
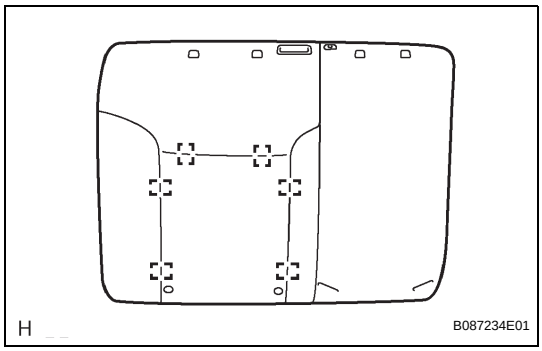
14. REMOVE REAR SEAT LOCK HANDLE

(a) Remove the screw and rear seat lock handle.

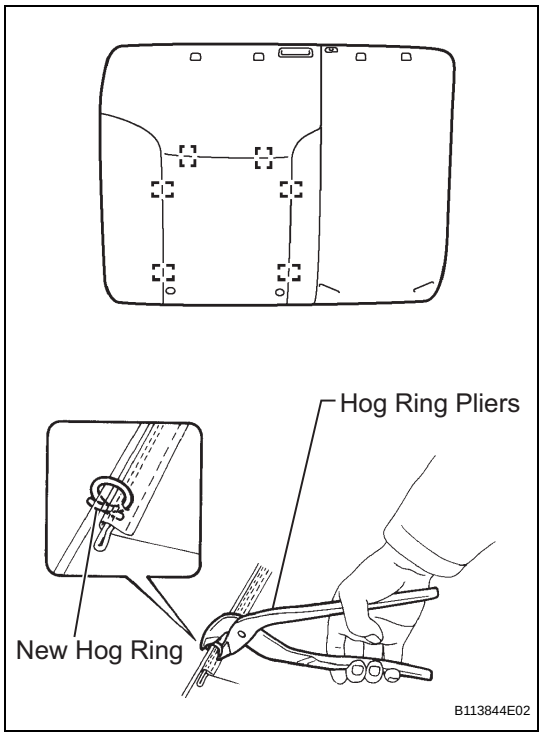


15. REMOVE REAR SEAT BACK COVER

(a) Remove the 6 hog rings and rear seat back cover.

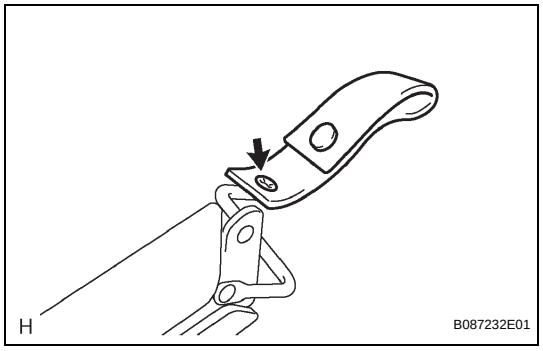
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surface on the rear seat back frame could cause injuries to your hands.



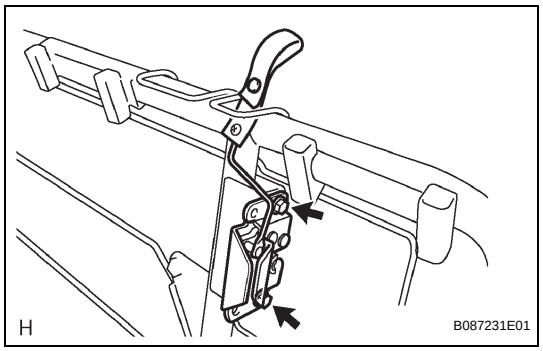
1. INSTALL REAR SEAT BACK COVER

(a) Using hog ring pliers, install the rear seat back cover with new hog rings.
NOTICE:
- **Do not contaminate or scratch the rear seat back cover.**
- **When installing the hog rings, minimize wrinkles as far as possible.**



2. INSTALL REAR SEAT LOCK HANDLE

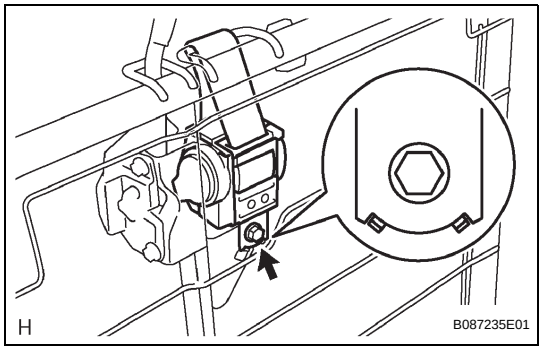
(a) Install the rear seat lock handle with the screw.



3. INSTALL REAR SEAT BACK LOCK ASSEMBLY

(a) Install the rear seat back lock with the 2 bolts.
Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)

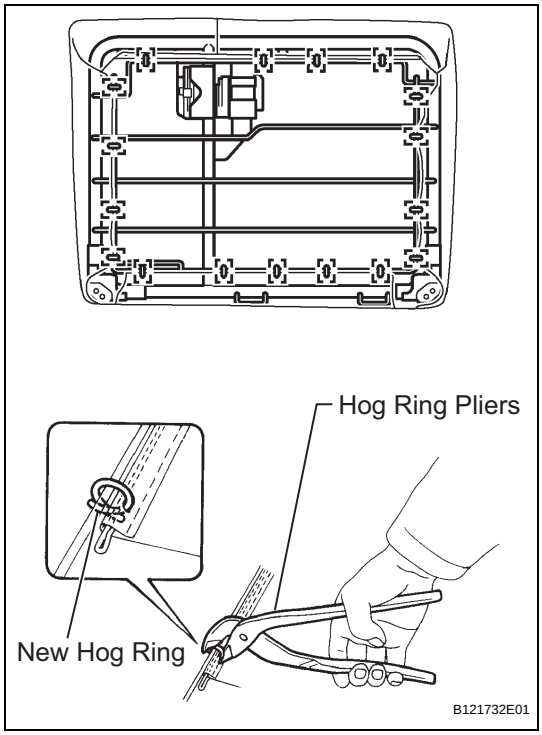
SE



4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Align the retractor with the positioning claws of the rear seat back frame and install the retractor with the bolt.
Torque: 44 N*m (450 kgf*cm, 33 ft.*lbf)

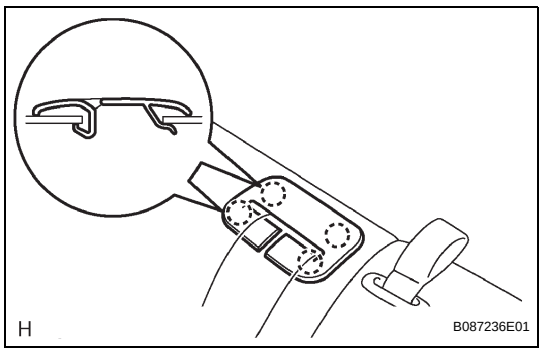
(b) Insert the belt through the hole into the rear seat back frame.



5. INSTALL REAR SEAT BACK FRAME SUB-ASSEMBLY

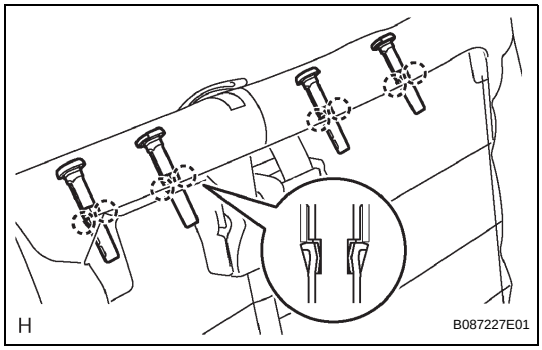
(a) Install the rear seat back spring into the rear seat back pad.

(b) Using hog ring pliers, install new hog rings.



6. INSTALL REAR SEAT SHOULDER BELT COVER

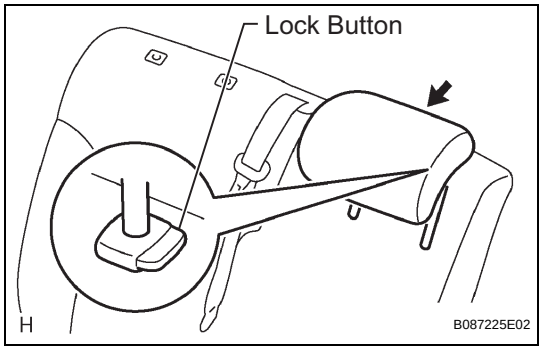
(a) Engage the 4 claws and install the rear seat shoulder belt cover.



7. INSTALL REAR SEAT HEADREST SUPPORT

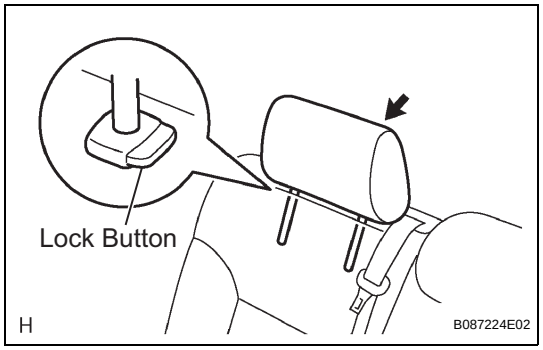
HINT:
Follow the same procedures as for the opposite side.

(a) Engage the 2 claws and install the front seat headrest support.



8. INSTALL REAR SEAT BACK BOARD SUB-ASSEMBLY

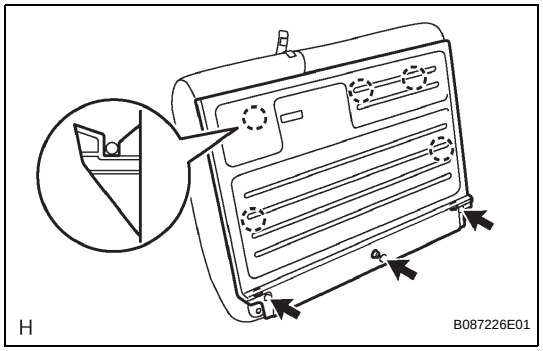
(a) Disengage the lock button of the rear seat headrest support and install the rear seat headrest center.



9. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY

(a) Disengage the lock button of the rear seat headrest support and install the rear center seat headrest.

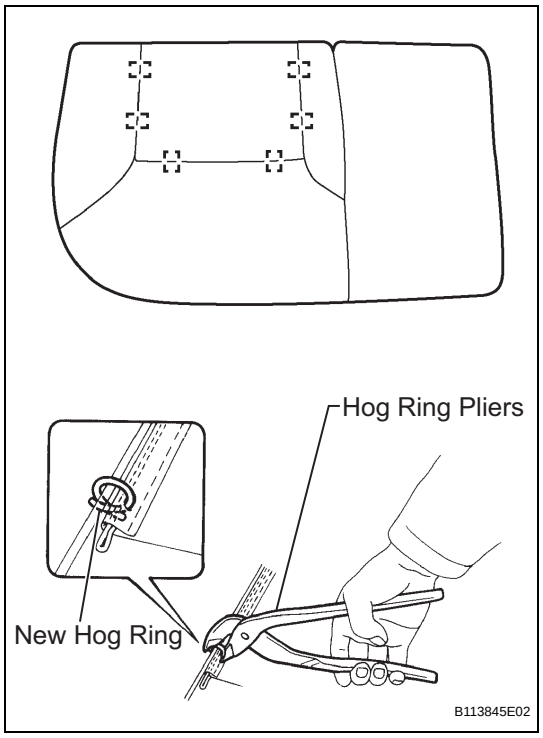
SE



10. INSTALL REAR SEAT HEADREST ASSEMBLY

(a) Engage the 5 claws and install the rear seat back board.

(b) Tighten the 3 screws.

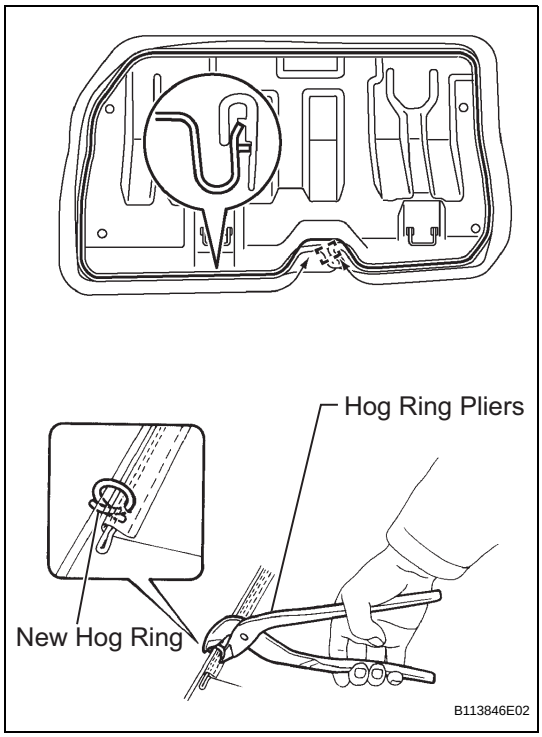


11. INSTALL REAR SEAT CUSHION COVER

(a) Using hog ring pliers, install the rear seat cushion cover with new hog rings.

NOTICE:

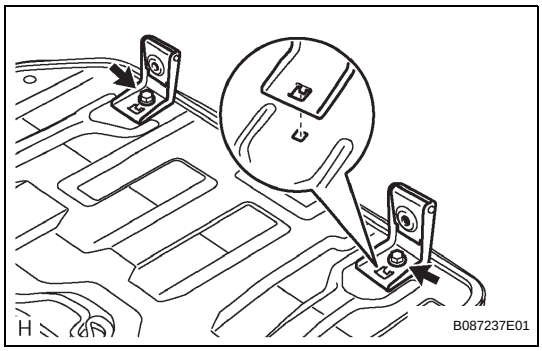
- **Do not contaminate or scratch the rear seat back cover.**
- **When installing the hog rings, minimize wrinkles as far as possible.**



12. INSTALL REAR SEAT CUSHION FRAME SUB-ASSEMBLY

(a) Engage the hook and install the rear seat cushion frame.

(b) Install a new hog ring.

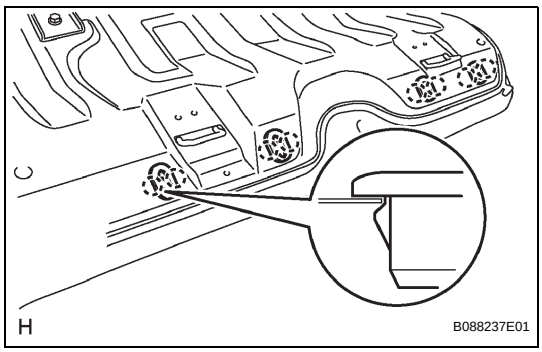


13. INSTALL REAR SEAT CUSHION HINGE SUB-ASSEMBLY

HINT:

Follow the same procedures as for the opposite side.

(a) Install the rear seat cushion hinge with the bolt.
Torque: 21 N*m (215 kgf*cm, 16 ft.*lbf)

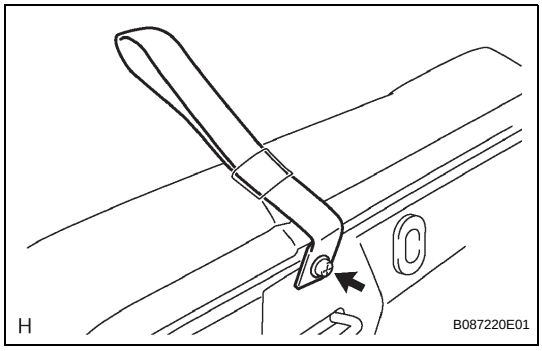


14. INSTALL REAR SEAT HEADREST HOLDER

HINT:

Follow the same procedures as for the opposite side.

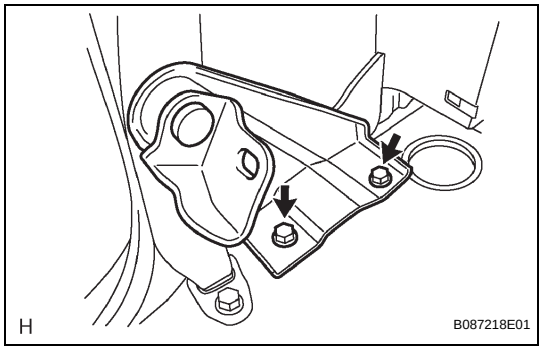
(a) Engage the 2 claws and install the rear seat headrest holder.



15. INSTALL REAR SEAT CUSHION BAND

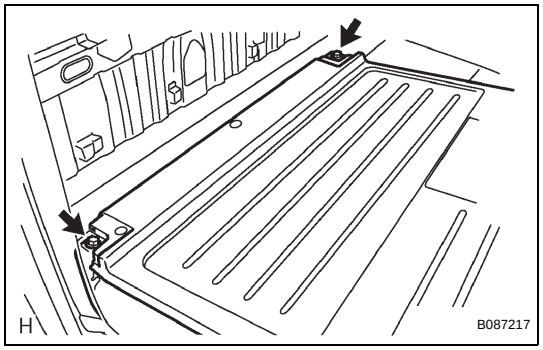
(a) Install the rear seat cushion band with the screw.

INSTALLATION



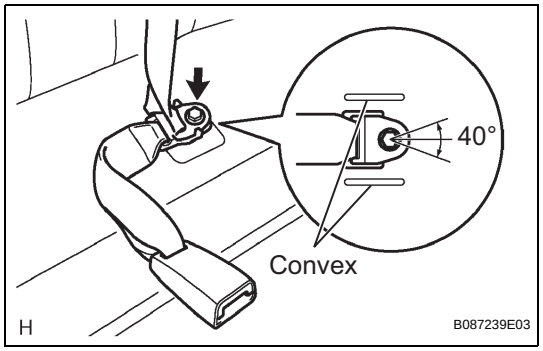
1. INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY

(a) Install the rear seat back hinge with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 14 ft.*lbf)

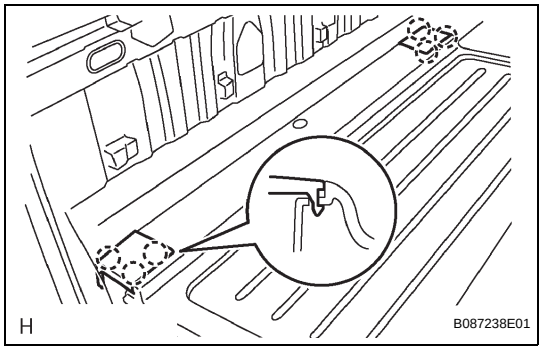


2. INSTALL REAR SEAT BACK ASSEMBLY

(a) Install the rear seat back with the 2 bolts.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



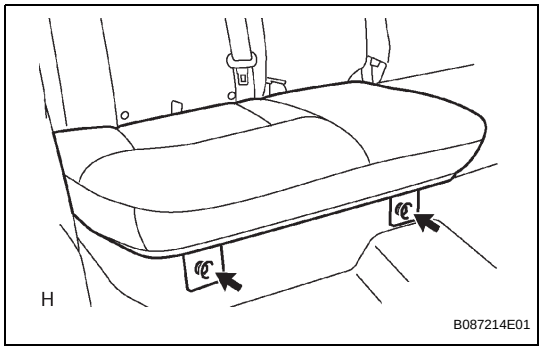
(b) Install the rear seat belt inner and rear seat belt outer center of the floor anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Make sure that the rear seat inner belt and floor anchor of the rear center seat outer belt are oriented in the correct direction when installing.**
- **Be careful not to place the rear seat inner belt (and floor anchor of the rear center seat outer belt) over the convex areas of the floor panel.**



3. INSTALL REAR SEAT BACK HINGE COVER

HINT:
Follow the same procedures as for the opposite side.

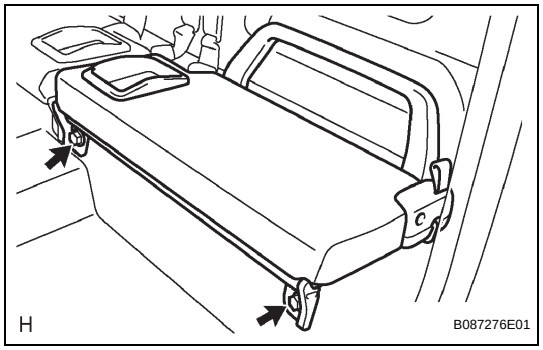
(a) Lock the 3 claws and install the rear seat back hinge cover.



4. INSTALL REAR SEAT CUSHION ASSEMBLY

(a) Install the rear seat cushion with the 2 bolts.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

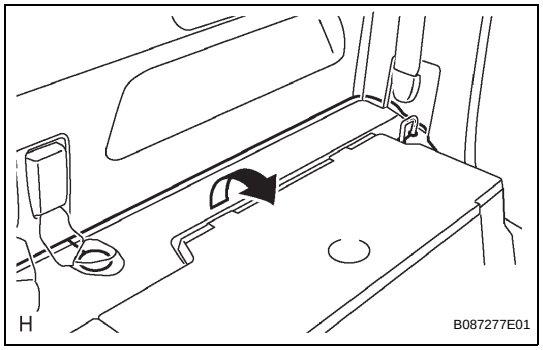
SE



REMOVAL

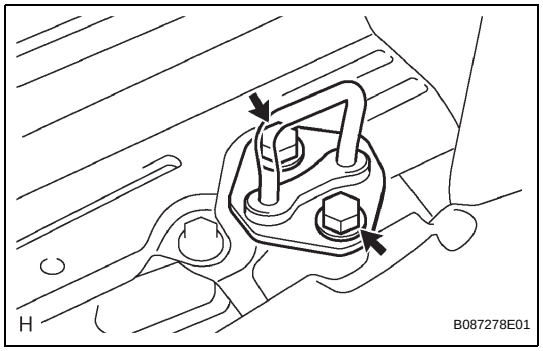
1. REMOVE REAR SEAT ASSEMBLY

(a) Remove the 2 bolts and rear seat.

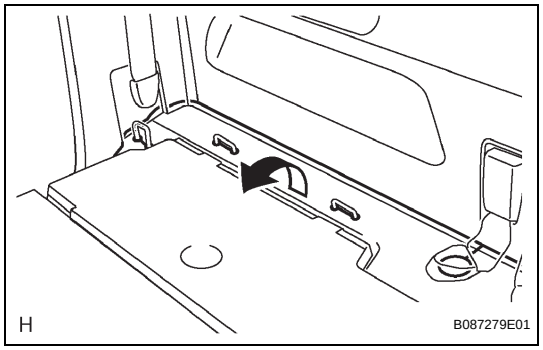


2. REMOVE REAR SEAT BACK LOCK STRIKER SUB-ASSEMBLY

(a) Open the floor carpet.

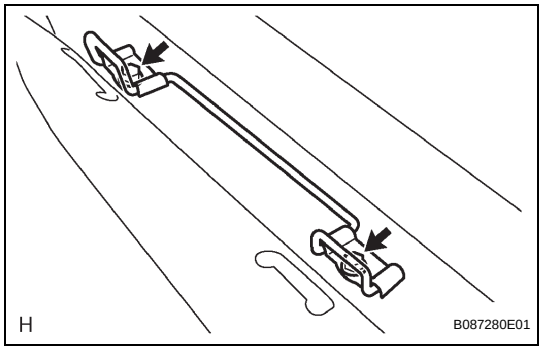


(b) Remove the 2 bolts and rear seat back lock striker.

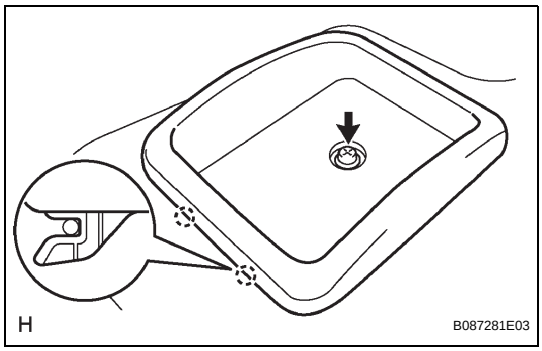


3. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY

(a) Open the floor carpet.

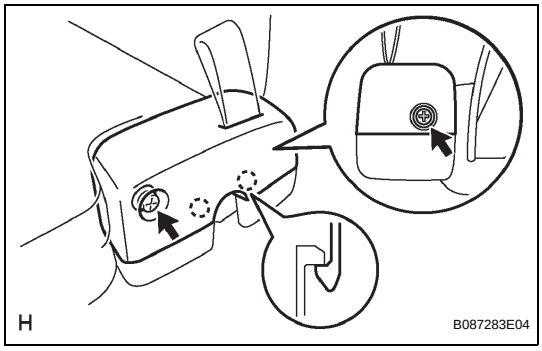


(b) Remove the 2 bolts and child restraint seat anchor bracket.

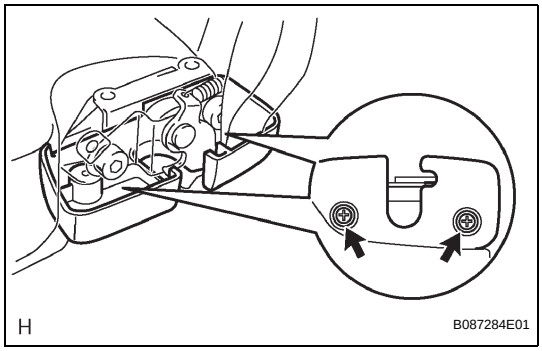


DISASSEMBLY

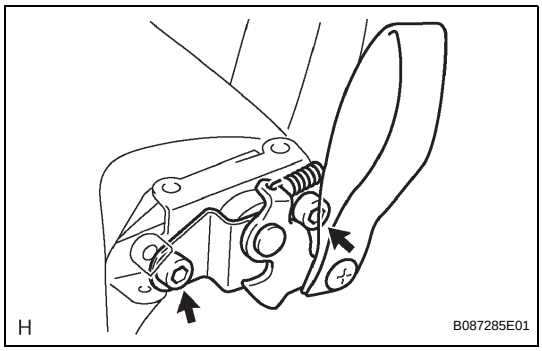
1. REMOVE REAR SEAT BACK TRAY
(a) Remove the screw.
(b) Disengage the 2 claws and remove the sub seat back tray.



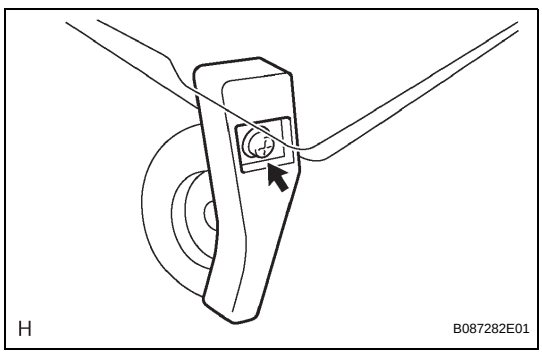
2. REMOVE REAR SEAT BACK COVER
(a) Remove the 2 screws.
(b) Disengage the 2 claws and remove the rear seat back cover.



3. REMOVE REAR SEAT BACK LOCK COVER
(a) Remove the 2 screws and rear seat back lock cover.

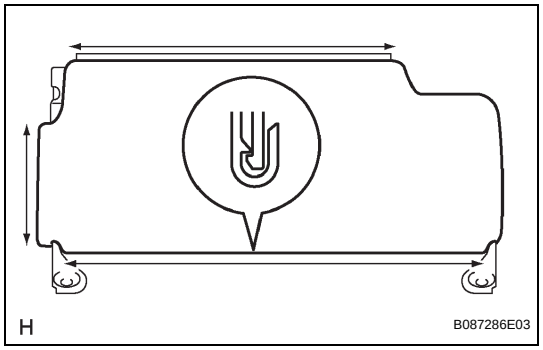


4. REMOVE REAR SEAT BACK LOCK SUB-ASSEMBLY
(a) Using a socket hexagon wrench 5, remove the 2 bolts and rear seat back lock.



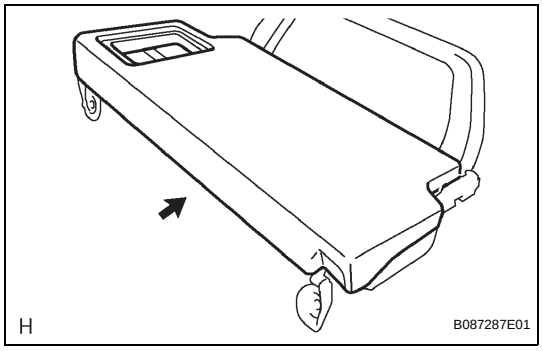
5. REMOVE REAR SEAT CUSHION COVER LH
(a) Remove the screw and rear seat cushion cover.

6. REMOVE REAR SEAT CUSHION COVER RH
HINT:
Follow the same procedures as for the rear seat cushion cover LH.



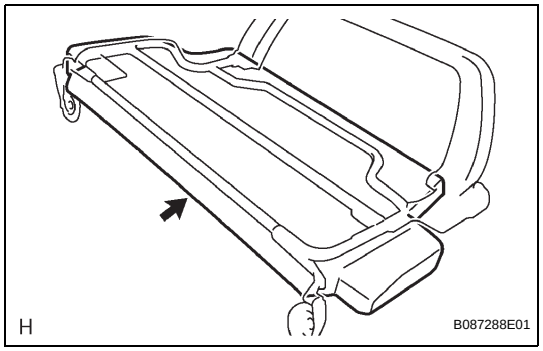
7. REMOVE REAR SEAT CUSHION COVER

(a) Disengage the 3 hooks and remove the rear seat cushion cover.



8. REMOVE REAR SEAT CUSHION UPPER PAD

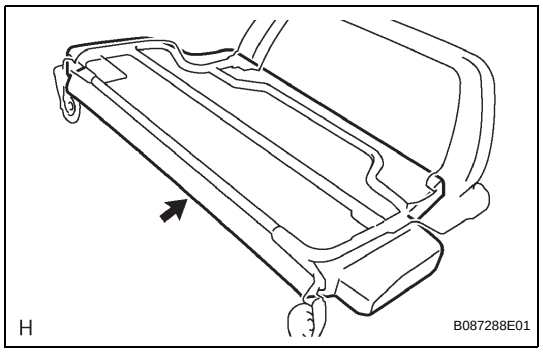
(a) Remove the rear seat cushion upper pad.



9. REMOVE REAR SEAT CUSHION LOWER PAD

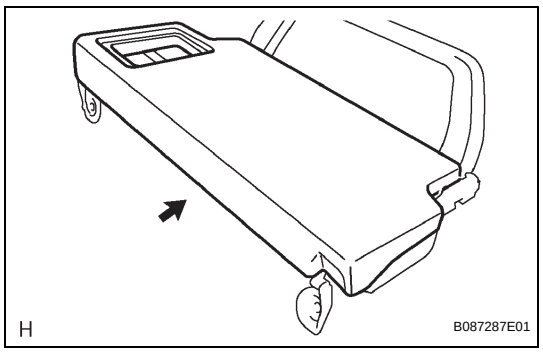
(a) Remove the rear seat cushion lower pad.

REASSEMBLY



1. INSTALL REAR SEAT CUSHION LOWER PAD

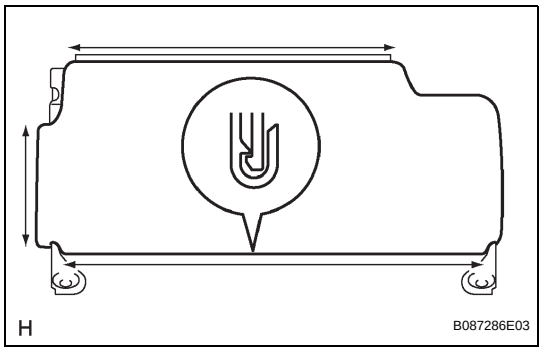
(a) Install the rear seat cushion lower pad.



2. INSTALL REAR SEAT CUSHION UPPER PAD

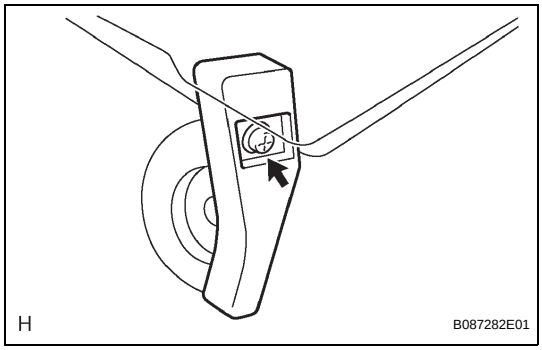
(a) Install the rear seat cushion upper pad.

SE



3. INSTALL REAR SEAT CUSHION COVER

(a) Engage the 3 hooks and install the rear seat cushion cover.

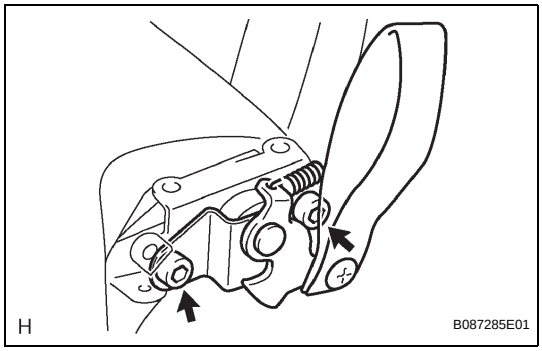


4. INSTALL REAR SEAT CUSHION COVER LH

(a) Install the rear seat cushion cover with the screw.

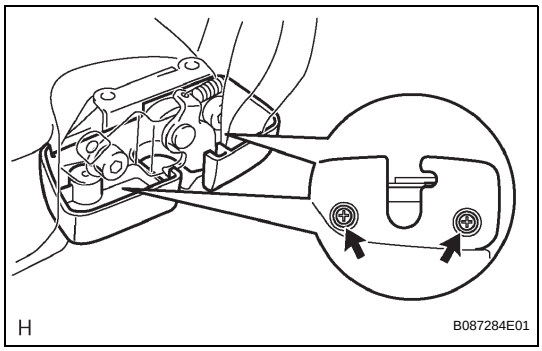
5. INSTALL REAR SEAT CUSHION COVER RH

HINT:
Follow the same procedures as for the rear seat cushion cover LH.



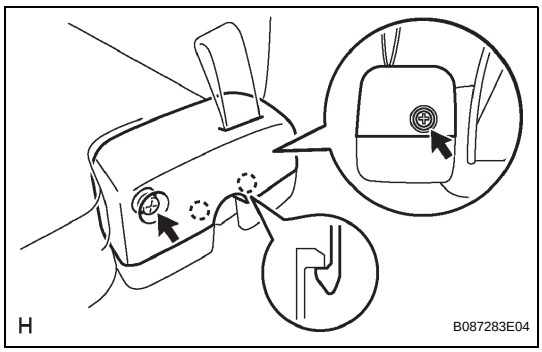
6. INSTALL REAR SEAT BACK LOCK SUB-ASSEMBLY

(a) Using a socket hexagon wrench 5, install the rear seat back lock with the 2 bolts.
Torque: 7.0 N*m (70 kgf*cm, 62 in.*lbf)



7. INSTALL REAR SEAT BACK LOCK COVER

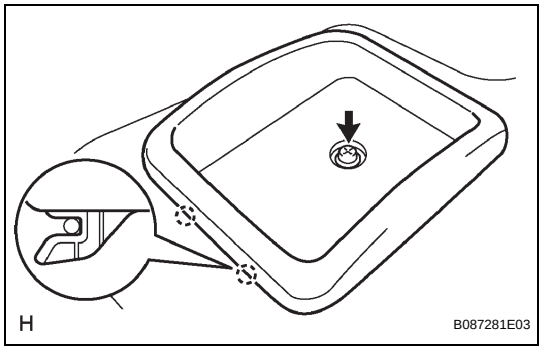
(a) Install the rear seat back lock cover with the 2 screws.



8. INSTALL REAR SEAT BACK COVER

(a) Engage the 2 claws and install the rear seat back cover.
(b) Tighten the 2 screws.

