MADE BY VB-SERVICES

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP VEHICLE

(a) The vehicle must be unloaded before jacking up / lifting up the vehicle. Never jack up / lift up a heavily loaded vehicle.

(b) When removing heavy parts such as the engine and transmission, the center of gravity of the vehicle may shift. To stabilize the vehicle, place a balance weight in a location where it will not roll or shift, or use a mission jack to hold the jacking support.

2. NOTICE FOR USING 4 POST LIFT

(a) Follow the safety procedures outlined in the lift instruction manual.

(b) Use precautionary measures to prevent the free wheel beam from damaging tires or wheels.

(c) Use wheel chocks to secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work on a level surface. Use wheel chocks at all times.

(b) Set the jack and rigid racks to the specified locations of the vehicle accurately.

(c) When jacking up the vehicle, first release the parking brake and move the shift lever to N.

(d) When jacking up the entire vehicle:

(1) When jacking up the front wheels first, make sure wheel chocks are behind the rear wheels.

(2) When jacking up the rear wheels first, make sure wheel chocks are in front of the front wheels.

(e) When jacking up only the front or rear wheels of the vehicle:

(1) Before jacking up the front wheels, place wheel chocks on both sides of the rear wheels.

(2) Before jacking up the rear wheels, place wheel chocks on both sides of the front wheels.

(f) When lowering a vehicle that only has its front or rear wheels jacked up:

(1) Before lowering the front wheels, make sure wheel chocks are in front of the rear wheels.

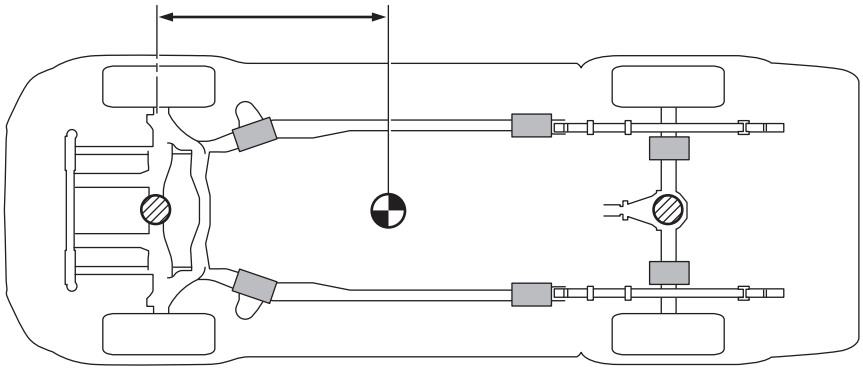
(2) Before lowering the rear wheels, make sure wheel chocks are behind the front wheels.

(g) It is extremely dangerous to perform any work on a vehicle raised on a jack alone, even for work that can be finished quickly. Rigid racks must be used to support the vehicle.

2WD (Except Pre Runner):

Regular Cab: 1,249 mm (49.2 in.)

Access Cab: 1,441 mm (56.7 in.)



Pre-runner:

Regular Cab: 1,249 mm (49.2 in.)

Access Cab: 1,445 mm (56.9 in.)

Double Cab (Short desk): 1,445 mm (56.9 in.)

Double Cab (Long desk): 1,621 mm (63.8 in.)

4WD:

Regular Cab: 1,186 mm (46.7 in.)

Access Cab: 1,394 mm (54.9 in.)

Double Cab (Short desk): 1,394 mm (54.9 in.)

Double Cab (Long desk): 1,560 mm (61.4 in.)

4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow safety procedures outlined in its instruction manual.

(b) Use a swing arm equipped with a rubber attachment.

(c) Set in the vehicle so as to make its center of gravity as close as possible to the center of the lift. (L becomes short.)

(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.

(e) Be sure to lock the swing arms before lifting and during work (if equipped with arm locks).

(f) Lift the vehicle up off the ground. Stand at a safe distance and shake the vehicle to check its stability.

HOW TO DETERMINE NUT STRENGTH

Nut Type

Present Standard Hexagon Nut	Old Standard Hexagon Nut		Class
	Cold Forging Nut	Cutting Processed Nut	
No Mark			4N
No Mark (w/ Washer)	No Mark (w/ Washer)	No Mark	5N (4T)
			6N
 			7N (5T)
			8N
		No Mark	10N (7T)
			11N
			12N

HINT:

- *: Nut with 1 or more marks on one side surface of the nut.
- Use the nut with the same number of the nut strength classification or greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example:

- Bolt = 4T
- Nut = 4N or more

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Park/neutral position switch x Automatic transmission (For nut)	6.9	70	61 in.*lbf

INSTALLATION

1. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

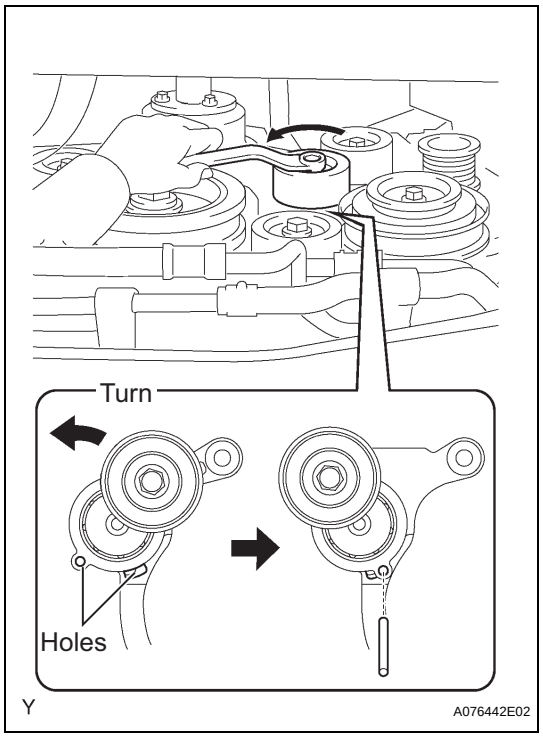
(a) Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise.
If a malfunction exists, replace the tensioner.

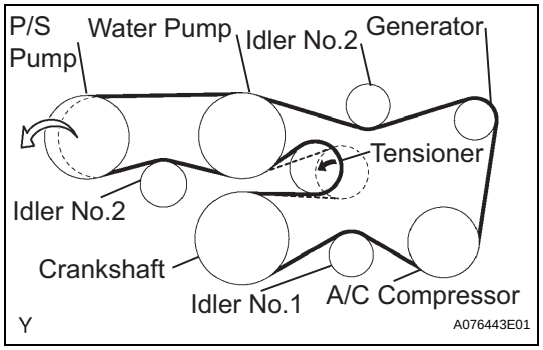
2. INSTALL FAN AND GENERATOR V BELT

(a) While turning the belt tensioner counterclockwise, align with its holes, and then insert a bar of 6 mm (0.24 in.) into the holes to fix the belt tensioner.

(b) Install the V-ribbed belt.

(c) While turning the belt tensioner counterclockwise, remove the bar.





(d) If it is hard to install the V-ribbed belt, perform the following procedure.

(1) Put the V-ribbed belt on all parts except the P/S pump, as shown in the illustration.

(2) While releasing the belt tension by turning the belt tensioner counterclockwise, put the V-ribbed belt on the P/S pump.

3. INSTALL NO.1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)

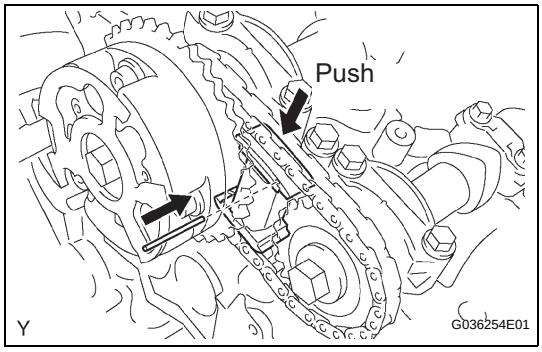
(a) Install the engine under cover with the 4 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)

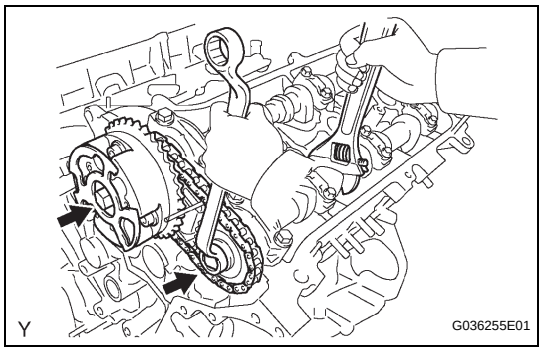
EM

EM

REMOVAL

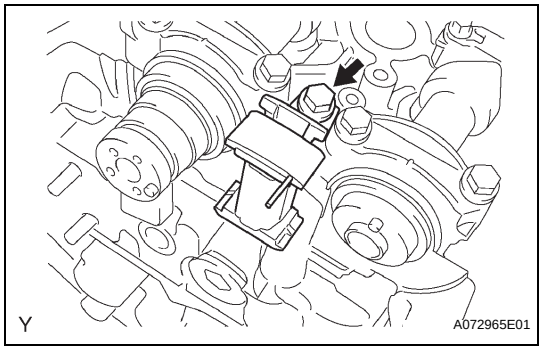
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **DRAIN ENGINE OIL (See page LU-4)**
4. **REMOVE ENGINE ASSEMBLY**
   (See page EM-186)
5. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-34)
6. **REMOVE CHAIN SUB-ASSEMBLY**
   (See page EM-44)
7. **REMOVE NO.1 COOL AIR INLET**
   (a) Remove the 2 bolts, then remove the cool air inlet.
8. **REMOVE FRONT NO.2 EXHAUST PIPE ASSEMBLY**
   (See page EX-3)
9. **REMOVE MANIFOLD STAY**
   (a) Remove the 3 bolts, then remove the exhaust manifold stay.
10. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH**
    (a) Disconnect the air fuel ratio sensor connector.
    (b) Remove the 6 nuts, then remove the exhaust manifold and gasket.
11. **REMOVE INTAKE MANIFOLD (See page EM-93)**
12. **REMOVE WATER BY-PASS JOINT RR (See page EM-93)**
13. **REMOVE NO.1 CHAIN VIBRATION DAMPER**
    (a) Remove the 2 bolts, then remove the chain vibration damper No. 1.
14. **REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)**
    (a) While pushing down the chain tensioner No. 2, insert a pin of ϕ 10. mm (0.039 in.) into the hole to fix it.





(b) Hold the hexagonal portion of the camshaft with a wrench.
NOTICE:
Be careful not to damage the cylinder head and valve lifter with the wrench.

(c) Remove the 2 bolts, then remove the camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.
NOTICE:
Do not disassemble the camshaft timing gear assembly.

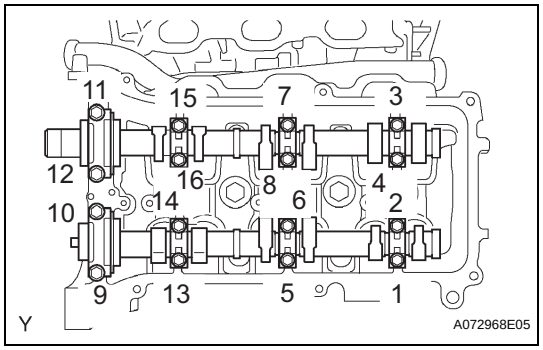


15. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 3.

16. REMOVE CAMSHAFTS
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

EM

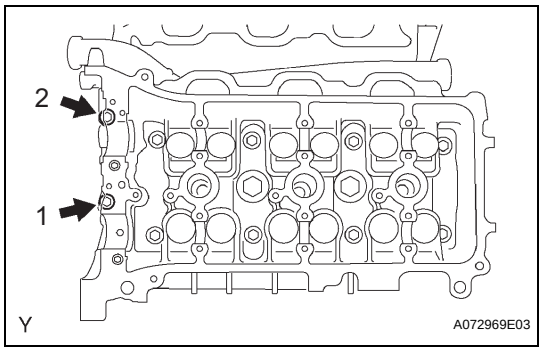


(a) Using several steps, uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.

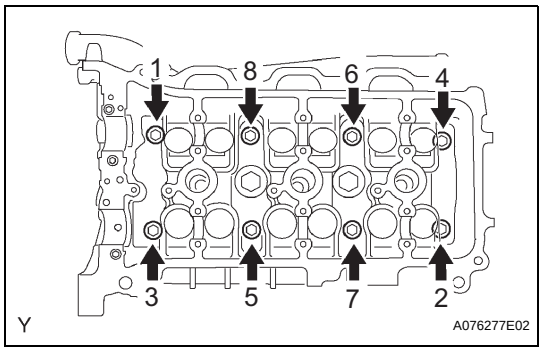
(b) Remove the 8 bearing caps and 2 camshafts.

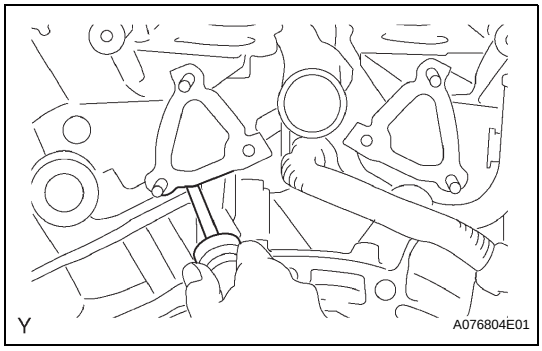
17. REMOVE CYLINDER HEAD LH

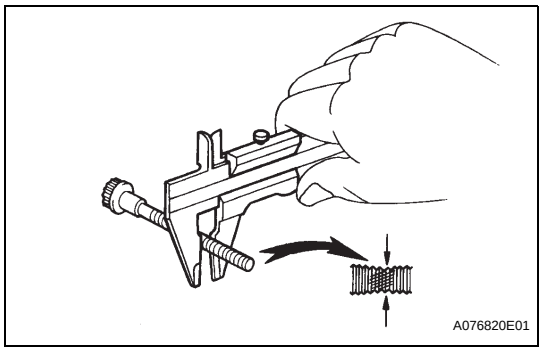
(a) Remove the bolt, then separate the ground cable.



(b) Using several steps, remove the 2 cylinder head bolts on the cylinder head in the sequence shown in the illustration.







(c) Using several steps, uniformly loosen the 8 cylinder head bolts on the cylinder head with a 10 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 8 cylinder head bolts and 8 plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result form removing the bolts in the wrong order.**

(d) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a bench.

NOTICE:

Be careful not to drop the plate washers into the cylinder head.

If the cylinder head is difficult to remove, pry between the cylinder head and cylinder block with a screwdriver.

18. REMOVE NO.2 CYLINDER HEAD GASKET

INSPECTION

1. INSPECT CYLINDER HEAD SET BOLT

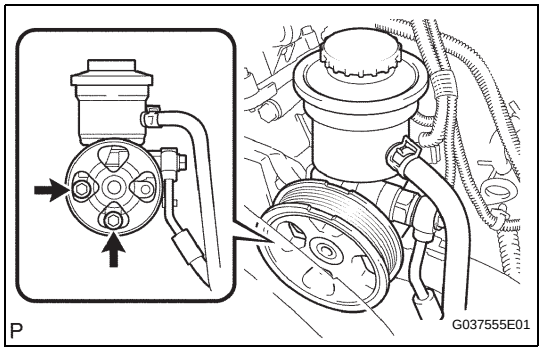
(a) Using vernier calipers, measure the outside diameter of the bolt thread.

Standard outside diameter:
10.85 to 11.00 mm (0.4272 to 0.4331 in.)

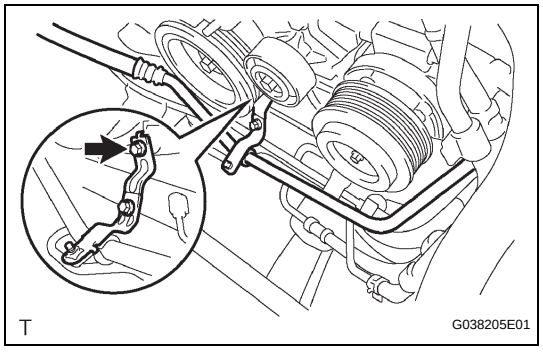
Minimum outside diameter:
10.7 mm (0.421 in.)

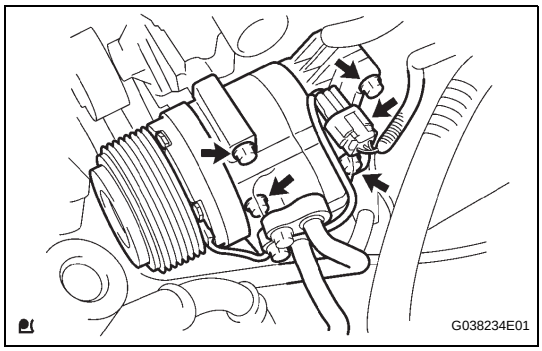
REMOVAL

1. **REMOVE HOOD SUB-ASSEMBLY**
2. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
3. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre-Runner)**
   (a) Remove the 4 bolts, then remove the No. 1 engine under cover.
4. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre-Runner, Regular Cab)**
   (a) Remove the 4 bolts, then remove the No. 2 engine under cover.
5. **DRAIN ENGINE OIL (See page LU-3)**
6. **DRAIN ENGINE COOLANT (See page CO-3)**
7. **REMOVE BATTERY**
8. **REMOVE BATTERY TRAY**
9. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
10. **REMOVE FAN SHROUD (See page CO-13)**
11. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page EC-14)**
12. **REMOVE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
13. **REMOVE AIR CLEANER CASE**
    (a) Remove the 3 bolts, then remove the air cleaner case.
14. **SEPARATE VANE PUMP ASSEMBLY**
    (a) Disconnect the vane pump connector.
    (b) Remove the 2 bolts, then separate the vane pump.
    HINT:
    Do not disconnect the hose. Hang the vane pump with a rope.
15. **REMOVE NO. 2 RADIATOR HOSE**



16. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning System)**
    (a) Remove the bolt shown in the illustration.





(b) Disconnect the compressor and magnetic clutch connector.
(c) Remove the 4 bolts, then separate the compressor and magnetic clutch.
HINT:
Do not disconnect the hose. Hang the vane pump with a rope.

17. REMOVE RADIATOR HOSE INLET

18. SEPARATE WATER HOSE SUB-ASSEMBLY (See page EM-92)

19. DISCONNECT FUEL HOSE (See page FU-11)

20. DISCONNECT FUEL HOSE NO.2 (See page FU-11)

21. SEPARATE FUEL VAPOR FEED HOSE ASSEMBLY (See page EM-93)

22. DISCONNECT NO. 1 AIR INJECTION HOSE (See page EM-93)

23. DISCONNECT ENGINE WIRE (See page EM-93)

24. REMOVE EXHAUST PIPE ASSEMBLY (See page EX-2)

25. REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)

26. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-6
R155F	MT-8

27. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (See page AT-109)

28. REMOVE ENGINE ASSEMBLY (See page EM-93)

29. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

30. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

31. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-77)

32. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-78)

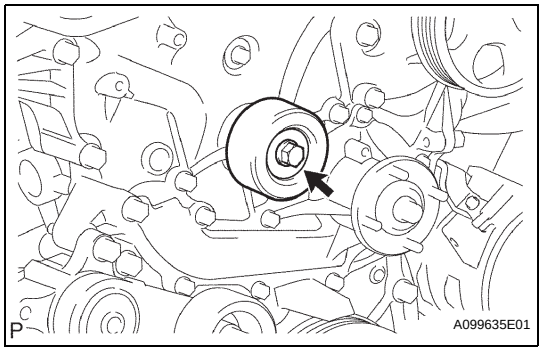
33. REMOVE REAR END PLATE

(a) Remove the 2 bolts, then remove the rear end plate.

34. REMOVE INTAKE AIR CONNECTOR (See page ES-452)

35. REMOVE GENERATOR ASSEMBLY (See page CH-7)

36. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-5)



37. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

(a) Remove the bolt and No. 1 idler pulley sub-assembly.

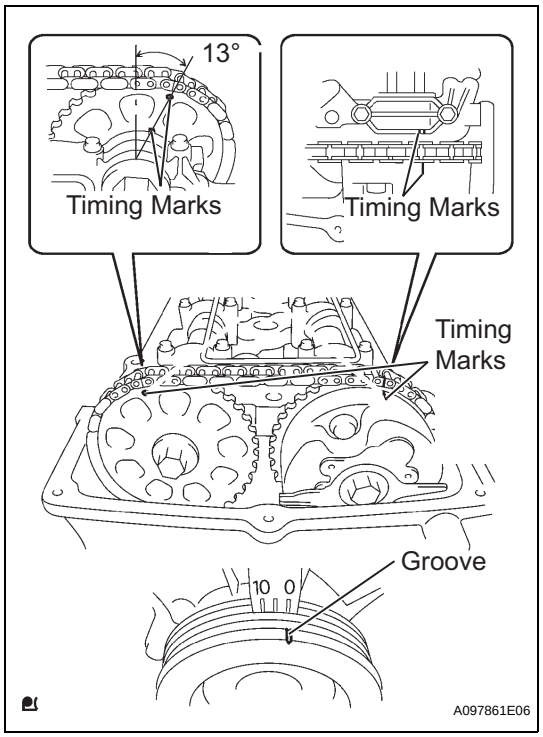
38. REMOVE IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-446)

39. REMOVE CRANKSHAFT POSITION SENSOR (See page ES-444)

40. REMOVE CAMSHAFT POSITION SENSOR (See page ES-444)

41. REMOVE NO. 1 INTAKE MANIFOLD TO HEAD GASKET (See page ES-463)

42. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-38)



43. REMOVE CRANKSHAFT PULLEY

(a) Set the No. 1 cylinder to the TDC/ compression.

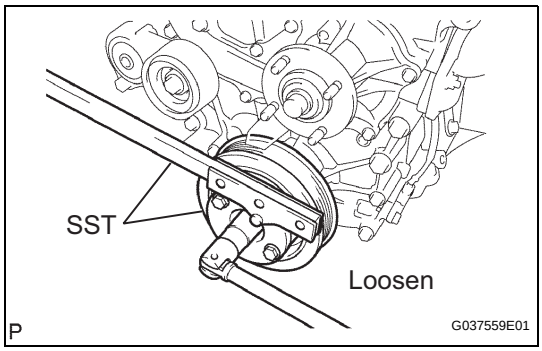
(1) Turn the crankshaft pulley clockwise and align its timing mark notch with the timing mark "0".

(2) Check that the timing marks of the camshaft timing gear are located as illustrated.

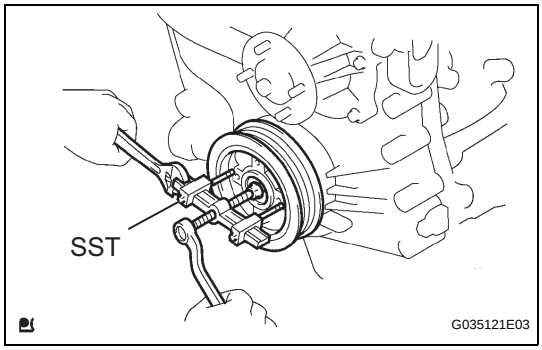
HINT:

If not, turn the crankshaft to align the marks.

EM



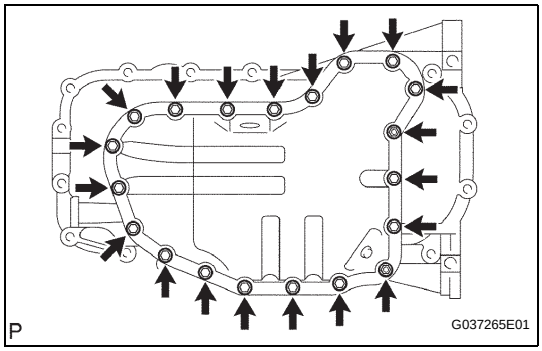
(b) Using SST, loosen the crankshaft pulley bolt.
SST 09213-54015 (91651-60855), 09330-00021
HINT:
Loosen the crankshaft pulley bolt until only 2 or 3 threads are still installed in the crankshaft.



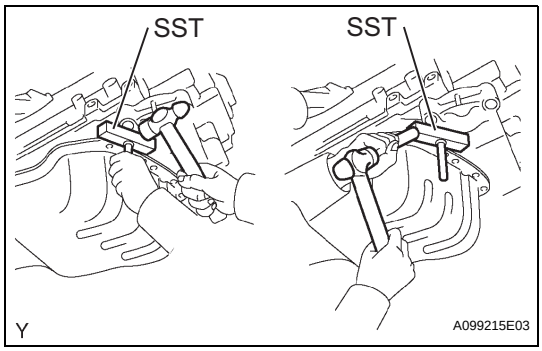
(c) Using SST, remove the crankshaft pulley and crankshaft pulley bolt.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05021)

44. REMOVE OIL LEVEL GAGE SUB-ASSEMBLY

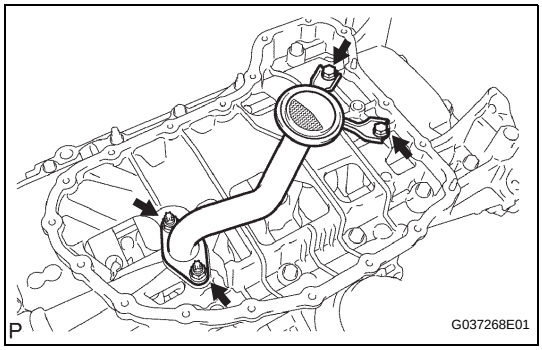
EM



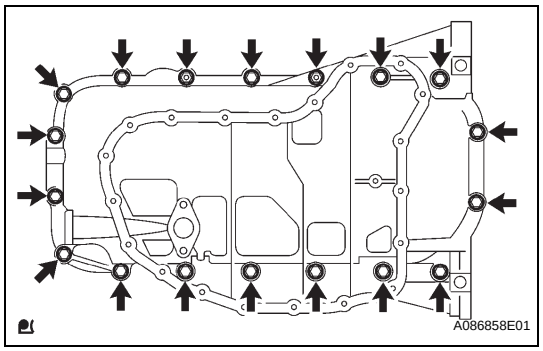
45. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY
(a) Remove the 18 bolts and 2 nuts.



(b) Insert the blade of SST between the pans. Cut through the applied sealer and remove the oil pan.
SST 09032-00100
NOTICE:
Be careful not to damage the contact surface of the oil pans.

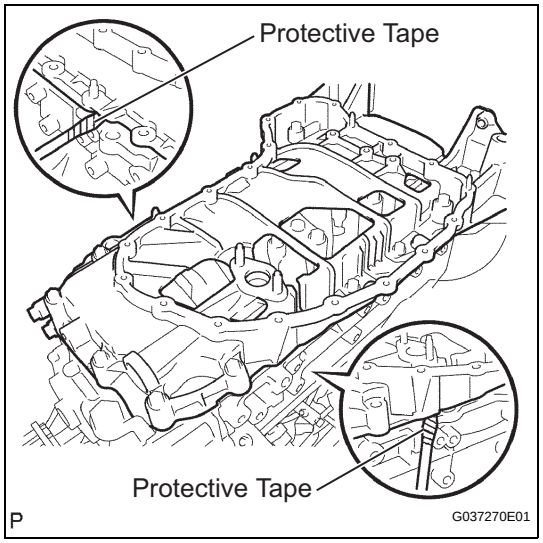


46. REMOVE OIL STRAINER SUB-ASSEMBLY
(a) Remove the 2 bolts, 2 nuts, oil strainer and gasket.



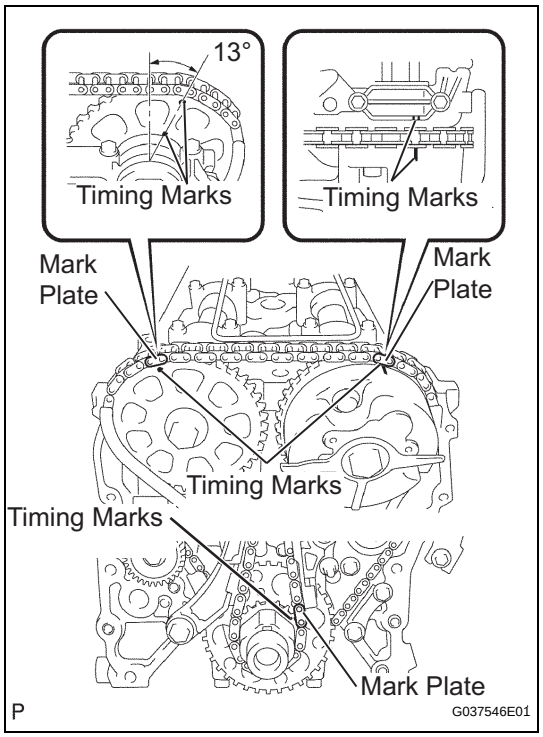
47. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 16 bolts and 2 nuts.



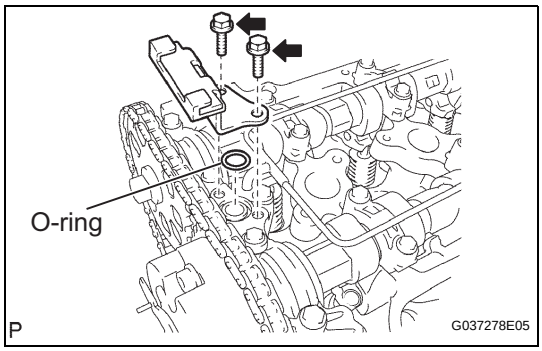
(b) Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and oil pan.

48. REMOVE TIMING CHAIN COVER (See page LU-21)

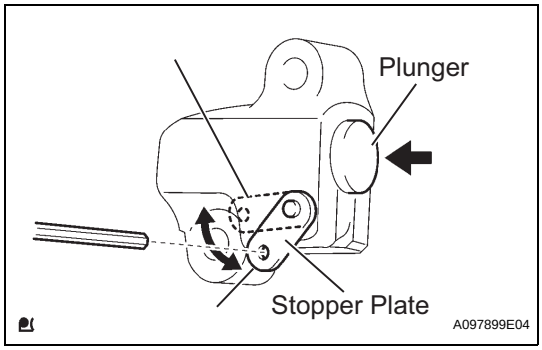


49. REMOVE TIMING CHAIN GUIDE

(a) Make sure that each matchmark is in the position shown in the illustration.



(b) Remove the 2 bolts, timing chain guide and O-ring.



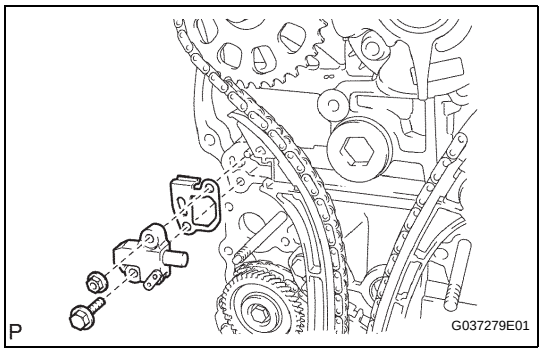
50. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

NOTICE:

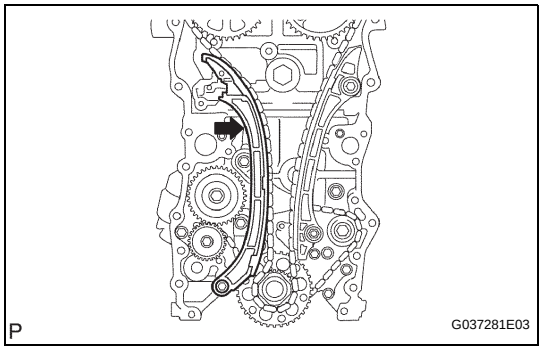
- **When the chain tensioner is removed, do not rotate the crankshaft.**
- **When the chain is removed and the camshaft needs to be rotated, rotate the crankshaft 90° to the right.**

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

(b) Move the stopper plate downward to set the lock, and insert a 3.0 mm (0.118 in.) diameter bar into the stopper plate hole.

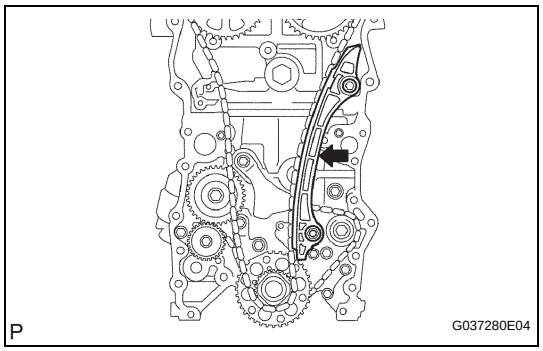


(c) Remove the bolt, nut, chain tensioner and gasket.



51. REMOVE CHAIN TENSIONER SLIPPER

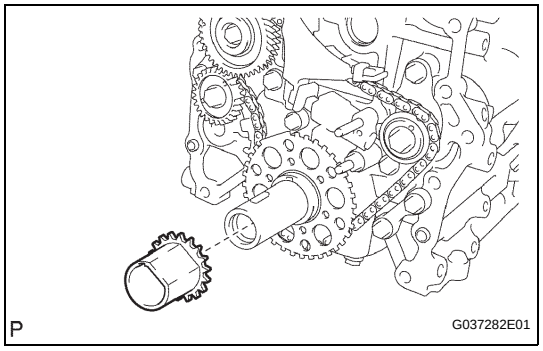
(a) Remove the bolt and tensioner slipper.



52. REMOVE NO. 1 CHAIN VIBRATION DAMPER

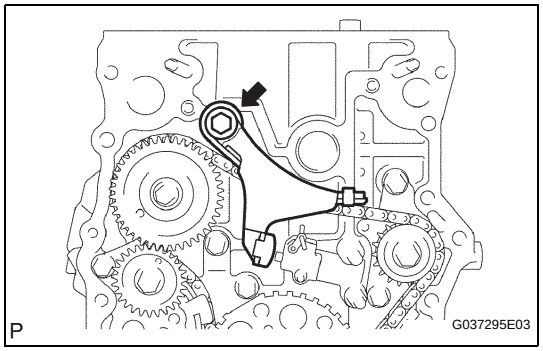
(a) Remove the 2 bolts and vibration damper.

53. REMOVE CHAIN SUB-ASSEMBLY



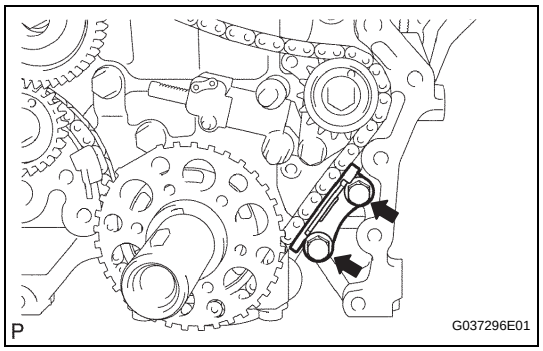
54. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Remove the crankshaft timing gear from the crankshaft.



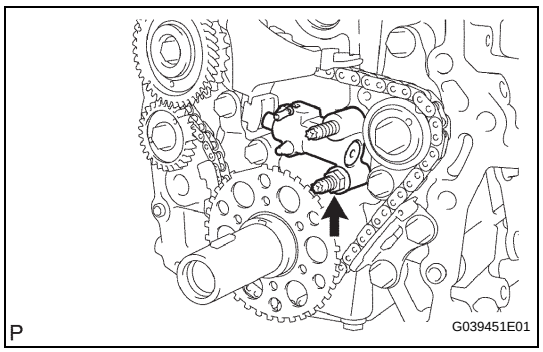
55. REMOVE NO. 2 CHAIN VIBRATION DAMPER

(a) Remove the bolt and No. 2chain vibration damper.



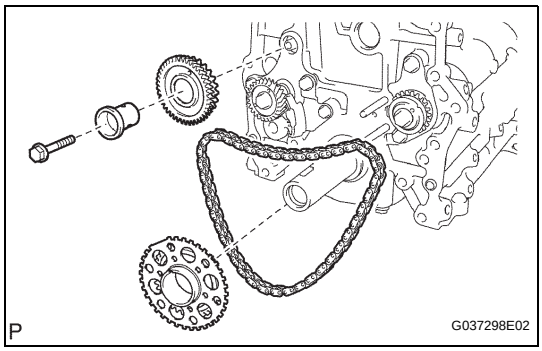
56. REMOVE NO. 3 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and No. 3chain vibration damper.



57. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Remove the nut and No. 2 chain tensioner assembly.



58. REMOVE NO.2 CHAIN SUB-ASSEMBLY

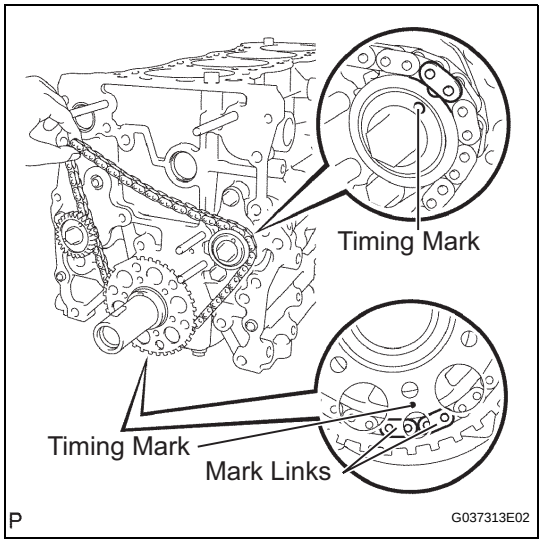
(a) Remove the bolt, balanceshaft drive gear shaft and balanceshaft drive gear.

(b) Remove the crankshaft timing sprocket No. 2 and chain.

INSTALLATION

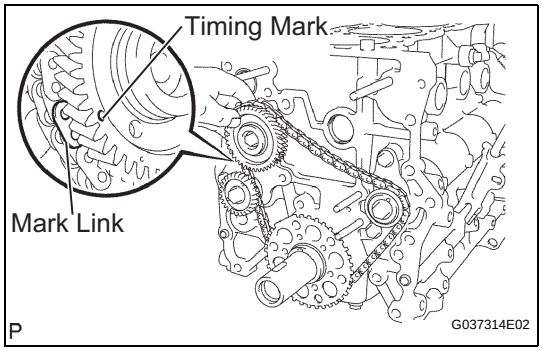
1. INSTALL NO.2 CHAIN SUB-ASSEMBLY

(a) Install the chain with its mark links aligned with the timing marks on the crankshaft timing sprocket and balanceshaft timing sprocket.



(b) Bring the other mark link of the crankshaft timing sprocket behind the large timing mark of the balanceshaft drive gear.

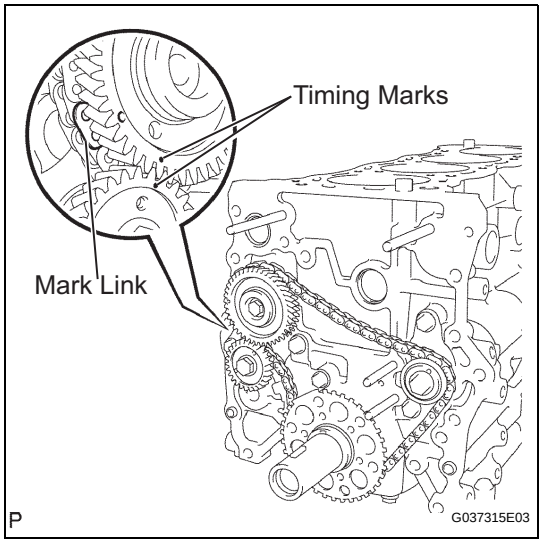
(c) Insert the balanceshaft drive gear shaft through the balanceshaft drive gear so that it fits into the thrust plate hole.

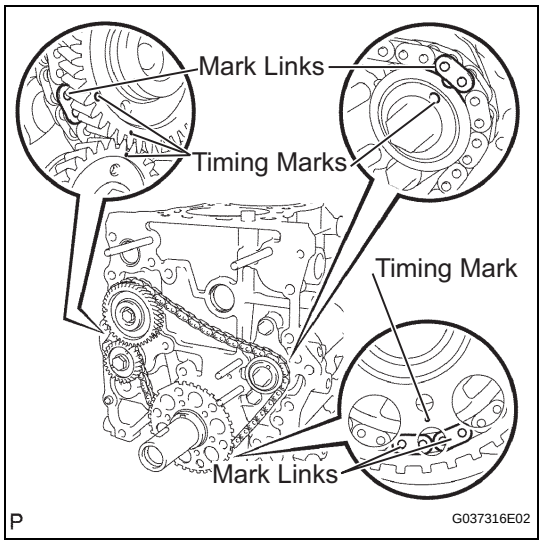


(d) Align the small timing mark of the balanceshaft drive gear with the timing mark of the balanceshaft timing gear.

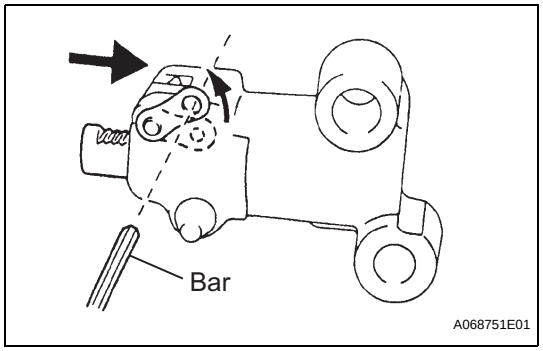
(e) Install the bolt onto the balanceshaft drive gear and tighten it.

Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



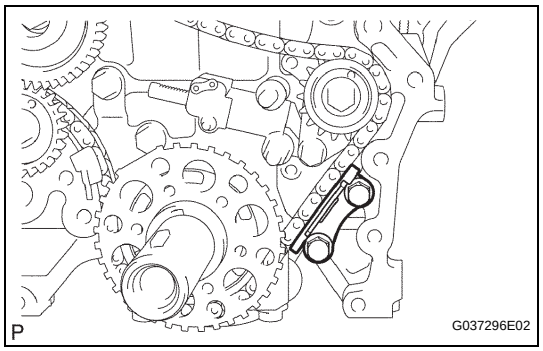


(f) Check that each timing mark is aligned with the corresponding mark link.



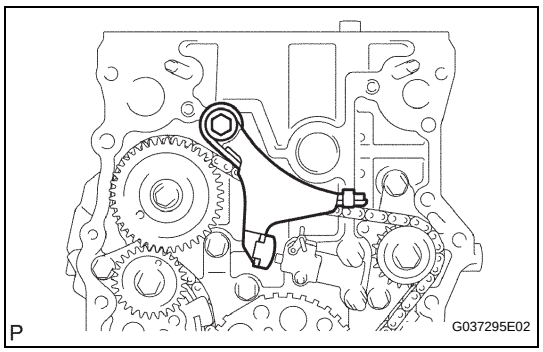
2. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Install the chain tensioner with the nut.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)
NOTICE:
Assemble the chain tensioner with the 3.0 mm (0.118 in.) diameter bar installed, then remove the bar after assembly. When doing this, avoid pushing the vibration damper against the chain.



3. INSTALL NO. 3 CHAIN VIBRATION DAMPER

(a) Install the No. 3 chain vibration damper with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

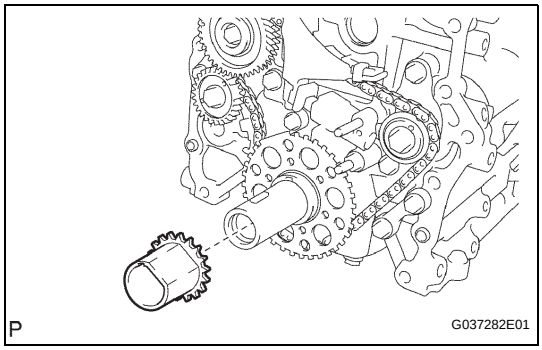


4. INSTALL CHAIN VIBRATION DAMPER NO.2

(a) Install the chain vibration damper with the bolt.
Torque: 27 N*m (270 kgf*cm, 20 ft.*lbf)

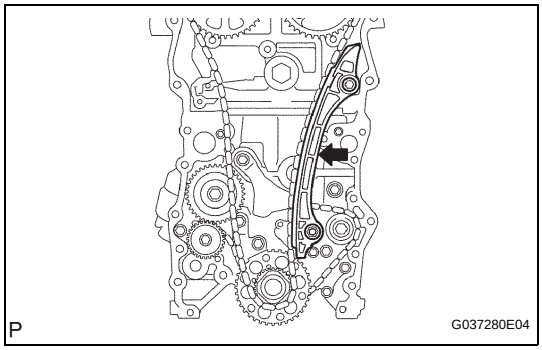
(b) Remove the pin from the chain tensioner and release the plunger.

EM



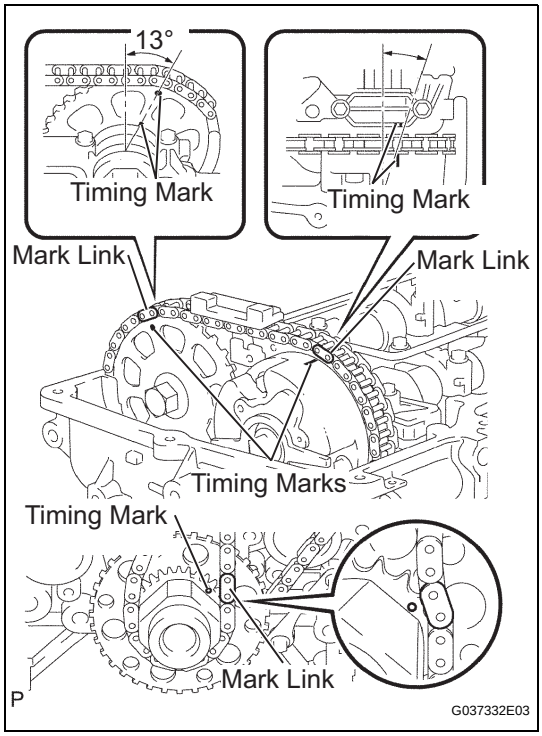
5. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Install the timing sprocket as shown in the illustration.



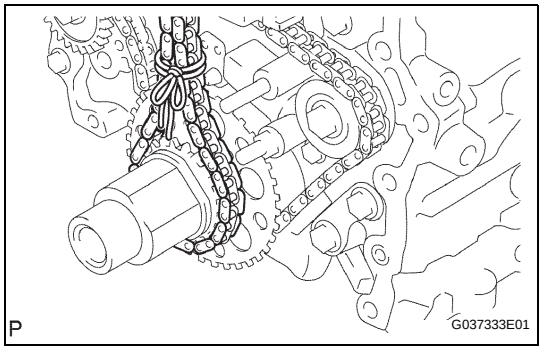
6. INSTALL NO. 1 CHAIN VIBRATION DAMPER

(a) Install the vibration damper with the bolt and nut.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

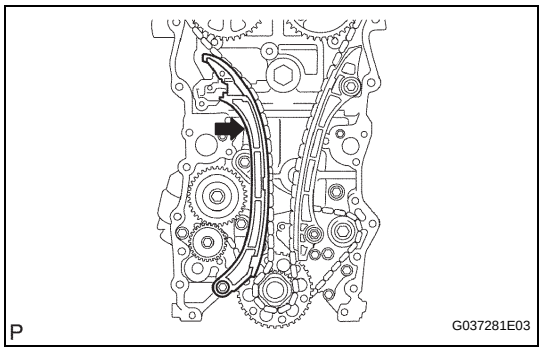


7. INSTALL CHAIN SUB-ASSEMBLY

(a) As shown in the illustration, install the chain onto the sprocket and gear with the painted marks aligned with the timing marks on the sprocket and gear.
HINT:
- The camshaft mark plate is orange.
- The crankshaft mark plate is yellow.

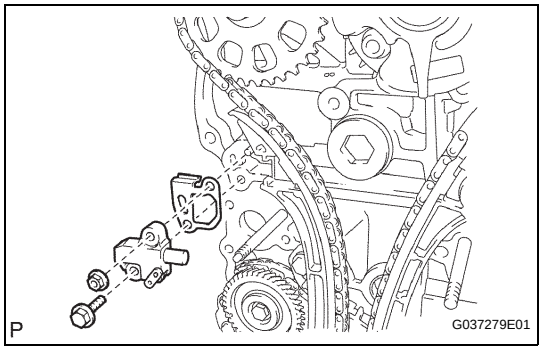


(b) Use a rope to tie the chain of the crankshaft timing sprocket. Tie the rope near the sprocket.
NOTICE:
After the chain tensioner has been installed, the rope must be removed.
HINT:
The rope is tied to prevent gear jumping.



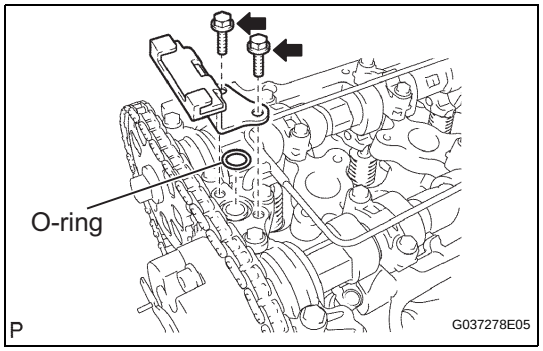
8. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the tensioner slipper with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



9. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

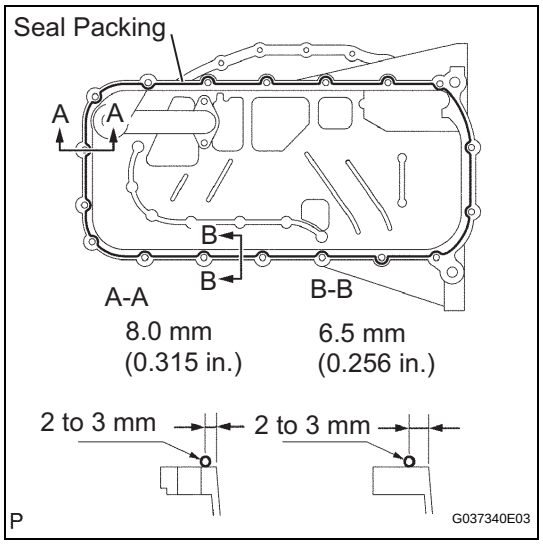
(a) Install a new gasket and the chain tensioner with the bolt and nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



10. INSTALL TIMING CHAIN GUIDE

(a) Install a new O-ring and the chain guide with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

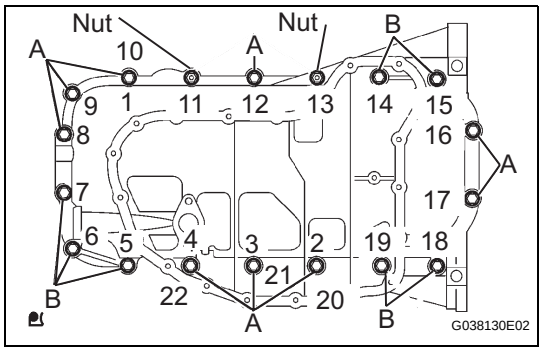
11. INSTALL TIMING CHAIN COVER (See page LU-24)



12. INSTALL OIL PAN SUB-ASSEMBLY

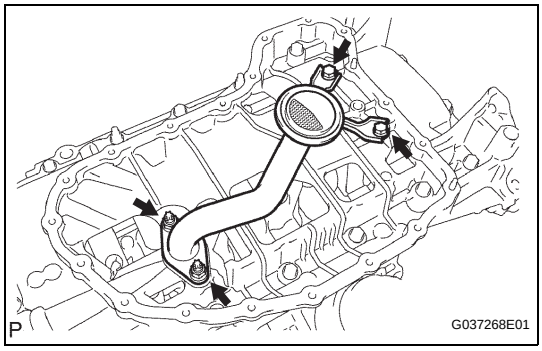
(a) Apply continuous beads of seal packing to the places shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
Seal width:
2 to 3 mm (0.079 to 0.118 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes of applying the seal packing.**
- **Do not start the engine for at least 2 hours after installation.**

EM



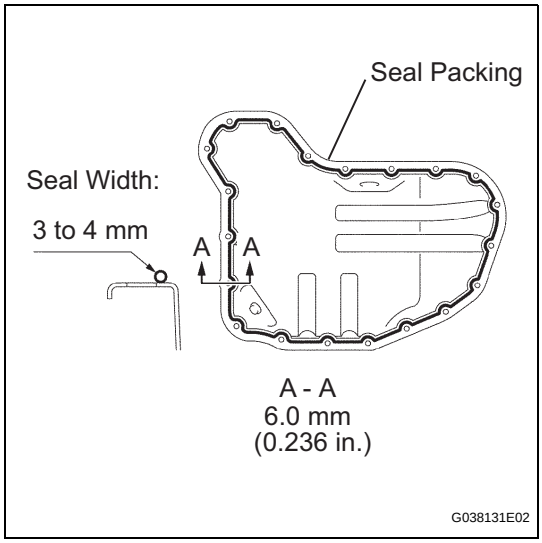
(b) Loosely install the oil pan with the 16 bolts and 2 nuts.
HINT:
Bolt length:
20 mm (0.79 in.) for bolt A,
40 mm (1.57 in.) for bolt B

(c) Uniformly tighten the 16 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



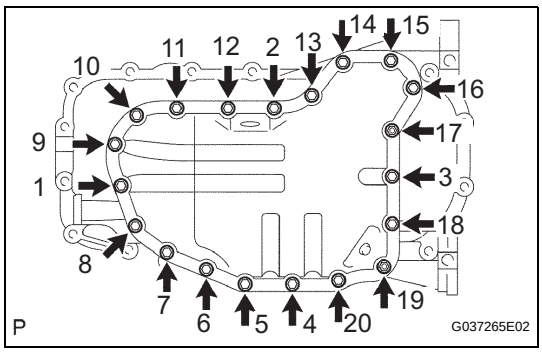
13. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



14. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

(a) Apply continuous beads of seal packing to the places shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
Seal width:
3 to 4 mm (0.118 to 0.157 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes of applying the seal packing.**
- **Do not start the engine for at least 2 hours after installation.**



(b) Provisionally install the oil pan with the 18 bolts and 2 nuts.

(c) Uniformly tighten the 18 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Install a new gasket and the drain plug.

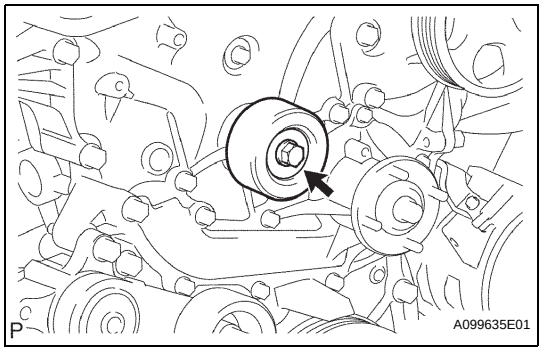
15. INSTALL OIL LEVEL GAGE SUB-ASSEMBLY

16. INSTALL CRANKSHAFT PULLEY (See page EM-75)

17. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-48)

18. INSTALL NO. 1 INTAKE MANIFOLD TO HEAD GASKET (See page EM-38)

19. INSTALL CAMSHAFT POSITION SENSOR (See page ES-444)



20. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-444)**

21. **INSTALL IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-444)**

22. **INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY**
    (a) Install the No. 1 idler pulley sub-assembly with the bolt.
    Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

23. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-6)**

24. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**

25. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**

26. **INSTALL REAR END PLATE**
    (a) Install the rear end plate with the 2 bolts.
    Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

27. **INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-79)**

28. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-79)**

29. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32
R155F	CL-37

30. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32
R155F	CL-37

31. **INSTALL ENGINE ASSEMBLY (See page EM-98)**

32. **INSTALL AUTOMATIC TRANSMISSION ASSEMBLY** (See page AT-113)

33. **INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY**

Transmission	See page
R155	MT-9
R155F	MT-11

34. **INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)**

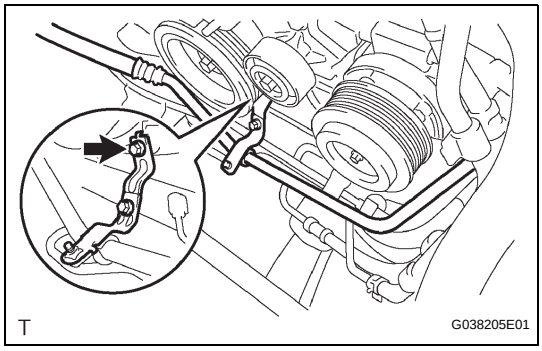
35. **INSTALL EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)**

36. **CONNECT ENGINE WIRE**

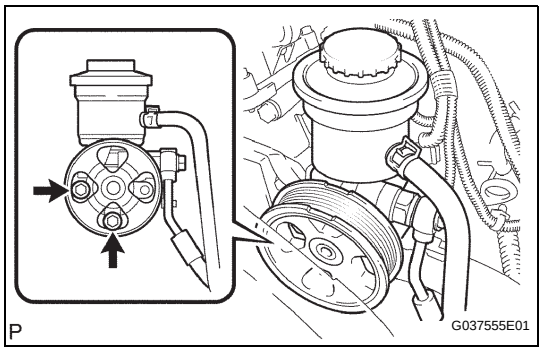
37. **CONNECT NO. 1 AIR INJECTION HOSE (See page EM-99)**

38. **CONNECT FUEL VAPOR FEED HOSE ASSEMBLY (See page EM-99)**
39. **CONNECT NO. 2 FUEL HOSE (See page FU-17)**
40. **CONNECT FUEL HOSE (See page FU-17)**
41. **INSTALL WATER HOSE SUB-ASSEMBLY (See page EM-99)**
42. **INSTALL RADIATOR HOSE INLET**
43. **INSTALL COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning System)**
    (a) Install the compressor and magnetic clutch with the 4 bolts.
    Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
    (b) Connect the compressor and magnetic clutch connector.

    (c) Install the bolt shown in the illustration.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
44. **INSTALL NO. 2 RADIATOR HOSE**



45. **INSTALL VANE PUMP ASSEMBLY**
    (a) Install the vane pump with the 2 bolts.
    Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
    (b) Connect the vane pump connector.
46. **INSTALL AIR CLEANER CASE**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
47. **INSTALL AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
48. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page EC-17)**
49. **INSTALL FAN SHROUD (See page CO-18)**
50. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)**
51. **INSTALL BATTERY TRAY**
52. **INSTALL BATTERY**
53. **ADD ENGINE OIL (See page LU-4)**
54. **ADD ENGINE COOLANT (See page CO-3)**
55. **CHECK FOR ENGINE OIL LEVEL**



56. CHECK FOR FUEL LEAKAGE

57. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)

58. CHECK FOR OIL LEAKAGE

59. CHECK FOR EXHAUST GAS LEAKAGE

60. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre-Runner)

(a) Install the No. 1 engine under cover with the 4 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

61. INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre-Runner, Regular Cab)

(a) Install the No. 2 engine under cover with the 4 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

62. INSTALL HOOD SUB-ASSEMBLY
(See page ED-7)

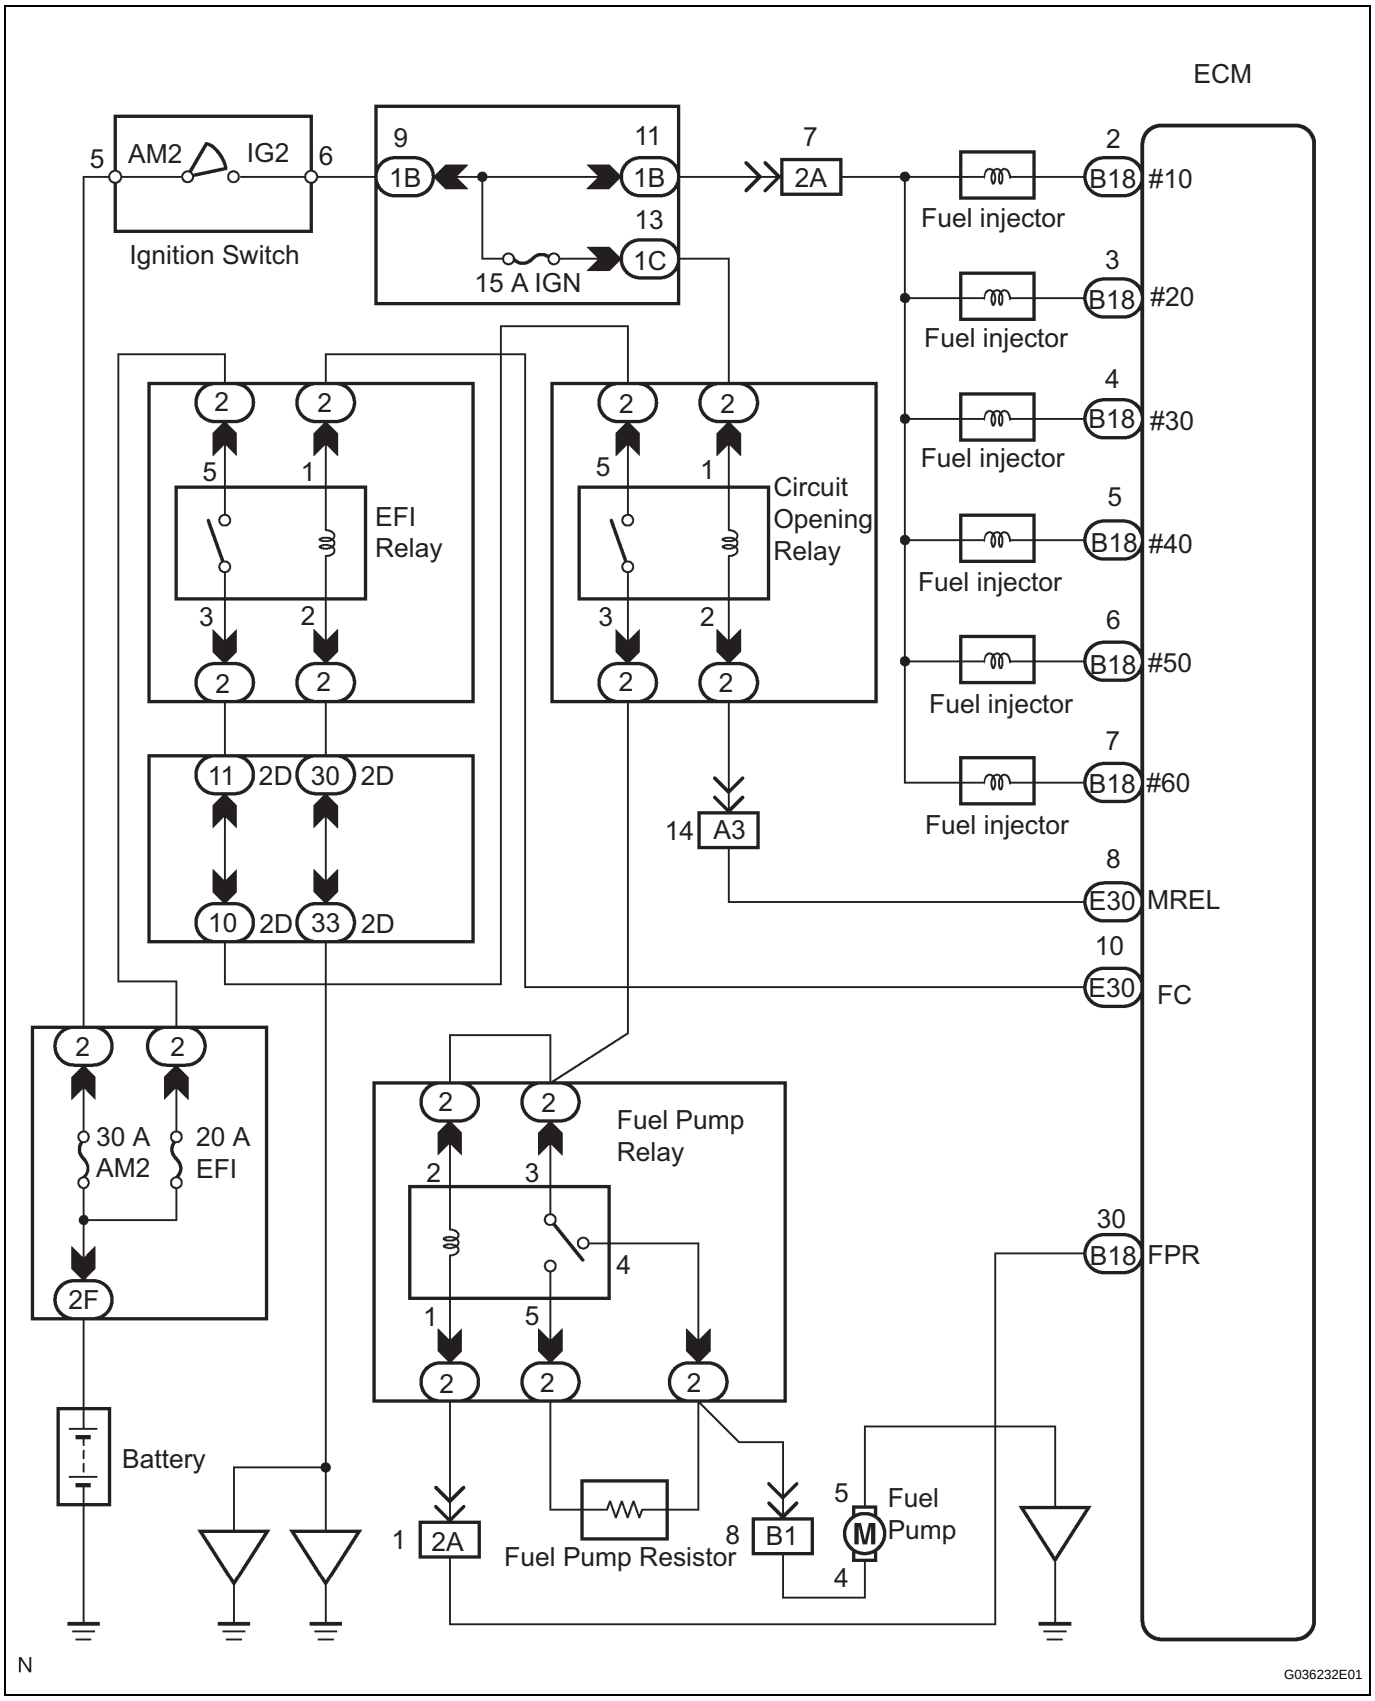
SYSTEM DIAGRAM



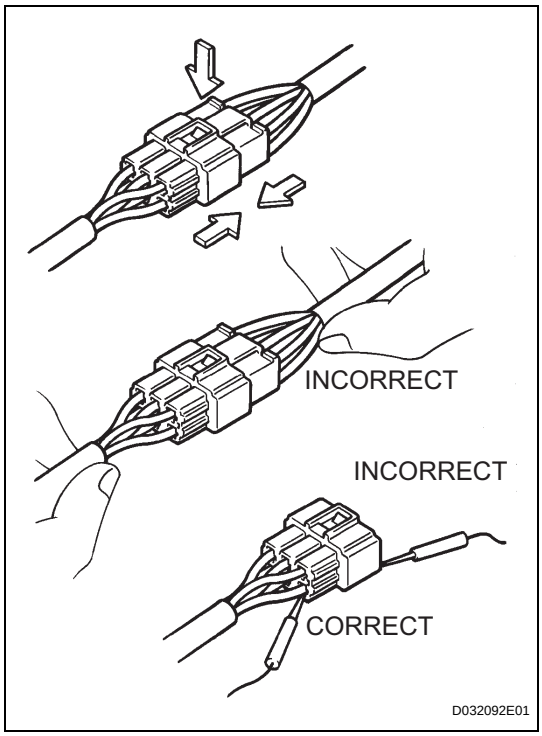
IN

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements should be made at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.



(b) HANDLING CONNECTORS

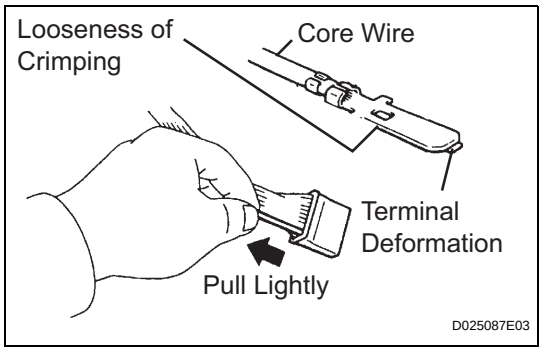
(1) When disconnecting a connector, first squeeze the mating halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

(3) Before connecting a connector, check that there are no deformed, damaged, loose or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

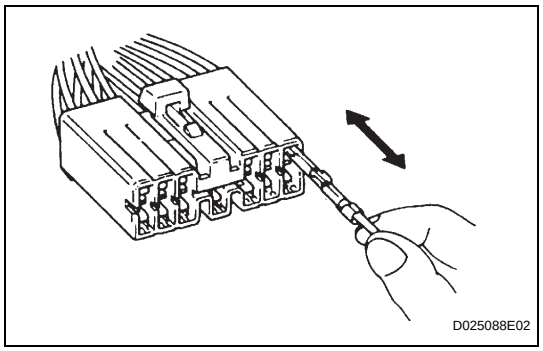
(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.
NOTICE:
- **As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.**
- **Do not damage the terminals by moving the inserted tester needle.**



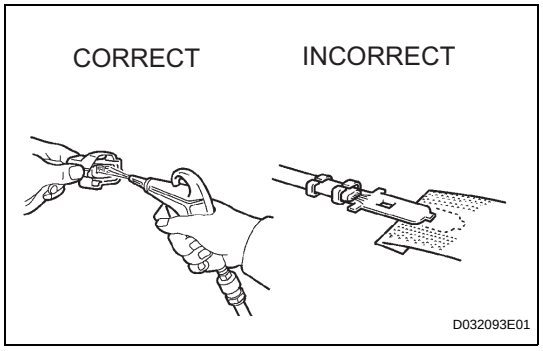
(c) CHECKING CONNECTORS

(1) Checking when a connector is disconnected: Squeeze the connector together to confirm that they are fully connected and locked.

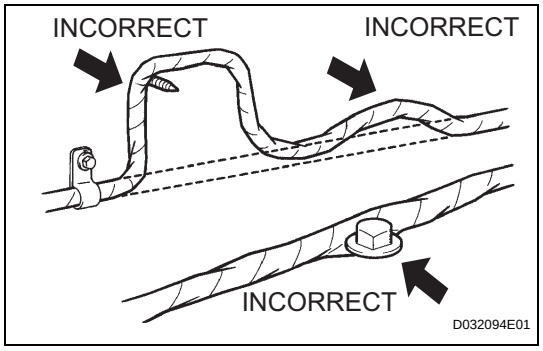
(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Check visually for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated, or deformed terminals.



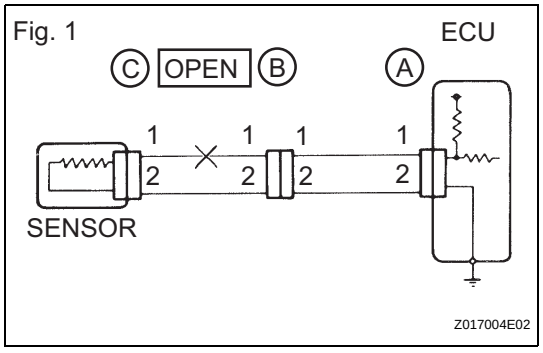
(3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.
NOTICE:
When testing a gold-plated female terminal, always use a gold-plated male terminal.



(d) REPAIR METHOD OF CONNECTOR TERMINAL
(1) If there is any foreign matter on the terminal, clean the contact point using an air gun or cloth. Never rub the contact point using sandpaper as the plating may come off.
(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.
(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.



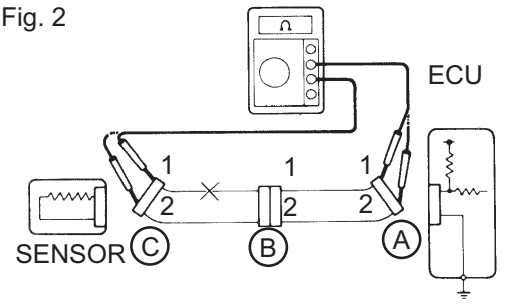
(e) HANDLING OF WIRE HARNESS
(1) If removing a wire harness, check the wiring and clamping before proceeding so that it can be restored in the same way.
(2) Never twist, pull or slacken the wire harness more than necessary.
(3) The wire harness should never come into contact with a high temperature part, or rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
(4) When installing parts, never pinch the wire harness.
(5) Never cut or break the cover of the wire harness. If it is cut or broken, replace it or repair it with vinyl tape.



2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, check the resistance or voltage, as described below.

Fig. 2



(b) Check the resistance.

(1) Disconnect connectors A and C and measure the resistance between them.

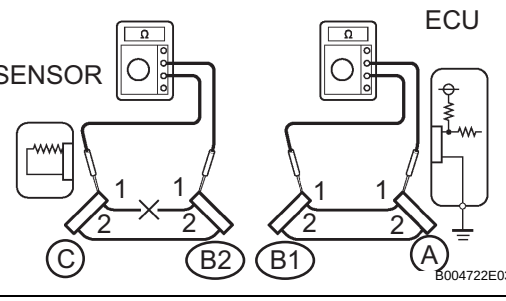
Standard resistance (Fig. 2)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3



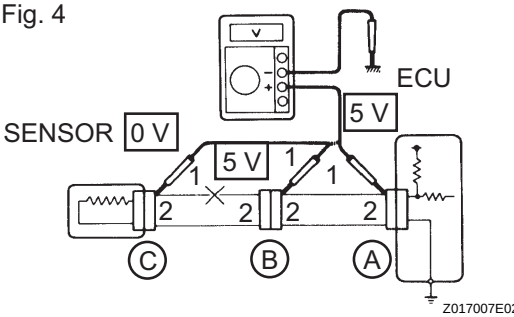
(2) Disconnect connector B and measure the resistance between the connectors.

Standard resistance (Fig. 3)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 1 - Connector C terminal 1	10 kΩ or higher

If the results match the examples above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

Fig. 4



(c) Check the voltage.

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.
With each connector still connected, measure the voltage between the body ground and these terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard voltage (Fig. 4)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the examples above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

Fig. 5

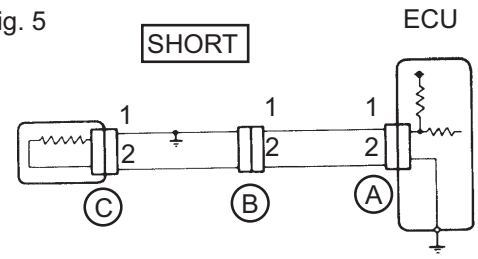


Fig. 6

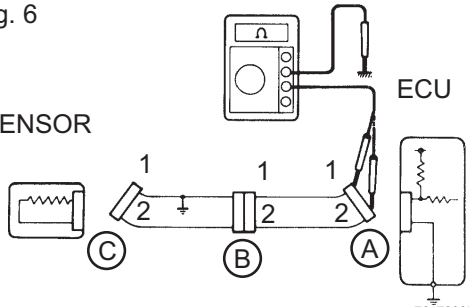

Fig. 7

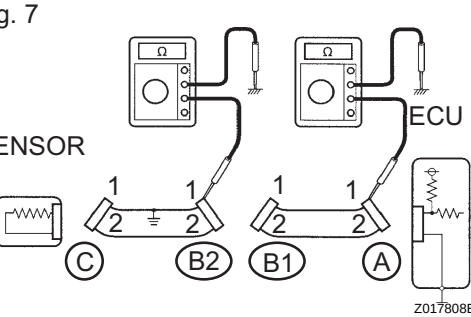


3. CHECK FOR SHORT CIRCUIT

(a) If the wire harness is ground shorted (Fig. 5), locate the section by conducting a resistance check with the body ground (below).

(b) Check the resistance with the body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard resistance (Fig. 6)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

HINT:
Measure the resistance while lightly shaking the wire harness vertically and horizontally. If your results match the examples above, a short circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard resistance (Fig. 7)

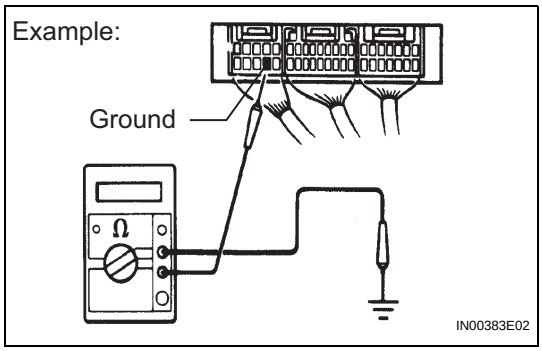
Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 1 - Body ground	Below 1 Ω

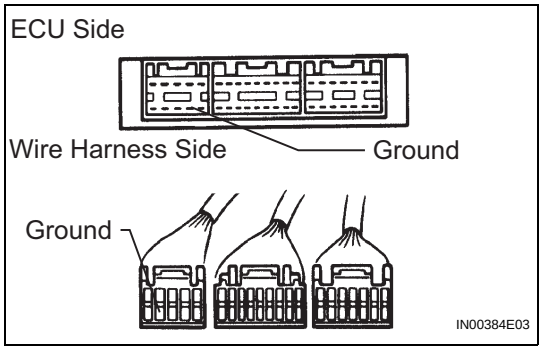
If the results match the examples above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- **The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.**
- **When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch ON.**
- **Check that the connectors are fully seated. Check for loose, corroded or broken wires.**





(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.
Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bending, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
3GR	Third Gear	-
4GR	Fourth Gear	-
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI/INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idle Air Control	Idle Speed Control (ISC)

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
IAT	Intake Air Temperature	Intake or Inlet Air temperature
ICM	Ignition Control Module	-
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O2 Sensor (O2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CCRO
TWC+OC	Three-Way + Oxidation Catalytic Converter	CCR + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-

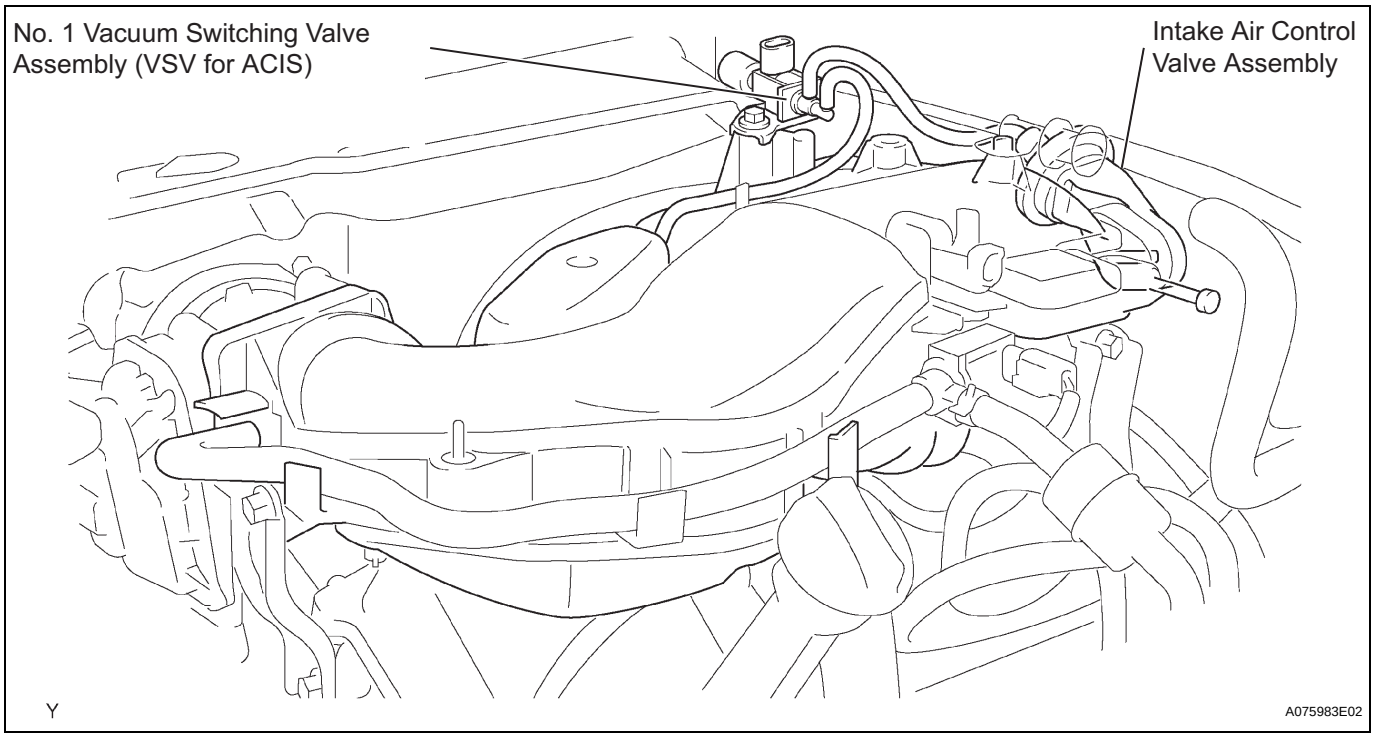
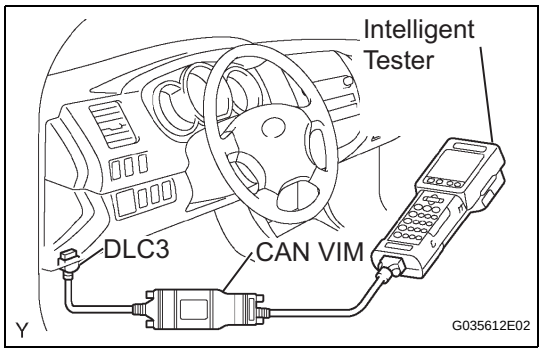
ON-VEHICLE INSPECTION

1. INSPECT INTAKE AIR CONTROL FUNCTION



(a) Remove the V-bank cover.
(b) Warm up the engine.
(c) Turn the ignition switch to OFF.

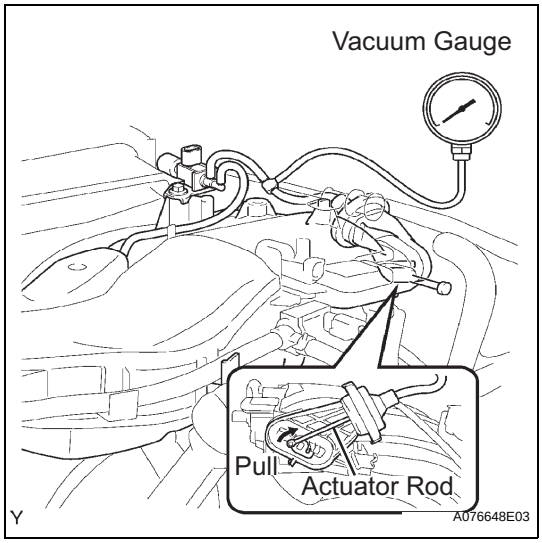


(d) Connect the intelligent tester to the DLC3.
(e) Start the engine and allow it to idle.
(f) Turn the intelligent tester ON.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSV1 / ON.
    (1) Check that the intake air control valve is pulled out.
    If the intake air control valve does not operate, replace the VSV for ACIS or intake air surge tank.
(h) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSV1 / OFF.
    (1) Check that the intake air control valve is returned to its original position.
    If the intake air control valve does not operate, replace the VSV for ACIS or intake air surge tank.

IT

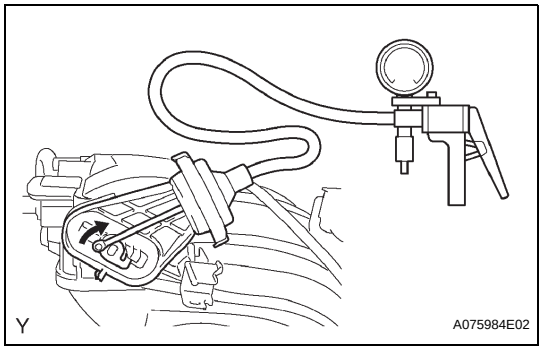
(i) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ENGINE SPD, THROTTLE POS, INTAKE CTL VSV1, and INTAKE CTL VSV2.
   (1) When depressing the accelerator pedal to the 60 % accelerator opening angle and running the engine at a speed of 2,200 to 4,100 rpm, check that the VSV is ON.
   If the intake air control valve does not operate, replace the Vacuum Switching Valve No. 1.

(j) Release the accelerator pedal when in the condition in step (1) or when the engine is idling, and check that the VSV is OFF.
If the intake air control valve does not operate, replace the Vacuum Switching Valve No. 1.



2. INSPECT INTAKE AIR CONTROL VALVE

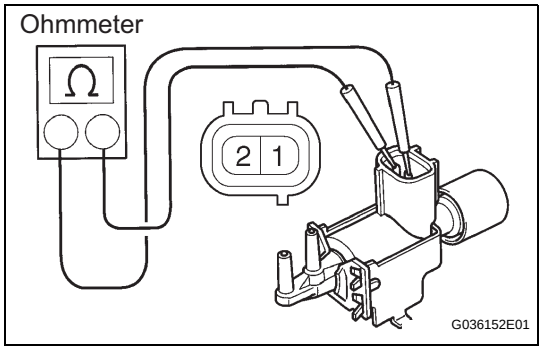
(a) Remove the V-bank cover.
(b) Using a 3-way connector, connect a vacuum gauge to the actuator hose.
(c) Start the engine.
(d) While the engine is idling, check that the vacuum gauge needle momentarily fluctuates up to approximately. 39.9 kPa (300 mmHg, 11.8 in.Hg). (The actuator rod is pulled out.)
If the intake air control valve does not operate, replace the intake air surge tank.
(e) Rapidly depress the accelerator pedal to the fully open position and check that the vacuum gauge needle points to 0 kPa (0 mmHg, 0 in.Hg). (The actuator rod is returned to its original position.)
If the intake air control valve does not operate, replace the intake air surge tank.



INSPECTION

1. INSPECT INTAKE AIR SURGE TANK

(a) Inspect the diaphragm.
   (1) Check that the lever moves when a vacuum of 26.6 kPa (200 mmHg) is applied with the Vacuum gage on.
   (2) Check that the vacuum of 26.6 kPa (200 mmHg) is sustained for 1 minute in the above state.

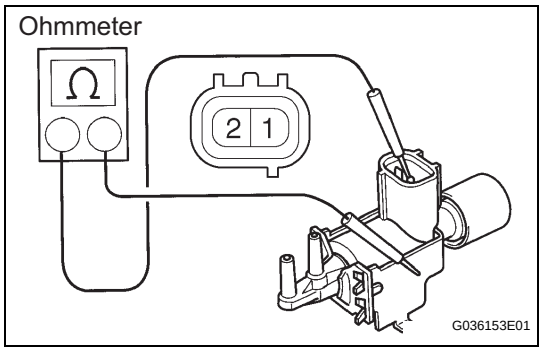


2. INSPECT NO. 1 VACUUM SWITCHING VALVE ASSEMBLY

(a) Check the resistance.
   (1) Using an ohmmeter, measure the resistance between the terminals.
   Standard

Tester Connection	Specified Condition
1 - 2	37 to 44 Ω at 20°C (68°F)

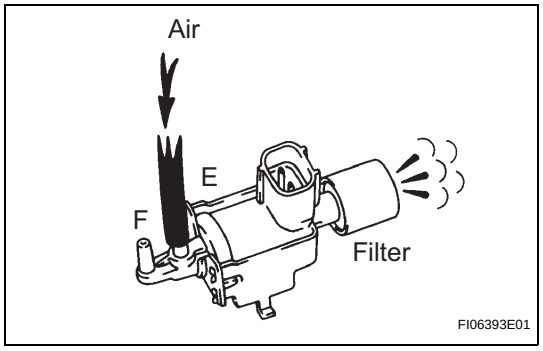
If the result is not as specified, replace the vacuum switching valve No. 1.



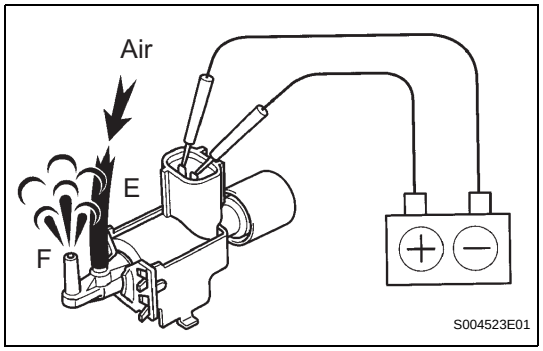
(b) Check the vacuum switching valve No. 1 for ground.
(1) Using an ohmmeter, measure the resistance between each terminal and the body.
Standard

Tester Connection	Specified Condition
1 - Body	10 kΩ or higher
2 - Body	10 kΩ or higher

If the result is not as specified, replace the vacuum switching valve No. 1.



(c) Check the operation.
(1) Check that air does not flow from port E to port F.
If the operation is not as specified, replace the vacuum switching valve No. 1.



(2) Apply battery voltage across the terminals.
(3) Check that air flows from port E to port F.
If the operation is not as specified, replace the vacuum switching valve No. 1.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE HEATED OXYGEN SENSOR (See page EC-19)**
3. **REMOVE EXHAUST PIPE ASSEMBLY CENTER**
   (a) Remove the 2 bolts and 2 compression springs, then separate the exhaust pipe center.
   (b) Separate the 4 insulators from the exhaust tail pipe, then remove the exhaust pipe center.
4. **REMOVE EXHAUST FRONT PIPE ASSEMBLY NO.2**
   (a) Remove the 2 bolts and 2 nuts, then separate the exhaust front pipe No. 2 from the exhaust front pipe.
   (b) Remove the 2 nuts, then separate the exhaust front pipe No. 2 from the exhaust manifold LH.
   (c) Separate the insulator, then remove the exhaust front pipe No. 2.
5. **REMOVE EXHAUST PIPE ASSEMBLY FRONT**
   (a) Remove the 2 nuts, then remove the exhaust front pipe.

INSTALLATION

1. INSTALL EXHAUST PIPE ASSEMBLY FRONT

(a) Install a new gasket onto the exhaust manifold RH.

(b) Install the exhaust front pipe with the new 2 nuts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

2. INSTALL EXHAUST FRONT PIPE ASSEMBLY NO.2

(a) Install a new gasket onto the exhaust manifold LH.

(b) Install a new gasket onto the exhaust front pipe.

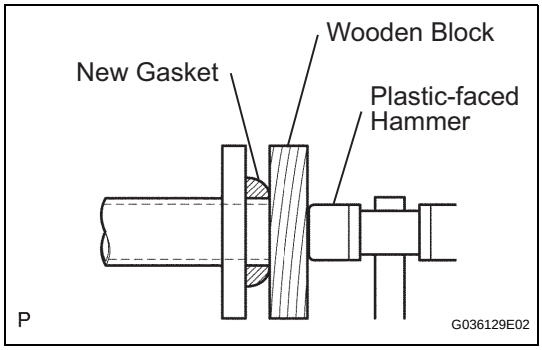
(c) Install the exhaust front pipe No. 2 onto the insulator.

(d) Install the exhaust front pipe No. 2 onto the exhaust manifold LH with the new 2 nuts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

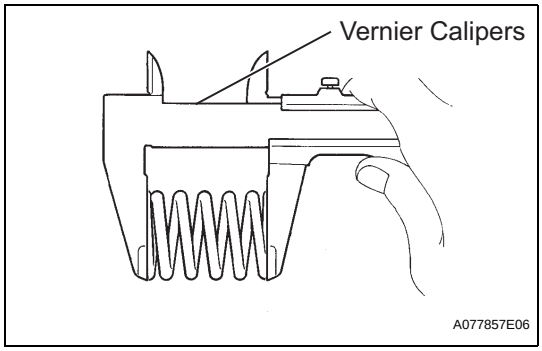
(e) Install the exhaust front pipe No. 2 onto the exhaust front pipe with the 2 bolts and 2 nuts.
Torque: 48 N*m (489 kgf*cm, 35 ft.*lbf)

(f) Install a new gasket onto the exhaust front pipe No. 2.

(1) Using a wooden block and plastic- faced hammer, tap in a new gasket until it is flush with the exhaust front pipe No. 2.
NOTICE:
- **Make sure that the gasket is in the correct direction when installing.**
- **Do not reuse the removed gasket.**



EX



3. INSTALL EXHAUST PIPE ASSEMBLY CENTER

(a) Check the free length.

(1) Using vernier calipers, measure the free length of the compression spring.
Minimum:
40.5 mm (1.594 in.)
If the free length is less than the minimum, replace the compression spring.

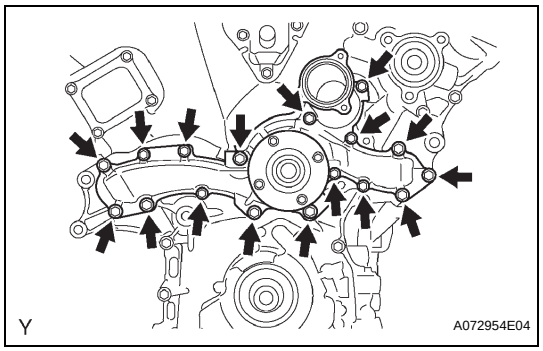
(b) Install the exhaust tail pipe onto the 4 insulators.

(c) Install the exhaust pipe center onto the exhaust front pipe No. 2 with the 2 bolts and 2 springs.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

4. INSTALL HEATED OXYGEN SENSOR (See page EC-19)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

6. CHECK FOR EXHAUST GAS LEAKAGE



INSTALLATION

1. **INSTALL WATER PUMP ASSEMBLY**
   (a) Install a new gasket and the water pump with the 17 bolts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt A
   23 N*m (235 kgf*cm, 17 ft.*lbf) for bolt B

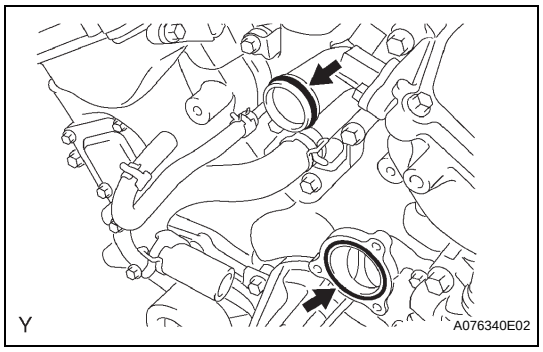
2. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY**
   HINT:

Drive Type	See Page
2WD	EM-26
Pre Runner and 4WD	EM-48

3. **INSTALL COOLER COMPRESSOR ASSEMBLY (See page ES-410)**

4. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**

5. **INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY**
   (a) Install the 2 idler pulleys with the 2 bolts.
   Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



6. **INSTALL WATER INLET**
   (a) Install a new O-ring onto the water outlet pipe.
   (b) Install a new gasket onto the water pump.
   (c) Apply soapy water to the O-ring.

   (d) Install the water inlet with the 5 bolts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   (e) Connect the 5 water by-pass hoses.
   (f) Connect the 2 radiator hoses.
   (g) Connect the 2 oil cooler hoses (with oil cooler).

7. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**

8. **INSTALL FAN SHROUD (See page CO-20)**

9. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**

10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

11. **ADD ENGINE COOLANT (See page CO-3)**

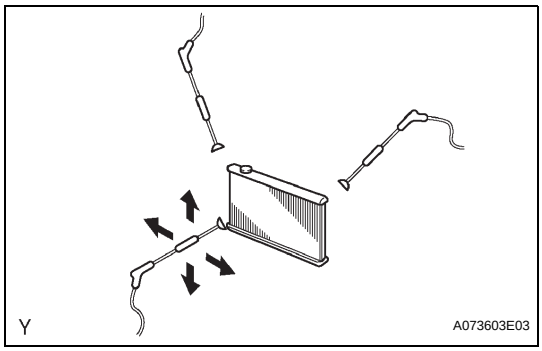
12. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**

13. **INSTALL V-BANK COVER**
    (a) Install the V-bank cover with the 2 nuts.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

14. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)

(a) Install the engine under cover with the 4 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

NOTICE:
The above pumping speed is for the first pumping only (in order to close the vacuum valve). After the first pumping, the pumping speed can be reduced.
HINT:
Use the tester's maximum reading as the opening pressure. If the opening pressure is less than the minimum, replace the radiator cap.



ON-VEHICLE CLEANING

1. CHECK FINS FOR BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner and then dry them with compressed air.

NOTICE:

- **If the distance between the steam cleaner and core is too small, the fins may be damaged. So, keep to the following injection distances.**

Injection Pressure kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not to expose electronic components to water.**

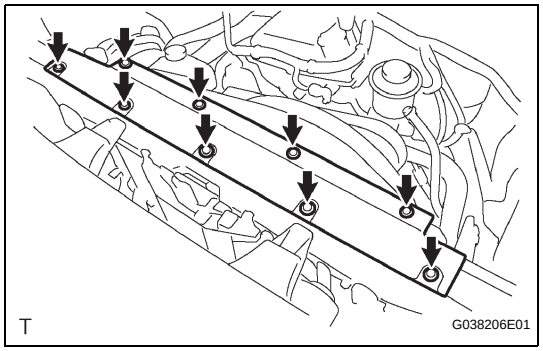
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the engine under cover No. 1.

3. **DRAIN ENGINE COOLANT (See page CO-3)**

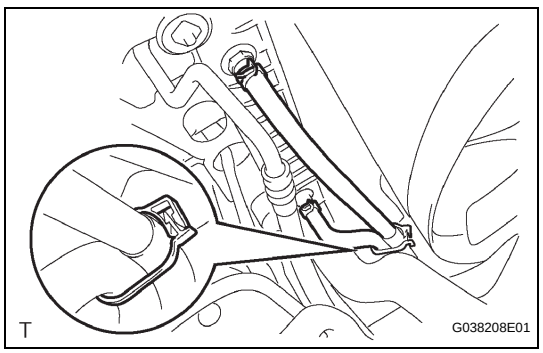
4. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH**
   (a) Disengage the 9 clips, then remove the radiator support to frame seal LH.



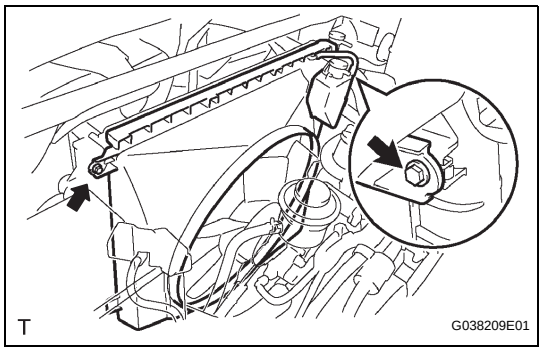
5. **REMOVE FAN SHROUD**
   (a) Loosen the 4 nuts shown in the illustration.
   (b) Remove the fan and generator V belt.

   (c) Disconnect the radiator reserve tank hose from the radiator.

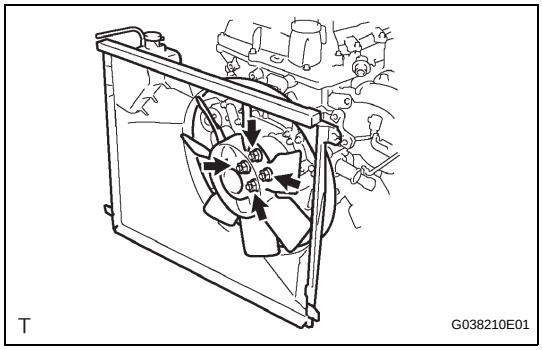
   (d) Disconnect the oil cooler inlet and outlet hoses from the fan shroud. (for Automatic Transmission)



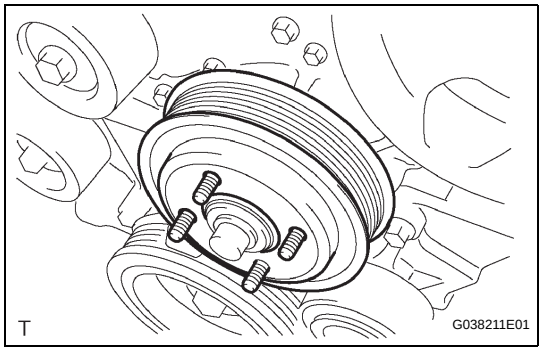
CO



(e) Remove the 2 bolts shown in the illustration.

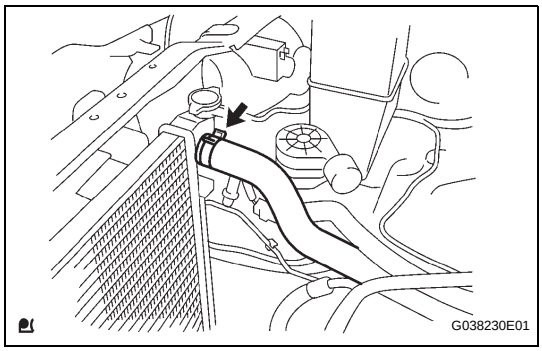


(f) Remove the 4 nuts, then remove the fan shroud and fan with fluid coupling together.
NOTICE:
Make sure that the fan shroud and fan with fluid coupling do not make any contact with the radiator when they are removed.



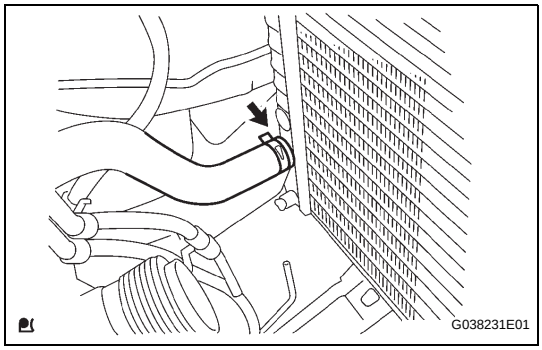
(g) Remove the fan pulley.

CO

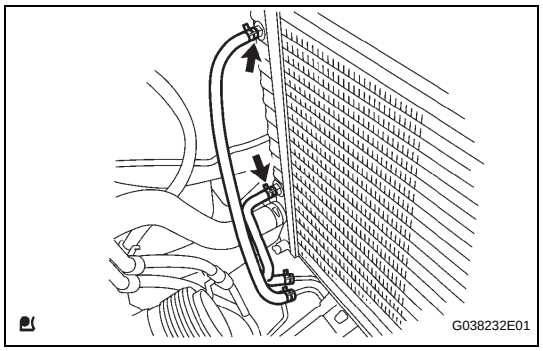


6. REMOVE RADIATOR ASSEMBLY

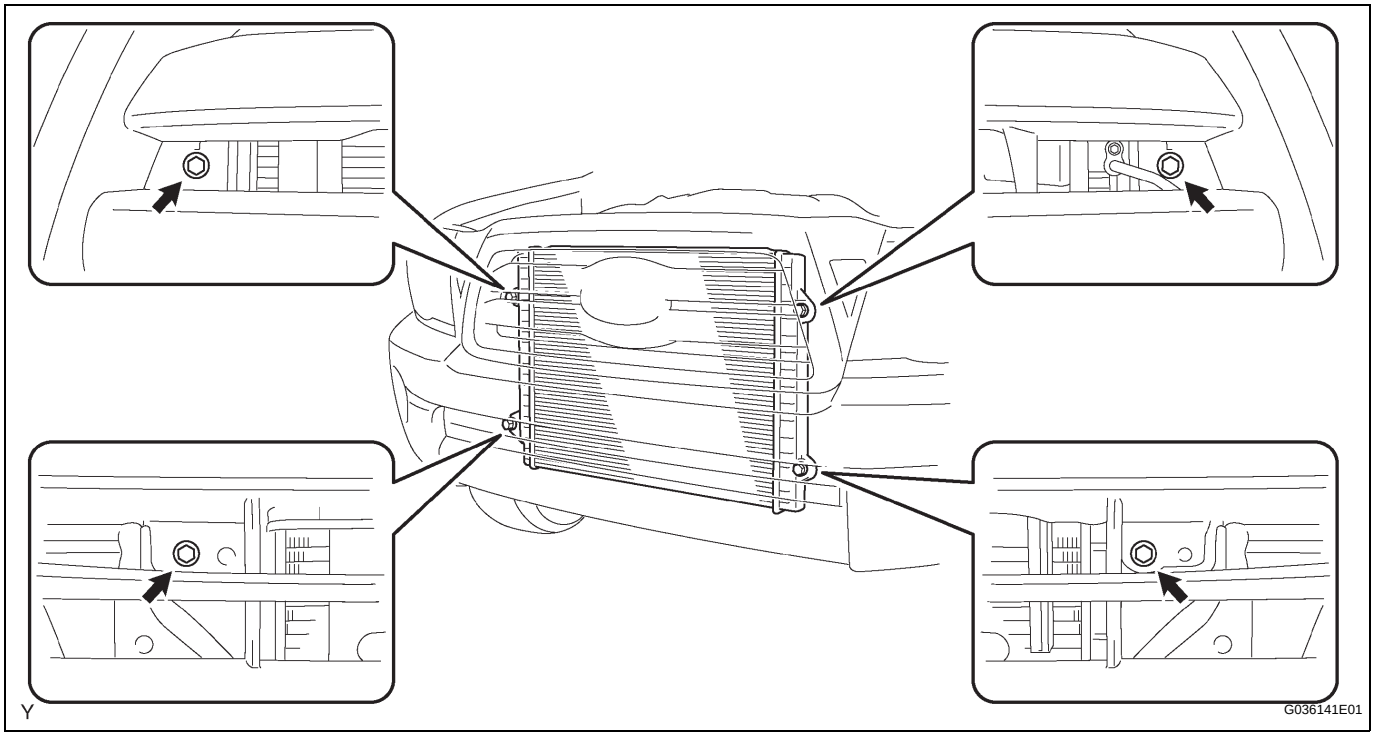
(a) Disconnect the radiator hose inlet.



(b) Disconnect the radiator hose No. 2.



(c) Disconnect the oil cooler inlet and outlet hoses. (for Automatic Transmission)
(d) Remove the 4 bolts, then remove the radiator.

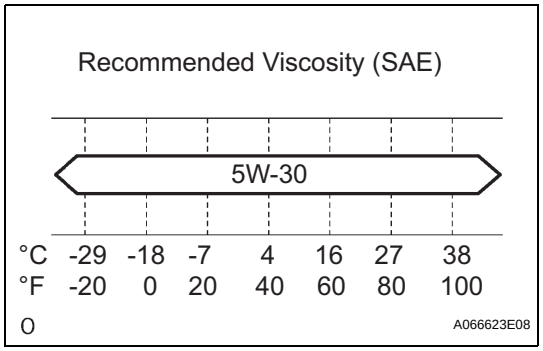


ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

(a) Warm up the engine, then stop the engine and wait for 5 minutes.

(b) Check that the engine oil level is between the low level and full level marks on the level gauge.
If low, check for leakage and top oil up to the full level mark.
NOTICE:
Do not fill with engine oil to above the full level mark.

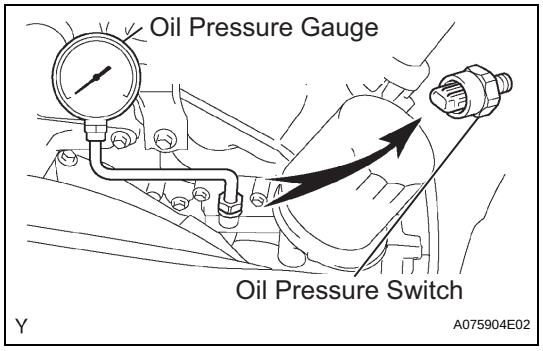


2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water intrusion, discoloration or thinning.
If the quality is visibly poor, replace the oil.
Oil grade:
Use API grade SM "Energy-Conserving" or ILSAC multigrade engine oil.
SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.
If SAE 5W-30 is not available, use SAE 10W-30.
However, it should be replaced with SAE 5W-30 at the next oil replacement.

3. INSPECT OIL PRESSURE

(a) Disconnect the oil pressure switch connector.



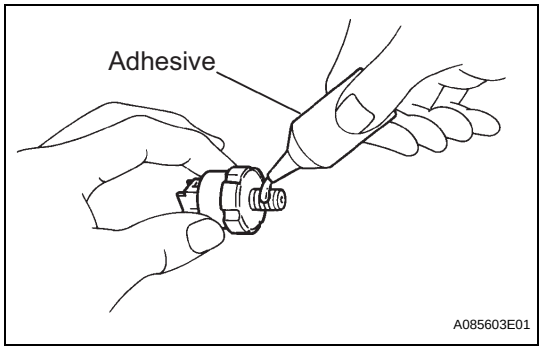
(b) Using a 24 mm deep socket wrench, remove the oil pressure switch.

(c) Install the oil pressure gauge.

(d) Warm up the engine.

(e) Inspect the oil pressure.
Oil pressure

When Idling	**29 kPa (0.3 kgf*cm^2, 4.3 psi) or more**
At 3,000 rpm	**294 to 588 kPa (3.0 to 6.0kgf*cm^2, 43 to 85 psi)**



(f) Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(g) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not start the engine within 1 hour of installation.

(h) Connect the oil pressure switch connector.

(i) Check for engine oil leakage.

REMOVAL

1. **REMOVE HOOD SUB-ASSEMBLY**
2. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See Page FU-1)
3. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the engine under cover No. 1.
4. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO.2 (for Pre Runner and 4WD Type, Regular Cab)**
   (a) Remove the 4 bolts, then remove the engine under cover No. 2.
5. **DRAIN ENGINE OIL (See page LU-3)**
6. **DRAIN ENGINE COOLANT (See page CO-3)**
7. **REMOVE BATTERY**
8. **REMOVE BATTERY TRAY**
9. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
10. **REMOVE FAN SHROUD (See page CO-13)**
11. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page EC-14)**
12. **REMOVE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
13. **REMOVE AIR CLEANER CASE**
    (a) Remove the 3 bolts, then remove the air cleaner case.
14. **SEPARATE VANE PUMP ASSEMBLY (See page EM-21)**
15. **REMOVE RADIATOR HOSE NO.2**
16. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (With Air Conditioning) (See page EM-21)**
17. **REMOVE RADIATOR HOSE INLET**
18. **SEPARATE WATER HOSE SUB-ASSEMBLY (See page EM-92)**
19. **DISCONNECT FUEL HOSE (See page FU-11)**
20. **DISCONNECT FUEL HOSE NO.2 (See page FU-11)**
21. **SEPARATE FUEL VAPOR FEED HOSE ASSEMBLY (See page EM-93)**
22. **DISCONNECT AIR INJECTION SYSTEM NO.1 HOSE (See page EM-93)**
23. **DISCONNECT ENGINE WIRE (See page EM-93)**
24. **REMOVE EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)**

25. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)**

26. **REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY**

Transmission	See page
R155	MT-6
R155F	MT-8

27. **REMOVE AUTOMATIC TRANSMISSION ASSEMBLY** (See Page AT-109)

28. **REMOVE ENGINE ASSEMBLY (See page EM-93)**

29. **REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-30
R155F	CL-35

30. **REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-30
R155F	CL-35

31. **REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-77)**

32. **REMOVE DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-78)**

33. **REMOVE REAR END PLATE (See page EM-66)**

34. **REMOVE INTAKE AIR CONNECTOR (See page ES-452)**

35. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**

36. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-5)**

37. **REMOVE IDLER PULLEY SUB-ASSEMBLY NO.1 (See page EM-23)**

38. **REMOVE IDLE PULLEY ASSEMBLY W/BRACKET (With Air Conditioning) (See page ES-446)**

39. **REMOVE CRANKSHAFT POSITION SENSOR (See page ES-446)**

40. **REMOVE CAMSHAFT POSITION SENSOR (See page ES-444)**

41. **REMOVE INTAKE MANIFOLD TO HEAD GASKET NO. 1 (See page ES-460)**

42. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-38)**

43. **REMOVE CRANKSHAFT PULLEY (See page EM-74)**

44. REMOVE OIL LEVEL GAGE SUB-ASSEMBLY

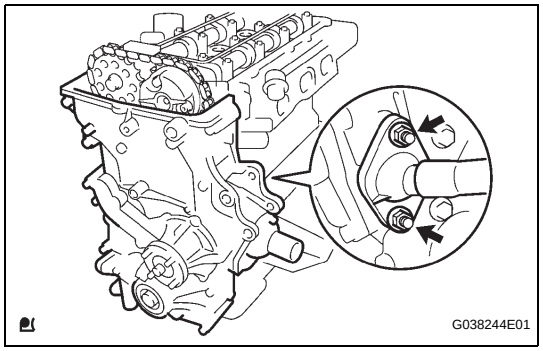
45. REMOVE OIL PAN SUB-ASSEMBLY NO.2 (See page EM-24)

46. REMOVE OIL STRAINER SUB-ASSEMBLY (See page EM-24)

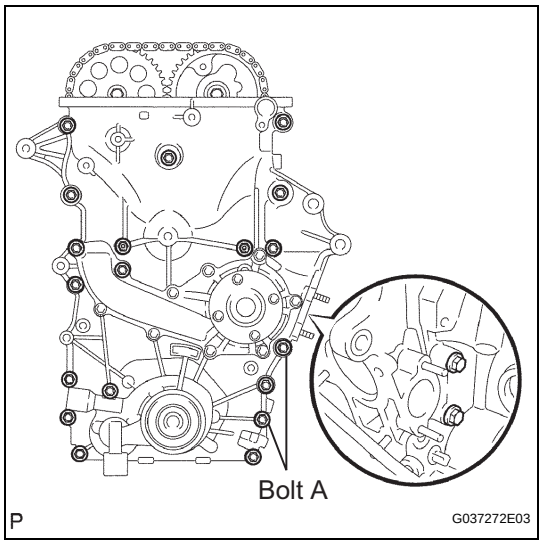
47. REMOVE OIL PAN SUB-ASSEMBLY (See page EM-25)

48. REMOVE OIL PUMP

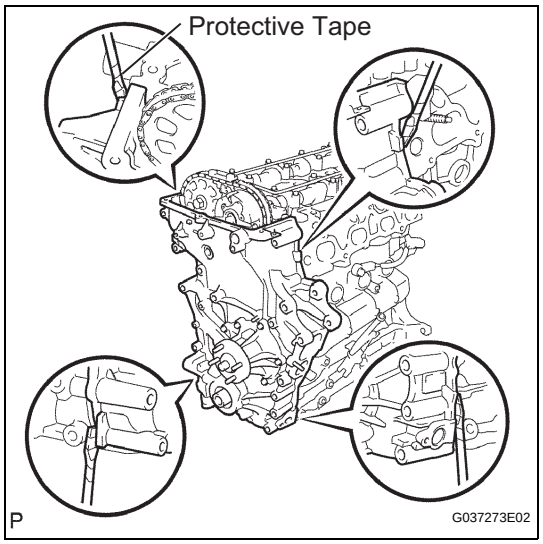
(a) Remove the 2 nuts, then separate the water by-pass pipe No. 1.



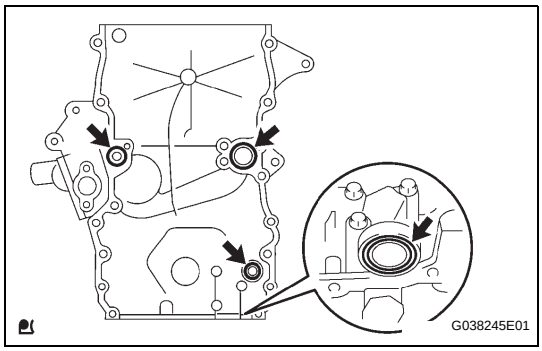
(b) Remove the 19 bolts and 2 nuts shown in the illustration.
HINT:
If the vehicle is equipped with air conditioning, bolts A are already removed since they are for installing the idle pulley with bracket.



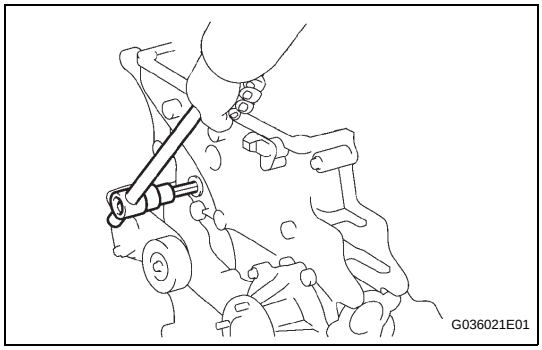
(c) Remove the oil pump by prying between the oil pump and cylinder head or cylinder block with a screwdriver.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and timing chain cover.



LU



(d) Remove the 4 O-rings.

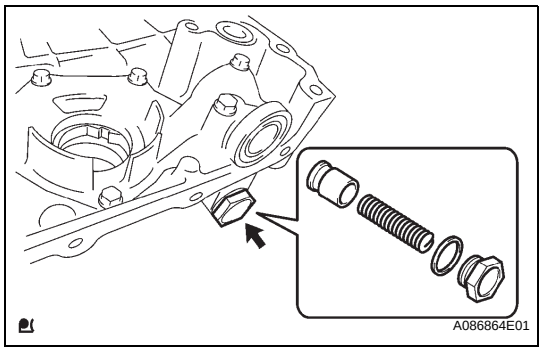


(e) Using a 10 mm socket hexagon wrench, remove the head straight screw plug.

49. REMOVE WATER INLET (See page CO-7)

50. REMOVE THERMOSTAT (See page CO-7)

51. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-149)

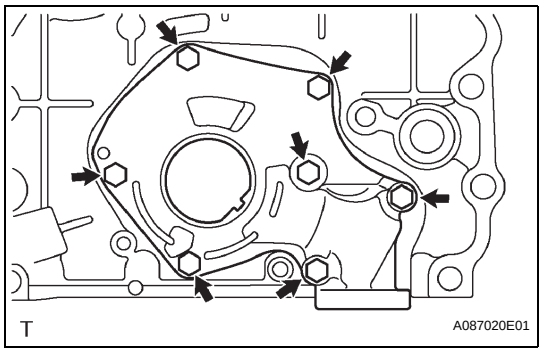


DISASSEMBLY

1. REMOVE OIL PUMP RELIEF VALVE

(a) Using a 27 mm socket wrench, remove the relief valve plug and gasket.

(b) Remove the valve spring and oil pump relief valve.

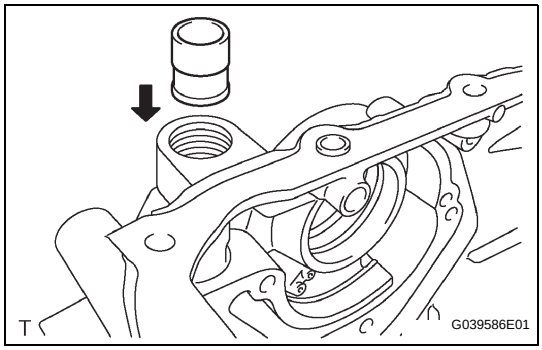


2. REMOVE OIL PUMP COVER

(a) Remove the 7 bolts and oil pump cover.

3. REMOVE OIL PUMP ROTOR SET

(a) Remove the oil pump rotor set from the timing chain cover.



INSPECTION

1. REMOVE OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil and drop it into the relief valve hole.

(b) Check that the relief valve falls in smoothly by its own weight.
If it does not, replace the relief valve. If necessary, replace the timing chain cover.

ON-VEHICLE INSPECTION

1. CHECK IGNITION COIL ASSEMBLY AND PERFORM SPARK TEST

(a) Check for DTCs.

NOTICE:

If any DTC is present, perform troubleshooting in accordance with a procedure for that DTC.

(b) Check that sparks occur.

(1) Remove the ignition coils.

(2) Using a 16 mm plug wrench, remove the spark plugs.

(3) Install the spark plugs to each ignition coil, and connect the ignition coil connectors.

(4) Disconnect the 6 injector connectors.

(5) Ground the spark plugs.

(6) Check if sparks occur at each spark plug while the engine is being cranked.

NOTICE:

- **Be sure to ground the spark plug when checking.**
- **Replace the ignition coil if it receives an impact.**
- **Do not crank the engine for more than 2 seconds.**

If sparks do not occur, perform the following test:

(c) Spark test flow chart.

(1) Check that the wire harness side connector of ignition coil with igniter is securely connector.

Result

Result	Proceed to
NG	Connect securely.
OK	Go to next step.

(2) Perform spark test on each ignition coil with igniter.

1.Replace ignition coil with igniter with a normal one.

2.Perform spark test again.

Result

Result	Proceed to
NG	Replace ignition coil with igniter.
OK	Go to next step.

(3) Check power supply to ignition coil.

1.Turn ignition switch ON.

2.Check that there is battery positive (+) voltage at ignition coil positive (+) terminal.

Result

Result	Proceed to
NG	Check wiring between ignition switch and ignition coil assembly.
OK	Go to next step.

(4) Check resistance in VVT sensor out put voltage (see step 2).

Result

Result	Proceed to
NG	Following test 1 and 2.
OK	Go to next step.

1. Check that the wiring between VVT sensor and ECM.

Result

Result	Proceed to
NG	Repair wiring between VVT sensor and ECM.
OK	Repair VVT sensor

(5) Check resistance in crankshaft position sensor.

Standard resistance

Standard condition	Specified condition
at 20°C (68°F)	1850 to 2450 Ω

Result

Result	Proceed to
NG	Replace the crankshaft position sensor.
OK	Go to next step.

(6) Check IGT signal from ECM.

Result

Result	Proceed to
NG	Check ECM
OK	Repair wiring between ignition coil and ECM.

(d) Using a 16 mm plug wrench, install the spark plugs.
(e) Install the ignition coils.

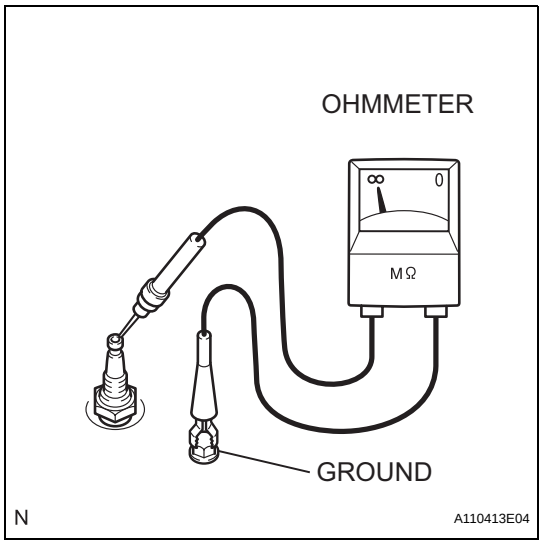
2. CHECK SPARK PLUG

NOTICE:

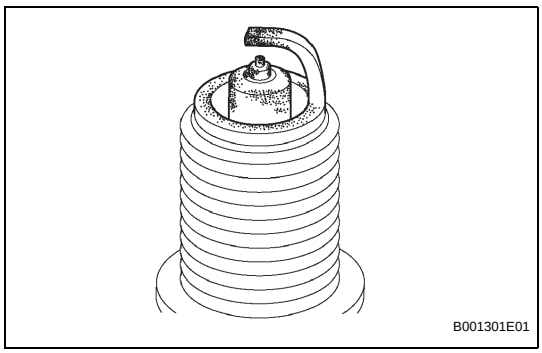
- **Never use a wire brush for cleaning.**
- **Never attempt to adjust the electrode gap on a used spark plug.**
- **The spark plug should be replaced every 200,000 km (120,000 miles).**

(a) Remove the engine cover.
(b) Remove the air cleaner.
(c) Remove the ignition coil.
(d) Remove the spark plug.

IG



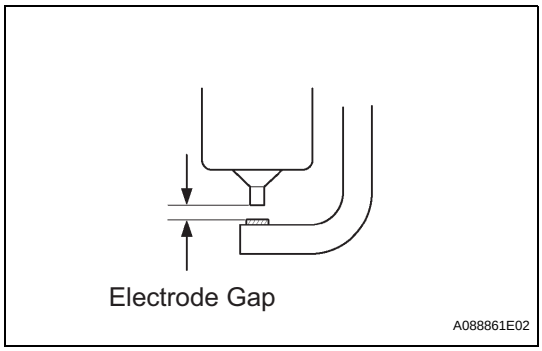
(e) Check the electrode.
(1) Using an ohmmeter, measure the insulation resistance.
Correct insulation resistance:
10 MΩ or more
If the resistance is below the specified range, remove the spark plug.
HINT:
If an ohmmeter is not available, perform the following simple inspection.



(f) Alternative inspection method:
(1) Quickly accelerate the engine to 4,000 rpm 5 times.
(2) Remove the spark plug.
(3) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

(g) Check the spark plug for any damage on its threads and insulator.
If there is damage, replace the spark plug. If not, reinstall the spark plug.
Recommended spark plug

Manufacturer	Spark Plug Type
DENSO	K20HR-U11
NGK	LFR6C11



(h) Check the spark plug electrode gap.
Standard electrode gap:
1.0 to 1.1 mm (0.039 to 0.043 in.)
If the electrode gap is larger than the standard, replace the spark plug.

ON-VEHICLE INSPECTION

NOTICE:
In this section, the terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

1. PERFORM SPARK TEST

(a) Check for DTCs.
NOTICE:
If a DTC is present, perform troubleshooting procedures for that DTC.

(b) Check if sparks occur.
(1) Remove the ignition coil.
(2) Remove the spark plug.
(3) Install the spark plug to the ignition coil and connect the ignition coil connector.
(4) Disconnect the 4 injector connectors.
(5) Ground the spark plug.
(6) Visually check that sparks occur while the engine is being cranked.
NOTICE:
- **Be sure to ground the spark plug when checking.**
- **If the ignition coil has been struck or dropped, replace it.**
- **Do not crank the engine for more than 2 seconds.**

(c) Spark test flow chart.
(1) Check that the wire harness side connector of the ignition coil with igniter is securely connected.
Result

Result	Proceed to
NG	Connect securely
OK	Go to next step

(2) Perform spark test on each ignition coil with igniter.
1. Replace ignition coil with igniter with a normal one.
2. Perform spark test again.
Result

Result	Proceed to
OK	Replace ignition coil with igniter
NG	Go to next step

(3) Check power supply to ignition coil with igniter.
1. Turn the ignition switch ON.

2. Check that there is battery voltage at ignition coil positive (+) terminal.
Result

Result	Proceed to
NG	Check wiring between engine switch and ignition coil with igniter
OK	Go to next step

(4) Check resistance of camshaft position sensor.
Standard resistance

Temperature	Specified Condition
Cold	835 to 1,400 Ω
Hot	1,060 to 1,645 Ω

Result

Result	Proceed to
NG	Replace camshaft position sensor
OK	Go to next step

(5) Check resistance of crankshaft position sensor.
Standard resistance

Temperature	Specified Condition
Cold	1,690 to 2,740 Ω
Hot	2,065 to 3,225 Ω

Result

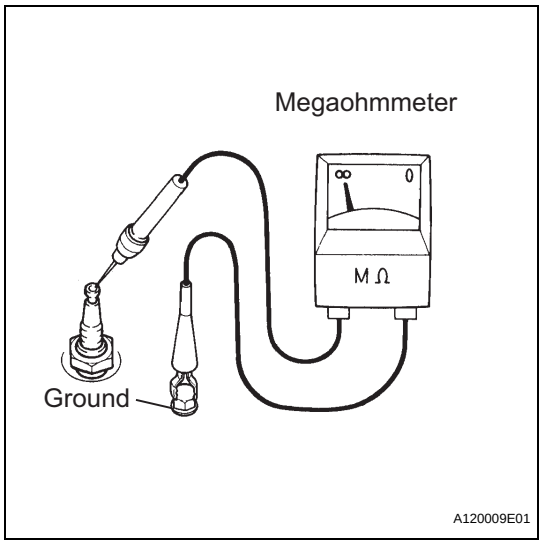
Result	Proceed to
NG	Replace crankshaft position sensor.
OK	Go to next step

(6) Check IGT signal from ECM.
Result

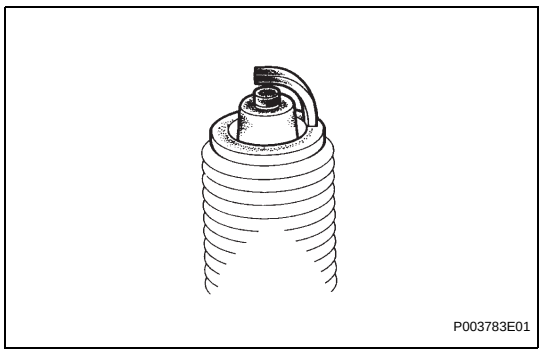
Result	Proceed to
NG	Check ECM
OK	Repair wiring between ignition coil and ECM

(d) Using a 16 mm plug wrench, install the spark plug.
Torque: 18 N*m (183 kgf*cm, 13 ft.*lbf)
(e) Install the ignition coil.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

2. CHECK SPARK PLUG
NOTICE:
- **Do not use a wire brush for cleaning.**
- **Do not attempt to adjust the electrode gap of a used spark plug.**



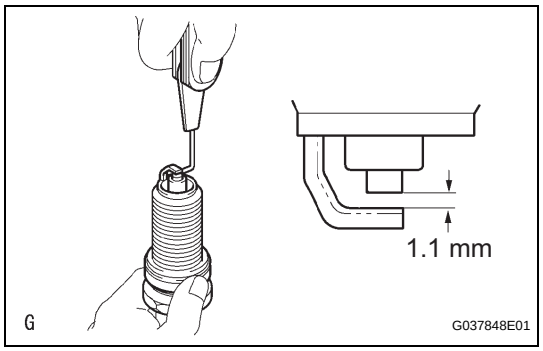
(a) Check the electrode.
(1) Using a megohmmeter, measure the insulation resistance.
Insulation resistance:
10 MΩ or more
HINT:
If a megohmmeter is not available, perform the following simple inspection instead.



(b) Alternative inspection method:
(1) Quickly accelerate the engine to 4,000 rpm 5 times.
(2) Remove the spark plug.
(3) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

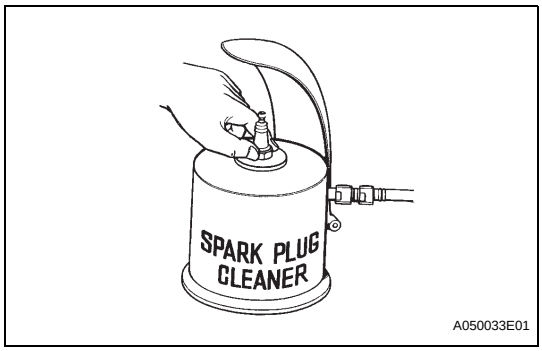
(c) Check the spark plug for any damage on its thread and insulator.
If there is damage, replace the spark plug. If not, reinstall the spark plug.
Recommended spark plug

Manufacturer	Spark Plug Type
DENSO made	SK20R11
NGK made	ILFR6C11



(d) Check the spark plug electrode gap.
Maximum electrode gap for used spark plug:
1.3 mm (0.051 in.)
If the gap is greater than the maximum, replace the spark plug.
Electrode gap for new spark plug:
1.1 mm (0.043 in.)
NOTICE:
When adjusting the gap of a new spark plug, bend only the base of the ground electrode. Do not touch the tip. Never attempt to adjust the gap of a used plug.

IG



(e) Clean the spark plugs.
If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.
Air pressure:
588 kPa (6 kgf/cm^2, 85 psi)
Duration:
20 seconds or less
HINT:
Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

REASSEMBLY

1. INSTALL STARTER ARMATURE ASSEMBLY

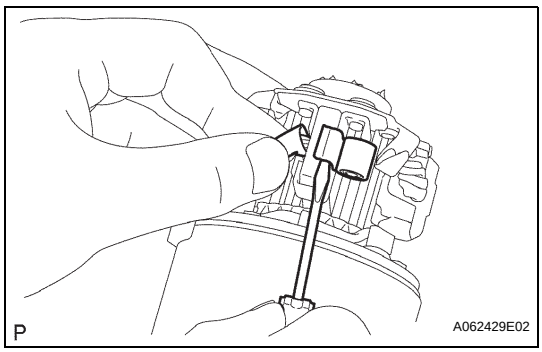
(a) Apply grease to the bearings, and install it onto the starter yoke.

2. INSTALL STARTER BRUSH HOLDER ASSEMBLY

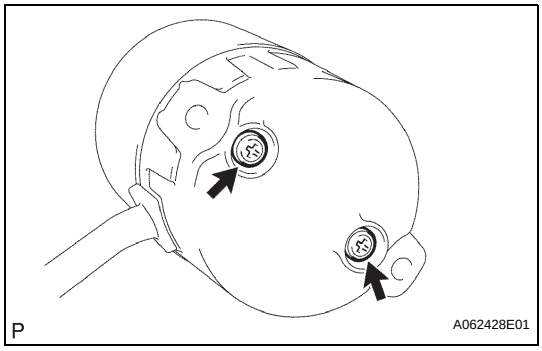
(a) Place the brush holder on the armature.

(b) Using a screwdriver, install the 4 brushes.

(c) Install a new O-ring onto the groove of the field frame.



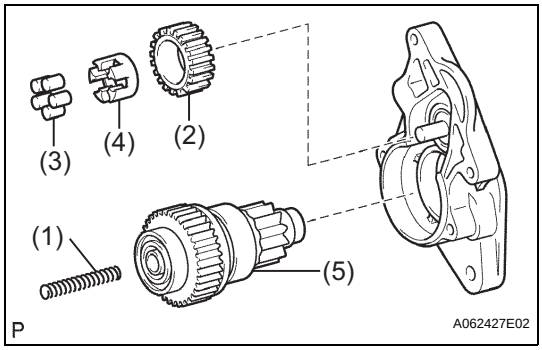
(d) Install the end frame with the 2 screws.
Torque: 3.8 N*m (39 kgf*cm, 34 in.*lbf)



3. INSTALL MAGNET STARTER SWITCH ASSEMBLY

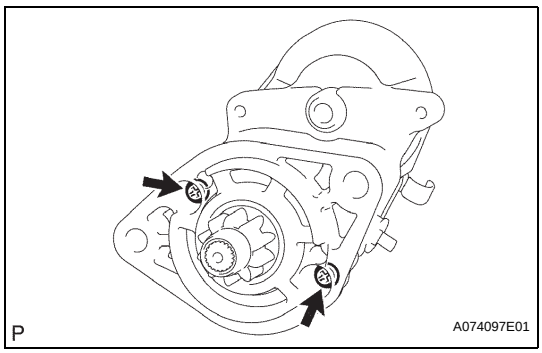
(a) Apply grease to the steel ball, and install it onto the clutch shaft hole.

(b) Apply grease to parts (2) - (5), and install all the parts below onto the starter drive housing.



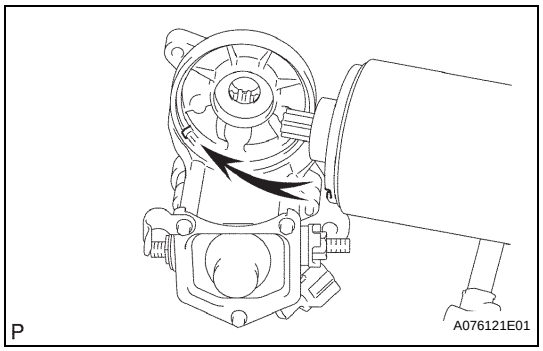
(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch

(c) Install the magnet starter switch with the 2 screws.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)

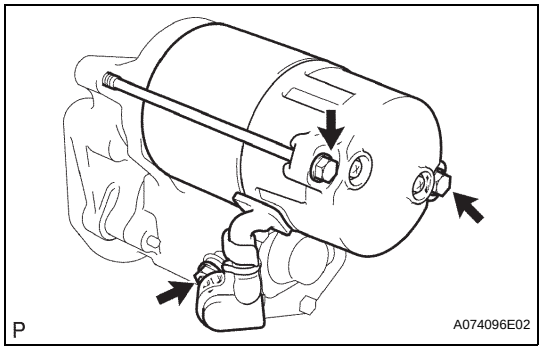


4. INSTALL STARTER YOKE ASSEMBLY

(a) Install a new O-ring onto the groove of the starter yoke.



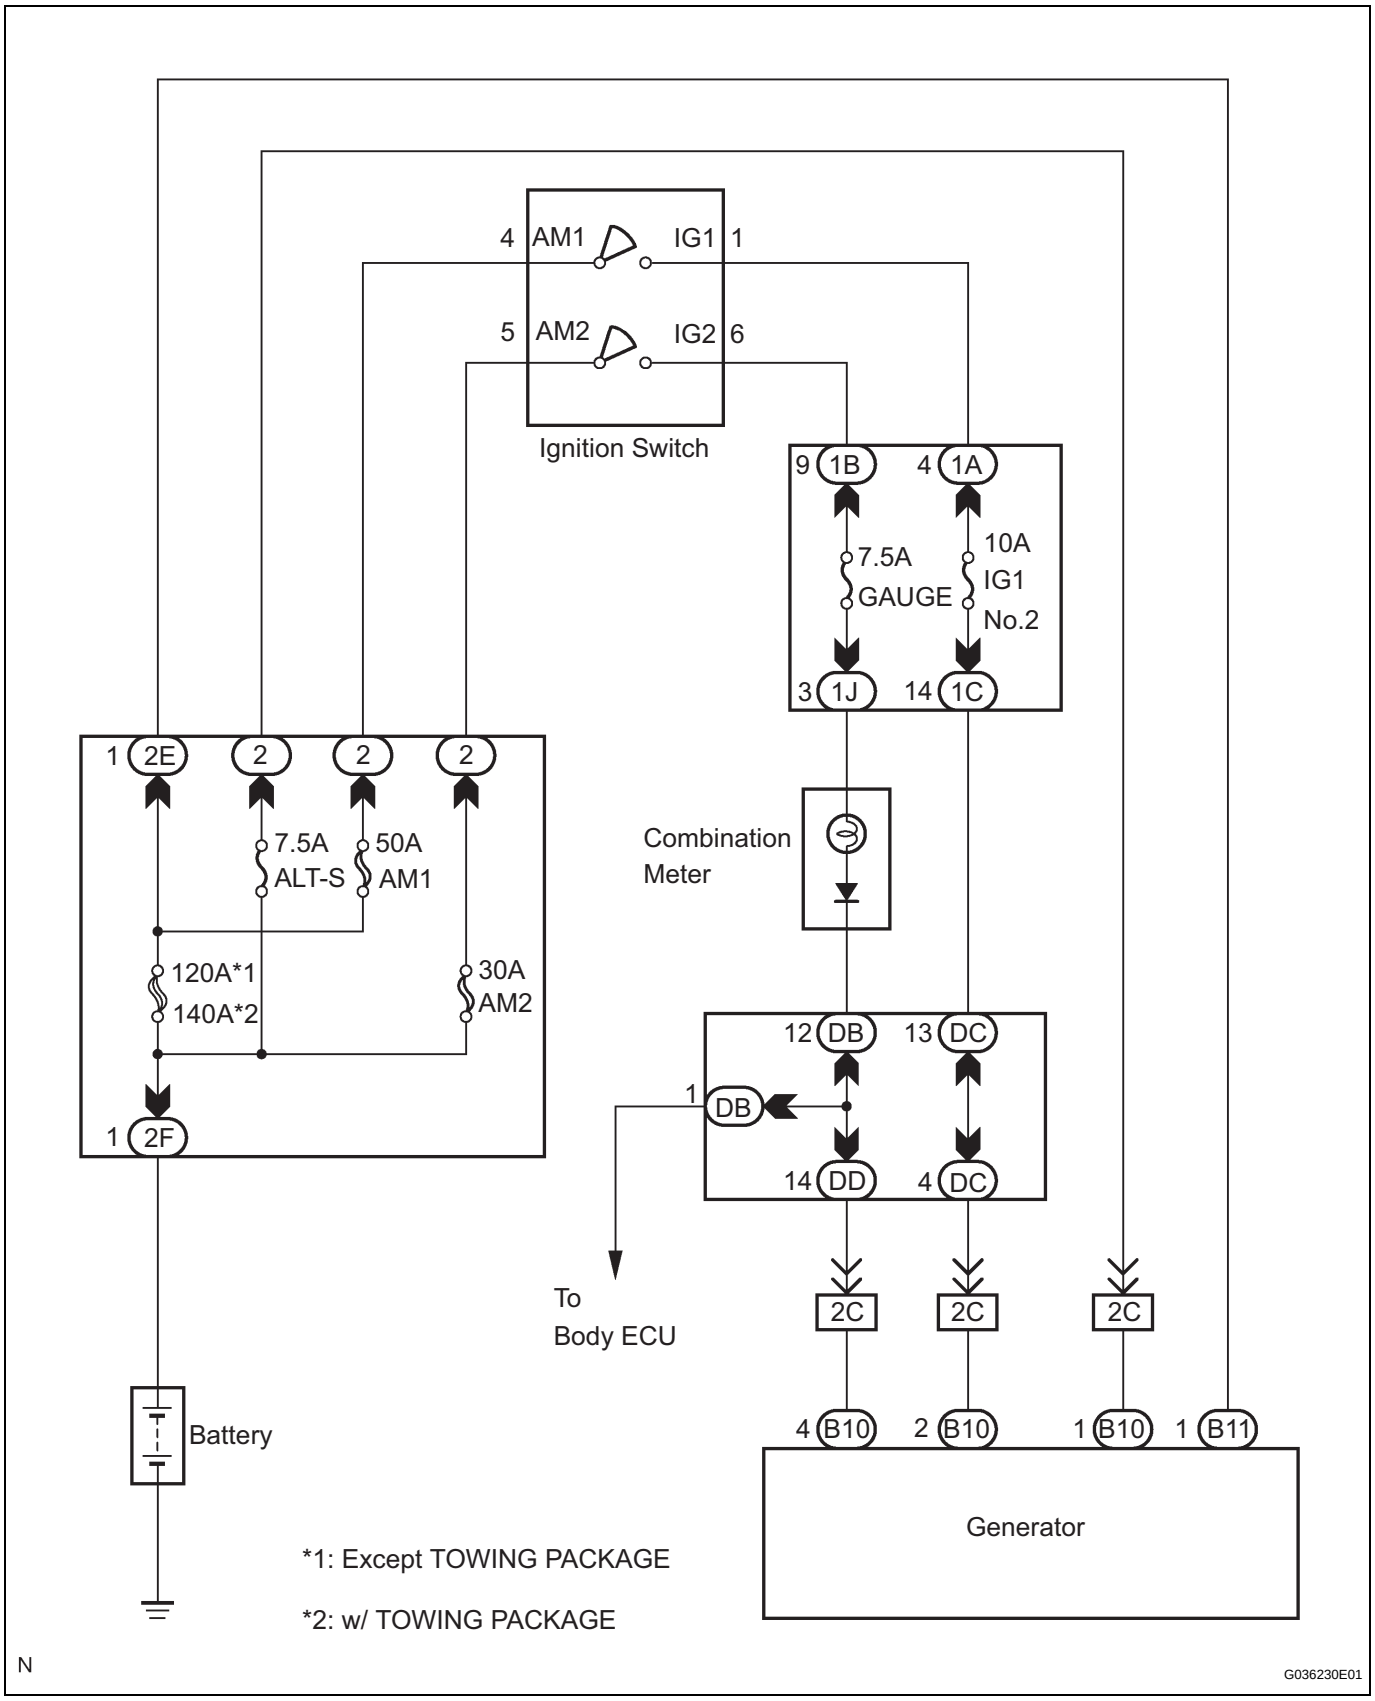
(b) Align the key of the starter yoke with the groove of the magnet starter switch.



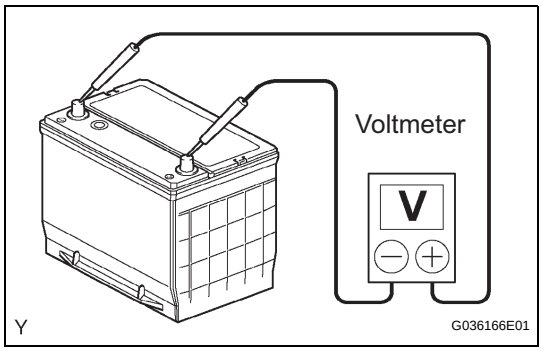
(c) Install the starter yoke and armature with the 2 through bolts.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)

(d) Connect the lead wire to terminal C with the nut.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

SYSTEM DIAGRAM



CH



ON-VEHICLE INSPECTION

1. INSPECT BATTERY (for Maintenance Free Battery)

(a) Check the voltage.

(1) If it has been less than 20 minutes since you stopped driving the vehicle or since the engine was stopped, turn the ignition switch and electrical systems (headlight, blower motor, rear defogger etc.) to the ON position for 60 seconds. This will remove the surface charge on the battery.

(2) Turn the ignition switch to OFF.

(3) Turn the electrical systems to OFF.

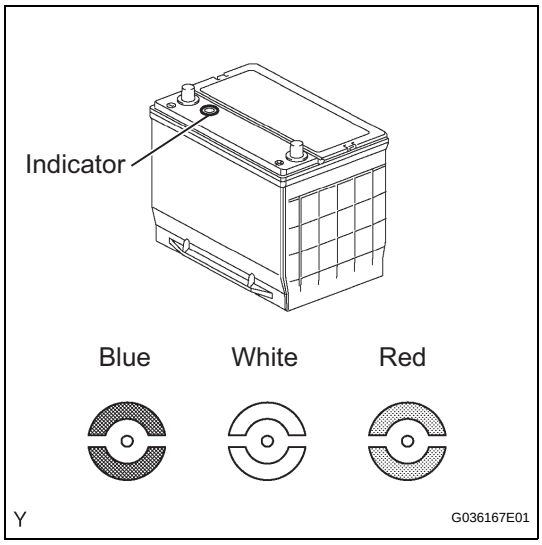
(4) Using a voltmeter, measure the battery voltage between the negative (-) and positive (+) terminals of the battery.

Standard:

12.6 to 12.9 V at 20°C(68°F)

If the result is not as specified, replace the battery.

(b) Check the indicator is as shown in the illustration.



Indicator Color	Condition
Blue	Ready
White	Charging Necessary
Red	Have battery checked by your Toyota dealer

2. INSPECT BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Visually check the battery terminals.

(1) Check that the battery terminals are not loose or corroded.

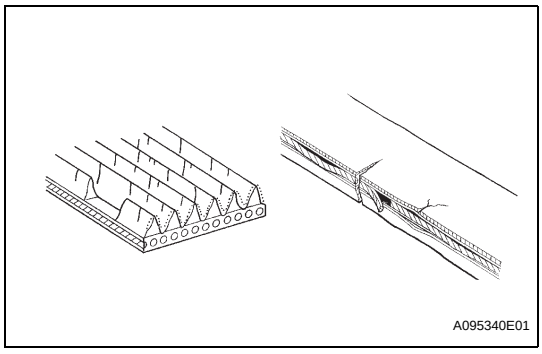
(b) Visually check the fusible link and fuses.

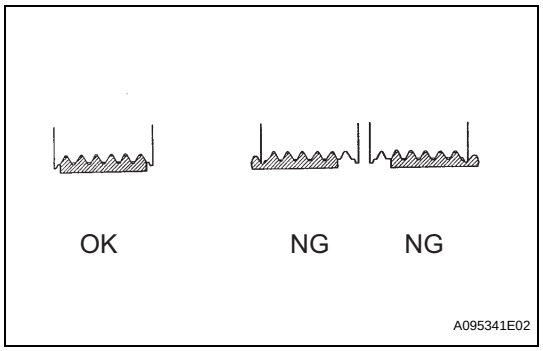
(1) Check that there is continuity between the fusible links, high current fuses and regular fuses.

3. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords, etc..

- If any defects are found, replace the V-ribbed belt.
- Cracks on the rib side of the belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.





(b) Check that the belt fits properly in the ribbed grooves. Confirm by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

4. INSPECT GENERATOR WIRING

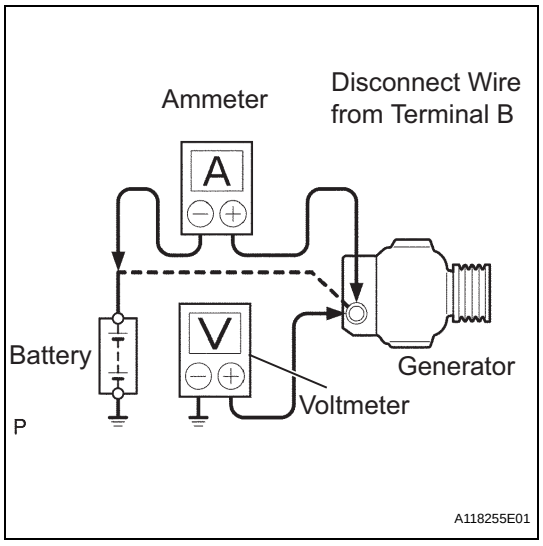
(a) Visually check the generator wiring.
  (1) Check that the wiring is in good condition.

5. INSPECT ABNORMAL NOISES

(a) Listen for abnormal noises from the generator.
  (1) Check that no abnormal noises are heard from the generator while the engine is running.

6. INSPECT CHARGING WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to ON. Check that the charge warning light comes on.
(b) Start the engine and check that the light goes off. If the light does not operate as specified, troubleshoot the charge warning light circuit.



7. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) If a tester is not available, connect a voltmeter and ammeter to the charging circuit as follows.
  (1) Disconnect the wire from terminal B of the generator, then connect it to the negative (-) lead of the ammeter.
  (2) Connect the positive (+) lead of the ammeter to terminal B of the generator.
  (3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.
  (4) Ground the negative (-) lead of the voltmeter.
(b) Check the charging circuit.
  (1) Maintain the engine speed at 2,000 rpm and check the reading on the ammeter and voltmeter.
  Standard:
  10 A or less for amperage
  13.2 to 14.8 V for voltage

8. INSPECT CHARGING CIRCUIT WITH LOAD

(a) With the engine running at 2,000 rpm, turn the high beam headlights ON and turn the heater blower switch to the HI position.
(b) Check the reading on the ammeter.
  Standard:
  30 A or more
  - If the ammeter reading is less than the standard amperage, repair the generator.
  - If the battery is fully charged, the indication will sometimes be less than the standard amperage.

ON-VEHICLE INSPECTION

1. INSPECT BATTERY (for Maintenance Free Battery)

(a) Check the voltage.

(1) If it has been less than 20 minutes since you stopped driving the vehicle or since the engine was stopped, turn the ignition switch and electrical systems (headlight, blower motor, rear defogger etc.) to the ON position for 60 seconds. This will remove the surface charge on the battery.

(2) Turn the ignition switch to OFF.

(3) Turn the electrical systems OFF.

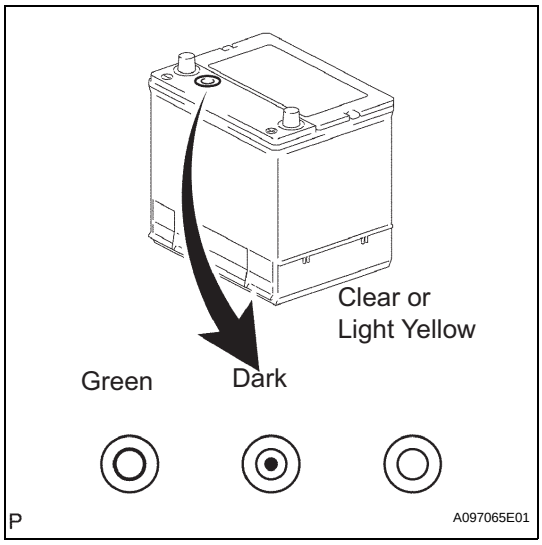
(4) Using a voltmeter, measure the battery voltage between the negative (-) and positive (+) terminals of the battery.

Standard voltage:

12.5 to 12.9 V at 20°C (68°F)

If the voltage is less than the minimum, charge or replace the battery.

(b) Check the indicator is as shown in the illustration.



Indicator Color	Condition
Green	OK
Dark	Charging Necessary
Clear or Light Yellow	Insufficient Water

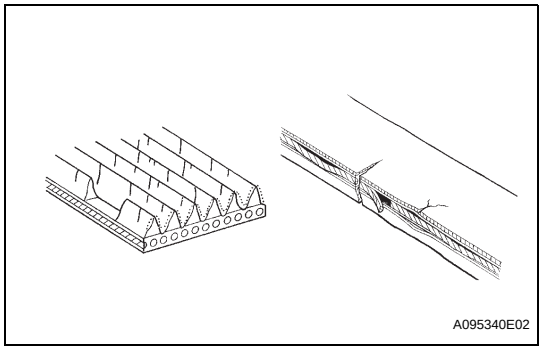
2. INSPECT BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Visually check the battery terminals.

(1) Check that the battery terminals are not loose or corroded.

(b) Visually check the fusible links and fuses.

(1) Check that there is continuity between the fusible links, high current fuses and regular fuses.



3. INSPECT V-RIBBED BELT

(a) Visually check the belt for excessive wear, frayed cords, etc..

- If any defects are found, replace the V-ribbed belt.
- Cracks on the rib side of the belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

4. INSPECT GENERATOR WIRING

(a) Visually check the generator wiring.

(1) Check that the wiring is in good condition.

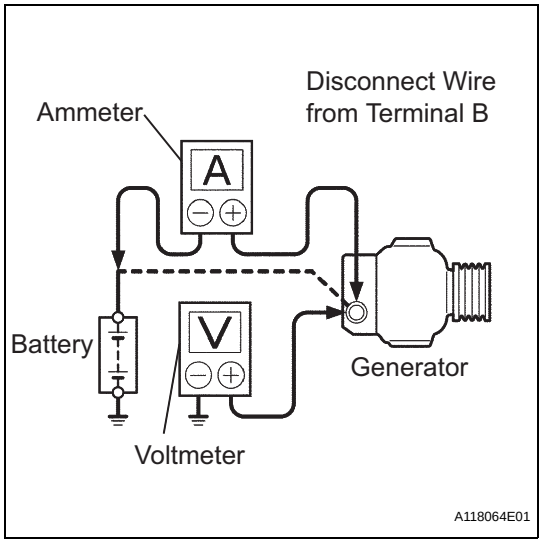
(a) Listen for abnormal noises from the generator.

(1) Check that no abnormal noises are heard from the generator while the engine is running.

6. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off. If the light does not operate as specified, troubleshoot the charge warning light circuit.



7. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) If a tester is not available, connect a voltmeter and ammeter to the charging circuit as follows.

(1) Disconnect the wire from terminal B of the generator, then connect it to the negative (-) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.

(3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.

(4) Ground the negative (-) lead of the voltmeter.

(b) Check the charging circuit.

(1) Maintain the engine speed at 2,000 rpm and check the reading on the ammeter and voltmeter.

Standard:

10 A or less for amperage

13.2 to 14.8 V for voltage

8. INSPECT CHARGING CIRCUIT WITH LOAD

(a) With the engine running at 2,000 rpm, turn the high beam headlights ON and turn the heater blower switch to the HI position.

(b) Check the reading on the ammeter.

Standard:

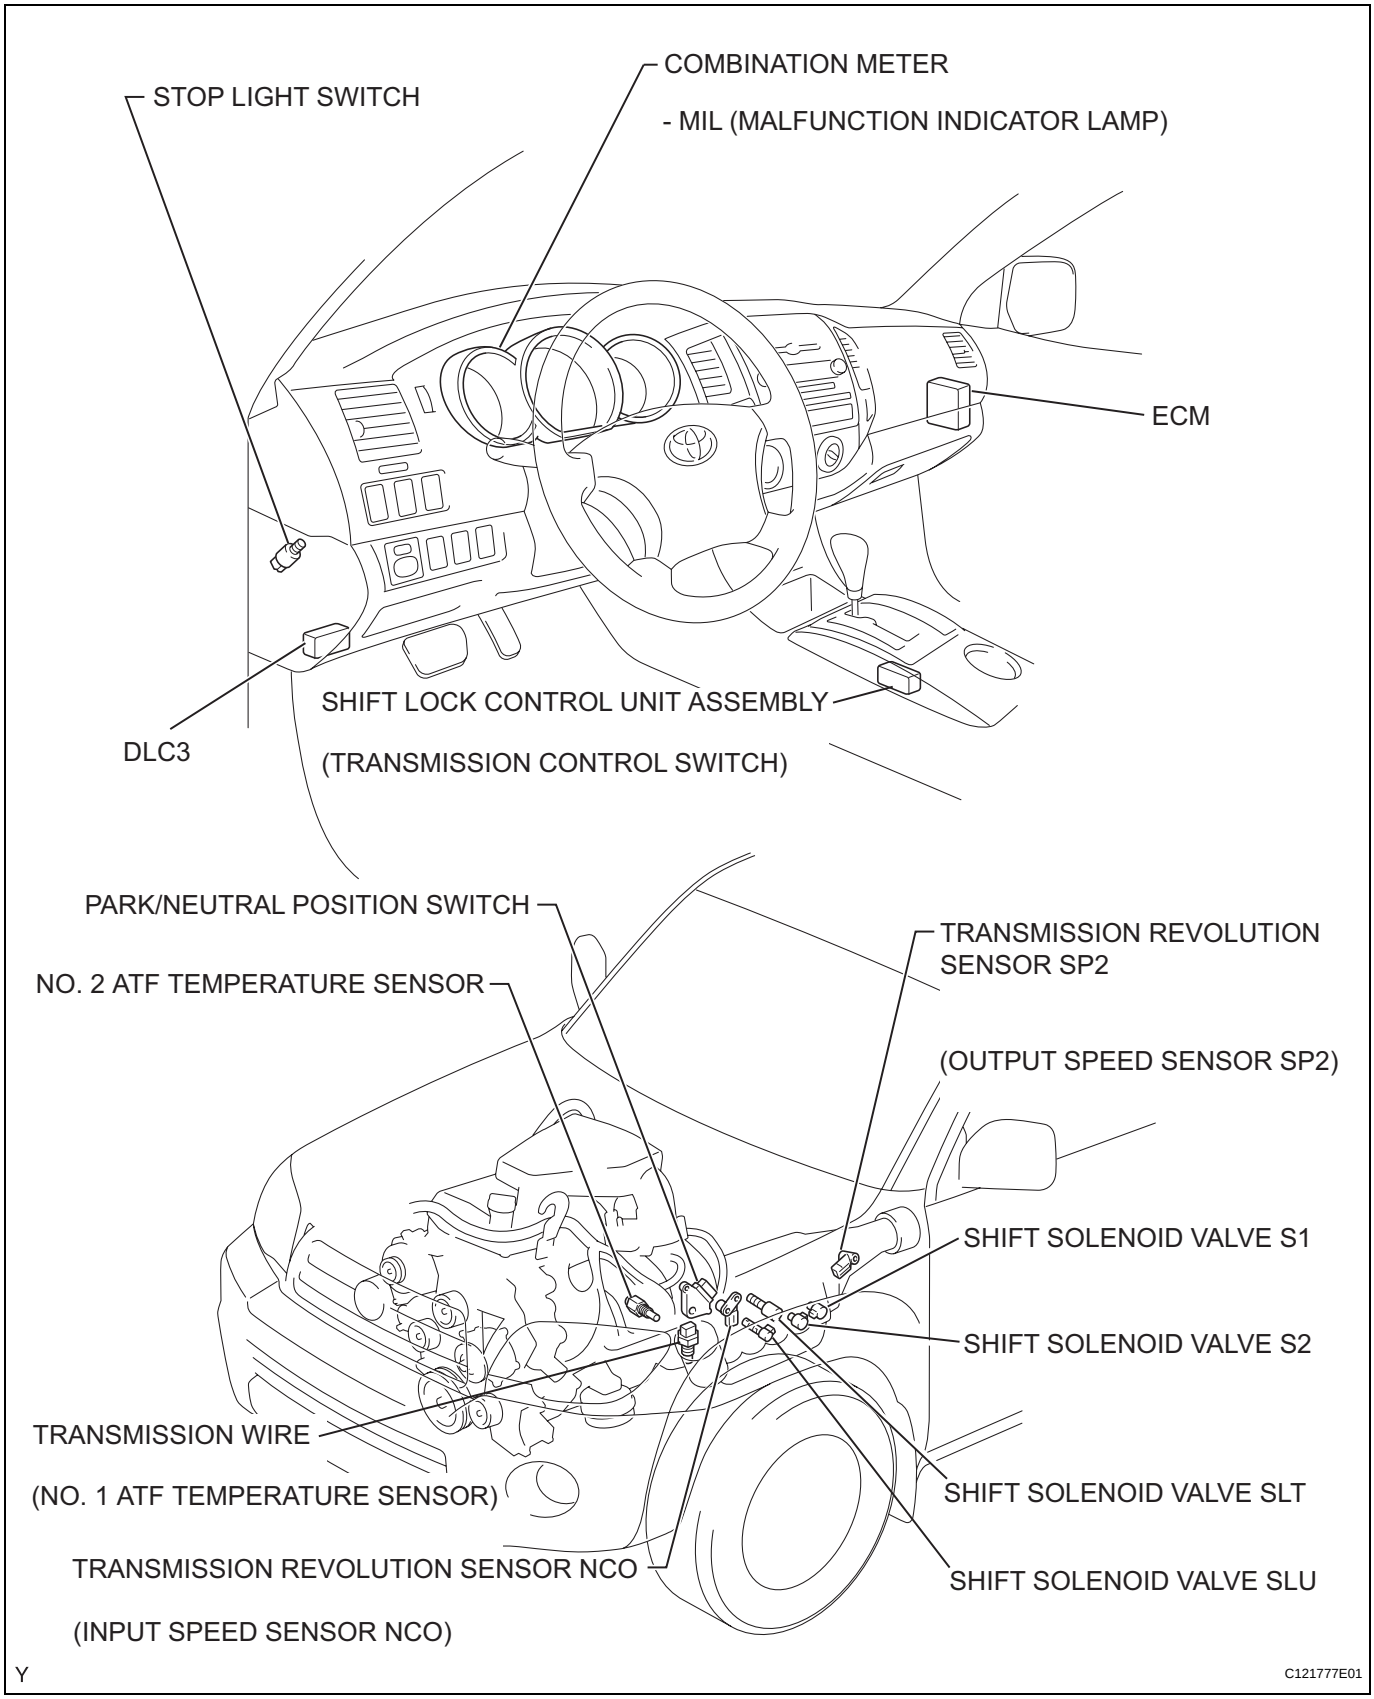
30 A or more

- If the ammeter reading is less than the standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than the standard amperage.

DEFINITION OF TERMS

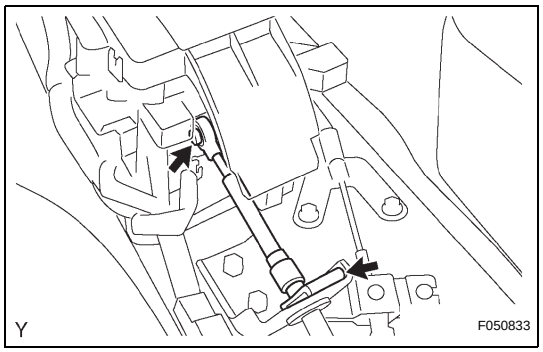
Term	Definition
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble code that are output by the ECM based on the same malfunction detection logic.
Typical enabling conditions	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While one sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has been completed.
Required sensors/components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects the malfunction only one time during a single driving cycle. "Continuous" means that the ECM detects the malfunction every time the enabling conditions are met.
Duration	The minimum time that the ECM must detect a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the ECM determines that there is a malfunction and sets a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediate" means that the ECM illuminates the MIL the instant the ECM determines that there is a malfunction. "2 driving cycles" means that the ECM illuminates the MIL if the same malfunction is detected again in a 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. These ranges are for a reference. They cannot be used to determine whether a sensor or solenoid is defective or not.

PARTS LOCATION

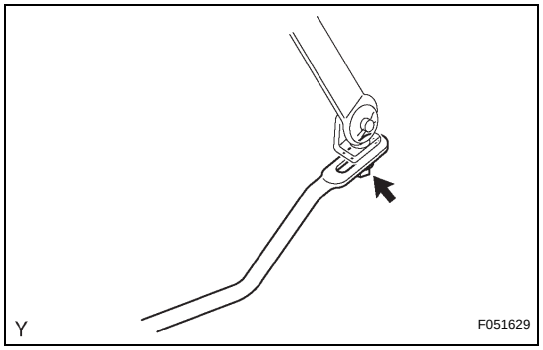


REMOVAL

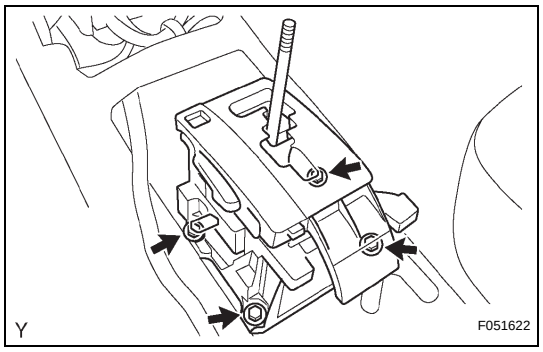
1. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-9)**
2. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
3. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Separate Seat Type) (See page IP-10)**
4. **REMOVE FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-10)**
5. **REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-11)**



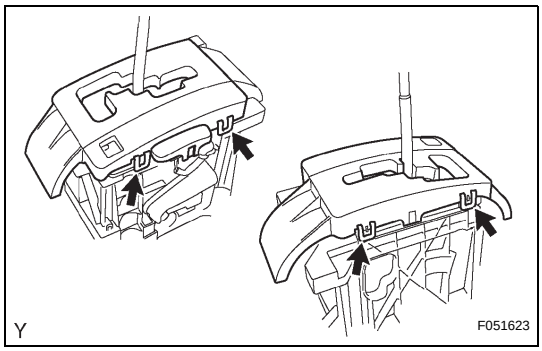
6. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) CABLE TYPE:
      (1) Disconnect the transmission control cable assembly from the shift lever assembly.
      (2) Remove the clip and disconnect the transmission control cable.



7. **SEPARATE FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY**
   (a) ROD TYPE:
      (1) Remove the nut, then separate the floor shift gear shifting rod.



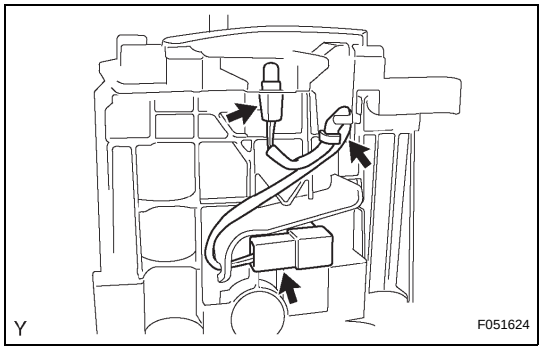
8. **REMOVE FLOOR SHIFT ASSEMBLY**
   (a) Disconnect the 2 connectors and 2 clamps.
   (b) Remove the 4 bolts and floor shift assembly.



DISASSEMBLY

1. REMOVE UPPER POSITION INDICATOR HOUSING

(a) Release the 4 claws with a screwdriver and remove the position indicator housing and slide cover.

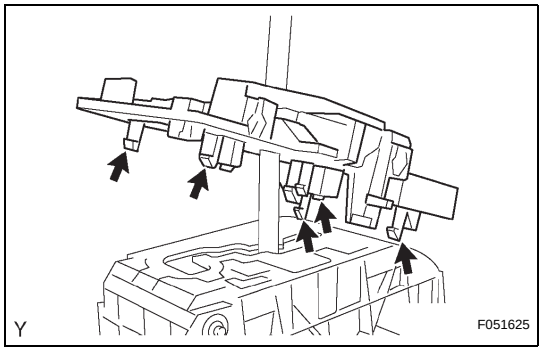


2. REMOVE INDICATOR LAMP WIRE SUB-ASSEMBLY

(a) Remove the indicator lamp wire sub-assembly.

(b) Remove the bulb from the indicator lamp wire sub-assembly.

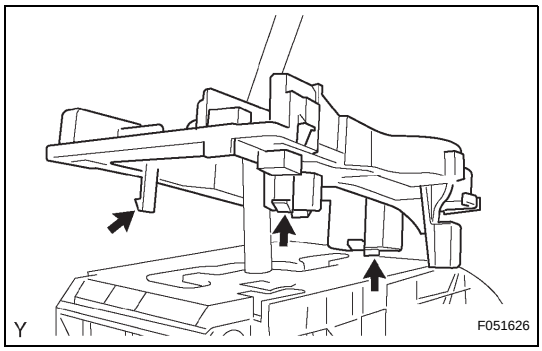
3. REMOVE SHIFT LOCK RELEASE BUTTON



4. REMOVE LOWER POSITION INDICATOR HOUSING

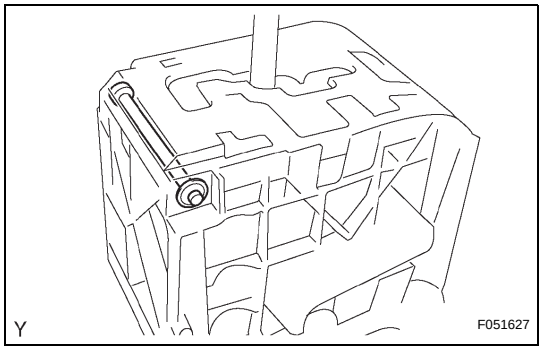
(a) CABLE TYPE:

(1) Release the 5 claws with a screwdriver and remove the position indicator housing lower.



(b) ROD TYPE:

(1) Release the 3 claws with a screwdriver and remove the position indicator housing lower.



5. REMOVE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Remove the shift lever nut and shift lever lock pin.

(b) Remove the shift lever guide housing.

(c) Release the 2 claws with a screwdriver and remove the shift lock release link and spring.

(d) Remove the 2 screws and the shift lock control ECU.

REMOVAL

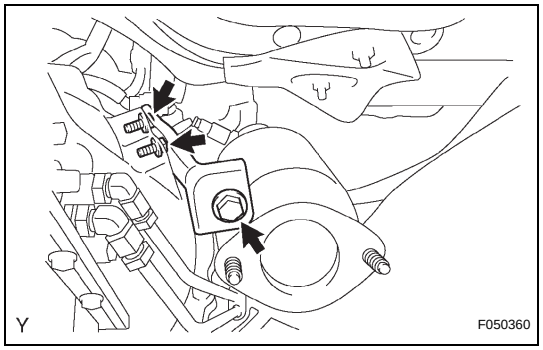
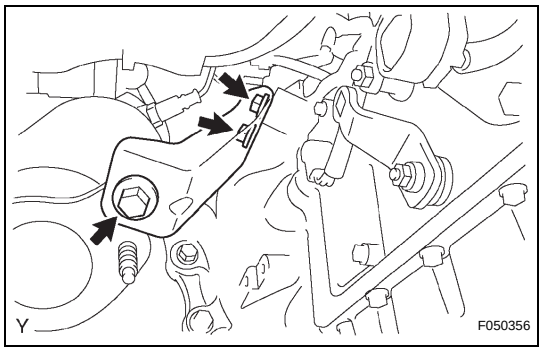
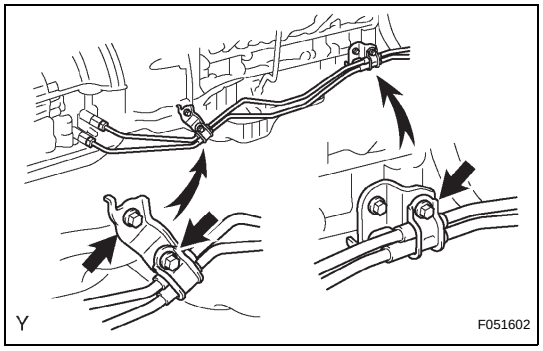
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY**
3. **REMOVE NO. 2 ENGINE UNDER COVER (w/ No. 2 Engine Under Cover)**
4. **DISCONNECT OXYGEN SENSOR**
5. **REMOVE EXHAUST PIPE**
   (See page EX-3)
6. **REMOVE PROPELLER SHAFT ASSEMBLY FRONT (See page PR-16)**
7. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-8)**
8. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug and gasket, and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)
9. **REMOVE MANIFOLD STAY**
   (a) Remove the 3 bolts and manifold stay.

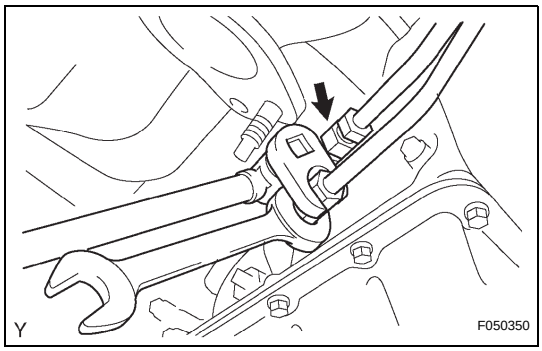


10. **REMOVE NO.2 MANIFOLD STAY**
    (a) Remove the 3 bolts and manifold stay No. 2.



11. **DISCONNECT NO.1 OIL COOLER INLET TUBE**
    (a) Remove the 3 bolts and 2 clamps.

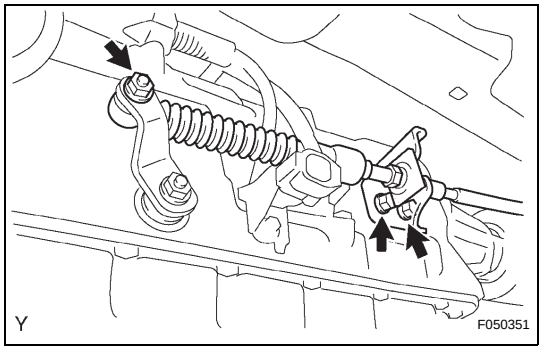




(b) Using SST, disconnect the oil cooler inlet tube No. 1.
SST 09023-12701

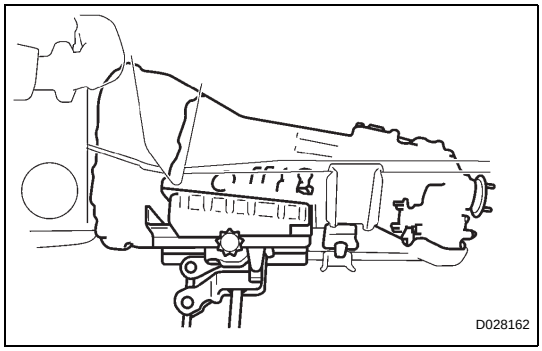
12. DISCONNECT NO.1 OIL COOLER OUTLET TUBE

(a) Using SST, disconnect the oil cooler outlet tube No. 1.
SST 09023-12701



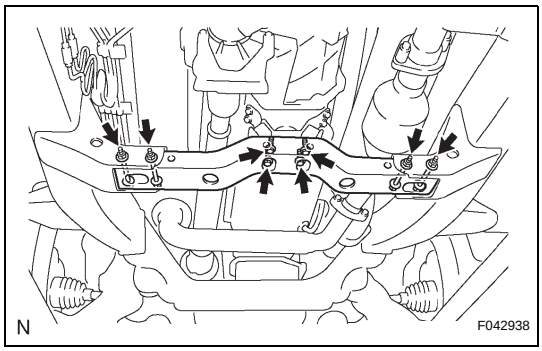
13. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Remove the nut and disconnect the transmission control cable.
(b) Remove the 2 bolts and disconnect the transmission control cable.



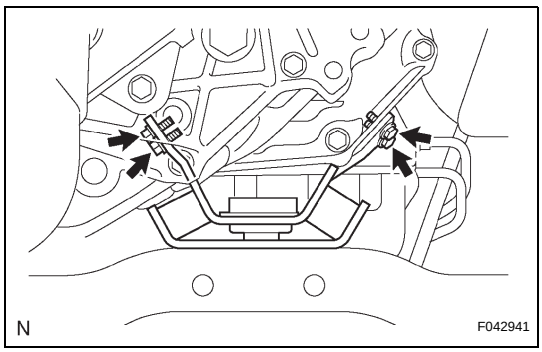
14. SUPPORT AUTOMATIC TRANSMISSION WITH TRANSFER

(a) Support the automatic transmission assembly with a transmission jack.



15. REMOVE NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Remove the 4 bolts on the frame crossmember sub-assembly No. 3.
(b) Remove the 4 nuts, 4 bolts and frame crossmember sub-assembly No. 3.



16. REMOVE REAR NO.1 ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts and engine mounting insulator rear from the automatic transmission.

17. DISCONNECT CONNECTOR

(a) Disconnect the park/neutral position switch connector.
(b) Disconnect the transmission wire connector.
(c) Disconnect the 2 speed sensor connectors.
(d) Disconnect the transfer shift actuator connector.

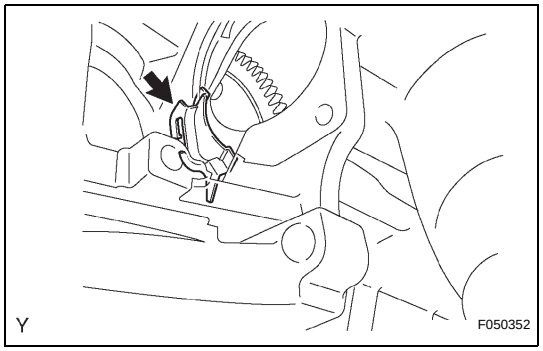
(e) Disconnect the indicator switch No. 1 connector.
(f) Disconnect the indicator switch No. 2 connector.

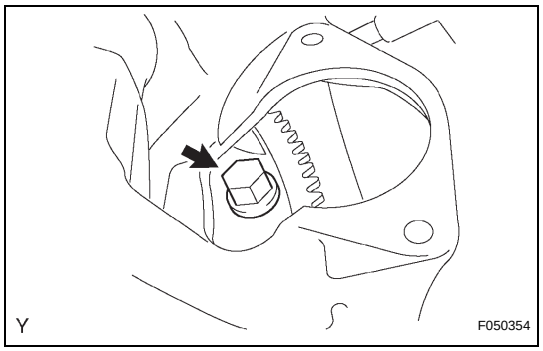
18. DISCONNECT WIRE HARNESS

19. REMOVE STARTER ASSEMBLY (See page ST-13)

20. REMOVE FLYWHEEL HOUSING SIDE COVER

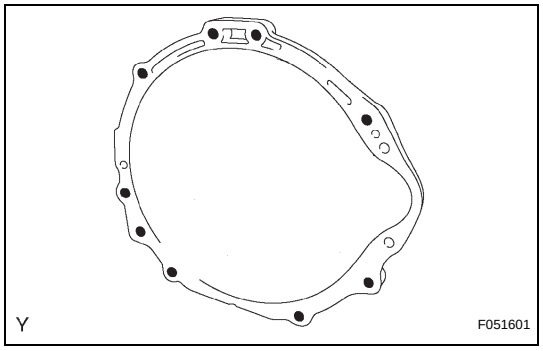
(a) Remove the flywheel housing side cover from the cylinder block.





21. REMOVE AUTOMATIC TRANSMISSION WITH TRANSFER

(a) Turn the crankshaft to gain access to each bolt.
(b) Hold the crankshaft pulley nut with a wrench and remove the 6 bolts.



(c) Remove the 9 bolts.
(d) Separate and remove the automatic transmission.

22. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

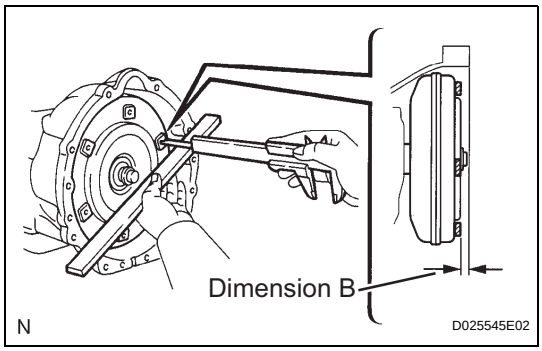
23. REMOVE TRANSFER ASSEMBLY (See page TF-14)

AT

INSTALLATION

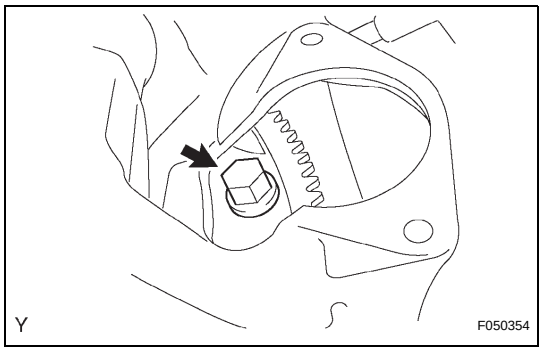
1. **INSTALL TRANSFER ASSEMBLY (See page TF-38)**
2. **INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY (See page AT-169)**
3. **INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY**
   (a) Install the torque converter clutch onto the automatic transmission.
   (b) Using calipers and a straight edge, measure dimension A, between the engine and the end surface of the drive plate, shown in the illustration.

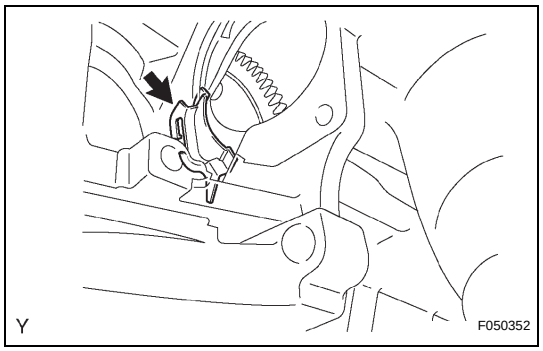
   (c) Using calipers and a straight edge, measure dimension B shown in the illustration and check that B is greater than A measured in (b).
   Standard:
   A+1 mm or more



4. **INSTALL AUTOMATIC TRANSMISSION WITH TRANSFER**
   (a) Install the automatic transmission onto the engine with the 9 bolts.
   Torque: 71 N*m (720 kgf*cm, 53 ft.*lbf) for bolt A
   37 N*m (380 kgf*cm, 27 ft.*lbf) for bolt B

   (b) Install the 6 torque converter clutch mounting bolts.
   Torque: 48 N*m (489 kgf*cm, 35 ft.*lbf)
   HINT:
   First install the black bolt and then the other 5 bolts.

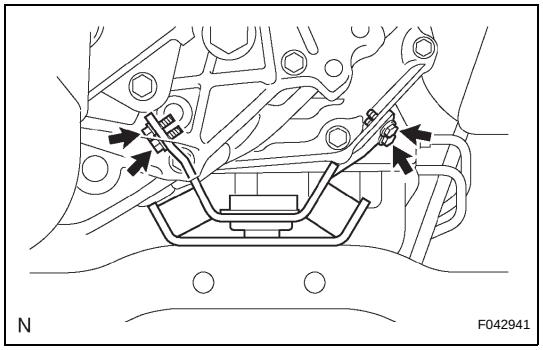




5. INSTALL FLYWHEEL HOUSING SIDE COVER

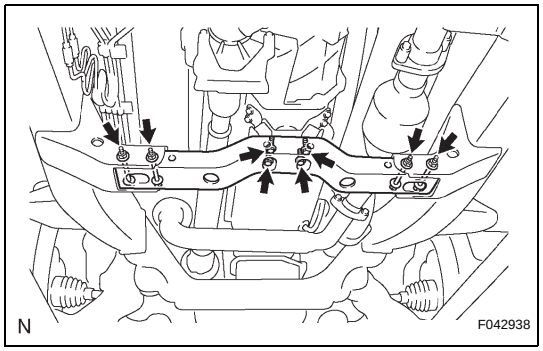
(a) Install the flywheel housing side cover onto the cylinder block.

6. INSTALL STARTER ASSEMBLY (See page ST-19)



7. INSTALL REAR NO.1 ENGINE MOUNTING INSULATOR

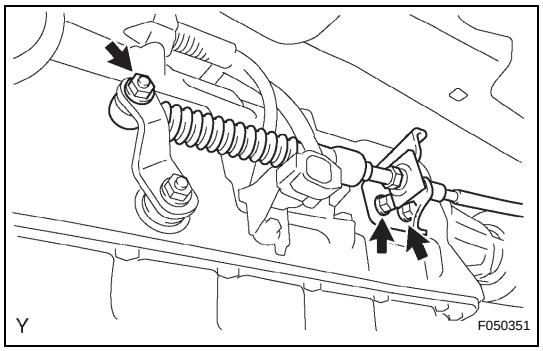
(a) Install the engine mounting insulator rear and 4 bolts onto the automatic transmission.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



8. INSTALL NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Install the frame crossmember sub-assembly No. 3 with the 4 bolts and 4 nuts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

(b) Install the frame crossmember sub-assembly No. 3 with the 4 bolts.
Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)



9. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable bracket No. 1 with the 2 bolts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

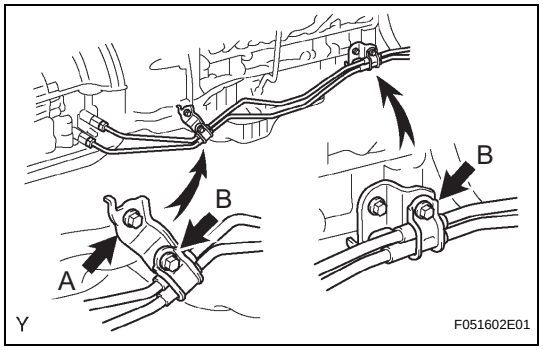
(b) Connect the transmission control cable with the nut.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

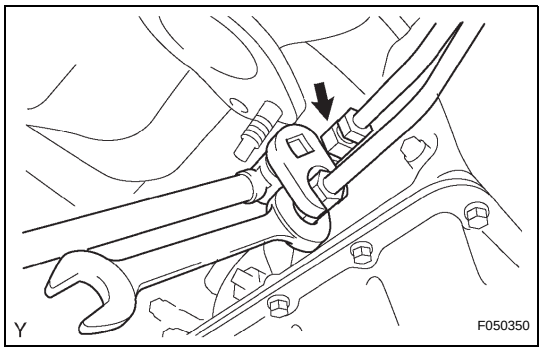
10. INSTALL NO.1 OIL COOLER OUTLET TUBE

(a) Provisionally install the oil cooler outlet tube No. 1.

(b) Provisionally install the oil cooler inlet tube No. 1.

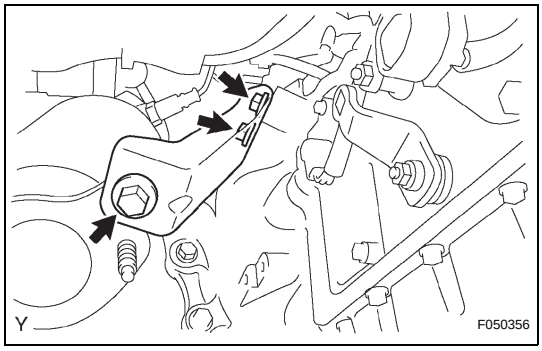
(c) Install the 2 clamps and 2 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf) for bolt A
5.0 N*m (50 kgf*cm, 43 in.*lbf) for bolt B



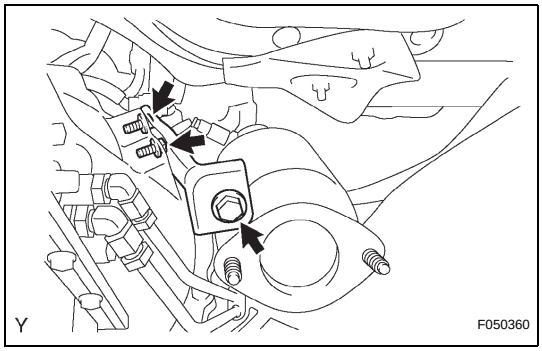


(d) Using SST, tighten the oil cooler outlet tube No. 1.
SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

11. INSTALL NO.1 OIL COOLER INLET TUBE
(a) Using SST, tighten the oil cooler inlet tube No. 1.
SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



12. INSTALL NO.2 MANIFOLD STAY
(a) Install manifold stay No. 2 with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



13. INSTALL MANIFOLD STAY
(a) Install the manifold stay with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

14. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-8)

15. INSTALL FRONT PROPELLER SHAFT ASSEMBLY (See page PR-19)

16. INSTALL EXHAUST PIPE
(See page EX-3)

17. CONNECT OXYGEN SENSOR

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

19. PERFORM INITIALIZATION
(See pageAT-17)

20. ADD AUTOMATIC TRANSMISSION FLUID
(See page AT-139)

21. INSPECT SHIFT LEVER POSITION (See page AT-158)

22. CHECK FOR EXHAUST GAS LEAKAGE

23. INSTALL NO. 2 ENGINE UNDER COVER (w/ No. 2 Engine Under Cover)

24. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

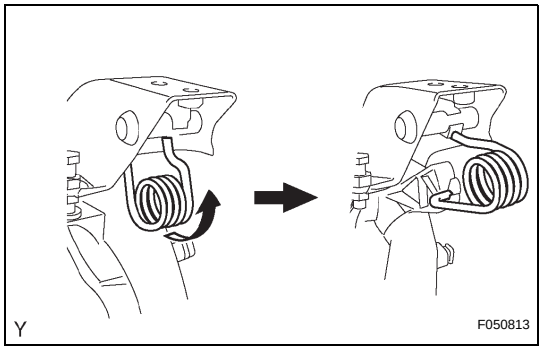
CL

REMOVAL

1. REMOVE CLUTCH MASTER CYLINDER ASSEMBLY
(See page CL-11)

2. REMOVE TURN OVER SPRING SEAT COMPRESSION SPRING

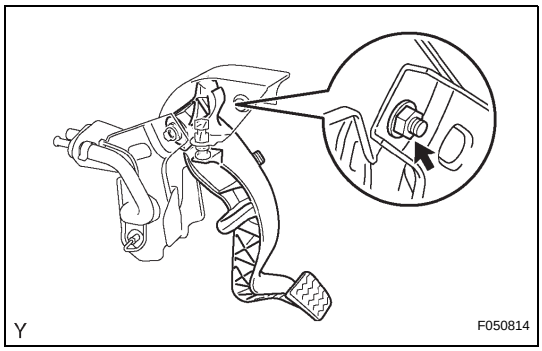
(a) Remove the compression spring.



3. REMOVE CLUTCH PEDAL SUB-ASSEMBLY

(a) Remove the bolt and nut.

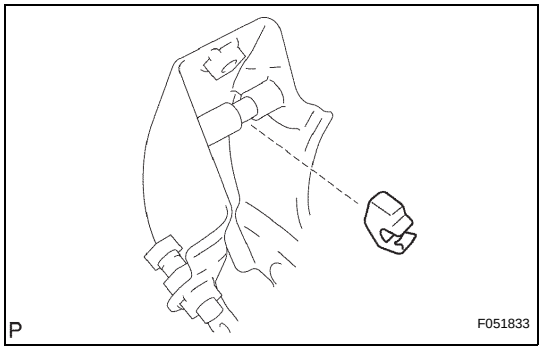
(b) Remove the clutch pedal from the clutch pedal support.



4. REMOVE CLUTCH PEDAL SPRING HOLDER

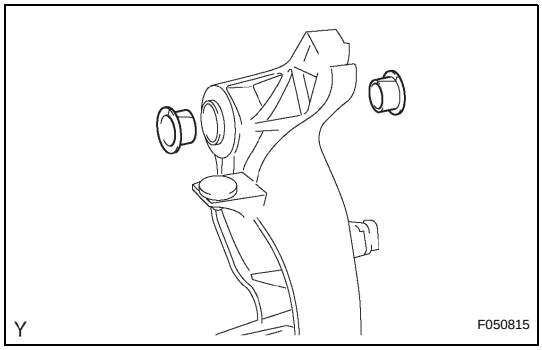
(a) Remove the clutch pedal spring holder from the clutch pedal support.

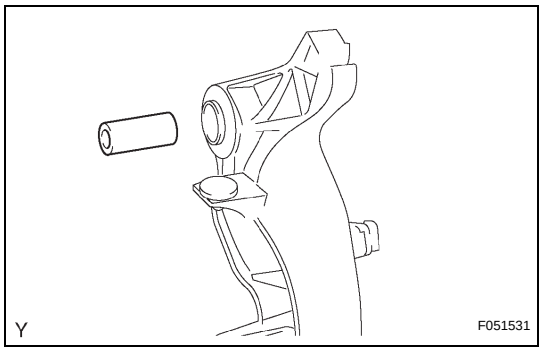
5. REMOVE CLUTCH PEDAL PAD



6. REMOVE CLUTCH PEDAL BUSH

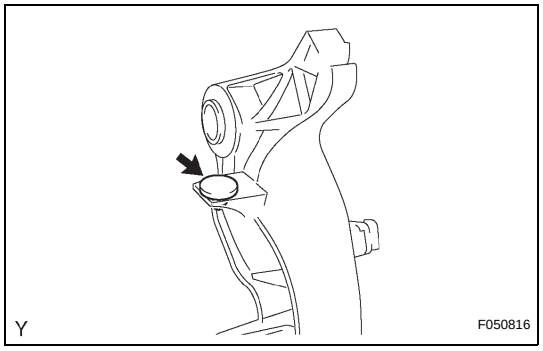
(a) Remove the 2 bushes from the clutch pedal.





7. REMOVE CLUTCH PEDAL SHAFT COLLAR

(a) Remove the clutch pedal shaft collar.



8. REMOVE CLUTCH PEDAL NO.1 CUSHION

(a) Using needle-nose pliers, remove the No. 1 cushion from the clutch pedal.

DISASSEMBLY

1. REMOVE CLUTCH RELEASE CYLINDER KIT

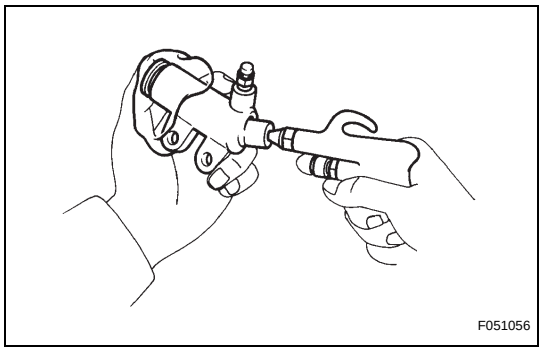
(a) Remove the boot from the cylinder body.

(b) Remove the push rod from the cylinder body.

(c) Using compressed air, remove the piston together with the spring from the cylinder.

NOTICE:
Be careful not to damage the inside of the cylinder body.

(d) Remove the bleeder plug cap from the bleeder plug.



2. REMOVE RELEASE CYLINDER BLEEDER PLUG

CL

REASSEMBLY

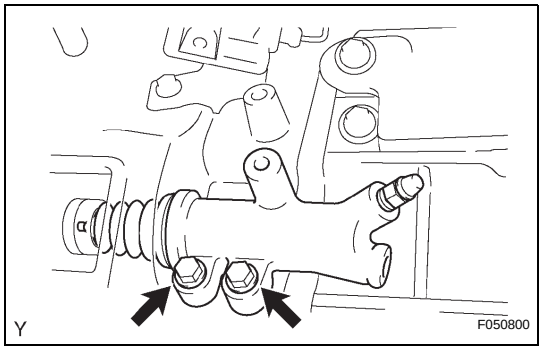
1. **INSTALL RELEASE CYLINDER BLEEDER PLUG**
   Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

2. **INSTALL CLUTCH RELEASE CYLINDER KIT**
   (a) Install the bleeder plug cap onto the bleeder plug.
   (b) Install the spring onto the cylinder body.

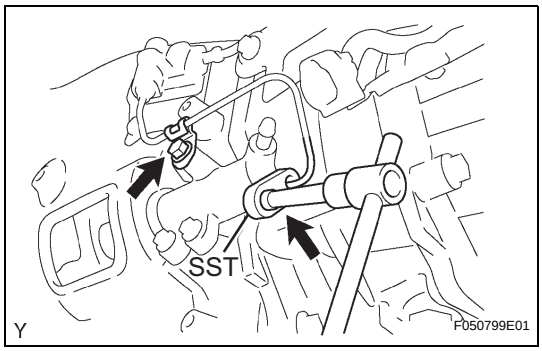
   (c) Apply lithium soap base glycol grease to the portions shown in the illustration.
   (d) Install the piston onto the cylinder body.
   NOTICE:
   Be careful not to damage the inside of the cylinder body.
   (e) Install the push rod into the cylinder body.
   (f) Install the boot onto the cylinder body.

INSTALLATION

1. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY**
   (a) Install the clutch release cylinder with the 2 bolts.
   Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



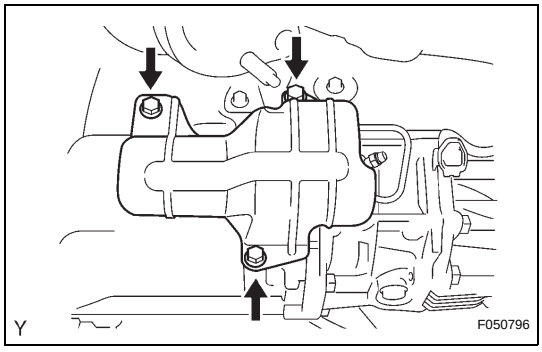
2. **CONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE**
   (a) Using SST, connect the flexible hose tube.
   SST 09023-00101
   Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)
   (b) Install the clutch line bracket.
   Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



3. **BLEED CLUTCH PIPE LINE**
   (a) Fill the brake reservoir tank with brake fluid and bleed the clutch system.
   Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. **CHECK FOR CLUTCH FLUID LEAKAGE**

5. **INSTALL NO. 1 CLUTCH HOUSING COVER**
   (a) Install the clutch housing cover No. 1 with the 3 bolts.
   Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



TORQUE SPECIFICATIONS

Part Tightened		N*m	kgf*cm	ft.*lbf

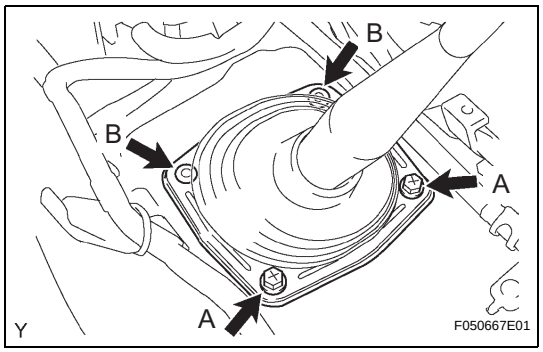
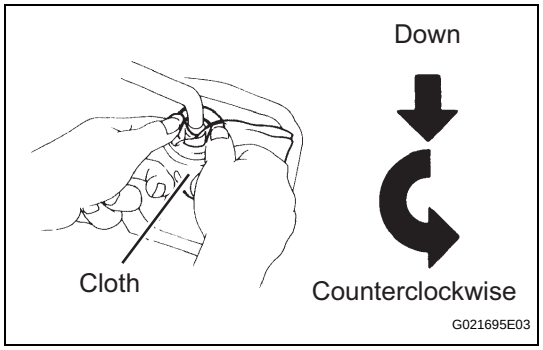
REMOVAL

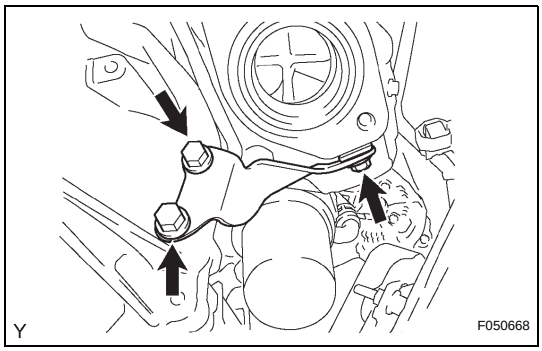
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-9)**
3. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
4. **REMOVE FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-11)**
5. **REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-11)**
6. **REMOVE SHIFT LEVER BOOT ASSEMBLY**
   (a) Remove the 2 screws A, 2 clips B and floor shift lever assembly.





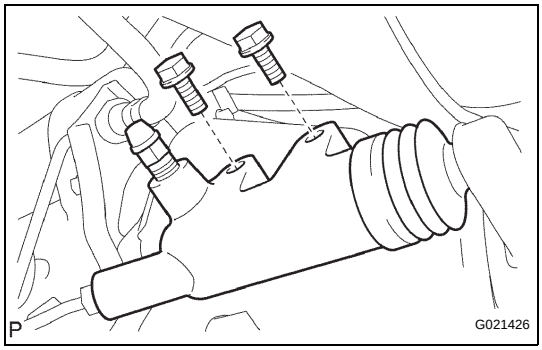
7. **REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Cover the shift lever cap with a cloth.
   (b) While pressing down on the shift lever, turn it counterclockwise to remove.
   (c) Pull out the shift lever.
8. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and engine under cover No. 2.
9. **DRAIN MANUAL TRANSMISSION OIL**
   Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
10. **REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)**
11. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-8)**
12. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-3)**
13. **REMOVE STARTER ASSEMBLY (See page ST-5)**

MT



14. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.

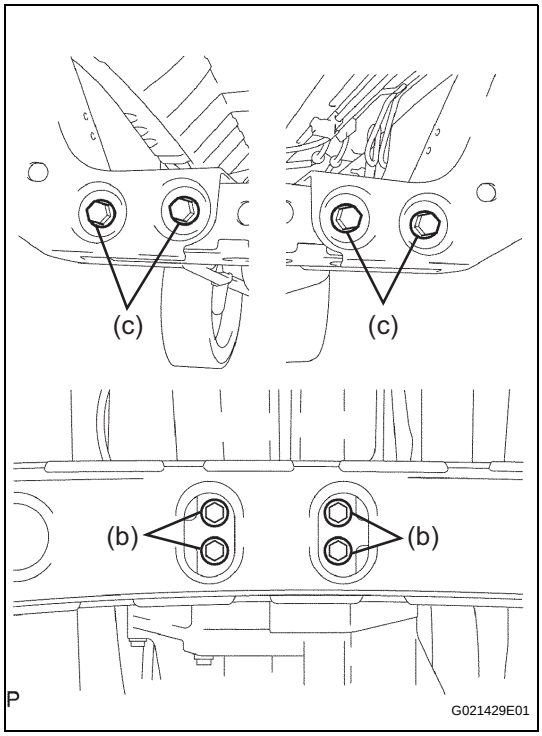


15. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and separate the clutch release cylinder assembly.

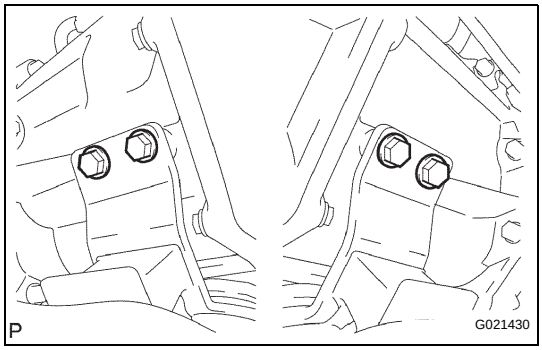
16. REMOVE NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Support the transmission rear side with a transmission jack.



(b) Remove the 4 bolts from the engine rear mounting.

(c) Remove the 4 bolts, nuts and flame crossmember sub-assembly No. 3.



17. REMOVE NO. 1 ENGINE MOUNTING INSULATOR REAR

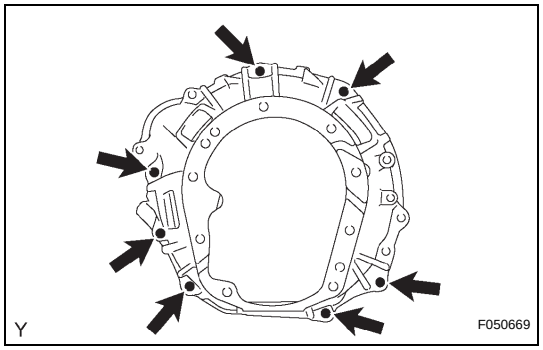
(a) Remove the 4 bolts and engine mounting insulator rear No. 1.

18. DISCONNECT WIRE HARNESS

(a) Tilt the transmission assembly downward.
NOTICE:
Make sure that the cooling fan does not come in contact with the fan shroud.

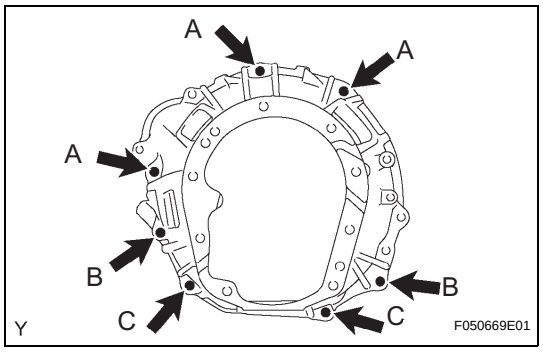
(b) Disconnect the back-up lamp switch connector.

(c) Disconnect the speed sensor connector.
(d) Disconnect the wire harness clamp from the transmission assembly.



19. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

(a) Remove the 7 bolts and remove the transmission assembly.



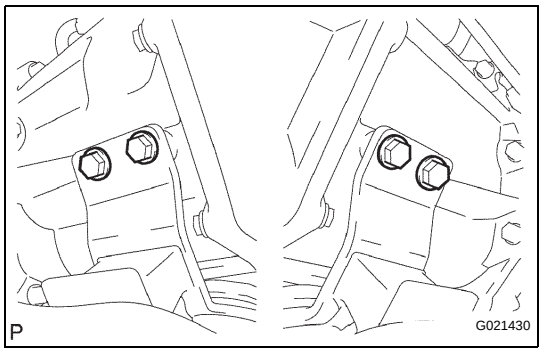
INSTALLATION

1. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

(a) Align the input shaft with the clutch disc and install the transmission unit assembly onto the engine.
(b) Install the 7 bolts.
Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
37 N*m (379 kgf*cm, 27 ft.*lbf) for bolt B and C
HINT:
Install bolt B from the direction of the front of the vehicle.

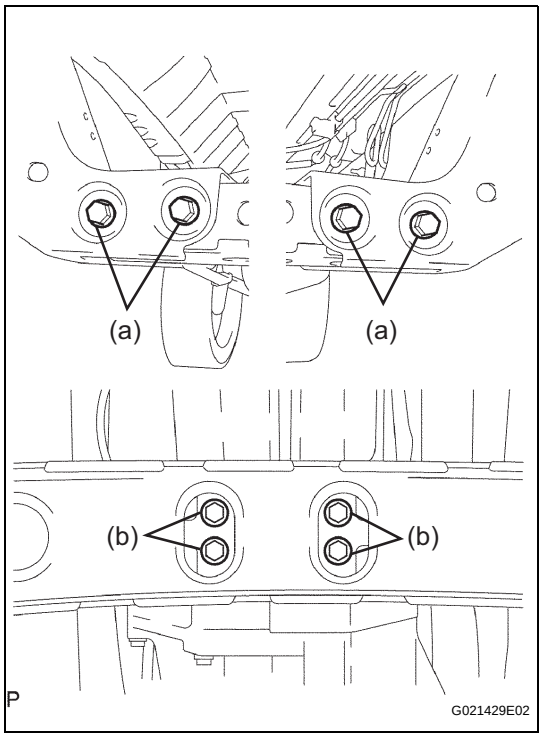
2. CONNECT WIRE HARNESS

(a) Connect the wire harness clamp to the transmission assembly.
(b) Connect the back-up lamp switch connector.
(c) Connect the speed sensor connector.

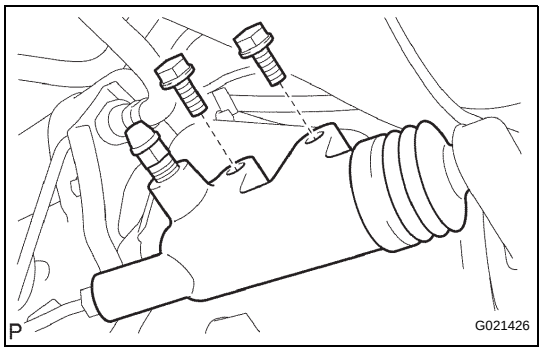


3. INSTALL NO. 1 ENGINE MOUNTING INSULATOR REAR

(a) Install the engine mount insulator rear No. 1 onto the transmission assembly with 4 bolts.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

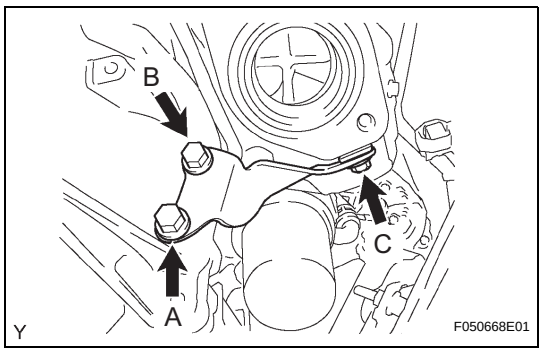


4. **INSTALL NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY**
   (a) Install the frame crossmember sub-assembly No. 3 with the 8 bolts and nuts.
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
   (b) Install the 4 bolts onto the engine mounting insulator rear No. 1.
   Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)



5. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY**
   (a) Install the clutch release cylinder assembly with the 2 bolts.
   Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)

6. **INSTALL STARTER ASSEMBLY (See page ST-10)**



7. **INSTALL MANIFOLD STAY**
   (a) Install the manifold stay with the 3 bolts.
   Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
   44 N*m (449 kgf*cm, 33 ft.*lbf) for bolt B
   30 N*m (306 kgf*cm, 22 ft.*lbf) for bolt C

8. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-13)**

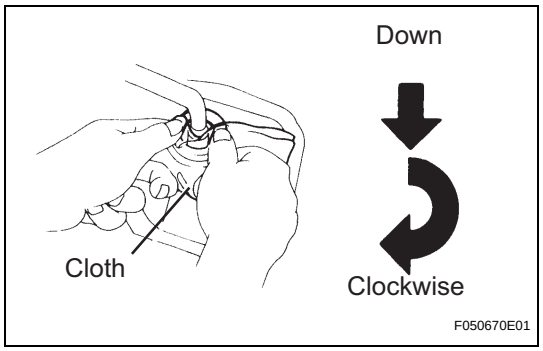
9. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-6)**

10. **INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)**

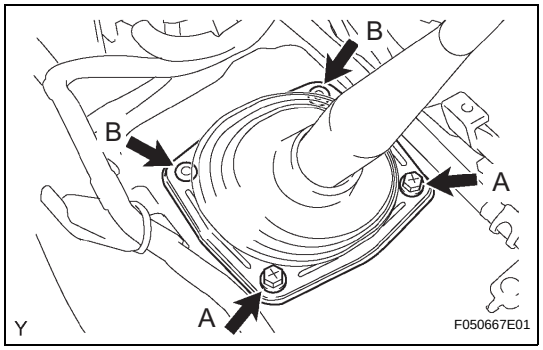
11. **ADD MANUAL TRANSMISSION OIL**

12. **ADJUST MANUAL TRANSMISSION OIL (See page MT-2)**

13. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Install the engine under cover No. 2 with the 4 bolts.
   Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



14. **INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY**
    (a) Cover the shift lever cap with a cloth.
    (b) While pressing down on the shift lever cap, turn it clockwise to install.
    NOTICE:
    Apply MP grease to the tip of the shift lever.



15. **INSTALL SHIFT LEVER BOOT ASSEMBLY**
    (a) Install the shift lever boot assembly with the 2 screws A and 2 clips B.
16. **INSTALL FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-22)**
17. **INSTALL FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-23)**
18. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
19. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-25)**
20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
21. **CHECK FOR MANUAL TRANSMISSION OIL LEAKAGE**

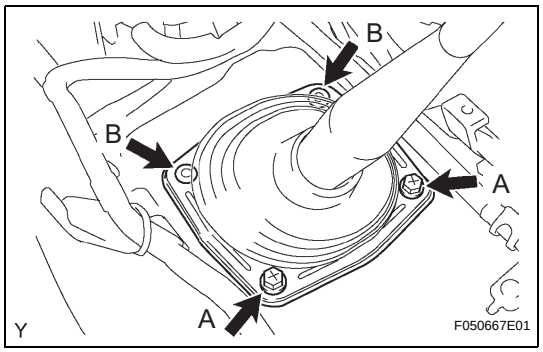
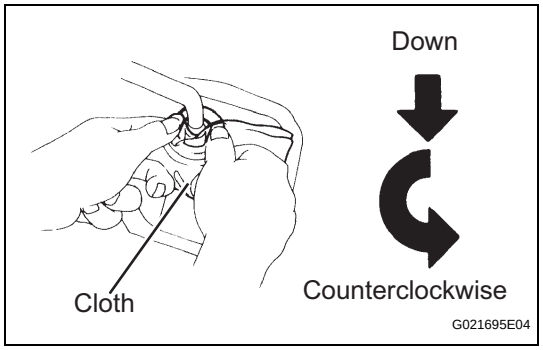
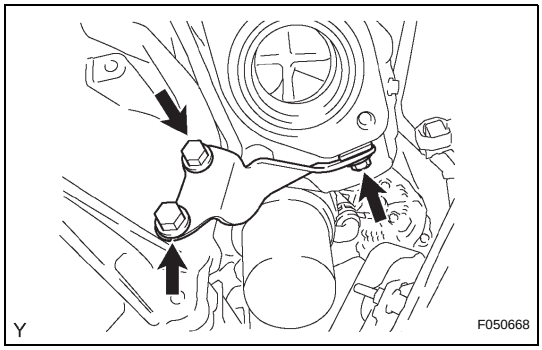
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-9)**
3. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
4. **REMOVE FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-11)**
5. **REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-11)**
6. **REMOVE SHIFT LEVER BOOT ASSEMBLY**
   (a) Remove the 2 screws A, 2 clips B and floor shift lever assembly.



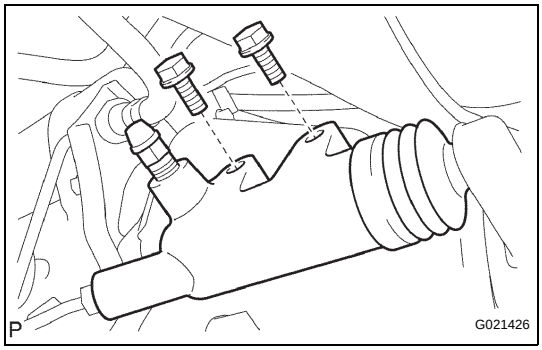


7. **REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Cover the shift lever cap with a cloth.
   (b) While pressing down on the shift lever cap, turn it counterclockwise to remove.
   (c) Pull out the shift lever.
8. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and engine under cover No. 2.
9. **DRAIN MANUAL TRANSMISSION OIL**
   Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
10. **REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)**
11. **REMOVE FRONT PROPELLER SHAFT ASSEMBLY (See page PR-16)**
12. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-27)**
13. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-22)**
14. **REMOVE STARTER ASSEMBLY (See page ST-5)**



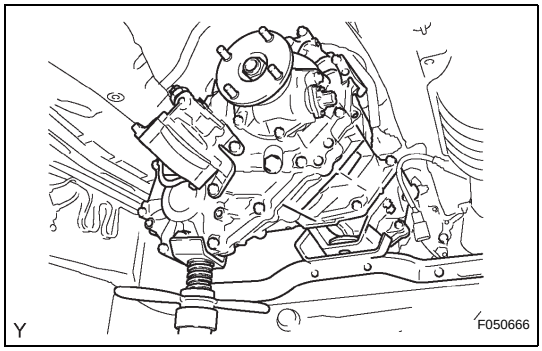
15. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.



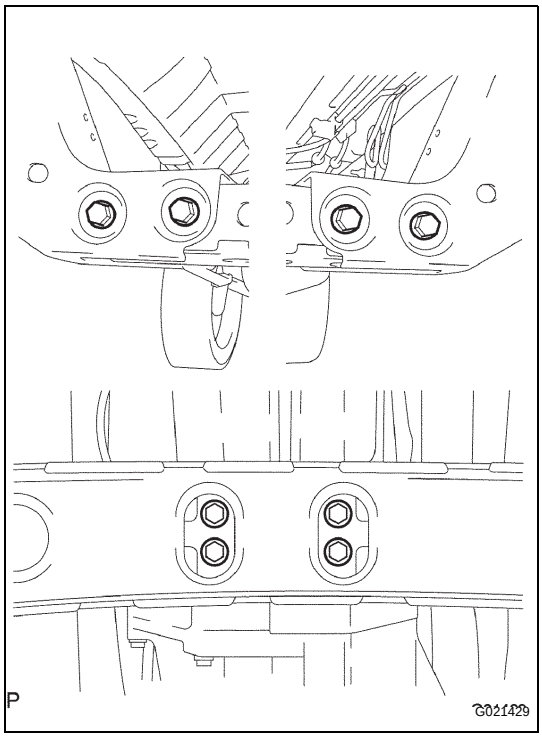
16. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and separate the clutch release cylinder assembly.



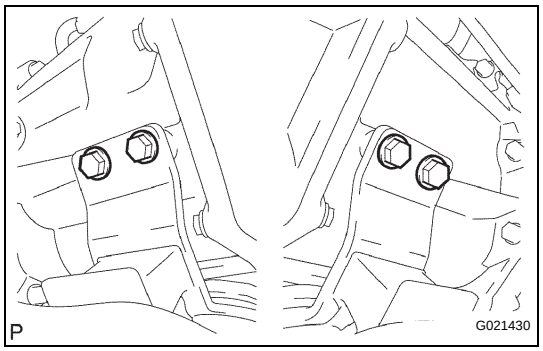
17. REMOVE NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Support the transfer with a support stand.



(b) Remove the 4 bolts from the engine rear mounting.

(c) Remove the 4 bolts, nuts and frame crossmember sub- assembly No. 3.

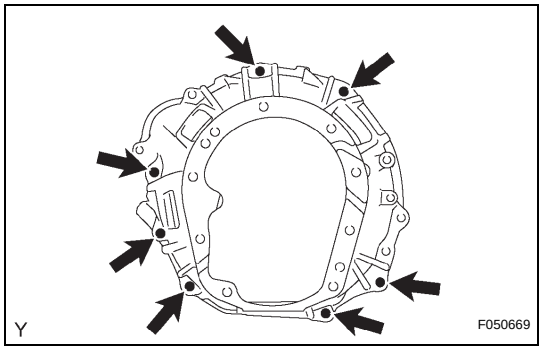


18. REMOVE NO. 1 ENGINE MOUNTING INSULATOR REAR

(a) Remove the 4 bolts and engine mounting insulator rear No. 1.
(b) Using a transmission jack, support the transmission unit assembly.
(c) Remove the support stand from the rear side of the transfer.

19. DISCONNECT WIRE HARNESS

(a) Tilt the transmission assembly downward.
NOTICE:
Make sure that the cooling fan does not come in contact with the fan shroud.
(b) Disconnect the back-up lamp switch connector.
(c) Disconnect the speed sensor connector.
(d) Disconnect the 2 transfer indicator switch connectors.
(e) Disconnect the transfer shift actuator motor connector.
(f) Disconnect the wire harness clamp from the transmission w/ transfer assembly.



20. REMOVE MANUAL TRANSMISSION WITH TRANSFER

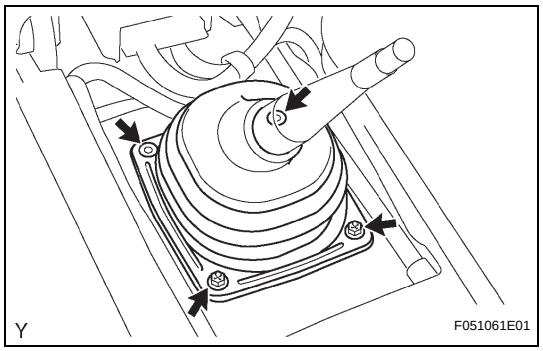
(a) Remove the 7 bolts and remove the transmission assembly.

21. REMOVE TRANSFER ASSEMBLY (See page TF-14)

MT

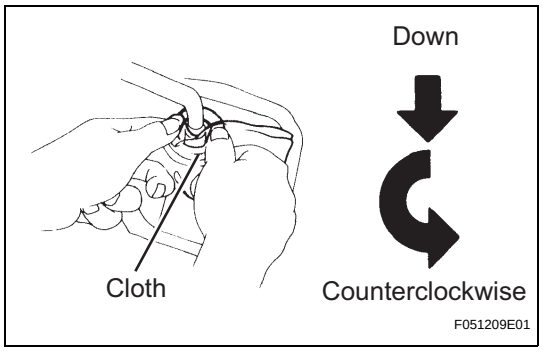
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-9)**
3. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-10)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **REMOVE FRONT CONSOLE BOX (See page IP-11)**
6. **REMOVE SHIFT LEVER BOOT ASSEMBLY**
   (a) Remove the 2 screws and 2 clips, then remove the shift lever boot.



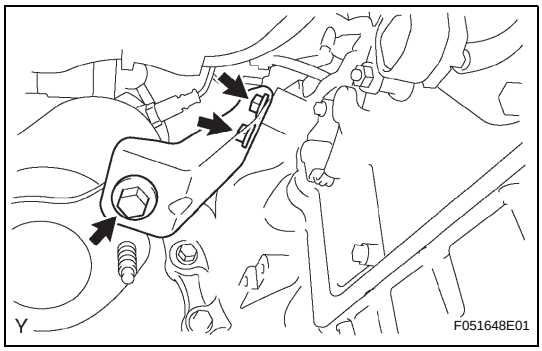
7. **REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Separate the shift lever cap boot from the manual transmission.

   (b) Cover the shift lever cap with a cloth.
   (c) Pressing down on the shift lever cap, turn it counterclockwise to remove the shift lever.
   (d) Pull out the shift lever.



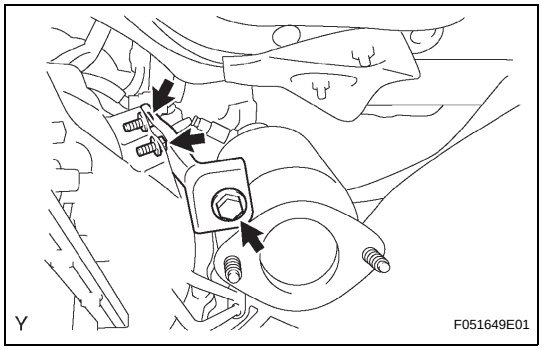
8. **REMOVE NO. 2 ENGINE UNDER COVER**
9. **DRAIN MANUAL TRANSMISSION OIL**
   (a) Remove the drain plug, gasket and then drain the manual transmission oil.
   (b) Install a new gasket and the drain plug.
   Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
10. **REMOVE EXHAUST PIPE (See page EX-3)**
11. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-8)**

MT



12. REMOVE NO. 2 MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay No. 2.



13. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.

14. REMOVE STARTER ASSEMBLY (See page ST-5)

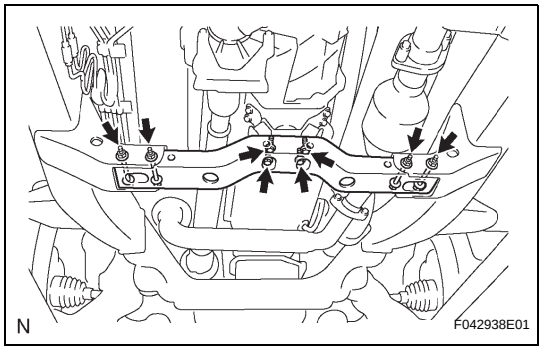
15. REMOVE NO. 1 CLUTCH HOUSING COVER (See page CL-21)

16. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY (See page CL-21)

17. REMOVE CLUTCH ACCUMULATOR ASSEMBLY (See page CL-26)

18. SUPPORT MANUAL TRANSMISSION UNIT ASSEMBLY

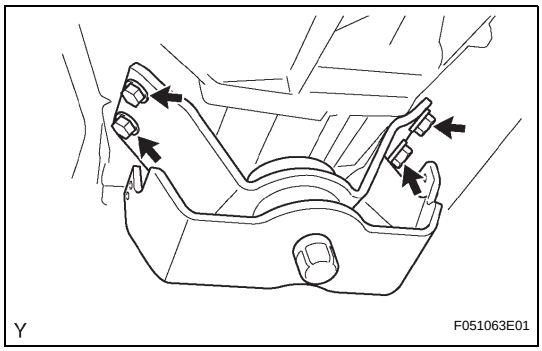
(a) Support the manual transmission with a transmission jack.



19. REMOVE NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Remove the 4 bolts on the frame crossmember sub-assembly No. 3.

(b) Remove the 4 nuts, 4 bolts and frame crossmember sub-assembly No. 3.



20. REMOVE NO. 1 ENGINE MOUNTING INSULATOR REAR

(a) Remove the 4 bolts and the engine mounting insulator rear No. 1.

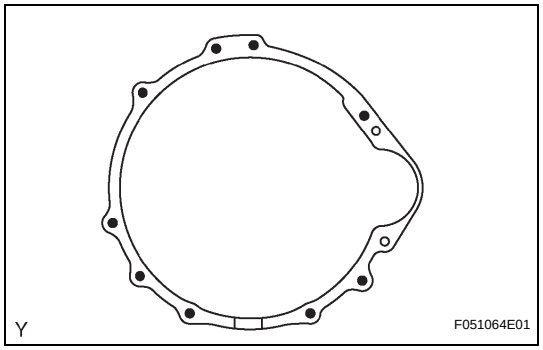
21. DISCONNECT CONNECTOR

(a) Tilt down the transmission.

(b) Disconnect the speedometer sensor connector.

(c) Disconnect the back up lamp switch connector.

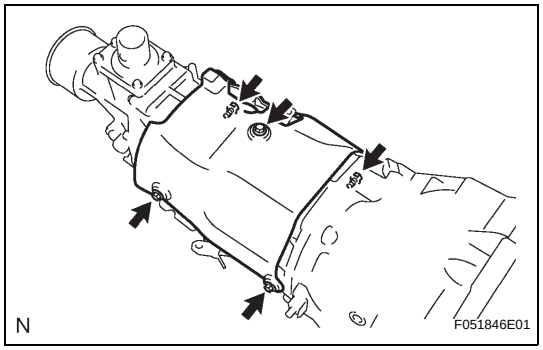
22. DISCONNECT WIRE HARNESS



23. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

(a) Remove the 9 bolts.

(b) Separate and remove the manual transmission.

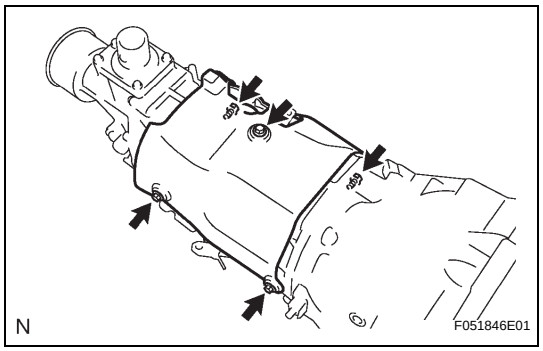


24. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Remove the 5 bolts and manual transmission case cover.

MT

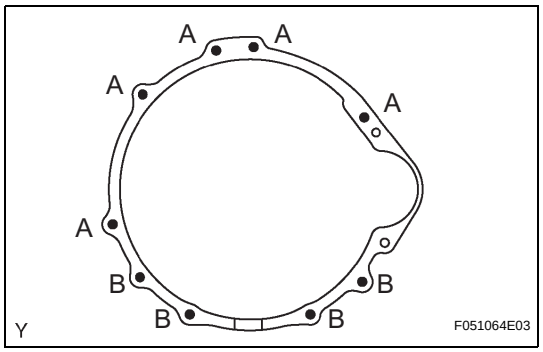
INSTALLATION



1. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Install the manual transmission case cover with the 5 bolts.

Torque: 12 N*m (117 kgf*cm, 8.5 ft.*lbf)

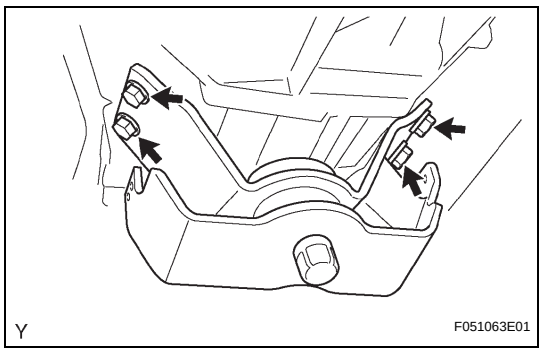


2. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

(a) Install the manual transmission with the 9 bolts.

Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
37 N*m (380 kgf*cm, 28 ft.*lbf) for bolt B

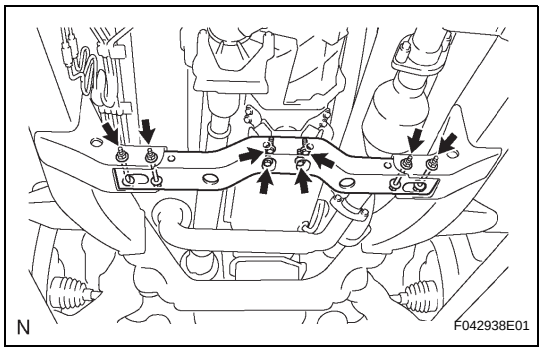
3. CONNECT WIRE HARNESS



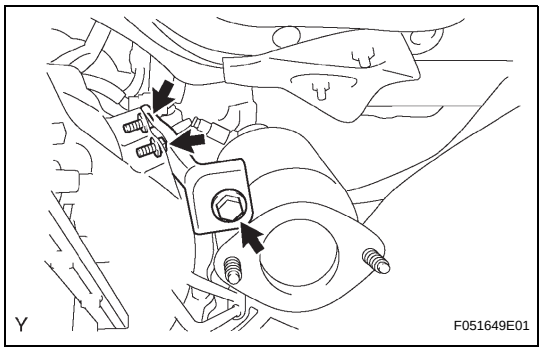
4. INSTALL NO. 1 ENGINE MOUNTING INSULATOR REAR

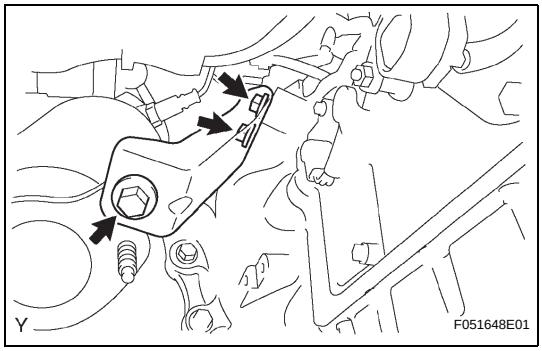
(a) Install the engine mounting insulator rear No. 1 with the 4 bolts.

Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

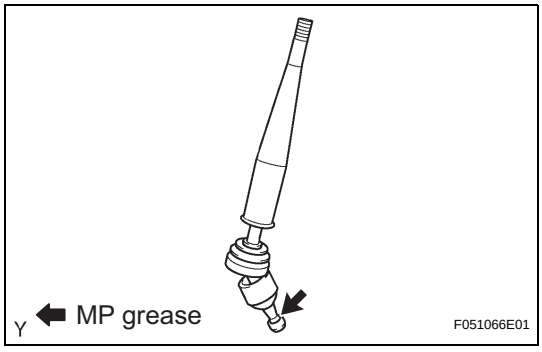


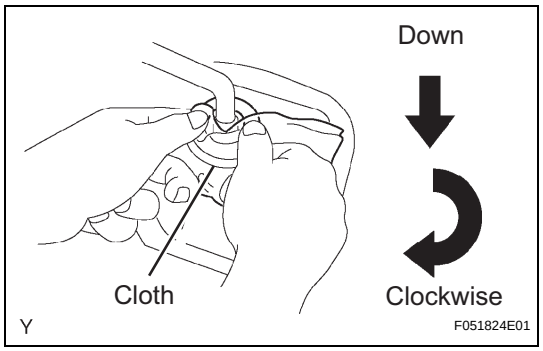
5. **INSTALL NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY**
   (a) Install the frame crossmember sub-assembly No. 3 with the 4 bolts and 4 nuts.
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
   (b) Install the frame crossmember sub-assembly No. 3 with the 4 bolts.
   Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)
6. **INSTALL CLUTCH ACCUMULATOR ASSEMBLY (See page CL-26)**
7. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (See page CL-22)**
8. **INSTALL NO. 1 CLUTCH HOUSING COVER (See page CL-22)**
9. **INSTALL STARTER ASSEMBLY (See page ST-11)**
10. **INSTALL MANIFOLD STAY**
    (a) Install the manifold stay with the 3 bolts.
    Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)





11. **INSTALL NO. 2 MANIFOLD STAY**
    (a) Install the manifold stay No. 2 with the 3 bolts.
    Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
12. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-13)**
13. **INSTALL EXHAUST PIPE (See page EX-3)**
14. **ADD MANUAL TRANSMISSION OIL**
15. **ADJUST MANUAL TRANSMISSION OIL (See page MT-2)**
16. **INSTALL NO.2 ENGINE UNDER COVER**
17. **INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY**
    (a) Apply MP grease to the tip of the shift lever.





(b) Cover the shift lever cap with a cloth.
(c) Pressing down on the shift lever cap, turn it clockwise to install the shift lever.

18. INSTALL SHIFT LEVER BOOT ASSEMBLY
(a) Install the shift lever boot with the 2 screws and 2 clips.

19. INSTALL FRONT CONSOLE BOX (See page IP-23)

20. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

21. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-24)

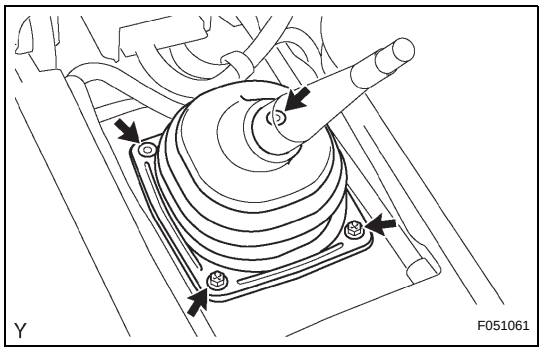
22. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-25)

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

MT

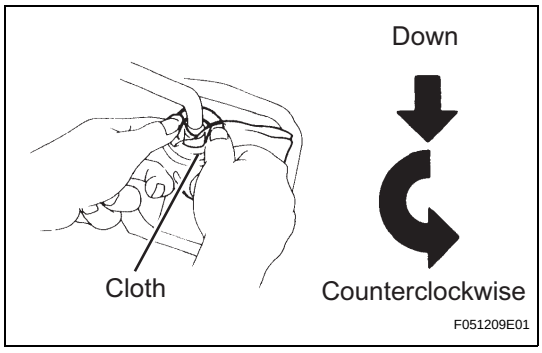
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-9)**
3. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-10)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **REMOVE FRONT CONSOLE BOX (See page IP-11)**
6. **REMOVE SHIFT LEVER BOOT ASSEMBLY**
   (a) Remove the 2 screws and 2 clips, then remove the shift lever boot.

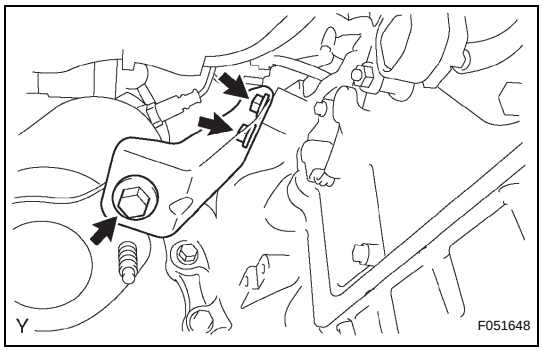


7. **REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Separate the shift lever cap boot from the manual transmission.

   (b) Cover the shift lever cap with a cloth.
   (c) Pressing down on the shift lever cap, turn it counterclockwise to remove the shift lever.
   (d) Pull out the shift lever.

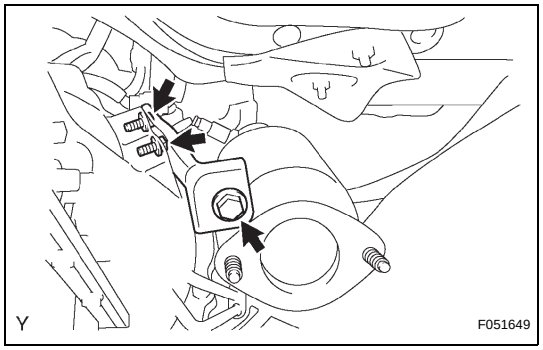


8. **REMOVE NO. 2 ENGINE UNDER COVER**
9. **DRAIN MANUAL TRANSMISSION OIL**
   (a) Remove the drain plug, gasket and then drain the manual transmission oil.
   (b) Install a new gasket and drain plug.
   Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
10. **REMOVE EXHAUST PIPE ASSEMBLY (See page EX-3)**
11. **REMOVE FRONT PROPELLER SHAFT ASSEMBLY (See page PR-16)**
12. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-27)**



13. REMOVE NO. 2 MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay No. 2.



14. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.

15. REMOVE STARTER ASSEMBLY (See page ST-13)

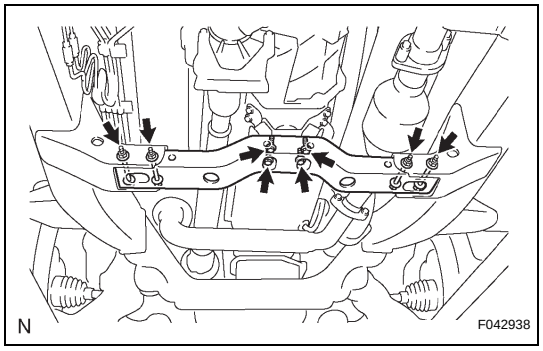
16. REMOVE NO. 1 CLUTCH HOUSING COVER (See page CL-24)

17. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY (See page CL-24)

18. REMOVE CLUTCH ACCUMULATOR ASSEMBLY (See page CL-28)

19. SUPPORT MANUAL TRANSMISSION WITH TRANSFER

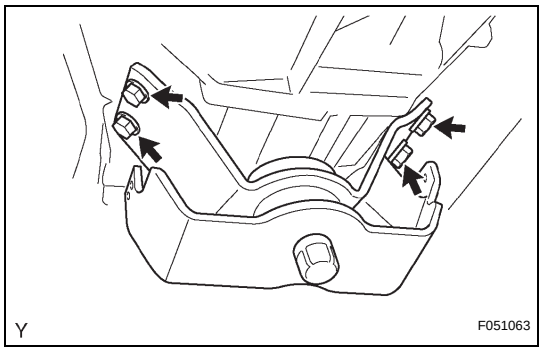
(a) Support the manual transmission with a transmission jack.



20. REMOVE NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Remove the 4 bolts on the frame crossmember sub-assembly No. 3.

(b) Remove the 4 nuts, 4 bolts and frame crossmember sub-assembly No. 3.



21. REMOVE NO. 1 ENGINE MOUNTING INSULATOR REAR

(a) Remove the 4 bolts and engine mounting insulator rear from the manual transmission.

22. DISCONNECT CONNECTOR

(a) Tilt down the transmission.

(b) Disconnect the transfer shift actuator connector.

(c) Disconnect the transfer indicator switch No. 1 connector.

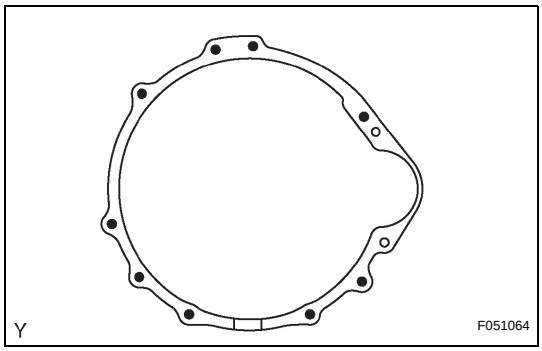
(d) Disconnect the transfer indicator switch No. 2 connector.

(e) Disconnect the speedometer sensor connector.

(f) Disconnect the back up lamp switch connector.

23. DISCONNECT WIRE HARNESS

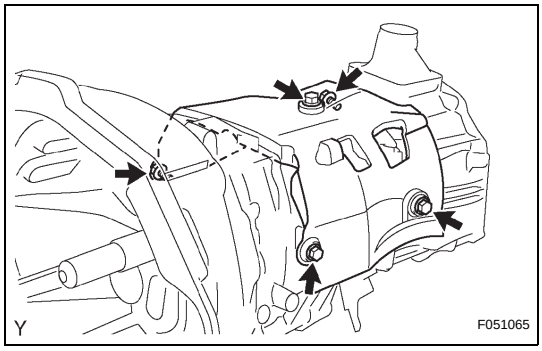
MT



24. REMOVE MANUAL TRANSMISSION WITH TRANSFER

(a) Remove the 9 bolts.

(b) Separate and remove the manual transmission.



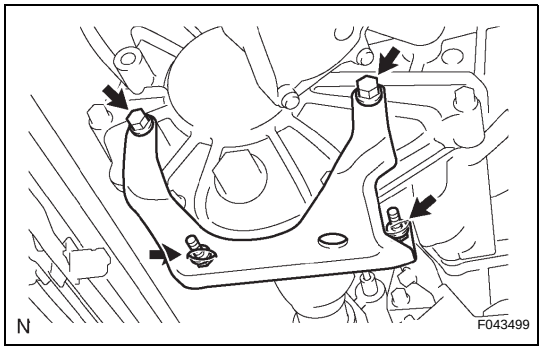
25. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Remove the 5 bolts and manual transmission case cover.

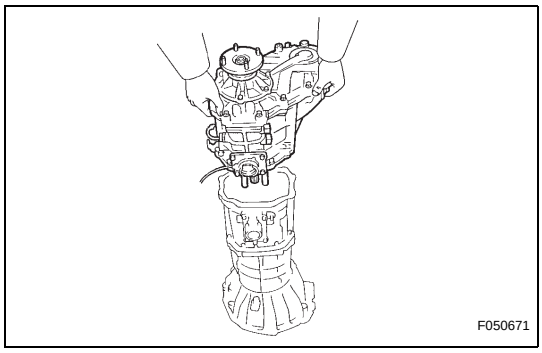
26. REMOVE TRANSFER ASSEMBLY (See page TF-14)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN TRANSFER OIL**
3. **REMOVE TRANSFER CASE LOWER PROTECTOR**
   (a) Remove the 4 bolts and remove the transfer case lower protector.

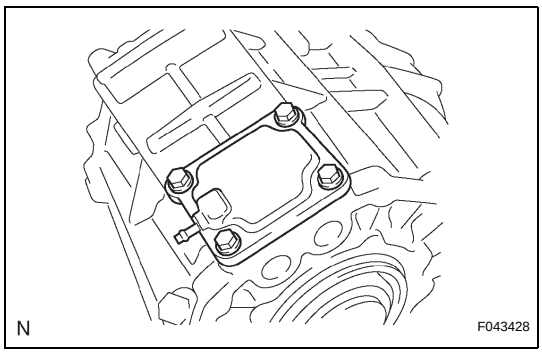


4. **REMOVE MANUAL TRANSMISSION ASSEMBLY (for R155F)**
   (See page MT-8)
5. **REMOVE MANUAL TRANSMISSION ASSEMBLY (for RA60F)**
   (See page MT-6)
6. **REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (for A750F)**
   (See page AT-162)
7. **REMOVE TRANSFER ASSEMBLY**
   (a) Remove the 8 transfer adaptor rear mounting bolts.
   (b) Pull the transfer straight up and remove it from the transmission.
   NOTICE:
   Take care not to damage the adaptor rear oil seal with the transfer input gear spline.

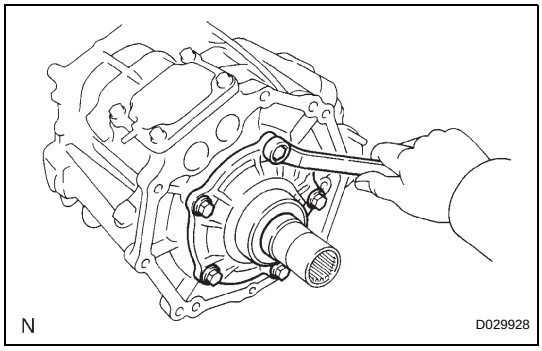


DISASSEMBLY

1. **REMOVE TRANSFER CASE COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and the case cover sub-assembly.



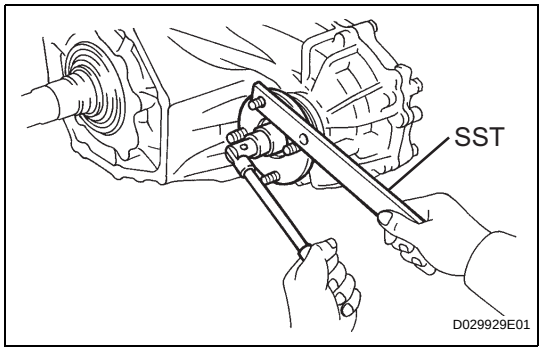
2. **REMOVE BREATHER OIL DEFLECTOR SUB-ASSEMBLY**
3. **REMOVE TRANSFER RH BEARING RETAINER SUB-ASSEMBLY**
   (a) Remove the 5 bolts and the front bearing retainer sub-assembly.
   HINT:
   If necessary, tap the retainer sub-assembly with a plastic hammer to remove it.



4. **REMOVE TRANSFER RH BEARING RETAINER OIL SEAL (for R155F/A750F)**
   (a) Using a screwdriver and hammer, remove the transfer RH bearing retainer oil seal.

5. REMOVE TRANSFER RH BEARING RETAINER OIL SEAL (for RA60F)

(a) Using a screwdriver and hammer, remove the 2 transfer RH bearing retainer oil seals.

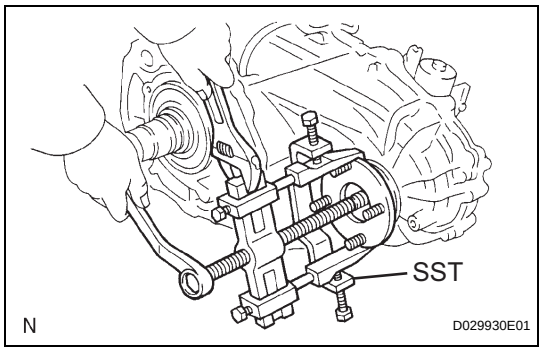


6. REMOVE OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY

(a) Using a chisel and hammer, loosen the staked part of the output shaft companion flange lock nut.

(b) Using SST to hold the output shaft companion flange, remove the output shaft companion flange lock nut.

SST 09330-00021



(c) Using SST, remove the output shaft companion flange sub-assembly (front side).

SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04051, 09957-04010, 09958-04011)

7. REMOVE TRANSFER OUTPUT SHAFT COMPANION FLANGE OIL SEAL

(a) Using a screwdriver and hammer, remove the companion flange oil seal.

8. REMOVE OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY

(a) Remove the rear output shaft companion flange sub-assembly using the same procedure as for the front output shaft companion flange sub-assembly (rear side).

SST 09330-00021, 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04051, 09957-04010, 09958-04011)

9. REMOVE TRANSFER OUTPUT SHAFT COMPANION FLANGE OIL SEAL

(a) Using a screwdriver and hammer, remove the companion flange oil seal.

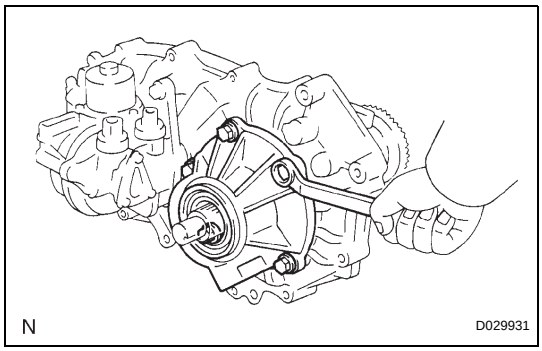
10. REMOVE SPEEDOMETER DRIVEN GEAR SUB-ASSEMBLY (for R155F/RA60F)

(a) Remove the bolt and speedometer driven gear w/ sensor.

11. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY (for A750F)

(a) Remove the bolt and speedometer hole cover sub-assembly.

TF



12. REMOVE TRANSFER EXTENSION HOUSING SUB-ASSEMBLY FRONT

(a) Remove the 5 bolts and extension housing sub-assembly.
HINT:
If necessary, tap the extension housing sub-assembly with a plastic hammer to remove it.

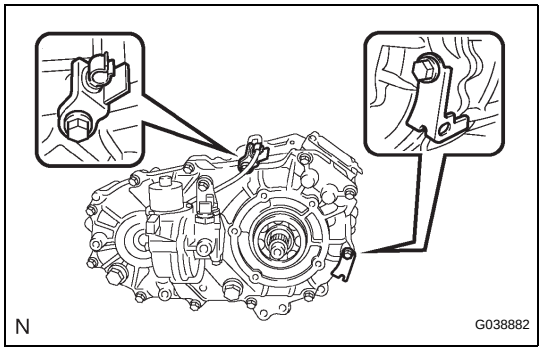
13. REMOVE TRANSFER EXTENSION HOUSING TYPE T OIL SEAL

(a) Using a screwdriver and hammer, remove the type T oil seal.

14. REMOVE TRANSFER OUTPUT WASHER

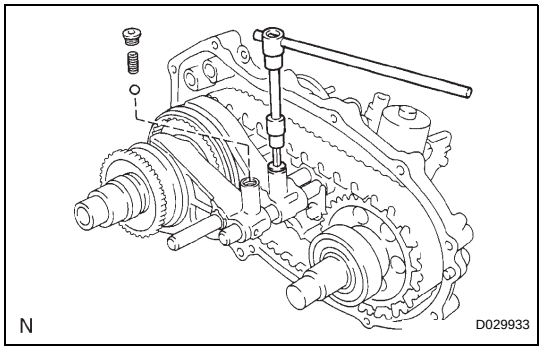
15. REMOVE TRANSFER SPEEDOMETER DRIVE GEAR

(a) Remove the speedometer drive gear.
(b) Using a magnetic finger, remove the speedometer drive gear ball.



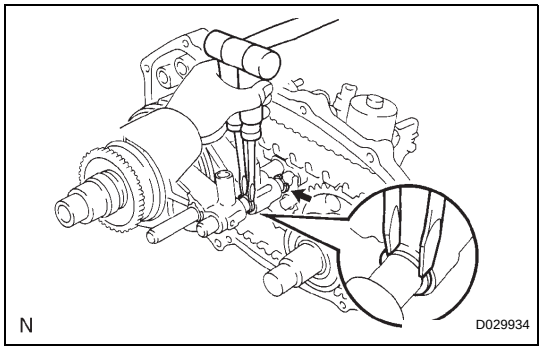
16. REMOVE TRANSFER REAR CASE

(a) Remove the 12 bolts and 2 brackets.
(b) Remove the transfer case rear.
HINT:
If necessary, tap the transfer case rear with a plastic hammer to remove it.

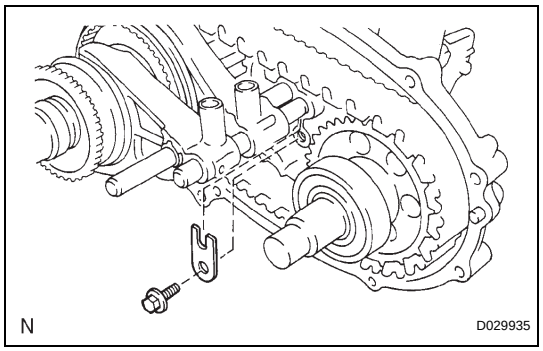


17. REMOVE TRANSFER FRONT DRIVE SHIFT FORK SHAFT

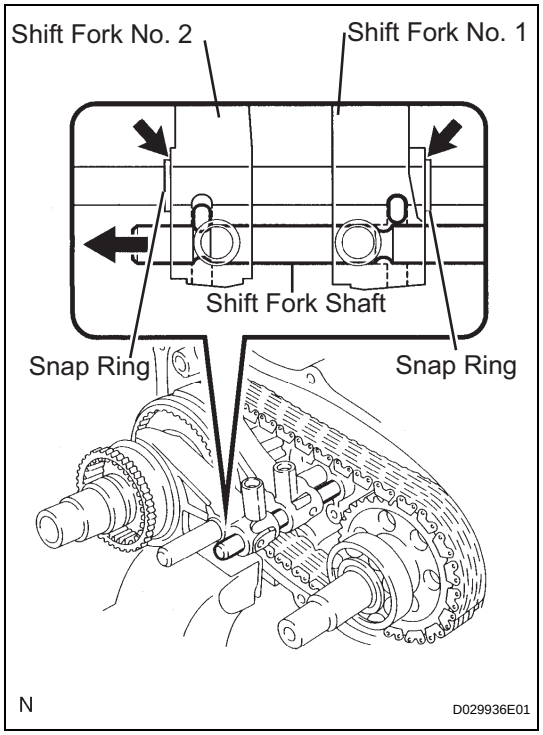
(a) Using a hexagon wrench (6 mm), remove the 2 shift detent ball spring plugs, 2 shift fork compression springs and 2 shift detent balls.



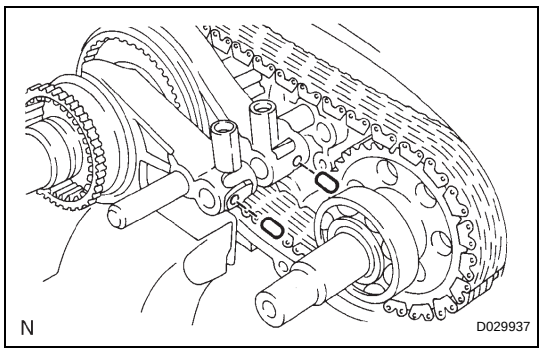
(b) Using 2 screwdrivers and a hammer, tap out the 2 shift fork shaft snap rings.



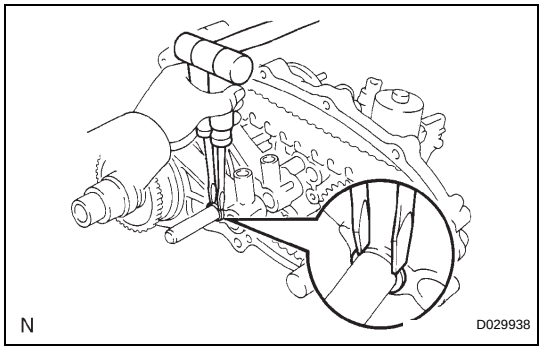
(c) Remove the bolt and shift shaft stopper.



(d) To pull out the shift fork shaft, shift the shift fork No. 1 and No. 2 to the positions shown in the illustration.
(e) Pull out the shift fork shaft.



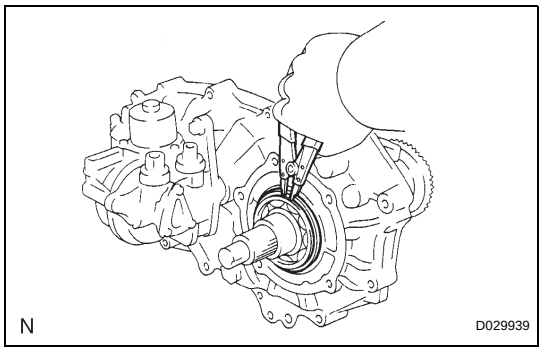
(f) Using a magnetic finger, remove the 2 shift inter lock pins.



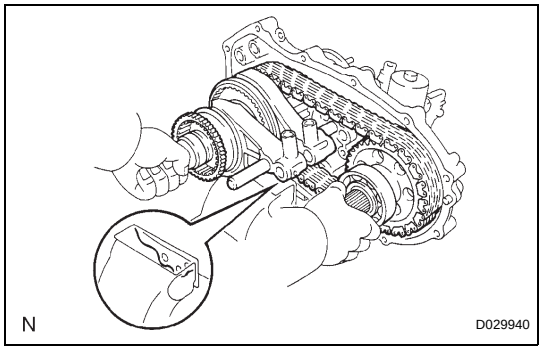
18. REMOVE REAR OUTPUT SHAFT ASSEMBLY, FRONT DRIVE CHAIN, DRIVEN SPROCKET ASSEMBLY, SHIFT FORK NO. 1 AND NO. 2

(a) Using 2 screwdrivers and a hammer, tap out the shift fork shaft snap ring.
HINT:
Remove only the snap ring on the front side of the shift fork shaft.

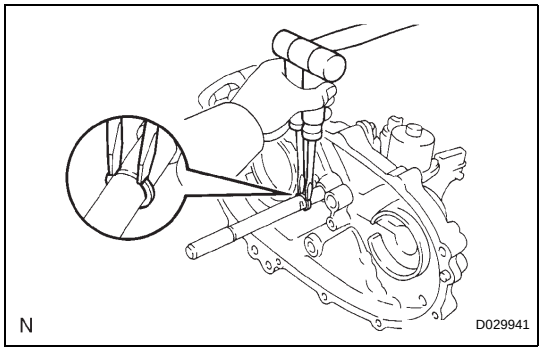
TF



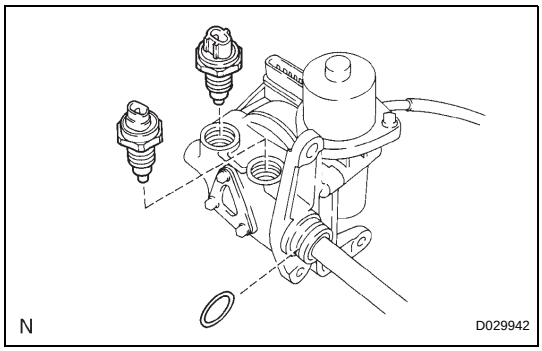
(b) Using a snap ring expander, remove the output shaft snap ring.



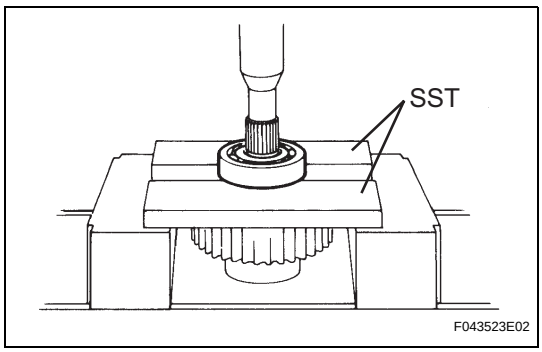
(c) Mount the transfer case rear in a vise.
(d) Using a plastic hammer, carefully tap the transfer case rear and remove the rear output shaft assembly, driven sprocket assembly, front drive chain, shift fork No. 1 and No. 2.
(e) Remove the driven sprocket assembly, front drive chain, shift fork No. 1 and No. 2 from the rear output shaft assembly.



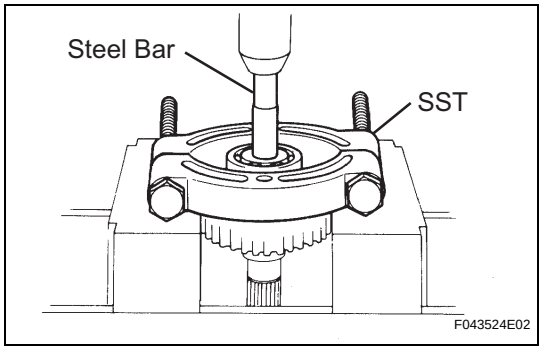
19. REMOVE TRANSFER SHIFT ACTUATOR ASSEMBLY
(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring.
(b) Remove the 3 bolts and shift actuator assembly.



20. REMOVE TRANSFER INDICATOR SWITCH NO.1
(a) Remove the O-ring, the 2 indicator switches No. 1 and 2 gaskets.



21. REMOVE TRANSFER DRIVEN SPROCKET BEARING
(a) Using SST and a press, remove the driven sprocket bearing.
SST 09527-10011



22. REMOVE TRANSFER INPUT GEAR RADIAL BALL BEARING

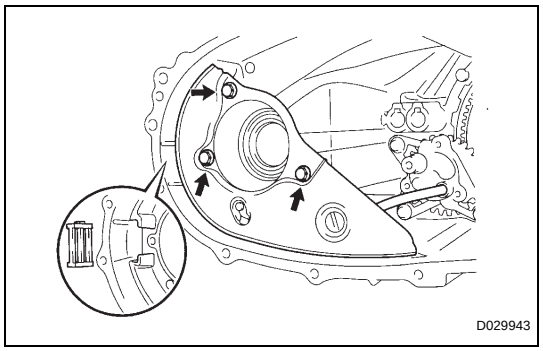
(a) Using SST, a press and steel bar, remove the input gear radial ball bearing.
SST 09555-55010

23. REMOVE TRANSFER CASE PLUG

(a) Remove the transfer case plug No. 1 (filler plug) and gasket.

24. REMOVE TRANSFER CASE PLUG

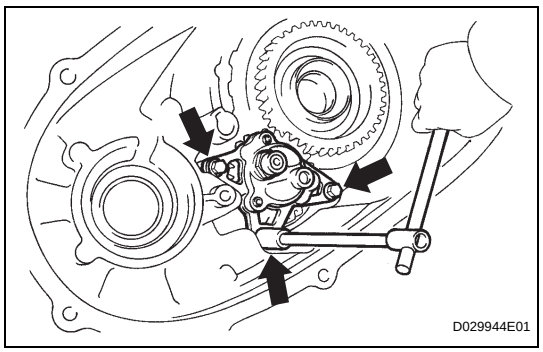
(a) Remove the transfer case plug (drain plug) and gasket.



25. REMOVE TRANSFER OIL SEPARATOR SUB-ASSEMBLY

(a) Remove the 3 bolts and oil separator sub-assembly.

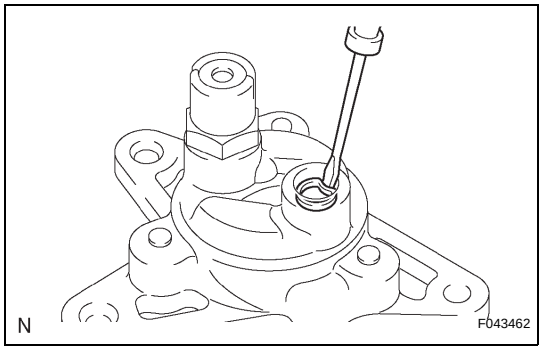
26. REMOVE TRANSFER CASE MAGNET



27. REMOVE TRANSFER OIL PUMP BODY SUB-ASSEMBLY

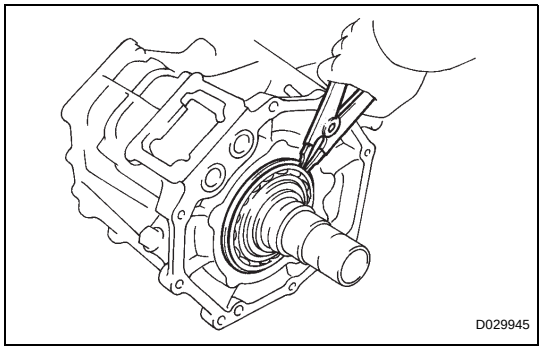
(a) Remove the 3 bolts and oil pump body sub-assembly.

28. REMOVE TRANSFER OIL PUMP GEAR



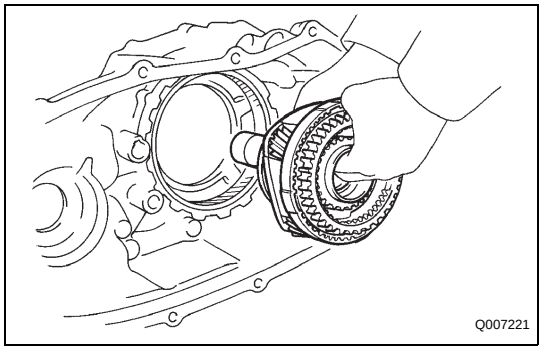
29. REMOVE TRANSFER OIL PUMP BODY O-RING

(a) Using a screwdriver, remove the oil pump body O-ring.

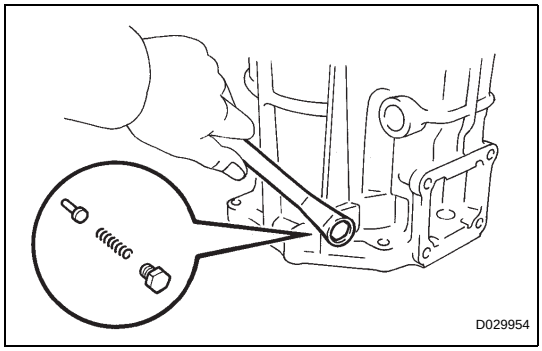


30. REMOVE LOW PLANETARY GEAR ASSEMBLY WITH INPUT SHAFT SUB-ASSEMBLY

(a) Using a snap ring expander, remove the low planetary gear bearing shaft snap ring.

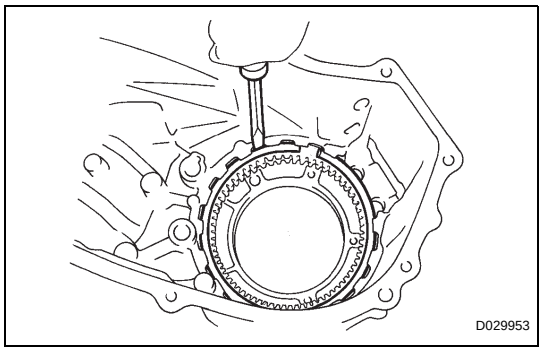


(b) Remove the low planetary gear assembly w/ input shaft assembly.



31. REMOVE TRANSFER CASE PLUG

(a) Remove the case plug.
(b) Using a magnetic finger, remove the spring and pin.

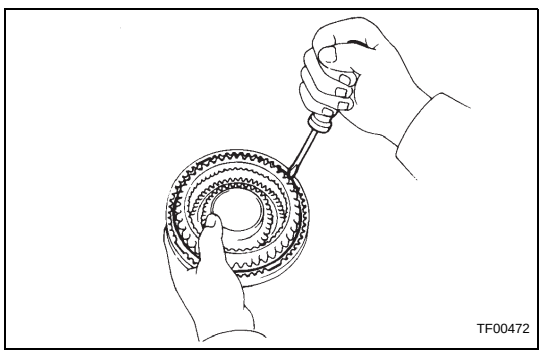


32. REMOVE TRANSFER LOW PLANETARY RING GEAR

(a) Using a screwdriver, remove the hole snap ring.
(b) Remove the low planetary ring gear from the front case.

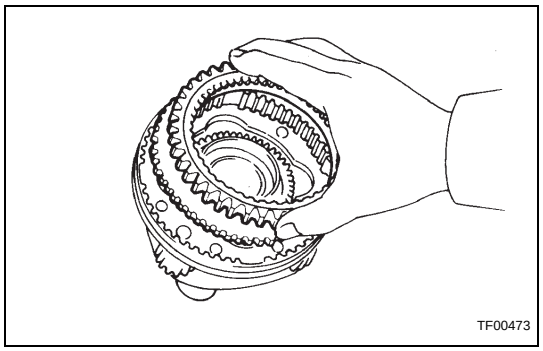
33. REMOVE TRANSFER CASE OIL SEAL

(a) Using a screwdriver and hammer, remove the transfer case oil seal.

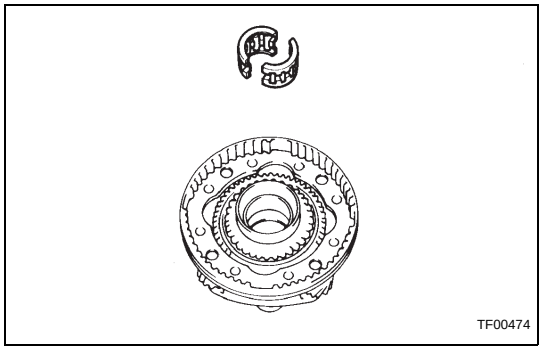


34. REMOVE TRANSFER LOW PLANETARY GEAR SPLINE PIECE

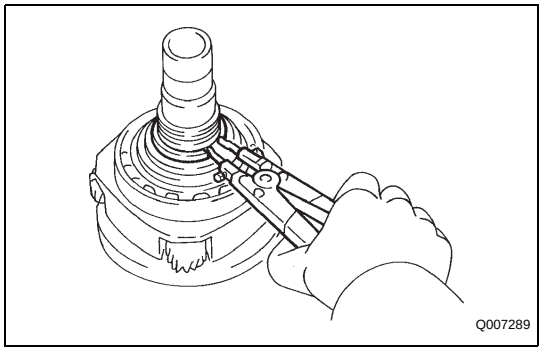
(a) Using a screwdriver, remove the low planetary gear shaft snap ring.



(b) Remove the low planetary gear spline piece.

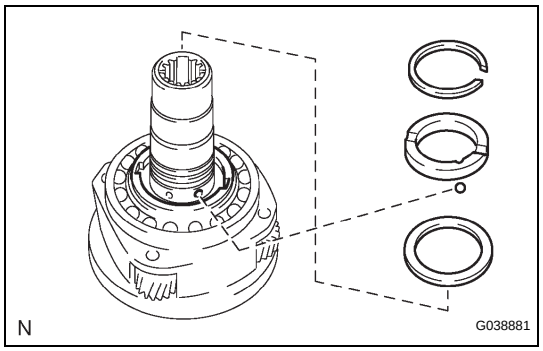


35. REMOVE TRANSFER OUTPUT SHAFT FRONT NEEDLE ROLLER BEARING



36. REMOVE TRANSFER INPUT GEAR STOPPER SHAFT SNAP RING

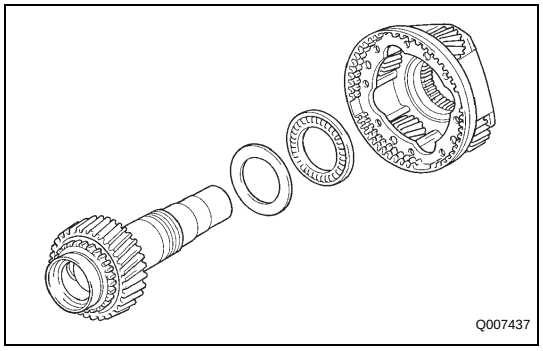
(a) Using a snap ring expander, remove the input gear stopper shaft snap ring.



37. REMOVE TRANSFER INPUT GEAR STOPPER

38. REMOVE TRANSFER INPUT GEAR STOPPER BALL

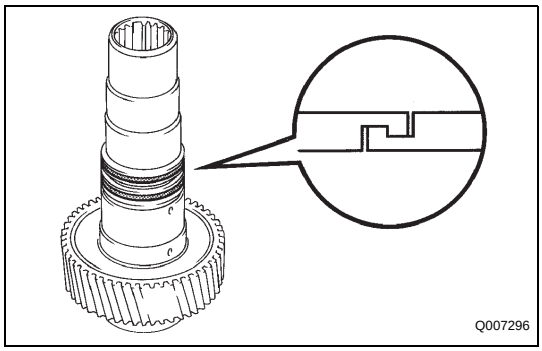
39. REMOVE MANUAL TRANSFER PLANETARY CARRIER WASHER



40. REMOVE TRANSFER INPUT SHAFT

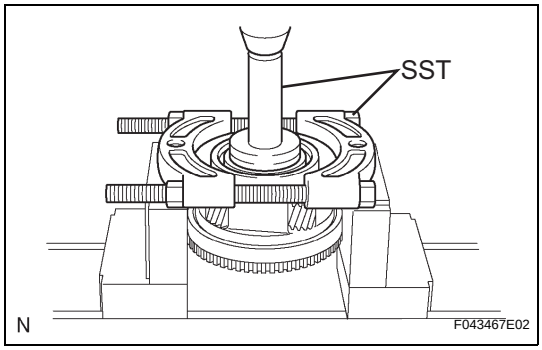
41. REMOVE TRANSFER NO. 1 THRUST BEARING RACE

42. REMOVE TRANSFER LOW PLANETARY GEAR BEARING



43. REMOVE TRANSFER NO. 1 INPUT SHAFT SEAL RING

(a) Remove the 2 seal rings No. 1.

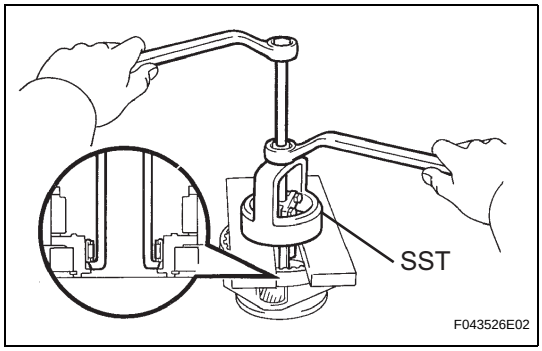


44. REMOVE TRANSFER INPUT SHAFT BEARING

(a) Using a snap ring expander, remove the input bearing shaft snap ring.

(b) Using SST and a press, remove the input shaft bearing.

SST 09554-30011, 09555-55010



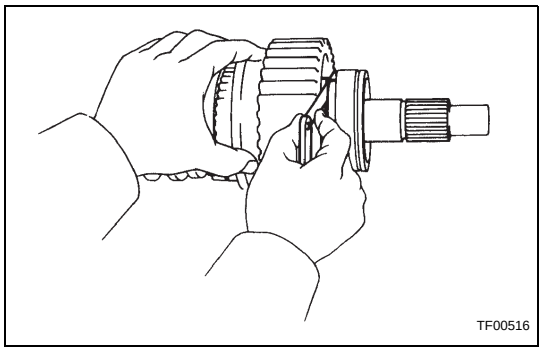
45. REMOVE TRANSFER LOW PLANETARY GEAR BEARING

(a) Using SST, remove the low planetary gear bearing.

SST 09612-65014 (09612-01030, 09612-01050)

NOTICE:

Hang SST securely to the clearance between the bearing and the low planetary gear.



46. INSPECT DRIVE SPROCKET THRUST CLEARANCE

(a) Using a feeler gauge, measure the drive sprocket thrust clearance.

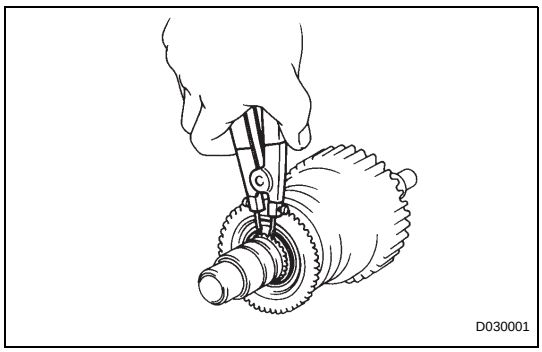
Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

Maximum clearance:

0.25 mm (0.0098 in.)

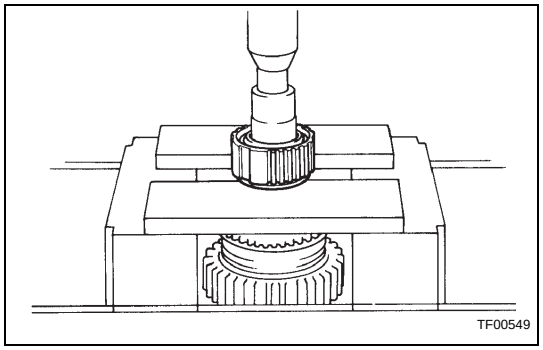
If the clearance exceeds the maximum, replace the drive sprocket.



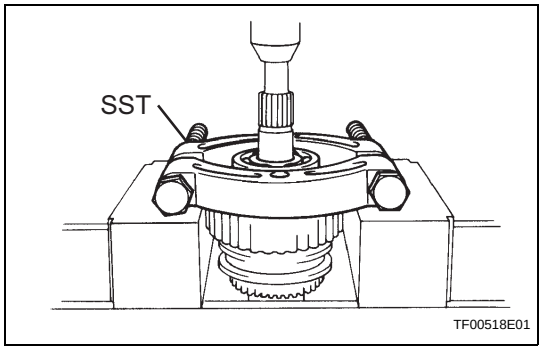
47. REMOVE TRANSFER CLUTCH HUB

(a) Using a snap ring expander, remove the clutch hub shaft snap ring.

(b) Remove the high and low clutch sleeve.

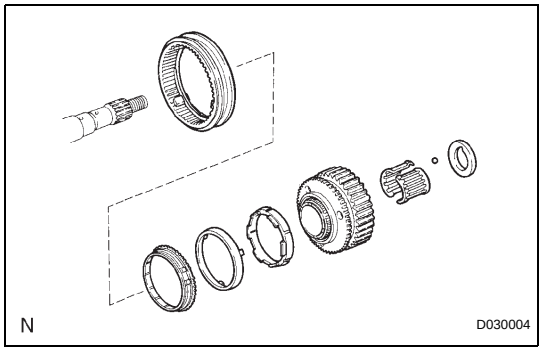


(c) Using a press, remove the clutch hub.



48. REMOVE TRANSFER OUTPUT SHAFT REAR RADIAL BALL BEARING

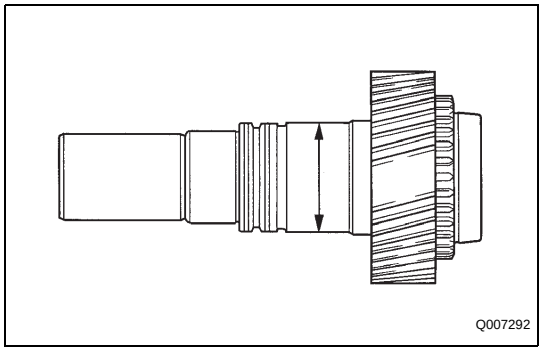
(a) Using SST and a press, remove the bearing.
SST 09555-55010



49. REMOVE TRANSFER DRIVE SPROCKET SUB-ASSEMBLY

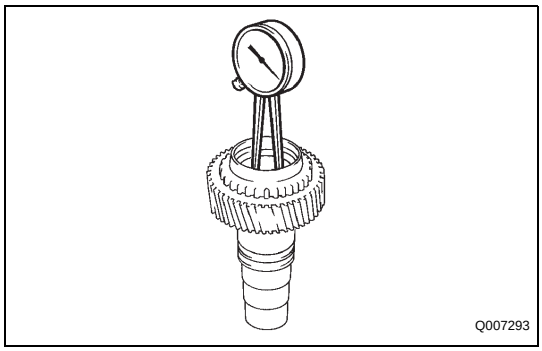
(a) Remove the output shaft spacer and output shaft spacer ball.
(b) Remove the drive sprocket sub-assembly, synchronizer inner ring, center ring, outer ring and drive clutch sleeve together.
(c) Remove the drive sprocket bearing.
(d) Remove the synchronizer inner ring, center ring, outer ring and drive clutch sleeve.
(e) Remove the 3 synchromesh shifting keys No. 1 and the 2 synchromesh shifting key springs No. 1.

INSPECTION

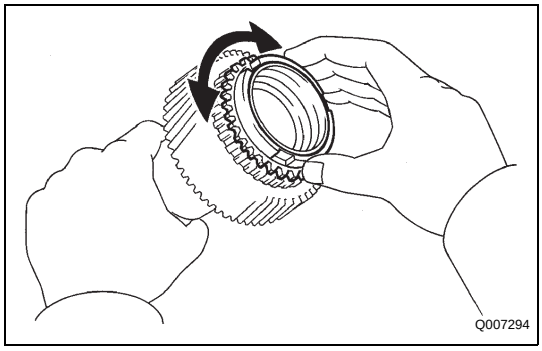


1. INSPECT TRANSFER INPUT SHAFT

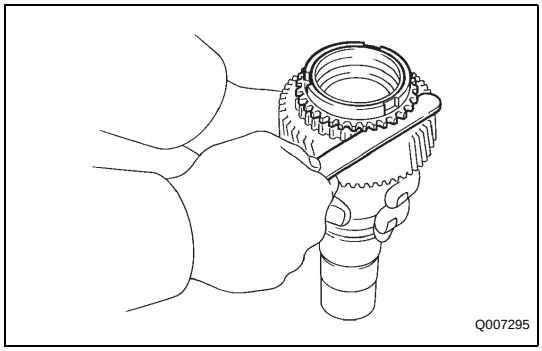
(a) Using a micrometer, measure the outer diameter of the input shaft journal surface.
Minimum diameter:
47.59 mm (1.8736 in.)
If the outer diameter is less than the minimum, replace the input shaft.



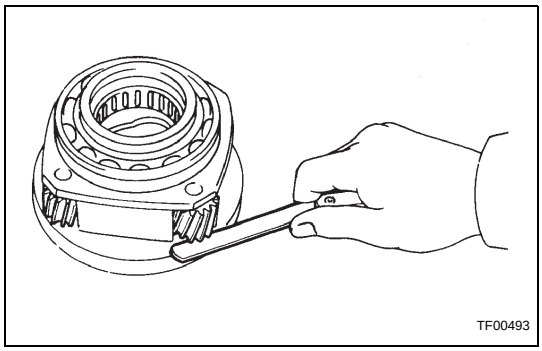
(b) Using a dial indicator, measure the inside diameter of the input shaft bushing.
Maximum diameter:
39.14 mm (1.5409 in.)
If the inside diameter exceeds the maximum, replace the input shaft.



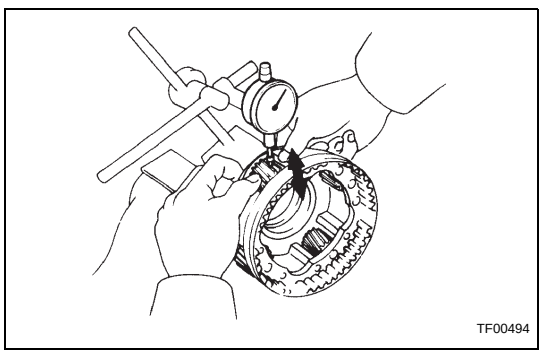
2. INSPECT SYNCHRONIZER RING
(a) Turn the ring and confirm that the input shaft and synchronizer ring are engaged with each other.



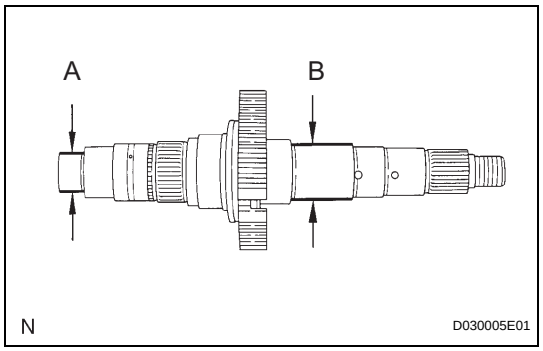
(b) Using a feeler gauge, measure the clearance between the synchronizer ring and the input shaft spline.
Standard clearance:
1.05 to 1.85 mm (0.0413 to 0.0728 in.)
Minimum clearance:
0.80 mm (0.0315 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



3. INSPECT PLANETARY PINION GEAR THRUST CLEARANCE
(a) Using a feeler gauge, measure the thrust clearance of the planetary pinion gear.
Standard clearance:
0.11 to 0.84 mm (0.0043 to 0.0331 in.)
Maximum clearance:
0.84 mm (0.0331 in.)
If the clearance exceeds the maximum, replace the planetary gear assembly.



4. INSPECT PLANETARY PINION GEAR RADIAL CLEARANCE
(a) Using a dial indicator, measure the radial clearance of the planetary pinion gear.
Standard clearance:
0.009 to 0.038 mm (0.0004 to 00015 in.)
Maximum clearance:
0.038 mm (0.0015 in.)
If the clearance exceeds the maximum, replace the planetary gear assembly.



5. INSPECT TRANSFER REAR OUTPUT SHAFT

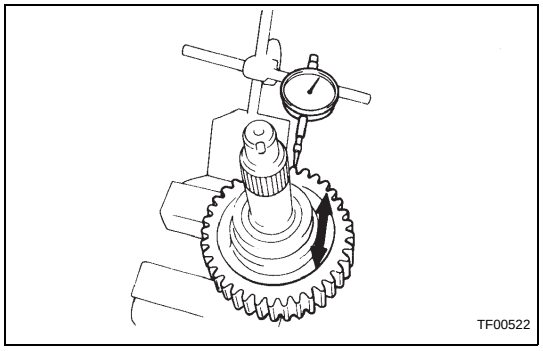
(a) Using a micrometer, measure the outer diameter of the output shaft rear journal surface.

Minimum diameter:

27.98 mm (1.1016 in.) for part A

36.98 mm (1.4561 in.) for part B

If the outer diameter is less than the minimum, replace the output shaft rear.



6. INSPECT DRIVE SPROCKET RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance between the sprocket and the shaft with the needle roller bearing installed.

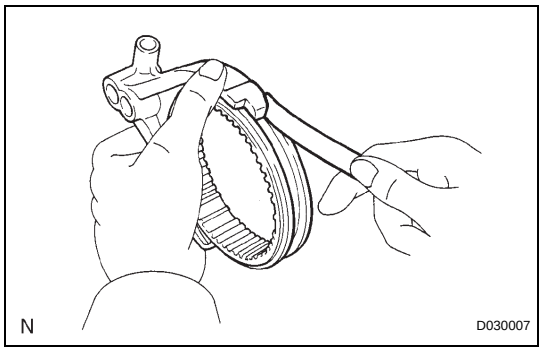
Standard clearance:

0.010 to 0.055 mm (0.0004 to 0.0022 in.)

Maximum clearance:

0.055 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the drive sprocket, rear output shaft and drive sprocket bearing.



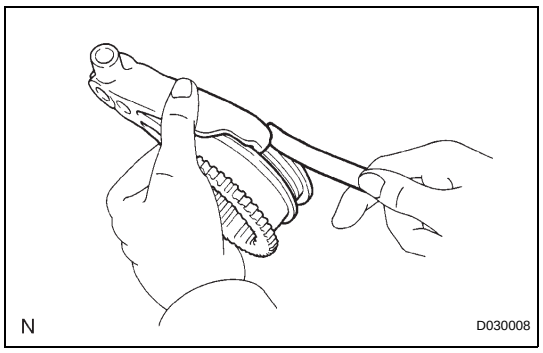
7. INSPECT GEAR SHIFT FORK NO. 1 AND HUB SLEEVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the gear shift fork No. 1 and drive clutch sleeve.

Maximum clearance:

1.0 mm (0.039 in.)

If the clearance exceeds the maximum, replace the gear shift fork No. 1 and drive clutch sleeve.



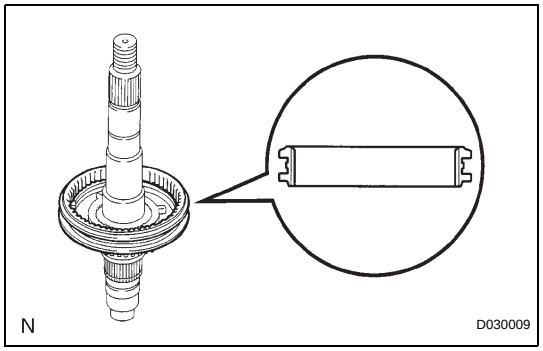
8. INSPECT GEAR SHIFT FORK NO. 2 AND HUB SLEEVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the gear shift fork No. 2 and high and low clutch sleeve.

Maximum clearance:

1.0 mm (0.039 in.)

If the clearance exceeds the maximum, replace the gear shift fork No. 2 and high and low clutch sleeve.



REASSEMBLY

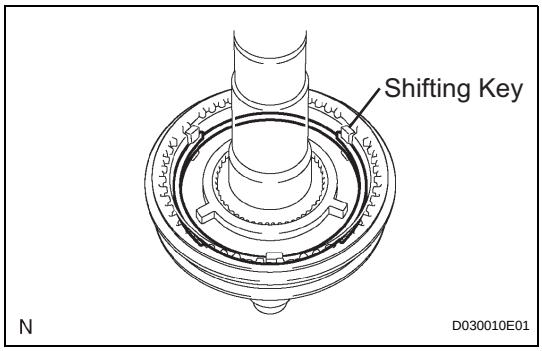
1. INSTALL FRONT DRIVE CLUTCH SLEEVE

(a) Install the drive clutch sleeve onto the rear output shaft.

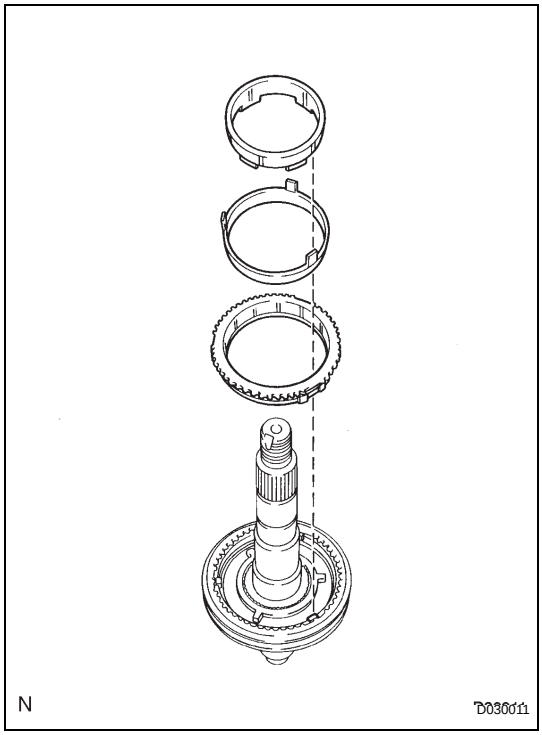
NOTICE:

Make sure that the clutch sleeve is installed facing in the correct direction.

TF



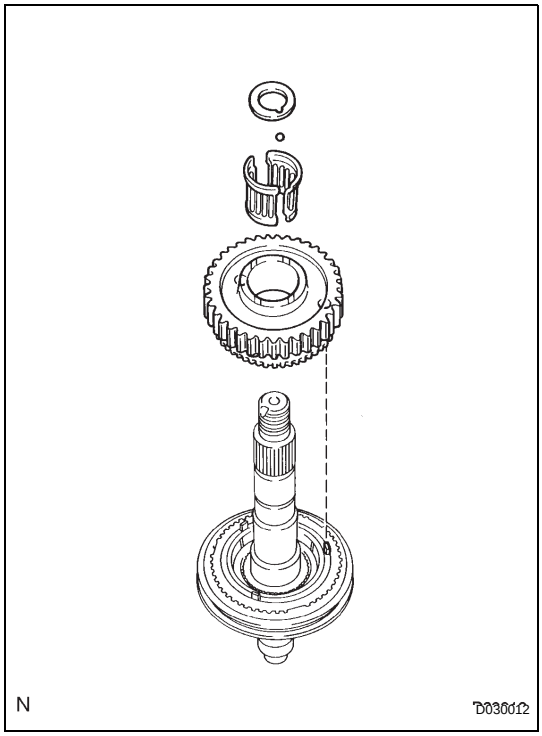
(b) Install the 3 synchromesh shifting keys No. 1 and the 2 synchromesh shifting keys spring No. 1.
NOTICE:
Install the key springs so that their end gaps are not in line.



2. INSTALL TRANSFER SYNCHRONIZER RING SET

(a) Install the synchronizer outer ring onto the rear output shaft.
NOTICE:
Align the slots of the synchronizer outer ring with the shifting keys.

(b) Install the synchronizer center and the inner rings onto the rear output shaft.
NOTICE:
Align the slots of the synchronizer outer with those of the inner rings.

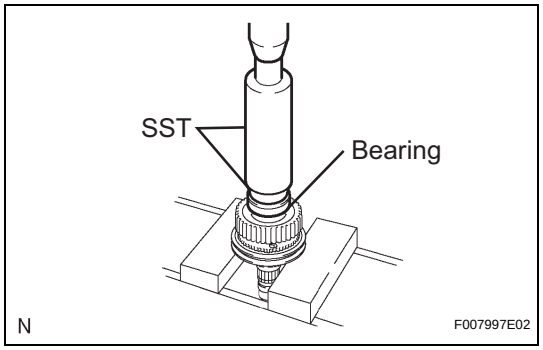


3. INSTALL TRANSFER DRIVE SPROCKET SUB-ASSEMBLY

(a) Install a new drive sprocket bearing.

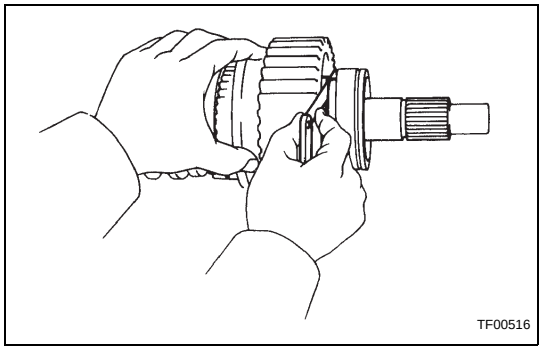
(b) Install the drive sprocket sub-assembly.
NOTICE:
Align the holes in the drive sprocket with the protrusions on the synchronizer center ring.

(c) Install the output shaft spacer aligned it with the output shaft spacer ball.



4. INSTALL TRANSFER OUTPUT SHAFT REAR RADIAL BALL BEARING

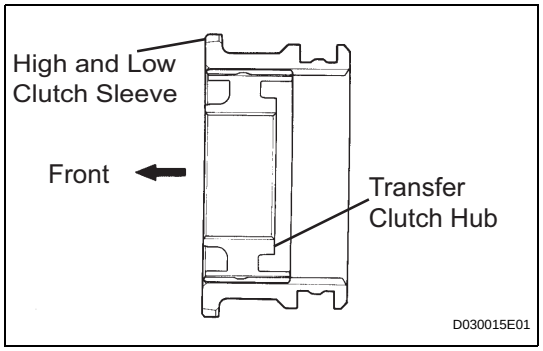
(a) Using SST and a press, install a new output shaft rear radial ball bearing with the output shaft snap ring groove toward the rear.
SST 09316-60011 (09316-00011, 09316-00071)



5. INSPECT DRIVE SPROCKET THRUST CLEARANCE

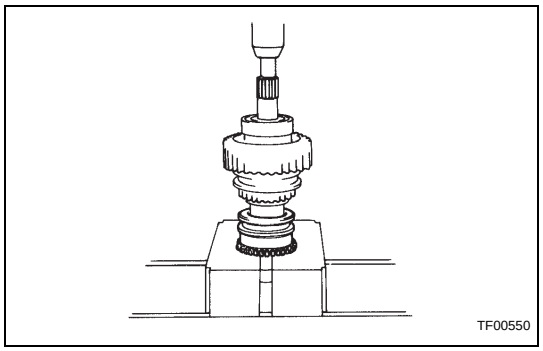
(a) Using a feeler gauge, measure the drive sprocket thrust clearance.
Standard clearance:
0.10 to 0.25 mm (0.0039 to 0.0098 in.)
Maximum clearance:
0.25 mm (0.0098 in.)
If the clearance exceeds the maximum, replace the drive sprocket sub-assembly.

TF



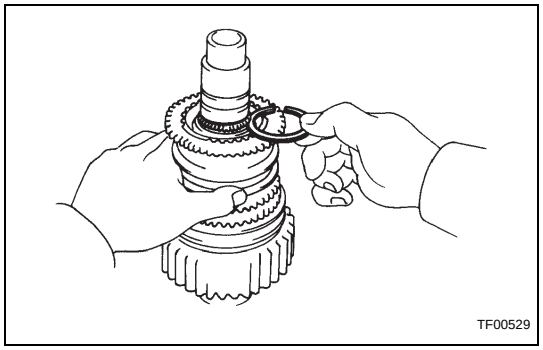
6. INSTALL TRANSFER HIGH AND LOW CLUTCH SLEEVE

(a) Install the high and low clutch sleeve onto the transfer clutch hub.
NOTICE:
Make sure that the high and low clutch hub is installed facing in the correct direction.



7. INSTALL TRANSFER CLUTCH HUB

(a) Using a press, install the transfer clutch hub.



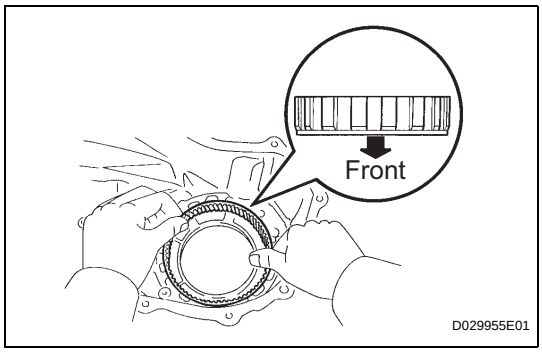
(b) Select an output shaft snap ring that allows the minimum axial play.

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)

Mark	Thickness mm (in.)
G	2.40 to 2.45 (0.0945 to 0.0965)
H	2.45 to 2.50 (0.0965 to 0.0984)
J	2.50 to 2.55 (0.0984 to 0.1004)
K	2.00 to 2.05 (0.0787 to 0.0807)
L	2.05 to 2.10 (0.0807 to 0.0827)

(c) Using a snap ring expander, install the new snap ring.

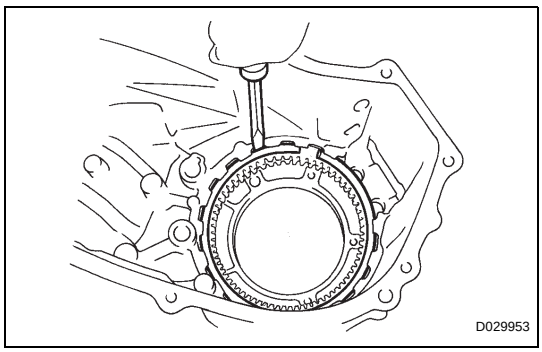
8. INSTALL TRANSFER LOW PLANETARY RING GEAR



(a) Install the low planetary ring gear onto the transfer case front.

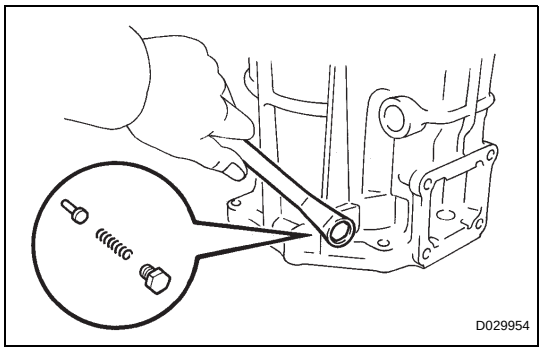
NOTICE:

Be sure to install the low planetary ring gear facing in the correct direction.



(b) Using a screwdriver, install the hole snap ring.

9. INSTALL TRANSFER CASE PLUG



(a) Install the pin and spring.

(b) Apply sealant to the case plug threads.

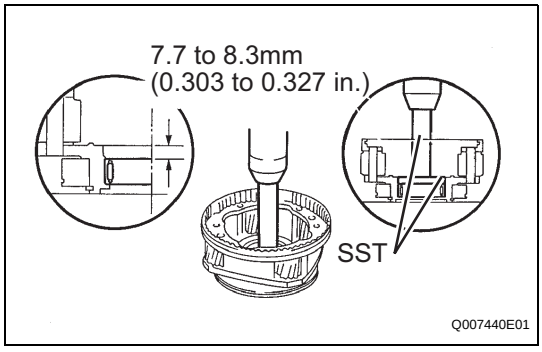
Sealant:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(c) Install the case plug.

Torque: 18.6 N*m (190 kgf*cm, 14 ft.*lbf)

10. INSTALL TRANSFER LOW PLANETARY GEAR BEARING

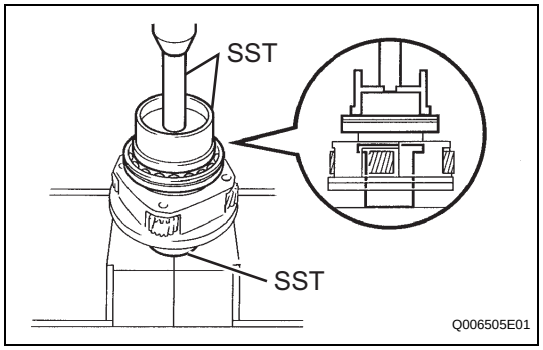


(a) Using SST and a press, tap in a new low planetary gear bearing.

SST 09950-60010 (09951-00570), 09950-70010 (09951-07100)

Press in depth:

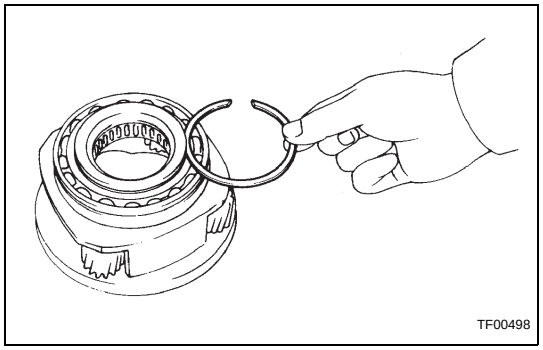
7.7 to 8.3 mm (0.303 to 0.327 in.)



11. INSTALL TRANSFER INPUT SHAFT BEARING

(a) Using SST and a press, install a new input shaft bearing with the groove facing forward.

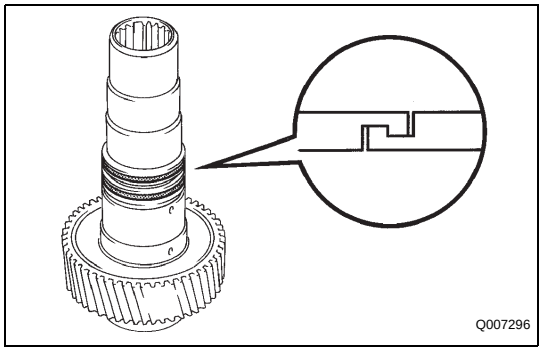
SST 09223-15020, 09515-30010, 09950-70010 (09951-07100)



(b) Select a snap ring that allows 0.1 mm (0.004 in.) or less axial play.

Mark	Thickness mm (in.)
1	1.45 to 1.50 (0.0571 to 0.0591)
2	1.50 to 1.55 (0.0591 to 0.0610)
3	1.55 to 1.60 (0.0610 to 0.0630)
4	1.60 to 1.65 (0.0630 to 0.0650)
5	1.65 to 1.70 (0.0650 to 0.0669)

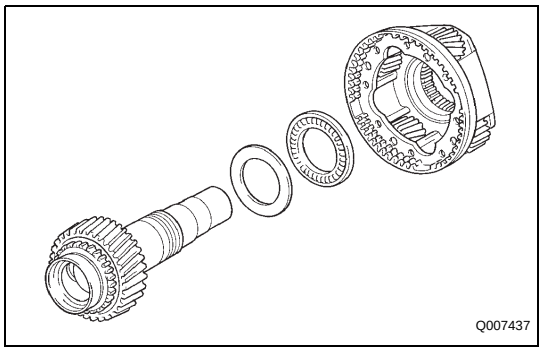
(c) Using a snap ring expander, install the new input bearing shaft snap ring.



12. INSTALL TRANSFER NO. 1 INPUT SHAFT SEAL RING

(a) Apply gear oil to the 2 input shaft seal ring No. 1.

(b) Engage the rings securely to eliminate any clearance, as shown in the illustration.



13. INSTALL TRANSFER LOW PLANETARY GEAR BEARING

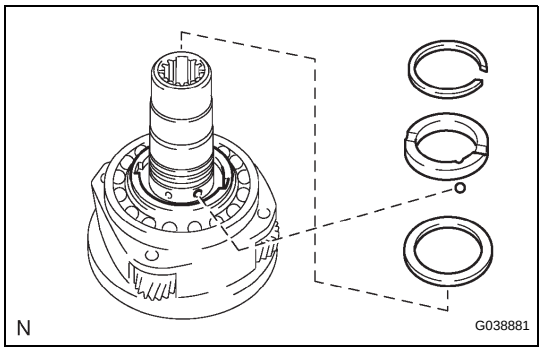
NOTICE:

Be sure to install the transfer low planetary gear facing in the correct direction.

14. INSTALL TRANSFER NO. 1 THRUST BEARING RACE

15. INSTALL TRANSFER INPUT SHAFT

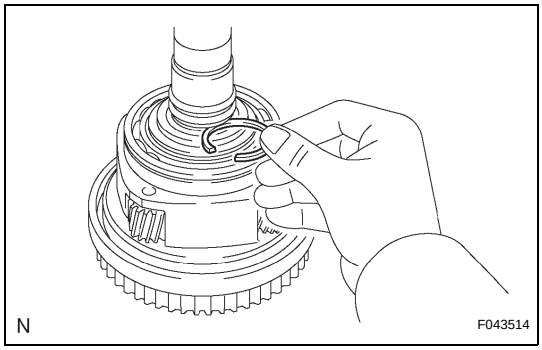
TF



16. INSTALL MANUAL TRANSFER PLANETARY CARRIER WASHER

17. INSTALL TRANSFER INPUT GEAR STOPPER BALL

18. INSTALL TRANSFER INPUT GEAR STOPPER

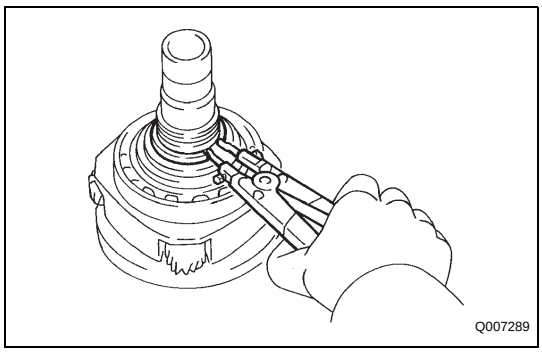


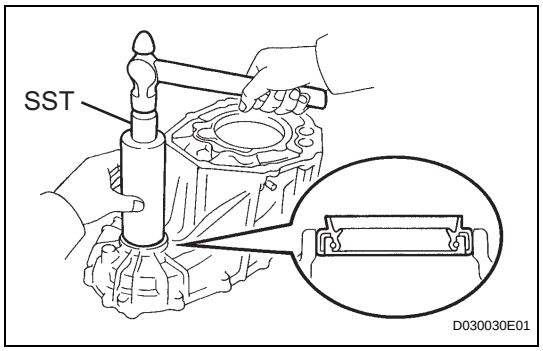
19. INSTALL TRANSFER INPUT GEAR STOPPER SHAFT SNAP RING

(a) Select an input gear stopper shaft snap ring that allows 0.05 to 0.15 mm (0.0020 to 0.0059 in.) axial play.

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)
H	2.45 to 2.50 (0.0965 to 0.0984)
J	2.50 to 2.55 (0.0984 to 0.1004)
K	2.55 to 2.60 (0.1004 to 0.1204)
L	2.60 to 2.65 (0.1024 to 0.1043)
M	2.65 to 2.70 (0.1043 to 0.1063)
N	2.70 to 2.75 (0.1063 to 0.1083)
P	2.75 to 2.80 (0.1083 to 0.1102)
Q	2.80 to 2.85 (0.1102 to 0.1122)
R	2.85 to 2.90 (0.1122 to 0.1142)
S	2.90 to 2.95 (0.1142 to 0.1161)
T	2.95 to 3.00 (0.1161 to 0.1181)
U	3.00 to 3.05 (0.1181 to 0.1201)

(b) Using a snap ring expander, install the new input gear stopper shaft snap ring.

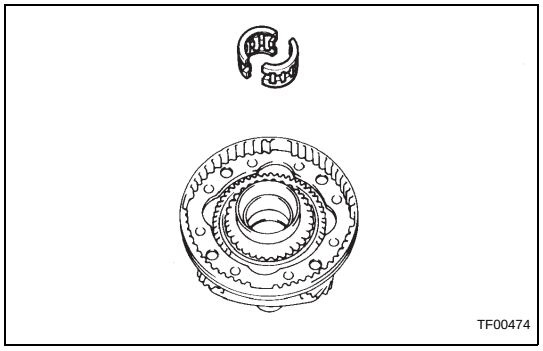




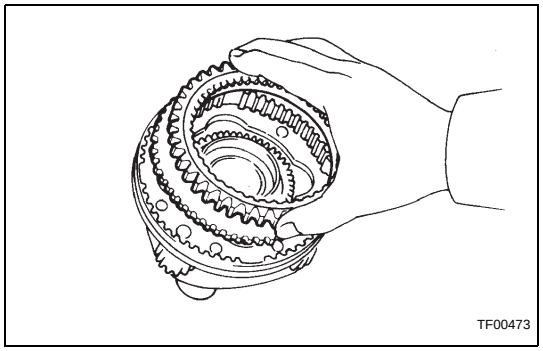
20. INSTALL TRANSFER CASE OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the case upper surface.
SST 09316-60011 (09316-00011)

(b) Coat the lip of the oil seal with MP grease.

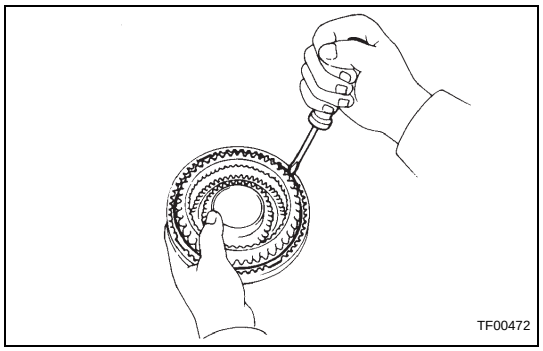


21. INSTALL TRANSFER OUTPUT SHAFT FRONT NEEDLE ROLLER BEARING

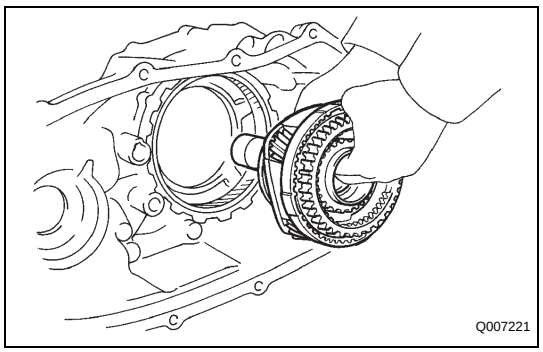


22. INSTALL TRANSFER LOW PLANETARY GEAR SPLINE PIECE

(a) Install the low planetary gear spline piece.

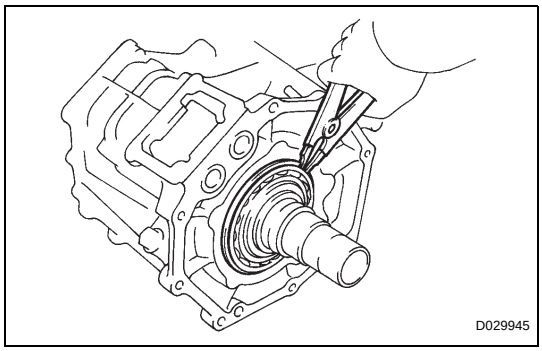


(b) Using a screwdriver, install the low planetary gear shaft snap ring.
NOTICE:
Make sure that the end gap of the snap ring is not aligned with the cutout of the planetary carrier.



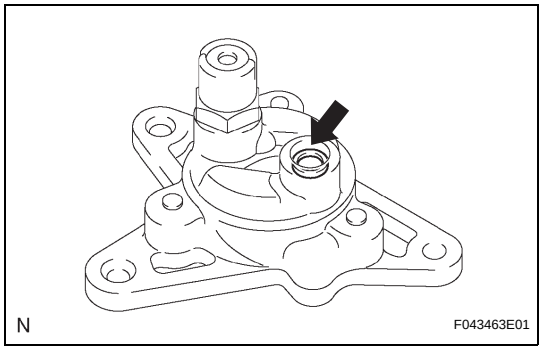
23. INSTALL LOW PLANETARY GEAR ASSEMBLY WITH INPUT SHAFT SUB-ASSEMBLY

(a) Install the low planetary gear assembly w/ input shaft sub-assembly.
HINT:
If necessary, heat the front case to about 50 to 80°C (122 to 176°F).



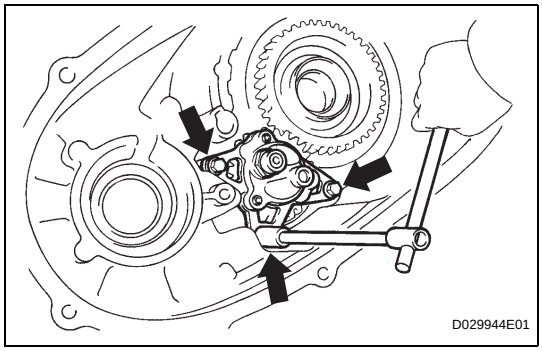
(b) Using a snap ring expander, install the shaft snap ring.

24. INSTALL TRANSFER OIL PUMP GEAR



25. INSTALL TRANSFER OIL PUMP BODY O-RING

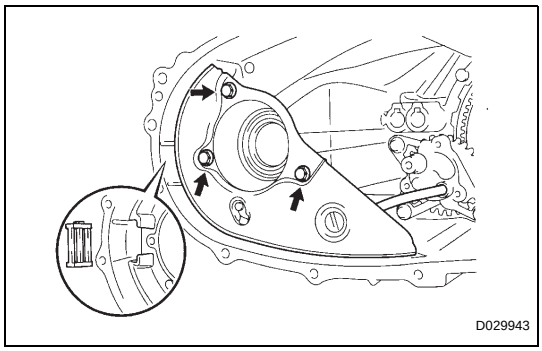
(a) Coat a new O-ring with gear oil and install it onto the oil pump body.



26. INSTALL TRANSFER OIL PUMP BODY SUB-ASSEMBLY

(a) Install the oil pump body sub-assembly with the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

27. INSTALL TRANSFER CASE MAGNET



28. INSTALL TRANSFER OIL SEPARATOR SUB-ASSEMBLY

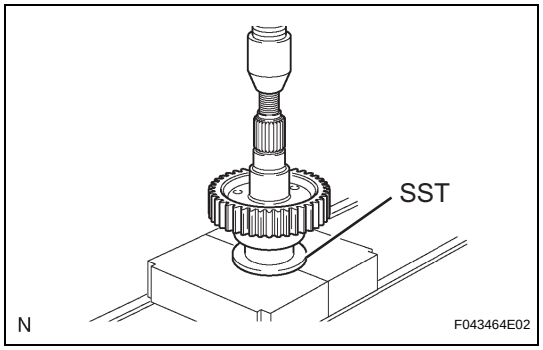
(a) Install the oil separator sub-assembly with the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

29. INSTALL TRANSFER CASE PLUG

(a) Install the case plug No. 1 (filler plug) and a new gasket.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

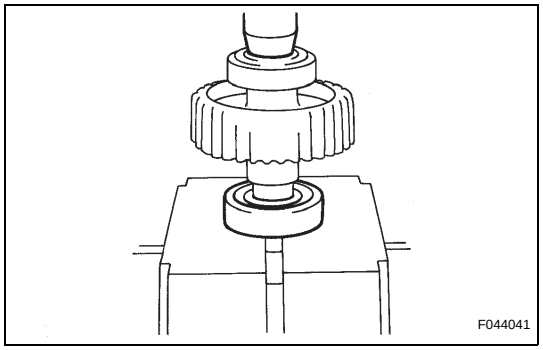
30. INSTALL TRANSFER CASE PLUG

(a) Install the case plug (drain plug) and a new gasket.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



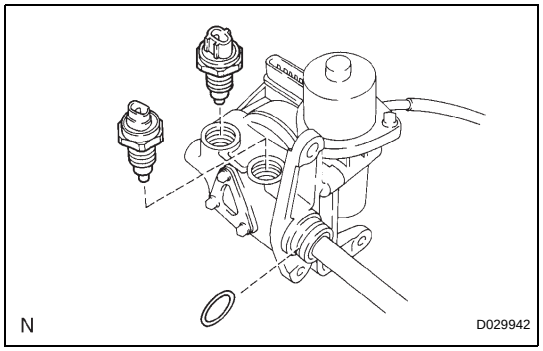
31. INSTALL TRANSFER INPUT GEAR RADIAL BALL BEARING

(a) Using SST and a press, install a new input gear radial ball bearing.
SST 09316-60011 (09316-00031)



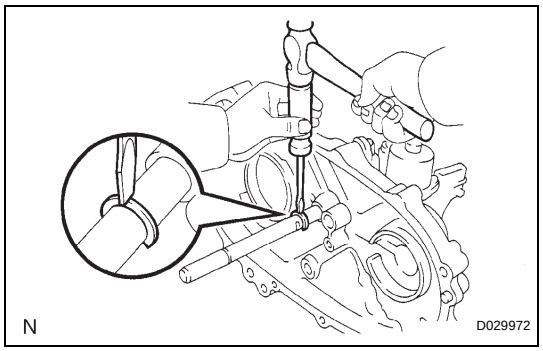
32. INSTALL TRANSFER DRIVEN SPROCKET BEARING

(a) Using a press, install a new driven sprocket bearing.



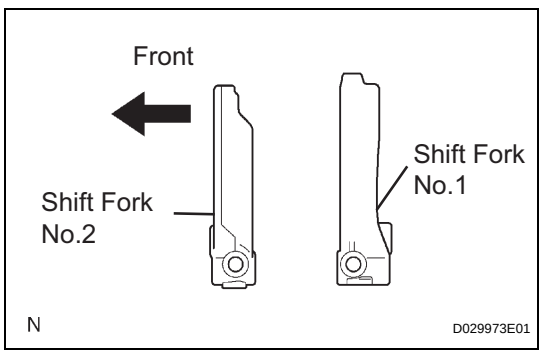
33. INSTALL TRANSFER INDICATOR SWITCH NO.1

(a) Coat a new O-ring with gear oil and install it onto the shift actuator assembly.
(b) Install 2 new gaskets and the 2 indicator switches No. 1 onto the shift actuator assembly.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



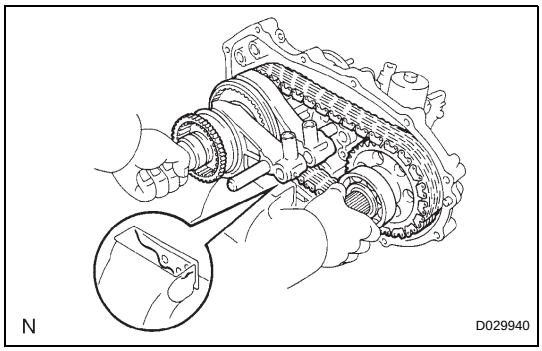
34. INSTALL TRANSFER SHIFT ACTUATOR ASSEMBLY

(a) Install the shift actuator assembly with the 3 bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
(b) Using a screwdriver and hammer, tap in the shift fork shaft snap ring.
HINT:
Install only the snap ring on the rear side of the shaft.

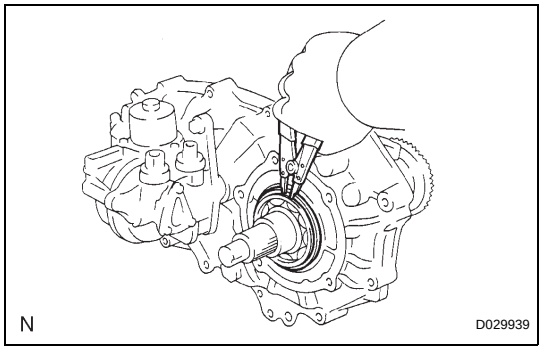


35. INSTALL REAR OUTPUT SHAFT ASSEMBLY, FRONT DRIVE CHAIN, DRIVEN SPROCKET ASSEMBLY, SHIFT FORK NO. 1 AND NO. 2

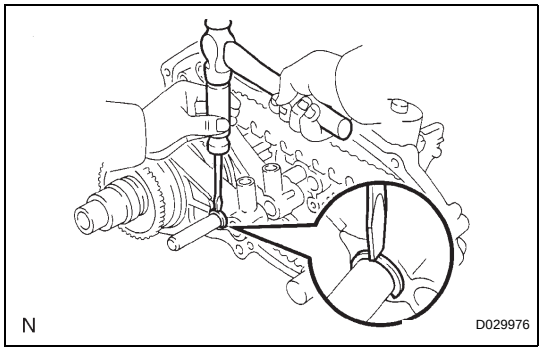
(a) Install the driven sprocket assembly, front drive chain and shift forks No. 1 and No. 2 onto the rear output shaft assembly.
NOTICE:
Make sure that the shift forks No. 1 and No. 2 are installed facing in the correct direction.



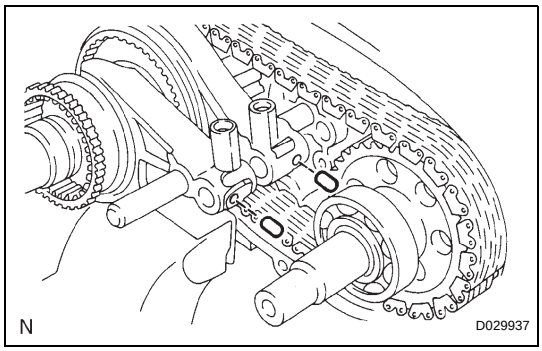
(b) Fix the case rear in a vise.
(c) Install the rear output shaft assembly, front drive chain, driven sprocket assembly and shift forks No. 1 and No. 2 onto the case rear.
NOTICE:
Do not let the clutch sleeve or shifting key drop.
HINT:
If necessary, heat the rear case to about 50 to 80°C (122 to 176°F).



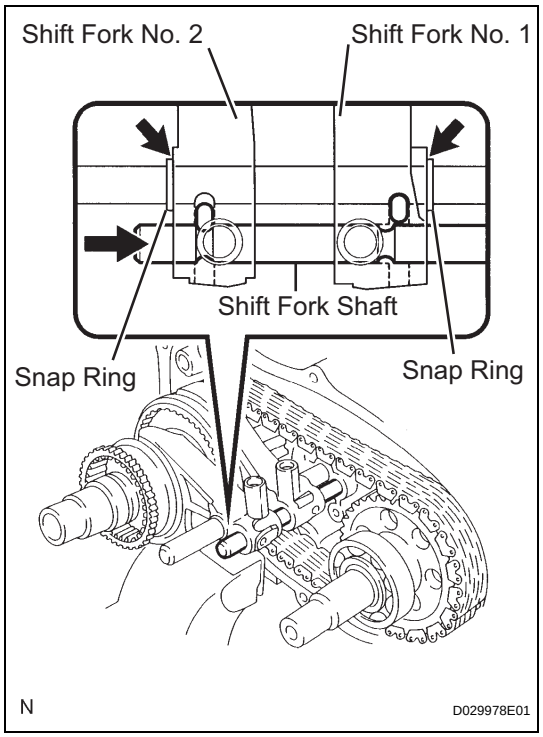
(d) Using a snap ring expander, install the output shaft snap ring.



(e) Using a screwdriver and hammer, tap in the shift fork shaft snap ring.
HINT:
Check that the rear output shaft assembly and driven sprocket assembly turn smoothly.



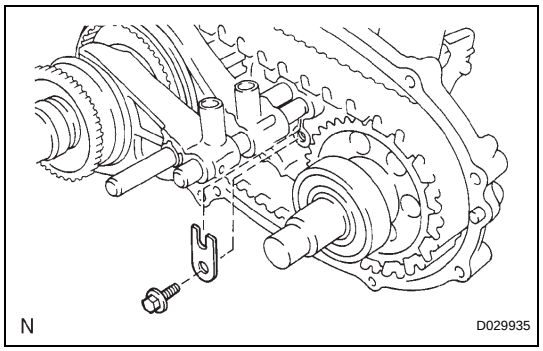
36. INSTALL TRANSFER FRONT DRIVE SHIFT FORK SHAFT
(a) Using a magnetic finger, install the 2 shift inter lock pins onto the shift forks No. 1 and No. 2.



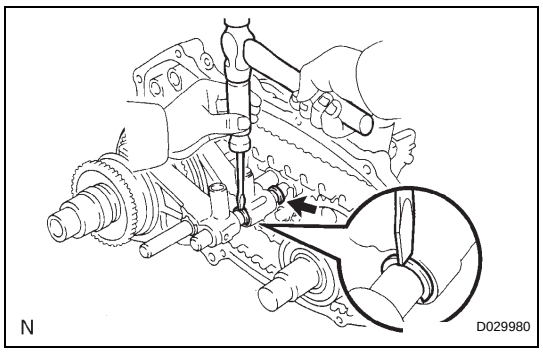
(b) To push in the shift fork shaft, shift the shift fork No. 1 and No. 2 to the positions shown in the illustration.

(c) Push in the shift fork shaft.

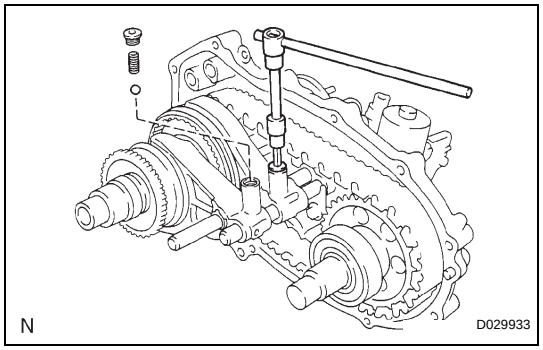
NOTICE:
Make sure that the shift fork shaft is installed facing in the correct direction.



(d) Install the shift shaft stopper with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



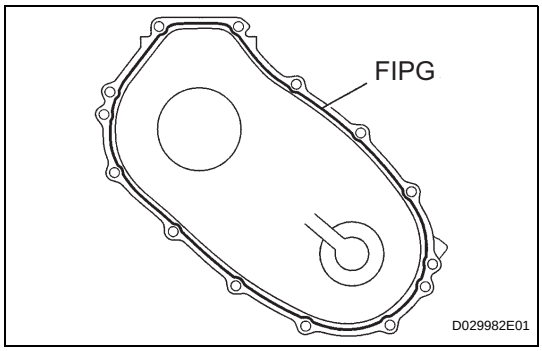
(e) Using a screwdriver and hammer, tap the 2 shift fork shaft snap rings into the shift fork shaft.



(f) Install the 2 shift detent balls and 2 compression springs onto the shift forks No. 1 and No. 2.

(g) Apply sealant to the shift detent ball spring plug threads.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(h) Using a hexagon wrench (6 mm), install the 2 shift detent ball spring plugs onto the shift forks No. 1 and No. 2.
Torque: 18.6 N*m (190 kgf*cm, 14 ft.*lbf)

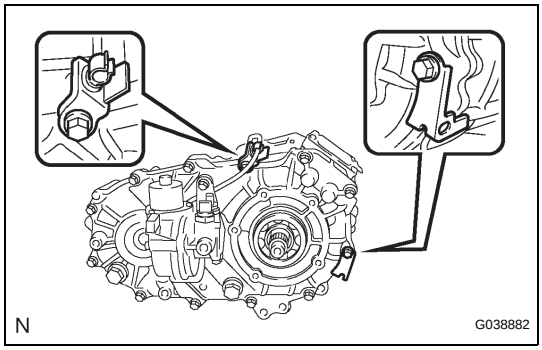


37. INSTALL TRANSFER REAR CASE

(a) Apply FIPG to the case rear, as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent



(b) Engage the 2 brackets and install the case rear with the 12 bolts.

Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

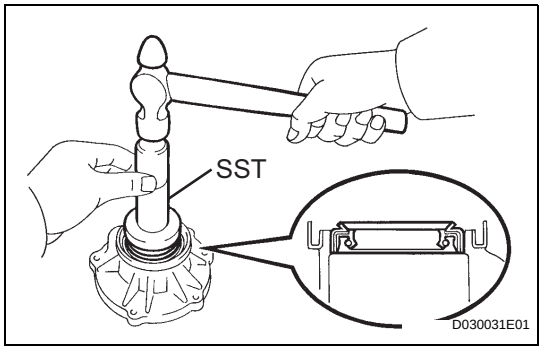
38. INSTALL TRANSFER SPEEDOMETER DRIVE GEAR

(a) Coat the speedometer drive gear ball with MP grease and install it onto the rear output shaft assembly.

(b) Install the speedometer drive gear.

39. INSTALL TRANSFER OUTPUT WASHER

(a) Install the 2 output washers.

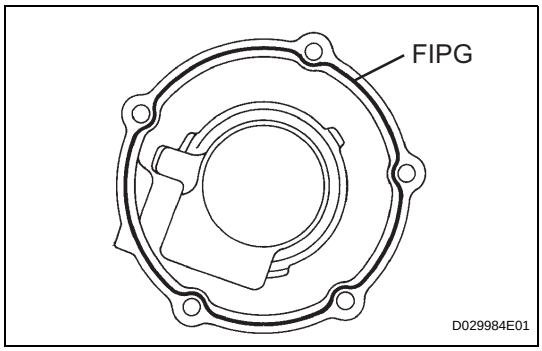


40. INSTALL TRANSFER EXTENSION HOUSING TYPE T OIL SEAL

(a) Using SST and a hammer, tap in a new extension housing type T oil seal until its surface is flush with the housing upper surface.

SST 09554-22010

(b) Coat the lip of the oil seal with MP grease.



41. INSTALL TRANSFER EXTENSION HOUSING SUB-ASSEMBLY FRONT

(a) Apply FIPG to the extension housing sub-assembly, as shown in the illustration.

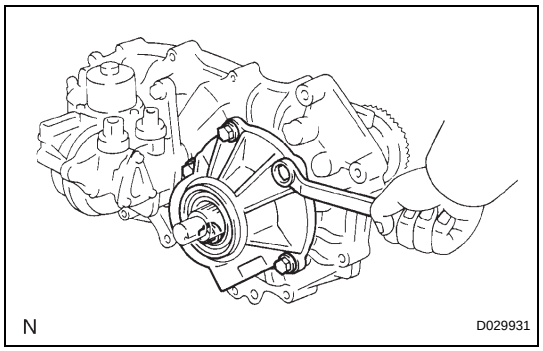
FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

(b) Apply sealant to the bolt threads.

Sealant:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent



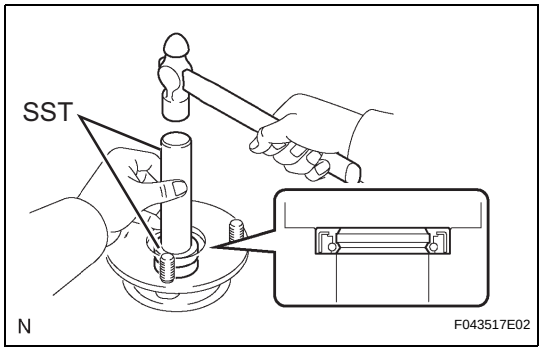
(c) Install the extension housing sub-assembly with the 5 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

42. INSTALL SPEEDOMETER DRIVEN GEAR ASSEMBLY WITH SENSOR (for R155F/RA60F)

(a) Install the speedometer driven gear w/ sensor with the bolt.
Torque: 11.5 N*m (117 kgf*cm, 8 ft.*lbf)

43. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY (for A750F)

(a) Install the speedometer driven hole cover with the bolt.
Torque: 11.5 N*m (117 kgf*cm, 8 ft.*lbf)

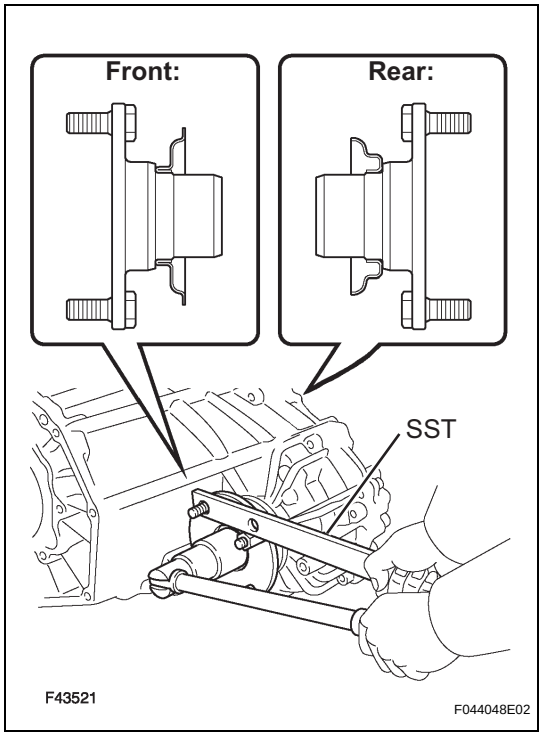


44. INSTALL TRANSFER OUTPUT SHAFT COMPANION FLANGE OIL SEAL

(a) Using SST and a hammer, tap in a new output shaft companion flange oil seal (front side).
SST 09950-60010 (09951-00320), 09950-70010 (09951-07100)

45. INSTALL TRANSFER OUTPUT SHAFT COMPANION FLANGE OIL SEAL

(a) Tap in a new output shaft companion flange oil seal using the same procedure as for the oil seal (rear side).
SST 09950-60010 (09951-00320), 09950-70010 (09951-07100)



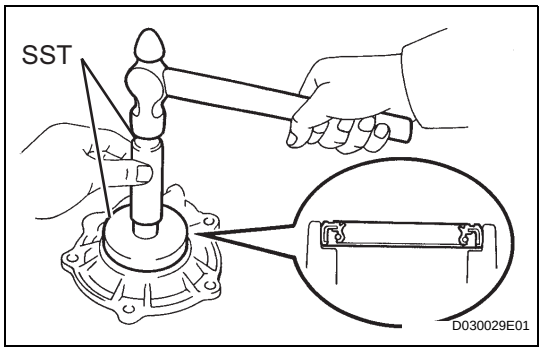
46. INSTALL OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY

(a) Install the companion flange sub-assembly (front side) onto the drive sprocket sub-assembly.
(b) Using SST to hold the companion flange, install a new companion flange lock nut.
SST 09330-00021
Torque: 118 N*m (1,203 kgf*cm, 87 ft.*lbf)
(c) Using a chisel and hammer, stake the companion flange lock nut.

47. INSTALL OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY

(a) Using SST, install the companion flange sub-assembly using the same procedure as for the companion flange sub-assembly (rear side).
SST 09330-00021

TF

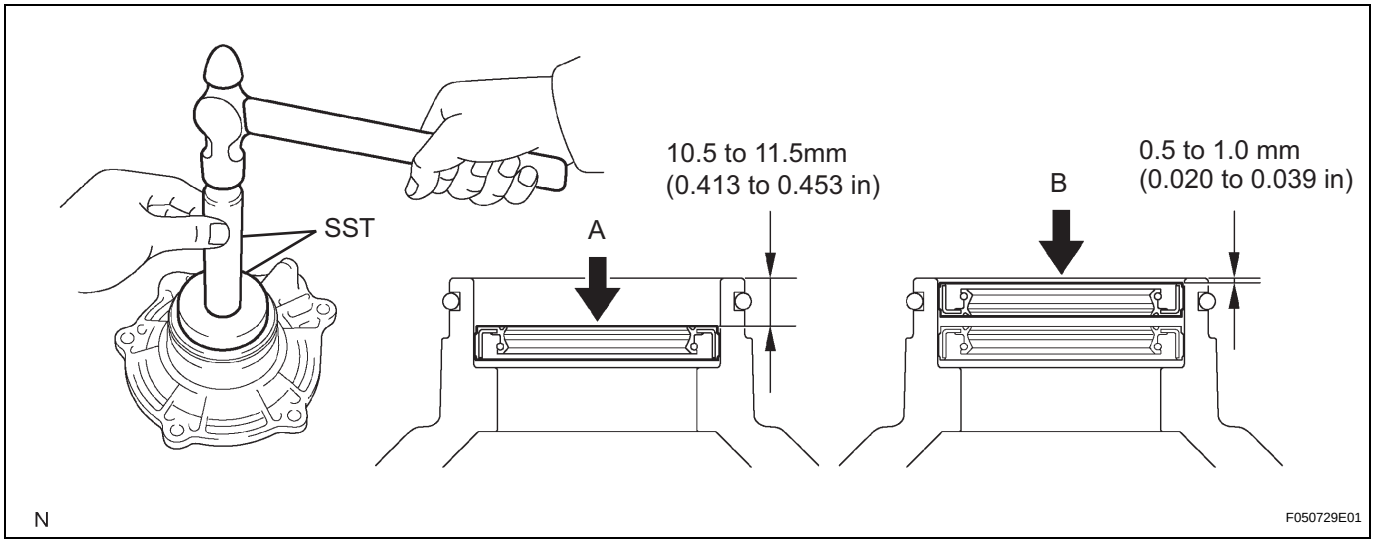


48. INSTALL TRANSFER RH BEARING RETAINER OIL SEAL (for R155F/A750F)

(a) Using SST and a hammer, tap in a new transfer cover type T oil seal until its surface is flush with the retainer upper surface.
SST 09950-60010 (09951-00590), 09950-70010 (09951-07100)

(b) Coat the lip of the oil seal with MP grease.

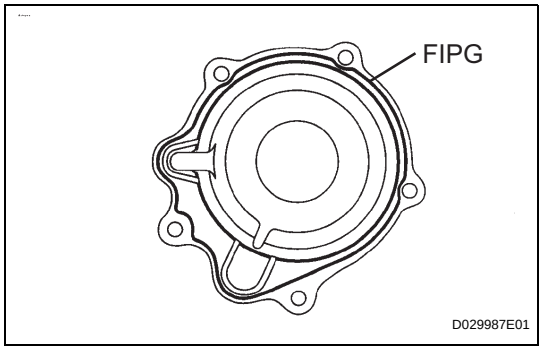
49. INSTALL TRANSFER RH BEARING RETAINER OIL SEAL (for RA60F)



(a) Using SST and a hammer, tap in 2 new transfer cover type T oil seals A and B as shown in the illustration.
SST 09950-60010 (09951-00580), 09950-70010 (09951-07100)
Drive in depth:
10.5 to 11.5 mm (0.413 to 0.453 in.) for oil seal A
0.5 to 1.0 mm (0.020 to 0.039 in.) for oil seal B

(b) Coat the lip of the oil seal with MP grease.

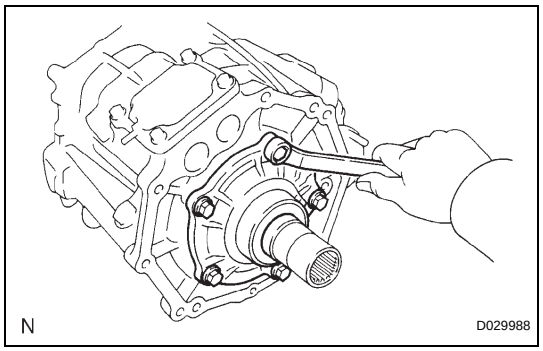
(c) Install a new O-ring onto the transfer RH bearing retainer.
NOTICE:
Apply gear oil to the O-ring when installing the transfer onto the transmission.



50. INSTALL TRANSFER RH BEARING RETAINER SUB-ASSEMBLY

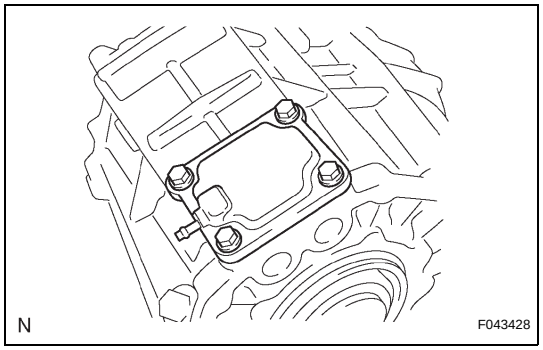
(a) Apply FIPG to the front bearing retainer sub-assembly, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent

(b) Apply sealant to the bolt threads.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

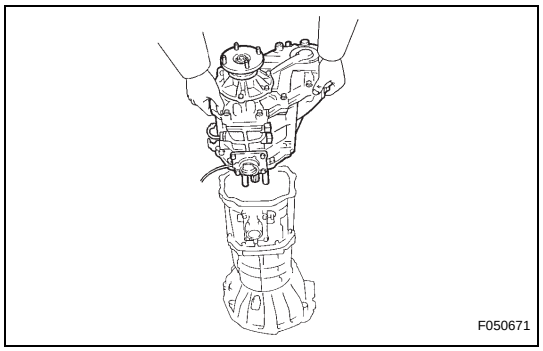


(c) Install the front bearing retainer sub-assembly with the 5 bolts.
Torque: 11.5 N*m (117 kgf*cm, 8 ft.*lbf)

51. INSTALL BREATHER OIL DEFLECTOR SUB-ASSEMBLY



52. INSTALL TRANSFER CASE COVER SUB-ASSEMBLY
(a) Install the case cover sub-assembly with the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



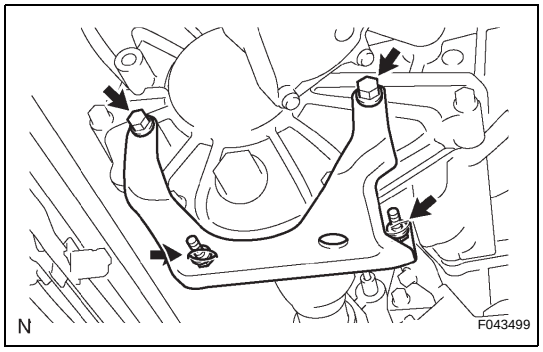
INSTALLATION

1. INSTALL TRANSFER ASSEMBLY
(a) Install the transfer assembly with the 8 bolts.
Torque: 24 N*m (244 kgf*cm, 17 ft.*lbf)
NOTICE:
Take care not to damage the adaptor rear oil seal with the transfer input gear spline.

2. INSTALL MANUAL TRANSMISSION ASSEMBLY (for R155F)
(See page MT-11)

3. INSTALL MANUAL TRANSMISSION ASSEMBLY (for RA60F)
(See page MT-8)

4. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (for A750F)
(See page AT-165)



5. INSTALL TRANSFER CASE LOWER PROTECTOR
(a) Install the 4 bolts and the transfer case lower protector.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

6. ADD TRANSFER OIL

7. INSPECT TRANSFER OIL (See page TF-3)

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

9. CHECK FOR TRANSFER OIL LEAKAGE

10. CHECK FOR EXHAUST GAS LEAKAGE

DISASSEMBLY

1. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check the spider bearing axial play by turning the yoke with holding the shaft tightly.

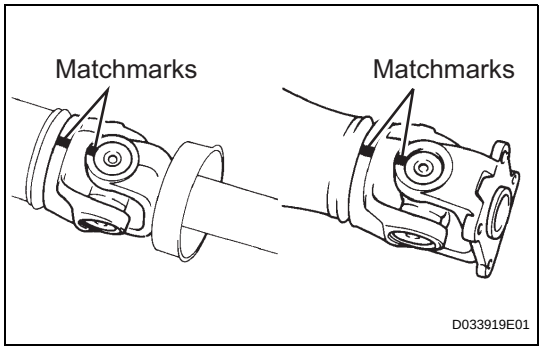
Maximum bearing axial play:

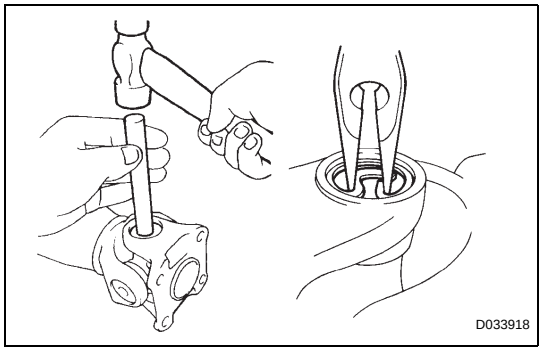
0 to 0.05 mm (0 to 0.002 in.)

If the bearing axial play is greater than the maximum, replace the spider bearing.

2. REMOVE PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

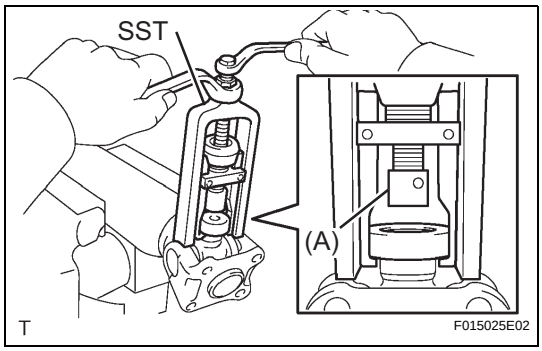
(a) Place matchmarks on the propeller shaft and yoke.





(b) Using a brass bar and a hammer, slightly tap in the spider bearing outer races.

(c) Using needle-nose pliers, remove the 4 snap rings from the grooves.

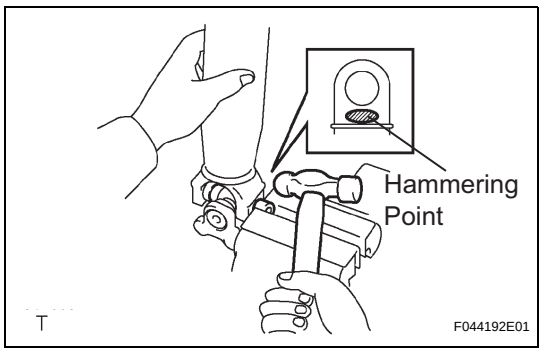


(d) Using SST, push the spider bearing out of the propeller shaft.

SST 09332-25010

HINT:

Sufficiently raise the part indicated by (A) so that it does not come into contact with the spider bearing.



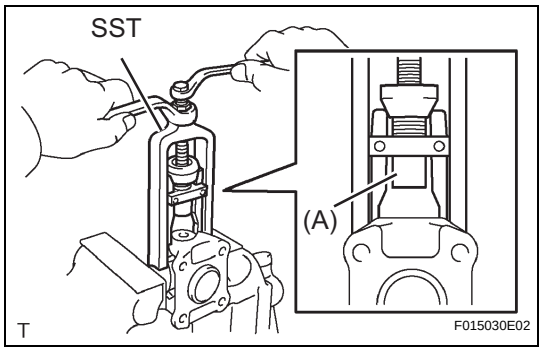
(e) Clamp the spider bearing outer race in a vise and tap off the propeller shaft with a hammer.

NOTICE:

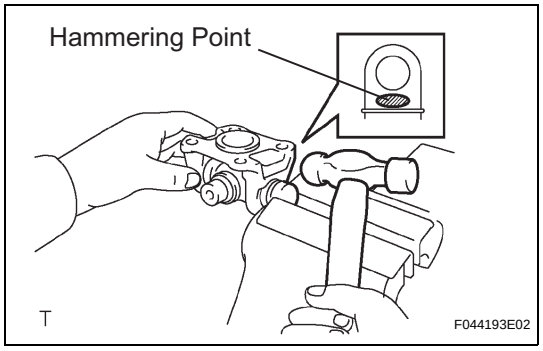
Do not tap the shaft.

HINT:

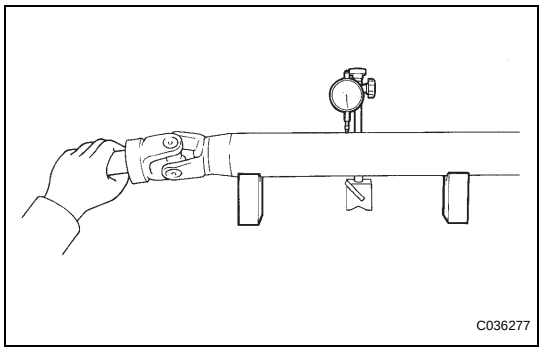
Remove the spider bearing on the opposite side in the same procedure.



(f) Install the 2 removed spider bearing outer races onto the spider, and clamp them in a vise.
(g) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.



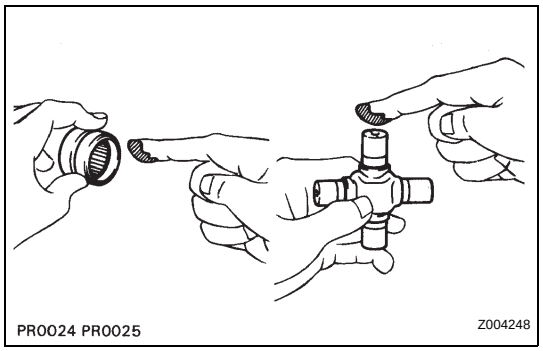
(h) Clamp the outer bearing race in a vise and tap off the yoke with a hammer.
(i) Remove the spider.



INSPECTION

1. INSPECT PROPELLER SHAFT ASSEMBLY

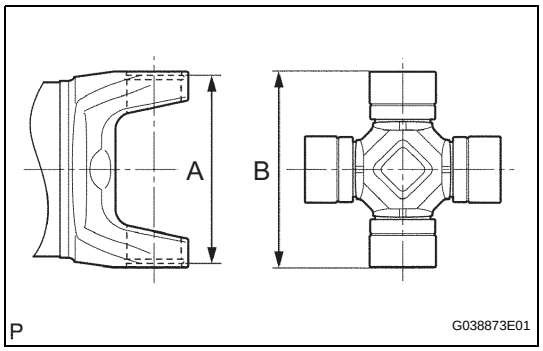
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the shaft.



REASSEMBLY

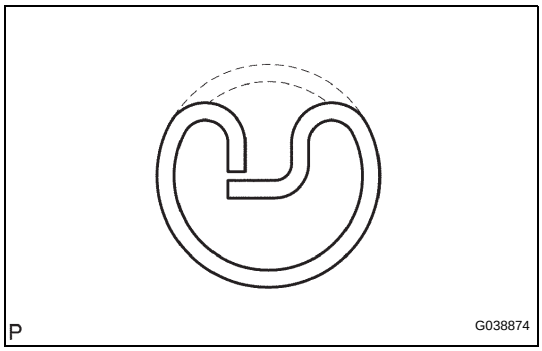
1. INSTALL PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Apply MP grease No. 2 to a new spider and bearings.
(b) Fit the spider into the flange yoke.



(c) Measure dimension A between the snap ring grooves.
(d) Insert the spider bearing into the spider journal portion, and then measure dimension B of the universal joint.
NOTICE:
When measuring dimension B, fix the spider and spider bearings in a vise and hold them firmly together.

PR

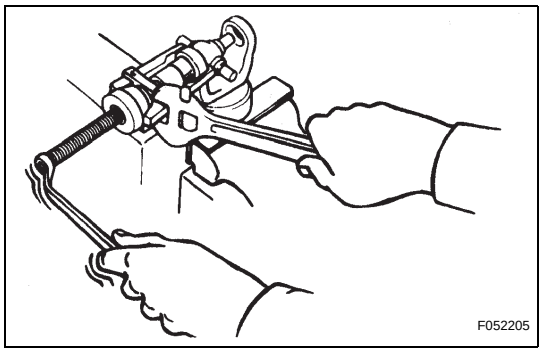


(e) Select snap rings to make dimensions A and B the same.

Snap Ring Type

Color	Thickness mm (in.)
Green	1.384 (0.0545)
Red	1.435 (0.0565)
Black	1.486 (0.0585)
Copper	1.511 (0.0595)
Silver	1.537 (0.0605)
Yellow	1.588 (0.0625)
Blue	1.638 (0.0645)

NOTICE:
- **Use new snap rings.**
- **If possible, use snap rings of the same thickness for both edges.**



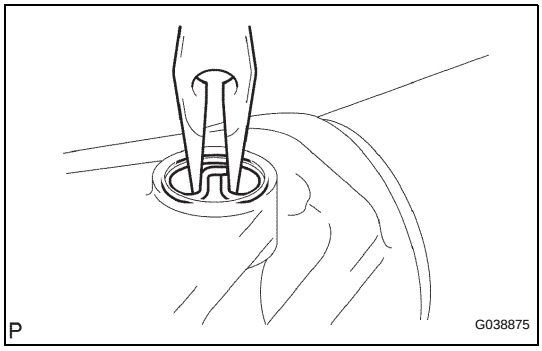
(f) Insert the spider into the yoke, and then using SST, press the spider bearing into the snap ring groove.

(g) Press in the spider bearing on the opposite side in the same way.

SST 09332-25010

NOTICE:

When pressing in the spider bearing, be careful not to damage its lip.



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

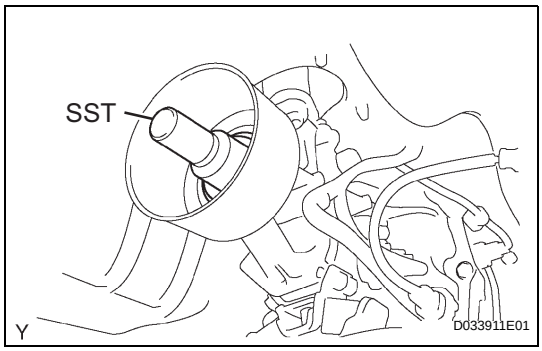
2. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

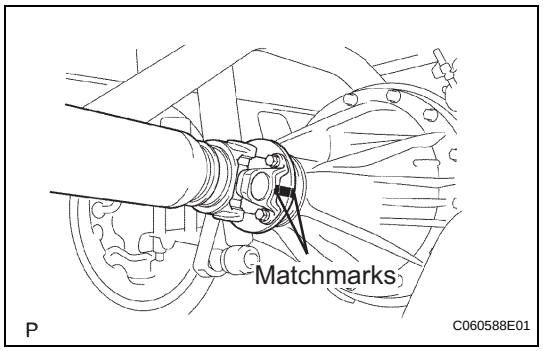


INSTALLATION

1. INSTALL PROPELLER SHAFT ASSEMBLY

(a) Remove SST from the extension housing.

(b) Install the propeller shaft assembly into the extension housing.



(c) Align the matchmarks on the propeller shaft flange and differential flange.

(d) Install the propeller shaft assembly with the 4 bolts, 4 nuts and 4 washers.
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)

2. INSPECT TRANSMISSION OIL LEAKAGE

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT WHEEL

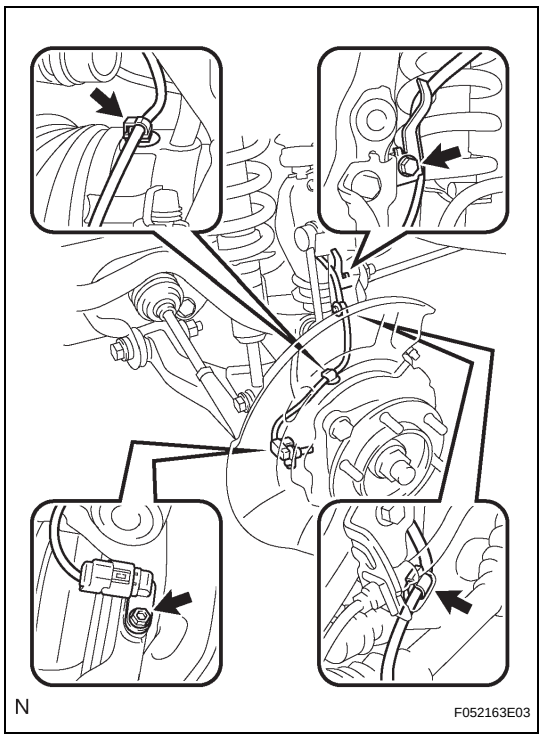
3. DRAIN DIFFERENTIAL OIL

4. SEPARATE FRONT SPEED SENSOR

(a) Remove the bolt and separate the front speed sensor.

(b) Disengage the 2 clamps.

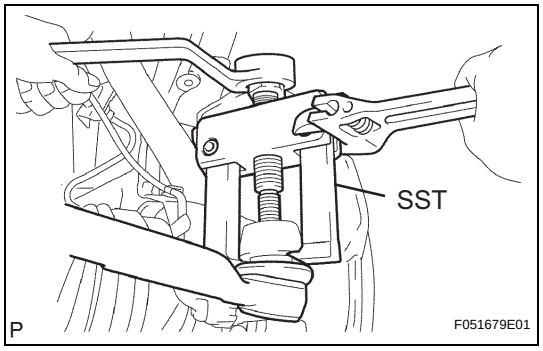
(c) Remove the bolt and separate the speed sensor wire harness from the steering knuckle.



5. SEPARATE TIE ROD END SUB-ASSEMBLY

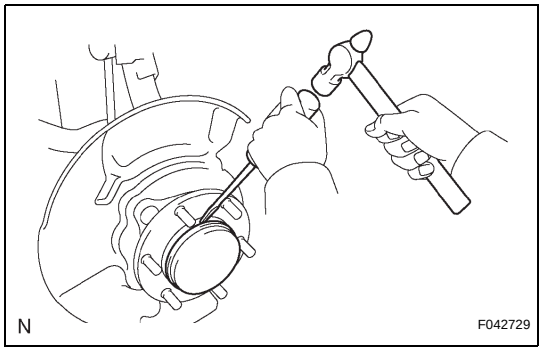
(a) Remove the cotter pin and nut.

(b) Using SST, separate the tie rod end from the steering knuckle.
SST 09628-62011

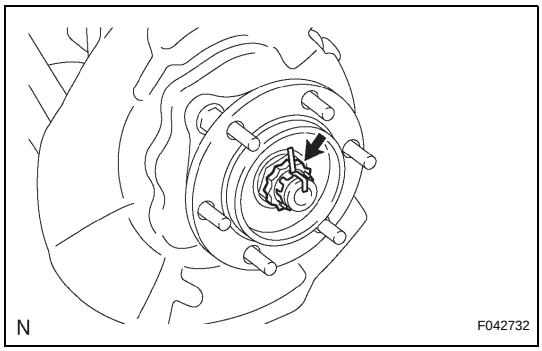


6. REMOVE FRONT AXLE HUB NUT

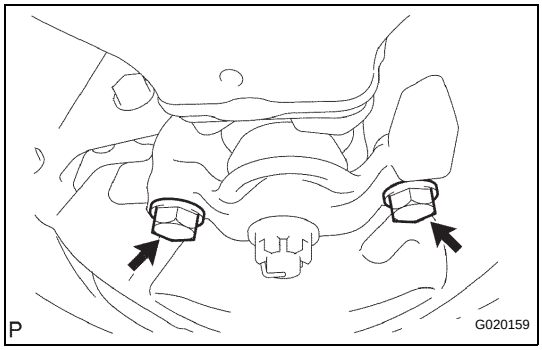
(a) Using a screwdriver and a hammer, remove the front axle hub grease cap.



DS

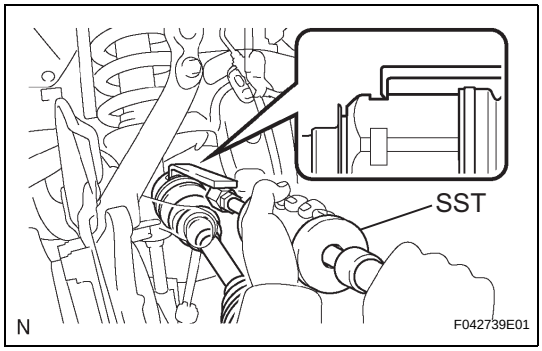


(b) Remove the cotter pin and adjusting cap.
(c) Remove the front axle hub nut.



7. SEPARATE FRONT SUSPENSION LOWER ARM

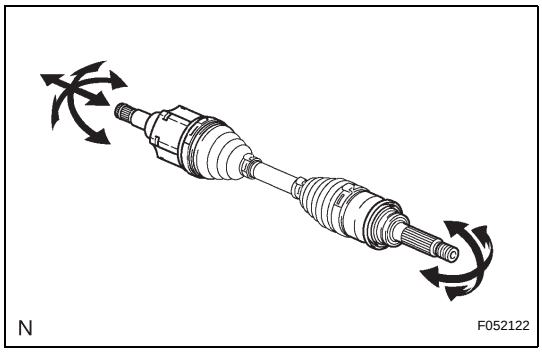
(a) Remove the 2 bolts and separate the front lower ball joint attachment front from the steering knuckle.



8. REMOVE FRONT DRIVE SHAFT

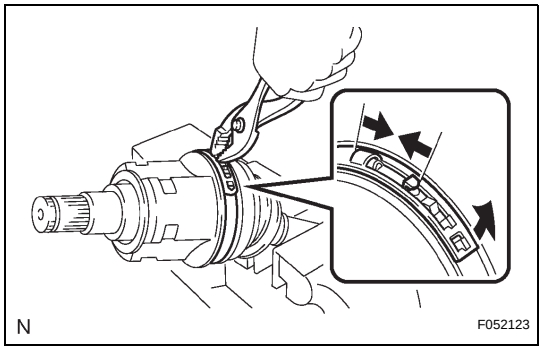
(a) Using SST, remove the front drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)
NOTICE:
Be careful not to damage the oil seal.

DISASSEMBLY



1. INSPECT FRONT DRIVE SHAFT

(a) Check whether there is no remarkable play in the outboard joint.
(b) Check whether the inboard joint slides smoothly in the thrust direction.
(c) Check whether there is no remarkable play in the radial direction of the inboard joint.
(d) Check the boots for damage.
NOTICE:
Move the drive shaft while keeping it level.

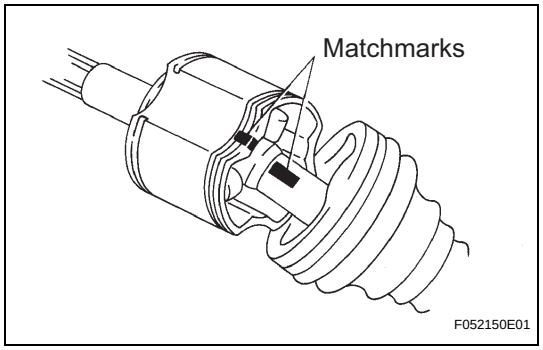


2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Using pliers, disengage the hooks together and remove the large clamp.
(b) Using a side cutter, cut the small boot clamp.

3. SEPARATE INBOARD JOINT BOOT

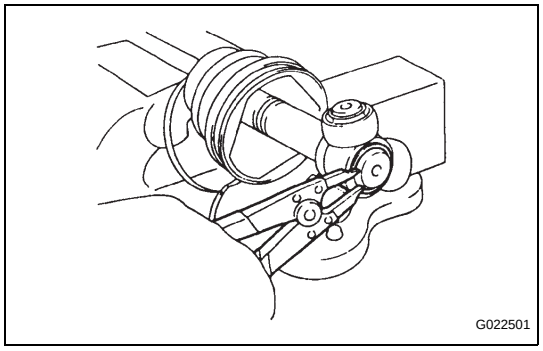
(a) Slide the inboard joint boot toward the outboard joint.



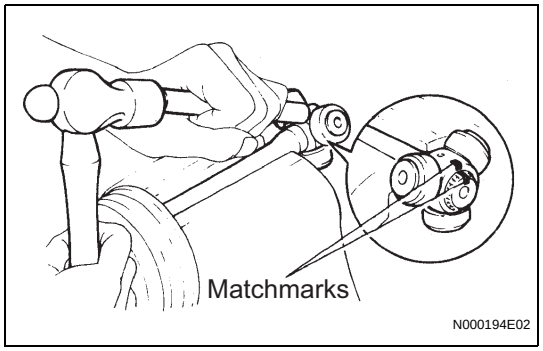
4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Place matchmarks on the inboard joint and outboard joint shaft.
NOTICE:
Do not punch the marks.

(b) Remove the inboard joint from the outboard joint shaft.



(c) Using a snap ring expander, remove the snap ring.



(d) Place matchmarks on the outboard joint shaft and tripod.
NOTICE:
Do not punch the marks.

(e) Using a brass bar and hammer, remove the tripod from the outboard joint shaft.
NOTICE:
Do not tap the roller.

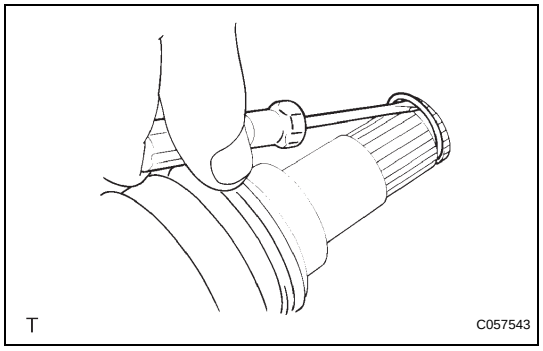
(f) Remove the inboard joint boot from the outboard joint shaft.

5. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using a side cutter, cut the boot clamps.

6. REMOVE OUTBOARD JOINT BOOT

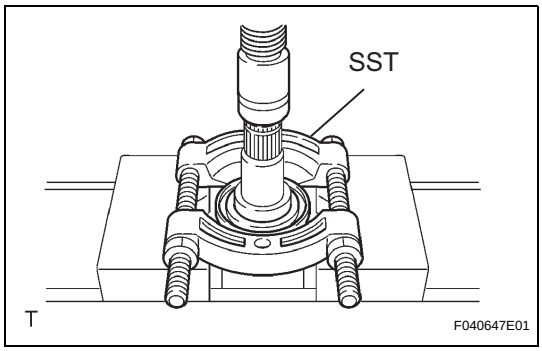
(a) Remove the outboard joint boot from the outboard joint shaft.



7. REMOVE FRONT DRIVE INNER SHAFT OUTER SHAFT SNAP RING

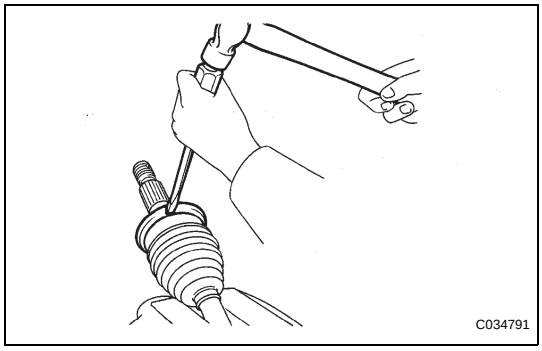
(a) Using a screwdriver, remove the snap ring.

DS



8. REMOVE FRONT DRIVE SHAFT DUST COVER

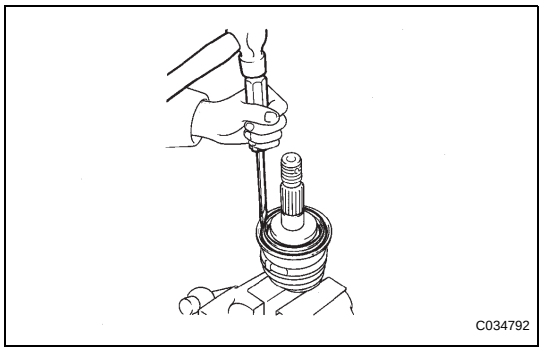
(a) Using SST and a press, remove the dust cover.
SST 09950-00020



9. REMOVE FRONT AXLE HUB OIL SEAL

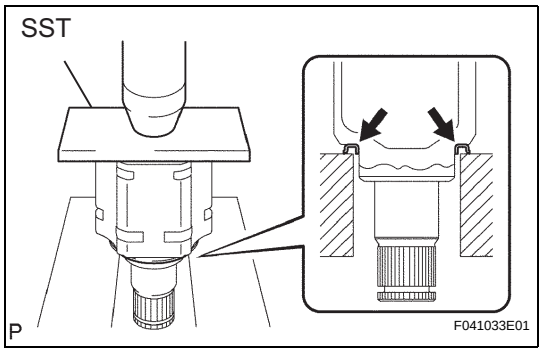
(a) Using a screwdriver and a hammer, remove the oil seal.

REASSEMBLY



1. INSTALL FRONT AXLE HUB OIL SEAL

(a) Using a screwdriver and a hammer, install a new oil seal.
NOTICE:
Do not damage the oil seal.

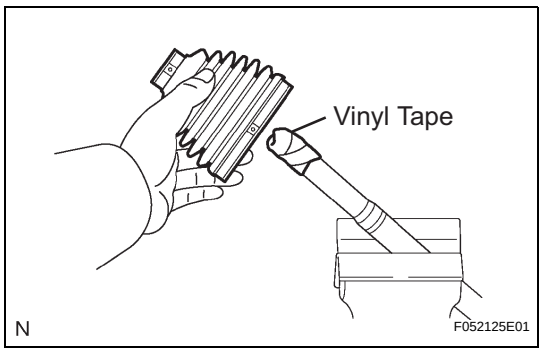


2. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, install a new dust cover.
SST 09527-10011

3. INSTALL FRONT DRIVE INNER SHAFT OUTER SHAFT SNAP RING

(a) Install a new snap ring.



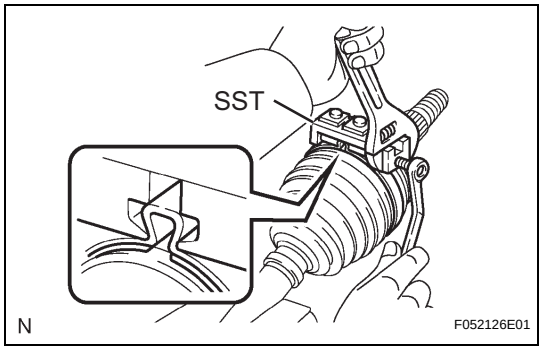
4. INSTALL OUTBOARD JOINT BOOT

HINT:

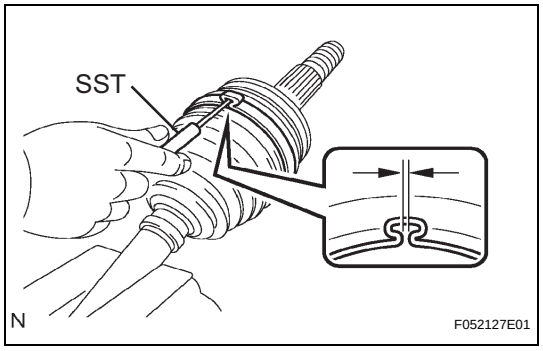
- Before installing the boots, wrap the spline of the outboard joint with vinyl tape to prevent the boots from being damaged.
- Before installing the boot, place 2 new boot clamps on the small boot end and large boot ends.

(a) Provisionally install a new outboard joint boot with 2 new clamps onto the outboard joint shaft.

(b) Fill the outboard joint and boot with grease in the boot kit.
Grease capacity:
260 to 280 g (9.2 to 9.9 oz.)
(c) Provisionally install the boot onto the outboard joint.

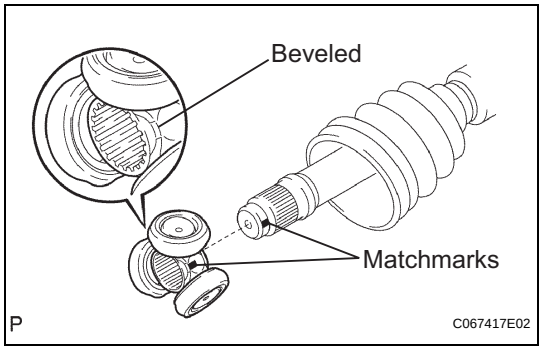


5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP
(a) Install the boot clamps onto the boot.
(b) Place SST onto the large boot clamp.
SST 09521-24010
(c) Tighten the SST so that the large boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

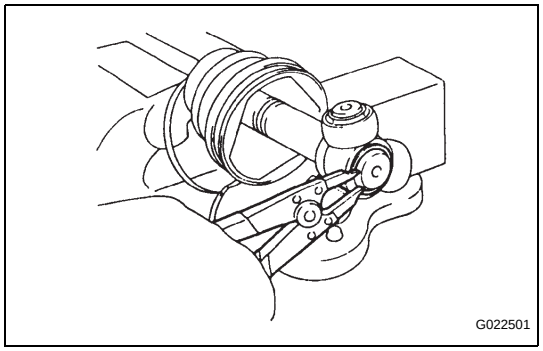


(d) Using SST, adjust the clearance of the large boot clamp.
SST 09240-00020
Clearance:
1.0 to 5.0 mm (0.039 to 0.197 in.)
(e) Use the same procedure for the small boot clamp.

6. INSTALL INBOARD JOINT BOOT
HINT:
Before installing the boot, place a new boot clamp on the small boot end.
(a) Provisionally install a new inboard joint boot with a new clamp onto the outboard joint shaft.



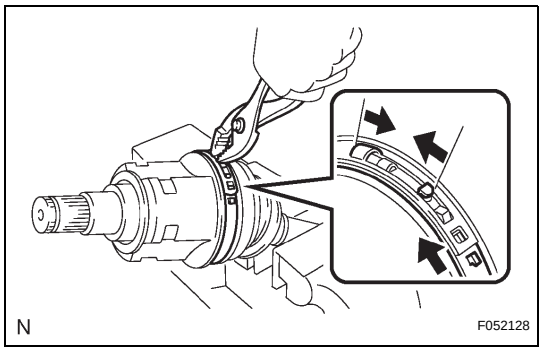
7. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY
(a) Place the beveled side of the tripod toward the inboard joint.
(b) Align the matchmarks and install the tripod into the inboard joint.
(c) Using a brass bar and hammer, tap the tripod into the outboard joint shaft.
NOTICE:
Do not tap the roller.



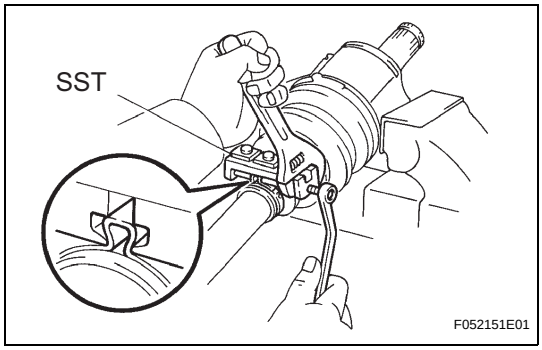
(d) Using a snap ring expander, install a new snap ring.
(e) Pack the inboard joint and boot with grease from the boot kit.
Grease capacity:
182 to 202 g (6.4 to 7.1 oz.)
(f) Align the matchmarks placed before removal and install the inboard joint onto the outboard joint shaft.
(g) Provisionally install the boot onto the inboard joint.

8. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP
(a) Place the large boot clamp.

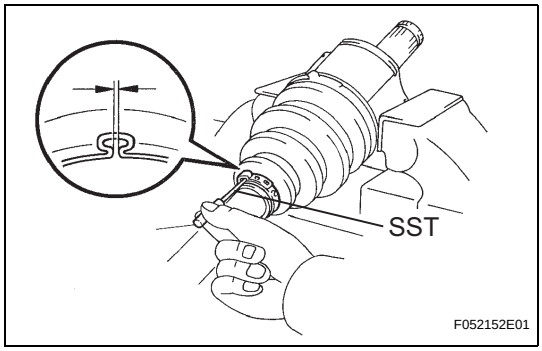
DS



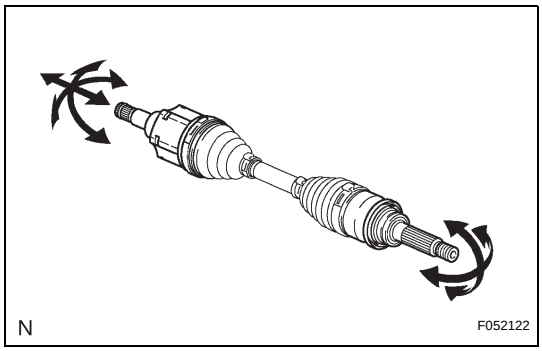
(b) Using pliers, compress the large clamp and attach the claws.



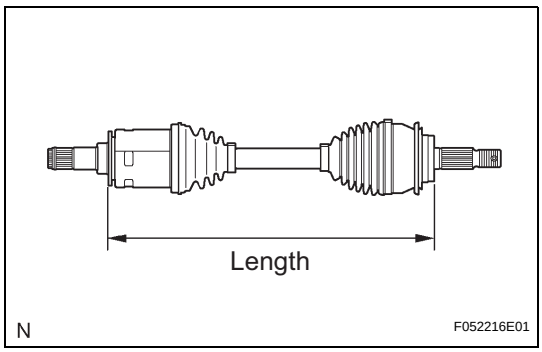
(c) Secure the boot clamp onto the boot.
(d) Place SST onto the small boot clamp.
SST 09521-24010
(e) Tighten the SST so that the small boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(f) Using SST, adjust the clearance of the small boot clamp.
SST 09240-00020
Clearance:
1.0 to 4.0 mm (0.039 to 0.157 in.)

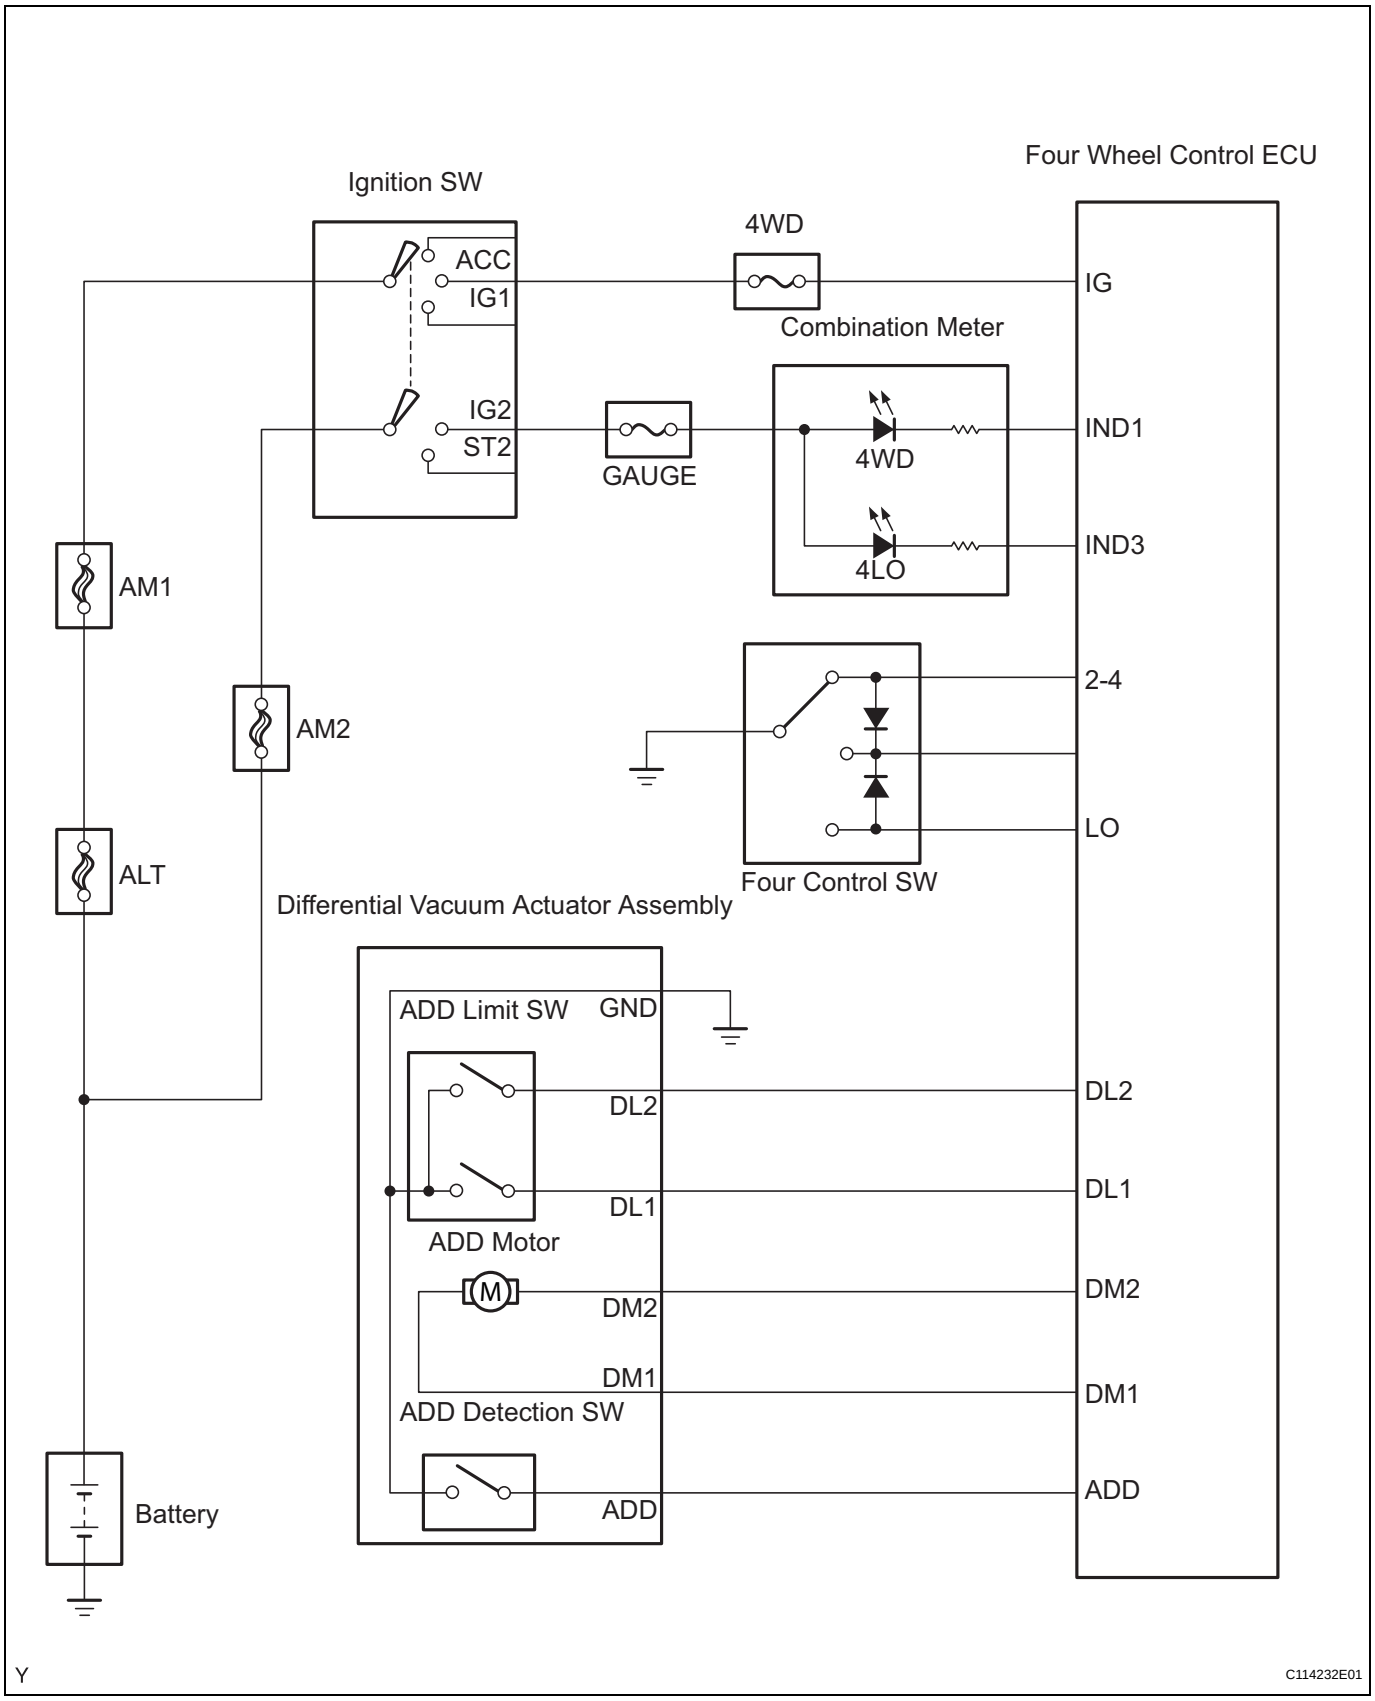


9. INSPECT FRONT DRIVE SHAFT
(a) Check whether there is no remarkable play in the outboard joint.
(b) Check whether the inboard joint slides smoothly in the thrust direction.
(c) Check whether there is no remarkable play in the radial direction of the inboard joint.
(d) Check the boots for damage.
NOTICE:
Move the drive shaft while keeping it level.



(e) Make sure that the boots are not stretched or contracted when the drive shaft is at standard length.
Drive shaft standard length:
484.4 to 488.4 mm (19.071 to 19.226 in.)
NOTICE:
Move the drive shaft keeping it level.

SYSTEM DIAGRAM



DF

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in order. If necessary, replace these parts.

Symptom	Suspected area	See page
Oil leakage from front differential	1. Oil level (Too high or wrong grade)	DF-8
	2. Front differential rear oil seal (Worn or damaged)	DF-12
	3. Companion flange (Loose or damaged)	DF-19
Oil leakage from rear differential	1. Oil level (Too high or wrong grade)	DF-8
	2. Rear differential front oil seal (Worn or damaged)	DF-9
	3. Companion flange (Loose or damaged)	DF-43

REMOVAL

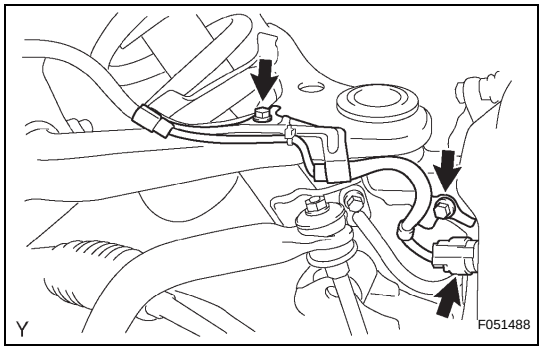
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT WHEEL

3. SEPARATE SKID CONTROL SENSOR WIRE

(a) Remove the speed sensor connector.