SE

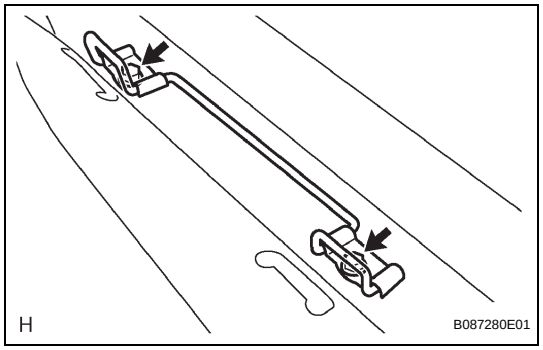


9. INSTALL REAR SEAT BACK TRAY

(a) Engage the 2 claws and install the sub seat back tray.

(b) Tighten the screw.

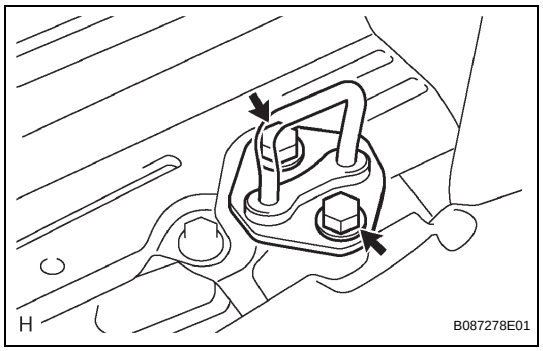
INSTALLATION



1. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY

(a) Install the child restraint seat anchor bracket with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

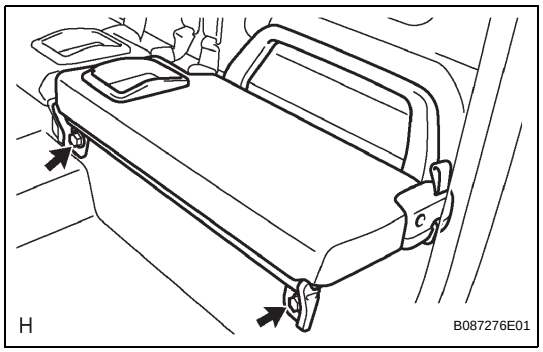
(b) Close the floor carpet.



2. INSTALL REAR SEAT BACK LOCK STRIKER SUB-ASSEMBLY

(a) Install the rear seat back lock striker with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

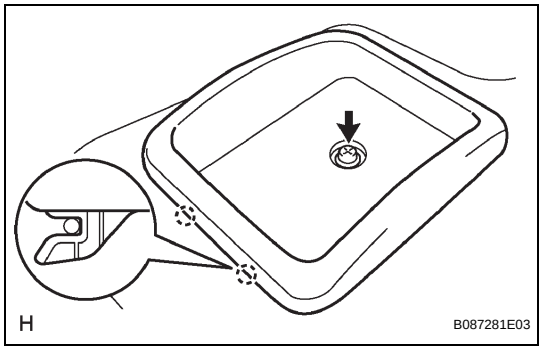
(b) Close the floor carpet.



3. INSTALL REAR SEAT ASSEMBLY

(a) Install the rear seat with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

SE

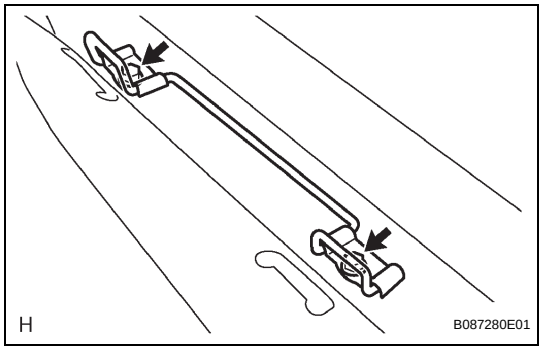


9. INSTALL REAR SEAT BACK TRAY

(a) Engage the 2 claws and install the sub seat back tray.

(b) Tighten the screw.

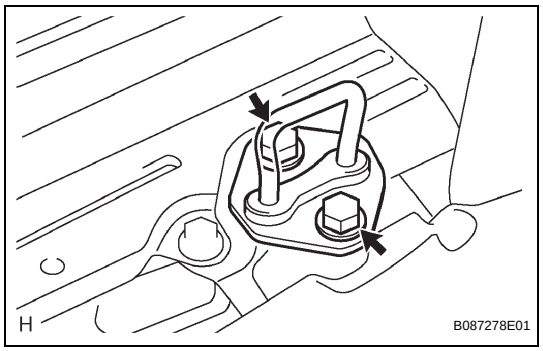
INSTALLATION



1. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY

(a) Install the child restraint seat anchor bracket with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

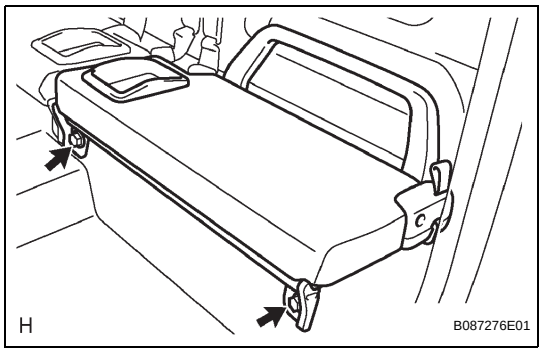
(b) Close the floor carpet.



2. INSTALL REAR SEAT BACK LOCK STRIKER SUB-ASSEMBLY

(a) Install the rear seat back lock striker with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

(b) Close the floor carpet.



3. INSTALL REAR SEAT ASSEMBLY

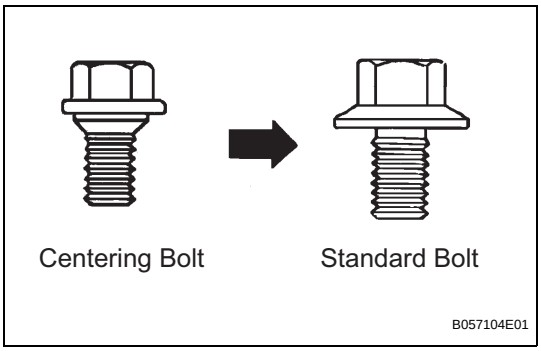
(a) Install the rear seat with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

SE

ADJUSTMENT

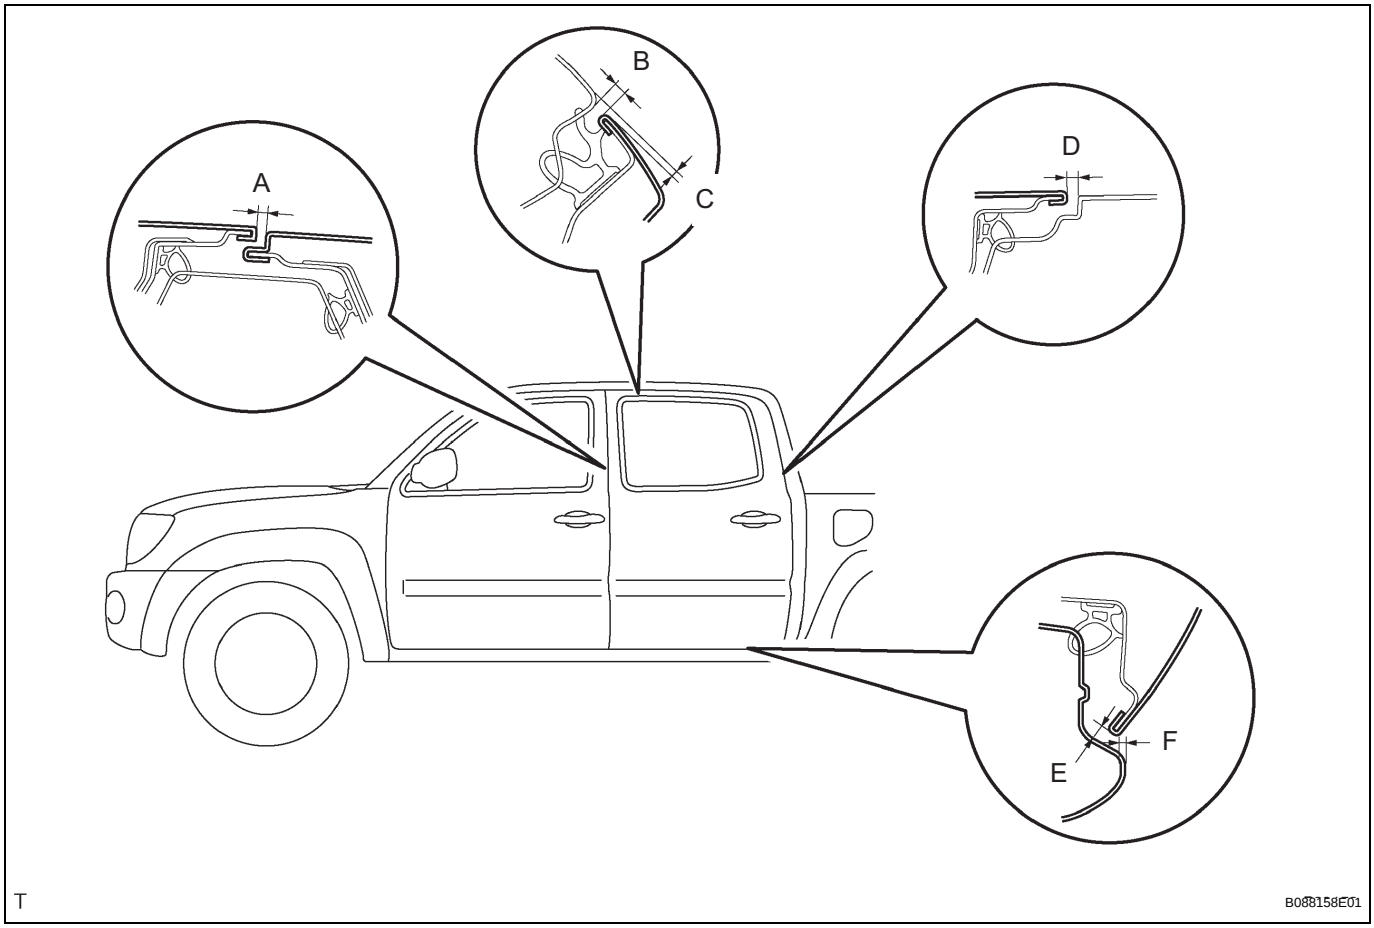
HINT:

- Before adjusting the positions of doors on vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the cable from the negative battery terminal. After making adjustments, inspect the SRS warning lamp, the side airbag system and the curtain shield airbag system for normal operation (See page RS-28).
- Use the same procedure for both the RH and LH sides.
- The procedures listed below are for the LH side.
- Centering bolts are used to mount the door hinge onto the vehicle body and door. The doors cannot be adjusted with the centering bolts on. Substitute the standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (See page SS-2).



1. INSPECT REAR DOOR PANEL SUB-ASSEMBLY LH

(a) Check that the clearance measurements of areas A to F are within the standard ranges.

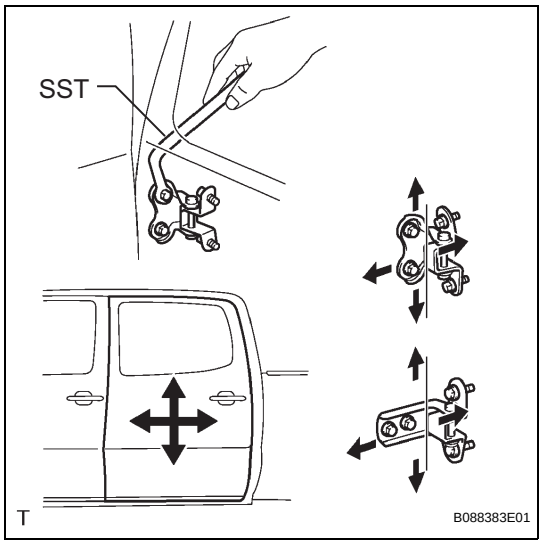


Standard:

Area	Measurement	Area	Measurement
A	5.0 +- 1.5 mm (0.197 +- 0.059 in.)	D	4.5 +- 1.5 mm (0.177 +- 0.059 in.)
B	5.0 +- 1.5 mm (0.197 +- 0.059 in.)	E	5.0 +- 1.5 mm (0.197 +- 0.059 in.)
C	1.8 +- 1.5 mm (0.071 +- 0.059 in.)	F	2.0 +- 1.5 mm (0.079 +- 0.059 in.)

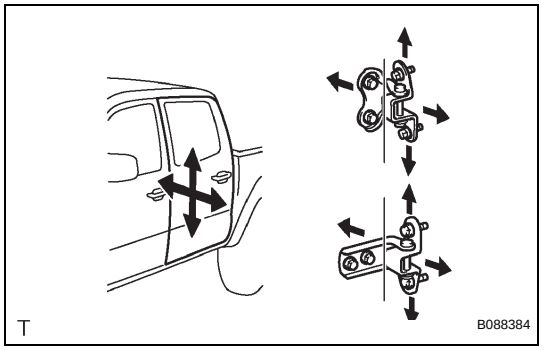
2. ADJUST REAR DOOR PANEL SUB-ASSEMBLY LH

(a) Disconnect the cable from the negative battery terminal.
CAUTION:
Work must be started at least 90 seconds after the ignition switch is turned to OFF and the cable is disconnected from the negative battery terminal. (The SRS is equipped with a back-up power source. If work is started within 90 seconds of disconnecting the cable from the negative battery terminal and the ignition switch being turned to OFF, the SRS may deploy.)



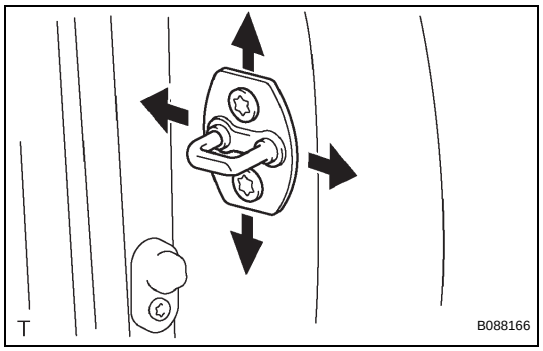
(b) Using SST, adjust the door horizontally and vertically by loosening the body side hinge bolts.
SST 09812-00010

(c) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(d) Loosen the door side hinge bolts and adjust the door position.

(e) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



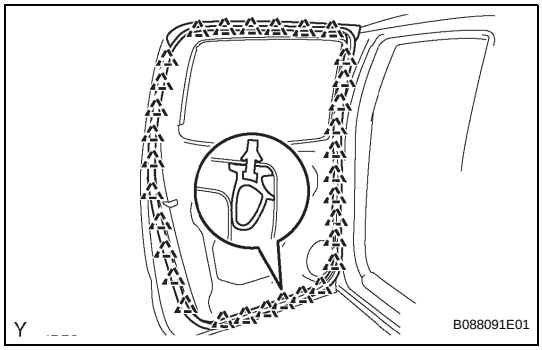
(f) Adjust the striker position by slightly loosening the striker mounting screws using a torx socket wrench T40 and hitting the striker with a plastic hammer.

(g) Using a torx socket wrench T40 , tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

(h) Connect the cable to the negative battery terminal.
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

(i) Inspect the SRS warning lamp (See page RS-28).

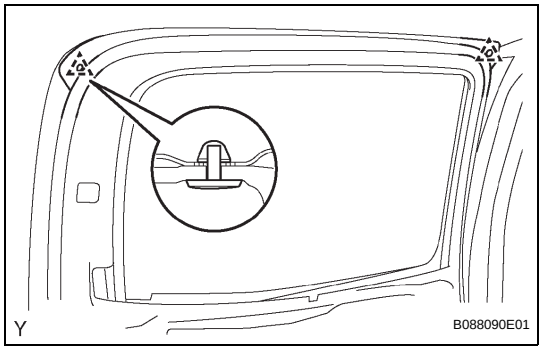
ED



REASSEMBLY

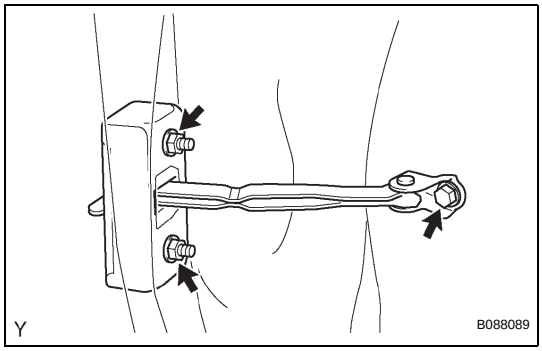
1. INSTALL REAR DOOR WEATHERSTRIP LH

(a) Engage the 32 clips and install a new rear door weatherstrip LH.



(b) Engage the 2 clips.

(c) Remove the tab tape at both ends of 2-sided tape attached to the weather strip, and attach the weather strip to the door panel with the 2-sided tape.



2. INSTALL REAR DOOR CHECK ASSEMBLY LH

(a) Apply MP grease to the sliding areas of the check.

(b) Install the rear door check assembly onto the door panel with the 2 nuts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

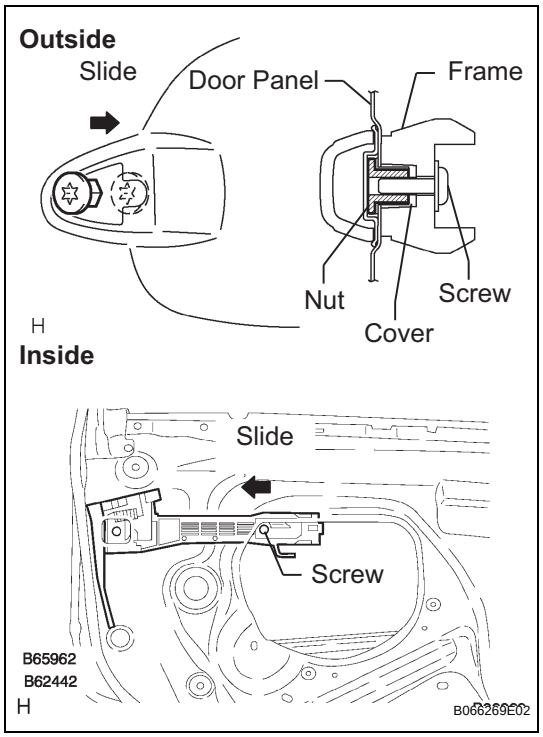
(c) Apply adhesive to the threads of the bolt.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(d) Install the rear door check assembly onto the body panel with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

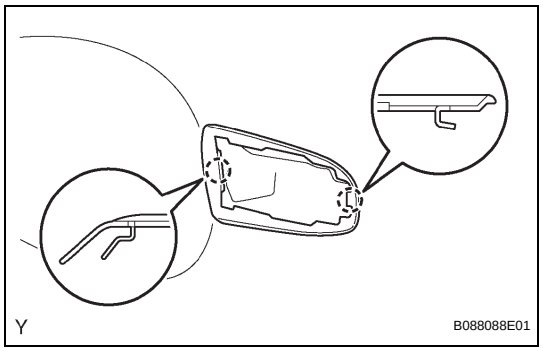
3. INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY LH

(a) Apply MP grease to the sliding areas of the rear door outside handle flame sub-assembly LH.

ED

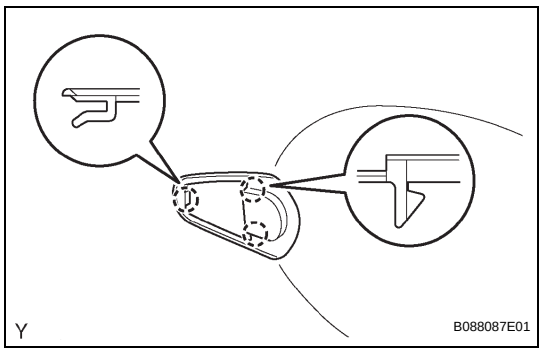


(b) Using a torx socket wrench T30 , install the handle frame sub-assembly with the screw.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
NOTICE:
A cover should be inserted between the nut and the door panel.

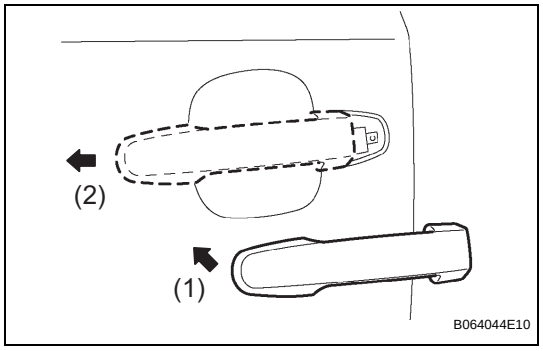


4. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY RH

(a) Engage the 2 claws and install the outside handle rear pad.

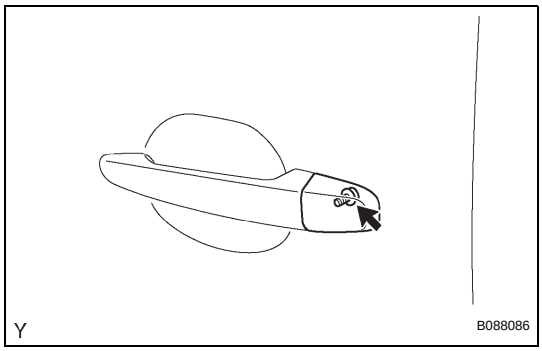


(b) Engage the 3 claws and install the outside handle front pad.



(c) Pushing the outside handle in the direction of the arrow marks shown in the illustration, install the outside handle.
NOTICE:
If the release plate is not pulled and held when installing the outside handle, the release plate will interfere with the outside handle. This will damage the release plate.

ED



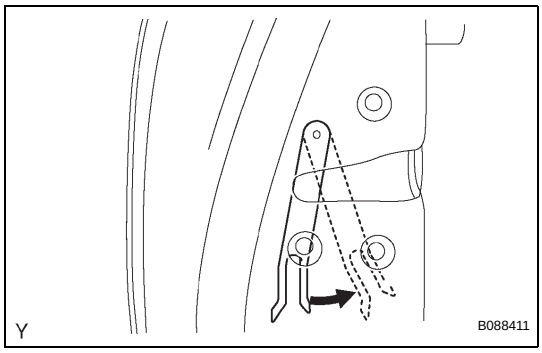
5. INSTALL REAR DOOR OUTSIDE HANDLE COVER LH

(a) Using a torx socket wrench T30 , install the rear door outside handle cover with the screw.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

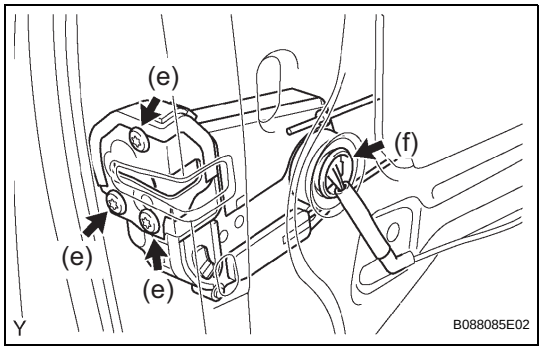
6. INSTALL REAR DOOR LOCK ASSEMBLY LH

(a) Apply MP grease to the sliding and rotating areas of the rear door lock assembly.

(b) Install a new door lock wire harness packing.
NOTICE:
- **When reinstalling the door lock, always use a new packing.**
- **Do not allow grease or dirt to contaminate the gap between the door panel and packing.**
- **Old packing and damaged packing cannot effectively protect against water, which could damage the door lock.**



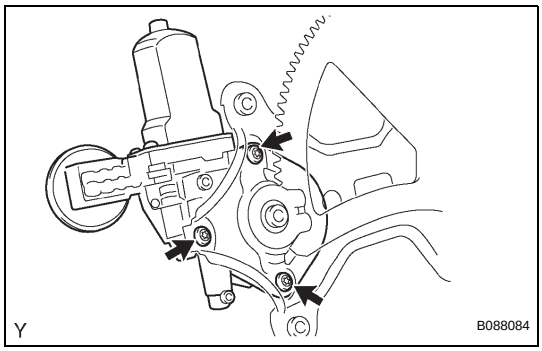
(c) Pull and hold the release plate of the outside handle frame, as shown in the illustration.



(d) Apply adhesive to the threads of the 3 screws.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(e) Using a torx socket wrench T30 , install the rear door lock with the 3 screws.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

(f) Connect the connector.

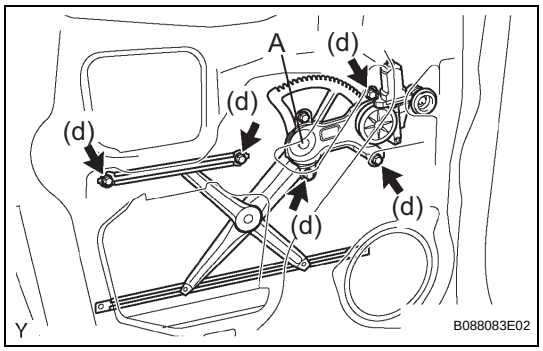


7. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a torx socket wrench T25 , install the power window regulator motor assembly LH with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

8. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY LH

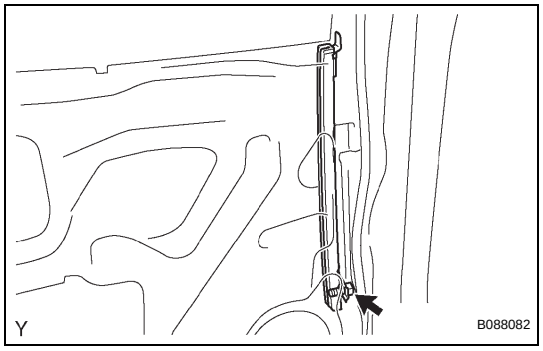
(a) Apply MP grease to the sliding and rotating areas of the rear door window regulator sub-assembly LH.
NOTICE:
Do not apply grease to the window regulator spring.



(b) Loosely screw bolt A onto the rear door window regulator sub-assembly LH.

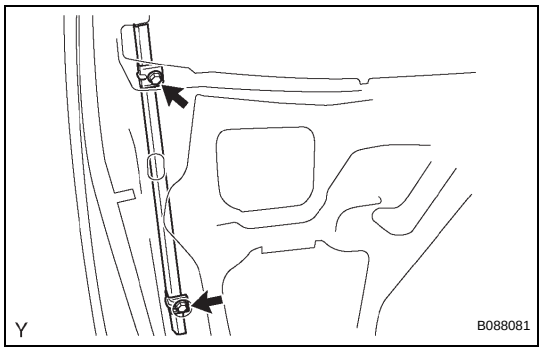
(c) Insert the rear door window regulator into the door panel. Use bolt A to hang the rear door window regulator on the door panel.
NOTICE:
Be careful not to drop the window regulator as it may be damaged.

(d) Install the rear door window regulator with the 5 bolts, and tighten bolt A.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



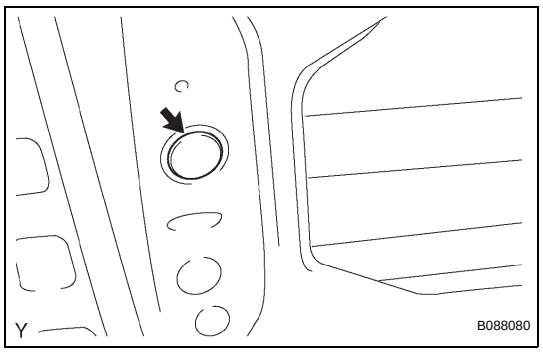
9. INSTALL REAR DOOR FRONT WINDOW GUIDE SUB-ASSEMBLY LH

(a) Install the rear door front window guide sub-assembly LH with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 70 in.*lbf)

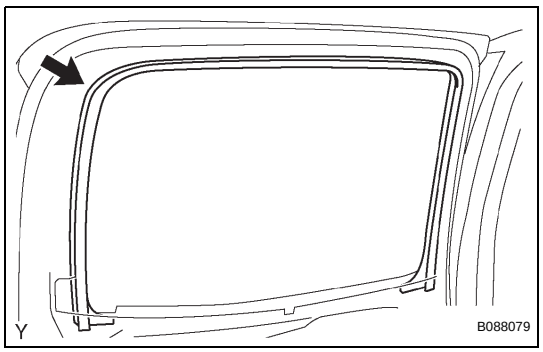


10. INSTALL REAR DOOR REAR LOWER WINDOW FRAME SUB-ASSEMBLY LH

(a) Install the rear door rear lower window frame sub-assembly LH with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 70 in.*lbf)



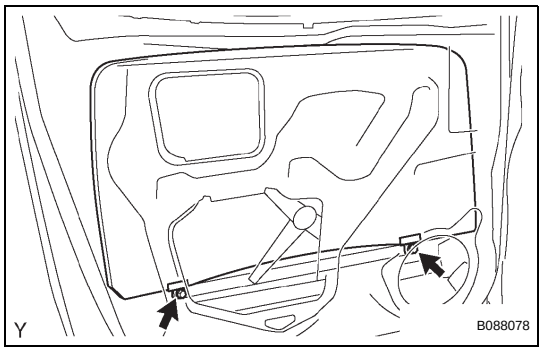
(b) Install the hole plug.



11. INSTALL REAR DOOR GLASS RUN LH

(a) Install the rear door glass run LH.

ED

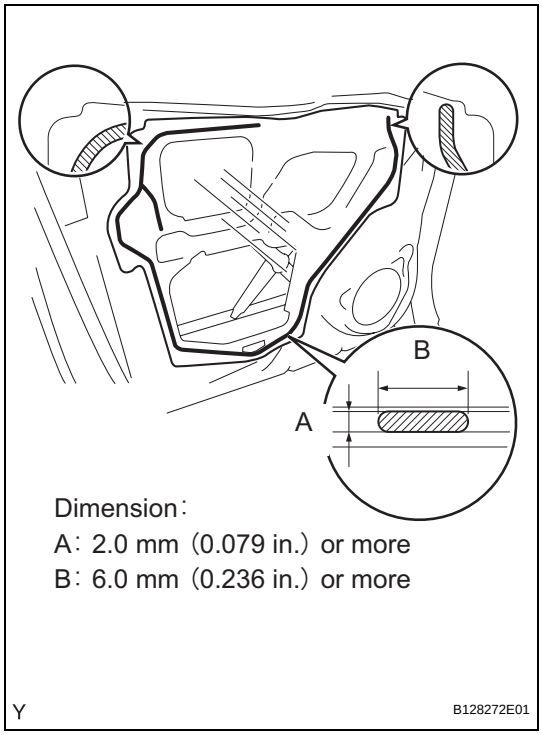


12. INSTALL REAR DOOR GLASS SUB-ASSEMBLY LH

(a) Install the rear door glass sub-assembly LH onto the rear door window regulator sub-assembly LH with the 2 bolts.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

13. INSTALL REAR DOOR BELT MOULDING LH (See page ET-35)

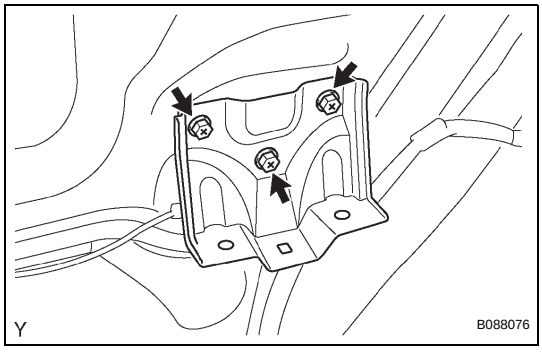


14. INSTALL REAR DOOR SERVICE HOLE COVER LH

(a) Apply butyl tape to the door panel, then install the rear door service hole cover LH as shown in the illustration.

HINT:

- When installing the service hole cover, pull the links and connectors out through the service hole cover.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.



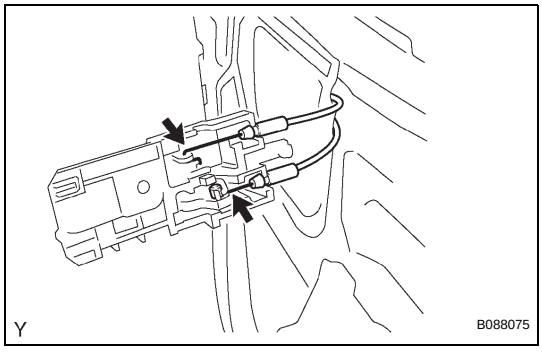
15. INSTALL NO. 2 REAR DOOR TRIM BRACKET

(a) Install the No. 2 rear door trim bracket with the 3 screws.

16. INSTALL REAR SPEAKER ASSEMBLY

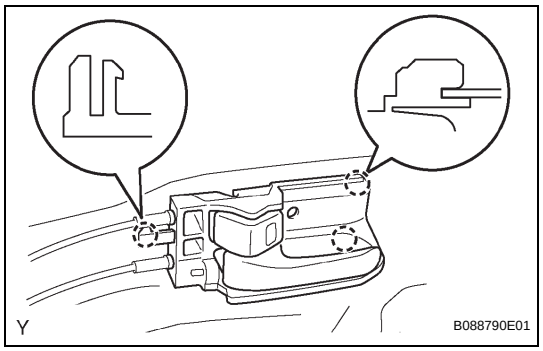
HINT:

- Access cab (See page AV-88)
- Double cab (See page AV-86)

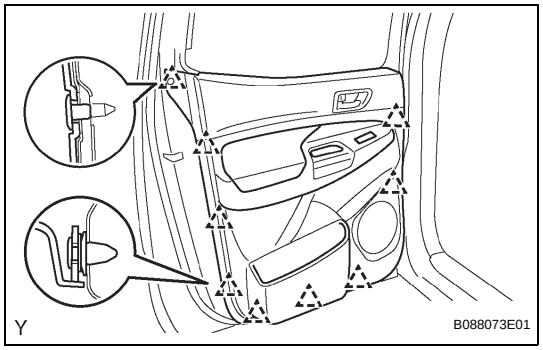


17. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY LH

(a) Connect the 2 cables to the rear door inside handle sub-assembly LH.



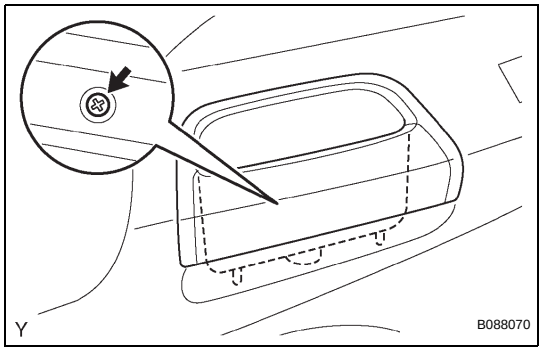
(b) Engage the 3 claws and install the rear door inside handle sub-assembly LH onto the door panel.



18. INSTALL REAR DOOR TRIM PANEL ASSEMBLY LH

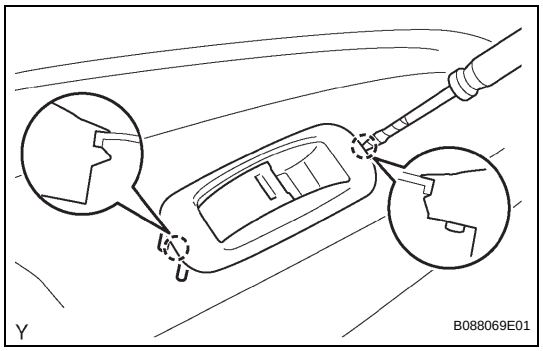
(a) Engage the 9 clips and install the rear door trim panel assembly LH.

(b) Install the door assist grip assembly LH with the screw.

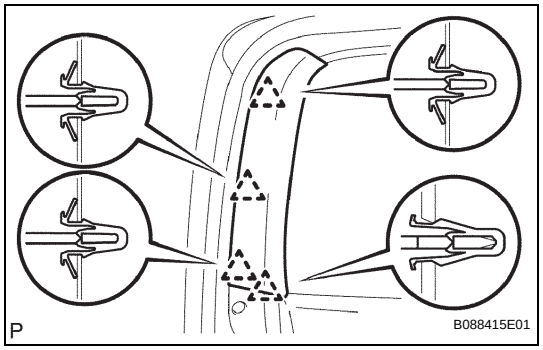


19. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Connect the connector.