(b) Remove the 2 bolts, and separate the skid control sensor wire.

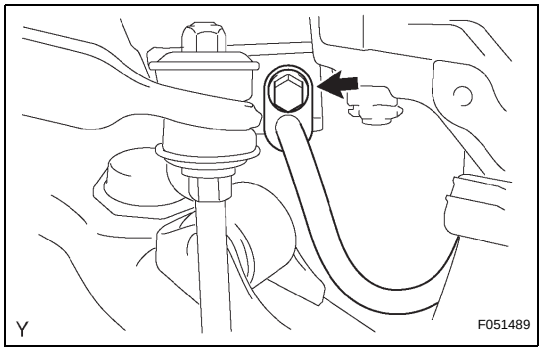


4. REMOVE FRONT SPEED SENSOR

(a) Remove the bolt, and then remove the front speed sensor.

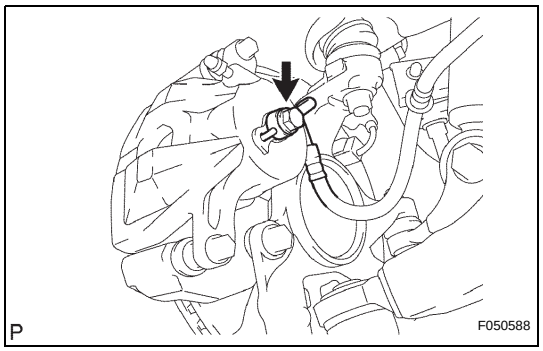
5. SEPARATE FRONT FLEXIBLE HOSE

(a) Remove the bolt, and separate the front flexible hose.

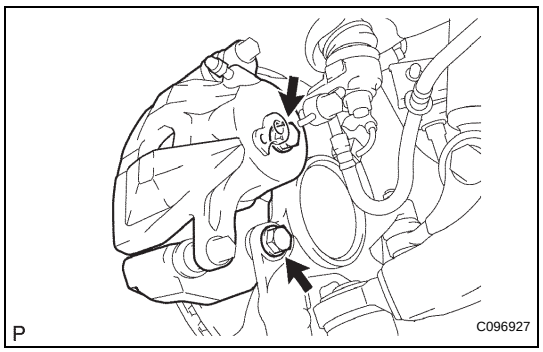


6. REMOVE FRONT DISC BRAKE CALIPER ASSEMBLY

(a) Remove the union bolt and gasket from the disc brake cylinder and then disconnect the flexible hose.



(b) Remove the 2 bolts, and then remove the brake caliper.

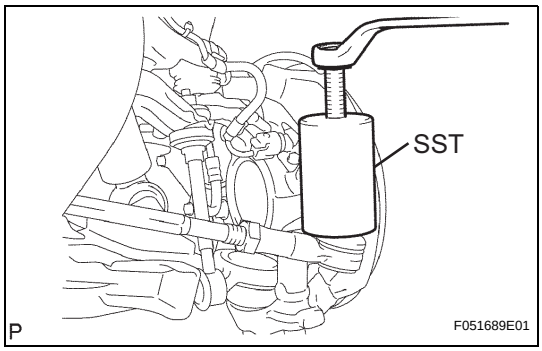


7. REMOVE FRONT DISC

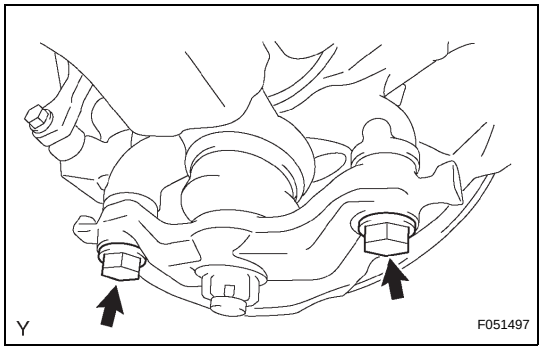
8. SEPARATE TIE ROD END SUB-ASSEMBLY

(a) Remove the cotter pin and nut.

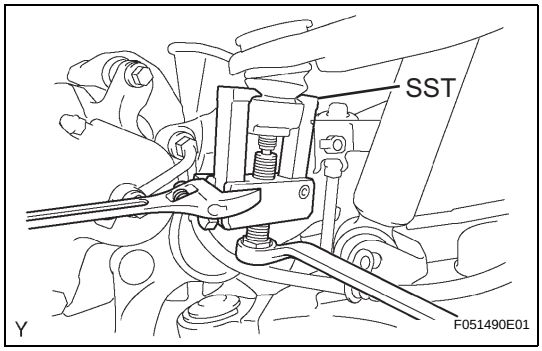
AH



(b) Using SST, separate the tie rod end from the steering knuckle arm.
SST 09610-20012



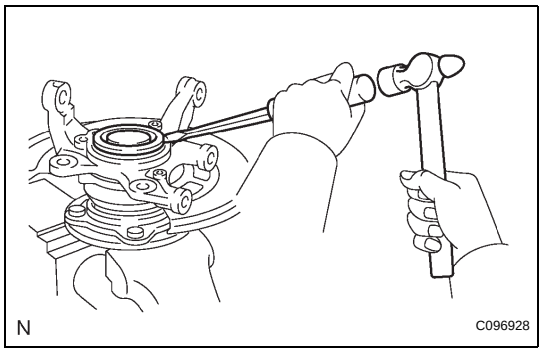
9. SEPARATE FRONT SUSPENSION LOWER ARM
(a) Remove the 2 bolts, and separate the front lower ball joint attachment from the front axle.



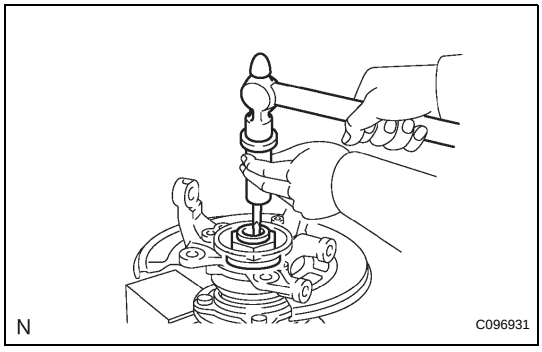
10. SEPARATE FRONT SUSPENSION UPPER ARM
(a) Remove the clip and nut.
(b) Using SST, separate the upper ball joint from the steering knuckle.
SST 09628-62011

11. REMOVE FRONT AXLE HUB

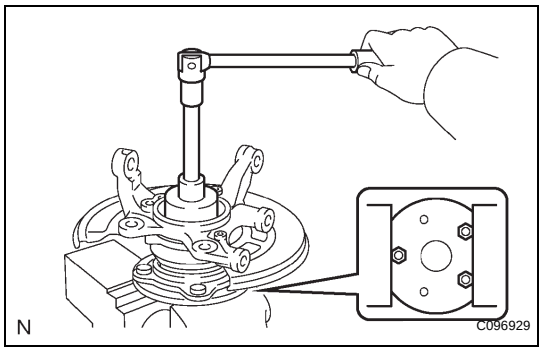
DISASSEMBLY



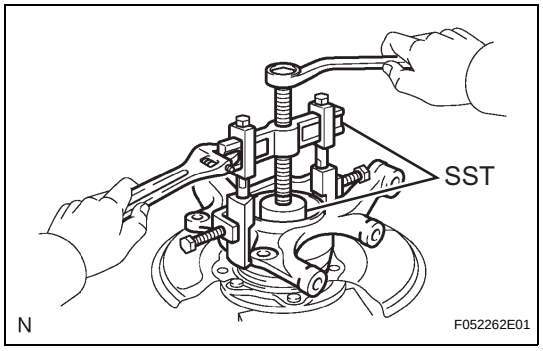
1. REMOVE KNUCKLE GREASE RETAINER CAP
(a) Using a screwdriver and a hammer, tap out the knuckle grease retainer cap.



2. REMOVE FRONT AXLE HUB NUT
(a) Using SST and a hammer, loosen the staked part of the lock nut.
SST 09930-00010



(b) Attach the 3 bolts onto the hub bolt in the position shown in the illustration, and screw them into the flange, then fix them in a vice.
(c) Using a socket wrench (36 mm), remove the lock nut.
(d) Remove the spacer.

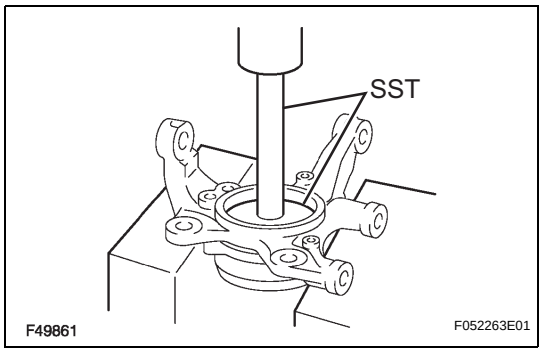


3. REMOVE STEERING KNUCKLE

(a) Remove the 3 bolts and shift the dust cover towards the hub side (outside).
(b) Using SST, remove the steering knuckle.
SST 09710-30021 (09710-03131), 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04031, 09957-04010, 09958-04011)
(c) Remove the dust cover from the axle hub.

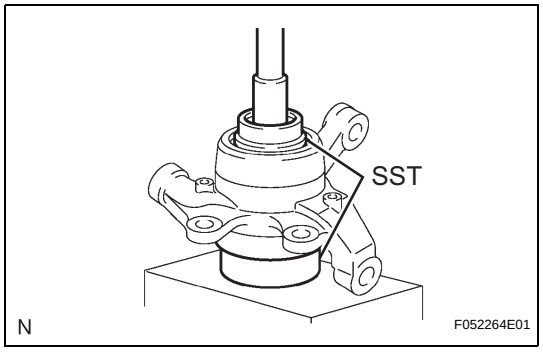
4. REMOVE FRONT AXLE HUB OIL SEAL

(a) Using a screwdriver, pry out the oil seal from the steering knuckle.



5. REMOVE FRONT AXLE HUB INNER BEARING

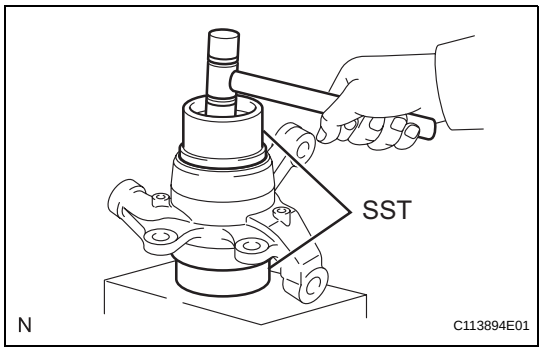
(a) Using snap ring pliers, remove the snap ring.
(b) Using SST and a press, press the bearing out of the steering knuckle.
SST 09950-60020 (09951-00710), 09950-70010 (09951-07150)



REASSEMBLY

1. INSTALL FRONT AXLE HUB INNER BEARING

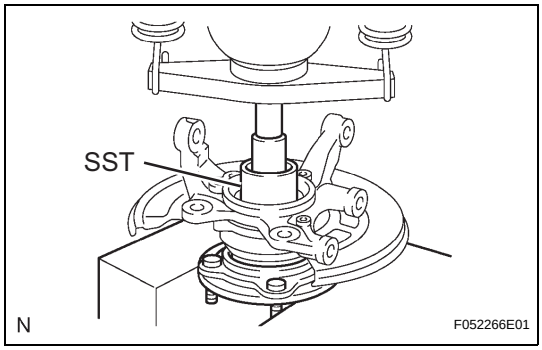
(a) Using SST and a press, press a new bearing into the steering knuckle.
SST 09527-17011, 09608-10010
(b) Using snap ring pliers, install a new snap ring.



2. INSTALL FRONT AXLE HUB OIL SEAL

(a) Using SST and a plastic-faced hammer, tap in a new oil seal.
SST 09223-15020, 09527-17011

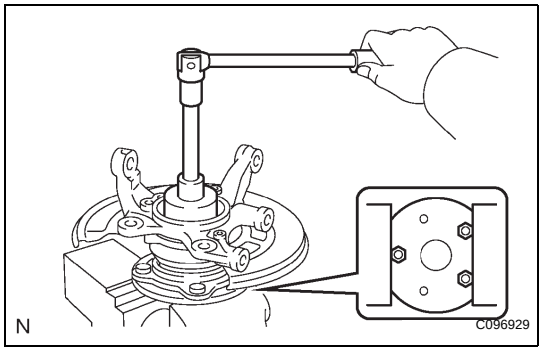
(b) Coat MP grease to the oil seal lip.



3. INSTALL STEERING KNUCKLE

(a) Install the dust cover onto the steering knuckle with the 3 bolts.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

(b) Using SST and a press, press in the axle hub to the steering knuckle.
SST 09710-30050



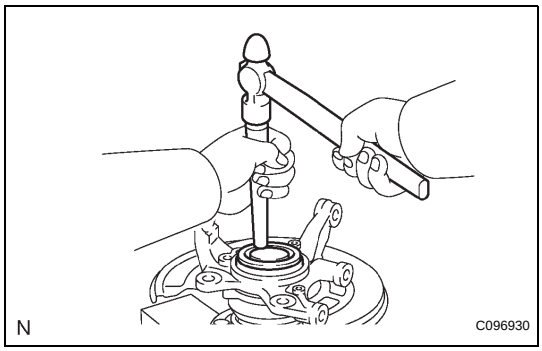
4. INSTALL FRONT AXLE HUB NUT

(a) Attach the 3 bolts onto the hub bolt in the position shown in the illustration, and screw them into the flange, then fix them in a vice.

(b) Install the spacer.

(c) Using a socket wrench (36 mm), install a new lock nut onto the axle hub.
Torque: 199 N*m (2,029 kgf*cm, 147 ft.*lbf)

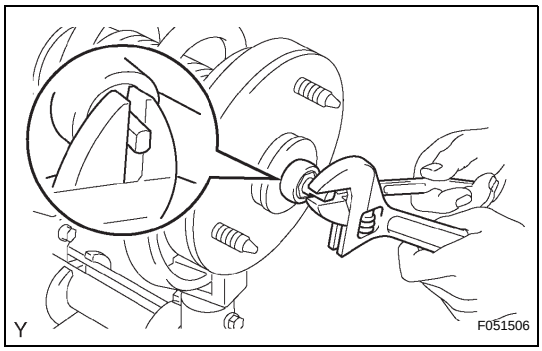
(d) Using a chisel and hammer, stake the lock nut.



5. INSTALL KNUCKLE GREASE RETAINER CAP

(a) Using a brass bar and hammer, install the knuckle grease retainer cap.
NOTICE:
Do not damage the knuckle grease retainer cap.

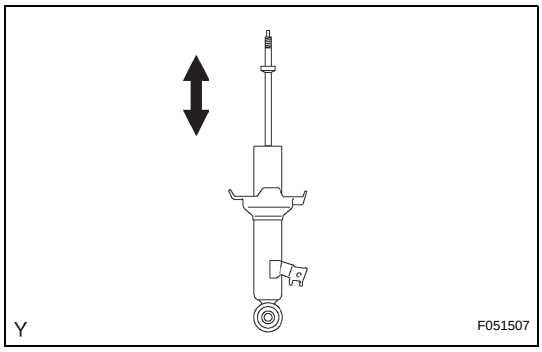
AH



(b) While holding the shock absorber rod, remove the nut.
NOTICE:
Do not use an impact wrench. It will damage the shock absorber rod.

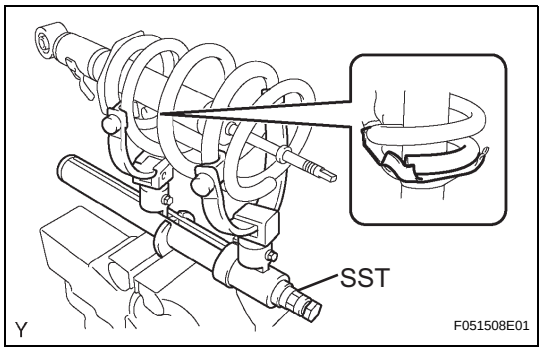
2. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
3. **REMOVE FRONT SHOCK ABSORBER CUSHION NO. 1**
4. **REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY**
5. **REMOVE FRONT COIL SPRING INSULATOR UPPER**
6. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
7. **REMOVE FRONT COIL SPRING**

INSPECTION



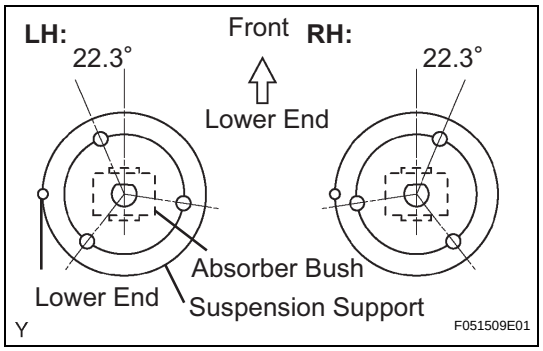
1. **INSPECT SHOCK ABSORBER ASSEMBLY FRONT**
   (a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual sound during operation.
   If there is any abnormality, replace the shock absorber front with a new one.
   NOTICE:
   When disposing of the shock absorber front, see DISPOSAL on page SP-18.

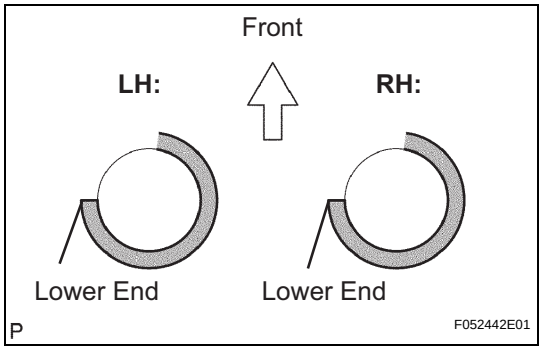
REASSEMBLY

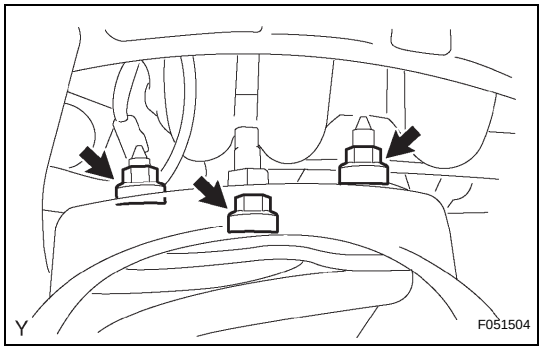


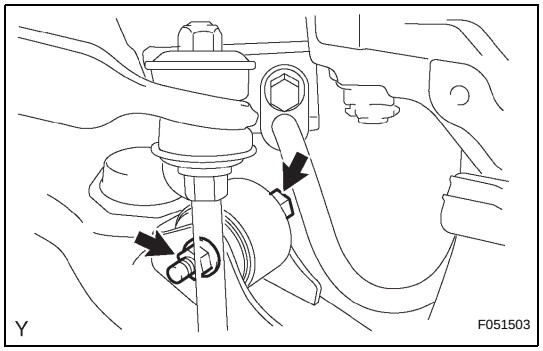
1. **INSTALL FRONT COIL SPRING**
   (a) Using SST, compress the front coil spring LH.
   SST 09727-30021 (09727-00010, 09727-00031), 09727-00060
   NOTICE:
   Do not use an impact wrench. It will damage SST.
   (b) Install the front coil spring onto the shock absorber front.
   HINT:
   Fit the lower end of the front coil spring into the gap of the spring lower seat.
2. **INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER**
3. **INSTALL FRONT COIL SPRING INSULATOR UPPER**
4. **INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY**
5. **INSTALL FRONT SHOCK ABSORBER CUSHION NO. 1**
6. **INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER**

SP









7. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Align the suspension support and the absorber bush as shown in the illustration.

(b) Fit and tighten a new lock nut.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
NOTICE:
Do not use an impact wrench. It will damage the shock absorber rod.

(c) Release the coil spring while checking the position of the suspension support.

INSTALLATION

1. TEMPORARILY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) LH Side:
(1) Install the coil spring onto the body with the lower end of the coil spring facing the outer side of the vehicle.

(b) RH Side:
(1) Install the coil spring onto the body with the lower end of the coil spring facing the inner side of the vehicle.

(c) Install the 3 nuts onto the upper side of the front shock absorber with coil spring.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

(d) Temporarily tighten the bolt, nut and washer as shown in the illustration.

2. TEMPORARILY TIGHTEN FRONT SUSPENSION UPPER ARM (See page SP-28)

3. INSTALL FRONT FLEXIBLE HOSE (See page SP-28)

4. INSTALL SKID CONTROL SENSOR WIRE (See page SP-28)

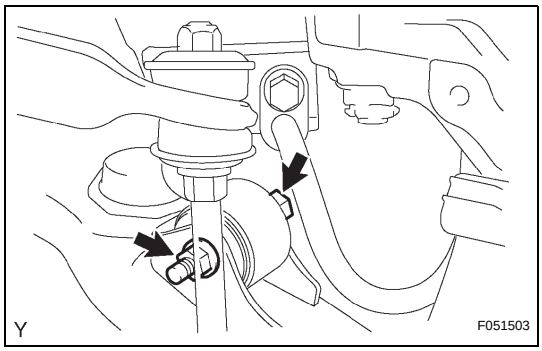
5. INSTALL FRONT WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

6. STABILIZE SUSPENSION

(a) Jack down the vehicle.

(b) Bounce the vehicle up and down several times to stabilize the suspension.

SP



7. FULLY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

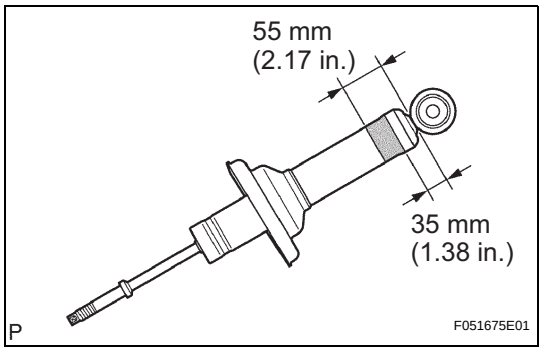
(a) Fully tighten the nut.
Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

8. FULLY TIGHTEN FRONT SUSPENSION UPPER ARM (See page SP-28)

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

10. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-2)

DISPOSAL



1. DISPOSE OF SHOCK ABSORBER ASSEMBLY FRONT

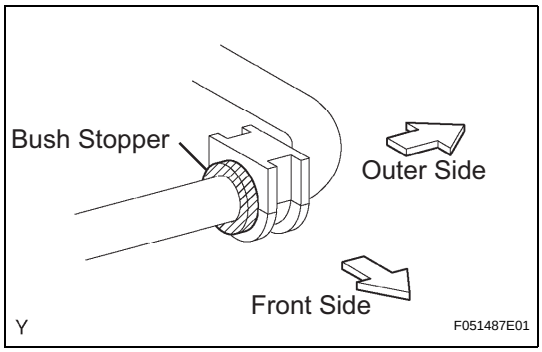
(a) Fully extend the shock absorber piston rod, and fix it at an angle in a vise or similar tool.

(b) Using a drill or similar tool, slowly make a hole in the shaded area shown in the illustration, and discharge the gas inside.
CAUTION:
- **The gas is colorless, odorless and harmless.**
- **Since the discharged gas may cause chips to scatter, cover the drill with a shop rag when making the hole.**

SP

INSTALLATION

1. INSTALL FRONT STABILIZER BAR

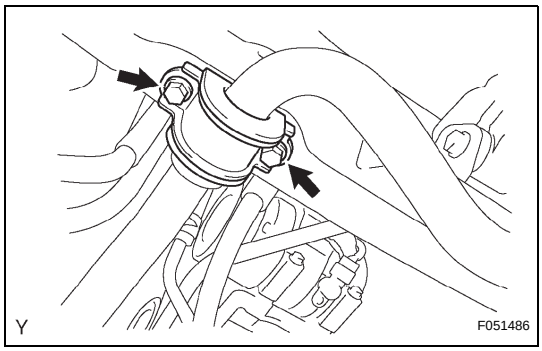


2. INSTALL FRONT STABILIZER LOWER BRACKET BUSH LH

(a) Install the front stabilizer lower bracket bush.
HINT:
- Install the bush onto the inner side of the bush stopper on the stabilizer bar.
- Install the bush onto the stabilizer bar with its cut line facing to the front.

3. INSTALL FRONT STABILIZER LOWER BRACKET BUSH RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

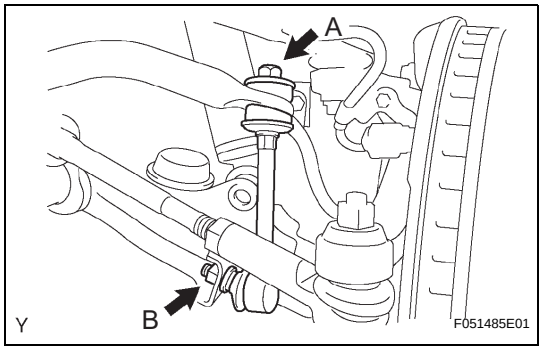


4. INSTALL FRONT STABILIZER BRACKET NO. 1 LH

(a) Install the front stabilizer bracket with the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

5. INSTALL FRONT STABILIZER BRACKET NO. 1 RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.



6. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

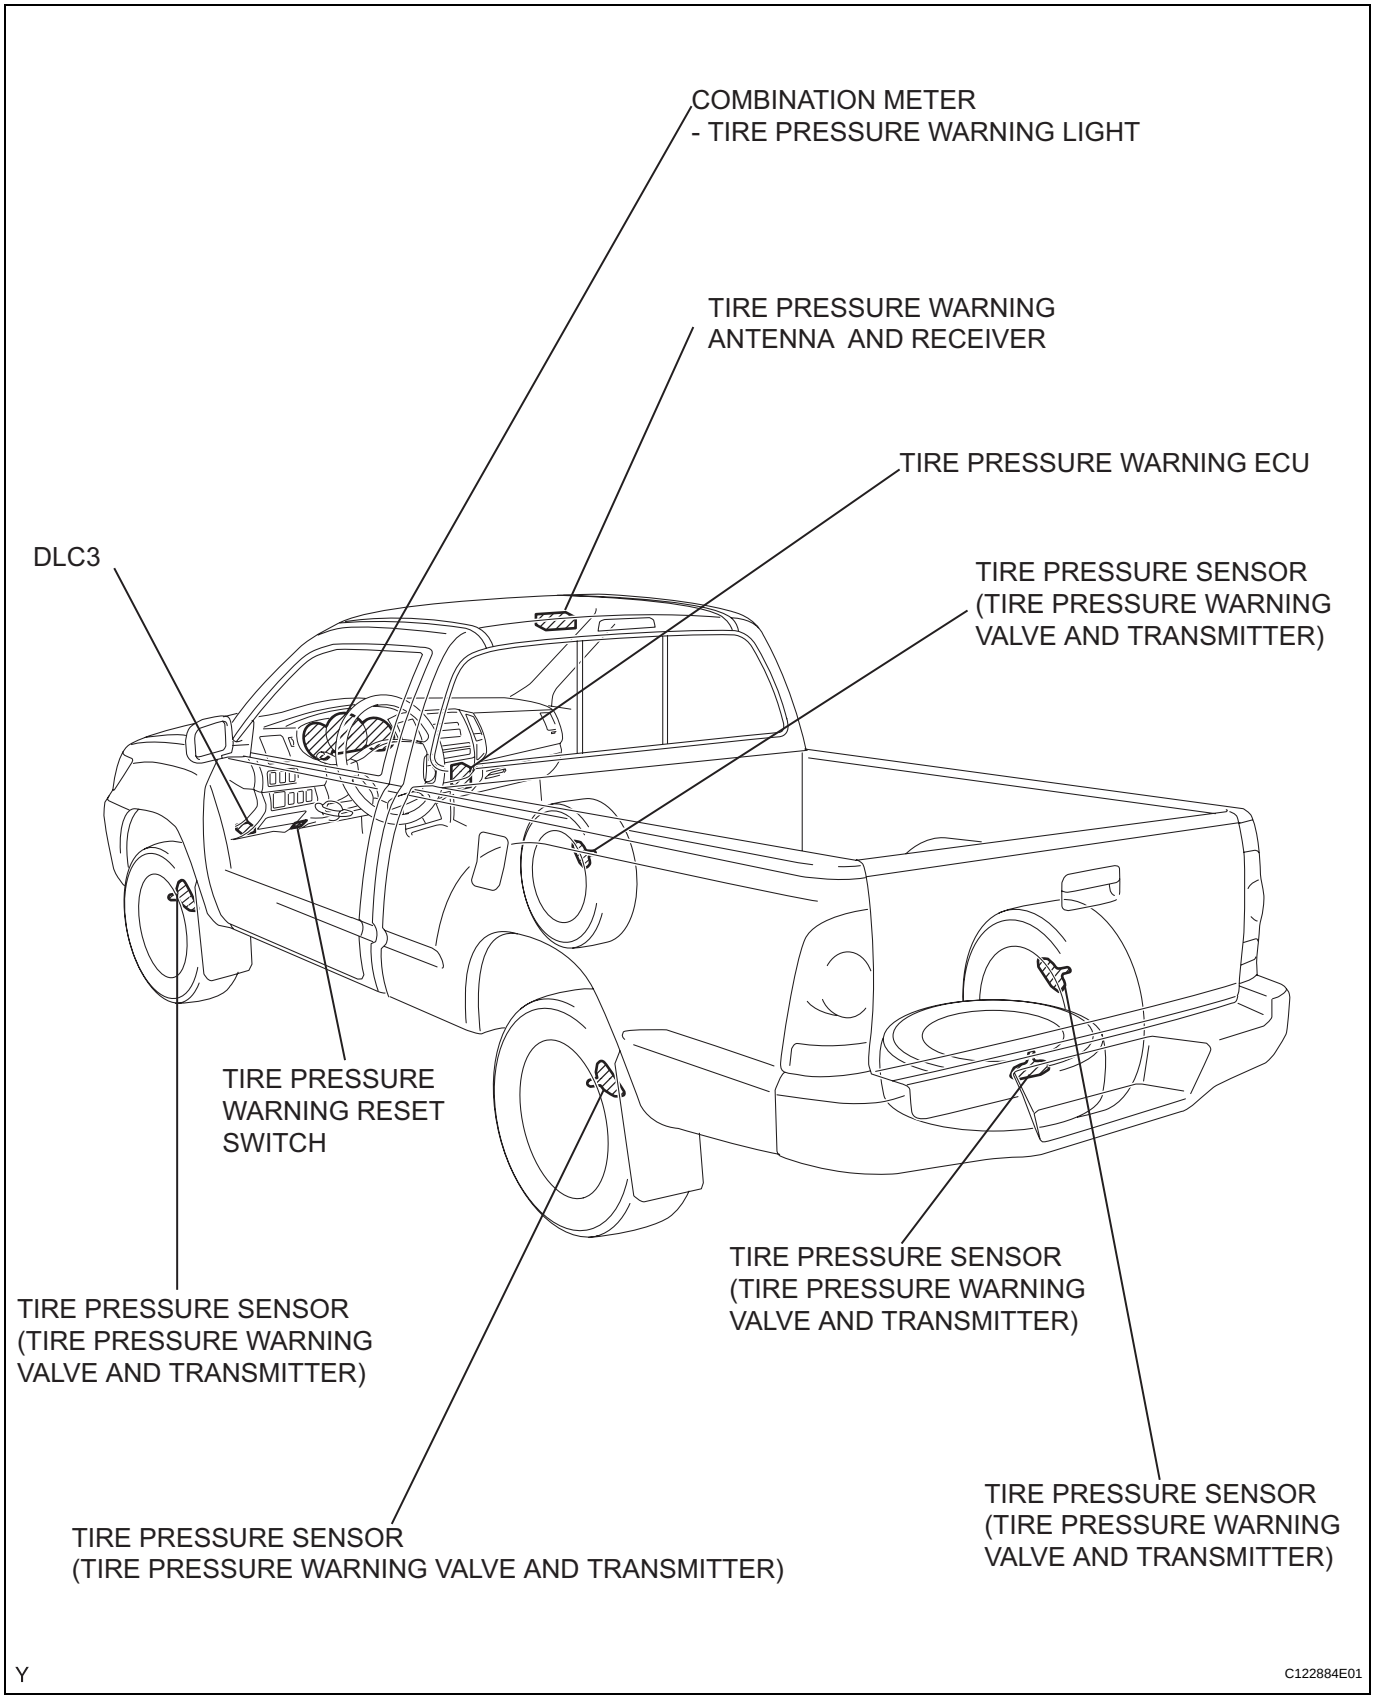
(a) Install the front stabilizer link LH with the 2 nuts, 2 cushions and 2 retainers.
Torque: Nut A
19 N*m (194 kgf*cm, 14 ft.*lbf)
Nut B
69 N*m (704 kgf*cm, 51 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

7. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

8. INSTALL FRONT WHEELS
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

PARTS LOCATION



TW

SYSTEM DIAGRAM

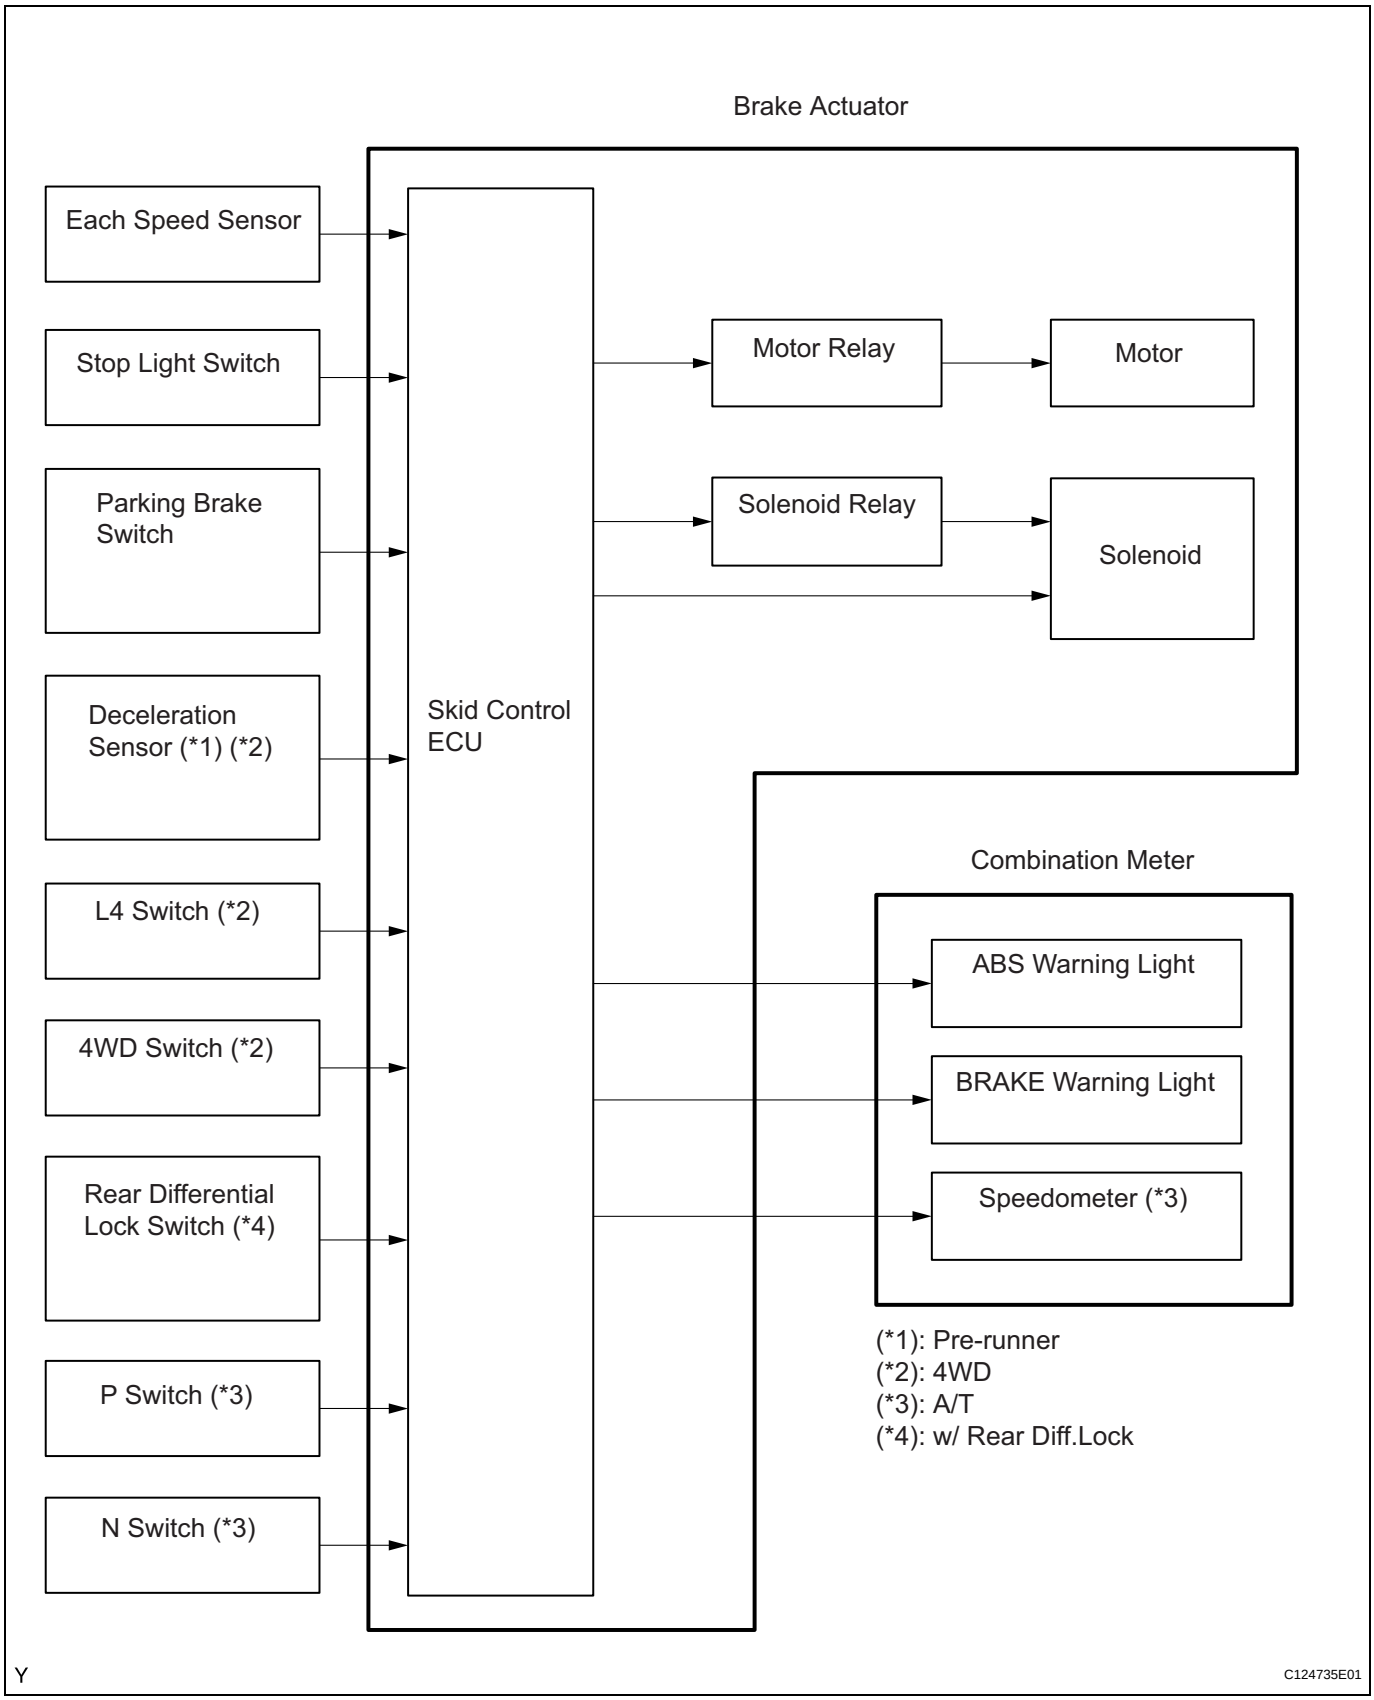
SYSTEM DIAGRAM



BC

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

HINT:

The skid control ECU is a single unit with brake actuator.

(a) ABS (Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

(b) EBD (Electronic Brake force Distribution)

The EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with the driving conditions. In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain the vehicle behavior.

2. ABS with EBD OPERATION

(a) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the speed and deceleration of each wheel, and checks the wheel slipping conditions. The ECU controls the pressure holding valve and pressure reduction valve in order to adjust the fluid pressure of each wheel cylinder according to the slipping conditions.

3. FAIL SAFE FUNCTION

(a) When a failure occurs in the ABS system, the ABS warning light comes on and its operation is prohibited.

In addition to this, when a failure which disables the EBD operation occurs, the brake warning light comes on as well and operation is prohibited (See page BC-19).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The intelligent tester can be used at step 3, 6, 9, 12.

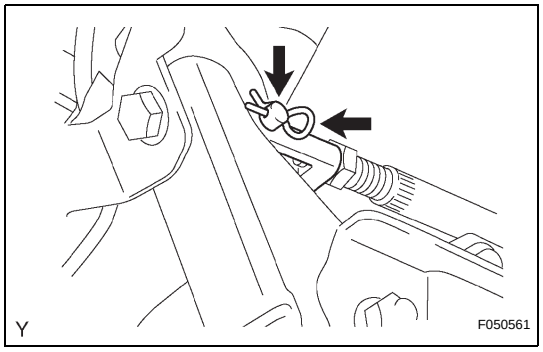
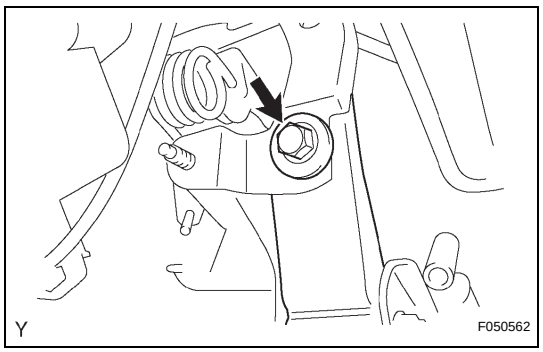
REMOVAL

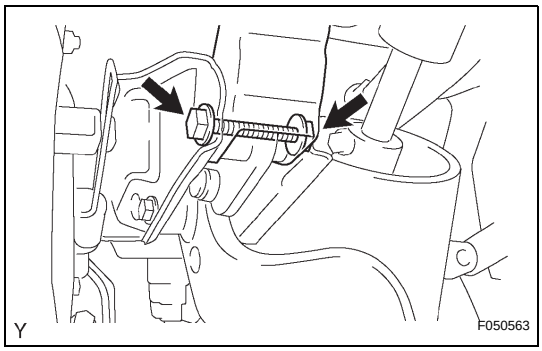
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
3. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
4. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-61)**
5. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
6. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
7. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-61)**
8. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
9. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-9)**
10. **REMOVE INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-9)**
11. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-12)**
12. **SEPARATE DRIVER SIDE JUNCTION BLOCK**
13. **SEPARATE MASTER CYLINDER PUSH ROD CLEVIS**
    (a) Remove the clip and push rod pin, then separate the push rod clevis.



14. **REMOVE BRAKE PEDAL SUPPORT REINFORCEMENT**
    (a) Remove the bolt from the reinforcement.



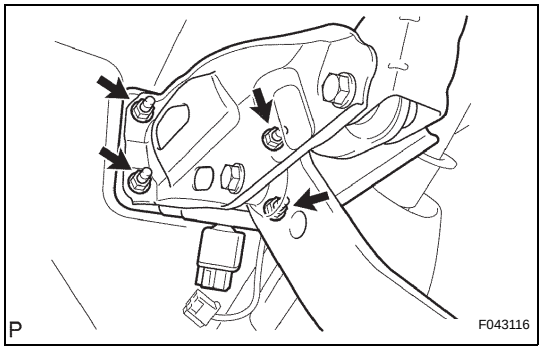
BR



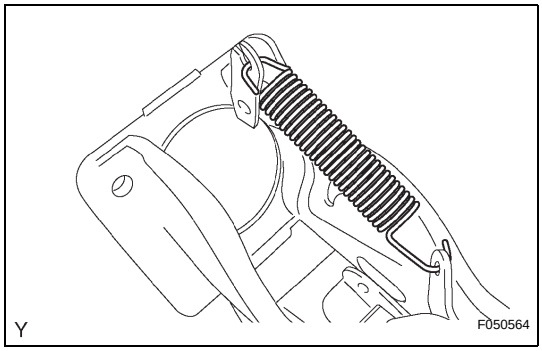
(b) Remove the bolt and nut, then remove the reinforcement from the brake pedal support.

15. REMOVE BRAKE PEDAL SUPPORT SUB-ASSEMBLY

(a) Disconnect the stop light switch connector from the stop lamp switch.



(b) Remove the 4 nuts and brake pedal support.

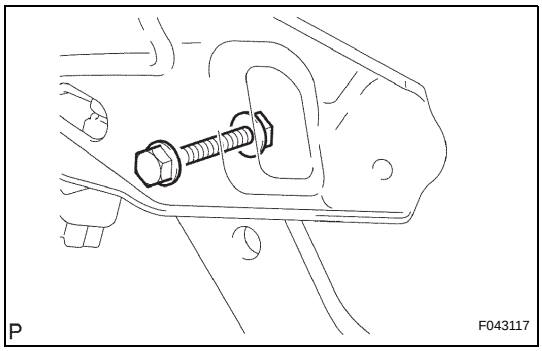


16. REMOVE BRAKE PEDAL RETURN SPRING

(a) Remove the return spring from the brake pedal support and brake pedal.

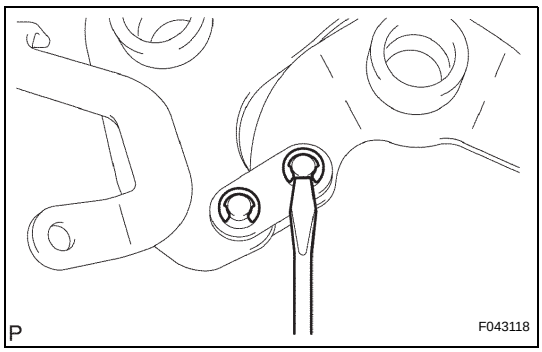
17. REMOVE STOP LIGHT SWITCH ASSEMBLY

(a) Turn the stop light switch counterclockwise, and remove the stop light switch.
(b) Remove the stop light switch mounting adjuster from the brake pedal support.



18. REMOVE BRAKE PEDAL

(a) Remove the bolt and nut, then remove the brake pedal from the brake pedal support.
(b) Remove the 4 brake pedal bushes from the brake pedal and brake pedal lever.
(c) Remove the 2 collars from the brake pedal and brake pedal lever.

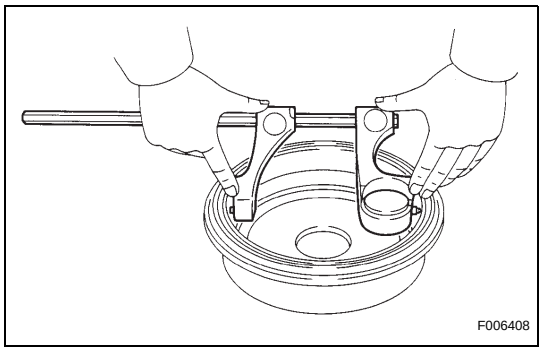


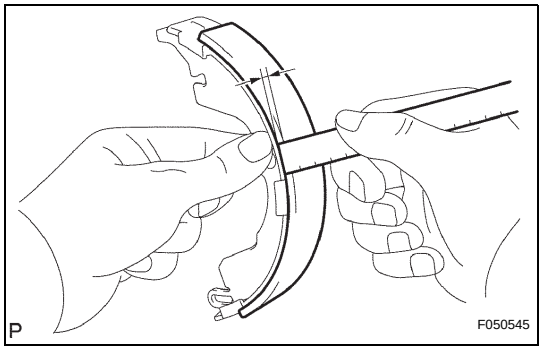
19. REMOVE BRAKE PEDAL LEVER

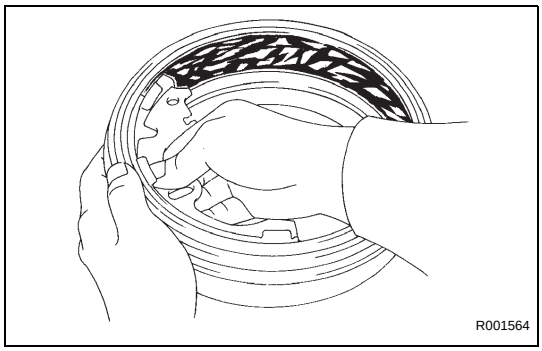
(a) Using a screwdriver, remove the 2 E-rings from the brake pedal link pin.
(b) Remove the 2 brake pedal link pins, 2 brake pedal shaft collars and 2 brake pedal links.
(c) Remove the brake pedal lever from the brake pedal.

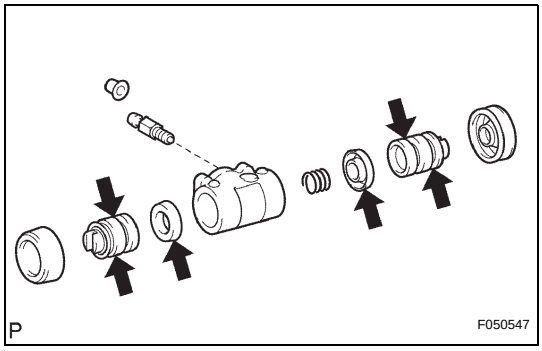
20. REMOVE BRAKE PEDAL PAD

(a) Remove the brake pedal pad from the brake pedal.









INSPECTION

1. INSPECT BRAKE DRUM INSIDE DIAMETER

(a) Using a brake drum gauge or equivalent, measure the inside diameter of the drum.

Standard inside diameter:
254 mm (10.00 in.)
Maximum inside diameter:
256 mm (10.08 in.)

If the inside diameter is greater than the maximum, replace the brake drum.

2. INSPECT REAR DRUM BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the thickness of the shoe lining.

Standard thickness:
5.0 mm (0.197 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the lining thickness is the minimum value or less, or if there is any severe or uneven wear, replace the brake shoe.

3. INSPECT BRAKE DRUM AND REAR DRUM BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the drum, then grind the brake shoe lining for proper fitting.
If the contact between the drum and the shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe assembly.

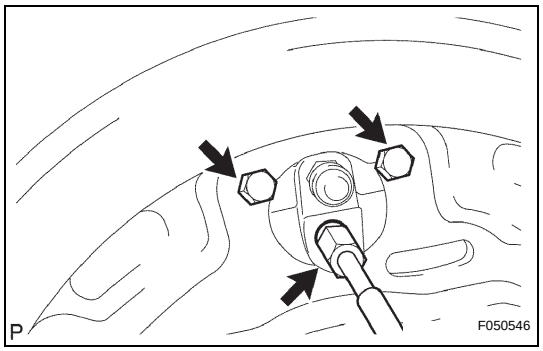
4. INSPECT REAR WHEEL BRAKE CYLINDER

(a) Check the cylinder bore and piston for rust and scoring.

REASSEMBLY

1. INSTALL REAR WHEEL CYLINDER CUP KIT

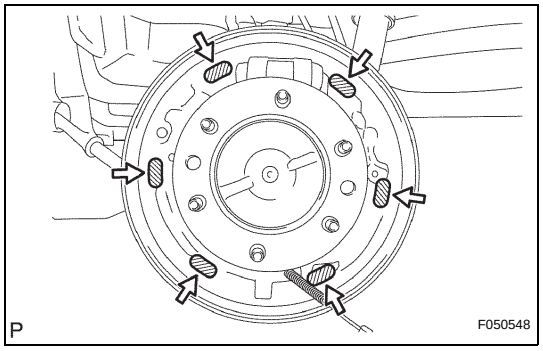
(a) Provisionally tighten the bleeder plug to the rear wheel brake cylinder, and install the bleeder plug cap.
(b) Apply lithium soap base glycol grease to 2 new cylinder cups and the 2 pistons.
(c) Install the cylinder cup onto each piston.
(d) Install the compression spring and 2 pistons onto the rear wheel brake cylinder.
(e) Install the 2 new wheel cylinder boots onto the rear wheel brake cylinder.



2. INSTALL FRONT OR UPPER REAR WHEEL BRAKE CYLINDER ASSEMBLY

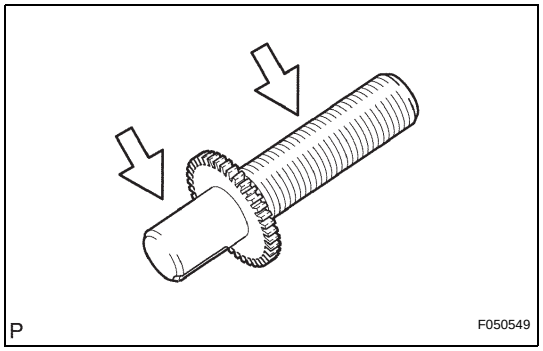
(a) Install the rear wheel brake cylinder assembly with the 2 bolts.
Torque: 9.5 N*m (97 kgf*cm, 84 in.*lbf)

(b) Using SST, connect the brake tube.
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf)



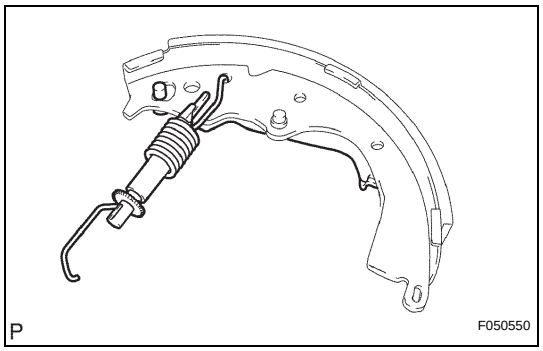
3. APPLY HIGH TEMPERATURE GREASE

(a) Apply high temperature grease to the shoe attached surface of the backing plate.

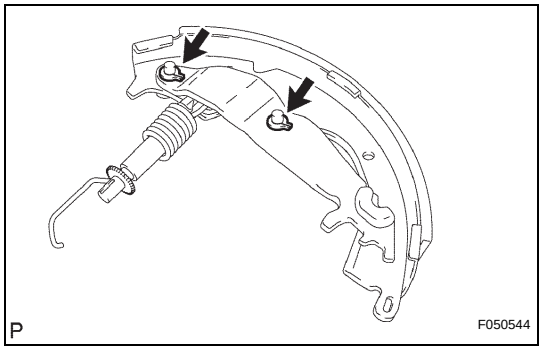


4. INSTALL REAR BRAKE SHOE

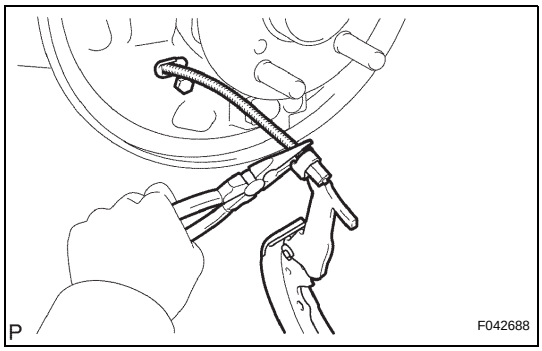
(a) Apply high temperature grease to the adjusting bolt.



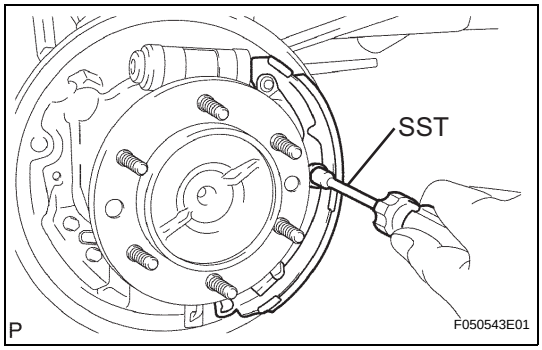
(b) Install the parking brake shoe lever LH and parking brake shoe strut set with the shoe return spring onto the rear brake shoe.



(c) Using pliers, install the parking brake shoe strut set, parking brake reaction lever and parking brake shoe lever LH with 2 new C-washers.



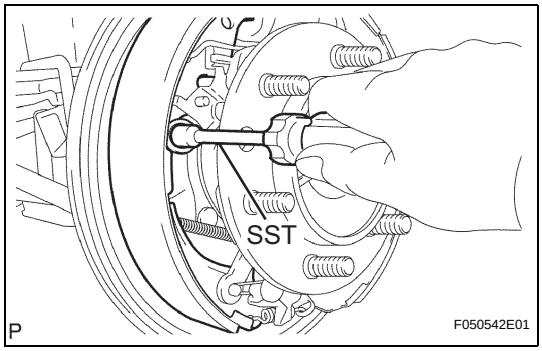
(d) Using needle-nose pliers, connect the parking brake cable No. 3 to the parking brake shoe lever LH.



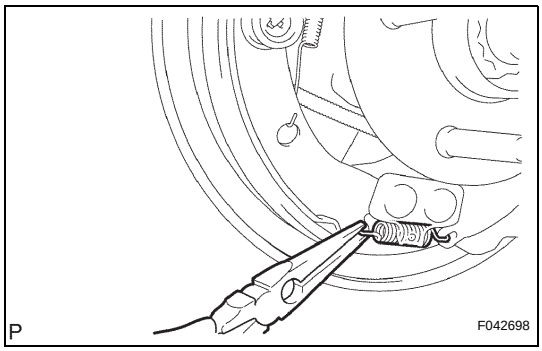
(e) Using SST, install the rear brake shoe, pin, shoe hold down spring and shoe hold down spring cup.
SST 09718-00010

5. INSTALL FRONT BRAKE SHOE

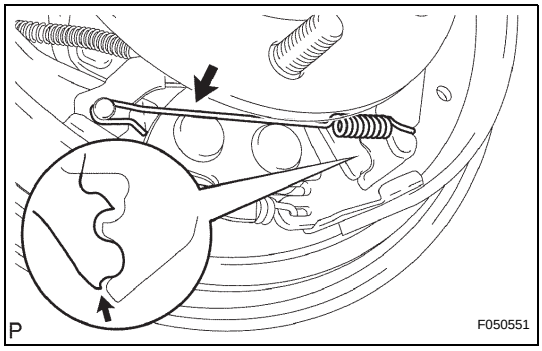
(a) Install the automatic adjust lever LH, automatic adjust lever spring and parking brake shoe strut lower onto the front brake shoe.



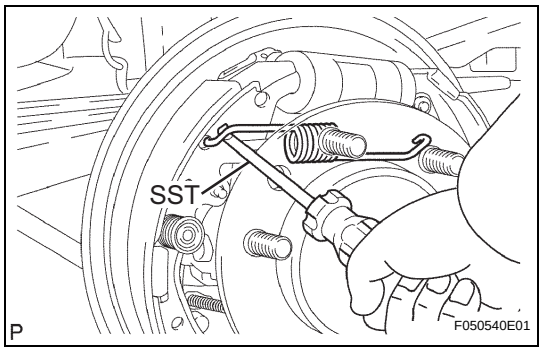
(b) Using SST, install the front brake shoe, pin, shoe hold down spring and shoe hold down spring cup.
SST 09718-00010



(c) Install the tension spring onto the front brake shoe and rear brake shoe.



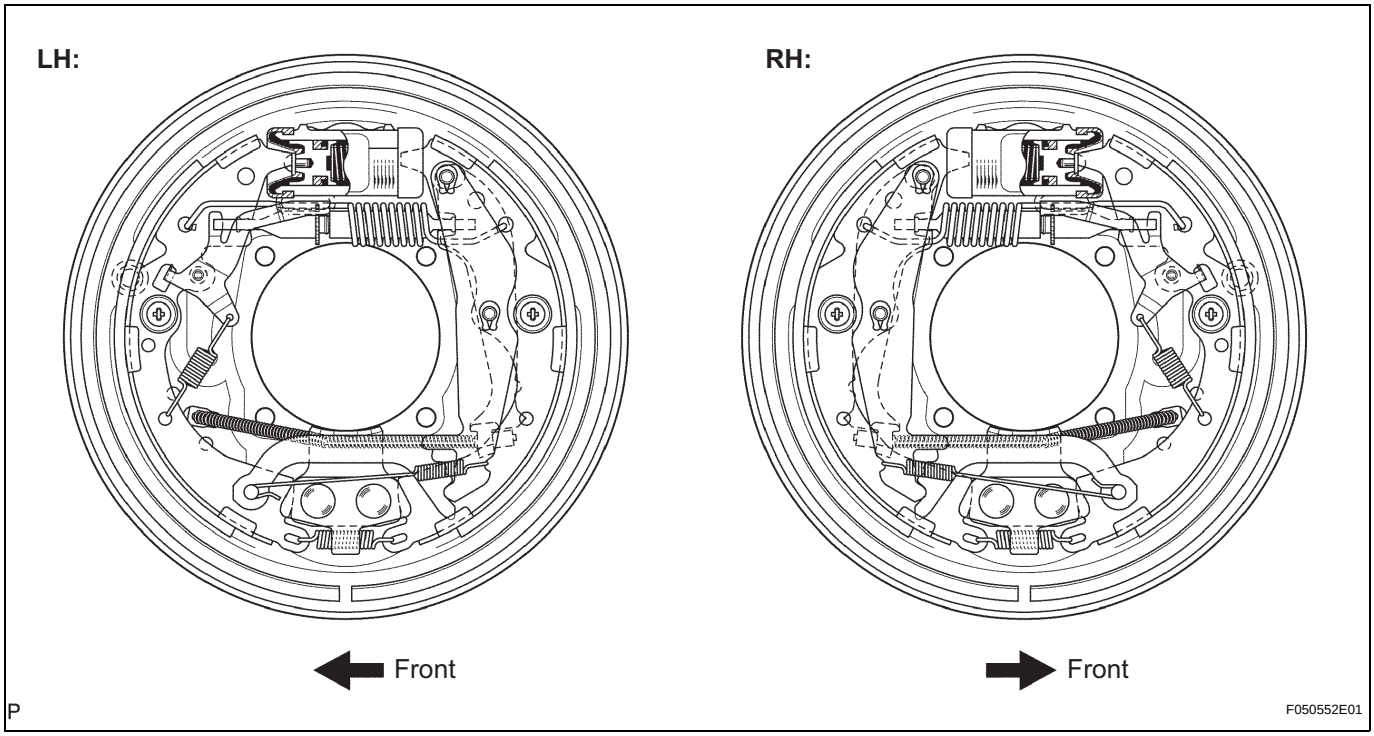
(d) Using needle-nose pliers, install the return spring.

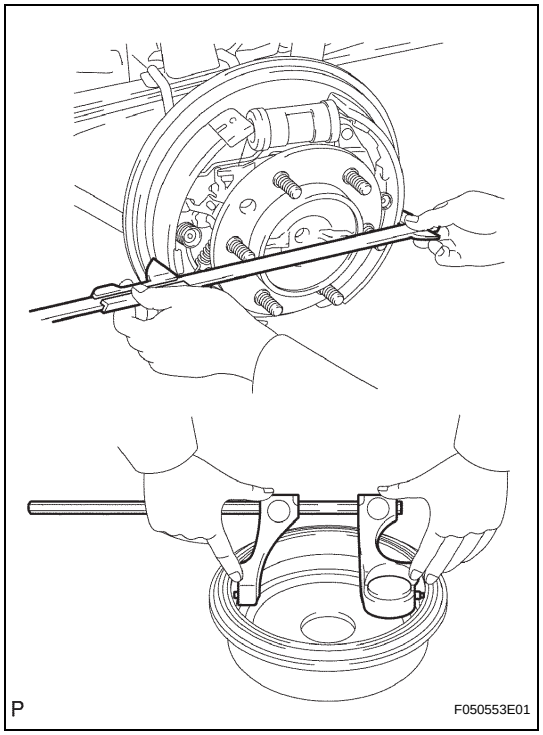


(e) Using SST, install the shoe return spring onto the front brake shoe.
SST 09921-00010

6. INSPECT REAR DRUM BRAKE INSTALLATION

(a) Check that each part is installed properly.

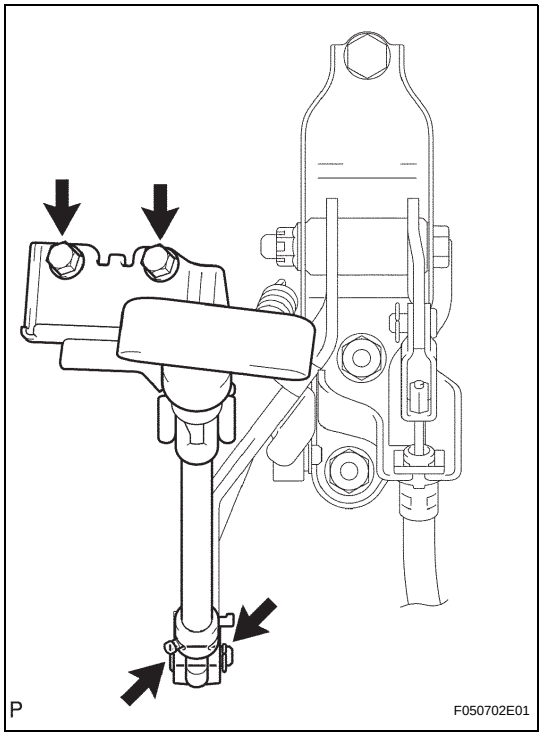




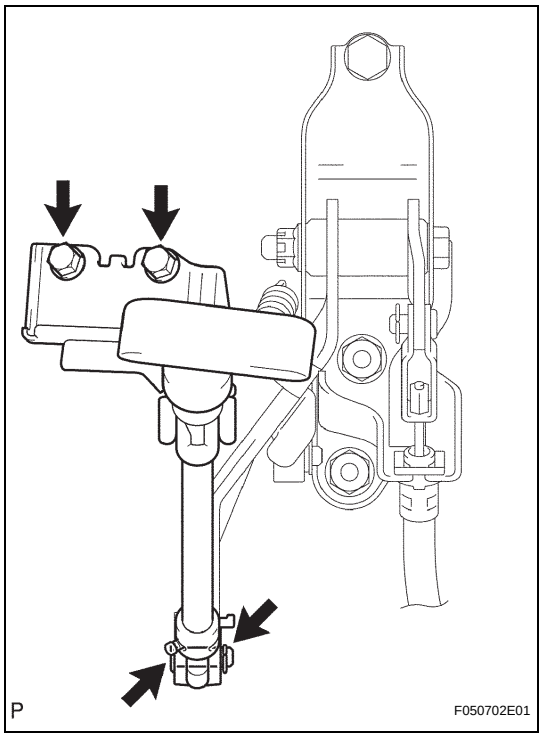
(b) Measure the brake drum inside diameter and the diameter of the brake shoes. Check that difference between the diameters is the specified shoe clearance.
Shoe clearance:
0.5 mm (0.020 in.)
NOTICE:
There should be no oil or grease adhering to the friction surfaces of the shoe lining and the drum.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
3. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-61)**
4. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
5. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
6. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
7. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-61)**
8. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
9. **REMOVE INSTRUMENT PANEL HOLE COVER (See page IP-9)**
10. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
11. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-12)**
12. **REMOVE PARKING BRAKE LEVER**
    (a) Release the parking brake lever.
    (b) Remove the clip and pin and separate the sleeve.
    (c) Remove the 2 bolts and parking brake lever assembly.

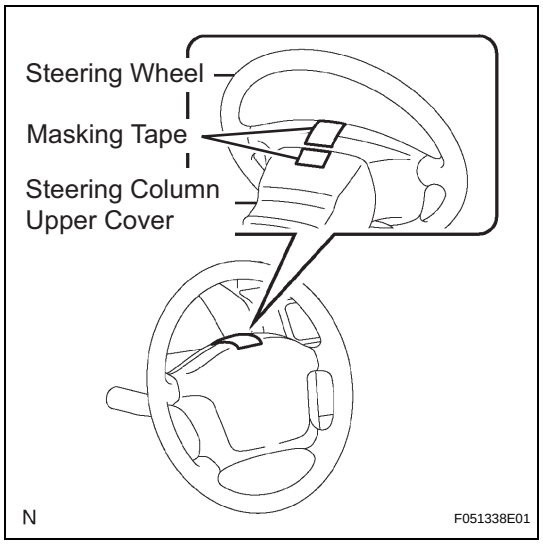


PB



INSTALLATION

1. **INSTALL PARKING BRAKE LEVER**
   (a) Install the parking brake lever assembly with the 2 bolts.
   Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
   (b) Install the sleeve with the pin and clip.
2. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-22)**
3. **INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
4. **INSTALL INSTRUMENT PANEL HOLE COVER (See page IP-25)**
5. **INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)**
6. **INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-52)**
7. **INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)**
8. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
9. **INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)**
10. **INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)**
11. **INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)**
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)



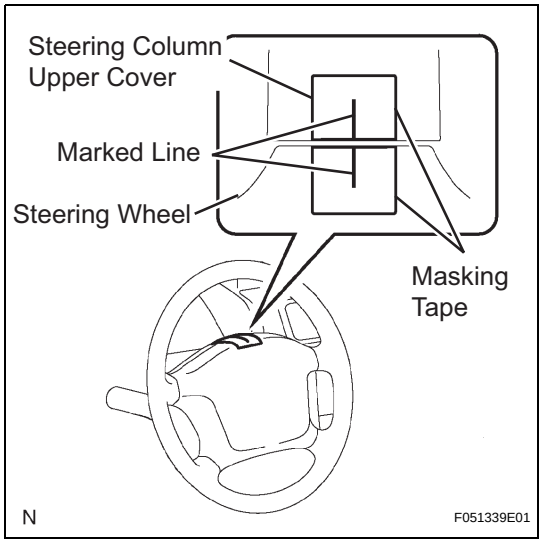
REPAIR

1. STEERING OFF CENTER REPAIR PROCEDURE

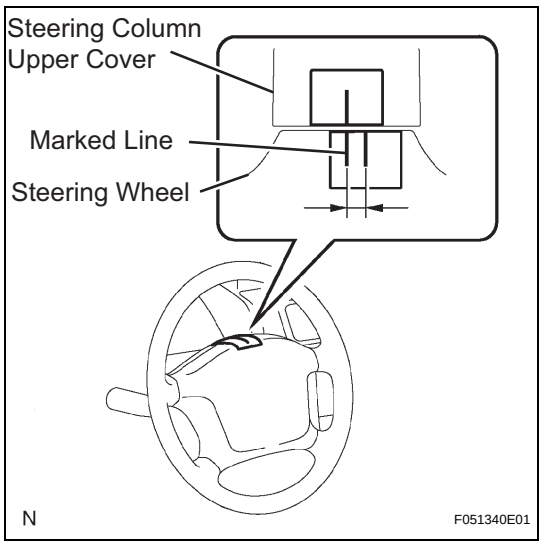
(a) Inspect steering wheel off center.

(1) Apply masking tape to the top center of the steering wheel and steering column upper cover.

(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), and hold the steering wheel to maintain the course.



(3) Draw a line on the masking tape as shown in the illustration.



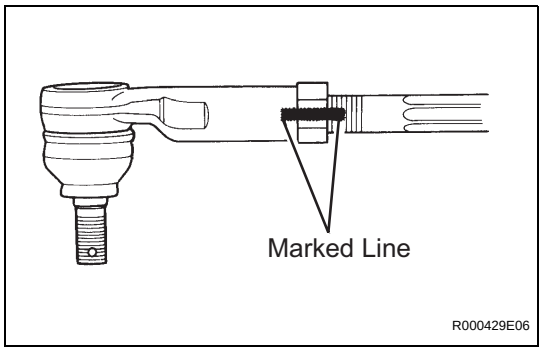
(4) Turn the steering wheel to its straight position.
HINT:
Refer to the steering column upper cover and marked line on the steering wheel for the straight position.

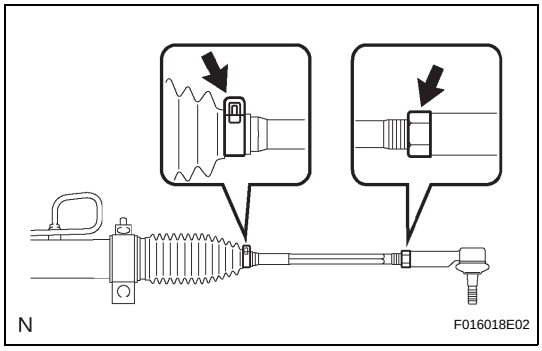
(5) Draw a new line on the masking tape or the steering wheel as shown in the illustration.

(6) Measure the distance between the 2 lines on the masking tape of the steering wheel.

(7) Convert the measured distance to the steering angle.
Measured distance 1 mm (0.04 in.):
Steering angle approximately 1 deg.
HINT:
Make a note of the steering angle.

SR



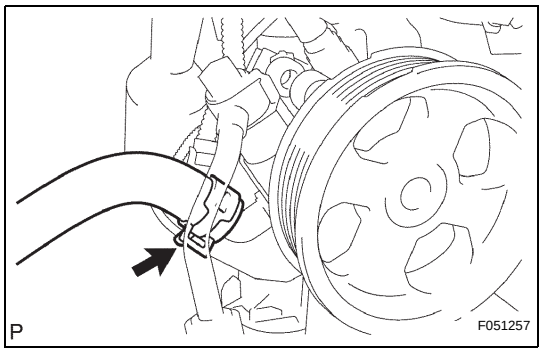


(b) Adjust the steering angle.
  (1) Draw a line on the RH and LH tie rods and on the RH and LH rack ends which can easily be seen.
  (2) Using a paper gauge, measure the distance from RH and LH tie rod ends to the rack end screws.
  HINT:
  - Measure both the RH and LH side.
  - Make a note of the measured values.

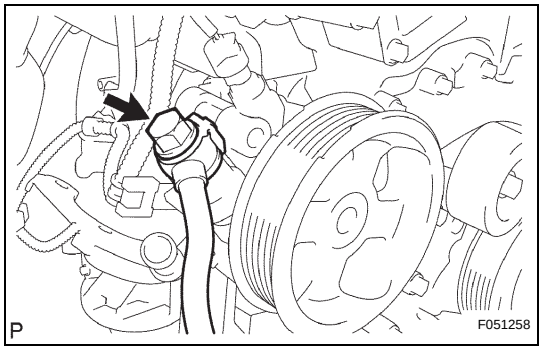
  (3) Remove the RH and LH boot clips from the rack boots.
  (4) Loosen the RH and LH lock nuts.
  (5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.
  Amount of turn:
  360° turn of rack end (1.5 mm (0.059 in.) horizontal movement) - 12° of steering angle.
  (6) Tighten the RH and LH lock nuts.
  Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)
  NOTICE:
  Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is less than 1.5 mm (0.059 in.).
  (7) Install the RH and LH boot clips.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO. 1 (for 4WD and Pre-Runner)**
3. **REMOVE FAN AND GENERATOR V BELT (See page EM-5)**
4. **DRAIN POWER STEERING FLUID**
5. **DISCONNECT OIL RESERVOIR TO PUMP HOSE NO. 1**
   (a) Disengage the clip and disconnect the oil reservoir to pump hose No. 1.

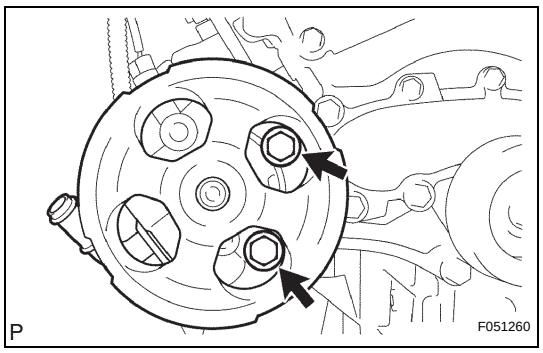


6. **DISCONNECT PRESSURE FEED TUBE ASSEMBLY**
   (a) Remove the union bolt, then disconnect the pressure feed tube.
   (b) Remove the gasket from the pressure feed tube.

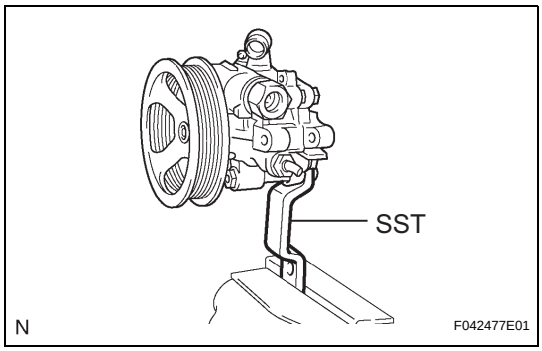


7. **REMOVE VANE PUMP**
   (a) Disconnect the oil pressure switch connector.
   (b) Remove the bolt and wire harness clamp bracket.

   (c) Remove the 2 bolts and vane pump assembly.



PS



DISASSEMBLY

1. FIX VANE PUMP

(a) Using SST, fix the vane pump assembly in a vise.
SST 09630-00014 (09631-00132)
NOTICE:
When using a vise, do not over tighten it.

2. REMOVE POWER STEERING SUCTION PORT UNION

(a) Remove the bolt and suction port union.
(b) Remove the O-ring from the suction port union.

3. REMOVE FLOW CONTROL VALVE

(a) Remove the pressure port union.
(b) Remove the O-ring from the pressure port union.
(c) Remove the flow control valve and compression spring.

4. REMOVE POWER STEERING OIL PRESSURE SWITCH
NOTICE:
Be careful not to drop or badly damage the oil pressure switch. If damaged, replace it with a new one.

5. REMOVE VANE PUMP HOUSING REAR

(a) Remove the 4 bolts and vane pump housing rear from the vane pump housing front.
(b) Remove the O-ring from the vane pump housing front.

6. REMOVE PULLEY SHAFT SUB-ASSEMBLY
NOTICE:
Be careful not to drop or badly damage the pulley shaft. If damaged, replace it with a new one.

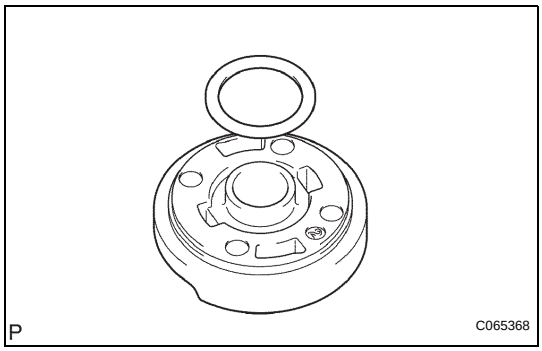
(a) Using a screwdriver, remove the snap ring from the pulley shaft.
(b) Remove the pulley shaft.

PS

7. REMOVE VANE PUMP ROTOR

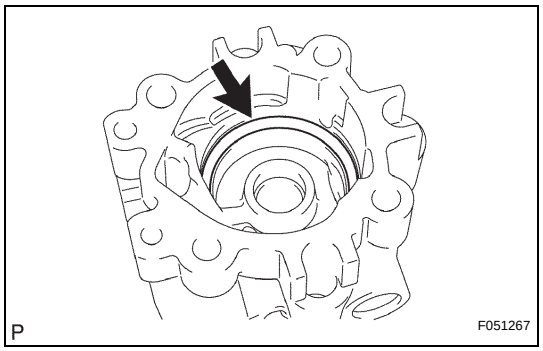
(a) Remove the 10 vane plates.
(b) Remove the vane pump rotor.

8. REMOVE VANE PUMP CAM RING

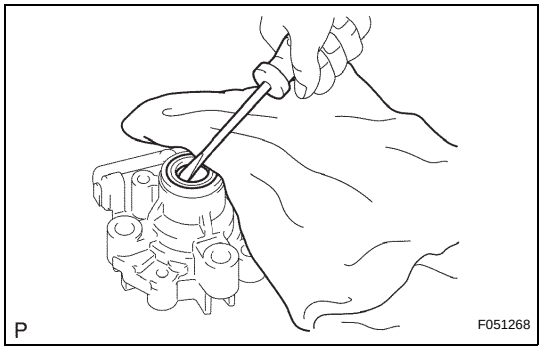


9. REMOVE VANE PUMP SIDE PLATE FRONT

(a) Remove the side plate from the vane pump housing front.
(b) Remove the O-ring from the side plate.

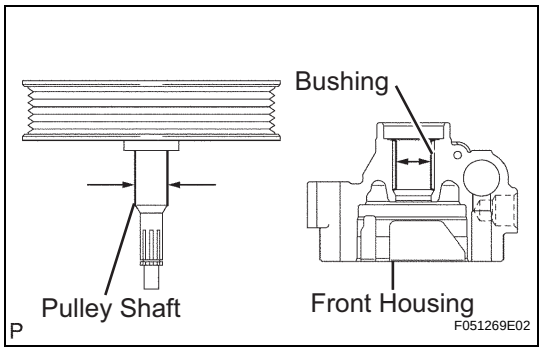


(c) Remove the O-ring from the vane pump housing front.



10. REMOVE VANE PUMP HOUSING OIL SEAL

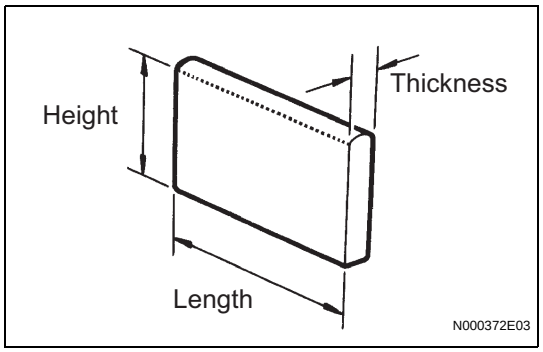
(a) Using screwdriver, remove the oil seal.
NOTICE:
Be careful not to damage the vane pump housing front.



INSPECTION

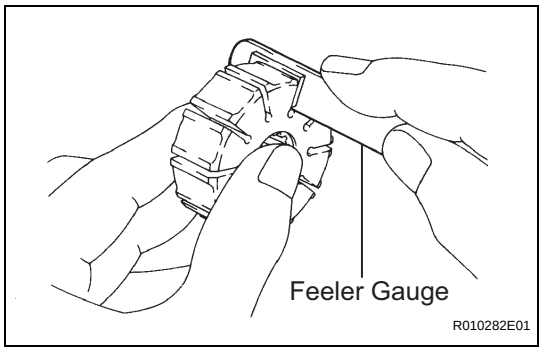
1. INSPECT OIL CLEARANCE

(a) Using a micrometer and caliper gauge, measure the oil seal clearance.
Standard clearance:
0.021 to 0.043 mm (0.0008 to 0.0017 in.)
Maximum clearance:
0.07 mm (0.0028 in.)
If it is greater than the maximum, replace the vane pump assembly.



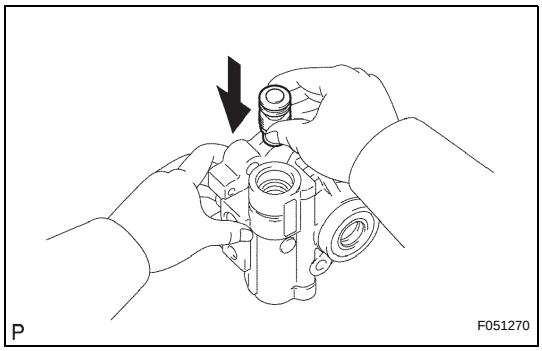
2. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATE

(a) Using a micrometer, measure the height, thickness and length of the vane plates.
Minimum height:
7.7 mm (0.303 in.)
Minimum thickness:
1.408 mm (0.0554 in.)
Minimum length:
11.993 mm (0.4722 in.)



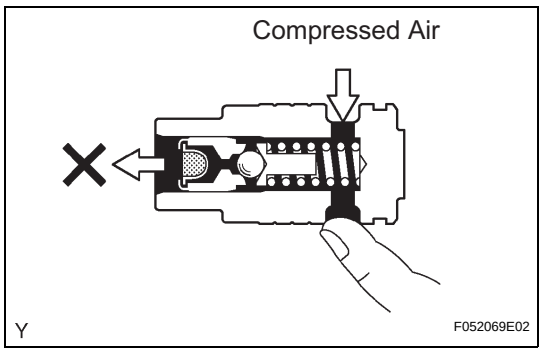
(b) Using a feeler gauge, measure the clearance between a side face of the vane pump rotor groove and vane plate.
Maximum clearance:
0.025 mm (0.0012 in.)
If it is greater than the maximum, replace the vane pump assembly.

PS

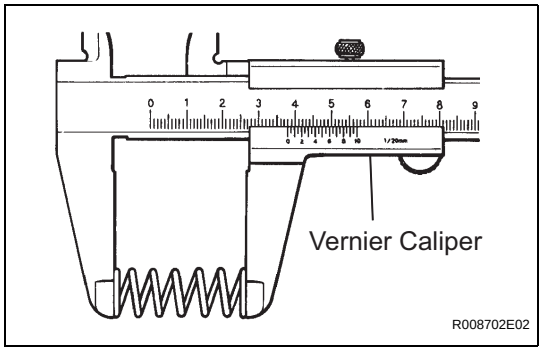


3. INSPECT FLOW CONTROL VALVE

(a) Coat the flow control valve with power steering fluid and check that it falls smoothly into the flow control valve hole under its own weight.



(b) Check the flow control valve for leakage. Close one of the holes and apply compressed air of 392 to 490 kPa (4 to 5 kgf/cm^2, 57 to 71 psi) to the hole on the opposite side. Confirm that the air does not flow out of the end holes.
If necessary, replace the vane pump assembly.



4. INSPECT COMPRESSION SPRING

(a) Using vernier calipers, measure the free length of the spring.
Minimum free length:
36.9 mm (1.453 in.)
If it is not within the specification, replace the vane pump assembly.

5. INSPECT PRESSURE PORT UNION SUB-ASSEMBLY

(a) If the union seat in the pressure port union is badly damaged, it could cause fluid leakage, so replace the vane pump assembly.

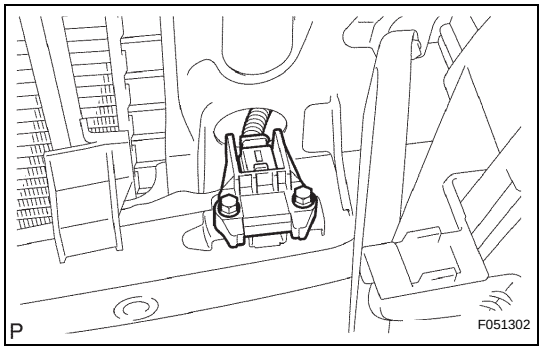
REMOVAL

HINT:
Use the same procedures for the RH side and LH side.

1. **PRECAUTION**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE RADIATOR GRILLE (See page ET-4)**
4. **REMOVE FRONT AIRBAG SENSOR**
   (a) Remove the 2 bolts and front airbag sensor.
   (b) Disconnect the connector from the sensor.



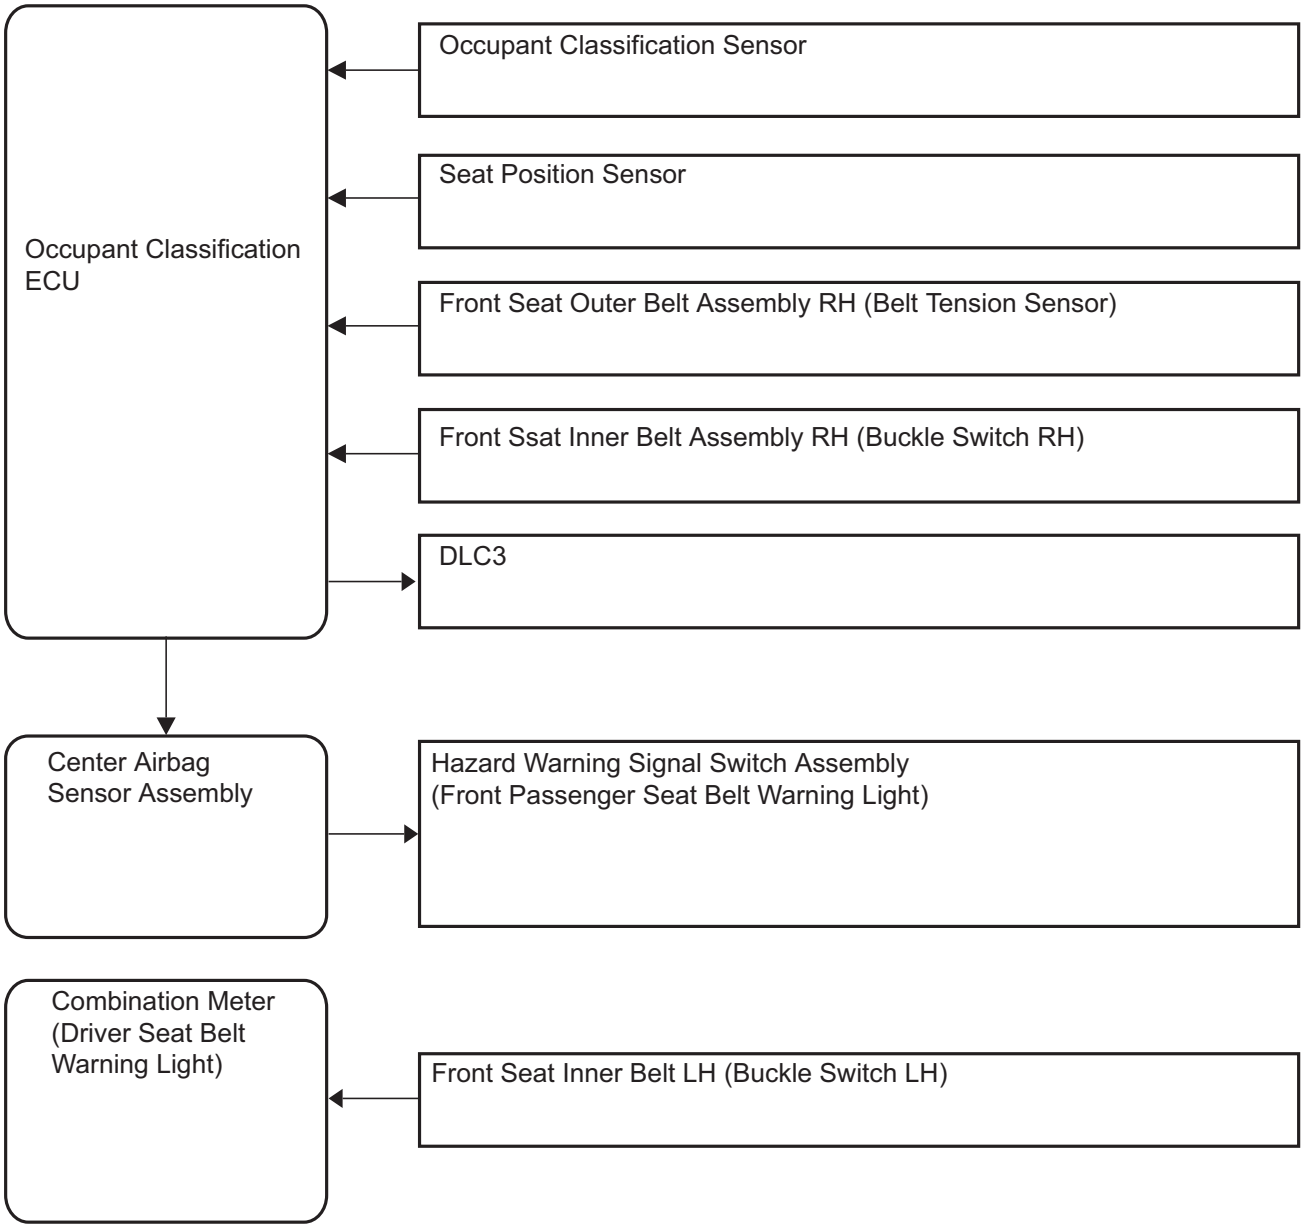
INSTALLATION

HINT:
Use the same procedures for the RH side and LH side.

1. **INSTALL FRONT AIRBAG SENSOR**
   (a) Check that the ignition switch is OFF.
   (b) Check that the cable is disconnected from the battery negative (-) terminal.
   CAUTION:
   After disconnecting cable from the terminal, wait for at least 90 seconds before starting the operation.
   (c) Check that there is no slack in the installation parts of the front airbag sensor.
   (d) Connect the connector to the front airbag sensor.
   (e) Install the front airbag sensor with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.**
   - **When installing the front airbag sensor, make sure that the SRS wiring does not interfere with any other parts and that it is not pinched between other parts.**
2. **INSTALL RADIATOR GRILLE (See page ET-11)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
4. **INSPECT SRS WARNING LIGHT**
   (See page RS-28)

SYSTEM DIAGRAM

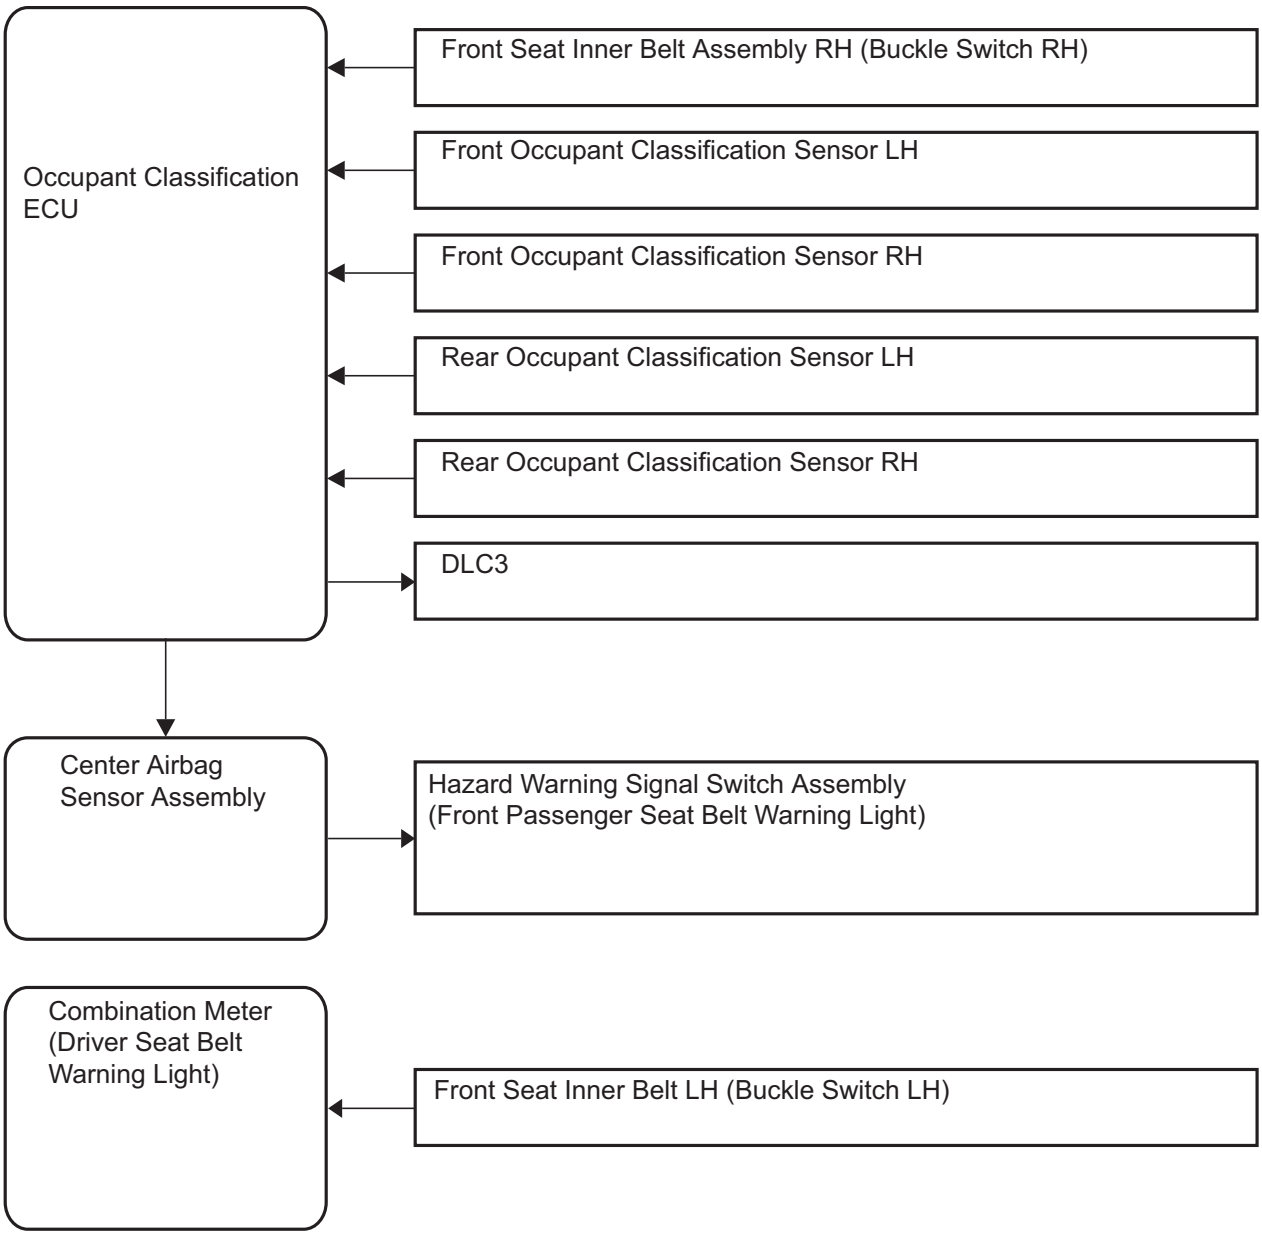
For Bench Seat:



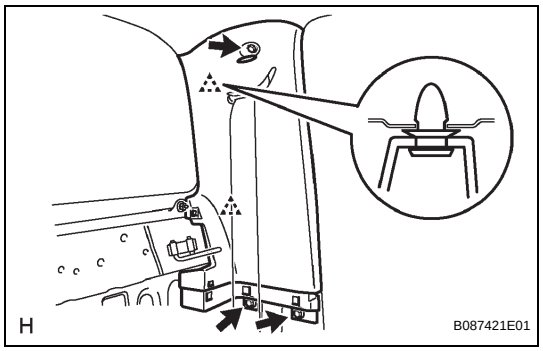
B126120E02

SB

For Separate Seat:

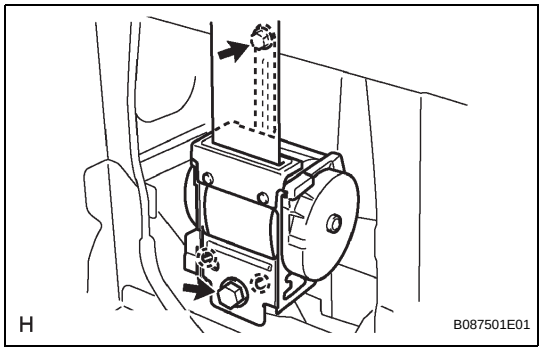


B126119E02



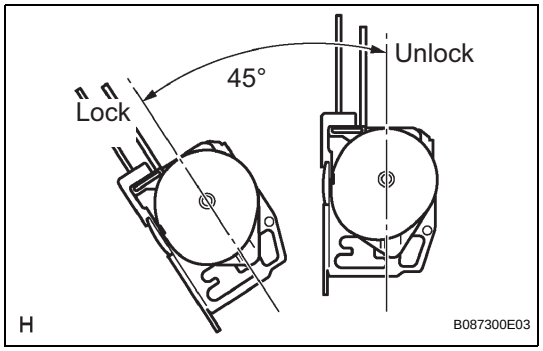
(c) Remove the 3 screws.
(d) Disengage the 2 clips and remove the quarter inside trim board.

9. REMOVE REAR SEAT OUTER BELT ASSEMBLY
(a) Remove the bolt and shoulder anchor.

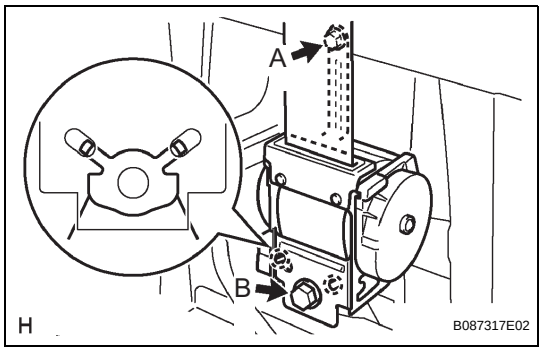


(b) Remove the 2 bolts and retractor.

INSTALLATION

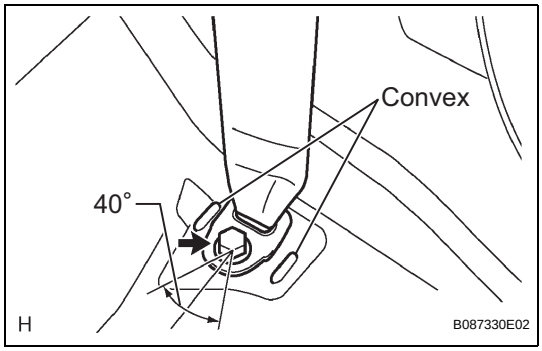


1. INSTALL REAR SEAT OUTER BELT ASSEMBLY
(a) Check the amount of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any directions. Also check that the belt locks when inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If operation is not as specified, replace the rear seat outer belt.



(b) Hook the lower stay of the retractor onto the 2 body hooks.
(c) Tighten bolt A, and then tighten bolt B.
Torque: 8.5 N*m (85 kgf*cm, 75 in.*lbf) (for bolt A)
42 N*m (430 kgf*cm, 31 ft.*lbf) (for bolt B)

(d) Install the shoulder anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the shoulder anchor rotates smoothly.

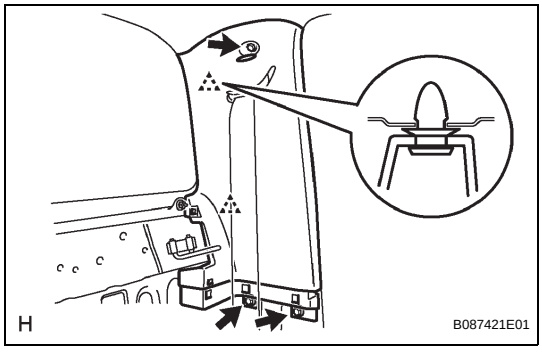


(f) Install the floor anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Make sure that the rear seat outer belt is oriented in the correct direction when installing.**
- **Be careful not to place the rear seat outer belt over the convex areas of the floor panel.**

(g) Check the ELR lock.
NOTICE:
- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

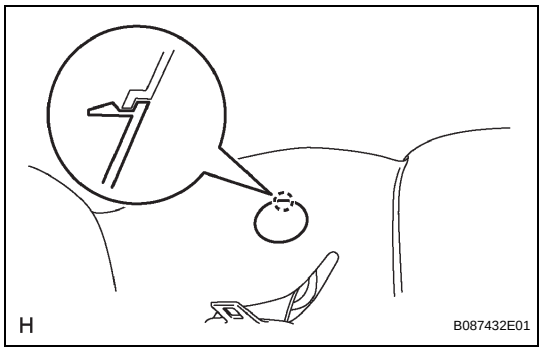
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If operation is not as specified, replace the rear seat outer belt.

(h) Remove the bolt and floor anchor.

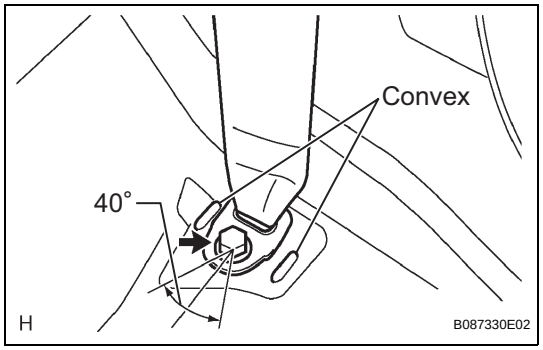


2. INSTALL QUARTER INSIDE TRIM BOARD
(a) Engage the 2 clips and install the quarter inside trim board.
(b) Tighten the 3 screws.

SB



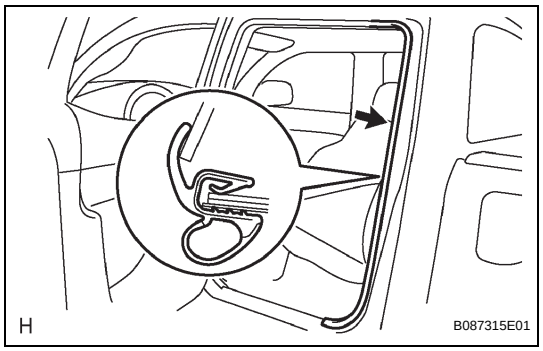
(c) Engage the claw and close the cover.



(d) Install the floor anchor of the rear seat belt outer with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

3. INSTALL QUARTER TRIM LOWER PANEL (See page IR-25)

4. INSTALL LUGGAGE COMPARTMENT SIDE TRAY (See page IR-25)

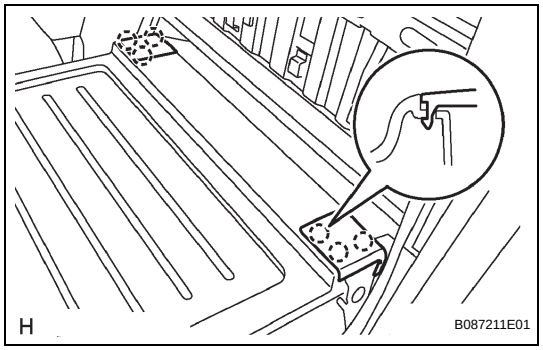


5. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP
(a) Install the rear door opening trim weatherstrip.

6. INSTALL REAR DOOR SCUFF PLATE (See page IR-29)

7. INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY (See page SE-77)

8. INSTALL REAR SEAT BACK ASSEMBLY (See page SE-77)



9. INSTALL REAR SEAT BACK HINGE COVER
HINT:
Follow the same procedure as for the opposite side.
(a) Engage the 3 claws and install the rear seat back hinge cover.

SB

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The engine immobiliser system is designed to prevent the vehicle from being stolen. This system uses a transponder key ECU that stores the key codes of authorized ignition keys. If an attempt is made to start the engine using an unauthorized key, the transponder key ECU sends a signal to the ECM to prohibit fuel delivery and ignition, effectively disabling the engine.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier	When key is inserted in ignition key cylinder, key coil receives key's code. Then amplifier amplifies ID code and outputs it to transponder key ECU.
Unlock warning switch	Detects if key is in ignition key cylinder and outputs results to transponder key ECU
ECM	Through SFI communication*1, ECM receives ID verification results from transponder key ECU. ECM also verifies ECUs. Then judgment of whether or not to disable engine is made.
Security indicator light	Illuminates or starts flashing. Illumination is controlled by transponder key ECU

3. SYSTEM FUNCTION

When the transponder key ECU detects that the unlock warning switch is ON, the ECU provides current to the transponder key coil and produces a faint electric wave. A transponder chip in the key grip receives the wave. Upon receiving the wave, the transponder chip outputs a key ID code signal. The transponder key coil receives this signal, the transponder key amplifier amplifies it, and then the signal is transmitted to the transponder key ECU. The transponder key ECU matches the key's ID code with the vehicle's ID code, which was previously registered in the transponder key ECU. If the ID codes match, the transponder key ECU turns OFF the security indicator. Then when the ignition key cylinder is turned, the code match results are sent through the transponder key ECU to the ECM. After the identification results show that the key's ID code matches the vehicle's ID code and the transponder key ECU has confirmed their match, the immobiliser system is canceled and the engine starting controls (fuel injection control and ignition control) enter standby mode.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the engine immobiliser system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CRANK ENGINE FOR MORE THAN 10 SECONDS

NEXT

4	CHECK FOR DTCS*

(a) Check for DTCs and note any codes that are output (see page EI-19).

(b) Delete the DTC.

(c) Recheck for DTCs. Based on the DTC output in (a), try to force output of the same SFI system DTC or engine immobiliser system DTC by simulating the original activity indicated by the DTC.

Result:

Result	Proceed to
DTC output does not reoccur	A
SFI system DTC output reoccurs	B
Engine immobiliser system DTC output reoccurs	C

B → GO TO SFI SYSTEM

C → GO TO STEP 8

A

5	READ VALUE OF INTELLIGENT TESTER*

(a) Connect the intelligent tester to the DLC3.

EI

(b) Turn the ignition switch ON and push the intelligent tester main switch ON.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / IMMOBILISER / KEY SW. Read the values.

Transponder key ECU assembly:

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ ON or OFF	OFF: No key is in ignition key cylinder ON: Key is in ignition key cylinder	-

OK:
ON (key is in ignition key cylinder) appears on the screen.

NG → **GO TO DTC B2780**

OK

6 PROBLEM SYMPTOMS TABLE

Result:

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **GO TO STEP 8**

A

7 OVERALL ANALYSIS AND TROUBLESHOOTING*

(a) DATA LIST/ACTIVE TEST (see page EI-19)
(1) Inspection with intelligent tester (DATA LIST)
(2) Inspection with intelligent tester (ACTIVE TEST)
(b) Terminals of ECU (see page EI-13)

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

The cruise control system makes it possible to drive at a desired speed without using the accelerator pedal. ECM controls the throttle opening angle based on signals from switches and sensors.

The microcomputer which controls the cruise control system is built into the ECM, and the actuator is the throttle position sensor and motor.

Constant speed control gets ready when the cruise control main switch ON-OFF button is pushed (the CRUISE MAIN indicator light comes on).

Operating the cruise control main switch, the driver can control the following functions.

HINT:

- The cruise control main switch is an automatic return type switch which operates only while it is pushed in one direction and turns off after it is released.
- "SET" and "-", "RES" and "+", "ON" and "OFF" operations are all controlled by using the same switch.

(a) 'SET' function

When the cruise control main switch is pushed down to "-/SET", the ECM stores the set speed and compares it with the actual vehicle speed. If the actual driving speed is greater than the set speed, the ECM sends a signal to the throttle position sensor and motor to close the throttle valve. If lower, it opens the throttle valve. The cruise control operative speed range is between the low and high speed limits.

(b) '+' function

The cruise set speed increases while the cruise control main switch lever is pushed up to "+/RES". The vehicle begins to cruise at the newly set speed when the cruise control main switch lever is released.

(c) Tap-up function

When the cruise control main switch lever is tapped up to "+/RES" (approximately 0.6 seconds), the ECM increases the stored set speed by 1 mph (1.6 km/h) at a time. However, when the difference between the driving and the stored vehicle speeds is more than 3.1 mph (approximately 5 km/h), the stored vehicle speed will not change.

(d) '-' function

The cruise set speed decreases while the cruise control main switch lever is pushed down to "-/SET". The vehicle begins to cruise at the newly set speed when the cruise control main switch lever is released.

(e) Tap-down function
When the cruise control main switch lever is tapped down to "-/SET" (approximately 0.6 seconds), the ECM decreases the stored set speed by 1 mph (1.6 km/h) at a time. However, when the difference between the driving and the stored vehicle speeds is more than 3.1 mph (approximately 5 km/h), the vehicle speed, when the cruise control main switch lever is released from "-/SET", will be stored and constant speed control is maintained.

(f) Low speed limit
The lowest possible limit of the speed setting range is approximately 25 mph (40 km/h). The cruise control system cannot be set when the vehicle speed is below the speed limit. Cruise control operation is automatically canceled when the vehicle speed decreases to below the low speed limit while the cruise control is in operation.

(g) High speed limit
The highest possible limit of the speed setting range is approximately 125 mph (200 km/h). The cruise control system cannot be set when the vehicle speed is over the high speed limit. The speed cannot be in greased using "+/RES" with the cruise control main switch assembly to beyond the high speed limit.

(h) 'RES' function
If the cruise control operation was canceled under the manual cancel condition (other than by turning cruise control main switch ON-OFF button off), and if the driving speed is within the limit range, pushing the cruise control main switch to "+/RES" restores the vehicle speed stored at the time of cancellation, and maintains constant speed control. Even when cruise control is canceled automatically due to the vehicle speed decreasing below the low speed limit, cruise control can be resumed when the vehicle speed returns to over the low speed limit, since the stored vehicle speed remains in the memory.

(i) MANUAL CANSEL function
The ECM cancels the cruise control while driving under the following conditions:
- The cruise control main switch is pulled to "CANCEL".
- The brake pedal is depressed.
- The clutch pedal is depressed (M/T ONLY).
- The cruise control main switch ON-OFF button is pushed off.

- The D position circuit in the neutral start switch is turned from ON to OFF. Models with the 1GR-FE engine (5AT): Shift the gear from the D or 4th position to any of the N, 3rd, 2nd and 1st positions. Models with the 2TR-FE engine (4AT): Shift the gear from the D or 3rd position to any of the N, 2nd and 1st positions.

(j) AUTO CANCEL function

(1) When any of the following malfunctions occurs, the ECM clears the set vehicle speed and deactivates the cruise control.
In this case, the power indicator continues blinking until the cruise control main switch is turned OFF and the ECM allows the cruise control to be reactivated when the main switch is next turned ON again.
- Open or short malfunctions in the stop light switch.
- Abnormalities in the vehicle speed signal.
- Malfunctions in the throttle body.

(2) When any of the following malfunctions occurs, the ECM clears the set vehicle speed and deactivates the cruise control.
In this case, the power indicator continues blinking until the cruise control main switch is turned OFF and the ECM allows the cruise control to be reactivated when the ignition switch is next turned ON again.
- Malfunctions in the stop light switch input circuit.
- Malfunctions in the cancel circuit.

(3) When the vehicle is in one of the following conditions, the ECM deactivates the cruise control (the cruise control can be reset).
- Actual vehicle speed is below the lower vehicle speed limit (the set vehicle speed is retained).
- Actual vehicle speed decreases by 10 mph (16 km/h) from the set vehicle speed (the set vehicle speed is cleared).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO DLC3*

HINT:
If the display indicates a communication fault in the tester, inspect the DLC3.

NEXT

4	CHECK DTC AND FREEZE FRAME DATA*

HINT:
Record or print DTCs and freeze frame data, if necessary.

NEXT

5	CLEAR DTC AND FREEZE FRAME DATA*

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	SET CHECK MODE DIAGNOSIS*

NEXT

8	CONFIRM PROBLEM SYMPTOMS

HINT:
If the engine does not start, perform steps 10 and 12 first.

ES

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Intelligent tester only:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with an intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2trip detection logic.

1. Clear DTCs (See page ES-38).
2. Switch the ECM from normal mode to check mode using an intelligent tester (See page ES-41).
3. Perform a simulation test.
4. Check and wiggle the harness(es), connector(s) and terminal(s).

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch OFF.

Result	Proceed To
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK WHETHER ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK

5 CHECK IDLING SPEED

NG → **TROUBLESHOOT IDLING SPEED AND PROCEED TO NEXT STEP**

OK

6	CHECK FUEL PRESSURE

NG → TROUBLESHOOT FUEL PRESSURE AND PROCEED TO NEXT STEP

OK

7	CHECK FOR SPARK

NG → TROUBLESHOOT SPARK AND PROCEED TO NEXT STEP

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement ECM.
HINT:
The VIN is in the form of a 17-digit alphanumeric vehicle identification number. An intelligent tester is required to resister the VIN.

1. DESCRIPTION

This registration section consists of three parts, Input Instructions, Read VIN and Write VIN.

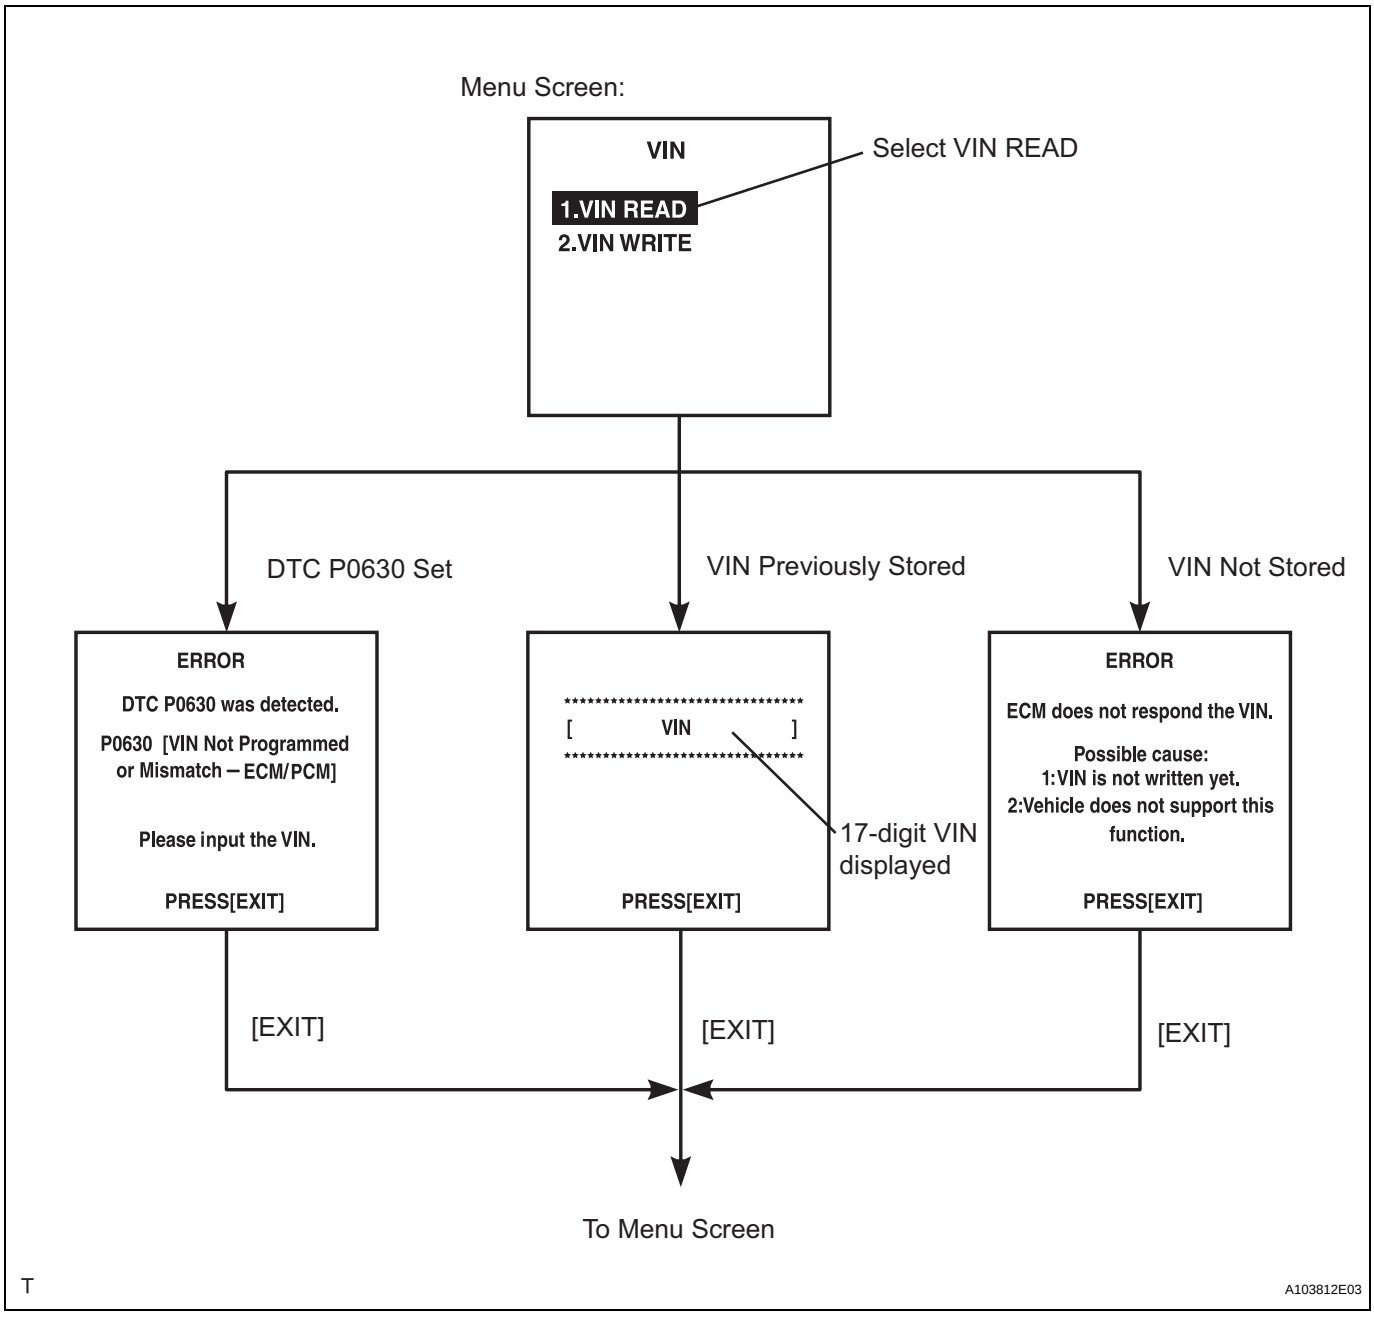
(a) Input Instructions: Explains the general VIN input instructions using an intelligent tester.
(b) Read VIN: Explains the VIN reading process in a flowchart. This process allows the VIN stored in the ECM to be read, in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.
(c) Write VIN: Explains the VIN writing process in a flowchart. This process allows the VIN to be input into the ECM. If the ECM is changed, or the VIN and VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.

2. INPUT INSTRUCTIONS

(a) Intelligent tester
  (1) The arrow buttons (UP, DOWN, RIGHT and LEFT) and numerical buttons (0 to 9) are used, in order to input the VIN.
(b) Cursor Operation
  (1) To move the cursor around the tester screen, press the RIGHT and LEFT buttons.
(c) Alphabetical Character Input
  (1) Press the UP and DOWN buttons to select the desired alphabetical character.
  (2) After selection, the cursor should move.
(d) Numeric Character Input
  (1) Press the numerical button corresponding to the number that you want to input.
  (2) After input, the cursor should move.
    HINT:
    Numerical characters can be selected by using the UP and DOWN buttons.
(e) Correction
  (1) When correcting the input character(s), put the cursor onto the character using the RIGHT or LEFT buttons.
  (2) Select or input the correct character using the UP/DOWN buttons, or the numerical buttons.
(f) Finishing Input Operation
  (1) Make sure that the input VIN matches the vehicle VIN after input.
  (2) Press the ENTER button on the tester.

3. READ VIN

(a) Confirm the vehicle VIN.
(b) Connect an intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Turn the tester ON.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / VIN.



4. WRITE VIN

(a) Confirm the vehicle VIN.
(b) Connect an intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Turn the tester ON.

(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / VIN.

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalyst, evaporative emission (EVAP) and thermostat.

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component will malfunction in the near future.

Perform the following instruction to view the monitor status. Although this instruction reference the Lexus/Toyota diagnostic tester, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect an intelligent tester to the DLC3.

(b) Turn the ignition switch ON and the tester ON.

(c) Clear DTCs (See page ES-38).

(d) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (See page ES-23). Do not turn the ignition switch OFF.

NOTICE:

The test results will be lost if the ignition switch is turned OFF.

2. ACCESS MONITOR RESULT

(a) Select from the intelligent tester menus: DIAGNOSIS, ENHANCED OBDII, MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.

- INCMP: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limit. If the test value is on the borderline of the test limit, the component will malfunction in the near future.
HINT:
The monitor result might on rare occasions be PASS even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the value by the scaling value listed below.

A/F Sensor Bank 1

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.0003	No dimension	Response rate deterioration level for bank 1 sensor 1
$01	$91	Multiply by 0.004	mA	A/F sensor current

A/F Sensor Bank 2

Monitor ID	Test ID	Scaling	Unit	Description
$05	$8E	Multiply by 0.0003	No dimension	Response rate deterioration level for bank 2
$05	$91	Multiply by 0.004	mA	A/F sensor current for bank 2

HO2S Bank 1 Sensor 2

Monitor ID	Test ID	Scaling	Unit	Description
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8F	Multiply by 0.0003	Grams	Maximum oxygen storage capacity

HO2S Bank 2 Sensor 2

Monitor ID	Test ID	Scaling	Unit	Description
$06	$07	Multiply by 0.001	V	Minimum sensor voltage
$06	$08	Multiply by 0.001	V	Maximum sensor voltage
$06	$8F	Multiply by 0.0003	Grams	Maximum oxygen storage capacity

Catalyst - Bank 1

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst - Bank 1

Catalyst - Bank 2

Monitor ID	Test ID	Scaling	Unit	Description
$22	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst - Bank 2

EVAP

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump OFF stuck (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump ON stuck (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve OFF stuck (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve ON stuck (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV close stuck (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV open stuck (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Misfire

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: Misfire counts for last 10 driving cycles - Total
$A1	$0C	Multiply by 1	Time	Misfire rate for all cylinders: Misfire counts for last/ current driving cycles - Total
$A2	$0B	Multiply by 1	Time	EWMA misfire for cylinder 1: Misfire counts for last 10 driving cycles - Total
$A2	$0C	Multiply by 1	Time	Misfire rate for cylinder 1: Misfire counts for last/ current driving cycles - Total
$A3	$0B	Multiply by 1	Time	EWMA misfire for cylinder 2: Misfire counts for last 10 driving cycles - Total

Monitor ID	Test ID	Scaling	Unit	Description
$A3	$0C	Multiply by 1	Time	Misfire rate for cylinder 2: Misfire counts for last/ current driving cycles - Total
$A4	$0B	Multiply by 1	Time	EWMA misfire for cylinder 3: Misfire counts for last 10 driving cycles - Total
$A4	$0C	Multiply by 1	Time	Misfire rate for cylinder 3: Misfire counts for last/ current driving cycles - Total
$A5	$0B	Multiply by 1	Time	EWMA misfire for cylinder 4: Misfire counts for last 10 driving cycles - Total
$A5	$0C	Multiply by 1	Time	Misfire rate for cylinder 4: Misfire counts for last/ current driving cycles - Total
$A6	$0B	Multiply by 1	Time	EWMA misfire for cylinder 5: Misfire counts for last 10 driving cycles - Total
$A6	$0C	Multiply by 1	Time	Misfire rate for cylinder 5: Misfire counts for last/ current driving cycles - Total
$A7	$0B	Multiply by 1	Time	EWMA misfire for cylinder 6: Misfire counts for last 10 driving cycles - Total
$A7	$0C	Multiply by 1	Time	Misfire rate for cylinder 6: Misfire counts for last/ current driving cycles - Total

ES

READINESS MONITOR DRIVE PATTERN

PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester's software must be version 9.0 or newer to view the Readiness Monitor status. To view the status, select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:
Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.
The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

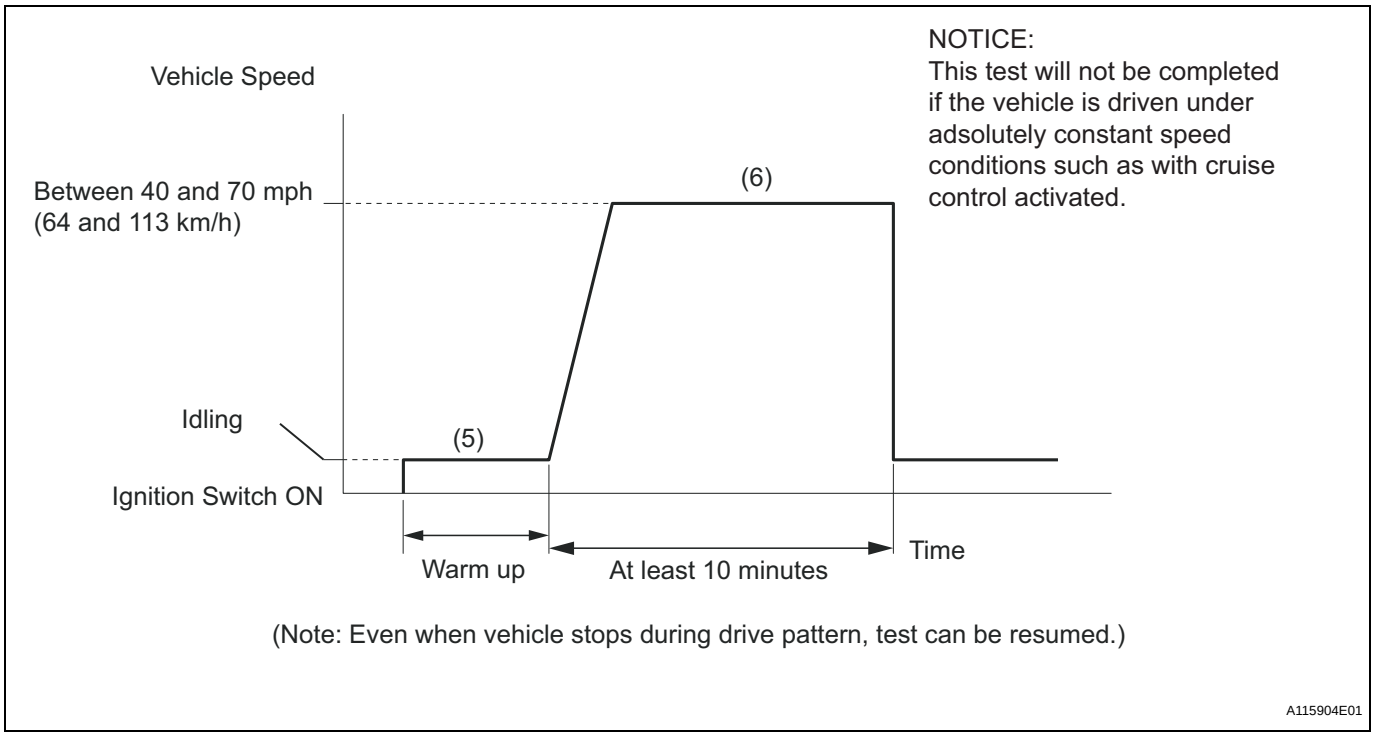
CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.
NOTICE:
These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.
In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.
To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

Contents

Steps	Section Titles
1	Catalyst Monitor (Active Air-Fuel Ratio Control Type)

Steps	Section Titles
2	EVAP System Monitor (Key-Off Type)
3	Air-Fuel Ratio (A/F) and Heated Oxygen (HO2) Sensor Monitors (Active Air-Fuel Ratio Control Type)
4	Air-Fuel Ratio (A/F) and Heated Oxygen (HO2) Sensor Heater Monitors (Front A/F and Rear HO2 Sensor Type)

1. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF

(b) Drive Pattern
(1) Connect an intelligent tester or OBDII scan tool to the DLC3.
(2) Turn the ignition switch ON.
(3) Turn the tester or scan tool ON.
(4) Clear DTCs (where set) (See page ES-38).
(5) Start the engine and warm it up.
(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester or scan tool.
(2) If the status does not switch to COMPL (complete), extend the driving time.

2. EVAP SYSTEM MONITOR (KEY-OFF TYPE)

(a) Preconditions
The monitor will not run unless:
- The fuel tank is less than 90 % full.
- The altitude is less than 8,000 ft (2,450 m).

- The vehicle is at stationary.
- The engine coolant temperature is between 4.4°C and 35°C (40°F to 95°F).
- The intake air temperature is between 4.4°C and 35°C (40°F to 95°F).
- Vehicle was driven in the city area (or on free-way) for 10 minutes or more.

(b) Monitor Conditions

(1) Turn the ignition switch OFF and wait for 6 hours.

HINT:

Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status

(1) Connect an intelligent tester to the DLC3.

(2) Turn the ignition switch ON.

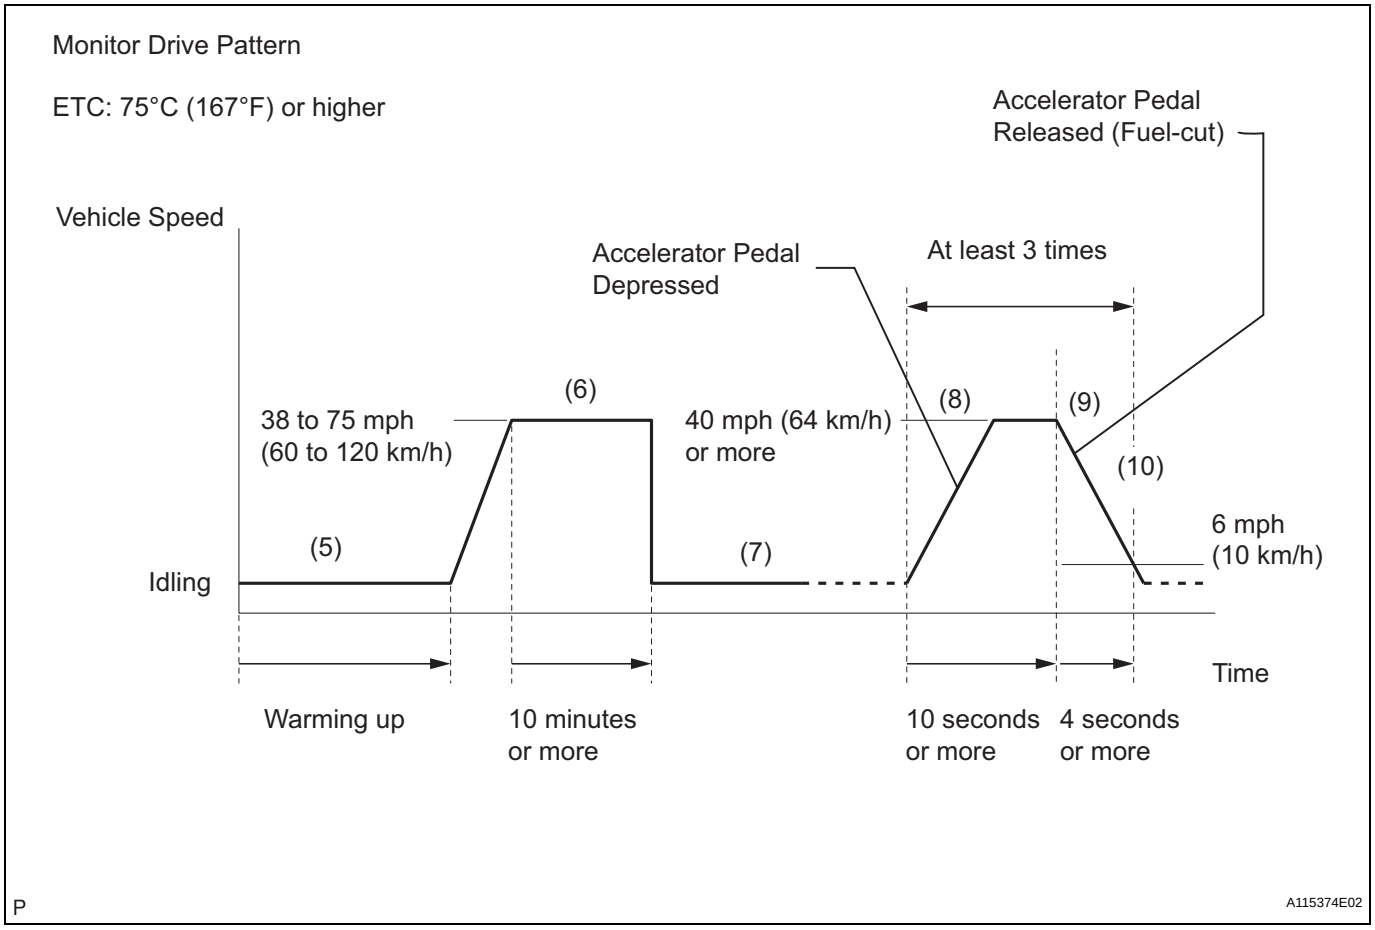
(3) Turn the tester or scan tool ON.

(4) Check the Readiness Monitor status displayed on the tester or scan tool.

If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

3. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

(a) Preconditions



The monitor will not run unless:

- 2 minutes or more have elapsed since the engine was started.
- The Engine Coolant Temperature (ECT) is 75°C (167°F) or more.
- Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
- Air-fuel ratio feedback control is performed.
- Fuel-cut control is performed for 8 seconds or more (for the Rear HO2 Sensor Monitor)

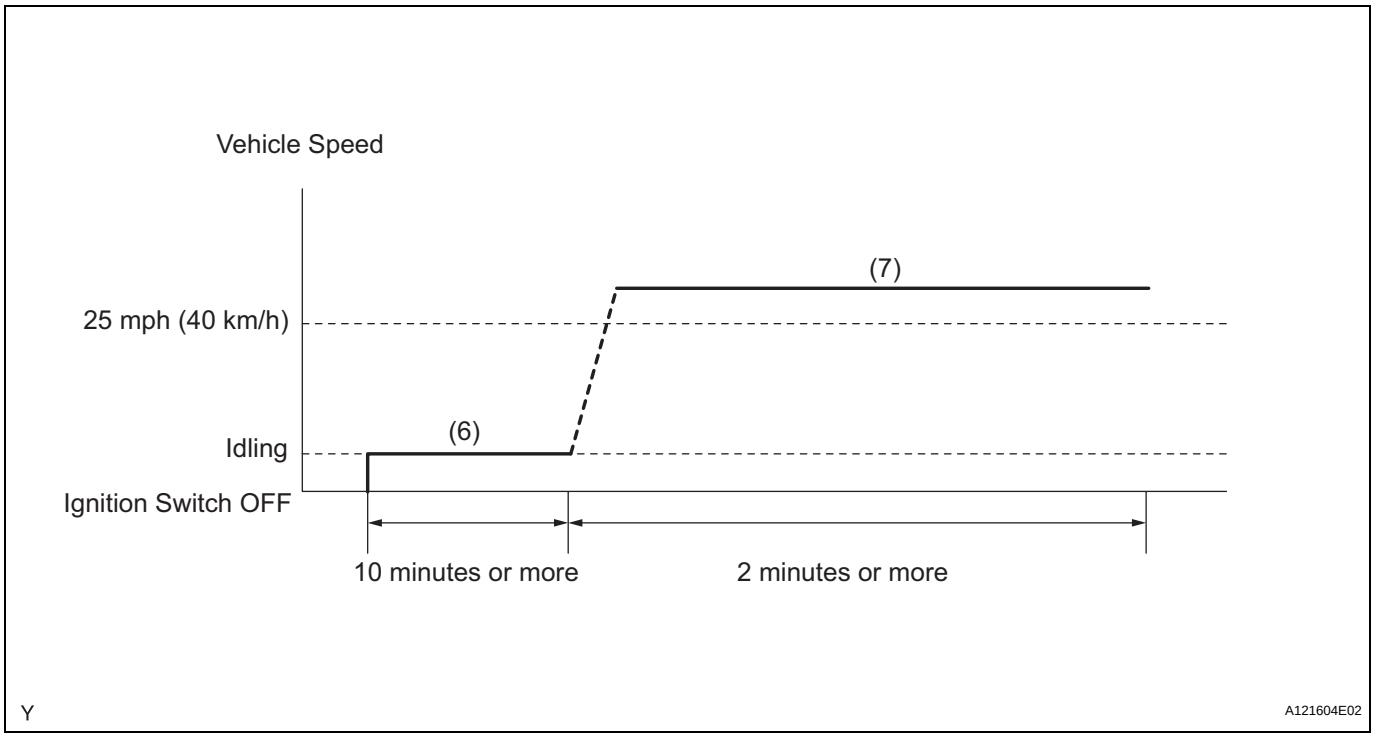
(b) Drive Pattern for front A/F sensor and HO2 sensor

(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch ON.
(3) Turn the tester ON.
(4) Clear DTCs (See page ES-38).
(5) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(6) Drive the vehicle at 38 mph (60 km/h) or more for at least 10 minutes.
(7) Change the transmission to 2nd gear.
(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.

(9) Soon after performing step (8) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and then perform steps from (5) through (11) in Drive Pattern above.

4. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF

(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch ON.
(3) Turn the tester or scan tool ON.
(4) Clear DTCs (See page ES-38).
(5) Start the engine.
(6) Allow the engine to idle for 10 minutes or more.
(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the tester or scan tool.
If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat steps through (5) to (7) described in the Drive Pattern above.

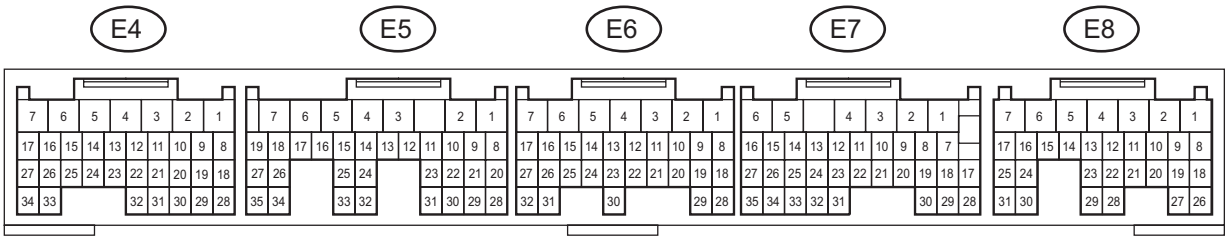
PROBLEM SYMPTOMS TABLE

HINT:
When a malfunction is not confirmed by a DTC (Diagnostic Trouble Code) check and the cause of problem cannot be identified through a basic inspection, troubleshoot according to the priority order indicated in the table below.

Symptom	Suspected area	See page
Engine does not crank (Does not start)	1. Immobilizer System	EI-3
	2. Starter	ST-3
	3. STARTER relay	ST-3
No initial combustion (Does not start)	1. ECM power source circuit	ES-383
	2. Fuel pump control circuit	ES-391
	3. VC output circuit	ES-388
	4. ECM	ES-29
Engine cranks normally but difficult to start	1. Fuel pump control circuit	ES-391
	2. Compression	EM-2
Difficult to start with cold engine	1. Starter signal circuit	ES-263
	2. Fuel pump control circuit	ES-263
	3. Spark plug	IG-3
	4. Ignition system	ES-192
	5. Injector	FU-6
Difficult to start with warm engine	1. Starter signal circuit	ES-263
	2. Fuel pump control circuit	ES-391
	3. Spark plug	IG-3
	4. Ignition system	ES-192
	5. Injector	FU-6
High engine idling speed (Poor idling)	1. A/C signal circuit (compressor circuit)	-
	2. ECM power source circuit	ES-383
	3. Electronic throttle control system	ES-283
	4. Air induction system	-
	5. PCV hose	-
Low engine idling speed (Poor idling)	1. A/C signal circuit (compressor circuit)	-
	2. Fuel pump control circuit	ES-391
	3. Electronic throttle control system	ES-283
	4. Air induction system	-
	5. PCV hose	-
Rough idling (Poor idling)	1. Compression	EM-2
	2. Fuel pump control circuit	ES-391
	3. Electronic throttle control system	ES-283
	4. Air induction system	-
	5. PCV hose	-
Hunting (Poor idling)	1. ECM power source circuit	ES-383
	2. Fuel pump control circuit	ES-391
	3. Spark plug	IG-3
	4. Ignition system	ES-192
	5. Injector	FU-6
	6. Electronic throttle control system	ES-283
	7. Air induction system	-
	8. PCV hose	-

Symptom	Suspected area	See page
Hesitation/ Poor acceleration (Poor driveability)	1. Fuel pump control circuit	ES-391
	2. A/T faulty* (A750E)	-
	3. A/T faulty* (A750F)	AT-8
	4. Spark plug	IG-3
	5. Ignition system	ES-192
	6. Injector	FU-6
Surging (Poor driveability)	1. Fuel pump control circuit	ES-391
	2. Spark plug	IG-3
	3. Ignition system	ES-192
	4. Injector	FU-6
Engine stalls soon after starting	1. Fuel pump control circuit	ES-391
	2. Spark plug	IG-3
	3. Ignition system	ES-192
	4. Injector	FU-6
Engine stalls during A/C operation	1. A/C signal circuit (Compressor circuit)	-
	2. ECM	ES-29
Unable/difficult to refuel	Refueling valve (canister)	-

TERMINALS OF ECM



Y

A121603E02

HINT:
The standard normal voltage between each pair of ECM terminals is shown in the table below. The appropriate conditions for checking each pair of terminals are also indicated.
The result of checks should be compared with the standard normal voltage for that pair of terminals, displayed in the STD Voltages column.
The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
BATT (E8-3) - E1 (E6-1)	L - BR	Battery (for measuring the battery voltage and for the ECM memory)	Always	9 to 14 V
+BM (E8-7) - E1 (E6-1)	LG - BR	Power source of throttle motor	Always	9 to 14 V
IGSW (E8-9) - E1 (E6-1)	O - BR	Ignition switch	Ignition switch ON	9 to 14 V
+B (E8-1) - E1 (E6-1)	B - BR	Power source of ECM	Ignition switch ON	9 to 14 V
+B2 (E8-2) - E1 (E6-1)	B - BR	Power source of ECM	Ignition switch ON	9 to 14 V
OC1+ (E6-17) - OC1- (E6-16)	G-Y - L-B	Camshaft timing oil control valve (OCV)	Ignition switch ON	Pulse generation (see waveform 1)
OC2+ (E6-15) - OC2- (E6-14)	L-W - L-R	Camshaft timing oil control valve (OCV)	Ignition switch ON	Pulse generation (see waveform 1)
MREL (E8-8) - E1 (E6-1)	G-W - BR	EFI relay	Ignition switch ON	9 to 14 V
VC (E4-23) - E2 (E4-28)	L - BR	Power source of sensor (specific voltage)	Ignition switch ON	4.5 to 5.0 V
VG (E4-30) - E2G (E4-29)	R-Y - R-W	Mass air flow meter	Idling, Shift lever position P or N, A/C switch OFF	0.5 to 3.0 V
THA (E4-22) - E2 (E4-28)	R-L - BR	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (E4-21) - E2 (E4-28)	Y-B - BR	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
VTA1 (E4-20) - E2 (E4-28)	G-B - BR	Throttle position sensor (for engine control)	Ignition switch ON, Throttle valve fully closed	0.5 to 1.2 V
VTA1 (E4-20) - E2 (E4-28)	G-B - BR	Throttle position sensor (for engine control)	Ignition switch ON, Throttle valve fully open	3.2 to 4.8 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
VTA2 (E4-19) - E2 (E4-28)	G-W - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	2.1 to 3.1 V
VTA2 (E4-19) - E2 (E4-28)	G-W - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	4.5 to 5.0 V
VPA (E8-18) - EPA (E8-20)	R-Y - LG-B	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully released	0.5 to 1.1 V
VPA (E8-18) - EPA (E8-20)	R-Y - LG-B	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully depressed	2.6 to 4.5 V
VPA2 (E8-19) - EPA2 (E8-21)	GR-B - R-B	Accelerator pedal position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	1.2 to 2.0 V
VPA2 (E8-19) - EPA2 (E8-21)	GR-B - R-B	Accelerator pedal position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	3.4 to 5.0 V
VCPA (E8-26) - EPA (E8-20)	R - LG-B	Power source of accelerator pedal position sensor (for VPA)	Ignition switch ON	4.5 to 5.0 V
VCP2 (E8-27) - EPA2 (E8-21)	L-W - R-B	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch ON	4.5 to 5.0 V
HA1A (E5-2) - E04 (E5-7) HA2A (E5-1) - E05 (E5-6)	R - W-B B-W - W-B	A/F sensor heater	Idling	Below 3.0 V
HA1A (E5-2) - E04 (E5-7) HA2A (E5-1) - E05 (E5-6)	R - W-B B-W - W-B	A/F sensor heater	Ignition switch ON	9 to 14 V
A1A+ (E5-22) - E1 (E6-1)	P - BR	A/F sensor	Ignition switch ON	3.3 V*1
A2A+ (E5-23) - E1 (E6-1)	W - BR	A/F sensor	Ignition switch ON	3.3 V*1
A1A- (E5-30) - E1 (E6-1)	L - BR	A/F sensor	Ignition switch ON	2.9 V*1
A2A- (E5-31) - E1 (E6-1)	R - BR	A/F sensor	Ignition switch ON	2.9 V*1
HT1B (E4-1) - E1 (E6-1) HT2B (E5-5) - E1 (E6-1)	G - BR L - BR	Heated oxygen sensor heater	Idling	Below 3.0 V
HT1B (E4-1) - E1 (E6-1) HT2B (E5-5) - E1 (E6-1)	G - BR L - BR	Heated oxygen sensor heater	Ignition switch ON	9 to 14 V
OX1B (E4-18) - E2 (E4-28) OX2B (E5-33) - E2 (E4-28)	W - BR B - BR	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (see waveform 2)
#10 (E6-2) - E01 (E4-7) #20 (E6-3) - E01 (E4-7) #30 (E6-4) - E01 (E4-7) #40 (E6-5) - E01 (E4-7) #50 (E6-6) - E01 (E4-7) #60 (E6-7) - E01 (E4-7)	R-L - W-B B - W-B R - W-B G - W-B Y - W-B L - W-B	Injector	Ignition switch ON	9 to 14 V
#10 (E6-2) - E01 (E4-7) #20 (E6-3) - E01 (E4-7) #30 (E6-4) - E01 (E4-7) #40 (E6-5) - E01 (E4-7) #50 (E6-6) - E01 (E4-7) #60 (E6-7) - E01 (E4-7)	R-L - W-B B - W-B R - W-B G - W-B Y - W-B L - W-B	Injector	Idling	Pulse generation (see waveform 3)

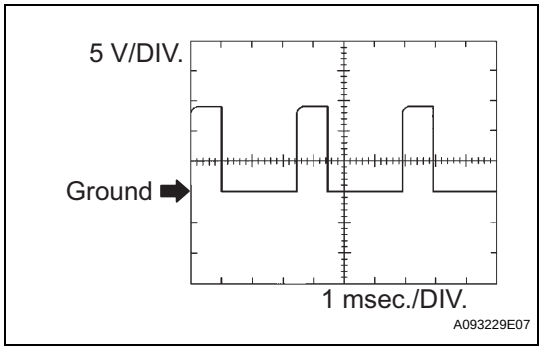
IGF1 (E4-24) - E1 (E6-1)	W-R - BR	Ignition coil with igniter (ignition confirmation signal)	Idling	Pulse generation (see waveform 6)
PRG (E4-34) - E1 (E6-1)	Y - BR	Purge VSV	Ignition switch ON	9 to 14 V
PRG (E4-34) - E1 (E6-1)	Y - BR	Purge VSV	Idling	Pulse generation (see waveform 7)
SPD (E7-8) - E1 (E6-1)	V-W - BR	Speed signal from combination meter	Ignition switch ON, Rotate driving wheel slowly	Pulse generation (see waveform 8)
STA (E6-11) - E1 (E6-1)	B-Y - BR	Starter signal	Cranking	9 to 14 V
STP (E8-15) - E1 (E6-1)	L - BR	Stop light switch	Brake pedal depressed	7.5 to 14 V
STP (E8-15) - E1 (E6-1)	L - BR	Stop light switch	Brake pedal released	Below 1.5 V
ST1- (E8-16) - E1 (E6-1)	V-W - BR	Stop light switch (opposite to STP terminal)	Ignition switch ON, Brake pedal depressed	Below 1.5 V
ST1- (E8-16) - E1 (E6-1)	V-W - BR	Stop light switch (opposite to STP terminal)	Ignition switch ON, Brake pedal released	7.5 to 14 V
NSW (E5-8) - E1 (E6-1)	V - BR	Park/Neutral position switch	Ignition switch ON, Shift lever position in P or N	Below 3.0 V
NSW (E5-8) - E1 (E6-1)	V - BR	Park/Neutral position switch	Ignition switch ON, Shift lever position other than P and N	9 to 14 V
M+ (E4-5) - ME01 (E5-3)	P - W-B	Throttle motor	Idling with warm engine	Pulse generation (see waveform 9)
M- (E4-4) - ME01 (E5-3)	L - W-B	Throttle motor	Idling with warm engine	Pulse generation (see waveform 10)
FC (E8-10) - E1 (E6-1)	L-B - BR	Fuel pump control	Ignition switch ON	9 to 14 V
FPR (E6-30) - E1 (E6-1)	Y-R - BR	Fuel pump control	Ignition switch ON	9 to 14 V
W (E7-30) - E1 (E6-1)	BR - BR	MIL	Ignition switch ON	Below 3.0 V
W (E7-30) - E1 (E6-1)	BR - BR	MIL	Idling	9 to 14 V
ELS (E7-13) - E1 (E6-1)	G - BR	Electric load	Defogger switch OFF	0 to 1.5 V
ELS (E7-13) - E1 (E6-1)	G - BR	Electric load	Defogger switch ON	7.5 to 14 V
ELS2 (E7-12) - E1 (E6-1)	B-W - BR	Electric load	Taillight switch OFF	0 to 1.5 V
ELS2 (E7-12) - E1 (E6-1)	B-W - BR	Electric load	Taillight switch ON	7.5 to 14 V
TC (E8-23) - E1 (E6-1)	P-B - BR	Terminal TC of DLC 3	Ignition switch ON	9 to 14 V
TACH (E7-1) - E1 (E6-1)	B-W - BR	Engine speed	Idling	Pulse generation (see waveform 11)
ACIS (E4-33) - E1 (E6-1)	W-L - BR	VSV for ACIS	Ignition switch ON	9 to 14 V
PSW (E6-10) - E1 (E6-1)	G-W - BR	P/S pressure switch	Ignition switch ON	9 to 14 V
VPMP (E8-5) - E1 (E6-1)	V-W - BR	Vent valve (built into canister pump module)	Ignition switch ON	9 to 14 V
MPMP (E8-6) - E1 (E6-1)	G - BR	Leak detection pump (built into canister pump module)	Leak detection pump OFF	0 to 3 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
MPMP (E8-6) - E1 (E6-1)	G - BR	Leak detection pump (built into canister pump module)	Leak detection pump ON	9 to 14 V
PPMP (E8-22) - E2 (E4-28)	GR - BR	Canister pressure sensor (built into canister pump module)	Ignition switch ON	3 to 3.6 V
F/PS (E7-32) - E1 (E6-1)	R - BR	Airbag sensor assembly	Idling with warm engine	Pulse generation (see waveform 12)
CANH (E7-33) - E1 (E6-1)	B - BR	CAN communication line	Ignition switch ON	Pulse generation (see waveform 13)
CANL (E7-34) - E1 (E6-1)	W - BR	CAN communication line	Ignition switch ON	Pulse generation (see waveform 14)

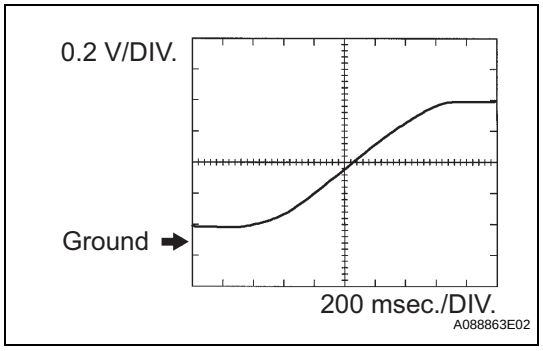
*1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.



1. WAVEFORM 1
Camshaft timing oil control valve (OCV)

ECM Terminal Names	Between OC1+ and OC1- or OC2+ and OC2-
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling

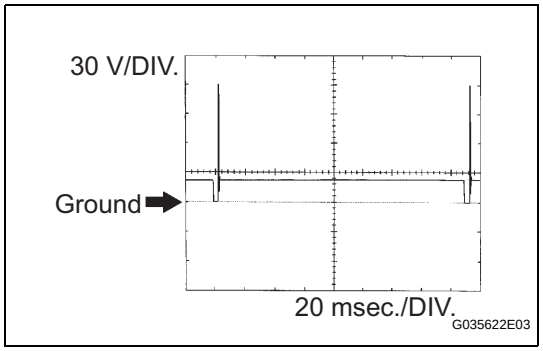
HINT:
The wavelength becomes shorter as the engine rpm increases.



2. WAVEFORM 2
Heated oxygen sensor

ECM Terminal Names	Between OX1B and E2 or OX2B and E2
Tester Ranges	0.2 V/DIV, 200 msec./DIV
Conditions	Engine speed maintained at 2,500 rpm for 2 minutes after warming up sensor

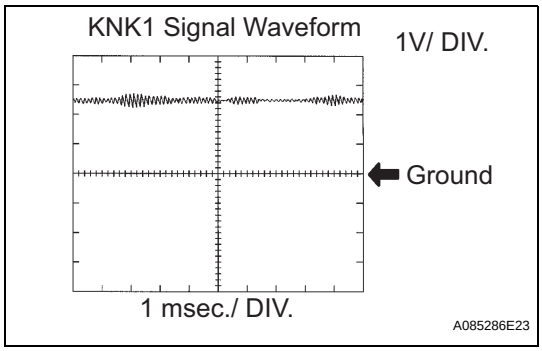
HINT:
In the DATA LIST, item O2S B1S2 or O2S B2S2 shows the ECM input values from the heated oxygen sensor.



3. WAVEFORM 3
Fuel injector

ECM Terminal Names	Between #10 (to 60) and E01
Tester Ranges	30 V/DIV, 20 msec./DIV
Conditions	Idling

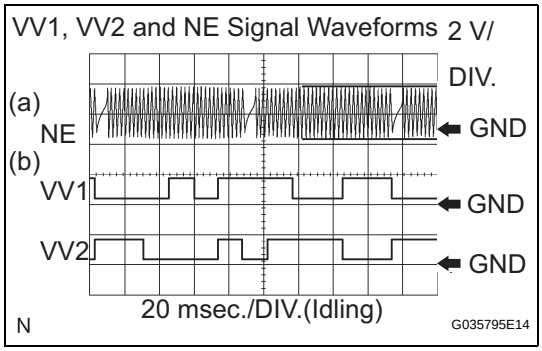
HINT:
The wavelength becomes shorter as the engine rpm increases.



4. WAVEFORM 4
Knock sensor

ECM Terminal Names	Between KNK1 and EKNK or KNK2 and EKN2
Tester Ranges	0.01 to 10 V/DIV, 0.01 to 10 msec./DIV
Conditions	Engine speed maintained at 4,000 rpm after warming up engine

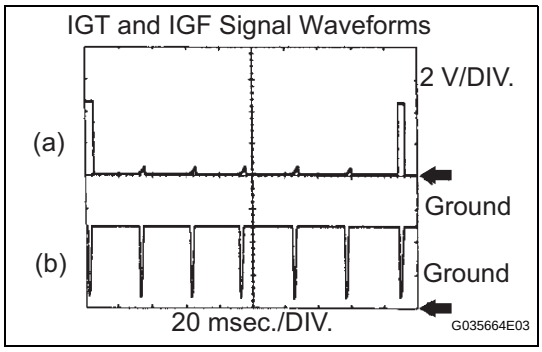
HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed on the tester differ slightly depending on the vehicle.



5. WAVEFORM 5
(a) VVT sensor
(b) Crankshaft position sensor

ECM Terminal Names	(a) Between NE+ and NE- (b) Between VV1+ and VV1- or VV2+ and VV2-
Tester Ranges	2 V/DIV, 20 msec./DIV
Conditions	Idling

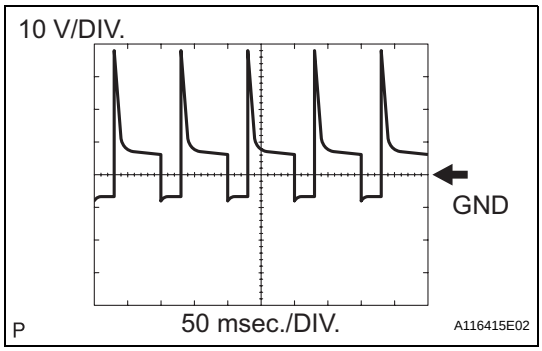
HINT:
The wavelength becomes shorter as the engine rpm increases.



6. WAVEFORM 6
(a) Igniter IGT signal (from ECM to igniter)
(b) Igniter IGF signal (from igniter to ECM)

ECM Terminal Names	(a) Between IGT (1 to 6) and E1 (b) Between IGF1 and E1
Tester Ranges 2	2 V/DIV, 20 msec./DIV
Conditions	Idling

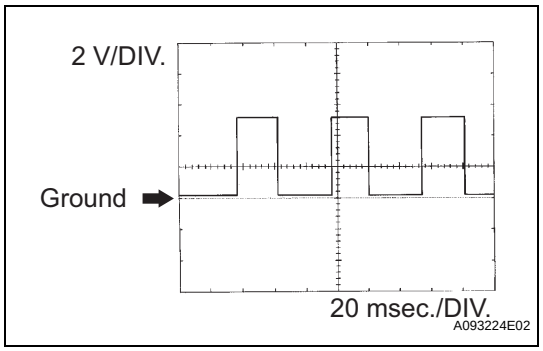
HINT:
The wavelength becomes shorter as the engine rpm increases.



7. WAVEFORM 7
Purge VSV

ECM Terminal Names	Between PRG and E01
Tester Ranges	10 V/DIV, 50 msec./DIV
Conditions	Idling

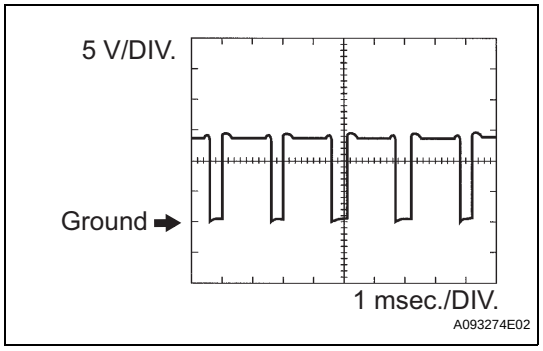
HINT:
If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.



8. WAVEFORM 8
Vehicle speed signal

ECM Terminal Names	Between SPD and E1
Tester Ranges	2 V/DIV, 20 msec./DIV
Conditions	Driving at 12 mph (20 km/h)

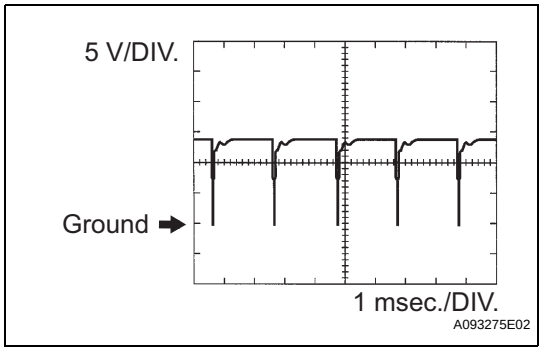
HINT:
The wavelength becomes shorter as the vehicle speed increases.



9. WAVEFORM 9
Throttle actuator positive terminal

ECM Terminal Names	Between M+ and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

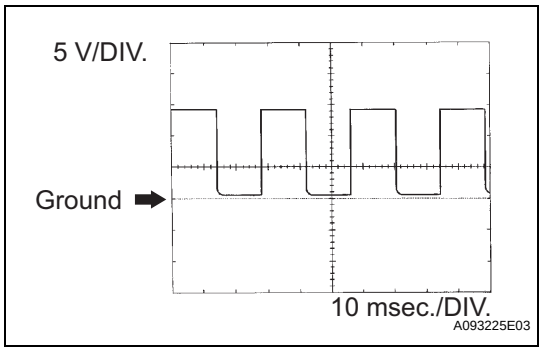
HINT:
The duty ratio varies depending on the throttle actuator operation.



10. WAVEFORM 10
Throttle actuator negative terminal

ECM Terminal Names	Between M- and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

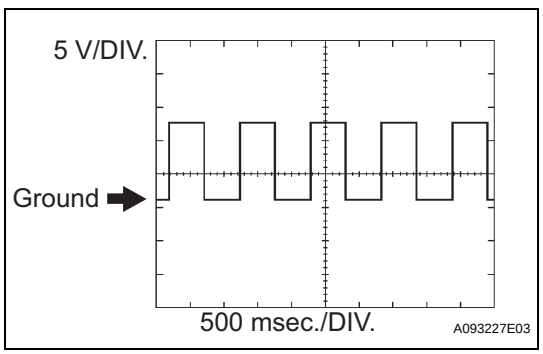
HINT:
The duty ratio varies depending on the throttle actuator operation.



11. WAVEFORM 11
Engine speed signal

ECM Terminal Names	Between TACH and E1
Tester Ranges	5 V/DIV, 10 msec./DIV
Conditions	Idling

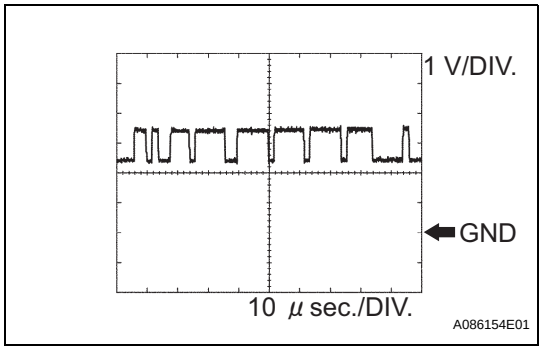
HINT:
The wavelength becomes shorter as the engine rpm increases.



12. WAVEFORM 12
Airbag sensor assembly

ECM Terminal Names	Between F/PS and E1
Tester Ranges	5 V/DIV, 500 msec./DIV
Conditions	Idling with warm engine

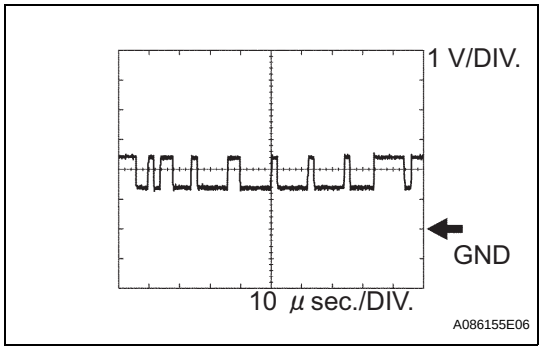
ES



13. WAVEFORM 13
CAN communication signal

ECM Terminal Names	Between CANH and E1
Tester Ranges	1 V/DIV, 10μsec./DIV
Conditions	Stop engine and ignition switch ON

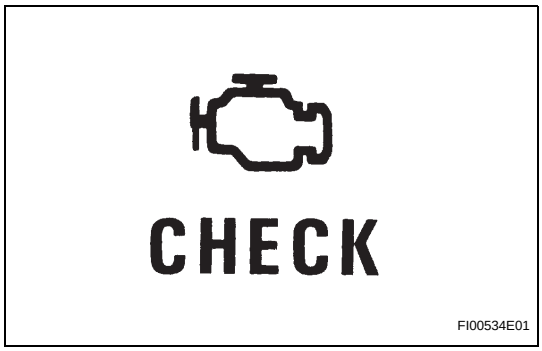
HINT:
The wavelength varies depending on the CAN communication signal.



14. WAVEFORM 14
CAN communication signal

ECM Terminal Names	Between CANL and E1
Tester Ranges	1 V/DIV, 10μsec./DIV
Conditions	Stop engine and ignition switch ON

HINT:
The wavelength varies depending on the CAN communication signal.

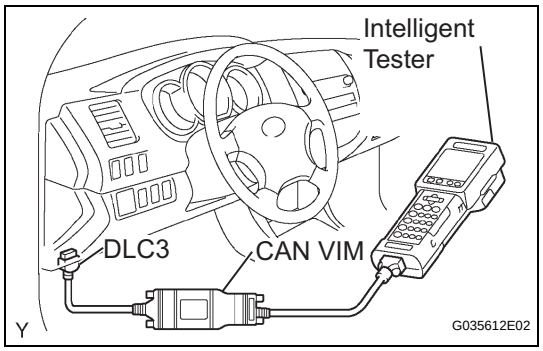


DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, an intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.
OBD II regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control systems and components
(b) The power train control components (which affect vehicle emissions)



(c) The computer itself
In addition, the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.
To check DTCs, connect an intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of engine data. The DTCs and freeze frame data can be erased with the tester (See page ES-38).
In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication is introduced in this system (CAN: Controller Area Network). It minimizes a gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows a high speed communication between the systems and to simplify the wire harness connection.
Since this system is equipped with the CAN communication, connecting the CAN VIM (VIM: Vehicle Interface Module) with an intelligent tester is necessary to display any information from the ECM. (Also the communication between an intelligent tester and the ECM uses CAN communication signals.) When confirming the DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and an intelligent tester.

2. NORMAL MODE AND CHECK MODE

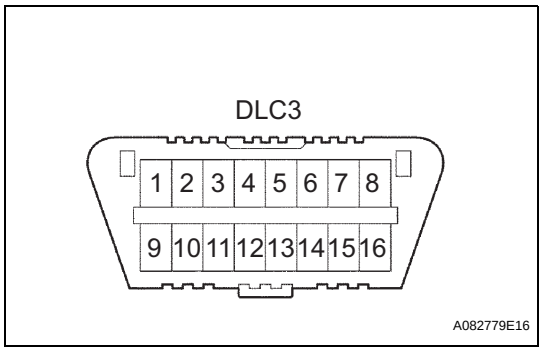
The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only) (See page ES-12).

3. 2 TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

Freeze frame data record the engine condition (fuel system, calculated engine load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc) when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.



5. DLC3 (Data Link Connector 3)

The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols	Terminal No.	Names	Reference terminals	Results	Conditions
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always
CANH	6	CAN "High" line	CANL	54 to 69 Ω	Ignition switch OFF
CANH	6	CAN "High" line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANH	6	CAN "High" line	CG	1 kΩ or higher	Ignition switch OFF
CANL	14	CAN "Low" line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANL	14	CAN "Low" line	CG	1 kΩ or higher	Ignition switch OFF

HINT:
The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of an intelligent tester, turn the ignition switch ON and turn the tester ON. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.
If communication is normal: Inspect the DLC3 on the original vehicle.
If communication is impossible: The problem is probably with the tester itself. Consult the Service Department listed in the instruction manual.

6. BATTERY VOLTAGE

Battery Voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.

7. MIL (Malfunction Indicator Lamp)

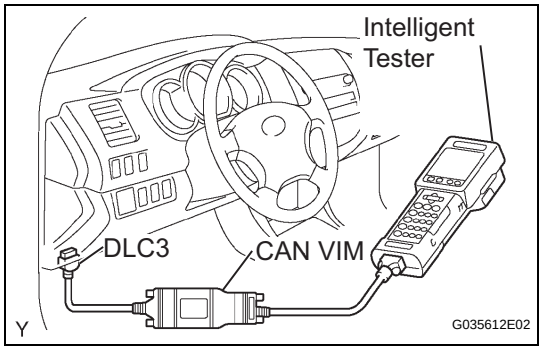
(a) The MIL is illuminated when the ignition switch is first turned ON (the engine is not running).

(b) The MIL should turn off when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.
HINT:
If the MIL is not illuminated when the ignition switch is first turned ON, check the MIL circuit (See page ES-402).

DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of DTCs and freeze frame data.
HINT:

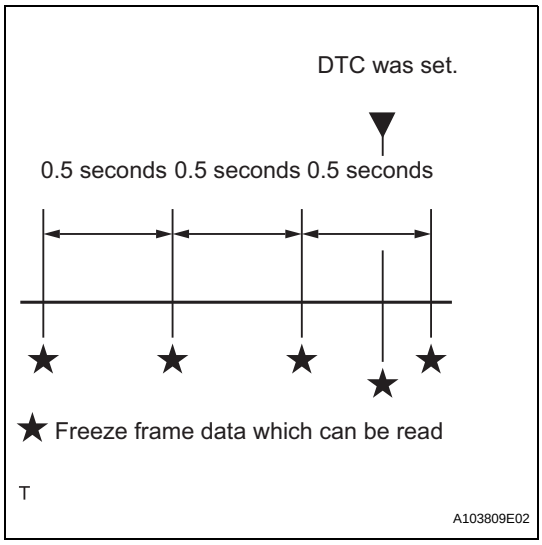
- DTCs which are stored in the ECM can be displayed on an intelligent tester. An intelligent tester can display current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.



1. CHECK DTC (Using an intelligent tester)
(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) Check the details of the DTC(s) (See page ES-54).

2. CLEAR DTC (Using an intelligent tester)
(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(e) Press the YES button.

3. CLEAR DTC (Without using an intelligent tester)
(a) Perform either one of the following operations.
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the EFI and ETCS fuses from the Relay Block (R/B) located inside the engine compartment for more than 1 minute.



ES

FREEZE FRAME DATA

1. DESCRIPTION

Freeze frame data record the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it can help determine if the vehicle was running or stopped, the engine was warmed up or not, the air-fuel ratio was LEAN or RICH, and other data, from the time the malfunction occurred.

HINT:

If it is impossible to replicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using an intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 data sets before the DTC was set
- 1 data set when the DTC was set
- 1 data set after the DTC was set

These data sets can be used to simulate the conditions of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.

2. LIST OF FREEZE FRAME DATA

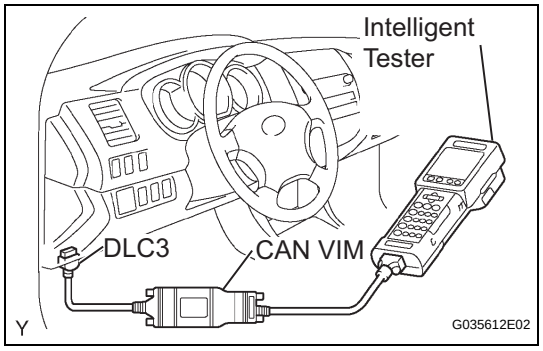
LABEL (Intelligent Tester Display)	Measure Item/Range	Diagnostic Note
INJECTOR	Injector	-
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculate load	Calculated load by ECM
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If value approximately 0.0 g/sec: • Mass air flow meter power source circuit open or short • VG circuit open or short If value 160.0 g/sec or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If value -40°C, sensor circuit open If value 140°C or more, sensor circuit shorted
INTAKE AIR	Intake air temperature	If value -40°C, sensor circuit open If value 140°C or more, sensor circuit shorted
AIR-FUEL RATIO	Air-fuel ratio	-
PURGE DENSITY	Learning value of purge density	-
PURGE FLOW	Purge flow	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
EVAP VAPOR PRES	EVAP vapor pressure	-
KNOCK CRRT VAL	Correction learning value of knocking	-
KNOCK FB VAL	Feedback value of knocking	-
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1	-

LABEL (Intelligent Tester Display)	Measure Item/Range	Diagnostic Note
ACCEL POS #2	Absolute APP No. 2	-
THROTTLE POS	Throttle position	Read value with ignition switch ON (Do not start engine)
THROTTLE POS	Throttle sensor positioning	Read value with ignition switch ON (Do not start engine)
THROTTLE POS #2	Throttle sensor positioning #2	-
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
O2S B2 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
AFS B2 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
TOTAL FT #1	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate a continual deviation of short-term fuel trim from central valve
FUEL SYS #1	Fuel system status (Bank1)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control, malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	Same as SHORT FT #1
O2FT B2 S2	Fuel trim at heated oxygen sensor	Same as SHORT FT #1
AF FT B1 S1	Fuel trim at A/F sensor	-
AF FT B2 S1	Fuel trim at A/F sensor	-
CAT TEMP B1 S1	Catalyst temperature	-
CAT TEMP B2 S1	Catalyst temperature	-
CAT TEMP B1 S2	Catalyst temperature	-
CAT TEMP B2 S2	Catalyst temperature	-
INI COOL TEMP	Initial engine coolant temperature	-
INI INTAKE TEMP	Initial intake air temperature	-
INJ VOL	Injection volume	-
STARTER SIG	Starter signal	-
PS SW	Power steering signal	-
PS SIGNAL	Power steering signal (history)	This signal status usually ON until battery terminals disconnected
CTP SW	Closed throttle position switch	-
A/C SIG	A/C signal	-
ELECT LOAD SIG	Electrical load signal	-
STOP LIGHT SW	Stop light switch	-

LABEL (Intelligent Tester Display)	Measure Item/Range	Diagnostic Note
BATTERY VOLTAGE	Battery voltage	-
ATM PRESSURE	Atmospheric pressure	-
ACT VSV	A/C cut status for Active Test	-
EVAP VSV	EVAP purge VSV	VSV for EVAP controlled by ECM (ground side duty control)
FUEL PUMP / SPD	Fuel pump speed status	-
VVT CTRL B1	VVT control status	-
VACUUM PUMP	Key-off EVAP system pump status	-
EVAP VENT VAL	Key-off EVAP system vent valve status	-
TC/TE1	TC and TE1 terminals of DLC3	-
VVTL AIM ANGL #1	VVT aim angle	-
VVT CHNG ANGL #1	VVT change angle	-
VVT OCV DUTY B1	VVT OCV operation duty	-
FC IDL	Idle fuel cut	ON: when throttle valve fully closed and engine speed over 2,800 rpm
FC TAU	FC TAU	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
IGNITION	Ignition	-
CYL #1	Cylinder #1 misfire rate	Displayed in only idling
CYL #2	Cylinder #2 misfire rate	Displayed in only idling
CYL #3	Cylinder #3 misfire rate	Displayed in only idling
CYL #4	Cylinder #4 misfire rate	Displayed in only idling
CYL #5	Cylinder #5 misfire rate	Displayed in only idling
CYL #6	Cylinder #6 misfire rate	Displayed in only idling
CYL ALL	All cylinder misfire rate	Displayed in only idling
MISFIRE RPM	Misfire RPM	-
MISFIRE LOAD	Misfire load	-
MISFIRE MARGIN	Margin to detect engine misfire	-
ENG RUN TIME	Accumulated engine running time	-
TIME DTC CLEAR	Cumulative time after DTC cleared	-
DIST DTC CLEAR	Accumulated distance from DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-
MODEL CODE	Identifying the model code	GRN2###
FAN MOTOR	Electric fan motor	-
VAPOR PRESS	Vapor pressure	EVAP system pressure as read by canister pressure sensor
ENG OIL PRES SW	Engine oil pressure switch signal	Always ON while engine is running
ENGINE TYPE	Identifying the engine type	1GR
CYLINDER NUMBER	Identifying the cylinder number	6
DESTINATION	Identifying the destination	A (America)
MODEL YEAR	Identifying the model year	200#
SYSTEM	Identifying the engine system	GASLIN (gasoline engine)

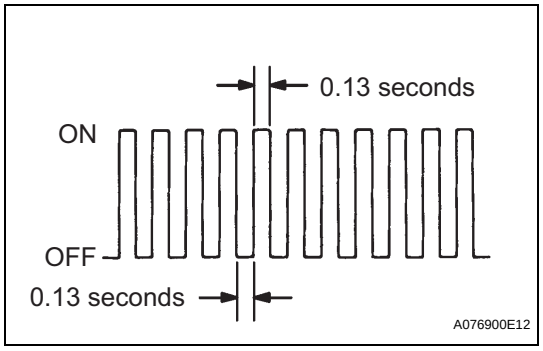
CHECK MODE PROCEDURE

HINT:
Intelligent tester only:
Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected by normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or OFF while in check mode.
Before changing modes, always check and make a note of any DTCs and freeze frame data.



1. CHECK MODE PROCEDURE (Using an intelligent tester)

(a) Check and ensure the following conditions:
  (1) Battery voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transmission in the P or N positions
  (4) A/C switched OFF
(b) Turn the ignition switch OFF.
(c) Connect an intelligent tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.
(g) Switch the ECM from normal mode to check mode.



(h) Make sure the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure the MIL turns off.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check DTCs and freeze frame data using the tester.

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily.

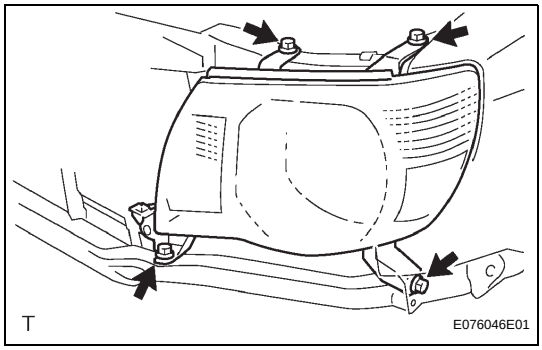
DTCs	Components	Fail-Safe Operations	Fail-Safe Deactivation Conditions
P0031, P0032, P0051 and P0052	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater.	Ignition switch OFF
P0037, P0038, P0057 and P0058	Heated Oxygen (HO2) Sensor Heater	ECM turns off HO2 sensor heater.	Ignition switch OFF
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position.	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F).	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F).	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and throttle valve returned to 6° throttle position by return spring. ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle, to allow vehicle to continue at minimal speed.*	Pass condition detected and then ignition switch turned OFF
P0327, P0328, P0332 and P0333	Knock Sensor	ECM sets ignition timing to maximum retard.	Ignition switch OFF
P0351 to P0356	Igniter	ECM cuts fuel.	Pass condition detected
P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138	Accelerator Pedal Position (APP) Sensor	APP sensor has 2 sensor circuits: Main and Sub. If either of circuits malfunctions, ECM controls engine using other circuit. If both of circuits malfunction, ECM regards accelerator pedal as being released. As a result, throttle valve is closed and engine idles.	Pass condition detected and then ignition switch turned OFF

NOTICE:

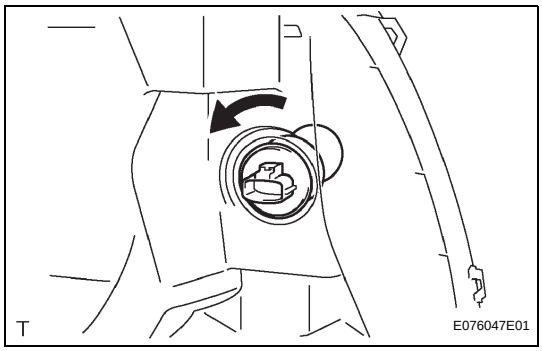
*** The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.**

REMOVAL

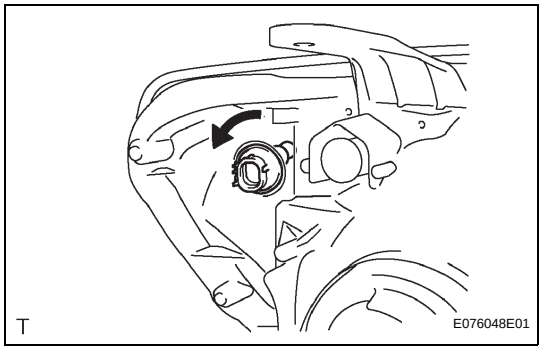
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE RADIATOR GRILLE (See page ET-4)**
3. **REMOVE FRONT BUMPER COVER (See page ET-4)**
4. **REMOVE FRONT BUMPER FILLER (See page ET-6)**
5. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the bolt and 3 screws.
   (b) Disconnect the 3 connectors, then remove the LH headlight assembly.



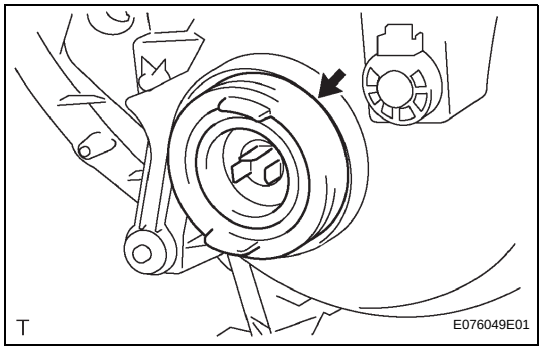
6. **REMOVE FRONT TURN SIGNAL LIGHT BULB**
   (a) To remove the front turn signal light socket and bulb, turn them in the direction indicated by the arrow in the illustration.
   (b) Remove the front turn signal light bulb from the light socket.

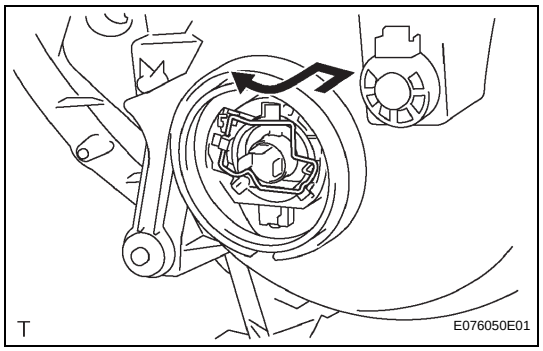


7. **REMOVE CLEARANCE LIGHT BULB**
   (a) To remove the clearance light bulb socket and bulb, turn them in the direction indicated by the arrow in the illustration.
   (b) Remove the clearance light bulb from the light socket.

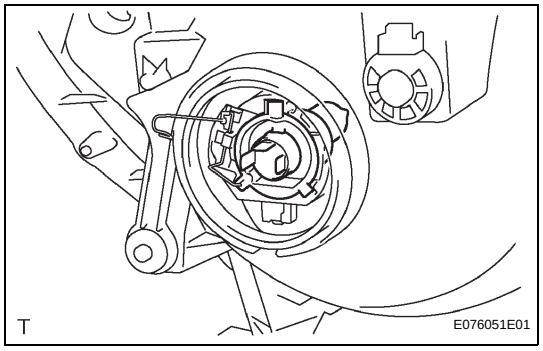


8. **REMOVE NO. 1 HEADLIGHT, BULB**
   (a) Remove the socket cover.



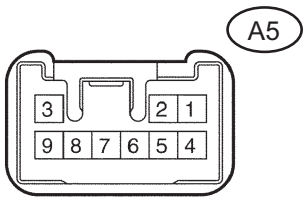


(b) Push the set spring in the direction indicated by the arrow in the illustration.



(c) Remove the No. 1 headlight bulb.
NOTICE:
Do not touch the bulb glass with your fingers.

Connector Front Side:



P E064833E01

ON-VEHICLE INSPECTION

1. INSPECT TOWING CONVERTER RELAY

(a) Measure the voltage and check the result in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1 - Body ground	Constant	Battery positive voltage
2 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
2 - Body ground	Depress brake pedal	Battery positive voltage
3 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
4 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
4 - Body ground	Depress brake pedal	Battery positive voltage
6 - Body ground	Constant	Below 1 Ω
8 - Body ground	Depress brake pedal	Battery positive voltage
9 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)

REMOVAL

1. BOLT, SCREW AND NUT TABLE

mm (in.) (L = Length)

Code	Shape	Code	Shape	Code	Shape
<A>	 φ = 6 (0.24) L = 16 (0.63) 90080-11157	<B>	 φ = 6 (0.24) L = 20 (0.79) 90080-11353	<C>	 φ = 6 (0.24) L = 16 (0.63) 90105-A0007
<D>	 φ = 5 (0.20) L = 14 (0.55) 90080-16100	<E>	 φ = 5 (0.20) L = 18 (0.71) 90159-A0034	<F>	 φ = 5 (0.20) L = 20 (0.79) 90159-50192
<G>	 φ = 6 (0.24) 90178-A0023				

P

B085808E01

HINT:
All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabetic codes in the table below.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

3. REMOVE FRONT FLOOR FOOTREST (See page IR-1)

4. REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)

5. REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)

6. REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab)

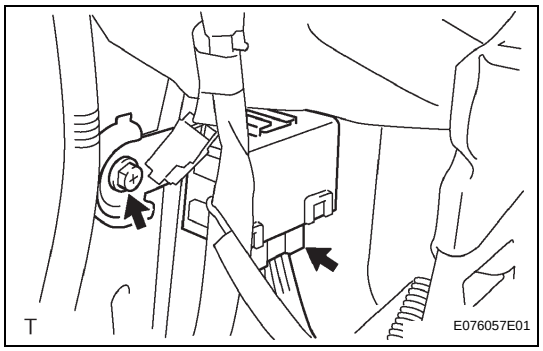
7. REMOVE FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-40)

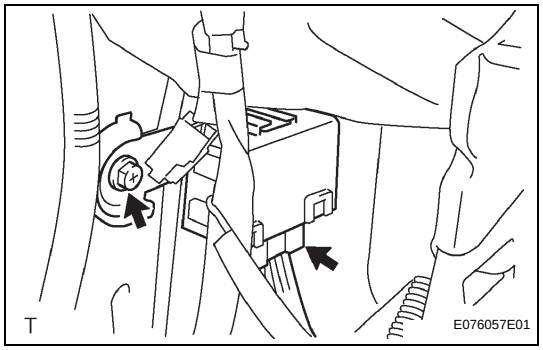
8. REMOVE FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-61)

9. REMOVE FRONT DOOR SCUFF PLATE RH (for Double Cab)

10. REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)
11. REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)
12. REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)
13. REMOVE COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-40)
14. REMOVE COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-61)
15. REMOVE COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-12)
16. SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-8)
17. SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-8)
18. REMOVE FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-41)
19. REMOVE FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-62)
20. REMOVE FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-13)
21. REMOVE FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-41)
22. REMOVE FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-63)
23. REMOVE FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-14)
24. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)
25. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)
26. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)
27. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)
28. REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)
29. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)

30. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-10)**
31. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-11)**
32. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-11)**
33. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-11)**
34. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)**
35. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)**
36. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
37. **REMOVE LOWER NO. 1 INSTRUMENT PANEL FINFISH PANEL (See page IP-12)**
38. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**
39. **REMOVE COMBINATION METER ASSEMBLY (See page IP-13)**
40. **REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)**
41. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
42. **REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-14)**
43. **REMOVE LOWER INSTRUMENT PANEL LH (See page IP-14)**
44. **REMOVE LOWER INSTRUMENT COVER SUB-ASSEMBLY (See page IP-14)**
45. **REMOVE INSTRUMENT SIDE PANEL RH (See page IP-14)**
46. **DISCONNECT PASSENGER AIRBAG CONNECTOR (See page RS-576)**
47. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY W/ PASSENGER AIRBAG ASSEMBLY (See page IP-14)**





48. **REMOVE TOWING CONVERTER RELAY**
    (a) Disconnect the connector.
    (b) Remove the bolt and towing converter relay.

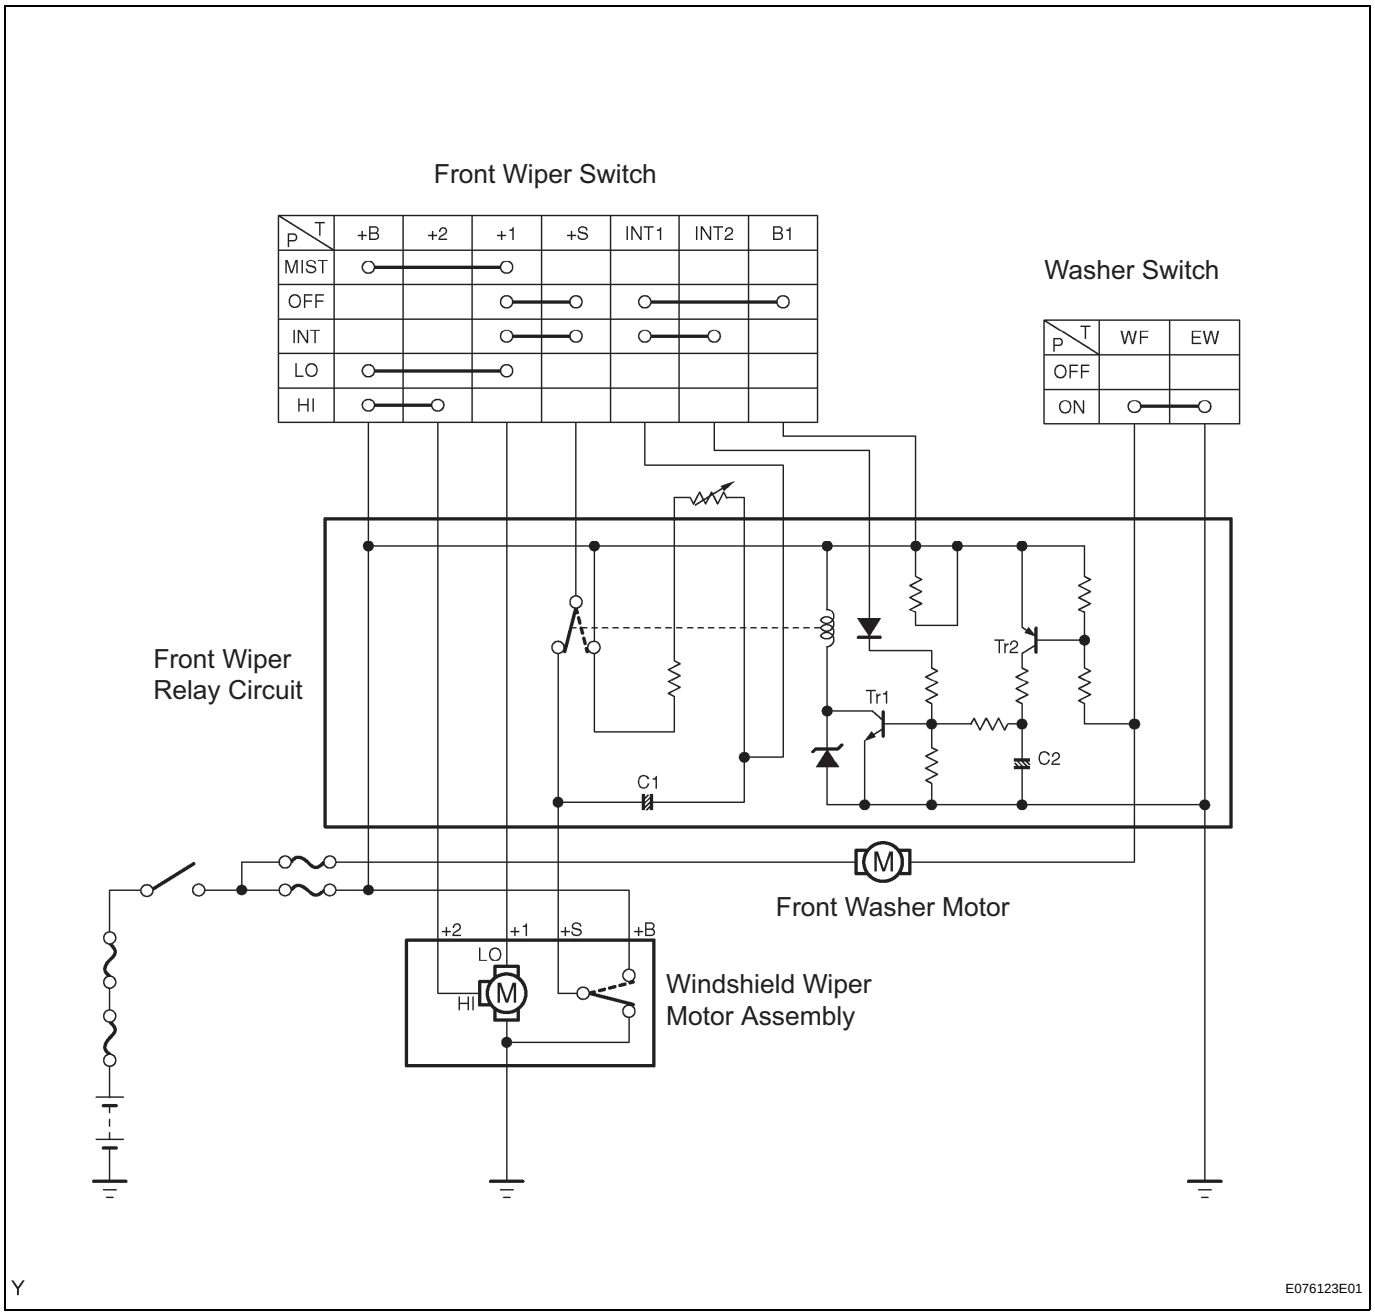
INSTALLATION

1. **INSTALL TOWING CONVERTER RELAY**
    (a) Install the towing converter relay with the bolt.
    Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
    (b) Connect the connector.
2. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY W/ PASSENGER AIRBAG ASSEMBLY (See page IP-18)**
3. **CONNECT PASSENGER AIRBAG CONNECTOR**
4. **INSTALL INSTRUMENT SIDE PANEL RH (See page IP-20)**
5. **INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)**
6. **INSTALL LOWER INSTRUMENT PANEL LH (See page IP-20)**
7. **INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-20)**
8. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
9. **INSTALL INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
10. **INSTALL COMBINATION METER ASSEMBLY (See page IP-21)**
11. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
12. **INSTALL LOWER NO.1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)**
13. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
14. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)**
15. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)**
16. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)**
17. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)**

18. INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)
19. INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)
20. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)
21. INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)
22. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)
23. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)
24. INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)
25. INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)
26. INSTALL FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-51)
27. INSTALL FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-74)
28. INSTALL FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-28)
29. INSTALL FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-52)
30. INSTALL FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-74)
31. INSTALL FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-28)
32. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH
33. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH
34. INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)
35. INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)
36. INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)
37. INSTALL COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-52)

38. **INSTALL COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-75)**
39. **INSTALL COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-29)**
40. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
41. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
42. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
43. **INSTALL FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-52)**
44. **INSTALL FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-75)**
45. **INSTALL FRONT DOOR SCUFF PLATE RH (for Double Cab) (See page IR-29)**
46. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
47. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
48. **INSPECT SRS WARNING LIGHT**
    (See page RS-28)

SYSTEM DIAGRAM



WW

SYSTEM DESCRIPTION

1. WASHER LINKED OPERATION

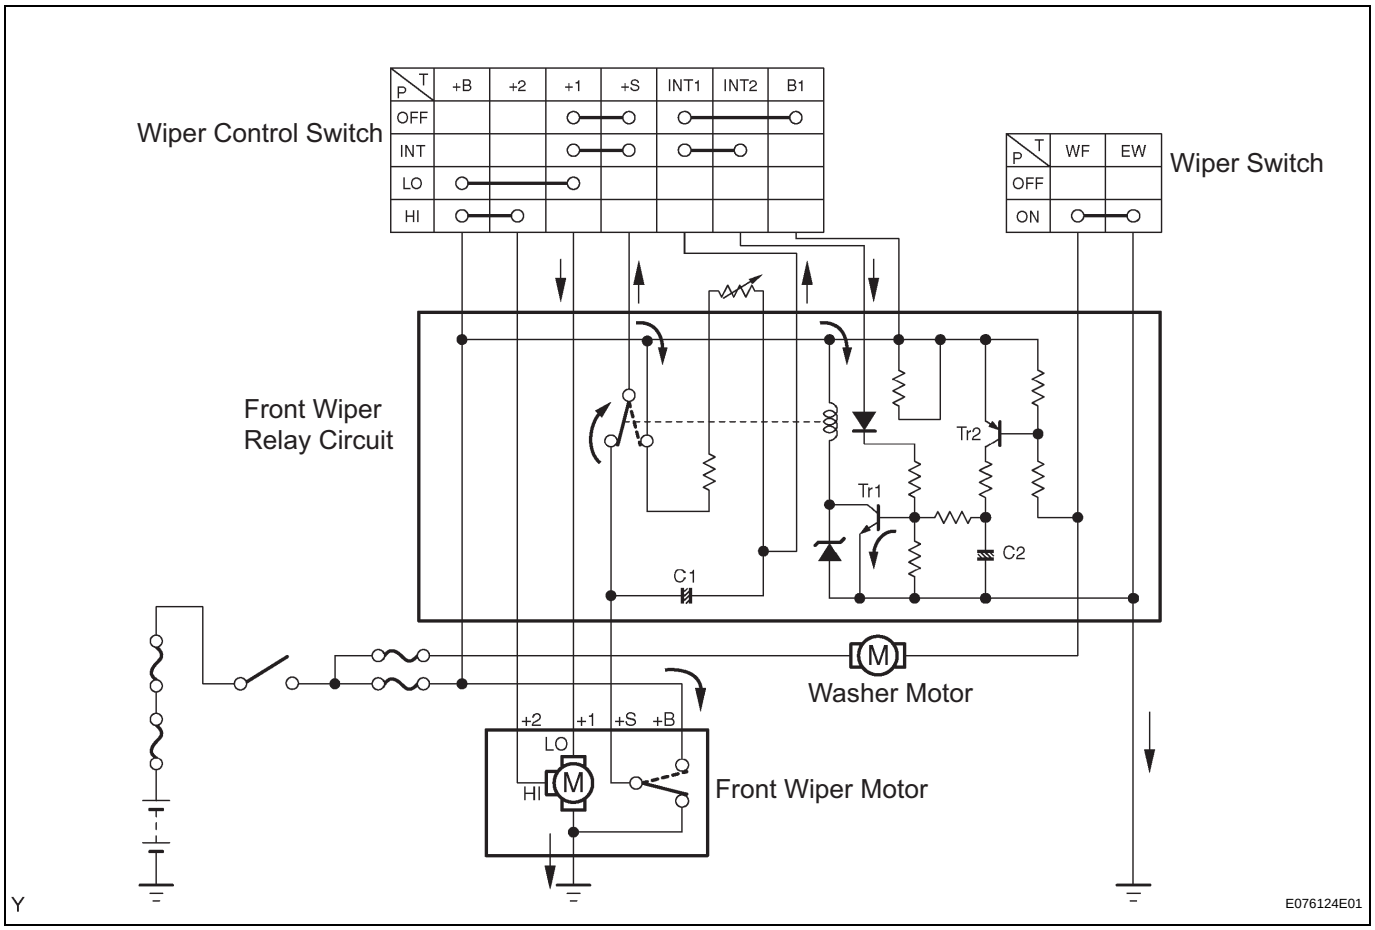
(a) This system operates the front wipers at low speed immediately after washer fluid is ejected when the front washer switch is on for 0.3 seconds or more. When the washer switch is pressed for 1.5 seconds or more, the system operates the front wipers at low speed for approximately 2.2 seconds and then stops the operation.

2. INTERMITTENT OPERATION

(a) The system operates the front wipers once every 1.6 to 10.7 seconds when the front wiper switch is turned to the INT position. The intermittent time can be adjusted to between 1.6 and 10.7 seconds by using the intermittent time adjust dial.

(b) When the wiper control switch is turned to the INT position, current flows from the precharged capacitor C1, through terminals INT1 and INT2 of the wiper control switch, to Tr1 (transistor). When transistor Tr1 is turned on, current flows from terminal +S of the wiper control switch to terminal +1 of the wiper control switch, to terminal +1 of the wiper motor, to the wiper motor and finally to ground, causing the wiper motor to operate. At the same time, current flows from capacitor C1 to terminal INT1 of the wiper control switch and then to INT2. When the current flow from capacitor C1 stops, transistor Tr1 turns off to stop the relay contact point and halts the wiper motor. When the relay contact is off, capacitor C1 begins to charge

again and Tr1 remains off until the charging is complete. This period corresponds to the time interval between wiper operations. When capacitor C1 is fully charged, Tr1 turns on and then the relay contact point turns on, causing the motor to operate again. This is the cycle of the intermittent wiper operation. The time interval can be adjusted by using the intermittent time adjust dial (variable resistor) to change the charging time of capacitor C1.



SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all the doors simultaneously.

- The master switch and the door control switch (on the passenger side door) send lock/unlock request signals to the multiplex network body ECU. Then, the multiplex network body ECU transmits these requests to the lock motors in each door to lock/unlock all the doors simultaneously.
- Operating the driver side and passenger side door locks using a key sends lock/unlock request signals to the multiplex network body ECU. The driver side door key-linked lock function has an optional unlock method called the "2-step unlock function." Refer to the chart below in step (b) for details on this function.

(b) The power door lock control system has the following functions:

Function	Description
Key-linked lock and unlock function	This function locks/unlocks all doors simultaneously when driver side or passenger side door key cylinder (linked with driver side and passenger side door lock) is turned with key.
Key lock-in prevention function	When key is inserted into ignition key cylinder and door lock operation is performed with driver side door open, all doors are unlocked.
Door control switch* unlock prohibition function	Performing door lock operation with transmitter or key prohibits the unlock operation by door lock control switch.
2-step unlock function	Driver side door can be unlocked by turning key cylinder once; remaining doors can be unlocked by turning key cylinder second time.

*: Master switch and door control switch (passenger side)

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the power door lock control system.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK SYMPTOM CHECK)

NEXT

3	PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed on the problem symptoms table, proceed to A.
(b) If the fault is listed on the problem symptoms table, proceed to B.

B → Go to step 6

A

4	OVERALL ANALYSIS AND TROUBLESHOOTING

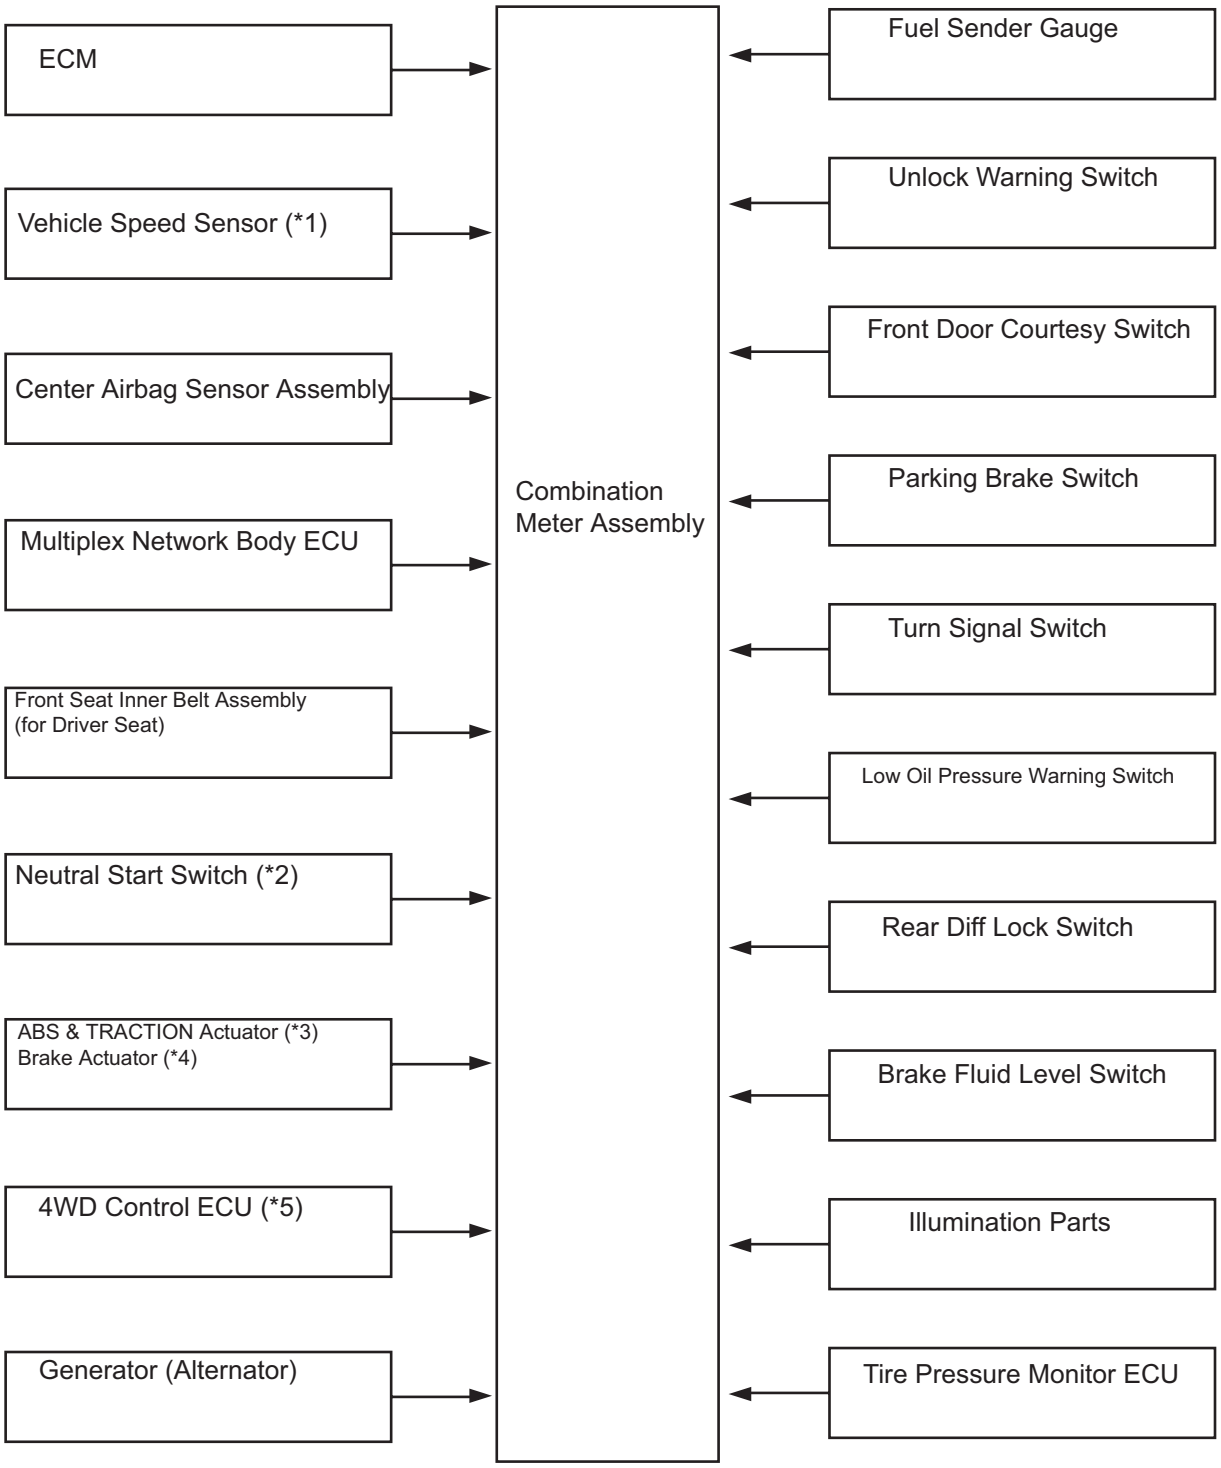
SYSTEM DIAGRAM

Combination Meter Assembly:



*1: M/T Vehicle *3: w/ VSC *5: 4WD Vehicle
*2: A/T Vehicle *4: w/o VSC

B127007E02

SYSTEM DESCRIPTION

1. METER GAUGE AND WARNING/INDICATOR

GAUGE:

Item	Detail
Speedometer (with VSC)	Based on signals received from wheel speed sensor, hydraulic brake booster calculates vehicle speed and transmits data to meter.
Tachometer	ECM transmits engine speed to meter to display.
ODO/TRIP meter	Combination meter assembly.
Fuel	Displays fuel level in accordance with signal from fuel sender gauge.
Water Temperature	Displays water temperature in accordance with signal from ECM.

WARNING / INDICATOR:

Item	Signal Description
TURN	Turn signal switch is ON.
BEAM	Displays reception of signal from multiplex network body ECU.
CHARGE	Receives malfunction signals from generator (alternator).
OIL PRESSURE	Warning is displayed when oil pressure is low (pressure switch is ON).
MIL	Receives malfunction signals from ECM.
DOOR	Open door indicator comes on when signal is received from multiplex network body ECU.
SEAT BELT	Driver's seat belt buckle switch is OFF (Unfastened).
BRAKE	Displays warning when parking brake switch is ON or brake fluid level warning switch is ON.
MAINT (Blinks)	Blinks when 4,500 miles has been run after ODO/TRIP switch is set.
MAINT (Comes on)	Comes on when 5,000 miles has been run after ODO/TRIP switch is set.
CRUISE	Receives malfunction signals from ECM.
AIR BAG	Receives malfunction signals from airbag ECU.
FUEL	Receives fuel empty signals from fuel sender gauge.
A/T P (A/T)	Receives P signals from neutral start switch.
A/T R (A/T)	Receives R signals from neutral start switch.
A/T N (A/T)	Receives N signals from neutral start switch.
A/T D (A/T)	Receives D signals from neutral start switch.
A/T 4 (A/T)	Receives 4 signals from neutral start switch.
A/T 3 (A/T)	Receives 3 signals from neutral start switch.
A/T 2 (A/T)	Receives 2 signals from neutral start switch.
A/T L (A/T)	Receives L signals from neutral start switch.
TAIL	Displays when receiving signals from multiplex network body ECU.
A/T OIL TEMP	Displays when receiving signals from ECU.
AUTO LSD	Receives signals from hydraulic brake booster while AUTO LSD is operating.
SLIP	• Receives signals from hydraulic brake booster while VSC, TRAC, A-TRAC, A-LSD, DAC, RR DIFF LOCK and HCA are operating. • Receives malfunction signals of TRAC, A-TRAC and A-LSD from hydraulic brake booster.
VSC TRAC	Receives malfunction signals of VSC, TRAC, A-TRAC, A-LSD, DAC and HAC from hydraulic brake booster.
VSC OFF	• Receives signals from hydraulic brake booster while H4L, L4L and RR DIFF LOCK are operating. • Receives malfunction signals of VSC from hydraulic brake booster.
DAC	• Receives signals from hydraulic brake booster while DAC and RR DIFF LOCK are operating. • Receives malfunction signals of the DAC from hydraulic brake booster.
4WD	Receives signals from 4WD control ECU while 4WD is operating.
4LO	Receives signals from 4WD control ECU while 4LO is operating.
RR DIFF LOCK	Receives signals from 4WD control ECU while RR DIFF LOCK is operating.
ABS	• Receives signals from hydraulic brake booster while DIFF LOCK is operating. • Receives malfunction signals of ABS, BRAKE ASSIST, and EBD from hydraulic brake booster.
TIRE PRESSURE	Receives signals from tire pressure monitor ECU.

BUZZER:

Item	Signal Description
Key Reminder	Buzzer is ON: Ignition switch is OFF, key is inserted, and door is open.
Fasten Belt	Buzzer is ON: Ignition switch is ON and seat belt is unfastened.
Manual Shift Reverse (6MT)	Buzzer is ON: Ignition switch is ON, shift position is reverse.

2. SYSTEM FEATURES

The combination meter in this vehicle has the following features:

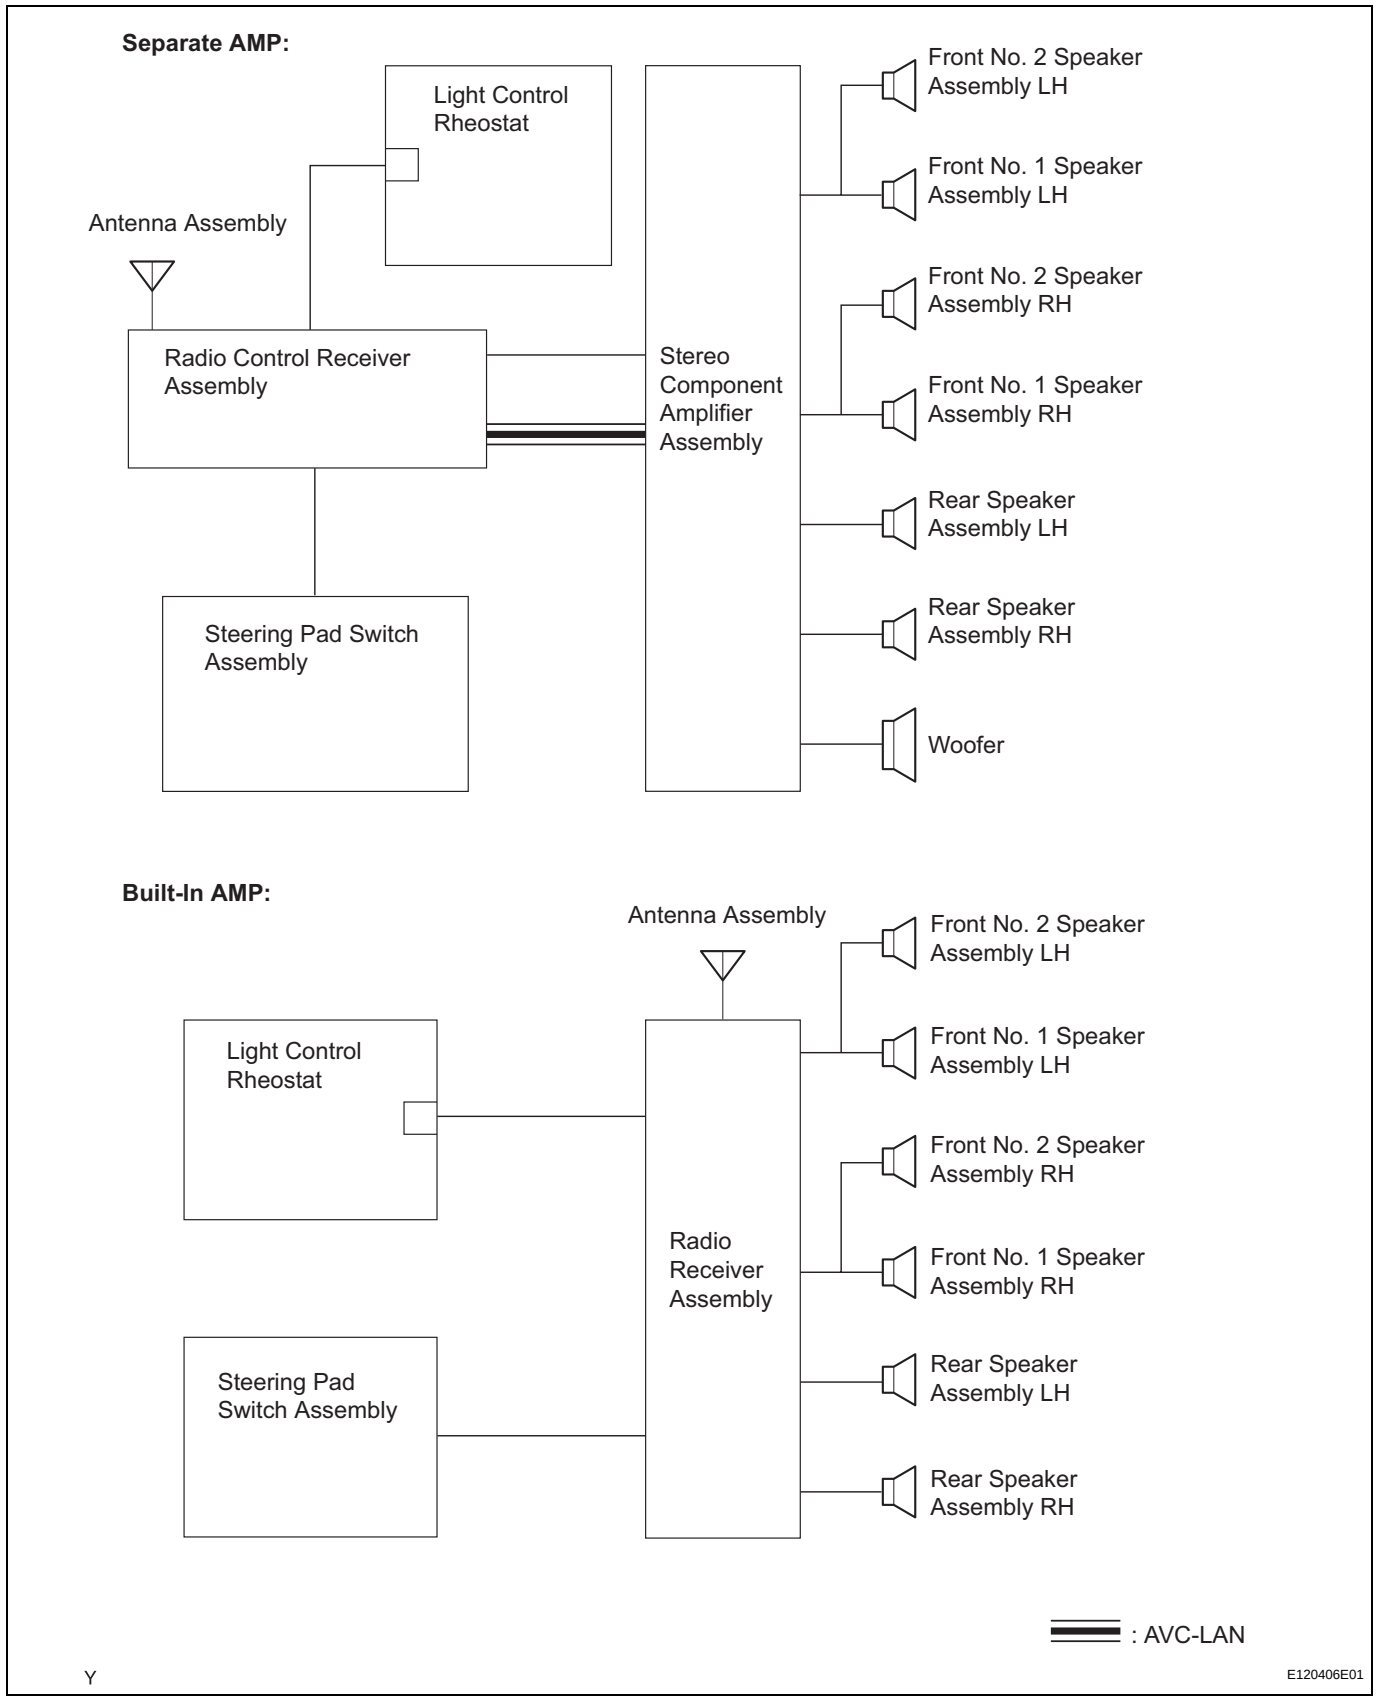
(a) Built-in buzzer for the reminder system (key and seat belt).

(b) Integrated rheostat, trip and odometer knobs.
- Rotate the knob to adjust the interior illumination.
- Press and release the knob to scroll through trip A, trip B, and odometer features.
- Press and hold the trip knob to reset the trip meter functions.

(c) Oil maintenance indicator.
- 4,500 miles after the ODO/TRIP switch is set, the maintenance indicator blinks for 15 seconds after the ignition switch is turned to the ON position.
- 5,000 miles after ODO/TRIP switch is set, the maintenance indicator comes on.

(d) How to reset oil maintenance indicator (See page ME-24).

SYSTEM DIAGRAM

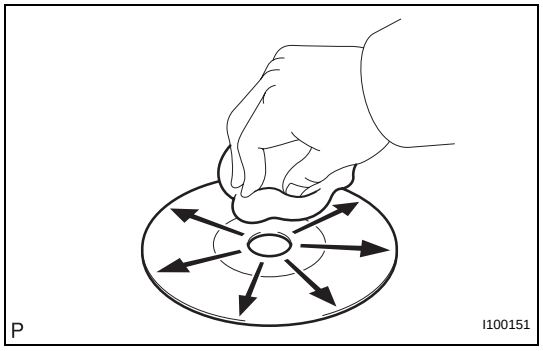


SYSTEM DESCRIPTION

1. COMPACT DISC PLAYER

(a) Compact Disc (hereafter called CD) players use a laser beam pick-up to read the digital signals recorded on CDs and reproduce analog signals of the music etc. 4.7 in. (12 cm) and 3.2 in. (8 cm) discs are available for the CD player.
HINT:
Never disassemble or apply oil to any part of the player unit. Do not insert any objects other than discs into the CD player.
NOTICE:
CD players use an invisible laser beam which could cause hazardous radiation exposure. Be sure to operate the player correctly as instructed.

2. MAINTENANCE CD Player/Disc Cleaning



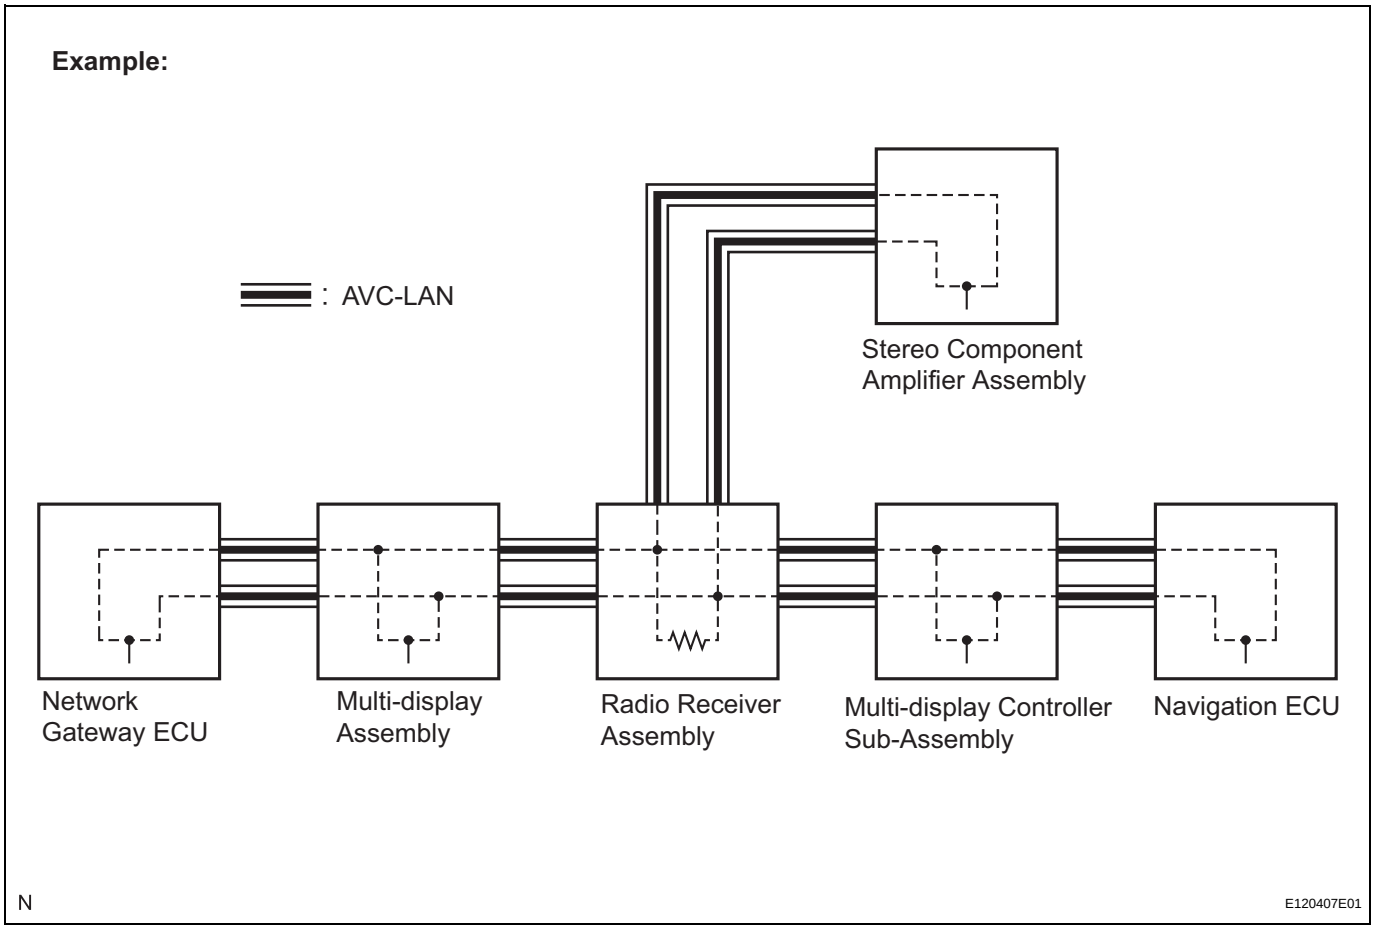
(a) If the disc gets dirty, clean the disc by wiping the surface from the center to the outside, in a radial direction, with a soft cloth as shown in the illustration.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

AV

3. OUTLINE OF AVC-LAN

(a) What is AVC-LAN?

AVC-LAN is an abbreviation for Audio Visual Communication-Local Area Network. This is a unified standard co-developed by 6 audio manufacturers associated with Toyota Motor Corporation. The unified standard includes signals, such as audio, visual and signals for switch indication and communication.



(b) Objectives

Recent development in car audio systems has been rapid and functions have been changed drastically. The conventional system has been switched to a multi-media type such as the navigation system. At the same time customers want to upgrade their audio systems. This is the factor that lies behind this standardization.

The concrete objectives are explained below.

(1) When products of different manufacturers are combined together, malfunctions such as sound failure can occur. This problem can be solved by the standardization of signals.

(2) Various types of after market products are available.

(3) In general, new products developed by particular manufacturers could not be used due to a lack of compatibility with other manufacturer's products. By developing this new standard, users can enjoy a range of compatible products from different manufacturers.
HINT:
- When a +B short or GND short is detected in the AVC-LAN circuit, communication stops, and the audio system does not function.
- When the audio system is not equipped with a navigation system, the audio head unit is the master unit. When the audio system is equipped with a navigation system, the multi-display is the master unit.
- The radio receiver assembly is equipped with a resistor (60 to 80 Ω) for communication.
- All car audio systems using AVC-LAN circuits have diagnostic functions.
- Each unit has its own specified number called a physical address (three-digit number). Numbers are also allotted to each function, which are called logical addresses (two-digit number).

4. COMMUNICATION SYSTEM

(a) Components in the audio system communicate with each other through the AVC-LAN. (Radio receiver with CD changer control function)

(b) When a short circuit or circuit breakdown occurs in the AVC-LAN circuit, the audio system does not operate normally due to the communication cutoff.

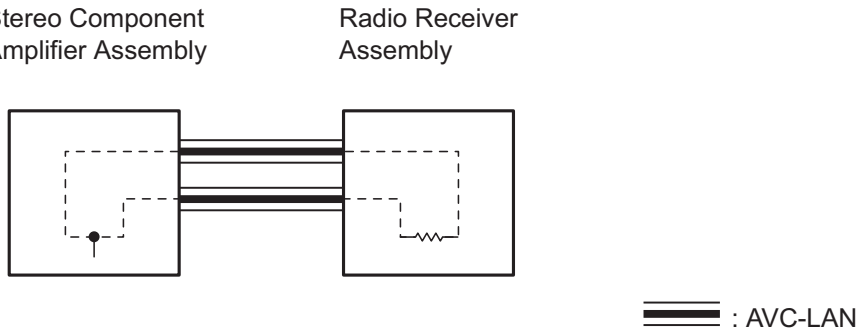
5. DIAGNOSTIC FUNCTION

(a) The audio system has a diagnostic function (the diagnostic result is displayed on the LCD of the radio receiver assembly). (Radio receiver with CD changer control function)

(b) The component code (physical address), or three-digit number (in hexadecimal) is set for each component comprising AVC-LAN.

(c) The logical address, or two-digit number (in hexadecimal) is set for each function and component unit in each component.

AVC-LAN:



6. DIAGNOSTIC TROUBLE CODE CHART

Terms	Description
Physical address	Three-digit code (shown in hexadecimal) which is given to each component comprising AVC-LAN. Corresponding to the function, individual symbols are specified.
Logical address	Two-digit code (shown in hexadecimal) which is given to each function comprising inner system of AVC-LAN.

HINT:
Titles for each unit are stated in the following order: physical address (part name).
(a) 190 (RADIO RECEIVER ASSEMBLY)

Logical address: 01 (Communication control)

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
D5 *1	Registered Component Disconnected	Component shown by sub code is or was disconnected from system with ignition switch in ACC or ON. Communication with component shown by sub code is not ensured when engine is started.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code.
D6 *1	Absence of Master	Component in which this code is recorded was disconnected from system or master component with ignition switch in ACC or ON.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly.
D7 *5	Connection Check Error	Component in which this code is recorded was disconnected from system or master component with ignition switch in ACC or ON.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly.
D8 *2	No Response to Connection Check	Component shown by sub code is or was disconnected from system after engine start.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code.

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
D9 *1	Last Mode Error	Audio or visual component operated before engine stop is or was disconnected with ignition switch in ACC or ON.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code.
DA	No Response to ON/OFF Instruction	No response is identified when changing mode (audio and visual mode change). Sound and picture do not change by button operation.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code. • If error occurs again, replace component shown by sub code.
DB *1	Mode Status Error	Dual alarm is detected.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code.
DC *3	Transmission Error	Transmission to component shown by sub code has failed. (Detecting this DTC does not necessarily mean actual failure.)	If same sub code is recorded in other component, check harness for power supply and communication systems of all components shown by code. (If not, delete DTC and recheck.)
DD *4	Master Reset (Momentary Interruption)	After engine was started, master component was disconnected from system.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly. • If this error occurs frequently, replace radio receiver assembly.
DE *4	Slave Reset (Momentary Interruption)	After engine was started, component shown by sub code was disconnected from system.	• Check harness for power supply system of component shown by sub code. • Check harness for communication system of component shown by sub code.
DF *4	Master Error	Due to defective condition of component with display, master function is switched to audio equipment.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly.
E0 *1	Registration Completion Instruction Error	Registration completion instruction command from master cannot be received.	Since this DTC is provided for engineering purposes, it may be set when no actual failure exists.
E1 *1	Voice Processing Device ON Error	Amp device records that amp output does not function even while source device is operating.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly.
E2	ON/OFF Instruction Parameter Error	Error occurs in ON/OFF controlling command from master component.	Replace radio receiver assembly.

AV

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
E3 *1	Registration Request Transmission	Registration request command is output from component shown by sub code. Receiving connection check instruction, Registration request command is output from sub-master component.	Since this DTC is provided for engineering purposes, it may be set when no actual failure exists.
E4 *1	Multiple Frame Abort	Multiple frame transmission is aborted.	Since this DTC is provided for engineering purposes, it may be set when no actual failure exists.
22	RAM Error	Abnormal condition of RAM is detected.	Replace radio receiver assembly.

HINT:

- *1: This DTC may be recorded depending on the battery condition or engine start voltage even if no failure is detected.
- *2: If the power connector is disconnected after the engine starts, this DTC is recorded after 180 seconds.
- *3: This DTC may be stored if the ignition key is turned to the START position again when the engine is already running.
- *4: This DTC may be stored if the ignition key is held in the START position for one minute or more before returning to the ON position.
- *5: The DTC is stored 210 seconds after the master component power supply connector is disconnected with the ignition switch in ACC or IG.

Logical address: 62 (CD player)

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
42	No Disc Readout	Disc cannot be read.	• Inspect CD • Replace radio receiver assembly
44	CD player Error	Error is detected in CD player.	Replace radio receiver assembly
45	EJECT Error	Disc cannot be ejected.	Replace radio receiver assembly
46	Disc has scratches on the reverse surface	CD has dirt or scratches on reverse side.	• Inspect CD • If same code is detected, replace radio receiver assembly

Logical address: 63 (In-dash CD player)

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
42	No Disc Readout	Disc cannot be read.	• Inspect CD • Replace radio receiver assembly
44	CD player Error	Error is detected in CD player.	Replace radio receiver assembly
45	EJECT Error	Disc cannot be ejected.	Replace radio receiver assembly
46	Disc has scratches on the reverse surface	CD has dirt or scratches on reverse side.	• Inspect CD • If same code is detected, replace radio receiver assembly
51	Elevator Error	Mechanical error occurred during elevator operation.	Replace radio receiver assembly
52	Clamp Error	Error occurs on clamp	Replace radio receiver assembly

(b) 440 (STEREO COMPONENT AMPLIFIER ASSEMBLY)

Logical address: 01 (Communication control)

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
D6 *1	Absence of Master	Component in which this code is recorded was disconnected from system with ignition switch in ACC or ON. Alternatively radio receiver assembly was disconnected when this code was recorded.	• Check harness for power supply system of radio receiver assembly. • Check harness for power supply system of stereo component amplifier assembly. • Check harness for communication system of stereo component amplifier assembly.
D7	Communication Check Error	Component in which this code is recorded is or was disconnected from system after engine start. Alternatively radio receiver assembly was disconnected when this code was recorded.	• Check harness for power supply system of radio receiver assembly. • Check harness for power supply system of stereo component amplifier assembly. • Check harness for communication system of stereo component amplifier assembly.
DC *2	Transmission Error	Transmission to component shown by sub code has failed. (Detecting this DTC does not necessarily mean actual failure.)	If same sub code is recorded in other component, check harness for power supply and communication systems of all components shown by code. (If not, delete DTC and recheck.)
DD *3	Master Reset (Momentary Interruption)	After engine was started, master component was disconnected from system.	• Check harness for power supply system of radio receiver assembly. • Check harness for power supply system of stereo component amplifier assembly. • Check harness for communication system of stereo component amplifier assembly. • If this error occurs frequently, replace radio receiver assembly.
DD *4	Master Error	Due to defective condition of component with display, master function is switched to audio equipment. Error occurs in communication between sub-master (audio) and master component.	• Check harness for power supply of radio receiver assembly. • Check harness for communication system of stereo component amplifier assembly. • Check harness for communication system between multi-display assembly and sub-master component.
E0 *1	Registration Completion Instruction Error	Registration completion instruction command from master cannot be received.	Since this DTC is provided for engineering purposes, it may be set when no actual failure exists.
E1 *1	Audio processor ON Error	While source device is operating, amp output stops.	• Check harness for power supply system of radio receiver assembly. • Check harness for communication system of radio receiver assembly.

AV

DTC	Diagnosis Item	Diagnostic Content	Troubleshooting
E2	ON/OFF Instruction Parameter Error	Error occurs in ON/OFF controlling command from master component.	Replace radio receiver assembly.
E3 *1	Registration Request Transmission	Registration request command is output from slave component.	Since this DTC is provided for engineering purposes, it may be set when no actual failure exists.

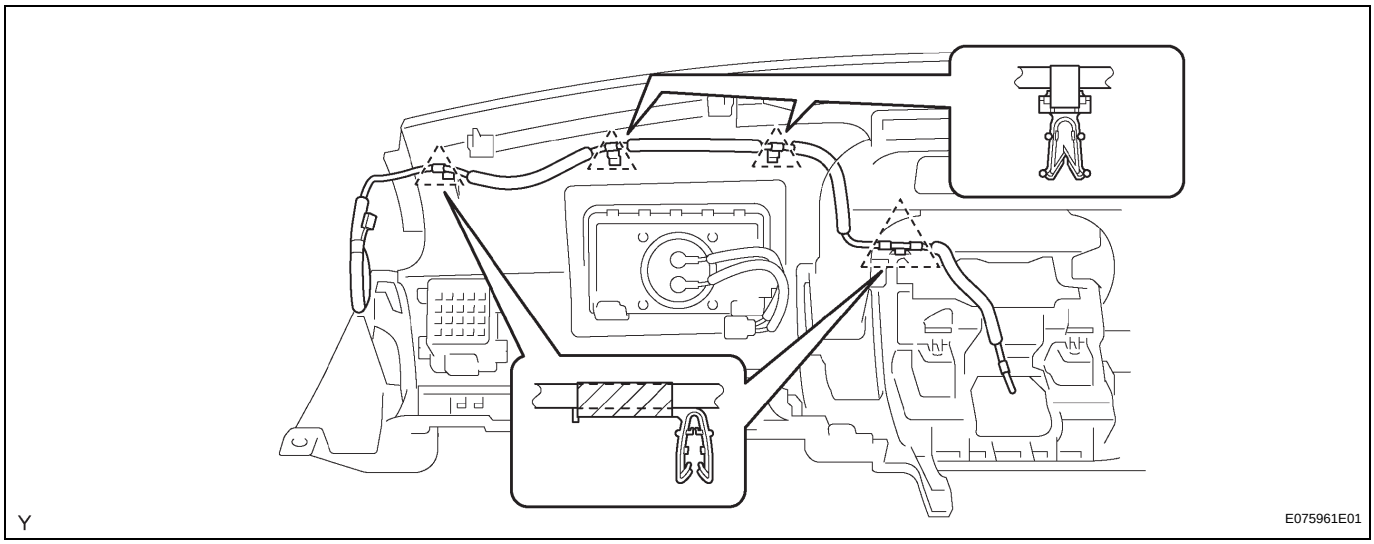
HINT:

- *1: This DTC may be recorded depending on the battery condition or engine start voltage even if no failure is detected.
- *2: This DTC may be stored if the ignition key is turned to the START position again when the engine is already running.
- *3: This DTC may be stored if the ignition key is held in the START position for one minute or more before returning to the ON position.
- *4: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.

AV

INSTALLATION

1. **INSTALL RADIO ANTENNA CORD SUB-ASSEMBLY**



(a) Engage the 4 claws and install the Radio antenna cord.

2. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY**
3. **INSTALL INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY (See page IP-18)**
4. **CONNECT PASSENGER AIRBAG CONNECTOR (See page RS-577)**
5. **INSTALL INSTRUMENT SIDE PANEL RH (See page IP-20)**
6. **INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)**
7. **INSTALL LOWER INSTRUMENT PANEL LH (See page IP-20)**
8. **INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-20)**
9. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
10. **INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
11. **INSTALL COMBINATION METER ASSEMBLY (See page ME-65)**
12. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
13. **INSTALL NO. 1 LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-22)**
14. **INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
15. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)**

16. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page AC-96)**
17. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)**
18. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)**
19. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)**
20. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
21. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
22. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
23. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)**
24. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)**
25. **INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)**
26. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)**
27. **INSTALL FRONT PILLAR GARNISH RH (See page IR-52)**
28. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**
29. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-29)**
30. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-28)**
31. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-52)**
32. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-52)**
33. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-52)**
34. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-52)**
35. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**

36. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

(a) The power window control system controls the UP/DOWN function of the power windows by using the regulator motors.

The main components of this system are: the power window regulator master switch assembly, which is built into the driver side door, and the power window regulator switch, which is built into the passenger side door and rear doors. Pressing the regulator switch or either of the four switches on the master switch assembly transmits an UP/DOWN signal to the corresponding power window regulator motor.

(b) The power window control system has the following functions:

Function	Outline
Manual UP / DOWN function	Driver side power window: Function that causes window to rise while power window switch is being pulled up, and to lower while pushed halfway down. Window stops as soon as the switch is released. Passenger side power window and rear door power window: Function that causes window to rise while power window switch is being pulled up and to lower while pushed down. Window stops as soon as the switch is released.
AUTO DOWN function	Function that enables window of driver side door to be fully open by one press of power window switch.
Remote control function	Function that allows power window master switch assembly to control manual UP/DOWN operation of passenger door power window and rear door power window.
Key-off operation function	Function that makes it possible to operate power window for approximately 43 seconds after ignition switch is turned to ACC or LOCK position if neither front door is opened.
Window lock function	Function where passenger side power window and rear door power window operations are disabled when window lock switch of the master switch assembly is pressed. Passenger side power window and rear door power window can be operated when window lock switch is pressed again.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the power window control system.

REMOVAL

1. **TABLE OF BOLT, SCREW AND NUT**
   HINT:
   All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabetic codes in the table below.

mm (in.) (L = Length)

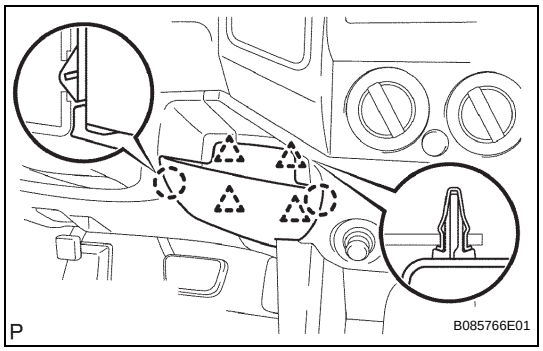
Code	Shape	Code	Shape	Code	Shape
<A>	 φ = 6 (0.24) L = 16 (0.63) 90080-11157	<B>	 φ = 6 (0.24) L = 20 (0.79) 90080-11353	<C>	 φ = 6 (0.24) L = 16 (0.63) 90105-A0007
<D>	 φ = 5 (0.20) L = 14 (0.55) 90080-16100	<E>	 φ = 5 (0.20) L = 18 (0.71) 90159-A0034	<F>	 φ = 5 (0.20) L = 20 (0.79) 90159-50192
<G>	 φ = 6 (0.24) 90178-A0023				

P

B085808E01

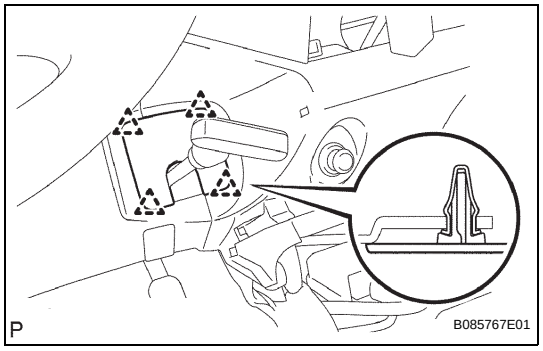
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait at least for 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
4. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
6. **REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)**

7. **REMOVE FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-41)**
8. **REMOVE FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-61)**
9. **REMOVE FRONT DOOR SCUFF PLATE RH (for Double Cab) (See page IR-12)**
10. **REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)**
11. **REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)**
12. **REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**
13. **REMOVE COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-40)**
14. **REMOVE COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-61)**
15. **REMOVE COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-12)**
16. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
    (a) Separate the front door opening trim weatherstrip LH.
17. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Separate the front door opening trim weatherstrip RH.
18. **REMOVE FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-41)**
19. **REMOVE FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-62)**
20. **REMOVE FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-13)**
21. **REMOVE FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-41)**
22. **REMOVE FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-63)**
23. **REMOVE FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-14)**



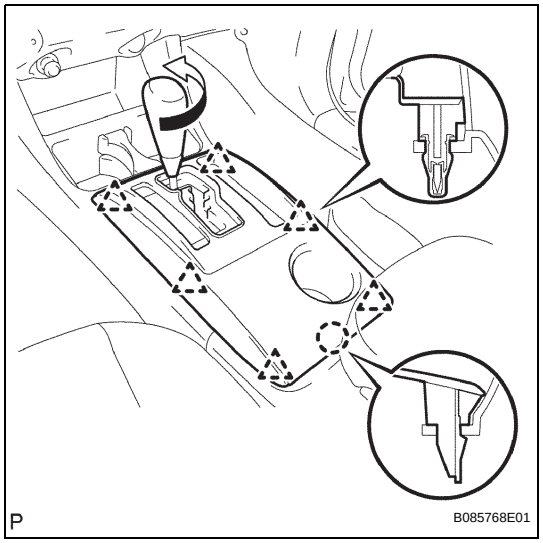
24. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake)

(a) Disengage the 4 clips and 2 claws, and remove the instrument panel under tray.



25. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake)

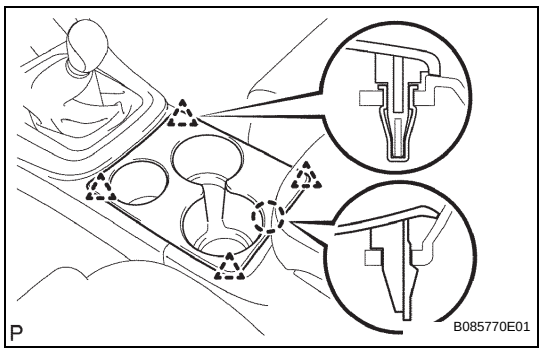
(a) Disengage the 4 clips and remove the instrument panel hole cover.



26. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type)

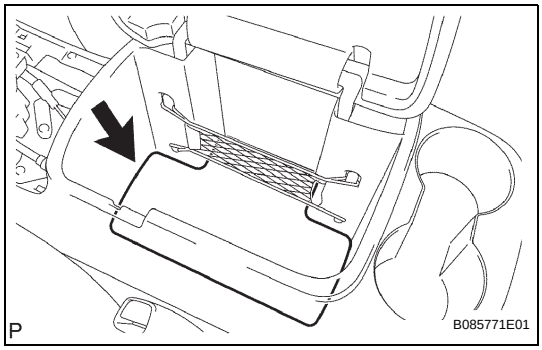
(a) Remove the shift knob.

(b) Disengage the 6 clips and claw, and remove the console upper rear panel sub-assembly.



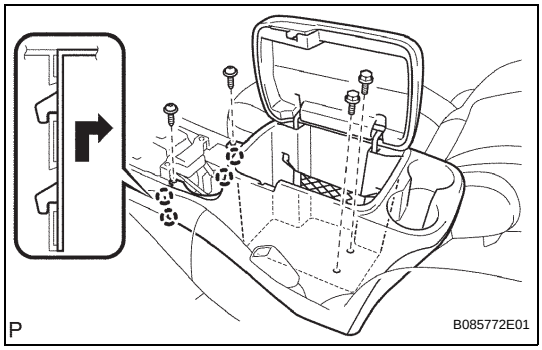
27. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type)

(a) Disengage the 4 clips and claw, and remove the console upper rear panel sub-assembly.



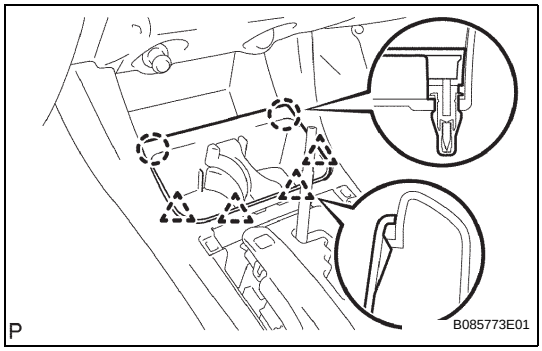
28. REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type)

(a) Remove the console box carpet.



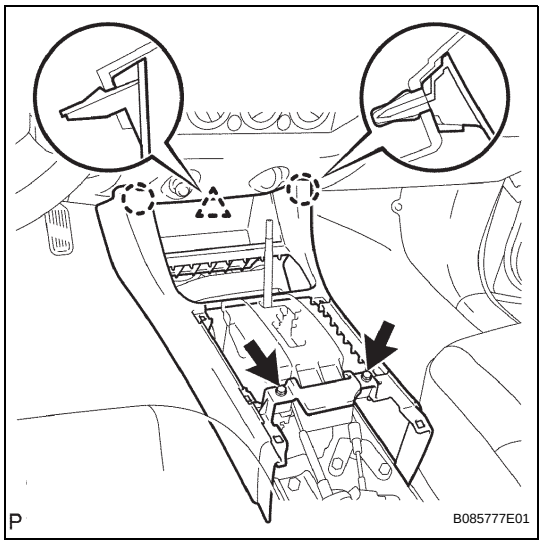
(b) Remove the 2 screws <F> and 2 bolts <B>.

(c) Disengage the 4 claws and remove the rear console box assembly.



29. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type)

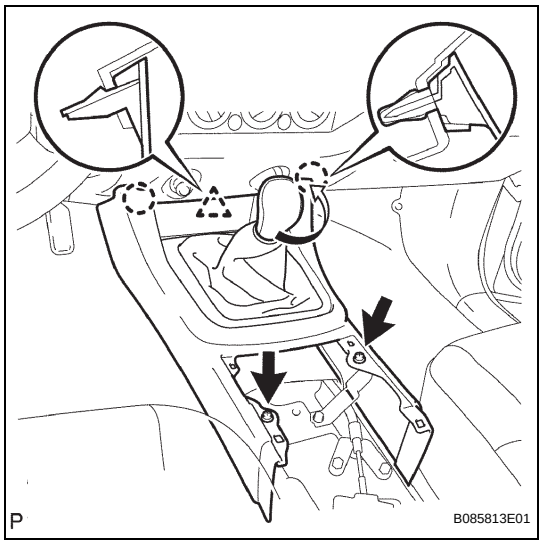
(a) Disengage the 2 clips and 4 claws, and remove the instrument panel cup holder tray.



30. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type)

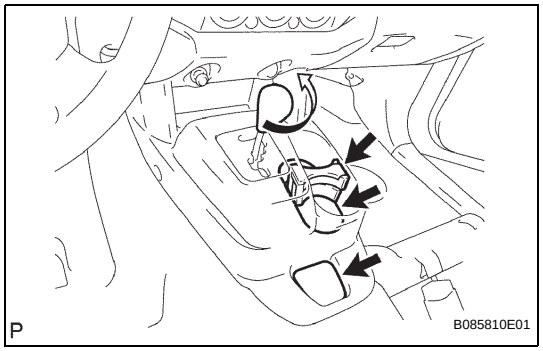
(a) Remove the 2 screws <F>.

(b) Disengage the 2 clips and claw, and remove the front console box.



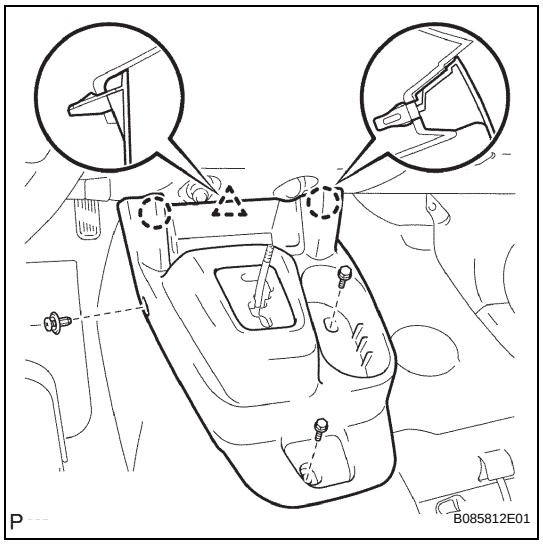
31. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type)

(a) Remove the shift knob.
(b) Remove the 2 screws <F>.
(c) Disengage the 2 clips and claw, and remove the front console box.

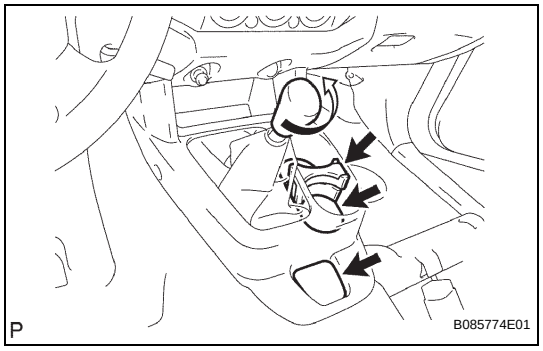


32. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type)

(a) Remove the shift knob.
(b) Remove the box bottom mat.
(c) Remove the instrument panel cup holder.
(d) Remove the No. 2 box bottom mat.

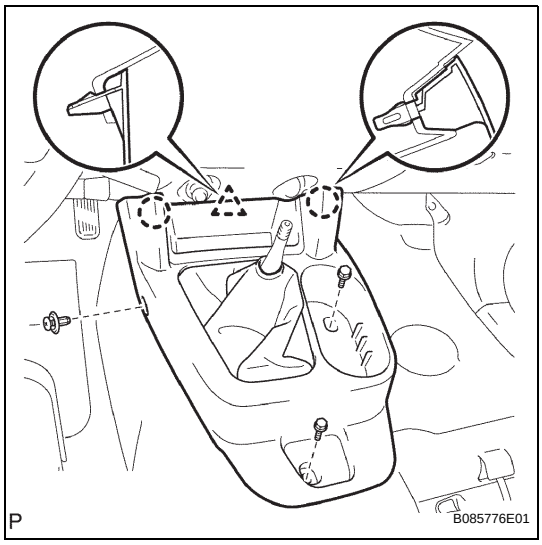


(e) Remove the clip and 2 bolts <A>.
(f) Disengage the 2 clips and claw, and remove the front console box.

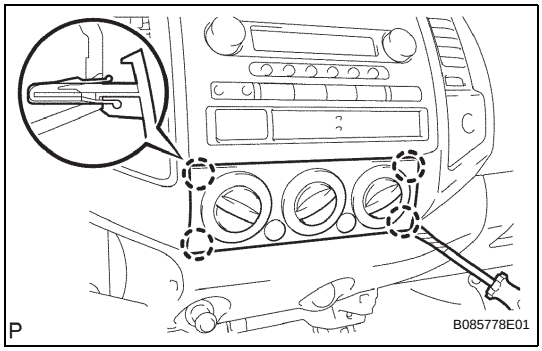


33. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type)

(a) Remove the shift knob.
(b) Remove the box bottom mat.
(c) Remove the instrument panel cup holder.
(d) Remove the No. 2 box bottom mat.



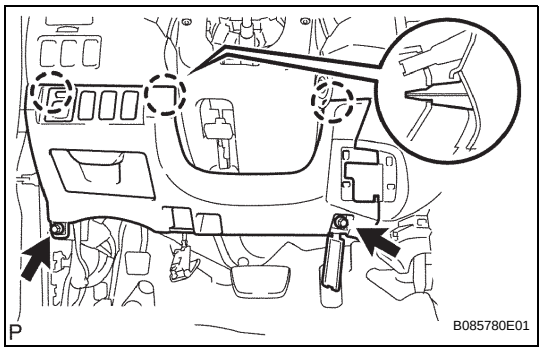
(e) Remove the clip and 2 bolts <A>.
(f) Disengage the 2 clips and claw, and remove the front console box.



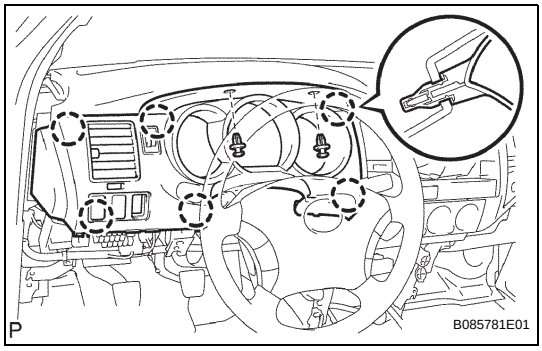
34. REMOVE AIR CONDITIONING CONTROL ASSEMBLY
(a) Using a screwdriver, disengage the 4 clips and remove the air conditioning control assembly.
HINT:
Tape up the screwdriver tip before use.
(b) Disconnect the 2 connectors.

35. REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)

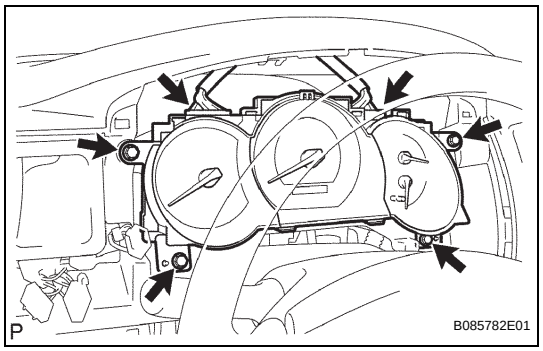
36. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)



37. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL
(a) Remove the 2 bolts <B>.
(b) Disengage the 3 clips and remove the lower No. 1 instrument panel finish panel.
(c) Disconnect the connectors.



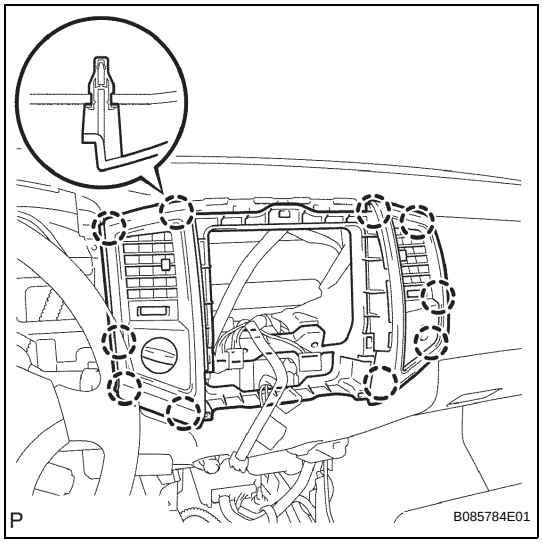
38. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY
(a) Remove the 2 clips.
(b) Disengage the 6 clips and remove the instrument cluster finish panel sub-assembly.
(c) Disconnect the connectors.



39. REMOVE COMBINATION METER ASSEMBLY

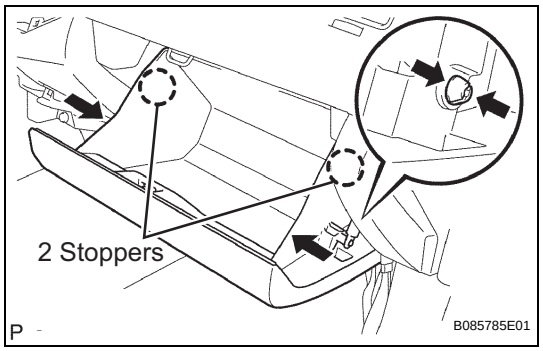
(a) Remove the 4 screws <E> and the combination meter assembly.

(b) Disconnect the 2 connectors.



40. REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY

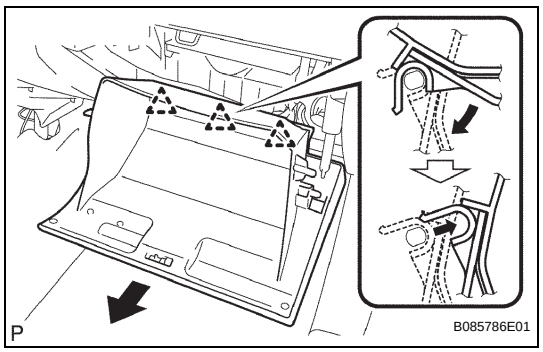
(a) Disengage the 10 clips and remove the instrument cluster center finish panel sub-assembly.



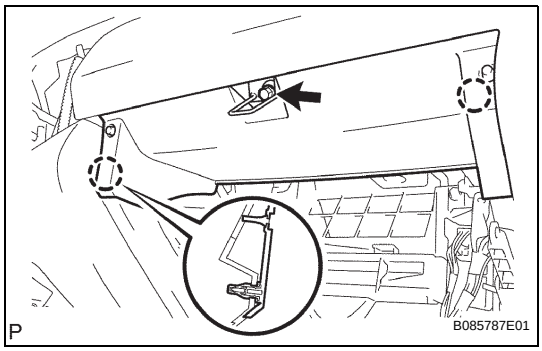
41. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Disengage the claw and separate the glove compartment door stopper from the glove compartment door assembly.

(b) Slightly deform the upper part of the glove compartment door assembly to release the 2 stoppers and open the glove compartment door assembly until it becomes horizontal.

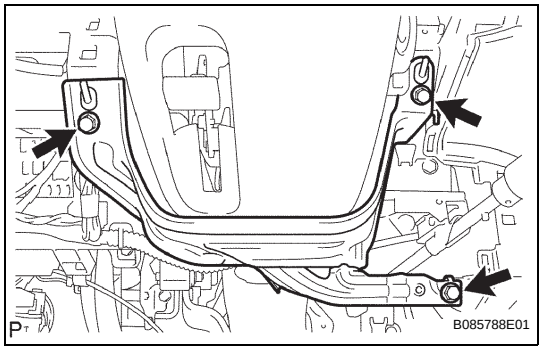


(c) Pull the glove compartment door assembly toward the rear of the vehicle to release the 3 hinges and remove the glove compartment door assembly.



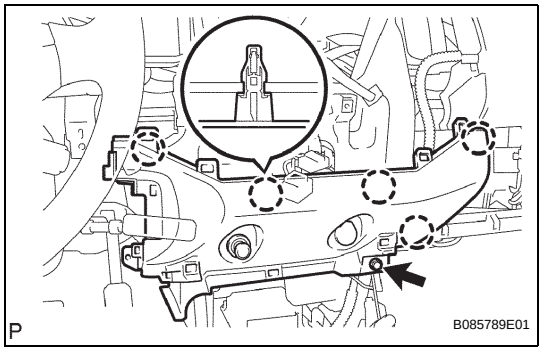
42. REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH

(a) Remove the bolt <B>.
(b) Disengage the 2 clips and remove the instrument panel lower finish panel sub-assembly RH.



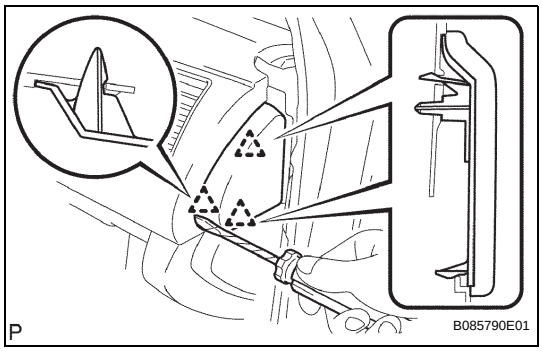
43. REMOVE LOWER INSTRUMENT PANEL LH

(a) Remove the 3 bolts <B> and the lower instrument panel LH.



44. REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY

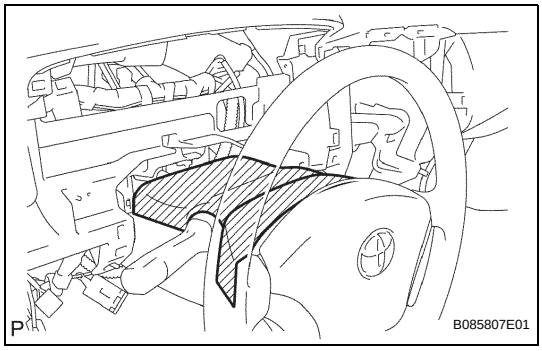
(a) Remove the bolt <B>.
(b) Disengage the 5 clips and remove the instrument lower cover sub-assembly.
(c) Disconnect the 2 connectors.



45. REMOVE INSTRUMENT SIDE PANEL RH

(a) Using a screwdriver, disengage the 3 claws and remove the instrument side panel RH.
HINT:
Tape up the screwdriver tip before use.

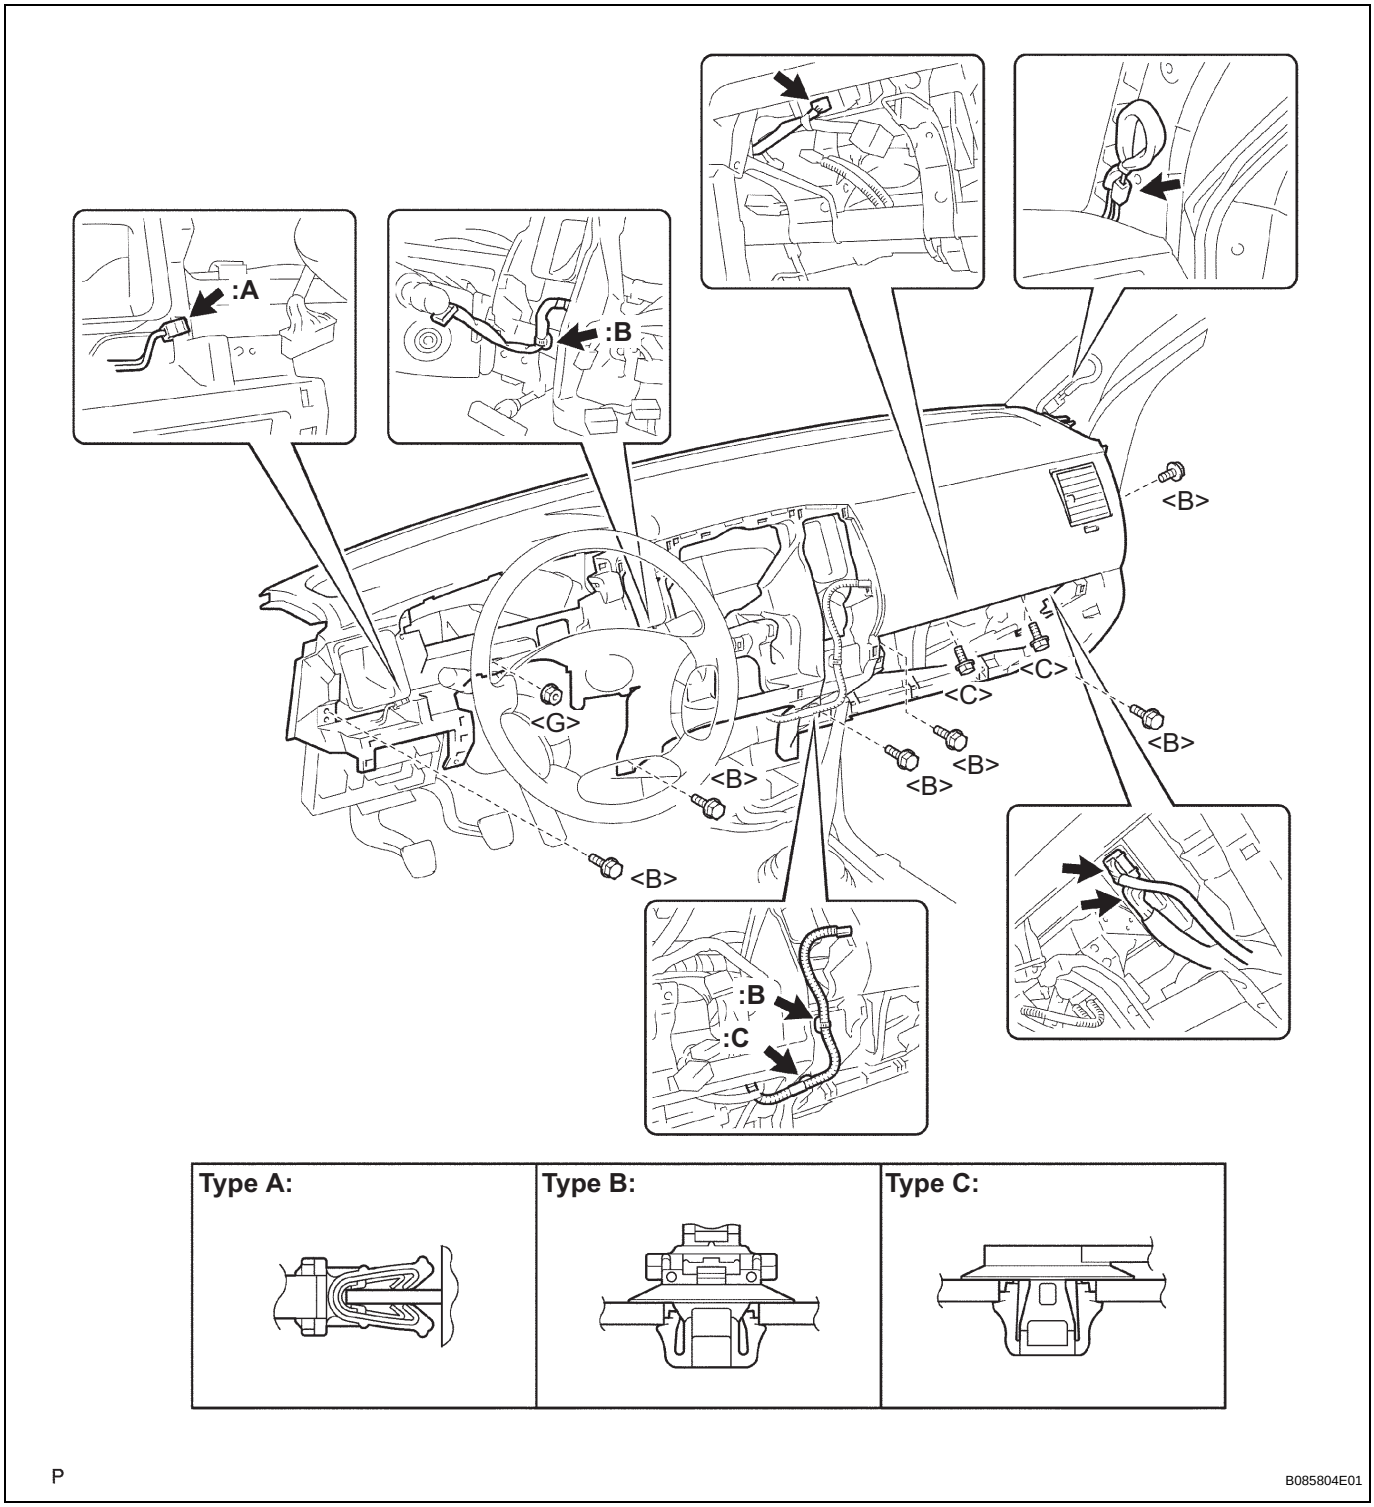
46. DISCONNECT PASSENGER AIRBAG CONNECTOR (See page RS-576)



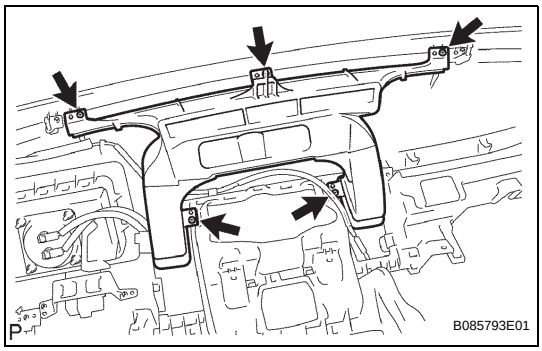
47. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY W/ PASSENGER AIRBAG ASSEMBLY

(a) Tape up the steering column cover upper and steering wheel sub-assembly in protective tape.
(b) Disengage the 4 clamps and disconnect the 4 connectors.

(c) Remove the 8 bolts, nut and instrument panel sub-assembly w/ passenger air bag assembly.

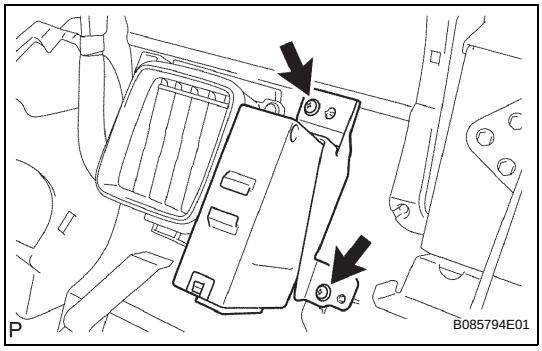


IP



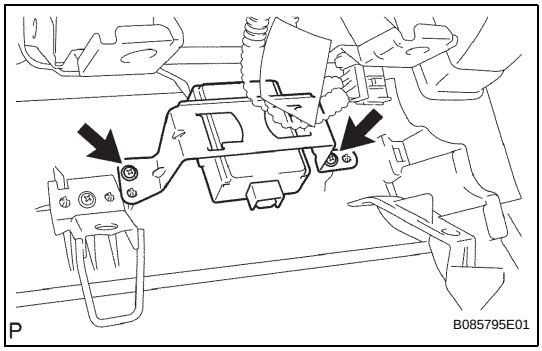
48. REMOVE DEFROSTER NOZZLE ASSEMBLY W/ NO.2 HEATER TO REGISTER DUCT

(a) Remove the 5 screws <D> and defroster nozzle assembly w/ No. 2 heater to register duct.



49. REMOVE FOUR WHEEL DRIVE CONTROL ECU

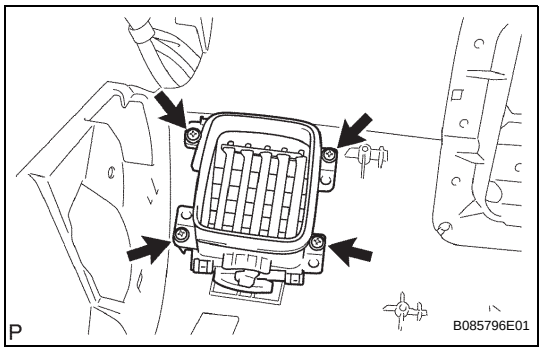
(a) Remove the 2 screws <D> and four wheel drive control ECU.



50. REMOVE DOOR CONTROL RECEIVER

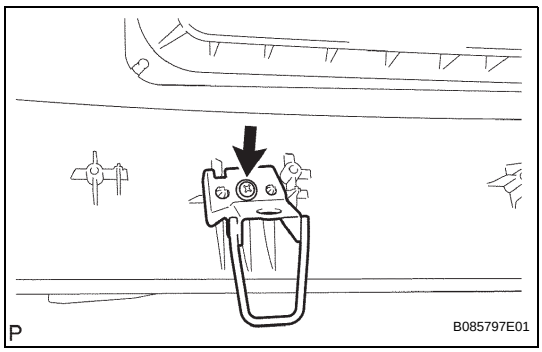
(a) Remove the 2 screws <D> and door control receiver.

51. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-577)



52. REMOVE NO.1 INSTRUMENT PANEL REGISTER ASSEMBLY

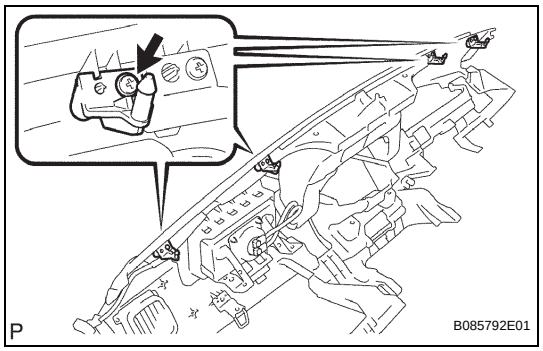
(a) Remove the 4 screws <D> and No. 1 instrument panel register assembly.



53. REMOVE INSTRUMENT PANEL CENTER BRACKET SUB-ASSEMBLY

(a) Remove the screw <D> and instrument panel center bracket sub-assembly center.

54. REMOVE ANTENNA CORD SUB-ASSEMBLY (See page AV-94)



55. REMOVE NO. 1 INSTRUMENT PANEL PIN

(a) Remove the 4 screws <D> and the 4 No. 1 instrument panel pins.

56. REMOVE INSTRUMENT PANEL CUSHION

57. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Intelligent tester only:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with a intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear DTCs (see page ES-40).
2. Switch the ECM from normal mode to check mode using a intelligent tester (see page ES-43).
3. Perform a simulation test (see page IN-34).
4. Check and wiggle the harness(es), connector(s) and terminal(s) (see page IN-34).

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch OFF.

Result	Proceed To
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK WHETHER ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK

5 CHECK IDLING SPEED

HINT:
Refer to Engine Mechanical (See page EM-2).

NG → PROCEED TO PROBLEM SYMPTOMS TABLE

OK

6	CHECK FUEL PRESSURE

HINT:
Refer to Fuel System (See page FU-6).

NG → PROCEED TO FUEL SYSTEM AND CONTINUE TROUBLESHOOTING

OK

ES

7	CHECK FOR SPARK

HINT:
Refer to Ignition System (See page IG-3).

NG → PROCEED TO IGNITION SYSTEM AND CONTINUE TROUBLESHOOTING

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement ECM.
HINT:
The VIN is in the form of a 17-digit alphanumeric vehicle identification number. A intelligent tester is required to register the VIN.

1. DESCRIPTION

This registration section consists of three parts, Input Instructions, Read VIN and Write VIN.

(a) Input Instructions: Explains the general VIN input instructions using a intelligent tester.

(b) Read VIN: Explains the VIN reading process in a flowchart. This process allows the VIN stored in the ECM to be read, in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(c) Write VIN: Explains the VIN writing process in a flowchart. This process allows the VIN to be input into the ECM. If the ECM is changed, or the VIN and VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.

2. INPUT INSTRUCTIONS

(a) Intelligent tester
  (1) The arrow buttons (UP, DOWN, RIGHT and LEFT) and numerical buttons (0 to 9) are used, in order to input the VIN.

(b) Cursor Operation
  (1) To move the cursor around the tester screen, press the RIGHT and LEFT buttons.

(c) Alphabetical Character Input
  (1) Press the UP and DOWN buttons to select the desired alphabetical character.
  (2) After selection, the cursor should move.

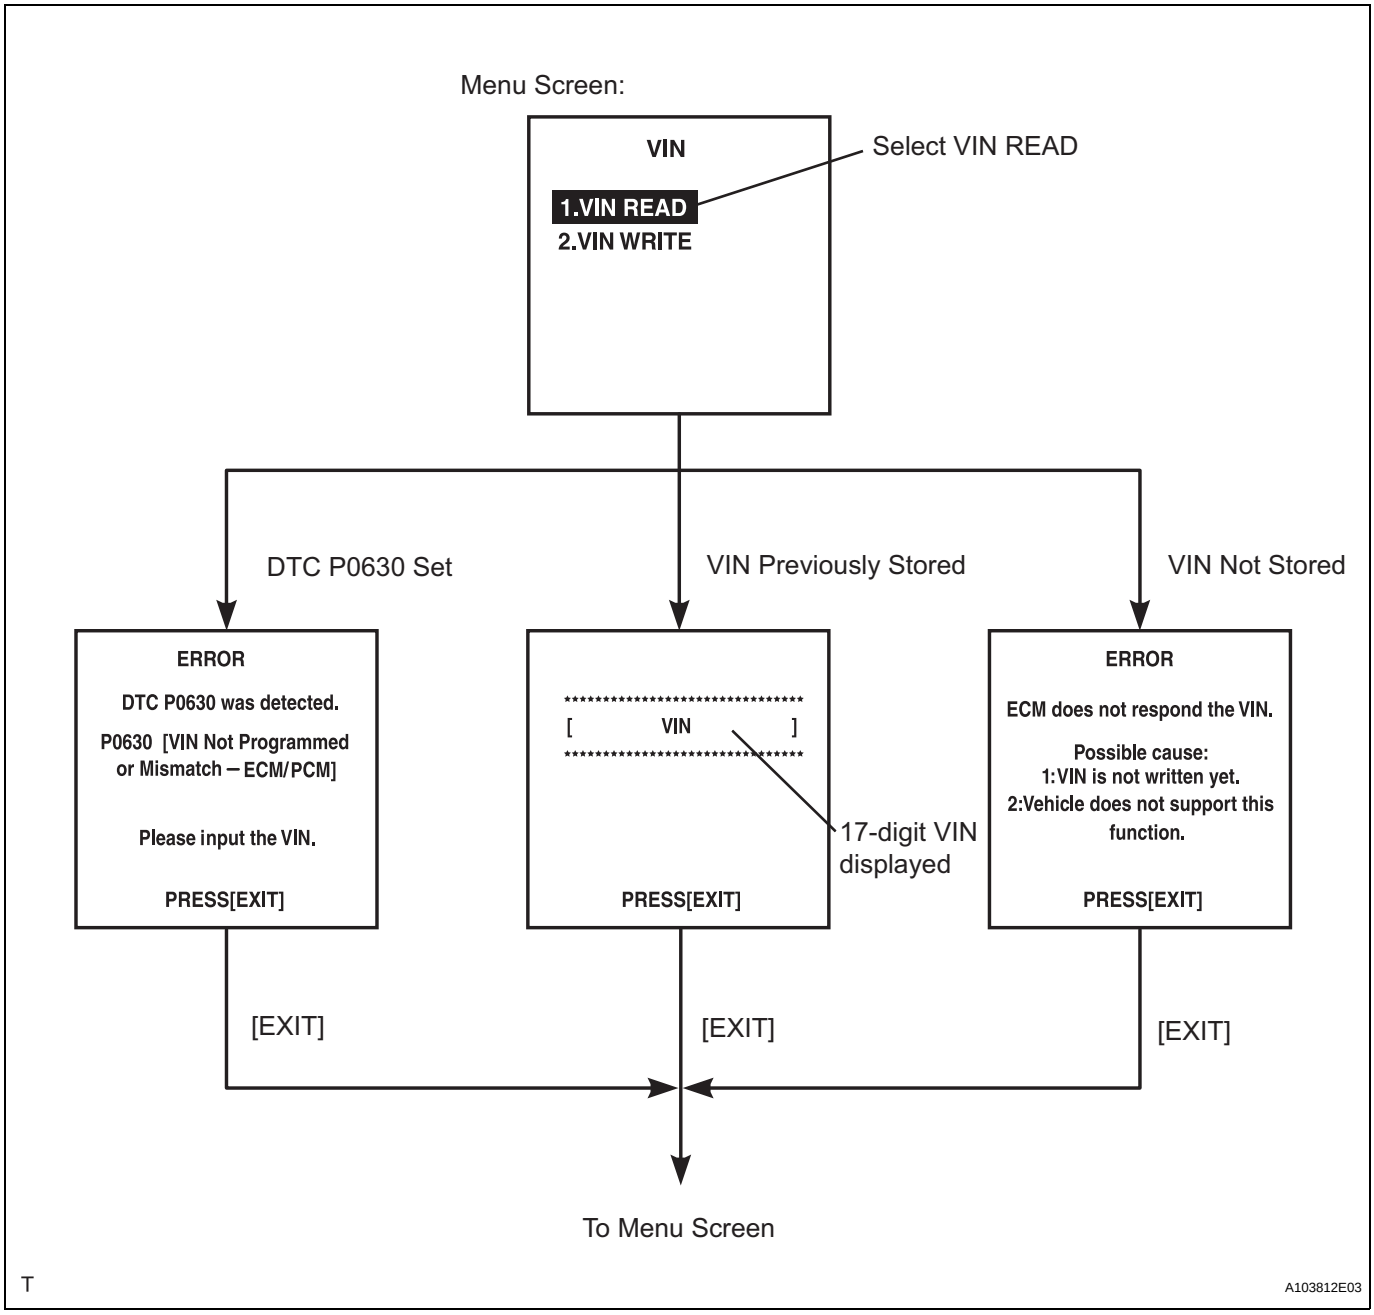
(d) Numeric Character Input
  (1) Press the numerical button corresponding to the number that you want to input.
  (2) After input, the cursor should move.
  HINT:
  Numerical characters can be selected by using the UP and DOWN buttons.

(e) Correction
  (1) When correcting the input character(s), put the cursor onto the character using the RIGHT or LEFT buttons.
  (2) Select or input the correct character using the UP/DOWN buttons, or the numerical buttons.

(f) Finishing Input Operation
  (1) Make sure that the input VIN matches the vehicle VIN after input.
  (2) Press the ENTER button on the tester.

3. READ VIN

(a) Explains the VIN reading process in a flowchart. Reading the VIN stored in the ECM is necessary when comparing it to the VIN provided with the vehicle.
(b) Read VIN using the intelligent tester.
(c) Check the vehicle's VIN.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the ignition switch to ON.
(f) Turn the tester ON.
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / VIN.



4. WRITE VIN

(a) Explains the VIN writing process in a flowchart. This process allows the VIN to be input into the ECM. If the ECM is changed, or the ECM VIN and Vehicle VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.
(b) Write VIN using the intelligent tester.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the tester ON.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / VIN.

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalyst, evaporative emission (EVAP) and thermostat.

The monitor result allows the intelligent tester to display the monitor status, test value, minimum test value and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component will malfunction in the near future. Perform the following instructions to view the monitor status. Although these instructions refer to the Lexus/Toyota diagnostic tester, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch and intelligent tester ON.

(c) Clear the DTCs (see page ES-40).

(d) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (see page ES-25). Do not turn the ignition switch OFF.

NOTICE:

The test results will be lost if the ignition switch is turned OFF.

2. ACCESS MONITOR RESULT

(a) Select from the intelligent tester menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.

- INCMP: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN) and maximum test limit (MAX).

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limits. If the test value is on the borderline of the test limits, the component will malfunction in the near future.
HINT:
The monitor result might on rare occasions be PASS even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the test value by the scaling value listed below.

A/F Sensor Bank 1

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.001	V	Response rate deterioration level for bank 1 sensor 1
$01	$91	Multiply by 0.004	mA	A/F sensor current

HO2S Bank 1 Sensor 2

Monitor ID	Test ID	Scaling	Unit	Description
$02	$05	Multiply by 0.001	Seconds	Rich - Lean switch time
$02	$06	Multiply by 0.001	Seconds	Lean - Rich switch time
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8A	Multiply by 1	Time	Frequency of sensor switching
$02	$8F	Multiply by 0.0003	Grams	Maximum oxygen storage capacity

Catalyst - Bank 1

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst - Bank 1

EVAP

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump stuck OFF (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump stuck ON (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (P2420)

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Secondary Air Injection (AIR)

Monitor ID	Test ID	Scaling	Unit	Description
$71	$E1	Multiply by 0.01	Gram per second	Test value of AIR insufficient
$71	$E2	Multiply by 0.01	kPa	Test value of AIR pump stuck ON
$71	$E3	Multiply by 0.01	kPa	Test value of AIR pump stuck OFF
$71	$E4	Multiply by 0.01	kPa	Test value of AIR control valve ON
$71	$E5	Multiply by 0.01	kPa	Test value of AIR control valve OFF

Misfire

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: Misfire counts for last ten driving cycle - Total
$A1	$0C	Multiply by 1	Time	Misfire rate for all cylinders: Misfire counts for last/ current driving cycles - Total
$A2	$0B	Multiply by 1	Time	EWMA misfire for cylinder 1: Misfire counts for last ten driving cycle - Total
$A2	$0C	Multiply by 1	Time	Misfire rate for cylinder 1: Misfire counts for last/ current driving cycles - Total
$A3	$0B	Multiply by 1	Time	EWMA misfire for cylinder 2: Misfire counts for last ten driving cycle - Total
$A3	$0C	Multiply by 1	Time	Misfire rate for cylinder 2: Misfire counts for last/ current driving cycles - Total

Monitor ID	Test ID	Scaling	Unit	Description
$A4	$0B	Multiply by 1	Time	EWMA misfire for cylinder 3: Misfire counts for last ten driving cycle - Total
$A4	$0C	Multiply by 1	Time	Misfire rate for cylinder 3: Misfire counts for last/ current driving cycles - Total
$A5	$0B	Multiply by 1	Time	EWMA misfire for cylinder 4: Misfire counts for last ten driving cycle - Total
$A5	$0C	Multiply by 1	Time	Misfire rate for cylinder 4: Misfire counts for last/ current driving cycles - Total

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester software must be version 9.0 or newer to view the Readiness Monitor status. To view the status, select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD ll scan tool can also be used to view the Readiness Monitor status.

HINT:
Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.
The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

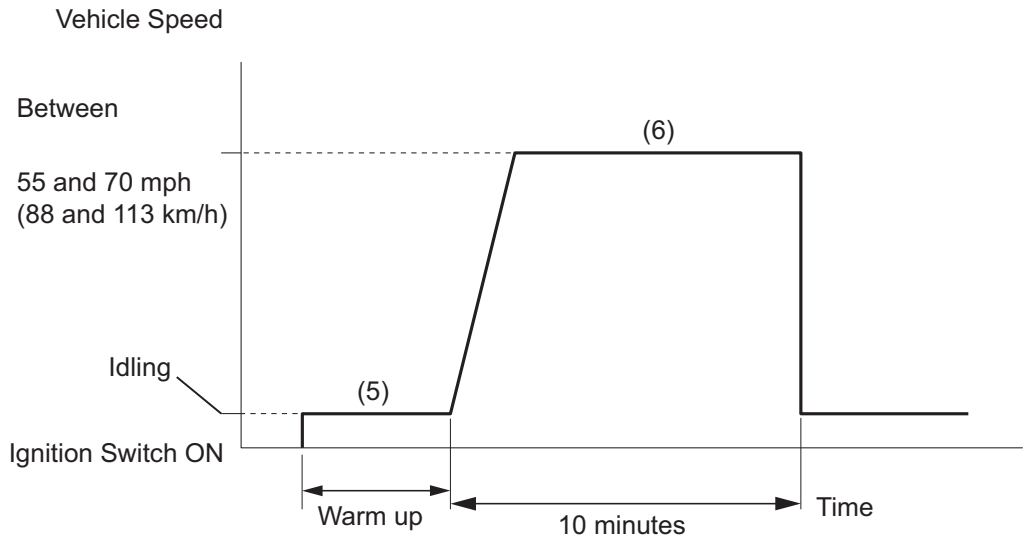
CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.
NOTICE:
These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.
In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.
To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

Contents

Steps	Section Titles
2	Catalyst Monitor (Active Air-Fuel Ratio Control Type)

Steps	Section Titles
3	EVAP System Monitor (Key-Off Type)
4	Air-Fuel Ratio (A/F) and Heated Oxygen (HO2) Sensor Monitors (Active Air-Fuel Ratio Control Type)
5	Air-Fuel Ratio (A/F) and Heated Oxygen (HO2) Sensor Heater Monitors (Front A/F and Rear HO2 Sensor Type)

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF

(b) Drive Pattern
(1) Connect a intelligent tester or OBD II scan tool to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester or scan tool ON.
(4) Clear DTCs (where set) (see page ES-40).
(5) Start the engine and warm it up.
(6) Drive the vehicle at between 55 mph and 70 mph (88 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester or scan tool.
(2) If the status does not switch to COMPL (complete), extend the driving time.

3. EVAP SYSTEM MONITOR (KEY-OFF TYPE)

(a) Preconditions
The monitor will not run unless:
- The fuel tank is less than 90 % full.

- The altitude is less than 8,000 ft (2,450 m).
- The vehicle is at stationary.
- The engine coolant temperature is between 4.4°C and 35°C (40°F to 95°F).
- The intake air temperature is between 4.4°C and 35°C (40°F to 95°F).
- Vehicle was driven in the city area (or on free-way) for 10 minutes or more.

(b) Monitor Conditions

(1) Turn the ignition switch to OFF and wait for 6 hours.

HINT:

Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status

(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester or scan tool ON.
(4) Check the Readiness Monitor status displayed on the tester or scan tool.

If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

4. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

(a) Preconditions

The monitor will not run unless:

- 2 minutes or more have elapsed since the engine was started.
- The Engine Coolant Temperature (ECT) is 75°C (167°F) or more.
- Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
- Air-fuel ratio feedback control is performed.
- Fuel-cut control is performed for 8 seconds or more (for the Rear HO2 Sensor Monitor)

(b) Drive Pattern for front A/F sensor and HO2 sensor

(1) Connect a intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester ON.
(4) Clear DTCs (see page ES-40).
(5) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(6) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(7) Change the transmission to 2nd gear.
(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.

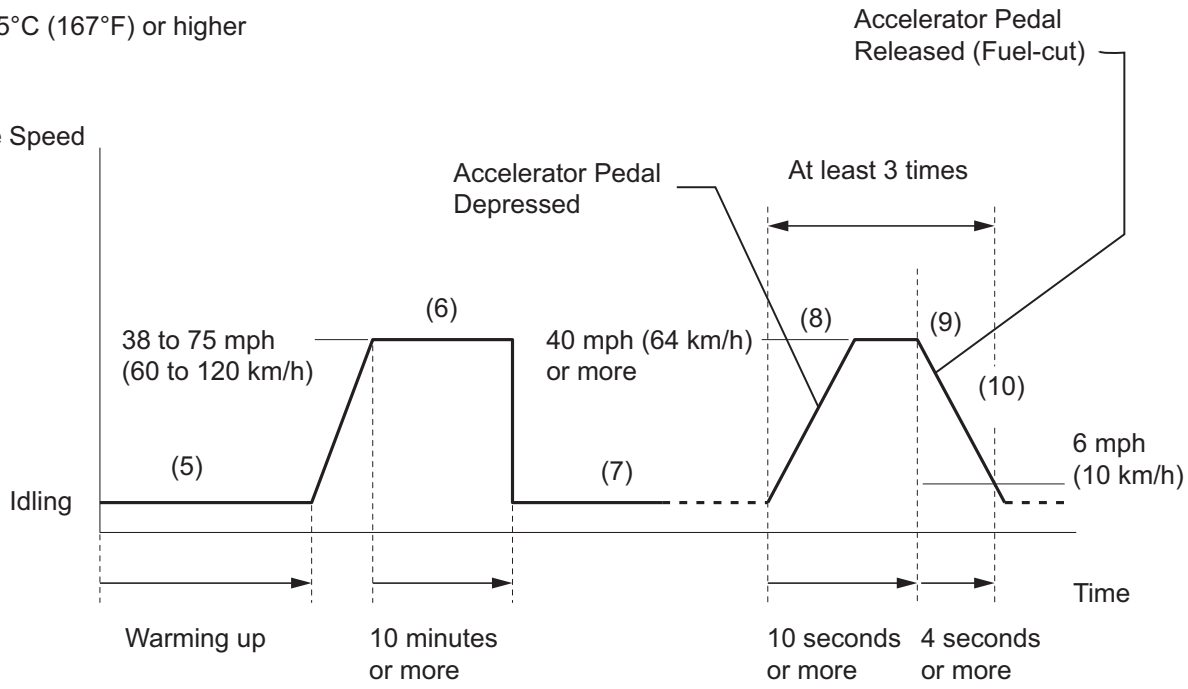
(9) Soon after performing step (8) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and then perform steps from (5) through (11) in Drive Pattern above.

ES

Monitor Drive Pattern

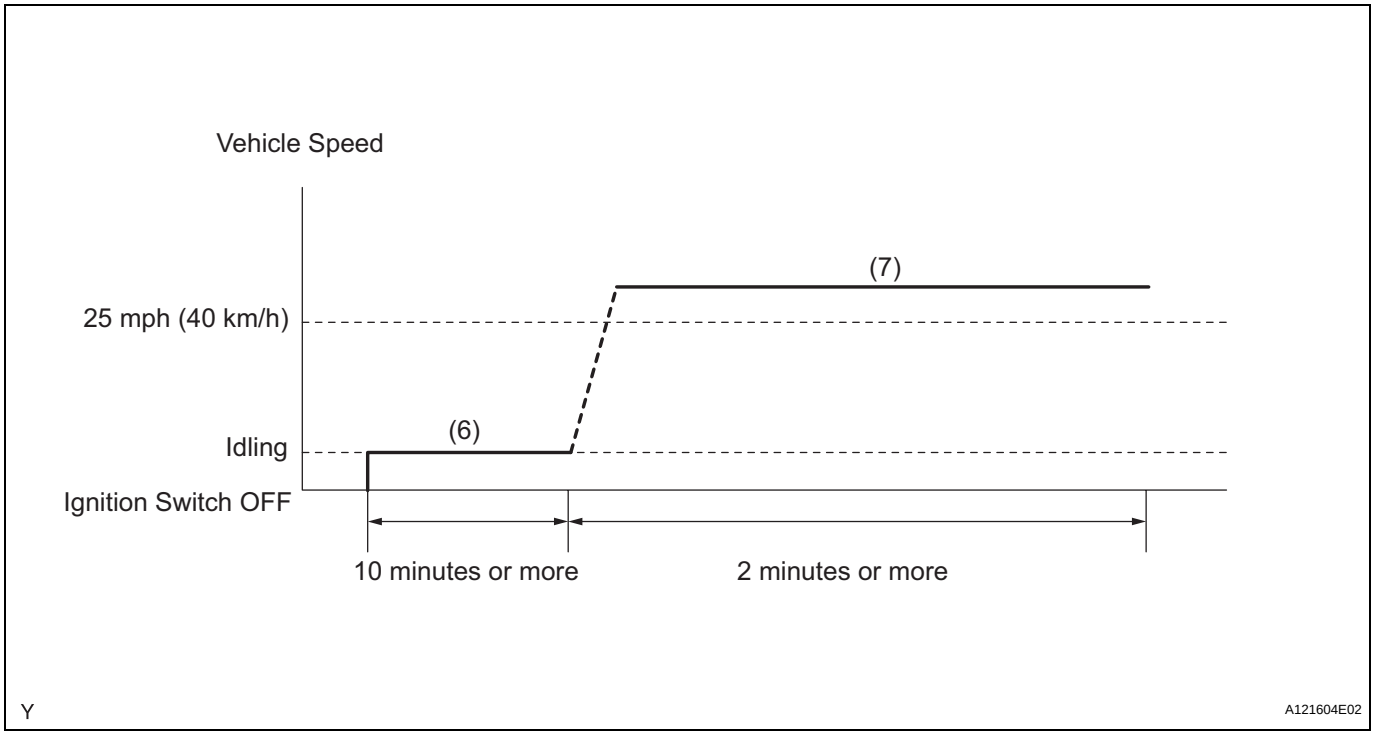
ETC: 75°C (167°F) or higher



P

A115374E02

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF

(b) Drive Pattern
(1) Connect a intelligent tester or the OBD II scan tool to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester or scan tool ON.
(4) Clear DTCs (where set) (see page ES-40).
(5) Start the engine.
(6) Allow the engine to idle for 10 minutes or more.
(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester or scan tool.

If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat steps through (5) to (7) described in the Drive Pattern above.

PROBLEM SYMPTOMS TABLE

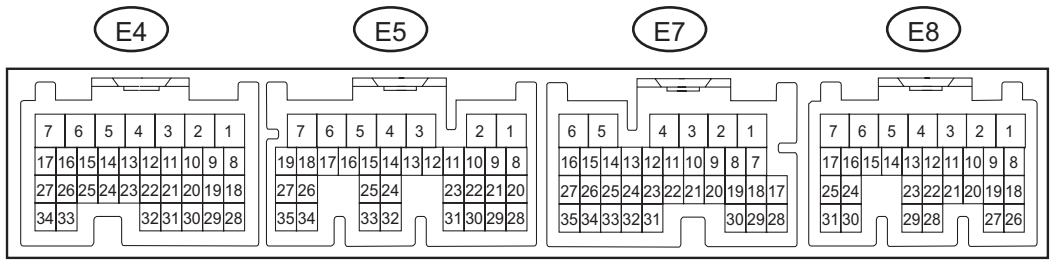
HINT:
Use the table below to help determine the cause of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Symptom	Suspected area	See page
Engine does not crank (Does not start)	1. Immobilizer system	EI-3
	2. Starter	ST-6
	3. STARTER relay	ST-12
No initial combustion (Does not start)	1. ECM power source circuit	ES-425
	2. Fuel pump control circuit	ES-433
	3. VC output circuit	ES-430
	4. ECM	ES-467
Engine cranks normally but difficult to start	1. Fuel pump control circuit	ES-433
	2. Compression	EM-3
Difficult to start with cold engine	1. Starter signal circuit	ES-262
	2. Fuel pump control circuit	ES-433
	3. Spark plug	IG-4
	4. Ignition system	IG-3
	5. Injector	FU-13
Difficult to start with warm engine	1. Starter signal circuit	ES-262
	2. Fuel pump control circuit	ES-433
	3. Spark plug	IG-4
	4. Ignition system	IG-3
	5. Injector	FU-13
High engine idling speed (Poor idling)	1. A/C signal circuit (compressor circuit)	AC-5
	2. ECM power source circuit	ES-425
	3. Electronic throttle control system	ES-452
	4. Air induction system	IT-3
	5. PCV hose	EC-23
Low engine idling speed (Poor idling)	1. A/C signal circuit (compressor circuit)	AC-5
	2. Fuel pump control circuit	ES-433
	3. Electronic throttle control system	ES-452
	4. Air induction system	IT-3
	5. PCV hose	EC-23
Rough idling (Poor idling)	1. Compression	EM-3
	2. Fuel pump control circuit	ES-433
	3. Electronic throttle control system	ES-452
	4. Air induction system	IT-3
	5. PCV hose	EC-23
	6. Mass air flow meter	ES-442

Symptom	Suspected area	See page
Hunting (Poor idling)	1. ECM power source circuit	ES-425
	2. Fuel pump control circuit	ES-433
	3. Spark plug	IG-4
	4. Ignition system	IG-3
	5. Injector	FU-13
	6. Electronic throttle control system	ES-452
	7. Air induction system	IT-3
	8. PCV hose	EC-23
Hesitation/Poor acceleration (Poor driveability)	1. Fuel pump control circuit	ES-433
	2. A/T faulty*	AT-8
	3. Spark plug	IG-4
	4. Ignition system	IG-3
	5. Injector	FU-13
	6. Mass air flow meter	ES-442
Surging (Poor driveability)	1. Fuel pump control circuit	ES-433
	2. Spark plug	IG-4
	3. Ignition system	IG-3
	4. Injector	FU-13
	5. Mass air flow meter	ES-442
Engine stalls soon after starting	1. Fuel pump control circuit	ES-433
	2. Spark plug	IG-4
	3. Ignition system	IG-3
	4. Injector	FU-13
Engine stalls during A/C operation	1. A/C signal circuit (Compressor circuit)	AC-5
	2. ECM	ES-467
Unable/difficult to refuel	1. Refueling valve (canister)	EC-20

*: Automatic Transmission models only

TERMINALS OF ECM



Y

C121776E01

HINT:
The standard normal voltage between each pair of ECM terminals is shown in the table below. The appropriate conditions for checking each pair of terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of terminals, displayed in the STD Voltage column. The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
BATT (E8-3) - E1 (E4-3)	L - BR	Battery (for measuring battery voltage and for ECM memory)	Always	9 to 14 V
+BM (E8-7) - E1 (E4-3)	LG - BR	Power source of throttle motor	Always	9 to 14 V
IGSW (E8-9) - E1 (E4-3)	O - BR	Ignition switch	Ignition switch ON	9 to 14 V
+B (E8-1) - E1 (E4-3)	B - BR	Power source of ECM	Ignition switch ON	9 to 14 V
MREL (E8-8) - E1 (E4-3)	G-W - BR	EFI relay	Ignition switch ON	9 to 14 V
VC (E4-18) - E2 (E4-28)	L - BR	Power source of sensor (specific voltage)	Ignition switch ON	4.5 to 5.0 V
VTA1 (E4-20) - E2 (E4-28)	G-B - BR	Throttle position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully released	0.5 to 1.1 V
VTA1 (E4-20) - E2 (E4-28)	G-B - BR	Throttle position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully depressed	3.3 to 4.9 V
VTA2 (E4-19) - E2 (E4-28)	G-W - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	2.1 to 3.1 V
VTA2 (E4-19) - E2 (E4-28)	G-W - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	4.5 to 5.0 V
VPA (E8-18) - EPA (E8-20)	R-Y - LG-B	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully released	0.5 to 1.1 V
VPA (E8-18) - EPA (E8-20)	R-Y - LG-B	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully depressed	2.6 to 4.5 V
VPA2 (E8-19) - EPA2 (E8-21)	GR-B - R-B	Accelerator pedal position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	1.2 to 2.0 V
VPA2 (E8-19) - EPA2 (E8-21)	GR-B - R-B	Accelerator pedal position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	3.4 to 5.0 V
VCPA (E8-26) - EPA (E8-20)	R - LG-B	Power source of accelerator pedal position sensor (for VPA)	Ignition switch ON	4.5 to 5.0 V
VCP2 (E8-27) - EPA2 (E8-21)	L-W - R-B	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch ON	4.5 to 5.0 V

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
VG (E5-28) - E2G (E5-30)	R-Y - R-W	Mass air flow meter	Idling, Shift position P or N, A/C switch OFF	0.5 to 3.0 V
THA (E5-29) - E2 (E4-28)	R-L - BR	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (E4-32) - E2 (E4-28)	Y-B - BR	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V

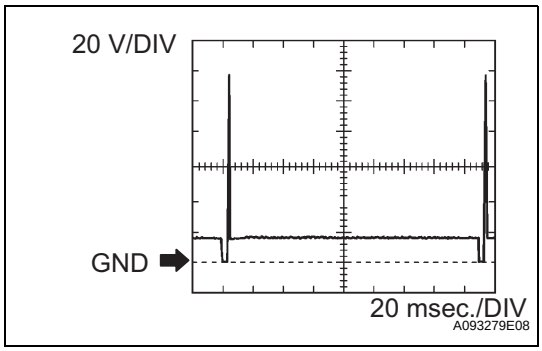
IGT1 (E4-17) - E1 (E4-3) IGT2 (E4-16) - E1 (E4-3) IGT3 (E4-15) - E1 (E4-3) IGT4 (E4-14) - E1 (E4-3)	P - BR P-L - BR LG - BR LG-B - BR	Ignition coil with igniter (ignition signal)	Idling	Pulse generation (see waveform 2)
IGF1 (E4-23) - E1 (E4-3)	W-R - BR	Ignition coil with igniter (ignition confirmation signal)	Ignition switch ON	4.5 to 5.0 V
IGF1 (E4-23) - E1 (E4-3)	W-R - BR	Ignition coil with igniter (ignition confirmation signal)	Idling	Pulse generation (see waveform 2)
G2 (E4-26) - NE- (E4-34)	L - G	Camshaft position sensor	Idling	Pulse generation (see waveform 3)
NE+ (E4-27) - NE- (E4-34)	R - G	Crankshaft position sensor	Idling	Pulse generation (see waveform 3)
FC (E8-25) - E1 (E4-3)	L-B - BR	Fuel pump control	Ignition switch ON	9 to 14 V
FC (E8-25) - E1 (E4-3)	L-B - BR	Fuel pump control	Idling	Below 1.5 V
M+ (E4-5) - ME01 (E5-3)	P - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 4)
M- (E4-4) - ME01 (E5-3)	L - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 5)
A1A+ (E4-21) - E1 (E4-3)	P - BR	A/F sensor	Always (Ignition switch ON)	3.3 V*1
A1A- (E4-31) - E1 (E4-3)	L - BR	A/F sensor	Always (Ignition switch ON)	3.0 V*1
OX1B (E4-25) - E2 (E4-28)	W - BR	Heated oxygen sensor	Engine speed maintained 2,500 rpm for 2 minutes after warming up sensor	Pulse generation (see waveform 6)
HA1A (E4-1) - E04 (E5-7)	R - W-B	A/F sensor heater	Idling	Below 3.0 V
HA1A (E4-1) - E04 (E5-7)	R - W-B	A/F sensor heater	Ignition switch ON	9 to 14 V
HT1B (E4-2) - E03 (E5-4)	G - W-B	Heated oxygen sensor heater	Idling	Below 3.0 V
HT1B (E4-2) - E03 (E5-4)	G - W-B	Heated oxygen sensor heater	Ignition switch ON	9 to 14 V
KNK1 (E4-29) - EKNK (E4-30)	B - W	Knock sensor	Maintain engine speed 4,000 rpm after warming up engine	Pulse generation (see waveform 7)
OC1+ (E4-13) - OC1- (E4-12)	L-W - W	Camshaft timing oil control valve (OCV)	Idling	Pulse generation (see waveform 8)
PRG (E5-23) - E01 (E4-7)	Y - W-B	Purge VSV	Ignition switch ON	9 to 14 V
PRG (E5-23) - E01 (E4-7)	Y - W-B	Purge VSV	Idling	Pulse generation (see waveform 9)
VPMP (E8-5) - E1 (E4-3)	V-W - BR	Vent valve (built into canister pump module)	Ignition switch ON	9 to 14 V

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
MPMP (E8-6) - E1 (E4-3)	G - BR	Leak detection pump (built into canister pump module)	• Leak detection pump OFF	0 to 3 V
MPMP (E8-6) - E1 (E4-3)	G - BR	Leak detection pump (built into canister pump module)	• Leak detection pump ON	9 to 14 V
PPMP (E8-31) - E2 (E4-28)	GR - BR	Canister pressure sensor (built into canister pump module)	Ignition switch ON	3 to 3.6 V
STA (E8-12) - E1 (E4-3)	B-Y - BR	Starter signal	Shift position N, Ignition switch START	5.5 V or more
STP (E7-4) - E1 (E4-3)	L - BR	Stop light switch	Brake pedal depressed	7.5 to 14 V
STP (E7-4) - E1 (E4-3)	L - BR	Stop light switch	Brake pedal released	Below 1.5 V
ST1- (E8-16) - E1 (E4-3)	V-W - BR	Stop light switch	Ignition switch ON, Brake pedal depressed	Below 1.5 V
ST1- (E8-16) - E1 (E4-3)	V-W - BR	Stop light switch	Ignition switch ON, Brake pedal released	7.5 to 14 V
W (E7-30) - E01 (E4-7)	BR - W-B	MIL	Idling	9 to 14 V
W (E7-30) - E01 (E4-7)	BR - W-B	MIL	Ignition switch ON	Below 3.5 V
ELS (E8-15) - E1 (E4-3)	G - BR	Electric load	Tail light switch ON	7.5 to 14 V
ELS (E8-15) - E1 (E4-3)	G - BR	Electric load	Tail light switch OFF	0 to 1.5 V
ELS2 (E7-20) - E1 (E4-3)	B-W - BR	Electric load	Vehicle stationary, Voltage inverter outputs more than 100 W	9 to 14 V
ELS2 (E7-20) - E1 (E4-3)	B-W - BR	Electric load	Vehicle stationary, Voltage inverter outputs 100 W or less	0 to 1.5 V
TACH (E7-1) - E1 (E4-3)	B-W - BR	Engine speed	Idling	Pulse generation (see waveform 10)
SPD (E7-8) - E1 (E4-3)	V-W - BR	Speed signal from combination meter	Driving at 12 mph (20 km/h)	Pulse generation (see waveform 11)
TC (E7-17) - E1 (E4-3)	P-B - BR	Terminal TC of DLC 3	Ignition switch ON	9 to 14 V
PSW (E5-32) - E1 (E4-3)	G-W - BR	Power steering oil pressure switch	While turning steering wheel	Below 1.5 V
F/PS (E7-32) - E1 (E4-3)	R - BR	Airbag sensor assembly	Idling with warm engine	Pulse generation (see waveform 12)
NSW (E8-30) - E1 (E4-3)	V - BR	Park/Neutral switch signal	IG switch ON and shift lever P or N position	Below 1 V
NSW (E8-30) - E1 (E4-3)	V - BR	Park/Neutral switch signal	IG switch ON and shift lever except P and N	9 to 14 V
*2 CANH (E7-33) - E1 (E4-3)	B - BR	Communication signal with other components	Ignition switch ON	Pulse generation (see waveform 13)
*2 CANL (E7-34) - E1 (E4-3)	W - BR	Communication signal with other components	Ignition switch ON	Pulse generation (see waveform 14)
AIRV (E4-24) - E1 (E4-3)	R-W - BR	Air switching valve for secondary air injection system	Idling	9 to 14 V
AIRP (E4-11) - E1 (E4-3)	Y-R - BR	Air pump control	Idling	9 to 14 V
AIDI (E5-20) - E1 (E4-3)	G-R - BR	Diagnostic information signal for air injection system	Air injection system operates	Pulse generation (see waveform 15)
AIP (E5-22) - E2 (E4-28)	GR - BR	Secondary air injection system pressure signal	Ignition switch ON	4.5 to 5.0 V

*1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.

*2: Only for the vehicle equipped with VSC (see page CA-22).

ES

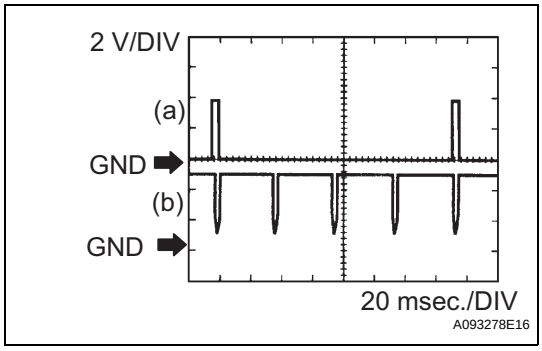


1. WAVEFORM 1

Fuel injector

ECM Terminal Names	Between #10 (to 40) and E01
Tester Ranges	20 V/DIV, 20 msec./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

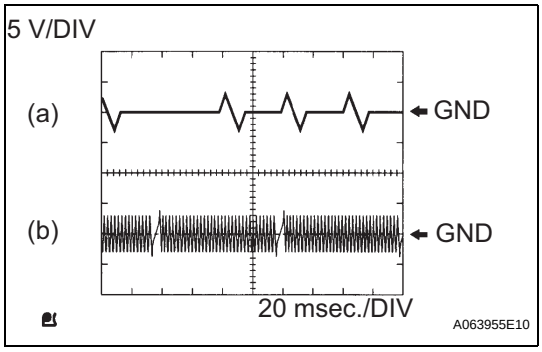


2. WAVEFORM 2

(a) Igniter IGT signal (from ECM to igniter)
(b) Igniter IGF signal (from igniter to ECM)

ECM Terminal Names	(a) Between IGT (1 to 4) and E1 (b) Between IGF1 and E1
Tester Ranges	2 V/DIV, 20 msec./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

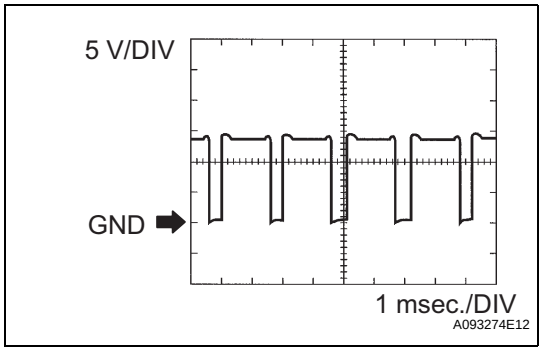


3. WAVEFORM 3

(a) Camshaft position sensor
(b) Crankshaft position sensor

ECM Terminal Names	(a) Between G2+ and NE- (b) Between NE+ and NE-
Tester Ranges	5 V/DIV, 20 msec./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

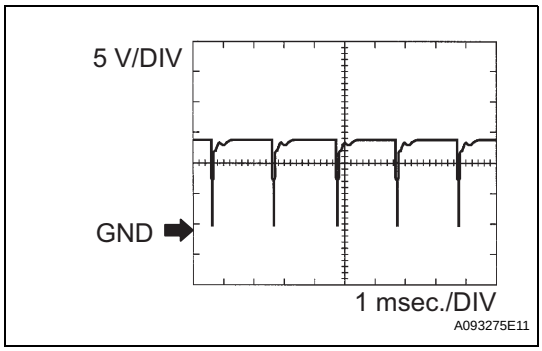


4. WAVEFORM 4

Throttle actuator positive terminal

ECM Terminal Names	Between M+ and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

HINT:
The duty ratio varies depending on the throttle actuator operation.

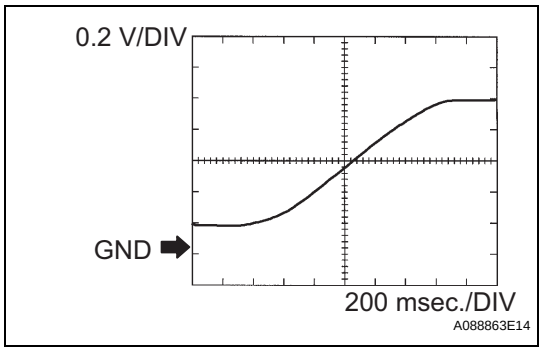


5. WAVEFORM 5

Throttle actuator negative terminal

ECM Terminal Names	Between M- and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

HINT:
The duty ratio varies depending on the throttle actuator operation.

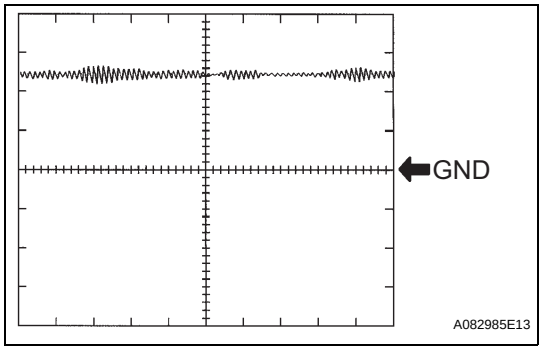


6. WAVEFORM 6

Heated oxygen sensor

ECM Terminal Names	Between OX1B and E2
Tester Ranges	0.2 V/DIV, 200 msec./DIV
Conditions	Engine speed maintained 2,500 rpm for 2 minutes after warming up engine

HINT:
In the DATA LIST, item O2S B1S2 shows the ECM input values from the heated oxygen sensor.

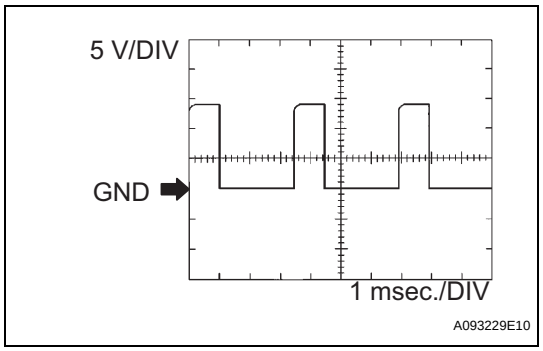


7. WAVEFORM 7

Knock sensor

ECM Terminal Names	Between KNK1 and EKNK
Tester Ranges	0.01 to 10 V/DIV, 0.01 to 10 msec./DIV
Conditions	Engine speed maintained 4,000 rpm after warming up engine

HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.

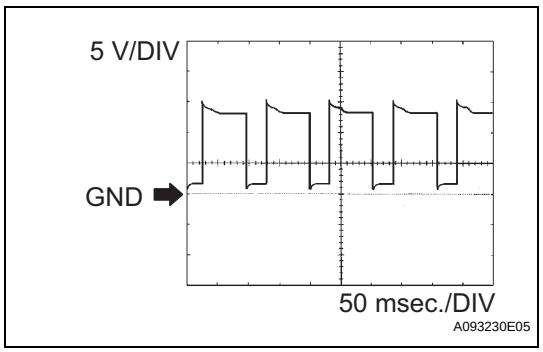


8. WAVEFORM 8

Camshaft timing oil control valve (OCV)

ECM Terminal Names	Between OC1+ and OC1-
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.



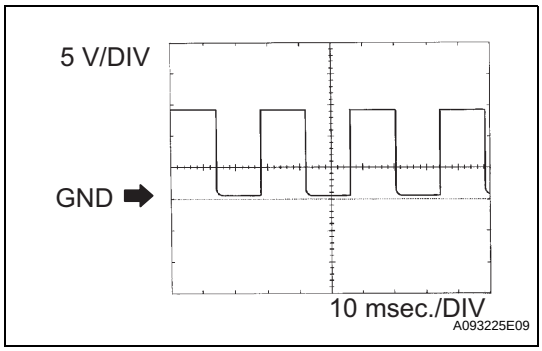
9. WAVEFORM 9

EVAP VSV

ECM Terminal Names	Between PRG and E01
Tester Ranges	5 V/DIV, 50 msec./DIV
Conditions	Idling

HINT:
If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.

ES

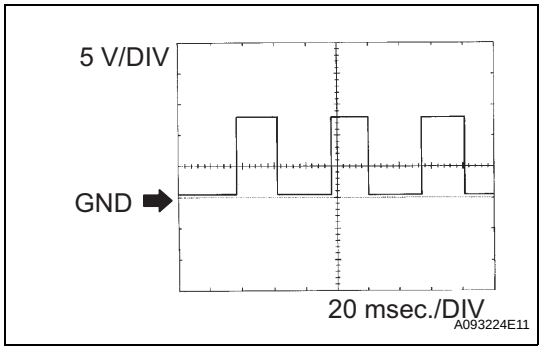


10. WAVEFORM 10

Engine speed signal

ECM Terminal Names	Between TACH and E1
Tester Ranges	5 V/DIV, 10 msec./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

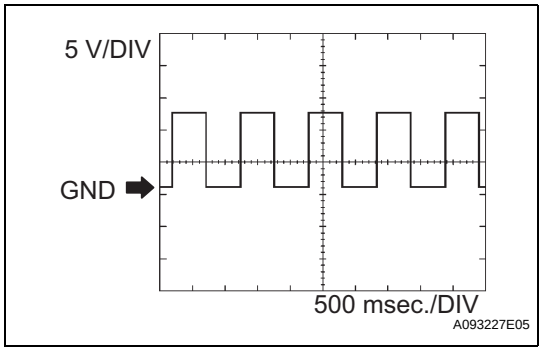


11. WAVEFORM 11

Vehicle speed signal

ECM Terminal Names	Between SPD and E1
Tester Ranges	5 V/DIV, 20 msec./DIV
Conditions	Driving at 12 mph (20 km/h)

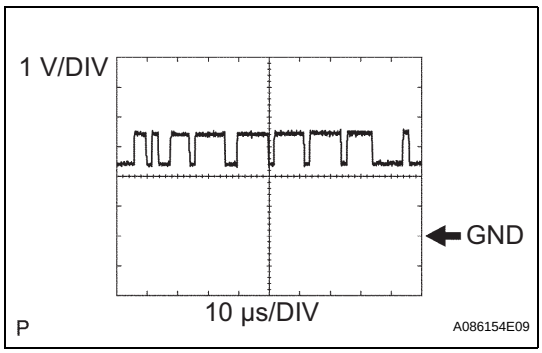
HINT:
The wavelength becomes shorter as the vehicle speed increases.



12. WAVEFORM 12

Airbag sensor assembly

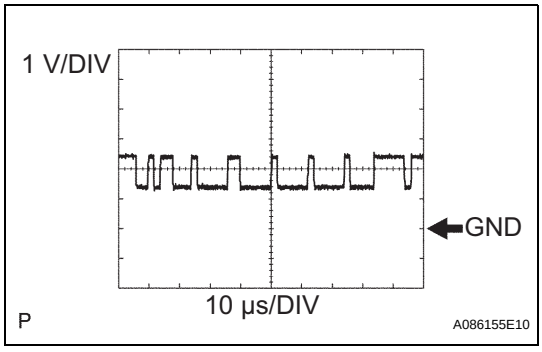
ECM Terminal Names	Between F/PS and E1
Tester Ranges	5 V/DIV, 500 msec./DIV
Conditions	Idling with warm engine



13. WAVEFORM 13

CAN communication signal (reference)

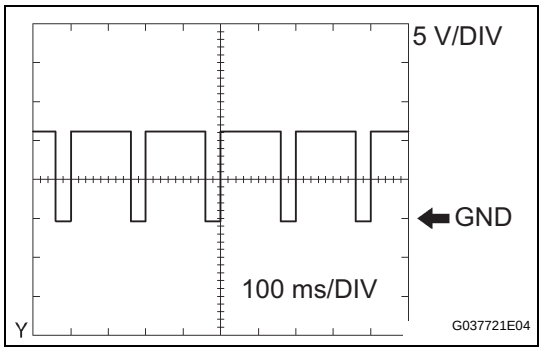
ECM Terminal Names	Between CANH and E1
Tester Ranges	1 V/DIV, 10 µs/DIV
Conditions	Ignition switch ON



14. WAVEFORM 14

CAN communication signal (reference)

ECM Terminal Names	Between CANL and E1
Tester Ranges	1 V/DIV, 10 µs/DIV
Conditions	Ignition switch ON



15. WAVEFORM 15

Terminal DI of air injection control driver

ECM Terminal Names	Between AIDI and E1
Tester Ranges	5 V/DIV, 100 ms/DIV
Conditions	Performing ACTIVE TEST using intelligent tester (air injection system)

HINT:

The wavelength changes when the air injection control driver detects malfunctions in the air injection system (see page ES-193).

ES

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, a intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

OBD II regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control systems and components

(b) The power train control components (which affect vehicle emissions)

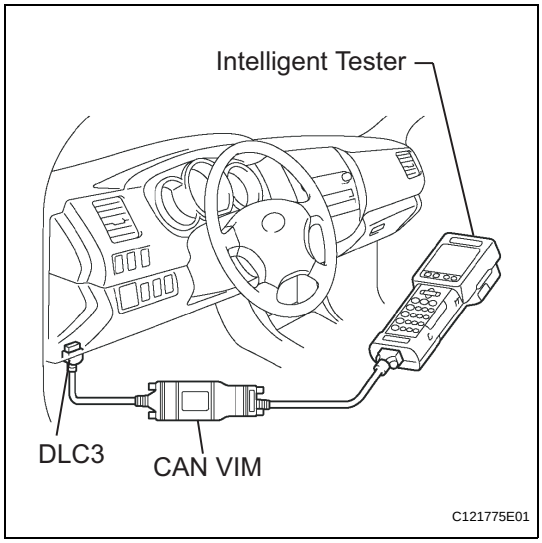
(c) The computer itself

In addition, the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check DTCs, connect a intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of engine data. The DTCs and freeze frame data can be erased with the tester (see page ES-40).

In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication is introduced in this system (CAN: Controller Area Network). It minimizes a gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and to simplify the wire harness connection.

Since this system is equipped with the CAN communication, connecting the CAN VIM (VIM: Vehicle Interface Module) with intelligent tester is necessary to display any information from the ECM. (Also the communication between the intelligent tester and the ECM uses CAN communication signal.) When confirming the DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.



2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only) (see page ES-43).

3. 2 TRIP DETECTION LOGIC

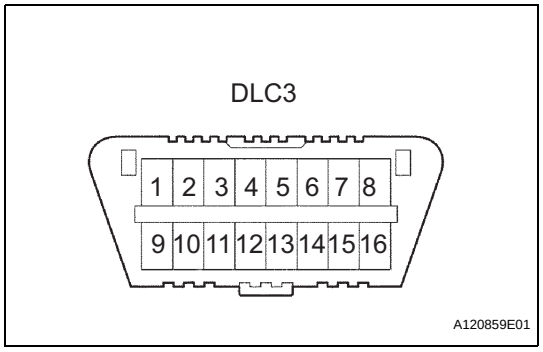
When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

Freeze frame data record the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

5. DLC3 (Data Link Connector 3)

The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always
CANH	6	CAN "High" line	CANL	54 to 69 Ω	Ignition switch OFF
CANH	6	CAN "High" line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANH	6	CAN "High" line	CG	1 kΩ or higher	Ignition switch OFF
CANL	4	CAN "Low" line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANL	4	CAN "Low" line	CG	1 kΩ or higher	Ignition switch OFF

HINT:

The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of a intelligent tester, turn the ignition switch to ON and turn the tester ON. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

If communication is normal: Inspect the DLC3 on the original vehicle.

If communication is impossible: The problem is probably with the tester itself. Consult the Service Department listed in the instruction manual.

6. BATTERY VOLTAGE

Battery Voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the ignition switch is first turned to ON (the engine is not running).

(b) The MIL should turn off when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

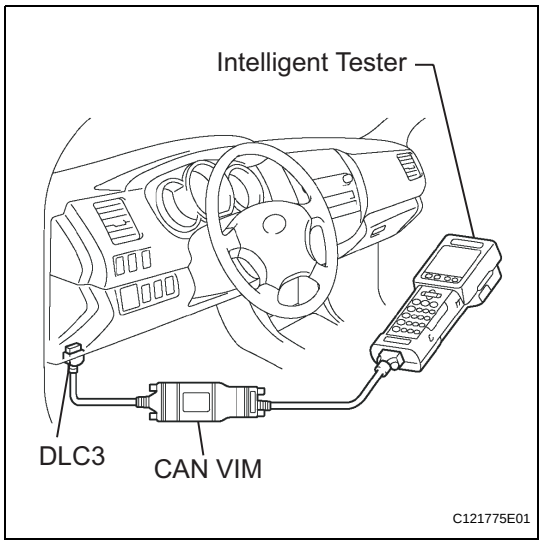
HINT:

If the MIL is not illuminated when the ignition switch is first turned to ON, check the MIL circuit (see page ES-439).

DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of DTCs and freeze frame data.
HINT:

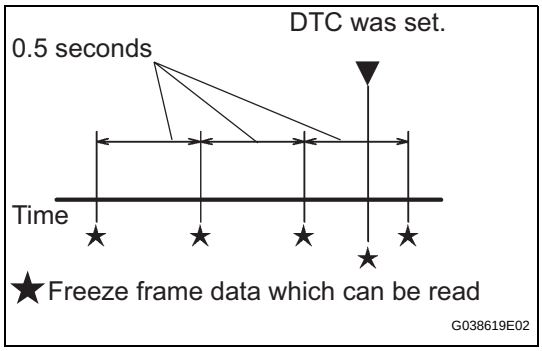
- DTCs which are stored in the ECM can be displayed on a intelligent tester. A intelligent tester can display current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- The pending DTCs are set when the malfunction is detected once.



1. CHECK DTC (Using a intelligent tester)
(a) Connect a intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES or PENDING CODES.
(e) Check DTCs and freeze frame data, and then write them down.
(f) Proceed to Diagnosis Trouble Code Chart to check the details of the DTCs (See page ES-54).

2. CLEAR DTC (Using the intelligent tester)
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(e) Press the YES button.

3. CLEAR DTC (Without using the intelligent tester)
(a) Perform either one of the following operations.
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the EFI and ETCS fuses from the Relay Block (R/B) located inside the engine compartment for more than 1 minute.



FREEZE FRAME DATA

1. DESCRIPTION

Freeze frame data record the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it can help determine if the vehicle was running or stopped, the engine was warmed up or not, the air-fuel ratio was LEAN or RICH, and other data, from the time the malfunction occurred.

HINT:

If it is impossible to replicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 data sets before the DTC was set
- 1 data set when the DTC was set
- 1 data set after the DTC was set

These data sets can be used to simulate the condition of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.

2. LIST OF FREEZE FRAME DATA

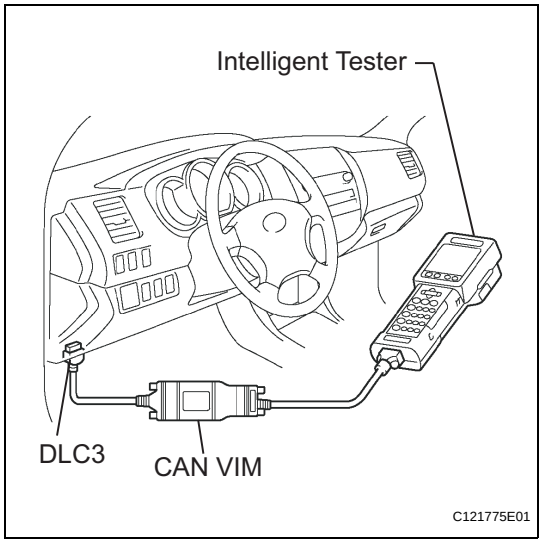
LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
INJECTOR	Injector	-
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculate load	Calculated load by ECM
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If value approximately 0.0 g/sec: • Mass air flow meter power source circuit open or short • VG circuit open or short If value 160.0 g/sec or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If value -40°C, sensor circuit open If value 140°C, sensor circuit shorted
INTAKE AIR	Intake air temperature	If value -40°C, sensor circuit open If value 140°C, sensor circuit shorted
AIR-FUEL RATIO	Air-fuel ratio	-
PURGE DENSITY	Learning value of purge density	-
PURGE FLOW	Purge flow	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
EVAP VAPOR PRES	EVAP vapor pressure	-
KNOCK CRRT VAL	Correction learning value of knocking	-
KNOCK FB VAL	Feedback value of knocking	-
ACCEL POS #1	Absolute No. 1 Accelerator Pedal Position (APP)	-

LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
ACCEL POS #2	Absolute No. 2 APP	-
THROTTLE POS	Throttle position	Read value with ignition switch ON (Do not start engine)
THROTTLE POS	Throttle sensor position	Read value with ignition switch ON (Do not start engine)
THROTTLE POS #2	Throttle sensor position #2	-
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
TOTAL FT #1	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate a continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status (Bank1)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control. • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control, malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	-
AF FT B1 S1	Fuel trim at A/F sensor	-
CAT TEMP B1 S1	Catalyst temperature	-
CAT TEMP B1 S2	Catalyst temperature	-
INI COOL TEMP	Initial engine coolant temperature	-
INI INTAKE TEMP	Initial intake air temperature	-
INJ VOL	Injection volume	-
AIR PMP PRS	Air pump pressure	(See page ES-354)
AIR PMP PLS PRS	Air pump pulsation pressure	(See page ES-354)
STARTER SIG	Starter signal	-
PS SW	Power steering signal	-
PS SIGNAL	Power steering signal (history)	This signal status usually ON until battery terminals disconnected
CTP SW	Closed throttle position switch	-
A/C SIG	A/C signal	-
ELECT LOAD SIG	Electrical load signal	-
STOP LIGHT SW	Stop light switch	-
BATTERY VOLTAGE	Battery voltage	-
ATM PRESSURE	Atmospheric pressure	-
SECOND AIR VSV	Secondary air injection system status	-
ACT VSV	A/C cut status for Active Test	-
EVAP VSV	EVAP purge VSV	VSV for EVAP controlled by ECM (ground side duty control)
FUEL PUMP / SPD	Fuel pump speed status	-

LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
VVT CTRL B1	VVT control status	-
VACUUM PUMP	Key-off EVAP system pump status	(See page ES-390)
EVAP VENT VAL	Key-off EVAP system vent valve status	-
TC/TE1	TC and TE1 terminal of DLC3	-
AI STATUS	Secondary air injection system operation prohibit	(See page ES-354)
VVTL AIM ANGL #1	VVT aim angle	-
VVT CHNG ANGL #1	VVT change angle	-
VVT OCV DUTY B1	VVT OCV operation duty	-
FC IDL	Idle fuel cut	ON: when throttle valve fully closed and engine speed over 1,500 rpm
FC TAU	FC TAU	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
IGNITION	Ignition	-
CYL #1	Cylinder #1 misfire rate	Displayed in only idling
CYL #2	Cylinder #2 misfire rate	Displayed in only idling
CYL #3	Cylinder #3 misfire rate	Displayed in only idling
CYL #4	Cylinder #4 misfire rate	Displayed in only idling
CYL ALL	All cylinder misfire rate	Displayed in only idling
MISFIRE RPM	Misfire RPM	-
MISFIRE LOAD	Misfire load	-
MISFIRE MARGIN	Misfire monitoring	-
ENG RUN TIME	Accumulated engine running time	-
TIME DTC CLEAR	Cumulative time after DTC cleared	-
DIST DTC CLEAR	Accumulated distance from DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-
MODEL CODE	Identifying model code	TRN2###
FAN MOTOR	Electric fan motor	-
VAPOR PRESS	Vapor pressure	EVAP system pressure as read by canister pressure sensor
ENG OIL PRES SW	Engine oil pressure switch signal	Always ON while engine running
ENGINE TYPE	Identifying engine type	2TR
CYLINDER NUMBER	Identifying cylinder number	4 or 6
DESTINATION	Identifying destination	A (America)
MODEL YEAR	Identifying model year	200#
SYSTEM	Identifying engine system	GASOLINE (gasoline engine)

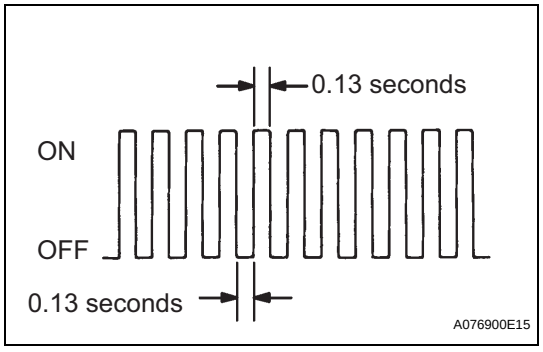
CHECK MODE PROCEDURE

HINT:
Intelligent tester only:
Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected by normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or OFF while in check mode.
Before changing modes, always check and make a note of any DTCs and freeze frame data.



1. CHECK MODE PROCEDURE (Using the intelligent tester)

(a) Check and ensure the following conditions:
  (1) Battery voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transmission in the P or N positions
  (4) A/C switched OFF
(b) Turn the ignition switch to OFF.
(c) Connect a intelligent tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.
(g) Switch the ECM from normal mode to check mode.



(h) Make sure the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure the MIL turns off.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check DTCs and freeze frame data using the tester.

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily.

DTCs	Components	Fail-Safe Operations	Fail-Safe Deactivation Conditions
P0031 and P0032	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater.	Ignition switch OFF
P0037 and P0038	Heated Oxygen (HO2) Sensor Heater	ECM turns off HO2 sensor heater	Ignition switch OFF
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position.	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F).	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F).	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and throttle valve returned to 6.5° throttle position by return spring. ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle, to allow vehicle to continue at minimal speed.*	Pass condition detected and then ignition switch turned OFF
P0327 and P0328	Knock Sensor	ECM sets ignition timing to maximum retard.	Ignition switch OFF
P0351 to P0354	Igniter	ECM cuts fuel.	Pass condition detected
P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138	Accelerator Pedal Position (APP) Sensor	APP sensor has 2 sensor circuits: Main and Sub. If either of circuits malfunctions, ECM controls engine using other circuit. If both of circuits malfunction, ECM regards accelerator pedal as being released. As a result, throttle valve is closed and engine idles.	Pass condition detected and then ignition switch turned OFF

NOTE:

* The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.

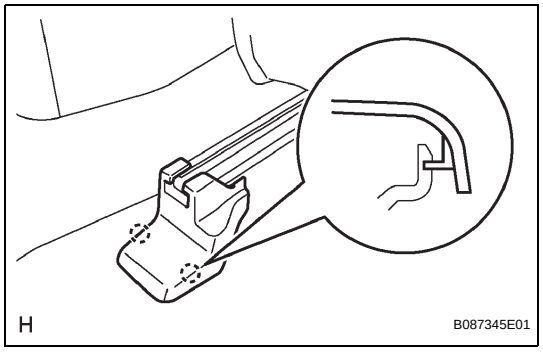
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).

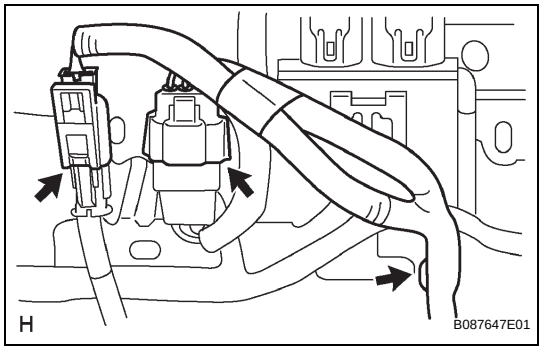
2. REMOVE SEAT TRACK COVER



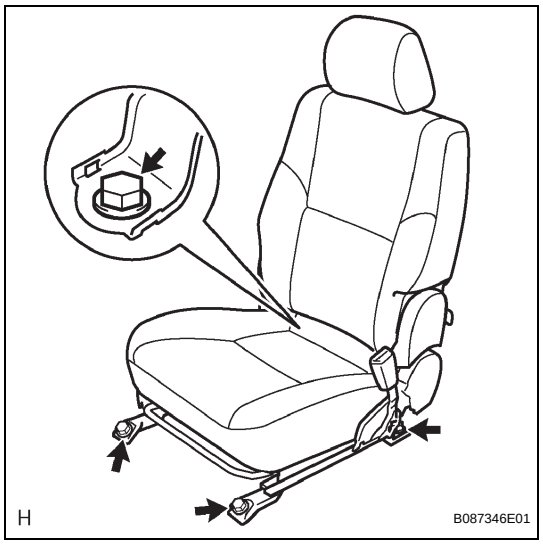
HINT:
Follow the same procedures as for the opposite side.

(a) Disengage the 2 claws and remove the seat track cover.

3. REMOVE FRONT SEAT ASSEMBLY



(a) Disconnect the connector.
(b) w/ Front Seat Side Airbag:
  (1) Disconnect the connector.
(c) Using a clip remover, remove the wire harness clamp.

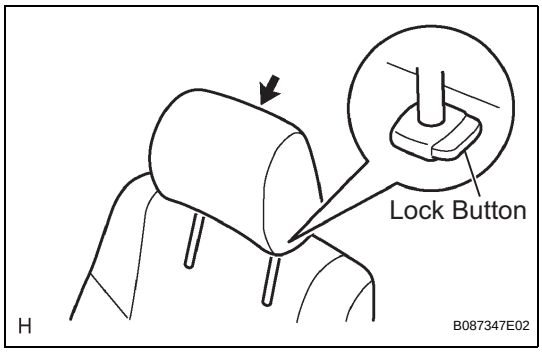


(d) Remove the 4 bolts and front seat.

SE

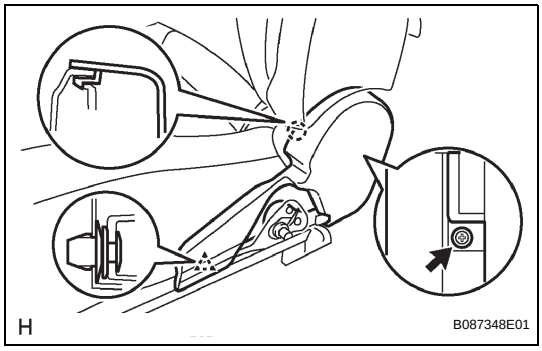
DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat back spring and front seat with adjuster frame could cause injuries to your hands.

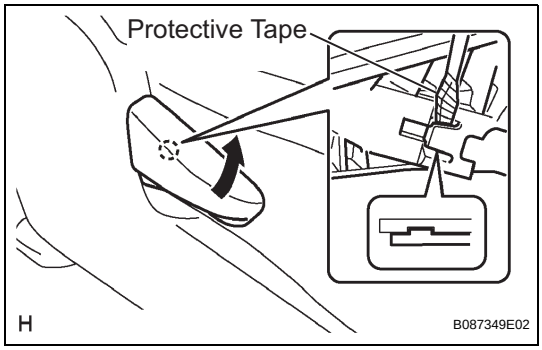


1. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
   (a) Disengage the lock button of the front seat headrest support and remove the front seat headrest.

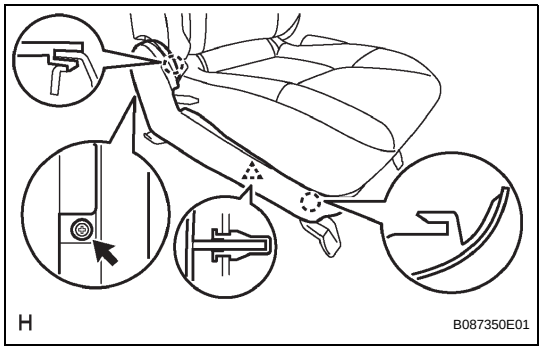
2. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SE-39)**



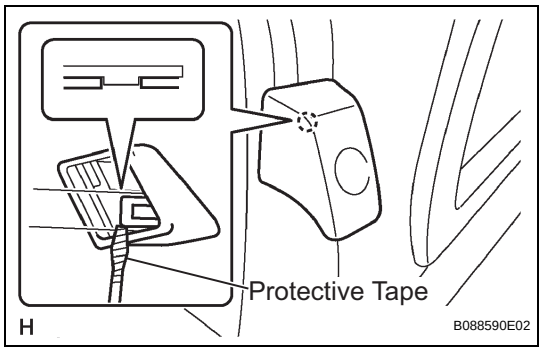
3. **REMOVE FRONT SEAT CUSHION INNER SHIELD**
   (a) Remove the screw.
   (b) Disengage the claw and clip, and remove the front seat cushion shield inner.



4. **REMOVE RECLINING ADJUSTER RELEASE HANDLE**
   (a) Using a screwdriver with its tip taped in protective tape, disengage the claw and remove the reclining adjuster release handle.



5. **REMOVE FRONT SEAT CUSHION SHIELD**
   (a) Remove the screw.
   (b) Disengage the 2 claws and clip, and remove the front seat cushion shield.



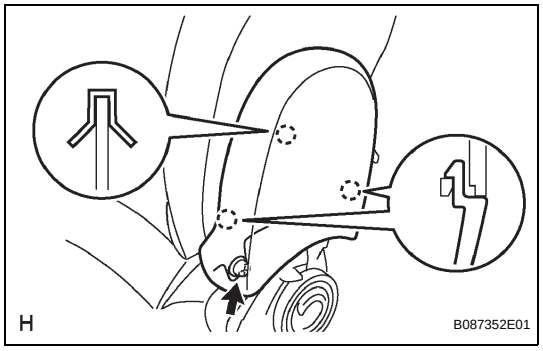
6. REMOVE RECLINING ADJUSTER RELEASE KNOB LH

(a) Using a screwdriver with its tip taped in protective tape, disengage the claw and remove the reclining adjuster release knob.

7. REMOVE RECLINING ADJUSTER RELEASE KNOB RH

HINT:

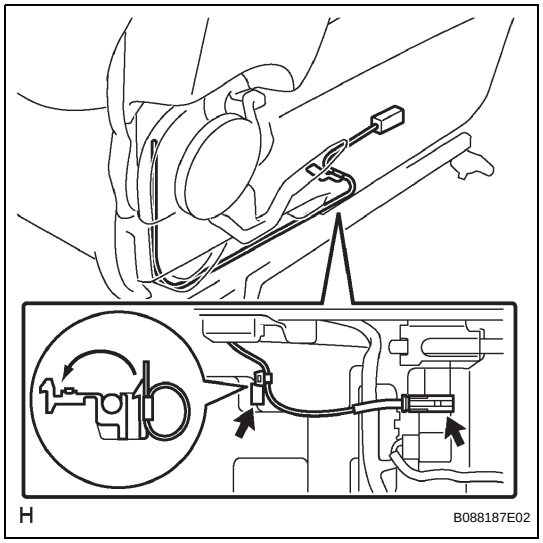
Follow the same procedures as for the reclining adjuster release handle LH.



8. REMOVE FRONT SEAT BACK SHIELD LH

(a) Remove the screw.

(b) Disengage the 3 claws and remove the front seat back shield.

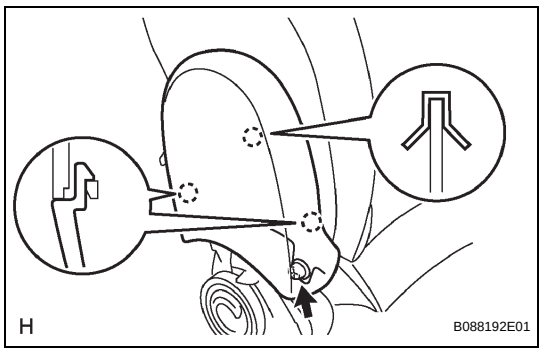


9. REMOVE FRONT SEAT BACK SHIELD RH

(a) w/ Front Seat Side Airbag:

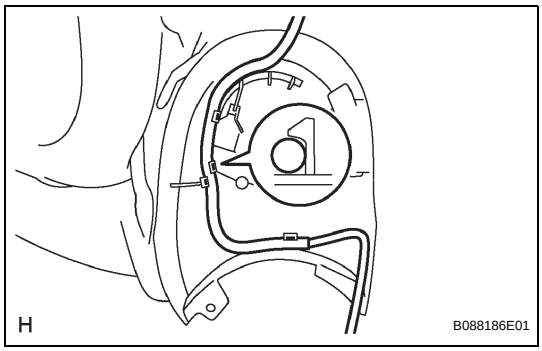
(1) Using a clip remover, remove the connector clamp.

(2) Remove the wire harness clamp.

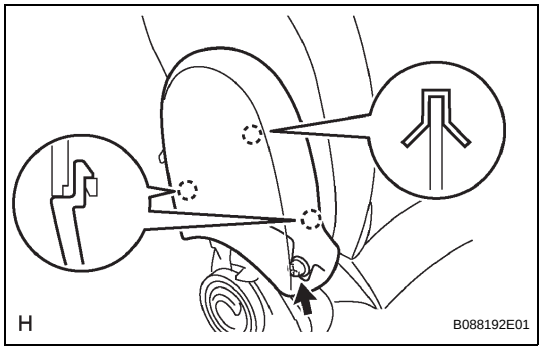


(3) Remove the screw.

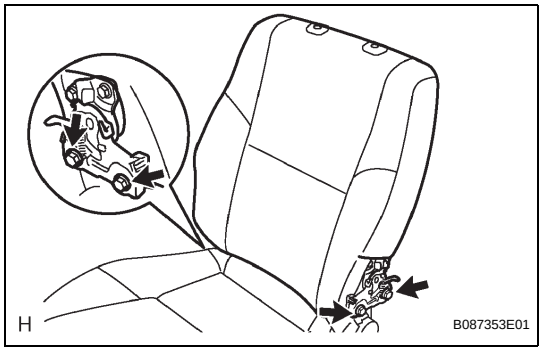
(4) Disengage the 3 claws and remove the front seat back shield.



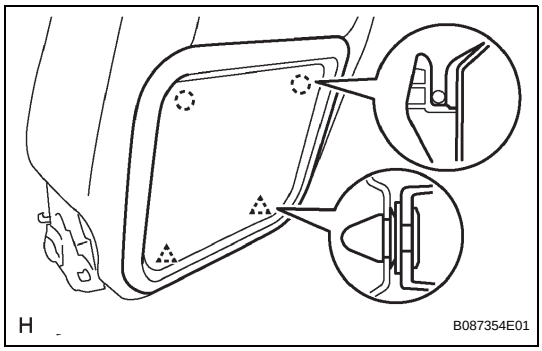
(5) Disengage the 4 claws and remove the front seat side air bag wire.



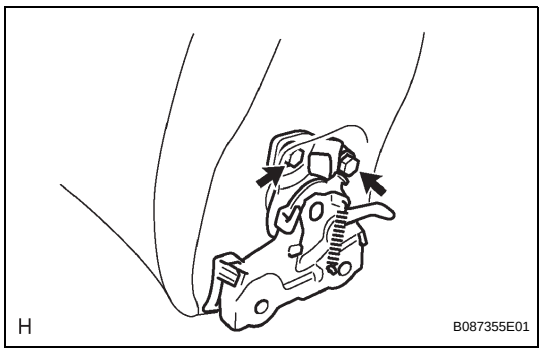
(b) w/o Front Seat Side Airbag:
(1) Remove the screw.
(2) Disengage the 3 claws and remove the front seat back shield.



10. REMOVE FRONT SEAT BACK ASSEMBLY
(a) Remove the 4 bolts and front seat back.

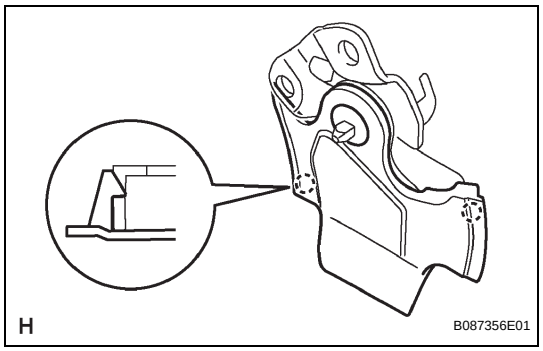


11. REMOVE FRONT SEAT BACK BOARD
(a) Disengage the 2 claws and 2 clips, and remove the front seat back board.



12. REMOVE FRONT SEAT BACK LOCK SUB-ASSEMBLY LH
(a) Remove the 2 bolts and front seat back lock.

13. REMOVE FRONT SEAT BACK LOCK SUB-ASSEMBLY RH
HINT:
Follow the same procedures as for the front seat back lock sub-assembly LH.



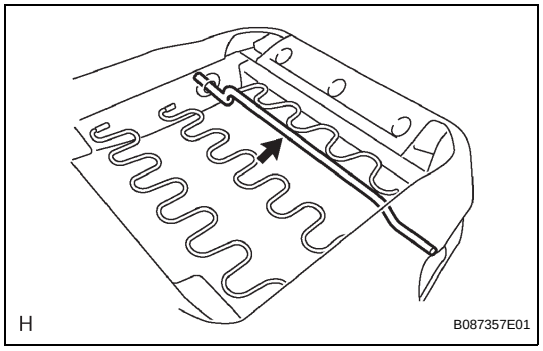
14. REMOVE FRONT SEAT HINGE COVER LH

(a) Remove the seat hinge cover.

15. REMOVE FRONT SEAT HINGE COVER RH

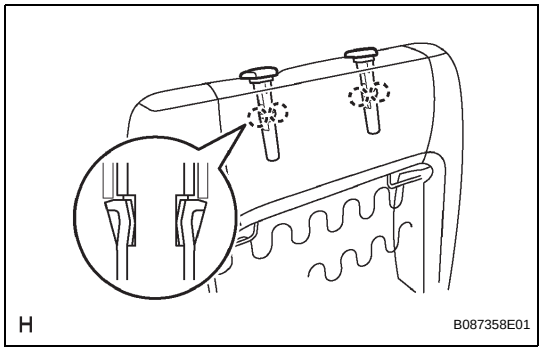
HINT:

Follow the same procedures as for the seat hinge cover LH.



16. REMOVE FRONT SEAT BACK LOCK HANDLE ROD

(a) Remove the front seat back lock handle rod.

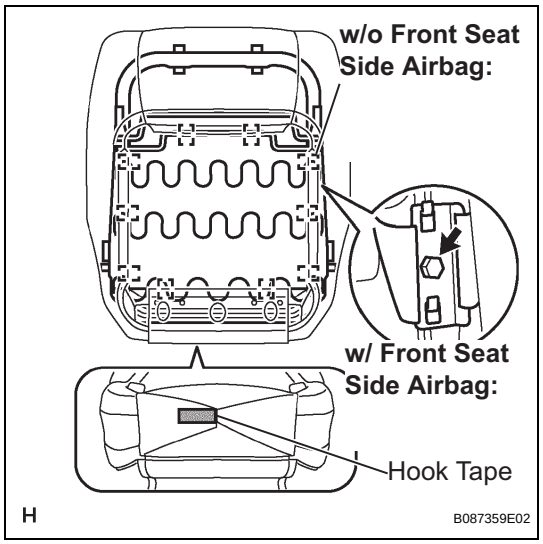


17. REMOVE FRONT SEAT HEADREST SUPPORT

HINT:

Follow the same procedures as for the opposite side.

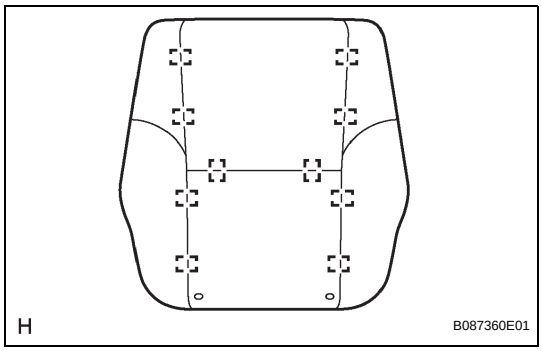
(a) Disengage the 2 claws and remove the front seat headrest support.



18. REMOVE FRONT SEAT BACK SPRING ASSEMBLY

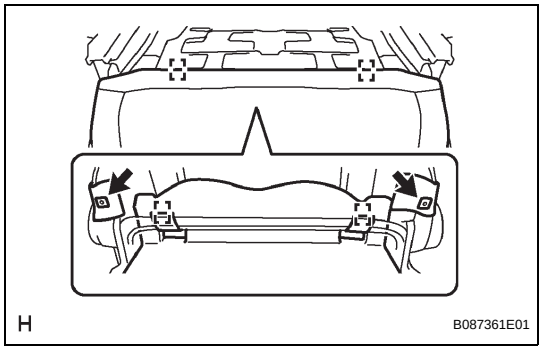
(a) w/ Front Seat Side Airbag:
  (1) Remove the bolt and inner hook.
  (2) Remove the 9 hog rings.
  (3) Remove the hook tape.
  (4) Remove the front seat back spring from the front seat back pad.

(b) w/o Front Seat Side Airbag:
  (1) Remove the 10 hog rings.
  (2) Remove the hook tape.
  (3) Remove the front seat back spring from the front seat back pad.



19. REMOVE FRONT SEAT BACK COVER

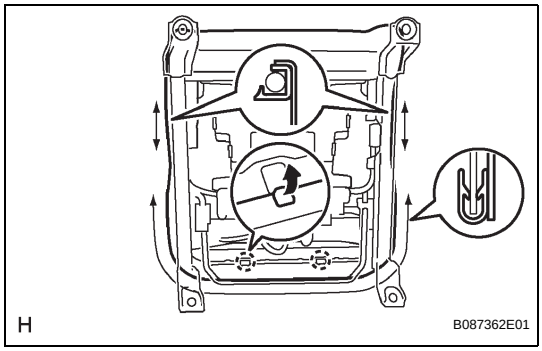
(a) Remove the 10 hog rings and front seat back cover.



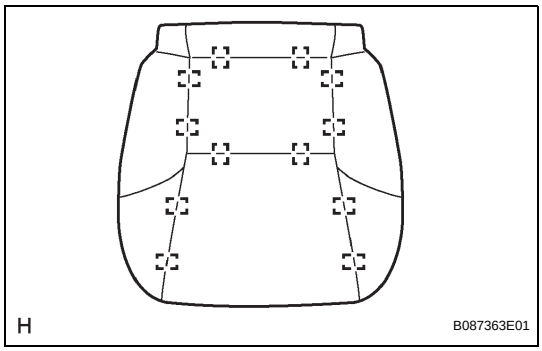
20. REMOVE FRONT SEAT CUSHION ASSEMBLY

(a) Remove the 4 hog rings.

(b) Remove the front seat cushion cover from the front seat frame adjuster.

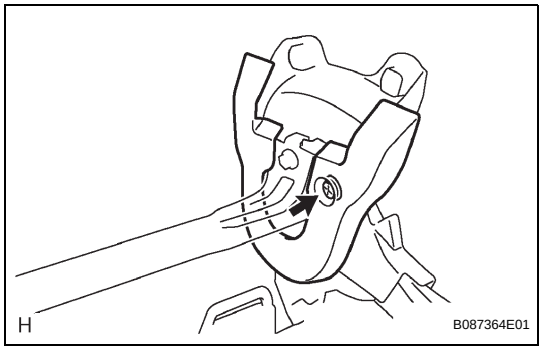


(c) Disengage the 2 claws and 3 hooks, and remove the front seat cushion pad together with the front seat cushion cover.



21. REMOVE FRONT SEAT CUSHION COVER

(a) Remove the 12 hog rings and front seat cushion cover.



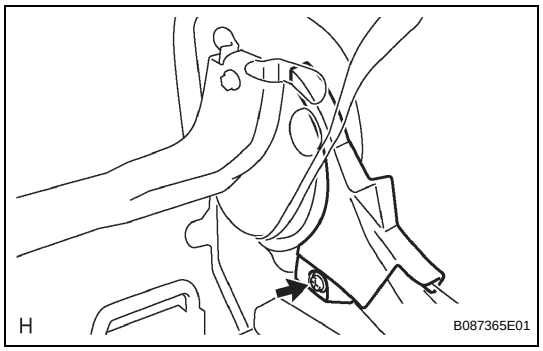
22. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw and reclining adjuster inside cover.

23. REMOVE RECLINING ADJUSTER INSIDE COVER RH

HINT:

Follow the same procedures as for the reclining adjuster inside cover LH.

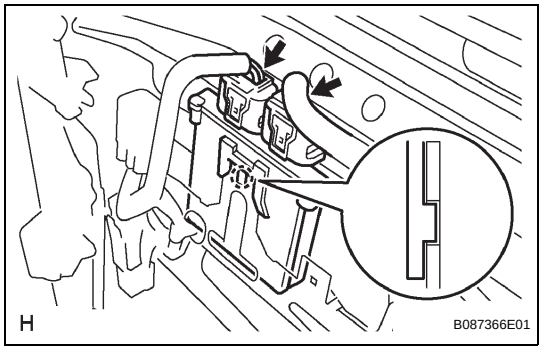


24. REMOVE RECLINING ADJUSTER OUTSIDE COVER LH

(a) Remove the screw and reclining adjuster outside cover.

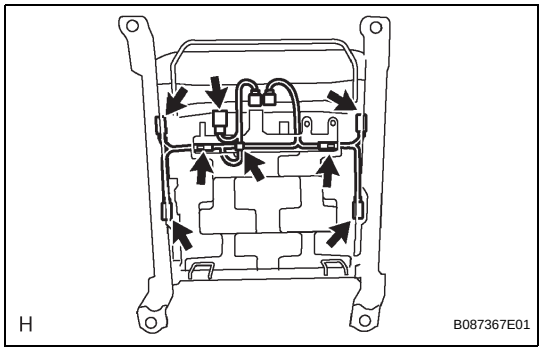
25. REMOVE RECLINING ADJUSTER OUTSIDE COVER RH

HINT:
Follow the same procedures as for the reclining adjuster outside cover LH.



26. REMOVE OCCUPANT CLASSIFICATION ECU

(a) Disconnect the 2 connectors.
(b) Disengage the claw and remove the occupant classification ECU.

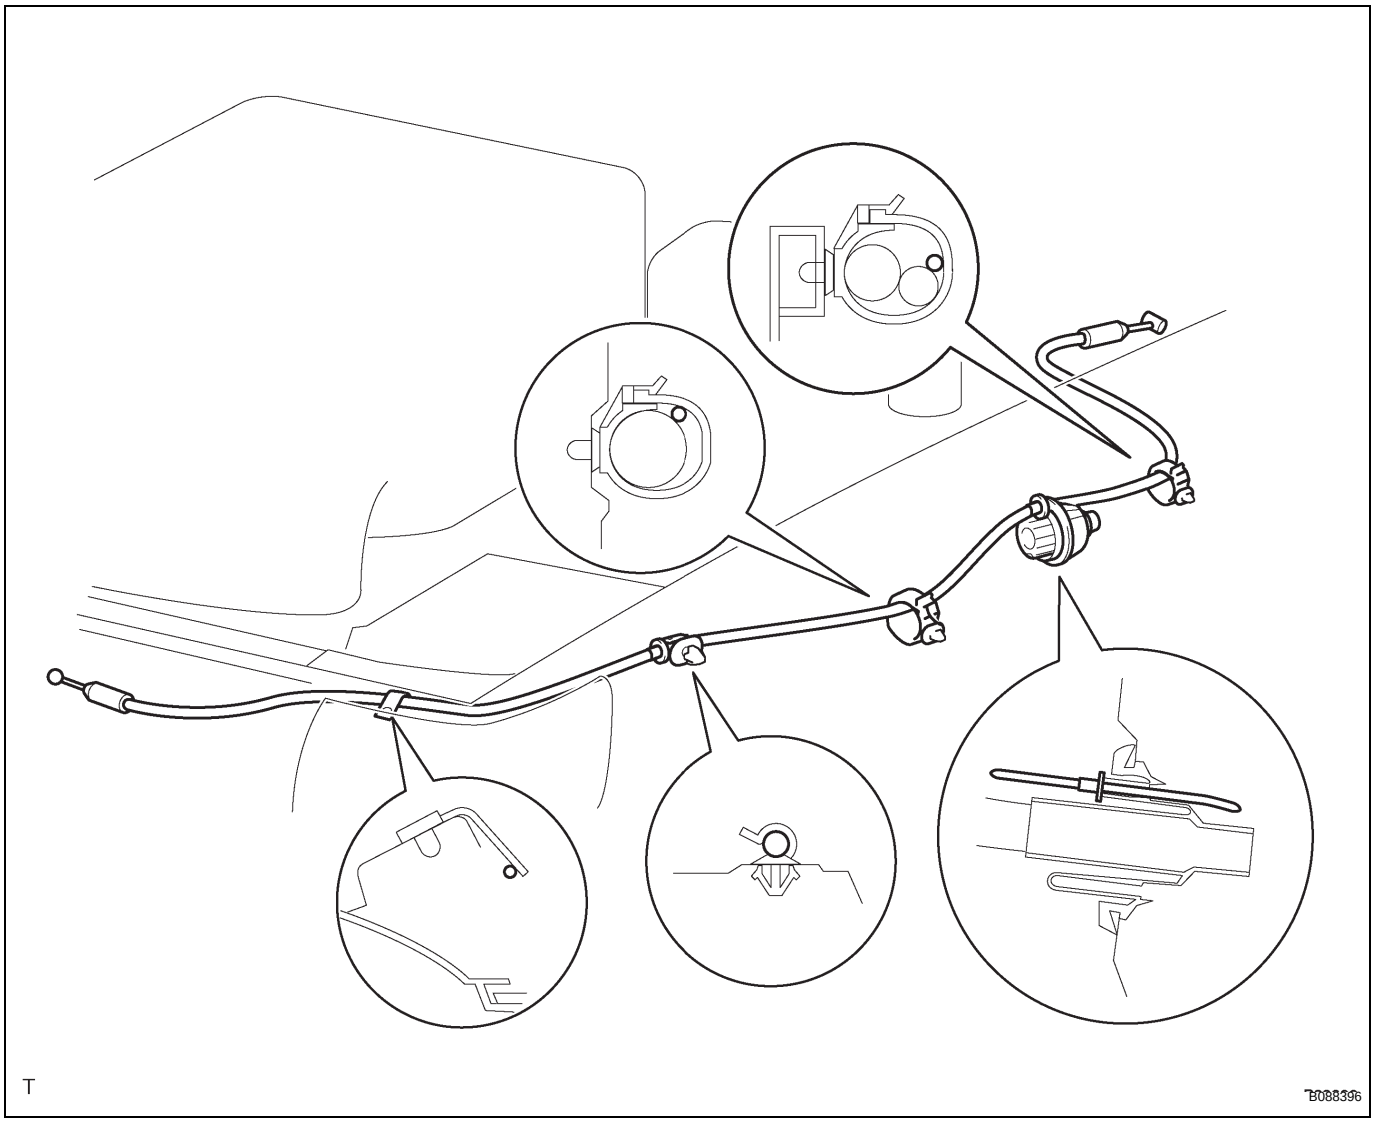


27. REMOVE SEAT WIRE

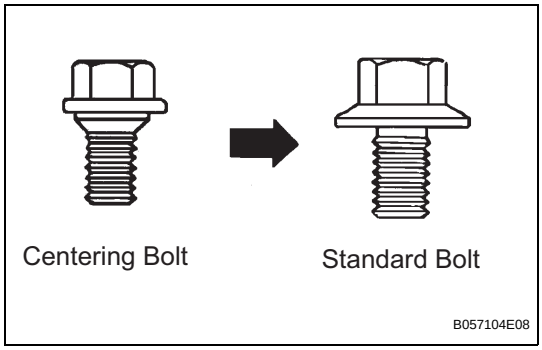
(a) Disconnect the 4 connectors.
(b) Using a clip remover, remove the 3 wire harness clamps and connector clamp.

SE

(b) Remove the hood lock control cable assembly referring to the illustration.



NOTICE:
Leave the string inside the wire harness grommet for the installation of the hood lock control cable assembly.

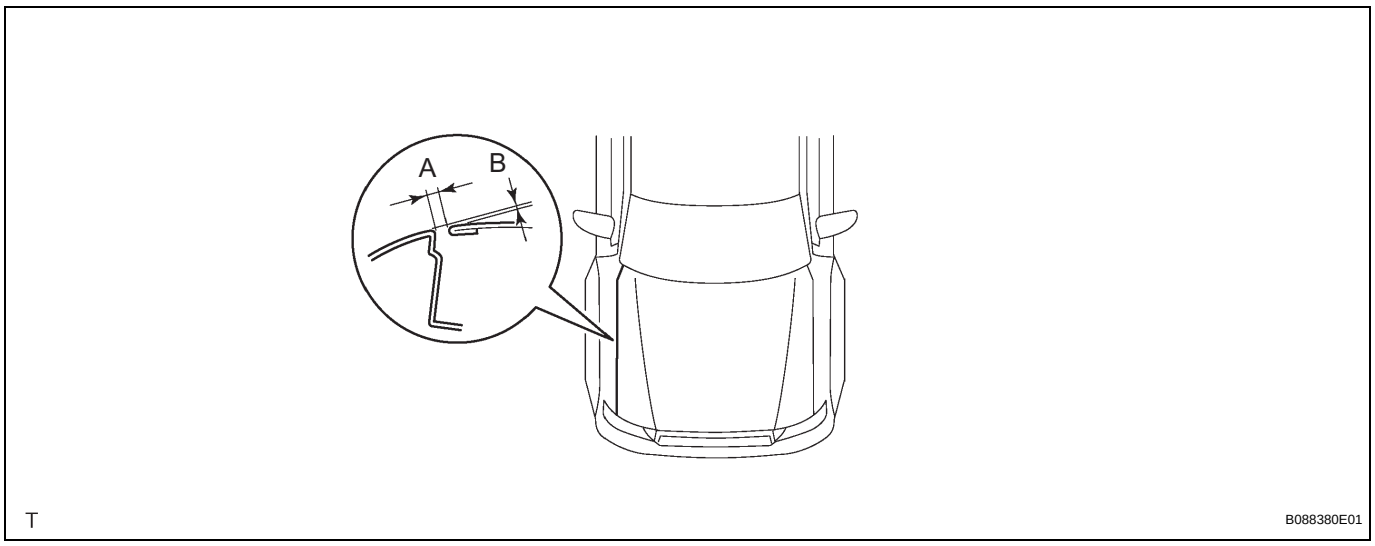


ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute the standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (See page SS-2).

1. INSPECT HOOD SUB-ASSEMBLY



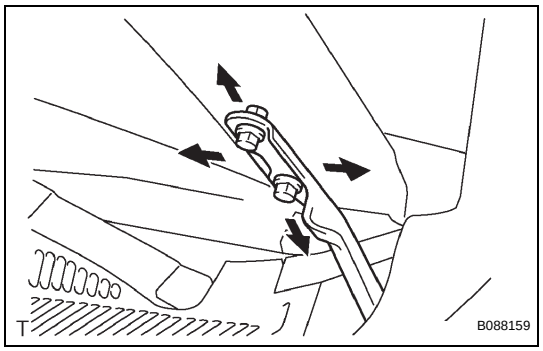
(a) Check that the clearance measurements of areas A and B are within the standard ranges.
Standard:

Area	Measurement
A	4.4 +- 1.5 mm (0.173 +- 0.059 in.)
B	0.3 +- 1.5 mm (0.012 +- 0.059 in.)

2. ADJUST HOOD SUB-ASSEMBLY

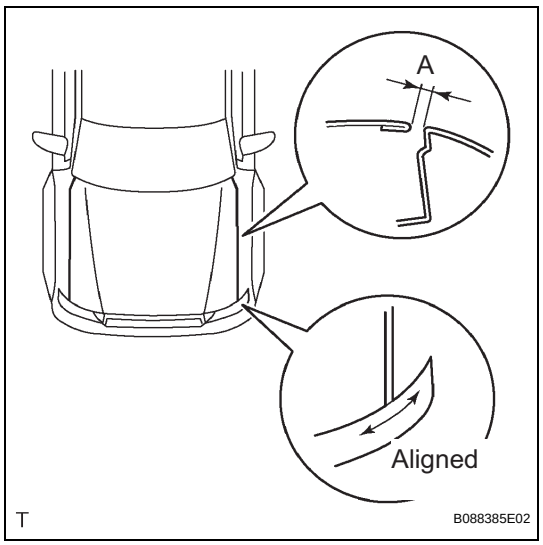
(a) Adjust the hood position.

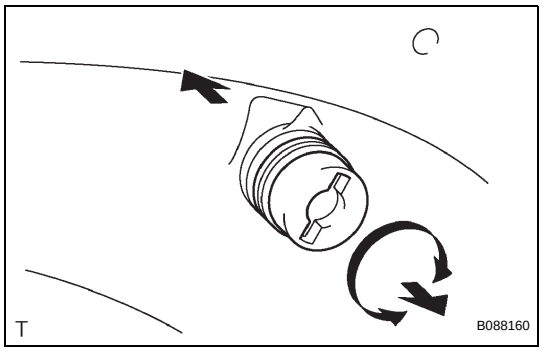
(1) Loosen the 4 hinge bolts on the hood side.



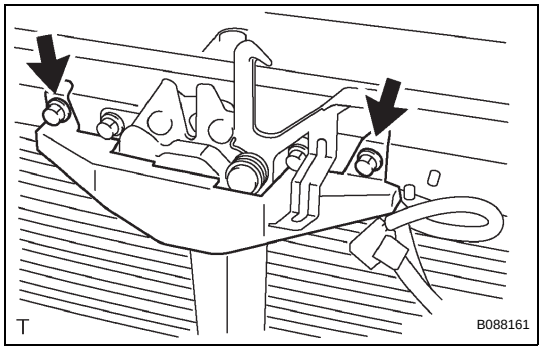
(2) Move the hood and adjust the clearance between the hood and front fender. Make sure that the clearance is within the standard range.
Standard(A):
4.4 +- 1.5 mm(0.173 +- 0.059 in.)

(3) Tighten the hood side hinge bolts after the adjustment.
Torque:
30N*m(306kgf*cm,22ft.*lbf)

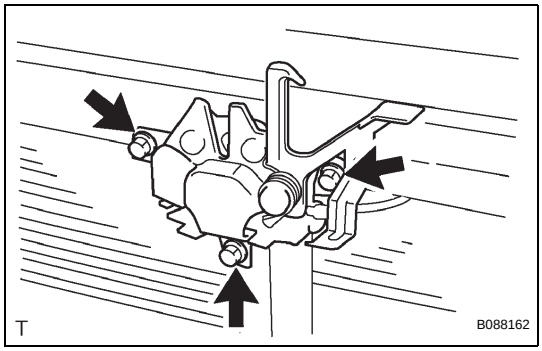




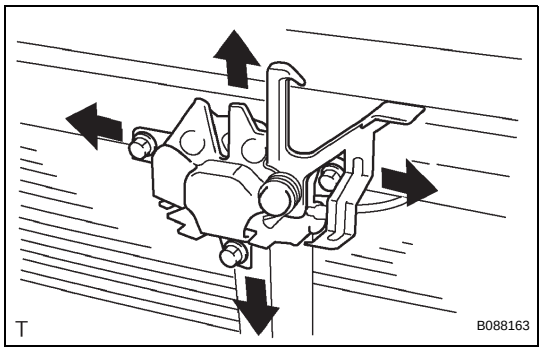
(b) Adjust the cushion rubber so that the heights of the hood and the fender are aligned.
(1) Raise or lower the hood front end by turning the cushion rubber. Make sure that the clearance is within the standard range.
HINT:
Raise or lower the cushion rubber by turning it.



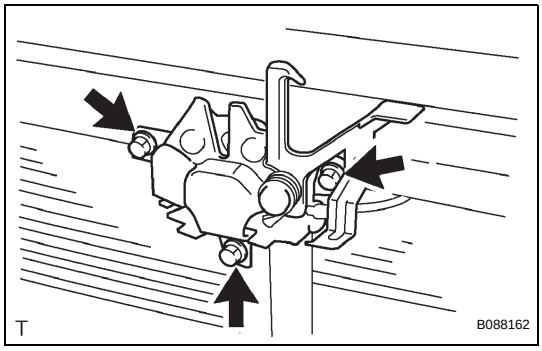
(c) Adjust the hood lock.
(1) Remove the 2 bolts and No. 2 hood lock release lever protector.



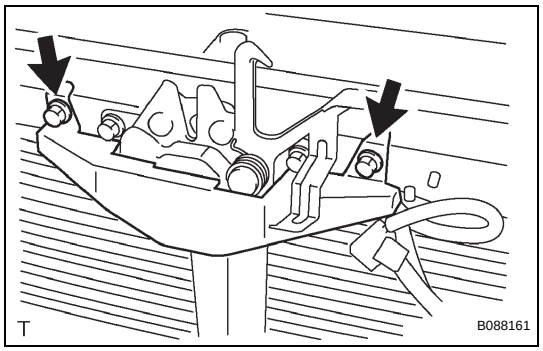
(2) Loosen the 3 bolts.



(3) Adjust the hood lock position so that the striker can enter it smoothly.



(4) Tighten the 3 bolts after the adjustment.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

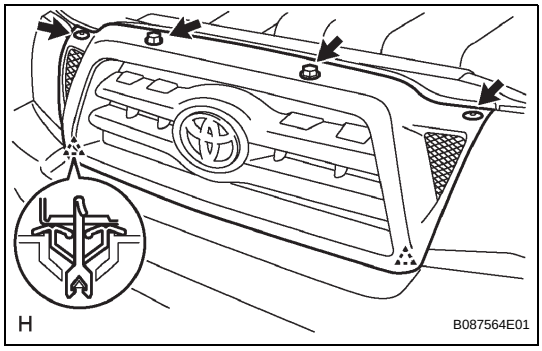


(5) Install the No. 2 hood lock release lever protector.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

REMOVAL

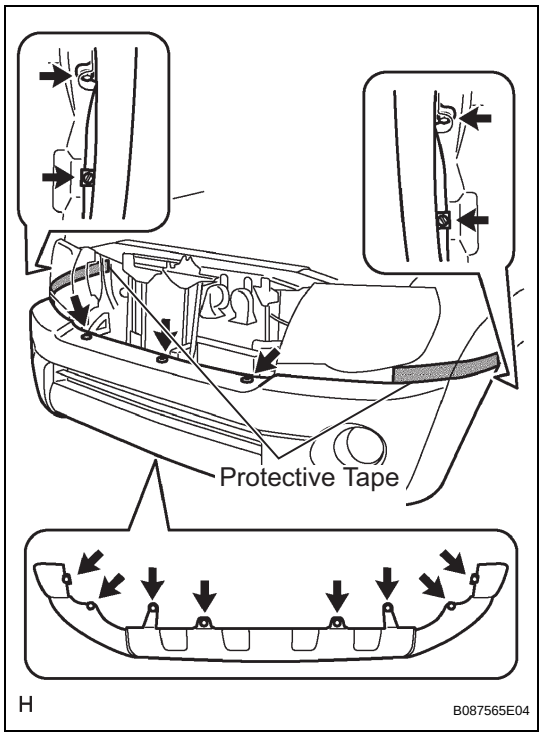
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE RADIATOR GRILLE

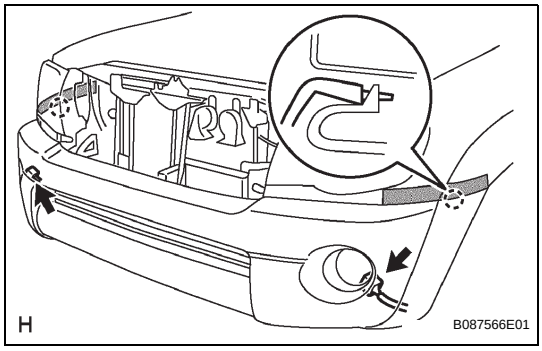


(a) Remove the 2 screws.
(b) Using a clip remover, remove the 2 clips.
(c) Disengage the 2 clips and remove the radiator grille.

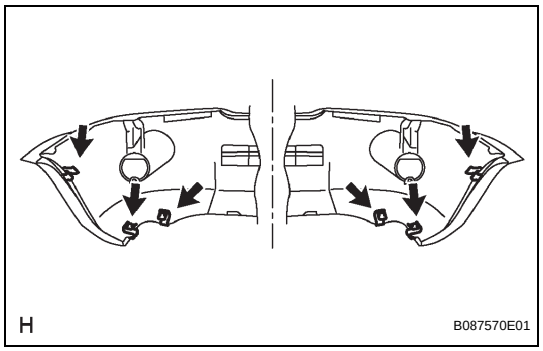
3. REMOVE FRONT BUMPER COVER



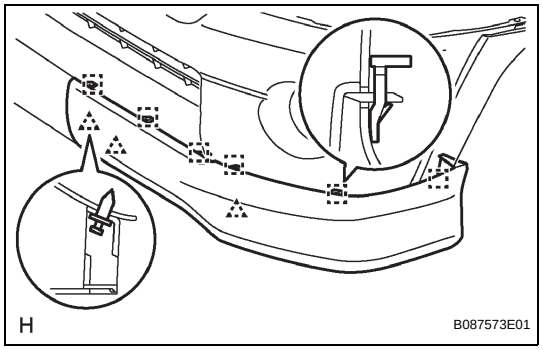
(a) Apply protective tape to the outer circumference of the front bumper cover, as shown in the illustration.
(b) Remove the 6 screws.
(c) Using a clip remover, remove the 7 clips.
(d) Remove the 2 clips.



(e) w/ Fog Light:
  (1) Disconnect the 2 fog light connectors.
(f) Disengage the 2 claws and remove the front bumper cover.

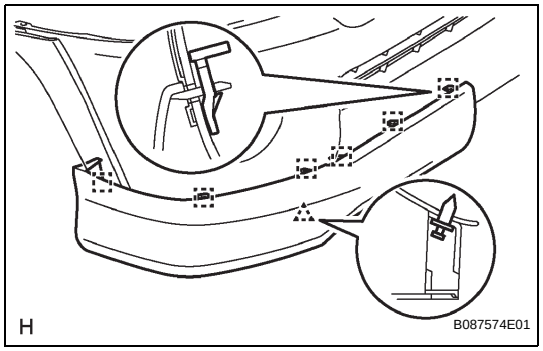


(g) Remove the 6 clips.



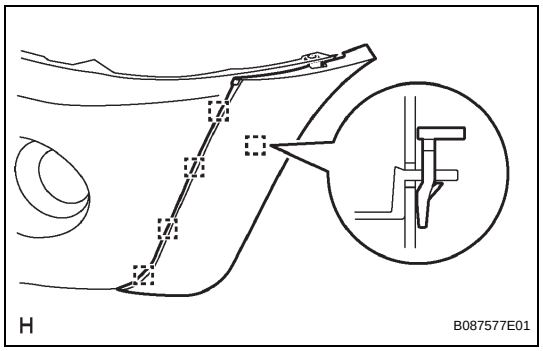
4. REMOVE FRONT SPOILER COVER LH (for X-Runner)

(a) Using a clip remover, remove the 3 clips.
(b) Remove the 6 retainers and front spoiler cover.