(b) Engage the 2 claws and install the rear power window regulator switch assembly.



20. INSTALL REAR DOOR FRAME GARNISH LH

(a) Engage the 4 clips and install the rear door frame garnish LH.

NOTICE:

Confirm that no clips remain on the door panel before the garnish is installed. Transfer any remaining clips to the garnish side before installing it. Installing the garnish with any clips remaining on the door panel side could cause the clips to drop inside the door panel.

21. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

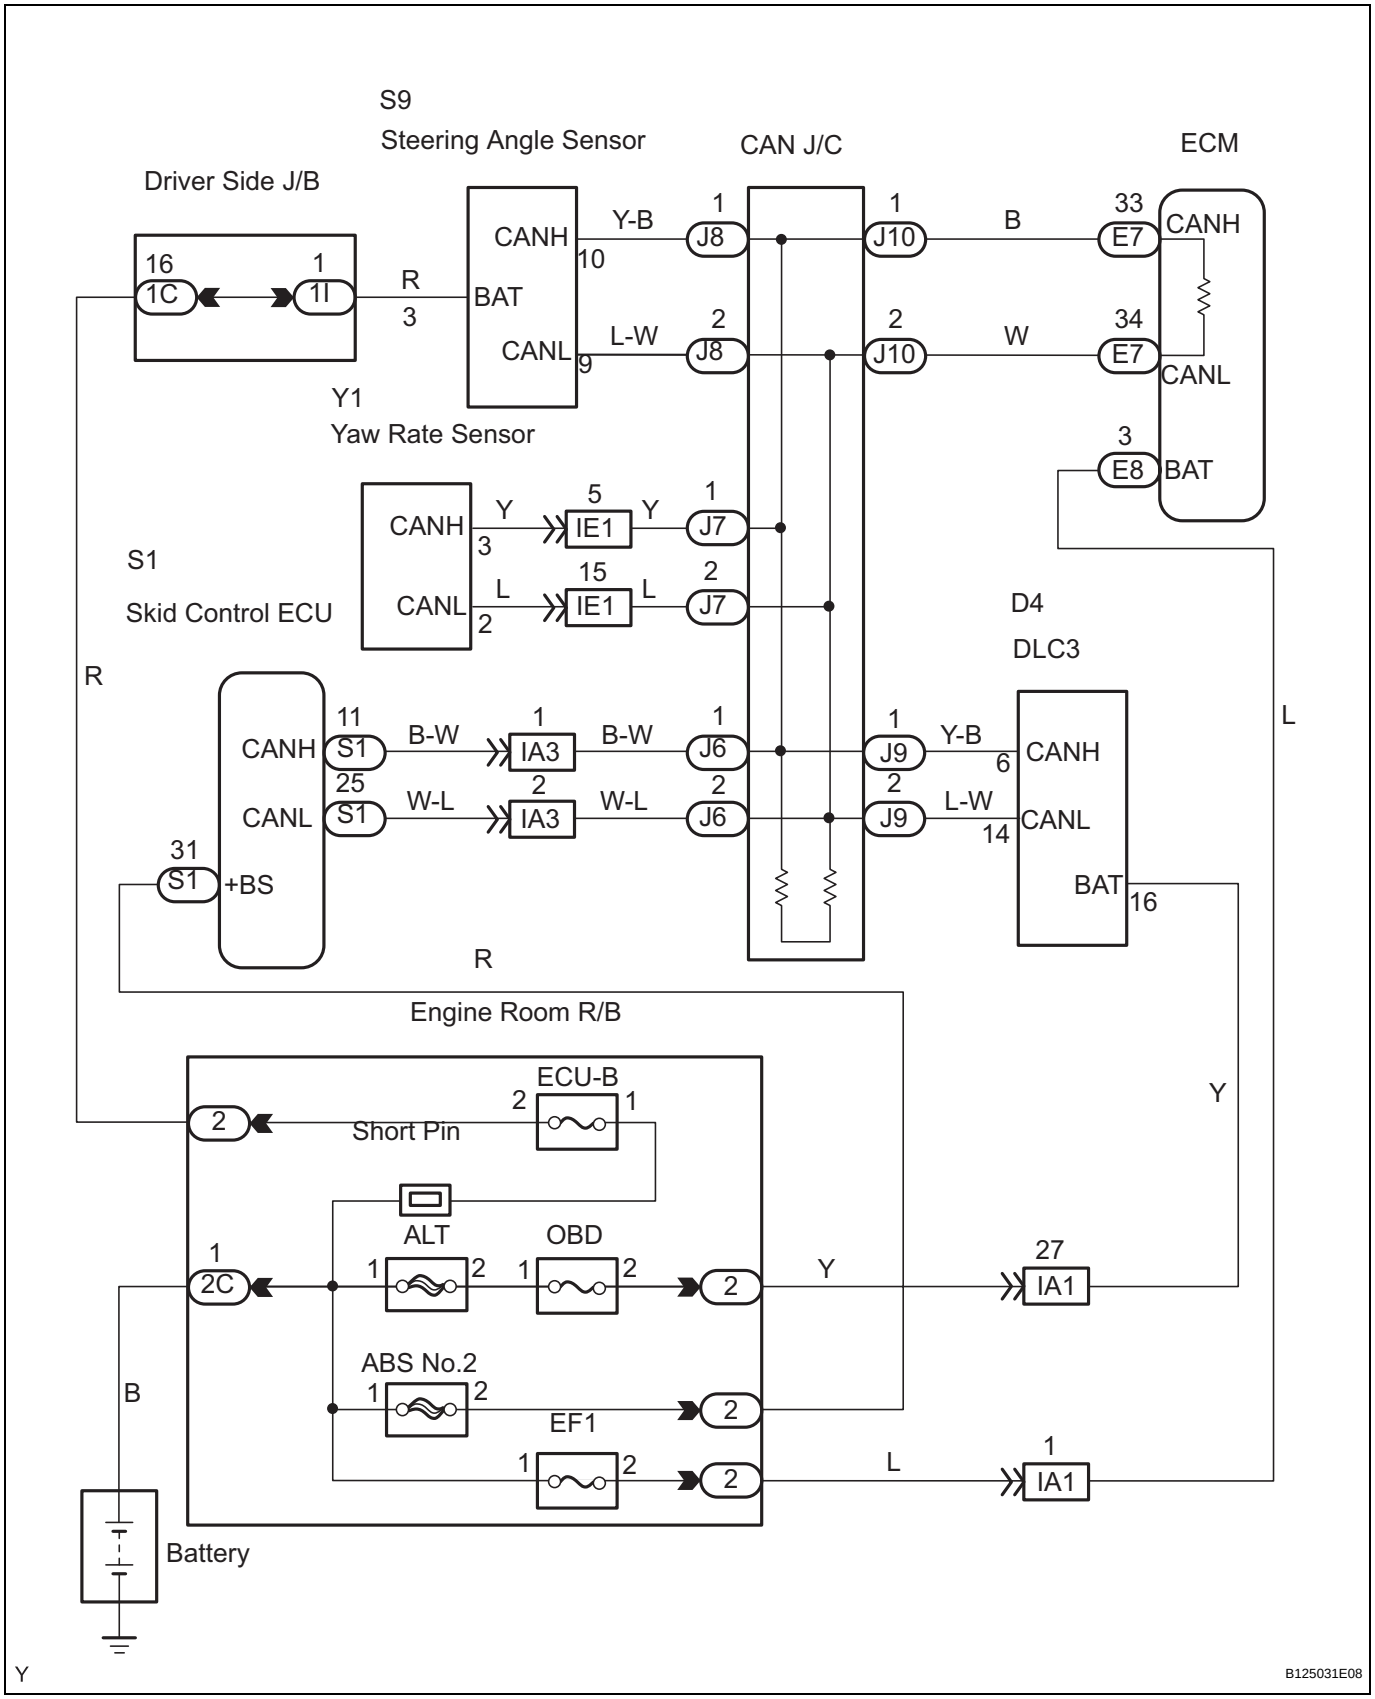
Short to B+ in CAN Bus Line

DESCRIPTION

A short to +B is suspected in the CAN bus line when there is continuity between terminals 16 (BAT) and 6 (CANH) or terminals 16 (BAT) and 14 (CANL) of the DLC3.

Symptom	Trouble Area
There is continuity between terminals 16 (BAT) and 6 (CANH) or 16 (BAT) and 14 (CANL) of the DLC3.	• Short to +B in CAN bus line • ECM • Skid control ECU • Steering angle sensor • Yaw rate sensor

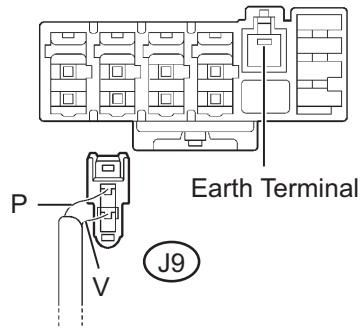
WIRING DIAGRAM



CA

1	CHECK CAN BUS LINES FOR SHORT TO +B (DLC3 SUB BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



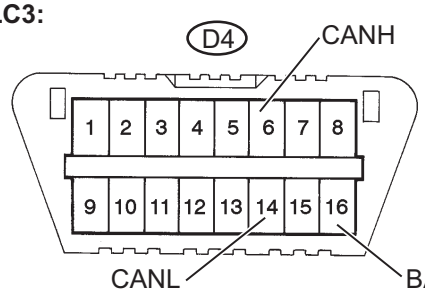
G031933E13

(a) Disconnect the DLC3 sub bus line connector (J9) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E58

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-16 (BAT)	• Ignition switch OFF • Stop light switch OFF	1 MΩ or more
D4-14 (CANL) - D4-16 (BAT)		

NG → **REPAIR OR REPLACE DLC3 BRANCH LINE OR CONNECTOR (CAN-H,CAN-L)**

OK

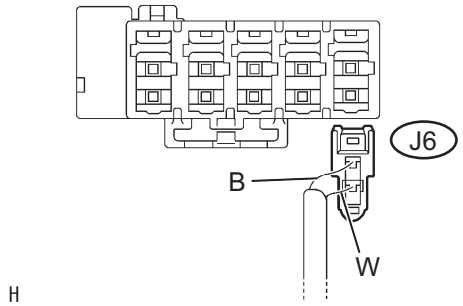
2	CONNECT CONNECTOR

(a) Reconnect the DLC3 sub bus line connector (J9) to the CAN J/C.

NEXT

3	CHECK CAN BUS LINES FOR SHORT TO +B (SKID CONTROL ECU SUB BUS LINE)

CAN J/C "B" Side (w/o Earth Terminal) Wire Harness View:



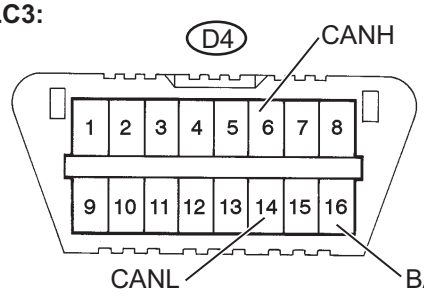
G031932E78

(a) Disconnect the skid control ECU sub bus line connector (J6) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E58

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-16 (BAT)	• Ignition switch OFF • Stop light switch OFF	1 MΩ or more
D4-14 (CANL) - D4-16 (BAT)		

OK → **Go to step 10**

NG

4	CONNECT CONNECTOR

(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

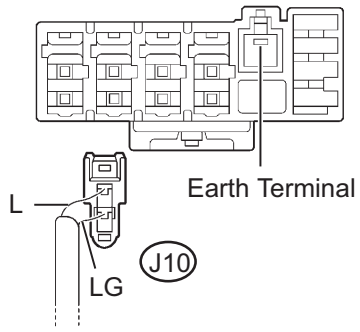
9	CHECK CAN BUS LINE FOR SHORT TO GND (ECM MAIN BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



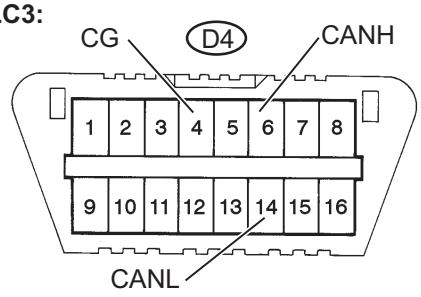
G031933E12

(a) Disconnect the ECM main bus line connector (J10) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E59

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-4 (CG)	•Ignition switch OFF •Stop light switch OFF	3 kΩ or more
D4-14 (CANL) - D4-4 (CG)		

CA

OK → **Go to step 16**

NG

REPLACE CAN J/C

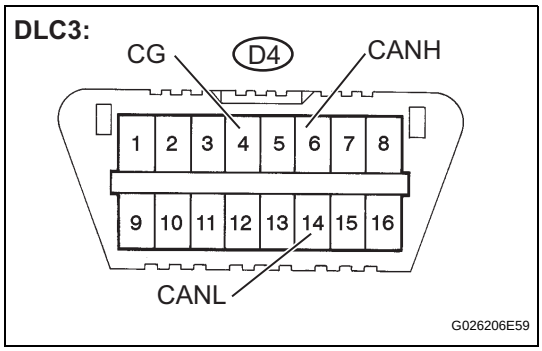
10	CONNECT CONNECTOR

(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

NEXT

11	CHECK CAN BUS LINE FOR SHORT TO GND (SKID CONTROL ECU SUB BUS LINE)

(a) Disconnect the skid control ECU connector (S1).



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-4 (CG)	• Ignition switch OFF • Stop light switch OFF	3 kΩ or more
D4-14 (CANL) - D4-4 (CG)		

OK → REPLACE MASTER CYLINDER SOLENOID

NG

REPAIR OR REPLACE SKID CONTROL ECU BRANCH LINE OR CONNECTOR (CAN-H,CAN-L)

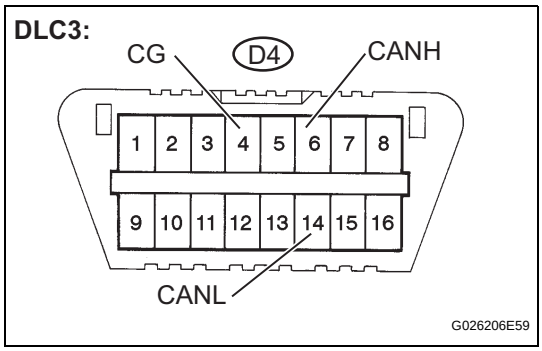
12 CONNECT CONNECTOR

(a) Reconnect the yaw rate sensor sub bus line connector (J7) to the CAN J/C.

NEXT

CA

13 CHECK CAN BUS LINE FOR SHORT TO GND (YAW RATE SENSOR SUB BUS LINE)



(a) Disconnect the yaw rate sensor connector (Y1).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6(CANH) - D46-4(CG)	•Ignition switch OFF •Stop light switch OFF	3 kΩ or more
D4-14(CANL) - D4-4(CG)		

OK → REPLACE YAW RATE SENSOR

NG

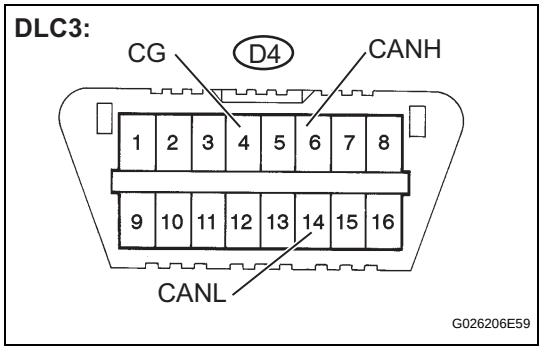
REPAIR OR REPLACE YAW RATE SENSOR SUB BUS LINE OR CONNECTOR (CAN-H,CAN-L)

14 CONNECT CONNECTOR

(a) Reconnect the steering angle sensor sub bus line connector (J8) to the CAN J/C.

NEXT

15	CHECK CAN BUS LINE FOR SHORT TO GND (STEERING ANGLE SENSOR SUB BUS LINE)



(a) Disconnect the steering angle sensor connector (S9).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-4 (CG)	• Ignition switch OFF • Stop light switch OFF	3 kΩ or more
D4-14 (CANL) - D4-4 (CG)		

OK → REPLACE STEERING ANGLE SENSOR

NG

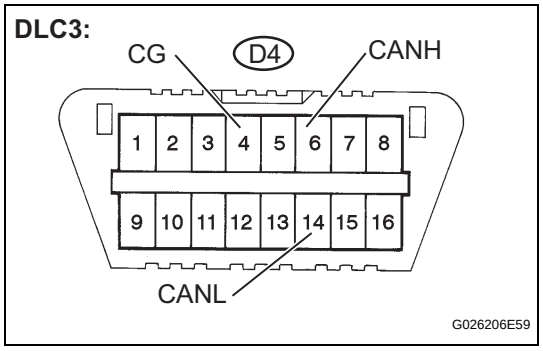
REPAIR OR REPLACE STEERING ANGLE SENSOR BRANCH LINE OR CONNECTOR (CAN-H,CAN-L)

16	CONNECT CONNECTOR

(a) Reconnect the ECM main bus line connector (J10) to the CAN J/C.

NEXT

17	CHECK CAN BUS LINE FOR SHORT TO GND (ECM MAIN BUS LINE)



(a) Disconnect the ECM connector (E7).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-4 (CG)	• Ignition switch OFF • Stop light switch OFF	3 kΩ or more
D4-14 (CANL) - D4-4 (CG)		

OK → REPLACE ECM

NG

REPAIR OR REPLACE ECM MAIN BUS LINE OR CONNECTOR (CAN-H,CAN-L)

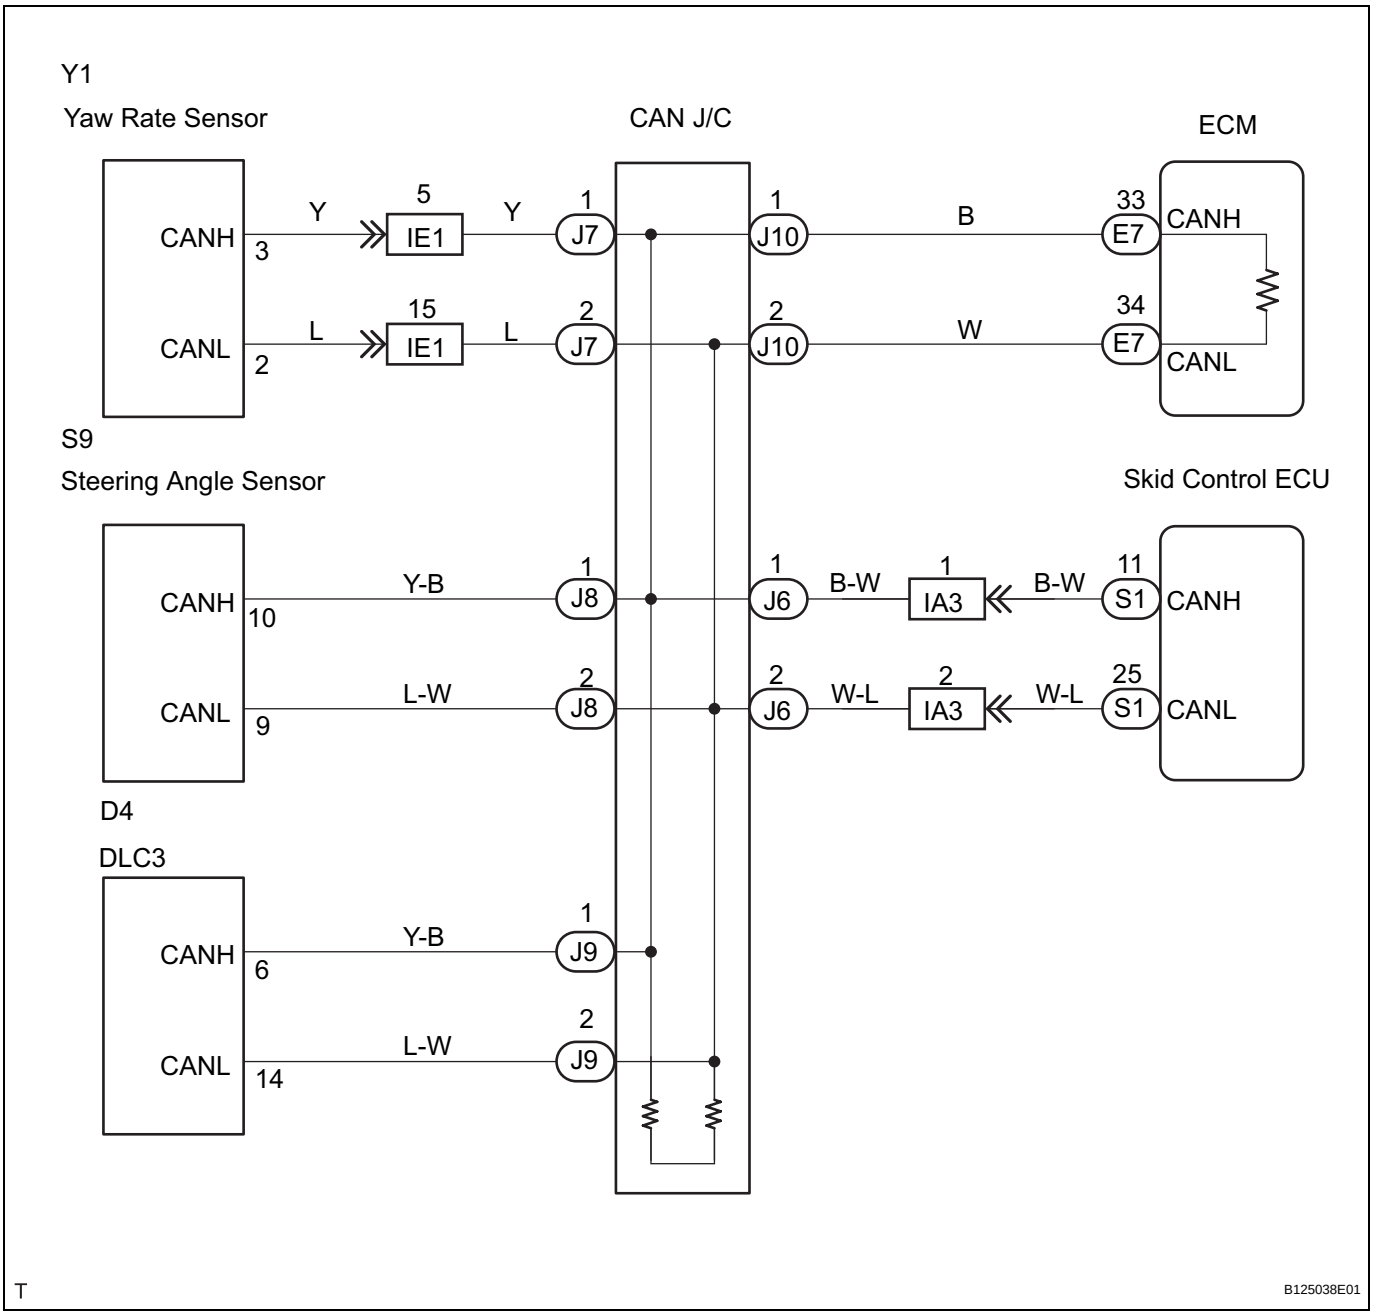
Open in One Side of CAN Sub Bus Line

DESCRIPTION

If 2 or more ECUs and/or sensors do not appear on the intelligent tester "BUS CHECK" screen via the CAN VIM , one side of the CAN sub-bus line may be open. (ONE side of the CAN-H [sub-bus line] / CAN-L [sub-bus line] of the ECU and/or sensor is open.)

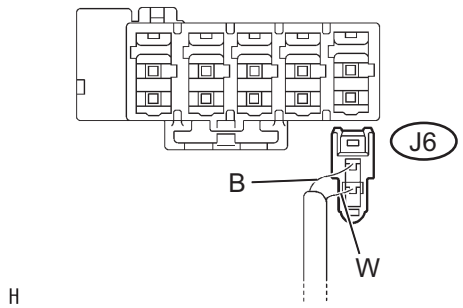
Symptom	Trouble Alrea
2 or more ECUs and/or sensors do not appear on the intelligent tester "BUS CHECK" screen via the CAN VIM.	• One side of the CAN sub-bus line is open • Skid control ECU • Steering angle sensor • Yaw rate sensor • ECM • CAN J/C

WIRING DIAGRAM



1	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (SKID CONTROL ECU SUB BUS LINE)

CAN J/C "B" Side (w/o Earth Terminal) Wire Harness View:



(a) Disconnect the skid control ECU sub bus line connector (J6) from the CAN J/C.
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

(b) Connect the intelligent tester via the CAN VIM to the DLC3.
(c) Turn the ignition switch ON.
(d) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (See page CA-14).

Result

A	"ABS/VSC/TRAC" does not appear
B	2 or more ECUs and/or sensors do not appear

A → **Go to step 8**

B

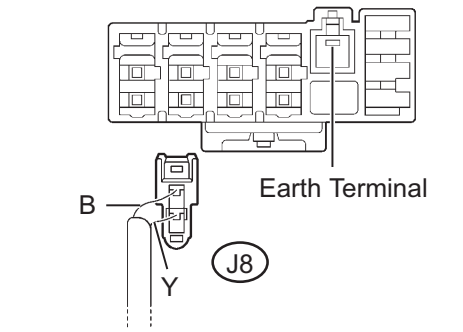
2	CONNECT CONNECTOR

(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

NEXT

3	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (STEERING ANGLE SENSOR SUB BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



(a) Disconnect the steering angle sensor sub bus line connector (J8) from the CAN J/C.
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

(b) Connect the intelligent tester via the CAN VIM to the DLC3.
(c) Turn the ignition switch ON.
(d) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (See page CA-14).

Result

A	"STEERING SENSOR" does not appear
B	2 or more ECUs and/or sensors do not appear

A → **Go to step 10**

B

CA

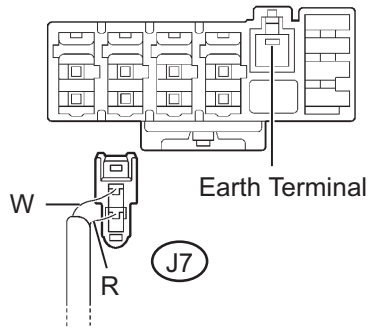
4	CONNECT CONNECTOR

(a) Reconnect the steering angle sensor sub bus line connector (J8) CAN J/C.

NEXT

5	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (YAW RATE SENSOR SUB BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



G031933E10

(a) Disconnect the yaw rate sensor sub bus line connector (J7) from the CAN J/C.
CAUTION:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

(b) Connect the intelligent tester via the CAN VIM to the DLC3.
(c) Turn the ignition switch ON.
(d) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (See page CA-14).

Result

A	"YAW /DECELERAT" does not appear
B	2 or more ECUs and/or sensors do not appear

B → **Go to step 12**

A

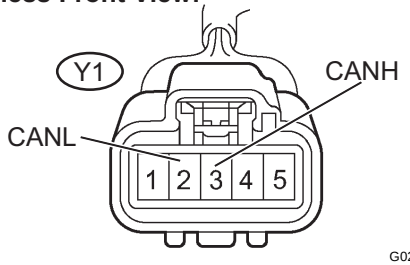
6	CONNECT CONNECTOR

(a) Reconnect the yaw rate sensor sub bus line connector (J7) to the CAN J/C.

NEXT

7	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (YAW RATE SENSOR SUB BUS LINE)

Yaw Rate Sensor Wire Harness Front View:



H

G026359E46

(a) Disconnect the yaw rate sensor connector (Y1).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified value
Y1-2 (CANL) - Y1-3 (CANH)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE YAW RATE SENSOR SUB BUS LINE OR CONNECTOR (CAN-H or CAN-L)**

OK

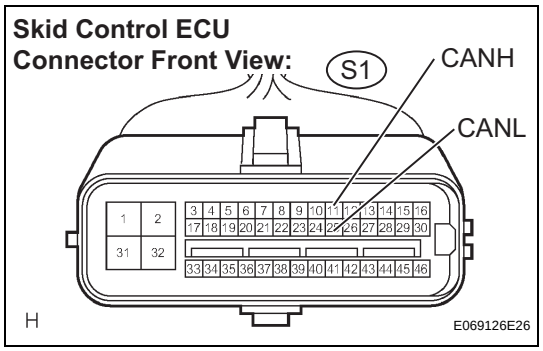
REPLACE YAW RATE SENSOR

8	CONNECT CONNECTOR

(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

NEXT

9	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (SKID CONTROL ECU SUB BUS LINE)



(a) Disconnect the skid control ECU connector (S1).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified value
S1-11 (CANH) - S1-25 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE SKID CONTROL ECU BRANCH LINE OR CONNECTOR (CAN-H or CAN-L)**

OK

REPLACE MASTER CYLINDER SOLENOID

10	CONNECT CONNECTOR

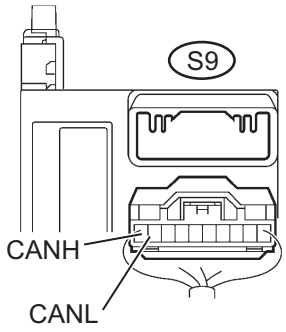
(a) Reconnect the steering angle sensor sub bus line connector (J8) to the CAN J/C.

NEXT

CA

11	CHECK FOR AN OPEN IN ONE SIDE OF THE CAN SUB BUS LINE (STEERING ANGLE SENSOR SUB BUS LINE)

Steering Angle Sensor Wire Harness View:



G030155E23

(a) Disconnect steering angle sensor connector (S9).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified value
S9-10 (CANH) - S9-9 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE STEERING ANGLE SENSOR BRANCH LINE OR CONNECTOR (CAN-H or CAN-L)**

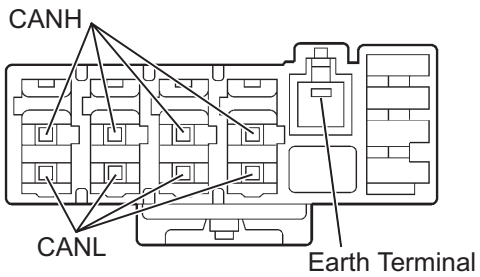
OK

CA

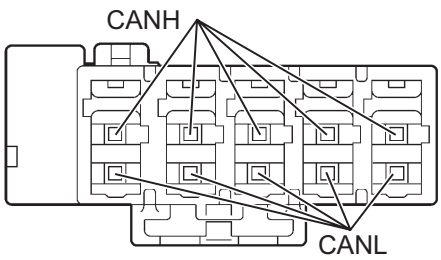
REPLACE STEERING ANGLE SENSOR

12	INSPECT CAN J/C

CAN J/C "A" Side (w/ Earth Terminal):



CAN J/C "B" Side (w/o Earth Terminal):



G026214E10

(a) Disconnect connectors (J6), (J7), (J8), (J9), and (J10) from the CAN J/C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified value
1 (CANH) - 2 (CANL)	• Ignition switch OFF • Stop light switch OFF	108 to 132 Ω

NG → **REPLACE CAN J/C**

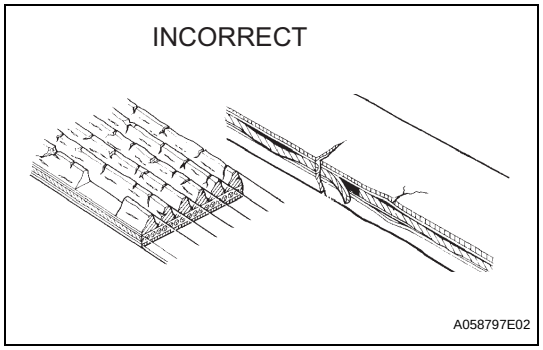
OK

REPLACE ECM

ENGINE

ON-VEHICLE INSPECTION

1. **INSPECT ENGINE COOLANT (See page CO-2)**
2. **INSPECT ENGINE OIL (See page LU-2)**
3. **INSPECT BATTERY (See page CH-4)**
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
5. **INSPECT SPARK PLUG (See page IG-5)**
6. **INSPECT DRIVE BELT**

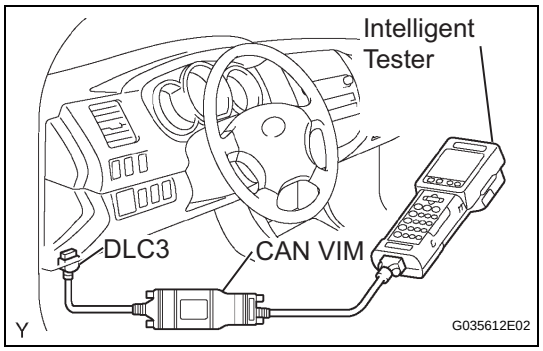


(a) Visually check the driver belt for excessive wear, frayed cords, etc. If any defect is found, replace the drive belt.
HINT:
Cracks on the rib side of a drive belt are considered acceptable. If the drive belt has chunks missing from the ribs, it should be replaced.

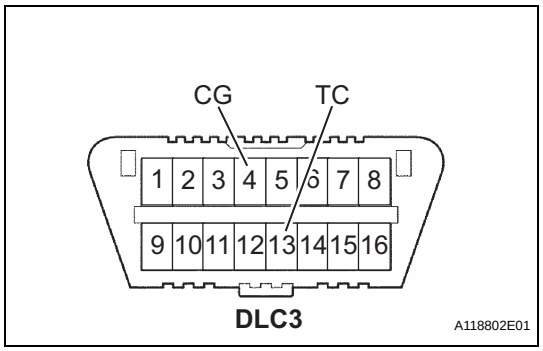
7. **INSPECT IGNITION TIMING**

NOTICE:
- **Turn all electrical systems OFF.**
- **Operate the inspection when the cooling fan motor is turned OFF.**

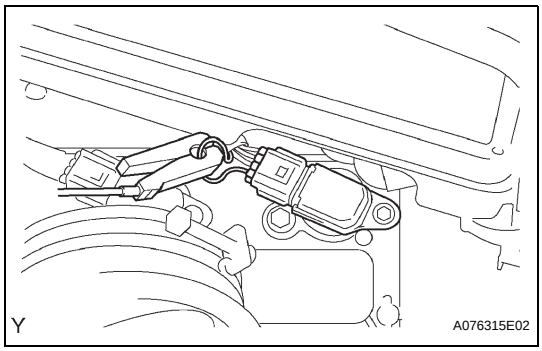
(a) Warm up the engine.



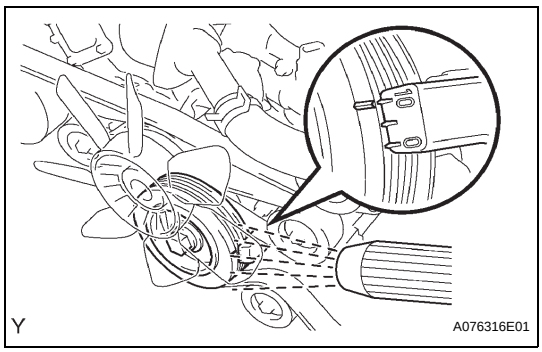
(b) When using the intelligent tester.
(1) Connect the intelligent tester to the DLC3.
(2) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / DATA LIST / IGN ADVANCE.
(3) Inspect the ignition timing during idling.
Ignition timing:
7 to 24°CA BTDC during idling
(Transmission in neutral position)
(4) Check that the ignition timing advances immediately when the engine speed is increased.



(c) When not using intelligent tester.
(1) Using SST, connect the terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
Be sure not to connect the terminals wrongly. It causes breakage of the engine.
(2) Remove the air cleaner.



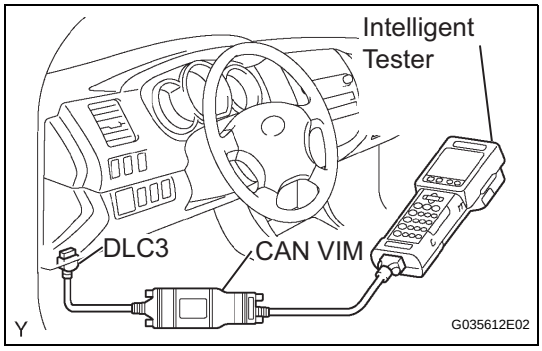
(3) Pull out the wire harness as shown in the illustration.
(4) Connect the tester probe of a timing light to the wire of the ignition coil connector for No. 1 cylinder.
NOTICE:
- **Use a timing light that detects the first signal.**
- **After checking, be sure to wrap the wire harness with tape.**



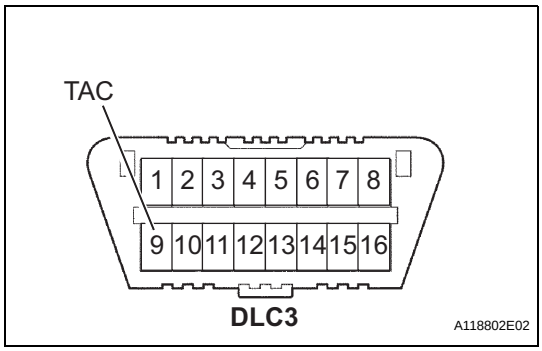
(5) Inspect the ignition timing during idling.
Ignition timing:
8 to 12°CA BTDC during idling (Transmission in neutral position)
(6) Remove the SST from the DLC3.
(7) Inspect the ignition timing during idling.
Ignition timing:
7 to 24°CA BTDC during idling (Transmission in neutral position)
(8) Install the air cleaner.

8. INSPECT ENGINE IDLING SPEED
NOTICE:
- **Turn all the electrical systems OFF.**
- **Operate the inspection when the cooling fan motor is turned OFF.**

(a) Warm up the engine.

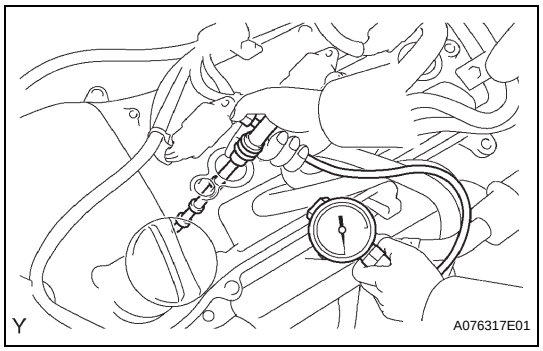


(b) When using the intelligent tester:
(1) Connect the intelligent tester to the DLC3.
(2) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / DATA LIST / ENGINE SPD.
(3) Inspect the engine idling speed.
Idling speed:
650 to 750 rpm (Transmission in neutral position)



(c) When not using the intelligent tester:
(1) Using SST, connect the terminal 8 (TAC) of the DLC3.
SST 09843-18030
(2) Race the engine speed at 2,500 rpm for approximately 90 seconds.
(3) Inspect the engine idling speed.
Idling speed:
650 to 750 rpm (Transmission in neutral position)

9. INSPECT COMPRESSION
(a) Warm up and stop the engine.
(b) Remove the circuit opening relay.
(c) Remove the V-bank cover.
(d) Remove the air cleaner assembly.



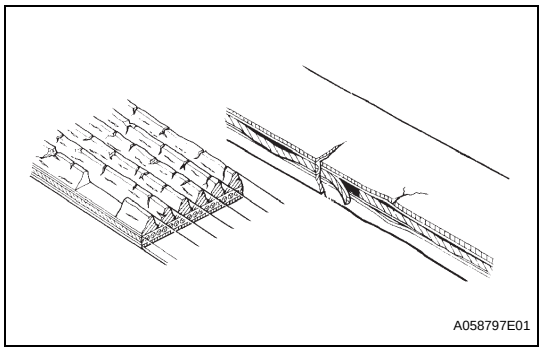
(e) Remove the ignition coils.
(f) Remove the spark plugs.
(g) Inspect the cylinder compression pressure.
(1) Insert a compression gage into the spark plug hole.
SST 09992-00500
(2) Fully open the throttle.
(3) While cranking the engine, measure the compression pressure.
Compression pressure:
1,300 kPa (13.3 kgf/cm^2, 189 psi)
Minimum pressure:
1,000 kPa (10.2 kgf/cm^2, 145 psi)
Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi)
NOTICE:
- **Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.**
- **Inspect the other cylinders in the same way.**
- **Measure the compression in as short a time as possible.**

(4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat steps (1) through (3) for cylinders with low compression.
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage from the gasket.

10. INSPECT CO/HC
(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
(d) Immediately check the CO/HC concentration during idling and/or at 2,500 rpm.
HINT:
- Complete the measurement within 3 minutes.
- When carrying out the 2 modes (idling and 2,500 rpm) test, the measurement orders are prescribed by the applicable local regulations.

(e) If the CO/HC concentration does not comply with regulations, troubleshoot in the order given below.
(1) Check the heated oxygen sensor operation.

CO	HC	Problems	Causes
Normal	High	Rough idling	1. Faulty ignition: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: – PCV hoses – Intake manifold – Throttle body – IAC valve – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idling (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI systems: – Faulty pressure regulator – Faulty engine coolant temperature sensor – Faulty mass air flow meter – Faulty ECM – Faulty injectors – Faulty throttle position sensor



DRIVE BELT

ON-VEHICLE INSPECTION

1. INSPECT DRIVE BELT

(a) Visually check the drive belt for excessive wear frayed cords, etc. If any defect is found, replace the drive belt

HINT:

Cracks on the rib side of a drive belt are considered acceptable.

If the drive belt has chunks missing from the ribs, it should be replaced.

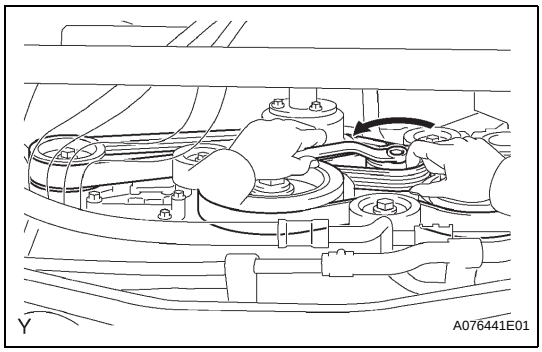
REMOVAL

1. REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)

(a) Remove the 4 bolts, then remove the under cover No. 1.

2. REMOVE FAN AND GENERATOR V BELT

(a) While releasing the belt tension by turning the belt tensioner counterclockwise, remove the V-ribbed belt from the belt tensioner.

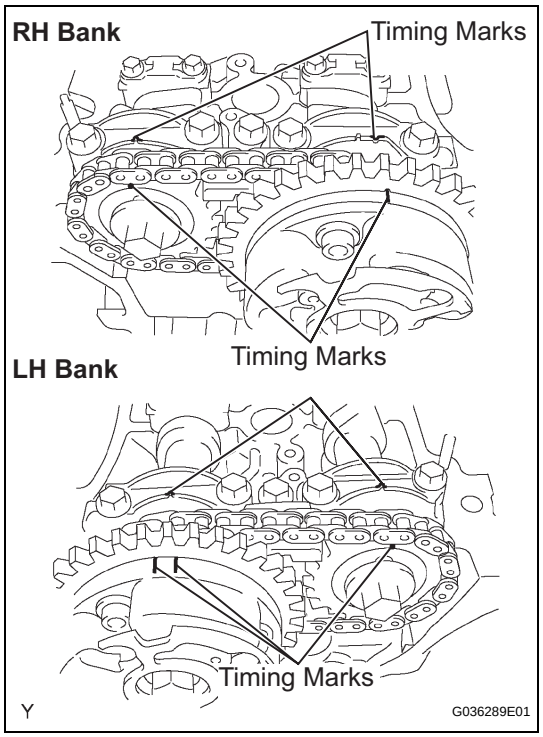


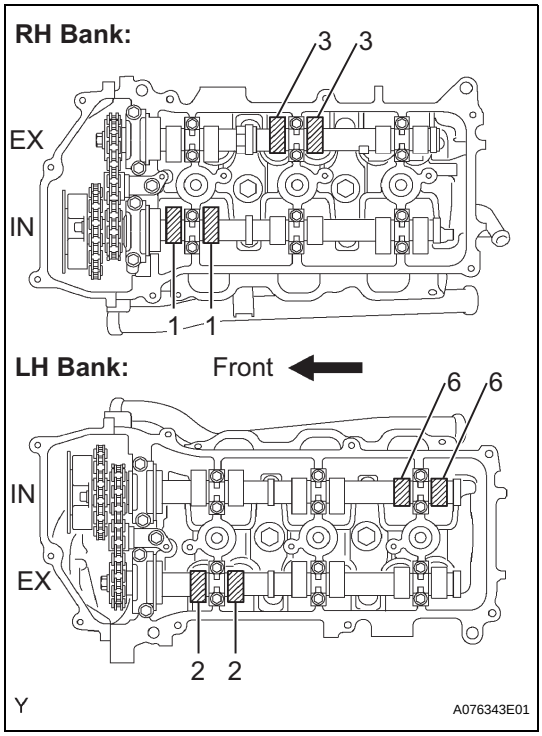
VALVE CLEARANCE

ADJUSTMENT

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **REMOVE INTAKE AIR SURGE TANK (See page EM-57)**
6. **REMOVE IGNITION COIL ASSEMBLY (See page IG-7)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-59)**
8. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH (See page EM-59)**
9. **SET NO.1 CYLINDER TO TDC/COMPRESSION**
   (a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.

   (b) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
   If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks above.





10. INSPECT VALVE CLEARANCE

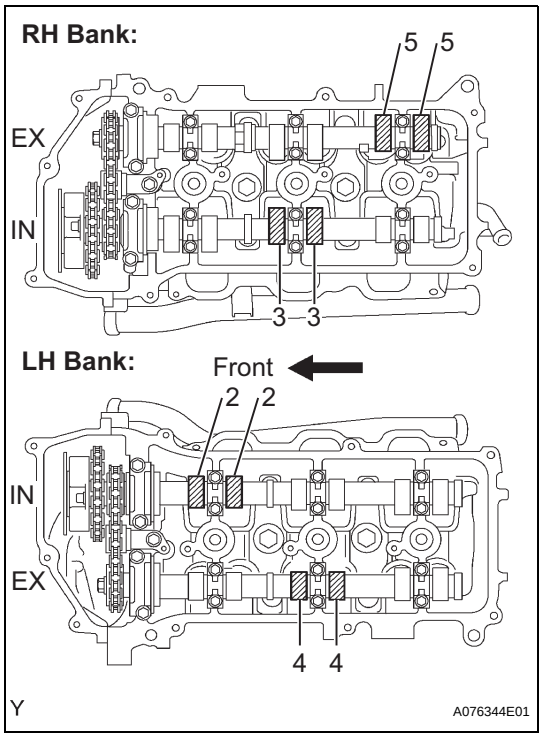
(a) Check the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (Cold):

Intake 0.15 to 0.25 mm (0.006 to 0.010 in.)
Exhaust 0.29 to 0.39 mm (0.011 to 0.015 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.



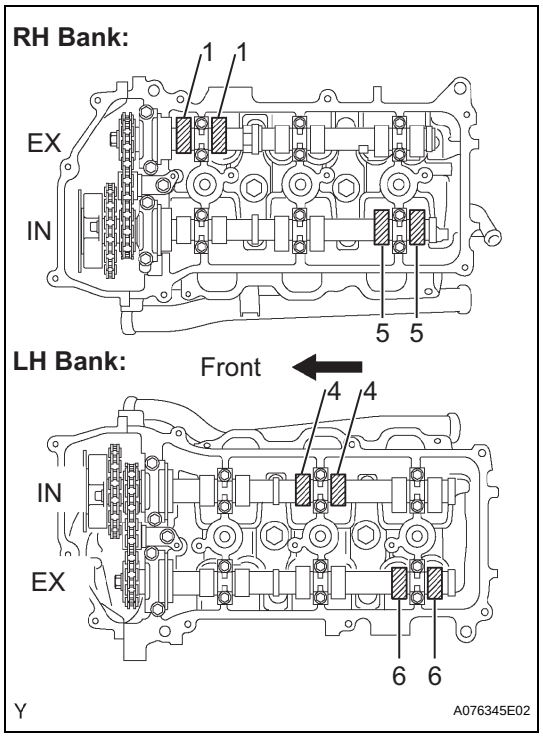
(b) Turn the crankshaft 240° clockwise, and check the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (Cold):

Intake 0.15 to 0.25 mm (0.006 to 0.010 in.)
Exhaust 0.29 to 0.39 mm (0.011 to 0.015 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.



(c) Turn the crankshaft 240° clockwise, and check the valves indicated in the illustration.

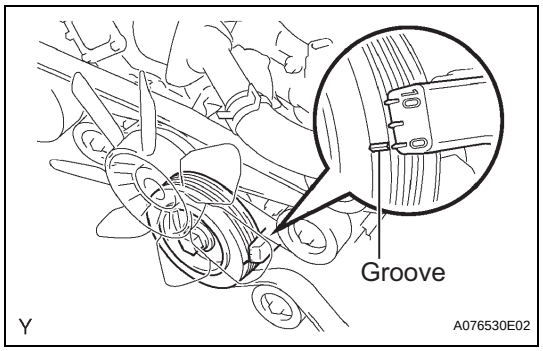
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

(2) Valve clearance (Cold):

Intake 0.15 to 0.25 mm (0.006 to 0.010 in.)
Exhaust 0.29 to 0.39 mm (0.011 to 0.015 in.)

Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

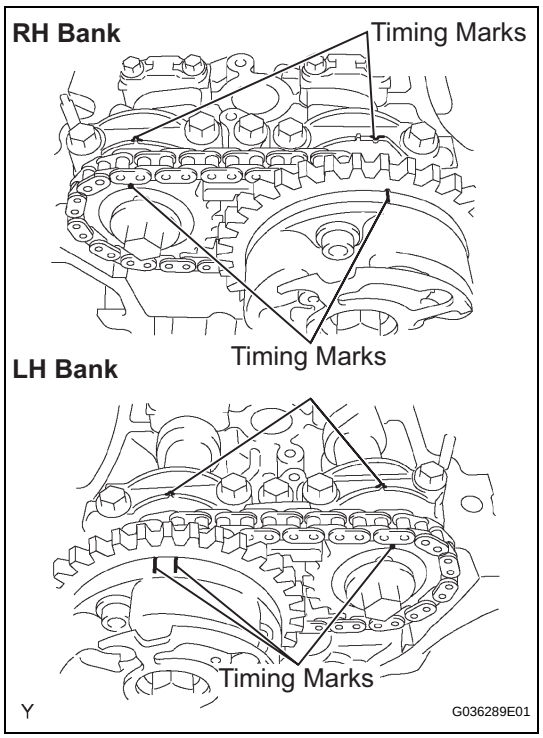
EM



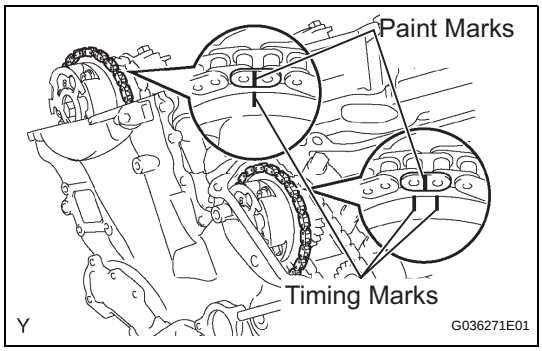
11. ADJUST VALVE CLEARANCE

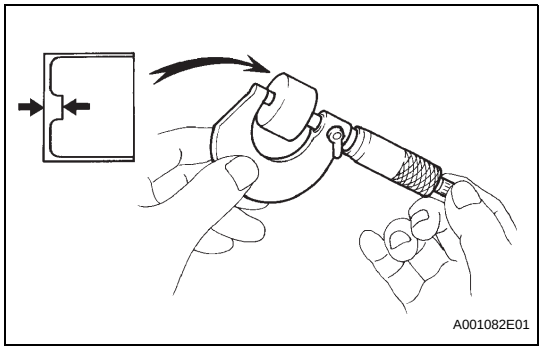
(a) Set No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.



(2) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.





(3) Place paint marks on the No. 1 chain links corresponding to the timing marks of the camshaft timing gears.

(b) Remove the chain tensioner assembly No. 1.
(c) Remove the No. 2 camshaft.
(d) Remove the chain tensioner assembly No. 2.
(e) Remove the camshaft.
(f) Remove the No. 4 camshaft sub-assembly.
(g) Remove the chain tensioner assembly No. 3.
(h) Remove the No. 3 camshaft sub-assembly.
(i) Remove the valve lifters.

(j) Determine the replacement valve lifter size according to the following formulas and charts:

(1) Using a micrometer, measure the thickness of the removed lifter.

(2) Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

T:
Thickness of removed lifter
A:
Measured valve clearance
N:
Thickness of new lifter
Intake:
N = T + (A - 0.20 mm (0.008 in.))
Exhaust:
N = T + (A - 0.30 mm (0.012 in.))

(3) Select a new lifter with a thickness as close as possible to the calculated value.

HINT:
Lifters are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

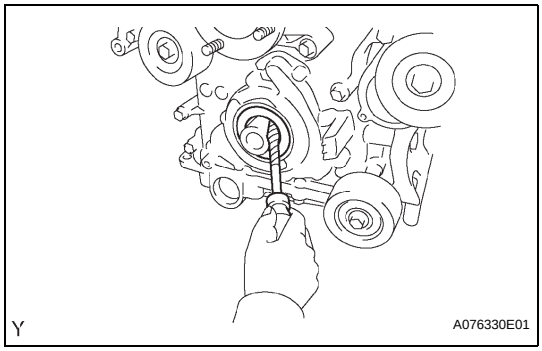
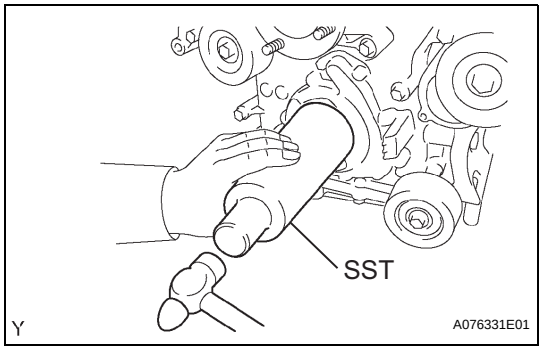
ENGINE FRONT OIL SEAL

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
4. **REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre Runner Drive Type)**
   (a) Remove the 4 bolts and engine under cover.
5. **REMOVE FAN SHROUD (See page CO-15)**
6. **REMOVE CRANKSHAFT PULLEY (See page EM-45)**
7. **REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL**
   (a) Using a screwdriver, pry out the oil seal.
   NOTICE:
   Be careful not to damage the crankshaft. Wrap a tip of the screwdriver with tape.





INSTALLATION

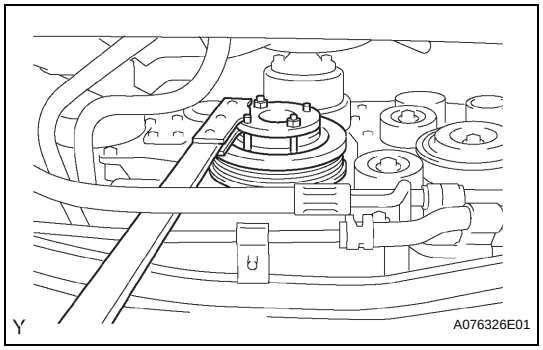
1. **INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL**
   (a) Apply MP grease to a new oil seal lip.
   (b) Using SST and a hammer, tap in the oil seal until its surface is flush with the timing chain cover edge.
   SST 09226-10010
2. **INSTALL CRANKSHAFT PULLEY (See page EM-30)**
3. **INSTALL FAN SHROUD (See page CO-20)**
4. **INSTALL RADIATOR SUPPORT TO FRAME SEAL LH**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **CHECK FOR ENGINE OIL LEAKAGE**
7. **INSTALL ENGINE UNDER COVER SUB-ASSEMBLY (for 4WD and Pre Runner Drive Type)**
   (a) Install the engine under cover with the 4 bolts.
   Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)
8. **INSTALL V-BANK COVER**
   (a) Install the V-bank cover with the 2 nuts.
   Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

ENGINE REAR OIL SEAL

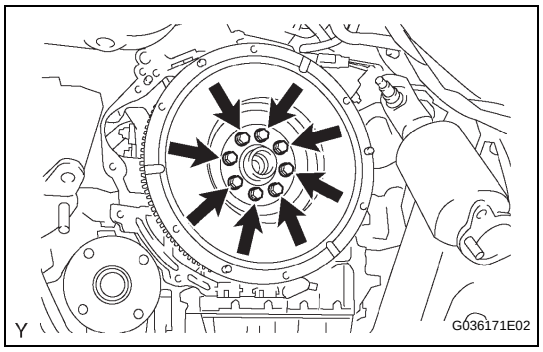
REMOVAL

1. **REMOVE TRANSMISSION ASSEMBLY (See page EM-186)**

2. **REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)**

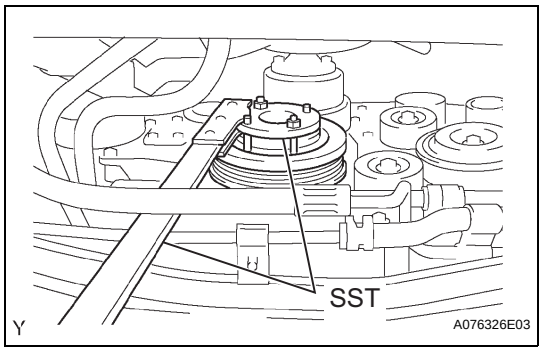


(a) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021

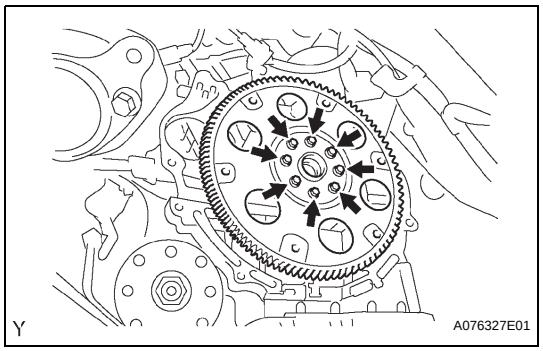


(b) Remove the 8 bolts, then remove the flywheel and 2 spacers.

3. **REMOVE DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission)**

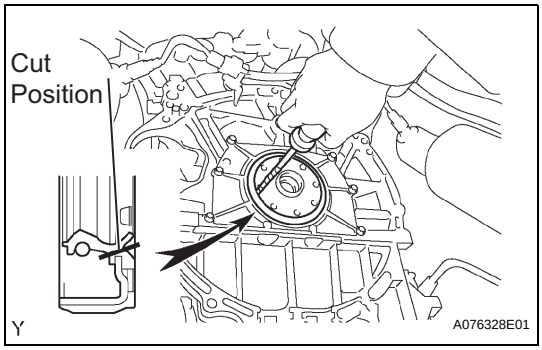


(a) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021



(b) Remove the 8 bolts, then remove the drive plate and 2 spacers.

EM



4. REMOVE REAR ENGINE OIL SEAL

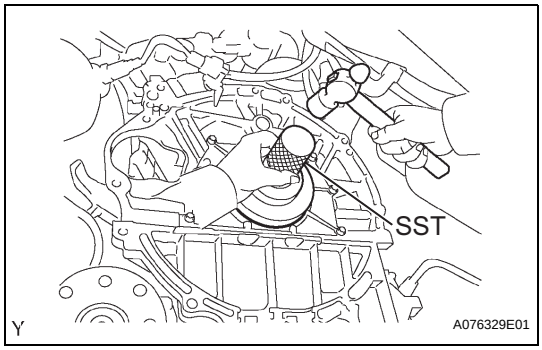
(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Wrap the screwdriver tip with tape.

INSTALLATION

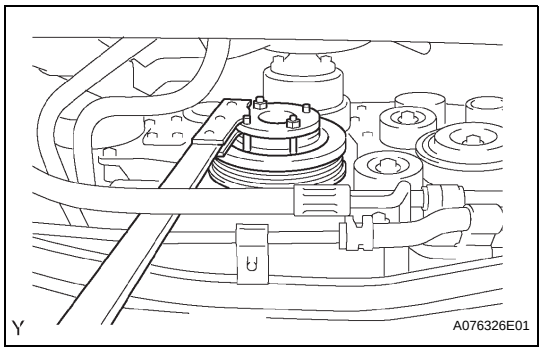


1. INSTALL REAR ENGINE OIL SEAL

(a) Apply MP grease to a new oil seal tip.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

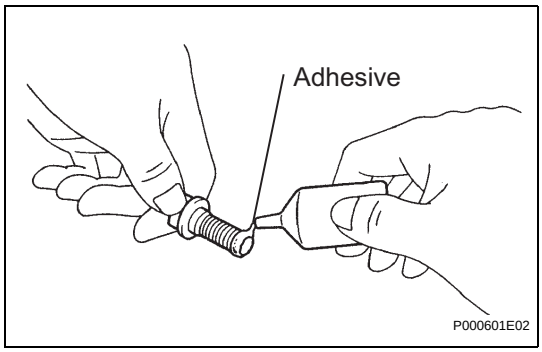
SST 09223-78010



2. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

(a) Using SST, hold the crankshaft.

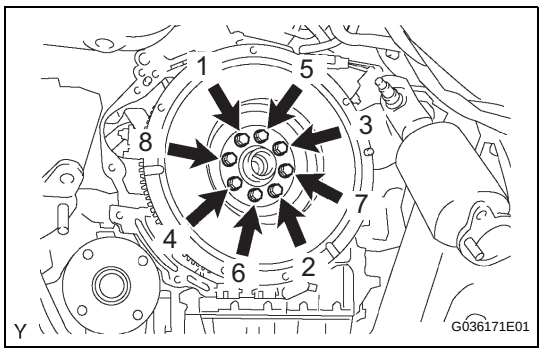
SST 09213-54015 (91651-60855), 09330-00021



(b) Apply adhesive to 2 or 3 threads of the mounting bolt end.

Adhesive:

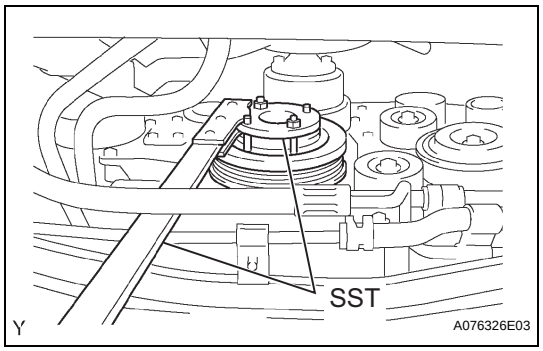
Part No. 08833-00070, THREE BOND 1324 or equivalent



(c) Install the flywheel and 2 spacers onto the crankshaft.

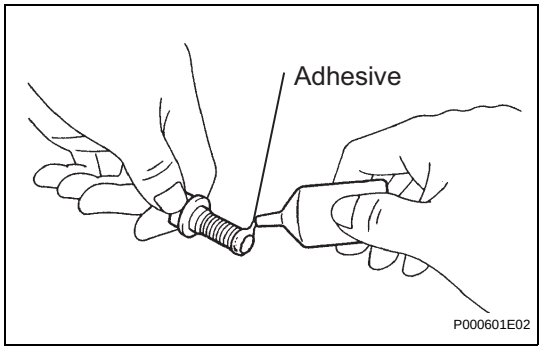
(d) Using several steps, uniformly install and tighten the 8 mounting bolts in the sequence shown in the illustration.

Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

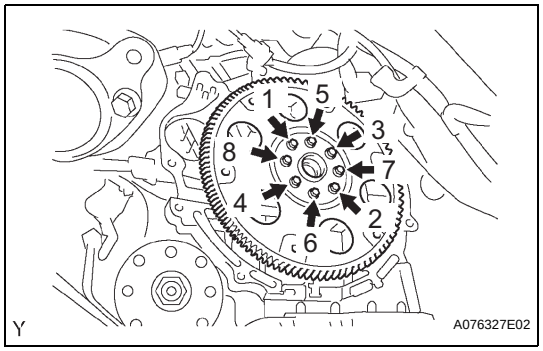


3. INSTALL DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

(a) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021



(b) Apply adhesive to 2 or 3 threads of the mounting bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent



(c) Install the drive plate and 2 spacers onto the crankshaft.

(d) Using several steps, uniformly install and tighten the 8 mounting bolts in the sequence shown in the illustration.
Torque: 83 N*m (846 kgf*cm, 61 ft.*lbf)

4. INSTALL TRANSMISSION ASSEMBLY (See page EM-192)

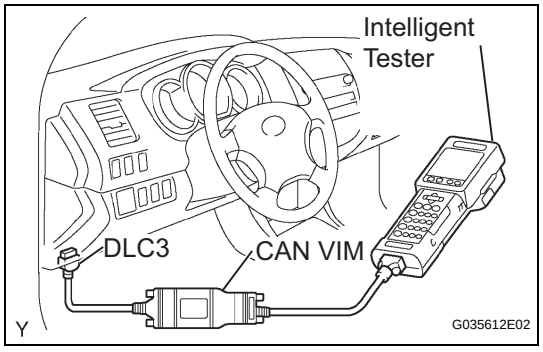
ENGINE

ON-VEHICLE INSPECTION

1. **INSPECT ENGINE COOLANT (See page CO-2)**
2. **INSPECT ENGINE OIL**
   (See page LU-1)
3. **INSPECT BATTERY (See page CH-4)**
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
   (a) Remove the air filter.
   (b) Visually check that the air filter is not excessively damaged or oily. If necessary, replace the air filter.
5. **INSPECT SPARK PLUG**
   (See page IG-3)
6. **INSPECT V-RIBBED BELT TENSIONER ASSEMBLY**
   (a) Idle the engine and then stop the engine. Check that the drive belt is between the edges of the tensioner pulley.
   (b) Remove the drive belt from the tensioner pulley.
   (c) Turn the pulley, and check that the tensioner bearing moves smoothly and quietly.
   If necessary, replace the tensioner.
7. **INSPECT VALVE LASH ADJUSTER NOISE**
   (a) Rev up the engine several times. Check that the engine does not make any abnormal noises [*a].
   If abnormal noises are heard, warm up the engine and idle it for more than 30 minutes. Then repeat step [*a].
   HINT:
   If any defects or problems are found during the inspection above, perform the lash adjuster inspection.



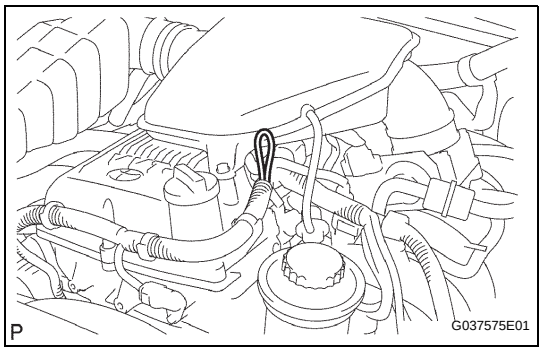
8. **INSPECT IGNITION TIMING**
   (a) When using a intelligent tester:
      (1) Connect the intelligent tester to the DLC3.
      (2) Turn the ignition switch to ON.
      (3) Turn the intelligent tester ON.
      (4) Start the engine and warm it up.
      (5) Select the following menu items:
      DIAGNOSIS / ENHANCED OBDII / DATA LIST / PRIMARY / IGN ADVANCE.
      Ignition timing:
      3 to7°BTDC (during idling)
      NOTICE:
      Turn all electrical systems OFF.
      HINT:
      Refer to the intelligent tester operator's manual for further information regarding the selection of DATA LIST.

(6) Check that the ignition timing advances immediately when engine speed is increased.

(b) When not using a intelligent tester:

(1) Turn the ignition switch to ON.

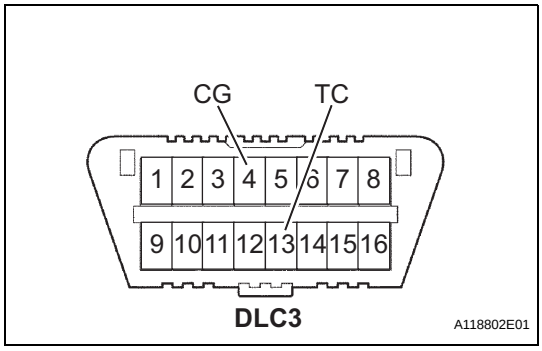
(2) Start the engine and warm it up.



(3) Install the tester terminal of a timing light in the position shown in the illustration.

NOTICE:

- **Use a timing light that detects the first signal.**
- **After checking, be sure to wrap the wire harness with tape.**



(4) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST 09843-18040

NOTICE:

Be careful not to connect the wrong terminals. It may damage the engine.

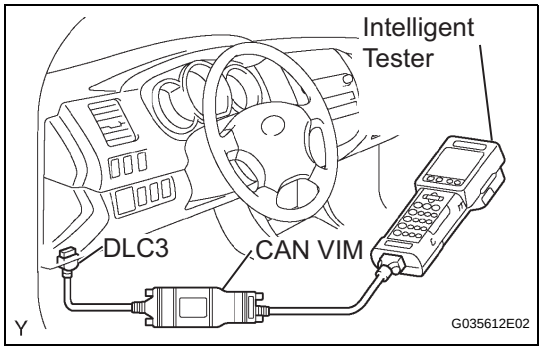
(5) Check that the ignition timing is within the specification.

Ignition timing:

3 to7° BTDC (during idling)

NOTICE:

Turn all electrical systems OFF.



9. INSPECT ENGINE IDLING SPEED

(a) When using a intelligent tester:

(1) Connect the intelligent tester to the DLC3

(2) Turn the ignition switch to ON.

(3) Turn the intelligent tester ON.

(4) Start the engine and warm it up.

(5) Select the following menu items:
DIAGNOSIS / ENHANCED OBDII / DATA LIST / PRIMARY / ENGINE SPD.

Idling speed:

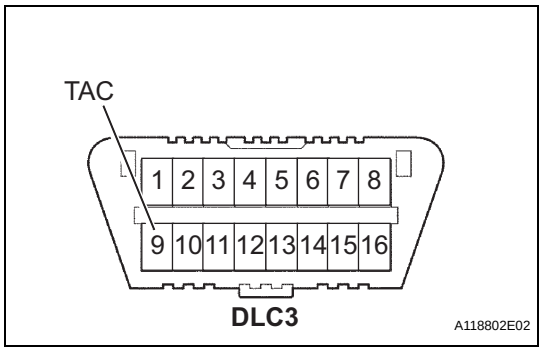
600 to 700 rpm

NOTICE:

- **Turn all electrical system OFF.**
- **When checking the idling speed, the transmission is in the neutral position.**

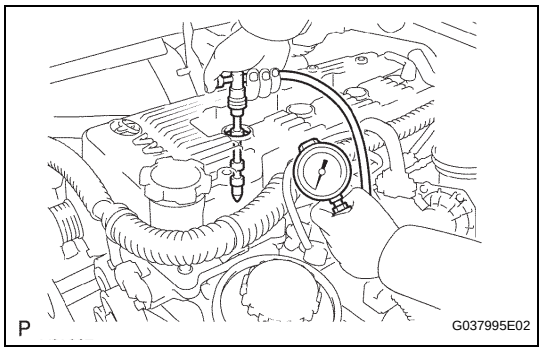
HINT:

Refer to the intelligent tester operator's manual for further information regarding the selection of DATA LIST.



(b) When not using a intelligent tester:
(1) Turn the ignition switch ON.
(2) Start the engine and warm it up.
(3) Install SST onto terminal 9 (TAC) of the DLC3. Connect a tachometer, then measure the engine idling speed.
SST 09843-18030
Idling speed:
600 to 700 rpm
NOTICE:
- **Turn all electrical systems OFF.**
- **When checking the idling speed, the transmission should be in the neutral position.**

10. INSPECT COMPRESSION
(a) Warm up the engine, then stop it.
(b) Remove the intake air connector
(c) Remove the ignition coils.
(d) Remove the spark plugs.
(e) Disconnect the fuel infector connector.