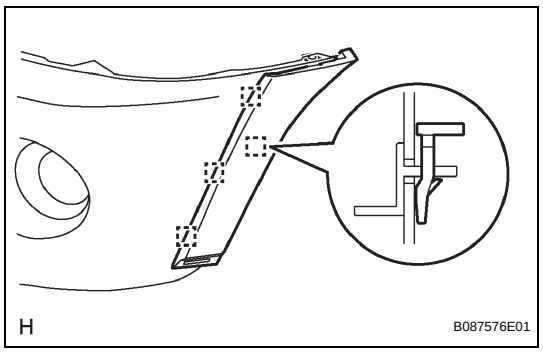
5. REMOVE FRONT SPOILER COVER RH (for X-Runner)

(a) Using a clip remover, remove the clip.
(b) Remove the 6 retainers and front spoiler cover.



6. REMOVE FRONT BUMPER EXTENSION LH

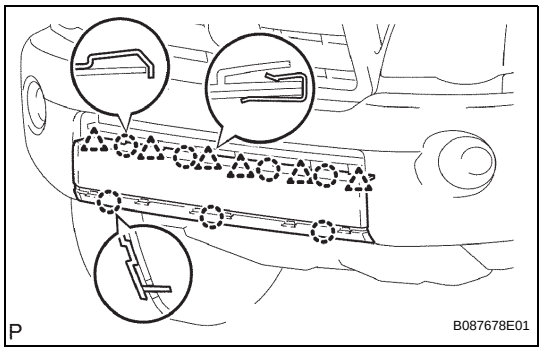
(a) for 4WD and Pre Runner:
  (1) Remove the 5 retainers and front bumper extension.



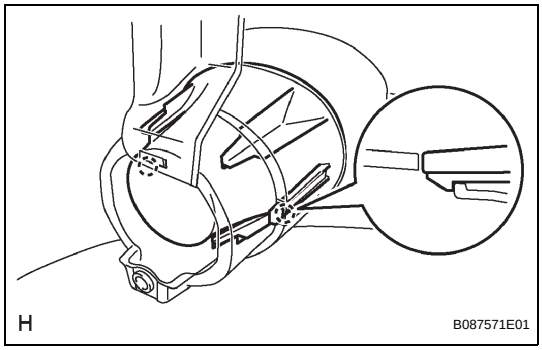
(b) for X-Runner:
  (1) Remove the 4 retainers and front bumper extension.

7. REMOVE FRONT BUMPER EXTENSION RH

HINT:
Follow the same procedures as for the front bumper extension LH.

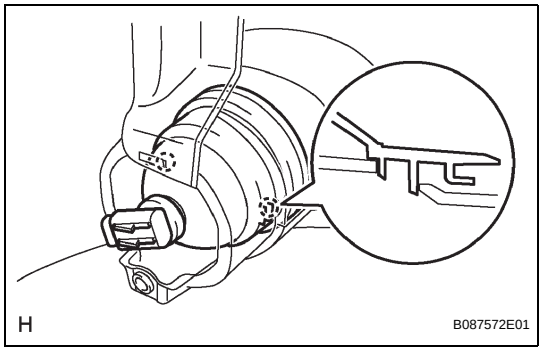


8. REMOVE FRONT SPOILER CENTER COVER (for X-Runner)
(a) Remove the 6 retainers.
(b) Disengage the 7 claws and remove the front spoiler center cover.



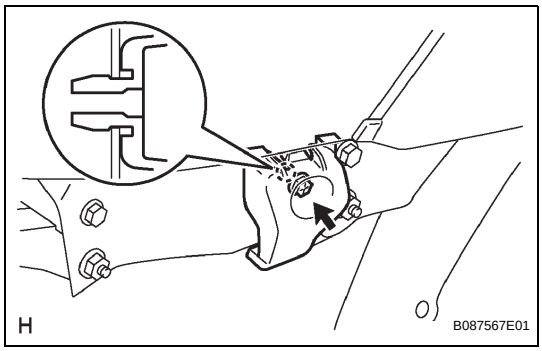
9. REMOVE FRONT BUMPER HOLE COVER LH (w/o Fog Light)
(a) Disengage the 2 claws and remove the front bumper hole cover.

10. REMOVE FRONT BUMPER HOLE COVER RH (w/o Fog Light)
HINT:
Follow the same procedures as for the front bumper hole cover LH.

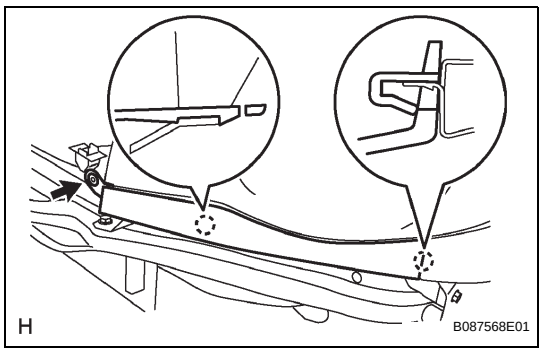


11. REMOVE FOG LIGHT ASSEMBLY LH (w/ Fog Light)
(a) Disengage the 2 claws and remove the fog light.

12. REMOVE FOG LIGHT ASSEMBLY RH (w/ Fog Light)
HINT:
Follow the same procedures as for the fog light LH.



13. REMOVE FRONT BUMPER SIDE SUPPORT
HINT:
Follow the same procedures as for the opposite side.
(a) Remove the screw.
(b) Disengage the claw and remove the front bumper side support.



14. REMOVE FRONT BUMPER FILLER LH
(a) Using a clip remover, remove the clip
(b) Disengage the 2 claws and remove the front bumper filler.

15. REMOVE FRONT BUMPER FILLER RH
HINT:
Follow the same procedures as for the front bumper filler LH.

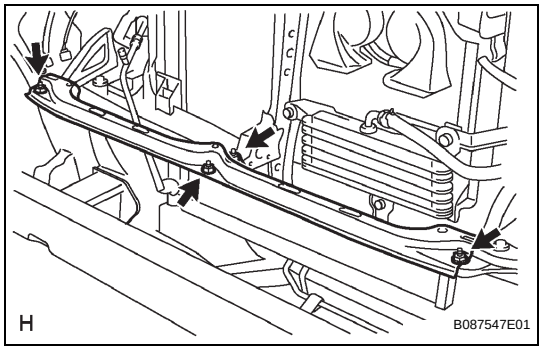
16. REMOVE HEADLIGHT ASSEMBLY LH (See page LI-4)

ET

17. REMOVE HEADLIGHT ASSEMBLY RH

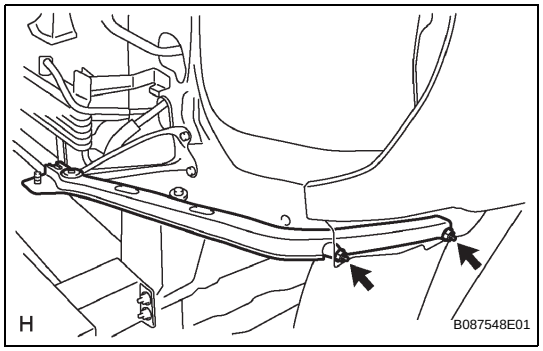
HINT:

Follow the same procedures as for the headlight LH.



18. REMOVE FRONT BUMPER UPPER CENTER RETAINER

(a) Remove the 4 nuts and front bumper upper center retainer.



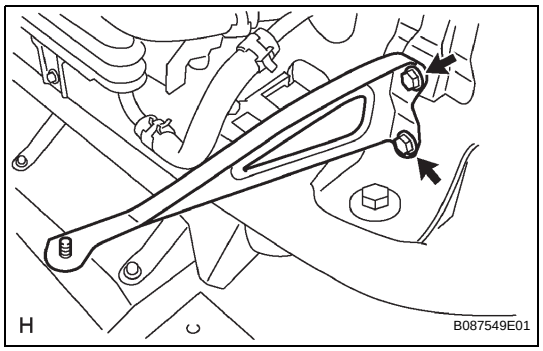
19. REMOVE FRONT BUMPER REINFORCEMENT EXTENSION LH

(a) Remove the 2 nuts and front bumper reinforcement extension.

20. REMOVE FRONT BUMPER REINFORCEMENT EXTENSION RH

HINT:

Follow the same procedures as for the front bumper reinforcement extension LH.



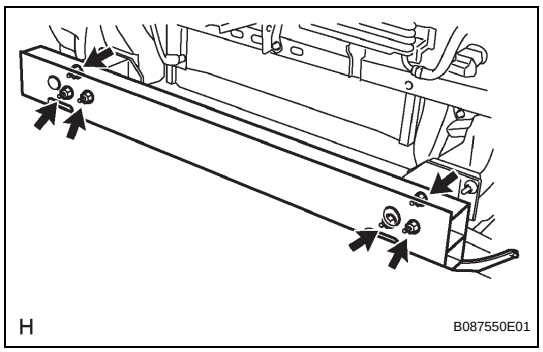
21. REMOVE FRONT BUMPER ARM MOUNTING BRACKET LH

(a) Remove the 2 bolts and front bumper arm mounting bracket.

22. REMOVE FRONT BUMPER ARM MOUNTING BRACKET RH

HINT:

Follow the same procedures as for the front bumper arm mounting bracket LH.



23. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Remove the 6 nuts and front bumper reinforcement.

ET

REMOVAL

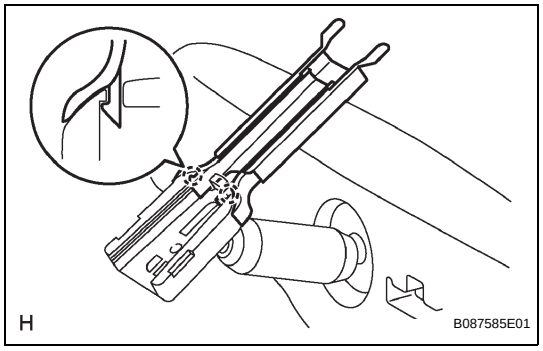
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

2. **REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)**
   (a) Disconnect the EC mirror connector.
   (b) Slide the inner rear view mirror cover.

   (c) Slide the inner rear view mirror.

   (d) Disengage the 2 claws and remove the inner rear view mirror cover.



3. **REMOVE SEAT TRACK COVER LH (See page SE-23)**

4. **REMOVE SEAT TRACK COVER RH**
   (a) for Separate Folding Seat Type:
      (1) Remove the seat track cover RH (See page SE-5).
   (b) for Separate Seat Type Front Passenger Side:
      (1) Remove the seat track cover RH (See page SE-38).

5. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-23)**

6. **REMOVE FRONT SEAT ASSEMBLY RH**
   (a) for Separate Folding Seat Type:
      (1) Remove the front seat assembly RH (See page SE-5).
   (b) for Separate Seat Type Front Passenger Side:
      (1) Remove the front seat assembly RH (See page SE-38).

7. **REMOVE REAR SEAT CUSHION ASSEMBLY LH (See page SE-71)**

8. **REMOVE REAR SEAT CUSHION ASSEMBLY RH (See page SE-82)**

9. **REMOVE REAR SEAT BACK HINGE COVER**
   (a) for LH Side:
      (1) Remove the rear seat back hinge cover (See page SE-71).
   (b) for RH Side:
      (1) Remove the rear seat back hinge cover (See page SE-82).

10. **REMOVE REAR SEAT BACK ASSEMBLY LH (See page SE-71)**

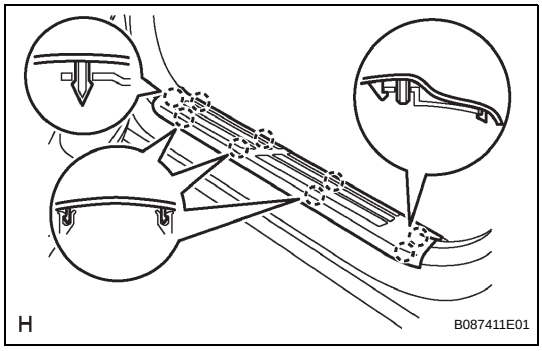
11. **REMOVE REAR SEAT BACK ASSEMBLY RH (See page SE-82)**

12. **REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY LH (See page SE-71)**

13. **REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY RH**
    HINT:
    Follow the same procedures as for the rear seat back hinge sub-assembly LH.

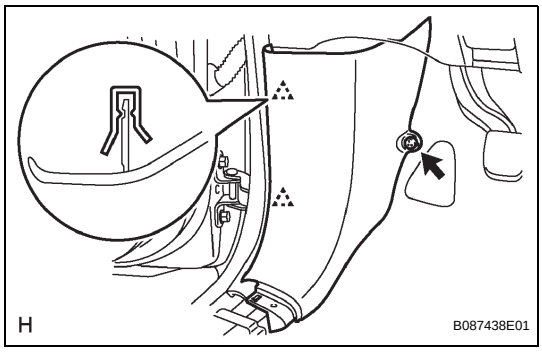
14. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**

15. **REMOVE FRONT DOOR SCUFF PLATE LH**
    (a) Disengage the 9 claws and remove the front door scuff plate.

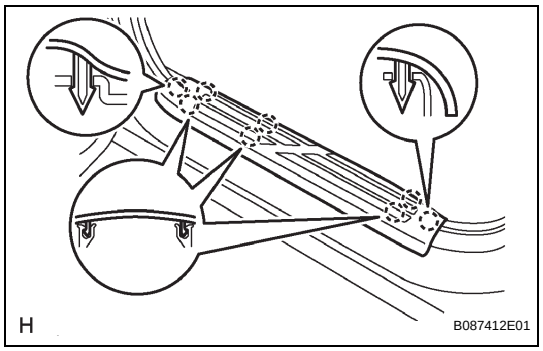


16. **REMOVE FRONT DOOR SCUFF PLATE RH**
    HINT:
    Follow the same procedures as for the front door scuff plate LH.

17. **REMOVE COWL SIDE TRIM BOARD LH**
    (a) Remove the clip.
    (b) Disengage the 2 clips and remove the cowl side trim board.



18. **REMOVE COWL SIDE TRIM BOARD RH**
    HINT:
    Follow the same procedures as for the cowl side trim board LH.

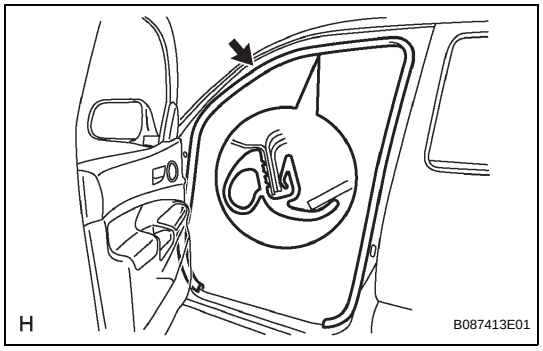


19. REMOVE REAR DOOR SCUFF PLATE LH

(a) Disengage the 8 claws and remove the rear door scuff plate.

20. REMOVE REAR DOOR SCUFF PLATE RH

HINT:
Follow the same procedures as for the rear door scuff plate LH.

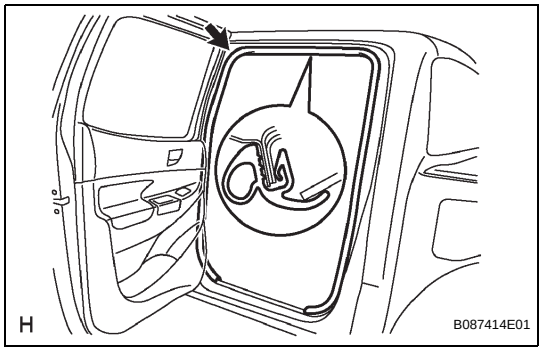


21. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Remove the front door opening trim weatherstrip.

22. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:
Follow the same procedures as for the front door opening trim weatherstrip LH.

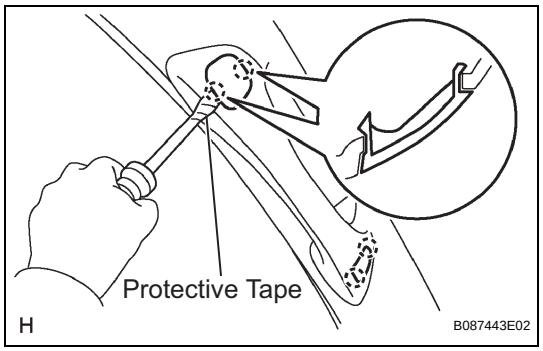


23. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

(a) Remove the rear door opening trim weatherstrip.

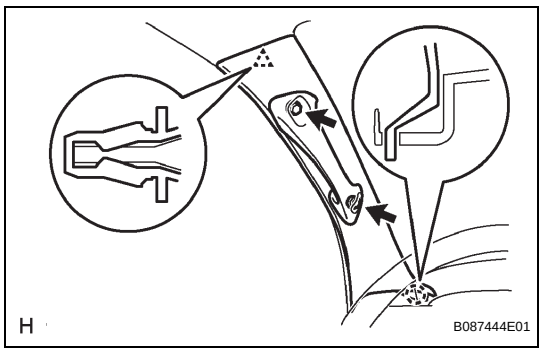
24. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:
Follow the same procedures as for the rear door opening trim weatherstrip LH.



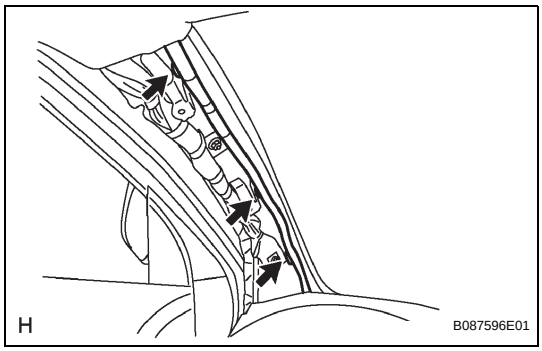
25. REMOVE FRONT PILLAR GARNISH LH

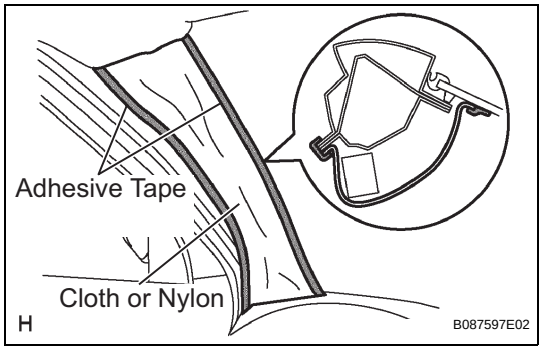
(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the assist grip plug.
HINT:
Follow the same procedures as for the opposite side.



(b) Remove the 2 screws.
(c) Disengage the clip and claw and remove the front pillar garnish.

IR





(d) for LH side:
(1) Using a clip remover, remove the 3 wire harness clamps.

(e) w/ Curtain Shield Airbag:
NOTICE:
Cover the curtain shield airbag with the protective cover as soon as the front pillar garnish is removed.
(1) Thoroughly cover the air bag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape, as shown in the illustration.

26. REMOVE FRONT PILLAR GARNISH RH
HINT:
Follow the same procedures as for the front pillar garnish LH.

27. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)

28. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)

29. REMOVE REAR CONSOLE UPPER PANEL SUB-ASSEMBLY
(a) for Automatic Transmission:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).
(b) for Manual Transmission:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).

30. REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-10)

31. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission) (See page IP-10)

32. REMOVE FRONT CONSOLE BOX
(a) for Automatic Transmission:
(1) Remove the front console box (See page IP-10).
(b) for Manual Transmission:
(1) Remove the front console box (See page IP-11).

33. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)

34. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)**

35. **DISCONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**

36. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-12)**

37. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**

38. **REMOVE COMBINATION METER ASSEMBLY (See page IP-13)**

39. **REMOVE INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)**

40. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**

41. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-14)**

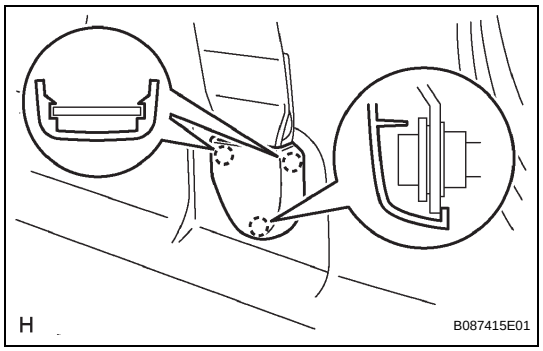
42. **REMOVE INSTRUMENT LOWER PANEL (See page IP-14)**

43. **REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-14)**

44. **REMOVE INSTRUMENT SIDE PANEL (See page IP-14)**

45. **DISCONNECT PASSENGER AIRBAG CONNECTOR (See page RS-576)**

46. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)**

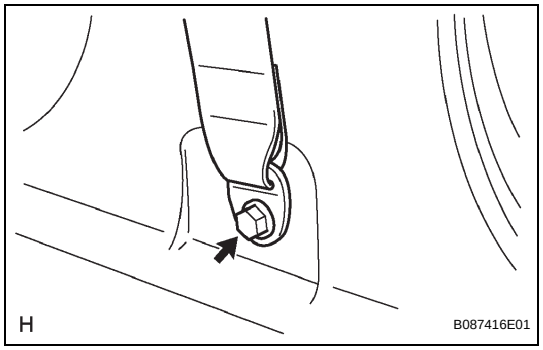


47. **REMOVE LAP BELT OUTER ANCHOR COVER**

HINT:

Follow the same procedures as for the opposite side.

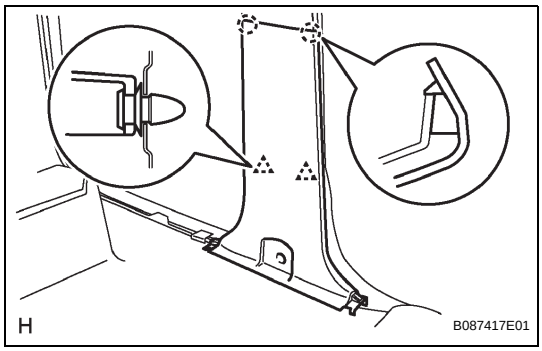
(a) Disengage the 3 claws and remove the lap belt outer anchor cover.



48. **REMOVE CENTER PILLAR LOWER GARNISH LH**

(a) Remove the bolt and floor anchor of the front seat outer belt.

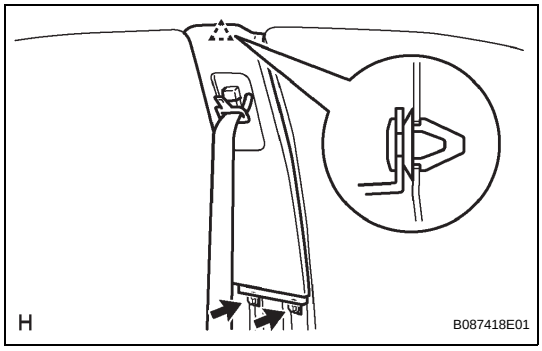
IR



(b) Disengage the 2 claws and 2 clips, and remove the center pillar lower garnish.

49. REMOVE CENTER PILLAR LOWER GARNISH RH

HINT:
Follow the same procedures as for the center pillar lower garnish LH.



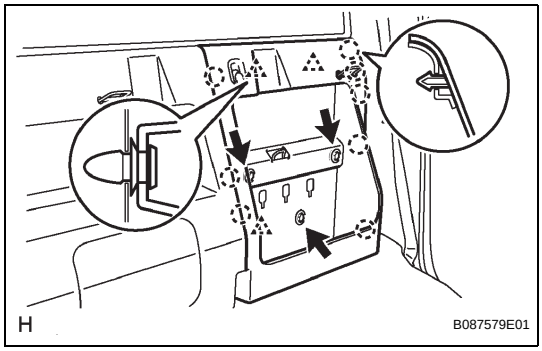
50. REMOVE CENTER PILLAR UPPER GARNISH LH

(a) Remove the 2 screws.
(b) Disengage the clip and remove the center pillar upper garnish.

51. REMOVE CENTER PILLAR UPPER GARNISH RH

HINT:
Follow the same procedures as for the center pillar upper garnish LH.

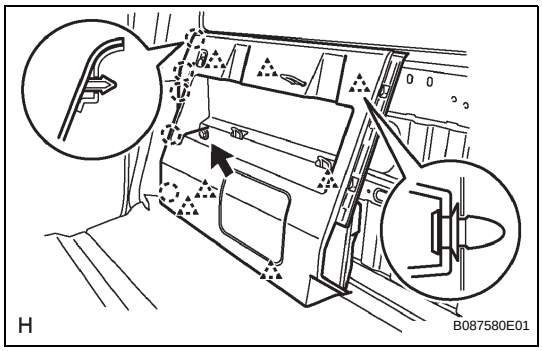
IR



52. REMOVE LUGGAGE COMPARTMENT SIDE TRAY LH

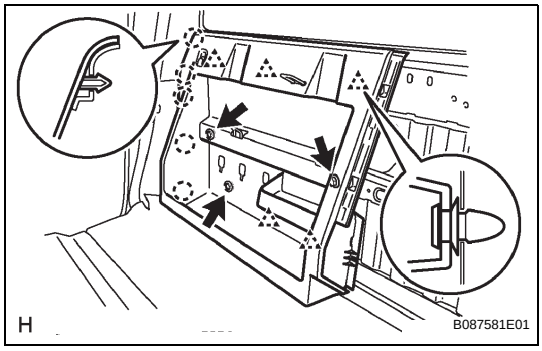
(a) Remove the 3 bolts.
(b) Disengage the 8 claws and 3 clips, and remove the luggage compartment side tray.

53. REMOVE REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY (See page SE-71)

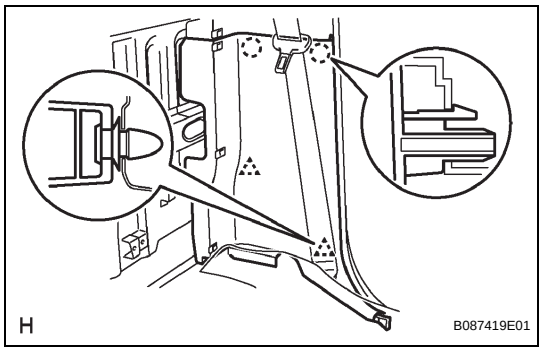


54. REMOVE LUGGAGE COMPARTMENT SIDE TRAY RH

(a) w/ Woofer:
(1) Remove the bolt.
(2) Disengage the 5 claws and 7 clips, and remove the luggage compartment side tray.



(b) w/o Woofer:
(1) Remove the 3 bolts.
(2) Disengage the 5 claws and 5 clips, and remove the luggage compartment side tray.



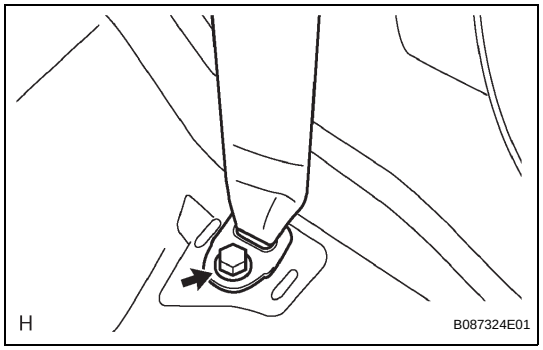
55. REMOVE QUARTER TRIM LOWER PANEL LH

(a) Disengage the 2 claws and 2 clips, and remove the quarter trim lower panel.

56. REMOVE QUARTER TRIM LOWER PANEL RH

HINT:

Follow the same procedures as for the quarter trim lower panel LH.

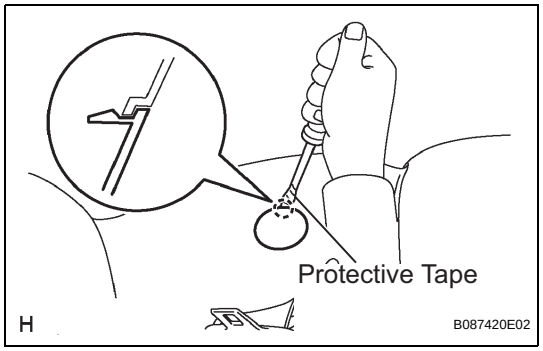


57. REMOVE QUARTER INSIDE TRIM BOARD LH

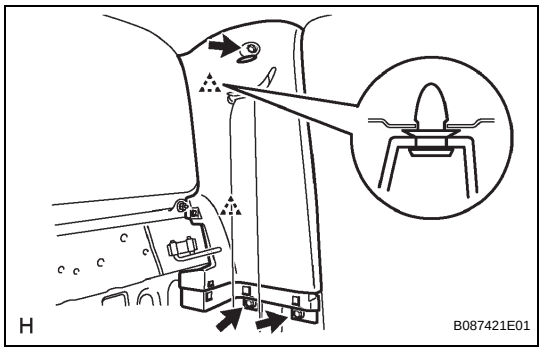
(a) Remove the bolt and remove the floor anchor of the rear seat belt outer.

HINT:

Follow the same procedures as for the opposite side.



(b) Using a screwdriver with its tip taped in protective tape, disengage the claw and open the cover.



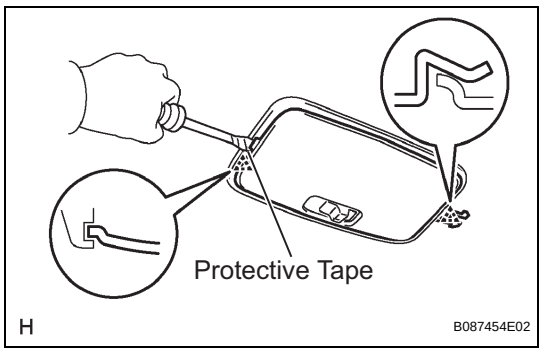
(c) Remove the 3 screws.

(d) Disengage the 2 clips and remove the quarter inside trim board.

58. REMOVE QUARTER INSIDE TRIM BOARD RH

HINT:

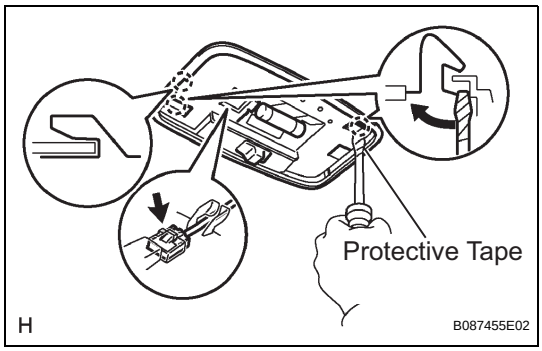
Follow the same procedures as for the quarter inside trim board LH.



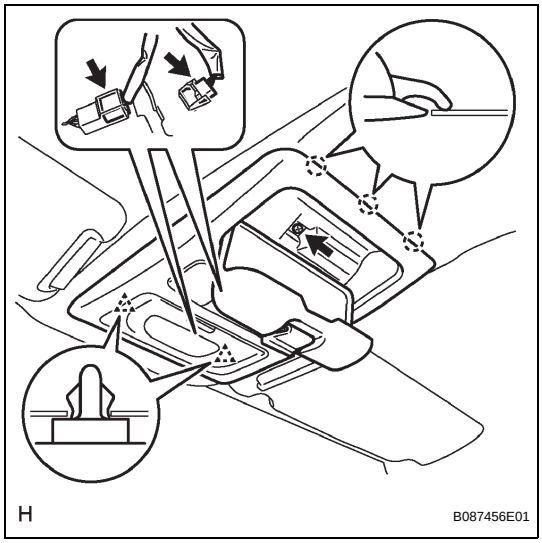
59. REMOVE ROOM LIGHT ASSEMBLY

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the room light lens.

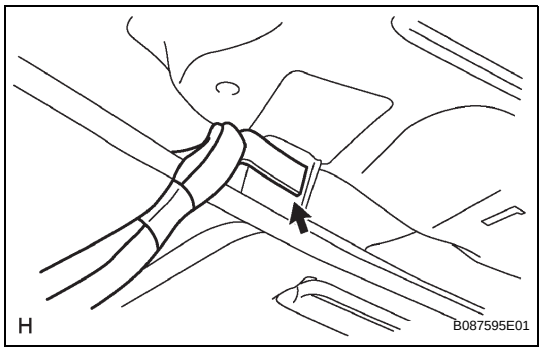
IR



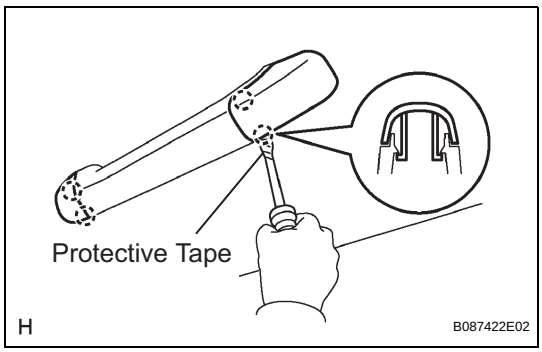
(b) Using a screwdriver with its tip taped in protective tape, disengage the 3 claws.
(c) Disconnect the room light connector and remove the room light.



60. REMOVE ROOF CONSOLE BOX ASSEMBLY
(a) Remove the screw.
(b) Disengage the 2 clips and 3 claws.
(c) Disconnect the accessory meter connector and map lamp connector and remove the map lamp.

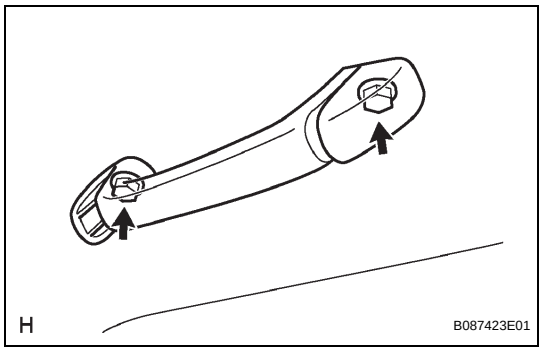


(d) Using a clip remover, remove the wire harness clamp.

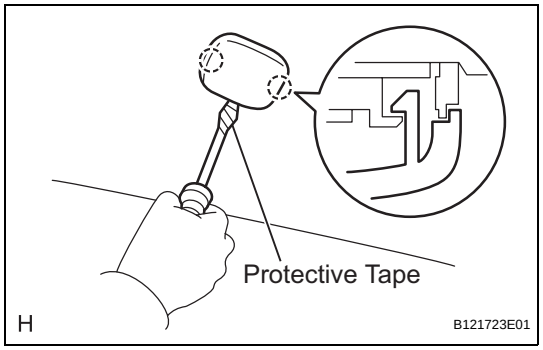


61. REMOVE ASSIST GRIP SUB-ASSEMBLY
HINT:
Follow the same procedures as for the opposite side.
(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and open the cover.

IR



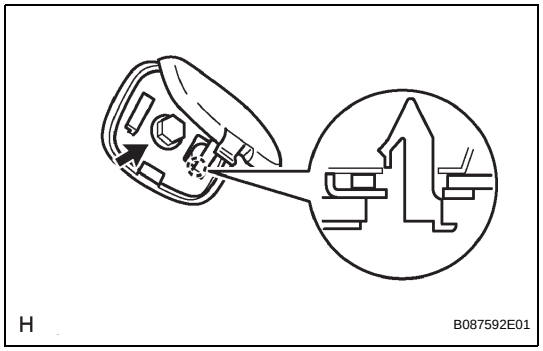
(b) Remove the 2 screws and assist grip.



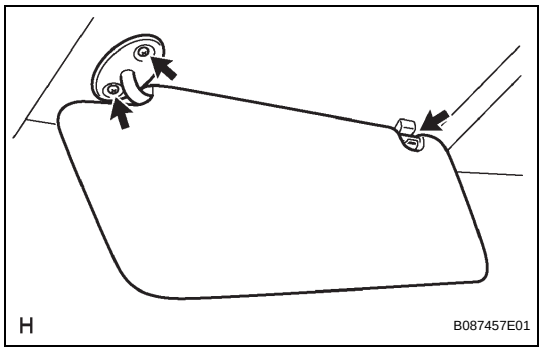
62. REMOVE ASSIST GRIP PLUG (w/ Curtain Shield Airbag)

HINT:
Follow the same procedures as for the opposite side.

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and open the cover.



(b) Remove the screw.
(c) Disengage the claw and remove the assist grip plug.

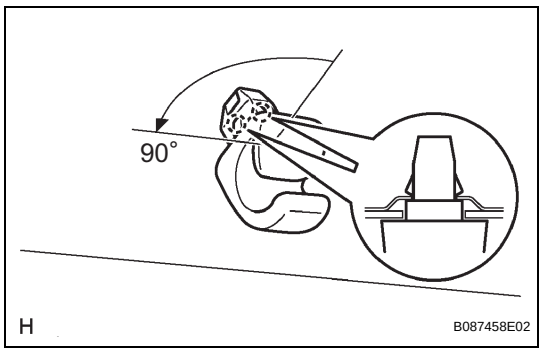


63. REMOVE VISOR ASSEMBLY LH

(a) Remove the 2 screws.
(b) Remove the visor from the visor hol

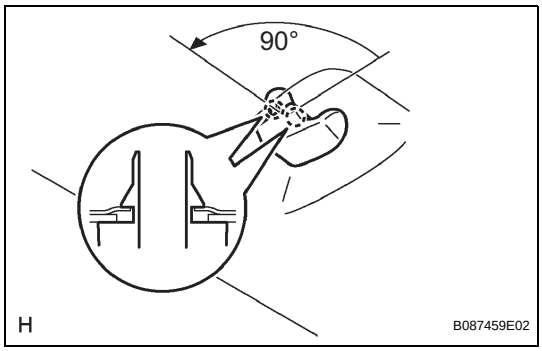
64. REMOVE VISOR ASSEMBLY RH

HINT:
Follow the same procedures as for the visor assembly LH.



65. REMOVE VISOR HOLDER

(a) Turn the visor holder 90° counterclockwise and remove it.
HINT:
Follow the same procedures as for the opposite side.

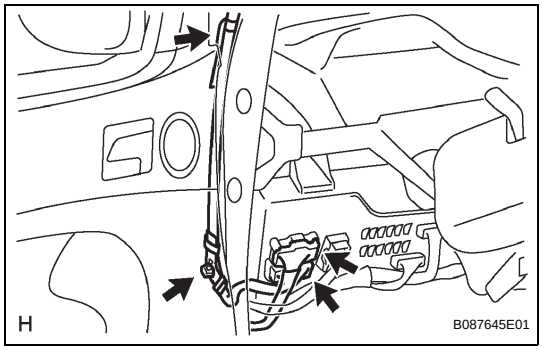


66. REMOVE COAT HOOK

HINT:

Follow the same procedures as for the opposite side.

(a) Turn the coat hook 90° counterclockwise and remove it.

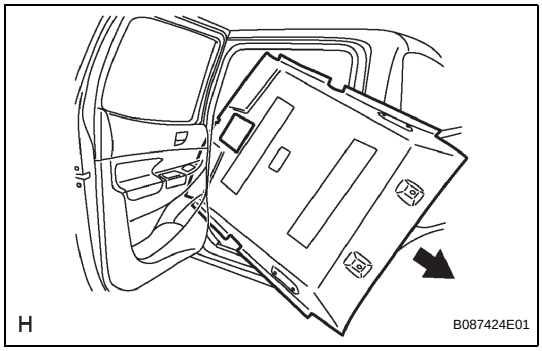


67. REMOVE ROOF HEADLINING ASSEMBLY

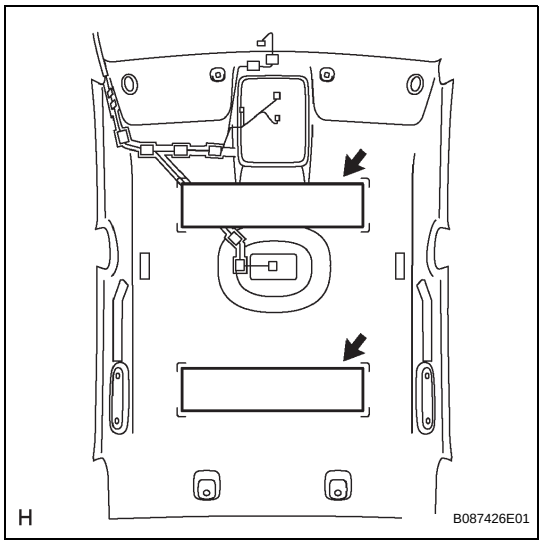
(a) Disconnect the frame wire connector.

(b) Disconnect the roof wire connector.

(c) Using a clip remover, remove the 2 wire harness clamps.

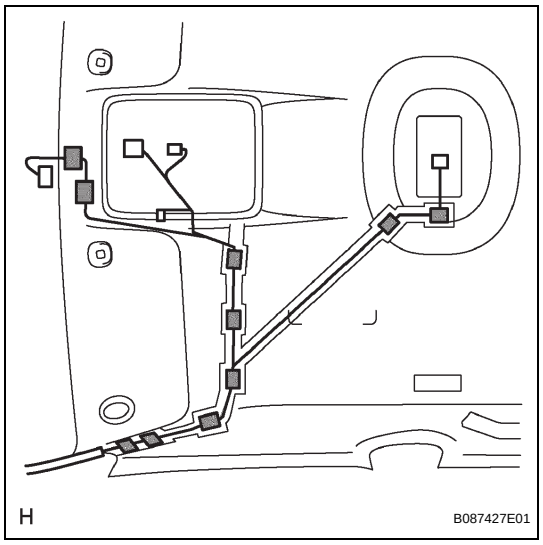


(d) Remove the roof headlining from the vehicle.



68. REMOVE ROOF HEADLINING PAD

(a) Remove the 2 roof headlining pads from the roof headlining.

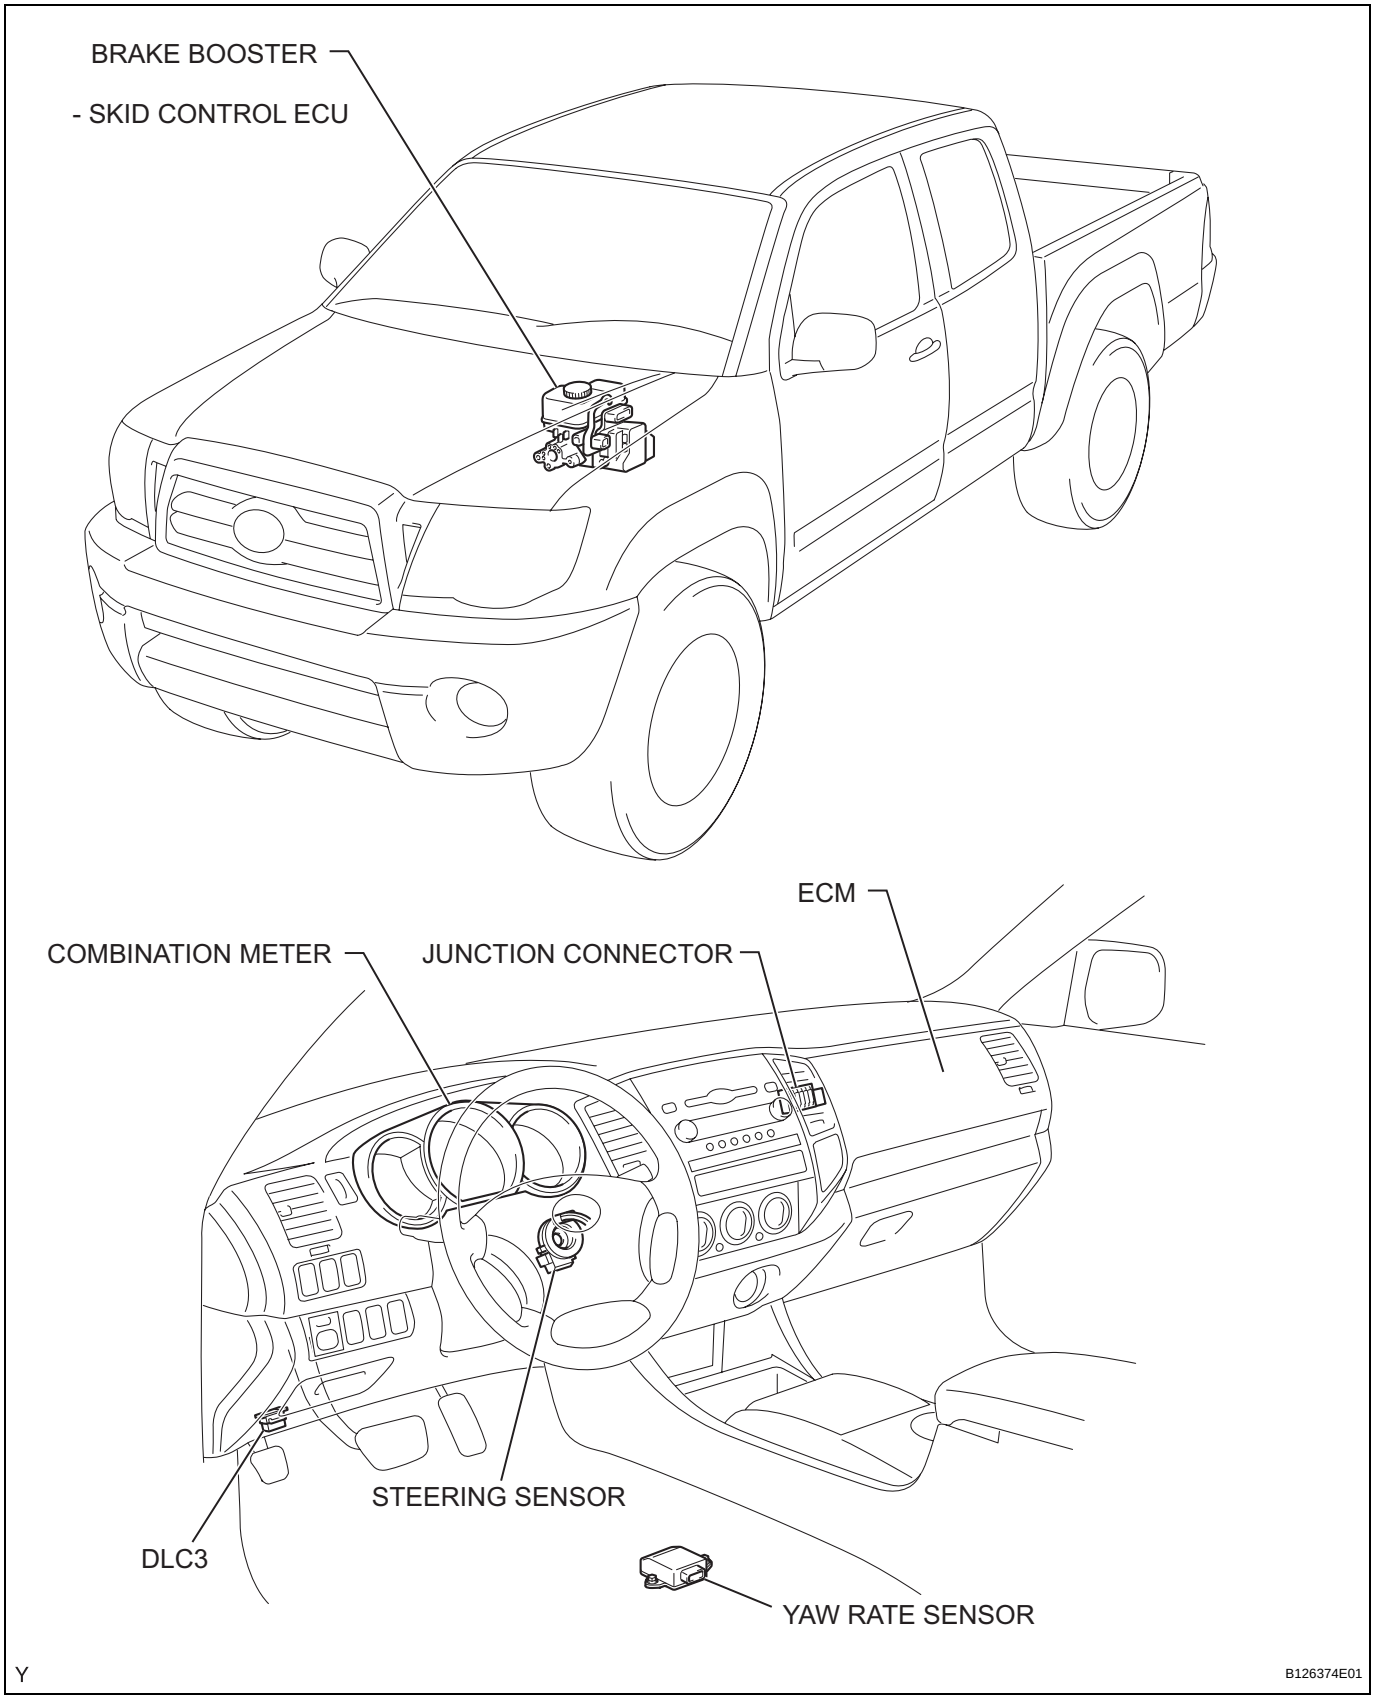


69. REMOVE ROOF WIRE

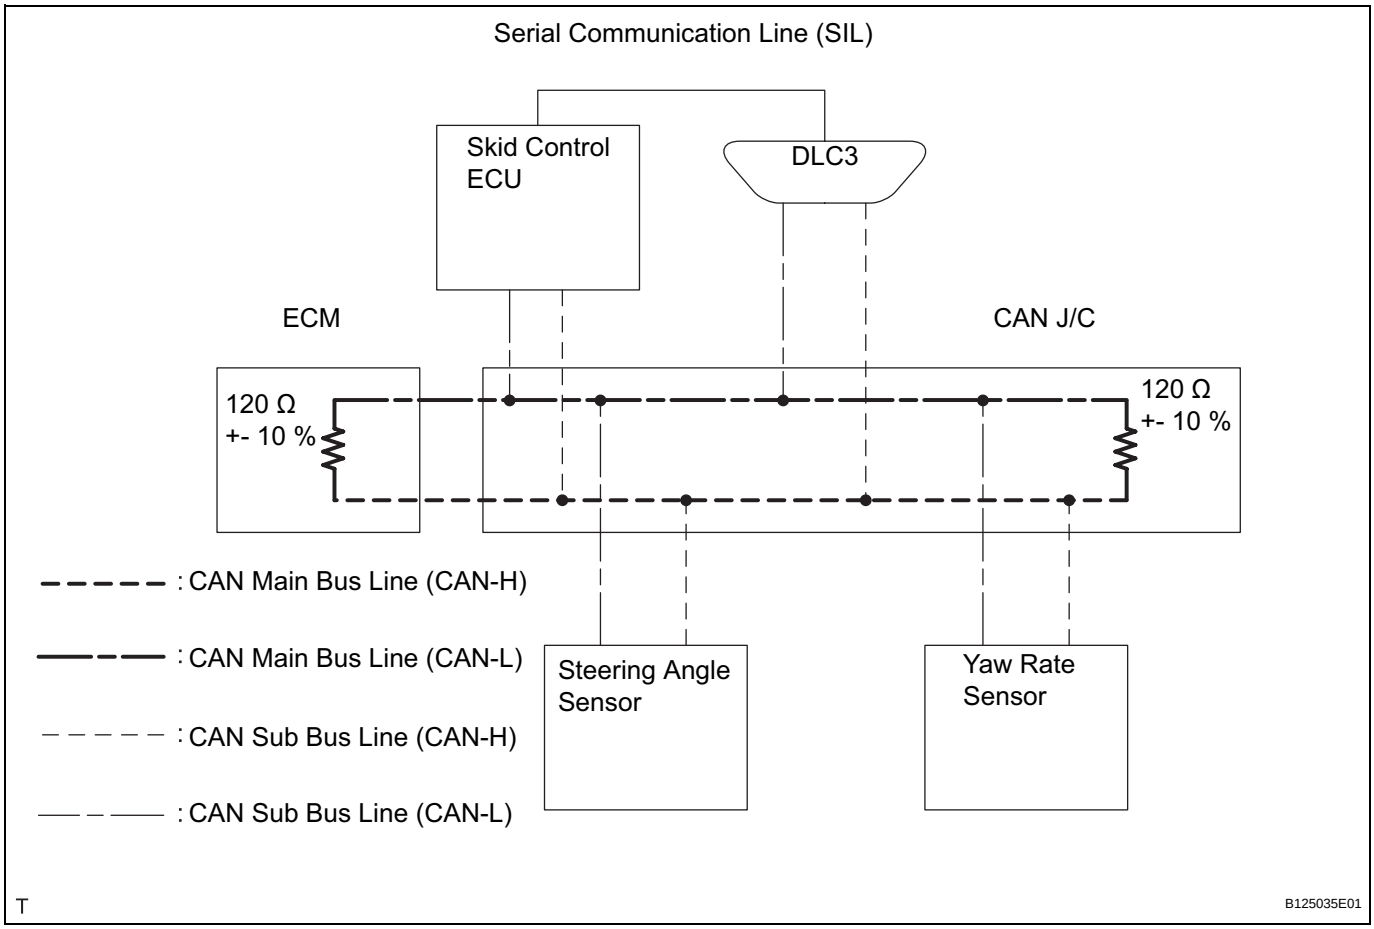
(a) w/ EC Mirror:
  (1) Remove the 10 tapes and roof wire.

(b) w/o EC Mirror:
  (1) Remove the 8 tapes and roof wire.

PARTS LOCATION



SYSTEM DIAGRAM



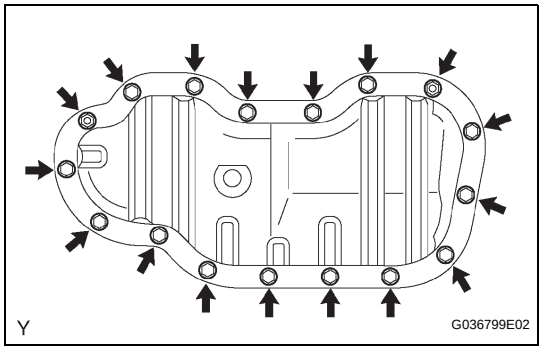
HINT:

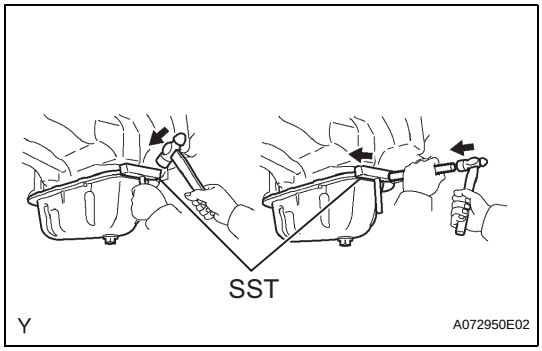
- The skid control ECU stores DTCs and performs DTC communication by receiving information from the steering angle sensor and yaw rate sensor. These sensors cannot store DTCs or perform DTC communication.
- The ECM uses the CAN communication system to perform DTC communication instead of the conventional serial communication line (SIL).

CA

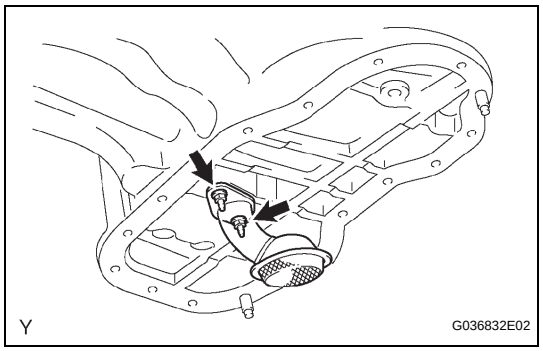
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE ENGINE ASSEMBLY**
   (See page EM-186)
6. **REMOVE OIL LEVEL GAGE GUIDE**
   (a) Remove the oil level gauge.
   (b) Remove the bolt and pull out the oil level gauge guide.
   (c) Remove the O-ring from the oil level gauge guide.
7. **REMOVE WATER INLET (See page CO-9)**
8. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-44)**
9. **REMOVE NO.2 IDLER PULLEY SUB-ASSEMBLY**
   (a) Remove the 2 bolts, then remove the idler pulley No. 2.
10. **REMOVE NO.1 IDLER PULLEY SUB-ASSEMBLY**
    (a) Remove the bolt, then remove the idler pulley No. 1.
11. **REMOVE CRANKSHAFT PULLEY (See page EM-45)**
12. **REMOVE NO.2 OIL PAN SUB-ASSEMBLY**
    (a) Remove the 15 bolts and 2 nuts.

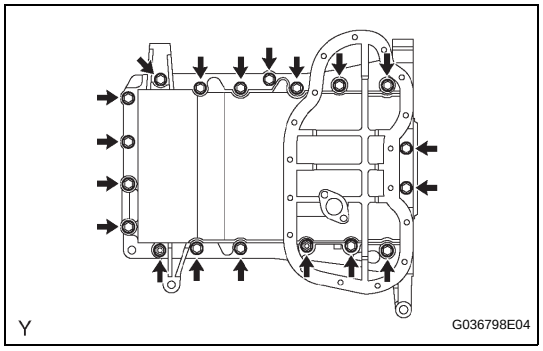




(b) Insert the blade of SST between the oil pan and oil pan No. 2, cut off applied sealer and remove the oil pan No. 2.
SST 09032-00100
NOTICE:
- **Be careful not to damage the contact surfaces of the oil pan and oil pan No. 2**



13. **REMOVE OIL STRAINER SUB-ASSEMBLY**
    (a) Remove the 2 nuts, then remove the oil strainer and gasket.

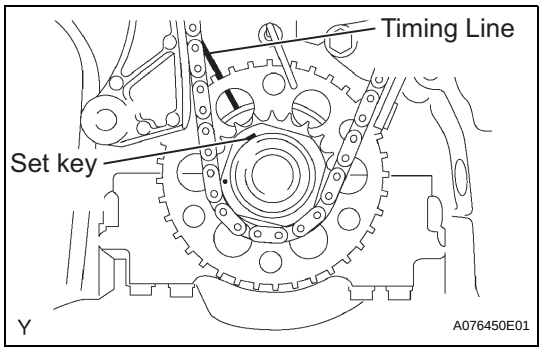


14. **REMOVE OIL PAN SUB-ASSEMBLY**
    (a) Remove the 17 bolts and 2 nuts.

    (b) Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block.
    NOTICE:
    Be careful not to damage the contact surfaces of the cylinder block and oil pan.

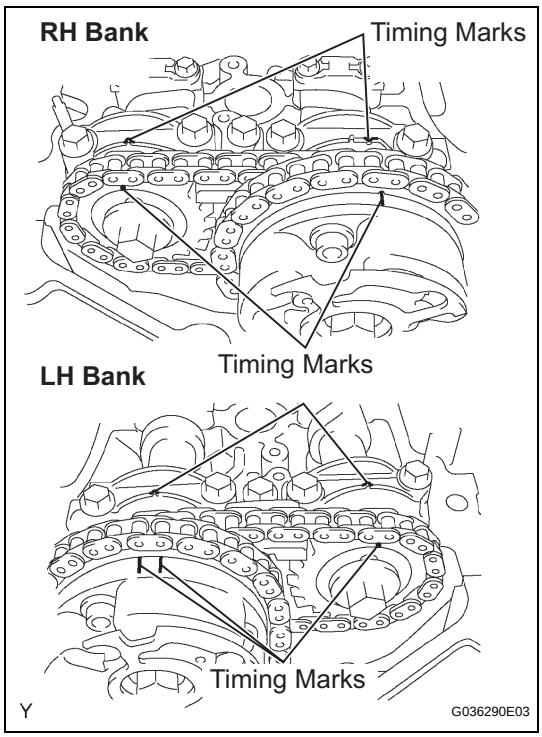
15. **REMOVE INTAKE AIR SURGE TANK (See page EM-57)**
16. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
17. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)**
18. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)**
19. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-407)**
20. **REMOVE VVT SENSOR (See page IG-8)**
21. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY (See page LU-17)**
22. **REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)**

EM



23. SET NO.1 CYLINDER TO TDC/COMPRESSION

(a) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

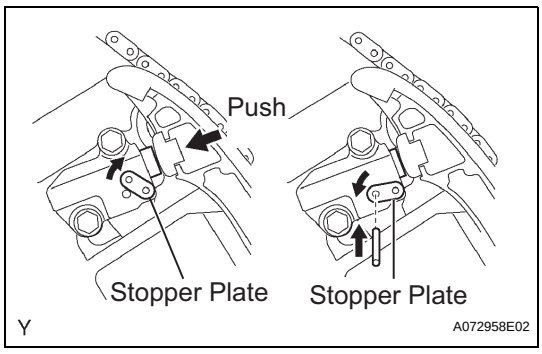


(b) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

24. REMOVE NO.1 CHAIN TENSIONER ASSEMBLY

NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**



(a) While turning the stopper plate of the tensioner upward, push in the plunger of the chain tensioner as shown in the illustration.

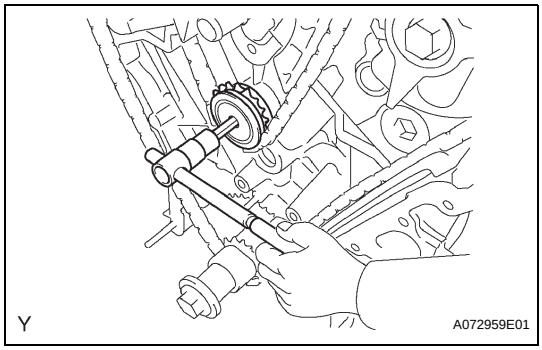
(b) While turning the stopper plate of the tensioner down ward, insert a bar of ϕ 3.5 mm (0.138) into the holes in the stopper plate and tensioner to fix the stopper plate.

(c) Remove the 2 bolts, then remove the chain tensioner.

25. REMOVE CHAIN TENSIONER SLIPPER

26. REMOVE IDLE SPROCKET ASSEMBLY

(a) Using a 10 mm hexagon wrench, remove the idle gear shaft No. 2, idle gear No. 1 and idle gear shaft No. 1.



27. REMOVE NO.2 CHAIN VIBRATION DAMPER

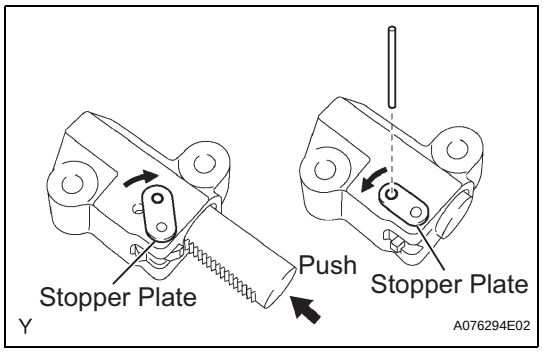
(a) Remove the 2 chain vibration dampers No. 2.

28. REMOVE CHAIN SUB-ASSEMBLY

INSTALLATION

1. INSTALL CHAIN TENSIONER SLIPPER

2. INSTALL NO.1 CHAIN TENSIONER ASSEMBLY



(a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.

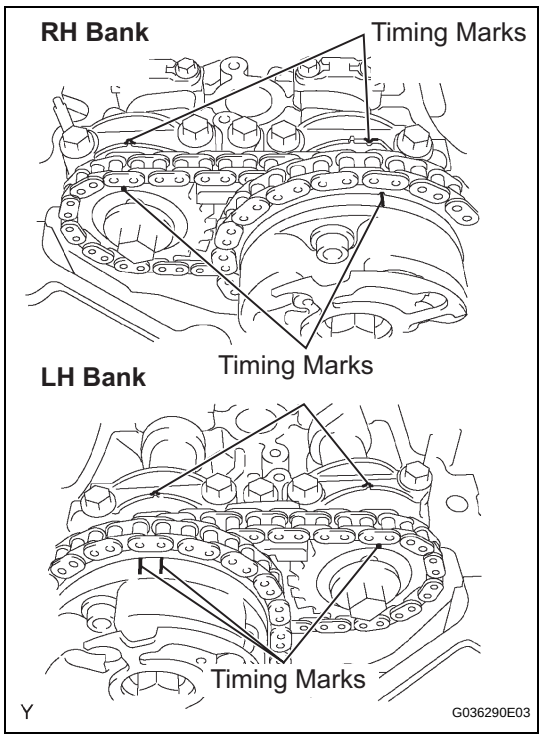
(b) While turning the stopper plate of the tensioner counterclockwise, insert a bar of ϕ 35 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.

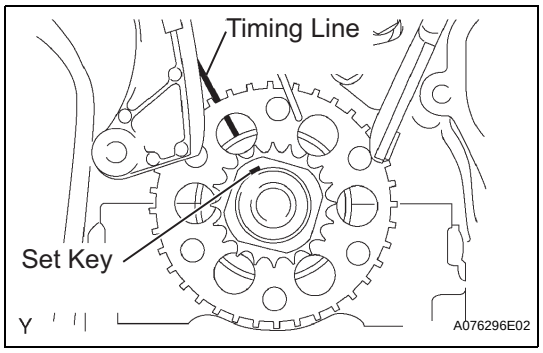
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

3. INSTALL CHAIN SUB-ASSEMBLY

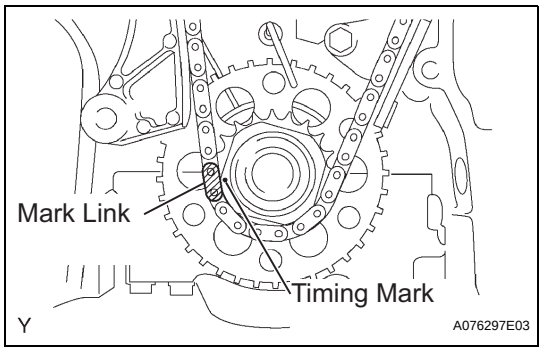
(a) Set the No. 1 cylinder to TDC/ compression.

(1) Align the timing marks of the camshaft timing gears and bearing caps.

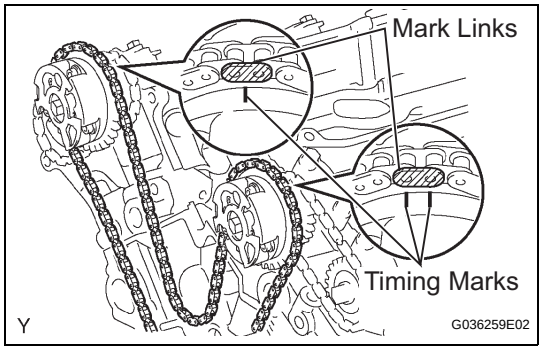




(2) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.



(b) Align the yellow mark link with the timing mark of the crankshaft timing link.



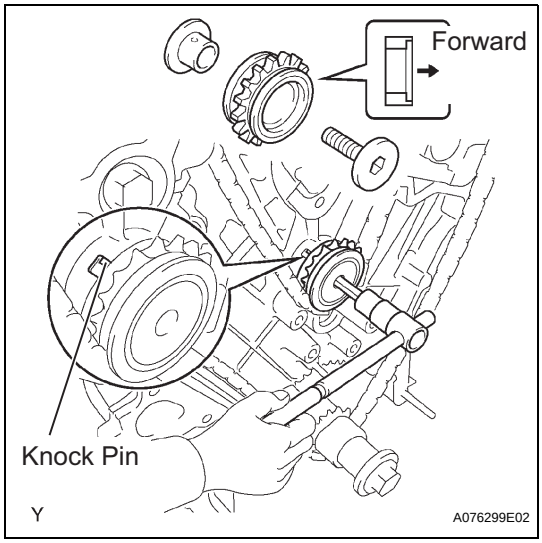
(c) Align the orange mark links with the timing marks of the camshaft timing gears, and install the chain.

4. INSTALL NO.2 CHAIN VIBRATION DAMPER

(a) Install the 2 chain vibration dampers No. 2.

5. INSTALL IDLE SPROCKET ASSEMBLY

(a) Apply a light coat of engine oil to rotating surface of the idle gear shaft No. 1.



(b) Temporarily install the idle gear shaft No. 1 together with idle gear shaft No. 2 while aligning the knock pin of the idle gear shaft No. 1 with the knock pin groove of the cylinder block.
NOTICE:
Be careful of the idle gear direction.

(c) Using 10 mm hexagon wrench, tighten the idle gear shaft No. 2.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

(d) Remove the bar from the chain tensioner.

6. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)

7. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY (See page LU-20)

8. INSTALL VVT SENSOR (See page IG-8)

9. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-408)

10. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-68)

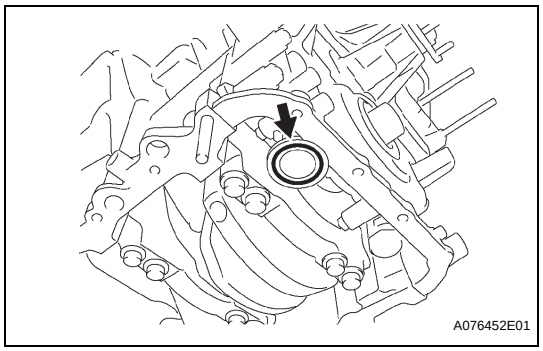
11. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-68)

12. INSTALL IGNITION COIL ASSEMBLY (See page IG-7)

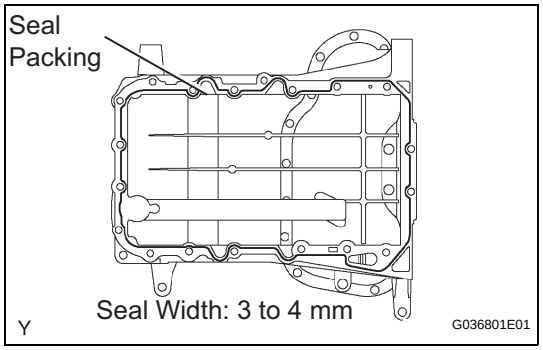
13. INSTALL INTAKE AIR SURGE TANK (See page EM-69)

14. INSTALL OIL PAN SUB-ASSEMBLY

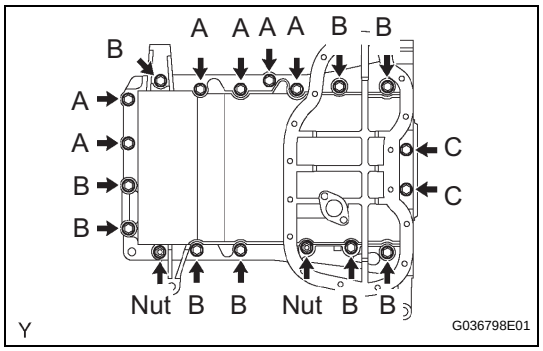
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.



(b) Install a new O-ring onto the oil pump.



(c) Apply a continuous bead of the seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the oil pan as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan within 3 minutes of applying the seal packing. Tighten the oil pan bolts and nuts within 15 minutes of installing the oil pan. Otherwise, the seal packing must be removed and reapplied.

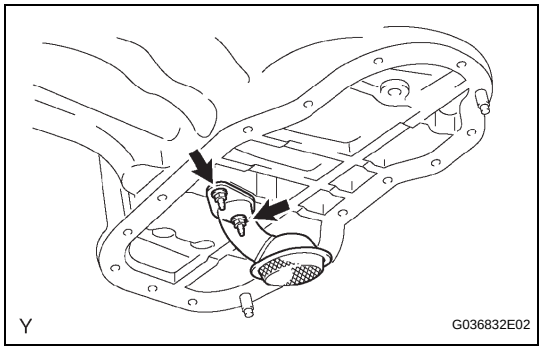


(d) Install the oil pan with the 17 bolts and 2 nuts, and tighten the bolts and nuts uniformly in several steps.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for 10 mm (0.39 in.) head
21 N*m (214 kgf*cm, 16 ft.*lbf) for 12 mm (0.47 in.) head
HINT:
Each bolt length is as follows:

Bolt	Length
A	25 mm (0.98 in.)
B	45 mm (1.77 in.)
C	14 mm (0.55 in.)

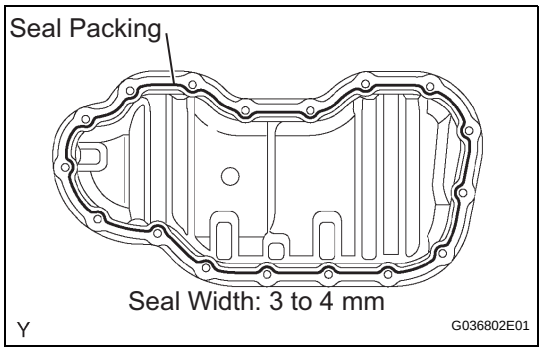
15. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket and the oil strainer with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

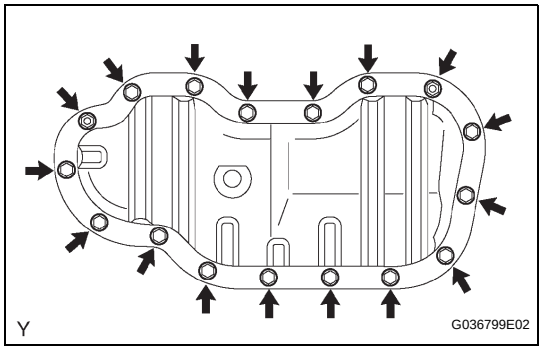


16. INSTALL NO.2 OIL PAN SUB-ASSEMBLY

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the oil pan and oil pan No. 2.

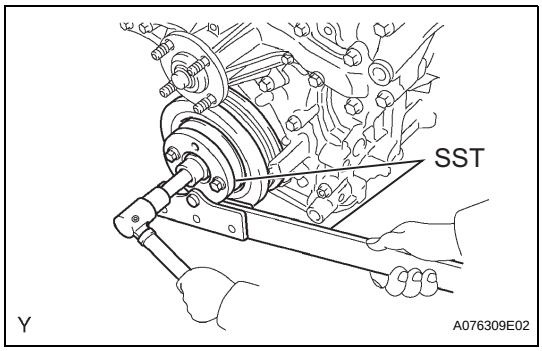


(b) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan No. 2 within 3 minutes of applying the seal packing. Tighten the oil pan No. 2 bolts and nut within 15 minutes of installing the oil pan. Otherwise, the seal packing must be removed and reapplied.

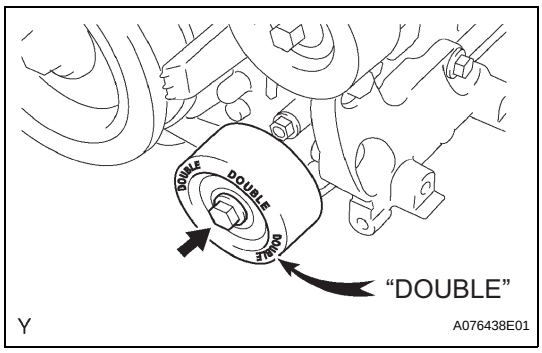


(c) Install the oil pan No. 2 with the 15 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts
10 N*m (102 kgf*cm, 7.4 ft.*lbf) for nuts

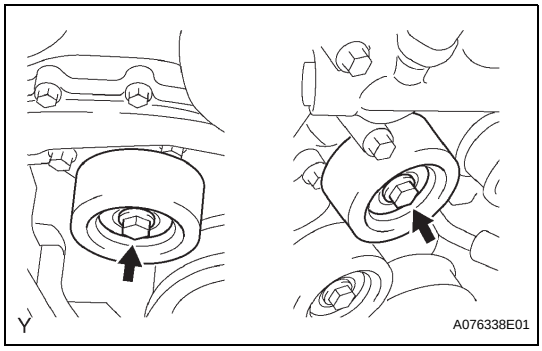
EM



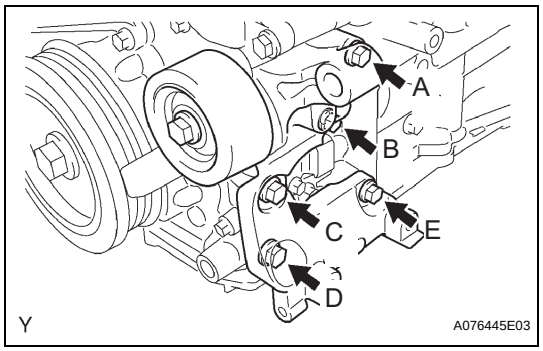
17. INSTALL CRANKSHAFT PULLEY
(a) Using SST, install the pulley set bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 250 N*m (2,549 kgf*cm, 184 ft.*lbf)



18. INSTALL NO.1 IDLER PULLEY SUB-ASSEMBLY
(a) Install the idler pulley with the bolt.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
HINT:
DOUBLE is marked on the idler pulley No. 1 to distinguish it from the idler pulley No. 2.



19. INSTALL NO.2 IDLER PULLEY SUB-ASSEMBLY
(a) Install the 2 idler pulleys with the 2 bolts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



20. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

NOTICE:

A bolt in position A is not reusable.

HINT:

Each bolt length is as follows:

Position	Length
A	70 mm (2.76 in.)
B, C, D and E	33 mm (1.30 in.)

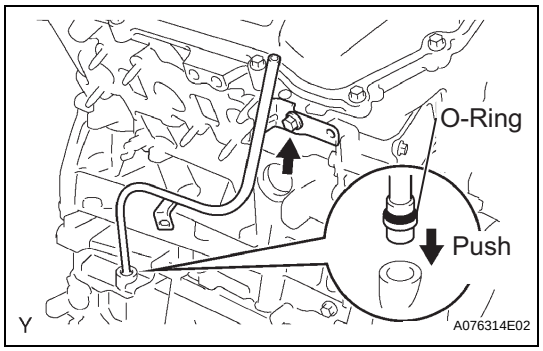
(a) Use a new bolt in position A.

(b) Finger-tighten the bolts in positions A and E and install the bracket.

(c) Tighten the bolts in positions A and E.
Torque: 36 N*m (267 kgf*cm, 27 ft.*lbf)

(d) Tighten the bolts in positions B, C and D.
Torque: 36 N*m (267 kgf*cm, 27 ft.*lbf)

21. INSTALL WATER INLET (See page CO-10)



22. INSTALL OIL LEVEL GAGE GUIDE

(a) Install a new O-ring onto the oil level gauge guide.

(b) Apply a light coat of engine oil to the O-ring.

(c) Push the oil level gauge guide end into the guide hole of the oil pan.

(d) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(e) Install the oil level gauge guide.

23. INSTALL ENGINE ASSEMBLY
(See page EM-190)

24. INSTALL BATTERY

25. ADD ENGINE COOLANT (See page CO-3)

26. ADD ENGINE OIL (See page LU-5)

27. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)

28. CHECK FOR ENGINE OIL LEAKAGE

29. CHECK FOR FUEL LEAKAGE

30. CHECK FOR EXHAUST GAS LEAKAGE

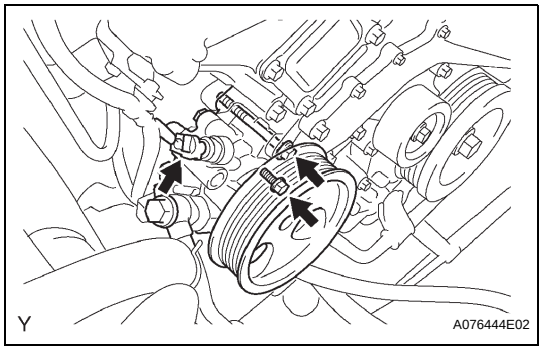
31. INSPECT IGNITION TIMING (See page EM-1)

32. INSPECT ENGINE IDLING SPEED (See page EM-2)

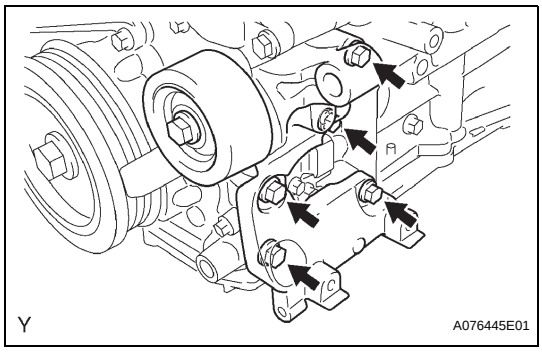
33. INSPECT CO/HC (See page EM-3)

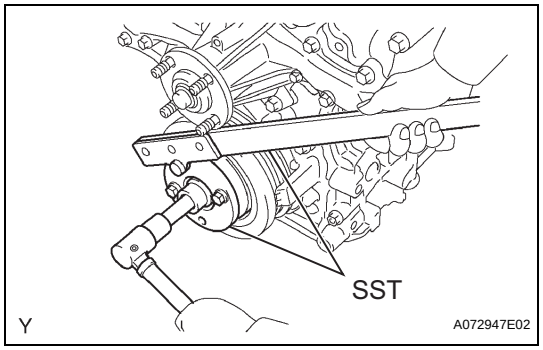
REMOVAL

1. **REMOVE BATTERY**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **DRAIN ENGINE OIL (See page LU-5)**
4. **REMOVE POWER STEERING LINK ASSEMBLY** (See page PS-53)
5. **REMOVE FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)** (See page DF-19)
6. **REMOVE V-BANK COVER (See page ES-414)**
7. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
8. **REMOVE FAN SHROUD (See page CO-15)**
9. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
10. **REMOVE OIL LEVEL GAGE GUIDE**
    (a) Remove the oil level gauge.
    (b) Remove the bolt and pull out the oil level gauge guide.
    (c) Remove the O-ring from the oil level gauge guide.
11. **REMOVE WATER INLET (See page CO-9)**
12. **SEPARATE VANE PUMP ASSEMBLY**
    (a) Disconnect the power steering pressure switch connector.
    (b) Remove the 2 bolts, then separate the vane pump.
    NOTICE:
    Do not hit the pulley with other parts when separating the vane pump.
    HINT:
    The vane pump is suspended securely.



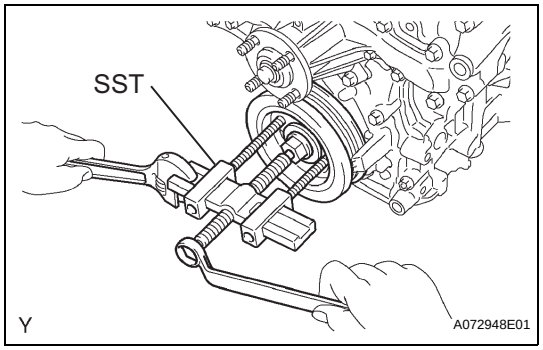
13. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**
14. **SEPARATE COOLER COMPRESSOR ASSEMBLY (See page ES-409)**
15. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY**
    (a) Remove the 5 bolts, then remove the V-ribbed belt tensioner.
16. **REMOVE NO.2 IDLER PULLEY SUB-ASSEMBLY**
    (a) Remove the 2 bolts, then remove the idler pulley No. 2.
17. **REMOVE NO.1 IDLER PULLEY SUB-ASSEMBLY**
    (a) Remove the bolt, then remove the idler pulley No. 1.





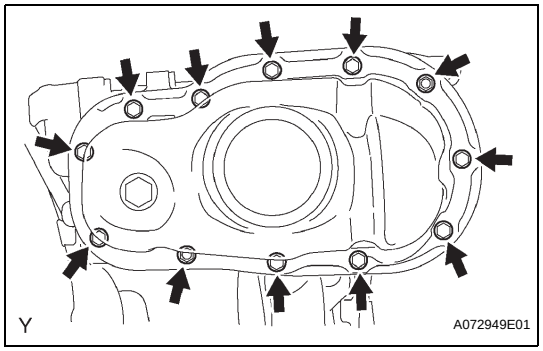
18. REMOVE CRANKSHAFT PULLEY

(a) Using SST, hold the crankshaft pulley and loosen the pulley set bolt.
SST 09213-54015 (91651-60855), 09330-00021



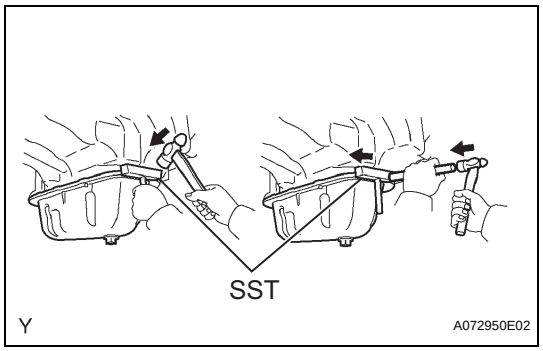
(b) Using the pulley set bolt and SST, remove the crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05030)

EM

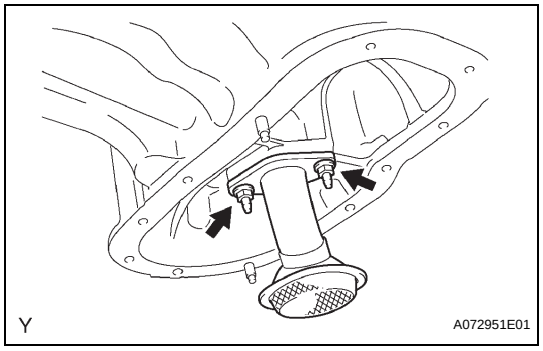


19. REMOVE NO.2 OIL PAN SUB-ASSEMBLY

(a) Remove the 10 bolts and 2 nuts.

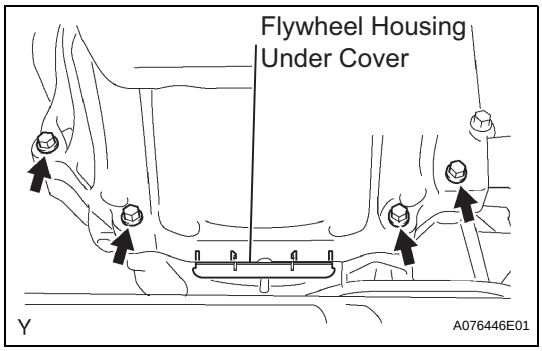


(b) Insert the blade of SST between the oil pan and oil pan No. 2, cut off applied sealer and remove the oil pan No. 2.
SST 09032-00100
NOTICE:
- **Be careful not to damage the contact surfaces of the oil pan and oil pan No. 2.**
- **Be careful not to damage the oil pan No. 2 flange.**



20. REMOVE OIL STRAINER SUB-ASSEMBLY

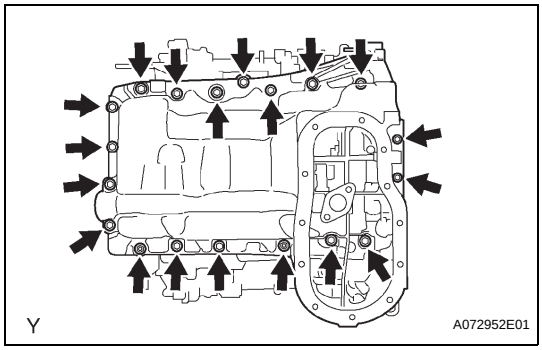
(a) Remove the 2 nuts, then remove the oil strainer and gasket.



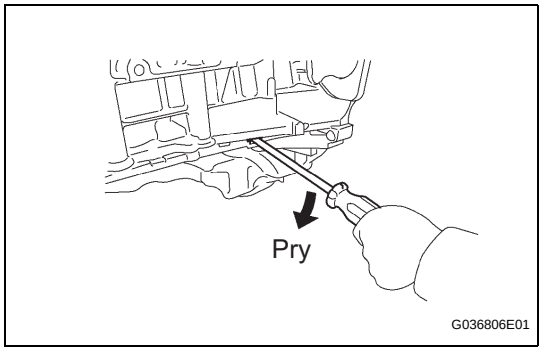
21. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 4 housing bolts.

(b) Remove the flywheel housing under cover.



(c) Remove the 17 bolts and 2 nuts.



(d) Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and oil pan.

(e) Remove the O-ring from the oil pump.

22. REMOVE INTAKE AIR SURGE TANK (See page EM-57)

23. REMOVE IGNITION COIL ASSEMBLY (See page IG-7)

24. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)

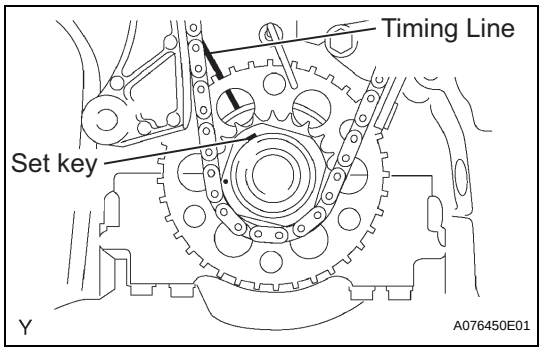
25. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)

26. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-407)

27. REMOVE VVT SENSOR (See page IG-8)

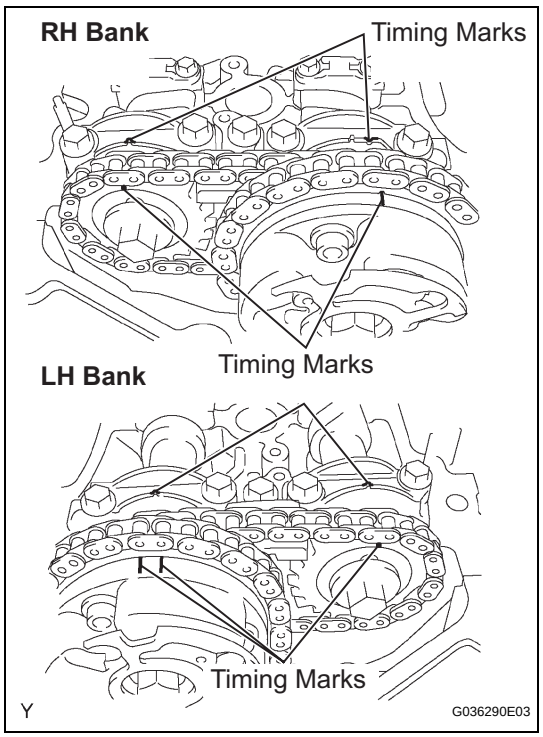
28. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY (See page LU-17)

29. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)



30. SET NO.1 COMPRESSION TO TDC/COMPRESSION

(a) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

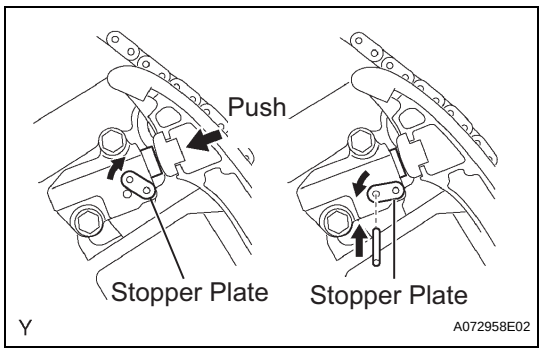


(b) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

31. REMOVE NO.1 CHAIN TENSIONER ASSEMBLY

NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**



(a) While turning the stopper plate of the tensioner upward, push in the plunger of the chain tensioner as shown in the illustration.

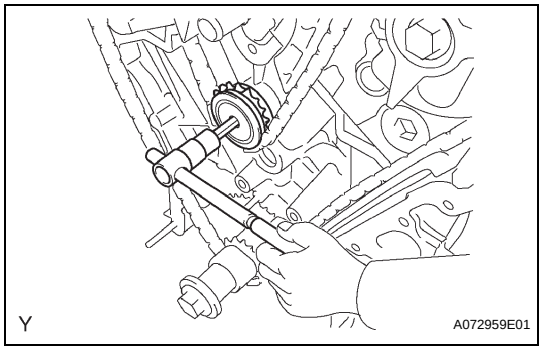
(b) While turning the stopper plate of the tensioner down ward, insert a bar of ϕ 3.5 mm (0.138) into the holes in the stopper plate and tensioner to fix the stopper plate.

(c) Remove the 2 bolts, then remove the chain tensioner.

32. REMOVE CHAIN TENSIONER SLIPPER

33. REMOVE IDLE SPROCKET ASSEMBLY

(a) Using a 10 mm hexagon wrench, remove the idle gear shaft No. 2, idle gear No. 1 and idle gear shaft No. 1.



34. REMOVE NO.2 CHAIN VIBRATION DAMPER

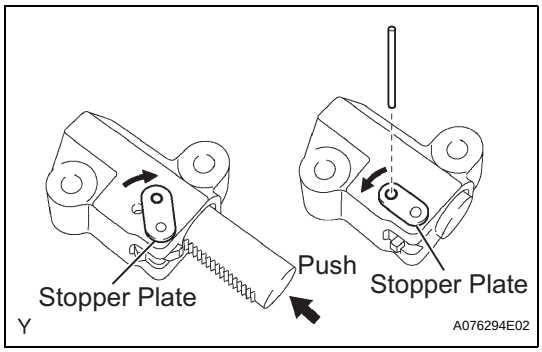
(a) Remove the 2 chain vibration dampers No. 2.

35. REMOVE CHAIN SUB-ASSEMBLY

INSTALLATION

1. INSTALL CHAIN TENSIONER SLIPPER

2. INSTALL NO.1 CHAIN TENSIONER ASSEMBLY



(a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.

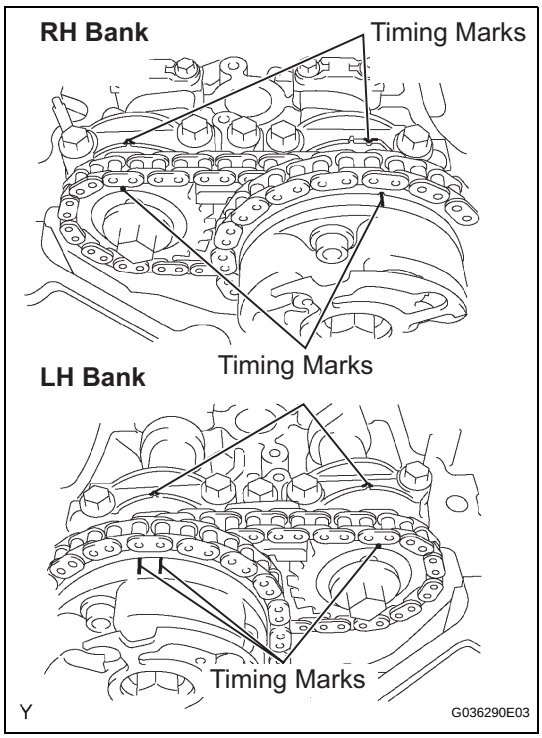
(b) While turning the stopper plate of the tensioner counterclockwise, insert a bar of ϕ 35 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.

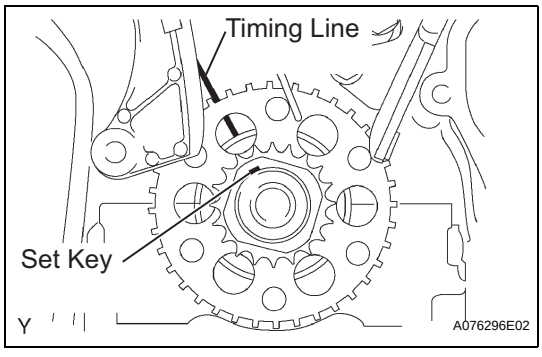
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

3. INSTALL CHAIN SUB-ASSEMBLY

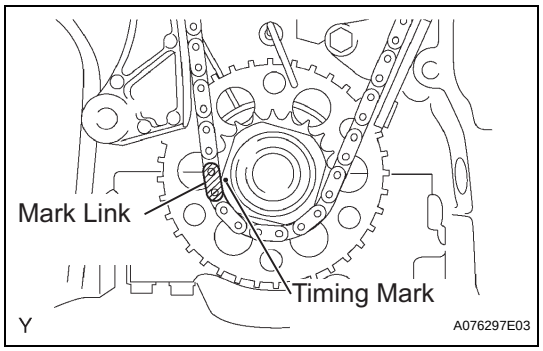
(a) Set the No. 1 cylinder to TDC/ compression.

(1) Align the timing marks of the camshaft timing gears and bearing caps.

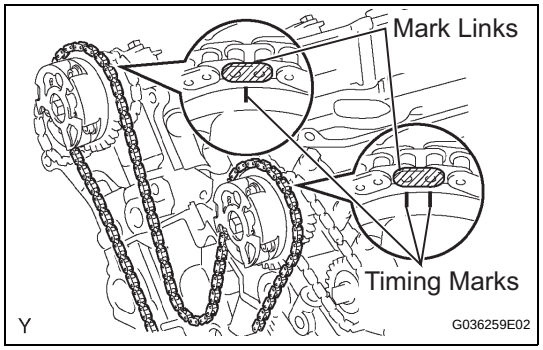




(2) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.



(b) Align the yellow mark link with the timing mark of the crankshaft timing link.



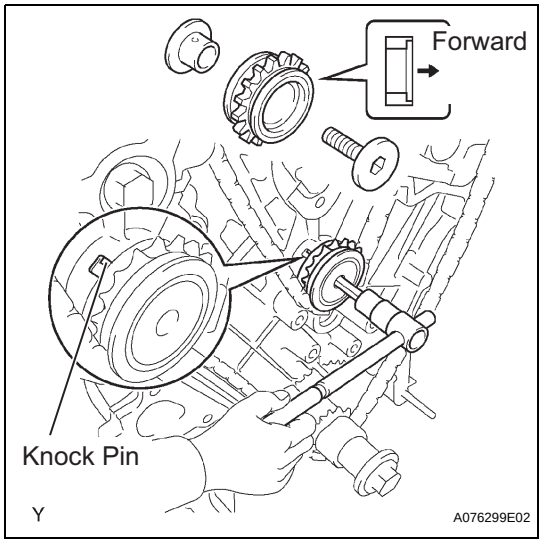
(c) Align the orange mark links with the timing marks of the camshaft timing gears, and install the chain.

4. INSTALL NO.2 CHAIN VIBRATION DAMPER

(a) Install the 2 chain vibration dampers No. 2.

5. INSTALL IDLE SPROCKET ASSEMBLY

(a) Apply a light coat of engine oil to rotating surface of the idle gear shaft No. 1.



(b) Temporarily install the idle gear shaft No. 1 together with the idle gear shaft No. 2 while aligning the knock pin of the idle gear shaft No. 1 with the knock pin groove of the cylinder block.
NOTICE:
Be careful of the idle gear direction.

(c) Using 10 mm hexagon wrench, tighten the idle gear shaft No. 2.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

(d) Remove the bar from the chain tensioner.

6. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)

7. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY (See page LU-20)

8. INSTALL VVT SENSOR (See page IG-8)

9. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-408)

10. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-68)

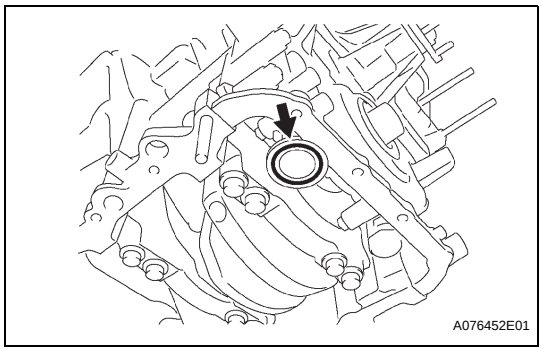
11. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-68)

12. INSTALL IGNITION COIL ASSEMBLY (See page IG-7)

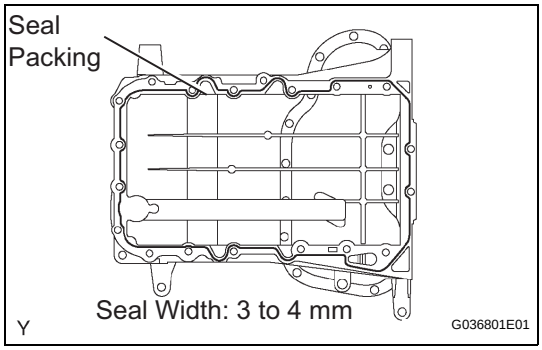
13. INSTALL INTAKE AIR SURGE TANK (See page EM-69)

14. INSTALL OIL PAN SUB-ASSEMBLY

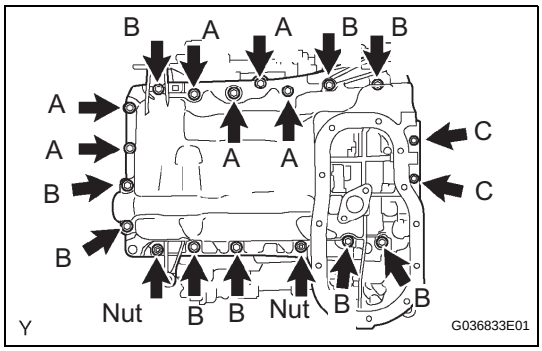
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.



(b) Install a new O-ring onto the oil pump.

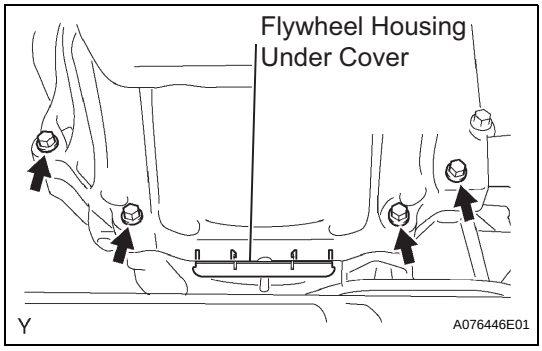


(c) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the oil pan as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan within 3 minutes of applying the seal packing. Tighten the oil pan bolts and nuts within 15 minutes of installing the oil pan. Otherwise, the seal packing must be removed and reapplied.



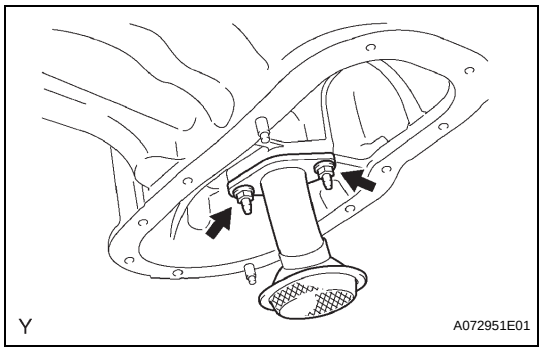
(d) Install the oil pan with the 17 bolts and 2 nuts, and tighten the bolts and nuts uniformly in several steps.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for 10 mm (0.39 in.) head
21 N*m (214 kgf*cm, 16 ft.*lbf) for 12 mm (0.47 in.) head
HINT:
Each bolt length is as follows:

Bolt	Length
A	25 mm (0.98 in.)
B	45 mm (1.77 in.)
C	14 mm (0.55 in.)



(e) Install the 4 housing bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(f) Install the flywheel housing under cover.

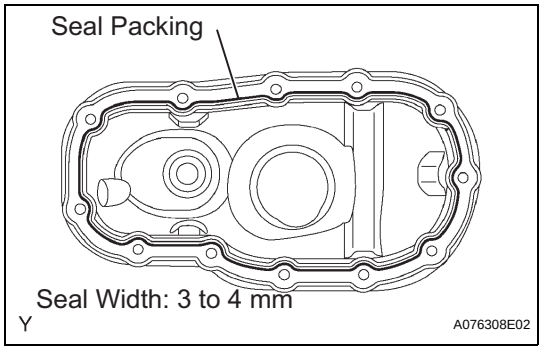


15. INSTALL OIL STRAINER SUB-ASSEMBLY

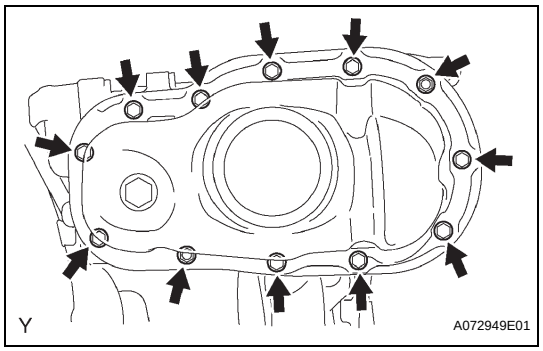
(a) Install a new gasket and the oil strainer with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

16. INSTALL NO.2 OIL PAN SUB-ASSEMBLY

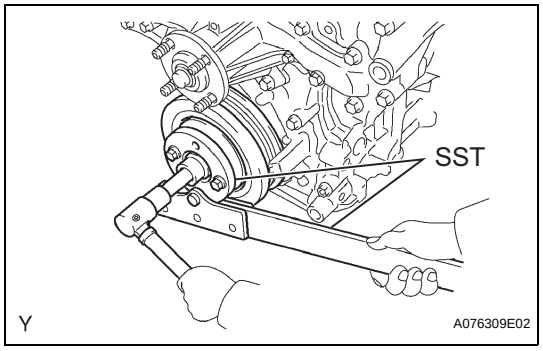
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the oil pan and oil pan No. 2.



(b) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan No. 2 within 3 minutes of applying the seal packing. Tighten the oil pan No. 2 bolts and nuts within 15 minutes of installing the oil pan No. 2. Otherwise, the seal packing must be removed and reapplied.

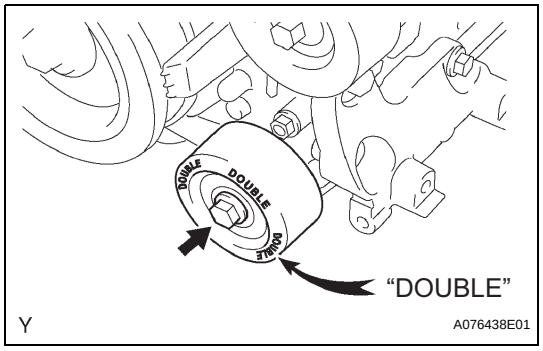


(c) Install the oil pan No. 2 with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts
10 N*m (102 kgf*cm, 7.4 in.*lbf) for nut



17. INSTALL CRANKSHAFT PULLEY

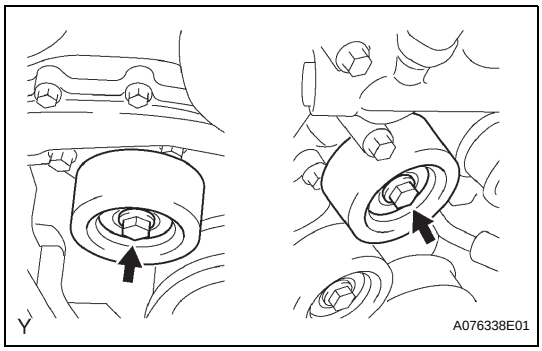
(a) Using SST, install the pulley set bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 250 N*m (2,549 kgf*cm, 184 ft.*lbf)



18. INSTALL NO.1 IDLER PULLEY SUB-ASSEMBLY

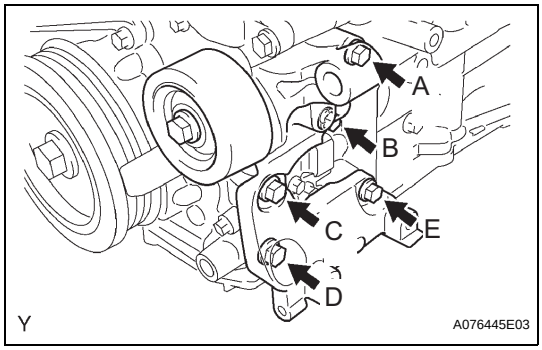
(a) Install the idler pulley with the bolt.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
HINT:
DOUBLE is marked on the idler pulley No. 1 to distinguish it from the idler pulley No. 2.

EM



19. INSTALL NO.2 IDLER PULLEY SUB-ASSEMBLY

(a) Install the 2 idler pulleys with the 2 bolts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



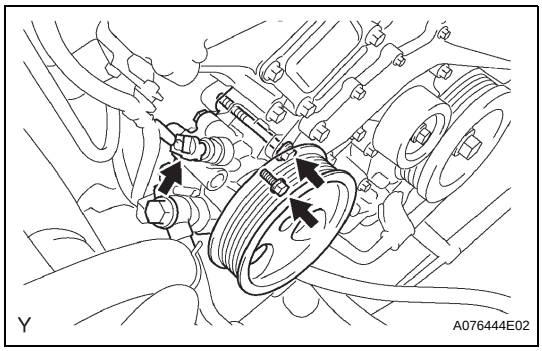
20. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY
NOTICE:
A bolt in position A is not reusable.
HINT:
Each bolt length is as follows:

Position	Length
A	70 mm (2.76 in.)
B, C, D and E	33 mm (1.30 in.)

(a) Use a new bolt in position A.
(b) Finger-tighten the bolts in positions A and E and install the bracket.
(c) Tighten the bolts in positions A and E.
Torque: 36 N*m (267 kgf*cm, 27 ft.*lbf)
(d) Tighten the bolts in positions B, C and D.
Torque: 36 N*m (267 kgf*cm, 27 ft.*lbf)

21. INSTALL COOLER COMPRESSOR ASSEMBLY (See page ES-410)

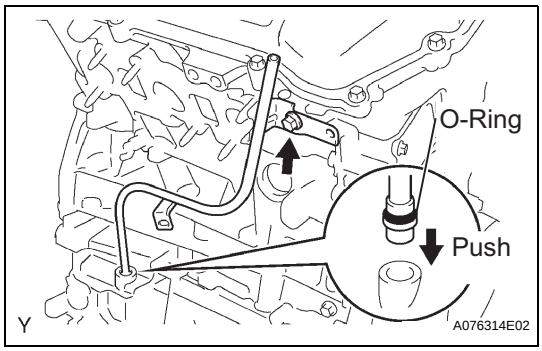
22. INSTALL GENERATOR ASSEMBLY (See page CH-13)



23. INSTALL VANE PUMP ASSEMBLY

(a) Install the vane pump with the 2 bolts.
(b) Connect the power steering pressure switch connector.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
NOTICE:
Do not hit the pulley with other parts when installing the vane pump.
(c) Connect the power steering pressure switch connector.

24. INSTALL WATER INLET (See page CO-10)



25. INSTALL OIL LEVEL GAGE GUIDE

(a) Install a new O-ring onto the oil level gauge guide.
(b) Apply a light coat of engine oil to the O-ring.
(c) Push the oil level gauge guide end into the guide hole of the oil pan.
(d) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(e) Install the oil level gauge guide.

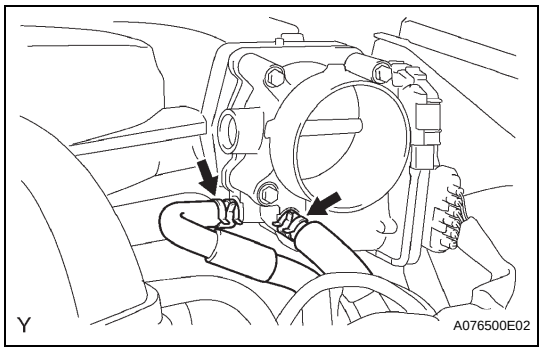
26. INSTALL AIR CLEANER ASSEMBLY (See page ES-416)

27. **INSTALL FAN SHROUD (See page CO-20)**
28. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
29. **INSTALL FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)**
(See page DF-38)
30. **INSTALL POWER STEERING LINK ASSEMBLY**
(See page PS-67)
31. **INSTALL BATTERY**
32. **ADD ENGINE OIL (See page LU-5)**
33. **ADD ENGINE COOLANT (See page CO-3)**
34. **ADD DIFFERENTIAL OIL (for 4WD)**
35. **INSPECT DIFFERENTIAL OIL (for 4WD) (See page DF-8)**
36. **ADD POWER STEERING FLUID**
37. **BLEED POWER STEERING FLUID (See page PS-2)**
38. **CHECK FOR ENGINE OIL LEAKAGE**
39. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
40. **CHECK FOR POWER STEERING FLUID LEAKAGE**
41. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(See page SP-7)
42. **INSTALL V-BANK COVER (See page ES-416)**
43. **INSPECT IGNITION TIMING (See page EM-1)**

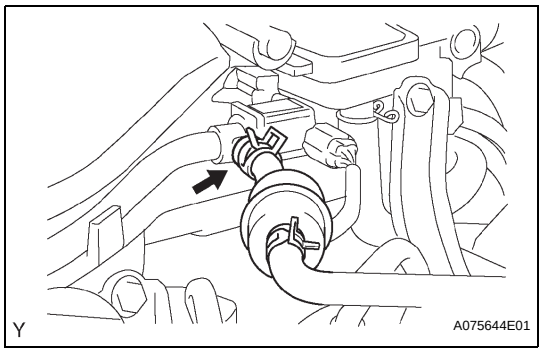
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **REMOVE INTAKE AIR SURGE TANK**

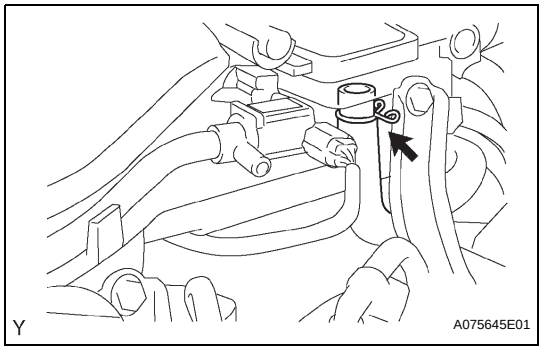
(a) Disconnect the 2 water by-pass hoses.

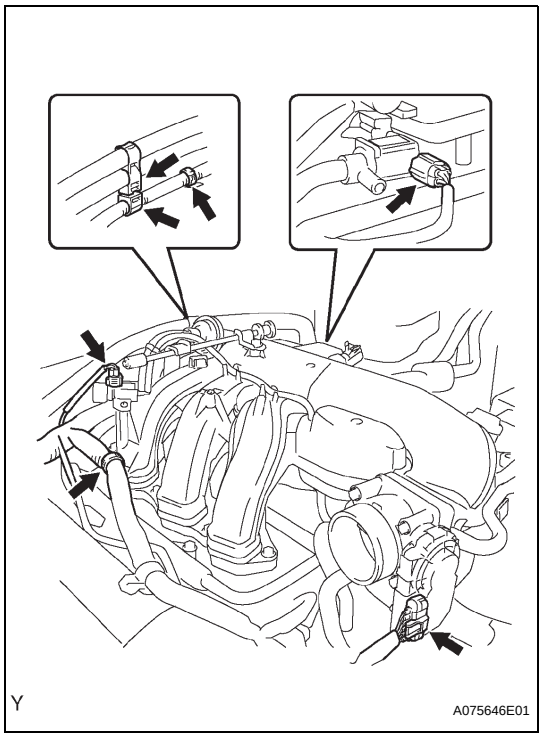


(b) Disconnect the fuel vapor feed hose.

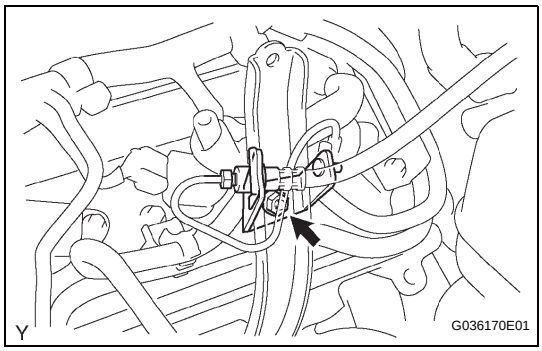


(c) Disconnect the ventilation hose.

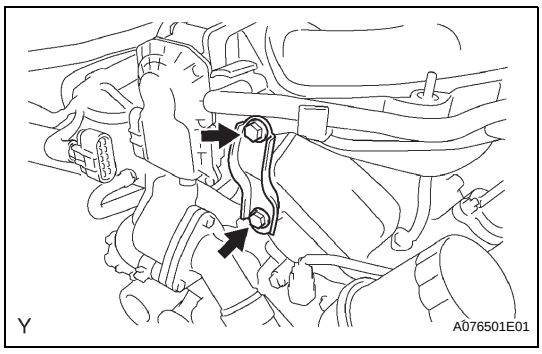




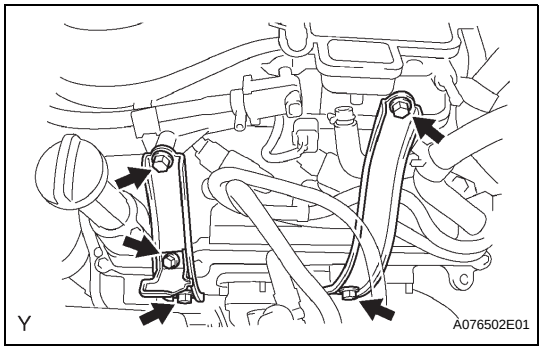
(d) Disconnect the 2 VSV connectors.
(e) Disconnect the throttle body with motor connector.
(f) Separate the 3 wire harness clamps and hose clamp.



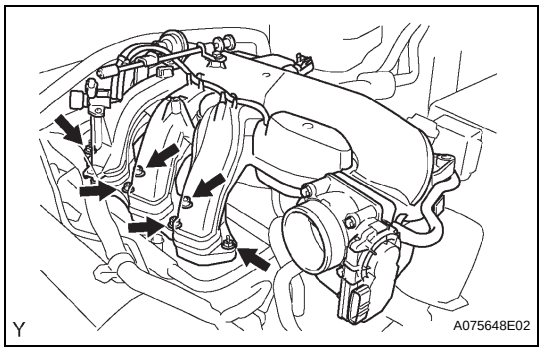
(g) Remove the nut, then separate the clutch flexible hose bracket from the surge tank stay (with Manual Transmission).



(h) Remove the 2 bolts and throttle body bracket.



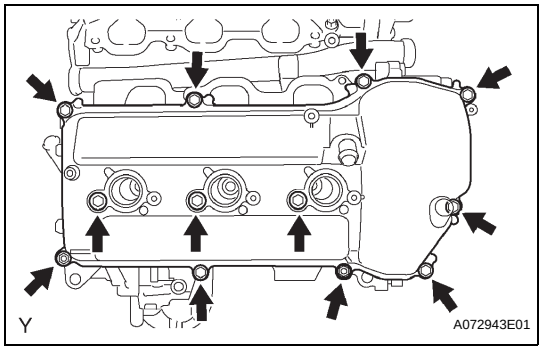
(i) Remove the bolt and oil baffle plate.
(j) Remove the 4 bolts and 2 surge tank stays.



(k) Remove the 2 nuts.
(l) Using a socket hexagon wrench 8, remove the 4 bolts, intake air surge tank and gasket.

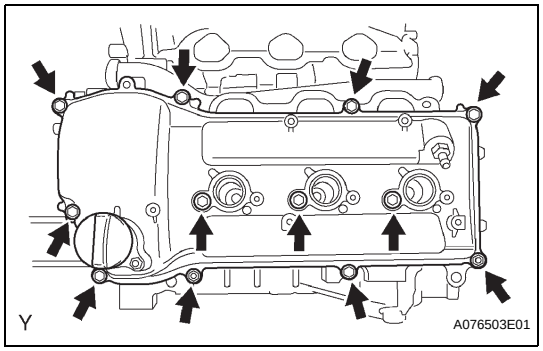
6. REMOVE IGNITION COIL ASSEMBLY

(a) Disconnect the 3 connectors.
(b) Remove the 3 bolts, then remove the 3 ignition coils.



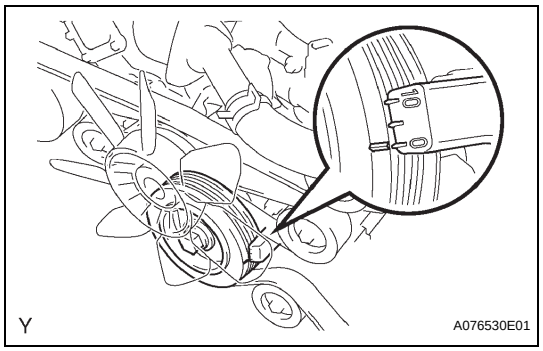
7. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



8. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

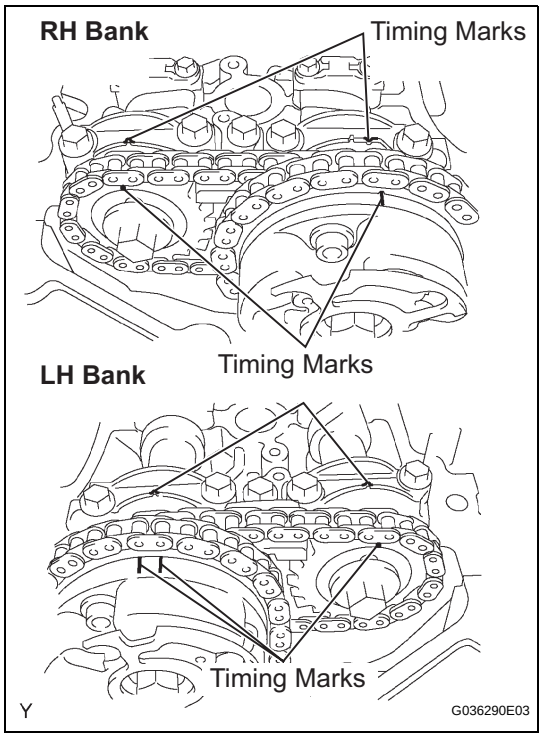
(a) Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



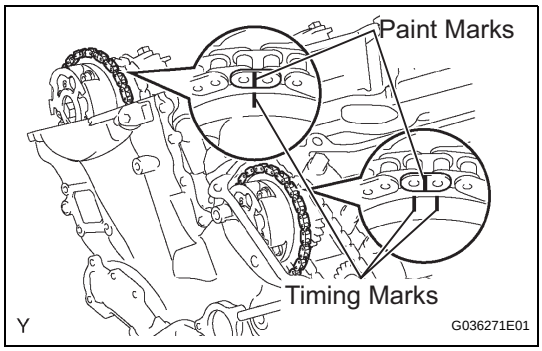
9. SET NO.1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.

EM



(b) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks above.

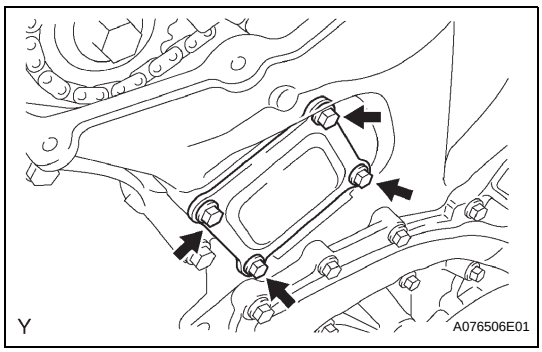


(c) Place paint marks on the No. 1 chain links corresponding to the timing marks of the camshaft timing gears.

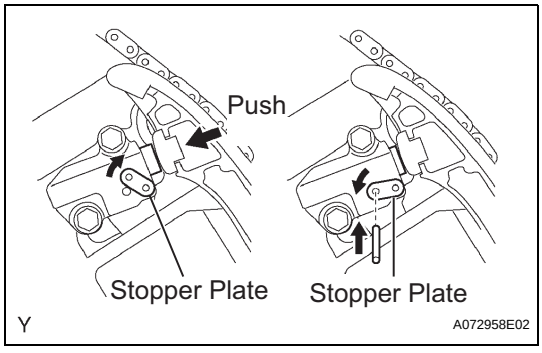
10. REMOVE NO.1 CHAIN TENSIONER ASSEMBLY

NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**



(a) Remove the 4 bolts, then remove the timing chain cover plate and gasket.



(b) While turning the stopper plate of the tensioner upward, push in the plunger of the chain tensioner as shown in the illustration.

(c) While turning the stopper plate of the tensioner downward, insert a bar of ϕ3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.

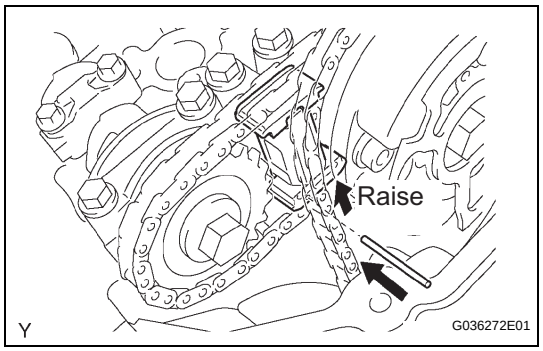
(d) Remove the 2 bolts, then remove the chain tensioner.

11. REMOVE NO.2 CAMSHAFT

NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

(a) While raising the chain tensioner No. 2, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it.

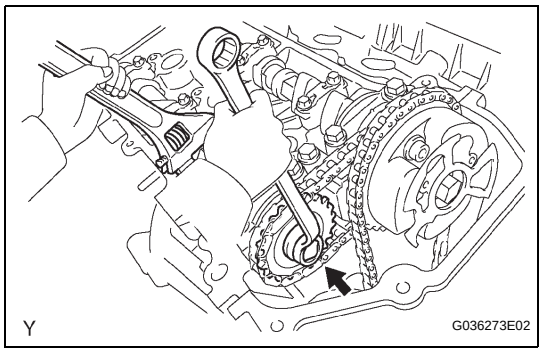


(b) Hold the hexagonal portion of the No. 2 camshaft with a wrench, and remove the camshaft timing gear set bolt.

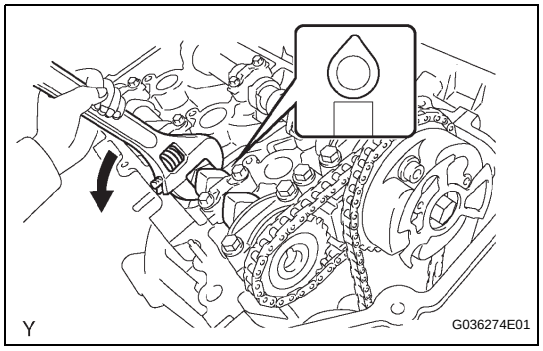
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

(c) Separate the camshaft timing gear from the No. 2 camshaft.

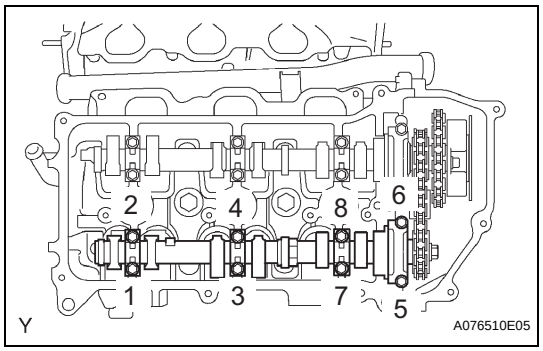


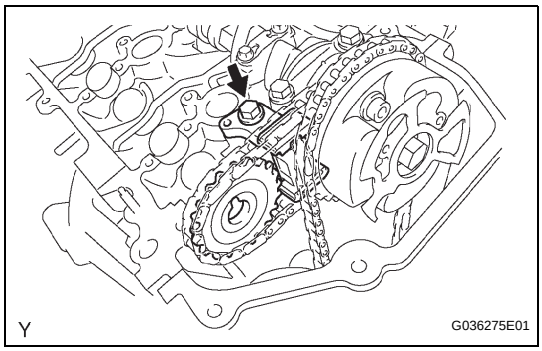
(d) 3Rotate the camshaft counterclockwise using the wrench so that the cam lobes of No. 1 cylinder face upward as shown in the illustration.



(e) Using several steps, uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

(f) Remove the 4 bearing caps and No. 2 camshaft.





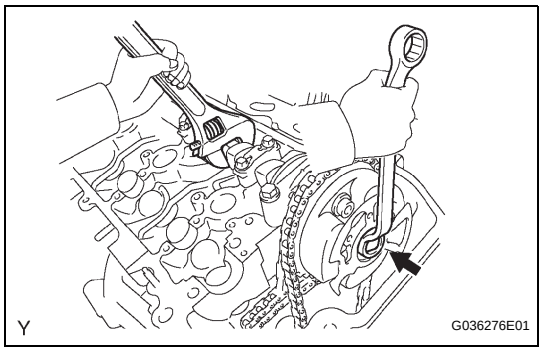
12. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the chain tensioner No. 2 bolt, then remove the chain tensioner No. 2 and camshaft timing gear.

13. REMOVE CAMSHAFT

NOTICE:

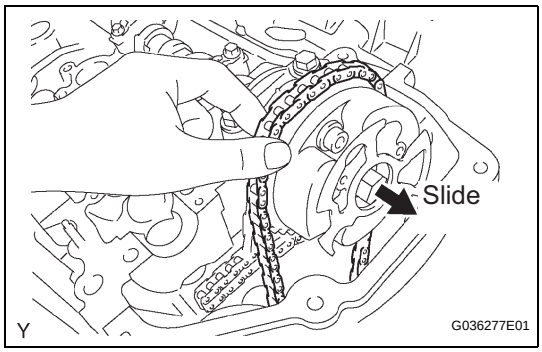
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



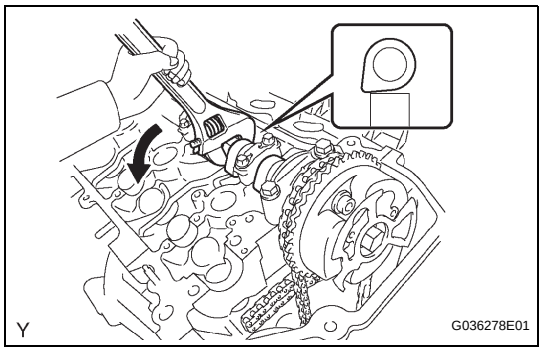
(a) Hold the hexagonal portion of the No. 1 camshaft with a wrench, and loosen the camshaft timing gear set bolt.

NOTICE:

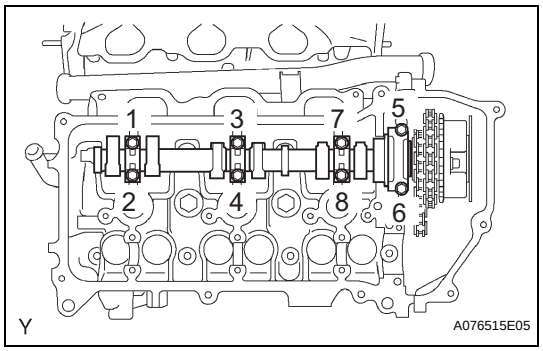
- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear assembly.**



(b) Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.

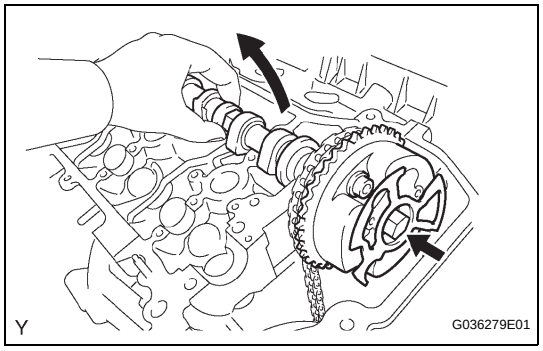


(c) Rotate the No. 1 camshaft counterclockwise using the wrench so that the cam lobes of No. 1 cylinder face downward as shown in the illustration.

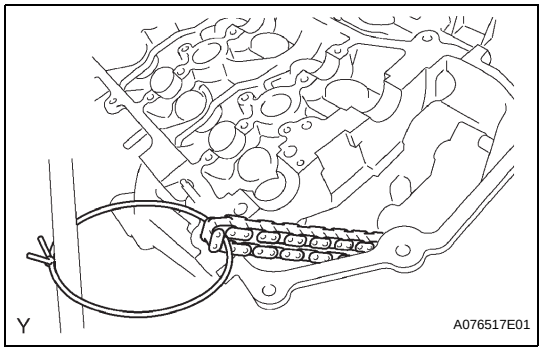


(d) Using several steps, loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

(e) Remove the 4 bearing caps.



(f) Remove the camshaft timing gear set bolt with the No. 1 camshaft lifted up, then remove the No. 1 camshaft and camshaft timing gear with No. 2 chain.



(g) Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

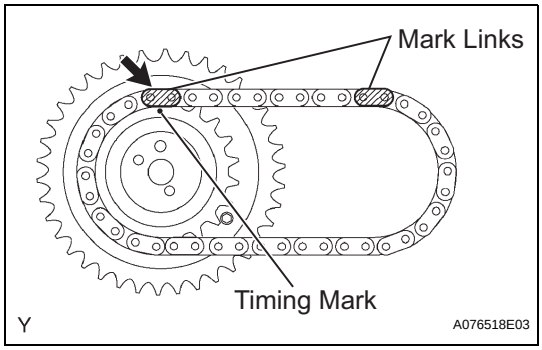
EM

INSTALLATION

1. INSTALL CAMSHAFT

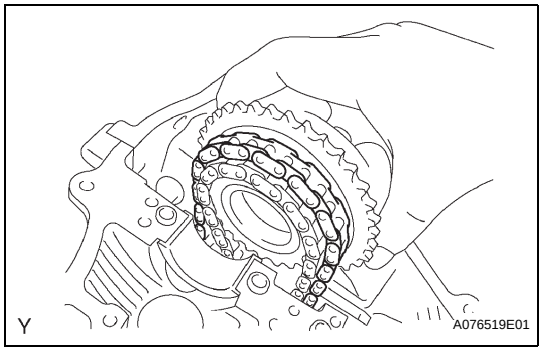
NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

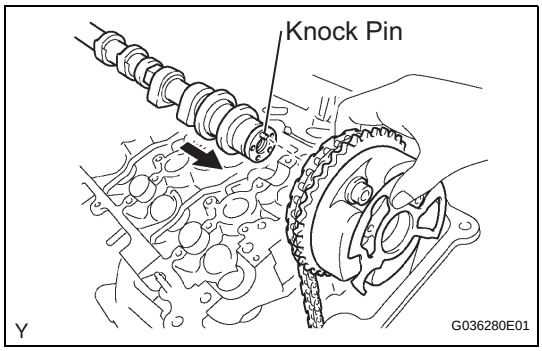


(a) Align the yellow mark link with the timing mark (1 dot mark) of the camshaft timing gear as shown in the illustration.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.

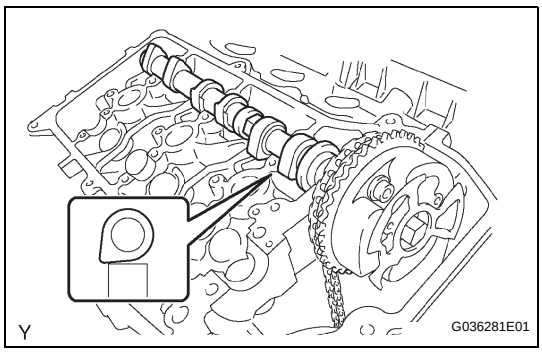


(c) Temporarily install the No. 1 chain onto the No. 2 chain of the camshaft timing gear.

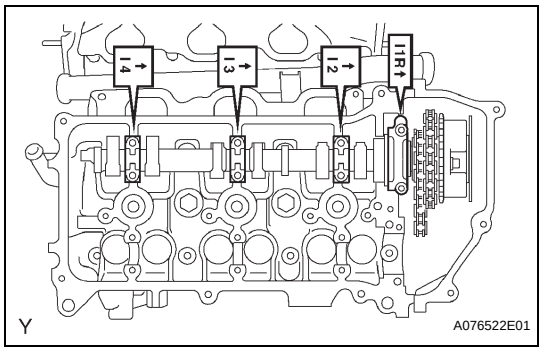


(d) Align the knock pin hole of the camshaft timing gear with the knock pin of the No. 1 camshaft, and insert the No. 1 camshaft into the camshaft timing gear.

(e) Temporarily install the camshaft timing gear set bolt.

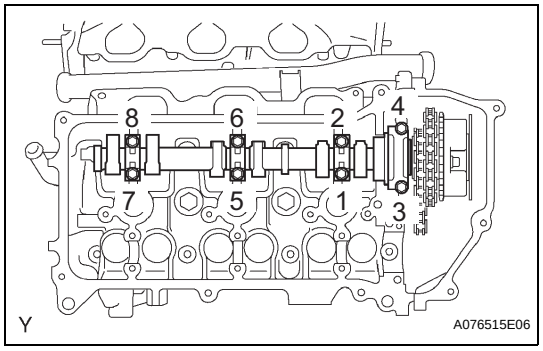


(f) Install the No. 1 camshaft onto the RH cylinder head with the cam lobes of the No. 1 cylinder facing downward as shown in the illustration.



(g) Install the 4 bearing caps in the proper locations as shown.

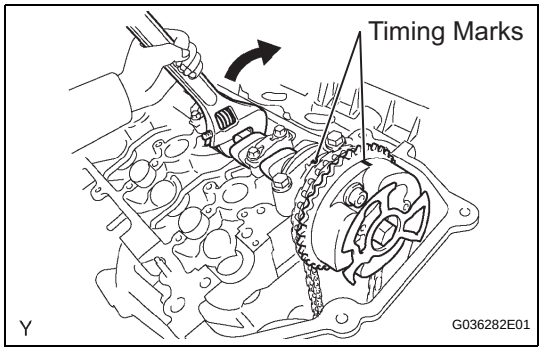
(h) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



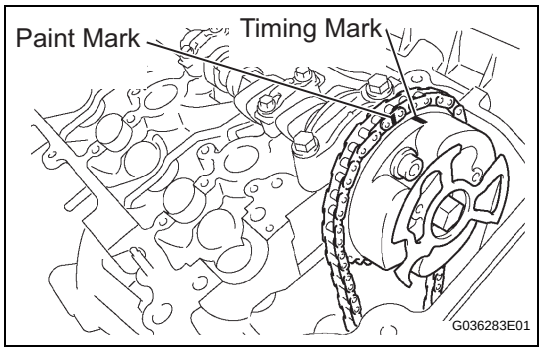
(i) Using several steps, uniformly install and tighten the 8 bearing cap bolts in the sequence shown in the illustration.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

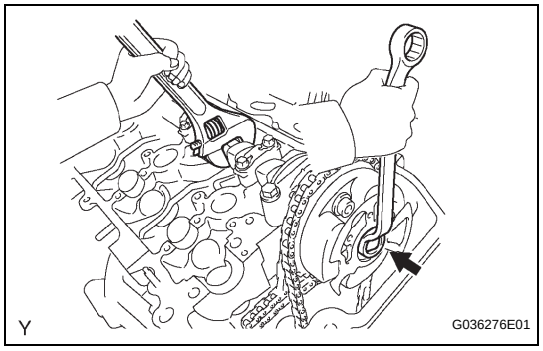
EM



(j) Rotate the No. 1 camshaft clockwise using a wrench so that the timing mark of the camshaft timing gear is aligned with the timing mark of the camshaft bearing cap.

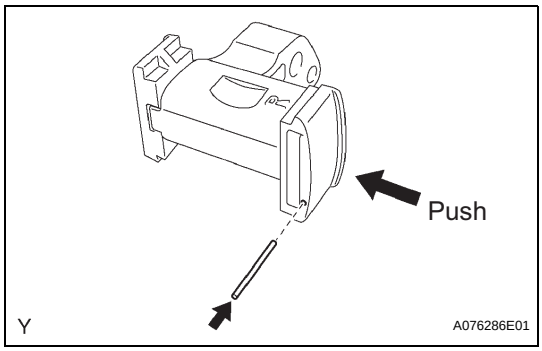


(k) Align the paint mark of the No. 1 chain with the timing mark of the camshaft timing gear.



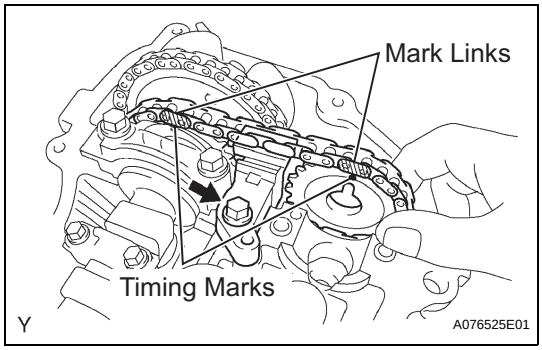
(l) Hold the hexagonal portion of the No. 1 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)



2. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



(b) Temporarily install the camshaft timing gear and chain tensioner No. 2 and align the yellow mark links with the timing marks (1 dot mark) of the camshaft timing gears.

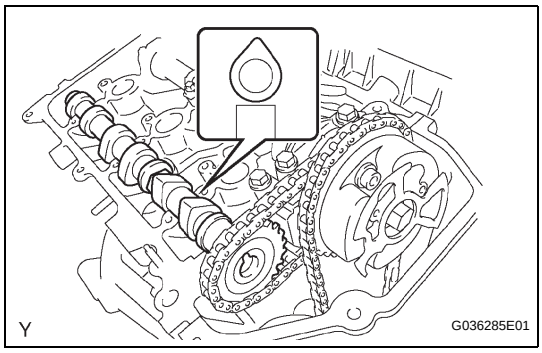
(c) Tighten the chain tensioner No. 2 bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

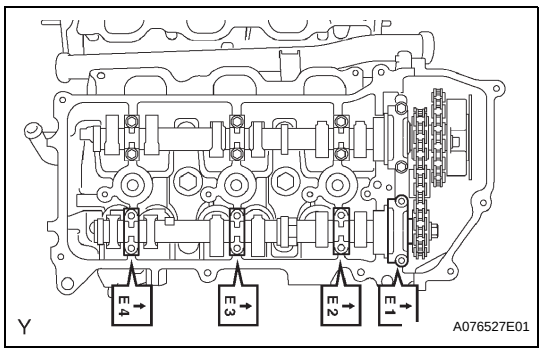
EM

3. INSTALL NO.2 CAMSHAFT

NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

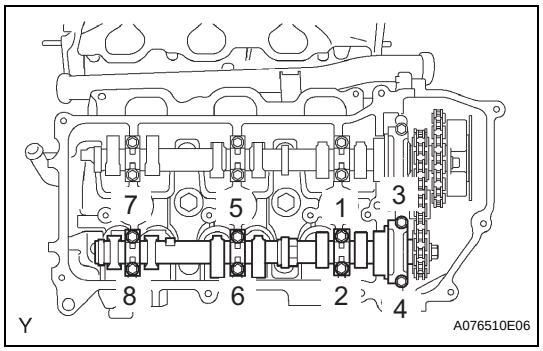
(a) Install the No. 2 camshaft onto the RH cylinder head with the cam lobes of No. 1 cylinder facing upward as shown in the illustration.



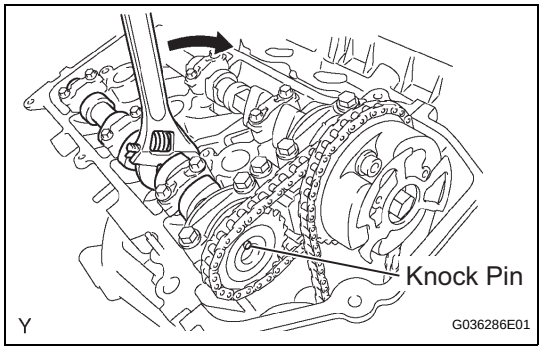


(b) Install the 4 bearing caps in the proper locations as shown.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

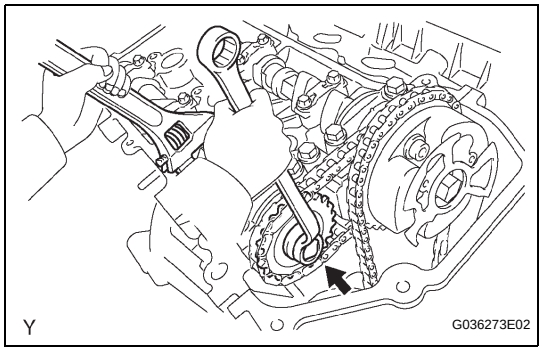


(d) Using several steps, uniformly install and tighten the 8 bearing cap bolts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

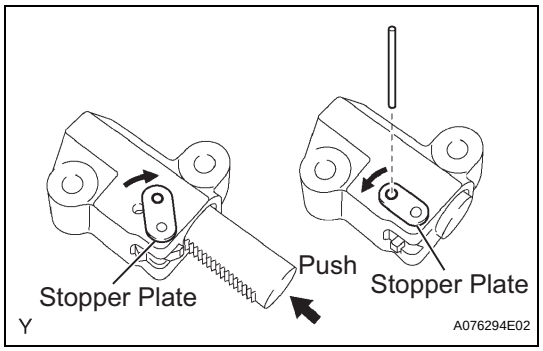


(e) Rotate the No. 2 camshaft clockwise using a wrench so that the knock pin of the No. 2 camshaft is aligned with the knock pin hole of the camshaft timing gear.

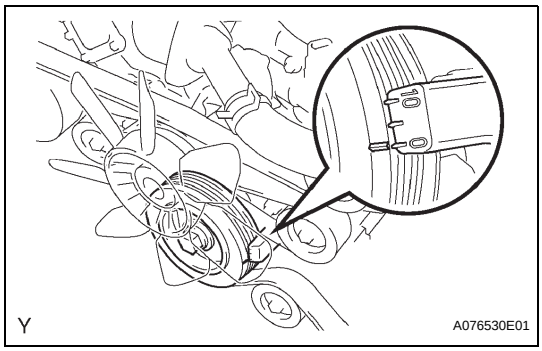
EM



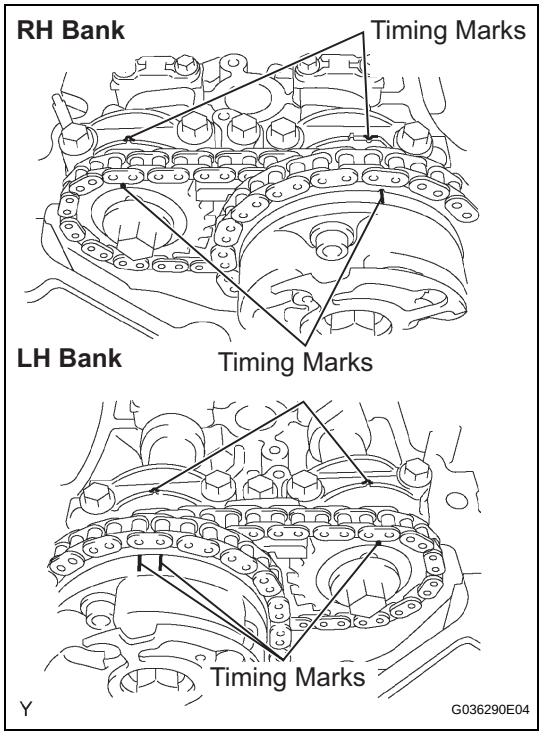
(f) Hold the hexagonal portion of the No. 2 camshaft with a wrench, and install the camshaft timing gear set bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)
(g) Remove the pin from the chain tensioner No. 2.



4. INSTALL NO.1 CHAIN TENSIONER ASSEMBLY
(a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.
(b) While turning the stopper plate of the tensioner counterclockwise, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)
(d) Remove the bar from the chain tensioner.
(e) Install a new gasket and the timing chain cover plate with the 4 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



(f) Turn the crankshaft pulley 2 complete revolutions slowly until its groove and the timing mark "0" of the timing chain cover are aligned.



(g) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.

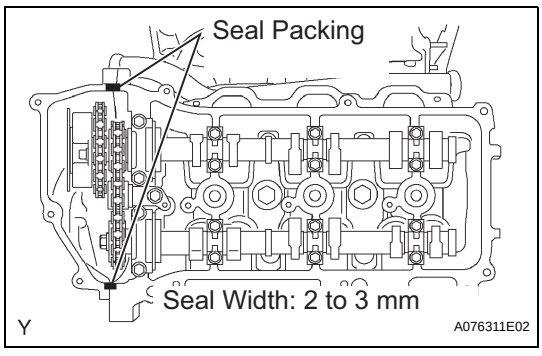
5. SET CYLINDER TO TDC/COMPRESSION (See page EM-7)

6. INSPECT VALVE CLEARANCE (See page EM-8)

7. ADJUST VALVE CLEARANCE (See page EM-9)

8. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

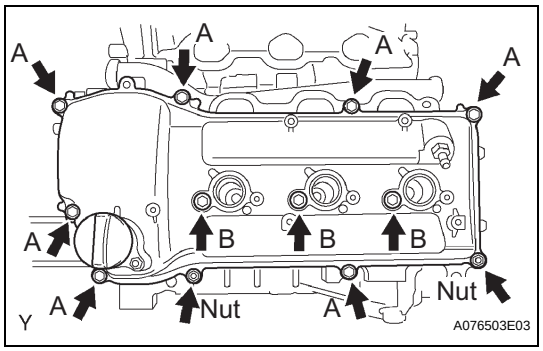


(b) Install the cylinder head cover within 3 minutes of applying seal packing. Tighten the cylinder head cover bolts and nuts within 15 minutes of installing the cylinder head cover. Otherwise, the seal packing mush be removed and reapplied.

Seal packing:
Part No. 08826-00080 or equivalent

NOTICE:
Install the cylinder head cover within 3 minutes after applying the seal packing. After installing it, cylinder head cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

(c) Install the seal washers onto the bolts.



(d) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

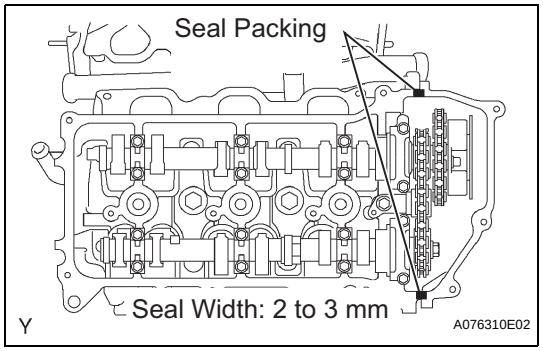
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B
9.0 N*m (92 kgf*cm, 80 in.*lbf) for nut

HINT:
Each bolt length is as follows.

Bolt	Length
A	25 mm (0.98 in.)
B	60 mm (2.36 in.)

9. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

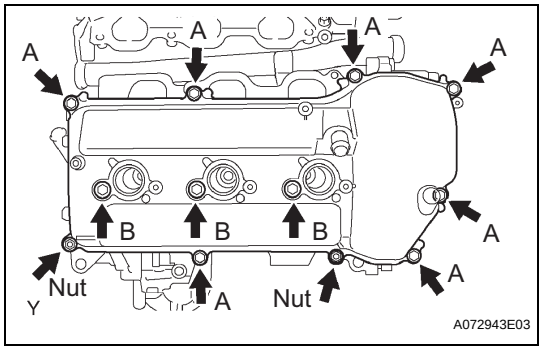
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



(b) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the cylinder head and timing chain cover as shown in the illustration.

Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head cover within 3 minutes of applying the seal packing. Tighten the cylinder head cover bolts and nuts within 15 minutes of installing the cylinder head cover. Otherwise, the seal packing must be removed and reapplied.

(c) Install the seal washers onto the bolts.



(d) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B
9.0 N*m (92 kgf*cm, 80 in.*lbf) for nut

HINT:
Each bolt length is as follows.

Bolt	Length
A	25 mm (0.98 in.)
B	60 mm (2.36 in.)

10. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 3 ignition coils with the 3 bolts.

Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for bolt A

(b) Connect the 3 connectors.

11. INSTALL INTAKE AIR SURGE TANK

(a) Install a new gasket onto the intake air surge tank.

(b) Using the socket hexagon wrench 8, install the intake air surge tank with the 4 bolts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
(c) Install the 2 intake air surge tank nuts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
(d) Install the 2 surge tank stays with the 4 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(e) Install the oil baffle plate with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(f) Install the throttle body bracket with the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(g) Install the clutch flexible hose bracket with the nut (w/ Manual Transmission).
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)
(h) Install the 3 wire harness clamps and hose clamp.
(i) Connect the throttle body w/ motor connector.
(j) Connect the 2 VSV connectors.
(k) Connect the ventilation hose.
(l) Connect the fuel vapor feed hose.
(m) Connect the 2 water by-pass hoses.

12. INSTALL AIR CLEANER ASSEMBLY (See page ES-416)

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

14. ADD ENGINE COOLANT (See page CO-3)

15. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)

16. INSTALL V-BANK COVER
(a) Install the V-bank cover with the 2 nuts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

17. INSPECT IGNITION TIMING (See page EM-1)

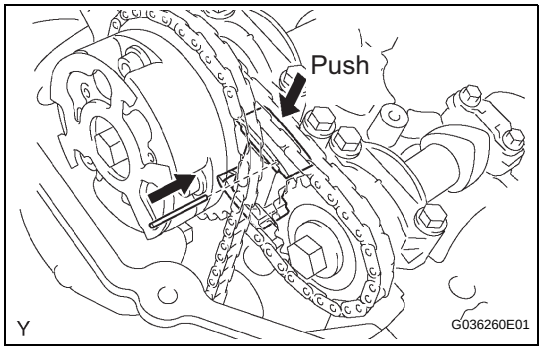
EM

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **REMOVE INTAKE AIR SURGE TANK (See page EM-57)**
6. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)**
8. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)**
9. **SET NO.1 CYLINDER TO TDC/COMPRESSION (See page EM-59)**
10. **REMOVE NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-26)**
11. **REMOVE NO.4 CAMSHAFT SUB-ASSEMBLY**

NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

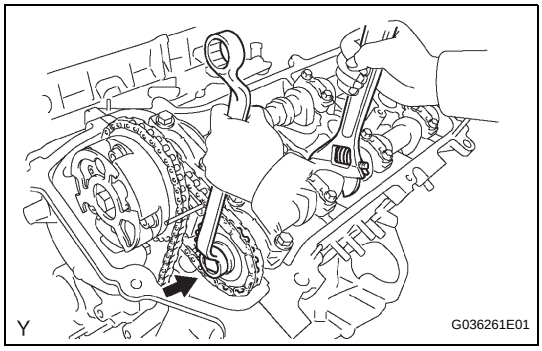
(a) While pushing down the chain tensioner No. 3, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

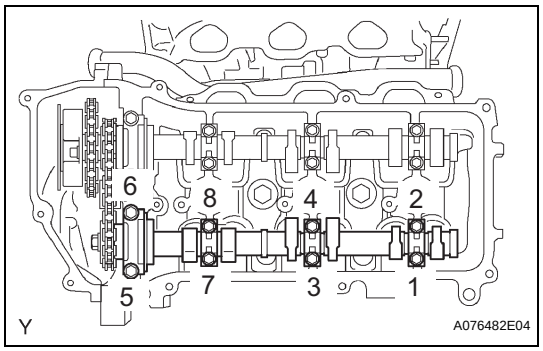


(b) Hold the hexagonal portion of the No. 4 camshaft with a wrench, and remove the camshaft timing gear set bolt.

NOTICE:
Be careful not to damage the cylinder head and valve lifter with the wrench.

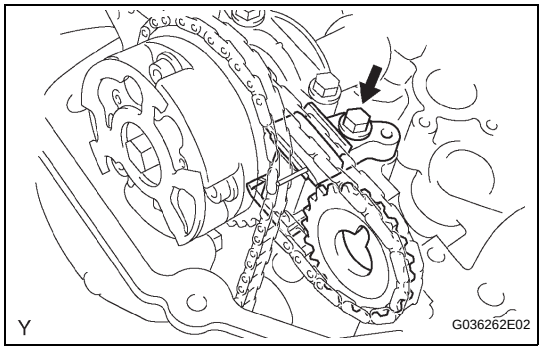
(c) Separate the camshaft timing gear from the No. 4 camshaft.





(d) Using several steps, uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

(e) Remove the 4 bearing caps and No. 4 camshaft.



12. REMOVE NO.3 CHAIN TENSIONER ASSEMBLY

(a) Remove the chain tensioner No. 3 bolt, then remove the chain tensioner No. 3 and camshaft timing gear.

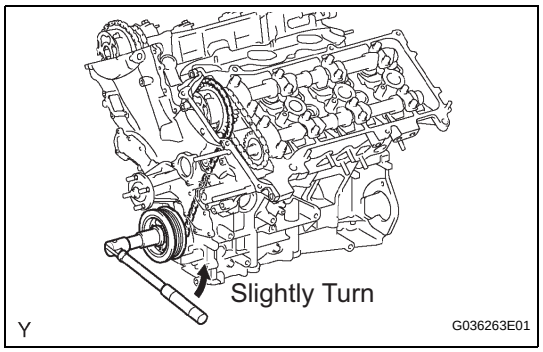
13. REMOVE NO.3 CAMSHAFT SUB-ASSEMBLY

NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

EM

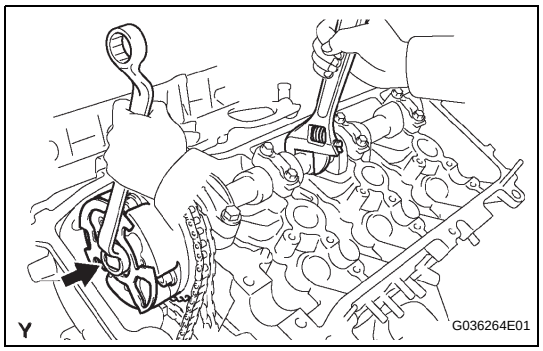
(a) Release the chain tension between the camshaft timing gear (LH bank) and crankshaft timing gear by turning the crankshaft pulley counterclockwise slightly.

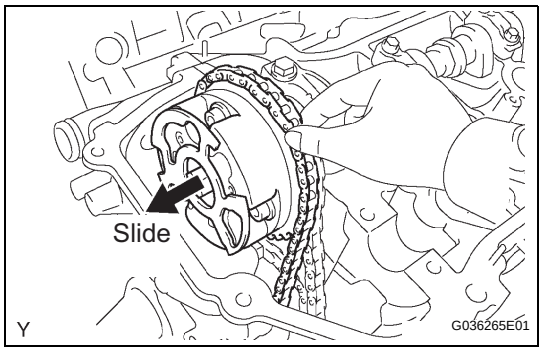


(b) Hold the hexagonal portion of the No. 3 camshaft with a wrench, then loosen the camshaft timing gear set bolt.

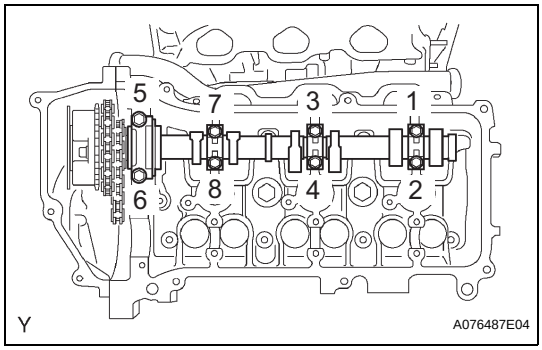
NOTICE:

- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear assembly.**

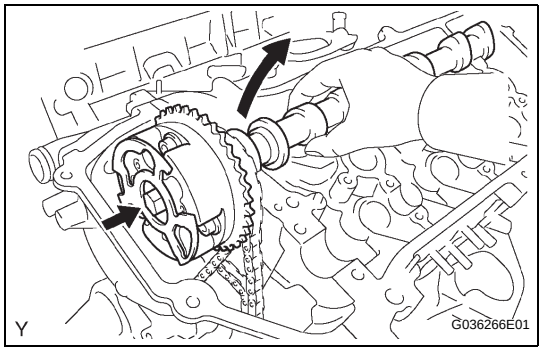




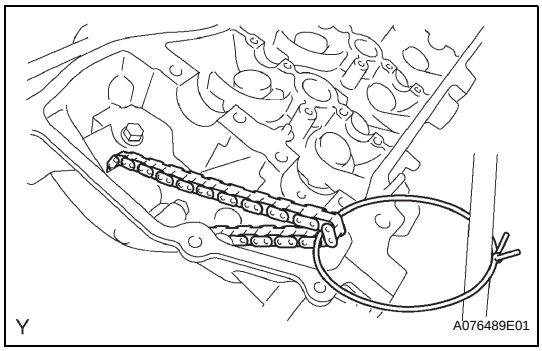
(c) Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.



(d) Using several steps, uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.
(e) Remove the 4 bearing caps.



(f) Remove the camshaft timing gear set bolt with the No. 3 camshaft lifted up, then remove the No. 3 camshaft and camshaft timing gear w/ No. 2 chain.



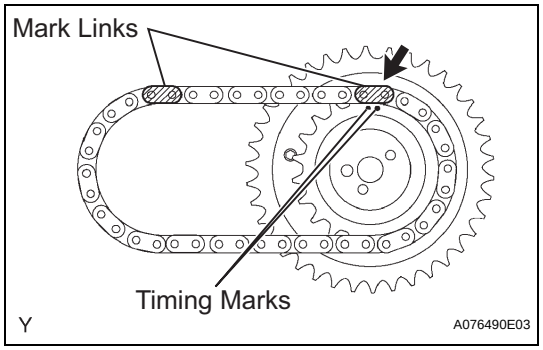
(g) Tie the No. 1 chain with a string as shown in the illustration.
NOTICE:
Be careful not to drop anything inside the timing chain cover.

INSTALLATION

1. INSTALL NO.3 CAMSHAFT SUB-ASSEMBLY

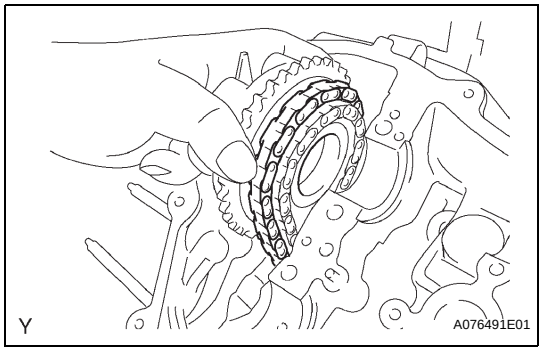
NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

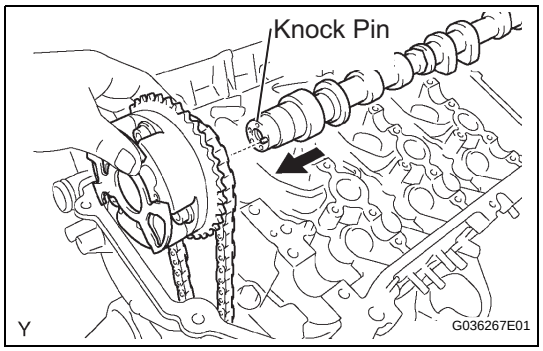


(a) Align the yellow mark link with the timing mark (2 dot marks) of the camshaft timing gear as shown in the illustration.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.

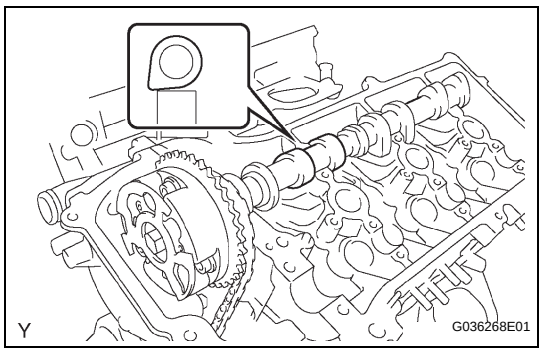


(c) Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.



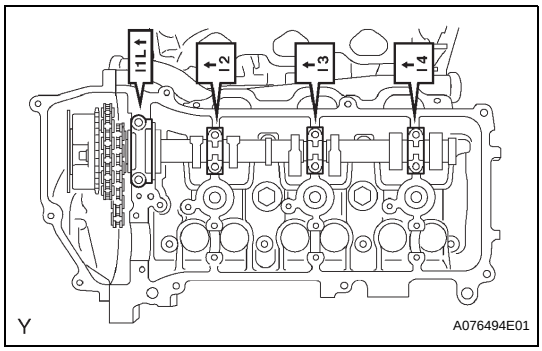
(d) Align the knock pin hole in the camshaft timing gear with the knock pin of the No. 3 camshaft, and insert the No. 3 camshaft into the camshaft timing gear.

(e) Temporarily install the camshaft timing gear set bolt.

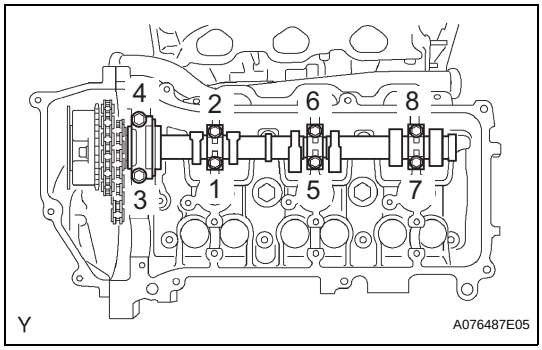


(f) Set the No. 3 camshaft onto the LH cylinder head with the cam lobes of the No. 2 cylinder facing downward as shown in the illustration.

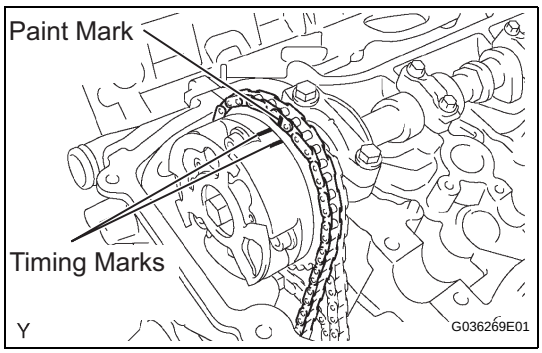
EM



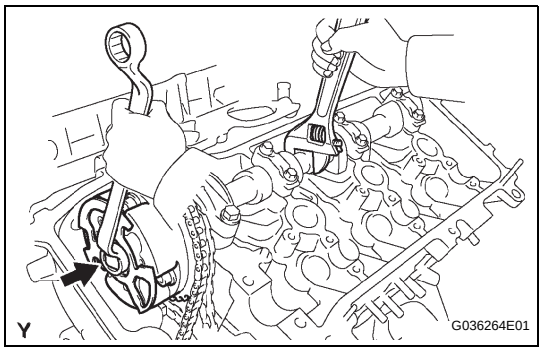
(g) Install the 4 bearing caps in the proper locations as shown.
(h) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



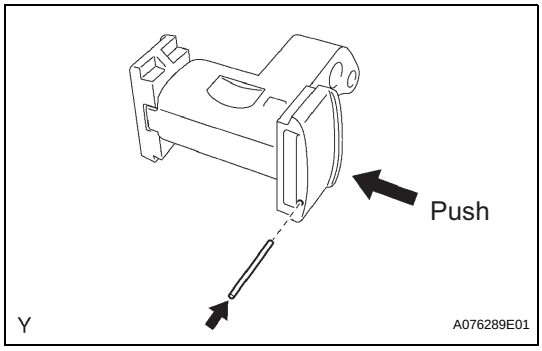
(i) Using several steps, uniformly install and tighten the 8 bearing cap bolts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head



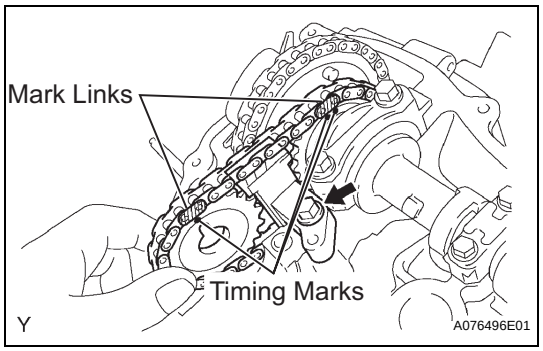
(j) Align the paint mark of the No. 1 chain with the timing marks of the camshaft timing gear.



(k) Hold the hexagonal portion of the No. 3 camshaft with a wrench, and tighten the camshaft timing gear set bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

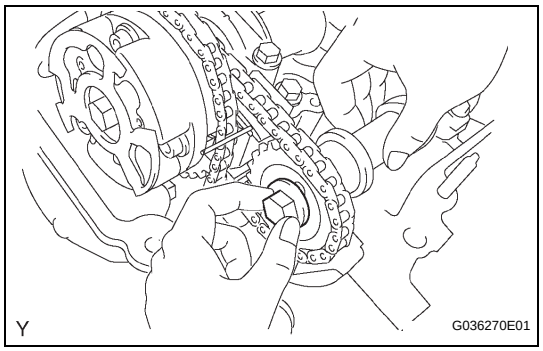


2. INSTALL NO.3 CHAIN TENSIONER ASSEMBLY
(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to hold it.

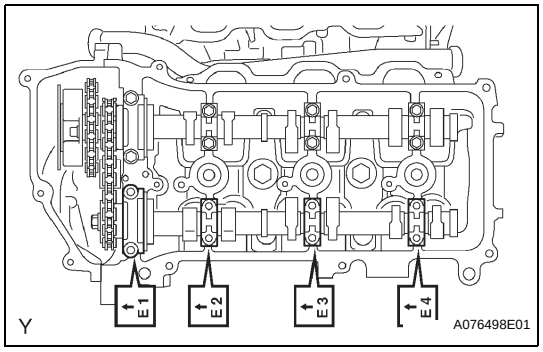


(b) Temporarily install the camshaft timing gear and chain tensioner No. 3 and align the yellow mark links with the timing marks (1 dot mark and 2 dot marks) of the camshaft timing gears.
(c) Tighten the chain tensioner No. 3 bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

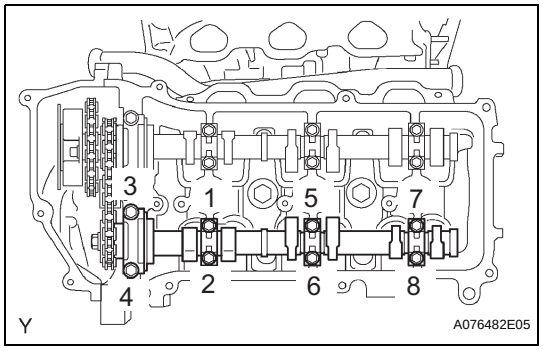
3. INSTALL NO.4 CAMSHAFT SUB-ASSEMBLY
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



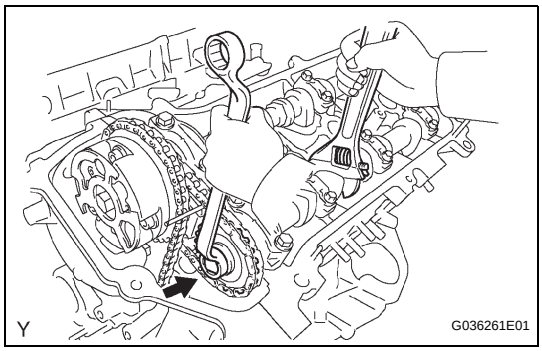
(a) Align the knock pin hole in the camshaft timing gear with the knock pin of he No. 4 camshaft, and insert the No. 4 camshaft into the camshaft timing gear.
(b) Temporarily install the camshaft timing gear set bolt.



(c) Install the 4 bearing caps in the proper locations as shown.
(d) Apply a light coat of engine oil to the threads of the bearing cap bolts.

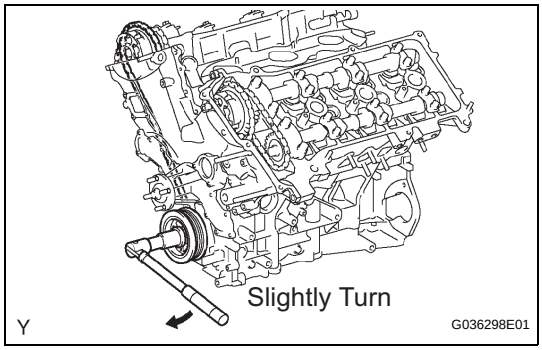


(e) Using several steps, uniformly install and tighten the 8 bearing cap bolts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head



(f) Hold the hexagonal portion of the No. 4 camshaft with a wrench, and tighten the camshaft timing gear set bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(g) Remove the pin from the chain tensioner No. 3.

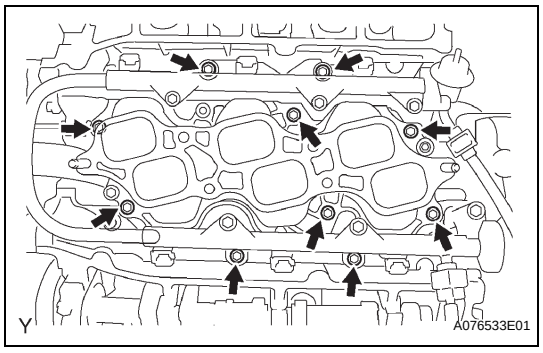


(h) Release the chain tension between the camshaft timing gear (RH bank) and crankshaft timing gear by turning the crankshaft pulley clockwise slightly.

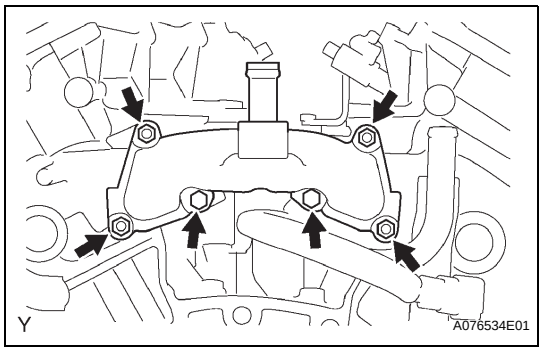
4. **INSTALL NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-27)**
5. **SET NO.1 CYLINDER TO TDC/COMPRESSION (See page EM-25)**
6. **INSPECT VALVE CLEARANCE (See page EM-8)**
7. **ADJUST VALVE CLEARANCE (See page EM-9)**
8. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-68)**
9. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-68)**
10. **INSTALL IGNITION COIL ASSEMBLY**
    Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)
11. **INSTALL INTAKE AIR SURGE TANK (See page EM-69)**
12. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
14. **ADD ENGINE COOLANT (See page CO-3)**
15. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
16. **INSTALL V-BANK COVER**
    (a) Install the V-bank cover with the 2 nuts.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
17. **INSPECT IGNITION TIMING (See page EM-1)**

REMOVAL

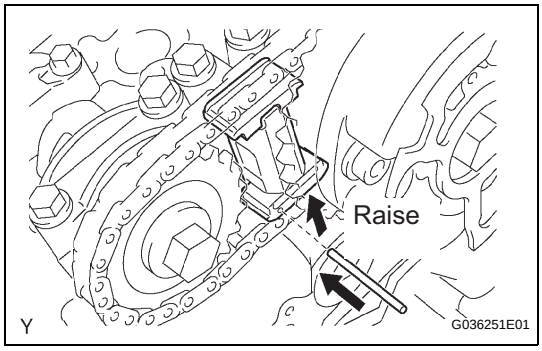
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE ENGINE ASSEMBLY**
   (See page EM-186)
6. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-34)
7. **REMOVE CHAIN SUB-ASSEMBLY**
   (See page EM-44)
8. **REMOVE NO.1 COOL AIR INLET**
   (a) Remove the 2 bolts, then remove the cool air inlet.
9. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
   (See page EX-3)
10. **REMOVE MANIFOLD STAY**
    (a) Remove the 3 bolts, then remove the exhaust manifold stay.
11. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH**
    (a) Disconnect the air fuel ratio sensor connector.
    (b) Remove the 6 nuts, then remove the exhaust manifold and gasket.
12. **DISCONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
13. **DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
14. **REMOVE INTAKE MANIFOLD**
    (a) Disconnect the 6 fuel injector connectors.
    (b) Remove the 10 bolts, then remove the intake manifold and gasket.
15. **REMOVE WATER BY-PASS JOINT RR**
    (a) Disconnect the engine coolant temperature sensor connector.
    (b) Disconnect the heater hose.



EM

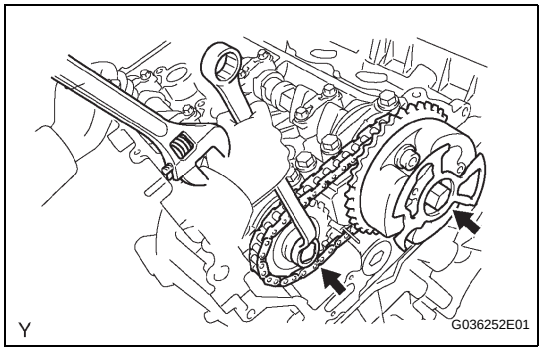


(c) Remove the 2 bolts and 4 nuts, then remove the water by-pass joint RR and 2 gaskets.
(d) Remove the O-ring from the water outlet hose.

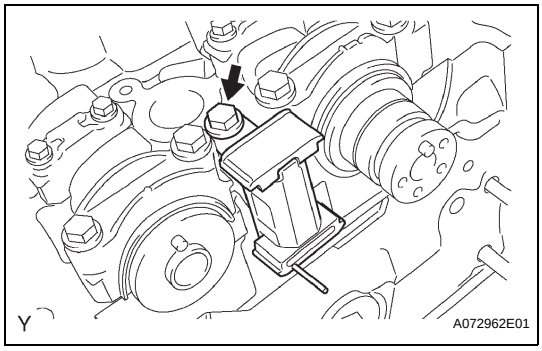


16. REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) While raising the chain tensioner No. 2, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



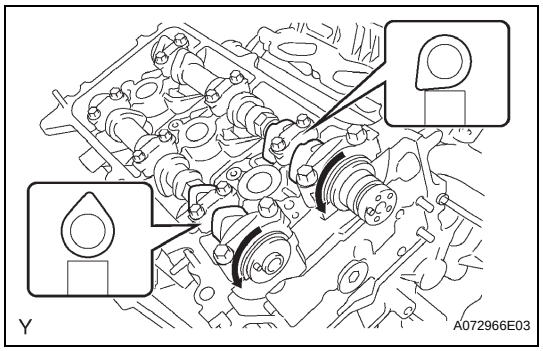
(b) Hold the hexagonal portion of the camshaft with a wrench.
NOTICE:
Be careful not to damage the cylinder head and valve lifter with the wrench.
(c) Remove the 2 bolts, then remove the camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.
NOTICE:
Do not disassemble the camshaft timing gear assembly.



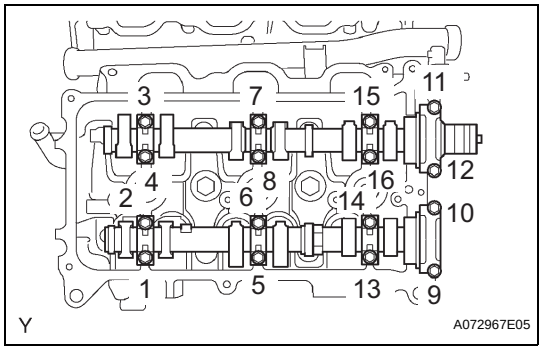
17. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 2.

18. REMOVE CAMSHAFTS
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



(a) Rotate the camshafts counterclockwise using a wrench so that the cam lobes of No. 1 cylinder face in the directions shown in the illustration.



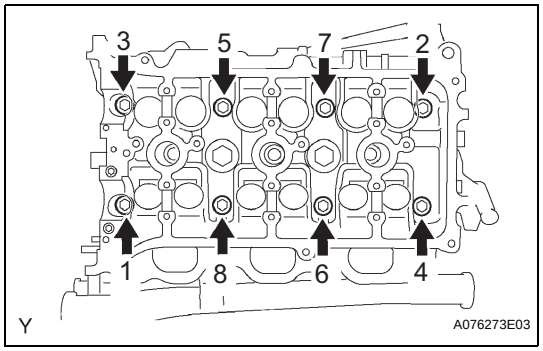
(b) Using several steps, loosen and remove the 16 bearing cap bolts uniformly in the sequence shown in the illustration.

(c) Remove the 8 bearing caps and 2 camshafts.

19. REMOVE NO.2 CAMSHAFT BEARING

20. REMOVE CYLINDER HEAD SUB-ASSEMBLY

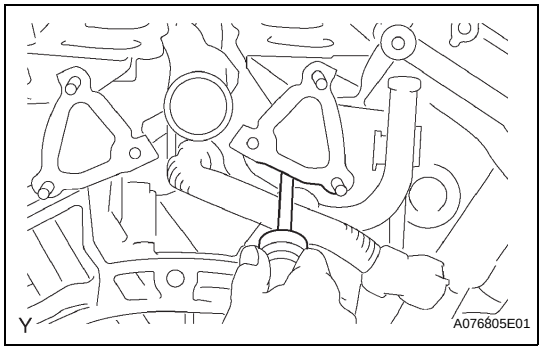
(a) Remove the 2 bolts and separate the 2 ground cables.



(b) Using several steps, uniformly loosen the 8 cylinder head bolts on the cylinder head with a 10 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 8 cylinder head bolts and 8 plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing the bolts in the wrong order.**



(c) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a bench.

NOTICE:

Be careful not to drop the plate washers into the cylinder head.

If the cylinder head is difficult to remove, pry between the cylinder head and cylinder block with a screwdriver.

21. REMOVE CYLINDER HEAD GASKET

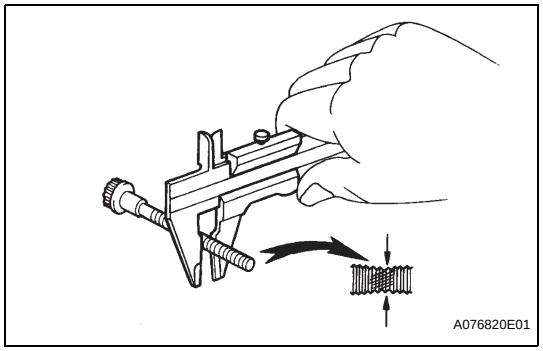
INSPECTION

1. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the outside diameter of the bolt thread.

Standard outside diameter:
10.85 to 11.00 mm (0.4272 to 0.4331 in.)

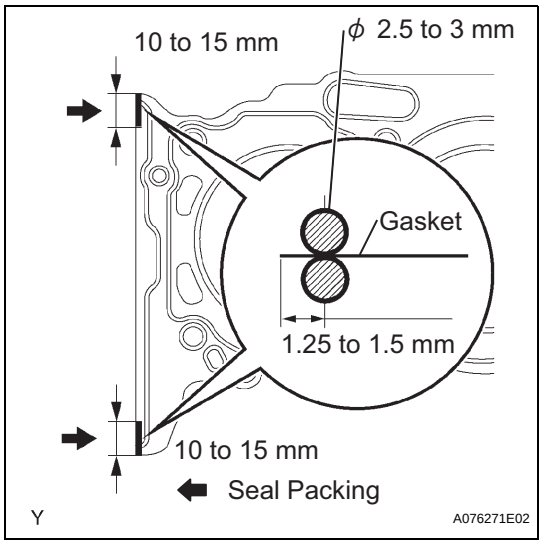
Minimum outside diameter:
10.7 mm (0.421 in.)



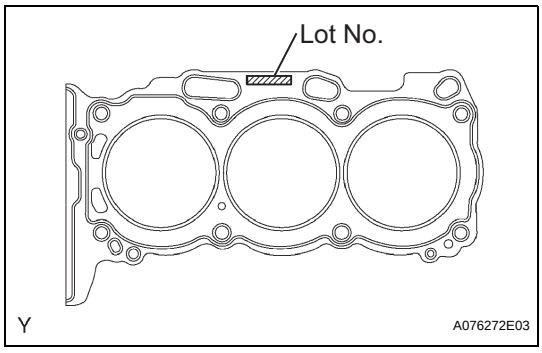
INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.



(b) Apply a continuous bead of seal packing (diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying the seal packing. Tighten the cylinder head bolts within 15 minutes of installing the cylinder head. Otherwise, the seal packing must be removed and reapplied.



(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

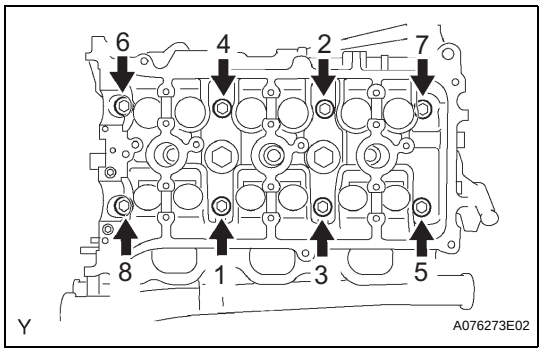
(a) Place the cylinder head on the cylinder head gasket.

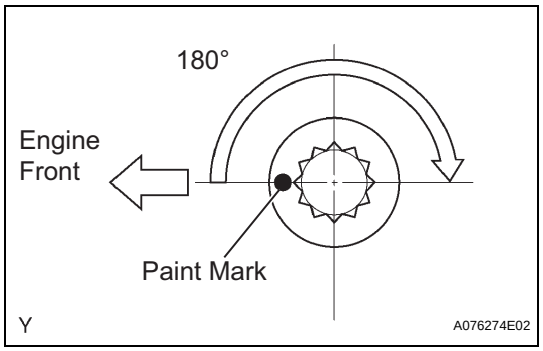
(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace them.

(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.

(2) Install the plate washer onto the cylinder head bolt.

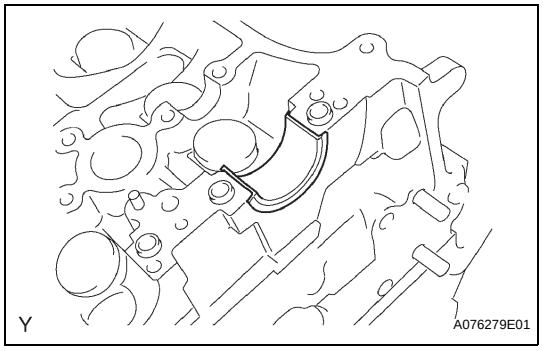
(3) Using several steps, tighten each bolt uniformly with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.





(4) Mark the front side of each cylinder head bolt with paint.
(5) Retighten the cylinder head bolts 180° as shown.
(6) Check that the painted marks are now at 180° from the engine front.

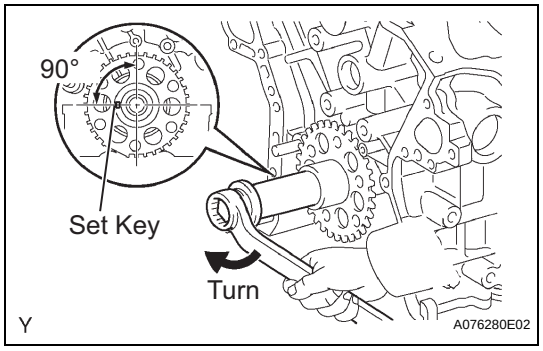
(c) Install the ground cables with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



3. INSTALL NO.2 CAMSHAFT BEARING

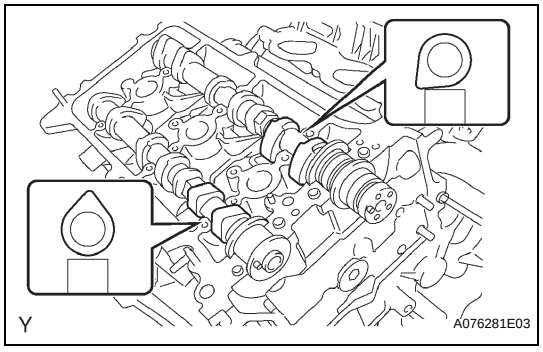
(a) Install the camshaft bearing No. 2 onto the cylinder head.
NOTICE:
Clean the installation planes of the back side of the bearing and cylinder head and keep them free of oils and fats.

4. INSTALL CAMSHAFTS
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

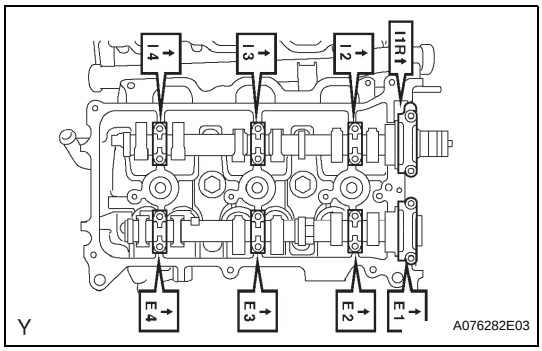


(a) Set the crankshaft position.
(1) Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key in the left horizontal position.
NOTICE:
Installing the crankshaft at the wrong angle could cause the piston head and valve head to come into contact with each other when installing the camshaft. This could cause damage, so always set the crankshaft at the correct angle.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.

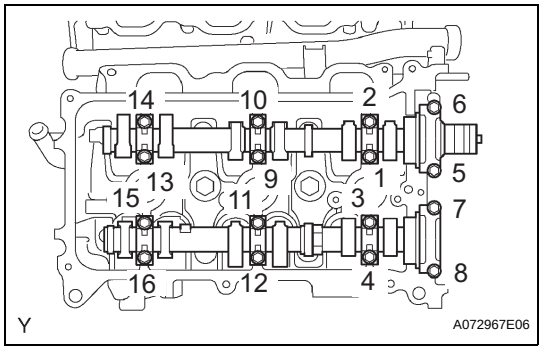


(c) Place the 2 camshafts onto the cylinder head with the cam lobes of No. 1 cylinder facing in the directions shown in the illustration.



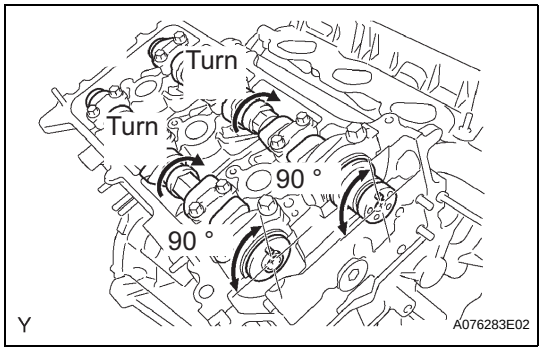
(d) Install the 8 bearing caps in the proper locations as shown.

(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(f) Using several steps, uniformly install and tighten the 16 bearing cap bolts in the sequence shown in the illustration.

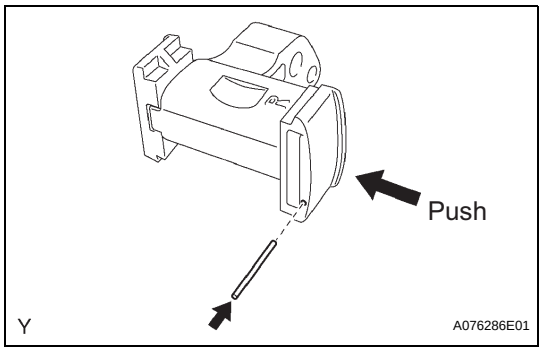
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

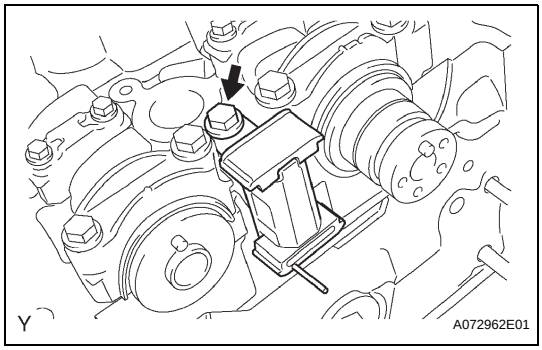


(g) Turn the camshafts clockwise until each camshaft knock pin comes to a position 90° to the cylinder head.

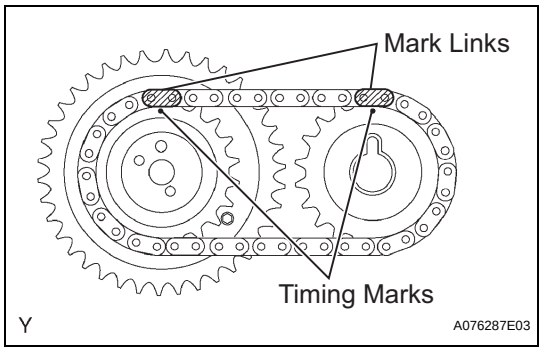
5. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



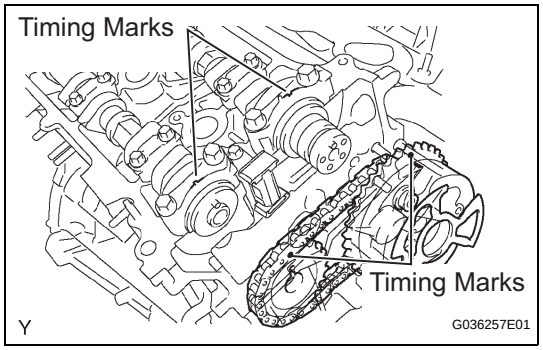


(b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



6. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) Align the yellow mark links with the timing marks (1 dot mark) of camshaft timing gears as shown in the illustration.

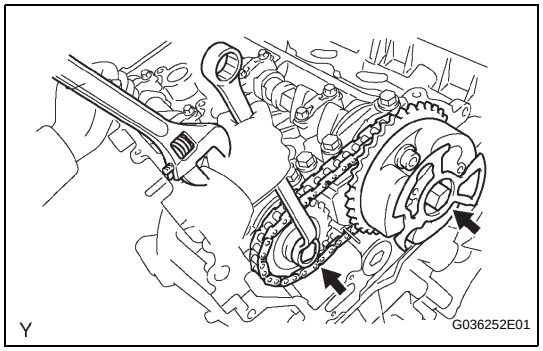


(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the RH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.

NOTICE:

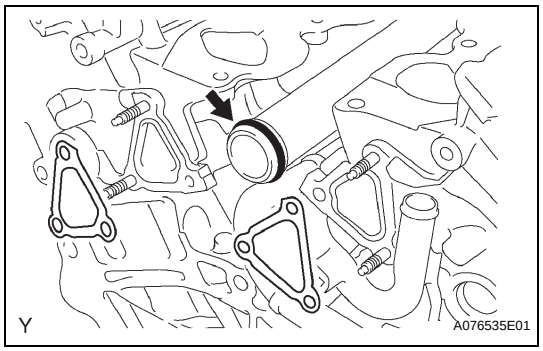
Do not push camshaft timing gear assembly onto the camshaft forcibly when installing it.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the tensioner No. 2.



7. INSTALL WATER BY-PASS JOINT RR

(a) Install a new O-ring onto the water outlet pipe.

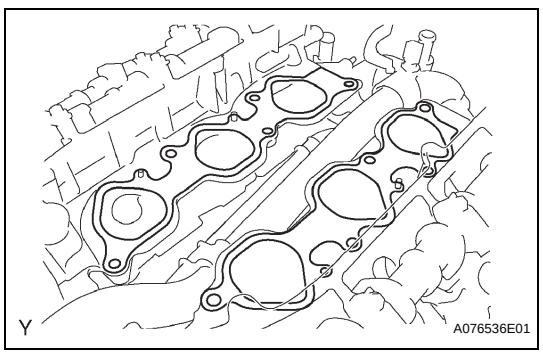
(b) Apply soapy water to the O-ring.

(c) Install 2 new gaskets and water by-pass joint rear with the 2 bolts and 4 nuts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Connect the heater hose.

(e) Connect the engine coolant temperature sensor connector.



8. INSTALL INTAKE MANIFOLD

(a) Set a new gasket on each cylinder head.

NOTICE:

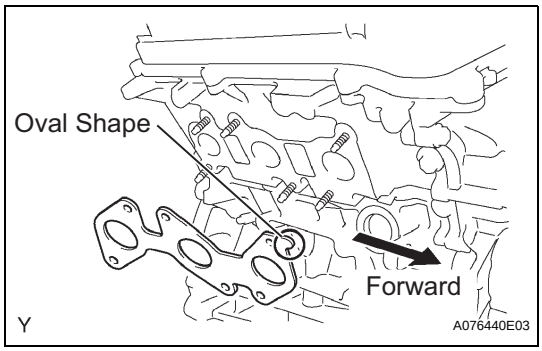
- **Align the port holes of the gasket and cylinder head.**
- **Be careful of the installation direction.**

(b) Set the intake manifold on the cylinder heads.

(c) Install and tighten the 10 bolts uniformly in several steps.

Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(d) Connect the 6 fuel injector connectors.



9. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Set a new gasket to the RH cylinder head with the oval shape facing forward.
NOTICE:
Be careful of the installation direction.

(b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

(c) Connect the air fuel ratio sensor connector.

10. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

11. INSTALL FRONT EXHAUST PIPE ASSEMBLY
(See page EX-3)

12. INSTALL NO.1 COOL AIR INLET

(a) Install the cool air inlet with the 2 bolts.
Torque: 12 N*m (122 kgf*cm, 9.0 ft.*lbf)

13. INSTALL CHAIN TENSIONER SLIPPER

14. INSTALL NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-27)

15. INSTALL CHAIN SUB-ASSEMBLY
(See page EM-48)

16. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY
(See page LU-38)

17. INSTALL ENGINE ASSEMBLY
(See page EM-190)

18. INSTALL BATTERY

19. ADD ENGINE COOLANT (See page CO-3)

20. ADD ENGINE OIL (See page LU-5)

21. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)

22. CHECK FOR ENGINE OIL LEAKAGE

23. CHECK FOR FUEL LEAKAGE

24. CHECK FOR EXHAUST GAS LEAKAGE

25. INSPECT IGNITION TIMING (See page EM-1)

26. INSPECT ENGINE IDLING SPEED (See page EM-2)

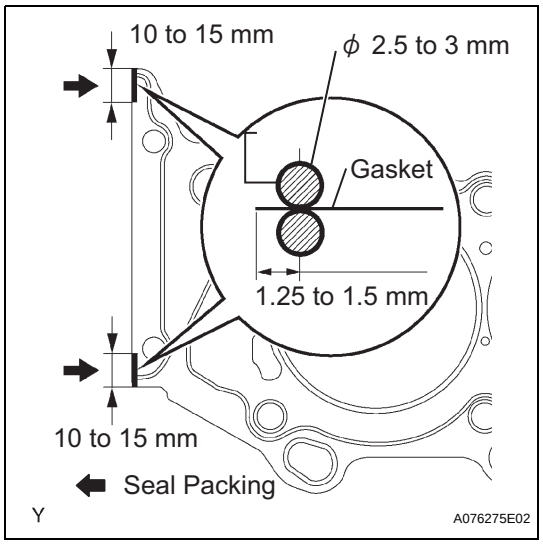
27. INSPECT CO/HC (See page EM-3)

EM

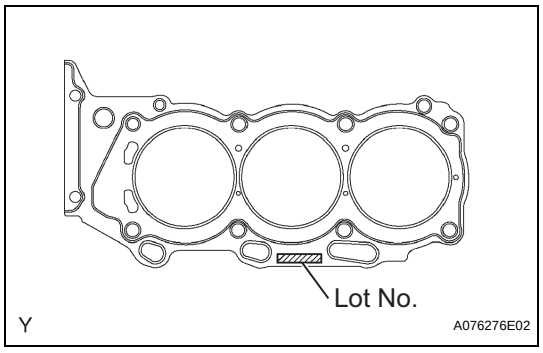
INSTALLATION

1. INSTALL NO.2 CYLINDER HEAD GASKET

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder head and cylinder block.



(b) Apply a continuous bead of seal packing (diameter 2.5 to 3.0 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying the seal packing. Tighten the cylinder head bolts within 15 minutes of installing the cylinder head. Otherwise, the seal packing must be removed and reapplied.



(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

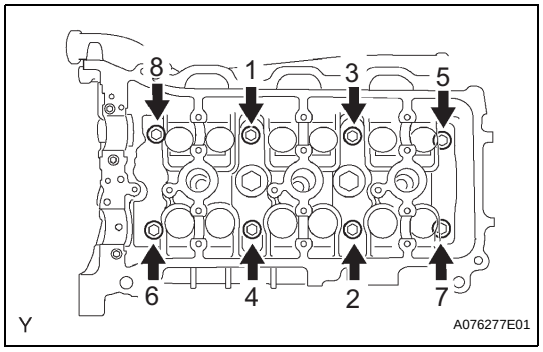
2. INSTALL CYLINDER HEAD LH

(a) Place the cylinder head on the cylinder head gasket.

(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace them.

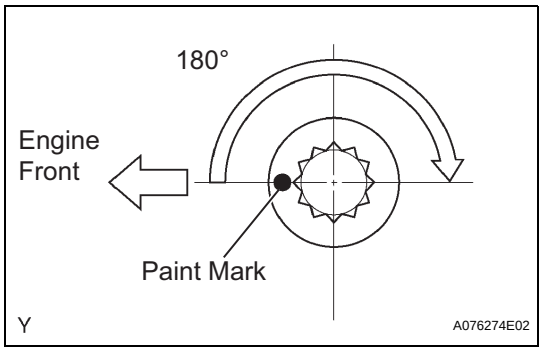
(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.

(2) Install the plate washer onto the cylinder head bolt.

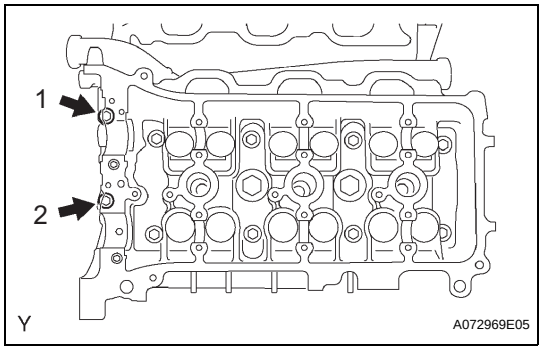


(3) Using several steps, tighten each bolt uniformly with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.

EM



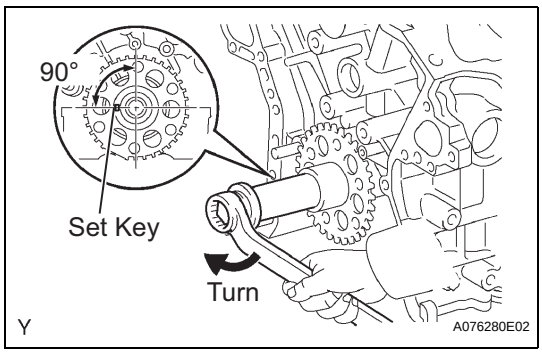
(4) Mark the front side of each cylinder head bolt with paint.
(5) Retighten the cylinder head bolts 180° as shown.
(6) Check that the painted marks are now at 180° from the engine front.



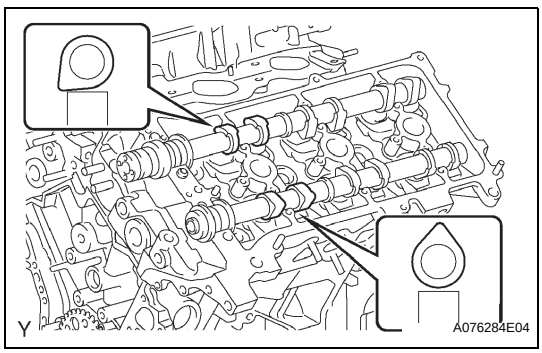
(c) Install the 2 cylinder head bolts.
(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
(2) Using several steps, uniformly install and tighten the 2 cylinder head bolts in the sequence shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
(d) Install the ground cables with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

3. INSTALL CAMSHAFTS

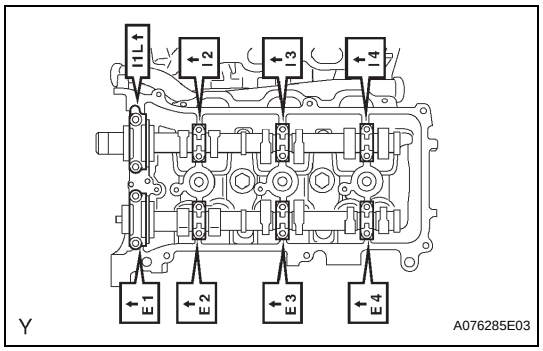
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



(a) Set the crankshaft position.
(1) Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key in the left horizontal position.
NOTICE:
Installing the crankshaft at the wrong angle could cause the piston head and valve head to come into contact with each other when installing the camshaft. This could cause damage, so always set the crankshaft at the correct angle.
(b) Apply new engine oil to the thrust portion and journal of the camshafts.

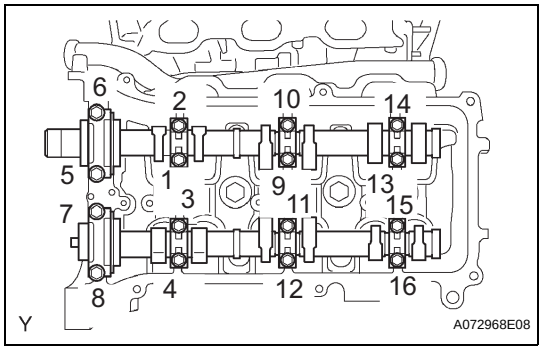


(c) Place the 2 camshafts onto the cylinder head with the cam lobes of No. 1 cylinder facing in the directions as shown in the illustration.



(d) Install the 8 bearing caps in the proper locations as shown.

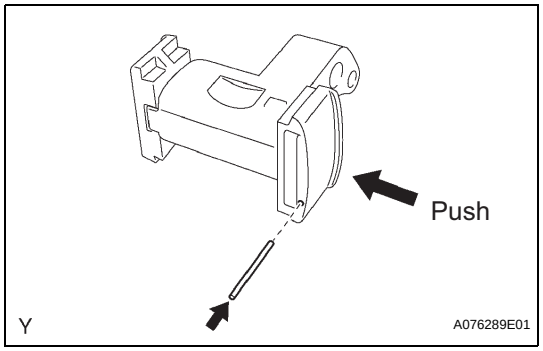
(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(f) Using several steps, uniformly install and tighten the 16 bearing cap bolts in the sequence shown in the illustration.

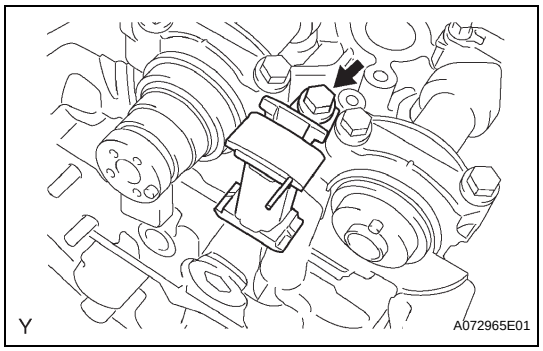
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

EM

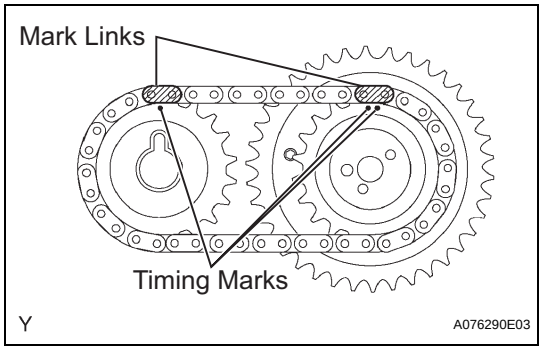


4. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

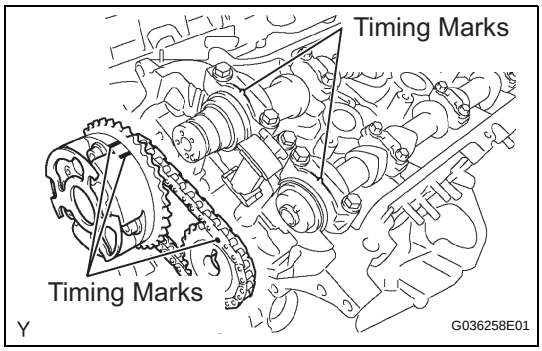


(b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



5. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)

(a) Align the yellow mark links with the timing marks (1 dot mark and 2 dot marks) of camshaft timing gears as shown in the illustration.

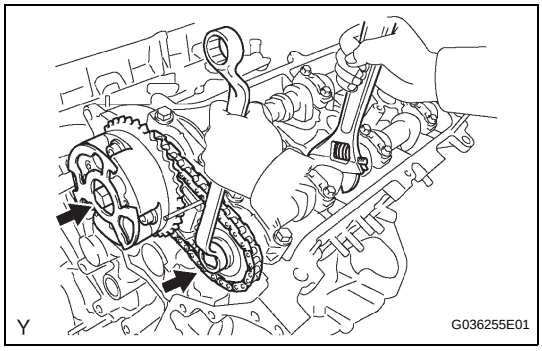


(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the LH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.

NOTICE:

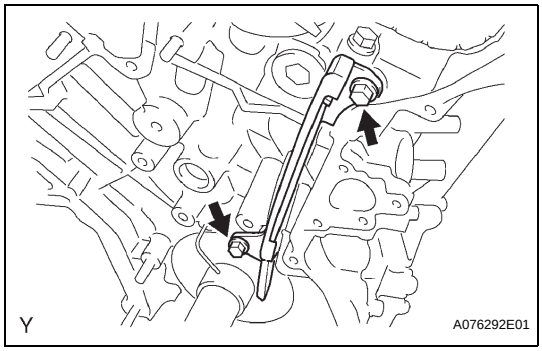
Do not push camshaft timing gear assembly onto the camshaft forcibly when installing it.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the tensioner No. 2.



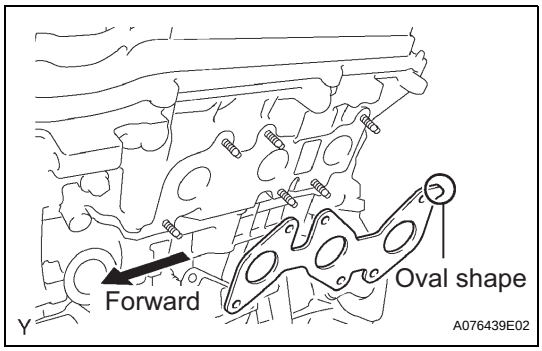
6. INSTALL NO.1 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper with the 2 bolts.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

7. INSTALL WATER BY-PASS JOINT RR (See page EM-99)

8. INSTALL INTAKE MANIFOLD (See page EM-99)



9. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Set a new gasket to the LH cylinder head with the oval shape facing forward.

NOTICE:

Be careful of the installation direction.

(b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

(c) Connect the air fuel ratio sensor connector.

10. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.

Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

11. INSTALL NO.2 EXHAUST FRONT PIPE ASSEMBLY (See page EX-3)

12. INSTALL NO.1 COOL AIR INLET

(a) Install the cool air inlet with the 2 bolts.

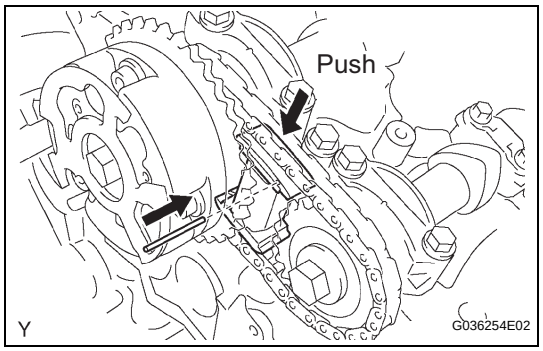
Torque: 12 N*m (122 kgf*cm, 9.0 ft.*lbf)

13. INSTALL CHAIN TENSIONER SLIPPER

14. **INSTALL NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-27)**
15. **INSTALL CHAIN SUB-ASSEMBLY**
(See page EM-48)
16. **INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
(See page LU-38)
17. **INSTALL ENGINE ASSEMBLY**
(See page EM-190)
18. **INSTALL BATTERY**
19. **ADD ENGINE COOLANT (See page CO-3)**
20. **ADD ENGINE OIL (See page LU-5)**
21. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
22. **CHECK FOR ENGINE OIL LEAKAGE**
23. **CHECK FOR FUEL LEAKAGE**
24. **CHECK FOR EXHAUST GAS LEAKAGE**
25. **INSPECT IGNITION TIMING (See page EM-1)**
26. **INSPECT ENGINE IDLING SPEED (See page EM-2)**
27. **INSPECT CO/HC (See page EM-3)**
28. **INSPECT COMPRESSION (See page EM-2)**

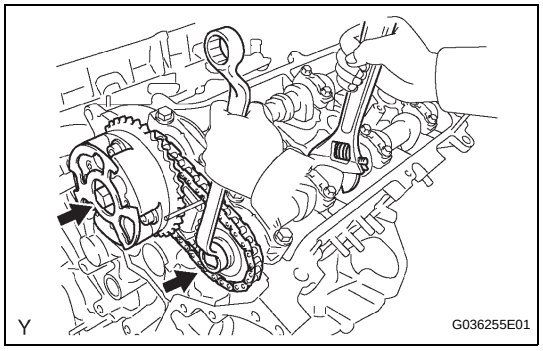
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE POWER STEERING LINK ASSEMBLY**
   (See page PS-53)
6. **REMOVE FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)**
   (See page DF-19)
7. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-34)
8. **REMOVE CHAIN SUB-ASSEMBLY**
   (See page EM-44)
9. **REMOVE NO.1 COOL AIR INLET**
   (a) Remove the 2 bolts, then remove the cool air inlet.
10. **REMOVE FRONT NO.2 EXHAUST PIPE ASSEMBLY**
    (See page EX-3)
11. **REMOVE MANIFOLD STAY**
    (a) Remove the 3 bolts, then remove the exhaust manifold stay.
12. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH**
    (a) Disconnect the air fuel ratio sensor connector.
    (b) Remove the 6 nuts, then remove the exhaust manifold and gasket.
13. **DISCONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
14. **DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
15. **REMOVE INTAKE MANIFOLD (See page EM-93)**
16. **REMOVE WATER BY-PASS JOINT RR (See page EM-93)**
17. **REMOVE NO.1 CHAIN VIBRATION DAMPER**
    (a) Remove the 2 bolts, then remove the chain vibration damper No. 1.



18. REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)

(a) While pushing down the chain tensioner No. 2, insert a pin of ϕ 10 mm (0.039 in.) into the hole to fix it.



(b) Hold the hexagonal portion of the camshaft with a wrench.

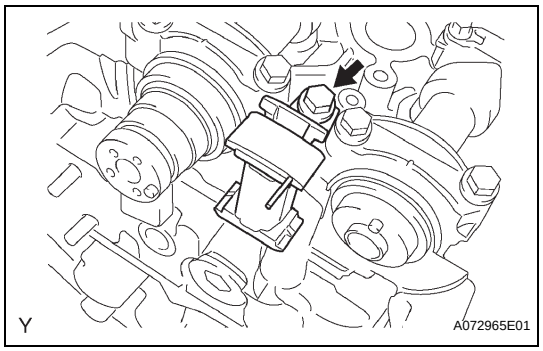
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

(c) Remove the 2 bolts, then remove the camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.

NOTICE:

Do not disassemble the camshaft timing gear assembly.



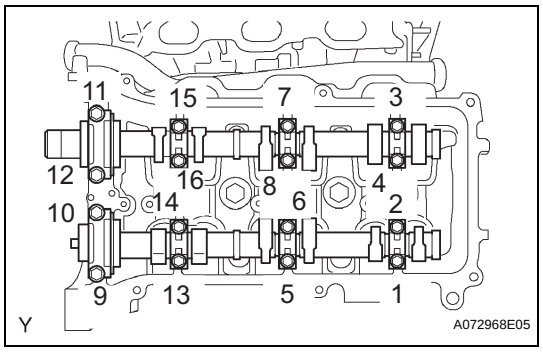
19. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 3.

20. REMOVE CAMSHAFTS

NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



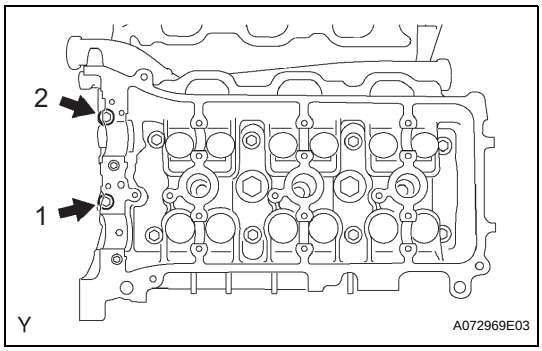
(a) Using several steps, loosen and remove the 16 bearing cap bolts uniformly in the sequence shown in the illustration.

(b) Remove the 8 bearing caps and 2 camshafts.

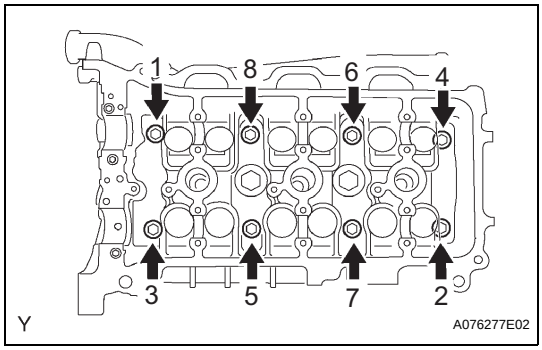
21. REMOVE CYLINDER HEAD LH

(a) Remove the bolt, then separate the ground cable.

EM



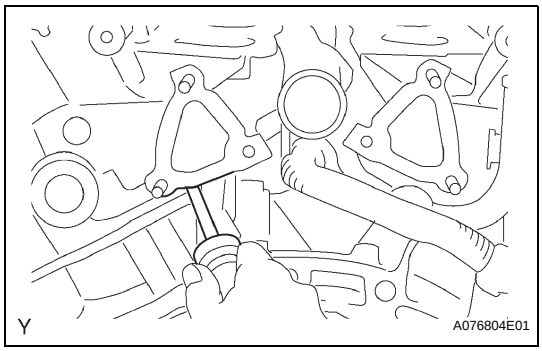
(b) Using several steps, remove the 2 cylinder head bolts on the cylinder head in the sequence shown in the illustration.



(c) Using several steps,uniformly loosen the 8 cylinder head bolts on the cylinder head with a 10 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 8 cylinder head bolts and 8 plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result form removing the bolts in the wrong order.**



(d) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a bench.

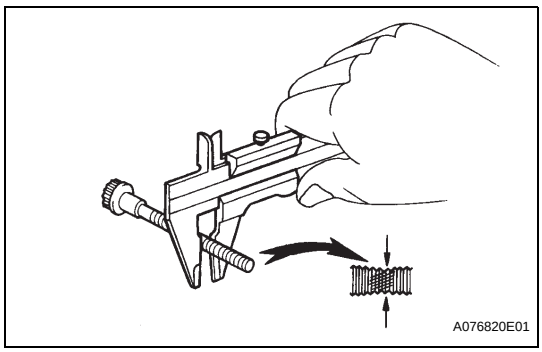
NOTICE:

Be careful not to drop the plate washers into the cylinder head.

If the cylinder head is difficult to remove, pry between the cylinder head and cylinder block with a screwdriver.

22. REMOVE NO.2 CYLINDER HEAD GASKET

INSPECTION



1. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the outside diameter of the bolt thread.

Standard outside diameter:

10.85 to 11.00 mm (0.4272 to 0.4331 in.)

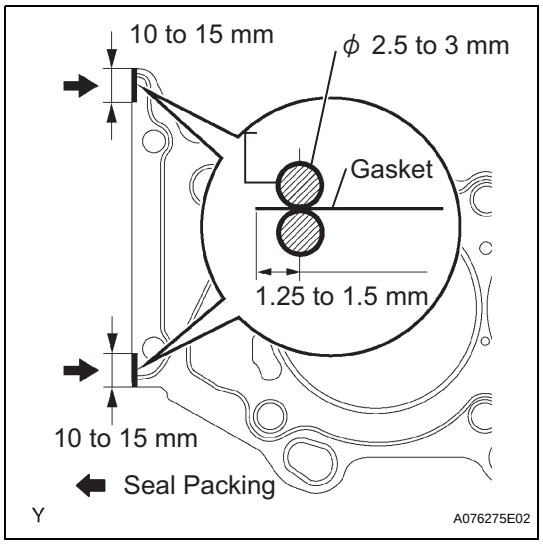
Minimum outside diameter:

10.7 mm (0.421 in.)

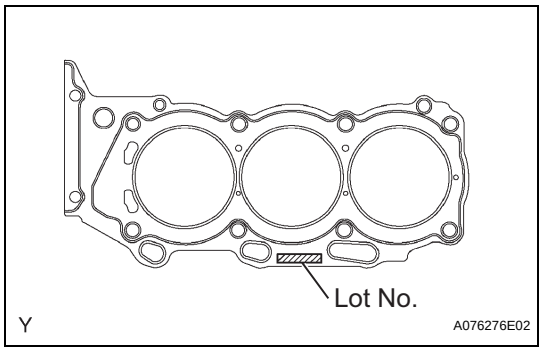
INSTALLATION

1. INSTALL NO.2 CYLINDER HEAD GASKET

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder head and cylinder block.



(b) Apply a continuous bead of seal packing (diameter 2.5 to 3.0 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying the seal packing. Tighten the cylinder head bolts within 15 minutes of installing the cylinder head. Otherwise, the seal packing must be removed and reapplied.



(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

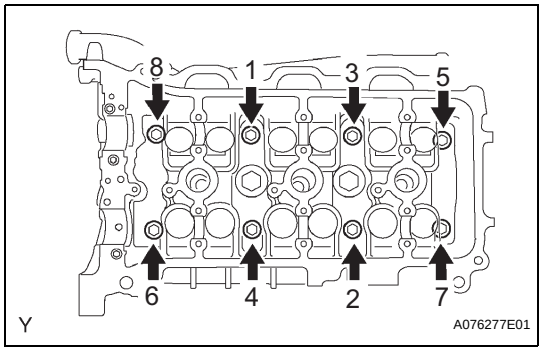
2. INSTALL CYLINDER HEAD LH

(a) Place the cylinder head on the cylinder head gasket.

(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace it.

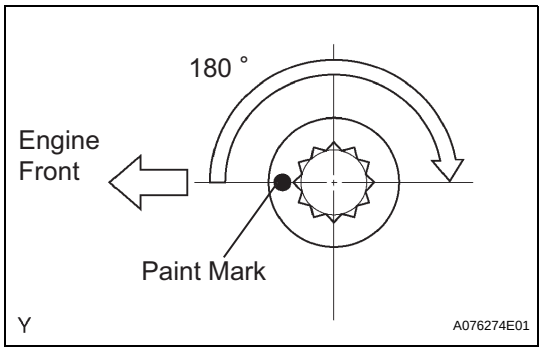
(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.

(2) Install the plate washer onto the cylinder head bolt.

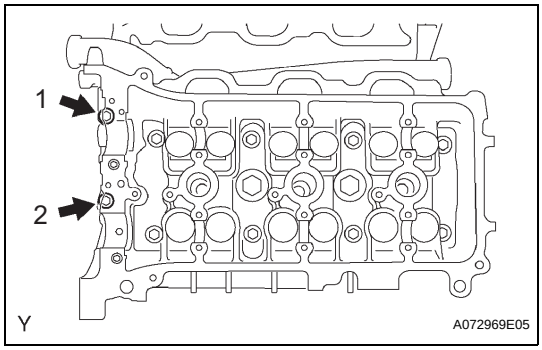


(3) Using several steps, uniformly tighten each bolt with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.

EM



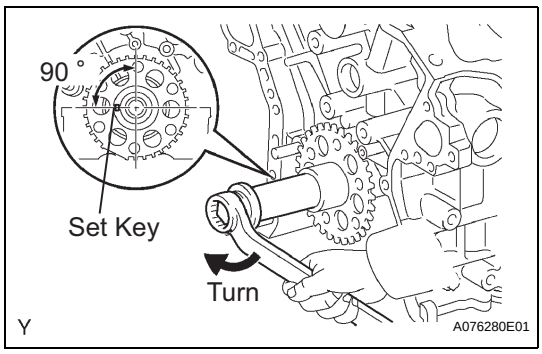
(4) Mark the front side of each cylinder head bolt with paint.
(5) Retighten the cylinder head bolts 180° as shown.
(6) Check that the painted marks are now at 180° from the engine front.



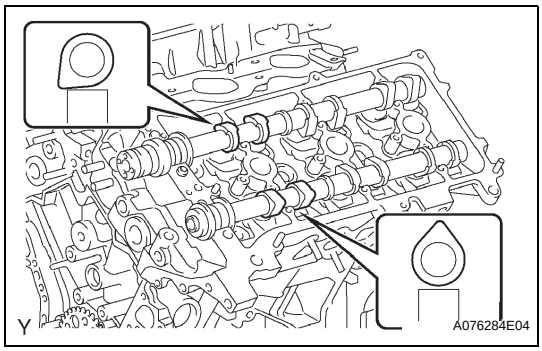
(c) Install the 2 cylinder head bolts.
(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
(2) Using several steps, uniformly install and tighten the 2 cylinder head bolts in the sequence as shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
(d) Install the ground cables with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

3. INSTALL CAMSHAFTS

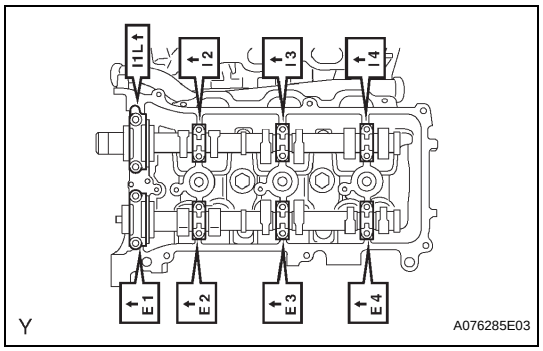
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



(a) Set the crankshaft position.
(1) Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key in the left horizontal position.
NOTICE:
Installing the crankshaft at the wrong angle could cause the piston head and valve head to come into contact with each other when installing the camshaft. This could cause damage, so always set the crankshaft at the correct angle.
(b) Apply new engine oil to the thrust portion and journal of the camshafts.

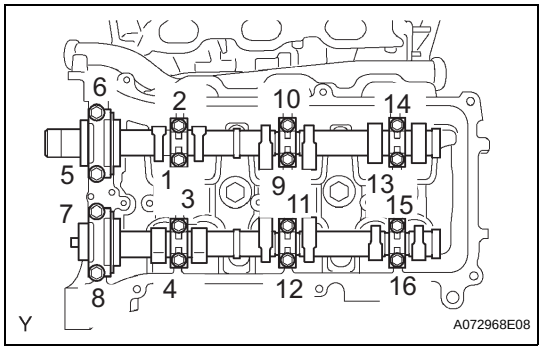


(c) Place the 2 camshafts onto the cylinder head with the cam lobes of No. 1 cylinder facing in the directions shown in the illustration.



(d) Install the 8 bearing caps in the proper locations as shown.

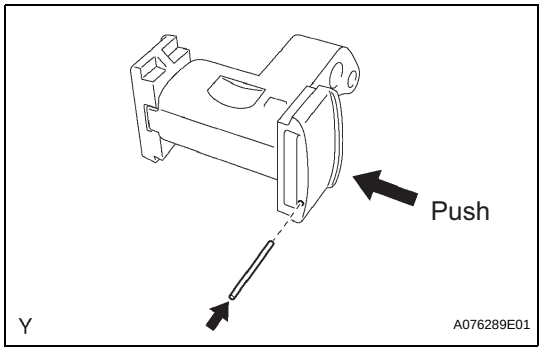
(e) Apply a light coat of engine oil to the threads and under the leads of the bearing cap bolts.



(f) Using several steps, uniformly install and tighten the 16 bearing cap bolts in the sequence as shown in the illustration.

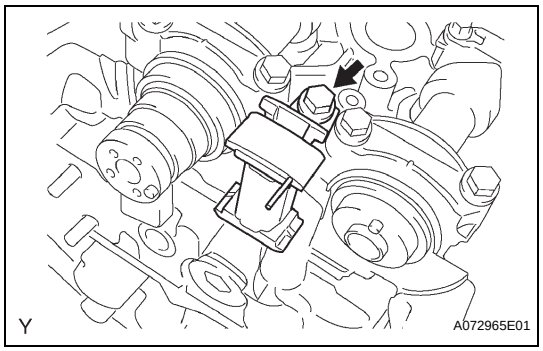
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

EM

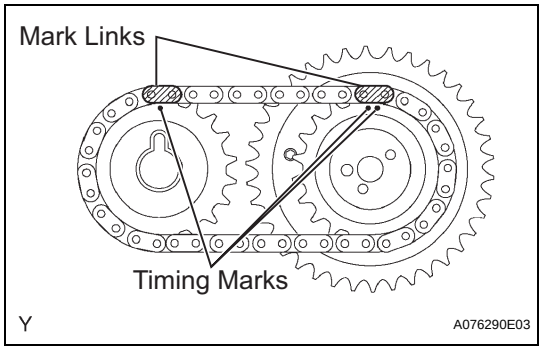


4. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

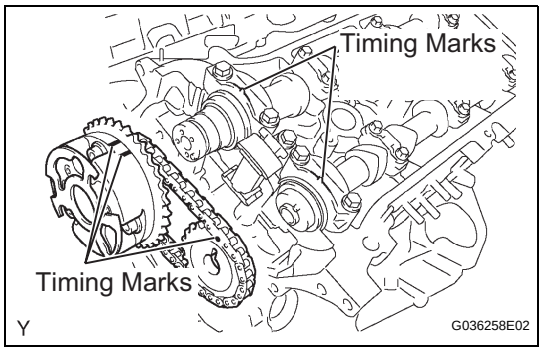


(b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



5. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)

(a) Align the yellow mark links with the timing marks (1 dot mark and 2 dot marks) of camshaft timing gears as shown in the illustration.

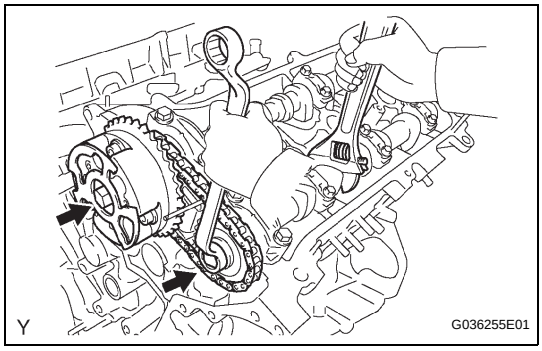


(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the LH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.

NOTICE:

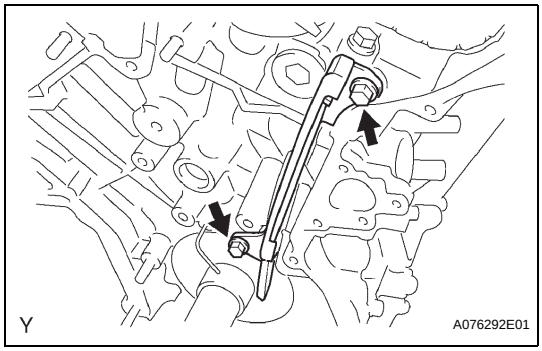
Do not push camshaft timing gear assembly onto the camshaft forcibly when installing it.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the tensioner No. 2.



6. INSTALL NO.1 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper with the 2 bolts.

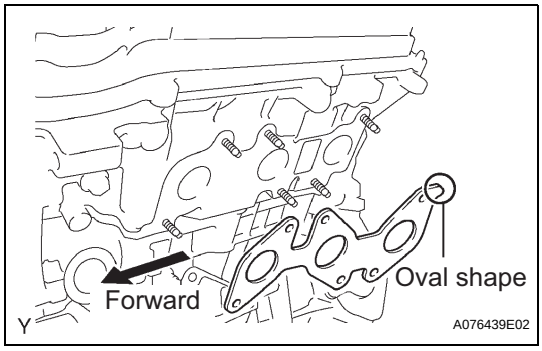
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

7. INSTALL WATER BY-PASS JOINT RR (See page EM-121)

8. INSTALL INTAKE MANIFOLD (See page EM-121)

9. CONNECT NO.2 FUEL PIPE SUB-ASSEMBLY

10. CONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-17)



11. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Set a new gasket to the LH cylinder head with the oval shape facing forward.

NOTICE:

Be careful of the installation direction.

(b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

(c) Connect the air fuel ratio sensor connector.

12. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.

Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

13. INSTALL NO.2 EXHAUST PIPE ASSEMBLY

(See page EX-3)

14. INSTALL NO.1 COOL AIR INLET

(a) Install the cool air inlet with the 2 bolts.

Torque: 12 N*m (122 kgf*cm, 9.0 ft.*lbf)

15. INSTALL CHAIN TENSIONER SLIPPER

16. **INSTALL NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-27)**
17. **INSTALL CHAIN SUB-ASSEMBLY**
(See page EM-48)
18. **INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
(See page LU-38)
19. **INSTALL DIFFERENTIAL CARRIER ASSEMBLY FRONT (for 4WD)**
(See page DF-38)
20. **INSTALL POWER STEERING LINK ASSEMBLY**
(See page PS-67)
21. **INSTALL BATTERY**
22. **ADD ENGINE OIL (See page LU-5)**
23. **ADD ENGINE COOLANT (See page CO-3)**
24. **ADD DIFFERENTIAL OIL (for 4WD)**
25. **INSPECT DIFFERENTIAL OIL (for 4WD) (See page DF-8)**
26. **ADD POWER STEERING FLUID**
27. **BLEED POWER STEERING FLUID (See page PS-2)**
28. **CHECK FOR ENGINE OIL LEAKAGE**
29. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
30. **CHECK FOR FUEL LEAKAGE**
31. **CHECK FOR EXHAUST GAS LEAKAGE**
32. **CHECK FOR POWER STEERING FLUID LEAKAGE**
33. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(See page SP-7)
34. **INSPECT IGNITION TIMING (See page EM-1)**
35. **INSPECT ENGINE IDLING SPEED (See page EM-2)**
36. **INSPECT CO/HC (See page EM-3)**
37. **INSPECT COMPRESSION (See page EM-2)**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE HOOD SUB-ASSEMBLY**
   (a) Disconnect the windshield washer hose.
   (b) Separate the 2 hood supports.
   (c) Remove the 4 bolts, then remove the hood.
6. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
7. **REMOVE FAN SHROUD (See page CO-15)**
8. **REMOVE RADIATOR ASSEMBLY (See page CO-15)**
9. **REMOVE V-BANK COVER (See page ES-414)**
10. **REMOVE TRANSMISSION ASSEMBLY**
    HINT:
    Refer to the table below when removing transmission.

Transmission	Drive Type	See Page
Manual Transmission	2WD	MT-7
Manual Transmission	4WD	MT-6
Automatic Transmission	2WD	AT-159
Automatic Transmission	4WD	AT-162

11. **REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)**

Transmission	See page
RA60	CL-40
RA60F	CL-44

12. **REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
RA60	CL-40
RA60F	CL-44

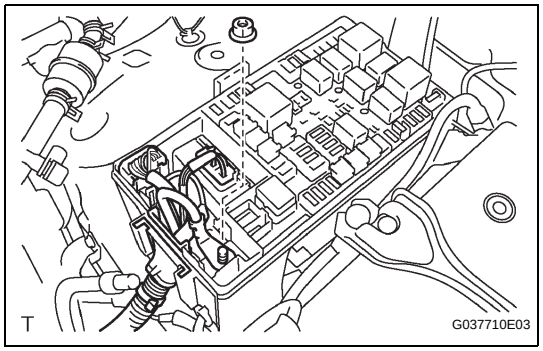
13. **REMOVE FAN PULLEY**
14. **REMOVE VANE PUMP ASSEMBLY (See page EM-44)**
15. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**
16. **SEPARATE COOLER COMPRESSOR ASSEMBLY (See page ES-409)**
17. **DISCONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
18. **DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
19. **DISCONNECT HEATER WATER INLET HOSE**

20. DISCONNECT HEATER WATER OUTLET HOSE

21. REMOVE INTAKE AIR SURGE TANK (See page EM-57)

22. SEPARATE ENGINE WIRE

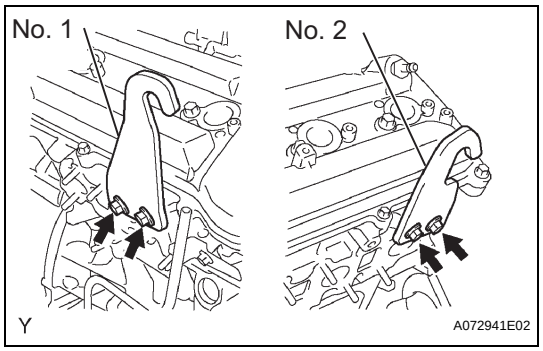
(a) Remove the glove compartment door.
(b) Remove the instrument panel finish panel sub-assembly lower RH.
(c) Disconnect the 5 connectors from the ECM.
(d) Disconnect the 2 connectors from four wheel drive ECU (4WD only).
(e) Pull the wire harness into the engine room.
(f) Disconnect the front differential connector (4WD only).



(g) Disconnect the 3 connectors from the engine room relay block.
(h) Remove the nut, then separate the engine wire from the engine room relay block.

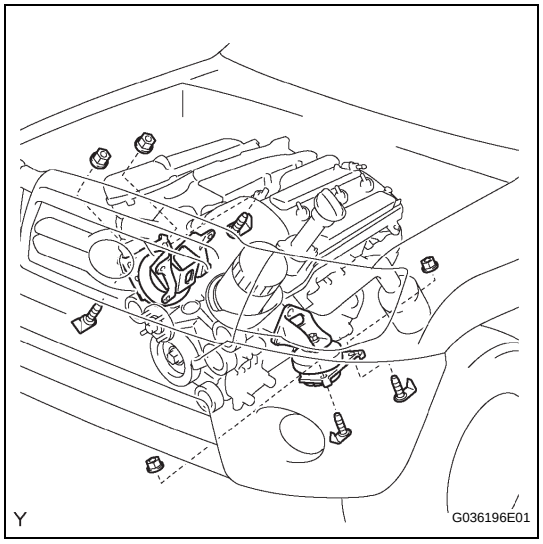
23. SEPARATE NO.2 ENGINE WIRE

(a) Disconnect the ground cable from the cylinder block.



24. REMOVE ENGINE ASSEMBLY

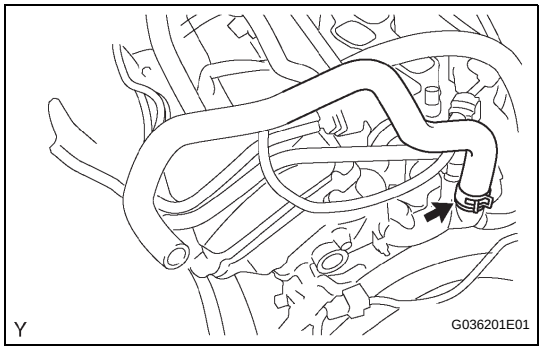
(a) Install the 2 engine hangers with the 4 bolts as shown in the illustration.
Part No:
Engine hanger No. 1 12281-31070
Engine hanger No. 2 12282-31050
Bolt 90119-08177
Torque: 33 N*m (336 kgf*cm, 24 ft.*lbf)
(b) Attach the engine sling device and hang the engine with the chain block.



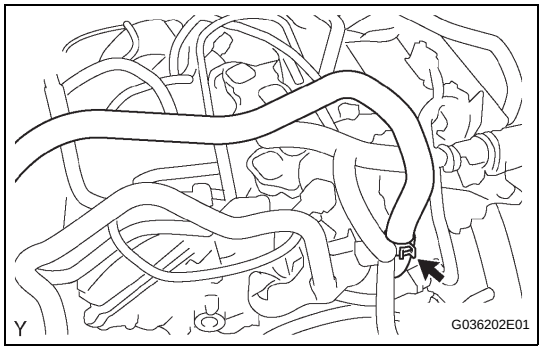
(c) Remove the 4 bolts and 4 nuts, and separate the engine mounting brackets from the frame brackets.
(d) Lift the engine out of the vehicle carefully.
NOTICE:
Make sure that the engine is clear of all wiring and hoses.
(e) Place the engine onto a working bench.

25. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-167)

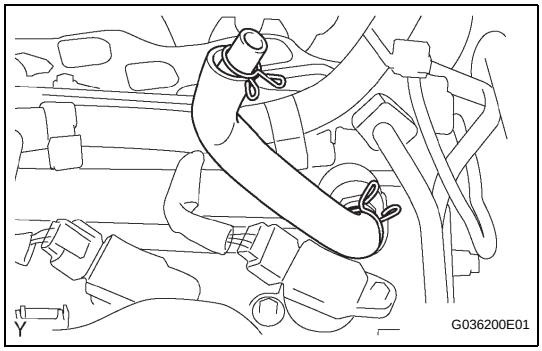
26. REMOVE DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-167)



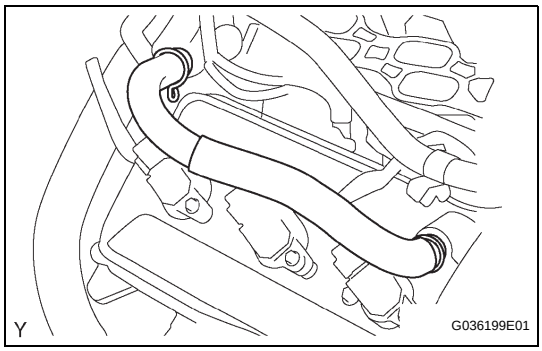
27. REMOVE HEATER WATER INLET HOSE



28. REMOVE HEATER WATER OUTLET HOSE



29. REMOVE VENTILATION HOSE



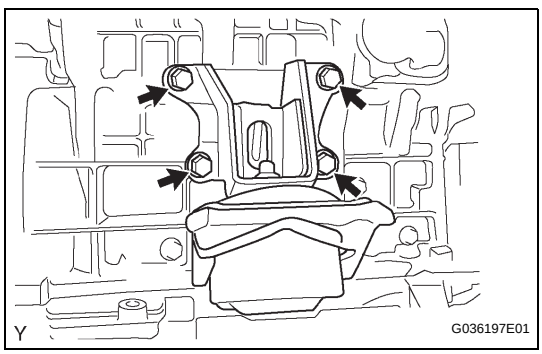
30. REMOVE NO.2 VENTILATION HOSE

31. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Remove the 6 nuts, exhaust manifold and gasket.

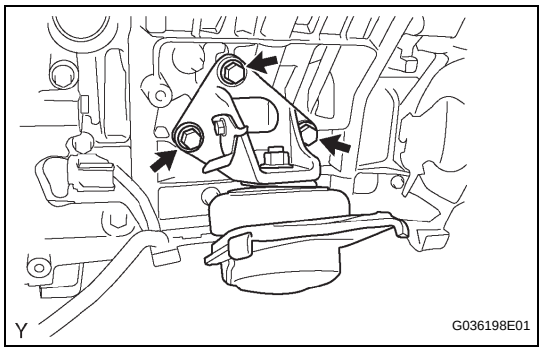
32. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Remove the 6 nuts, exhaust manifold and gasket.



33. REMOVE FRONT NO.1 ENGINE MOUNTING BRACKET RH

(a) Remove the 4 bolts, then remove the engine mounting bracket RH.

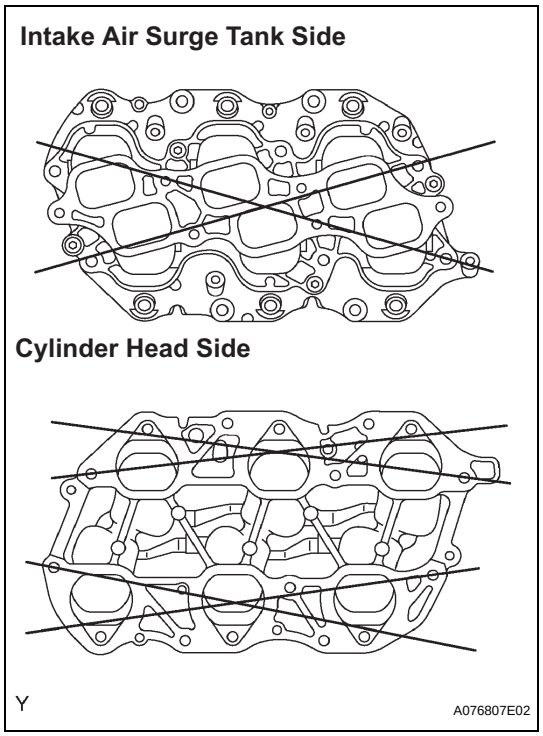


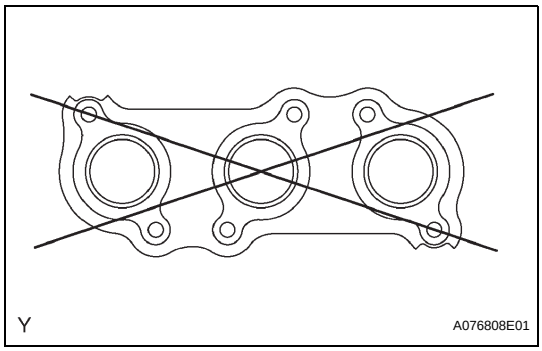
34. **REMOVE FRONT NO.1 ENGINE MOUNTING BRACKET LH**
    (a) Remove the 3 bolts, then remove the engine mounting bracket LH.
35. **REMOVE NO.2 IDLER PULLEY SUB-ASSEMBLY**
    (a) Remove the 2 bolts, then remove the 2 idler pulleys.
36. **REMOVE NO.1 IDLER PULLEY SUB-ASSEMBLY**
    (a) Remove the bolt, then remove the idler pulley.
37. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-44)**
38. **REMOVE WATER INLET (See page CO-9)**
39. **REMOVE OIL FILTER BRACKET SUB-ASSEMBLY**
    (a) Remove the 3 bolts and 2 nuts, then remove the oil filter bracket and gasket.
40. **REMOVE INTAKE MANIFOLD (See page EM-93)**
41. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-407)**
42. **REMOVE WATER BY-PASS JOINT RR (See page EM-93)**
43. **REMOVE OIL FILTER CAP SUB-ASSEMBLY**
44. **REMOVE OIL FILLER CAP HOUSING**
    (a) Remove the 2 nuts, oil filler cap housing and gasket.
45. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
46. **REMOVE SPARK PLUG**
47. **REMOVE OIL LEVEL GAGE SUB-ASSEMBLY**

EM

INSPECTION

1. **INSPECT INTAKE MANIFOLD FOR WARPAGE**
   (a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surfaces of the cylinder head and intake air surge tank.
   Maximum warpage:
   0.8 mm (0.031 in.) for Intake air surge tank side
   0.2 mm (0.008 in.) for Cylinder head side
   If warpage is greater than the maximum, replace the intake manifold.





2. INSPECT EXHAUST MANIFOLD FOR WARPAGE

(a) Using a precision straight edge and feeler gauge, measure the warpage of the top surface of the cylinder head.

Maximum warpage:

0.7 mm (0.028 in.)

If warpage is greater than maximum, replace the exhaust manifold.

HINT:

Maximum warpage of each installation surface:
0.3 mm (0.012 in.)

INSTALLATION

1. **INSTALL OIL LEVEL GAGE SUB-ASSEMBLY**
2. **INSTALL SPARK PLUG**
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
3. **INSTALL IGNITION COIL ASSEMBLY (See page IG-7)**
4. **INSTALL OIL FILLER CAP HOUSING**
   (a) Install a new gasket and oil filler cap housing with the 2 nuts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
5. **INSTALL OIL FILLER CAP SUB-ASSEMBLY**
6. **INSTALL WATER BY-PASS JOINT RR (See page EM-99)**
7. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-408)**
8. **INSTALL INTAKE MANIFOLD (See page EM-99)**
9. **INSTALL OIL FILTER BRACKET SUB-ASSEMBLY**
   (a) Install a new gasket and oil filler bracket with the 3 bolts and 2 nuts.
10. **INSTALL WATER INLET (See page CO-10)**
11. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-52)**
12. **INSTALL NO.1 IDLER PULLEY SUB-ASSEMBLY (See page EM-30)**
13. **INSTALL NO.2 IDLER PULLEY SUB-ASSEMBLY (See page EM-30)**
14. **INSTALL FRONT NO.1 ENGINE MOUNTING BRACKET LH**
    (a) Install the engine mounting bracket w/ engine mounting insulator with the 3 bolts.
    Torque: 43 N*m (435 kgf*cm, 31 ft.*lbf)
15. **INSTALL FRONT NO.1 ENGINE MOUNTING BRACKET RH**
    (a) Install the engine mounting bracket w/ engine mounting insulator with the 4 bolts.
    Torque: 43 N*m (435 kgf*cm, 31 ft.*lbf)
16. **INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH (See page EM-142)**
17. **INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH (See page EM-100)**
18. **INSTALL NO.2 VENTILATION HOSE**
19. **INSTALL VENTILATION HOSE**
20. **INSTALL HEATER WATER INLET HOSE**
21. **INSTALL HEATER WATER OUTLET HOSE**

22. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-168)**

23. **INSTALL DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-169)**

24. **INSTALL ENGINE ASSEMBLY**
    (a) Attach the engine sling device and hang the engine with the chain block.
    (b) Lower the engine into the engine compartment carefully.
    (c) Attach the engine mounting brackets to the frame brackets.
    (d) Install the engine mounting brackets onto the frame brackets with the 4 bolts and 4 nuts.
    Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)
    (e) Remove the 4 bolts and 2 engine hangers.

25. **INSTALL NO.2 ENGINE WIRE**
    (a) Install the ground cable to the cylinder block.
    Torque: 13 N*m (133 kgf*cm, 9 ft.*lbf)

26. **INSTALL ENGINE WIRE**
    (a) Connect the 3 connectors to the engine room relay box.
    (b) Install the nut, then install the engine wire into the engine room relay block.
    (c) Connect the front differential connector (4WD only).
    (d) Insert the engine wire into the vehicle room, and install the grommet.
    (e) Connect the 2 connectors to the four wheel ECU (4WD only).
    (f) Connect the 5 connectors to the ECM.
    (g) Install the instrument panel finish panel sub-assembly lower RH.
    (h) Install the glove compartment door.

27. **INSTALL INTAKE AIR SURGE TANK (See page EM-69)**

28. **CONNECT HEATER WATER INLET HOSE**

29. **CONNECT HEATER WATER OUTLET HOSE**

30. **CONNECT NO.2 FUEL PIPE SUB-ASSEMBLY**

31. **CONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-17)**

32. **INSTALL COOLER COMPRESSOR ASSEMBLY (See page ES-410)**

33. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**

34. **INSTALL VANE PUMP ASSEMBLY (See page EM-52)**

35. **INSTALL FAN PULLEY**

36. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
RA60	CL-42
RA60F	CL-46

37. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
RA60	CL-42
RA60F	CL-46

38. INSTALL TRANSMISSION ASSEMBLY

HINT:

Refer to the table below when installing transmission.

Transmission	Drive Type	See Page
Manual Transmission	2WD	MT-9
Manual Transmission	4WD	MT-8
Automatic Transmission	2WD	AT-162
Automatic Transmission	4WD	AT-165

39. INSTALL RADIATOR ASSEMBLY (See page CO-19)

40. INSTALL FAN SHROUD (See page CO-20)

41. INSTALL RADIATOR SUPPORT TO FRAME SEAL LH

42. INSTALL HOOD SUB-ASSEMBLY

(See page ED-7)

43. INSTALL BATTERY

44. ADD ENGINE COOLANT (See page CO-3)

45. ADD ENGINE OIL (See page LU-5)

46. PERFORM INITIALIZATION

47. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)

48. CHECK FOR ENGINE OIL LEAKAGE

49. CHECK FOR FUEL LEAKAGE

50. CHECK FOR EXHAUST GAS LEAKAGE

51. INSTALL V-BANK COVER (See page ES-416)

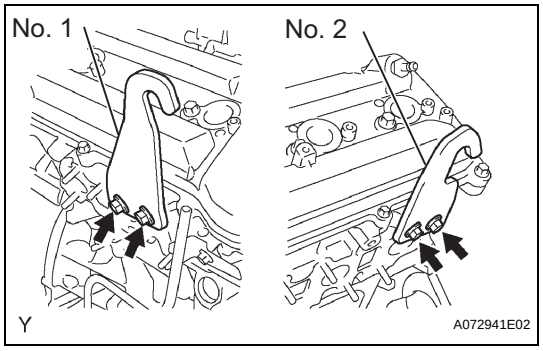
52. INSPECT IGNITION TIMING (See page EM-1)

53. INSPECT ENGINE IDLING SPEED (See page EM-2)

54. INSPECT CO/HC (See page EM-3)

DISASSEMBLY

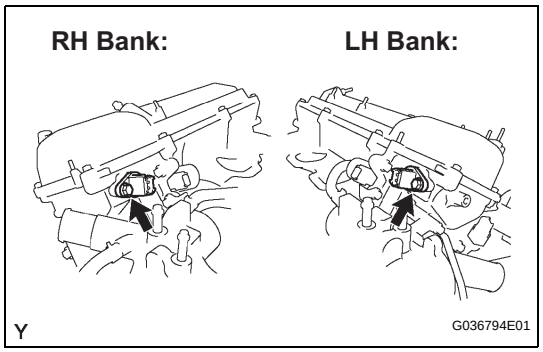
HINT:
- Thoroughly clean all parts to be assembled.
- Before installing the parts, apply new engine oil to all sliding and rotating surfaces.
- Replace all gaskets, O-rings and oil seals with new parts.



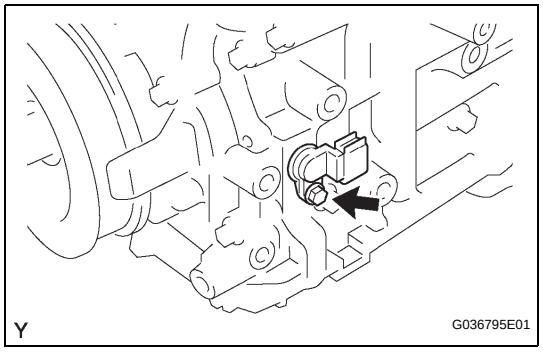
1. REMOVE ENGINE HANGERS
(a) Remove the 2 bolts and engine hanger No. 1.
(b) Remove the 2 bolts and engine hanger No. 2.

2. REMOVE OIL LEVEL GAGE GUIDE
(a) Remove the bolt, then pull out the oil level gauge guide.
(b) Remove the O-ring from the oil level gauge guide.

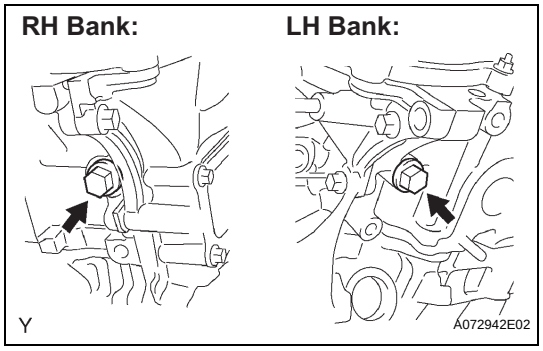
3. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY
(a) Remove the 2 water drain cocks.



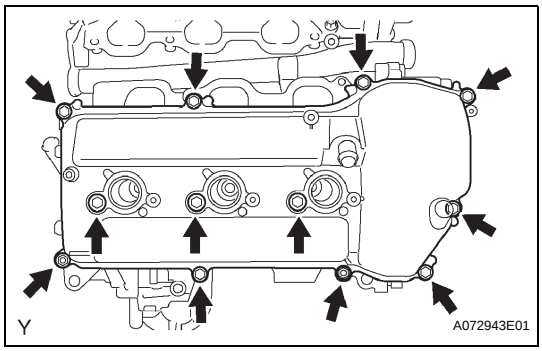
4. REMOVE VVT SENSOR
(a) Remove the 2 bolts, then remove the 2 VVT sensors.



5. REMOVE CRANKSHAFT POSITION SENSOR
(a) Remove the bolt, then remove the crankshaft position sensor.



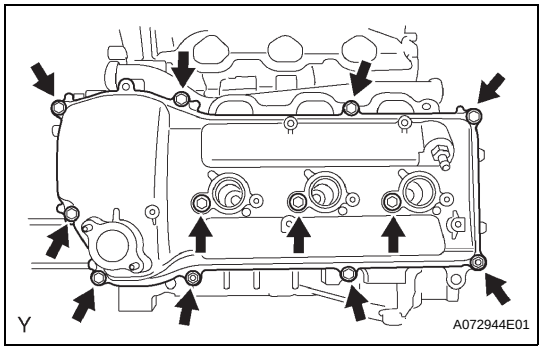
6. REMOVE OIL CONTROL VALVE FILTER
(a) Remove the plug and filter, then remove the gasket from each cylinder head.



7. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 10 bolts, 3 seal washers and 2 nuts, then remove the cylinder head cover.

(b) Remove the gasket from the cylinder head cover.

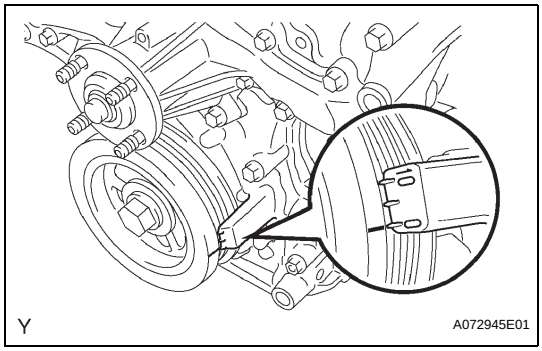


8. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

(a) Remove the 10 bolts, 3 seal washers and 2 nuts, then remove the cylinder head cover.

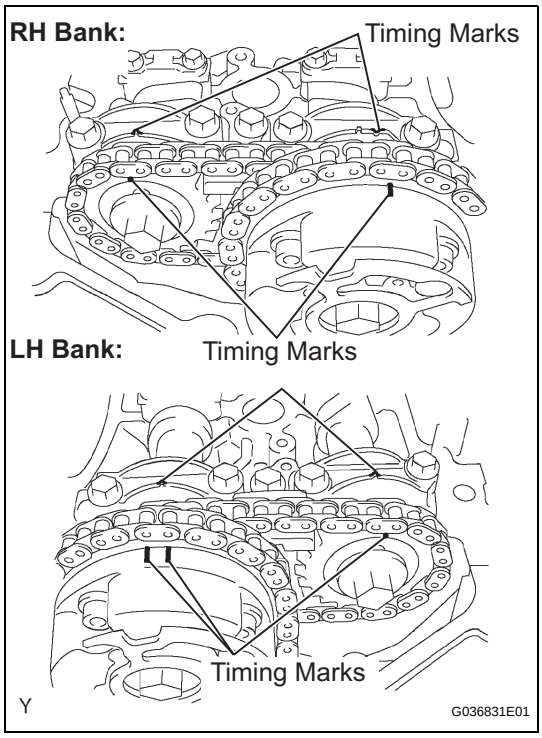
(b) Remove the gasket from the cylinder head cover.

(c) Remove the ventilation valve from the cylinder head cover.

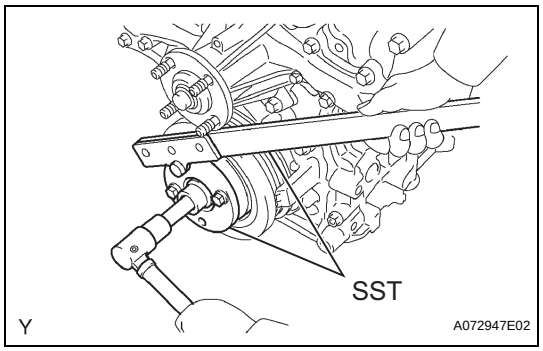


9. REMOVE CRANKSHAFT PULLEY

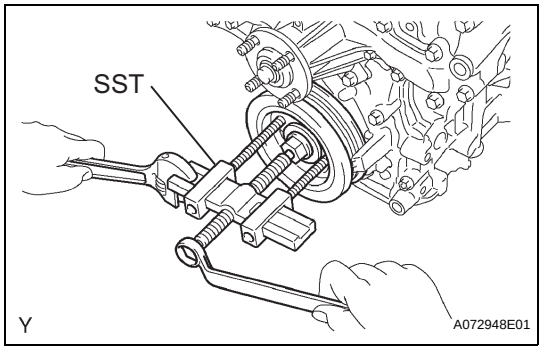
(a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.



(b) Check that each timing mark of the camshaft timing gears is aligned with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.



(c) Using SST, fix the pulley and loosen the pulley bolt.
SST 09213-54015 (91651-60855), 09330-00021

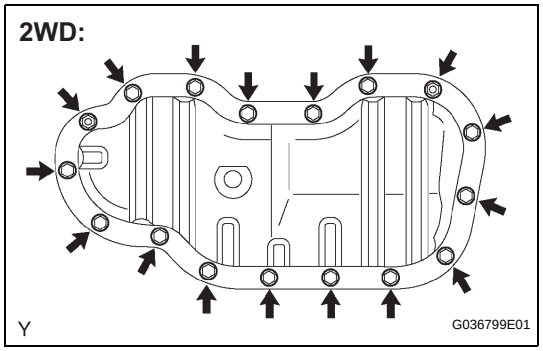


(d) Using the pulley set bolt and SST, remove the crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05030)

10. REMOVE OIL PAN DRAIN PLUG

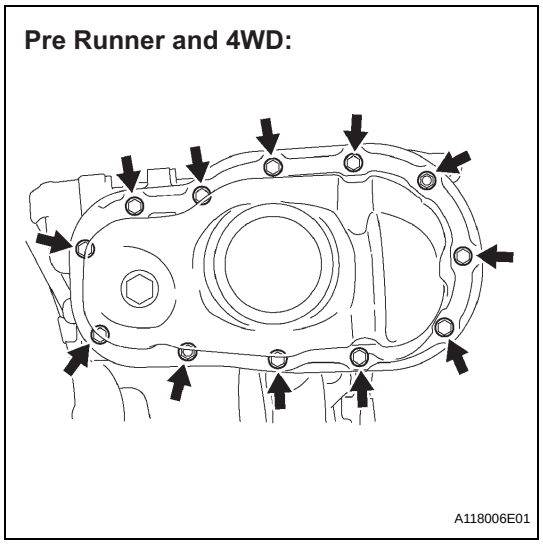
(a) Remove the drain plug and gasket.

EM

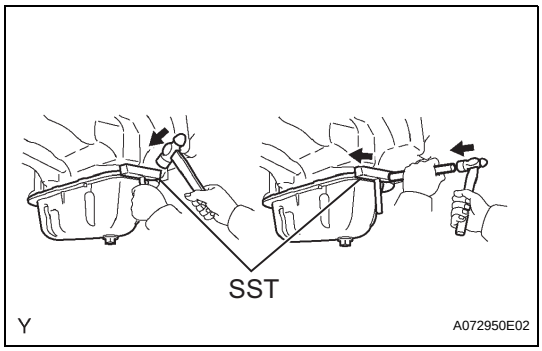


11. REMOVE NO.2 OIL PAN SUB-ASSEMBLY

(a) Remove the 15 bolts and 2 nuts (for 2WD).

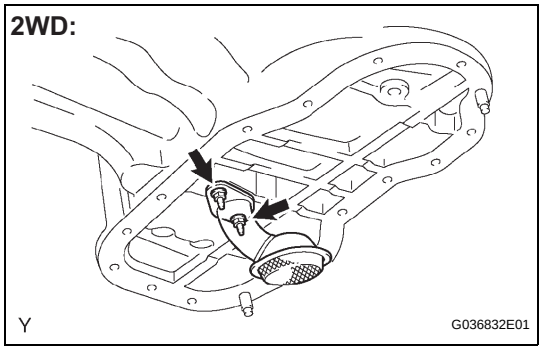


(b) Remove the 10 bolts and 2 nuts (for Pre Runner and 4WD).

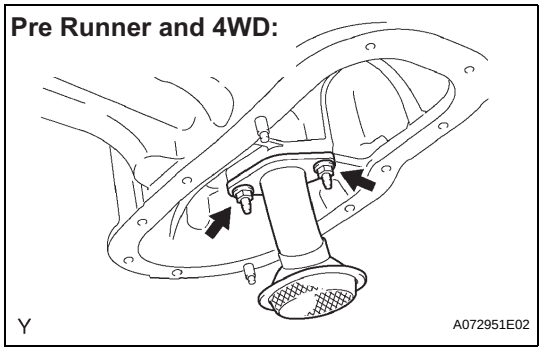


(c) Insert the blade of SST between the oil pan and oil pan No. 2, then cut off applied sealer and remove the oil pan No. 2.
SST 09032-00100
NOTICE:
- **Be careful not to damage the contact surface of the oil pan and oil pan No. 2.**
- **Be careful not to damage the oil pan No. 2 flange.**

12. REMOVE OIL STRAINER SUB-ASSEMBLY

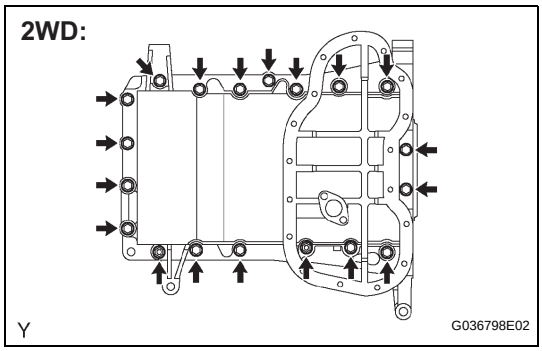


(a) Remove the 2 nuts, then remove the oil strainer and gasket (for 2WD).



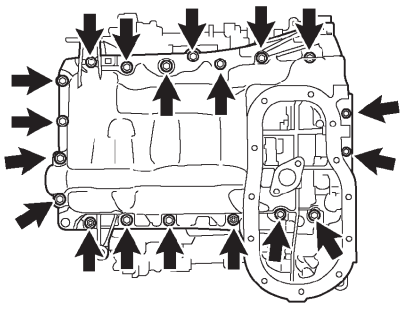
(b) Remove the 2 nuts, then remove the oil strainer and gasket (for Pre Runner and 4WD).

13. REMOVE OIL PAN SUB-ASSEMBLY



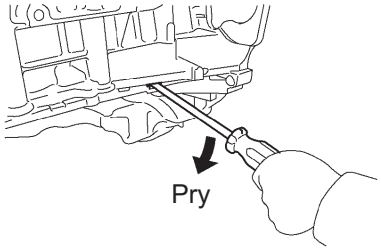
(a) Remove the 17 bolts and 2 nuts (for 2WD).

Pre Runner and 4WD:



A122289E01

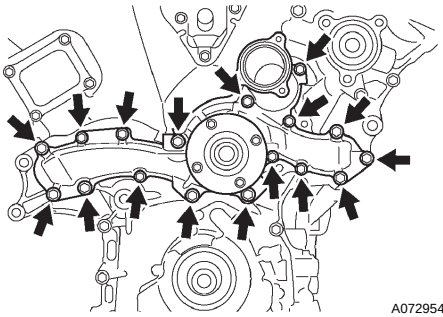
(b) Remove the 17 bolts and 2 nuts (for Pre Runner and 4WD).



G036806E01

(c) Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block in the sequence shown.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and oil pan.

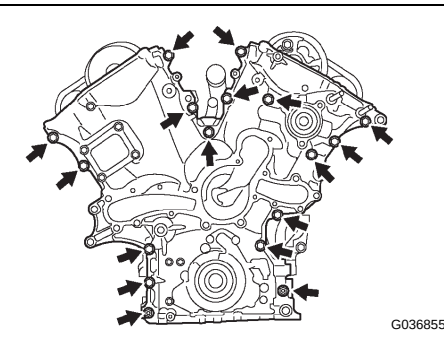
(d) Remove the O-ring from the oil pump.



A072954E01

14. REMOVE WATER PUMP ASSEMBLY

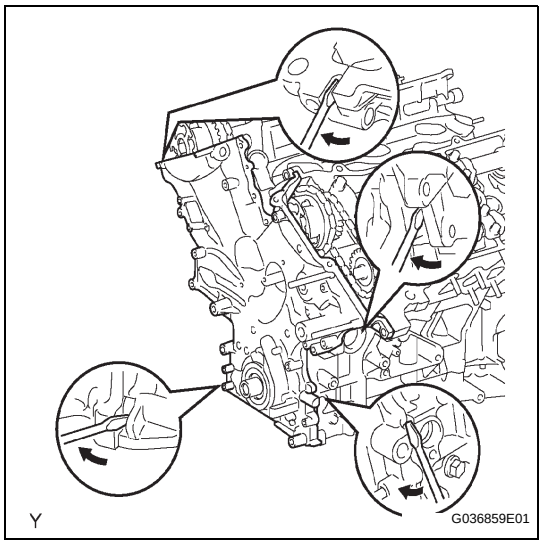
(a) Remove the 17 bolts, then remove the water pump and gasket.



G036855E03

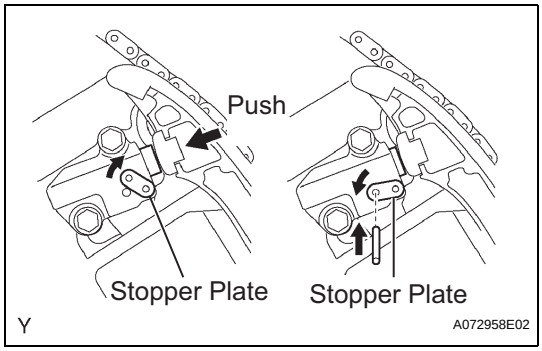
15. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove the 15 bolts and 2 nuts.



(b) Remove the timing chain cover by prying between the timing chain cover, cylinder head and cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.
(c) Remove the O-ring from the LH cylinder head.

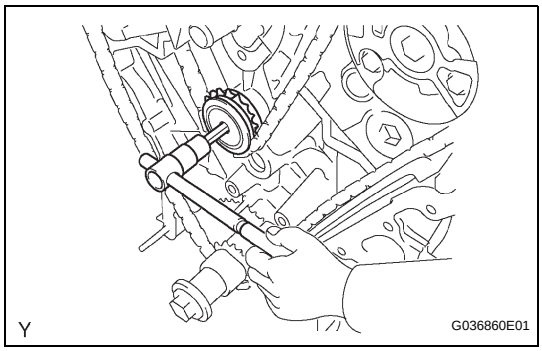
16. REMOVE NO.1 CHAIN TENSIONER ASSEMBLY
NOTICE:
- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**



(a) While turning the stopper plate of the tensioner upward, push in the plunger of the chain tensioner as shown in the illustration.
(b) While turning the stopper plate of the tensioner downward, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.
(c) Remove the 2 bolts, then remove the chain tensioner.

17. REMOVE CHAIN TENSIONER SLIPPER

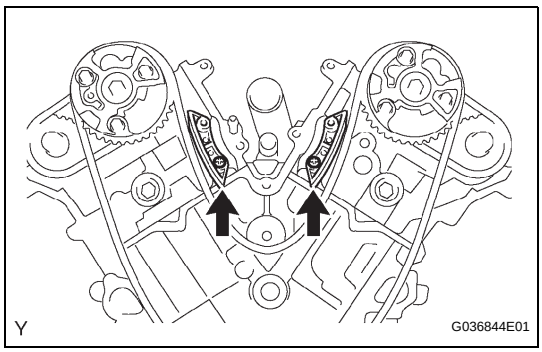
18. REMOVE IDLE SPROCKET ASSEMBLY
(a) Using a 10 mm hexagon wrench, remove the idle gear shaft No. 2, idle gear No. 1 and idle gear shaft No. 1.

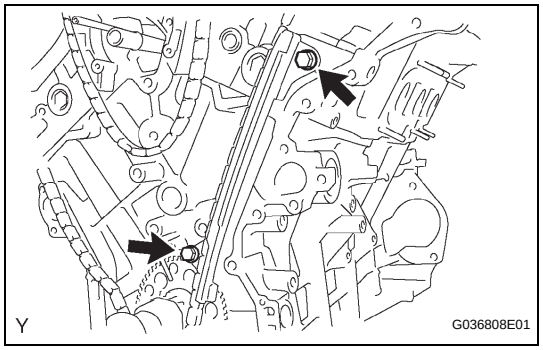


19. REMOVE NO.2 CHAIN VIBRATION DAMPER
(a) Remove the 2 chain vibration dampers No. 2.

20. REMOVE CHAIN SUB-ASSEMBLY

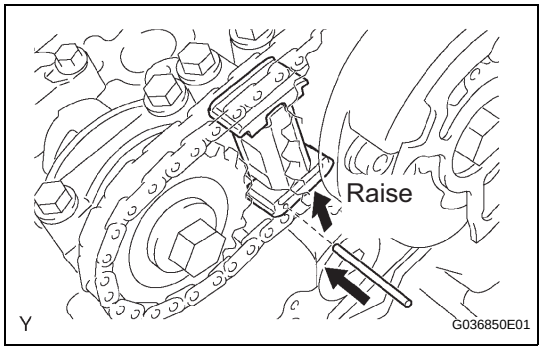
21. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET





22. REMOVE NO.1 CHAIN VIBRATION DAMPER

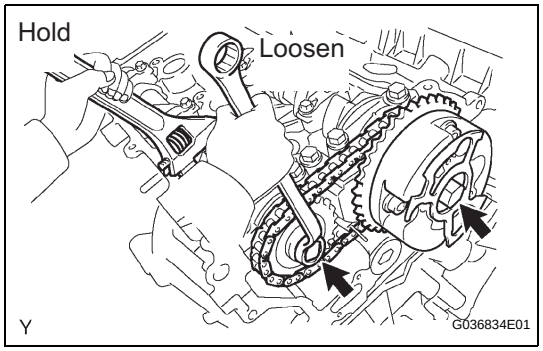
(a) Remove the 2 bolts, then remove the chain vibration damper No. 1.



23. REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) While raising the chain tensioner No. 2 upward, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

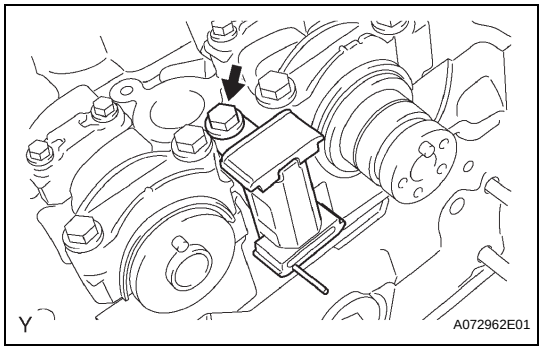
EM



(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts, camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.

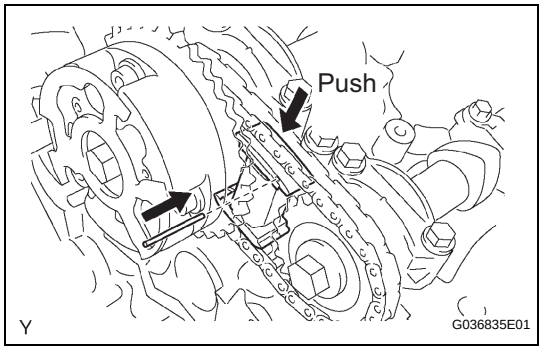
NOTICE:

- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear assembly.**



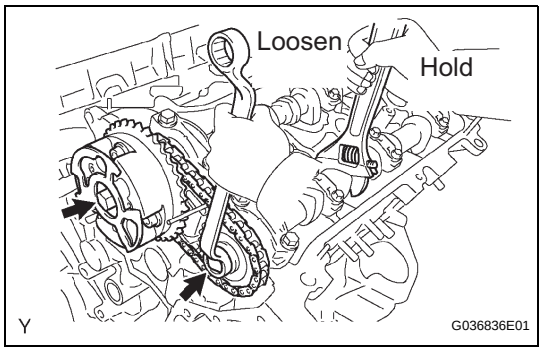
24. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 2.



25. REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)

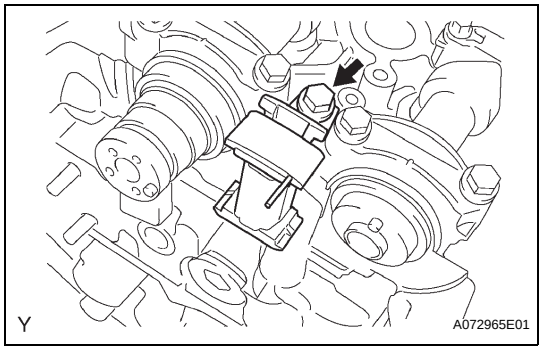
(a) While pushing down the chain tensioner No. 3, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts, camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.

NOTICE:

- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear assembly.**



26. REMOVE NO.3 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 3.

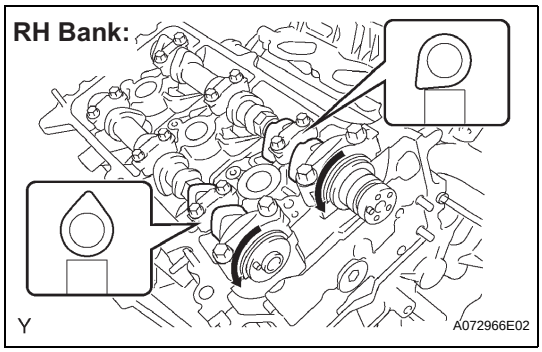
27. REMOVE CAMSHAFTS

NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

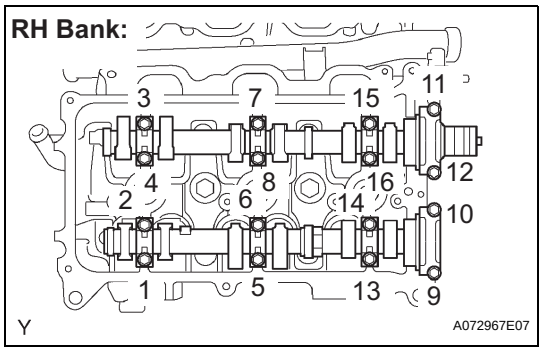
(a) Remove the camshafts of the RH bank.

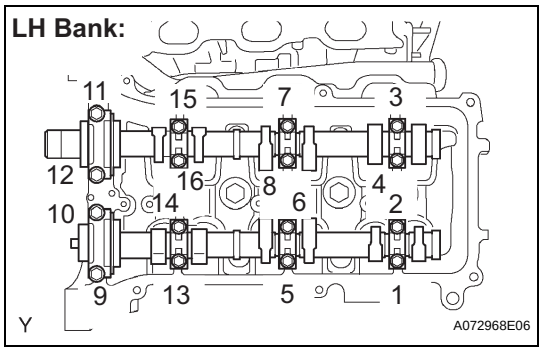
(1) Rotate the camshafts counterclockwise using a wrench so that cam lobes of No. 1 cylinder face in the directions as shown in the illustration.



(2) Using several steps, uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.

(3) Remove the 8 bearing caps, then remove the 2 camshafts.

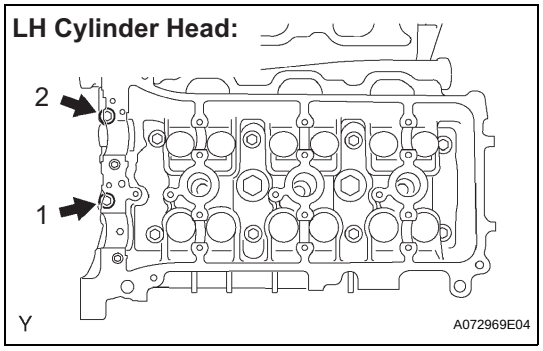




(b) Remove the camshafts of the LH bank.
(1) Using several steps, uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.
(2) Remove the 8 bearing caps, then remove the 2 camshafts.

28. REMOVE NO.1 CAMSHAFT BEARING

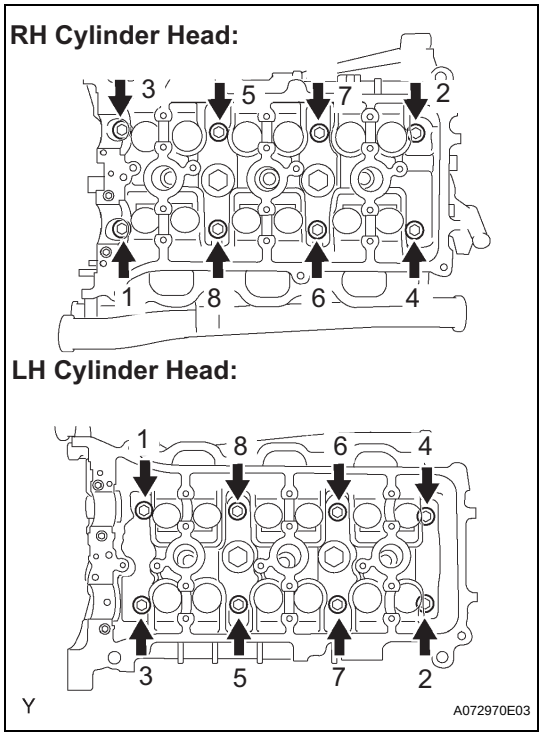
29. REMOVE NO.2 CAMSHAFT BEARING



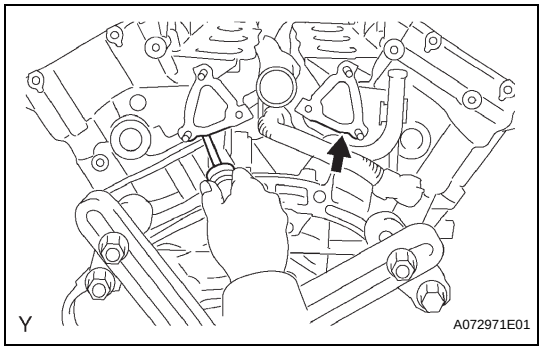
30. REMOVE CYLINDER HEADS

(a) Using several steps, remove the 2 cylinder head bolts on the LH cylinder head in the sequence shown in the illustration.

EM

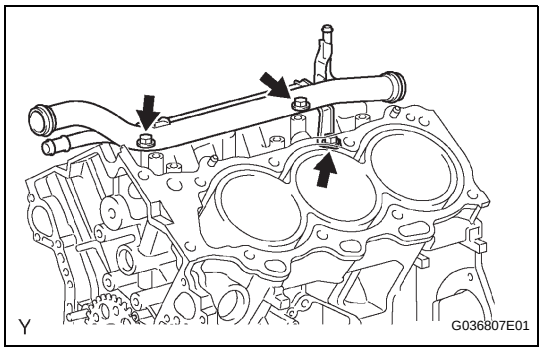


(b) Using several steps, loosen the 8 cylinder head bolts on each cylinder head with a 10 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 16 cylinder head bolts, then remove the plate washers.
NOTICE:
- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing the bolts in the wrong order.**



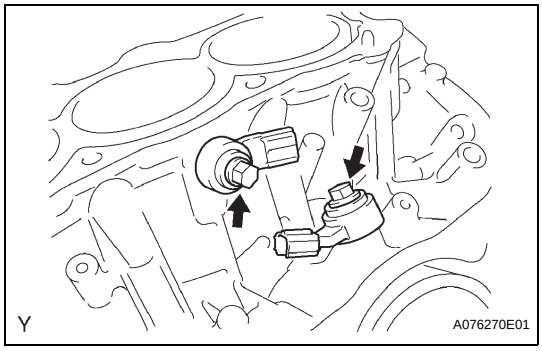
(c) Lift the cylinder head from the dowels on the cylinder block, and place the 2 cylinder heads on wooden blocks on a bench.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and cylinder block.
HINT:
If the cylinder head is difficult to remove, pry between the cylinder head and cylinder block with a screwdriver.

(d) Remove the RH and LH cylinder head gaskets.



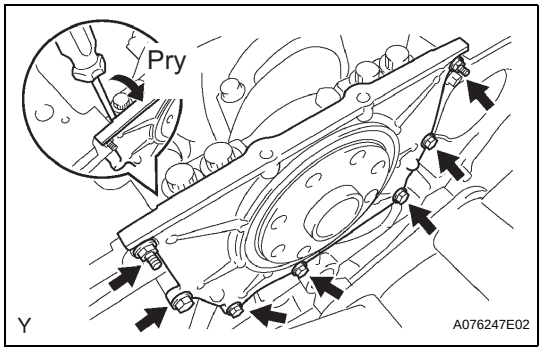
31. REMOVE NO.1 WATER OUTLET PIPE

(a) Separate the knock sensor wire.
(b) Remove the 3 bolts, then remove the water outlet pipe.



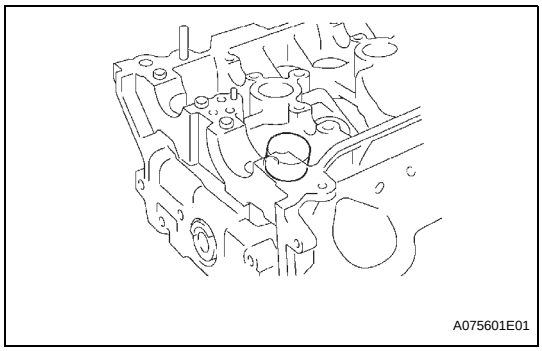
32. REMOVE KNOCK CONTROL SENSOR

(a) Disconnect the knock sensor connectors.
(b) Remove the 2 bolts, then remove the 2 knock sensors.



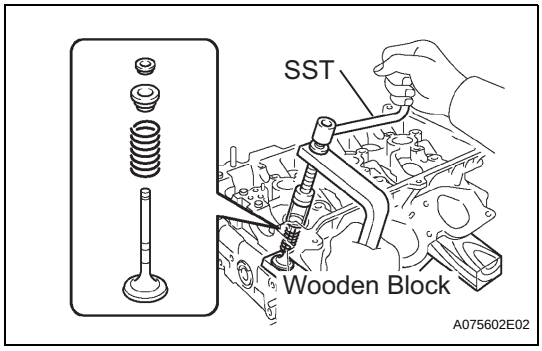
33. REMOVE REAR ENGINE OIL SEAL RETAINER

(a) Remove the 5 bolts and 2 nuts.
(b) Using a screwdriver, remove the oil seal retainer by prying between the oil seal retainer and crankshaft bearing cap.



34. REMOVE VALVE LIFTER

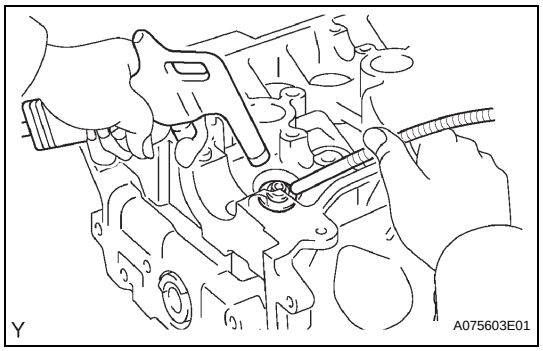
HINT:
Arrange the valve lifter in the correct order.



35. REMOVE VALVE

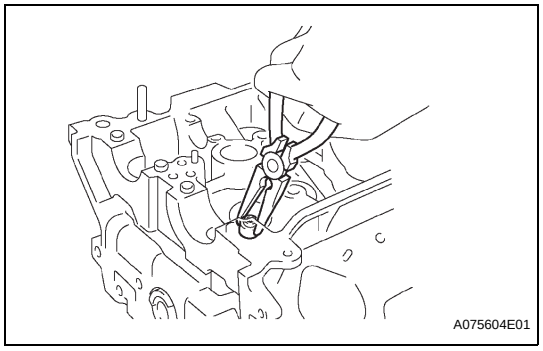
HINT:
Arrange the valves, inner compression springs, valve spring retainers and valve spring retainer rocks in the correct order.

(a) Place the cylinder head on a wooden block.
(b) Using SST, compress the inner compression spring and remove the 2 valve spring retainer rocks.
SST 09202-70020 (09202-00010)
(c) Remove the valve, inner compression spring and valve spring retainer.



36. REMOVE VALVE SPRING SEAT

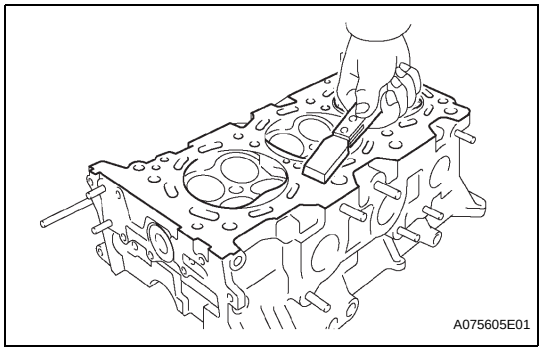
(a) Using compressed air and a magnetic finger, remove the valve spring seat by blowing air.



37. REMOVE VALVE STEM OIL O SEAL OR RING

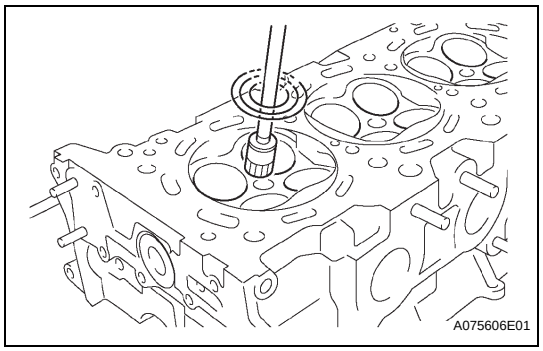
(a) Using needle-nose pliers, remove the valve stem oil seal.

EM

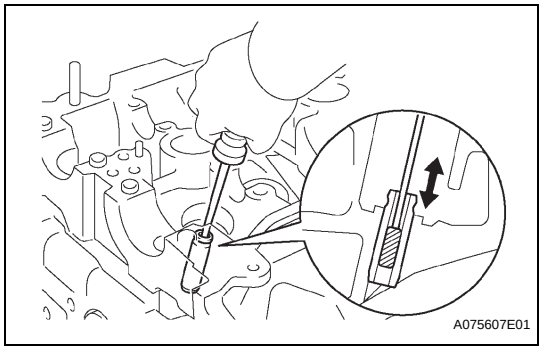


38. CLEAN CYLINDER HEAD SUB-ASSEMBLY

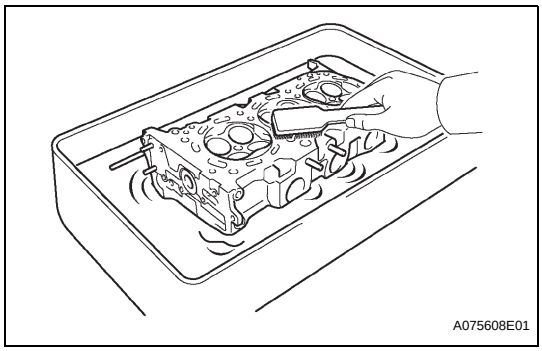
(a) Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.
NOTICE:
Be careful not to scratch the cylinder block contact surface.



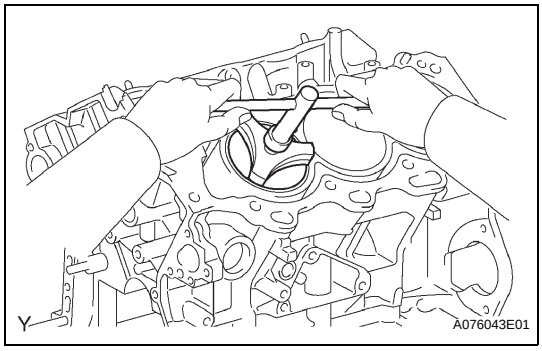
(b) Using a wire brush, remove all the carbon from the combustion chambers.
NOTICE:
Be careful not to scratch the combustion chambers.



(c) Using a valve guide bushing brush and solvent, clean all the valve guide bushes.



(d) Using a soft brush and solvent, thoroughly clean the cylinder head.

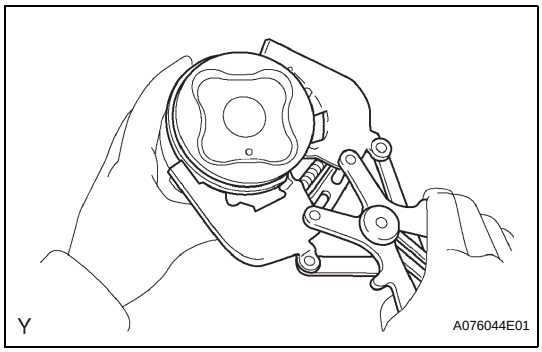


39. REMOVE WITH PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push in the piston, connecting rod assembly and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearings, connecting rod and cap together.
- Arrange the piston and connecting rod in the correct order.

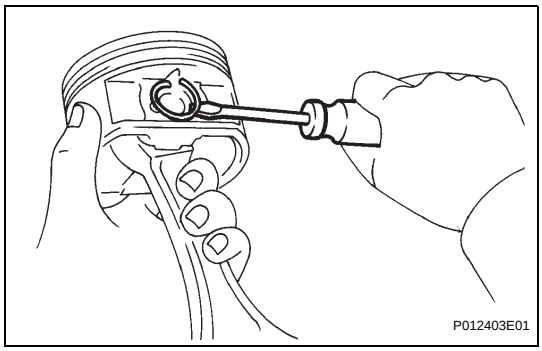
40. REMOVE CONNECTING ROD BEARING



41. REMOVE PISTON RING SET

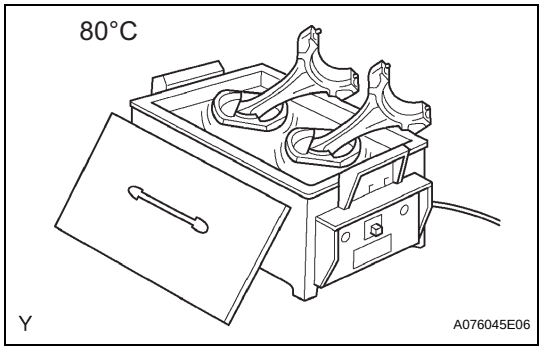
(a) Using a piston ring expander, remove the 2 compression rings.

(b) Remove the 2 side rails and oil ring by hand.



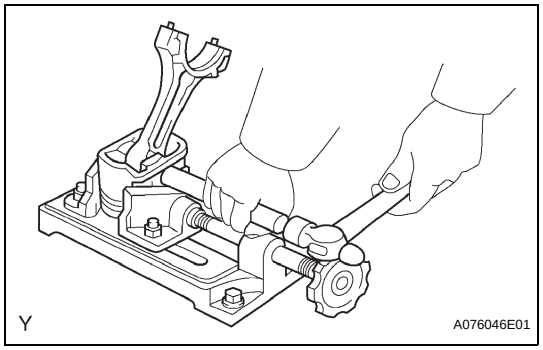
42. REMOVE HOLE SNAP RING

(a) Using a small screwdriver, pry out the 2 snap rings.



43. REMOVE WITH PISTON SUB-ASSEMBLY

(a) Gradually heat the piston to approximately 80°C (176°F).

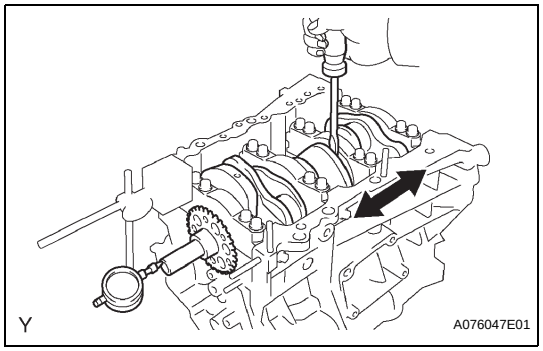


(b) Using a plastic-faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:

- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.

EM



44. INSPECT CRANKSHAFT THRUST CLEARANCE

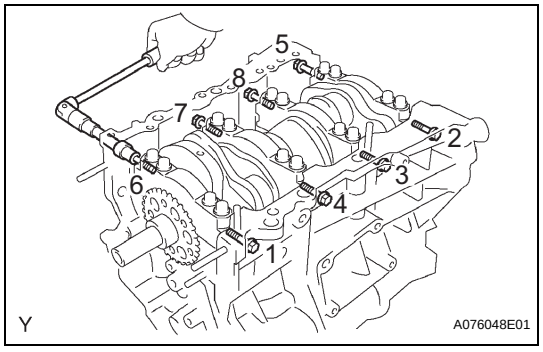
(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0094 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is greater than the maximum, replace the pair of the thrust washers or crankshaft.

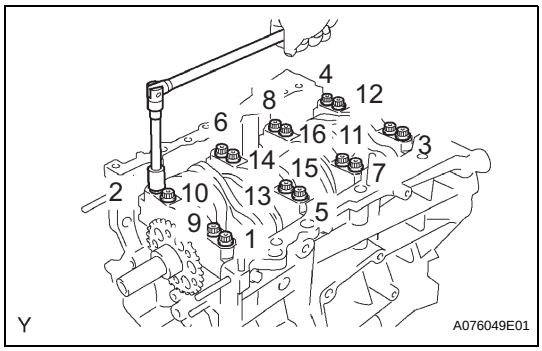
HINT:

Thrust washer thickness:
1.93 to 1.98 mm (0.0760 to 0.0780 in.)

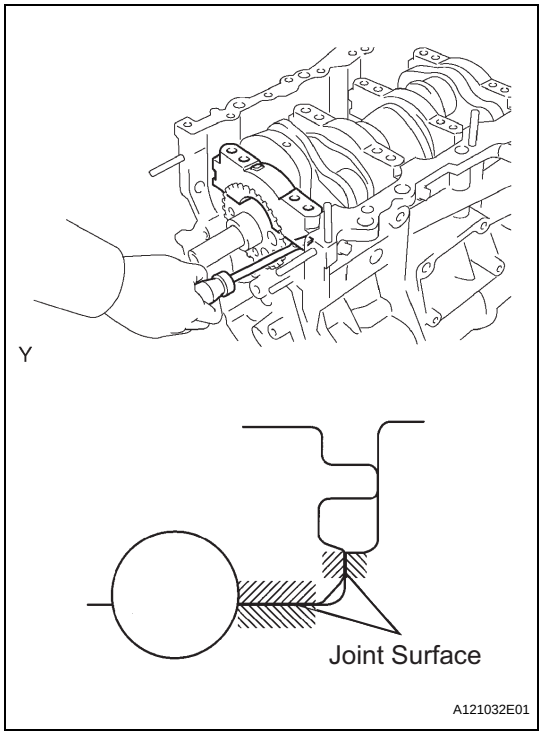


45. REMOVE CRANKSHAFT

(a) Using several steps, uniformly loosen and remove the 8 main bearing cap bolts and seal washers in the sequence shown in the illustration.



(b) Using several steps, uniformly loosen and remove the 16 main bearing cap bolts in the sequence shown in the illustration.



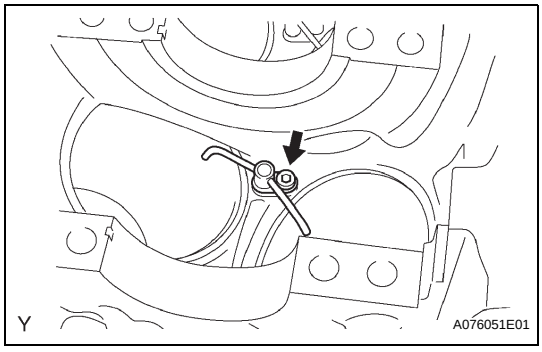
(c) Using a screwdriver, pry out the main bearing caps. Remove the 4 main bearing caps and lower bearings.

NOTICE:

- **Pull up the main bearing cap by turning it to the right and left little by little.**
- **Be careful not to damage the joint surfaces of the cylinder block and the main bearing cap.**

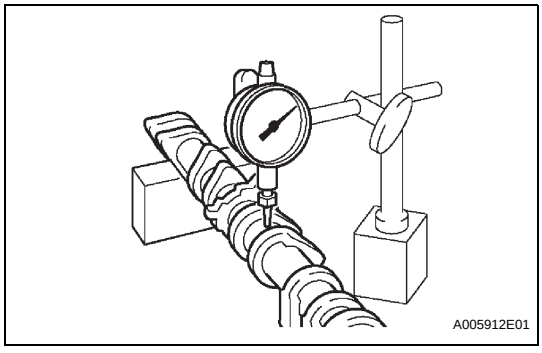
46. REMOVE CRANKSHAFT THRUST WASHER SET

47. REMOVE CRANKSHAFT BEARING



48. REMOVE NO.1 SUB-ASSEMBLY OIL NOZZLE

(a) Using a 5 mm socket hexagon wrench, remove the 3 oil nozzles.



INSPECTION

1. INSPECT CAMSHAFTS

(a) Inspect the camshaft for runout.

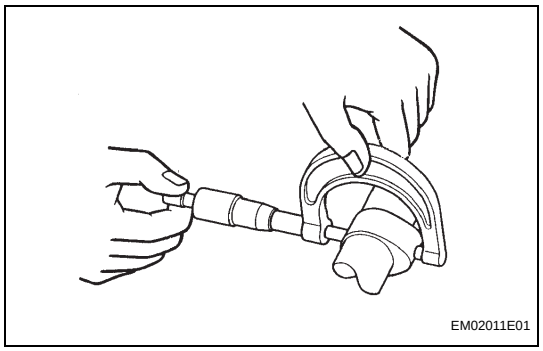
(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

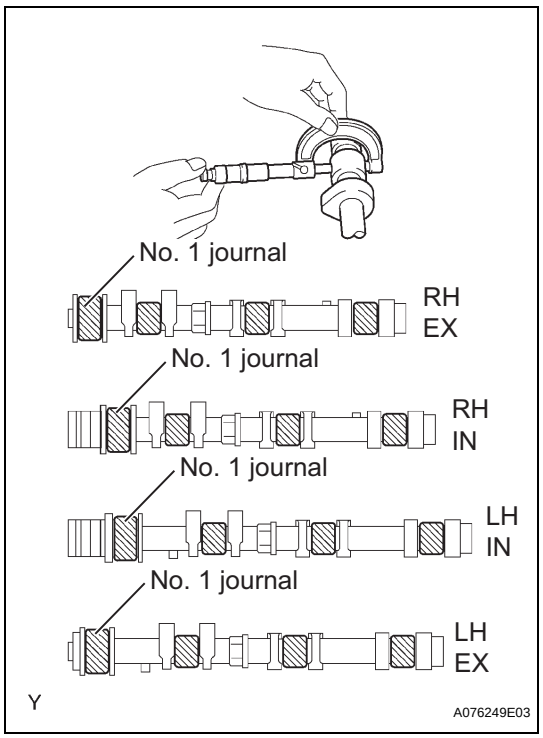
Maximum runout:

0.06 mm (0.0024 in.)

If the circle runout is greater than the maximum, replace the camshaft.



(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
Intake 44.168 to 44.268 mm (1.7389 to 1.7428 in.)
Exhaust 44.580 to 44.680 mm (1.7551 to 1.7591 in.)
Minimum cam lobe height:
Intake 44.018 mm (1.7330 in.)
Exhaust 44.430 mm (1.7492 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

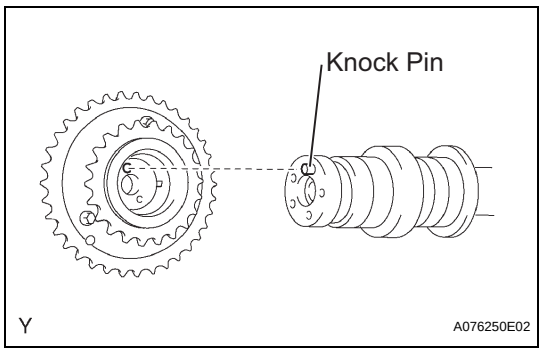


(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
No. 1 journal diameter:
35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other journal diameter:
22.959 to 22.975 mm (0.9039 to 0.9045 in.)
If the journal diameter is not as specified, check the oil clearance.

EM

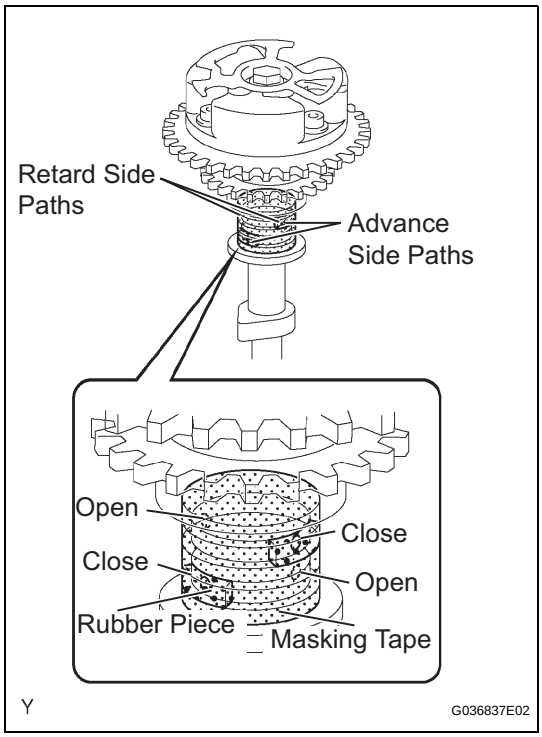
2. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Fix the intake camshaft in a vise.
NOTICE:
Be careful not to damage the camshaft.

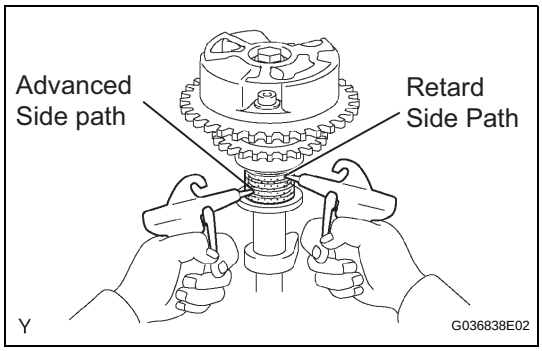


(b) Align the knock pin hole in the camshaft timing gear assembly with the knock pin of the camshaft, and install the camshaft timing gear assembly with the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

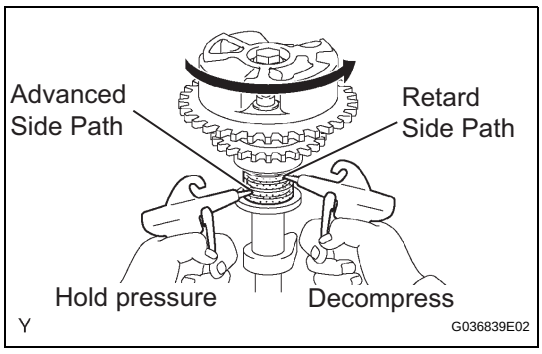
(c) Confirm that the camshaft timing gear assembly is locked.



(d) Release that lock pin.
(1) Cover 4 oil paths of cam journal with masking tape as shown in the illustration.
HINT:
One of the 2 grooves on the cam journal is for the retard side path (upper) and the other is for the advance side path (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with tape.
(2) Puncture the tape covering the advance oil path and retard oil path on the opposite side of the groove as shown in the illustration.



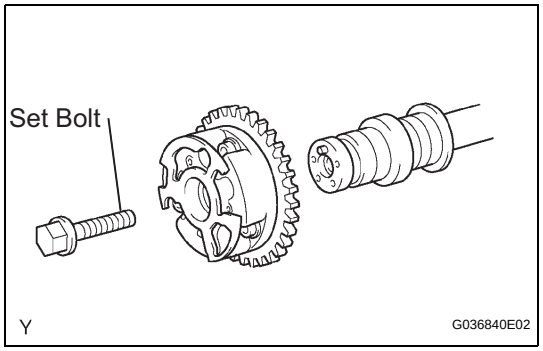
(3) Apply air pressure into two broken paths (the advance side path and the retard side path) of about 200 kPa (2.0 kgf/cm^2).
NOTICE:
Cover the paths with a shop rag to avoid oil splashes.



(4) Confirm that the camshaft timing gear assembly rotates in the timing advance direction when reducing the air pressure on the timing retard path.
HINT:
When the lock pin is released, the camshaft timing gear rotates in the advance direction.
(5) When the camshaft timing gear comes to the most advanced position, release the air pressure on the timing retard side path, and release that of the timing advance side path.
NOTICE:
Camshaft timing assembly gear occasionally shifts to the retard side abruptly if the air compression on the advanced side path is released first. This often causes the breakage of the lock pin.

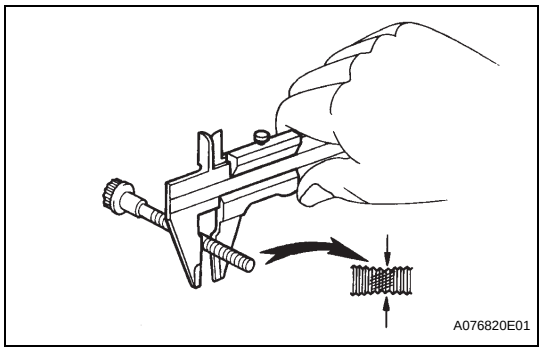
(e) Check the smooth revolution.
  (1) Rotate the camshaft timing gear several times within the movable range except for the most retarded position and check it rotates smoothly.
  Standard:
  Move smoothly in the range about 31°
  NOTICE:
  Be sure to perform this check by hand, instead of using air pressure.

(f) Check that the lock is in the most retarded position.
  (1) Confirm that the camshaft timing gear assembly is locked in the most retarded position.



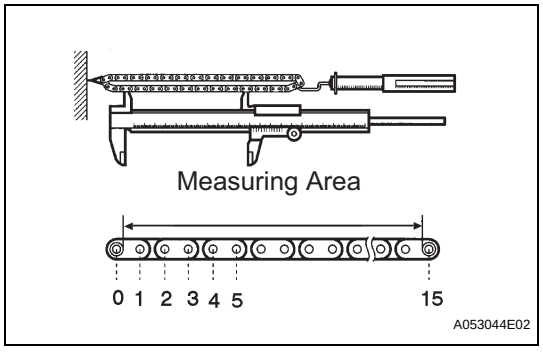
(g) Remove the set bolt, then remove the camshaft timing gear assembly.
  NOTICE:
  Be sure not to remove the other 3 bolts.

EM



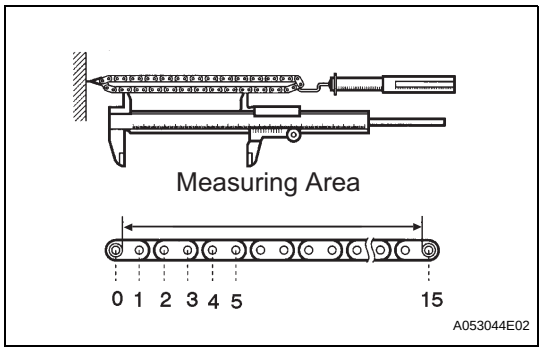
3. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the outer diameter of the bolt thread.
  Standard outer diameter:
  10.85 to 11.00 mm (0.4272 to 0.4331 in.)
  Minimum outer diameter:
  10.7 mm (0.421 in.)
  If the cylinder head set bolt is less than the minimum, replace the bolt.



4. INSPECT CHAIN SUB-ASSEMBLY

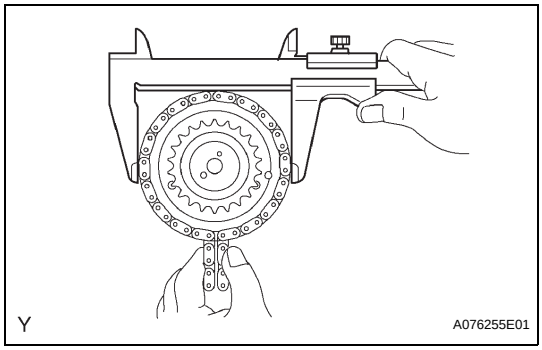
(a) Using a spring scale, apply 147 N (15.0 kgf, 33.1 lbf) to the chain and measure the length.
  Maximum chain length:
  146.8 mm (5.780 in.)
  NOTICE:
  Measure the length at least 3 places and calculate the average length.
  If the chain length is greater than the maximum, replace the chain.



5. INSPECT NO.2 CHAIN SUB-ASSEMBLY

(a) Using a spring scale, apply 147 N (15.0 kgf, 33.1 lbf) to the chain and measure the length.

Maximum chain length:
146.8 mm (5.780 in.)
NOTICE:
Measure the length at least 3 places and calculate the average length.
If the chain length is greater than the maximum, replace the chain.

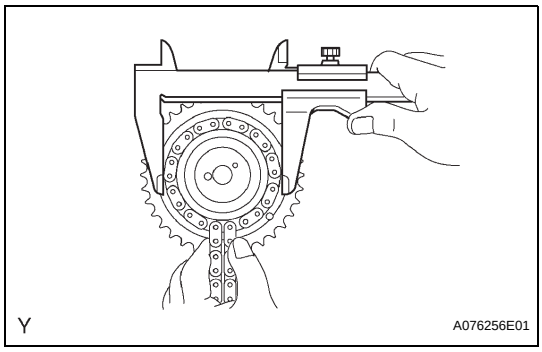


6. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Wrap the No. 1 chain around the larger gear of timing gear assembly.

(b) Using vernier caliper, measure the timing gear with the chain wrapped.

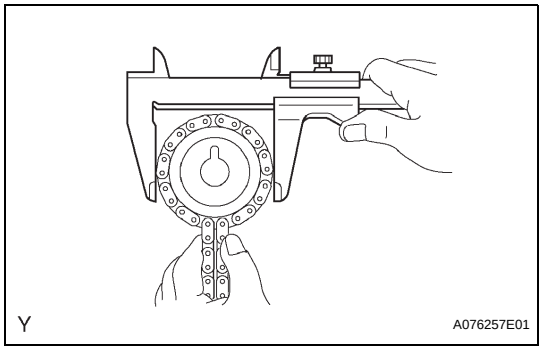
Minimum gear diameter (with chain):
115.5 mm (4.547 in.)
NOTICE:
Vernier caliper must be in contact with the chain rollers when measuring.
If the gear diameter is less than the minimum, replace the No. 1 chain and the camshaft timing gear assembly.



(c) Wrap the No. 2 chain around the smaller gear of timing gear assembly.

(d) Using vernier calipers, measure the timing gear with the chain wrapped.

Minimum gear diameter (with chain):
73.1 mm (2.878 in.)
NOTICE:
The vernier calipers must be in contact the chain rollers when measuring.
If the gear diameter is less than the minimum, replace the No. 2 chain and the camshaft timing gear assembly.

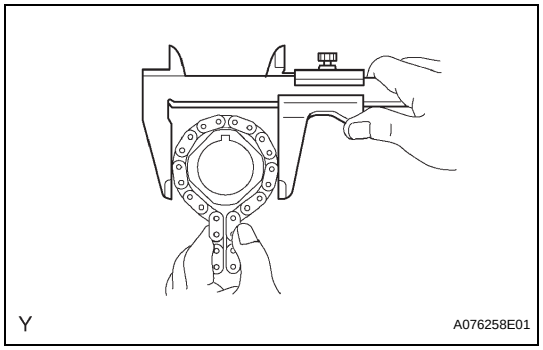


7. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET

(a) Wrap the No. 2 chain around the timing gear.

(b) Using vernier calipers, measure the camshaft timing gear diameter with the chain wrapped.

Minimum gear diameter (with chain):
73.1 mm (2.878 in.)
NOTICE:
The vernier calipers must be in contact the chain rollers when measuring.
If the gear diameter is less than the minimum, replace the No. 2 chain and camshaft timing gear.



8. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

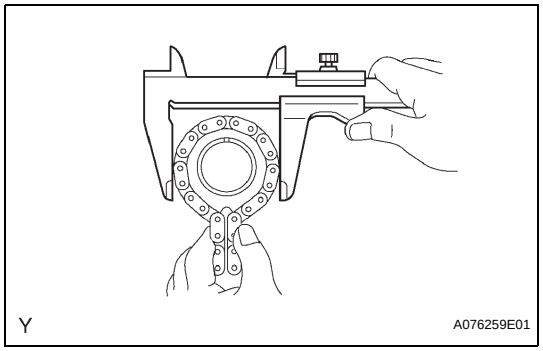
(a) Wrap the No. 1 chain around the timing gear.

(b) Using vernier calipers, measure the timing gear diameter with the chain wrapped.

Minimum gear diameter (with chain):
61.0 mm (2.402 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the gear diameter is less than the minimum, replace the No. 1 chain and the crankshaft timing gear.



9. INSPECT IDLE SPROCKET ASSEMBLY

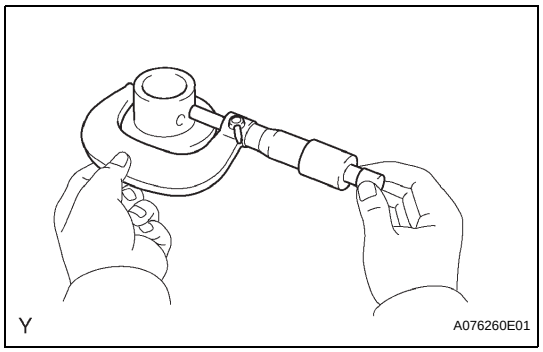
(a) Wrap the No. 1 chain around the idle sprocket.

(b) Using vernier caliper, measure the idle sprocket with the chain wrapped.

Minimum gear diameter (with chain):
61.0 mm (2.402 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

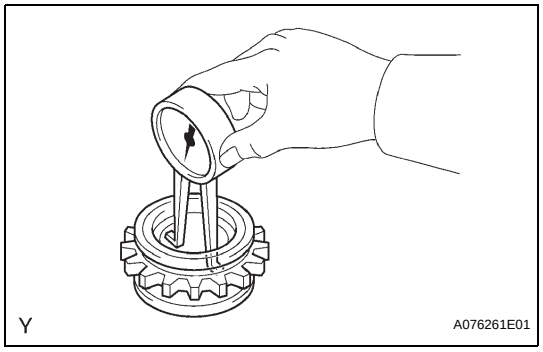
If the gear diameter is less than the minimum, replace the No. 1 chain and idle sprocket.



10. INSPECT NO.1 IDLE GEAR SHAFT

(a) Using a micrometer, measure the idle gear shaft diameter.

Idle gear shaft diameter:
22.987 to 23.000 mm (0.9050 to 0.9055 in.)



(b) Using a caliper gauge, measure the internal diameter of the idle gear.

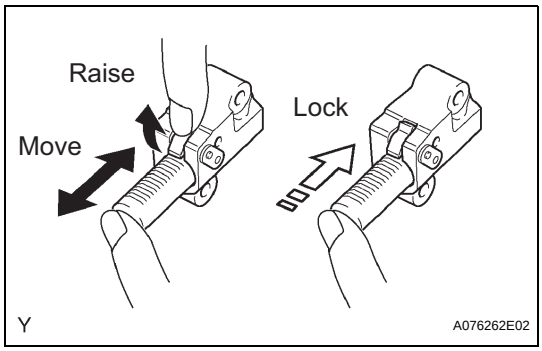
Idle gear internal diameter:
23.02 to 23.03 mm (0.9063 to 0.9067 in.)

(c) Subtract the idle gear shaft diameter measurement from the idle gear internal diameter measurement.

Standard oil clearance:
0.020 to 0.043 mm (0.0008 to 0.0017 in.)

Maximum oil clearance:
0.093 mm (0.0037 in.)

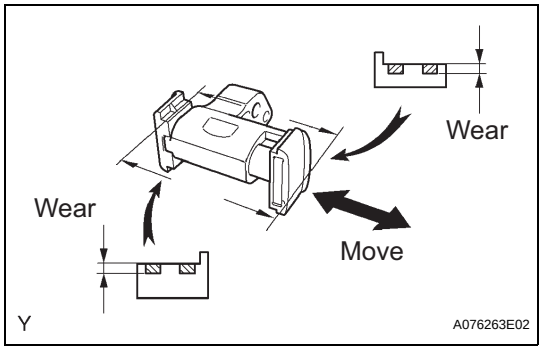
EM



11. INSPECT NO.1 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly when the ratchet pawl is raised with finger.

(b) Release the ratchet pawl, then check that the plunger is locked in place by the ratchet pawl and does not move when pushing it with finger.



12. INSPECT NO.2 CHAIN TENSIONER ASSEMBLY

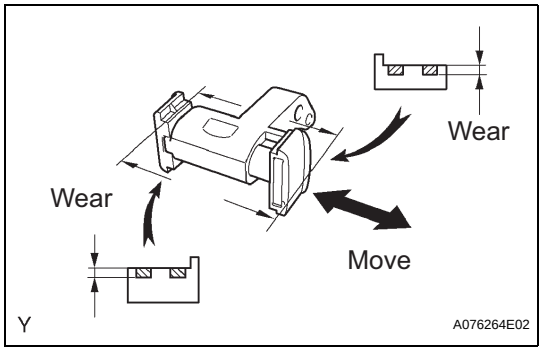
(a) Check that the plunger moves smoothly.

(b) Measure the wear of the chain tensioner slipper.

Maximum wear:

1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner No. 2.



13. INSPECT NO.3 CHAIN TENSIONER ASSEMBLY

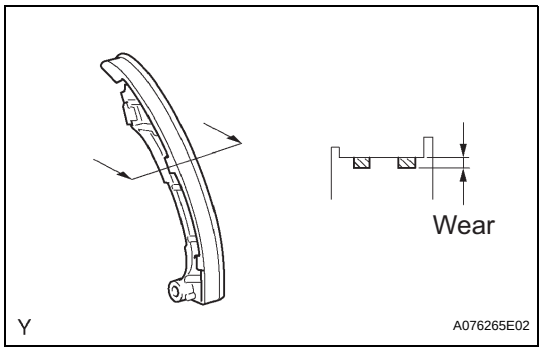
(a) Check that the plunger moves smoothly.

(b) Measure the wear of the chain tensioner slipper.

Maximum wear:

1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner No. 3.



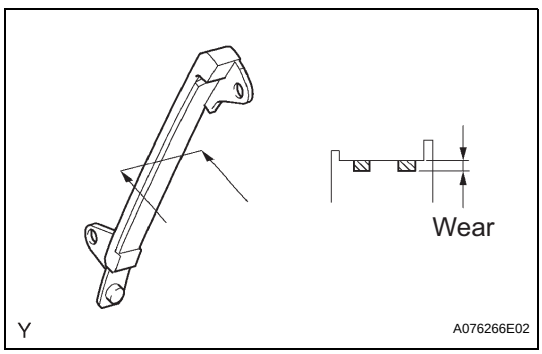
14. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the wear of the tensioner slipper.

Maximum wear:

1.0 mm (0.039 in.)

If the thickness is greater than the maximum, replace the tensioner slipper.



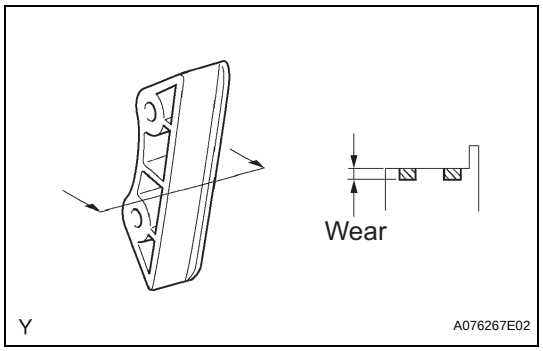
15. INSPECT NO.1 CHAIN VIBRATION DAMPER

(a) Measure the wear of the vibration damper No. 1.

Maximum wear:

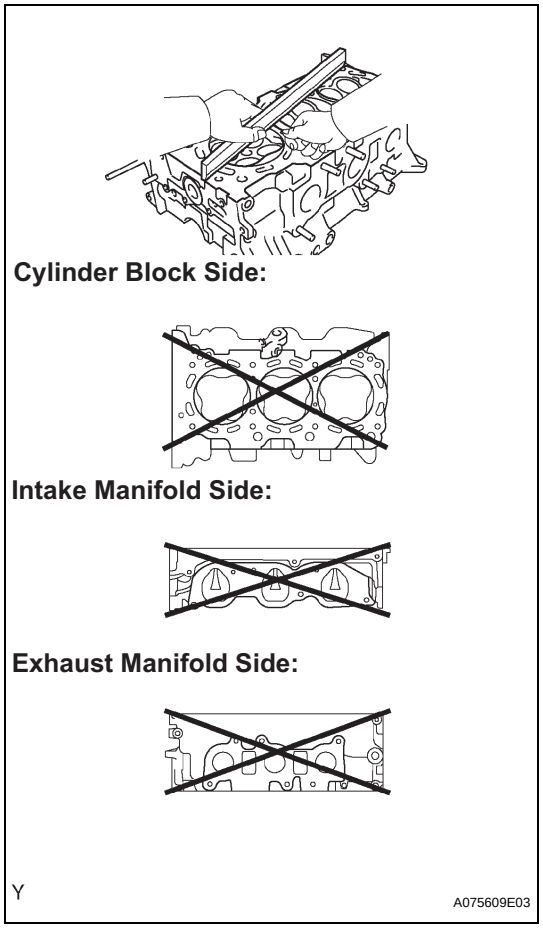
1.0 mm (0.039 in.)

If the thickness is greater than the maximum, replace the vibration damper No. 1.



16. INSPECT NO.2 CHAIN VIBRATION DAMPER

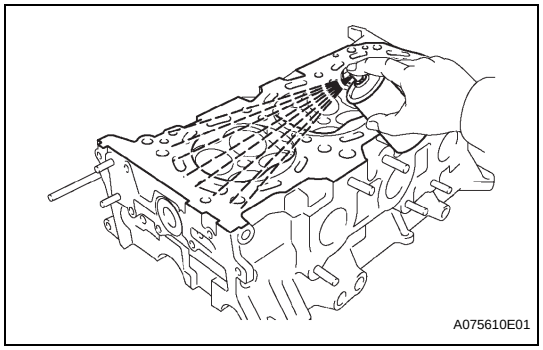
(a) Measure the wear of the vibration damper No. 2 .
Maximum wear:
1.0 mm (0.039 in.)
If the thickness is greater than the maximum, replace the vibration damper No. 2.



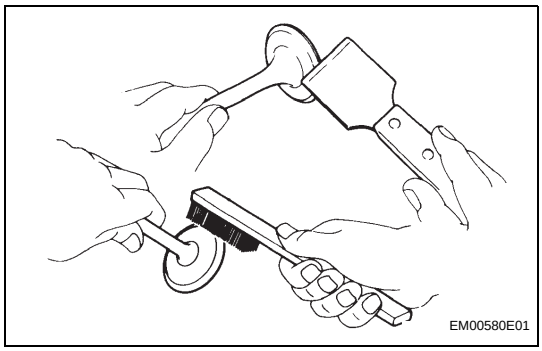
17. INSPECT CYLINDER HEAD SUB-ASSEMBLY

(a) Inspect the cylinder head for warpage.
(1) Using a precision straight edge and feeler gauge, measure the warpage on the cylinder block side and the intake and exhaust sides.
Maximum warpage:
0.10 mm (0.0039 in.)
If the warpage is greater than the maximum, replace the cylinder head.

EM



(b) Inspect the cylinder head for crack.
(1) Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.
If cracked, replace the cylinder head.

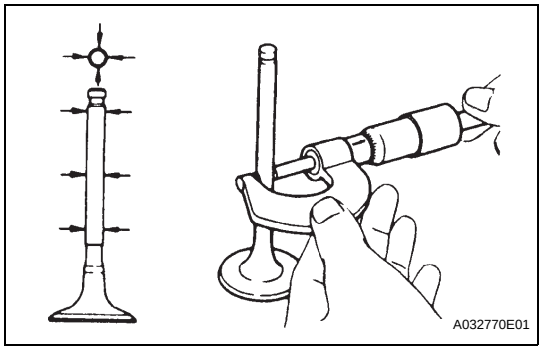


EM00580E01

18. CLEAN VALVE

(a) Using a gasket scraper, chip off any carbon from the valve head.

(b) Using a wire brush, thoroughly clean the valve.



A032770E01

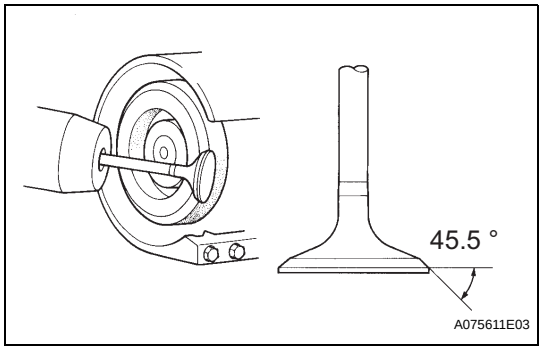
19. INSPECT VALVE

(a) Inspect valve stem diameter.

(1) Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter

Intake	**5.470 to 5.485 mm (0.2154 to 0.2159 in.)**
Exhaust	**5.465 to 5.480 mm (0.2152 to 0.2158 in.)**



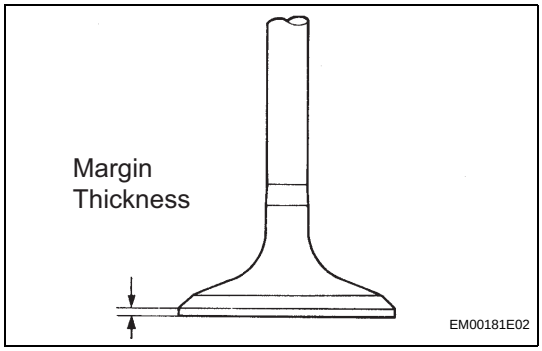
A075611E03

(b) Inspect valve face angle.

(1) Grind the valve enough to remove any pits and carbon.

(2) Check that the valve is ground to the correct valve face angle.

Valve face angle:
45.5°

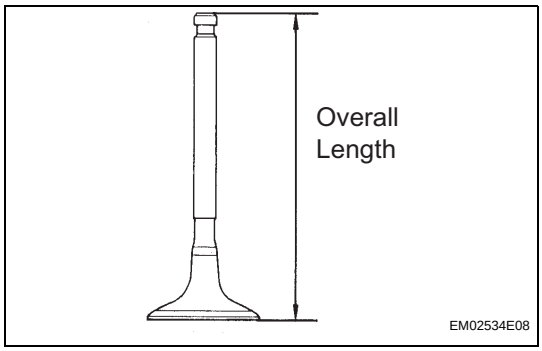


EM00181E02

(c) Inspect valve head margin thickness.

(1) Using vernier calipers, check the valve head margin thickness.

Standard margin thickness:
1.0 mm (0.039 in.)
Minimum margin thickness:
0.5 mm (0.020 in.)
If the margin thickness is less than the minimum, replace the valve.



EM02534E08

(d) Inspect overall length.

(1) Using vernier calipers, check the overall length.

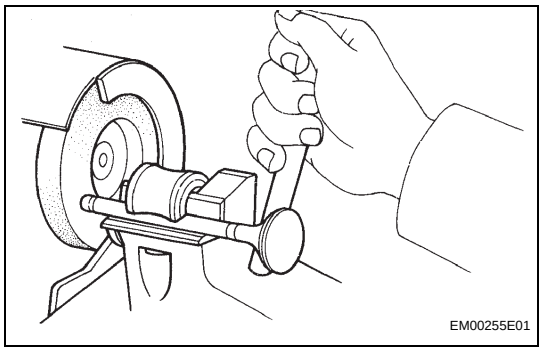
Standard overall length

Intake	**106.95 mm (4.2106 in.)**
Exhaust	**105.80 mm (4.1654 in.)**

Minimum overall length

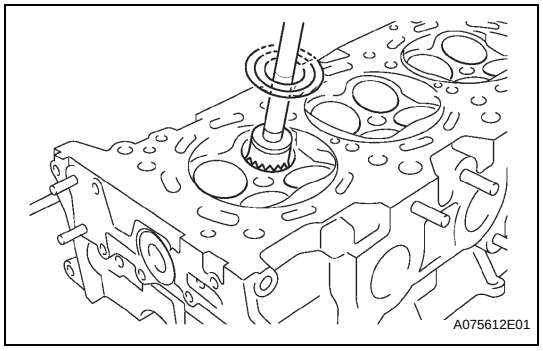
Intake	**106.70 mm (4.2008 in.)**
Exhaust	**105.55 mm (4.1555 in.)**

If the overall length is less than the minimum, replace the valve.



EM00255E01

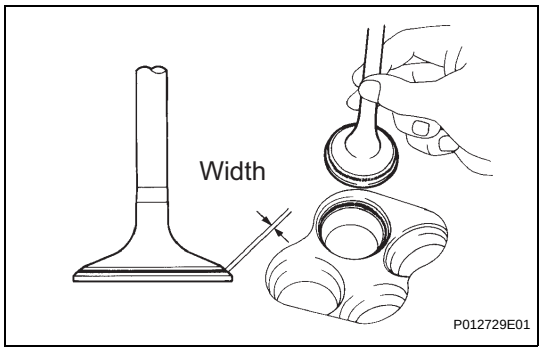
(e) Inspect valve stem tip.
(1) Check the surface of the valve stem tip for wear.
NOTICE:
Do not grind to less than the minimum length.
If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.



A075612E01

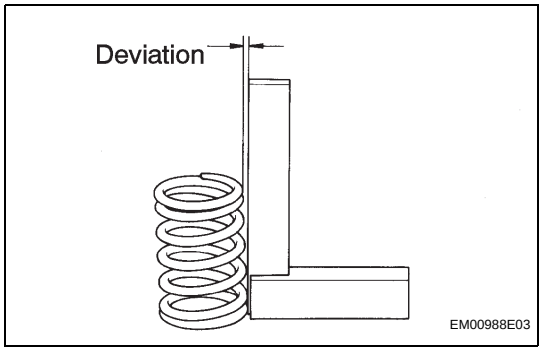
20. CLEAN VALVE SEAT
(a) Using a 45° carbide cutter, resurface the valve seats.
(b) Clean the valve seats.

EM



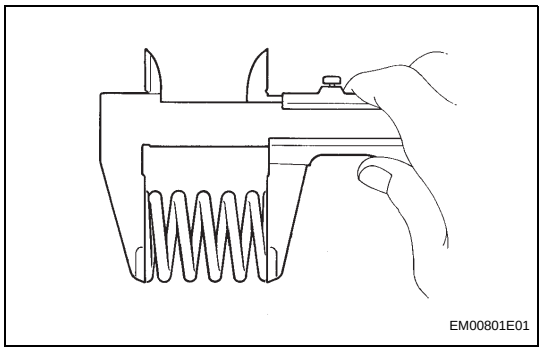
P012729E01

21. INSPECT VALVE SEAT
(a) Apply a light coat of prussian blue (or white lead) to the valve face.
(b) Lightly press the valve against the valve seat.
NOTICE:
Do not rotate the valve.
(c) Check the valve face and seat according to the following procedure.
(1) If blue appears 360° around the face, the valve is concentric.
If not, replace the valve.
(2) If the blue appears 360° around the valve seat, the guide and face are concentric.
If not, resurface the valve seat.
(3) Check that the seat is in contact with the middle of the valve face with the following width.
Standard width:
1.0 to 1.4 mm (0.039 to 0.055 in.)



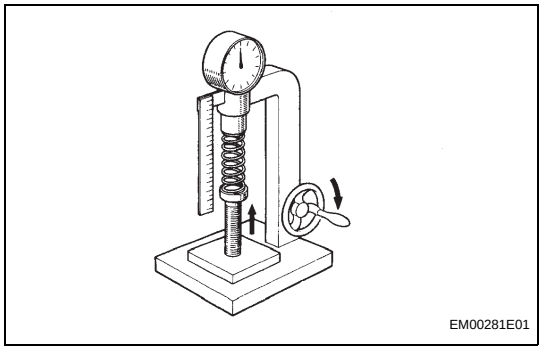
EM00988E03

22. INSPECT INNER COMPRESSION SPRING
(a) Inspect the deviation.
(1) Using steel squares, measure the deviation of the inner compression spring.
Maximum deviation:
2.0 mm (0.079 in.)
If the deviation is greater than the maximum, replace the inner compression spring.



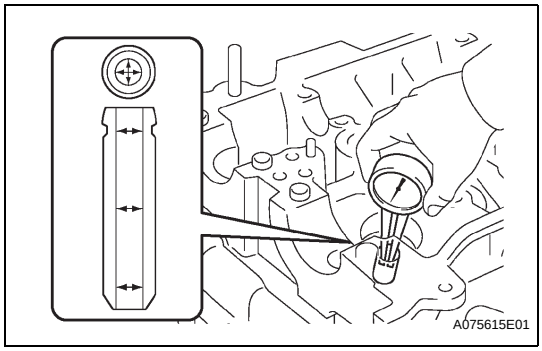
EM00801E01

(b) Inspect the free length.
(1) Using vernier calipers, measure the free length of the inner compression spring.
Free length:
47.80 mm (1.8819 in.)
If the free length is not as specified, replace the inner compression spring.



EM00281E01

(c) Inspect the tension.
(1) Using a spring tester, measure the tension of the inner compression spring at the specified installed length.
Installed tension:
186.2 to 205.8 N (19.0 to 21.0 kgf, 41.9 to 46.3 lbf) at 33.3 mm (1.311 in.)
If the installed tension is not as specified, replace the inner compression spring.



A075615E01

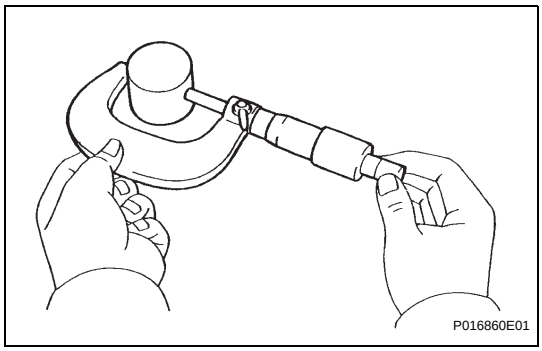
23. INSPECT VALVE GUIDE BUSH OIL CLEARANCE
(a) Using a caliper gauge, measure the internal diameter of the valve guide bush.
Inside diameter:
5.51 to 5.53 mm (0.2169 to 0.2177 in.)
(b) Subtract the valve stem diameter measurement (Step 8) from the valve guide bush internal diameter measurement.
Standard oil clearance

Intake	**0.025 to 0.060 mm (0.0010 to 0.0024 in.)**
Exhaust	**0.030 to 0.065 mm (0.0012 to 0.0026 in.)**

Maximum oil clearance

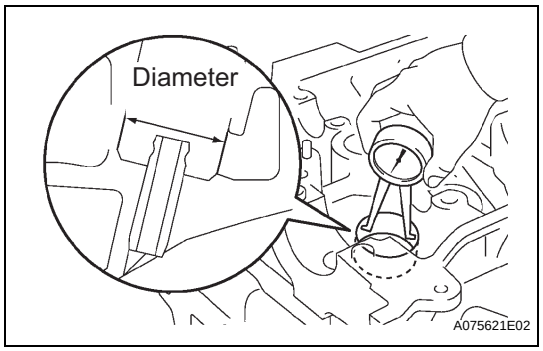
Intake	**0.08 mm (0.0031 in.)**
Exhaust	**0.10 mm (0.0039 in..)**

If the oil clearance is greater than the maximum, replace the valve and valve guide bush.



P016860E01

24. INSPECT VALVE LIFTER
(a) Using a micrometer, measure the valve lifter diameter.
Valve lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



25. INSPECT VALVE LIFTER OIL CLEARANCE

(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Lifter bore diameter:
31.009 to 31.025 mm (1.2208 to 1.2215 in.)

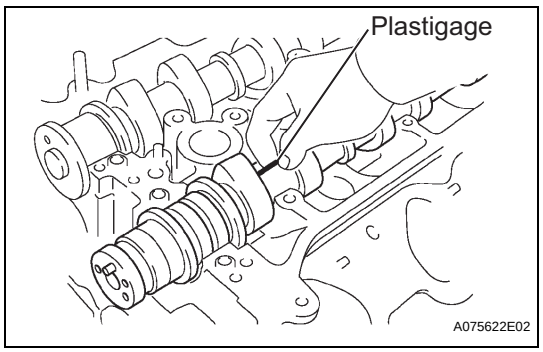
(b) Subtract the valve lifter diameter measurement (Step 16) from the lifter bore diameter measurement.

Standard oil clearance:
0.033 to 0.059 mm (0.0013 to 0.0023 in.)

Maximum oil clearance:
0.08 mm (0.0031 in.)

If the oil clearance is greater than the maximum, replace the valve lifter.

If necessary, replace the cylinder head.



26. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the camshaft bearing caps, camshaft bearings and camshaft journals.

(b) Install the camshaft bearing (see page EM-57 or EM-74).

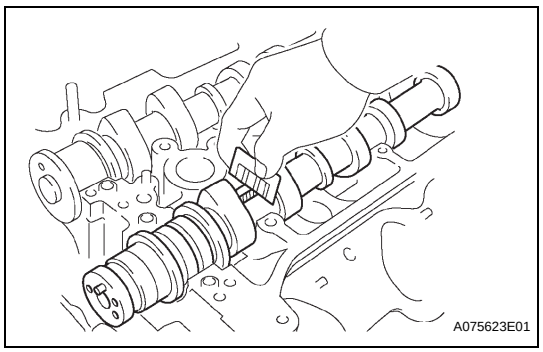
(c) Place the camshaft on the cylinder head.

(d) Lay a strip of Plastigage across each camshaft journal.

(e) Install the camshaft bearing caps (see page EM-54 or EM-74).

NOTICE:
Do not turn the camshafts.

(f) Remove the camshaft bearing caps (see page EM-57 or EM-74).



(g) Measure the Plastigage at its widest point.

Standard oil clearance (Cylinder head RH)

No. 1 (Intake)	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
No. 1 (Exhaust)	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Others	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Standard oil clearance (Cylinder head LH)

No. 1	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Others	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance (Cylinder head RH)

No. 1 (Intake)	0.07 mm (0.0028 in.)
Others	0.10 mm (0.0039 in.)

Maximum oil clearance (Cylinder head LH):
0.10 mm (0.0039 in.)

If the oil clearance is greater than the maximum, replace the camshaft bearings and/or camshafts.

If necessary, replace the camshaft bearing caps and cylinder head together.

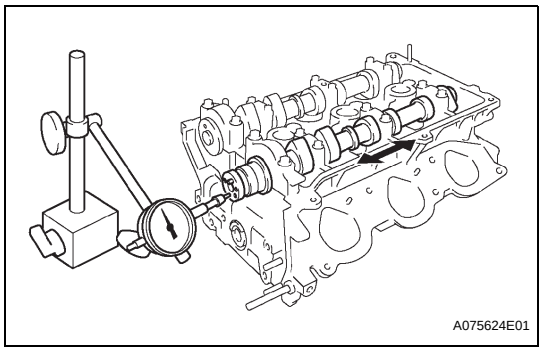
Reference

Cylinder head journal bore diameter	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
Camshaft bearing center wall thickness (Mark "2")	2.004 to 2.008 mm (0.0789 to 0.0791 in.)

EM

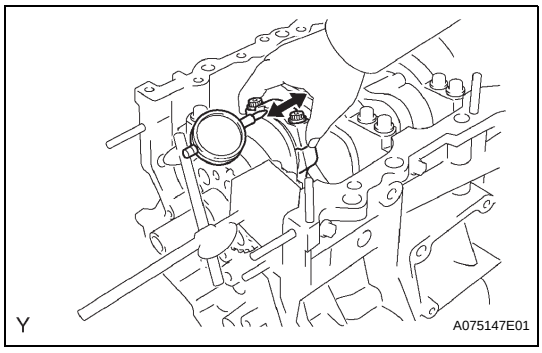
Cylinder head journal bore diameter	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
Camshaft journal diameter	35.971 to 35.985 mm (1.4165 to 1.4167 in.)

(h) Remove the Plastigage completely.
(i) Remove the camshafts.
(j) Remove the camshaft bearing.



27. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts. (See page EM-57 or EM-74).
(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.
Standard thrust clearance:
0.04 to 0.09 mm (0.016 to 0.035 in.)
Maximum thrust clearance:
0.11 mm (0.0043 in.)
If the thrust clearance is greater than the maximum, replace the camshafts.
If necessary, replace the camshaft bearing caps and cylinder head as a set.

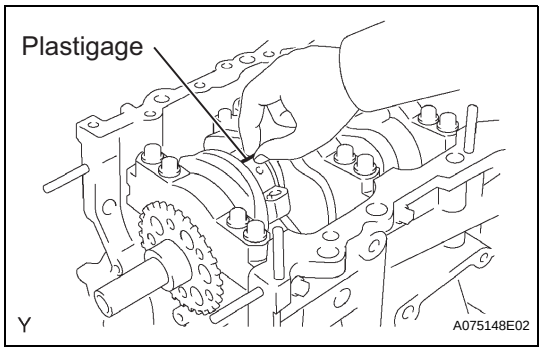


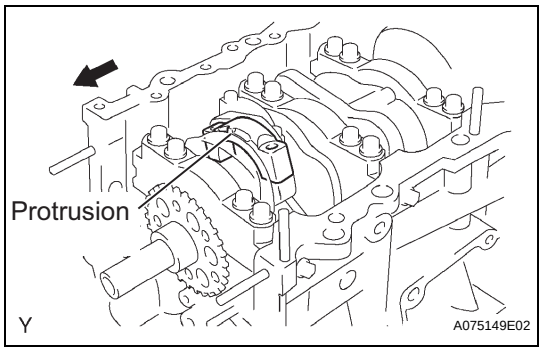
28. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.15 to 0.30 mm (0.0059 to 0.0118 in.)
Maximum thrust clearance:
0.35 mm (0.0138 in.)

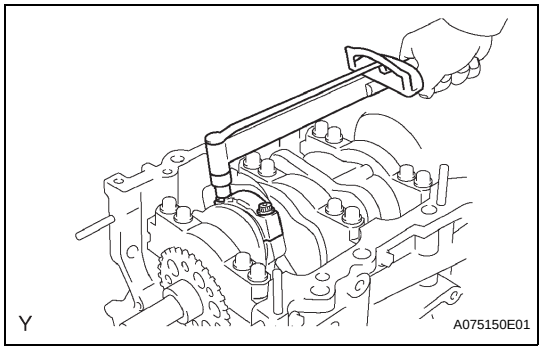
29. INSPECT CONNECTING ROD OIL CLEARANCE

(a) Check the matchmarks on the connecting rod and cap are aligned to ensure correct assembly.
(b) Using SST, remove the 2 connecting rod cap bolts.
SST 09011-38121
(c) Clean the crank pin, bearing and connecting rod.
(d) Check the crank pin and bearing for any pits and scratches.
(e) Lay a strip of plastigage across the crank pin.

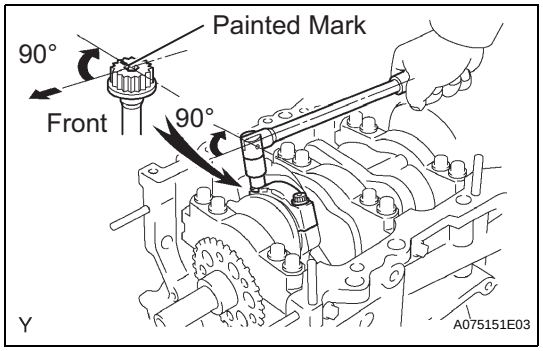




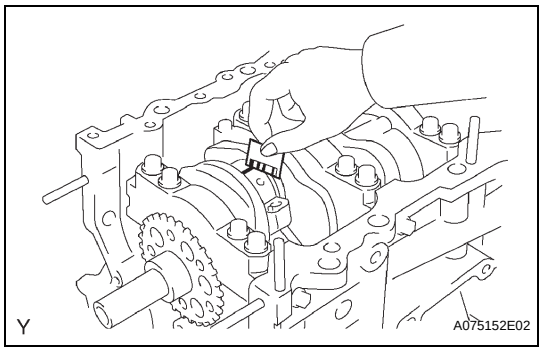
(f) Check that the protrusion of the connecting rod cap is facing in the correct direction.
(g) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



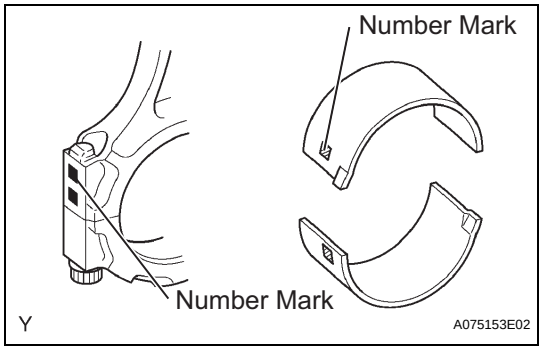
(h) Using SST, tighten the bolts alternately to the specified torque.
SST 09011-38121
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



(i) Mark the front side of the each connecting cap bolt with paint.
(j) Retighten the cap bolts 90° as shown in the illustration.
NOTICE:
Do not turn the crankshaft.
(k) Remove the 2 bolts, connecting rod cap and lower bearing.



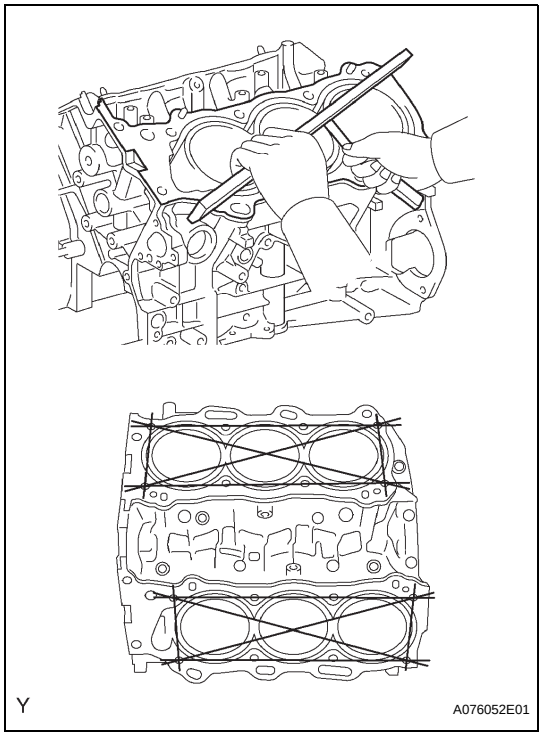
(l) Measure the plastigage at its widest point.
Standard oil clearance:
0.026 to 0.046 mm (0.0010 to 0.0018 in.)
Maximum oil clearance:
0.066 mm (0.0025 in.)
NOTICE:
Completely remove the plastigage.



(m) When replacing the bearing, replace it with one with the same number as marked on the connecting rod. There are 4 sizes of standard bearings, marked "1 ", "2", "3" and "4" accordingly.
HINT:
Standard bearing center wall thickness

Mark	mm (in.)
"1"	1.484 to 1.487 (0.0584 to 0.0585)
"2"	1.487 to 1.490 (0.0585 to 0.0587)
"3"	1.490 to 1.493 (0.0587 to 0.0588)

Mark	mm (in.)
"4"	1.493 to 1.496 (0.0588 to 0.0589)



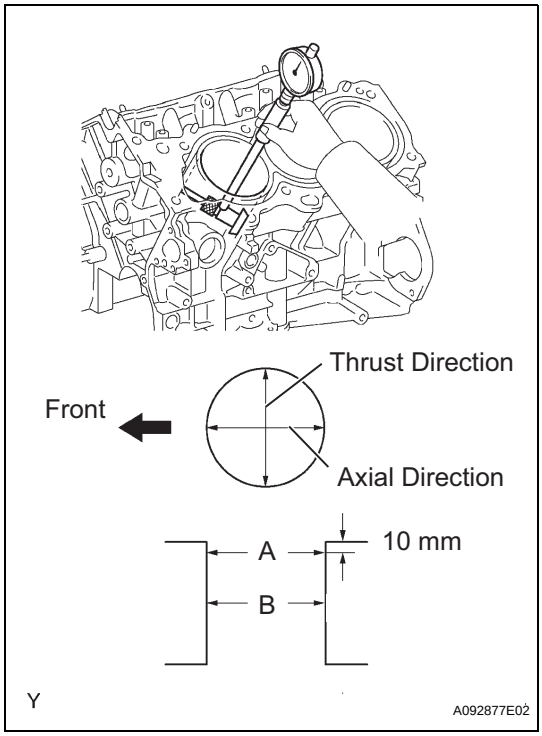
30. CHECK CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:

0.05 mm (0.0020 in.)

If the warpage is greater than the maximum, replace the cylinder block.



31. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

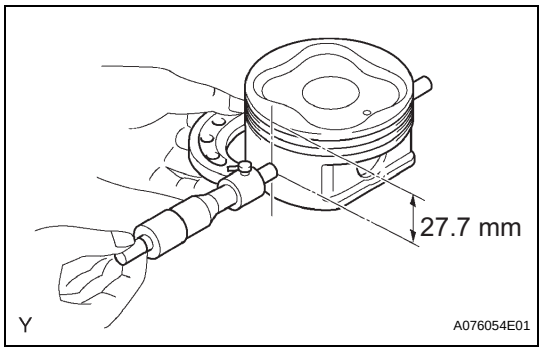
Standard diameter:

94.000 to 94.012 mm (3.7008 to 3.7013 in.)

Maximum diameter:

94.132mm (3.7060 in.)

If the average diameter of 4 positions is greater than the maximum, replace the cylinder block.



32. INSPECT WITH PISTON SUB-ASSEMBLY

(a) Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 27.7 mm (1.091 in.) from the piston head.

Piston diameter:

93.910 to 93.940 mm (3.6972 to 3.6984 in.)

33. INSPECT PISTON OIL CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:

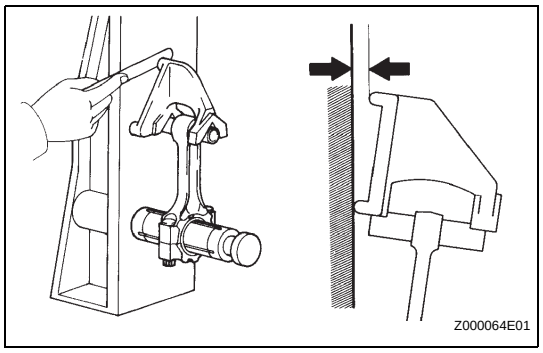
0.060 to 0.102 mm (0.0031 to 0.0040 in.)

Maximum oil clearance:

0.13 mm (0.0051 in.)

If the oil clearance is greater than the maximum, replace all the 6 pistons. If necessary, replace the cylinder block.

EM



34. INSPECT CONNECTING ROD SUB-ASSEMBLY

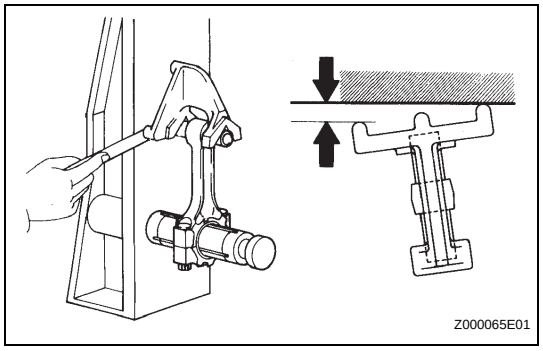
(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.

Maximum misalignment:

0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If misalignment is greater than the maximum, replace the connecting rod assembly.

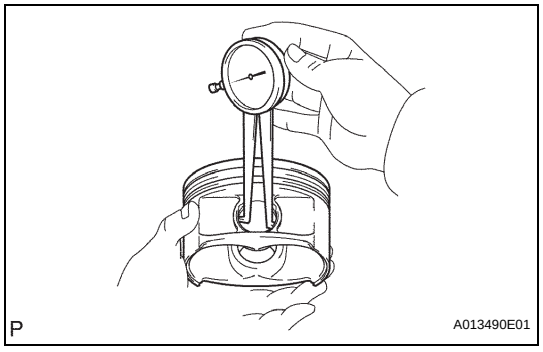


(2) Check the twist.

Maximum twist:

0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If the twist is greater than the maximum, replace the connecting rod assembly.



35. INSPECT PISTON PIN OIL CLEARANCE

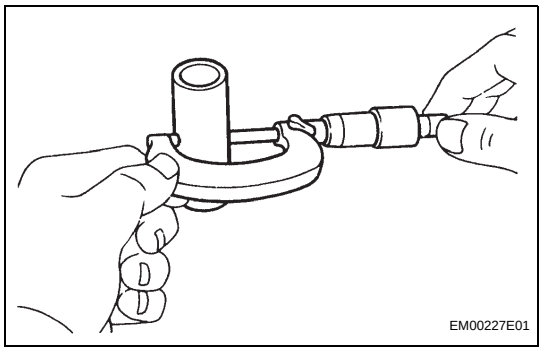
(a) Using a caliper gauge, measure the internal diameter of the piston pin hole.

Piston pin hole internal diameter:

22.001 to 22.010 mm (0.8662 to 0.8665 in.)

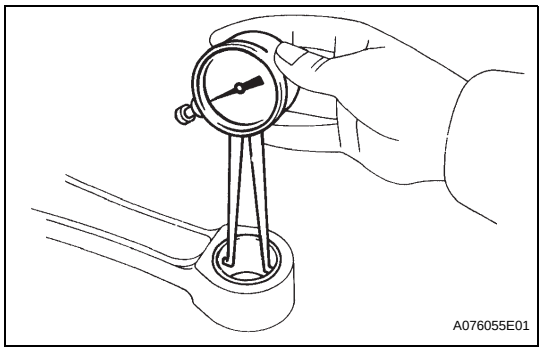
Piston pin hole inside diameter

Mark	mm (in.)
A	22.001 to 22.004 (0.8662 to 0.8663)
B	22.005 to 22.007 (0.8663 to 0.8664)
C	22.008 to 22.010 (0.8665 to 0.8665)



(b) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)
Piston pin diameter

Mark	mm (in.)
A	21.997 to 22.000 (0.8660 to 0.8661)
B	22.001 to 22.003 (0.8661 to 0.8663)
C	22.004 to 22.006 (0.8663 to 0.8664)



(c) Using a caliper gauge, measure the internal diameter of the connecting rod bushing.
Bushing internal diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Bushing internal diameter

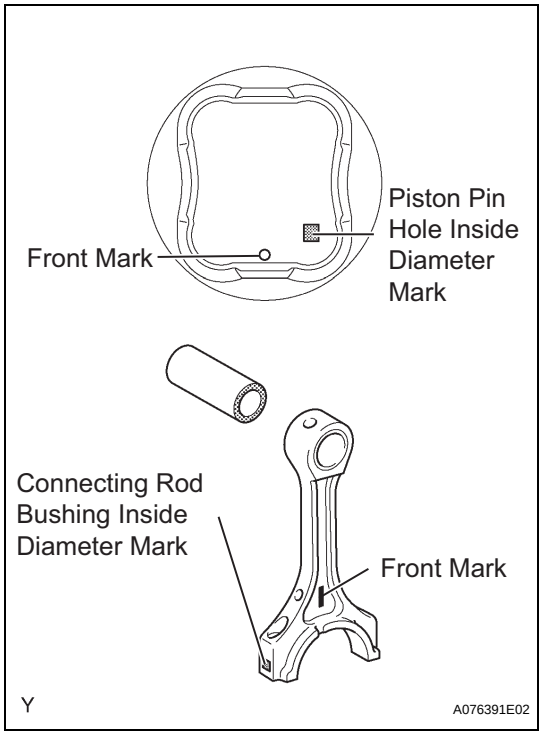
Mark	mm (in.)
A	22.005 to 22.008 (0.8663 to 0.8665)
B	22.009 to 22.011 (0.8665 to 0.8666)
C	22.012 to 22.014 (0.8666 to 0.8667)

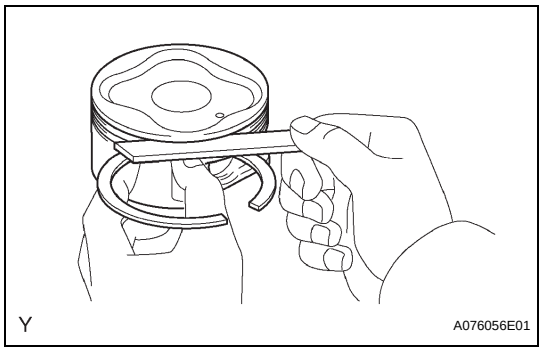
(d) Subtract the piston pin diameter measurement from the piton pin hole diameter measurement.
Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.00028 in.)
Maximum oil clearance:
0.040 mm (0.0016 in.)

(e) If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the piston and piston pin together.

(f) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.
Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.050 mm (0.0020 in.)

(g) If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the connecting rod and piston pin together.



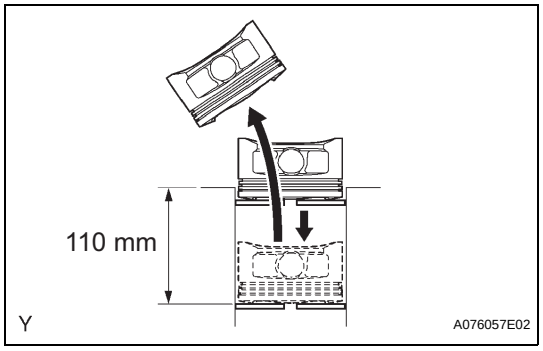


36. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

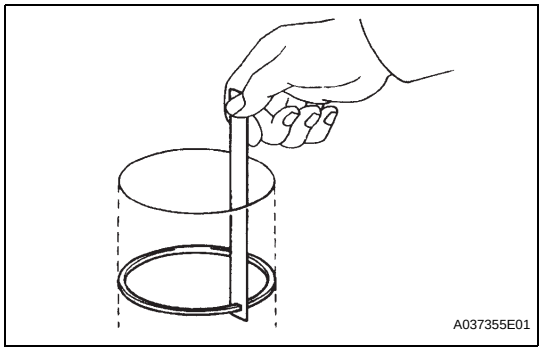
Ring groove clearance:

No.1 0.02 to 0.07 mm (0.0008 to 0.0028 in.)
No.2 0.02 to 0.06 mm (0.0008 to 0.0024 in.)
Oil 0.07 to 0.15 mm (0.0028 to 0.0060 in.)



37. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



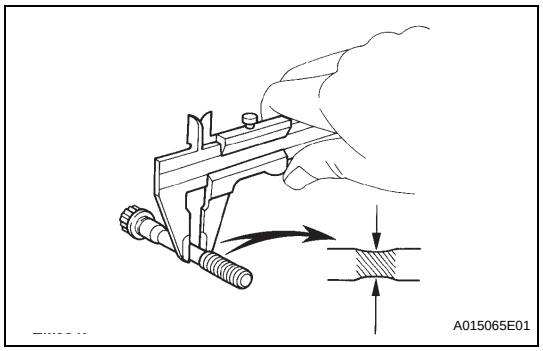
(b) Using a feeler gauge, measure the end gap.

Standard end gap:

No. 1 0.30 to 0.40 mm (0.0118 to 0.0157 in.)
No. 2 0.40 to 0.50 mm (0.0157 to 0.0197 in.)
Oil (Side rail) 0.10 to 0.40 mm (0.0039 to 0.0157 in.)

Maximum end gap:

No. 1 1.0 mm (0.039 in.)
No. 2 1.1 mm (0.043 in.)
Oil (Side rail) 1.0 mm (0.039 in.)



38. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolt.

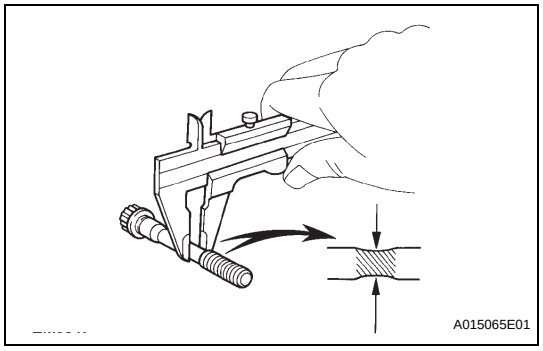
Standard diameter:

7.2 to 7.3 mm (0.283 to 0.287 in.)

Minimum diameter:

7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the bolt.



39. INSPECT CRANKSHAFT BEARING CAP SET BOLT

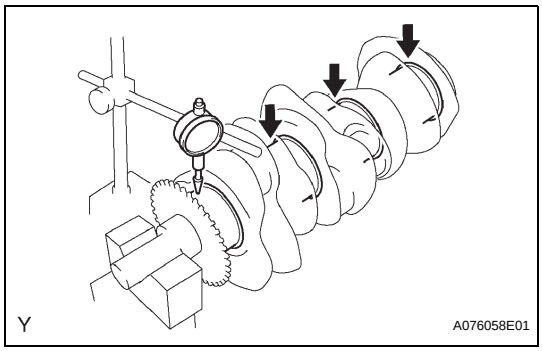
(a) Using vernier calipers, measure the tension portion diameter of the bolt.

Standard diameter:

10.0 to 10.2 mm (0.393 to 0.402 in.)

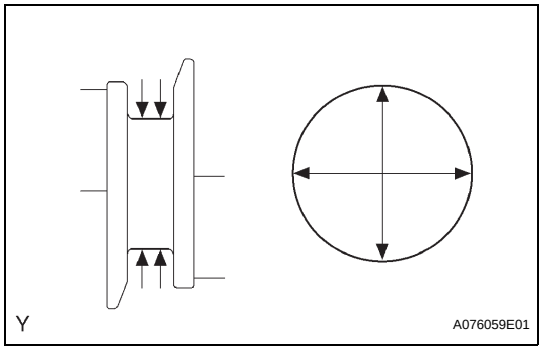
If the diameter is less than the minimum, replace the bolt.

EM



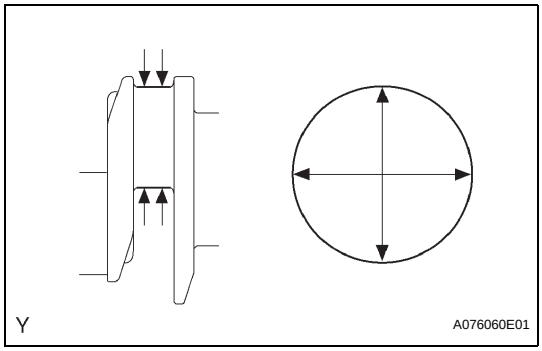
40. INSPECT CRANKSHAFT

(a) Using a dial indicator and V-blocks, measure the runout as shown in the illustration.
Maximum circle runout:
0.06 mm (0.0024 in.)



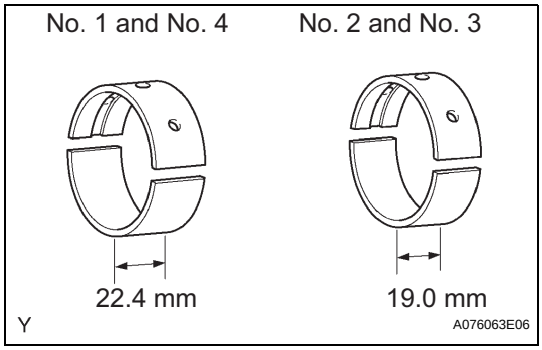
(b) Using a micrometer, measure the diameter of each main journal.
Diameter:
71.988 to 72.000 mm (2.8342 to 2.8346 in.)

(c) Check each main journal for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



(d) Using a micrometer, measure the diameter of each crank pin.
Diameter:
55.992 to 56.000 mm (2.2044 to 2.2047 in.)

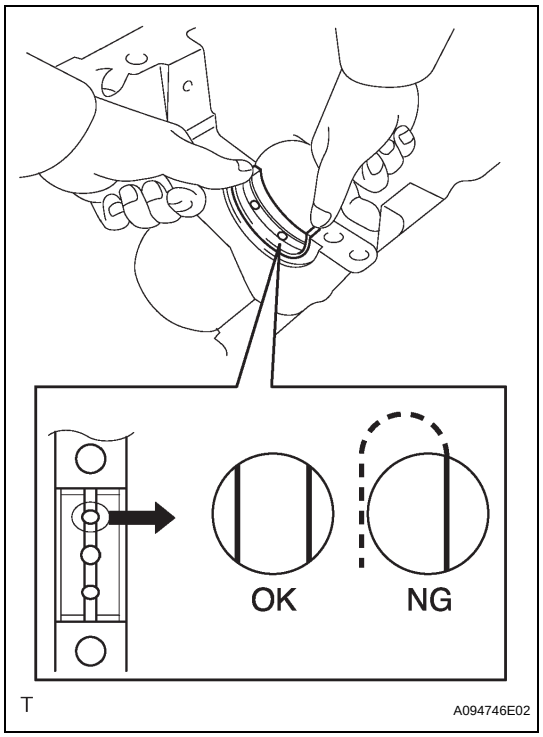
(e) Check each crank pin for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



41. INSPECT CRANKSHAFT OIL CLEARANCE

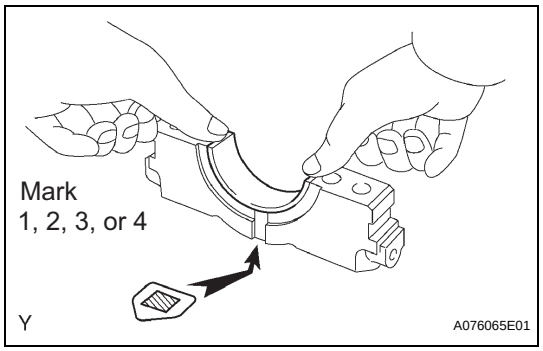
HINT:
There are 2 types of main bearings with different widths (19.0 mm (0.748 in.) and 22.4 mm (0.882 in.)) for use in the inspection. Install the 22.4mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

(a) Clean each main journal and bearing.



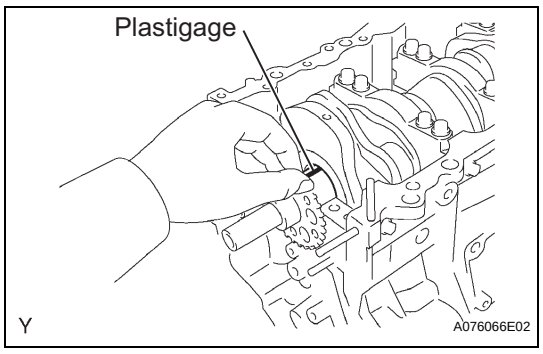
(b) Install the 4 upper bearings.
(1) Install the upper bearing near the center of the cylinder block.
NOTICE:
- **The width of the No. 1 and No. 4 journal bearings is different from that of the No. 2 and No. 3 journal bearings. Therefore, confirm whether it is the correct journal bearing prior to installation.**
- **Do not apply engine oil to the bearing installation surfaces of the cylinder block and the back side of the bearings.**
- **Check that the oil groove on the cylinder block can be seen through the oil supply holes of the upper bearing.**

EM

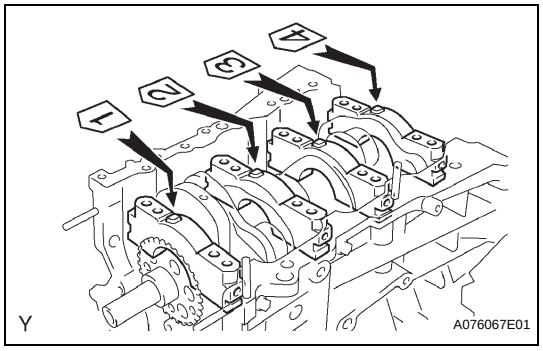


(c) Install the 4 lower bearings.
(1) Install the lower bearing near the center of the cylinder block.
NOTICE:
Do not apply engine oil to the bearing and its contact surface.
HINT:
A number marked on each main bearing cap indicates the installation position.

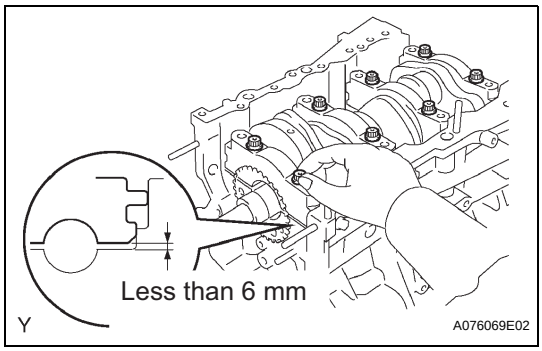
(d) Place the crankshaft on the cylinder block.



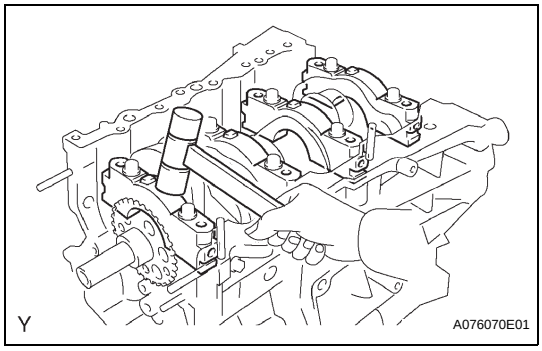
(e) Lay a strip of plastigage across each journal.



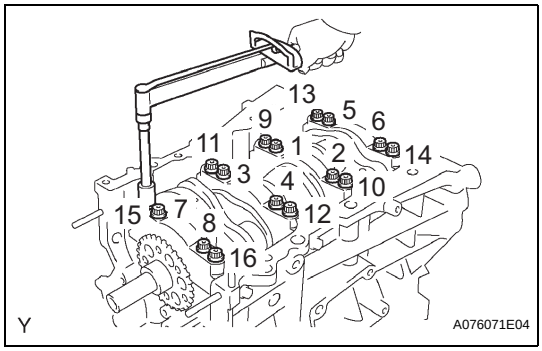
(f) Examine the front marks and numbers, check the sequence order is as shown and install the bearing caps onto the cylinder block.
(g) Apply a light coat of engine oil to the threads of bearing cap bolts.
(h) Temporarily install the 8 main bearing cap bolts in the inside positions.



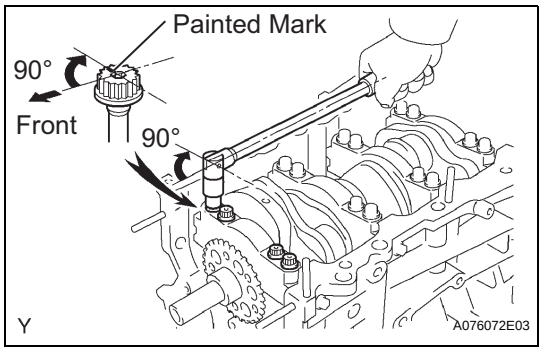
(i) Install the main bearing caps. Tighten the 2 bolts for each bearing cap until the clearance between the bearing cap and the cylinder block is under 6 mm (0.23 in.).



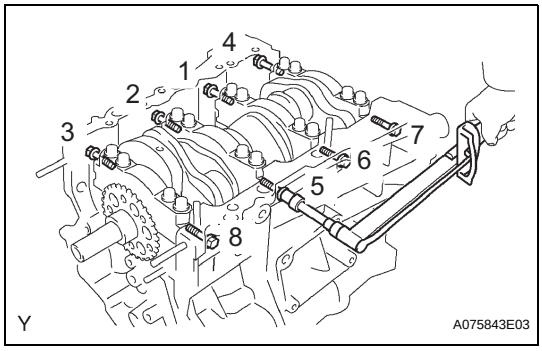
(j) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(k) Apply a light coat of engine oil to the threads of main bearing cap bolts.



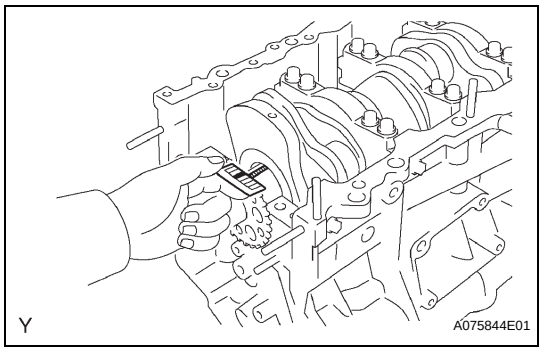
(l) Install the 16 main bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)



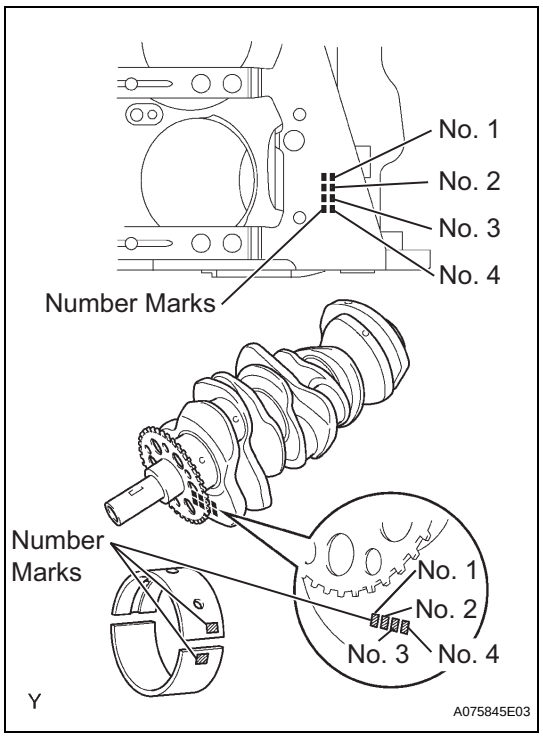
(m) Mark the front side of the bearing cap bolts with paint.
(n) Retighten the bearing cap bolts 90° in the sequence as shown.
(o) Check that the painted mark is now at a 90° angle from the front.
NOTICE:
Do not turn the crankshaft.



(p) Install the 8 main bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
(q) Remove the main bearing caps.



(r) Measure the Plastigage at its widest point.
Standard oil clearance:
0.018 to 0.030 mm (0.0007 to 0.0012 in.)
Maximum clearance:
0.046 mm (0.0018 in.)
If the oil clearance is greater than the maximum, replace the bearings. If necessary, replace the crankshaft.
NOTICE:
Completely remove the plastigage.



(s) Replace the bearing with the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 size of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.
Journal bearing

Cylinder block (A) + Crankshaft	0 -5	6 -11	12 -17	18 - 23	24 - 28
Use Bearing	"1"	"2"	"3"	"4"	"5"

HINT:
EXAMPLE
Cylinder block "11" (A) + Crankshaft "06" (B)
=Total number 17 (Use bearing "3")

Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	"00"	77.000 (3.0315)
	"01"	77.001 (3.0315)

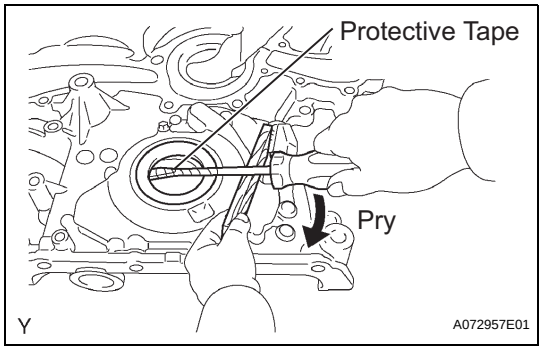
	"4"	2.497 to 2.500 (0.0982 to 0.0984)
	"5"	2.500 to 2.503 (0.0984 to 0.0985)

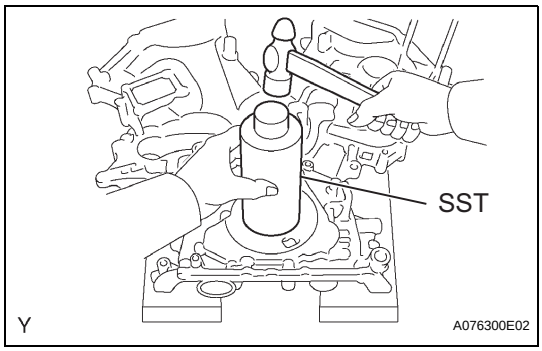
EM



REPLACEMENT

1. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

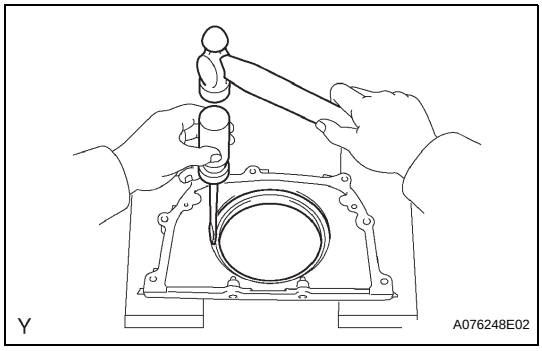
(a) Using a screwdriver, pry out the oil seal.
NOTICE:
Be careful not to damage the oil pump assembly. Wrap a tip of the screwdriver with tape.



2. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09226-10010

(b) Apply MP grease to the oil seal lip.

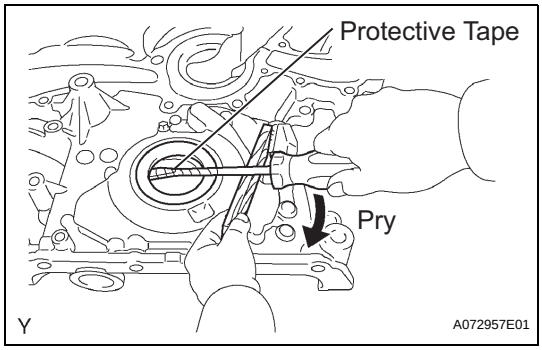


3. REMOVE REAR ENGINE OIL SEAL

(a) Using a screwdriver and hammer, tap the oil seal out.

Item	Mark	mm (in.)
Crankshaft main journal diameter (B)	"00"	71.999 to 72.000 (2.8346 to 2.8346)
	"01"	71.998 to 71.999 (2.8346 to 2.8346)
	"02"	71.997 to 71.998 (2.8345 to 2.8346)
	"03"	71.996 to 71.997 (2.8345 to 2.8346)
	"04"	71.995 to 71.996 (2.8344 to 2.8345)
	"05"	71.994 to 71.995 (2.8344 to 2.8344)
	"06"	71.993 to 71.994 (2.8343 to 2.8344)
	"07"	71.992 to 71.993 (2.8343 to 2.8343)
	"08"	71.991 to 71.992 (2.8343 to 2.8343)
	"09"	71.990 to 71.991 (2.8343 to 2.8343)
	"10"	71.989 to 71.990 (2.8342 to 2.8343)
	"11"	71.988 to 71.989 (2.8342 to 2.8342)
Standard bearing center wall thickness	"1"	2.488 to 2.491 (0.0980 to 0.0981)
	"2"	2.491 to 2.494 (0.0981 to 0.0982)
	"3"	2.494 to 2.497 (0.0982 to 0.0983)
	"4"	2.497 to 2.500 (0.0982 to 0.0984)
	"5"	2.500 to 2.503 (0.0984 to 0.0985)

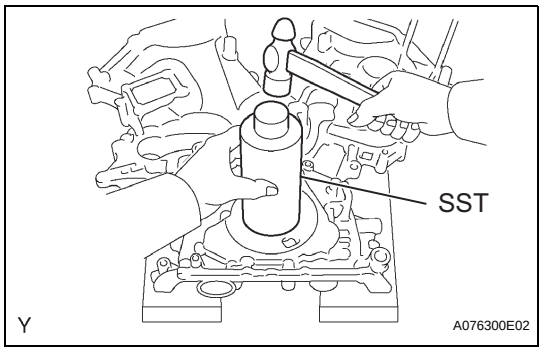
EM



REPLACEMENT

1. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

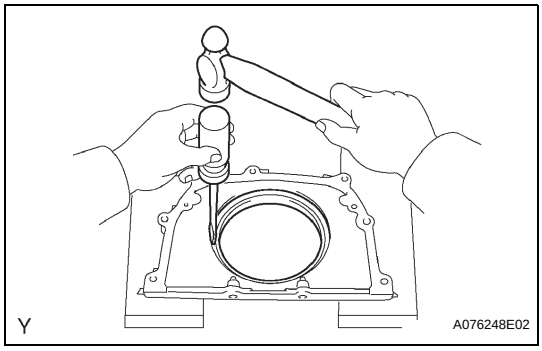
(a) Using a screwdriver, pry out the oil seal.
NOTICE:
Be careful not to damage the oil pump assembly. Wrap a tip of the screwdriver with tape.



2. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

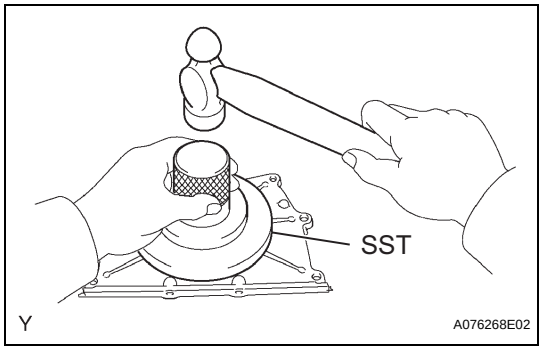
(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09226-10010

(b) Apply MP grease to the oil seal lip.



3. REMOVE REAR ENGINE OIL SEAL

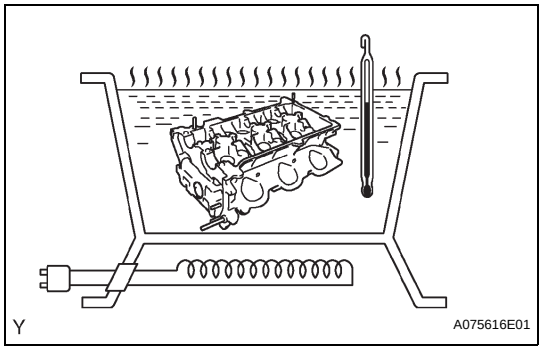
(a) Using a screwdriver and hammer, tap the oil seal out.