(f) Inspect the compression.
(1) Insert a compression gauge into the plug hole.
(2) Crank the engine, then measure the compression pressure.
Compression pressure:
1230 kPa (12.5 kgf/cm^2, 178 psi)
Minimum pressure:
880 kPa (9.0 kgf/cm^2, 128 psi) or more
Difference between each cylinder:
68 kPa (0.7 kgf/cm^2, 10psi) or less
NOTICE:
- **Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.**
- **Inspect the other cylinders in the same way.**
- **Measure the compression pressure in as short a time as possible.**

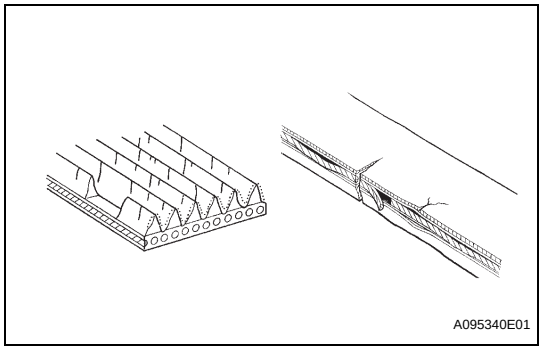
(3) If the compression pressure is low, pour a small amount of engine oil into the cylinder block, then measure it again.
HINT:
- If the compression pressure increases after adding the engine oil, the piston rings may be worn.
- If the compression pressure does not charge after pouring engine oil, defects may be occurring around the valves.

11. INSPECT CO/HC
HINT:
This inspection is for checking whether the CO/HC concentration in the emission gas while idling complies with the regulations.

EM

(a) Start the engine.
(b) Keep the engine speed at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe while idling.
(d) Immediately check the CO/HC concentration while idling and/or at 2,500 rpm.
HINT:
When performing the 2 mode (2,500 rpm and idle) test, follow the applicable local regulations. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.
(1) Check the A/F sensor and heated oxygen sensor operation.
(2) See the table below for possible causes, then inspect and correct the applicable parts if necessary.

CO	HC	Problems	Causes
Normal	High	Rough idling	1. Faulty ignition: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leakage in intake and exhaust valves 4. Leakage in cylinders
Low	High	Rough idling (Fluctuation HC reading)	1. Vacuum leakage: – PCV hoses – Intake manifold – Throttle body – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idling (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty SFI systems: – Faulty pressure regulator – Faulty engine coolant temperature sensor – Faulty mass air flow meter – Faulty ECM – Faulty injectors – Faulty throttle body



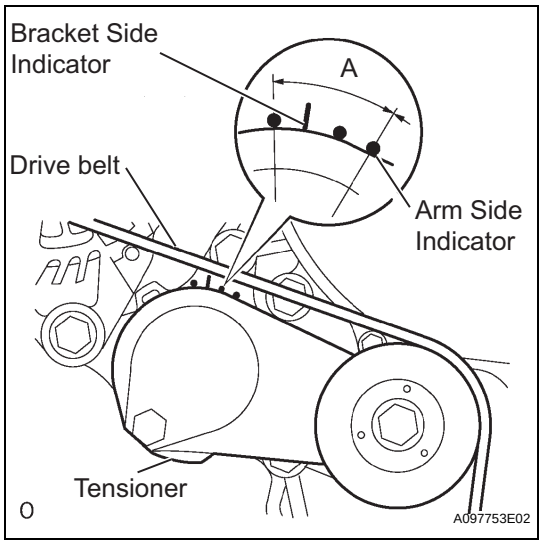
DRIVE BELT

ON-VEHICLE INSPECTION

1. INSPECT FAN AND GENERATOR V BELT

(a) Visually check the belt for excessive wear, frayed cords, etc..
- If any defects are found, replace the V-ribbed belt.
- Cracks on the rib side of the belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that the tensioner indicator mark is within range A shown in the illustration. If the mark is not within range A, replace the V belt.

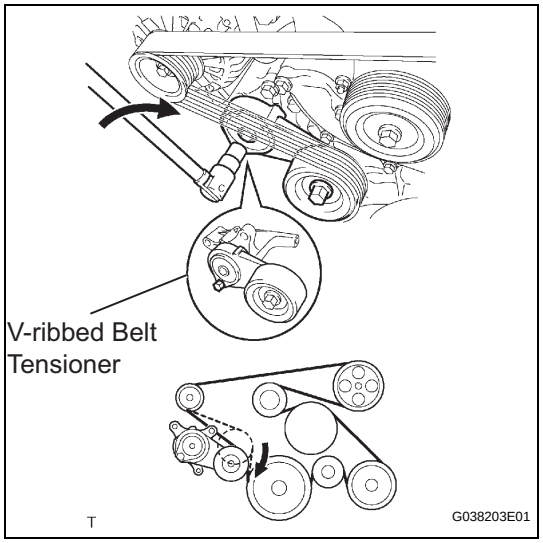


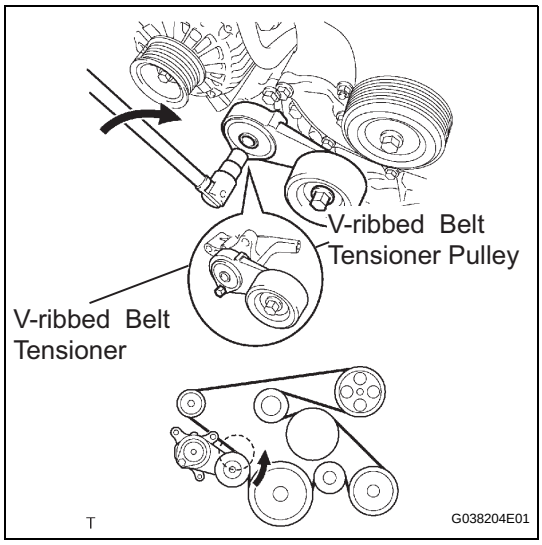
EM

REMOVAL

1. REMOVE FAN AND GENERATOR V BELT

(a) Turning the hexagonal bolt on the V-ribbed belt tensioner clockwise, loosen and then remove the V belt.





INSTALLATION

1. **INSTALL FAN AND GENERATOR V BELT**
   (a) Provisionally install the V belt onto each pulley.
   NOTICE:
   Install the V belt onto each pulley and finally install the V belt onto the V-ribbed belt tensioner.
   (b) Turn the hexagonal bolt on the V-ribbed belt tensioner clockwise and install the V belt onto the V-ribbed belt tensioner pulley.

2. **INSPECT FAN AND GENERATOR V BELT (See page EM-5)**

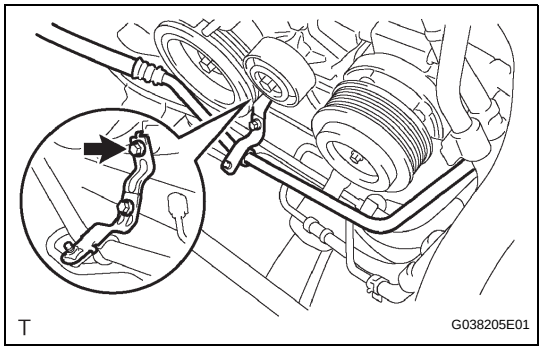
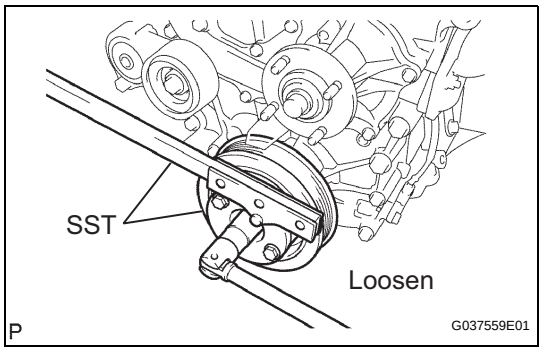
ENGINE FRONT OIL SEAL

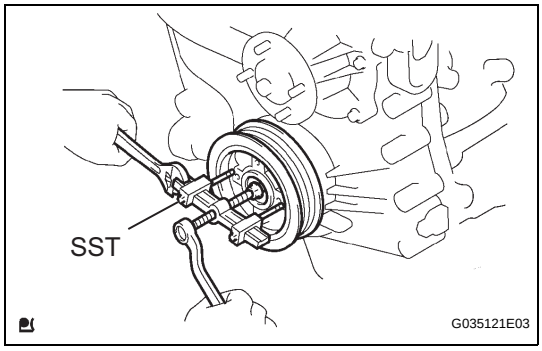
REMOVAL

1. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the No. 1 engine under cover.
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
4. **REMOVE FAN SHROUD (See page CO-13)**
5. **REMOVE CRANKSHAFT PULLEY**
   (a) Remove the bolt, then separate the bracket. (w/ AIR CONDITIONING)

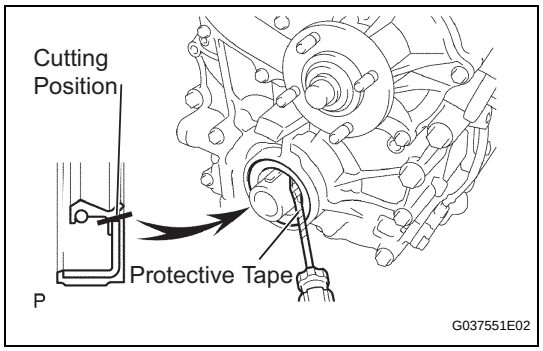




(b) Using SST, loosen the crankshaft pulley bolt.
SST 09213-54015 (91651-60855), 09330-00021
HINT:
Loosen the crankshaft pulley bolt until only 2 or 3 threads are still installed in the crankshaft.



(c) Using SST, remove the crankshaft pulley and crankshaft pulley bolt.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05021)



6. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

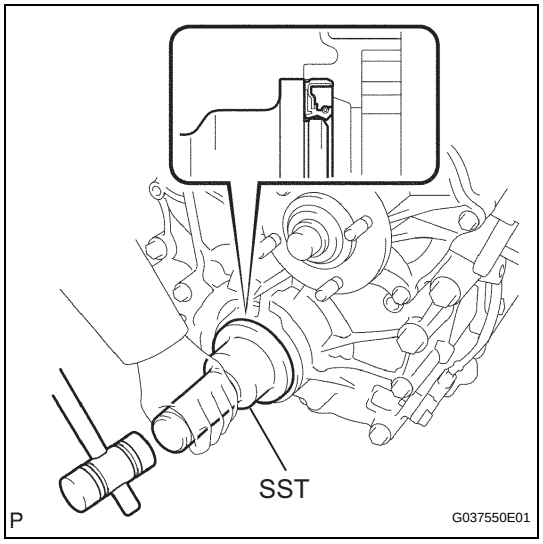
(a) Using a cutter knife, cut off the lip of the oil seal.

(b) Using a screwdriver with its tip wrapped in tape, pry out the oil seal and remove it.

NOTICE:

Check the crankshaft for damage after removing the oil seal. If damaged, smooth the surface with 400-grit sandpaper.

INSTALLATION



1. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Apply a light coat of MP grease to the lip of a new oil seal.

NOTICE:

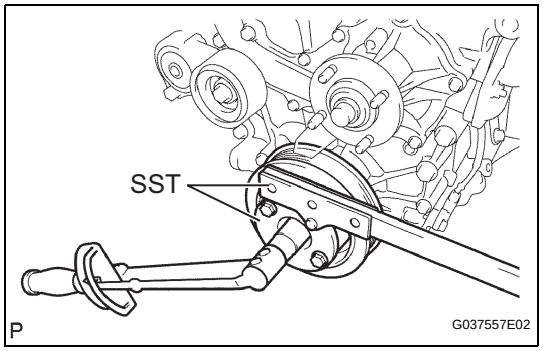
Keep the lip free of foreign objects.

(b) Using SST, uniformly tap a new oil seal in until its surface is flush with the timing chain cover edge.

SST 09223-50010

NOTICE:

- **Do not tap the oil seal in at an angle.**
- **Wipe any extra grease off the crankshaft.**



2. INSTALL CRANKSHAFT PULLEY

(a) Align the set key of the crankshaft with the key groove of the pulley, and slide on the pulley.

(b) Provisionally install a new crankshaft pulley bolt onto the crankshaft.

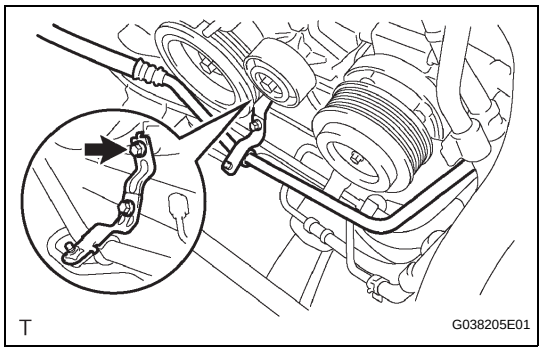
(c) Using SST, hold the crankshaft pulley and tighten the crankshaft pulley bolt.

SST 09213-54015 (91651-60855), 09330-00021

Torque: 260 N*m (2,651 kgf*cm, 192 ft.*lbf)

NOTICE:

Do not reuse the pulley bolt.



(d) Install the bracket with the bolt. (w/ AIR CONDITIONING)

Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

3. INSTALL FAN SHROUD (See page CO-18)

4. INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)

5. ADD ENGINE COOLANT (See page CO-3)

6. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)

7. CHECK FOR ENGINE OIL LEAKAGE

EM

8. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)

(a) Install the No. 1 engine under cover with the 4 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

ENGINE REAR OIL SEAL

REMOVAL

1. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-6
R155F	MT-8

2. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

(See page AT-113)

3. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

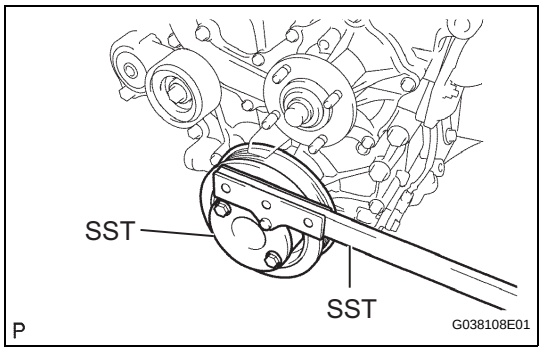
4. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-30
R155F	CL-35

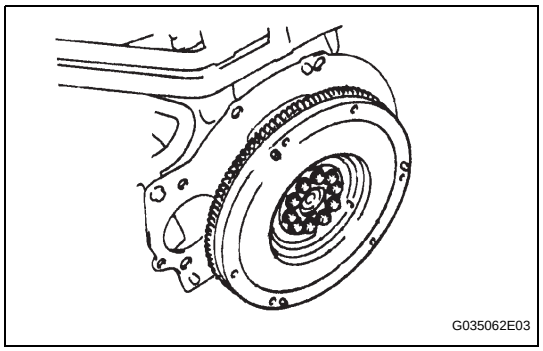
5. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

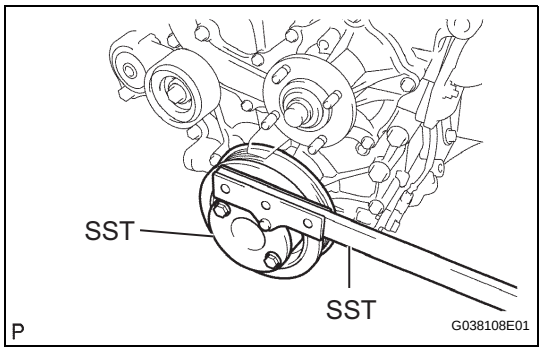
(a) Using SST, hold the crankshaft pulley.

SST 09213-54015 (91651-60855), 09330-00021



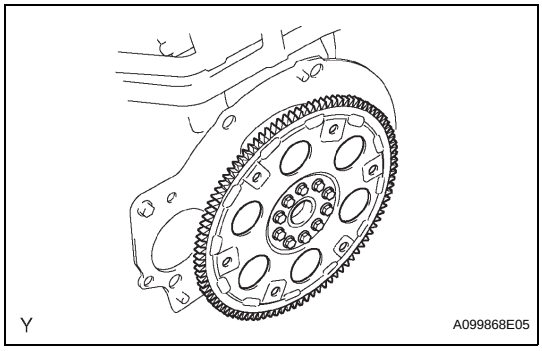
(b) Remove the 10 bolts, then remove the flywheel.



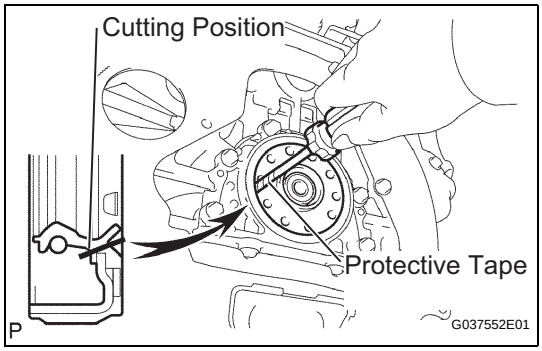


6. REMOVE DRIVE PLATE and RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

(a) Using SST, hold the crankshaft pulley.
SST 09213-54015 (91651-60855), 09330-00021

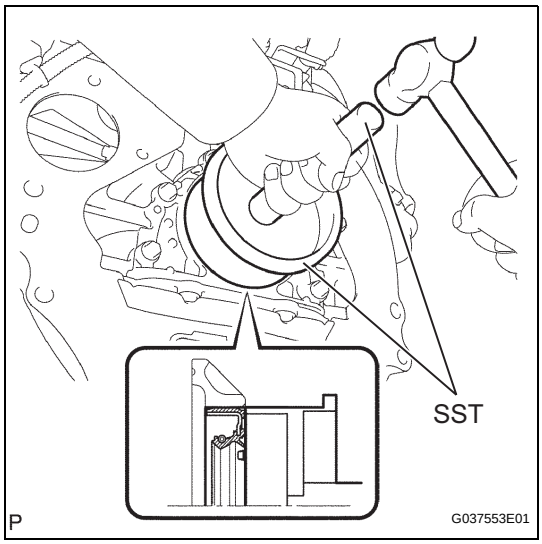


(b) Remove the 10 bolts, drive plate spacer rear, drive plate and ring gear and drive plate spacer front.



7. REMOVE ENGINE REAR OIL SEAL

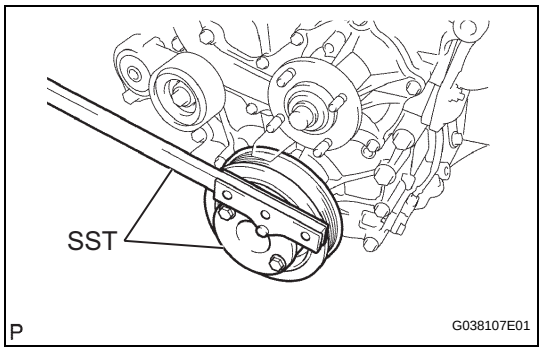
(a) Using a cutter knife, cut off the lip of the oil seal.
(b) Using a screwdriver with its tip wrapped in tape, pry out the oil seal and remove it.
NOTICE:
Check the crankshaft for damage after removing the oil seal. If damaged, smooth the surface with 400-grit sandpaper.



INSTALLATION

1. INSTALL ENGINE REAR OIL SEAL

(a) Apply a light coat of MP grease to the lip of a new oil seal.
NOTICE:
Keep the lip free of foreign objects.
(b) Using SST and a hammer, tap the oil seal in until its surface is flush with the rear oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07150)
NOTICE:
- **Do not tap the oil seal in at an angle.**
- **Wipe any extra grease off the crankshaft.**

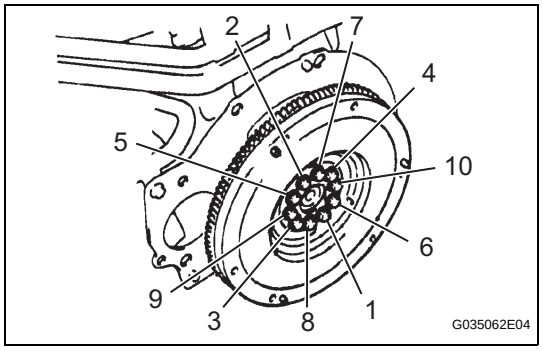


2. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

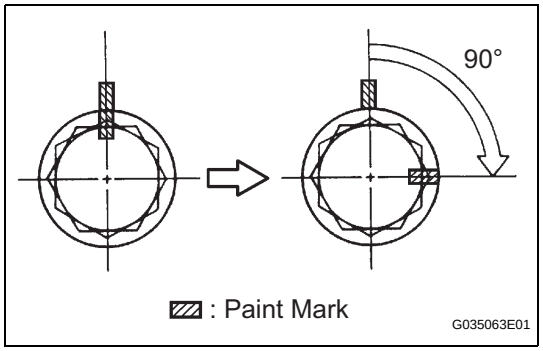
(a) Clean the 10 bolts and 10 bolt holes.

(b) Apply adhesive to 2 or 3 threads of the 10 bolts.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(c) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021



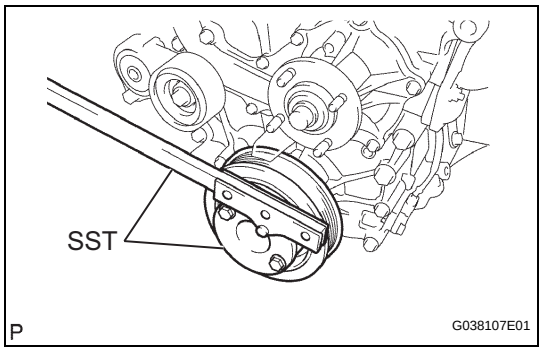
(d) Using several steps, uniformly install and tighten the 10 bolts in the sequence shown in the illustration.
Torque: 27 N*m (270 kgf*cm, 20 ft.*lbf)



(e) Mark the bolts with paint as shown in the illustration.

(f) Retighten the bolts by 90° in the same sequence as in step (d).

(g) Check that the paint mark of each bolt is at a 90° from the original position.
NOTICE:
Do not start the engine for at least 1 hour after installation.



3. INSTALL DRIVE PLATE and RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

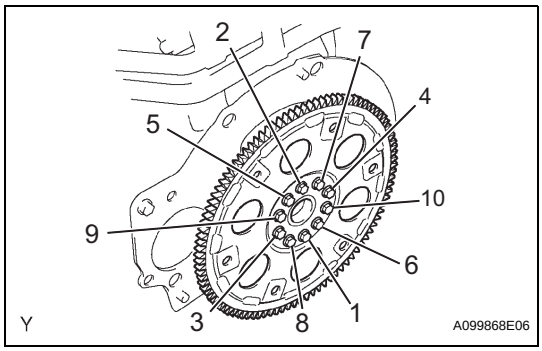
(a) Clean the 10 bolts and 10 bolt holes.

(b) Apply adhesive to 2 or 3 threads of the 10 bolts.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(c) Provisionally install the drive plate spacer front, drive plate and ring gear and drive plate rear with the 10 bolts.

(d) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021

EM



(e) Using several steps, uniformly install and tighten the 10 bolts in the sequence shown in the illustration.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
Do not start the engine for at least 1 hour after installation.

4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-32
R155F	CL-37

SST 09301-00210

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

Transmission	See page
R155	CL-32
R155F	CL-37

6. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

Transmission	See page
R155	MT-9
R155F	MT-11

7. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (See page ED-7)

8. CHECK FOR ENGINE OIL LEAKAGE

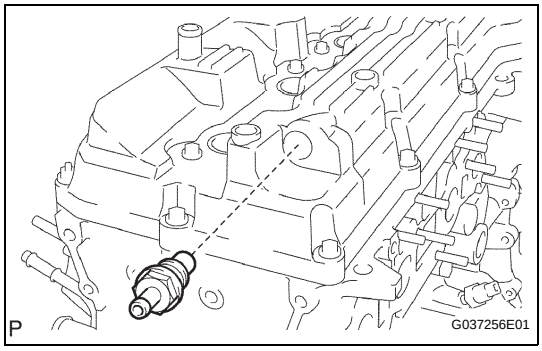
DISASSEMBLY

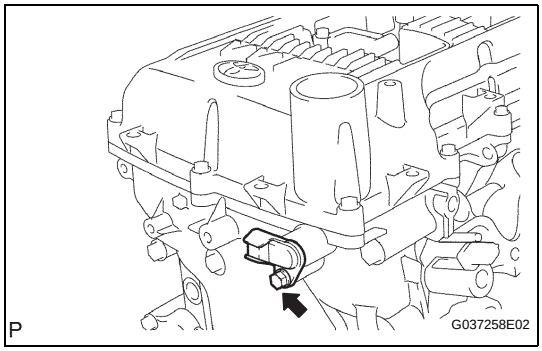
1. REMOVE OIL FILLER CAP SUB-ASSEMBLY

(a) Remove the oil filler cap sub-assembly.



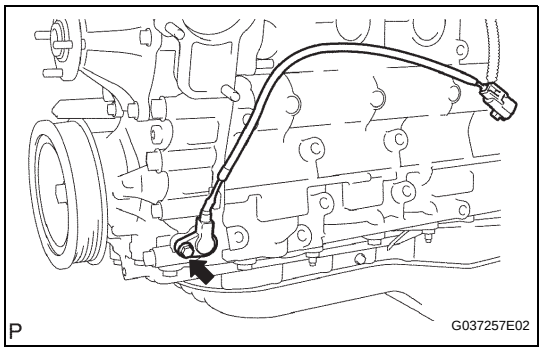
2. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve sub-assembly.



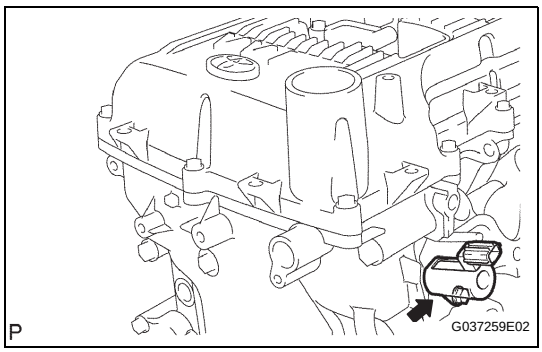
3. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and camshaft position sensor.



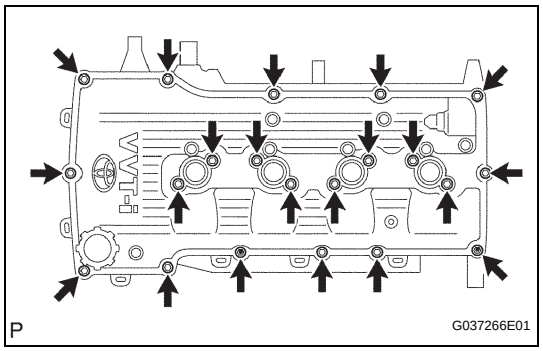
4. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and crankshaft position sensor.



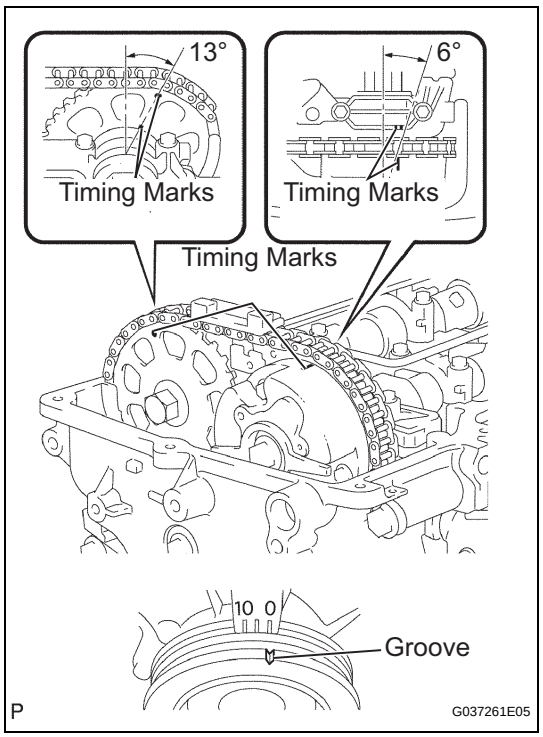
5. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Remove the bolt and camshaft timing oil control valve.



6. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 19 bolts, 2 nuts, head cover and 2 gaskets.

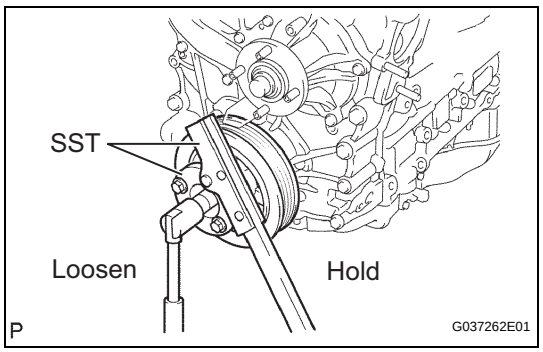


7. REMOVE CRANKSHAFT PULLEY

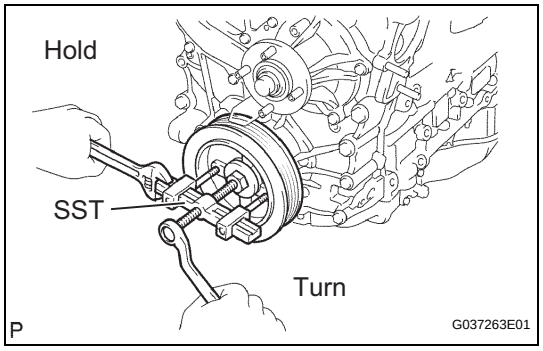
(a) Turn the crankshaft pulley, and align its groove with timing mark 0 of the timing chain cover.

(b) Check that the timing marks of the camshaft timing gear and sprocket are aligned with the timing marks of the bearing cap No.1, as shown in the illustration.

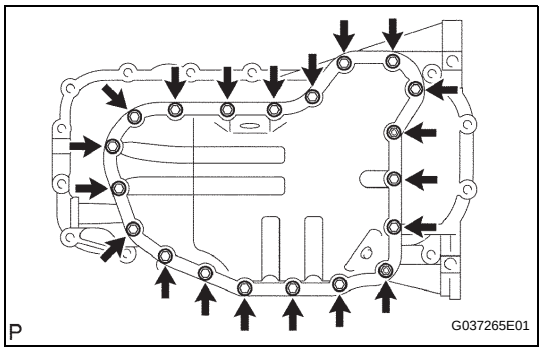
EM



(c) Using SST, loosen the crankshaft pulley bolt.
SST 09213-54015 (91651-60855), 09330-00021



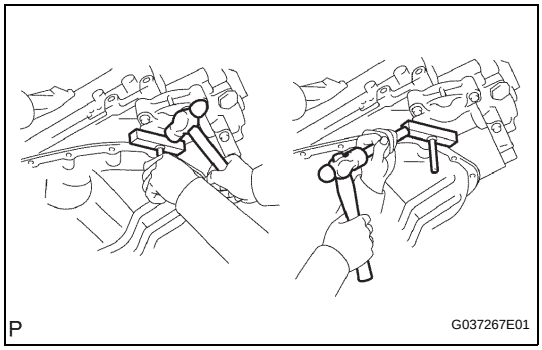
(d) Using SST, remove the crankshaft pulley bolt and crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05021)



8. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove the drain plug and gasket.

(b) Remove the 18 bolts and 2 nuts.

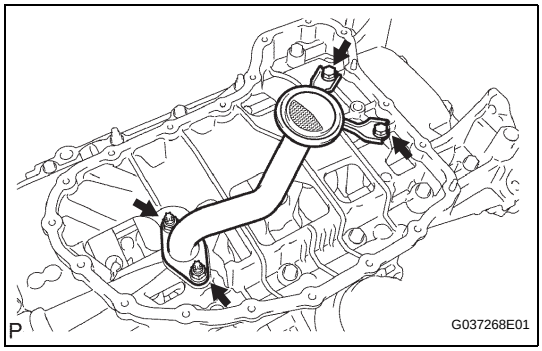


(c) Insert the blade of SST between the oil pans. Cut through the applied sealer and remove the oil pan sub-assembly No.2.

SST 09032-00100

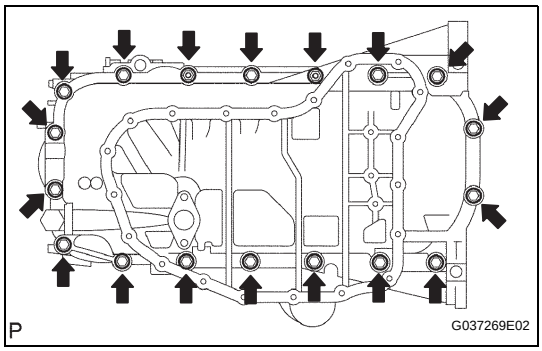
NOTICE:

Be careful not to damage the contact surfaces of the oil pans.



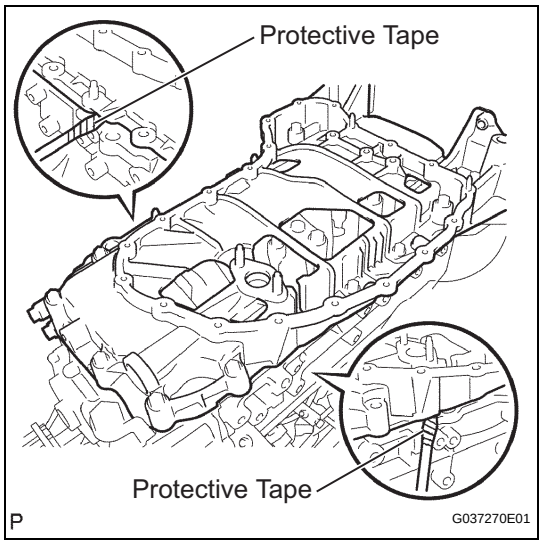
9. REMOVE OIL STRAINER SUB-ASSEMBLY

(a) Remove the 2 bolts, 2 nuts, oil strainer and gasket.

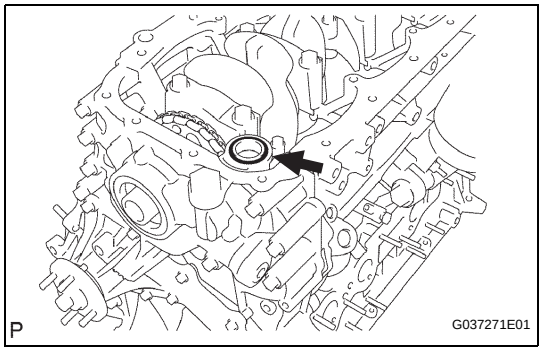


10. REMOVE OIL PAN SUB-ASSEMBLY

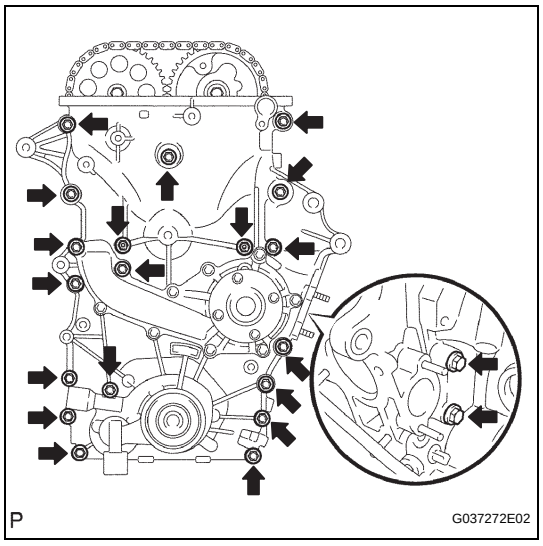
(a) Remove the 16 bolts and 2 nuts.



(b) Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and oil pan.
HINT:
Tape the screwdriver tip before use.