4. INSTALL REAR ENGINE OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-78010

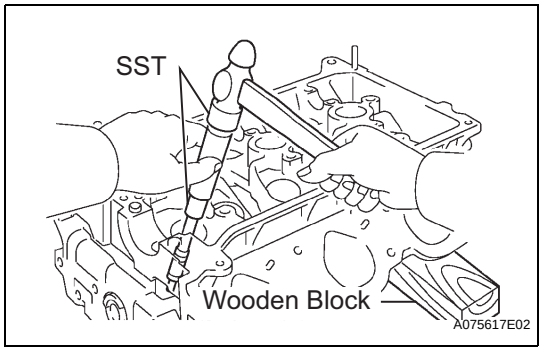
(b) Apply MP grease to the oil seal lip.



5. REMOVE VALVE GUIDE BUSH

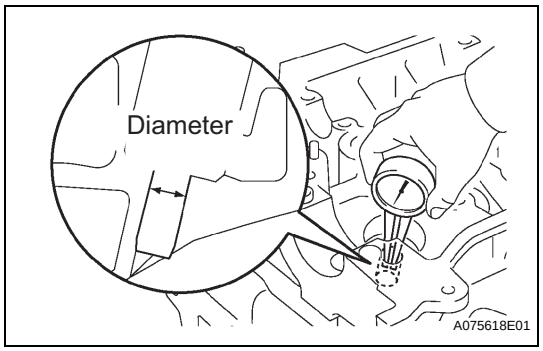
(a) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

EM



(b) Place the cylinder head on a wooden block.

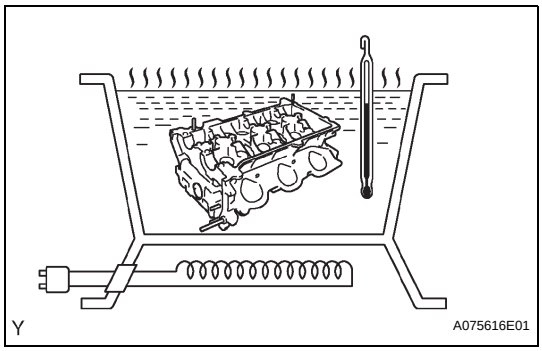
(c) Using SST, tap out the valve guide bush.
SST 09201-10000, 09201-01055, 09950-70010 (09951-07100)



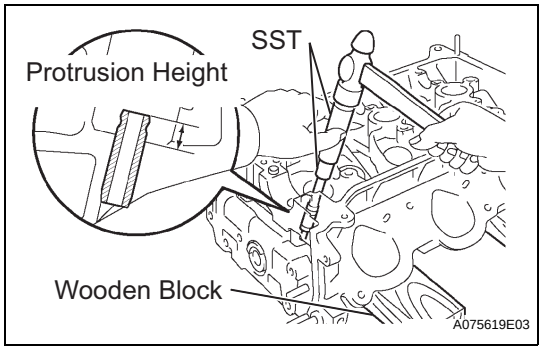
6. INSTALL VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Bush bore diameter:
10.295 to 10.315 mm (0.4053 to 0.4061 in.)
If the bush bore diameter of the cylinder head is greater than 10.315 mm (0.4061 in.), machine the bush bore to the dimension of 10.345 to 10.365 mm (0.4073 to 0.4081 in.).
Valve guide bush diameter

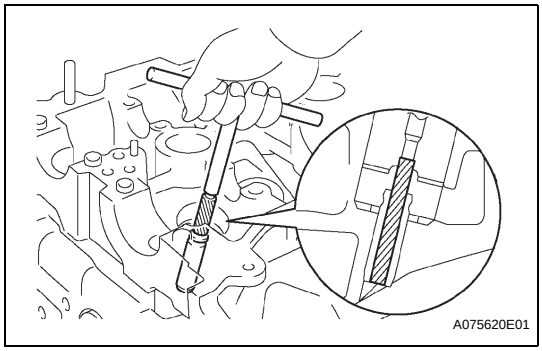
STD	**10.333 to 10.344 mm (0.4068 to 0.4072 in.)**
O/S 0.05	**10.383 to 10.394 mm (0.4088 to 0.4092 in.)**



(b) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

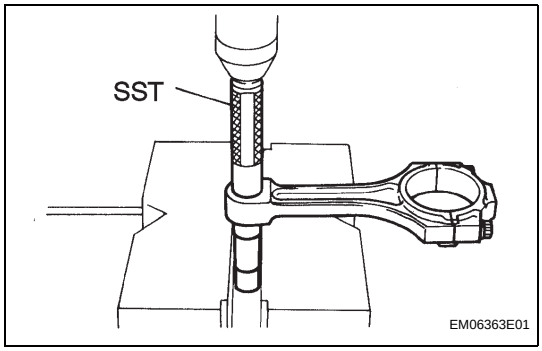


(c) Place the cylinder head on a wooden block.
(d) Using SST, tap in a new valve guide bush to the specified protrusion height.
SST 09201-10000, 09201-01055, 09950-70010 (09951-07100)
Protrusion height:
9.3 to 9.7 mm (0.366 to 0.382 in.)

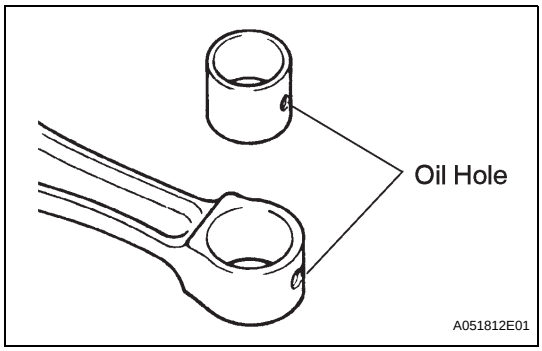


(e) Using a sharp 5.5 mm reamer, ream the valve guide bush to the standard specified clearance between the valve guide bush and valve stem.
Standard oil clearance:

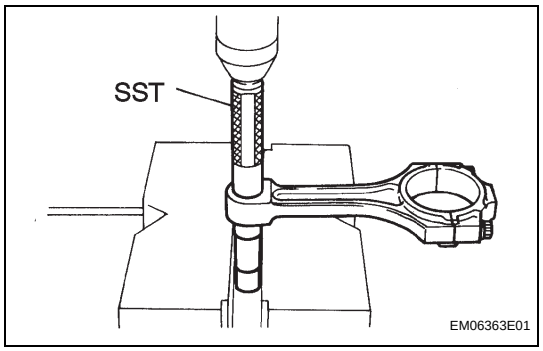
Intake	**0.025 to 0.060 mm (0.0010 to 0.0024 in.)**
Exhaust	**0.030 to 0.065 mm (0.0012 to 0.0026 in.)**



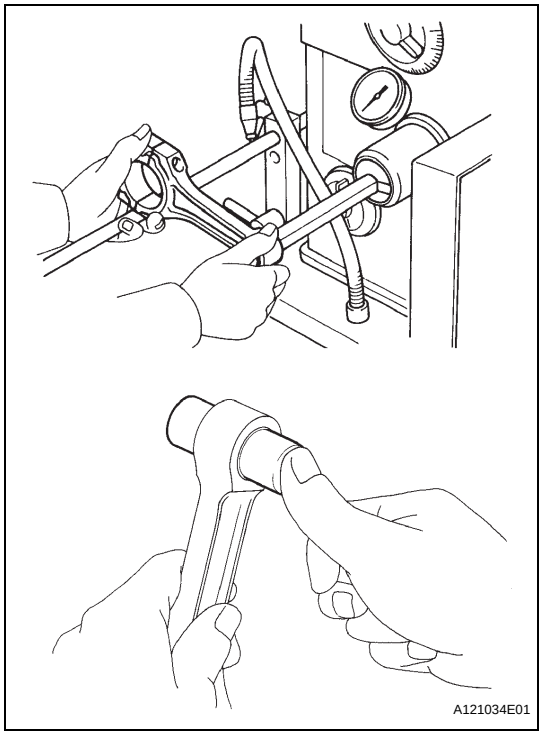
7. REMOVE CONNECTING ROD SMALL END BUSH
(a) Using SST and a press, press out the bushing.
SST 09222-30010



8. INSTALL CONNECTING ROD SMALL END BUSH
(a) Align the oil holes of a new bushing and the connecting rod.



(b) Using SST and a press, press in the bushing.
SST 09222-30010



(c) Using a pin hole grinder, hone the bushing to the standard specified clearance between the bushing and piston pin.
Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
HINT:
Check the measurement at room temperature. Coat the piston pin with engine oil, and push it into the connecting rod with a thumb.

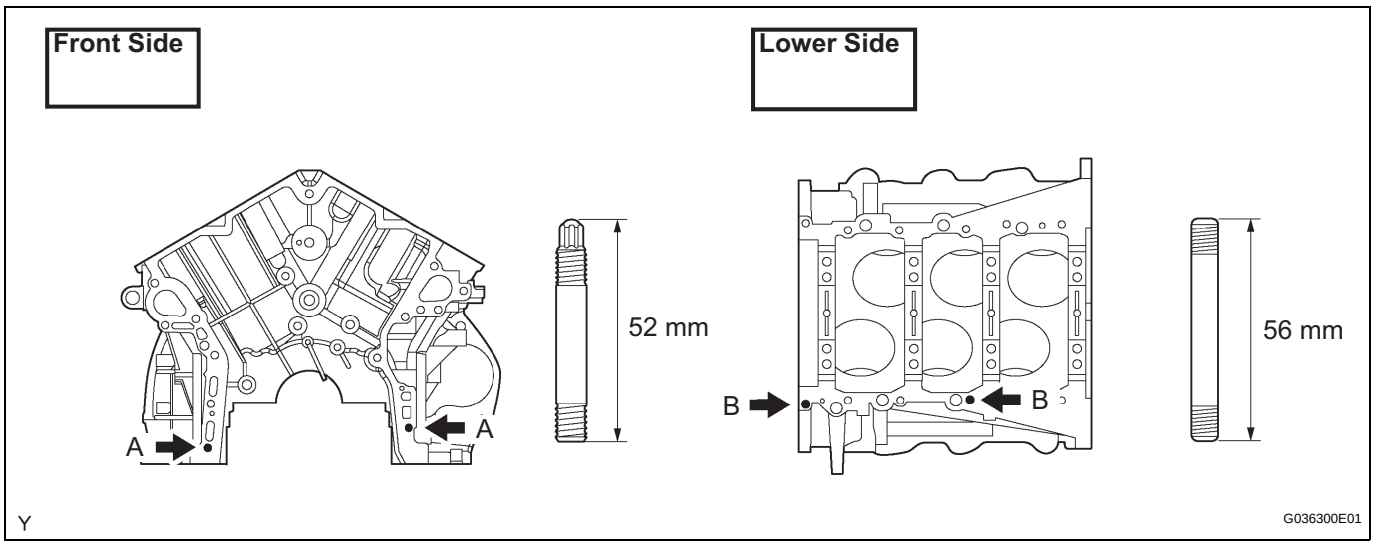
EM

REASSEMBLY

1. INSTALL STUD BOLT

(a) Install the stud bolts as shown in the illustration.

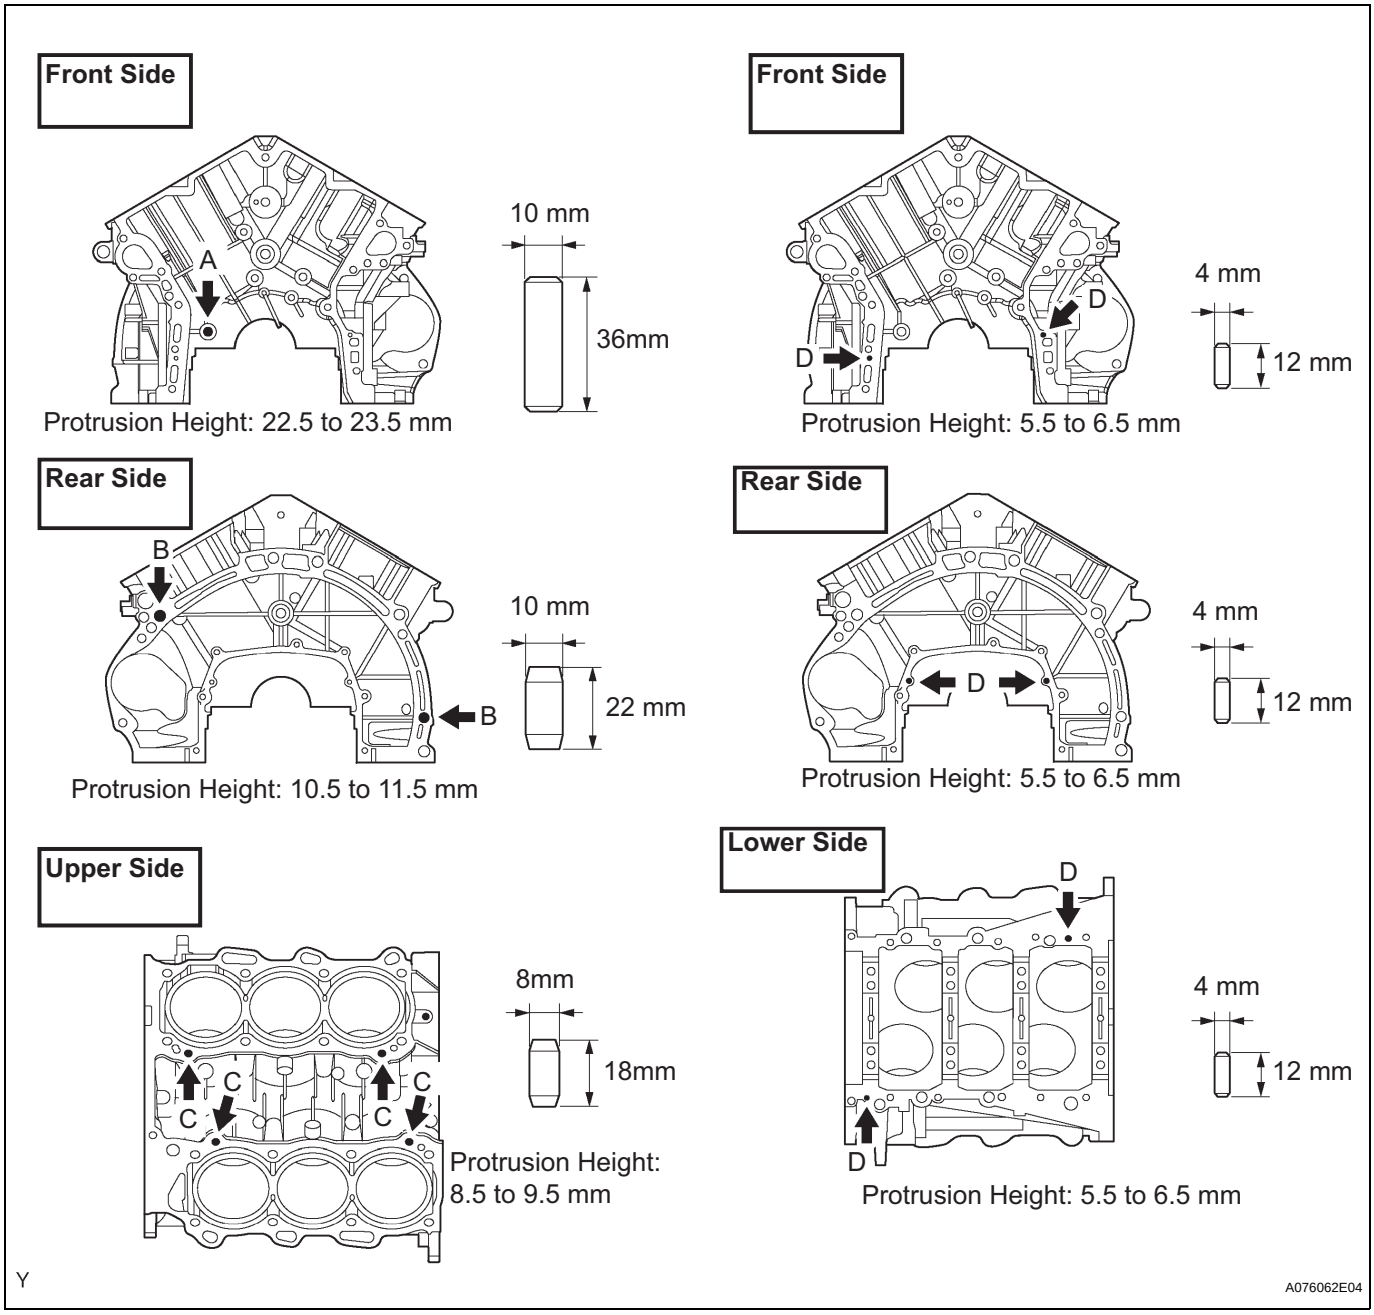
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf) for stud bolt A
4.5 N*m (46 kgf*cm, 40 in.*lbf) for stud bolt B



2. INSTALL STRAIGHT PIN

(a) Using a plastic-faced hammer, tap into the new straight pin.

Standard protrusion:
Pin A 22.5 to 23.5 mm (0.886 to 0.925 in.)
Pin B 10.5 to 11.5 mm (0.413 to 0.453 in.)
Pin C 8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin D 5.5 to 6.5 mm (0.217 to 0.256 in.)



3. INSTALL TIGHT PLUG

(a) Apply adhesive around tight plugs.

Adhesive:

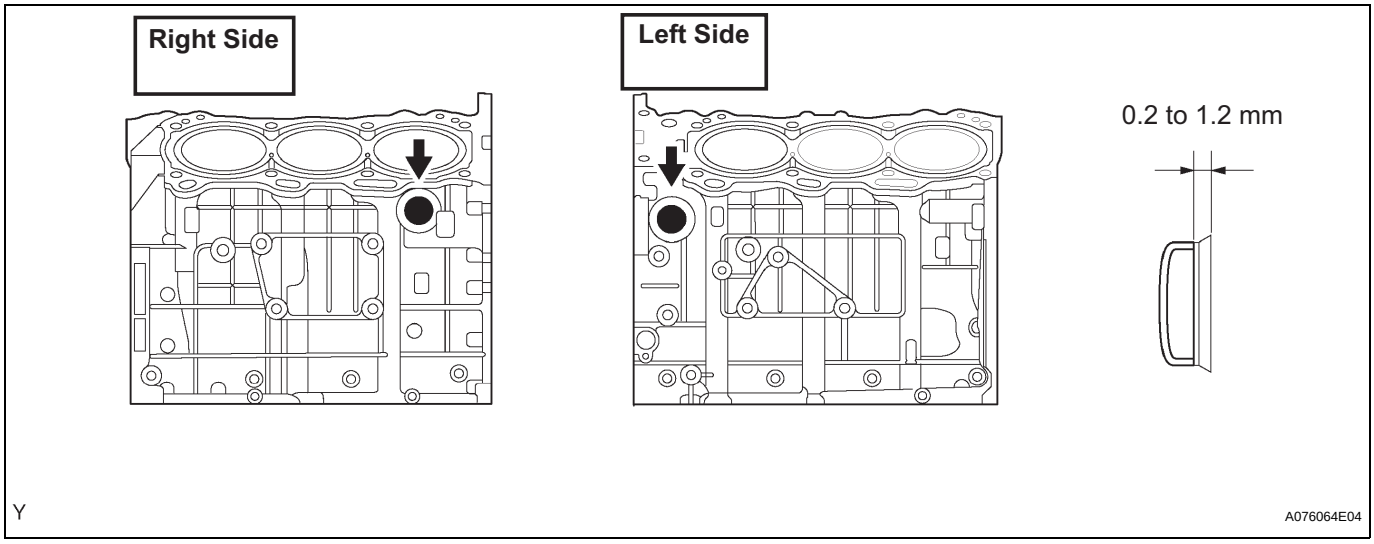
part No. 08833-00070, THREE BOND 1324 or equivalent.

(b) Using SST, install the tight plugs as shown in the illustration.

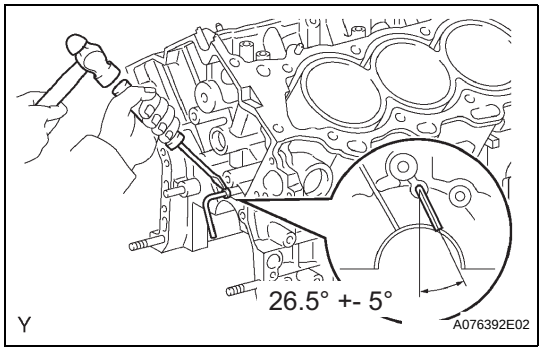
SST 09550-60010 (09951-00350), 09950-70010 (09951-07150)

Standard depth:

0.2 to 1.2 mm (0.008 to 0.047 in.)

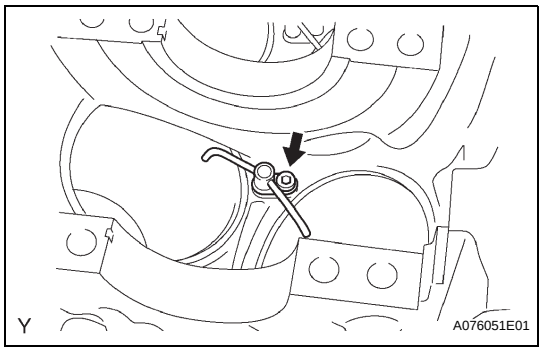


EM



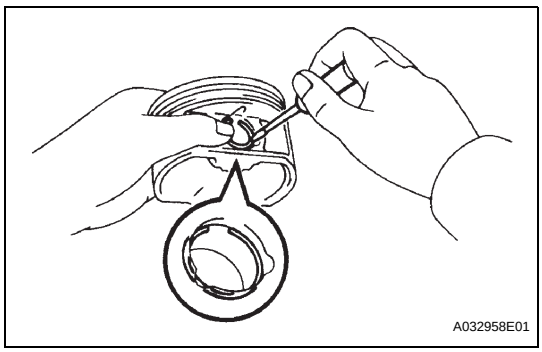
4. INSTALL OIL JET

(a) Using a screw driver and hammer, tap in a oil jet.



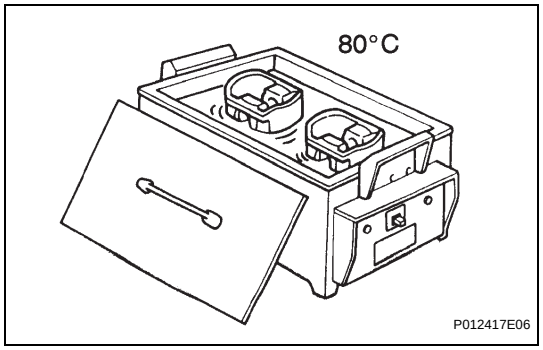
5. INSTALL NO.1 SUB-ASSEMBLY OIL NOZZLE

(a) Using a 5 mm socket hexagon wrench, install the 3 oil nozzles.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



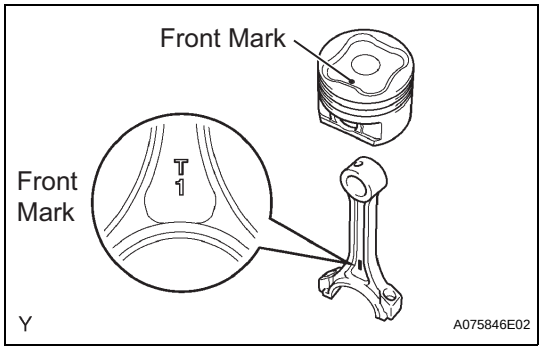
6. INSTALL HOLE SNAP RING

(a) Using a small screwdriver, install a new snap ring onto one side of the piston pin hole.
HINT:
Check that an end gap of the snap ring is not overlapped with the pin hole cutout portion of the piston.



7. INSTALL WITH PIN PISTON SUB-ASSEMBLY

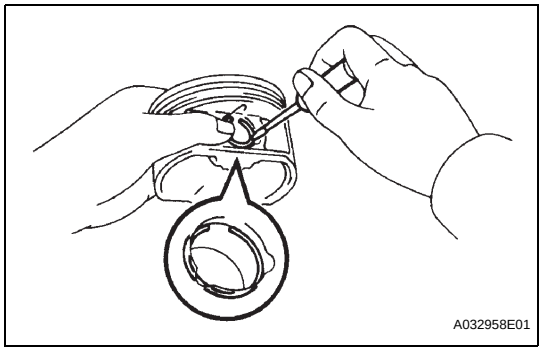
(a) Gradually heat the piston to about 80°C (176°F).



(b) Coat the piston pin with engine oil.

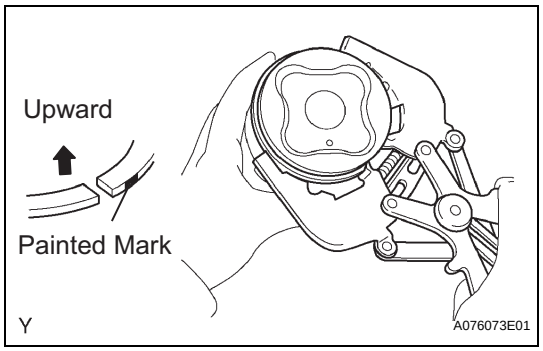
(c) Align the front marks of the piston and connecting rod, and push in the piston pin with thumb.

EM



8. INSTALL HOLE SNAP RING

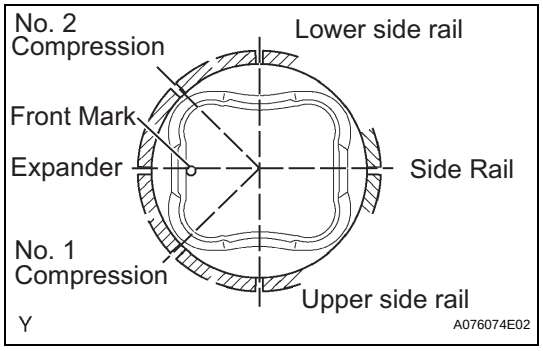
(a) Using a small screwdriver, install a new snap ring onto the other side of the piston pin hole.
HINT:
Make sure that the gap in the snap ring does not overlap with the pin hole cutout portion of the piston.



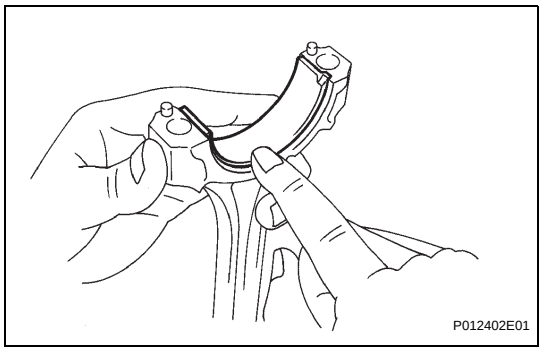
9. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.

(b) Using a piston ring expander, install the 2 compression rings.
NOTICE:
Mark Install the compression ring No. 2 with the painted mark facing upward.



(c) Position the piston rings so that the ring ends are as shown.

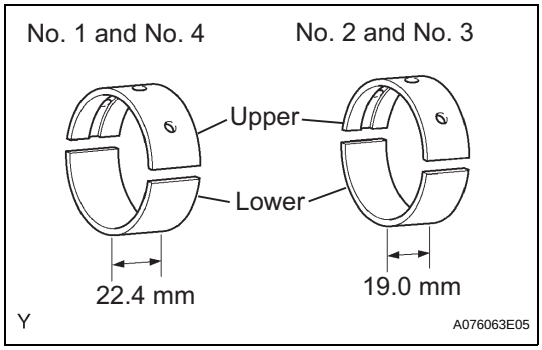


10. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.

NOTICE:

Clean the back side of the bearing and the bearing surface of the connecting rod and keep them free of oils and fats.

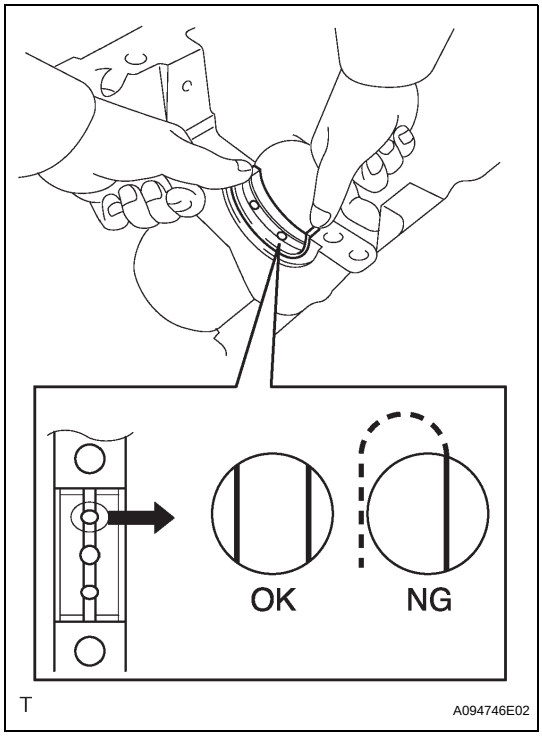


11. INSTALL CRANKSHAFT BEARING

HINT:

There are 2 types of main bearings with different widths (19.0 mm (0.748 in.) and 22.4 mm (0.882 in.)) for use in the inspection. Install the 22.4mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

(a) Clean each main journal and bearing.

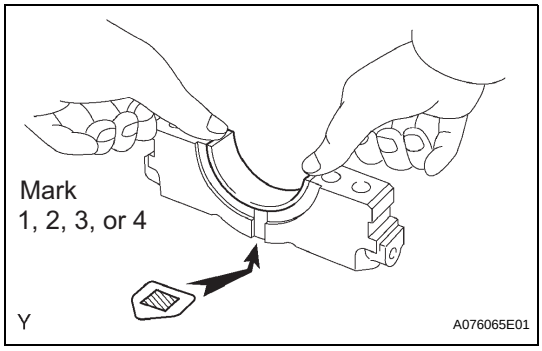


(b) Install the 4 upper bearings.

(1) Install the upper bearings near the center of the cylinder block.

NOTICE:

- **The width of the No. 1 and No. 4 journal bearings is different from that of the No. 2 and No. 3 journal bearings. Therefore, confirm whether it is the correct journal bearing prior to installation.**
- **Do not apply engine oil to the bearing installation surfaces of the cylinder block and the back side of the bearings.**
- **Check that the oil groove on the cylinder block can be seen through the oil supply holes of the upper bearing.**



(c) Install the 4 lower bearings.

(1) Install the lower bearings near the center of the cylinder block.

NOTICE:

Do not apply engine oil to the bearing and its contact surface.

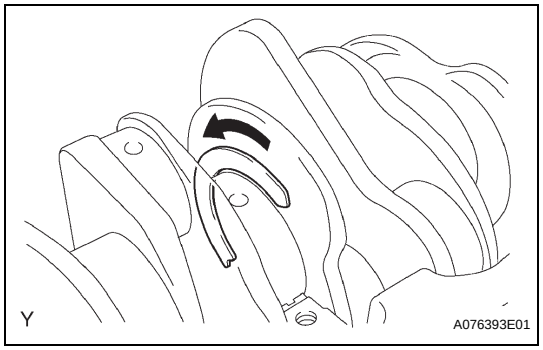
HINT:

A number marked on each main bearing cap indicates the installation position.

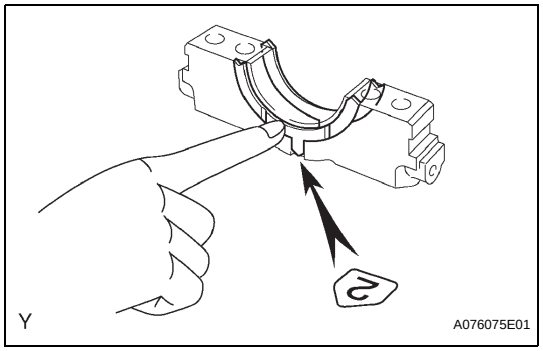
12. INSTALL CRANKSHAFT

(a) Apply engine oil to the upper bearing and install the crankshaft onto the cylinder block.

(b) Install the 2 upper thrust washers onto the No. 2 journal position of the cylinder block.
   (1) Push the crankshaft toward the front (rear) side.
   (2) Install the 2 upper thrust washers with the oil grooves facing outward.



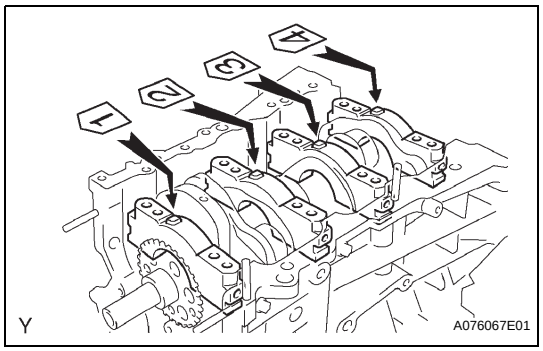
(c) Install the 2 lower thrust washers onto the No. 2 bearing cap with the grooves facing outward.



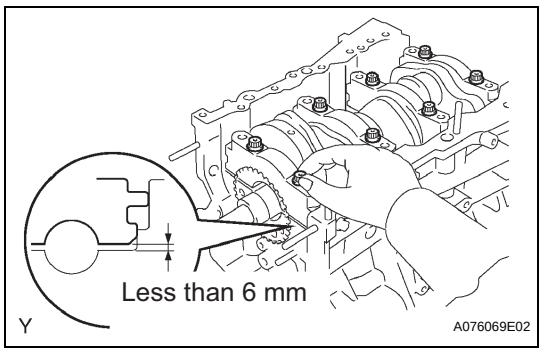
(d) Examine the front marks and numbers, check the sequence number is as shown in the illustration and install the bearing caps on the cylinder block.

(e) Apply a light coat of engine oil to the threads of bearing cap bolts.

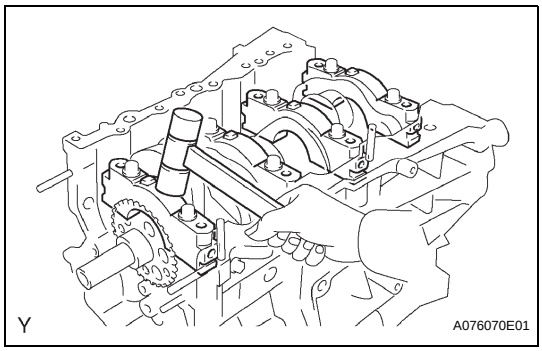
(f) Temporarily install the 8 main bearing cap bolts in the inside positions.



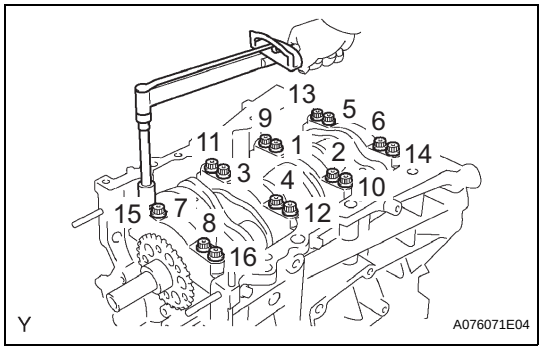
(g) Install the main bearing caps. Tighten the 2 bolts for each bearing cap until the clearance between the bearing cap and the cylinder block is under 6 mm (0.23 in.).



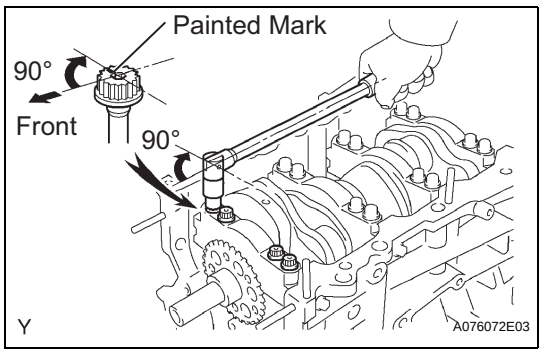
EM



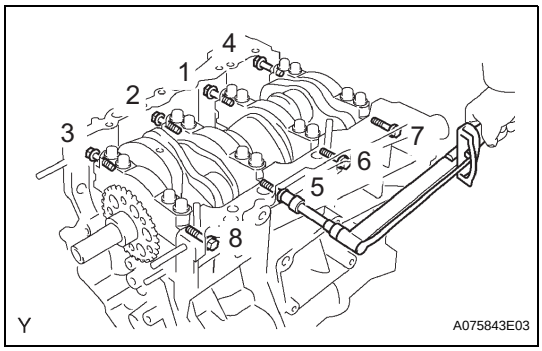
(h) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(i) Apply a light coat of engine oil to the threads of main bearing cap bolts.



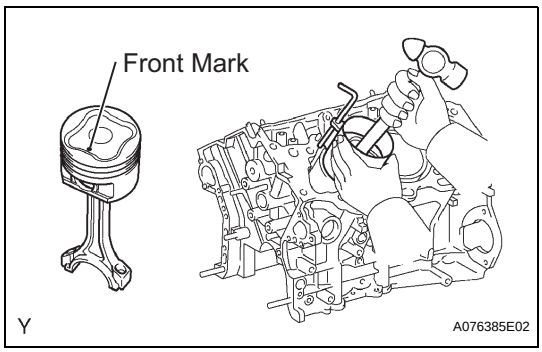
(j) Install the 16 main bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)



(k) Mark the front side of the bearing cap bolts with paint.
(l) Retighten the bearing cap bolts 90° in the sequence as shown.
(m) Check that the painted mark is now at a 90° angle from the front.
(n) Check that the crankshaft turns smoothly.



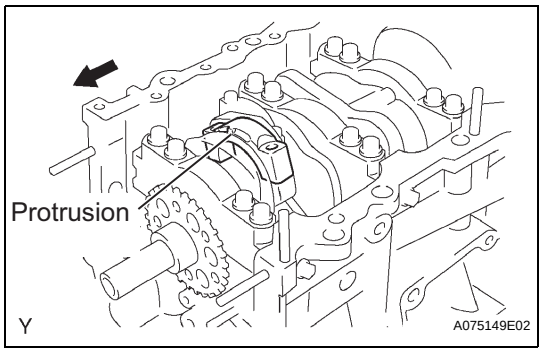
(o) Using several steps, tighten the 8 main bearing cap bolts uniformly in the sequence shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



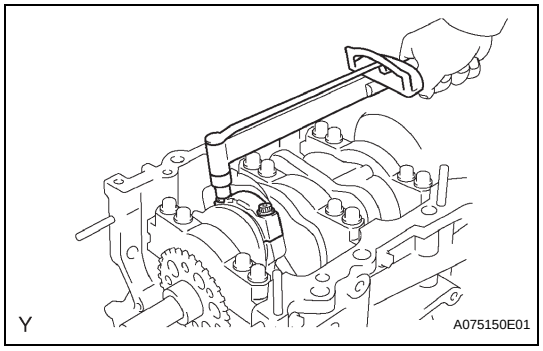
13. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTIONG ROD

(a) Apply engine oil to the cylinder walls, pistons, and surfaces of connecting rod bearings.
(b) Check the position of the piston ring ends.

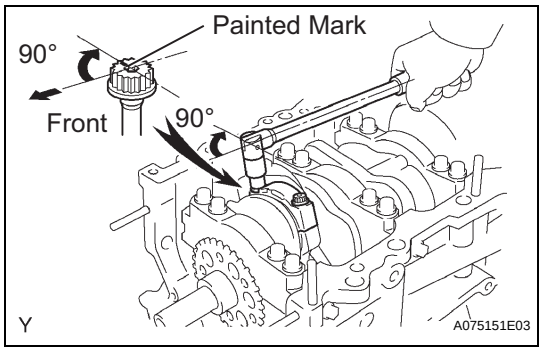
(c) Using a piston ring compressor, push the correct number piston and connecting rod into each cylinder with the front mark of the piston facing forward.
NOTICE:
- **Clean the back side of the bearing and the bearing surface of the connecting rod cap and keep them free of oils and fats.**
- **Match the numbered connecting rod cap with the connecting rod.**



(d) Check that the protrusion of the connecting rod cap is facing in the correct direction.
(e) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



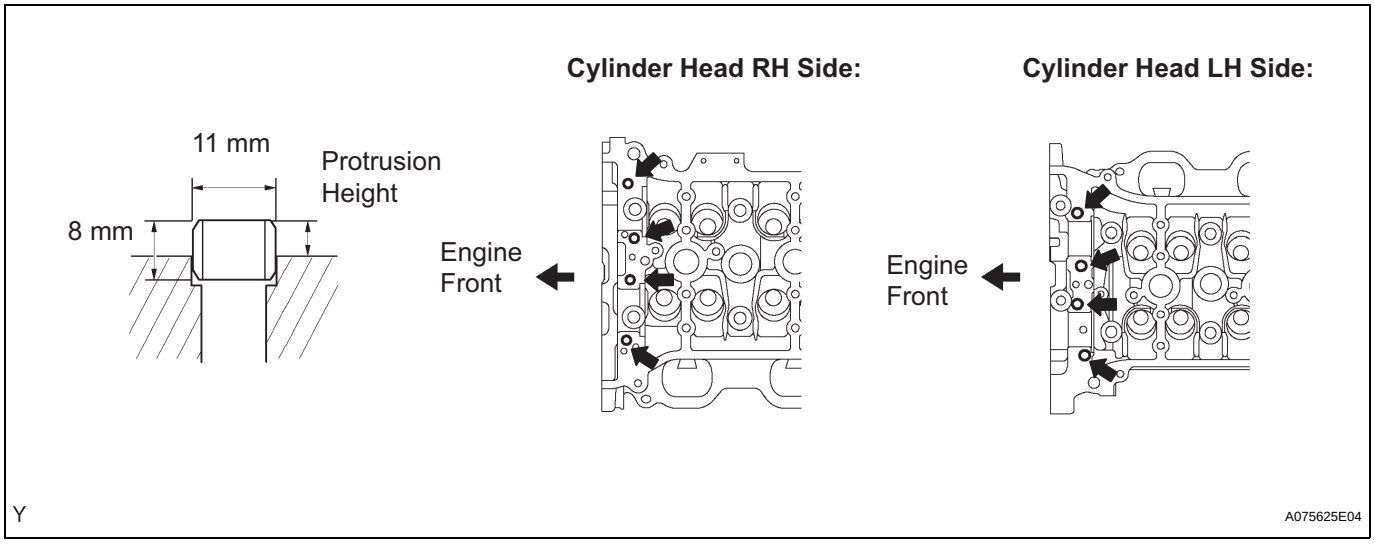
(f) Using SST, tighten the bolts alternately to the specified torque.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



(g) Mark the front side of the each connecting cap bolt with paint.
(h) Retighten the cap bolts 90° as shown.
(i) Check that the crankshaft turns smoothly.

14. INSTALL RING PIN

(a) Using a plastic-faced hammer, tap in the new ring pins to the specified protrusion height.
Specified protrusion height:
2.7 to 3.3 mm (0.106 to 0.130 in.)

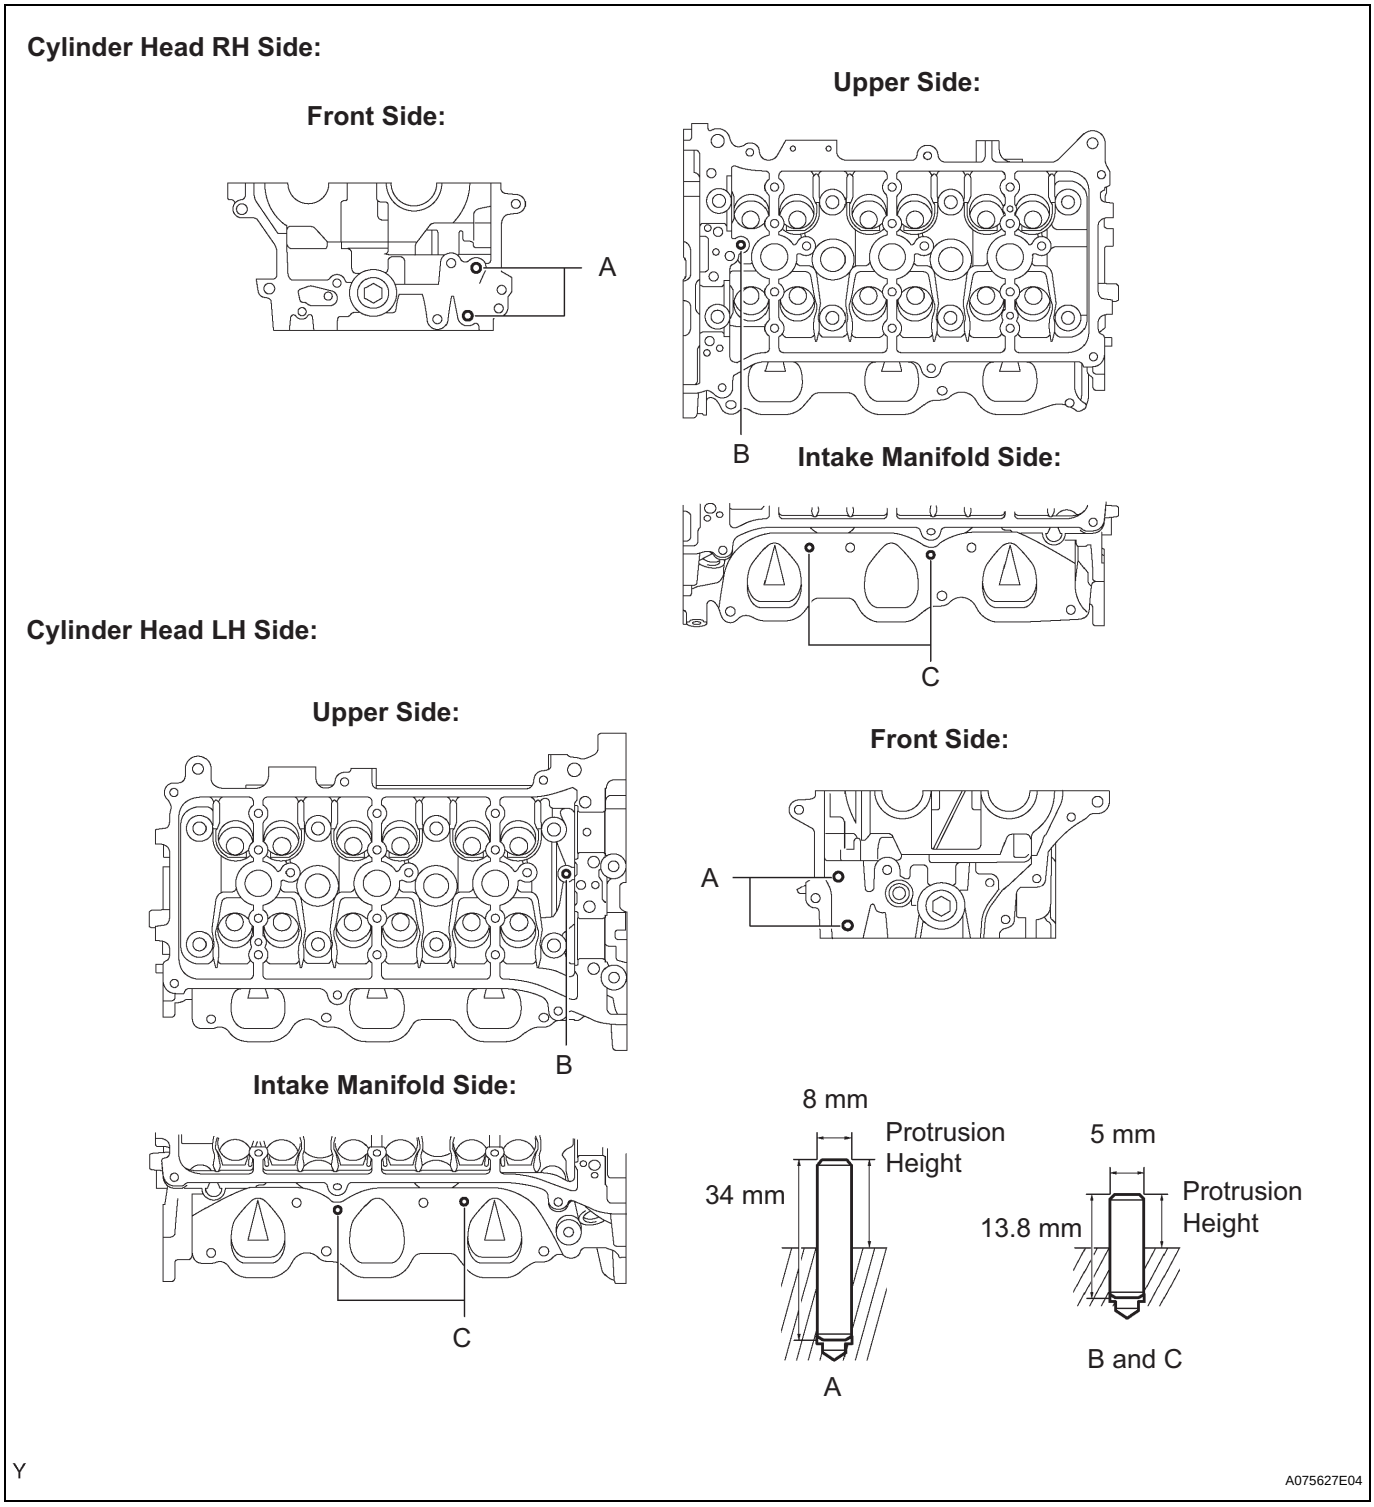


EM

15. INSTALL STRAIGHT PIN

(a) Using a plastic-faced hammer, tap in the new straight pins to the specified protrusion height.
Specified protrusion height

A	**17.5 to 19.5 mm (0.689 to 0.768 in.)**
B	**7.5 to 8.5 mm (0.295 to 0.335 in.)**
C	**7.0 to 9.0 mm (0.276 to 0.354 in.)**



EM

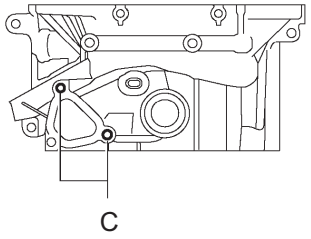
16. INSTALL STUD BOLT

(a) Using the torx socket wrenchs E5 and E7, install the stud bolts.

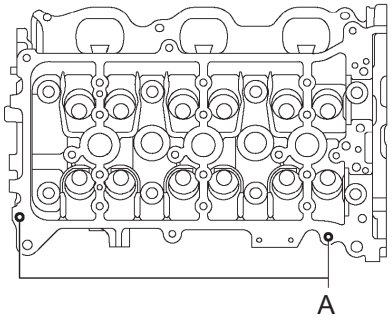
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf) for stud bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for stud bolt B
4.0 N*m (41 kgf*cm, 35 in.*lbf) for stud bolt C

Cylinder Head RH Side:

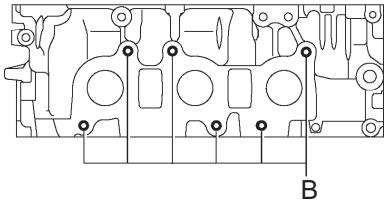
Rear Side:



Upper Side:

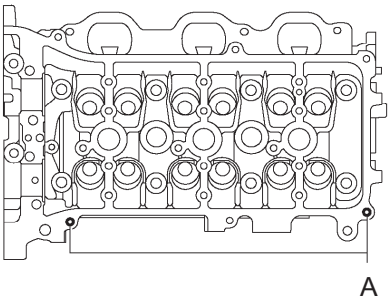


Exhaust Manifold Side:

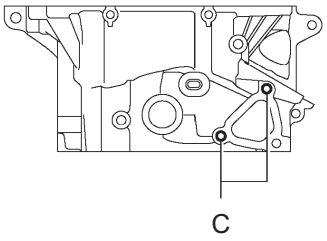


Cylinder Head LH Side:

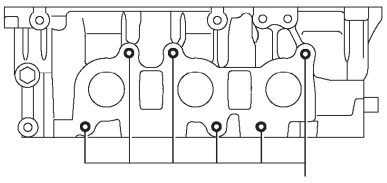
Upper Side:

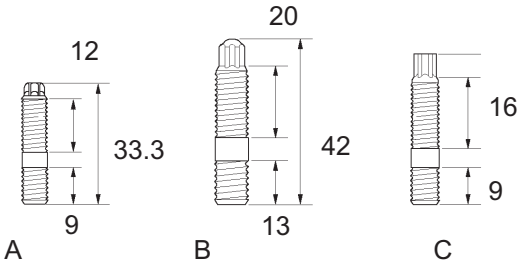


Rear Side:



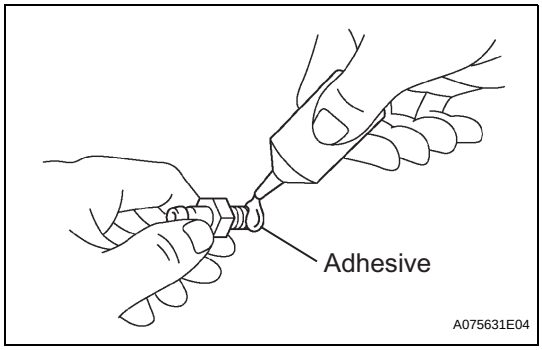
Exhaust Manifold Side:





Y

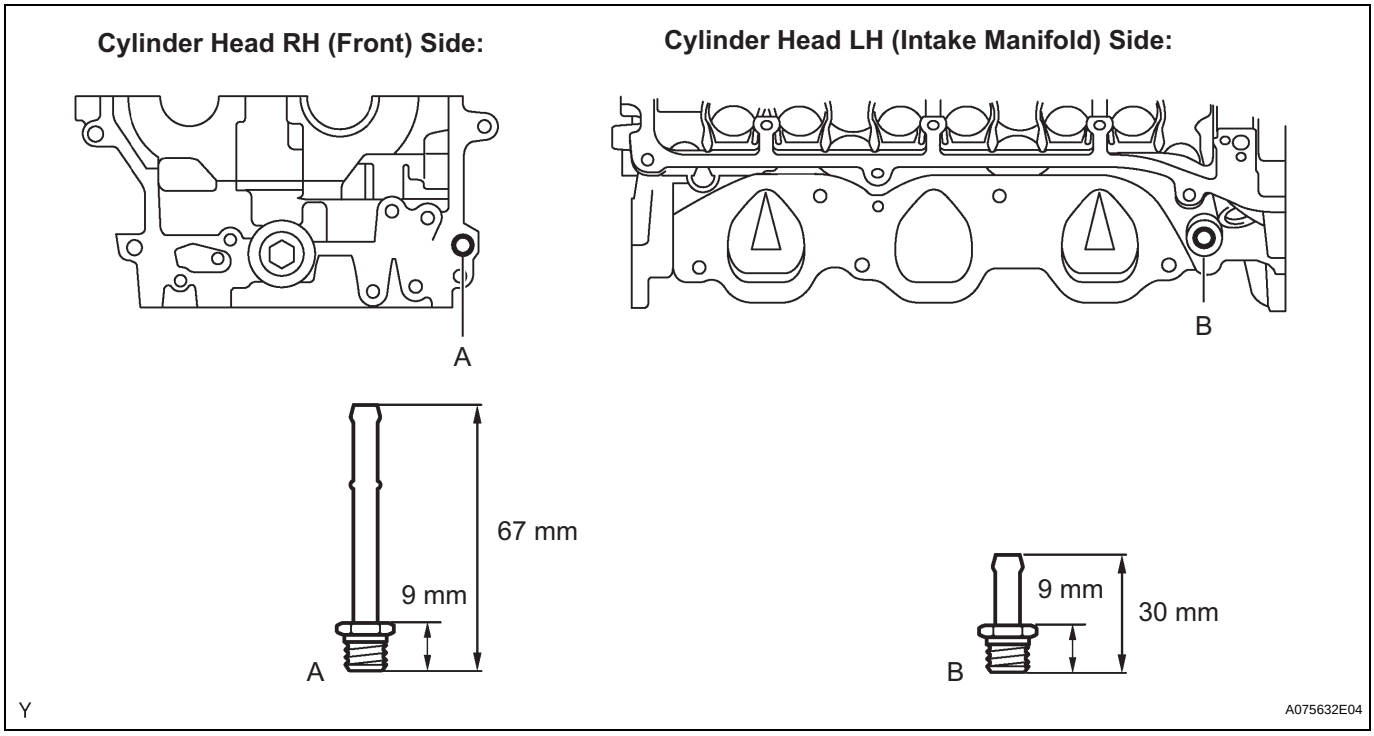
G036299E01

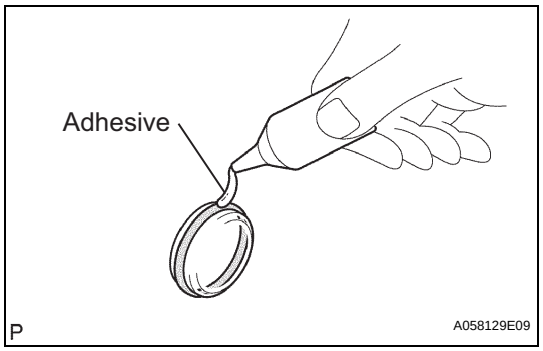


17. INSTALL UNION

(a) Apply adhesive to 2 or 3 threads of the bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(b) Using a deep socket wrench 12, install the unions.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)





18. INSTALL TIGHT PLUG

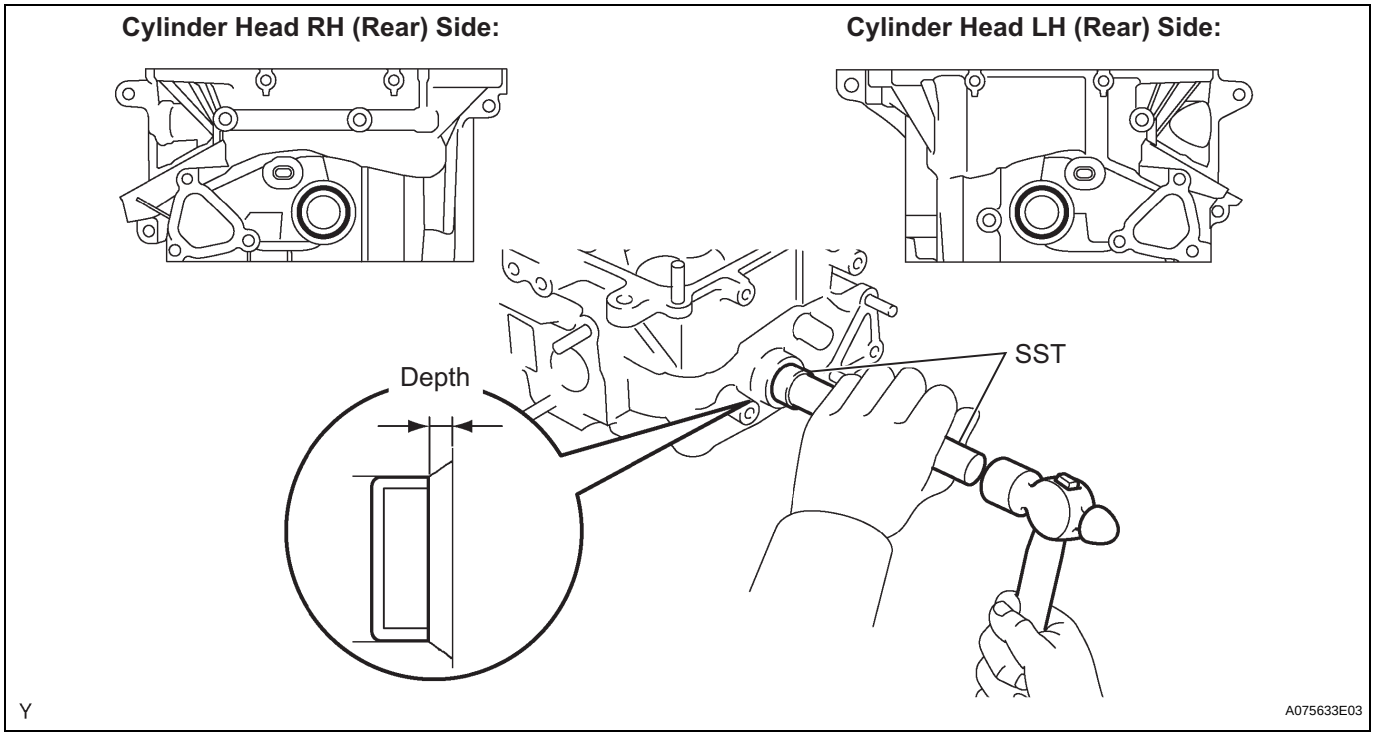
(a) Apply adhesive around the tight plug.

(b) Using SST, tap in the tight plugs to the specified depth.

SST 09950-60010 (09951-00250), 09950-70010 (09951-07150)

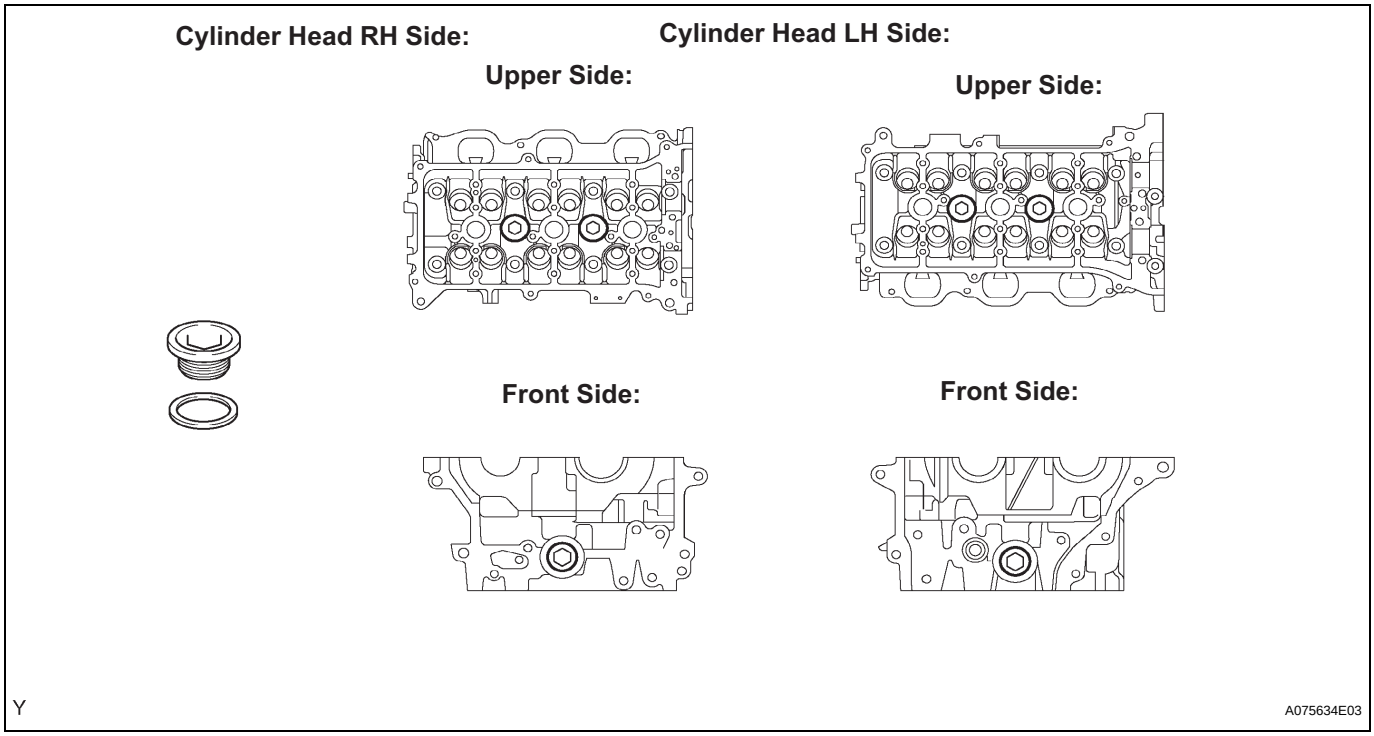
Specified depth:

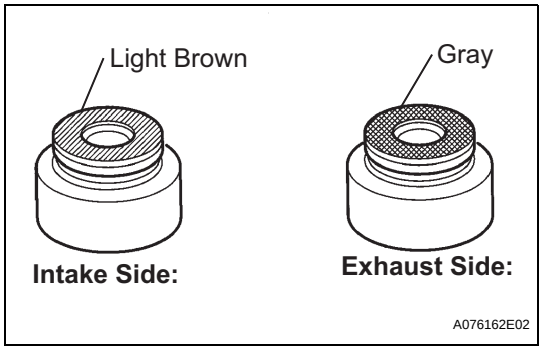
1.5 mm (0.059 in.)



19. INSTALL WITH HEAD STRAIGHT SCREW PLUG

(a) Using a straight hexagon wrench 14, install a new gasket and straight screw plug.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

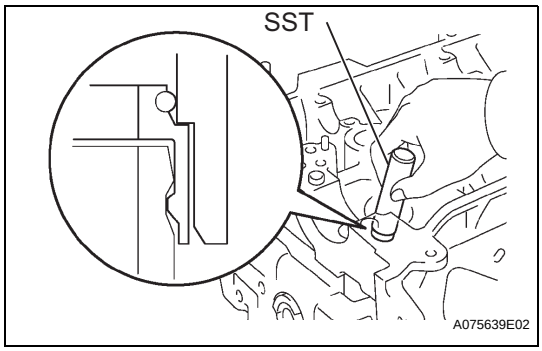




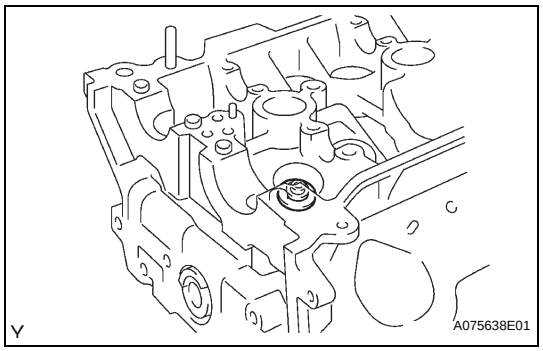
20. INSTALL VALVE STEM OIL O SEAL OR RING

HINT:
The intake valve stem oil seal is light brown and the exhaust valve stem oil seal is gray.

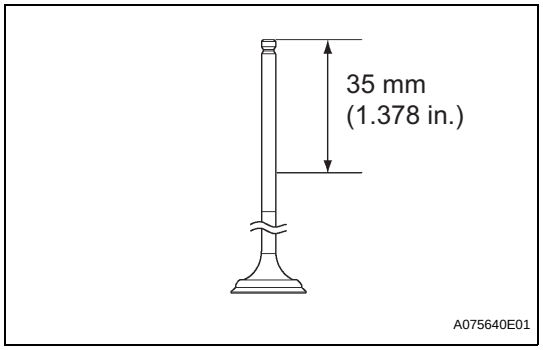
(a) Apply a light coat of engine oil to the valve guide bush.



(b) Using SST, push in a new valve stem oil seal.
SST 09201-41020

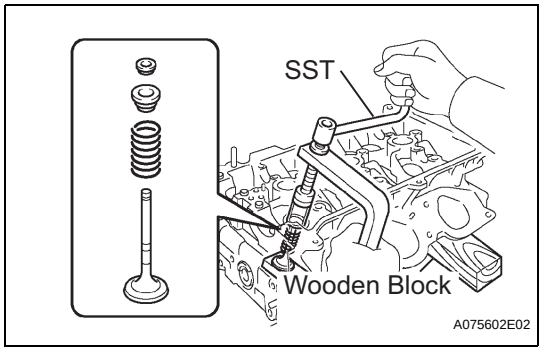


21. INSTALL VALVE SPRING SEAT

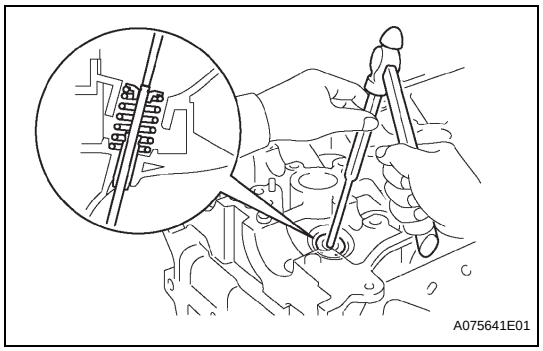


22. INSTALL VALVE

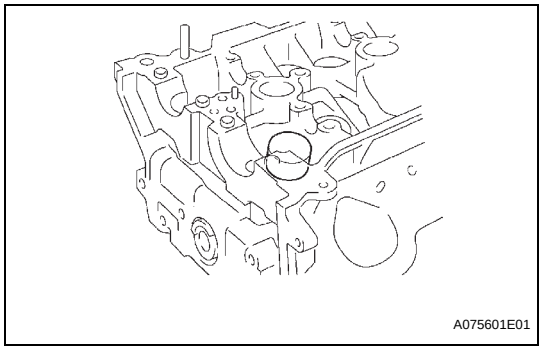
(a) Apply the engine oil to the valve as shown in the illustration.



(b) Place the cylinder head on a wooden block.
(c) Install the valve, inner compression spring and valve spring retainer.
(d) Using SST, compress the inner compression spring and place the 2 valve spring retainer rocks around the valve stem.
SST 09202-70020 (09202-00010)



(e) Using a pin punch 5, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.

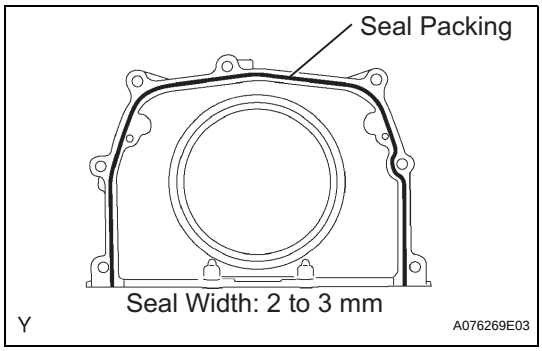


23. INSTALL VALVE LIFTER

(a) Apply the engine oil to the valve stem end and valve lifter, and install the valve lifter onto the valve stem.
(b) Check that the valve lifter rotates smoothly by hand.

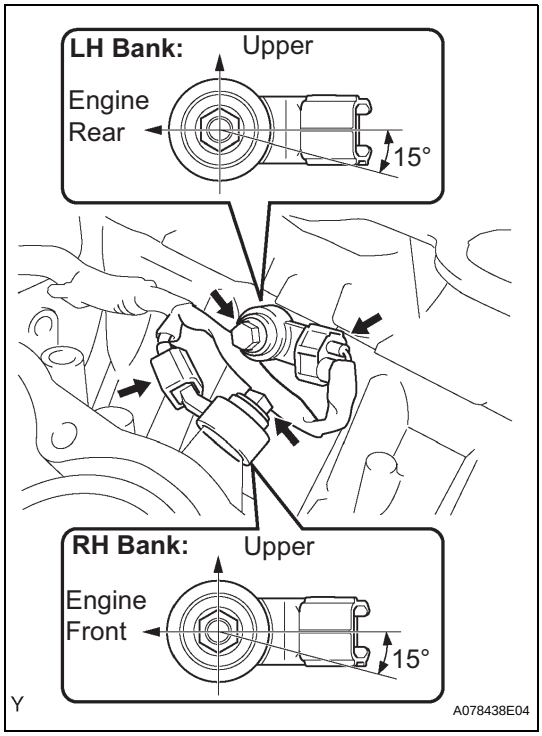
24. INSTALL REAR ENGINE OIL SEAL RETAINER

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the oil seal retainer and cylinder block.



(b) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the oil seal retainer as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Parts must be assembled within 3 minutes of application. Otherwise, the seal packing must be removed and reapplied.

(c) Install the oil seal retainer with the 5 bolts and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
10 N*m (102 kgf*cm, 7.4 ft.*lbf)

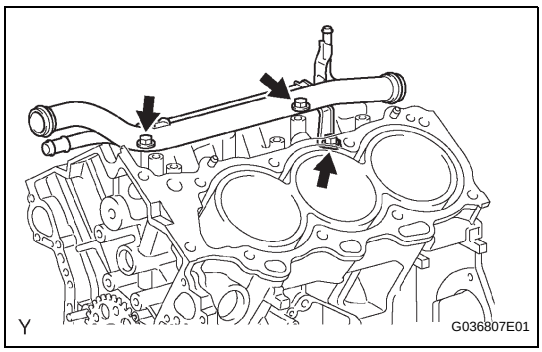


25. INSTALL KNOCK CONTROL SENSOR

(a) Install the 2 knock sensors with the 2 bolts as shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(b) Connect the knock sensor connectors.

(c) Connect the knock sensor wire.

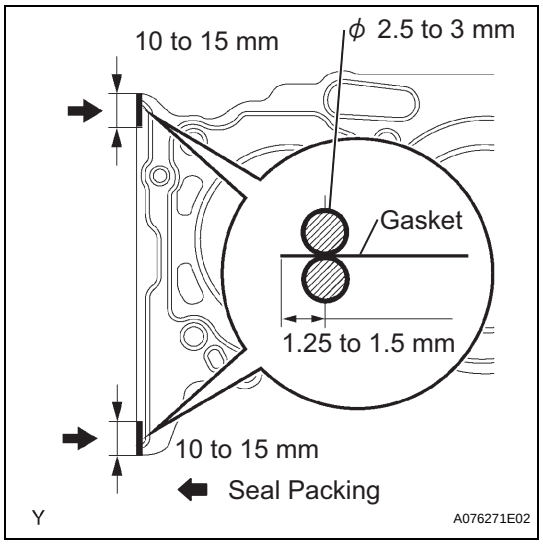


26. INSTALL NO.1 WATER OUTLET PIPE

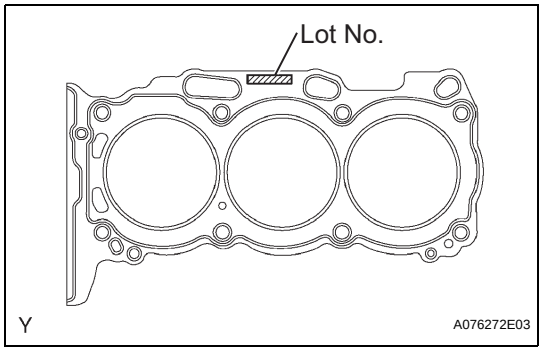
(a) Install the water outlet pipe with the 3 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

27. INSTALL CYLINDER HEAD GASKET

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.



(b) Apply a continuous bead of seal packing (diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying the seal packing. After installation, cylinder head bolts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.



(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

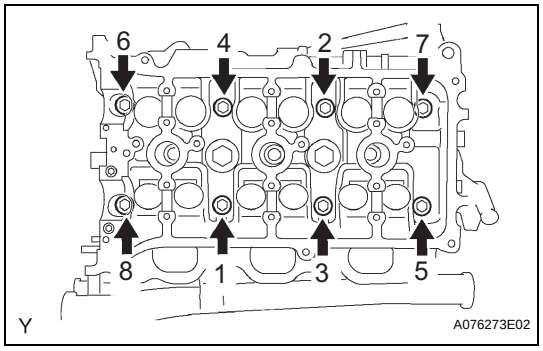
EM

28. INSTALL CYLINDER HEAD SUB-ASSEMBLY

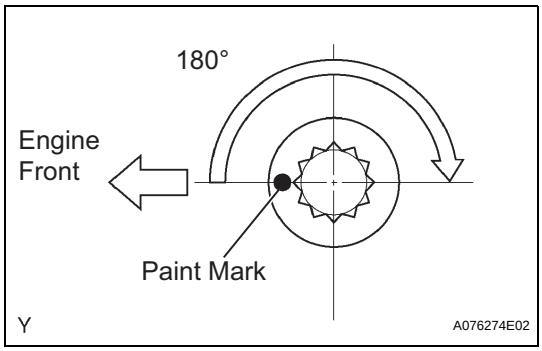
(a) Place the RH cylinder head on the cylinder head gasket.

(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace them.

(1) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



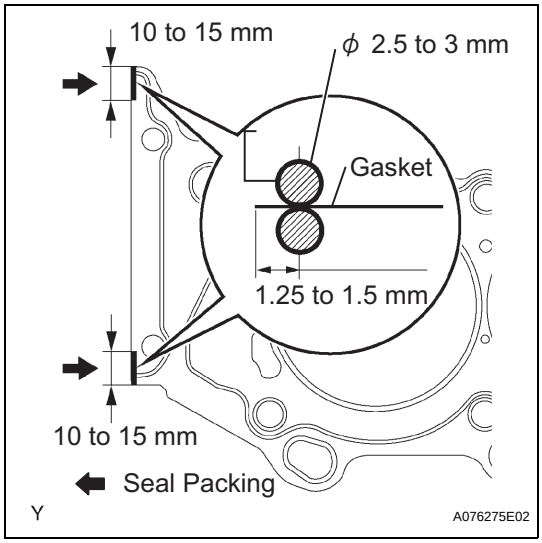
(2) Using several steps, uniformly install and tighten the 10 cylinder head bolts and plate washers with a bi-hexagon wrench 10 mm in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.



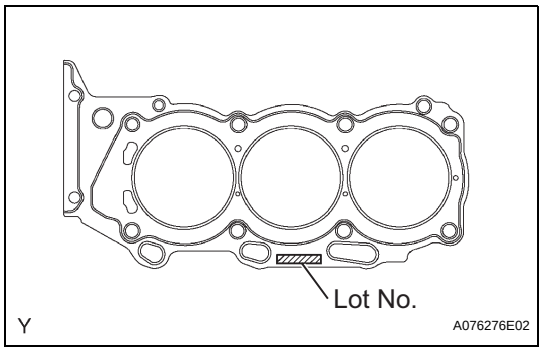
(3) Mark the front of the cylinder head bolt with paint.
(4) Retighten the cylinder head bolts by 180° as shown.
(5) Check that the painted marks are now at 180° from the engine front.

29. INSTALL NO.2 CYLINDER HEAD GASKET

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.



(b) Apply a continuous bead of seal packing (Diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying the seal packing. After installation, cylinder head bolts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.

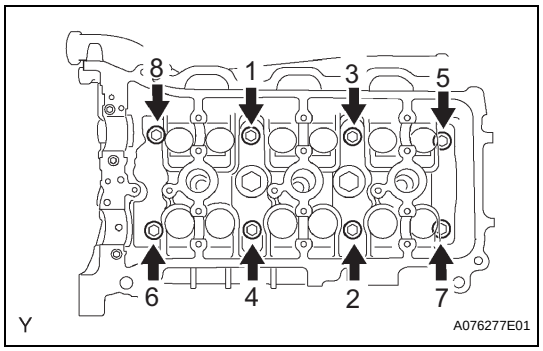


(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

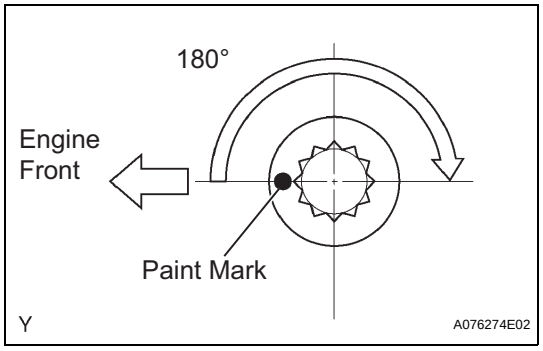
30. INSTALL CYLINDER HEAD LH

(a) Place the LH cylinder head on the cylinder head gasket.
(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace them.

(1) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

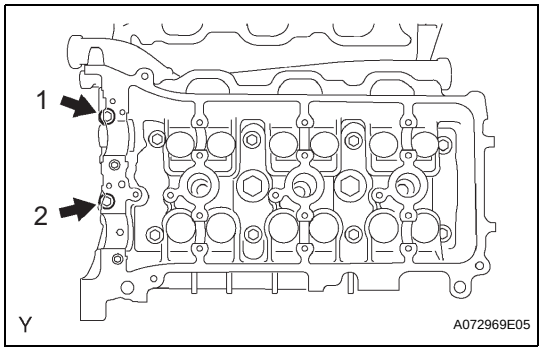


(2) Using several steps, uniformly install and tighten the 8 cylinder head bolts and plate washers with a bi-hexagon wrench 10 mm in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.

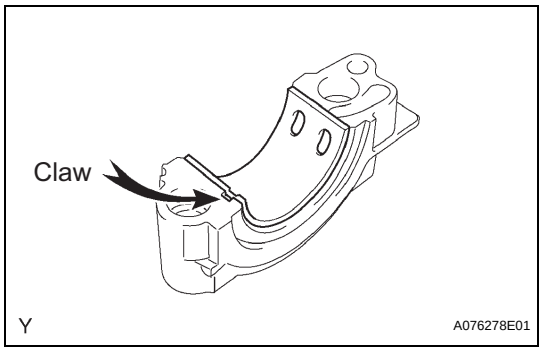


(3) Mark the front of the cylinder head bolt with paint.
(4) Retighten the cylinder head bolts by 180° as shown.
(5) Check that the painted marks are now at 180° from the engine front.

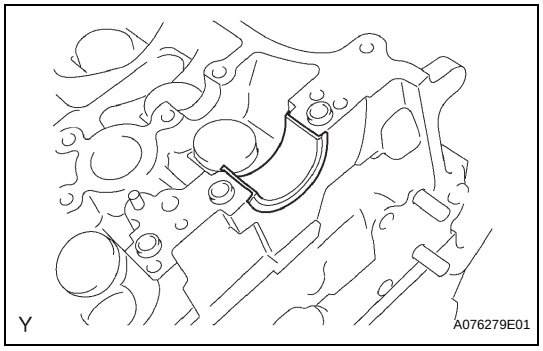
EM



(c) Install the 2 cylinder head bolts.
(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
(2) Using several steps, uniformly install and tighten the 10 cylinder head bolts and plate washers with a bi-hexagon wrench 10 mm in the sequence shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



31. INSTALL NO.1 CAMSHAFT BEARING
(a) Align the bearing claw with the claw groove of the bearing cap, and push in the camshaft bearing.
NOTICE:
- **Install the bearing while aligning it with the oil hole in the bearing cap.**
- **Clean the back side of the bearing and the surface of the bearing cap and keep them free of oils and fats.**

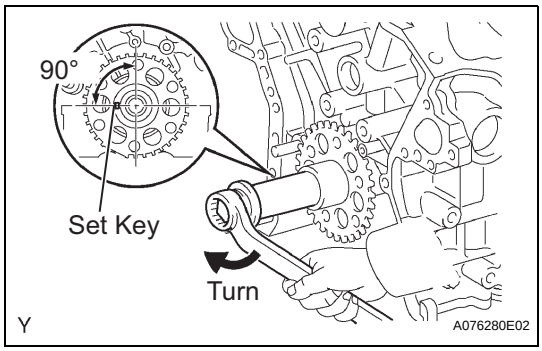


32. INSTALL NO.2 CAMSHAFT BEARING
(a) Install camshaft bearing No. 2 onto the cylinder head.
NOTICE:
Clean the back side of the bearing and the bearing surface of the cylinder head and keep them free of oils and fats.

33. INSTALL CAMSHAFTS

NOTICE:

Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



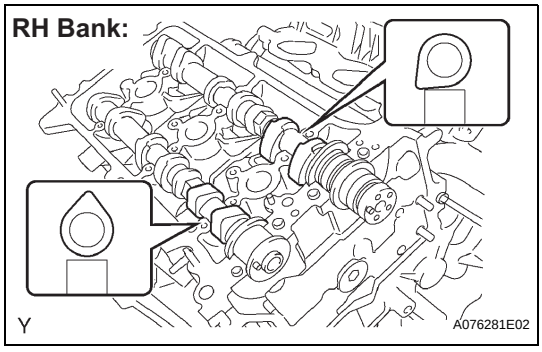
(a) Set the crankshaft position.

(1) Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key in the left horizontal position as indicated.

NOTICE:

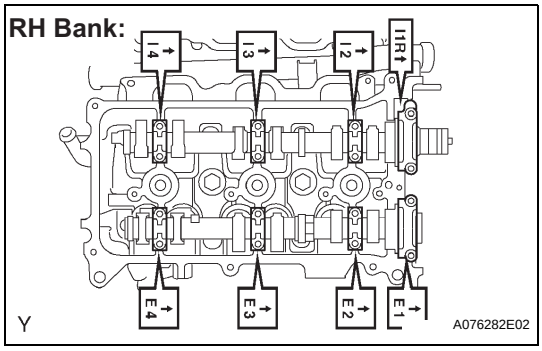
Setting the crankshaft at the wrong angle could cause the piston head and valve head to come into contact with each other when the camshaft is installed. This could cause damage, so always set the camshaft at the correct angle.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.



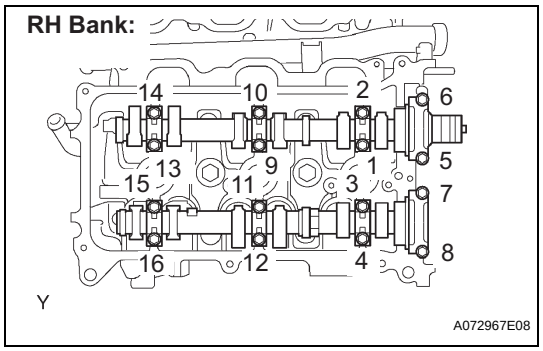
(c) Install the camshaft of the RH bank.

(1) Place the 2 camshafts on the RH cylinder head with the No. 1 cam lobes facing as shown the illustration.



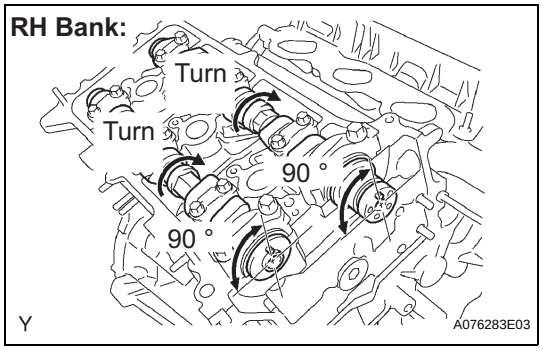
(2) Install the 8 bearing caps in their correct locations.

(3) Apply a light coat of engine oil to the threads of the bearing cap bolts.



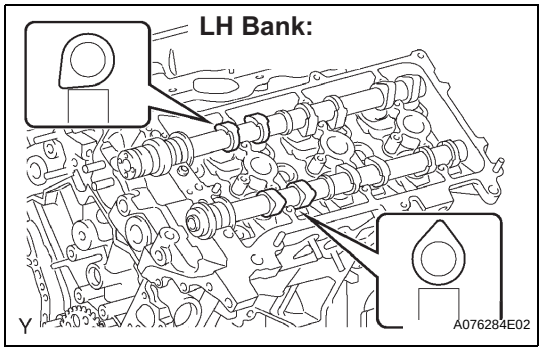
(4) Using several steps, uniformly tighten the 16 bearing cap bolts in the sequence shown in the illustration.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head



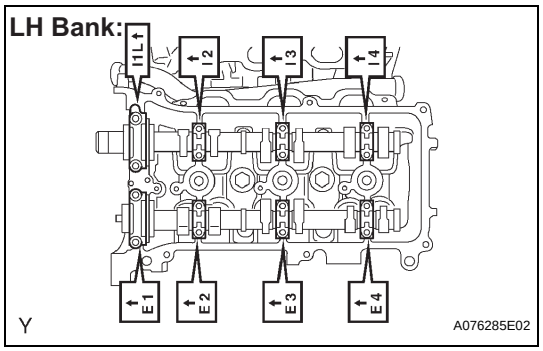
(5) Using a wrench, turn the camshafts clockwise until each camshaft knock pin comes to a position 90° to the cylindercylinder head.

EM



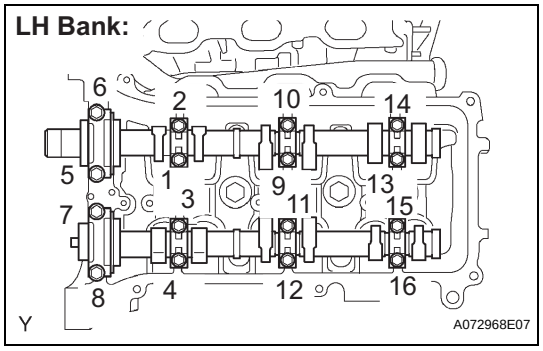
(d) Install the camshafts of the LH bank.

(1) Place the 2 camshafts on the LH cylinder head with the No.1 cam lobes facing as shown the illustration.



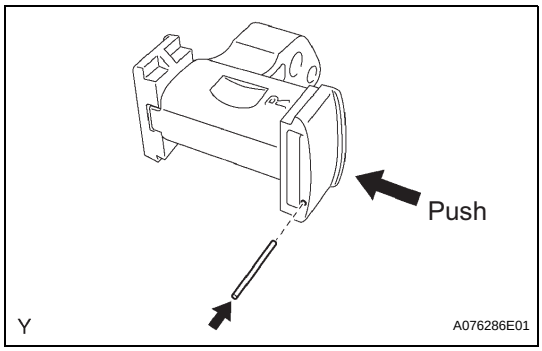
(2) Install the 8 bearing caps in the correct locations as shown.

(3) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



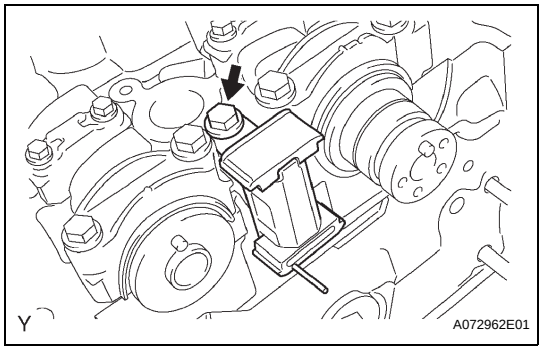
(4) Using several steps, uniformly tighten the 16 bearing cap bolts in the sequence shown in the illustration.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head



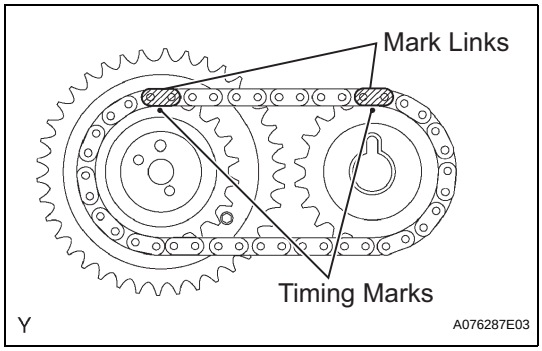
34. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



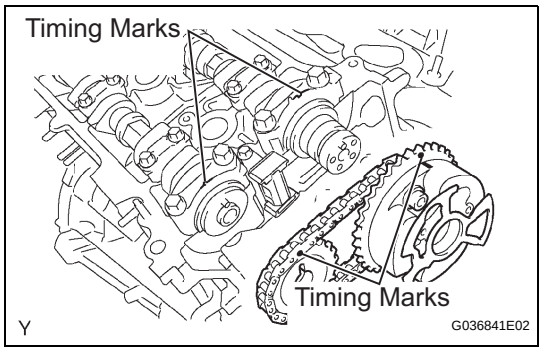
(b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

EM



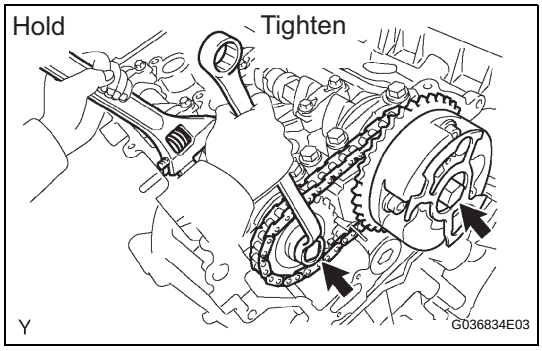
35. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) Align the yellow mark links with the timing marks (1 dot mark) of camshaft timing gears as shown in the illustration.



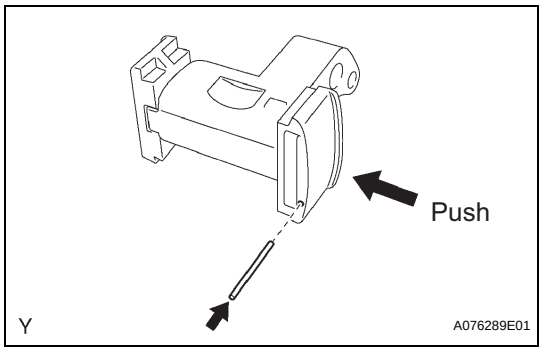
(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the RH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.
NOTICE:
Do not push the camshaft timing gear assembly onto the camshaft forcibly when installing it.



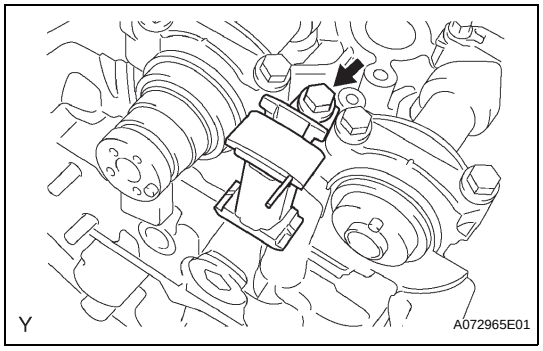
(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the chain tensioner No. 2.

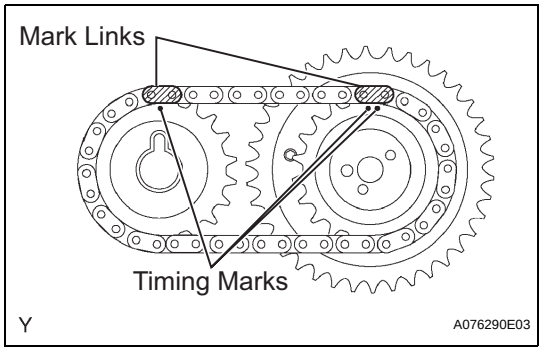


36. INSTALL NO.3 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to hold it.

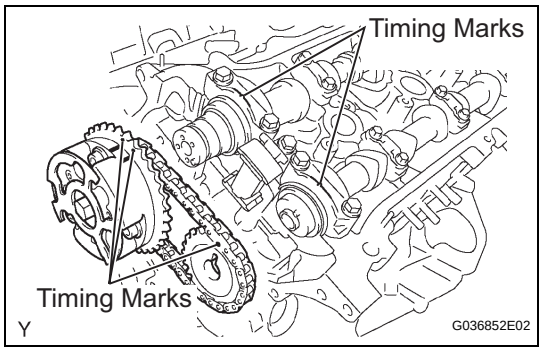


(b) Install the chain tensioner No. 3 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



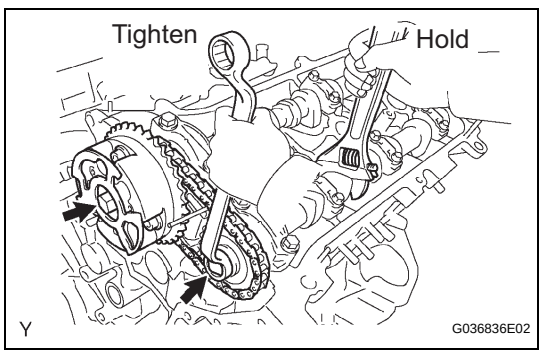
37. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 2)

(a) Align the yellow mark links with the timing marks (1 dot mark and 2 dot marks) on camshaft timing gears as shown in the illustration.



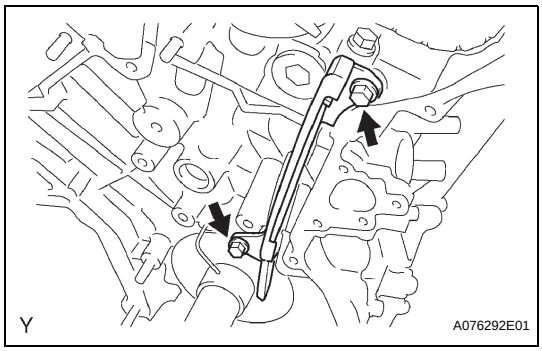
(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the LH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.
NOTICE:
Do not push camshaft timing gear assembly onto the camshaft forcibly when installing it.



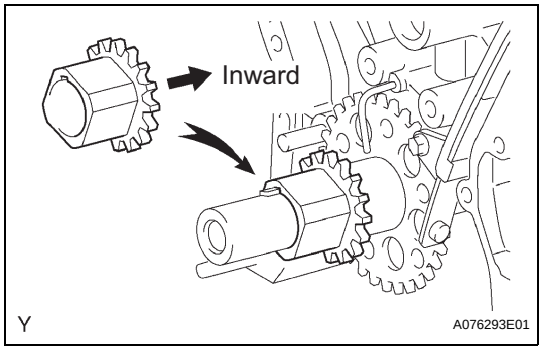
(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the chain tensioner No. 3.



38. INSTALL NO.1 CHAIN VIBRATION DAMPER

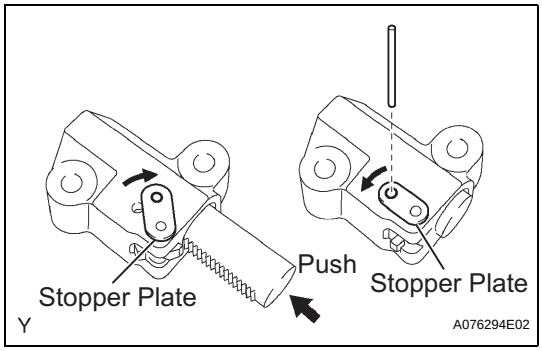
(a) Install the chain vibration damper No. 1 with the 2 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



39. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

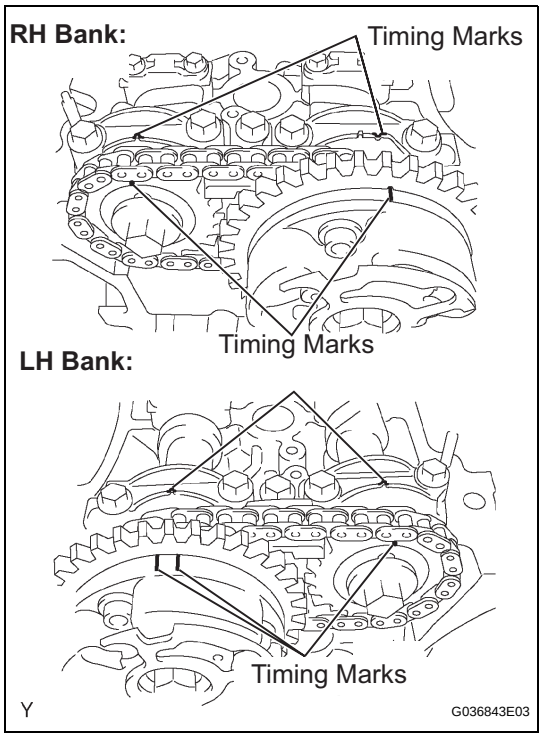
(a) Align the timing gear set key with the key groove of the timing gear.
(b) Install the timing gear onto the crankshaft with the gear side facing inward.

40. INSTALL CHAIN TENSIONER SLIPPER



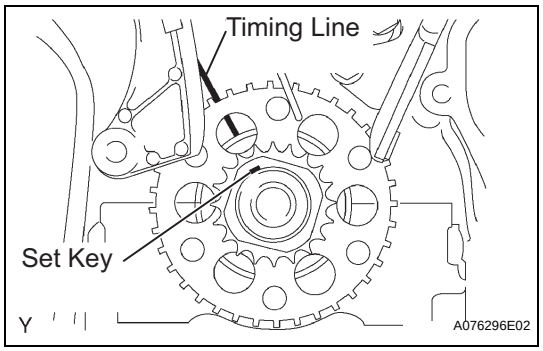
41. INSTALL NO.1 CHAIN TENSIONER ASSEMBLY

(a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.
(b) While turning the stopper plate of the tensioner counterclockwise, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

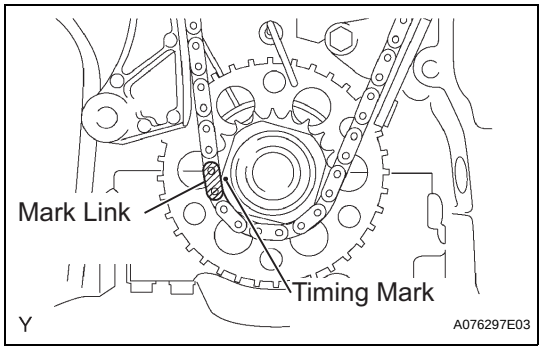


42. INSTALL CHAIN SUB-ASSEMBLY

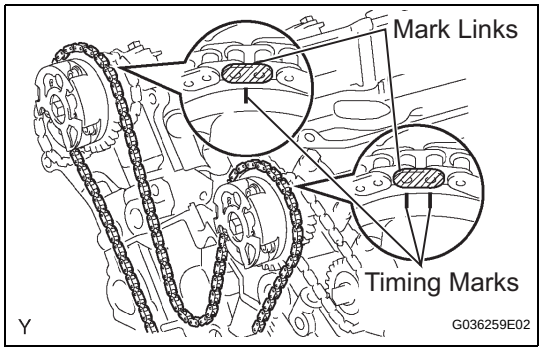
(a) Set the No. 1 cylinder to TDC/ compression.
(1) Align the timing marks of the camshaft timing gears and bearing caps.



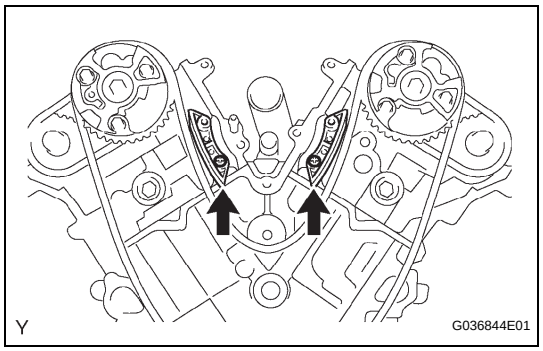
(2) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.



(b) Align the yellow mark link with the timing mark of the crankshaft timing gear.



(c) Align the orange mark links with the timing marks of the camshaft timing gears, and install the chain.



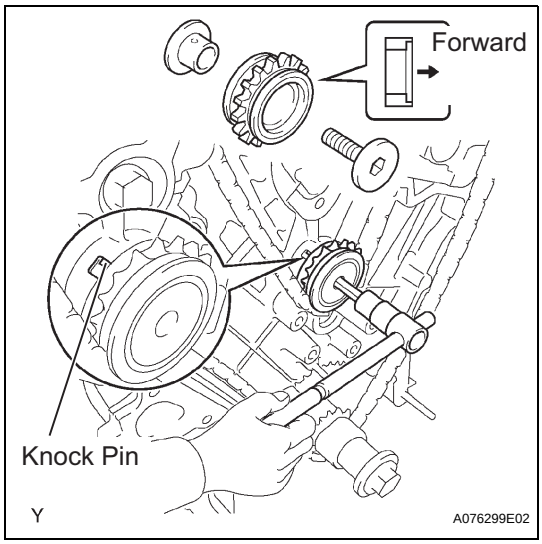
43. INSTALL NO.2 CHAIN VIBRATION DAMPER

(a) Instal the 2 chain vibration dampers No. 2.

44. INSTALL IDLE SPROCKET ASSEMBLY

(a) Apply a light coat of engine oil to rotating surface of the idle gear shaft No. 1.

EM



(b) Temporarily install the idle gear shaft No. 1 together with the idle gear shaft No. 2 while aligning the knock pin of the idle gear shaft No. 1 with the knock pin groove of the cylinder block.
NOTICE:
Be careful of the idle gear direction.

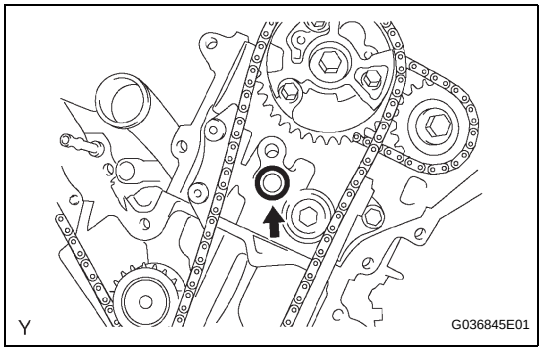
(c) Using a 10 mm hexagon wrench, tighten the idle gear shaft No. 2.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

(d) Remove the bar from the chain tensioner.

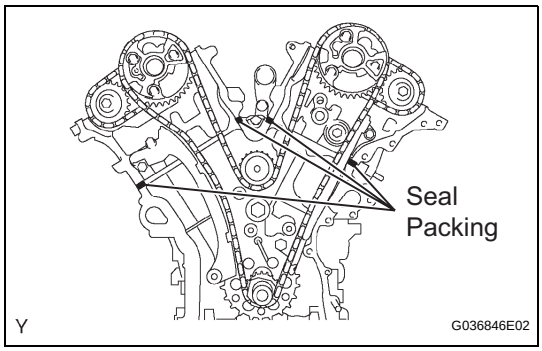
45. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.

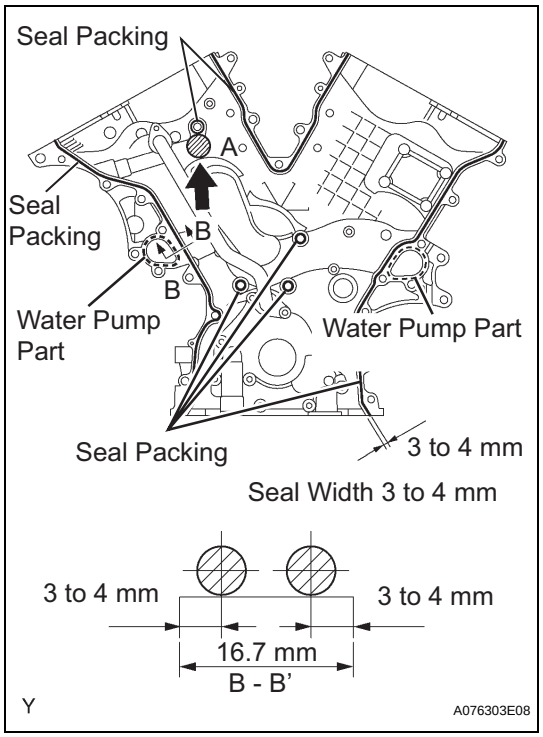
EM



(b) Install a new O-ring onto the LH cylinder head as shown in the illustration.



(c) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to 4 locations as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent



(d) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the timing chain cover as shown in the illustration.

Seal packing:

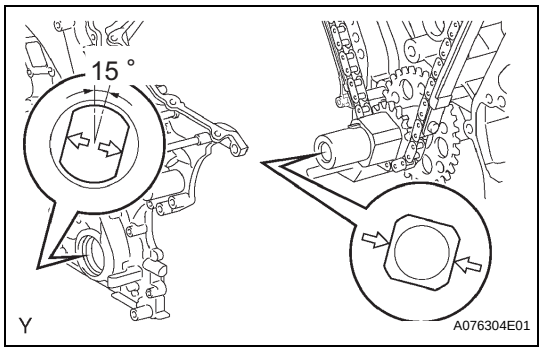
Water pump part: Part No. 08826-00100 or equivalent

Other part: Part No. 08826-00080 or equivalent

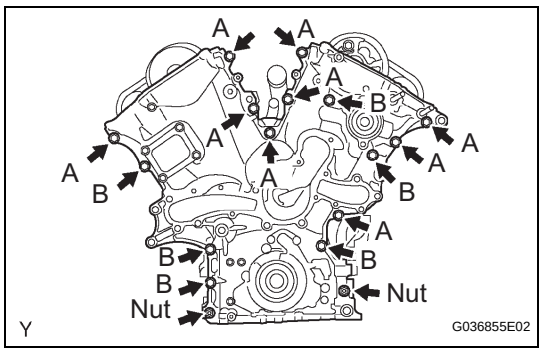
NOTICE:

- **Install the timing chain cover within 3 minutes of applying the seal packing. After installation, the timing chain cover bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.**
- **Do not apply seal packing to A as shown in the illustration.**

EM



(e) Align the key way of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.



(f) Install the timing chain cover with the 15 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

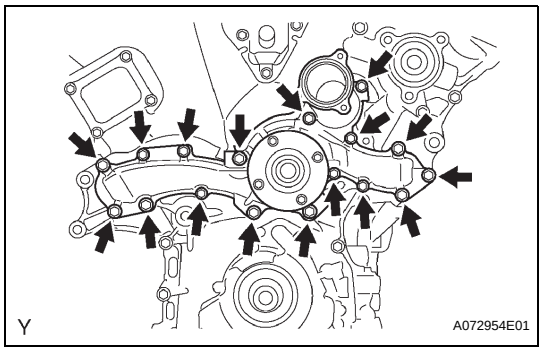
NOTICE:

- **Take care not to wrap the chain and slipper beyond the timing chain cover seal line.**
- **After installing the timing chain cover, install the water pump within 15 minutes.**

HINT:

Each bolt length is as follows:

Bolt	length
A	25 mm (0.98 in.)
B	55 mm (2.17 in.)



46. INSTALL WATER PUMP ASSEMBLY

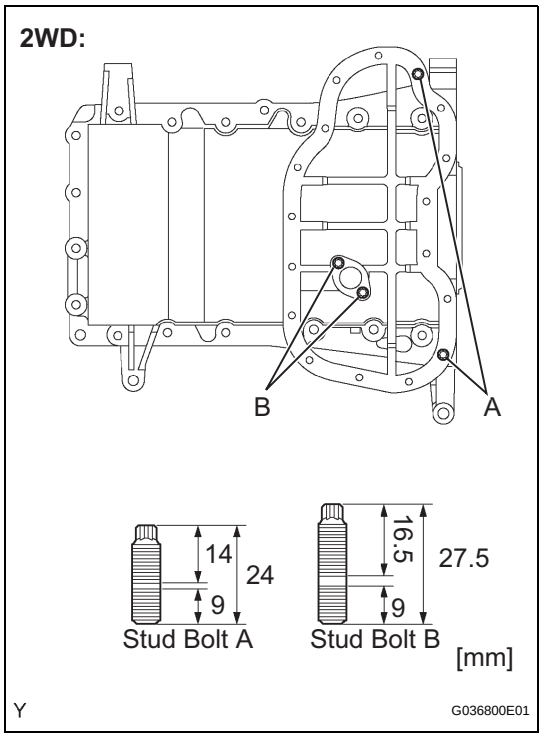
(a) Install a new gasket and the water pump with the 17 bolts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
23 N*m (235 kgf*cm, 17 ft.*lbf) for 12 mm (0.47 in.) head

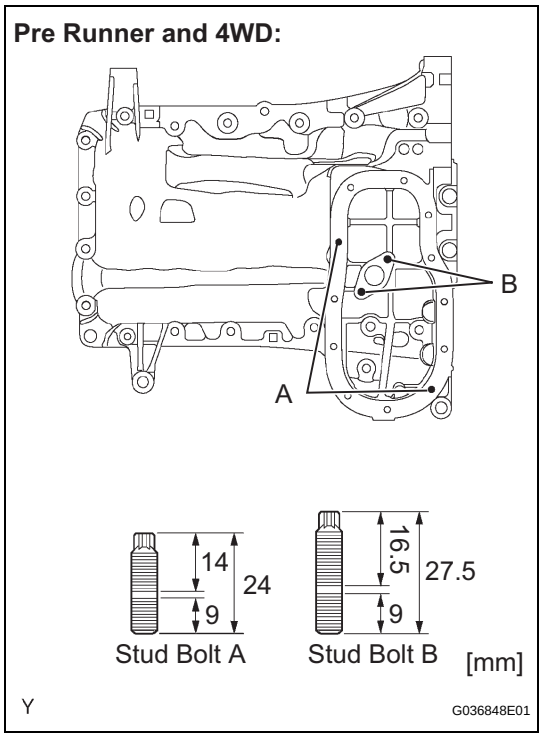
47. INSTALL OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.

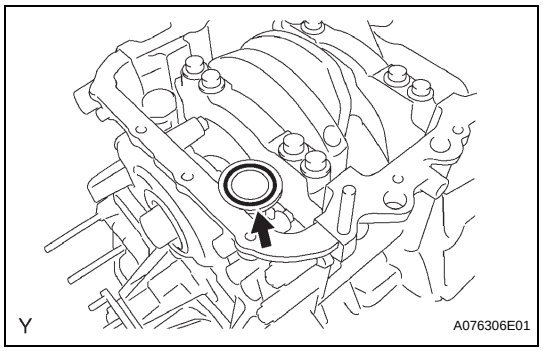
(b) Install the 4 stud bolts (for 2WD).
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



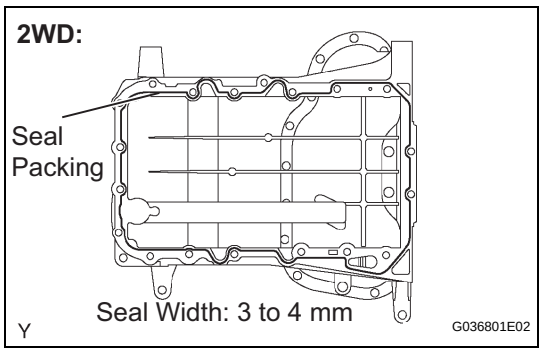
EM



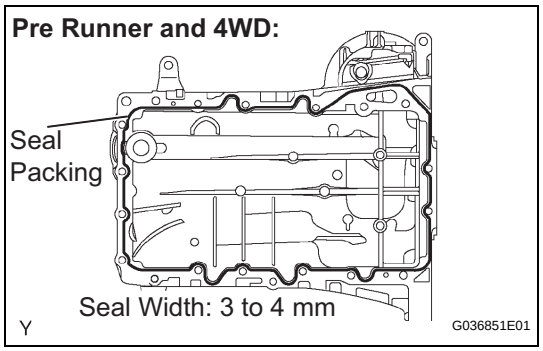
(c) Install the 4 stud bolts (for Pre Runner and 4WD).
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



(d) Install a new O-ring onto the oil pump.



(e) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 1.16 in.)) to the oil pan as shown in the illustration (for 2WD).
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan within 3 minutes of applying the seal packing. After installation, the oil pan bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.

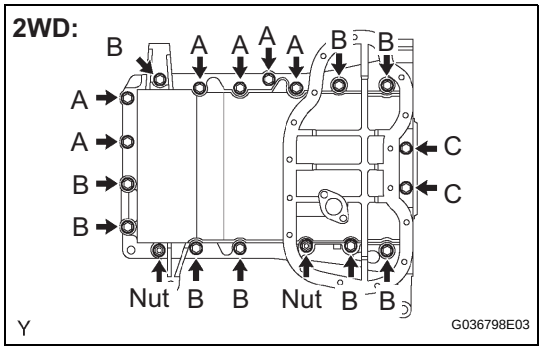


(f) Apply a continuous bead of the seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the oil pan as shown in the illustration (for Pre Runner and 4WD).
Seal packing:
Part No. 08826-00080 or equivalent

NOTICE:
Install the oil pan within 3 minutes of applying the seal packing. After installation, the oil pan bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.

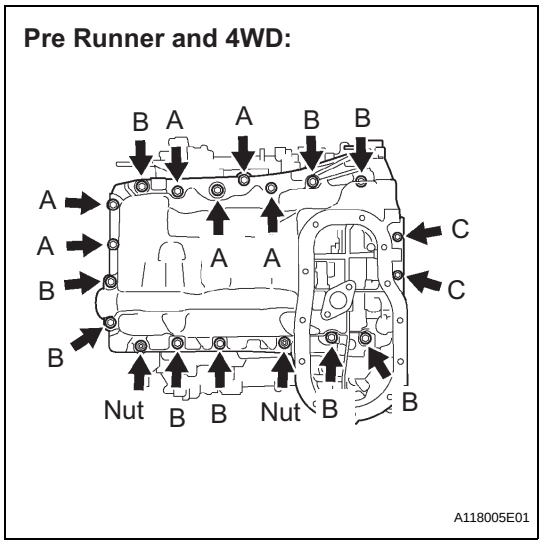
(g) Install the oil pan with the 17 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps (for 2WD).
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for 10 mm (0.39 in.) head
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf) for 12 mm (0.47 in.) head
HINT:
Each bolt length is as follows:

Bolt	length
A	25 mm (0.98 in.)
B	45 mm (1.77 in.)
C	14 mm (0.55 in.)



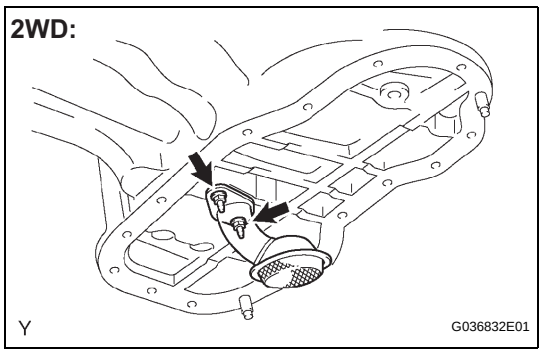
(h) Install the oil pan with the 17 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps (for Pre Runner and 4WD).
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for 10 mm (0.39 in.) head
21 N*m (214 kgf*cm, 16 ft.*lbf) for 12 mm (0.47 in.) head
HINT:
Each bolt length is as follows:

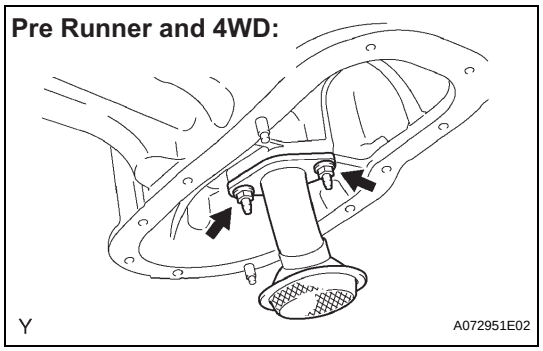
Bolt	length
A	25 mm (0.98 in.)
B	45 mm (1.77 in.)
C	14 mm (0.55 in.)



48. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket, then install the oil strainer with the 2 nuts (for 2WD).
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

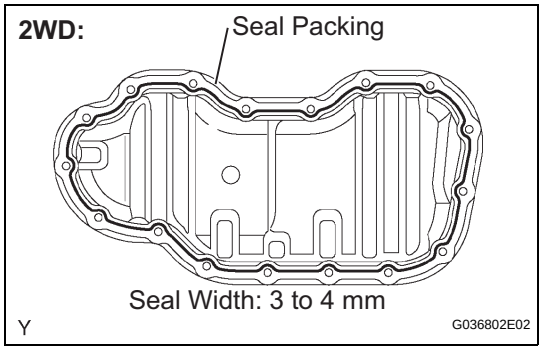




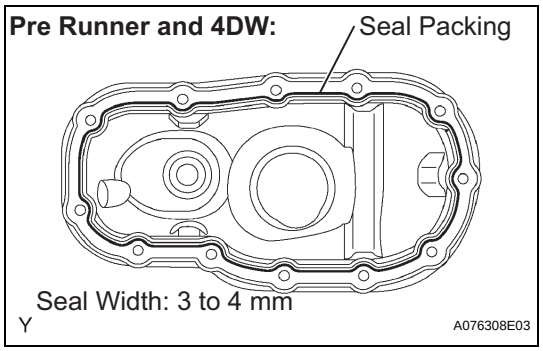
(b) Install a new gasket, then install the oil strainer with the 2 nuts (for Pre Runner and 4WD).
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

49. INSTALL NO.2 OIL PAN SUB-ASSEMBLY

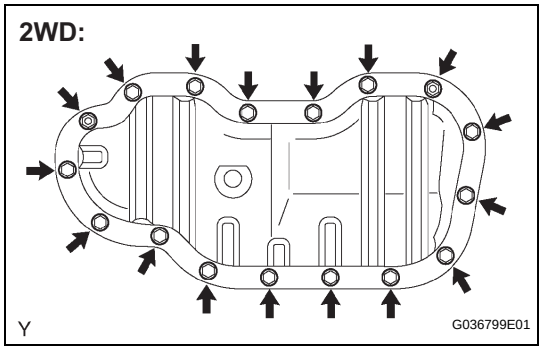
(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the oil pan and oil pan No. 2.



(b) Apply a continuous bead of the seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) as shown in the illustration (for 2WD).
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan No. 2 within 3 minutes of applying the seal packing. After installation, oil pan No. 2 bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.

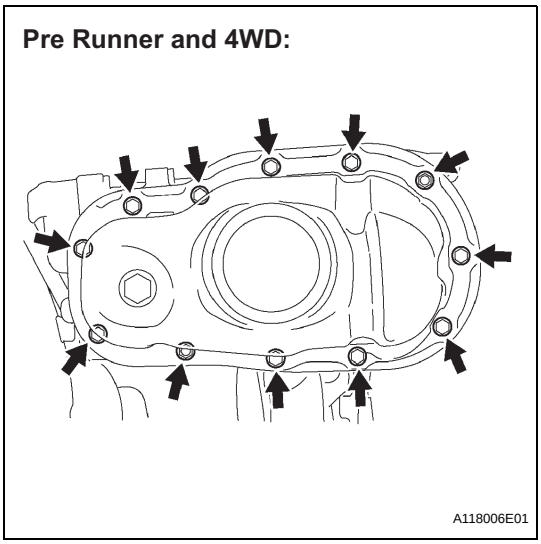


(c) Apply a continuous bead of seal packing (diameter 3 to 4mm(0.12 to 0.16 in.)) as shown in the illustration (for Pre Runner and 4WD).
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the oil pan No. 2 within 3 minutes of applying the seal packing. After installation, the oil pan No. 2 bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.



(d) Install the oil pan No. 2 with the 15 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps (for 2WD).
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts
10 N*m (102 kgf*cm, 7.4 ft.*lbf) for nut

EM

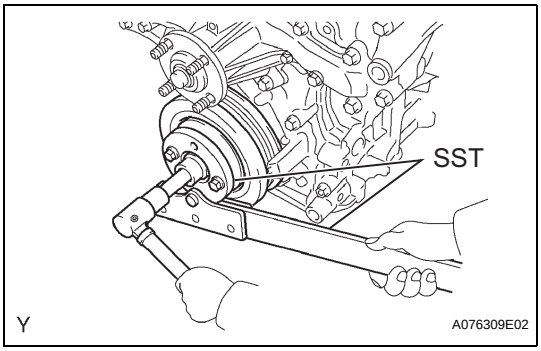


(e) Install the oil pan No. 2 with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps (for Pre Runner and 4WD).
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts
10 N*m (102 kgf*cm, 7.4 ft.*lbf)

50. INSTALL OIL PAN DRAIN PLUG

(a) Install the drain plug with a new gasket.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

EM



51. INSTALL CRANKSHAFT PULLEY

(a) Using SST, fix the pulley and tighten the bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 250 N*m (2,549 kgf*cm, 185 ft.*lbf)

52. SET NO.1 CYLINDER TO TDC/COMPRESSION

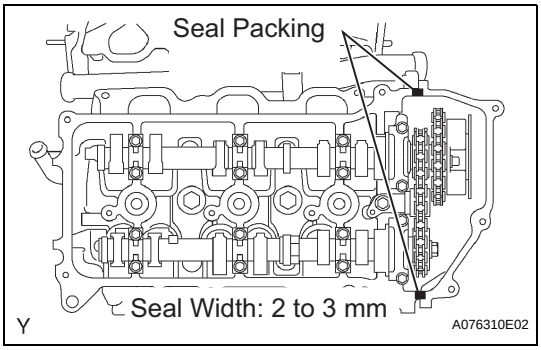
53. INSPECT VALVE CLEARANCE

54. ADJUST VALVE CLEARANCE

55. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

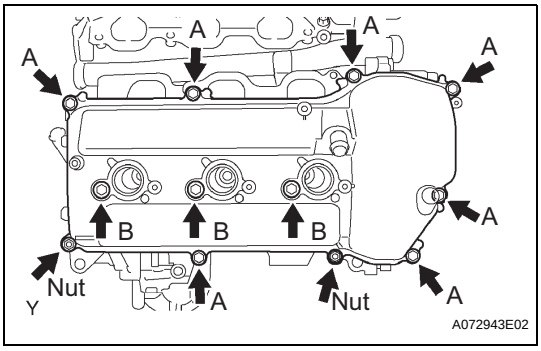
(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

(b) Install the gasket onto the cylinder head cover.



(c) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the cylinder head and timing chain cover as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head cover within 3 minutes of applying the seal packing. After installation, the cylinder head cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

(d) Install the seal washers onto the bolts.



(e) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for bolts A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts B
9.0 N*m (92 kgf*cm, 80 in.*lbf) for nuts
HINT:
Each bolt length is as follows:

Bolt	length
A	25 mm
B	60 mm (2.36 in.)

56. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

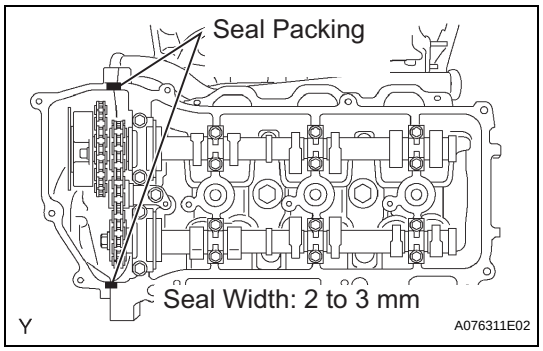
(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

(b) Apply adhesive to the threads of the ventilation valve.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(c) Install the ventilation valve onto the cylinder head cover.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

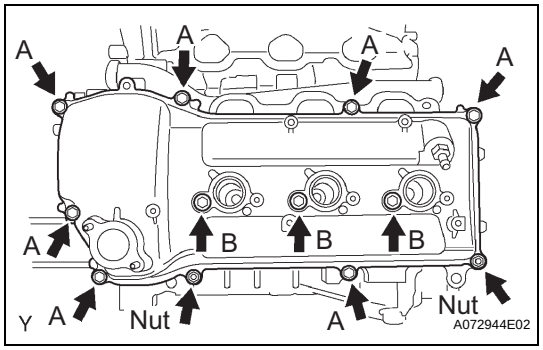
(d) Install the gasket onto the cylinder head cover.

(e) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the cylinder head and timing chain cover as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head cover of 3 minutes of applying the seal packing. After installation, the cylinder head cover bolts and nuts must be tightened within 15 minutes. Otherwise, the seal packing must be removed and reapplied.



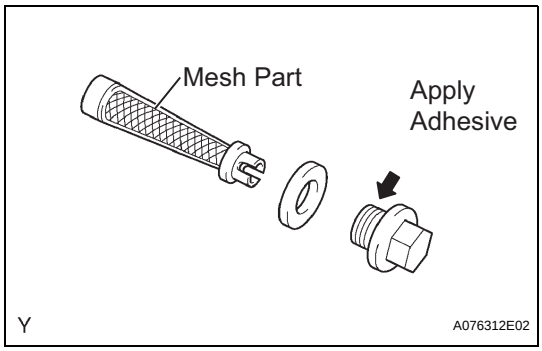
(f) Install the seal washers onto the bolts.

(g) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) for bolts A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolts B
9.0 N*m (92 kgf*cm, 80 in.*lbf) for nuts
HINT:
Each bolt length is as follows:



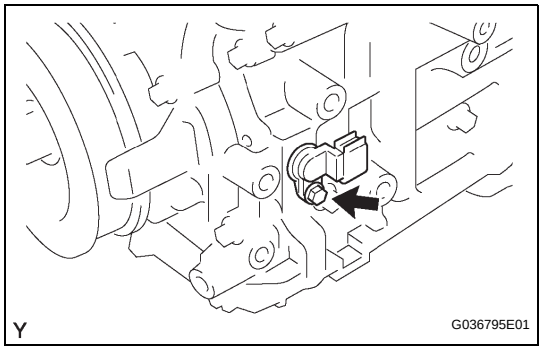
Bolt	length
A	25 mm (0.98 in.)
B	60 mm (2.36 in.)

EM



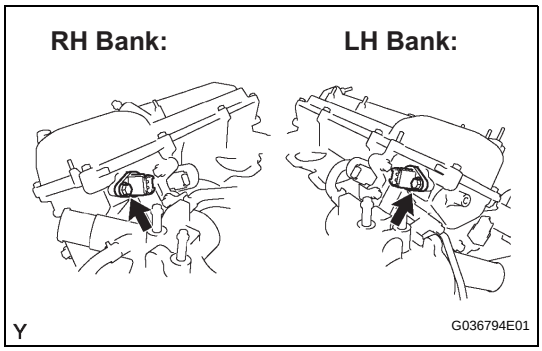
57. INSTALL OIL CONTROL VALVE FILTER

(a) Check that no foreign objects on the mesh part of the 2 filters.
(b) Install 2 new gaskets onto each new plug.
(c) Insert the filters into the plugs.
(d) Apply adhesive to 2 or 3 threads of the plugs.
Adhesive:
Part No. 08833-00080, THREE BOND 1344 LOCTITE 242 or equivalent
(e) Install the plugs onto each cylinder head.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)



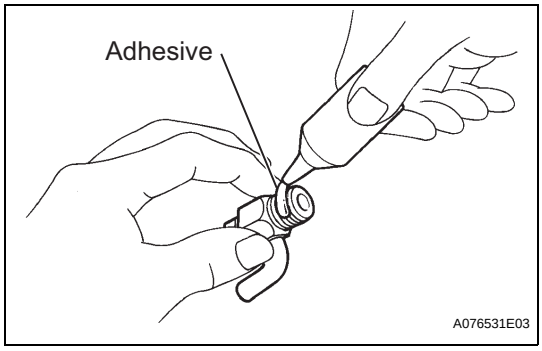
58. INSTALL CRANKSHAFT POSITION SENSOR

(a) Install the crankshaft position sensor with the bolt.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)



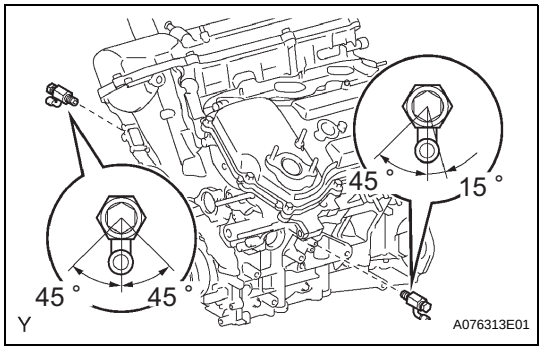
59. INSTALL VVT SENSOR

(a) Apply a light coat of engine oil to the O-ring of each VVT sensor.
(b) Install the 2 VVT sensors with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

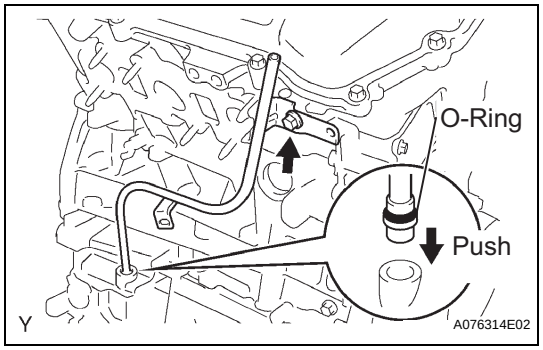


60. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the drain cocks end.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

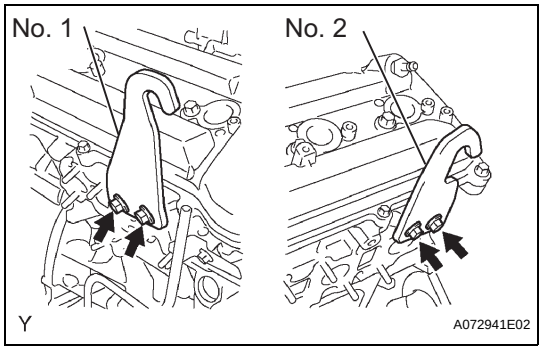


(b) Tighten the drain cocks to the specified torque, and rotate them clockwise as shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
- **Do not rotate the drain cocks more than 1 complete revolution (360°) after tightening the drain cocks to the specified torque.**
- **Do not loosen the drain cocks after setting it correctly.**



61. INSTALL OIL LEVEL GAGE GUIDE

(a) Install a new O-ring onto the oil level gauge guide.
(b) Apply a light coat of engine oil to the O-ring.
(c) Push the oil level gauge guide end into the guide hole of the oil pan.
(d) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



62. INSTALL ENGINE HANGERS

(a) Install the engine hanger with the 2 bolts.
Torque: 33 N*m (336 kgf*cm, 24 ft.*lbf)
(b) Install the engine hanger with the 2 bolts.
Torque: 33 N*m (336 kgf*cm, 24 ft.*lbf)

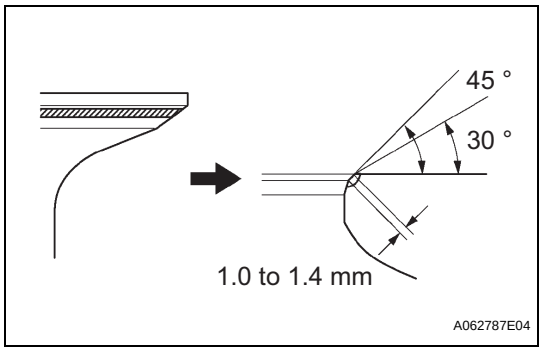
EM

REPAIR

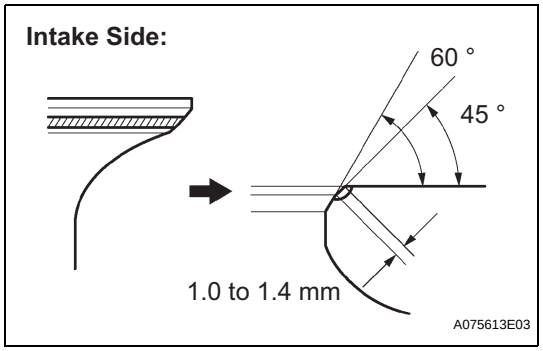
1. REPAIR VALVE SEAT

NOTICE:
Use a cutter to gradually make the intake valve seat smoother.

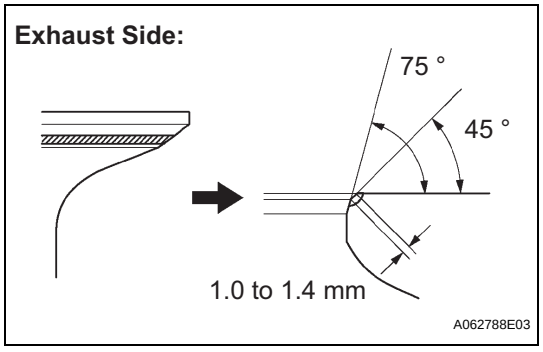
(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

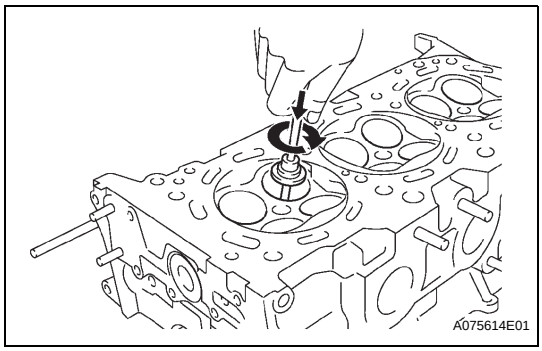


(b) Intake side:
If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.



(c) Exhaust side:
If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.





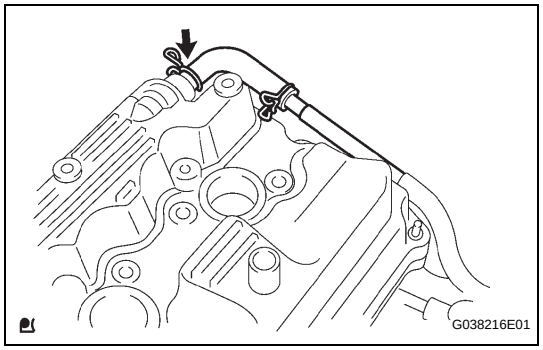
(d) Lap the valve and valve seat with an abrasive compound by hand.
(e) After lapping, clean the valve and valve seat.

REMOVAL

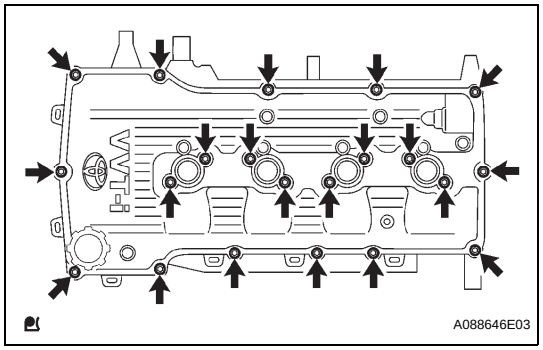
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD)**
   (a) Remove the 4 bolts, then remove the No. 1 engine under cover.
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
5. **REMOVE FAN SHROUD (See page CO-13)**
6. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page EC-14)**
7. **REMOVE INTAKE AIR CONNECTOR (See page ES-452)**
8. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY**
   (a) Disconnect the ignition coil connectors.
   (b) Disconnect the throttle with motor body connector.
   (c) Disconnect the VSV connector.
   (d) Disconnect the camshaft position sensor connector.
   (e) Disconnect the engine wire harness clamps.

EM

   (f) Remove the bolts, then remove the ignition coils.

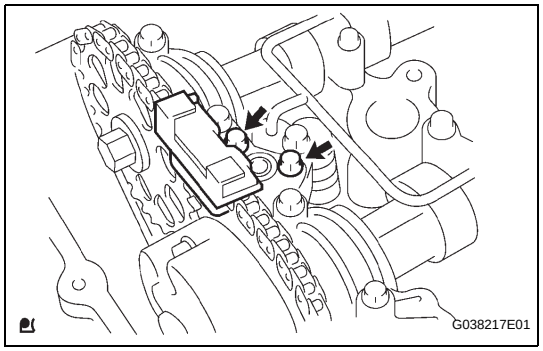


(g) Disconnect the ventilation hose.

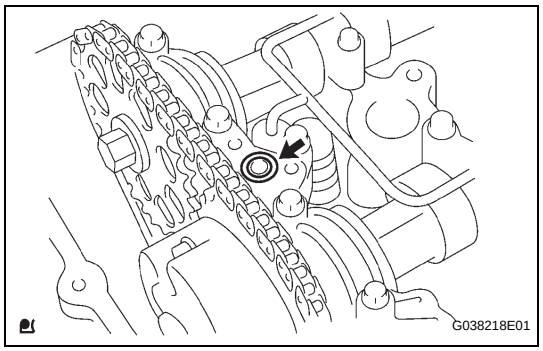


(h) Remove the 19 bolts and 2 nuts, then remove the cylinder head cover.

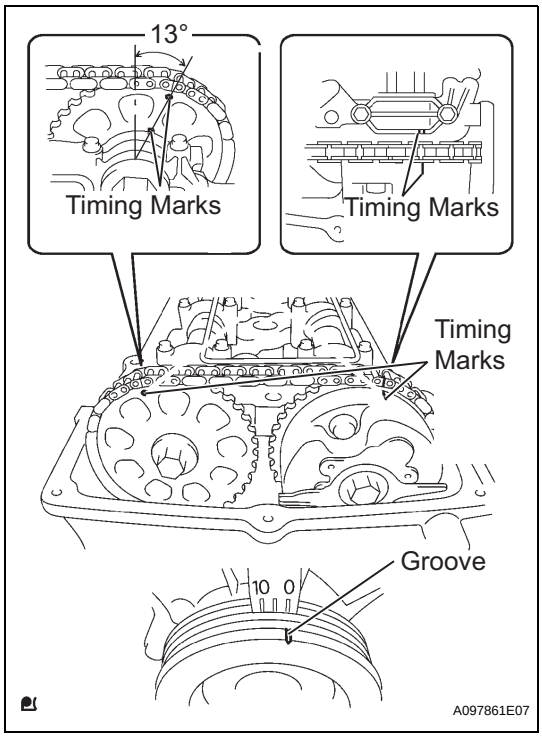
9. REMOVE TIMING CHAIN GUIDE



(a) Remove the 2 bolts, then remove the timing chain guide.

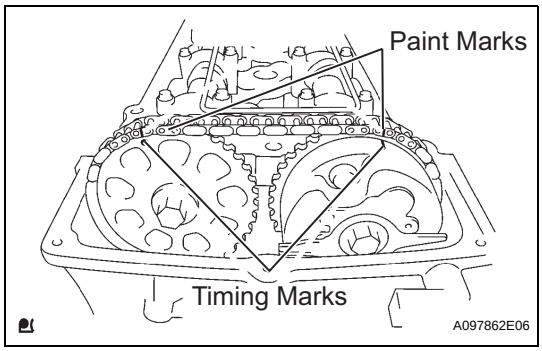


(b) Remove the O-ring.

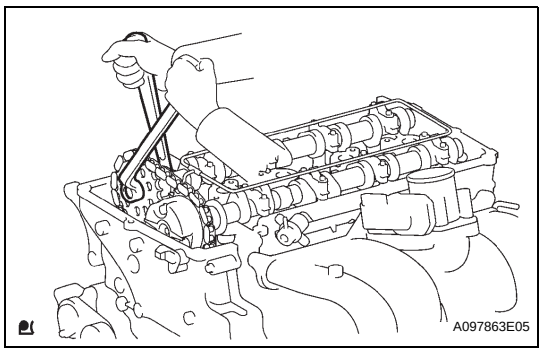


10. REMOVE CAMSHAFT

(a) Set the No. 1 cylinder to the TDC/compression.
  (1) Turn the crankshaft pulley clockwise and align its timing mark notch with the timing mark "0".
  (2) Check that the timing marks of the camshaft timing gear are located as illustrated.
  HINT:
  If not, turn the crankshaft to align the marks.

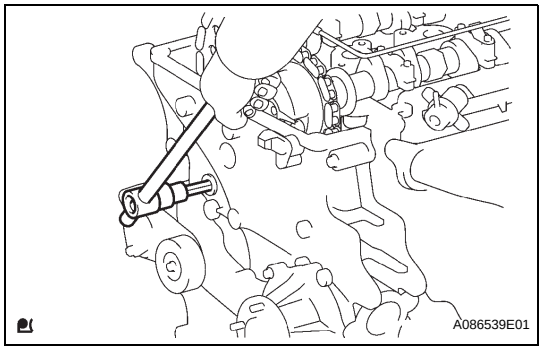


(b) Place paint marks on the timing chain plates that align with timing marks of the camshaft timing gear.

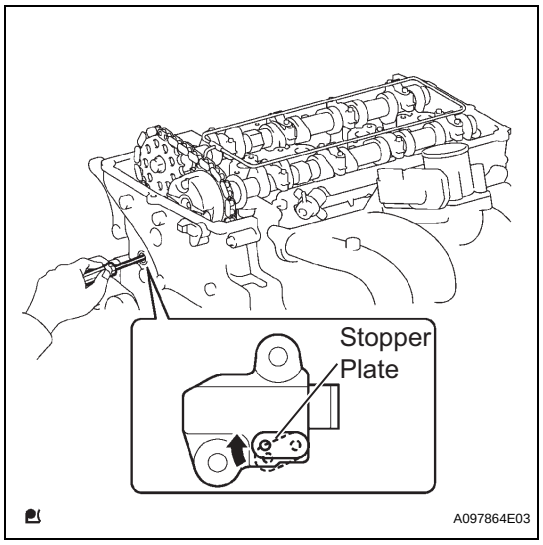


(c) Hold the hexagonal lobe of the No. 2 camshaft with an adjustable wrench.
  NOTICE:
  Be careful not to damage the camshaft oil delivery pipe.

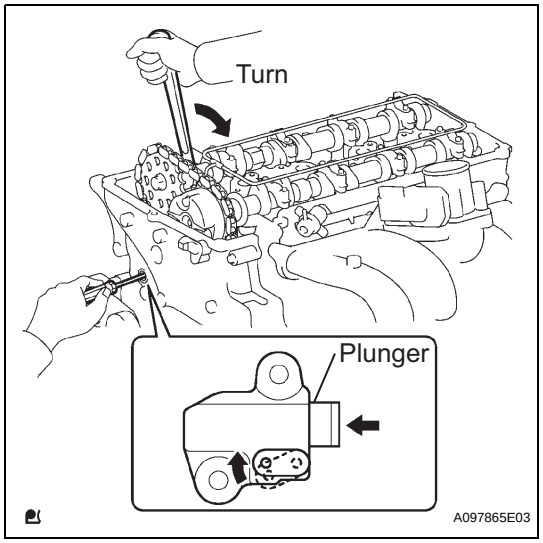
(d) Loosen the bolt.



(e) Using 10 mm socket hexagon wrench, remove the head straight screw plug.

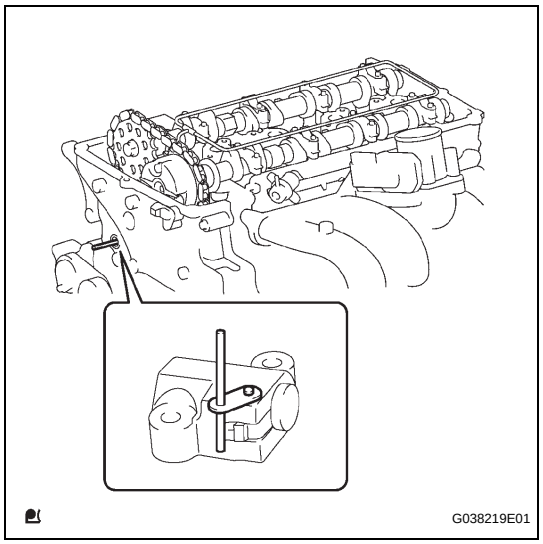


(f) Insert a screwdriver into the service hole of the chain tensioner to hold the stopper plate of the chain tensioner lifted up.
HINT:
Lifting up the stopper plate of the chain tensioner unlocks the plunger.



(g) While keeping the stopper plate of the chain tensioner lifted up, slightly rotate the hexagonal lobe of the No. 2 camshaft clockwise with an adjustable wrench so the plunger of the chain tensioner is pushed.
HINT:
When the No. 2 camshaft is slightly rotated clockwise, the plunger is pushed.
NOTICE:
Be careful not to damage the camshaft oil delivery pipe.

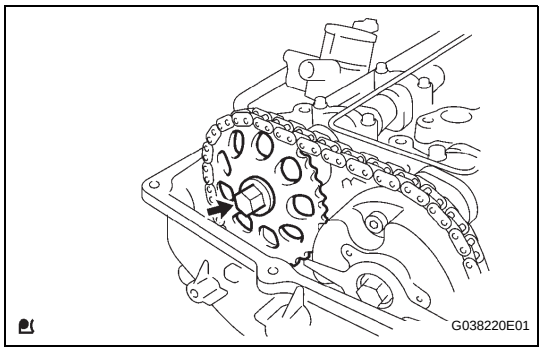
(h) Keeping the adjustable wrench installed, remove the screwdriver with the plunger pushed in.
NOTICE:
Do not move the adjustable wrench.
HINT:
Removing the screwdriver lifts down the stopper plate and locks the plunger.



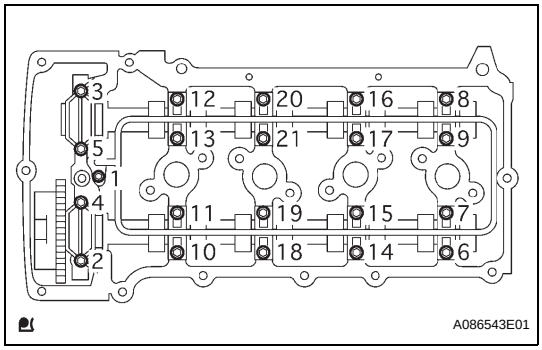
(i) Insert a 3.0 mm (0.118 in.) diameter bar into the hole of the stopper plate with the stopper plate of the chain tensioner lifted down and locked.
HINT:
If a 3.0 mm (0.118 in.) diameter bar cannot be inserted into the hole of the stopper plate, rotate the No. 2 camshaft slightly to the left and right. Then a 3.0 mm (0.118 in.) diameter bar can be inserted easily.

(j) Secure the 3.0 mm (0.118 in.) diameter bar with tape.

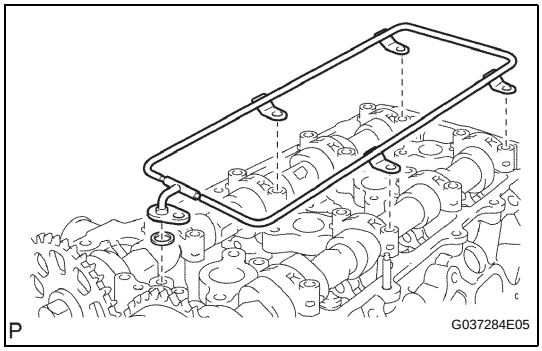
EM



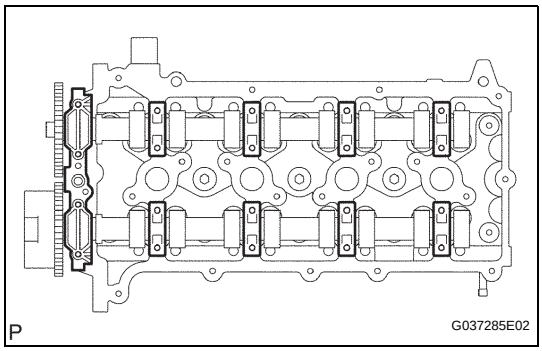
(k) Remove the bolt, then remove the camshaft timing gear.



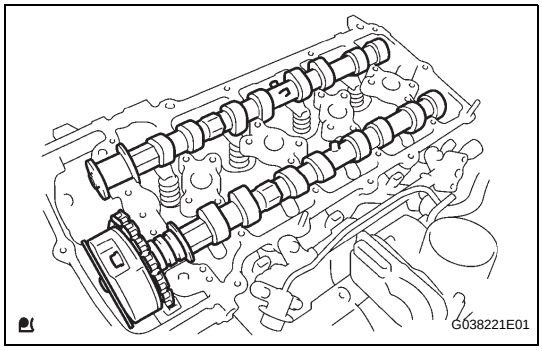
(l) Using several steps, uniformly loosen and remove the 21 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Place the camshaft on a flat surface and loosen the bolts uniformly.



(m) Remove the camshaft oil delivery pipe and O-ring.

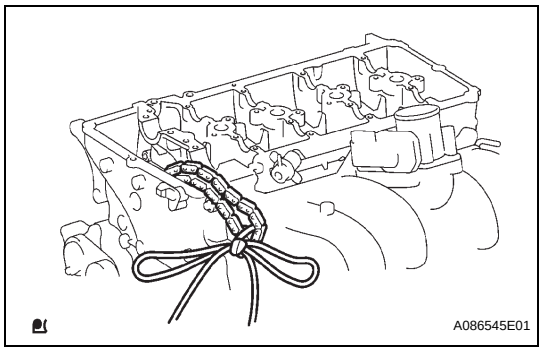


(n) Remove the camshaft bearing cap No. 1 and 8 camshaft bearing caps No. 2.

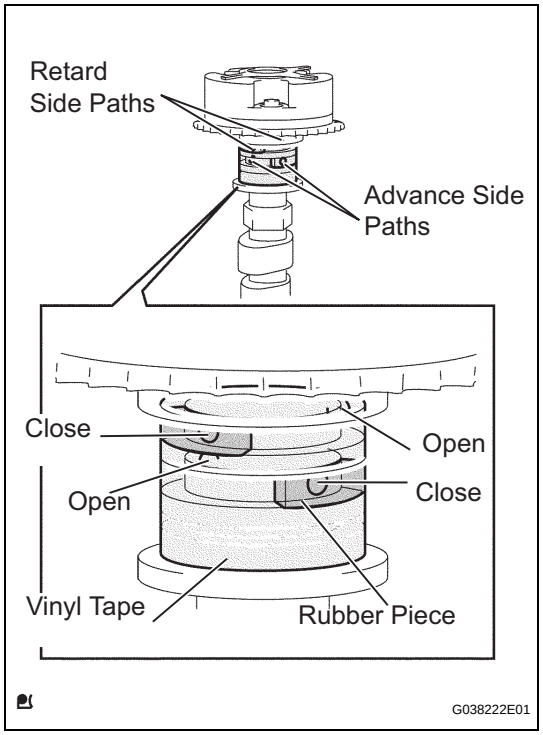


(o) Remove the camshaft and No. 2 camshaft.
NOTICE:
- **Do not pry the camshaft with a tool by applying excessive force to it.**
- **Do not damage the cylinder head when removing the camshafts.**

EM



(p) Tie the chain with a piece of string or wire.
NOTICE:
Prevent foreign objects from getting into the engine compartment with a shop rag.

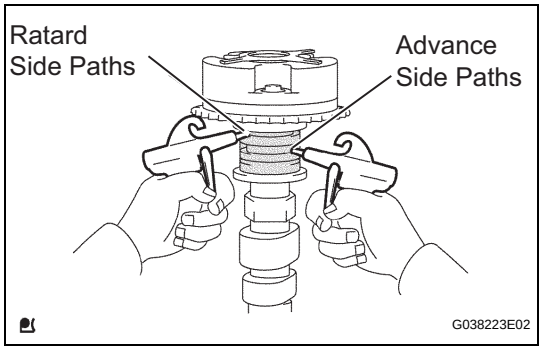


11. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

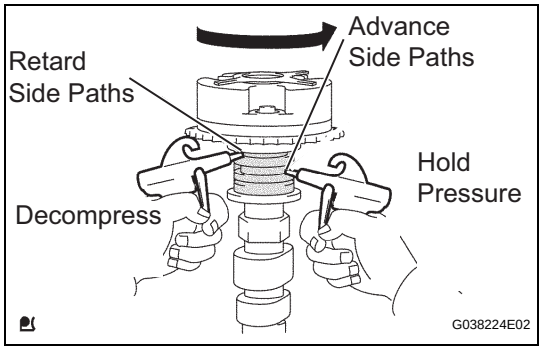
(a) Clamp the camshaft in a vise, then check that the camshaft timing gear does not rotate.
NOTICE:
Do not damage the camshaft by clamping it in a vise too tightly.

(b) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the 2 oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(c) Puncture the tape covering the advance side path and retard side path on the opposite side.

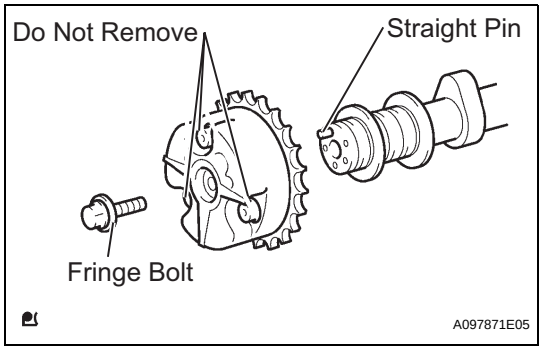


(d) Apply air pressure at approximately 200 kPa (2.0 kgf/cm^2, 29 psi) into the 2 paths (the advance side path and retard side path) from the 2 punctures.
NOTICE:
When applying air pressure, cover the paths with a shop rag to prevent oil splashes.

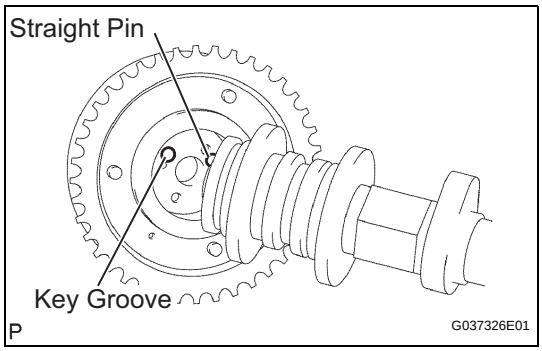


(e) Confirm that the camshaft timing gear revolves in the advance direction when reducing the air pressure on the retard side path.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear reaches the most advanced position, release the air pressure on the retard side path, then release the air pressure on the advance side path.
NOTICE:
If the air pressure on the advance side path is released first, the camshaft timing gear assembly occasionally shifts in the retard direction abruptly. This may damage the lock pin. Be sure to release the air pressure on the retard side path first.



(g) Remove the fringe bolt of the camshaft timing gear.
NOTICE:
Be sure not to remove the other 3 bolts.



INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

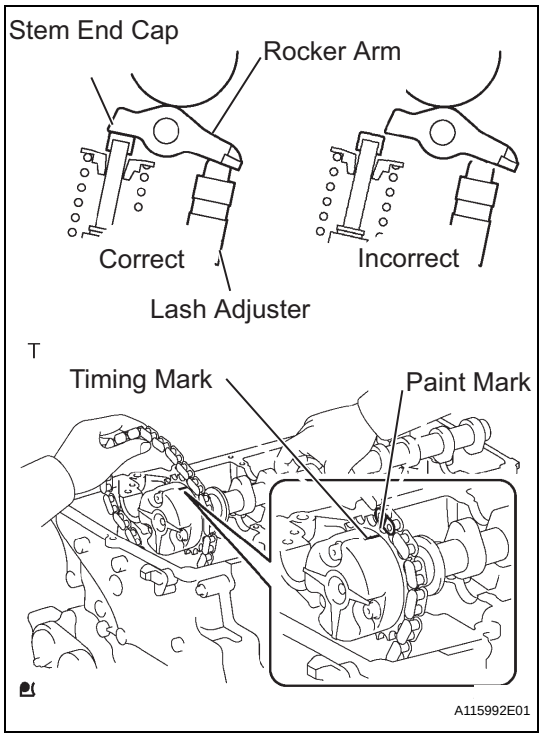
(a) Put the camshaft timing gear and camshaft together by aligning the key groove and straight pin.

(b) Gently press the gear against the camshaft, and turn the gear. Push further at the position where the pin fits into the groove.
CAUTION:
Be sure not to turn the camshaft timing gear to the retard angle side (to the right angle).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 78 N*m (795 kgf*cm, 58 ft.*lbf)

(e) Check that the camshaft timing gear can move to the retard angle side (the right angle), and is locked in the extreme retard position.



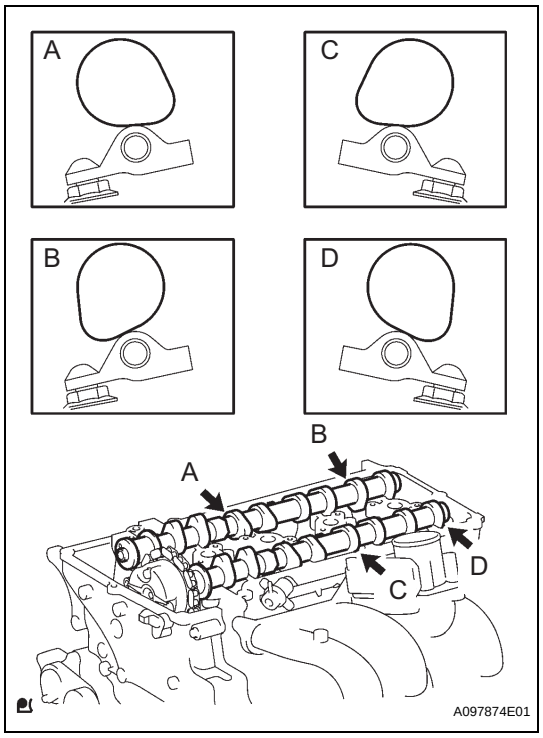
2. INSTALL CAMSHAFT

NOTICE:

Check that the valve rocker arm is correctly set as shown in the illustration.

(a) Apply clean engine oil to the camshaft's cam portion and the cylinder head journals.

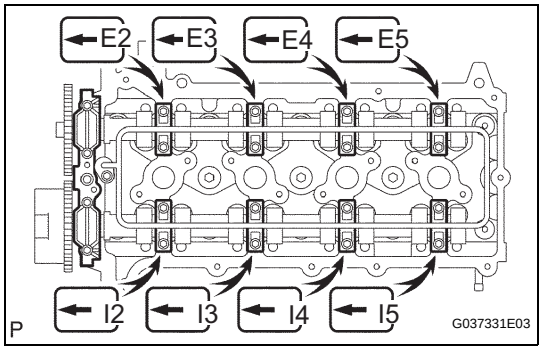
(b) Install the chain onto the camshaft timing gear, with the painted mark of the link aligned with the timing mark of the camshaft timing gear.



(c) Set the 2 camshafts as shown in the illustration.

NOTICE:

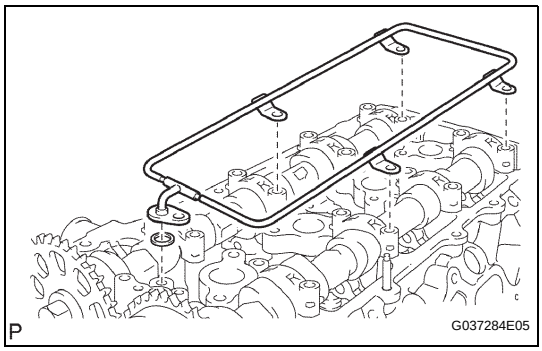
Align the paint mark with the timing mark before setting the camshaft.



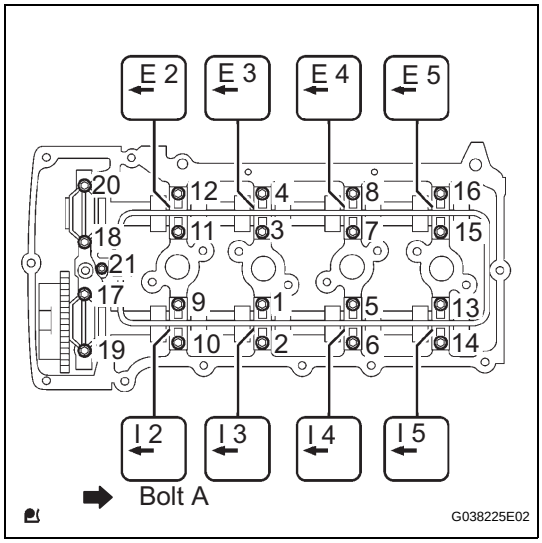
(d) Provisionally install the No. 1 camshaft bearing cap.

(e) Check the proper location of each No. 2 camshaft bearing cap and install each one.

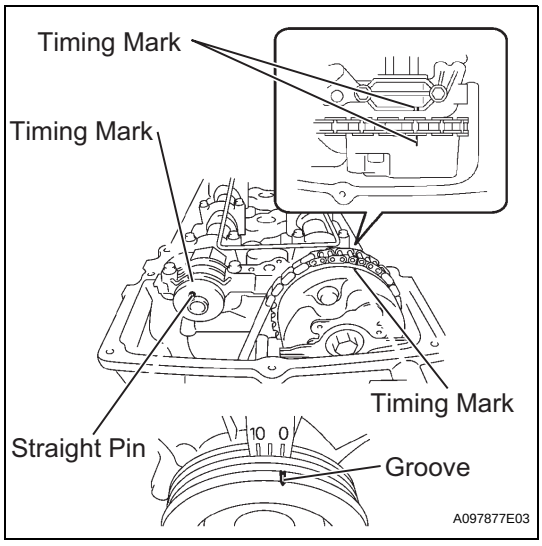
EM



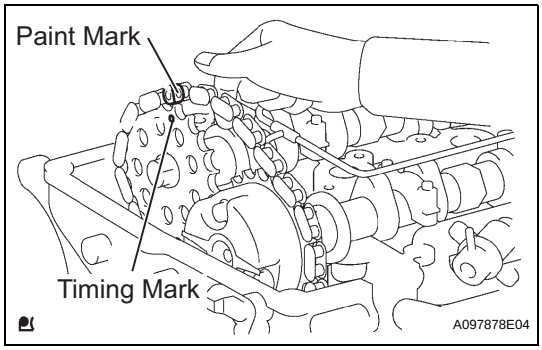
(f) Install a new O-ring onto the No. 1 camshaft bearing cap.
(g) Provisionally install the camshaft oil delivery pipe.



(h) Tighten the bolts in the order shown in the illustration.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf) for bolt A
16 N*m (158 kgf*cm, 11 ft.*lbf) for bolts except bolt A

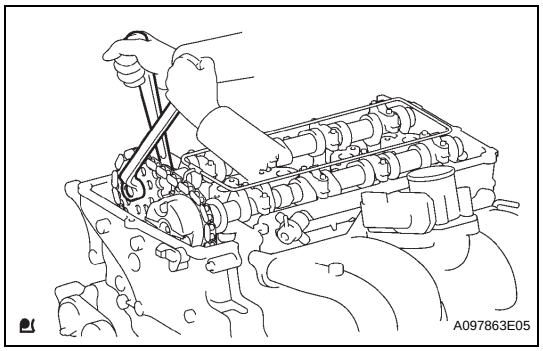


(i) Check that each timing mark is set in the position shown in the illustration.



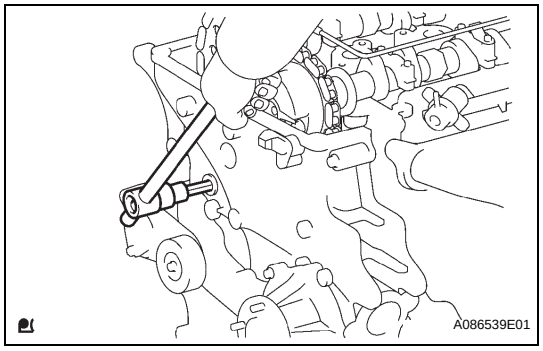
(j) Install the timing chain onto the camshaft timing gear, with the paint mark aligned with the timing mark on the camshaft timing gear.

(k) Align the No. 2 camshaft straight pin and camshaft timing gear straight pin hole. Then install the camshaft timing gear onto the No. 2 camshaft.
NOTICE:
If the straight pin and straight pin hole are difficult to align, slightly rotate the No. 2 camshaft to the left and right using the hexagonal lobe of the camshaft. Then attempt to align them again.



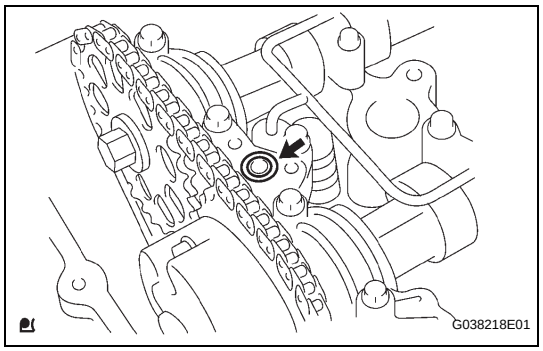
(l) Hold the hexagonal lobe of the No. 2 camshaft with the adjustable wrench.
(m) Tighten the bolt.
Torque: 78 N*m (795 kgf*cm, 58 ft.*lbf)
(n) Remove the 3.0 mm (0.118 in.) diameter bar from the chain tensioner.
(o) Apply adhesive to 2 or 3 threads of the timing gear case with head straight screw plug.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

EM

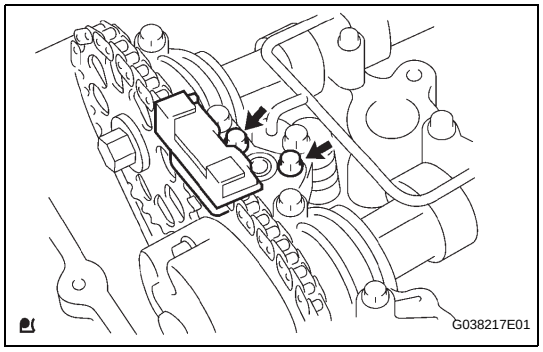


(p) Using a 10 mm socket hexagon wrench, install the timing gear case with head straight screw plug.
Torque: 17 N*m (170 kgf*cm, 12 ft.*lbf)

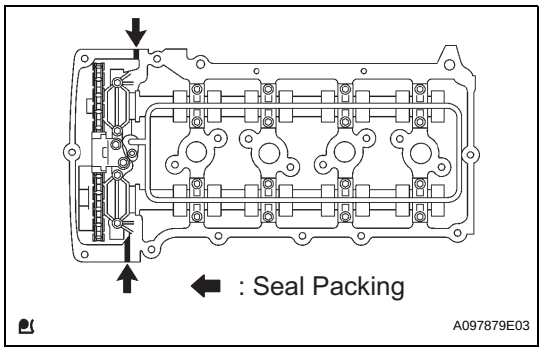
3. INSTALL TIMING CHAIN GUIDE



(a) Install a new O-ring onto the camshaft bearing cap.

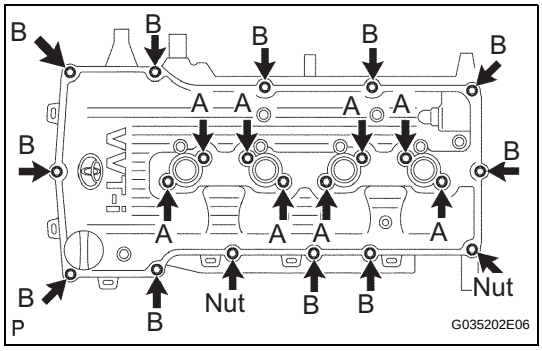


(b) Install the timing chain guide with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

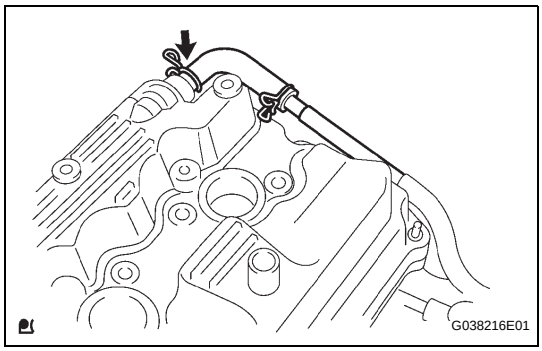


4. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

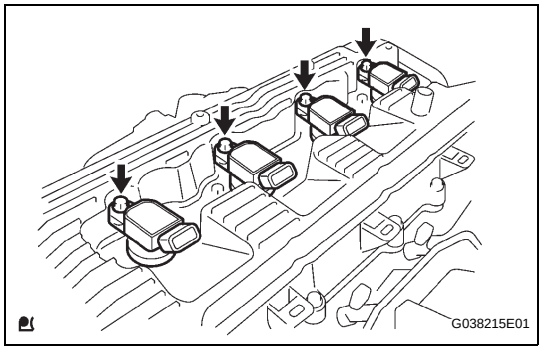
(a) Apply seal packing to the 2 locations shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes of applying the seal packing.**
- **Do not apply engine oil for at least 2 hours of installation.**



(b) Provisionally install the cylinder head cover with the 19 bolts and 2 nuts.
(c) Tighten bolts A shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(d) Tighten bolts B and nuts shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(e) Tighten bolts A again.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

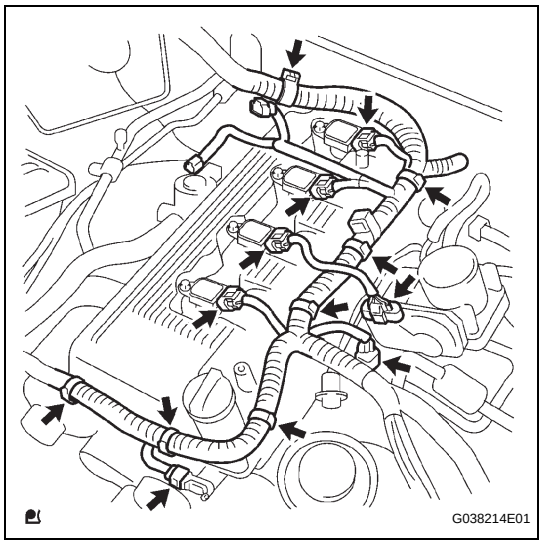


(f) Connect the ventilation hose.



(g) Install the ignition coils with the bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM



(h) Install the engine wire harness clamps.
(i) Connect the camshaft position sensor connector.
(j) Connect the VSV connector.
(k) Connect the throttle with motor body connector.
(l) Connect the ignition coil connectors.

5. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**
6. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page EC-17)**
7. **INSTALL FAN SHROUD (See page CO-18)**
8. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
10. **ADD ENGINE COOLANT (See page CO-3)**
11. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)**
12. **CHECK FOR ENGINE OIL LEAKAGE**
13. **INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
    (a) Install the No. 1 engine under cover with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

REMOVAL

1. **REMOVE HOOD SUB-ASSEMBLY**
2. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
3. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the No. 1 engine under cover.
4. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type, Regular Cab)**
   (a) Remove the 4 bolts, then remove the No. 2 engine under cover.
5. **DRAIN ENGINE OIL (See page LU-3)**
6. **DRAIN ENGINE COOLANT (See page CO-3)**
7. **REMOVE BATTERY**
8. **REMOVE BATTERY TRAY**
9. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
10. **REMOVE FAN SHROUD (See page CO-13)**
11. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page EC-14)**
12. **REMOVE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
13. **REMOVE AIR CLEANER CASE**
    (a) Remove the 3 bolts, then remove the air cleaner case.
14. **SEPARATE VANE PUMP ASSEMBLY (See page EM-21)**
15. **REMOVE NO. 2 RADIATOR HOSE**
16. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning) (See page EM-21)**
17. **REMOVE RADIATOR HOSE INLET**
18. **SEPARATE WATER HOSE SUB-ASSEMBLY (See page EM-92)**
19. **DISCONNECT FUEL HOSE (See page FU-11)**
20. **DISCONNECT NO. 2 FUEL HOSE (See page FU-11)**
21. **SEPARATE FUEL VAPOR FEED HOSE ASSEMBLY (See page EM-93)**
22. **DISCONNECT NO. 1 AIR INJECTION HOSE (See page EM-93)**
23. **DISCONNECT ENGINE WIRE (See page EM-93)**

24. REMOVE EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)

25. REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)

26. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-6
R155F	MT-8

27. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (See page AT-113)

28. REMOVE ENGINE ASSEMBLY (See page EM-98)

29. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

30. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

31. REMOVE FLYWHEEL SUB-ASSEMBLY (for Automatic Transmission) (See page EM-77)

32. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Manual Transmission) (See page EM-78)

33. REMOVE REAR END PLATE

(a) Remove the 2 bolts, then remove the rear end plate.

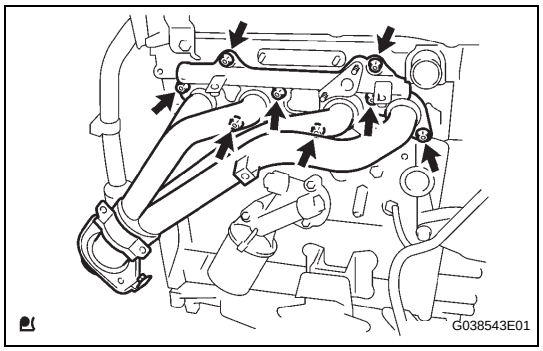
34. REMOVE INTAKE AIR CONNECTOR (See page ES-452)

35. REMOVE GENERATOR ASSEMBLY (See page CH-7)

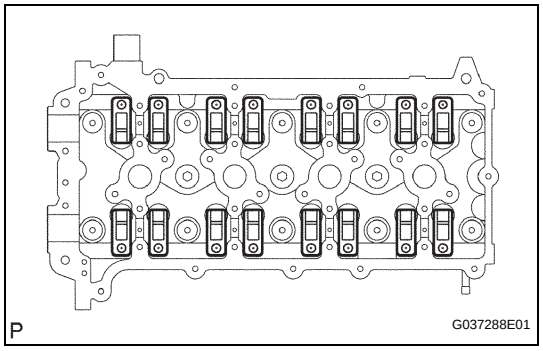
36. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (See page EC-14)

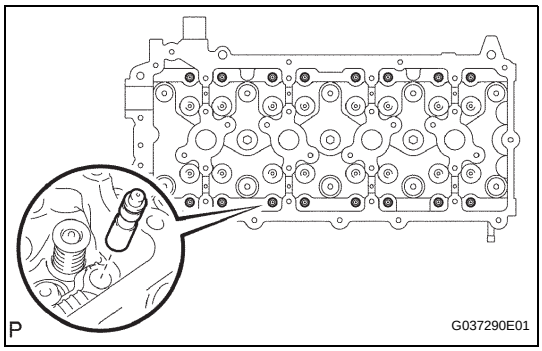
37. REMOVE INTAKE PIPE INSULATOR (See page EC-14)

38. REMOVE AIR SWITCHING VALVE ASSEMBLY (See page EC-15)



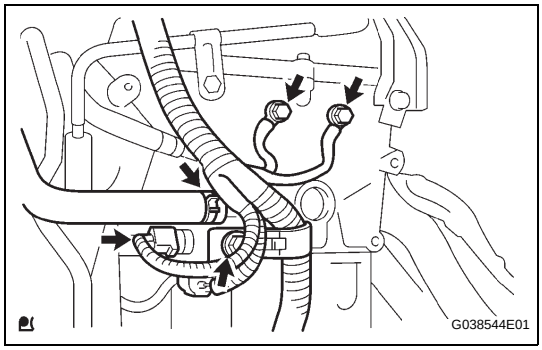
39. **REMOVE EXHAUST MANIFOLD**
    (a) Remove the 8 nuts, then remove the exhaust manifold.
40. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-5)**
41. **REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY (See page EM-23)**
42. **REMOVE IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-446)**
43. **REMOVE CRANKSHAFT POSITION SENSOR (See page ES-444)**
44. **REMOVE CAMSHAFT POSITION SENSOR (See page ES-444)**
45. **REMOVE NO. 1 INTAKE MANIFOLD HEAD GASKET (See page ES-460)**
46. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-38)**
47. **REMOVE CRANKSHAFT PULLEY (See page EM-74)**
48. **REMOVE OIL LEVEL GAGE SUB-ASSEMBLY**
49. **REMOVE NO. 2 OIL PAN SUB-ASSEMBLY (See page EM-24)**
50. **REMOVE OIL STRAINER SUB-ASSEMBLY (See page EM-24)**
51. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-25)**
52. **REMOVE TIMING CHAIN COVER (See page LU-21)**
53. **REMOVE TIMING CHAIN GUIDE (See page EM-25)**
54. **REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-26)**
55. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-26)**
56. **REMOVE NO. 1 CHAIN VIBRATION DAMPER (See page EM-27)**
57. **REMOVE CHAIN SUB-ASSEMBLY**
58. **REMOVE CAMSHAFT (See page EM-40)**
59. **REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY**
    (a) Remove the 16 valve rocker arms.





60. REMOVE VALVE LASH ADJUSTER ASSEMBLY

(a) Remove the valve lash adjuster.



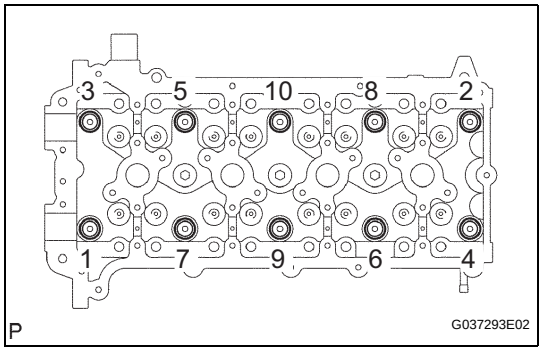
61. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Disconnect the water hose shown in the illustration.

(b) Disconnect the engine coolant temperature sensor connector.

(c) Remove the bolts, then separate the wire harnesses.

(d) Remove the bolt, then separate the wire harness bracket.



(e) Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

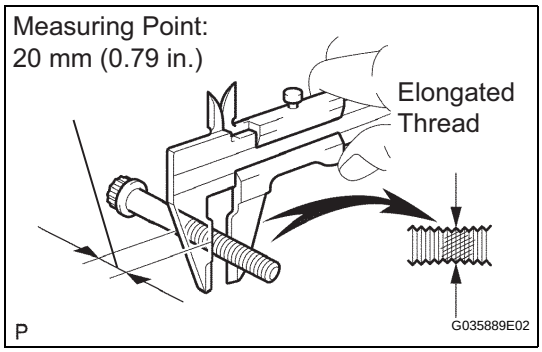
NOTICE:

- **Be careful not to drop the washers into the cylinder head.**
- **Head warpage or cracking could result from removing the bolts in the wrong order.**

62. REMOVE CYLINDER HEAD GASKET

INSPECTION

1. INSPECT CYLINDER HEAD SET BOLT



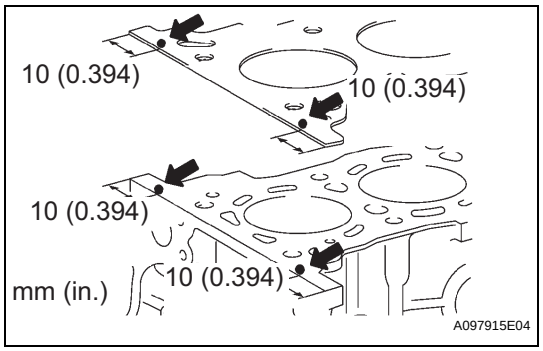
(a) Using vernier calipers, measure the minimum diameter of the elongated thread at the measuring point.

Standard outside diameter:
10.76 to 10.97 mm (0.4236 to 0.4319 in.)

Minimum outside diameter:
10.40 mm (0.4094 in.)

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

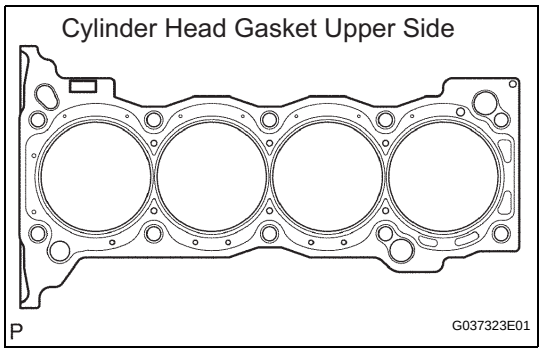


INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

(a) Apply continuous beads of seal packing to the cylinder block upper side and cylinder head gasket upper side as shown in the illustration.

Seal packing:
Part No. 08826-00080 or equivalent
Seal width:
4 to 7 mm (0.15 to 0.28 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes of applying the seal packing.**
- **Install the cylinder head bolt within 15 minutes of applying the seal packing.**
- **Do not pour in engine oil for at least 4 hours after installation.**



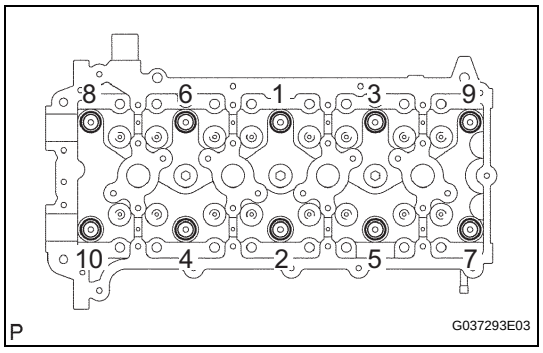
(b) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp facing upward.
NOTICE:
- **Make sure that the cylinder head gasket is installed in the correct direction.**
- **Place the cylinder head gently in order to avoid damaging the gasket with the bottom part of the head.**

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
The cylinder head bolts are tightened in 2 successive steps.

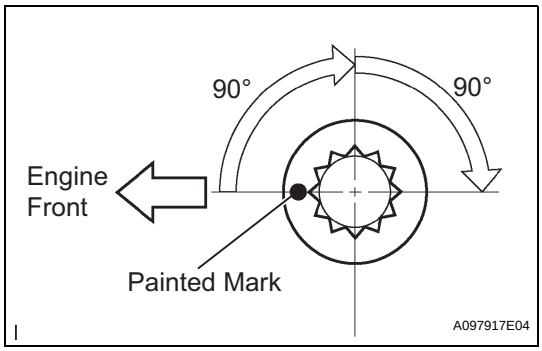
(a) Place the cylinder head on the cylinder block.

(b) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

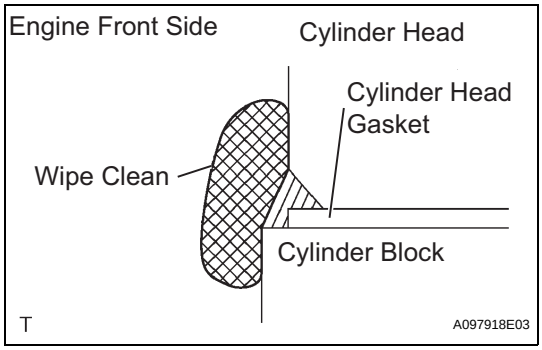


(c) Using several steps, uniformly install and tighten the 10 cylinder head bolts with plate washers with a 10 mm bi- hexagon wrench in the sequence shown in the illustration.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

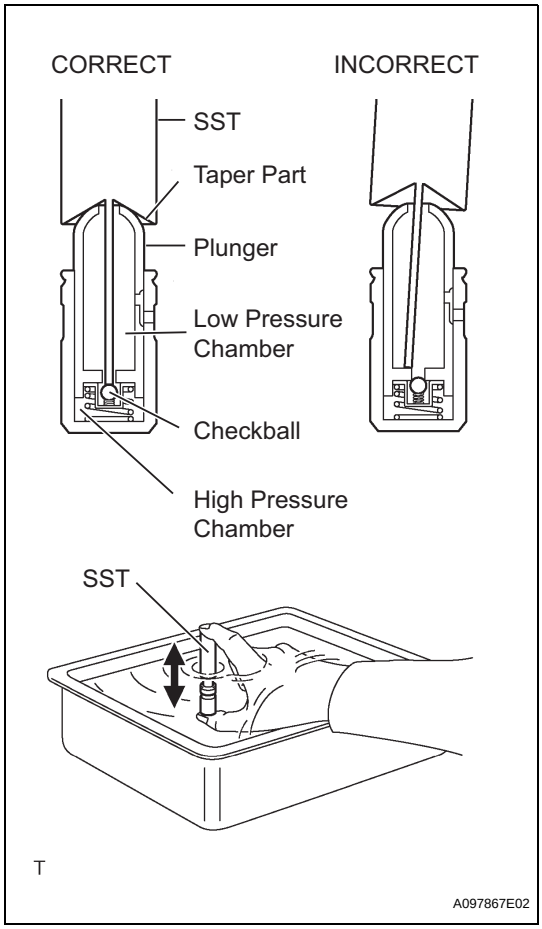
EM



(d) Mark the front of the cylinder head bolt head with paint.
(e) Retighten the cylinder head bolts by 90° in the same order as in step (c).
(f) Retighten the cylinder head bolts by an additional 90°.
(g) Check that the painted mark is at a 180° from the original position.



(h) Seal packing will seep out on the engine's front side. Thoroughly wipe clean any seal packing.
(i) Install the wire harness bracket with the bolt.
(j) Install the wire harness with the bolts.
(k) Connect the engine coolant temperature sensor connector.
(l) Install the water hose.

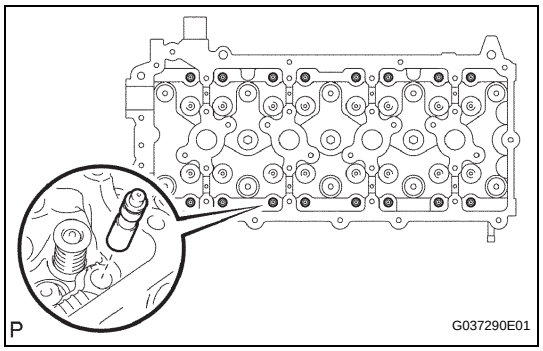


3. INSPECT VALVE LASH ADJUSTER ASSEMBLY

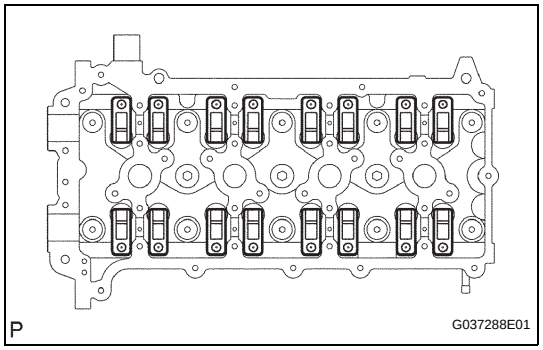
NOTICE:

- **Keep the lash adjuster free from dirt and foreign objects.**
- **Only use clean engine oil.**

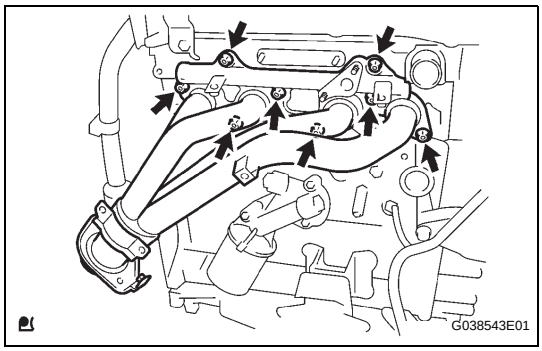
(a) Place the lash adjuster into a container full of engine oil.
(b) Insert the tip of SST into the lash adjuster's plunger and press down the checkball inside the plunger.
SST 09276-75010
(c) Firmly hold SST and lash adjuster together and move the plunger up and down 5 to 6 times.
(d) Check the movement of the plunger and bleed air.
OK:
Plunger moves up and down.
NOTICE:
When bleeding high-pressure air from the compression chamber, make sure that the tip of the SST is actually pressing the checkball as shown in the illustration. If the checkball is not pressed, the air will not bleed.
(e) After bleeding the air, remove SST. Then quickly and firmly press the plunger with a finger.
OK:
Plunger is very difficult to move.
If the result is not as specified, replace the lash adjuster.



4. **INSTALL VALVE LASH ADJUSTER ASSEMBLY**
   (a) Install the valve lash adjuster.



5. **INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY**
   (a) Install the 16 valve rocker arms.
6. **INSTALL CAMSHAFT (See page EM-45)**
7. **INSTALL NO. 1 CHAIN VIBRATION DAMPER (See page EM-30)**
8. **INSTALL CHAIN SUB-ASSEMBLY (See page EM-30)**
9. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-31)**
10. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-31)**
11. **INSTALL TIMING CHAIN GUIDE (See page EM-31)**
12. **INSTALL TIMING CHAIN COVER (See page LU-24)**
13. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-31)**
14. **INSTALL OIL STRAINER SUB-ASSEMBLY (See page EM-32)**
15. **INSTALL NO. 2 OIL PAN SUB-ASSEMBLY (See page EM-32)**
16. **INSTALL OIL LEVEL GAGE SUB-ASSEMBLY**
17. **INSTALL CRANKSHAFT PULLEY (See page EM-75)**
18. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-48)**
19. **INSTALL NO. 1 INTAKE MANIFOLD TO HEAD GASKET (See page ES-463)**
20. **INSTALL CAMSHAFT POSITION SENSOR (See page ES-444)**
21. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-444)**
22. **INSTALL IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-448)**
23. **INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY (See page EM-33)**
24. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-6)**



25. **INSTALL EXHAUST MANIFOLD**
    (a) Install a new gasket and the exhaust manifold with 8 new nuts.
    Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
26. **INSTALL AIR SWITCHING VALVE ASSEMBLY (See page EC-16)**
27. **INSTALL INTAKE PIPE INSULATOR (See page EC-16)**
28. **INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (See page EC-16)**
29. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**
30. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**
31. **INSTALL REAR END PLATE**
    (a) Install the rear end plate with the 2 bolts.
    Torque: 18 N*m (178 kgf*cm, 13 ft.*lbf)
32. **INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-79)**
33. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-79)**
34. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32
R155F	CL-37

35. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32
R155F	CL-37

36. **INSTALL ENGINE ASSEMBLY (See page EM-98)**
37. **INSTALL AUTOMATIC TRANSMISSION ASSEMBLY** (See page ED-7)
38. **INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY**

Transmission	See page
R155	MT-9
R155F	MT-11

39. **INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page CH-13)**
40. **INSTALL EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)**
41. **CONNECT ENGINE WIRE**
42. **CONNECT NO. 1 AIR INJECTION HOSE (See page EM-99)**

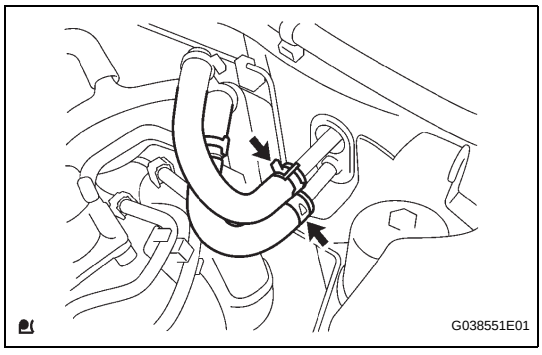
EM

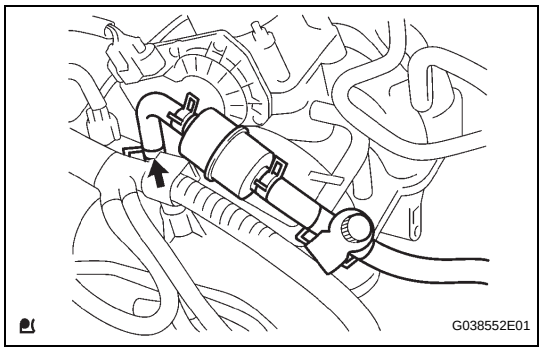
43. **CONNECT FUEL VAPOR FEED HOSE ASSEMBLY**
44. **CONNECT NO. 2 FUEL HOSE (See page FU-17)**
45. **CONNECT FUEL HOSE (See page FU-17)**
46. **INSTALL WATER HOSE SUB-ASSEMBLY (See page EM-99)**
47. **INSTALL RADIATOR HOSE INLET**
48. **INSTALL COMPRESSOR AND MAGNETIC CLUTCH (With Air Conditioning) (See page EM-34)**
49. **INSTALL NO. 2 RADIATOR HOSE**
50. **INSTALL VANE PUMP ASSEMBLY (See page EM-34)**
51. **INSTALL AIR CLEANER CASE**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
52. **INSTALL AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
53. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page EC-17)**
54. **INSTALL FAN SHROUD (See page CO-18)**
55. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)**
56. **INSTALL BATTERY TRAY**
57. **INSTALL BATTERY**
58. **ADD ENGINE OIL (See page LU-4)**
59. **ADD ENGINE COOLANT (See page CO-3)**
60. **CHECK ENGINE OIL LEVEL**
61. **CHECK FOR FUEL LEAKAGE**
62. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)**
63. **CHECK FOR OIL LEAKAGE**
64. **CHECK FOR EXHAUST GAS LEAKAGE**
65. **INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
    (a) Install the No. 1 engine under cover with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
66. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type, Regular Cab)**
    (a) Install the No. 2 engine under cover with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
67. **INSTALL HOOD SUB-ASSEMBLY**
    (See page ED-7)

EM

REMOVAL

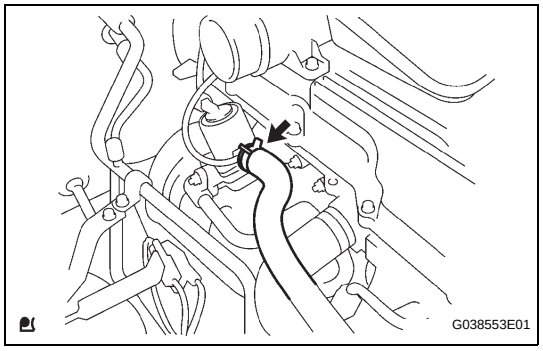
1. **REMOVE HOOD SUB-ASSEMBLY**
2. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
3. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
   (a) Remove the 4bolts, then remove the engine under cover No.1.
4. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type, Regular Cab)**
   (a) Remove the 4 bolts, then remove engine cover No.2.
5. **DRAIN ENGINE COOLANT (See page CO-3)**
6. **REMOVE BATTERY**
7. **REMOVE BATTERY TRAY**
8. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
9. **REMOVE FAN SHROUD (See page CO-13)**
10. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page EC-14)**
11. **REMOVE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
12. **REMOVE AIR CLEANER CASE**
    (a) Remove the 3 bolts, then remove the air cleaner case.
13. **SEPARATE VANE PUMP (See page EM-21)**
14. **REMOVE NO. 2 RADIATOR HOSE**
15. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning System) (See page EM-21)**
16. **REMOVE RADIATOR HOSE INLET**
17. **SEPARATE WATER HOSE SUB-ASSEMBLY**
    (a) Separate the water hoses.
18. **DISCONNECT FUEL HOSE (See page FU-11)**
19. **DISCONNECT NO. 2 FUEL HOSE (See page FU-11)**





20. SEPARATE FUEL VAPOR FEED HOSE ASSEMBLY

(a) Disconnect the fuel vapor feed hose.



21. DISCONNECT NO. 1 AIR INJECTION HOSE

(a) Disconnect the No.1 air injection hose.

22. DISCONNECT ENGINE WIRE

(a) Disconnect the connector from the ECM, then pull the engine wire harness to the compartment side.
NOTICE:
Do not forcibly pull the wire harness to the engine compartment side.

(b) Disconnect all wire harnesses and connectors in the engine room.

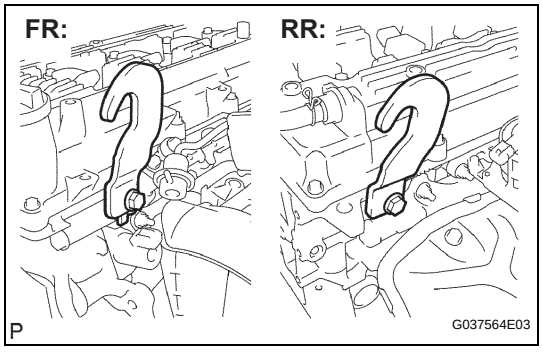
23. REMOVE EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)

24. REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)

25. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-6
R155F	MT-8

26. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY
(See page AT-113)

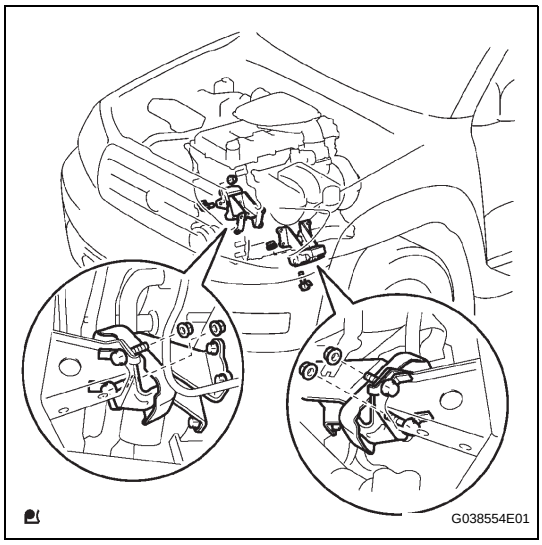


27. REMOVE ENGINE ASSEMBLY

(a) Install the engine hanger with the bolt.
Torque: 42 N*m (420 kgf*cm, 30 ft.*lbf)
Part No

Part Name	Part No.
Engine hanger	12281-75040
Bolt	91552-A1020

NOTICE:
Be sure to use the bolts when installing the engine hanger.



(b) Attach the engine sling device and chain block to the engine hangers.
(c) Remove the 4 bolts and 4 nuts.
(d) Lift the engine out of the vehicle slowly and carefully by operating the engine sling device and chain block.

NOTICE:
Make sure that no wires, hoses or cables are connected to the engine.

28. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

29. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

30. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-77)

31. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-78)

32. REMOVE REAR END PLATE (See page EM-66)

33. REMOVE INTAKE AIR CONNECTOR (See page ES-452)

34. REMOVE FUEL HOSE (See page FU-11)

35. REMOVE NO. 2 FUEL HOSE (See page FU-11)

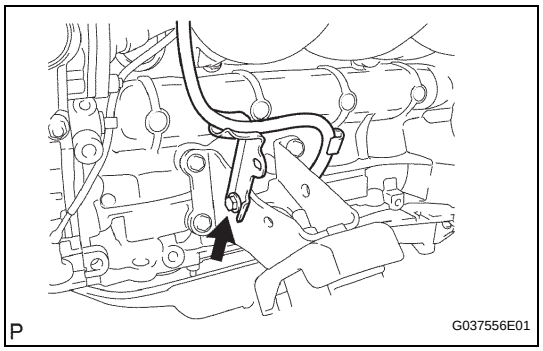
36. REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-453)

37. REMOVE NO. 1 INTAKE MANIFOLD TO HEAD GASKET (See page ES-460)

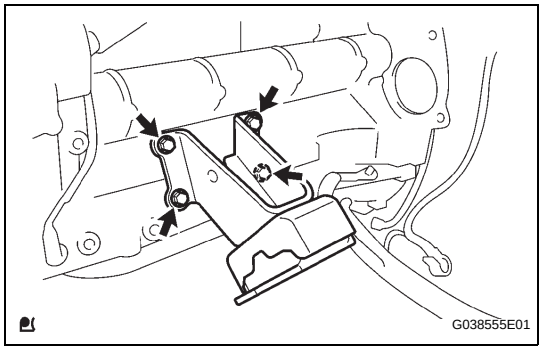
38. REMOVE IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-446)

39. REMOVE ENGINE WIRE

40. REMOVE OIL LEVEL GAGE SUB-ASSEMBLY



41. **REMOVE OIL LEVEL GAGE GUIDE**
    (a) Remove the bolts, then remove the oil level gage guide.

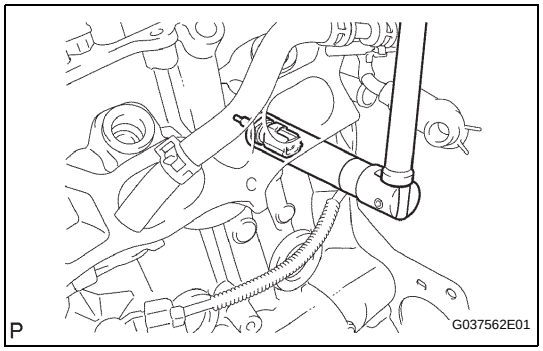


42. **REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET**
    (a) Remove the 4 bolts, then remove the engine mounting bracket front No. 1 LH with engine mounting insulator front.

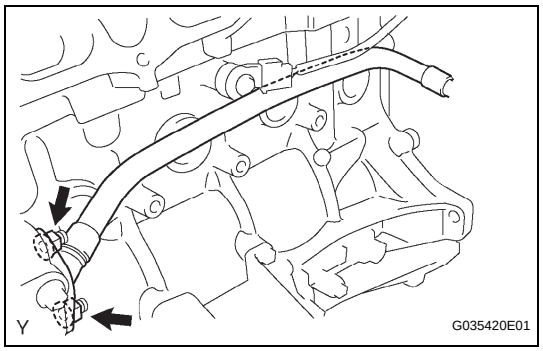
43. **REMOVE THERMOSTAT (See page CO-7)**

44. **REMOVE FUEL INJECTOR ASSEMBLY (See page FU-13)**

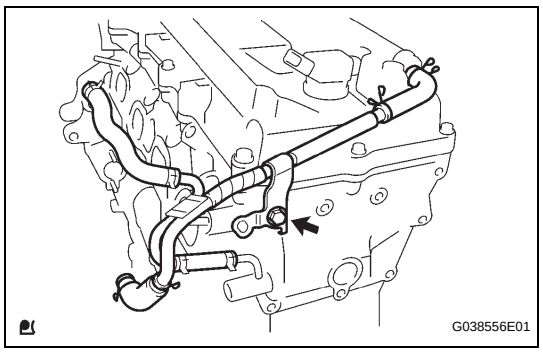
45. **REMOVE KNOCK SENSOR (See page ES-462)**



46. **REMOVE ENGINE COOLANT TEMPERATURE SENSOR**
    (a) Using a 19 mm deep socket wrench, remove the engine coolant temperature sensor.



47. **REMOVE NO. 1 WATER BY-PASS PIPE**
    (a) Remove the 2 nuts, then remove the water by-pass pipe No. 1.



48. **REMOVE VENTILATION PIPE**
    (a) Remove the bolts, then remove the ventilation pipe.

49. **REMOVE IGNITION COIL ASSEMBLY**
    (See page EM-38)

50. **REMOVE SPARK PLUG**

51. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**

52. **REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY (See page EM-23)**

EM

53. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-5)

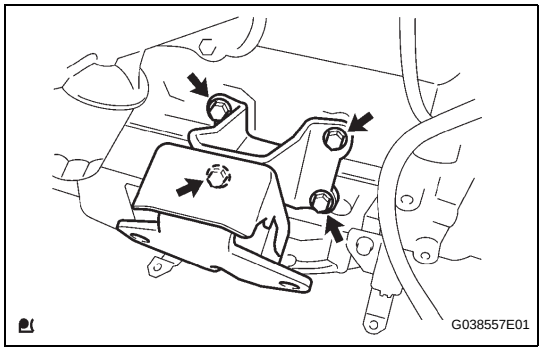
54. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (See page EC-14)

55. REMOVE AIR SWITCHING VALVE ASSEMBLY (See page EC-15)

56. REMOVE EXHAUST MANIFOLD (See page EM-67)

57. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET RH

(a) Remove the 4 bolts, then remove the engine mounting bracket front No. 1 together with the engine mounting insulator front.

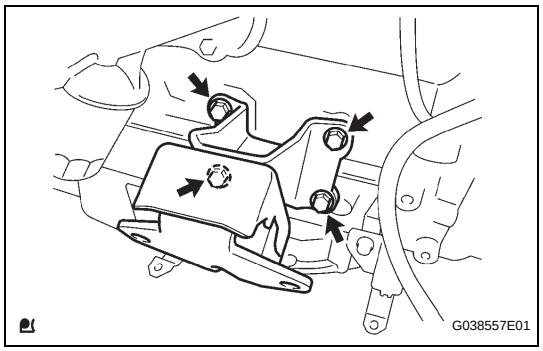


58. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

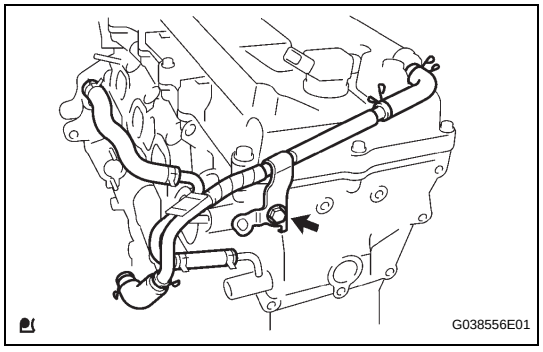
(See page LU-1)

INSTALLATION

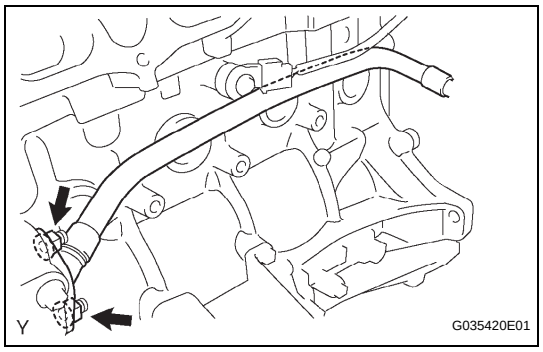
1. **INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY**
   (See page LU-1)



2. **INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET RH**
   (a) Install the engine mounting bracket front No. 1 RH with the 4 bolts.
   Torque: 51 N*m (520 kgf*cm, 38 ft.*lbf)
3. **INSTALL EXHAUST MANIFOLD (See page EM-72)**
4. **INSTALL AIR SWITCHING VALVE ASSEMBLY (See page EC-16)**
5. **INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (See page EC-16)**
6. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-6)**
7. **INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY (See page EM-33)**
8. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**
9. **INSTALL SPARK PLUG**
   Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
10. **INSTALL IGNITION COIL ASSEMBLY**
    (See page EM-69)

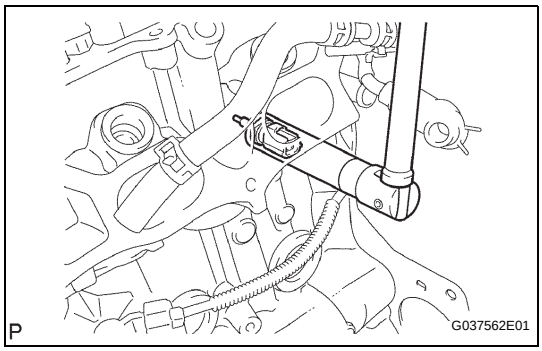


11. **INSTALL VENTILATION PIPE**
    (a) Install the ventilation pipe with the bolt.
    Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

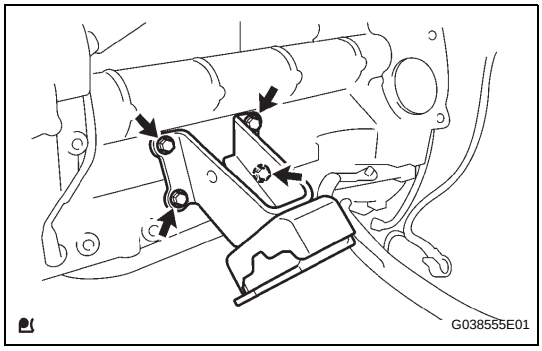


12. **INSTALL NO. 1 WATER BY-PASS PIPE**
    (a) Install a new gasket, then install the water by-pass pipe No. 1.
    Torque: 18 N*m (178 kgf*cm, 13 ft.*lbf)

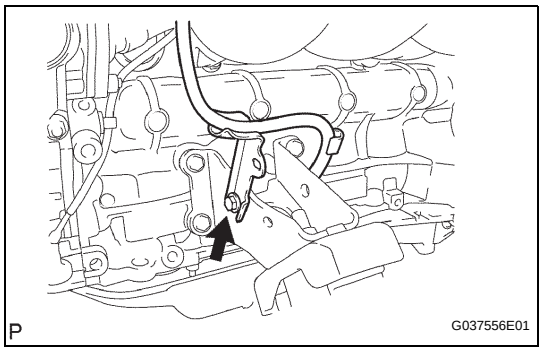
EM



13. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
    (a) Install a new gasket onto the engine coolant temperature sensor.
    (b) Using a 19 mm deep socket wrench, install the engine coolant temperature sensor.
    Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
14. **INSTALL KNOCK SENSOR (See page ES-462)**
15. **INSTALL FUEL INJECTOR ASSEMBLY (See page FU-15)**
16. **INSTALL THERMOSTAT (See page CO-8)**



17. **INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET LH**
    (a) Install engine mounting bracket front No. 1 LH with the 4 bolts.
    Torque: 51 N*m (520 kgf*cm, 38 ft.*lbf)



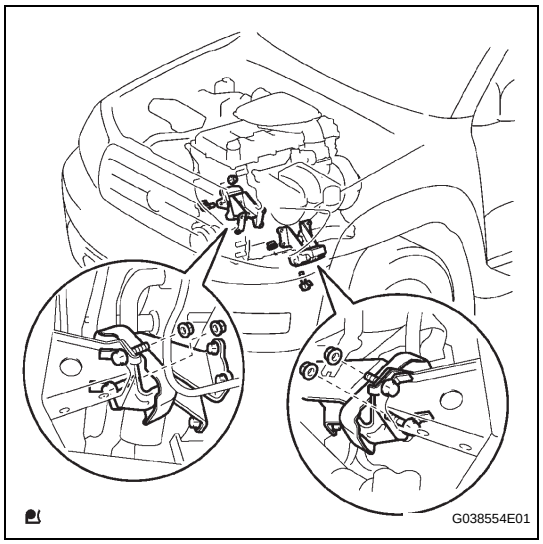
18. **INSTALL OIL LEVEL GAGE GUIDE**
    (a) Install the oil level gage guide with the bolt.
    Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
19. **INSTALL OIL LEVEL GAGE SUB-ASSEMBLY**
20. **INSTALL ENGINE WIRE**
21. **INSTALL IDLE PULLEY ASSEMBLY WITH BRACKET (w/ Air Conditioning System) (See page ES-448)**
22. **INSTALL NO. 1 INTAKE MANIFOLD TO HEAD GASKET (See page ES-463)**
23. **INSTALL THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-454)**
24. **INSTALL NO. 2 FUEL HOSE (See page FU-17)**
25. **INSTALL FUEL HOSE (See page FU-17)**
26. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**
27. **INSTALL REAR END PLATE (See page EM-72)**
28. **INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-79)**
29. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-79)**
30. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32

Transmission	See page
R155F	CL-37

31. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-32
R155F	CL-37



32. INSTALL ENGINE ASSEMBLY

(a) Attach the engine sling device and chain block to the engine hangers.

(b) Keep the engine level, and align the engine mounting bracket front No. 1 RH w/ engine mounting insulator front and LH with the body mountings.

(c) Attach the engine mounting bracket front No. 1 RH w/ engine mounting insulator front and LH, and install the 4 bolts and nuts.

Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)

(d) Remove the bolts, then remove the engine hangers.

33. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY
(See page ED-7)

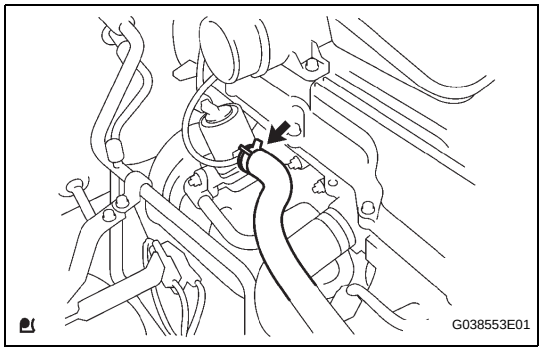
34. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-9
R155F	MT-11

35. INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)

36. INSTALL EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)

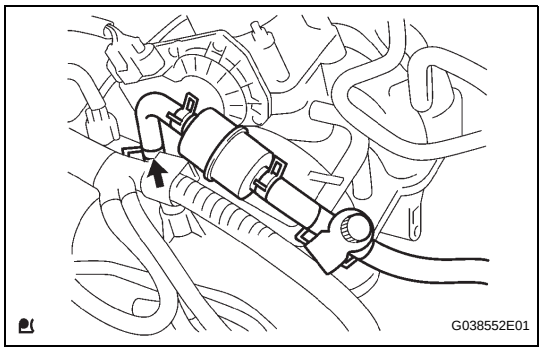
37. INSTALL ENGINE WIRE



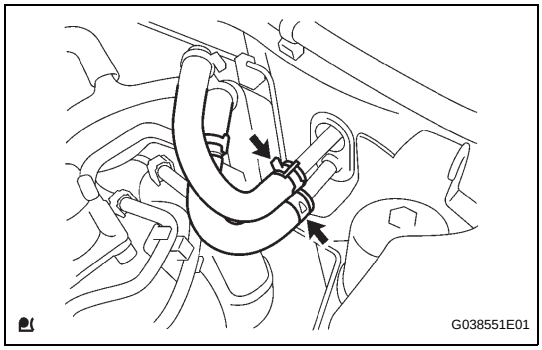
38. CONNECT NO. 1 AIR INJECTION HOSE

(a) Connect the fuel vapor feed hose.

EM



39. **CONNECT FUEL VAPOR FEED HOSE ASSEMBLY**
    (a) Connect the fuel feed hose.
40. **CONNECT NO. 2 FUEL HOSE (See page FU-17)**
41. **CONNECT FUEL HOSE (See page FU-17)**



42. **INSTALL WATER HOSE SUB-ASSEMBLY**
    (a) Install the water hose.
43. **INSTALL RADIATOR HOSE INLET**
44. **INSTALL COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning System) (See page EM-34)**
45. **INSTALL NO. 2 RADIATOR HOSE**
46. **INSTALL VANE PUMP ASSEMBLY (See page EM-34)**
47. **INSTALL AIR CLEANER CASE**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
48. **INSTALL AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
49. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page EC-17)**
50. **INSTALL FAN SHROUD (See page CO-18)**
51. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)**
52. **INSTALL BATTERY TRAY**
53. **INSTALL BATTERY**
54. **ADD ENGINE COOLANT (See page CO-3)**
55. **ADD ENGINE OIL (See page LU-4)**
56. **CHECK FOR ENGINE OIL LEVEL**
57. **CHECK FOR FUEL LEAKAGE**
58. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)**
59. **CHECK FOR OIL LEAKAGE**
60. **CHECK FOR EXHAUST GAS LEAKAGE**
61. **INSPECT IGNITION TIMING (See page EM-1)**
62. **INSPECT ENGINE IDLE SPEED (See page EM-2)**
63. **INSPECT CO/HC (See page EM-3)**

64. **INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
    (a) Install the engine under cover No. 1 with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

65. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type, Regular Cab)**
    (a) Install the engine under cover No. 2 with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

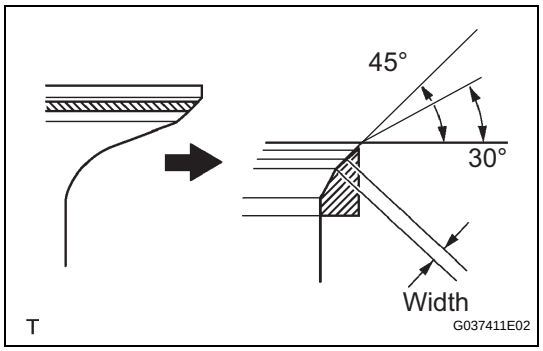
66. **INSTALL HOOD SUB-ASSEMBLY**
    (See page ED-7)

REPAIR

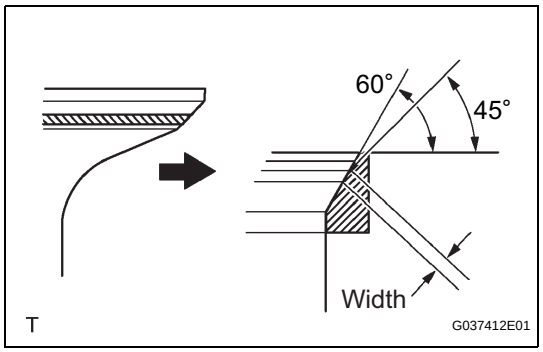
1. REPAIR INTAKE VALVE SEAT

NOTICE:

Keep the lip free from foreign matter.



(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.



(b) If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.

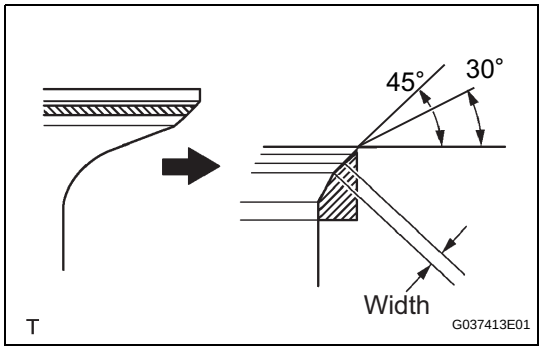
(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

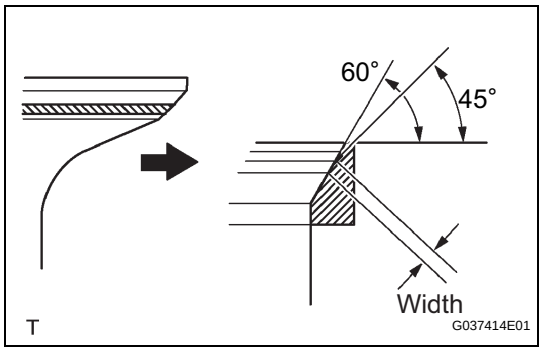
2. REPAIR EXHAUST VALVE SEAT

NOTICE:

Keep the lip free from foreign matter.



(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

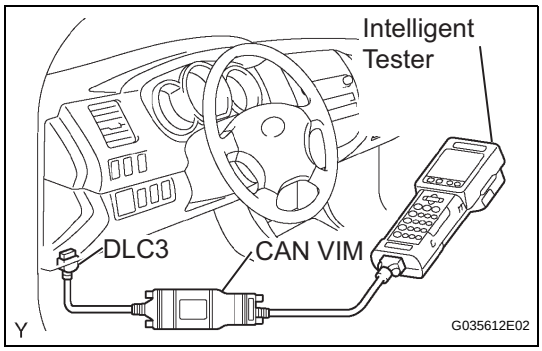


(b) If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.

(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

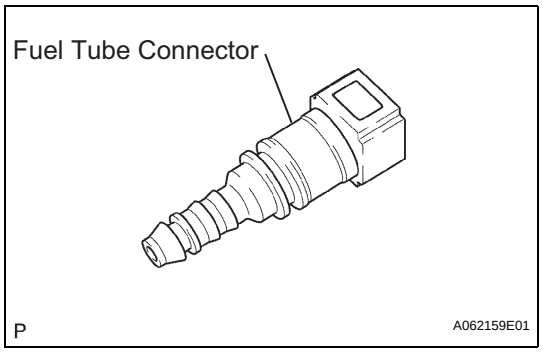
EM



ON-VEHICLE INSPECTION

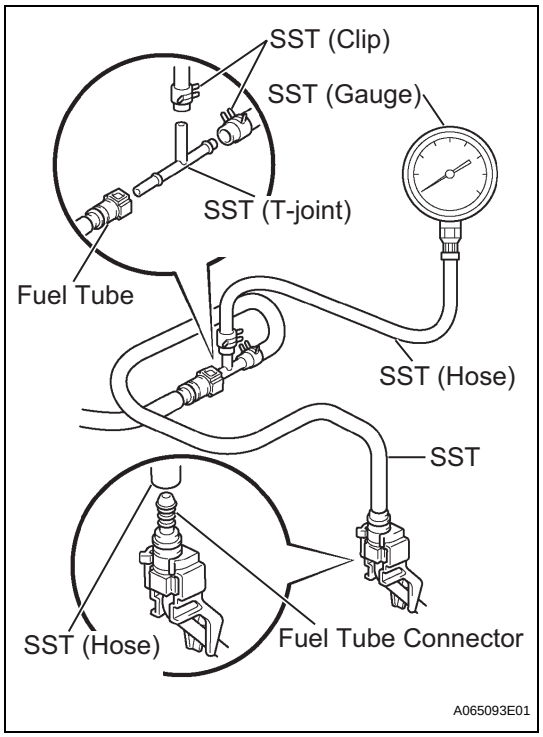
1. CHECK FUEL PUMP

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
NOTICE:
Do not start the engine.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
(e) Check the fuel operation by operating it with the intelligent tester.
If the fuel pump does not operate, replace the fuel pump.



2. CHECK FUEL PRESSURE

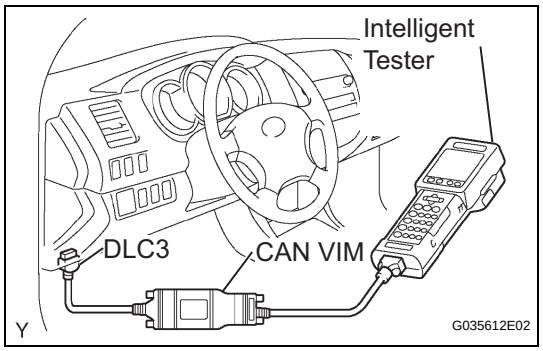
(a) Prepare for the inspection.
(1) Prepare a new fuel tube.
HINT:
Part No. 23801-0P010
(2) Using a cutter knife, cut the fuel tube protector. Tear the protector by hand, then remove the fuel tube connector.
NOTICE:
If the protector is cut too deeply with the cutter, the O-ring of the fuel tube connector will be damaged.
(b) Discharge the fuel pressure system (see page FU-1).
(c) Using a voltmeter, measure the battery voltage.
Standard:
9.0 to 14 V
(d) Disconnect the battery negative terminal.
(e) Disengage the fuel pipe clamp (see page FU-1).
(f) Disconnect the fuel pipe No. 1.



(g) Install SST and the fuel tube connector onto the vehicle.
SST 09268-41048 (90467-13001, 95336-08070, 09268-41500), 09268-45014 (09268-41200, 09268-41220, 09268-41250)

(h) Wipe off any spilt gasoline.

(i) Connect the cable to the battery negative terminal.
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



(j) Connect the intelligent tester to the DLC3.

(k) Turn the ignition switch to ON.

(l) Turn the intelligent tester ON.

(m) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / ACTIVE TEST / FUEL PUMP / SPD / ON.

(n) Measure the fuel pressure.
Standard:

281 to 287 kPa (2.87 to 2.93 kgf/cm^2, 40.8 to 41.7 psi)

- If the fuel pressure is greater than the standard value, replace the fuel pump.
- If the fuel pressure is less than the standard value, check the connection between the fuel hose and fuel pump.

(o) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / ACTIVE TEST / FUEL PUMP / SPD / OFF.

(p) Check that the fuel pressure does not change for 5 minutes.
Standard:

147 kPa (1.5 kgf/cm^2, 21 psi)

If the result is not as specified, check the fuel pump and fuel injector.

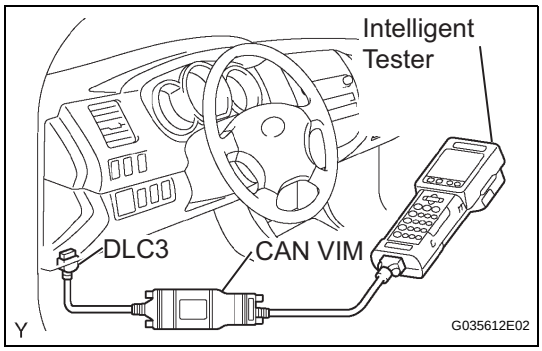
(q) Disconnect the intelligent tester from the DLC3.

(r) Disconnect the cable from the battery negative terminal.

(s) Remove SST and the fuel tube connector while being careful to prevent gasoline splashes.

(t) Connect the fuel tube.

FU

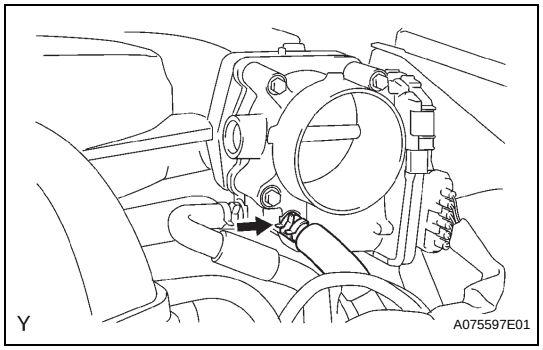


3. CHECK FOR FUEL LEAKAGE

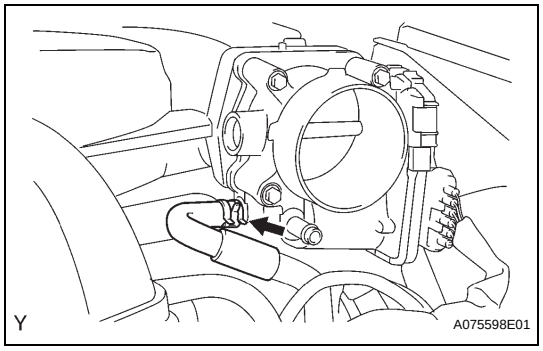
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
NOTICE:
Do not start the engine.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD / ON.
(e) Check that there are no leakage in the fuel system.

REMOVAL

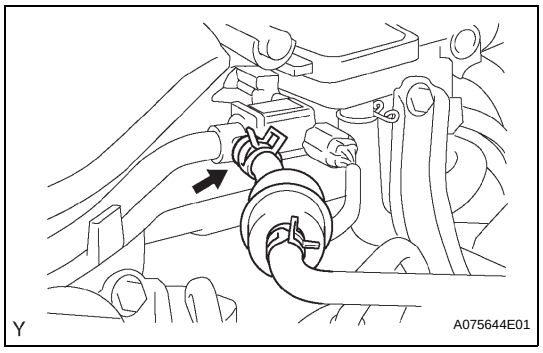
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **REMOVE V-BANK COVER (See page ES-414)**
5. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
6. **REMOVE INTAKE AIR SURGE TANK**
   (a) Disconnect the water by-pass hose No. 5.

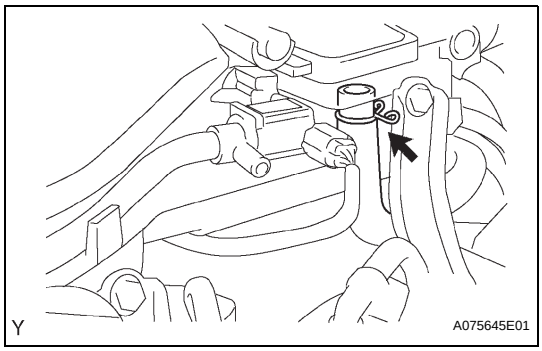


(b) Disconnect the water by-pass hose No. 4.

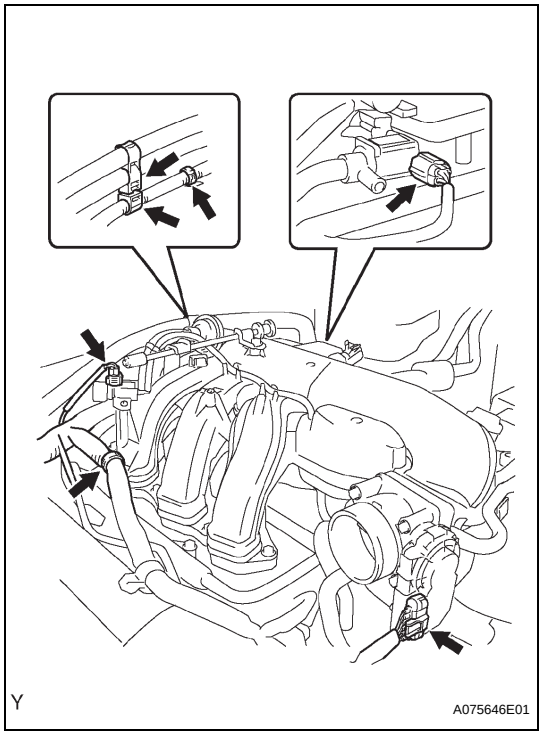


(c) Disconnect the fuel vapor feed hose.

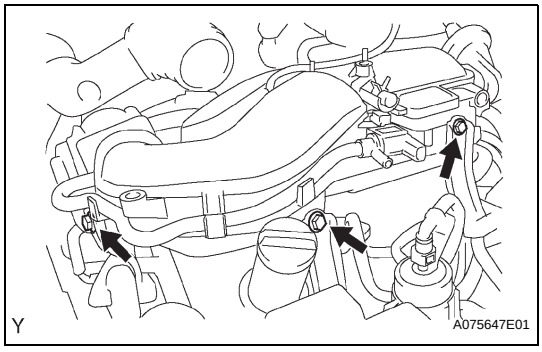




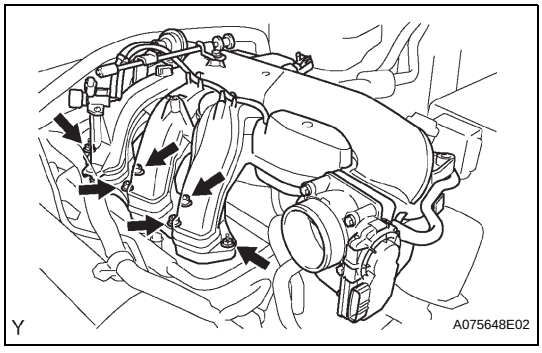
(d) Disconnect the ventilation hose.



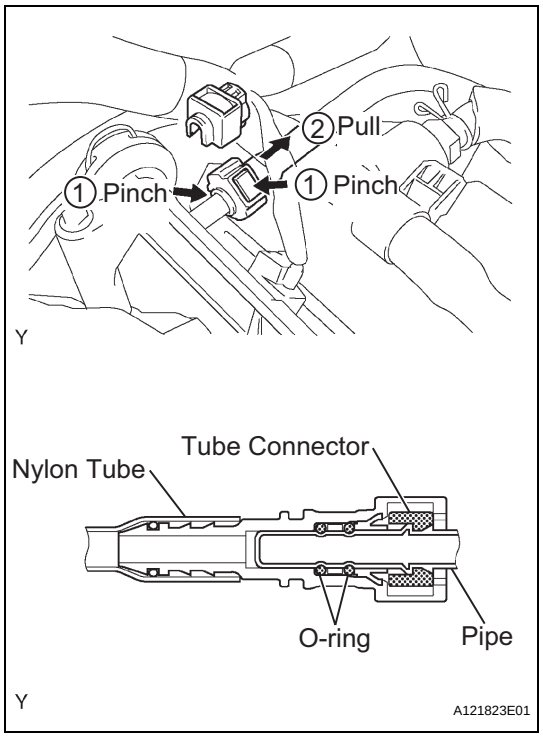
(e) Disconnect the 2 VSV connectors.
(f) Disconnect the throttle motor connector.
(g) Remove the 3 wire harness clamps and hose clamp.



(h) Remove the 3 upper bolts which are used to secure the 2 surge tank stays and throttle body bracket.



(i) Using an 8 mm socket hexagon wrench, remove the 4 bolts.
(j) Remove the 2 nuts, then remove the intake air surge tank and gasket.



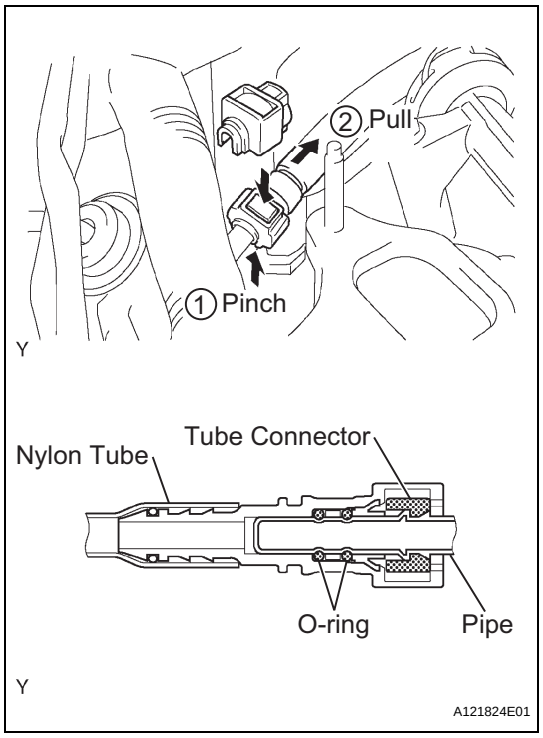
7. DISCONNECT NO.1 FUEL PIPE SUB-ASSEMBLY

(a) Remove the fuel pipe clamp.

(b) Pinch the tube connector, and then pull the fuel pipe out of the pipe as shown in the illustration.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**



8. DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY

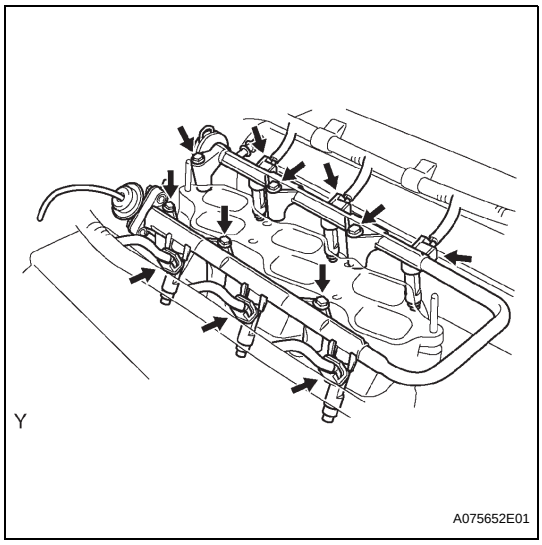
(a) Remove the fuel pipe clamp.

(b) Pinch the tube connector, and then pull the fuel pipe out of the pipe as shown in the illustration.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

FU



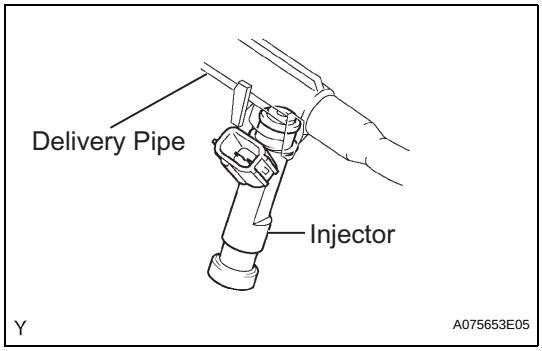
9. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Disconnect the 6 fuel injector connectors.

(b) Remove the 6 bolts and fuel delivery pipe together with the 6 fuel injectors.

NOTICE:

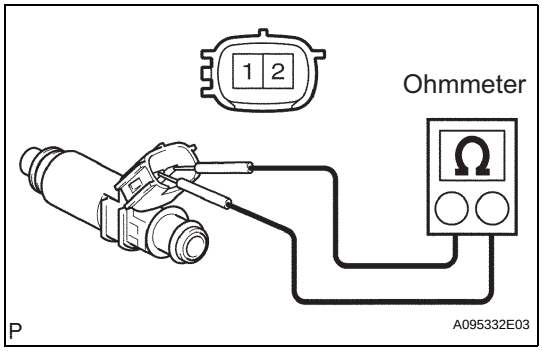
Be careful not to drop the injectors when removing the fuel delivery pipe.



10. REMOVE FUEL INJECTOR

(a) Pull the 6 injectors out of the delivery pipe.

INSPECTION



1. INSPECT FUEL INJECTOR ASSEMBLY

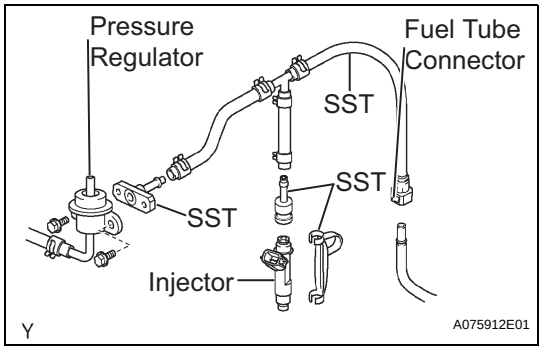
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
1 -2	11.6 to 12.4 Ωat 20°C (68°F)

If the result is not as specified, replace the fuel injector.



(b) Check the injection volume.

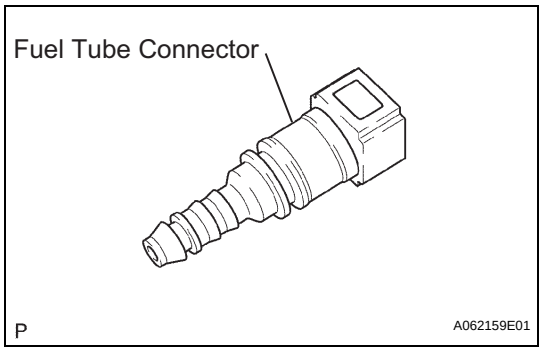
NOTICE:

- **Perform the test in a well-ventilated area and watch out for flames.**
- **Handle the fuel tube connector carefully.**

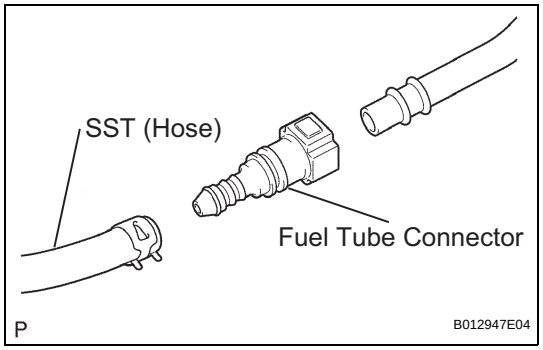
(1) Prepare a new fuel tube.

HINT:

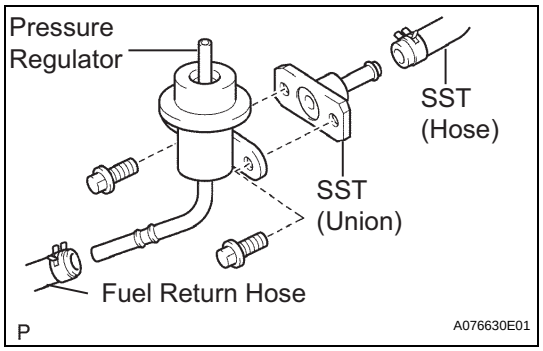
Part No. 23801-0P010



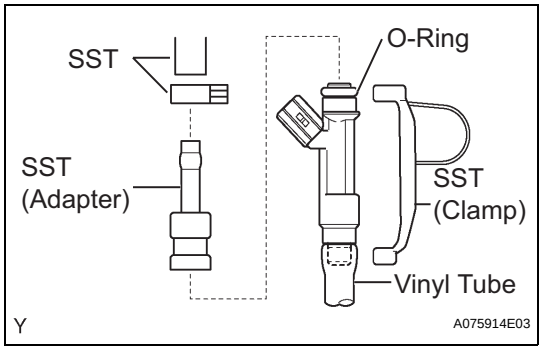
(2) Using a cutter knife, cut the fuel tube protector. Tear the protector by hand, then remove the fuel tube connector.
NOTICE:
If the protector is cut too deeply with the cutter, the O-ring of the fuel tube connector will be damaged.



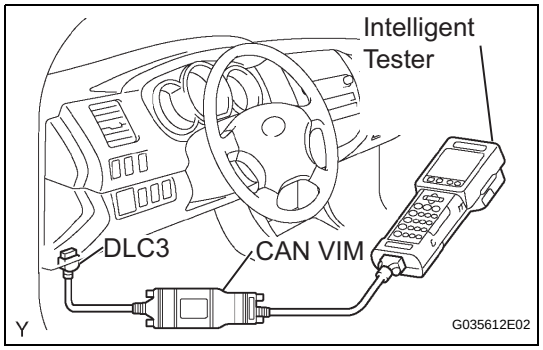
(3) Install the fuel tube connector into SST (hose), then connect the tube connector to the fuel pipe.
SST 09268-41047 (95336-08070)
CAUTION:
Connect the fuel tube connector (quick type) after observing the precautions.
(4) Remove the pressure regulator(see page 11-40).
(5) Install the O-ring onto the fuel inlet of the pressure regulator.



(6) Connect SST (hose) to the fuel inlet of the pressure regulator with another SST (union) and the 2 bolts.
SST 09268-41047 (95336-08070, 09268-41091)
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(7) Connect the fuel return hose to the fuel outlet of the pressure regulator.

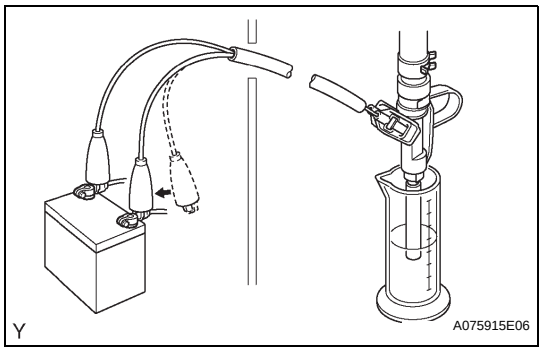


(8) Install a new O-ring onto the injector.
(9) Connect SST (adaptor and hose) to the injector and hold the injector and union with SST (clamp).
SST 09268-41047 (95336-08070), 09268-41140, 09268-41400
(10) Set the injector in a graduated cylinder.
CAUTION:
Install a suitable vinyl tube onto the injector to prevent gasoline splashes.



(11) Connect the intelligent tester to the DLC3.
(12) Turn the ignition switch to ON.
(13) Turn the intelligent tester ON.
(14) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / ACTIVE TEST / FUEL PUMP / SPD / ON.
(15) Install SST onto the fuel injector.
SST 09842-30080

FU



(16) Connect SST to the battery, then measure the injection volume for 15 seconds. Perform the inspection 2 or 3 times, then calculate the average.

Standard:

Injection Volume	Difference Between Each Fuel Injector
76 to 91 cm^3 (4.6 to 5.5 cu in.) per 15 seconds	15 cm^3 (0.9 cu in.) or less

NOTICE:

Always do the switching at the battery side.

If the result is not as specified, replace the fuel injector.

(c) Check the fuel leakage.

(1) When checking the injection volume, remove SST from the battery. Inspect the fuel leakage from the fuel injector.

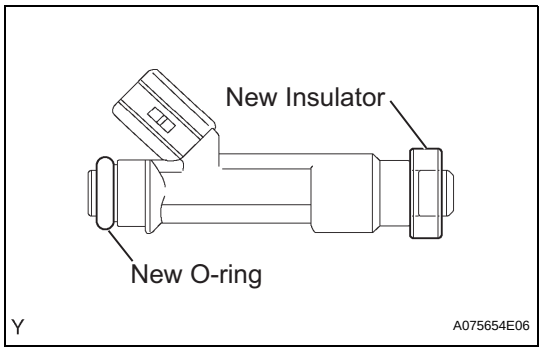
Standard:

1 drop or less every 12 minutes.

If the result is not as specified, replace the fuel injector.

FU

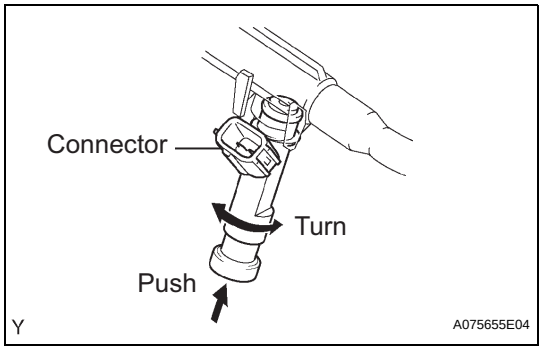
INSTALLATION



1. INSTALL FUEL INJECTOR

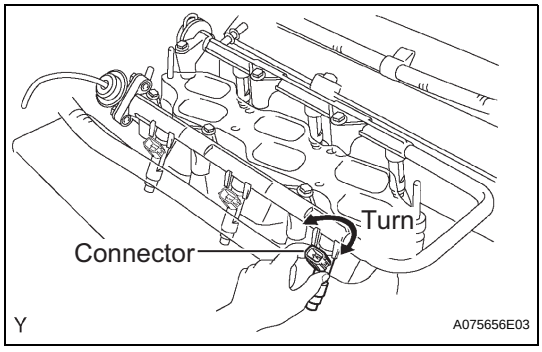
(a) Install a new insulator onto each fuel injector.

(b) Apply a light coat of spindle oil or gasoline to a new O-ring and install it onto each fuel injector.



(c) While turning the fuel injector left and right, install it onto the fuel delivery pipe.

(d) Position the fuel injector connector facing outward.



2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Place the fuel delivery pipe together with the 6 fuel injectors on the intake manifold.

(b) Provisionally install the 6 bolts, which are used to hold the fuel delivery pipe, onto the intake manifold.

(c) Check that the fuel injectors rotate smoothly.

HINT:

If the fuel injectors do not rotate smoothly, replace the O-ring.

(d) Position the fuel injector connector facing outward.

(e) Tighten the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
(f) Connect the 6 fuel injector connectors.

3. **CONNECT FUEL PIPE SUB-ASSEMBLY**
(a) Push the tube connector into the pipe until the tube connector makes a "click" sound.
NOTICE:
- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check that the pipe and connector are securely connected by pulling them.**

(b) Install the fuel pipe clamp.

4. **CONNECT NO.1 FUEL PIPE SUB-ASSEMBLY**
(a) Push the tube connector into the pipe until the tube connector makes a "click" sound.
NOTICE:
- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check that the pipe and connector are securely connected by pulling them.**

(b) Install the fuel pipe clamp.

5. **INSTALL INTAKE AIR SURGE TANK**
(a) Install a new gasket and the intake air surge tank with the 2 nuts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
(b) Using an 8 mm socket hexagon wrench, install the 4 bolts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
(c) Install the 3 upper bolts which are used to secure the 2 surge tank stays and throttle body bracket.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
(d) Install the 3 wire harness clamps and hose clamp.
(e) Connect the throttle motor connector.
(f) Connect the 2 VSV connectors.
(g) Connect the ventilation hose.
(h) Connect the fuel vapor feed hose.
(i) Connect the water by-pass hose No. 4.
(j) Connect the water by-pass hose No. 5.

6. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**

7. **INSTALL V-BANK COVER (See page ES-416)**

8. **CONNECT CONNECT BATTERY NEGATIVE TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

9. **ADD ENGINE COOLANT (See page CO-3)**

10. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**

FU

11. CHECK FOR FUEL LEAKAGE

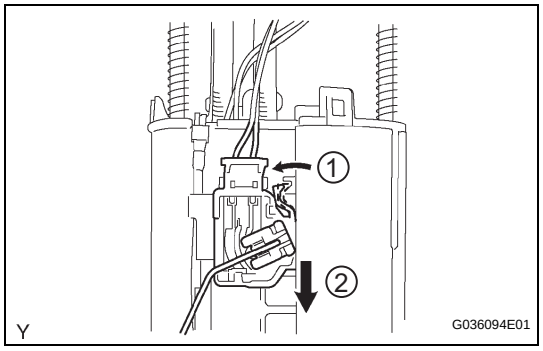
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE NO.1 FUEL TANK PROTECTOR SUB-ASSEMBLY (OFF ROAD PACKAGE)**
4. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-30)**
5. **REMOVE FUEL TANK ASSEMBLY (See page FU-30)**
6. **REMOVE FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-32)**
7. **REMOVE FUEL SUCTION WITH PUMP & GAUGE TUBE ASSEMBLY (See page FU-33)**
8. **DRAIN FUEL**

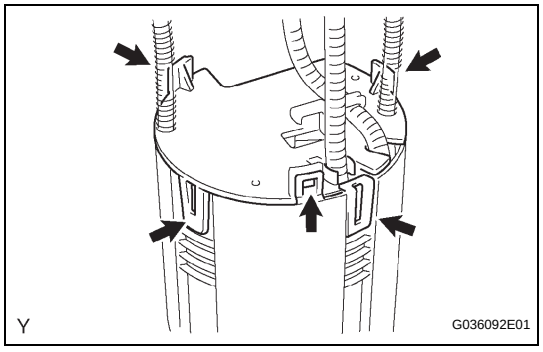
DISASSEMBLY

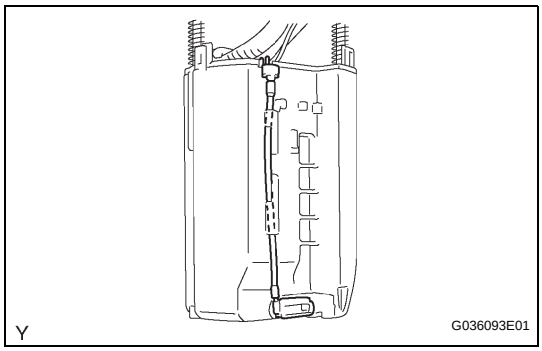
1. **REMOVE FUEL SENDER GAUGE ASSEMBLY**
   (a) Disconnect the connector.

   (b) Disengage the claw fitting and remove the sender gauge by sliding it in the direction as shown in the illustration.

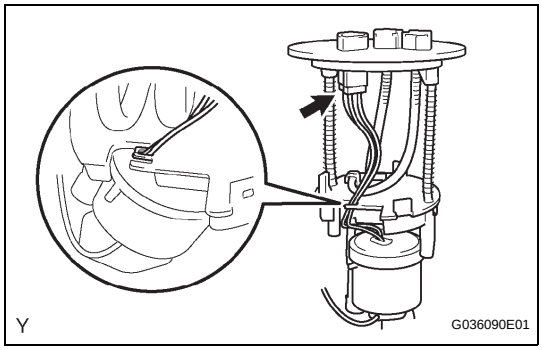


2. **REMOVE NO. 1 FUEL SUB-TANK**
   (a) Disengage the 5 claw fittings and remove the fuel pump tank.



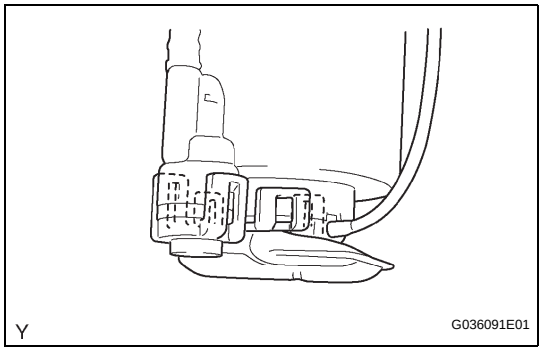


(b) Separate the connector and disengage the clamp.

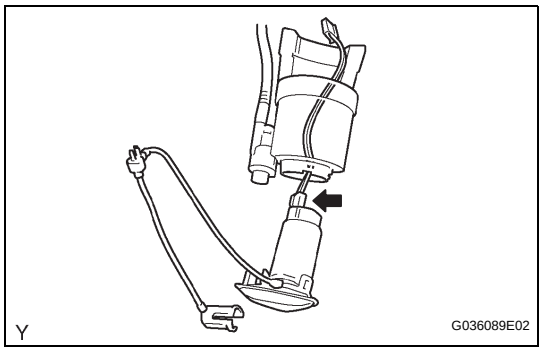


3. REMOVE FUEL PUMP ASSEMBLY

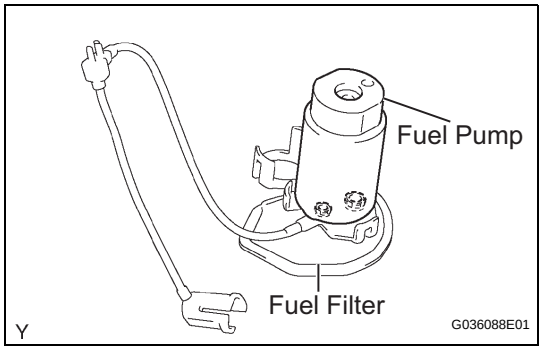
(a) Disengage the clamp, then disconnect the connector.



(b) Disengage the 5 claw fittings and separate the fuel pump from the fuel pump case.

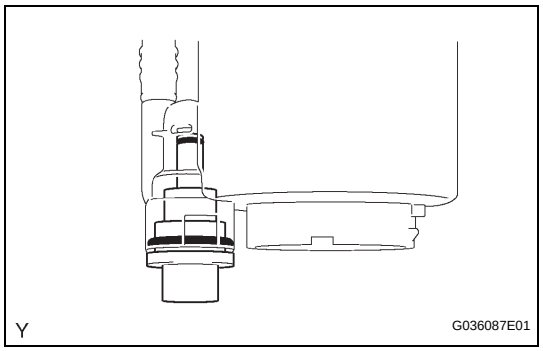


(c) Disconnect the connector from the fuel pump.



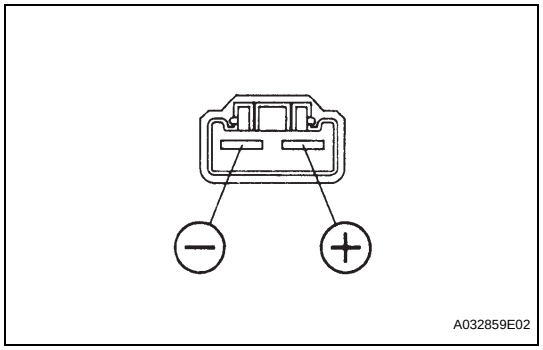
4. REMOVE FUEL PUMP FILTER

(a) Remove the fuel filter from the fuel pump.



5. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Remove the fuel pressure regulator and the 2 O-rings.



INSPECTION

1. INSPECT FUEL PUMP ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

0.2 to 3.0 Ωat 20°C (68°F)

(b) Check the operation.

(1) Apply battery voltage to both terminals. Check that the pump operates.

NOTICE:

- **These tests must be performed quickly (within 10 seconds) to prevent damage to the pump.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always do the switching at the battery side.**

FU

REASSEMBLY

1. **INSTALL FUEL PRESSURE REGULATOR**
   (a) Install the new O-ring into the fuel pump case.
   (b) Install the new O-ring onto the fuel pressure regulator.
2. **INSTALL FUEL PUMP FILTER**
3. **INSTALL FUEL PUMP ASSEMBLY**
4. **INSTALL NO.1 FUEL SUB-TANK**
5. **INSTALL FUEL SENDER GAGE ASSEMBLY**

INSTALLATION

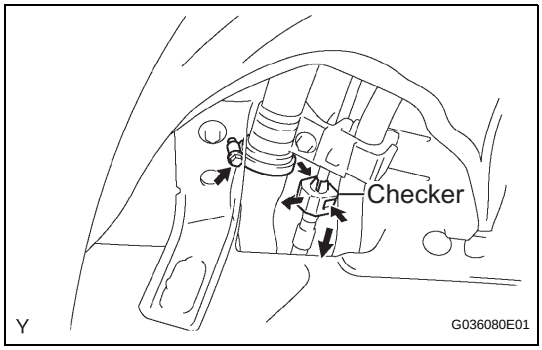
1. **INSTALL FUEL SUCTION WITH PUMP & GAGE TUBE ASSEMBLY (See page FU-34)**
2. **INSTALL FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-35)**
3. **INSTALL FUEL TANK ASSEMBLY (See page FU-35)**
4. **CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-36)**
5. **INSTALL NO.1 FUEL TANK PROTECTOR SUB-ASSEMBLY (See page FU-36)**
6. **ADD FUEL**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
8. **CHECK FOR FUEL LEAKAGE**

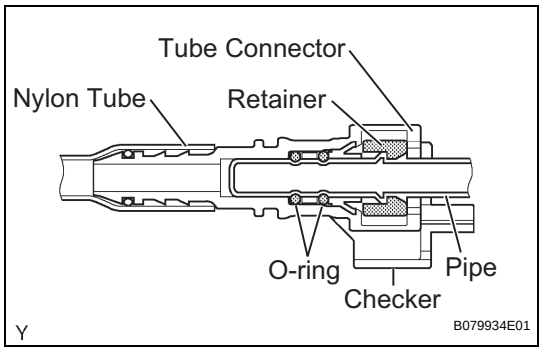
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE NO.1 FUEL TANK PROTECTOR SUB-ASSEMBLY (WITH OFF ROAD PACKAGE)**
4. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE**
   (a) Remove the fuel pipe clamp.

   (b) Disconnect the fuel tank main tube and fuel tank return tube.
      (1) Pinch the retainer as illustrated, then pull the fuel tube connectors out of the pipes.
      NOTICE:
      - **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
      - **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
      - **Perform this work by hand. Do not use any tools.**
      - **Do not forcibly bend, twist or turn the nylon tube.**
      - **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
      - **If the fuel tube connector and pipe are stuck, push and pull to release them.**

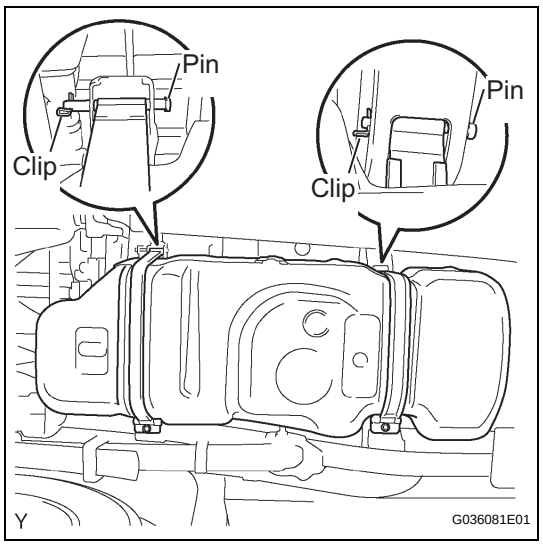
5. **REMOVE FUEL TANK ASSEMBLY**
   (a) Loosen the clamp bolt.
   (b) Disconnect the fuel breather tube.
      (1) Remove the checker of the fuel tube connector from the pipe.





(2) Pinch the retainer of the fuel tube connector, then pull the tube connector out of the pipe.
NOTICE:
- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

(c) Hold the fuel tank using the mission jack.



(d) Remove the 2 fuel tank bands.
(1) Remove the 2 bolts.
(2) Remove the 2 clips and 2 pins, then remove the 2 fuel tank bands.

(e) Slightly jack the fuel tank down and separate the fuel tank to filler pipe hose from the inlet pipe.
NOTICE:
Slowly jack down the fuel tank so as not to tear the wire harness and hose.

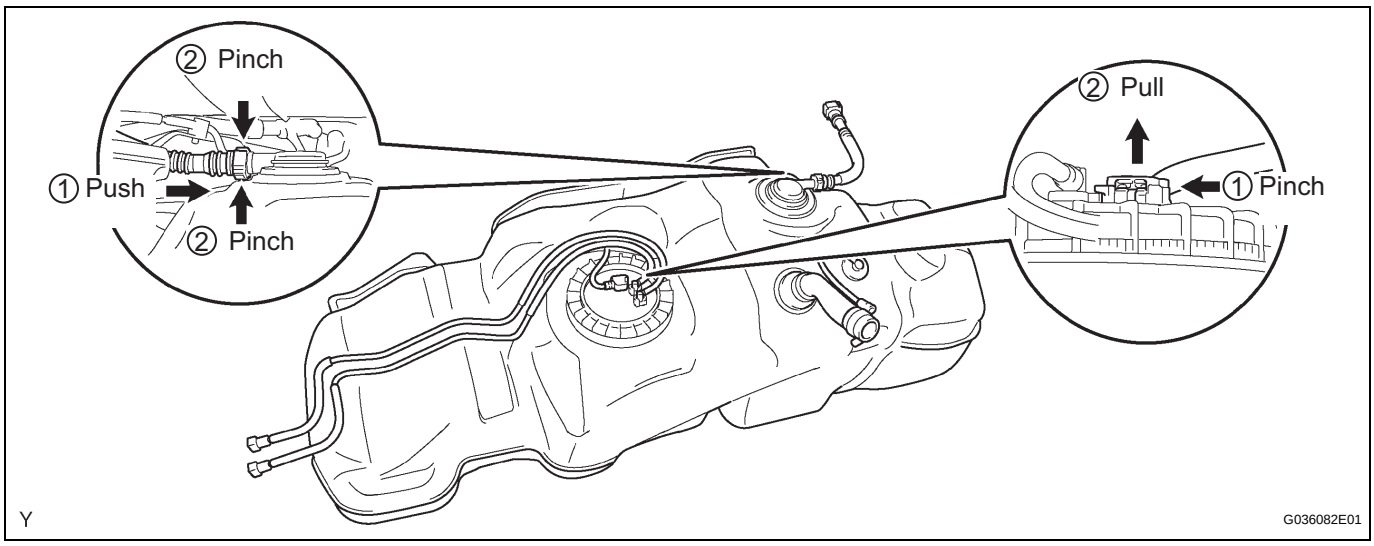
(f) Remove the fuel pump cover.

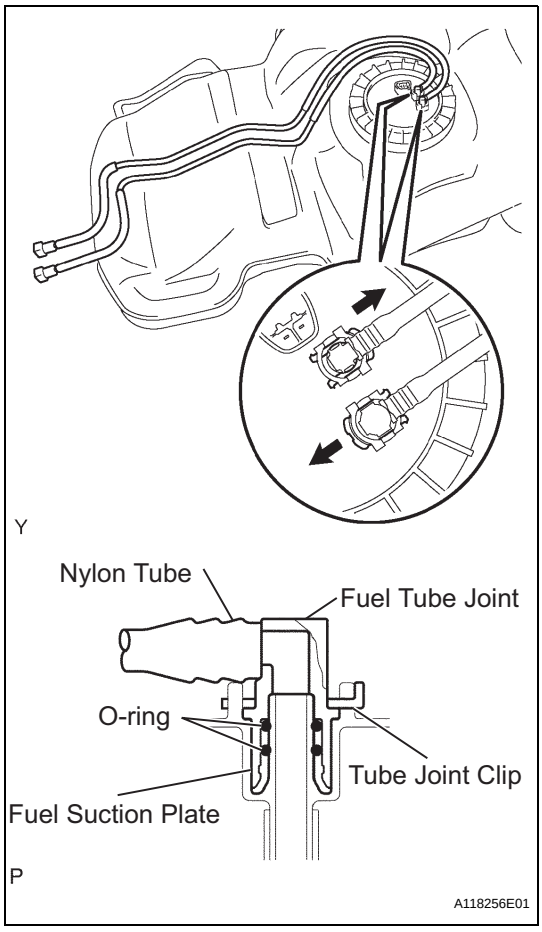
(g) Disconnect the fuel pump connector.

(h) Disconnect the fuel tank vent hose.
(1) Pinch the retainer and pull the fuel tank vent hose connector out of the charcoal canister to disconnect the fuel tank vent hose from the charcoal canister.
NOTICE:
- **Remove any dirt and foreign objects from the fuel tank vent hose connector before performing this work.**
- **Do not allow any scratches of foreign objects on the parts when disconnecting, as the fuel tank vent hose connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tank vent hose.**
- **If the fuel tank vent connector and pipe are stuck, push and pull to release them.**

FU

(i) Remove the fuel tank assy.



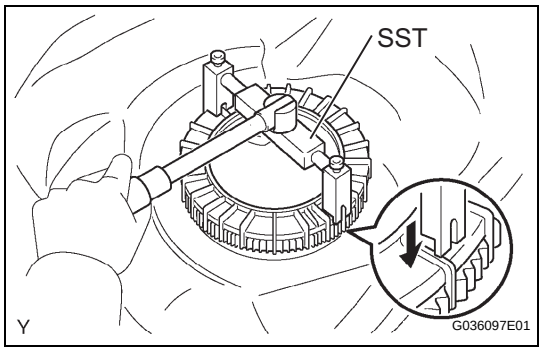


6. REMOVE FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Remove the 2 joint clips, then remove the fuel tank main tube and fuel tank return tube.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**



7. REMOVE FUEL SUCTION WITH PUMP & GAUGE TUBE ASSEMBLY

NOTICE:

Protect the connector and tube joint with masking tape or equivalent to prevent any foreign objects from sticking to them. Clean any dirt and foreign objects from the fuel suction tube assy before removing.

(a) Using a SST, loosen the retainer.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

The ribs on the retainer can be fitted into a tip of the SST.

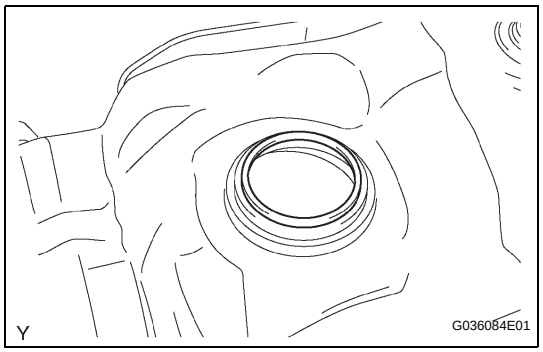
(b) Remove the retainer.

(c) Pull the fuel pump assy out of the fuel tank.

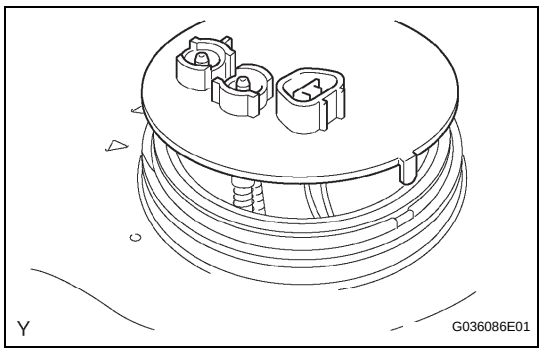
NOTICE:

Be careful not to bend the arm of the sender gauge.

(d) Remove the gasket from the fuel tank.



8. DRAIN FUEL



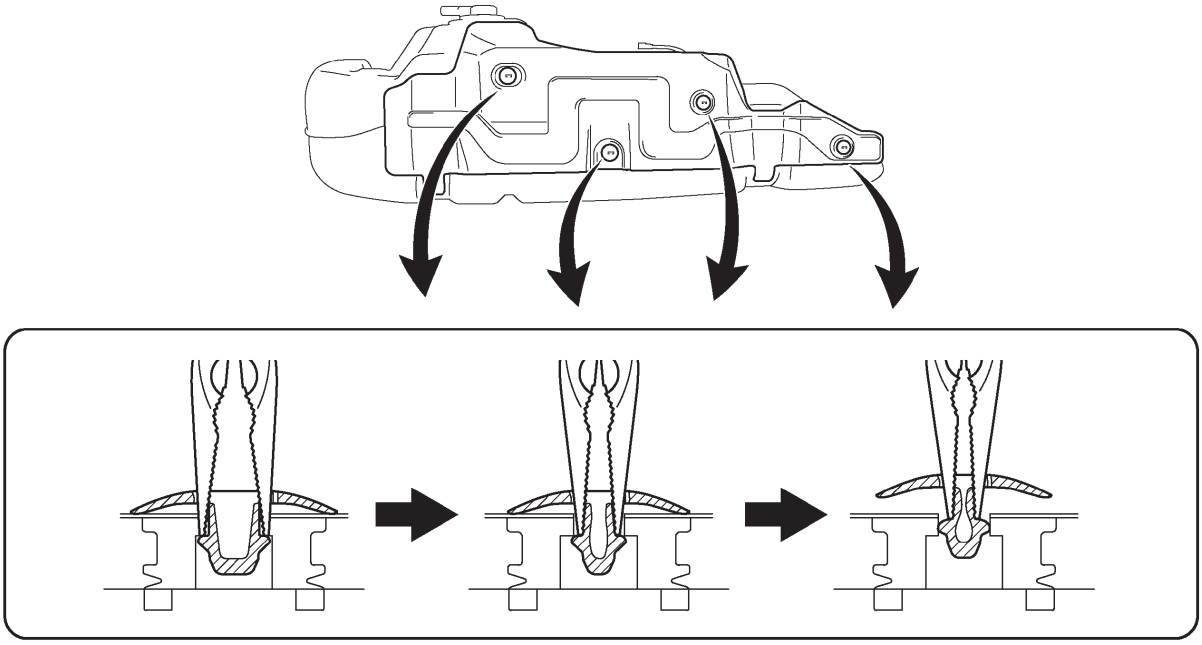
9. REMOVE FUEL TANK TO FILLER PIPE HOSE

(a) Loosen the clamp bolt, then remove the fuel tank to filler pipe hose.

10. REMOVE NO.1 FUEL TANK PROTECTOR

(a) Remove the 4 clips, then remove the fuel tank protector.

FU



Y

G036085E01

INSTALLATION

1. INSTALL NO.1 FUEL TANK PROTECTOR

(a) Install the fuel tank protector with the 4 clips.

2. INSTALL FUEL TANK TO FILLER PIPE HOSE

(a) Install the fuel tank onto the filler pipe hose, then tighten the pipe clamp bolt.

3. INSTALL FUEL SUCTION WITH PUMP & GAUGE TUBE ASSEMBLY

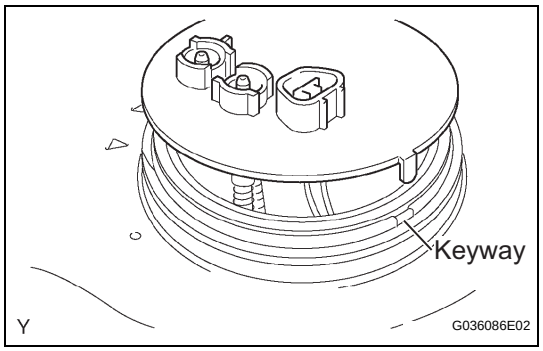
(a) Install a new gasket onto the fuel tank.

(b) Set the fuel pump assembly in the fuel tank.

NOTICE:

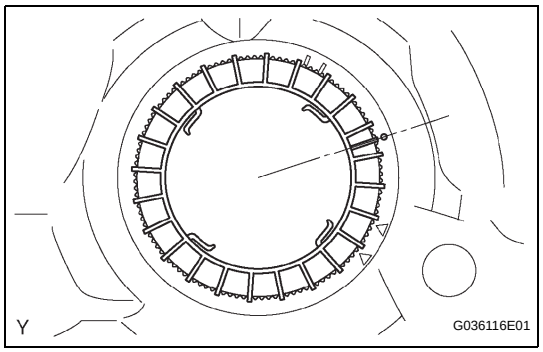
Be careful not to bend the arm of the sender gauge.

(c) Fit a spline of the fuel suction tube assembly into a keyway of the fuel tank.



(d) Install a new retainer.

(1) Align the mark on a new retainer with the rib on the fuel tank as shown in the illustration.

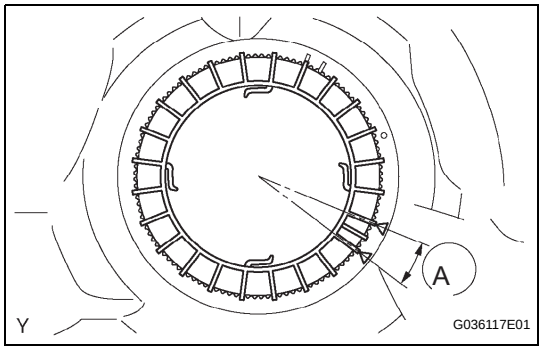


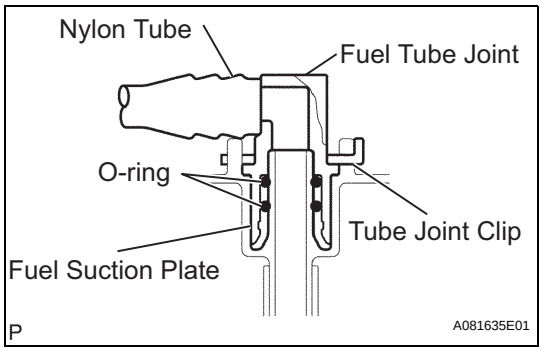
(2) Using SST, turn the retainer 740° to 780° clockwise (more than 2 turns), and position the mark on the retainer within range A to install it.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

The ribs on the retainer can be fitted into the tip of the SST.





4. INSTALL FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Install the fuel tank main tube and return tube with the 2 joint clips.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube joint and plug before performing this work.**
- **Check that the fuel tube joint is securely inserted to the end.**
- **Check that the tube joint clips are on the collar of the fuel tube joint.**
- **After installing the tube joint clip, check that the fuel tank main tube and return tube can be pulled out.**

5. INSTALL FUEL TANK ASSEMBLY

(a) Set the fuel tank assembly onto the mission jack.

(b) Connect the fuel tank vent hose.

(1) Align the fuel tank vent connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the fuel suction plate.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tank vent connector and plug before performing this work.**
- **After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling the quick connector.**

(c) Connect the fuel pump connector.

(d) Install the fuel pump cover.

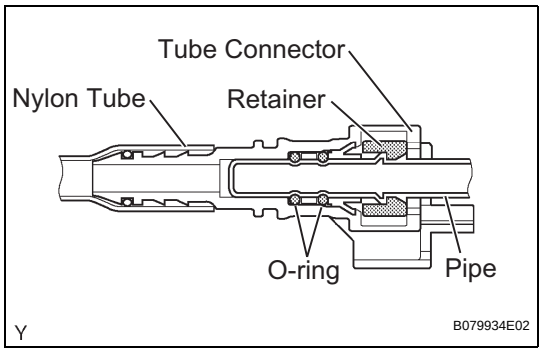
(e) Connect the fuel tank to filler pipe hose.

(f) Install the 2 fuel tank bands.

(1) Install the 2 fuel tank bands with the 2 pins and 2 clips.

(2) Install the 2 fuel tank bands with the 2 bolts.

Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)



(g) Connect the fuel tank breather tube.

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound to connect the fuel tank vent breather tube.

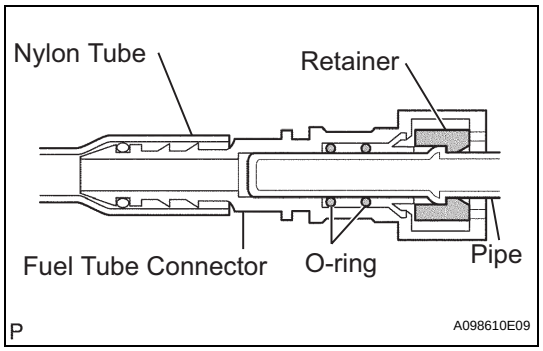
NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube connector and pipe before performing this work.**
- **After connecting the fuel tank breather tube, check that the fuel pump tube is securely connected by pulling the fuel tube connector and pipe.**

FU

(2) Install the checker onto the pipe.

(h) Tighten the clamp bolt.



6. CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Connect the fuel tank main tube and return tube.

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound to connect the fuel tank main tube and return tube.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube connector and pipe before performing this work.**
- **After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling them.**

(2) Install the fuel pipe clamp.

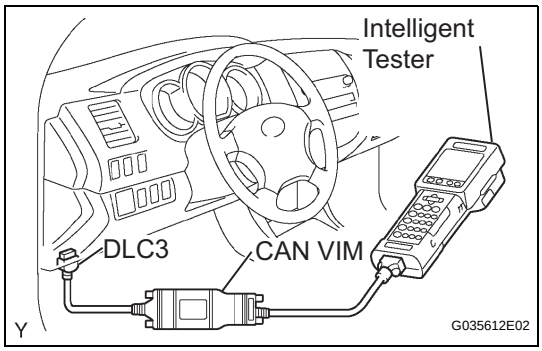
7. INSTALL NO.1 FUEL TANK PROTECTOR SUB-ASSEMBLY (with Off Road Package)

(a) Install the fuel tank protector LWR with the 4 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

8. ADD FUEL

9. CONNECT CONNECT BATTERY NEGATIVE TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

10. CHECK FOR FUEL LEAKAGE



ON-VEHICLE INSPECTION

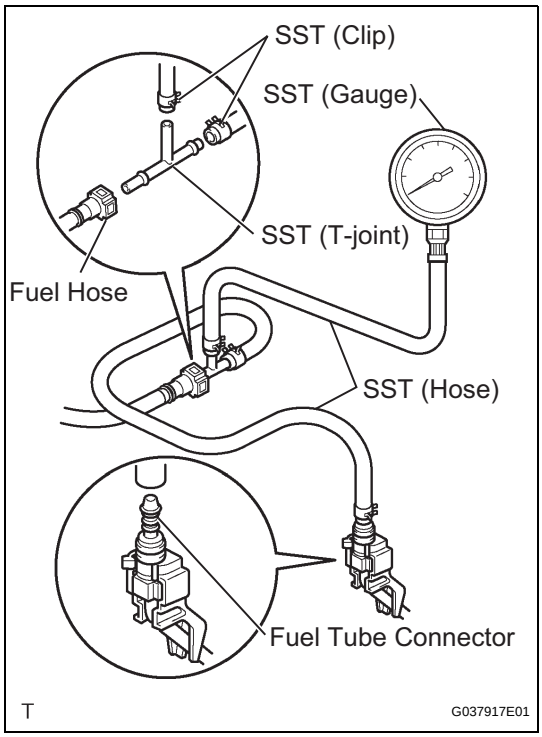
1. CHECK FUEL PUMP

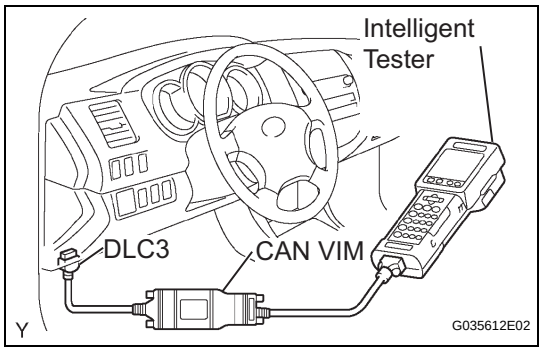
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
NOTICE:
Do not start the engine.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
(e) Check the fuel operation by operating it with the intelligent tester.
If the fuel pump does not operate, replace the fuel pump.

2. CHECK FUEL PRESSURE

(a) Discharge the fuel system pressure.
(b) Using a voltmeter, measure the battery voltage.
Standard:
9.0 to 14 V
(c) Disconnect the cable from the negative battery terminal.
(d) Remove the fuel pipe clamp.
(e) Disconnect the fuel hose.
(f) Install SST into the vehicle.
SST 09268-41048 (09268-41500, 90467-13001, 95336-08070), 09268-45014 (09268-41200, 09268-41220, 09268-41250)
(g) Wipe off any spilt gasoline.
(h) Connect the cable to the negative battery terminal.
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

FU





(i) Connect the intelligent tester to the DLC3.
(j) Turn the ignition switch to ON.
(k) Turn the intelligent tester ON.
(l) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD /ON.
(m) Measure the fuel pressure.
Standard:

281 to 287 kPa (2.87 to 2.93 kgf/cm^2, 40.8 to 41.7 psi)

- If the pressure is too high, replace the fuel pressure regulator.
- If the pressure is too low, check the connection between the fuel hose and fuel pump.

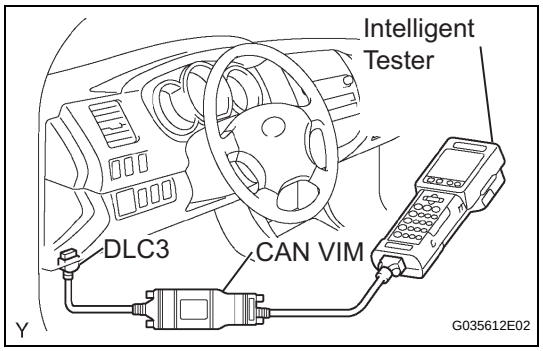
(n) Disconnect the intelligent tester from the DLC3.
(o) Start the engine.
(p) Measure the fuel pressure while the engine idles.
Standard:

281 to 287 kPa (2.87 to 2.93 kgf/cm^2, 40.8 to 41.7 psi)

(q) Stop the engine.
(r) Check that the fuel pressure does not change for 5 minutes.
Standard:

147 kPa (1.5 kgf/cm^2, 21 psi)

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injector.
(s) Discharge the fuel system pressure.
(t) Disconnect the cable from the negative battery terminal.
(u) Remove SST while being careful to prevent gasoline splashes.
(v) Connect the fuel hose.
(w) Install the fuel pipe clamp.
(x) Connect the cable to the negative battery terminal.
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



3. CHECK FOR FUEL LEAKAGE

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
NOTICE:
Do not start the engine.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD / ON.
(e) Check that there are no leakage in the fuel system.

FU

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
(See page FU-1)

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

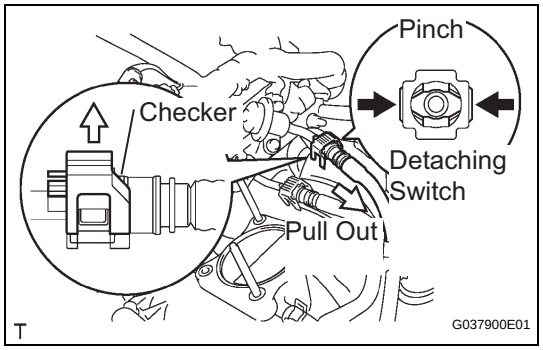
3. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO.1**

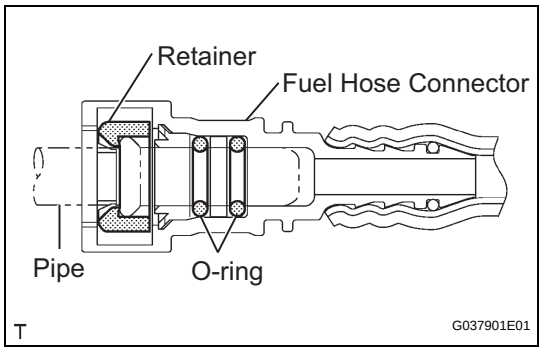
4. **DRAIN ENGINE COOLANT (See page CO-3)**

5. **REMOVE INTAKE AIR CONNECTOR (See page ES-452)**

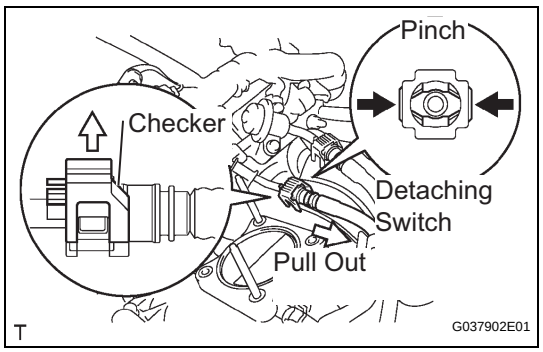
6. **REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-453)**

7. **DISCONNECT FUEL HOSE**
(a) Pull the checker of the fuel hose upward.
(b) Pinch the detaching switch of the fuel hose connector and pull out the fuel hose.
NOTICE:
- **Remove any dirt and foreign objects on the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel hose.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

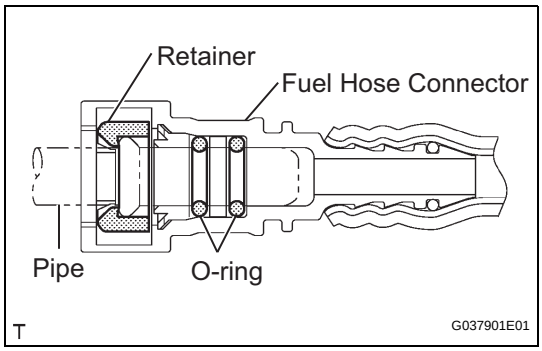




8. **DISCONNECT NO. 2 FUEL HOSE**
(a) Pull the checker of the fuel hose upward.
(b) Pinch the detaching switch of the fuel hose connector and pull out the fuel hose.
NOTICE:
- **Remove any dirt and foreign objects on the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**

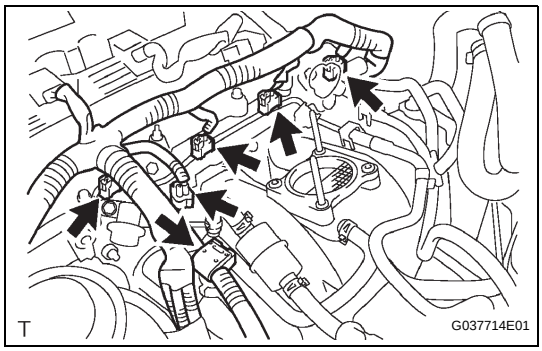


FU



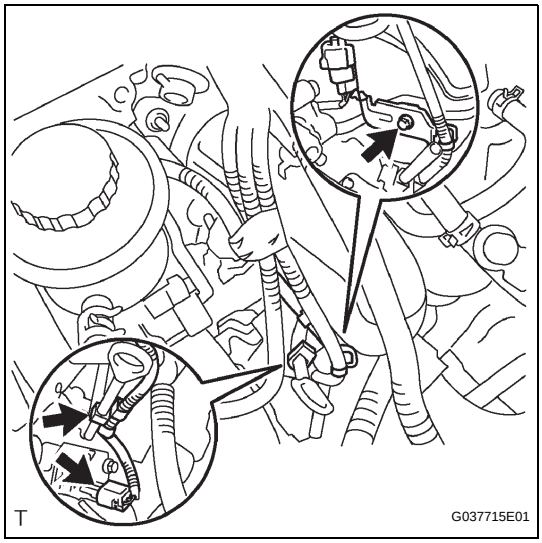
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel hose.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

9. REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY (See page FU-21)

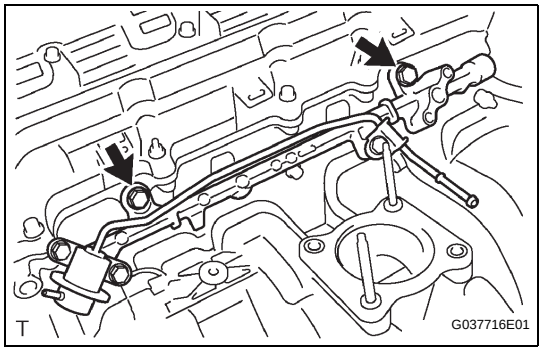


10. REMOVE FUEL DELIVERY PIPE WITH INJECTOR

(a) Disconnect the 4 injector connectors.
(b) Disconnect the VSV connector.
(c) Disconnect the engine wire harness clamp.

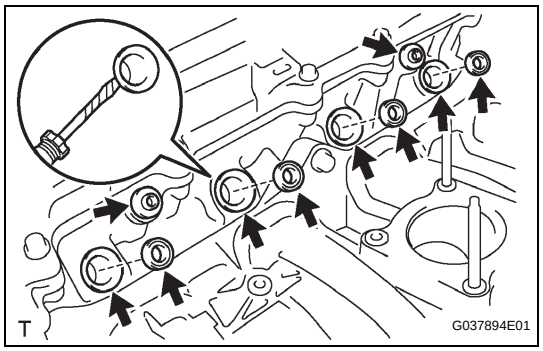


(d) Disconnect the compressor magnetic clutch connector. (with AIR CONDITIONING)
(e) Disconnect the wire harness clamp.
(f) Remove the bolt, then remove the harness clamp bracket.

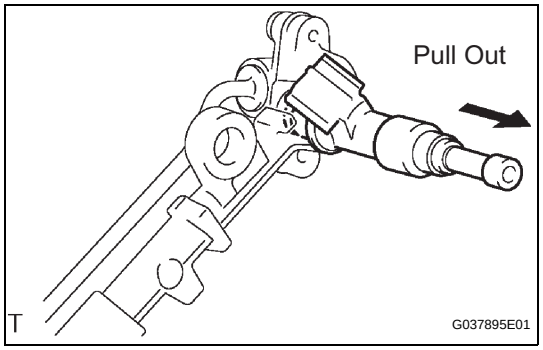


(g) Remove the 2 bolts, then remove the fuel delivery pipe together with the fuel injectors.
NOTICE:
Be careful not to drop the fuel injectors when removing the fuel delivery pipe.

FU

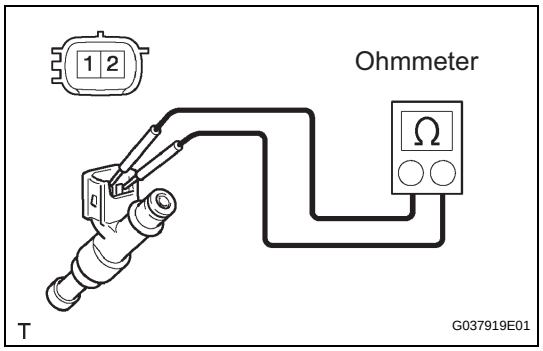


(h) Remove the 2 delivery pipe No. 1 spacers.
(i) Remove the 4 injector vibration insulators.
(j) Using a screwdriver, remove the 4 spacers.



11. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull the 4 fuel injectors out of the fuel delivery pipe.



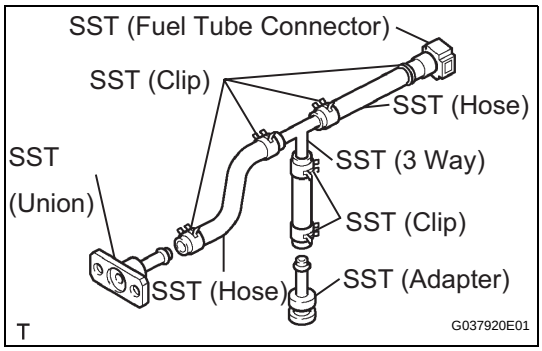
INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

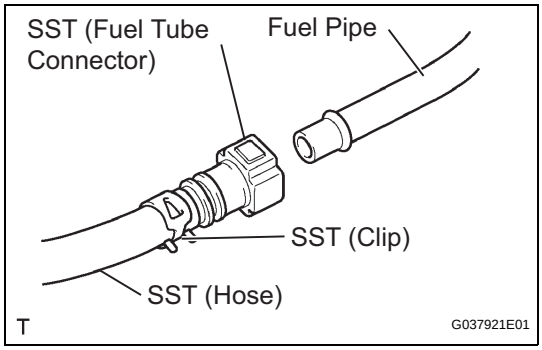
(a) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the terminals.
Resistance:
11.6 to 12.4 Ω at 20°C (68°F)
If the result is not as specified, replace the fuel injector.

(b) Check the injection volume.
CAUTION:
This test involves high-pressure fuel and electricity, therefore, safety precautions should be taken. Perform this test in a safe area and avoid any sparks and flames. Do not smoke.
(1) Discharge the fuel system pressure (see page FU-1).
(2) Remove the fuel hose from the fuel pressure pulsation damper (see page FU-21).
(3) Remove the fuel hose from the fuel pipe (see page FU-1).
(4) Separate the pressure regulator (see page FU-19).
NOTICE:
Do not separate the fuel hose No.2.

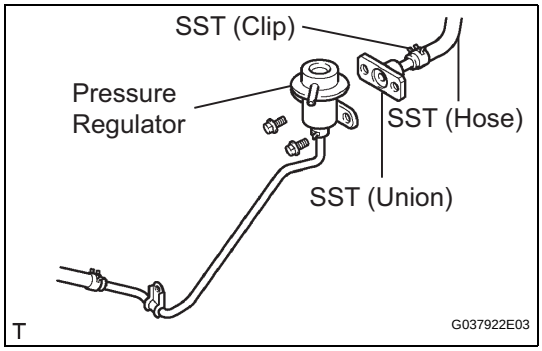
FU



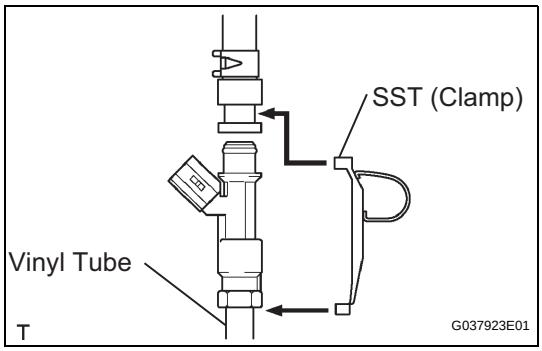
(5) Assemble SST as shown in the illustration.
SST 09268-41048 (09268-41091, 09268-41110, 09268-41120, 09268-41500, 95336-08070, 90467-13001)



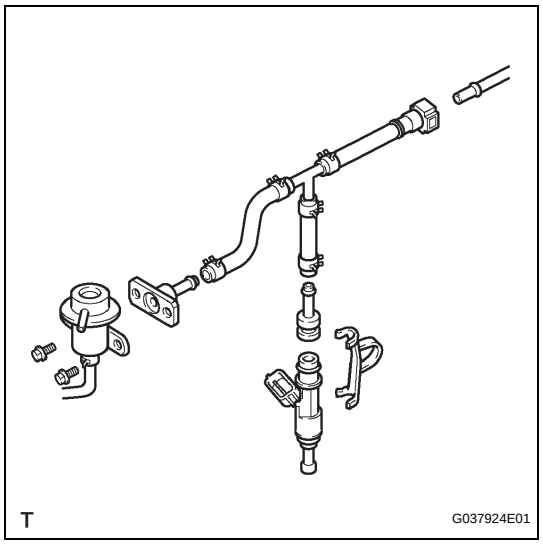
(6) Connect SST to the fuel pipe.
SST 09268-41048 (09268-41500, 90467-13001)



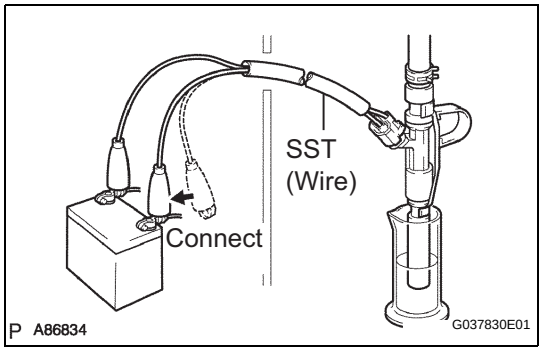
(7) Install the pressure regulator onto SST (union) with the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
SST 09268-41048 (09268-41091)
NOTICE:
Make sure that the O-ring is installed onto the pressure regulator.



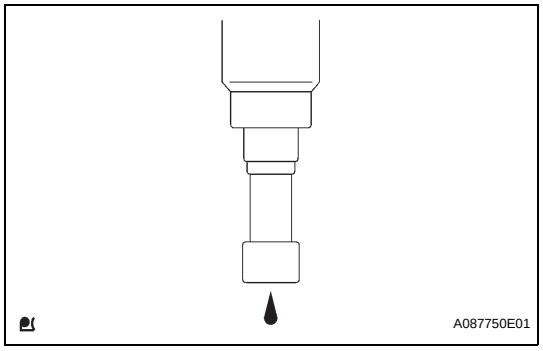
(8) Install the O-ring onto the injector.
(9) Assemble SST as shown in the illustration.
SST 09268-41048 (09268-41110, 09268-41310)
(10) Put the injector into a graduated cylinder.
CAUTION:
Install a suitable vinyl tube onto the injector to contain any gasoline spray.



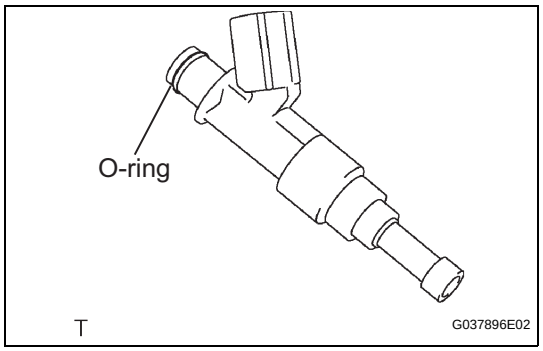
(11) Make sure that SST is installed as shown in the illustration.
(12) Operate the fuel pump (see page FU-6).



(13) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with a graduated cylinder. Test each injector 2 or 3 times.
SST 09842-30080
Volume:
71 to 86 cm^3 (4.3 to 5.2 cu in.) per 15 seconds
Difference between each injector:
15 cm^3 (0.9 cu in.) or less
If the injection volume is not as specified, replace the injector.



(c) Check the leakage.
(1) In the condition above, disconnect the tester probes of SST (wire) from the battery and check the fuel leakage from the injector.
Fuel drop:
1 drop or less in 12 minutes

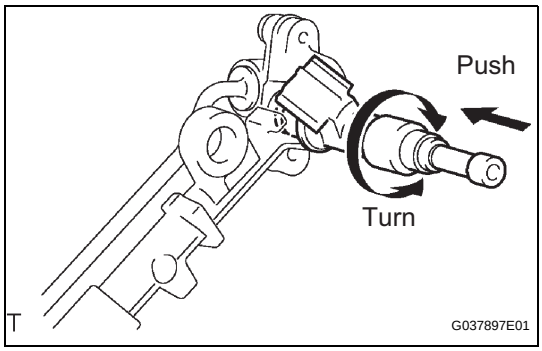


INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

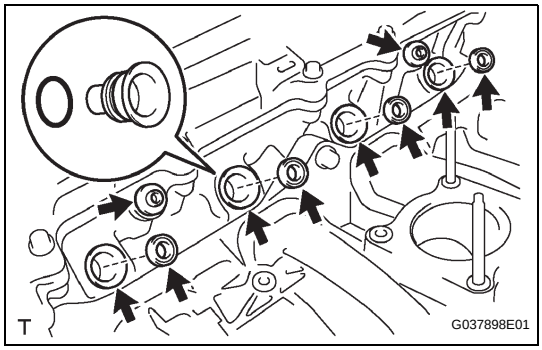
(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each fuel injector.

FU



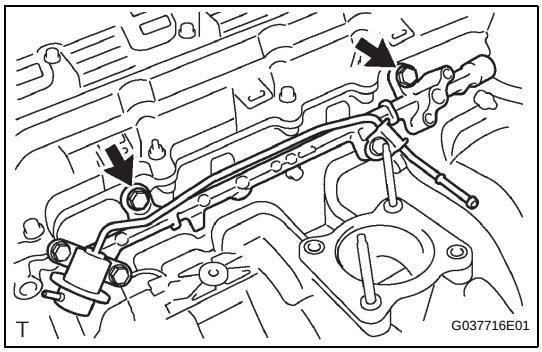
(b) Apply a light coat of gasoline or spindle oil to the contact surfaces of the fuel delivery pipe and the O-ring of the fuel injector.
(c) Apply a light coat of gasoline or spindle oil to the O-ring again, then install the fuel injector into the fuel delivery pipe by turning it right and left.
NOTICE:
Make sure that the O-ring is not cracked or jammed when installing.
(d) Check that the fuel injector rotates smoothly.
If the fuel injector does not rotate, replace the O-ring.

2. INSTALL FUEL DELIVERY PIPE W/ INJECTOR

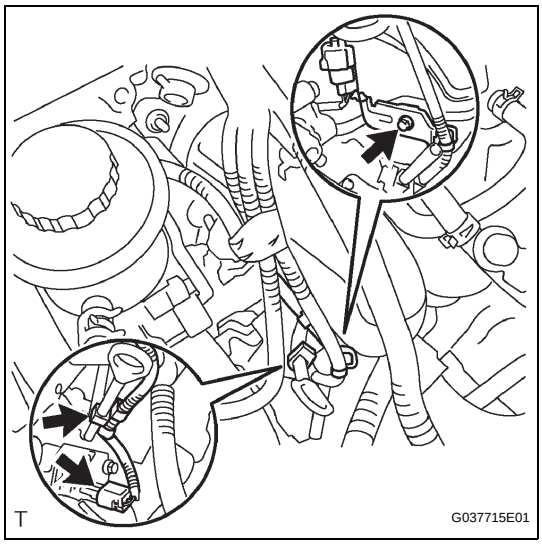


(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each spacer.
(b) Install the 4 spacers onto the cylinder head.
(c) Install 4 new injector vibration insulators onto the cylinder head.
(d) Install the 2 delivery pipe No. 1 spacers onto the cylinder head.

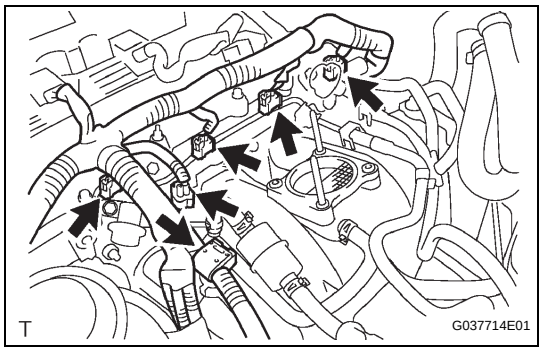
FU



(e) Install the fuel delivery pipe together with the 4 fuel injectors, then provisionally tighten the fuel delivery pipe with the 2 bolts.
NOTICE:
Do not drop the fuel injectors when installing the fuel delivery pipe.
(f) Check that the fuel injector rotates smoothly.
If the fuel injector does not rotate, replace the O-ring.
(g) Retighten the 2 bolts to the specified torque.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

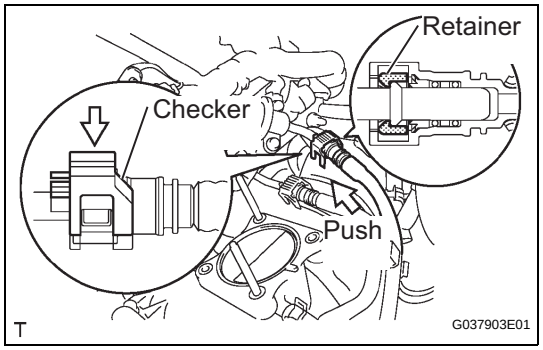


(h) Install the harness clamp bracket with the bolt.
Torque: 8.2 N*m (84 kgf*cm, 73 in.*lbf)
(i) Connect the wire harness clamp.
(j) Connect the compressor magnetic clutch connector. (with AIR CONDITIONING)



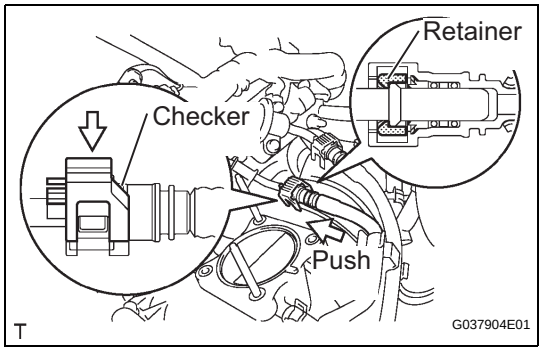
(k) Connect the engine wire harness clamp.
(l) Connect the VSV connector.
(m) Connect the 4 injector connectors.

3. **INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY (See page FU-21)**



4. **CONNECT FUEL HOSE**
(a) Align the fuel hose connector with the pipe stem, and insert the fuel hose until the retainer makes a "click" sound.
(b) Push down the checker of the fuel hose.
NOTICE:
- **Check that there are no scratches or foreign objects around the disconnected parts of the fuel hose connector and pipe before performing this work.**
- **After connecting the fuel hose, check that the fuel hose is securely connected by pulling the fuel hose connector and pipe.**

(c) Push the fuel hose down until the checker of the fuel hose makes a "click" sound.



5. **CONNECT FUEL HOSE NO.2**
(a) Align the fuel hose connector with the pipe stem, and insert the fuel hose until the retainer makes a "click" sound.
(b) Push down the checker of the fuel hose.
NOTICE:
- **Check that there are no scratches or foreign objects around the disconnected parts of the fuel hose connector and pipe before performing this work.**
- **After connecting the fuel hose, check that the fuel hose is securely connected by pulling the fuel hose connector and pipe.**

(c) Push the fuel hose down until the checker of the fuel hose makes a "click" sound.

6. **INSTALL THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-454)**

7. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**

8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

9. **ADD ENGINE COOLANT (See page CO-3)**

10. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)**

FU

11. **CHECK FOR FUEL LEAKAGE (See page FU-7)**
12. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO.1**

REMOVAL

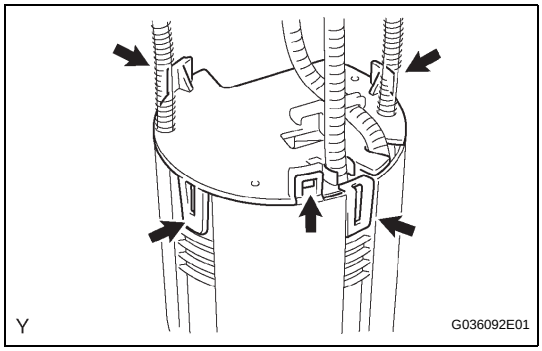
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-30)**
4. **REMOVE FUEL TANK ASSEMBLY (See page FU-31)**
5. **REMOVE FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-32)**
6. **REMOVE FUEL SUCTION WITH PUMP & GAUGE TUBE ASSEMBLY (See page FU-33)**
7. **DRAIN FUEL**

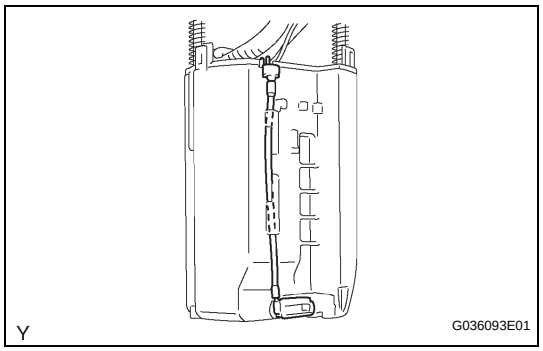
DISASSEMBLY

1. **REMOVE FUEL SENDER GAGE ASSEMBLY**
   (a) Disconnect the connector.

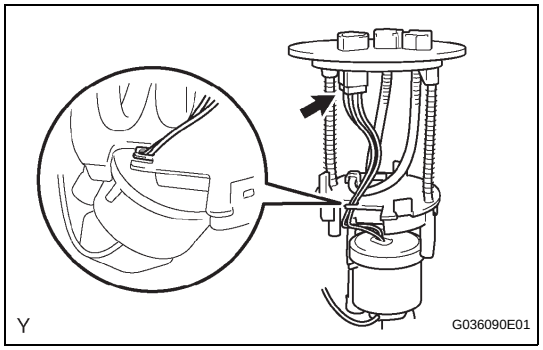
   (b) Disengage the claw fitting and remove the sender gauge by sliding it in the direction as shown in the illustration.

2. **REMOVE NO. 1 FUEL SUB-TANK**
   (a) Disengage the 5 claw fittings and remove the fuel pump tank.



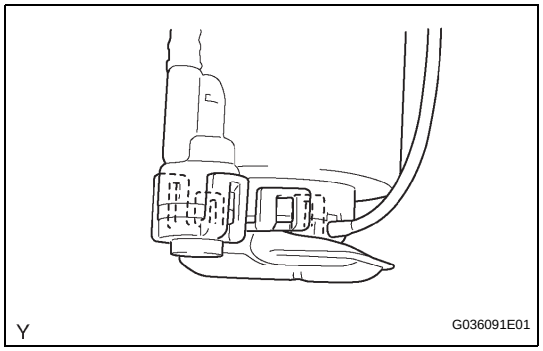


(b) Separate the connector and disengage the clamp.

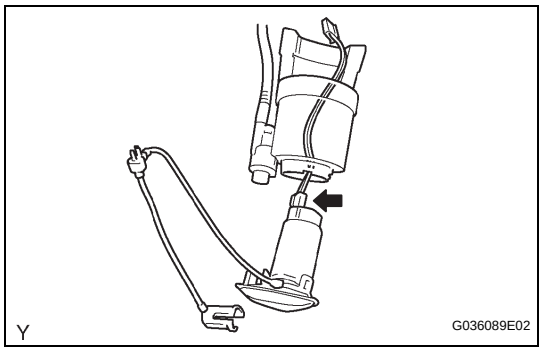


3. REMOVE FUEL PUMP ASSEMBLY

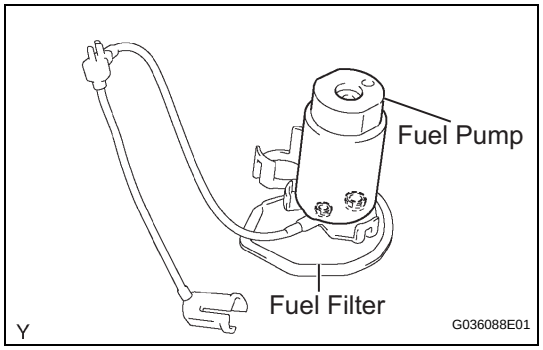
(a) Disengage the clamp, then disconnect the connector.



(b) Disengage the 5 claw fittings and separate the fuel pump from the fuel pump case.



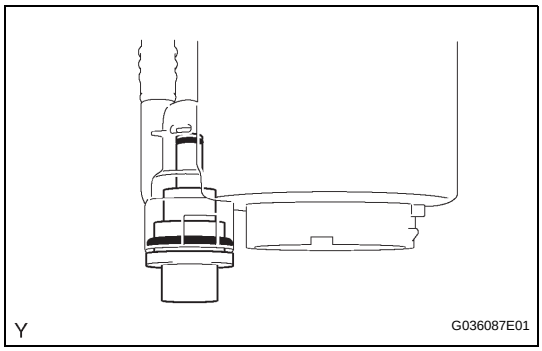
(c) Disconnect the connector from the fuel pump.



4. REMOVE FUEL PUMP FILTER

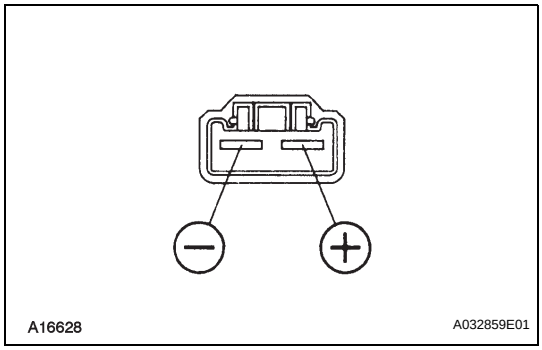
(a) Remove the fuel filter from the fuel pump.

FU



5. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Remove the fuel pressure regulator and the 2 O-rings.



INSPECTION

1. INSPECT FUEL PUMP

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

0.2 to 3.0 Ω at 20°C (68°F)

(b) Check the operation.

(1) Apply battery voltage to both terminals. Check that the pump operates.

NOTICE:

- **These tests must be performed quickly (within 10 seconds) to prevent damage to the pump.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always do the switching at the battery side.**

REASSEMBLY

1. **INSTALL FUEL PRESSURE REGULATOR ASSEMBLY**
   (a) Install the new O-ring into the fuel pump case.
   (b) Install the new O-ring onto the fuel pressure regulator.
2. **INSTALL FUEL PUMP FILTER**
3. **INSTALL FUEL PUMP ASSEMBLY**
4. **INSTALL NO. 1 FUEL SUB-TANK**
5. **INSTALL FUEL SENDER GAGE ASSEMBLY**

INSTALLATION

1. **INSTALL FUEL SUCTION WITH PUMP & GAGE TUBE ASSEMBLY (See page FU-34)**
2. **INSTALL FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-35)**
3. **INSTALL FUEL TANK ASSEMBLY (See page FU-35)**
4. **CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-36)**
5. **ADD FUEL**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
7. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

REMOVAL

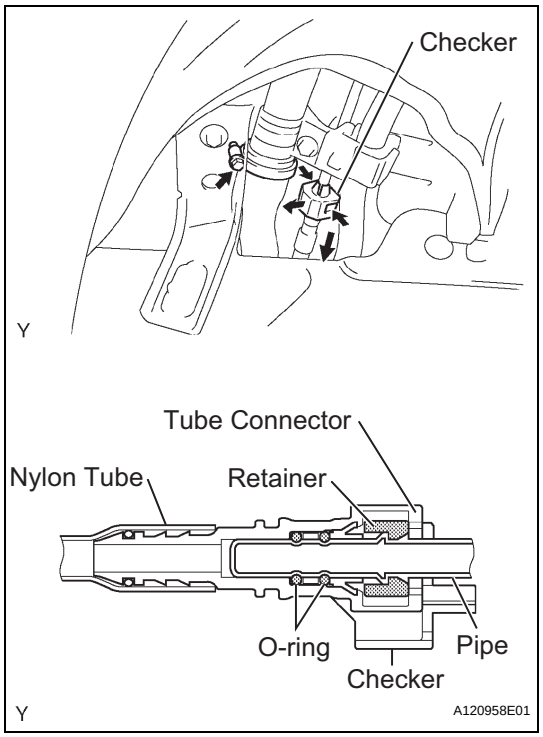
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

3. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE**
   (a) Remove the fuel pipe clamp.

   (b) Disconnect the fuel tank main tube and fuel tank return tube.
      (1) Pinch the retainer as illustrated, then pull the fuel tube connectors out of the pipes.
      NOTICE:
      - **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
      - **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
      - **Perform this work by hand. Do not use any tools.**
      - **Do not forcibly bend, twist or turn the nylon tube.**
      - **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
      - **If the fuel tube connector and pipe are stuck, push and pull to release them.**

FU



4. REMOVE FUEL TANK ASSEMBLY

(a) Loosen the clamp bolt.

(b) Disconnect the fuel breather tube.

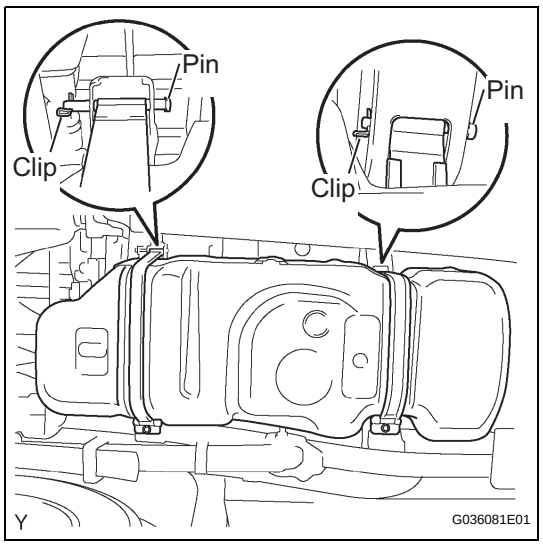
(1) Remove the checker of the fuel tube connector from the pipe.

(2) Pinch the retainer of the fuel tube connector, then pull the tube connector out of the pipe.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

(c) Hold the fuel tank using the mission jack.



(d) Remove the 2 fuel tank bands.

(1) Remove the 2 bolts.

(2) Remove the 2 clips and 2 pins, then remove the 2 fuel tank bands.

(e) Remove the fuel pump cover.

(f) Slightly jack the fuel tank down and separate the fuel tank to filler pipe hose from the inlet pipe.

NOTICE:

Slowly jack down the fuel tank so as not to tear the wire harness and hose.

(g) Disconnect the fuel pump connector.

(h) Disconnect the fuel tank vent hose.

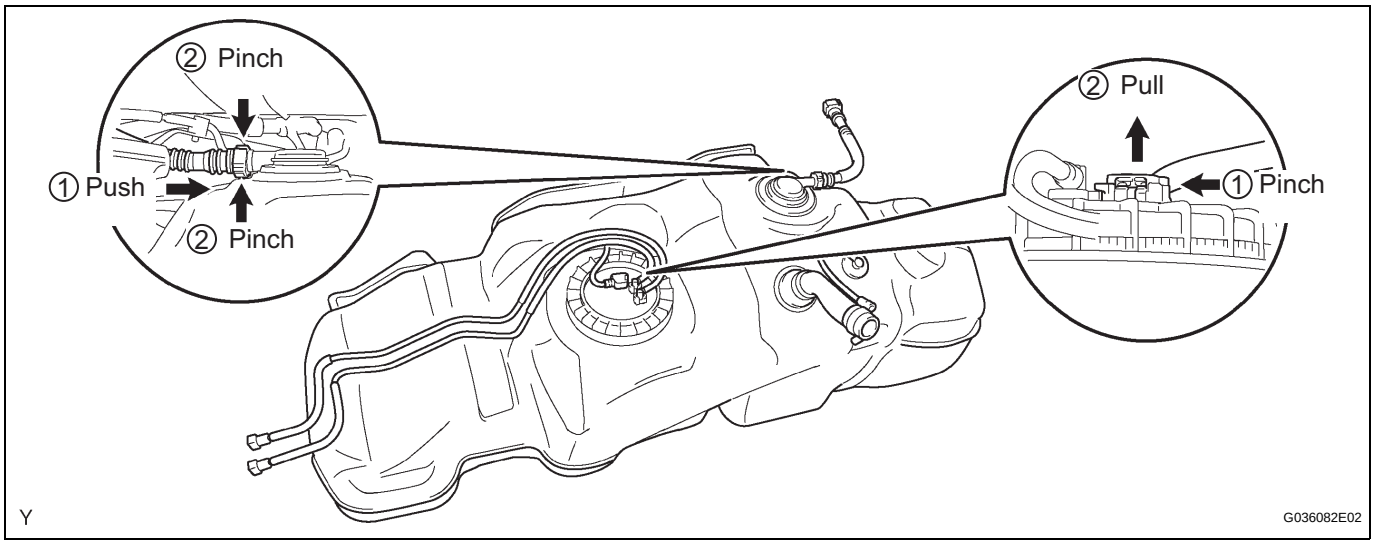
(1) Pinch the retainer and pull the fuel tank vent hose connector out of the charcoal canister to disconnect the fuel tank vent hose from the charcoal canister.

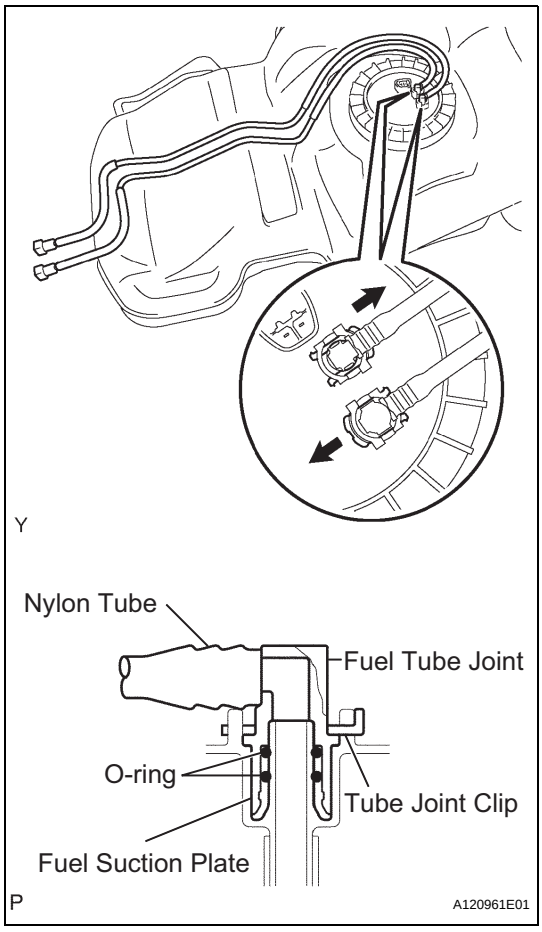
NOTICE:

- **Remove any dirt and foreign objects from the fuel tank vent hose connector before performing this work.**
- **Do not allow any scratches of foreign objects on the parts when disconnecting, as the fuel tank vent hose connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**

- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tank vent hose.**
- **If the fuel tank vent connector and pipe are stuck, push and pull to release them.**

(i) Remove the fuel tank assembly.



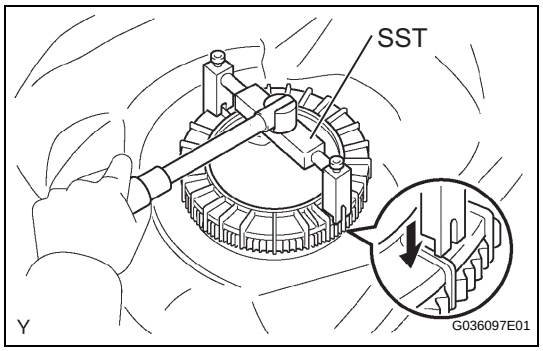


5. REMOVE FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Remove the 2 joint clips, then remove the fuel tank main tube and fuel tank return tube.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**



6. REMOVE FUEL SUCTION WITH PUMP & GAGE TUBE ASSEMBLY

NOTICE:

Protect the connector and tube joint with masking tape or equivalent to prevent any foreign objects from sticking to them. Clean any dirt and foreign objects from the fuel suction tube assembly before removing.

(a) Using a SST, loosen the retainer.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

The ribs on the retainer can be fitted into a tip of the SST.

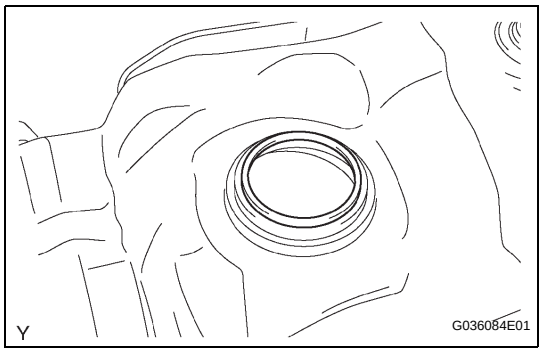
(b) Remove the retainer.

(c) Pull the fuel pump assembly out of the fuel tank.

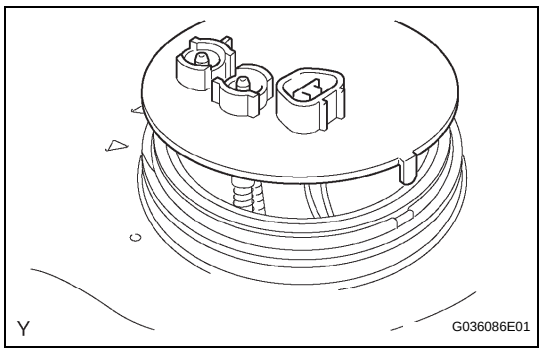
NOTICE:

Be careful not to bend the arm of the sender gauge.

(d) Remove the gasket from the fuel tank.



7. DRAIN FUEL



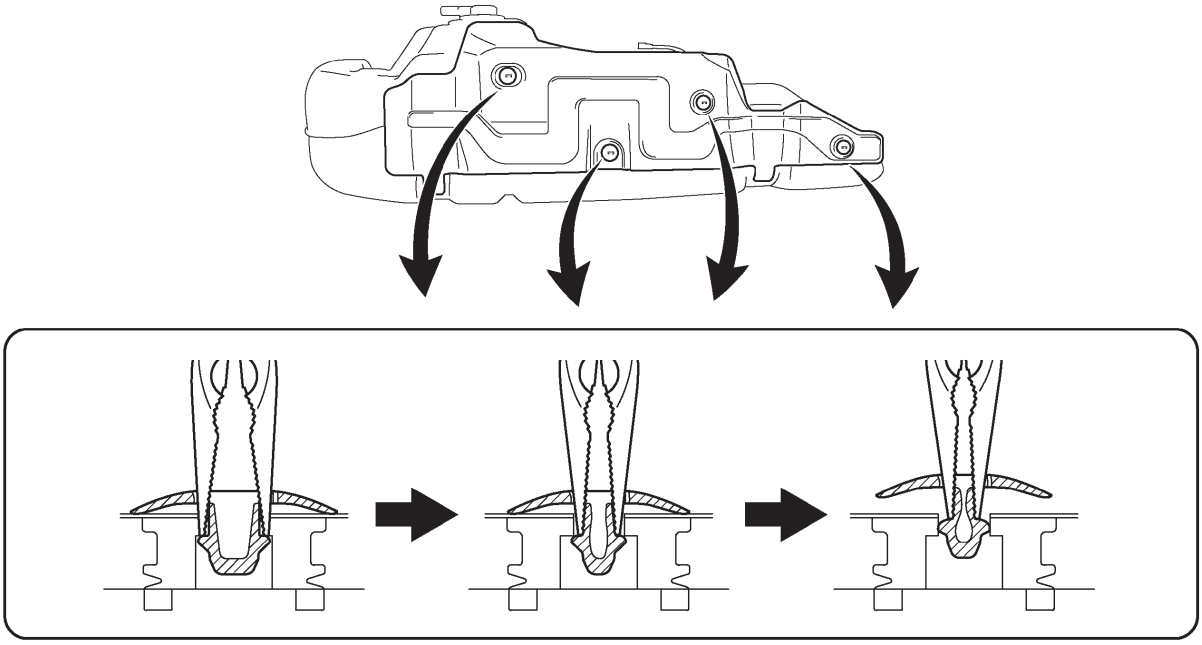
8. REMOVE FUEL TANK TO FILLER PIPE HOSE

(a) Loosen the clamp bolt, then remove the fuel tank to filler pipe hose.

9. REMOVE NO. 1 FUEL TANK PROTECTOR

(a) Remove the 4 clips, then remove the fuel tank protector.

FU



Y
G036085E01

INSTALLATION

1. INSTALL NO. 1 FUEL TANK PROTECTOR

(a) Install the fuel tank protector with the 4 clips.

2. INSTALL FUEL TANK TO FILLER PIPE HOSE

(a) Install the fuel tank onto the filler pipe hose, then tighten the pipe clamp bolt.

3. INSTALL FUEL SUCTION WITH PUMP & GAGE TUBE ASSEMBLY

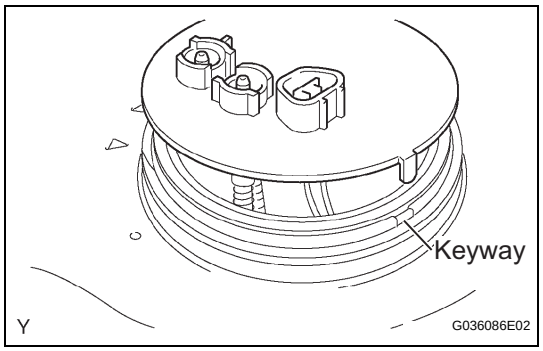
(a) Install a new gasket onto the fuel tank.

(b) Set the fuel pump assembly in the fuel tank.

NOTICE:

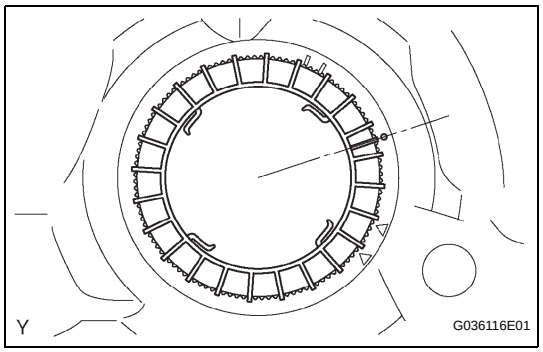
Be careful not to bend the arm of the sender gauge.

(c) Fit a spline of the fuel suction tube assembly into a keyway of the fuel tank.



(d) Install a new retainer.

(1) Align the mark on a new retainer with the rib on the fuel tank as shown in the illustration.

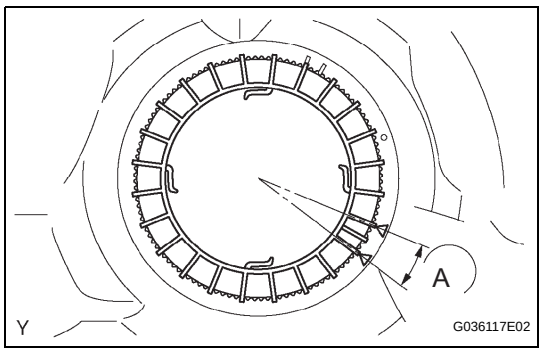


(2) Using SST, turn the retainer 740°to 780°clockwise (more than 2 turns), and position the mark on the retainer within range A to install it.

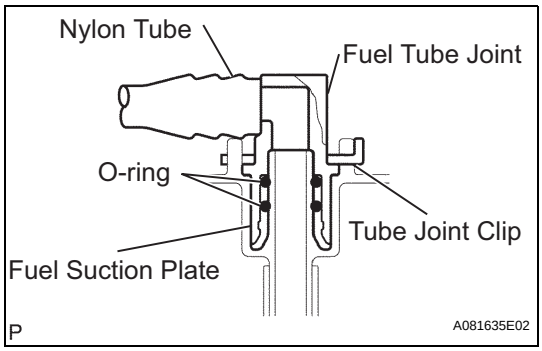
SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

The ribs on the retainer can be fitted into the tip of the SST.



FU



4. INSTALL FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Install the fuel tank main tube and return tube with the 2 joint clips.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube joint and plug before performing this work.**
- **Check that the fuel tube joint is securely inserted to the end.**
- **Check that the tube joint clips are on the collar of the fuel tube joint.**
- **After installing the tube joint clip, check that the fuel tank main tube and return tube can be pulled out.**

5. INSTALL FUEL TANK ASSEMBLY

(a) Set the fuel tank assembly onto the mission jack.

(b) Connect the fuel tank vent hose.

(1) Align the fuel tank vent connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the fuel suction plate.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tank vent connector and plug before performing this work.**
- **After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling the quick connector.**

(c) Connect the fuel pump connector.

(d) Connect the fuel tank to filler pipe hose.

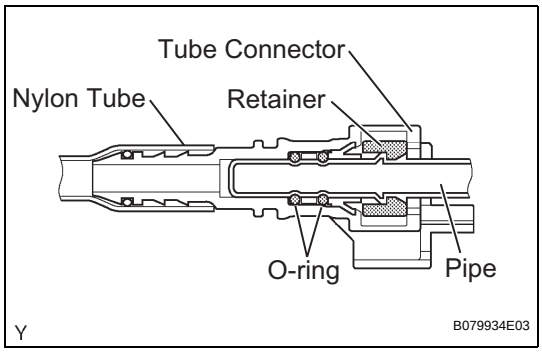
(e) Install the fuel pump cover.

(f) Install the 2 fuel tank bands.

(1) Install the 2 fuel tank bands with the 2 pins and 2 clips.

(2) Install the 2 fuel tank bands with the 2 bolts.

Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)



(g) Connect the fuel tank breather tube.

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound to connect the fuel tank vent breather tube.

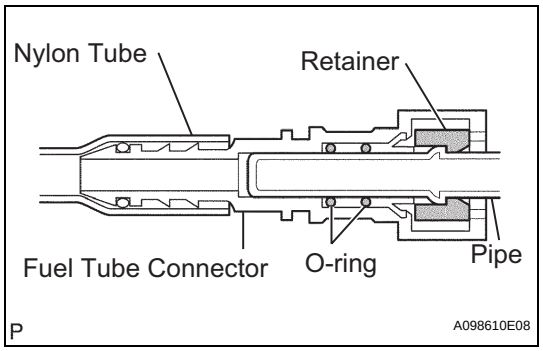
NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube connector and pipe before performing this work.**
- **After connecting the fuel tank breather tube, check that the fuel pump tube is securely connected by pulling the fuel tube connector and pipe.**

FU

(2) Install the checker onto the pipe.

(h) Tighten the clamp bolt.



6. CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE

(a) Connect the fuel tank main tube and return tube.

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound to connect the fuel tank main tube and return tube.

NOTICE:

- **Check that there are no scratches or foreign objects around the connected part of the fuel tube connector and pipe before performing this work.**
- **After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling them.**

(b) Install the fuel pipe clamp.

7. ADD FUEL

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

9. CHECK FOR FUEL LEAKAGE (See page FU-7)

ON-VEHICLE INSPECTION

1. INSPECT AIR-FUEL RATIO COMPENSATION SYSTEM

(a) Measure the voltage between the terminals of the ECM connectors.

Standard

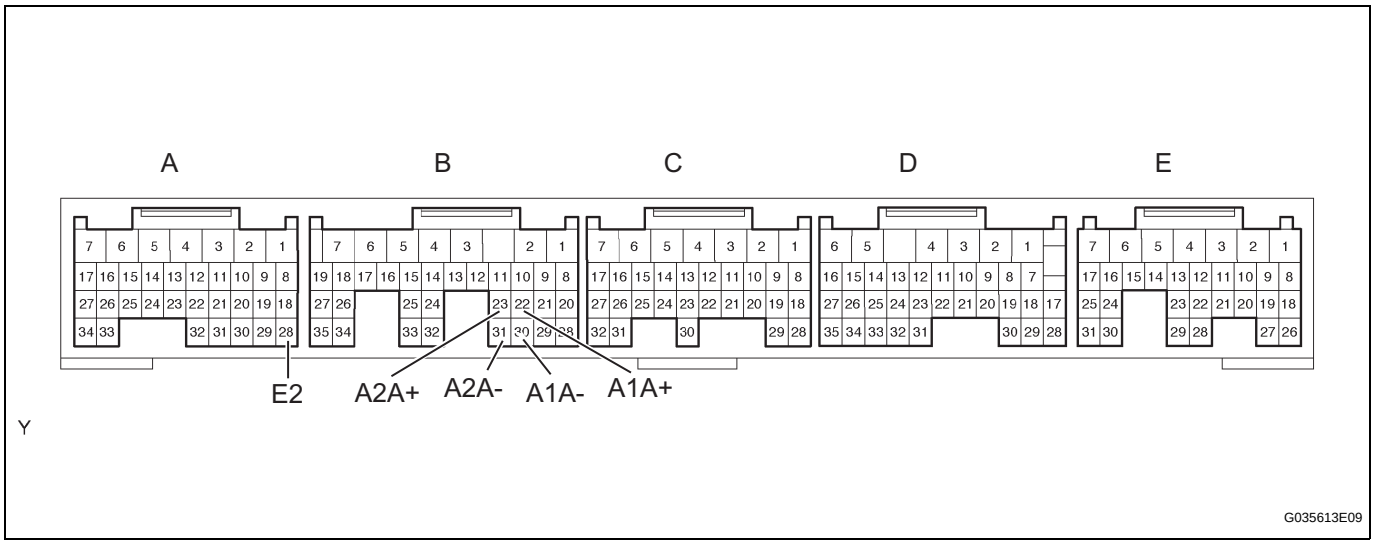
Tester Connection	Condition	Specified Condition
B22 (A1A+) - A28 (E2)	Ignition switch ON	3.3 V
B23 (A2A+) - A28 (E2)	Ignition switch ON	3.3 V
B30 (A1A-) - A28 (E2)	Ignition switch ON	2.9 V
B31 (A2A-) - A28 (E2)	Ignition switch ON	2.9 V

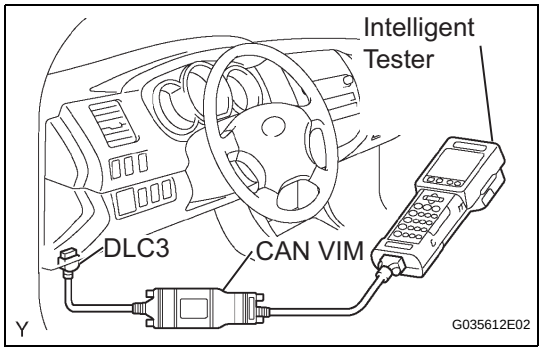
NOTICE:

Connect test leads from the back side of the connector. Do not disconnect the connectors from the ECM.

HINT:

Voltage between the terminals of the ECM is kept constant regardless of the voltage of the A/F sensor.



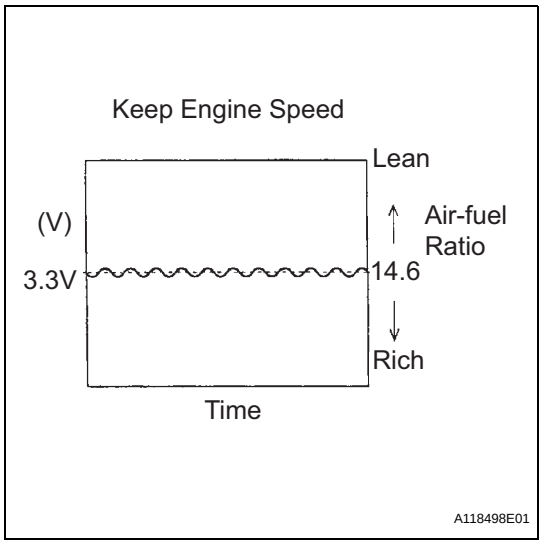


(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch to ON.

(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / A/FS B1 S1 and O2S B1 S2.

(e) Warm up the A/F sensor with the engine speed at 2,500 rpm for approximately 2 minutes.



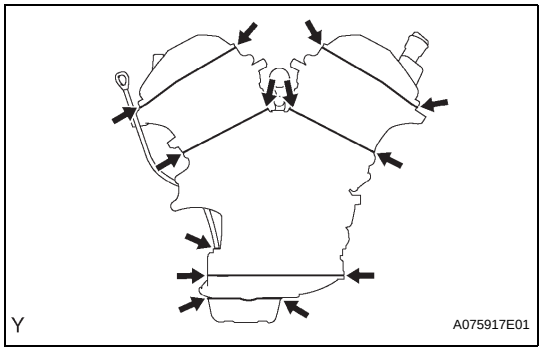
(f) Maintain the engine speed at 2,500 rpm and confirm that the display on the intelligent tester, when A/FS B1 S1 is selected, is as shown in the illustration.
HINT:
- The illustration may slightly differ from the display on the intelligent tester.
- Only the intelligent tester displays the waveform of the A/F sensor.

(g) Confirm that the waveform displayed on the intelligent tester, when O2S B1 S2 is selected, changes between 0 V and 1 V with the engine speed at 2,500 rpm.
OK:
The voltage output oscillates more than 8 times in 10 seconds.
CAUTION:
- **Perform the check immediately after warming up the engine.**
- **If the voltage variation could not be verified, warm up the heated oxygen sensor again. If it could not be verified even after warming up the sensor again, check the DTC No. (see page 05-498).**

EC

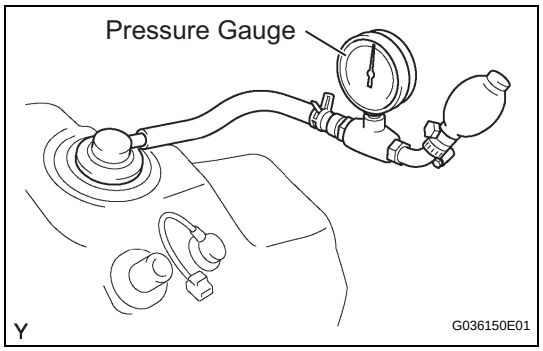
2. INSPECT FUEL CUT OFF RPM

(a) Increase the engine speed to at least 3,500 rpm.
(b) Use a sound scope to check for injector operating sounds.
(c) Check that injector operating sounds stop momentarily and then resume when the accelerator pedal is released.
Fuel cut off rpm:
2,500 rpm
Fuel return rpm:
1,400 rpm



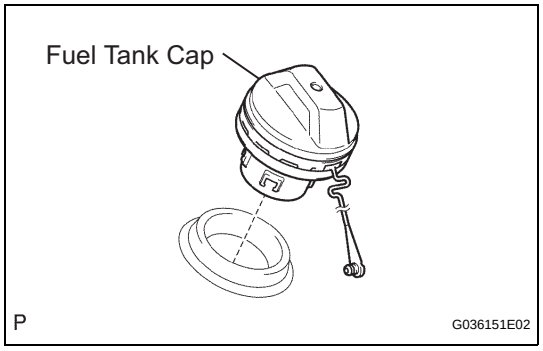
3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

(a) Check the appearance.
(1) Check if the indicated portions of the engine assembly are cracked, leaking or damaged.
HINT:
Disconnection of the engine oil level gauge, oil filler cap, PCV hose, etc. may cause the engine to run improperly. Disconnected, loose or cracked parts in the air induction system between the throttle body and cylinder head will allow air suction and cause the engine to run improperly.
If necessary, repair the engine assembly.

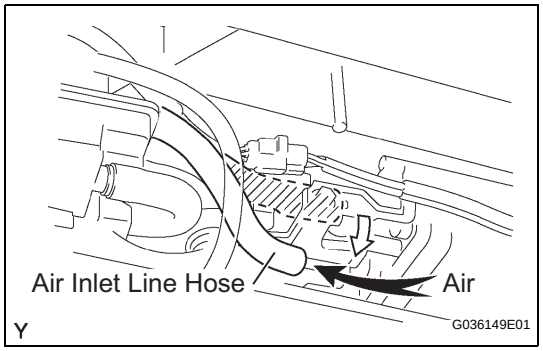


4. INSPECT FUEL CUTOFF VALVE AND FILL CHECK VALVE

(a) Remove the fuel tank (see page FU-30).
(b) Connect the pressure gauge to the vent hose port.
(c) Install the fuel tank with the vent hose disconnected.
(d) Fill the fuel tank with fuel.
(e) Apply pressure at 4 kPa (41 gf/cm2, 0.58 psi) to the vent port of the fuel tank.
HINT:
Check the amount of fuel left in the fuel tank.



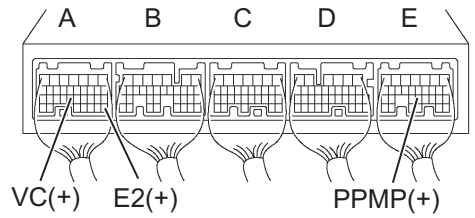
(f) Remove the fuel tank cap, and check that the pressure decreases.
If the pressure does not decrease, replace the fuel tank assembly.
(g) Reconnect the vent line hose to the fuel tank.



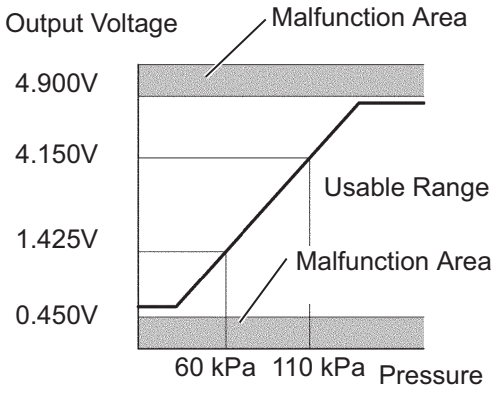
5. CHECK AIR INLET LINE

(a) Disconnect the air inlet line hose from the charcoal canister.
(b) Check that air flows freely into the air inlet line.
If air does not flow freely into the air inlet line, repair or replace the air inlet line.
(c) Reconnect the air inlet line hose to the charcoal canister.

EC



Y **Pressure Sensor Specification**



HINT:
Standard Atmospheric Pressure:101.3 kPa

P

G036145E01

EC

6. INSPECT LEAK DETECTION PUMP (Pressure Sensor)

(a) Measure the power source voltage of the ECM connectors.

Standard

Tester Connection	Condition	Specified Condition
A23 (VC) - A28 (E2)	Ignition switch ON	4.5 to 5.5 V

If the voltage is not as specified, check the ECM, leak detection pump and wire harness.

(b) Measure the power output of the ECM connectors.

(1) Remove the fuel tank cap.

Standard

Tester Connection	Condition	Specified Condition
E22 (PPMP) - A28 (E2)	Ignition switch ON	1.425 to 4.150 V

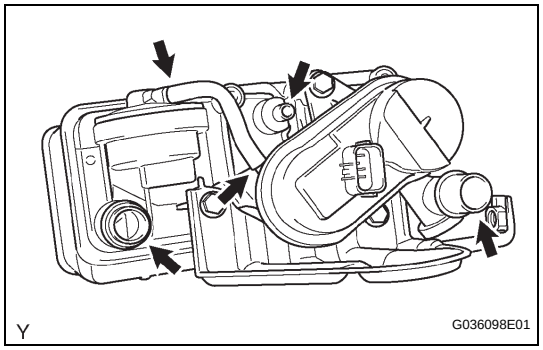
If the voltage is not as specified, check the ECM, leak detection pump and wire harness.

(2) Install the fuel tank cap.

INSPECTION

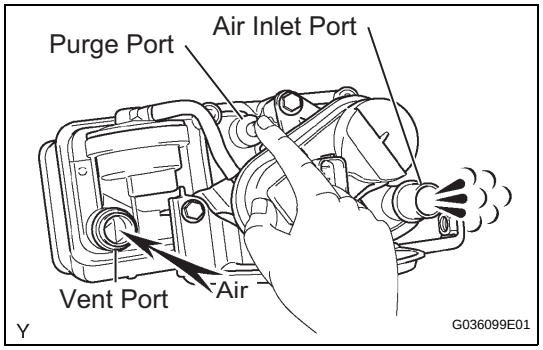
1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks and damage.
If there is any cracks or damage, replace the charcoal canister assembly.

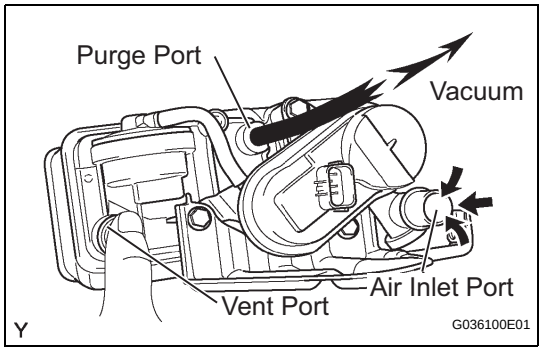


(b) Check the charcoal canister operation.

(1) While holding the purge port closed, blow air at 1.67 kPa (17.0 gf/cm2, 0.24 psi) into the vent port, and check that the air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assembly

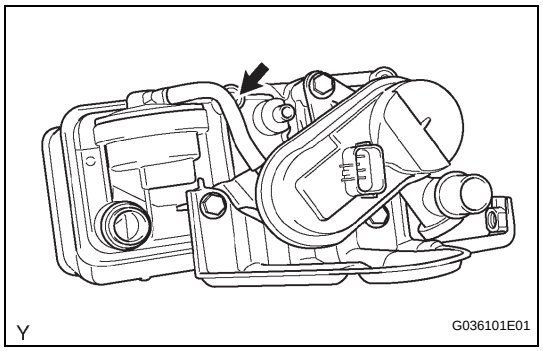


(2) While holding the vent port closed, apply a vacuum of 1.10 kPa (8.3 mmHg, 0.32 in.Hg) into the purge port, and check that the air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assembly

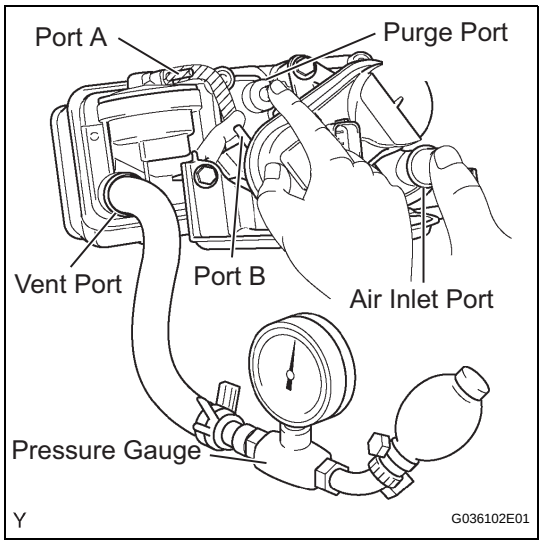


(c) Check for air leakage.

(1) Remove the air hose between ports A and B.

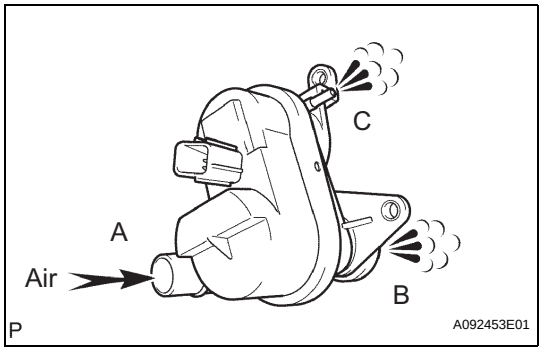


EC



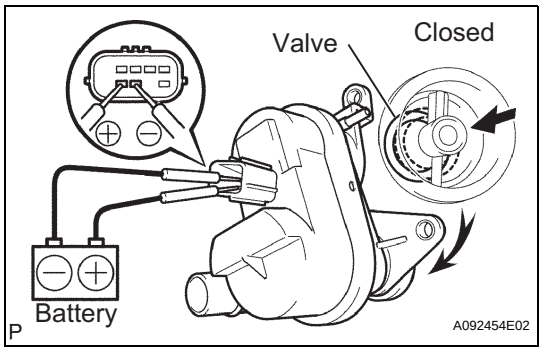
(2) Connect the pressure gauge to the vent port of the charcoal canister.
SST 09992-00242

(3) While holding port B, the purge port and air inlet port closed with your fingers, leave port A open and apply pressurized air at 19.6 kPa (0.2 kgf/cm2, 2.81 psi) into the vent port. Check that the pressure is retained.
If the result is not as specified, replace the charcoal canister assembly



(d) Check the leak detection pump.

(1) Check that air flows from port A to ports B and C.
If the result is not as specified, replace the pump module.



(2) Apply battery positive voltage across the terminals.

(3) Check that the valve is closed.
If the result is not as specified, replace the pump module.

EC

INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

(a) Connect the fuel tank vent hose.

(1) Align the fuel tank vent hose connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the charcoal canister.

NOTICE:

- **Check that there are no scratches or foreign objects on the disconnected parts of the fuel tank vent connector and pipe before performing the work.**
- **After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling the quick connector.**

(b) Install the charcoal canister with the bolt and 2 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(c) Connect the EVAP tube.

(d) Connect the connector.

2. INSTALL CHARCOAL CANISTER FILTER NO.2

(a) Install the charcoal canister filter No. 2 with the nut.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(b) Connect the breather hose to the charcoal canister.

(c) Engage the clamp.

(d) Connect the breather hose to the pipe.

(e) Connect the EVAP pipe to the clamp.

(f) Install the ABS wire harness clamp with the bolt.
Torque: 14 N*m (142 kgf*cm, 10 ft.*lbf)

3. INSTALL FUEL TANK ASSEMBLY (See page FU-35)

4. CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-36)

5. INSTALL FUEL TANK PROTECTOR SUB-ASSEMBLY NO.1 (for Off Road Package) (See page FU-36)

6. CONNECT CABLE TO NEGATIVE BAATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

7. CHECK FOR FUEL LEAKAGE

INSTALLATION

1. **INSTALL DUTY VACUUM SWITCHING VALVE**
   (a) Connect the hose to the vacuum switching valve.
   (b) Install the vacuum switching valve with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   (c) Connect the vapor feed hose.
   (d) Connect the connector.
2. **INSTALL V-BANK COVER (See page ES-416)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

ON-VEHICLE INSPECTION

1. INSPECT AIR-FUEL RATIO COMPENSATION SYSTEM

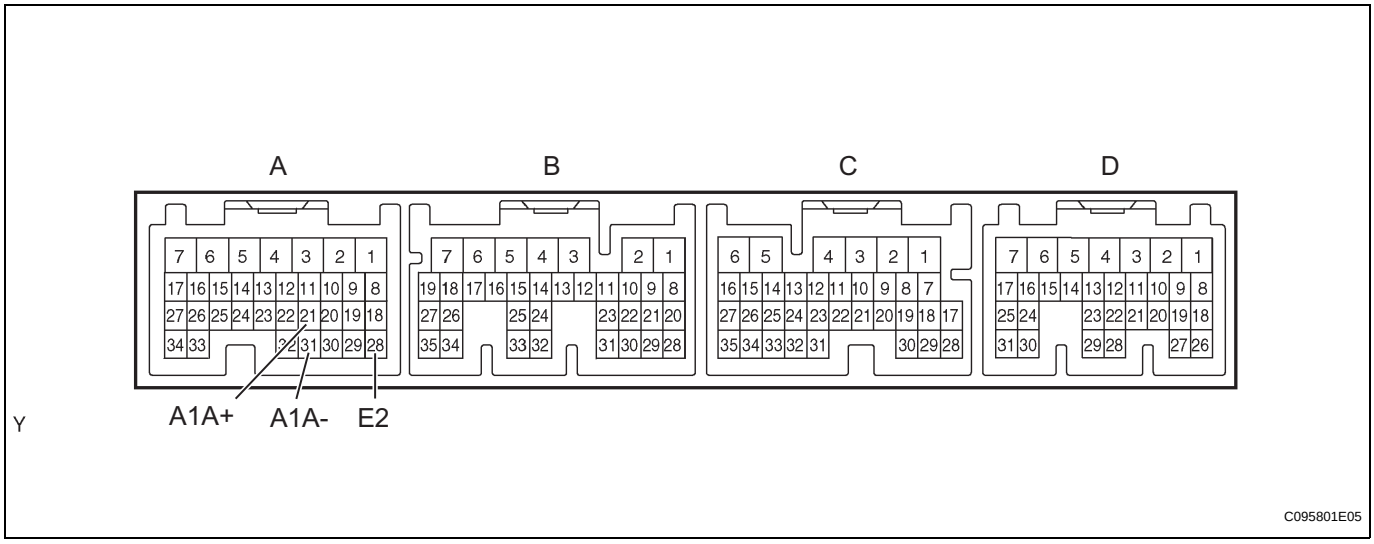
(a) Measure the voltage between the terminals of the ECM connectors.

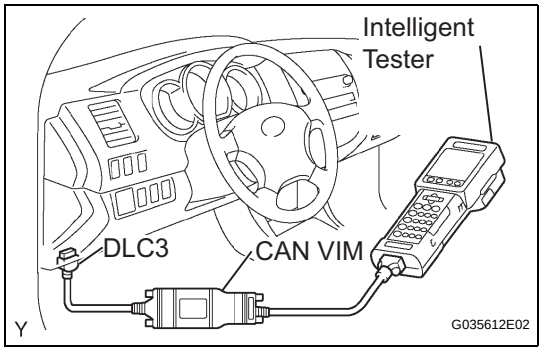
Standard

Tester Connection	Condition	Specified Condition
A21 (A1A+) -A28 (E2)	Ignition switch ON	3.3 V
A31 (A1A-) -A28 (E2)	Ignition switch ON	2.9 V

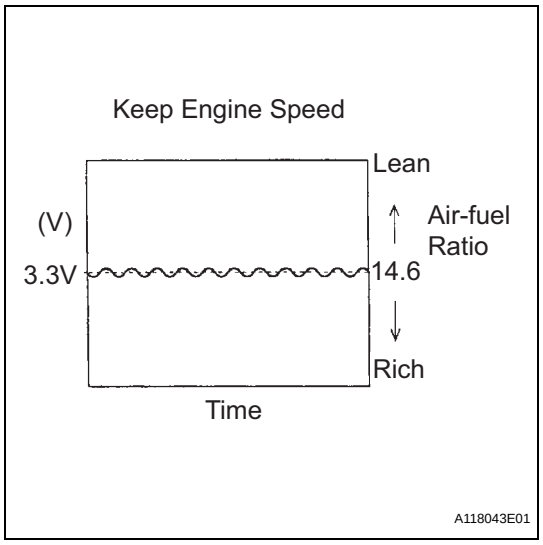
NOTICE:
Connect test leads from the back side of the connector. The connectors should not be disconnected from the ECM.

HINT:
Voltage between the terminals of the ECM is kept constant regardless of the voltage of the A/F sensor.





(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / A/FS B1 S1 and O2S B1 S2.
(e) Warm up the A/F sensor with the engine speed at 2,500 rpm for approximately 2 minutes.

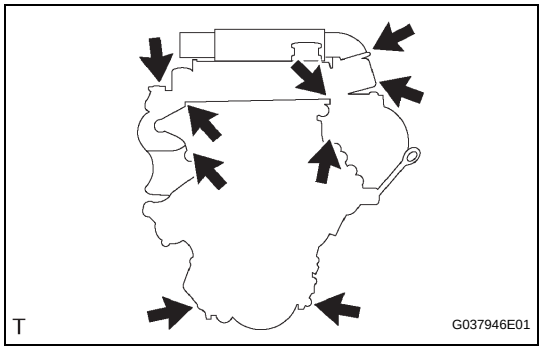


(f) Keep the engine speed at 2,500 rpm and confirm that the display, when A/FS B1 S1 is selected, is as shown in the illustration.
HINT:
- The illustration may slightly differ from the display on the intelligent tester.
- Only the intelligent tester displays the waveform of the A/F sensor.

(g) Confirm that the display, when O2S B1 S2 is selected, changes between 0 V and 1 V with the engine speed at 2,500 rpm.
OK:
The voltage output oscillates more than 8 times in 10 seconds.
CAUTION:
- **Perform the check immediately after warming up the engine.**
- **If the voltage variation could not be verified, warm up the heated oxygen sensor again. If it could not be verified even after warming up the sensor again, check the DTC No. (see page 05-61).**

2. INSPECT FUEL CUT OFF RPM

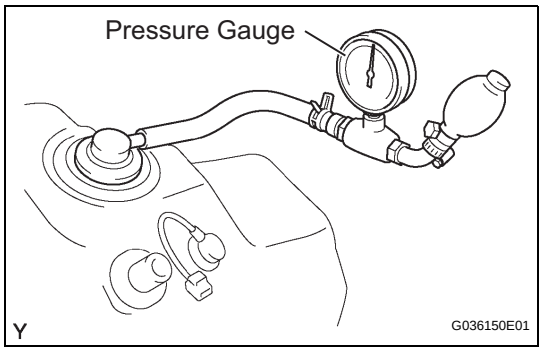
(a) Increase the engine speed to at least 3,500 rpm.
(b) Use a sound scope to check for injector operating sounds.
(c) Check that injector operating sounds stop momentarily and then resume when the accelerator pedal is released.
Fuel cut off rpm:
2,500 rpm
Fuel return rpm:
1,200 rpm



3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

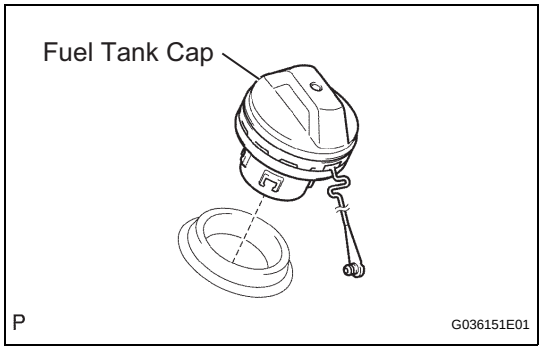
(a) Check the appearance.
(1) Check if the indicated portions of the engine assembly are cracked, leaking or damaged.
HINT:
Disconnection of the engine oil level gauge, oil filler cap, PCV hose, etc. may cause the engine to run improperly. Disconnection, slack or cracks in the air induction system parts between the throttle body and cylinder head will allow air suction and cause the engine to run improperly.
If necessary, repair the engine assembly.

EC

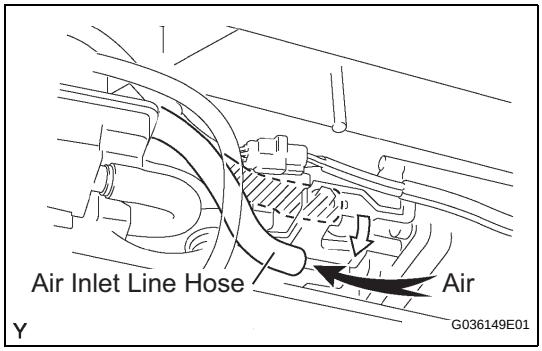


4. INSPECT FUEL CUTOFF VALVE AND FILL CHECK

(a) Remove the fuel tank (see page FU-30).
(b) Connect the pressure gauge to the vent hose port.
(c) Install the fuel tank with the vent hose disconnected.
(d) Fill the fuel tank with fuel.
(e) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.
HINT:
It is necessary to check the amount of fuel in the fuel tank.



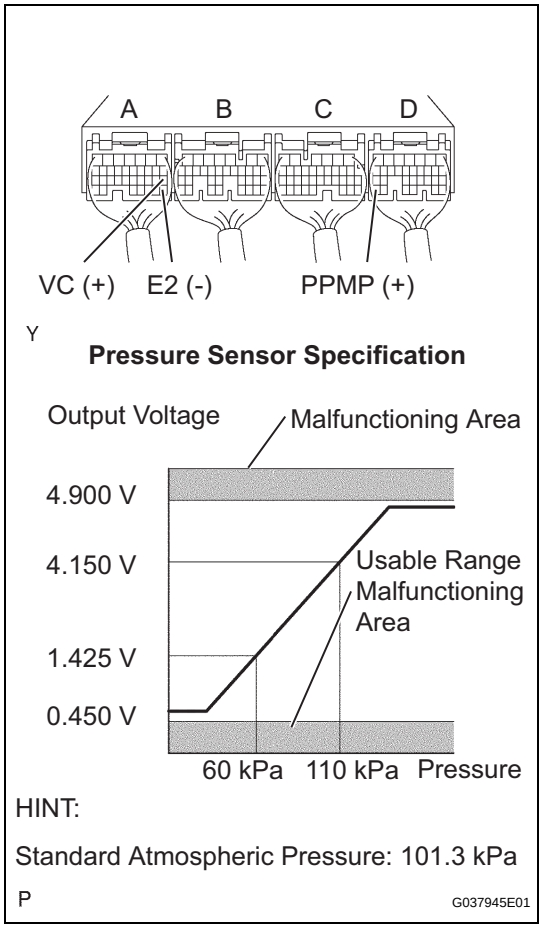
(f) Remove the fuel tank cap, and check that the pressure drops.
If the pressure does not drop, replace the fuel tank assembly.
(g) Reconnect the vent line hose to the fuel tank.



5. CHECK AIR INLET LINE

(a) Disconnect the air inlet line hose from the charcoal canister.
(b) Check that air can flow freely into the air inlet line.
If air cannot flow freely into the air inlet line, repair or replace it.
(c) Reconnect the air inlet line hose to the charcoal canister.

EC



6. INSPECT LEAK DETECTION PUMP (Pressure Sensor)

(a) Measure the power source voltage of the ECM connectors.

Standard

Tester Connection	Condition	Specified Condition
A18 (VC) - A28 (E2)	Ignition switch ON	4.5 to 5.5 V

If the voltage is not as specified, check the ECM, leak detection pump and wire harness.

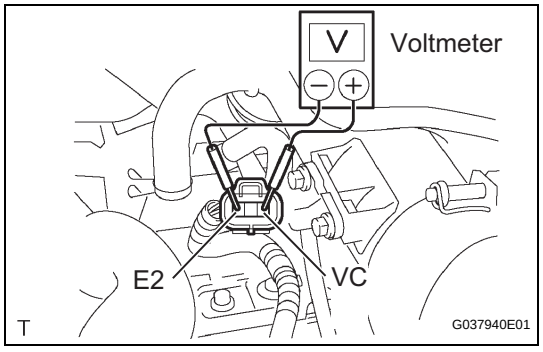
(b) Measure the power output of the ECM connectors.

(1) Remove the fuel tank cap.

Tester Connection	Condition	Specified Condition
D31 (PPMP) - A28 (E2)	Ignition switch ON	1.425 to 4.150 V

If the voltage is not as specified, check the ECM, leak detection pump and wire harness.

(2) Install the fuel tank cap.



7. INSPECT PRESSURE SENSOR

(a) Check the power source voltage.

(1) Disconnect the pressure sensor connector.

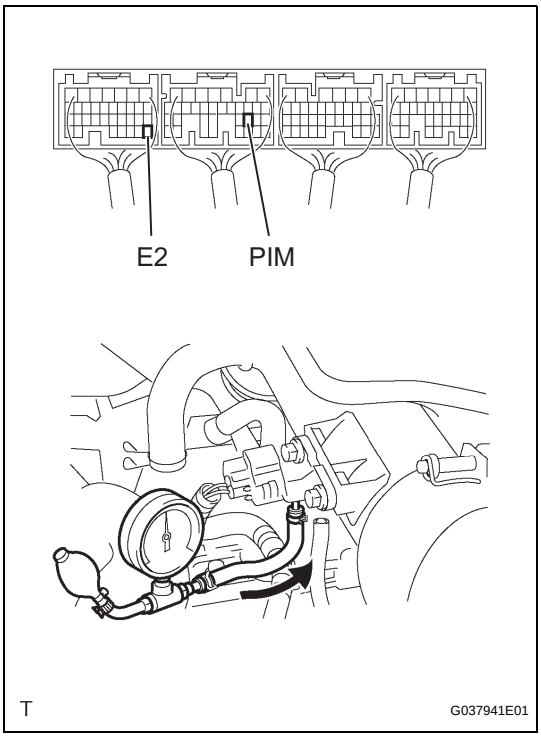
(2) Turn the ignition switch to ON.

(3) Using a voltmeter, measure the voltage between terminals VC and E2.

Voltage:

4.5 to 5.5 V

EC

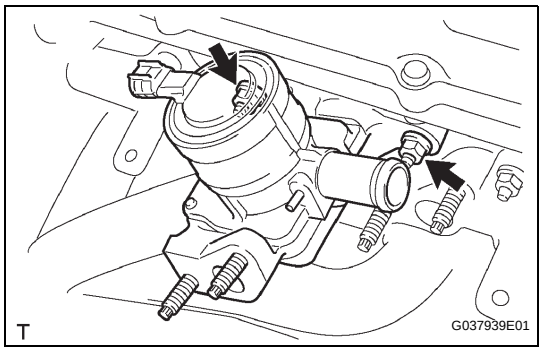


(b) Check the supply power.
(1) Using SST (turbocharger pressure gauge), apply air to the turbo pressure sensor at the pressures shown in the table below.
SST 09992-00242
(2) Connect a voltmeter to terminals PIM and E2 of the ECM and measure the output voltage under ambient atmospheric pressure.
Voltage Increase

Applied Pressure [kPa (kgf/cm2, psi)]	Voltage Increase [V]
19.6 (0.20, 2.84)	0.1 to 0.4
39.2 (0.40, 5.69)	0.4 to 0.7
58.8 (0.60, 8.53)	0.7 to 1.0
78.5 (0.80, 11.4)	1.0 to 1.3
98.0 (1.00, 14.2)	1.3 to 1.6

8. INSPECT AIR PUMP ASSEMBLY
(a) Check the operation (see page 05-372).

EC

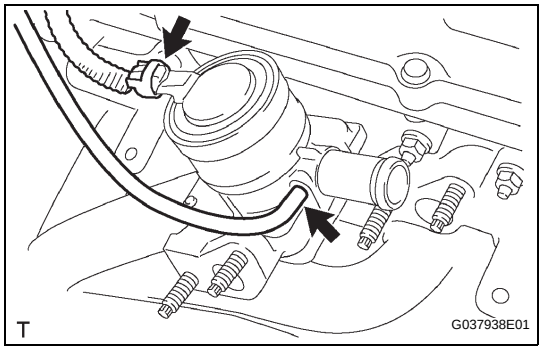


INSTALLATION

1. INSTALL AIR SWITCHING VALVE ASSEMBLY

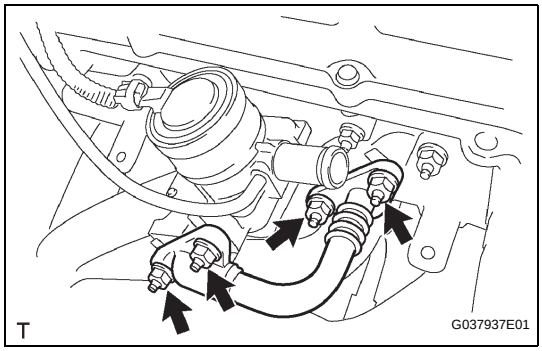
(a) Install a new gasket onto the cylinder head.

(b) Install the air switching valve with the 2 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(c) Connect the air switching valve connector.

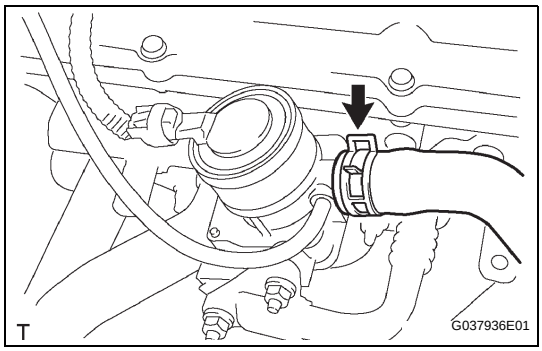
(d) Connect the vacuum hose.



2. INSTALL INTAKE PIPE INSULATOR

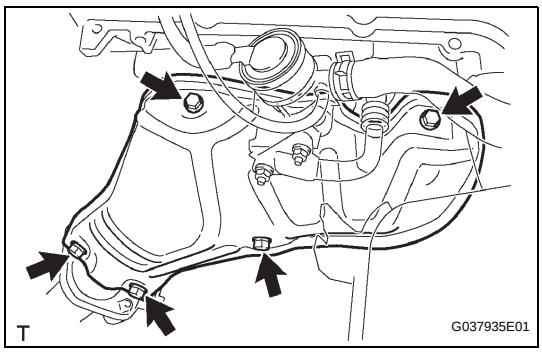
(a) Install 2 new gaskets onto the cylinder head and air switching valve.

(b) Install the intake pipe insulator with the 4 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



3. CONNECT AIR INJECTION SYSTEM NO.1 HOSE

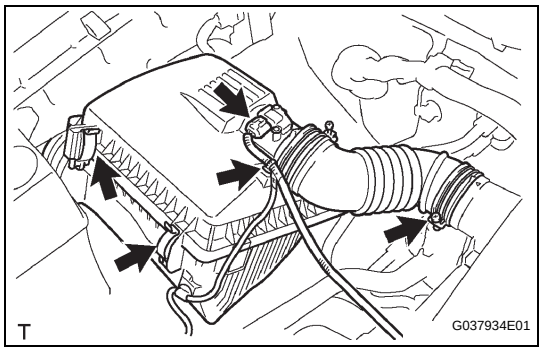
(a) Connect the air injection system No. 1 hose to the air switching valve.



4. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1

(a) Install the exhaust manifold heat insulator No. 1 with the 5 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

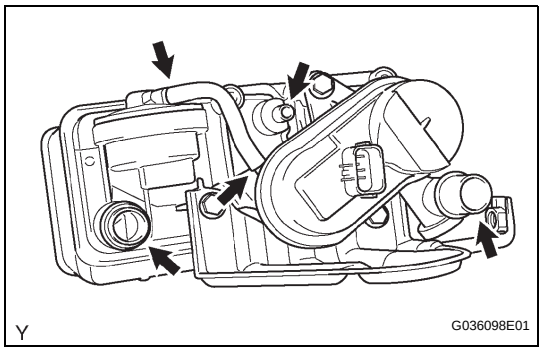
EC



5. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY**
   (a) Install the air cleaner cap together with the air cleaner hose No. 1.
   (b) Connect the 2 air cleaner clamps.
   (c) Tighten the hose clamp bolt, then connect the air cleaner hose No. 1.
   (d) Connect the wire harness clamp.
   (e) Connect the mass air flow meter connector.

6. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**

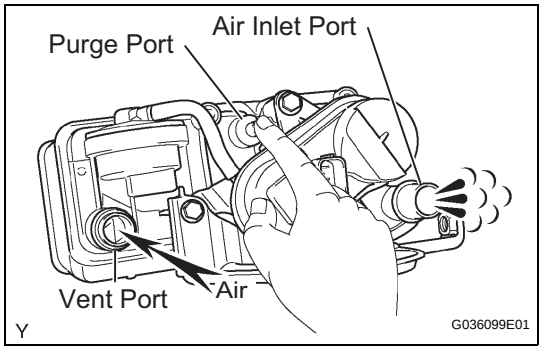
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



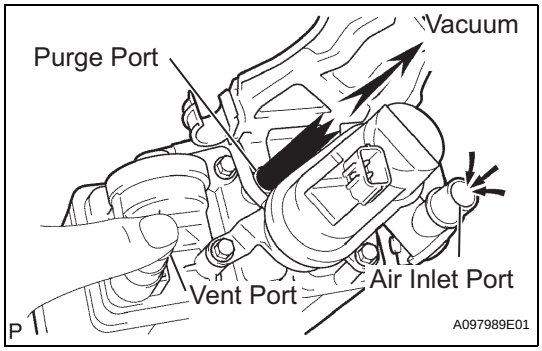
INSPECTION

1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks and damage.
If cracks and damage are found, replace the charcoal canister assy.

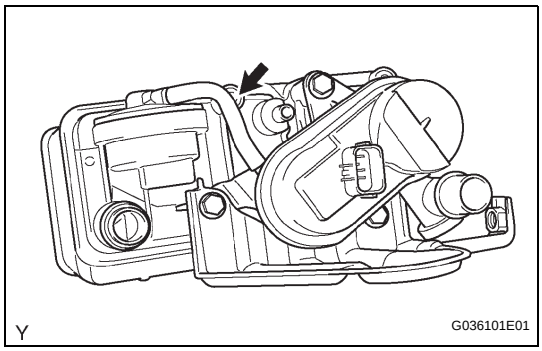


(b) Check the charcoal canister operation.
(1) While holding the purge port closed, blow air of 1.67 kPa (17.0 gf/cm^2, 0.24 psi) into the vent port, and check that the air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assy.

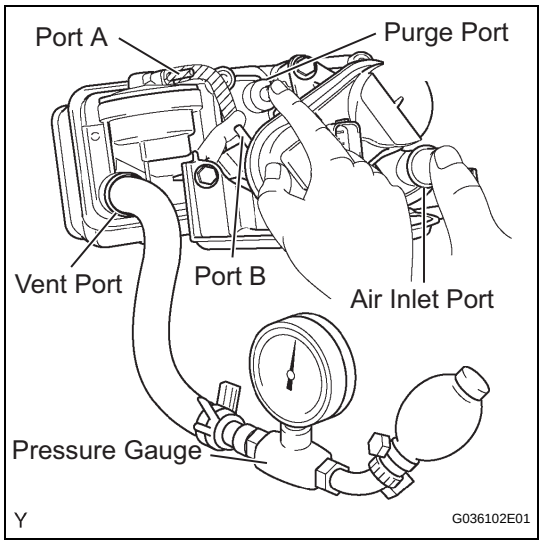


(2) While holding the vent port closed, apply a vacuum of 1.10 kPa (8.3 mmHg, 0.32 in.Hg) into the purge port, and check that the air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assy.

EC

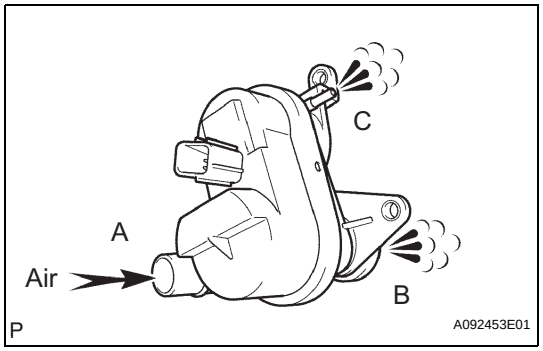


(c) Check for air leakage.
(1) Remove the air hose between ports A and B.



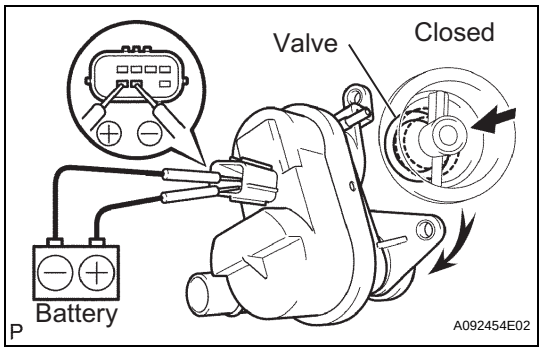
(2) Connect the pressure gauge to the vent port of the charcoal canister.
SST 09992-00242

(3) While holding port B, the purge port and air inlet port closed and port A open, apply pressurized air of 19.6 kPa (0.2 kgf/cm^2, 2.81 psi) into the vent port. Then confirm that the pressure is retained.
If the result is not as specified, replace the charcoal canister assy.



(d) Check the leak detection pump.

(1) Check that air flows from port A to ports B and C.
If the result is not as specified, replace the charcoal canister (pump module).



(2) Apply battery positive voltage across the terminals.

(3) Check that the valve is closed.
If the result is not as specified, replace the charcoal canister (pump module).

EC

INSTALLATION

1. **INSTALL CHARCOAL CANISTER ASSEMBLY**
   (a) Connect the fuel tank vent hose.
      (1) Align the fuel tank vent hose connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the charcoal canister.
      NOTICE:
      - **Check that there are no scratches or foreign objects on the disconnected parts of the fuel tank vent connector and pipe before performing the work.**
      - **After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling the quick connector.**
   (b) Install the charcoal canister with the bolt and 2 nuts.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (c) Connect the EVAP tube.
   (d) Connect the connector.

2. **INSTALL CHARCOAL CANISTER FILTER NO.2**
   (a) Install the charcoal canister filter No. 2 with the nut.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the breather hose to the charcoal canister.
   (c) Engage the clamp.
   (d) Connect the breather hose to the pipe.
   (e) Connect the EVAP pipe to the clamp.
   (f) Install the ABS wire harness clamp with the bolt.
   Torque: 14 N*m (142 kgf*cm, 10 ft.*lbf)

3. **INSTALL FUEL TANK ASSEMBLY (See page FU-35)**

4. **CONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-36)**

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

6. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

EC

INSTALLATION

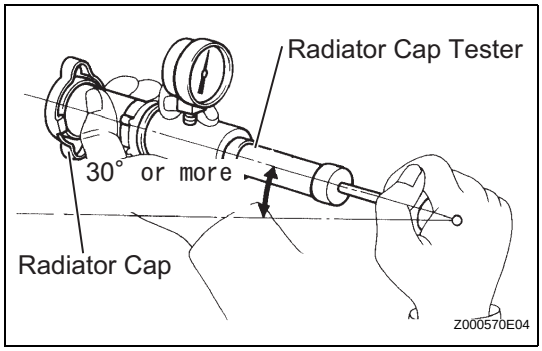
1. **INSTALL WATER INLET**
   (a) Install a new gasket onto the water inlet with thermostat.
   (b) Install the water inlet with thermostat with the 3 nuts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
2. **CONNECT NO.2 RADIATOR HOSE**
3. **CONNECT BATTERY NEGATIVE TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
4. **ADD ENGINE COOLANT (See page CO-3)**
5. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
6. **INSTALL V-BANK COVER**
   (a) Install the V-bank cover with the 2 nuts.
   Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

ON-VEHICLE INSPECTION

1. INSPECT RADIATOR CAP SUB-ASSEMBLY

NOTICE:

- **If the radiator cap is contaminated, rinse it with water.**
- **Before using a radiator cap tester, wet the relief valve and pressure valve with engine coolant or water.**
- **When performing the following steps (a) and (b), keep the tester at an angle of 30° or more above the horizontal.**



(a) Using a radiator cap tester, slowly pump and check that air comes from the vacuum valve.

Pumping speed:

1 push every 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air does not come from the vacuum valve, replace the radiator cap.

(b) Pump the tester, then measure the relief valve opening pressure.

Pumping speed:

1 push every second

NOTICE:

The above pumping speed is for the first pumping only (in order to close the vacuum valve). After the first pumping, the pumping speed can be reduced.

HINT:

Use the tester's maximum reading as the opening pressure.

Standard opening pressure:

93 to 123 kPa (0.95 to 1.25 kgf*cm^2, 13.5 to 17.8 psi)

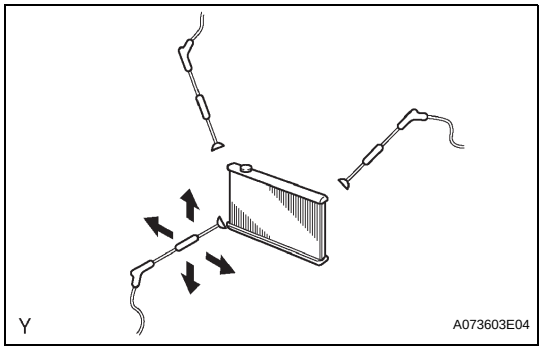
Minimum opening pressure:

78 kPa (0.8 kgf*cm^2, 11.4 psi)

If the opening pressure is less than the minimum, replace the radiator cap.

CO

ON-VEHICLE CLEANING



1. CHECK FINS FOR BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner, then dry them with compressed air.

NOTICE:

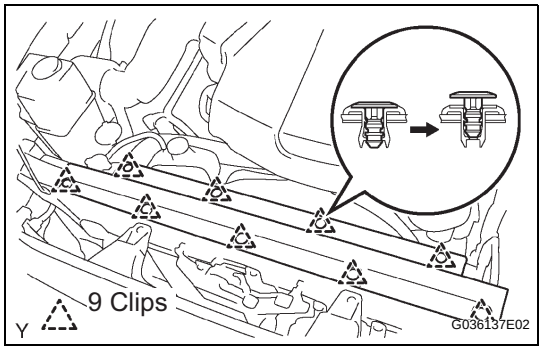
- **If the distance between the steam cleaner and core is too small, there is a possibility of damaging the fins, so keep to the following injection distances.**

Injection Pressure kPa (kg/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not to expose electronic components to water.**

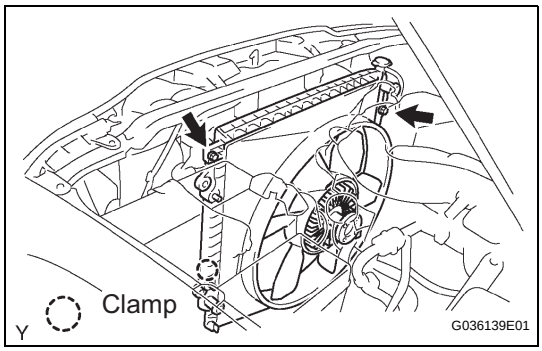
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH**
   (a) Disengage the 9 clips, then remove the radiator support to frame seal.

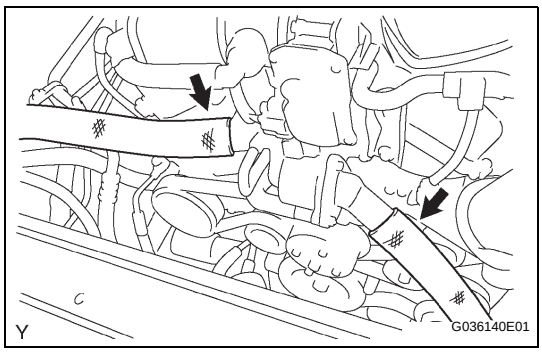


4. **REMOVE FAN SHROUD**
   (a) Disconnect the hose from the radiator reserve tank.

   (b) Remove the 2 cooler hoses from the clamp (with automatic transmission).
   (c) Remove the 4 nuts from the fan pulley.
   (d) Remove the fan and generator V belt (see page EM-5).
   (e) Remove the 2 bolts from the fan shroud.
   (f) Remove the fan pulley and fan shroud.

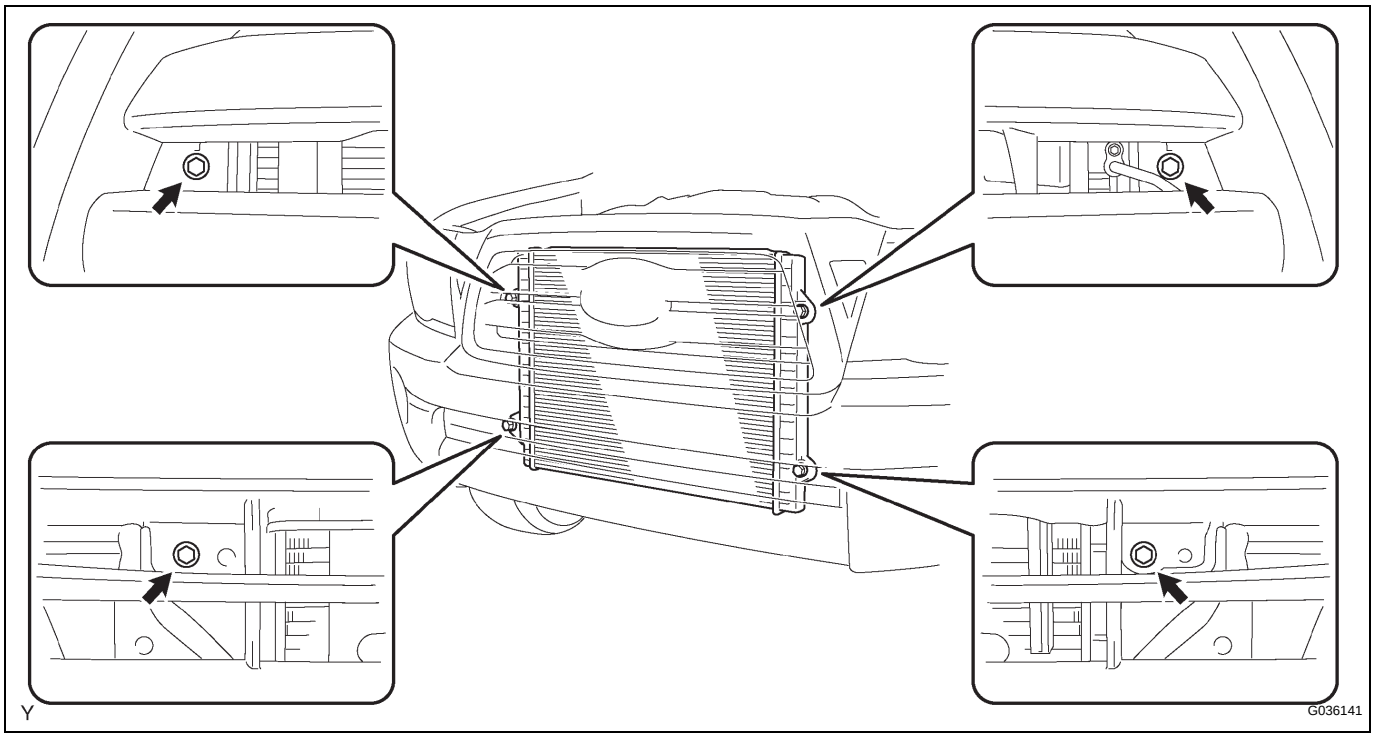


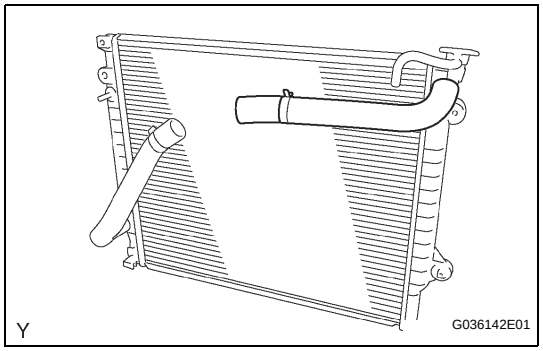
5. **REMOVE RADIATOR ASSEMBLY**
   (a) Disconnect the 2 radiator hoses.
   (b) Remove the 4 bolts, then remove the radiator.



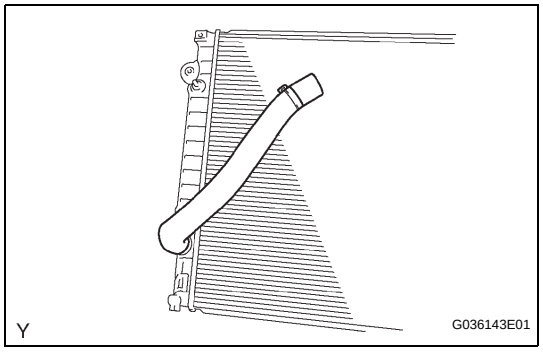
CO

(c) Disconnect the 2 oil cooler hoses (with automatic transmission).





6. REMOVE RADIATOR HOSE INLET



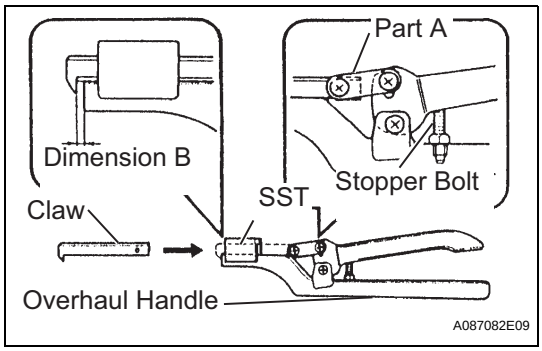
7. REMOVE NO.2 RADIATOR HOSE

DISASSEMBLY

1. REMOVE RADIATOR DRAIN COCK

(a) Remove the drain cock plug.

(b) Remove the O-ring from the drain cock plug.



2. ASSEMBLE SST

SST 09230-01010 (09231-01010, 09231-01030)

(a) Engage the claw with the overhaul handle by inserting it into the hole in part A as shown in the illustration.

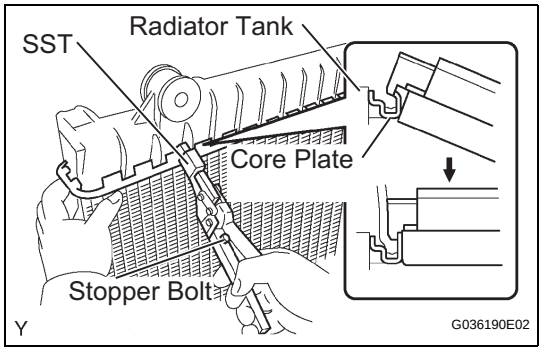
(b) While gripping the handle, adjust dimension B to between 0.2 and 0.3 mm, using the stopper bolt.

Dimension B:

0.2 to 0.3 mm (0.008 to 0.012 in)

NOTICE:

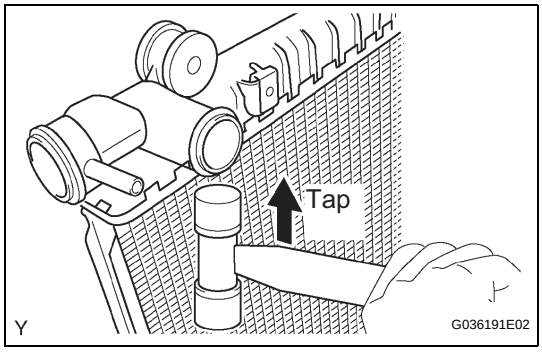
If the stopper bolt can not be adjusted, the claw may be damaged.



3. UNCAULK CORE PLATE

(a) Straighten the core plate by gripping it with SST until stopped by the stopper bolt.

SST 09230-01010 (09231-01010, 09231-01030)



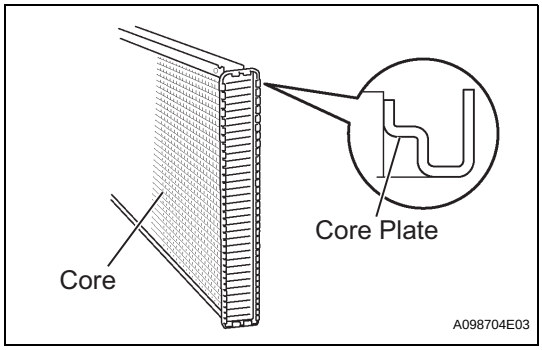
4. REMOVE RADIATOR TANK UPPER

(a) Lightly tap the radiator tank bracket (or radiator tank pipe) with a soft-faced hammer to remove the radiator tank.

5. REMOVE RADIATOR TANK LOWER

HINT:

Perform the same procedures as for the radiator tank upper.



INSPECTION

1. INSPECT RADIATOR CORE SUB-ASSEMBLY

Check the core plate for damage.

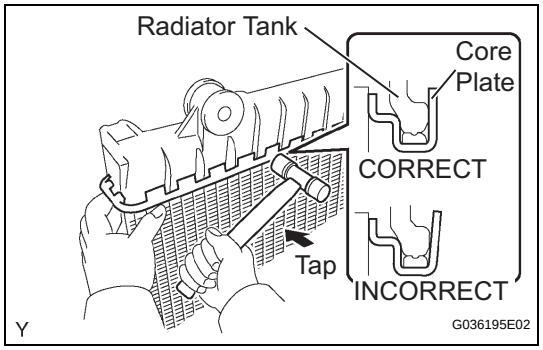
HINT:

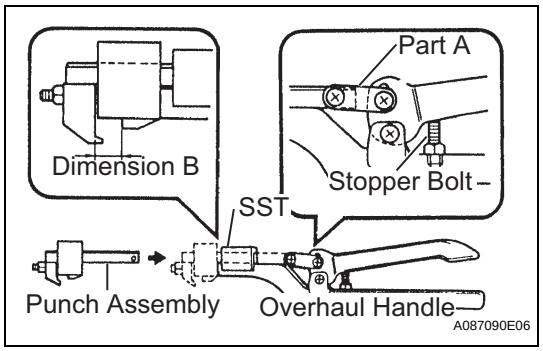
- If the sides of the core plate groove are deformed, it is impossible to reassemble the radiator tank. Therefore, first correct any deformation using pliers or a similar tool.
- Water leakage will occur if the bottom of the core plate groove is damaged or dented. Repair or replace the core plate if necessary.

NOTICE:

The radiator can only be recaulked twice. After being recaulked twice, the radiator assembly must be replaced.

CO





REASSEMBLY

1. INSTALL RADIATOR TANK UPPER

(a) Install the new radiator tank.

(b) Tap the core plate with a soft-faced hammer until there is no gap between the core plate and radiator tank.

2. INSTALL RADIATOR TANK LOWER

HINT:

Perform the same procedures as for the radiator tank upper.

3. ASSEMBLE SST

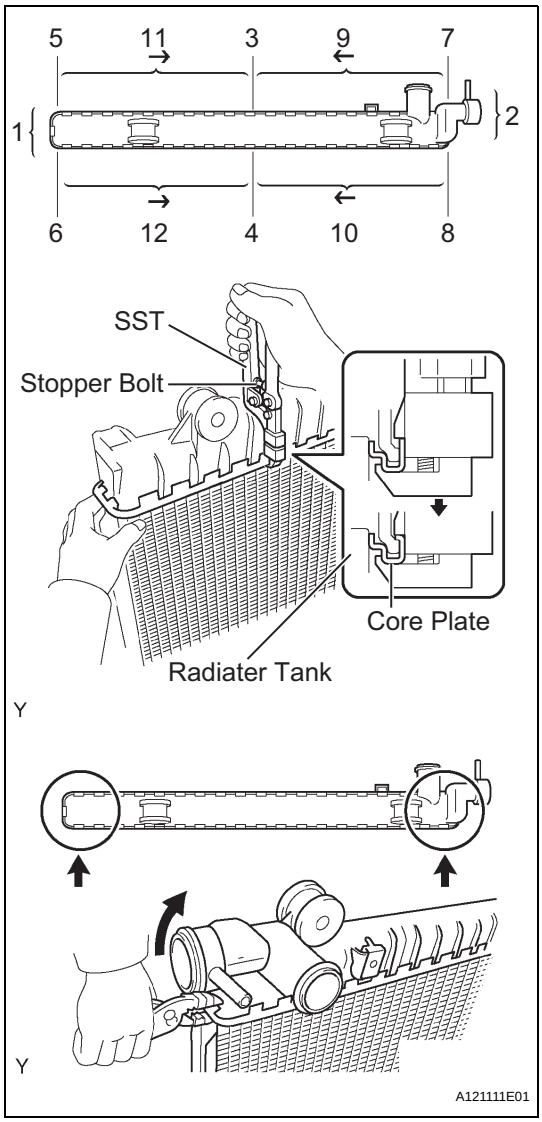
SST 09230-01010 (09231-01010, 09231-01020)

(a) Install the punch assembly into the overhaul handle by inserting it into the hole in part A as shown in the illustration.

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.

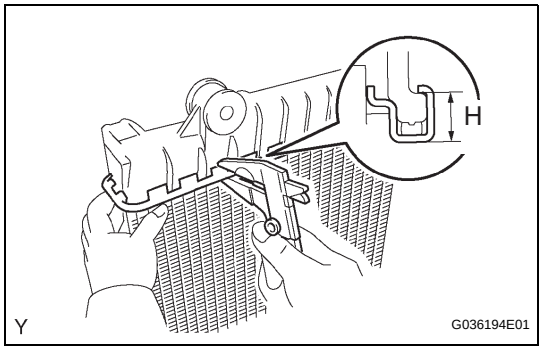
Dimension B:

8.4 mm (0.331 in.)



4. CAULK CORE PLATE

(a) Lightly press SST against the core plate in the order shown in the illustration. After repeating this a few times, fully caulk the core plate by gripping the handle until stopped by the stopper bolt.
SST 09230-01010 (09231-01010, 09231-01020)
HINT:
Do not tap the portions indicated in the illustration or the oil coller using SST. Use pliers or a similar tool. Be careful not to damage the core plate.



(b) Check the core plate height (H) after completing the caulking.
Plate height (H):
8.7 to 9.1 mm (0.343 to 0.358 in.)
If the height is not as specified, readjust the stopper bolt of the handle, then caulk it again.

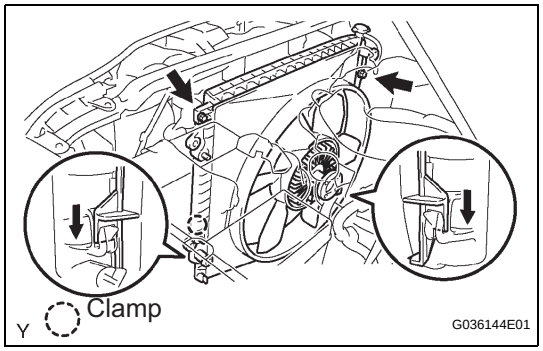
5. INSTALL RADIATOR DRAIN COCK

(a) Install a new O-ring onto the drain cock plug.
(b) Install the drain cock plug.

CO

INSTALLATION

1. **INSTALL NO.2 RADIATOR HOSE**
2. **INSTALL RADIATOR HOSE INLET**
3. **INSTALL RADIATOR ASSEMBLY**
   (a) Install the radiator with the 4 bolts.
   Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
   (b) Connect the 2 oil cooler hoses (with automatic transmission).
4. **INSTALL FAN SHROUD**
   (a) Provisionally install the fan shroud together with the fan pulley.
   (b) Install the fan and generator V belt (see page EM-5).
   (c) Install the fan pulley with the 4 nuts.
   Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
   (d) Install the fan shroud with the 2 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (e) Install the 2 cooler hoses into the clamp (with automatic transmission).
   (f) Connect the hose to the radiator reserve tank.
5. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
7. **ADD ENGINE COOLANT (See page CO-3)**
8. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**



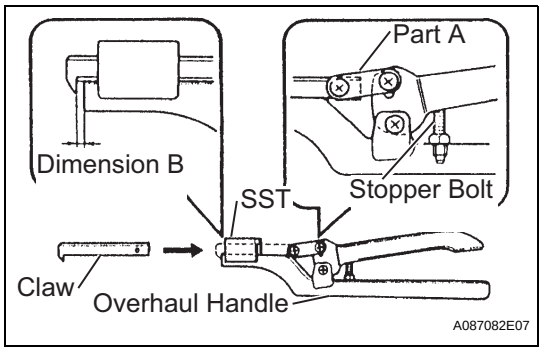
CO

DISASSEMBLY

1. REMOVE RADIATOR DRAIN COCK

(a) Remove the drain cock plug.

(b) Remove the O-ring from the drain cock plug.



2. ASSEMBLE SST

SST 09230-01010 (09231-01010, 09231-01030)

(a) Engage the claw with the overhaul handle by inserting it into the hole in part A as shown in the illustration.

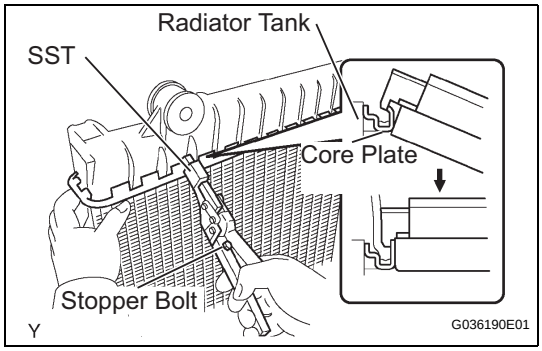
(b) While gripping the handle, adjust dimension B to between 0.2 and 0.3 mm, using the stopper bolt.

Dimension B:

0.2 to 0.3 mm (0.008 to 0.012 in)

NOTICE:

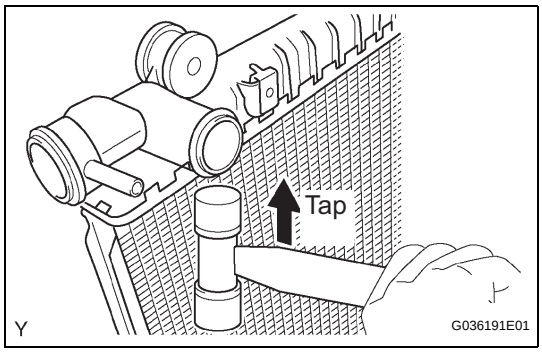
If the stopper bolt can not be adjusted, the claw may be damaged.



3. UNCAULK CORE PLATE

(a) Straighten the core plate by gripping it with SST until stopped by the stopper bolt.

SST 09230-01010 (09231-01010, 09231-01030)



4. REMOVE RADIATOR TANK UPPER

(a) Lightly tap the radiator tank bracket (or radiator tank pipe) with a soft-faced hammer to remove the radiator tank.

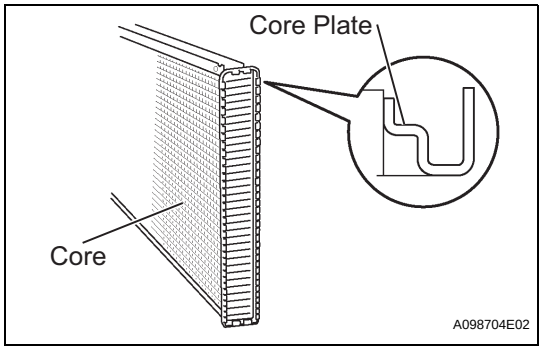
5. REMOVE RADIATOR TANK LOWER

HINT:

Perform the same procedures as for the radiator tank upper.

CO

INSPECTION



1. INSPECT RADIATOR CORE SUB-ASSEMBLY

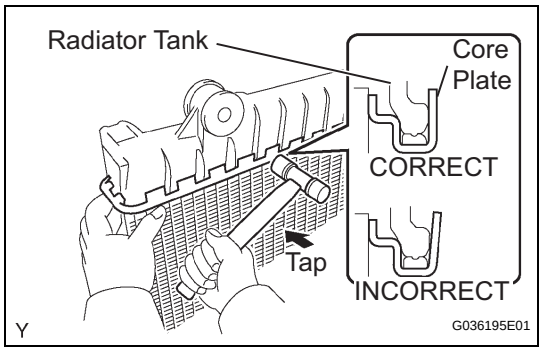
Check the core plate for damage.

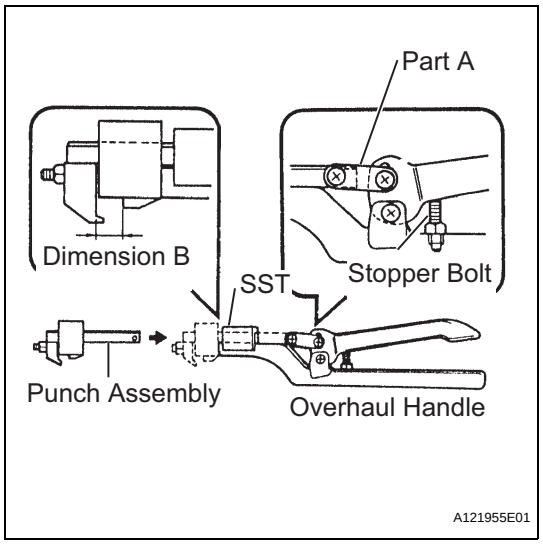
HINT:

- If the sides of the core plate groove are deformed, it is impossible to reassemble the radiator tank. Therefore, first correct any deformation using pliers or a similar tool.
- Water leakage will occur if the bottom of the core plate groove is damaged or dented. Repair or replace the core plate if necessary.

NOTICE:

The radiator can only be caulked twice. After being caulked twice, the radiator assembly must be replaced.





REASSEMBLY

1. INSTALL RADIATOR TANK UPPER

(a) Install the new radiator tank.

(b) Tap the core plate with a soft-faced hammer until there is no gap between the core plate and radiator tank.

2. INSTALL RADIATOR TANK LOWER

HINT:

Perform the same procedures as for the radiator tank upper.

3. ASSEMBLE SST

SST 09230-01010 (09231-01010, 09231-01020)

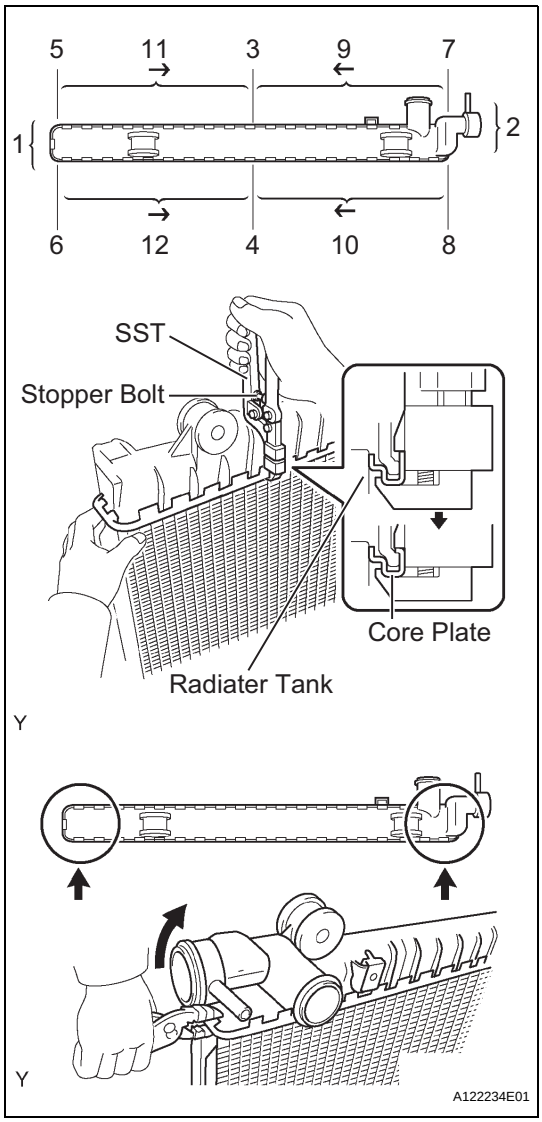
(a) Install the punch assembly into the overhaul handle by inserting it into the hole in part A as shown in the illustration.

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.

Dimension B:

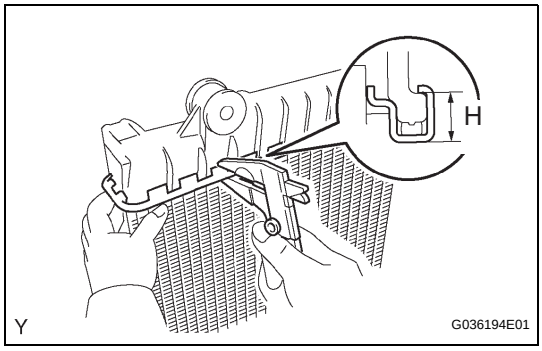
8.4 mm (0.331 in.)

CO



4. CAULK CORE PLATE

(a) Gently press SST against the core plate in the order shown in the illustration. After repeating this a few times, fully caulk the core plate by gripping the handle until stopped by the stopper bolt.
SST 09230-01010 (09231-01010, 09231-01020)
HINT:
Do not tap the portions indicated in the illustration or the oil cooler using SST. Use pliers or a similar tool. Be careful not to damage the core plate.



(b) Check the core plate height (H) after completing the caulking.
Plate height (H):
8.7 to 9.1 mm (0.343 to 0.358 in.)
If the height is not as specified, readjust the stopper bolt of the handle, then caulk it again.

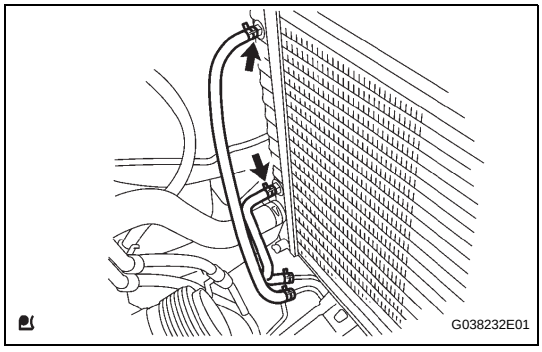
5. INSTALL RADIATOR DRAIN COCK

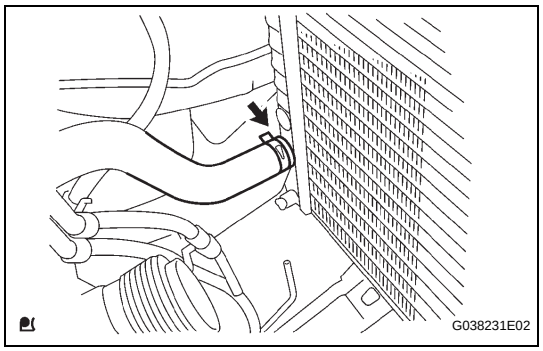
(a) Install a new O-ring onto the drain cock plug.
(b) Install the drain cock plug.

INSTALLATION

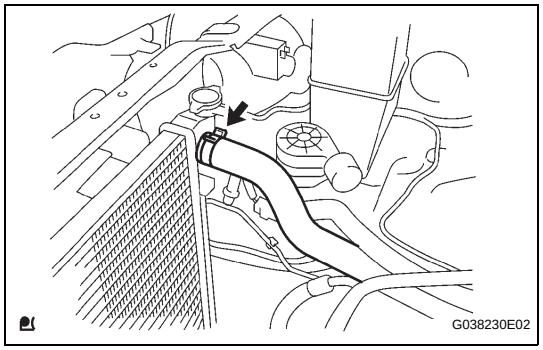
1. INSTALL RADIATOR ASSEMBLY

(a) Install the radiator with the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
(b) Connect the oil cooler inlet and outlet hoses. (for Automatic Transmission)

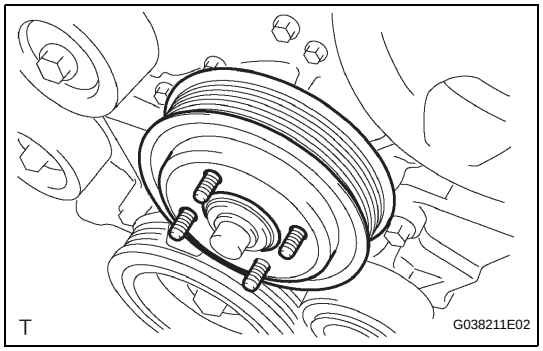




(c) Connect the radiator hose NO. 2.

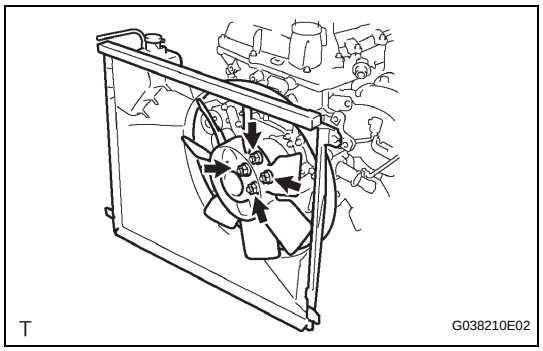


(d) Connect the radiator hose inlet.



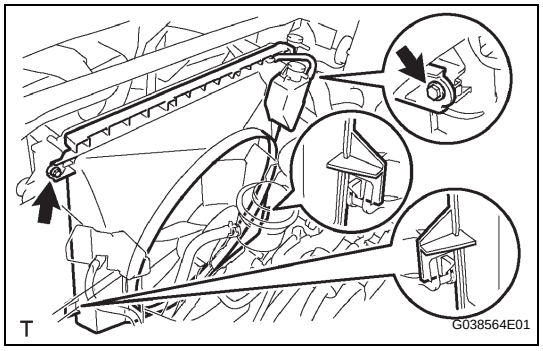
2. INSTALL FAN SHROUD

(a) Install the fan pulley.



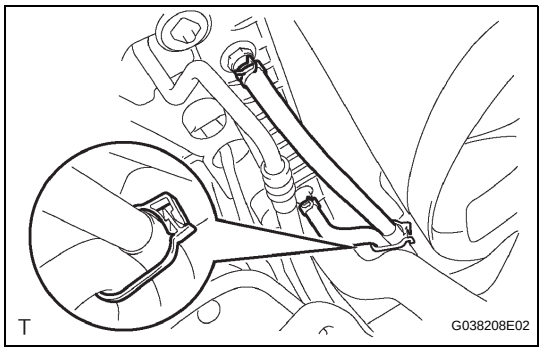
(b) Install the fan shroud and fan with fluid coupling together.
NOTICE:
Make sure that the fan shroud and fan with fluid coupling do not make any contact with the radiator when they are installed.

(c) Provisionally install the fan with fluid coupling with the 4 nuts.

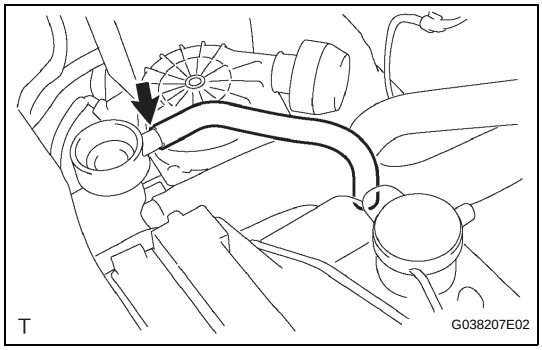


(d) Install the 2 bolts shown in the illustration.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

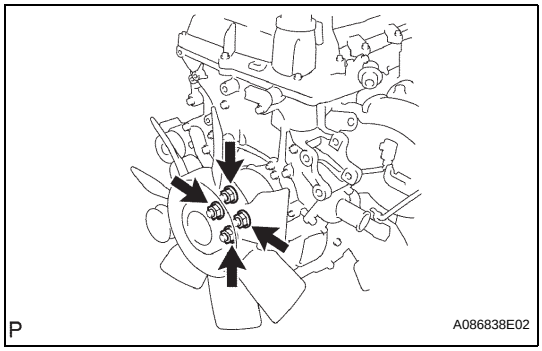
CO



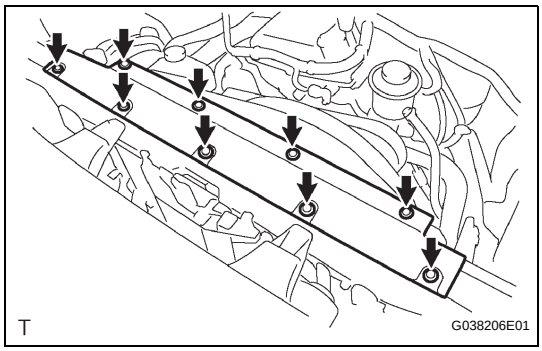
(e) Connect the oil cooler inlet and outlet hoses to the fan shroud. (for Automatic Transmission)



(f) Connect the radiator reserve tank hose to the radiator.
(g) Install the fan generator V belt.



(h) Tighten the 4 nuts shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



3. INSTALL RADIATOR SUPPORT TO FRAME SEAL LH
(a) Install the radiator support frame seal LH with the 9 clips.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

5. ADD ENGINE COOLANT (See page CO-3)

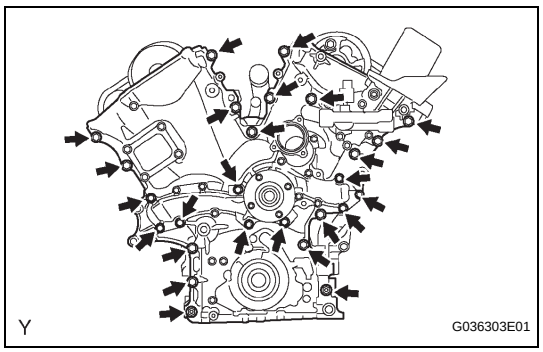
6. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)

7. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for Pre Runner and 4WD Type)
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

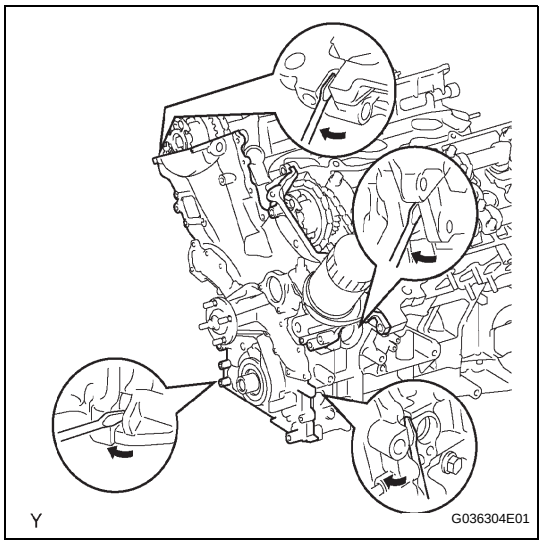
CO

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE ENGINE ASSEMBLY**
   (See page EM-186)
6. **REMOVE OIL LEVEL GAUGE GUIDE**
7. **REMOVE WATER INLET (See page CO-9)**
8. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-44)**
9. **REMOVE NO.2 IDLER PULLEY SUB-ASSEMBLY (See page EM-24)**
10. **REMOVE NO.1 IDLER PULLEY SUB-ASSEMBLY (See page EM-24)**
11. **REMOVE CRANKSHAFT PULLEY (See page EM-45)**
12. **REMOVE NO.2 OIL PAN SUB-ASSEMBLY (See page EM-24)**
13. **REMOVE OIL STRAINER SUB-ASSEMBLY (See page EM-24)**
14. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-25)**
15. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
16. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)**
17. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)**
18. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-407)**
19. **REMOVE VVT SENSOR (See page IG-8)**
20. **REMOVE OIL FILTER BRACKET SUB-ASSEMBLY**
    (a) Remove the 3 bolts, 2 nuts, oil filter bracket and gasket.
21. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
    (a) Remove the 24 bolts and 2 nuts.



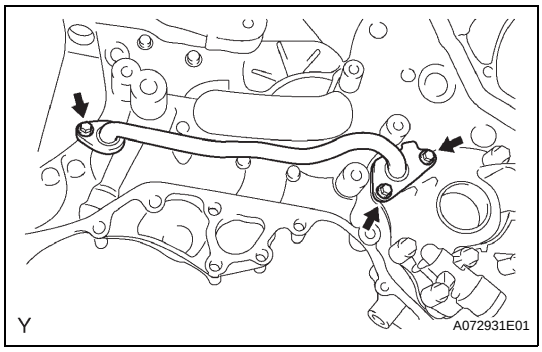
LU



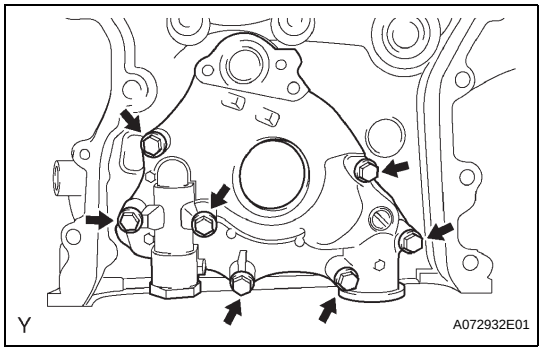
(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.
(c) Remove the O-ring from the LH cylinder head.

22. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)

DISASSEMBLY

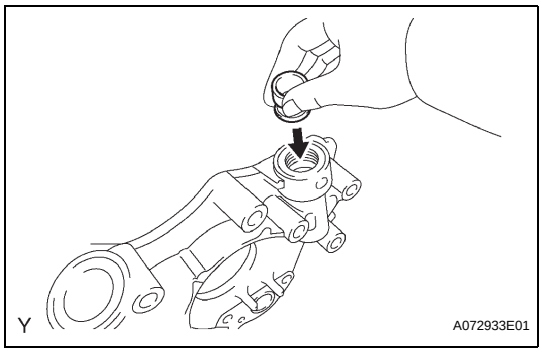


1. REMOVE OIL PUMP COVER
(a) Remove the 3 bolts, then remove the oil pipe.
(b) Remove the 2 O-rings.



(c) Remove the 7 bolts, then remove the oil pump cover, drive rotor and driven rotor.

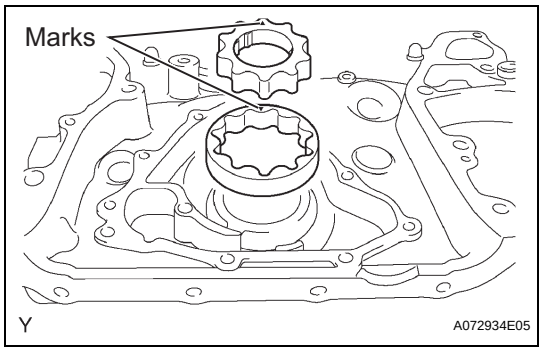
2. REMOVE OIL PUMP RELIEF VALVE
(a) Remove the relief valve plug.
(b) Remove the relief valve spring and relief valve.



INSPECTION

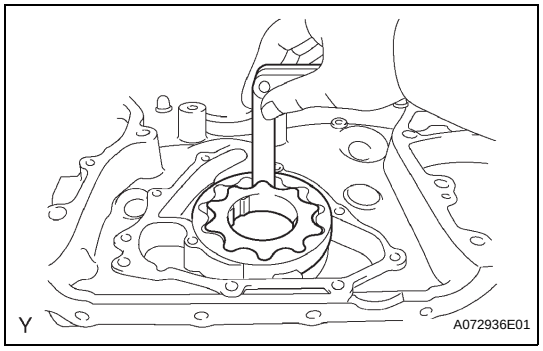
1. INSPECT OIL PUMP RELIEF VALVE
(a) Coat the valve with engine oil, then check that it falls smoothly into the valve hole by its own weight.
If not, replace the relief valve. If necessary, replace the oil pump assembly.

LU



2. INSPECT OIL PUMP ROTOR SET

(a) Place the drive and driven rotors into the timing chain cover with the marks facing upward.



(b) Check the rotor tip clearance.

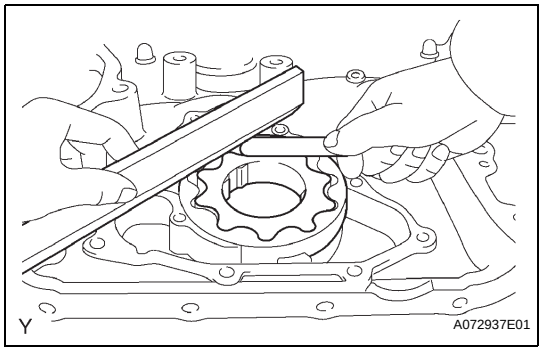
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard clearance:

0.06 to 0.16 mm (0.0024 to 0.0063 in.)

Maximum tip clearance: 0.16 mm (0.0063 in.)

If the clearance is greater than the maximum, replace the drive and driven rotors together.



(c) Check the rotor side clearance.

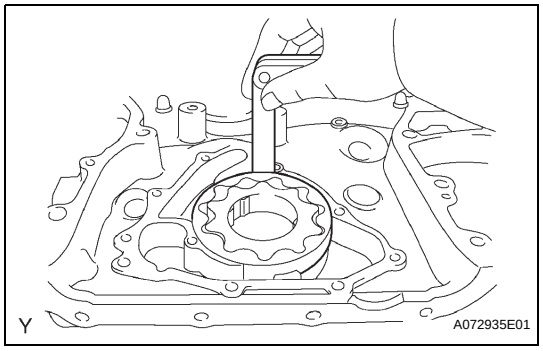
(1) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.

Standard clearance:

0.03 to 0.09 mm (0.0012 to 0.0035 in.)

Maximum side clearance: 0.09 mm (0.0035 in.)

If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.



(d) Check the rotor body clearance.

(1) Using a feeler gauge, measure the clearance between the driven rotor and body.

Standard clearance:

0.250 to 0.325 mm (0.0098 to 0.0128 in.)

Maximum body clearance: 0.325 mm (0.0128 in.)

If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.

REASSEMBLY

1. INSTALL OIL PUMP RELIEF VALVE

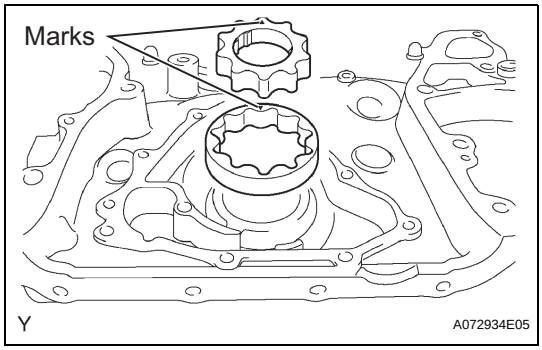
(a) Coat the relief valve with engine oil and insert the relief valve and spring into the valve hole.

(b) Install the relief valve plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

2. INSTALL OIL PUMP COVER

(a) Apply fresh engine oil to the drive and driven rotors.

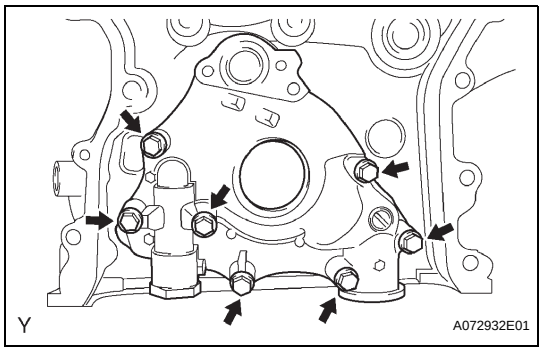
(b) Place the drive and driven rotors into the timing chain cover with the marks facing the oil pump cover side.



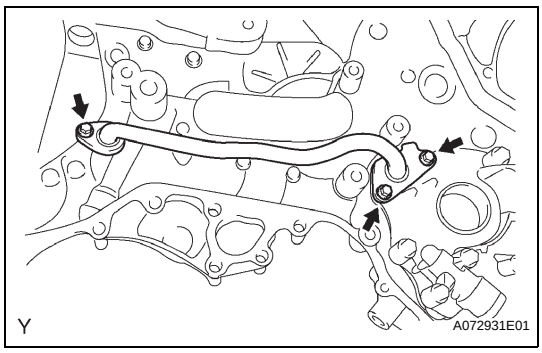
(c) Install the oil pump cover with the 7 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Install a new O-ring onto the oil pump cover.

(e) Install a new O-ring onto the oil pipe.



(f) Install the oil pipe with the 3 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



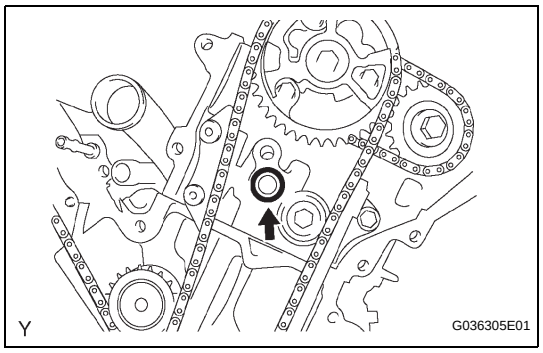
INSTALLATION

1. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)

2. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

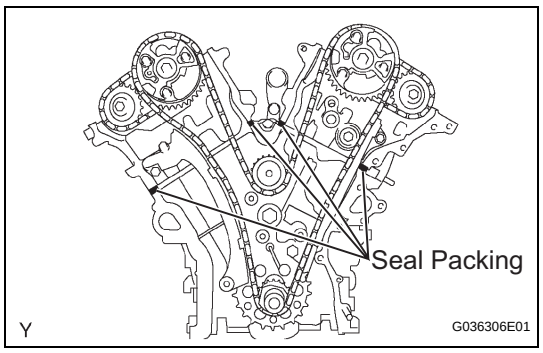
(a) Remove any old packing (FIPG) material. Be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.

(b) Install a new O-ring onto the LH cylinder head as shown in the illustration.



(c) Apply continuous beads of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the 4 locations shown in the illustration.

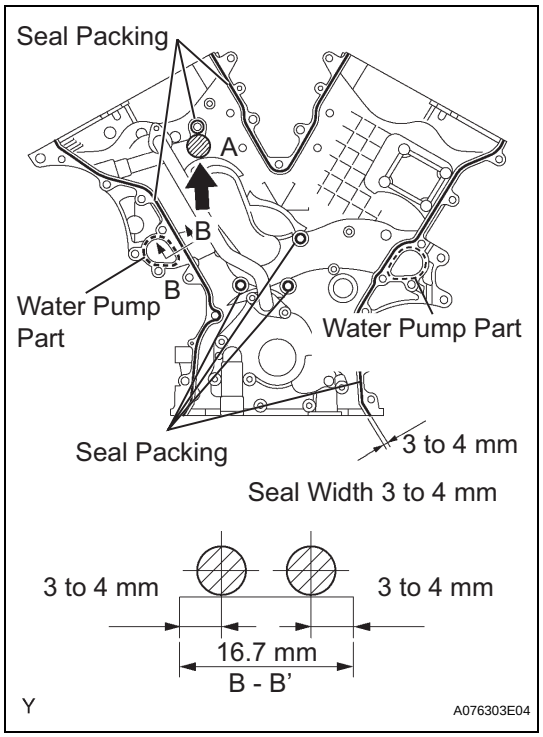
Seal packing:
Part No. 08826-00080 or equivalent



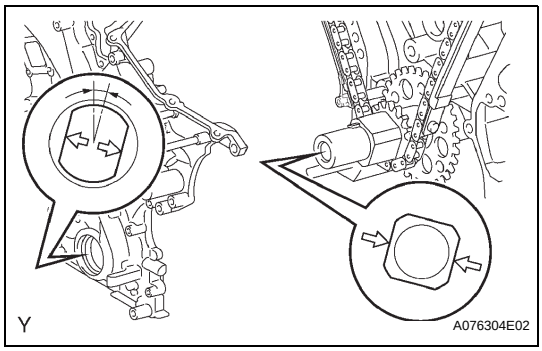
(d) Apply continuous beads of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the timing chain cover as shown in the illustration.

Seal packing:
Water pump part:
Part No. 08826-00100 or equivalent
Other parts:
Part No. 08826-00080 or equivalent

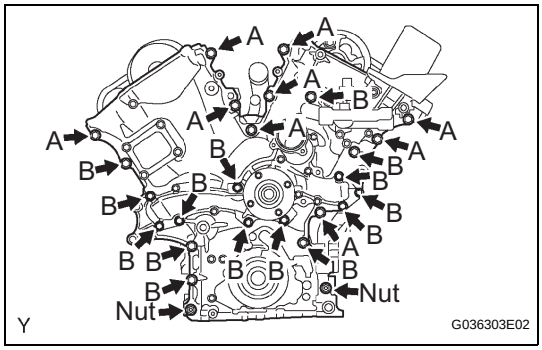
NOTICE:
- **Install the timing chain cover within 3 minutes of applying the seal packing. Timing chain cover bolts and nuts must be tightened within 15 minutes of installation. Otherwise, the seal packing must be removed and reapplied.**
- **Do not apply seal packing to portion A shown in the illustration.**



LU



(e) Align the key way of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.



(f) Install the timing chain cover with the 24 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)
NOTICE:
Pay attention not to wrap the chain and slipper over the timing chain cover seal line.
Each bolt length is as follows

Bolt	Length
A	25 mm (0.98 in.)
B	55 mm (2.17 in.)

3. **INSTALL OIL FILTER BRACKET SUB-ASSEMBLY**
   (a) Install a new gasket and the oil filter bracket with the 3 bolts and 2 nuts.
   Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
4. **INSTALL VVT SENSOR (See page IG-8)**
5. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-408)**
6. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-68)**
7. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-68)**
8. **INSTALL IGNITION COIL ASSEMBLY (See page IG-8)**
9. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-31)**
10. **INSTALL OIL STRAINER SUB-ASSEMBLY (See page EM-29)**
11. **INSTALL NO.2 OIL PAN SUB-ASSEMBLY (See page EM-29)**
12. **INSTALL CRANKSHAFT PULLEY (See page EM-30)**
13. **INSTALL NO.1 IDLER PULLEY SUB-ASSEMBLY (See page EM-30)**
14. **INSTALL NO.2 IDLER PULLEY SUB-ASSEMBLY (See page EM-30)**
15. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-30)**
16. **INSTALL WATER INLET (See page CO-10)**

17. **INSTALL OIL LEVEL GAUGE GUIDE**
18. **INSTALL ENGINE ASSEMBLY**
    (See page EM-190)
19. **INSTALL BATTERY**
20. **ADD ENGINE COOLANT (See page CO-3)**
21. **ADD ENGINE OIL (See page LU-5)**
22. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
23. **CHECK FOR ENGINE OIL LEAKAGE**
24. **CHECK FOR FUEL LEAKAGE**
25. **CHECK FOR EXHAUST GAS LEAKAGE**
26. **INSPECT IGNITION TIMING (See page EM-1)**
27. **INSPECT ENGINE IDLING SPEED (See page EM-2)**
28. **INSPECT CO/HC (See page EM-3)**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE** (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE POWER STEERING LINK ASSEMBLY** (See page PS-53)
6. **REMOVE FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)** (See page DF-19)
7. **REMOVE V-BANK COVER (See page ES-414)**
8. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
9. **REMOVE FAN SHROUD (See page CO-15)**
10. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
11. **REMOVE OIL LEVEL GAUGE GUIDE**
12. **REMOVE WATER INLET (See page CO-9)**
13. **SEPARATE PUMP ASSEMBLY, VANE (See page EM-44)**
14. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**
15. **SEPARATE COOLER COMPRESSOR ASSEMBLY (See page ES-409)**
16. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-44)**
17. **REMOVE NO.2 IDLER PULLEY SUB-ASSEMBLY (See page EM-44)**
18. **REMOVE NO.1 IDLER PULLEY SUB-ASSEMBLY (See page EM-44)**
19. **REMOVE CRANKSHAFT PULLEY (See page EM-45)**
20. **REMOVE NO.2 OIL PAN SUB-ASSEMBLY (See page EM-45)**
21. **REMOVE OIL STRAINER SUB-ASSEMBLY (See page EM-45)**
22. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-46)**
23. **REMOVE INTAKE AIR SURGE TANK (See page FU-11)**
24. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
25. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)**

26. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)

27. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-407)

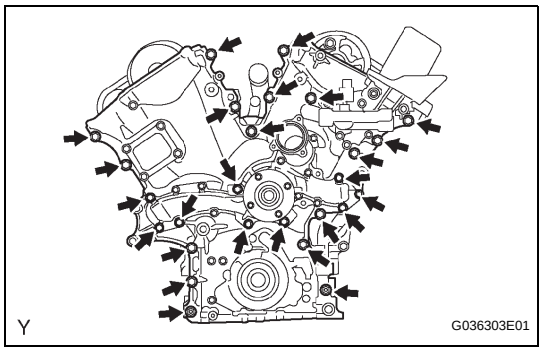
28. REMOVE VVT SENSOR (See page IG-8)

29. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

(a) Remove the 3 bolts, 2 nuts, oil filter bracket and gasket.

30. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove the 24 bolts and 2 nuts.

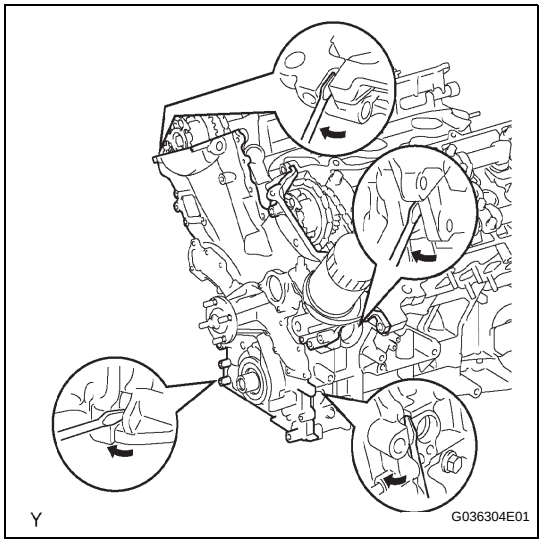


(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.

(c) Remove the O-ring from the LH cylinder head.



31. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)

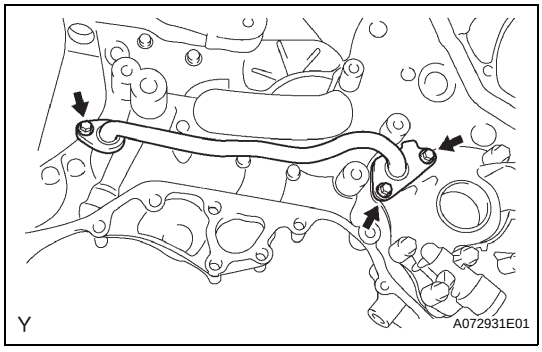
LU

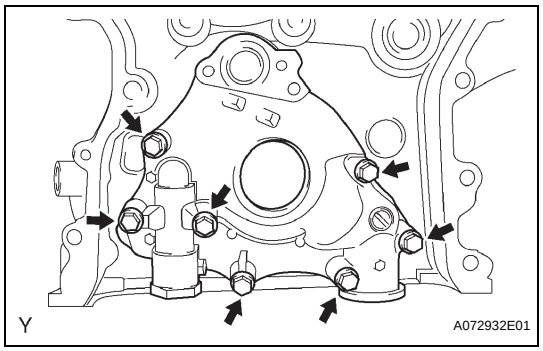
DISASSEMBLY

1. REMOVE OIL PUMP COVER

(a) Remove the 3 bolts, then remove the oil pipe.

(b) Remove the 2 O-rings.



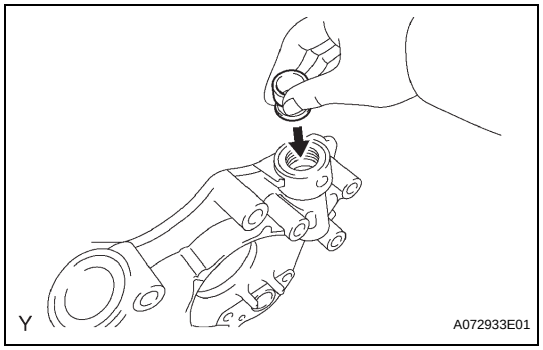


(c) Remove the 7 bolts, then remove the oil pump cover, drive rotor and driven rotor.

2. REMOVE OIL PUMP RELIEF VALVE

(a) Remove the relief valve plug.

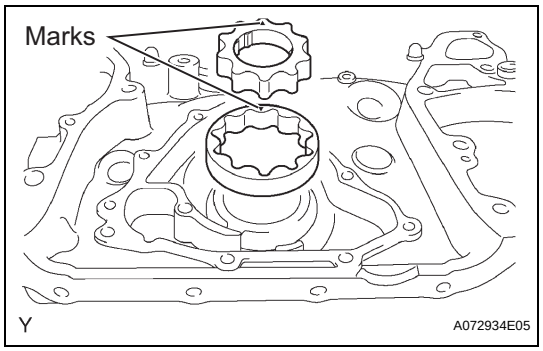
(b) Remove the relief valve spring and relief valve.



INSPECTION

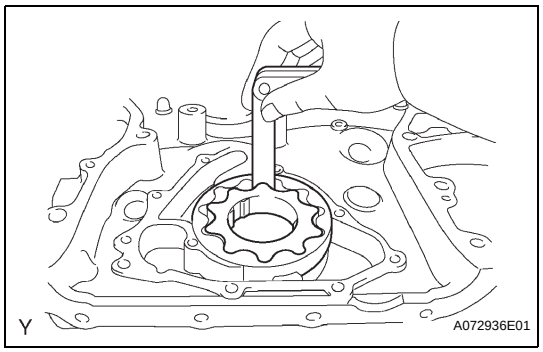
1. INSPECT OIL PUMP RELIEF VALVE

(a) Coat the valve with engine oil, then check that it falls smoothly into the valve hole by its own weight.
If not, replace the relief valve. If necessary, replace the oil pump assembly.



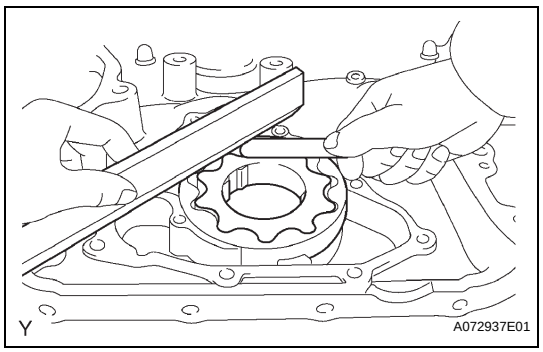
2. INSPECT OIL PUMP ROTOR SET

(a) Place the drive and driven rotors into the timing chain cover with the marks facing upward.



(b) Check the rotor tip clearance.

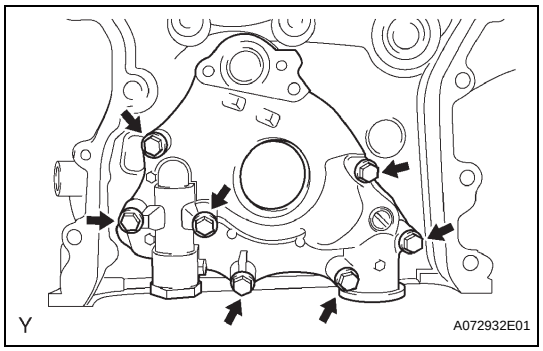
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard clearance:
0.06 to 0.16 mm (0.0024 to 0.0063 in.)
Maximum tip clearance:
0.16 mm (0.0063 in.)
If the clearance is greater than the maximum, replace the drive and driven rotors together.



(c) Check the rotor side clearance.

(1) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.
Standard clearance:
0.03 to 0.09 mm (0.0012 to 0.0035 in.)
Maximum side clearance:
0.09 mm (0.0035 in.)

LU

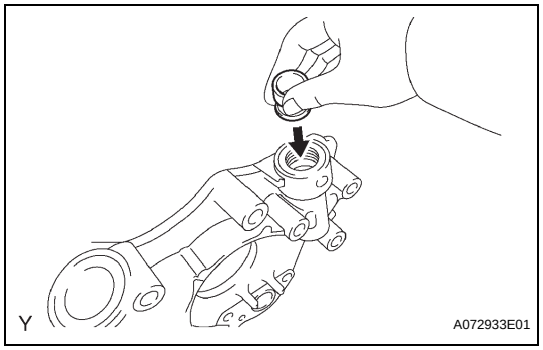


(c) Remove the 7 bolts, then remove the oil pump cover, drive rotor and driven rotor.

2. REMOVE OIL PUMP RELIEF VALVE

(a) Remove the relief valve plug.

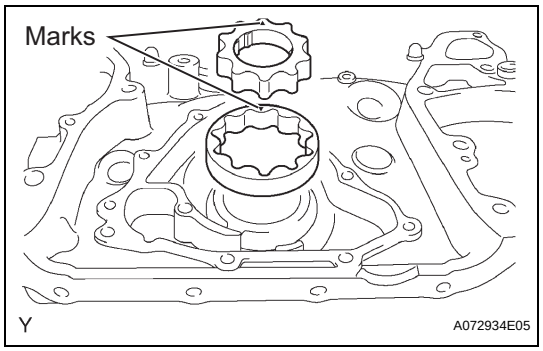
(b) Remove the relief valve spring and relief valve.



INSPECTION

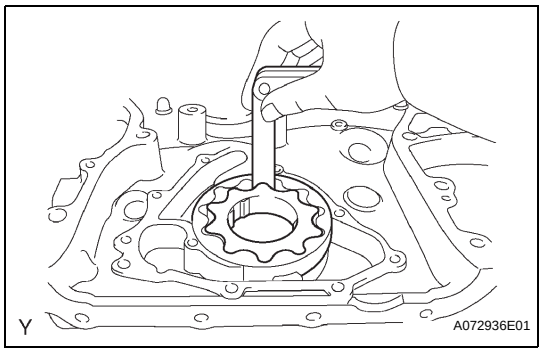
1. INSPECT OIL PUMP RELIEF VALVE

(a) Coat the valve with engine oil, then check that it falls smoothly into the valve hole by its own weight.
If not, replace the relief valve. If necessary, replace the oil pump assembly.



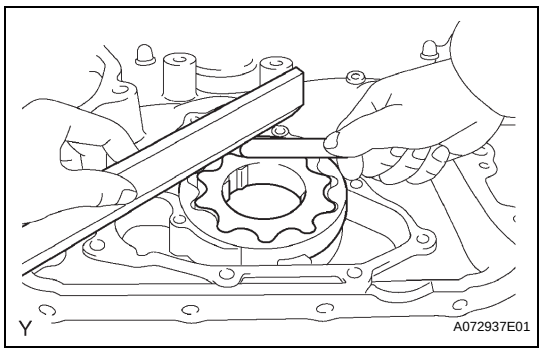
2. INSPECT OIL PUMP ROTOR SET

(a) Place the drive and driven rotors into the timing chain cover with the marks facing upward.



(b) Check the rotor tip clearance.

(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard clearance:
0.06 to 0.16 mm (0.0024 to 0.0063 in.)
Maximum tip clearance:
0.16 mm (0.0063 in.)
If the clearance is greater than the maximum, replace the drive and driven rotors together.

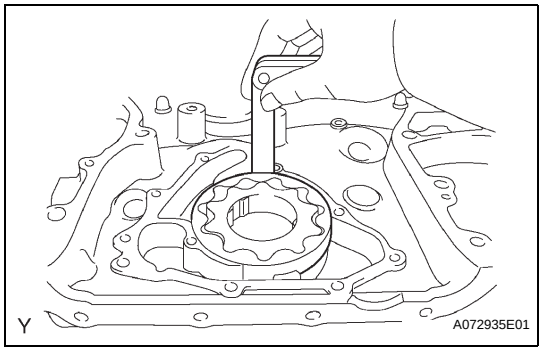


(c) Check the rotor side clearance.

(1) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.
Standard clearance:
0.03 to 0.09 mm (0.0012 to 0.0035 in.)
Maximum side clearance:
0.09 mm (0.0035 in.)

LU

If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.



(d) Check the rotor body clearance.
(1) Using a feeler gauge, measure the clearance between the driven rotor and body.
Standard clearance:
0.250 to 0.325 mm (0.0098 to 0.0128 in.)
Maximum body clearance:
0.325 mm (0.0128 in.)
If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.

REASSEMBLY

1. INSTALL OIL PUMP RELIEF VALVE

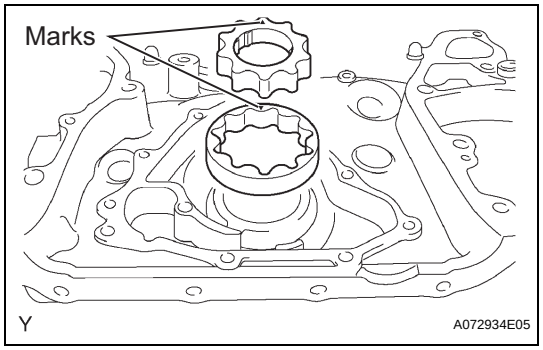
(a) Coat the relief valve with engine oil and insert the relief valve and spring into the valve hole.

(b) Install the relief valve plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

2. INSTALL OIL PUMP COVER

(a) Apply fresh engine oil to the drive and driven rotors.

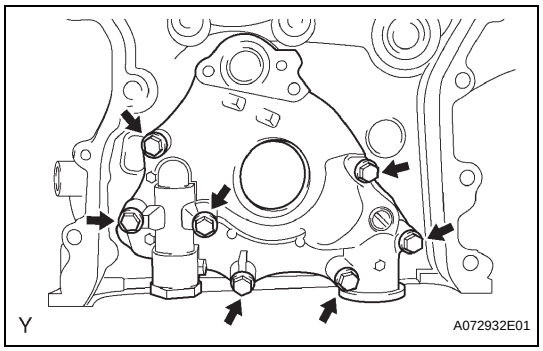
(b) Place the drive and driven rotors into the timing chain cover with the marks facing the oil pump cover side.



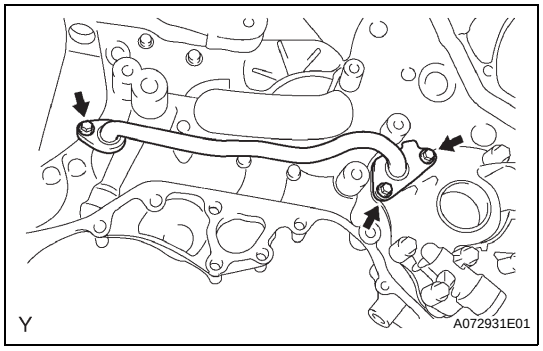
(c) Install the oil pump cover with the 7 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Install a new O-ring onto the oil pump cover.

(e) Install a new O-ring onto the oil pipe.



(f) Install the oil pipe with the 3 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



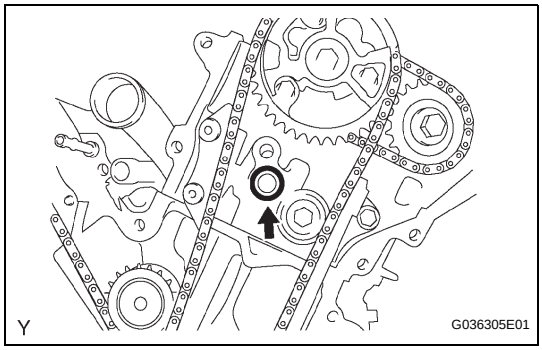
INSTALLATION

1. **INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-236)**

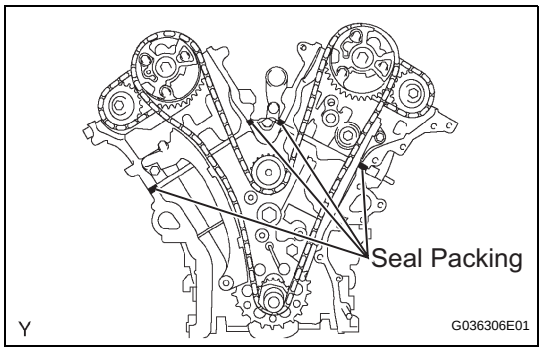
2. **INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.

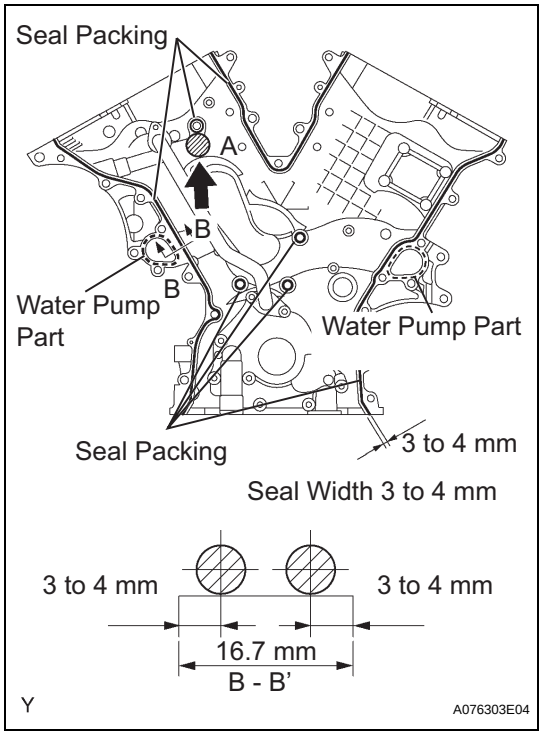
(b) Install a new O-ring onto the LH cylinder head as shown in the illustration.



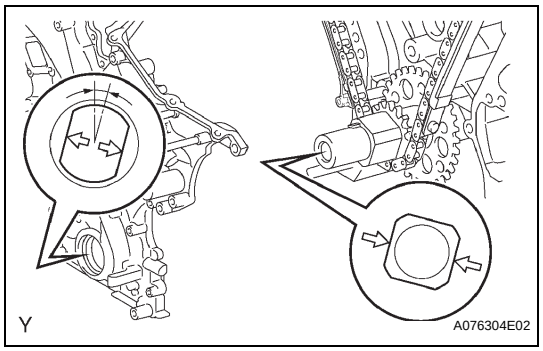
(c) Apply continuous beads of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the 4 locations shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent



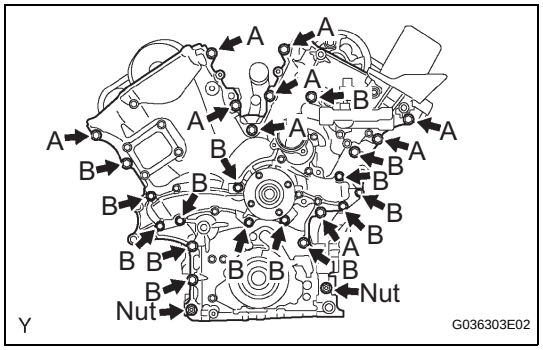
(d) Apply continuous beads of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the timing chain cover as shown in the illustration.
Seal packing:
Water pump part:
Part No. 08826-00100 or equivalent
Other parts:
Part No. 08826-00080 or equivalent
NOTICE:
- **Install the timing chain cover within 3 minutes after applying seal packing. Timing chain cover bolts and nuts must be tightened within 15 minutes of installation. Otherwise the seal packing must be removed and reapplied.**
- **Do not apply seal packing to portion A shown in the illustration.**



LU



(e) Align the key way of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.

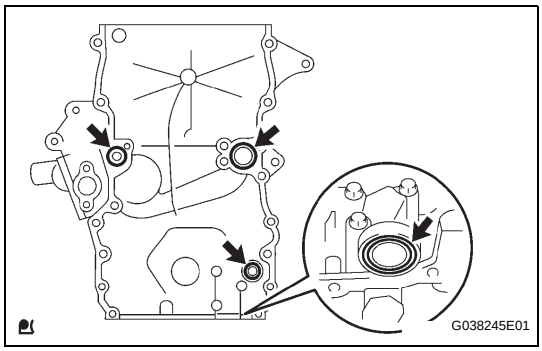


(f) Install the timing chain cover with the 24 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)
NOTICE:
Pay attention not to wrap the chain and slipper over the timing chain cover seal line.
Each bolt length is as follows

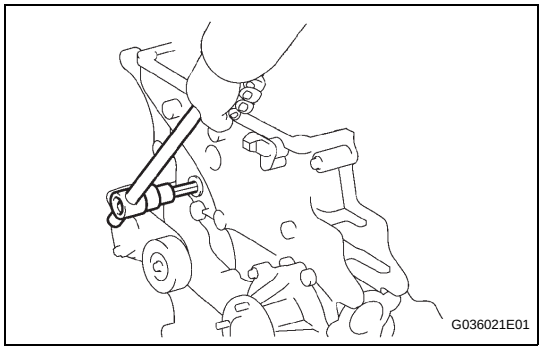
Bolt	Length
A	25 mm (0.98 in.)
B	55 mm (2.17 in.)

3. **INSTALL OIL FILTER BRACKET SUB-ASSEMBLY**
   (a) Install a new gasket and oil filter bracket with the 3 bolts and 2 nuts.
   Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
4. **INSTALL VVT SENSOR (See page IG-8)**
5. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-408)**
6. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-68)**
7. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-68)**
8. **INSTALL IGNITION COIL ASSEMBLY (See page IG-7)**
9. **INSTALL INTAKE AIR SURGE TANK (See page FU-17)**
10. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-49)**
11. **INSTALL OIL STRAINER SUB-ASSEMBLY (See page EM-51)**
12. **INSTALL NO.2 OIL PAN SUB-ASSEMBLY (See page EM-51)**
13. **INSTALL CRANKSHAFT PULLEY (See page EM-51)**
14. **INSTALL NO.1 IDLER PULLEY SUB-ASSEMBLY (See page EM-51)**
15. **INSTALL NO.2 IDLER PULLEY DUB-ASSEMBLY (See page EM-52)**

16. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-52)**
17. **INSTALL COOLER COMPRESSOR ASSEMBLY (See page ES-410)**
18. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**
19. **INSTALL VANE PUMP ASSEMBLY (See page EM-52)**
20. **INSTALL WATER INLET (See page CO-10)**
21. **INSTALL OIL LEVEL GAUGE GUIDE**
22. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**
23. **INSTALL FAN SHROUD (See page CO-20)**
24. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
25. **INSTALL FRONT DIFFERENTIAL CARRIER ASSEMBLY**
    (See page DF-38)
26. **INSTALL POWER STEERING LINK ASSEMBLY**
    (See page PS-67)
27. **INSTALL BATTERY**
28. **ADD ENGINE OIL (See page LU-5)**
29. **ADD ENGINE COOLANT (See page CO-3)**
30. **ADD DIFFERENTIAL OIL (for 4WD)**
31. **INSPECT DIFFERENTIAL OIL (for 4WD) (See page DF-8)**
32. **ADD POWER STEERING FLUID (See page PS-3)**
33. **BLEED POWER STEERING FLUID (See page PS-2)**
34. **CHECK FOR ENGINE OIL LEAKAGE**
35. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
36. **CHECK FOR FUEL LEAKAGE**
37. **CHECK FOR EXHAUST GAS LEAKAGE**
38. **CHECK POWER STEERING FLUID LEAKAGE**
39. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-7)
40. **INSTALL V-BANK COVER (See page ES-416)**
41. **INSPECT IGNITION TIMING (See page EM-1)**
42. **INSPECT ENGINE IDLING SPEED (See page EM-2)**
43. **INSPECT COMPRESSION (See page EM-2)**
44. **INSPECT CO/HC (See page EM-3)**



(d) Remove the 4 O-rings.

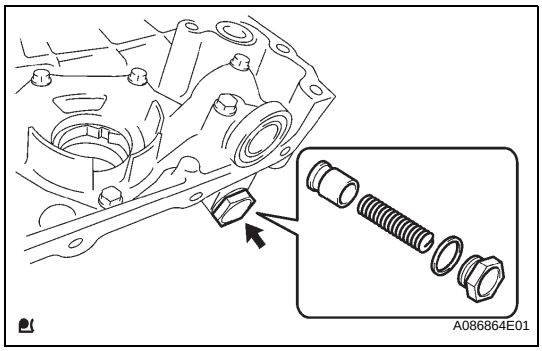


(e) Using a 10 mm socket hexagon wrench, remove the head straight screw plug.

49. REMOVE WATER INLET (See page CO-7)

50. REMOVE THERMOSTAT (See page CO-7)

51. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-149)

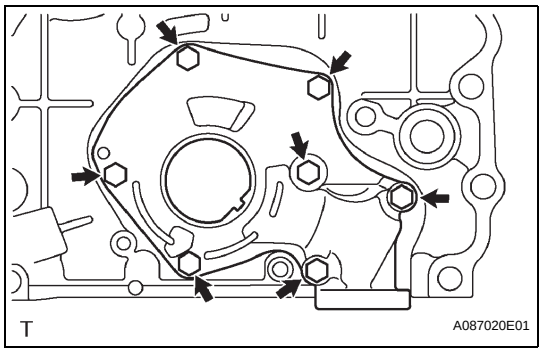


DISASSEMBLY

1. REMOVE OIL PUMP RELIEF VALVE

(a) Using a 27 mm socket wrench, remove the relief valve plug and gasket.

(b) Remove the valve spring and oil pump relief valve.

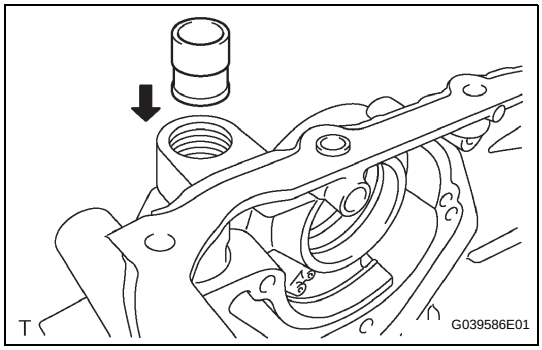


2. REMOVE OIL PUMP COVER

(a) Remove the 7 bolts and oil pump cover.

3. REMOVE OIL PUMP ROTOR SET

(a) Remove the oil pump rotor set from the timing chain cover.



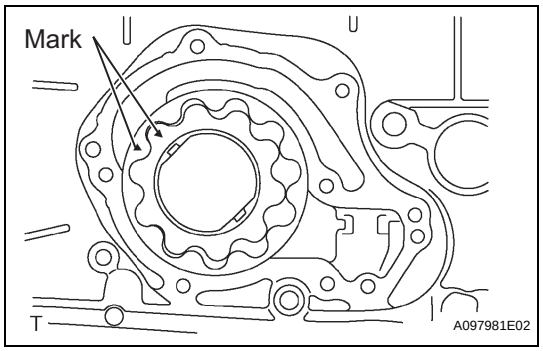
INSPECTION

1. REMOVE OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil and drop it into the relief valve hole.

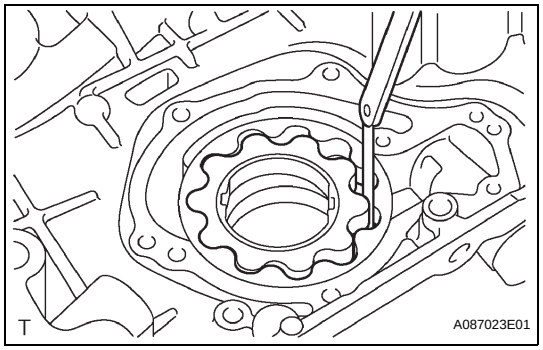
(b) Check that the relief valve falls in smoothly by its own weight.
If it does not, replace the relief valve. If necessary, replace the timing chain cover.

LU



2. INSPECT OIL PUMP ROTOR SET

(a) Install the rotors to the timing chain cover with the rotors' marks facing outward. Check that the rotors revolves smoothly.



3. INSPECT ROTOR TIP CLEARANCE

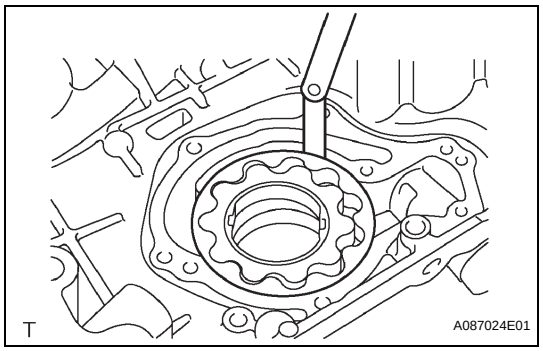
(a) Check the tip clearance.

(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips, as shown in the illustration.

Tip clearance

Standard	**0.040 to 0.160 mm (0.0016 to 0.0063 in.)**
Maximum	**0.26 mm (0.0102 in.)**

If the tip clearance is greater than the maximum, replace the timing chain cover.



4. INSPECT ROTOR BODY CLEARANCE

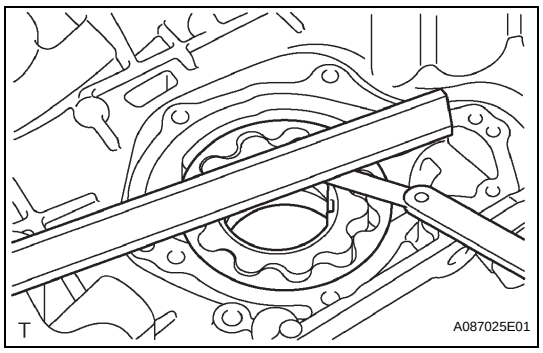
(a) Check the body clearance.

(1) Using a feeler gauge, measure the clearance between the timing chain cover and driven rotor, as shown in the illustration.

Body clearance

Standard	**0.250 to 0.325 mm (0.0098 to 0.0128 in.)**
Maximum	**0.425 mm (0.0167 in.)**

If the body clearance is greater than the maximum, replace the timing chain cover.



5. INSPECT ROTOR SIDE CLEARANCE

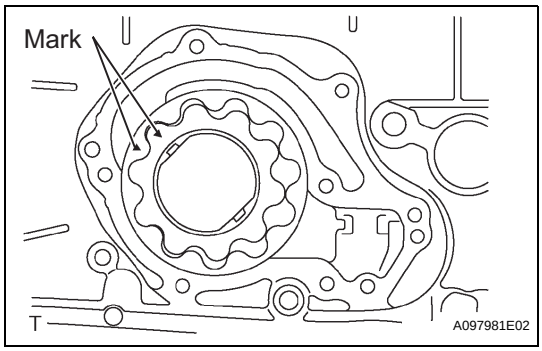
(a) Check the side clearance.

(1) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge, as shown in the illustration.

Side clearance

Standard	**0.025 to 0.075 mm (0.0010 to 0.0030 in.)**
Maximum	**0.130 mm (0.0051 in.)**

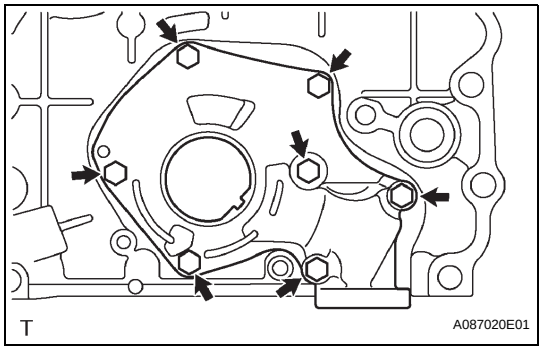
If the side clearance is greater than the maximum, replace the timing chain cover.



6. INSTALL OIL PUMP ROTOR SET

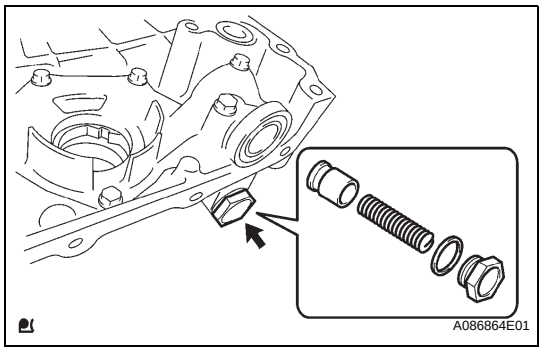
(a) Coat the oil pump gear set with engine oil and place it into timing chain cover with the marks facing outward (oil pump cover side). Check that the rotors revolve smoothly.

REASSEMBLY



1. INSTALL OIL PUMP COVER

(a) Install the oil pump cover with the 7 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

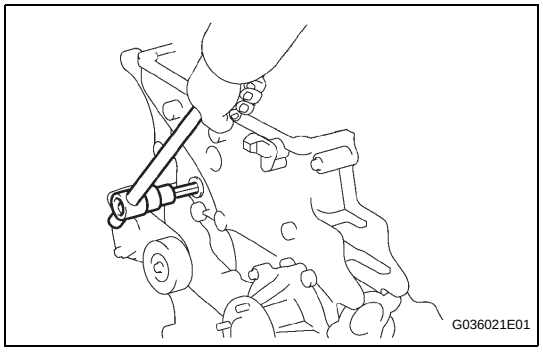


2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil.
(b) Insert the relief valve and relief valve spring into the timing chain cover hole.
(c) Install a new gasket to the relief valve plug.
(d) Using a 27 mm socket wrench, install the plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

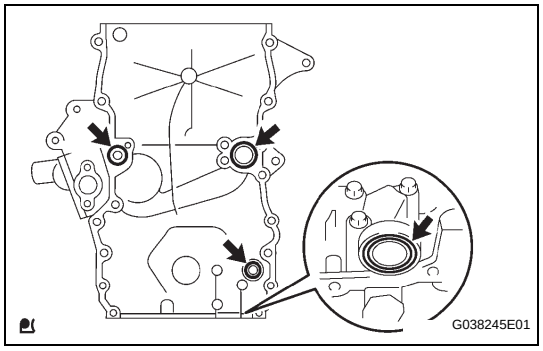
INSTALLATION

1. **INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (See page EM-149)**
2. **INSTALL THERMOSTAT (See page CO-8)**
3. **INSTALL WATER INLET (See page CO-8)**
4. **INSTALL OIL PUMP**



(a) Apply adhesive to the head straight screw plug.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(b) Using a 10 mm socket hexagon wrench, install the head straight screw plug.
Torque: 17 N*m (170 kgf*cm, 12 ft.*lbf)

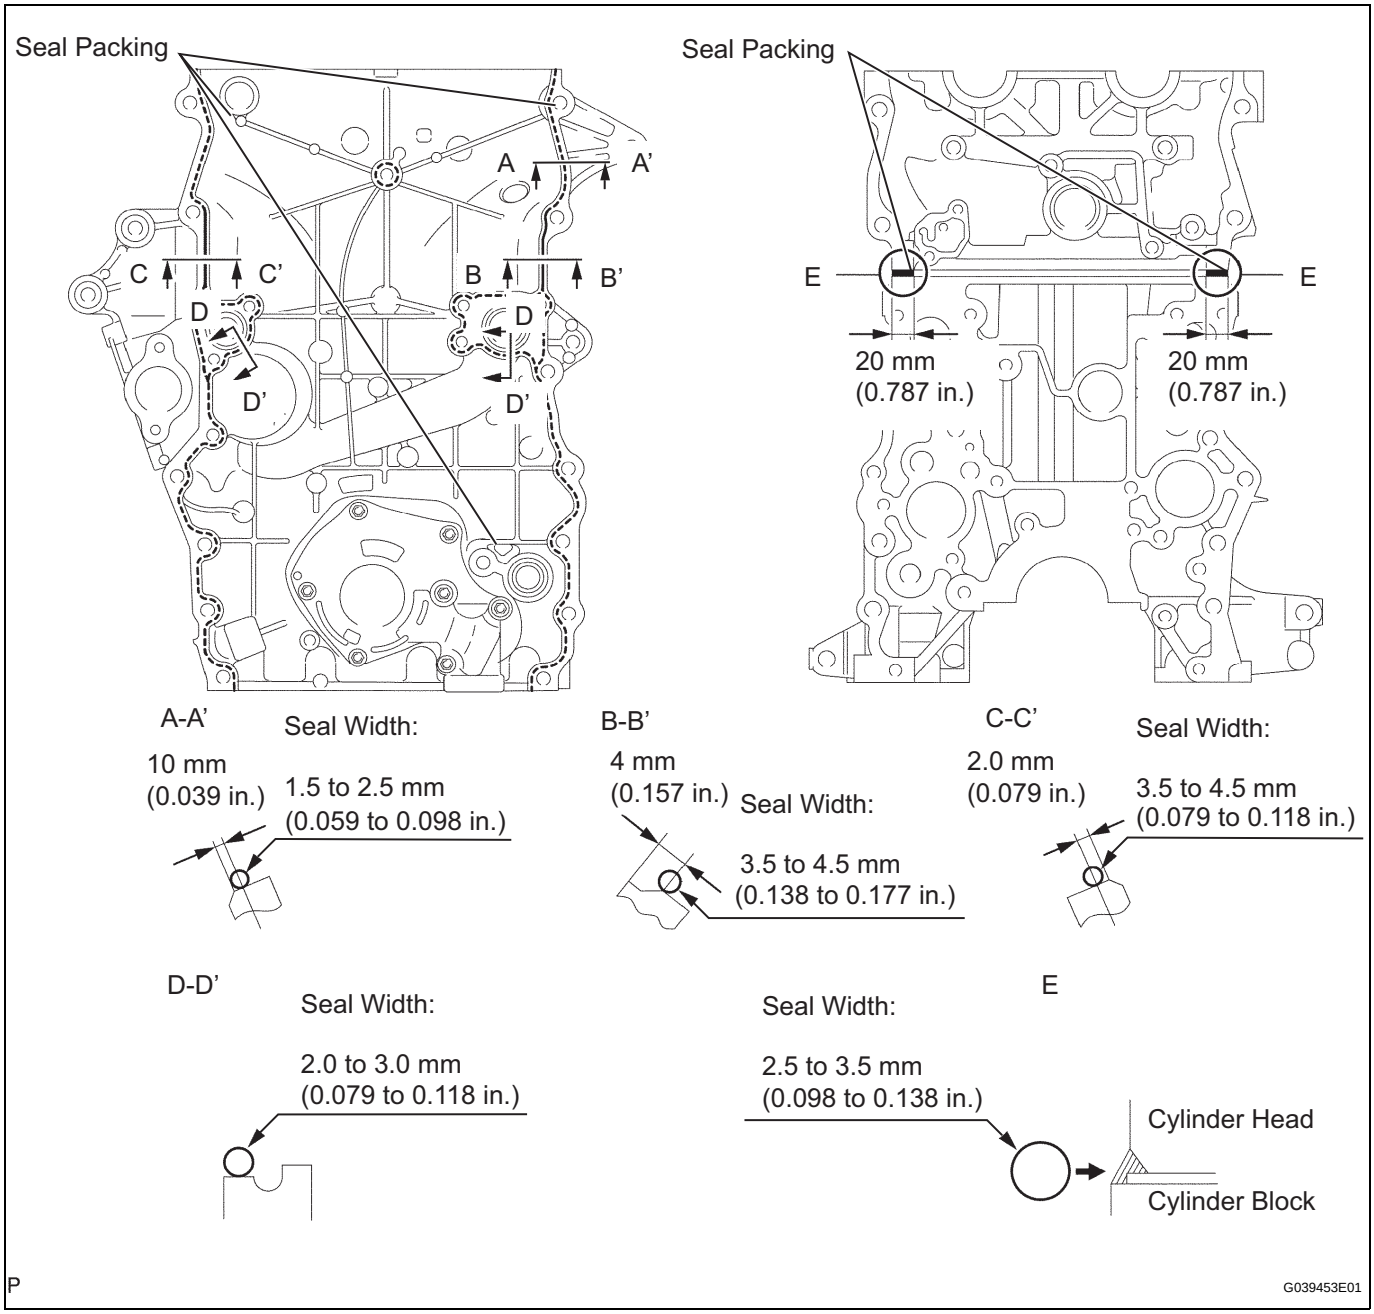


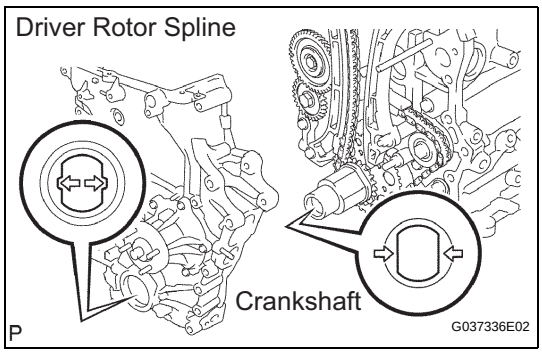
(c) Install 4 new O-rings onto the oil pump as shown in the illustration.

(d) Apply continuous beads of seal packing to the places shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
Seal width:

Position	Specified Condition
A - A'	2.5 to 3.0 mm (0.098 to 0.118 in.)
B - B', C - C'	4.0 to 4.5 mm (0.157 to 0.177 in.)
D - D'	2.5 to 3.0 mm (0.098 to 0.118 in.)
E	2.5 to 3.5 mm (0.098 to 0.138 in.)

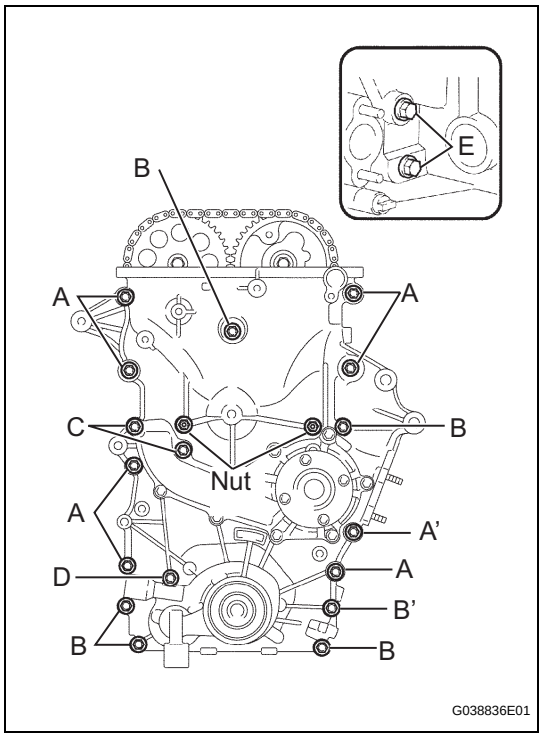
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes and tighten the bolts within 15 minutes of applying seal packing.**
- **Do not start the engine for at least 4 hours after installation.**





(e) Align the oil pump's drive rotor spline and the crankshaft as shown in the illustration. Install the spline and chain cover onto the crankshaft.

(f) Loosely install the oil pump with the 19 bolts and 2 nuts, but do not tighten the bolts and nuts yet.

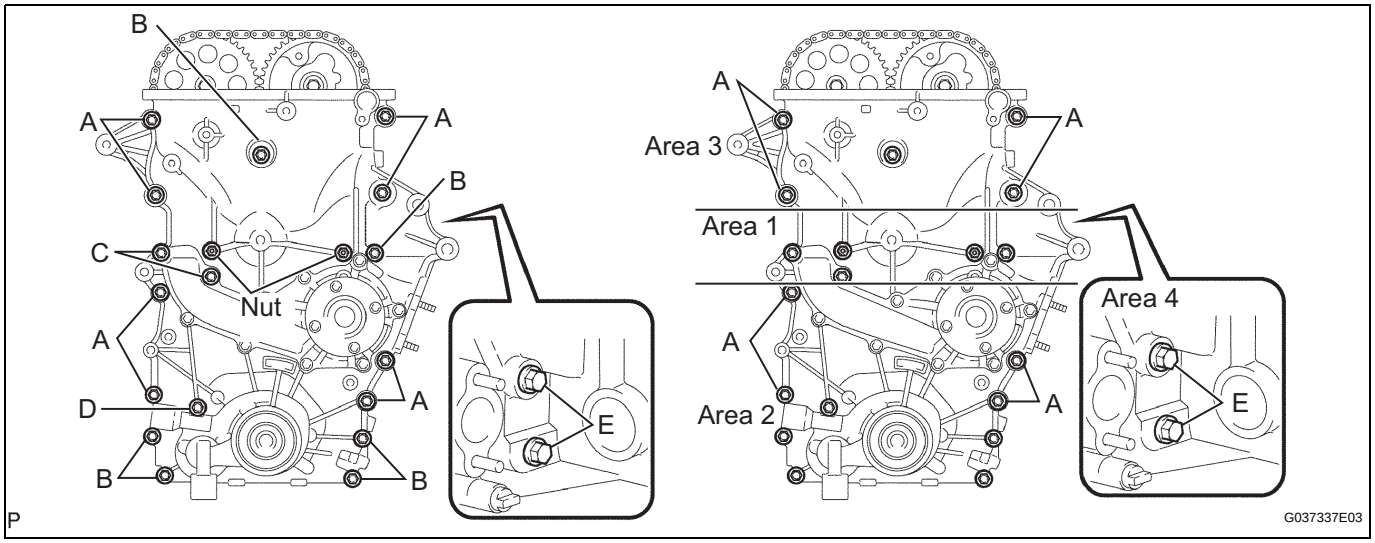


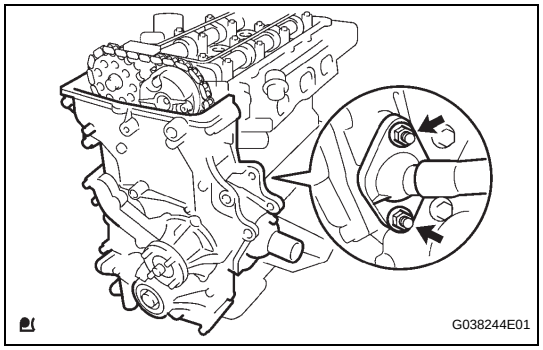
(g) Provisionally install the oil pump with the 19 bolts and 2 nuts.
NOTICE:
If the vehicle is equipped with air conditioning, install bolts A' and B' when installing the idle pulley with bracket since they are for this purpose.
HINT:
Bolt length:
75 mm (2.95 in.) for bolt A, B
87 mm (3.43 in.) for bolt C
95 mm (3.74 in.) for bolt D
35 mm (1.37 in.) for bolt E

(h) Fully tighten the bolts and nuts, except bolts A, in the following order: Area 1, Area 3 and then Area 2.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(i) Fully tighten the bolts A in the following order: Area 2 and then Area 3.
Torque: 46 N*m (469 kgf*cm, 34 ft.*lbf)

(j) Fully tighten the bolts E in Area 4.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)





(k) Install a new gasket, then install the water by-pass pipe No. 1 with the 2 nuts.
Torque: 18 N*m (178 kgf*cm, 13 ft.*lbf)

5. **INSTALL OIL PAN SUB-ASSEMBLY (See page LU-24)**
6. **INSTALL OIL STRAINER SUB-ASSEMBLY (See page EM-32)**
7. **INSTALL OIL PAN SUB-ASSEMBLY NO.2 (See page EM-32)**
8. **INSTALL OIL LEVEL GAGE SUB-ASSEMBLY**
9. **INSTALL CRANKSHAFT PULLEY (See page EM-75)**
10. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-48)**

11. **INSTALL INTAKE MANIFOLD TO HEAD GASKET NO. 1 (See page ES-463)**
12. **INSTALL CAMSHAFT POSITION SENSOR (See page ES-444)**
13. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-447)**
14. **INSTALL IDLE PULLEY ASSEMBLY W/BRACKET (w/ Air Conditioning System) (See page ES-448)**
15. **INSTALL IDLER PULLEY SUB-ASSEMBLY NO.1 (See page EM-33)**
16. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page CO-6)**
17. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**
18. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**
19. **INSTALL REAR END PLATE (See page EM-72)**
20. **INSTALL DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission) (See page EM-79)**
21. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) (See page EM-79)**
22. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32

23. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)**

Transmission	See page
R155	CL-32
R155F	CL-37

24. **INSTALL ENGINE ASSEMBLY (See page EM-98)**
25. **INSTALL AUTOMATIC TRANSMISSION ASSEMBLY** (See page AT-113)
26. **INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY**

Transmission	See page
R155	MT-9
R155F	MT-11

27. **INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)**
28. **INSTALL EXHAUST PIPE ASSEMBLY TAIL (See page EX-2)**
29. **CONNECT ENGINE WIRE**

30. **CONNECT AIR INJECTION SYSTEM NO.1 HOSE (See page EM-99)**
31. **CONNECT FUEL VAPOR FEED HOSE ASSEMBLY (See page EM-99)**
32. **CONNECT FUEL HOSE NO.2 (See page FU-17)**
33. **CONNECT FUEL HOSE (See page FU-17)**
34. **INSTALL WATER HOSE SUB-ASSEMBLY (See page EM-99)**
35. **INSTALL RADIATOR HOSE INLET**
36. **INSTALL COMPRESSOR AND MAGNETIC CLUTCH (w/ Air Conditioning System) (See page EM-34)**
37. **INSTALL RADIATOR HOSE NO.2**
38. **INSTALL VANE PUMP ASSEMBLY (See page EM-34)**
39. **INSTALL AIR CLEANER CASE**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
40. **INSTALL AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
41. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page EC-17)**
42. **INSTALL FAN SHROUD (See page CO-18)**
43. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)**
44. **INSTALL BATTERY TRAY**
45. **INSTALL BATTERY**
46. **ADD ENGINE OIL (See page LU-4)**
47. **ADD ENGINE COOLANT (See page CO-3)**
48. **CHECK ENGINE OIL LEVEL**
49. **CHECK FUEL LEAKAGE**
50. **CHECK ENGINE COOLANT LEAKAGE (See page CO-2)**
51. **CHECK OIL LEAKAGE**
52. **CHECK EXHAUST GAS LEAKAGE**
53. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for Pre Runner and 4WD Type)**
    (a) Install the engine under cover No. 1 with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
54. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO.2 (for Pre Runner and 4WD Type, Regular Cab)**
    (a) Install the engine under cover No. 2 with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
55. **INSTALL HOOD SUB-ASSEMBLY**
    (See page ED-7)

INSTALLATION

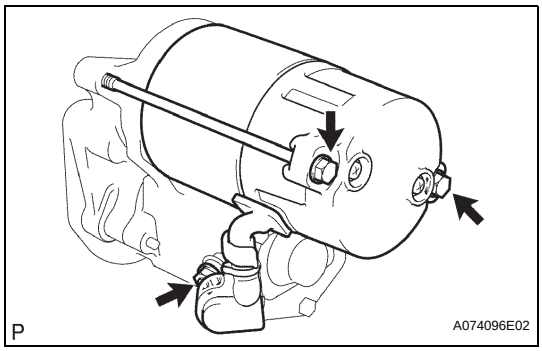
1. **INSTALL STARTER ASSEMBLY**
   (a) Install the starter assembly with the 2 bolts.
   Torque:
   37 N*m (377 kgf*cm, 27 ft.*lbf)
   (b) Install the wire harness with the nut to terminal 30.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
   (c) Connect terminal 50 to the starter assy.

2. **INSTALL WIRE HARNESS**
   (a) Install the earth wire harness onto the cylinder block with the bolt.
   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

3. **INSTALL NO.2 MANIFOLD STAY**
   (a) Install the manifold stay No. 2 with the 3 bolts.
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

4. **INSTALL NO.1 ENGINE UNDER COVER SUB-ASSEMBLY (for Off Road Package)**
   (a) Install the engine under cover with the 4 bolts.
   Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

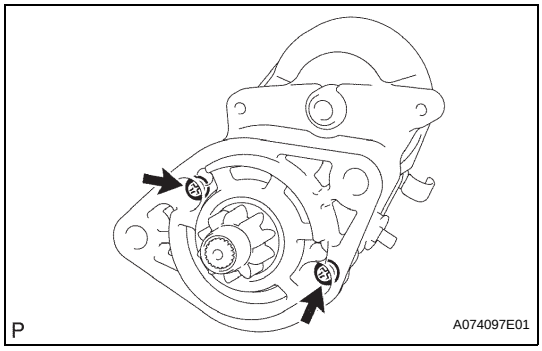
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



DISASSEMBLY

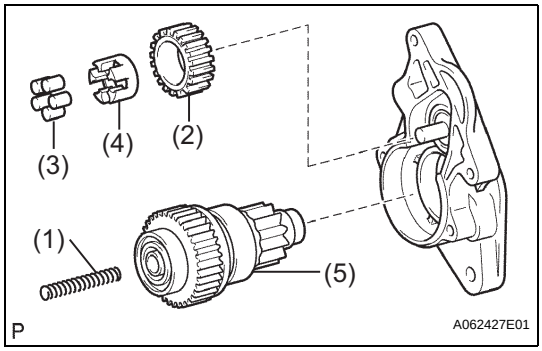
1. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the nut, then disconnect the lead wire from terminal C.
(b) Remove the 2 through bolts.
(c) Pull the starter yoke and the armature out together.
(d) Remove the O-ring from the starter yoke.



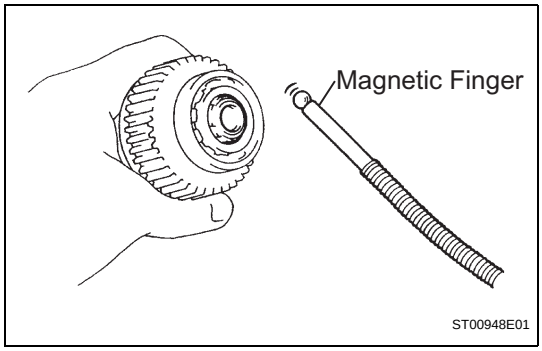
2. REMOVE MAGNET STARTER SWITCH ASSEMBLY

(a) Remove the 2 screws, then remove the magnet starter switch.

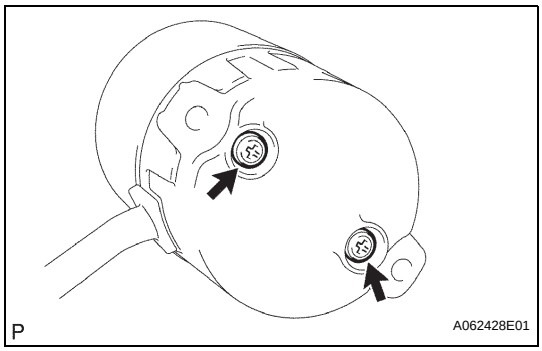


(b) Remove these parts from the starter drive housing.

(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch



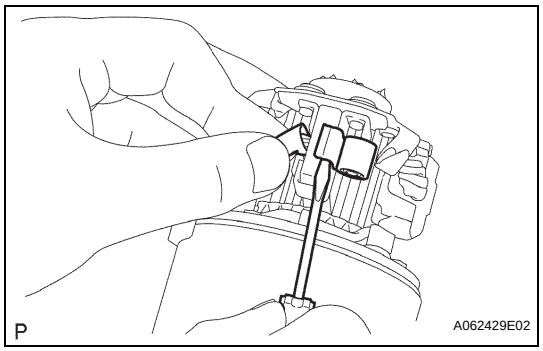
(c) Using a magnetic finger, remove the steel ball from the clutch shaft hole.



3. REMOVE STARTER BRUSH HOLDER ASSEMBLY

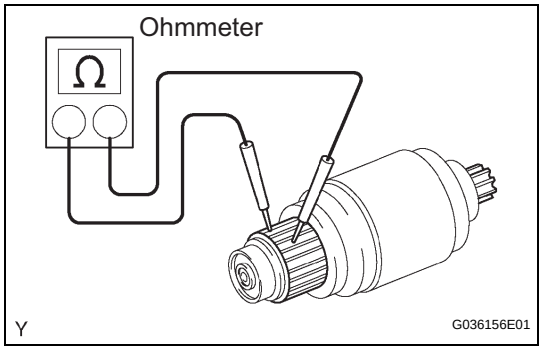
(a) Remove the 2 screws, then remove the end frame from the starter yoke.
(b) Remove the O-ring from the starter yoke.

ST



(c) Using a screwdriver, hold the spring back and disconnect the 4 brushes from the brush holder.
(d) Remove the brush holder from the armature.

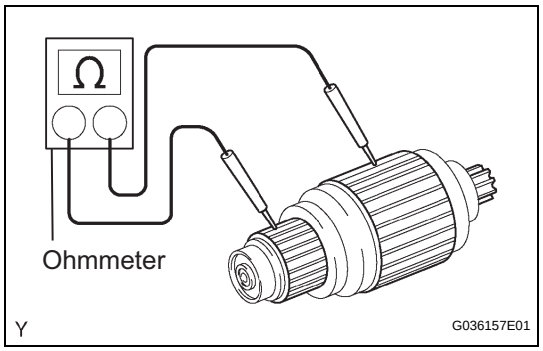
4. REMOVE STARTER ARMATURE ASSEMBLY



INSPECTION

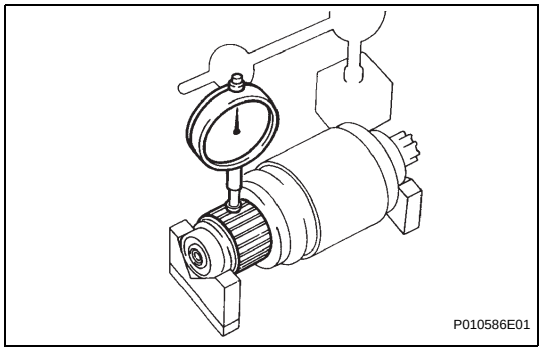
1. INSPECT STARTER ARMATURE ASSEMBLY

(a) Check the commutator for an open circuit.
(1) Using an ohmmeter, measure the resistance between the segments of the commutator.
Standard:
1Ω or lower
If the result is not as specified, replace the starter armature.

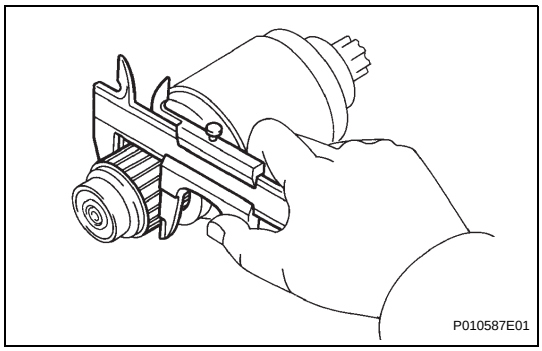


(b) Check the commutator for ground.
(1) Using an ohmmeter, measure the resistance between the commutator and armature coil core.
Standard:
10 kΩ or higher
If the result is not as specified, replace the starter armature.

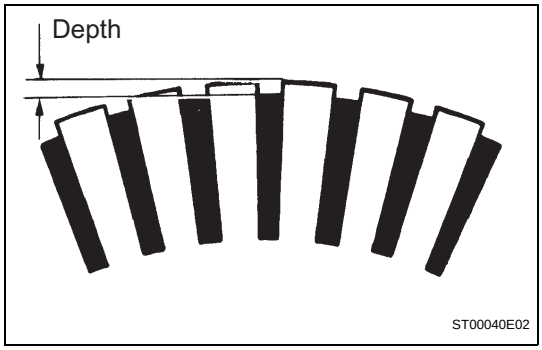
(c) Check whether the commutator surface is dirty or burnt.
If necessary, clean it with sandpaper (No. 400) or a lathe.



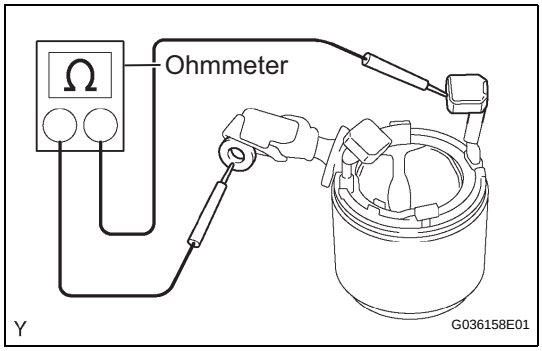
(d) Check the commutator for runout.
(1) Place the commutator on V-blocks.
(2) Using a dial gauge, measure the runout.
Maximum runout:
0.05 mm (0.0020 in.)
If the runout is greater than the maximum, correct it on a lathe.



(e) Using vernier calipers, measure the commutator diameter.
Standard diameter:
35.0 mm (1.378 in.)
Minimum diameter:
34.0 mm (1.339 in.)
If the diameter is less than the minimum, replace the armature.

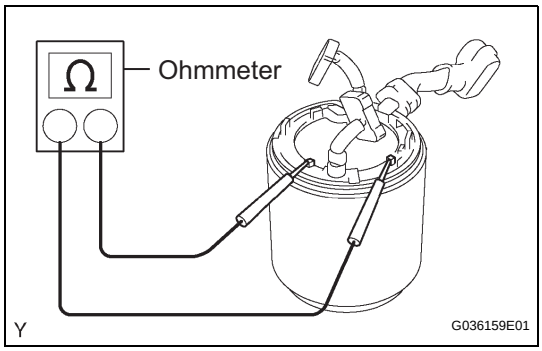


(f) Check that the undercut portion between the segments is free of foreign objects. Measure its depth.
Standard undercut depth:
0.7 mm (0.028 in.)
Minimum undercut depth:
0.2 mm (0.008 in.)
If the undercut depth is less than the minimum, correct it with a hacksaw blade.

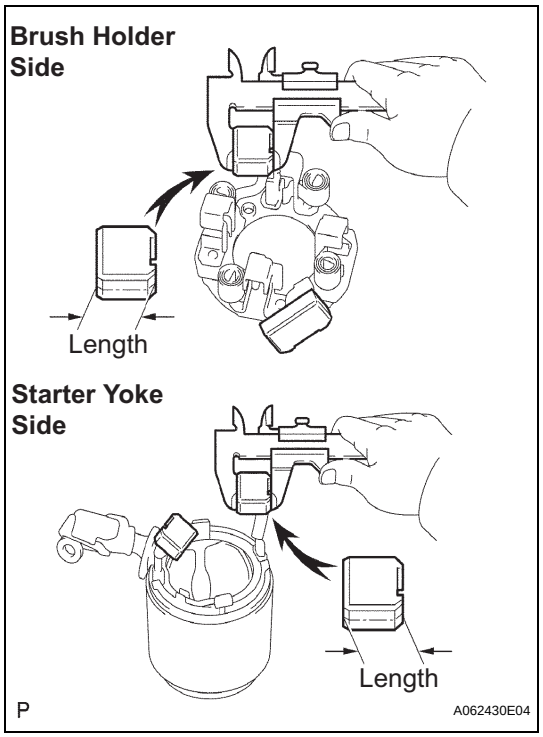


2. INSPECT STARTER YOKE ASSEMBLY

(a) Check the starter yoke for an open circuit.
(1) Using an ohmmeter, measure the resistance between the lead wire and brushes.
Standard:
1 Ω or lower
If the result is not as specified, replace the starter yoke.



(b) Check the shunt coil for an open circuit.
(1) Using an ohmmeter, measure the resistance between shunt coil terminals A and B.
Standard:
1.5 to 1.9 Ω at 20°C (68°F)
If the result is not as specified, replace the starter yoke.



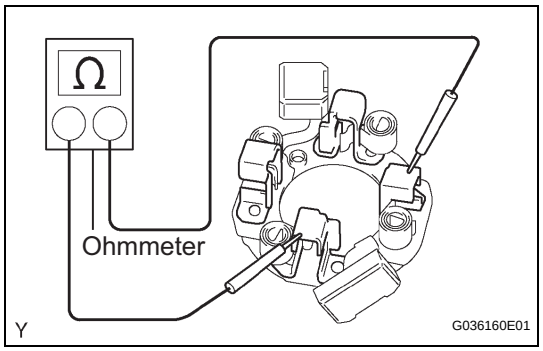
3. INSPECT BRUSH

(a) Check the brush length.

(1) Using vernier calipers, measure the brush length.

Standard length:
15.0 mm (0.591 in.)
Minimum length:
9.0 mm (0.354 in.)

If the length is less than the minimum, replace the brush holder and starter yoke.



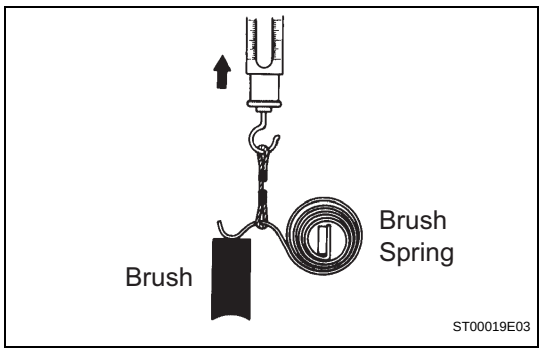
4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

(a) Check the blush holder insulation.

(1) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brush holders.

Standard:
10 kΩ or higher

If the result is not as specified, replace the brush holder.

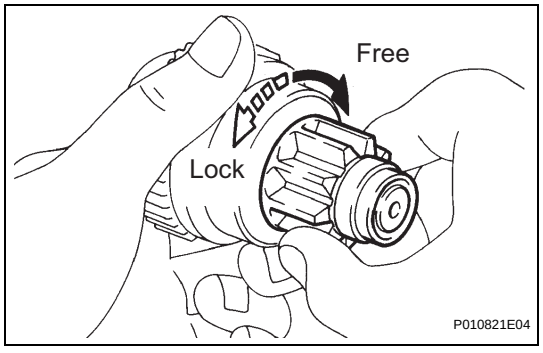


(b) Check the brush spring load.

(1) Take the pull scale reading as soon as the brush spring separates from the brush.

Standard spring load:
21.5 to 27.5 N (2.2 to 2.8 kgf, 4.8 to 6.2 lbf)
Minimum spring load:
12.7 N (1.3 kgf, 2.9 lbf)

If the spring load is less than the minimum, replace the brush holder.



5. INSPECT STARTER CLUTCH SUB-ASSEMBLY

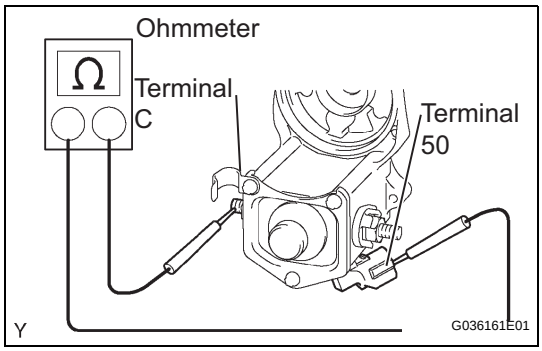
(a) Check the clutch pinion gear.

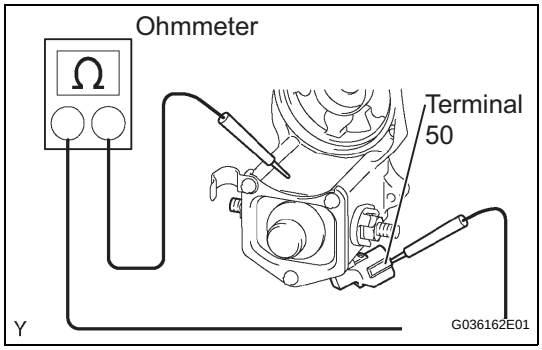
(1) Hold the starter clutch, rotate the pinion gear clockwise and check that it turns freely.

(2) Try to rotate the pinion gear counterclockwise and check that it locks.

If necessary, replace the starter clutch.

ST





6. INSPECT MAGNET STARTER SWITCH ASSEMBLY

(a) Check the pull-in coil for an open circuit.

(1) Using an ohmmeter, measure the resistance between terminals 50 and C.

Standard:

1 Ω or lower

If the result is not as specified, replace the magnet starter switch.

(b) Check the holding coil for an open circuit.

(1) Using an ohmmeter, measure the resistance between terminal 50 and the switch body.

Standard:

2 Ω or lower

If the result is not as specified, replace the magnet starter switch.

REASSEMBLY

1. INSTALL STARTER ARMATURE ASSEMBLY

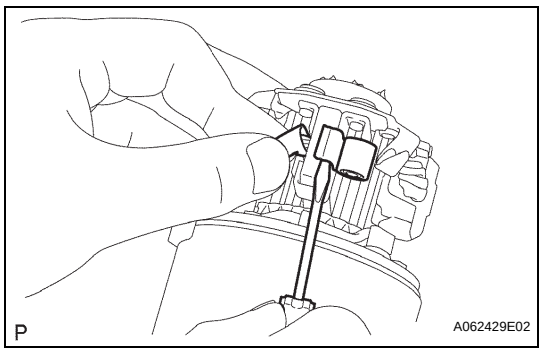
(a) Apply grease to the bearings, and install it onto the starter yoke.

2. INSTALL STARTER BRUSH HOLDER ASSEMBLY

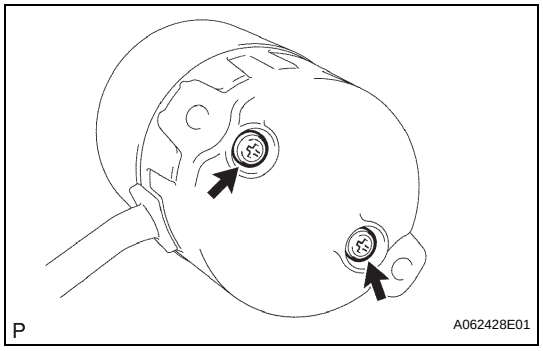
(a) Place the brush holder on the armature.

(b) Using a screwdriver, install the 4 brushes.

(c) Install a new O-ring onto the groove of the field frame.



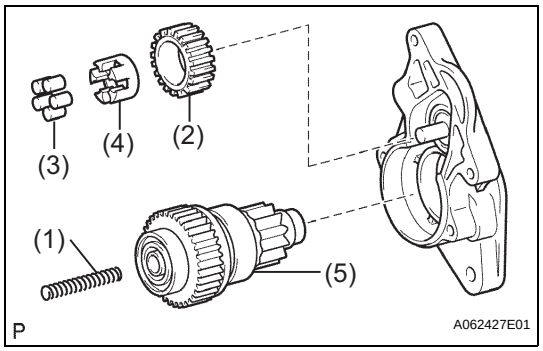
(d) Install the end frame with the 2 screws.
Torque: 3.8 N*m (39 kgf*cm, 34 in.*lbf)



3. INSTALL MAGNET STARTER SWITCH ASSEMBLY

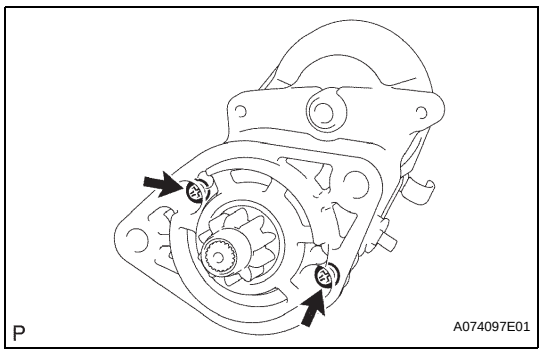
(a) Apply grease to the steel ball, and install it onto the clutch shaft hole.

(b) Apply grease to parts (2)- (5), and install all the parts below onto the starter drive housing.



(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch

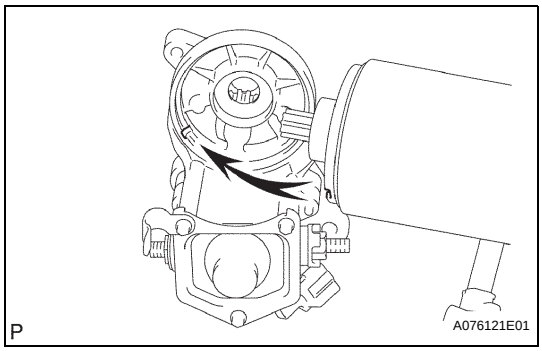
(c) Install the magnet starter switch with the 2 screws.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)



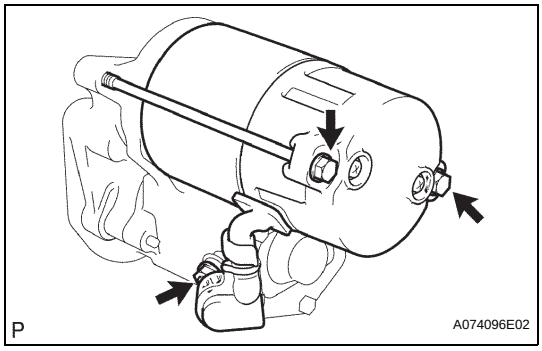
4. INSTALL STARTER YOKE ASSEMBLY

(a) Install a new O-ring onto the groove of the starter yoke.

ST



(b) Align the key of the starter yoke with the groove of the magnet starter switch.



(c) Install the starter yoke and armature with the 2 through bolts.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)

(d) Connect the lead wire to terminal C with the nut.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

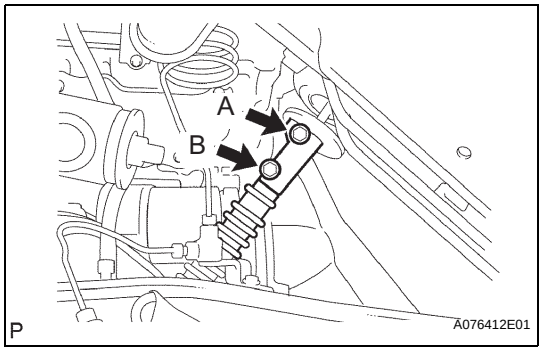
INSTALLATION

1. INSTALL STARTER ASSEMBLY

(a) Install the starter assembly with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(b) Install the wire harness to terminal 30 with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

(c) Connect the terminal 50 connector to the starter assembly.



2. INSTALL NO.2 STEERING INTERMEDIATE SHAFT

(a) Install the steering sliding yoke onto steering intermediate shaft No. 2.

(b) Install bolt B and then tighten bolt B and A.
Torque: 36 N*m (370 kgf*cm, 27 ft.*lbf)

3. INSTALL FRONT FENDER SEAL LH

(a) Install the front fender splash shield rear LH with the 5 clips.

4. INSTALL NO.2 EXHAUST FRONT PIPE ASSEMBLY
(See page EX-3)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

6. CHECK FOR EXHAUST GAS LEAKAGE

7. INSTALL NO.1 ENGINE UNDER COVER SUB-ASSEMBLY

(a) Install the engine under cover with the 4 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)

INSTALLATION

1. **INSTALL GENERATOR ASSEMBLY**
   (a) Install the generator assembly with the 2 bolts.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
   (b) Install the wire harness clamp bracket with the 2 bolts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (c) Connect the wire harness.
      (1) Connect the wire harness to terminal B and install the nut.
      Torque: 9.8 N*m (100 kgf*cm, 7.0 ft.*lbf)
      (2) Connect the connector to the generator assembly.
      (3) Install the wire harness stay with the bolt.
      Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
2. **INSTALL FAN SHROUD (See page CO-20)**
3. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
4. **INSTALL V-BANK COVER (See page ES-416)**
5. **CONNECT CABLE TO NEGATIVE TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

INSTALLATION

1. **INSTALL GENERATOR ASSEMBLY**
   (a) Install the generator assembly with the 2 bolts.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
   (b) Install the wire harness clamp bracket with the 2 bolts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (c) Connect the wire harness.
      (1) Connect the wire harness to terminal B and install the nut.
      Torque: 9.8 N*m (100 kgf*cm, 7.0 ft.*lbf)
      (2) Connect the connector to the generator assembly.
      (3) Install the wire harness stay with the bolt.
      Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
2. **INSTALL FAN SHROUD (See page CO-20)**
3. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
4. **INSTALL V-BANK COVER (See page ES-416)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

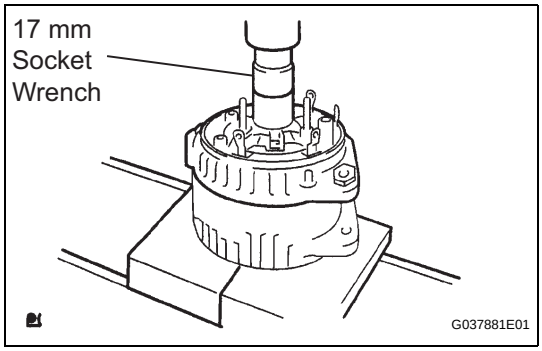
REASSEMBLY

1. INSTALL GENERATOR ROTOR ASSEMBLY

(a) Place the drive end frame on the generator rotor assembly.
NOTICE:
Do not drop the generator rotor assembly.

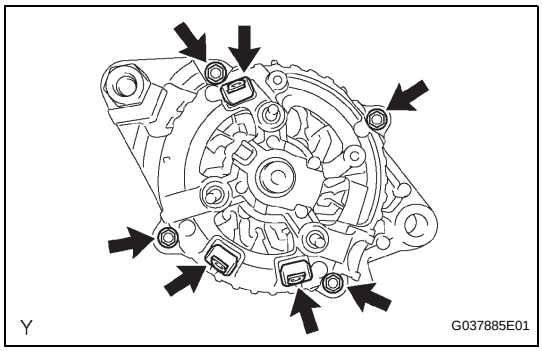
(b) Install the generator rotor assembly and plate retainer.

(c) Using a 17 mm socket wrench and press, slowly press in the rectifier end frame.



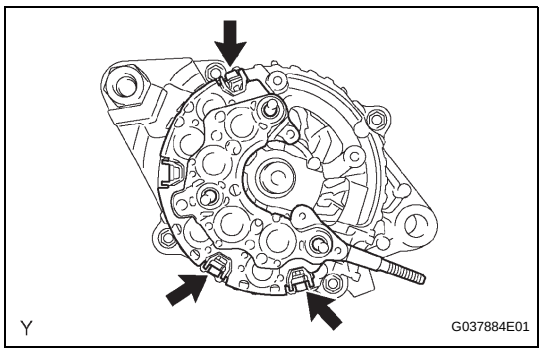
(d) Install the 4 nuts.
Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)

(e) Install the 3 terminal insulators to the rectifier end frame.



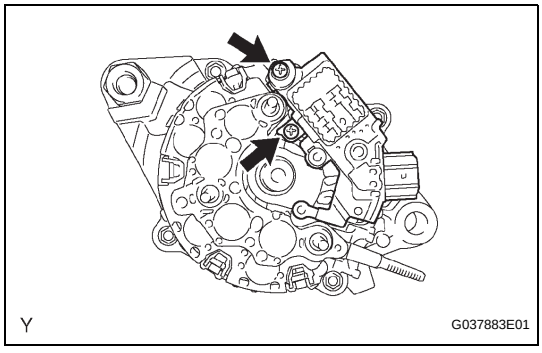
2. INSTALL GENERATOR HOLDER WITH RECTIFIER

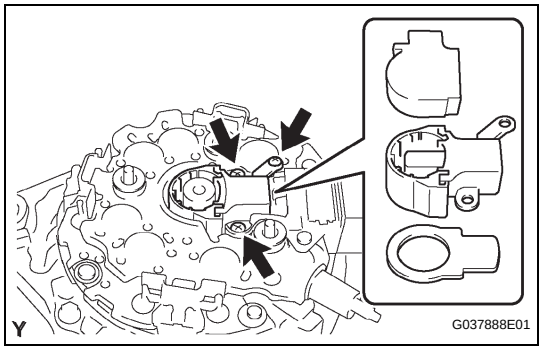
(a) Install the generator rectifier holder with the 3 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)



3. INSTALL GENERATOR REGULATOR ASSEMBLY

(a) Install the generator regulator assembly with the 2 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)





4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

(a) Install the plate seal.

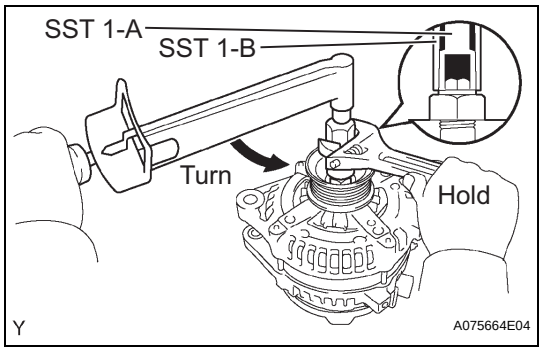
(b) Install the generator brush holder assembly with the 3 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)

(c) Install the brush cover on the generator brush holder assembly.

(d) Install the rear end cover with the 2 nuts.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf)

(e) Install the rectifier plate with the nut and screw.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf) for nut
Torque: 3.9 N*m (40 kgf*cm, 34 in.*lbf) for bolt

(f) Install the terminal insulator with the nut.
Torque: 4.1 N*m (42 kgf*cm, 36 in.*lbf)



5. INSTALL GENERATOR PULLEY

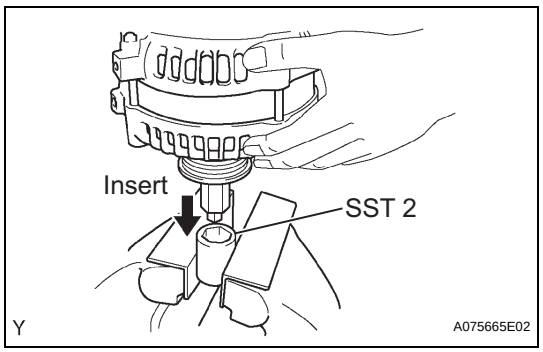
SST 09820-63010 (09820-06010, 09820-06020)

HINT:

SST 1-A and B	09820-06010
SST 2	09820-06020

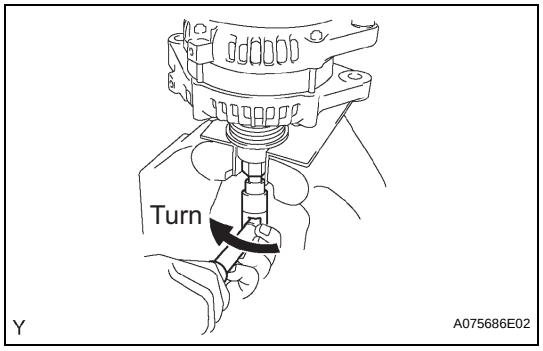
(a) Install the generator pulley to the generator rotor shaft by tightening the generator pulley nut by hand.

(b) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise with the specified torque.
Torque:
39 N*m (398 kgf*cm, 29 ft.*lbf)
NOTICE:
Check that the SST is secured to the generator rotor shaft.



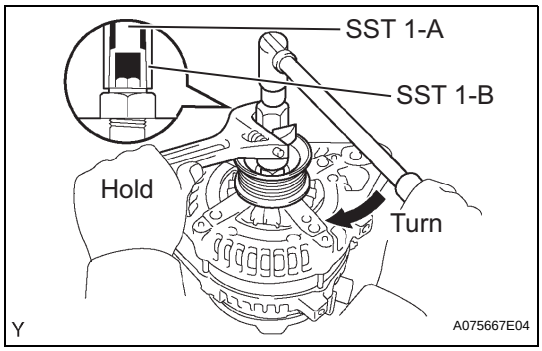
(c) Mount SST 2 in a vise.

(d) Insert SST 1-A and B into SST 2, and attach the generator pulley nut to SST 2.



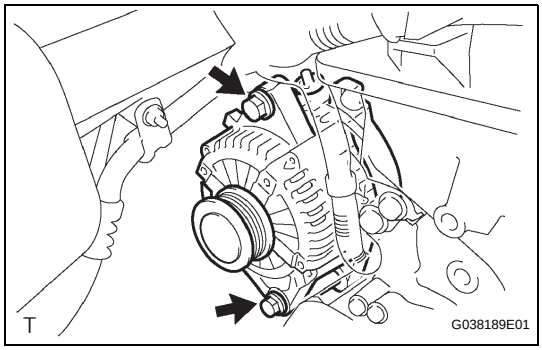
(e) Tighten the generator pulley nut by turning SST 1-A in the direction shown in the illustration.
Torque: 137 N*m (1,397 kgf*cm, 101 ft.*lbf)

(f) Remove the generator from SST 2.

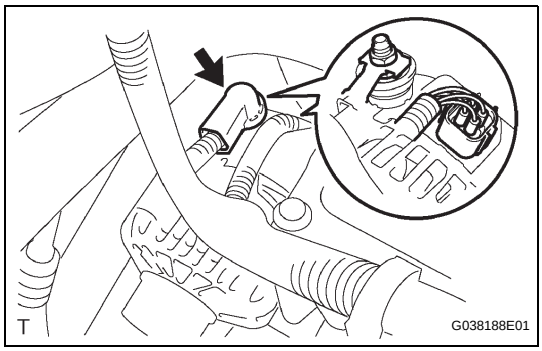


(g) Turn SST 1-B, and remove SST 1-A and B.
(h) Turn the generator pulley, and check that the generator pulley moves smoothly.

INSTALLATION



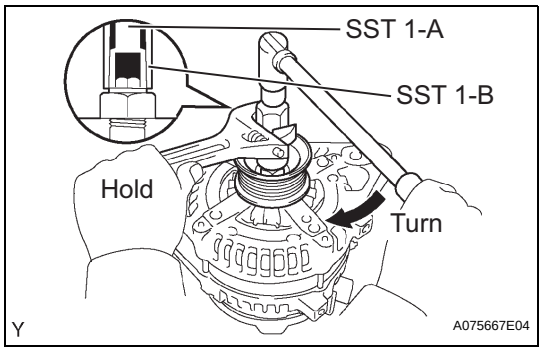
1. INSTALL GENERATOR ASSEMBLY
(a) Install the generator with the 2 bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



(b) Connect the generator connector.
(c) Install the generator wire with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(d) Install the terminal cap.

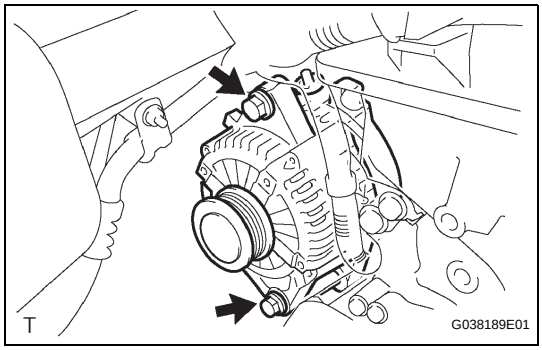
2. INSTALL FAN AND GENERATOR V BELT (See page EM-6)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

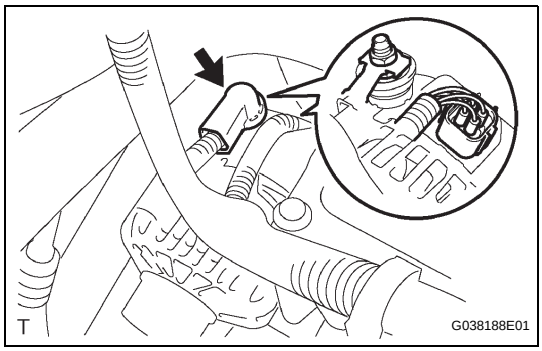


(g) Turn SST 1-B, and remove SST 1-A and B.
(h) Turn the generator pulley, and check that the generator pulley moves smoothly.

INSTALLATION



1. INSTALL GENERATOR ASSEMBLY
(a) Install the generator with the 2 bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



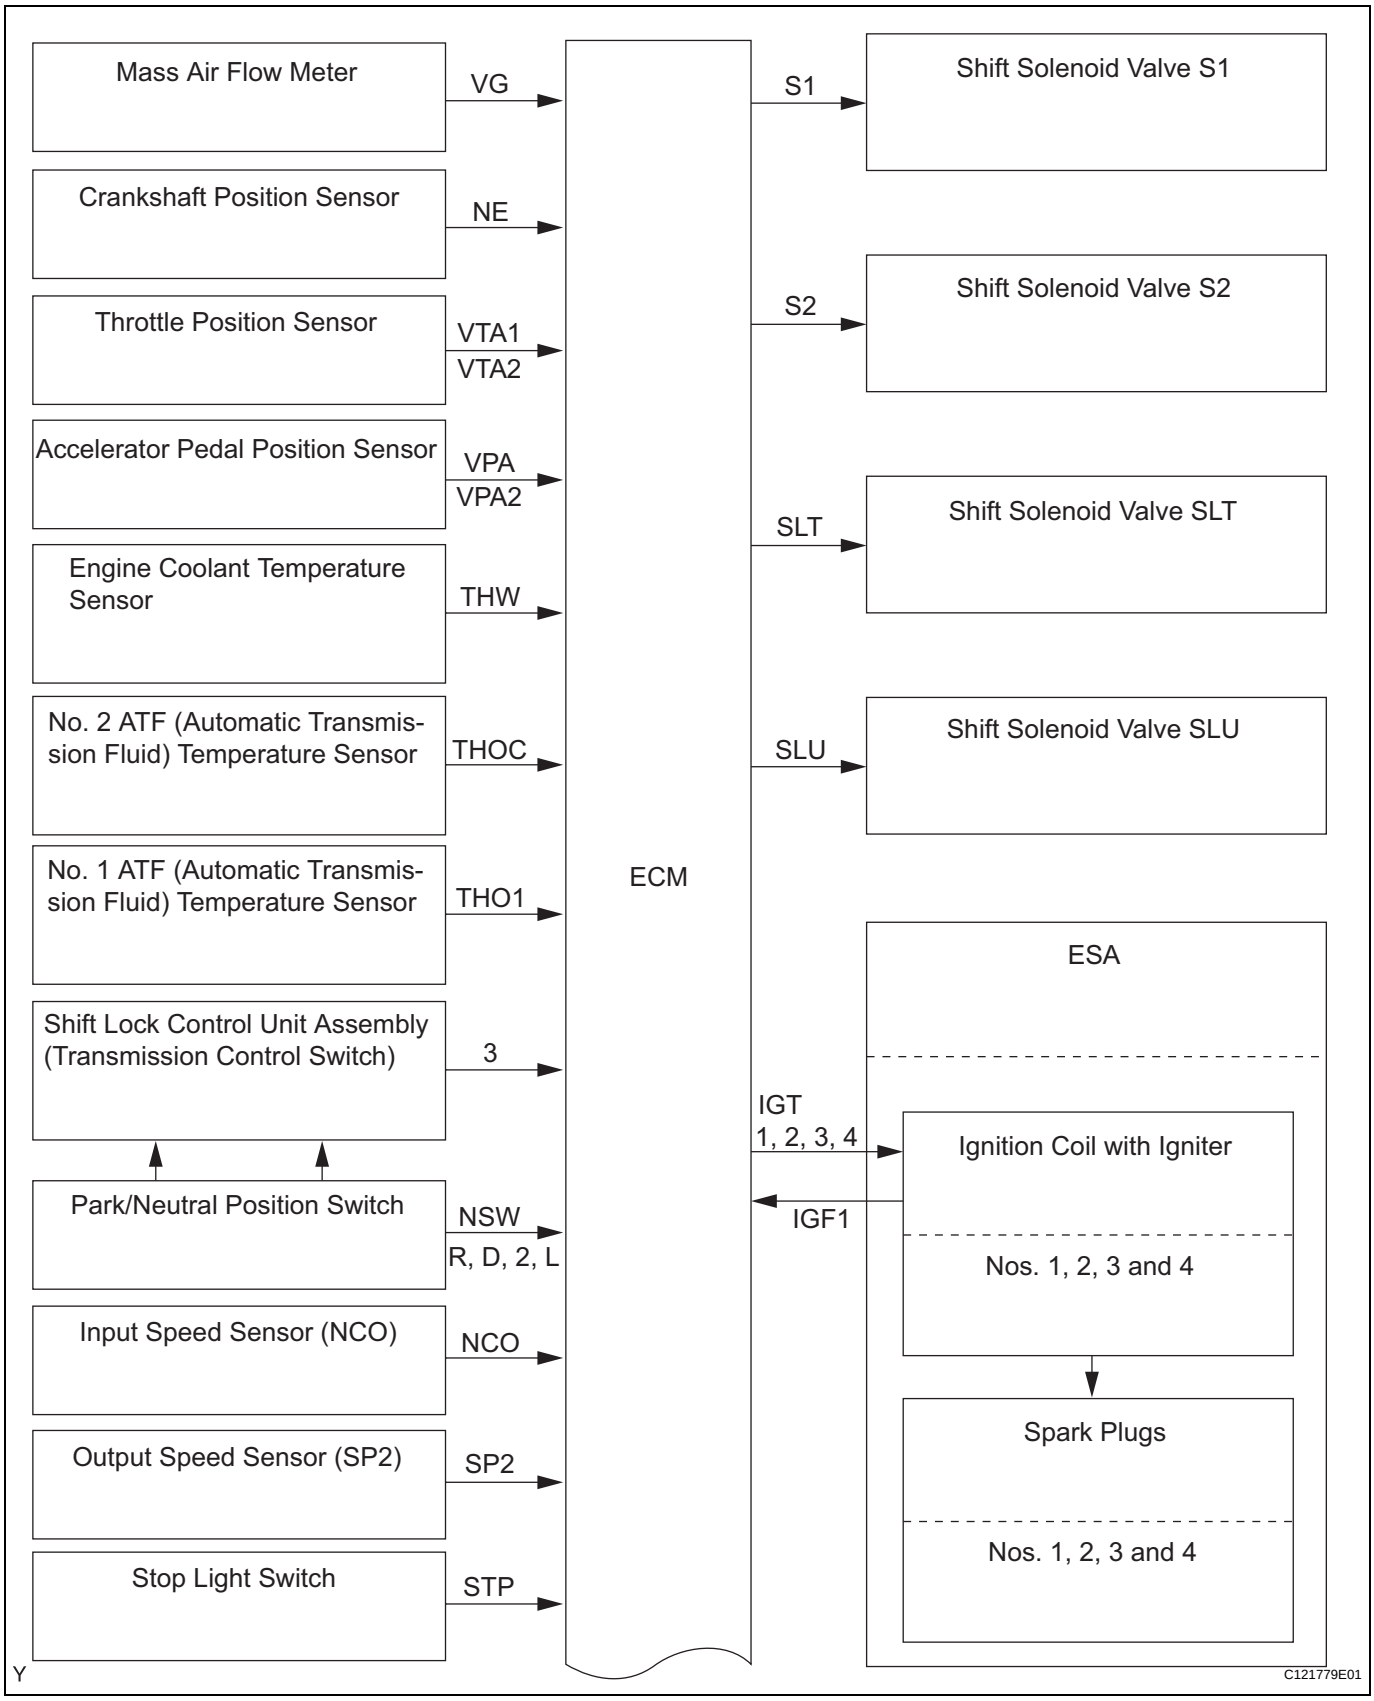
(b) Connect the generator connector.
(c) Install the generator wire with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(d) Install the terminal cap.

2. INSTALL FAN AND GENERATOR V BELT (See page EM-6)

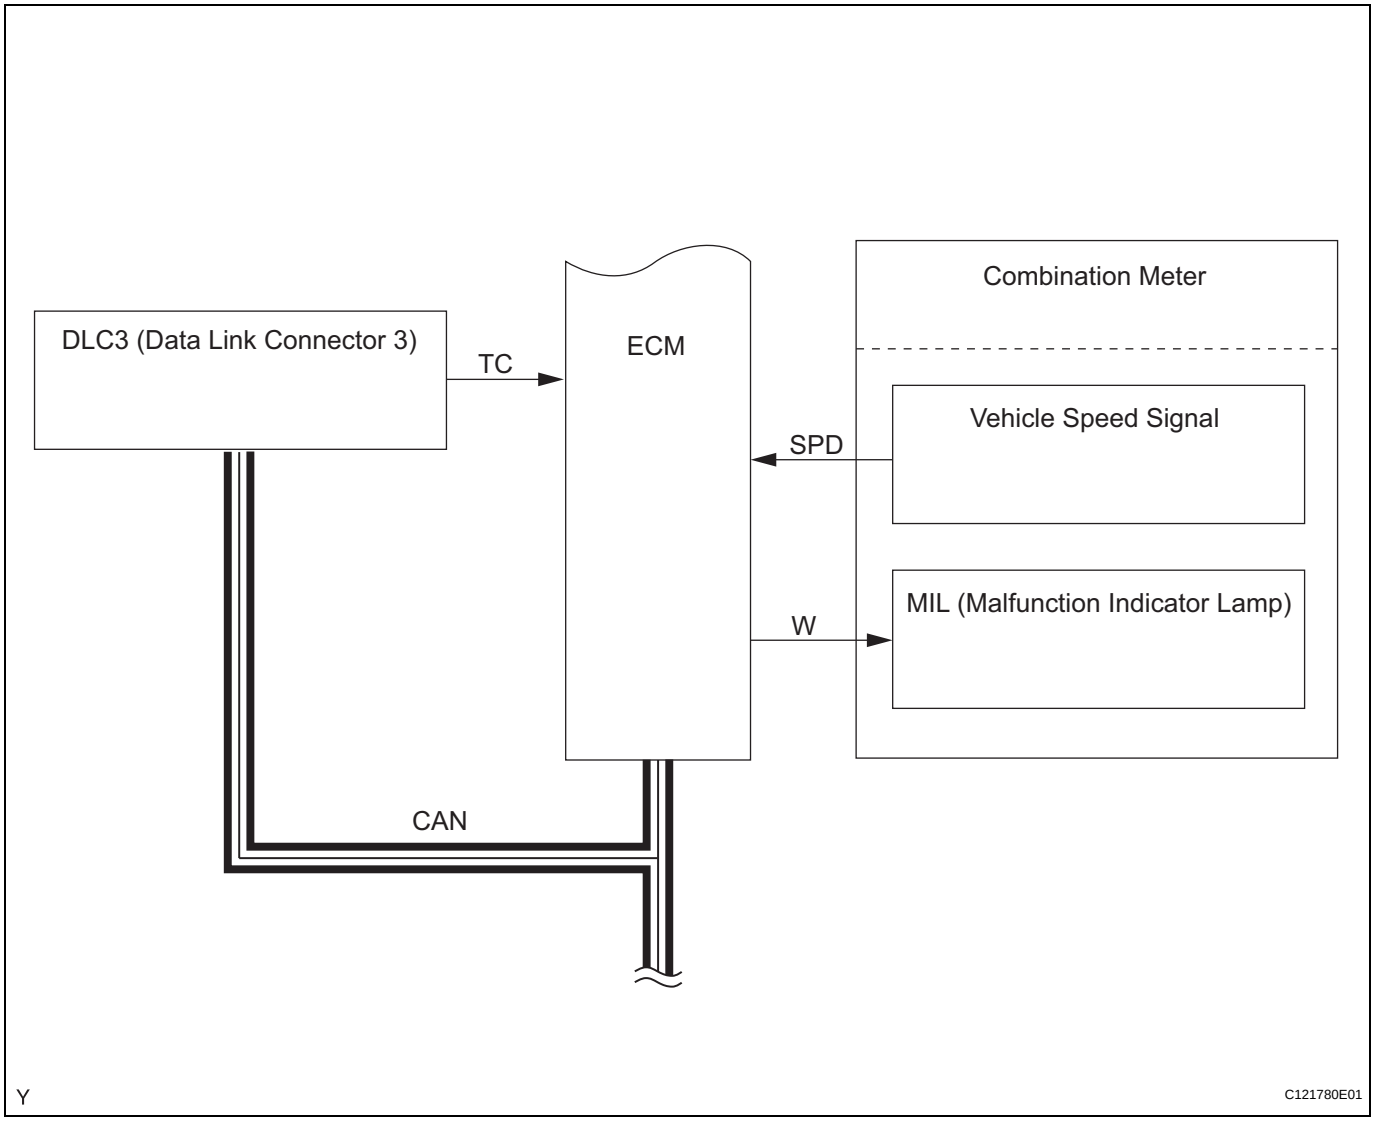
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

SYSTEM DIAGRAM

The configuration of the electronic control system in the A340E automatic transmission is as shown in the following chart.



AT



Combination Meter
DLC3 (Data Link Connector 3)
TC
ECM
SPD
Vehicle Speed Signal
MIL (Malfunction Indicator Lamp)
W
CAN
Y
C121780E01

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic Controlled automatic Transmission) is an automatic transmission that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.
Shift shock has been reduced by controlling the engine and transmission simultaneously. In addition, the ECT has features such as follows:

- Diagnostic function.
- Fail-safe function when a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN and multiplex communication system. Therefore, before starting troubleshooting, make sure that there is no trouble in the CAN and multiplex communication system.
- The intelligent tester can be used at steps 3, 4, 6, and 9.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transmission does not shift up, shift down, or the shift point is too high or too low, conduct the following road test while referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50° to 80°C (122° to 176°F).

(a) D position test:

Shift into the D position, fully depress the accelerator pedal and check the following points:

(1) Check up-shift operation.

Check that 1 →2, 2 → 3 and 3 → 4 up-shifts take place, and that the shift points conform to the automatic shift schedule. (See page SS-37)

HINT:

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55 °C (131 °F) or less and vehicle speed is 49.7 mph (80 km/h) or less.

4th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 55°C(131 °F) or less.

(2) Check for shift shock and slippage.

Check for shock and slippage at the 1 → 2, 2 → 3 and 3 → 4 up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3 and 3 → 4 while driving with the shift lever in the D position, and check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc..

(4) Check kick-down operation.

While running in the D position, 2nd, 3rd and 4th gears, check that the possible kick-down vehicle speed limits for 2 → 1, 3 → 2 and 4 → 3 kick-downs conform to those indicated on the automatic shift schedule. (See page SS-37)

(5) Check for abnormal shock and slippage at kick-down.

(6) Check the lock-up mechanism.
- Drive in the D position (4th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up function in the 1st and 2nd gears.
- If there is a sudden increase in engine speed, there is no lock-up.

(b) 3 position test:
Shift into the 3 position, fully depress the accelerator pedal and check the following points:
(1) Check up-shift operation.
Check that 1 → 2, 2 → 3 up-shifts take place and that the shift point conforms to the automatic shift schedule (See page SS-37).
HINT:
There is no 4th up-shift and lock-up in the 3 position. 3rd Gear Lock-up Prohibition Control
- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 55 °C (131 °F) or less.

(2) Check engine braking.
While running in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.
(4) Check the lock-up mechanism.
- Drive in the 3 position (3rd gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up function in the 1st and 2nd gears.
- If there is a sudden increase in engine speed, there is no lock-up.

(c) 2 position test:
Shift into the 2 position, fully depress the accelerator pedal and check the following points:
(1) Check up-shift operation.
Check that 1 → 2 up-shift takes place and that the shift point conforms to the automatic shift schedule. (See page SS-37).
(2) Check engine braking.
While running in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) L position test:
Shift into the L position, fully depress the accelerator pedal and check the following points:
(1) Check no up-shift.
While running in the L position, check that there is no up-shift to the 2nd gear.
(2) Check engine braking.
While running in the L position, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration.

(e) R position test:
Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test, ensure that the test area is free from people and obstructions.

(f) P position test:
Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

MECHANICAL SYSTEM TESTS

1. STALL SPEED TEST

HINT:

This test is to check the overall performance of the engine and transmission.

NOTICE:

- **Do not perform the stall speed test longer than 5 seconds.**
- **To ensure safety, perform this test in an open and level area that provides good traction.**
- **The stall speed test should always be performed with at least 2 people. One person should observe the condition of the wheels and wheel chocks while the other is performing the test.**

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Chock all 4 wheels.

(e) Set the parking brake and keep the brake pedal depressed firmly with your left foot.

(f) Shift the shift lever into the D position.

(g) Depress the accelerator pedal as much as possible with your right foot.

(h) Read the engine rpm (stall speed) and release the accelerator pedal immediately.

Standard value:

1,850 to 2,150 rpm

Evaluation:

Test Result	Possible Cause
Stall speed is lower than standard value	• Stator one-way clutch is not operating properly • Torque converter is faulty (stall speed is less than standard value by 600 rpm or more) • Engine power may be insufficient
Stall speed is higher than standard value	• Line pressure is low • Forward clutch slipping • No. 2 one-way clutch is not operating properly • O/D one-way clutch is not operating properly • Improper fluid level

2. SHIFT TIME LAG TEST

HINT:

This test is to check the condition of the direct clutch, forward clutch, 1st brake and reverse brake.

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Set the parking brake and keep the brake pedal depressed firmly.

(e) Check the D range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the D position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.

(f) Check the R range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the R position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.

Standard value:

D range time lag is less than 1.2 seconds
R range time lag is less than 1.5 seconds

Evaluation:

Test Result	Possible Cause
D range time lag exceeds standard value	• Line pressure is low • Forward clutch is worn • O/D one-way clutch is not operating properly
R range time lag exceeds standard value	• Line pressure is low • Direct clutch is worn • 1st brake and reverse brake is worn • O/D one-way clutch is not operating properly

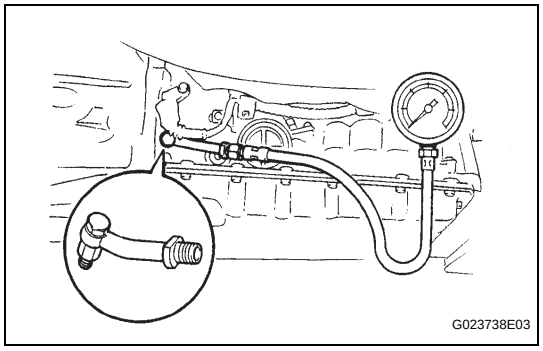
HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature of 50° to 80°C (122° to 176°F).**
- **The line pressure test should always be carried out in pairs. One technician should observe the condition of the wheels or wheel stoppers outside the vehicle while the other is doing the test.**
- **Be careful to prevent the SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting the engine.**
- **Perform the test with A/C OFF.**
- **Do not conduct stall tests for longer than 5 seconds continuously.**



(1) Warm up the ATF.
(2) Lift the vehicle up.
(3) Remove the test plug on the transmission case center right side and connect SST.
SST 09992-00095 (09992-00231, 09992-00271)
(4) Fully apply the parking brake and chock the 4 wheels.
(5) Start the engine and check the idling speed.
(6) Keep your left foot pressing firmly on the brake pedal and shift into the D position.
(7) Measure the line pressure while the engine is idling.
(8) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when the engine speed reaches the stall speed.
(9) In the same manner, do the test in the R position.

Specified line pressure

Condition	D position: kPa (kgf / cm^2, psi)	R position: kPa (kgf / cm^2, psi)
Idling	363 to 422 (3.7 to 4.3, 52.6 to 61.2)	608 to 706 (6.2 to 7.2, 88.2 to 102.4)
Stall test	932 to 1,177 (9.5 to 12.0, 135.2 to 170.7)	1,569 to 1,912 (16.0 to 19.5, 227.6 to 277.3)

Evaluation

Problem	Possible cause
If the measured values at all positions are too high	• Shift solenoid valve (SLT) defective • Regulator valve detective
If the measured values at all positions are too low	• Shift solenoid valve (SLT) defective • Regulator valve detective • Oil pump defective • O/D direct clutch defect
If pressure is low in the D position only	• D position circuit fluid leakage • Forward clutch defective

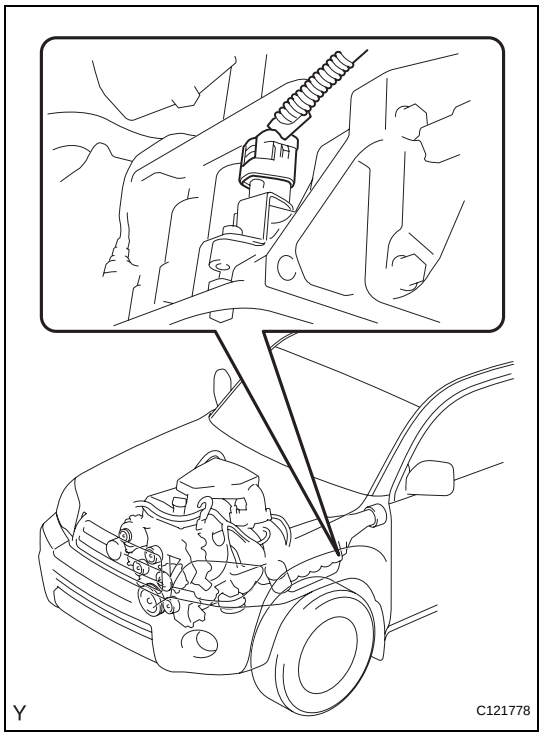
Problem	Possible cause
If pressure is low in the R position only	• **R position circuit fluid leakage** • **Direct clutch defective** • **1st & reverse brake defective**

MANUAL SHIFTING TEST

1. MANUAL SHIFTING TEST

HINT:

- Through this test, it can be determined whether the trouble occurs in the electrical circuit or if it is a mechanical problem in the transmission.
- If any abnormalities are found in the following test, the problem is in the transmission itself.



(a) Disconnect the connector of the transmission wire.
HINT:
It is possible to deactivate the electrical shift control by disconnecting the transmission wire. The gear positions can then be changed mechanically with the shift lever.

(b) Drive with the transmission wire disconnected. Move the shift lever to each position to check whether the gear position changes as shown in the table below.

Shift Lever Position	Gear Position
D	4th
3	4th
2	3rd
L	1st
R	R
P	P

(c) Connect the connector of the transmission wire.

(d) Clear the DTC. (See pageAT-25)

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT (Electronic Controlled automatic Transmission) malfunctions.
(The DTCs may not be detected due to the actual driving conditions. And some DTCs may not be detected through this drive pattern.)
HINT:
Preparation for driving

- Warm up the engine sufficiently. (Engine coolant temperature should be 60 °C (140 °F) or higher)
- Drive the vehicle when the atmospheric temperature is -10 °C(14 °F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10 °C (14 °F))

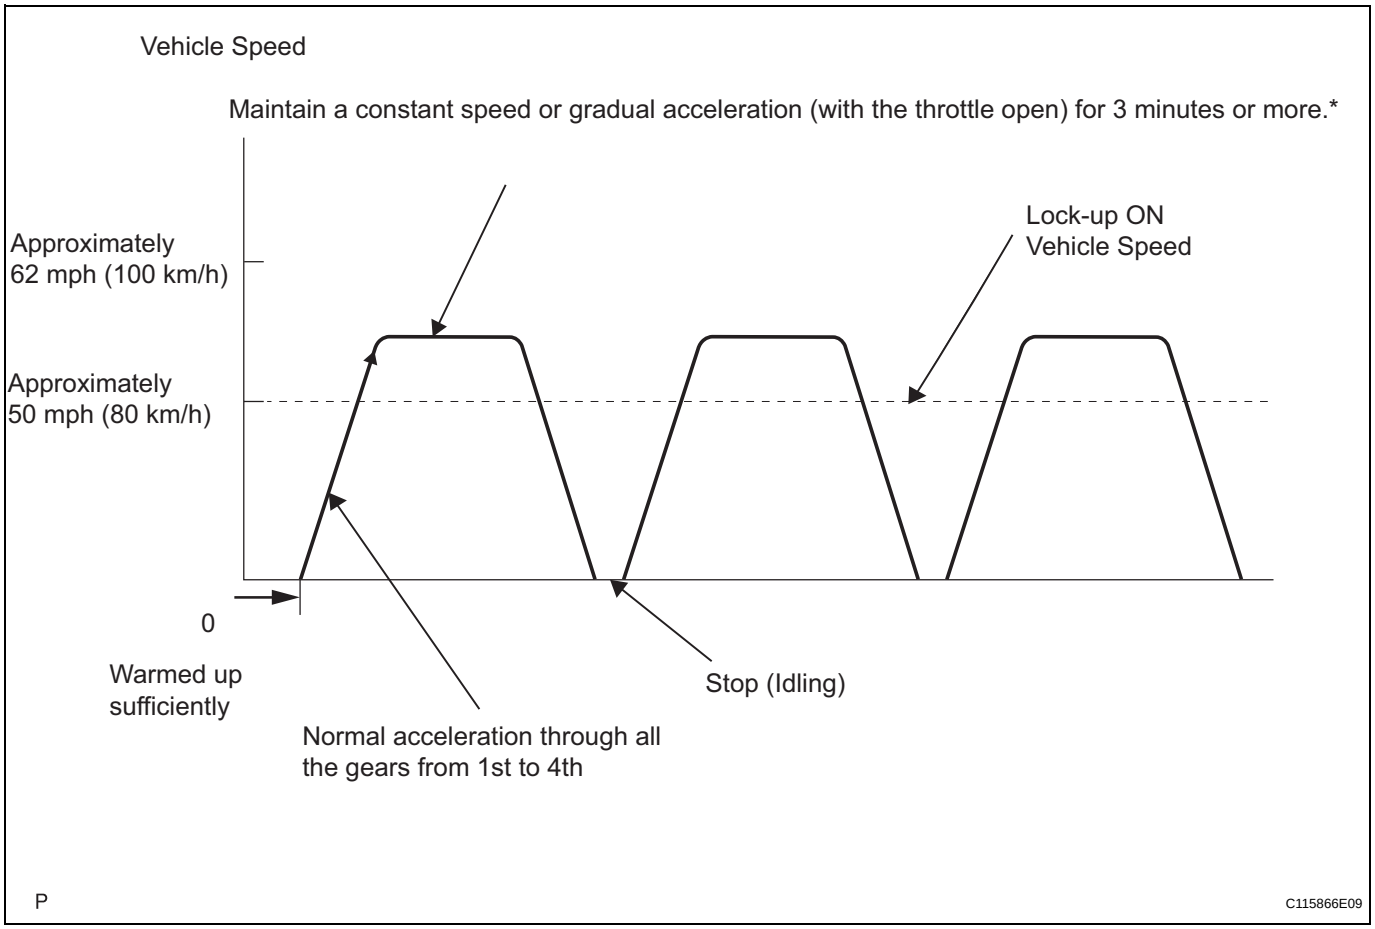
Notice in driving

- Drive the vehicle through all gears.
  Stop → 1st → 2nd → 3rd → 4th → 4th (lock-up ON).
- Repeat the above driving pattern three times or more.

NOTICE:

- **The monitor status can be checked using the intelligent tester. When using the intelligent tester, monitor status can be found in the "ENHANCED OBD II/ DATA LIST" or under "CARB OBD II".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors) the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:
Perform this drive pattern on as level a road as possible and strictly observe the posted speed limits and traffic laws while driving.



HINT:
*1: Drive at such a speed in the uppermost gear, so as to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.

PROBLEM SYMPTOMS TABLE

HINT:

- If a normal code is displayed during the DTC check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
- The Matrix Chart is divided into 2 chapters.
- When the circuit on which mark *1 is attached is a malfunction, DTC could be output.

Chapter 1: Electronic Circuit Matrix Chart

Refer to the table below when the trouble cause is considered to be electrical. The instruction "Proceed to next circuit inspection shown on matrix chart" is given in the flow chart for each circuit, proceed to the circuit with the next highest number in the table to continue the check. If the trouble still occurs even though there are no abnormalities in any of the other circuits, then check and replace the ECM.

Symptom	Suspected area	See page
No up-shift (1st to 2nd)	1. Shift solenoid valve (S2) circuit *1	AT-64
	2. Speed sensor SP2 circuit *1	AT-48
	3. ECM	IN-34
No up-shift (2nd to 3rd)	1. Shift solenoid valve (S1) circuit *1	AT-64
	2. ECM	IN-34
No up-shift (3rd to 4th)	1. Park/neutral position switch circuit *1	AT-34
	2. Engine coolant temperature sensor circuit *1	ES-54
	3. Shift solenoid valve (S2) circuit *1	AT-64
	4. ECM	IN-34
No down-shift (4th to 3rd)	1. Park/neutral position switch circuit *1	AT-34
	2. Shift solenoid valve (S2) circuit *1	AT-64
	3. ECM	IN-34
No down-shift (3rd to 2nd)	1. Shift solenoid valve (S1) circuit *1	AT-64
	2. ECM	IN-34
No down-shift (2nd to 1st)	1. Shift solenoid valve (S2) circuit *1	AT-64
	2. ECM	IN-34
No lock-up or no lock-up off	1. Shift solenoid valve (SLU) circuit *1	AT-81
	2. Stop light switch circuit *1	AT-52
	3. ECM	IN-34
No lock-up	1. Shift solenoid valve (SLU) circuit *1	AT-81
	2. Engine coolant temperature sensor circuit *1	ES-54
	3. Stop light switch circuit *1	AT-52
	4. Speed sensor NCO circuit *1	AT-44
	5. ECM	IN-34
No lock-up off	1. Shift solenoid valve (SLU) circuit *1	AT-81
	2. ECM	IN-34
Shift point too high or too low	1. Shift solenoid valve (SLT) circuit *1	AT-68
	2. Speed sensor NCO circuit *1	AT-44
	3. Speed sensor SP2 circuit *1	AT-48
	4. Throttle position sensor circuit *1	ES-54
	5. ATF temperature sensor THOC circuit *1	AT-40
	6. ATF temperature sensor THO1 circuit *1	AT-72
	7. ECM	IN-34
Up-shift to 2nd while in L position	1. Park/neutral position sensor circuit *1	AT-34
	2. ECM	IN-34

Symptom	Suspected area	See page
Up-shift to 3rd while in 2 position	1. Park/neutral position sensor circuit *1	AT-34
	2. ECM	IN-34
Up-shift from 3rd to 4th while engine is cold	1. Engine coolant temperature sensor circuit *1	ES-54
	2. ECM	IN-34
Harsh engagement (N to D)	1. Shift solenoid valve (SLT) circuit *1	AT-68
	2. Speed sensor NCO circuit *1	AT-44
	3. ECM	IN-34
Harsh engagement (Lock-up)	1. Speed sensor NCO circuit *1	AT-44
	2. Speed sensor SP2 circuit *1	AT-48
	3. Shift solenoid valve (SLU) circuit *1	AT-81
	4. ECM	IN-34
Harsh engagement (Any driving position)	1. Throttle position sensor circuit *1	ES-54
	2. Shift solenoid valve (SLU) circuit *1	AT-81
	3. Shift solenoid valve (SLT) circuit *1	AT-68
	4. Speed sensor NCO circuit *1	AT-44
	5. ECM	IN-34
Poor acceleration	1. Shift solenoid valve (SLT) circuit *1	AT-68
	2. ECM	IN-34
No engine braking	ECM	IN-34
No kick-down	ECM	IN-34
Engine stalls when starting off or stopping	1. Shift solenoid valve (SLU) circuit *1	AT-81
	2. ECM	IN-34

Chapter 2: On-Vehicle Repair and Off-Vehicle Repair

(▲: A340E AUTOMATIC TRANSMISSION Repair Manual Pub. No. RM998U)

Symptom	Suspected area	See page
Vehicle does not move in any forward position or reverse position	1. Shift solenoid valve SLT	AT-68
	2. Transmission control cable	AT-105
	3. Manual valve	▲
	4. Parking lock pawl	▲
	5. O/D one-way clutch (F0)	▲
	6. O/D direct clutch (C0)	▲
	7. O/D brake (B0)	▲

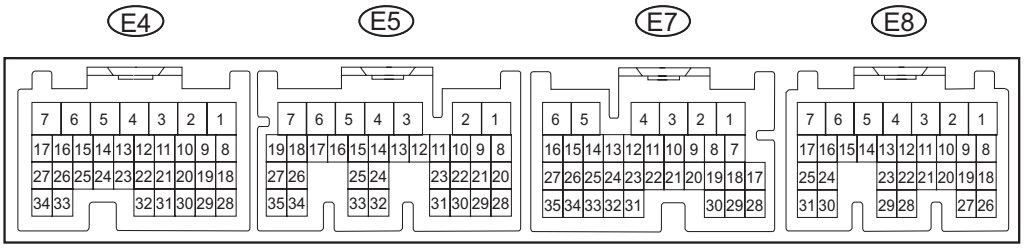
	3. Torque converter clutch	AT-117
Harsh engagement (N to D)	1. Accumulator control valve	▲
	2. Forward clutch (C1)	▲
Harsh engagement (Lock-up)	1. Lock-up control valve	▲
	2. Lock-up relay valve	▲
	3. Torque converter clutch	AT-117
Harsh engagement (N to R)	1. Accumulator control valve	▲
	2. C2 accumulator	▲
	3. Direct clutch (C2)	▲
	4. 1st and reverse brake (B3)	▲
Harsh engagement (N to L)	Low coast modulator valve	▲
Harsh engagement (1st to 2nd, 2nd to 3rd and 3rd to 4th)	1. Accumulator control valve	▲
	2. Throttle valve	▲
Harsh engagement (2nd to 3rd)	1. Accumulator control valve	▲
	2. C2 accumulator	▲
	3. 2nd coast brake (B1)	▲
Harsh engagement (3rd to 4th)	1. Accumulator control valve	▲
	2. Solenoid modulator valve	▲
	3. O/D direct clutch (C0)	▲
	4. O/D brake (B0)	▲
	5. O/D planetary gear unit	▲
Harsh engagement (4th to 3rd)	1. Accumulator control valve	▲
	2. C0 accumulator	▲
	3. O/D brake (B0)	▲
Slippage or shuddering (Forward and reverse: After warm-up)	1. Shift solenoid valve SLT	AT-68
	2. Transmission control cable	AT-105
	3. Oil strainer	▲
	4. Pressure relief valve	▲
	5. Torque converter clutch	▲
	6. O/D one-way clutch (F0)	▲
	7. O/D direct clutch (C0)	▲
Slippage or shuddering (Particular position: Just after engine starts)	1. Shift solenoid valve SLT	AT-68
	2. Transmission control cable	AT-105
	3. Torque converter clutch	AT-117
Slippage or shuddering (R position)	1. Direct clutch (C2)	▲
	2. 1st and reverse brake (B3)	▲

Symptom	Suspected area	See page
Slippage or shuddering (1st position)	1. Forward clutch (C1)	▲
	2. No. 2 one-way clutch (F2)	▲
Slippage or shuddering (2nd position)	1. 2nd brake (B2)	▲
	2. 2nd coast brake (B1)	▲
	3. No. 1 one-way clutch (F1)	▲
Slippage or shuddering (3rd position)	Direct clutch (C2)	▲
Slippage or shuddering (4th position)	O/D brake (B0)	▲
Engine brake does not work only in 1st gear at L position	1. Low coast modulator valve	▲
	2. 1st and reverse brake (B3)	▲
Engine brake does not work only in 2nd gear at 2 position	1. 2nd coast modulator valve	▲
	2. 2nd coast brake (B1)	▲
Engine brake does not work only in 3rd gear at 3 position	O/D direct clutch (C0)	▲
Engine brake does not work only in 1st to 4th gear at D position	O/D direct clutch (C0)	▲
No kick-down	1. 1-2 shift valve	▲
	2. 2-3 shift valve	▲
	3. 3-4 shift valve	▲
Poor acceleration (All position)	Torque converter clutch	AT-117
Poor acceleration (4th)	1. O/D direct clutch (C0)	▲
	2. O/D planetary gear unit	▲
Poor acceleration (other than 4th)	O/D brake (B0)	▲
Poor acceleration (other than 2nd)	1. 2nd coast brake (B1)	▲
	2. 2nd brake (B2)	▲
Poor acceleration (1st and 2nd)	Direct clutch (C2)	▲
Poor acceleration (L and R positions)	1st and reverse brake (B3)	▲
Poor acceleration (R position)	Forward clutch (C1)	▲
Engine stalls when starting off or stopping	Torque converter clutch	AT-117

TERMINALS OF ECM

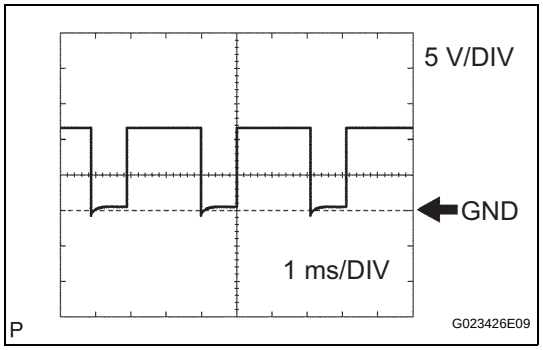


HINT:
The standard voltage of each ECM terminal is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition". Use the illustration above as a reference for the ECM terminals.

Standard voltage:

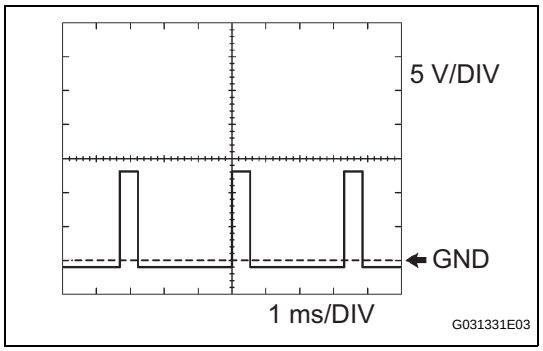
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
NSW (E8-30) - E1 (E4-3)	V - BR	Park/neutral switch signal	IG switch ON and shift lever P and N positions	Below 1 V
NSW (E8-30) - E1 (E4-3)	V - BR	Park/neutral switch signal	IG switch ON and shift lever other than P and N positions	10 to 14 V
STP (E7-4) - E1 (E4-3)	L - BR	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
STP (E7-4) - E1 (E4-3)	L - BR	Stop light switch signal	Brake pedal is released	Below 1.5 V
L (E7-9) - E1 (E4-3)	G-Y - BR	L shift position switch signal	IG switch ON and shift lever L position	10 to 14 V
L (E7-9) - E1 (E4-3)	G-Y - BR	L shift position switch signal	IG switch ON and shift lever other than L position	Below 1 V
2 (E7-10) - E1 (E4-3)	R-Y - BR	2 shift position switch signal	IG switch ON and shift lever 2 position	10 to 14 V
2 (E7-10) - E1 (E4-3)	R-Y - BR	2 shift position switch signal	IG switch ON and shift lever other than 2 position	Below 1 V
R (E7-11) - E1 (E4-3)	R-W - BR	R shift position switch signal	IG switch ON and shift lever R position	10 to 14 V
R (E7-11) - E1 (E4-3)	R-W - BR	R shift position switch signal	IG switch ON and shift lever other than R position	Below 1 V
3 (E7-19) - E1 (E4-3)	Y - BR	3 shift position switch signal	IG switch ON and shift lever 3 position	10 to 14 V
3 (E7-19) - E1 (E4-3)	Y - BR	3 shift position switch signal	IG switch ON and shift lever other than 3 position	Below 1 V
D (E7-21) - E1 (E4-3)	L-B - BR	D shift position switch signal	IG switch ON and shift lever D position	10 to 14 V
D (E7-21) - E1 (E4-3)	L-B - BR	D shift position switch signal	IG switch ON and shift lever other than D position	Below 1 V
S2 (E5-8) - E1 (E4-3)	L-W - BR	S2 solenoid signal	2nd or 3rd gear	10 to 14 V
S2 (E5-8) - E1 (E4-3)	L-W - BR	S2 solenoid signal	1st or 4th gear	Below 1 V
S1 (E5-9) - E1 (E4-3)	W-G - BR	S1 solenoid signal	1st or 2nd gear	10 to 14 V
S1 (E5-9) - E1 (E4-3)	W-G - BR	S1 solenoid signal	3rd and 4th gears	Below 1 V
SLU+ (E5-11) - SLU- (E5-10)	V - LG	SLU solenoid signal	3rd (lock-up) or 4th (lock-up) gear	Pulse generation (See waveform 2)
SLT+ (E5-12) - SLT- (E5-13)	G-B - R-B	SLT solenoid signal	Engine idling speed	Pulse generation (See waveform 1)

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
THO1 (E5-24) - E2 (E4-28)	Y-B - BR	ATF temperature sensor signal	ATF temperature: 115 °C (239 °F) or more	Below 1.5 V
NCO+ (E5-34) - NCO- (E5-26)	Y - L	Speed sensor (NCO) signal	Engine idling speed	Pulse generation (See waveform 3)
SP2+ (E5-35) - SP2- (E5-27)	G - R	Speed sensor (SP2) signal	Vehicle speed 12 mph (20 km/h)	Pulse generation (See waveform 4)
THOC (E4-22) - E2 (E4-28)	GR - BR	ATF temperature sensor signal	ATF temperature: 115 °C (239 °F) or more	Below 1.5 V



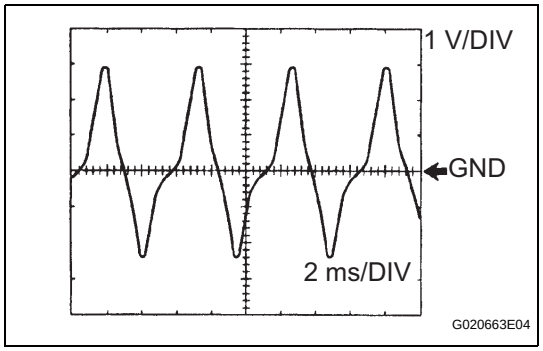
1. Waveform 1

Item	Content
Terminal	SLT+ (E5-12) - SLT- (E5-13)
Tool setting	5V/DIV, 1ms/DIV
Vehicle condition	Engine idling speed



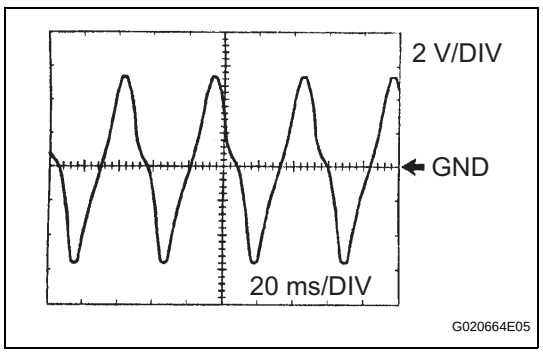
2. Waveform 2

Item	Content
Terminal	SLU+ (E5-11) - SLU- (E5-10)
Tool setting	5V/DIV, 1ms/DIV
Vehicle condition	3rd (lock-up) or 4th (lock-up) gear



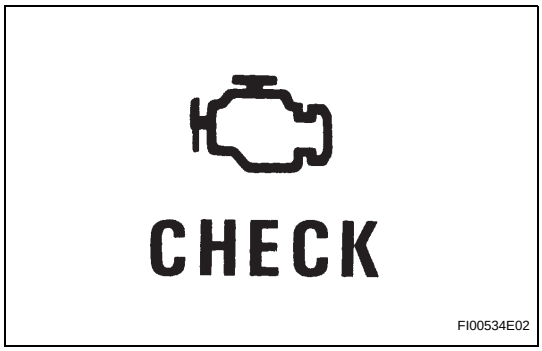
3. Waveform 3

Item	Content
Terminal	NCO+ (E5-34) - NCO- (E5-26)
Tool setting	1V/DIV, 2ms/DIV
Vehicle condition	Engine idling speed (P or N position)



4. Waveform 4

Item	Content
Terminal	SP2+ (E5-35) - SP2- (E5-27)
Tool setting	2V/DIV, 20ms/DIV
Vehicle condition	Vehicle speed 12 mph (20 km/h)



DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting On-Board Diagnostic (OBD II) vehicles, the vehicle must be connected to the intelligent tester (complying with SAE J1987). Various data output from the vehicle's ECM can then be read.

OBD II regulations require that the vehicle's on-board computer illuminates the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in:

1. The emission control system/components
2. The powertrain control components (which affect vehicle emissions)
3. The computers.

In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the ECM memory. If the malfunction does not reoccur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) of the vehicle. The intelligent tester displays DTCs, the freeze frame data and a variety of the engine data.

The DTCs and freeze frame data can be erased with the intelligent tester. (See page AT-25)

In order to enhance OBD functions on vehicles and develop the Off-Board diagnosis system, CAN communication has been introduced in this system (CAN: Controller Area Network). It minimizes the gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and simplification of the wire harness connection.

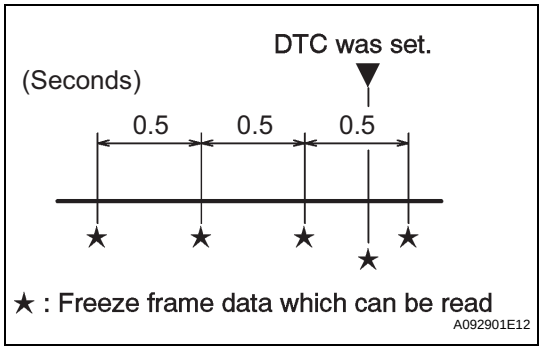
Since this system is equipped with CAN communication, CAN VIM (VIM: Vehicle Interface Module) connecting with an intelligent tester is necessary to display any information from the ECM on the tester. (Also communication between the intelligent tester and the ECM uses a CAN communication signal.) When confirming DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2-trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1-trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.

3. 2-TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the MIL will illuminate.



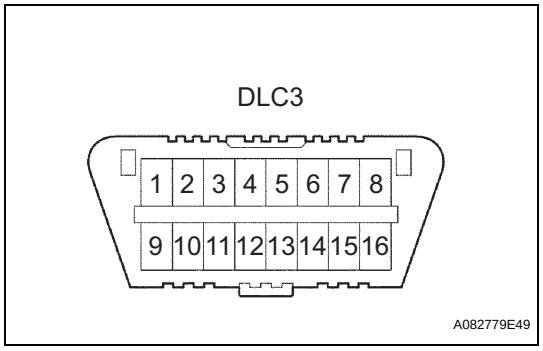
4. FREEZE FRAME DATA

Freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 data sets before the DTC was set
- 1 data set when the DTC was set
- 1 data set after the DTC was set

These data sets can be used to simulate the condition of the vehicle around the time the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.



5. DLC3 (Data Link Connector 3)

The vehicle's ECM uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	HIGH-level CAN bus line	CANL	54 to 69 Ω	Ignition switch OFF

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
CANH	6	HIGH-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANH	6	HIGH-level CAN bus line	CG	1 kΩ or higher	Ignition switch OFF
CANL	14	HIGH-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANL	14	HIGH-level CAN bus line	CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Standard battery voltage:

11 to 14 V

If the voltage is below 11 V, replace the battery before proceeding.

7. CHECK MIL

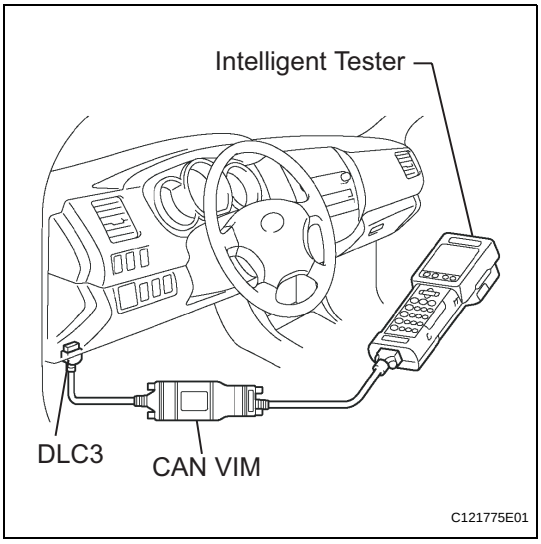
(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (refer to MIL CIRCUIT on page ES-439).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II/ MONITOR STATUS on the intelligent tester.

DTC CHECK / CLEAR



1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The intelligent tester can display pending DTCs and current DTCs.
Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

(d) Confirm the DTCs and freeze frame data and then write them down.

(e) See page AT-30 to confirm the details of the DTCs.

2. CLEAR DTC

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Turn the ignition switch to the ON position.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
CANH	6	HIGH-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANH	6	HIGH-level CAN bus line	CG	1 kΩ or higher	Ignition switch OFF
CANL	14	HIGH-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
CANL	14	HIGH-level CAN bus line	CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Standard battery voltage:

11 to 14 V

If the voltage is below 11 V, replace the battery before proceeding.

7. CHECK MIL

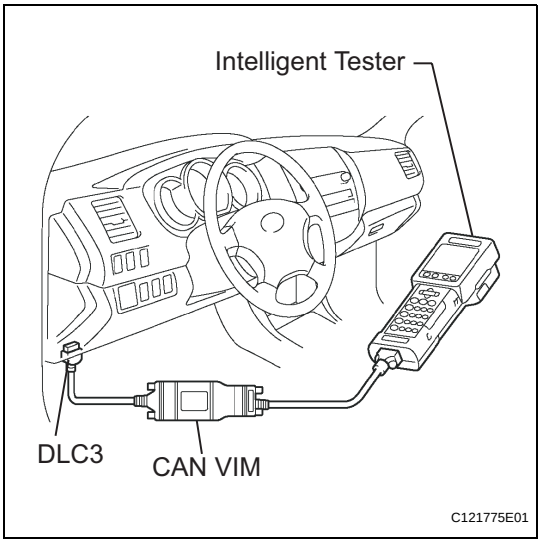
(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (refer to MIL CIRCUIT on page ES-439).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II/ MONITOR STATUS on the intelligent tester.

DTC CHECK / CLEAR



1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The intelligent tester can display pending DTCs and current DTCs.
Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

(d) Confirm the DTCs and freeze frame data and then write them down.

(e) See page AT-30 to confirm the details of the DTCs.

2. CLEAR DTC

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Turn the ignition switch to the ON position.

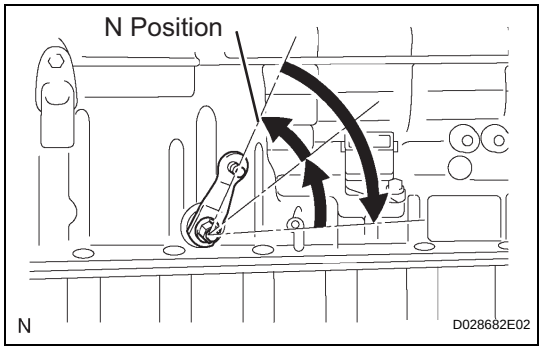
(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CLEAR CODES and press YES.

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

(a) Check that the shift lever moves smoothly and appropriately from the P to R position, only when the ignition switch is turned to ON and the brake pedal is depressed.

(b) When starting the engine, make sure that the vehicle moves forward when shifting the lever from the N to D position and moves rearward when shifting the lever to the R position.



2. ADJUST SHIFT LEVER POSITION

(a) Push the control shaft fully rearward.

(b) Turn the control shaft lever 2 notches counterclockwise to the N position.

(c) Set the shift lever to the N position.

REASSEMBLY

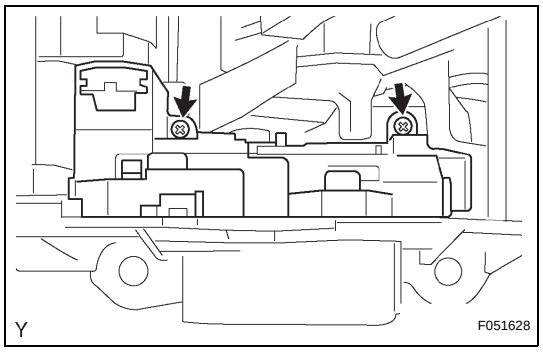
1. INSTALL SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Install the shift lock control ECU with the 2 screws.

(b) Install the spring and shift lock release link.

(c) Install the shift lever guide housing .

(d) Install the lever lock and new shift lever nut.



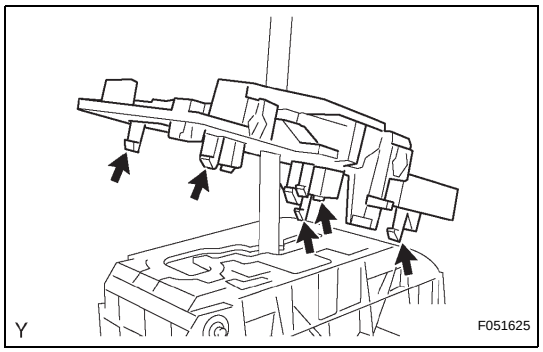
2. INSTALL LOWER POSITION INDICATOR HOUSING

(a) CABLE TYPE:

(1) Install the position indicator housing lower.

HINT:

Firmly make the claws fit.

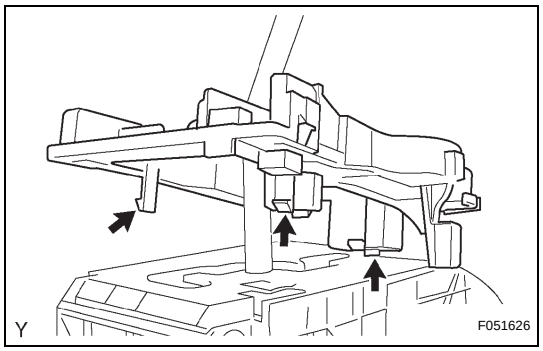


(b) ROD TYPE:

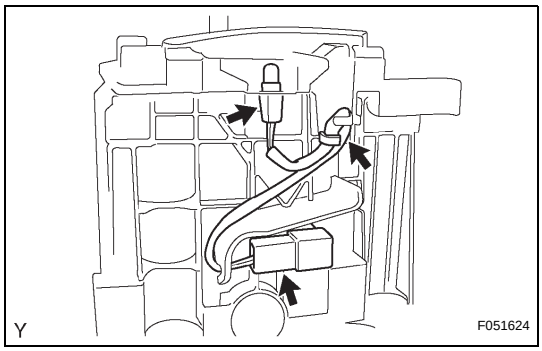
(1) Install the position indicator housing lower.

HINT:

Firmly make the claws fit.



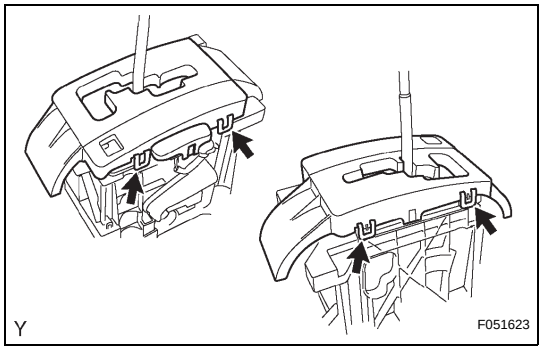
3. INSTALL SHIFT LOCK RELEASE BUTTON



4. INSTALL INDICATOR LAMP WIRE SUB-ASSEMBLY

(a) Install the bulb into the indicator lamp wire sub-assembly.

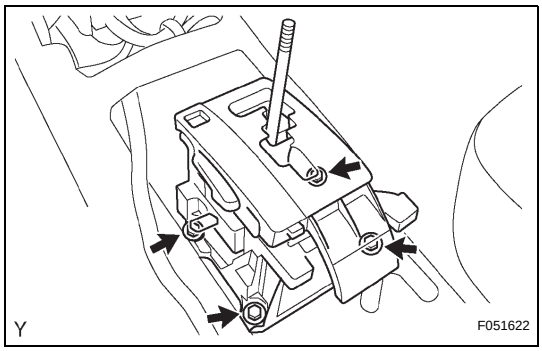
(b) Install the indicator lamp wire sub-assembly.



5. INSTALL UPPER POSITION INDICATOR HOUSING

(a) Install the slide cover and position indicator housing sub-assembly onto the shift lever guide housing.
HINT:
Firmly make the claws fit.

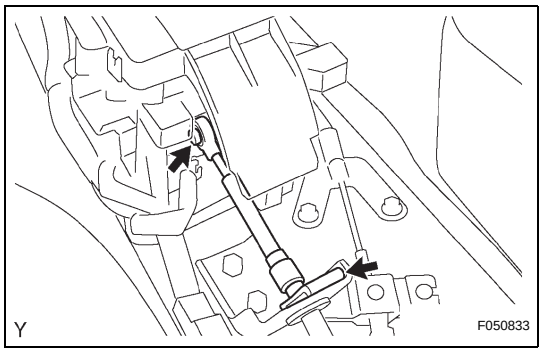
INSTALLATION



1. INSTALL FLOOR SHIFT ASSEMBLY

(a) Install the floor shift with the 4 bolts.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

(b) Connect the 2 clamps and 2 connectors.

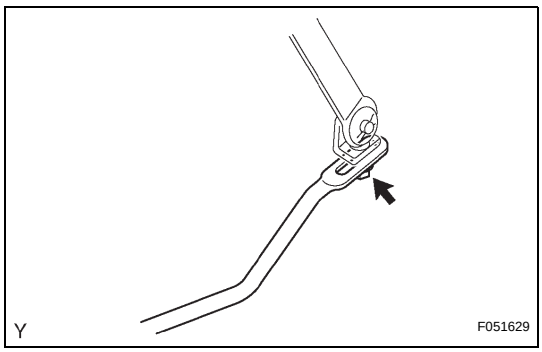


2. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) CABLE TYPE:

(1) Connect the transmission control cable with the clip to floor shift assembly.

(2) Install the transmission control cable onto the floor shift assembly.



3. INSTALL FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

(a) ROD TYPE:

(1) Install the floor shift gear shifting rod with nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

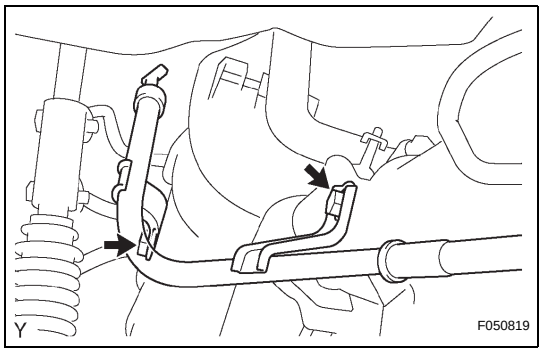
4. INSTALL FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-23)

5. INSTALL FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-24)

6. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Separate Seat Type) (See page IP-24)**
7. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
8. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-25)**
9. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
10. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

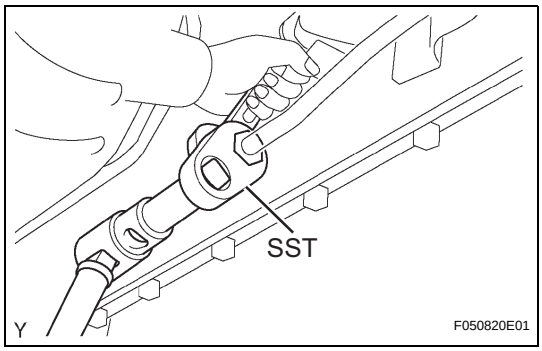
REMOVAL

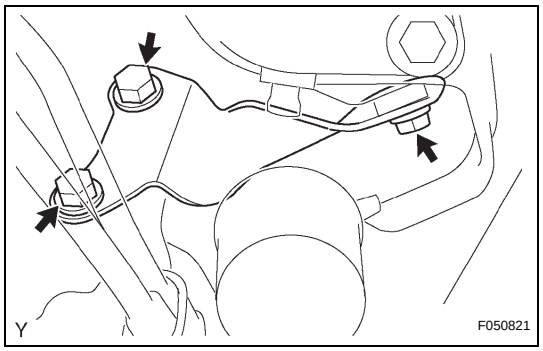
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-3)**
3. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-27)**
4. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
5. **REMOVE TRANSMISSION OIL LEVEL GAGE SUB-ASSEMBLY**
6. **REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY**
   (a) Remove the 2 bolts and oil filler tube.



7. **REMOVE NO.1 OIL COOLER OUTLET TUBE**
   (a) Remove the 3 bolts and 3 clamps.

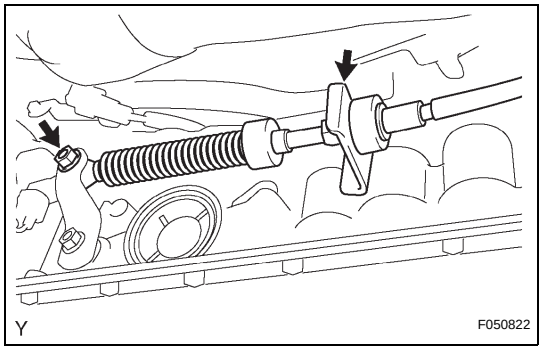
   (b) Using SST, disconnect the oil cooler outlet tube No. 1.
   SST 09023-12701
8. **REMOVE NO.1 OIL COOLER INLET TUBE**
   (a) Using SST, disconnect the oil cooler inlet tube No. 1.
   SST 09023-12701





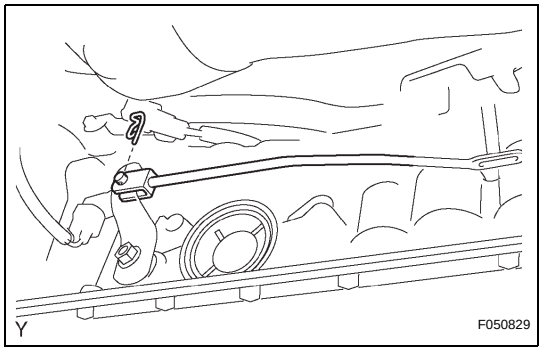
9. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.



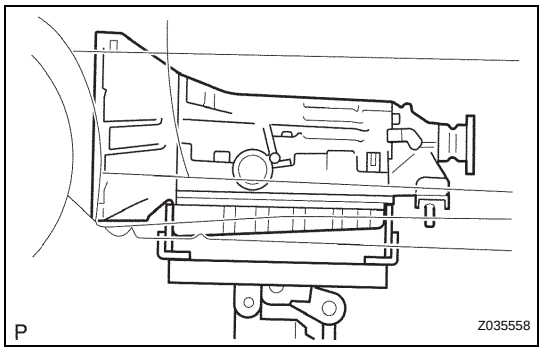
10. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) CABLE TYPE:
  (1) Remove the nut and disconnect the transmission control cable.
  (2) Remove the clip and disconnect the transmission control cable.



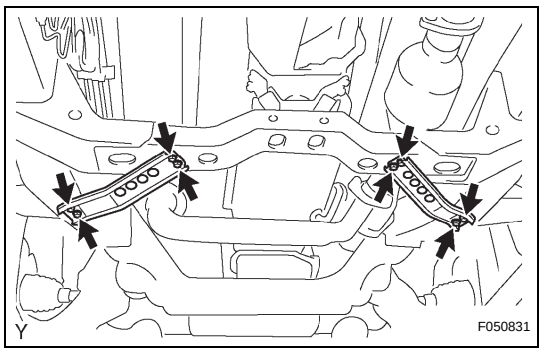
11. SEPARATE FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

(a) ROD TYPE:
  (1) Remove the clip and separate the floor shift gear shifting rod from the automatic transmission.



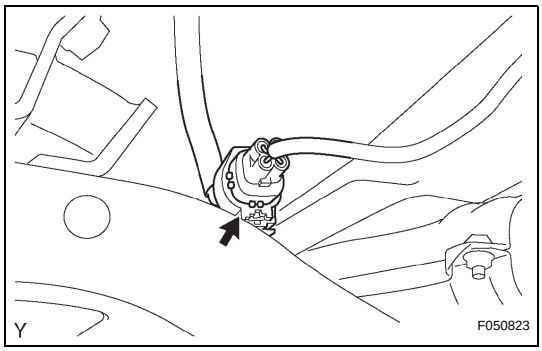
12. SUPPORT AUTOMATIC TRANSMISSION ASSEMBLY

(a) Support the automatic transmission assembly with a transmission jack.



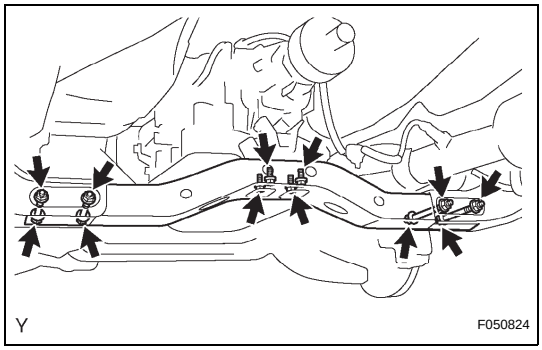
13. REMOVE FRONT SUSPENSION MEMBER BRACKET

(a) Remove the 8 bolts and 2 front suspension member brackets.



14. REMOVE NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

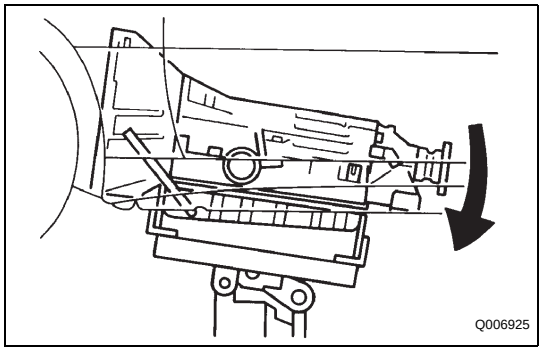
(a) Disconnect the heated oxygen sensor connector.



(b) Remove the 4 bolts from the frame crossmember sub-assembly No. 3.

(c) Remove the 4 nuts, 4 bolts and frame crossmember sub-assembly No. 3.

15. REMOVE STARTER ASSEMBLY (See page ST-5)



16. DISCONNECT CONNECTOR

(a) Tilt down the transmission.
NOTICE:
Take care so that the cooling fan does not come in contact with the fan shroud.

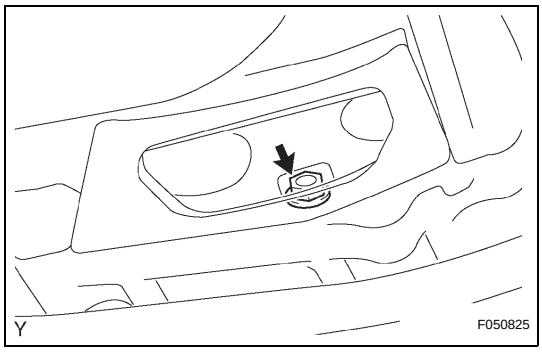
(b) Disconnect the park/neutral position switch connector.

(c) Disconnect the transmission wire connector.

(d) Disconnect the 2 speed sensor connectors.

(e) Disconnect the temperature sensor connector.

17. DISCONNECT WIRE HARNESS

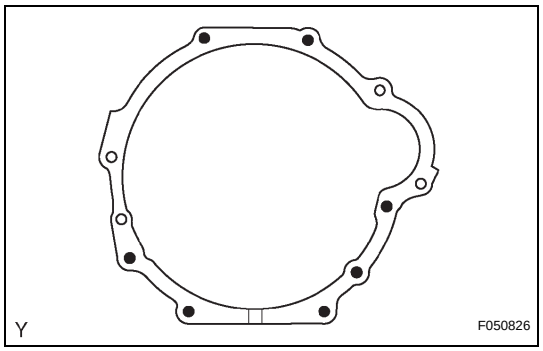


18. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

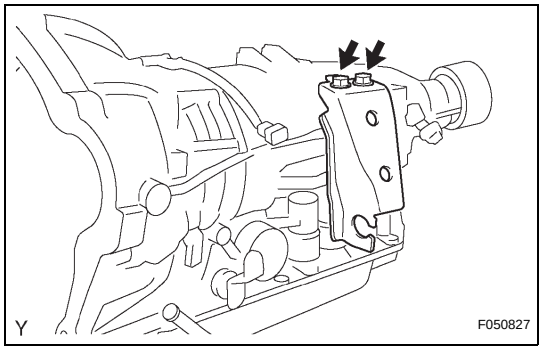
(a) Remove flywheel housing dust seal.

(b) Turn the crankshaft to gain access to each bolt.

(c) Hold the crankshaft pulley bolt with a wrench and remove the 6 bolts.

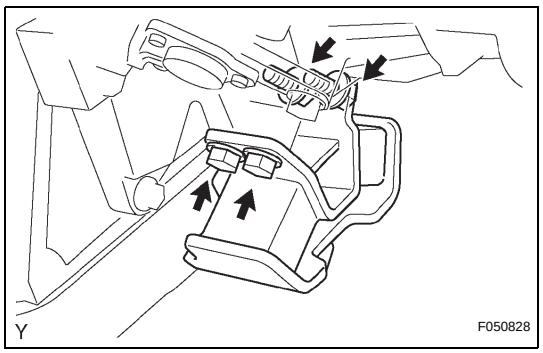


(d) Remove the 7 bolts.
(e) Separate and remove the automatic transmission.



19. REMOVE NO.1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and transmission control cable bracket No. 1.



20. REMOVE REAR NO.1 ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts and engine mounting insulator rear No. 1.

21. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

INSTALLATION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY (See page AT-117)

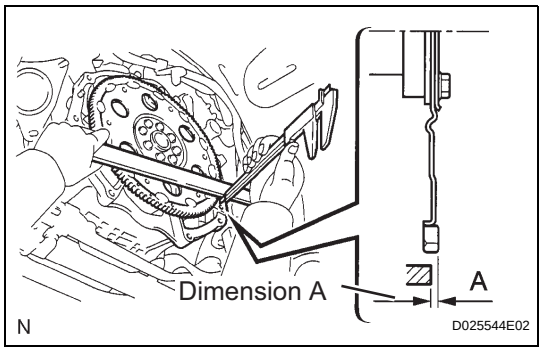
2. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Install the torque converter clutch onto the automatic transmission.

(b) Using calipers and a straight edge, measure dimension A, between the transmission and the end surface of the drive plate, as shown in the illustration.

Standard:

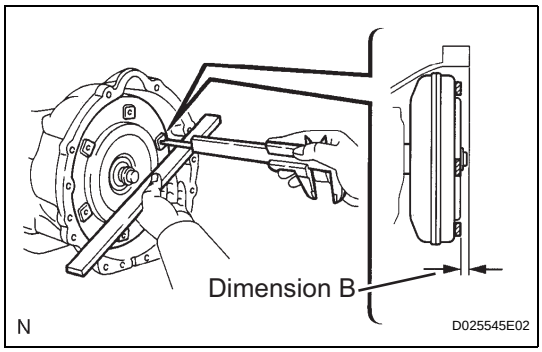
A: 22.28 mm (0.8772 in.)



(c) Using calipers and a straight edge, measure the dimension B shown in the illustration and check that B is greater than A measured in (b).

Standard:

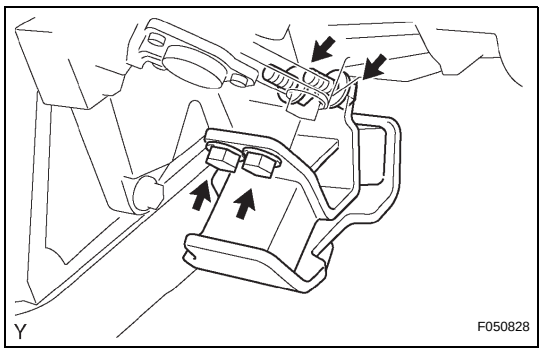
23.28 mm (0.9165 in.) or more



3. INSTALL REAR NO.1 ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator with the 4 bolts.

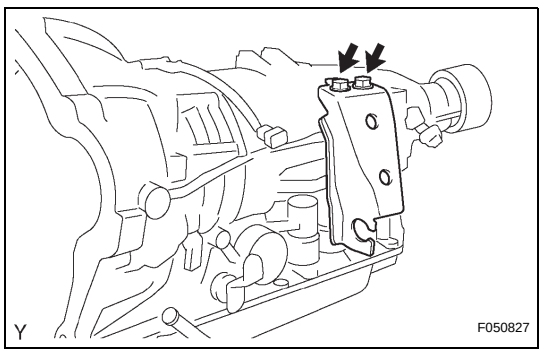
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

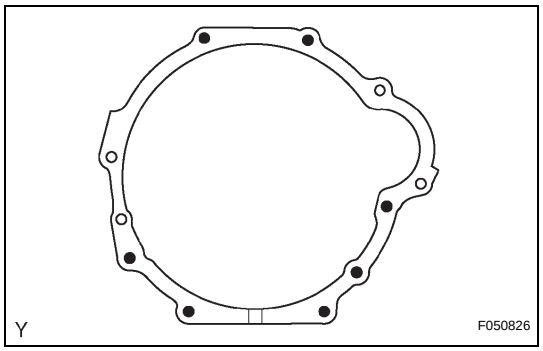


4. INSTALL NO.1 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the transmission control cable bracket No. 1 with the 2 bolts.

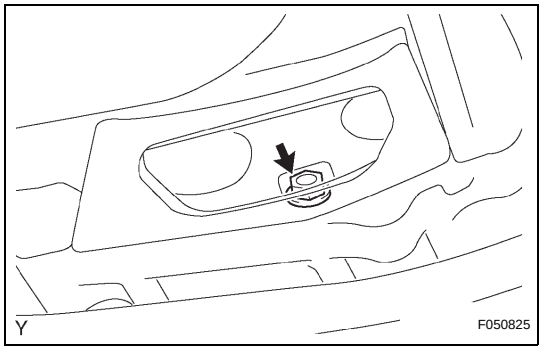
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)





5. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

(a) Install the automatic transmission with the 7 bolts.
Torque: 71 N*m (724 kgf*cm, 52 ft.*lbf) for bolt A
37 N*m (377 kgf*cm, 27 ft.*lbf) for bolt B

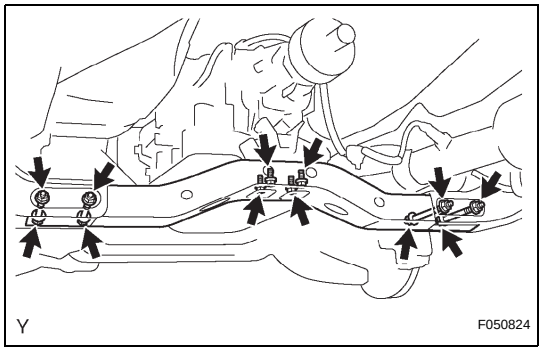


(b) Install the 6 torque converter clutch mounting bolts.
Torque: 48 N*m (489 kgf*cm, 35 ft.*lbf)
HINT:
First install the black bolt and then the other 5 bolts.

(c) Install the flywheel housing under cover.

6. INSTALL WIRE HARNESS

7. INSTALL STARTER ASSEMBLY (See page ST-10)

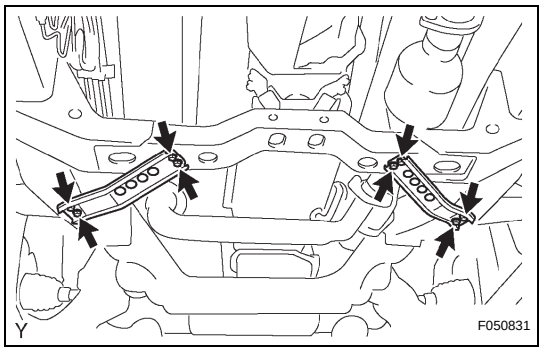


8. INSTALL NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Install the frame crossmember sub-assembly No. 3 with the 4 bolts and 4 nuts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

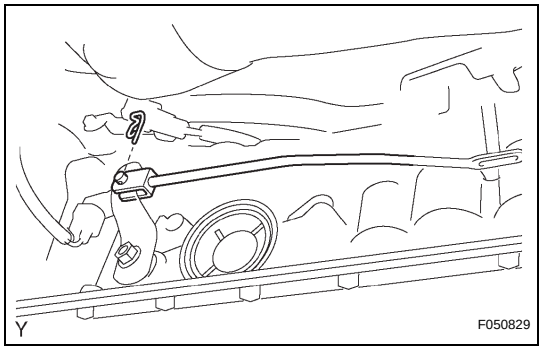
(b) Install the frame crossmember sub-assembly No. 3 with the 4 bolts.
Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)

(c) Connect the heated oxygen sensor connector.



9. INSTALL FRONT SUSPENSION MEMBER BRACKET

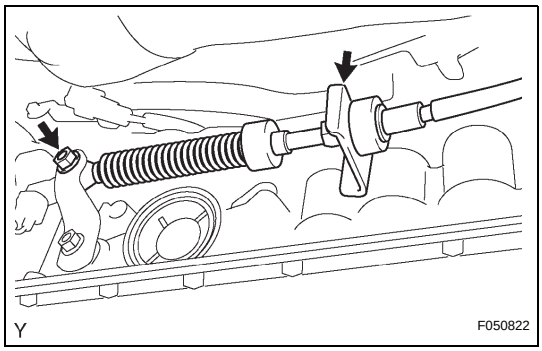
(a) Install the 2 front suspension member brackets with the 8 bolts.
Torque: 33 N*m (336 kgf*cm, 24 ft.*lbf)



10. INSTALL FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

(a) ROD TYPE:

(1) Install the floor shift gear shifting rod, then install the clip.



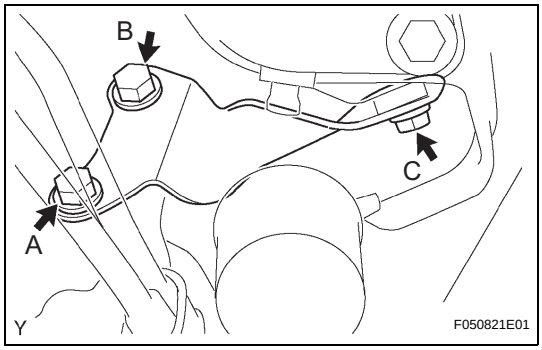
11. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) CABLE TYPE:

(1) Connect the transmission control cable with the clip.

(2) Connect the transmission control cable with the nut.

Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)



12. INSTALL MANIFOLD STAY

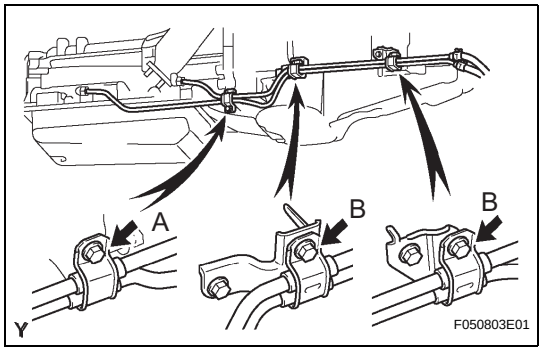
(a) Install the manifold stay with the 3 bolts.

Torque: 71 N*m (724 kgf*cm, 52 ft.*lbf) for bolt A
44 N*m (449 kgf*cm, 33 ft.*lbf) for bolt B
30 N*m (306 kgf*cm, 22 ft.*lbf) for bolt C

13. INSTALL NO.1 OIL COOLER INLET TUBE

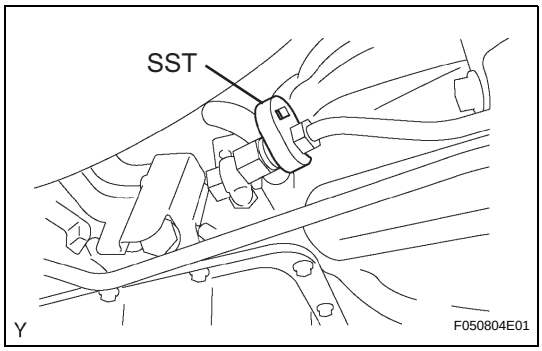
(a) Provisionally install the oil cooler inlet tube No. 1.

(b) Provisionally install the oil cooler outlet tube No. 1.



(c) Install the 3 clamps and 3 bolts.

Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf) for bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf) for bolt B



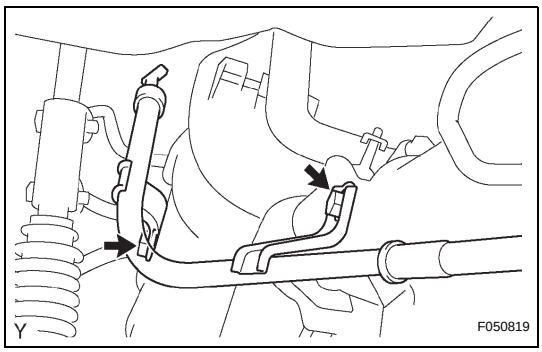
(d) Using SST, tighten the oil cooler inlet tube No. 1.

SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

14. INSTALL NO.1 OIL COOLER OUTLET TUBE

(a) Using SST, tighten the oil cooler outlet tube No. 1.

SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



15. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Coat new O-ring with ATF and install it onto the oil filler tube.

(b) Install the oil filler tube with the 2 bolts.

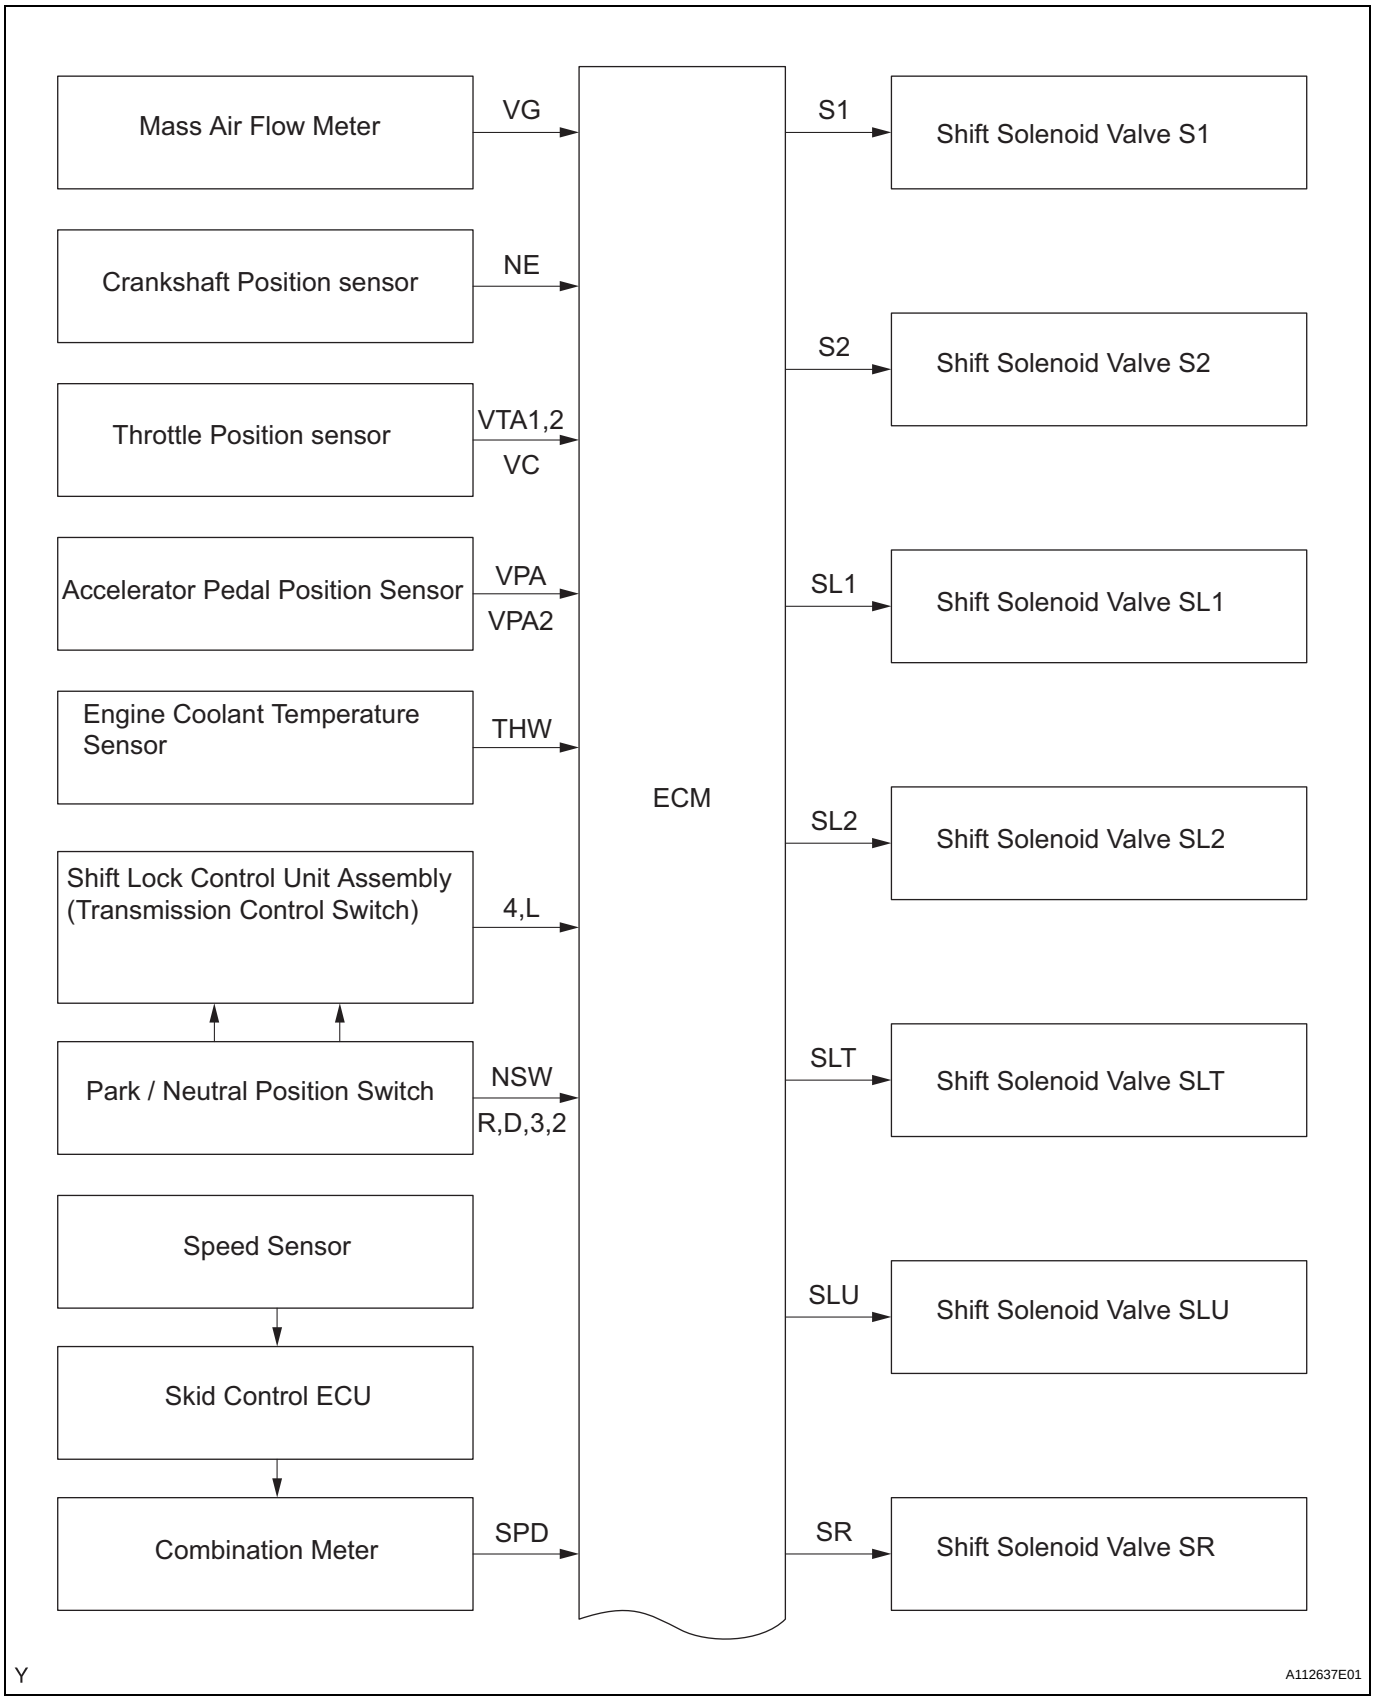
Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf)

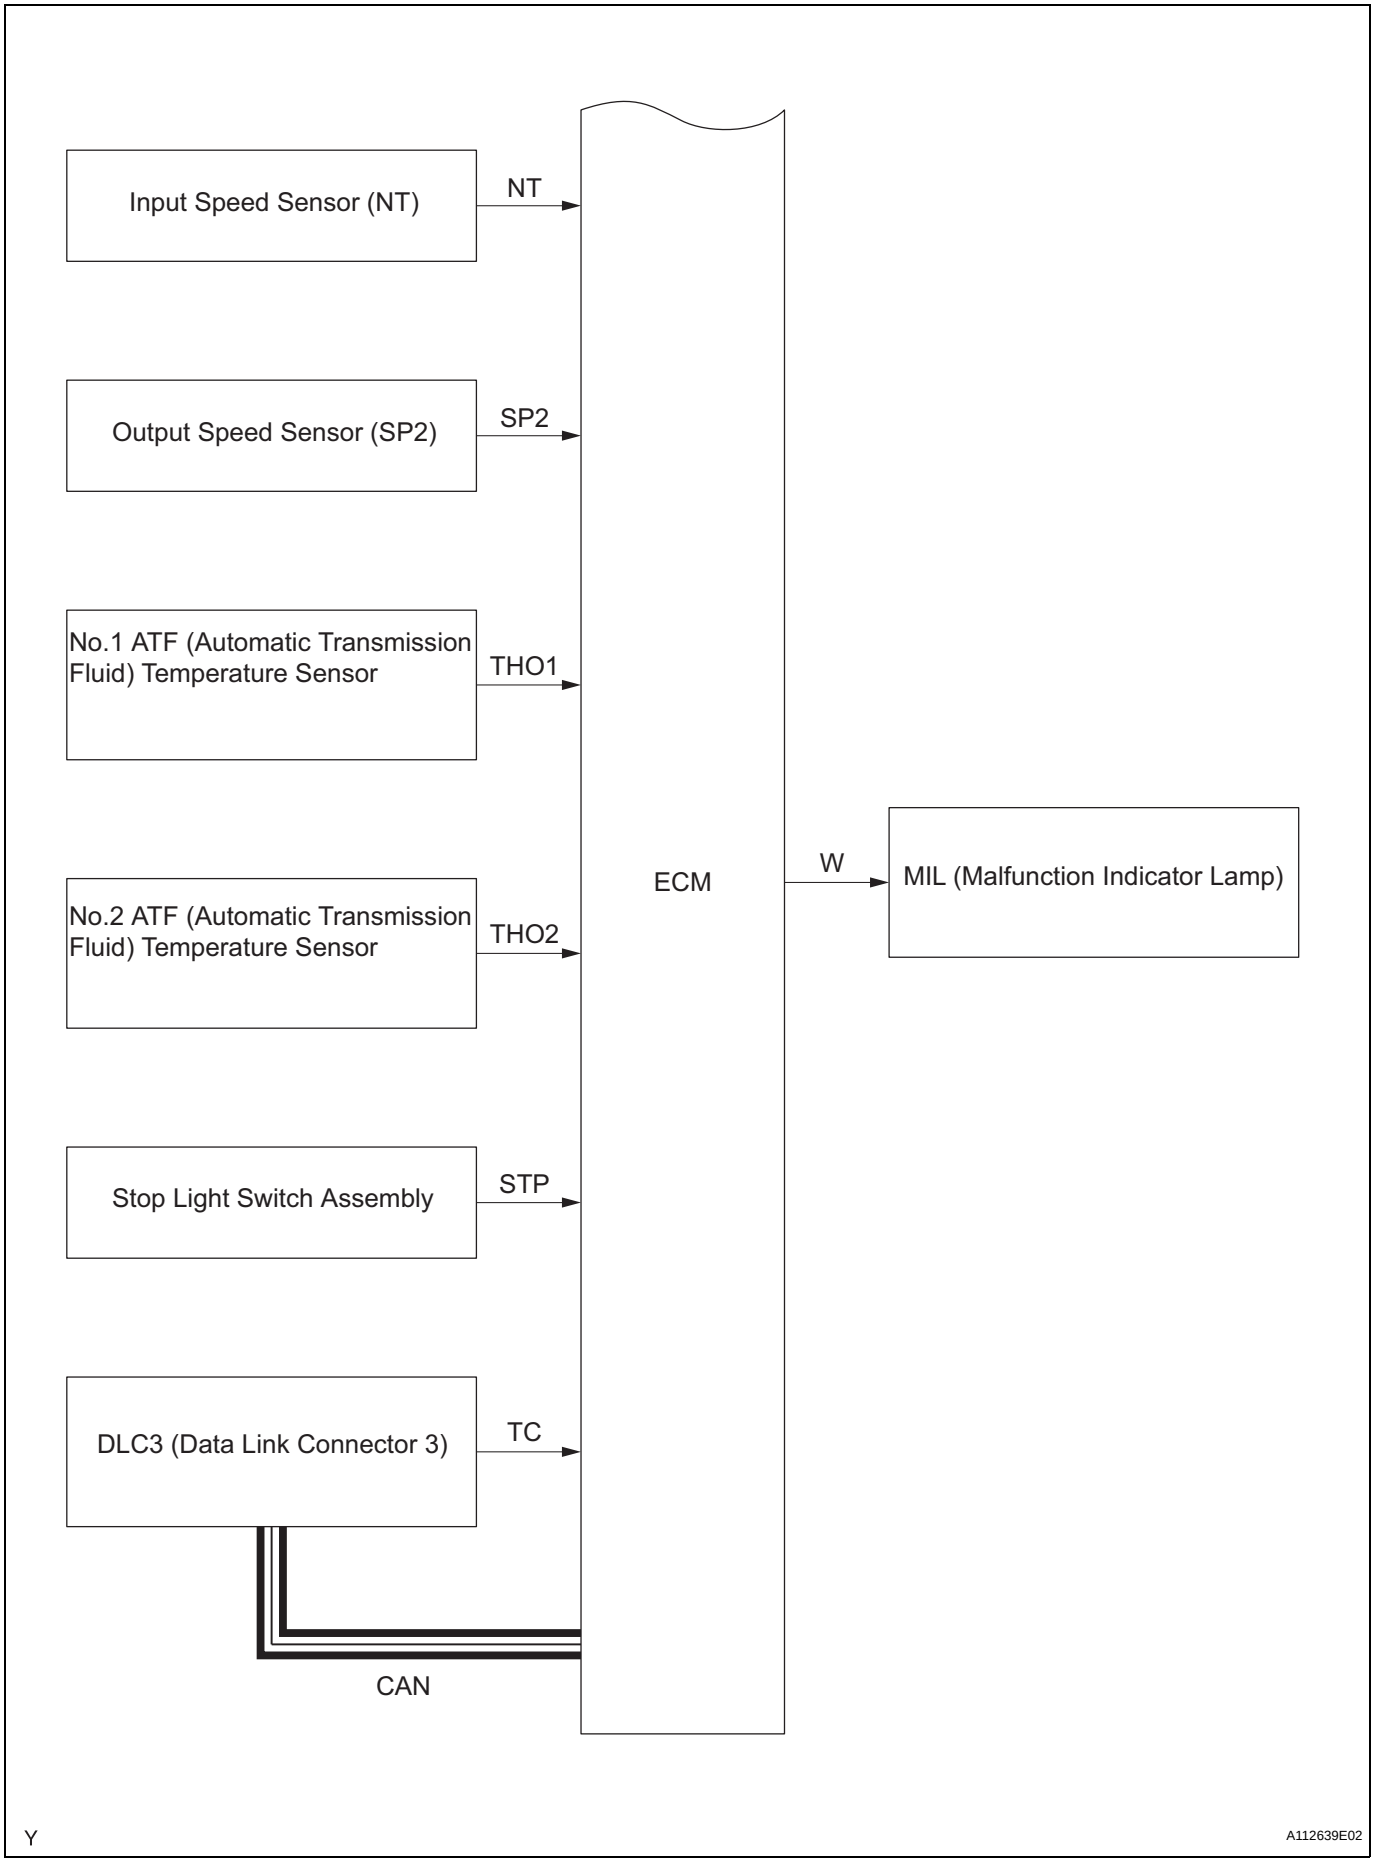
16. INSTALL TRANSMISSION OIL LEVEL GAGE SUB-ASSEMBLY

17. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-32)**
18. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-6)**
19. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
21. **ADD AUTOMATIC TRANSMISSION FLUID**
22. **INSPECT AUTOMATIC TRANSMISSION FLUID (See page AT-85)**
23. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

SYSTEM DIAGRAM

The configuration of the electronic control system in the A750E automatic transmission is as shown in the following chart.





Input Speed Sensor (NT)
NT

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission) is an automatic transmission that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.
Shift shock has been reduced by controlling the engine and transmission simultaneously.
In addition, the ECT has features such as follows:
- Diagnostic function.
- Fail-safe function when a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure that there is no trouble in the CAN communication system.
- *: Use the intelligent tester.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test while referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50° to 80°C (122° to 176°F).

(a) D position test:

Shift into the D position, fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts take place, and that the shift points conform to the automatic shift schedule (see page SS-39).

HINT:

5th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is 32 mph (51 km/h) or less.

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 47°C (116.6°F) or less and vehicle speed is 30.4 mph (49 km/h) or less.

5th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slippage

Check for shock and slippage at the 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3, 3 → 4 and 4 → 5 while driving with the shift lever in the D position, and check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.
Check vehicle speeds when the 2 → 1, 3 → 2, 4 → 3, and 5 → 4 kick-downs take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule (see page SS-39).

(5) Check for abnormal shock and slippage at kick-down.

(6) Check the lock-up mechanism.
- Drive in the D position (5th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
If there is a sudden increase in engine speed, there is no lock-up.

(b) 4 position test:
Shift into the 4 position, fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.
Check that the 1 → 2, 2 → 3 and 3 → 4 up-shifts take place and that the shift points conform to the automatic shift schedule (see page SS-39).
HINT:
- There is no 5th up-shift in the 4 position.
- 4th Gear Lock-up Prohibition Control
- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check engine braking.
While driving in the 4 position and 4th gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(4) Check the lock-up mechanism.
- Drive in the 4 position and 4th gear, at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
If there is a sudden increase in engine speed, there is no lock-up.

(c) 3 position test:
Shift into the 3 position, fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2 and 2 → 3 up-shifts take place and that the shift points conform to the automatic shift schedule (see page SS-39).
HINT:
There is no 4th up-shift and lock-up in the 3 position.
(2) Check engine braking.
While running in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) 2 position test:
Shift into the 2 position, fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2 up-shift takes place and that the shift point conforms to the automatic shift schedule (see page SS-39).
HINT:
There is no 3rd up-shift and lock-up in the 2 position.
(2) Check engine braking.
While running in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(e) L position test:
Shift into the L position and fully depress the accelerator pedal and check the following points.
(1) Check no up-shift.
While running in the L position, check that there is no up-shift to 2nd gear.
(2) Check engine braking.
While running in the L position, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration.

(f) R position test:
Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test, ensure that the test area is free from people and obstructions.

(g) P position test:
Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

MECHANICAL SYSTEM TESTS

1. STALL SPEED TEST

HINT:

This test is to check the overall performance of the engine and transmission.

NOTICE:

- **Do not perform the stall speed test longer than 5 seconds.**
- **To ensure safety, perform this test in an open and level area that provides good traction.**
- **The stall speed test should always be performed with at least 2 people. One person should observe the condition of the wheels and wheel chocks while the other is performing the test.**

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Chock all 4 wheels.

(e) Set the parking brake and keep the brake pedal depressed firmly with your left foot.

(f) Shift the shift lever into the drive position.

(g) Depress the accelerator pedal as much as possible with your right foot.

(h) Read the engine rpm (stall speed) and release the accelerator pedal immediately.

Standard value:

2,250 to 2,550 rpm

Evaluation:

Test Result	Possible Cause
Stall speed is lower than standard value	• Stator one-way clutch is not operating properly • Torque converter is faulty (stall speed is less than standard value by 600 rpm or more) • Engine power may be insufficient
Stall speed is higher than standard value	• Line pressure is low • No. 1 clutch (C1) slipping • No. 3 one-way clutch (F3) is not operating properly • Improper fluid level

2. SHIFT TIME LAG TEST

HINT:

This test is to check the condition of the direct clutch, forward clutch, 1st brake and reverse brake.

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Set the parking brake and keep the brake pedal depressed firmly.

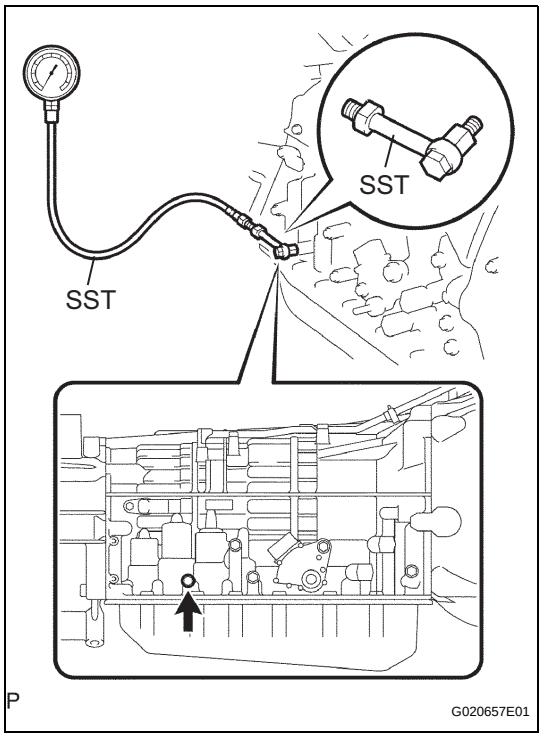
(e) Check the D range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the D position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.

(f) Check the R range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the R position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.

Standard value:
D range time lag is less than 1.2 seconds
R range time lag is less than 1.5 seconds

Evaluation:

Test Result	Possible Cause
D range time lag exceeds standard value	• Line pressure is low • No. 1 clutch (C1) is worn • No. 3 one-way clutch (F3) is not operating properly
R range time lag exceeds standard value	• Line pressure is low • No. 3 clutch (C3) is worn • No. 4 brake (B4) is worn • No. 1 one-way clutch (F1) is not operating properly



HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature of 50° to 80°C (122° to 176°F).**
- **The line pressure test should always be carried out in pairs. One technician should observe the condition of the wheels or wheel stoppers outside the vehicle while the other is doing the test.**
- **Be careful to prevent the SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting the engine.**
- **Perform with the A/C OFF.**
- **Do not conduct stall tests for longer than 10 seconds continuously.**

(1) Warm up the ATF.
(2) Lift the vehicle up.
(3) Remove the test plug on the transmission case center right side and connect SST.
SST 09992-00095 (09992-00151, 09992-00271)
(4) Fully apply the parking brake and chock the 4 wheels.
(5) Start the engine and check the idling speed.

(6) Keep your left foot pressing firmly on the brake pedal and shift into the D position.
(7) Measure the line pressure while the engine is idling.
(8) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when the engine speed reaches the stall speed.
(9) In the same manner, do the test in the R position.

Specified line pressure

Condition	D position	R position
Idling	**363 to 423 kPa (3.7 to 4.3 kgf/cm^2 , 53 to 61 psi)**	**484 to 564 kPa (4.9 to 5.8 kgf/cm^2, 70 to 82 psi)**
Stall test	**1,282 to 1,381 kPa (13.1 to 14.1 kgf/cm^2, 186 to 200 psi)**	**1,218 to 1,338 kPa (12.4 to 13.6 kgf/cm^2, 177 to 194 psi)**

Evaluation:

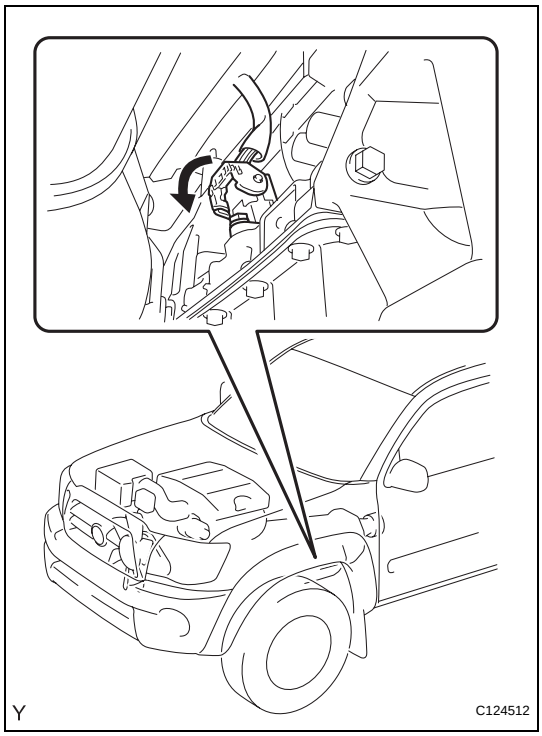
Problem	Possible cause
Measured value are higher than specified in all positions	• Shift solenoid valve SLT defective • Regulator valve defective
Measured value are lower than specified in all positions	• Shift solenoid valve SLT defective • Regulator valve defective • Oil pump defective
Pressure is low in D position only	• D position circuit fluid leakage • No. 1 clutch (C_1) defective
Pressure is low in R position only	• R position circuit fluid leakage • No. 3 clutch (C_3) defective • No. 4 brake (B_4) defective

MANUAL SHIFTING TEST

1. MANUAL SHIFTING TEST

HINT:

- Through this test, it can be determined whether the trouble occurs in the electrical circuit or if it is a mechanical problem in the transmission.
- If any abnormalities are found in the following test, the problem is in the transmission itself.



(a) Disconnect the connector of the transmission wire.
HINT:
It is possible to deactivate the electrical shift control by disconnecting the transmission wire. The gear positions can then be changed mechanically with the shift lever.

(b) Drive with the transmission wire disconnected. Shift the shift lever to each position to check whether the gear position changes as shown in the table below.

Shift Lever Position	Gear Position
D	4th
4	4th
3	3rd
2	1st
L	1st
R	R
P	P

(c) Connect the connector of the transmission wire.

(d) Clear the DTC (See page AT-30).

INITIALIZATION

1. RESET MEMORY

CAUTION:

Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM.

NOTICE:

Intelligent tester only

HINT:

The ECM stores the condition under which the ECT (Electronic Controlled Automatic Transmission) controls the automatic transmission and engine assemblies according to their characteristics. Therefore, when the automatic transmission assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can store the new information. Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the intelligent tester together with the CAN VIN (controller area network vehicle interface module) to the DLC3.

(c) Turn the ignition switch to the ON position and push the intelligent tester main switch on.

(d) Select the items "DIAGNOSIS/ ENHANCED OBD II".

(e) Perform the reset memory procedure from the ENGINE menu.

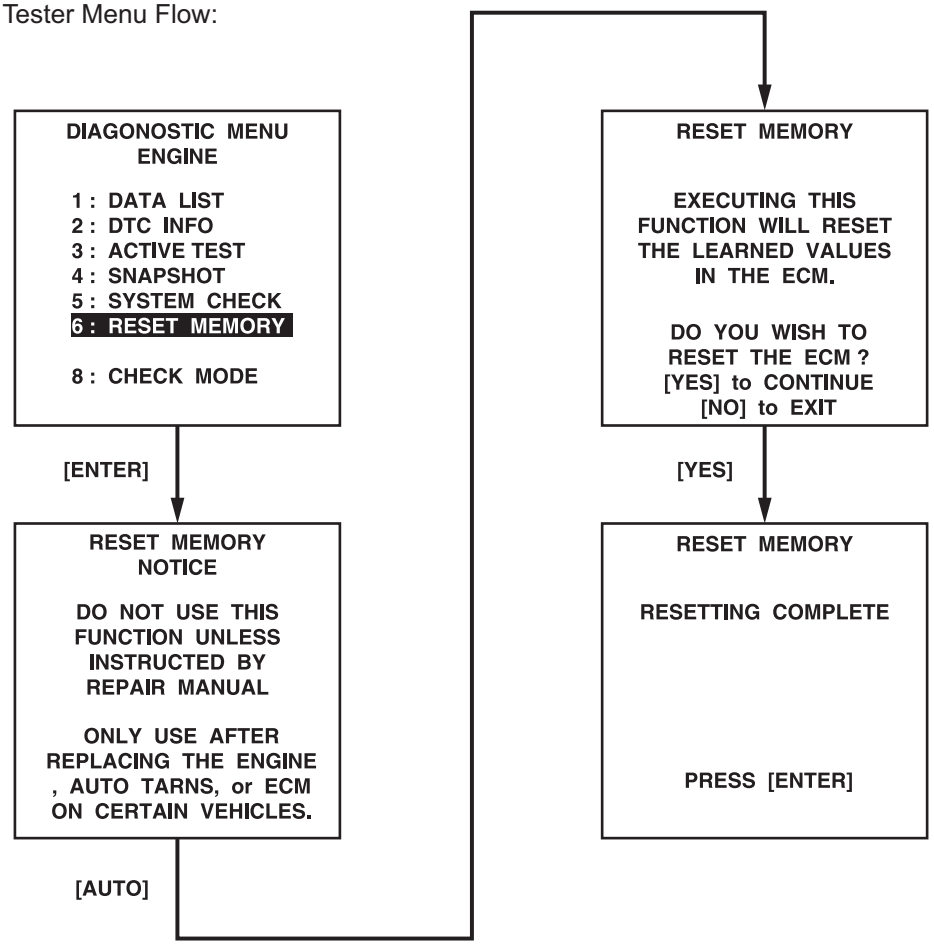
CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (see page AT-11) described earlier.

HINT:

The ECM stores the new information during the ROAD TEST.

Tester Menu Flow:



P C115865E01

MONITOR DRIVE PATTERN

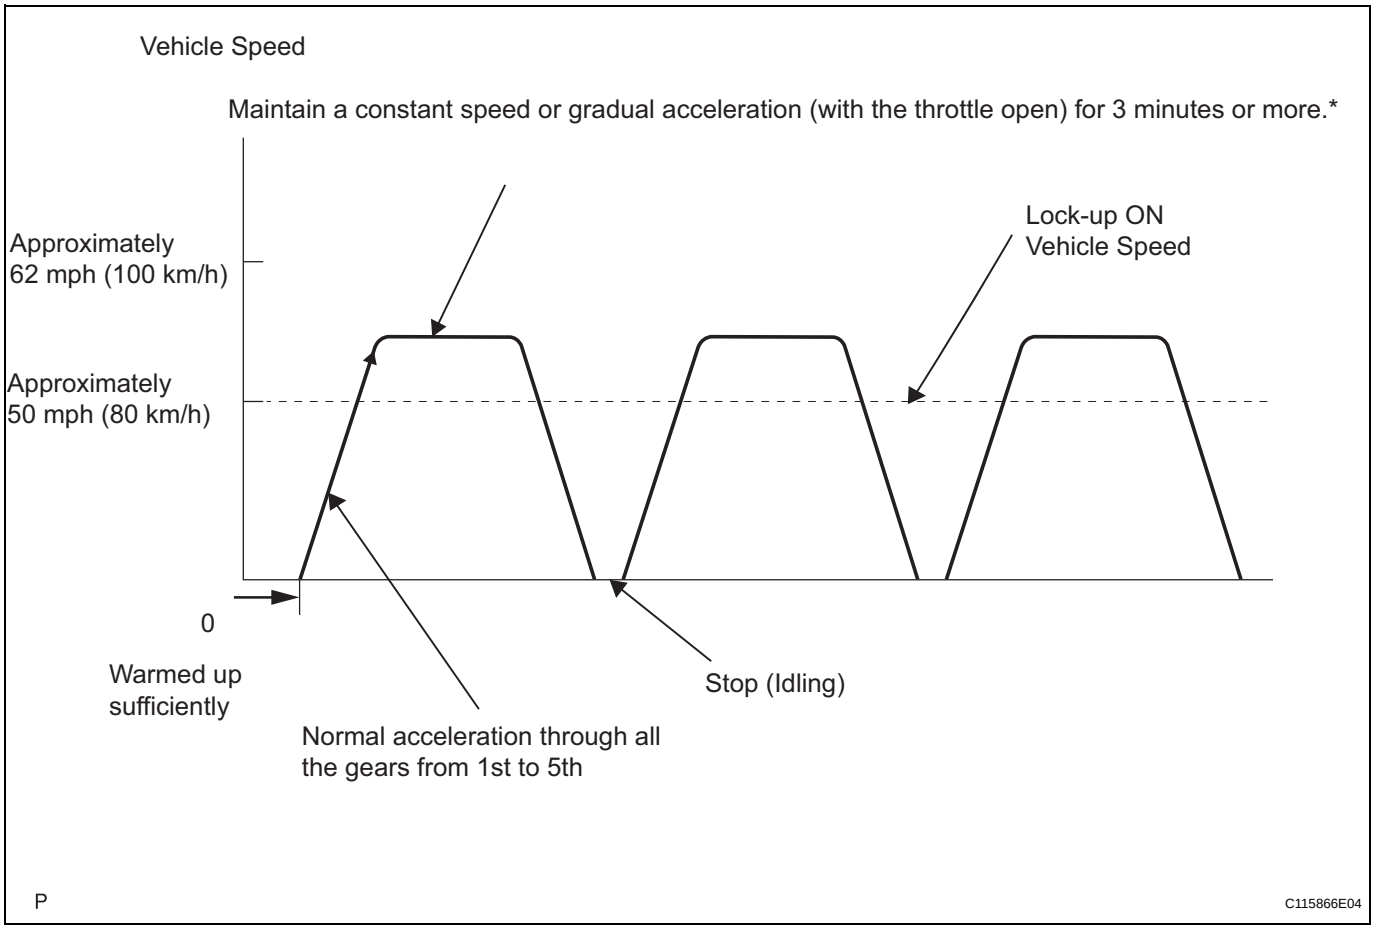
1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT (Electronic Controlled Automatic Transmission) malfunctions.
(The DTCs may not be detected due to the actual driving conditions. And some DTCs may not be detected through this drive pattern.)
HINT:
Preparation for driving
- Warm up the engine sufficiently. (Engine coolant temperature should be 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F))

Notice in driving
- Drive the vehicle through all gears. Stop → 1st → 2nd → 3rd → 4th → 5th → 5th (lock-up ON).
- Repeat the above driving pattern three times or more.

NOTICE:
- **The monitor status can be checked using the intelligent tester. When using the intelligent tester, monitor status can be found in the "ENHANCED OBD II/ DATA LIST" or under "CARB OBD II".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:
Perform this drive pattern on as level a road as possible and strictly observe the posted speed limits and traffic laws while driving.



HINT:
*: Drive at such a speed in the uppermost gear, as to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.

NOTICE:
It is necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

PROBLEM SYMPTOMS TABLE

HINT:
If no DTCs are displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
The Matrix Chart is divided into 2 chapters.

1. **Chapter 1: Electronic Circuit Matrix Chart**
   - Refer to the table below when the cause of trouble is considered to be electrical.
   - If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the ECM.

   HINT:
   *1: Denotes that when there are malfunctions in the circuit, DTCs may be set.

Symptom	Suspected area	See page
No up-shift (A particular gear, from 1st to 4th gear, is not up-shifted)	1. Shift solenoid valve (S1) circuit *1	AT-100
	2. Shift solenoid valve (S2) circuit *1	AT-103
	3. ECM	IN-34
No up-shift (4th -> 5th)	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. Speed sensor NT circuit *1	AT-57
	4. Shift solenoid valve (SL1) circuit *1	AT-66
	5. Shift solenoid valve (SL2) circuit *1	AT-91
	6. Shift solenoid valve (SR) circuit *1	AT-106
	7. ECM	IN-34
No up-shift (3rd -> 4th)	1. Engine coolant temperature sensor circuit *1	ES-104
	2. Shift solenoid valve (S2) circuit *1	AT-103
	3. ECM	IN-34
No up-shift (1st -> 2nd)	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. Shift solenoid valve (S2) circuit *1	AT-103
	3. ECM	IN-34
No down-shift (5th -> 4th)	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. Shift solenoid valve (SL1) circuit *1	AT-66
	3. Shift solenoid valve (SL2) circuit *1	AT-91
	4. Shift solenoid valve (SR) circuit *1	AT-106
	5. ECM	IN-34
No down-shift (2nd -> 1st)	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. Shift solenoid valve (S2) circuit *1	AT-103
	3. ECM	IN-34
No down-shift (A particular gear, from 1st to 4th gear, is not down-shifted)	1. Shift solenoid valve (S1) circuit *1	AT-100
	2. Shift solenoid valve (S2) circuit *1	AT-103
	3. ECM	IN-34

Symptom	Suspected area	See page
No lock-up	1. ATF temperature sensor circuit *1	AT-49
	2. Stop light switch circuit *1	ES-272
	3. Speed sensor NT circuit *1	AT-57
	4. Shift solenoid valve (SLU) circuit *1	AT-131
	5. Engine coolant temperature sensor circuit *1	ES-104
	6. ECM	IN-34
No lock-up off	1. Shift solenoid valve (SLU) circuit *1	AT-131
	2. ECM	IN-34
Shift point too high or too low	1. Shift solenoid valve (SLT) circuit *1	AT-117
	2. Speed sensor NT circuit *1	AT-57
	3. Speed sensor SP2 circuit *1	AT-62
	4. Throttle position sensor circuit *1	ES-112
	5. ATF temperature sensor circuit *1	AT-49
	6. ECM	IN-34
Up-shift from 4th to 5th while shift lever is in 4 position	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. ECM	IN-34
Up-shift from 4th to 5th while engine is cold	1. Engine coolant temperature sensor circuit *1	ES-104
	2. ECM	IN-34
Up-shift from 3rd to 4th while shift lever is in 3 position	1. Park/neutral position switch circuit *1	AT-43
	2. ECM	IN-34
Up-shift from 2nd to 3rd while shift lever is in 2 position	1. Park/neutral position switch circuit *1	AT-43
	2. ECM	IN-34
Up-shift from 1st to 2nd while shift lever is in L position	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. ECM	IN-34
Harsh engagement (N -> D)	1. Speed sensor NT circuit *1	AT-57
	2. Shift solenoid valve (SL1) circuit *1	AT-66
	3. Shift solenoid valve (SLT) circuit *1	AT-117
	4. ECM	IN-34
Harsh engagement (Lock-up)	1. Speed sensor NT circuit *1	AT-57
	2. Speed sensor SP2 circuit *1	AT-62
	3. Shift solenoid valve (SLU) circuit *1	AT-131
	4. ECM	IN-34
Harsh engagement (Any driving position)	ECM	IN-34
Poor acceleration	1. No. 2 ATF temperature sensor circuit *1	AT-121
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. Shift solenoid valve (SLT) circuit *1	AT-117
	4. ECM	IN-34
No engine braking	ECM	IN-34
No kick-down	ECM	IN-34
Engine stalls when starting off or stopping	1. Shift solenoid valve (SLU) circuit *1	AT-131
	2. ECM	IN-34
ATF temperature warning light remains on	1. No. 2 ATF temperature sensor circuit *1	AT-121
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34
Lock-up at 3rd gear	1. No. 2 ATF temperature sensor circuit *1	AT-121
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34

Symptom	Suspected area	See page
Shift point too high	1. No. 2 ATF temperature sensor circuit *1	AT-121
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34

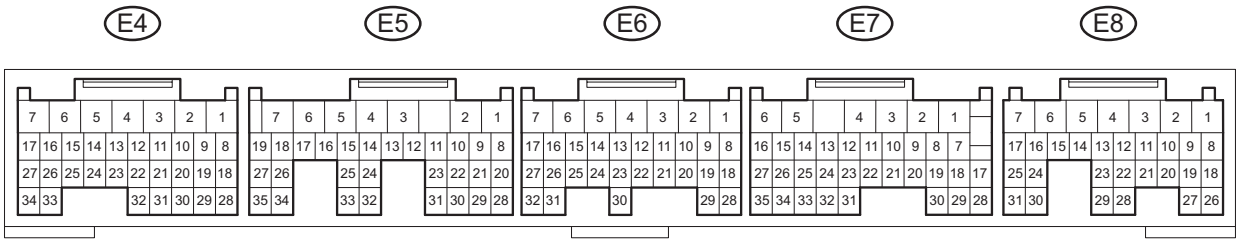
2. Chapter 2: On-Vehicle Repair and Off-Vehicle Repair
(▲: A750E, A750F AUTOMATIC TRANSMISSION Repair Manual Pub. No. RM999U)

Symptom	Suspected area	See page
Vehicle does not move in any forward positions or reverse position	1. Transmission control cable	AT-155
	2. Manual valve	▲
	3. Parking lock pawl	▲
	4. Rear planetary gear unit	▲
	5. Torque converter clutch	AT-166
Vehicle does not move in R position	1. Valve body assembly	AT-144
	2. No. 3 clutch (C3)	▲
	3. No. 4 brake (B4)	▲
	4. No. 1 one-way clutch (F1)	▲
No up-shift (1st -> 2nd)	1. Valve body assembly	AT-144
	2. No. 3 brake (B3)	▲
	3. No. 1 one-way clutch (F1)	▲
	4. No. 2 one-way clutch (F2)	▲
No up-shift (2nd -> 3rd)	1. Valve body assembly	AT-144
	2. No. 3 clutch (C3)	▲
No up-shift (3rd -> 4th)	1. Valve body assembly	AT-144
	2. No. 2 clutch (C2)	▲
No up-shift (4th -> 5th)	1. Valve body assembly	AT-144
	2. No. 1 brake (B1)	▲
	3. No. 1 clutch (C1)	▲
No down-shift (5th -> 4th)	Valve body assembly	AT-144
No down-shift (4th -> 3rd)	Valve body assembly	AT-144
No down-shift (3rd -> 2nd)	Valve body assembly	AT-144
No down-shift (2nd -> 1st)	Valve body assembly	AT-144
No lock-up or No lock-up off	1. Shift solenoid valve (SLU)	AT-126
	2. Valve body assembly	AT-144
	3. Torque converter clutch	AT-166
Harsh engagement (N -> D)	1. Shift solenoid valve (SL1)	AT-81
	2. Valve body assembly	AT-144
	3. C1 accumulator	▲
	4. No. 1 clutch (C1)	▲
	5. No. 3 one-way clutch (F3)	▲
Harsh engagement (Lock-up)	1. Shift solenoid valve (SLU)	AT-126
	2. Valve body assembly	AT-144
	3. Torque converter clutch	AT-166

Symptom	Suspected area	See page
Harsh engagement (N -> R)	1. Shift solenoid valve (SLT)	AT-110
	2. Shift solenoid valve (SLU)	AT-126
	3. Valve body assembly	AT-144
	4. C3 accumulator	▲
	5. No. 3 clutch (C3)	▲
	6. No. 4 brake (B4)	▲
	7. No. 1 one-way clutch (F1)	▲
Harsh engagement (1st -> 2nd -> 3rd -> 4th -> 5th)	1. Shift solenoid valve (SLT)	AT-110
	2. Shift solenoid valve (SL1)	AT-81
	3. Valve body assembly	AT-144
Harsh engagement (1st -> 2nd)	1. Valve body assembly	AT-144
	2. B3 accumulator	▲
	3. No. 3 brake (B3)	▲
	4. No. 1 one-way clutch (F1)	▲
	5. No. 2 one-way clutch (F2)	▲
Harsh engagement (2nd -> 3rd)	1. Valve body assembly	AT-144
	2. C3 accumulator	▲
	3. No. 3 clutch (C3)	▲
Harsh engagement (3rd -> 4th)	1. Valve body assembly	AT-144
	2. C2 accumulator	▲
	3. No. 2 clutch (C2)	▲
Harsh engagement (4th -> 5th)	1. Shift solenoid valve (SL1)	AT-81
	2. Shift solenoid valve (SL2)	AT-86
	3. Valve body assembly	AT-144
	4. No. 1 brake (B1)	▲
	5. No. 1 clutch (C1)	▲
Slippage or shuddering (Forward and reverse: After warm-up)	1. Valve body assembly	AT-144
	2. Oil strainer	AT-144
	3. No. 1 one-way clutch (F1)	▲
	4. No. 3 clutch (C3)	▲
	5. Torque converter clutch	AT-166
Slippage or shuddering (Particular position: Just after engine starts)	Torque converter clutch	AT-166
Slippage or shuddering (R position)	1. No. 4 brake (B4)	▲
	2. No. 1 one-way clutch (F1)	▲
	3. No. 3 clutch (C3)	▲
Slippage or shuddering (1st)	1. No. 1 clutch (C1)	▲
	2. No. 3 one-way clutch (F3)	▲
Slippage or shuddering (2nd)	1. No. 1 clutch (C1)	▲
	2. No. 3 brake (B3)	▲
	3. No. 1 one-way clutch (F1)	▲
	4. No. 2 one-way clutch (F2)	▲

Symptom	Suspected area	See page
Slippage or shuddering (3rd)	1. No. 1 clutch (C1)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 one-way clutch (F1)	▲
Slippage or shuddering (4th)	1. No. 1 clutch (C1)	▲
	2. No. 2 clutch (C2)	▲
Slippage or shuddering (5th)	1. No. 2 clutch (C2)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 brake (B1)	▲
Engine brake does not work only in 1st to 4th gear at D position	No. 1 clutch (C1)	▲
Engine brake does not work only in 1st gear at L position	1. Valve body assembly	AT-144
	2. No. 4 brake (B4)	▲
Engine brake does not work only in 2nd gear at 2 position	1. Valve body assembly	AT-144
	2. No. 2 brake (B2)	▲
Engine brake does not work only in 3rd gear at 3 position	1. Valve body assembly	AT-144
	2. No. 1 brake (B1)	▲
No kick-down	Valve body assembly	AT-144
Shift point too high or too low	1. Shift solenoid valve (SLT)	AT-110
	2. Shift solenoid valve (SL1)	AT-81
	3. Valve body assembly	AT-144
Poor acceleration (All positions)	1. Shift solenoid valve (SLT)	AT-110
	2. Valve body assembly	AT-144
	3. Torque converter clutch	AT-166
Poor acceleration (5th)	1. No. 1 clutch (C1)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 brake (B1)	▲
	4. Front planetary gear unit	▲
Engine stalls when starting off or stopping	1. Shift solenoid valve (SLU)	AT-126
	2. Valve body assembly	AT-144
	3. Torque converter clutch	AT-166

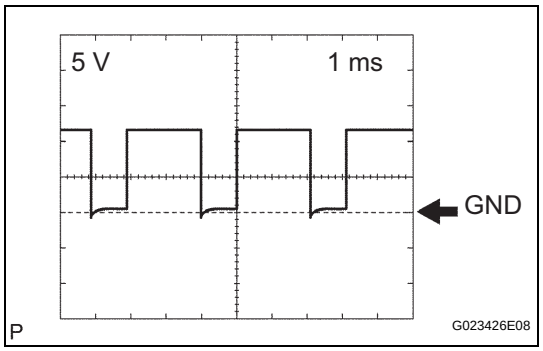
TERMINALS OF ECM



HINT:
The standard voltage of each ECM terminal is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition".
Use the illustration above as a reference for the ECM terminals.

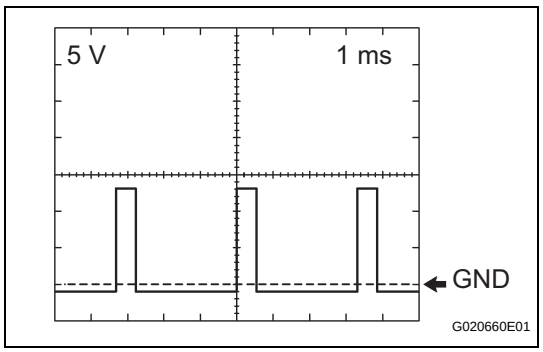
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STP (E8-15) - E1 (E6-1)	L - BR	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
			Brake pedal is released	Below 1.5 V
L (E7-9) - E1 (E6-1)	G-Y - BR	L shift position switch signal	Ignition switch ON and shift lever L position	10 to 14 V
			Ignition switch ON and shift lever other than L position	Below 1 V
2 (E7-10) - E1 (E6-1)	R-Y - BR	2 shift position switch signal	Ignition switch ON and shift lever 2 and L positions	10 to 14 V
			Ignition switch ON and shift lever other than 2 and L positions	Below 1 V
R (E7-11) - E1 (E6-1)	R-W - BR	R shift position switch signal	Ignition switch ON and shift lever R position	10 to 14 V
			Ignition switch ON and shift lever other than R position	Below 1 V
3 (E7-19) - E1 (E6-1)	Y - BR	3 shift position switch signal	Ignition switch ON and shift lever 3 position	10 to 14 V
			Ignition switch ON and shift lever other than 3 position	Below 1 V
4 (E7-20) - E1 (E6-1)	B - BR	4 shift position switch signal	Ignition switch ON and shift lever 4 position	10 to 14 V
			Ignition switch ON and shift lever other than 4 position	Below 1 V
D (E7-21) - E1 (E6-1)	L-B - BR	D shift position switch signal	Ignition switch ON and shift lever D and 4 positions	10 to 14 V
			Ignition switch ON and shift lever other than D and 4 positions	Below 1 V
NSW (E5-8) - E1 (E6-1)	V - BR	Park or neutral shift position switch signal	Ignition switch ON and shift lever P and N positions	Below 2 V
			Ignition switch ON and shift lever other than P and N positions	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SR (E5-9) - E1 (E6-1)	G - BR	SR solenoid signal	5th gear	10 to 14 V
			1st gear	Below 1 V
S2 (E5-10) - E1 (E6-1)	L-W - BR	S2 solenoid signal	2nd or 3rd gear	10 to 14 V
			1st, 4th or 5th gear	Below 1 V
S1 (E5-11) - E1 (E6-1)	W-G - BR	S1 solenoid signal	1st or 2nd gear	10 to 14 V
			3rd, 4th or 5th gear	Below 1 V
SLT+ (E5-13) - SLT- (E5-12)	G-B - R-B	SLT solenoid signal	Engine is idling	Pulse generation (See waveform 1)
SLU+ (E5-15) - SLU- (E5-14)	Y-B - LG	SLU solenoid signal	5th (lock-up) gear	Pulse generation (See waveform 2)
SL2+ (E5-17) - SL2- (E5-16)	W-L - G-R	SL2 solenoid signal	Engine idling speed	Pulse generation (See waveform 3)
SL1+ (E5-19) - SL1- (E5-18)	G-W - P-L	SL1 solenoid signal	Engine idling speed	Pulse generation (See waveform 4)
THO2 (E5-32) - E2 (E4-28)	GR - BR	No. 2 ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V
THO1 (E5-24) - E2 (E4-28)	Y-B - BR	No. 1 ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V
SP2+ (E5-34) - SP2- (E5-26)	L-R - R	Speed sensor (SP2) signal	Vehicle speed 12 mph (20 km/h)	Pulse generation (See waveform 5)
NT+ (E5-35) - NT- (E5-27)	W-R - Y-R	Speed sensor (NT) signal	Engine is idling	Pulse generation (See waveform 6)



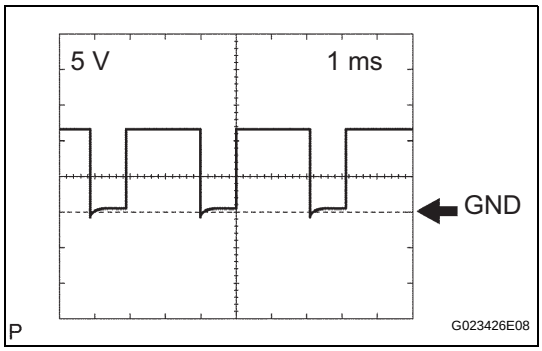
1. Waveform 1

Item	Condition
Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



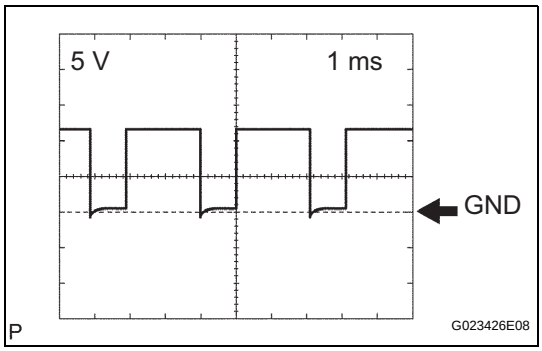
2. Waveform 2

Item	Condition
Terminal	SLU+ - SLU-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	5th (lock-up) gear



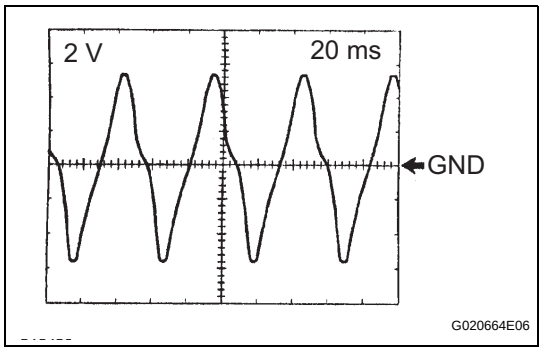
3. Waveform 3

Item	Condition
Terminal	SL2+ - SL2-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



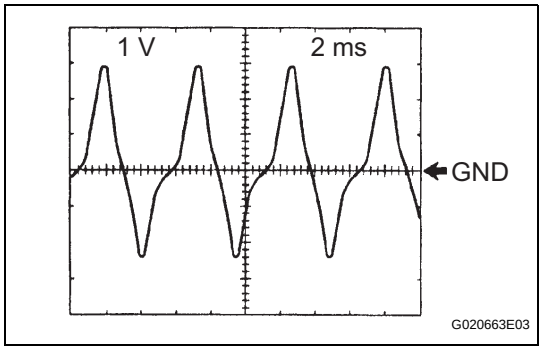
4. Waveform 4

Item	Condition
Terminal	SL1+ - SL1-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



5. Waveform 5

Item	Condition
Terminal	SP2+ - SP2-
Tool setting	2 V/DIV, 20 ms/DIV
Vehicle condition	Vehicle speed 12 mph (20 km/h)



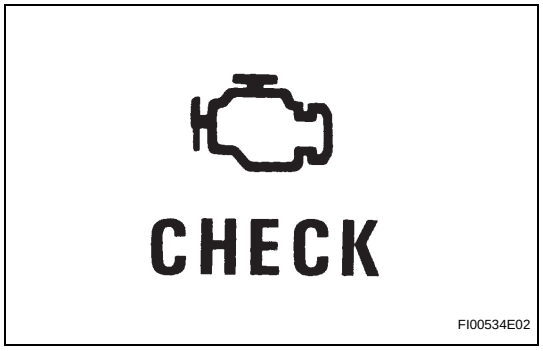
6. Waveform 6

Item	Condition
Terminal	NT+ - NT-
Tool setting	1 V/DIV, 2 ms/DIV
Vehicle condition	Engine idling speed

DIAGNOSIS SYSTEM

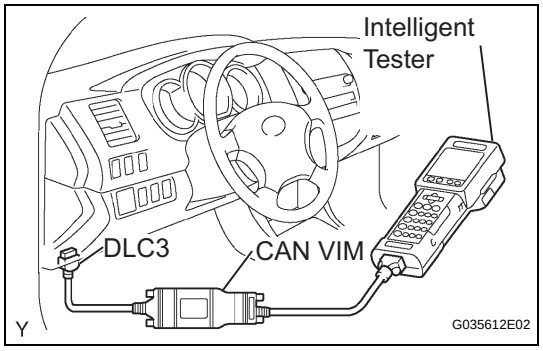
1. DESCRIPTION

(a) When troubleshooting on-Board Diagnostic (OBD II) vehicles, the vehicle must be connected to the intelligent tester (complying with SAE J1987). Various data output from the vehicle's ECM can then be read.



(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in:
1. The emission control system/components
2. The power train control components (which affect vehicle emissions)
3. The computer

In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the ECM memory.
If the malfunction does not reoccur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.



(c) To check DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) of the vehicle. The intelligent tester displays DTCs, the freeze frame data and a variety of the engine data.
The DTCs and freeze frame data can be erased with the intelligent tester (See page AT-30).

(d) In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication has been introduced in this system (CAN: Controller Area Network). It minimizes the gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and simplification of the wire harness connection. Since this system is equipped with CAN communication, CAN VIM (VIM: Vehicle Interface Module) connecting with intelligent tester is necessary to display any information from the ECM on the tester. (Also communication between the intelligent tester and the ECM uses a CAN communication signal.) When confirming DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.

2. NORMAL MODE AND CHECK MODE

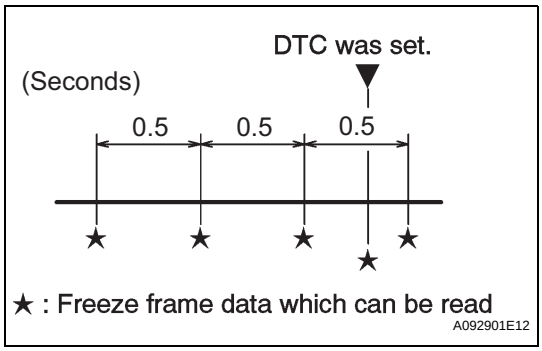
(a) The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1 trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.

3. 2 TRIP DETECTION LOGIC

(a) When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the MIL will illuminate.

4. FREEZE FRAME DATA

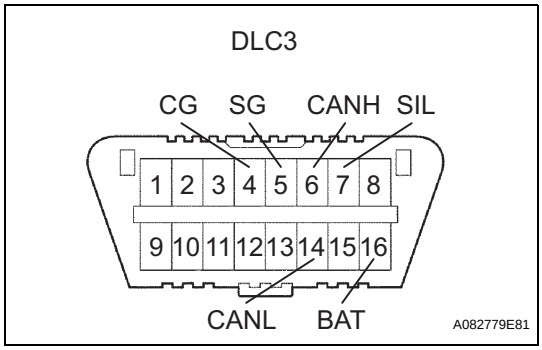
(a) Freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was Lean or Rich, and other data from the time the malfunction occurred.



(b) The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.
- 3 data sets before the DTC was set
- 1 data set when the DTC was set
- 1 data set after the DTC was set

These data sets can be used to simulate the condition of the vehicle around the time the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.

5. DATA LINK CONNECTOR 3 (DLC3)



(a) The vehicle's ECM uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - SG	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	HIGH-level CAN bus line	14 - CANL	54 to 69 Ω	Ignition switch OFF
			Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF
CANL	14	LOW-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Battery voltage:

11 to 14 V

(a) If the voltage is below 11 V, replace the battery before proceeding.

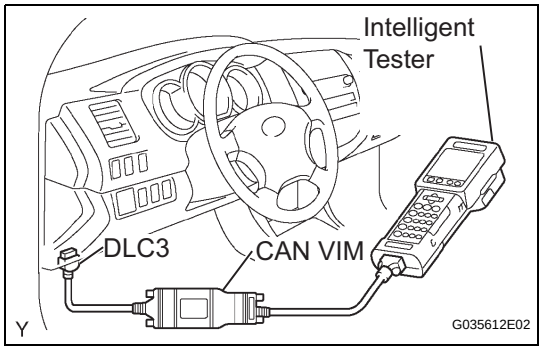
7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (See page ES-402).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

(a) For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II / MONITOR STATUS on the intelligent tester.



DTC CHECK / CLEAR

1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The tester can display pending DTCs and current DTCs. Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - SG	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	HIGH-level CAN bus line	14 - CANL	54 to 69 Ω	Ignition switch OFF
			Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF
CANL	14	LOW-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Battery voltage:

11 to 14 V

(a) If the voltage is below 11 V, replace the battery before proceeding.

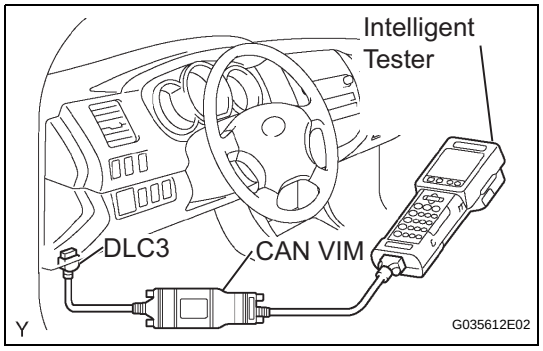
7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (See page ES-402).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

(a) For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II / MONITOR STATUS on the intelligent tester.



DTC CHECK / CLEAR

1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The tester can display pending DTCs and current DTCs. Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

(d) Confirm the DTCs and freeze frame data and then write them down.
(e) Confirm the details of the DTCs (See page AT-38).

2. CLEAR DTC

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CLEAR CODES and press YES.

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

(a) Check that the shift lever moves smoothly and appropriately from the P to R position, only when the ignition switch is turned to ON and the brake pedal is depressed.

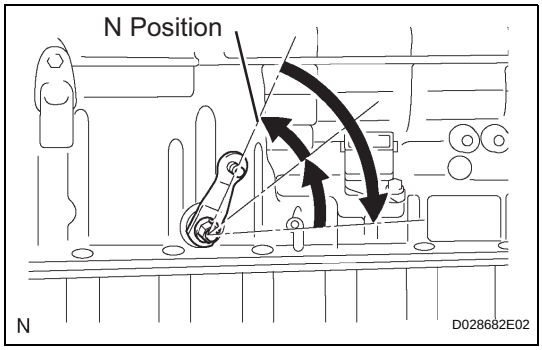
(b) When starting the engine, make sure that the vehicle moves forward when shifting the lever from the N to D position and moves rearward when shifting the lever to the R position.

2. ADJUST SHIFT LEVER POSITION

(a) Push the control shaft fully rearward.

(b) Turn the control shaft lever 2 notches counterclockwise to the N position.

(c) Set the shift lever to the N position.



REASSEMBLY

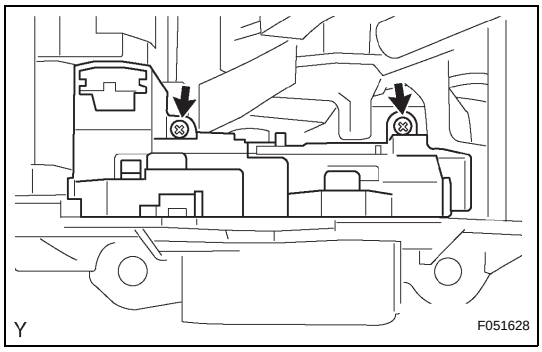
1. INSTALL SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Install the shift lock control ECU with the 2 screws.

(b) Install the spring and shift lock release link.

(c) Install the shift lever guide housing .

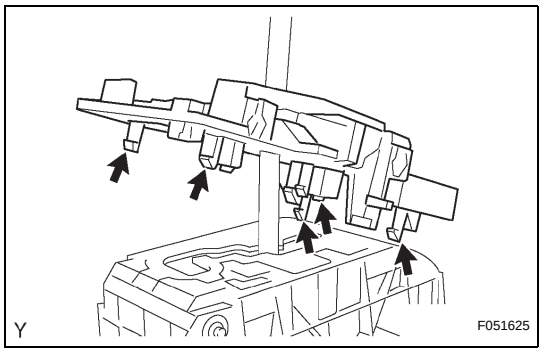
(d) Install the lever lock and new shift lever nut.



2. INSTALL LOWER POSITION INDICATOR HOUSING

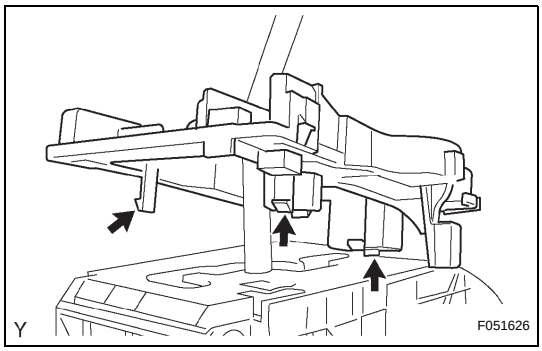
(a) CABLE TYPE:

(1) Install the position indicator housing lower.
HINT:
Firmly make the claws fit.

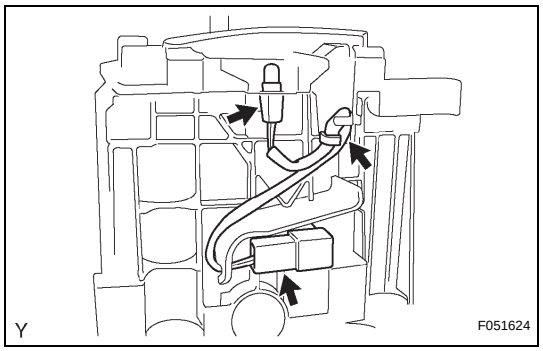


(b) ROD TYPE:

(1) Install the position indicator housing lower.
HINT:
Firmly make the claws fit.



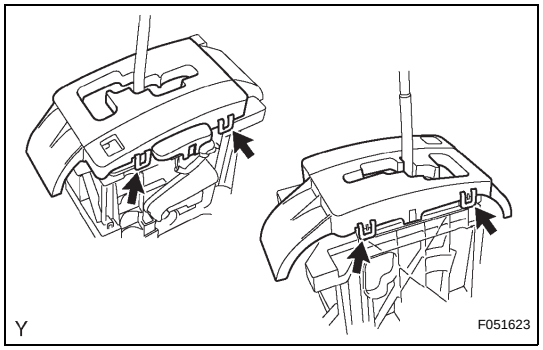
3. INSTALL SHIFT LOCK RELEASE BUTTON



4. INSTALL INDICATOR LAMP WIRE SUB-ASSEMBLY

(a) Install the bulb into the indicator lamp wire sub-assembly.

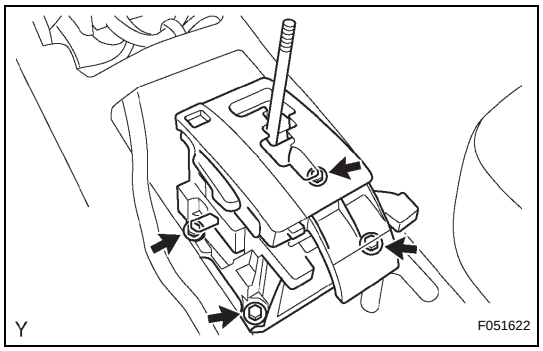
(b) Install the indicator lamp wire sub-assembly.



5. INSTALL UPPER POSITION INDICATOR HOUSING

(a) Install the slide cover and position indicator housing sub-assembly onto the shift lever guide housing.
HINT:
Firmly make the claws fit.

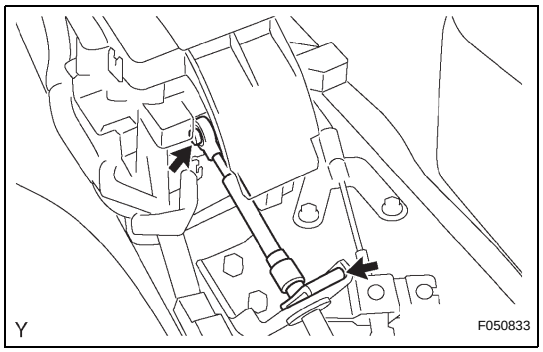
INSTALLATION



1. INSTALL FLOOR SHIFT ASSEMBLY

(a) Install the floor shift with the 4 bolts.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

(b) Connect the 2 clamps and 2 connectors.

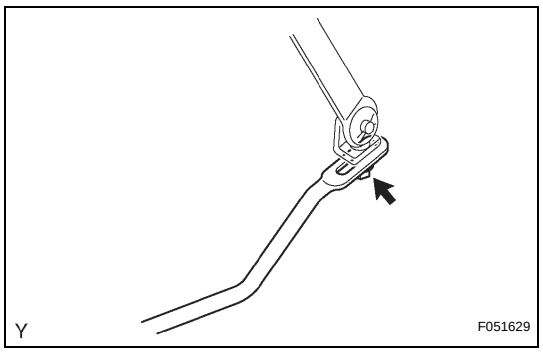


2. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) CABLE TYPE:

(1) Connect the transmission control cable with the clip to floor shift assembly.

(2) Install the transmission control cable onto the floor shift assembly.



3. INSTALL FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

(a) ROD TYPE:

(1) Install the floor shift gear shifting rod with nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

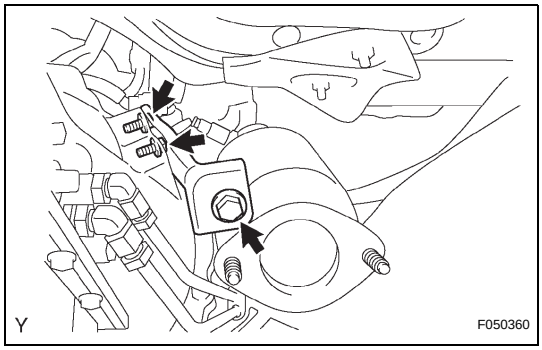
4. INSTALL FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-23)

5. INSTALL FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-24)

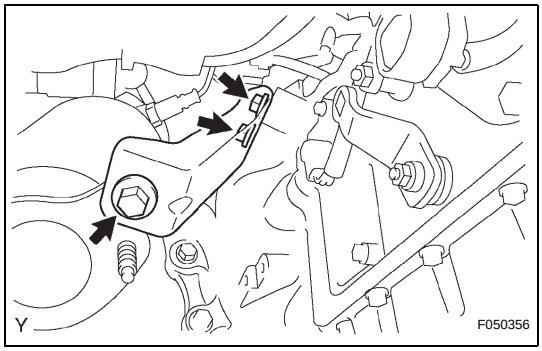
6. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Separate Seat Type) (See page IP-24)**
7. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
8. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-25)**
9. **ADJUST SHIFT LEVER POSITION (See page AT-155)**
10. **INSPECT SHIFT LEVER POSITION (See page AT-155)**

REMOVAL

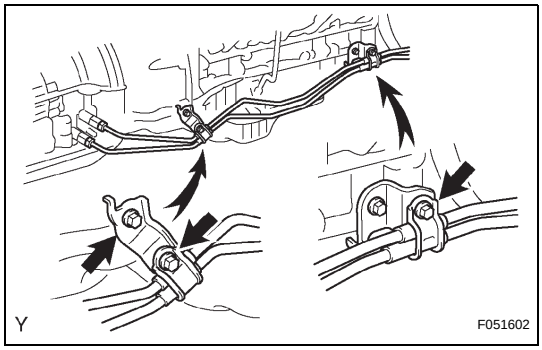
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY**
3. **REMOVE NO. 2 ENGINE UNDER COVER (w/ No. 2 Engine Under Cover)**
4. **DISCONNECT OXYGEN SENSOR**
5. **REMOVE EXHAUST PIPE ASSEMBLY**
   (See page EX-3)
6. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-27)**
7. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug and gasket, and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)
8. **REMOVE MANIFOLD STAY**
   (a) Remove the 3 bolts and manifold stay.

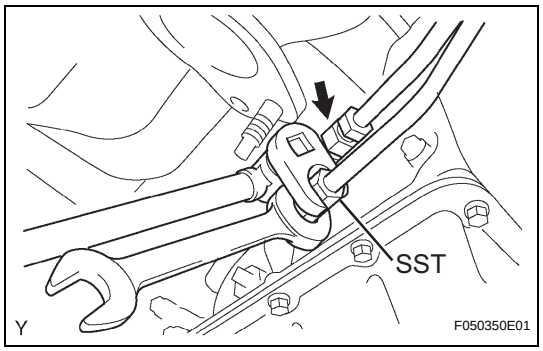


9. **REMOVE NO.2 MANIFOLD STAY**
   (a) Remove the 3 bolts and manifold stay No. 2.



10. **DISCONNECT NO.1 OIL COOLER INLET TUBE**
    (a) Remove the 3 bolts and 2 clamps.

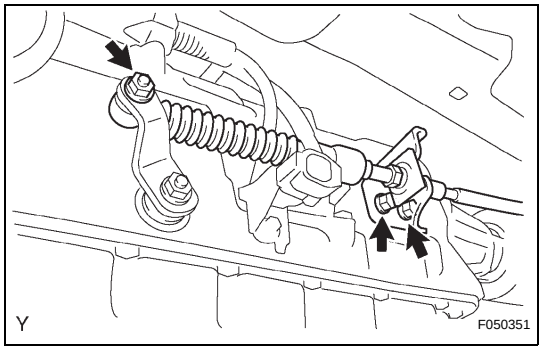




(b) Using SST, disconnect the oil cooler inlet tube No. 1.
SST 09023-12701

11. DISCONNECT NO.1 OIL COOLER OUTLET TUBE

(a) Using SST, disconnect the oil cooler outlet tube No. 1.
SST 09023-12701



12. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

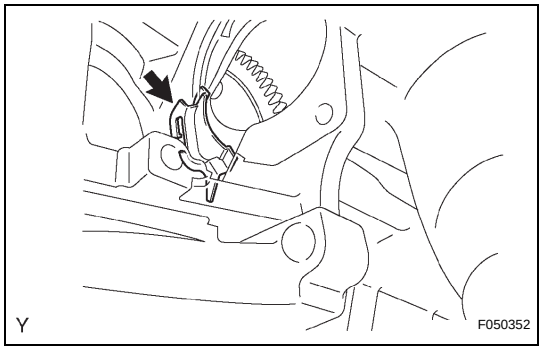
(a) Remove the nut and disconnect the transmission control cable.
(b) Remove the 2 bolts and disconnect the transmission control cable.

13. DISCONNECT CONNECTOR

(a) Disconnect the park/neutral position switch connector.
(b) Disconnect the transmission wire connector.
(c) Disconnect the 2 speed sensor connectors.

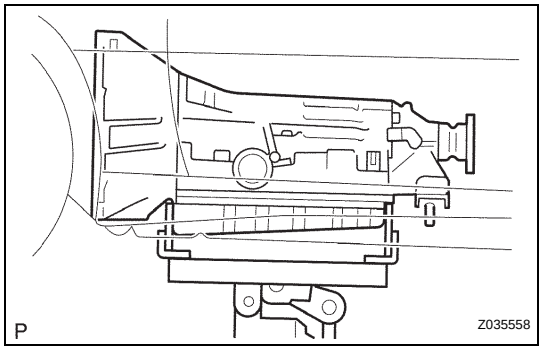
14. DISCONNECT WIRE HARNESS

15. REMOVE STARTER ASSEMBLY (See page ST-5)



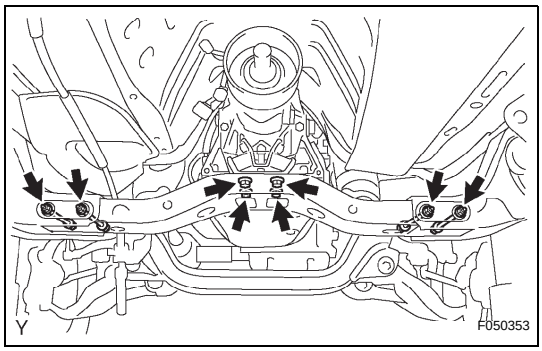
16. REMOVE FLYWHEEL HOUSING SIDE COVER

(a) Remove the flywheel housing side cover from the cylinder block.



17. SUPPORT AUTOMATIC TRANSMISSION ASSEMBLY

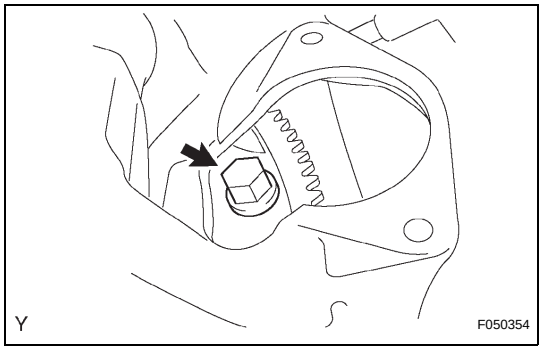
(a) Support the automatic transmission assembly with a transmission jack.



18. REMOVE NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Remove the 4 bolts on the frame crossmember sub-assembly No. 3.

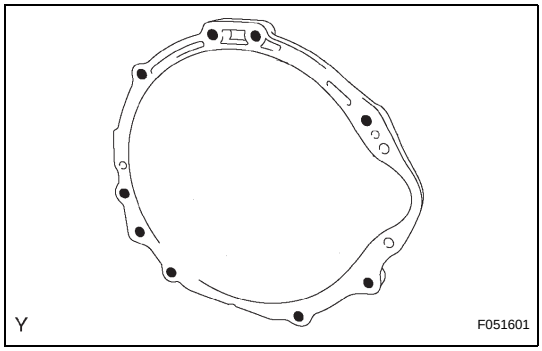
(b) Remove the 4 nuts, 4 bolts and frame crossmember sub-assembly No. 3.



19. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

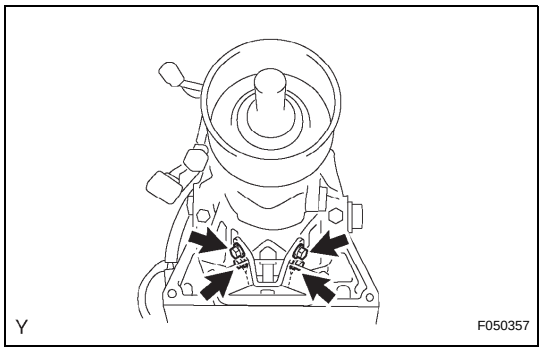
(a) Turn the crankshaft to gain access to each bolt.

(b) Hold the crankshaft pulley nut with a wrench and remove the 6 bolts.



(c) Remove the 9 bolts.

(d) Separate and remove the automatic transmission.



20. REMOVE REAR NO.1 ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts and engine mounting insulator rear from the automatic transmission.

21. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

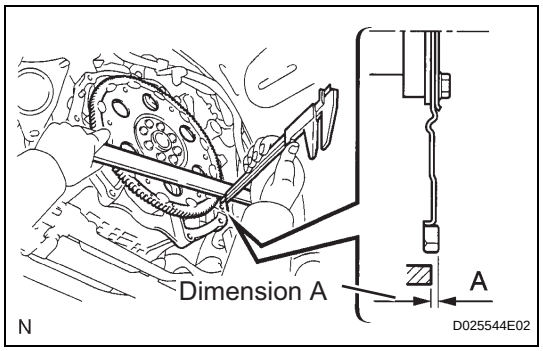
INSTALLATION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY (See page AT-166)

2. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Install the torque converter clutch onto the automatic transmission.

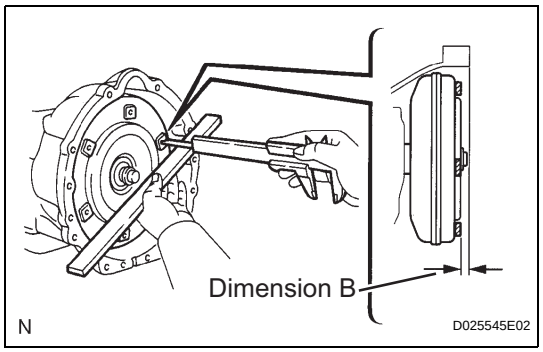
(b) Using calipers and a straight edge, measure dimension A, between the engine and the end surface of the drive plate, as shown in the illustration.



(c) Using calipers and a straight edge, measure dimension B shown in the illustration and check that B is greater than A measured in (b).

Standard:

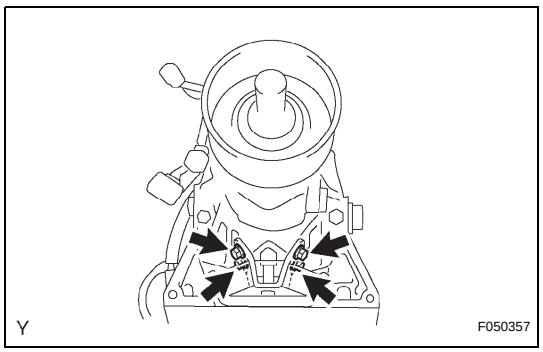
A + 1 mm or more



3. INSTALL REAR NO.1 ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator rear onto the automatic transmission with the 4 bolts.

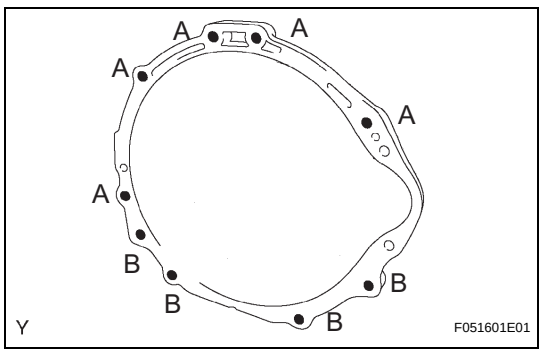
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

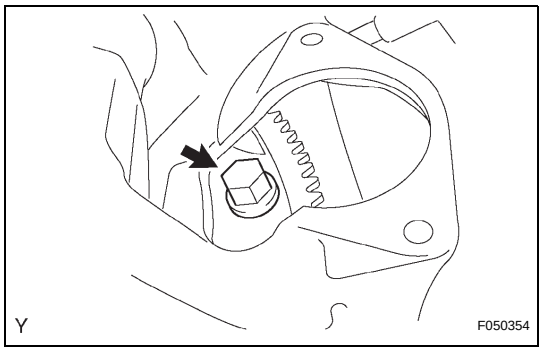


4. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

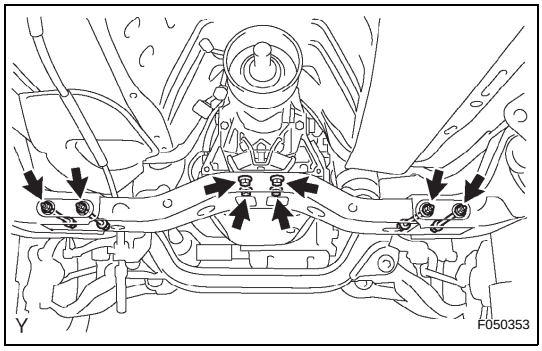
(a) Install the automatic transmission onto the engine with the 9 bolts.

Torque: 71 N*m (720 kgf*cm, 53 ft.*lbf) for bolt A
37 N*m (380 kgf*cm, 27 ft.*lbf) for bolt B





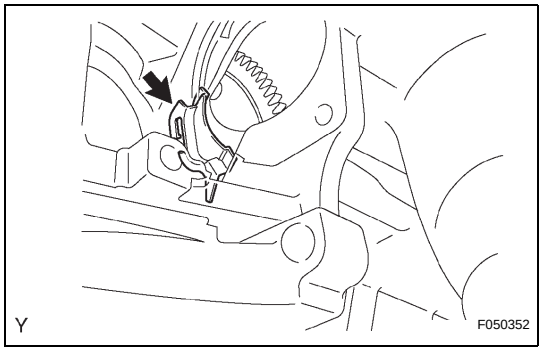
(b) Install the 6 torque converter clutch mounting bolts.
Torque: 48 N*m (489 kgf*cm, 35 ft.*lbf)
HINT:
First install the black bolt and then the other 5 bolts.



5. INSTALL NO.3 FRAME CROSSMEMBER SUB-ASSEMBLY

(a) Install the frame crossmember sub-assembly No. 3 with the 4 bolts and 4 nuts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

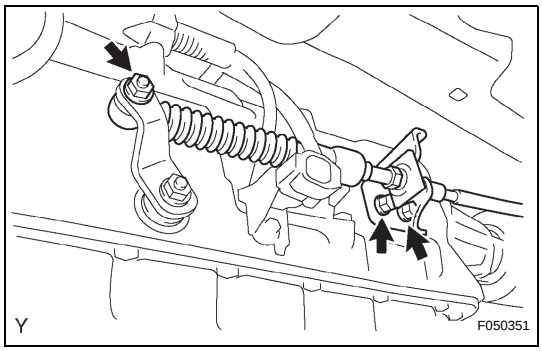
(b) Install the frame crossmember sub-assembly No. 3 with the 4 bolts.
Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)



6. INSTALL FLYWHEEL HOUSING SIDE COVER

(a) Install the flywheel housing side cover onto the cylinder block.

7. INSTALL STARTER ASSEMBLY (See page ST-11)



8. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable bracket No. 1 with the 2 bolts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

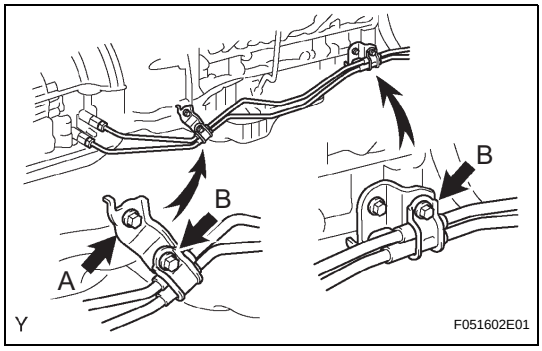
(b) Connect the transmission control cable with the nut.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

9. INSTALL NO.1 OIL COOLER OUTLET TUBE

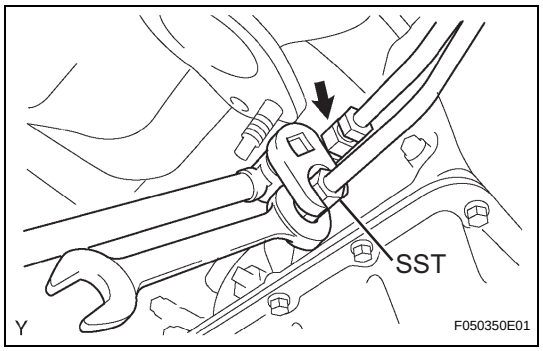
(a) Provisionally install the oil cooler outlet tube No. 1.

(b) Provisionally install the oil cooler inlet tube No. 1.

(c) Install the 2 clamps and 3 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf) for bolt A
5.0 N*m (50 kgf*cm, 43 in.*lbf) for bolt B



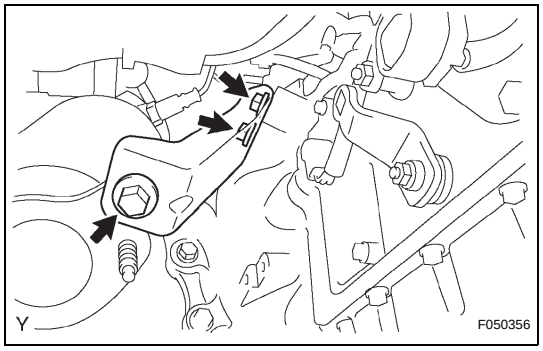
AT



(d) Using SST, tighten the oil cooler outlet tube No. 1.
SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

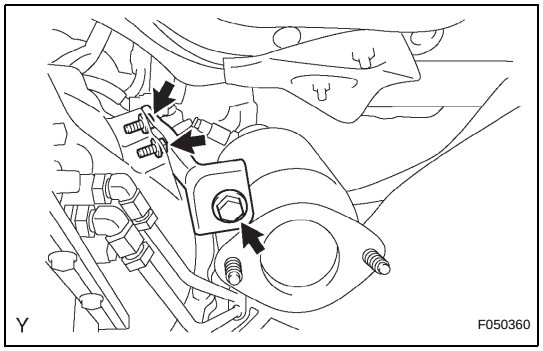
10. INSTALL NO.1 OIL COOLER INLET TUBE

(a) Using SST, tighten the oil cooler inlet tube No. 1.
SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



11. INSTALL NO.2 MANIFOLD STAY

(a) Install manifold stay No. 2 with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



12. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

13. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-32)

14. INSTALL EXHAUST PIPE
(See page EX-3)

15. INSTALL OXYGEN SENSOR

16. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

17. PERFORM INITIALIZATION
(See page AT-17)

18. ADD AUTOMATIC TRANSMISSION FLUID
(See page AT-135)

19. INSPECT SHIFT LEVER POSITION (See page AT-155)

20. CHECK FOR EXHAUST GAS LEAKAGE

21. INSTALL NO. 2 ENGINE UNDER COVER (w/ No. 2 Engine Under Cover)

22. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

SYSTEM DIAGRAM

The configuration of the electronic control system in the A750F automatic transmission is as shown in the following chart.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission) is an automatic transmission that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.
Shift shock has been reduced by controlling the engine and transmission simultaneously.
In addition, the ECT has features such as follows:
- Diagnostic function.
- Fail-safe function when a malfunction occurs.

AT

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure that there is no trouble in the CAN communication system.
- *: Use the intelligent tester.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test while referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50° to 80°C (122° to 176°F).

(a) D position test:

Shift into the D position, fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts take place, and that the shift points conform to the automatic shift schedule (see page SS-42).

HINT:

5th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is 32 mph (51 km/h) or less.

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 47°C (116.6°F) or less and vehicle speed is 30.4 mph (49 km/h) or less.

5th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slippage

Check for shock and slippage at the 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3, 3 → 4 and 4 → 5 while driving with the shift lever in the D position, and check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.
Check vehicle speeds when the 2 → 1, 3 → 2, 4 → 3, and 5 → 4 kick-downs take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule (see page SS-42).

(5) Check for abnormal shock and slippage at kick-down.

(6) Check the lock-up mechanism.
- Drive in the D position (5th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
If there is a sudden increase in engine speed, there is no lock-up.

(b) 4 position test:
Shift into the 4 position, fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.
Check that the 1 → 2, 2 → 3 and 3 → 4 up-shifts take place and that the shift points conform to the automatic shift schedule (see page SS-42).
HINT:
- There is no 5th up-shift in the 4 position.
- 4th Gear Lock-up Prohibition Control
- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check engine braking.
While driving in the 4 position and 4th gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(4) Check the lock-up mechanism.
- Drive in the 4 position and 4th gear, at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
If there is a sudden increase in engine speed, there is no lock-up.

(c) 3 position test:
Shift into the 3 position, fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2 and 2 → 3 up-shifts take place and that the shift points conform to the automatic shift schedule (see page SS-42).
HINT:
There is no 4th up-shift and lock-up in the 3 position.
(2) Check engine braking.
While running in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) 2 position test:
Shift into the 2 position, fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2 up-shift takes place and that the shift point conforms to the automatic shift schedule (see page SS-42).
HINT:
There is no 3rd up-shift and lock-up in the 2 position.
(2) Check engine braking.
While running in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(e) L position test:
Shift into the L position and fully depress the accelerator pedal and check the following points.
(1) Check no up-shift.
While running in the L position, check that there is no up-shift to 2nd gear.
(2) Check engine braking.
While running in the L position, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration.

(f) R position test:
Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test, ensure that the test area is free from people and obstructions.

(g) P position test:
Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

AT

MECHANICAL SYSTEM TESTS

1. STALL SPEED TEST

HINT:

This test is to check the overall performance of the engine and transmission.

NOTICE:

- **Do not perform the stall speed test longer than 5 seconds.**
- **To ensure safety, perform this test in an open and level area that provides good traction.**
- **The stall speed test should always be performed with at least 2 people. One person should observe the condition of the wheels and wheel chocks while the other is performing the test.**

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Chock all 4 wheels.

(e) Set the parking brake and keep the brake pedal depressed firmly with your left foot.

(f) Shift the shift lever into the drive position.

(g) Depress the accelerator pedal as much as possible with your right foot.

(h) Read the engine rpm (stall speed) and release the accelerator pedal immediately.

Standard value:

2,250 to 2,550 rpm

Evaluation:

Test Result	Possible Cause
Stall speed is lower than standard value	• Stator one-way clutch is not operating properly • Torque converter is faulty (stall speed is less than standard value by 600 rpm or more) • Engine power may be insufficient
Stall speed is higher than standard value	• Line pressure is low • No. 1 clutch (C1) slipping • No. 3 one-way clutch (F3) is not operating properly • Improper fluid level

2. SHIFT TIME LAG TEST

HINT:

This test is to check the condition of the direct clutch, forward clutch, 1st brake and reverse brake.

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

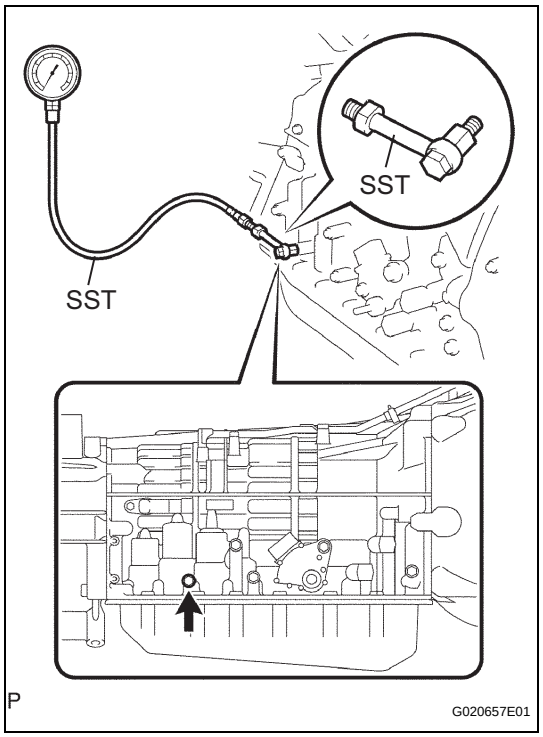
(d) Set the parking brake and keep the brake pedal depressed firmly.

(e) Check the D range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the D position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.

(f) Check the R range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute.
(2) Shift the shift lever into the R position and measure the time until the shock is felt.
(3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.
Standard value:
D range time lag is less than 1.2 seconds
R range time lag is less than 1.5 seconds

Evaluation:

Test Result	Possible Cause
D range time lag exceeds standard value	• Line pressure is low • No. 1 clutch (C1) is worn • No. 3 one-way clutch (F3) is not operating properly
R range time lag exceeds standard value	• Line pressure is low • No. 3 clutch (C3) is worn • No. 4 brake (B4) is worn • No. 1 one-way clutch (F1) is not operating properly



HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.
NOTICE:
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature of 50° to 80°C (122° to 176°F).**
- **The line pressure test should always be carried out in pairs. One technician should observe the condition of the wheels or wheel stoppers outside the vehicle while the other is doing the test.**
- **Be careful to prevent the SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting the engine.**
- **Perform with the A/C OFF.**
- **Do not conduct stall tests for longer than 10 seconds continuously.**

(1) Warm up the ATF.
(2) Lift the vehicle up.
(3) Remove the test plug on the transmission case center right side and connect SST.
SST 09992-00095 (09992-00151, 09992-00271)
(4) Fully apply the parking brake and chock the 4 wheels.
(5) Start the engine and check the idling speed.

(6) Keep your left foot pressing firmly on the brake pedal and shift into the D position.
(7) Measure the line pressure while the engine is idling.
(8) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when the engine speed reaches the stall speed.
(9) In the same manner, do the test in the R position.

Specified line pressure

Condition	D position	R position
Idling	**363 to 423 kPa (3.7 to 4.3 kgf/cm^2 , 53 to 61 psi)**	**484 to 564 kPa (4.9 to 5.8 kgf/cm^2, 70 to 82 psi)**
Stall test	**1,282 to 1,381 kPa (13.1 to 14.1 kgf/cm^2, 186 to 200 psi)**	**1,218 to 1,338 kPa (12.4 to 13.6 kgf/cm^2, 177 to 194 psi)**

Evaluation:

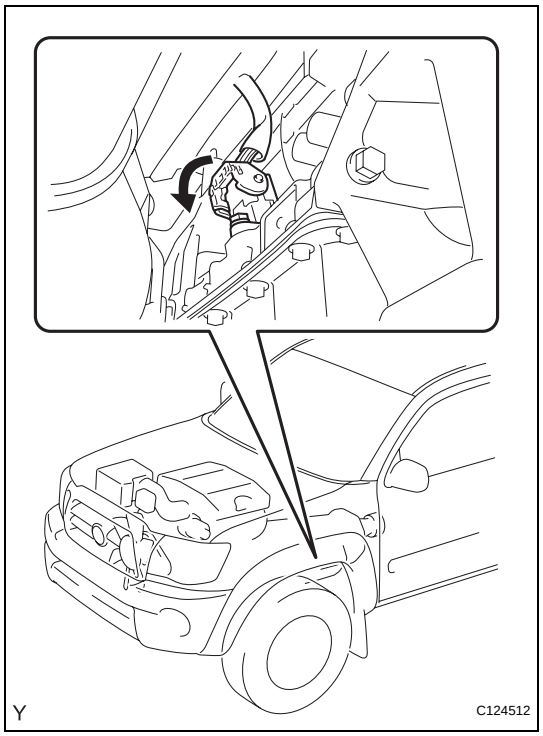
Problem	Possible cause
Measured value are higher than specified in all positions	• Shift solenoid valve SLT defective • Regulator valve defective
Measured value are lower than specified in all positions	• Shift solenoid valve SLT defective • Regulator valve defective • Oil pump defective
Pressure is low in D position only	• D position circuit fluid leakage • No. 1 clutch (C_1) defective
Pressure is low in R position only	• R position circuit fluid leakage • No. 3 clutch (C_3) defective • No. 4 brake (B_4) defective

MANUAL SHIFTING TEST

1. MANUAL SHIFTING TEST

HINT:

- Through this test, it can be determined whether the trouble occurs in the electrical circuit or if it is a mechanical problem in the transmission.
- If any abnormalities are found in the following test, the problem is in the transmission itself.



(a) Disconnect the connector of the transmission wire.
HINT:
It is possible to deactivate the electrical shift control by disconnecting the transmission wire. The gear positions can then be changed mechanically with the shift lever.

(b) Drive with the transmission wire disconnected. Shift the shift lever to each position to check whether the gear position changes as shown in the table below.

Shift Lever Position	Gear Position
D	4th
4	4th
3	3rd
2	1st
L	1st
R	R
P	P

(c) Connect the connector of the transmission wire.

(d) Clear the DTC (See page AT-31).

AT

INITIALIZATION

1. RESET MEMORY

CAUTION:

Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM.

NOTICE:

Intelligent tester only

HINT:

The ECM stores the condition under which the ECT (Electronic Controlled Automatic Transmission) controls the automatic transmission and engine assemblies according to their characteristics. Therefore, when the automatic transmission assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can store the new information. Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the intelligent tester together with the CAN VIN (controller area network vehicle interface module) to the DLC3.

(c) Turn the ignition switch to the ON position and push the intelligent tester main switch on.

(d) Select the items "DIAGNOSIS/ ENHANCED OBD II".

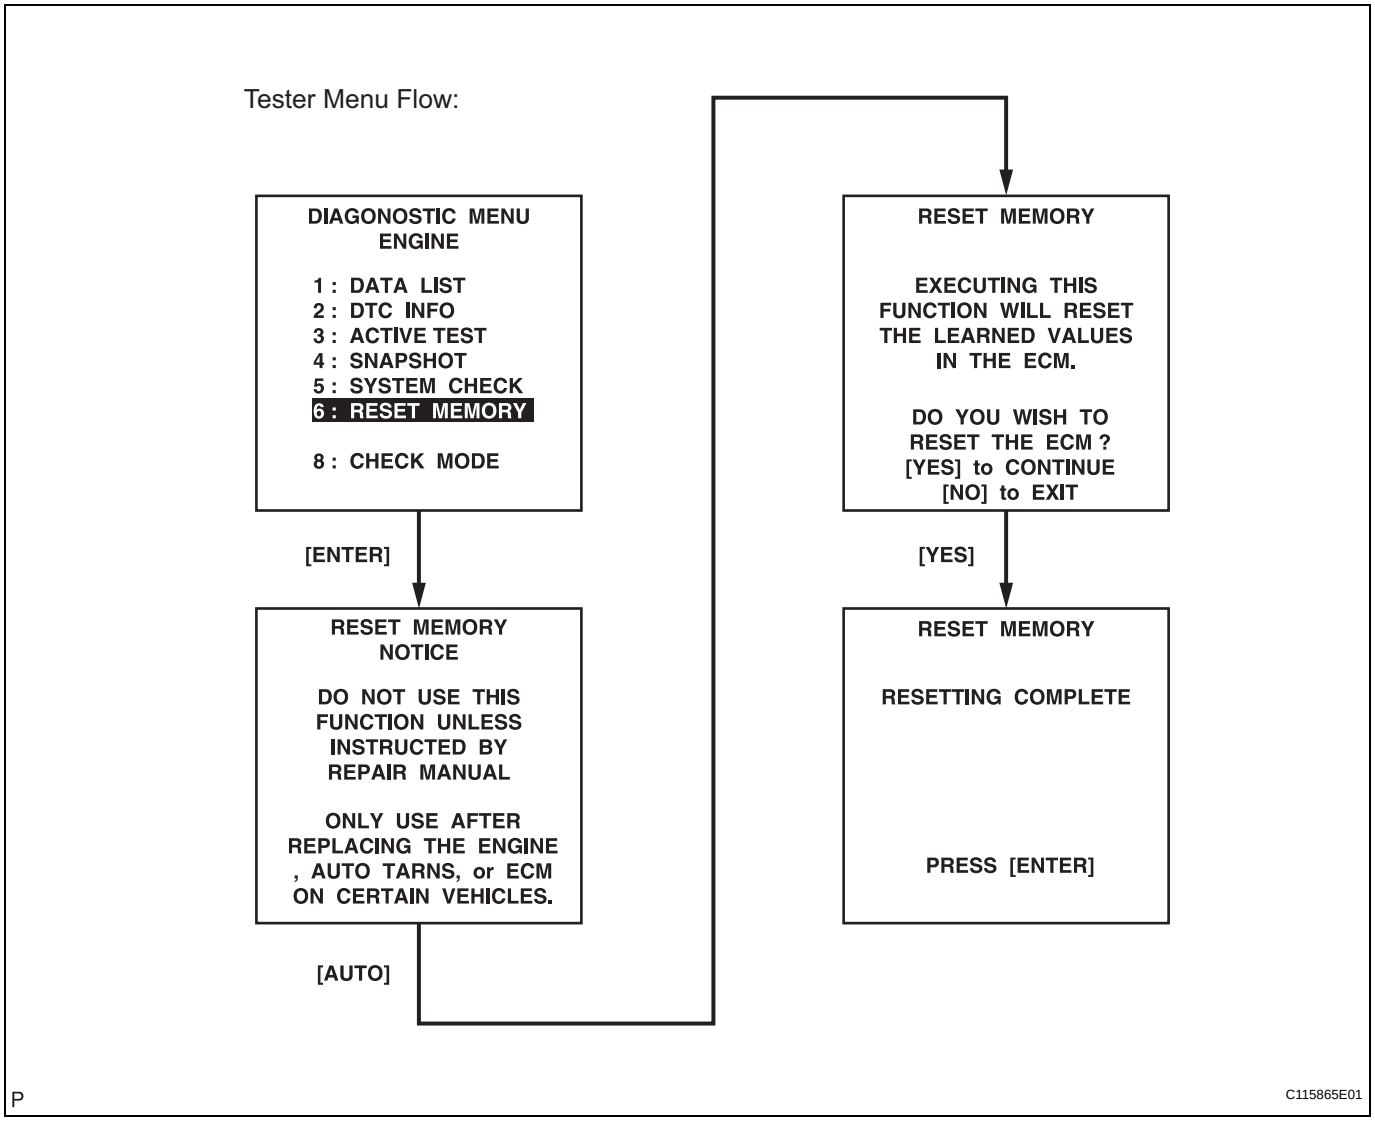
(e) Perform the reset memory procedure from the ENGINE menu.

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (see page AT-11) described earlier.

HINT:

The ECM stores the new information during the ROAD TEST.



2. SET UP FUNCTION OF ATF TEMPERATURE WARNING LIGHT (ONLY 4WD VEHICLE)

CAUTION:

Re-set the function of the ATF (Automatic Transmission Fluid) temperature warning light, if the ECM has been replaced or RESET MEMORY (AT initialization) has been performed.

HINT:

- The ATF temperature warning light is built into the 4WD vehicles. When the ATF temperature is too high, the ATF temperature warning light illuminates to warn the driver. If the ECM has been replaced or RESET MEMORY has been performed, this function does not work unless the following procedure is performed.
- Once the ECM is set up, its memory will not be cleared by only disconnecting the negative cable from the battery.

(a) Start the engine.

(b) Shift the 4 wheel drive control switch to the 4WD position. Check that the 4WD indicator illuminates.

(c) Shift the 4 wheel drive control switch to the 2WD position.
(d) Drive the vehicle at a vehicle speed of 25 mph (40 km/h) or more.

NOTICE:
If the battery is disconnected before driving the vehicle at a vehicle speed of 25 mph (40 km/h) or more, the memory will be cleared. If the battery has been disconnected, perform steps (a) to (d) again.

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

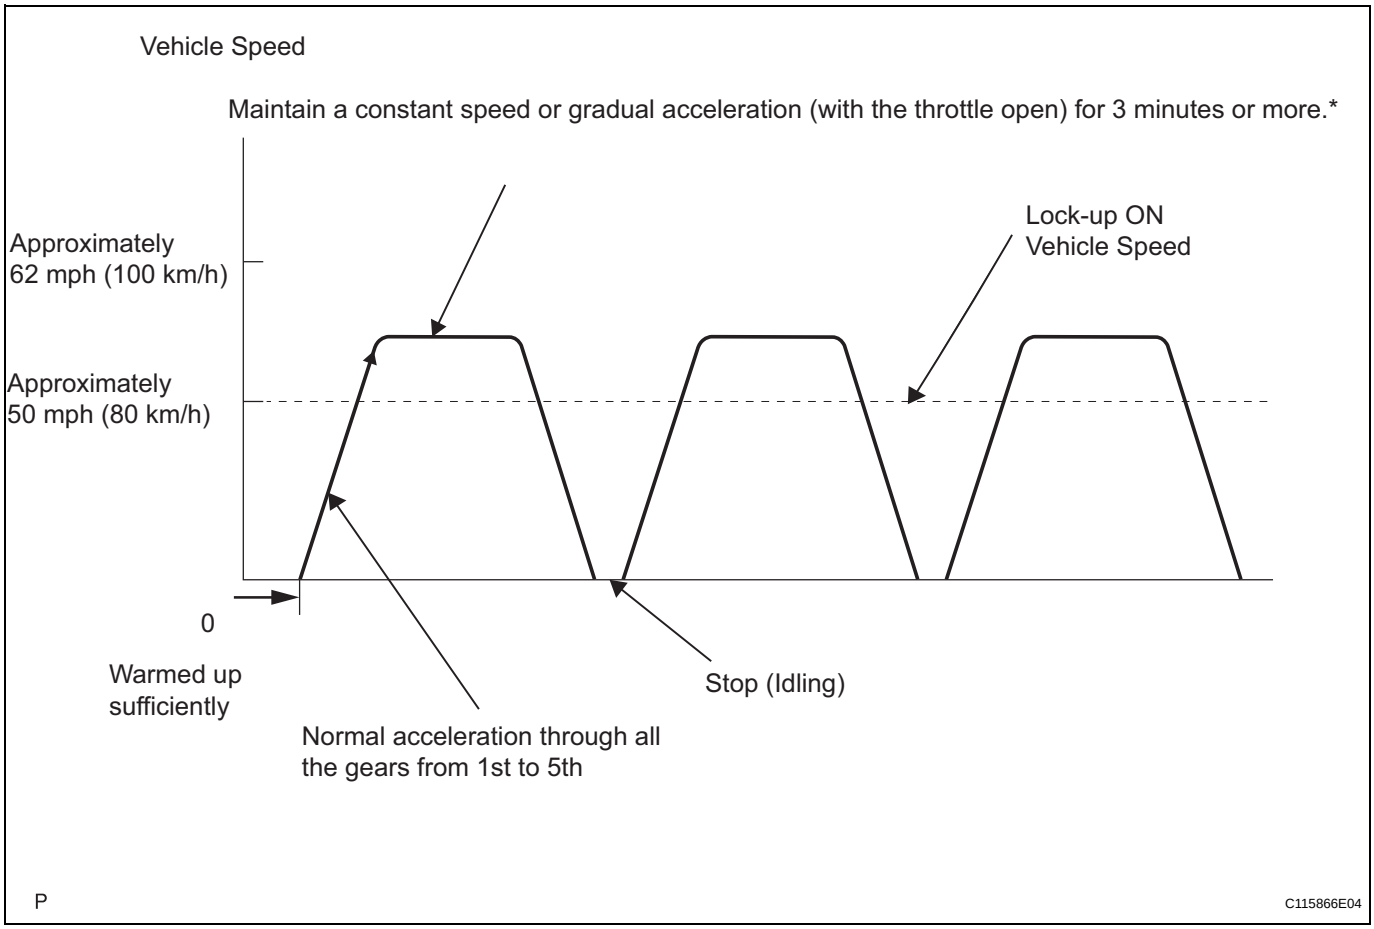
(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT (Electronic Controlled Automatic Transmission) malfunctions.
(The DTCs may not be detected due to the actual driving conditions. And some DTCs may not be detected through this drive pattern.)
HINT:
Preparation for driving
- Warm up the engine sufficiently. (Engine coolant temperature should be 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F))

Notice in driving
- Drive the vehicle through all gears. Stop → 1st → 2nd → 3rd → 4th → 5th → 5th (lock-up ON).
- Repeat the above driving pattern three times or more.

NOTICE:
- **The monitor status can be checked using the intelligent tester. When using the intelligent tester, monitor status can be found in the "ENHANCED OBD II/ DATA LIST" or under "CARB OBD II".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:
Perform this drive pattern on as level a road as possible and strictly observe the posted speed limits and traffic laws while driving.

AT



HINT:

*: Drive at such a speed in the uppermost gear, as to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.

NOTICE:

It is necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

PROBLEM SYMPTOMS TABLE

HINT:
If no DTCs are displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
The Matrix Chart is divided into 2 chapters.

1. **Chapter 1: Electronic Circuit Matrix Chart**
   - Refer to the table below when the cause of trouble is considered to be electrical.
   - If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the ECM.

   HINT:
   *1: Denotes that when there are malfunctions in the circuit, DTCs may be set.

Symptom	Suspected area	See page
No up-shift (A particular gear, from 1st to 4th gear, is not up-shifted)	1. Shift solenoid valve (S1) circuit *1	AT-101
	2. Shift solenoid valve (S2) circuit *1	AT-104
	3. ECM	IN-34
No up-shift (4th -> 5th)	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. Speed sensor NT circuit *1	AT-57
	4. Shift solenoid valve (SL1) circuit *1	AT-67
	5. Shift solenoid valve (SL2) circuit *1	AT-92
	6. Shift solenoid valve (SR) circuit *1	AT-107
	7. ECM	IN-34
No up-shift (3rd -> 4th)	1. Engine coolant temperature sensor circuit *1	ES-104
	2. Shift solenoid valve (S2) circuit *1	AT-104
	3. ECM	IN-34
No up-shift (1st -> 2nd)	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. Shift solenoid valve (S2) circuit *1	AT-104
	3. ECM	IN-34
No down-shift (5th -> 4th)	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. Shift solenoid valve (SL1) circuit *1	AT-67
	3. Shift solenoid valve (SL2) circuit *1	AT-92
	4. Shift solenoid valve (SR) circuit *1	AT-107
	5. ECM	IN-34
No down-shift (2nd -> 1st)	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. Shift solenoid valve (S2) circuit *1	AT-104
	3. ECM	IN-34
No down-shift (A particular gear, from 1st to 4th gear, is not down-shifted)	1. Shift solenoid valve (S1) circuit *1	AT-101
	2. Shift solenoid valve (S2) circuit *1	AT-104
	3. ECM	IN-34

Symptom	Suspected area	See page
No lock-up	1. ATF temperature sensor circuit *1	AT-49
	2. Transfer L4 position switch circuit *1	AT-136
	3. Stop light switch circuit *1	ES-272
	4. Speed sensor NT circuit *1	AT-57
	5. Shift solenoid valve (SLU) circuit *1	AT-132
	6. Engine coolant temperature sensor circuit *1	ES-104
	7. ECM	IN-34
No lock-up off	1. Shift solenoid valve (SLU) circuit *1	AT-132
	2. ECM	IN-34
Shift point too high or too low	1. Shift solenoid valve (SLT) circuit *1	AT-118
	2. Speed sensor NT circuit *1	AT-57
	3. Speed sensor SP2 circuit *1	AT-62
	4. Throttle position sensor circuit *1	ES-112
	5. ATF temperature sensor circuit *1	AT-49
	6. Transfer L4 position switch circuit *1	AT-136
	7. ECM	IN-34
Up-shift from 4th to 5th while shift lever is in 4 position	1. Transmission control switch circuit (D - 4) *1	AT-43
	2. ECM	IN-34
Up-shift from 4th to 5th while engine is cold	1. Engine coolant temperature sensor circuit *1	ES-104
	2. ECM	IN-34
Up-shift from 3rd to 4th while shift lever is in 3 position	1. Park/neutral position switch circuit *1	AT-43
	2. ECM	IN-34
Up-shift from 2nd to 3rd while shift lever is in 2 position	1. Park/neutral position switch circuit *1	AT-43
	2. ECM	IN-34
Up-shift from 1st to 2nd while shift lever is in L position	1. Transmission control switch circuit (2 - L) *1	AT-43
	2. ECM	IN-34
Harsh engagement (N -> D)	1. Speed sensor NT circuit *1	AT-57
	2. Shift solenoid valve (SL1) circuit *1	AT-67
	3. Shift solenoid valve (SLT) circuit *1	AT-118
	4. ECM	IN-34
Harsh engagement (Lock-up)	1. Speed sensor NT circuit *1	AT-57
	2. Speed sensor SP2 circuit *1	AT-62
	3. Shift solenoid valve (SLU) circuit *1	AT-132
	4. ECM	IN-34
Harsh engagement (Any driving position)	ECM	IN-34
Poor acceleration	1. No. 2 ATF temperature sensor circuit *1	AT-122
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. Shift solenoid valve (SLT) circuit *1	AT-118
	4. ECM	IN-34
No engine braking	ECM	IN-34
No kick-down	ECM	IN-34
Engine stalls when starting off or stopping	1. Shift solenoid valve (SLU) circuit *1	AT-132
	2. ECM	IN-34
ATF temperature warning light remains on	1. No. 2 ATF temperature sensor circuit *1	AT-122
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34
Lock-up at 3rd gear	1. No. 2 ATF temperature sensor circuit *1	AT-122
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34

Symptom	Suspected area	See page
Shift point too high	1. No. 2 ATF temperature sensor circuit *1	AT-122
	2. Engine coolant temperature sensor circuit *1	ES-104
	3. ECM	IN-34

2. Chapter 2: On-Vehicle Repair and Off-Vehicle Repair
(▲: A750E, A750F AUTOMATIC TRANSMISSION Repair Manual Pub. No. RM999U)

Symptom	Suspected area	See page
Vehicle does not move in any forward positions or reverse position	1. Transmission control cable	AT-158

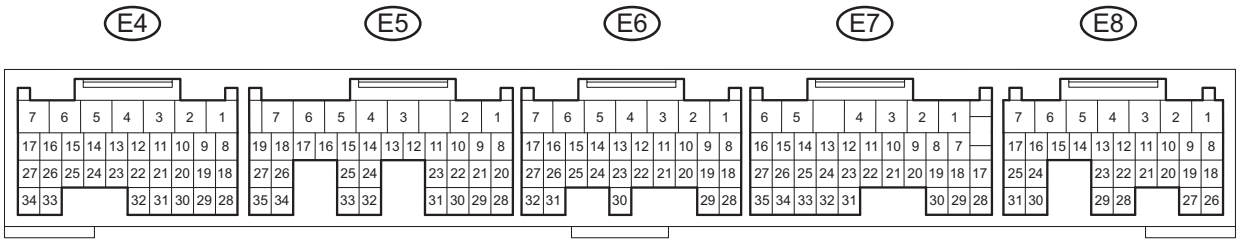
	4. No. 1 brake (B1)	▲
	5. No. 1 clutch (C1)	▲
Slippage or shuddering (Forward and reverse: After warm-up)	1. Valve body assembly	AT-147
	2. Oil strainer	AT-147
	3. No. 1 one-way clutch (F1)	▲
	4. No. 3 clutch (C3)	▲
	5. Torque converter clutch	AT-169
Slippage or shuddering (Particular position: Just after engine starts)	Torque converter clutch	AT-169
Slippage or shuddering (R position)	1. No. 4 brake (B4)	▲
	2. No. 1 one-way clutch (F1)	▲
	3. No. 3 clutch (C3)	▲
Slippage or shuddering (1st)	1. No. 1 clutch (C1)	▲
	2. No. 3 one-way clutch (F3)	▲
Slippage or shuddering (2nd)	1. No. 1 clutch (C1)	▲
	2. No. 3 brake (B3)	▲
	3. No. 1 one-way clutch (F1)	▲
	4. No. 2 one-way clutch (F2)	▲

Symptom	Suspected area	See page
Slippage or shuddering (3rd)	1. No. 1 clutch (C1)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 one-way clutch (F1)	▲
Slippage or shuddering (4th)	1. No. 1 clutch (C1)	▲
	2. No. 2 clutch (C2)	▲
Slippage or shuddering (5th)	1. No. 2 clutch (C2)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 brake (B1)	▲
Engine brake does not work only in 1st to 4th gear at D position	No. 1 clutch (C1)	▲
Engine brake does not work only in 1st gear at L position	1. Valve body assembly	AT-147
	2. No. 4 brake (B4)	▲
Engine brake does not work only in 2nd gear at 2 position	1. Valve body assembly	AT-147
	2. No. 2 brake (B2)	▲
Engine brake does not work only in 3rd gear at 3 position	1. Valve body assembly	AT-147
	2. No. 1 brake (B1)	▲
No kick-down	Valve body assembly	AT-147
Shift point too high or too low	1. Shift solenoid valve (SLT)	AT-111
	2. Shift solenoid valve (SL1)	AT-82
	3. Valve body assembly	AT-147
Poor acceleration (All positions)	1. Shift solenoid valve (SLT)	AT-111
	2. Valve body assembly	AT-147
	3. Torque converter clutch	AT-169
Poor acceleration (5th)	1. No. 1 clutch (C1)	▲
	2. No. 3 clutch (C3)	▲
	3. No. 1 brake (B1)	▲
	4. Front planetary gear unit	▲
Engine stalls when starting off or stopping	1. Shift solenoid valve (SLU)	AT-127
	2. Valve body assembly	AT-147
	3. Torque converter clutch	AT-169

TERMINALS OF ECM



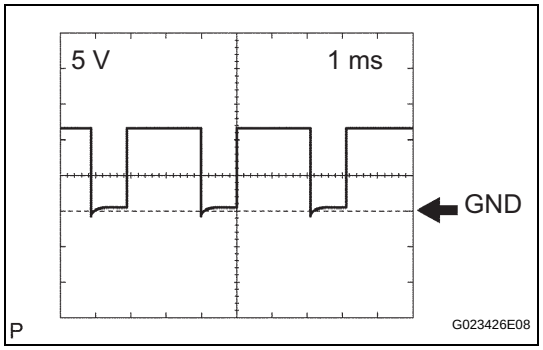
Y

C124513E01

HINT:
The standard voltage of each ECM terminal is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition".
Use the illustration above as a reference for the ECM terminals.

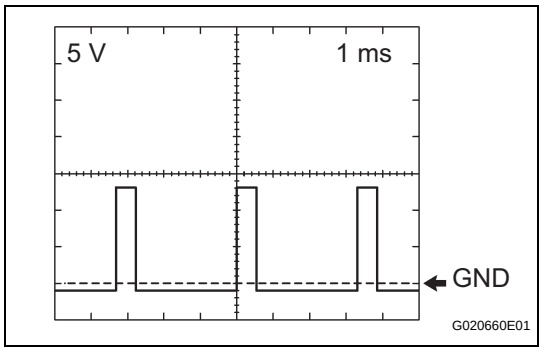
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STP (E8-15) - E1 (E6-1)	L - BR	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
			Brake pedal is released	Below 1.5 V
L (E7-9) - E1 (E6-1)	G-Y - BR	L shift position switch signal	Ignition switch ON and shift lever L position	10 to 14 V
			Ignition switch ON and shift lever other than L position	Below 1 V
2 (E7-10) - E1 (E6-1)	R-Y - BR	2 shift position switch signal	Ignition switch ON and shift lever 2 and L positions	10 to 14 V
			Ignition switch ON and shift lever other than 2 and L positions	Below 1 V
R (E7-11) - E1 (E6-1)	R-W - BR	R shift position switch signal	Ignition switch ON and shift lever R position	10 to 14 V
			Ignition switch ON and shift lever other than R position	Below 1 V
3 (E7-19) - E1 (E6-1)	Y - BR	3 shift position switch signal	Ignition switch ON and shift lever 3 position	10 to 14 V
			Ignition switch ON and shift lever other than 3 position	Below 1 V
4 (E7-20) - E1 (E6-1)	B - BR	4 shift position switch signal	Ignition switch ON and shift lever 4 position	10 to 14 V
			Ignition switch ON and shift lever other than 4 position	Below 1 V
D (E7-21) - E1 (E6-1)	L-B - BR	D shift position switch signal	Ignition switch ON and shift lever D and 4 positions	10 to 14 V
			Ignition switch ON and shift lever other than D and 4 positions	Below 1 V
L4 (E6-13) - E1 (E6-1)	Y-B - BR	Transfer L4 shift position switch signal	Ignition switch ON and transfer shift lever L position	Below 1 V
			Ignition switch ON and transfer shift lever other than L position	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
NSW (E5-8) - E1 (E6-1)	V - BR	Park or neutral shift position switch signal	Ignition switch ON and shift lever P and N positions	Below 2 V
			Ignition switch ON and shift lever other than P and N positions	10 to 14 V
SR (E5-9) - E1 (E6-1)	G - BR	SR solenoid signal	5th gear	10 to 14 V
			1st gear	Below 1 V
S2 (E5-10) - E1 (E6-1)	L-W - BR	S2 solenoid signal	2nd or 3rd gear	10 to 14 V
			1st, 4th or 5th gear	Below 1 V
S1 (E5-11) - E1 (E6-1)	W-G - BR	S1 solenoid signal	1st or 2nd gear	10 to 14 V
			3rd, 4th or 5th gear	Below 1 V
SLT+ (E5-13) - SLT- (E5-12)	G-B - R-B	SLT solenoid signal	Engine is idling	Pulse generation (See waveform 1)
SLU+ (E5-15) - SLU- (E5-14)	Y-B - LG	SLU solenoid signal	5th (lock-up) gear	Pulse generation (See waveform 2)
SL2+ (E5-17) - SL2- (E5-16)	W-L - G-R	SL2 solenoid signal	Engine idling speed	Pulse generation (See waveform 3)
SL1+ (E5-19) - SL1- (E5-18)	G-W - P-L	SL1 solenoid signal	Engine idling speed	Pulse generation (See waveform 4)
THO2 (E5-32) - E2 (E4-28)	GR - BR	No. 2 ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V
THO1 (E5-24) - E2 (E4-28)	Y-B - BR	No. 1 ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V
SP2+ (E5-34) - SP2- (E5-26)	L-R - R	Speed sensor (SP2) signal	Vehicle speed 12 mph (20 km/h)	Pulse generation (See waveform 5)
NT+ (E5-35) - NT- (E5-27)	W-R - Y-R	Speed sensor (NT) signal	Engine is idling	Pulse generation (See waveform 6)



1. Waveform 1

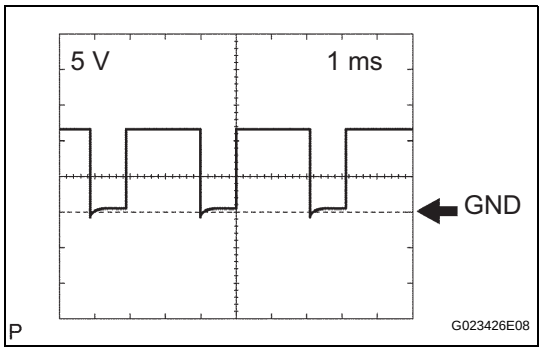
Item	Condition
Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



2. Waveform 2

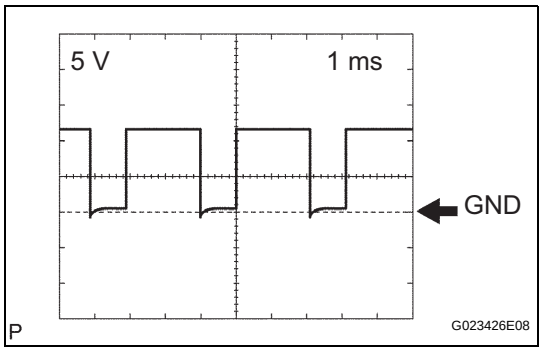
Item	Condition
Terminal	SLU+ - SLU-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	5th (lock-up) gear

AT



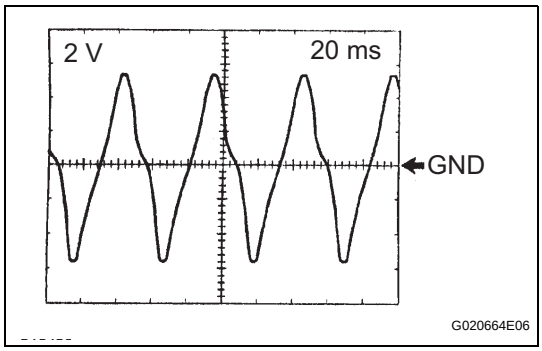
3. Waveform 3

Item	Condition
Terminal	SL2+ - SL2-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



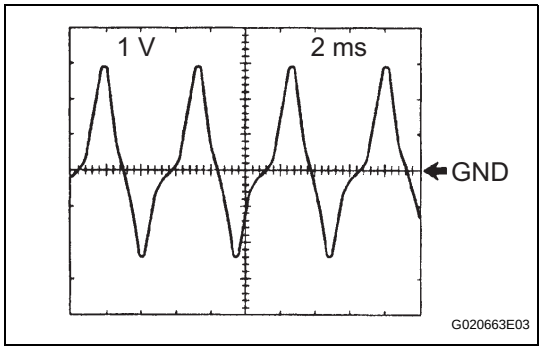
4. Waveform 4

Item	Condition
Terminal	SL1+ - SL1-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle condition	Engine idling speed



5. Waveform 5

Item	Condition
Terminal	SP2+ - SP2-
Tool setting	2 V/DIV, 20 ms/DIV
Vehicle condition	Vehicle speed 12 mph (20 km/h)



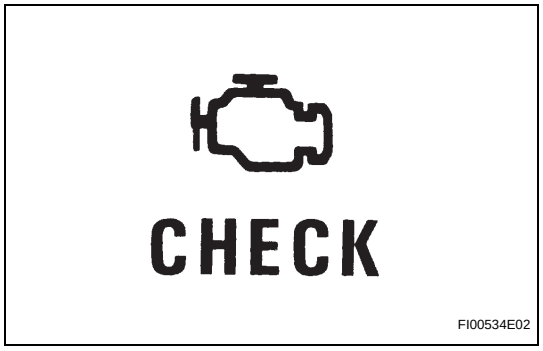
6. Waveform 6

Item	Condition
Terminal	NT+ - NT-
Tool setting	1 V/DIV, 2 ms/DIV
Vehicle condition	Engine idling speed

DIAGNOSIS SYSTEM

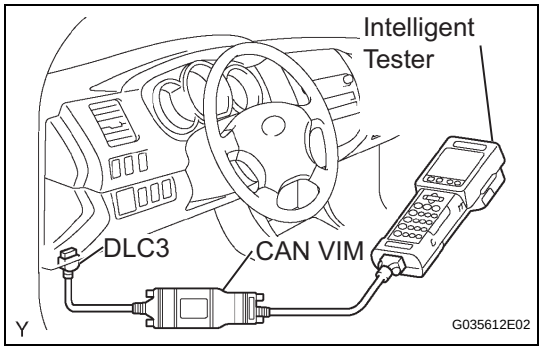
1. DESCRIPTION

(a) When troubleshooting on-Board Diagnostic (OBD II) vehicles, the vehicle must be connected to the intelligent tester (complying with SAE J1987). Various data output from the vehicle's ECM can then be read.



(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in:
1. The emission control system/components
2. The power train control components (which affect vehicle emissions)
3. The computer

In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the ECM memory.
If the malfunction does not reoccur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.



(c) To check DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) of the vehicle. The intelligent tester displays DTCs, the freeze frame data and a variety of the engine data.
The DTCs and freeze frame data can be erased with the intelligent tester (See page AT-31).

(d) In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication has been introduced in this system (CAN: Controller Area Network). It minimizes the gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and simplification of the wire harness connection. Since this system is equipped with CAN communication, CAN VIM (VIM: Vehicle Interface Module) connecting with intelligent tester is necessary to display any information from the ECM on the tester. (Also communication between the intelligent tester and the ECM uses a CAN communication signal.) When confirming DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.

AT

AT

2. NORMAL MODE AND CHECK MODE

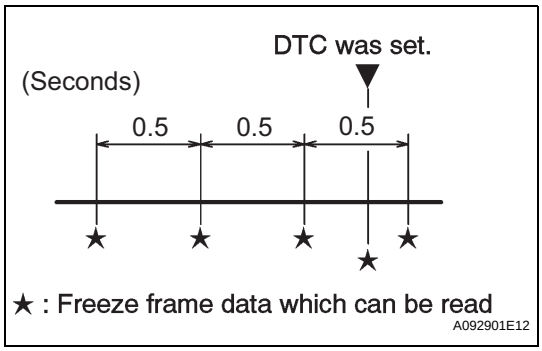
(a) The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1 trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.

3. 2 TRIP DETECTION LOGIC

(a) When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the MIL will illuminate.

4. FREEZE FRAME DATA

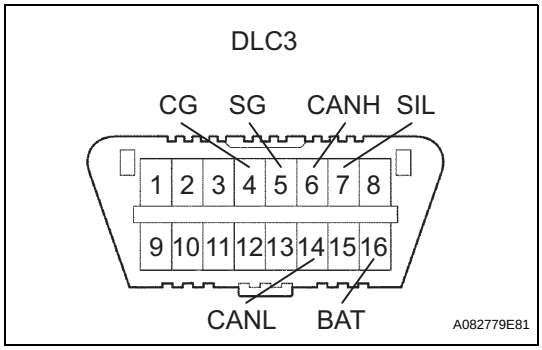
(a) Freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was Lean or Rich, and other data from the time the malfunction occurred.



(b) The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 data sets before the DTC was set
- 1 data set when the DTC was set
- 1 data set after the DTC was set

These data sets can be used to simulate the condition of the vehicle around the time the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.



5. DATA LINK CONNECTOR 3 (DLC3)

(a) The vehicle's ECM uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - SG	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	HIGH-level CAN bus line	14 - CANL	54 to 69 Ω	Ignition switch OFF
			Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF
CANL	14	LOW-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Battery voltage:

11 to 14 V

(a) If the voltage is below 11 V, replace the battery before proceeding.

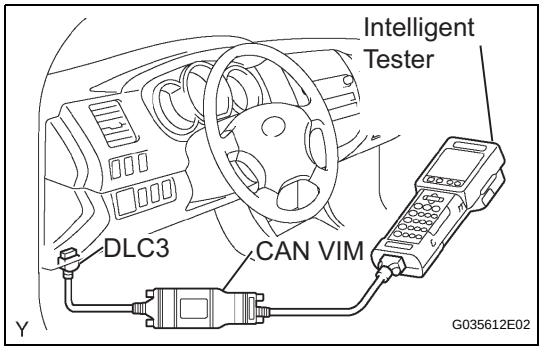
7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (See page ES-402).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

(a) For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II / MONITOR STATUS on the intelligent tester.



DTC CHECK / CLEAR

1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The tester can display pending DTCs and current DTCs. Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbol	Terminal No.	Name	Reference terminal	Result	Condition
SIL	7	Bus "+" line	5 - SG	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	HIGH-level CAN bus line	14 - CANL	54 to 69 Ω	Ignition switch OFF
			Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF
CANL	14	LOW-level CAN bus line	Battery positive	1 MΩ or higher	Ignition switch OFF
			4 - CG	1 kΩ or higher	Ignition switch OFF

6. CHECK BATTERY VOLTAGE

Battery voltage:

11 to 14 V

(a) If the voltage is below 11 V, replace the battery before proceeding.

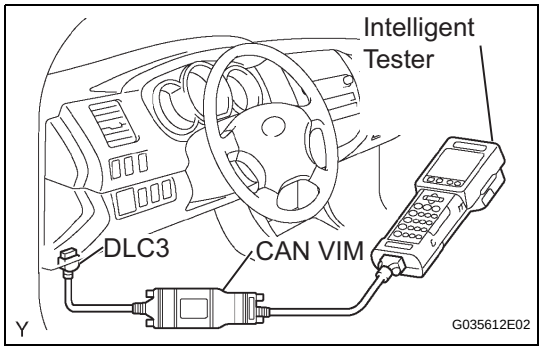
7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (See page ES-402).

(b) When the engine is started, the MIL should turn off.

8. ALL READINESS

(a) For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II / MONITOR STATUS on the intelligent tester.



DTC CHECK / CLEAR

1. CHECK DTC

DTCs which are stored in the ECM can be displayed with the intelligent tester.
The tester can display pending DTCs and current DTCs. Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving cycles. However, malfunctions detected during a single driving cycle are stored as pending DTCs.

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch to the ON position.

(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES (or PENDING CODE).

(d) Confirm the DTCs and freeze frame data and then write them down.
(e) Confirm the details of the DTCs (See page AT-39).

2. CLEAR DTC

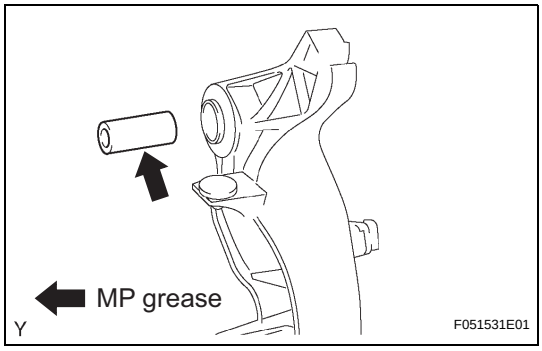
(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CLEAR CODES and press YES.

CL

INSTALLATION

1. INSTALL CLUTCH PEDAL NO.1 CUSHION

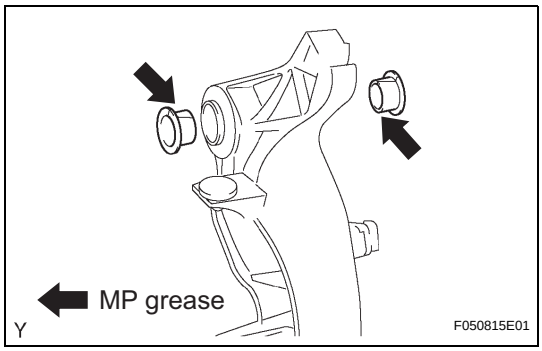
(a) Install the No. 1 cushion onto the clutch pedal.



2. INSTALL CLUTCH PEDAL SHAFT COLLAR

(a) Apply MP grease to the clutch pedal shaft collar.

(b) Install the clutch pedal shaft collar onto the clutch pedal.

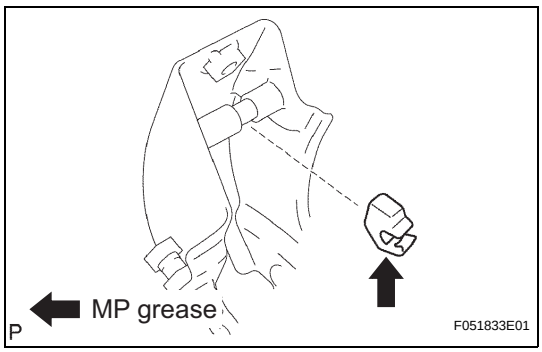


3. INSTALL CLUTCH PEDAL BUSH

(a) Apply MP grease to 2 new bushes.

(b) Install the 2 bushes onto the clutch pedal.

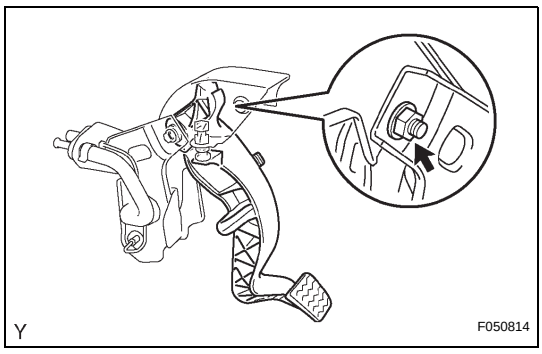
4. INSTALL CLUTCH PEDAL PAD



5. INSTALL CLUTCH PEDAL SPRING HOLDER

(a) Apply MP grease to the contact surface of the clutch pedal spring holder.

(b) Install the clutch pedal spring holder.



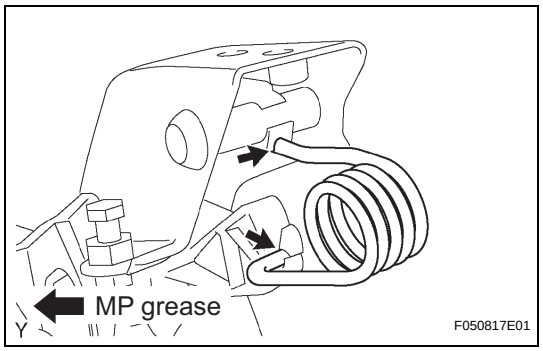
6. INSTALL CLUTCH PEDAL SUB-ASSEMBLY

(a) Install the clutch pedal onto the clutch pedal support with the bolt and nut.

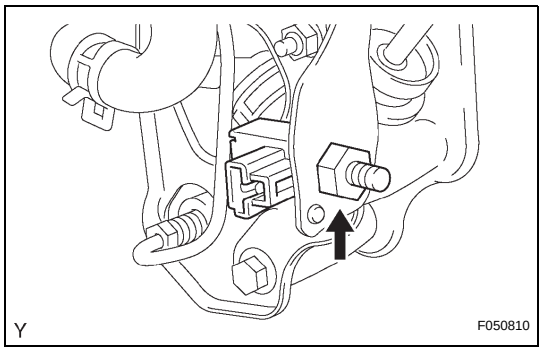
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)

HINT:

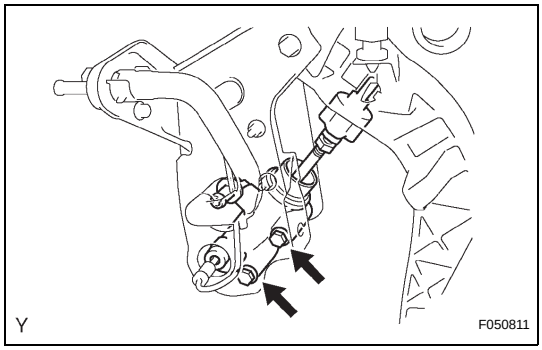
Install the bolt from the left side of the vehicle.



7. **INSTALL TURN OVER SPRING SEAT COMPRESSION SPRING**
   (a) Apply MP grease to the contact surfaces of the spring holder, clutch pedal and spring.
   (b) Install the spring onto the clutch pedal and spring holder.
8. **INSTALL CLUTCH MASTER CYLINDER ASSEMBLY** (See page CL-12)
9. **BLEED BRAKE LINE (w/o VSC)**
10. **BLEED CLUTCH PIPE LINE**
11. **INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY (See page CL-6)**
12. **CHECK BRAKE FLUID LEAKAGE (w/o VSC)**
13. **CHECK FOR CLUTCH FLUID LEAKAGE**
14. **CHECK FLUID LEVEL IN RESERVOIR**

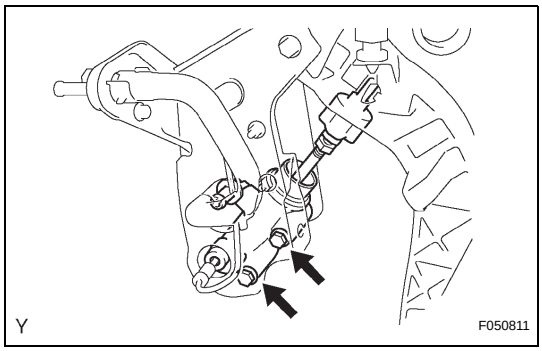


(c) Remove the nut and clutch start switch from the clutch pedal support.



(d) Remove the 2 bolts, then remove the clutch master cylinder.

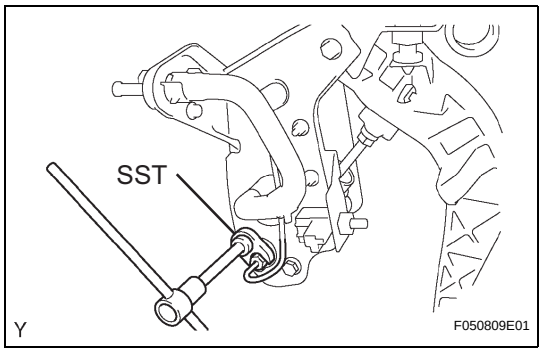
INSTALLATION



1. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY

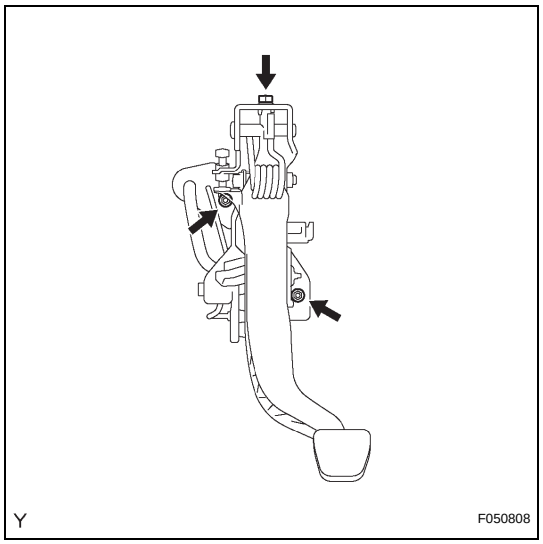
(a) Install the clutch master cylinder with the 2 bolts.
Torque: 16 N*m (158 kgf*cm, 11 ft.*lbf)

(b) Install the clutch start switch with the nut.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



(c) Using SST, connect the clutch master cylinder to 2 way tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

(d) Connect the clutch reservoir tube.



2. INSTALL CLUTCH PEDAL WITH CLUTCH MASTER CYLINDER

(a) Install the clutch pedal with clutch master cylinder onto the vehicle with the 2 nuts and bolt.
Torque: 14 N*m (145 kgf*cm, 10 ft.*lbf) for nut
24 N*m (245 kgf*cm, 18 ft.*lbf) for bolt

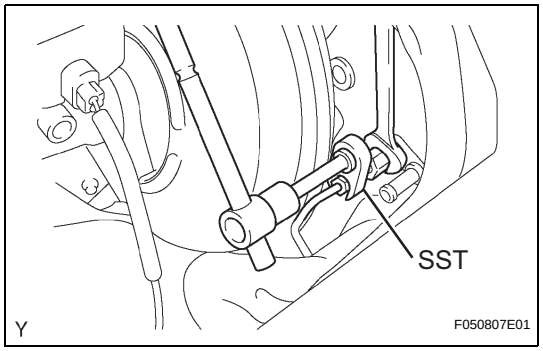
(b) Connect the clutch start switch connector.

3. CONNECT DRIVER SIDE JUNCTION BLOCK

4. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)

5. INSTALL COWL SIDE TRIM BOARD LH

6. INSTALL FRONT DOOR SCUFF PLATE LH



7. CONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST, connect the flexible hose tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

8. CONNECT CLUTCH RESERVOIR TUBE

9. BLEED BRAKE LINE (w/o VSC)

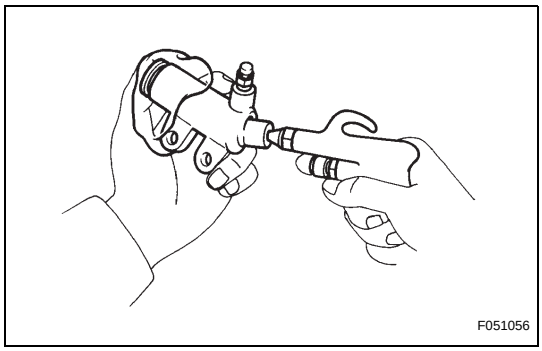
10. BLEED CLUTCH PIPE LINE

11. INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY (See page CL-6)

12. CHECK BRAKE FLUID LEAKAGE (w/o VSC)

13. CHECK FOR CLUTCH FLUID LEAKAGE

14. CHECK FLUID LEVEL IN RESERVOIR



DISASSEMBLY

1. REMOVE CLUTCH RELEASE CYLINDER KIT

(a) Remove the boot from the cylinder body.

(b) Remove the push rod from the cylinder body.

(c) Using compressed air, remove the piston together with the spring from the cylinder.

NOTICE:
Be careful not to damage the inside of the cylinder body.

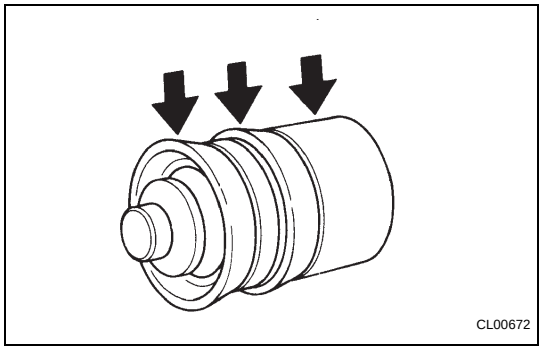
(d) Remove the bleeder plug cap from the bleeder plug.

2. REMOVE RELEASE CYLINDER BLEEDER PLUG

REASSEMBLY

1. INSTALL RELEASE CYLINDER BLEEDER PLUG
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

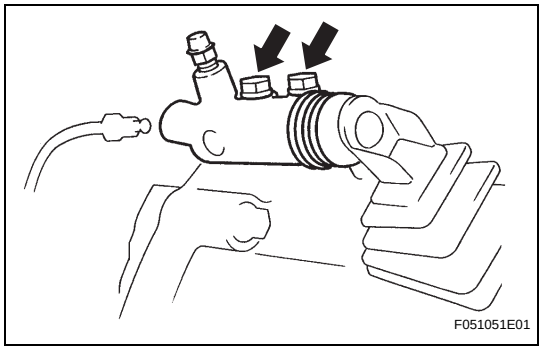
2. INSTALL CLUTCH RELEASE CYLINDER KIT
(a) Install the bleeder plug cap onto the bleeder plug.
(b) Install the spring onto the cylinder body.
(c) Apply lithium soap base glycol grease to the portions shown in the illustration.
(d) Install the piston onto the cylinder body.
NOTICE:
Be careful not to damage the inside of the cylinder body.
(e) Install the push rod into the cylinder body.
(f) Install the boot onto the cylinder body.



CL00672

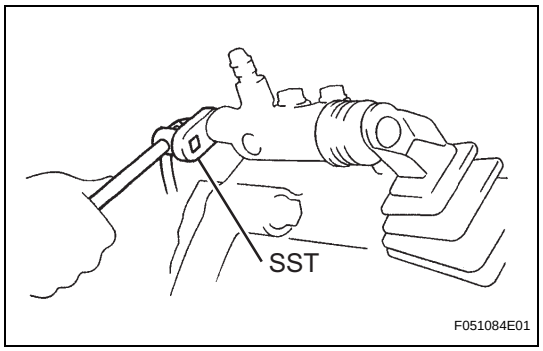
INSTALLATION

1. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY
(a) Install the clutch release cylinder with the 2 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



F051051E01

2. CONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE
(a) Using SST, connect the flexible hose tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)



F051084E01

3. BLEED CLUTCH PIPE LINE
(a) Fill the brake reservoir tank with brake fluid and bleed the clutch system.
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

DISASSEMBLY

1. REMOVE CLUTCH RELEASE CYLINDER KIT

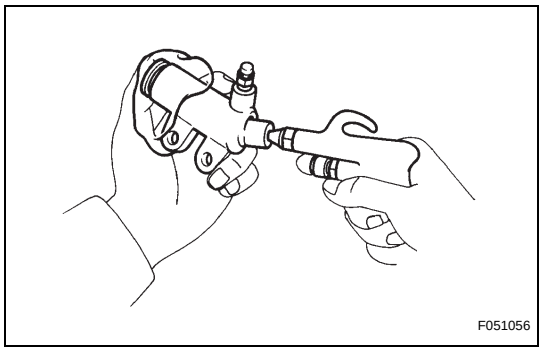
(a) Remove the boot from the cylinder body.

(b) Remove the push rod from the cylinder body.

(c) Using compressed air, remove the piston together with the spring from the cylinder.

NOTICE:
Be careful not to damage the inside of the cylinder body.

(d) Remove the bleeder plug cap from the bleeder plug.



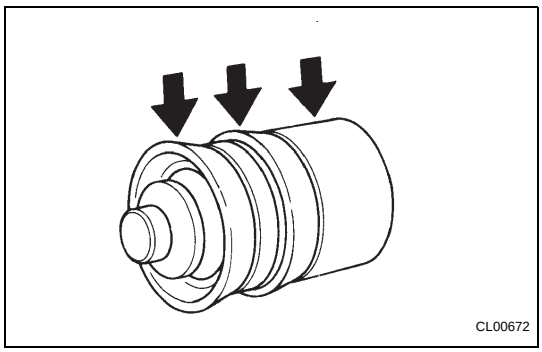
2. REMOVE RELEASE CYLINDER BLEEDER PLUG

CL

REASSEMBLY

1. INSTALL RELEASE CYLINDER BLEEDER PLUG
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

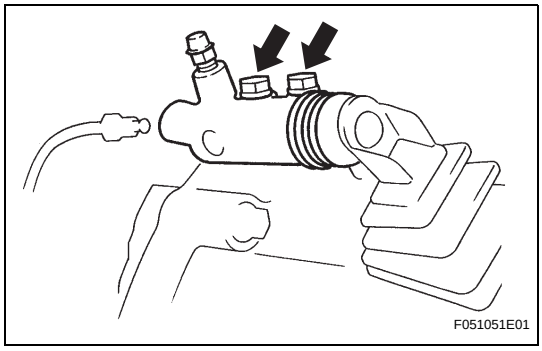
2. INSTALL CLUTCH RELEASE CYLINDER KIT
(a) Install the bleeder plug cap onto the bleeder plug.
(b) Install the spring onto the cylinder body.
(c) Apply lithium soap base glycol grease to the portions shown in the illustration.
(d) Install the piston onto the cylinder body.
NOTICE:
Be careful not to damage the inside of the cylinder body.
(e) Install the push rod into the cylinder body.
(f) Install the boot onto the cylinder body.



CL00672

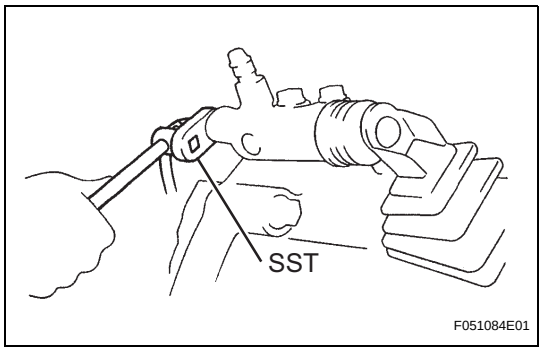
INSTALLATION

1. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY
(a) Install the clutch release cylinder with the 2 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



F051051E01

2. CONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE
(a) Using SST, connect the flexible hose tube.
SST 09023-00101

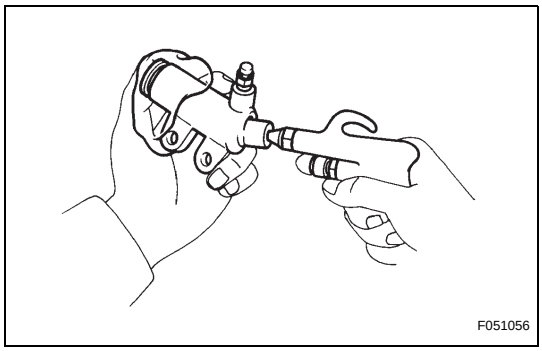


F051084E01

3. BLEED CLUTCH PIPE LINE
(a) Fill the brake reservoir tank with brake fluid and bleed the clutch system.
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

DISASSEMBLY



1. REMOVE CLUTCH RELEASE CYLINDER KIT

(a) Remove the boot from the cylinder body.

(b) Remove the push rod from the cylinder body.

(c) Using compressed air, remove the piston together with the spring from the cylinder.

NOTICE:
Be careful not to damage the inside of the cylinder body.

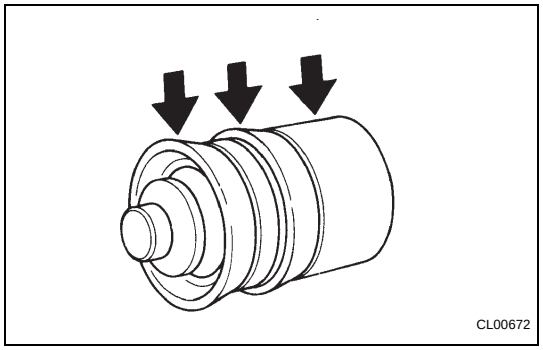
(d) Remove the bleeder plug cap from the bleeder plug.

2. REMOVE RELEASE CYLINDER BLEEDER PLUG

REASSEMBLY

1. INSTALL RELEASE CYLINDER BLEEDER PLUG
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

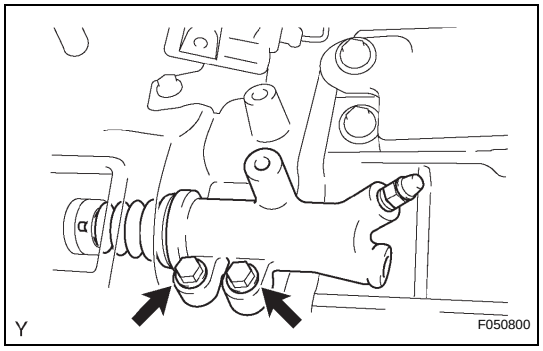
2. INSTALL CLUTCH RELEASE CYLINDER KIT
(a) Install the bleeder plug cap onto the bleeder plug.
(b) Install the spring onto the cylinder body.



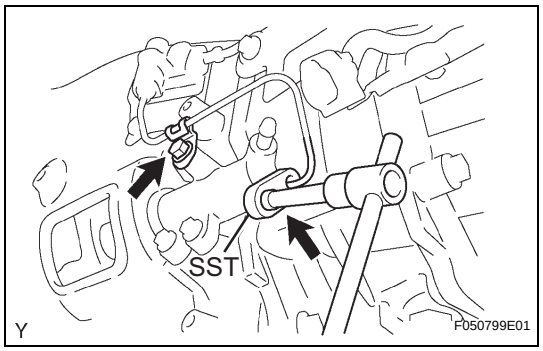
(c) Apply lithium soap base glycol grease to the portions shown in the illustration.
(d) Install the piston onto the cylinder body.
NOTICE:
Be careful not to damage the inside of the cylinder body.
(e) Install the push rod into the cylinder body.
(f) Install the boot onto the cylinder body.

INSTALLATION

1. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY
(a) Install the clutch release cylinder with the 2 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



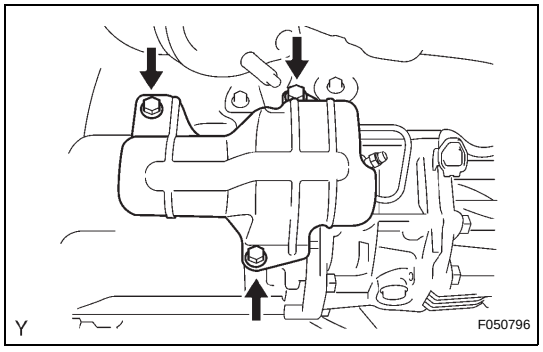
2. CONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE
(a) Using SST, connect the flexible hose tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)
(b) Install the clutch line bracket.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



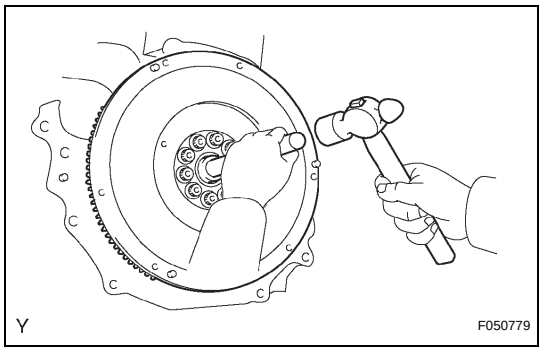
3. BLEED CLUTCH PIPE LINE
(a) Fill the brake reservoir tank with brake fluid and bleed the clutch system.
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

5. INSTALL NO. 1 CLUTCH HOUSING COVER
(a) Install the clutch housing cover No. 1 with the 3 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



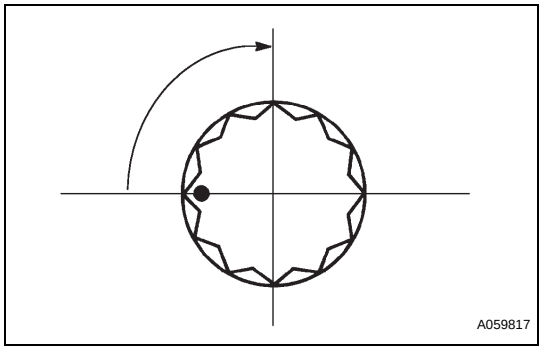
INSTALLATION



1. INSTALL INPUT SHAFT BEARING

(a) Using SST and a hammer, install the input shaft bearing.
SST 09304-30012
HINT:
After assembling the input shaft bearing to the hub, make sure that it rotates smoothly.

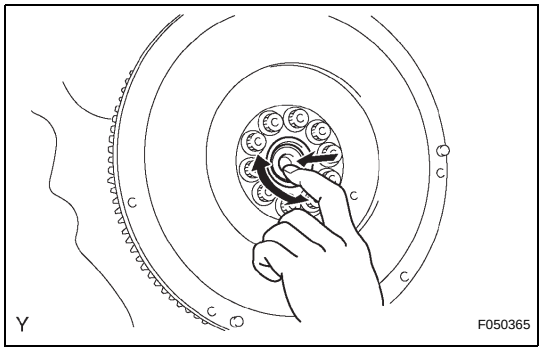
(b) Install 4 new bolts.
Torque: 27 N*m (270 kgf*cm, 20 ft.*lbf)



(c) Mark each bolt with paint as shown in the illustration.

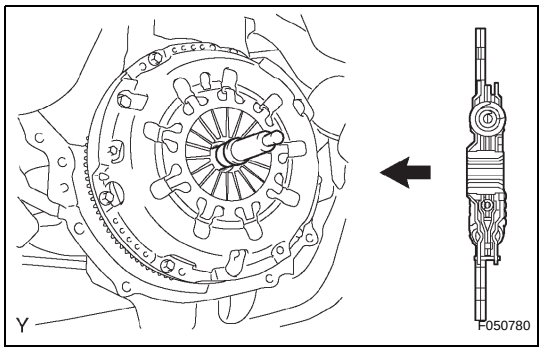
(d) Retighten each bolt by 90°.

(e) Check that the mark on each bolt is at a 90° angle from its original position.



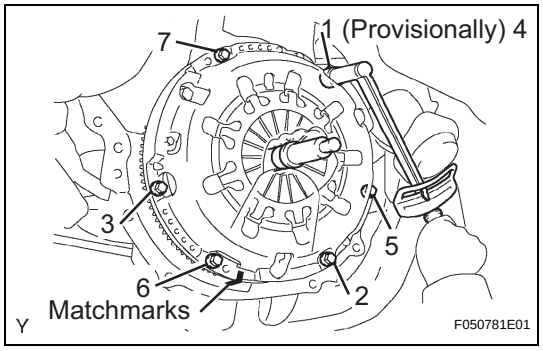
2. INSPECT INPUT SHAFT BEARING

(a) Turn the bearing by hand while applying force in the rotation direction.
If the bearing is stuck or difficult to turn, replace the input shaft bearing.
HINT:
The bearing is permanently lubricated and requires no cleaning or lubrication.



3. INSTALL CLUTCH DISC ASSEMBLY

(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.
SST 09301-00210
NOTICE:
Take care not to insert clutch disc assembly in the wrong orientation.

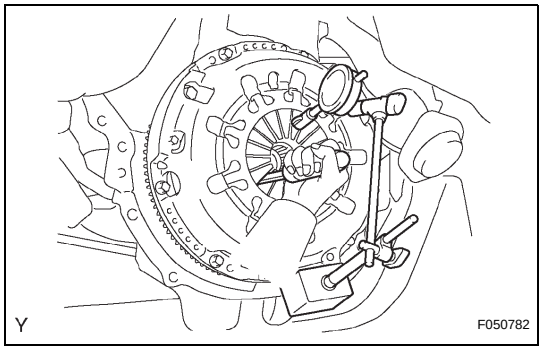


4. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly and flywheel sub-assembly.

(b) Tighten the 6 bolts, in the order shown in the illustration, starting with the bolt located near the knock pin on the top.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
HINT:
- Following the order in the illustration, uniformly tighten the bolts.

- Move SST up and down, right and left gently after checking that the disc is in the center, and tighten the bolts.



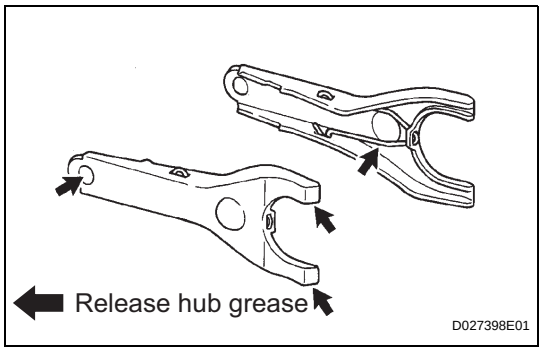
5. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with roller instrument, check the diaphragm spring tip alignment.
Maximum non-alignment:
0.5 mm (0.020 in.)
If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.
SST 09333-00013

6. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

7. INSTALL RELEASE BEARING HUB CLIP



8. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the release fork and release bearing assembly contact surfaces, release fork and push rod contact surface and release fork pivot point.
Sealant:
Part No. 08887-01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork onto the release bearing assembly.

9. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

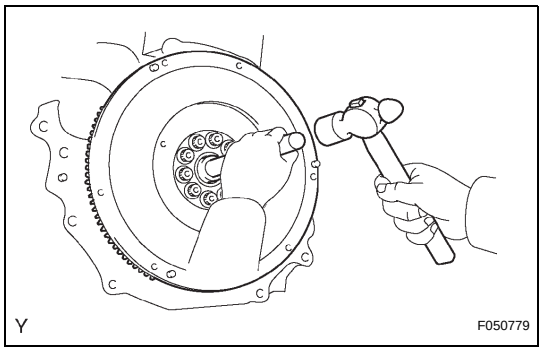
(a) Apply clutch spline grease to the input shaft spline.
Sealant:
Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

(b) Install the bearing onto the release fork, and then install them onto the transaxle assembly.
NOTICE:
After installation, move the fork forward and backward to check that the release bearing slides smoothly.

10. INSTALL CLUTCH RELEASE FORK BOOT

11. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY
(See page MT-9)

CL



INSTALLATION

1. INSTALL INPUT SHAFT BEARING

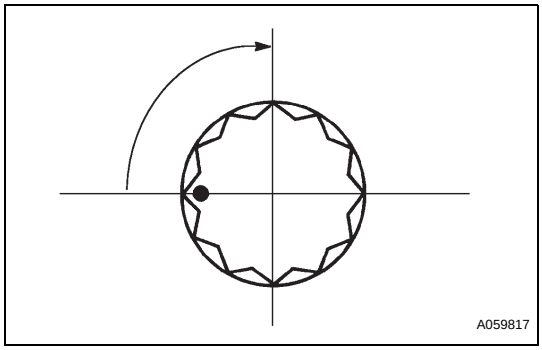
(a) Using SST and a hammer, install the input shaft bearing.
SST 09304-30012
HINT:
After assembling the input shaft bearing to the hub, make sure that it rotates smoothly.

(b) Install 4 new bolts.
Torque: 27 N*m (270 kgf*cm, 20 ft.*lbf)

(c) Mark each bolt with paint as shown in the illustration.

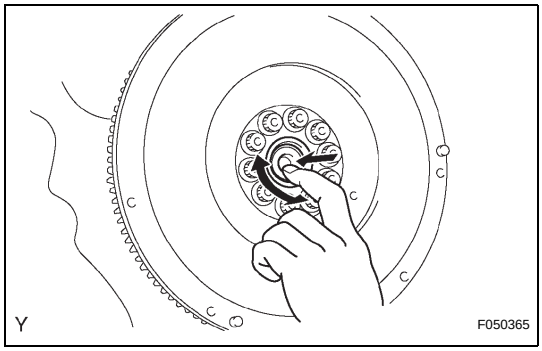
(d) Retighten each bolt by 90°.

(e) Check that the mark on each bolt is at a 90° angle from its original position.



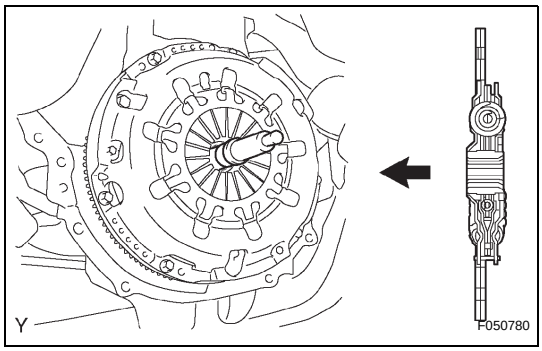
2. INSPECT INPUT SHAFT BEARING

(a) Turn the bearing by hand while applying force in the rotation direction.
If the bearing is stuck or difficult to turn, replace the input shaft bearing.
HINT:
The bearing is permanently lubricated and requires no cleaning or lubrication.



3. INSTALL CLUTCH DISC ASSEMBLY

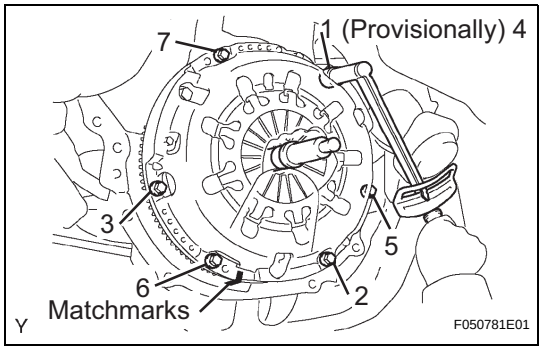
(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.
SST 09301-00210
NOTICE:
Take care not to insert clutch disc assembly in the wrong orientation.



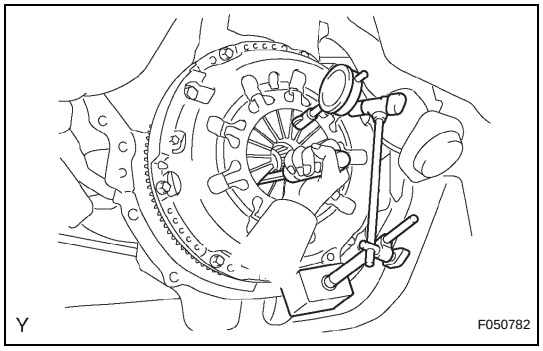
4. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly and flywheel sub-assembly.