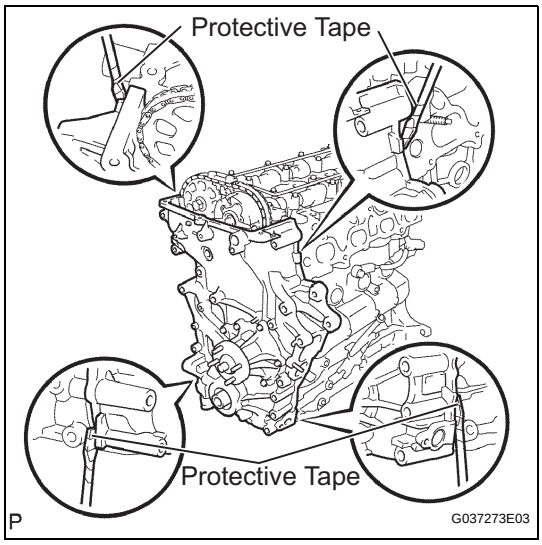
(c) Remove the O-ring.



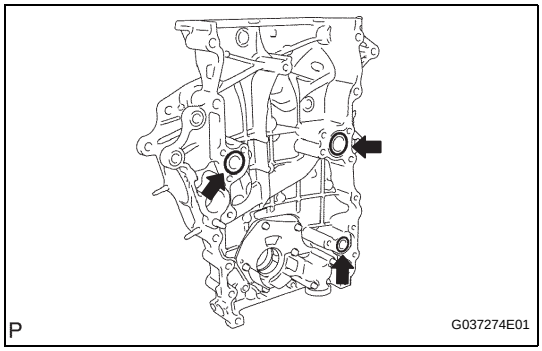
11. REMOVE TIMING CHAIN COVER

(a) Remove the 19 bolts and 2 nuts as shown in the illustration.

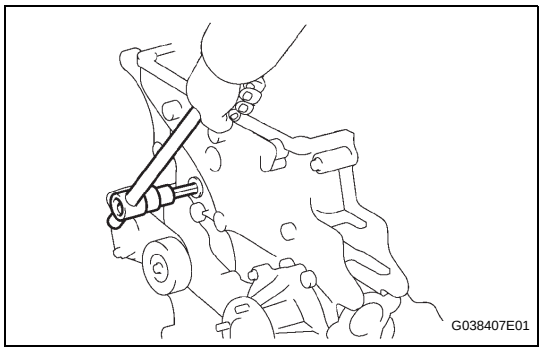
EM



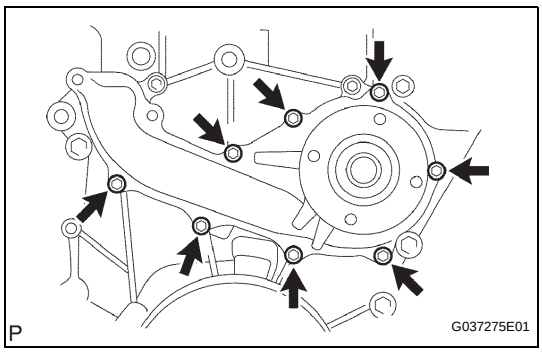
(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and timing chain cover.



(c) Remove the 3 O-rings.

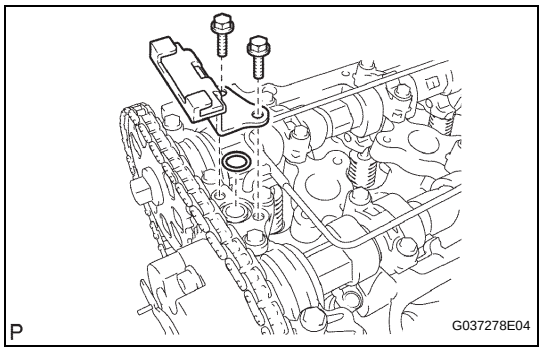


(d) Using a 10 mm socket hexagon wrench, remove the timing chain cover plug.



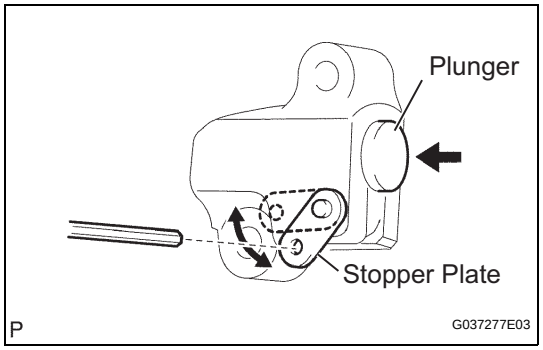
12. REMOVE WATER PUMP ASSEMBLY

(a) Remove the 8 bolts, water pump and gasket.



13. REMOVE TIMING CHAIN GUIDE

(a) Remove the 2 bolts, timing chain guide and O-ring.



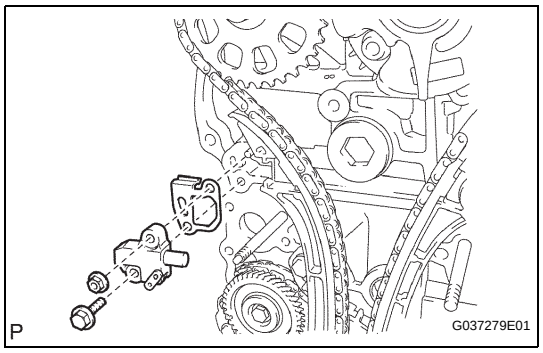
14. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

NOTICE:

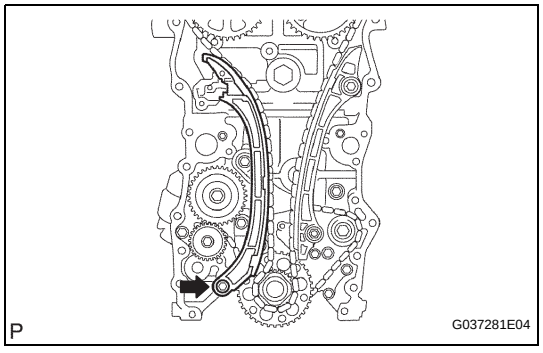
- **When the chain tensioner is removed, do not rotate the crankshaft.**
- **When the chain is removed and the camshaft needs to be rotated, rotate the crankshaft 90 degrees to the right.**

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the stopper plate's hole.



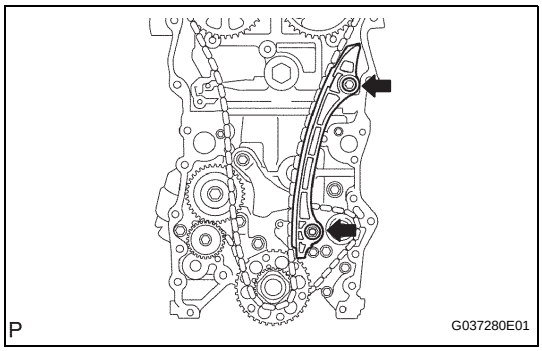
(c) Remove the bolt, nut, chain tensioner assembly No.1 and gasket.



15. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the bolt and tensioner slipper.

EM

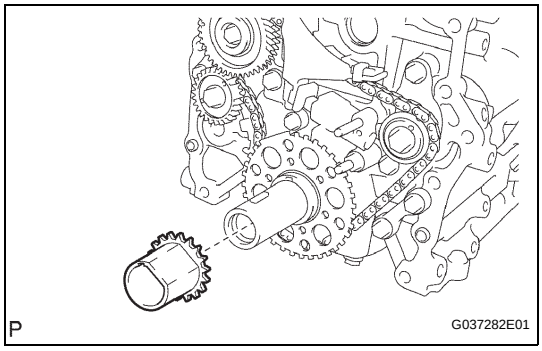


16. REMOVE NO. 1 CHAIN VIBRATION DAMPER

(a) Remove the bolt, nut, and vibration damper.

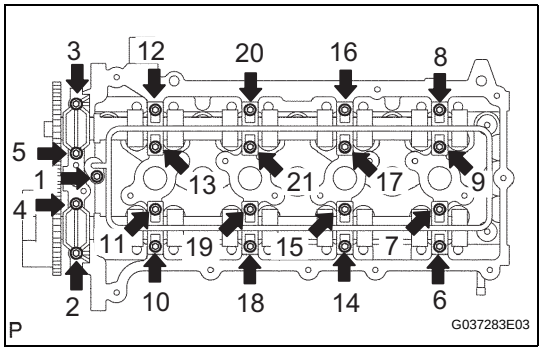
17. REMOVE CHAIN SUB-ASSEMBLY

(a) Remove the chain.



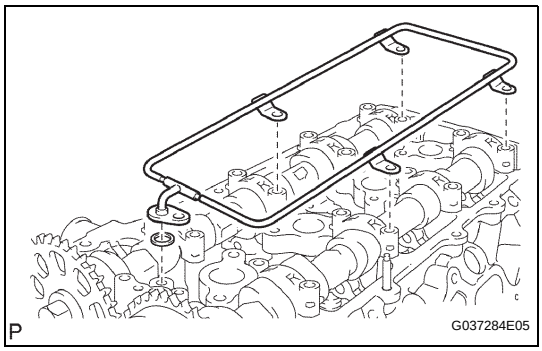
18. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Remove the crankshaft timing gear from the crankshaft.

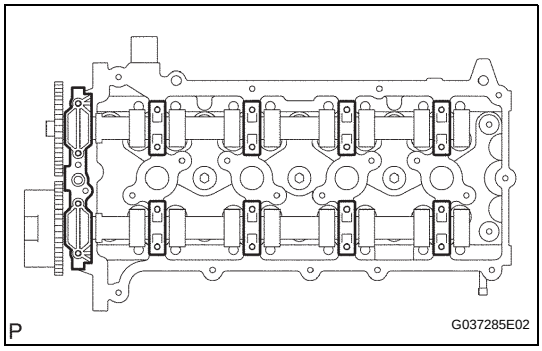


19. REMOVE CAMSHAFT BEARING CAP

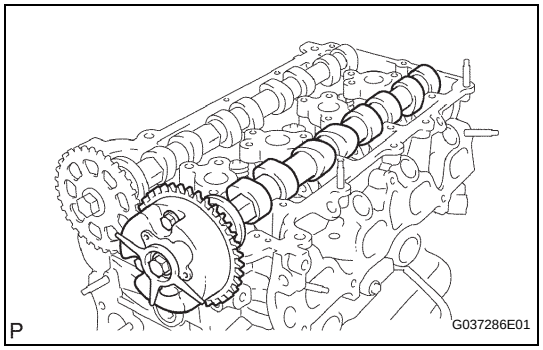
(a) Uniformly loosen and remove the 21 bearing cap bolts and 20 washers on the camshafts in the sequence shown in the illustration.



(b) Remove the oil delivery pipe and O-ring from the bearing caps.

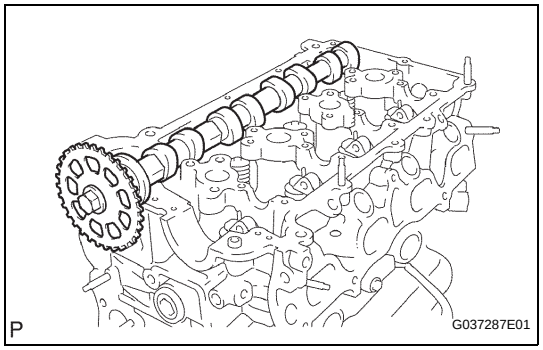


(c) Remove the 9 bearing caps.



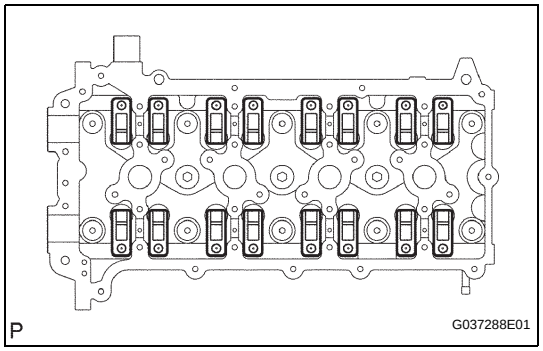
20. REMOVE CAMSHAFT

(a) Remove the camshaft sub-assembly.



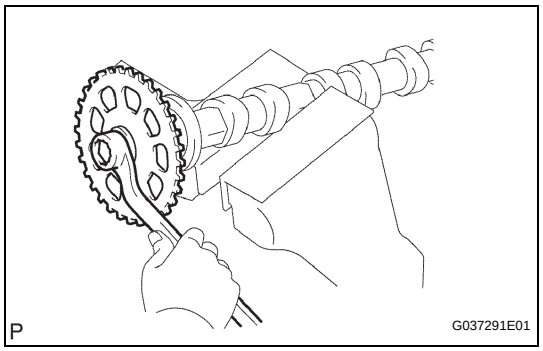
21. REMOVE NO.2 CAMSHAFT

(a) Remove the No.2 camshaft sub-assembly.



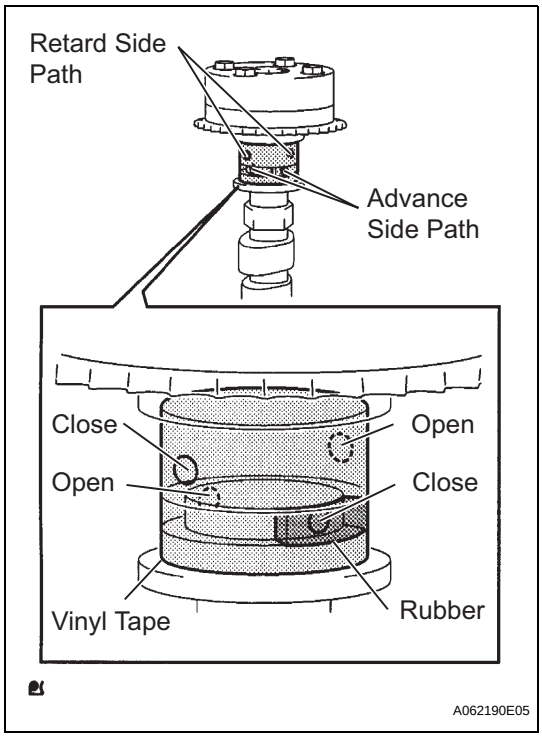
22. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Remove the 16 valve rocker arm sub-assembly.



23. REMOVE CAMSHAFT TIMING SPROCKET

(a) Fix the camshaft with a vise and then remove the sprocket bolt and camshaft timing sprocket.
NOTICE:
Be careful not to damage the camshaft.



24. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of the camshaft timing gear.

(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.

NOTICE:

Be careful not to damage the camshaft.

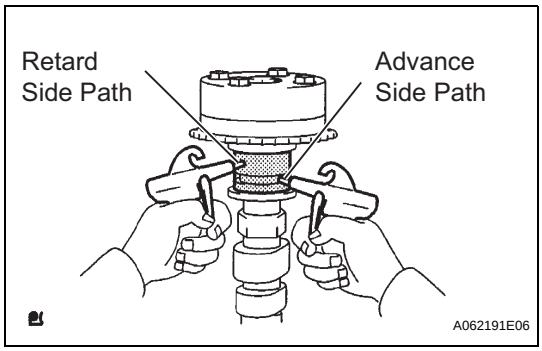
(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.

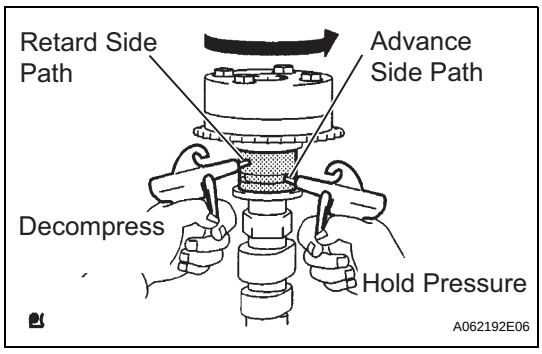
(2) Break through the tape of the advance side path and the retard side path on the opposite side to the hole of the advance side path, as shown in the illustration.



(3) Apply approximately 200 kPa (2.0 kgf*cm^2, 28 psi) of air pressure to the two broken paths.

CAUTION:

Some oil splashing will occur. Cover the paths with a shop rag.



(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.

OK:

Gear rotates in the advance direction.

HINT:

This operation releases the lock pin for the most retarded position.

(5) When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.

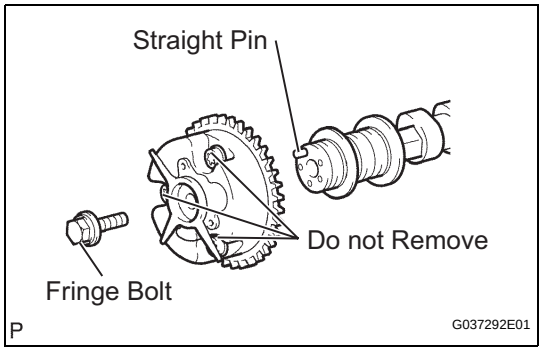
NOTICE:

Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

EM

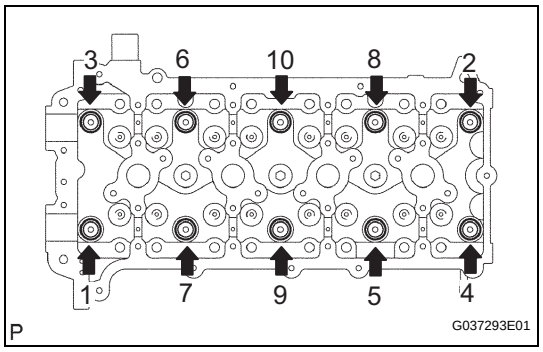
(c) Check for smooth rotation.
(1) Rotate the camshaft timing gear within its movable range several times, but do not turn it to the most retarded position. Check that the gear rotates smoothly.
OK:
Gear rotates in the advance direction.
CAUTION:
Do not use an air pressure to perform the smooth operation check.

(d) Check the lock in the most retarded position.
(1) Confirm that the camshaft timing gear is locked at the most retarded position.



25. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY
(a) Remove the fringe bolt and camshaft timing gear.
NOTICE:
- **Be sure not to remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

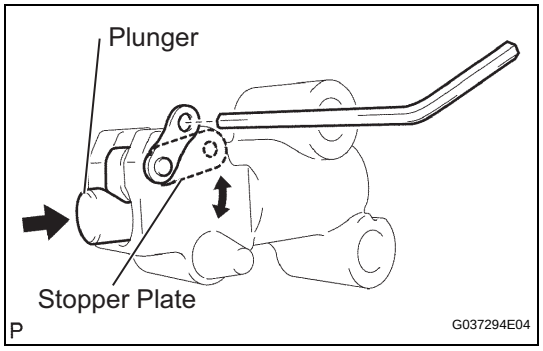
EM



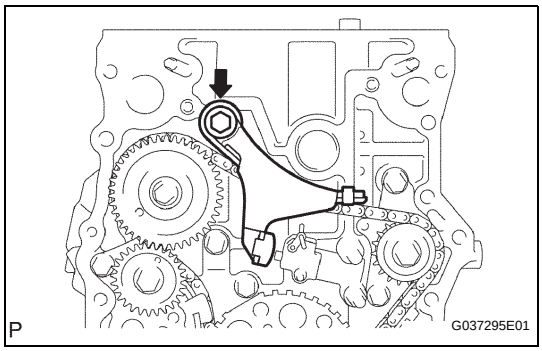
26. REMOVE CYLINDER HEAD SUB-ASSEMBLY
(a) Uniformly loosen the 10 bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.
NOTICE:
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

(b) Remove the cylinder head.

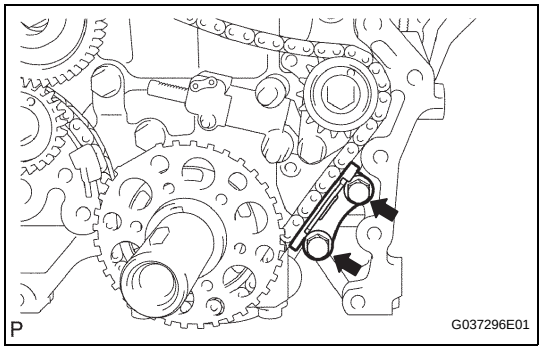
27. REMOVE CYLINDER HEAD GASKET
(a) Remove the cylinder head and gasket.



28. REMOVE NO. 2 CHAIN VIBRATION DAMPER
(a) Move the stopper plate downward to release the lock, and push the plunger deep into the tensioner.
(b) Move the stopper plate upward to set the lock, and insert a hexagon wrench into the stopper plate's hole.

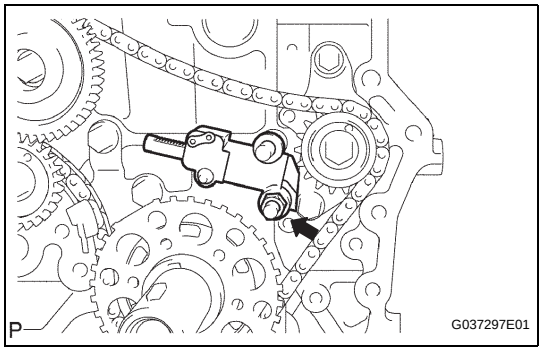


(c) Remove the bolt and chain vibration damper No.2.



29. REMOVE NO. 3 CHAIN VIBRATION DAMPER

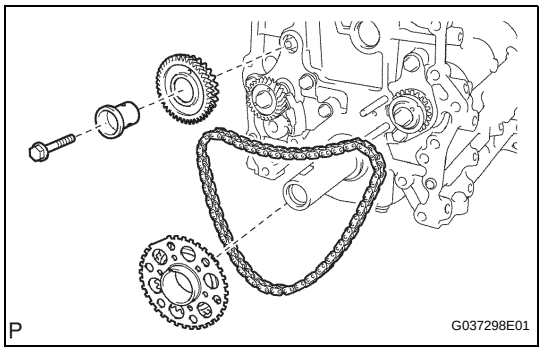
(a) Remove the 2 bolts and chain vibration damper No.3.



30. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Remove the hexagon wrench from the tensioner assembly No.2.

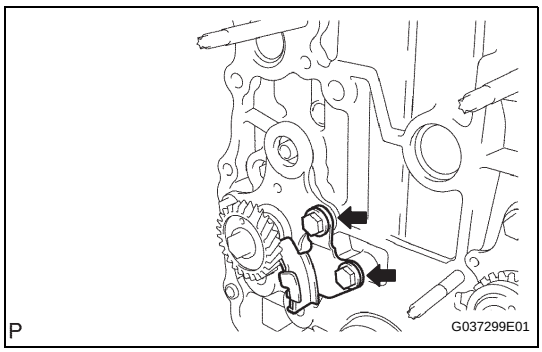
(b) Remove the nut and chain tensioner assembly No.2.



31. REMOVE NO.2 CHAIN SUB-ASSEMBLY

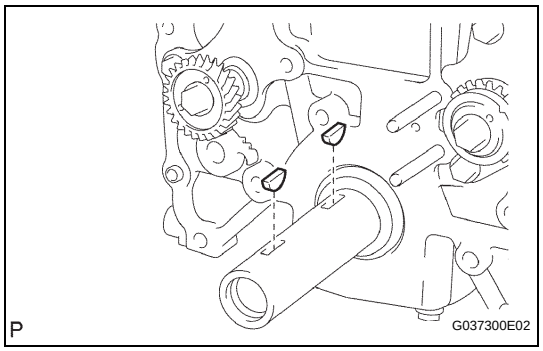
(a) Remove the bolt, balanceshaft drive gear shaft and balanceshaft drive gear.

(b) Remove the crankshaft timing sprocket No.2 and chain.



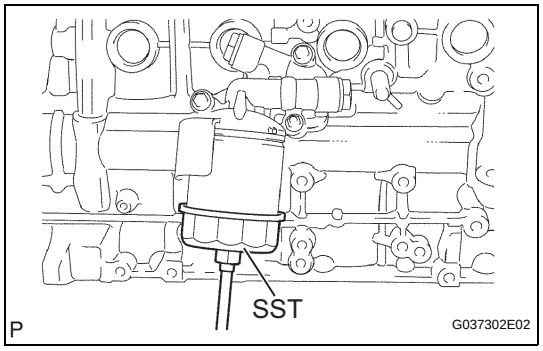
32. REMOVE NO. 4 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and vibration damper No.4.



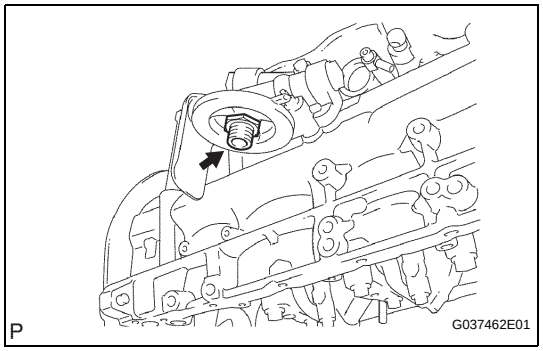
33. REMOVE CRANKSHAFT PULLEY SET CRANKSHAFT KEY

(a) Remove the 2 pulley set keys from the crankshaft.

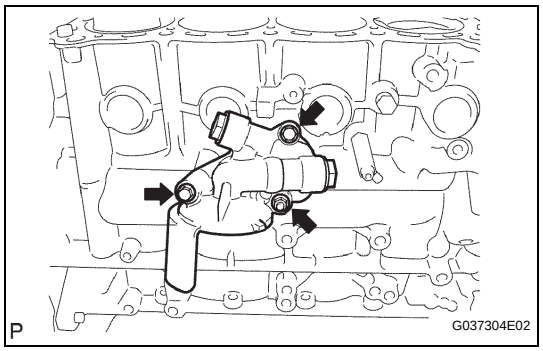


34. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.
SST 09228-07501



(b) Using a 27 mm socket wrench, remove the oil filter union.

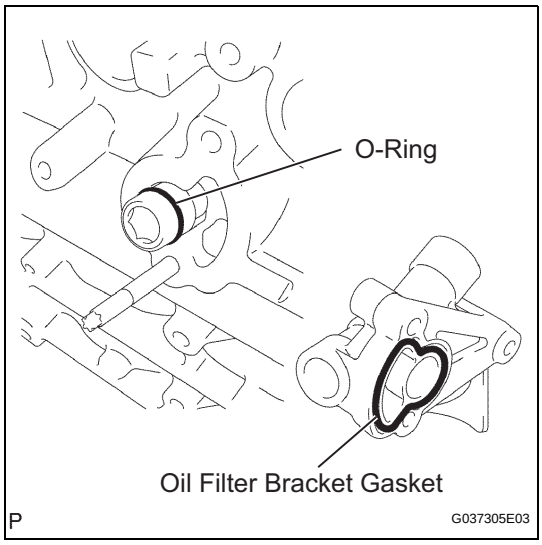


35. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

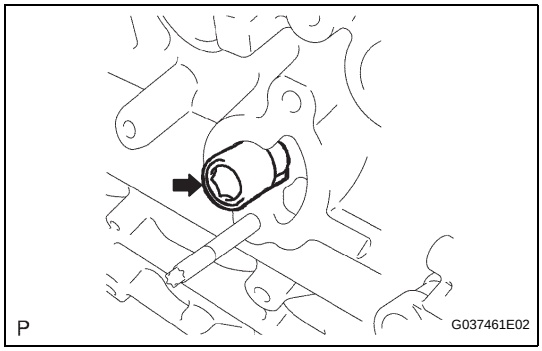
(a) Remove the 2 bolts and nut from the oil filter bracket.

(b) Remove the 2 screw plugs and 2 gaskets from the oil filter bracket.

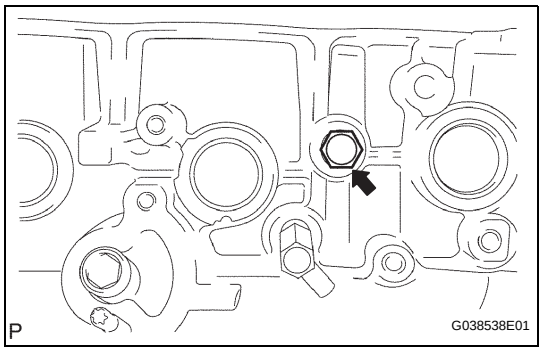
EM



(c) Remove the oil filter bracket gasket and O-ring.

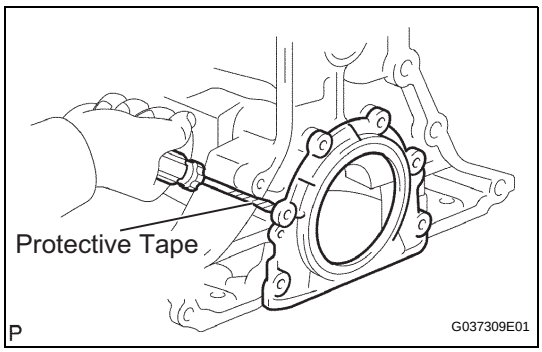


(d) Using a hexagon wrench, remove the oil filter bracket union.



36. REMOVE NO. 1 WITH HEAD TAPER SCREW PLUG

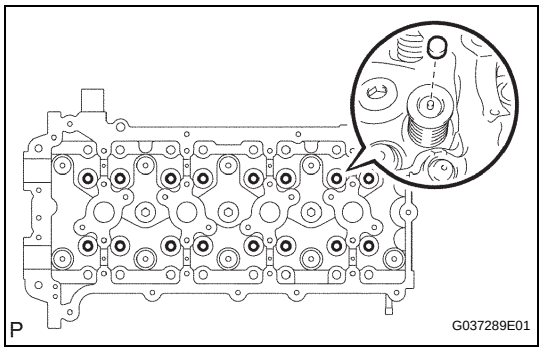
(a) Remove the taper screw plug from the cylinder block.



37. REMOVE ENGINE REAR OIL SEAL RETAINER

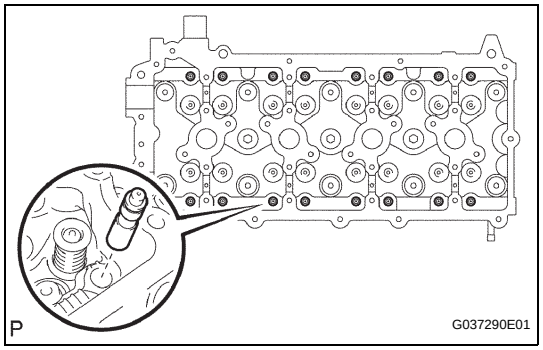
(a) Remove the 6 bolts.

(b) Using a screwdriver with its tip taped, pry out the oil seal retainer.
HINT:
Tape the screwdriver tip before use.



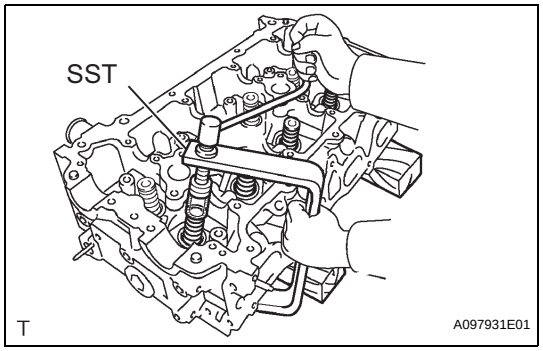
38. REMOVE VALVE STEM CAP

(a) Remove the valve stem caps from the cylinder head.
HINT:
Arrange the removed parts in the correct order.



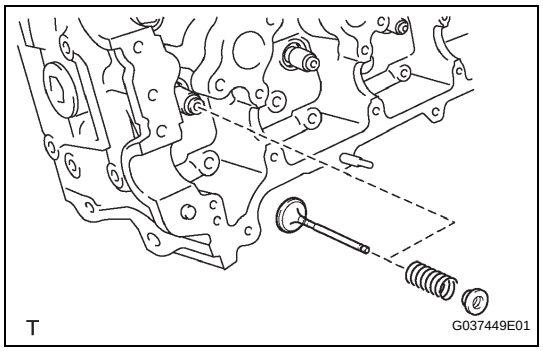
39. REMOVE VALVE LASH ADJUSTER ASSEMBLY

(a) Remove the valve lash adjusters from the cylinder head.
HINT:
Arrange the removed parts in the correct order.

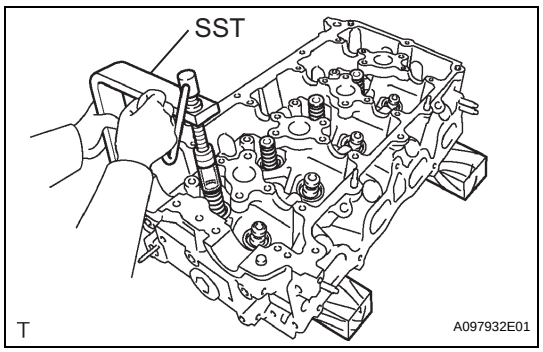


40. REMOVE INTAKE VALVE

(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer locks.
SST 09202-70020 (09202-00010)

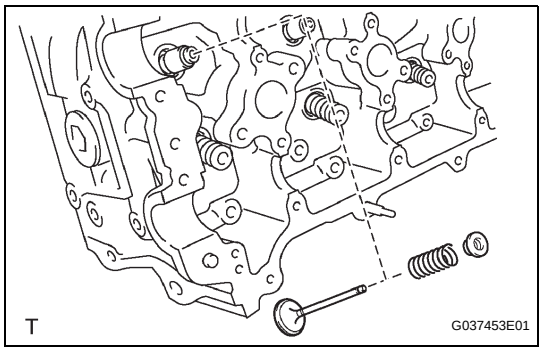


(b) Remove the retainer, compression spring, and valve.
HINT:
Arrange the removed parts in the correct order.

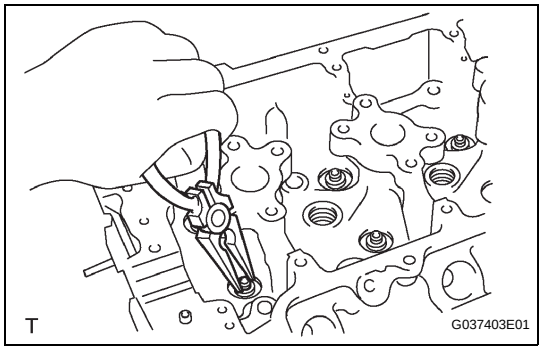


41. REMOVE EXHAUST VALVE

(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer locks.
SST 09202-70020 (09202-00010)



(b) Remove the retainer, compression spring, and valve.
HINT:
Arrange the removed parts in the correct order.

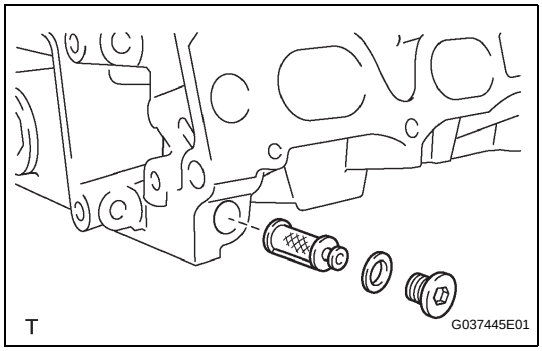


42. REMOVE VALVE STEM OIL SEAL

(a) Using needle-nose pliers, remove the oil seals.

43. REMOVE VALVE SPRING SEAT

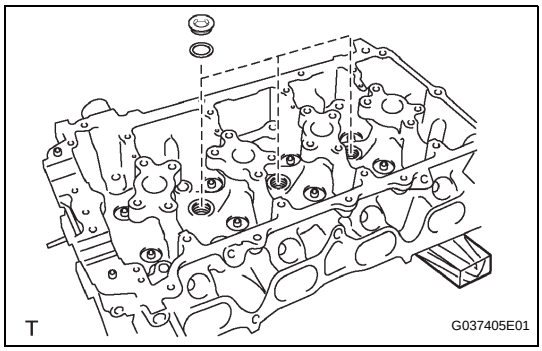
(a) Remove the valve spring seats from the cylinder head.