(b) Tighten the 6 bolts, in the order shown in the illustration, starting with the bolt located near the knock pin on the top.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
HINT:
- Following the order in the illustration, uniformly tighten the bolts.



- Move SST up and down, right and left gently after checking that the disc is in the center, and tighten the bolts.



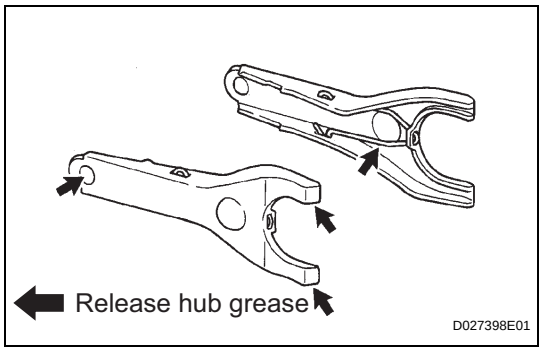
5. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with roller instrument, check the diaphragm spring tip alignment.
Maximum non-alignment:
0.5 mm (0.020 in.)
If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.
SST 09333-00013

6. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

7. INSTALL RELEASE BEARING HUB CLIP



8. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the release fork and release bearing assembly contact surfaces, release fork and push rod contact surface and release fork pivot point.
Sealant:
Part No. 08887-01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork onto the release bearing assembly.

9. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

(a) Apply clutch spline grease to the input shaft spline.
Sealant:
Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

(b) Install the bearing onto the release fork, and then install them onto the transaxle assembly.
NOTICE:
After installation, move the fork forward and backward to check that the release bearing slides smoothly.

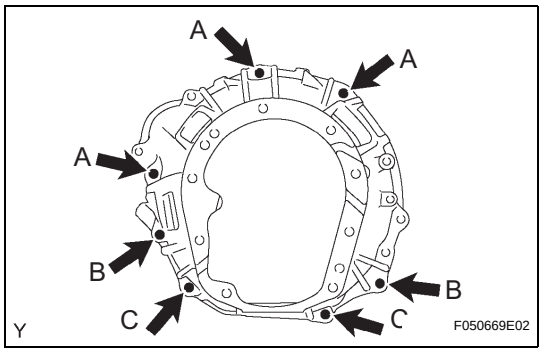
10. INSTALL CLUTCH RELEASE FORK BOOT

11. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY
(See page MT-11)

MT

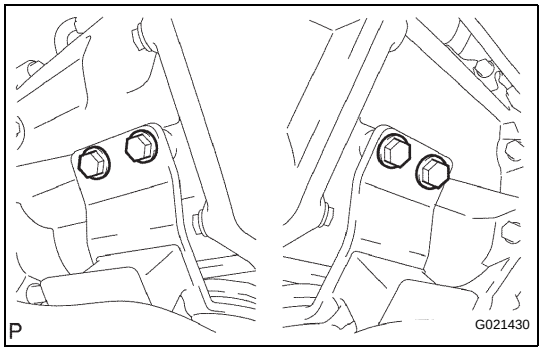
INSTALLATION

1. **INSTALL TRANSFER ASSEMBLY (See page TF-38)**

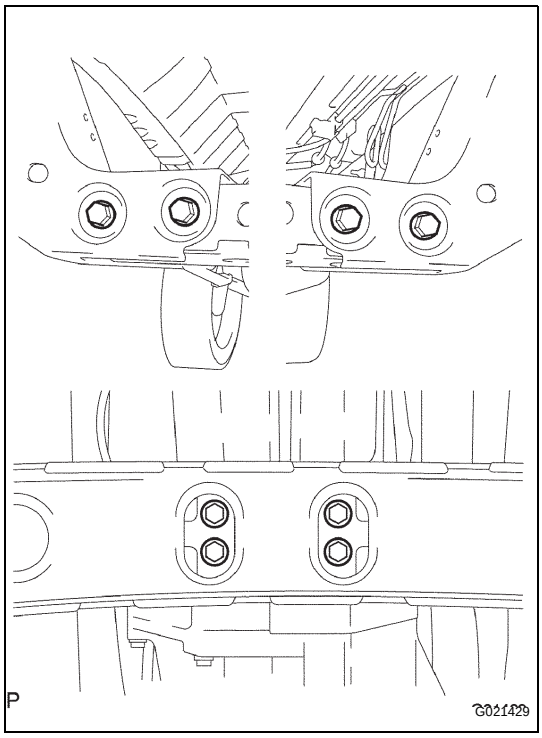


2. **INSTALL MANUAL TRANSMISSION WITH TRANSFER**
   (a) Align the input shaft with the clutch disc and install the transmission unit assembly onto the engine.
   (b) Install the 7 bolts.
   Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
   37 N*m (379 kgf*cm, 27 ft.*lbf) for bolt B and C
   HINT:
   Install bolt B from the front of the vehicle direction.

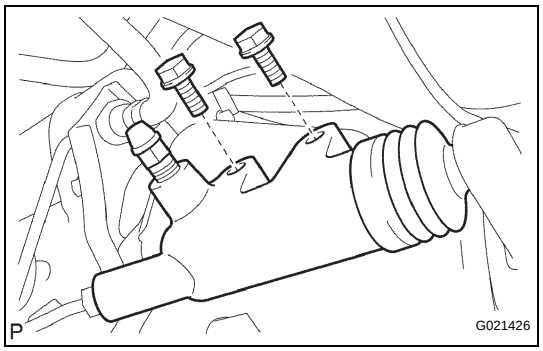
3. **CONNECT WIRE HARNESS**
   (a) Connect the wire harness clamp to the transmission w/ transfer assembly.
   (b) Connect the back-up lamp switch connector.
   (c) Connect the speed sensor connector.
   (d) Connect the 2 transfer indicator switch connectors.
   (e) Connect the transfer shift actuator motor connector.



4. **INSTALL NO. 1 ENGINE MOUNTING INSULATOR REAR**
   (a) Install the engine mount insulator rear No. 1 with 4 bolts onto the transmission assembly.
   Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

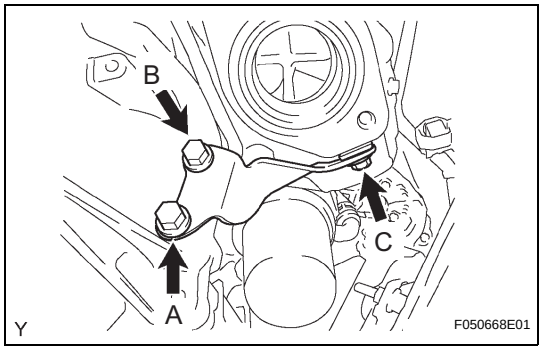


5. **INSTALL NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY**
   (a) Install the frame crossmember sub-assembly No. 3 with the 8 bolts and nuts.
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
   (b) Install the 4 bolts onto the engine mounting insulator rear No. 1.
   Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)



6. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY**
   (a) Install the clutch release cylinder assembly with the 2 bolts.
   Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

7. **INSTALL STARTER ASSEMBLY (See page ST-10)**



8. **INSTALL MANIFOLD STAY**
   (a) Install the manifold stay with the 3 bolts.
   Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
   44 N*m (449 kgf*cm, 33 ft.*lbf) for bolt B
   30 N*m (306 kgf*cm, 22 ft.*lbf) for bolt C

9. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-32)**

10. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-25)**

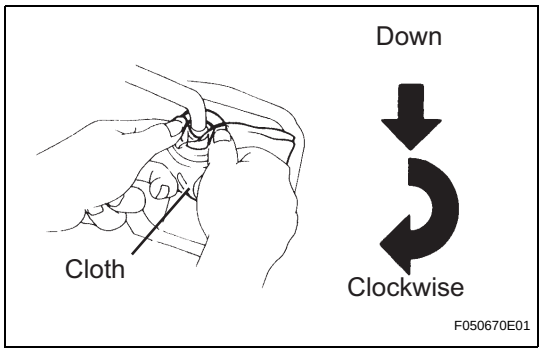
11. **INSTALL FRONT PROPELLER SHAFT ASSEMBLY (See page PR-19)**

12. **INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)**

13. **ADD MANUAL TRANSMISSION OIL**

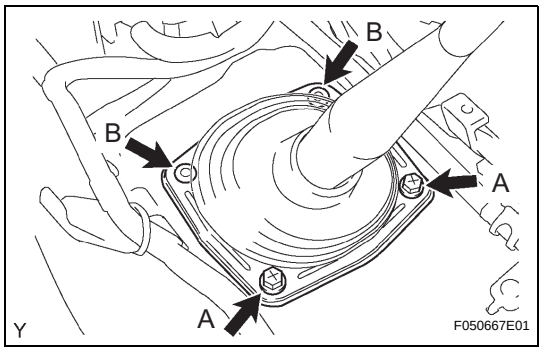
14. **ADJUST MANUAL TRANSMISSION OIL (See page MT-2)**

15. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Install the engine under cover No. 2 with the 4 bolts.
   Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

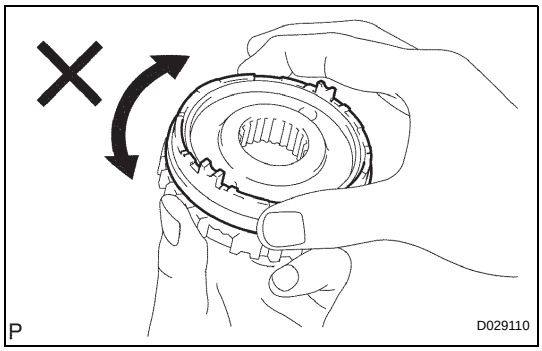


16. **INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Cover the shift lever cap with a cloth.
   (b) While pressing down on the shift lever, turn it clockwise to install.
   HINT:
   Apply MP grease to the tip of the shift lever.

MT



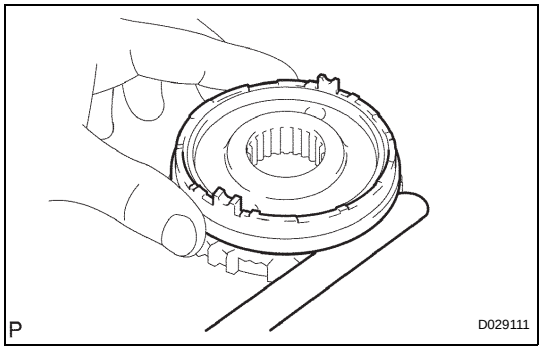
17. **INSTALL SHIFT LEVER BOOT ASSEMBLY**
    (a) Install the shift lever boot assembly with the 2 screws A and 2 clips B.
18. **INSTALL FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-22)**
19. **INSTALL FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-23)**
20. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
21. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-25)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
23. **CHECK FOR MANUAL TRANSMISSION OIL LEAKAGE**



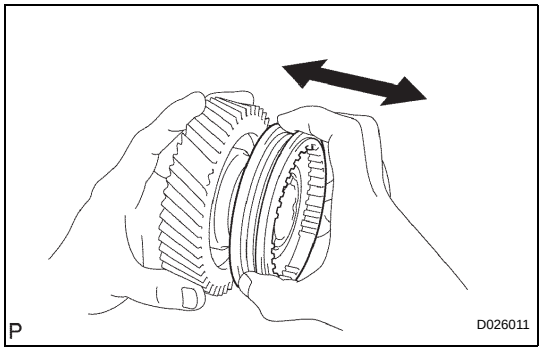
INSPECTION

1. INSPECT NO. 3 SYNCHRONIZER RING OUTER

(a) Apply gear oil to the cone part of gear spline piece No. 5, and check that it does not turn in both directions while pushing the synchronizer ring outer No. 3 to the gear spline piece No. 5.
If it turns, replace the synchronizer ring.



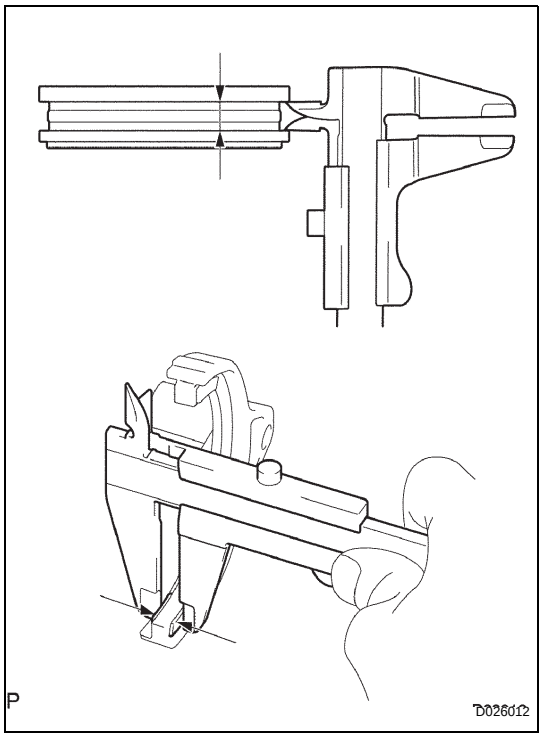
(b) Measure the clearance between the synchronizer ring outer No. 3 and gear spline piece No. 5 while pushing the synchronizer ring outer No. 3 to the cone part of the gear spline piece No. 5.
Standard clearance:
0.68 to 1.32 mm (0.0267 to 0.0610 in.)
If the clearance is not within the specified values, replace synchronizer ring outer No. 3 with a new one.



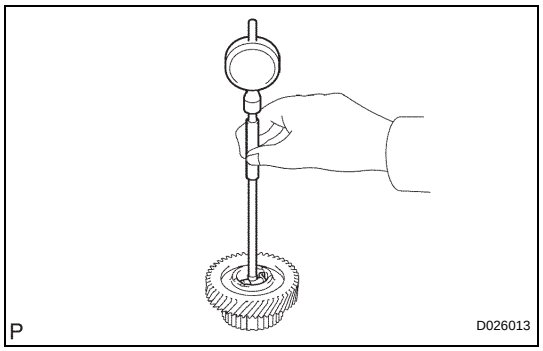
2. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Check that the counter shaft 5th gear and transmission hub sleeve No. 3 slide smoothly each other.

(b) Check the tip of the spline gear of the transmission hub sleeve No. 3 for wear.
If there are any detects, replace the transmission hub sleeve No. 3.



(c) Using vernier calipers, measure the transmission hub sleeve No. 3 groove and the thickness of the claw part of the shift fork No. 3 to calculate the clearance.
Standard clearance:
0.26 to 0.84 mm (0.0102 to 0.0331 in.)
If the clearance is not within the specified values, replace the transmission hub sleeve No. 3 and shift fork No. 3 with new ones.



3. INSPECT COUNTERSHAFT 5TH GEAR

(a) Using a cylinder gauge, measure the inner diameter of the counter 5th gear.

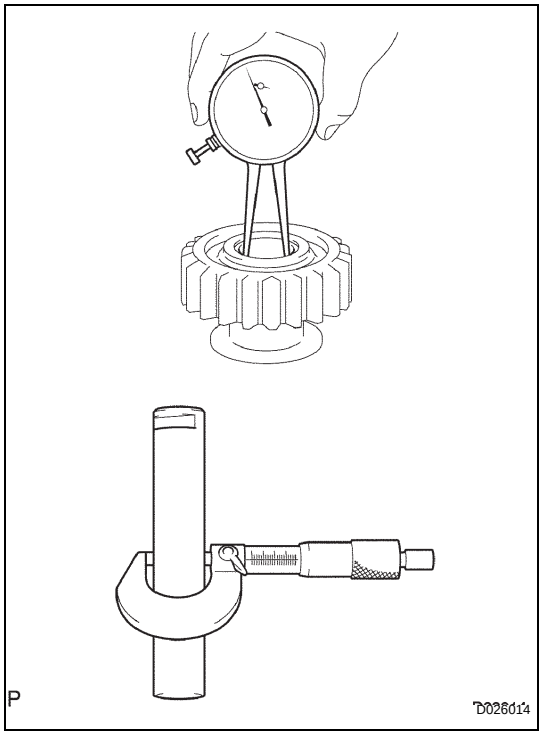
Standard diameter:

38.015 to 38.040 mm (1.4967 to 1.4976 in.)

Maximum diameter:

38.040 mm (1.4976 in.)

If the diameter greater than the maximum, replace the counter shaft 5th gear with a new one.



4. INSPECT REVERSE IDLER GEAR SUB-ASSY

(a) Using a caliper gauge, measure the inner diameter of the reverse idler gear.

Standard diameter:

24.040 to 24.061 mm (0.9465 to 0.9473 in.)

Maximum diameter:

24.061 mm (0.9473 in.)

If the clearance is greater than the maximum, replace the reverse idler gear with a new one.

(b) Using a micrometer, measure the outer diameter of the sliding part of the reverse idler gear on the reverse idler gear shaft.

Standard diameter:

23.979 to 24.000 mm (0.9441 to 0.9449 in.)

Minimum diameter:

23.979 mm (0.9441 in.)

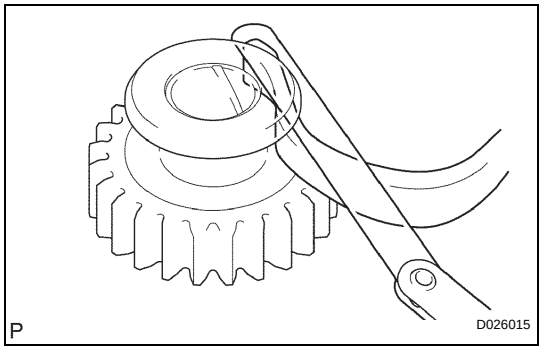
If the diameter is outside the specification, replace the reverse idler gear shaft with a new one.

(c) Subtract the reverse idler gear shaft inside diameter measurement from the reverse idler gear diameter clearance.

Standard clearance:

0.040 to 0.082 mm (0.0016 to 0.0032 in.)

If the clearance is not as specified, replace the reverse idler gear or reverse idler gear shaft.



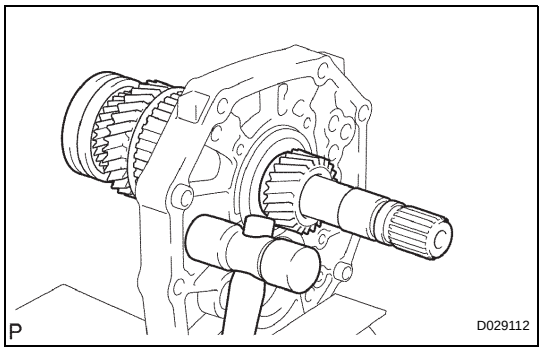
(d) Using a feeler gauge, measure the thrust clearance of the shoe part between the reverse idler gear and the reverse shift arm.

Standard clearance:

0.05 to 0.35 mm (0.0020 to 0.0138 in.)

If the clearance is outside the specification, replace the idler gear and reverse shift arm with new ones.

MT

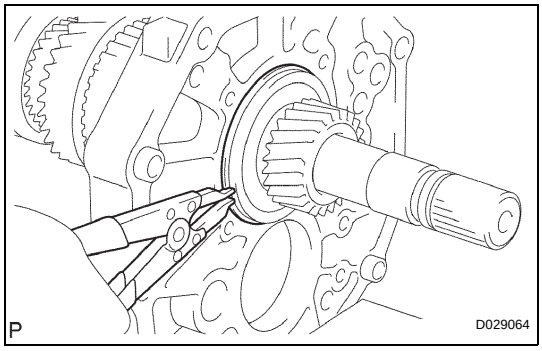


REASSEMBLY

1. INSTALL OUTPUT SHAFT ASSEMBLY

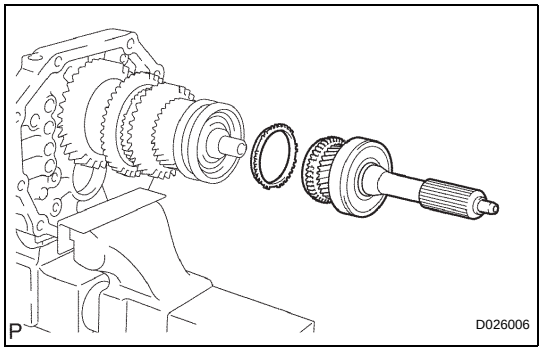
(a) Apply gear oil to the sliding part of the output assembly.

(b) Using a plastic hammer, install the output shaft assembly by tapping the intermediate plate.



2. INSTALL OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, install the output shaft bearing shaft snap ring onto the output shaft.

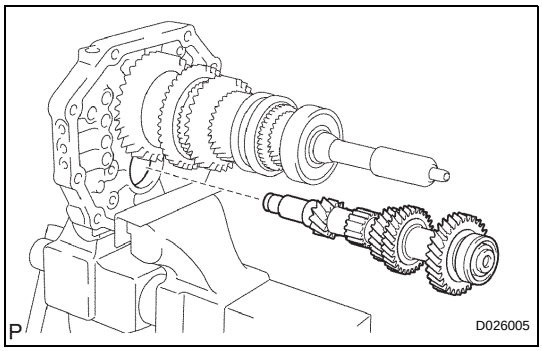


3. INSTALL INPUT SHAFT ASSEMBLY

(a) Apply gear oil to the input shaft assembly and synchronizer ring No. 2, and install them onto the output shaft.

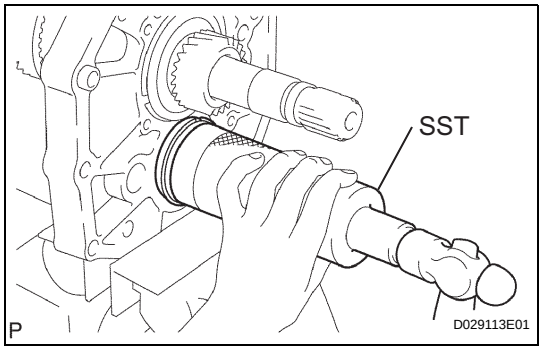
NOTICE:

- **Install the synchronizer ring No. 2 so that its groove fits into the synchromesh shifting key No. 2.**
- **Check that the input shaft assembly rotates smoothly.**



4. INSTALL COUNTER GEAR

(a) Provisionally install the counter gear assembly onto the intermediate plate.



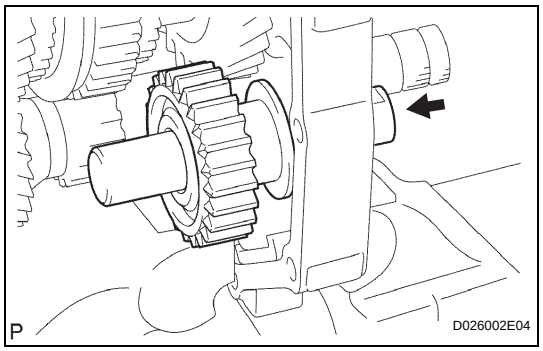
5. INSTALL COUNTER SHAFT CENTER BEARING

(a) Using SST and a hammer, install the new counter shaft center bearing onto the intermediate plate.

SST 09316-60011 (09316-00011)

HINT:

Remove the bearing while tapping the tip of the counter gear so that the counter gear assembly is not pushed forward into the side wall of the output shaft gear.

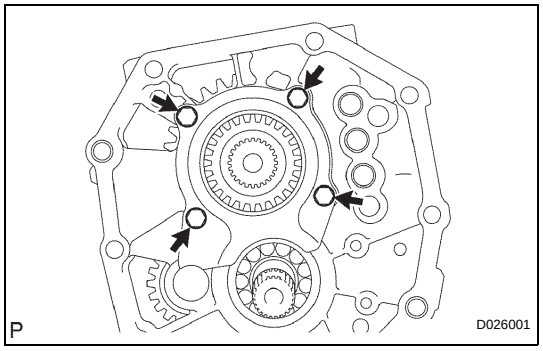


6. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Apply gear oil to each sliding part of the reverse idler gear and the reverse idler gear shaft, and install them onto the intermediate plate.

NOTICE:

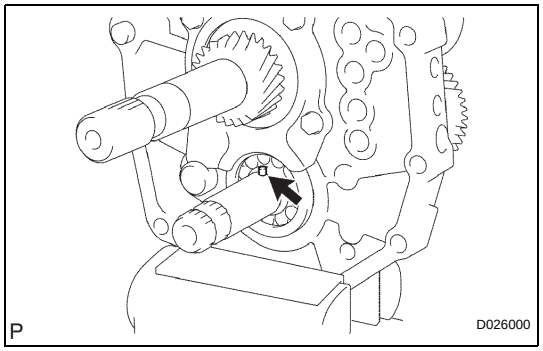
Orient the groove side of the reverse idler shaft to the rear side and install it from the rear side.



7. INSTALL OUTPUT SHAFT REAR BEARING RETAINER

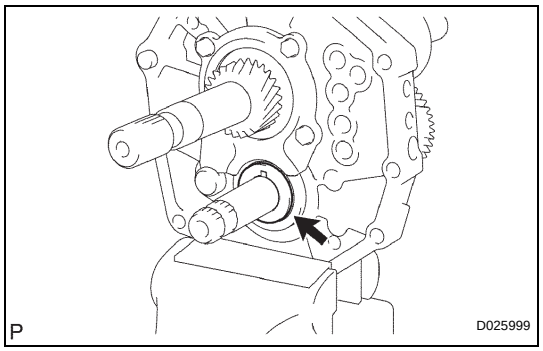
(a) Install the output shaft rear bearing retainer into the groove of the reverse idler gear shaft with the 4 bolts.

Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)



8. INSTALL 5TH GEAR THRUST WASHER PIN

(a) Apply MP grease to the 5th gear thrust washer pin, and install it onto the counter gear.

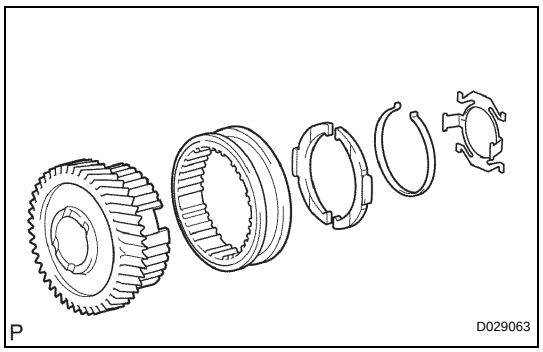


9. INSTALL 5TH GEAR THRUST WASHER

(a) Apply gear oil to the 5th gear thrust washer, and install it onto the counter gear.

NOTICE:

Install the thrust washer so that its chamfer side faces to the front side.



10. INSTALL NO. 3 TRANSMISSION HUB SLEEVE

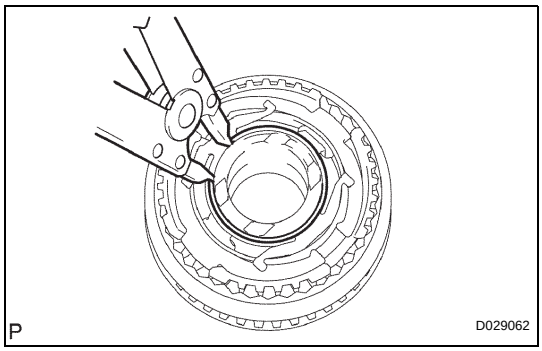
(a) Apply gear oil to the sliding part of transmission hub sleeve No. 3, and install it onto the counter shaft 5th gear.

NOTICE:

Make sure that the transmission hub sleeve No. 3 and counter 5th gear are oriented in the correct direction.

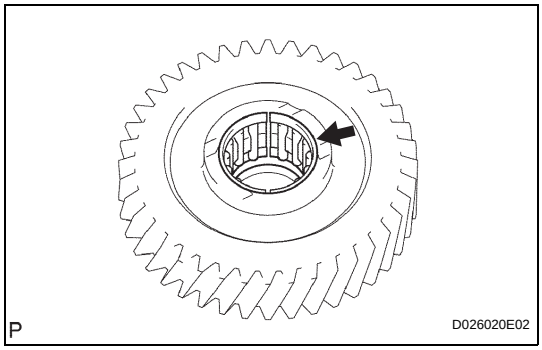
(b) Install the 2 synchromesh shifting keys No. 3 and the 2 synchromesh shifting key springs onto the counter shaft 5th gear.

MT



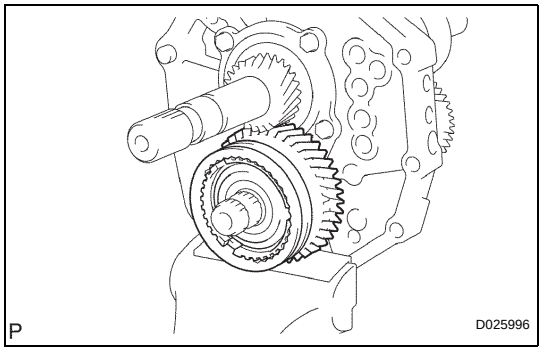
(c) Using a snap ring expander, install the bearing shaft snap ring onto the counter 5th gear.

MT



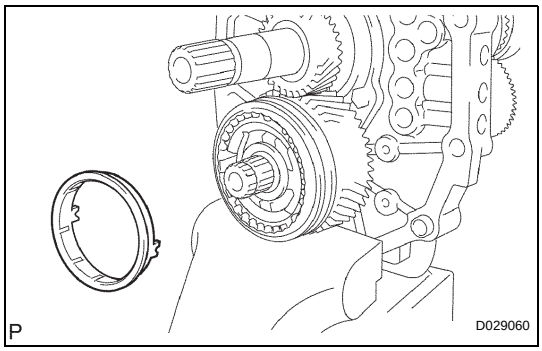
11. INSTALL COUNTER 5TH GEAR BEARING

(a) Apply gear oil to the counter 5th gear bearing and install it onto the counter 5th gear.



12. INSTALL COUNTER SHAFT 5TH GEAR

(a) Apply gear oil to the counter 5th gear and transmission hub sleeve No. 3 assembly, and install them onto the counter gear.

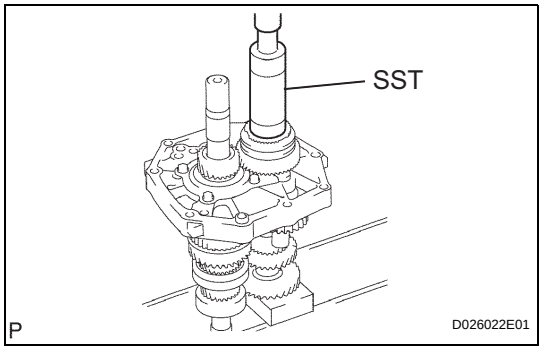


13. INSTALL NO. 3 SYNCHRONIZER RING OUTER

(a) Apply gear oil to the synchronizer ring outer No. 3, and install it onto the counter gear.

NOTICE:

Install the synchronizer ring outer No. 3 so that its groove fits into the synchromesh shifting key No. 3.



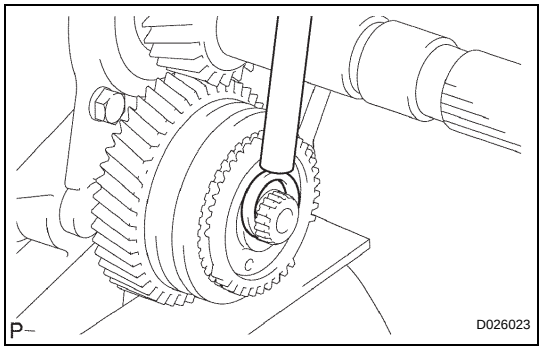
14. INSTALL NO. 5 GEAR SPLINE PIECE

(a) Using SST and a press, install the gear spline piece No. 5 onto the counter gear.

SST 09316-60011 (09316-00011)

NOTICE:

Check that the gear rotates smoothly.



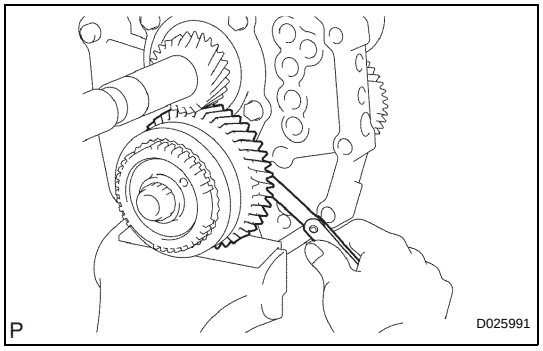
15. INSTALL COUNTER GEAR REAR SHAFT SNAP RING

(a) Select the counter gear rear shaft snap ring so that the thrust gap between gear spline piece No. 5 and counter gear rear shaft snap ring is within the specified values, and using a brass bar and a hammer, install it onto the counter gear.

Standard clearance:

0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.80 to 2.85 (0.1102 to 0.1122)
B	2.85 to 2.90 (0.1122 to 0.1141)
C	2.90 to 2.95 (0.1141 to 0.1160)
D	2.95 to 3.00 (0.1160 to 0.1181)
E	3.00 to 3.05 (0.1181 to 0.1200)
F	3.05 to 3.10 (0.1200 to 0.1220)
G	3.10 to 3.15 (0.1220 to 0.1240)

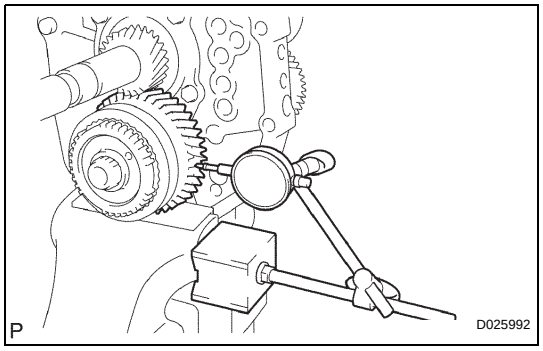


16. INSPECT COUNTER SHAFT 5TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, check the thrust clearance of the counter 5th gear.

Standard clearance:

0.10 to 0.35 mm (0.0039 to 0.0138 in.)



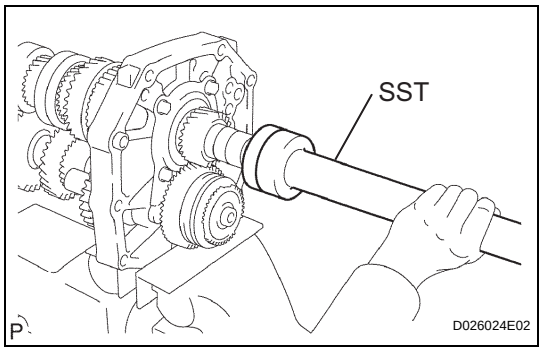
17. INSPECT COUNTER SHAFT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, check the counter 5th gear radial clearance.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

If the clearance is out of specification the counter 5th gear bearing.

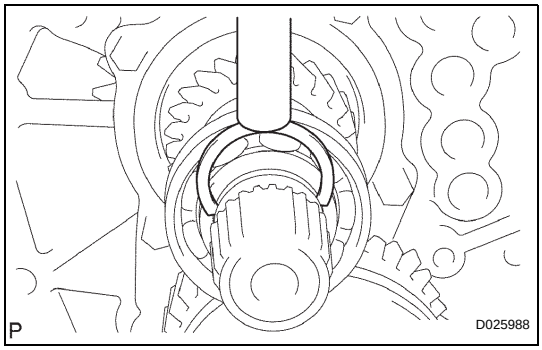


18. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install the new spacer and output shaft rear bearing onto the output shaft.

SST 09309-35010

MT



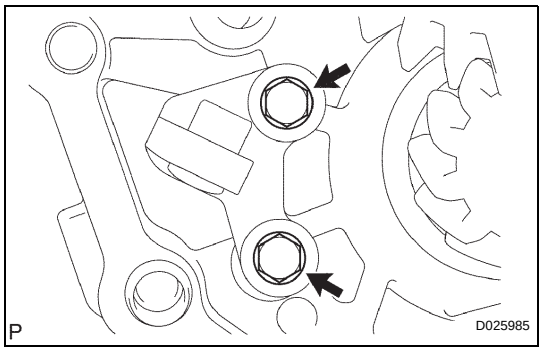
MT

19. INSTALL OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Select an output shaft bearing shaft snap ring so the thrust gap between the snap ring and the bearing is within the specified values. Use a brass bar and hammer to install it onto the output shaft.

Standard clearance:
0.1 mm (0.0039 in.) or less

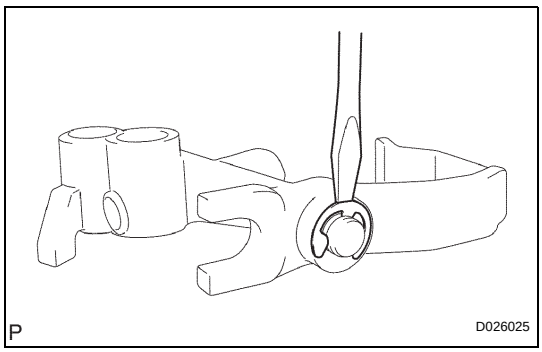
Mark	Thickness mm (in.)
A	2.65 to 2.70 (0.1043 to 0.1063)
B	2.70 to 2.75 (0.1063 to 0.1083)
C	2.75 to 2.80 (0.1083 to 0.1102)
D	2.80 to 2.85 (0.1102 to 0.1122)
E	2.85 to 2.90 (0.1122 to 0.1141)
F	2.90 to 2.95 (0.1141 to 0.1160)
G	2.95 to 3.00 (0.1160 to 0.1181)
H	3.00 to 3.05 (0.1181 to 0.1200)
J	3.05 to 3.10 (0.1200 to 0.1220)
K	3.10 to 3.15 (0.1220 to 0.1240)
L	3.15 to 3.20 (0.1240 to 0.1260)
M	3.20 to 3.25 (0.1260 to 0.1280)
N	3.25 to 3.30 (0.1280 to 0.1299)
P	3.30 to 3.35 (0.1299 to 0.1319)
Q	3.35 to 3.40 (0.1319 to 0.1339)
R	3.40 to 3.45 (0.1339 to 0.1358)
S	3.45 to 3.50 (0.1358 to 0.1378)



20. INSTALL REVERSE SHIFT ARM BRACKET

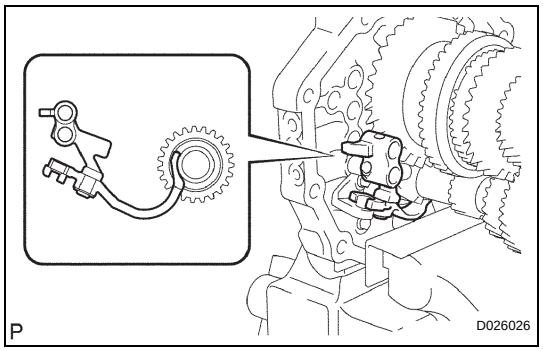
(a) Install the reverse shift arm bracket onto the intermediate plate with the 2 bolts.

Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

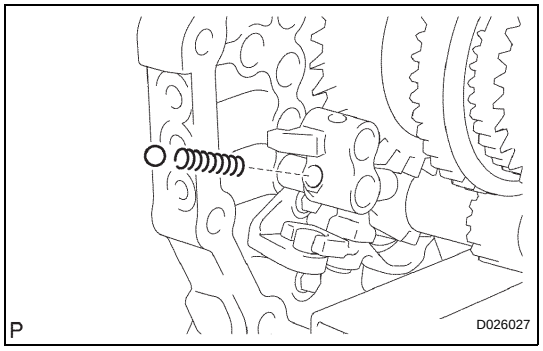


21. INSTALL REVERSE SHIFT FORK

(a) Install the reverse shift arm onto the reverse shift fork. Using a screwdriver and a hammer, install the new reverse shift arm end shaft ring.

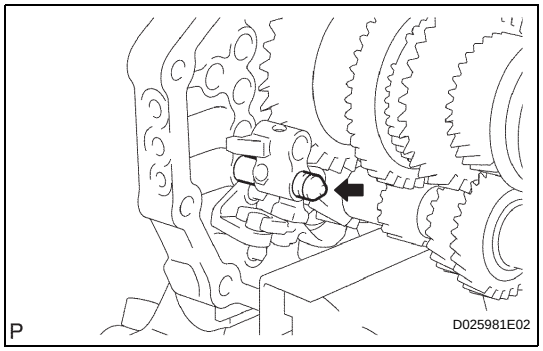


(b) Install the tip of the reverse shift arm onto the reverse idler gear. Align the cut end of the reverse shift arm with the reverse shift arm bracket pin, and install them.



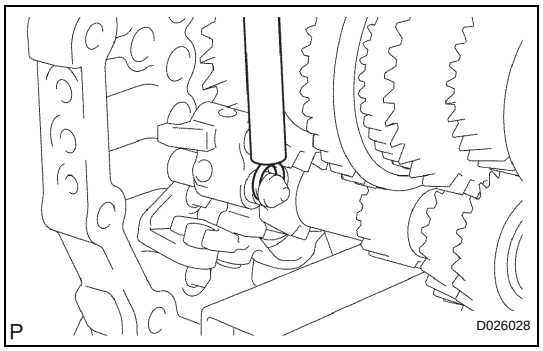
22. INSTALL 5TH SHIFT ARM SHAFT

(a) Install the reverse shift fork return compression spring and the reverse shift fork ball into the reverse shift fork.

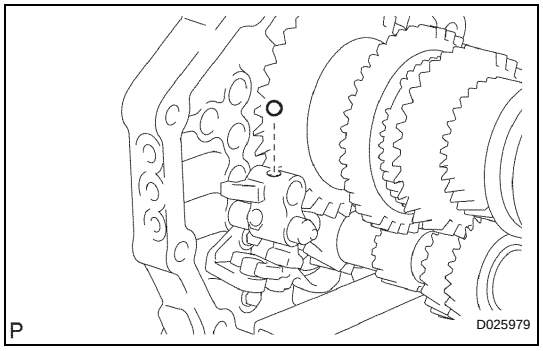


(b) Apply gear oil to the sliding part of the 5th shift arm shaft.

(c) Using a screwdriver, install the 5th shift arm shaft by pushing the reverse shift fork ball gently.

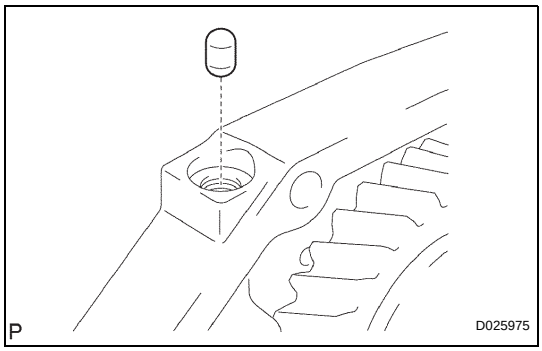


(d) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the 5th shift arm shaft.

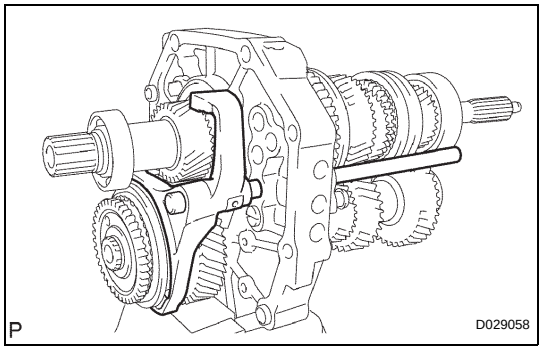


23. INSTALL REVERSE SHIFT FORK SHAFT

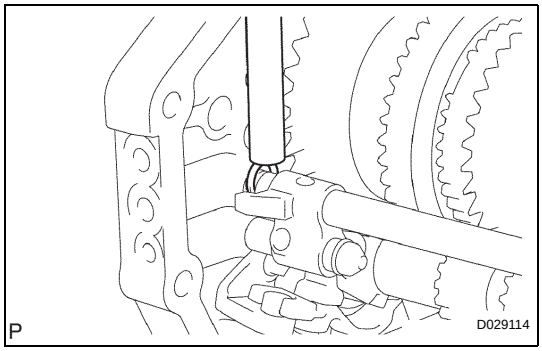
(a) Install the reverse shift fork ball into the reverse shift fork.



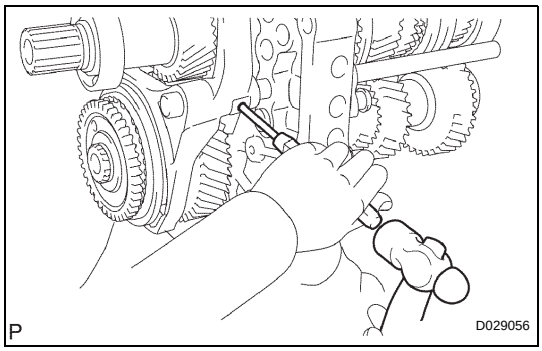
(b) Install the shift interlock No. 1 roller onto the intermediate plate.



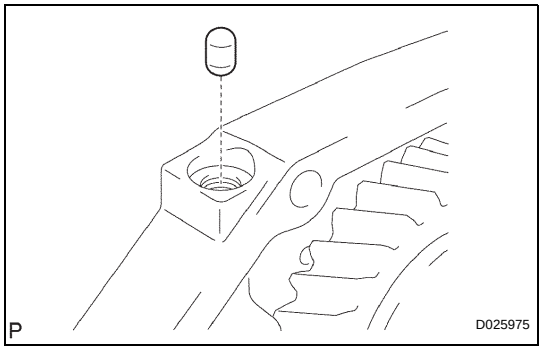
(c) Install the shift fork No. 3 onto the transmission hub sleeve No. 3 and the reverse shift fork shaft onto the intermediate plate from the front side.



(d) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the reverse shift fork shaft.

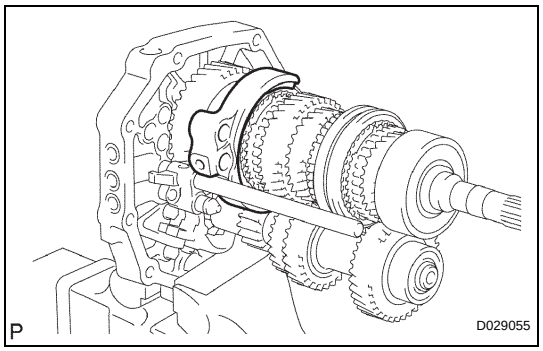


(e) Using a pin punch (5 mm) and a hammer, install the shift fork set slotted spring pin into the gear shift fork No. 3.

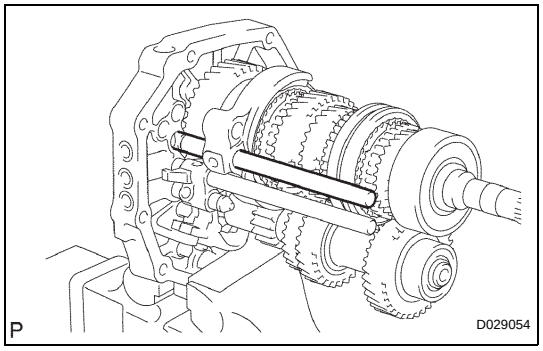


24. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

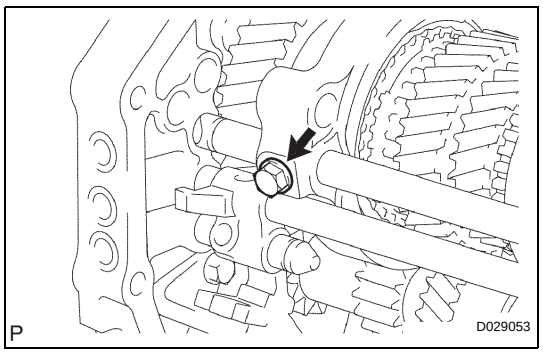
(a) Install the shift interlock No. 1 roller onto the intermediate plate.



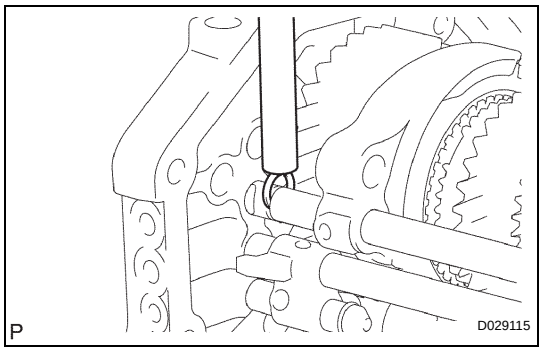
(b) Install the gear shift fork No. 1 onto the reverse gear.



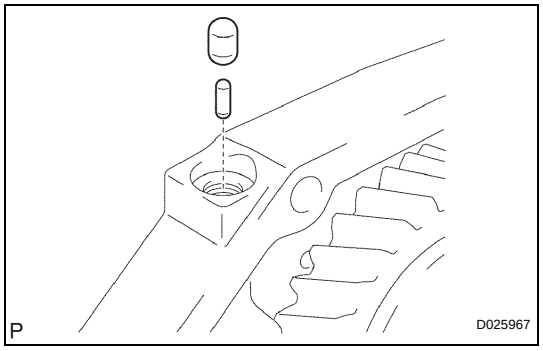
(c) Install the gear shift fork shaft No. 1 onto the intermediate plate from the rear side.



(d) Install the new shift fork set bolt onto the gear shift fork No. 1.
Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)

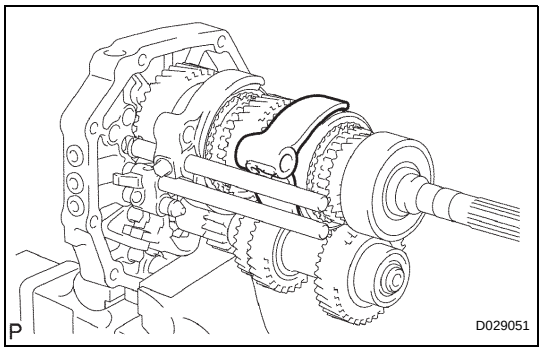


(e) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the gear shift fork shaft No. 1.

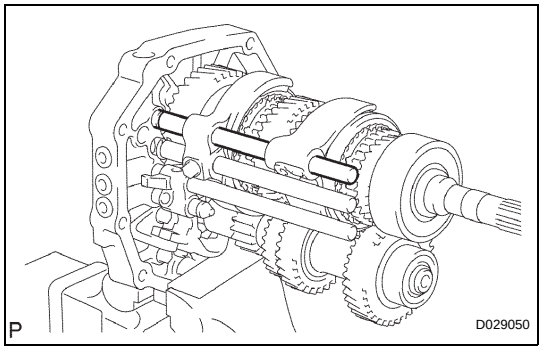


25. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

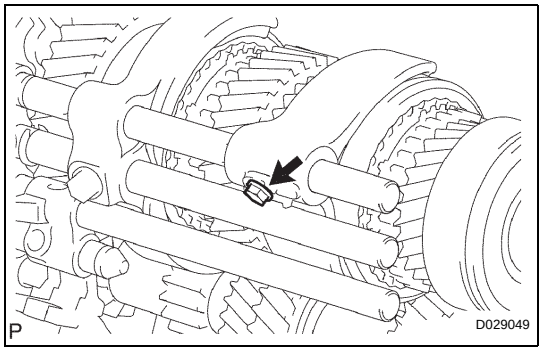
(a) Install the shift interlock pin (ball) and shift interlock No. 1 roller into the intermediate plate.



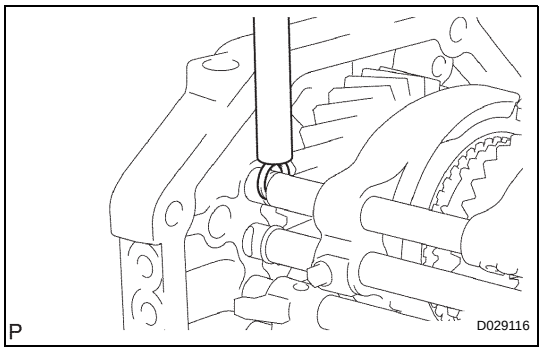
(b) Install the gear shift fork No. 2 onto the transmission hub sleeve No. 2.



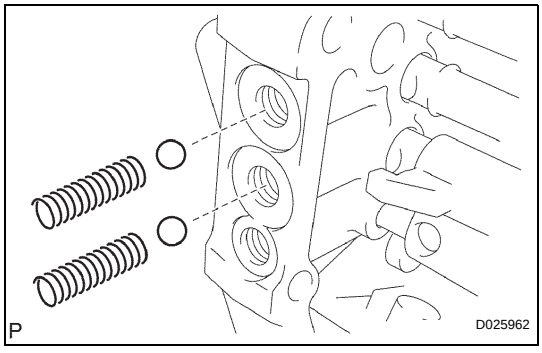
(c) Apply gear oil to the gear shift fork shaft No. 2, and install it onto the intermediate plate from the rear side.



(d) Install the new shift fork set bolt onto the gear shift fork No. 2.
Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)

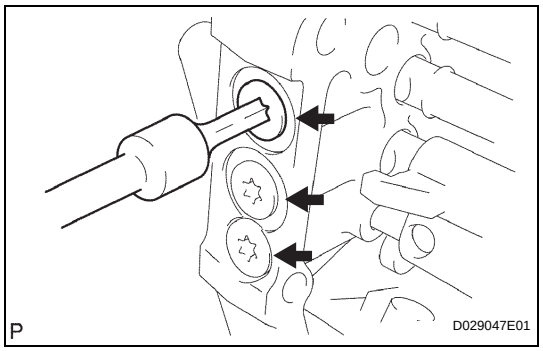


(e) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the gear shift fork shaft No. 2.

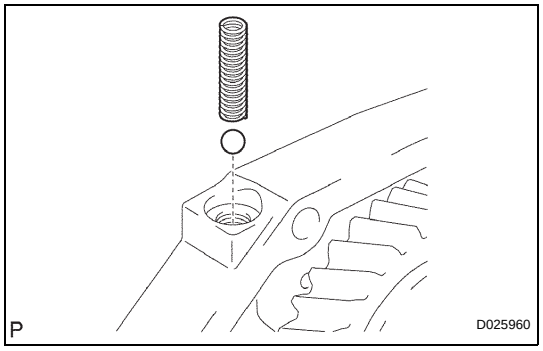


26. INSTALL NO. 1 SHIFT DETENT BALL SPRING SEAT

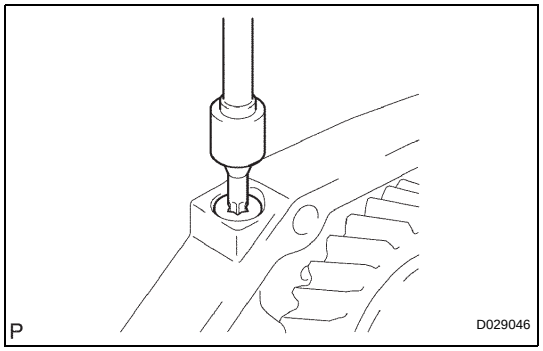
(a) Install the 2 shift detent ball low side compression springs and 2 shift detent balls into the intermediate plate.



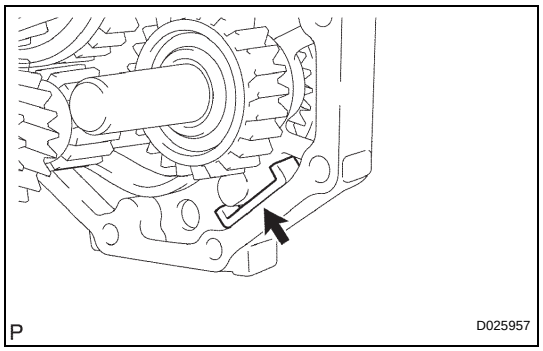
(b) Using a "Torx" socket wrench T40, install the 3 shift detent ball spring seats No. 1 onto the intermediate plate.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)



(c) Install the shift detent ball and the shift detent ball low side compression spring into the intermediate plate.

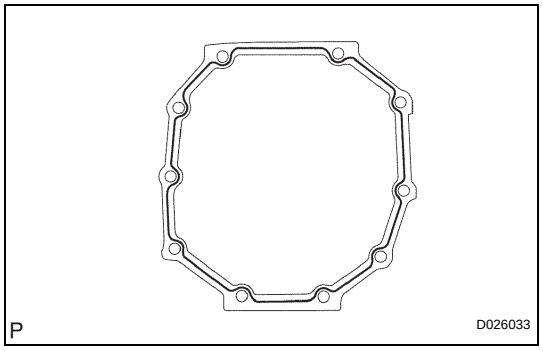


(d) Using a "Torx" socket wrench T40, install the shift detent ball spring seat No. 1 onto the intermediate plate.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)



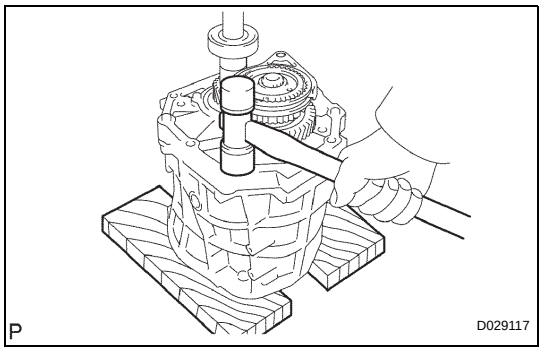
27. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet, and install it onto the intermediate plate.

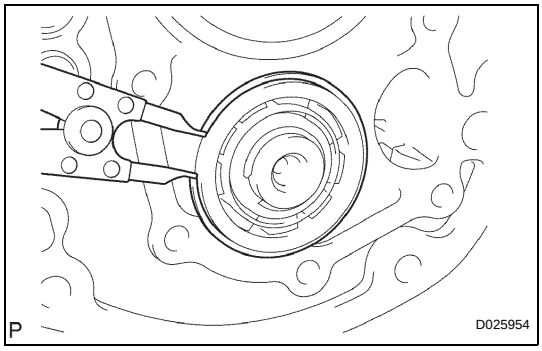


28. INSTALL MANUAL TRANSMISSION CASE

(a) Apply seal packing to the manual transmission case as shown in the illustration.
Seal packing:
Part No.08826-00090, THREE BOND 1281 or equivalent.

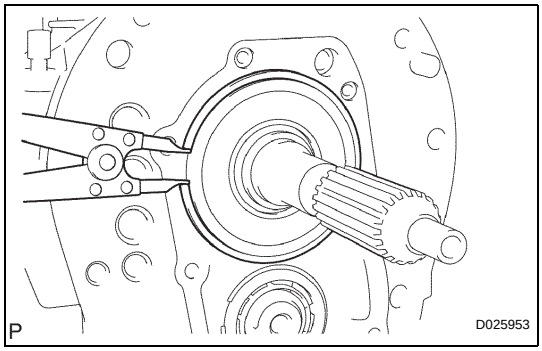


(b) Using a plastic hammer, tap the manual transmission case to attach it to the intermediate plate.



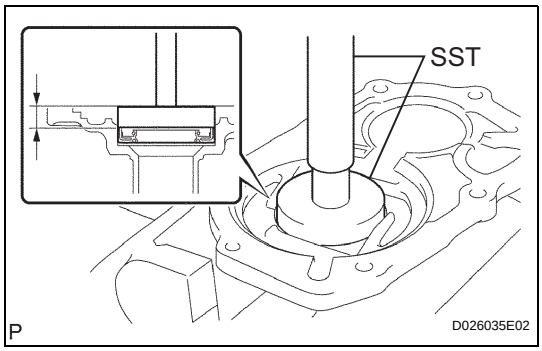
29. INSTALL NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Using a snap ring expander, install the counter gear front bearing snap ring No. 1 onto the transmission case.



30. INSTALL FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, install the front bearing shaft snap ring onto the transmission case.



31. INSTALL TRANSMISSION FRONT BEARING RETAINER OIL SEAL

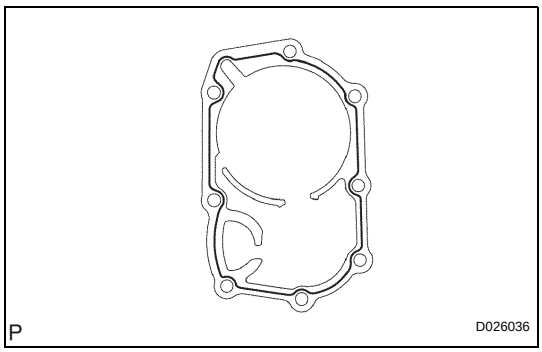
(a) Using SST and a hammer, install the new transmission front bearing retainer oil seal onto the transmission front bearing retainer.

SST 09950-60010 (09951-00300, 09951-00520, 09952-06010), 09950-70010 (09951-07100)

Drive in depth:

11.2 to 12.2 mm (0.4409 to 0.4803 in.)

(b) Coat the lip of the oil seal with MP grease.

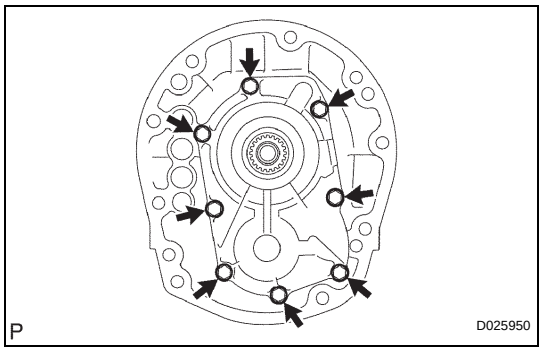


32. INSTALL FRONT BEARING RETAINER

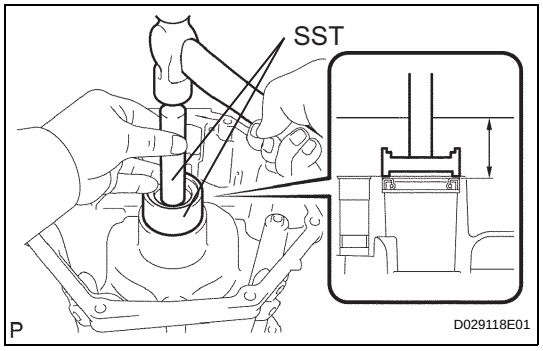
(a) Apply seal packing to the bearing retainer front as shown in the illustration.

Seal packing:

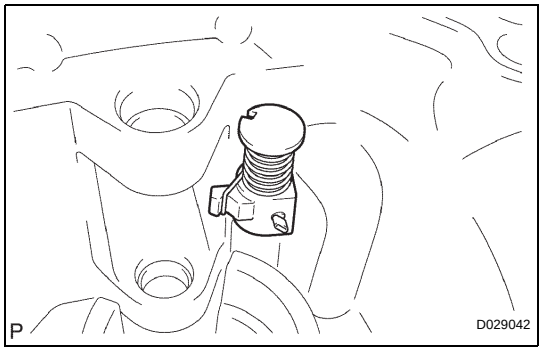
Part No.08826-00090, THREE BOND 1281 or equivalent.



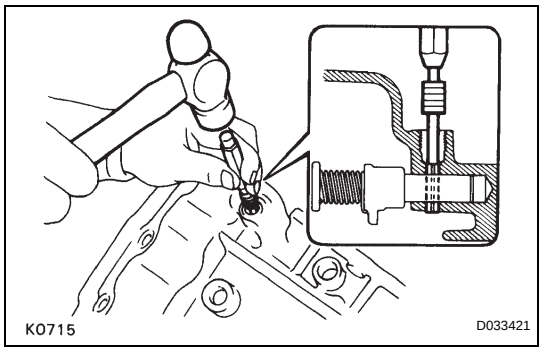
(b) Install the front bearing retainer onto the transmission case with the 8 bolts.
Torque: 16.5 N*m (168 kgf*cm, 12 ft.*lbf)
(c) Check that the input shaft and output shaft rotate smoothly.



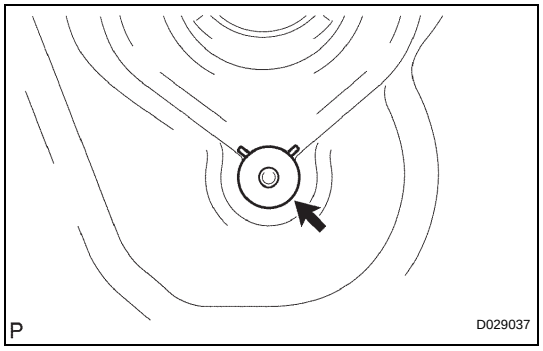
33. INSTALL TRANSFER ADAPTER OIL SEAL
(a) Using SST and a hammer, install the new transfer adapter oil seal onto the transfer adapter.
SST 09710-30050, 09950-70010 (09951-07100)
Drive in depth:
45.4 to 46.4 mm (1.7874 to 1.8268 in.)
(b) Lightly apply MP grease to the tip of the oil seal.
NOTICE:
Be careful not to damage the oil seal lip.



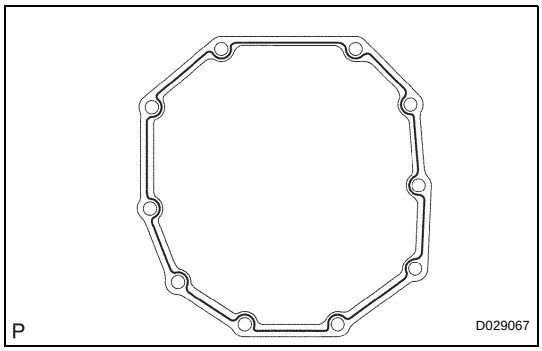
34. INSTALL REVERSE RESTRICT PIN ASSEMBLY
(a) Install the reverse restrict pin into the transfer adapter.



(b) Using a pin punch (5 mm) and a hammer, install the reverse restrict slotted pin into the transfer adapter.
(c) Using a "Torx" socket wrench T40, install the reverse restrict pin plug onto the transfer adapter.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)

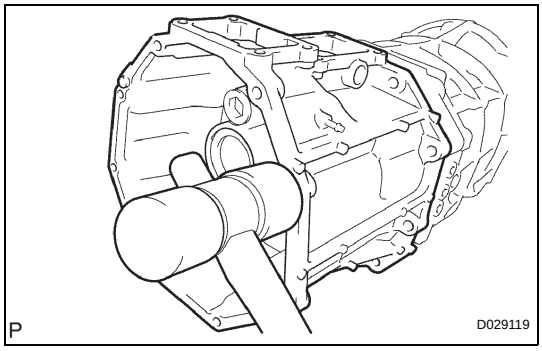


35. INSTALL OIL RECEIVER
(a) Install the oil receiver onto the transfer adapter.

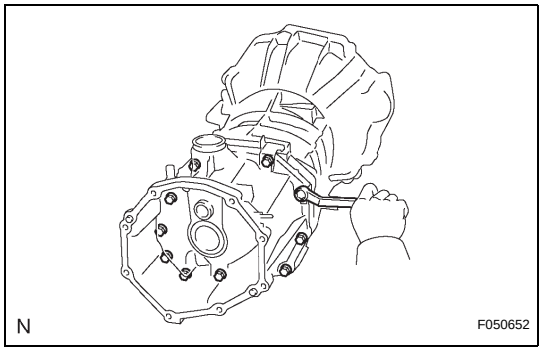


36. INSTALL TRANSFER ADAPTER

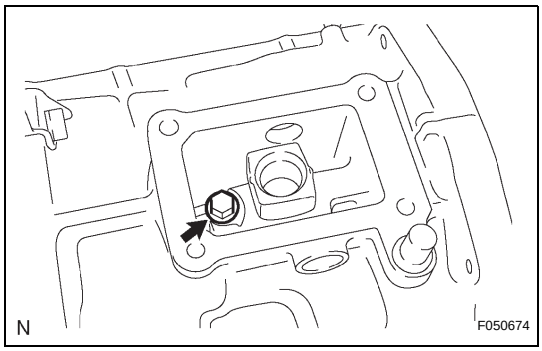
(a) Apply seal packing to the transfer adapter as shown in the illustration.
Seal packing:
Part No.08826-00090, THREE BOND 1281 or equivalent.



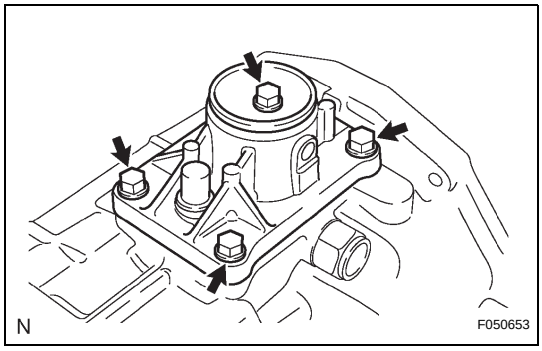
(b) Using a plastic hammer, tap the transfer adapter to attach it to the transmission case.



(c) Install the transfer adapter, onto the transmission case with the 10 bolts.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

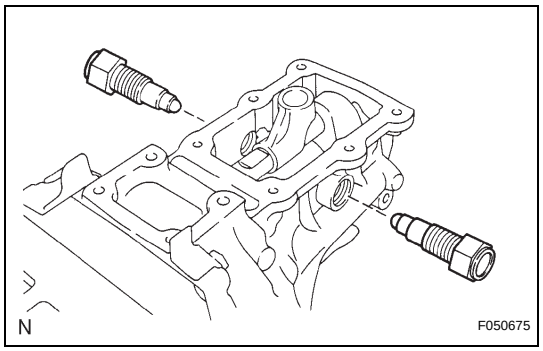


(d) Install the shift lever housing set bolt.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)



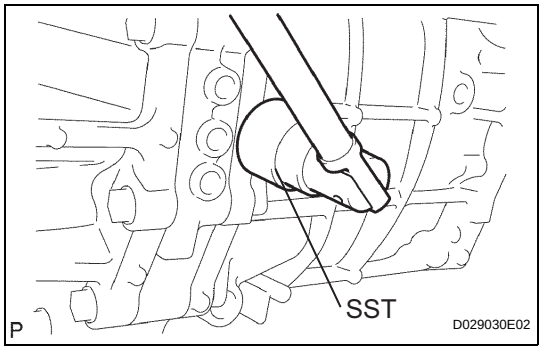
37. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Install the control shift lever retainer and transfer oil deflector onto the transfer adapter with the 4 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)



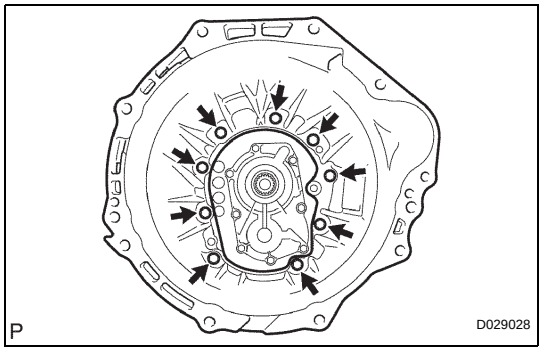
38. INSTALL REVERSE RESTRICT PIN ASSEMBLY

(a) Install the 2 reverse restrict pins into the extension housing or transfer adapter.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)



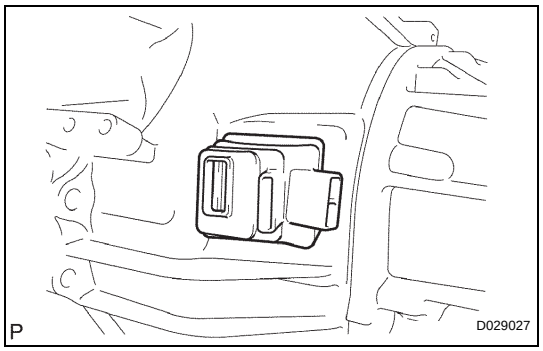
39. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch assembly and the gasket onto the transmission case.
SST 09817-16011
Torque: 44 N*m (450 kgf*cm, 32 ft.*lbf)



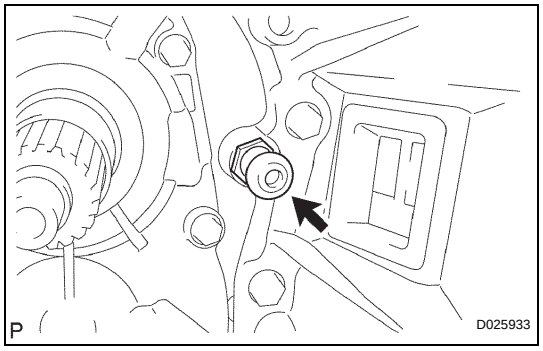
40. INSTALL CLUTCH HOUSING

(a) Install the clutch housing onto the transmission case with the 9 bolts.
Torque: 36 N*m (370 kgf*cm, 27 ft.*lbf)



41. INSTALL CLUTCH RELEASE FORK BOOT

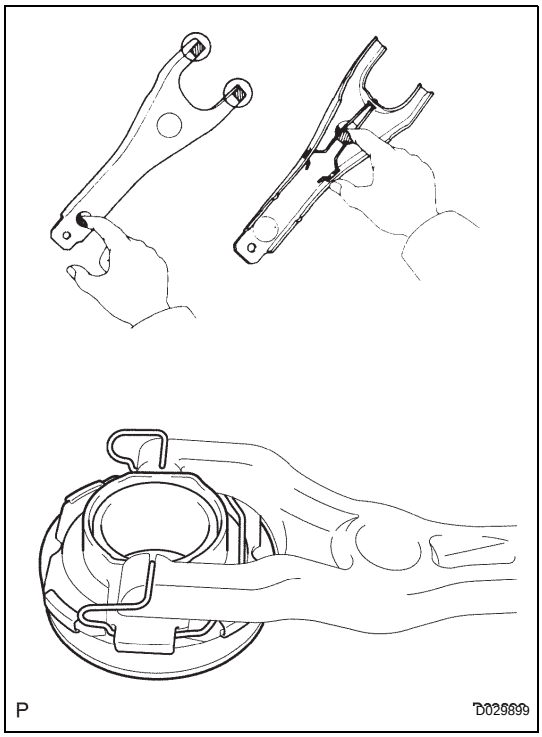
(a) Install the clutch release fork boot onto the clutch housing.



42. INSTALL RELEASE FORK SUPPORT

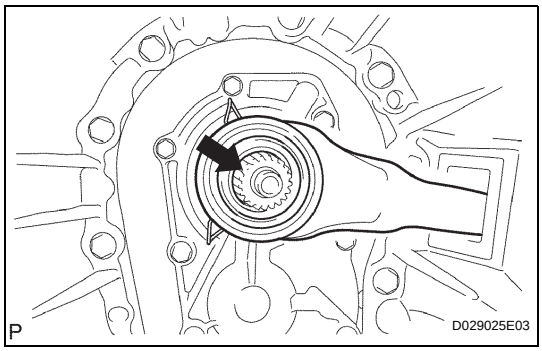
(a) Install the clutch release fork support onto the clutch housing.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)

MT



43. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

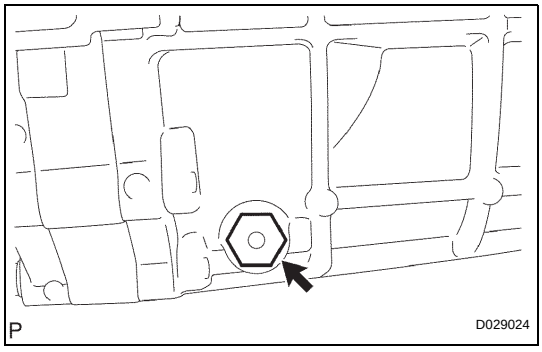
(a) Apply clutch release hub grease to the clutch release bearing, and install it onto the clutch release fork.



44. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

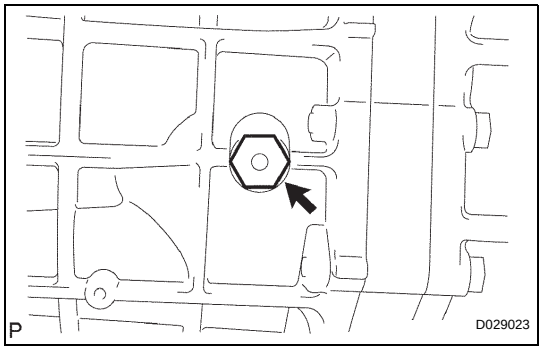
(a) Install the clutch release fork.

(b) Apply the clutch spline grease to the spline of the input shaft.



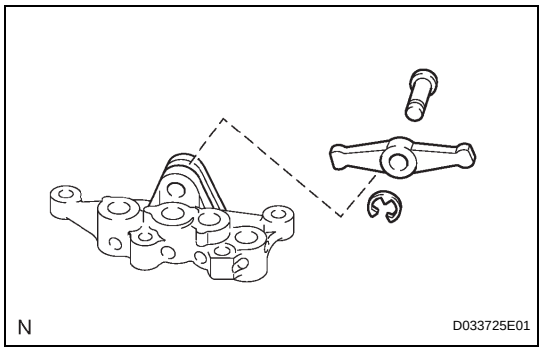
45. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug onto the transmission case through a new gasket.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)



46. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the filler plug onto the transmission case through a new gasket.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

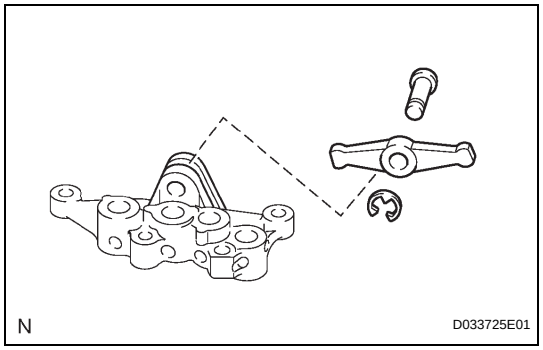


(b) Remove the shift arm pivot and shift arm.

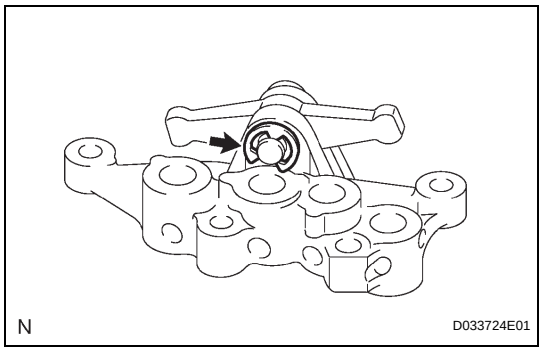
REASSEMBLY

1. INSTALL 1ST AND REVERSE SHIFT ARM

(a) Install the shift arm and shift arm pivot onto the interlock bracket.



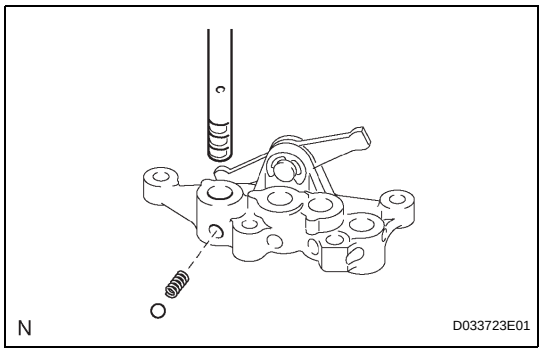
(b) Install a new E-ring onto the shift arm pivot.



2. INSTALL NO. 4 GEAR SHIFT FORK SHAFT

(a) Install the spring and ball onto the interlock bracket.

(b) Install the shift fork shaft No. 4.



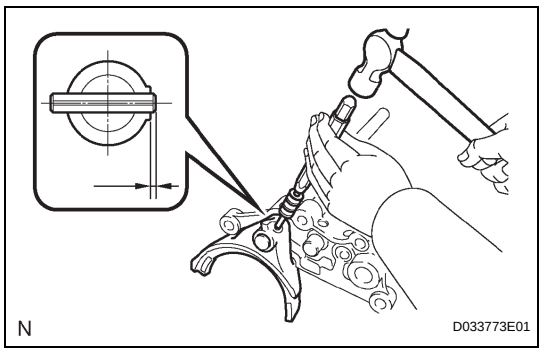
3. INSTALL NO. 4 GEAR SHIFT FORK

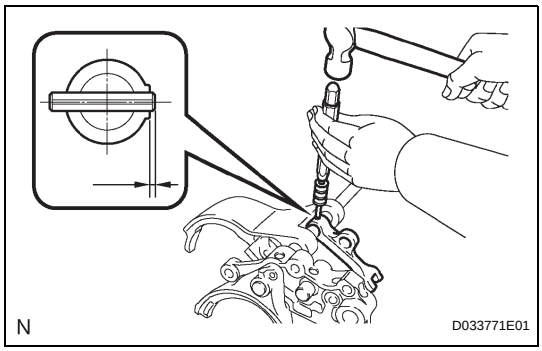
(a) Install the shift fork No. 4 onto the shift fork shaft No. 4.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft fork No. 4 and shift fork shaft No. 4.

Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)





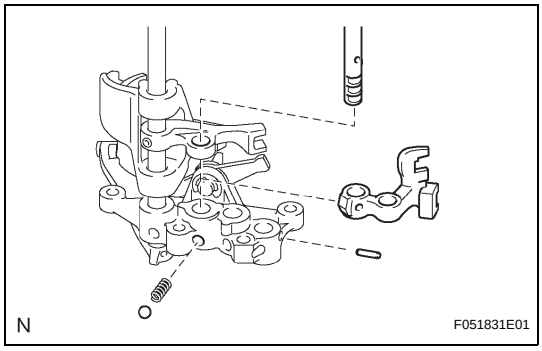
4. INSTALL NO. 1 GEAR SHIFT FORK

(a) Install the shift fork No. 1 and shift head No. 2 onto the shift fork shaft No. 4.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft head No. 2 and shift fork shaft No. 4.

Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)



5. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

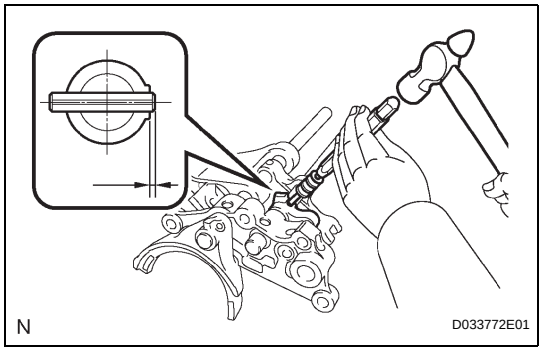
(a) Apply MP grease to the interlock pin No. 1 and install it onto the interlock bracket.

(b) Install the spring and ball onto the interlock bracket.

(c) Install the shift fork shaft No. 1 onto the interlock bracket.

HINT:

Place the shift fork shaft No. 4 in the neutral position.



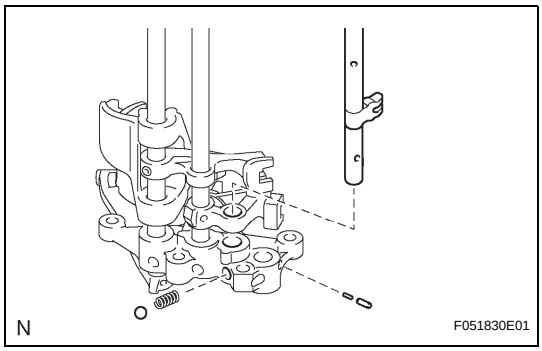
6. INSTALL NO. 1 GEAR SHIFT HEAD

(a) Install the shift head No. 1 into the shift fork shaft No. 1.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft head No. 1 and shift fork shaft No. 1.

Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)



7. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

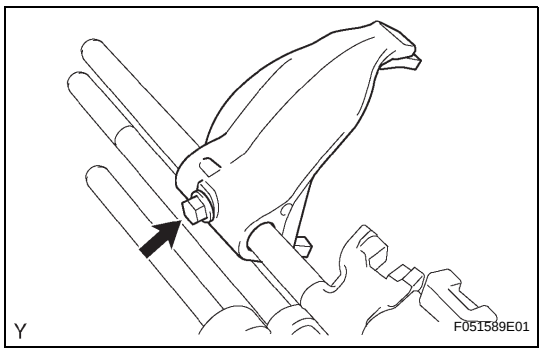
(a) Apply MP grease to the interlock pins No. 2 and No. 3, then install them onto the interlock bracket.

(b) Install the spring and ball the interlock bracket.

(c) Install the shift fork shaft No. 2 onto the interlock bracket.

HINT:

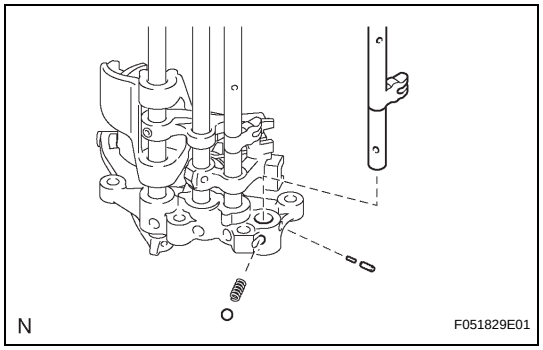
Place the shift fork shafts No. 3 and No. 4 in the neutral position.



8. INSTALL NO. 2 GEAR SHIFT FORK

(a) Install the shift fork No. 2 with the bolt.

Torque: 20 N*m (199 kgf*cm, 14 ft.*lbf)



9. INSTALL NO. 3 GEAR SHIFT FORK SHAFT

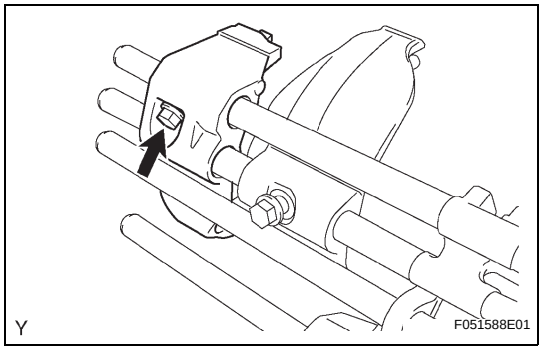
(a) Apply MP grease to the interlock pins No. 2 and No. 3, then install them onto the interlock bracket.

(b) Install the spring and ball onto the interlock bracket.

(c) Install the shift fork shaft No. 3 onto the interlock bracket.

HINT:

Place the shift fork shafts No. 2, No. 1 and No. 4 in the neutral position.

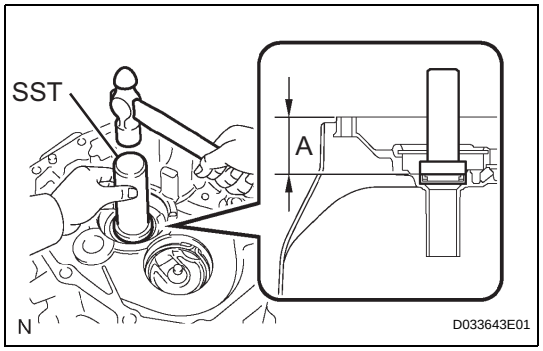


10. INSTALL NO. 3 GEAR SHIFT FORK

(a) Install the shift fork No. 3 with the bolt.

Torque: 20 N*m (199 kgf*cm, 14 ft.*lbf)

MT



11. INSTALL TRANSMISSION CASE OIL SEAL

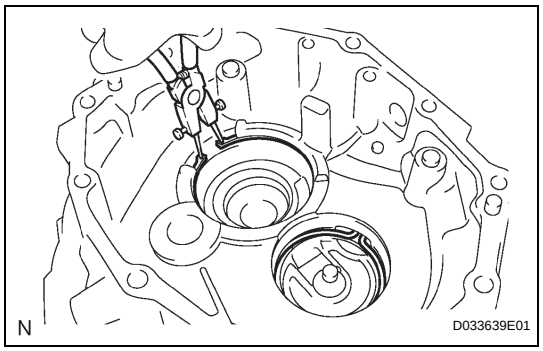
(a) Using SST and a hammer, tap a new oil seal into the front case in accordance with the dimension specified in the illustration.

SST 09950-70010 (09951-07100), 09950-60010 (09951-00470)

Dimension A:

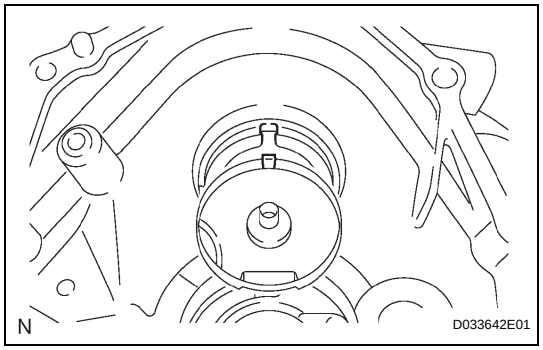
60.0 to 60.8 mm (2.362 to 2.394 in.)

(b) Apply gear oil to the lip of the oil seal.



12. INSTALL FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring plier, install the 2 snap rings.

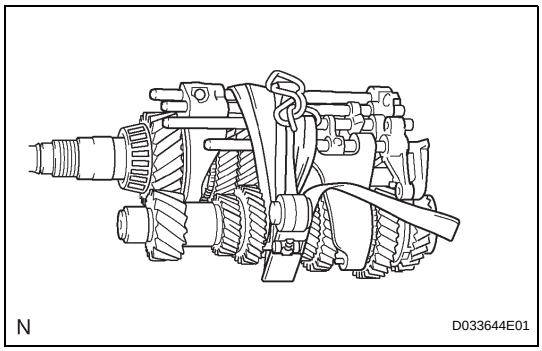


13. INSTALL NO. 1 OIL RECEIVER PIPE

(a) Install the oil receiver pipe No. 1 onto the transmission front case.

HINT:

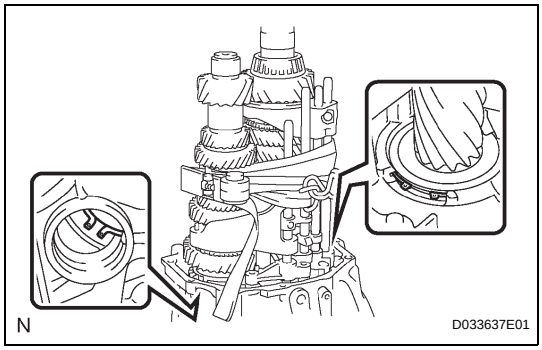
Align the convex portion of the oil receiver pipe with the cutout of the front case and install the oil receiver pipe onto the clutch housing.



14. INSTALL TRANSMISSION FRONT CASE

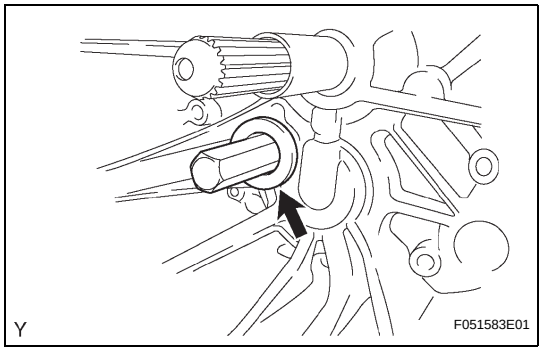
(a) Apply gear oil to all sliding and rotating parts.

(b) Provisionally install the output shaft, input shaft, counter gear shaft and control assembly, and tie them with a rope or string.

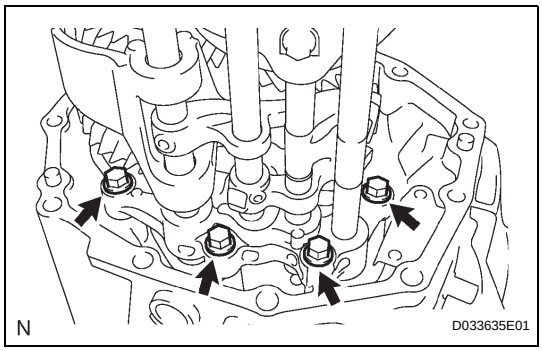


(c) Using a snap ring expander, extend the 2 snap rings and install the output shaft, input shaft, counter gear shaft and control assembly.
HINT:
Make sure that the snap ring is fitted into the grooves of the input shaft and front bearing of the counter gear shaft.

(d) Untie the output shaft, input shaft, counter gear shaft and control assembly.

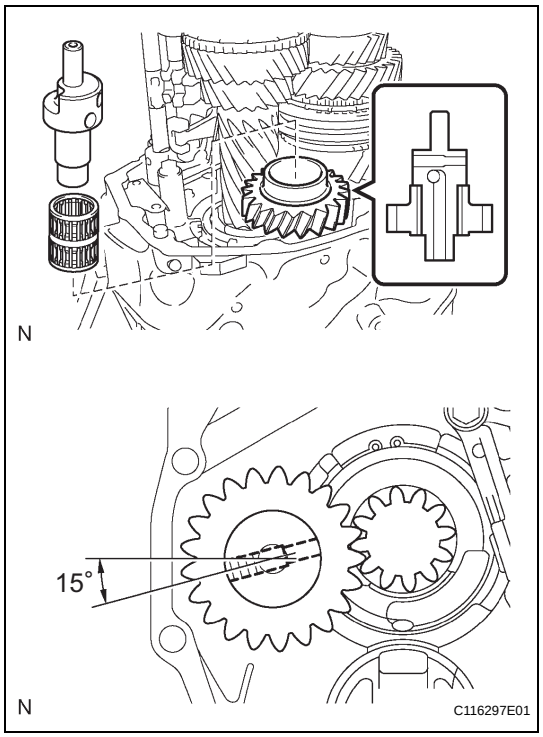


(e) Using a hexagonal wrench (24 mm), install the plug onto the front case.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)



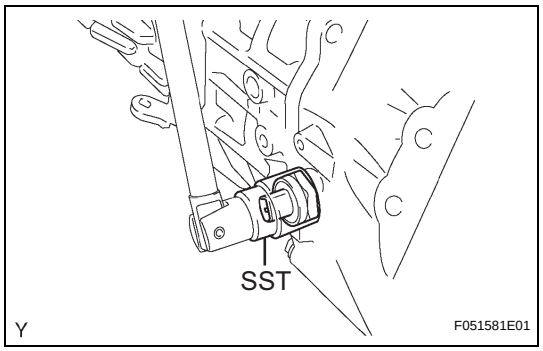
(f) Install the 4 bolts onto the interlock bracket.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

MT



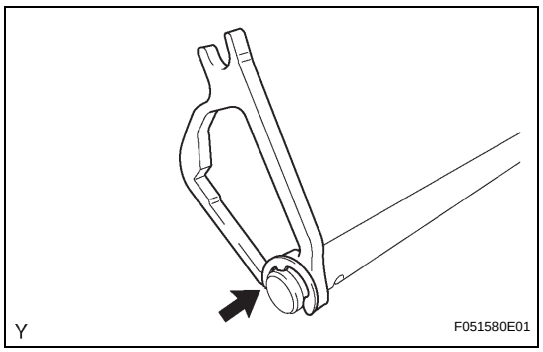
15. INSTALL REVERSE IDLER GEAR

(a) Install the reverse idler gear, reverse idler gear bearing and reverse idler gear shaft.
HINT:
Make sure that the reverse idler gear faces the correct direction as shown in the illustration.
NOTICE:
Make sure that the tapped hole portion of the reverse idler shaft is in the position shown in the illustration.



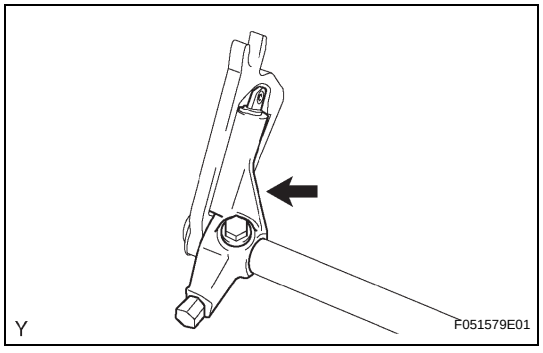
16. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch with a new gasket onto the transmission front case.
SST 09817-16011
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)



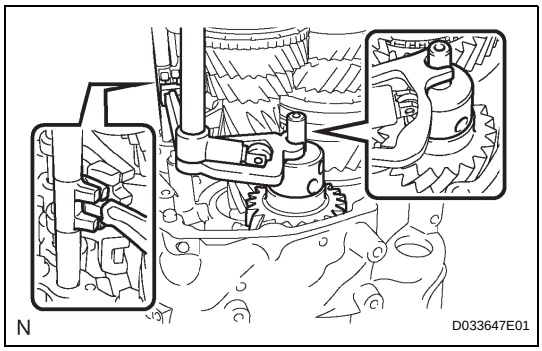
17. INSTALL SHIFT AND SELECT LEVER CAM

(a) Install the shift and select lever cam onto the shaft and install a new E-ring.



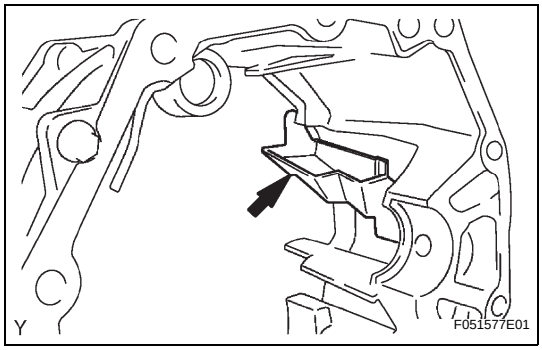
18. INSTALL SHIFT AND SELECT LEVER

(a) Install the lock ball pin and spring onto the shift and select lever.
(b) Install the shift and select lever onto the shift and select lever cam and shaft.
(c) Install the bolt onto the shift and select lever.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)



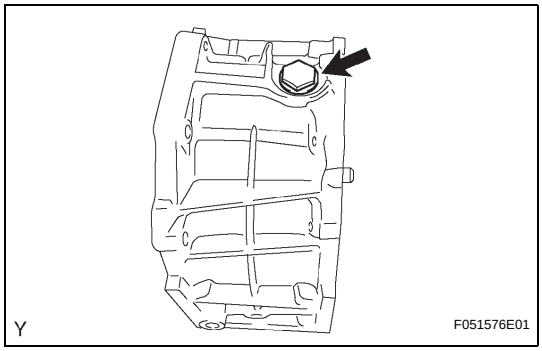
19. INSTALL SHIFT AND SELECT LEVER SHAFT

(a) Align the groove of the shift and select cam with the reverse idler shaft, and the claw with the groove of the control assembly, and install them.



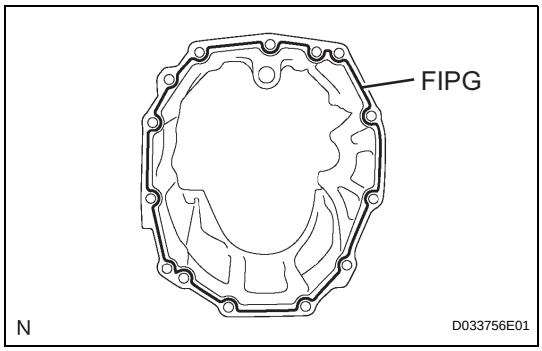
20. INSTALL NO. 2 OIL RECEIVER PIPE

(a) Install the oil receiver pipe No. 2 into the transmission middle case.



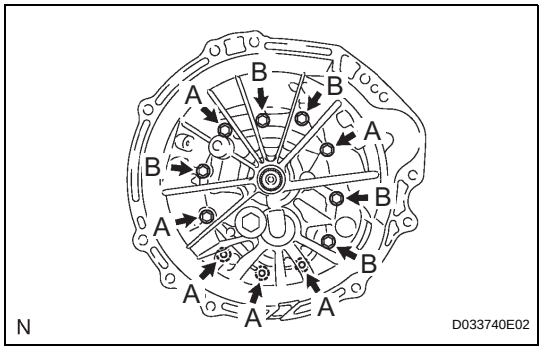
21. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug with a new gasket onto the transmission middle case.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

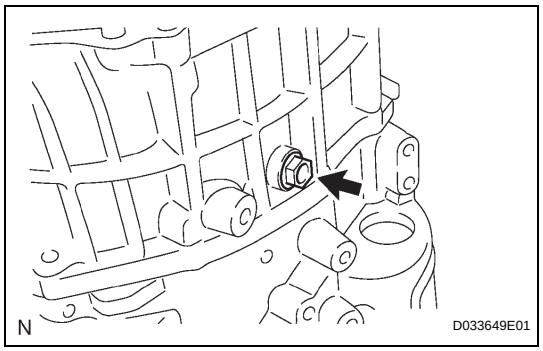


22. INSTALL TRANSMISSION MIDDLE CASE

(a) Apply FIPG to the transmission middle case, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

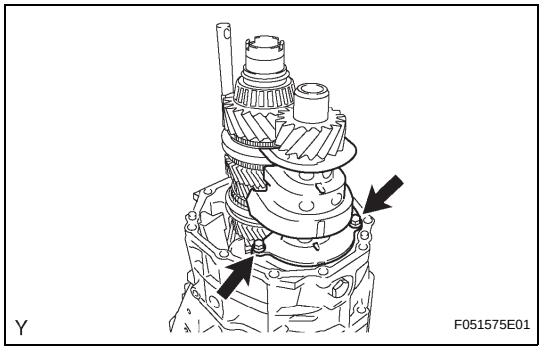


(b) Install the transmission middle case with the 11 bolts onto the transmission front case.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
Bolt length:
Bolt A:
40 mm (1.57 in.)
Bolt B:
80 mm (3.15 in.)



23. INSTALL REVERSE IDLER GEAR SHAFT BOLT

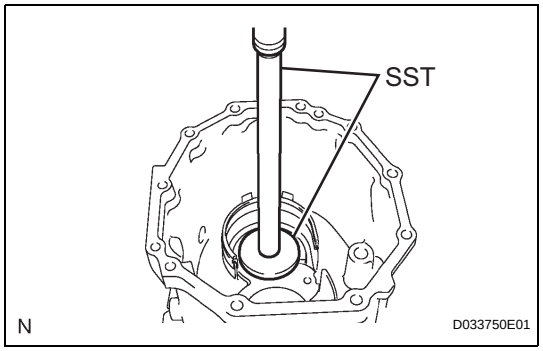
(a) Install a new gasket and the reverse idler gear shaft bolt onto the reverse idler gear shaft.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)



24. INSTALL TRANSMISSION OIL SEPARATOR

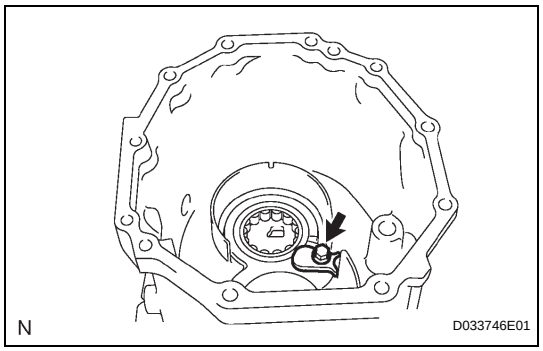
(a) Install the transmission oil separator with the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

MT

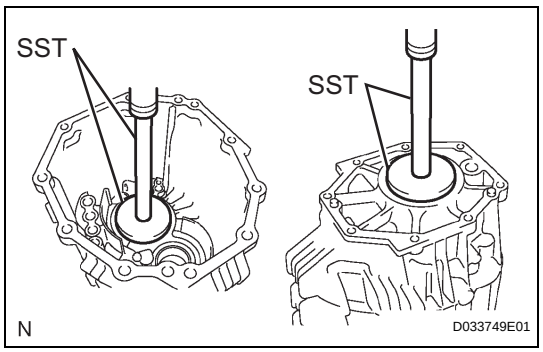


25. INSTALL COUNTER GEAR REAR RADIAL BALL BEARING

(a) Coat a new counter gear rear radial ball bearing with gear oil, and using SST and a press, install it into the transmission rear case.
SST 09950-70010 (09951-07360), 09950-60010 (09951-00650)

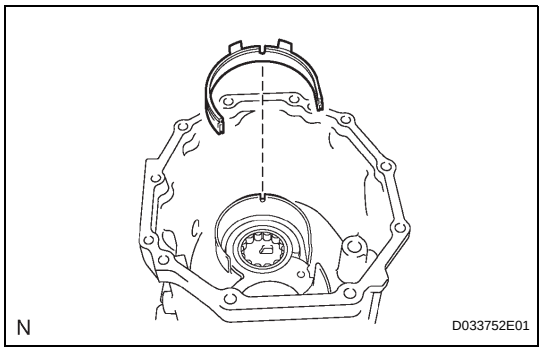


(b) Install the bearing lock plate with the bolt.
Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)



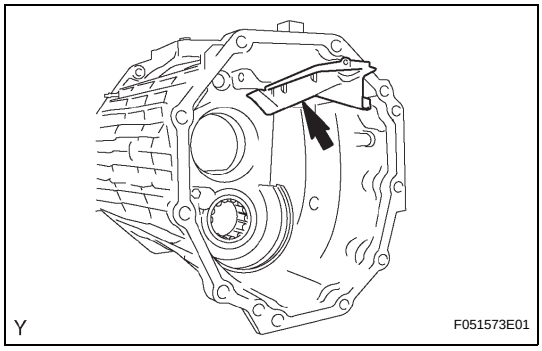
26. INSTALL OUTPUT SHAFT REAR BEARING OUTER RACE

(a) Using SST and a press, press in 2 new bearing outer races.
SST 09950-70010 (09951-07100, 09951-07360), 09950-60020 (09951-00790)



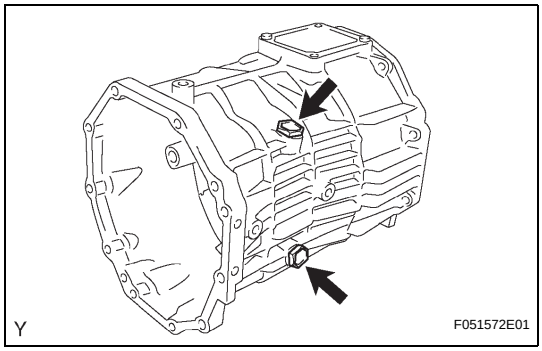
27. INSTALL OIL SEPARATOR PACKING SEAL

(a) Install the oil separator packing seal onto the transmission rear case.
HINT:
Insert the protruding part of the oil separator packing seal into the groove on the transmission rear case.



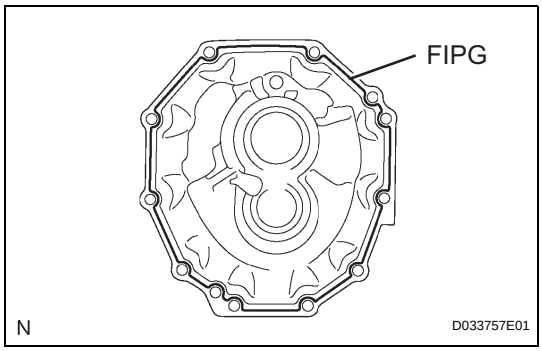
28. INSTALL EXTENSION HOUSING OIL RECEIVER PIPE

(a) Install the extension housing oil receiver pipe onto the transmission rear case.



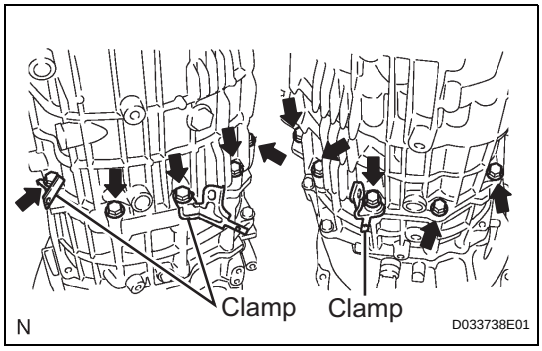
29. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the 2 transmission filler plugs with 2 new gaskets onto the transmission rear case.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

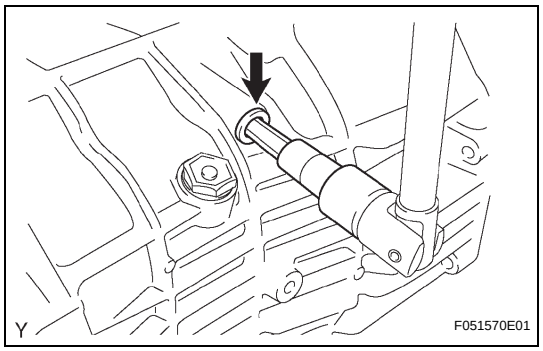


30. INSTALL TRANSMISSION REAR CASE

(a) Apply FIPG to the transmission rear case, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.



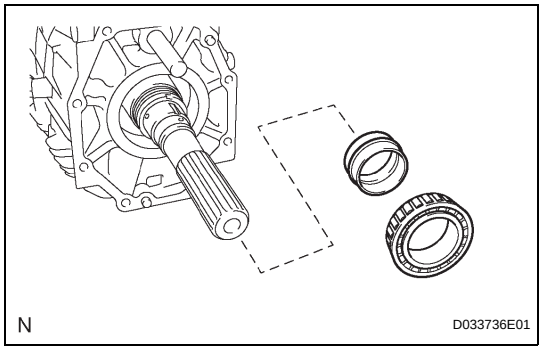
(b) Install the transmission rear case with the 10 bolts and 3 brackets onto the transmission middle case.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



31. INSTALL SHIFT DETENT BALL PLUG

(a) Install the ball and compression spring onto the transmission rear case.

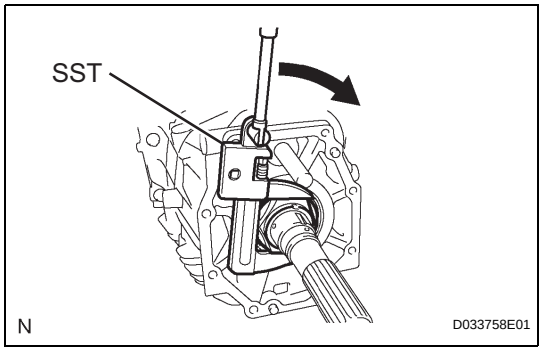
(b) Install a new shift detent ball plug, and install it onto the transmission rear case.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



32. INSTALL OUTPUT SHAFT ADJUST NUT

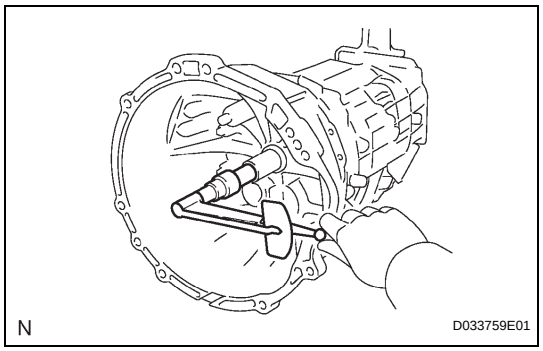
(a) Using a belt and wooden block, fasten the transmission to the workbench.

(b) Install a new spacer and output shaft taper roller bearing No. 2.



(c) Using SST, provisionally tighten a new nut until there is no slack in the output shaft.
SST 09922-10010
HINT:
No preload should be applied to the nut.

(d) Fit the bearing into the output shaft by turning the output shaft 15 times.



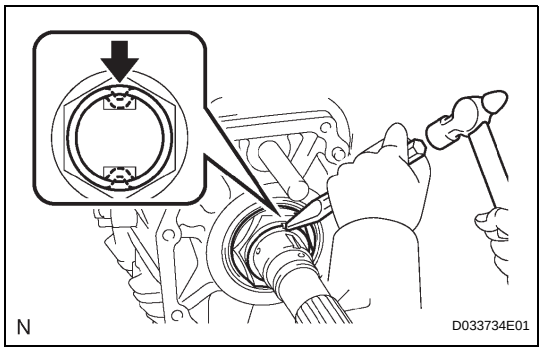
(e) Place the gearshift into 5th gear and check the initial torque of the input shaft.

(f) Using SST, tighten the nut.
SST 09922-10010

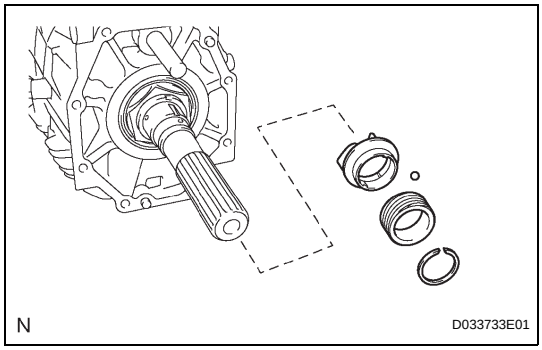
(g) Place the gearshift into 5th gear and check the initial torque of the input shaft.

(h) Confirm that the difference between (d) and (f) is within the specified values.
Preload (at starting):
0.45 to 1.35 N*m
(4.59 to 13.77 kgf*cm, 3.98 to 11.95 in.*lbf)
If the result is not as specified, tighten and adjust the output shaft adjusting nut.
NOTICE:
If the output shaft adjusting nut is loose or removed due to a large preload, always replace the spacer with a new one.

MT

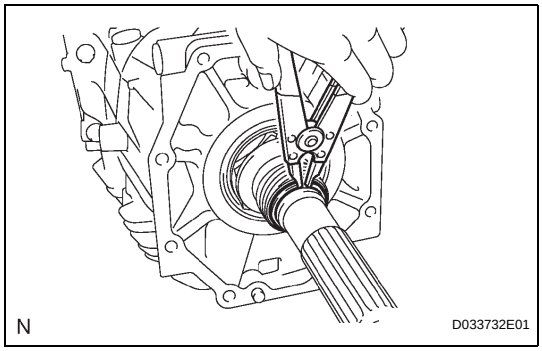


(i) Using a chisel and hammer, caulk the output shaft adjust nut.

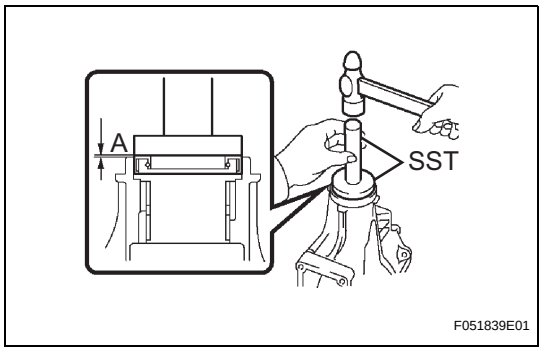


33. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install the oil receiver pipe, ball and speedometer drive gear.



(b) Using a snap ring expander, install the snap ring.



34. INSTALL MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

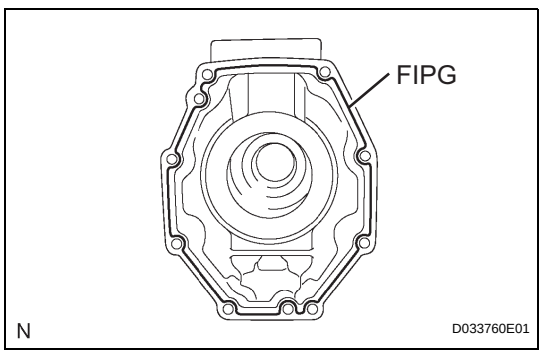
(a) Using SST and a hammer, tap a new oil seal into the extension housing in accordance with the dimension specified in the illustration.

SST 09950-60020 (09951-00640), 09950-70010 (09951-07100)

Dimension A:

-0.5 to 0.5 mm (-0.197 to 0.197 in.)

(b) Apply gear oil to the lip of the oil seal.



35. INSTALL EXTENSION HOUSING SUB-ASSEMBLY

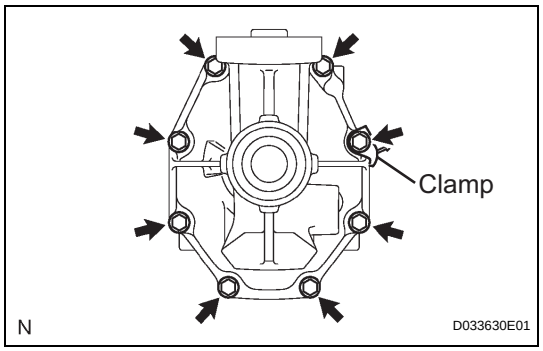
(a) Apply FIPG to the extension housing, as shown in the illustration.

FIPG:

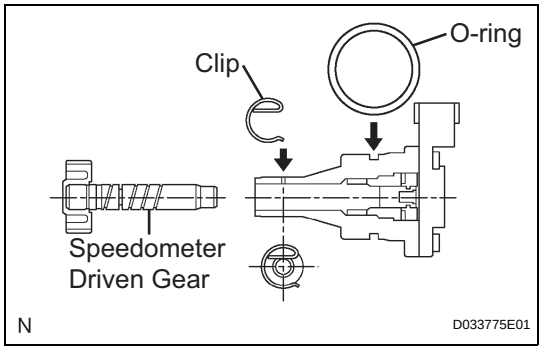
Part No. 08826-00090, THREE BOND 1281 or equivalent

NOTICE:

Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.



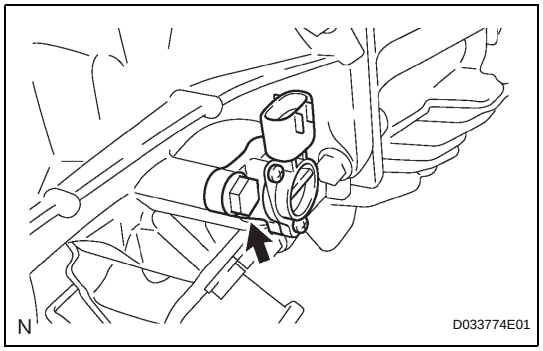
(b) Install the extension housing with the 8 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



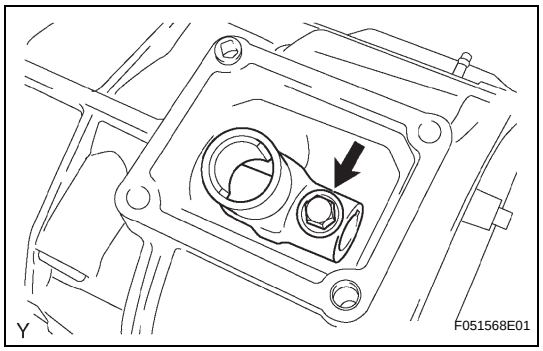
36. INSTALL SPEEDOMETER SENSOR

(a) Install a new O-ring onto the speedometer sensor.

(b) Install the speedometer driven gear into the speedometer sensor with the clip.
NOTICE:
Be sure to install the clip in the direction shown in the illustration.

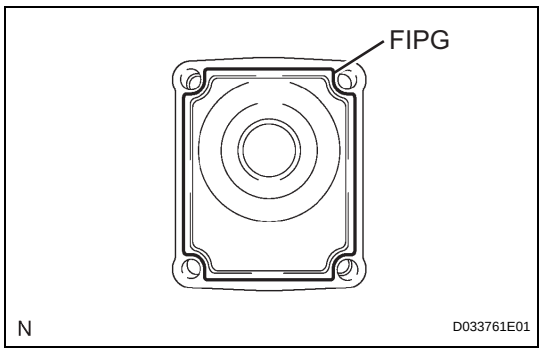


(c) Install the speedometer driven gear with the bolt.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



37. INSTALL SHIFT LEVER HOUSING

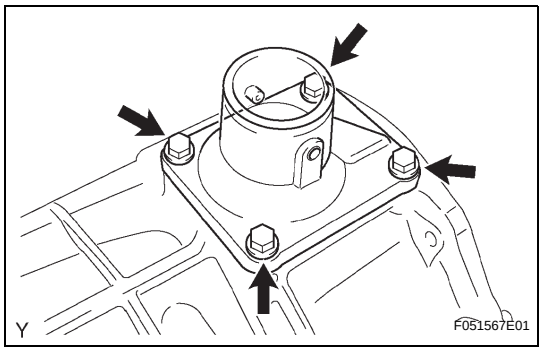
(a) Install the shift lever housing with the bolt.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)



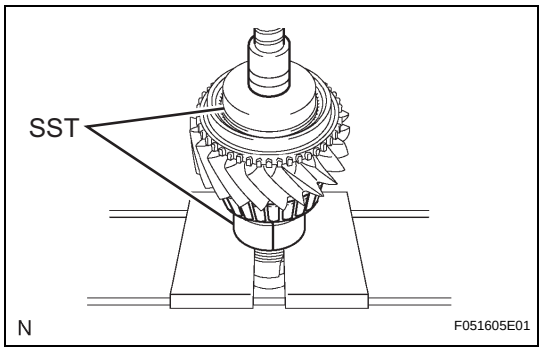
38. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Apply FIPG to the floor shift control shift lever retainer, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

MT



(b) Install the floor shift control shift lever retainer with the 4 bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



REASSEMBLY

1. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install a new output shaft bearing onto the output shaft.

SST 09710-20011 (09710-06061), 09950-60010 (09951-00650)

(b) Apply a light coat of grease to the bearing.

2. INSTALL OUTPUT SHAFT CENTER BEARING

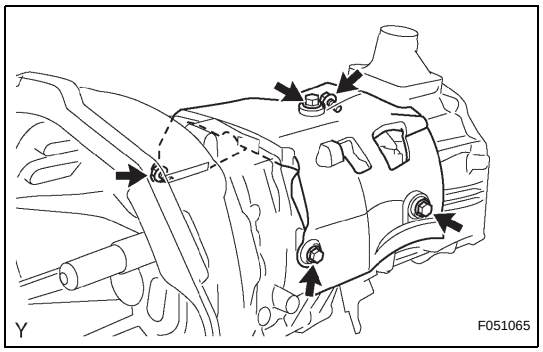
(a) Apply gear grease to the output shaft center bearing to the output shaft, and install it onto the output shaft.

3. INSTALL NO. 3 SYNCHRONIZER RING

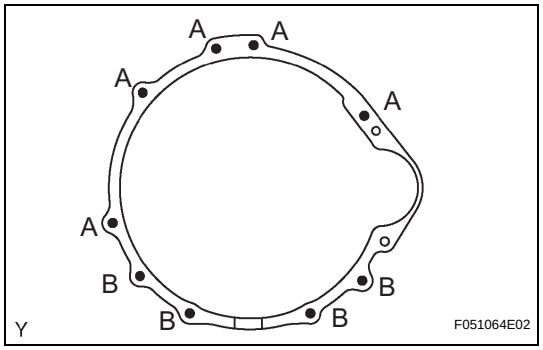
(a) Apply gear oil to synchronizer ring No. 3, and install it onto the output shaft.

INSTALLATION

1. **INSTALL TRANSFER ASSEMBLY (See page TF-38)**

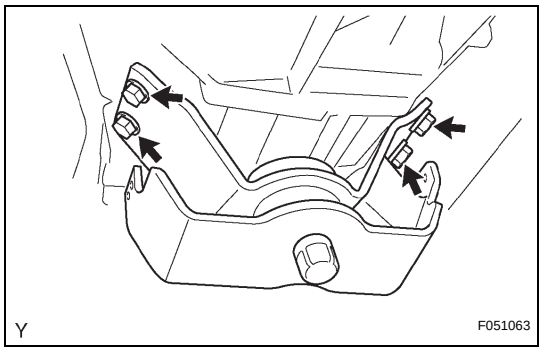


2. **INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY**
   (a) Install the manual transmission case cover with the 5 bolts.
   Torque: 12 N*m (117 kgf*cm, 8.5 ft.*lbf)

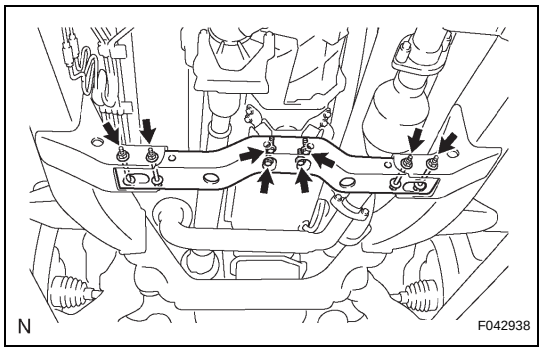


3. **INSTALL MANUAL TRANSMISSION WITH TRANSFER**
   (a) Install the manual transmission with transfer with the 9 bolts.
   Torque: 72 N*m (730 kgf*cm, 53 ft.*lbf) for bolt A
   37 N*m (380 kgf*cm, 28 ft.*lbf) for bolt B

4. **CONNECT WIRE HARNESS**



5. **INSTALL NO. 1 ENGINE MOUNTING INSULATOR REAR**
   (a) Install the engine mounting insulator rear No. 1 with the 4 bolts.
   Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



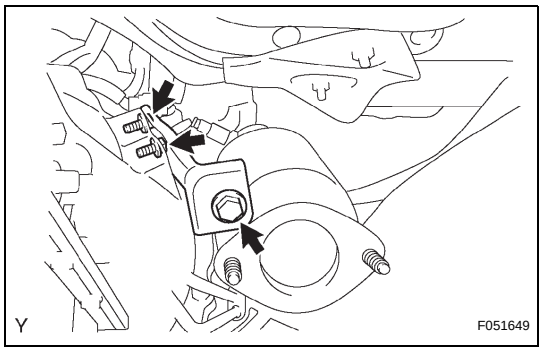
6. **INSTALL NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY**
   (a) Install the frame crossmember sub-assembly No. 3 with the 4 bolts and 4 nuts.
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
   (b) Install the frame crossmember sub-assembly No. 3 with the 4 bolts.
   Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf)

7. **INSTALL CLUTCH ACCUMULATOR ASSEMBLY (See page CL-28)**

8. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (See page CL-25)**

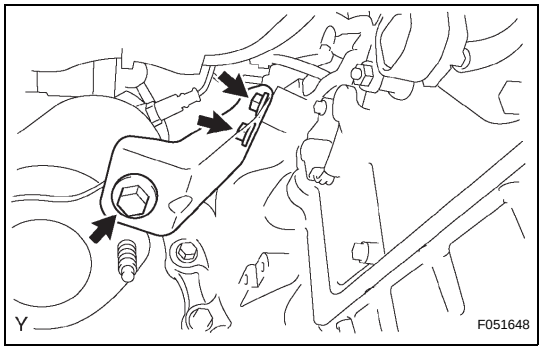
9. **INSTALL NO. 1 CLUTCH HOUSING COVER (See page CL-25)**

10. **INSTALL STARTER ASSEMBLY (See page ST-19)**



11. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



12. INSTALL NO. 2 MANIFOLD STAY

(a) Install the manifold stay No. 2 with the 3 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

13. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-32)

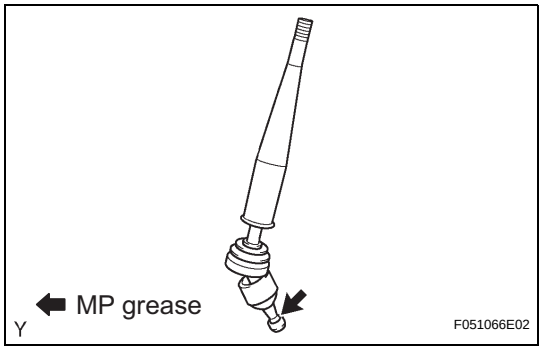
14. INSTALL FRONT PROPELLER SHAFT ASSEMBLY (See page PR-19)

15. INSTALL EXHAUST PIPE ASSEMBLY (See page EX-3)

16. ADD MANUAL TRANSMISSION OIL

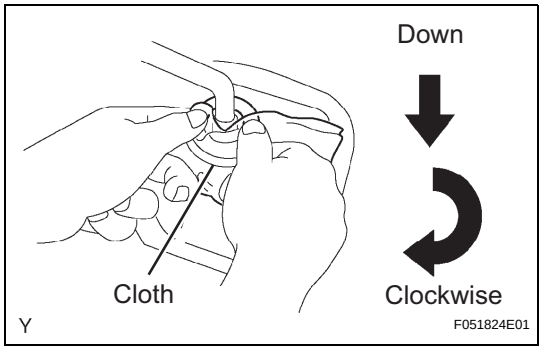
17. ADJUST MANUAL TRANSMISSION OIL (See page MT-2)

18. INSTALL NO. 2 ENGINE UNDER COVER



19. INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY

(a) Apply MP grease to the tip of the shift lever.



(b) Cover the shift lever cap with a cloth.
(c) Pressing down on the shift lever cap, turn it clockwise to install the shift lever.

20. INSTALL SHIFT LEVER BOOT ASSEMBLY

(a) Install the shift lever boot with the 2 screws and 2 clips.

21. INSTALL FRONT CONSOLE BOX (See page IP-23)

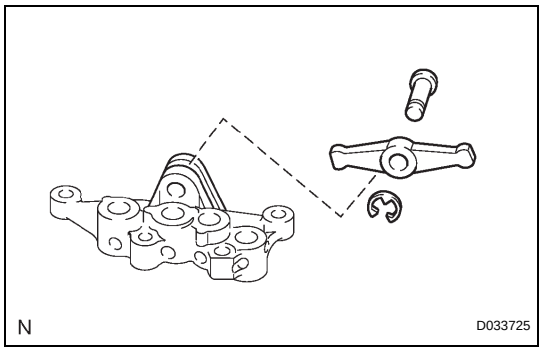
22. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

23. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-24)

24. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-25)

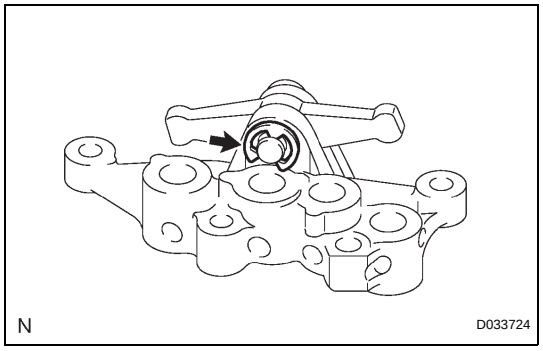
25. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

REASSEMBLY

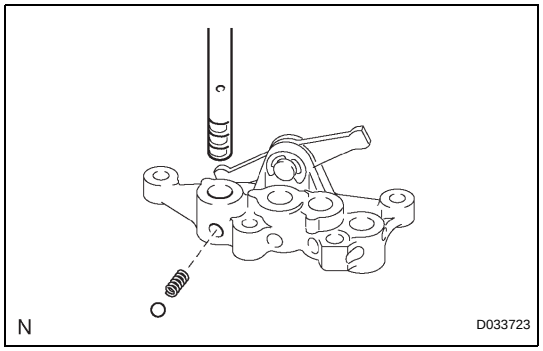


1. INSTALL 1ST AND REVERSE SHIFT ARM

(a) Install the shift arm and shift arm pivot onto the interlock bracket.



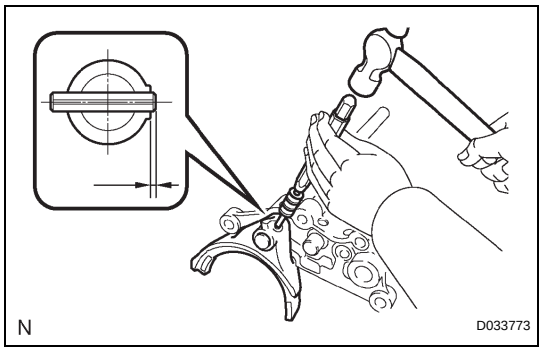
(b) Install a new E-ring onto the shift arm pivot.



2. INSTALL NO. 4 GEAR SHIFT SHAFT

(a) Install the spring and ball onto the interlock bracket.

(b) Install the shift fork shaft No. 4.



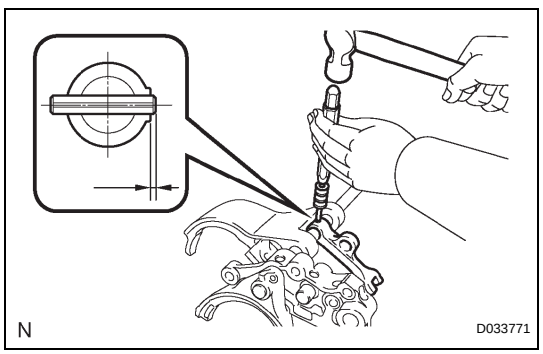
3. INSTALL NO. 4 GEAR SHIFT FORK

(a) Install the shift fork No. 4 onto the shift fork shaft No. 4.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft fork No. 4 and shift fork shaft No. 4.

Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)



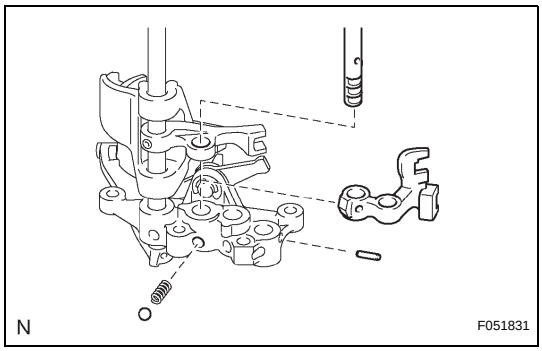
4. INSTALL NO. 1 GEAR SHIFT FORK

(a) Install the shift fork No. 1 and shift head No. 2 onto the shift fork shaft No. 4.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft head No. 2 and shift fork shaft No. 4.

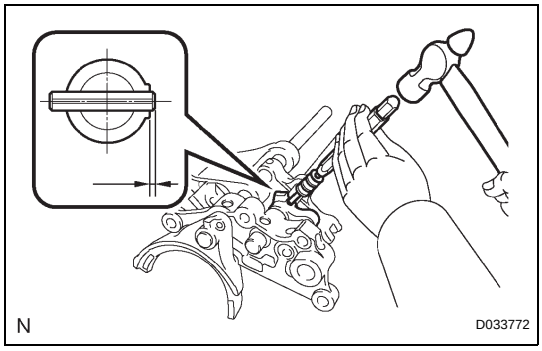
Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)



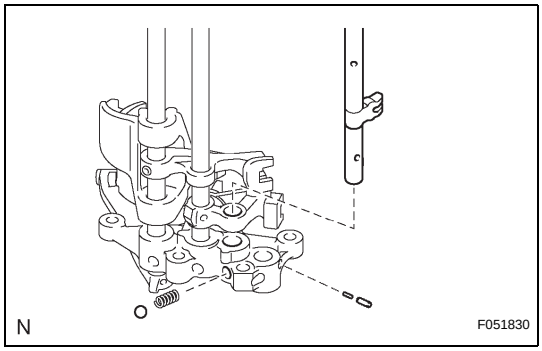
5. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

(a) Apply MP grease to the interlock pin No. 1 and install it onto the interlock bracket.
(b) Install the spring and ball onto the interlock bracket.
(c) Install the shift fork shaft No. 1 onto the interlock bracket.
HINT:
Place the shift fork shaft No. 4 in the neutral position.



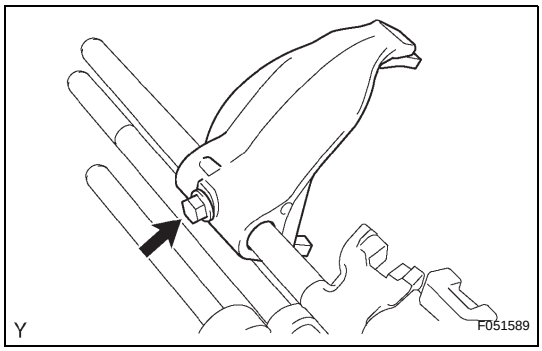
6. INSTALL NO. 1 GEAR SHIFT HEAD

(a) Install the shift head No. 1 into the shift fork shaft No. 1.
(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft head No. 1 and shift fork shaft No. 1.
Drive in depth:
0 to 0.5 mm (0 to 0.050 in.)



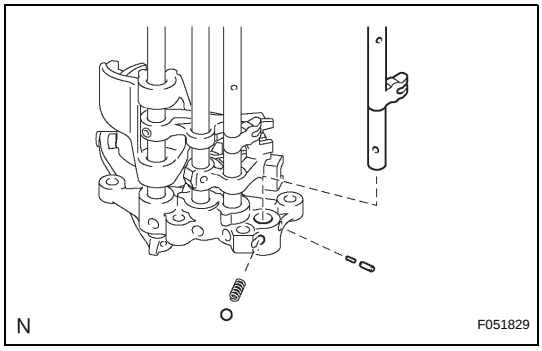
7. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

(a) Apply MP grease to the interlock pins No. 2 and No. 3, then install them onto the interlock bracket.
(b) Install the spring and ball the interlock bracket.
(c) Install the shift fork shaft No. 2 onto the interlock bracket.
HINT:
Place the shift fork shafts No. 3 and No. 4 in the neutral position.



8. INSTALL NO. 2 GEAR SHIFT FORK

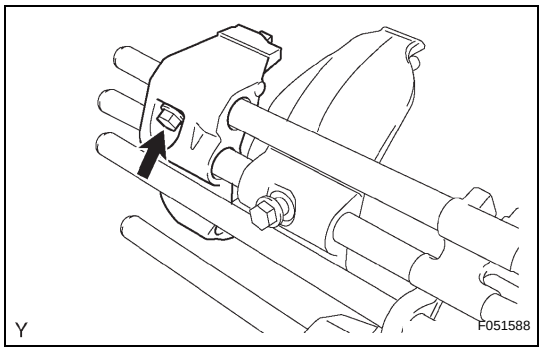
(a) Install the shift fork No. 2 with the bolt.
Torque: 20 N*m (199 kgf*cm, 14 ft.*lbf)



9. INSTALL NO. 3 GEAR SHIFT FORK SHAFT

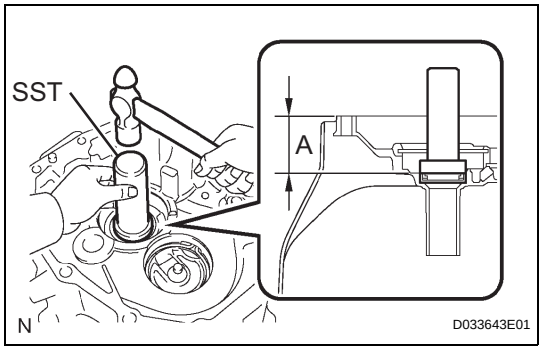
(a) Apply MP grease to the interlock pins No. 2 and No. 3, then install them onto the interlock bracket.
(b) Install the spring and ball onto the interlock bracket.
(c) Install the shift fork shaft No. 3 onto the interlock bracket.
HINT:
Place the shift fork shafts No. 2, No. 1 and No. 4 in the neutral position.

MT



10. INSTALL NO. 3 GEAR SHIFT FORK

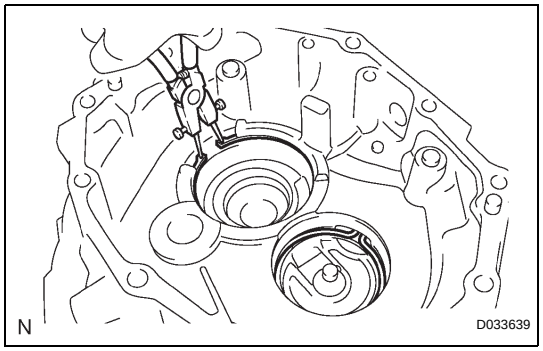
(a) Install the shift fork No. 3 with the bolt.
Torque: 20 N*m (199 kgf*cm, 14 ft.*lbf)



11. INSTALL TRANSMISSION CASE OIL SEAL

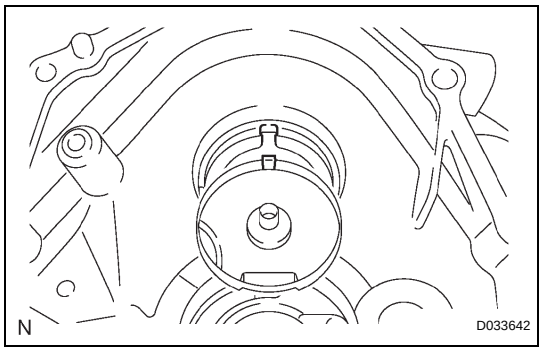
(a) Using SST and a hammer, tap a new oil seal into the front case in accordance with the dimension specified in the illustration.
SST 09950-70010 (09951-07100), 09950-60010 (09951-00470)
Dimension A:
60.0 to 60.8 mm (2.362 to 2.394 in.)

(b) Apply gear oil to the lip of the oil seal.



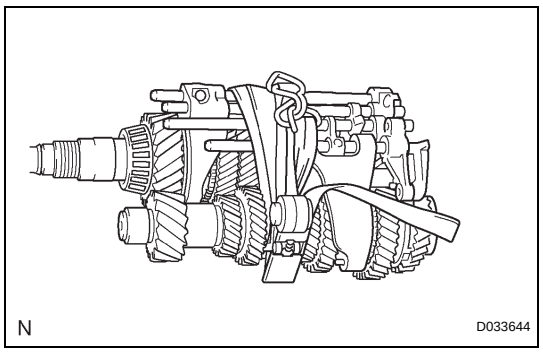
12. INSTALL FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring plier, install the 2 snap rings.



13. INSTALL NO. 1 OIL RECEIVER PIPE

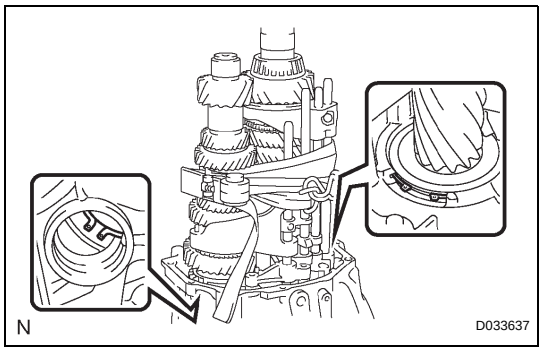
(a) Install the oil receiver pipe No. 1 onto the transmission front case.
HINT:
Align the convex portion of the oil receiver pipe with the cutout of the front case and install the oil receiver pipe onto the clutch housing.



14. INSTALL TRANSMISSION FRONT CASE

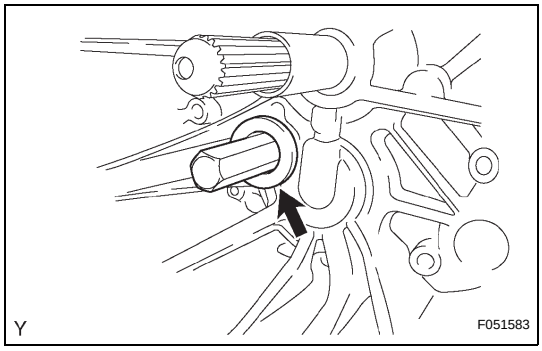
(a) Apply gear oil to all sliding and rotating parts.
(b) Provisionally install the output shaft, input shaft, counter gear shaft and control assembly, and tie them with a rope or string.

MT

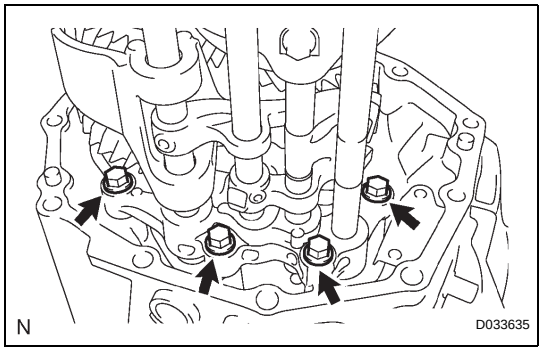


(c) Using a snap ring expander, extend the 2 snap rings and install the output shaft, input shaft, counter gear shaft and control assembly.
HINT:
Make sure that the snap ring is fitted into the grooves of the input shaft and front bearing of the counter gear shaft.

(d) Untie the output shaft, input shaft, counter gear shaft and control assembly.



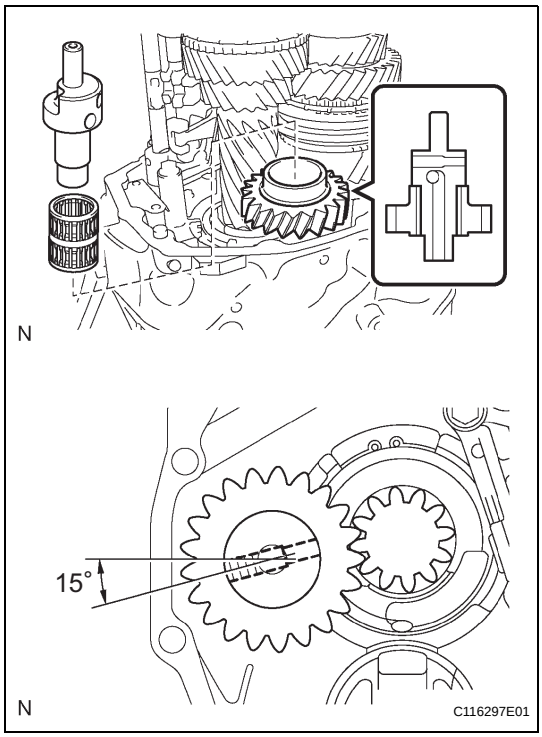
(e) Using a hexagonal wrench (24 mm), install the plug onto the front case.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

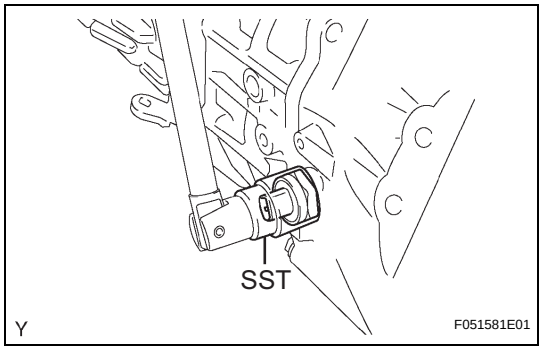


(f) Install the 4 bolts onto the interlock bracket.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

15. INSTALL REVERSE IDLER GEAR

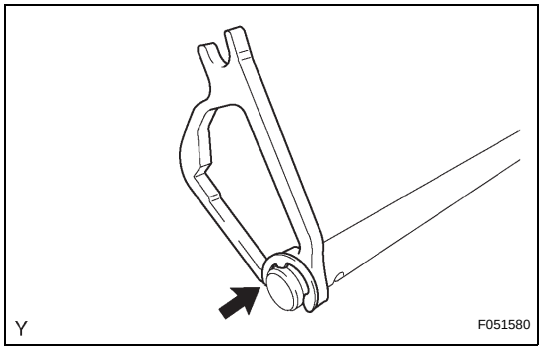
(a) Install the reverse idler gear, reverse idler gear bearing and reverse idler gear shaft.
HINT:
Make sure that the reverse idler gear faces the correct direction as shown in the illustration.
NOTICE:
Make sure that the tapped hole portion of the reverse idler shaft is in the position shown in the illustration.





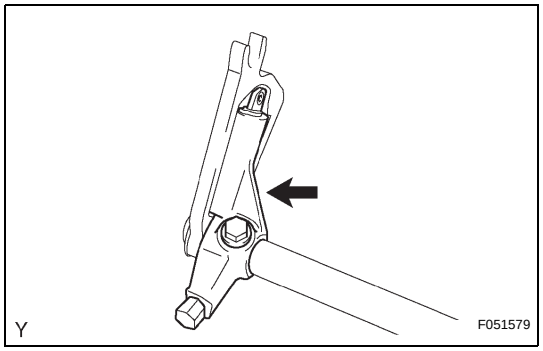
16. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch with a new gasket onto the transmission front case.
SST 09817-16011
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)



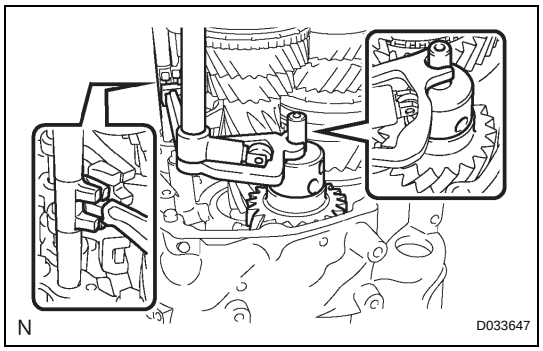
17. INSTALL SHIFT AND SELECT LEVER CAM

(a) Install the shift and select lever cam onto the shaft and install a new E-ring.



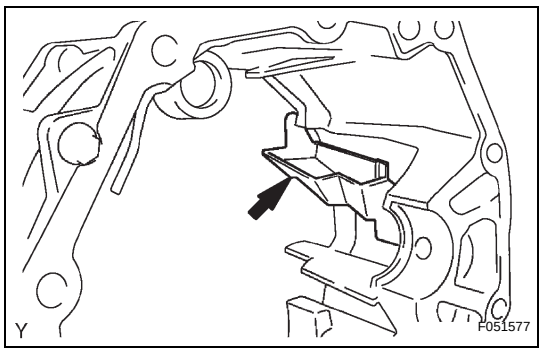
18. INSTALL SHIFT AND SELECT LEVER

(a) Install the lock ball pin and spring onto the shift and select lever.
(b) Install the shift and select lever onto the shift and select lever cam and shaft.
(c) Install the bolt onto the shift and select lever.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)



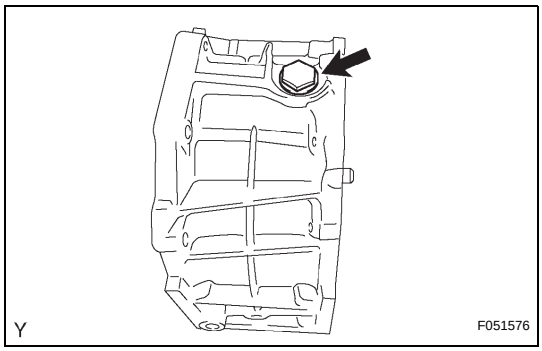
19. INSTALL SHIFT AND SELECT LEVER SHAFT

(a) Align the groove of the shift and select cam with the reverse idler shaft, and the claw with the groove of the control assembly, and install them.



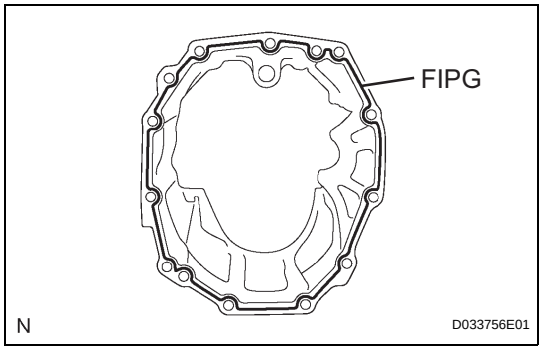
20. INSTALL NO. 2 OIL RECEIVER PIPE

(a) Install the oil receiver pipe No. 2 into the transmission middle case.



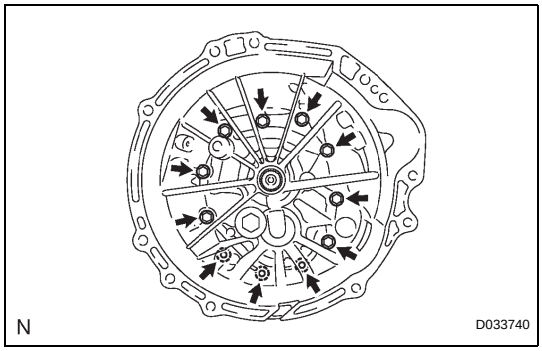
21. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug with a new gasket onto the transmission middle case.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

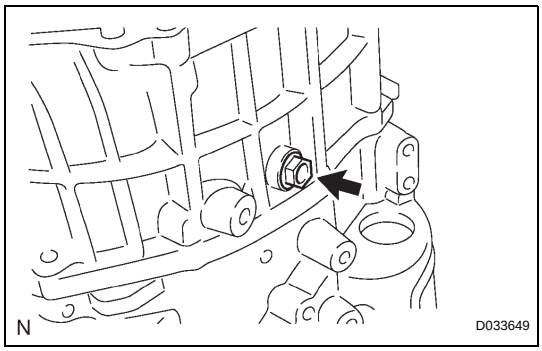


22. INSTALL TRANSMISSION MIDDLE CASE

(a) Apply FIPG to the transmission middle case, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

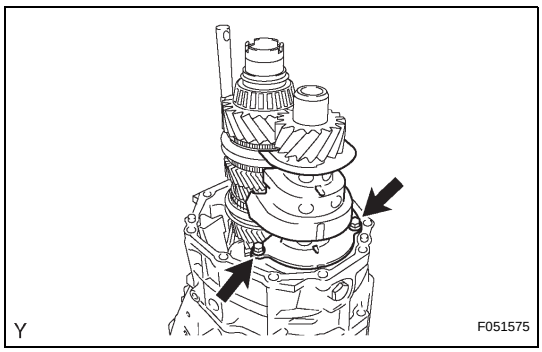


(b) Install the transmission middle case with the 11 bolts onto the transmission front case.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
Bolt length:
Bolt A: 40 mm (1.57 in.)
Bolt B: 80 mm (3.15 in.)



23. INSTALL REVERSE IDLER GEAR SHAFT BOLT

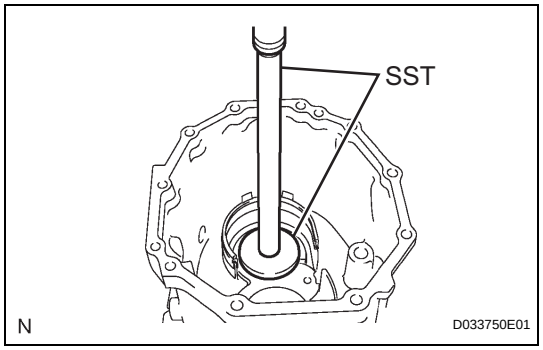
(a) Install a new gasket and the reverse idler gear shaft bolt onto the reverse idler gear shaft.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)



24. INSTALL TRANSMISSION OIL SEPARATOR

(a) Install the transmission oil separator with the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

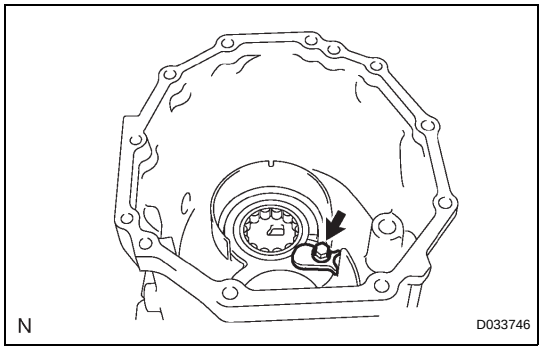
MT



25. INSTALL COUNTER GEAR REAR RADIAL BALL BEARING

(a) Coat a new counter gear rear radial ball bearing with gear oil, and using SST and a press, install it into the transmission rear case.

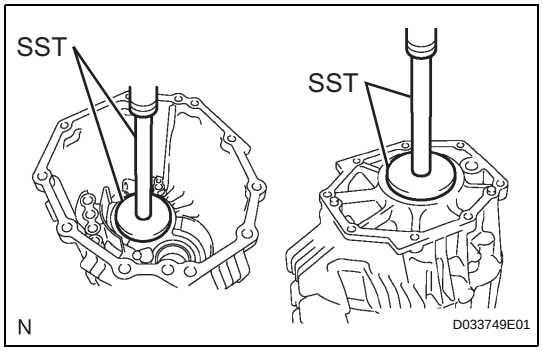
SST 09950-70010 (09951-07360), 09950-60010 (09951-00650)



(b) Install the bearing lock plate with the bolt.

Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)

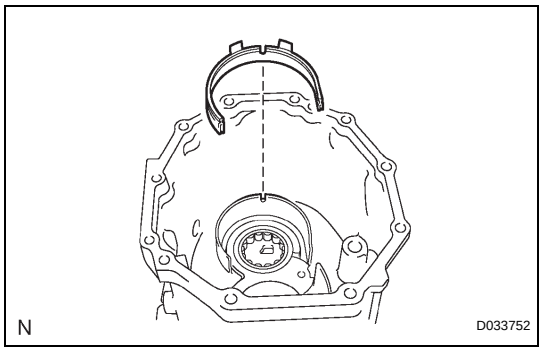
MT



26. INSTALL OUTPUT SHAFT REAR BEARING OUTER RACE

(a) Using SST and a press, press in 2 new bearing outer races.

SST 09950-70010 (09951-07100, 09951-07360), 09950-60020 (09951-00790)

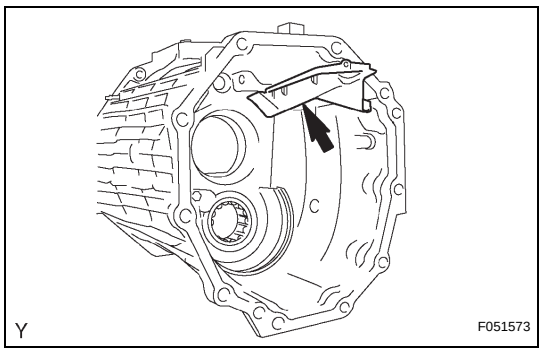


27. INSTALL OIL SEPARATOR PACKING SEAL

(a) Install the oil separator packing seal onto the transmission rear case.

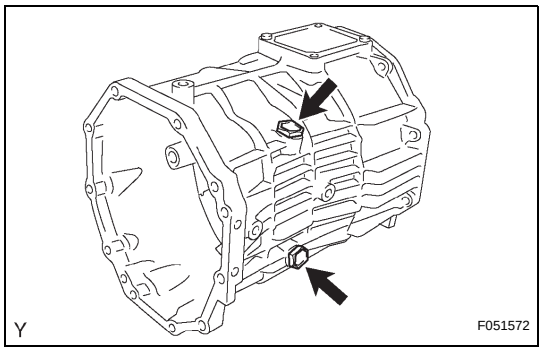
HINT:

Insert the protruding part of the oil separator packing seal into the groove on the transmission rear case.



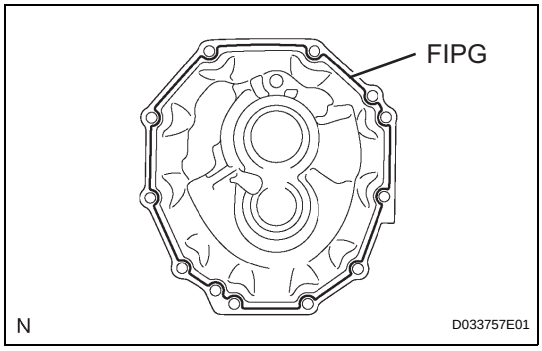
28. INSTALL EXTENSION HOUSING OIL RECEIVER PIPE

(a) Install the extension housing oil receiver pipe onto the transmission rear case.



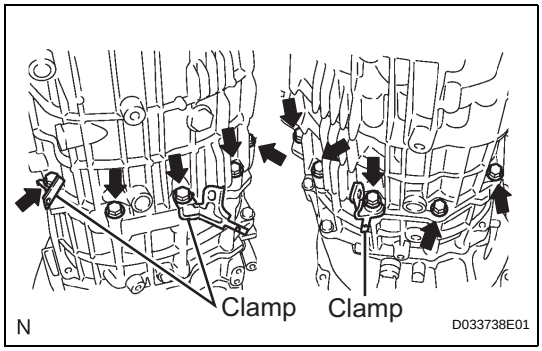
29. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the 2 transmission filler plugs with 2 new gaskets onto the transmission rear case.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

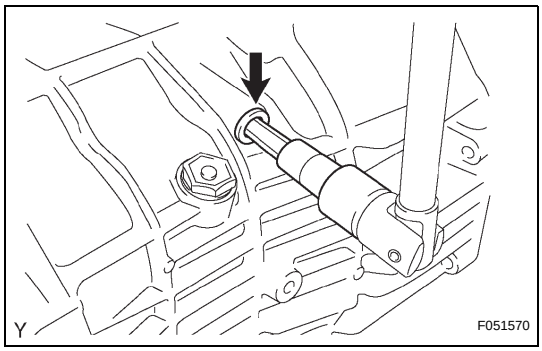


30. INSTALL TRANSMISSION REAR CASE

(a) Apply FIPG to the transmission rear case, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

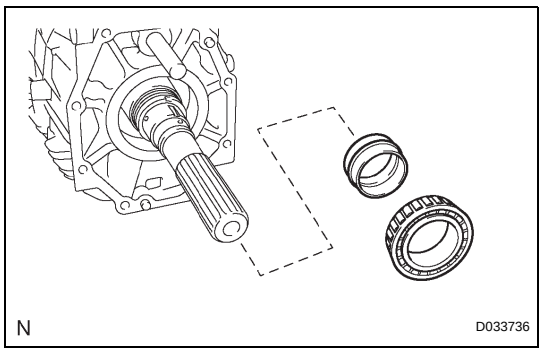


(b) Install the transmission rear case with the 10 bolts and 3 brackets onto the transmission middle case.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



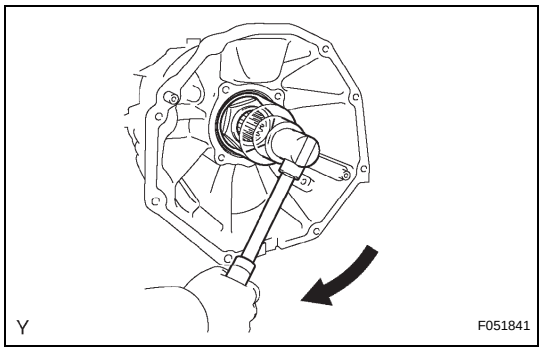
31. INSTALL SHIFT DETENT BALL PLUG

(a) Install the ball and compression spring onto the transmission rear case.
(b) Install a new shift detent ball plug, and install it onto the transmission rear case.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)

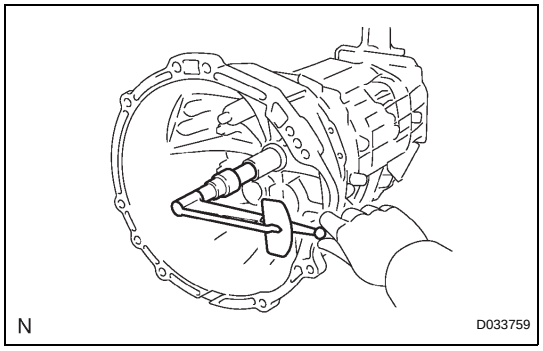


32. INSTALL OUTPUT SHAFT ADJUST NUT

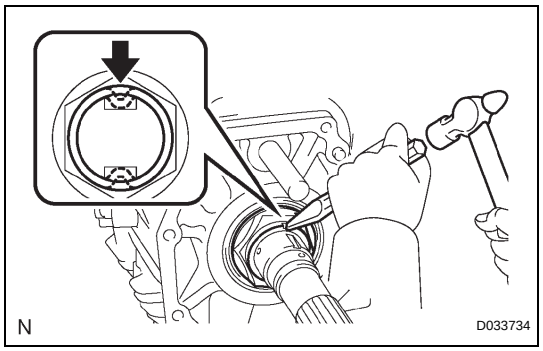
(a) Using a belt and wooden block, fasten the transmission to the workbench.
(b) Install a new spacer and output shaft taper roller bearing No. 2.



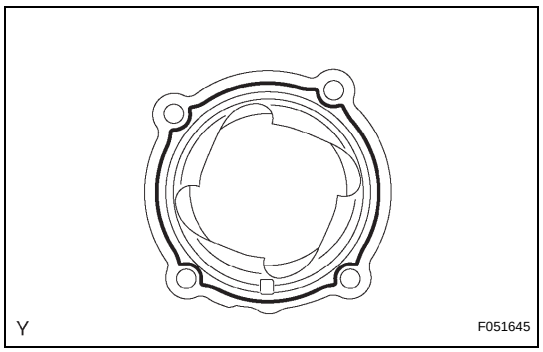
(c) Using a socket wrench (60 mm), provisionally tighten a new nut until there is no slack in the output shaft.
HINT:
No preload should be applied to the nut.
(d) Fit the bearing into the output shaft by turning the output shaft 15 times.



(e) Place the gearshift into 5th gear and check the initial torque of the input shaft.
(f) Using a socket wrench (60 mm), tighten the nut.
(g) Place the gearshift into 5th gear and check the initial torque of the input shaft.
(h) Confirm that the difference between (f) and (i) is within the specified values.
Preload (at starting):
0.45 to 1.35 N*m (4.59 to 13.77 kgf*cm, 3.98 to 11.95 in.*lbf)
If the result is not as specified, tighten and adjust the output shaft adjusting nut.
NOTICE:
If the output shaft adjusting nut is loose or removed due to a large preload, always replace the spacer with a new one.

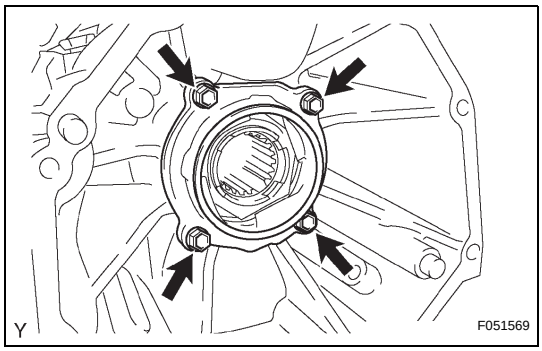


(i) Using a chisel and hammer, caulk the output shaft adjust nut.

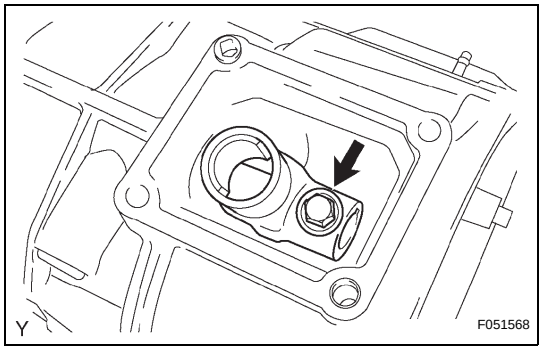


33. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY
(a) Apply FIPG to the transmission case cover, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

MT

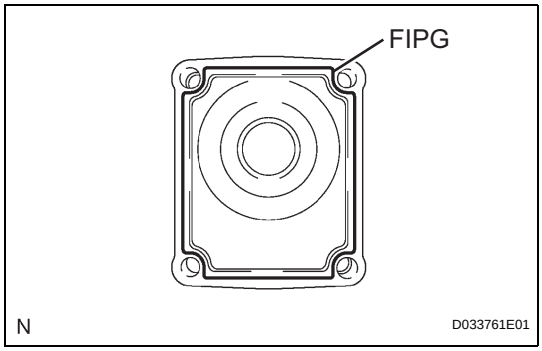


(b) Install the transmission case cover with the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



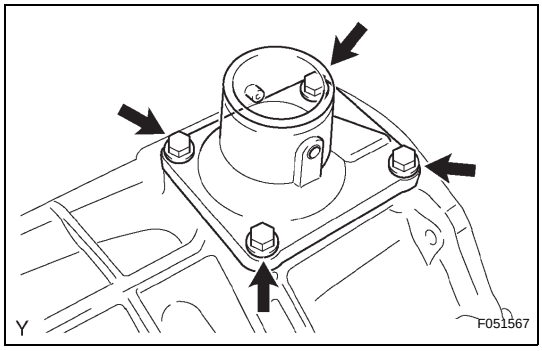
34. INSTALL SHIFT LEVER HOUSING

(a) Install the shift lever housing with the bolt.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)

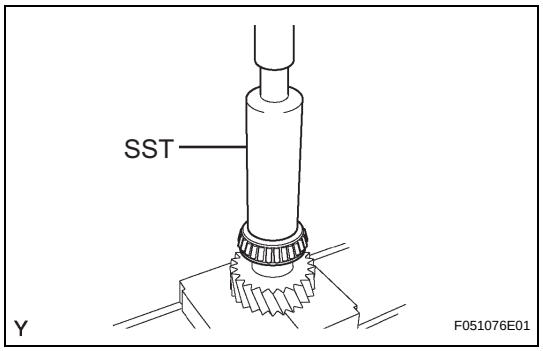


35. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Apply FIPG to the floor shift control shift lever retainer, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.



(b) Install the floor shift control shift lever retainer with the 4 bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



REASSEMBLY

1. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install a new output shaft rear bearing onto the output shaft.
SST 09316-60011 (09316-00011)

(b) Apply a light coat of grease to the bearing.

2. INSTALL OUTPUT SHAFT CENTER BEARING

(a) Apply gear grease to the output shaft center bearing to the output shaft, and install it onto the output shaft.

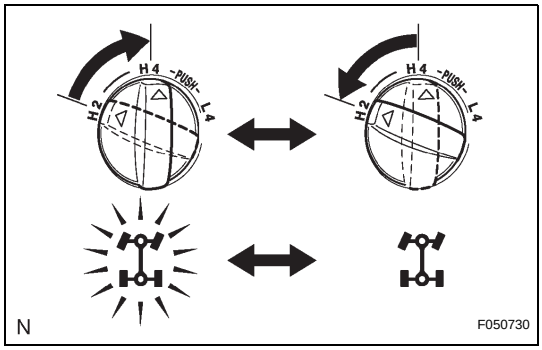
3. INSTALL NO. 3 SYNCHRONIZER RING

(a) Apply gear oil to synchronizer ring No. 3, and install it onto the output shaft.

INSPECTION

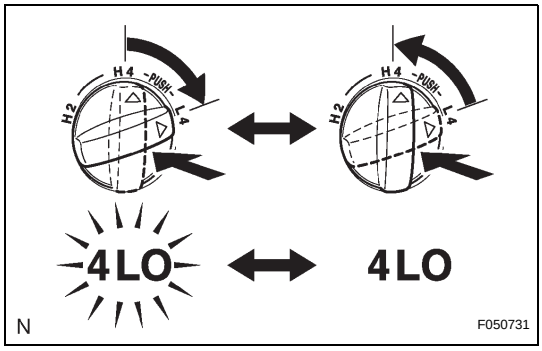
NOTICE:

- **A/T:**
  Switch the 4 wheel drive control switch when the A/T shift lever is in the N position and the vehicle speed is 5 km/h or less.
- **M/T:**
  Switch the 4 wheel drive control switch when the clutch start switch is turned ON and the vehicle speed is 3 km/h or less.
- **Do not change from H2 to H4 when the vehicle speed is 100 km/h or more.**



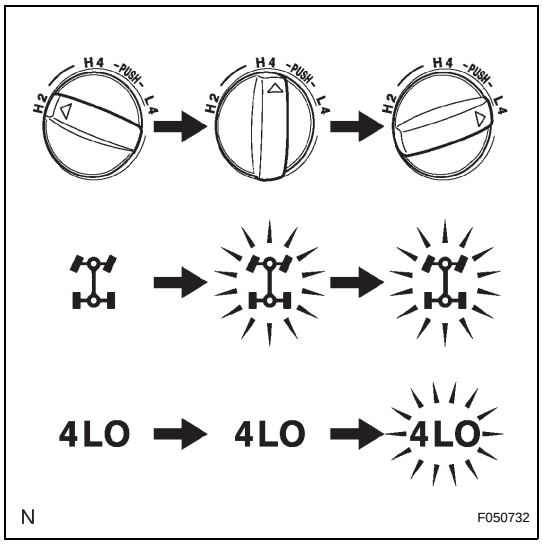
1. INSPECT H2 (2WD) - H4 (4WD) SHIFT

(a) Start the engine.
(b) Turn the 4 wheel drive control switch from the H2 to the H4 position.
(c) Check that the 4WD indicator light blinks and then stays on.
(d) Turn the 4 wheel drive control switch from the H4 to the H2 position
(e) Check that the 4WD indicator light blinks and then goes off.



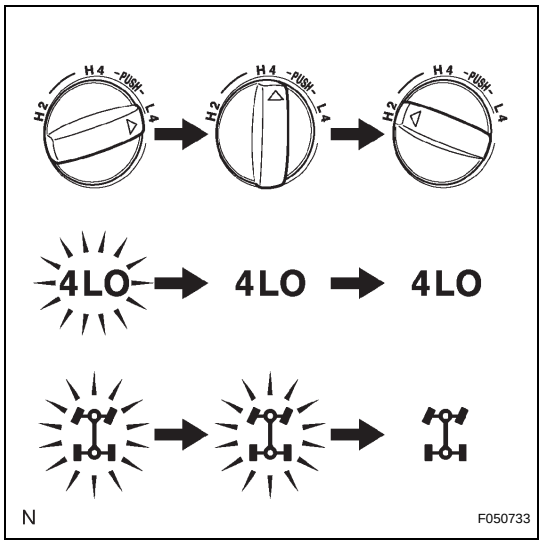
2. INSPECT H4 (4WD) - L4 (4WD) SHIFT

(a) Start the engine.
(b) Turn the 4 wheel drive control switch from the H4 to the L4 position while pressing it.
(c) Check that the 4LO indicator light blinks and then stays on.
(d) Turn the 4 wheel drive control switch from the L4 to the H4 position while pressing it.
(e) Check that the 4LO indicator light blinks and then goes off.



3. INSPECT H2 (2WD) - L4 (4WD) SHIFT

(a) Start the engine.
(b) Turn the 4 wheel drive control switch from the H2 to the H4 position.
(c) Check that the 4WD indicator light blinks and then stays on.
(d) Turn the 4 wheel drive control switch from the H4 to the L4 position while pressing it.
(e) Check that the 4LO indicator light blinks and then stays on.



4. INSPECT L4 (4WD) - H2 (2WD) SHIFT

(a) Start the engine.

(b) Turn the 4 wheel drive control switch from the L4 to the H4 position while pressing it.

(c) Check that the 4LO indicator light blinks and then goes off.

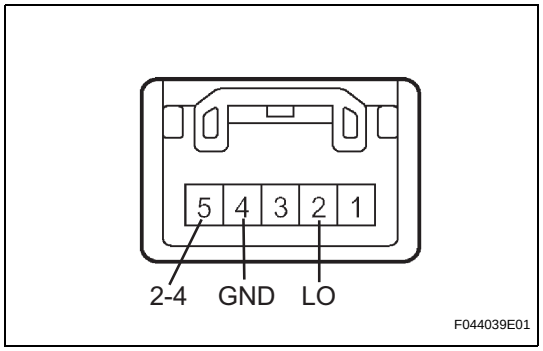
(d) Turn the 4 wheel drive control switch from the H4 to the H2 position.

(e) Check that the 4WD indicator light blinks and then goes off.

5. INSPECT 4 WHEEL DRIVE CONTROL SWITCH

(a) Remove the center instrument cluster finish panel sub-assembly.

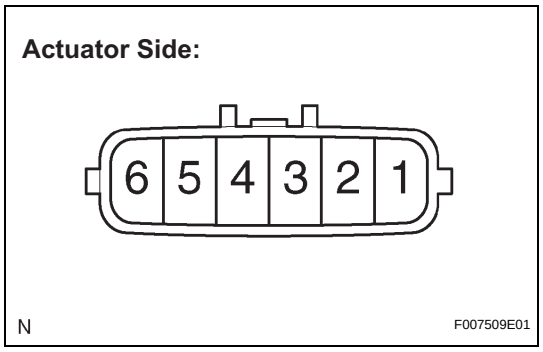
(b) Remove the 4 wheel drive control switch from the center instrument cluster finish panel sub-assembly.



(c) Using an ohmmeter, measure the resistance between the terminals.

Switch position	Tester connection	Specified condition
H2	5 (2-4) - 4 (GND)	Below 1Ω
H4	5 (2-4) → 4 (GND)	Below 1Ω
	5 (2-4) ← 4 (GND)	100 kΩ or higher
	2 (LO) → 4 (GND)	Below 1Ω
	2 (LO) ← 4 (GND)	100 kΩ or higher
L4	2 (LO) - 4 (GND)	Below 1Ω

If the results are not as specified, replace the 4 wheel drive control switch or bulb.



6. INSPECT ACTUATOR RESISTANCE

(a) Using an ohmmeter, measure the resistance between terminals 1 and 2.

Standard resistance:

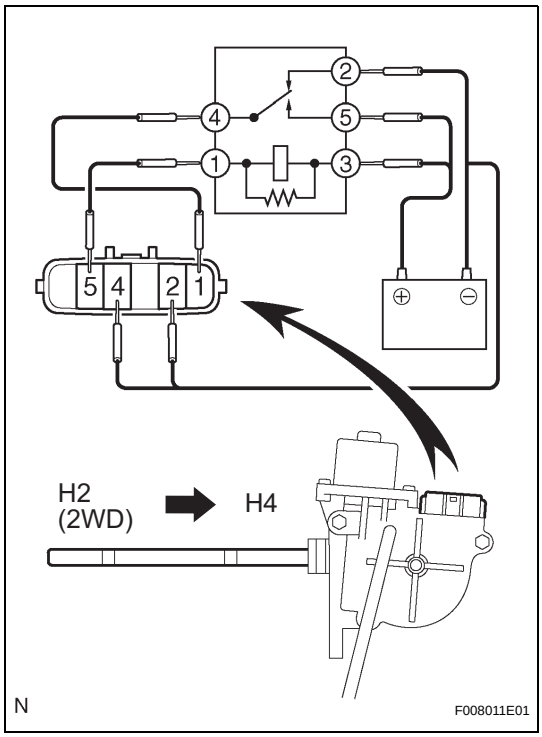
0.3 to 100 Ω

(b) Using an ohmmeter, measure the resistance between terminals 1 or 2 and the body ground.

Standard resistance:

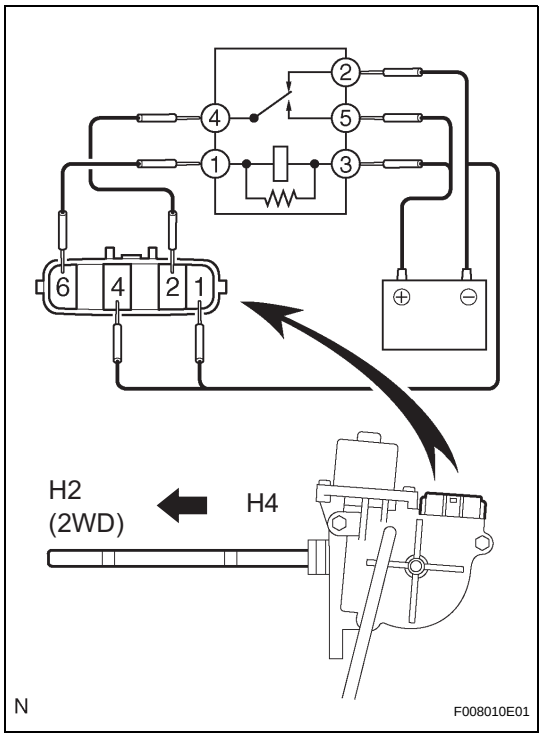
More than 0.5 MΩ

If the results are not as specified, replace the shift actuator assembly.



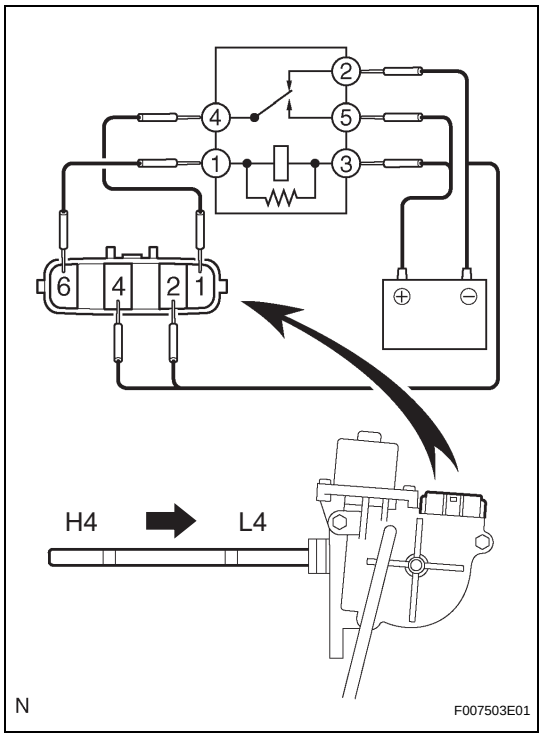
7. INSPECT ACTUATOR OPERATION

(a) H2 (2WD) → H4 shift:
Connect the lines via the relay as shown in the illustration, then check that the actuator fork shaft moves from the H2 (2WD) to the H4 positions.

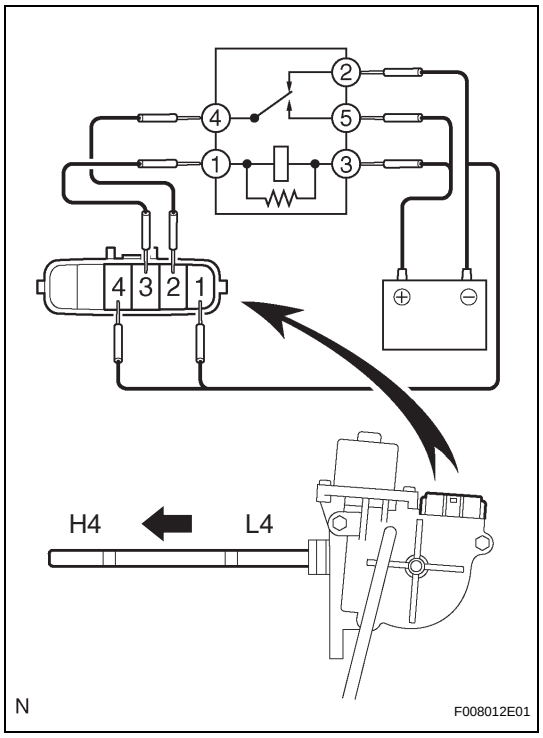


(b) H4 → H2 (2WD) shift:
Connect the lines via the relay as shown in the illustration, then check that the actuator fork shaft moves from the H4 to the H2 (2WD) positions.

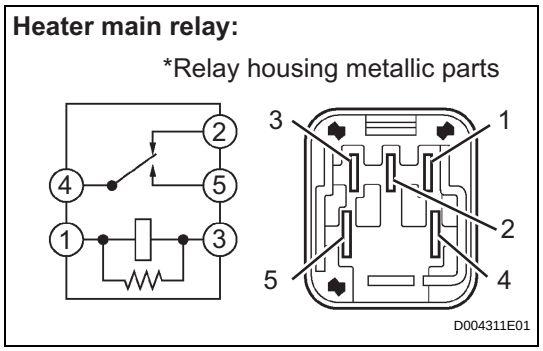
TF



(c) H4 → L4 shift:
Connect the lines via the relay as shown in the illustration, then check that the actuator fork shaft moves from the H4 to the L4 positions.

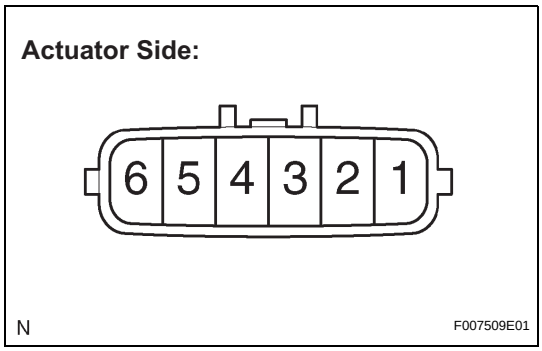


(d) L4 →H4 shift:
Connect the lines via the relay as shown in the illustration, then check that the actuator fork shaft moves from the L4 to the H4 positions.



HINT:
When inspecting the operation described above, use a heater main relay.
NOTICE:
Connect the terminals, being careful not to touch the neighboring terminals or metallic parts of the relay housing.

TF



8. INSPECT LIMIT SWITCH CONTINUITY

(a) Start the engine and lift the vehicle up.

(b) With the actuator connector connected, after checking the operating sound, disconnect the connector and inspect the continuity between the terminals using an ohmmeter.

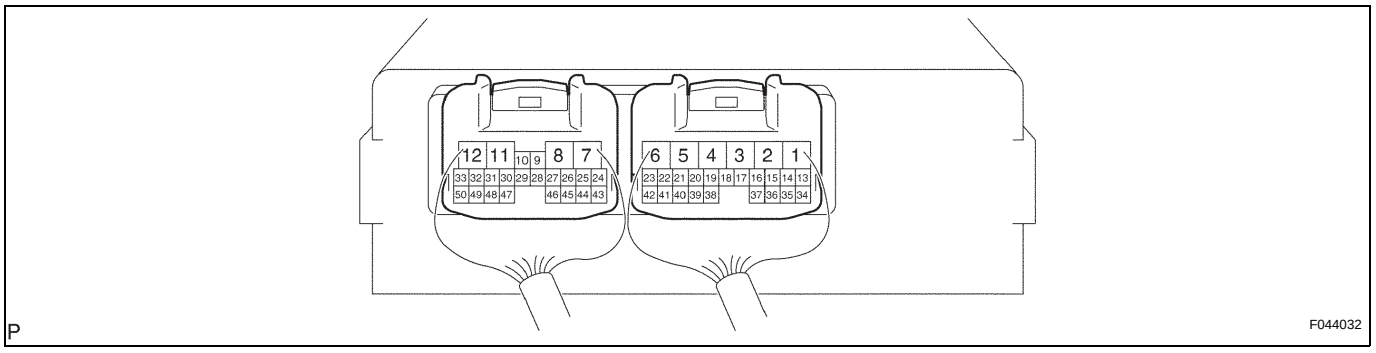
HINT:

When shifting the actuator fork shaft, connect the connectors.

Shift position	Tester connection	Specified condition
H2	3 - 4	100 kΩ or higher
	3 - 5	100 kΩ or higher
	3 - 6	100 kΩ or higher
	4 - 5	Below 1Ω
	4 - 6	100 kΩ or higher
	5 - 6	100 kΩ or higher
H4	3 - 4	100 kΩ or higher
	3 - 5	100 kΩ or higher
	3 - 6	100 kΩ or higher
	4 - 5	100 kΩ or higher
	4 - 6	Below 1Ω
	5 - 6	100 kΩ or higher
L4	3 - 4	Below 1Ω
	3 - 5	100 kΩ or higher
	3 - 6	100 kΩ or higher
	4 - 5	100 kΩ or higher
	4 - 6	100 kΩ or higher
	5 - 6	100 kΩ or higher

9. INSPECT 4 WHEEL DRIVE CONTROL ECU

(a) Connect the wire harness side connector to the 4 wheel drive control ECU and inspect the wire harness side connector from the back side, as shown.



STANDARD VALUE OF ECU TERMINAL

Terminals (Symbols)	Condition	STD Voltage (V)
2 (TM1) - 1 (TM2)	• Ignition switch ON • Differential lock switch in OFF position • 4 wheel drive control switch H2 position → H4 position	10 to 14 or 0 to 14 pulse generation then less than 0.5
1 (TM2) - 2 (TM1)	• Ignition switch ON • Keep pressing the differential lock switch for approx. 2 seconds to turn it ON • 4 wheel drive control switch L4 position → H4 position	10 to 14 or 0 to 14 pulse generation then less than 0.5
3 (DM1) - 4 (DM2)	• Ignition switch ON • A.D.D. FREE →LOCK	10 to 14 or 0 to 14 pulse generation then less than 0.5
4 (DM2) - 3 (DM1)	• Ignition switch ON • A.D.D. LOCK → FREE	10 to 14 or 0 to 14 pulse generation then less than 0.5

12 (GND) - Body ground	Ignition switch OFF	Below 1Ω
11 (IG) - 12 (GND)	Ignition switch ON	10 to 14
18 (DL2) - 12 (GND)	• Ignition switch ON • A.D.D. LOCK → FREE	1.5 or less → 10 to 14
19 (DL1) - 12 (GND)	• Ignition switch ON • A.D.D. FREE → LOCK	1.5 or less → 10 to 14
25 (2-4) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch L4 position → H2 position or H4 position	10 to 14 → 2 or less
26 (SPD) - 12 (GND)	During driving	Pulse generation
28 (IND3) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H4 position → L4 position	10 to 14 → 1.5 to 3.5
32 (LO) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H4 position → L4 position	10 to 14 →1.5 or less
42 (ADD) - 12 (GND)	• Ignition switch ON • A.D.D. FREE → LOCK	10 to 14 →1.5 or less
23 (L4) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position or H4 position → L4 position	10 to 14 →1.5 or less
38 (4WD) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position →H4 position	10 to 14 →1.5 or less
39 (TL3) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position → L4 position	10 to 14 → 0.88 or less
40 (TL2) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position → H4 position	10 to 14 → 0.88 or less
41 (TL1) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position → H4 position or L4 position	0.88 or less → 10 to 14
45 (IND1) - 12 (GND)	• Ignition switch ON • 4 wheel drive control switch H2 position → H4 position or L4 position	10 to 14 → 0 to 3.5
48 (N) - 12 (GND)	• Ignition switch ON • Transmission shift lever other position → N position	1.5 or less → 10 to 14

TF

DISASSEMBLY

1. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearings axial play by turning the yoke while holding the shaft tightly.

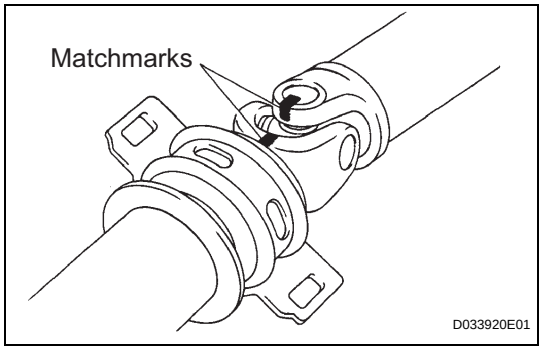
Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

If the bearing axial play is greater than the maximum, replace the spider bearing.

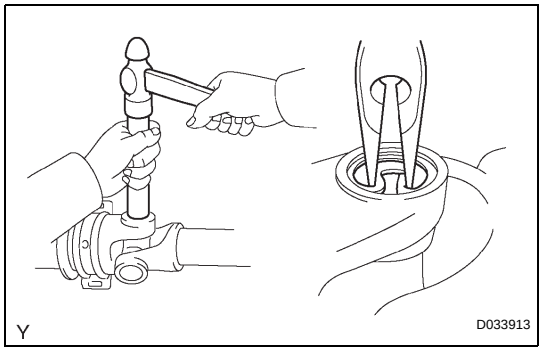
2. REMOVE PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Place matchmarks on the propeller shaft and universal joint yoke.



(b) Using a brass bar and hammer, slightly tap in the spider bearing.

(c) Using needle-nose pliers, remove the 4 snap rings from the grooves.



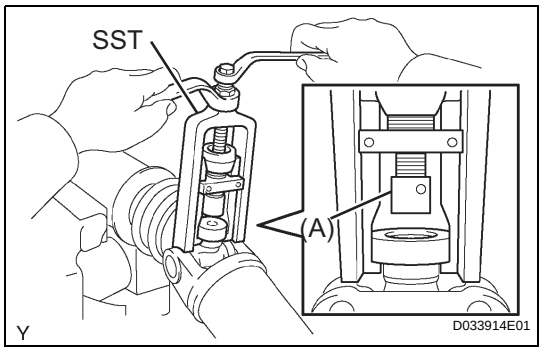
(d) Clamp the propeller shaft in a vise between aluminum plates.

(e) Using SST, push the spider bearing out of the propeller shaft.

SST 09332-25010

HINT:

Sufficiently raise the part indicated by (A) so that it does not come into contact with the spider bearing.



(f) Clamp the removed spider bearing outer race in a vise and tap the propeller shaft to remove the spider bearing.

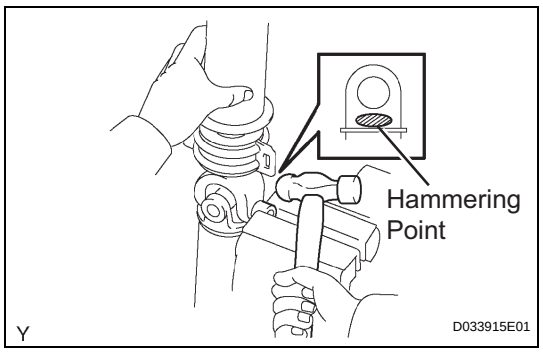
NOTICE:

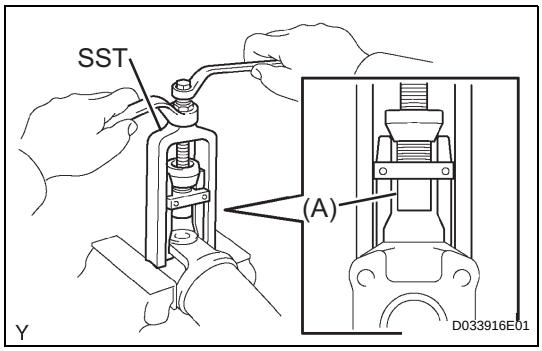
Do not tap the shaft tube.

HINT:

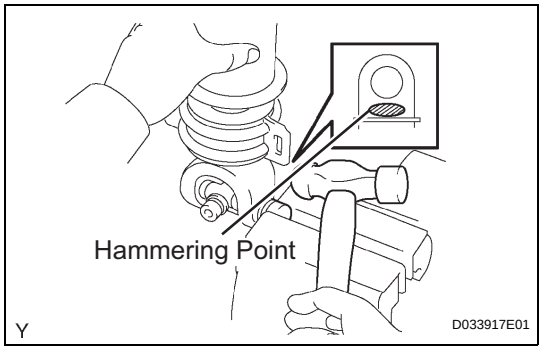
Remove the spider bearing from the opposite side of the spider using the same procedure.

(g) Separate the propeller with center bearing shaft assembly from the propeller shaft assembly.

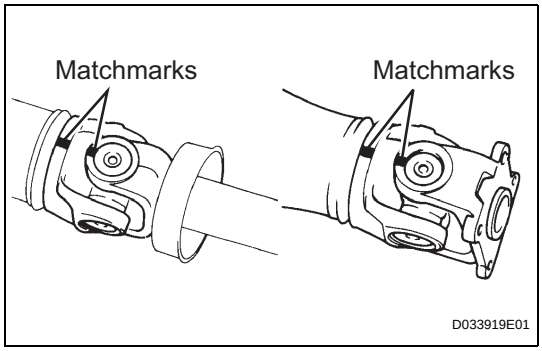




(h) Reinstall the 2 removed spider bearings onto the spider and clamp the spider bearings in a vise.
(i) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.

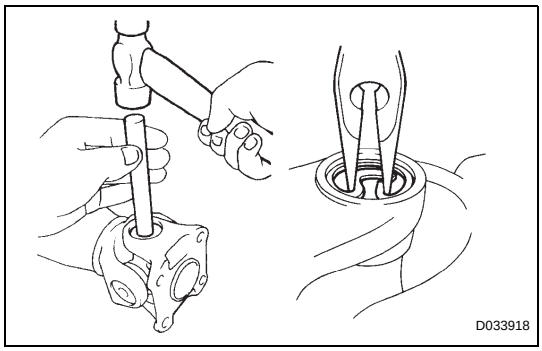


(j) Clamp the outer bearing race in a vise and tap off the yoke with a hammer.
(k) Remove the spider.

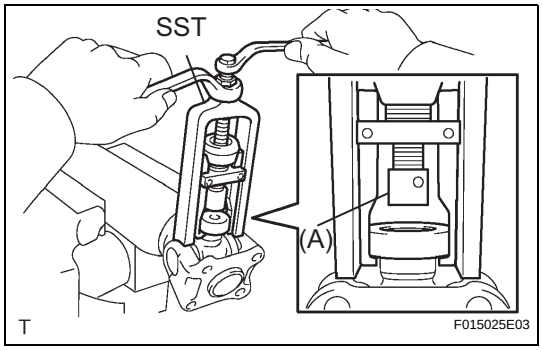


3. REMOVE PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

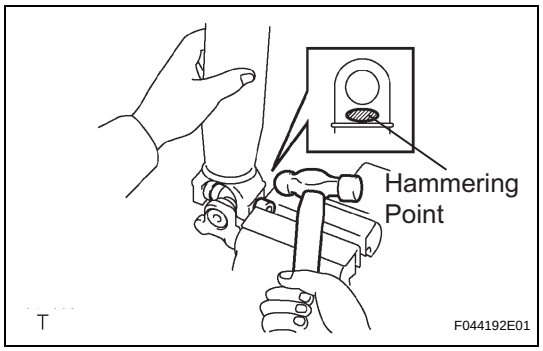
(a) Place matchmarks on the flange yoke and sleeve yoke.



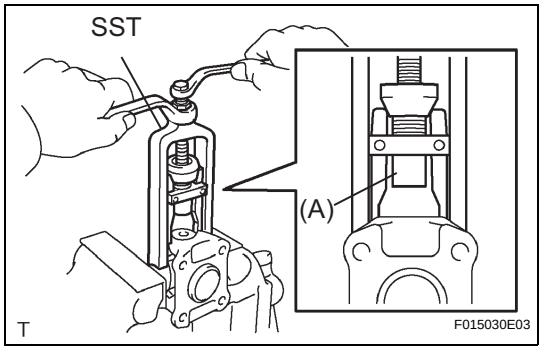
(b) Using a brass bar and hammer, slightly tap in the spider bearing.
(c) Using 2 needle-nose pliers, remove the 4 snap rings from the grooves.



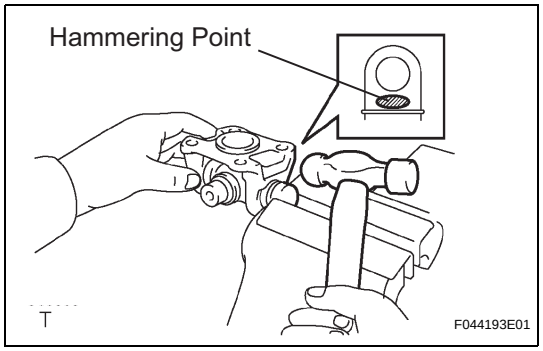
(d) Clamp the propeller shaft in a vise between the aluminum plates.
(e) Using SST, push the spider bearing out of the propeller shaft.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.



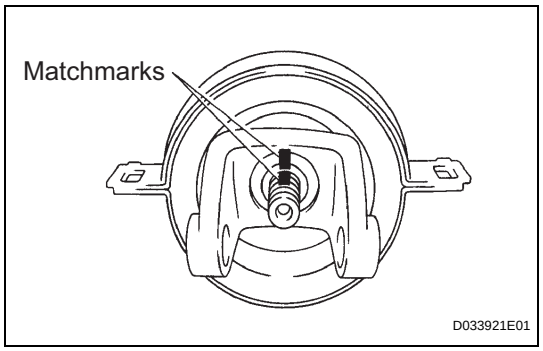
(f) Clamp the removed spider bearing outer race in a vise and tap the propeller shaft to remove the spider bearing.
NOTICE:
Do not tap the shaft tube.
HINT:
Remove the spider bearing from the opposite side of the spider using the same procedure.
(g) Separate the flange yoke and spider from the propeller shaft.



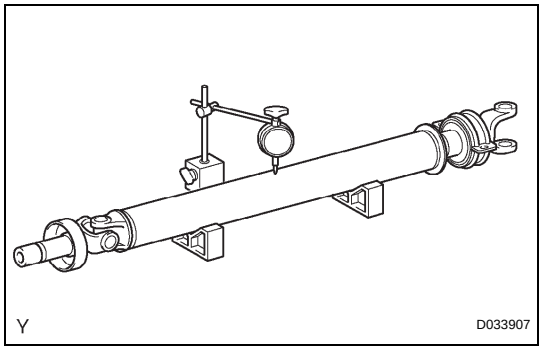
(h) Reinstall the 2 removed spider bearings onto the spider and clamp the spider bearings in a vise.
(i) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.



(j) Clamp the outer bearing race in a vise and tap off the yoke with a hammer.
(k) Remove the spider.



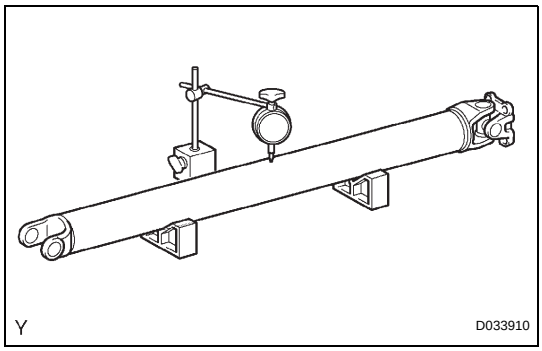
4. REMOVE CENTER SUPPORT BEARING ASSEMBLY NO. 2
(a) Fix the yoke at the center bearing section in a vice.
(b) Using a chisel and a hammer, loosen the staked part of the lock nut.
(c) Place matchmarks on the yoke and shaft.
(d) Using a brass bar and hammer, remove the center yoke, spacer and center support bearing from the intermediate shaft.



INSPECTION

1. INSPECT PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the shaft.

PR



2. INSPECT PROPELLER SHAFT

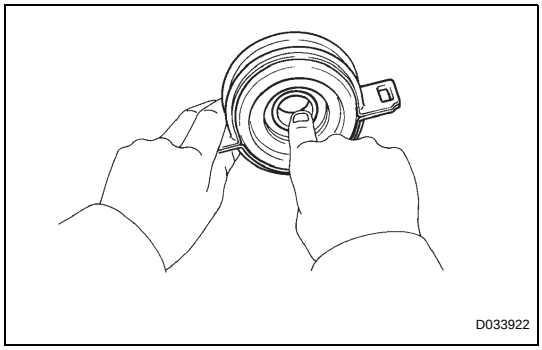
(a) Using a dial indicator, check the propeller shaft runout.

Maximum runout:

0.6 mm (0.024 in.)

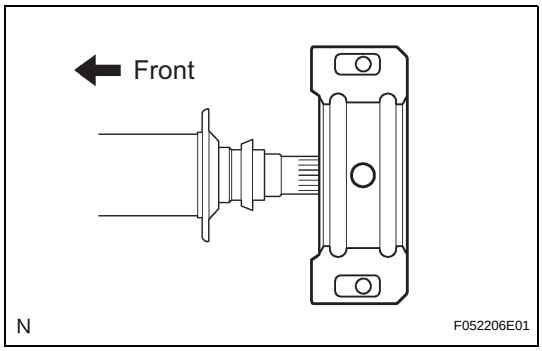
If the shaft runout is greater than the maximum, replace the shaft.

REASSEMBLY



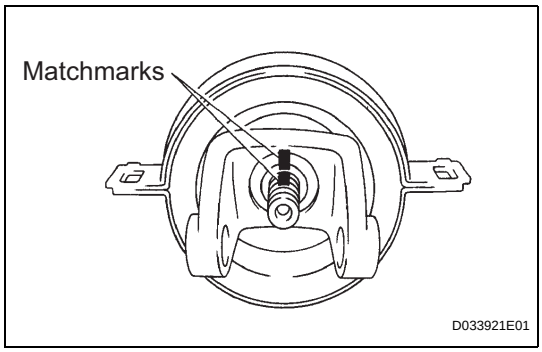
1. INSPECT CENTER SUPPORT BEARING ASSEMBLY NO. 2

(a) When turning the center bearing with your hand, check that it turns smoothly without catching and that there are no cracks or damage.
If there are any defects, replace it.



2. INSTALL CENTER SUPPORT BEARING ASSEMBLY NO. 2

(a) Install the center support bearing onto the intermediate shaft.



(b) Coat the splines of the intermediate shaft with MP grease No. 2.

(c) Align the matchmarks on the center yoke and intermediate shaft.
HINT:
If replacing either the center yoke or intermediate shaft, reassemble them so that the front side yoke of the intermediate shaft and the center yoke are facing in the same direction.

(d) Install the spacer.

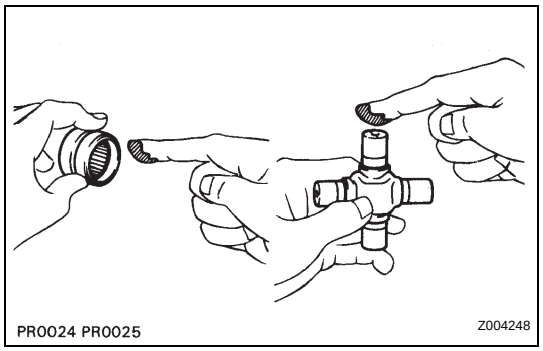
(e) Fix the yoke at the center bearing section in a vice.

(f) Clamp the yoke in a vise, and press the bearing into position by tightening a new nut.
Torque: 182 N*m (1,850 kgf*cm, 134 ft.*lbf)

(g) Loosen the nut.

(h) Torque the nut again.
Torque: 69 N*m (700 kgf*cm, 51 ft.*lbf)

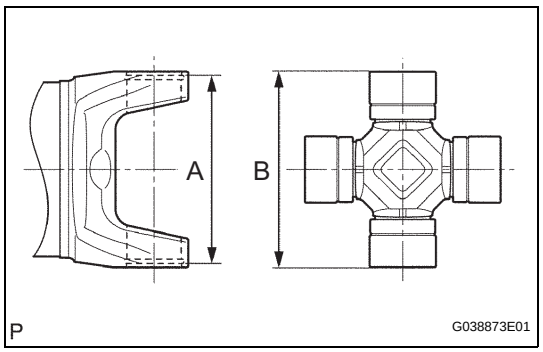
(i) Using a chisel and hammer, stake the lock nut.



3. INSTALL PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Apply MP grease No. 2 to a new spider and bearings.

(b) Fit the spider into the flange yoke.

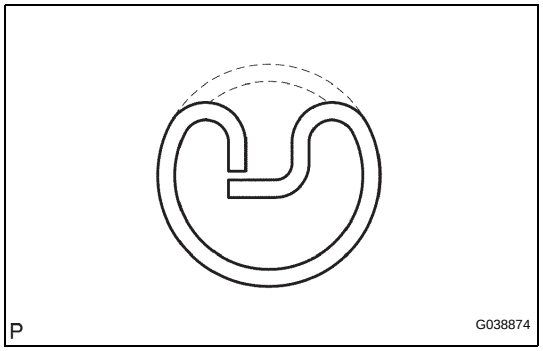


(c) Measure dimension A between the snap ring grooves.

(d) Insert the spider bearing into the spider journal portion, and then measure dimension B of the universal joint.

NOTICE:

When measuring dimension B, fix the spider and spider bearings in a vise and hold them firmly together.



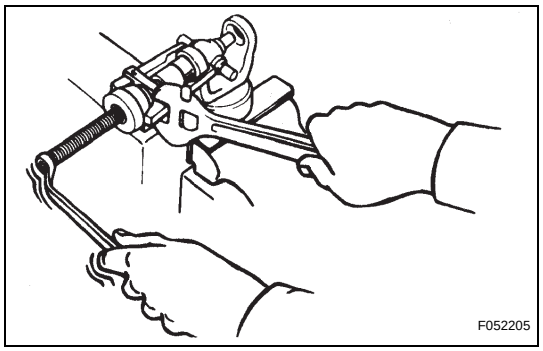
(e) Select snap rings to make dimensions A and B the same.

Snap Ring Type

Color	Thickness mm (in.)
Green	1.384 (0.0545)
Red	1.435 (0.0565)
Black	1.486 (0.0585)
Copper	1.511 (0.0595)
Silver	1.537 (0.0605)
Yellow	1.588 (0.0625)
Blue	1.638 (0.0645)

NOTICE:

- **Use new snap rings.**
- **If possible, use snap rings of the same thickness for both edges.**



(f) Insert the spider into the yoke, and then using SST, press the spider bearing into the snap ring groove.

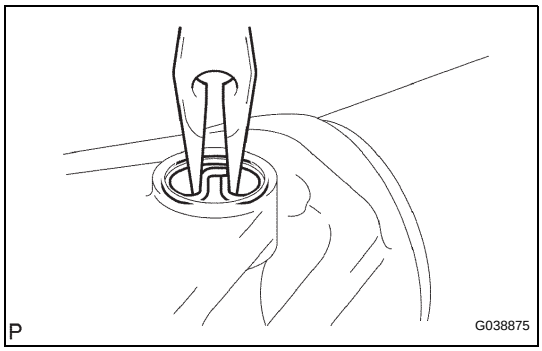
SST 09332-25010

(g) Press in the spider bearing on the opposite side in the same way.

NOTICE:

When pressing in the spider bearing, be careful not to damage its lip.

PR



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

4. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

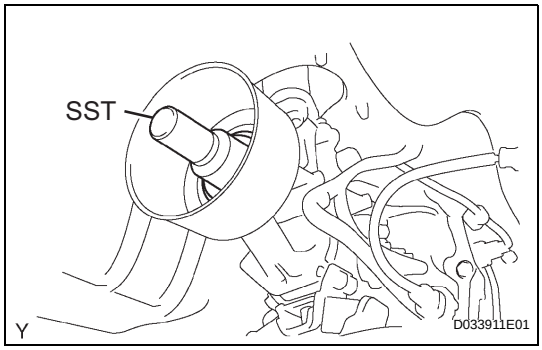
(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.
Maximum bearing axial play:
0 to 0.05 mm (0 to 0.002 in.)

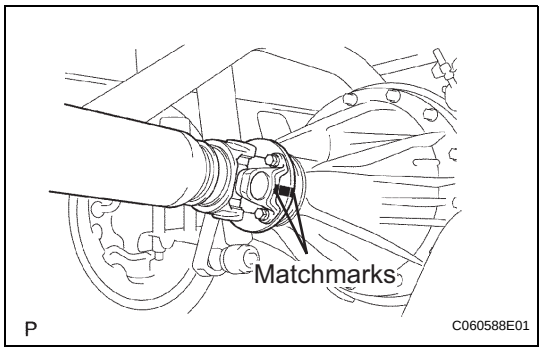
INSTALLATION

1. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

(a) Remove SST from the extension housing.

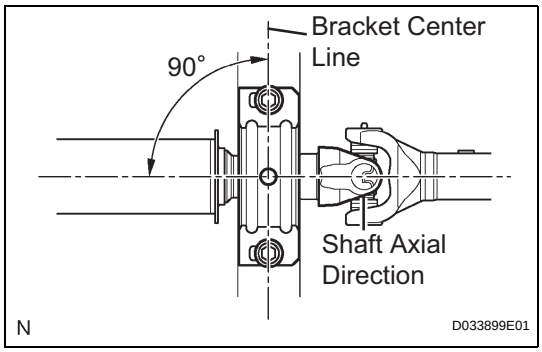
(b) Install the propeller shaft into the extension housing.



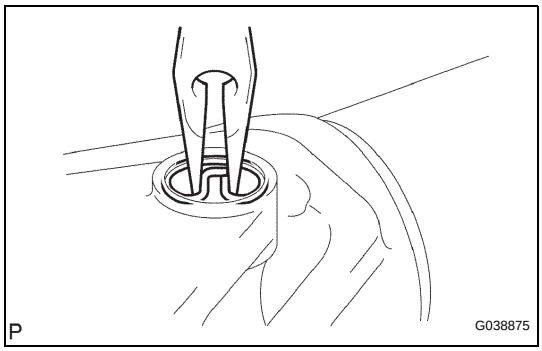


(c) Align the matchmarks on the propeller shaft flange and differential flange.

(d) Install the propeller shaft with the 4 bolts, 4 nuts and 4 washers.
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



(e) Provisionally install the center support bearing with the 2 mounting bolts.
HINT:
Make sure the bearing is installed with the drain hole facing downwards.



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

4. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

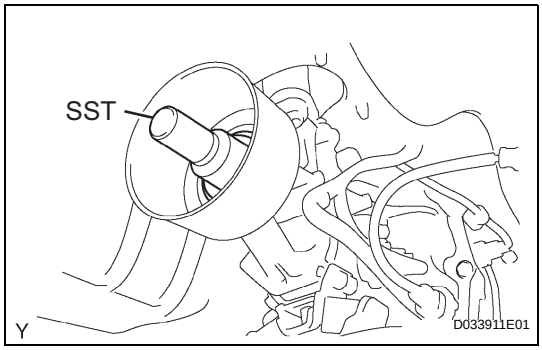
(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.
Maximum bearing axial play:
0 to 0.05 mm (0 to 0.002 in.)

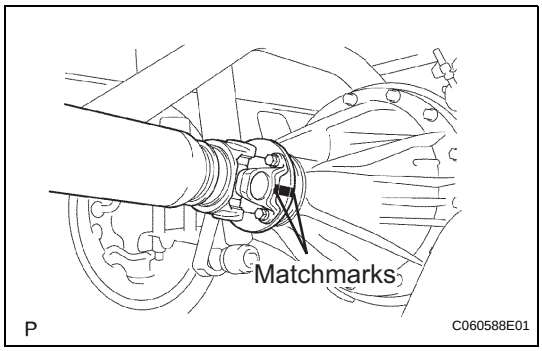
INSTALLATION

1. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

(a) Remove SST from the extension housing.

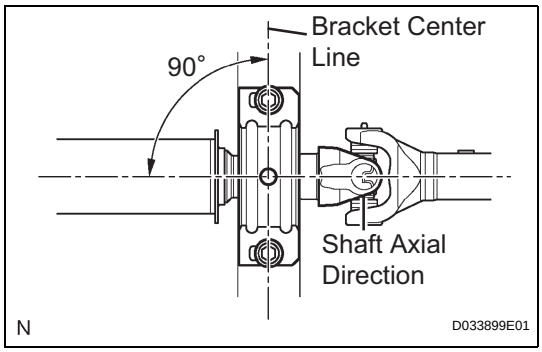
(b) Install the propeller shaft into the extension housing.



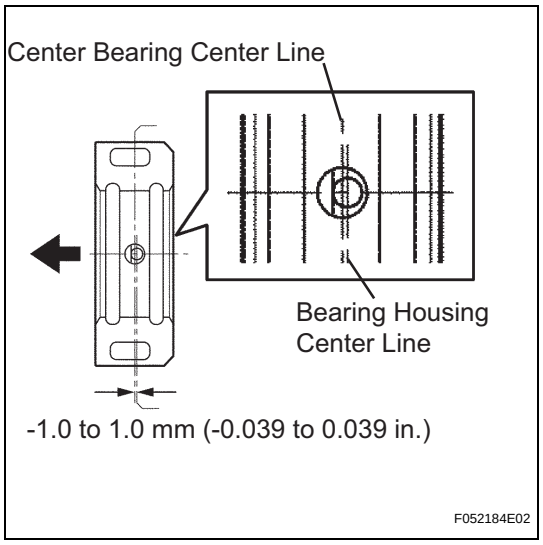


(c) Align the matchmarks on the propeller shaft flange and differential flange.

(d) Install the propeller shaft with the 4 bolts, 4 nuts and 4 washers.
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



(e) Provisionally install the center support bearing with the 2 mounting bolts.
HINT:
Make sure the bearing is installed with the drain hole facing downwards.



(f) Adjust the center support bearing.
HINT:
- With the vehicle unladen, adjust the center support bearing to keep the intervals, as shown.
- In the same condition, check the center line in the axial direction. Adjust the bearing if necessary.
- The center bearing center line and center bearing housing center line must be adjusted to within -1.0 to 1.0 mm (-0.039 to 0.039 in.) of each other in the vehicle's longitudinal direction when the vehicle is unladen.

(g) Torque the 2 bolts.
Torque: 36 N*m (369 kgf*cm, 27 ft.*lbf)

2. INSPECT TRANSMISSION OIL LEAKAGE

DISASSEMBLY

1. INSPECT FRONT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

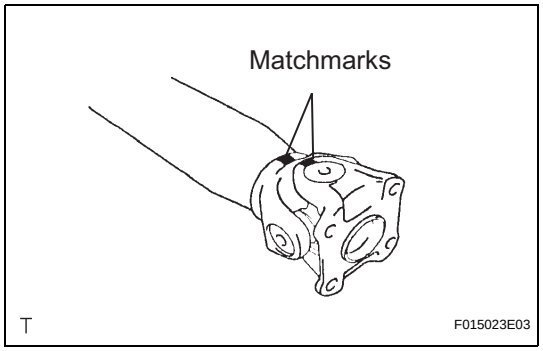
(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

Maximum bearing axial play:
0 to 0.05 mm (0 to 0.002 in.)

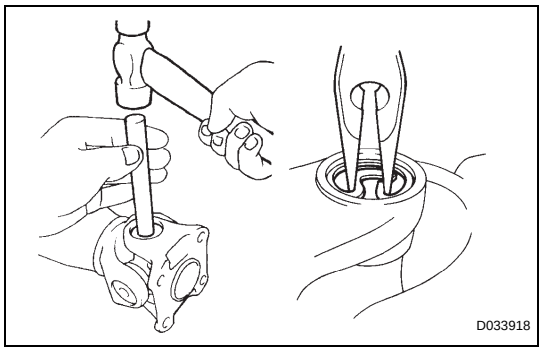
2. REMOVE FRONT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Place matchmarks on the propeller shaft and flange yoke.



(b) Using a brass bar and a hammer, slightly tap in the spider bearing outer races.

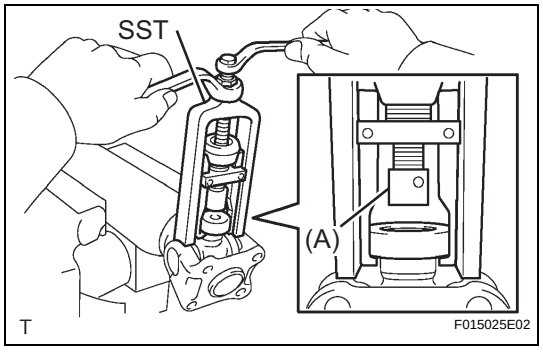
(c) Using needle-nose pliers, remove the 4 snap rings from the grooves.



(d) Using SST, push the spider bearing out of the propeller shaft.

SST 09332-25010

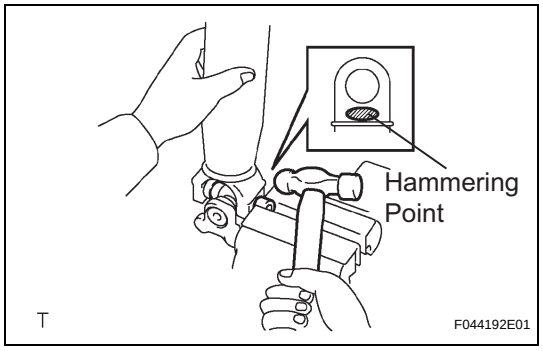
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the spider bearing.

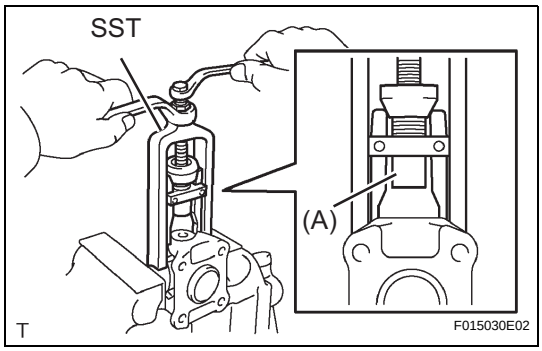


(e) Clamp the spider bearing outer race in a vise and tap off the propeller shaft with a hammer.

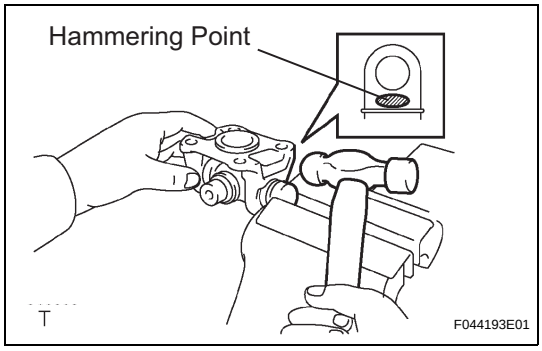
HINT:
Remove the bearing on the opposite side in the same procedure.

NOTICE:
Do not tap the shaft.

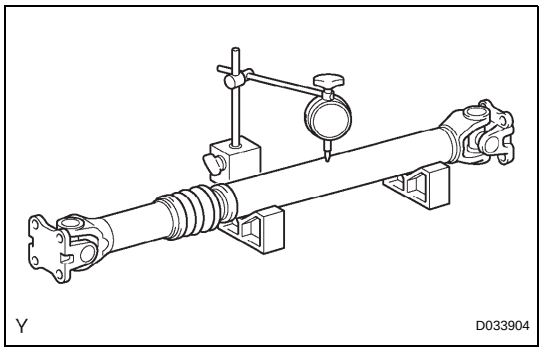




(f) Install the 2 removed spider bearing outer races onto the spider, and clamp them in a vise.
(g) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.



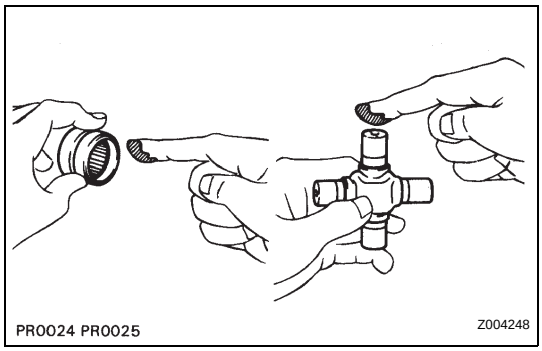
(h) Clamp the outer bearing race in a vise and tap off the flange yoke with a hammer.
(i) Remove the spider.



INSPECTION

1. INSPECT FRONT PROPELLER SHAFT ASSEMBLY

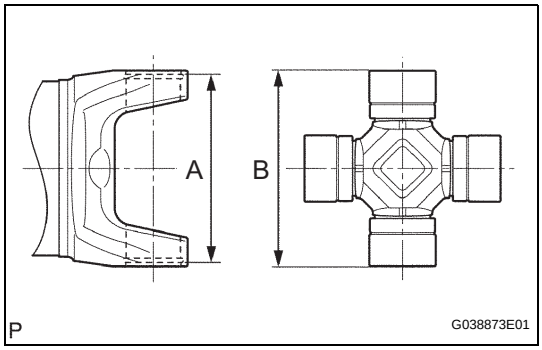
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the propeller shaft.



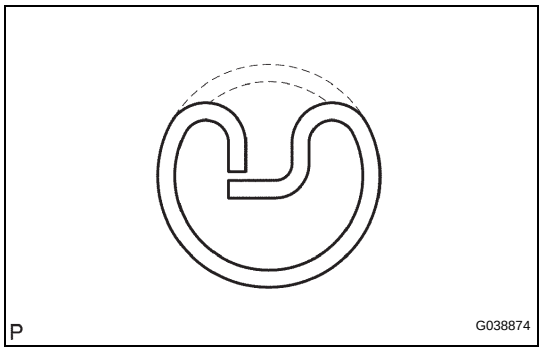
REASSEMBLY

1. INSTALL FRONT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Apply MP grease No. 2 to a new spider and spider bearing.
(b) Fit the spider into the flange yoke.



(c) Measure dimension A between the snap ring grooves.
(d) Insert the spider bearing into the spider journal portion, and then measure dimension B of the universal joint.
NOTICE:
When measuring dimension B, fix the spider and needle roller bearings in a vise and hold them firmly together.

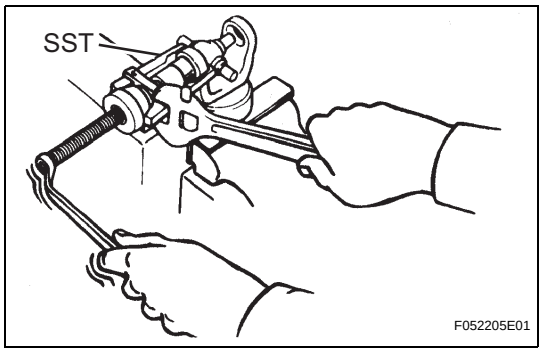


(e) Select snap rings to make dimensions A and B the same.

Snap Ring Type

Color	Thickness mm (in.)
Green	1.384 (0.0545)
Red	1.435 (0.0565)
Black	1.486 (0.0585)
Copper	1.511 (0.0595)
Silver	1.537 (0.0605)
Yellow	1.588 (0.0625)
Blue	1.638 (0.0645)

NOTICE:
- **Use new snap rings.**
- **If possible, use snap rings of the same thickness for both edges.**

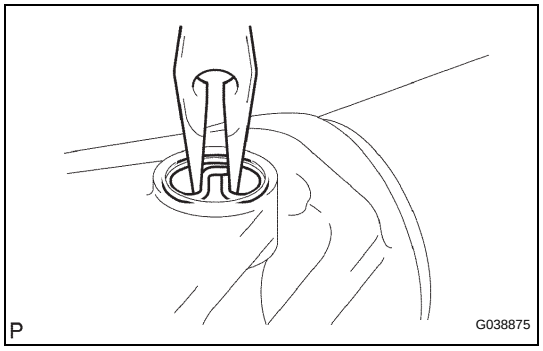


(f) Insert the spider into the yoke, and then using SST, press in the spider bearing into the snap ring groove.

SST 09332-25010

(g) Press in the spider bearing on the opposite side in the same way.

NOTICE:
When pressing in the spider bearing, be careful not to damage its lip.



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

2. INSPECT FRONT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

Maximum bearing axial play:
0 to 0.05 mm (0 to 0.002 in.)

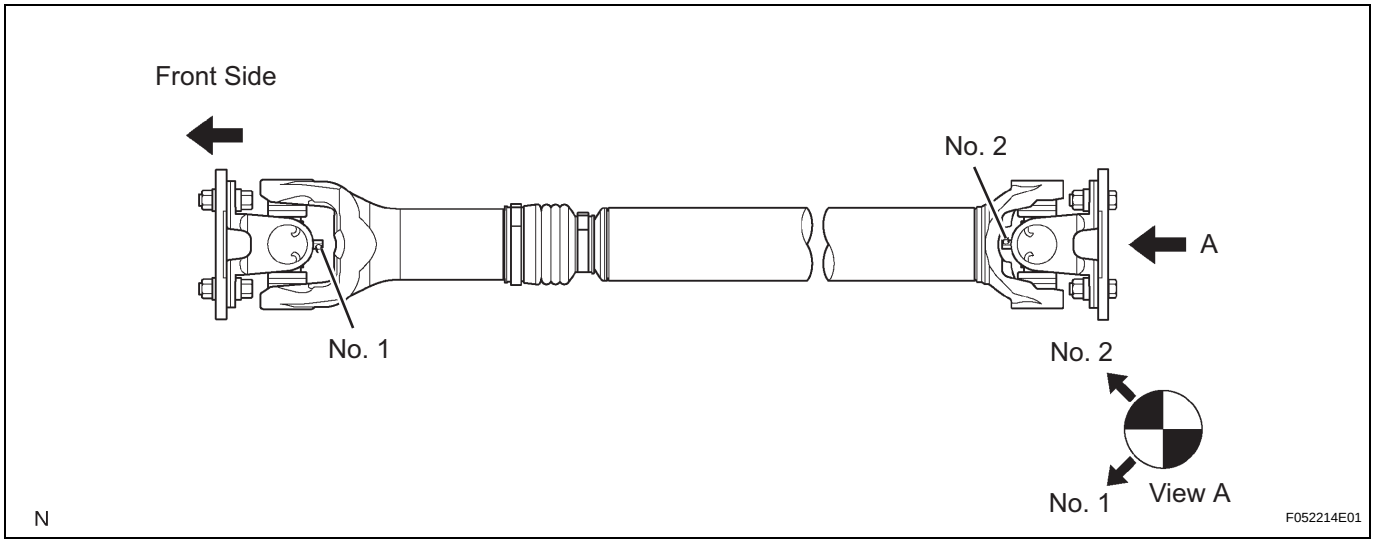
PR

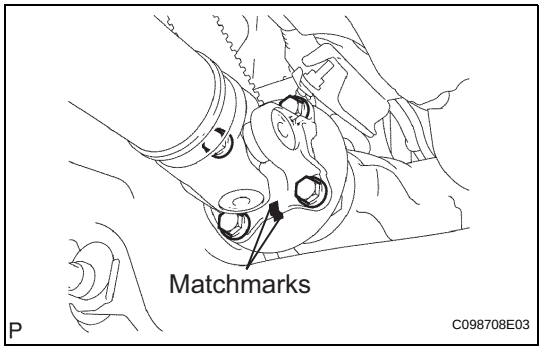
INSTALLATION

1. INSPECT FRONT PROPELLER SHAFT ASSEMBLY

HINT:

When replacing the spider bearing, make sure that the grease fitting assembly hole is facing in the direction shown in the illustration.



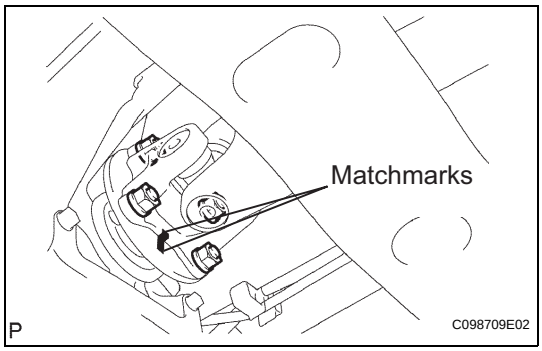


2. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

(a) Align the matchmarks on the yoke and differential flange.

(b) Install the propeller shaft with the 4 bolts, 4 nuts and 4 washers.

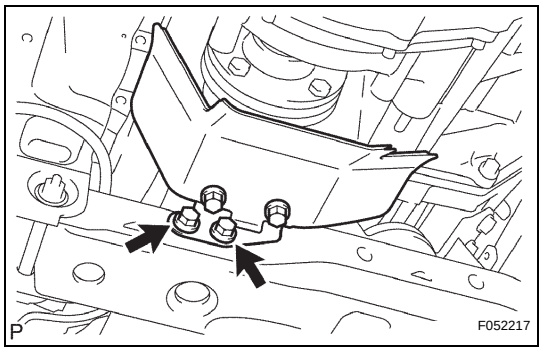
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



(c) Align the matchmarks on the yoke and transfer flange.

(d) Install the propeller shaft with the 4 nuts and 4 washers.

Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



3. REMOVE PROPELLER SHAFT HEAT INSULATOR BRACKET SUB-ASSEMBLY

(a) Install the propeller shaft heat insulator bracket with the 2 bolts.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)

4. REMOVE EXHAUST FRONT PIPE ASSEMBLY NO. 2 (for 1GR-FE) (See page EX-3)

DISASSEMBLY

1. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

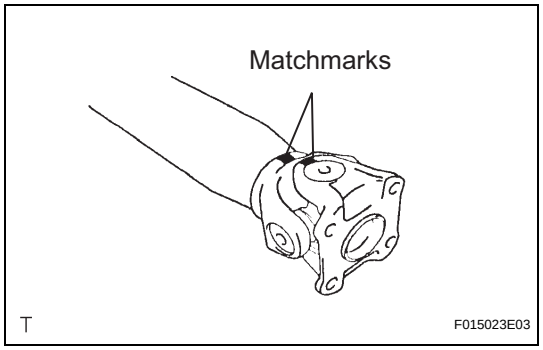
Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

If the bearing axial play is greater than the maximum, replace the spider bearing.

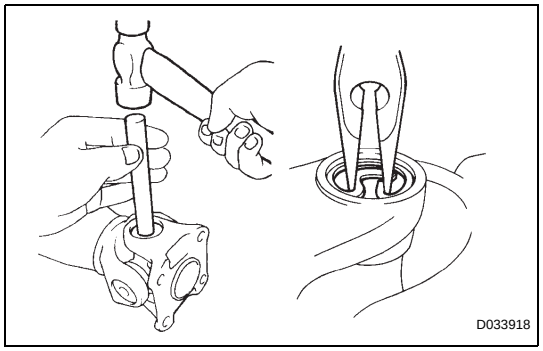
2. REMOVE PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Place matchmarks on the flange yoke and sleeve yoke.



(b) Using a brass bar and a hammer, slightly tap in the spider bearing outer races.

(c) Using needle-nose pliers, remove the 4 snap rings from the grooves.

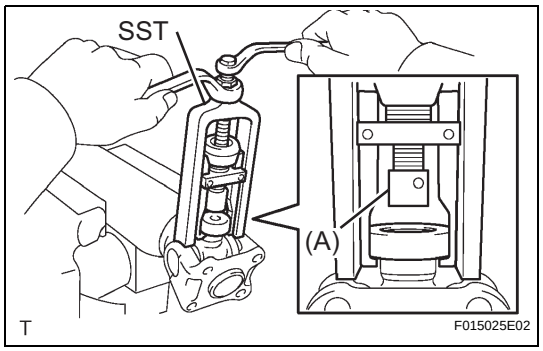


(d) Using SST, push the spider bearing out of the propeller shaft.

SST 09332-25010

HINT:

Sufficiently raise the part indicated by (A) so that it does not come into contact with the spider bearing.



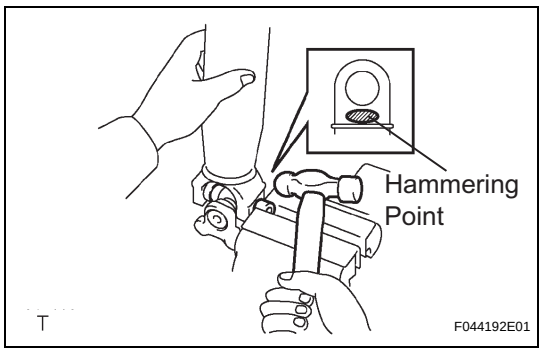
(e) Clamp the spider bearing outer race in a vise and tap off the propeller shaft with a hammer.

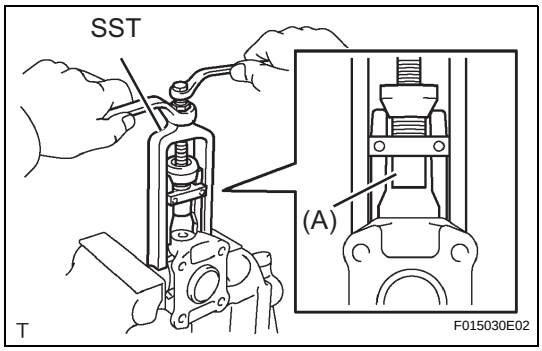
HINT:

Remove the bearing on opposite side in the same procedure.

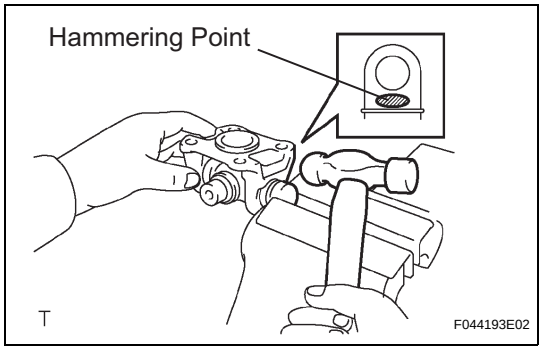
NOTICE:

Do not tap the shaft.

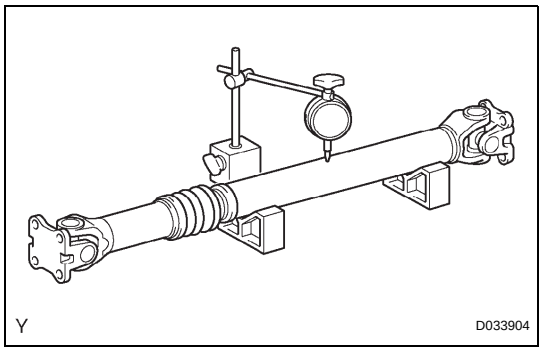




(f) Install the 2 removed spider bearing outer races onto the spider, and clamp them in a vise.
(g) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.



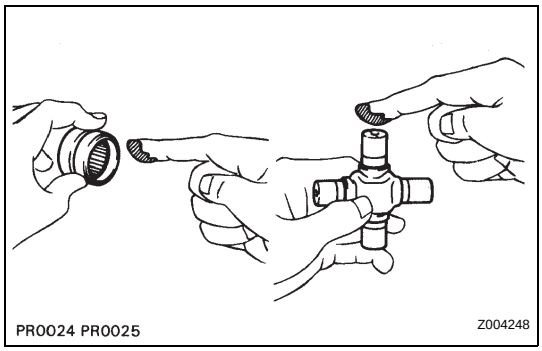
(h) Clamp the outer bearing race in a vise and tap off the flange yoke with a hammer.
(i) Remove the spider.



INSPECTION

1. INSPECT PROPELLER SHAFT ASSEMBLY

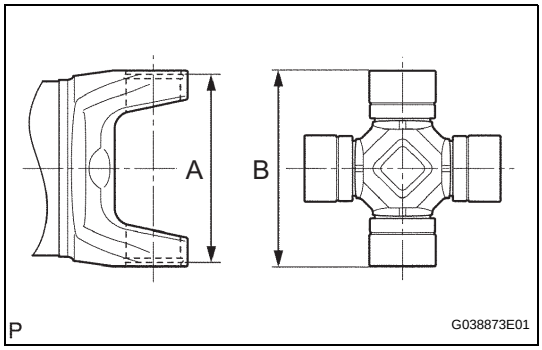
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the propeller shaft.



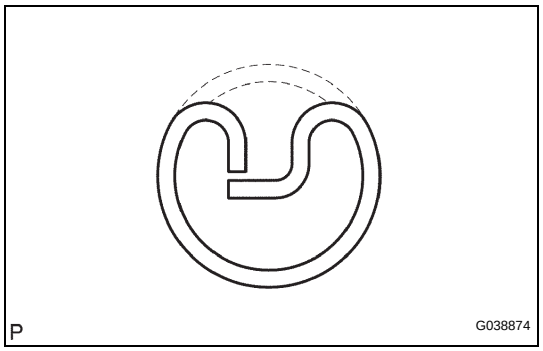
REASSEMBLY

1. INSTALL PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Apply MP grease No. 2 to a new spider and spider bearing.
(b) Fit the spider into the flange yoke.



(c) Measure dimension A between the snap ring grooves.
(d) Insert the thrust washer and spider bearing into the spider journal portion, and then measure dimension B of the universal joint.
NOTICE:
When measuring dimension B, fix the spider and spider bearings in a vise and hold them firmly together.

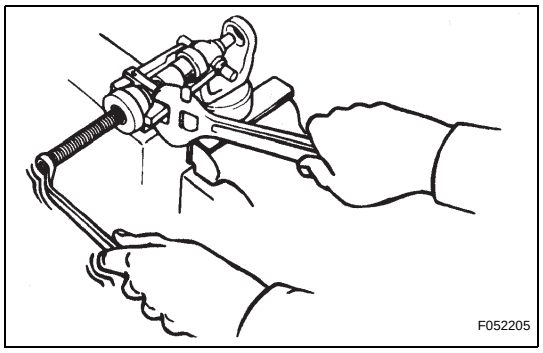


(e) Select snap rings to make dimensions A and B the same.

Snap Ring Type

Color	Thickness mm (in.)
Green	1.384 (0.0545)
Red	1.435 (0.0565)
Black	1.486 (0.0585)
Copper	1.511 (0.0595)
Silver	1.537 (0.0605)
Yellow	1.588 (0.0625)
Blue	1.638 (0.0645)

NOTICE:
- **Use new snap rings.**
- **If possible, use snap rings of the same thickness for both edges.**



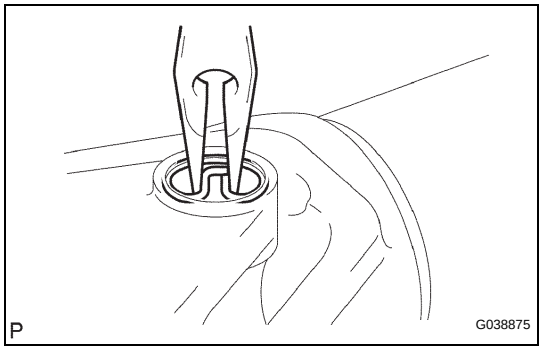
(f) Insert the spider into the yoke, and then using SST, press the spider bearing into the snap ring groove.

(g) Press in the spider bearing on the opposite side in the same way.

SST 09332-25010

NOTICE:

When pressing in the spider bearing, be careful not to damage its lip.



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

2. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

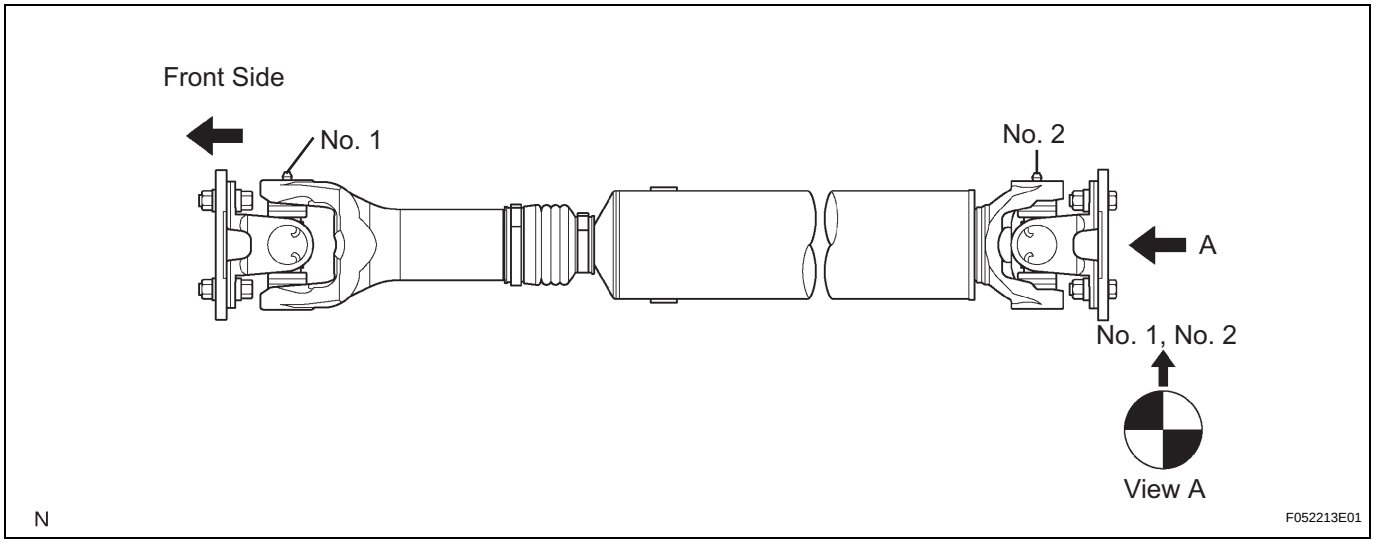
PR

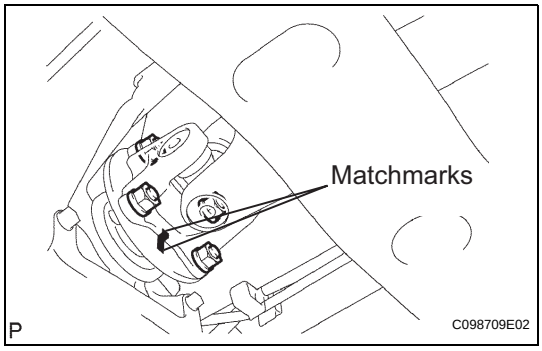
INSTALLATION

1. INSPECT PROPELLER SHAFT ASSEMBLY

HINT:

When replacing the spider bearing, make sure that the grease fitting assembly hole is facing in the direction shown in the illustration.



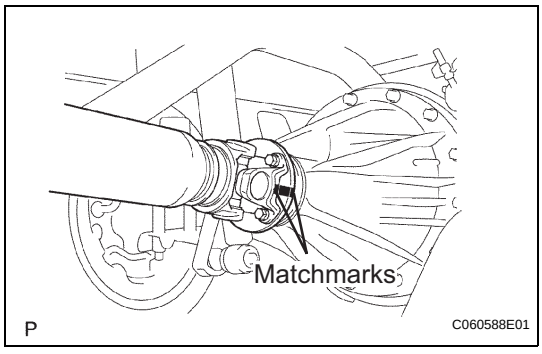


2. INSTALL PROPELLER SHAFT ASSEMBLY

(a) Align the matchmarks on the yoke and transfer flange.

(b) Install the propeller shaft with the 4 nuts and 4 washers.

Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



(c) Align the matchmarks on the yoke and differential flange.

(d) Install the propeller shaft with the 4 bolts, 4 nuts and 4 washers.

Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)

DISASSEMBLY

1. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

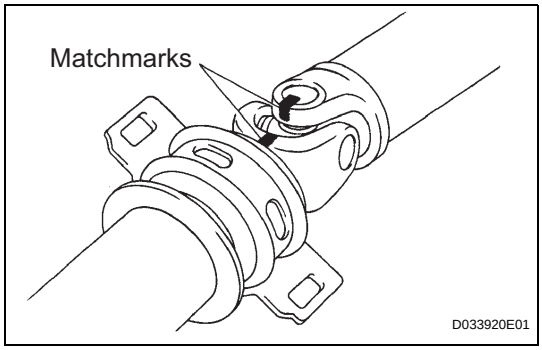
Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

If the bearing axial play is greater than the maximum, replace the spider bearing.

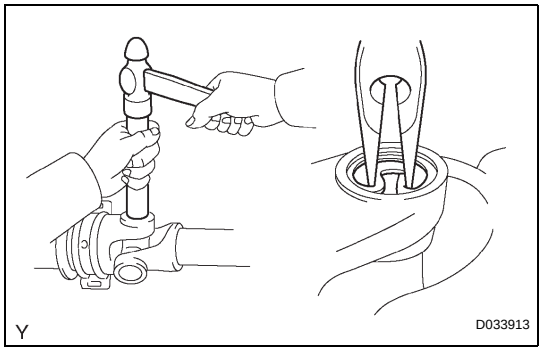
2. REMOVE PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Place matchmarks on the propeller shaft and universal joint yoke.



(b) Using a brass bar and hammer, slightly tap in the spider bearing.

(c) Using needle-nose pliers, remove the 4 snap rings from the grooves.



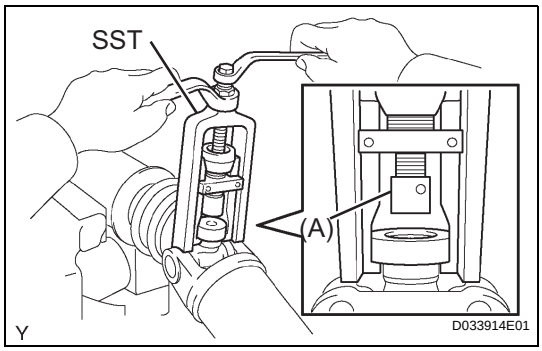
(d) Clamp the propeller shaft in a vise between aluminum plates.

(e) Using SST, push the spider bearing out of the propeller shaft.

SST 09332-25010

HINT:

Sufficiently raise the part indicated by (A) so that it does not come into contact with the spider bearing.



(f) Clamp the removed spider bearing outer race in a vise and tap the propeller shaft to remove the spider bearing.

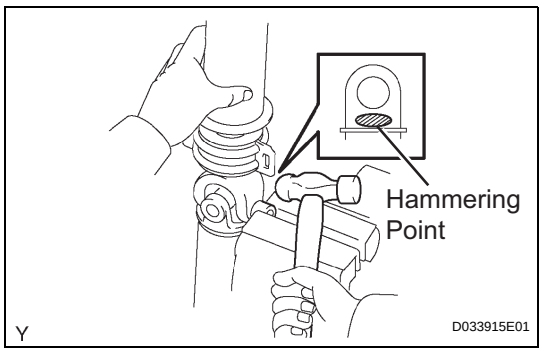
NOTICE:

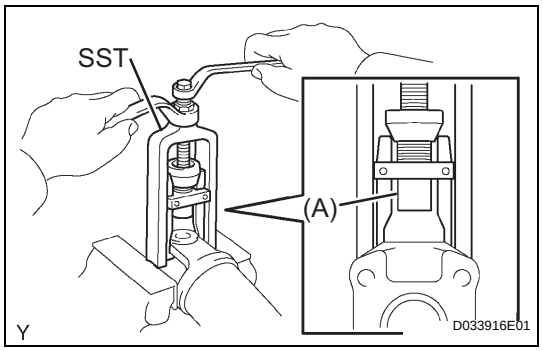
Do not tap the shaft tube.

HINT:

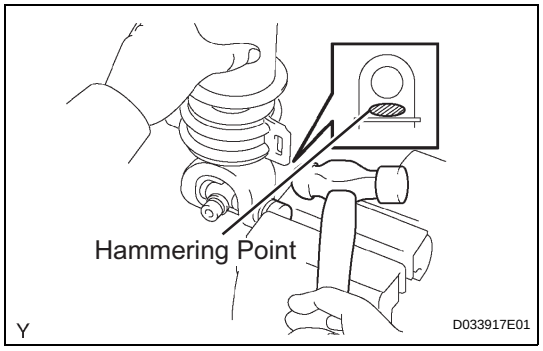
Remove the spider bearing from the opposite side of the spider using the same procedure.

(g) Separate the propeller with center bearing shaft.

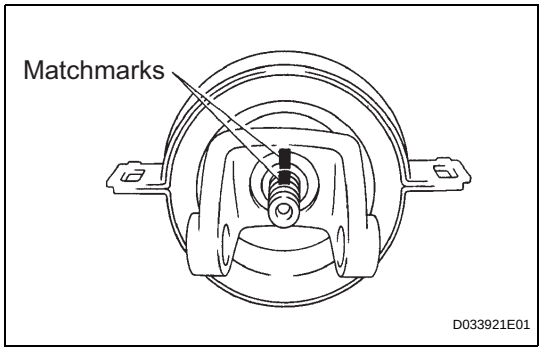




(h) Reinstall the 2 removed spider bearings onto the spider and clamp the spider bearings in a vise.
(i) Using SST, push the bearing out of the yoke.
SST 09332-25010
HINT:
Sufficiently raise the part indicated by (A) so that it does not come into contact with the bearing.

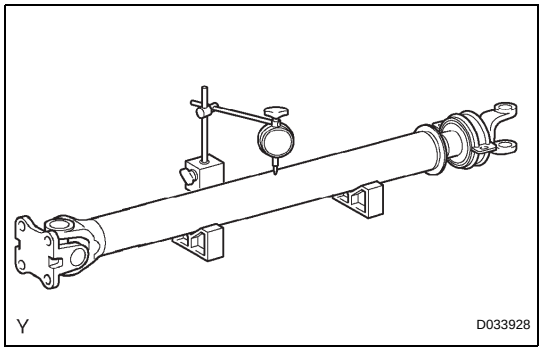


(j) Clamp the outer bearing race in a vise and tap off the yoke with a hammer.
(k) Remove the spider.

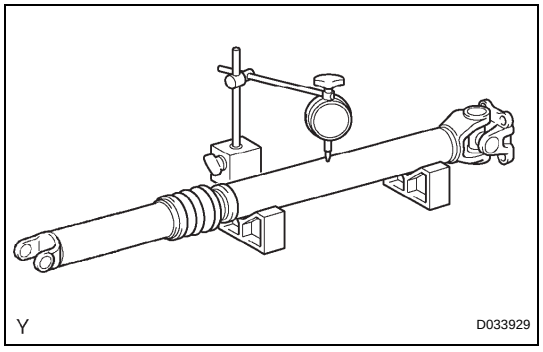


3. REMOVE CENTER SUPPORT BEARING ASSEMBLY NO. 2
(a) Fix the yoke at the center bearing section in a vice.
(b) Using a chisel and a hammer, loosen the staked part of the lock nut.
(c) Place matchmarks on the yoke and shaft.
(d) Using a brass bar and hammer, remove the center yoke, spacer and center support bearing from the intermediate shaft.

INSPECTION

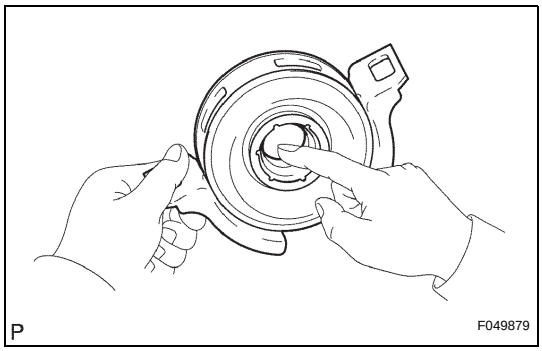


1. INSPECT PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the shaft.



2. INSPECT PROPELLER SHAFT
(a) Using a dial indicator, check the propeller shaft runout.
Maximum runout:
0.6 mm (0.024 in.)
If the shaft runout is greater than the maximum, replace the shaft.

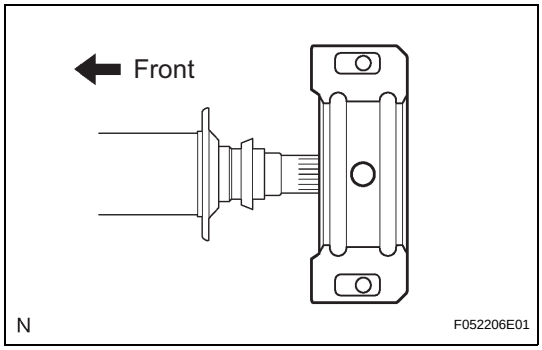
PR



REASSEMBLY

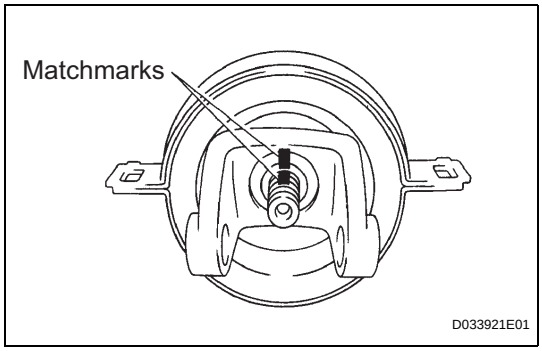
1. INSPECT CENTER SUPPORT BEARING ASSEMBLY NO. 2

(a) When turning the center bearing with your hand, check that it turns smoothly without catching and that there are no cracks or damage.
If there are any defects, replace it.

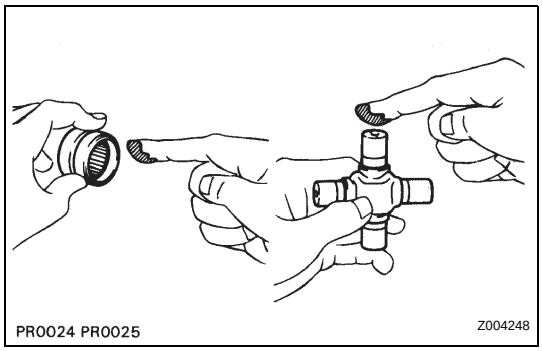


2. INSTALL CENTER SUPPORT BEARING ASSEMBLY NO. 2

(a) Install the center support bearing onto the intermediate shaft.

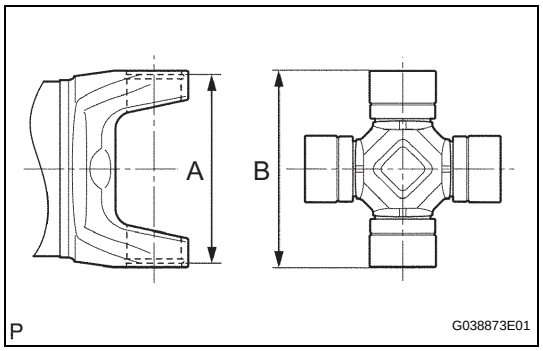


(b) Coat the splines of the intermediate shaft with MP grease.
(c) Align the matchmarks on the center yoke and intermediate shaft.
HINT:
If replacing either the center yoke or intermediate shaft, reassemble them so that the front side yoke of the intermediate shaft and the center yoke are facing in the same direction.
(d) Install the spacer.
(e) Fix the yoke at the center bearing section in a vice.
(f) Clamp the yoke in a vise, and press the bearing into position by tightening a new nut.
Torque: 182 N*m (1,850 kgf*cm, 134 ft.*lbf)
(g) Loosen the nut.
(h) Torque the nut again.
Torque: 69 N*m (700 kgf*cm, 51 ft.*lbf)
(i) Using a chisel and hammer, stake the lock nut.



3. INSTALL PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Apply MP grease No. 2 to a new spider and bearings.
(b) Fit the spider into the flange yoke.

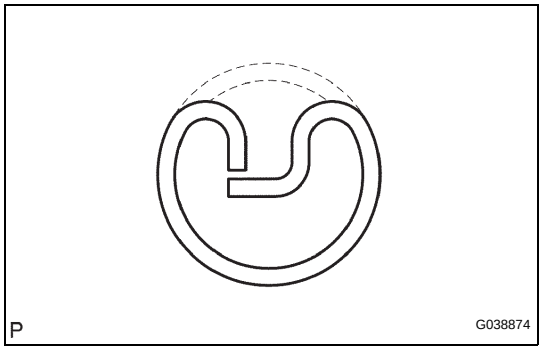


(c) Measure dimension A between the snap ring grooves.

(d) Insert the spider bearing into the spider journal portion, and then measure dimension B of the universal joint.

NOTICE:

When measuring dimension B, fix the spider and needle roller bearings in a vise and hold them firmly together.



(e) Select snap rings to make dimensions A and B the same.

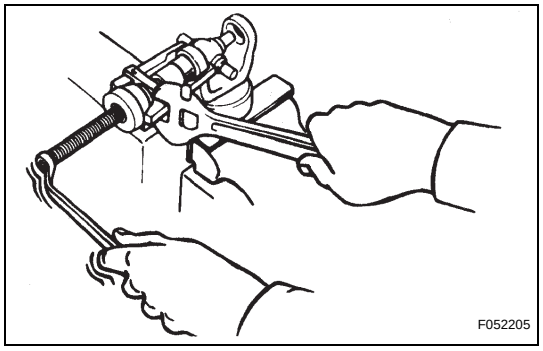
Snap Ring Type

Color	Thickness mm (in.)
Green	1.384 (0.0545)
Red	1.435 (0.0565)
Black	1.486 (0.0585)
Copper	1.511 (0.0595)
Silver	1.537 (0.0605)
Yellow	1.588 (0.0625)
Blue	1.638 (0.0645)

PR

NOTICE:

- **Use new snap rings.**
- **If possible, use snap rings of the same thickness for both edges.**



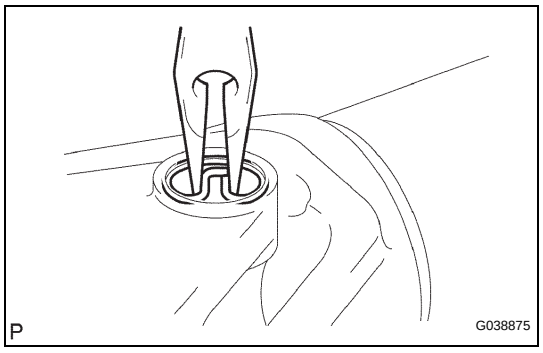
(f) Insert the spider into the yoke, and then using SST, press the spider bearing into the snap ring groove.

(g) Press in the spider bearing on the opposite side in the same way.

SST 09332-25010

NOTICE:

When pressing in the spider bearing, be careful not to damage its lip.



(h) Using needle-nose pliers, install new snap rings into the grooves of the yoke.

4. INSPECT PROPELLER SHAFT UNIVERSAL JOINT SPIDER BEARING

(a) Check the spider bearings for wear and damage.

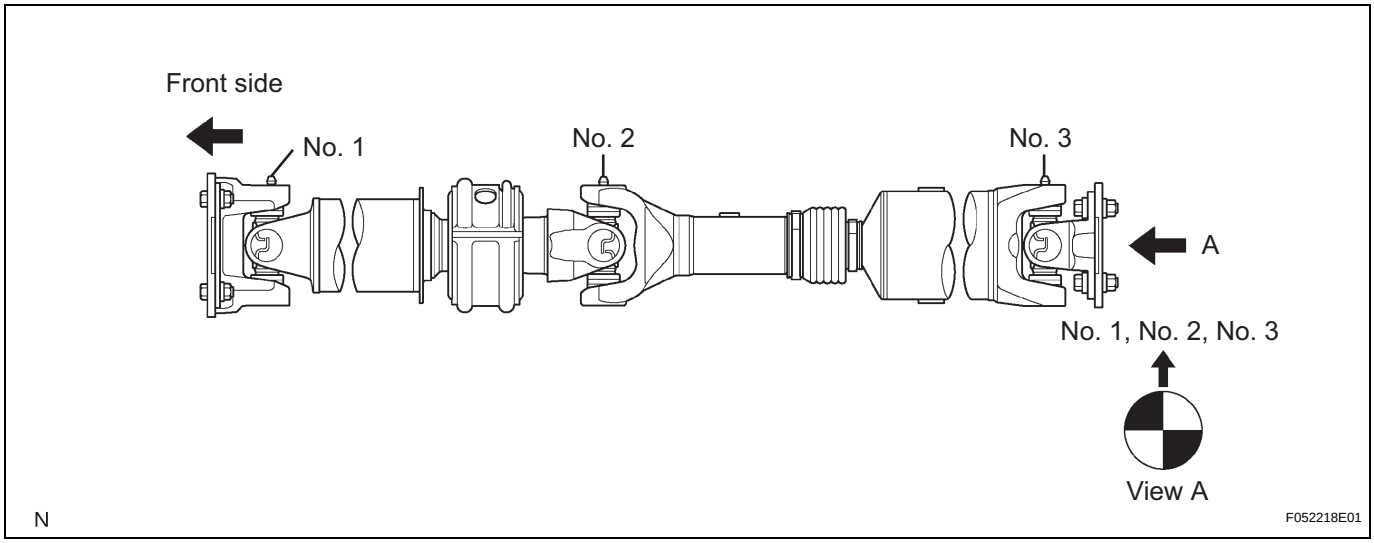
(b) Check each spider bearing's axial play by turning the yoke while holding the shaft tightly.

Maximum bearing axial play:

0 to 0.05 mm (0 to 0.002 in.)

INSTALLATION

1. INSPECT PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

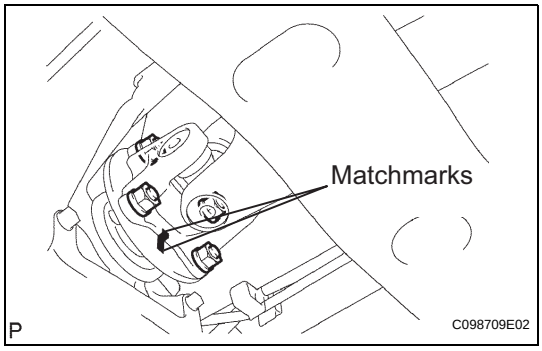


HINT:
When replacing the spider bearing, make sure that the grease fitting assembly hole is facing in the direction shown in the illustration.

2. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

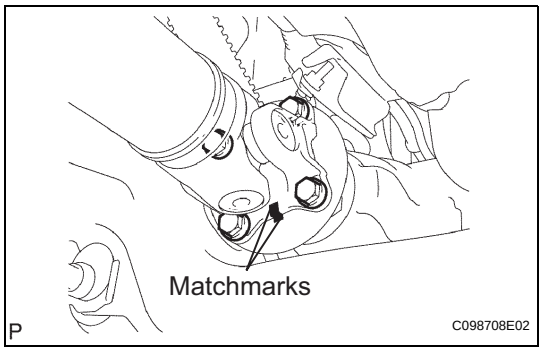
(a) Align the matchmarks on the yoke and transfer flange.

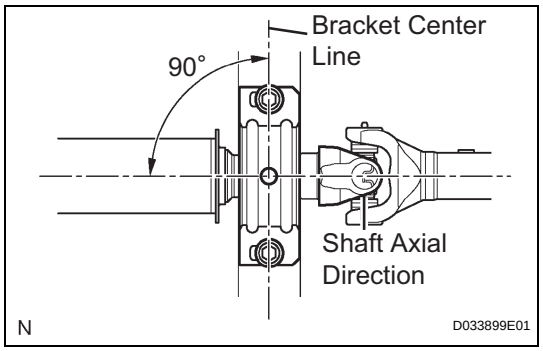
(b) Install the propeller shaft with the 4 nuts and 4 washers.
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)



(c) Align the matchmarks on the yoke and differential flange.

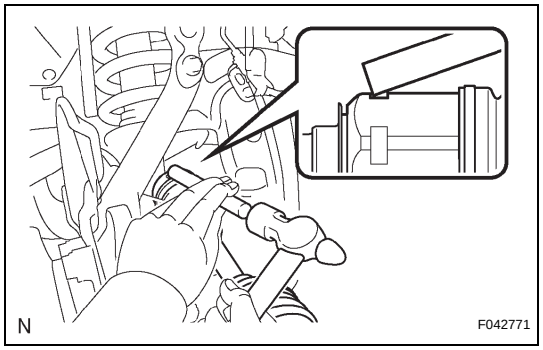
(d) Install the propeller shaft with the 4 bolts, 4 nuts and 4 washers.
Torque: 88 N*m (899 kgf*cm, 65 ft.*lbf)





(e) Provisionally install the center support bearing with 2 mounting bolts.
HINT:
Make sure the bearing is installed with the drain hole facing downwards.

(f) Torque the 2 bolts.
Torque: 36 N*m (369 kgf*cm, 27 ft.*lbf)



INSTALLATION

1. INSTALL FRONT DRIVE SHAFT

(a) Coat the spline of the inboard joint shaft with ATF.

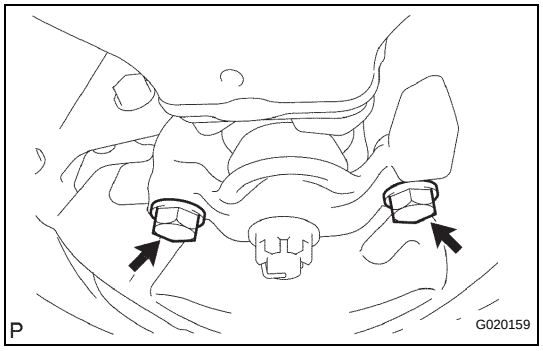
(b) Align the shaft splines and install the drive shaft with a brass bar and hammer.

NOTICE:

- **Set the snap ring with the opening side facing downward.**
- **Be careful not to damage the oil seal.**

HINT:

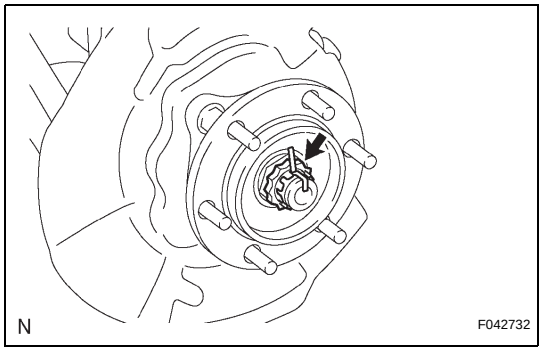
Whether the inboard joint shaft is in contact with the pinion shaft or not can be confirmed from the sound or feeling when driving it.



2. INSTALL FRONT SUSPENSION LOWER ARM

(a) Install the front lower ball joint attachment with the 2 bolts.

Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)



3. INSTALL FRONT AXLE HUB NUT

(a) Install the hub nut.

Torque: 235 N*m (2,396 kgf*cm, 173 ft.*lbf)

(b) Install the adjusting cap and a new cotter pin.

(c) Install the front axle hub grease cap.

4. INSTALL TIE ROD END SUB-ASSEMBLY

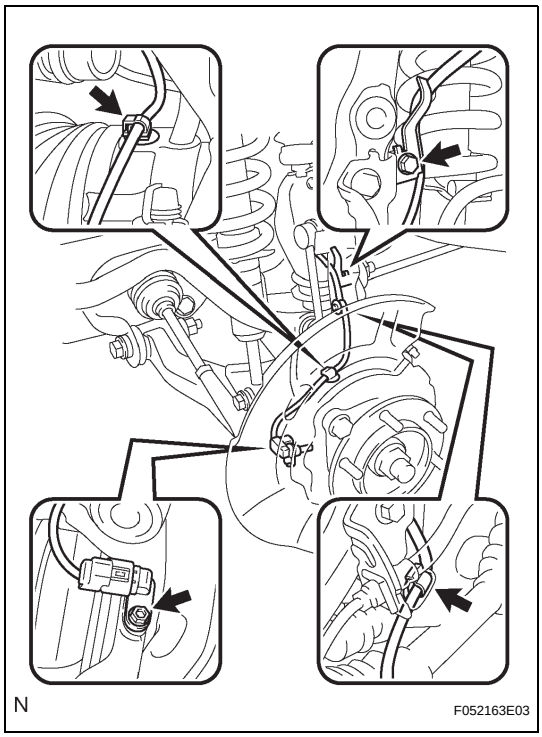
(a) Install the tie rod end onto the steering knuckle.

(b) Install the nut.

Torque: 91 N*m (928 kgf*cm, 67 ft.*lbf)

(c) Install a new cotter pin.

DS

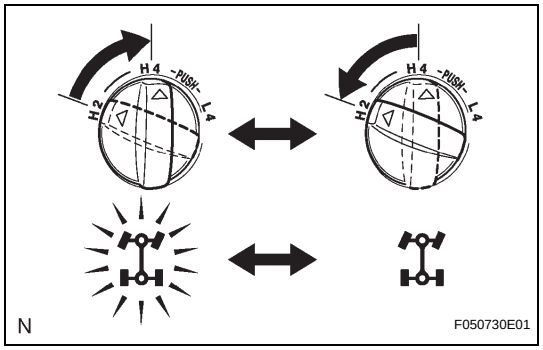


5. **INSTALL FRONT SPEED SENSOR**
   (a) Install the speed sensor wire harness onto the steering knuckle with the bolt.
   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
   (b) Engage the 2 clamps.
   (c) Install the speed sensor with the bolt.
   Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
6. **INSTALL FRONT WHEEL**
   Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
7. **INSPECT DIFFERENTIAL OIL (See page DF-8)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   (See page IN-5)
9. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
   (See page BC-103)
10. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    (See page BC-7)
11. **CHECK FOR DIFFERENTIAL OIL LEAKAGE**
12. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-7)

ON-VEHICLE INSPECTION

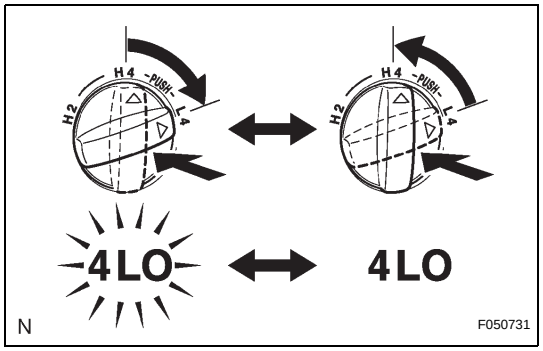
NOTICE:

- **Switch the four wheel drive control switch when the A/T shift lever is in the N position and the vehicle speed is 3 mph (5km/h) or less.**
- **Switch the four wheel drive control switch when the clutch start switch is turned ON and the vehicle speed is 2mph (3 km/h) or less.**
- **Do not change from H2 to H4 when the vehicle speed is 62 mph (100 km/h) or more.**



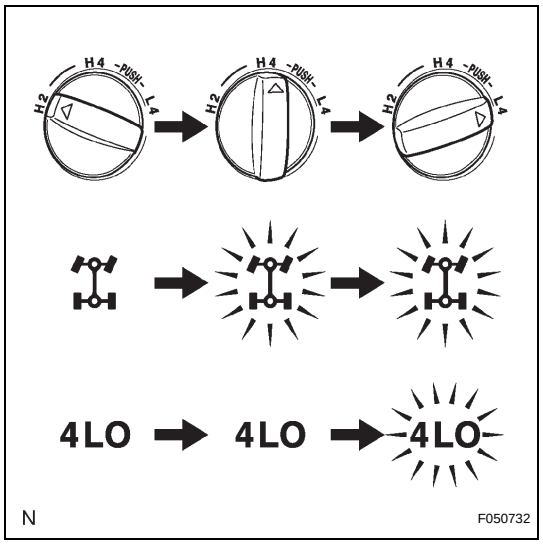
1. INSPECT H2 (2WD)-H4 (4WD) SHIFT

(a) Start the engine.
(b) Turn the four wheel drive control switch from the H2 position to the H4 position.
(c) Check that the 4WD indicator light blinks and then stays on.
(d) Turn the four wheel drive control switch from the H4 position to the H2 position.
(e) Check that the 4WD indicator light blinks and then goes off.



2. INSPECT H4 (4WD)-L4 (4WD) SHIFT

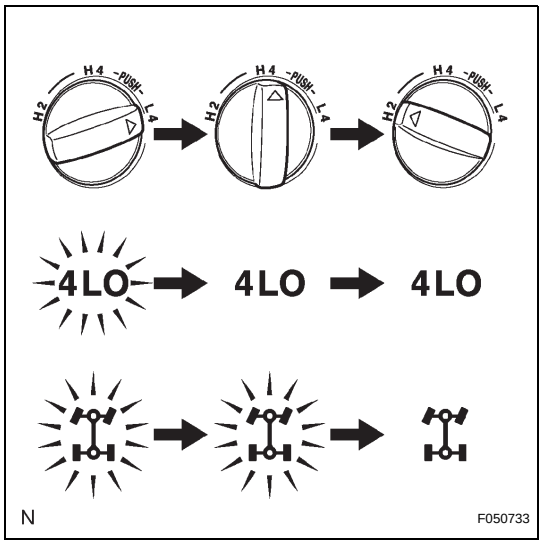
(a) Start the engine.
(b) Turn the four wheel drive control switch from the H4 position to the L4 position while pressing it.
(c) Check that the 4LO indicator light blinks and then stays on.
(d) Turn the four wheel drive control switch from the L4 position to the H4 position while pressing it.
(e) Check that the 4LO indicator light blinks and then goes off.



3. INSPECT H2 (2WD)-L4 (4WD) SHIFT

(a) Start the engine.
(b) Turn the four wheel drive control switch from the H2 position to the H4 position.
(c) Check that the 4WD indicator light blinks and then stays on.
(d) Turn the four wheel drive control switch from the H4 position to the L4 position while pressing it.
(e) Check that the 4LO indicator light blinks and then stays on.

DF



4. INSPECT L4 (4WD)-H2 (2WD) SHIFT

(a) Start the engine.

(b) Turn the four wheel drive control switch from the L4 position to the H4 position while pressing it.

(c) Check that the 4LO indicator light blinks and then goes off.

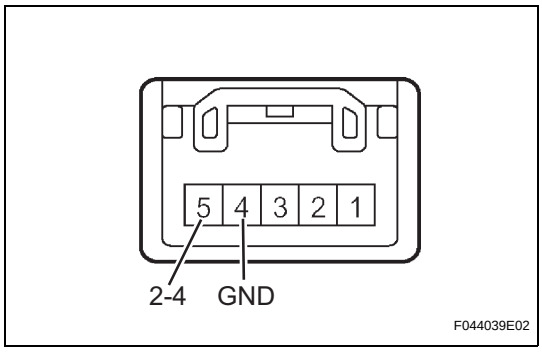
(d) Turn the four wheel drive control switch from the H4 position to the H2 position.

(e) Check that the 4WD indicator light blinks and then goes off.

INSPECTION

1. INSPECT 4 WHEEL DRIVE CONTROL SWITCH

(a) Using an ohmmeter, measure the resistance between the terminals.



Switch position	Tester connection	Specified condition
H2	5 (2-4) - 4 (GND)	Below 1Ω
H4	5 (2-4) → 4 (GND)	Below 1Ω
H4	5 (2-4) ← 4 (GND)	100 kΩ or higher

If the result is not as specified, replace the four wheel drive control switch or bulb.

2. INSPECT DIFFERENTIAL VACUUM ACTUATOR ASSEMBLY

(a) Measure the resistance between terminals 1 - 2.

Standard resistance:

0.1 to 100 Ω

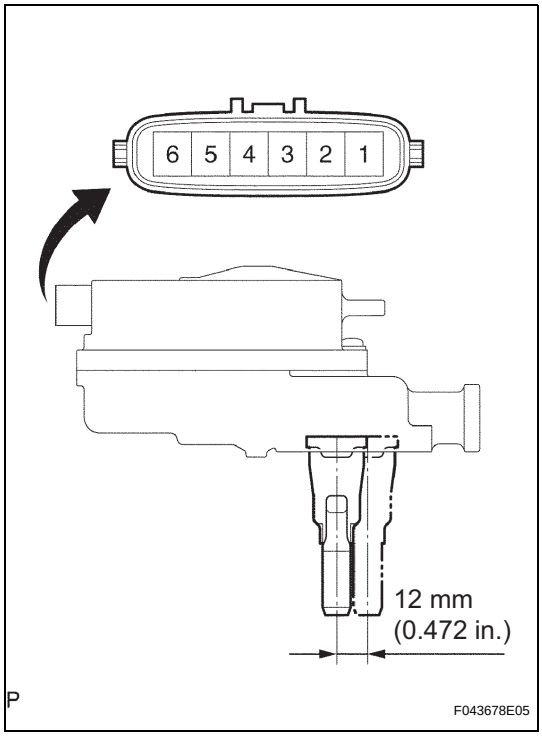
(b) Measure the resistance between terminals 1 or 2 and the body ground.

Standard resistance:

5 MΩ or more

If the result is not as specified, replace the differential vacuum actuator assembly.

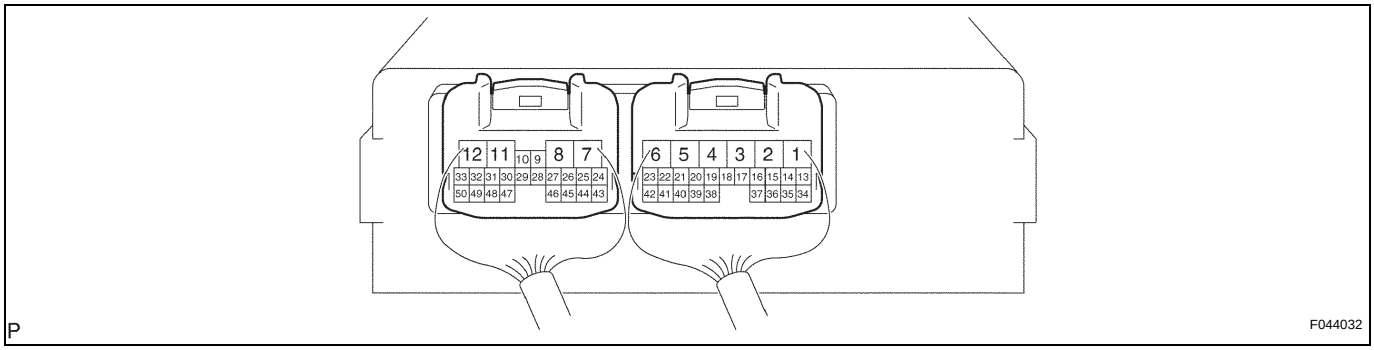
(c) Apply the battery positive voltage between terminals 1 - 2, and check the actuator operation by sound, actuator status and resistance between terminals 3 - 4, 5 - 4 and 6 - 4.



Battery voltage applied terminal	3 - 4 terminals resistance	5 - 4 terminals resistance	6 - 4 terminals resistance	Actuator status
1 (+) - 2 (-)	Below 1 Ω	Below 1 Ω	10 kΩ or higher	Connected
1 (-) - 2 (+)	10 kΩ or higher	10 kΩ or higher	Below 1 Ω	Disconnected

3. INSPECT FOUR WHEEL DRIVE CONTROL ECU

(a) Connect the wire harness side connector to the four wheel drive control ECU and inspect the wire harness side connector from the back side, as shown.



STANDARD VALUE OF ECU TERMINAL

Terminals (Symbols)	Conditions	STD Voltage (V)
2 (TM1) - 1 (TM2)	• Ignition switch ON • Differential lock switch in OFF position • Four wheel drive control switch H2 position → H4 position	10 to 14
1 (TM2) - 2 (TM1)	• Ignition switch ON • Keep pressing differential lock switch for approx. 2 seconds to turn it ON • Four wheel drive control switch L4 position → H4 position	10 to 14
3 (DM1) - 4 (DM2)	• Ignition switch ON • A.D.D. FREE → LOCK	10 to 14 or 0 to 14 pulse generation then less than 0.5
4 (DM2) - 3 (DM1)	• Ignition switch ON • A.D.D. LOCK → FREE	10 to 14 or 0 to 14 pulse generation then less than 0.5
12 (GND) - Body ground	Ignition switch OFF	Below 1Ω
11 (IG) - 12 (GND)	Ignition switch ON	10 to 14
18 (DL2) - 12 (GND)	• Ignition switch ON • A.D.D. LOCK → FREE	1.5 or less → 10 to 14
19 (DL1) - 12 (GND)	• Ignition switch ON • A.D.D. FREE → LOCK	1.5 or less → 10 to 14
25 (2-4) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch L4 position → H2 position or H4 position	10 to 14 → 1.5 or less
26 (SPD) - 12 (GND)	During driving	Pulse generation
28 (IND3) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H4 position → L4 position	10 to 14 → 1.5 to 3.5
32 (LO) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H4 position → L4 position	10 to 14 → 1.5 or less
42 (ADD) - 12 (GND)	• Ignition switch ON • A.D.D. FREE → LOCK	10 to 14 → 1.5 or less
23 (L4) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position or H4 position → L4 position	10 to 14 → 1.5 or less
38 (4WD) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position → H4 position	10 to 14 → 1.5 or less
39 (TL3) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position → L4 position	10 to 14 → 0.88 or less
40 (TL2) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position → H4 position	10 to 14 → 0.88 or less
41 (TL1) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position → H4 position or L4 position	0.88 or less → 10 to 14
45 (IND1) - 12 (GND)	• Ignition switch ON • Four wheel drive control switch H2 position → H4 position or L4 position	10 to 14 → 0 to 3.5
48 (N) - 12 (GND)	• Ignition switch ON • Transmission shift lever other position → N position	1.5 or less → 10 to 14

DF

Terminals (Symbols)	Conditions	STD Voltage (V)
49 (MTN) - 12 (GND)	• Ignition switch ON • Clutch start switch OFF position → ON position	10 to 14 → 1.5 or less

INSTALLATION

1. INSTALL REAR DIFFERENTIAL DRIVE PINION BEARING SPACER

(a) Install a new rear differential drive pinion bearing spacer.

2. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, install a new oil storage ring.

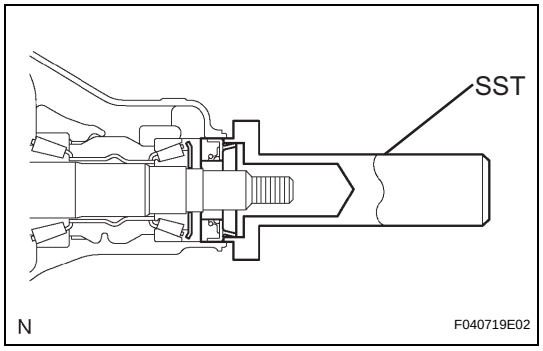
(b) Using SST and a hammer, install the front bearing outer race.

(c) Install the front bearing.

SST 09316-60011 (09316-00011, 09316-00021)

3. INSTALL REAR DIFFERENTIAL DRIVE PINION OIL SLINGER (w/ Differential Lock)

4. INSTALL REAR DIFFERENTIAL CARRIER OIL SEAL



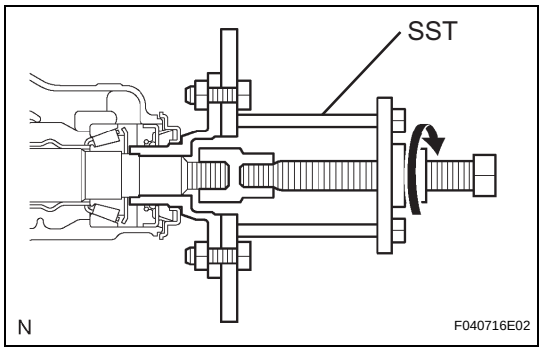
(a) Using SST and a hammer, install a new oil seal.

SST 09554-30011

Oil seal drive in depth:

-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

(b) Coat oil seal lip with MP grease.

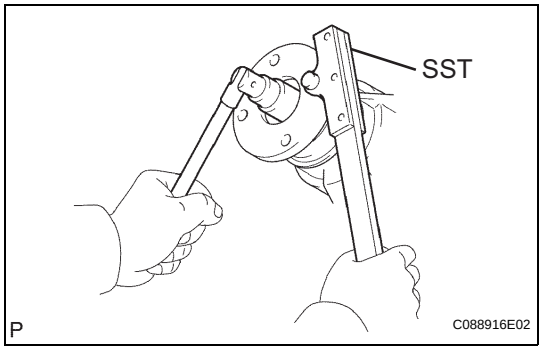


5. INSTALL REAR DRIVE COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, install the companion flange.

(b) Coat the threads of a new nut with hypoid gear oil LSD.

SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

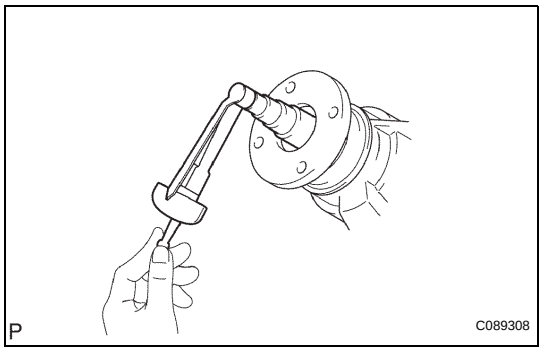


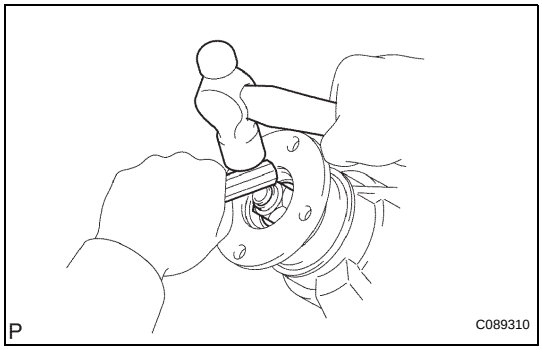
(c) Using SST to hold the companion flange, tighten the nut.

SST 09330-00021

Torque: 451 N*m (4,599 kgf*cm, 333 ft.*lbf)

DF

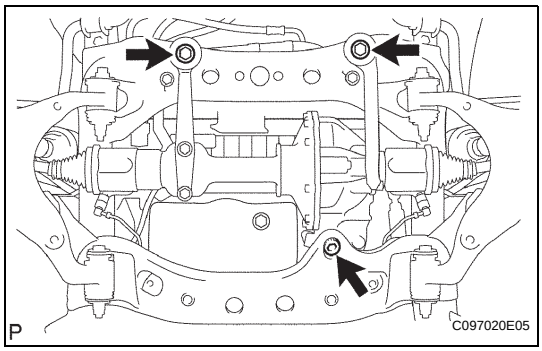




6. **INSPECT DIFFERENTIAL DRIVE PINION PRELOAD**
   (a) Using a torque wrench, measure the preload of backlash between the drive pinion and ring rear.
   New bearing:
   1.27 to 1.86 N*m (13 to 19 kgf*cm, 11 to 16 in.*lbf)
   Reused bearing:
   0.76 to 1.07 N*m (7.7 to 11 kgf*cm, 6.7 to 9.5 in.*lbf)
   If necessary, disassemble and inspect the differential assembly.
7. **INSTALL REAR DRIVE PINION NUT**
   (a) Using a chisel and a hammer, stake the nut.
8. **INSTALL PROPELLER SHAFT ASSEMBLY (for 2WD Drive Type, Regular Cab) (See page PR-6)**
9. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD Drive Type, Except Regular Cab) (See page PR-13)**
10. **INSTALL PROPELLER SHAFT ASSEMBLY (for 4WD Drive Type, Regular Cab) (See page PR-25)**
11. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (4WD Drive Type, Except Regular Cab) (See page PR-32)**
12. **FILL UP DIFFERENTIAL OIL (See page DF-8)**
13. **INSPECT DIFFERENTIAL OIL (See page DF-8)**
14. **INSPECT FOR DIFFERENTIAL OIL LEAKAGE**

REMOVAL

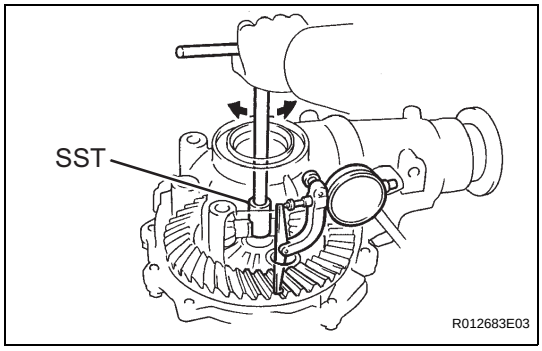
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEELS**
3. **REMOVE NO.2 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and No. 2 engine under cover sub-assembly.
4. **REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and No. 1 engine under cover sub-assembly.
5. **DRAIN DIFFERENTIAL OIL (See page DF-8)**
6. **REMOVE FRONT PROPELLER SHAFT ASSEMBLY (See page PR-16)**
7. **REMOVE FRONT AXLE HUB LH NUT (See page DS-3)**
8. **REMOVE FRONT AXLE HUB RH NUT**
   HINT:
   Use the same procedure as for the LH side.
9. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-50)**
10. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH (See page SP-50)**
11. **SEPARATE FRONT SPEED SENSOR LH (See page BC-303)**
12. **SEPARATE FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedure as for the LH side.
13. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page PS-54)**
14. **SEPARATE TIE ROD END SUB-ASSEMBLY RH (See page PS-54)**
15. **REMOVE FRONT SUSPENSION LOWER ARM LH (See page DS-4)**
16. **REMOVE FRONT SUSPENSION LOWER ARM RH**
    HINT:
    Use the same procedure as for the LH side.
17. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-4)**
18. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH**
    HINT:
    Use the same procedure as for the LH side.
    SST 09628-62011



19. REMOVE FRONT DIFFERENTIAL CARRIER ASSEMBLY

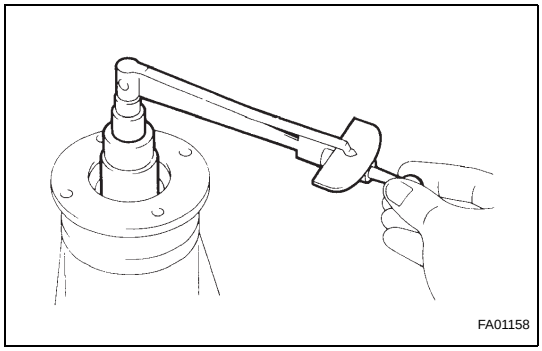
(a) Remove the bolt and separate the front differential breather tube bracket.
(b) Support the front differential with a jack.
(c) Remove the front differential mount nut No. 1.
(d) Remove the 2 front mounting bolts and 2 nuts.
(e) Disconnect the actuator hose and connector.
(f) Lower the jack and remove the front differential assembly.
(g) Remove the 2 bolts and No. 3 front differential support.
(h) Remove the 5 bolts and 2 front differential supports.

DISASSEMBLY



1. INSPECT BACKLASH DIFFERENTIAL RING GEAR AND DIFFERENTIAL DRIVE PINION

(a) Using SST and a dial indicator, measure the ring gear backlash.
SST 09564-32011
Backlash:
0.11 to 0.21 mm (0.0043 to 0.0083 in.)
If the backlash is not within the specification, adjust or repair the side bearing preload as necessary.

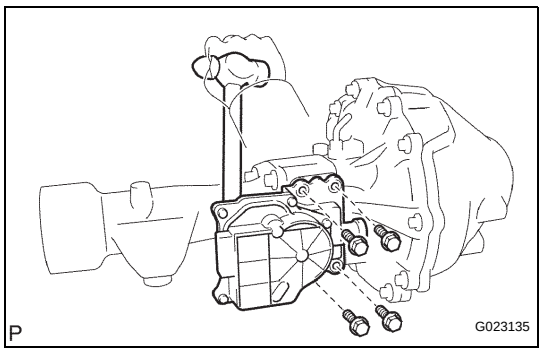


2. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Torque: 0.49 to 0.78 N*m (5 to 8 kgf*cm, 4.3 to 6.9 in.*lbf)
If necessary, disassemble and inspect the differential assembly.

3. INSPECT TOTAL PRELOAD

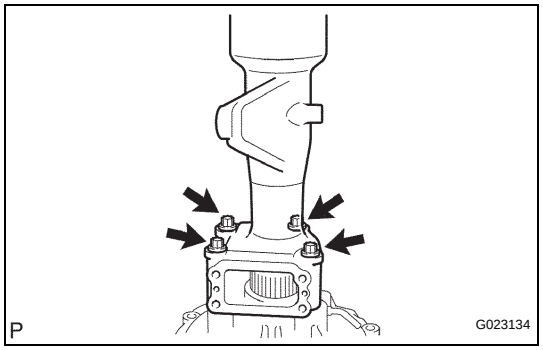
(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.
Total preload (at starting):
Drive pinion preload plus 0.22 to 0.88 N*m (2.2 to 8.8 kgf*cm, 2.0 to 7.8 in.*lbf)
If necessary, disassemble and inspect the differential.



4. REMOVE DIFFERENTIAL VACUUM ACTUATOR ASSEMBLY

(a) Remove the 4 bolts.
(b) Using a hammer handle, remove the actuator assembly.

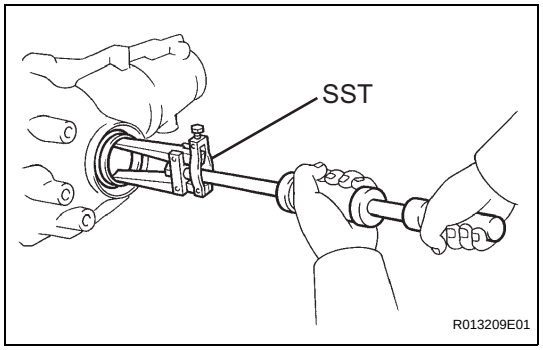
DF



5. REMOVE FRONT DIFFERENTIAL TUBE ASSEMBLY

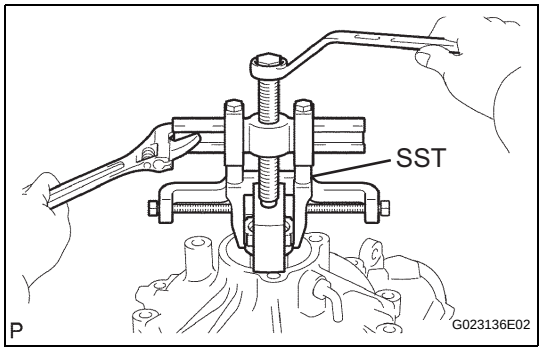
(a) Remove the 4 bolts.

(b) Using a plastic hammer, remove the differential tube.



6. REMOVE DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

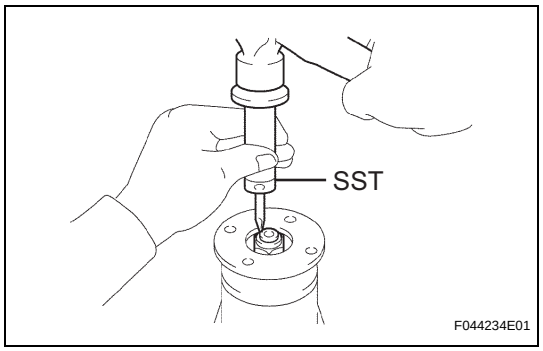
(a) Using SST, remove the oil seal.
SST 09308-00010



7. REMOVE DIFFERENTIAL SIDE GEAR INTER SHAFT SUB-ASSEMBLY

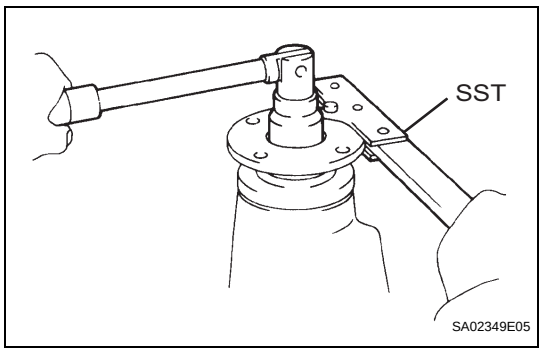
(a) Using SST, remove the side gear inter shaft.
SST 09350-20015 (09369-20040), 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011)

(b) Remove the snap ring from the side gear inter shaft.

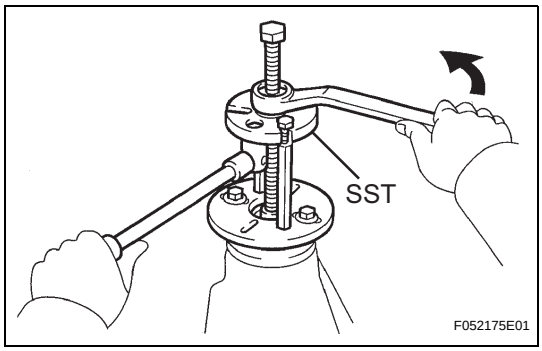


8. REMOVE FRONT DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY

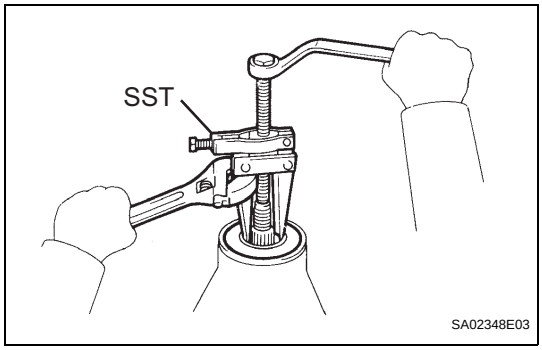
(a) Using SST and a hammer, remove the nut.
SST 09930-00010



(b) Using SST to hold the companion flange, remove the nut.
SST 09330-00021



(c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

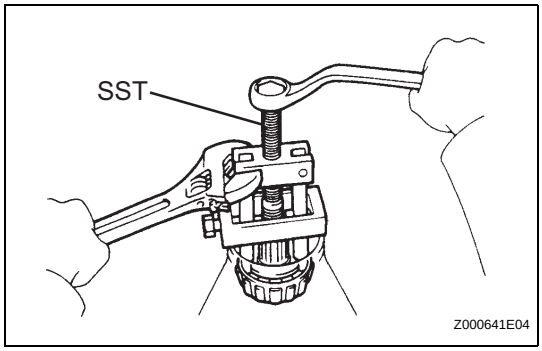


9. REMOVE FRONT DIFFERENTIAL CARRIER OIL SEAL

(a) Using SST, remove the oil seal from the differential carrier assembly.
SST 09308-10010

10. REMOVE FRONT DIFFERENTIAL DRIVE PINION OIL SLINGER

DF



11. REMOVE FRONT DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST, remove the rear bearing from the drive pinion.
SST 09556-22010

(b) Remove the bearing spacer.

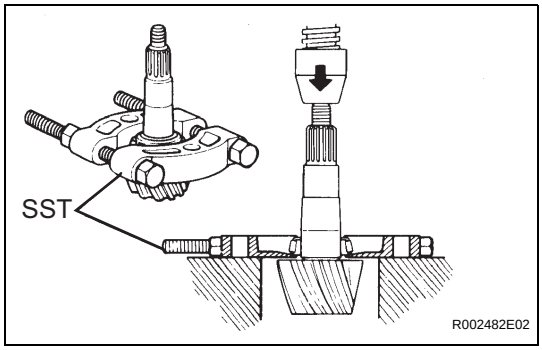
12. REMOVE DIFFERENTIAL SIDE BEARING RETAINER

(a) Using a screwdriver, remove the union.

(b) Remove the 10 bolts and tap out the side bearing retainer with a plastic hammer.

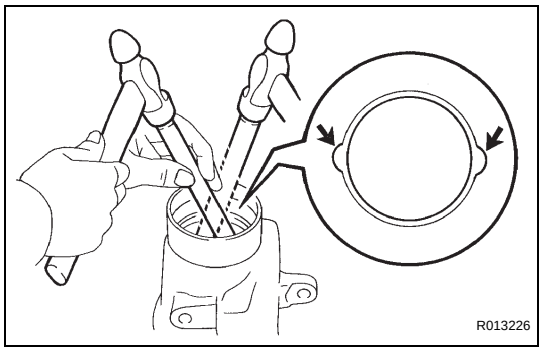
13. REMOVE DIFFERENTIAL CASE ASSEMBLY

14. REMOVE DIFFERENTIAL DRIVE PINION



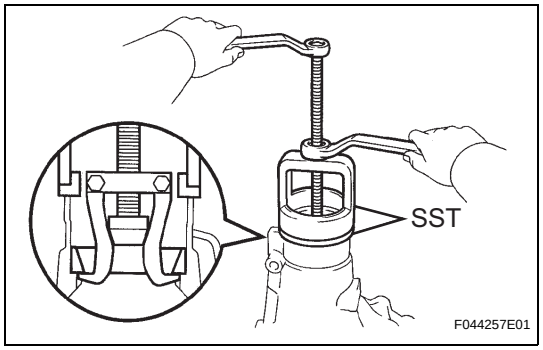
15. REMOVE FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, remove the front bearing and washer from the drive pinion.
SST 09950-00020
HINT:
If the drive gear or ring gear is damaged, replace them as a set.



16. REMOVE FRONT BEARING OUTER RACE

(a) Using a brass bar and a hammer, remove the front bearing outer race.



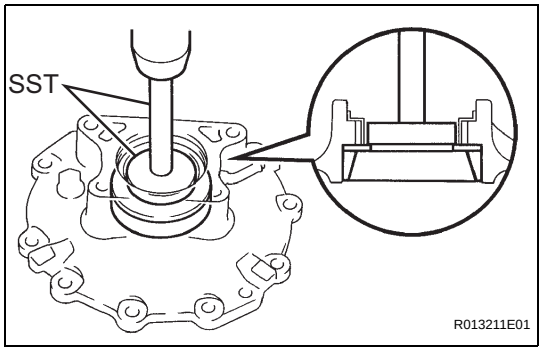
17. REMOVE REAR BEARING OUTER RACE

(a) Using SST, remove the rear bearing outer race.
SST 09502-12010, 09612-65014 (09612-01020, 09612-01050)

(b) Using a brass bar and a hammer, remove the oil storage ring.

18. REMOVE FRONT DIFFERENTIAL SIDE BEARING RETAINER DEFLECTOR

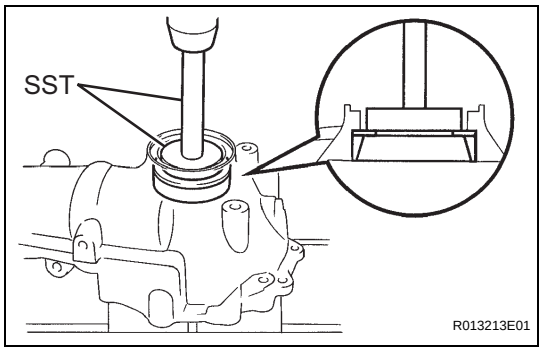
(a) Using a brass bar and hammer, remove the side bearing retainer deflector by tapping it gently.



19. REMOVE SIDE BEARING OUTER RACE

HINT:
- Measure the plate washer and note its thickness.
- Tag the bearing outer races to show the location for reassembly.

(a) Using SST and a press, remove the outer race and plate washer from the bearing retainer.
SST 09950-60020 (09951-00680), 09950-70010 (09951-07150)



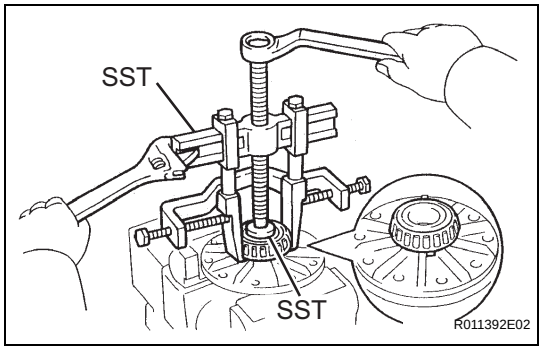
(b) Using SST and a press, remove the outer race and plate washer from the differential carrier assembly.
SST 09950-60020 (09951-00680), 09950-70010 (09951-07150)

20. REMOVE DIFFERENTIAL RING GEAR

(a) Place matchmarks on the ring gear and differential case assembly.

(b) Remove the 10 bolts.

(c) Using a plastic hammer, tap on the ring gear to separate it from the differential case assembly.

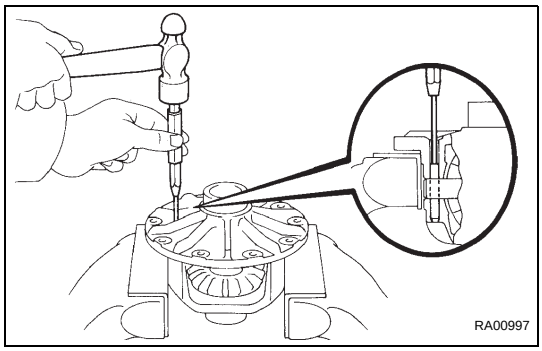


21. REMOVE FRONT DIFFERENTIAL CASE BEARING

(a) Using SST, remove the 2 differential case bearings from the differential case assembly.
SST 09950-60010 (09951-00390), 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04061, 09957-04010, 09958-04011)

HINT:
Fix the claws of SST into the notch in the differential case assembly.

DF



22. DISASSEMBLE DIFFERENTIAL CASE

(a) Using a pin punch and a hammer, remove the straight pin.

(b) Remove these parts from the differential case assembly.
- (1) 2 Differential side gears
- (2) 2 Differential side gear thrust washers
- (3) Differential pinion shaft
- (4) 2 Differential pinion gears
- (5) 2 Differential pinion gear thrust washers

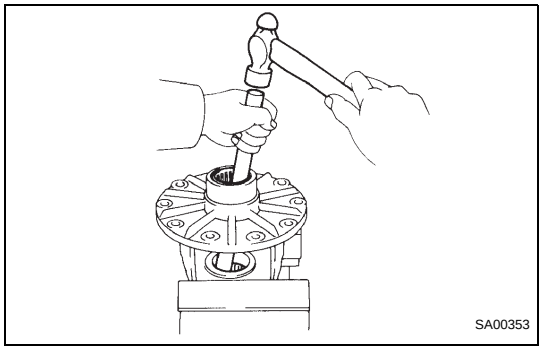
23. INSPECT DIFFERENTIAL GEAR KIT

(a) Check that there is no damage to the pinion gear and side gear.
If the pinion gear and/or side gear is damaged, replace the differential gear kit.

24. INSPECT FRONT DIFFERENTIAL CASE

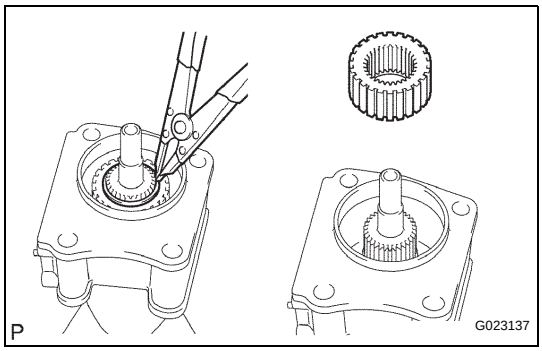
(a) Check that the differential case assembly is not damaged.
If the differential case assembly is damaged, replace it.

DF



25. REMOVE FRONT DIFFERENTIAL SIDE GEAR NEEDLE ROLLER BEARING

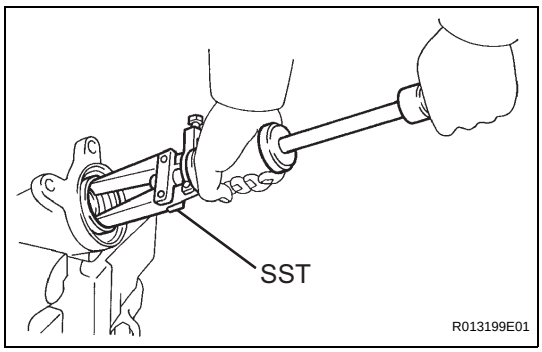
(a) Using a brass bar and hammer, remove the 2 bearings.



26. REMOVE DIFFERENTIAL CLUTCH HUB

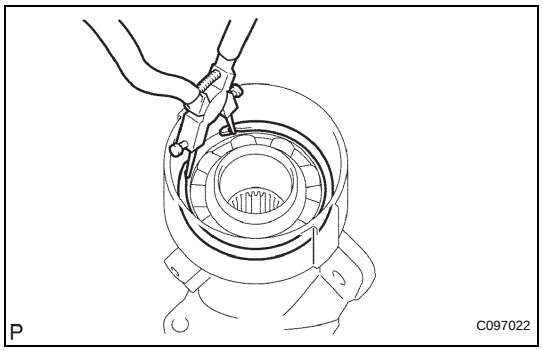
(a) Using a snap ring expander, remove the snap ring.

(b) Remove the differential clutch hub.



27. REMOVE DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

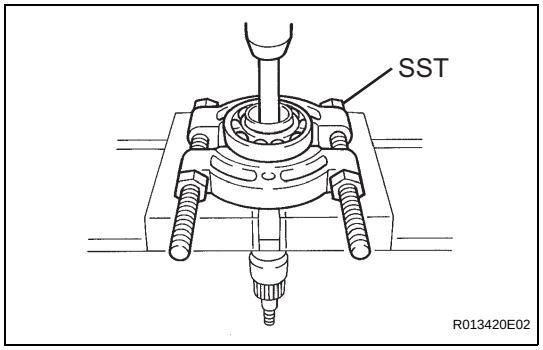
(a) Using SST, remove the oil seal from the differential tube.
SST 09308-00010



28. REMOVE DIFFERENTIAL SIDE GEAR SHAFT SUB-ASSEMBLY RH

(a) Using a snap ring expander, remove the snap ring.

(b) Remove the side gear shaft from the differential tube.



29. REMOVE FRONT DIFFERENTIAL SIDE GEAR SHAFT RH BEARING

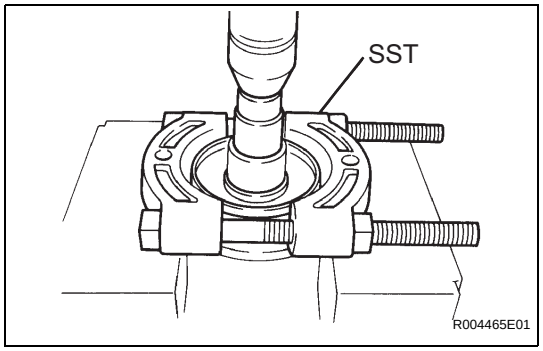
(a) Using a snap ring expander, remove the snap ring.

(b) Using SST, a brass bar and a press, remove the bearing.

SST 09950-00020

NOTICE:

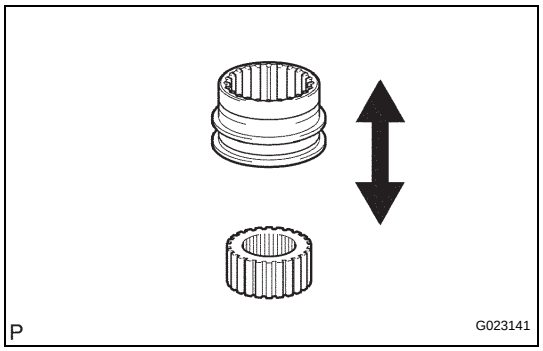
Do not damage the bearing.



30. REMOVE FRONT DIFFERENTIAL DUST DEFLECTOR

(a) Using SST, a socket wrench and a press, remove the dust deflector.

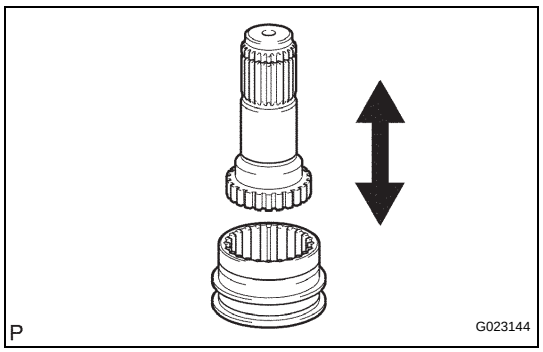
SST 09950-00020



31. REMOVE DIFFERENTIAL CLUTCH SLEEVE AND DIFFERENTIAL CLUTCH HUB

(a) Check for wear and damage to the clutch hub and clutch sleeve.
If necessary, replace them.

(b) Check that the clutch sleeve slides smoothly on the clutch hub.

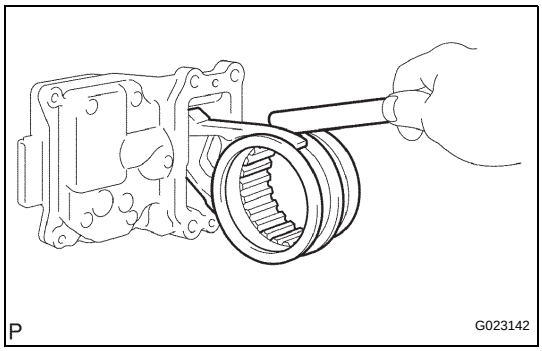


32. INSPECT DIFFERENTIAL CLUTCH SLEEVE AND CLUTCH SLEEVE FORK CLEARANCE

(a) Check for wear and damage to the clutch hub and side gear inter shaft.

(b) Check that the clutch sleeve slides smoothly on the side gear inter shaft.

DF



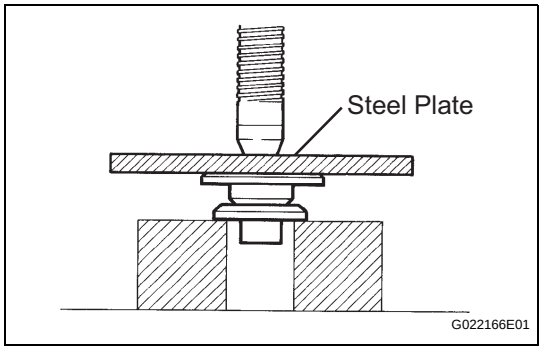
33. INSPECT DIFFERENTIAL CLUTCH SLEEVE AND CLUTCH SLEEVE FORK CLEARANCE

(a) Using a feeler gauge, measure the clearance between the sleeve fork and clutch sleeve.
Maximum clearance:
0.35 mm (0.0138 in.)
If the clearance exceeds the maximum, replace the fork or clutch sleeve.

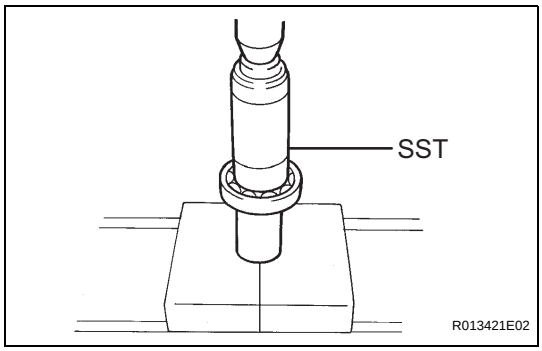
REASSEMBLY

1. INSTALL FRONT DIFFERENTIAL DUST DEFLECTOR

(a) Using a steel plate and a press, install a new dust deflector.
NOTICE:
Do not damage the dust deflector.

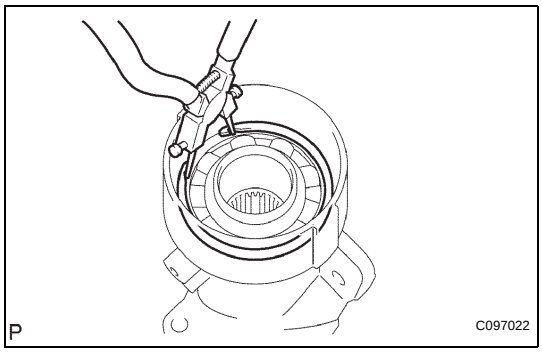


DF



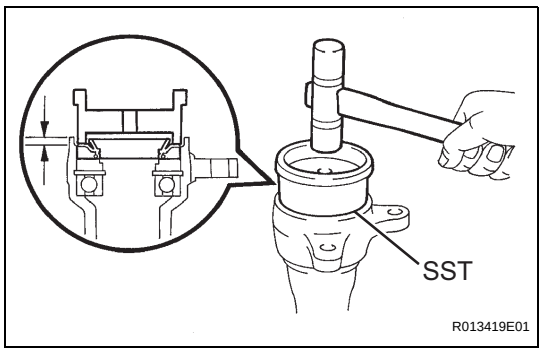
2. INSTALL FRONT DIFFERENTIAL SIDE GEAR SHAFT RH BEARING

(a) Using SST and a press, install the bearing.
SST 09223-00010
(b) Using a snap ring expander, install the snap ring.



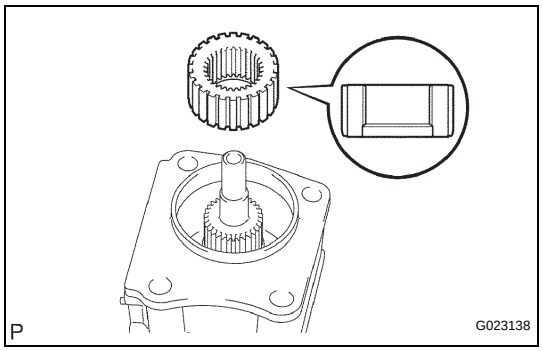
3. INSTALL DIFFERENTIAL SIDE GEAR SHAFT SUB-ASSEMBLY RH

(a) Install the side gear shaft into the differential tube.
(b) Using snap ring pliers, install the snap ring.



4. INSTALL DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

(a) Using SST and a plastic hammer, install a new oil seal.
SST 09608-32010
Oil seal drive in depth:
4.8 to 0.58 mm (0.1890 to 0.2284 in.)
(b) Coat the oil seal lip with MP grease.



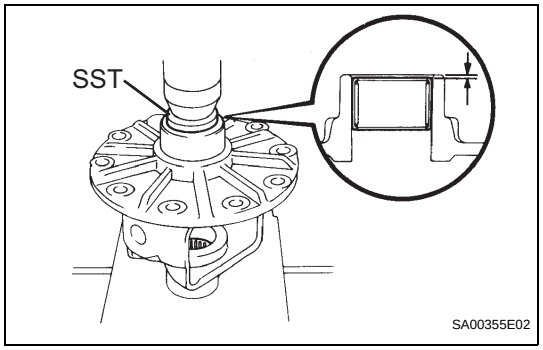
5. INSTALL DIFFERENTIAL CLUTCH HUB

(a) Install the clutch hub onto the side gear inter shaft.

(b) Using snap ring pliers, install the snap ring.

NOTICE:

Be sure to install the differential clutch hub in the correct direction.



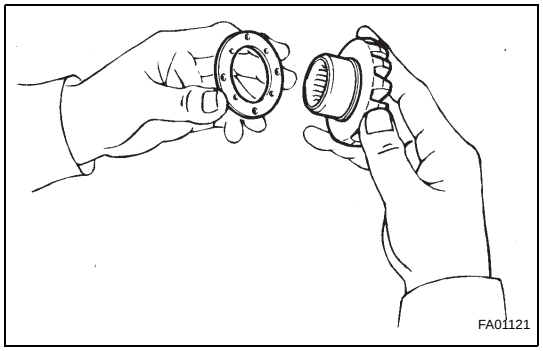
6. INSTALL FRONT DIFFERENTIAL SIDE GEAR NEEDLE ROLLER BEARING

(a) Using SST and a press, install 2 new bearings.

SST 09950-60010 (09951-00380)

Bearing press in depth:

1.4 to 2.0 mm (0.055 to 0.079 in.)



7. INSTALL FRONT DIFFERENTIAL CASE

(a) Install the 2 proper thrust washers onto the 2 side gears.

HINT:

Using the table below, select a thrust washer which will ensure that the backlash is within the specifications.

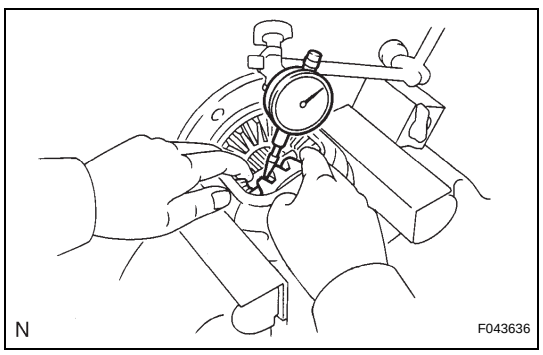
Washer thickness

Thickness mm (in.)	Thickness mm (in.)
1.50 (0.0591)	1.75 (0.0689)
1.55 (0.0610)	1.80 (0.0709)
1.60 (0.0630)	1.85 (0.0728)
1.65 (0.0650)	1.90 (0.0748)
1.70 (0.0669)	-

(b) Install the 2 side gears, 2 side gear thrust washers, 2 pinion gears, 2 pinion gear thrust washers and pinion shaft into the differential case assembly.

HINT:

Align the holes of the differential case assembly and pinion shaft.



(c) Measure the side gear backlash.

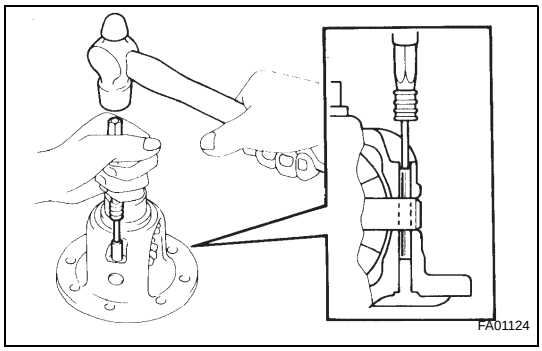
(1) Using a dial indicator, measure the side gear backlash while holding one pinion gear toward the differential case assembly.

Backlash:

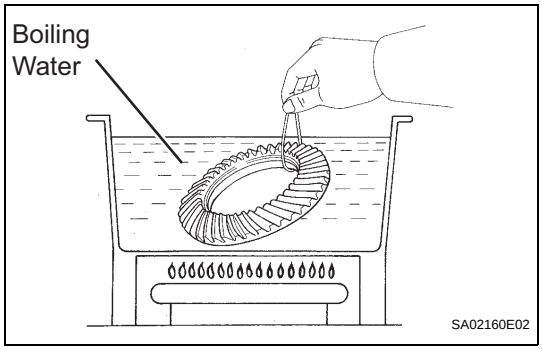
0 to 0.15 mm (0 to 0.0059 in.)

If the backlash is not within the specification, install a side gear thrust washer with a different thickness.

DF

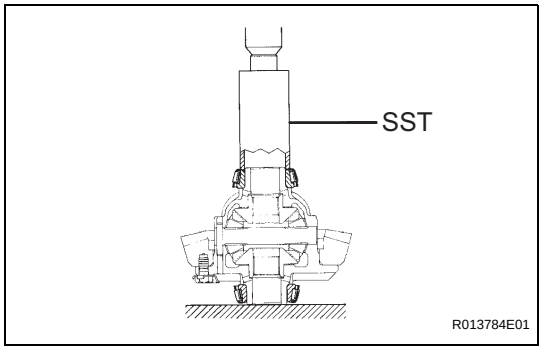


(d) Using a pin punch and hammer, install the straight pin through the differential case assembly and hole of the pinion shaft.
(e) Stake the differential case assembly.



8. INSTALL DIFFERENTIAL RING GEAR

(a) Clean the contact surfaces of the differential case assembly and ring gear.
(b) Heat the ring gear to about 100°C (212°F) in boiling water.
(c) Carefully take the ring gear out of the boiling water.
(d) After any moisture on the ring gear has completely evaporated, quickly install the ring gear onto the differential case assembly.
HINT:
Align the matchmarks on the ring gear and differential case assembly.
(e) Temporarily install 10 bolts so that the bolt holes in the ring gear and differential case assembly are aligned.
(f) After the ring gear has cooled sufficiently, tighten the ring gear set bolts to which thread lock has been applied.
Torque: 97 N*m (984 kgf*cm, 71 ft.*lbf)
Thread lock:
Part No. 08833-00100, THREE BOND 1360k or equivalent



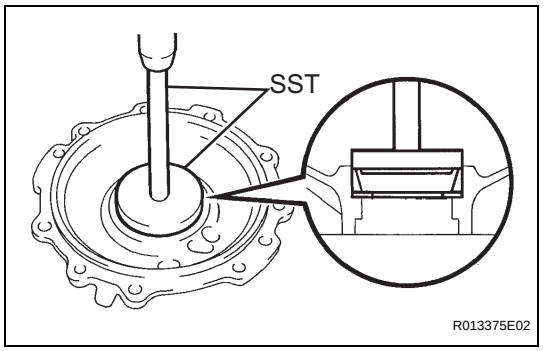
9. INSTALL FRONT DIFFERENTIAL CASE BEARING

(a) Using SST and a press, install the 2 differential case bearings into the differential case assembly.
SST 09226-10010

10. INSTALL SIDE BEARING OUTER RACE

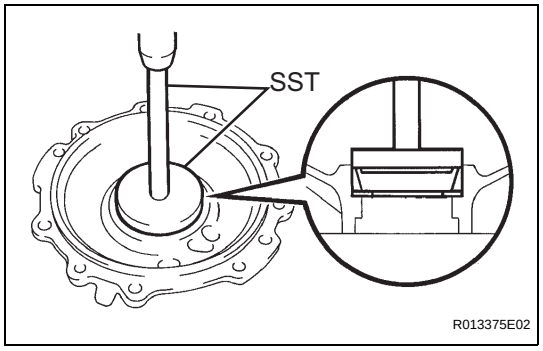
HINT:
When replacing the 2 differential case bearings, fit 2 of the thinnest new washers to each bearing and when reusing the bearings, fit washers of the same thickness as those removed.
(a) Install a new plate washer to the side bearing retainer.

DF

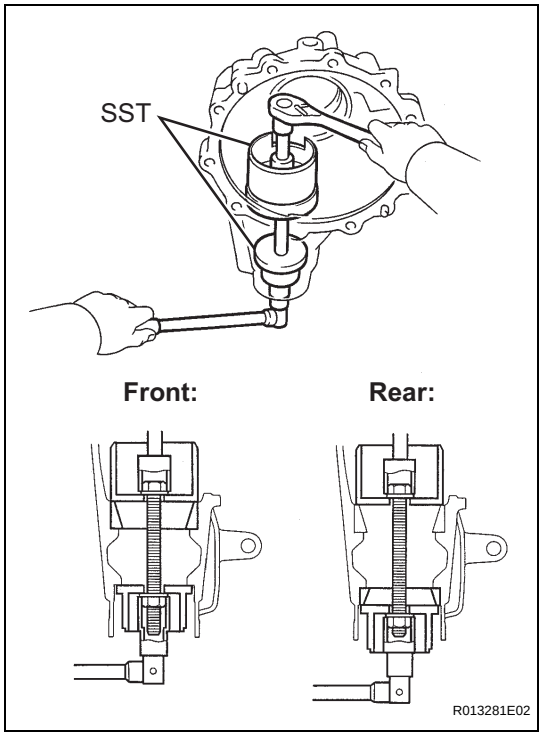


(b) Using SST and a press, install the bearing outer race onto the differential case bearing retainer assembly.
SST 09950-60020 (09951-00810), 09950-70010 (09951-07150)

(c) Install a new plate washer onto the differential carrier assembly.



(d) Using SST and a press, install the bearing outer race onto the differential carrier assembly.
SST 09950-60020 (09951-00810), 09950-70010 (09951-07150)



11. INSTALL FRONT BEARING OUTER RACE

(a) Using SST, install the outer race.
SST 09950-00020 (09951-00680, 09951-00890)

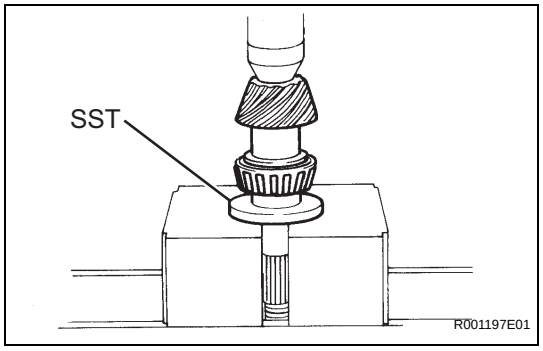
12. INSTALL REAR BEARING OUTER RACE

(a) Install the oil storage ring.

(b) Using SST, install the outer race.
SST 09950-00020 (09951-00680, 09951-00890)

13. INSTALL FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING

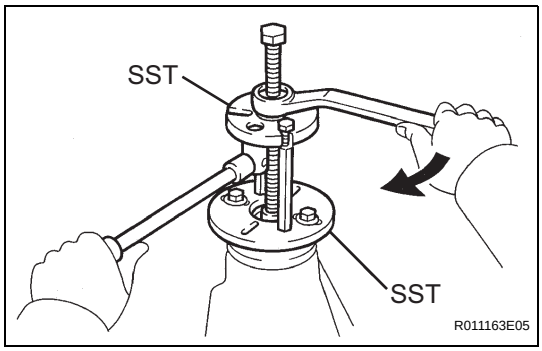
(a) Install the washer onto the drive pinion.
HINT:
First, fit a washer of the same thickness as the removed washer, then after checking the tooth contact pattern, replace the washer with one of a differential thickness if necessary.



(b) Using SST and a press, install the front bearing onto the drive pinion.
SST 09506-30012

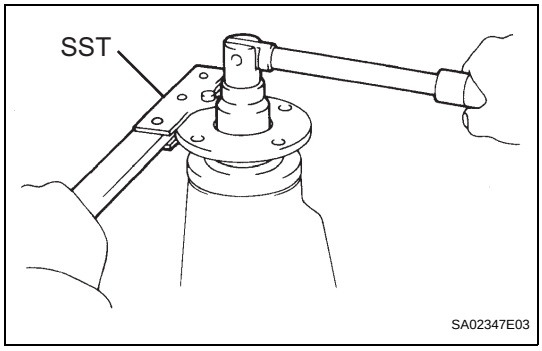
14. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Install the drive pinion.
HINT:
Assemble the spacer and oil seal after adjusting the ring gear tooth contact pattern.



(b) Using SST, install the rear bearing, oil slinger and companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

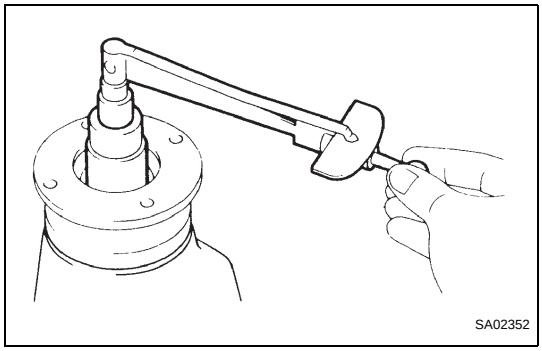
(c) Coat the threads of the nut with hypoid gear oil.



(d) Adjust the drive pinion preload by tightening the companion flange nut.

(e) Using SST to hold the companion flange, tighten the nut.
SST 09330-00021
NOTICE:
As there is no spacer, tighten the nut a little at a time, being careful not to overtighten it.

DF



(f) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Preload (at starting)

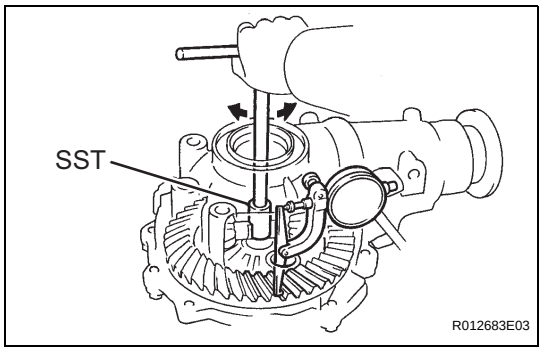
Bearing	Standard
New	0.98 to 1.57 N*m (10 to 16 kgf*cm, 8.7 to 13.9 in.*lbf)
Reused	0.49 to 0.78 N*m (5 to 8 kgf*cm, 4.3 to 6.9 in.*lbf)

If necessary, disassemble and inspect the differential assembly.

15. INSTALL DIFFERENTIAL CASE ASSEMBLY

16. ADJUST BACKLASH DIFFERENTIAL RING GEAR AND DIFFERENTIAL DRIVE PINION

(a) Install the side bearing retainer with the 10 bolts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)



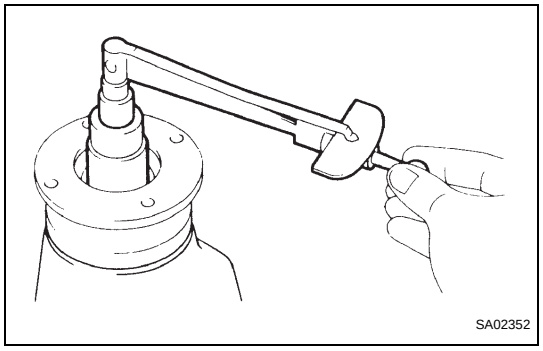
(b) Using SST and a dial indicator, measure the ring gear backlash.
SST 09564-32011
Backlash:
0.11 to 0.21 mm (0.0043 to 0.0083 in.)

(c) If it is not within the specification, adjust it by either increasing or decreasing the thickness of the washers on both sides by an equal amount.
HINT:
There should be no clearance between the plate washer and differential case.
Make sure that there is ring gear backlash.

Washer thickness

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.58 (0.0622)	1.78 (0.0701)	1.98 (0.0780)
1.60 (0.0630)	1.80 (0.0709)	2.00 (0.0787)
1.62 (0.0638)	1.82 (0.0717)	2.02 (0.0800)

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.64 (0.0646)	1.84 (0.0724)	2.04 (0.0803)
1.66 (0.0654)	1.86 (0.0732)	2.06 (0.0811)
1.68 (0.0661)	1.88 (0.0740)	2.08 (0.0819)
1.70 (0.0669)	1.90 (0.0748)	2.10 (0.0827)
1.72 (0.0677)	1.92 (0.0756)	2.12 (0.0835)
1.74 (0.0685)	1.94 (0.0764)	2.14 (0.0843)
1.76 (0.0693)	1.96 (0.0772)	2.16 (0.0850)

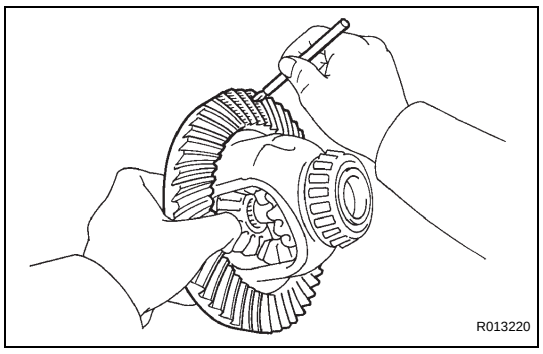


17. INSPECT TOTAL PRELOAD

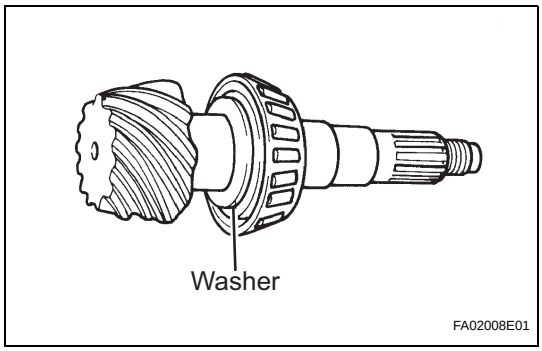
(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.
Total preload (at starting):
Drive pinion preload plus 0.22 to 0.88 N*m (2.2 to 8.8 kgf*cm, 2.0 to 7.8 in.*lbf)
If necessary, disassemble and inspect the differential.

18. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

(a) Remove the side bearing retainer and differential case assembly.

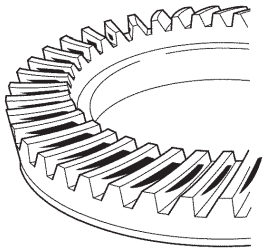


(b) Coat 3 or 4 teeth at 3 different positions on the ring gear with red lead.
(c) Install the differential case assembly and side bearing retainer.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
(d) Hold the companion flange firmly and rotate the ring gear in both directions.
(e) Remove the differential case, side bearing retainer and differential case assembly.

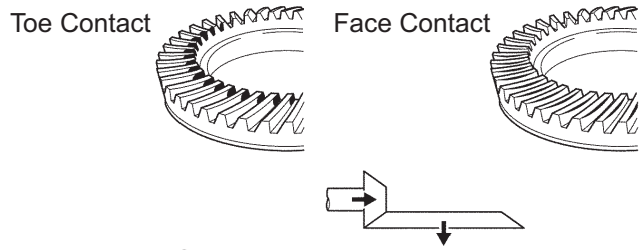


(f) Inspect the tooth contact pattern.

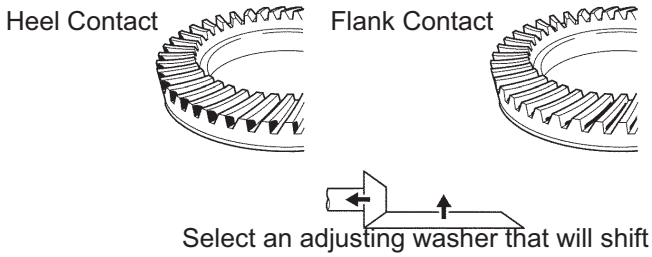
Driver Side:



Proper Contact

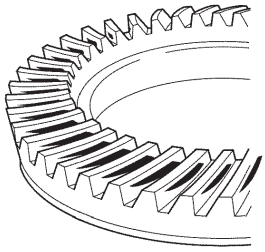


Select an adjusting washer that will bring the drive pinion closer to the ring gear.

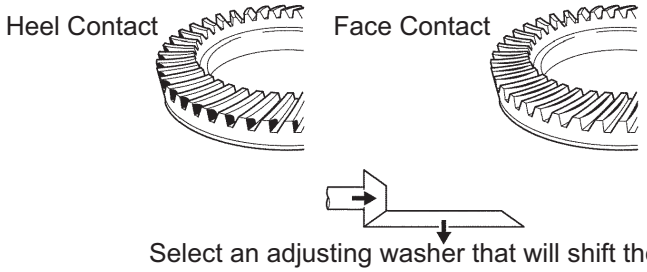


Select an adjusting washer that will shift the drive pinion away from the ring gear.

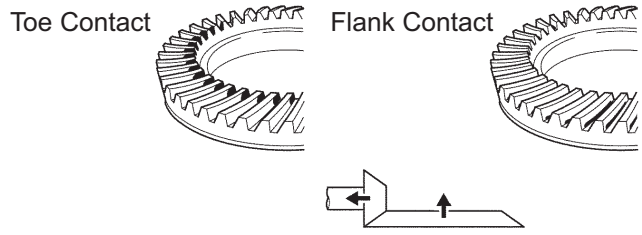
Coast Side:



Proper Contact



Select an adjusting washer that will shift the drive pinion closer to the ring gear.



Select an adjusting washer that will bring the drive pinion away from the ring gear.

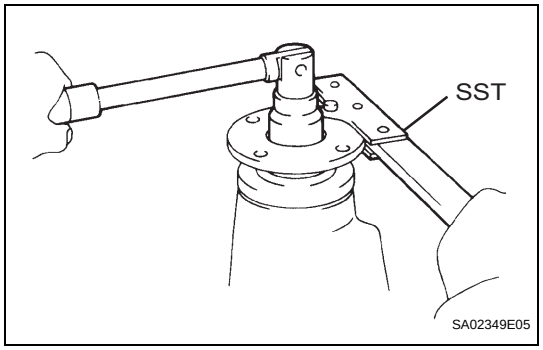
P

F052199E01

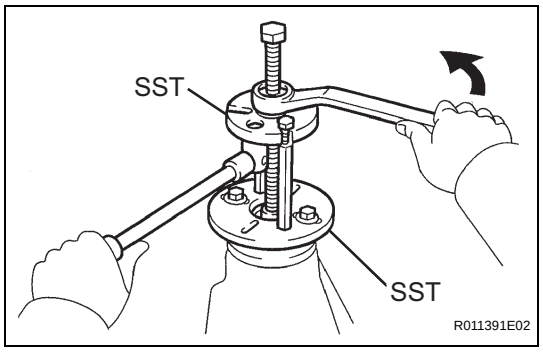
If the teeth are not engaged properly, use the following chart to select the appropriate washer for correction.

Washer thickness

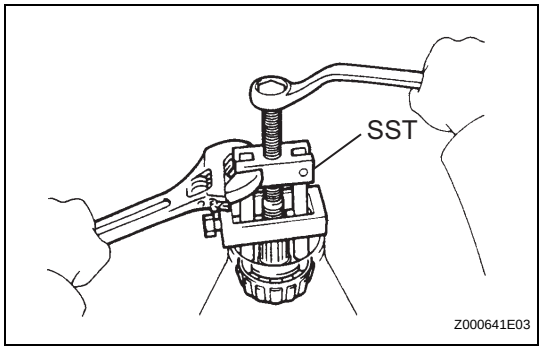
Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.70 (0.0669)	1.94 (0.0764)	2.18 (0.0858)
1.73 (0.0681)	1.97 (0.0776)	2.21 (0.0870)
1.76 (0.0693)	2.00 (0.0787)	2.24 (0.0882)
1.79 (0.0705)	2.03 (0.0799)	2.27 (0.0894)
1.82 (0.0717)	2.06 (0.0811)	2.30 (0.0906)
1.85 (0.0728)	2.09 (0.0823)	2.33 (0.0917)
1.88 (0.0740)	2.12 (0.0835)	-
1.91 (0.0752)	2.15 (0.0847)	-



(g) Using SST to hold the companion flange, remove the nut.
SST 09330-00021



(h) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)



(i) Using SST, remove the rear bearing from the drive pinion.
SST 09556-22010

19. INSTALL FRONT DIFFERENTIAL DRIVE PINION BEARING SPACER

(a) Install a new bearing spacer and oil storage ring.

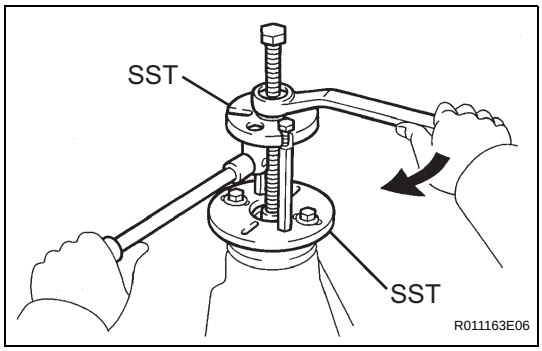
20. INSTALL FRONT DRIVE PINION REAR TAPERED ROLLER BEARING

21. INSTALL FRONT DIFFERENTIAL DRIVE PINION OIL SLINGER

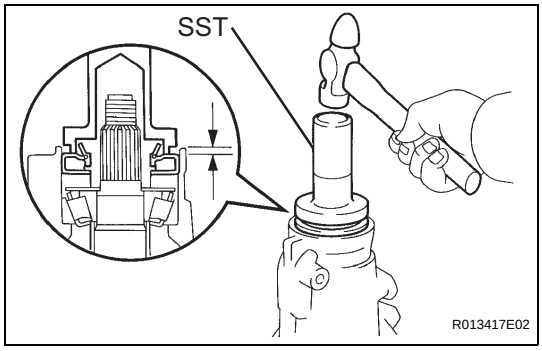
22. INSTALL FRONT DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY FRONT

(a) Place the companion flange on the drive pinion.
(b) Coat the threads of a new nut with hypoid gear oil LSD.

DF



(c) Using SST and the companion flange, install the rear tapered roller bearing, then remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

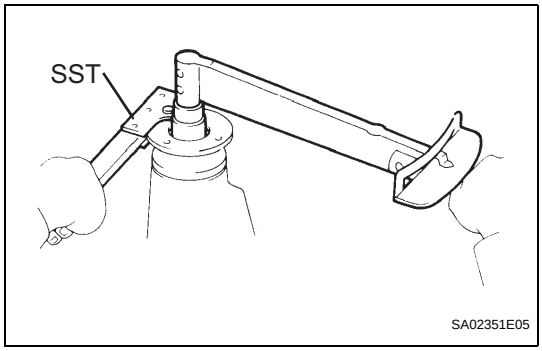


23. INSTALL FRONT DIFFERENTIAL CARRIER OIL SEAL

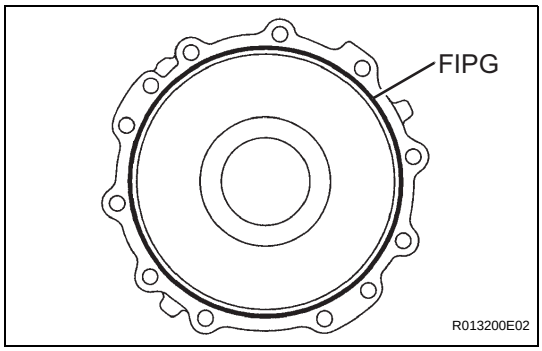
(a) Using SST and a hammer, install the oil seal.
SST 09554-22010
Oil seal drive in depth:
3.9 to 4.8 mm (0.153 to 0.189 in.)

(b) Coat the oil seal lip with MP grease.

DF



(c) Using SST to hold the flange, tighten the nut.
Torque: 370 N*m (3,773 kgf*cm, 273 ft.*lbf)
SST 09330-00021



24. INSTALL DIFFERENTIAL SIDE BEARING RETAINER

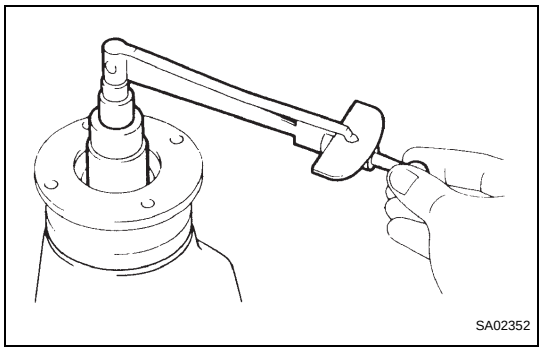
(a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the differential carrier and side bearing retainer.

(b) Clean the contact surfaces of any residual FIPG material using gasoline or alcohol.

(c) Apply FIPG to the side bearing retainer, as shown.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
HINT:
Install the side bearing retainer within 10 minutes of applying FIPG.

(d) Install the side bearing retainer with the 10 bolts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(e) Install the union.

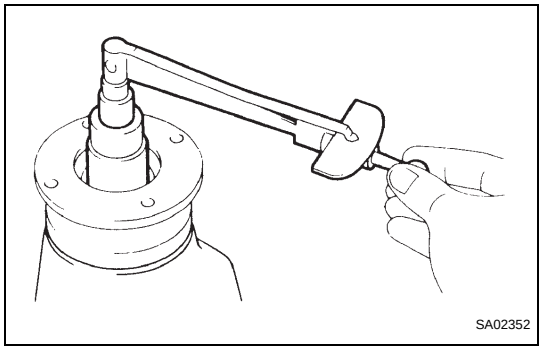


25. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Preload (at starting)

Bearing	Standard
New	0.98 to 1.57 N*m (10 to 16 kgf*cm, 8.7 to 13.9 in.*lbf)
Reused	0.49 to 0.78 N*m (5 to 8 kgf*cm, 4.3 to 6.9 in.*lbf)

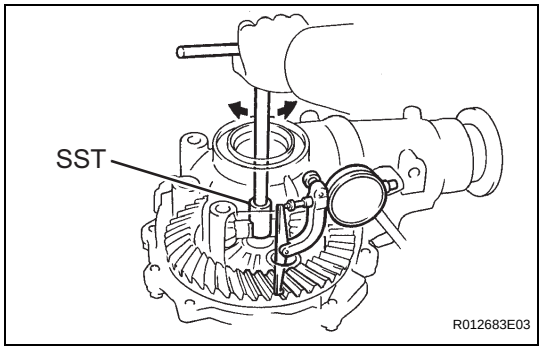
If the preload is greater than the specification, replace the bearing spacer.
If the preload is less than the specification, retighten the nut to 13 N*m (130 kgf*cm, 9 ft*lbf) a little at a time until the specified preload is reached.
Torque: 370 N*m (3,773 kgf*cm, 273 ft.*lbf) or less
If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repair the preload procedure. Do not loosen the nut to reduce the preload.



26. INSPECT TOTAL PRELOAD

(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.
Total preload (at starting):
Drive pinion preload plus 0.22 to 0.88 N*m (2.2 to 8.8 kgf*cm, 2.0 to 7.8 in.*lbf)
If necessary, disassemble and inspect the differential.

27. INSPECT BACKLASH DIFFERENTIAL RING GEAR AND DIFFERENTIAL DRIVE PINION
SST 09564-32011



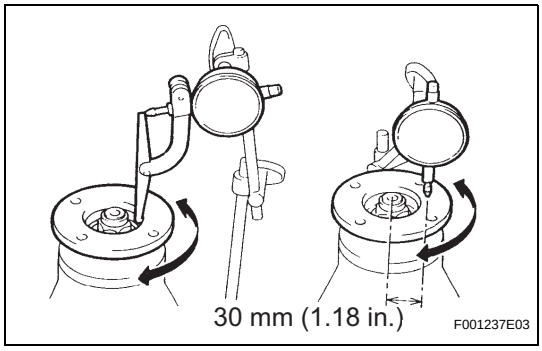
(a) Using SST and a dial indicator, measure the ring gear backlash.
Backlash:
0.11 to 0.21 mm (0.0043 to 0.0083 in.)

(b) If it is not within the specification, adjust it by either increasing or decreasing the thickness of the washers on both sides by an equal amount.
HINT:
There should be no clearance between the plate washer and differential case.
Make sure that there is ring gear backlash.

Washer thickness

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.58 (0.0622)	1.78 (0.0701)	1.98 (0.0780)
1.60 (0.0630)	1.80 (0.0709)	2.00 (0.0787)
1.62 (0.0638)	1.82 (0.0717)	2.02 (0.0800)
1.64 (0.0646)	1.84 (0.0724)	2.04 (0.0803)
1.66 (0.0654)	1.86 (0.0732)	2.06 (0.0811)
1.68 (0.0661)	1.88 (0.0740)	2.08 (0.0819)
1.70 (0.0669)	1.90 (0.0748)	2.10 (0.0827)
1.72 (0.0677)	1.92 (0.0756)	2.12 (0.0835)
1.74 (0.0685)	1.94 (0.0764)	2.14 (0.0843)

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.76 (0.0693)	1.96 (0.0772)	2.16 (0.0850)



28. INSPECT AND ADJUST FRONT DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY FRONT

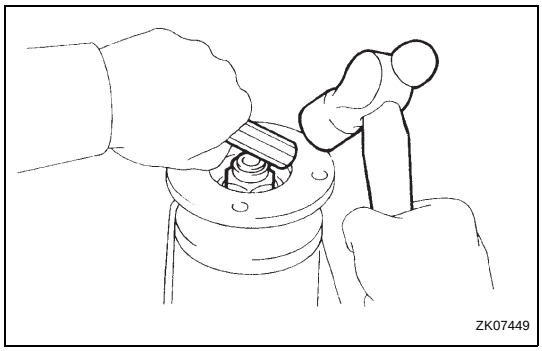
(a) Using a dial indicator, measure the runout of the drive pinion companion flange vertically and horizontally.

Maximum runout:

Vertical runout: 0.10 mm (0.0039 in.)

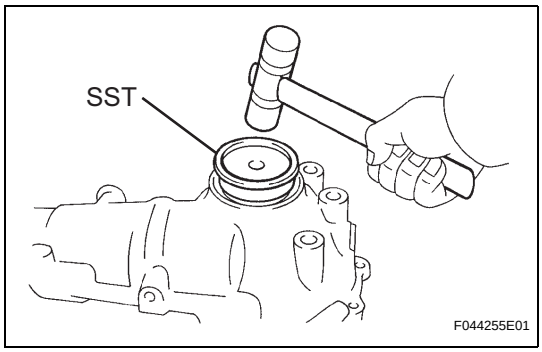
Lateral runout: 0.10 mm (0.0039 in.)

If the runouts are not within the specifications, replace the companion flange.



29. INSTALL FRONT DRIVE PINION COMPANION FLANGE FRONT NUT

(a) Using a chisel and hammer, stake the drive pinion nut.



30. INSTALL DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

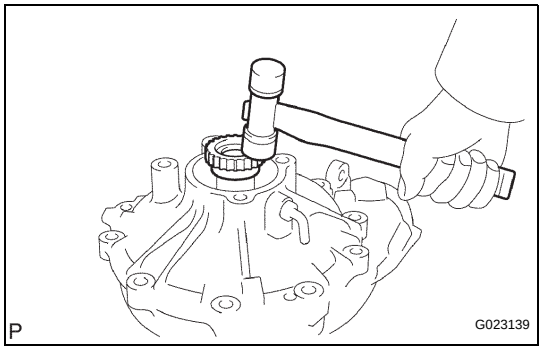
(a) Using SST and a plastic hammer, install a new oil seal until its surface is flush with the differential carrier end.

SST 09608-32010

(b) Coat the oil seal lip with MP grease.

Oil seal driven in depth:

-0.45 to 0.45 mm (-0.0177 to 0.0177 in.)



31. INSTALL DIFFERENTIAL SIDE GEAR INTER SHAFT SUB-ASSEMBLY

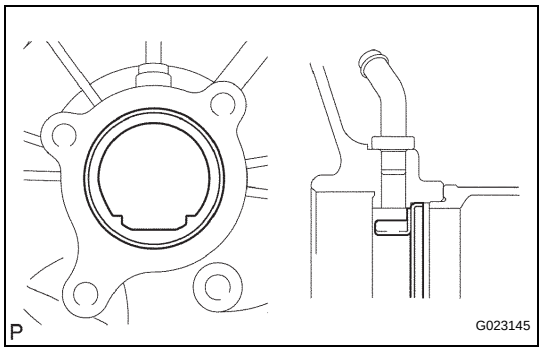
(a) Install a new snap ring onto the side gear inter shaft.

(b) Using a plastic hammer, install the side gear inter shaft onto the differential case.

(c) Check that there are 2 to 3 mm (0.08 to 0.12 in.) of play in the axial direction.

(d) Check that the side gear inter shaft will not come out by trying to pull it completely out by hand.

DF

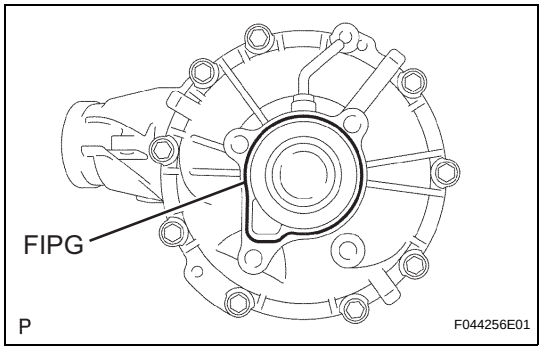


32. INSTALL FRONT DIFFERENTIAL SIDE BEARING RETAINER DEFLECTOR

(a) Using a brass bar and a hammer, install the side bearing retainer deflector.

NOTICE:

Be sure to install the side bearing retainer deflector in the correct direction.



33. INSTALL FRONT DIFFERENTIAL TUBE ASSEMBLY

(a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the differential and clutch case.

(b) Clean the contact surfaces of any residual FIPG material using gasoline or alcohol.

(c) Apply FIPG to the differential, as shown.

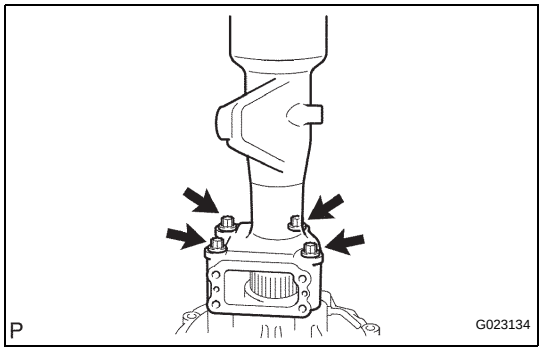
FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

HINT:

Install the differential tube within 10 minutes of applying FIPG.

(d) Install the differential tube into the differential carrier assembly.



(e) Clean the threads of the 4 bolts and retainer bolt holes with toluene or trichloroethylene.

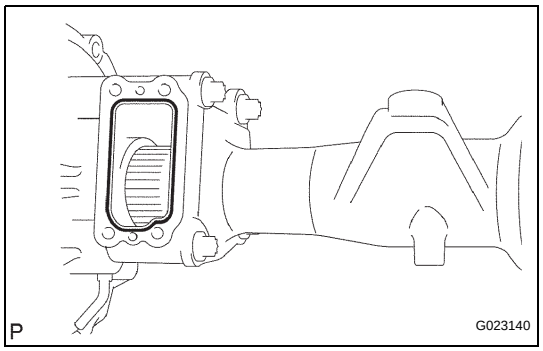
(f) Apply adhesive to 2 to 3 threads of each bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

(g) Install the 4 bolts.

Torque: 110 N*m (1,122 kgf*cm, 81 ft.*lbf) or less



34. INSTALL DIFFERENTIAL VACUUM ACTUATOR ASSEMBLY

(a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the actuator and clutch case.

(b) Clean the contact surfaces of any residual FIPG material using gasoline or alcohol.

(c) Apply FIPG to the differential tube, as shown.

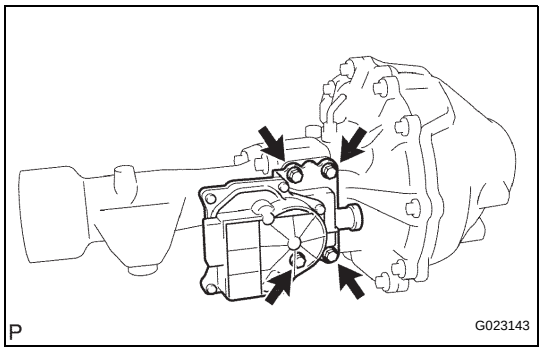
FIPG:

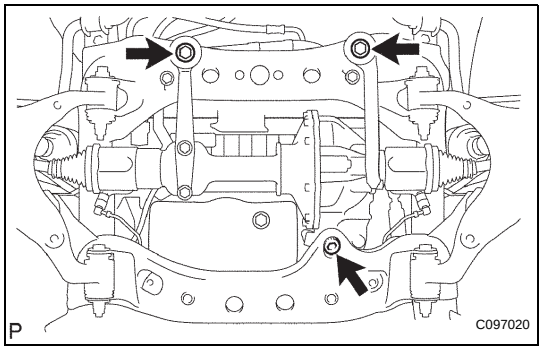
Part No. 08826-00090, THREE BOND 1281 or equivalent

HINT:

Install the actuator within 10 minutes of applying FIPG.

DF





(d) Clean the threads of the 4 bolts and retainer bolt holes with toluene or trichloroethylene.
(e) Install the actuator assembly onto the differential tube.
(f) Apply adhesive to 2 to 3 threads of each bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1281 or equivalent
(g) Install the 4 bolts.
Torque: 21 N*m (210 kgf*cm, 15 ft.*lbf)

INSTALLATION

1. **INSTALL FRONT DIFFERENTIAL CARRIER ASSEMBLY**
(a) Connect the actuator hose and connector.
(b) Install the No. 1 mounting support with the 3 bolts.
Torque: 186 N*m (1,899 kgf*cm, 138 ft.*lbf)
(c) Install the No. 2 mounting support with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)
(d) Install the No. 3 front differential support with the 2 bolts.
Torque: 108 N*m (1,100 kgf*cm, 80 ft.*lbf)
(e) Support the front differential with a jack.
(f) Install the 2 front mounting bolts and nuts.
Torque: 137 N*m (1,400 kgf*cm, 101 ft.*lbf)
(g) Install the No. 1 front differential mount nut.
Torque: 87 N*m (889 kgf*cm, 64 ft.*lbf)
(h) Install the front differential breather tube bracket with the bolt.
Torque: 13 N*m (129 kgf*cm, 8 ft.*lbf)
(i) Lower the jack.

2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-4)**

3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
HINT:
Use the same procedure as for the LH side.

4. **INSTALL FRONT SUSPENSION LOWER ARM LH (See page DS-9)**

5. **INSTALL FRONT SUSPENSION LOWER ARM RH**
HINT:
Use the same procedure as for the LH side.

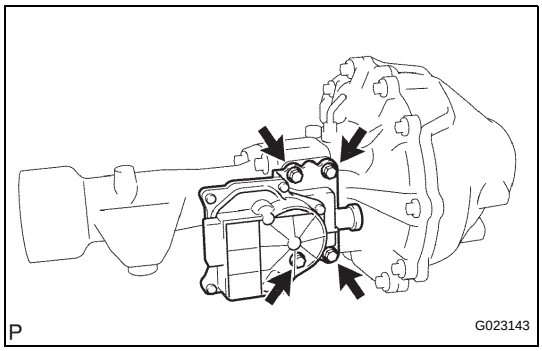
6. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page PS-68)**

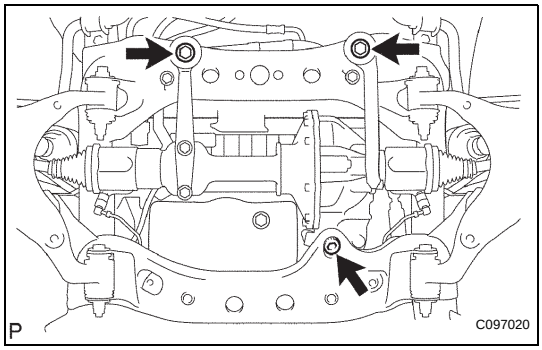
7. **INSTALL TIE ROD END SUB-ASSEMBLY RH (See page PS-68)**

8. **INSTALL FRONT SPEED SENSOR LH (See page BC-303)**

9. **INSTALL FRONT SPEED SENSOR RH**
HINT:
Use the same procedure as for the LH side.

DF





(d) Clean the threads of the 4 bolts and retainer bolt holes with toluene or trichloroethylene.
(e) Install the actuator assembly onto the differential tube.
(f) Apply adhesive to 2 to 3 threads of each bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1281 or equivalent
(g) Install the 4 bolts.
Torque: 21 N*m (210 kgf*cm, 15 ft.*lbf)

INSTALLATION

1. **INSTALL FRONT DIFFERENTIAL CARRIER ASSEMBLY**
(a) Connect the actuator hose and connector.
(b) Install the No. 1 mounting support with the 3 bolts.
Torque: 186 N*m (1,899 kgf*cm, 138 ft.*lbf)
(c) Install the No. 2 mounting support with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)
(d) Install the No. 3 front differential support with the 2 bolts.
Torque: 108 N*m (1,100 kgf*cm, 80 ft.*lbf)
(e) Support the front differential with a jack.
(f) Install the 2 front mounting bolts and nuts.
Torque: 137 N*m (1,400 kgf*cm, 101 ft.*lbf)
(g) Install the No. 1 front differential mount nut.
Torque: 87 N*m (889 kgf*cm, 64 ft.*lbf)
(h) Install the front differential breather tube bracket with the bolt.
Torque: 13 N*m (129 kgf*cm, 8 ft.*lbf)
(i) Lower the jack.

2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-4)**

3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
HINT:
Use the same procedure as for the LH side.

4. **INSTALL FRONT SUSPENSION LOWER ARM LH (See page DS-9)**

5. **INSTALL FRONT SUSPENSION LOWER ARM RH**
HINT:
Use the same procedure as for the LH side.

6. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page PS-68)**

7. **INSTALL TIE ROD END SUB-ASSEMBLY RH (See page PS-68)**

8. **INSTALL FRONT SPEED SENSOR LH (See page BC-303)**

9. **INSTALL FRONT SPEED SENSOR RH**
HINT:
Use the same procedure as for the LH side.

DF

10. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-51)**

11. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    Use the same procedure as for the LH side.

12. **INSTALL FRONT AXLE HUB LH NUT (See page AH-20)**

13. **INSTALL FRONT AXLE HUB RH NUT**
    HINT:
    Use the same procedure as for the LH side.

14. **INSTALL FRONT PROPELLER SHAFT ASSEMBLY (See page PR-19)**

15. **ADD DIFFERENTIAL OIL (See page DF-8)**

16. **INSPECT DIFFERENTIAL OIL (See page DF-8)**

17. **INSPECT FOR DIFFERENTIAL OIL LEAKAGE**

18. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY**
    (a) Install the No. 2 engine under cover sub-assembly with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

19. **INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY**
    (a) Install the No. 1 engine under cover sub-assembly with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

20. **INSTALL FRONT WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

21. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-7)

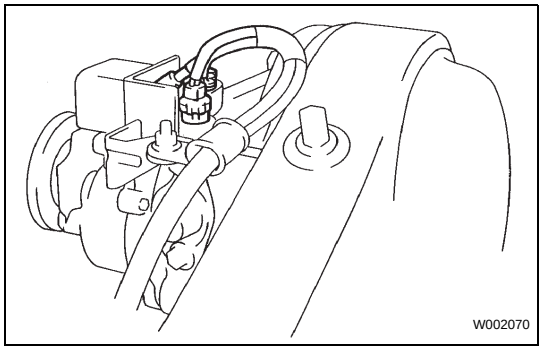
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

23. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    HINT:
    (See page BC-103)

24. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    HINT:
    (See page BC-7)

REMOVAL

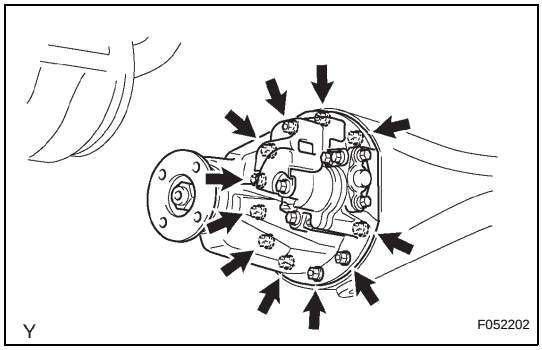
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR WHEEL**
3. **DRAIN BRAKE FLUID**
4. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-68)**
5. **REMOVE FRONT BRAKE SHOE (See page BR-68)**
6. **REMOVE REAR BRAKE SHOE (See page BR-69)**
7. **REMOVE PROPELLER SHAFT ASSEMBLY (for 2WD Drive Type, Regular Cab) (See page PR-3)**
8. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD Drive Type, Except Regular Cab) (See page PR-8)**
9. **REMOVE PROPELLER SHAFT ASSEMBLY (for 4WD Type, Regular Cab) (See page PR-22)**
10. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 4WD Drive Type, Except Regular Cab) (See page PR-8)**
11. **DRAIN DIFFERENTIAL OIL (See page DF-8)**
12. **SEPARATE REAR SPEED SENSOR LH (See page BC-304)**
13. **SEPARATE REAR SPEED SENSOR RH**
    HINT:
    Use the same procedure as for the LH side.
14. **SEPARATE NO.3 PARKING BRAKE CABLE ASSEMBLY (See page PB-21)**
15. **SEPARATE NO.2 PARKING BRAKE CABLE ASSEMBLY**
    HINT:
    Use the same procedure as for the LH side.
16. **REMOVE REAR AXLE SHAFT WITH BACKING PLATE (See page AH-29)**
17. **REMOVE REAR AXLE SHAFT WITH BACKING PLATE**
    HINT:
    Use the same procedure as for the LH side.



18. REMOVE REAR DIFFERENTIAL CARRIER ASSEMBLY

(a) Disconnect the differential lock actuator connector.

(b) Disconnect the rear differential lock actuator breather hose from the differential actuator assembly.



(c) Remove the 11 nuts and differential carrier assembly.

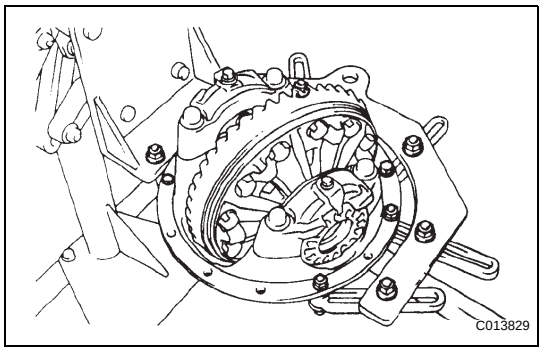
NOTICE:

Be careful not to damage the contact surfaces of the differential carrier and rear axle housing.

(d) Remove the rear differential carrier gasket from the differential carrier assembly.

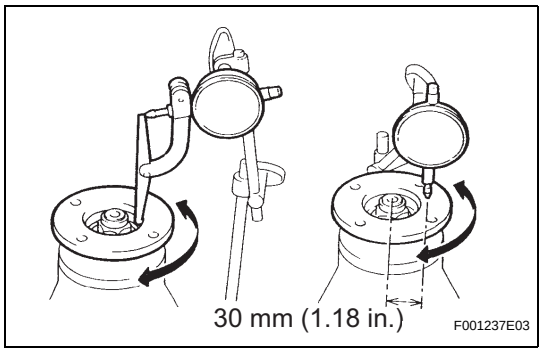
DF

DISASSEMBLY



1. FIX REAR DIFFERENTIAL CARRIER ASSEMBLY

(a) Fix the rear differential carrier assembly to the overattachment.



2. INSPECT REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

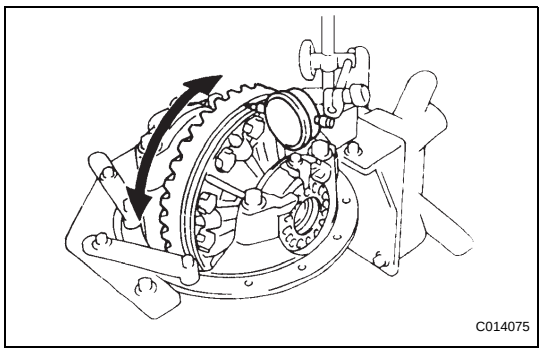
(a) Using a dial indicator, measure the runout of the companion flange vertically and horizontally.

Maximum runout:

Vertical runout: 0.10 mm (0.0039 in.)

Lateral runout: 0.10 mm (0.0039 in.)

If the runouts are not with the specifications, replace the companion flange.



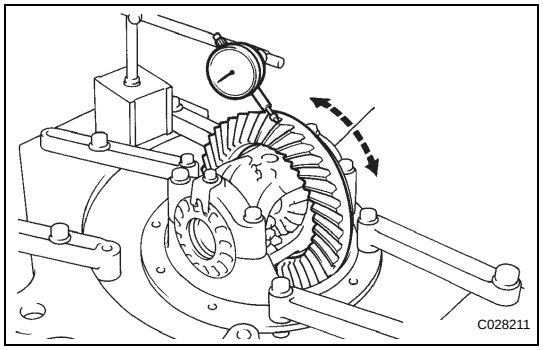
3. INSPECT RUNOUT OF DIFFERENTIAL RING GEAR

(a) Using a dial indicator, check the runout of the ring gear.

Maximum runout:

0.07 mm (0.0028 in.)

If the runout is greater than the maximum, replace the ring gear with a new one.



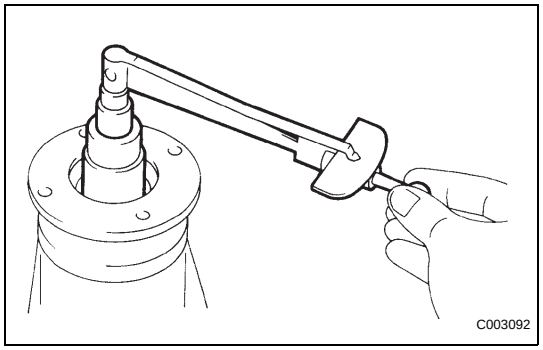
4. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) Using a dial indicator, check the backlash of the ring gear.

Backlash:

0.13 to 0.18 mm (0.0051 to 0.0071 in.)

If the backlash is not within the specification, adjust or repair the side bearing preload as necessary.



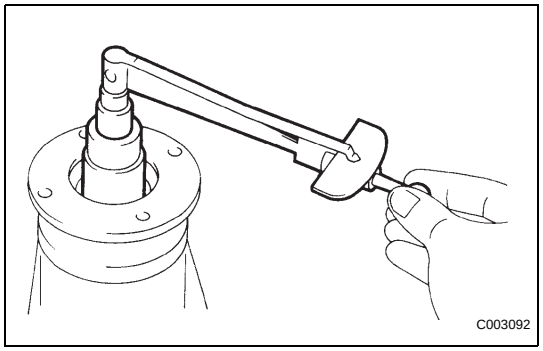
5. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.

Preload (at starting):

0.56 to 0.85 N*m (5.7 to 8.7 kgf*cm, 5.0 to 7.5 in.*lbf)

If necessary, disassemble and inspect the differential assembly.



6. INSPECT TOTAL PRELOAD

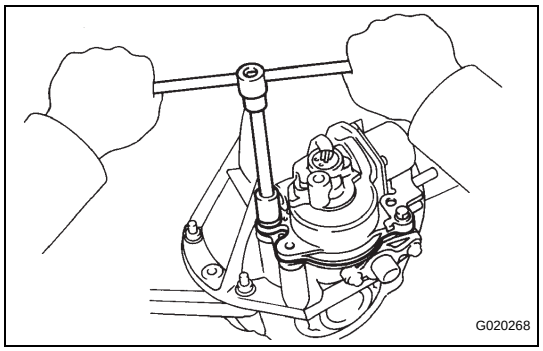
(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.

(b) Using a torque wrench, measure the total preload.

Total preload (at starting):

Drive pinion preload plus 0.39 to 0.59 N*m (4.0 to 6.0 kgf*cm, 3.5 to 5.2 in.*lbf)

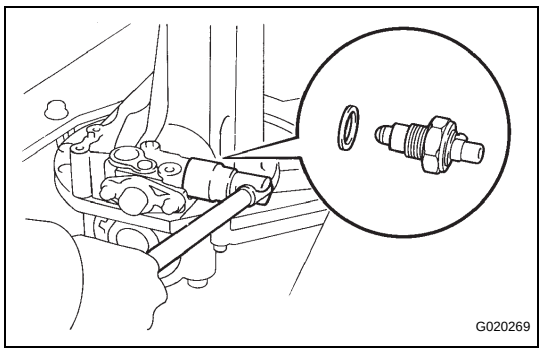
If necessary, disassemble and inspect the differential.



7. REMOVE DIFFERENTIAL LOCK SHIFT ACTUATOR

(a) Remove the 4 bolts and actuator from the differential carrier.

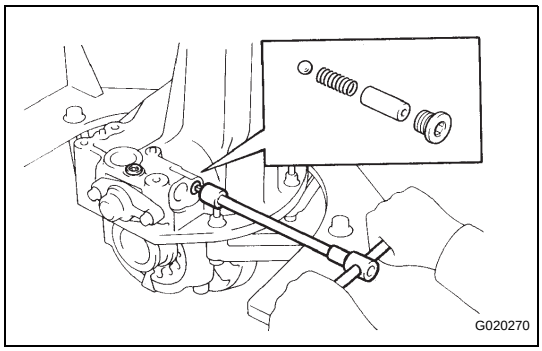
(b) Remove the O-ring.



8. REMOVE NO.1 TRANSFER INDICATOR SWITCH

(a) Remove the indicator switch and gasket.

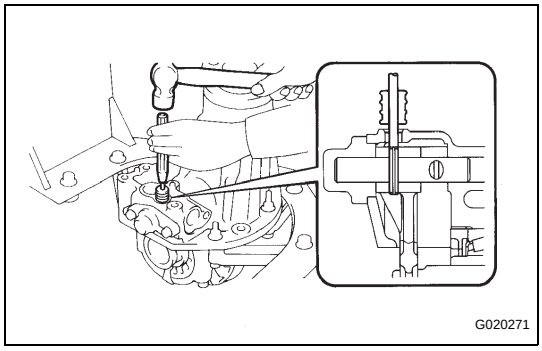
DF



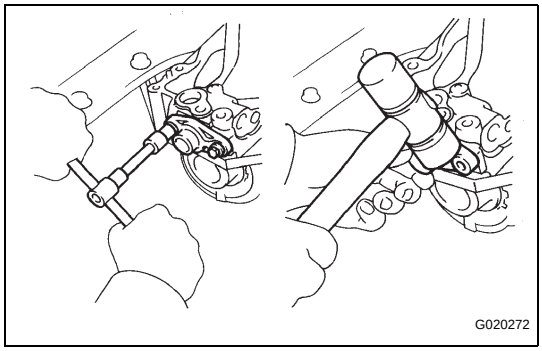
9. REMOVE REAR DIFFERENTIAL LOCK SHIFT FORK SHAFT

(a) Using a 6 mm hexagon wrench, remove the 2 screw plugs.

(b) Remove the spring seat, spring and ball.



(c) Using a 5 mm pin punch and hammer, remove the slotted pin.



(d) Remove the 2 bolts from the shaft retainer.

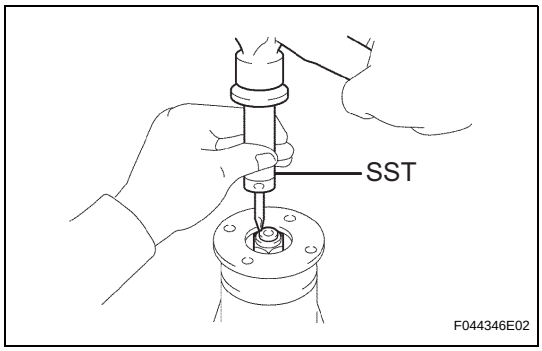
(e) Using a plastic hammer, remove the shaft retainer.

(f) Remove the shift fork shaft.

10. REMOVE REAR DRIVE PINION NUT

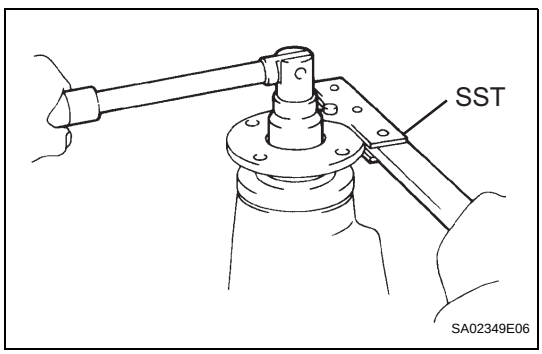
(a) Using SST and a hammer, loosen the staked part of the nut.

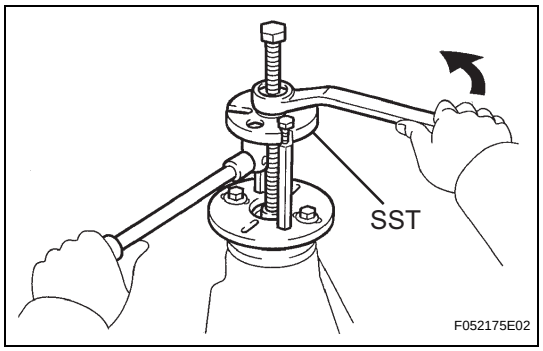
SST 09930-00010



(b) Using SST to hold the drive pinion companion flange, remove the nut.

SST 09330-00021

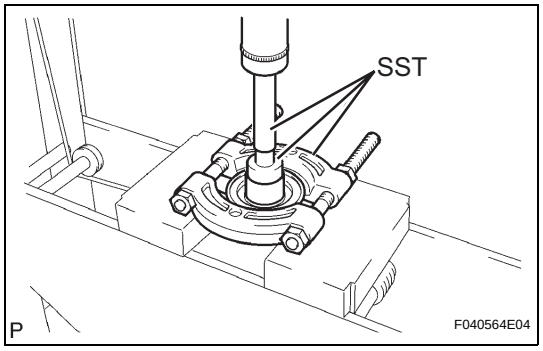




11. REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, remove the drive pinion companion flange.

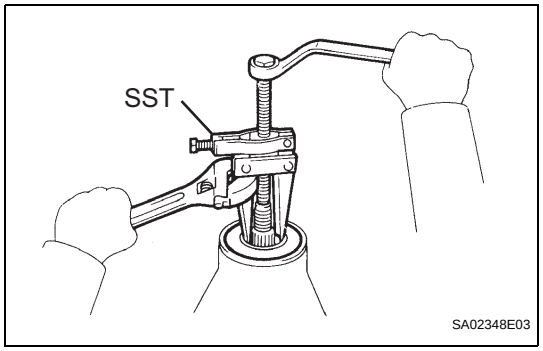
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



12. REMOVE REAR DIFFERENTIAL DUST DEFLECTOR

(a) Using SST and a press, remove the dust deflector.

SST 09950-60010 (09951-00380), 09950-70010 (09951-07150), 09950-00020

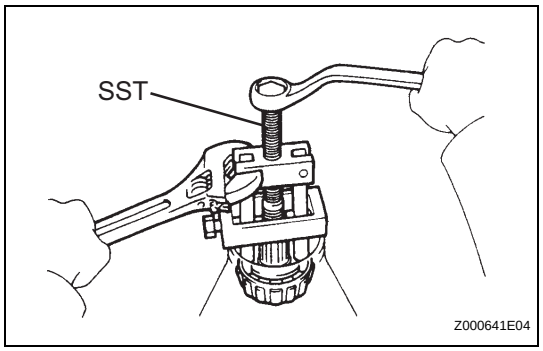


13. REMOVE REAR DIFFERENTIAL CARRIER OIL SEAL

(a) Using SST, remove the oil seal from the differential carrier.

SST 09308-10010

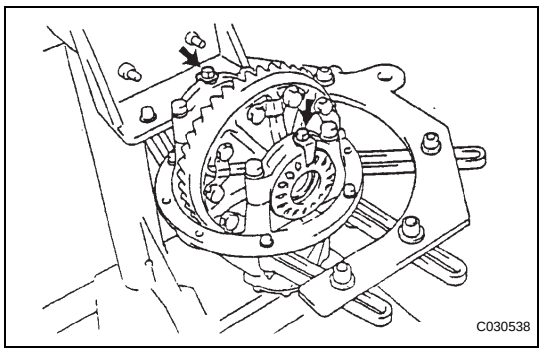
14. REMOVE REAR DIFFERENTIAL DRIVE PINION OIL SLINGER



15. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

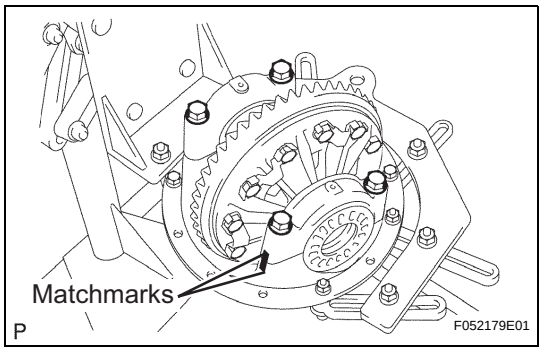
(a) Using SST, remove the drive pinion tapered roller bearing from the drive pinion.

SST 09556-22010



16. REMOVE REAR DIFFERENTIAL BEARING ADJUSTING NUT LOCK

(a) Remove the 2 bolts and 2 rear differential bearing adjusting nut locks.

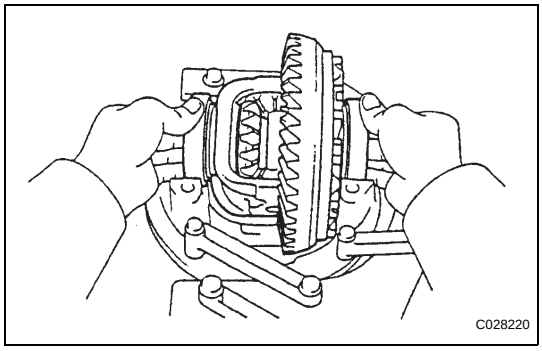


17. REMOVE DIFFERENTIAL CASE ASSEMBLY

(a) Place matchmarks on the bearing cap and differential carrier.

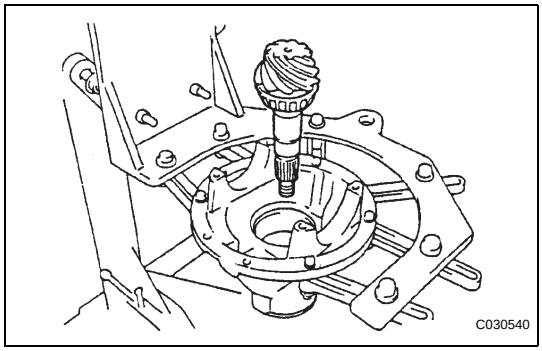
(b) Remove the 4 bolts and 2 differential bearing caps.

(c) Remove the 2 adjusting nuts.



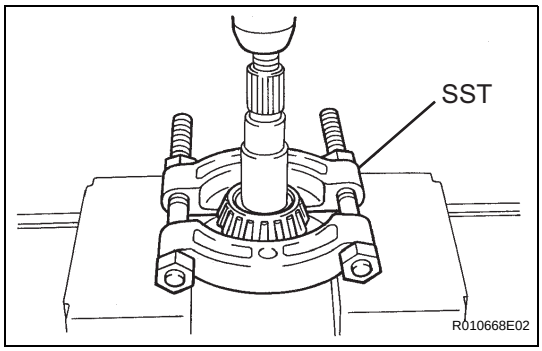
(d) Remove the rear differential case sub-assembly and 2 case bearings from the differential carrier.
HINT:
Tag the 2 case bearings outer races to show the locations for reassembly.

DF



18. REMOVE DIFFERENTIAL DRIVE PINION

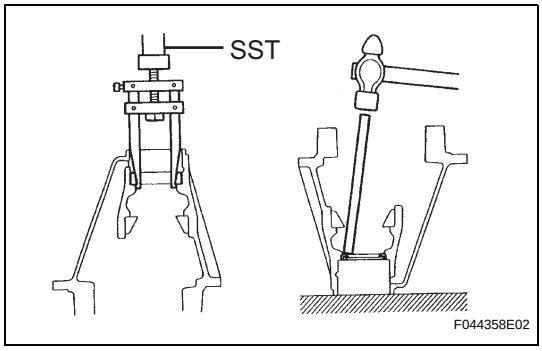
(a) Remove the differential drive pinion and bearing spacer from the differential carrier.



19. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST and a press, remove the drive pinion tapered roller bearing from the drive pinion.
SST 09950-00020
HINT:
If either the drive pinion or ring gear is damaged, replace them as a set.

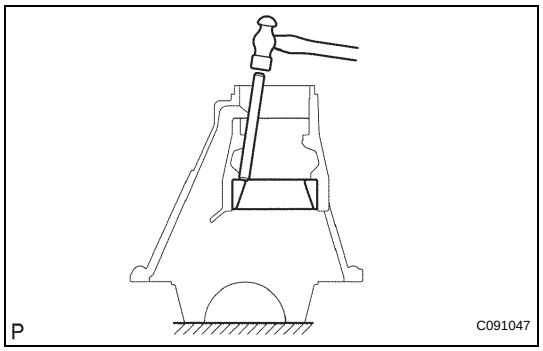
20. REMOVE REAR DIFFERENTIAL DRIVE PINION PLATE WASHER



21. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

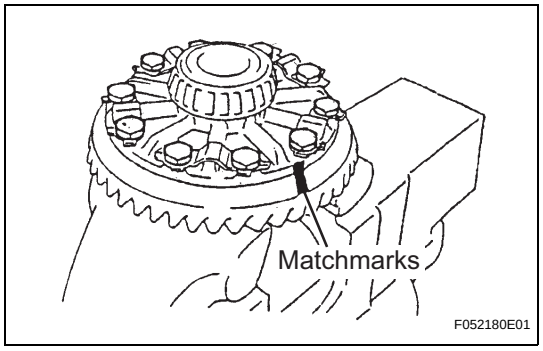
(a) Using SST, remove the front tapered roller bearing from the carrier.
SST 09308-00010

(b) Using a brass bar and a hammer, remove the oil storage ring from the carrier.



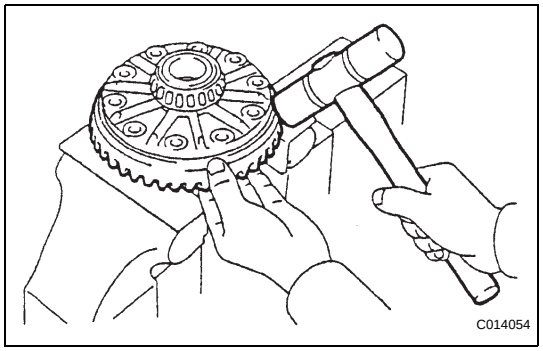
22. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, remove the rear tapered roller bearing from the carrier.

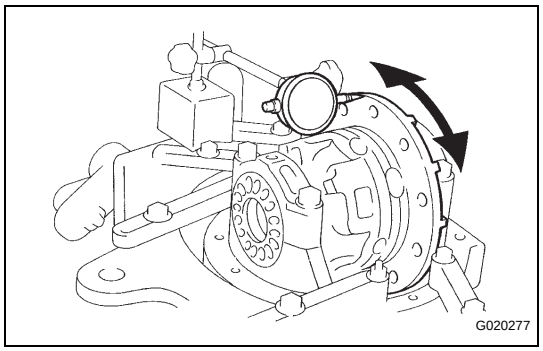


23. REMOVE DIFFERENTIAL RING GEAR

(a) Place matchmarks on the ring gear and differential case.
(b) Using a screwdriver and a hammer, unstake the lock plates.
(c) Remove the 10 ring gear set bolts and 5 lock plates.



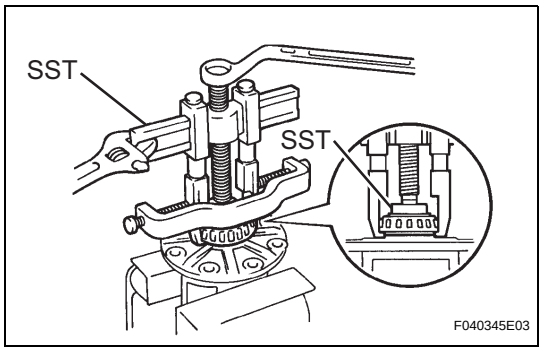
(d) Using a plastic hammer, tap on the ring gear to separate it from the differential case.



24. INSPECT DIFFERENTIAL CASE ASSEMBLY RUNOUT

(a) Install the rear differential case bearing onto the differential case.
(b) Install the differential case onto the differential carrier.
(c) Install the 2 bearing caps and 4 bolts onto the differential carrier.
Torque: 85 N*m (870 kgf*cm, 63 ft.*lbf)
(d) Inspect the differential case runout.
Maximum runout:
0.07 mm (0.0028 in.)
(e) Remove the differential case.
(f) Remove the rear differential case bearing.

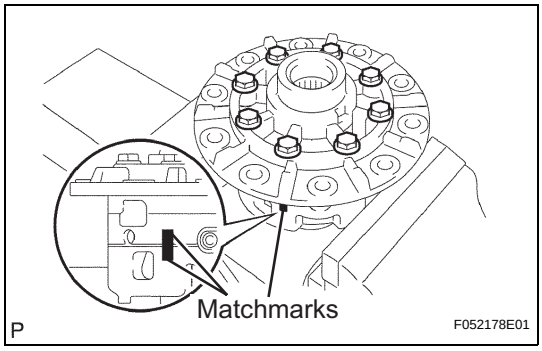
DF



25. REMOVE REAR DIFFERENTIAL CASE BEARING

(a) Using SST, remove the 2 rear differential case bearings from the differential case.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00360)

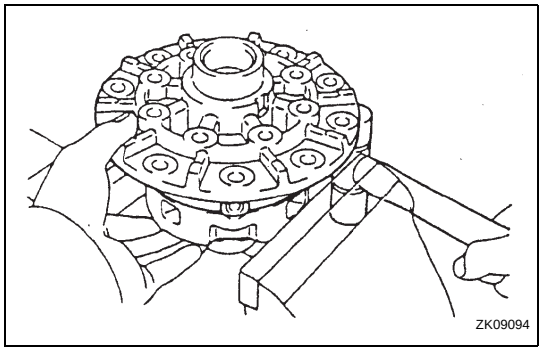


26. DISASSEMBLE DIFFERENTIAL CASE

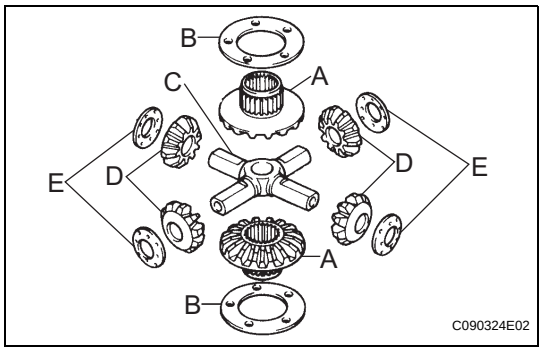
(a) Place matchmarks on the LH and RH cases.

(b) Remove the 8 bolts.

DF

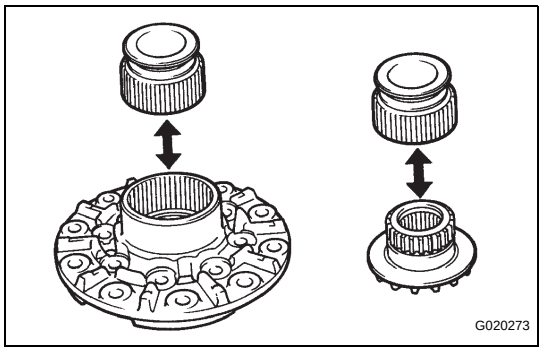


(c) Using a plastic hammer, separate the LH and RH cases.



(d) Remove these parts from the differential case.

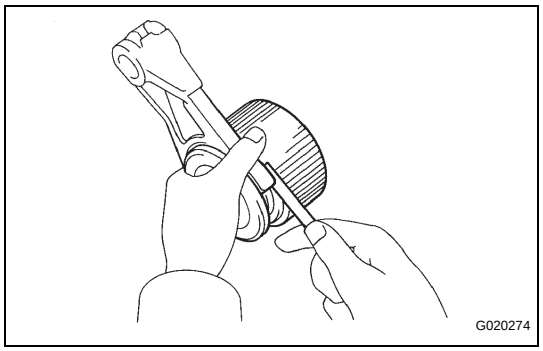
A	Side gear
B	Side gear thrust washer
C	Spider
D	Pinion gear
E	Pinion gear thrust washer



27. INSPECT REAR DIFFERENTIAL LOCK SLEEVE

(a) Install the sleeve onto the differential case (LH) and check that it moves smoothly.

(b) Install the side gear onto the sleeve and check that it moves smoothly.



(c) Using a feeler gauge, measure the clearance between the shift fork and sleeve.
Maximum clearance:
0.15 to 0.35 mm (0.0059 to 0.0138 in.)

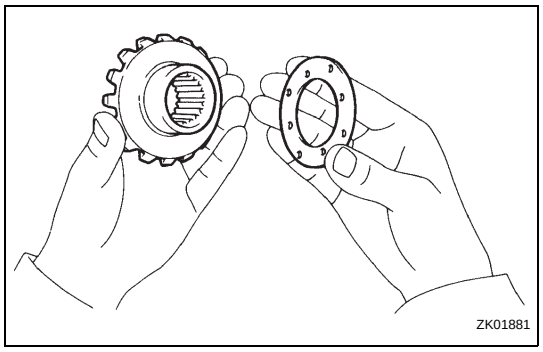
28. INSPECT DIFFERENTIAL PINION AND SIDE GEAR

(a) Check that there is no damage to the differential pinion and differential side gear.
If the differential pinion and/or differential side gear is damaged, replace the differential.

29. INSPECT DIFFERENTIAL CASE ASSEMBLY

(a) Check that the differential case is not damaged.
If the differential case is damaged, replace the differential case.

REASSEMBLY

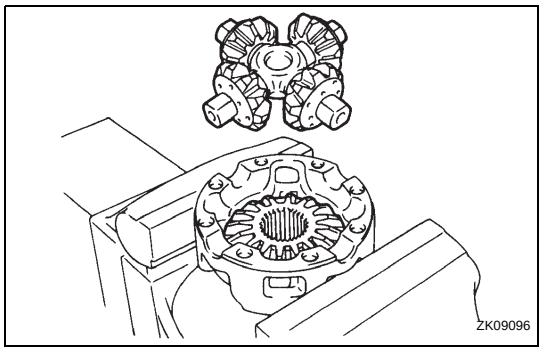


1. INSTALL DIFFERENTIAL CASE ASSEMBLY

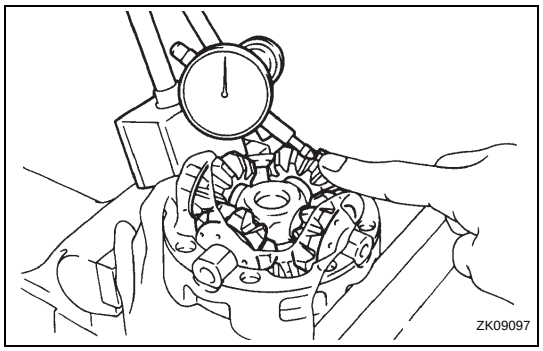
(a) Install the rear differential side gear thrust washer onto the rear differential side gear.

(b) Install the rear differential pinion thrust washer and rear differential pinion onto the rear differential spider.

(c) Fix the differential case RH.

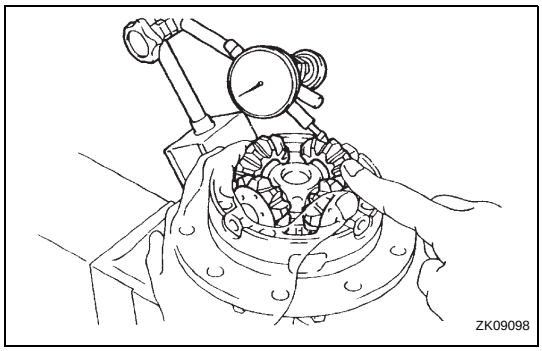


(d) Install the rear differential side gear and rear differential spider onto the differential case RH.



(e) Using a dial indicator, measure the differential case RH side backlash while holding the pinion toward the case.
Backlash:
0.05 to 0.20 mm (0.002 to 0.008 in.)

(f) Remove the rear differential spider from the differential case RH.



(g) Install the rear differential side gear and rear differential spider onto the differential case LH.

(h) Using a dial indicator, measure the differential case LH side backlash while holding the pinion toward the case.

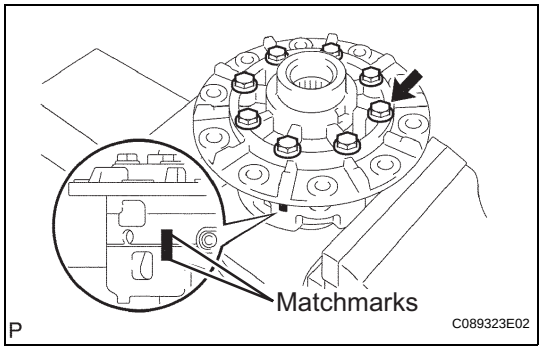
Backlash:

0.05 to 0.20 mm (0.002 to 0.008 in.)

If the backlash is not within the specification, install 2 side gear thrust washers of a different thickness.

Thrust washer thickness

Thickness mm (in.)	Thickness mm (in.)
0.9 (0.0354)	1.2 (0.0472)
1.0 (0.0394)	1.3 (0.0512)
1.1 (0.0433)	-



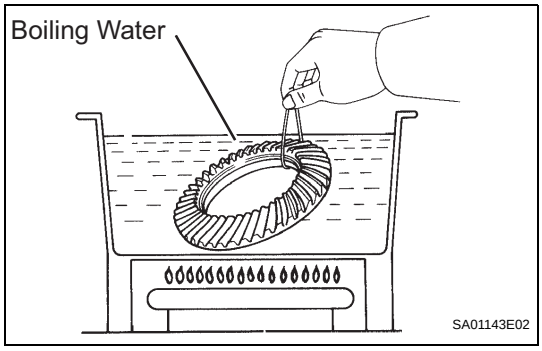
(i) Align the matchmarks and assemble the RH and LH cases.

(j) Using a plastic hammer, install the differential case.

(k) Install the 8 bolts.

Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)

DF



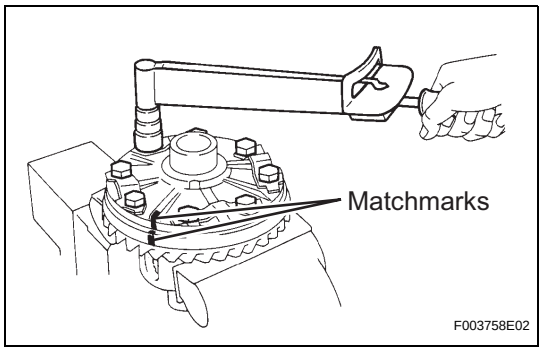
2. INSTALL DIFFERENTIAL RING GEAR

(a) Clean the contact surfaces of the differential case and ring gear.

(b) Heat the ring gear to approximately 100°C (212°F) in boiling water.

(c) Carefully take the ring gear out of the boiling water.

(d) After the moisture on the ring gear has completely evaporated, quickly install the ring gear onto the differential case.



(e) Align the matchmarks on the ring gear and differential case.

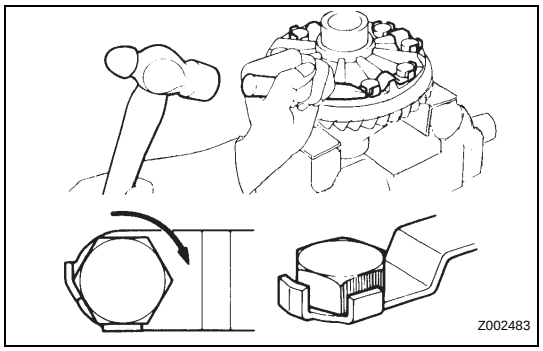
(f) Temporarily install 5 new lock plates and 10 bolts.

(g) After the ring gear cools down sufficiently, torque the 8 bolts uniformly.

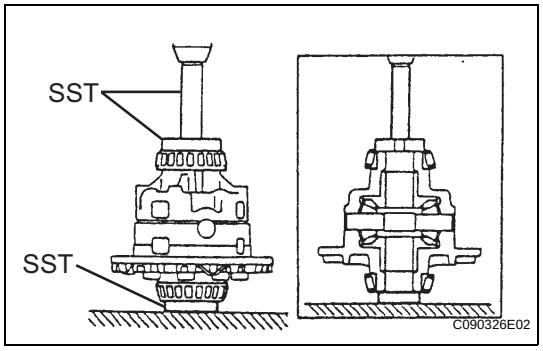
Torque: 97 N*m (985 kgf*cm, 71 ft.*lbf)

HINT:

Tighten the bolts in diagonal order little by little in several steps.

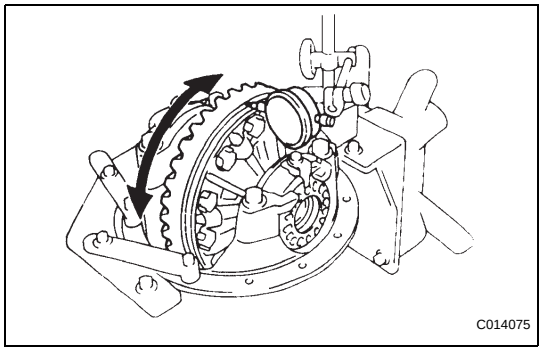


(h) Using a chisel and a hammer, stake the 5 lock plates.
HINT:
Stake one claw so that it is flush with the flat surface of the bolt.
For the claw in contact with the protruding portion of the bolt, stake only the half on the tightening side.



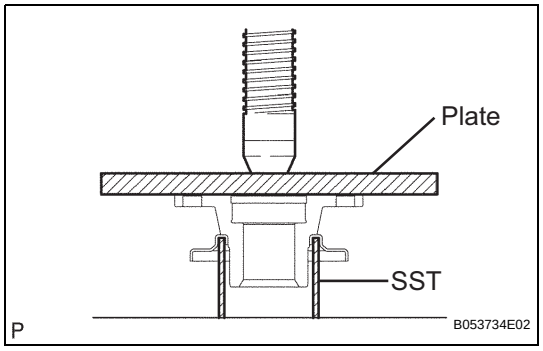
3. INSTALL REAR DIFFERENTIAL CASE BEARING

(a) Using SST and a press, install the bearing onto the differential case.
SST 09950-60010 (09951-00560, 09951-00570), 09950-70010 (09951-07150)



4. INSPECT DIFFERENTIAL RING GEAR RUNOUT

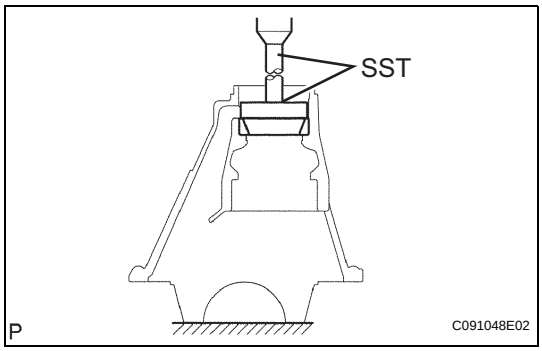
(a) Install the differential case onto the carrier, and install the 2 adjusting nuts so that there is no play in the bearing.
(b) Install the 2 bearing caps with the 4 bolts.
Torque: 85 N*m (870 kgf*cm, 63 ft.*lbf)
(c) Using a dial indicator, measure the runout of the ring gear.
Maximum runout:
0.07 mm (0.0028 in.)
(d) Remove the 2 bearing caps, 2 adjusting nuts and differential case.



5. INSTALL REAR DIFFERENTIAL DUST DEFLECTOR

(a) Using a press, install the dust deflector.
NOTICE:
Be careful not to damage the dust deflector.
SST 09636-20010

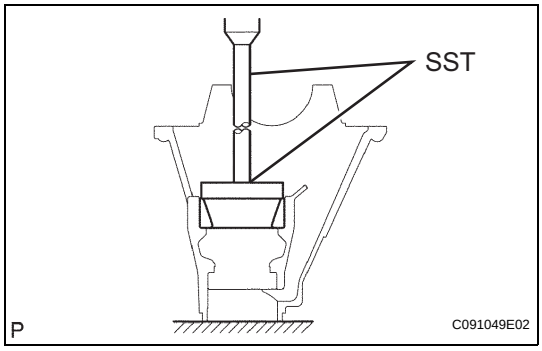
DF



6. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, install the oil storage ring.

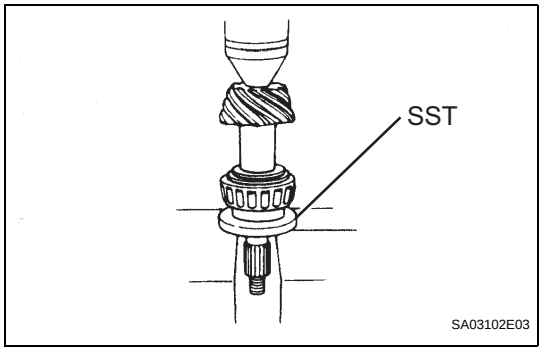
(b) Using SST and a press, install the tapered roller bearing onto the carrier.
SST 09316-60011 (09316-00011, 09316-00021)



7. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the tapered roller bearing onto the carrier.
SST 09316-60011 (09316-00041, 09316-00011)

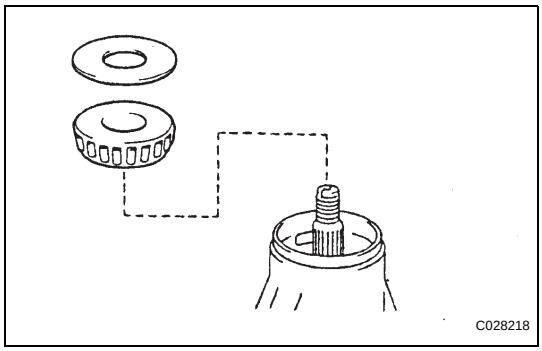
DF



8. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

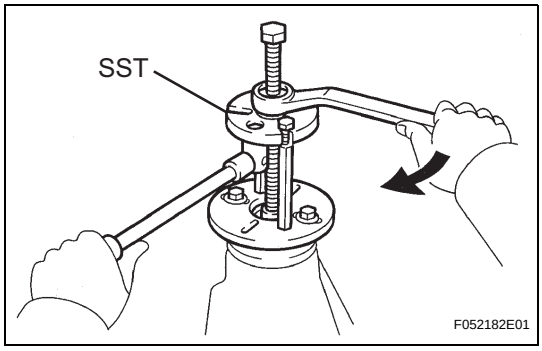
(a) Install the plate washer onto the drive pinion.

(b) Using SST and a press, install the tapered roller bearing onto the drive pinion.
SST 09506-30012



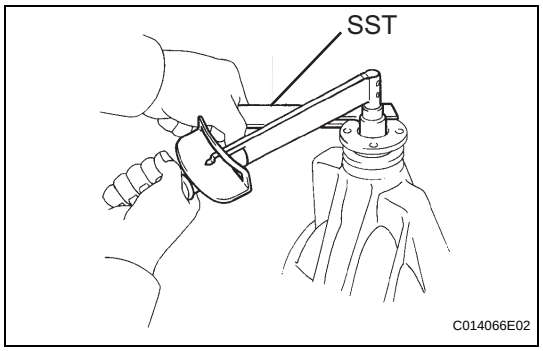
9. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD

(a) Install the drive pinion, rear drive pinion tapered roller bearing and rear differential drive oil slinger.
HINT:
Assemble the spacer and oil seal after adjusting the gear contact pattern.

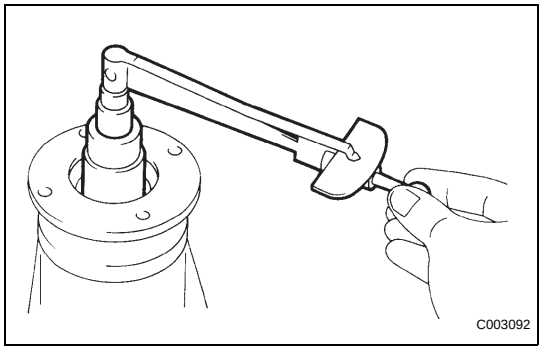


(b) Using SST, install the drive pinion companion flange.

(c) Coat the threads of the nut with hypoid gear oil LSD.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

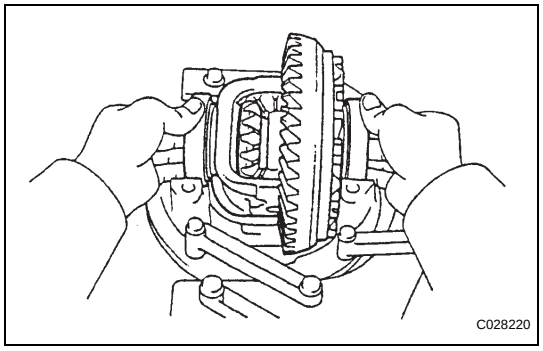


(d) Using SST to hold the drive pinion companion flange, tighten the nut.
Torque: 370 N*m (3,770 kgf*cm, 273 ft.*lbf) or less
SST 09330-00021
NOTICE:
- **As there is no spacer, tighten a little at a time, being careful not to overtighten it.**
- **Apply hypoid gear oil LSD to the nut.**



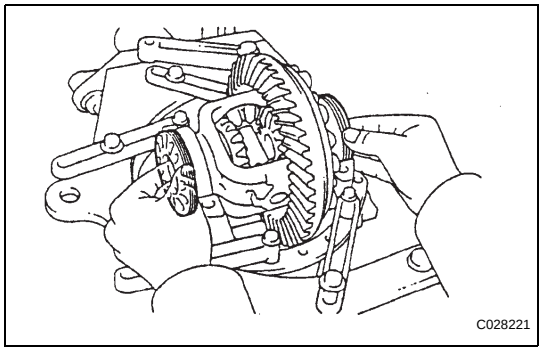
(e) Using a torque wrench, measure the preload.
Preload (at starting)

Bearing	Standard
New	1.05 to 1.64 N*m (10.7 to 16.7 kgf*cm, 9.3 to 14.5 in.*lbf)
Reused	0.56 to 0.85 N*m (5.7 to 8.7 kgf*cm, 4.9 to 7.5 in.*lbf)



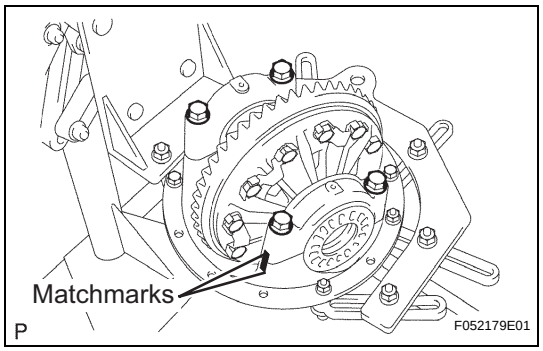
10. INSTALL DIFFERENTIAL CASE ASSEMBLY

(a) Place the 2 bearing outer races on their corresponding bearings.
HINT:
Make sure the right and left races are not interchanged.



11. INSTALL REAR DIFFERENTIAL BEARING ADJUSTING NUT

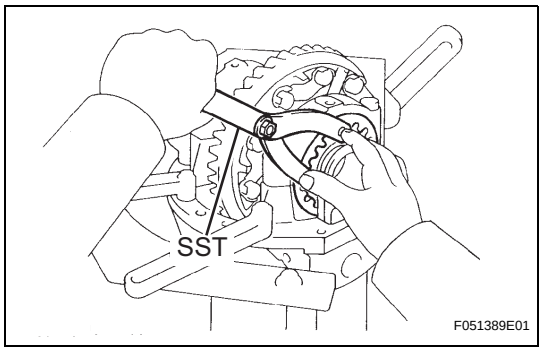
(a) Install the 2 adjusting nuts into the carrier, making sure the nuts are threaded properly.



12. INSPECT AND ADJUST BACKLASH DIFFERENTIAL RING GEAR AND DIFFERENTIAL DRIVE PINION

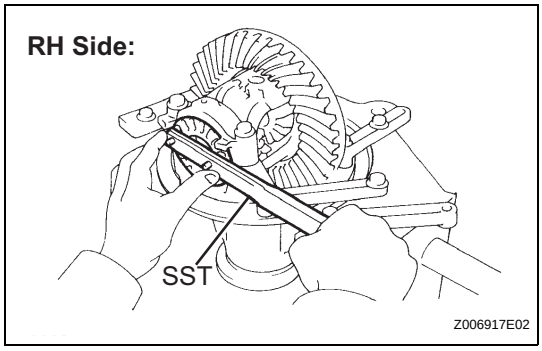
(a) Align the matchmarks on the cap and carrier.
(b) Install the right and left bearing caps with the 4 bolts.
Torque: 85 N*m (870 kgf*cm, 63 ft.*lbf)
HINT:
If the bearing cap does not fit tightly on the carrier, the adjusting nuts are not threaded properly. Reinstall the adjusting nuts if necessary.

DF



(c) Tighten the 4 bearing cap bolts to the specified torque, then loosen them to the point where the adjusting nuts can be turned by SST.
Torque: 85 N*m (870 kgf*cm, 63 ft.*lbf)

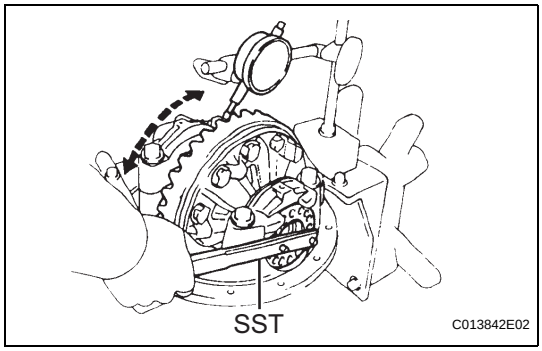
(d) Using the SST, tighten the adjusting nut on the ring gear side until the ring has a backlash of about 0.2 mm (0.008 in.).
SST 09960-10010 (09962-01000, 09963-00700)



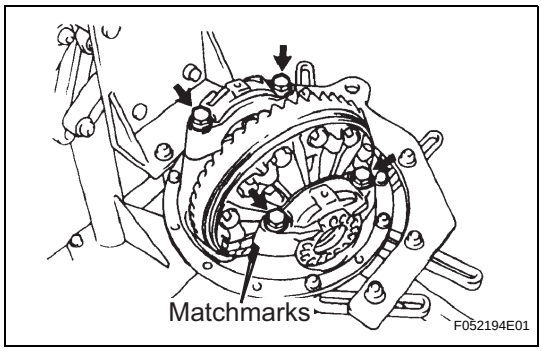
(e) While turning the ring gear, use the SST to fully tighten the adjusting nut on the drive pinion side. After the bearings have settled, loosen the adjusting nut on the drive pinion side.
SST 09504-00011

(f) Using SST, torque the adjusting nut 1 to 1.5 notches from the 0 preload position.

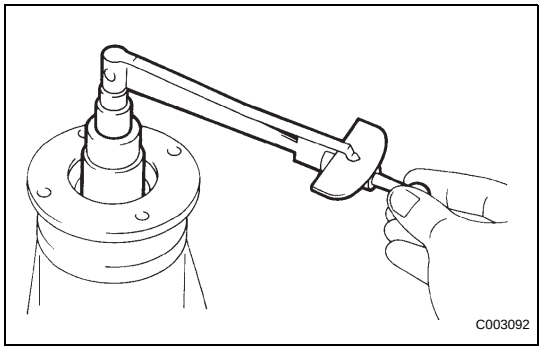
DF



(g) Using a dial indicator, adjust the ring gear backlash until it is within the specification.
Backlash:
0.13 to 0.18 mm (0.0051 to 0.0071 in.)
HINT:
The backlash is adjusted by turning the left and right adjusting nuts for an equal amounts. For example, loosen the nut on the right side by one notch.

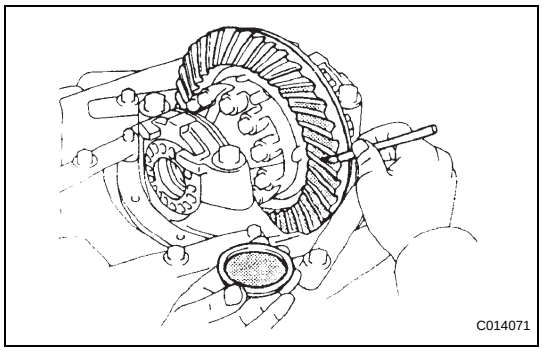


(h) Torque the bearing cap bolts.
Torque: 85 N*m (870 kgf*cm, 63 ft.*lbf)



13. INSPECT TOTAL PRELOAD

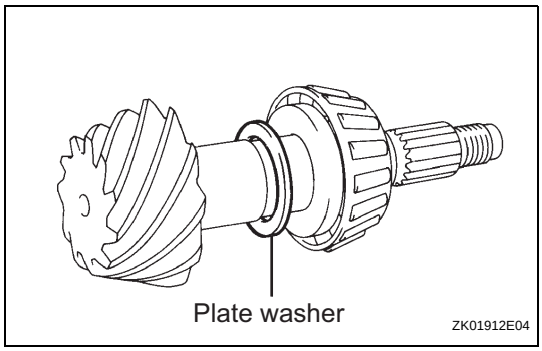
(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.
Total preload (at starting):
Drive pinion preload plus 0.39 to 0.59 N*m (4.0 to 6.0 kgf*cm, 3.5 to 5.2 in.*lbf)
If necessary, disassemble and inspect the differential.



14. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

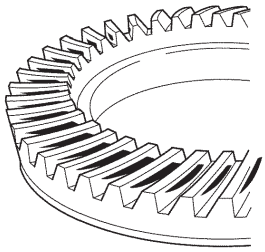
(a) Coat 3 or 4 teeth at 3 different positions on the ring gear with red lead primer.

(b) Hold the companion flange firmly and rotate the ring gear in both directions.

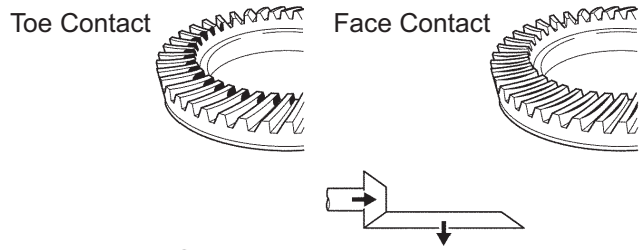


(c) Inspect the tooth contact pattern.

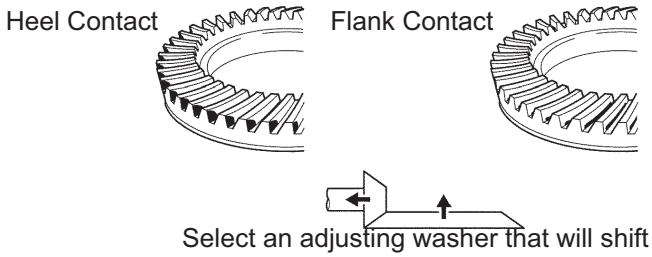
Driver Side:



Proper Contact

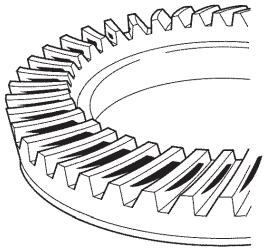


Select an adjusting washer that will bring the drive pinion closer to the ring gear.

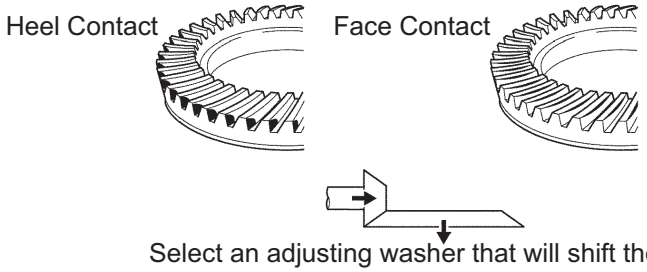


Select an adjusting washer that will shift the drive pinion away from the ring gear.

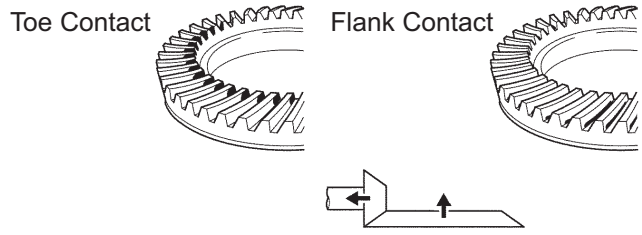
Coast Side:



Proper Contact



Select an adjusting washer that will shift the drive pinion closer to the ring gear.



Select an adjusting washer that will bring the drive pinion away from the ring gear.

P

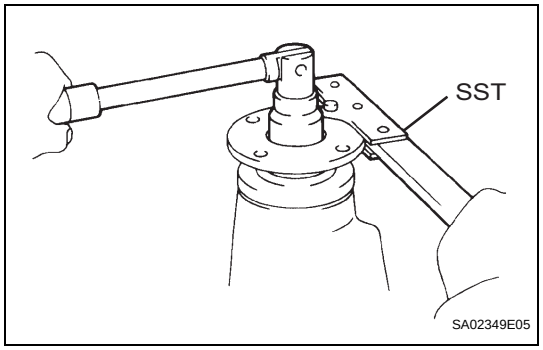
F052199E01

DF

If the teeth are not engaged properly, use the following chart to select an appropriate washer for correction.

Plate Washer thickness

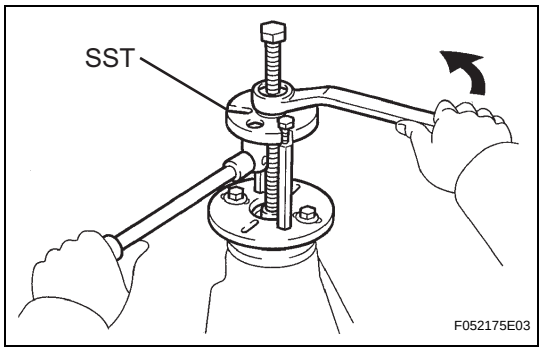
Thickness mm (in.)	Thickness mm (in.)
1.70 (0.0669)	2.03 (0.0799)
1.73 (0.0681)	2.06 (0.0811)
1.76 (0.0693)	2.09 (0.0823)
1.79 (0.0705)	2.12 (0.0835)
1.82 (0.0717)	2.15 (0.0847)
1.85 (0.0728)	2.18 (0.0853)
1.88 (0.0740)	2.21 (0.0870)
1.91 (0.0752)	2.24 (0.0882)
1.94 (0.0764)	2.27 (0.0894)
1.97 (0.0776)	2.30 (0.0906)
2.00 (0.0787)	2.33 (0.0917)



15. REMOVE REAR DRIVE PINION NUT

(a) Using SST to hold the drive pinion companion flange, remove the nut.

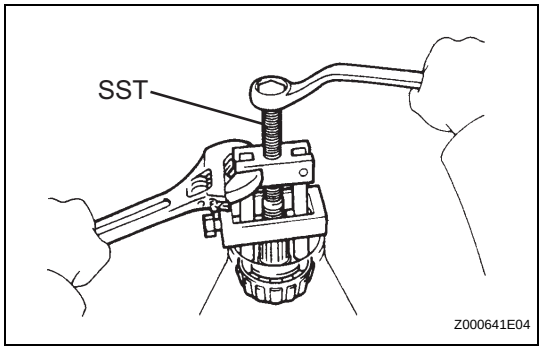
SST 09330-00021



16. REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, remove the drive pinion companion flange.

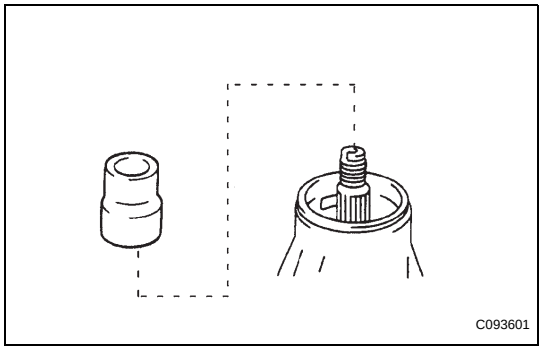
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



17. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

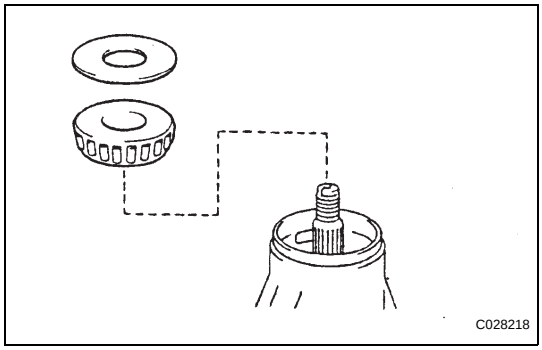
(a) Using SST, remove the drive pinion tapered roller bearing from the drive pinion.

SST 09556-22010



18. INSTALL REAR DIFFERENTIAL DRIVE PINION BEARING SPACER

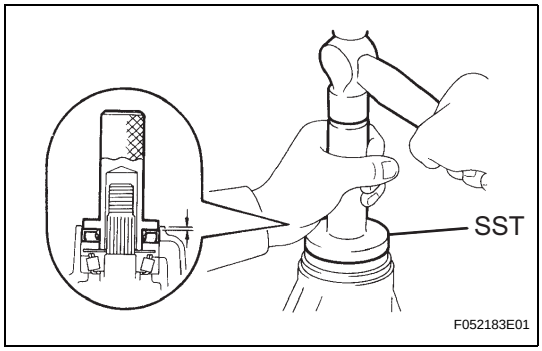
(a) Install a new bearing spacer onto the drive pinion.



19. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Install the drive pinion, rear drive pinion taper roller bearing and rear differential drive oil slinger.

DF



20. INSTALL REAR DIFFERENTIAL CARRIER OIL SEAL

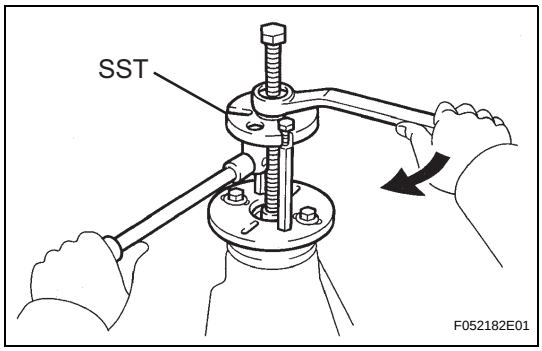
(a) Apply MP grease to the oil seal lip.

(b) Using SST and a hammer, install a new carrier oil seal.

SST 09554-30011

Oil seal drive in depth:

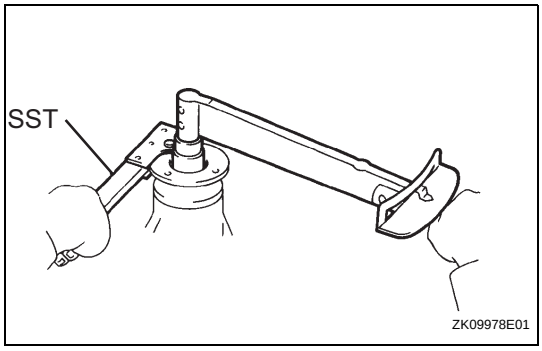
0.55 to 1.45 mm (0.021 to 0.057 in.)



21. INSTALL REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, install the drive pinion companion flange onto the drive pinion.

SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

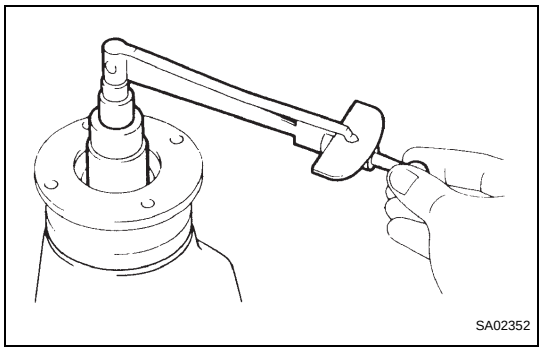


(b) Coat the threads of a new nut with hypoid gear oil LSD.

(c) Using SST to hold the flange, tighten the nut.

Torque: 370 N*m (3,770 kgf*cm, 273 ft.*lbf) or less

SST 09330-00021

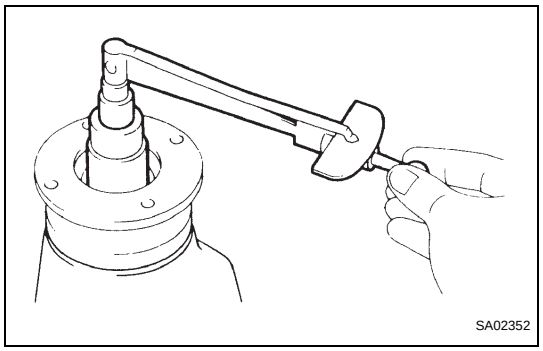


22. INSPECT DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Preload (at starting)

Bearing	Standard
New	1.05 to 1.64 N*m (10.7 to 16.7 kgf*cm, 9.3 to 14.5 in.*lbf)
Reused	0.56 to 0.85 N*m (5.7 to 8.7 kgf*cm, 4.9 to 7.5 in.*lbf)

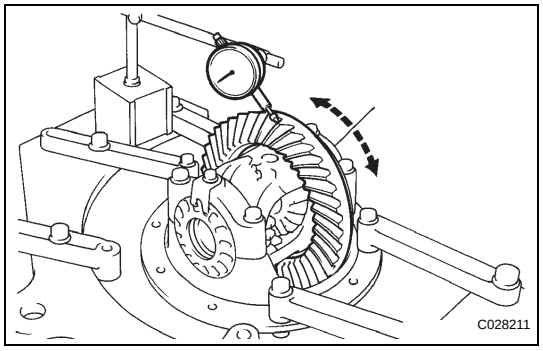
If the preload is greater than the specification, replace the bearing spacer.
If the preload is less than the specification, retighten the nut to 13 N*m (130 kgf*cm, 9 ft*lbf) of torque at a time until the specified preload is reached.
Torque: 370 N*m (3,770 kgf*cm, 27 ft.*lbf) or less
If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repeat the preload adjusting procedure. Do not loosen the pinion nut to reduce the preload.



23. INSPECT TOTAL PRELOAD

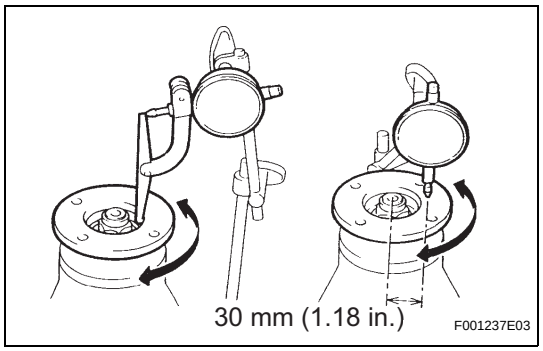
(a) Using a torque wrench, measure the preload.
Total preload (at starting):
Drive pinion preload plus 0.39 to 0.59 N*m (4.0 to 6.0 kgf*cm, 3.5 to 5.2 in.*lbf)
If necessary, disassemble and inspect the differential.

DF



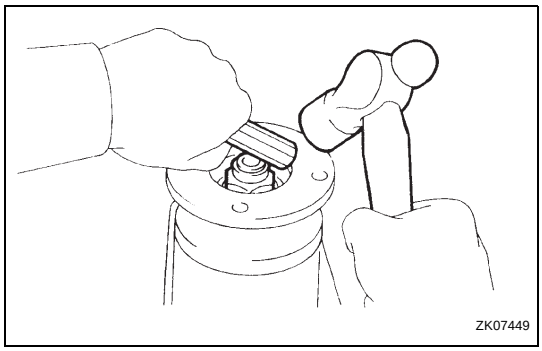
24. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) Using a dial indicator, check the backlash of the ring gear.
Backlash:
0.13 to 0.18 mm (0.0051 to 0.0071 in.)
If the backlash is not within the specification, adjust or repair the side bearing preload as necessary.



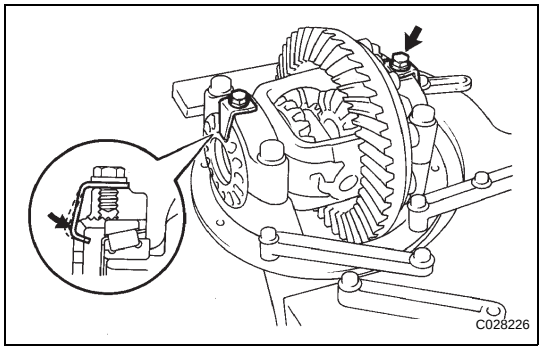
25. INSPECT RUNOUT OF REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using a dial indicator, measure the runout of the drive pinion companion flange vertically and horizontally.
Maximum runout:
Vertical runout: 0.10 mm (0.0039 in.)
Lateral runout: 0.10 mm (0.0039 in.)
If the runouts are not within the specifications, replace the companion flange.



26. INSTALL REAR DRIVE PINION NUT

(a) Using a chisel and hammer, stake the drive pinion nut.

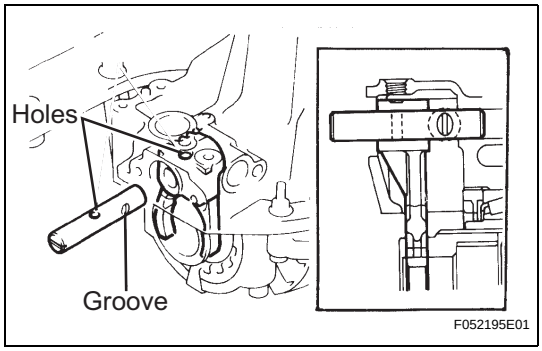


27. INSTALL REAR DIFFERENTIAL BEARING ADJUSTING NUT LOCK

(a) Install 2 new adjust locks onto the bearing caps.
Torque: 13 N*m (129 kgf*cm, 9 ft.*lbf)

(b) After tightening the bolts, bend the nut locks.

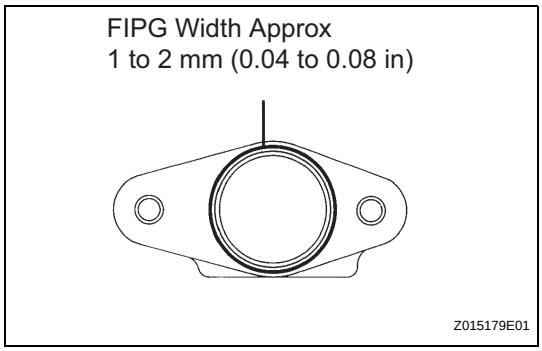
DF



28. INSTALL REAR DIFFERENTIAL LOCK SHIFT FORK

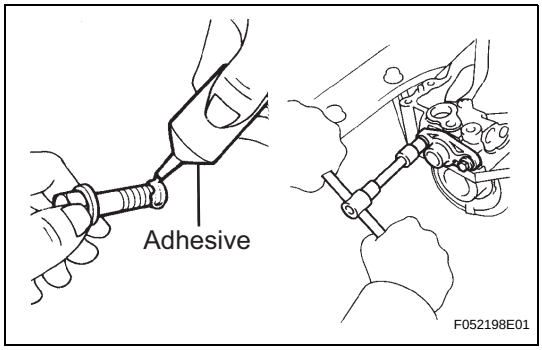
(a) Apply MP grease onto the outer circuit of the shaft.

(b) Install the fork shaft to align the hole of the shift fork with that of the shift fork shaft.



(c) Remove any FIPG material and be careful not to drop the oil shaft retainer.

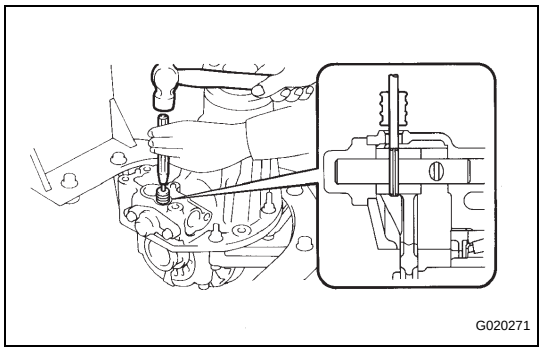
(d) Apply FIPG to the carrier, as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent
HINT:
Install the shaft retainer within 10 minutes of applying FIPG.



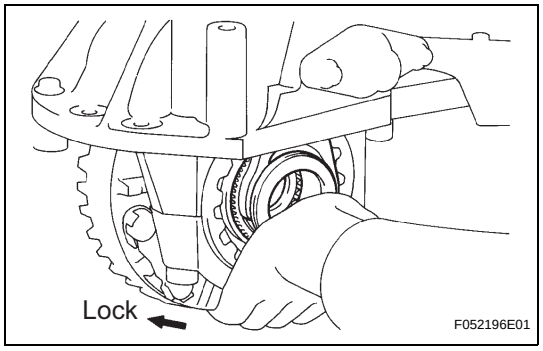
(e) Clean the threads of the bolts and retainer bolts holes with toluene or trichorethyene.

(f) Apply adhesive to 2 or 3 threads of each mount bolt end.
Adhesive:
Part No. 08833-00080, THREE BOND 1344, LOCTITE: 242 or equivalent

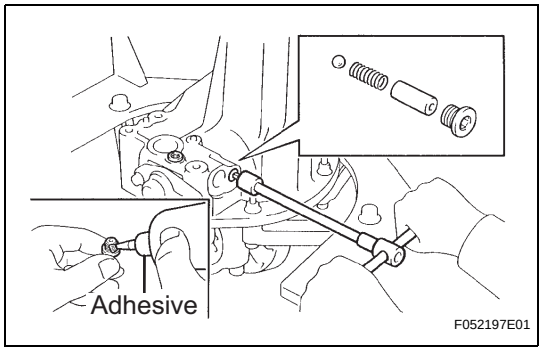
(g) Tighten the shaft retainer with the 2 bolts.
Torque: 24 N*m (240 kgf*cm, 17 ft.*lbf)



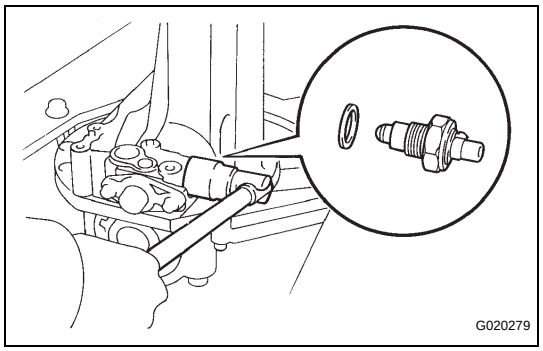
(h) Using a 5 mm pin punch and hammer, install the slotted spring pin onto the shift fork.
Torque: 22 N*m (220 kgf*cm, 16 ft.*lbf)



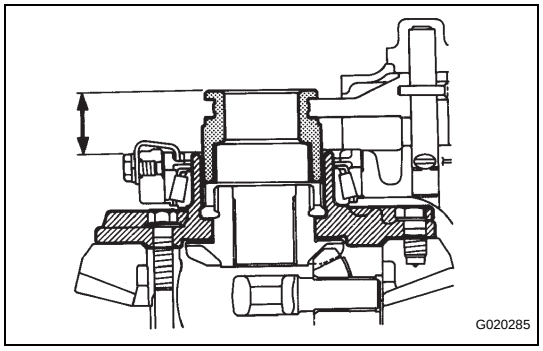
(i) Push the differential lock sleeve in deeply and hold it in position.



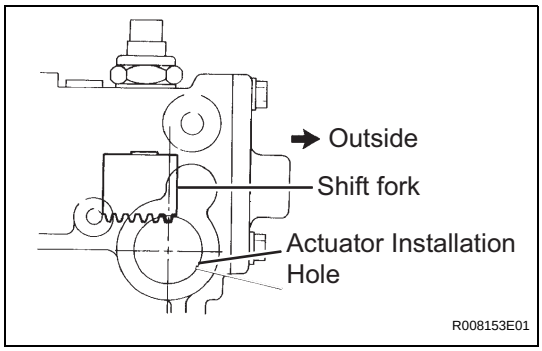
(j) Install the ball, spring and spring seat.
(k) Clean the threads of 2 plugs and plug holes with toluene or trichlorethylene.
Adhesive:
Part No. 08833-00080, THREE BOND 1344, LOCTITE: 242 or equivalent
(l) Using a 6 mm hexagon wrench, install and tighten the screw plugs.



29. INSTALL NO.1 TRANSFER INDICATOR SWITCH
(a) Install the indicator switch with a new gasket.
Torque: 40 N*m (410 kgf*cm, 30 ft.*lbf)

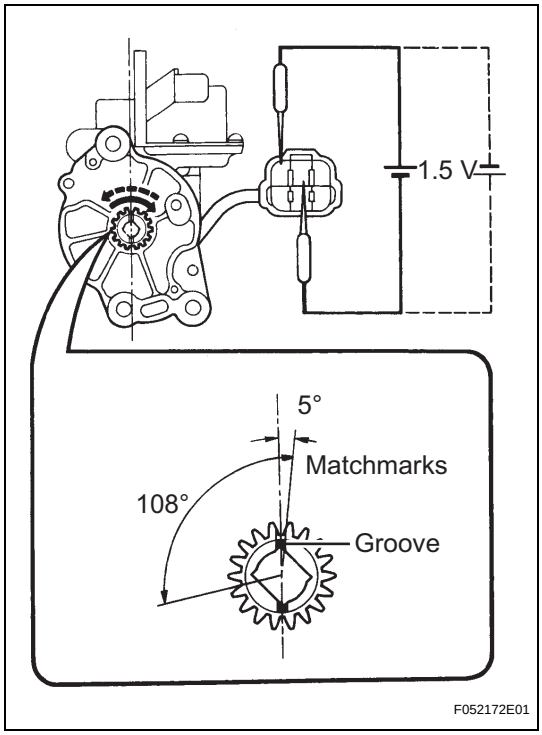


30. INSPECT REAR DIFFERENTIAL LOCK SLEEVE
(a) Measure the distance between the sleeve and tip of the differential case when the differential is FREE and LOCKED respectively.
Standard distance:
LOCKED: 17.44 to 18.86 mm (0.6866 to 0.7425 in.)
FREE: 32.40 to 33.90 mm (1.2756 to 1.3346 in.)



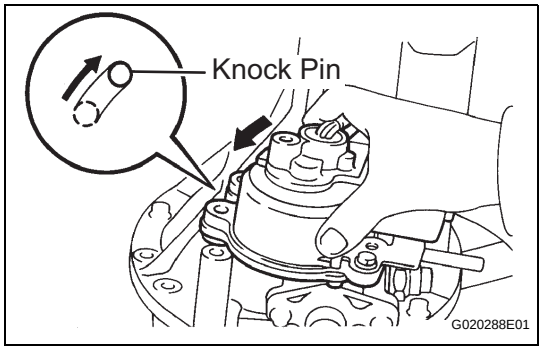
31. INSTALL DIFFERENTIAL LOCK SHIFT ACTUATOR

(a) Check that the outermost rack tooth of the shift fork is virtually above the center line of the actuator installation hole.



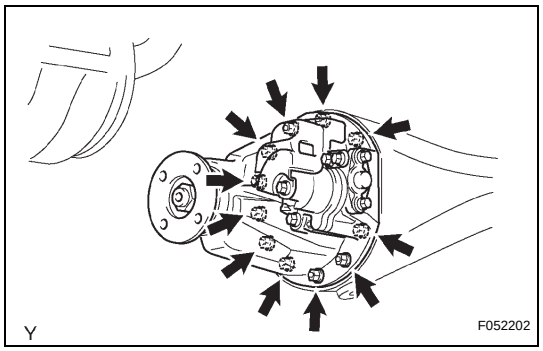
(b) Ensure that the matchmarks on the pinion of the actuator are in the range between 0 and 5 degrees clockwise above the center line of the actuator.
NOTICE:
- **If the matchmarks are not within this range, rotate the pinion.**
- **Dont supply the battery positive voltage directly between terminals.**
- **If the matchmarks come to the limit of rotation, dont apply the electric current.**

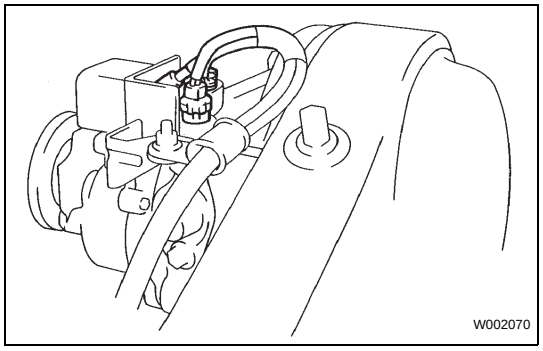
(c) Install a new O-ring onto the actuator.
(d) Apply a light coat of gear oil to the O-ring.
(e) Apply MP grease to the gear part.



(f) Ensure that the outermost rack tooth of the shift fork fits the matchmarks on the pinion of the actuator.
(g) Install the actuator so that the long hole on the actuator side fits into the knock pin on the carrier side.
HINT:
Dont damage the O-ring of the actuator.
(h) Align the actuator with the long hole and rotate the actuator counterclockwise when the knock pin is set to the right-hand side.
(i) Install and tighten the bolts.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

DF





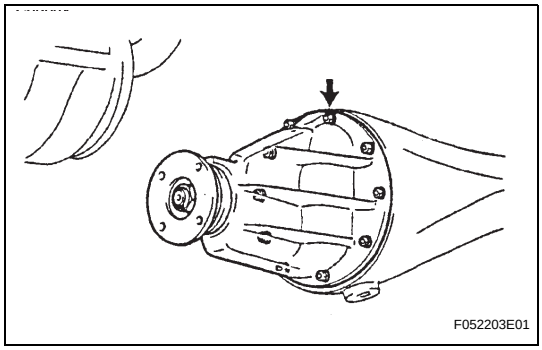
INSTALLATION

1. **INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY**
   (a) Remove any dust and oil from the differential carrier assembly and the contact surface of the axle housing.
   (b) Install the new rear differential carrier gasket and the differential carrier assembly with the 11 nuts and washers.
   (c) Connect the differential lock actuator connector.
   (d) Connect the rear differential lock actuator breather hose to the differential actuator assembly.
2. **INSTALL REAR AXLE SHAFT WITH BACKING PLATE LH (See page AH-33)**
3. **INSTALL REAR AXLE SHAFT WITH BACKING PLATE RH**
   HINT:
   Install the RH side by following the same procedures as the LH side.
4. **INSTALL NO.3 PARKING BRAKE CABLE ASSEMBLY (See page PB-22)**
5. **INSTALL NO.2 PARKING BRAKE CABLE ASSEMBLY**
   HINT:
   Install the RH side by following the same procedures as the LH side.
6. **INSTALL REAR SPEED SENSOR LH (See page BC-304)**
7. **INSTALL REAR SPEED SENSOR RH**
   HINT:
   Install the RH side by following the same procedures as the LH side.
8. **INSTALL PROPELLER SHAFT ASSEMBLY (for 2WD Drive Type, Regular Cab) (See page PR-6)**
9. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD Drive Type, Except Regular Cab) (See page PR-13)**
10. **INSTALL PROPELLER SHAFT ASSEMBLY (for 4WD Drive Type, Regular Cab) (See page PR-19)**
11. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 4WD Drive Type, Except Regular Cab) (See page PR-32)**
12. **INSTALL REAR BRAKE SHOE (See page BR-71)**
13. **INSTALL FRONT BRAKE SHOE (See page BR-72)**
14. **CHECK REAR BRAKE DRUM INSTALLATION (See page BR-73)**

15. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-73)**
16. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-74)**
17. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
18. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
19. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
20. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
21. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
22. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
23. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
24. **CHECK FOR BRAKE FLUID LEAKAGE**
25. **ADD DIFFERENTIAL OIL (See page DF-8)**
26. **INSPECT DIFFERENTIAL OIL (See page DF-8)**
27. **INSPECT FOR DIFFERENTIAL OIL LEAKAGE**
28. **INSTALL REAR WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 in.*lbf)
29. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
30. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-1)**
31. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-2)**
32. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**
33. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
34. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    HINT:
    (See page BC-103)
35. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    HINT:
    (See page BC-7)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR WHEEL**
3. **DRAIN BRAKE FLUID**
4. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-68)**
5. **REMOVE FRONT BRAKE SHOE (See page BR-68)**
6. **REMOVE REAR BRAKE SHOE (See page BR-69)**
7. **REMOVE PROPELLER SHAFT ASSEMBLY (for 2WD Driver Type, Regular Cab) (See page PR-3)**
8. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD Drive Type, Except Regular Cab) (See page PR-8)**
9. **REMOVE PROPELLER SHAFT ASSEMBLY (for 4WD Drive Type, Regular Cab) (See page PR-22)**
10. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 4WD Drive Type, Except Regular Cab) (See page PR-27)**
11. **DRAIN DIFFERENTIAL OIL (See page DF-8)**
12. **SEPARATE REAR SPEED SENSOR LH (See page BC-304)**
13. **SEPARATE REAR SPEED SENSOR RH**
    HINT:
    Use the same procedure as for the LH side.
14. **SEPARATE NO.3 PARKING BRAKE CABLE ASSEMBLY (See page PB-21)**
15. **SEPARATE NO.2 PARKING BRAKE CABLE ASSEMBLY**
    HINT:
    Use the same procedure as for the LH side.
16. **REMOVE REAR AXLE SHAFT WITH BACKING PLATE (See page AH-29)**
17. **REMOVE REAR AXLE SHAFT WITH BACKING PLATE**
    HINT:
    Use the same procedure as for the LH side.



18. REMOVE REAR DIFFERENTIAL CARRIER ASSEMBLY

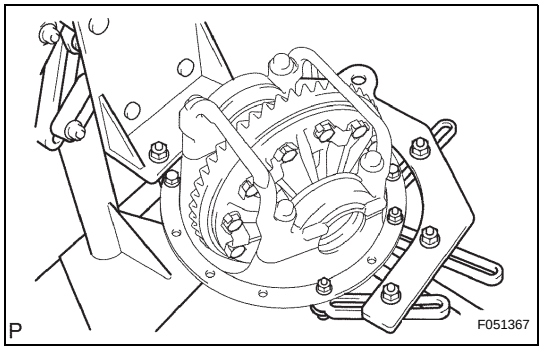
(a) Remove the 10 nuts and differential carrier assembly.

NOTICE:

Be careful not to damage the removal surface.

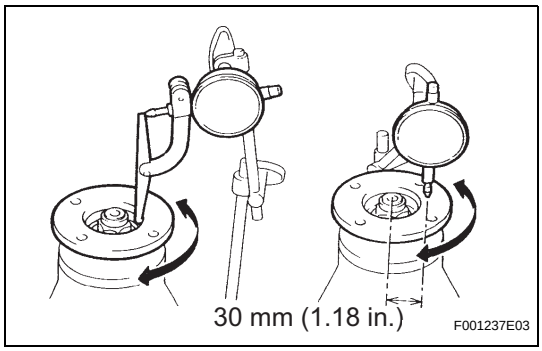
(b) Remove the rear differential carrier gasket from the differential carrier assembly.

DISASSEMBLY



1. FIX REAR DIFFERENTIAL CARRIER ASSEMBLY

(a) Fix the rear differential carrier to the overattachment.



2. INSPECT RUNOUT OF REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

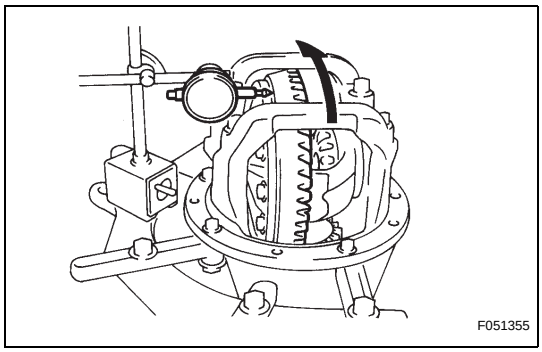
(a) Using a dial indicator, measure the vertical and horizontal runout of the companion flange.

Maximum runout:

Vertical runout: 0.10 mm (0.0039 in.)

Lateral runout: 0.10 mm (0.0039 in.)

If the runouts are not within the specifications, replace the companion flange.



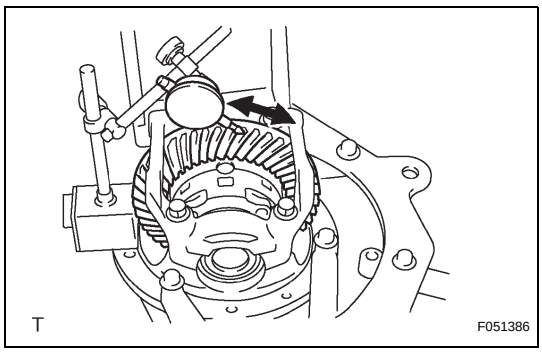
3. INSPECT RUNOUT OF DIFFERENTIAL RING GEAR

(a) Using a dial indicator, check the runout of the ring gear.

Maximum runout:

0.05 mm (0.0020 in.)

If the runout is greater than the maximum, replace the ring gear with a new one.



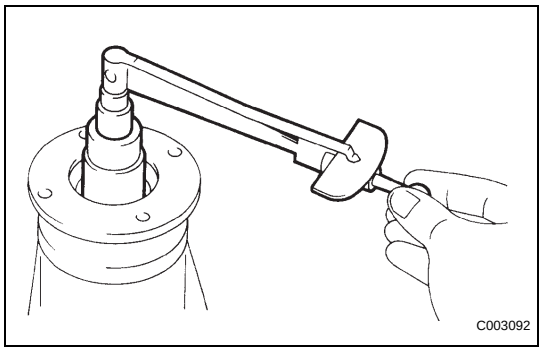
4. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) Using a dial indicator, check the backlash of the ring gear.

Backlash:

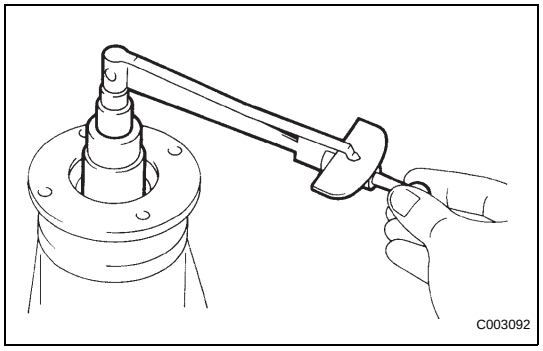
0.13 to 0.18 mm (0.0051 to 0.0071 in.)

If the backlash is not within the specification, adjust or repair the side bearing preload as necessary.



5. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Preload (at starting):
0.78 to 1.05 N*m (8.0 to 11 kgf*cm, 6.9 to 9.3 in.*lbf)

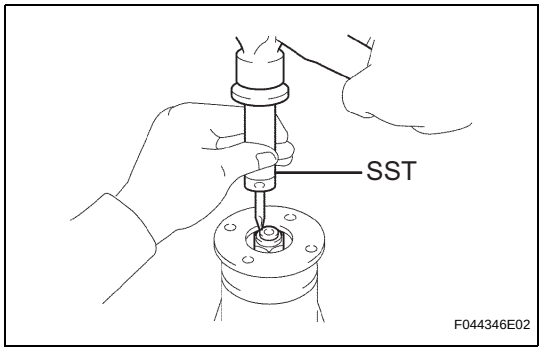


6. INSPECT TOTAL PRELOAD

(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.

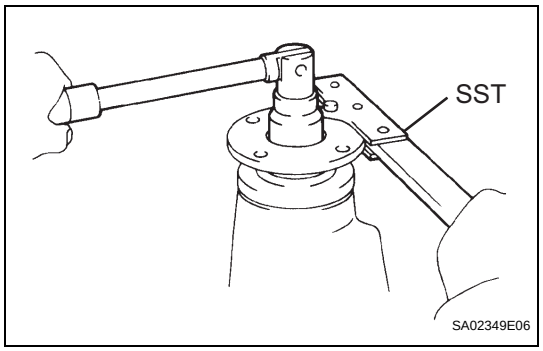
(b) Using a torque wrench, measure the total preload.
Total preload (at starting):
Drive pinion preload plus 0.39 to 0.59 N*m (4.0 to 6.0 kgf*cm, 3.5 to 5.2 in.*lbf)
If necessary, disassemble and inspect the differential.

DF

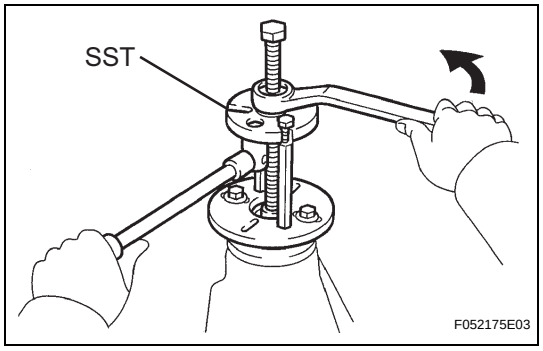


7. REMOVE REAR DRIVE PINION NUT

(a) Using SST and a hammer, loosen the staked part of the nut.
SST 09930-00010

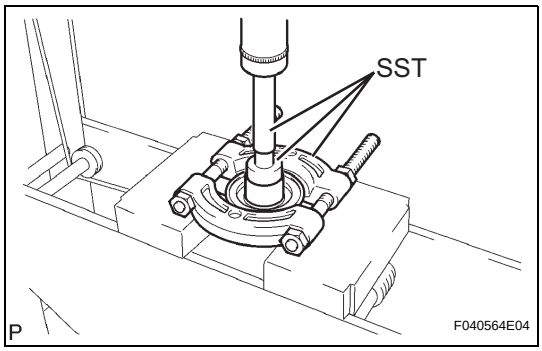


(b) Using SST to hold the drive pinion companion flange, remove the nut.
SST 09330-00021



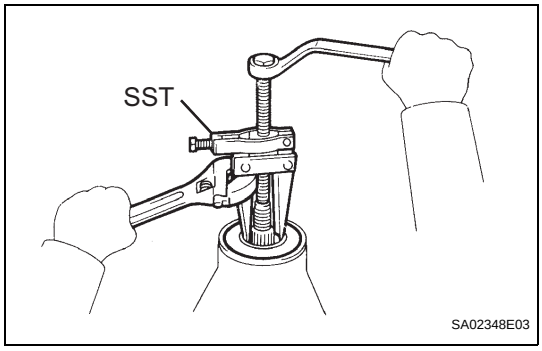
8. REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, remove the drive pinion companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



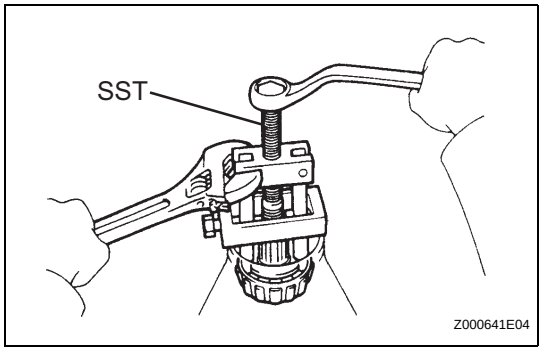
9. REMOVE REAR DIFFERENTIAL DUST DEFLECTOR

(a) Using SST and a press, remove the dust deflector.
SST 09950-60010 (09951-00380), 09950-70010 (09951-07150), 09950-00020



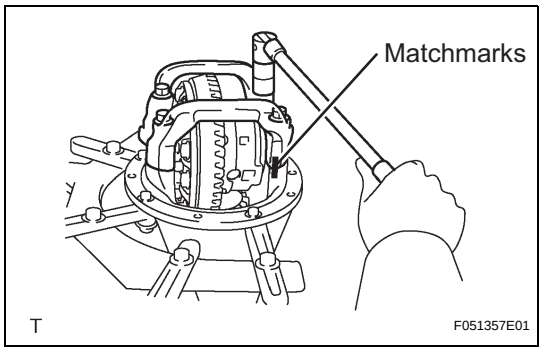
10. REMOVE REAR DIFFERENTIAL CARRIER OIL SEAL

(a) Using SST, remove the oil seal from the differential carrier.
SST 09308-10010



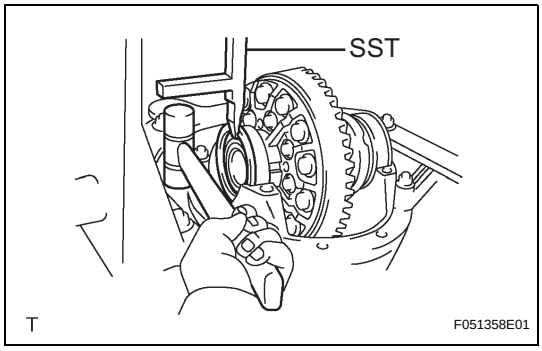
11. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the drive pinion tapered roller bearing from the drive pinion.
SST 09556-22010

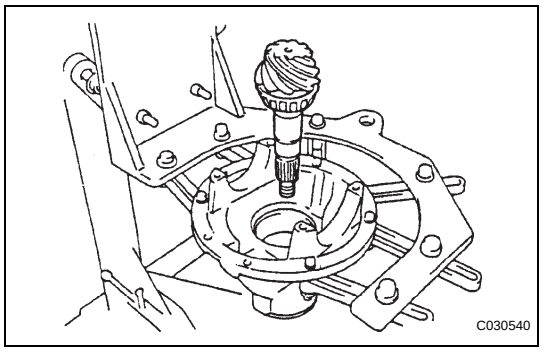


12. REMOVE DIFFERENTIAL CASE ASSEMBLY

(a) Place matchmarks on the bearing cap and differential carrier.
(b) Remove the 4 bolts and bearing cap.

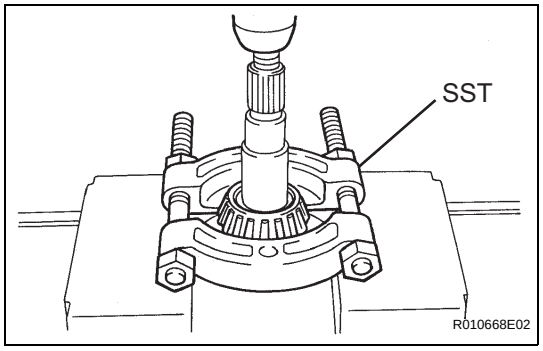


(c) Using SST and a plastic hammer, remove the 2 side bearing plate washers.
HINT:
Measure the plate washer thickness and note it down.
SST 09504-22011
(d) Remove the differential case with the bearing outer races from the carrier.
HINT:
Tag the disassembled parts to show the locations for reassembly.



13. REMOVE DIFFERENTIAL DRIVE PINION

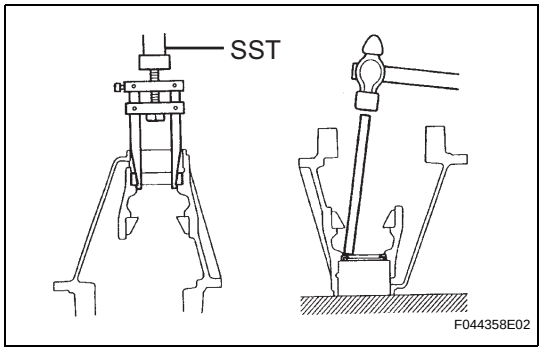
(a) Remove the differential drive pinion and bearing spacer from the differential carrier.



14. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST and a press, remove the drive pinion tapered roller bearing from the drive pinion.
SST 09950-00020
HINT:
If either the drive pinion or ring gear are damaged, replace them as a set.

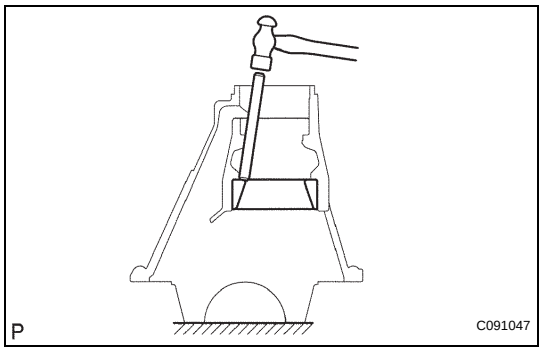
15. REMOVE REAR DIFFERENTIAL DRIVE PINION PLATE WASHER



16. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front tapered roller bearing from the carrier.
SST 09308-00010

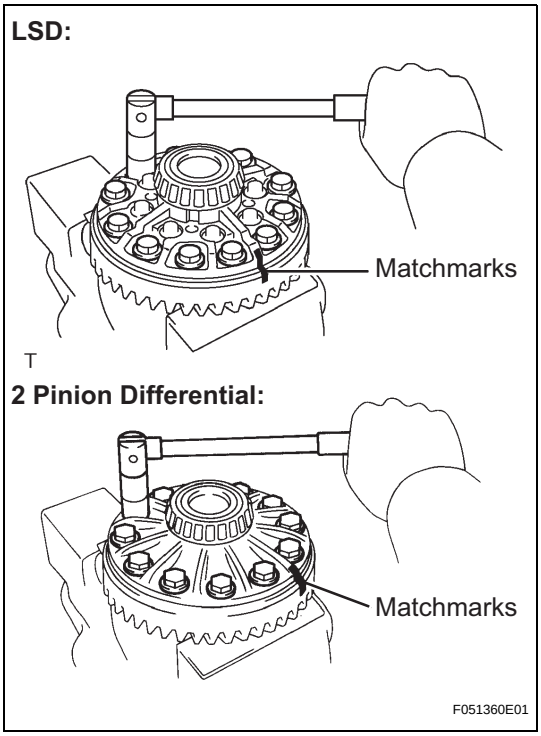
(b) Using a brass bar and a hammer, remove the oil storage ring from the carrier.



17. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, remove the rear tapered roller bearing from the carrier.

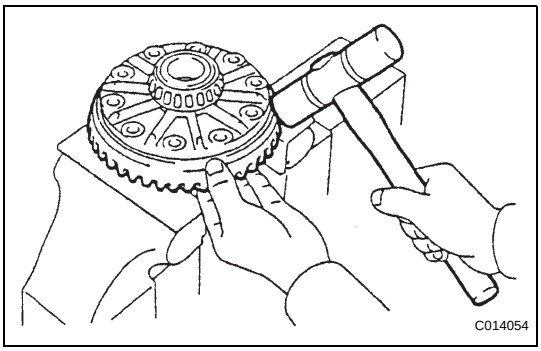
DF



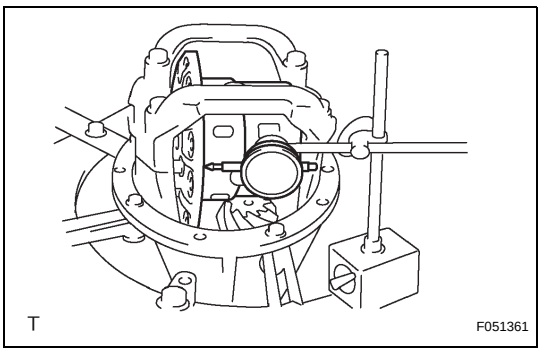
18. REMOVE DIFFERENTIAL RING GEAR

(a) Place matchmarks on the ring gear and differential case.

(b) Remove the 12 ring gear set bolts.



(c) Using a plastic hammer, tap on the ring gear to separate it from the differential case.



19. INSPECT DIFFERENTIAL CASE ASSEMBLY RUNOUT

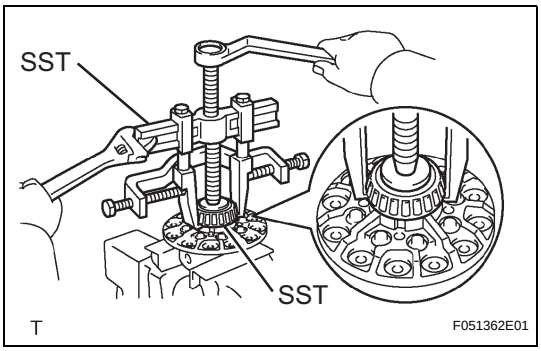
(a) Install the rear differential case bearing onto the differential case.

(b) Install the differential case onto the differential carrier.

(c) Using a dial indicator, measure the differential case runout.

Maximum case runout:
0.05 mm (0.0020 in.)

(d) Remove the differential case.

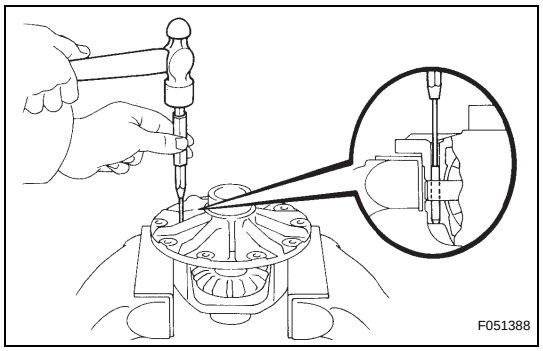


20. REMOVE REAR DIFFERENTIAL CASE BEARING

(a) Using SST, remove the 2 rear differential case bearings from the differential case.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00480)

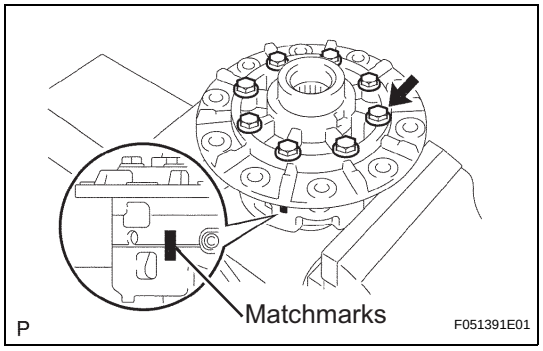
HINT:
Fix the claws of SST into the notch in the differential case.



21. DISASSEMBLE DIFFERENTIAL CASE (2 PINION DIFFERENTIAL)

(a) Using a pin punch and hammer, remove the straight pin.

(b) Remove the pinion shaft, 2 pinion gears, pinion gear thrust washers, side gears and side gear thrust washers from the differential case.

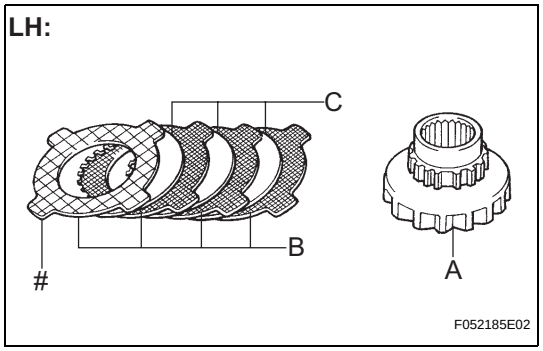


22. DISASSEMBLE DIFFERENTIAL CASE (W/ LSD DIFFERENTIAL)

(a) Place matchmarks on the LH and RH cases.

(b) Remove the 8 bolts uniformly, a little at a time.

(c) Using a plastic hammer, separate the LH and RH cases.

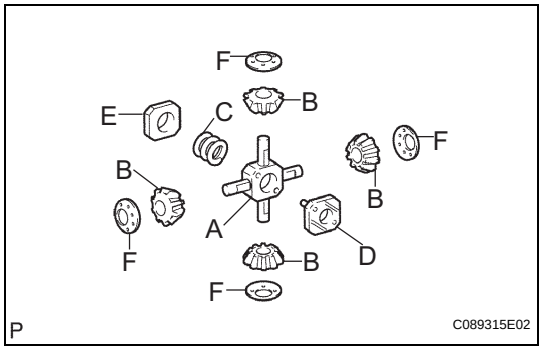


(d) Remove these parts from the LH case.

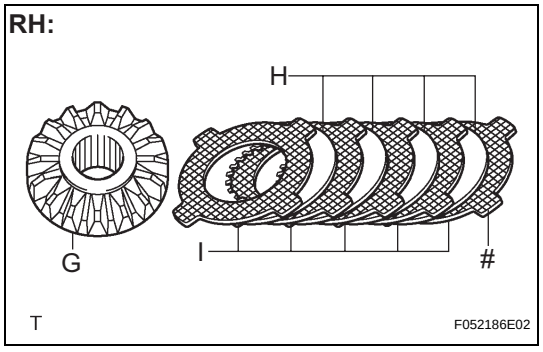
A	side gear
B	side gear thrust washer
C	clutch plates

HINT:

- Keep the disassembled parts in order.
- Face the rough side of the thrust washer marked by # to the differential case.



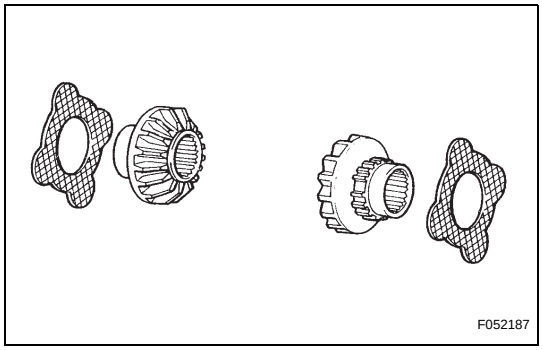
(e) Remove these parts from the RH case.



A	Spider
B	Differential pinion gear
C	Compression spring
D	Spring LH retainer
E	Spring RH retainer
F	Pinion gear thrust washer
G	Side gear
H	side gear thrust washer
I	clutch plate

DF

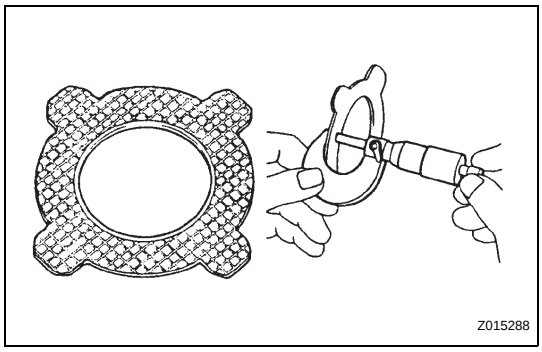
HINT:
Face the rough side of the thrust washer marked by # to the differential case.



INSPECTION

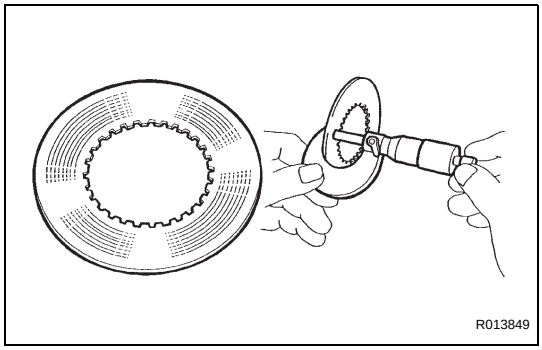
1. DIFFERENTIAL SIDE GEAR (w/ LSD Differential)

(a) Check that there is no damage or wear to the side gear.
If the side gear is damaged or worn, replace the side gear.
If replacing the side gear, also replace the thrust washer that contacts with it.



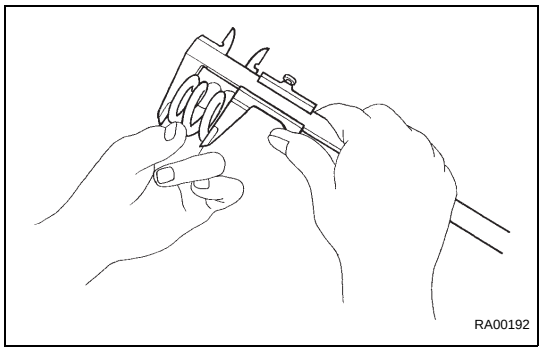
2. INSPECT REAR DIFFERENTIAL SIDE GEAR THRUST NO.1 WASHER (w/ LSD Differential)

(a) Using a micrometer, confirm that the contact surface of the thrust washer is even and check that no bare metal is showing.
Standard thickness:
1.77 to 1.86 mm (0.0697 to 0.0732 in.)
If necessary, replace the thrust washers.
HINT:
When replacing the thrust washer, also replace the clutch plate that comes into contact with it.



3. INSPECT CLUTCH PLATE (w/ LSD Differential)

(a) Using a micrometer, measure the contact surface of the clutch plate and check that there is no abnormal wear.
Standard thickness:
1.57 to 1.63 mm (0.0618 to 0.0642 in.)
If necessary, replace the clutch plate.



4. INSPECT REAR DIFFERENTIAL LOCK RETAINER COMPRESSION SPRING (w/ LSD Differential)

(a) Using a vernier calipers, measure the free length of the spring.
Free length:
26.35 mm (1.037 in.)

5. INSPECT DIFFERENTIAL PINION AND SIDE GEAR

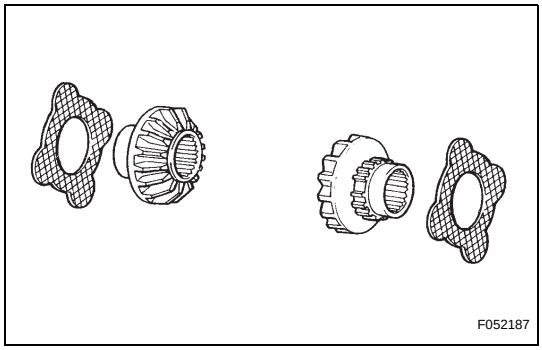
(a) Check that there is no damage to the differential pinion or differential side gear.
If the differential pinion and/or differential side gear is damaged, replace the differential.

6. INSPECT DIFFERENTIAL CASE

(a) Check that the differential case is not damaged.
If the differential case is damaged, replace it.

DF

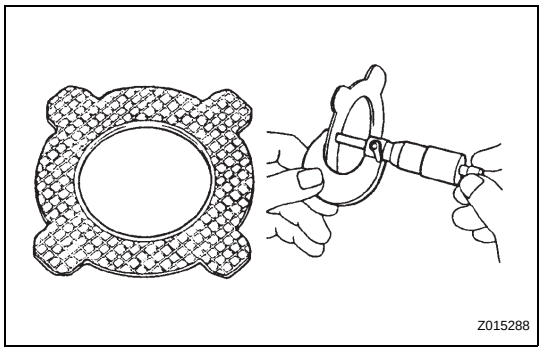
HINT:
Face the rough side of the thrust washer marked by # to the differential case.



INSPECTION

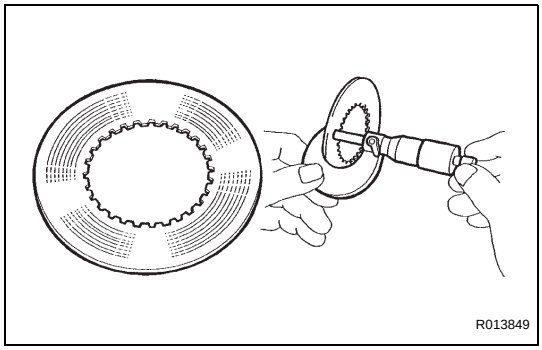
1. DIFFERENTIAL SIDE GEAR (w/ LSD Differential)

(a) Check that there is no damage or wear to the side gear.
If the side gear is damaged or worn, replace the side gear.
If replacing the side gear, also replace the thrust washer that contacts with it.



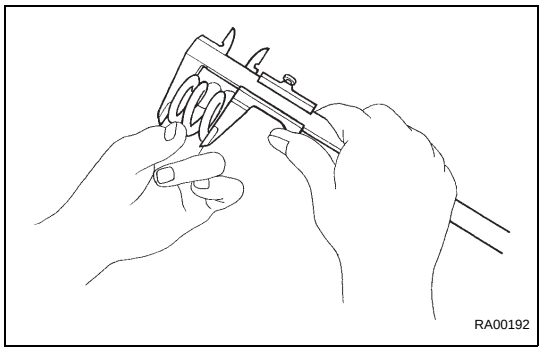
2. INSPECT REAR DIFFERENTIAL SIDE GEAR THRUST NO.1 WASHER (w/ LSD Differential)

(a) Using a micrometer, confirm that the contact surface of the thrust washer is even and check that no bare metal is showing.
Standard thickness:
1.77 to 1.86 mm (0.0697 to 0.0732 in.)
If necessary, replace the thrust washers.
HINT:
When replacing the thrust washer, also replace the clutch plate that comes into contact with it.



3. INSPECT CLUTCH PLATE (w/ LSD Differential)

(a) Using a micrometer, measure the contact surface of the clutch plate and check that there is no abnormal wear.
Standard thickness:
1.57 to 1.63 mm (0.0618 to 0.0642 in.)
If necessary, replace the clutch plate.



4. INSPECT REAR DIFFERENTIAL LOCK RETAINER COMPRESSION SPRING (w/ LSD Differential)

(a) Using a vernier calipers, measure the free length of the spring.
Free length:
26.35 mm (1.037 in.)

5. INSPECT DIFFERENTIAL PINION AND SIDE GEAR

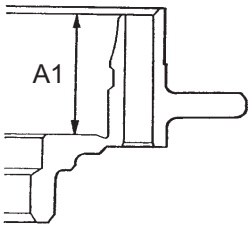
(a) Check that there is no damage to the differential pinion or differential side gear.
If the differential pinion and/or differential side gear is damaged, replace the differential.

6. INSPECT DIFFERENTIAL CASE

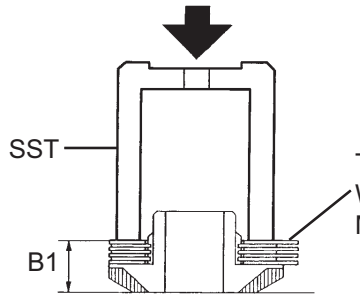
(a) Check that the differential case is not damaged.
If the differential case is damaged, replace it.

DF

LH Case:

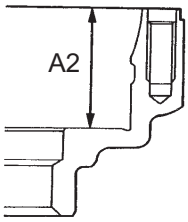


F052188E01

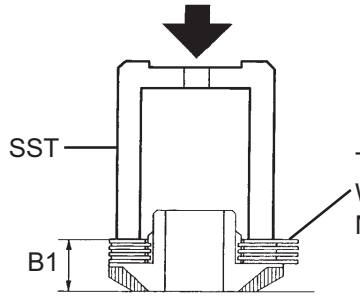


F052189E01

RH Case:



F052190E01



F052189E01

REASSEMBLY

1. INSTALL DIFFERENTIAL CASE ASSEMBLY (w/ LSD Differential)

(a) LH side:

(1) Measure dimension A1 of the differential case, as shown in the illustration.

(2) Install the thrust washers with their fine side facing to the side gear, and clutch plates onto the side gear.
HINT:
Install the new thrust washer (Mark N) instead of the thrust washers (Mark A - M) onto the differential case side.

(3) Using SST to press down the thrust washers and clutch plates with pressure of about 10 kgf (22 lbf), measure dimension B1 as shown in the illustration.
SST 09649-17010

(4) Refer to the following table and select the proper adjusting shim(s).
Adjusting shim thickness:
A1 - B1 - 16.175 mm (0.63681 in.)

(b) RH side:

(1) Measure the differential case dimension A2, as shown in the illustration.

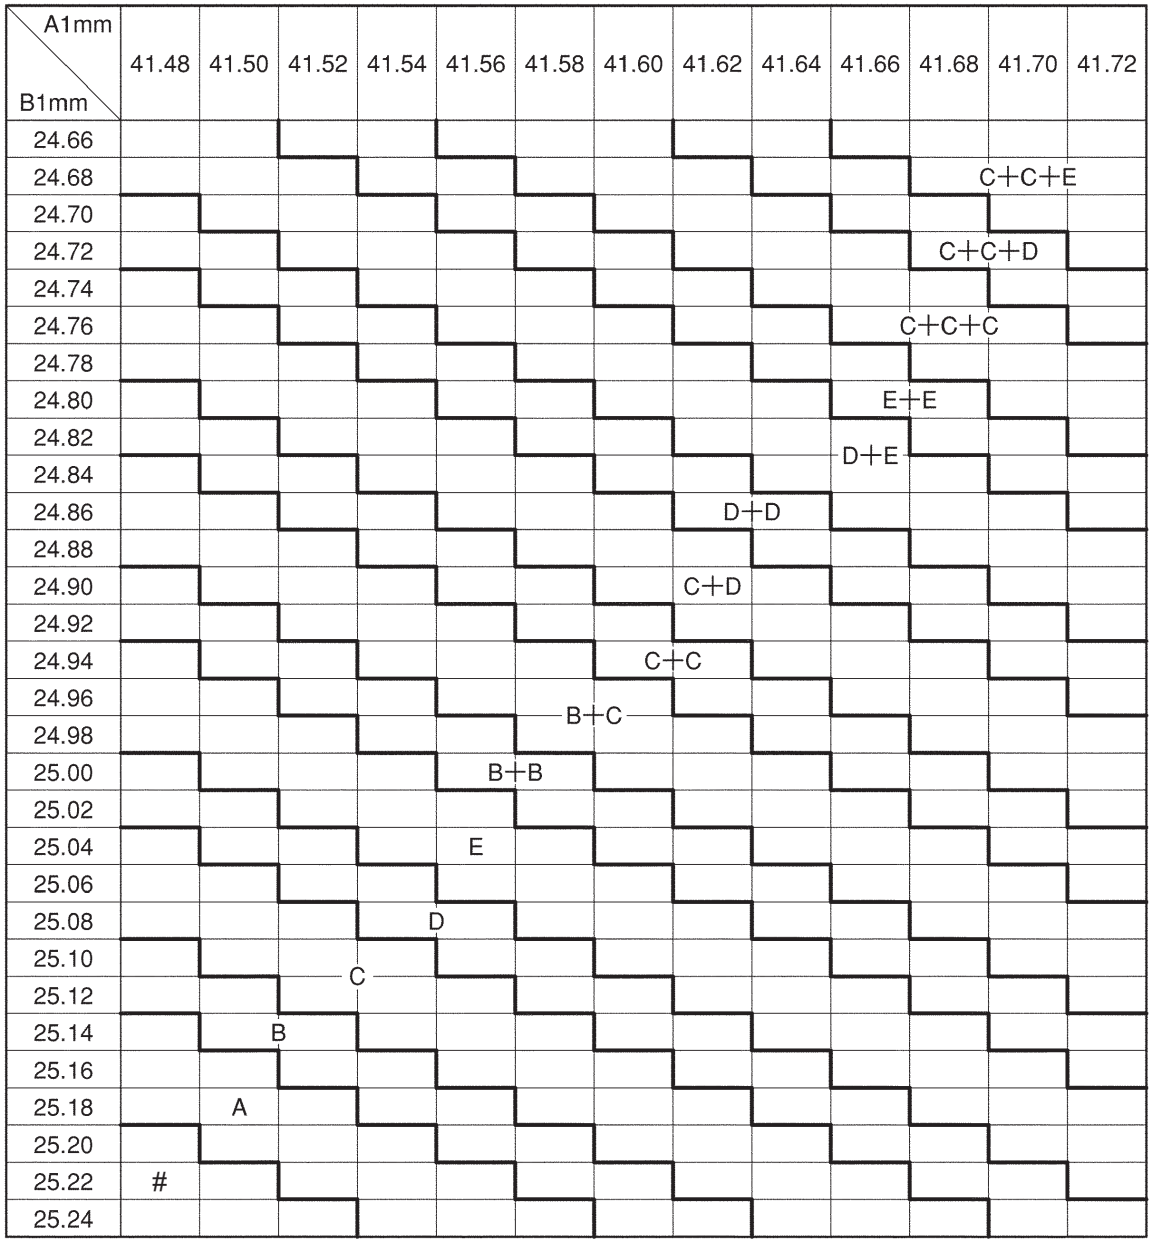
(2) Install the thrust washers with their fine side facing to the side gear, and clutch plates on the side gear.
HINT:
Install the new thrust washer (Mark N) instead of the thrust washers (Mark A - M) onto the differential case side.

(3) Using SST to press down the thrust washers and clutch plates with pressure of about 10 kgf (22 lbf), measure dimension B1 as shown in the illustration.
SST 09649-17010

(4) Refer to the following table and select the proper adjusting shim(s).
Adjusting shim thickness:
A2 - B2 - 16.175 mm (0.63681 in.)
Adjust washer thickness

Thrust Washer Mark	Thickness mm (in.)
A	0.13 to 0.17 (0.0051 to 0.0067)
B	0.18 to 0.22 (0.0071 to 0.0087)
C	0.23 to 0.27 (0.0091 to 0.0106)
D	0.28 to 0.32 (0.0110 to 0.0126)
E	0.33 to 0.37 (0.0130 to 0.0146)

LH Side



Reassemble another type shim or check the backlash after assembling A shim.

P

F052192E01

HINT:
Three or two adjusting shims can be used together if the total of their thickness meets the one of the above combinations, even if the combination does not exist in the above table.

RH Side

A2mm / B2mm	44.88	44.90	44.92	44.94	44.96	44.98	45.00	45.02	45.04	45.06	45.08	45.10	45.12

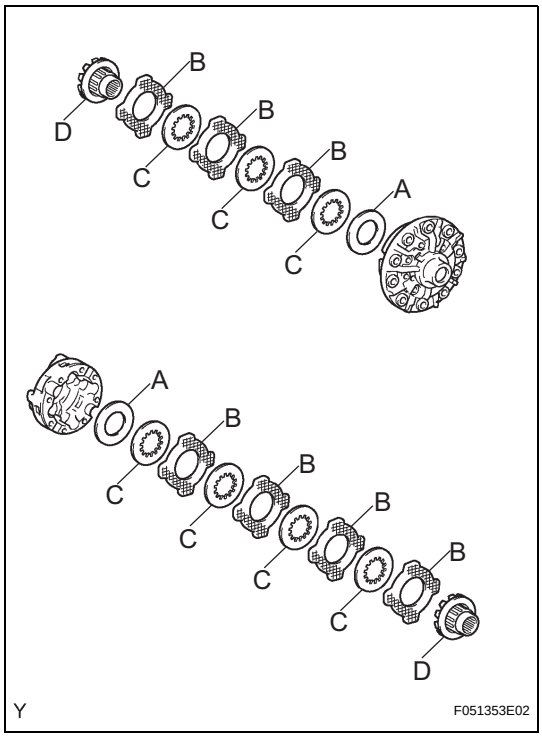
Reassemble another type shim or check the backlash after assembling A shim.

P

F052193E01

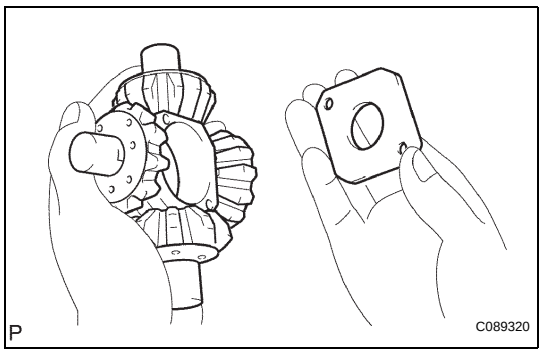
HINT:
Three or two adjusting shims can be used together if the total of their thickness meets the one of the above combinations, even if the combination does not exist in the above table.

DF

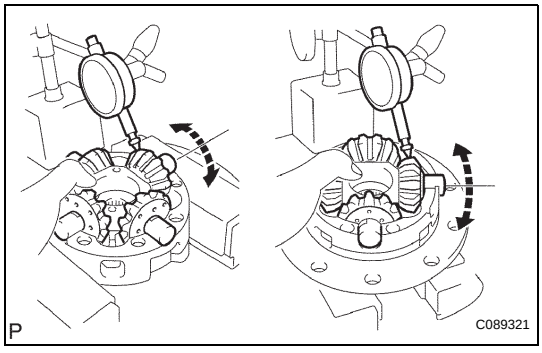


(5) Side gear thrust shim

A	Side gear thrust washer No. 1
B	Clutch plate
C	Side gear

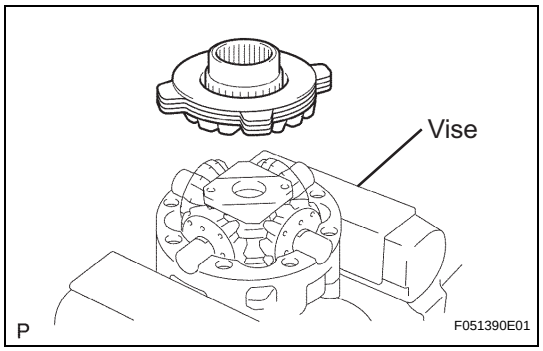


(c) Install the 4 pinion gears and thrust washers onto the spider.
(d) Align the spring RH retainer holes with the spider knock pins and install the RH retainer.
(e) Install the pinion gear and spider onto the differential RH case.
HINT:
Install the spider tightly onto the RH case while holding the spring retainer.



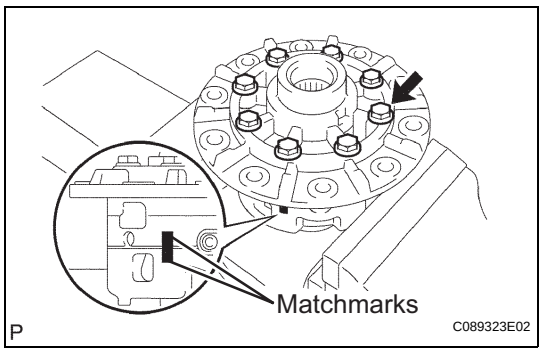
(f) Using a dial indicator, measure the side gear backlash while holding the side gear and spider.
Backlash:
0.05 to 0.20 mm (0.0020 to 0.0079 in.)
HINT:
- Measure the backlash at all 4 locations.
- Measure the backlash at the LH and RH cases.

If the backlash is not within the specification, install a adjusting shim of a different thickness.
(g) Reinstall the spider and spring RH retainer onto the differential RH case.
HINT:
Install the spider tightly onto the RH case while holding the spring retainer.
(h) Install the compression spring and spring LH retainer.

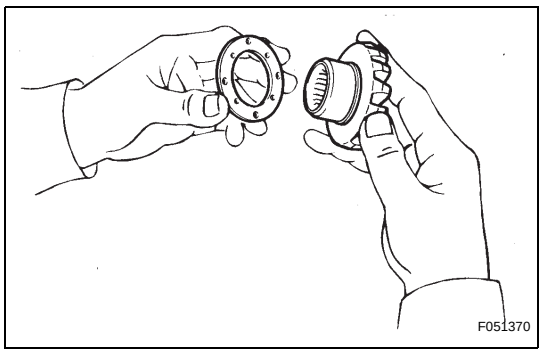


(i) Install the side gear, thrust washers and clutch plates.

(j) Align the matchmarks and assemble the RH and LH cases.
HINT:
Be careful not to drop the side gear and check the pinion and side gear alignment.



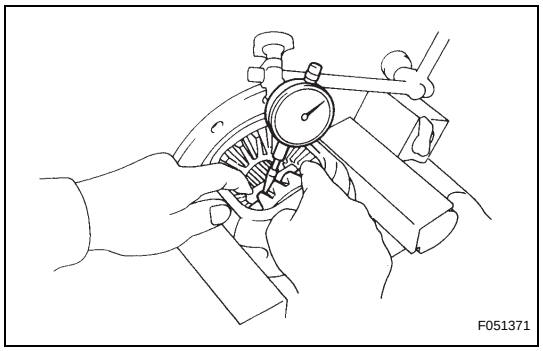
(k) Tighten the 8 bolts uniformly, a little at a time.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)



2. INSTALL DIFFERENTIAL CASE ASSEMBLY (2 Pinion Differential)

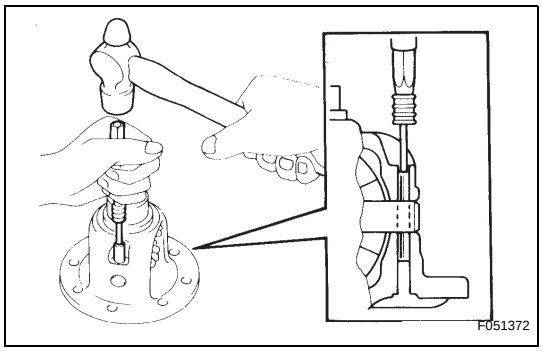
(a) Install the 2 thrust washers onto the side gears.

(b) Install the 2 side gears with the thrust washers, 2 pinion gears, 2 pinion gear thrust washers and pinion shaft.
HINT:
Align the holes for the straight pin in the differential case and pinion shaft.

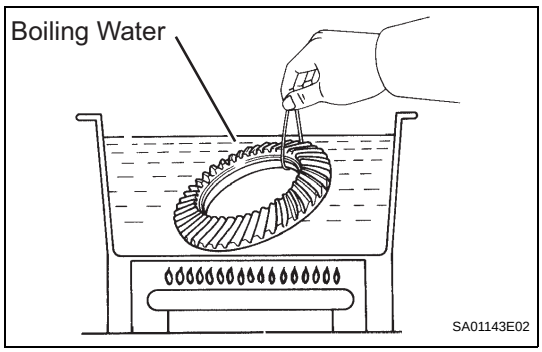


(c) Using a dial indicator, measure the side gear backlash while holding one pinion gear toward the differential case.
Backlash:
0.05 to 0.20 mm (0.0020 to 0.0079 in.)
If the backlash is not within the specified value, replace the side gear thrust washer with one of an appropriate thickness.
HINT:
Refer to the following table to select thrust washers so that the backlash is within the specified value.
Washer thickness

Thickness mm (in.)	Thickness mm (in.)
1.50 (0.0590)	1.75 (0.0689)
1.55 (0.0610)	1.80 (0.0709)
1.60 (0.0630)	1.85 (0.0728)
1.65 (0.0650)	1.90 (0.0748)
1.70 (0.0669)	-

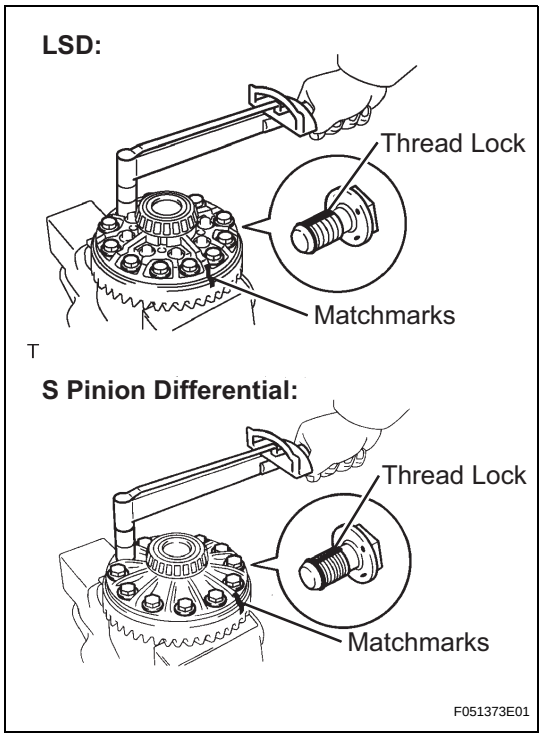


(d) Using a pin punch and hammer, install the straight pin through the holes in the differential case and pinion shaft.
(e) Using a chisel and hammer, stake the outside of the differential case pin hole.

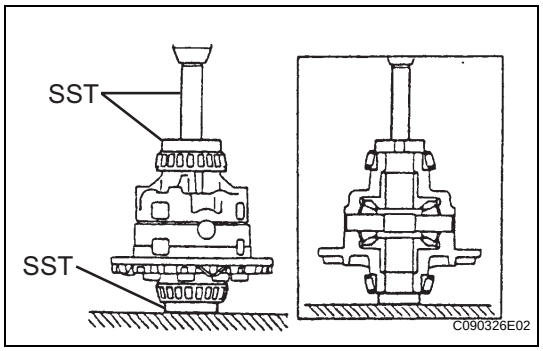


3. INSTALL DIFFERENTIAL RING GEAR

(a) Clean the contact surfaces of the differential case and ring gear.
(b) Heat the ring gear to approximately 100°C (212°F) in boiling water.
(c) Carefully take the ring gear out of the boiling water.
(d) After the moisture on the ring gear has completely evaporated, quickly install the ring gear onto the differential case.
HINT:
Align the matchmarks on the ring gear and differential case.



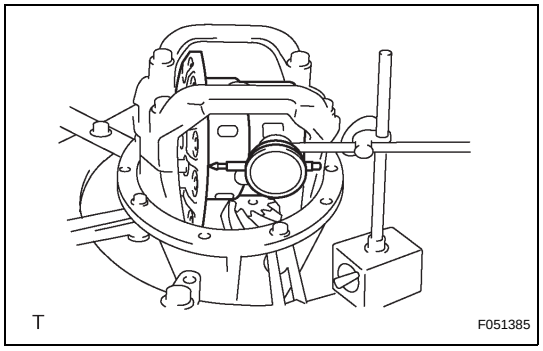
(e) After the ring gear has cooled sufficiently, torque the set bolts to which the thread lock has been applied.
Thread lock:
Part No. 08833-00100, THREE BOND 1360K or equivalent.
Torque: 125 N*m (1,270 kgf*cm, 92 ft.*lbf)



4. INSTALL REAR DIFFERENTIAL CASE BEARING

(a) Using SST and a press, install the 2 side bearings into the differential case.

SST 09950-60010 (09951-00480, 09951-00640), 09950-70010 (09951-07150)



5. INSPECT DIFFERENTIAL RING GEAR RUNOUT

(a) Install the differential case onto the carrier, and install the 2 adjusting nuts so that there is no play in the bearing.

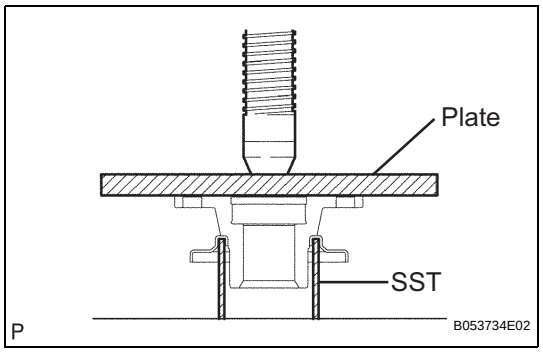
(b) Install the 2 bearing caps with the 4 bolts.

Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

(c) Using a dial indicator, measure the runout of the ring gear.

Maximum runout:
0.05 mm (0.0020 in.)

(d) Remove the 2 bearing caps, 2 adjusting nuts and differential case.



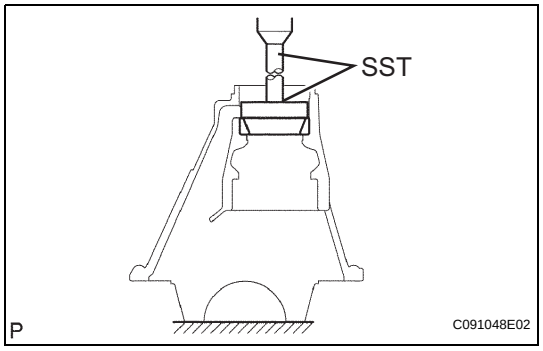
6. INSTALL REAR DIFFERENTIAL DUST DEFLECTOR

(a) Using a press, install the dust deflector.

SST 09636-20010

NOTICE:

Be careful not to damage the dust deflector.



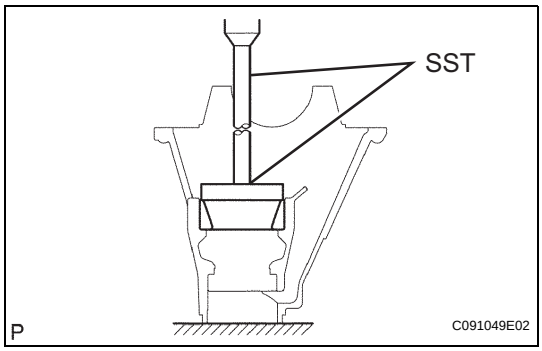
7. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, install the oil storage ring.

(b) Using SST and a press, install the tapered roller bearing onto the carrier.

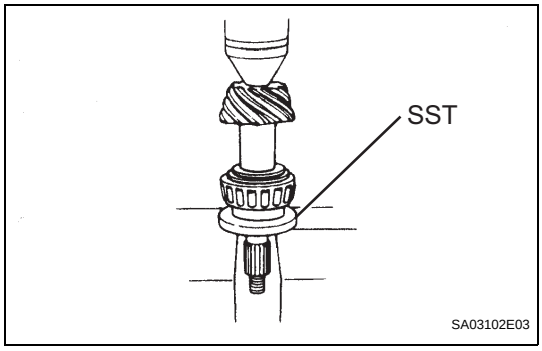
SST 09316-60011 (09316-00011, 09316-00021)

DF



8. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

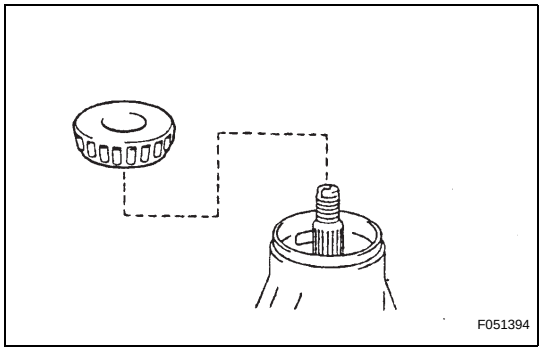
(a) Using SST and a press, install the tapered roller bearing onto the carrier.
SST 09316-60011 (09316-00041, 09316-00011)



9. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

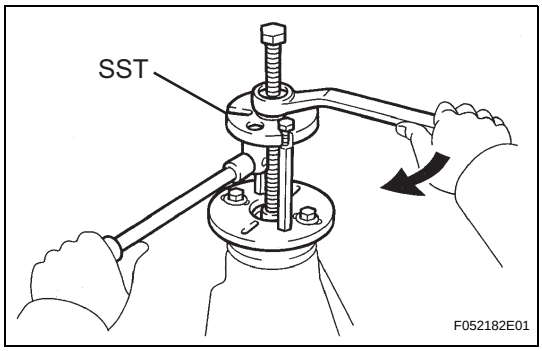
(a) Install the plate washer onto the drive pinion.
(b) Using SST and a press, install the tapered roller bearing onto the drive pinion.
SST 09506-30012

DF

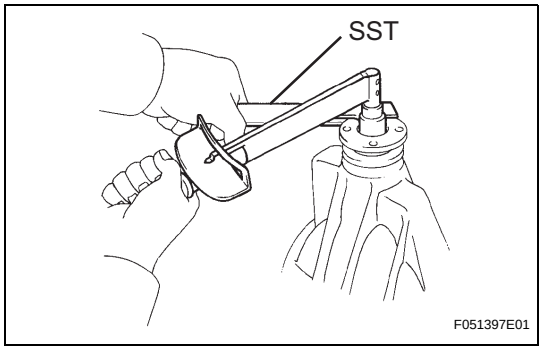


10. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD

(a) Install the drive pinion and rear drive pinion tapered roller bearing.
HINT:
Assemble the spacer and oil seal after adjusting the gear contact pattern.

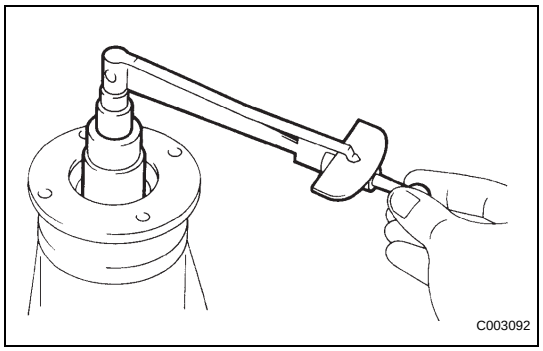


(b) Using SST, install the drive pinion companion flange.
(c) Coat the threads of the nut with hypoid gear oil LSD.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



(d) Using SST to hold the drive pinion companion flange, tighten the nut.
Torque: 451 N*m (4,600 kgf*cm, 333 ft.*lbf) or less
NOTICE:
- **As there is no spacer, tighten a little at a time, being careful not to overtighten it.**
- **Apply hypoid gear oil LSD to the nut.**

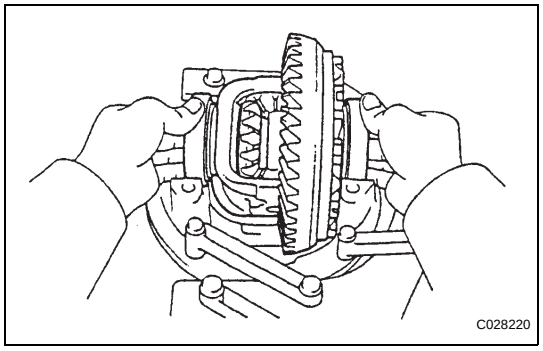
SST 09330-00021



(e) Using a torque wrench, measure the preload.
Preload (at starting)

Bearing	Standard
New	1.27 to 1.86 N*m (13 to 20 kgf*cm, 11 to 16 in.*lbf)
Reused	0.78 to 1.07 N*m (8.0 to 11 kgf*cm, 6.9 to 9.5 in.*lbf)

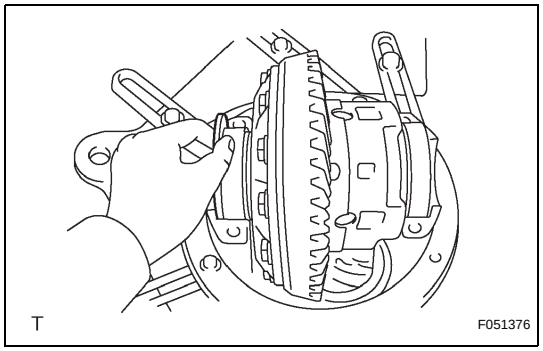
If necessary, disassemble and inspect the differential assembly.



11. INSTALL DIFFERENTIAL CASE ASSEMBLY

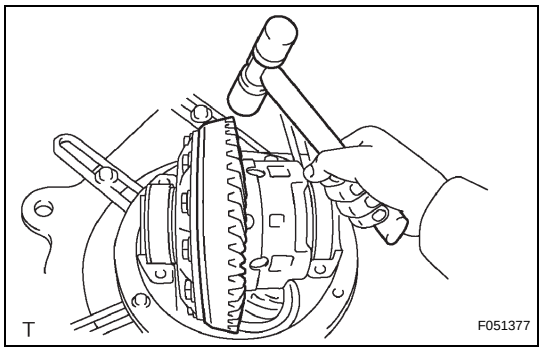
(a) Place the 2 bearing outer races on their corresponding bearings.
HINT:
Make sure the right and left races are not interchanged.

(b) Install the differential case into the carrier.

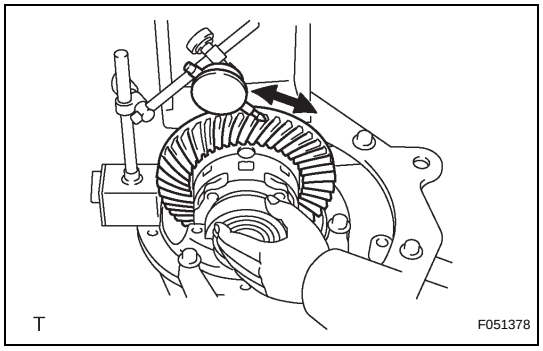


12. ADJUST DIFFERENTIAL RING GEAR BACKLASH

(a) Install the plate washer onto the ring gear back side.
HINT:
Make sure that the ring gear has backlash.

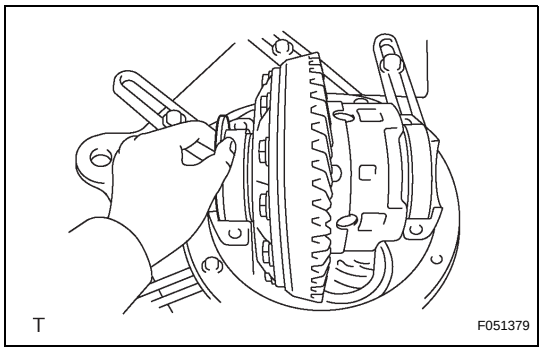


(b) Tap on the ring gear with a plastic hammer so that the washer fits into the bearing.

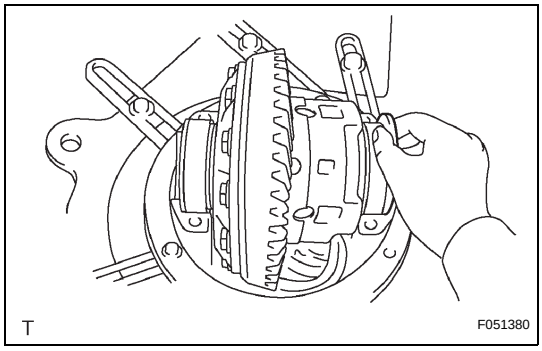


(c) Using a dial indicator, measure the ring gear backlash while holding the companion flange.
Backlash (reference):
0.13 to 0.18 mm (0.0051 to 0.0071 in.)

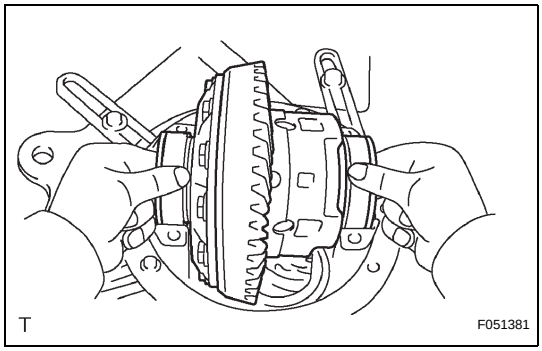
DF



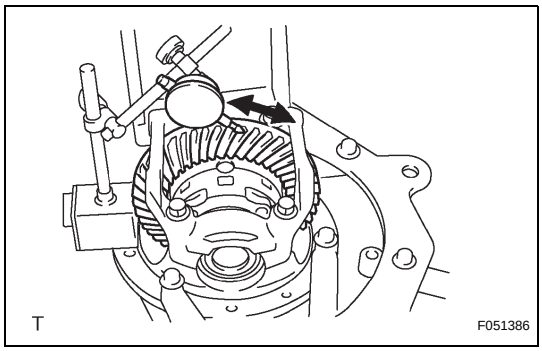
(d) Select a plate washer for the back side ring gear using the backlash as a reference.



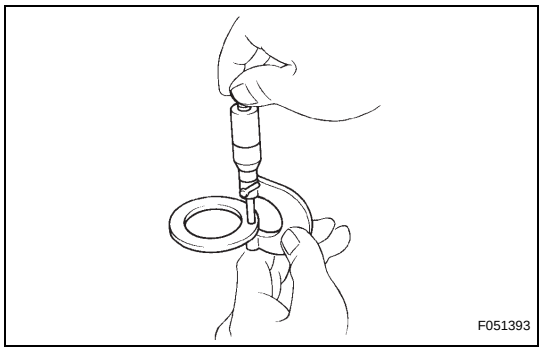
(e) Select a ring gear teeth side plate washer so that there is no clearance between the outer race and the case.
(f) Remove the 2 plate washers and differential case.
(g) Install the plate washer into the ring gear back side of the carrier.

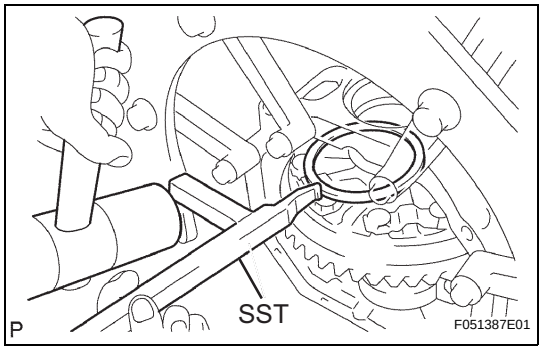


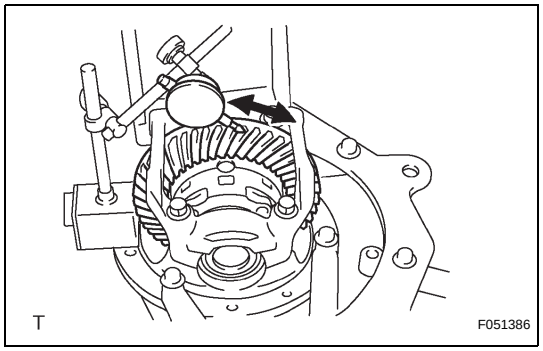
(h) Place the other plate washer onto the differential case together with the outer race, and install the differential case with the outer race into the carrier.
(i) Tap on the ring gear with a plastic hammer so that the washers fit into the bearing.



(j) Using a dial indicator, measure the ring gear backlash while holding the companion flange.
Backlash:
0.13 to 0.18 mm (0.0051 to 0.0071 in.)
If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of washers on both sides by an equal amount.
HINT:
There should be no clearance between the plate washer and the case.
Make sure that there is a ring gear backlash.







13. INSPECT SIDE BEARING PRELOAD

(a) Remove the ring gear teeth side plate washer and using a micrometer, measure the thickness.

(b) Using the backlash as a reference, install a new washer 0.06 to 0.09 mm (0.0024 to 0.0035 in.) thicker than the removed one.
HINT:
Select a washer which can be pressed in 2/3 of the way with your finger.

(c) Using SST and a plastic hammer, install the plate washer.

(d) Recheck the ring gear backlash.
Backlash:
0.13 to 0.18 mm (0.0051 to 0.0071 in.)
If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of washers on both sides by an equal amount.
HINT:
The backlash will change by about 0.02 mm (0.0008 in.) corresponding to 0.03 mm (0.0012 in.) change in the plate washer.

DF

Washer thickness

Thickness		Thickness		Thickness	
Mark	mm (in.)	Mark	mm (in.)	Mark	mm (in.)
58	2.58 (0.1016)	90	2.90 (0.1142)	22	3.22 (0.1268)
60	2.60 (0.1024)	92	2.92 (0.1150)	24	3.24 (0.1276)
62	2.62 (0.1032)	94	2.94 (0.1158)	26	3.26 (0.1284)
64	2.64 (0.1039)	96	2.96 (0.1165)	28	3.28 (0.1291)
66	2.66 (0.1047)	98	2.98 (0.1173)	30	3.30 (0.1299)
68	2.68 (0.1055)	00	3.00 (0.1181)	32	3.32 (0.1307)
70	2.70 (0.1063)	02	3.02 (0.1189)	34	3.34 (0.1315)
72	2.72 (0.1071)	04	3.04 (0.1197)	36	3.36 (0.1323)
74	2.74 (0.1079)	06	3.06 (0.1205)	38	3.38 (0.1331)
76	2.76 (0.1087)	08	3.08 (0.1213)	40	3.40 (0.1339)
78	2.78 (0.1095)	10	3.10 (0.1221)	42	3.42 (0.1347)

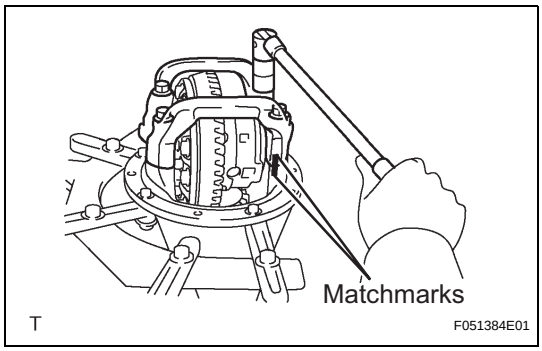
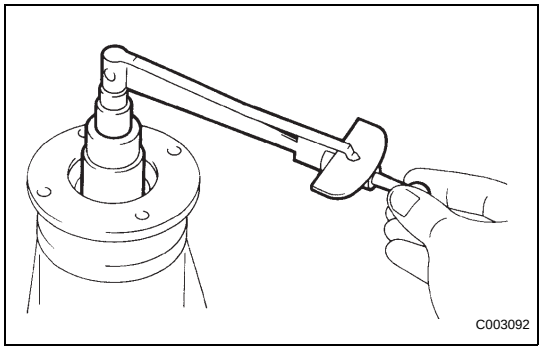
82	2.82 (0.1110)	14	3.14 (0.1236)	46	3.46 (0.1362)
84	2.84 (0.1118)	16	3.16 (0.1244)	48	3.48 (0.1370)
86	2.86 (0.1126)	18	3.18 (0.1257)	-	-
88	2.88 (0.1134)	20	3.20 (0.1260)	-	-



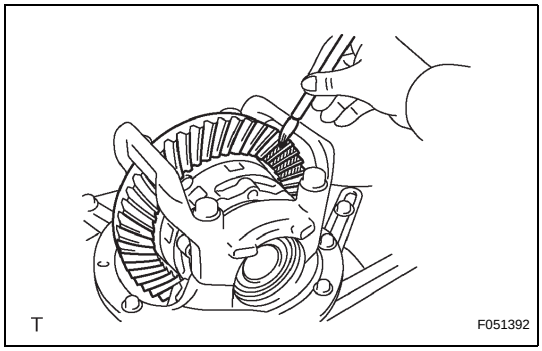
(e) Tighten the bearing cap bolts.
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)



14. INSPECT TOTAL PRELOAD

(a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.
Total Preload (at starting):
Drive pinion preload plus 0.39 to 0.59 N*m (4.0 to 6.0 kgf*cm, 3.5 to 5.2 in.*lbf)
If necessary, disassemble and inspect the differential.

DF

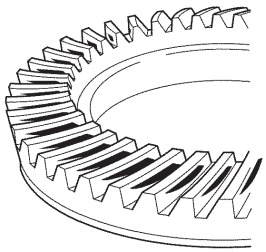


15. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

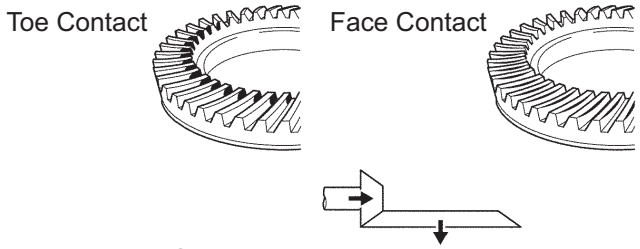
(a) Coat 3 or 4 teeth at 3 different positions on the ring gear with red lead primer.
(b) Hold the companion flange firmly and rotate the ring gear in both directions.

(c) Inspect the tooth contact pattern.

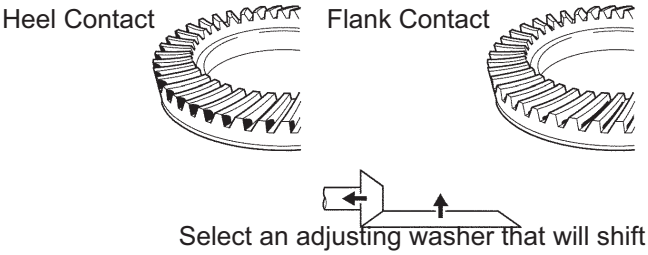
Driver Side:



Proper Contact

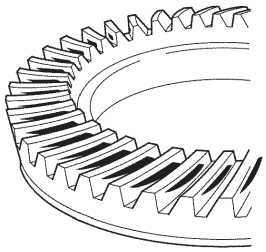


Select an adjusting washer that will bring the drive pinion closer to the ring gear.

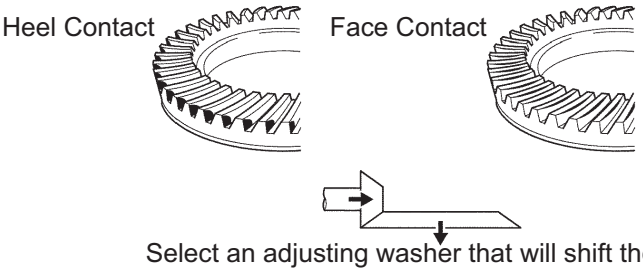


Select an adjusting washer that will shift the drive pinion away from the ring gear.

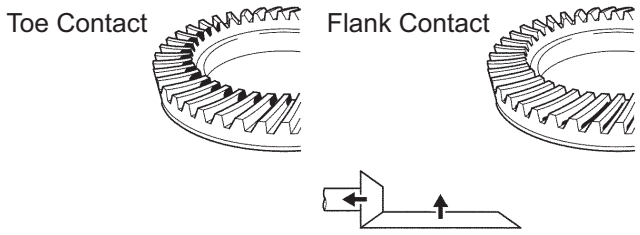
Coast Side:



Proper Contact



Select an adjusting washer that will shift the drive pinion closer to the ring gear.

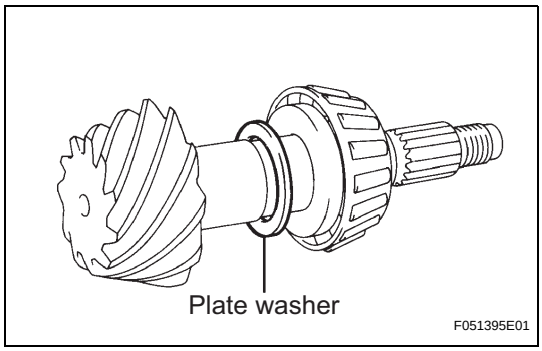


Select an adjusting washer that will bring the drive pinion away from the ring gear.

P

F052199E01

DF



(d) If the teeth are not properly in contact, use the following chart to select an appropriate washer for correction.

Washer thickness

Thickness		Thickness		Thickness	
Mark	mm (in.)	Mark	mm (in.)	Mark	mm (in.)
87	1.87 (0.0736)	03	2.03 (0.0799)	19	2.19 (0.0862)
88	1.88 (0.0740)	04	2.04 (0.0803)	20	2.20 (0.0866)
89	1.89 (0.0744)	05	2.05 (0.0807)	21	2.21 (0.0870)

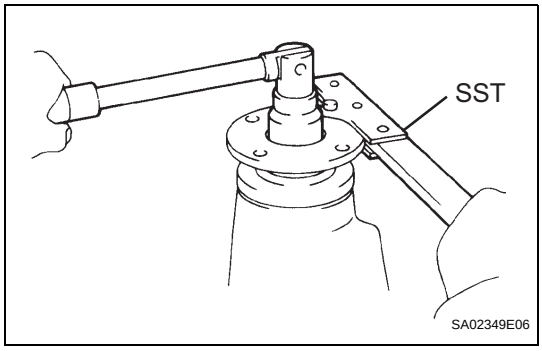
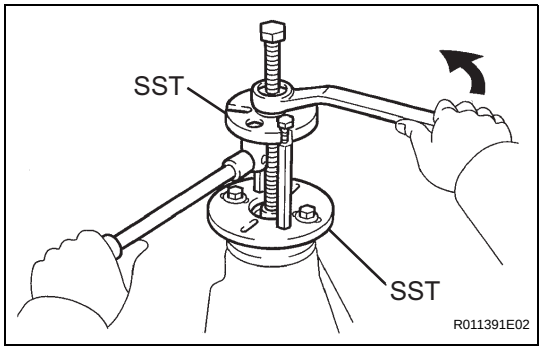
95	1.95 (0.0768)	11	2.11 (0.0831)	27	2.27 (0.0894)
96	1.96 (0.0772)	12	2.12 (0.0835)	28	2.28 (0.0898)
97	1.97 (0.0776)	13	2.13 (0.0839)	-	-
98	1.98 (0.0780)	14	2.14 (0.0843)	-	-
99	1.99 (0.0784)	15	2.15 (0.0847)	-	-
00	2.00 (0.0787)	16	2.16 (0.0850)	-	-
01	2.01 (0.0791)	17	2.17 (0.0854)	-	-
02	2.02 (0.0795)	18	2.18 (0.0858)	-	-



16. REMOVE REAR DRIVE PINION NUT

(a) Using SST to hold the drive pinion companion flange, remove the nut.

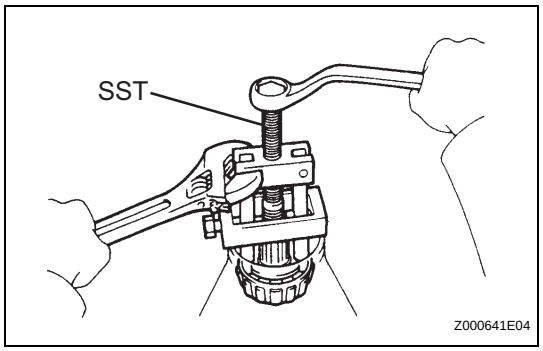
SST 09330-00021



17. REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

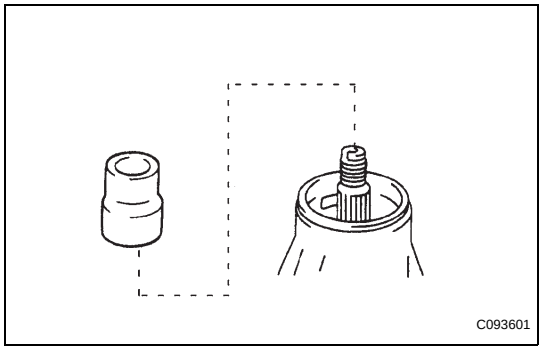
(a) Using SST, remove the drive pinion companion flange.

SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



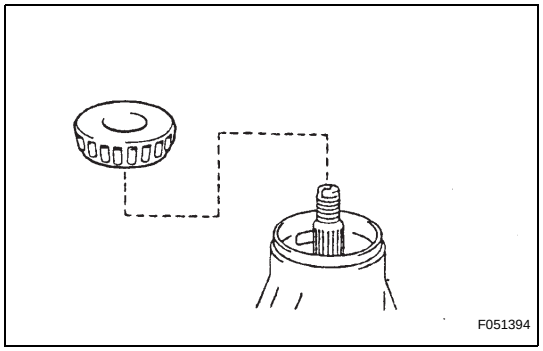
18. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the drive pinion tapered roller bearing from the drive pinion.
SST 09556-22010

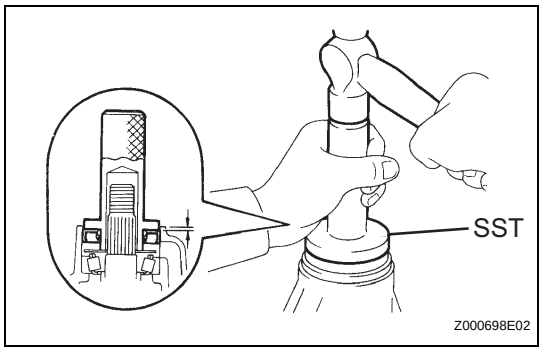


19. INSTALL REAR DIFFERENTIAL DRIVE PINION BEARING SPACER

(a) Install a new bearing spacer onto the drive pinion.

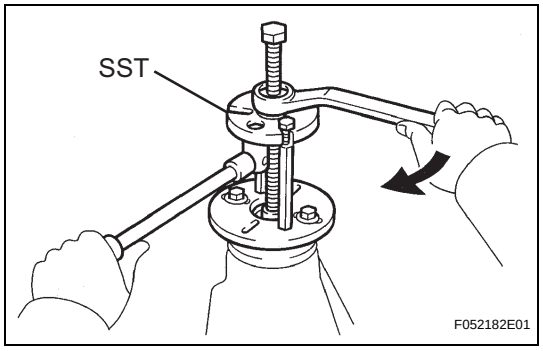


20. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING



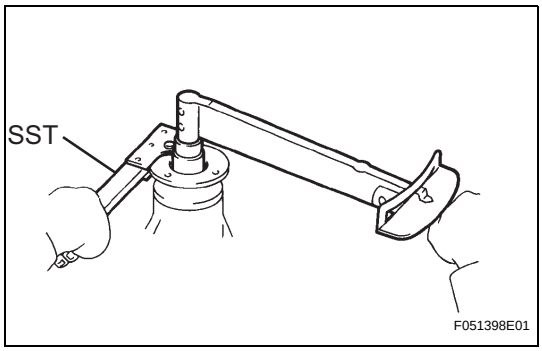
21. INSTALL REAR DIFFERENTIAL CARRIER OIL SEAL

(a) Apply MP grease to the oil seal lip.
(b) Using SST and a hammer, install a new carrier oil seal.
SST 09554-30011
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in)

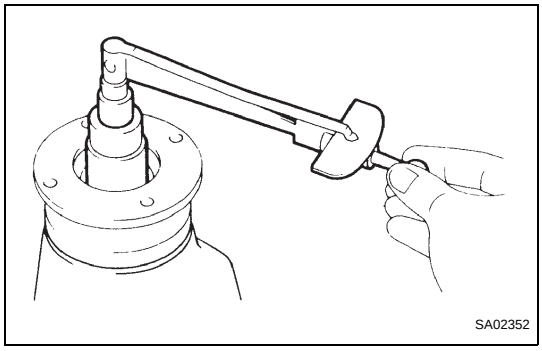


22. INSTALL REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using SST, install the drive pinion companion flange onto the drive pinion.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



(b) Coat the threads of a new nut with hypoid gear oil LSD.
(c) Using SST to hold the flange, torque the nut.
SST 09330-00021
Torque: 451 N*m (4,600 kgf*cm, 333 ft.*lbf) or less



23. INSPECT DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the preload of the backlash between the drive pinion and ring gear.
Preload (at starting)

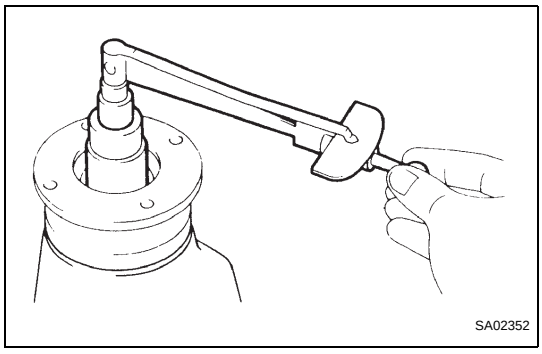
Bearing	Standard
New	1.27 to 1.86 N*m (13 to 19 kgf*cm, 11 to 16 in.*lbf)
Reused	0.78 to 1.07 N*m (8.0 to 11 kgf*cm, 6.9 to 9.5 in.*lbf)

- If the preload is greater than the specification, replace the bearing spacer.
- If the preload is less than the specification, retighten the nut to 13 N*m (130 kgf*cm, 9 ft*lbf) of torque at a time until the specified preload is reached.

Torque: 451 N*m (4,600 kgf*cm, 333 ft.*lbf) or less

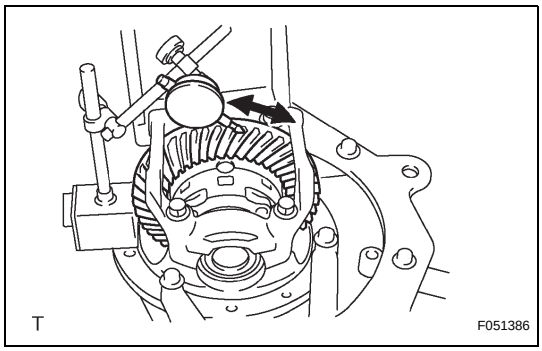
- If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repeat the preload adjusting procedure. Do not loosen the pinion nut to reduce the preload.

DF



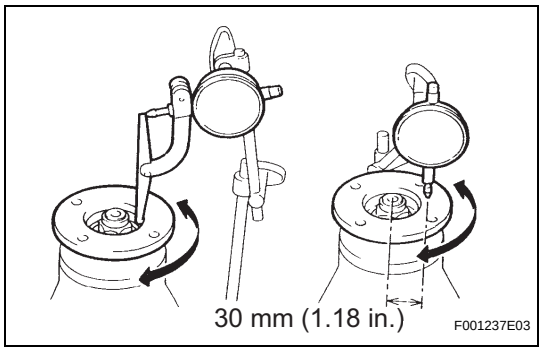
24. INSPECT TOTAL PRELOAD

(a) Using a torque wrench, measure the preload.
Total Preload (at starting):
Drive pinion preload plus 0.39 to 0.59 N*m (4 to 6 kgf*cm, 4.0 to 5.2 in.*lbf)
If the necessary, disassemble and inspect the differential.



25. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) Using a dial indicator, check the backlash of the ring gear.
Backlash:
0.13 to 0.18 mm (0.0051 to 0.0071 in.)
If the backlash is not within the specification, adjust or repair the side bearing preload as necessary.



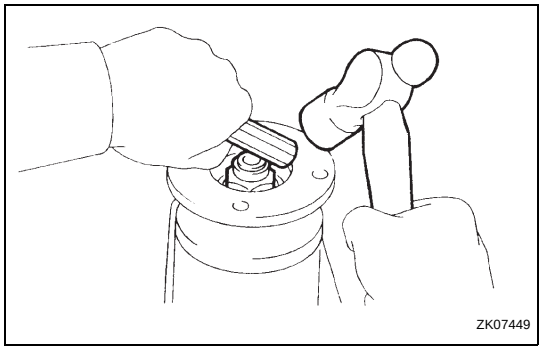
26. INSPECT RUNOUT OF REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR

(a) Using a dial indicator, measure the vertical and horizontal runout of the drive pinion companion flange.

Maximum runout:

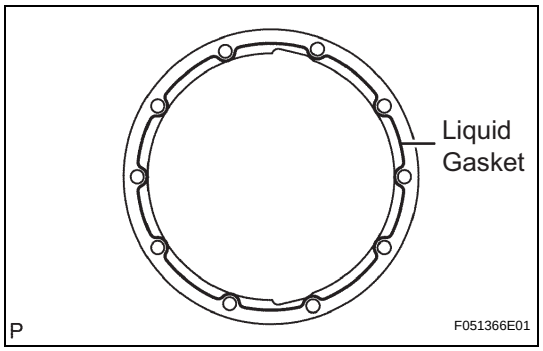
Vertical runout: 0.10 mm (0.0039 in.)

Lateral runout: 0.10 mm (0.0039 in.)



27. INSTALL REAR DRIVE PINION NUT

(a) Using a chisel and hammer, stake the drive pinion nut.



INSTALLATION

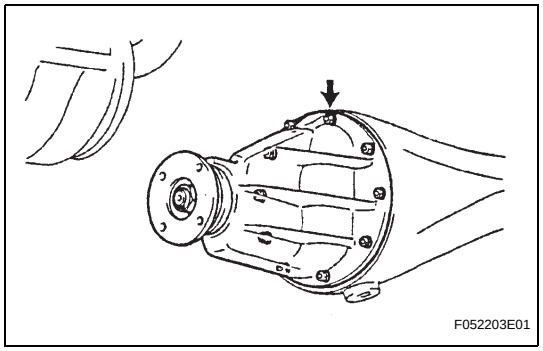
1. INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY

(a) Remove any dust and oil from the differential carrier assembly and contact surface of the axle housing.

(b) Apply liquid gasket to both sides of the gasket.

NOTICE:

Do not put the liquid gasket on the stud bolt.



(c) Install a new gasket and the differential carrier assembly with the 10 nuts and 10 washers.

Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)

2. INSTALL REAR AXLE SHAFT WITH BACKING PLATE LH (See page AH-33)

3. INSTALL REAR AXLE SHAFT WITH BACKING PLATE RH

HINT:

Use the same procedure as for the LH side.

4. INSTALL NO.3 PARKING BRAKE CABLE ASSEMBLY (See page PB-22)

5. INSTALL NO.2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Use the same procedure as for the LH side.

6. INSTALL REAR SPEED SENSOR LH (See page BC-304)

7. INSTALL REAR SPEED SENSOR RH

HINT:

Use the same procedure as for the LH side.

8. **INSTALL PROPELLER SHAFT ASSEMBLY (for 2WD Drive Type, Regular Cab) (See page PR-6)**
9. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD Drive Type, Except Regular Cab) (See page PR-13)**
10. **INSTALL PROPELLER SHAFT ASSEMBLY (for 4WD Driver Type, Regular Cab) (See page PR-25)**
11. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 4WD Driver Type, Expect Regular Cab) (See page PR-32)**
12. **INSTALL REAR BRAKE SHOE (See page BR-71)**
13. **INSTALL FRONT BRAKE SHOE (See page BR-72)**
14. **INSPECT REAR BRAKE DRUM INSTALLATION (See page BR-73)**
15. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-73)**
16. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-74)**
17. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
18. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
19. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
20. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
21. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
22. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
23. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
24. **CHECK FOR BRAKE FLUID LEAKAGE**
25. **ADD DIFFERENTIAL OIL (See page DF-8)**
26. **INSPECT DIFFERENTIAL OIL (See page DF-8)**
27. **INSPECT FOR DIFFERENTIAL OIL LEAKAGE**
28. **INSTALL REAR WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 in.*lbf)
29. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
30. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-1)**
31. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-2)**

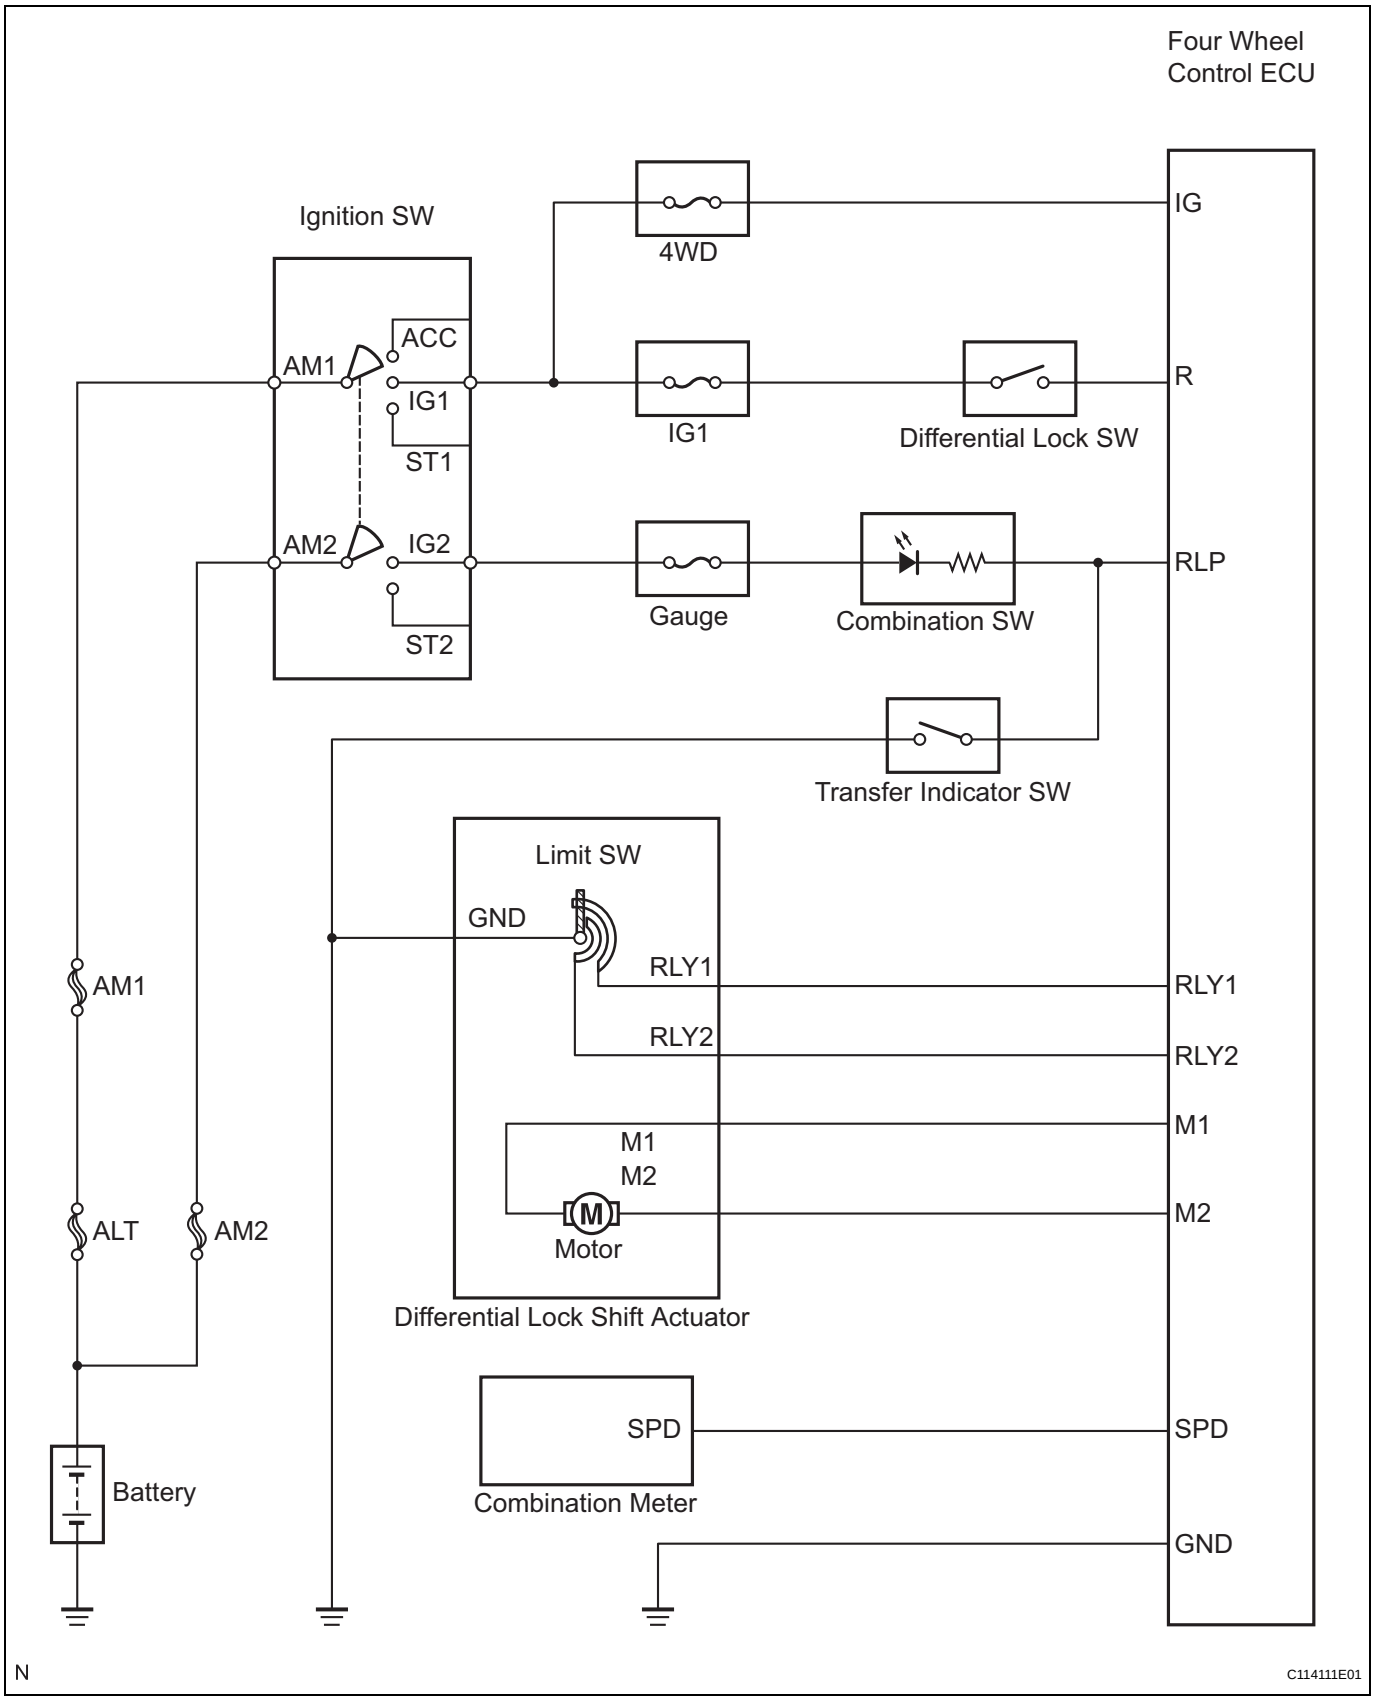
32. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**

33. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

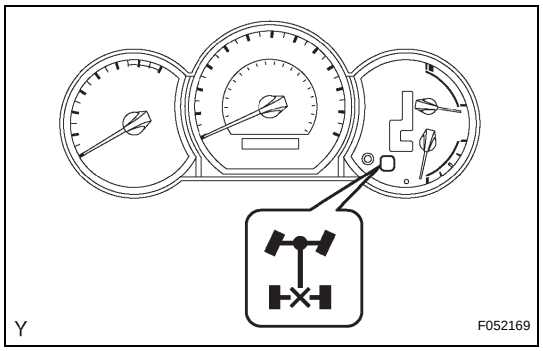
34. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
HINT:
(See page BC-103)

35. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
HINT:
(See page BC-7)

SYSTEM DIAGRAM



DF



ON-VEHICLE INSPECTION

1. INSPECT REAR DIFFERENTIAL LOCK SYSTEM

(a) Inspect the indicator light.

(1) Check that the indicator light illuminates for approx. 1 second when the ignition switch is turned ON.

(b) Inspect the differential lock operation.

(1) Jack up the vehicle and start the engine.

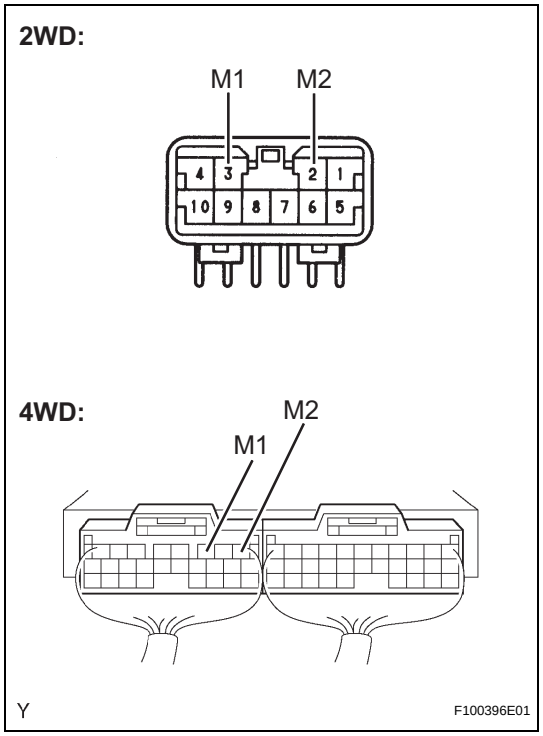
(2) When the differential lock control switch is ON the indicator light blinks.

HINT:

If the gears of the differential lock system are not engaged, the indicator light continues blinking, so rotate the tires to engage the gear.

(3) When the differential lock control switch is in the OFF position, the indicator light goes off. The differential lock is released for the rear wheel at this time.

(4) Check the voltage between the terminals of the rear differential lock control ECU when switching the rear differential lock control ON, with the speedometer registering at approximately 7 mph (11 km/h) or more.



Switch position	Terminal	Specified condition
ON	M1 - M2	0.5 V or less (No change)

(5) Return the differential lock control switch to OFF.

(6) Stop the engine and lower the vehicle.

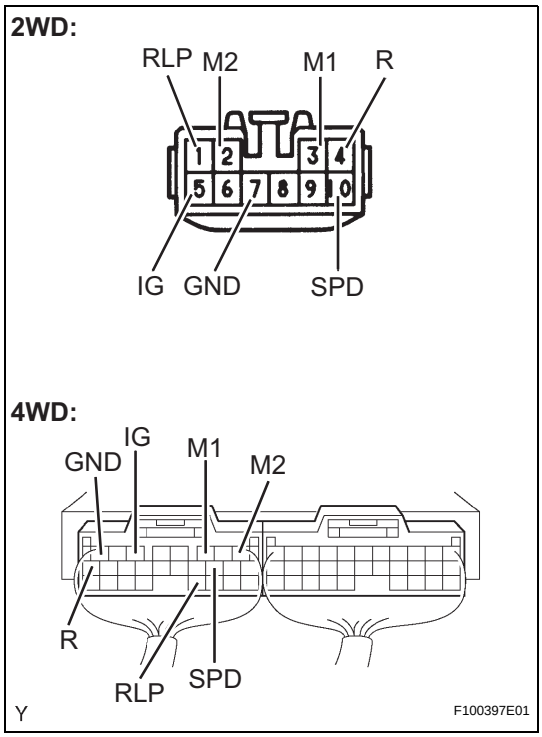
2. INSPECT DIFFERENTIAL LOCK SYSTEM CIRCUIT

(a) Inspect the battery positive voltage.

Battery positive voltage:

10 to 14 V

DF



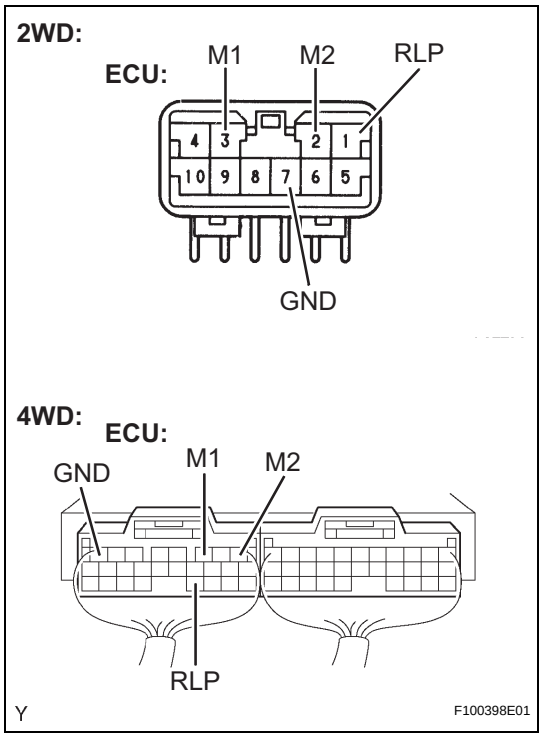
(b) Inspect the system circuit with the connector disconnected.
Disconnect the connector from the rear differential lock control ECU and inspect the connector on the wire harness side, as shown in the table.

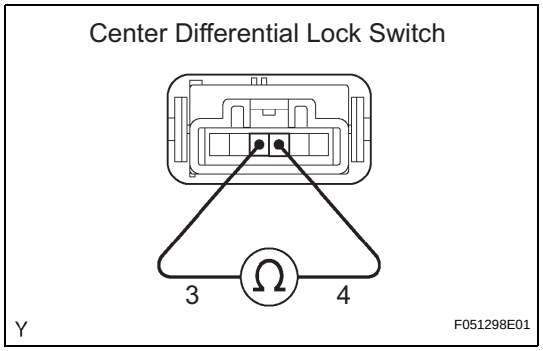
DF

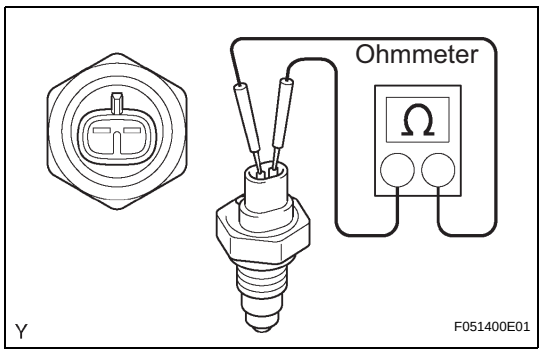
Standard

Symbols (Terminals No.)	Trouble part	Condition	Specified value
M1 - M2	RR Differential Lock Actuator	-	Less than 100 Ω
GND - Body ground	Body Ground	-	Below 1 Ω
SPD - Body ground	Speed Sensor	Vehicle moves slowly	1 pulse each 40 cm (15.75 in.)
IG - Body ground	DIFF Fuse	Ignition switch ON	10 to 14 V
RLP - Body ground	Rear Differential Lock Indicator Switch	Ignition switch ON with indicator light ON	About 0 V
		Ignition switch ON with indicator light OFF	10 to 14 V
R - Body ground	Differential Lock Control Switch	Ignition switch ON with differential lock control switch RR	10 to 14 V
		Ignition switch ON with differential lock control switch OFF	About 0 V

If the result is not as specified value, check and repair or replace the malfunctioning part shown in the table above.







(c) Inspect the system circuit with the connector connected.
  (1) Turn the ignition switch to the ON position.
  (2) Using a voltmeter, measure the voltage when the differential lock control switch is in the positions shown in the table.

Tester Connection + - -	Switch position	Specified condition
RLP - GND	RR*	0.5 V or less
M1 - M2	OFF → RR	0.5 V or less → 10 - 14 V (Approx. 1 sec.) → 0.5 V or less
M2 - M1	RR → OFF	

HINT:
*: The rear differential should be locked mechanically. If the result is not as specified, replace the ECU.

  (3) Install the ECU

INSPECTION

1. INSPECT CENTER DIFFERENTIAL LOCK SWITCH

(a) Check the resistance.
  (1) Measure the resistance using an ohmmeter.
  Standard

Tester Connection	Switch Condition	Specified Condition
3 - 4	**Released**	**10 kΩ or higher**
3 - 4	**Pushed in**	**Below 1 Ω**

If the result is not as specified, replace the center differential lock switch.

2. INSPECT NO. 1 TRANSFER INDICATOR SWITCH

(a) Check the resistance.
  (1) Measure the resistance using an ohmmeter.
  Standard

Tester Connection	Switch Condition	Specified Condition
1 - 2	**Released**	**10 kΩ or higher**
1 - 2	**Pushed in**	**Below 1 Ω**

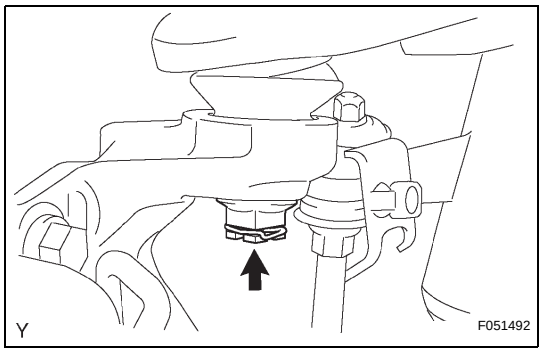
If the result is not as specified, replace the No. 1 transfer indicator switch.

DF

INSTALLATION

1. INSTALL FRONT AXLE HUB

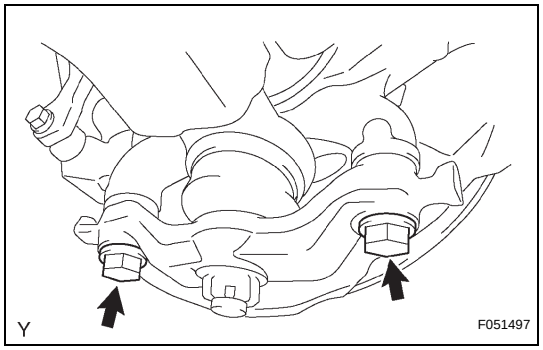
2. INSTALL FRONT SUSPENSION UPPER ARM



(a) Install the upper arm with a new nut.
Torque: 110 N*m (1,122 kgf*cm, 81 ft.*lbf)

(b) Install the clip.
NOTICE:
If the holes in the clip are not aligned, tighten the nut an additional 60°.

3. INSTALL FRONT SUSPENSION LOWER ARM



(a) Install the front lower ball joint attachment LH with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)

4. INSTALL TIE ROD END SUB-ASSEMBLY

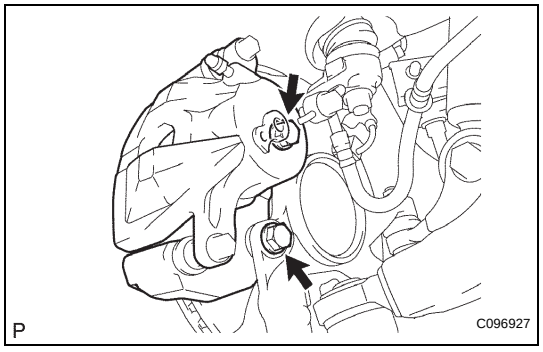
(a) Install the tie rod end onto the steering knuckle arm.

(b) Install the nut.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

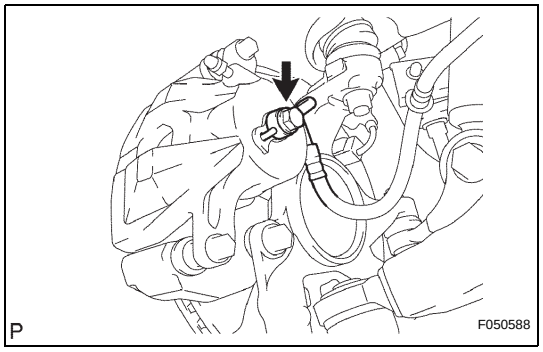
(c) Install a new cotter pin.
NOTICE:
If the holes in the cotter pin are not aligned, tighten the nut an additional 60°.

5. INSTALL FRONT DISC

6. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY

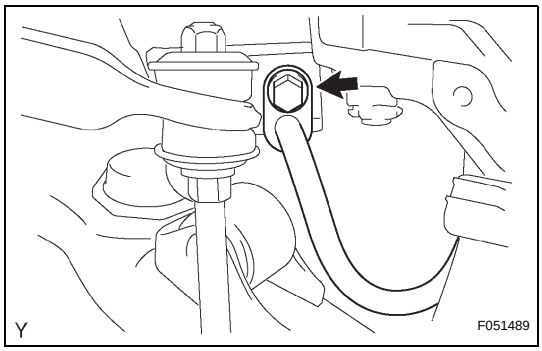


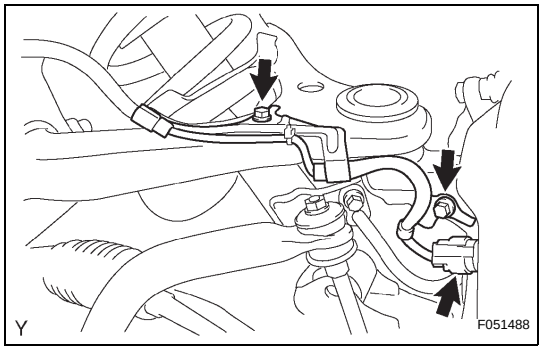
(a) Install the brake caliper with the 2 bolts.
Torque: 108 N*m (1,101 kgf*cm, 80 ft.*lbf)



(b) Install a new gasket and flexible hose with the union bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely into the lock hole in the disc brake cylinder.

AH





7. **INSTALL FRONT FLEXIBLE HOSE**
   (a) Install the front flexible hose with the bolt.
   Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf)

8. **INSTALL FRONT SPEED SENSOR**
   (a) Install the speed sensor front with the bolt.
   Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
   NOTICE:
   Make sure that the sensor tip is clean.

9. **INSTALL SKID CONTROL SENSOR WIRE**
   (a) Install the skid control sensor wire with the 2 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Connect the speed sensor connector.

10. **INSTALL FRONT WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)

12. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**

13. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**

14. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**

15. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**

16. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**

17. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**

18. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**

19. **CHECK FOR BRAKE FLUID LEAKAGE**

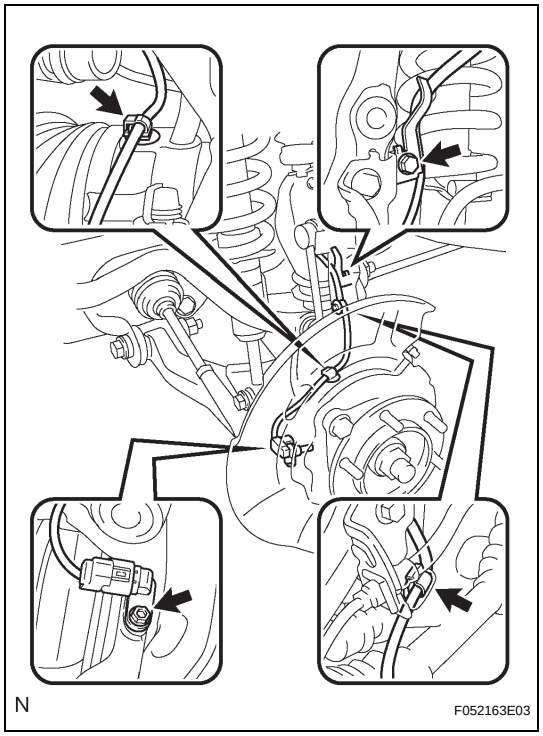
20. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    (See page BC-103)

21. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    (See page BC-7)

22. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-2)

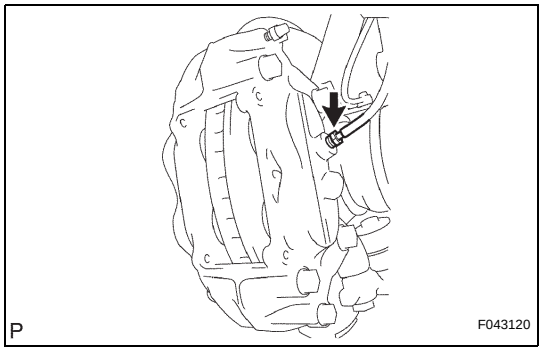
REMOVAL

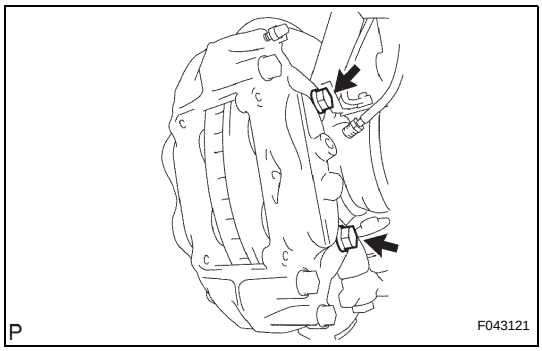
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with painted surfaces.
4. **SEPARATE FRONT SPEED SENSOR**
   (a) Remove the bolt and separate the speed sensor front LH.
   (b) Disengage the 2 clamps.
   (c) Remove the bolt and separate the speed sensor wire harness from the steering knuckle.



5. **REMOVE FRONT DISC BRAKE CALIPER ASSEMBLY**
   (a) Remove the bolt and separate the brake tube bracket from the steering knuckle.

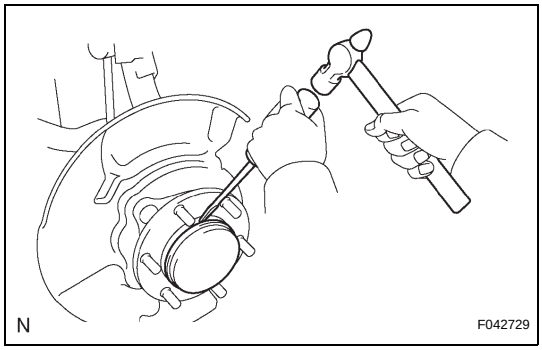
   (b) Using SST, disconnect the brake tube from the disc brake cylinder.
   SST 09023-00101
   NOTICE:
   Use a container to catch the brake fluid as it drains out.





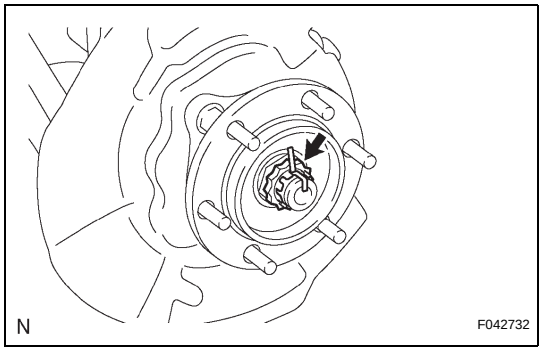
(c) Remove the 2 bolts and disc brake caliper.

6. REMOVE FRONT DISC



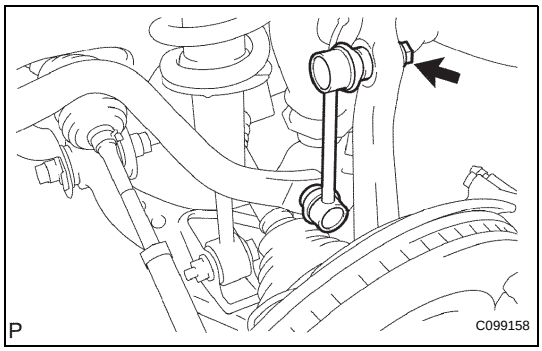
7. REMOVE FRONT AXLE HUB GREASE CAP (for 4WD)

(a) Using a screwdriver and a hammer, remove the front axle hub grease cap.
NOTICE:
Do not damage the axle hub.



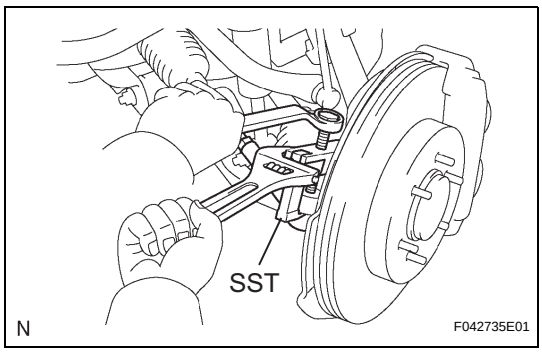
8. REMOVE FRONT AXLE HUB NUT (for 4WD)

(a) Remove the cotter pin and lock cap.
(b) Remove the front axle hub nut.



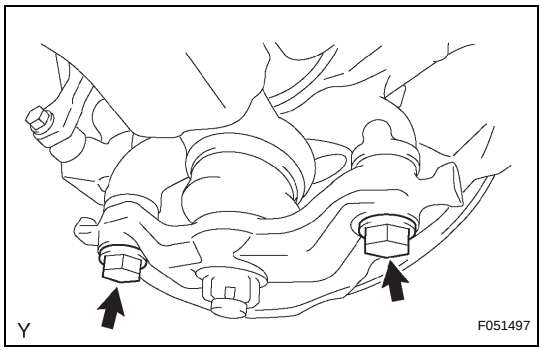
9. SEPARATE FRONT STABILIZER LINK ASSEMBLY

(a) Remove the nut and separate the stabilizer link from the steering knuckle.
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



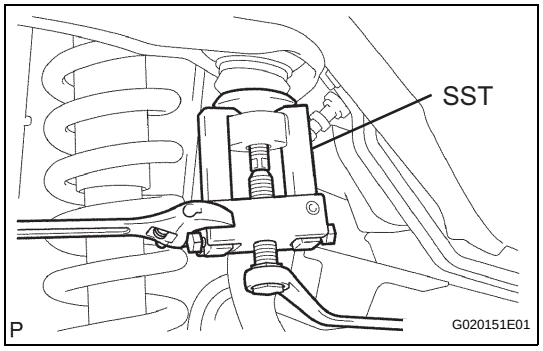
10. SEPARATE TIE ROD END SUB-ASSEMBLY

(a) Remove the cotter pin and nut.
(b) Using SST, separate the tie rod end from the steering knuckle.
SST 09628-62011



11. REMOVE FRONT SUSPENSION LOWER ARM

(a) Remove the 2 bolts, and separate the front suspension lower arm from the front axle.



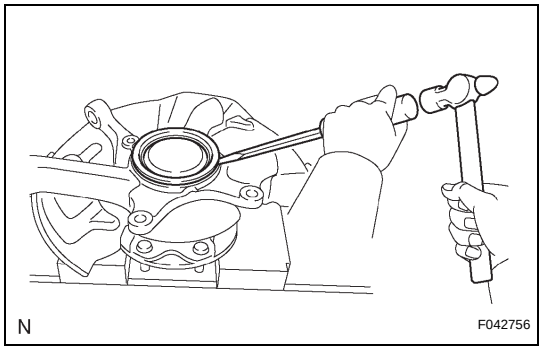
12. SEPARATE FRONT SUSPENSION UPPER ARM

(a) Support the front suspension lower arm with a jack.
(b) Remove the clip and nut.
(c) Using SST, separate the steering knuckle from the front suspension upper arm.
SST 09628-62011

13. REMOVE FRONT AXLE HUB

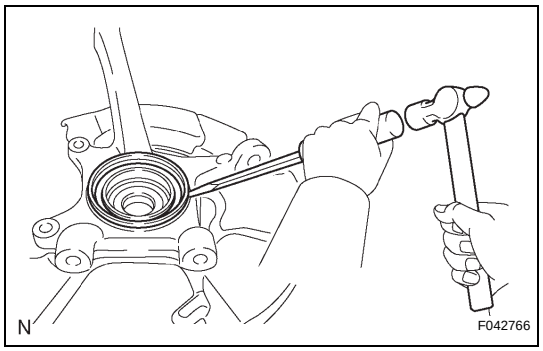
(a) for 4WD:
(1) Using a plastic hammer, separate the front axle hub from the front drive shaft.
(b) Remove the front axle hub.

DISASSEMBLY



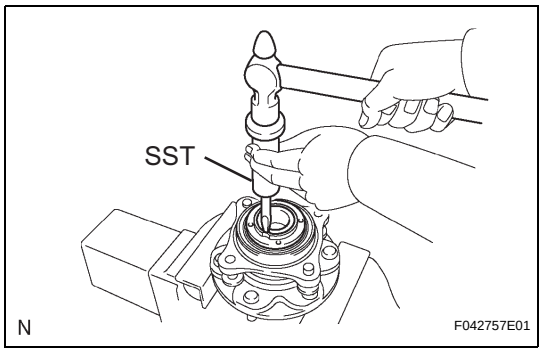
1. REMOVE KNUCKLE GREASE RETAINER CAP (for Pre-Runner)

(a) Using a screwdriver and hammer, remove the knuckle grease retainer cap.



2. REMOVE FRONT AXLE HUB OIL SEAL (for 4WD)

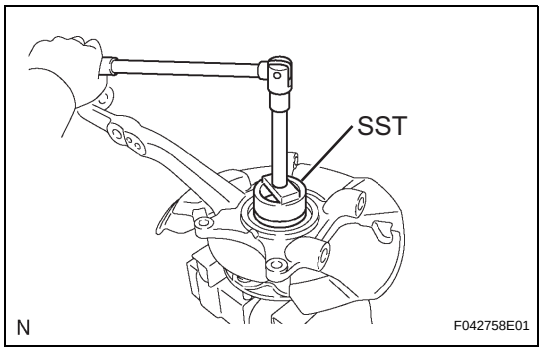
(a) Using a screwdriver and hammer, remove the front axle hub oil seal.



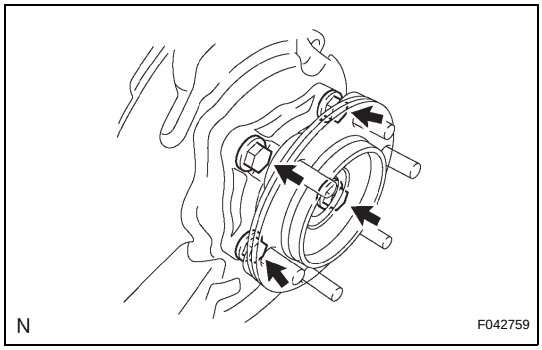
3. REMOVE FRONT WHEEL ADJUSTING NUT (for Pre-Runner)

(a) Using SST and a hammer, unstake the front wheel adjusting nut.
SST 09930-00010

AH



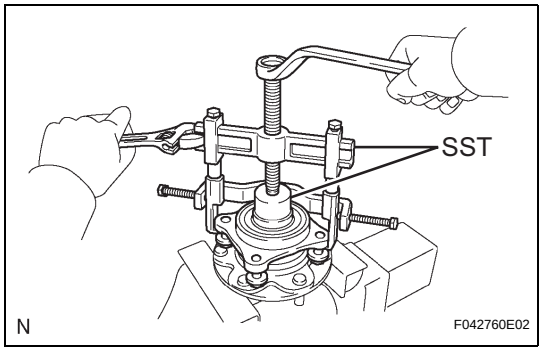
(b) Using SST, remove the front wheel adjusting nut.
SST 09318-12010



4. REMOVE FRONT AXLE HUB

(a) Remove the 4 bolts and axle hub from the steering knuckle.

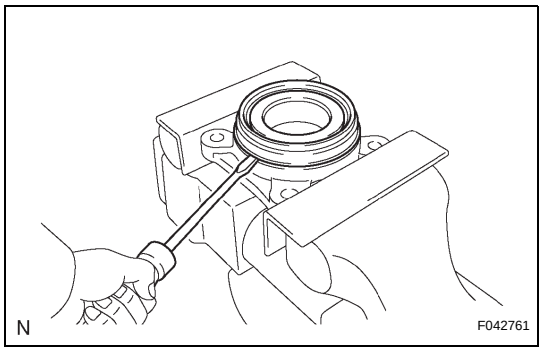
(b) Remove the O-ring from the axle hub.



5. REMOVE FRONT AXLE WITH ABS ROTOR BEARING ASSEMBLY

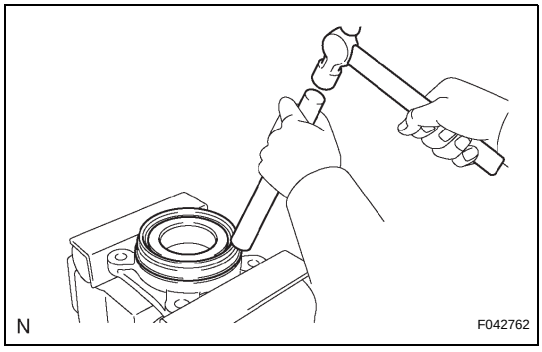
(a) Gently fix the front axle hub in a vise.

(b) Using SST, remove the bearing.
SST 09710-30021 (09710-03051), 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011)



6. REMOVE FRONT AXLE HUB OIL SEAL

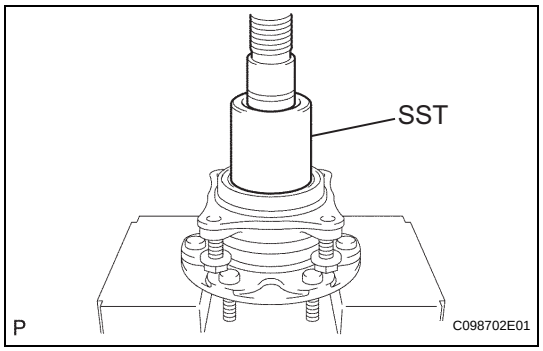
(a) Using a screwdriver, remove the front axle hub oil seal.



REASSEMBLY

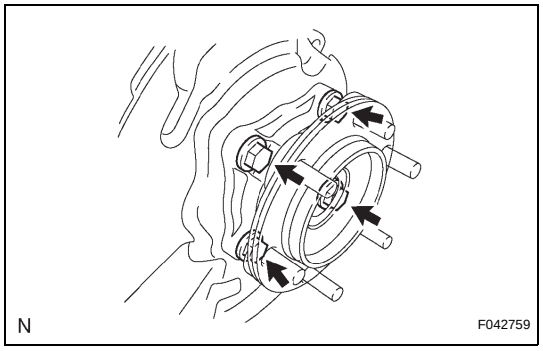
1. INSTALL FRONT AXLE HUB OIL SEAL

(a) Using a brass bar and a hammer, install a new front axle hub oil seal.
NOTICE:
Do not damage the oil seal.



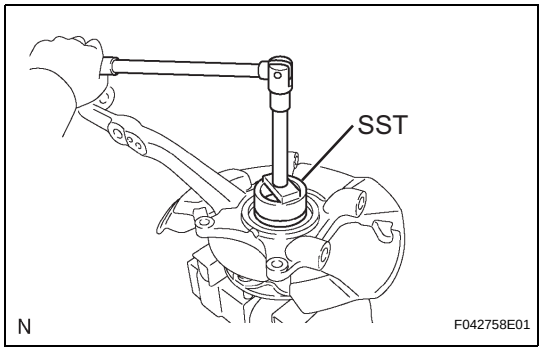
2. INSTALL FRONT AXLE WITH ABS ROTOR BEARING ASSEMBLY

(a) Using SST and a press, install a new bearing onto the front axle hub.
SST 09649-17010



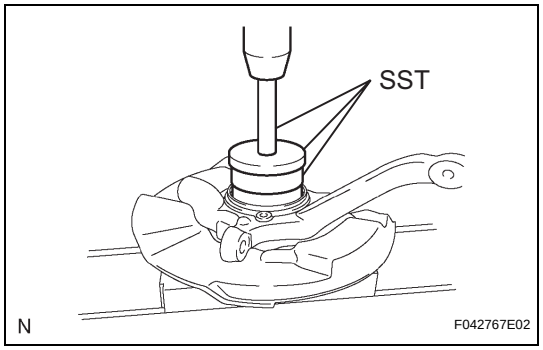
3. INSTALL FRONT AXLE HUB

(a) Apply MP grease to a new O-ring.
(b) Install the new O-ring onto the axle hub.
(c) Install the dust cover and axle hub onto the steering knuckle with the 4 bolts.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)



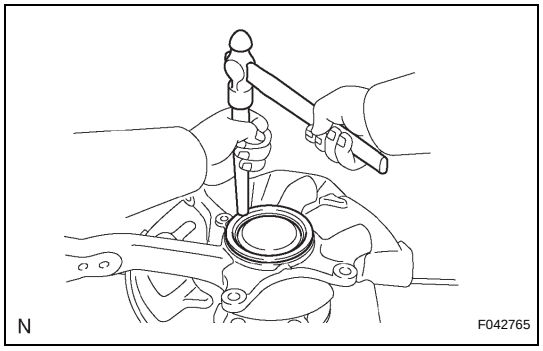
4. INSTALL FRONT WHEEL ADJUSTING NUT (for Pre-Runner)

(a) Using SST, install a new front wheel adjusting nut.
SST 09318-12010
Torque: 275 N*m (2,804 kgf*cm, 203 ft.*lbf)



5. INSTALL FRONT AXLE HUB OIL SEAL (for 4WD)

(a) Using SST and a press, install a new front axle hub oil seal.
SST 09527-17011, 09950-70010 (09951-07100), 09951-01000



6. INSTALL KNUCKLE GREASE RETAINER CAP (for Pre-Runner)

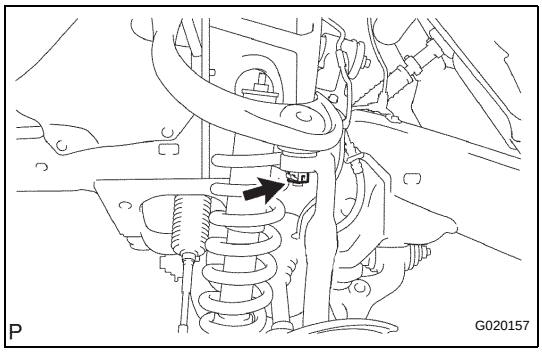
(a) Using a brass bar and a hammer, install a new knuckle grease retainer cap.
NOTICE:
Do not damage the knuckle grease retainer cap.

INSTALLATION

1. INSTALL FRONT AXLE HUB

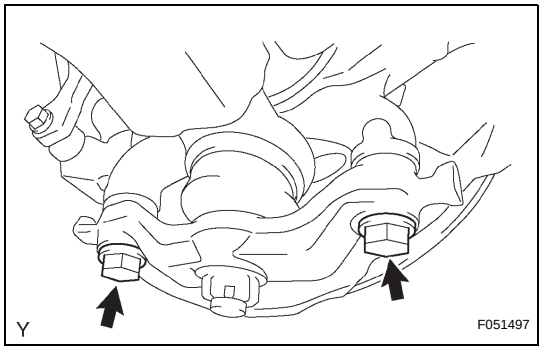
2. INSTALL FRONT SUSPENSION UPPER ARM

(a) Install a new nut and clip.
Torque: 110 N*m (1,122 kgf*cm, 81 ft.*lbf)



3. INSTALL FRONT SUSPENSION LOWER ARM

(a) Install the front suspension lower arm with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)

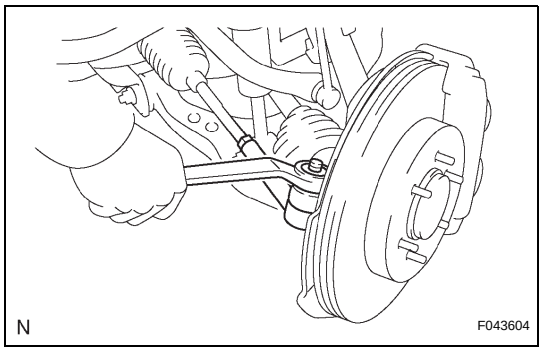


AH

4. INSTALL TIE ROD END SUB-ASSEMBLY

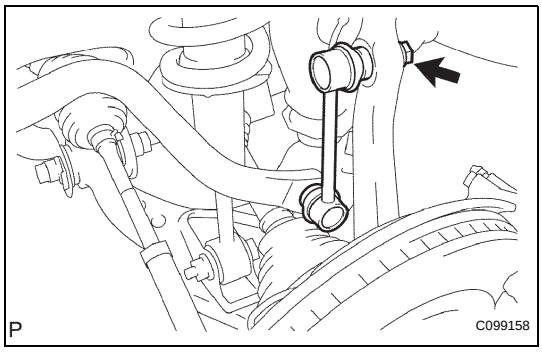
(a) Install the tie rod end with the nut.
Torque: 91 N*m (928 kgf*cm, 67 ft.*lbf)

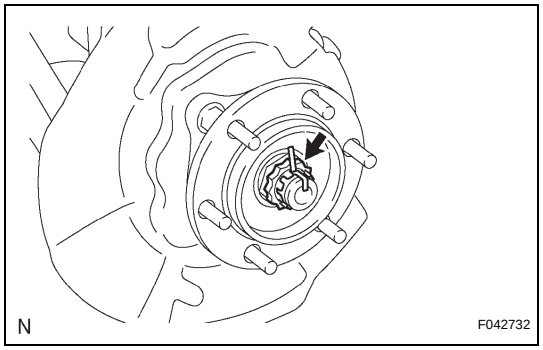
(b) Install a new cotter pin.
NOTICE:
If the holes in the cotter pin are not aligned, tighten the nut an additional 60°.



5. INSTALL FRONT STABILIZER LINK ASSEMBLY

(a) Install the stabilizer link onto the steering knuckle with the nut.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.





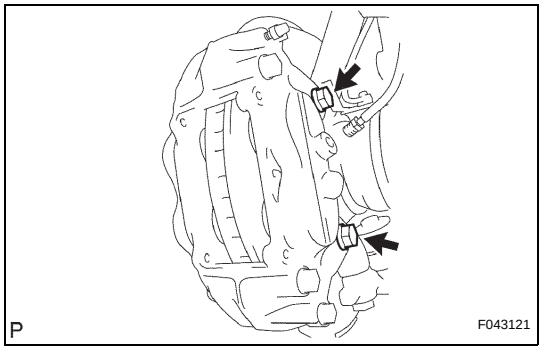
6. INSTALL FRONT AXLE HUB NUT (for 4WD)

(a) Install the hub nut.
Torque: 235 N*m (2,396 kgf*cm, 173 ft.*lbf)

(b) Install the adjusting cap and cotter pin.

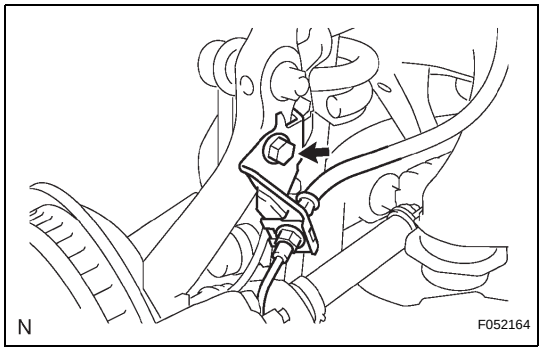
7. INSTALL FRONT AXLE HUB GREASE CAP (for 4WD)

8. INSTALL FRONT DISC

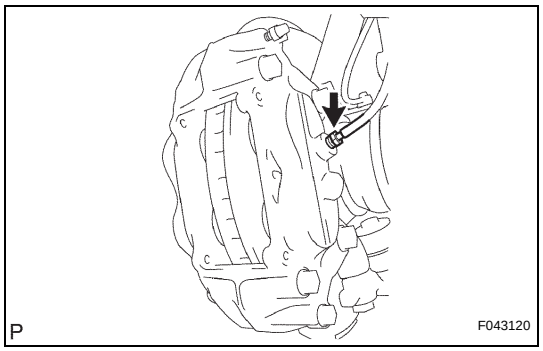


9. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY

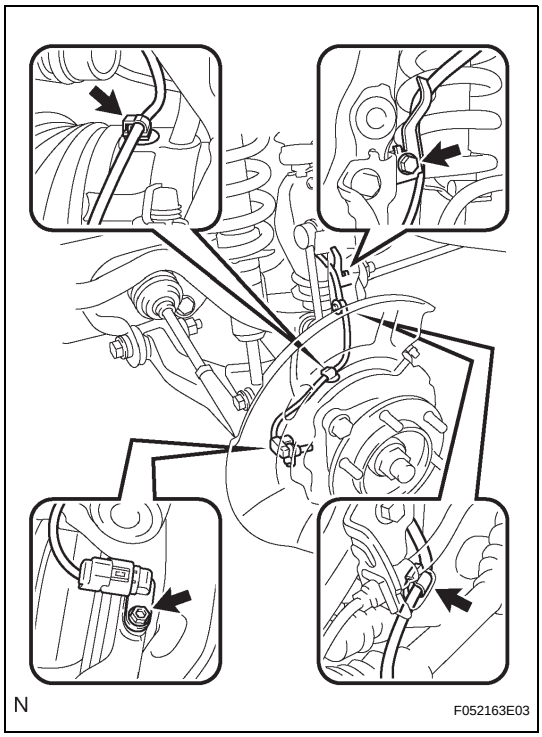
(a) Install the front disc brake caliper with the 2 bolts.
Torque: 123 N*m (1,254 kgf*cm, 91 ft.*lbf)



(b) Install the brake tube bracket onto the steering knuckle with the bolt.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



(c) Using SST, connect the brake tube to the disc brake cylinder.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

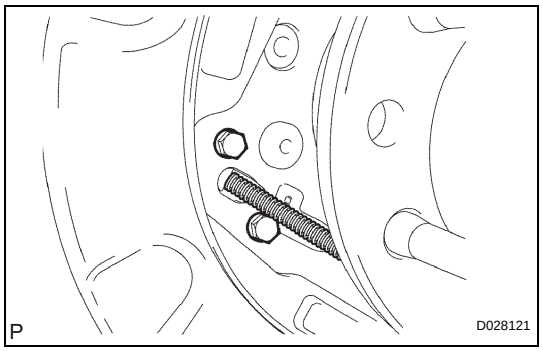


10. **INSTALL FRONT SPEED SENSOR**
    (a) Install the speed sensor wire harness onto the steering knuckle with the bolt.
    Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
    (b) Engage the 2 clips.
    (c) Install the speed sensor with the bolt.
    Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
11. **INSTALL FRONT WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
13. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
14. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
15. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
16. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
17. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
18. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
19. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
20. **CHECK FOR BRAKE FLUID LEAKAGE**
21. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    (See page BC-103)
22. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    (See page BC-7)
23. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-7)

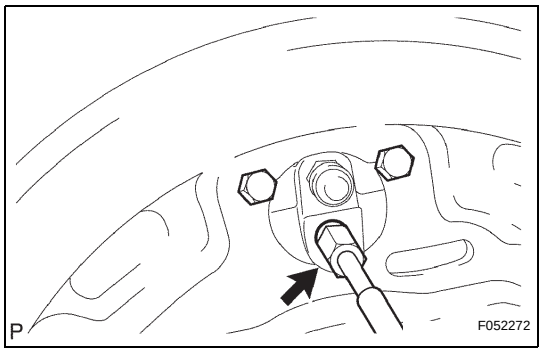
AH

REMOVAL

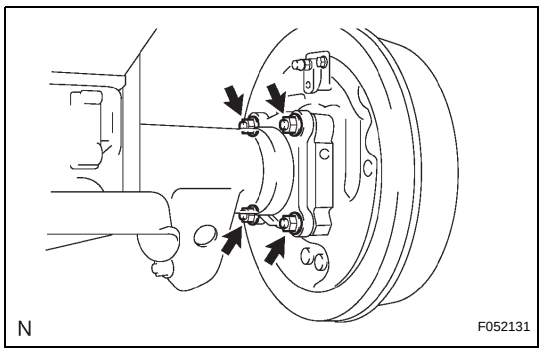
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR WHEEL**
3. **DRAIN BRAKE FLUID**
4. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-68)**
5. **REMOVE FRONT BRAKE SHOE (See page BR-68)**
6. **REMOVE REAR BRAKE SHOE (See page BR-69)**
7. **REMOVE REAR SPEED SENSOR (See page BC-304)**
8. **SEPARATE PARKING BRAKE CABLE ASSEMBLY NO. 3**
   (a) Remove the 2 bolts and disconnect the parking brake cable from the backing plate.

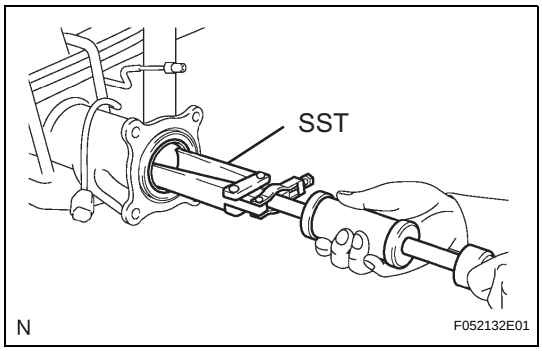


9. **SEPARATE REAR BRAKE TUBE NO. 8**
   (a) Using SST, separate the brake tube, and use a container to catch the brake fluid as it flows out.
   SST 09023-00101



10. **REMOVE REAR AXLE SHAFT WITH BACKING PLATE**
    (a) Remove the 4 nuts and rear axle shaft with backing plate.
    (b) Remove the O-ring.

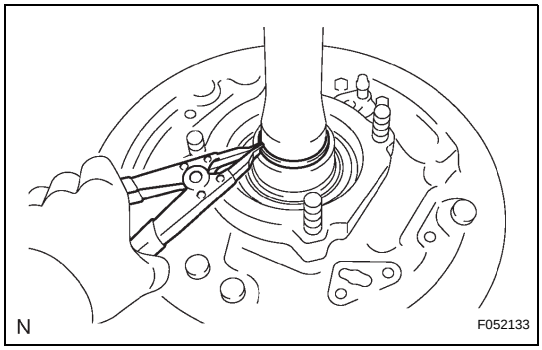




11. REMOVE REAR AXLE SHAFT OIL SEAL

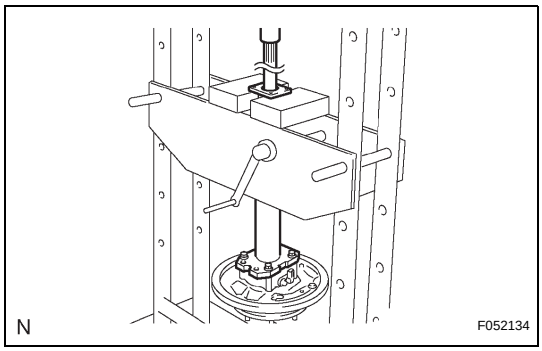
(a) Using SST, remove the oil seal.
SST 09308-00010

DISASSEMBLY



1. REMOVE REAR AXLE SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring.



2. REMOVE REAR AXLE SHAFT

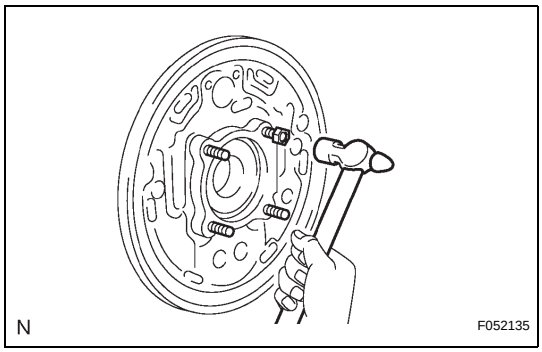
(a) Using SST and press, remove the rear axle shaft.
SST 09521-25011, 09521-25021

3. REMOVE REAR AXLE BEARING RETAINER INNER

(a) Remove the rear axle bearing retainer inner from the rear axle bearing.

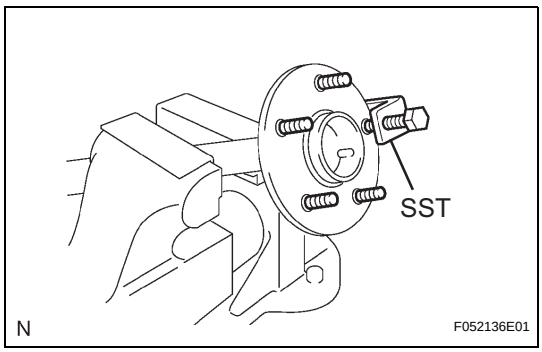
4. REMOVE REAR AXLE SHAFT WASHER

(a) Remove the rear axle shaft washer from the rear axle bearing.



5. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY

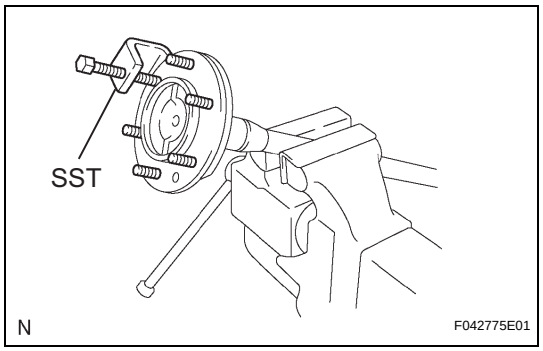
(a) Attach the 4 nuts to the rear axle housing bolts.
(b) Using a hammer, remove the 4 rear axle housing bolts and rear axle bearing.
NOTICE:
Do not reuse the nuts previously removed from the vehicle.



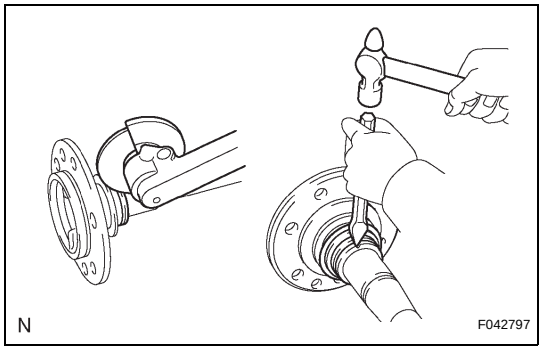
6. REMOVE REAR AXLE HUB BOLT

(a) for 2WD:
(1) Using SST, remove the 5 hub bolts.
SST 09650-17011
(b) Remove the deflector and deflector gasket from the rear axle shaft.

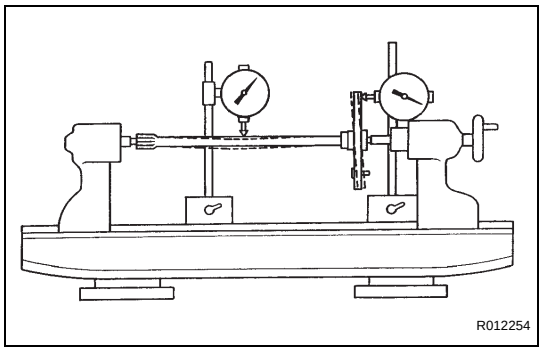
AH



(c) for 4WD and Pre-Runner:
(1) Using SST, remove the 6 hub bolts.
SST 09650-17011
(d) Remove the deflector and deflector gasket from the rear axle shaft.

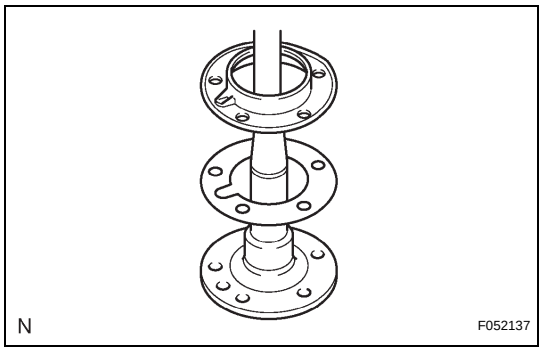


7. REMOVE REAR AXLE BEARING OIL SEAL
(a) Grind the rear axle bearing inner race surface using a grinder, and then chisel them out with a chisel.
(b) Remove the rear axle shaft oil seal from the rear axle shaft.



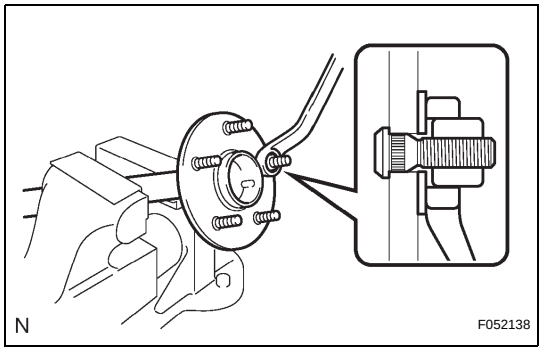
INSPECTION

1. INSPECT REAR AXLE SHAFT
(a) Using a dial indicator, measure the runout of the shaft and flange.
Maximum runout:
Shaft runout: 1.5 mm (0.0591 in.)
Flange runout: 0.05 mm (0.0020 in.)
If the rear axle shaft or flange is damaged or worn, or the runout is greater than the maximum, replace the rear axle shaft.



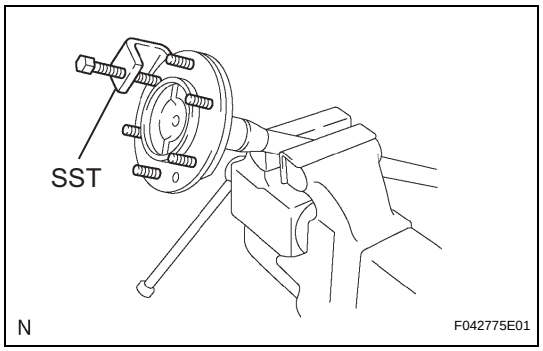
REASSEMBLY

1. INSTALL REAR AXLE HUB BOLT
(a) for 2WD:
(1) Install a new deflector gasket and deflector onto the rear axle shaft.
HINT:
Make sure that the deflector and deflector gasket are installed in the correct direction shown in the illustration.

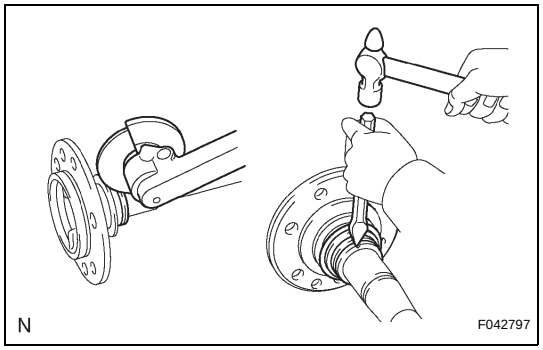


(2) Install the 5 bolts through the axle hub.
(3) Install a washer plate, as shown in the illustration, through the hub bolt, and install the hub bolt by tightening the hub nut.

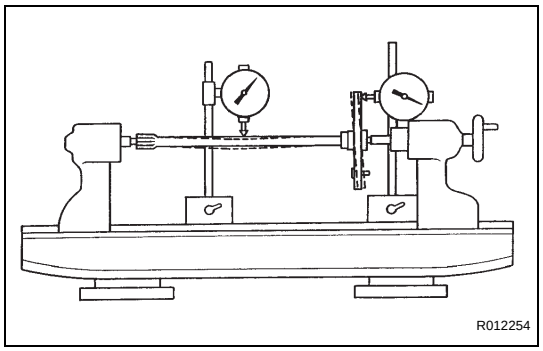
AH



(c) for 4WD and Pre-Runner:
(1) Using SST, remove the 6 hub bolts.
SST 09650-17011
(d) Remove the deflector and deflector gasket from the rear axle shaft.

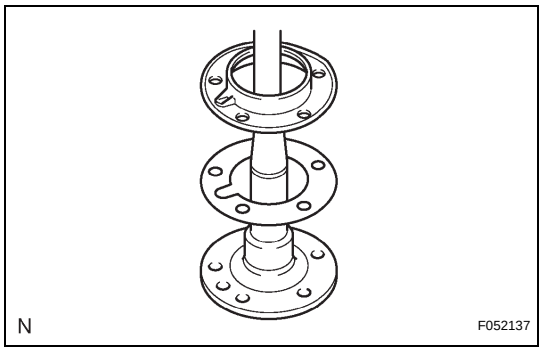


7. REMOVE REAR AXLE BEARING OIL SEAL
(a) Grind the rear axle bearing inner race surface using a grinder, and then chisel them out with a chisel.
(b) Remove the rear axle shaft oil seal from the rear axle shaft.



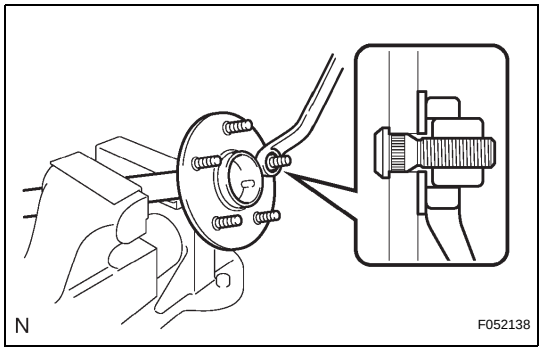
INSPECTION

1. INSPECT REAR AXLE SHAFT
(a) Using a dial indicator, measure the runout of the shaft and flange.
Maximum runout:
Shaft runout: 1.5 mm (0.0591 in.)
Flange runout: 0.05 mm (0.0020 in.)
If the rear axle shaft or flange is damaged or worn, or the runout is greater than the maximum, replace the rear axle shaft.



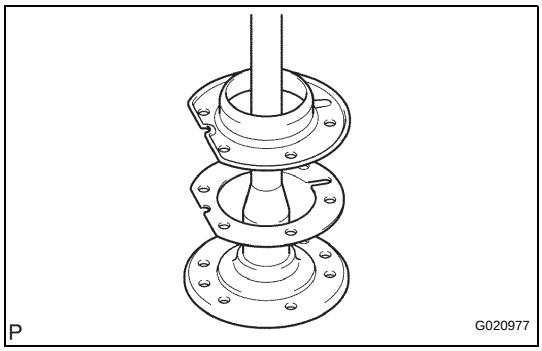
REASSEMBLY

1. INSTALL REAR AXLE HUB BOLT
(a) for 2WD:
(1) Install a new deflector gasket and deflector onto the rear axle shaft.
HINT:
Make sure that the deflector and deflector gasket are installed in the correct direction shown in the illustration.

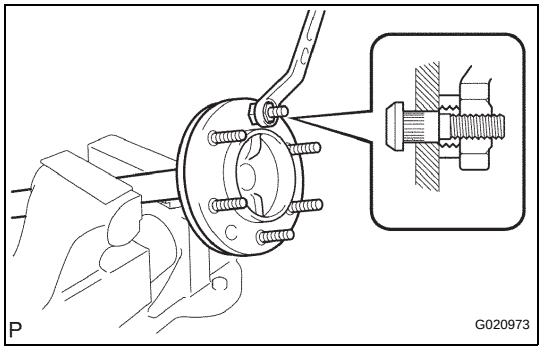


(2) Install the 5 bolts through the axle hub.
(3) Install a washer plate, as shown in the illustration, through the hub bolt, and install the hub bolt by tightening the hub nut.

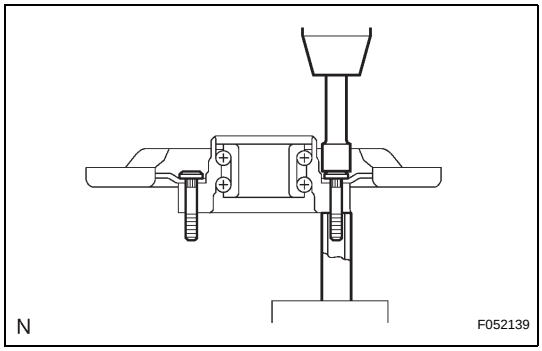
AH



(b) for 4WD and Pre-Runner:
(1) Install a new deflector gasket and deflector onto the rear axle shaft.
HINT:
Align the 2 notches.



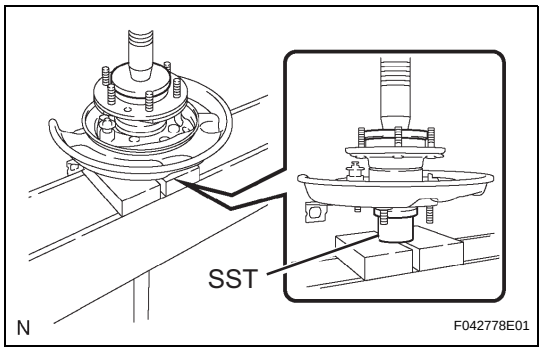
(2) Install the 6 bolts through the axle hub.
(3) Install the washer plate, as shown in the illustration, through the hub bolt, and install the hub bolt by tightening the hub nut.



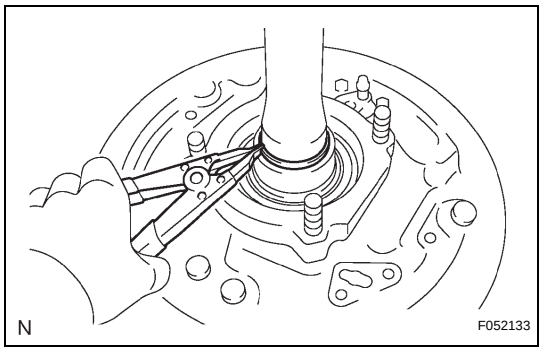
2. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY
(a) Position the backing plate on the rear axle bearing, and install the 4 parking brake plates onto the rear axle housing bolts using 2 socket wrenches and a press.

3. INSTALL REAR AXLE SHAFT WASHER
(a) Install the rear axle shaft plate washer onto the rear axle shaft.

4. INSTALL REAR AXLE BEARING RETAINER INNER
(a) Install a new rear axle bearing retainer inner onto the rear axle shaft.



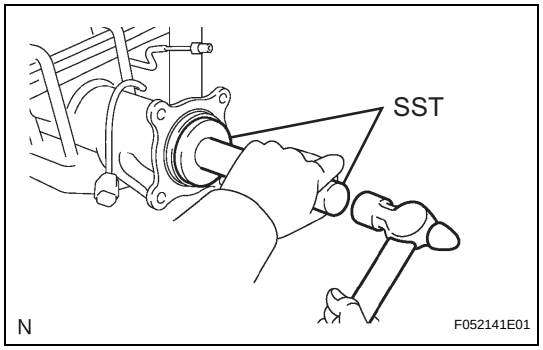
5. INSTALL REAR AXLE SHAFT
(a) Using SST and a press, install the rear axle shaft onto the rear axle bearing.
SST 09521-25011



6. INSTALL REAR AXLE SHAFT SNAP RING

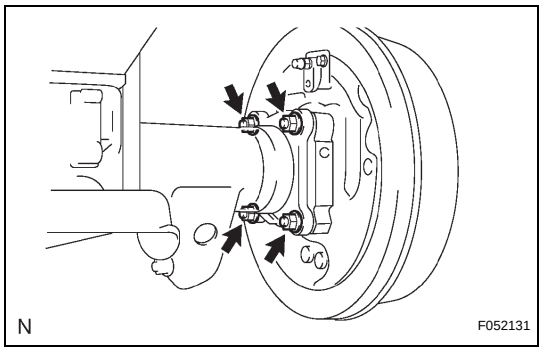
(a) Using a snap ring expander, install a new snap ring.

INSTALLATION



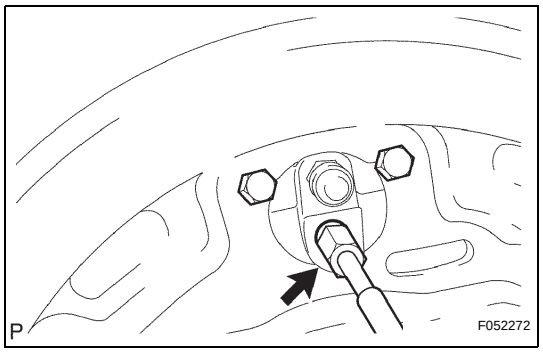
1. INSTALL REAR AXLE SHAFT OIL SEAL

(a) Using SST and a hammer, install a new oil seal.
SST 09950-60020 (09951-00770), 09950-70010 (09951-07150)



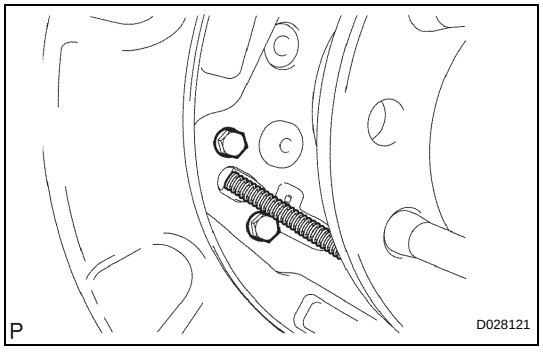
2. INSTALL REAR AXLE SHAFT WITH BACKING PLATE

(a) Install a new O-ring.
(b) Install the rear axle shaft with backing plate with the 4 nuts.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)



3. INSTALL REAR BRAKE TUBE NO. 8

(a) Using SST, connect the brake tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)



4. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 3

(a) Install the parking brake cable with the 2 bolts onto the backing plate.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

5. INSTALL REAR SPEED SENSOR (See page BC-304)

6. APPLY HIGH TEMPERATURE GREASE (See page BR-71)

7. INSTALL REAR BRAKE SHOE (See page BR-71)

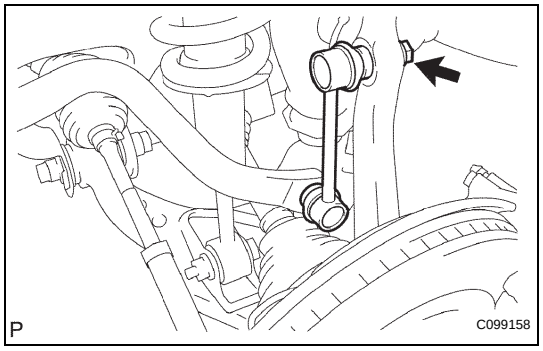
8. INSTALL FRONT BRAKE SHOE (See page BR-72)

AH

9. **INSPECT REAR DRUM BRAKE INSTALLATION (See page BR-73)**
10. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-73)**
11. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-74)**
12. **INSTALL REAR WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
14. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
15. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
16. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
17. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
18. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
19. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
20. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
21. **CHECK FOR BRAKE FLUID LEAKAGE**
22. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-1)**
23. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-1)**
24. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-2)**
25. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-2)**
26. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    (See page BC-103)
27. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    (See page BC-7)

REMOVAL

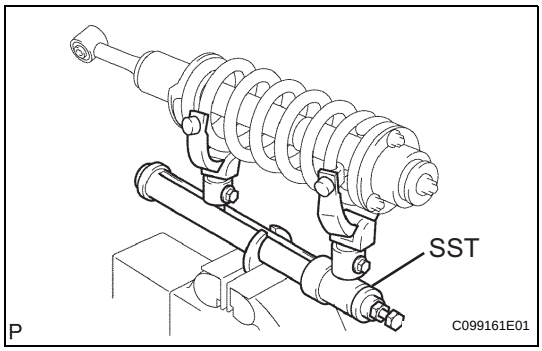
1. **REMOVE FRONT WHEELS**
2. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO. 1**
3. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Remove the nut and disconnect the stabilizer link from the steering knuckle.
   HINT:
   If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

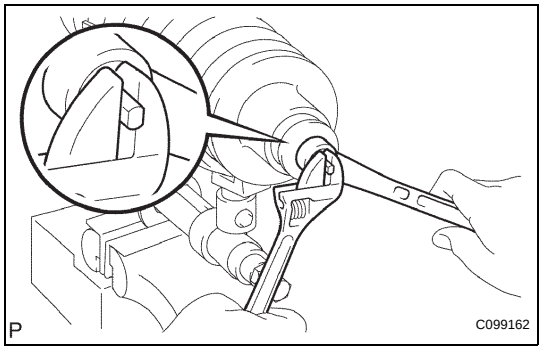


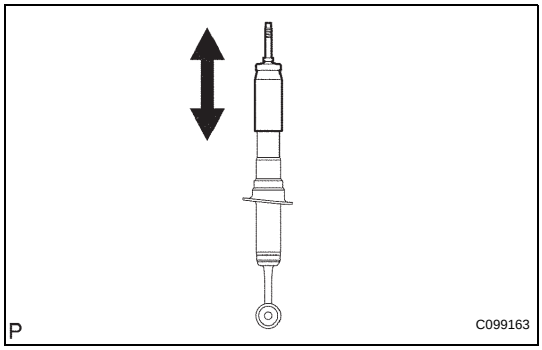
4. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
5. **REMOVE FRONT STABILIZER BRACKET NO. 1 LH (See page SP-50)**
6. **REMOVE FRONT STABILIZER BRACKET NO. 1 RH**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
7. **REMOVE FRONT STABILIZER BAR**
8. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page PS-54)**
9. **REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING**
   (a) Remove the bolt, nut and washer.

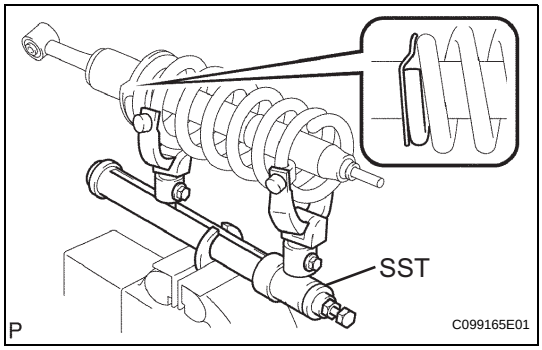
   (b) Remove the 3 nuts on the upper side of the front shock absorber with coil spring.
   (c) Remove the front shock absorber with coil spring.

SP









DISASSEMBLY

1. **REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT**
   (a) Using SST, compress the coil spring.
   SST 09727-30021 (09727-00010, 09727-00031), 09727-00060
   NOTICE:
   Do not use an impact wrench. It will damage SST.

   (b) While holding the shock absorber rod, remove the nut.
   NOTICE:
   Do not use an impact wrench. It will damage the shock absorber rod.
2. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
3. **REMOVE FRONT SHOCK ABSORBER CUSHION NO. 1**
4. **REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY**
5. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
6. **REMOVE FRONT COIL SPRING**

INSPECTION

1. **INSPECT SHOCK ABSORBER ASSEMBLY FRONT**
   (a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual sound during operation.
   If there is any abnormality, replace the shock absorber front with a new one.
   NOTICE:
   When disposing of the shock absorber front, see DISPOSAL on page SP-24.

REASSEMBLY

1. **INSTALL FRONT COIL SPRING**
   (a) Using SST, compress the front coil spring.
   SST 09727-30021 (09727-00010, 09727-00031), 09727-00060
   NOTICE:
   Do not use an impact wrench. It will damage SST.
   (b) Install the front coil spring onto the shock absorber front.
   HINT:
   Fit the lower end of the front coil spring into the gap of the spring lower seat.
2. **INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER**

3. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

4. INSTALL FRONT SHOCK ABSORBER CUSHION NO. 1

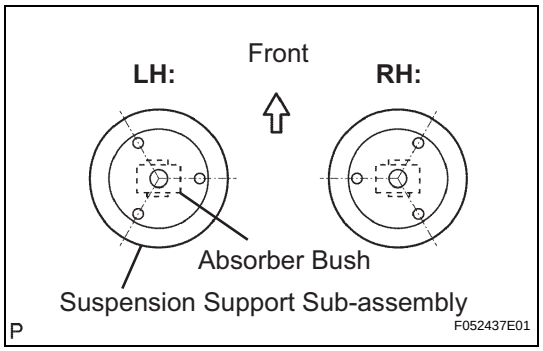
5. INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER

6. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Align the suspension support and the absorber bush as shown in the illustration.

(b) Fit and tighten a new lock nut.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
NOTICE:
Do not use an impact wrench. It will damage the shock absorber rod.

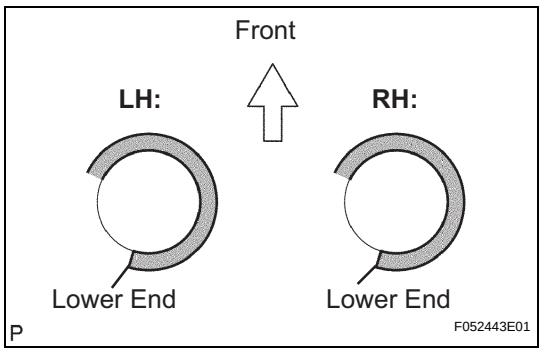
(c) Release the coil spring while checking the position of the suspension support.



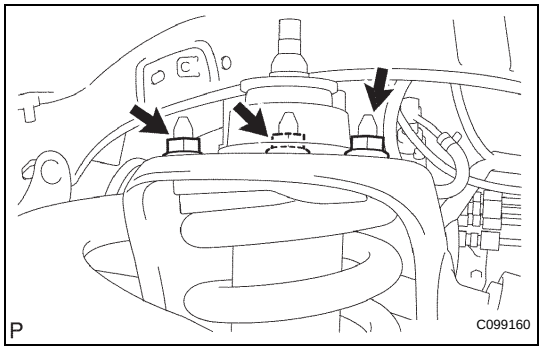
INSTALLATION

1. TEMPORARILY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

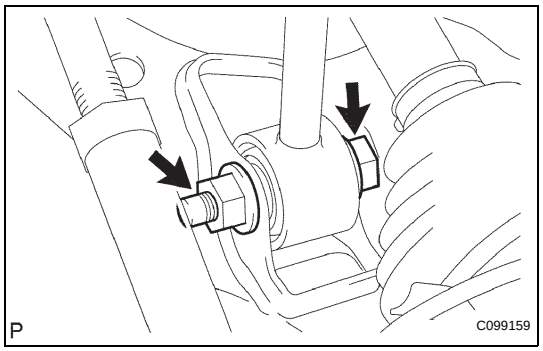
(a) Install the coil spring onto the body with the lower end of the coil spring facing the rear side of the vehicle.



(b) Install the 3 nuts onto the upper side of the front shock absorber with coil spring.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



(c) Temporarily tighten the bolt, nut and washer as shown in the illustration.



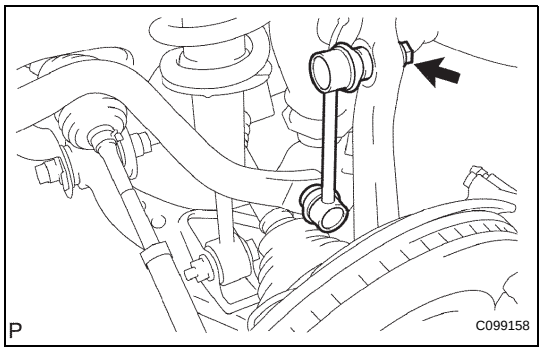
2. INSTALL TIE ROD END SUB-ASSEMBLY (See page PS-68)

3. INSTALL FRONT STABILIZER BAR

4. INSTALL FRONT STABILIZER BRACKET NO. 1 LH (See page SP-51)

5. INSTALL FRONT STABILIZER BRACKET NO. 1 RH
HINT:
The installation procedure for the RH side is the same as that for the LH side.

SP



6. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

(a) Connect the stabilizer link to the steering knuckle with the nut.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

7. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

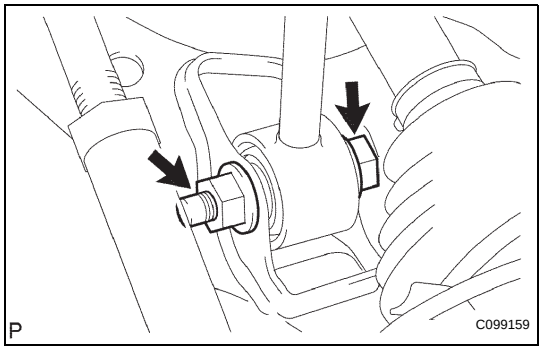
HINT:
The installation procedure for the RH side is the same as that for the LH side.

8. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO. 1
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

9. INSTALL FRONT WHEELS
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

10. STABILIZE SUSPENSION

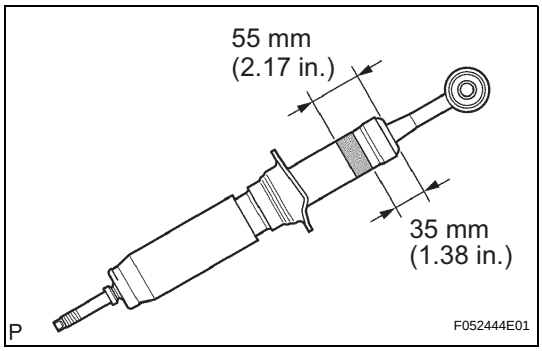
(a) Jack down the vehicle.
(b) Bounce the vehicle up and down several times to stabilize the suspension.



11. FULLY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Fully tighten the nut.
Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

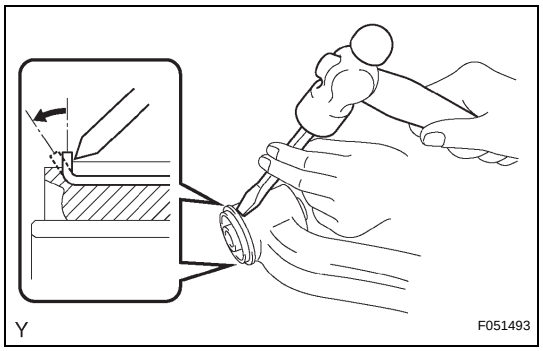
12. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-7)



DISPOSAL

1. DISPOSE OF SHOCK ABSORBER ASSEMBLY FRONT

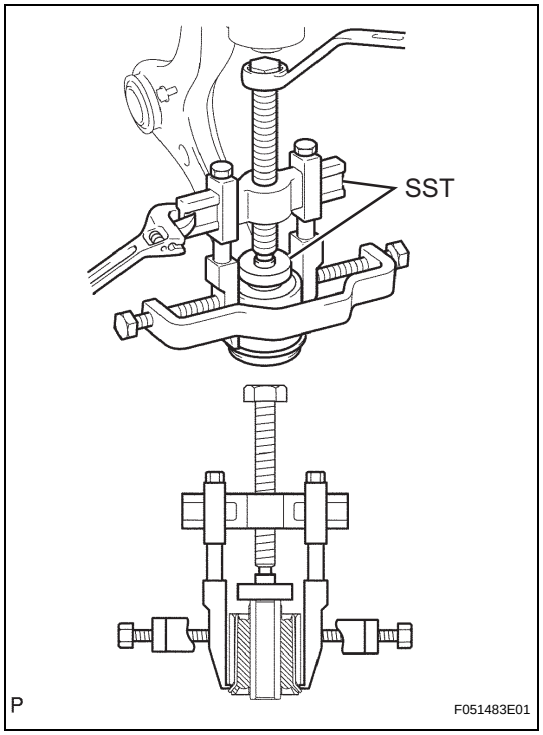
(a) Fully extend the shock absorber piston rod, and fix it at an angle in a vise or similar tool.
(b) Using a drill or similar tool, slowly make a hole in the shaded area shown in the illustration, and discharge the gas inside.
CAUTION:
- **The gas is colorless, odorless and harmless.**
- **Since the discharged gas may cause chips to scatter, cover the drill with a shop rag when making the hole.**



DISASSEMBLY

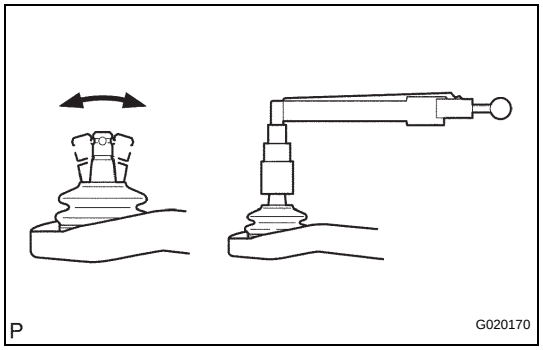
1. REMOVE FRONT SUSPENSION UPPER ARM BUSH

(a) Using a hammer and chisel, raise the flange of the bushing diagonally as shown in the illustration.



(b) Using SST, remove the upper arm bush.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00380)

(c) The removal procedure for the rear side is the same as that for the front side.



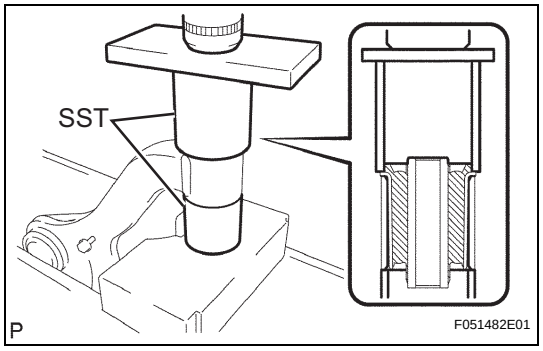
INSPECTION

1. INSPECT FRONT SUSPENSION UPPER ARM

(a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.
Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf) or less

(c) Check for any cracks and grease leakage on the ball joint dust cover.



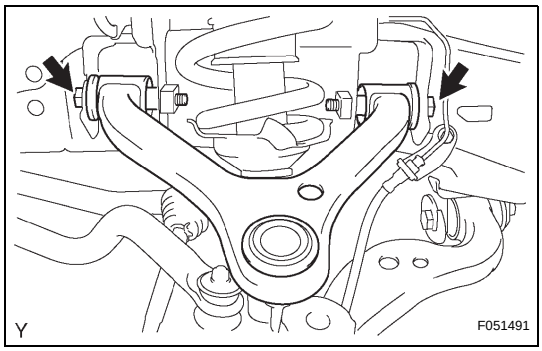
REASSEMBLY

1. INSTALL FRONT SUSPENSION UPPER ARM BUSH

(a) Using SST and a press, install a new upper arm bush (front side).
SST 09631-20081, 09710-04081

(b) The installation procedure for the rear side is the same as that for the front side.

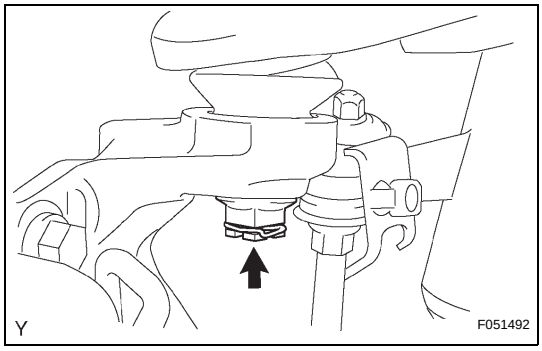
SP



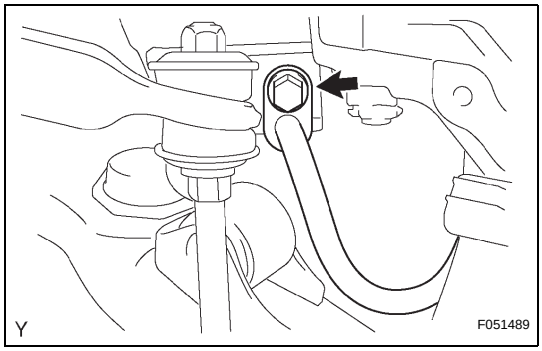
INSTALLATION

1. TEMPORARILY TIGHTEN FRONT SUSPENSION UPPER ARM

(a) Install the front suspension upper arm, and temporarily tighten the 2 bolts.



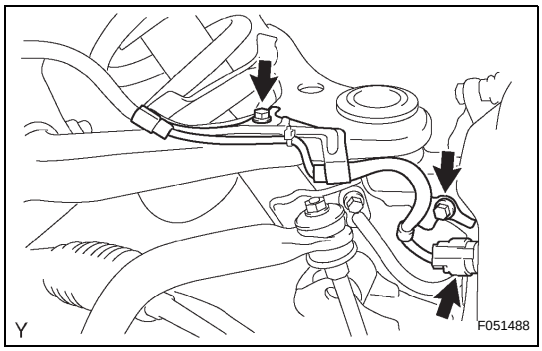
(b) Install a new nut and a new clip.
Torque: 110 N*m (1,122 kgf*cm, 81 ft.*lbf)



2. INSTALL FRONT FLEXIBLE HOSE

(a) Install the front flexible hose with the bolt.
Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf)

SP



3. INSTALL SKID CONTROL SENSOR WIRE

(a) Install the skid control sensor wire with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

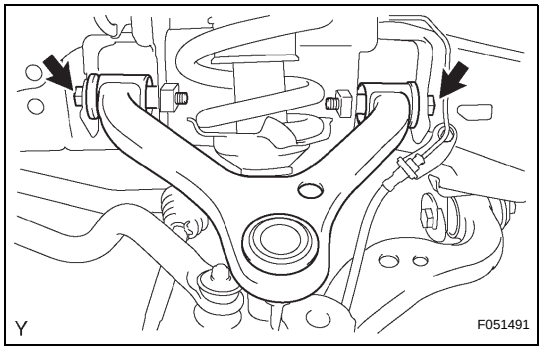
(b) Connect the speed sensor connector.

4. INSTALL FRONT WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

5. STABILIZE SUSPENSION

(a) Jack down the vehicle.

(b) Bounce the vehicle up and down several times to stabilize the suspension.

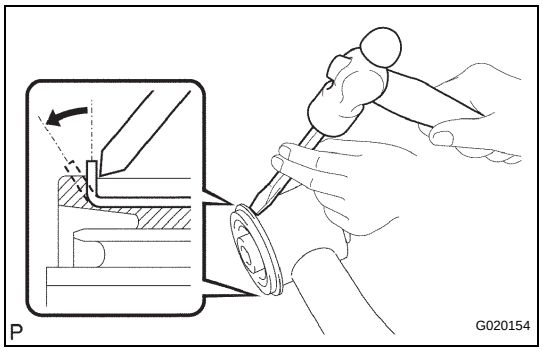


6. FULLY TIGHTEN FRONT SUSPENSION UPPER ARM

(a) Fully tighten the 2 bolts.
Torque: 82 N*m (836 kgf*cm, 60 ft.*lbf)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

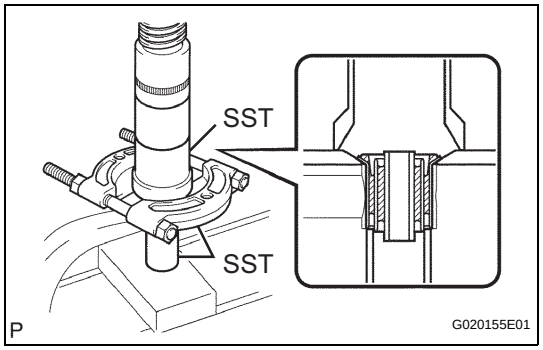
8. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-2)



DISASSEMBLY

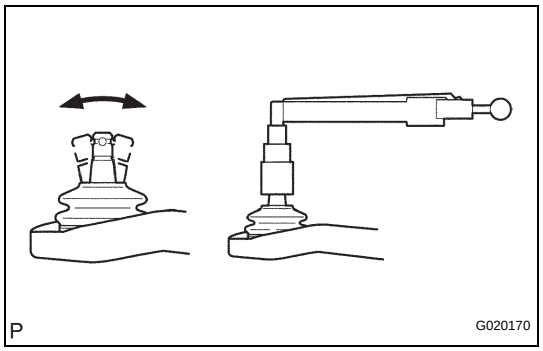
1. REMOVE FRONT SUSPENSION UPPER ARM BUSH

(a) Using a hammer and chisel, raise the flange of the bushing diagonally as shown in the illustration.



(b) Using SST and a press, remove the front suspension upper arm bush LH (front side).
SST 09613-26010, 09710-22021 (09710-01031), 09950-00020

(c) The removal procedure for the rear side is the same as that for the front side.



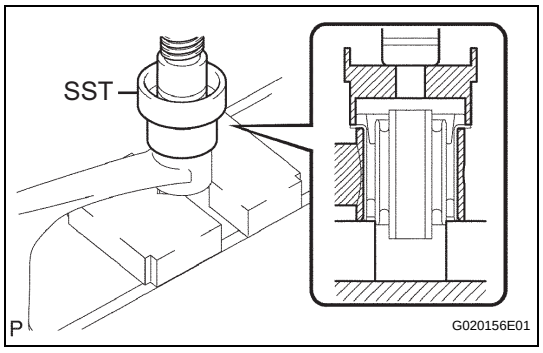
INSPECTION

1. INSPECT FRONT SUSPENSION UPPER ARM

(a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.
Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf) or less

(c) Check for any cracks and grease leakage on the ball joint dust cover.

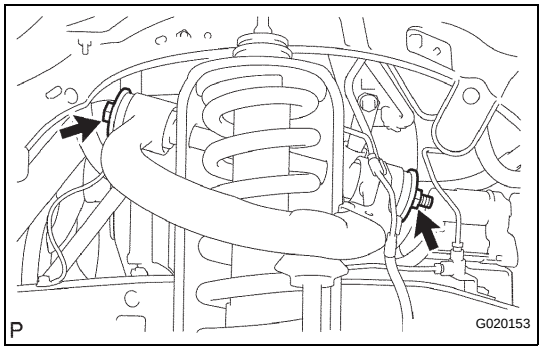


REASSEMBLY

1. INSTALL FRONT SUSPENSION UPPER ARM BUSH

(a) Using SST and a press, install a new upper arm bush (front side).
SST 09710-26010 (09710-05061)

(b) The installation procedure for the rear side is the same as that for the front side.

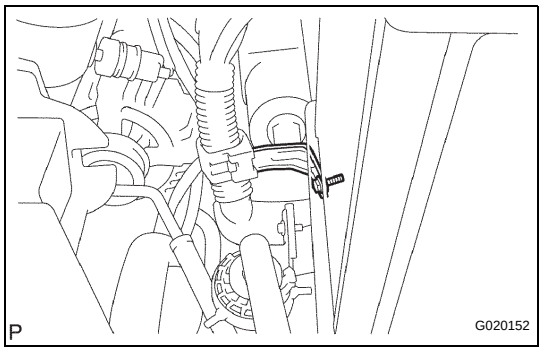


INSTALLATION

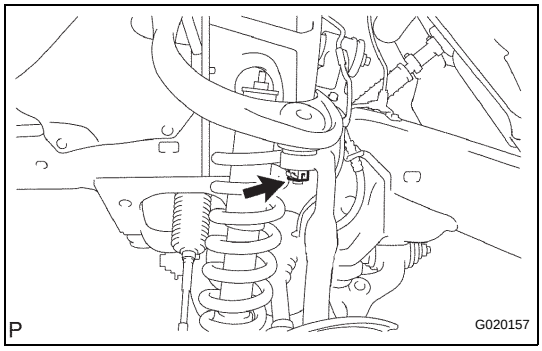
1. TEMPORARILY TIGHTEN FRONT SUSPENSION UPPER ARM

(a) Install the front suspension upper arm, and temporarily tighten the bolt, 2 washers and nut.

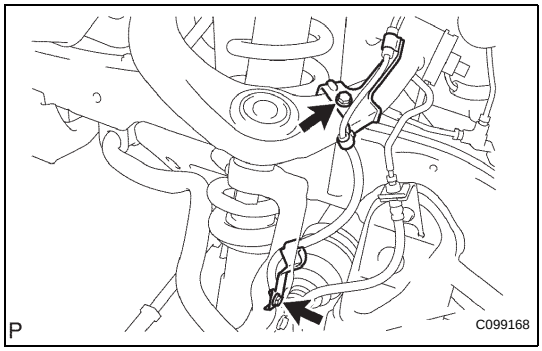
SP



(b) Install the bracket with the bolt.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)



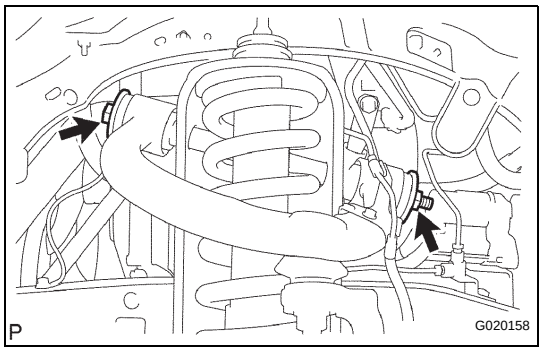
(c) Install a new nut and a new clip.
Torque: 110 N*m (1,122 kgf*cm, 81 ft.*lbf)



2. INSTALL SKID CONTROL SENSOR WIRE
(a) Install the skid control sensor wire with the 2 bolts.
Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)

3. INSTALL FRONT WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

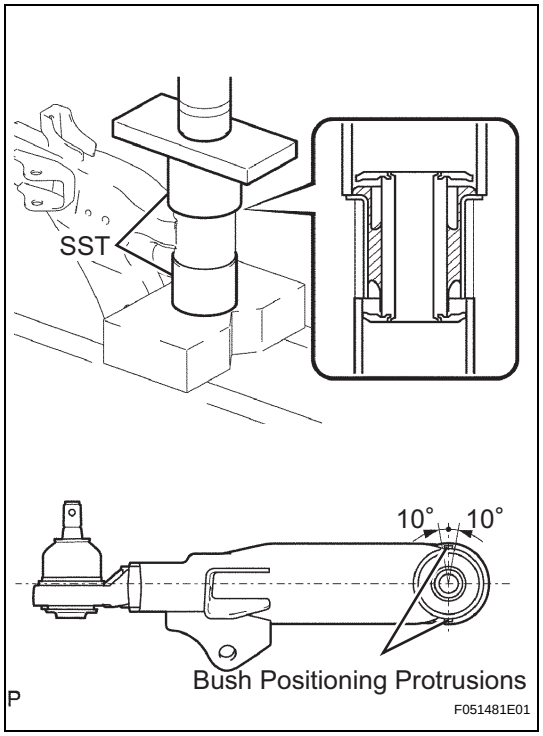
4. STABILIZE SUSPENSION
(a) Jack down the vehicle.
(b) Bounce the vehicle up and down several times to stabilize the suspension.



5. FULLY TIGHTEN FRONT SUSPENSION UPPER ARM
(a) Fully tighten the nut.
Torque: 115 N*m (1,173 kgf*cm, 85 ft.*lbf)

6. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-7)

SP



REASSEMBLY

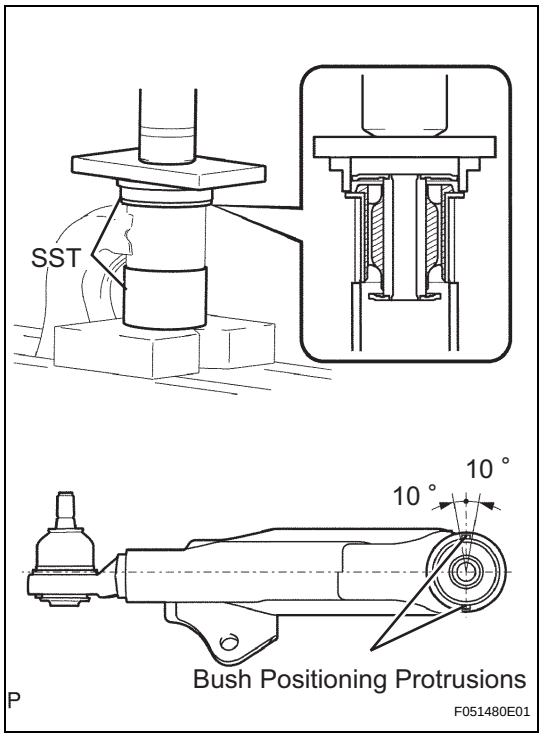
1. INSTALL FRONT LOWER ARM BUSH NO. 1

(a) Using SST, a press and steel plate, install a new lower arm bush.

SST 09631-12090, 09631-32020

NOTICE:

Push the lower arm bush in until the bush positioning protrusions come to the positions shown in the illustration.



2. INSTALL FRONT LOWER ARM BUSH NO. 2

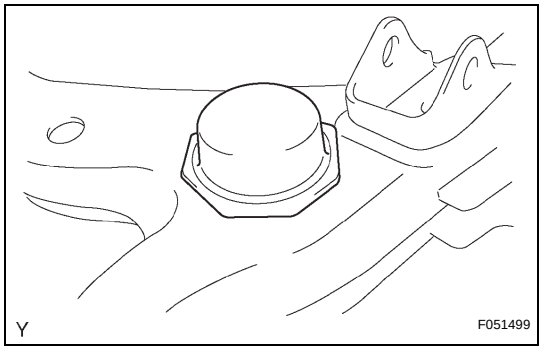
(a) Using SST, a press and steel plate, install a new lower arm bush.

SST 09502-12010, 09631-12090

NOTICE:

Push the lower arm bush in until the bush positioning protrusions come to the positions shown in the illustration.

SP

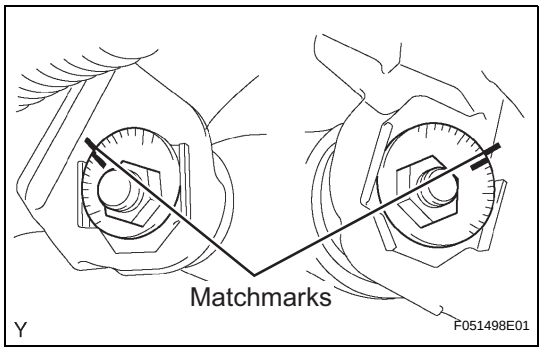


INSTALLATION

1. INSTALL FRONT SPRING BUMPER

(a) Install the front spring bumper.

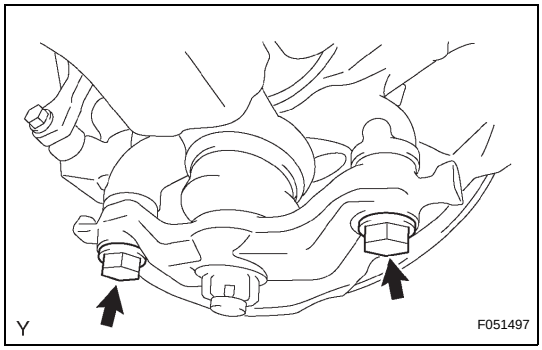
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



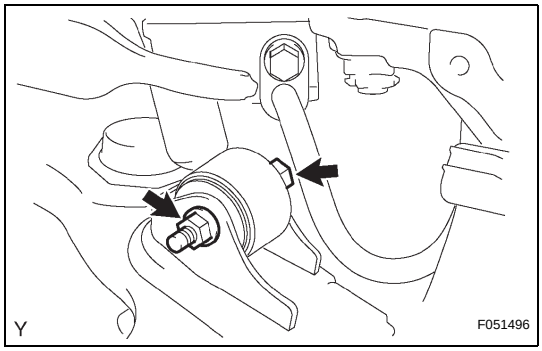
2. TEMPORARILY TIGHTEN FRONT SUSPENSION LOWER ARM

(a) Align the matchmarks on the 2 camber adjust cams and temporarily tighten the 2 nuts.

(b) Install the front lower ball joint attachment LH, a new nut and a new cotter pin.
Torque: 140 N*m (1,428 kgf*cm, 103 ft.*lbf)



(c) Install the front lower ball joint attachment LH with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)



3. TEMPORARILY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install the front shock absorber with coil spring, bolt and washer, and temporarily tighten the nut.

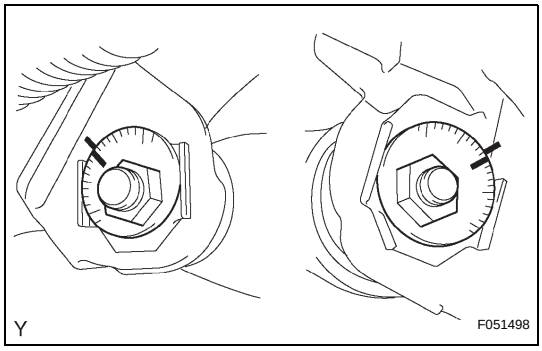
4. INSTALL FRONT STABILIZER LINK ASSEMBLY (See page SP-48)

5. INSTALL FRONT WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

6. STABILIZE SUSPENSION

(a) Jack down the vehicle.

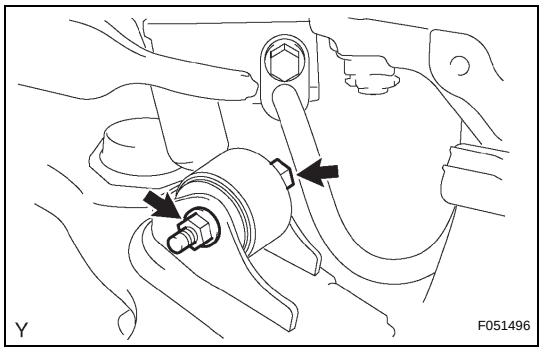
(b) Bounce the vehicle up and down several times to stabilize the suspension.



7. FULLY TIGHTEN FRONT SUSPENSION LOWER ARM

(a) Fully tighten the 2 nuts.
Torque: 210 N*m (2,141 kgf*cm, 155 ft.*lbf)

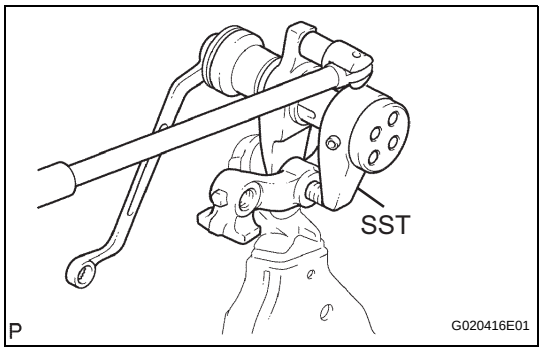
SP



8. FULLY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Fully tighten the nut.
Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

9. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-2)

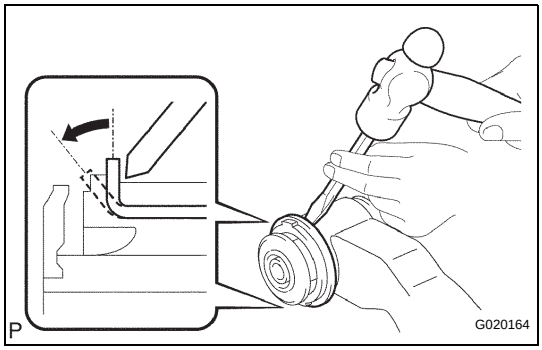


(d) Remove the cotter pin and the nut.
(e) Using SST, remove the front lower ball joint attachment LH.
SST 09628-00011

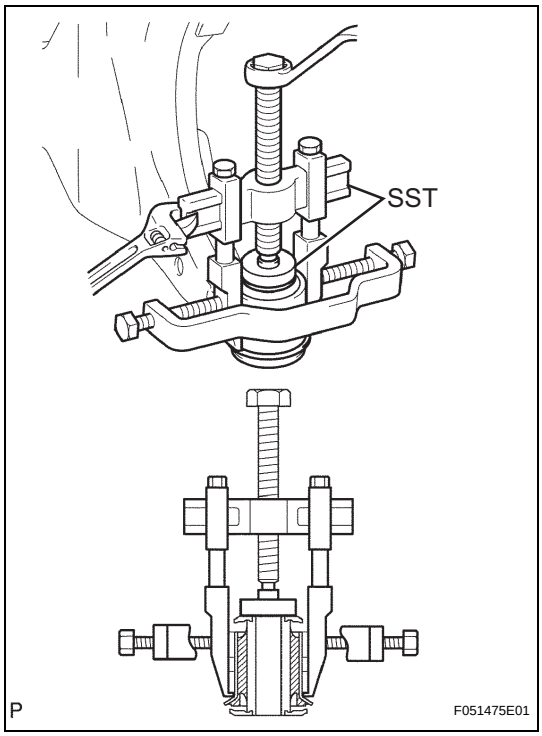
DISASSEMBLY

1. REMOVE FRONT LOWER ARM BUSH NO. 1

(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.

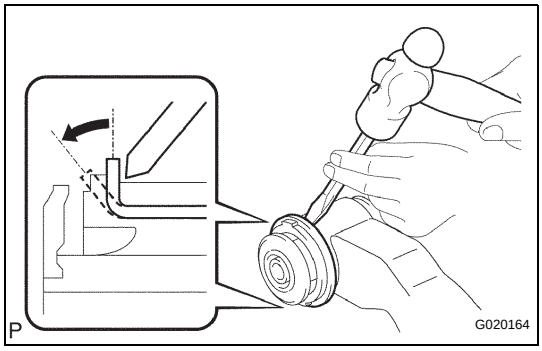


(b) Using SST, remove the lower arm bush.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00470)

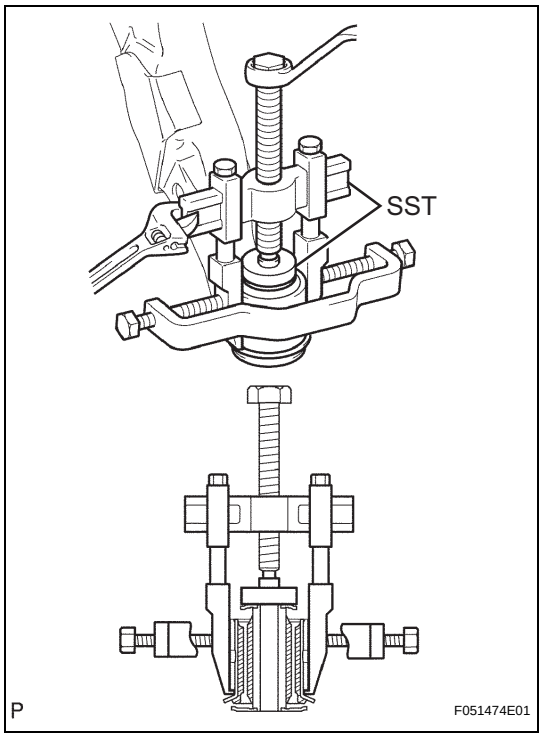


2. REMOVE FRONT LOWER ARM BUSH NO. 2

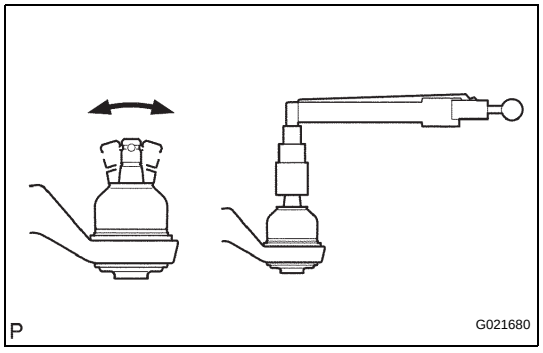
(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.



SP



(b) Using SST, remove the lower arm bush.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00520)



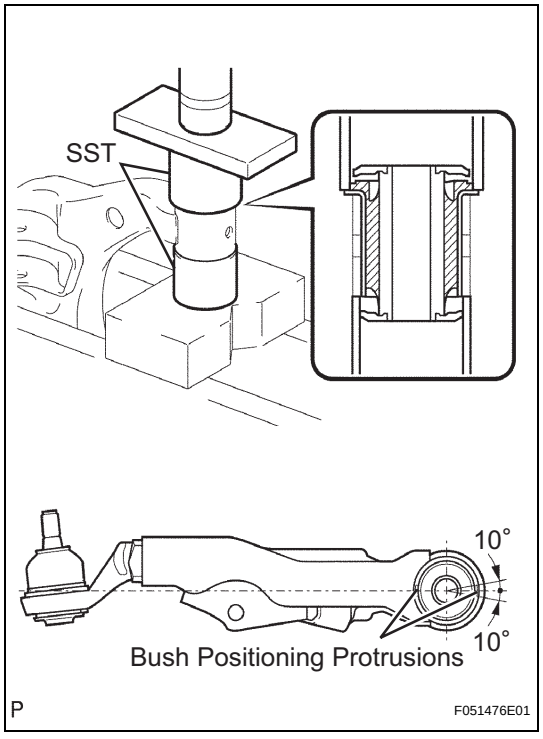
INSPECTION

1. INSPECT FRONT SUSPENSION LOWER ARM

(a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf) or less

(c) Check for any cracks and grease leakage on the ball joint dust cover.

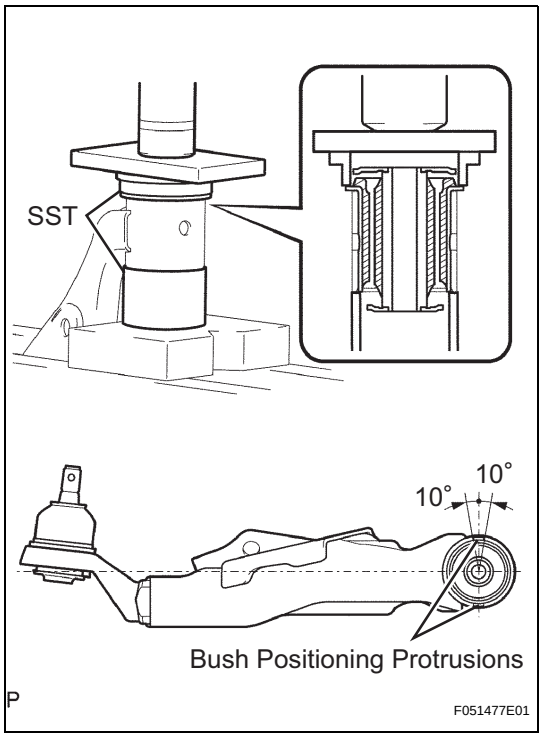


REASSEMBLY

1. INSTALL FRONT LOWER ARM BUSH NO. 1

(a) Install a new lower arm bush using SST, a press and steel plate.
SST 09631-12090, 09631-32020
NOTICE:
Push the lower arm bush in until the bush positioning protrusions come to the positions shown in the illustration.

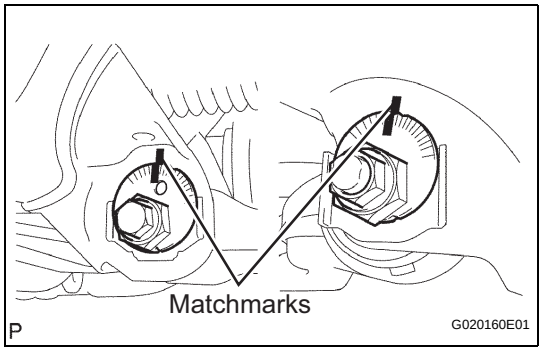
SP



2. INSTALL FRONT LOWER ARM BUSH NO. 2

(a) Install a new lower arm bush using SST, a press and steel plate.
SST 09502-12010, 09631-12090
NOTICE:
Push the lower arm bush in until the bush positioning protrusions come to the positions shown in the illustration.

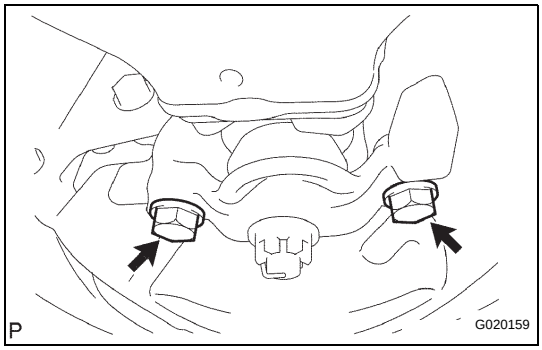
INSTALLATION



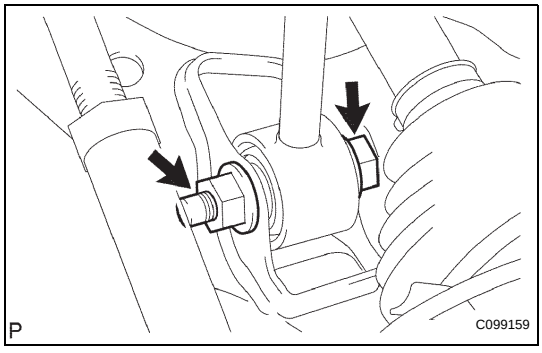
1. TEMPORARILY TIGHTEN FRONT SUSPENSION LOWER ARM

(a) Align the matchmarks on the camber adjust cam No. 2 and toe adjust cam. Temporarily tighten the bolt and the nut.

(b) Install the front lower ball joint attachment, a new nut and a new cotter pin.
Torque: 140 N*m (1,428 kgf*cm, 103 ft.*lbf)



(c) Install the front lower ball joint attachment with the 2 bolts.
Torque: 160 N*m (1,631 kgf*cm, 118 ft.*lbf)



2. TEMPORARILY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install the front shock absorber with coil spring, bolt and washer, and temporarily tighten the nut.

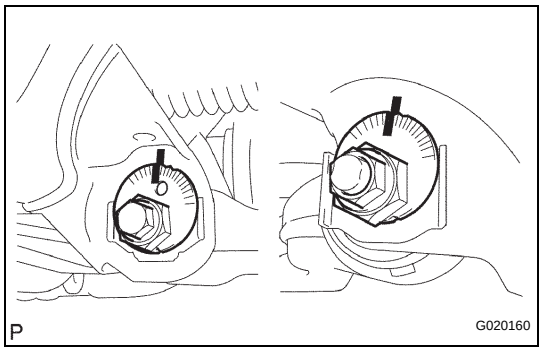
3. INSTALL FRONT WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

4. STABILIZE SUSPENSION

(a) Jack down the vehicle.

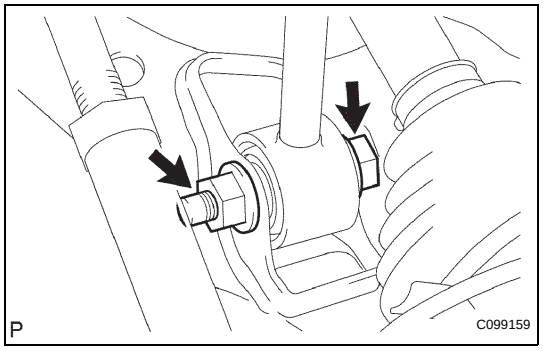
(b) Bounce the vehicle up and down several times to stabilize the suspension.

SP



5. FULLY TIGHTEN FRONT SUSPENSION LOWER ARM

(a) Fully tighten the bolt and the nut.
Torque: 135 N*m (1,377 kgf*cm, 100 ft.*lbf)



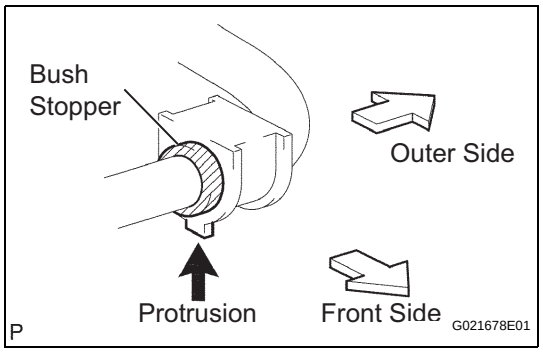
6. FULLY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Fully tighten the nut.
Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

7. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-7)

SP

INSTALLATION



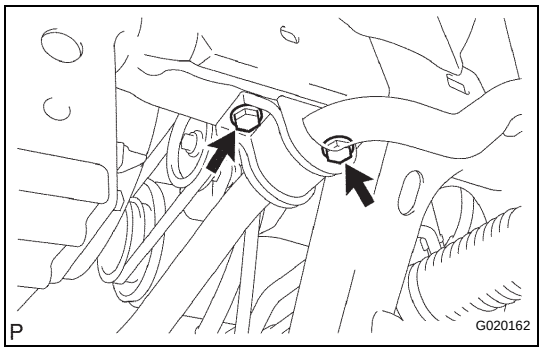
1. INSTALL FRONT STABILIZER BAR

2. INSTALL FRONT STABILIZER LOWER BRACKET BUSH LH

(a) Install the front stabilizer lower bracket bush.
HINT:
- Install the bush onto the inner side of the bush stopper on the stabilizer bar.
- Install the bush as the protrusion to be on the inner side of the vehicle.

3. INSTALL FRONT STABILIZER LOWER BRACKET BUSH RH

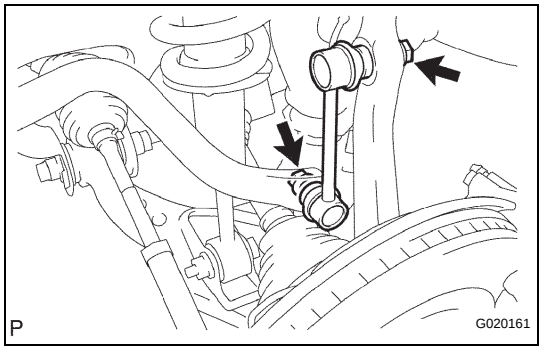
HINT:
The installation procedure for the RH side is the same as that for the LH side.



4. INSTALL FRONT STABILIZER BRACKET NO. 1 LH

(a) Install the front stabilizer bracket with the 2 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

5. INSTALL FRONT STABILIZER BRACKET NO. 1 RH
NOTICE:
The installation procedure for the RH side is the same as that for the LH side.



6. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

(a) Install the front stabilizer link assembly LH with the 2 nuts.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

7. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

8. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO. 1
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

9. INSTALL FRONT WHEELS
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

SP

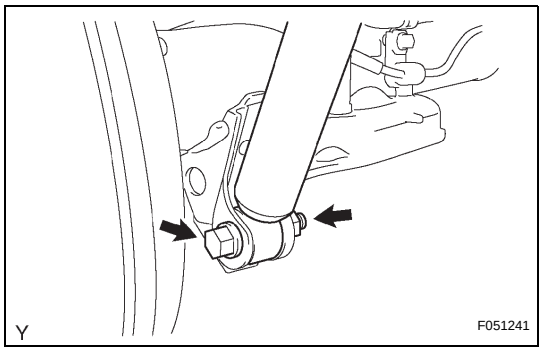
REMOVAL

1. REMOVE REAR WHEEL

2. REMOVE SPARE TIRE (for 4WD and Pre-Runner)

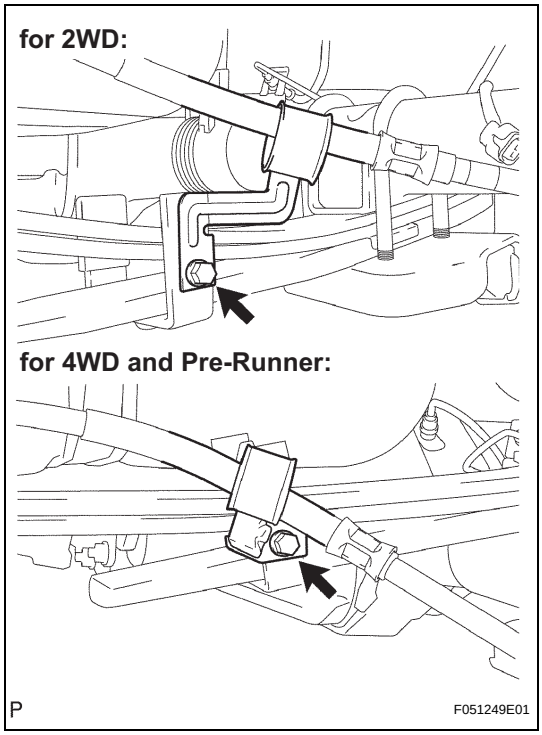
3. SEPARATE REAR SHOCK ABSORBER

(a) Support the rear axle housing.
(b) Remove the bolt, nut and washer.
(c) for 2WD:
  (1) Separate the shock absorber from the rear spring seat.
(d) for 4WD and Pre-Runner:
  (1) Separate the shock absorber from the rear axle housing.



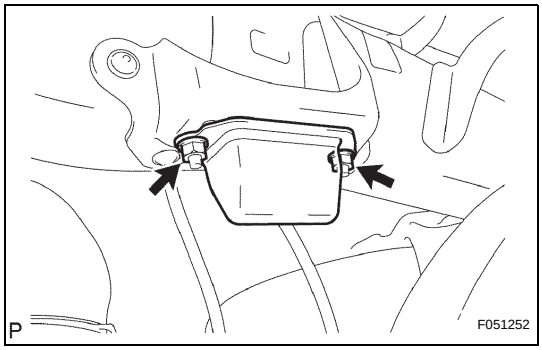
4. SEPARATE PARKING BRAKE CABLE ASSEMBLY NO. 3

(a) Remove the bolt, then separate the parking brake cable.

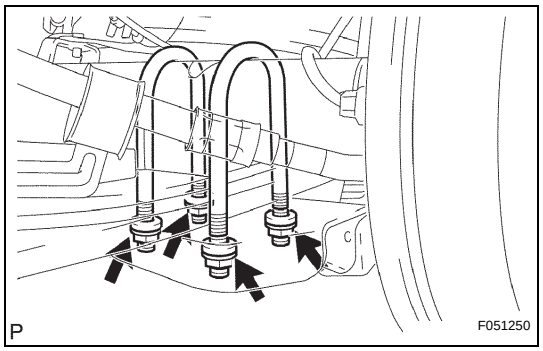


5. REMOVE REAR SPRING BUMPER NO. 1 (for 2WD)

(a) Remove the 2 nuts and spring bumper.



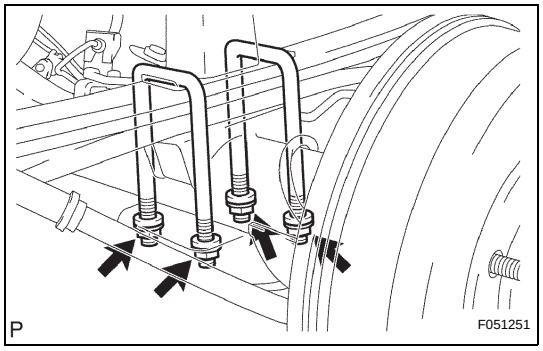
SP



6. REMOVE REAR SPRING U BOLT (for 2WD)

(a) Remove the 4 nuts and 4 washers.

(b) Remove the spring seat and 2 U-bolts.

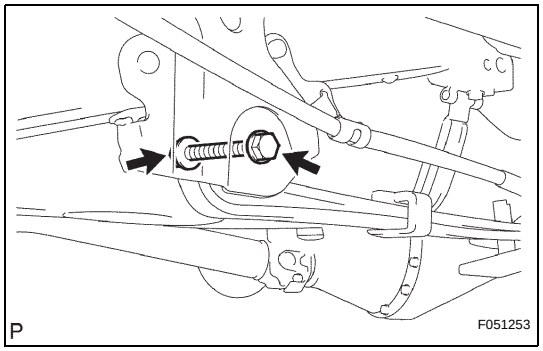


7. REMOVE REAR SPRING U BOLT (for 4WD and Pre-Runner)

(a) Remove the 4 nuts and 4 washers.

(b) Remove the spring seat and 2 U-bolts.

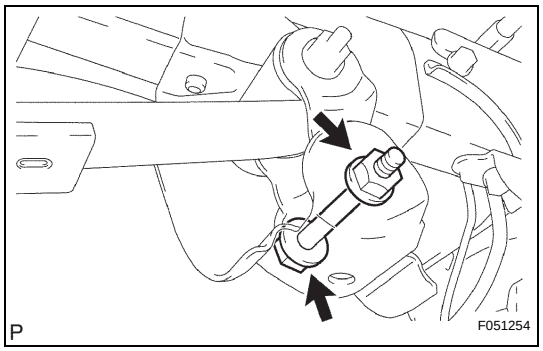
(c) Remove the spring bumper.



8. REMOVE REAR LEAF SPRING

(a) Remove the nut, washer and through bolt.

SP

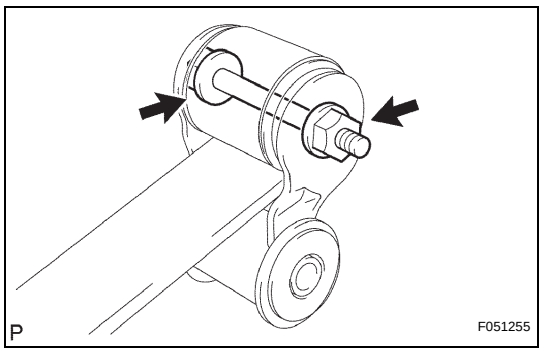


(b) Remove the nut, washer and through bolt.

NOTICE:

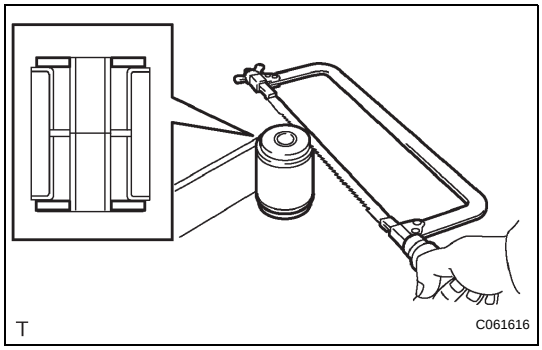
Be careful not to drop the spring when removing the through bolt.

(c) Remove the spring



9. REMOVE REAR SPRING SHACKLE SUB-ASSEMBLY NO. 2

(a) Remove the nut, washer, through bolt and shackle.

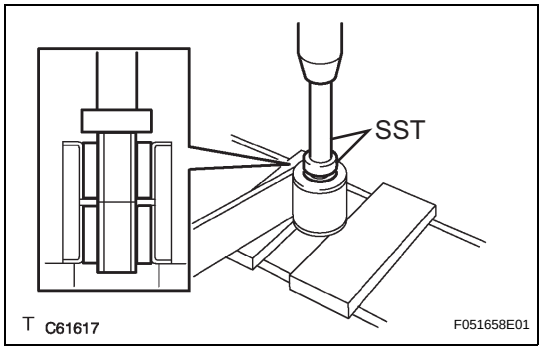


DISASSEMBLY

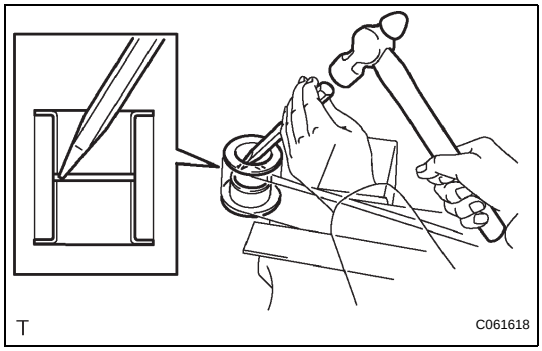
1. REMOVE BUSH

(a) Fix the spring in a vise.

(b) Using a hack saw, cut both ends off the bushes.



(c) Using SST and a press, press out the 2 bushes.
SST 09950-60010 (09951-00350), 09950-70010 (09951-07100)



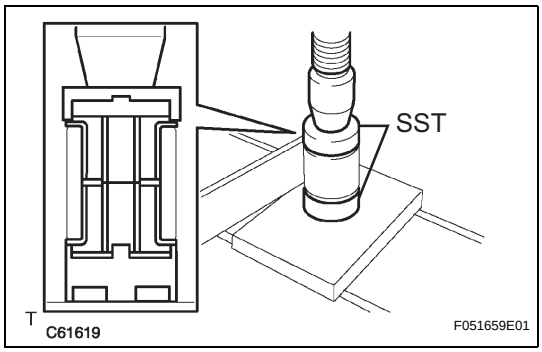
(d) Using a chisel and hammer, tap out the 2 outer tubes.

SP

REASSEMBLY

1. INSTALL BUSH

(a) Using SST and a press, press in 2 new bushes.
SST 09710-28012 (09710-07062), 09710-30041 (09710-03211)



INSTALLATION

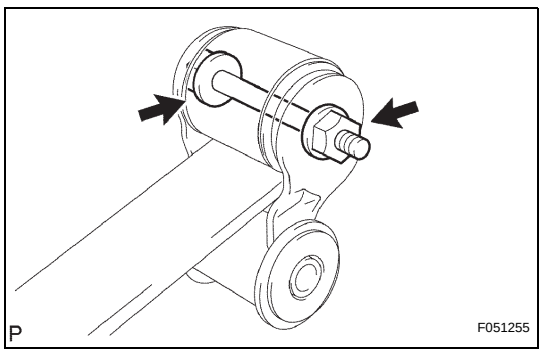
1. INSTALL REAR SPRING SHACKLE SUB-ASSEMBLY NO. 2

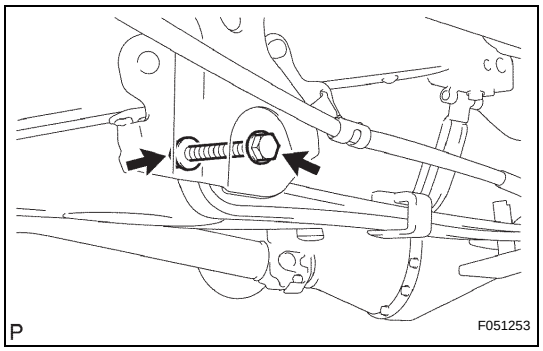
(a) Install the shackle with the through bolt, washer and nut.

2. INSTALL REAR LEAF SPRING

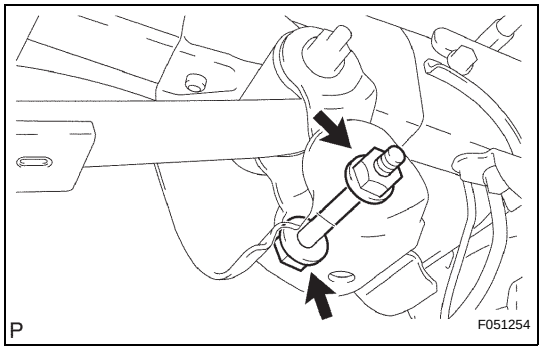
(a) Place the spring in the rear axle housing.

(b) Align the hole of the rear axle housing with the head of the spring center bolt.

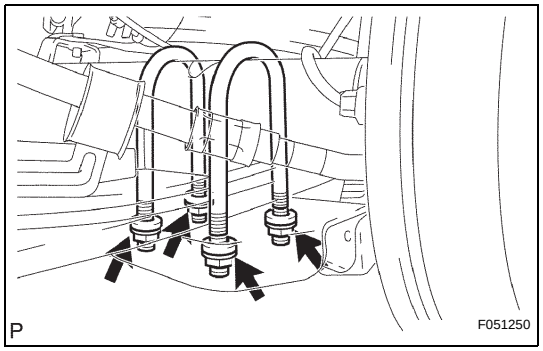




(c) Install the through bolt, washer and nut.



(d) Install the through bolt, washer and nut.



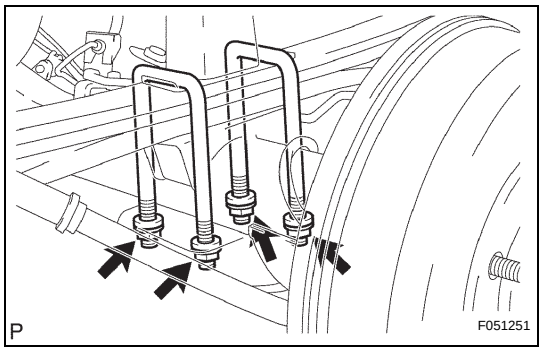
3. INSTALL REAR SPRING U BOLT (for 2WD)

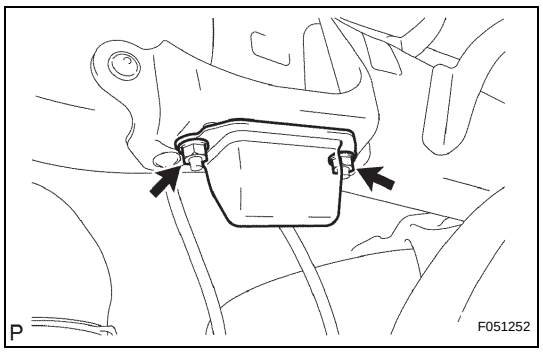
(a) Install the spring seat, 2 U-bolts, 4 washers and 4 nuts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
HINT:
Tighten the U-bolts until the lengths of all the U-bolts under the spring seat are the same.

4. INSTALL REAR SPRING U BOLT (for 4WD and Pre-Runner)

(a) Install the spring bumper.

(b) Install the spring seat, 2 U-bolts, 4 washers and 4 nuts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
HINT:
Tighten the U-bolts until the lengths of all the U-bolts under the spring seat are the same.

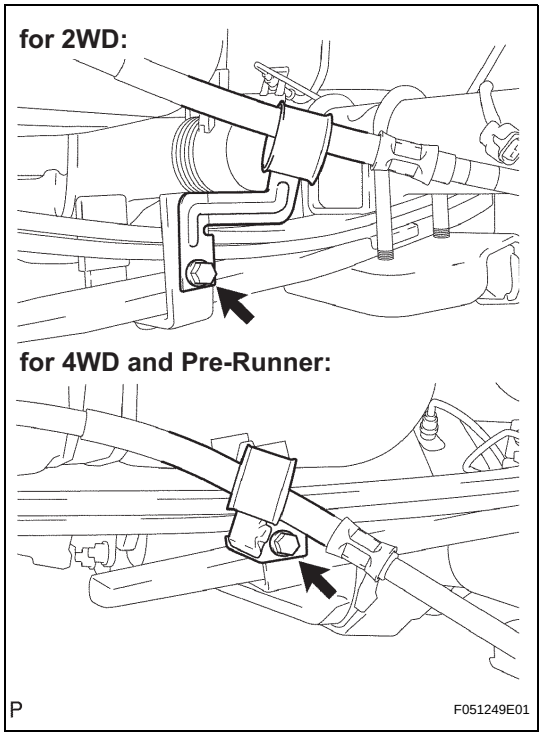




5. INSTALL REAR SPRING BUMPER NO. 1 (for 2WD)

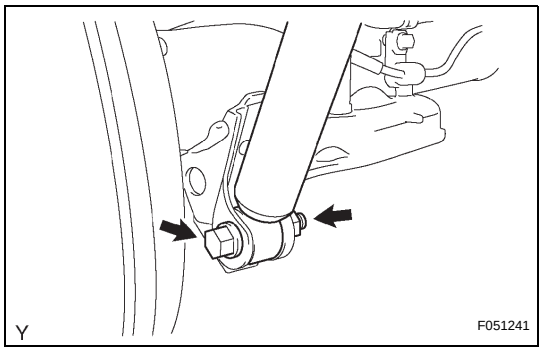
(a) Install the spring bumper with the 2 nuts.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

SP



6. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 3

(a) Install the parking brake cable with the bolt.
Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)



7. INSTALL REAR SHOCK ABSORBER

(a) Install the shock absorber with the bolt, nut and washer.

8. INSTALL REAR WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

9. STABILIZE SUSPENSION

(a) Jack down the vehicle.
(b) Bounce the vehicle up and down several times to stabilize the suspension.

10. FULLY TIGHTEN REAR SUSPENSION

(a) Tighten the nuts and bolts of the rear suspension parts.

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear LH spring x Rear spring shackle	120	1,224	89
Rear LH spring x Frame	120	1,224	89
Rear spring shackle x Frame	120	1,224	89
Rear shock absorber x Rear spring seat (2WD)	100	1,020	74
Rear shock absorber x Rear axle housing (4WD and Pre-Runner)	100	1,020	74

11. INSTALL SPARE TIRE (for 4WD and Pre-Runner)

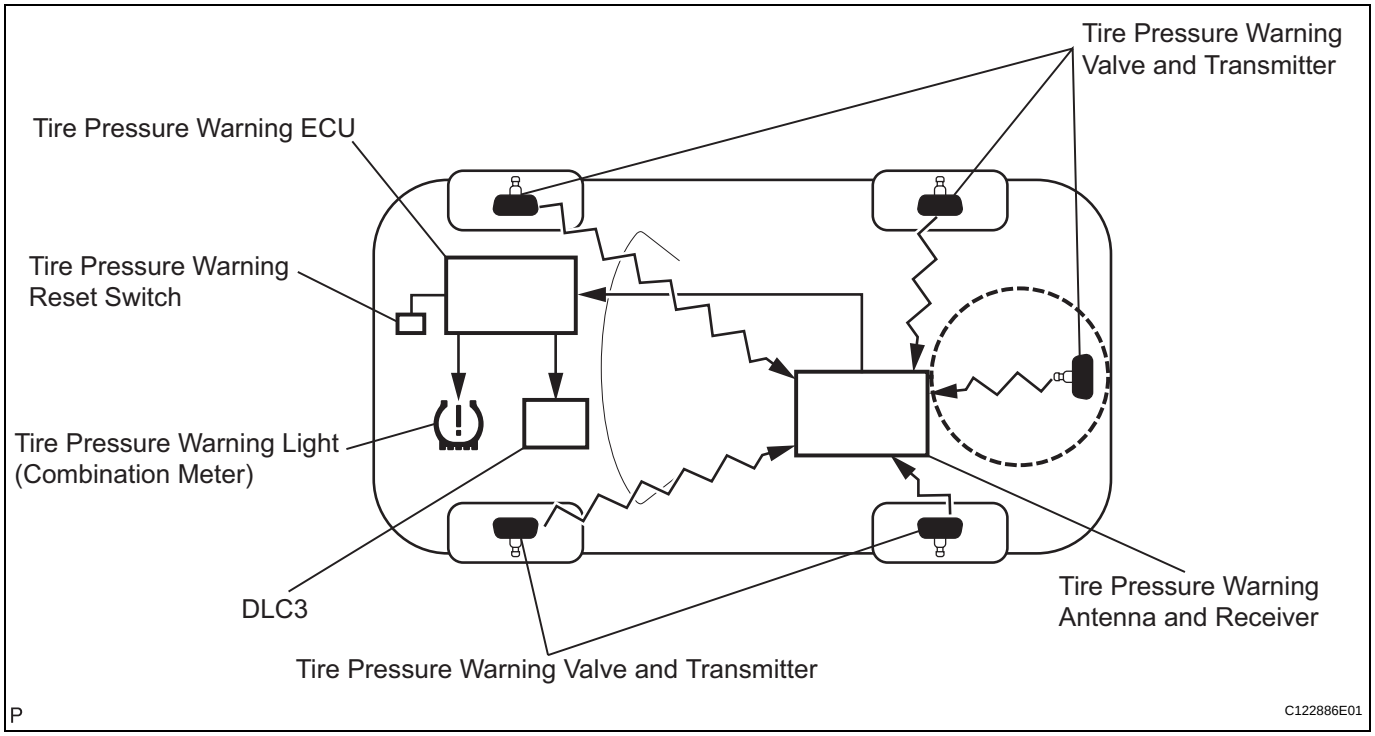
SP

SYSTEM DESCRIPTION

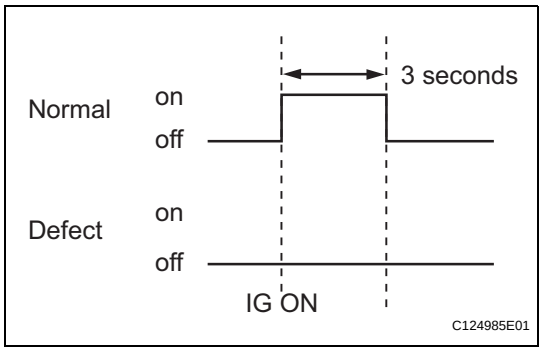
1. DESCRIPTION OF SYSTEM

(a) Tire pressure sensors (pressure warning valves and transmitters) are installed in tire and wheel assemblies. The sensors measure the air pressures and internal temperatures of the tires. The measured values and transmitter IDs are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the tire pressure warning light in the combination meter comes on.

- The tire pressure warning reset switch has been adopted in order to reset the warning threshold in accordance with variant tire pressure settings due to tire types and installation positions.
- The tire pressure warning valves and transmitters may not be used on wheels other than those originally fitted on the vehicle due to the air valve angle of the tire pressure warning valve and transmitter.



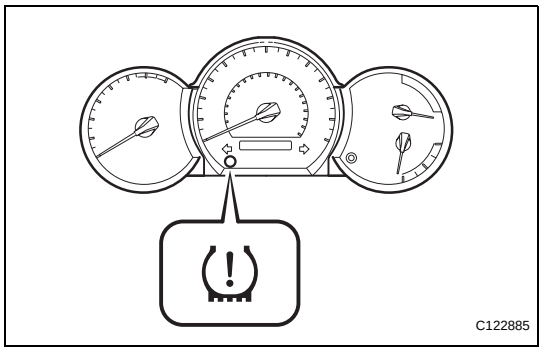
(b) After removing and installing the ECU or a tire pressure warning valve and transmitter, check that the normal code is output.



2. INITIAL CHECK

(a) The tire pressure warning light comes on for 3 seconds after the ignition switch turned ON, and then goes off.
HINT:
If the warning light does not come on for 3 seconds, trouble shoot the tire pressure warning light circuit.

Trouble Area	See Procedure
Tire pressure warning light circuit	TW-61



3. FAIL-SAFE FUNCTION

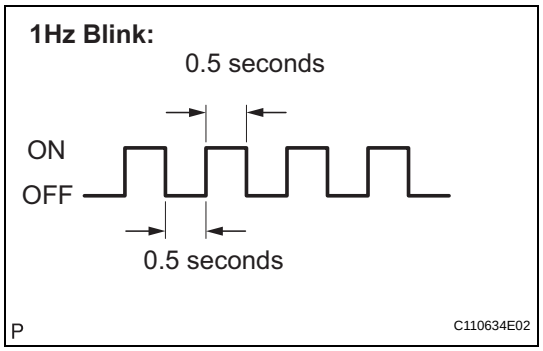
(a) When a malfunction occurs in the tire pressure warning system, the tire pressure warning light blinks to indicate the system failure.
(b) The result of this diagnosis is stored in the tire pressure warning ECU.

4. TIRE PRESSURE WARNING LIGHT CHART

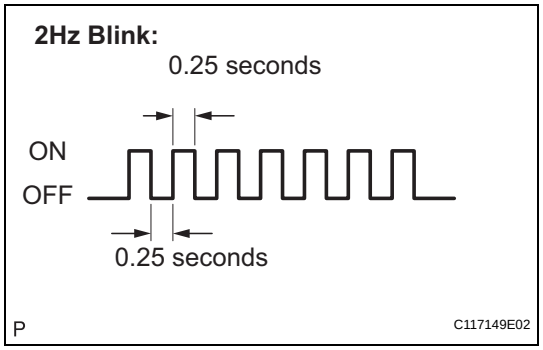
HINT:
The table below indicates the state of the tire pressure warning light after the ignition switch is turned on.

Condition	Immediately after IG turned ON	Always						
	Comes on for 3 seconds	Goes off	Comes on	Blinks (*1)	Blinks (*2)	Blinks (*3)	Outputs DTC	Comes on 3 times (1 second intervals)
Normal	○	○	-	-	-	-	-	-
Low tire pressure	○	-	○	-	-	-	-	-
System failure	○	-	-	○	-	-	-	-
ECU connector connection poor	-	-	○	-	-	-	-	-
TC grounded (no DTCs output)	○	-	-	-	○	-	-	-
TC grounded (DTCs output)	○	-	-	-	-	-	○	-
Test mode	○	-	-	-	-	○	-	-
Entering initialization	○	-	-	-	-	-	-	○

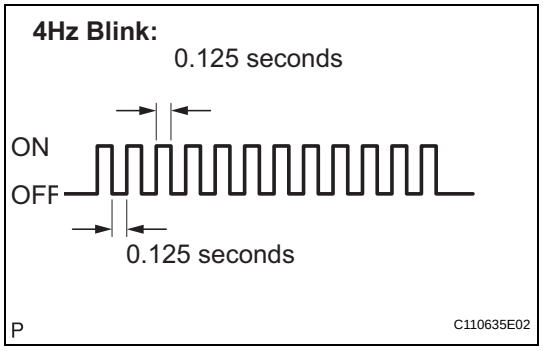
TW



*1: Blinks at 0.5 second intervals (1Hz).



*2: Blinks at 0.25 second intervals (2Hz).



*3: Blinks at 0.125 second intervals (4Hz).

5. FUNCTIONS OF COMPONENTS

Components	Function
Tire pressure warning valve and transmitter	Consists of sensor, transmitter, and built-in battery. Measures tire pressure and internal temperature, transmits measurement values and transmitter ID to tire pressure warning antenna and receiver.
Tire pressure warning antenna and receiver	Receives signals from tire pressure warning valves and transmitters and transmits them to tire pressure warning ECU.
Tire pressure warning ECU	Receives signals from tire pressure warning antenna and receiver, and identifies them as vehicle's own signals. If measurement values less than standard or malfunctions occur in tire pressure warning system, transmits signals to combination meter to illuminate tire pressure warning light.
Tire pressure warning light	Located in combination meter, indicates decreases in tire pressure, high internal tire temperatures and system failures.
Tire pressure warning reset switch	Allows tire pressure warning system to enter initialization mode when tire or wheel replacement, or tire rotation performed.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used at step 4.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CHECK TIRE PRESSURE WARNING LIGHT CONDITION

(a) Turn the ignition switch to the ON position.
(b) Record the condition of the tire pressure warning light in the combination meter.
(c) Refer to the TIRE PRESSURE WARNING LIGHT CHART section of the DIAGNOSIS SYSTEM when checking the condition of the tire pressure warning light (See page TW-23).

NEXT

4	DTC CHECK AND CLEAR

→ DTC OUTPUT: GO TO STEP 5
→ DTC NOT OUTPUT: GO TO STEP 6

5	DTC CHART

→ GO TO STEP 8

6	PROBLEM SYMPTOM CONFIRMATION

→ SYMPTOM DOES NOT OCCUR: GO TO STEP 7
→ SYMPTOM OCCURS: GO TO STEP 8

7	CIRCUIT INSPECTION WITH TROUBLESHOOTING

(a) Refer to PRECAUTION (See page TW-3).
(b) Refer to SYSTEM DESCRIPTION (See page TW-7).

(1) Initial check.
(2) Tire pressure warning light chart.

(c) Set the tire pressures to the appropriate specified values.
(d) Perform initialization (See page TW-15).
(e) Perform test mode procedure (See page TW-17).
(1) Check for a DTC (See page TW-26).
(2) Clear the DTC.
(3) Identify transmitter corresponding to DTC.
(f) Perform initialization (See page TW-15).
(g) Perform registration the transmitter ID (See page TW-11).
(h) Check the terminals of ECU (See page TW-22).
(i) Refer to DATA MONITOR / ACTIVE TEST (See page TW-28).

NEXT

8	REPAIR

NEXT

9	CONFIRMATION TEST

(a) Check for a DTC (See page TW-26).
(b) Perform initialization (See page TW-15).
(c) Confirm that the initialization has been completed.

NEXT

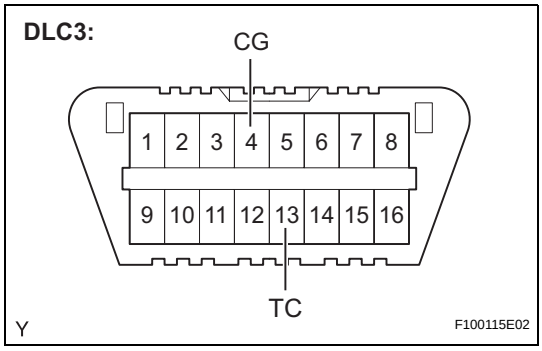
END

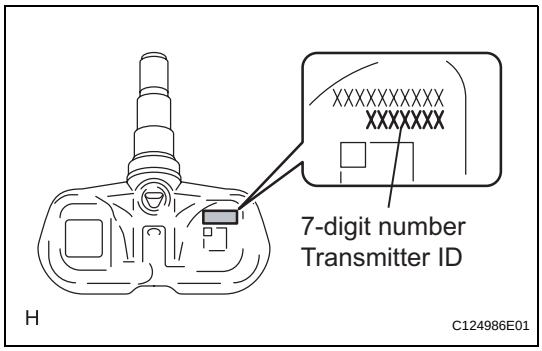
REGISTRATION

1. REGISTER TRANSMITTER IDs

NOTICE:

- **Register the transmitter IDs after the tire pressure warning ECU or the tire pressure warning valve and transmitters have been replaced.**
- **If the transmitter IDs cannot be registered, the tire pressure warning ECU is probably in initialization mode. Initialization mode can be terminated by making a short circuit between terminals TC and CG of the DLC3 connector.**
- **In order to avoid damage to the tire pressure warning valve and transmitters, observe the instructions when removing and installing the tire pressure warning valve and transmitters.**





(a) Prepare the all transmitter ID data before starting registration.

HINT:

- Read the registered transmitter IDs that are stored in the ECU using the intelligent tester and note them down.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valves and transmitters (See page TW-95).
- When replacing the tire pressure warning valves and transmitters, note down the IDs written on the tire pressure warning valves and transmitters.

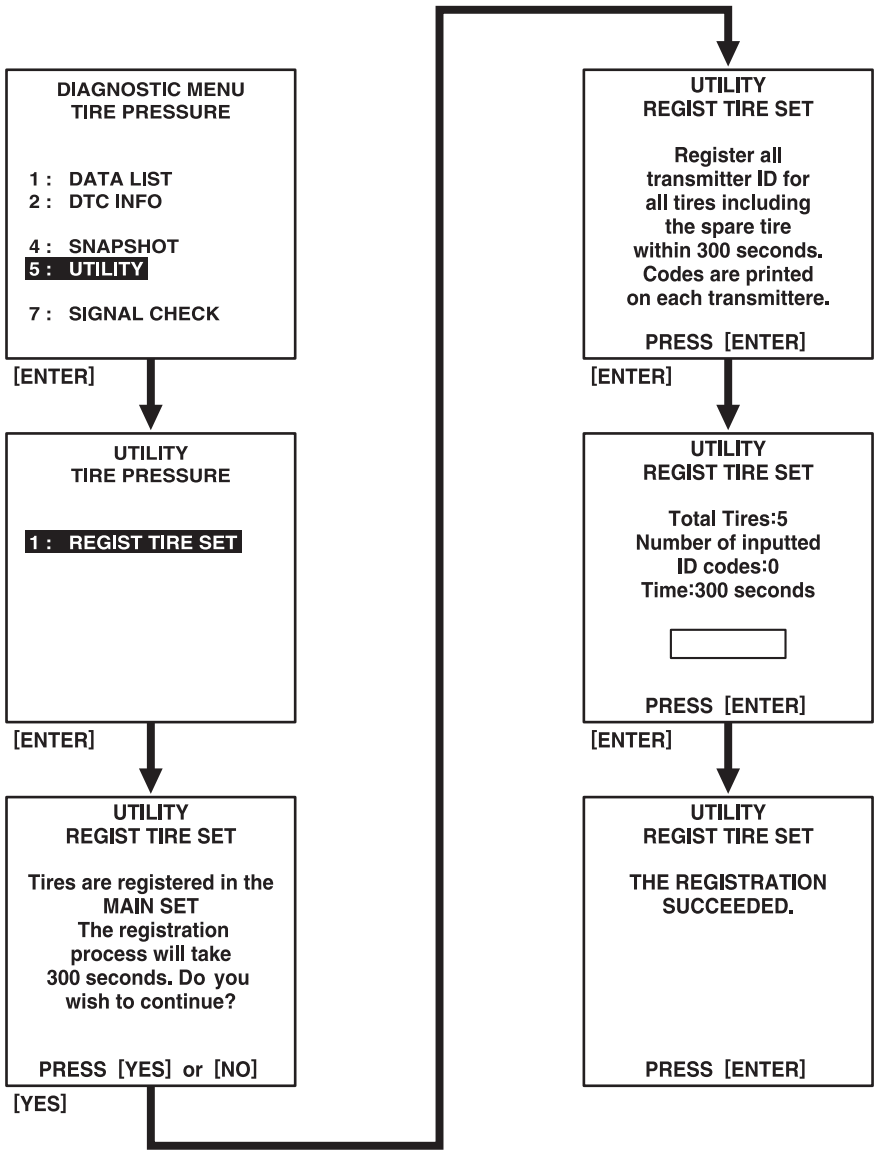
(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch to the ON position.

TW

(d) Select the REGIST TIRE by following the prompts displayed on the intelligent tester screen (UTILITY - REGIST TIRE).

Registration Procedure



P C122895E01

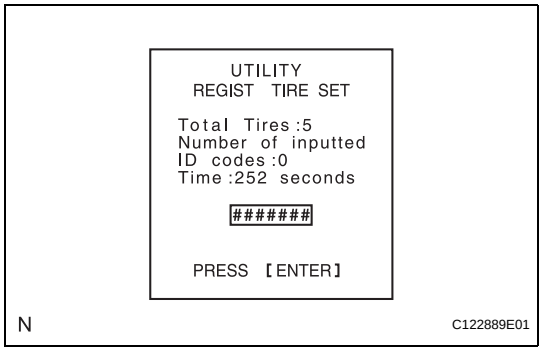
NOTICE:

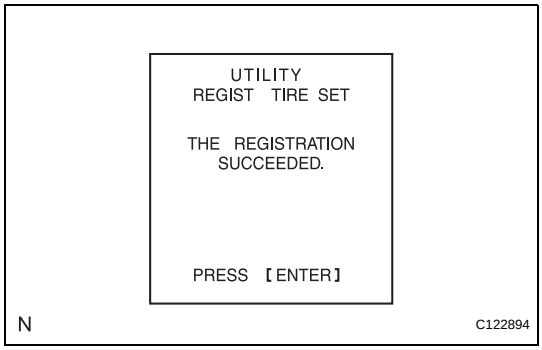
- **The previously registered IDs will be deleted from the memory when the registration is completed.**
- **If the procedures of the registration are not completed within 5 minutes, the mode returns to normal operation mode.**

TW

- **When the system is in initialization mode after the reset switch has been operated, the registration is disabled until the initialization process is canceled or completed.**

(e) Input the IDs (ID1 to ID5) using the intelligent tester and transmit them to the tire pressure warning ECU.





(f) When the ID transmission has successfully been completed, the message shown in the illustration appears on the tester screen.

(g) Turn the ignition switch to the OFF position, and then turn to the ON position.

(h) Select "SIGNAL CHECK" on the intelligent tester (See page TW-28).

(i) Confirm that the transmitter IDs and the data of tire pressure of all the tires are displayed on the intelligent tester screen.

TW

Item	Measurement Item/ Range (Display)	Normal Condition
REGIT ID1 CODE	Registered ID1 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID1 displayed
REGIT ID2 CODE	Registered ID2 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID2 displayed
REGIT ID3 CODE	Registered ID3 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID3 displayed
REGIT ID4 CODE	Registered ID4 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID4 displayed
REGIT ID5 CODE	Registered ID5 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID5 displayed
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm2, 92.5 psi)	Actual tire pressure
TIREPRESS2	ID2 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm2, 92.5 psi)	Actual tire pressure
TIREPRESS3	ID3 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm2, 92.5 psi)	Actual tire pressure
TIREPRESS4	ID4 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm2, 92.5 psi)	Actual tire pressure

Item	Measurement Item/ Range (Display)	Normal Condition
TIREPRESS5	ID5 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm2, 92.5 psi)	Actual tire pressure

NOTICE:

- **It may take up to 1 minute to update the tire pressure data.**
- **If the IDs have not been registered, DTC C2171/71 is set in the tire pressure warning ECU after approximately 30 minutes.**

(j) Disconnect the intelligent tester with the ignition switch turned OFF.

INITIALIZATION

1. INITIALIZATION

NOTICE:

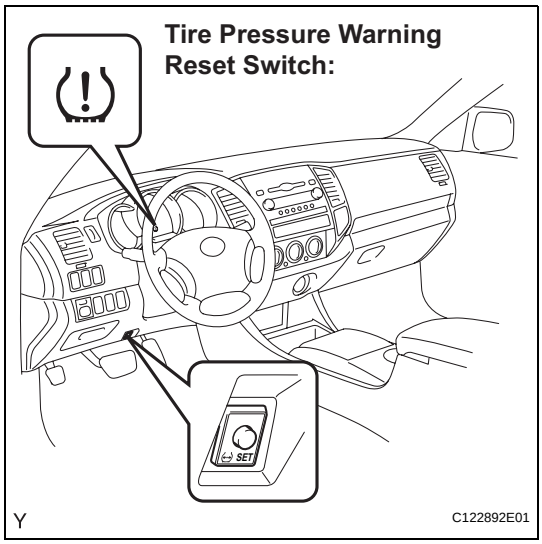
- **Perform the tire pressure warning system initialization after the transmitter ID registration has been completed.**
- **The initialization is necessary when one of the following situations applies:**
  - **Tire pressure warning ECU is replaced.**
  - **Tires are replaced with those of different pressures.**
  - **Tire pressure warning valves and transmitters are replaced.**
  - **Vehicle is newly delivered.**

(a) Set the tire pressures of all the wheels, including the spare tire, to the appropriate specified values.

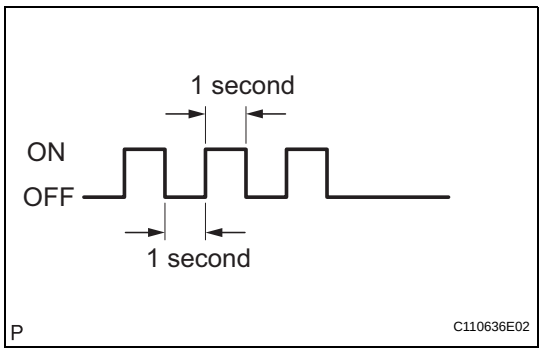
Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)
P215/70 R15	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P255/45 R18	240 (2.4, 34)	240 (2.4, 34)	240 (2.4, 34)
P245/75 R16	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)
P265/70 R16 (ORP)*	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P265/65 R17	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)

*: Used on Off Road Package Models

TW



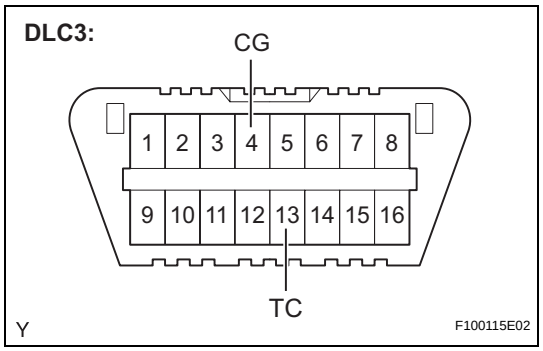
(b) Press the tire pressure warning reset switch for 3 seconds or more with the ignition switch in the ON position.



(c) Check that the tire pressure warning light blinks 3 times at 1 second intervals.

HINT:

The initialization is complete when the tire pressure warning ECU has received signals from all of the wheels.



(d) Wait for 2 or 3 minutes with the ignition switch ON.
NOTICE:
- **The initialization is normally completed within 2 to 3 minutes.**
- **If the initialization has not been completed successfully, DTC C2177/77 is set approximately 20 minutes after driving starts.**
- **The initialization can be terminated by making a short circuit between terminals TC and CG of the DLC3 connector.**

(e) Confirm that the initialization has been completed using the intelligent tester.
(1) Change the mode to test mode using intelligent tester and check that test DTCs have been stored.
- The test DTCs will not be indicated until the system initialization is complete.
- After the initialization has been completed successfully, the test DTCs (C2181/81 to C2191/91) are indicated.

NOTICE:
The following operations can be used instead of above procedure:
1. **Turn the ignition switch from OFF to ON.**
2. **Monitor the tire pressure values of all the wheels using intelligent tester.**
3. **If the tire pressure values cannot be displayed on the intelligent tester screen, the initialization has failed.**
4. **It takes 2 to 3 minutes to display the tire pressure data.**

HINT:
- In winter, as the tire pressure may decrease depending on the ambient temperature, increase the tire pressure by 20 kPa (0.2 kgf/cm^2, 2.9 psi) to 30 kPa (0.3 kgf/cm^2, 4.3 psi) above the specified value after confirmation that the initialization has been completed.

TW

TEST MODE PROCEDURE

1. ENTER TEST MODE

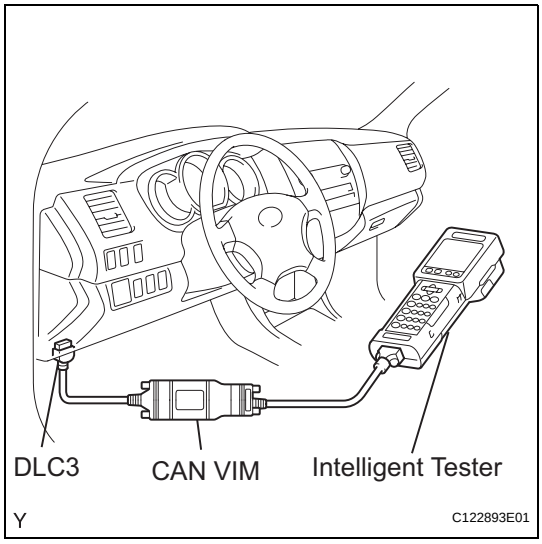
HINT:

- The operation of the tire pressure warning reset switch can be checked in TEST MODE.
- During TEST MODE, the system cannot be initialized by pressing the tire pressure warning reset switch. The tire pressure warning reset switch circuit can be inspected in this mode.

(a) Make sure that the ignition switch is off.

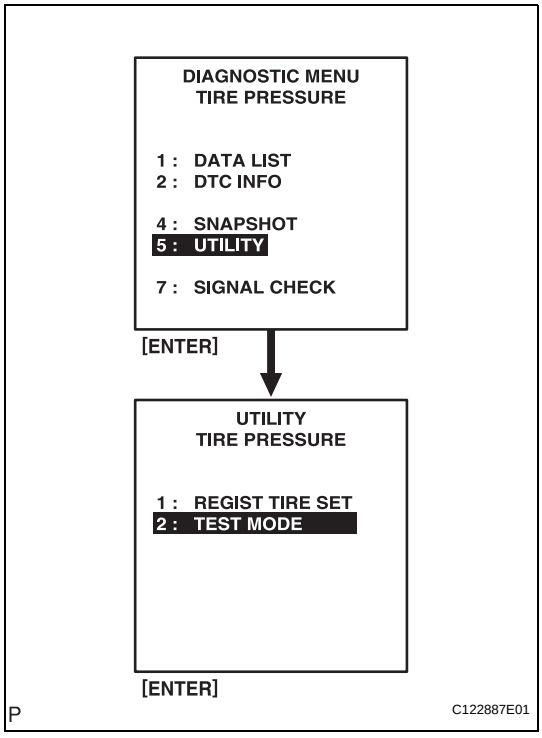
(b) Connect the intelligent tester with CAN VIM to the DLC3.

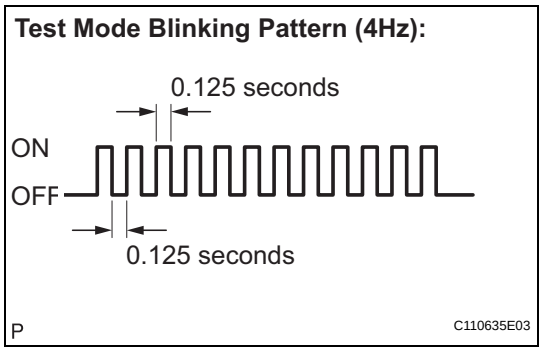
(c) Turn the ignition switch to the ON position and turn the tester ON.



TW

(d) Select TEST MODE on the intelligent tester.

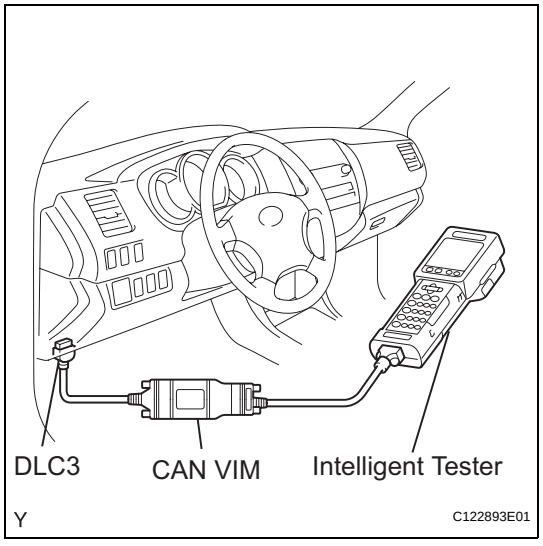




(e) Confirm that the tire pressure warning light in the combination meter blinks at 0.125 second intervals (4Hz).
HINT:
- When starting the signal checks, the tire pressure warning ECU sets all the signal check DTCs first.
  After the signal checks for each inspection item have been completed, the DTCs of the items that are determined to be normal by the tire pressure warning ECU are cleared.
  The DTCs for other inspection items may not be cleared when only a certain signal is inspected.
- When the mode returns from signal check mode to normal mode, all the signal check DTCs are cleared.

TEST MODE CODE

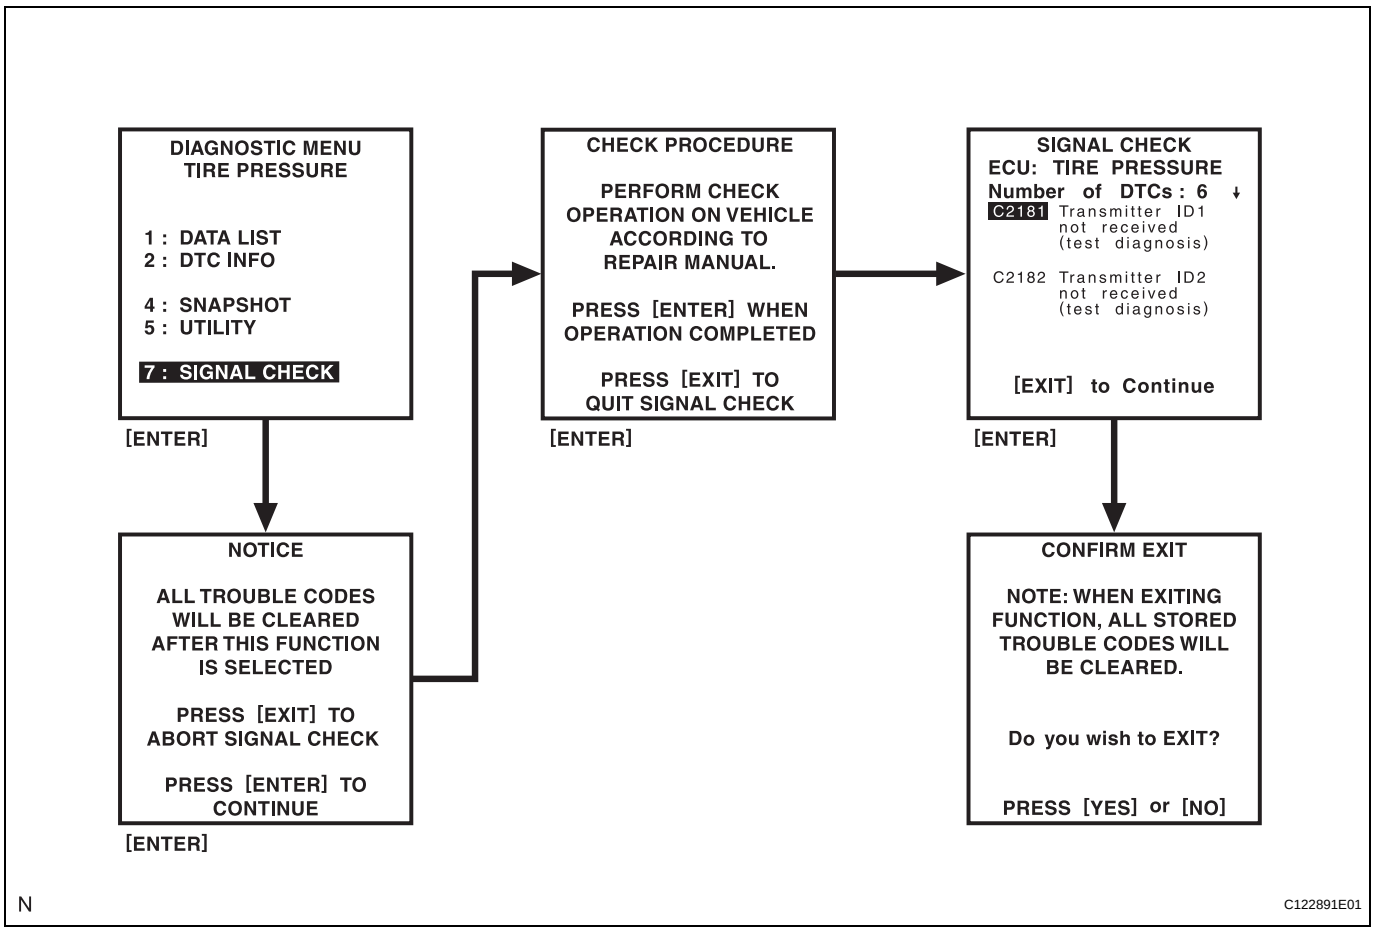
SIGNAL CHECK DTC	Test Signal	SIGNAL CHECK DTC Clear Condition
C2181/81 to C2185/85	Transmitter Data	Data received from the tire pressure warning valve and transmitter which has transmitter ID registered in tire pressure warning ECU
C2191/91	Vehicle Speed Signal	Vehicle speed of 12 mph (20 km/h) or more detected for 3 seconds or more
-	Tire Pressure Reset Switch	-



2. PERFORM SIGNAL CHECK

(a) Make sure that the ignition switch is off.
(b) Connect the intelligent tester with CAN VIM to the DLC3.
(c) Turn the ignition switch to the ON position and turn the tester ON.

(d) Select the SIGNAL CHECK on the intelligent tester.

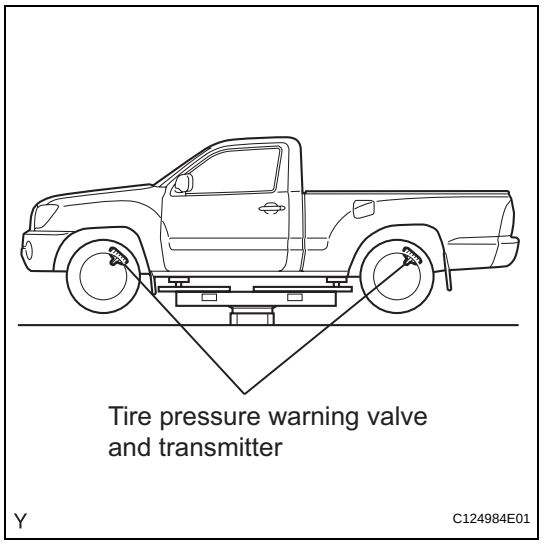


(e) Check the transmission data (for DTCs from C2181/81 to C2185/85)

(1) Set the tire pressures to the appropriate specified values.

Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)
P215/70 R15	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P255/45 R18	240 (2.4, 34)	240 (2.4, 34)	240 (2.4, 34)
P245/75 R16	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)
P265/70 R16 (OPR)*	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P265/65 R17	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)

*: Used on Off Road Package Models



(2) Jack up the vehicle.
(3) Rapidly release the tire pressure of all the tires to 40 kPa (0.4 kgf/cm^2, 5.8 psi)/ 30 seconds or more one by one.
HINT:
- It may take up to 1 minute to update the tire pressure data.
- The tire pressure warning light that is blinking at 0.125 second intervals will come on for 1 second when the tire pressure warning ECU receives the transmission data.
- If the transmission data have not been received, reset the tire pressures to the appropriate specified values and rotate the tires 90 to 270 degrees. Then recheck for the transmission data again.

(f) Check the vehicle speed signal (for DTC C2191/91)
(1) Drive the vehicle at 12 mph (20 km/h) or more for 10 seconds or more.
HINT:
The tire pressure warning light that is blinking at 0.125 second intervals will come on for 1 second when the tire pressure warning ECU receives the transmission data.

(g) Check the tire pressure warning reset switch
HINT:
Since there is no test mode code for the reset switch, check the reset switch by observing the status of the tire pressure warning light.
(1) Press the tire pressure warning reset switch.
(2) Check the tire pressure warning light blinking pattern.

TW

Result

Test Signal	Normal Condition
Tire Pressure Warning Reset Switch	• Switch ON: Tire pressure warning light comes on • Switch OFF: Tire pressure warning light blinks (4Hz)

(h) Read the test mode code.
(1) After the signal check has been completed, check for signal check DTCs to confirm the system status (See page TW-26).

(i) Clear the DTCs.
HINT:
When the mode returns from signal check mode to normal mode, all the signal check DTCs are cleared.

(j) End SIGNAL CHECK
After SIGNAL CHECK has finished, turn the ignition switch off and disconnect the tester.
HINT:
If a trouble code is displayed during the test mode DTC check, check the circuit indicated by the code. For details of each code, refer to the relevant page listed under respective "DTC No." in the table below.

TEST MODE DTCs

DTC No.	Detection Item	Trouble Area
C2181/81 (See page TW-37)	Transmitter ID1 not received	• Tire pressure warning antenna and receiver • Each tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector
C2182/82 (See page TW-37)	Transmitter ID2 not received	• Tire pressure warning antenna and receiver • Each tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector
C2183/83 (See page TW-37)	Transmitter ID3 not received	• Tire pressure warning antenna and receiver • Each tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector
C2184/84 (See page TW-37)	Transmitter ID4 not received	• Tire pressure warning antenna and receiver • Each tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector
C2185/85 (See page TW-37)	Transmitter ID5 not received	• Tire pressure warning antenna and receiver • Each tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector
C2191/91 (See page TW-55)	Vehicle speed signal error	• Vehicle speed sensor • Combination meter • Tire pressure warning ECU • Wire harness or connector

PROBLEM SYMPTOMS TABLE

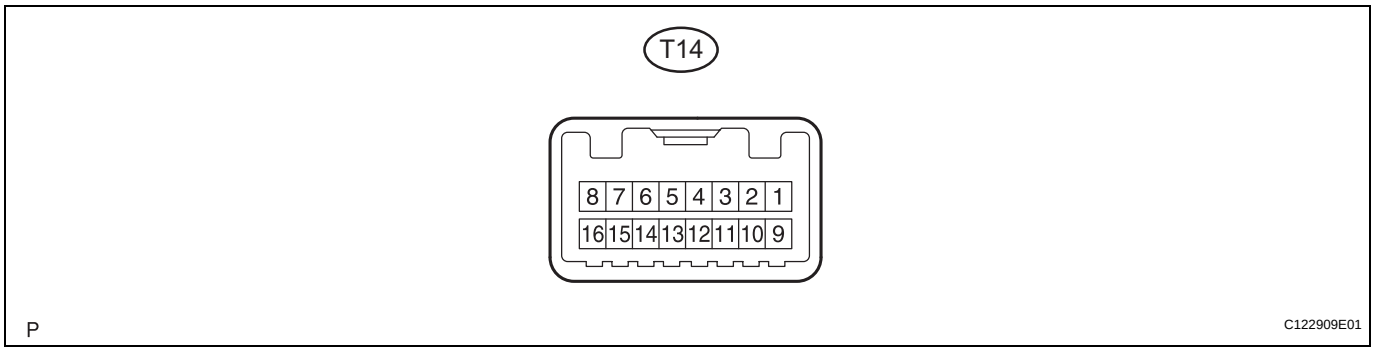
Read values of DATA LIST using the intelligent tester, and confirm that the tire pressure data of all the tires are displayed.
When those data cannot be displayed, perform the troubleshooting procedure related to DTCs C2121/21 to C2125/25 which indicate transmission or reception malfunctions first.
If there are no problem, inspect the following Problem Symptoms Table.

TIRE PRESSURE WARNING SYSTEM

Symptom	Suspected area	See page
Tire pressure warning light does not illuminate, despite tire pressure decreasing.	1. Initialization	TW-15
	2. Tire pressure warning valve and transmitter	TW-95
	3. Combination meter	ME-63
	4. Tire pressure warning ECU	TW-103
Tire pressure warning light does not illuminate.	1. Combination meter	ME-63
	2. Tire pressure warning ECU	TW-103
Tire pressure warning light remains illuminated (goes off during initial check).	1. Power source circuit	TW-63
	2. Tire pressure warning ECU	TW-103
Tire pressure warning light remains illuminated (comes on during initial check).	1. Tire pressures	TW-1
	2. Initialization	TW-15
	3. Combination meter	ME-63
	4. Tire pressure warning valve and transmitter	TW-95
	5. Tire pressure warning ECU	TW-103
Unable to perform initialization, despite reset switch being operated.	1. Tire pressure warning reset switch circuit	TW-58
	2. Combination meter	ME-63
	3. Tire pressure warning ECU	TW-103

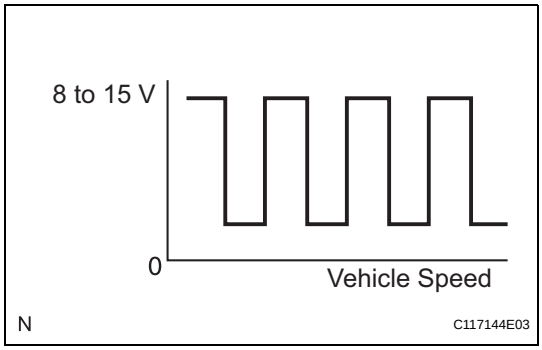
TERMINALS OF ECU

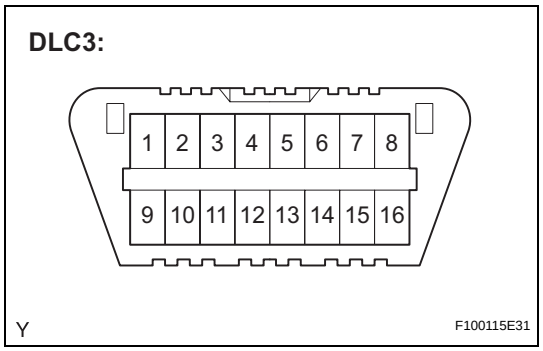
HINT:
Inspect the connector from the back side while the connector are connected.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
IG (T14-2) - GND (T14-11)	IG power source	IG switch ON	10 to 16 V
SPD (T14-3) - GND (T14-11)	Vehicle speed signal	Vehicle running	Pulse generation (See waveform 1)
SIL (T14-4) - GND (T14-11)	Diagnosis tester communication line	IG switch ON and communication not performed with tester	8 to 15 V
IND (T14-6) - GND (T14-11)	Tire pressure warning light output signal	IG switch ON: 1. Tire pressure warning light ON 2. Tire pressure warning light OFF	1. 8 V or more 2. Below 0.5 V
RDA (T14-7) - GND (T14-11)	Tire pressure warning antenna and receiver input signal	IG switch ON and tire pressure warning antenna and receiver not connected	9 to 16 V
RF5V (T14-8) - GND (T14-11)	Tire pressure warning antenna and receiver power source	IG switch ON	4.5 to 5.5 V
CALSW (T14-10) - GND (T14-11)	Tire pressure warning reset switch	IG switch ON: 1. Tire pressure warning reset switch ON 2. Tire pressure warning reset switch OFF	1. Below 0.5 V 2. 8 to 15 V
GND (T14-11) - Body ground	Ground	Always	Below 1 Ω
TC (T14-12) - GND (T14-11)	TC terminal	Terminal TC not connected	8 to 15 V
GND2 (T14-16) - GND (T14-11)	Tire pressure warning antenna and receiver ground	Always	Below 1 Ω

1. Waveform 1





DIAGNOSIS SYSTEM

1. CHECK BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.

2. CHECK DLC3

(a) The vehicle's tire pressure warning ECU conforms to ISO 14230 and ISO 9141-2 for communication protocol. The terminals arrangement of the DLC3 complies with ISO 15031-3 and meets the ISO 14230 and ISO 9141-2 formats.

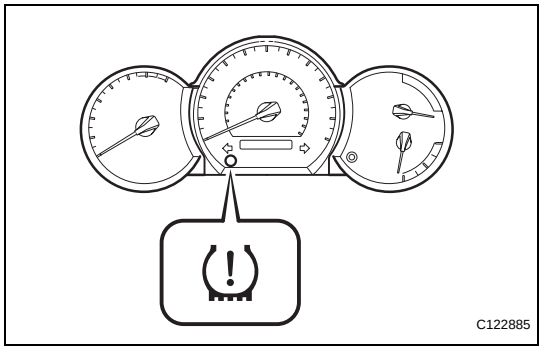
Verify the conditions listed in the table below

Terminal No. (Symbol)	Connection/ Voltage or Resistance	Condition
7 (SIL)	Bus + Line/ Pulse generation	During transmission
4 (CG)	Chassis Ground to Body Ground/ 1 Ω or less	Always
16 (BAT)	Battery Positive to Body Ground/ 11 to 14 V	Always

HINT:

If the intelligent tester display shows a communication error message when the cable of the intelligent tester is connected to the DLC3, the ignition switch is turned ON and the tester is turned ON, there is a problem on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester operator's manual.



3. DIAGNOSIS SYSTEM

(a) Warning light

(1) When there is a problem in the tire pressure warning system, the tire pressure warning light blinks at 0.5 second intervals (1Hz).

NOTICE:

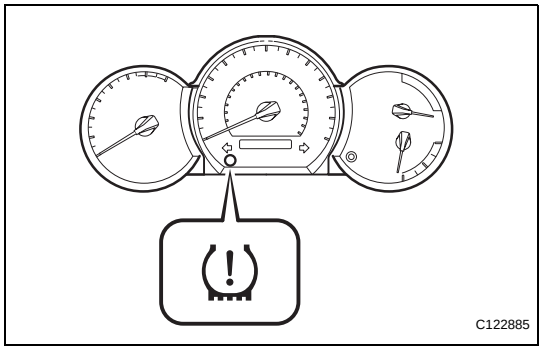
When the malfunction has been repaired, the tire pressure warning light does not come on.

(b) Normal mode

(1) DTCs are stored in the tire pressure warning ECU and can be read by observing the blinking patterns of the tire pressure warning light or by using the intelligent tester (See page TW-26).

TW

(c) Test mode
(1) By switching from normal mode to test mode (signal check), the tire pressure warning receiver, each tire pressure warning valve and transmitter and vehicle speed sensor can be inspected (See page TW-17).



4. CHECK WARNING LIGHT

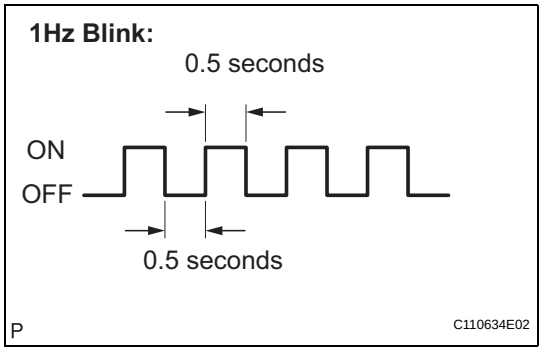
(a) Turn the ignition switch to the ON position.
(b) Check that the tire pressure warning light comes on for 3 seconds. If the warning light does not come on for 3 seconds, troubleshoot the tire pressure warning light circuit.

Trouble Area	See Procedure
Tire pressure warning light circuit	TW-61

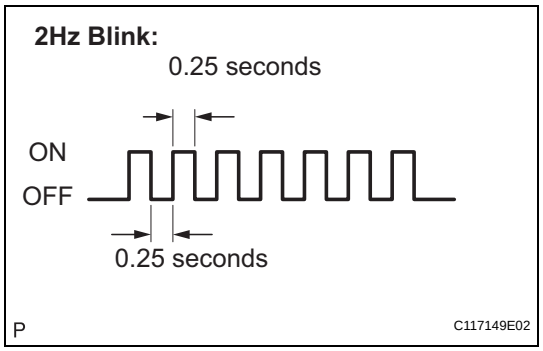
5. TIRE PRESSURE WARNING LIGHT CHART

HINT:
The table below indicates the state of the tire pressure warning light after the ignition switch is turned on.

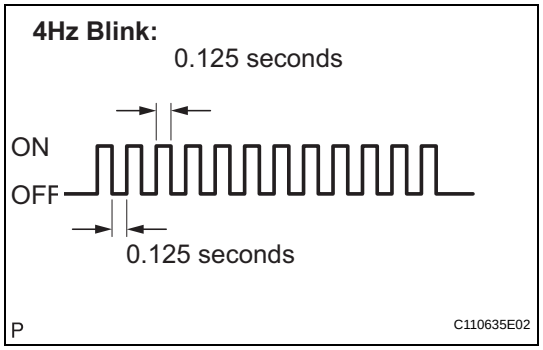
Condition	Immediately after IG turned ON	Always						
	Comes on for 3 seconds	Goes off	Comes on	Blinks (*1)	Blinks (*2)	Blinks (*3)	Outputs DTC	Comes on 3 times (1 second intervals)
Normal	○	○	-	-	-	-	-	-
Low tire pressure	○	-	○	-	-	-	-	-
System failure	○	-	-	○	-	-	-	-
ECU connector connection poor	-	-	○	-	-	-	-	-
TC grounded (no DTCs output)	○	-	-	-	○	-	-	-
TC grounded (DTCs outout)	○	-	-	-	-	-	○	-
Test mode	○	-	-	-	-	○	-	-
Entering initialization	○	-	-	-	-	-	-	○



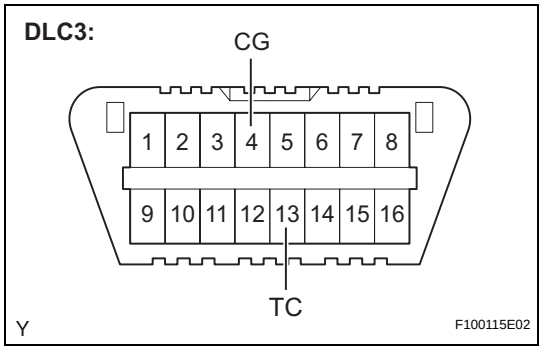
*1: Blinks at 0.5 second intervals (1Hz).



*2: Blinks at 0.25 second intervals (2Hz).



*3: Blinks at 0.125 second intervals (4Hz).



DTC CHECK / CLEAR

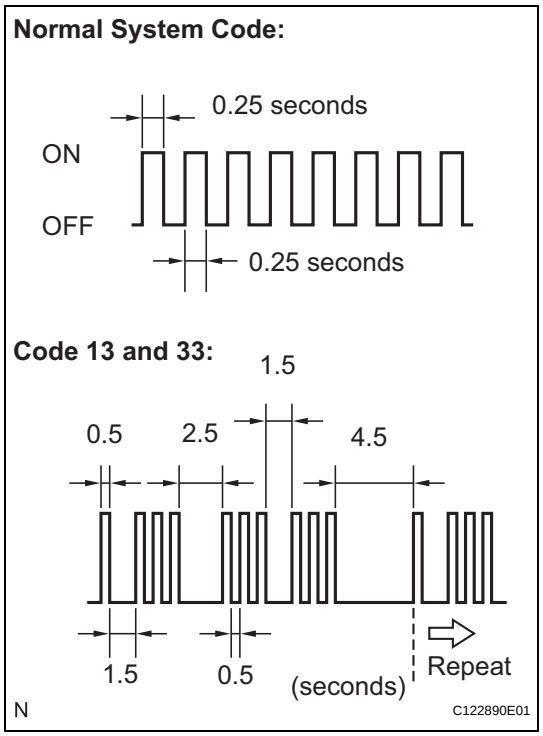
1. CHECK DTC (USING SST CHECK WIRE)

(a) Check DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

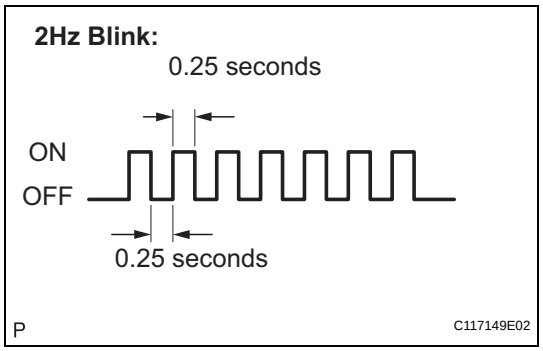
SST 09843-18040

(2) Turn the ignition switch to the ON position.

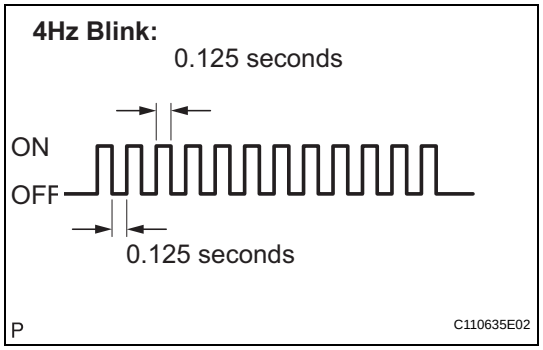


(3) Read and record any DTCs indicated by the tire pressure warning light in the combination meter. Refer to the illustration for examples of the normal system code and DTCs 13 and 33.

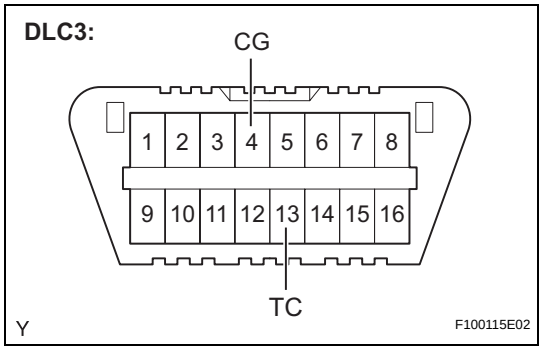
TW



*2: Blinks at 0.25 second intervals (2Hz).



*3: Blinks at 0.125 second intervals (4Hz).



DTC CHECK / CLEAR

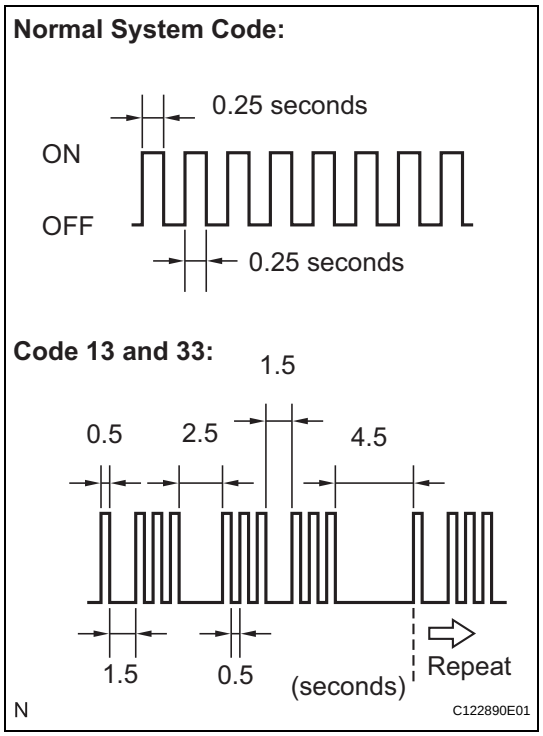
1. CHECK DTC (USING SST CHECK WIRE)

(a) Check DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

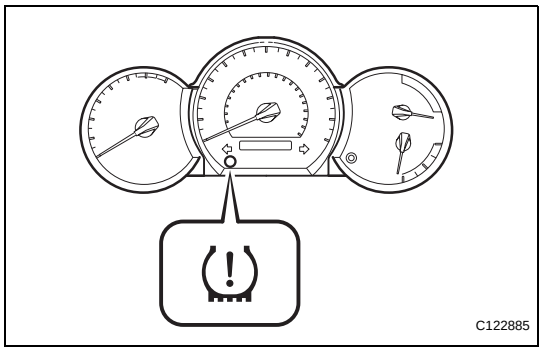
SST 09843-18040

(2) Turn the ignition switch to the ON position.



(3) Read and record any DTCs indicated by the tire pressure warning light in the combination meter. Refer to the illustration for examples of the normal system code and DTCs 13 and 33.

TW



HINT:

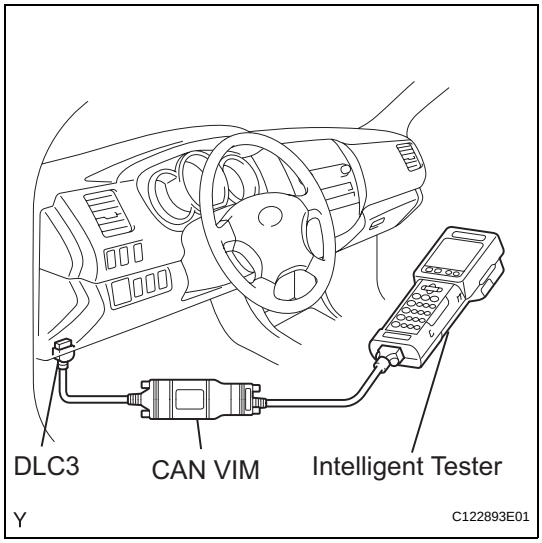
- If the tire pressure warning light does not indicate any DTCs or the normal system code, inspect the tire pressure warning light circuit and TC and CG terminal circuit.

Trouble Area	See Procedure
Tire pressure warning light circuit	TW-61
TC and CG terminal circuit	TW-66

- If 2 or more malfunctions are indicated simultaneously, the lowest numbered DTC is displayed first.

(4) Refer to the Diagnostic Trouble Code Chart (See page TW-30) for DTC information.

(5) After completing the check, turn the ignition switch off and remove the SST from the DLC3.
SST 09843-18040



2. CHECK DTC (USING INTELLIGENT TESTER)

(a) Check DTCs.

(1) Connect the intelligent tester with CAN VIM to the DLC3.

(2) Turn the ignition switch to the ON position and turn the tester ON.

(3) Read the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

3. CLEAR DTC

HINT:
After repairing the malfunctions, clear the DTCs.

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch to the ON position.

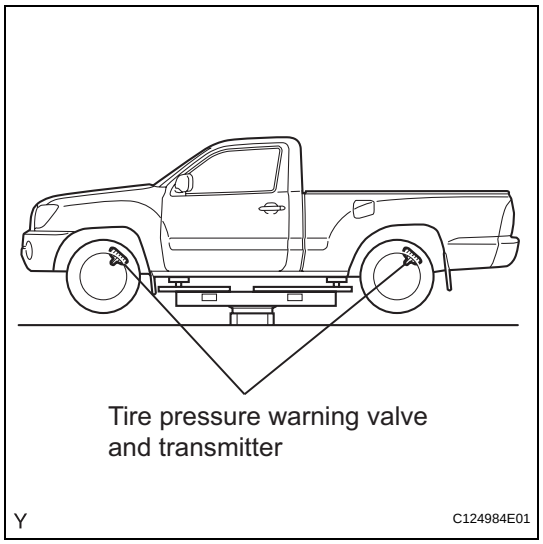
(c) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

4. IDENTIFY TIRE PRESSURE WARNING VALVE AND TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressures to the appropriate specified values.

Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)
P215/70 R15	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P255/45 R18	240 (2.4, 34)	240 (2.4, 34)	240 (2.4, 34)
P245/75 R16	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)
P265/70 R16 (OPR)*	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P265/65 R17	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)

*: Used on Off Road Package Models



(b) Jack up the vehicle.
(c) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Item	Measurement Item/ Range (Display)
TIREPRESS1	ID1 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS2	ID2 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS3	ID3 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS4	ID4 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS5	ID5 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)

(d) Rapidly release the tire pressure from any tire to 40 kPa (0.4 kgf/cm^2, 5.8 psi)/ 30 seconds or more.
(e) Check the DATA LIST.

Result

Display	Detection Condition
One of TIREPRESS data (ID1 to ID5) changes	**Normal**
None of TIREPRESS data change	**Transmitter corresponding to DTC**

HINT:
- When none of the TIREPRESS data (IDs 1 to 5) change, rotate the tires 90 to 270 degrees and recheck.
- When the transmitter is normal, record the tire location and the transmitter ID.

(f) Repeat this procedure to identify the malfunctioning tire pressure warning valve and transmitter.

DATA LIST / ACTIVE TEST

1. DATA LIST

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester ON.
(c) Read DATA LIST by following the prompts on the tester screen.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
MODE STATUS	Tire pressure warning system mode/ NORMAL, REG 2nd, REG M or TEST	NORMAL: Normal mode TEST: Test mode	-
TIRE	Registered ID number of tire/ 0 or 1, 2, 3, 4, 5	0 to 5 displayed	-
INITIAL SW	Tire pressure warning reset switch/ ON, OFF	ON: Switch ON OFF: Switch OFF	• Tire pressure warning reset switch • Wire harness or connector • Tire pressure warning ECU
VEHICLE SPEED	Vehicle speed reading/ minimum: 0 km/h (0 mph) maximum: 255 km/h (158 mph)	Actual vehicle speed	• Speed indicated on combination meter • Tire pressure warning ECU
REGIT ID1 CODE	Registered ID1 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID1 displayed	Registration of transmitter ID
REGIT ID2 CODE	Registered ID2 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID2 displayed	Registration of transmitter ID
REGIT ID3 CODE	Registered ID3 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID3 displayed	Registration of transmitter ID
REGIT ID4 CODE	Registered ID4 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID4 displayed	Registration of transmitter ID
REGIT ID5 CODE	Registered ID5 code/ minimum: 0 maximum: FFFFFFF	ID No. of registered transmitter ID5 displayed	Registration of transmitter ID
TRANS STATUS	ID code transmission status/ FINISH or NOW	FINISH or NOW	-
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	• Tire pressure warning valve and transmitter • Wire harness or connector • Tire pressure warning antenna and receiver • Tire pressure warning ECU
TIREPRESS2	ID2 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	• Tire pressure warning valve and transmitter • Wire harness or connector • Tire pressure warning antenna and receiver • Tire pressure warning ECU
TIREPRESS3	ID3 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	• Tire pressure warning valve and transmitter • Wire harness or connector • Tire pressure warning antenna and receiver • Tire pressure warning ECU

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS4	ID4 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Actual tire pressure	• Tire pressure warning valve and transmitter • Wire harness or connector • Tire pressure warning antenna and receiver • Tire pressure warning ECU
TIREPRESS5	ID5 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Actual tire pressure	• Tire pressure warning valve and transmitter • Wire harness or connector • Tire pressure warning antenna and receiver • Tire pressure warning ECU
TIRE TEMP1	ID1 temperature in tire/ minimum: - 40 °C (- 40 °F) maximum: 120 °C (248 °F)	Actual internal tire temperature	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
TIRE TEMP2	ID2 temperature in tire/ minimum: - 40 °C (- 40 °F) maximum: 120 °C (248 °F)	Actual internal tire temperature	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
TIRE TEMP3	ID3 temperature in tire/ minimum: - 40 °C (- 40 °F) maximum: 120 °C (248 °F)	Actual internal tire temperature	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
TIRE TEMP4	ID4 temperature in tire/ minimum: - 40 °C (- 40 °F) maximum: 120 °C (248 °F)	Actual internal tire temperature	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
TIRE TEMP5	ID5 temperature in tire/ minimum: - 40 °C (- 40 °F) maximum: 120 °C (248 °F)	Actual internal tire temperature	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
BATT VOLT1	ID1 battery voltage/ OVER or LESS	OVER	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
BATT VOLT2	ID2 battery voltage/ OVER or LESS	OVER	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
BATT VOLT3	ID3 battery voltage/ OVER or LESS	OVER	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
BATT VOLT4	ID4 battery voltage/ OVER or LESS	OVER	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
BATT VOLT5	ID5 battery voltage/ OVER or LESS	OVER	• Tire pressure warning valve and transmitter • Tire pressure warning ECU
INIT THRESHOLD1	ID1 initial low-pressure threshold minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Threshold pressure after initialization	-
INIT THRESHOLD2	ID2 initial low-pressure threshold minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Threshold pressure after initialization	-
INIT THRESHOLD3	ID3 initial low-pressure threshold minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Threshold pressure after initialization	-
INIT THRESHOLD4	ID4 initial low-pressure threshold minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Threshold pressure after initialization	-

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
INIT THRESHOLD5	ID5 initial low-pressure threshold minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Threshold pressure after initialization	-
#CODES	Number of DTC recorded/ minimum: 0 maximum: 255	Minimum: 0 Maximum: 255	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a malfunction code is displayed during the DTC check, inspect the circuit relevant to that code. For details of each code, refer to the page listed under "See page" in the table below.

DTC chart of Tire Pressure Warning

DTC No.	Detection Item	Trouble Area	See page
C2111/11	Transmitter ID1 Operation Stop	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU	TW-33
C2112/12	Transmitter ID2 Operation Stop	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU	TW-33
C2113/13	Transmitter ID3 Operation Stop	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU	TW-33
C2114/14	Transmitter ID4 Operation Stop	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU	TW-33
C2115/15	Transmitter ID5 Operation Stop	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU	TW-33
C2121/21	No Signal from Transmitter ID1	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU	TW-37
C2122/22	No Signal from Transmitter ID2	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU	TW-37
C2123/23	No Signal from Transmitter ID3	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU	TW-37
C2124/24	No Signal from Transmitter ID4	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU	TW-37
C2125/25	No Signal from Transmitter ID5	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU	TW-37
C2141/41	Transmitter ID1 Error	• Tire pressure warning valve and transmitter	TW-43
C2142/42	Transmitter ID2 Error	• Tire pressure warning valve and transmitter	TW-43

DTC No.	Detection Item	Trouble Area	See page
C2143/43	Transmitter ID3 Error	• Tire pressure warning valve and transmitter	TW-43
C2144/44	Transmitter ID4 Error	• Tire pressure warning valve and transmitter	TW-43
C2145/45	Transmitter ID5 Error	• Tire pressure warning valve and transmitter	TW-43
C2165/65	Abnormal Temperature Inside ID1 Tire	• Tire pressure warning valve and transmitter • Tire	TW-46
C2166/66	Abnormal Temperature Inside ID2 Tire	• Tire pressure warning valve and transmitter • Tire	TW-46
C2167/67	Abnormal Temperature Inside ID3 Tire	• Tire pressure warning valve and transmitter • Tire	TW-46
C2168/68	Abnormal Temperature Inside ID4 Tire	• Tire pressure warning valve and transmitter • Tire	TW-46
C2169/69	Abnormal Temperature Inside ID5 Tire	• Tire pressure warning valve and transmitter • Tire	TW-46
C2171/71	Transmitter ID not Registered	• Tire pressure warning ECU • Transmitter ID registration condition	TW-49
C2176/76	Receiver Error	• Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness or connector	TW-51
C2177/77	Initialization not Completed	• Tire pressure warning valve and transmitter • Tire pressure warning ECU	TW-54
C2181/81	Transmitter ID1 not Received (Test Mode DTC)	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector	TW-37
C2182/82	Transmitter ID2 not Received (Test Mode DTC)	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector	TW-37
C2183/83	Transmitter ID3 not Received (Test Mode DTC)	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector	TW-37
C2184/84	Transmitter ID4 not Received (Test Mode DTC)	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector	TW-37
C2185/85	Transmitter ID5 not Received (Test Mode DTC)	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector	TW-37

DTC No.	Detection Item	Trouble Area	See page
C2191/91	Vehicle Speed Signal Error (Test Mode DTC)	• Vehicle speed sensor • Tire pressure warning ECU • Combination meter • Wire harness	TW-55

TEST MODE PROCEDURE

1. TEST MODE PROCEDURE (for Using a Intelligent Tester)

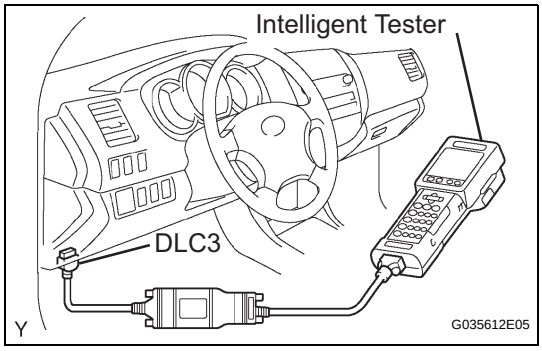
HINT:

- If the ignition switch is turned from the ON to the ACC or LOCK position during test mode, DTCs related to the signal check function will be erased.
- During test mode, the skid control ECU records all DTCs related to the signal check function. By performing the signal check, the codes are erased if normality is confirmed. The codes left over are the codes where an abnormality was found.

(a) Turn the ignition switch to OFF.

(b) Check that the steering wheel is in the straight-ahead position.

(c) A/T: Check that the shift lever is in the P position and apply the parking brake.
M/T: Check that the shift lever is in neutral and apply the parking brake.

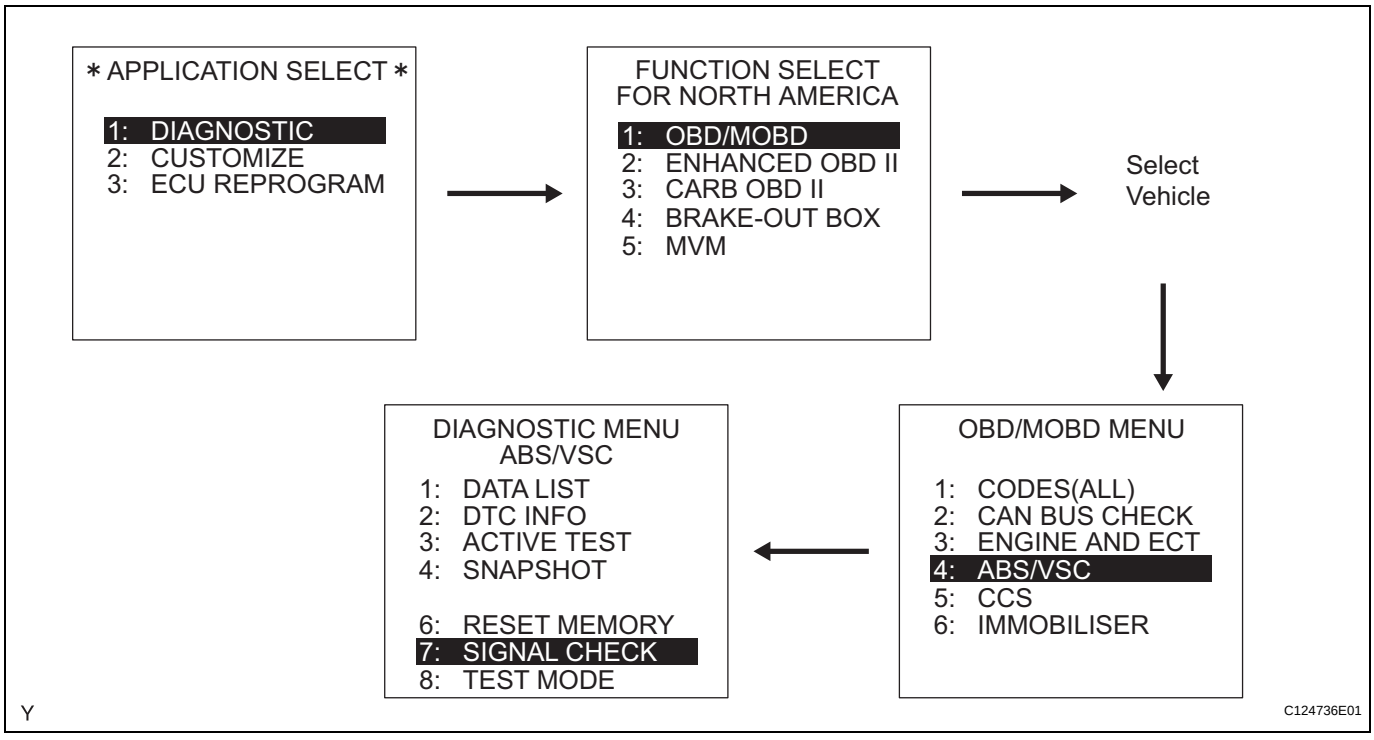


(d) Connect the intelligent tester to the DLC3.

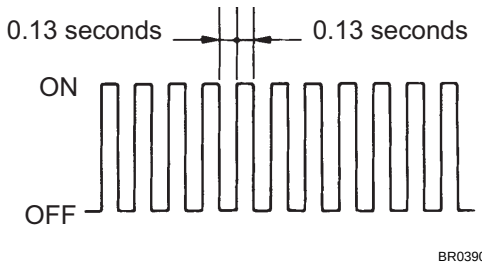
(e) Turn the ignition switch to the ON position.

(f) Switch the ECU to test mode using the intelligent tester.
Select the following menu items: DIAGNOSIS / OBD/MOBD / select vehicle / ABS/VSC / SIGNAL CHECK.

BC



Blinking pattern in TEST MODE:



(g) Check that the ABS warning light blinks as shown in the illustration.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit and the TS and CG terminal circuit.

Trouble Areas	See Page
ABS warning light circuit	BC-64 BC-68
TS and CG terminal circuit	BC-78

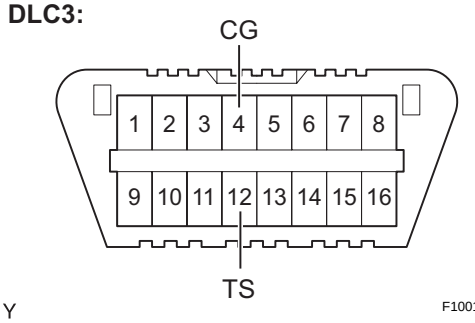
(h) Start the engine.
(i) Active the ABS sensor (deceleration sensor, 4WD detection switch, L4 detection switch and speed sensor) in test mode (SIGNAL CHECK) using intelligent tester.

2. TEST MODE PROCEDURE (for Using a SST Check Wire)

HINT:
- If the ignition switch is turned from the ON to the ACC or LOCK position during test mode, DTCs related to the signal check function will be erased.
- During test mode, the skid control ECU records all DTCs related to the signal check function. By performing the signal check, the codes are erased if normality is confirmed. The codes left over are the codes where an abnormality was found.

(a) Turn the ignition switch to OFF.
(b) Check that the steering wheel is in the straight-ahead position.
(c) A/T: Check that the shift lever is in the P position and apply the parking brake.
M/T: Check that the shift lever is in neutral and apply the parking brake.

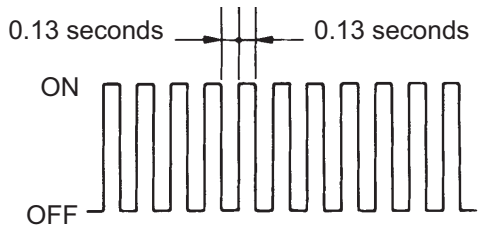
DLC3:



(d) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(e) Turn the ignition switch to the ON position.

BC

Blinking pattern in TEST MODE:

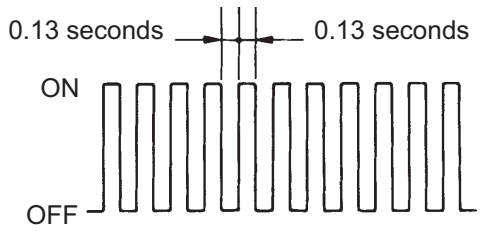


(f) Check that the ABS warning light is blinking as shown in the illustration.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit and TS and CG terminal circuit.

Trouble Areas	See Page
ABS warning light circuit	BC-64 BC-68
TS and CG terminal circuit	BC-78

(g) Start the engine.
(h) Activate the ABS sensor (deceleration sensor, 4WD detection switch, L4 detection switch and speed sensor) in test mode (SIGNAL CHECK) using a check wire.

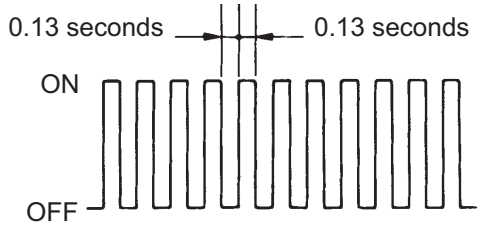
Blinking pattern in TEST MODE:



3. DECELERATION SENSOR SIGNAL CHECK (for 4WD and Pre-runner)

(a) Check that the ABS warning light is blinking as shown in the illustration.
(b) Keep the vehicle stationary on a level surface for 1 second or more.

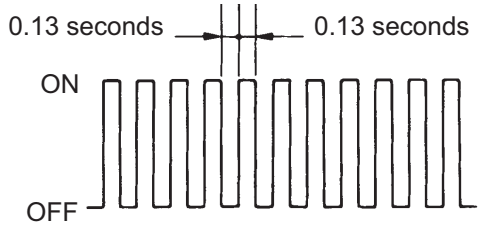
Blinking pattern in TEST MODE:



4. 4WD DETECTION SWITCH SIGNAL CHECK (for 4WD)

(a) Check that the ABS warning light is blinking as shown in the illustration.
(b) Check the transfer indicator switch (4WD position).
(1) Push the 4 wheel drive control switch on to put the vehicle in 4WD mode.
(2) Push the 4 wheel drive control switch off to put the vehicle in 2WD mode.

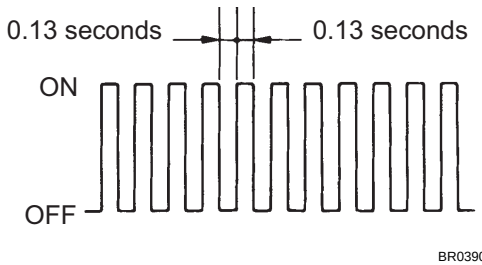
Blinking pattern in TEST MODE:



5. L4 DETECTION SWITCH SIGNAL CHECK (for 4WD)

(a) Check that the ABS warning light is blinking as shown in the illustration.
(b) Check the transfer indicator switch (L4 position).
(1) Turn the 4 wheel drive control switch to the L position to put the vehicle in L4 mode.
(2) Turn the 4 wheel drive control switch to the H position to put the vehicle in H4 mode.
HINT:
Move the vehicle either a little forward or a little backward to engage the L4 position.

Blinking pattern in TEST MODE:



6. SPEED SENSOR CHECK

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Check thee speed sensor signal.

(1) Drive the vehicle straight forward at a speed of 56 mph (90 km/h) or more.

(2) Drive the vehicle straight rearward at a speed of 1.9 mph (3 km/h) or more for 1 second or more.

(3) Check that the ABS warning light goes off.

HINT:

The sensor check may not be completed if the vehicle has its wheels spun or its steering wheel turned during this check.

(c) Stop the vehicle.

NOTICE:

- **Before performing the speed sensor signal check, complete the deceleration sensor, 4WD detection switch and L4 detection switch signal checks.**
- **The speed sensor signal check may not be completed if the speed sensor signal check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off, if the vehicle speed exceeds 28 mph (45 km/h), a signal check code will be stored again. Decelerate or stop the vehicle before the speed reaches 28 mph (45 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:

When the signal check has been completed, the ABS warning light goes off while driving and blinks in test mode while stationary.

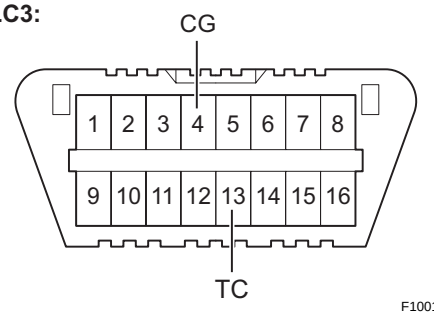
7. READ DTC OF ABS SENSOR (for Using a Intelligent Tester)

(a) Read the DTC(s) by following the tester screen.

HINT:

- Refer to the intelligent tester operator's manual for further details.
- See the list of DTC.

DLC3:



8. READ DTC OF ABS SENSOR (for Using a SST Check Wire)

(a) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(b) Turn the ignition switch to the ON position.

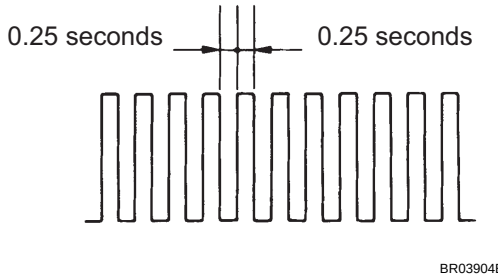
(c) Read the number of blinks of the ABS warning light.

HINT:

- See the list of DTC.

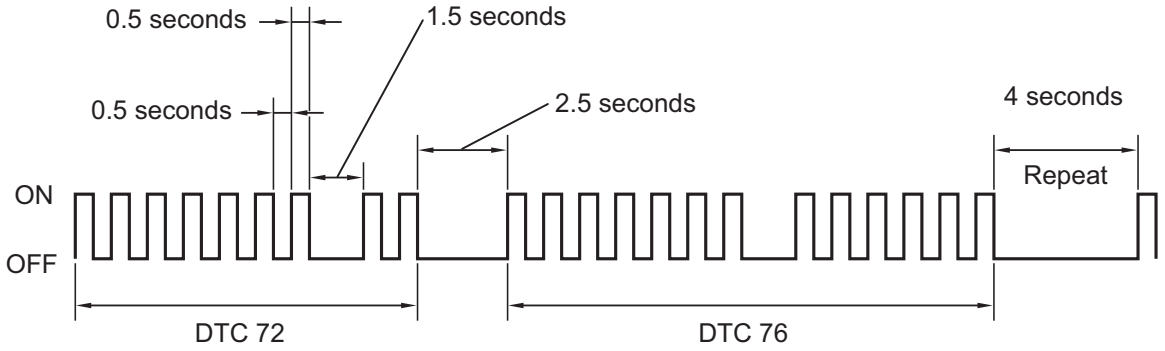
BC

Normal System Code:



- If every sensor is normal, the normal code is displayed (A cycle of 0.25 seconds ON and 0.25 seconds OFF is repeated).
- If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.

Example: Indication of DTCs 72 and 76



(d) After the check, disconnect the SST from terminals TC and CG of the DLC3.

(e) Turn the ignition switch to OFF.

9. DTC OF SIGNAL CHECK FUNCTION

DTC No.	Diagnosis	Trouble Areas
C1271/71	Low output voltage of right front speed sensor	• Right front speed sensor • Sensor installation • Speed sensor rotor
C1272/72	Low output voltage of left front speed sensor	• Left front speed sensor • Sensor installation • Speed sensor rotor
C1273/73	Low output voltage of right rear speed sensor	• Right rear speed sensor • Sensor installation • Speed sensor rotor
C1274/74	Low output voltage of left rear speed sensor	• Left rear speed sensor • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output voltage of right front speed sensor	Right front speed sensor rotor
C1276/76	Abnormal change in output voltage of left front speed sensor	Left front speed sensor rotor
C1277/77	Abnormal change in output voltage of right rear speed sensor	Right rear speed sensor rotor
C1278/78	Abnormal change in output voltage of left rear speed sensor	Left rear speed sensor rotor
C1279/79 (*1), (*2)	Deceleration sensor faulty	• Deceleration sensor • Sensor installation
C1282/82 (*2)	Center differential lock position switch malfunction	Transfer indicator switch (4WD position)
C1283/83 (*2)	L4 detection switch malfunction	Transfer indicator switch (L4 position)

(*1): Pre-runner
(*2): 4WD
HINT:
The DTCs in this table are only output in test mode.

PROBLEM SYMPTOMS TABLE

If no DTCs are displayed during the DTC check but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake actuator or sensor, turn the ignition switch to OFF.

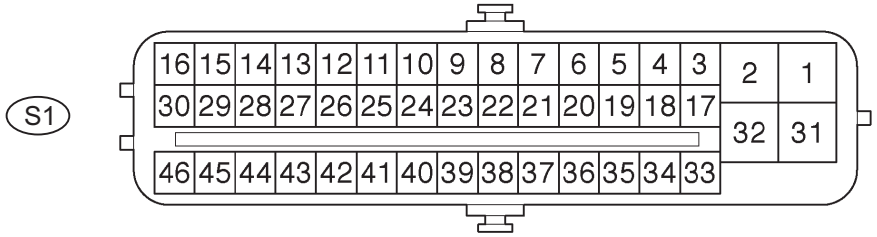
ANTI-LOCK BRAKE SYSTEM

Symptom	Suspected Areas	See Page
ABS does not operate	1. Check DTC reconfirming that normal code output.	BC-16
	2. IG power source circuit	BC-43
	3. Speed sensor circuit	BC-24
	4. Check brake actuator with intelligent tester. If abnormal, check hydraulic circuit for leakage.	BC-299
	5. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator.	BC-300
ABS does not operate efficiently	1. Check DTC reconfirming that normal code output.	BC-16
	2. Speed sensor circuit	BC-24
	3. Stop light switch circuit	BC-55
	4. Check brake actuator with intelligent tester. If abnormal, check hydraulic circuit for leakage.	BC-299
	5. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator.	BC-300
ABS warning light abnormal	1. ABS warning light circuit	BC-64
	2. Skid control ECU (brake actuator)	BC-300
DTC check cannot be performed	1. ABS warning light circuit	BC-64
	2. TC and CG terminal circuit	BC-75
	3. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator.	BC-300
Speed sensor signal check cannot be performed	1. Skid control ECU (brake actuator)	BC-300

TERMINALS OF ECU

1. Terminals of ECU

Skid control ECU:



Symbols (Terminals No.)	Terminal Description
GND1 (1)	Skid control ECU ground
+BS (2)	Solenoid valve power supply
GL1 (4) (*1) (*3)	Deceleration sensor signal input
P (6) (*2)	Shift position indicator P signal input
EXI2 (7) (*3)	Rear differential lock detection switch input
GGND (8) (*1) (*3)	Deceleration sensor ground
FL- (9)	Front LH wheel speed signal input
FL+ (10)	Front LH wheel speed sensor power supply
D/G (13)	Diagnosis tester communication line
STP (14)	Stop light switch input
RL+ (15)	Rear LH wheel speed sensor power supply
RL- (16)	Rear LH wheel speed signal input
WA (17)	ABS warning light output
SP1 (18) (*2)	Speed signal output for meter
TS (20)	Sensor diagnosis check input
TC (21)	Diagnosis tester communication line
PKB (23)	Parking brake switch input
EXI (24) (*3)	ADD change over actuator switch input
+BM (31)	Motor relay power supply
GND2 (32)	Skid control ECU ground
N (36) (*2)	Shift position indicator N signal input
VGS (37) (*1) (*3)	Deceleration sensor power supply
EXI4 (38) (*3)	Detection (L4) switch input
FR- (39)	Front RH wheel speed signal input
FR+ (40)	Front RH wheel speed sensor power supply
BRL (43)	Brake warning light input
RR+ (44)	Rear RH wheel speed sensor power supply
RR- (45)	Rear RH wheel speed signal input
IG1 (46)	ECU power supply

DIAGNOSIS SYSTEM

1. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS and/or BRAKE warning lights come on in accordance with the trouble area to warn the driver. The table below indicates which lights come on when there is a malfunction in a particular function.

Item/Trouble Area	ABS System	EBD System	Skid Control ECU
ABS Warning light	O	O	O
BRAKE Warning light	-	O	O

○: Light ON
-: Light OFF
HINT:

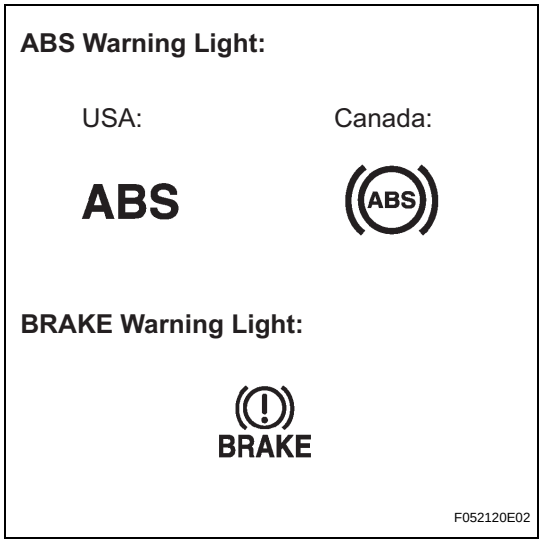
- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the intelligent tester.
- This system has a sensor signal check function (See page BC-7). The DTCs can be read by connecting SST (09843-18043) between terminals TC and CG of the DLC3 and observing the blinking of the ABS warning light, or by connecting a intelligent tester (See page BC-16).

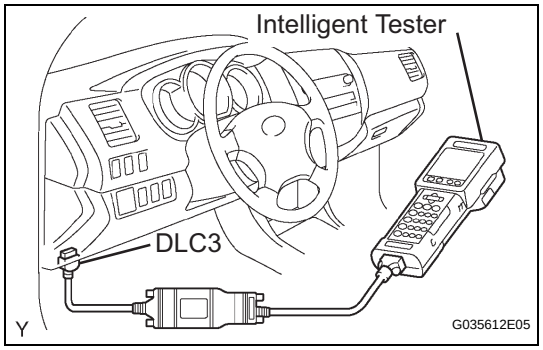
2. WARNING LIGHT CHECK

(a) Release the parking brake.
NOTICE:
When releasing the parking brake, set chocks to hold the vehicle for safety.
HINT:
When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) Check that the ABS warning light and BRAKE warning light come on when the ignition switch is turned on and go off in about 3 seconds.
HINT:
If the warning lights do not illuminate, confirm whether the bulbs have burned out, and also check the wire harness between the skid control ECU and the combination meter.
If the warning light remains on, troubleshoot the effected light circuit by proceeding to the page indicated below:

Trouble Areas	See Page
ABS warning light circuit	BC-64
BRAKE warning light circuit	BC-70



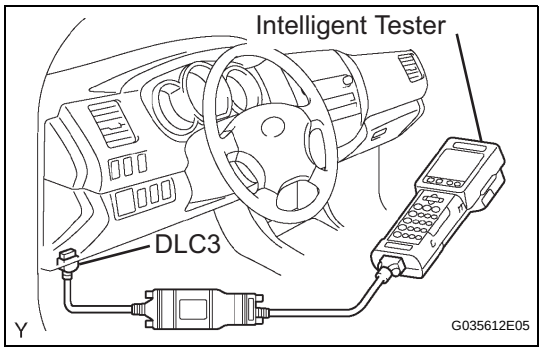


DTC CHECK / CLEAR

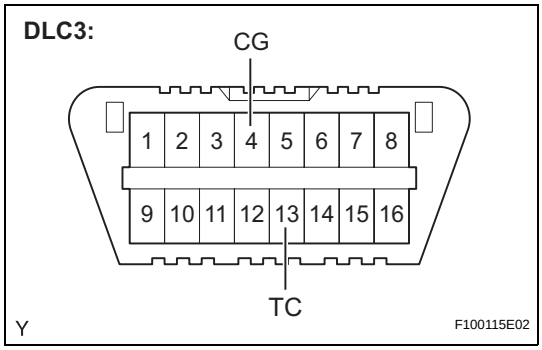
1. DTC CHECK / CLEAR (for Using a Intelligent Tester)

(a) Check DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester ON.
(4) Read the DTCs by following the prompts on the tester screen.

BC



(b) Clear DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Operate the intelligent tester to clear the DTCs.
HINT:
Refer to the intelligent tester operator's manual for further details.

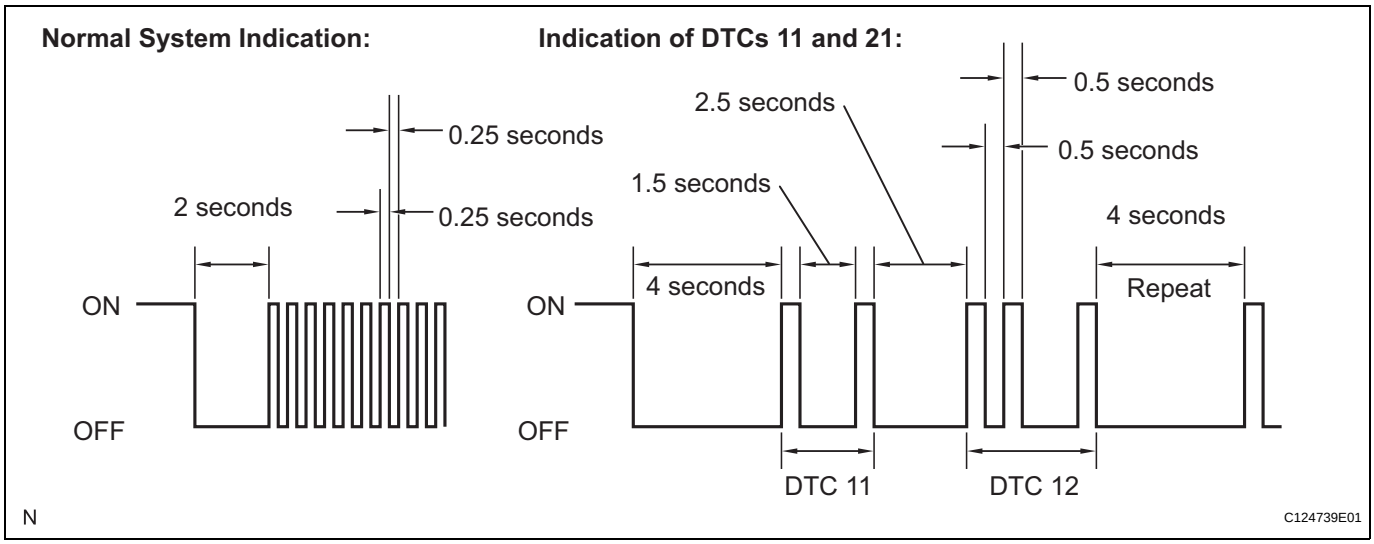


2. DTC CHECK / CLEAR (for Using a SST Check Wire)

(a) Check DTCs.
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the ignition switch to the ON position.
(3) Read 2-digit DTCs by observing the blinking of the ABS warning light on the combination meter.
HINT:
- If no code appears, inspect the ABS warning light circuit or TC and CG terminal circuit.

Trouble Areas	See Page
ABS warning light circuit	BC-64 BC-68
TC and CG terminal circuit	BC-75

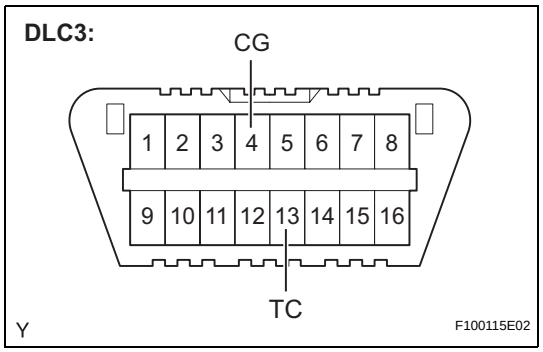
- As an example, the blinking patterns of the normal system indication and DTCs 11 and 21 are shown below.



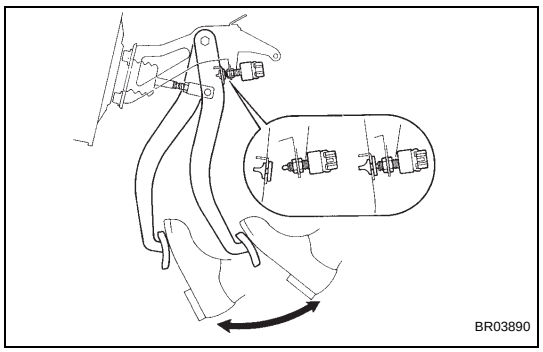
- DTCs are explained in DTC chart (See page BC-22).

BC

(4) After completing the check, disconnect SST from terminals TC and CG of the DLC3, and turn the ignition switch to OFF.
HINT:
If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.



(b) Clear DTCs.
(1) Using SST, connect terminals TC and CG of the DLC3.
(2) Turn the ignition switch to the ON position.
SST 09843-18040



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light blinks in the normal system indication pattern.
(5) Remove SST from the terminals of the DLC3.
(6) Turn the ignition switch to OFF.
HINT:
Clearing the DTCs cannot be performed by removing the battery cable.

3. END OF DTC CHECK / CLEAR

(a) Turn the ignition switch to the ON position.
(b) Check that the ABS warning light goes off within approximately 3 seconds.
(c) Turn the ignition switch to OFF.

BC

FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:

- Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) state as freeze frame data.
- The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to the On position since the last time ABS was activated. However, if the vehicle was stopped or at low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will not count the number since then.
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored when the ABS operated is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) From the display on the tester, select the "FREEZE FRAME DATA".

Intelligent tester display	Measurement Item	Reference Value
TROUBLE CODE	Freeze DTC	min.: 0, max.: 255
STOP LIGHT SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
SYSTEM	System status	ABS activated: ABS Fail safe mode activated: FAIL SF No system activated: NO SYS

WHEEL DIR FL	Front left wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD
WHEEL DIR RR	Rear right wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD
WHEEL DIR RL	Rear left wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

If there is a problem with any sensor signals or actuator systems, the skid control ECU prohibits the power supply to the brake actuator and prohibits ABS control.
ABS control will be prohibited, but EBD control continues as far as possible. If EBD control is impossible, the brake warning light comes on to warn the driver.

Malfunction	Symptom
ABS system	ABS control prohibited
EBD system	ABS & EBD control prohibited

HINT:
If the ABS system encounters a malfunction, the brake system will operate normally without ABS control.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By referring to the DATA LIST displayed on the intelligent tester, you can read the value and status of parts such as switches, sensors and actuators without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening diagnostic time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester.
(d) From the display on the tester, read the "DATA LIST".

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one of the methods to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) According to the display on the tester, perform the "ACTIVE TEST".

HINT:

Ignition switch must be turned to the ON position to proceed to the ACTIVE TEST using the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operation of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operation of solenoid (clicking sound) can be heard

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:
When removing any parts, turn the ignition switch to OFF.

HINT:

- Using SST 09843-18040, connect terminal TC and CG of the DLC3.
- If no abnormality is found when inspecting parts, inspect the ECU and ground points for poor contact.
- If a DTC is displayed during the DTC check, check the circuit for the DTC listed in the table below. For details of each DTC, refer to the page indicated.
- When 2 or more DTCs are recorded and the problem cannot be identified, perform circuit inspection of the other DTCs.

(*1): Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed.

1. Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
2. Clear the DTC.

DTC	**C0200/31**	**Right Front Wheel Speed Sensor Signal Malfunction**

DTC	**C0205/32**	**Left Front Wheel Speed Sensor Signal Malfunction**

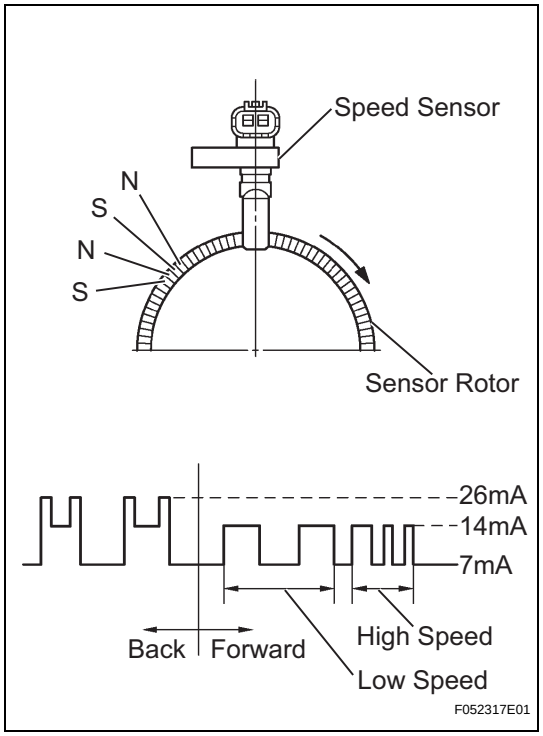
DTC	**C0210/33**	**Right Rear Wheel Speed Sensor Signal Malfunction**

DTC	**C0215/34**	**Left Rear Wheel Speed Sensor Signal Malfunction**

DESCRIPTION

The speed sensor detects the wheel speeds and sends the appropriate signals to the skid control ECU. Speed sensor rotors have rows of alternating N and S magnetic poles, and their magnetic fields change when the rotors turn.

Each speed sensor detects that magnetic change and sends a pulse signal to the skid control ECU. The ECU monitors the wheel speeds according to the speed signals to control the ABS control system.



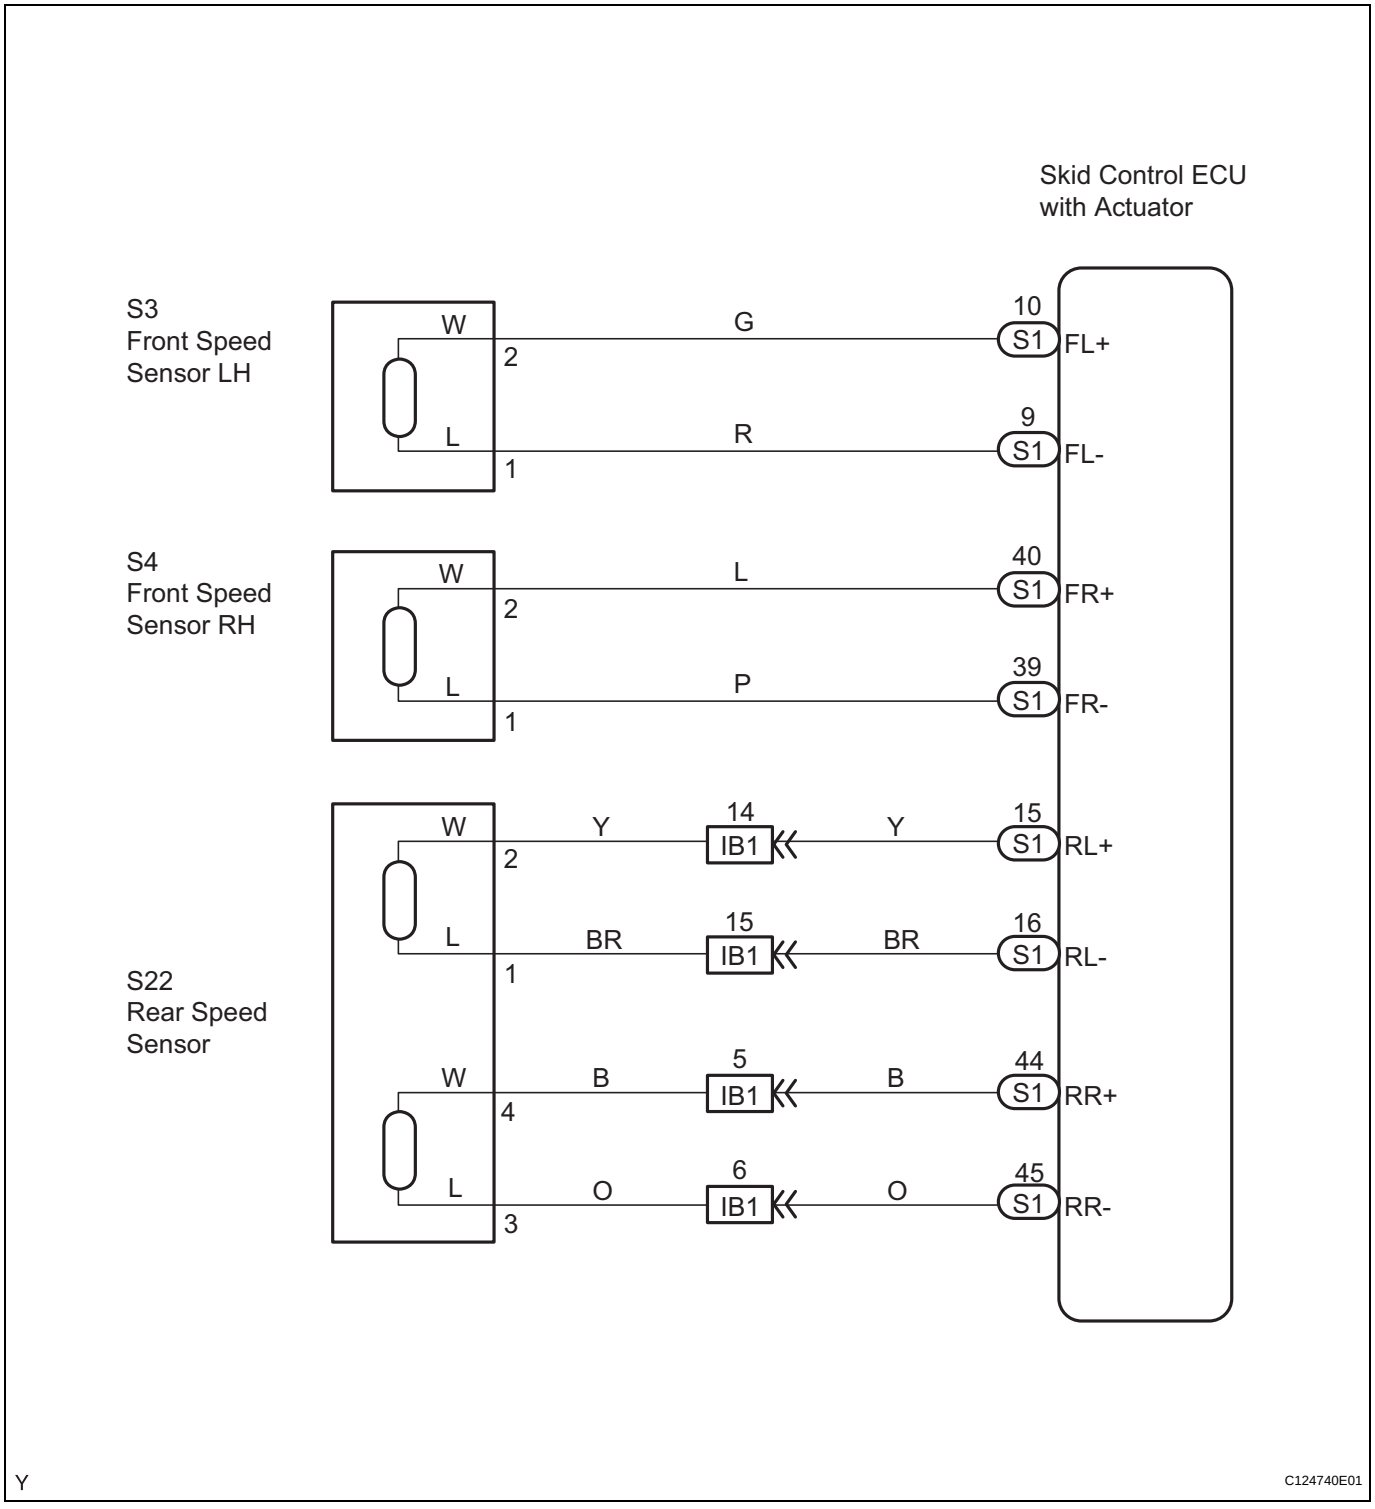
BC

DTC No.	DTC Detecting Conditions	Trouble Areas
C0200/31 C0205/32 C0210/33 C0215/34	1. At vehicle speed of 6 mph (10 km/h) or more, speed sensor signal circuit open or short for 1 second or more. 2. Speed sensor signal open circuit occurs at least 255 times. 3. Speed sensor signal circuit open for 0.5 seconds or more. 4. With ignition switch ON and vehicle speed at 2 mph (3km/h) or more, 3 wheels output reverse rotation signal and 1 wheel outputs high-frequency pulse 75 times. 5. At vehicle speed of 6 mph (10 km/h) or more, speed sensor output halves for 5 seconds. 6. At vehicle speed of 6 mph (10 km/h) or more, changing of normal rotation signal and reverse rotation signal occurs 7 times within 0.006 seconds while ignition switch ON. 7. Signal output of any one wheel different from signals of other 3 wheels for 1 second, at vehicle speed of 18 mph (30 km/h) or more. 8. Reverse rotation signal produced for 1 second or more at vehicle speed of 62 mph (100 km/h) or more. 9. At vehicle speed of 18 mph (30 km/h) or more, one speed sensor malfunctions and differs in signal direction from other 3 wheels. 10. When voltage at IG1 terminal 9.5 V or more, voltage of sensor power supply decreases for 0.5 seconds or more.	• Speed sensor • Speed sensor circuit • Speed sensor installation • Brake actuator (skid control ECU)

BC

HINT:
DTC C0200/31 relates to the front right speed sensor.
DTC C0205/32 relates to the front left speed sensor.
DTC C0210/33 relates to the rear right speed sensor.
DTC C0215/34 relates to the rear left speed sensor.

WIRING DIAGRAM



1	READ VALUE OF DATA LIST (SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the DATA LIST mode on the intelligent tester.

BC

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
WHEEL SPD FR	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD FL	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RR	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RL	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer

(d) Check that there is no difference between the speed value output from each speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
There is almost no difference with the displayed speed value.

HINT:
There is tolerance of +-10% in the speedometer indication.

NG → **Go to step 6**

OK

2 PERFORM TEST MODE INSPECTION (SPEED SENSOR CHECK)

(a) Check if test mode DTCs are detected (See page BC-7).

Result	Proceed to
Test mode DTC output	A
Test mode DTC not output	B

B → **Go to step 4**

A

3 RECONFIRM DTC

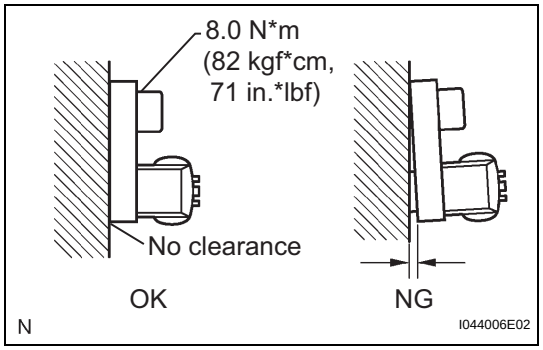
(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

4	CHECK SPEED SENSOR INSTALLATION



(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and front steering knuckle.
Torque:
8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **TIGHTEN BOLT PROPERLY**

OK

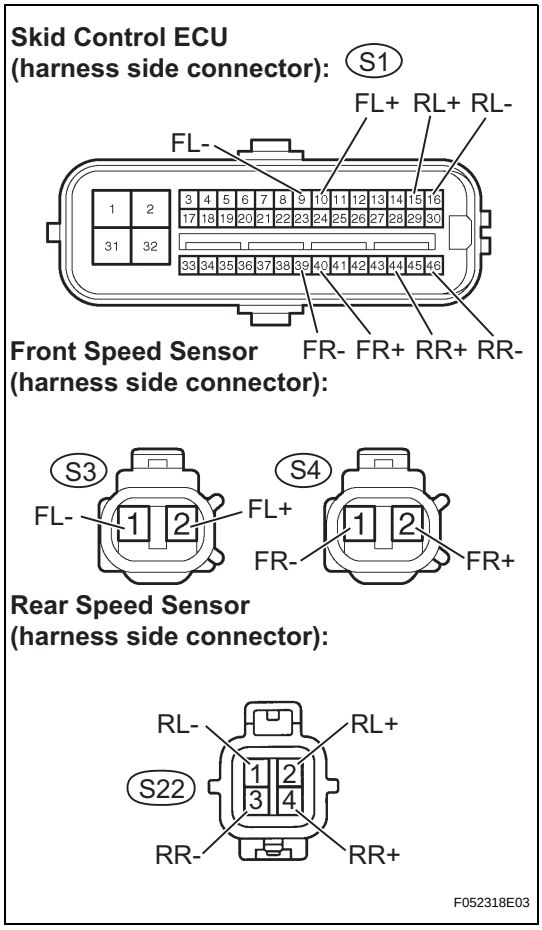
5	INSPECT SPEED SENSOR

(a) Remove the speed sensor.
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

6	CHECK HARNESS AND CONNECTOR



(a) Disconnect the skid control ECU connector.
(b) Disconnect the speed sensor connectors.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - S3-2 (FL+)	Below 1 Ω
S1-9 (FL-) - S3-1 (FL-)	Below 1 Ω
S1-40 (FR+) - S4-2 (FR+)	Below 1 Ω
S1-39 (FR-) - S4-1 (FR-)	Below 1 Ω
S1-15 (RL+) - S22-2 (RL+)	Below 1 Ω
S1-16 (RL-) - S22-1 (RL-)	Below 1 Ω
S1-44 (RR+) - S22-4 (RR+)	Below 1 Ω
S1-45 (RR-) - S22-3 (RR-)	Below 1 Ω

(d) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - Body ground	10 kΩ or higher
S1-9 (FL-) - Body ground	10 kΩ or higher
S1-40 (FR+) - Body ground	10 kΩ or higher
S1-39 (FR-) - Body ground	10 kΩ or higher
S1-15 (RL+) - Body ground	10 kΩ or higher
S1-16 (RL-) - Body ground	10 kΩ or higher
S1-44 (RR+) - Body ground	10 kΩ or higher
S1-45 (RR-) - Body ground	10 kΩ or higher

(e) Reconnect the speed sensor connectors.
(f) Reconnect the skid control ECU connector.

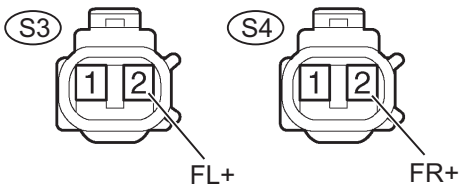
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

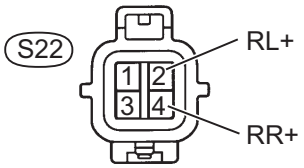
BC

7 INSPECT BRAKE ACTUATOR (TERMINAL VOLTAGE)

Front Speed Sensor (harness side connector):



Rear Speed Sensor (harness side connector):



F052319E02

(a) Disconnect the speed sensor connectors.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

Tester Connection	Specified Condition
S3-2 (FL+) - Body ground	7.5 to 12 V
S4-2 (FR+) - Body ground	7.5 to 12 V
S22-2 (RL+) - Body ground	7.5 to 12 V
S22-4 (RR+) - Body ground	7.5 to 12 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the speed sensor connectors.

NG → **REPLACE BRAKE ACTUATOR**

OK

8 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

REPLACE BRAKE ACTUATOR

BC

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

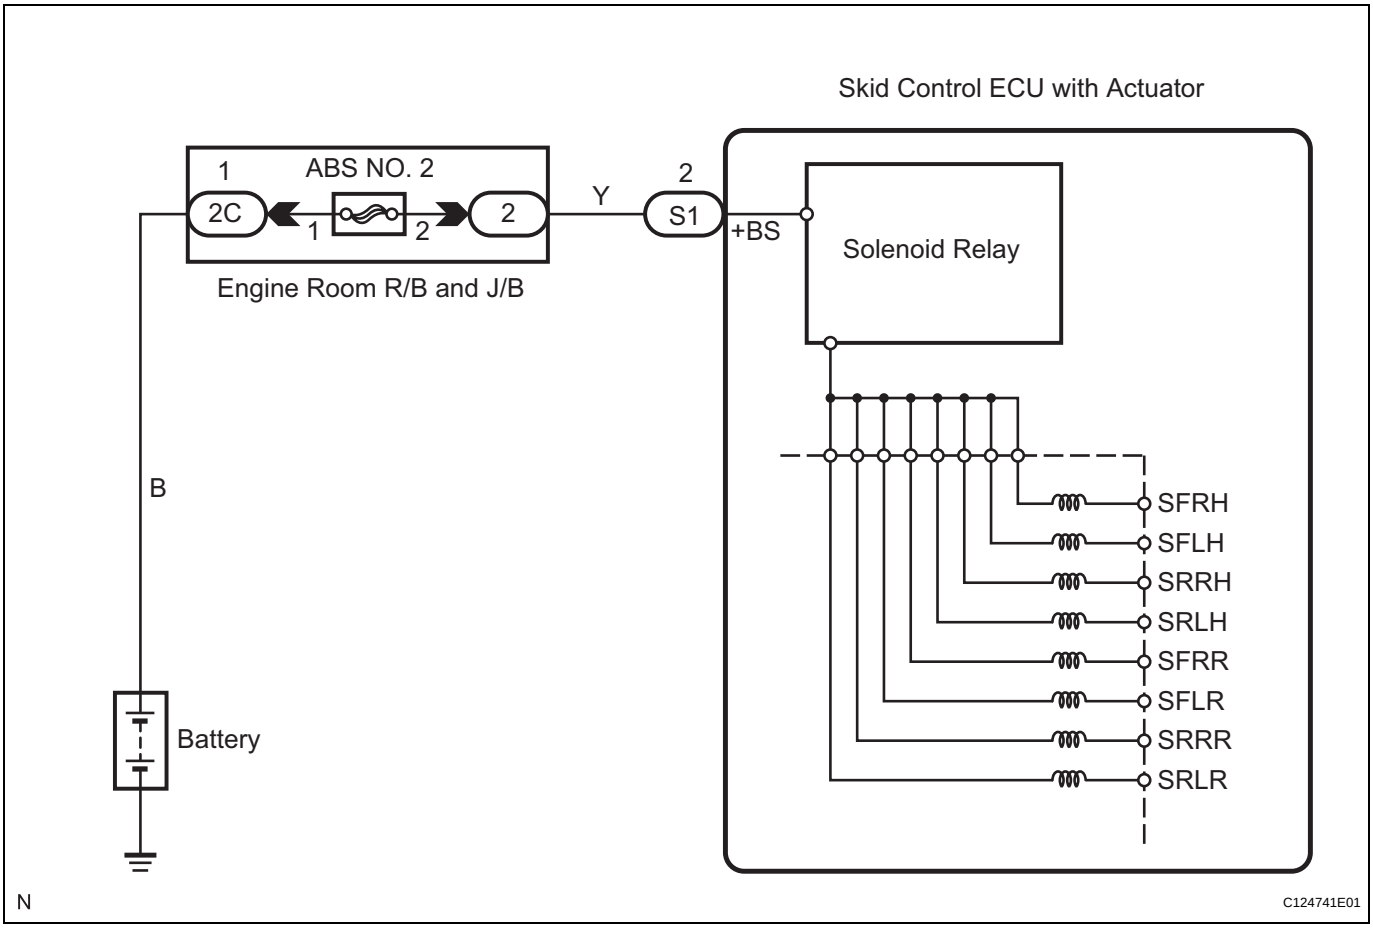
DTC	C0256/24	SRL Solenoid Circuit

DESCRIPTION

The solenoid goes on when signals are received from the ECU and controls the pressure action on the wheel cylinders thus controlling the braking force.

DTC No.	DTC Detecting Conditions	Trouble Areas
C0226/21	Open or short in SFRH or SFRR circuit for 0.05 seconds or more.	• Brake actuator • SFRH or SFRR circuit
C0236/22	Open or short in SFLH or SFLR circuit for 0.05 seconds or more.	• Brake actuator • SFLH or SFLR circuit
C0246/23	Open or short in SRRH or SRRR circuit for 0.05 seconds or more.	• Brake actuator • SRRH or SRRR circuit
C0256/24	Open or short in SRLH or SRLR circuit for 0.05 seconds or more.	• Brake actuator • SRLH or SRLR circuit

WIRING DIAGRAM



1	RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at 6 mph (10 km/h) or more to activate initial check.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPLACE BRAKE ACTUATOR

DTC	C0273/13	Open or Short Circuit in ABS Motor Relay Circuit

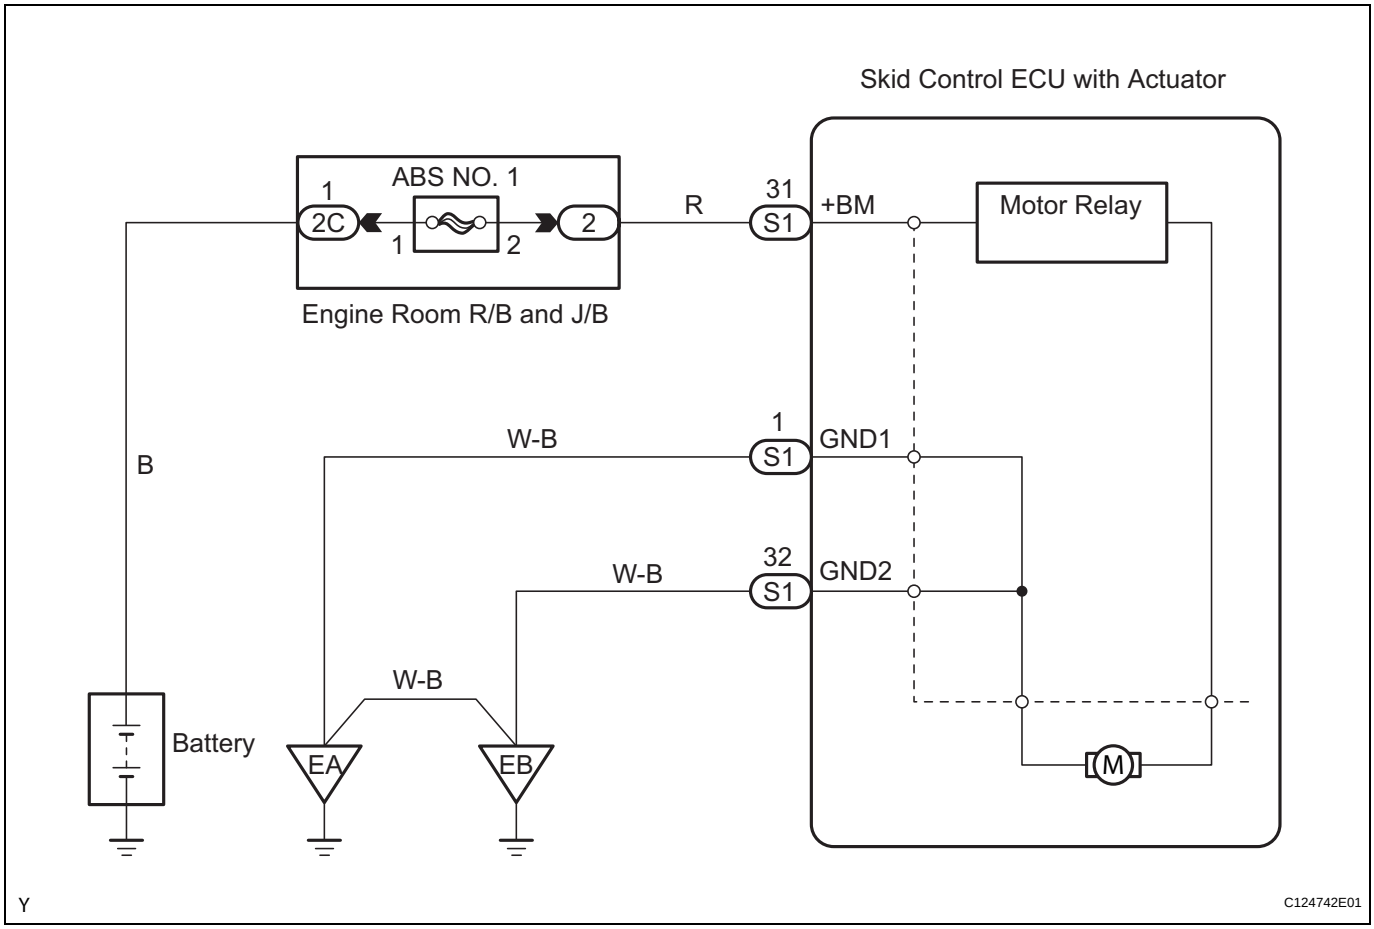
DTC	C0274/14	Short to B+ in ABS Motor Relay Circuit

DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the skid control ECU switches the motor relay ON and operates the ABS pump motor.

DTC No.	DTC Detecting Conditions	Trouble Areas
C0273/13	When either of following (1 or 2) detected: 1. Both of following conditions continue for at least 0.2 seconds. • IG1 voltage between 9.5 and 17.2 V. • Relay contact open when relay ON. 2. Both of following conditions continue for at least 0.2 seconds. • IG1 voltage less than 9.5 V. • Relay contact remains open when relay ON.	• ABS motor relay • ABS motor relay circuit
C0274/14	The following condition continues for at least 4 seconds. • Relay contact closed when relay OFF.	• ABS motor relay • ABS motor relay circuit

WIRING DIAGRAM



1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) Select the DATA LIST mode on the intelligent tester.
(e) Check the operation sound of the ABS motor when operating it with the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS MOT RELAY	Turns ABS motor relay ON/OFF	Operation of motor can be heard

OK:
The operation sound of the ABS motor should be heard.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at 6mph (10 km/h) or more to activate initial check.
(c) Check if the same DTCs are detected.

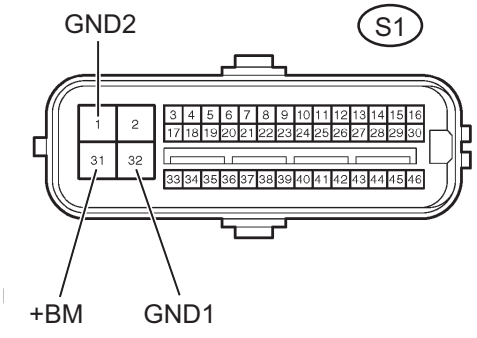
Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

3 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (BM+ - GND1, GND2)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
S1-31 (+BM) - S1-1, 32 (GND1, GND2)	Always	10 to 14 V

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

REPLACE BRAKE ACTUATOR

DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

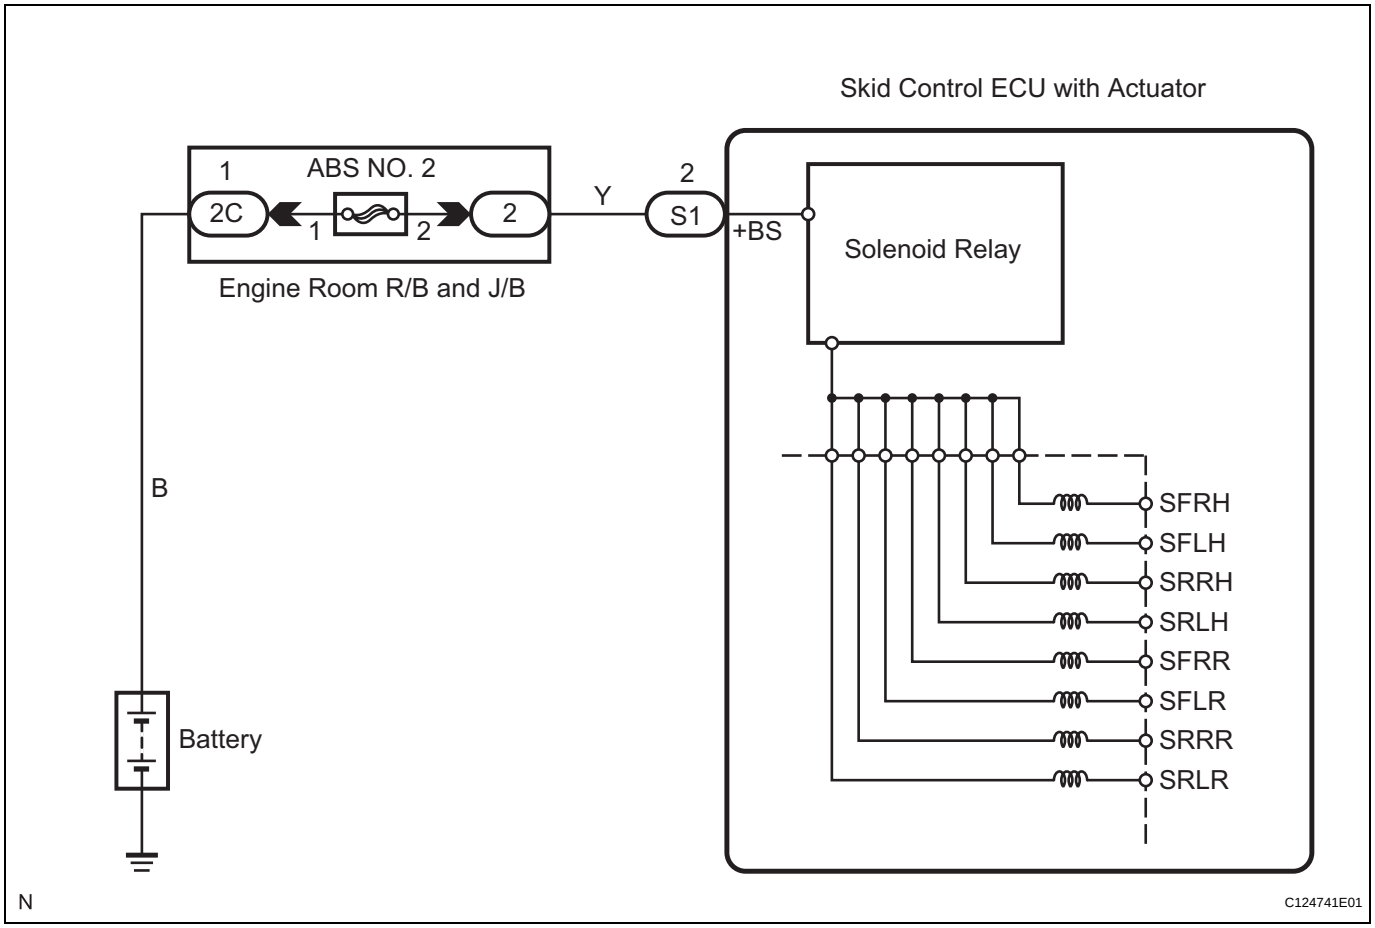
DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

DESCRIPTION

This relay supplies power to each ABS solenoid. After the ignition switch is turned ON, if the results of initial check are normal, the relay goes on.

DTC No.	DTC Detecting Conditions	Trouble Areas
C0278/11	When either of following (1 or 2) detected: 1. Both of following conditions continue for at least 0.2 seconds. • IG voltage between 9.5 and 17.2 V. • Relay contact open when relay ON. 2. Both of following conditions continues for at least 0.2 seconds. • IG voltage 9.5 V or less when relay ON. • Relay contact remains open.	• Brake actuator (skid control ECU) • ABS solenoid relay circuit
C0279/12	The following condition continues for at least 0.2 seconds. • Relay contact closed immediately after turning ignition switch ON when relay OFF.	• Brake actuator (skid control ECU) • ABS solenoid relay circuit

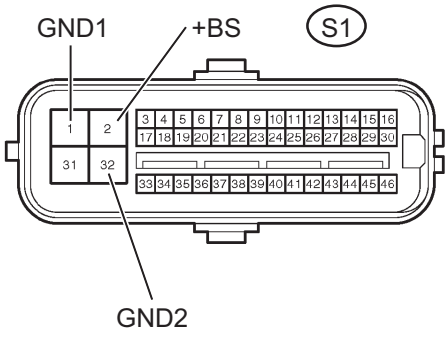
WIRING DIAGRAM



BC

1	INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (+BS - GND1, GND2)

Skid Control ECU
(harness side connector):



C121700E11

(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
S1-2 (BS+) - S1-1,32 (GND1, GND2)	Always	10 to 14 V

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at 6 mph (10 km/h) or more to activate initial check.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE BRAKE ACTUATOR

INSTALLATION

1. INSTALL BRAKE PEDAL PAD

(a) Install the brake pedal pad onto the brake pedal.

2. INSTALL BRAKE PEDAL LEVER

(a) Apply lithium soap base glycol grease to the 2 brake pedal link pins, 2 pedal shaft collars and 2 brake pedal links.

(b) Install the brake pedal lever with the 2 brake pedal link pins, 2 brake pedal shaft collars and 2 brake pedal links onto the brake pedal.

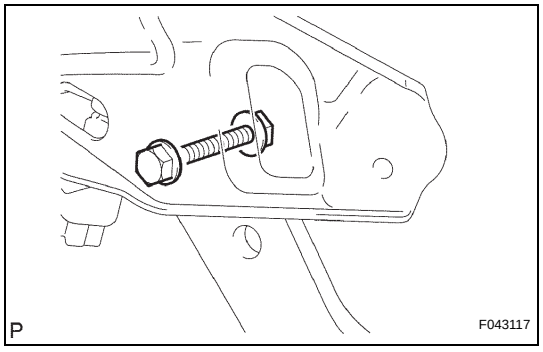
(c) Install 2 new E-rings onto each brake pedal link pin.

3. INSTALL BRAKE PEDAL

(a) Apply lithium soap base glycol grease to the 2 collars and 4 brake pedal bushes.

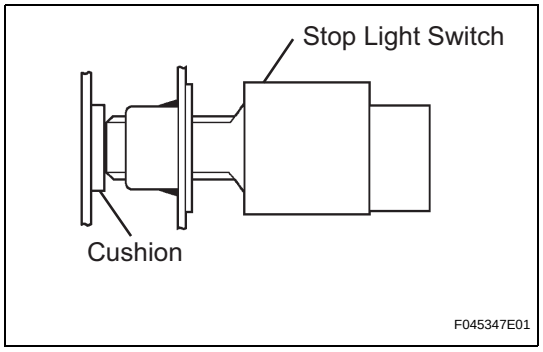
(b) Install the 2 collars and 4 brake pedal bushes onto the brake pedal and brake pedal lever.

(c) Install the brake pedal with the bolt and nut onto the brake pedal support.
Torque: 34.3 N*m (350 kgf*cm, 25 ft.*lbf)

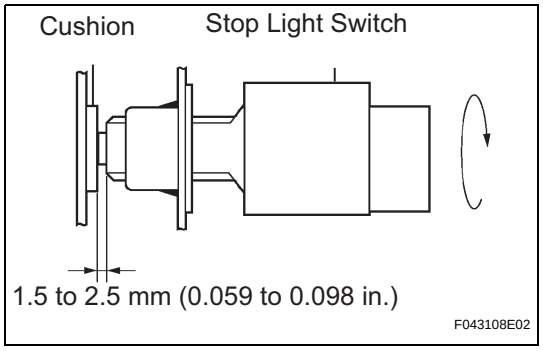


4. INSTALL STOP LIGHT SWITCH ASSEMBLY

(a) Insert the stop light switch until the body comes into contact with the cushion.
NOTICE:
When inserting the stop light switch, support the pedal from behind so that the pedal is not pushed in.



(b) Make a quarter turn clockwise to install the stop light switch.
NOTICE:
The turning torque for installing the stop light switch:
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
HINT:
Due to the inverse screw structure, turning the stop light switch clockwise will cause it to become loose and eventually detach from the adjuster.



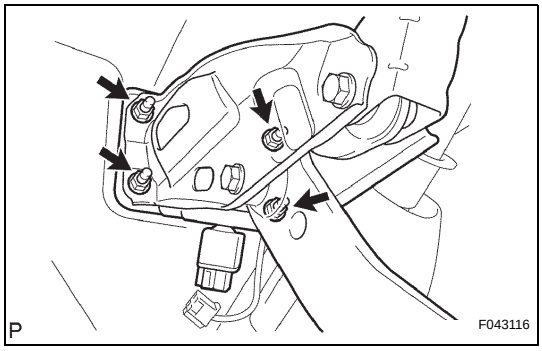
(c) Check the protrusion of the rod.
Protrusion of the rod:
1.5 to 2.5 mm (0.059 to 0.098 in.)

BR

5. INSTALL BRAKE PEDAL RETURN SPRING

(a) Apply lithium soap base glycol grease to the inner surface of the hole on the brake pedal support and brake pedal.

(b) Install the return spring onto the brake pedal support and brake pedal.



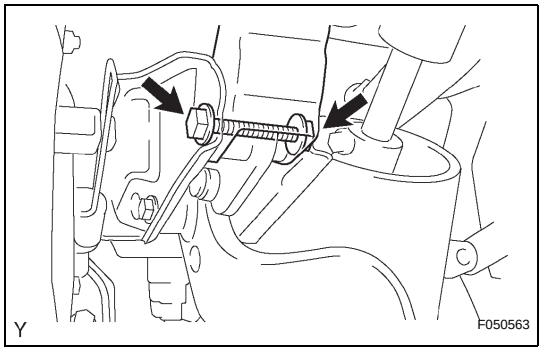
6. INSTALL BRAKE PEDAL SUPPORT SUB-ASSEMBLY

(a) Install the 4 nuts and brake pedal support.
Torque: 14.2 N*m (145 kgf*cm, 10 ft.*lbf)

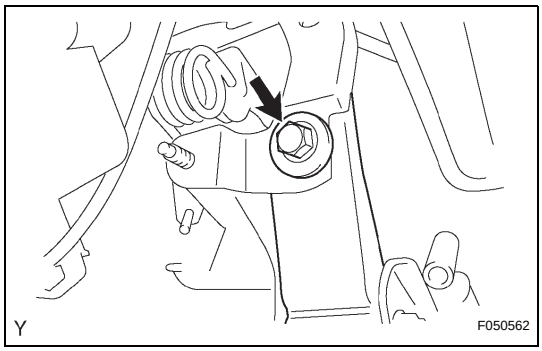
(b) Connect the stop light switch connector to the stop lamp switch.

7. INSTALL BRAKE PEDAL SUPPORT REINFORCEMENT

(a) Install the reinforcement onto the brake pedal support.



(b) Provisionally tighten the bolt and nut to the brake pedal support, reinforcement and brake pedal lever.



(c) Install the bolt onto the reinforcement.
Torque: 34.3 N*m (350 kgf*cm, 25 ft.*lbf)

(d) Tighten the bolt and nut.
Torque: 34.3 N*m (350 kgf*cm, 25 ft.*lbf)

8. INSTALL MASTER CYLINDER PUSH ROD CLEVIS

(a) Apply lithium soap base glycol grease to the inner surface of the hole on the brake pedal lever.

(b) Install the push rod clevis onto the brake pedal lever with the push rod pin and clip.

9. INSPECT BRAKE PEDAL HEIGHT (See page BR-11)

10. INSPECT PEDAL FREE PLAY (See page BR-14)

11. INSPECT PEDAL RESERVE DISTANCE (See page BR-14)

12. INSTALL DRIVER SIDE JUNCTION BLOCK
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

13. INSTALL INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-22)

14. INSTALL INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-25)

15. INSTALL INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-25)

16. **INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)**
17. **INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-75)**
18. **INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)**
19. **INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)**
20. **INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)**
21. **INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)**
22. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)

INSTALLATION

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD

NOTICE:

Make adjustments while the brake booster has no vacuum in it. (Depress the brake pedal several times with the engine stopped.)

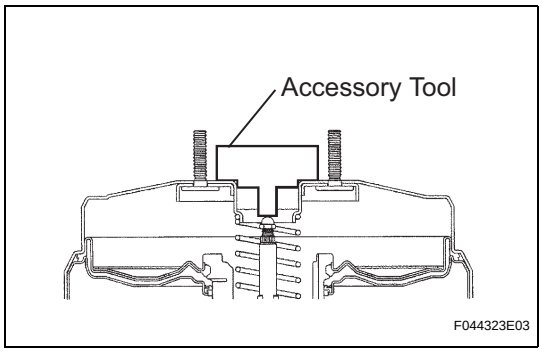
HINT:

The brake booster push rod should be adjusted when the brake master cylinder is replaced with a new one. The adjustment is not necessary when the brake master cylinder is reinstalled and the brake booster is replaced with a new one.

(a) Apply chalk to the tip of an accessory tool.

HINT:

An accessory tool is enclosed with a new brake master cylinder sub-assembly.



(b) Place the accessory tool on the brake booster assembly.

(c) Measure the clearance between the brake booster push rod and accessory tool.

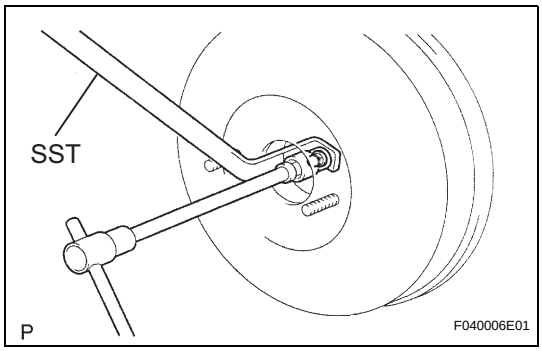
Clearance:

0 mm (0 in.)

HINT:

Adjust the clearance in following cases:

- If there is any clearance between the accessory tool and the shell of the brake booster (floating accessory tool), the clearance is too small.
- If the chalk does not stick on the tip of the brake booster push rod, the clearance is too big.



(d) If the clearance is out of the specified range, fix the push rod using SST and adjust the adjusting bolt protruding length.

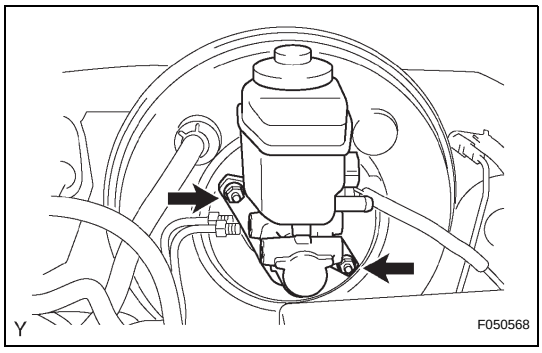
SST 09737-00020

HINT:

When adjusting the push rod, depress the brake pedal sufficiently so that the push rod sticks out.

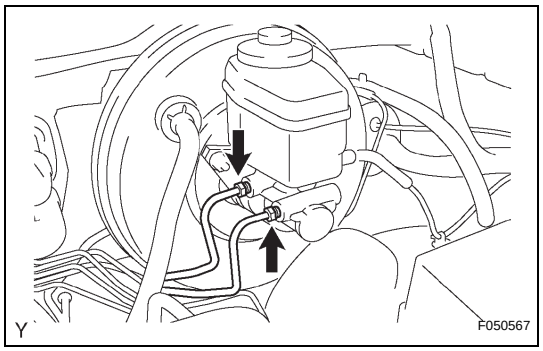
2. INSTALL BRAKE MASTER CYLINDER

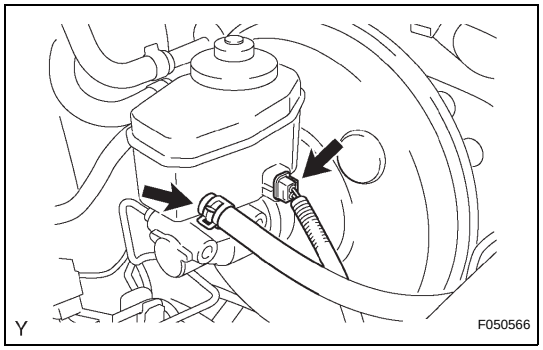
(a) Install a new O-ring onto the brake master cylinder.



(b) Install the brake master cylinder with the 2 nuts onto the brake booster.

Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)





(c) Using SST, connect the 2 brake lines to the brake master cylinder.
SST 09023-00101
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

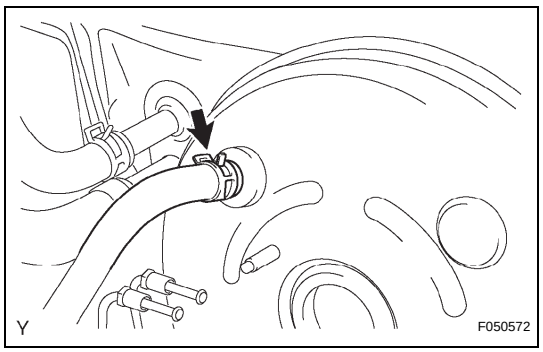
(d) for Manual Transmission:
(1) Connect the clutch reservoir tube to the reservoir.

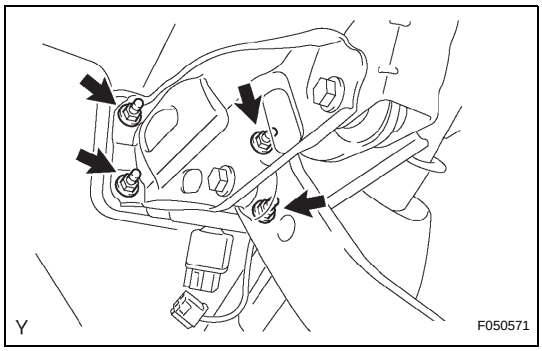
(e) Connect the brake fluid level warning switch connector to the brake master cylinder.

3. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-7)**
4. **BLEED MASTER CYLINDER (See page BR-7)**
5. **BLEED BRAKE LINE (See page BR-7)**
6. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-8)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**
8. **INSPECT BRAKE PEDAL HEIGHT (See page BR-11)**
9. **INSPECT PEDAL FREE PLAY (See page BR-14)**
10. **INSPECT PEDAL RESERVE DISTANCE (See page BR-14)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

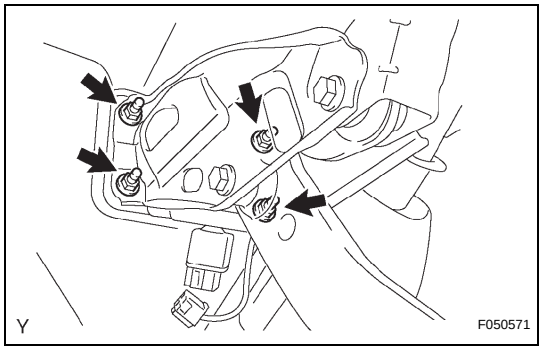
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
3. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
4. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
5. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-61)**
6. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
7. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
8. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-61)**
9. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
10. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-9)**
11. **REMOVE INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-9)**
12. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-12)**
13. **SEPARATE DRIVER SIDE JUNCTION BLOCK**
14. **REMOVE BRAKE MASTER CYLINDER (See page BR-21)**
15. **SEPARATE MASTER CYLINDER PUSH ROD CLEVIS (See page BR-15)**
16. **REMOVE BRAKE BOOSTER**
    (a) Disconnect the vacuum hose from the brake booster.





(b) Remove the 4 nuts, and pull out the brake booster.
(c) Remove the gasket from the brake booster.



INSTALLATION

1. **INSTALL BRAKE BOOSTER**
   (a) Install a new gasket onto the brake booster.
   (b) Install the brake booster assembly with the 4 nuts.
   Torque: 14.2 N*m (145 kgf*cm, 10 ft.*lbf)
   (c) Connect the vacuum hose to the brake booster.
2. **INSTALL MASTER CYLINDER PUSH ROD CLEVIS (See page BR-18)**
3. **INSTALL BRAKE MASTER CYLINDER (See page BR-22)**
4. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-7)**
5. **BLEED MASTER CYLINDER (See page BR-7)**
6. **BLEED BRAKE LINE (See page BR-7)**
7. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-8)**
8. **CHECK FOR BRAKE FLUID LEAKAGE**
9. **INSPECT BRAKE PEDAL HEIGHT (See page BR-11)**
10. **INSPECT PEDAL FREE PLAY (See page BR-14)**
11. **INSPECT PEDAL RESERVE DISTANCE (See page BR-14)**
12. **INSTALL DRIVER SIDE JUNCTION BLOCK**
    Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
13. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-22)**
14. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-25)**
15. **INSTALL INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-25)**
16. **INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)**
17. **INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-75)**
18. **INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)**
19. **INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)**
20. **INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)**
21. **INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)**
22. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

ON-VEHICLE INSPECTION

1. INSPECT BRAKE MASTER CYLINDER FLUID PRESSURE CHANGE

(a) Inspect the battery positive voltage.
Battery positive voltage:
10 to 14 V

(b) Turn the ignition switch to OFF, and depress the brake pedal more than 20 times.
HINT:
When pressure in the accumulator is released, the reaction force becomes lighter and the stroke becomes longer.

(c) Install a LSPV gauge (SST) and brake pedal effort gauge, and bleed the air.
SST 09709-29018

(d) When the booster does not operate:

(1) Depress the brake pedal and check the fluid pressure.
At 245 N (25 kgf, 55 lbf)

Front brake pressure	Rear brake pressure
1,840 kPa (18.8 kgf/cm^2, 267 psi) or more	0 kPa (0 kgf/cm^2, 0 psi)

At 343 N (35 kgf, 77 lbf)

Front brake pressure	Rear brake pressure
2,710 kPa (27.6 kgf/cm^2, 393 psi) or more	0 kPa (0 kgf/cm^2, 0 psi)

(e) When the booster operates:

(1) Turn the ignition switch to ON, and wait until the pump motor has stopped (step A).
HINT:
Pump operating sound can be heard.

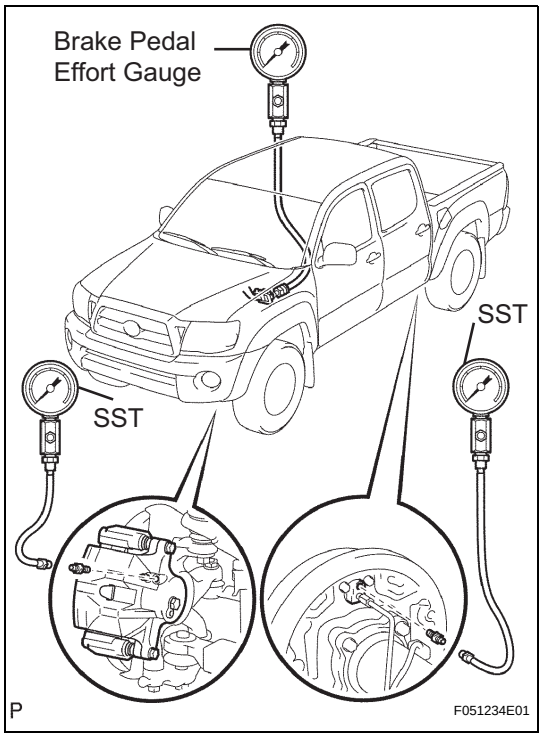
(2) Turn the ignition switch to OFF, and depress the brake pedal more than 20 times (step B).
HINT:
When pressure in the accumulator is released, the reaction force becomes lighter and the stroke becomes longer.

(3) Repeat step A and B 5 times (step C).

(4) Turn the ignition switch to ON, and check that the pump stops after approximately 8 to 14 seconds.
NOTICE:
If the pump does not stop, repeat step C again.

(5) Depress the brake pedal and check the fluid pressure.
At 49 N (5 kgf, 11 lbf)

Front brake pressure	Rear brake pressure
770 to 1,280 kPa (7.9 to 13.1 kgf/cm^2, 112 to 186 psi)	800 to 1,330 kPa (8.2 to 13.6 kgf/cm^2, 116 to 193 psi)



BR

At 98 N (10 kgf, 22 lbf)

Front brake pressure	Rear brake pressure
2,650 to 3,590 kPa (27.0 to 36.6 kgf/cm^2, 384 to 521 psi)	2,680 to 3,630 kPa (27.3 to 37.0 kgf/cm^2, 389 to 526 psi)

At 147 N (15 kgf, 33 lbf)

Front brake pressure	Rear brake pressure
4,680 to 5,720 kPa (47.7 to 58.3 kgf/cm^2, 679 to 830 psi)	4,710 to 5,760 kPa (48.0 to 58.7 kgf/cm^2, 683 to 835 psi)

At 196 N (20 kgf, 44 lbf)

Front brake pressure	Rear brake pressure
6,610 to 7,680 kPa (67.4 to 78.3 kgf/cm^2, 959 to 1,114 psi)	6,640 to 7,720 kPa (67.7 to 78.7 kgf/cm^2, 963 to 1,120 psi)

2. INSPECT BRAKE MASTER CYLINDER OPERATION

(a) Inspect the battery positive voltage.
Battery positive voltage:
10 to 14 V

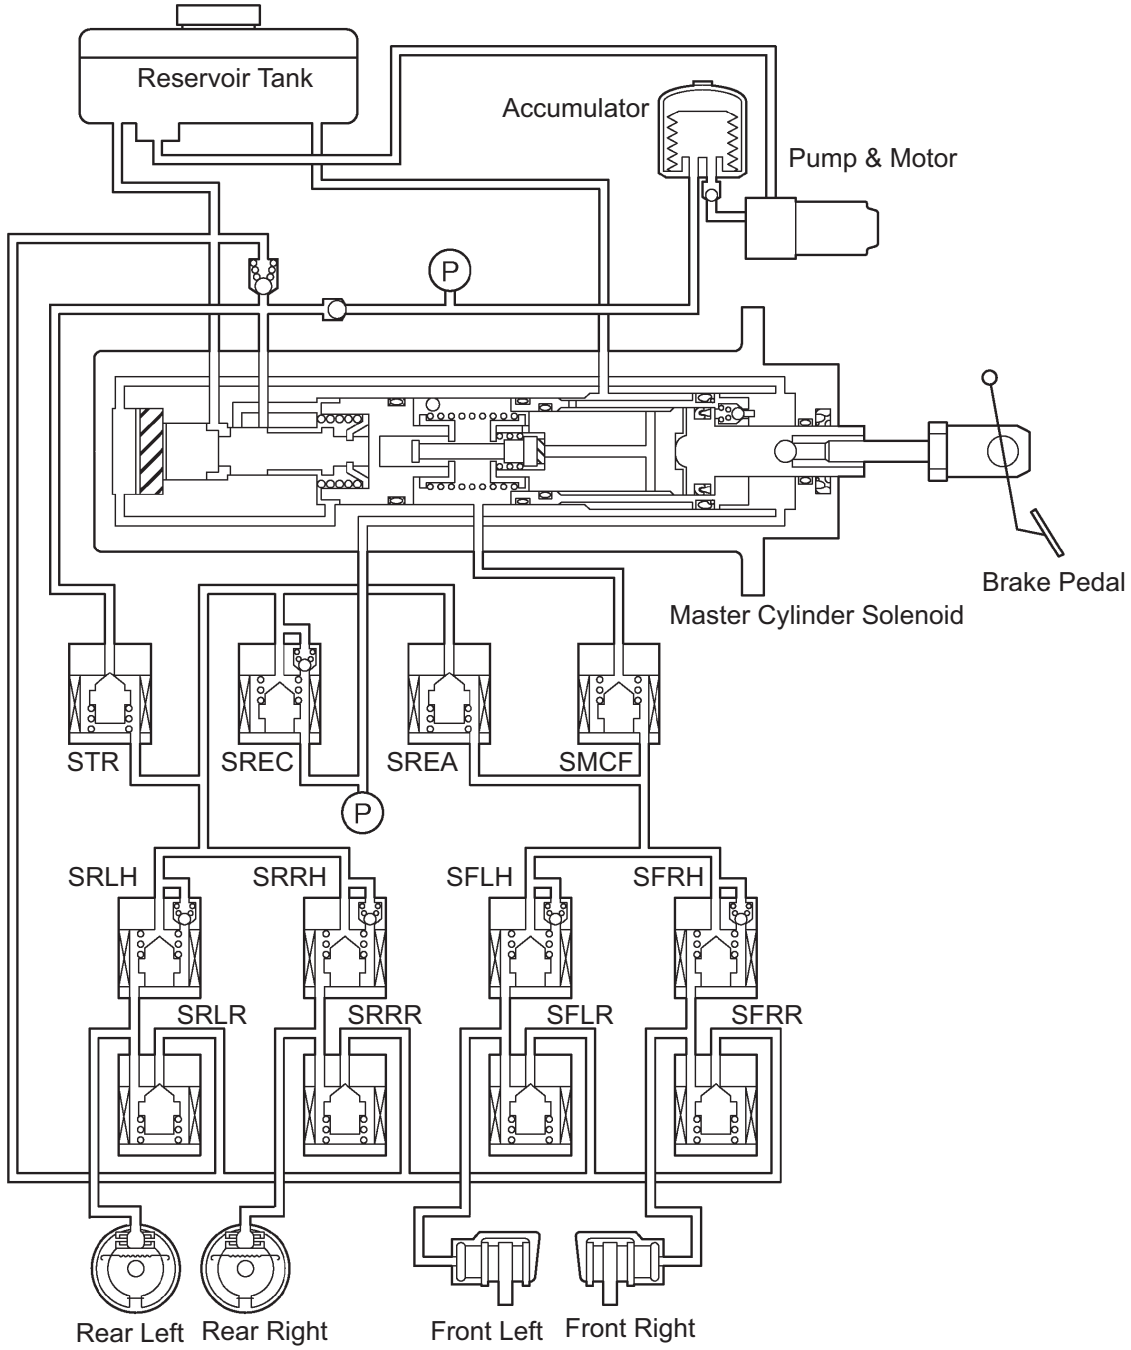
(b) Turn the ignition switch to OFF, and depress the brake pedal more than 20 times.
HINT:
When pressure in the accumulator is released, the reaction force becomes lighter and the stroke becomes longer.

(c) Check that the brake pedal becomes easy to depress.
If the pedal does not become easy to depress, check and replace the brake line and hydraulic brake booster.

(d) Turn the ignition switch to ON and check the pump motor operation noise.
If the pump motor does not operate, check and replace the wire harness and pump motor (see page BR-48).

(e) Connect the intelligent tester.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Select "ACTIVE TEST" mode on the intelligent tester.
HINT:
- Refer to the intelligent tester operator manual for further details.
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.

(f) Check the master cylinder solenoid operation.



Inspection Order (Step)	SOL Selected By Active Test	SOL To Be Activated
D	SRCF (SA1)	SMCF
E	SRCF (SA1) and SRCR (SA2)	SREA and SMCF

Inspection Order (Step)	SOL Selected By Active Test	SOL To Be Activated
F	SFRH	SFRH
G	SFLH	SFLH
H	SFRR & SFRH	SFRR and SFRH
I	SFLR & SFLH	SFLR and SFLH
J	SRMF (SMCF, SA3)	SREC
K	SRMF (SMCF, SA3) and SRMR (SMCR, STR)	STR and SREC
L	SRRH	SRRH
M	SRLH	SRLH
N	SRH & SRR	SRRR and SRRH
O	SRLR & SRLH	SRLR and SRLH

(g) Inspect front VSC solenoid (SMCF) operation (step D).
HINT:
- ON: Activate SMCF and check that the brake pedal cannot be depressed (the pedal feels tight).
- OFF: Deactivate SMCF and check that the brake pedal can be depressed.

(1) Select "SRCF (SA1)" on the intelligent tester.
(2) Turn the "SRCF (SA1)" on by the intelligent tester, then depress the brake pedal with stable force and check that the pedal cannot be depressed.
If the pedal can be depressed, replace the hydraulic brake booster.
HINT:
To protect the solenoid, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
NOTICE:
When operating it continuously, set the interval of more than 20 seconds.
(3) Release the brake pedal.
(4) When the solenoid is off, depress the brake pedal again and check that the brake pedal can be depressed.
If the pedal can be depressed, replace the hydraulic brake booster.

(h) Prepare the vehicle.
(1) Jack up and support the vehicle.
(2) Release the parking brake pedal (lever).
(3) Shift the shift lever to the "N" position and check the rear wheels by rotating them by hand.

(i) Inspect front VSC solenoid (SREA) operation (step E).
HINT:
- ON: Activate SREA and SMCF, depress the brake pedal, and then check that the front wheels do not rotate.

- OFF: Deactivate SREA and SMCF. Reactivate SMCF, depress the brake pedal, and then check that the front wheels rotate.

(1) Select "SRCR (SA2)" and "SRCF (SMCF)" on the intelligent tester.
(2) Turn the "SRCR (SA2)" and "SRCF (SMCF)" on simultaneously by the intelligent tester, then depress the brake pedal with stable force.
(3) When the solenoids are on, check that the front wheels do not rotate by hand.
If the front wheels rotate, replace the brake master cylinder.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheels as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, turn the "SRCF (SMCF)" on again, then depress the brake pedal and check the front wheels by rotating them by hand.
If front wheels stop, replace the hydraulic brake booster.
(5) When the "SRCF (SMCF)" is off, depress the brake pedal again and check that the brake pedal can be depressed.
If the pedal can be depressed, replace the hydraulic brake booster.

(j) Inspect front ABS solenoid (SFRH) operation (step F).
HINT:
- ON: Activate SFRH, depress the brake pedal, and then check that the right front wheel rotates.
- OFF: Deactivate SFRH, depress the brake pedal, and then check that the front right wheel does not rotate.

(1) Select "SFRH" on the intelligent tester.
(2) Turn the "SFRH" on by the intelligent tester, then depress the brake pedal with stable force.
(3) When the solenoid is on, check the right front wheel by rotating it by hand.
If the right front wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoid, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.

- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoid is off, depress the brake pedal again and check that the right front wheel does not rotate by hand.
If the right front wheel rotates, replace the hydraulic brake booster.

(k) Inspect front ABS solenoid (SFLH) operation (step G).
HINT:
- ON: Activate SFLH, depress the brake pedal, and then check that the left front wheel rotates.
- OFF: Deactivate SFLH, depress the brake pedal, and then check that the front left wheel does not rotate.

(1) Select "SFLH" on the intelligent tester.
(2) Turn the "SFLH" on by the intelligent tester, then depress the brake pedal with stable force.
(3) When the solenoid is on, check the left front wheel by rotating it by hand.
If the left front wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoid, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoid is off, depress the brake pedal again and check that the left front wheel does not rotate by hand.
If the left front wheel rotates, replace the hydraulic brake booster.

(l) Inspect front ABS solenoid (SFRR) operation (step H).
HINT:
- ON: Depress the brake pedal, activate SFRR and SFRH, and then check that the right front wheel rotates.
- OFF: Deactivate SFRR and SFRH, depress the brake pedal, and then check that the right front wheel does not rotate.

(1) Select "SFRR & SFRH" on the intelligent tester.

(2) Depress the brake pedal with stable force, then turn the "SFRR & SFRH" on simultaneously by the intelligent tester.
(3) When the solenoids are on, check the right front wheel by rotating it by hand.
If the right front wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, depress the brake pedal again and check that the right front wheel does not rotate by hand.
If the right front wheel rotates, replace the hydraulic brake booster.

(m) Inspect front ABS solenoid (SFLR) operation (step I).
HINT:
- ON: Depress the brake pedal, activate SFLR and SFLH, and then check that the left front wheel rotates.
- OFF: Deactivate SFLR and SFLH, depress the brake pedal, and then check that the left front wheel does not rotate.

(1) Select "SFLR & SFLH" on the intelligent tester.
(2) Depress the brake pedal with stable force, then turn the "SFLR & SFLH" on simultaneously by the intelligent tester.
(3) When the solenoids are on, check the left front wheel by rotating it by hand.
If the left front wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, depress the brake pedal again and check that the left front wheel does not rotate by hand.
If the left front wheel rotates, replace the hydraulic brake booster.

(n) Inspect rear VSC solenoid (SREC) operation (step J).
HINT:
- ON: Depress the brake pedal, activate SREC. Release the brake pedal and check that the rear wheels do not rotate.
- OFF: Deactivate SREC and check that the rear wheels rotate.

(1) Select "SRMF (SMCF, SA3)" on the intelligent tester.
(2) Depress the brake pedal with stable force, then turn the "SRMF (SMCF, SA3)" on by the intelligent tester.
(3) Release the brake pedal when the solenoid is on, and check that the rear wheels do not rotate by hand.
If the rear wheels rotate, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheels as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoid is off, check the rear wheels by rotating them by hand.
If the rear wheels stop, replace the hydraulic brake booster.

(o) Inspect rear VSC solenoid (STR) operation (step K).
HINT:
- ON: Activate STR and SREC, then check that the rear wheels do not rotate.
- OFF: Deactivate STR and SREC. Reactivate SREC and check that the rear wheels rotate.

(1) Select "SRMR (SMCR, STR)" on the intelligent tester.
(2) Turn the "SRMR (SMCR, STR) on simultaneously by the intelligent tester.
(3) When the solenoids are on , check that the rear wheels do not rotate by hand.
If the rear wheels rotate, replace the hydraulic brake booster.

HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheels as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, check the rear wheels by rotating them by hand.
If the rear wheels stop, replace the hydraulic brake booster.

(5) When the "SRMF (SREC)" is off, depress the brake pedal again and check that the rear wheels do not rotate by hand.
If the rear wheels rotate, replace the hydraulic brake booster.

(p) Inspect rear ABS solenoid (SRRH) operation (step L).
HINT:
- ON: Activate SRRH, depress the brake pedal, and then check that the right rear wheel rotates.
- OFF: Deactivate SRRH, depress the brake pedal, and then check that the right rear wheel does not rotate.

(1) Select "SRRH" on the intelligent tester.

(2) Turn the "SRRH" on by the intelligent tester, then depress the brake pedal with stable force.

(3) When the solenoid is on, check the right rear wheel by rotating it by hand.
If the right rear wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoid is off, depress the brake pedal again and check that the right rear wheel does not rotate by hand.
If the right rear wheel rotates, replace the hydraulic brake booster.

(q) Inspect front ABS solenoid (SRLH) operation (step M).
HINT:
- ON: Activate SRLH, depress the brake pedal, and then check that the left rear wheel rotates.
- OFF: Deactivate SRLH, depress the brake pedal, and then check that the left rear wheel does not rotate.

(1) Select "SRLH" on the intelligent tester.
(2) Turn the "SRLH" on by the intelligent tester, then depress the brake pedal with stable force.
(3) When the solenoid is on, check the left rear wheel by rotating it by hand.
If the left rear wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoid, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoid is off, depress the brake pedal again and check that the left rear wheel does not rotate by hand.
If the left rear wheel rotates, replace the hydraulic brake booster.

(r) Inspect rear ABS solenoid (SRRR) operation (step N).
HINT:
- ON: Depress the brake pedal, activate SRRR and SRRH, and then check that the right rear wheel rotates.
- OFF: Deactivate SRRR and SRRH, depress the brake pedal, and then check that the right rear wheel does not rotate.

(1) Select "SRH & SRR" on the intelligent tester.
(2) Depress the brake pedal with stable force, then turn the "SRH & SRR" on simultaneously by the intelligent tester.
(3) When the solenoids are on, check the right rear wheel by rotating it by hand.
If the right rear wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.

- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, depress the brake pedal again and check that the right rear wheel does not rotate by hand.
If the right rear wheel rotates, replace the hydraulic brake booster.

(s) Inspect rear ABS solenoid (SRLR) operation (step O).
HINT:
- ON: Depress the brake pedal, activate SRLR and SRLH, and then check that the left rear wheel rotates.
- OFF: Deactivate SRLR and SRLH, depress the brake pedal, and then check that the left rear wheel does not rotate.

(1) Select "SRLR & SRLH" on the intelligent tester.
(2) Depress the brake pedal with stable force, then turn the "SRLR & SRLH" on simultaneously by the intelligent tester.
(3) When the solenoids are on, check the left rear wheel by rotating it by hand.
If the left rear wheel stops, replace the hydraulic brake booster.
HINT:
- To protect the solenoids, intelligent tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.

NOTICE:
When operating it continuously, set the interval of more than 20 seconds.

(4) When the solenoids are off, depress the brake pedal again and check that the left rear wheel does not rotate by hand.
If the left rear wheel rotates, replace the hydraulic brake booster.

(t) Lower the vehicle.
(u) Disconnect the intelligent tester.

REMOVAL

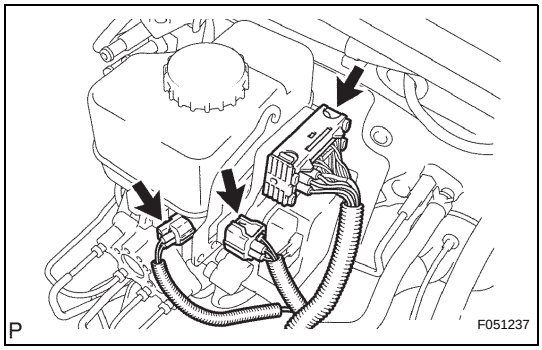
NOTICE:

- **Before starting the work, make sure that the ignition switch is OFF and depress the brake pedal more than 20 times.**
- **As high pressure is applied to the brake actuator tube No. 1, never deform it.**
- **Do not turn the ignition switch to ON until the work is completed.**

HINT:

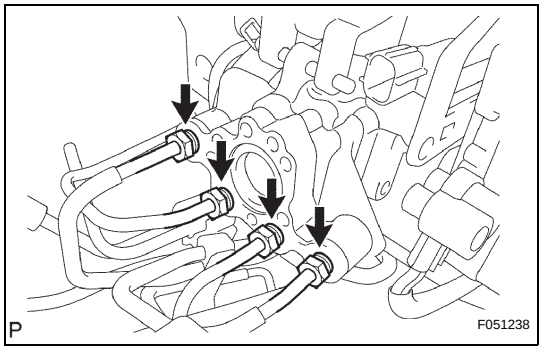
When pressure in the accumulator is released, reaction force becomes lighter and stroke becomes longer.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid off immediately that comes into contact with a painted surface.
3. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
4. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
5. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-61)**
6. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
7. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
8. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-61)**
9. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
10. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-9)**
11. **REMOVE INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-9)**
12. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-12)**
13. **SEPARATE DRIVER SIDE JUNCTION BLOCK**
14. **SEPARATE MASTER CYLINDER PUSH ROD CLEVIS (See page BR-15)**

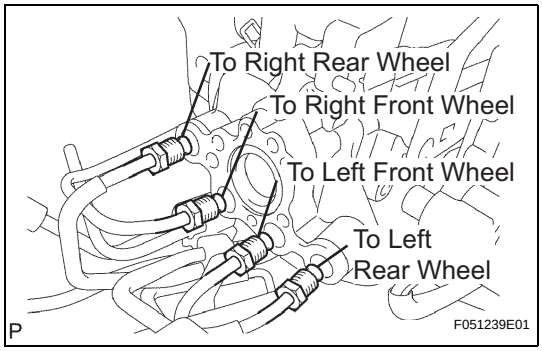


15. REMOVE HYDRAULIC BRAKE BOOSTER

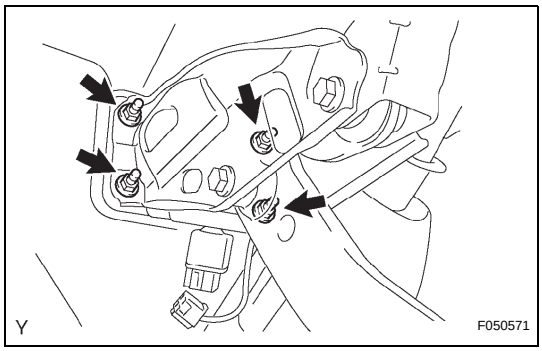
(a) Disconnect the 3 connectors from the hydraulic brake booster.



(b) Using SST, disconnect the 4 brake lines from the hydraulic brake booster.
SST 09023-00101

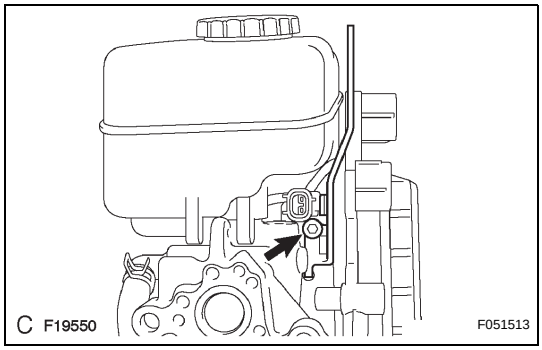


(c) Use tags or labels to identify the place to reconnect each line.



(d) Remove the 4 nuts and pull out the hydraulic brake booster.
(e) Remove the brake booster gasket.

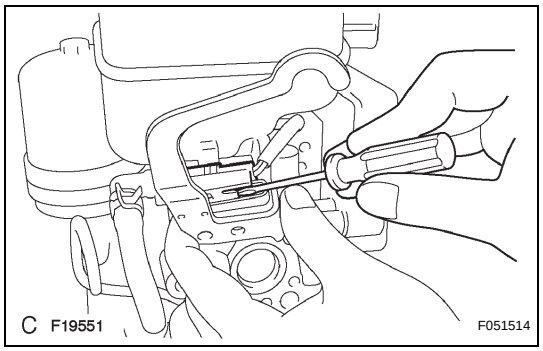
DISASSEMBLY



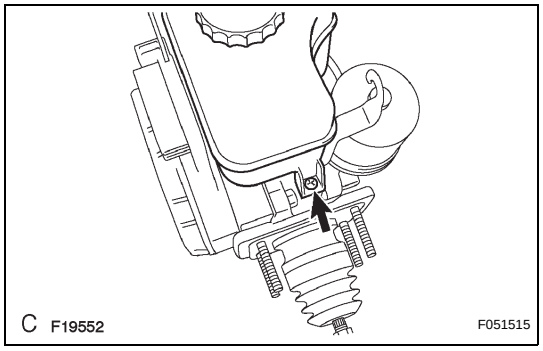
1. REMOVE BRAKE ACTUATOR BRACKET NO. 1

(a) Using a hexagon wrench (5 mm), remove the screw and brake actuator bracket No. 1.

BR

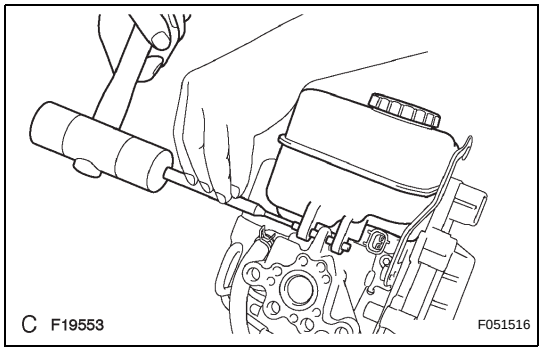


(b) Using a screwdriver, remove the fluid level warning switch connector.

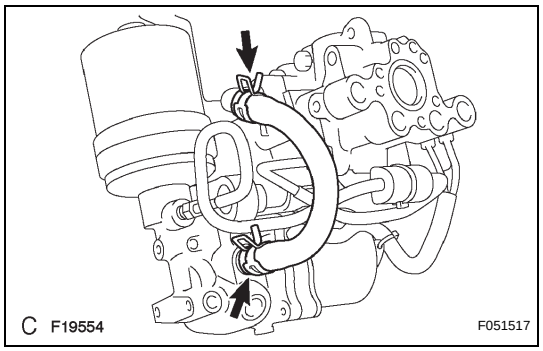


2. REMOVE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY

(a) Remove the screw from the master cylinder reservoir.

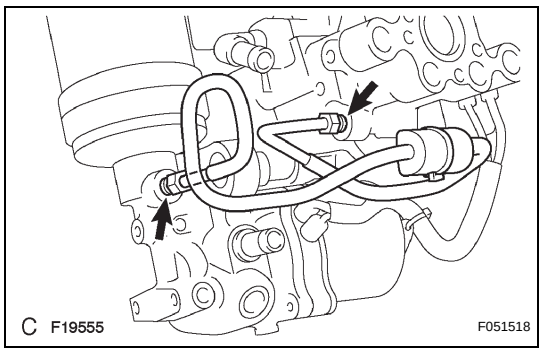


(b) Using a pin punch and hammer, remove the pin from the master cylinder reservoir.
(c) Pull out the master cylinder reservoir.
(d) Remove the 3 grommets.
(e) Remove the cap.



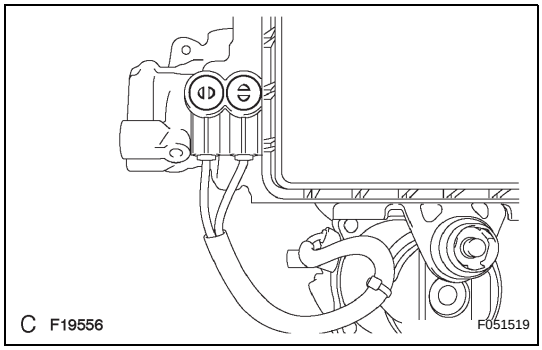
3. REMOVE BRAKE ACTUATOR HOSE

(a) Using needle-nose pliers, slide the 2 clips.
(b) Remove the brake actuator hose.



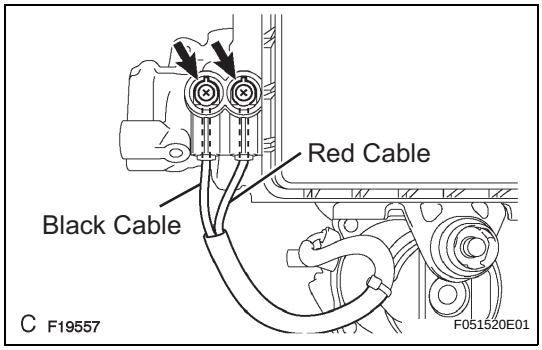
4. REMOVE BRAKE ACTUATOR TUBE NO. 1

(a) Using SST, remove the brake actuator tube No. 1.
SST 09023-00101

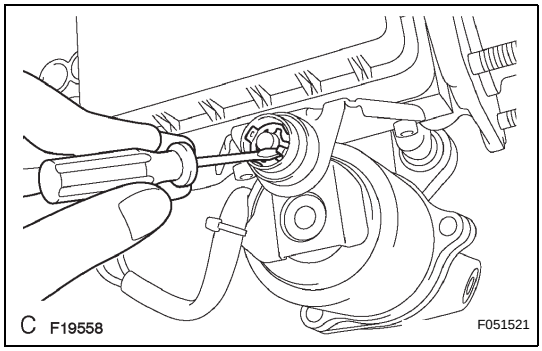


5. REMOVE BRAKE BOOSTER WITH ACCUMULATOR PUMP ASSEMBLY

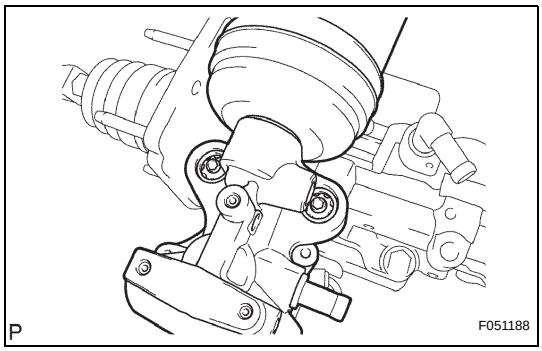
(a) Using a screwdriver, remove the 2 plugs.



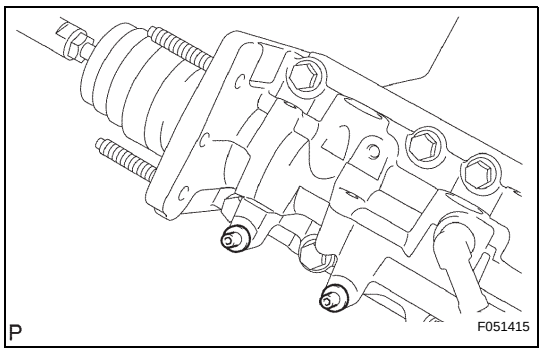
(b) Remove the 2 screws and pull the wire harness.



(c) Using a screwdriver, remove the clip.



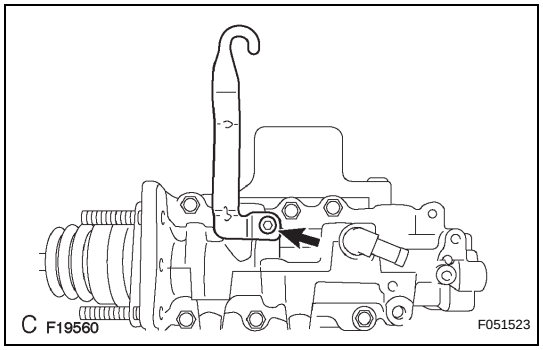
(d) Remove the brake booster w/ accumulator pump assembly.



(e) Using a hexagon wrench (4 mm), remove the 2 pins.

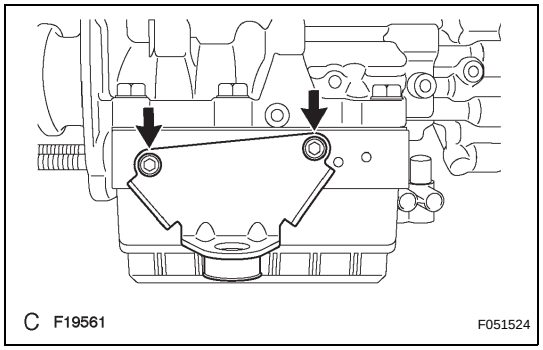
(f) Remove the 2 bushes and 2 collars from the brake booster with accumulator pump assembly.

BR



6. REMOVE BRAKE ACTUATOR BRACKET

(a) Using a hexagon wrench (5 mm), remove the screw and brake actuator bracket.



7. REMOVE BRAKE BOOSTER PUMP BRACKET

(a) Using a hexagon wrench (5 mm), remove the 2 screws and brake booster pump bracket.

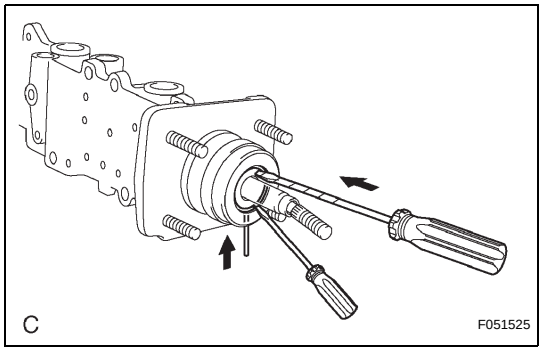
(b) Remove the bush from the brake booster pump bracket.

8. REMOVE MASTER CYLINDER PUSH ROD CLEVIS

(a) Loosen the lock nut on the brake master cylinder side, and then remove the rod operating adapter and lock nut.

(b) Loosen the lock nut on the rod operating adapter, and then remove the push rod clevis and lock nut.

9. REMOVE MASTER CYLINDER BOOT



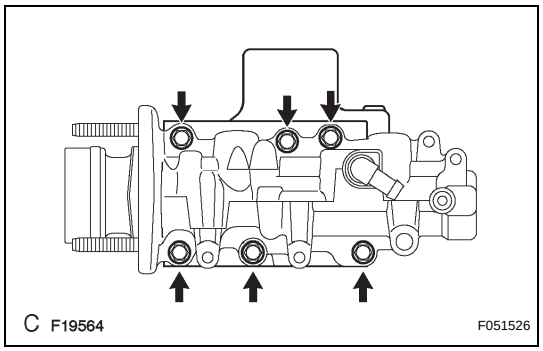
10. REMOVE PISTON

(a) Which pressing in the piston with a screwdriver, use a pin or equivalent to push the C-ring from the hole in the master cylinder body. Then remove the snap ring with another screwdriver.

(b) Remove the piston by pulling it straight out, not at an angle.

NOTICE:

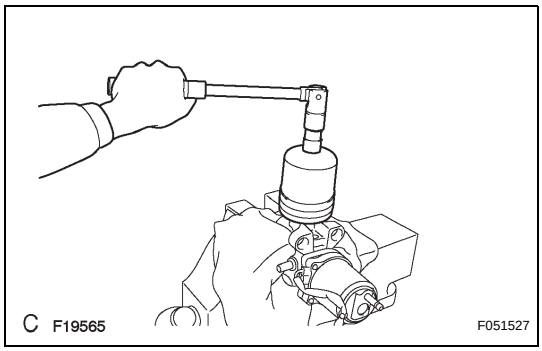
- **If the piston is pulled out at an angle, there is a possibility that the cylinder bore could be damaged.**
- **Be careful not to damage the rubber lips on the piston when reassembling.**



11. REMOVE MASTER CYLINDER SOLENOID

(a) Remove the 6 bolts.

(b) Remove the master cylinder solenoid and the gasket.



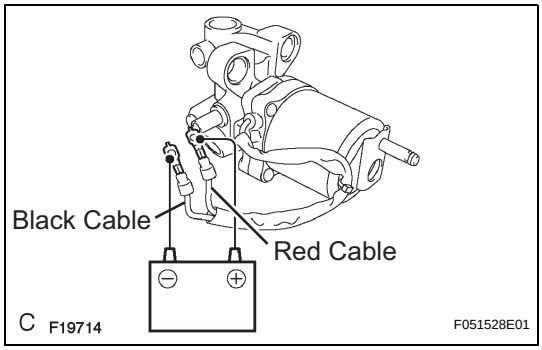
12. REMOVE BRAKE BOOSTER ACCUMULATOR ASSEMBLY

(a) Place the brake booster with accumulator pump assembly in a vise with a cloth.

(b) Using a socket wrench (17 mm), remove the brake booster accumulator.

(c) Remove the brake booster accumulator pipe, compression spring and O-ring.

INSPECTION



1. INSPECT BRAKE BOOSTER PUMP ASSEMBLY

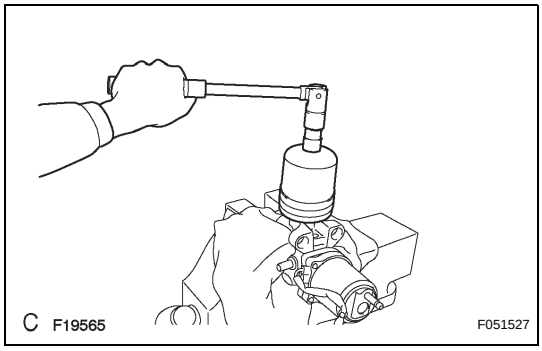
(a) Connect the positive (+) lead from the battery to the red cable of the pump, and the negative (-) lead to the black cable.

(b) Check the brake booster pump operation.

OK:

Operation sound is heard.

REASSEMBLY



1. INSTALL BRAKE BOOSTER ACCUMULATOR ASSEMBLY

(a) Place the brake booster pump in a vise with a cloth.

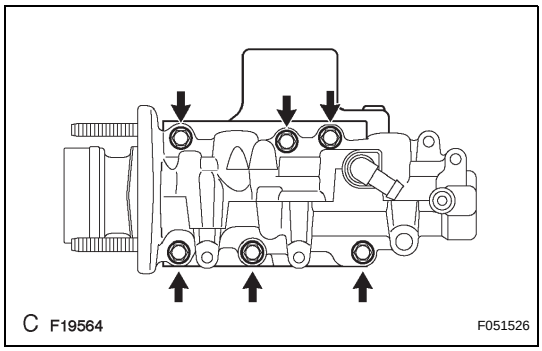
(b) Install the brake booster accumulator pipe, compression spring and a new O-ring.

NOTICE:

Ensure that no foreign matter enters the pump.

(c) Using a socket wrench (17 mm), install the brake booster accumulator onto the brake booster pump.

Torque: 57.4 N*m (585 kgf*cm, 42 ft.*lbf)



2. INSTALL MASTER CYLINDER SOLENOID

(a) Place a new gasket on the master cylinder solenoid and install them onto the master cylinder body with 6 new bolts.

Torque: 31.9 N*m (325 kgf*cm, 24 ft.*lbf)

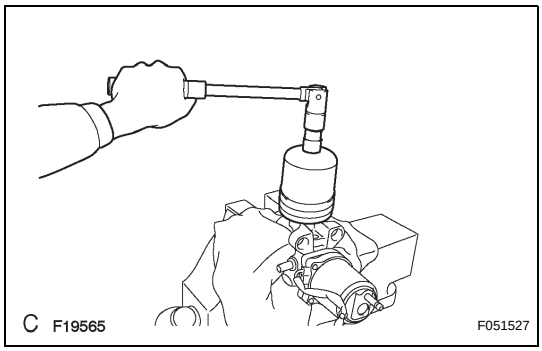
NOTICE:

Do not let water, dust, and/or other objects attach to the surface and/or attaching surface of the master cylinder solenoid, master cylinder and body gasket.

3. INSTALL PISTON

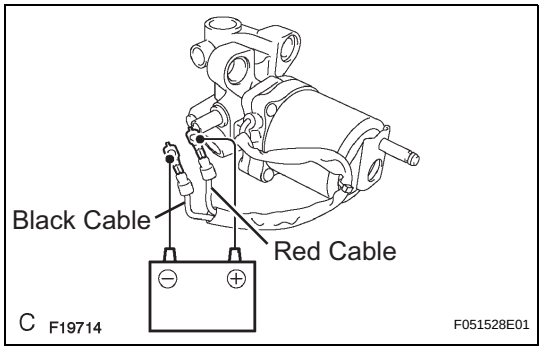
(a) Apply lithium soap base glycol grease to the new piston.

(b) Install the piston onto the master cylinder body.



12. REMOVE BRAKE BOOSTER ACCUMULATOR ASSEMBLY

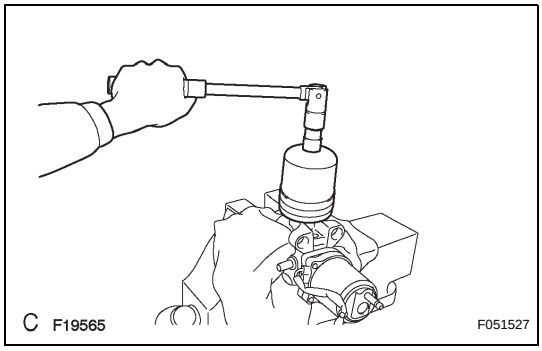
(a) Place the brake booster with accumulator pump assembly in a vise with a cloth.
(b) Using a socket wrench (17 mm), remove the brake booster accumulator.
(c) Remove the brake booster accumulator pipe, compression spring and O-ring.



INSPECTION

1. INSPECT BRAKE BOOSTER PUMP ASSEMBLY

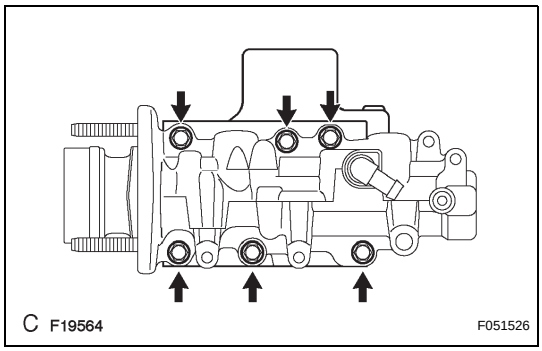
(a) Connect the positive (+) lead from the battery to the red cable of the pump, and the negative (-) lead to the black cable.
(b) Check the brake booster pump operation.
OK:
Operation sound is heard.



REASSEMBLY

1. INSTALL BRAKE BOOSTER ACCUMULATOR ASSEMBLY

(a) Place the brake booster pump in a vise with a cloth.
(b) Install the brake booster accumulator pipe, compression spring and a new O-ring.
NOTICE:
Ensure that no foreign matter enters the pump.
(c) Using a socket wrench (17 mm), install the brake booster accumulator onto the brake booster pump.
Torque: 57.4 N*m (585 kgf*cm, 42 ft.*lbf)

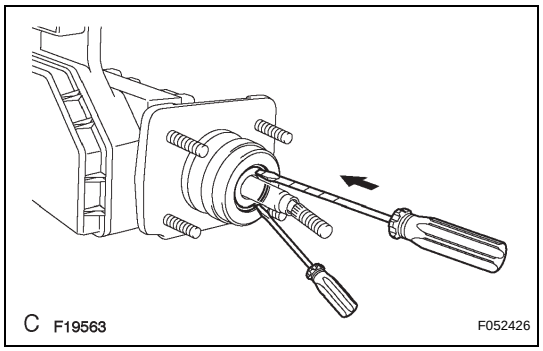


2. INSTALL MASTER CYLINDER SOLENOID

(a) Place a new gasket on the master cylinder solenoid and install them onto the master cylinder body with 6 new bolts.
Torque: 31.9 N*m (325 kgf*cm, 24 ft.*lbf)
NOTICE:
Do not let water, dust, and/or other objects attach to the surface and/or attaching surface of the master cylinder solenoid, master cylinder and body gasket.

3. INSTALL PISTON

(a) Apply lithium soap base glycol grease to the new piston.
(b) Install the piston onto the master cylinder body.



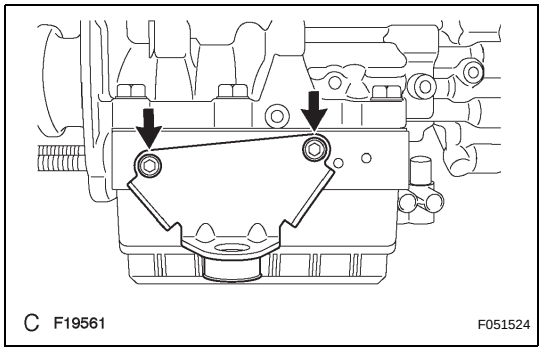
(c) Using 2 screwdrivers, install a new C-ring while pressing the piston.
NOTICE:
- **If the piston is pulled out at an angle, there is a possibility that the cylinder bore could be damaged.**
- **Be careful not to damage the rubber lips on the piston when reassembling.**

4. INSTALL MASTER CYLINDER BOOT

5. INSTALL MASTER CYLINDER PUSH ROD CLEVIS

(a) Install the lock nut and master cylinder push rod clevis onto the rod operating adapter.

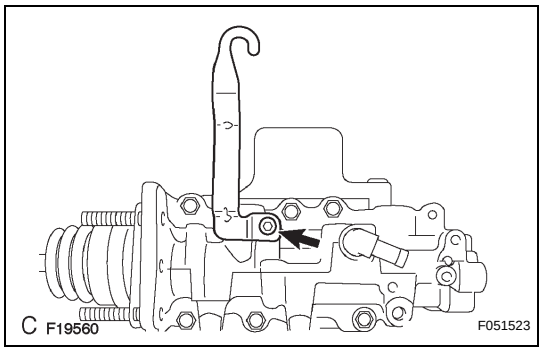
(b) Install the hydraulic brake booster side lock nut and rod operating adapter onto the hydraulic brake booster.
Torque: 25.5 N*m (260 kgf*cm, 19 ft.*lbf)



6. INSTALL BRAKE BOOSTER PUMP BRACKET

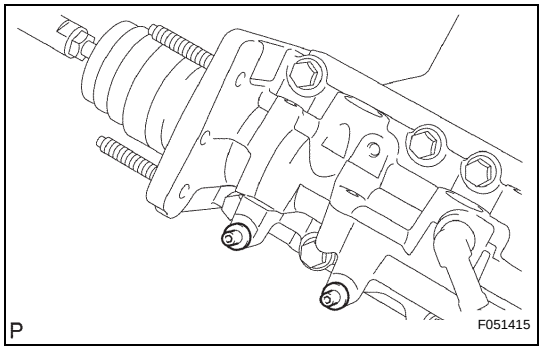
(a) Using a hexagon wrench (5 mm), install the brake booster pump bracket with the 2 screws.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

(b) Install the bush onto the brake booster pump bracket.



7. INSTALL BRAKE ACTUATOR BRACKET

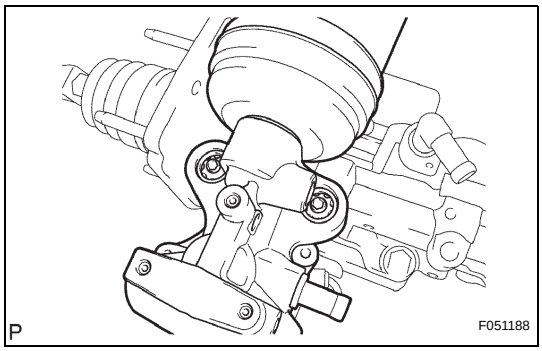
(a) Using a hexagon wrench (5 mm), install the brake actuator bracket with the screw.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)



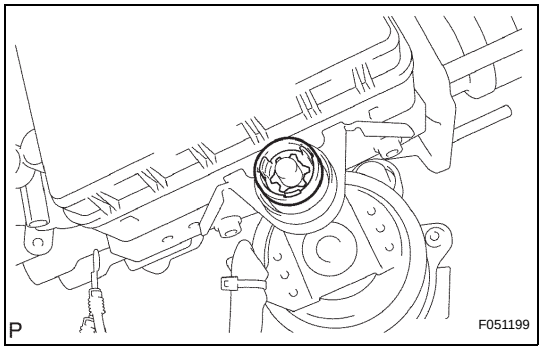
8. INSTALL BRAKE BOOSTER WITH ACCUMULATOR PUMP ASSEMBLY

(a) Install the 2 collars and 2 bushes onto the brake booster w/ accumulator pump assembly.

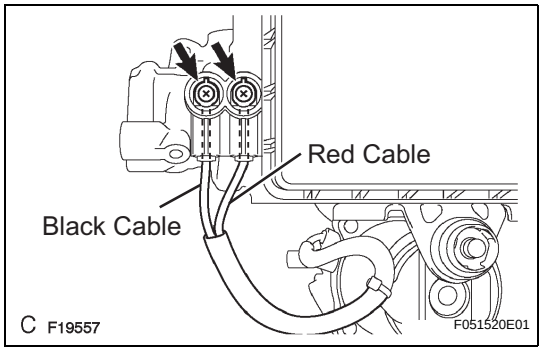
(b) Using a hexagon wrench (4 mm), install the 2 pins.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)



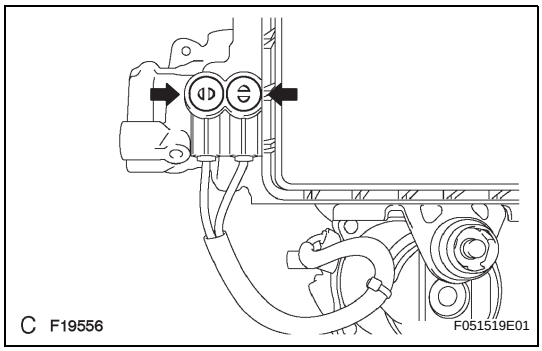
(c) Install the brake booster w/ accumulator pump assembly.



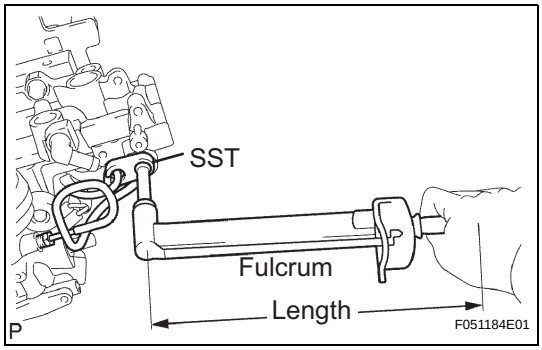
(d) Install a new clip.



(e) Install the wire harness with the 2 screws.
Torque: 2.9 N*m (30 kgf*cm, 26 in.*lbf)



(f) Install the 2 new plugs.



9. INSTALL BRAKE ACTUATOR TUBE NO. 1

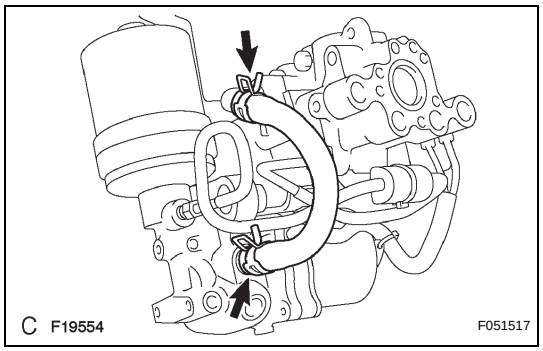
(a) Using SST, install the brake actuator tube No. 1.
SST 09023-00101
Torque: for use without SST
15.2 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

HINT:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).

BR

- This torque value is effective when SST is parallel to a torque wrench.



10. INSTALL BRAKE ACTUATOR HOSE

(a) Using needle-nose pliers, install the brake actuator hose and 2 clips.

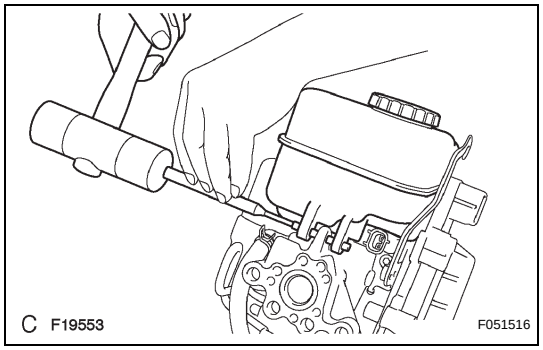
11. INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY

(a) Install the cap.

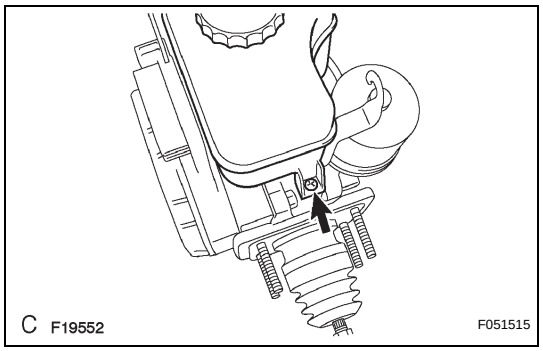
(b) Apply lithium soap base glycol grease to the 3 new grommets.

(c) Install the 3 grommets to the master cylinder body.
NOTICE:
Be careful of the size of each grommets.

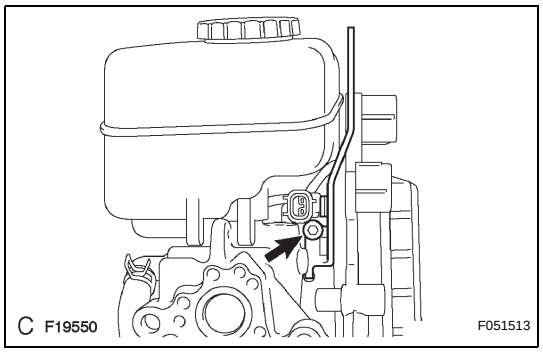
(d) Install the master cylinder reservoir.



(e) Using a pin punch and hammer, install a new pin onto the master cylinder reservoir.



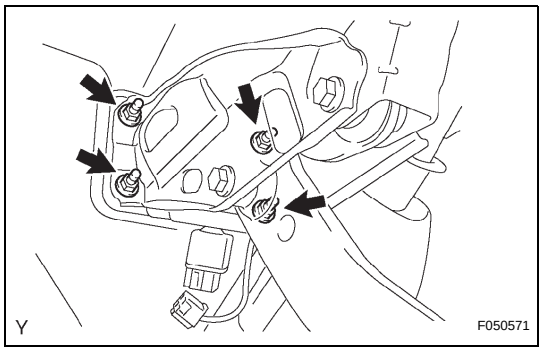
(f) Install the screw onto the master cylinder reservoir.
Torque: 1.7 N*m (17 kgf*cm, 15 in.*lbf)

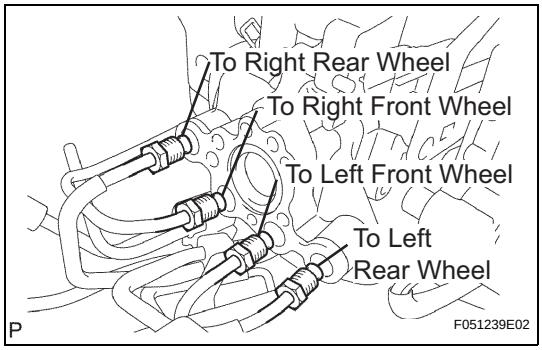


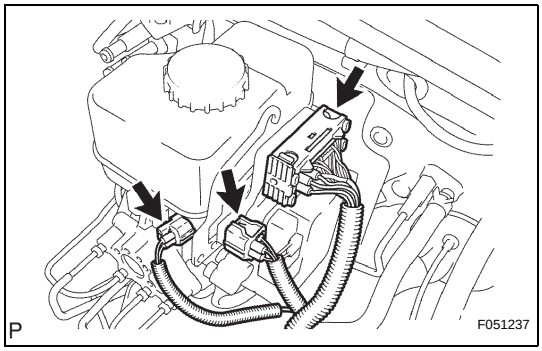
12. INSTALL BRAKE ACTUATOR BRACKET NO. 1

(a) Install the fluid level warning switch connector.

(b) Using a hexagon wrench (5 mm), install the brake actuator bracket No. 1 with the screw.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)







INSTALLATION

1. **INSTALL HYDRAULIC BRAKE BOOSTER**
   (a) Install a new brake booster gasket onto the hydraulic brake booster.
   (b) Install the hydraulic brake booster with the 4 nuts.
   Torque: 14.2 N*m (145 kgf*cm, 10 ft.*lbf)

   (c) Using SST, connect the 4 brake lines to the correct positions of the hydraulic brake booster, as shown in the illustration.
   SST 09023-00101
   Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf)

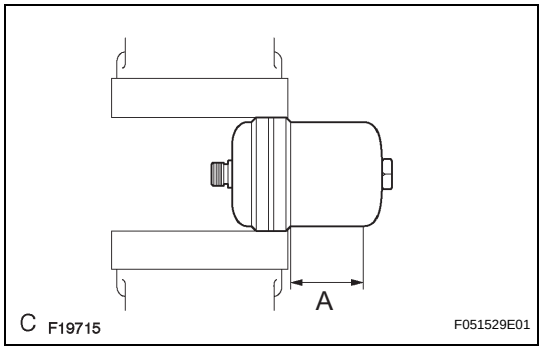
   (d) Connect the 3 connectors.

2. **INSTALL MASTER CYLINDER PUSH ROD CLEVIS (See page BR-18)**
3. **INSTALL DRIVER SIDE JUNCTION BLOCK**
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
4. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER NO. 1 (See page IP-22)**
5. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-25)**
6. **INSTALL INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-25)**
7. **INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)**
8. **INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-75)**
9. **INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)**
10. **INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)**
11. **INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)**
12. **INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)**
13. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

(See page IN-5)

15. **INSPECT BRAKE PEDAL HEIGHT (See page BR-11)**
16. **INSPECT PEDAL FREE PLAY (See page BR-14)**
17. **INSPECT PEDAL RESERVE DISTANCE (See page BR-14)**
18. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-4)**
19. **BLEED BRAKE BOOSTER WITH ACCUMULATOR PUMP ASSEMBLY (See page BR-4)**
20. **BLEED BRAKE LINE (See page BR-4)**
21. **BLEED MASTER CYLINDER SOLENOID (See page BR-5)**
22. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-6)**
23. **CHECK FOR BRAKE FLUID LEAKAGE**
24. **INSPECT BRAKE MASTER CYLINDER OPERATION (See page BR-33)**

DISPOSAL



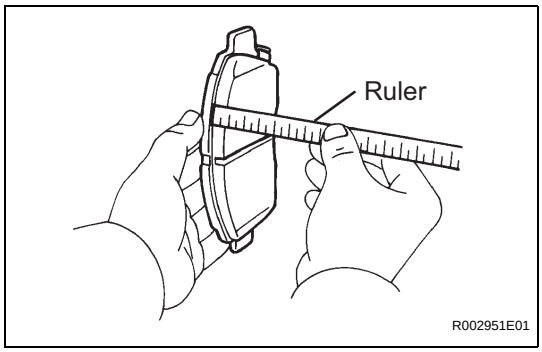
1. **DISPOSE OF BRAKE BOOSTER ACCUMULATOR ASSEMBLY**
   (a) Place the brake booster accumulator in a vise and cover it with a cloth.
   (b) Slowly cut a hole on the brake booster accumulator side in the A portion shown in the illustration on the left. And discharge the gas and liquid inside.
   NOTICE:
   - **As gas may spray out, cover the brake booster accumulator with a cloth when performing the operation.**
   - **Work slowly and do not cut the hole too quickly or suddenly.**
   - **Wear protective glasses during the operation.**

   (c) When the outer body of the brake booster accumulator is cut, gas and liquid discharge.
   HINT:
   - The gas is colorless, odorless and nonpoisonous nitrogen gas.
   - The liquid is brake fluid.

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and disc brake piston for rust and scoring.
If necessary, replace the disc brake cylinder.



2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.
Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the pad lining thickness is less than to the minimum thickness, replace the brake pad kit front.

3. INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that both plates have sufficient rebound, have no deformation, cracks or wear, and that all rust and dirt are cleaned off.
If necessary, replace the brake pad support plate.

REASSEMBLY

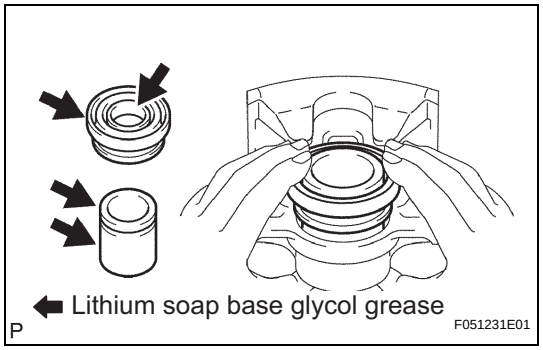
1. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG

(a) Provisionally tighten the bleeder plug to the disc brake cylinder.

2. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.

(b) Install the piston seal onto the disc brake cylinder.



3. INSTALL FRONT DISC BRAKE PISTON

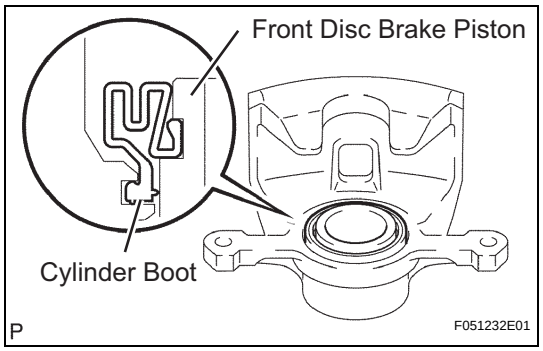
(a) Apply lithium soap base glycol grease to the disc brake piston and a new cylinder boot.

(b) Install the cylinder boot onto the front disc brake piston.

(c) Install the disc brake piston into the disc brake cylinder.

HINT:

Do not install the disc brake piston into the disc brake cylinder forcibly.



4. INSTALL CYLINDER BOOT

(a) Install the cylinder boot onto the disc brake cylinder.

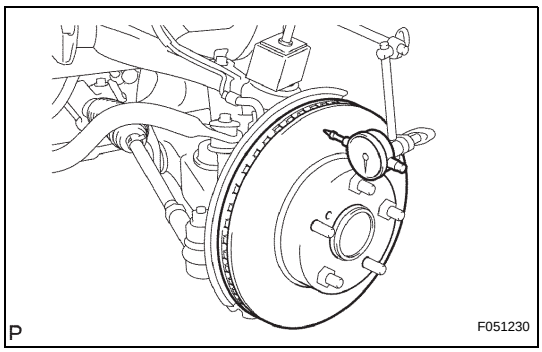
HINT:

Install the cylinder boot securely into the grooves of the disc brake cylinder and piston.

INSTALLATION

1. INSTALL FRONT DISC

(a) Aligning the matchmarks, install the front disc.
HINT:
When replacing the disc with a new one, select the installation position where the disc has the minimum runout.

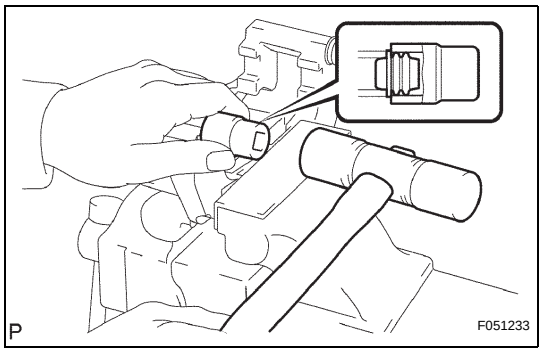


2. INSPECT DISC RUNOUT

(a) Provisionally fasten the disc with the hub nuts.
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

(b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the disc.
Maximum disc runout:
0.05 mm (0.0020 in.)

(c) If the disc runout is the maximum value or greater, check the bearing play in the axial direction and check the axle hub runout (see page AH-1). If the bearing play and axle hub runout are normal, adjust the disc runout or grind it on an on-car brake lathe.

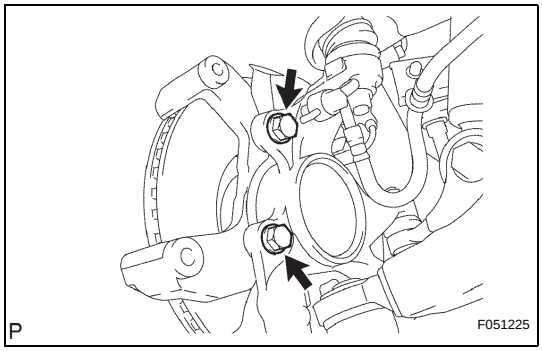


3. INSTALL FRONT DISC BRAKE BUSH DUST BOOT

(a) Place soft jaws on a vise and hold the disc brake cylinder mounting in the vise through aluminum plates.

(b) Apply lithium soap base glycol grease to the sealing surface of 2 new front disc brake bush dust boots.

(c) Using a socket wrench (19 mm) and hammer, tap the 2 disc brake bush dust boots into the disc brake cylinder mounting.



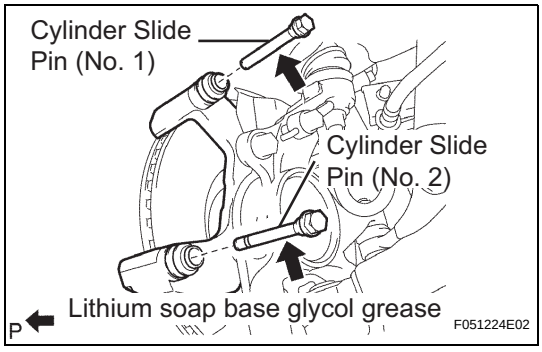
4. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

(a) Install the disc brake cylinder mounting with the 2 bolts.
Torque: 108 N*m (1,101 kgf*cm, 80 ft.*lbf)

5. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSH

(a) Apply lithium soap base glycol grease to a new disc brake cylinder slide bush.

(b) Install the disc brake cylinder slide bush to the bottom side of the disc brake cylinder slide pin (No. 2).



6. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the sliding part and the sealing surface of the disc brake cylinder slide pin.

(b) Install the disc brake cylinder slide pin onto the disc brake cylinder mounting.

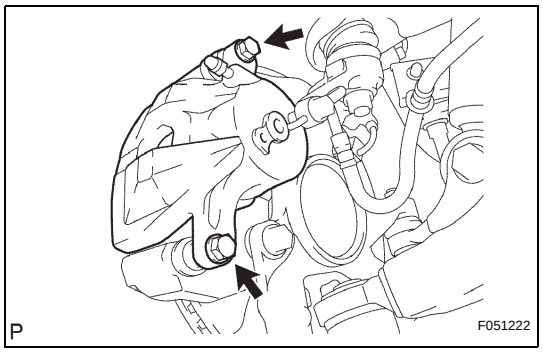
7. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE

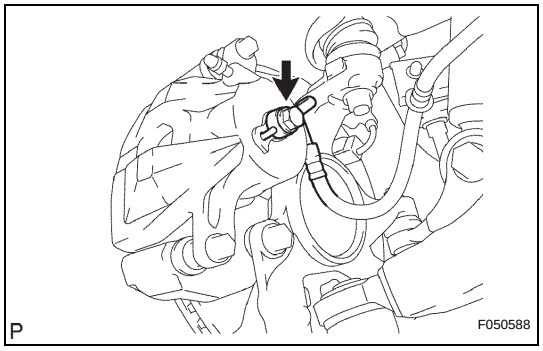
(a) Install the 2 disc brake pad support plates onto the disc brake cylinder mounting.

8. **INSTALL ANTI SQUEAL SHIM KIT FRONT**
NOTICE:
If necessary, replace the anti-squeal shim kit when replacing the brake pad.
(a) Apply disc brake grease to the both surfaces of the 2 anti-squeal shims and install them.
(b) Install the 2 outside anti-squeal shims onto the brake pads.
(c) Install the pad wear indicator plate facing upward, and install each pad.

9. **INSTALL DISC BRAKE PAD KIT FRONT (PAD ONLY)**
(a) Install the 2 disc brake pads with anti-squeal shim onto the disc brake cylinder mounting.
NOTICE:
There should be no oil or grease on the friction surfaces of the brake pads or the front disc.

10. **INSTALL DISC BRAKE CYLINDER ASSEMBLY**
(a) Install the disc brake cylinder with the 2 bolts.
Torque: 36.3 N*m (370 kgf*cm, 27 ft.*lbf)





(b) Install a new gasket and flexible hose with the union bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely into the lock hole in the disc brake cylinder.

11. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**

12. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**

13. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**

14. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**

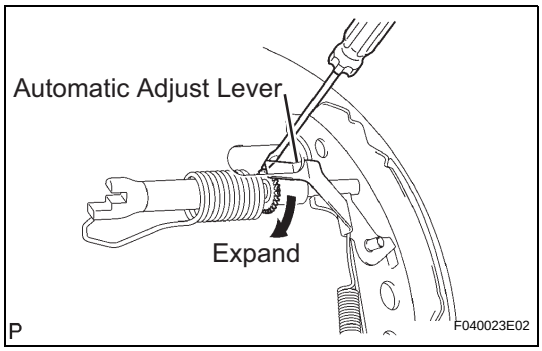
15. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**

16. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**

17. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**

18. **CHECK FOR BRAKE FLUID LEAKAGE**

19. **INSTALL FRONT WHEEL**
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)



INSTALLATION

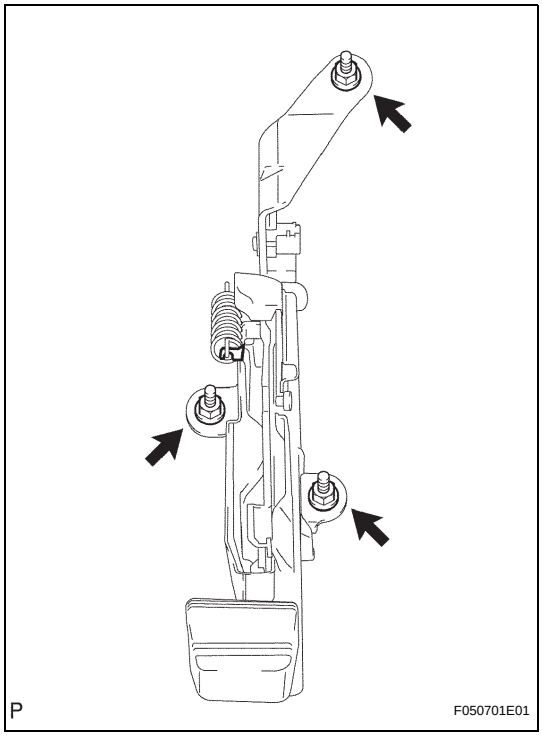
1. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
   (a) Install a new drum gasket onto the rear brake drum.
   (b) Install the rear brake drum.
2. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE**
   (a) Provisionally install the hub nuts.
   (b) Remove the hole plug, and turn the adjuster to expand the shoe until the drum locks.
   (c) Using a screwdriver, release the adjuster 15 notches.
   (d) Install the hole plug.
3. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
4. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
5. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
6. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
7. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
8. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
9. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
10. **CHECK FOR BRAKE FLUID LEAKAGE**
11. **INSTALL REAR WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
12. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-1)**
13. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-1)**
14. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-2)**
15. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-2)**

INSTALLATION

1. INSTALL PARKING PEDAL PAD

2. INSTALL PARKING BRAKE SWITCH ASSEMBLY

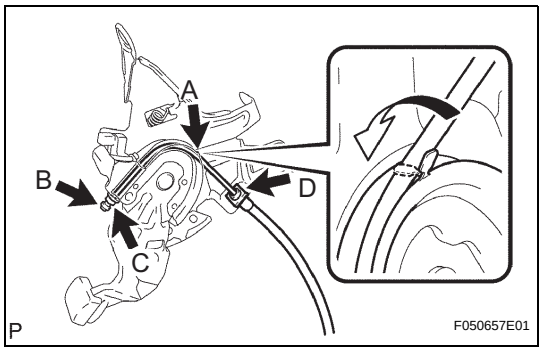
(a) Install the parking brake switch assembly with the screw.



3. INSTALL PARKING BRAKE PEDAL

(a) Install the parking brake control pedal assembly with the 3 nuts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)

(b) Connect the parking brake switch connector.



4. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 1

(a) Install the parking brake cable assembly No. 1 with the clip D, adjusting nut C and lock nut B.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(b) Bend the claw A.

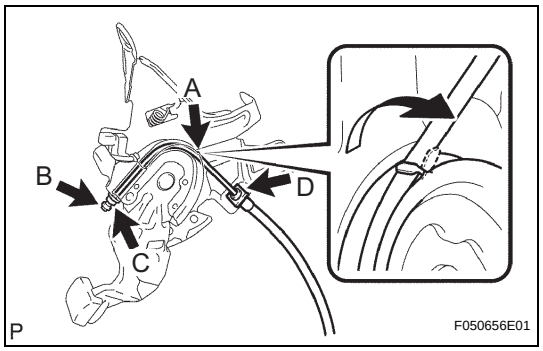
5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

6. INSPECT PARKING BRAKE PEDAL TRAVEL (See page PB-1)

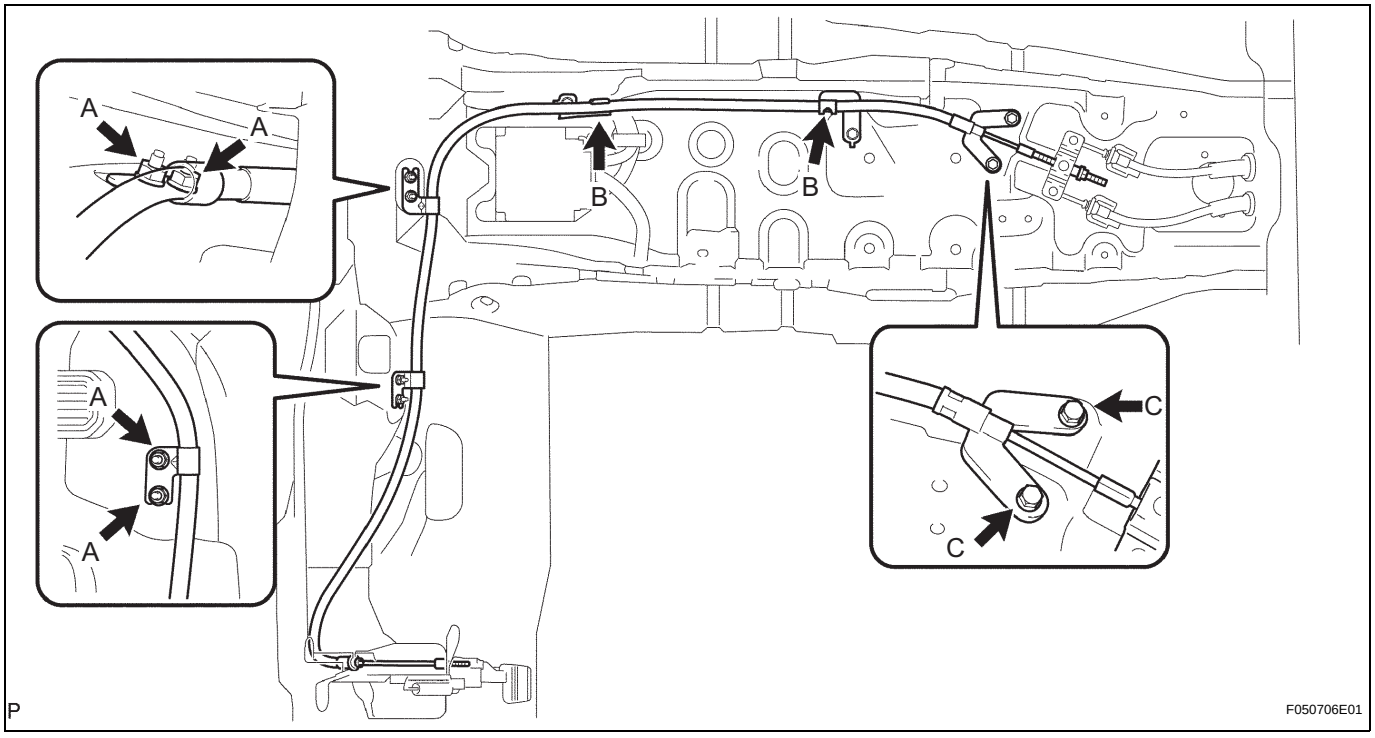
7. ADJUST PARKING BRAKE PEDAL TRAVEL (See page PB-2)

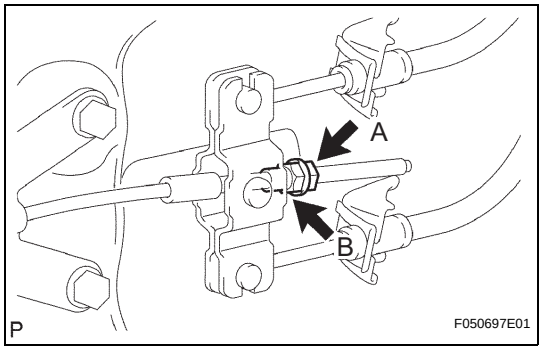
REMOVAL

1. **PRECAUTION**
   (See page RS-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   HINT:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)**
4. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)**
5. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
6. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)**
7. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-10)**
8. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-11)**
9. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-11)**
10. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-11)**
11. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-603)**
12. **REMOVE VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-104)**
13. **REMOVE PARKING BRAKE CABLE JOINT PROTECTOR (for Bench Seat Type) (See page PB-2)**
14. **REMOVE REAR WHEEL**
15. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-68)**
16. **REMOVE FRONT BRAKE SHOE (See page BR-68)**
17. **REMOVE REAR BRAKE SHOE (See page BR-69)**
18. **REMOVE PARKING BRAKE CABLE ASSEMBLY NO. 1 (for Automatic Transmission)**
    (a) Release the parking brake.



(b) Disengage the claw A.
(c) Remove the lock nut B, adjusting nut C and clip D and disconnect the parking brake cable from the parking brake control pedal.
(d) Remove the 4 nuts A, 2 clamps B and 2 bolts C from the parking brake cable.



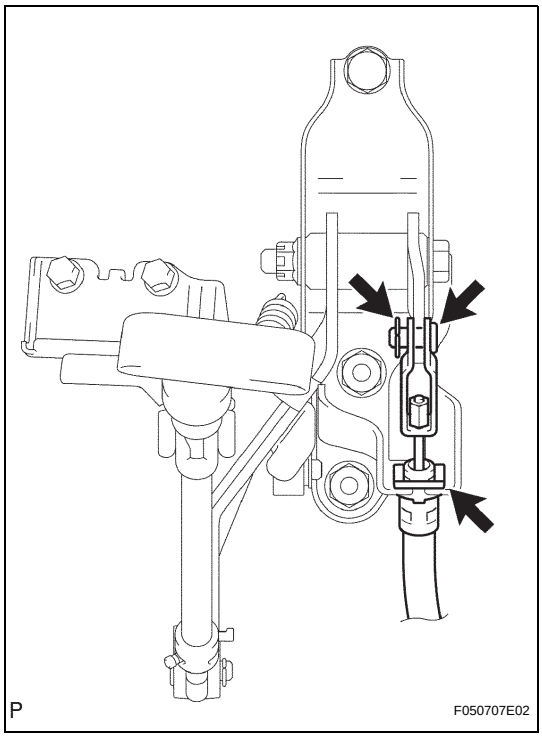


(e) Remove the lock nut A, adjusting nut B and parking brake cable from the parking brake equalizer.

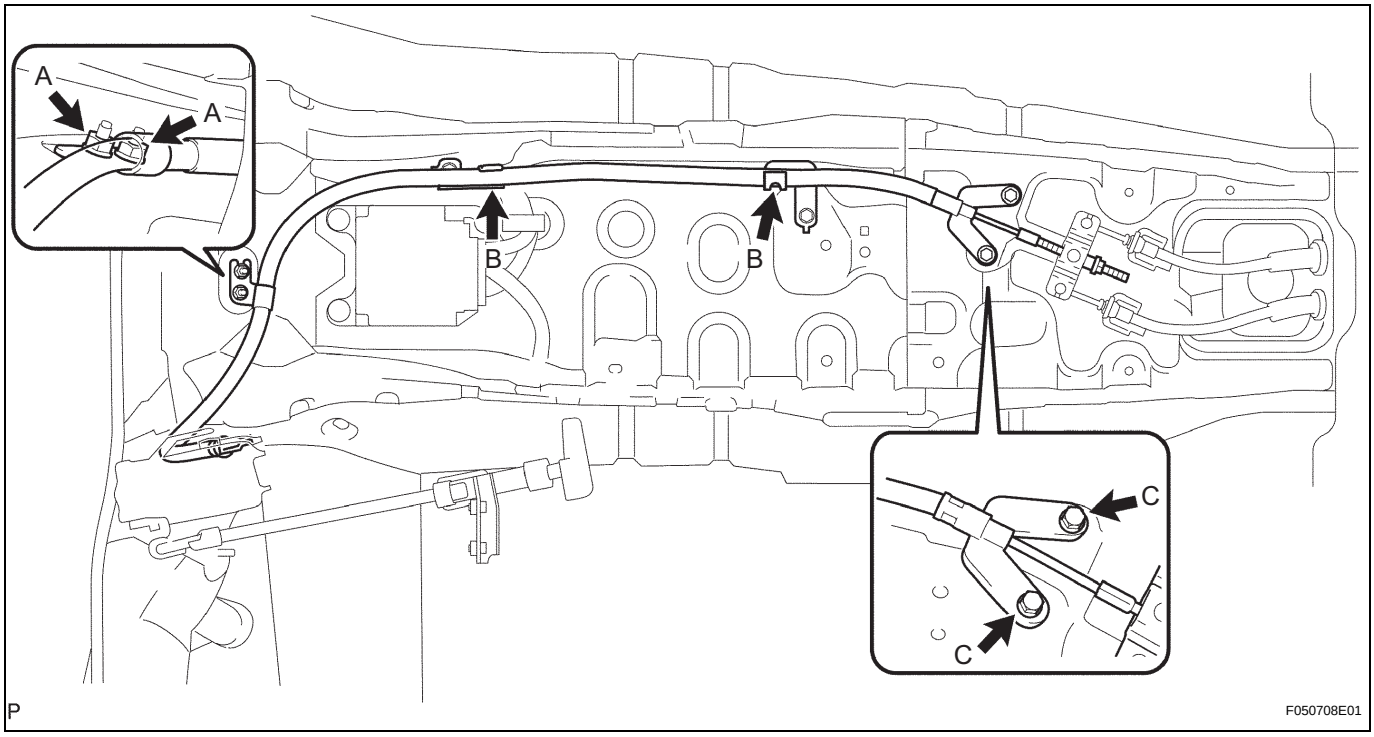
19. REMOVE PARKING BRAKE CABLE ASSEMBLY NO. 1 (for Manual Transmission)

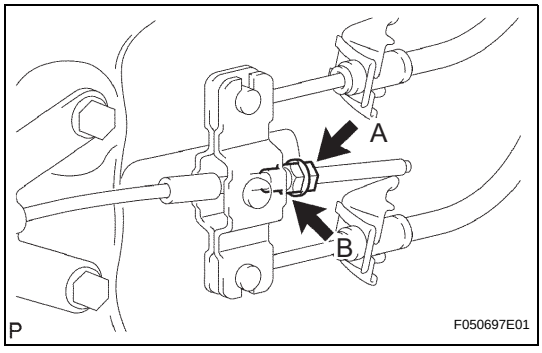
(a) Release the parking brake lever.

PB



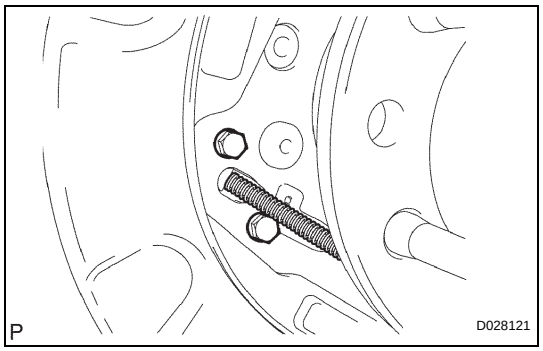
(b) Disengage the clip, remove the pin and separate the sleeve.
(c) Disengage the clip and disconnect the parking brake cable from the parking brake lever.
(d) Remove the 2 nuts A, 2 clamps B and 2 bolts C from the parking brake cable.





(e) Remove the lock nut A, adjusting nut B and parking brake cable from the parking brake equalizer.

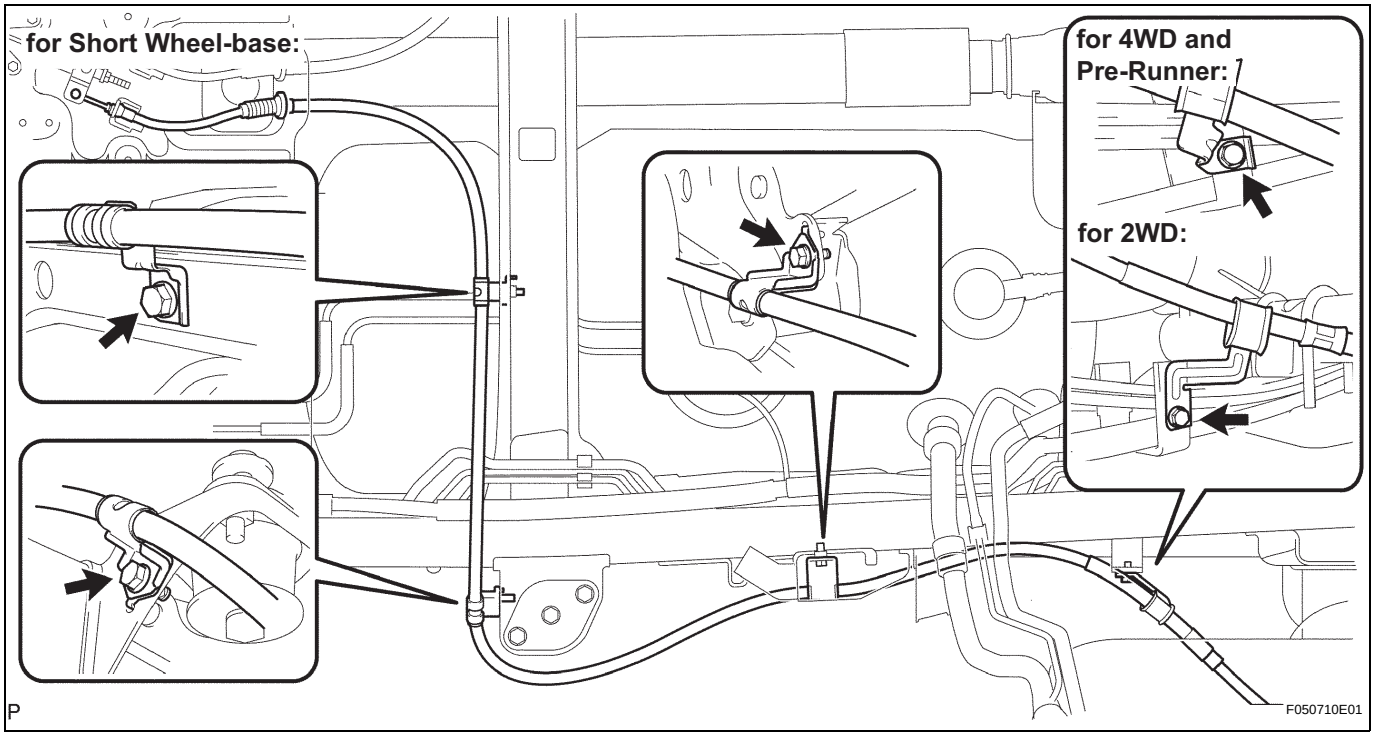
PB

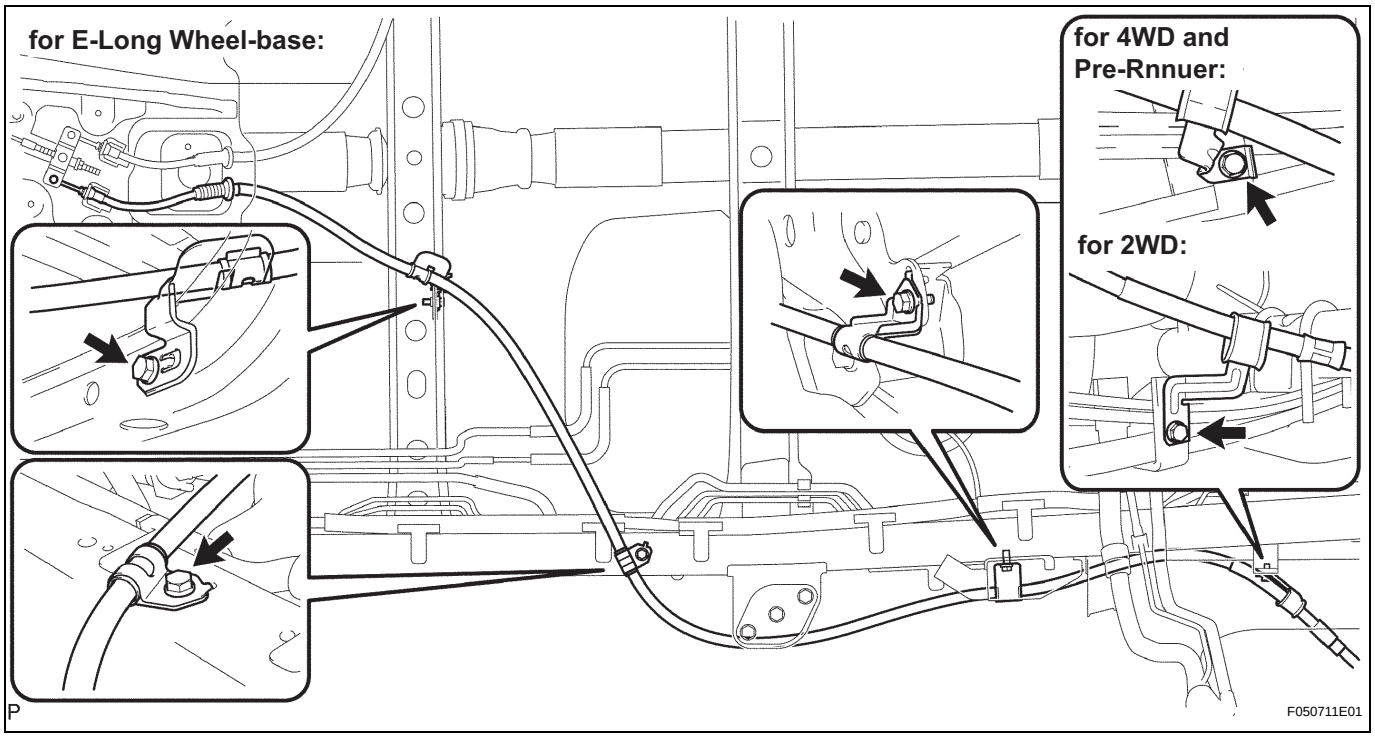


20. REMOVE PARKING BRAKE CABLE ASSEMBLY NO. 3

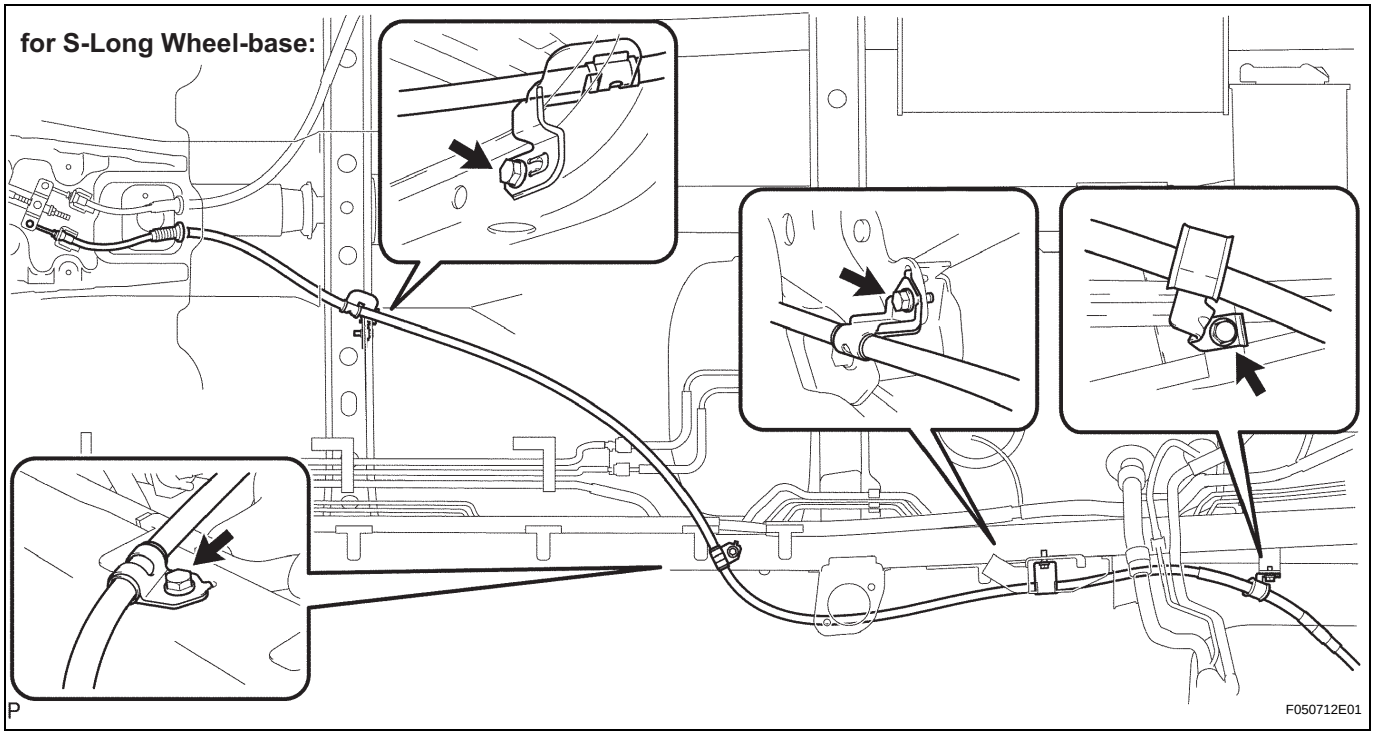
(a) Remove the 2 bolts and disconnect the parking brake cable from the backing plate.

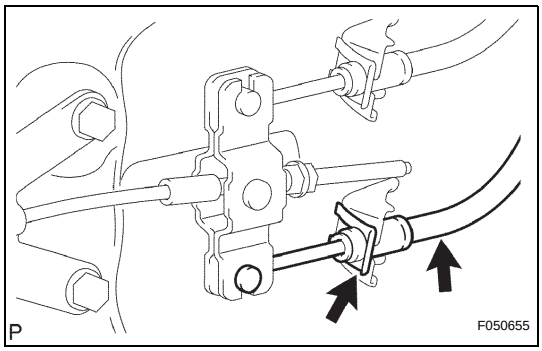
(b) Remove the 4 bolts from the parking brake cable.





PB





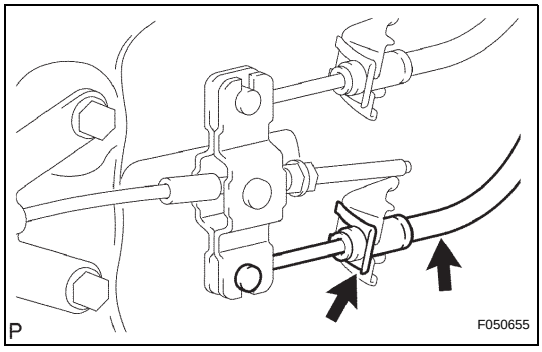
(c) Disengage the clip and disconnect the parking brake cable from the parking brake equalizer.

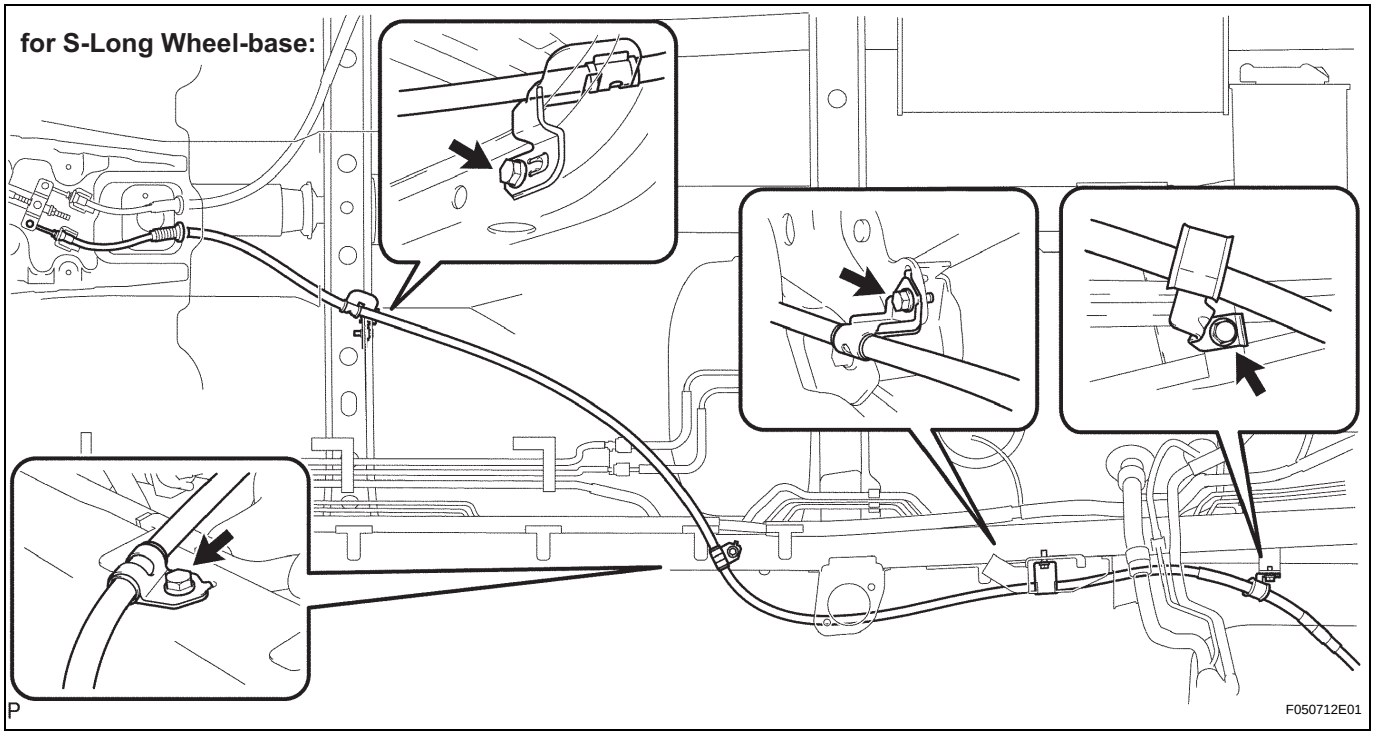
INSTALLATION

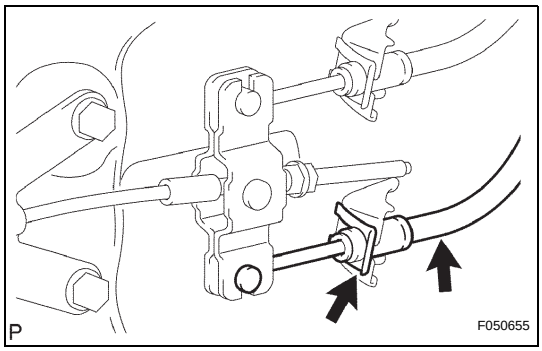
1. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 3

(a) Install the parking brake cable with the clip onto the parking brake equalizer.

(b) Install the parking brake cable with the 4 bolts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)







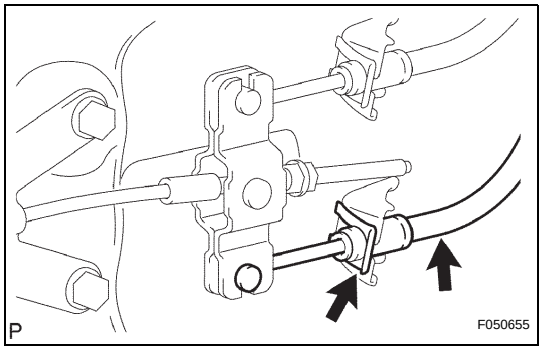
(c) Disengage the clip and disconnect the parking brake cable from the parking brake equalizer.

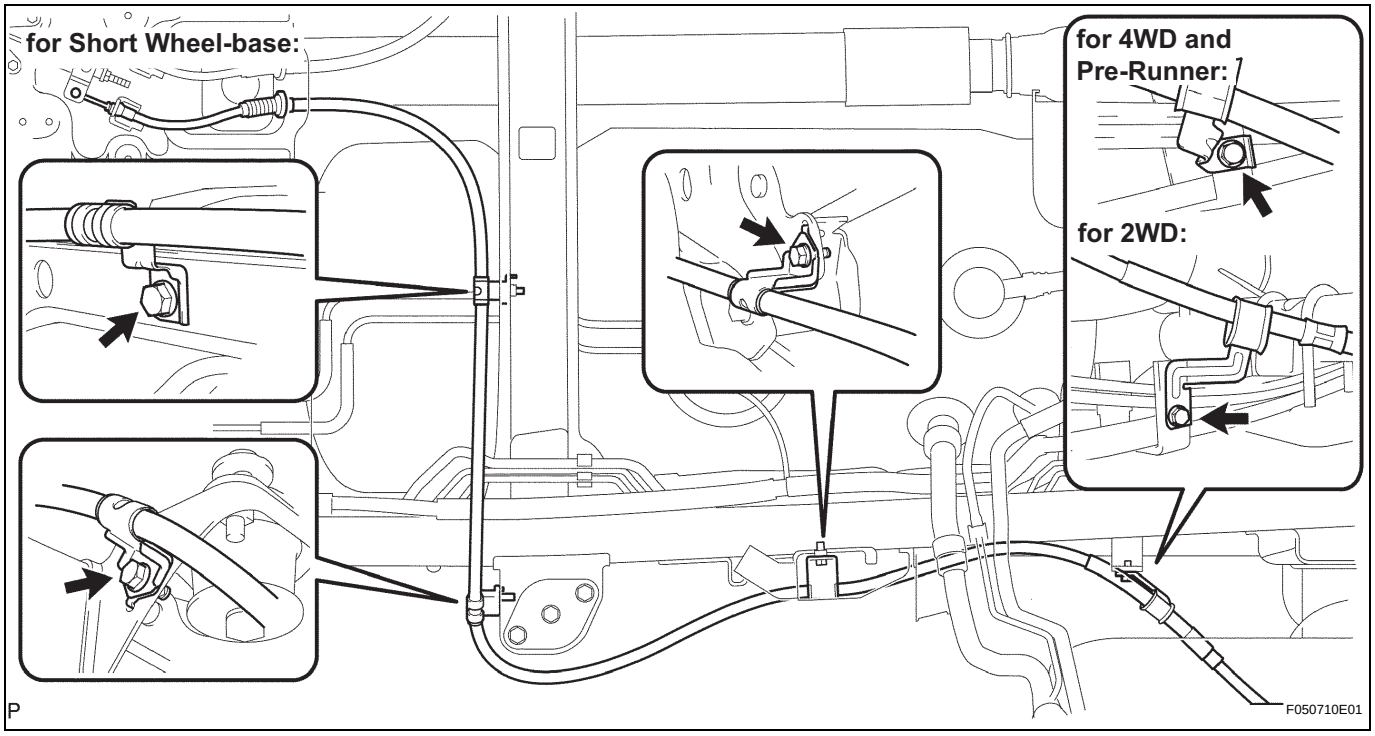
INSTALLATION

1. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 3

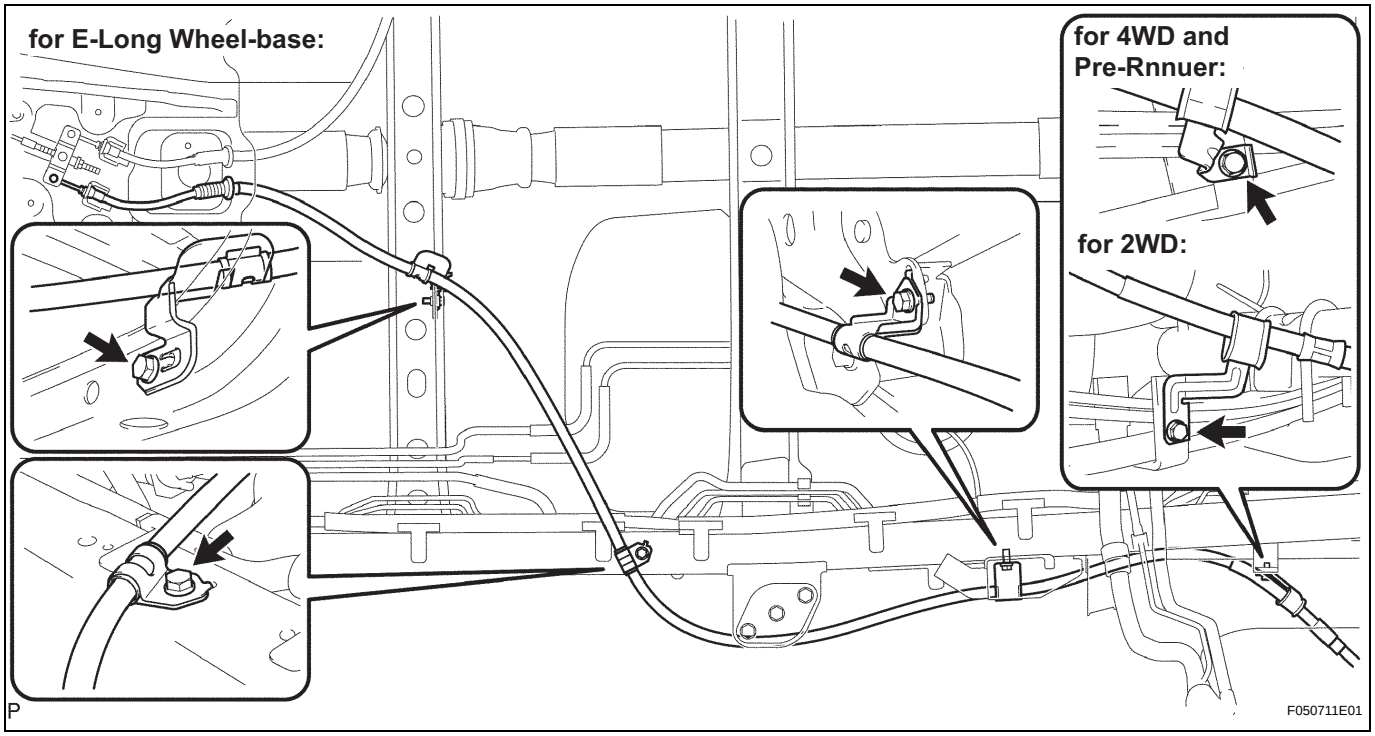
(a) Install the parking brake cable with the clip onto the parking brake equalizer.

(b) Install the parking brake cable with the 4 bolts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)



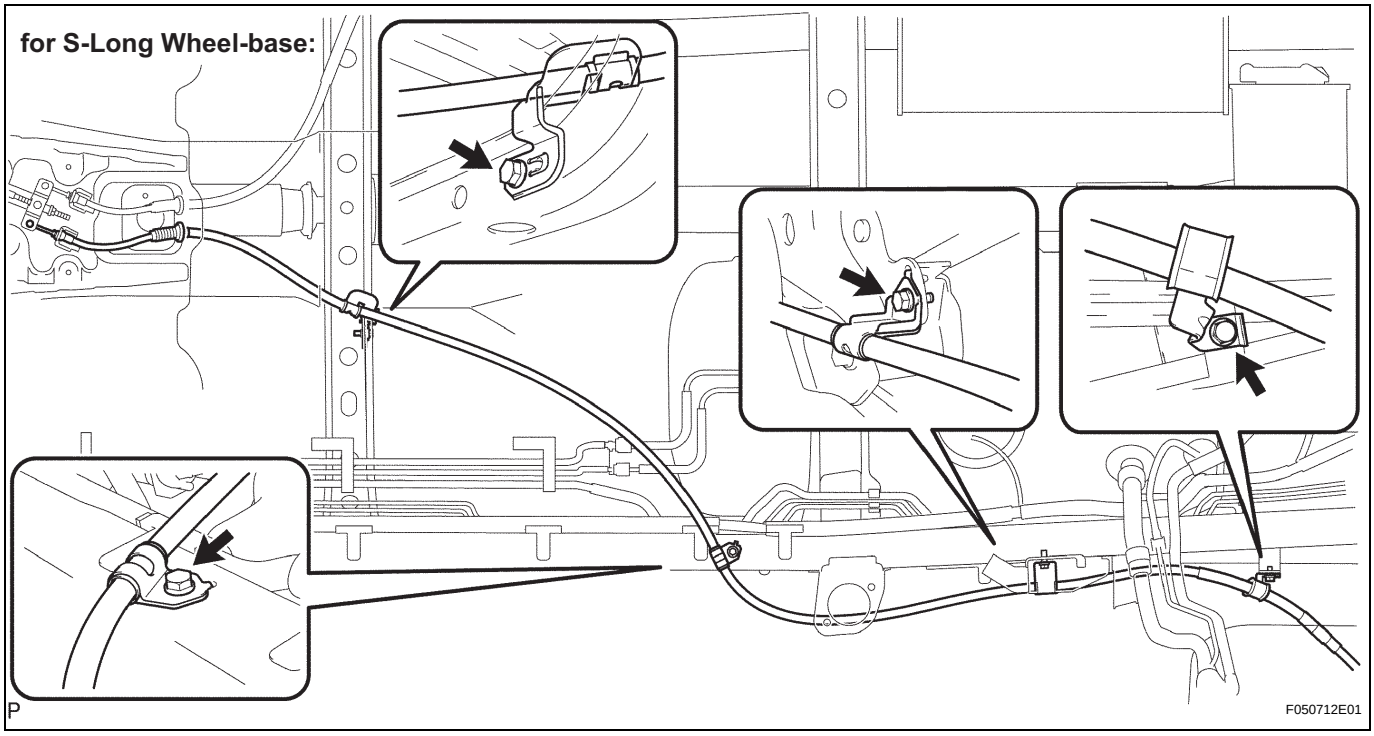


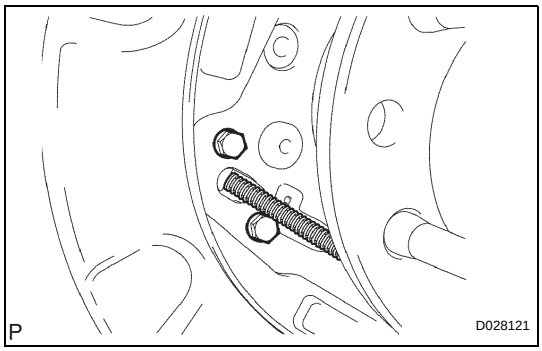
for Short Wheel-base:
for 4WD and Pre-Runner:
for 2WD:
P
F050710E01



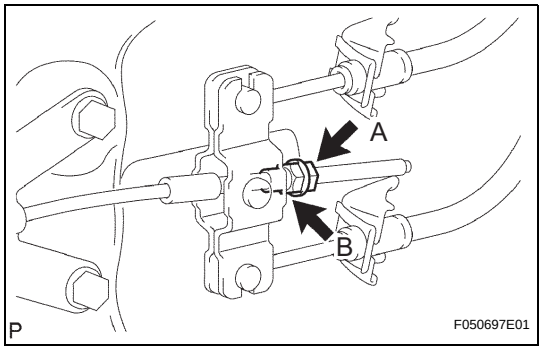
for E-Long Wheel-base:
for 4WD and Pre-Rnnuer:
for 2WD:
P
F050711E01

PB





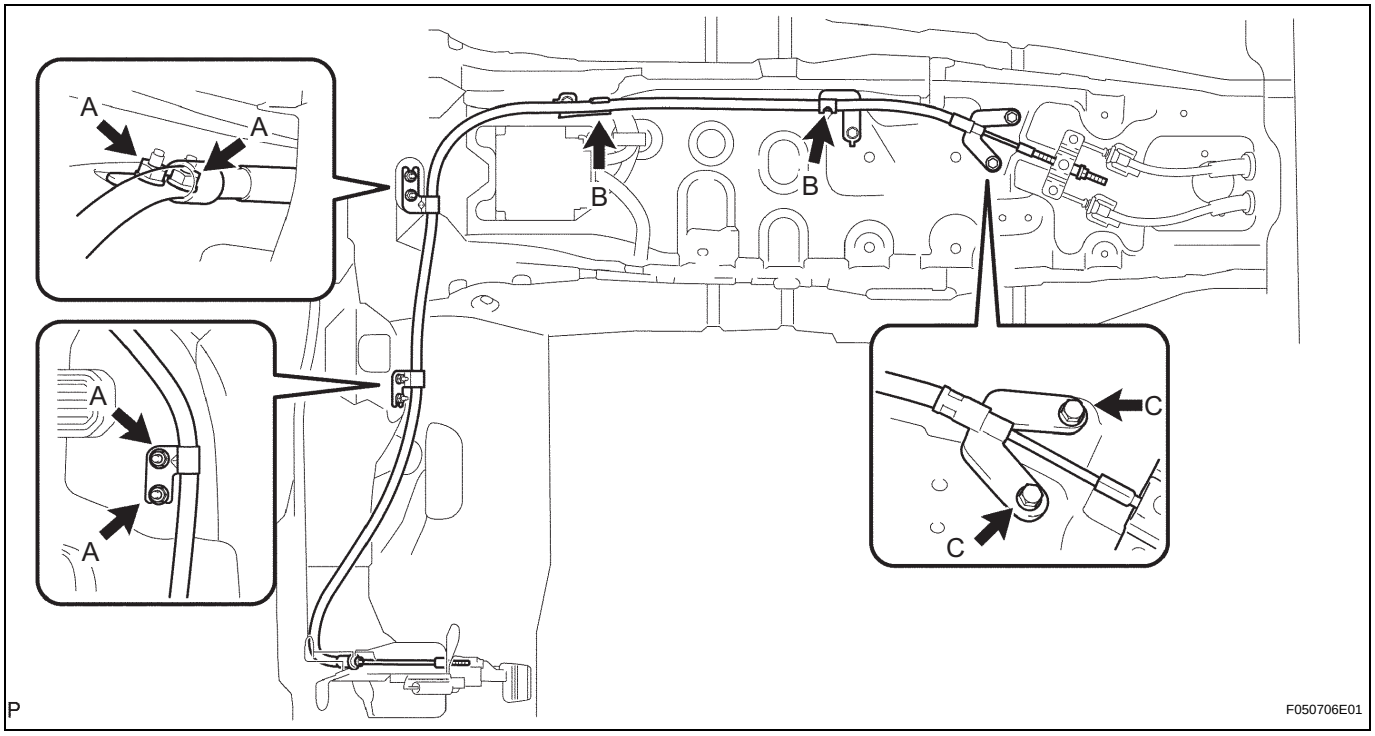
(c) Install the parking brake cable with the 2 bolts onto the backing plate.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

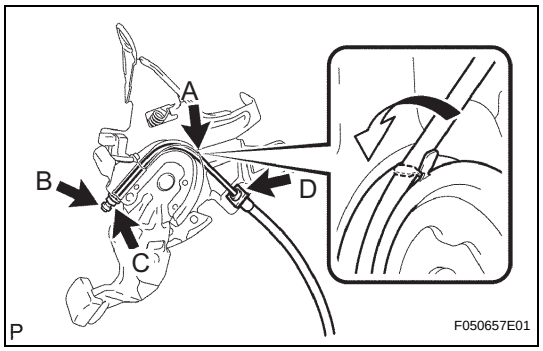


2. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 1 (for Automatic Transmission)

(a) Install the parking brake cable and provisionally tighten the adjusting nut B and lock nut A.

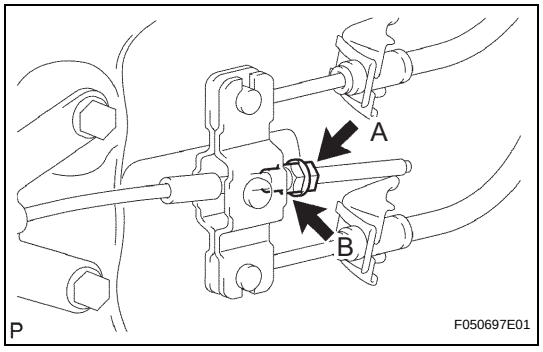
(b) Install the parking brake cable with the 4 nuts A, 2 clamps B, 2 bolts C.
Torque: Nut A
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Bolt C
13 N*m (127 kgf*cm, 9 ft.*lbf)





(c) Install the parking brake cable with the clip D, adjusting nut C and lock nut B onto the parking brake control pedal.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)

(d) Bend the claw A.

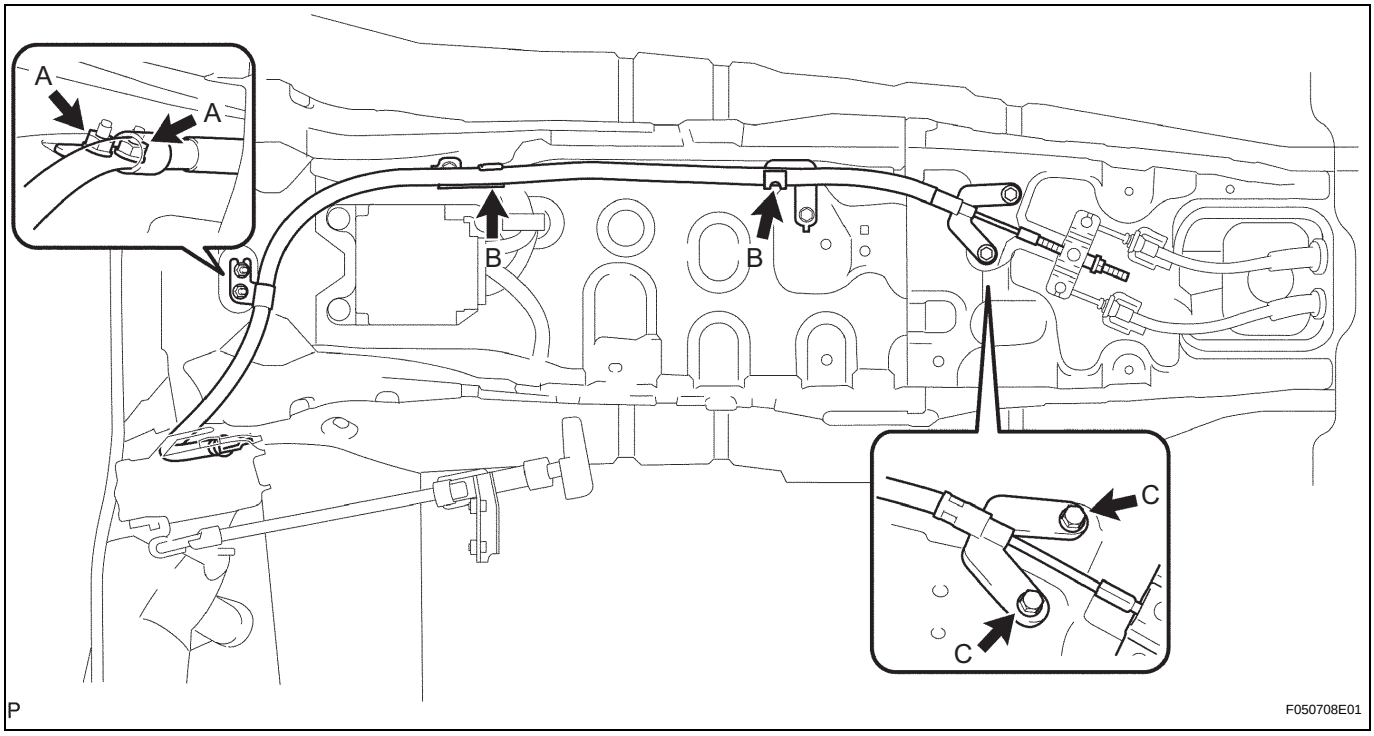


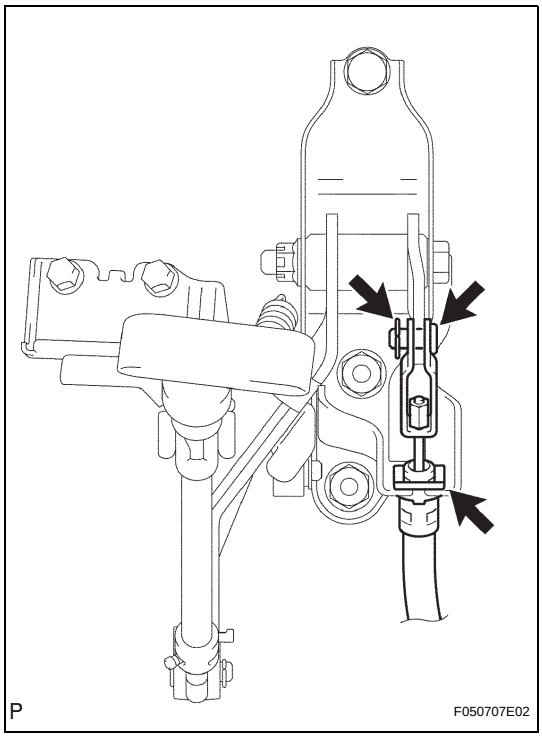
3. INSTALL PARKING BRAKE CABLE ASSEMBLY NO. 1 (for Manual Transmission)

(a) Install the parking brake cable and provisionally tighten the adjusting B nut and lock nut A.

(b) Install the parking brake cable with the 2 nuts A, 2 clamps B and 2 bolts C.
Torque: Nut A
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Bolt C
13 N*m (127 kgf*cm, 9 ft.*lbf)

PB





(c) Install the parking brake cable onto the parking brake lever with the clip.
(d) Install the sleeve with the pin and clip.

4. **APPLY HIGH TEMPERATURE GREASE (See page BR-71)**
5. **INSTALL REAR BRAKE SHOE (See page BR-71)**
6. **INSTALL FRONT BRAKE SHOE (See page BR-72)**
7. **INSPECT REAR DRUM BRAKE INSTALLATION (See page BR-73)**
8. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-73)**
9. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-74)**
10. **INSTALL REAR WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
11. **INSTALL PARKING BRAKE CABLE JOINT PROTECTOR (for Bench Seat Type) (See page PB-2)**
12. **INSTALL VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-105)**
13. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-603)**
14. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
15. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)**

16. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)**
17. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)**
18. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
19. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
20. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)**
21. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
23. **INSPECT SRS WARNING LIGHT**
    (See page RS-28)
24. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-1)**
25. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-1)**
26. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission) (See page PB-2)**
27. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transmission) (See page PB-2)**

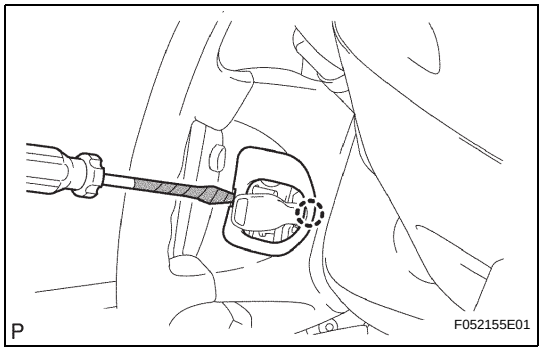
REMOVAL

1. **PRECAUTION**
   (See page RS-1)

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

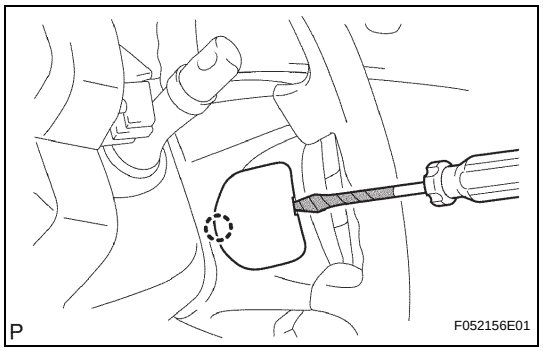
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**

4. **REMOVE NO.2 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the steering wheel cover lower No. 2.

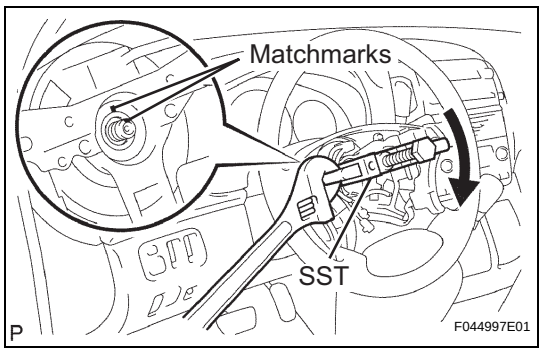


5. **REMOVE NO.3 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the No. 3 lower steering wheel cover.

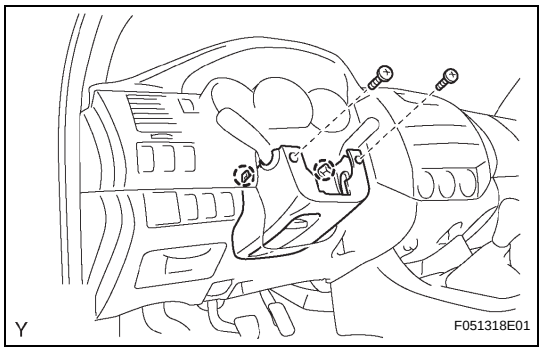
6. **REMOVE STEERING PAD (See page RS-558)**



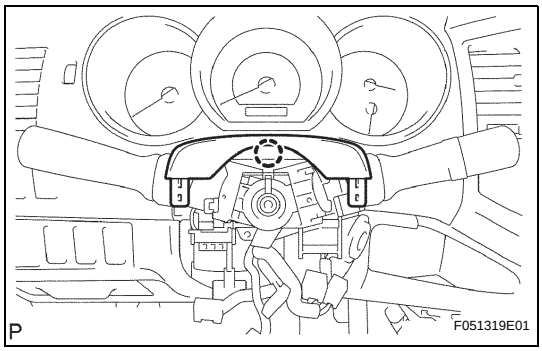
7. **REMOVE STEERING WHEEL ASSEMBLY**
   (a) Remove the steering wheel assembly set nut.
   (b) Place matchmarks on the steering wheel assembly and main shaft assembly.
   (c) Using SST, remove the steering wheel assembly.
   SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)



8. **REMOVE LOWER STEERING COLUMN COVER**
   (a) Remove the 2 screws.
   (b) Disengage the 2 claws to remove the lower steering column cover.

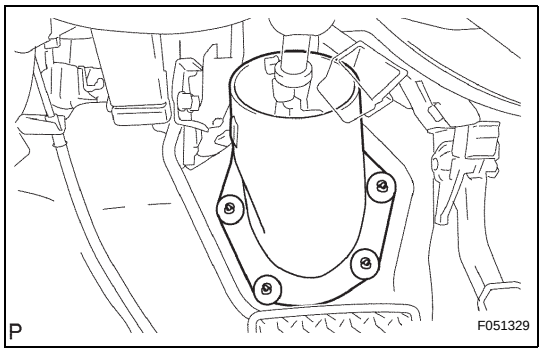


SR

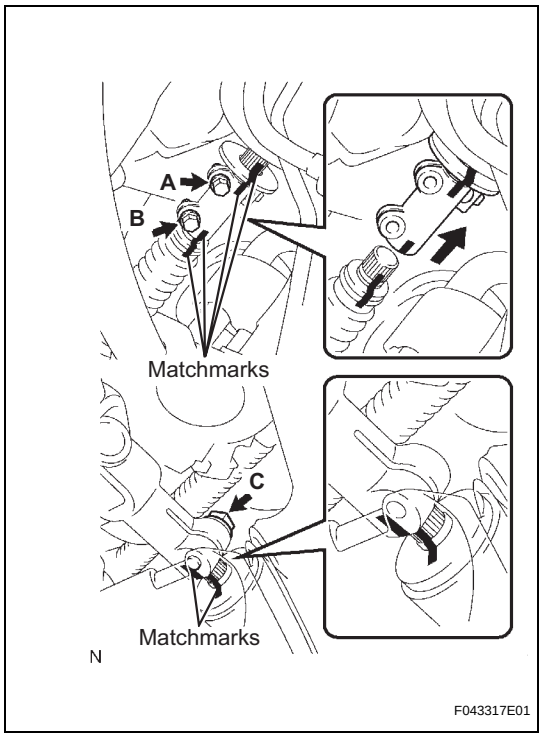


9. **REMOVE UPPER STEERING COLUMN COVER**
   (a) Disengage the claw and then remove the upper steering column cover.
10. **REMOVE SPIRAL CABLE SUB-ASSEMBLY (See page RS-566)**
11. **REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-17)**
12. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
13. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
14. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
15. **REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)**
16. **REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)**
17. **REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)**
18. **REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**
19. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)**
20. **REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)**
21. **REMOVE INSTRUMENT PANEL LOWER LH (See page IP-14)**
22. **REMOVE INSTRUMENT PANEL COVER SUB-ASSEMBLY LOWER (See page IP-14)**

SR



23. **REMOVE STEERING COLUMN HOLE COVER**
   (a) Disengage the 4 clips and remove the steering column hole cover.
24. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the No. 1 engine under cover sub-assembly with the 4 bolts.



25. REMOVE NO. 2 STEERING INTERMEDIATE SHAFT

(a) Mark matchmarks on the power steering gear assembly and No. 2 steering intermediate shaft.

(b) Remove bolt C and No. 2 steering intermediate shaft from the power steering gear assembly.

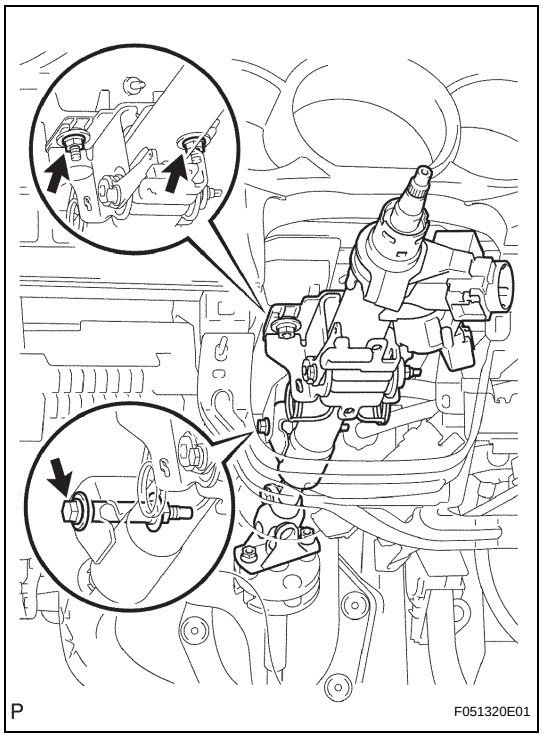
26. REMOVE STEERING SLIDING YOKE

(a) Mark matchmarks on the steering sliding yoke, steering intermediate shaft sub-assembly No. 2 and steering intermediate shaft assembly.

(b) Remove bolts A and B from the steering sliding yoke.

(c) Slide the steering sliding yoke up and separate it from the steering intermediate shaft sub-assembly No. 2.

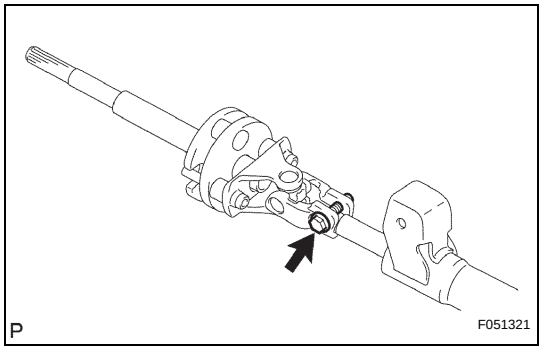
(d) Pull down the steering sliding yoke from the steering intermediate shaft assembly to remove.



27. REMOVE STEERING COLUMN ASSEMBLY

(a) Disconnect the connectors and wire harness clamps.

(b) Remove the bolt and 2 nuts, then remove the steering column assembly from the instrument panel reinforcement assembly.



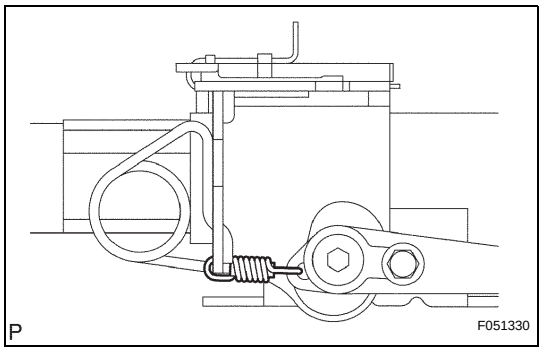
DISASSEMBLY

1. REMOVE STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Place matchmarks on the steering intermediate shaft sub-assembly and steering shaft.

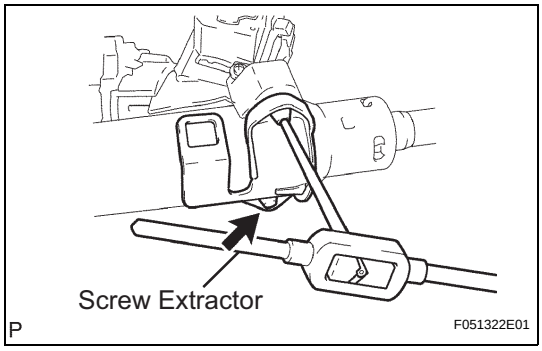
(b) Remove the bolt and steering intermediate shaft sub-assembly.

SR



2. REMOVE TILT LEVER RETURN SPRING

(a) Remove the tilt lever return spring from the steering upper support bracket and steering tilt lever.

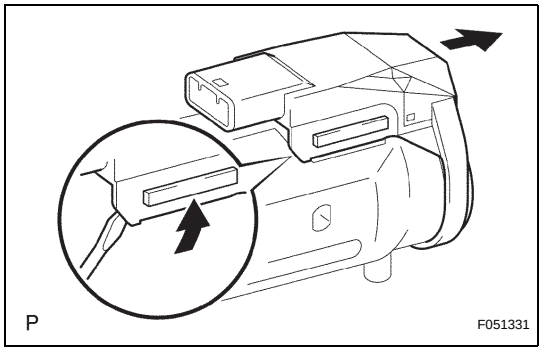


3. REMOVE UPPER STEERING COLUMN CLAMP

(a) Using a centering punch, make the center of the 2 taped- hand bolts.

(b) Using a drill, make a hole in the 2 steering lock set bolts and set a screw extractor.

(c) Using the screw extractor, remove the steering column bracket assembly upper and upper steering column clamp from the steering column tube upper.



4. REMOVE TRANSPONDER KEY AMPLIFIER

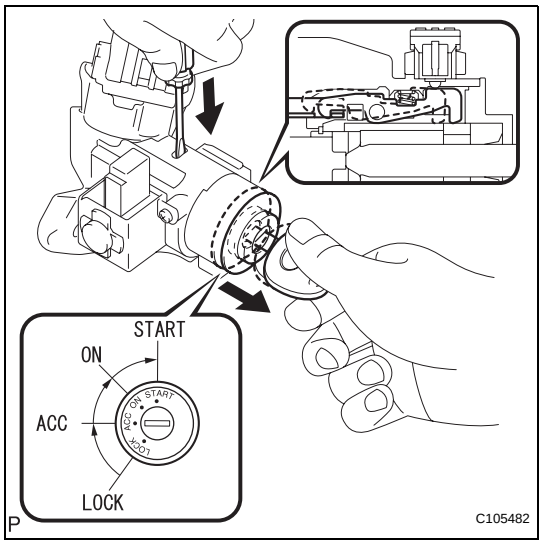
(a) Widen the claw hung on the upper bracket by approximately 1.0 mm (0.039 in.) using a screwdriver.

(b) Pull the transponder key amplifier toward the rear of the vehicle with the claw open.

NOTICE:

Take care not to apply excessive force to prevent the case from being damaged.

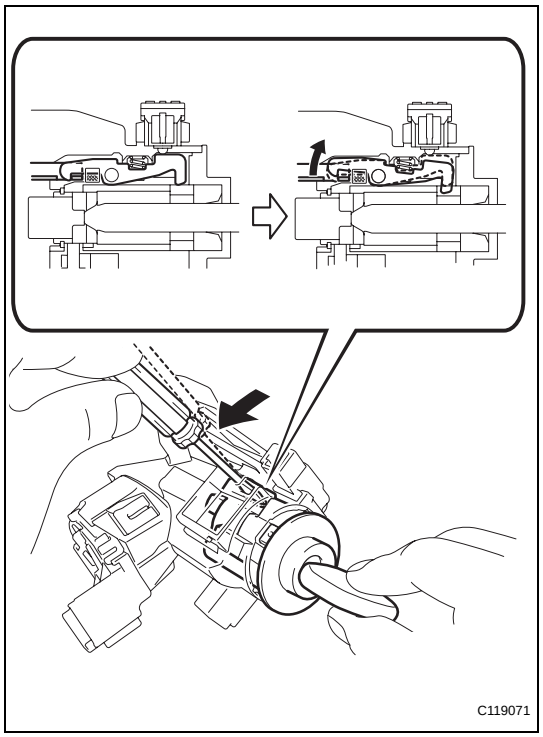
SR



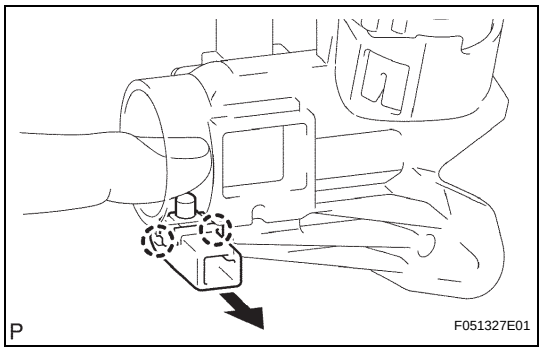
5. REMOVE IGNITION SWITCH LOCK CYLINDER & KEY SET

(a) Place the ignition switch lock cylinder assembly in the accessory position.

(b) Insert screwdriver in the steering column bracket assembly upper as shown in the illustration. Then slide ignition switch lock cylinder assembly until the claw of the ignition switch lock cylinder assembly comes into contact with the steering column bracket assembly upper stopper.

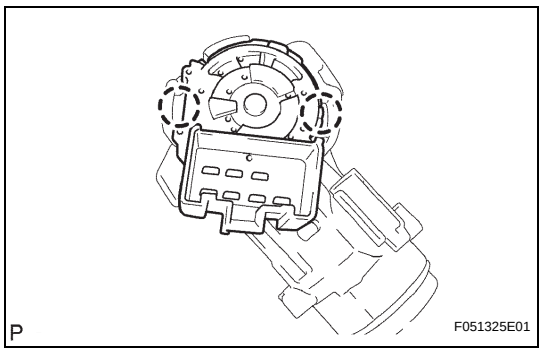


(c) Insert a screwdriver into the steering column bracket assembly upper as shown in the illustration .Then tilt the screwdriver as shown in the illustration to disengage the claw of the ignition lock cylinder assembly and remove the cylinder.
HINT:
When the ignition lock cylinder assembly disengages, a click sound is heard.



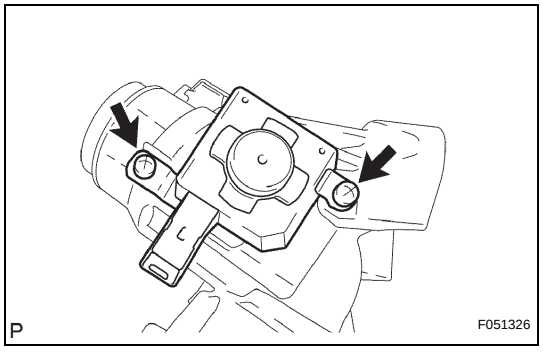
6. REMOVE UN-LOCK WARNING SWITCH ASSEMBLY

(a) Disconnect the un-lock warning switch assembly connector from the ignition or start switch assembly.
(b) Remove the un-lock warning switch assembly toward the rear of the vehicle by pushing up the center part.



7. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

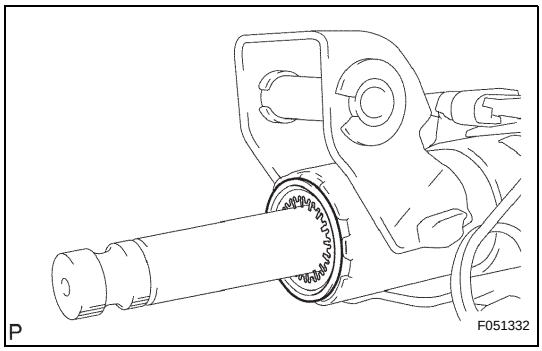
(a) Disengage the 2 claws and ignition or starter switch assembly from the steering column bracket assembly upper.



8. REMOVE KEY INTER LOCK SOLENOID (for Automatic Transmission)

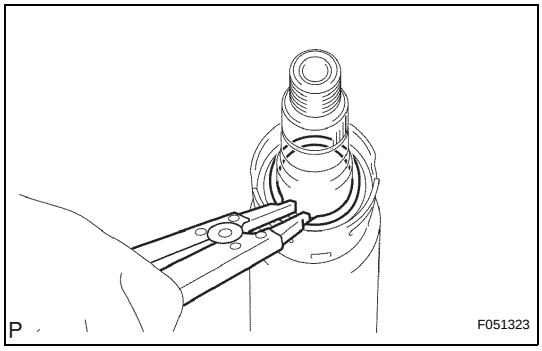
(a) Remove the 2 screws and key inter lock solenoid from the steering column bracket assembly upper.

SR



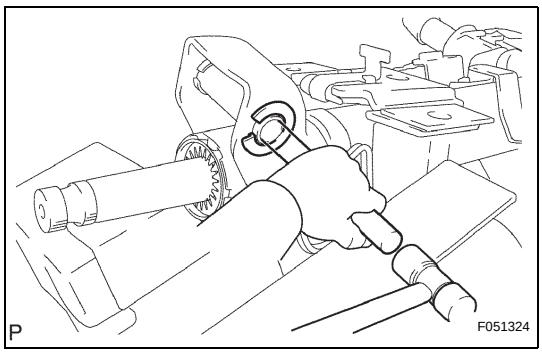
9. REMOVE STEERING MAIN SHAFT ASSEMBLY

(a) Using a screwdriver, remove the steering column No. 1 ring from the steering main shaft.



(b) Using a snap ring expander, remove the snap ring and No. 1 main shaft.

(c) Remove the compression spring, bearing thrust collar and bearing from the No. 1 main shaft.



10. REMOVE NO.1 TILT STEERING SUPPORT COLLAR

(a) Using a brass bar, hammer and vise, gently strike the central part of the steering column bracket spacer and remove it.

(b) Remove the No. 1 tilt steering support collar from the steering column tube lower.

REASSEMBLY

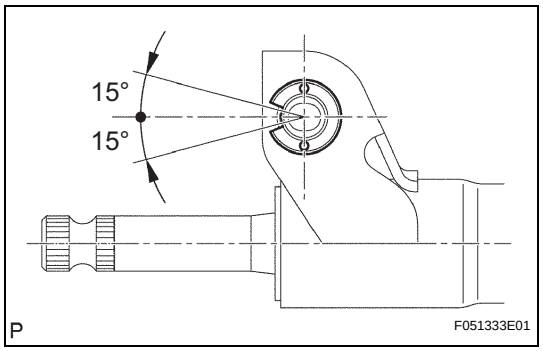
1. INSTALL NO.1 TILT STEERING SUPPORT COLLAR

(a) Install the No. 1 tilt steering support collar from the steering column tube lower.

(b) Using a hammer and vise, install the steering column bracket spacer.

NOTICE:

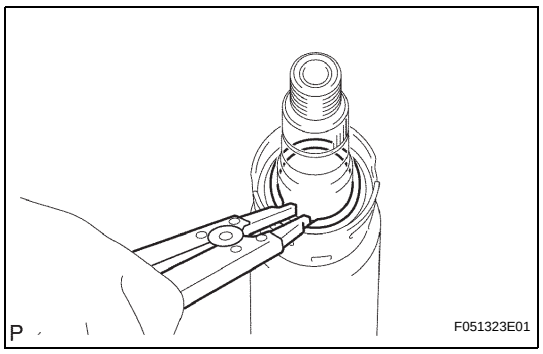
- **The inclination of the steering column bracket spacer should be within +- 15° when installing, as shown in the illustration.**
- **The turning angle of the No. 1 tilt steering support collar should be within +- 15° when installing.**



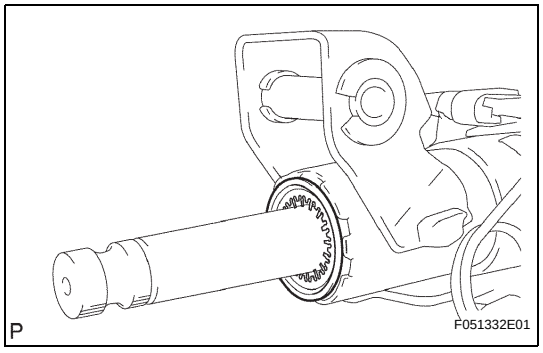
2. INSTALL STEERING MAIN SHAFT ASSEMBLY

(a) Install the steering main shaft onto the steering column tube upper and steering column tube lower.

(b) Using a snap ring expander, install a new snap ring onto the main shaft.



(c) Install the steering column No. 1 ring onto the steering main shaft.



3. INSTALL KEY INTER LOCK SOLENOID (for Automatic Transmission)

(a) Install the key inter lock solenoid onto the steering column bracket assembly upper with 2 screws.

4. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY

(a) Engage the ignition starter switch assembly into the steering column bracket assembly upper with the 2 claws.

5. INSTALL UN-LOCK WARNING SWITCH ASSEMBLY

(a) Install the un-lock warning switch assembly onto the steering column bracket assembly upper.

(b) Connect the un-lock warning switch assembly connector to the ignition switch assembly.

6. INSTALL IGNITION SWITCH LOCK CYLINDER & KEY SET

(a) Make sure that the ignition switch lock cylinder assembly is in the accessory position.

(b) Install the ignition switch lock cylinder assembly.

HINT:

When the ignition lock cylinder assembly engages, a click sound is heard.

7. INSTALL TRANSPONDER KEY AMPLIFIER

NOTICE:

Take care not to push the amplifier up forcibly to prevent it from being damaged.

(a) Align the transponder key amplifier with the installation position of the upper bracket with the amplifier inclined.

(b) Push up the transponder key amplifier and connect it to the upper bracket.

8. INSPECT STEERING LOCK OPERATION

(a) Check that the steering mechanism is activated when removing the key.

(b) Check that the steering mechanism is deactivated when inserting the key and turning it to ACC position.

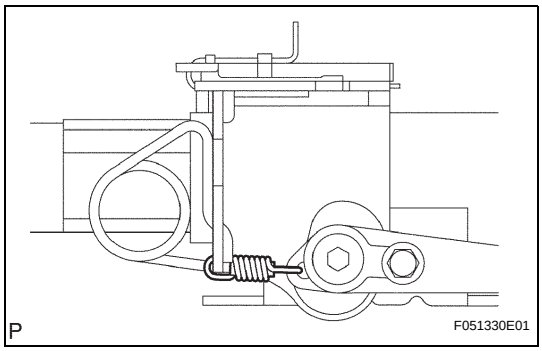
9. INSTALL UPPER STEERING COLUMN CLAMP

(a) Provisionally install the steering column bracket assembly upper and steering column upper clamp with the 2 new tapered-head bolts.

(b) Tighten the 2 tapered-head bolts until the bolt heads break off.

10. INSTALL TILT LEVER RETURN SPRING

(a) Install the tilt lever return spring onto the bracket and steering tilt lever.



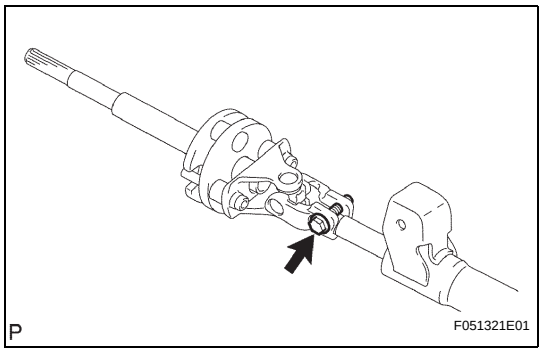
SR

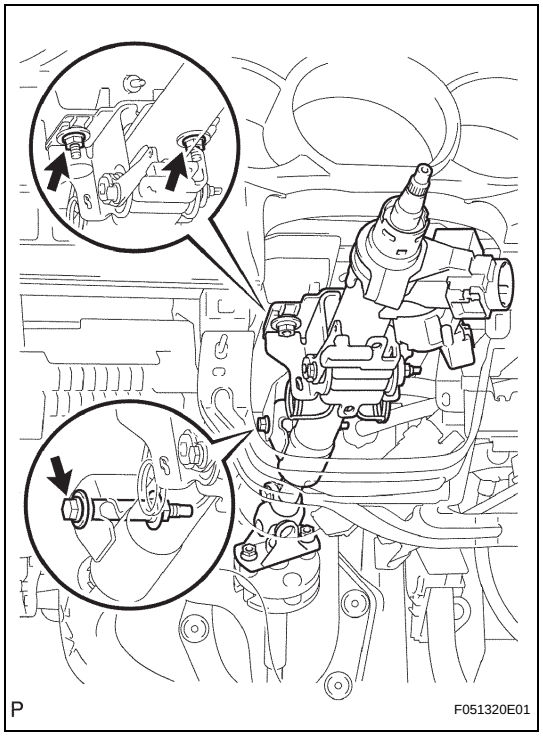
11. INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Align the matchmarks on the steering intermediate shaft sub-assembly and steering main shaft assembly.

(b) Temporarily install the steering intermediate shaft sub- assembly with the bolt.

Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)





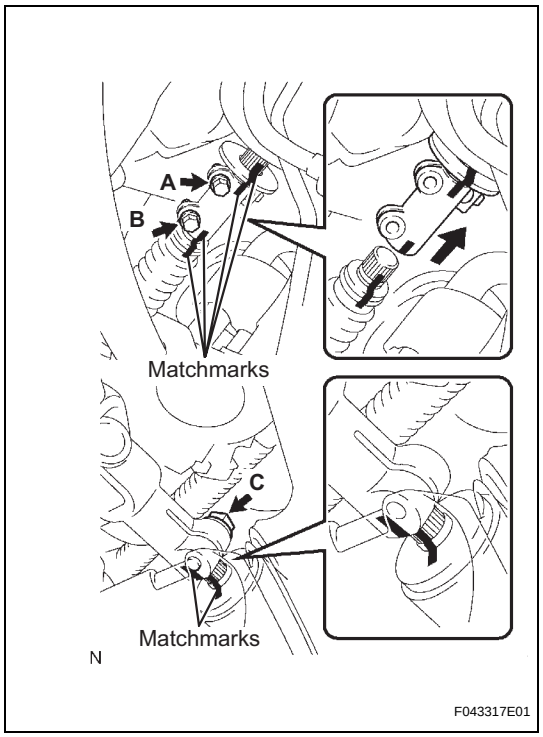
INSTALLATION

1. INSTALL STEERING COLUMN ASSEMBLY

(a) Install the steering column assembly with the 2 nuts and bolt.
Torque: 21 N*m (210 kgf*cm, 16 ft.*lbf)

(b) Connect each of the connectors to the steering column assembly.

(c) Connect the wire harness clamps to the steering column assembly.
CAUTION:
Use a shop rag to wipe any dirt off the installation plane and column body side.
NOTICE:
Be careful not to scratch or soil the installation plane of the steering column.



2. INSTALL NO.2 STEERING INTERMEDIATE SHAFT

(a) Align the matchmarks on the power steering gear and No. 2 steering intermediate shaft.

(b) Install the No. 2 steering intermediate shaft onto the steering gear box with bolt C.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf) for bolt C

3. INSTALL STEERING SLIDING YOKE

(a) Align the matchmarks on the steering column and steering sliding yoke.

(b) Install the steering sliding yoke onto the steering column assembly and slide it upward.

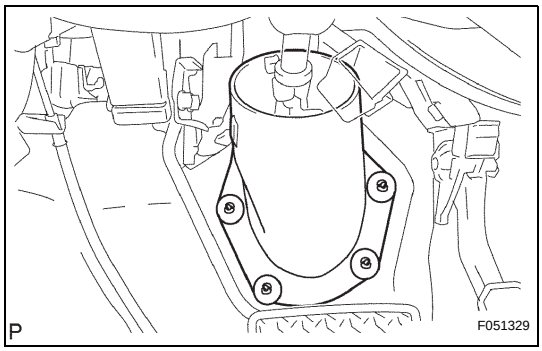
(c) Align the matchmarks on the intermediate shaft sub-assembly No. 2 and steering sliding yoke.

(d) Install the sliding yoke onto the intermediate shaft sub- assembly No. 2 with bolts A and B.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf) for bolt A, B

4. INSTALL NO.1 ENGINE UNDER COVER SUB-ASSEMBLY

(a) Install the No. 1 engine under cover sub-assembly with the 4 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

SR



5. **INSTALL STEERING COLUMN HOLE COVER**
   (a) Install the steering column hole cover with the 4 clips.
6. **INSTALL LOWER INSTRUMENT PANEL LH (See page IP-20)**
7. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
8. **INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)**
9. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)**
10. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**
11. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**
12. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)**
13. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
14. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
15. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
16. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
17. **INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-19)**
18. **INSTALL SPIRAL CABLE SUB-ASSEMBLY (See page RS-567)**
19. **INSTALL UPPER STEERING COLUMN COVER**
    (a) Engage the claw and then install the steering column cover upper.
20. **INSTALL LOWER STEERING COLUMN COVER**
    (a) Engage the 2 claws.
    (b) Install the steering column cover lower with the 2 screws.
21. **INSTALL STEERING WHEEL ASSEMBLY**
    (a) Align the matchmarks on the steering wheel assembly and steering main shaft assembly.
    (b) Install the steering wheel assembly set nut.
    Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
22. **INSTALL STEERING PAD (See page RS-558)**
23. **INSTALL NO.3 LOWER STEERING WHEEL COVER**
    (a) Engage the claw and install the No. 3 lower steering wheel cover onto the steering wheel assembly.

24. INSTALL NO.2 LOWER STEERING WHEEL COVER

(a) Engage the claw and install the No. 2 lower steering wheel cover onto the steering wheel assembly.

25. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

26. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

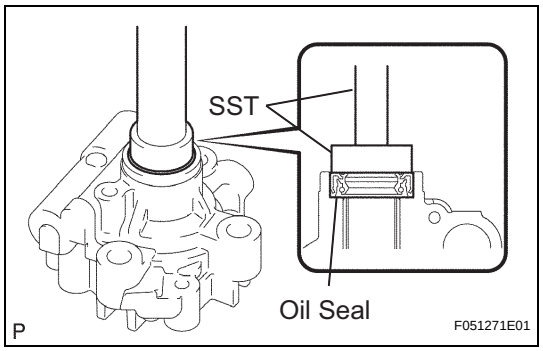
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

27. INSPECT SRS WARNING LIGHT

(See page RS-28)

REASSEMBLY

NOTICE:
When installing, coat the parts indicated by the arrows with power steering fluid (See page PS-3).



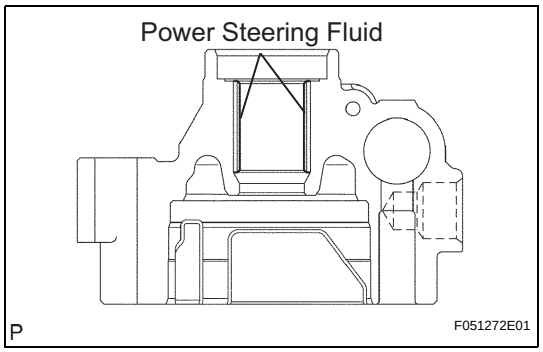
1. INSTALL VANE PUMP HOUSING OIL SEAL

(a) Coat a new vane pump housing oil seal lip with power steering fluid.

(b) Using SST and a press, install a new oil seal.

SST 09950-60010 (09951-00280), 09950-70010 (09951-07100)

NOTICE:
Make sure that the oil seal is installed facing in the correct direction.

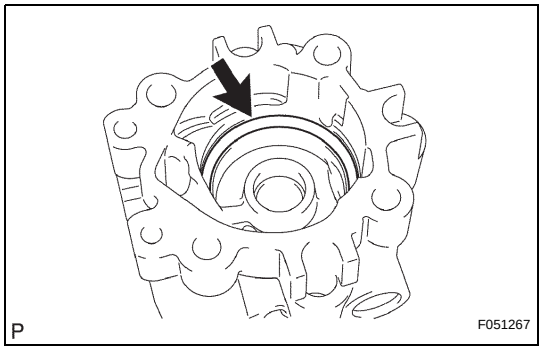


2. INSTALL PULLEY SHAFT SUB-ASSEMBLY

(a) Coat the bushing inner surface of the vane pump housing front with power steering fluid.

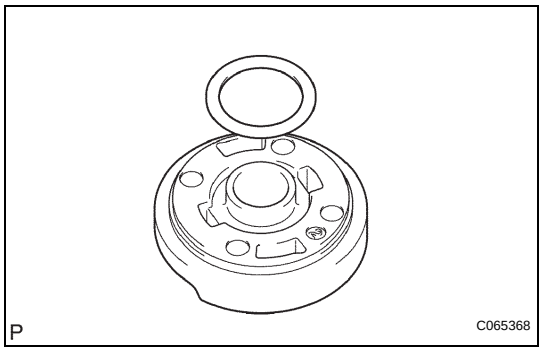
(b) Gradually insert the vane pump shaft.

NOTICE:
Do not damage the vane pump housing oil seal lip in the vane pump housing front.



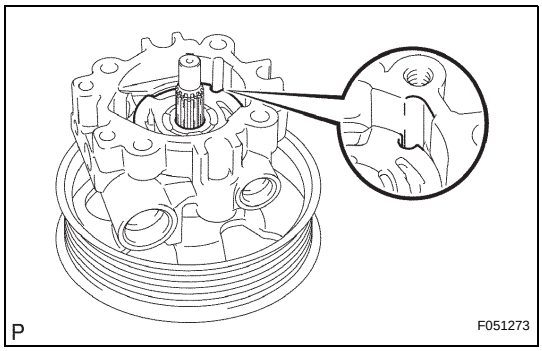
3. INSTALL VANE PUMP SIDE PLATE FRONT

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump housing front.

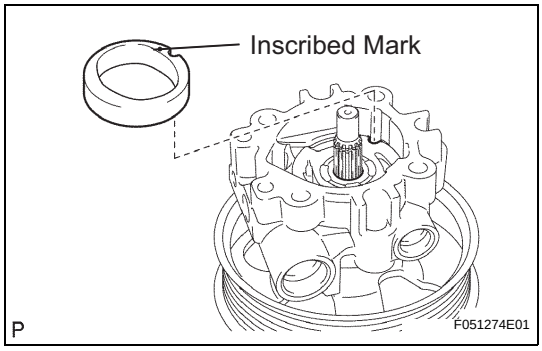


(b) Coat a new O-ring with power steering fluid and install it onto the side plate.

PS

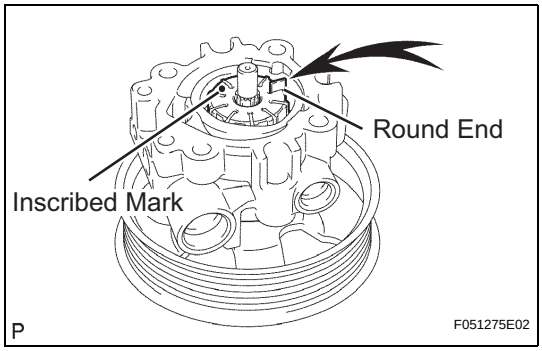


(c) Align the dent of the side plate with that of the vane pump housing front and install the side plate.
NOTICE:
Make sure that the side plate is installed facing the correct direction.



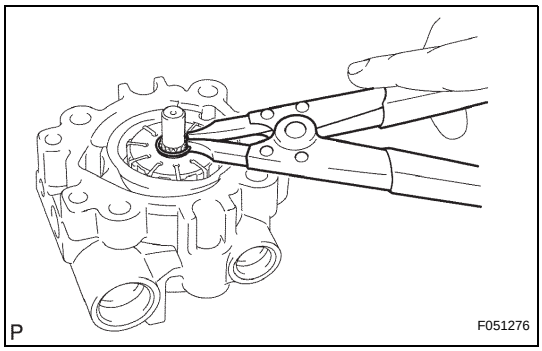
4. INSTALL VANE PUMP CAM RING

(a) Align the dent of the cam ring with that of the side plate and install the cam ring with the inscribed mark facing outward.



5. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor with the inscribed mark facing outward.
(b) Coat the 10 vane plates with power steering fluid.
(c) Install the vane plates with the round ends facing outward.

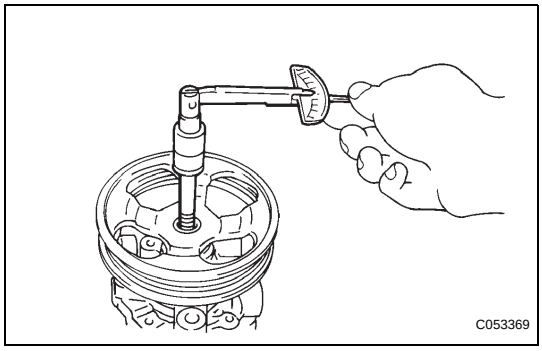


(d) Using a snap ring expander, install a new snap ring onto the pulley shaft.

PS

6. INSTALL VANE PUMP HOUSING REAR

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump housing rear.
(b) Align the straight pin of the vane pump housing rear with the dents of the cam ring, side plate and vane pump housing front, and install the vane pump housing rear with the 4 bolts.
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



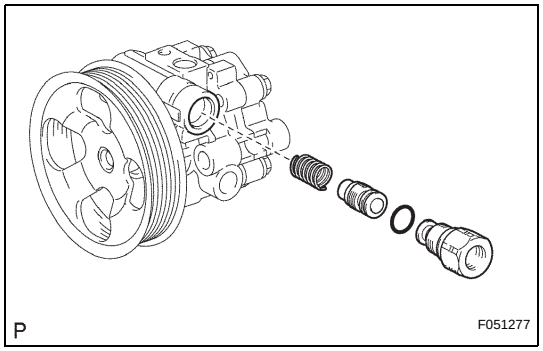
7. INSPECT PRELOAD

(a) Check that the pump rotates smoothly without making any abnormal noises.
(b) Provisionally install the service bolt.
Recommended service bolt:
Thread diameter:
10 mm (0.3937 in.)
Thread pitch:
1.25 mm (0.0492 in.)
Bolt length:
50 mm (1.9685 in.)

(c) Using a torque wrench, check the pump rotating torque.
Torque: 0.27 N*m (2.8 kgf*cm, 2.4 in.*lbf)

8. INSTALL POWER STEERING OIL PRESSURE SWITCH

(a) Coat the O-ring with power steering fluid and install it onto the power steering oil pressure switch.
(b) Install the power steering oil pressure switch onto the vane pump.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



9. INSTALL FLOW CONTROL VALVE

(a) Coat the compression spring and flow control valve with power steering fluid.
(b) Install the compression spring and flow control valve.
(c) Coat a new O-ring with power steering fluid and install it onto the pressure port union.
(d) Install the pressure port union.
Torque: 69 N*m (704 kgf*cm, 51 ft.*lbf)

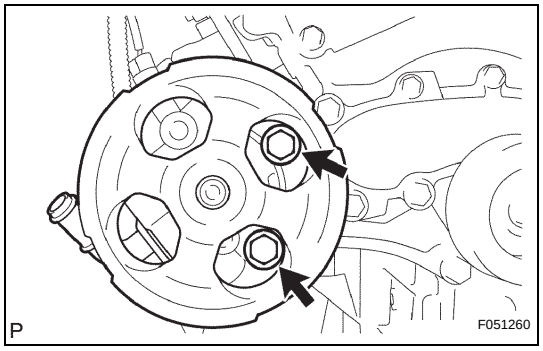
10. INSTALL POWER STEERING SUCTION PORT UNION

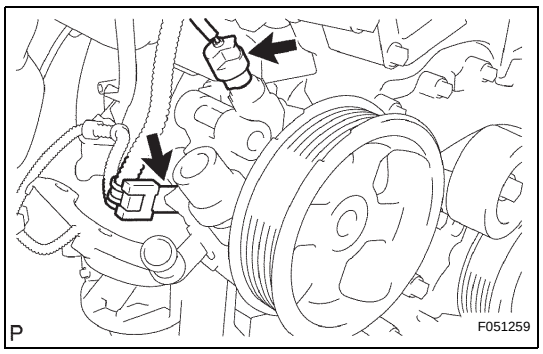
(a) Coat a new O-ring with power steering fluid, and install it onto the suction port union.
(b) Install the suction port union with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

INSTALLATION

1. INSTALL VANE PUMP

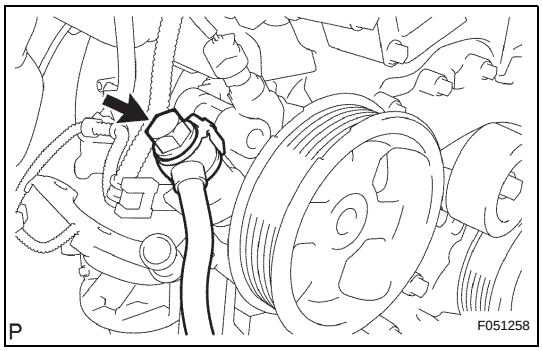
(a) Install the vane pump assembly with the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



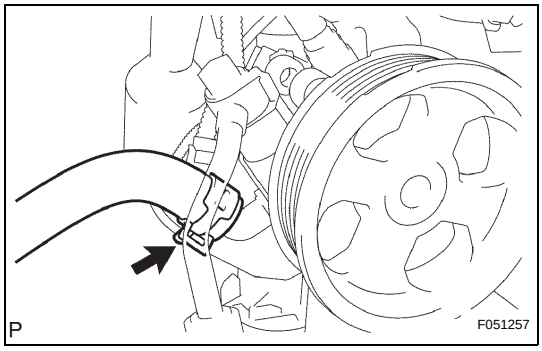


(b) Install the wire harness clamp bracket with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(c) Connect the oil pressure switch connector.
NOTICE:
Make sure that no oil adheres to the connector.

PS



2. **CONNECT PRESSURE FEED TUBE ASSEMBLY**
   (a) Install a new gasket onto the pressure feed tube.
   (b) Install the pressure feed tube with the union bolt.
   Torque: 51 N*m (520 kgf*cm, 38 ft.*lbf)



3. **CONNECT OIL RESERVOIR TO PUMP HOSE NO. 1**
   (a) Connect the oil reservoir to pump hose No. 1 with the clip.
4. **INSTALL FAN AND GENERATOR V BELT (See page EM-5)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   (See page IN-5)
6. **ADD POWER STEERING FLUID**
7. **BLEED POWER STEERING FLUID (See page PS-2)**
8. **CHECK FOR POWER STEERING FLUID LEAKAGE**
9. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO. 1 (for 4WD and Pre-Runner)**
   Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

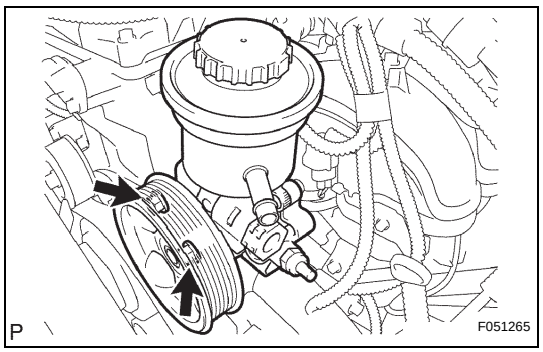
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO. 1 (for 4WD and Pre-Runner)**
3. **REMOVE FAN AND GENERATOR V BELT (See page EM-5)**
4. **DRAIN POWER STEERING FLUID**
5. **DISCONNECT PRESSURE FEED TUBE ASSEMBLY**
   (a) Disengage the clip and disconnect the return hose.

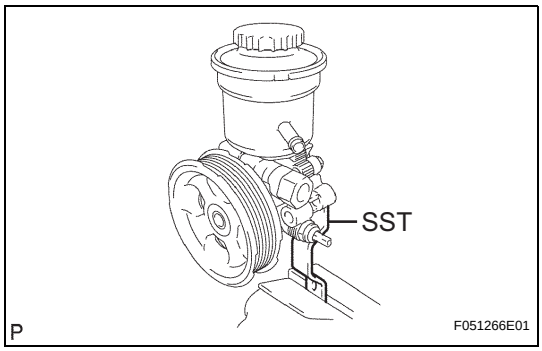
   (b) Remove the union bolt, then disconnect the pressure feed tube.
   (c) Remove the gasket from the pressure feed tube.

6. **REMOVE VANE PUMP**
   (a) Disconnect the oil pressure switch connector.

   (b) Remove the 2 bolts and vane pump assembly.



PS



DISASSEMBLY

1. FIX VANE PUMP

(a) Using SST, fix the vane pump assembly in a vise.
SST 09630-00014 (09631-00132)
NOTICE:
When using a vise, do not over tighten it.

2. REMOVE VANE PUMP OIL RESERVOIR SUB-ASSEMBLY

(a) Remove the 3 bolts and vane pump oil reservoir.
(b) Remove the O-ring from the vane pump oil reservoir.

3. REMOVE FLOW CONTROL VALVE

(a) Remove the pressure port union.
(b) Remove the O-ring from the pressure port union.
(c) Remove the flow control valve and compression spring.

4. REMOVE POWER STEERING OIL PRESSURE SWITCH
NOTICE:
Be careful not to drop or badly damage the oil pressure switch. If damaged, replace it with a new one.

5. REMOVE VANE PUMP HOUSING REAR

(a) Remove the 4 bolts and vane pump housing rear from the vane pump housing front.
(b) Remove the O-ring from the vane pump housing front.

6. REMOVE PULLEY SHAFT SUB-ASSEMBLY
NOTICE:
Be careful not to drop or badly damage the pulley shaft. If damaged, replace it with a new one.

(a) Using a screwdriver, remove the snap ring from the pulley shaft.
(b) Remove the pulley shaft.

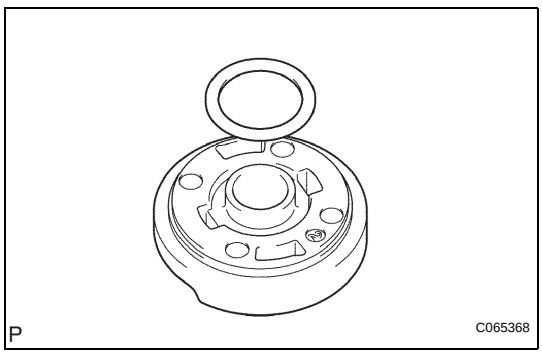
7. REMOVE VANE PUMP ROTOR

(a) Remove the 10 vane plates.
(b) Remove the vane pump rotor.

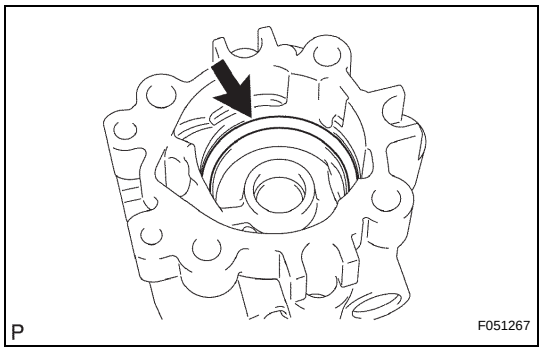
8. REMOVE VANE PUMP CAM RING

9. REMOVE VANE PUMP SIDE PLATE FRONT

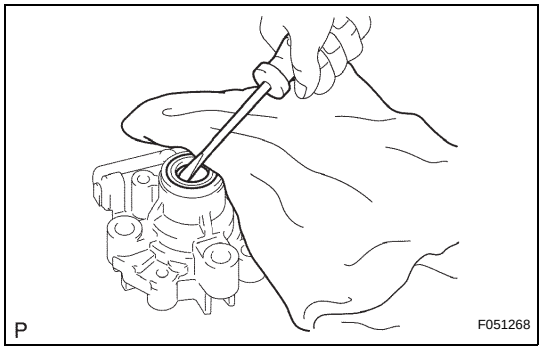
(a) Remove the side plate from the vane pump housing front.
(b) Remove the O-ring from the side plate.



PS

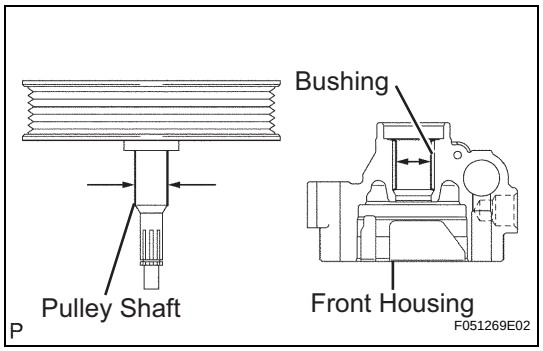


(c) Remove the O-ring from the vane pump housing front.



10. REMOVE VANE PUMP HOUSING OIL SEAL

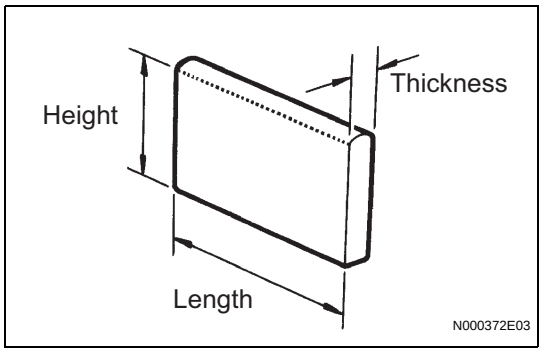
(a) Using screwdriver, remove the oil seal.
NOTICE:
Be careful not to damage the vane pump housing front.



INSPECTION

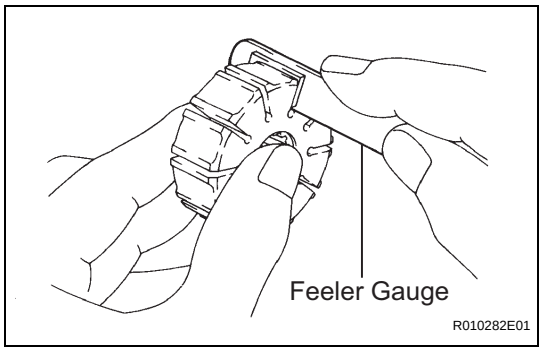
1. INSPECT OIL CLEARANCE

(a) Using a micrometer and caliper gauge, measure the oil seal clearance.
Standard clearance:
0.021 to 0.043 mm (0.0008 to 0.0017 in.)
Maximum clearance:
0.07 mm (0.0028 in.)
If it is greater than the maximum, replace the vane pump assembly.



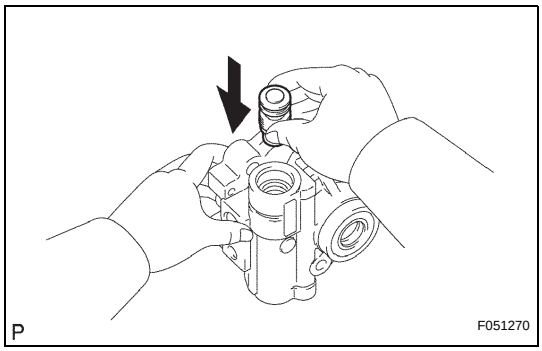
2. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATE

(a) Using a micrometer, measure the height, thickness and length of the vane plates.
Minimum height:
7.7 mm (0.303 in.)
Minimum thickness:
1.408 mm (0.0554 in.)
Minimum length:
11.993 mm (0.4722 in.)



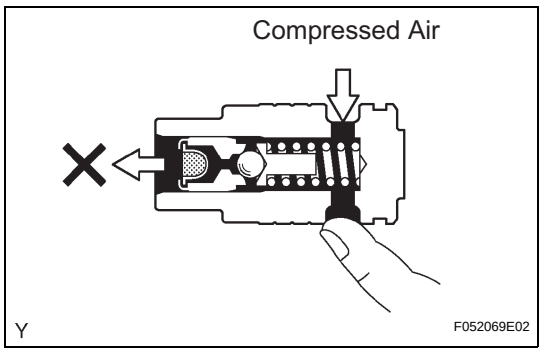
(b) Using a feeler gauge, measure the clearance between a side face of the vane pump rotor groove and vane plate.
Maximum clearance:
0.025 mm (0.0012 in.)
If it is greater than the maximum, replace the vane pump assembly.

PS

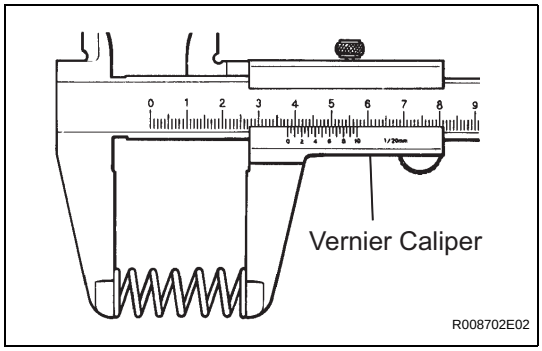


3. INSPECT FLOW CONTROL VALVE

(a) Coat the flow control valve with power steering fluid and check that it falls smoothly into the flow control valve hole under its own weight.



(b) Check the flow control valve for leakage. Close one of the holes and apply compressed air of 392 to 490 kPa (4 to 5 kgf/cm^2, 57 to 71 psi) to the hole on the opposite side. Confirm that the air does not flow out of the end hole.
If necessary, replace the vane pump assembly.



4. INSPECT COMPRESSION SPRING

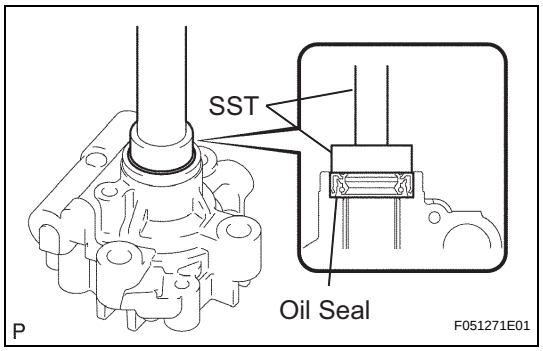
(a) Using vernier calipers, measure the free length of the spring.
Minimum free length:
36.9 mm (1.453 in.)
If it is not within the specification, replace the vane pump assembly.

5. INSPECT PRESSURE PORT UNION SUB-ASSEMBLY

(a) If the union seat in the pressure port union is badly damaged, it could cause fluid leakage, so replace the vane pump assembly.

REASSEMBLY

NOTICE:
When installing, coat the parts indicated by the arrows with power steering fluid (See page PS-3).



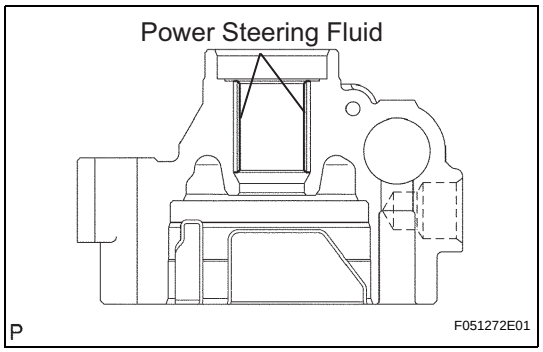
1. INSTALL VANE PUMP HOUSING OIL SEAL

(a) Coat a new vane pump housing oil seal lip with power steering fluid.

(b) Using SST and a press, install a new oil seal.

SST 09950-60010 (09951-00280), 09950-70010 (09951-07100)

NOTICE:
Make sure that the oil seal is installed facing in the correct direction.

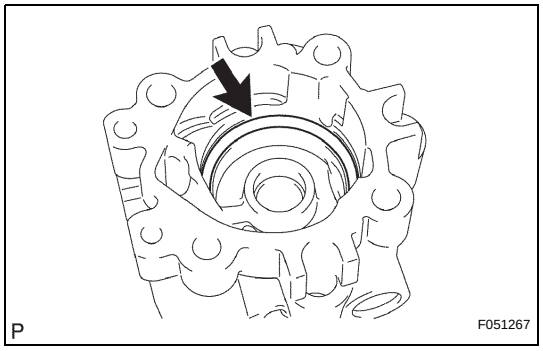


2. INSTALL PULLEY SHAFT SUB-ASSEMBLY

(a) Coat the bushing inner surface of the vane pump housing front with power steering fluid.

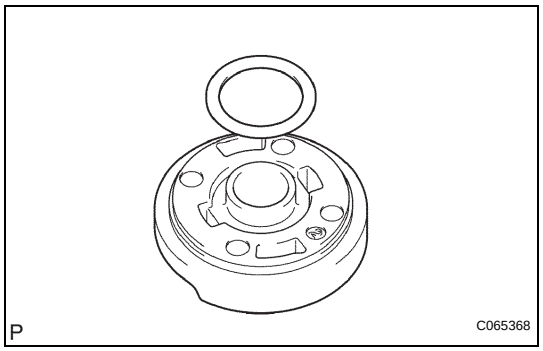
(b) Gradually insert the vane pump shaft.

NOTICE:
Do not damage the vane pump housing oil seal lip in the vane pump housing front.



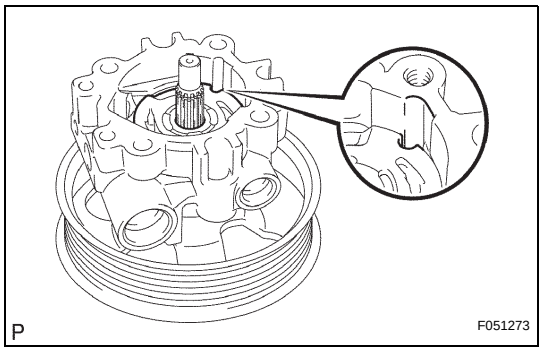
3. INSTALL VANE PUMP SIDE PLATE FRONT

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump housing front.

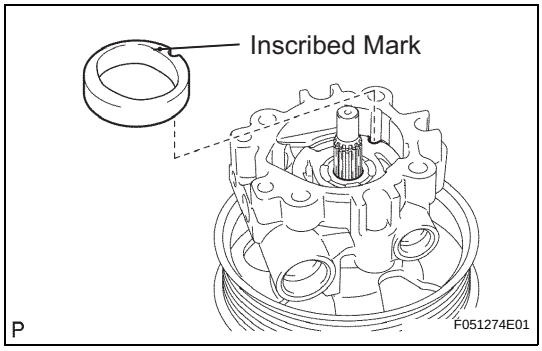


(b) Coat a new O-ring with power steering fluid and install it onto the side plate.

PS

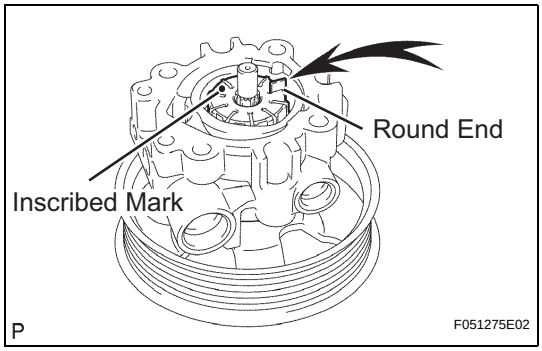


(c) Align the dent of the side plate with that of the vane pump housing front and install the side plate.
NOTICE:
Make sure that the side plate is installed facing the correct direction.



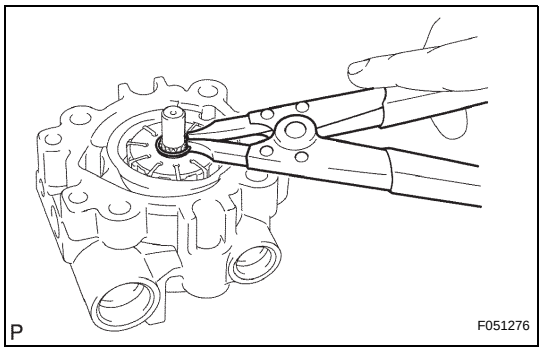
4. INSTALL VANE PUMP CAM RING

(a) Align the dent of the cam ring with that of the side plate and install the cam ring with the inscribed mark facing outward.



5. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor with the inscribed mark facing outward.
(b) Coat the 10 vane plates with power steering fluid.
(c) Install the vane plates with the round ends facing outward.

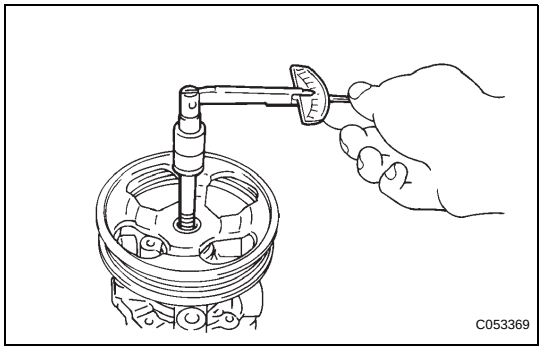


(d) Using a snap ring expander, install a new snap ring onto the pulley shaft.

PS

6. INSTALL VANE PUMP HOUSING REAR

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump housing rear.
(b) Align the straight pin of the vane pump housing rear with the dents of the cam ring, side plate and vane pump housing front, and install the vane pump housing rear with the 4 bolts.
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



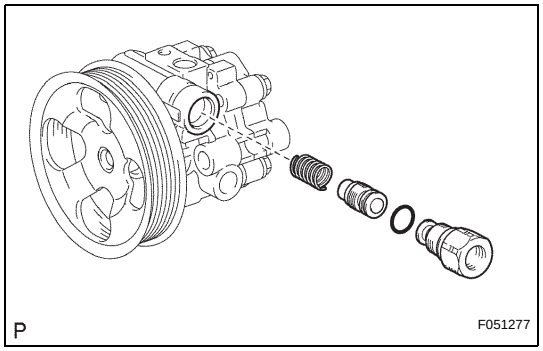
7. INSPECT PRELOAD

(a) Check that the pump rotates smoothly without making any abnormal noises.
(b) Provisionally install the service bolt.
Recommended service bolt:
Thread diameter:
10 mm (0.3937 in.)
Thread pitch:
1.25 mm (0.0492 in.)
Bolt length:
50 mm (1.9685 in.)

(c) Using a torque wrench, check the pump rotating torque.
Torque: 0.27 N*m (2.8 kgf*cm, 2.4 in.*lbf) or less

8. INSTALL POWER STEERING OIL PRESSURE SWITCH

(a) Coat the O-ring with power steering fluid and install it onto the power steering oil pressure switch.
(b) Install the power steering oil pressure switch onto the vane pump assembly.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



9. INSTALL FLOW CONTROL VALVE

(a) Coat the compression spring and flow control valve with power steering fluid.
(b) Install the compression spring and flow control valve.
(c) Coat a new O-ring with power steering fluid and install it onto the pressure port union.
(d) Install the pressure port union.
Torque: 69 N*m (704 kgf*cm, 51 ft.*lbf)

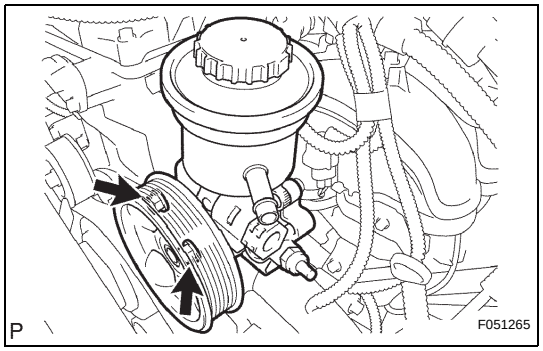
10. INSTALL VANE PUMP OIL RESERVOIR SUB-ASSEMBLY

(a) Coat a new O-ring with power steering fluid, and install it onto the vane pump oil reservoir.
(b) Install the vane pump oil reservoir with the 3 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

INSTALLATION

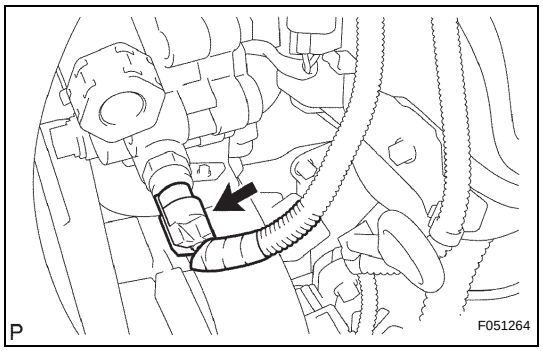
1. INSTALL VANE PUMP

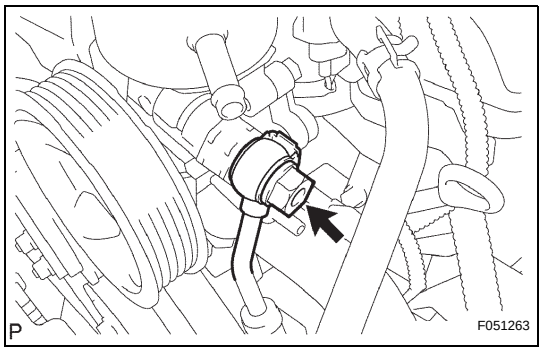
(a) Install the vane pump assembly with the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

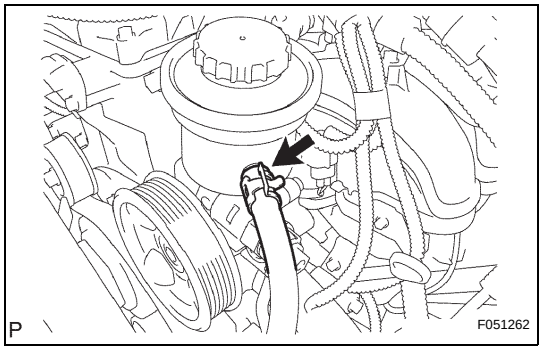


PS

(b) Connect the oil pressure switch connector.
NOTICE:
Make sure that no oil adheres to the connector.







2. CONNECT PRESSURE FEED TUBE ASSEMBLY

(a) Install a new gasket onto the pressure feed tube.

(b) Install the pressure feed tube with the union bolt.
Torque: 51 N*m (520 kgf*cm, 38 ft.*lbf)

(c) Connect the return hose with the clip.

3. INSTALL FAN AND GENERATOR V BELT (See page EM-6)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

5. ADD POWER STEERING FLUID

6. BLEED POWER STEERING FLUID (See page PS-2)

7. CHECK POWER STEERING FLUID LEAKAGE

8. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO. 1 (for 4WD and Pre-Runner)
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

REMOVAL

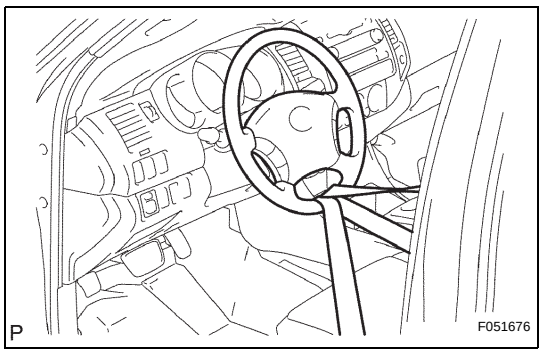
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

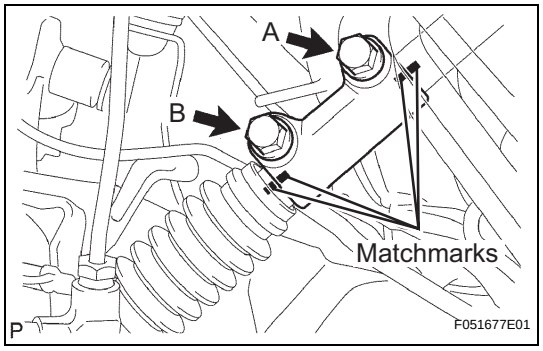
2. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

3. REMOVE FRONT WHEELS

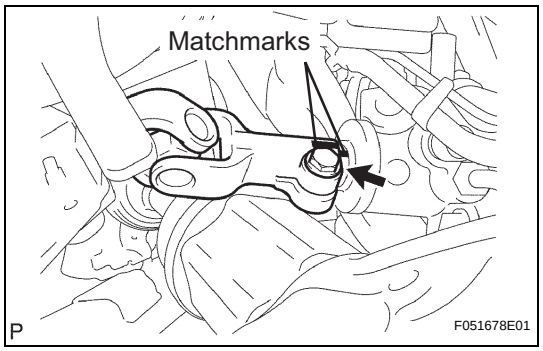
4. REMOVE STEERING INTERMEDIATE SHAFT NO. 2

(a) Fix the steering wheel with the seat belt in order to prevent it from rotating.
HINT:
The operation is effective for preventing any damage to the spiral cable.





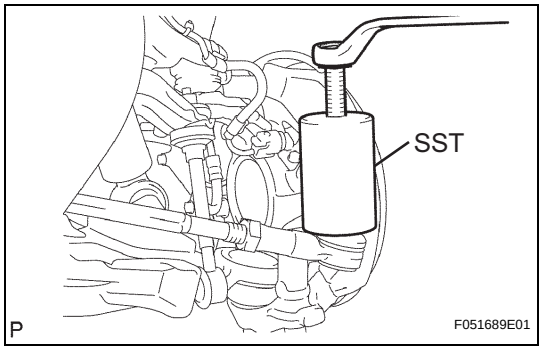
(b) Place matchmarks on the steering sliding yoke, steering intermediate shaft No. 2 and steering intermediate shaft.
(c) Remove bolts A and B from the steering sliding yoke.
(d) Slide the steering sliding yoke up and separate it from the steering intermediate shaft No. 2.
(e) Pull down the steering sliding yoke from the steering intermediate shaft to remove it.



(f) Place matchmarks on the steering intermediate shaft No. 2 and power steering link.
(g) Remove bolt C from the steering intermediate shaft No. 2.
(h) Slide the steering intermediate shaft No. 2 up and remove it from the power steering link.

5. SEPARATE TIE ROD END SUB-ASSEMBLY LH

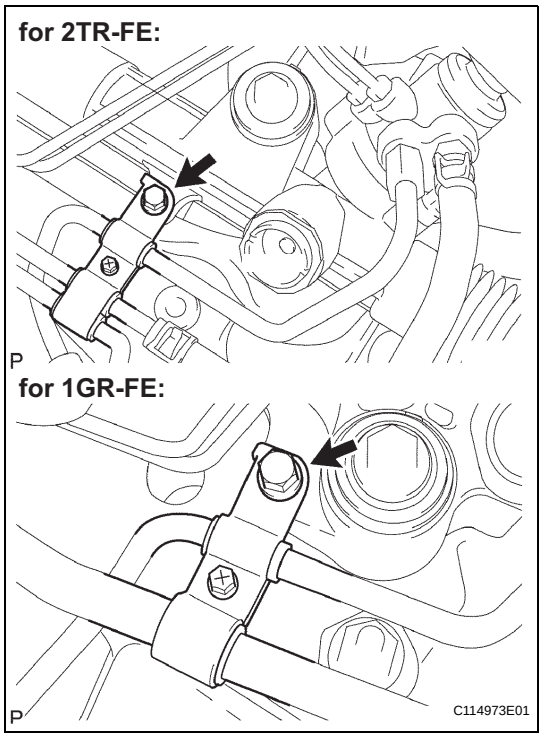
(a) Remove the cotter pin and nut.



(b) Using SST, separate the tie rod end from the steering knuckle arm.
SST 09610-20012

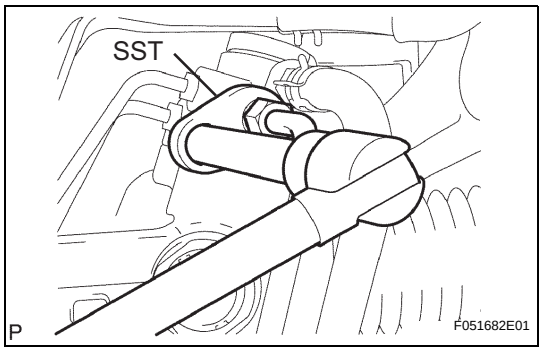
6. SEPARATE TIE ROD END SUB-ASSEMBLY RH
HINT:
The removal procedure for the RH side is the same as that for the LH side.

PS

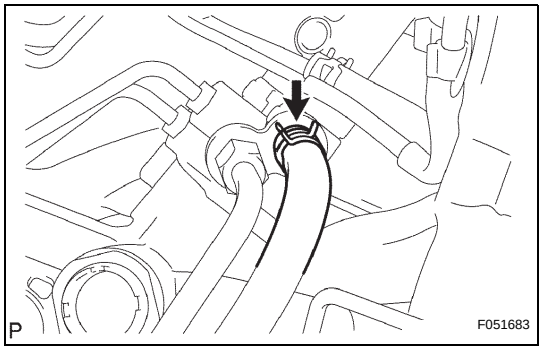


7. SEPARATE PRESSURE FEED TUBE ASSEMBLY

(a) Remove the bolt and separate the tube support bracket.

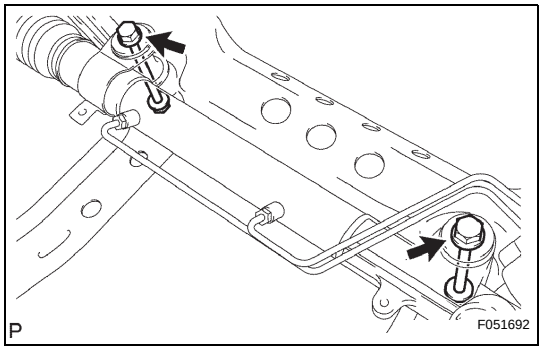


(b) Using SST, loosen the flare nut and separate the pressure feed tube.
SST 09023-12701



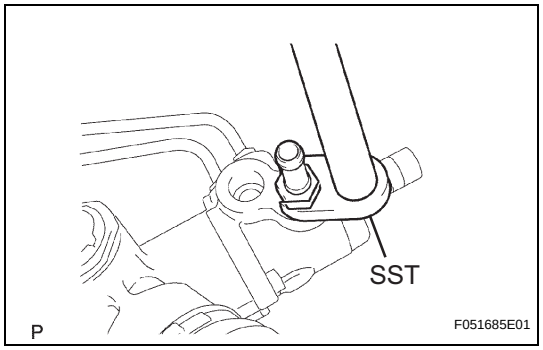
(c) Disengage the clip and disconnect the return hose.

PS



8. REMOVE POWER STEERING LINK

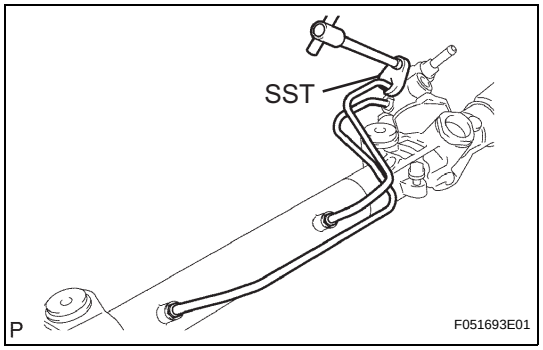
(a) Remove the 2 bolts, 2 nuts and power steering link.
NOTICE:
The nut has a detent, so never turn the nut. Be sure to turn only the bolt.



DISASSEMBLY

1. REMOVE STEERING GEAR OUTLET RETURN TUBE

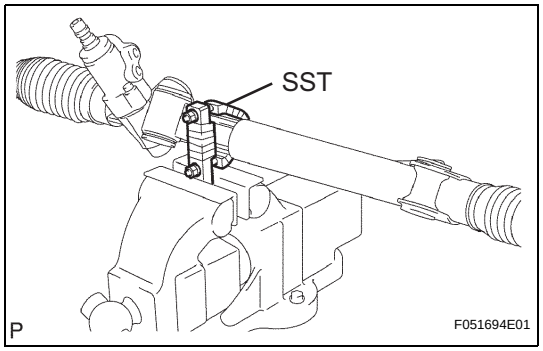
(a) Using SST, remove the return tube.
SST 09023-12701



2. REMOVE STEERING TURN PRESSURE TUBE

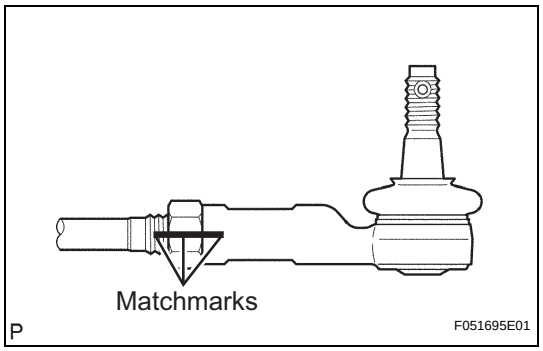
(a) Using SST, remove the 2 pressure tubes.
SST 09023-38401

(b) Remove the 4 O-rings from the pressure tubes.



3. FIX POWER STEERING LINK

(a) Using SST, fix the power steering link between aluminium plates in a vise, as shown in the illustration.
SST 09612-00012
NOTICE:
When using a vise, do not over tighten it.



4. REMOVE TIE ROD END SUB-ASSEMBLY LH

(a) Place matchmarks on the tie rod end, lock nut and rack end.

(b) Loosen the lock nut and remove the tie rod end and lock nut.

5. REMOVE TIE ROD END SUB-ASSEMBLY RH

HINT:
The removal procedure for the RH side is the same as that for the LH side.

6. REMOVE STEERING RACK BOOT CLIP

(a) Remove the 2 rack boot clips.

7. REMOVE STEERING RACK BOOT NO. 1 CLAMP

(a) Using pliers, remove the rack boot No. 1 clamp.
NOTICE:
Be careful not to damage the steering rack boot No. 1.

8. REMOVE STEERING RACK BOOT NO. 2 CLAMP

HINT:
The removal procedure for the No. 2 side is the same as that for the No. 1 side.

PS

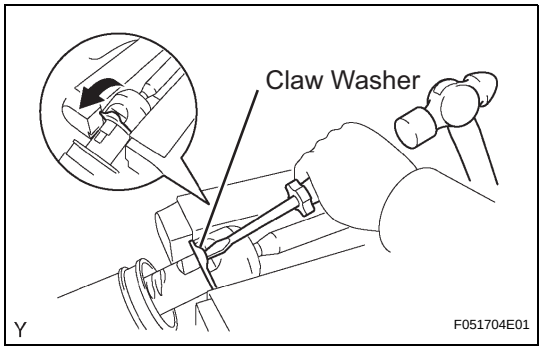
9. REMOVE STEERING RACK BOOT NO. 1

10. REMOVE STEERING RACK BOOT NO. 2

11. REMOVE STEERING RACK END SUB-ASSEMBLY

(a) Using a screwdriver and hammer, unstake the claw washer.

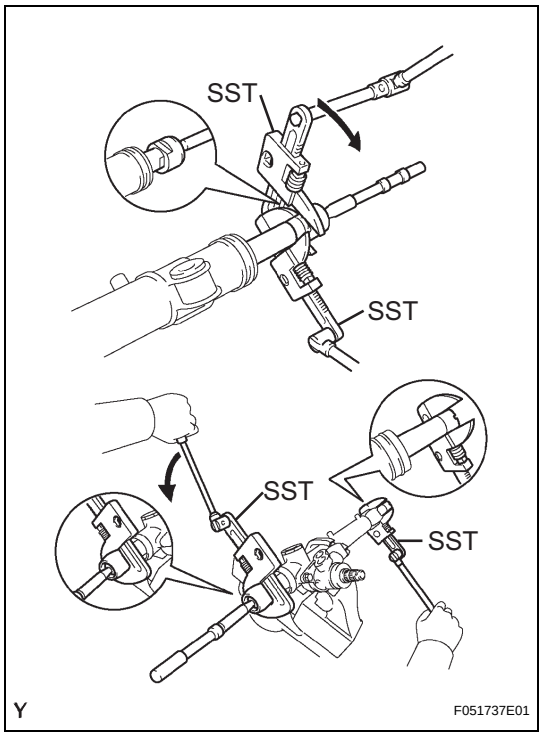
NOTICE:
Avoid any impact to the power steering rack.



(b) Using 2 SSTs, remove the 2 steering rack ends and 2 claw washers.

SST 09922-10010

NOTICE:
- **Turn SST 09922-10010 in the direction shown in the illustration.**
- **Securely hold the steering rack end with SST.**



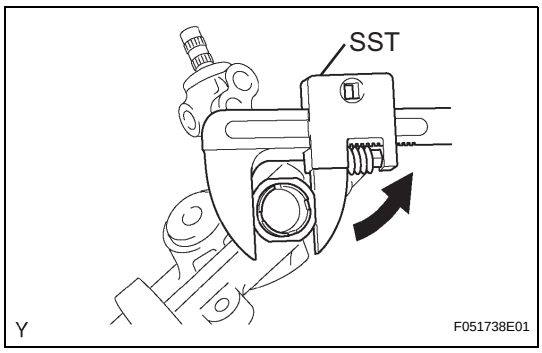
PS

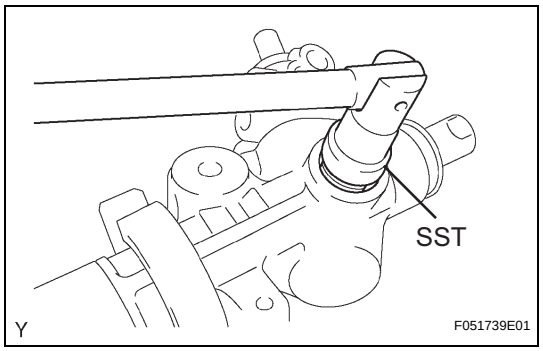
12. REMOVE STEERING GEAR RACK GUIDE

(a) Using SST, remove the rack guide spring cap nut.

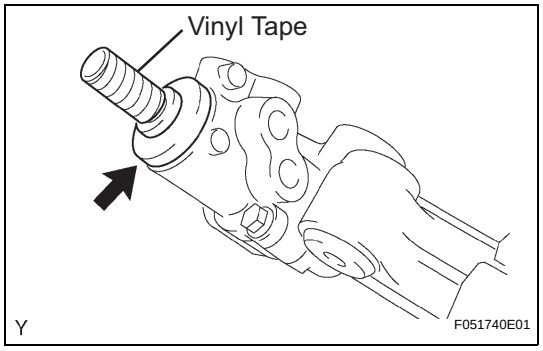
SST 09922-10010

NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.

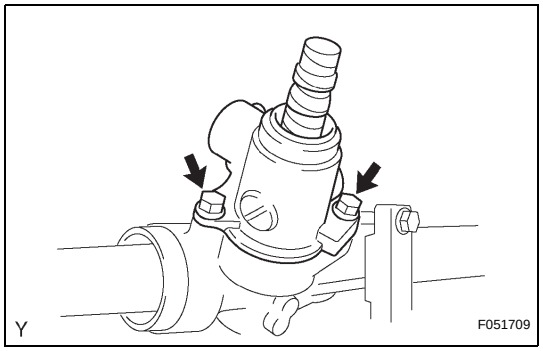




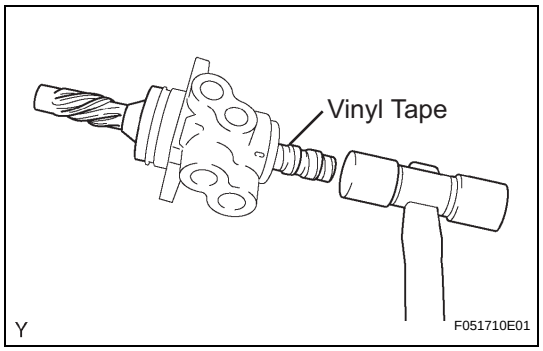
(b) Using SST, remove the rack guide spring cap.
SST 09631-10021
(c) Remove the rack guide spring and rack guide.



13. REMOVE POWER STEERING CONTROL VALVE ASSEMBLY
(a) Wind vinyl tape around the serrated portion of the control valve.
(b) Remove the dust cover from the control valve housing.

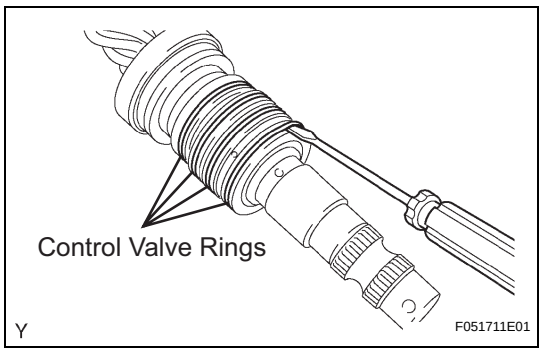


(c) Remove the 2 bolts and control valve w/ control valve housing.
(d) Remove the O-ring from the control valve housing.

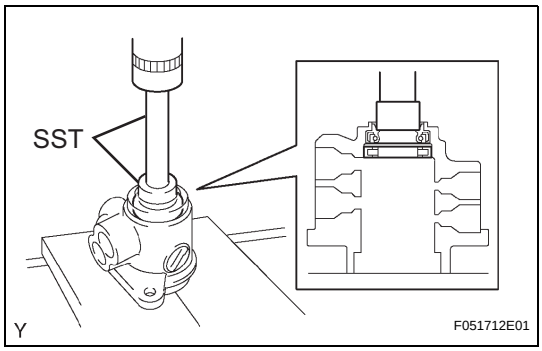


(e) To prevent the oil seal lip form getting damaged, wind vinyl tape around the serrated portion of the control valve.
(f) Using a plastic hammer, remove the control valve from the control valve housing.

PS



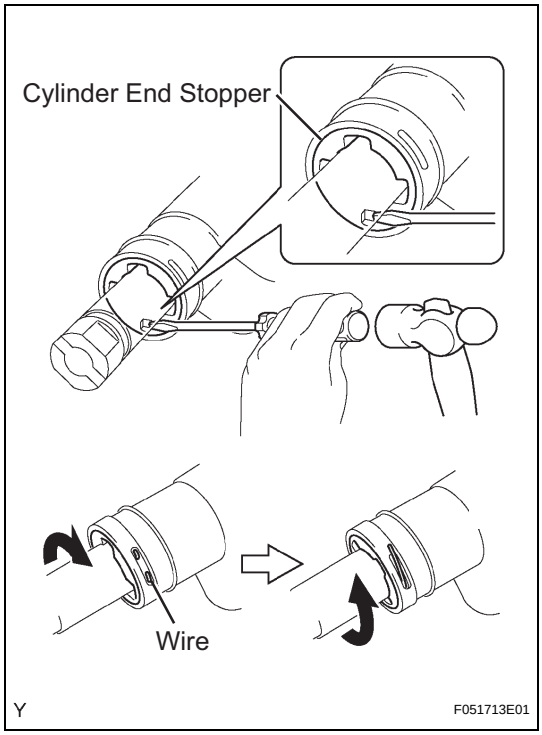
(g) Using a screwdriver, remove the 4 control valve rings.
NOTICE:
Be careful not to damage the grooves for the control valve rings.



14. REMOVE POWER STEERING CONTROL VALVE UPPER OIL SEAL

(a) Using SST and a press, remove the control valve upper bearing and control valve upper oil seal from the control valve housing.

SST 09950-60010 (09951-00250), 09950-70010 (09951-07150)



15. REMOVE CYLINDER END STOPPER

(a) Using a screwdriver and hammer, turn the cylinder end stopper clockwise until the wire end can be seen through the service hole.

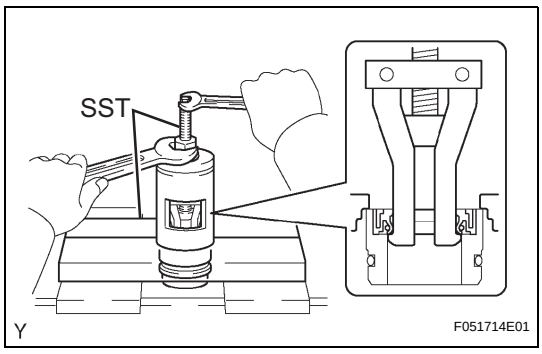
(b) Using a screwdriver and hammer, turn the cylinder end stopper counterclockwise, and remove the wire and cylinder end stopper.

16. REMOVE POWER STEERING RACK

17. REMOVE POWER STEERING RACK BUSH

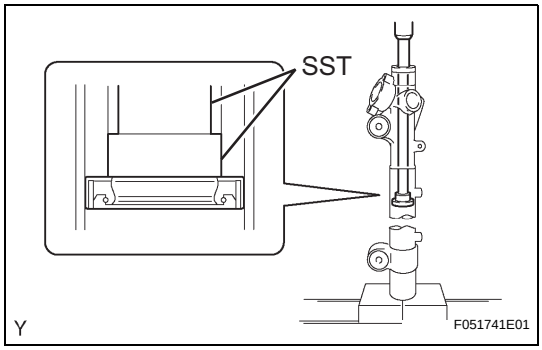
(a) Remove the rack bush from the power steering rack.

(b) Using a screwdriver, remove the O-ring from the rack bush.



(c) Using SST, remove the rack bush oil seal.

SST 09527-21011, 09612-24014 (09613-22011)

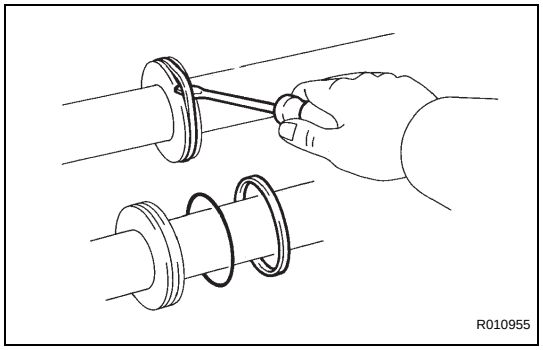


18. REMOVE POWER STEERING CYLINDER TUBE OIL SEAL

(a) Using SST and a press, remove the cylinder tube oil seal.

SST 09950-60010 (09951-00290), 09950-70010 (09951-07360)

PS



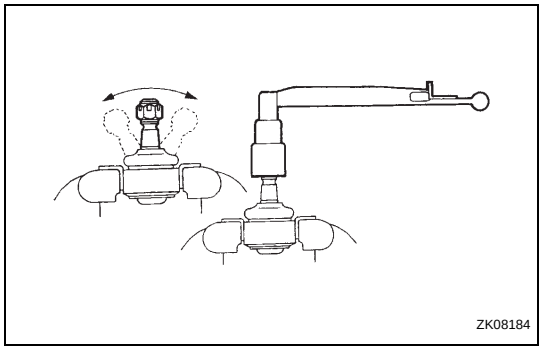
19. REMOVE RACK STEERING PISTON RING

(a) Using a screwdriver, remove the piston ring and O-ring.

NOTICE:

Be careful not to damage the groove for the piston ring.

INSPECTION

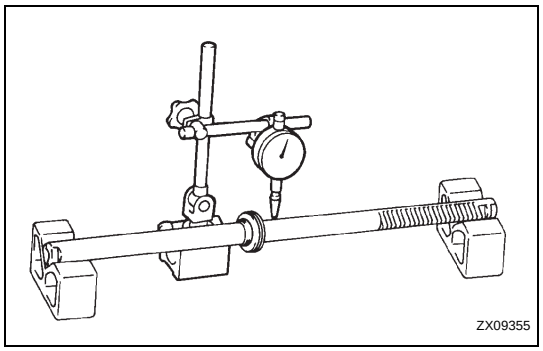


1. INSPECT TIE ROD END SUB-ASSEMBLY

(a) Flip the ball joint stud back and forth 5 times as shown in the illustration before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and check the torque reading on the 5th turn.

Torque: 0.83 to 3.43 N*m (8.5 to 35.0 kgf*cm, 7.35 to 30.36 in.*lbf)



2. INSPECT POWER STEERING RACK

(a) Using a dial indicator, check the power steering rack for runout, teeth wear and damage.

Maximum runout:

0.3 mm (0.012 in.)

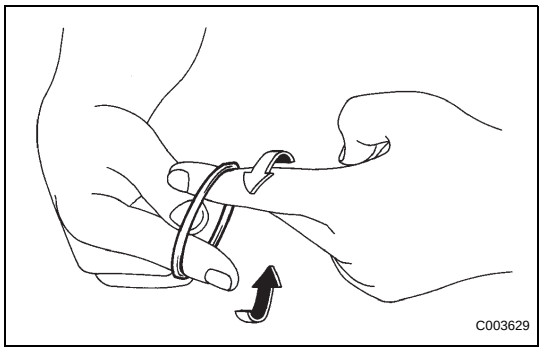
If necessary, replace the power steering link assembly.

(b) Check the back surface for wear and damage.

If necessary, replace the power steering link assembly.

REASSEMBLY

NOTICE:
When installing, coat the parts indicated by the arrows with power steering fluid (See page PS-3).



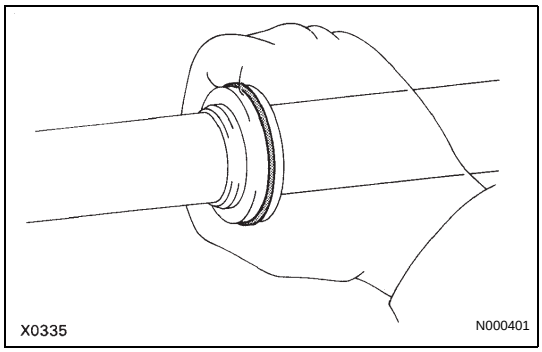
1. INSTALL RACK STEERING PISTON RING

(a) Coat a new O-ring with power steering fluid and install it onto the power steering rack.

(b) Expand a new piston ring with your fingers.

NOTICE:
Be careful not to over expand the rack steering piston ring.

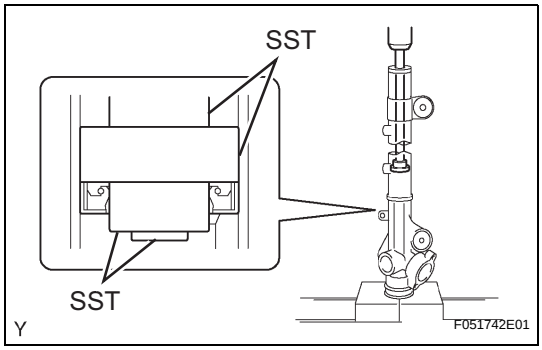
(c) Coat a new piston ring with power steering fluid.



(d) Install the piston ring onto the power steering rack, and position it with your fingers.

2. INSTALL POWER STEERING CYLINDER TUBE OIL SEAL

(a) Coat a new cylinder tube oil seal lip with power steering fluid.



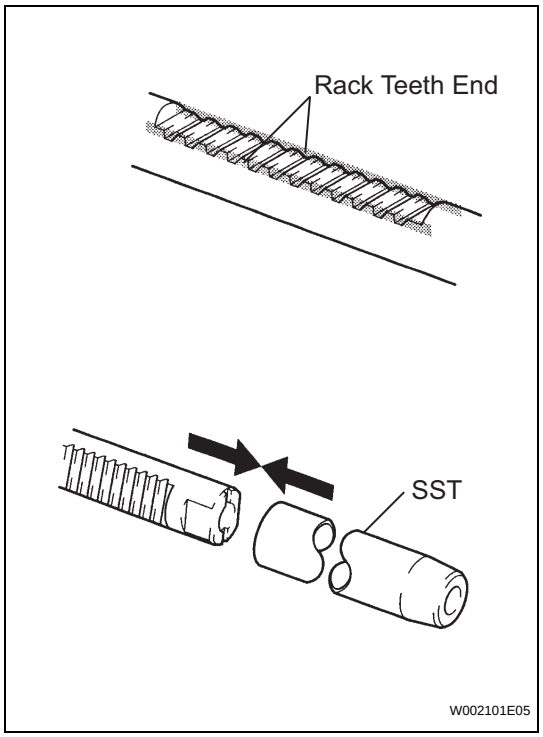
(b) Using SST and a press, install the cylinder tube oil seal.

SST 09950-60010 (09951-00250, 09951-00440, 09952-06010), 09950-70010 (09951-07360)

NOTICE:

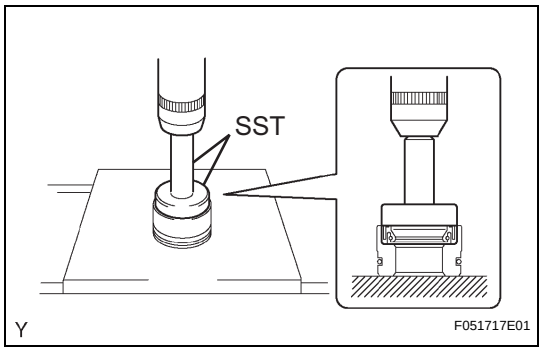
- **Make sure that the cylinder tube oil seal is installed facing in the correct direction.**
- **Take care not to reverse the cylinder tube oil seal direction when installing.**

PS



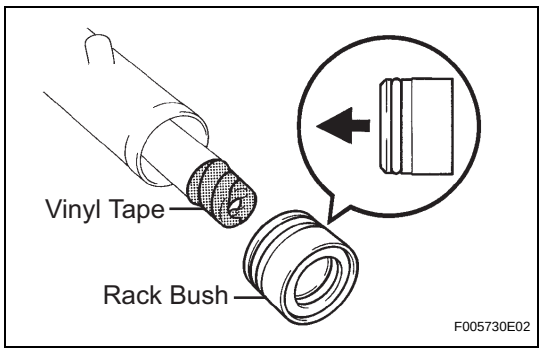
3. INSTALL POWER STEERING RACK

(a) Install SST onto the power steering rack.
SST 09631-33010
HINT:
If necessary, scrape the burrs off the power steering rack teeth end and burnish.
(b) Coat SST with power steering fluid.
(c) Install the power steering rack into the rack housing.
(d) Remove SST.



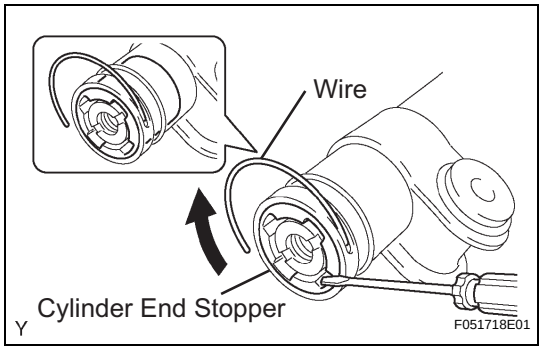
4. INSTALL POWER STEERING RACK BUSH

(a) Using SST and a press, install a new rack bush oil seal onto the rack bush.
SST 09950-60010 (09951-00400), 09950-70010 (09951-07100)
NOTICE:
Make sure that the rack bush oil seal is installed facing the correct direction.
(b) Coat a new O-ring with power steering fluid and install it onto the rack bush.



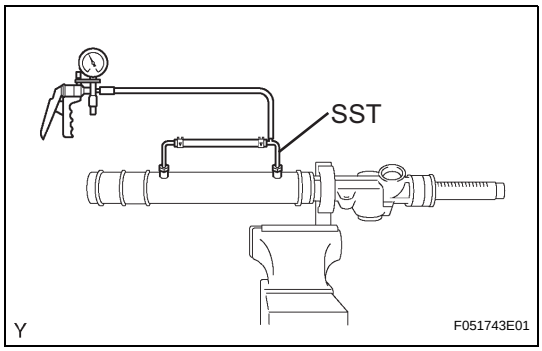
(c) To prevent the rack bush oil seal lip from being damaged, wind vinyl tape around the rack end and apply power steering fluid.
(d) Install the rack bush onto the power steering rack.

PS



5. INSTALL CYLINDER END STOPPER

(a) Align the installation hole for the wire of the cylinder end stopper with the slot of the rack housing.
(b) Install a new wire into the cylinder end stopper.
(c) Using a screwdriver, turn the cylinder end stopper clockwise by 400 to 500°.



6. AIR TIGHTNESS TEST

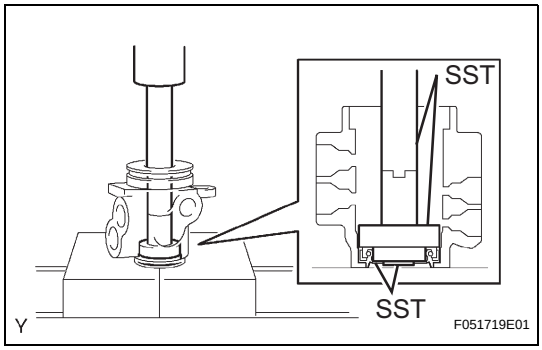
(a) Install SST onto the rack housing.

(b) Apply a vacuum of 53 kPa (400 mmHg, 15.75 in.Hg) for about 30 seconds.

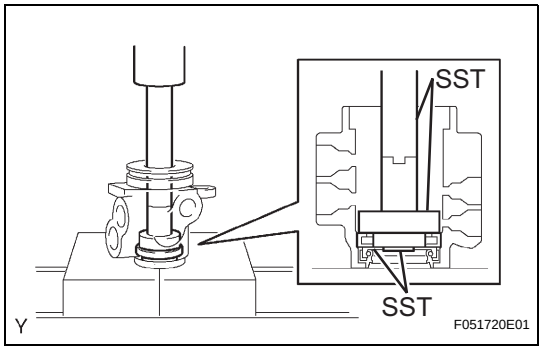
(c) Check that there is no change in the vacuum.
If there is any change in the vacuum, check whether the oil seals are installed correctly.

7. INSTALL POWER STEERING CONTROL VALVE UPPER OIL SEAL

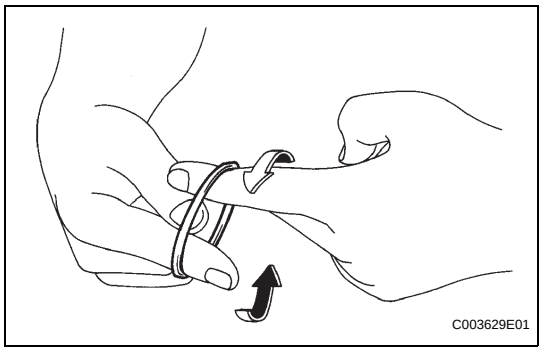
(a) Coat the control valve upper bearing and a new control valve upper oil seal with power steering fluid.



(b) Using SST and a press, install the control valve upper oil seal.
SST 09950-60010 (09951-00180, 09951-00320, 09952-06010), 09950-70010 (09951-07150)



(c) Using SST and a press, install the control valve upper bearing.
SST 09950-60010 (09951-00180, 09951-00340, 09952-06010), 09950-70010 (09951-07150)



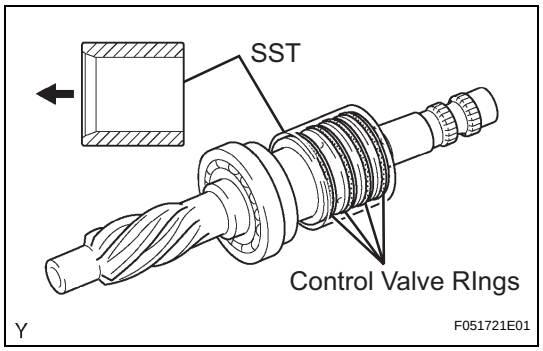
8. INSTALL POWER STEERING CONTROL VALVE ASSEMBLY

(a) Expand 4 new control valve rings with your fingers.
NOTICE:
Be careful not to over expand the control valve rings.

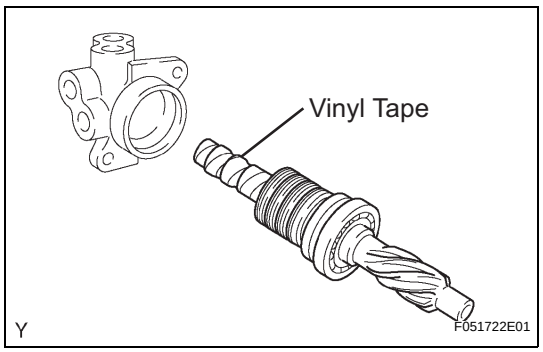
(b) Coat the 4 control valve rings with power steering fluid.

(c) Install the 4 control valve rings onto the control valve, and position them with your fingers.

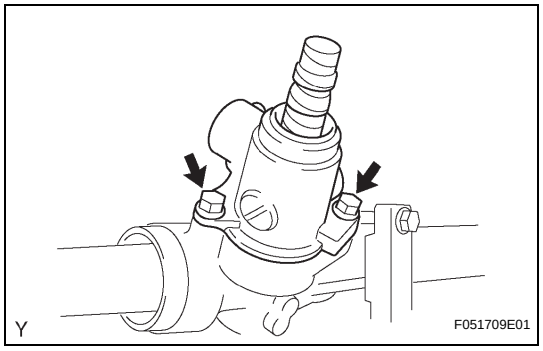
PS



(d) Carefully slide the tapered end of SST over the control valve rings until they fit to the control valve.
SST 09631-20081
NOTICE:
Be careful not to damage the control valve rings.

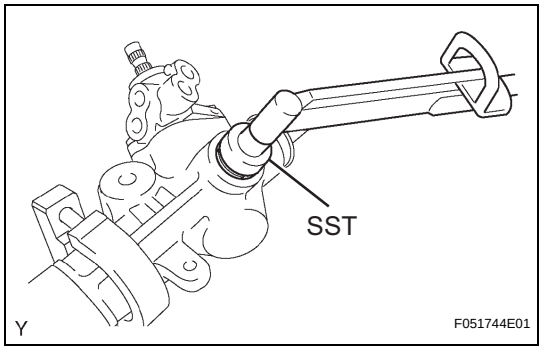


(e) To prevent the control valve upper oil seal lip from getting damaged, wind vinyl tape around the serrated portion of the control valve.
(f) Coat the control valve upper oil seal lip with power steering fluid.
(g) Install the control valve onto the control valve housing.
NOTICE:
Be careful not to damage the control valve ring and control valve upper oil seal lip.
(h) Apply grease to the needle roller bearing.
(i) Install a new O-ring onto the control valve housing.
(j) Wind vinyl tape around the serrated portion of the control valve.



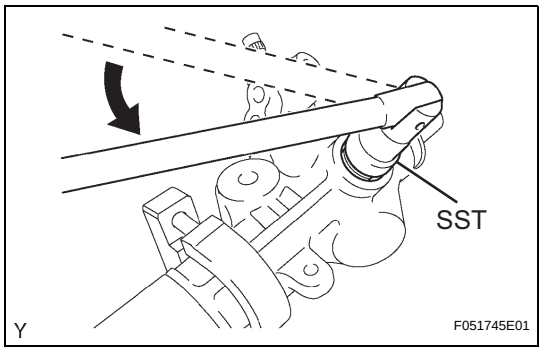
(k) Install the control valve w/ control valve housing onto the rack housing with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

9. INSTALL STEERING GEAR RACK GUIDE
(a) Install the rack guide.
(b) Install the rack guide spring.
(c) Apply sealant to 2 or 3 threads of the rack guide spring cap.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent
(d) Provisionally install the rack guide spring cap.

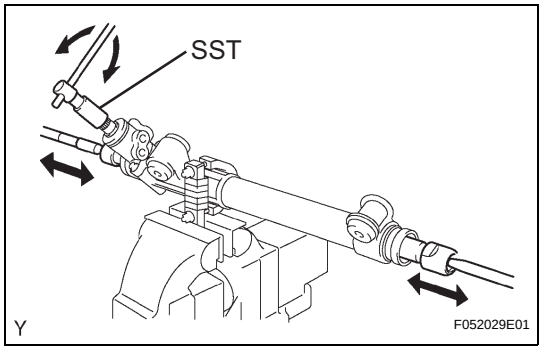


10. ADJUST TOTAL PRELOAD
(a) To prevent the steering rack teeth from damaging the oil seal lip, provisionally install the RH and LH steering rack end.
(b) Using SST, torque the rack guide spring cap.
SST 09631-10021
Torque: 25 N*m (254 kgf*cm, 18 ft.*lbf)

PS

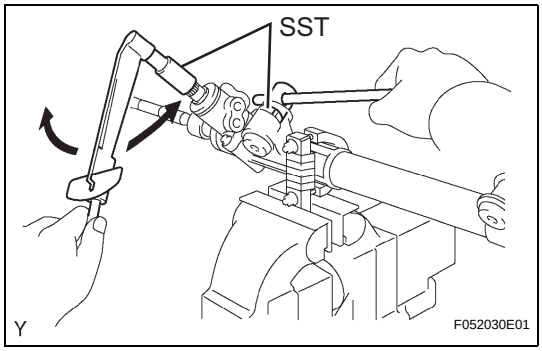


(c) Using SST, loosen the rack guide spring cap.
SST 09631-10021



(d) Using SST, turn the control valve to the right and left once or twice.
SST 09616-00011

(e) Using SST, loosen the rack guide spring cap until the rack guide spring ceases to function.
SST 09631-10021

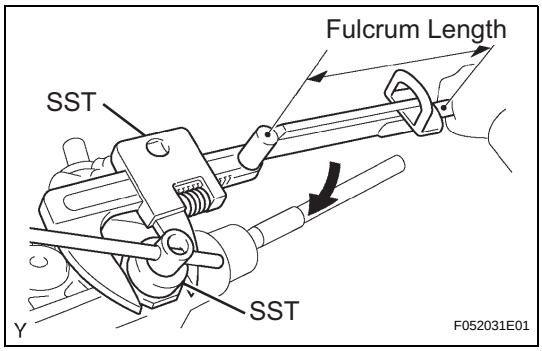


(f) Using SST and a torque wrench, tighten the rack guide spring cap until the preload is within the specification.
SST 09631-10021, 09616-00011
Preload (turning):
0.8 to 1.1 N*m (8.2 to 11.2 kgf*cm, 7.1 to 9.7 in.*lbf)

(g) Apply sealant to 2 or 3 threads of the rack guide spring cap nut.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(h) Provisionally install the rack guide spring cap nut.

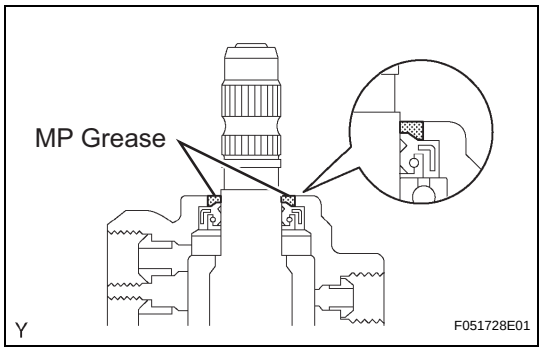
PS



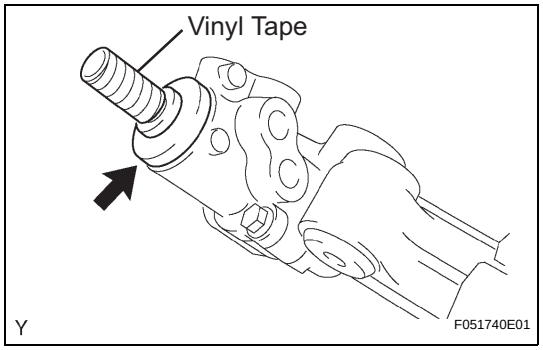
(i) Using SST, hold the rack guide spring cap and using another SST, torque the rack guide spring cap nut.
SST 09631-10021, 09922-10010
Torque: for use without SST
59 N*m (601 kgf*cm, 44 ft.*lbf)
for use with SST
43 N*m (440 kgf*cm, 32 ft.*lbf)
NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.
HINT:
Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

(j) Recheck the total preload.
Preload (turning):
0.8 to 1.1 N*m (8.2 to 11.2 kgf*cm, 7.1 to 9.7 in.*lbf)

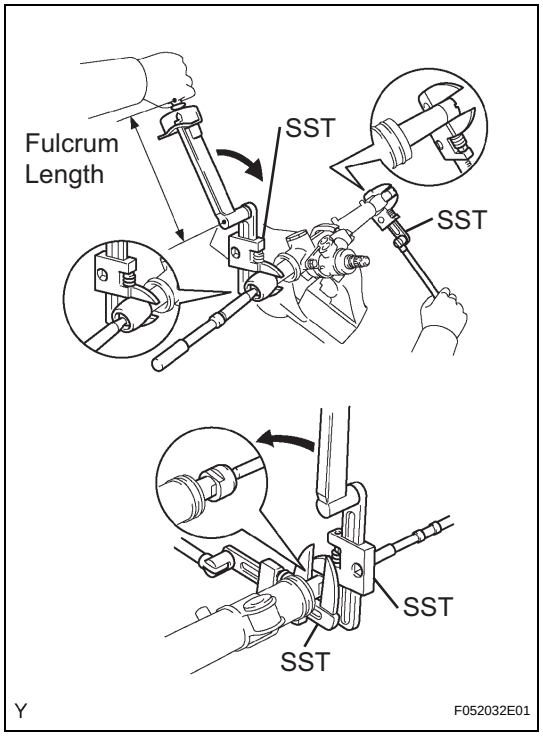
(k) Remove the RH and LH steering rack ends



(l) Apply MP grease to the control valve as shown in the illustration.



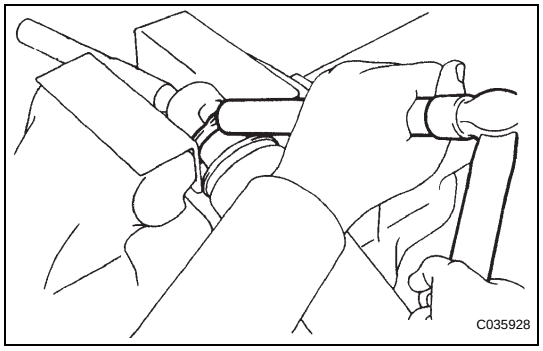
(m) Wind vinyl tape around the serrated portion of the control valve.
(n) Install the dust cover onto the control valve housing.



11. INSTALL STEERING RACK END SUB-ASSEMBLY

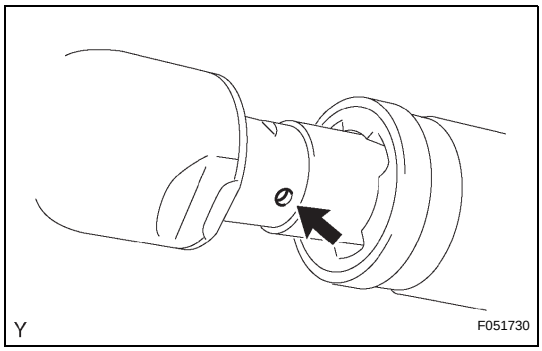
(a) Install 2 new claw washers, and provisionally install the 2 steering rack ends.
HINT:
Align the claws of the claw washers with the power steering rack grooves.

(b) Using 2 SSTs, install the 2 steering rack ends.
SST 09922-10010
Torque: for use without SST
84 N*m (851 kgf*cm, 62 ft.*lbf)
for use with SST
61 N*m (619 kgf*cm, 45 ft.*lbf)
NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.
HINT:
- Using SST, hold the power steering rack and install the rack end sub-assembly.
- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).



(c) Using a brass bar and hammer, stake the 2 claw washers.
NOTICE:
Avoid any impact to the power steering rack.

PS



12. INSPECT STEERING RACK END SUB-ASSEMBLY

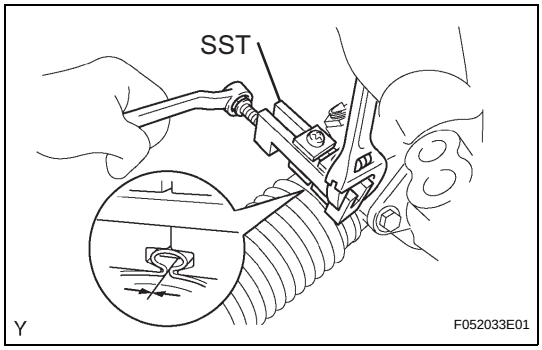
(a) Ensure that the steering rack end hole is not clogged with grease.

HINT:

If the hole is clogged, the pressure inside the boot will change after it has been assembled, when the steering wheel is turned.

13. INSTALL STEERING RACK BOOT NO. 1

14. INSTALL STEERING RACK BOOT NO. 2



15. INSTALL STEERING RACK BOOT NO. 1 CLAMP

(a) Using SST, tighten the rack boot No. 1 clamp as shown in the illustration.

SST 09521-24010

Clearance:

3.0 mm (0.118 in.) or less

NOTICE:

Be careful not to damage the rack boot No. 1.

16. INSTALL STEERING RACK BOOT NO. 2 CLAMP

HINT:

The installation procedure for the No. 2 side is the same as that for the No. 1 side.

SST 09521-24010

17. INSTALL STEERING RACK BOOT CLIP

(a) Using pliers, install the 2 rack boot clips.

18. INSTALL TIE ROD END SUB-ASSEMBLY LH

(a) Screw the lock nut and tie rod end onto the rack end until the matchmarks are aligned.

(b) After adjusting toe-in, torque the nut.

Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)

19. INSTALL TIE ROD END SUB-ASSEMBLY RH

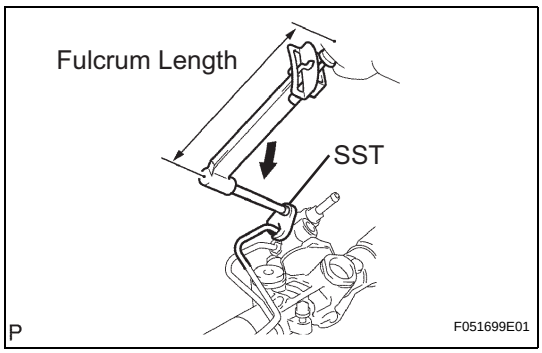
HINT:

The installation procedure for the RH side is the same as that for the LH side.

PS

20. INSTALL STEERING TURN PRESSURE TUBE

(a) Coat 4 new O-rings with power steering fluid and install them onto the pressure tubes.



(b) Using SST, install the 2 pressure tubes.

SST 09023-38401

Torque: for use without SST

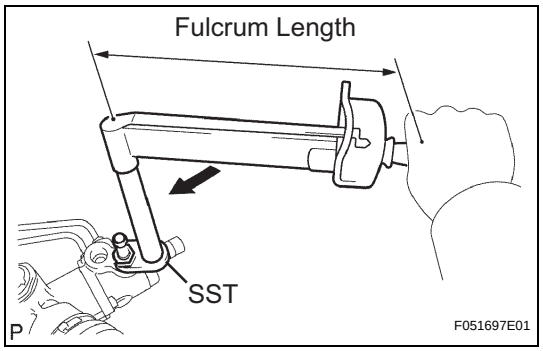
15 N*m (153 kgf*cm, 11 ft.*lbf)

for use with SST

14 N*m (141 kgf*cm, 10 ft.*lbf)

HINT:

- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST is parallel to a torque wrench.



21. REMOVE STEERING GEAR OUTLET RETURN TUBE

(a) Using SST, install the return tube.

SST 09023-12701

Torque: for use without SST

24 N*m (245 kgf*cm, 18 ft.*lbf)

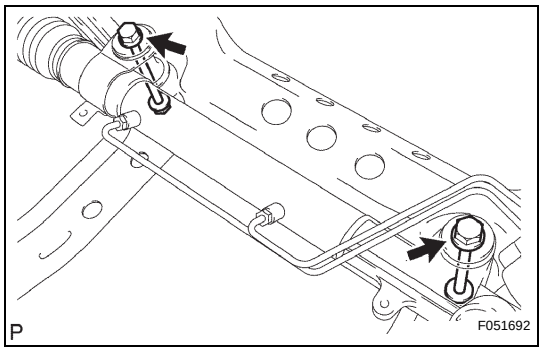
for use with SST

22 N*m (222 kgf*cm, 16 ft.*lbf)

HINT:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

INSTALLATION



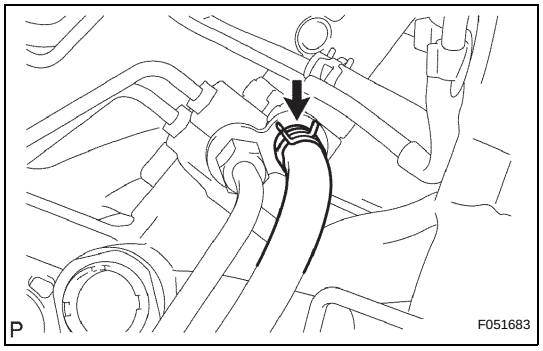
1. INSTALL POWER STEERING LINK

(a) Install the power steering link with the 2 bolts and 2 nuts.

Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)

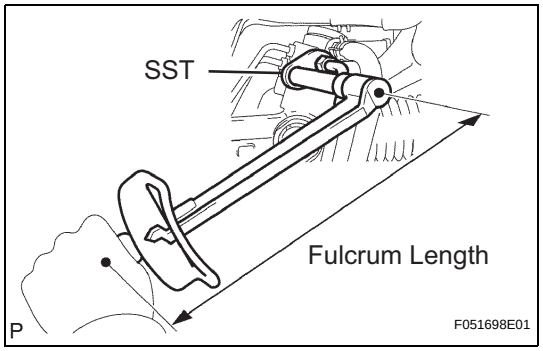
NOTICE:

Never turn the nut since it has a detent. Be sure to turn only the bolt.



2. INSTALL PRESSURE FEED TUBE ASSEMBLY

(a) Connect the return hose with the clip.



(b) Using SST, tighten the flare nut and connect the pressure feed tube.

SST 09023-12701

Torque: for use without SST

24 N*m (245 kgf*cm, 18 ft.*lbf)

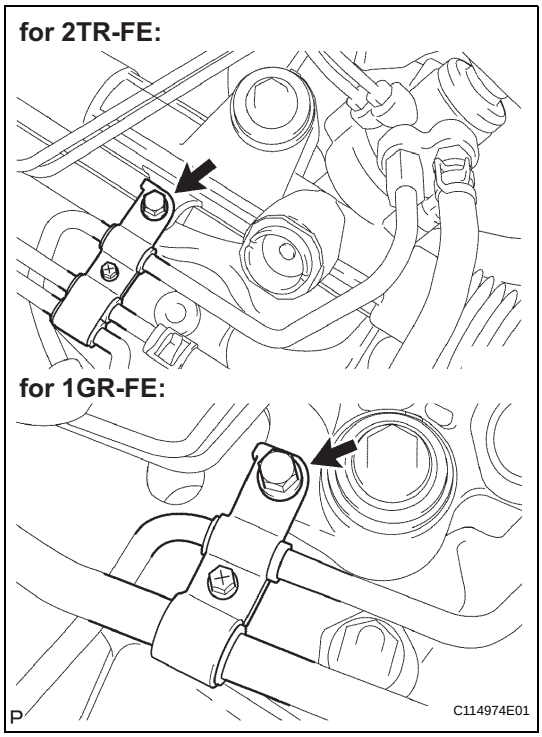
for use with SST

22 N*m (222 kgf*cm, 16 ft.*lbf)

HINT:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

PS



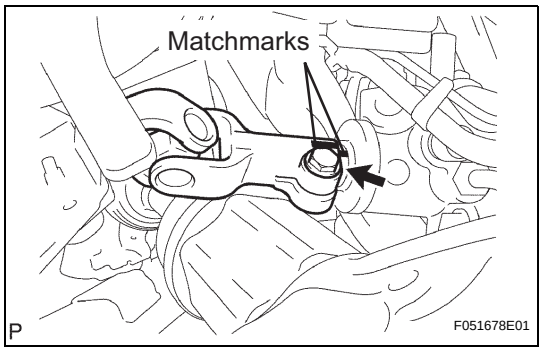
(c) Install the tube support bracket with the bolt.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

3. INSTALL TIE ROD END SUB-ASSEMBLY LH

(a) Install the tie rod end onto the steering knuckle arm.
(b) Install the nut.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
(c) Install a new cotter pin.

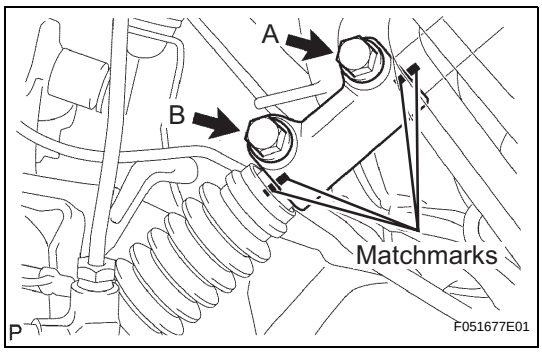
4. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.



5. INSTALL STEERING INTERMEDIATE SHAFT NO. 2

(a) Align the matchmarks on the steering intermediate shaft No. 2 and power steering link.
(b) Install the steering intermediate shaft No. 2 onto the power steering link with bolt C.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)



(c) Align the matchmarks on the steering intermediate shaft and steering sliding yoke.
(d) Install the steering sliding yoke onto the steering intermediate shaft and slide it upward.
(e) Align the matchmarks on the steering sliding yoke and steering intermediate shaft No. 2.
(f) Install the steering sliding yoke with bolts A and B.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)

6. INSTALL FRONT WHEELS
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

7. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

8. INSPECT STEERING WHEEL CENTER POINT

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

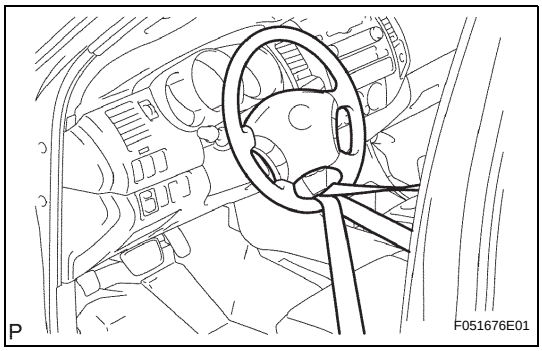
10. ADD POWER STEERING FLUID

11. BLEED POWER STEERING FLUID (See page PS-2)

12. **CHECK FOR POWER STEERING FLUID LEAKAGE**
13. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-2)

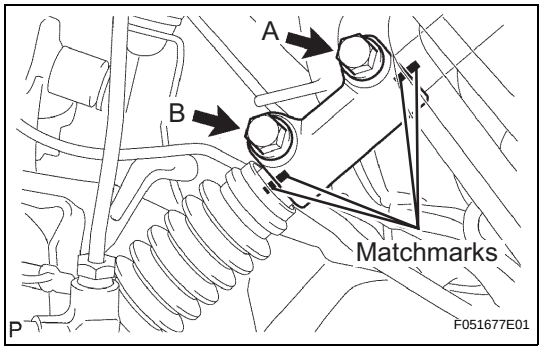
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE FRONT WHEELS**
4. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO. 1**
5. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (for 2TR-FE) (See page EX-2)**
6. **REMOVE EXHAUST FRONT PIPE ASSEMBLY NO. 2 (for 1GR-FE) (See page EX-3)**
7. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (for 1GR-FE) (See page EX-3)**
8. **REMOVE PROPELLER SHAFT ASSEMBLY FRONT (for 4WD) (See page PR-16)**
9. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab Pre-Runner) (See page PR-3)**
10. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab Pre-Runner) (See page PR-8)**
11. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab 4WD) (See page PR-22)**
12. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab 4WD) (See page PR-27)**
13. **REMOVE FRAME CROSSMEMBER SUB-ASSEMBLY NO. 3 (See page MT-10)**
14. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-21)**
15. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
16. **REMOVE FRONT STABILIZER BRACKET NO. 1 LH (See page SP-50)**
17. **REMOVE FRONT STABILIZER BRACKET NO. 1 RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
18. **REMOVE FRONT STABILIZER BAR**

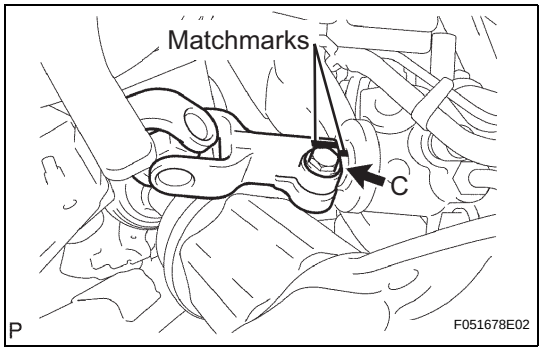


19. REMOVE STEERING INTERMEDIATE SHAFT NO. 2

(a) Fix the steering wheel with the seat belt in order to prevent it from rotating.
HINT:
The operation is effective for preventing any damage to the spiral cable.



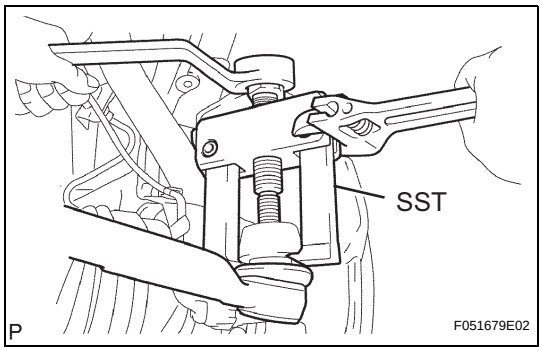
(b) Place matchmarks on the steering sliding yoke, steering intermediate shaft No. 2 and steering intermediate shaft.
(c) Remove bolts A and B from the steering sliding yoke.
(d) Slide the steering sliding yoke up and separate it from the steering intermediate shaft No. 2.
(e) Pull down the steering sliding yoke from the steering intermediate shaft to remove it.



(f) Place matchmarks on the steering intermediate shaft No. 2 and power steering link.
(g) Remove bolt C from the steering intermediate shaft No. 2.
(h) Slide the steering intermediate shaft No. 2 up and remove it from the power steering link.

20. SEPARATE TIE ROD END SUB-ASSEMBLY LH

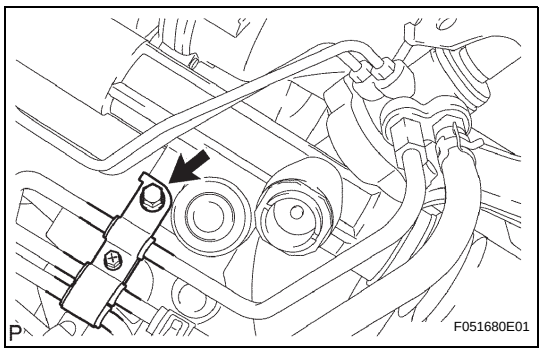
(a) Remove the cotter pin and nut.



(b) Using SST, separate the tie rod end from the steering knuckle arm.
SST 09628-62011

21. SEPARATE TIE ROD END SUB-ASSEMBLY RH

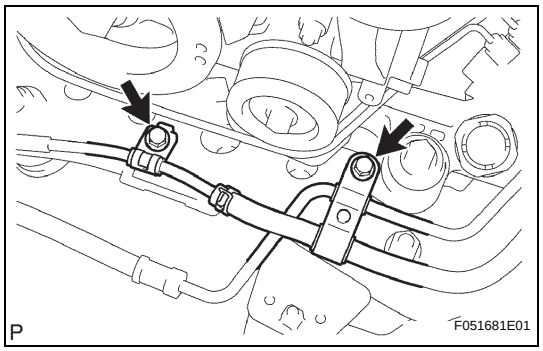
HINT:
The removal procedure for the RH side is the same as that for the LH side.



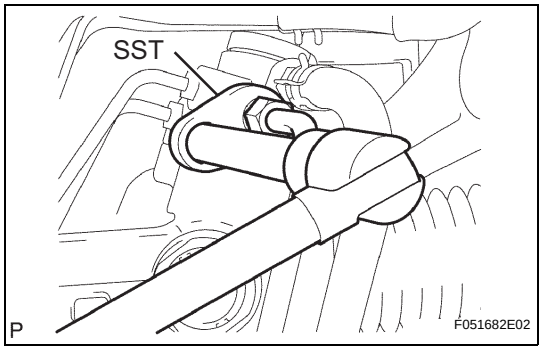
22. SEPARATE PRESSURE FEED TUBE ASSEMBLY

(a) for 2TR-FE:
(1) Remove the bolt and separate the tube support bracket.

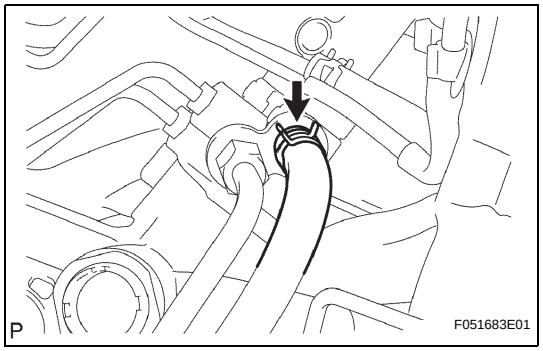
PS



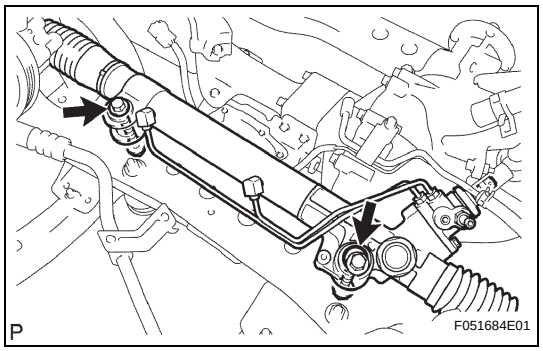
(b) for 1GR-FE:
(1) Remove the 2 bolts and separate the tube support brackets.



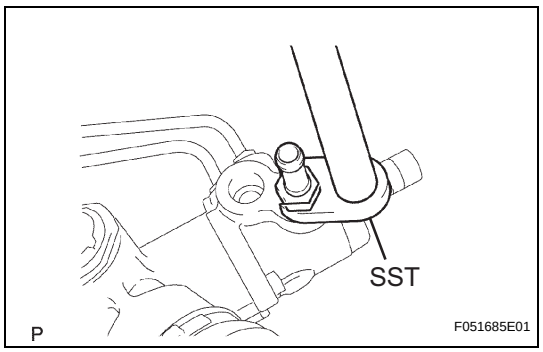
(c) Using SST, loosen the flare nut and separate the pressure feed tube.
SST 09023-12701



(d) Disengage the clip and disconnect the return hose.

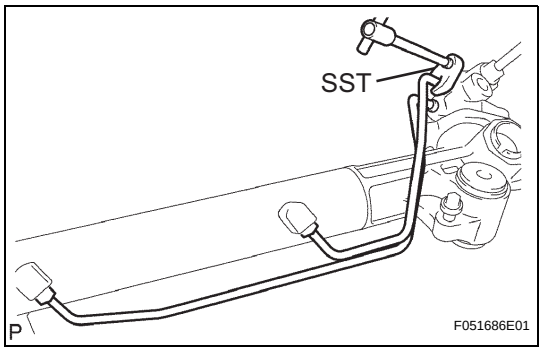


23. REMOVE POWER STEERING LINK
(a) Remove the 2 bolts and 2 nuts.
NOTICE:
The nut has a detent, so never turn the nut. Be sure to turn only the bolt.
(b) Tilt the transmission and remove the power steering link.



DISASSEMBLY

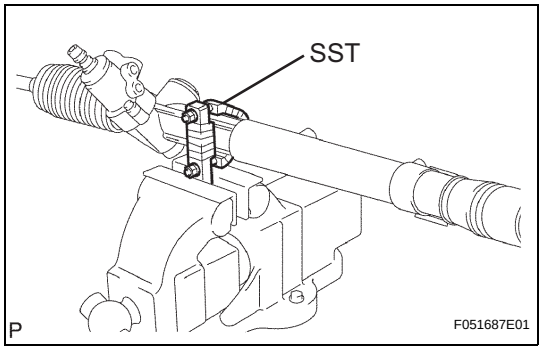
1. REMOVE STEERING GEAR OUTLET RETURN TUBE
(a) Using SST, remove the return tube.
SST 09023-12701



2. REMOVE STEERING TURN PRESSURE TUBE

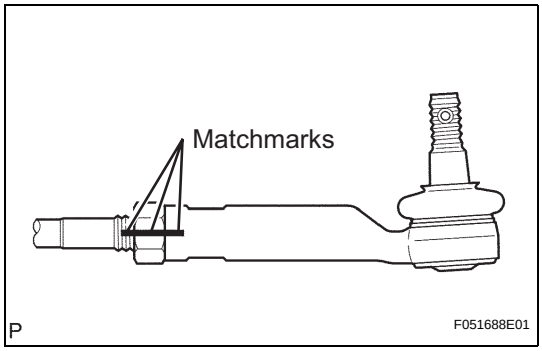
(a) Using SST, remove the 2 pressure tubes.
SST 09023-38401

(b) Remove the 4 O-rings from the pressure tubes.



3. FIX POWER STEERING LINK

(a) Using SST, fix the power steering link between aluminium plates in a vise, as shown in the illustration.
SST 09612-00012
NOTICE:
When using a vise, do not over tighten it.



4. REMOVE TIE ROD END SUB-ASSEMBLY LH

(a) Place matchmarks on the tie rod end, lock nut and rack end.

(b) Loosen the lock nut and remove the tie rod end and lock nut.

5. REMOVE TIE ROD END SUB-ASSEMBLY RH

HINT:
The removal procedure for the RH side is the same as that for the LH side.

6. REMOVE STEERING RACK BOOT CLIP

(a) Remove the 2 rack boot clips.

7. REMOVE STEERING RACK BOOT NO. 1 CLAMP

(a) Using pliers, remove the rack boot No. 1 clamp.
NOTICE:
Be careful not to damage the steering rack boot No. 1.

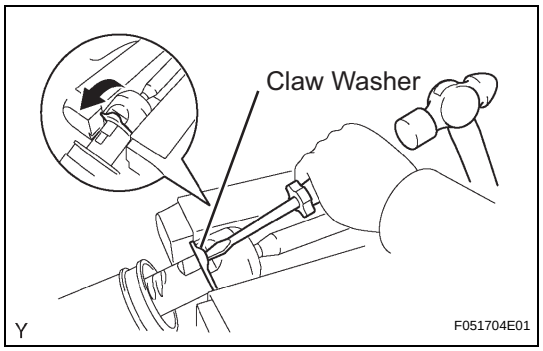
8. REMOVE STEERING RACK BOOT NO. 2 CLAMP

HINT:
The removal procedure for the No. 2 side is the same as that for the No. 1 side.

9. REMOVE STEERING RACK BOOT NO. 1

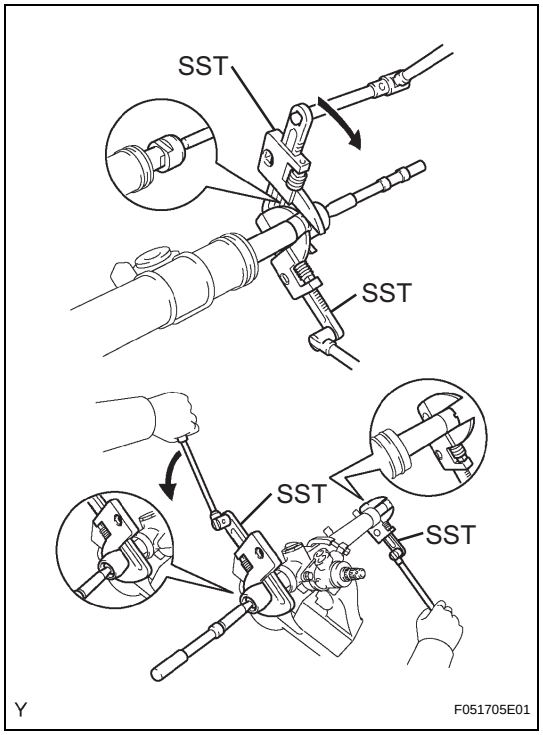
10. REMOVE STEERING RACK BOOT NO. 2

PS

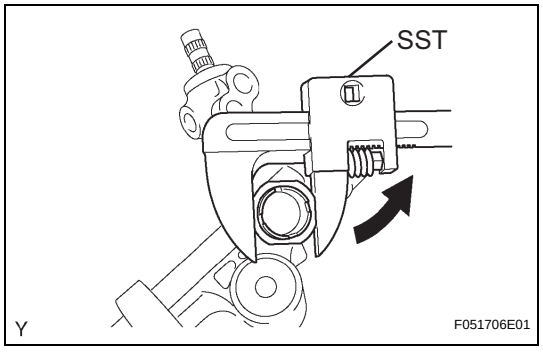


11. REMOVE STEERING RACK END SUB-ASSEMBLY

(a) Using a screwdriver and hammer, unstake the claw washer.
NOTICE:
Avoid any impact to the power steering rack.



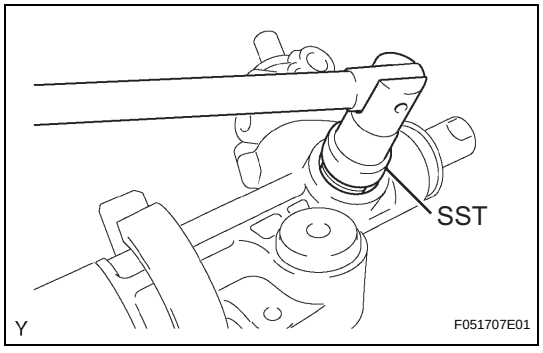
(b) Using 2 SSTs, remove the 2 steering rack ends and 2 claw washers.
SST 09922-10010
NOTICE:
- **Turn SST 09922-10010 in the direction shown in the illustration.**
- **Securely hold the steering rack end with SST.**



12. REMOVE STEERING GEAR RACK GUIDE

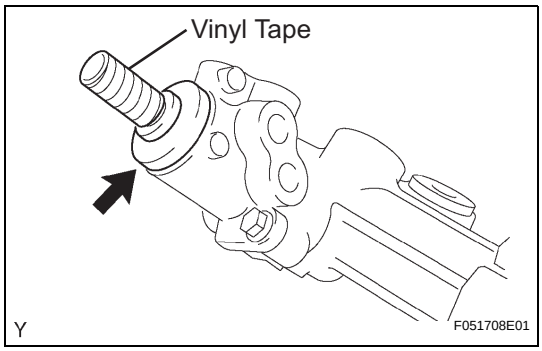
(a) Using SST, remove the rack guide spring cap nut.
SST 09922-10010
NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.

PS



(b) Using SST, remove the rack guide spring cap.
SST 09631-10021

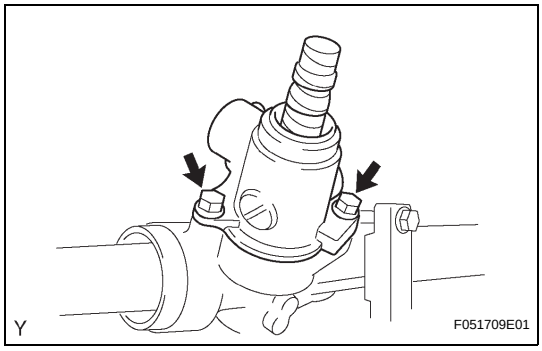
(c) Remove the rack guide spring and rack guide.



13. REMOVE POWER STEERING CONTROL VALVE ASSEMBLY

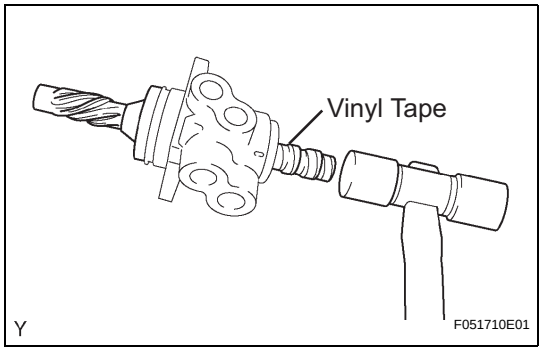
(a) Wind vinyl tape around the serrated portion of the control valve.

(b) Remove the dust cover from the control valve housing.



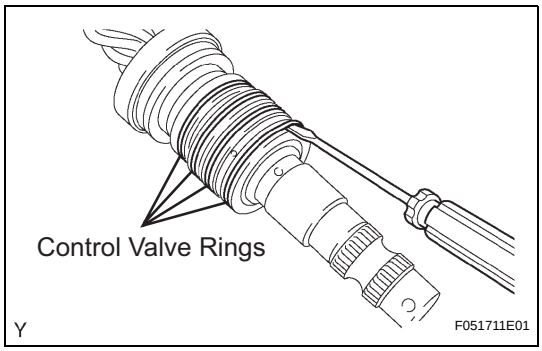
(c) Remove the 2 bolts and the control valve w/ control valve housing.

(d) Remove the O-ring from the control valve housing.



(e) To prevent the oil seal lip from getting damaged, wind vinyl tape around the serrated portion of the control valve.

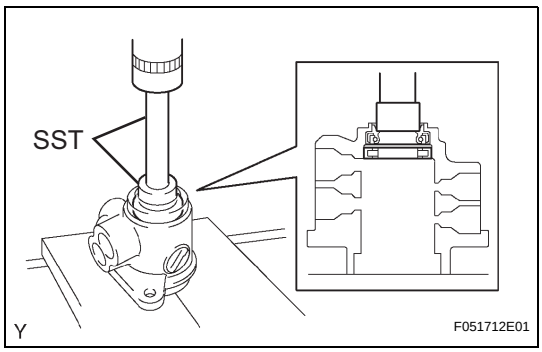
(f) Using a plastic hammer, remove the control valve from the control valve housing.



(g) Using a screwdriver, remove the 4 control valve rings.

NOTICE:

Be careful not to damage the grooves for the control valve rings.

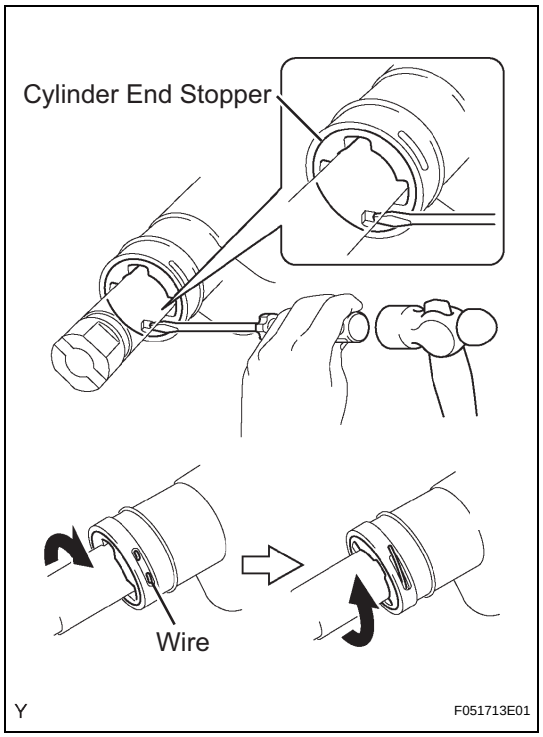


14. REMOVE POWER STEERING CONTROL VALVE UPPER OIL SEAL

(a) Using SST and a press, remove the control valve upper bearing and control valve upper oil seal from the control valve housing.

SST 09950-60010 (09951-00250), 09950-70010 (09951-07150)

PS



15. REMOVE CYLINDER END STOPPER

(a) Using a screwdriver and hammer, turn the cylinder end stopper clockwise until the wire end can be seen through the service hole.

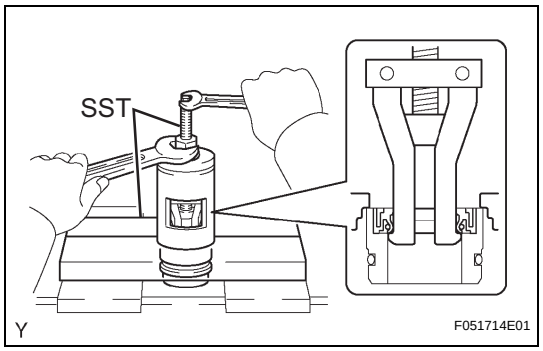
(b) Using a screwdriver and hammer, turn the cylinder end stopper counterclockwise, and remove the wire and cylinder end stopper.

16. REMOVE POWER STEERING RACK

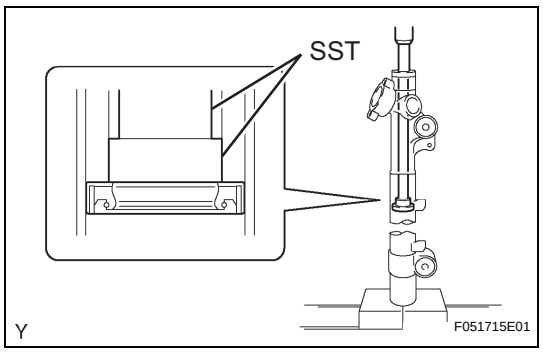
17. REMOVE POWER STEERING RACK BUSH

(a) Remove the rack bush from the power steering rack.

(b) Using a screwdriver, remove the O-ring from the rack bush.



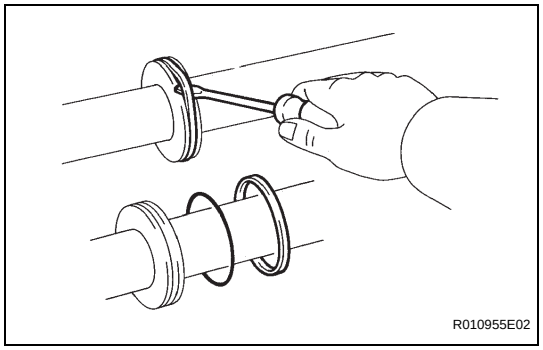
(c) Using SST, remove the rack bush oil seal.
SST 09527-21011, 09612-24014 (09613-22011)



18. REMOVE POWER STEERING CYLINDER TUBE OIL SEAL

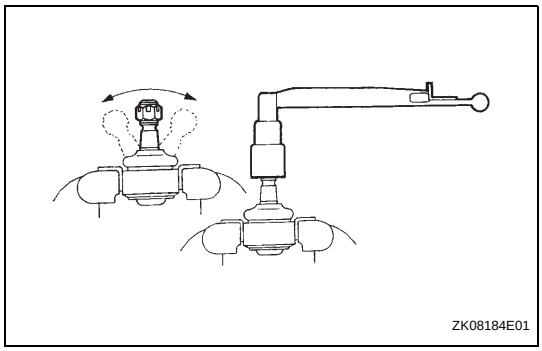
(a) Using SST and a press, remove the cylinder tube oil seal.
SST 09950-60010 (09951-00320), 09950-70010 (09951-07360)

PS



19. REMOVE RACK STEERING PISTON RING

(a) Using a screwdriver, remove the piston ring and O-ring.
NOTICE:
Be careful not to damage the groove for the piston ring.



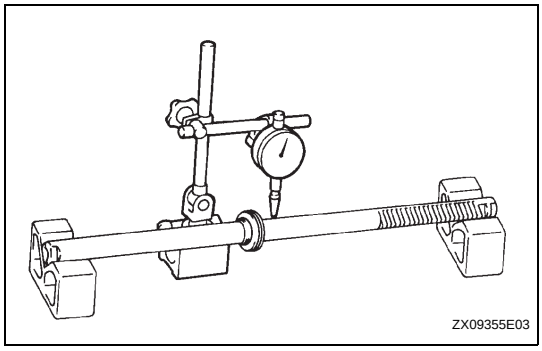
INSPECTION

1. INSPECT TIE ROD END SUB-ASSEMBLY

(a) Flip the ball joint stud back and forth 5 times as shown in the illustration before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and check the torque reading on the 5th turn.

Torque: 0.49 to 3.43 N*m (5.0 to 35.0 kgf*cm, 4.34 to 30.36 in.*lbf)



2. INSPECT POWER STEERING RACK

(a) Using a dial indicator, check the power steering rack for runout, teeth wear and damage.

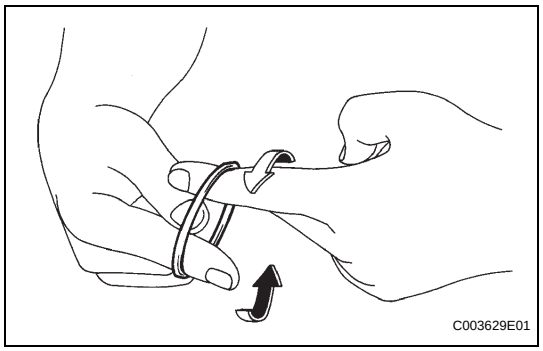
Maximum runout:
0.3 mm (0.012 in.)

If necessary, replace the power steering link assembly.

(b) Check the back surface for wear and damage.
If necessary, replace the power steering link assembly.

REASSEMBLY

NOTICE:
When installing, coat the parts indicated by the arrows with power steering fluid (See page PS-3).

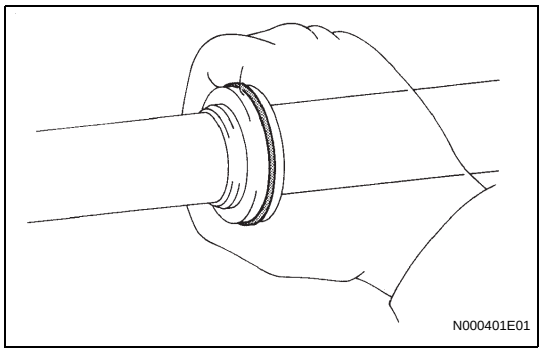


1. INSTALL RACK STEERING PISTON RING

(a) Coat a new O-ring with power steering fluid and install it onto the power steering rack.

(b) Expand a new piston ring with your fingers.
NOTICE:
Be careful not to over expand the rack steering piston ring.

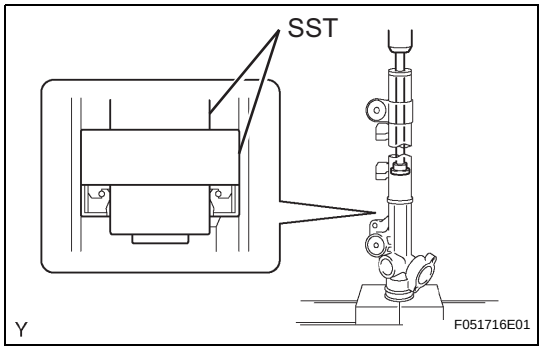
(c) Coat a new piston ring with power steering fluid.



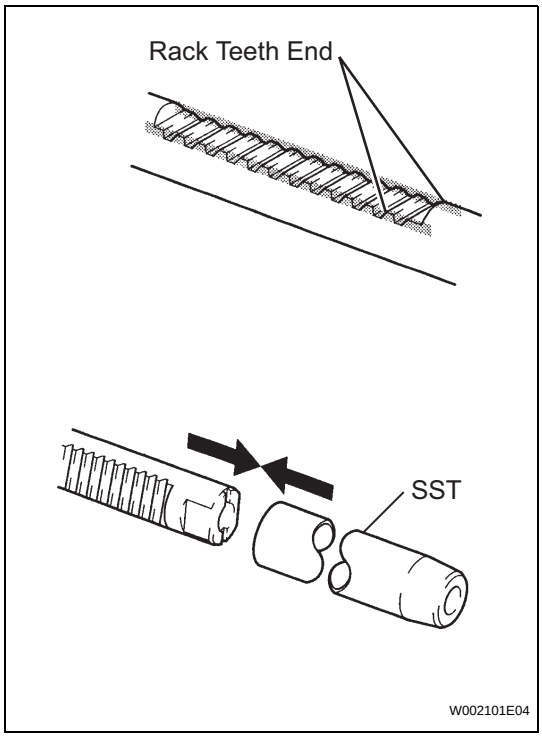
(d) Install the piston ring onto the power steering rack, and position it with your fingers.

2. INSTALL POWER STEERING CYLINDER TUBE OIL SEAL

(a) Coat a new cylinder tube oil seal lip with power steering fluid.

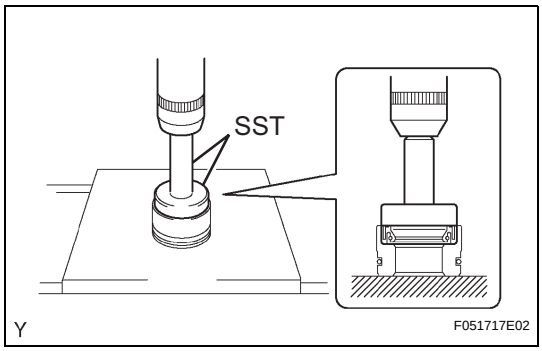


(b) Using SST and a press, install the cylinder tube oil seal.
SST 09950-60010 (09951-00280, 09951-00480, 09952-06010), 09950-70010 (09951-07360)
NOTICE:
- **Make sure that the cylinder tube oil seal is installed facing in the correct direction.**
- **Take care not to reverse the cylinder tube oil seal direction when installing.**



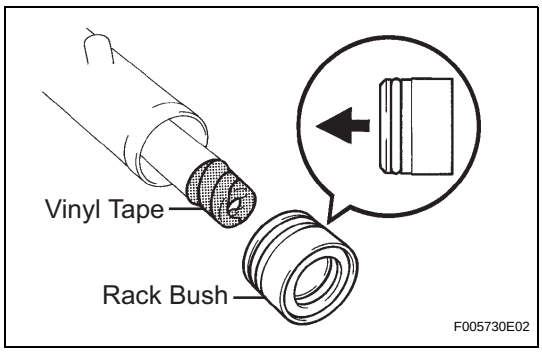
3. INSTALL POWER STEERING RACK

(a) Install SST onto the power steering rack.
SST 09631-20111
HINT:
If necessary, scrape the burrs off the power steering rack teeth end and burnish.
(b) Coat SST with power steering fluid.
(c) Install the power steering rack into the rack housing.
(d) Remove SST.

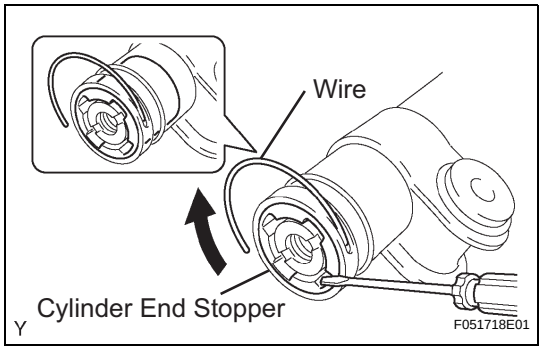


4. INSTALL POWER STEERING RACK BUSH

(a) Using SST and a press, install a new rack bush oil seal onto the rack bush.
SST 09950-60010 (09951-00440), 09950-70010 (09951-07100)
NOTICE:
Make sure that the rack bush oil seal is installed facing the correct direction.
(b) Coat a new O-ring with power steering fluid and install it onto the rack bush.



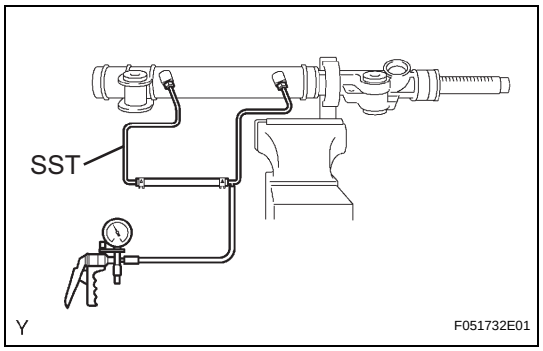
(c) To prevent the rack bush oil seal lip from being damaged, wind vinyl tape around the rack end and apply power steering fluid.
(d) Install the rack bush onto the power steering rack.



5. INSTALL CYLINDER END STOPPER

(a) Align the installation hole for the wire of the cylinder end stopper with the slot of the rack housing.
(b) Install a new wire into the cylinder end stopper.
(c) Using a screwdriver, turn the cylinder end stopper clockwise by 400 to 500°.

PS



6. AIR TIGHT TEST

(a) Install SST onto the rack housing.

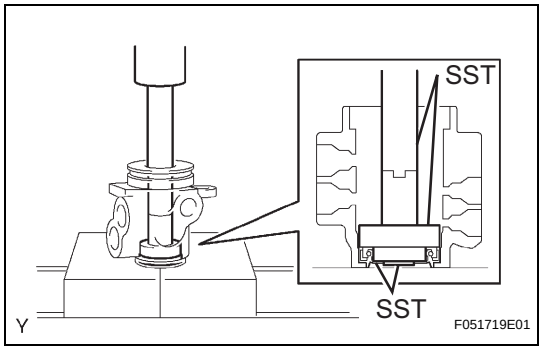
(b) Apply a vacuum of 53 kPa (400 mmHg, 15.75 in.Hg) for about 30 seconds.

(c) Check that there is no change in the vacuum.
If there is any change in the vacuum, check whether the oil seals are installed correctly.

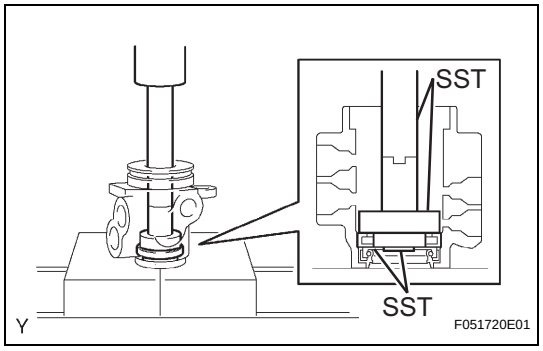
7. INSTALL POWER STEERING CONTROL VALVE UPPER OIL SEAL

(a) Coat the control valve upper bearing and a new control valve upper oil seal with power steering fluid.

(b) Using SST and a press, install the control valve upper oil seal.
SST 09950-60010 (09951-00180, 09951-00320, 09952-06010), 09950-70010 (09951-07150)



(c) Using SST and a press, install the control valve upper bearing.
SST 09950-60010 (09951-00180, 09951-00340, 09952-06010), 09950-70010 (09951-07150)

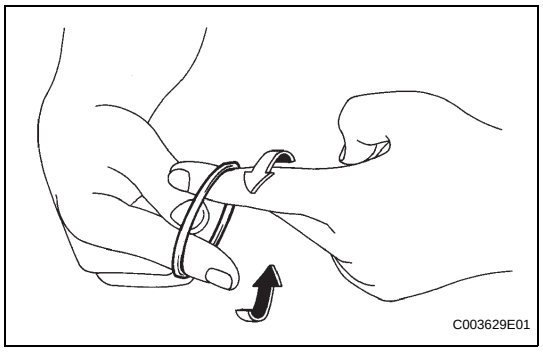


8. INSTALL POWER STEERING CONTROL VALVE ASSEMBLY

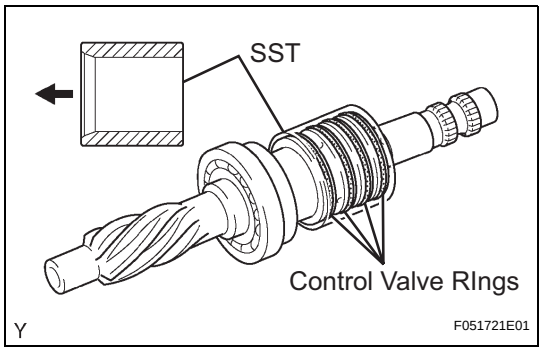
(a) Expand 4 new control valve rings with your fingers.
NOTICE:
Be careful not to over expand the control valve rings.

(b) Coat the 4 control valve rings with power steering fluid.

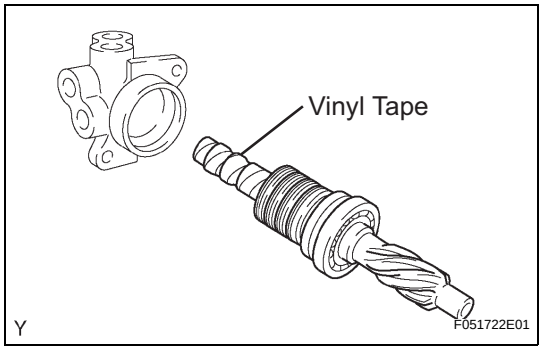
(c) Install the 4 control valve rings onto the control valve, and position them with your fingers.



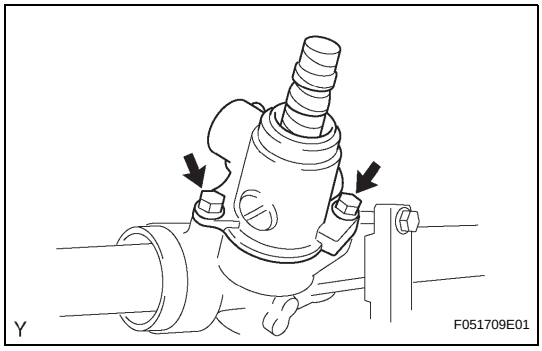
PS



(d) Carefully slide the tapered end of SST over the control valve rings until they fit to the control valve.
SST 09631-20081
NOTICE:
Be careful not to damage the control valve rings.

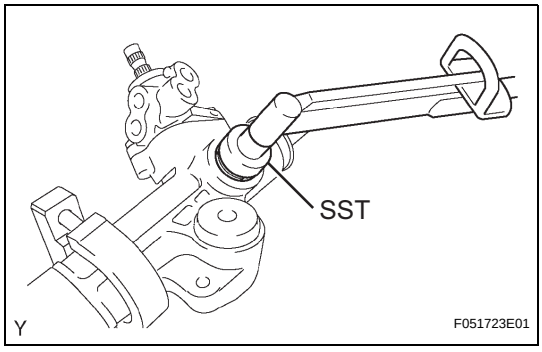


(e) To prevent the control valve upper oil seal lip from getting damaged, wind vinyl tape around the serrated portion of the control valve.
(f) Coat the control valve upper oil seal lip with power steering fluid.
(g) Install the control valve onto the control valve housing.
NOTICE:
Be careful not to damage the control valve ring and control valve upper oil seal lip.
(h) Apply grease to the needle roller bearing.
(i) Install a new O-ring onto the control valve housing.
(j) Wind vinyl tape around the serrated portion of the control valve.



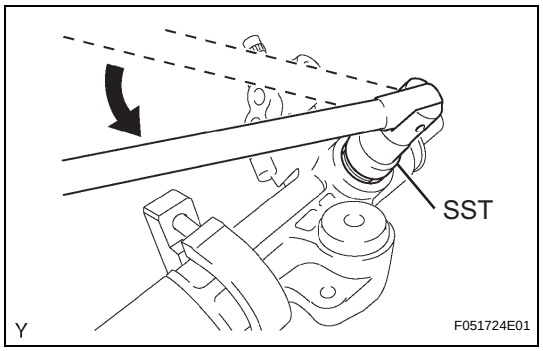
(k) Install the control valve w/ control valve housing onto the rack housing with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

9. INSTALL STEERING GEAR RACK GUIDE
(a) Install the rack guide.
(b) Install the rack guide spring.
(c) Apply sealant to 2 or 3 threads of the rack guide spring cap.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent
(d) Provisionally install the rack guide spring cap.

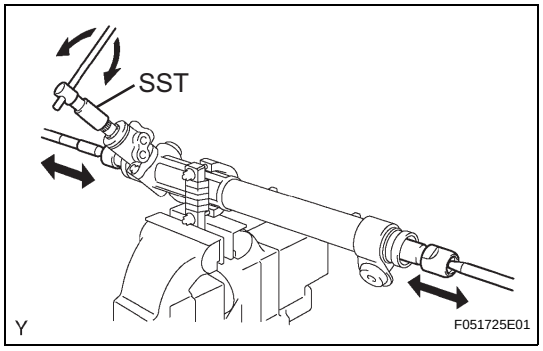


10. ADJUST TOTAL PRELOAD
(a) To prevent the steering rack teeth from damaging the oil seal lip, provisionally install the RH and LH steering rack end.
(b) Using SST, torque the rack guide spring cap.
SST 09631-10021
Torque: 25 N*m (254 kgf*cm, 18 ft.*lbf)

PS

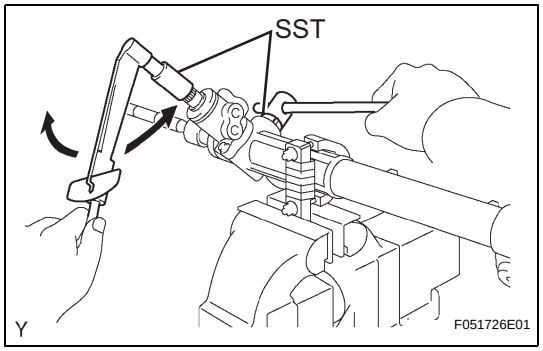


(c) Using SST, loosen the rack guide spring cap.
SST 09631-10021



(d) Using SST, turn the control valve to the right and left once or twice.
SST 09616-00011

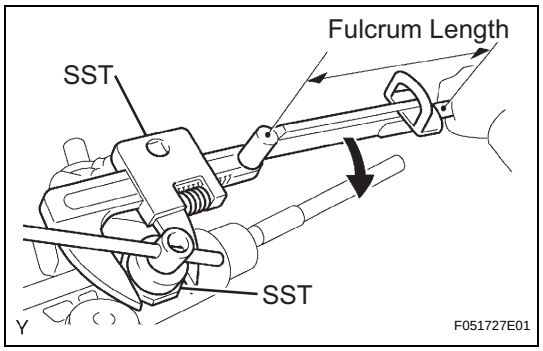
(e) Using SST, loosen the rack guide spring cap until the rack guide spring ceases to function.
SST 09631-10021



(f) Using SST and a torque wrench, tighten the rack guide spring cap until the preload is within the specification.
SST 09631-10021, 09616-00011
Preload (turning):
0.9 to 1.5 N*m (9.2 to 15.3 kgf*cm, 8.0 to 13.3 in.*lbf)

(g) Apply sealant to 2 or 3 threads of the rack guide spring cap nut.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(h) Provisionally install the rack guide spring cap nut.

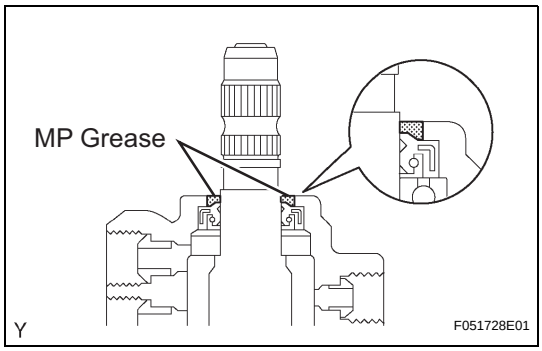


(i) Using SST, hold the rack guide spring cap and using another SST, torque the rack guide spring cap nut.
SST 09631-10021, 09922-10010
Torque: for use without SST
59 N*m (601 kgf*cm, 44 ft.*lbf)
for use with SST
43 N*m (440 kgf*cm, 32 ft.*lbf)
NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.
HINT:
Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

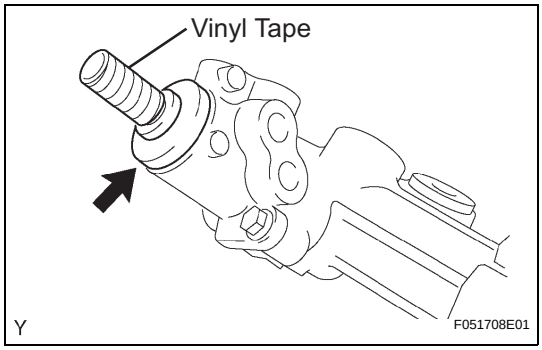
(j) Recheck the total preload.
Preload (turning):
0.9 to 1.5 N*m (9.2 to 15.3 kgf*cm, 8.0 to 13.3 in.*lbf)

(k) Remove the RH and LH steering rack ends.

PS

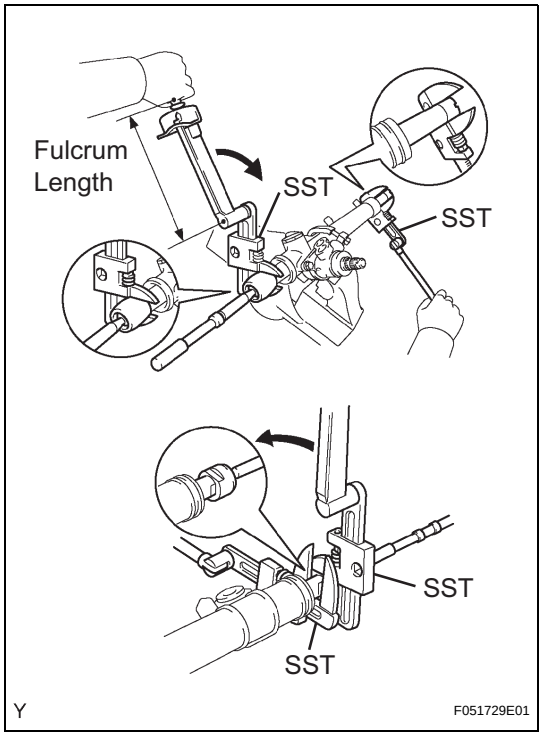


(l) Apply MP grease to the control valve as shown in the illustration.



(m) Wind vinyl tape around the serrated portion of the control valve.

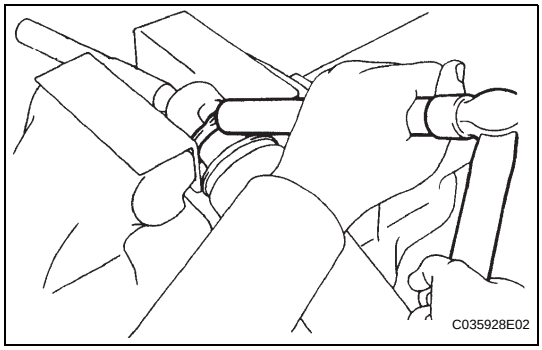
(n) Install the dust cover onto the control valve housing.



11. INSTALL STEERING RACK END SUB-ASSEMBLY

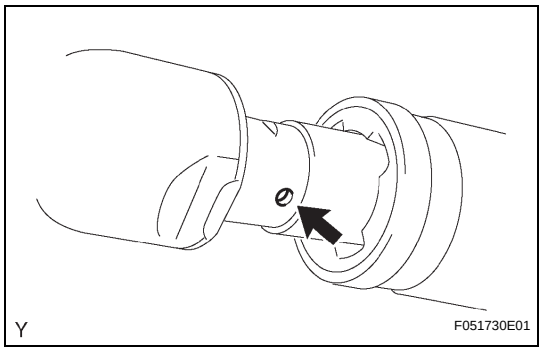
(a) Install 2 new claw washers, and provisionally install the 2 steering rack ends.
HINT:
Align the claws of the claw washers with the power steering rack grooves.

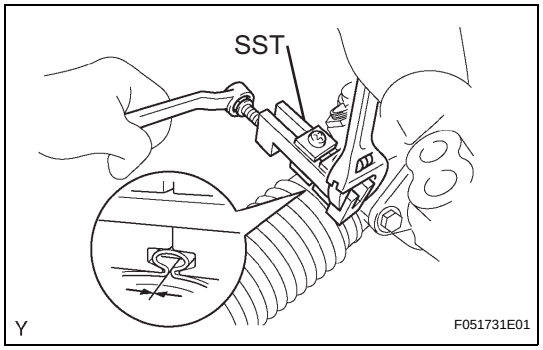
(b) Using 2 SSTs, install the 2 steering rack ends.
SST 09922-10010
Torque: for use without SST
84 N*m (851 kgf*cm, 62 ft.*lbf)
for use with SST
61 N*m (620 kgf*cm, 45 ft.*lbf)
NOTICE:
Turn SST 09922-10010 in the direction shown in the illustration.
HINT:
- Using SST, hold the power steering rack and install the rack end sub-assembly.
- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).



(c) Using a brass bar and hammer, stake the 2 claw washers.
NOTICE:
Avoid any impact to the power steering rack.

PS





12. INSPECT STEERING RACK END SUB-ASSEMBLY

(a) Ensure that the steering rack end hole is not clogged with grease.
HINT:
If the hole is clogged, the pressure inside the boot will change after it has been assembled, when the steering wheel is turned.

13. INSTALL STEERING RACK BOOT NO. 1

14. INSTALL STEERING RACK BOOT NO. 2

15. INSTALL STEERING RACK BOOT NO. 1 CLAMP

(a) Using SST, tighten the rack boot No. 1 clamp as shown in the illustration.
SST 09521-24010
Clearance:
3.0 mm (0.118 in.) or less
NOTICE:
Be careful not to damage the rack boot No. 1.

16. INSTALL STEERING RACK BOOT NO. 2 CLAMP

HINT:
The installation procedure for the No. 2 side is the same as that for the No. 1 side.

17. INSTALL STEERING RACK BOOT CLIP

(a) Using pliers, install the 2 rack boot clips.

18. INSTALL TIE ROD END SUB-ASSEMBLY LH

(a) Screw the lock nut and tie rod end onto the rack end until the matchmarks are aligned.
(b) After adjusting toe-in, torque the nut.
Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)

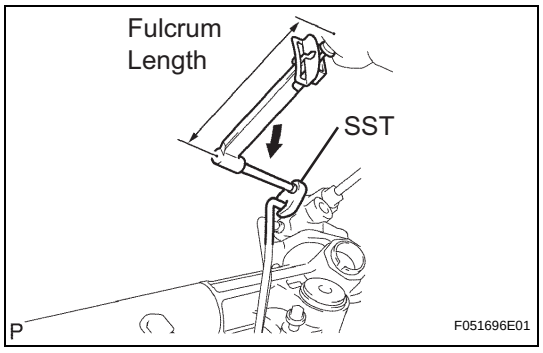
19. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

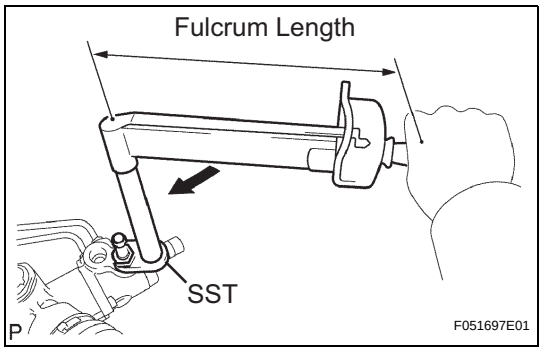
20. INSTALL STEERING TURN PRESSURE TUBE

(a) Coat 4 new O-rings with power steering fluid and install them onto the pressure tubes.

(b) Using SST, install the 2 pressure tubes.
SST 09023-38401
Torque: for use without SST
15 N*m (153 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (141 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST is parallel to a torque wrench.



PS



21. INSTALL STEERING GEAR OUTLET RETURN TUBE

(a) Using SST, install the return tube.

SST 09023-12701

Torque: for use without SST

24 N*m (245 kgf*cm, 18 ft.*lbf)

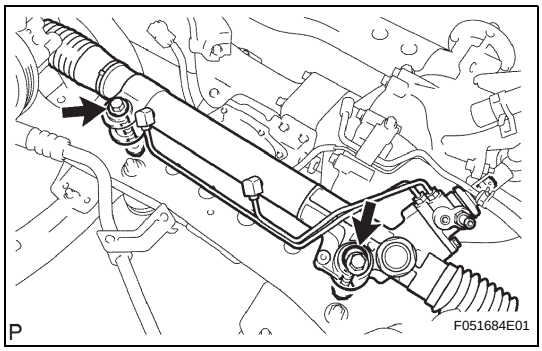
for use with SST

22 N*m (222 kgf*cm, 16 ft.*lbf)

HINT:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

INSTALLATION



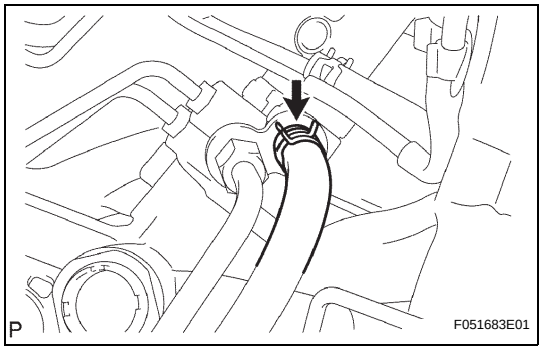
1. INSTALL POWER STEERING LINK

(a) Install the power steering link with the 2 bolts and 2 nuts.

Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)

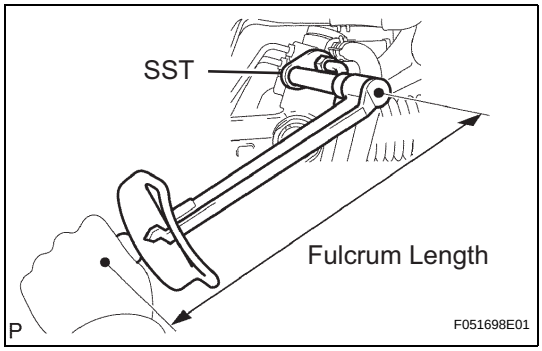
NOTICE:

Never turn the nut since it has a detent. Be sure to turn only the bolt.



2. INSTALL PRESSURE FEED TUBE ASSEMBLY

(a) Connect the return hose with the clip.



(b) Using SST, tighten the flare nut and connect the pressure feed tube.

SST 09023-12701

Torque: for use without SST

24 N*m (245 kgf*cm, 18 ft.*lbf)

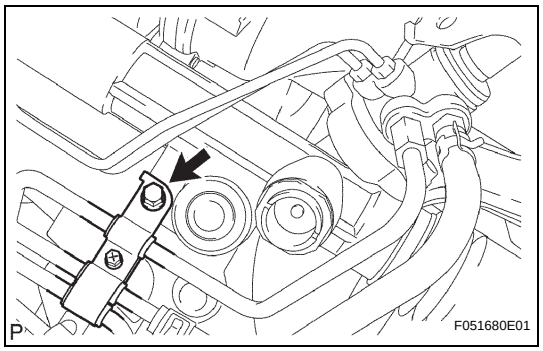
for use with SST

22 N*m (222 kgf*cm, 16 ft.*lbf)

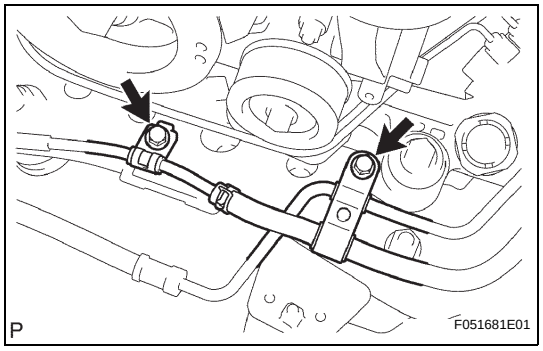
HINT:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

PS



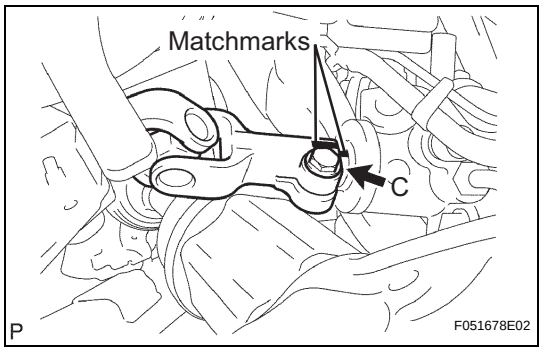
(c) for 2TR-FE:
(1) Install the tube support bracket with the bolt.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)



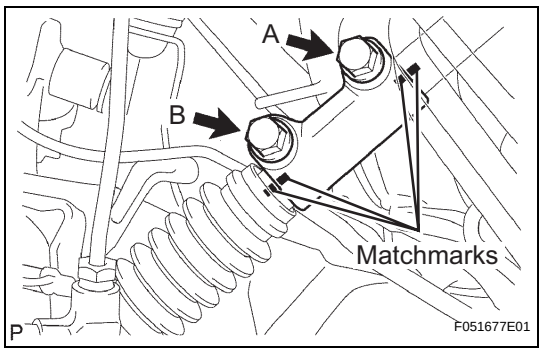
(d) for 1GR-FE:
(1) Install the tube support brackets with the 2 bolts.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

3. INSTALL TIE ROD END SUB-ASSEMBLY LH
(a) Install the tie rod end onto the steering knuckle arm.
(b) Install the nut.
Torque: 91 N*m (928 kgf*cm, 67 ft.*lbf)
(c) Install a new cotter pin.

4. INSTALL TIE ROD END SUB-ASSEMBLY RH
HINT:
The installation procedure for the RH side is the same as that for the LH side.



5. INSTALL STEERING INTERMEDIATE SHAFT NO. 2
(a) Align the matchmarks on the steering intermediate shaft No. 2 and power steering link.
(b) Install the steering intermediate shaft No. 2 onto the power steering link with bolt C.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)



(c) Align the matchmarks on the steering intermediate shaft and steering sliding yoke.
(d) Install the steering sliding yoke onto the steering intermediate shaft and slide it upward.
(e) Align the matchmarks on the steering sliding yoke and steering intermediate shaft No. 2.
(f) Install the steering sliding yoke with bolts A and B.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)

6. INSTALL FRONT STABILIZER BAR

7. INSTALL FRONT STABILIZER BRACKET NO. 1 LH (See page SP-51)

8. INSTALL FRONT STABILIZER BRACKET NO. 1 RH
HINT:
The installation procedure for the RH is the same as that for the LH side.

PS

9. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-24)**
10. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The installation procedure for the RH is the same as that for the LH side.
11. **INSTALL FRAME CROSSMEMBER SUB-ASSEMBLY NO. 3 (See page MT-12)**
12. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab Pre-Runner) (See page PR-6)**
13. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab Pre-Runner) (See page PR-13)**
14. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab 4WD) (See page PR-25)**
15. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab 4WD) (See page PR-32)**
16. **INSTALL PROPELLER SHAFT ASSEMBLY FRONT (for 4WD) (See page PR-19)**
17. **INSTALL EXHAUST PIPE ASSEMBLY FRONT (for 2TR-FE) (See page EX-2)**
18. **INSTALL EXHAUST PIPE ASSEMBLY FRONT (for 1GR-FE) (See page EX-3)**
19. **INSTALL EXHAUST FRONT PIPE ASSEMBLY NO. 2 (for 1GR-FE) (See page EX-3)**
20. **INSTALL FRONT WHEELS**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
21. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
22. **INSPECT STEERING WHEEL CENTER POINT**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
24. **ADD POWER STEERING FLUID**
25. **BLEED POWER STEERING FLUID (See page PS-2)**
26. **CHECK FOR POWER STEERING FLUID LEAKAGE**
27. **CHECK FOR EXHAUST GAS LEAKAGE**
28. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-7)
29. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO. 1**
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

PROBLEM SYMPTOMS TABLE

Check the suspected areas for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

Inspect the fuses and relays before inspecting the suspected areas shown in the table below.

If the malfunction still exists even after checking and confirming that all the suspected areas are normal, replace the A/C amplifier.

Symptom	Suspected area	See page
No Cool Air Comes Out: • Compressor Not Operating	A/C fuse	-
	Volume of refrigerant	AC-14
	Pressure switch	AC-85
	Magnetic clutch	AC-70
	Cooler thermistor sensor	AC-84
	Air conditioner amplifier assembly	AC-9
	Compressor pick up sensor	AC-70
	Cooler compressor	AC-67
	Cooler compressor	AC-73
	Wire harness or connector	-
No Cool Air Comes Out: • Blower Not Operating	HTR fuse	-
	Heater relay	AC-88
	Blower resistor	AC-63
	Blower motor	AC-62
	Blower speed control switch	AC-91
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
No Cool Air Comes Out: • Air Mix Damper Servo Not Operating	Air mix damper fuse	-
	Air mix control servo motor	AC-82
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
No Cool Air Comes Out: • Insufficient Cooling	Volume of refrigerant	AC-14
	Blower motor performance check	-
	Air mix damper servo full travel check	-
	Recirculation damper servo operation check	-
No Engine Idle-up when A/C Switch ON	Air conditioner amplifier assembly	AC-9
	Idling control system (2TR-FE)	ES-252
	Idling control system (1GR-FE)	ES-246
	Wire harness or connector	-
No Warm Air Comes Out: • Blower Not Operating	HTR fuse	-
	Heater relay	AC-88
	Blower resistor	AC-63
	Blower motor	AC-62
	Blower speed control switch	AC-91
	Air conditioning control assembly	AC-91
	Wire harness or connector	-

Symptom	Suspected area	See page
No Warm Air Comes Out: • Air Mix Damper Servo Not Operating	Air mix damper fuse	-
	Air mix control servo motor	AC-82

	Blower motor performance check	-
	Air mix damper servo full travel check	-
	Recirculation damper servo operation check	-
	Heater radiator	-
Air Not Coming From Desired Outlets: • Blower Not Operating	HTR fuse	-
	Heater relay	AC-88
	Blower resistor	AC-63
	Blower motor	AC-62
	Blower speed control switch	AC-91
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
Air Not Coming From Desired Outlets: • Air Mix Damper Servo Not Operating	Air mix damper fuse	-
	Air mix control servo motor	AC-82
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
Windshield Fogging: • Compressor Not Operating	A/C fuse	-
	Volume of refrigerant	AC-14
	Pressure switch	AC-85
	Magnetic clutch	AC-70
	Cooler thermistor sensor	AC-84
	Air conditioner amplifier assembly	AC-9
	Compressor pick up sensor	AC-70
	Cooler compressor	AC-67
	Cooler compressor	AC-73
	Wire harness or connector	-
Windshield Fogging: • Blower Not Operating	HTR fuse	-
	Heater relay	AC-88
	Blower resistor	AC-63
	Blower motor	AC-62
	Blower speed control switch	AC-91
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
Windshield Fogging: • Air Mix Damper Servo Not Operating	Air mix damper fuse	-
	Air mix control servo motor	AC-82
	Air conditioning control assembly	AC-91
	Wire harness or connector	-
Windshield Fogging: • Insufficient Cooling	Volume of refrigerant	AC-14
	Blower motor performance check	-
	Air mix damper servo full travel check	-
	Recirculation damper servo operation check	-

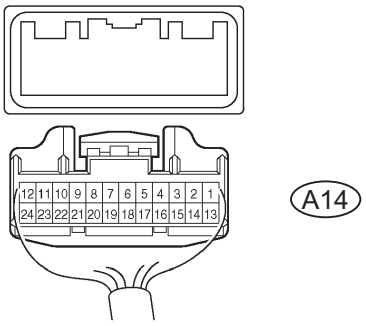
Symptom	Suspected area	See page
Defrosting Insufficient: • Air flow from def outlet insufficient (Check airflow when engine is running, blower MAX and DEF mode)	Blower motor	AC-62
	Mode doors: Check cooling, heating & door operation	-
	Mode control servo motor: Hot air not coming, Go to no hot air comes out	-
	Mode control servo motor: Cold air not coming, Go to no cold air comes out	-
Noise: • Blower noise (Check noise when ignition switch ON and blower ON)	Blower motor: Inspect blower motor for debris/cracks	-
	Fresh air intake area: Inspect fresh air intake area for debris	-
Noise: • A/C system (Engine is running, A/C switch is ON. Detect noise source using soundscope and moving around the refrigerant system.)	Cooler compressor: Cooler compressor incorrectly fitted	AC-73
	Magnetic clutch	AC-70
	Refrigerant charge amount	AC-18
	Compressor mounting bracket: Compressor mounting bracket incorrectly fitted (2TR-FE)	ES-447
	Compressor mounting bracket: Compressor mounting bracket incorrectly fitted (1GR-FE (2WD))	EM-26
	Compressor mounting bracket: Compressor mounting bracket incorrectly fitted (1GR-FE (PRE RUNNER/4WD))	EM-48
	A/C lines secure & not grounded	-
Odor (Cycle through blower speed, mode, temperature to define odor type when engine is running and A/C switch is ON. (Musty smell, coolant oil smell))	Wet carpet: Inspect water, engine coolant or oil leaks	-
	A/C drain tube: Inspect water, engine coolant or oil leaks	-
	Fresh air intake area: Inspect water, engine coolant or oil leaks	-
	Heater hose: Inspect water, engine coolant or oil leaks	-
	Evaporator: Inspect water, engine coolant or oil leaks	-
	Evapo case: Inspect water, engine coolant or oil leaks	-
Air Not Coming from Desired Outlets (Cycle the mode lever and check airflow for outlets when engine is running, A/C switch is ON.)	Blower motor	AC-62
	Mode control servo motor	AC-82
	Mode doors: Check cooling, heating & door operation	-
	Wire harness or connector	-
	Air conditioning control assembly	AC-91

TERMINALS OF ECU

1. INSPECT AIR CONDITIONER AMPLIFIER ASSEMBLY

(a) Disconnect the connector from the air conditioner amplifier assembly and inspect the connector on the wire harness side, as shown in the table below.

Wire Harness Side:



C

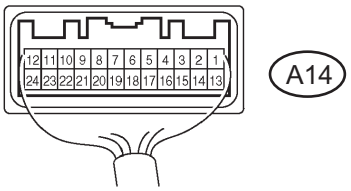
I036518E01

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
IG+ (A14-12) - GND (A14-1)	P - W-B	Power source (IG)	Ignition switch: OFF → ON	Below 1.0 → 10 to 14 V
+B (A14-24) - GND (A14-1)	P - W-B	Power source (Back-up)	Always	10 to 14 V
GND (A14-1) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1.0 Ω

If the results are not as specified, inspect the circuits connected to the other parts.

(b) Connect the connector to the air conditioning amplifier assembly and inspect the wire harness side connector from the back side, as shown in the table below.

From Back Side:



AC

C

I036517E01

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
DEF (A14-2) - GND (A14-1)	LG - W-B	Mode switch signal	Ignition switch: ON Mode select switch: Except DEF → DEF	1.0 to 14 → Below 1.0 V
LOCK (A14-6) - SG (A14-3)	R-W - W	Magnet clutch signal	Start engine Operate A/C system Magnet clutch: ON	Pulse generation (See waveform 1)
ACI (A14-9) - GND (A14-1)	G-W - W-B	Idle up request signal	Engine idling Operate A/C system Magnet clutch: OFF → ON	10 to 14 → Below 1.0 V
FRS (A14-10) - GND (A14-1)	V-W - W-B	Recirculation/Fresh switch signal	Ignition switch: ON Recirculation/Fresh switch: RECIRCULATION → FRESH	Below 1.0 → 10 to 14 V

Symbols (Terminals No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
REC (A14-11) - GND (A14-1)	P-B - W-B	Recirculation/Fresh switch signal	Ignition switch: ON Recirculation/Fresh switch: FRESH → RECIRCULATION	Below 1.0 → 10 to 14 V
MGC (A14-21) - GND (A14-1)	G - W-B	Magnet clutch relay signal	Engine idling Operate A/C system Magnet clutch: OFF → ON	10 to 14 → Below 1.0 V
PRS (A14-5) - GND (A14-1)	O - W-B	A/C pressure sensor signal	Start engine Operate A/C system Refrigerant pressure: Abnormal (More than 3,030 kPa (31.0 kgf/cm^2, 440 psi))	4.7 V or higher
PRS (A14-5) - GND (A14-1)	O - W-B	A/C pressure sensor signal	Start engine Operate A/C system Refrigerant pressure: Abnormal (Less than 186 kPa (1.9 kgf/cm^2, 27 psi))	Below 0.7 V
PRS (A14-5) - GND (A14-11)	O - W-B	A/C pressure sensor signal	Start engine Operate A/C system Refrigerant pressure: Normal (Less than 3,030 kPa (31.0 kgf/cm^2, 440 psi)) and more than 186 kPa (1.9 kgf/cm^2, 27 psi))	0.7 to 4.7 V
TE (A14-4) - GND (A14-1)	B - W-B	A/C evaporator temperature sensor signal	Ignition switch: ON Evaporator temperature: 0 → 15°C (32 → 59°F)	2.0 to 2.4 → 1.4 to 1.8 V
BLRH (A14-23) - GND (A14-1)	G-Y - W-B	Blower switch signal	Ignition switch: ON Blower switch: ON OFF → ON (LO, M1, M2, H1)	0 → 10 to 14 V
ACID (A14-15) - GND (A14-1)	Y - W-B	A/C switch LED signal	Ignition switch: ON Blower switch: ON A/C switch: OFF → ON	10 to 14 → Below 3.0 V
RDEF (A14-16) - GND (A14-1)	L-W - W-B	REC switch LED signal	Ignition switch: ON Blower switch: ON REC switch: OFF → ON	10 to 14 → Below 1.0 V
MR/F (A14-17) - GND (A14-1)	G-B - W-B	REC switch operation signal	Ignition switch: ON REC switch: OFF → ON	4 to 5 → Below 1.0 V
A/C (A14-18) - GND (A14-1)	GR - W-B	A/C switch operation signal	Ignition switch: ON A/C switch: OFF → ON	4 to 5 → Below 1.0 V
GND (A14-1) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1.0 Ω
SG (A14-3) - Body ground	W - Body ground	Ground for A/C evaporator temperature sensor	Always	Below 1.0 Ω
IG (A14-12) - Body ground	P - Body ground	Power source (IG)	Ignition switch: OFF → ON	Below 1.0 → 10 to 14 V
+B (A14-24) - Body ground	R - Body ground	Power source (Back-up)	Always	10 to 14 V

If the results are not as specified, replace the air conditioning amplifier assembly with a new one. If the results are still not as specified after replacing the air conditioning control assembly, inspect the circuits connected to other parts.