44. REMOVE OIL CONTROL VALVE FILTER

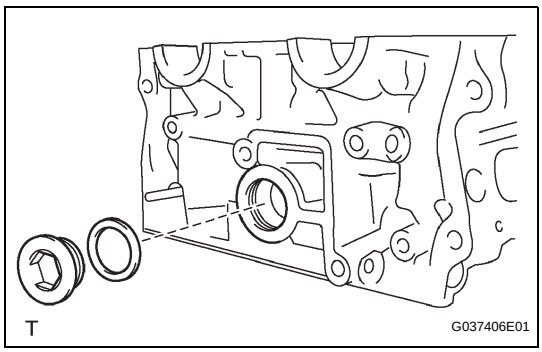
(a) Using an 8 mm hexagon wrench, remove the screw plug.

(b) Remove the oil control valve filter and gasket.



45. REMOVE NO. 1 WITH HEAD STRAIGHT SCREW PLUG

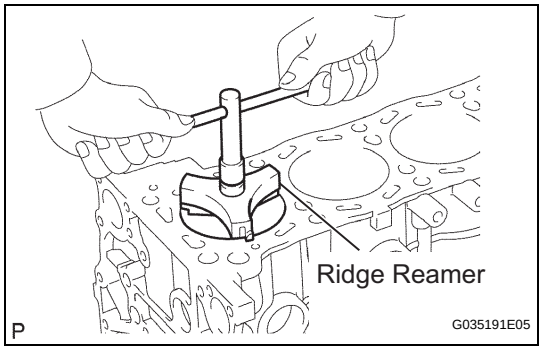
(a) Using a 10 mm hexagon wrench, remove the 3 screw plugs and 3 gaskets.
NOTICE:
If water leaks from the w/ head straight screw plug No.1 or the plug corrodes, replace it.



46. REMOVE NO. 2 WITH HEAD STRAIGHT SCREW PLUG

(a) Using a 19 mm hexagon wrench, remove the screw plug and gasket.
NOTICE:
If water leaks from the w/ head straight screw plug No.2 or the plug corrodes, replace it.

47. REMOVE CRANKSHAFT BEARING



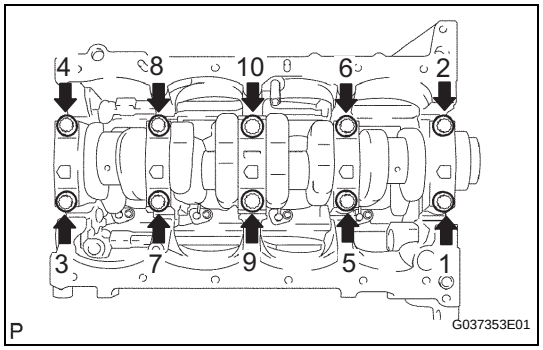
48. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

49. REMOVE CONNECTING ROD BEARING

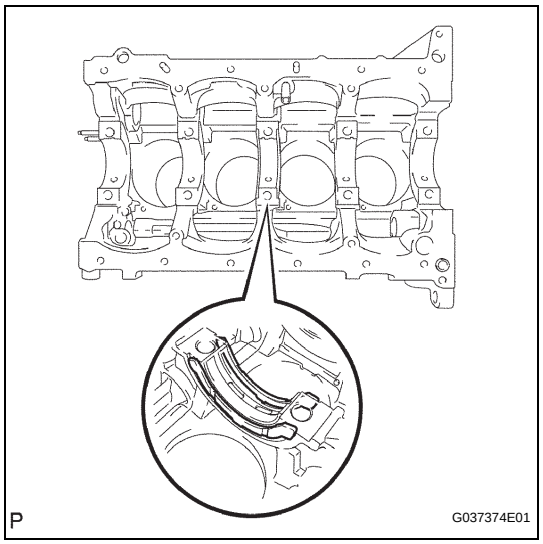
HINT:
Arrange the removed parts in the correct order.



50. REMOVE CRANKSHAFT

(a) Uniformly loosen the 10 bearing cap bolts, in several steps, in the sequence shown in the illustration.
HINT:
- Keep the lower bearings and crankshaft bearing caps together.
- Arrange the thrust washers in the correct order.

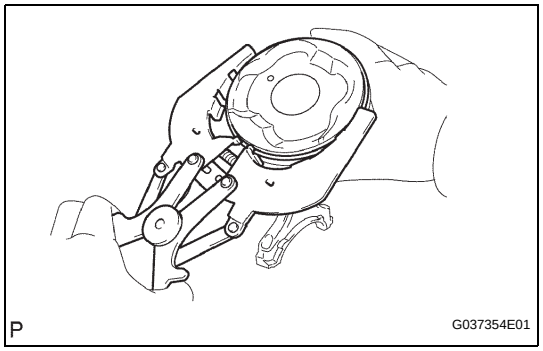
(b) Lift out the crankshaft.



(c) Remove the upper bearings and upper thrust washers from the cylinder block.
HINT:
Arrange the main bearing caps, bearings and thrust washers in the correct order.

51. REMOVE CRANKSHAFT BEARING

HINT:
Arrange the removed parts in the correct order.



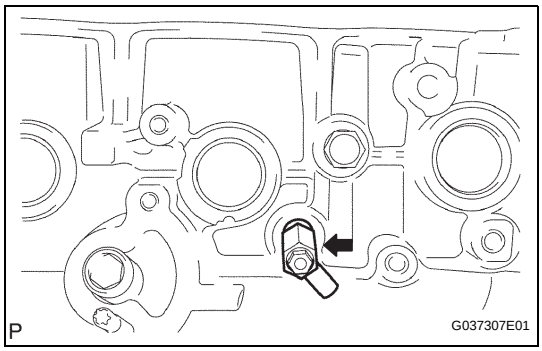
52. REMOVE PISTON RING SET

(a) Using a piston ring expander, remove the 2 compression rings.

(b) Using a piston ring expander, remove the oil ring rail.

(c) Remove the oil ring expander by hand.
HINT:
Arrange the piston rings in the correct order.

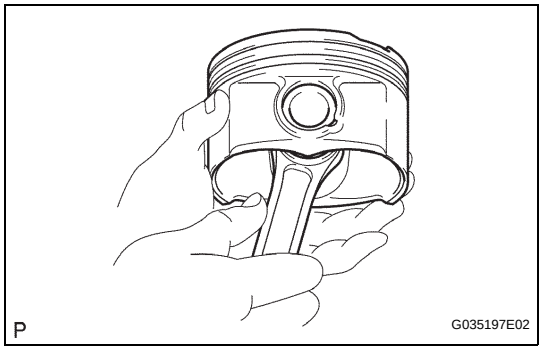
EM



53. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the water drain cock sub-assembly from the cylinder block.

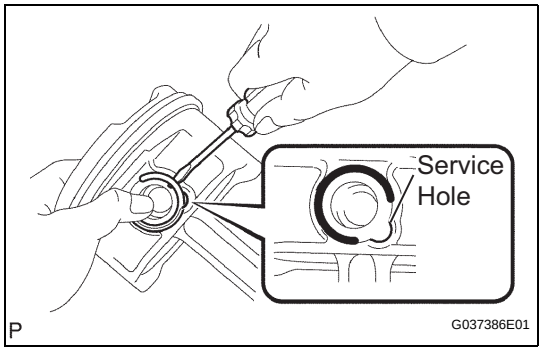
(b) Remove the water drain cock plug from the water drain cock sub-assembly.



54. REMOVE WITH PIN PISTON SUB-ASSEMBLY

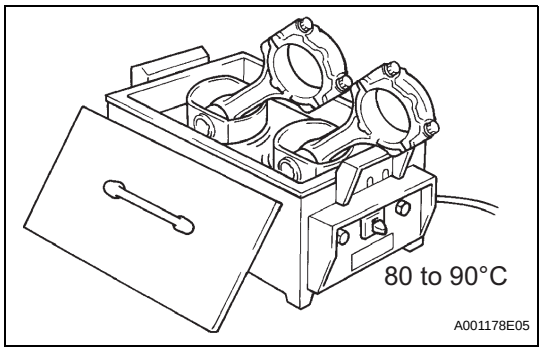
(a) Check the fitting condition between the piston and piston pin.

(1) Try to move the piston back and forth on the piston pin.
If any movement is felt, replace the piston and pin as a set.

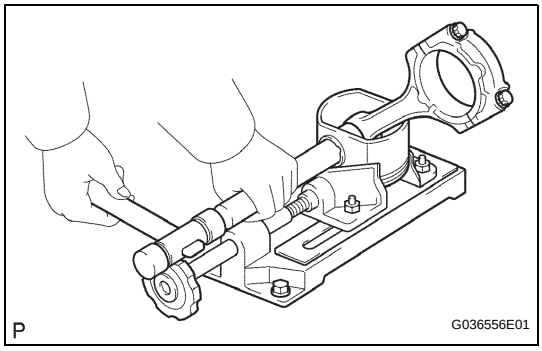


(b) Disconnect the connecting rod from the piston.

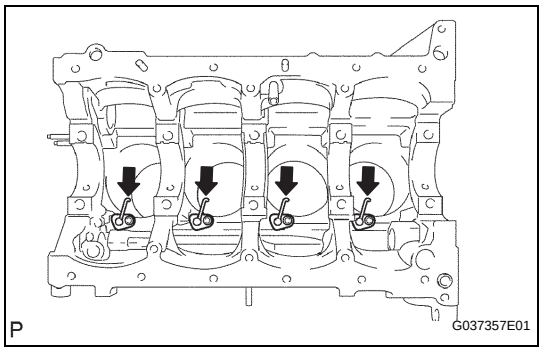
(1) Using a screwdriver, pry off the snap rings from the piston.



(2) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

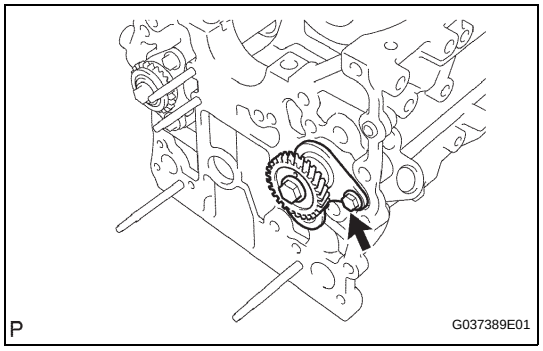


(3) Using a brass bar and plastic-faced hammer, lightly tap out the piston pin and remove the connecting rod.
HINT:
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



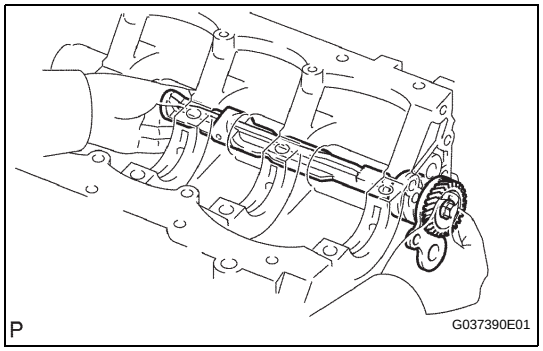
55. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, remove the oil nozzles.

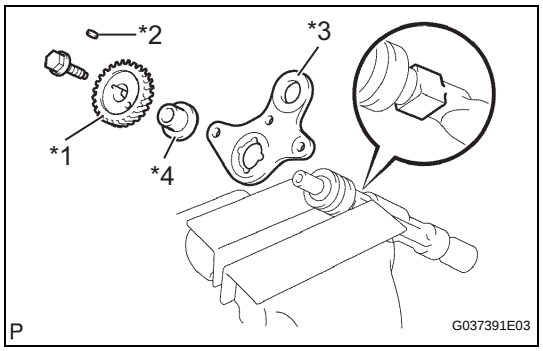


56. REMOVE NO.1 BALANCESHAFT

(a) Remove the bolt.

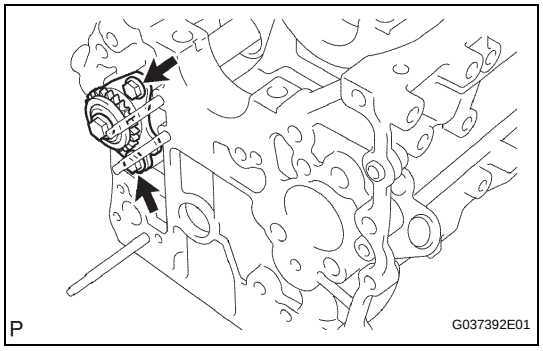


(b) Remove the balanceshaft from the cylinder block.
NOTICE:
When removing the balanceshaft, make sure to support the balanceshaft with both hands and avoid scratching the balanceshaft bearing on the cylinder block side.



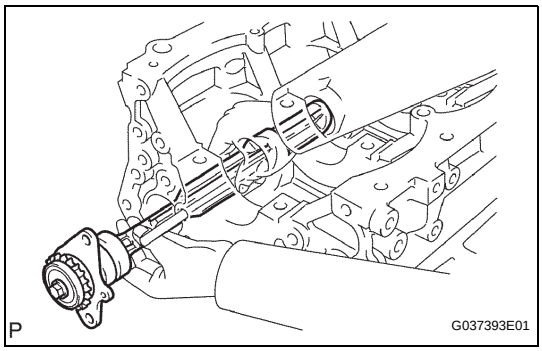
57. REMOVE NO. 1 BALANCESHAFT DRIVEN GEAR

(a) Mount the head portion of the balanceshaft in a vise.
NOTICE:
Be careful not to damage the balanceshaft.
(b) Remove the bolt.
(c) Remove the balanceshaft driven gear No.1 (*1), sliding key (*2), balanceshaft thrust washer No.1 (*3) and balanceshaft thrust spacer (*4).

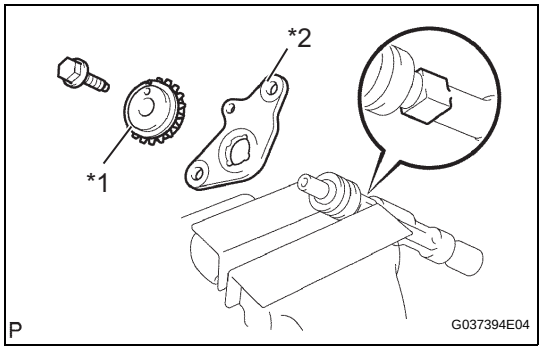


58. REMOVE NO.2 BALANCESHAFT

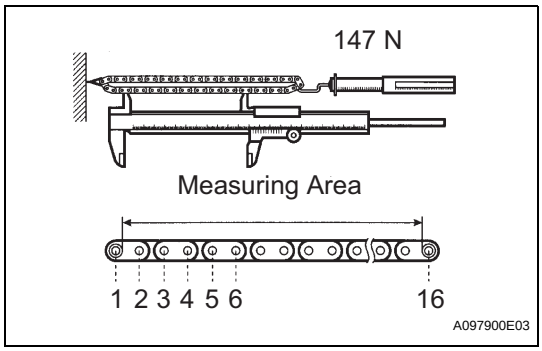
(a) Remove the 2 bolts.



(b) Remove the balanceshaft from the cylinder block.
NOTICE:
When removing the balanceshaft, make sure to support the balanceshaft with both hands and avoid scratching the balanceshaft bearing on the cylinder block side.

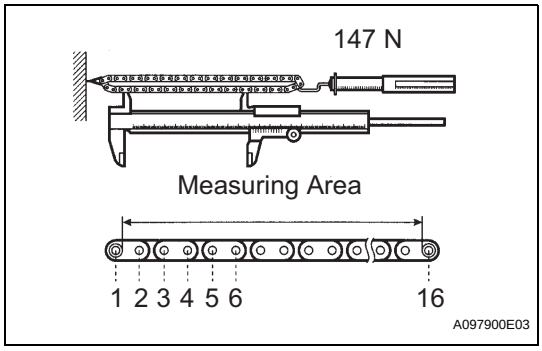


59. REMOVE NO. 2 BALANCESHAFT DRIVEN GEAR
(a) Mount the head portion of the balanceshaft in a vise.
NOTICE:
Be careful not to damage the balanceshaft.
(b) Remove the bolt.
(c) Remove the balanceshaft driven gear No.2 (*1) and balanceshaft thrust washer No.2 (*2).

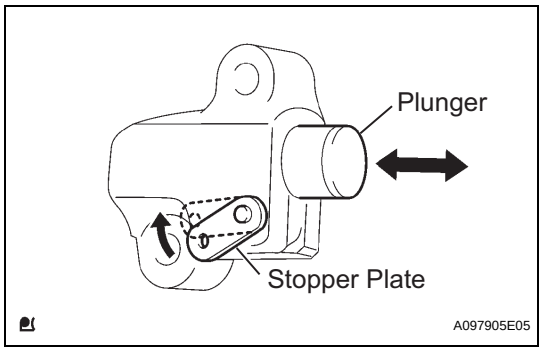


INSPECTION

1. INSPECT CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 16 links.
Maximum chain elongation:
147.5 mm (5.807 in.)
If the elongation is greater than the maximum, replace the chain.
NOTICE:
Perform the same measurement by pulling at random in 3 or more places to obtain an average.

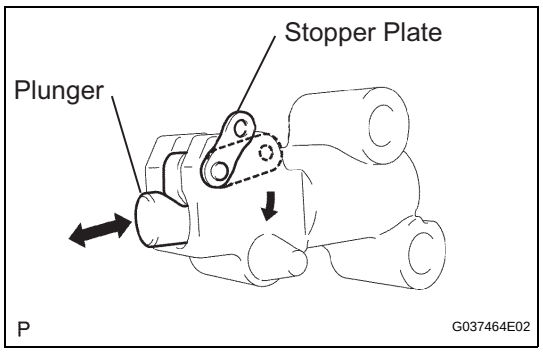


2. INSPECT NO.2 CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 16 links.
Maximum chain elongation:
123.6 mm (4.866 in.)
If the elongation is greater than the maximum, replace the chain.
NOTICE:
Perform the same measurement by pulling at random in 3 or more places to obtain an average.



3. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

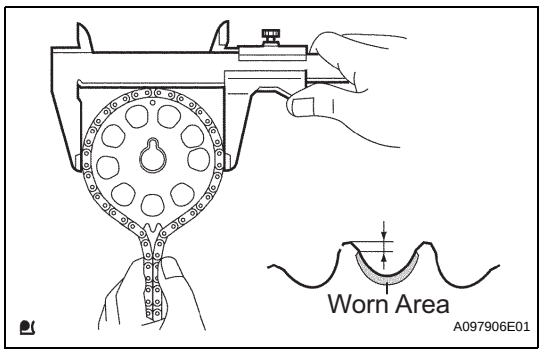
(a) Move the stopper plate upward to release the lock. Push the plunger and check that it moves smoothly.



4. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate downward to release the lock. Push the plunger and check that it moves smoothly.

EM



5. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET

(a) Measure the distance between the most worn out sprocket tip and the beginning of the worn area below the tip.

Minimum distance:
1.0 mm (0.039 in.)

If the distance is less than the minimum, replace the sprocket.

HINT:

If the worn area is too small or difficult to distinguish from a normal area, perform steps (b) and (c) below.

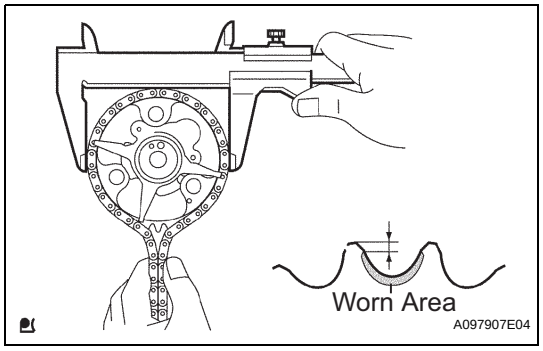
(b) Wrap the chain around the sprocket.

(c) Using vernier calipers, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
113.8 mm (4.480 in.)

HINT:

- The vernier calipers must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.



6. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Measure the distance between the most worn out timing gear tip and the beginning of the worn area below the tip.

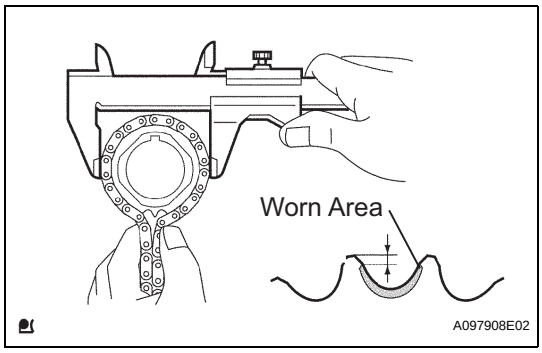
Minimum distance:
1.0 mm (0.039 in.)

If the distance is less than the minimum, replace the timing gear.

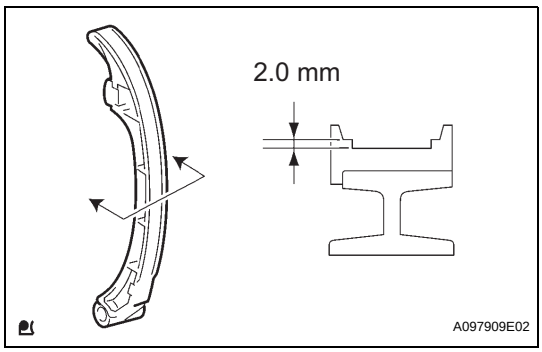
HINT:

If the worn area is too small or difficult to distinguish from a normal area, perform steps (b) and (c) below.

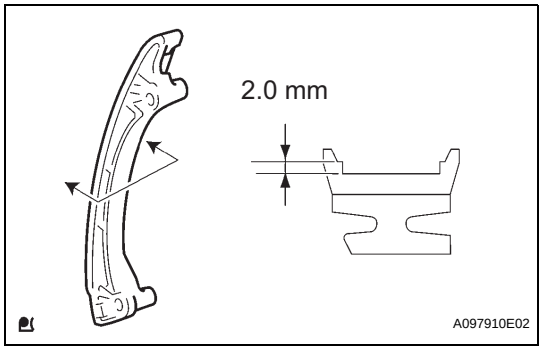
(b) Wrap the chain around the timing gear.
(c) Using vernier calipers, measure the sprocket diameter with the chain.
Minimum sprocket diameter (with chain):
113.8 mm (4.480 in.)
HINT:
- The vernier calipers must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and timing gear.



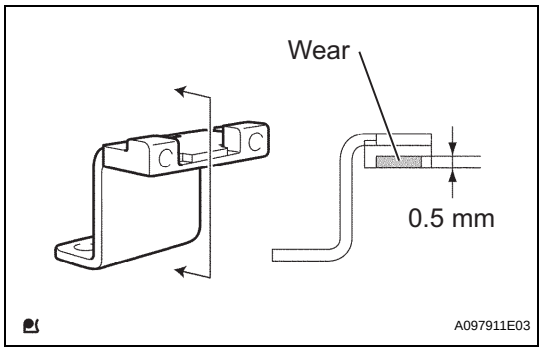
7. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET
(a) Measure the distance between the most worn out sprocket tip and the beginning of the worn area below the tip.
Minimum distance:
1.0 mm (0.039 in.)
If the distance is less than the minimum, replace the sprocket.
HINT:
If the worn area is too small or difficult to distinguish from a normal area, perform steps (b) and (c) below.
(b) Wrap the chain around the drive sprocket.
(c) Using vernier calipers, measure the sprocket diameter with the chain.
Minimum sprocket diameter (with chain):
59.4 mm (2.338 in.)
HINT:
- The vernier calipers must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.



8. INSPECT CHAIN TENSIONER SLIPPER
(a) Using vernier calipers, measure the tensioner slipper wear.
Maximum wear:
2.0 mm (0.079 in.)
If the wear is greater than the maximum, replace the tensioner slipper.



9. INSPECT NO. 1 CHAIN VIBRATION DAMPER
(a) Using vernier calipers, measure the vibration damper wear.
Maximum wear:
2.0 mm (0.079 in.)
If the wear is greater than the maximum, replace the vibration damper.



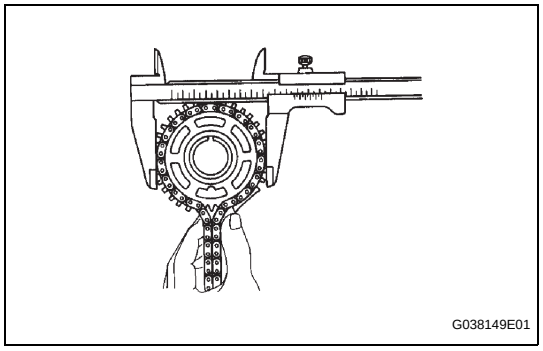
10. INSPECT TIMING CHAIN GUIDE

(a) Using vernier calipers, measure the chain guide wear.

Maximum wear:

0.5 mm (0.020 in.)

If the wear is greater than the maximum, replace the timing chain guide.



11. INSPECT NO. 2 CRANKSHAFT TIMING SPROCKET

(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain.

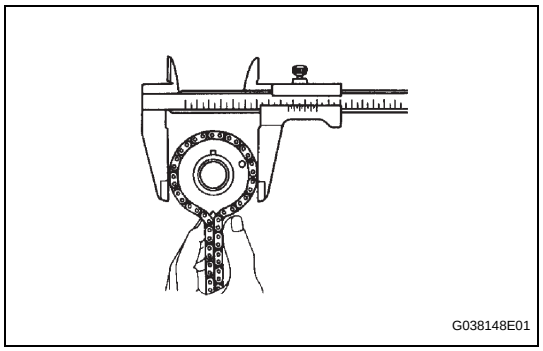
Minimum sprocket diameter (with chain):

96.7 mm (3.807 in.)

HINT:

The vernier calipers must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the chain and sprocket.



12. INSPECT BALANCESHAFT DRIVE GEAR SUB-ASSEMBLY

(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain.

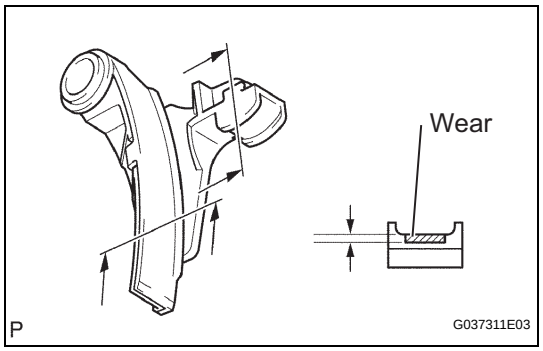
Minimum sprocket diameter (with chain):

75.9 mm (2.988 in.)

HINT:

The vernier calipers must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the chain and sprocket.



13. INSPECT NO. 2 CHAIN VIBRATION DAMPER

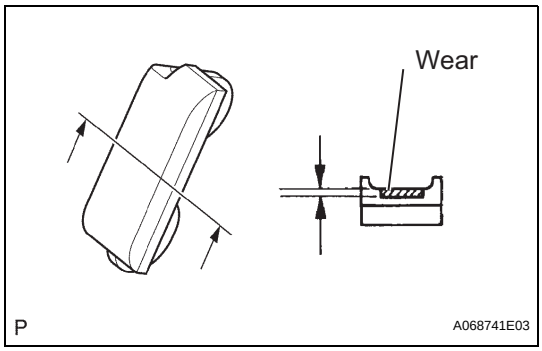
(a) Using vernier calipers, measure the vibration damper No.2 wear.

Maximum wear:

1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the vibration damper.

EM



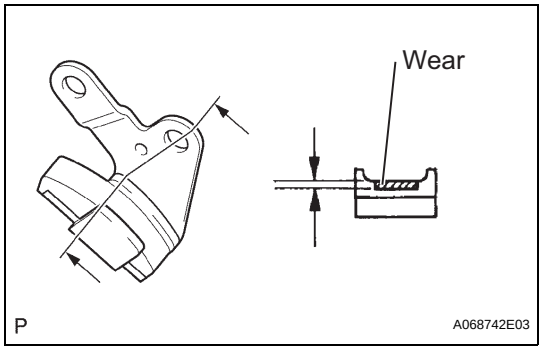
14. INSPECT NO. 3 CHAIN VIBRATION DAMPER

(a) Using vernier calipers, measure the vibration damper No.3 wear.

Maximum wear:

1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the vibration damper.



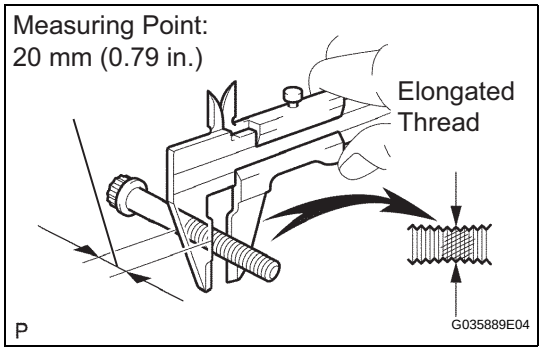
15. INSPECT NO. 4 CHAIN VIBRATION DAMPER

(a) Using vernier calipers, measure the vibration damper No.4 wear.

Maximum wear:

1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the vibration damper.



16. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the minimum diameter of the elongated thread at the measuring point.

Standard outside diameter:

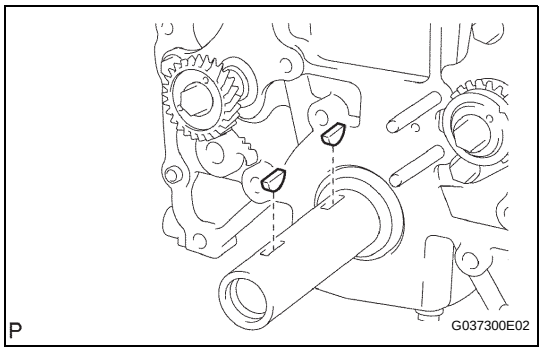
10.76 to 10.97 mm (0.4236 to 0.4319 in.)

Minimum outside diameter:

10.40 mm (0.4094 in.)

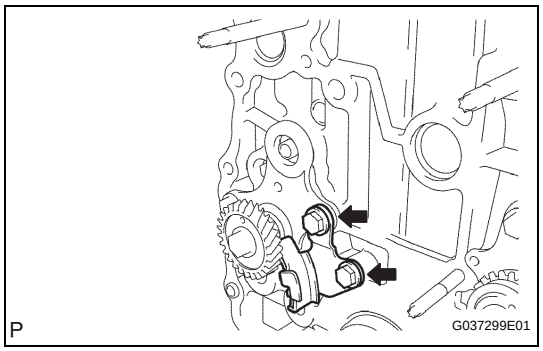
HINT:

- If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the lowest diameter.
- If the diameter is less than the minimum, replace the cylinder head bolt.



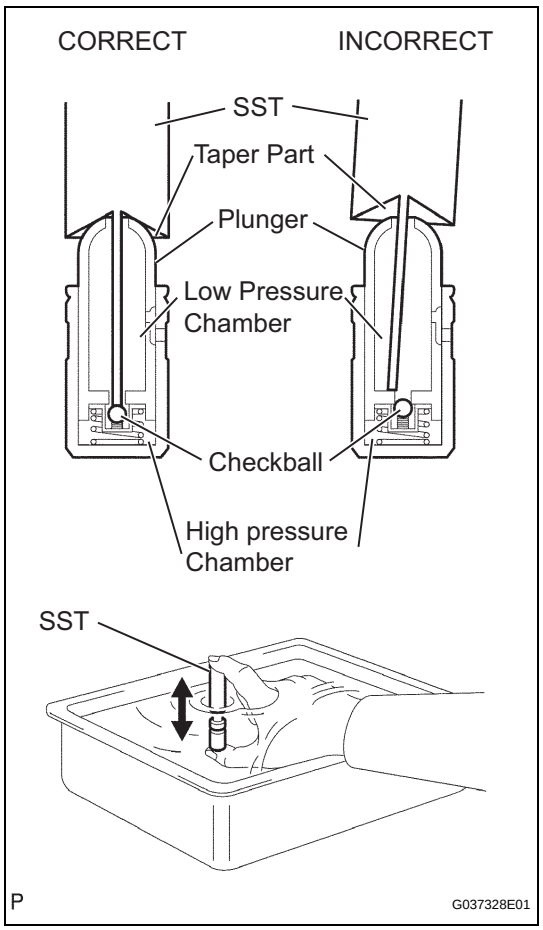
17. INSTALL CRANKSHAFT PULLEY SET CRANKSHAFT KEY

(a) Install the 2 pulley keys to the crankshaft.



18. INSTALL NO. 4 CHAIN VIBRATION DAMPER

(a) Install the vibration damper No.4 with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)



19. INSPECT VALVE LASH ADJUSTER ASSEMBLY
NOTICE:
- **Keep the lash adjuster free from dirt and foreign objects.**
- **Only use clean engine oil.**

(a) Place the lash adjuster into a container full of engine oil.

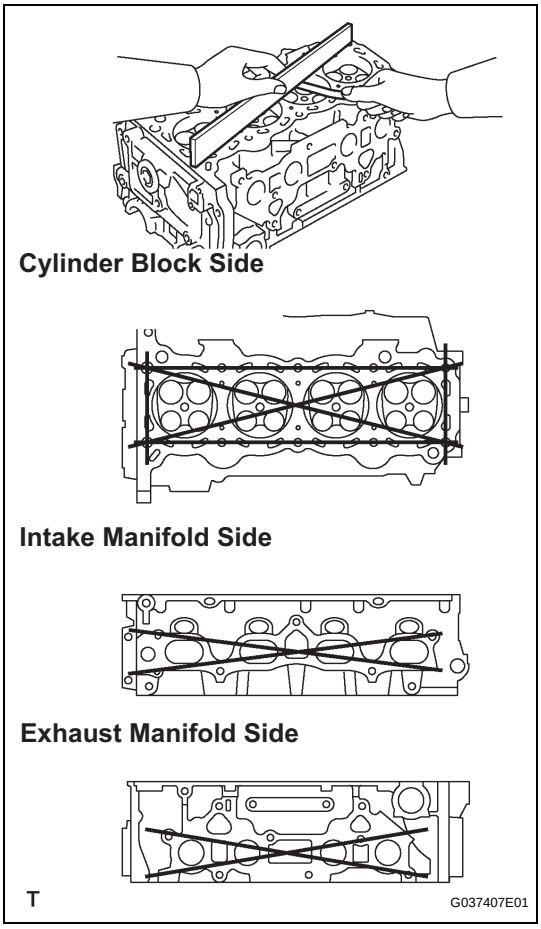
(b) Insert SST's tip into the lash adjuster's plunger and use the tip to press down on the checkball inside the plunger.
SST 09276-75010

(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed the air.
OK:
Plunger moves up and down.
NOTICE:
When bleeding high-pressure air from the compression chamber, make sure that the tip of the SST is actually pressing the checkball as shown in the illustration. If the checkball is not pressed, air will not bleed.

(e) After bleeding the air, remove the SST. Then quickly and firmly press the plunger with a finger.
OK:
Plunger is very difficult to move.
If the result is not as specified, replace the lash adjuster.

EM



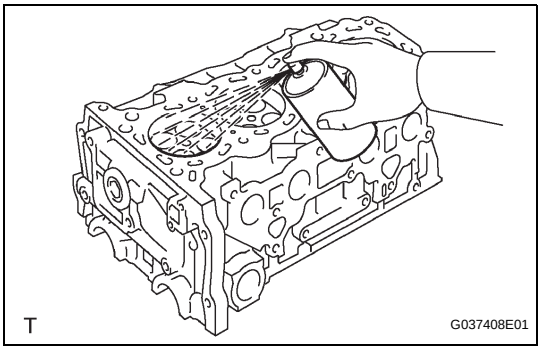
20. INSPECT CYLINDER HEAD FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surface of contacting the cylinder block and manifolds.

Maximum warpage:

0.05 mm (0.0020 in.)

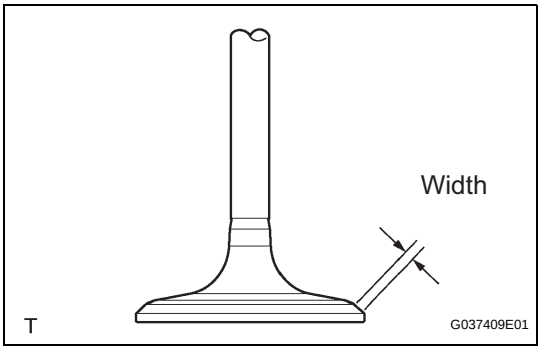
If the warpage is greater than the maximum, replace the cylinder head.



21. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrate, check the intake ports, exhaust ports and cylinder surface for cracks.

If cracked, replace the cylinder head.



22. INSPECT INTAKE VALVE SEAT

(a) Apply a light coat of prussian blue (or white lead) to the valve face.

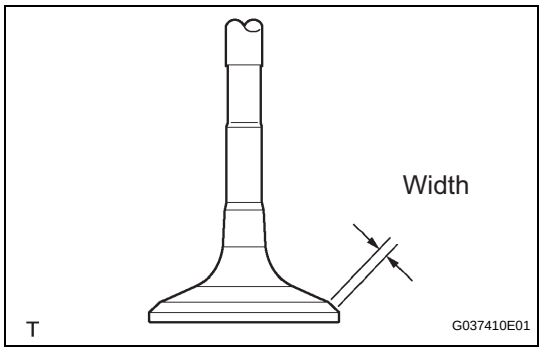
(b) Lightly press the valve face against the valve seat.

(c) Check the valve face and valve seat by using the following procedure.

(1) If prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.

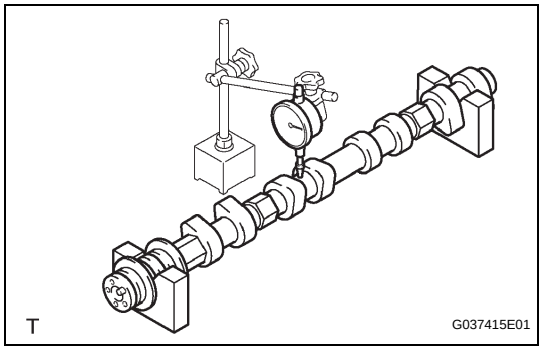
(2) If prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.

(3) Check that the valve seat contacts in the middle of the valve face with the width between 1.0 and 1.4 mm (0.039 and 0.055 in.).



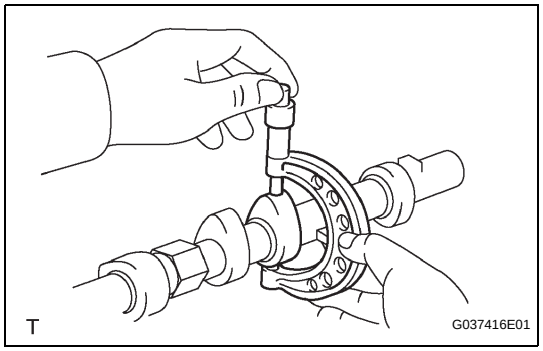
23. INSPECT EXHAUST VALVE SEAT

(a) Apply a light coat of prussian blue (or white lead) to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat by using to the following procedure.
  (1) If prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
  (2) If prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.0 and 1.4 mm (0.039 and 0.055 in.).

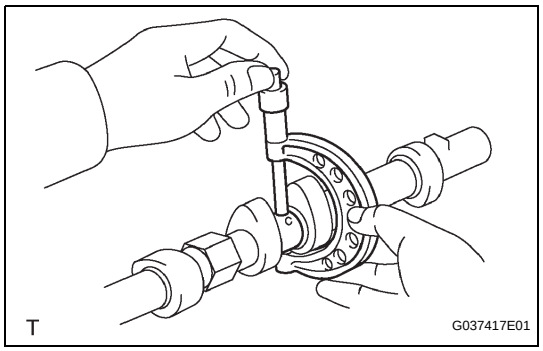


24. INSPECT CAMSHAFT

(a) Check the camshaft for runout.
  (1) Place the camshaft on V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.03 mm (0.0012 in.)
  If the circle runout is greater than the maximum, replace the camshaft.



(b) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
42.855 to 42.955 mm (1.6872 to1.6911 in.)
Minimum cam lobe height:
42.855 mm (1.6872 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

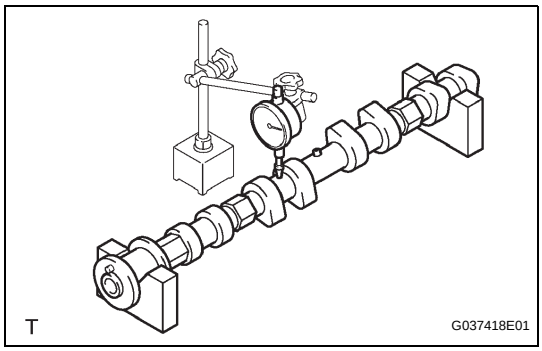


(c) Using a micrometer, measure the journal diameter.
Standard journal diameter

No.1 journal	**35.949 to 35.965 mm (1.4153 to 1.4159 in.)**
Other journal	**26.959 to 26.975 mm (1.0614 to 1.0620 in.)**

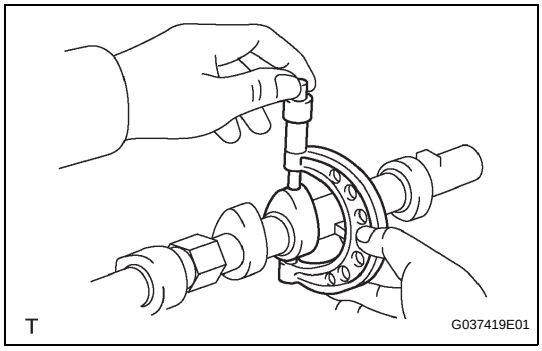
If the journal diameter is not as specified, check the oil clearance.

EM

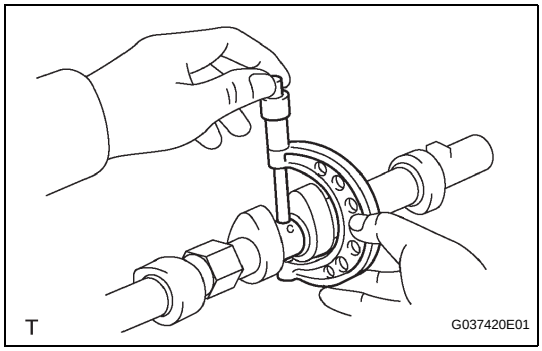


25. INSPECT NO.2 CAMSHAFT

(a) Check the camshaft for runout.
(1) Place the camshaft on V-blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.03 mm (0.0012 in.)
If the circle runout is greater than the maximum, replace the camshaft.



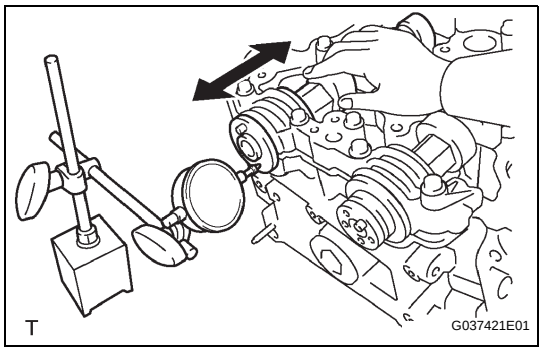
(b) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
42.854 to 42.954 mm (1.687 to 1.6911 in.)
Minimum cam lobe height:
42.854 mm (1.6872 in.)
If the cam lobe height is less than the minimum, replace the camshaft.



(c) Using a micrometer, measure the journal diameter.
Standard journal diameter

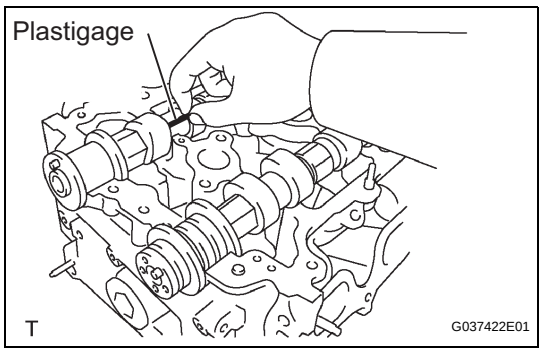
No.1 journal	**35.949 to 35.965 mm (1.4153 to 1.4159 in.)**
Other journal	**26.959 to 26.975 mm (1.0614 to 1.0620 in.)**

If the journal diameter is not as specified, check the oil clearance.



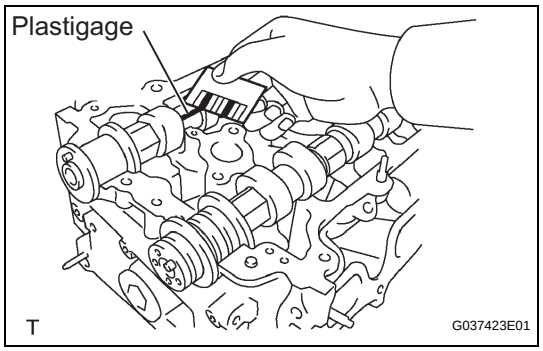
26. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts.
(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.
Standard thrust clearance:
0.10 to 0.24 mm (0.004 to 0.009 in.)
Maximum thrust clearance:
0.26 mm (0.010 in.)
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.



27. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.
(b) Place the camshafts on the cylinder head.
(c) Lay a strip of Plastigage across each of the camshaft journals.
(d) Install the bearing caps.
Torque: 16 N*m (160 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not turn the camshaft.
(e) Remove the bearing caps.



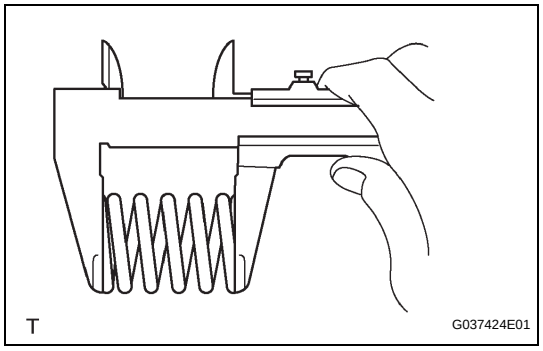
(f) Measure the Plastigage at its widest point.
Standard oil clearance

No.1 journal	**0.035 to 0.072 mm (0.0014 to 0.0029 in.)**
Other journal	**0.025 to 0.062 mm (0.00098 to 0.0024 in.)**

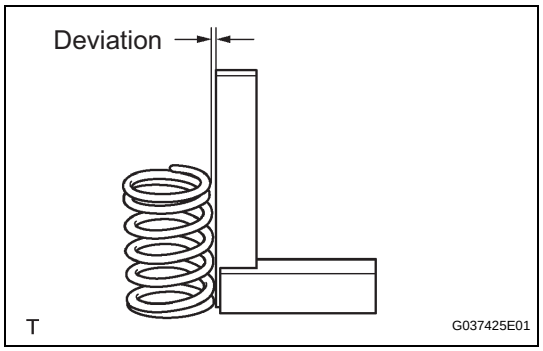
Maximum oil clearance:
0.08 mm (0.003 in.)
If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the cylinder head.

(g) Completely remove the Plastigage.

28. INSPECT INNER COMPRESSION SPRING

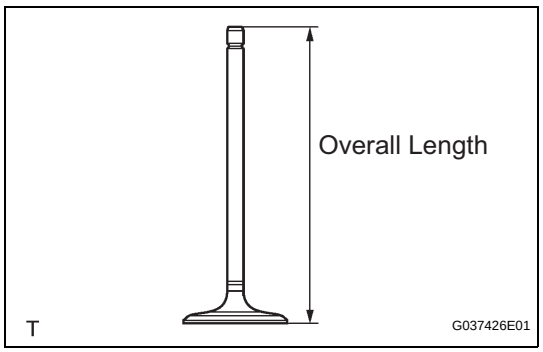


(a) Using vernier calipers, measure the free length of the inner compression spring.
Free length:
48.53 mm (1.9106 in.)
If the free length is not as specified, replace the spring.

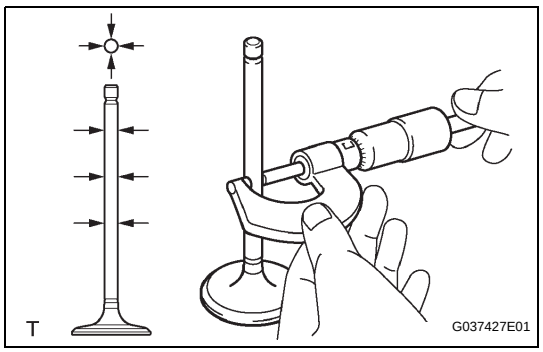


(b) Using a steel square, measure the deviation of the inner compression spring.
Maximum deviation:
1.5 mm (0.059 in.)
Maximum angle (reference):
2°
If the deviation is greater than the maximum, replace the spring.

29. INSPECT INTAKE VALVE

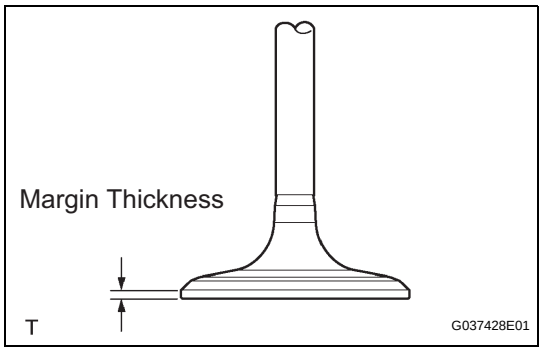


(a) Using vernier calipers, measure the valve's overall length.
Standard overall length:
106.26 mm (4.1835 in.)
Minimum overall length:
105.96 mm (4.1716 in.)
If the overall length is less than the minimum, replace the valve.

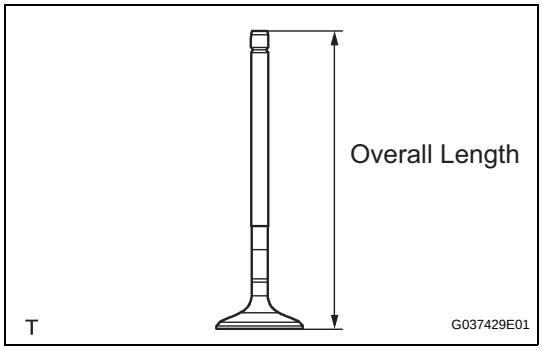


(b) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)

EM

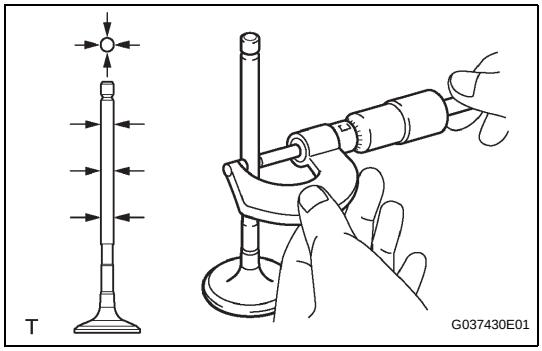


(c) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.05 to 1.45 mm (0.0413 to 0.0571 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
Thickness If the margin thickness is less than the minimum, replace the valve.

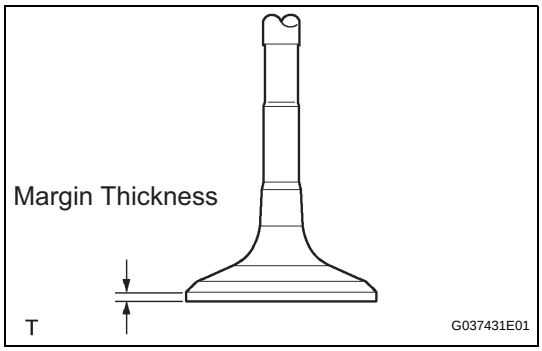


30. INSPECT EXHAUST VALVE

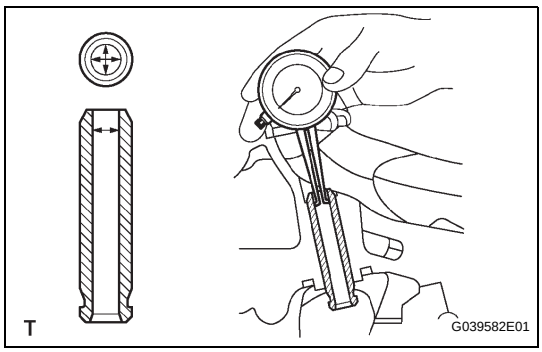
(a) Using vernier calipers, measure the valve's overall length.
Standard overall length:
106.74 mm (4.2024 in.)
Minimum overall length:
106.44 mm (4.1905 in.)
If the overall length is less than the minimum, replace the valve.



(b) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 to 5.480 mm (0.2151 to 0.2157 in.)



(c) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.2 to 1.6 mm (0.0472 to 0.0630 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the valve.



31. INSPECT VALVE GUIDE BUSHING

(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bush inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

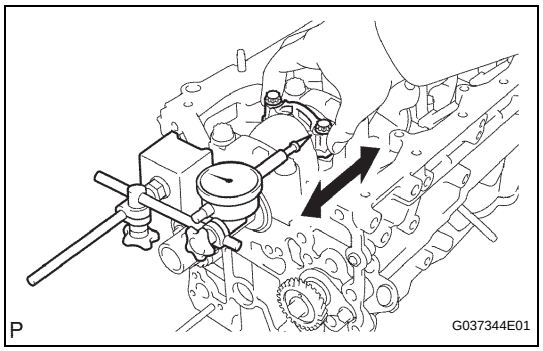
(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.) (Intake)
0.030 to 0.065 mm (0.0012 to 0.0026 in.) (Exhaust)

EM

Maximum oil clearance:
0.08 mm (0.0032 in.) (Intake)
0.10 mm (0.0039 in.) (Exhaust)

HINT:

- If the clearance is greater than the maximum, replace the intake valve and intake guide bush.
- If the clearance is greater than the maximum, replace the exhaust valve and exhaust guide bush.



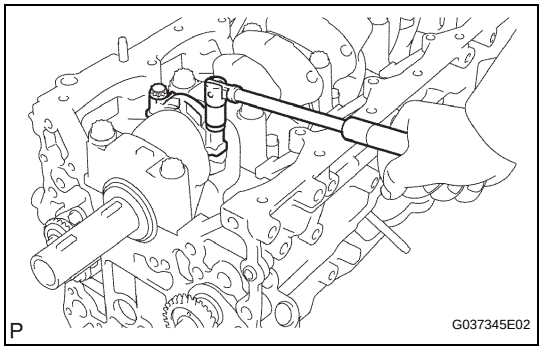
32. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.150 to 0.350 mm (0.0059 to 0.0138 in.)
Maximum thrust clearance:
0.40 mm (0.016 in.)
If the thrust clearance is greater than the maximum, replace the connecting rod assembly(s). If necessary, replace the crankshaft.

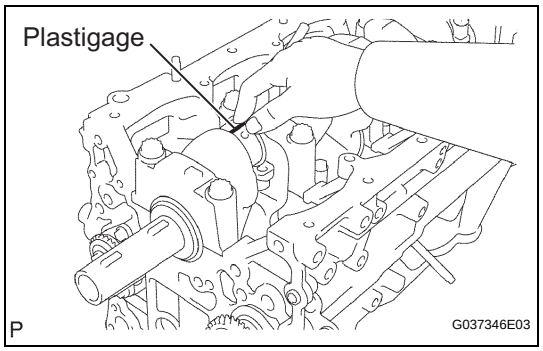
EM

33. INSPECT CONNECTING ROD OIL CLEARANCE

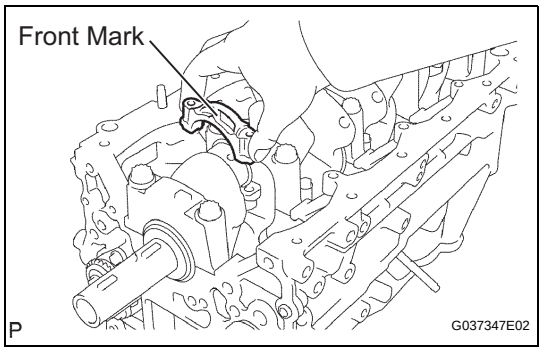
(a) Check that the matchmarks on the connecting rod and cap are aligned to ensure the correct reassembly.
HINT:
The matchmarks on the connecting rods and caps are for ensuring the correct reassembly.



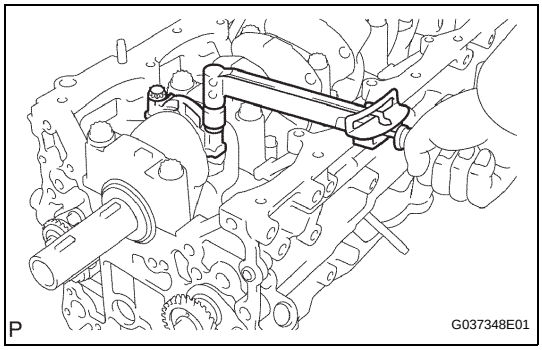
(b) Remove the 2 connecting rod cap bolts.
(c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.
(d) Clean the crank pin and bearing.
(e) Check the crank pin and bearing for pitting and scratches.



(f) Lay a strip of Plastigage on the crank pin.

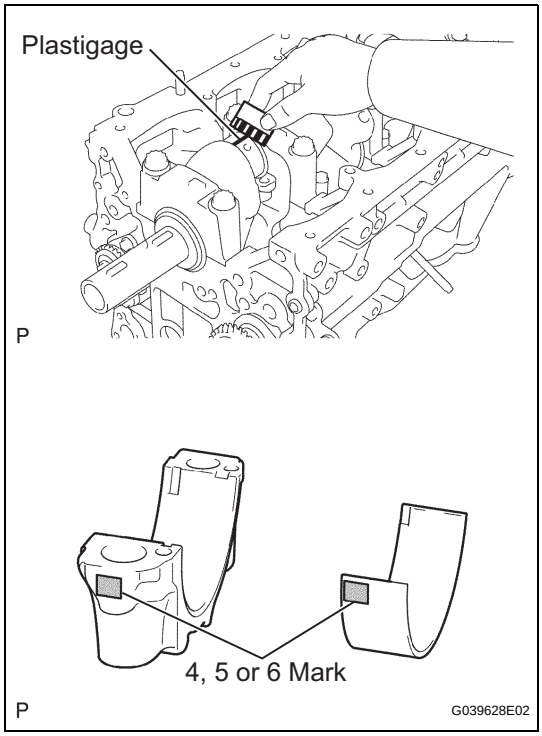


(g) Check that the front mark of the connecting rod cap is facing forward.



(h) Install the connecting rod cap.
NOTICE:
Do not turn the crankshaft.

(i) Remove the 2 bolts and connecting rod cap (see steps (b) and (c) above).



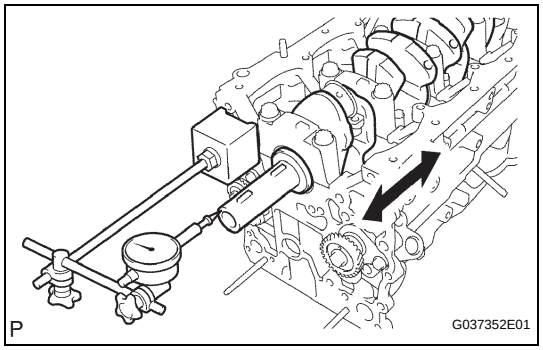
(j) Measure the Plastigage at its widest point.
Standard oil clearance:
0.024 to 0.049 mm (0.0009 to 0.0019 in.)
Maximum oil clearance:
0.066 mm (0.0026 in.)
If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, replace the crankshaft.
HINT:
If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2 and 3 mark on its surface.
Reference
Crankshaft pin diameter

Mark	Thickness
4	52.989 to 53.002 mm (2.0862 to 2.0867 in.)
5	52.989 to 53.002 mm (2.0862 to 2.0867 in.)
6	52.989 to 53.002 mm (2.0862 to 2.0867 in.)

Standard bearing center wall thickness

Mark	Thickness
4	1.484 to 1.487 mm (0.0584 to 0.0585 in.)
5	1.488 to 1.490 mm (0.0586 to 0.0587 in.)
6	1.491 to 1.493 mm (0.0587 to 0.0588 in.)

(k) Completely remove the Plastigage.



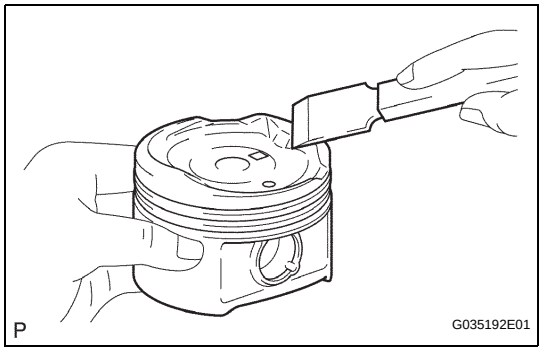
34. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.020 to 0.220 mm (0.0008 to 0.0087 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)

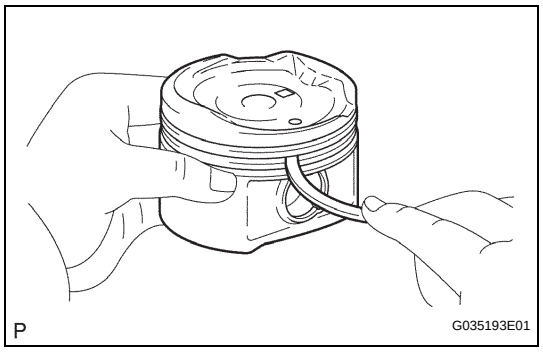
If the thrust clearance is greater than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.

Thrust washer thickness:
2.440 to 2.490 mm (0.0961 to 0.0980 in.)

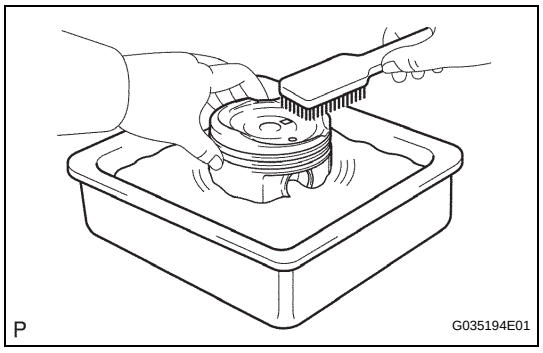


35. CLEAN WITH PIN PISTON SUB-ASSEMBLY

(a) Using a gasket scraper, remove the carbon from the piston top.



(b) Using a groove cleaning tool or broken ring, clean the piston ring grooves.



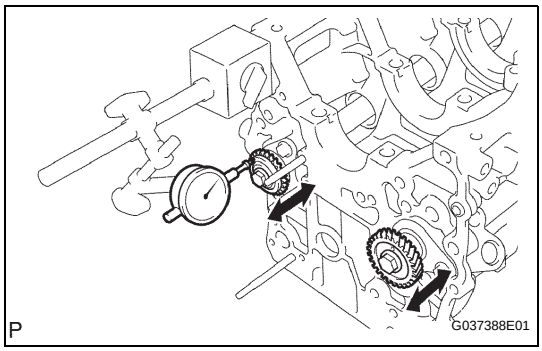
(c) Using solvent and a brush, thoroughly clean the piston.

NOTICE:
Do not use a wire brush.

36. INSPECT NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Check the oil nozzles for damage or clogging. If necessary, replace the oil nozzle.

EM

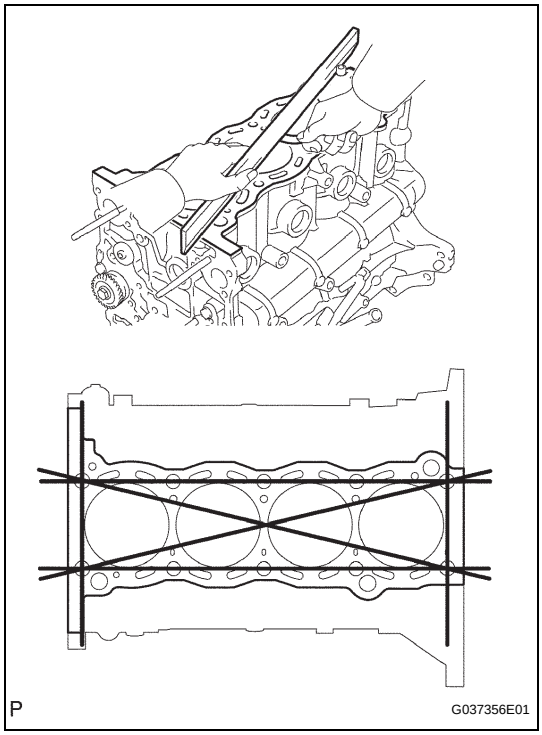


37. INSPECT BALANCE SHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the balanceshaft back and forth.

Standard thrust clearance:
0.07 to 0.13 mm (0.0027 to 0.0051 in.)
Maximum thrust clearance:
0.20 mm (0.0079 in.)

If the thrust clearance is greater than the maximum, replace the balanceshaft thrust washer. If necessary, replace the balanceshaft.

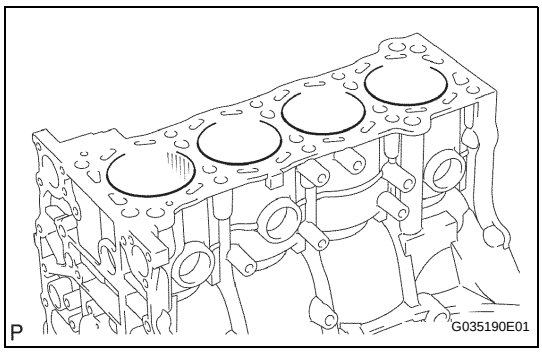


38. INSPECT CYLINDER BLOCK FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

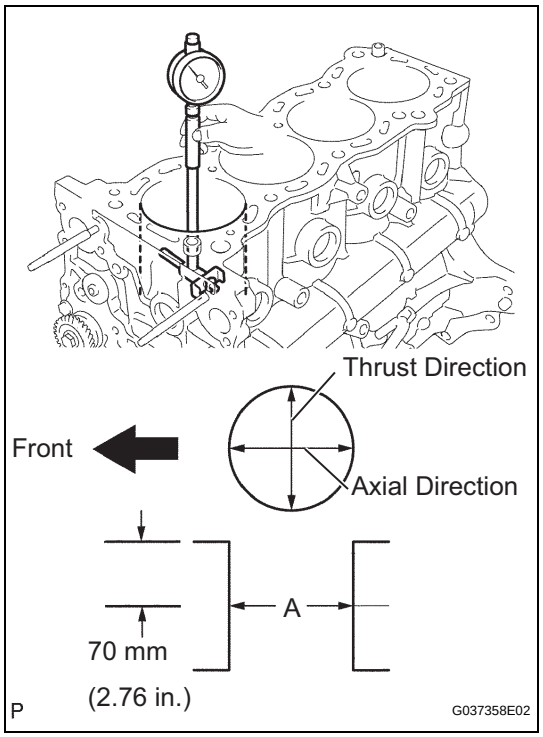
Maximum warpage:
0.05 mm (0.0020 in.)

If the warpage is greater than the maximum, replace the cylinder block.



(b) Visually check the cylinder for vertical scratches. If deep scratches are present, rebore all the 4 cylinders. If necessary, replace the cylinder block.

EM



39. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A in the thrust and axial directions.

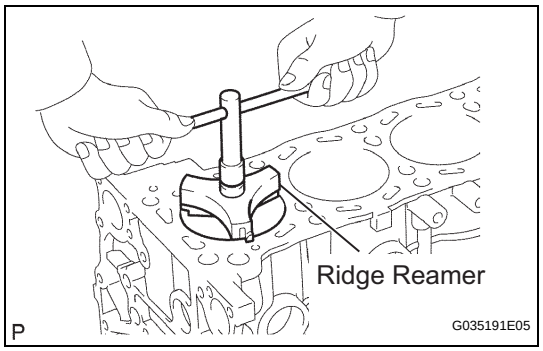
Standard diameter:

94.990 to 95.003 mm (3.7398 to 3.7403 in.)

Maximum difference diameter:

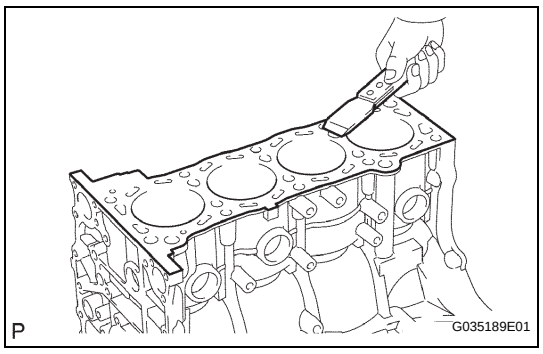
0.2 mm (0.008 in.)

If the diameter is greater than the maximum, rebore all the 4 cylinders. If necessary, replace the cylinder block.



(b) Inspect the cylinder ridge.

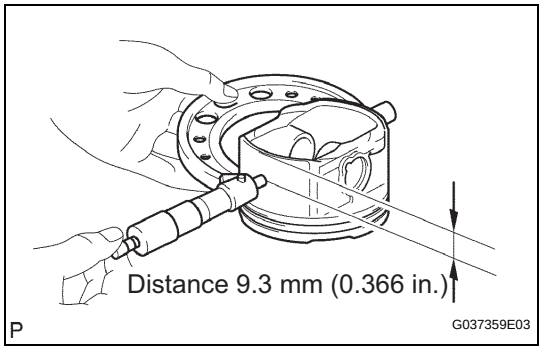
If the wear is less than 0.2 mm (0.008 in.), using a ridge reamer, grind the top of the cylinder.



40. CLEAN CYLINDER BLOCK

(a) Using a gasket scraper, remove all the gasket material from the top surface of the cylinder block.

(b) Using a soft brush and solvent, thoroughly clean the cylinder block.



41. INSPECT PISTON DIAMETER

(a) Using a micrometer, measure the piston diameter at right angles to the piston center line, the indicated distance from the piston end.

Distance:

9.3 mm (0.366 in.)

Piston diameter:

94.941 to 94.971 mm (3.7378 to 3.7390 in.) (for standard)

EM

42. INSPECT PISTON OIL CLEARANCE

(a) Measure the cylinder bore diameter in the thrust directions (see step 20).

(b) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.019 to 0.052 mm (0.0007 to 0.0020 in.)

If the oil clearance is greater than the standard, replace all the pistons and rebore all the cylinders. If necessary, replace the cylinder block.

HINT:

- Bore all the cylinders for the O/S piston outside diameter.
- Replace all the piston rings with ones to match the O/S pistons.

(c) If the oil clearance is greater than the standard.

(1) Prepare 4 new O/S pistons.

O/S 0.50 piston diameter:
95.441 to 95.451 mm (3.7575 to 3.7579 in.)

(2) Using a micrometer, measure the piston diameter at right angles to the piston center line, the indicated distance from the piston end.

Distance:
9.3 mm (0.366 in.)

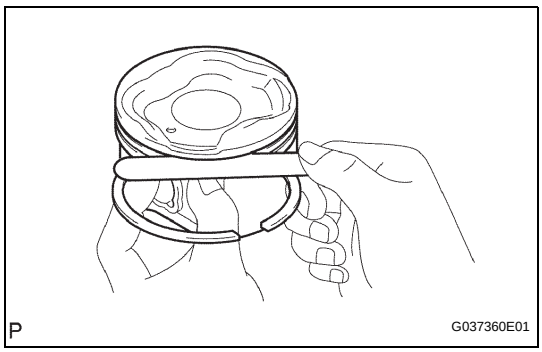
(3) Calculate the amount each cylinder is to be rebored as follows:

Size to be rebored = P + C -H

P	**Piston diameter**
C	**Piston clearance: 0.019 to 0.052 mm (0.0007 to 0.0020 in.)**
H	**Allowance for honing: 0.02 mm (0.0008 in.) or less**

(4) Bore and hone the cylinders to calculated dimensions.

Maximum honing:
0.02 mm (0.0008 in.)
NOTICE:
Excess honing will destroy the finished roundness.



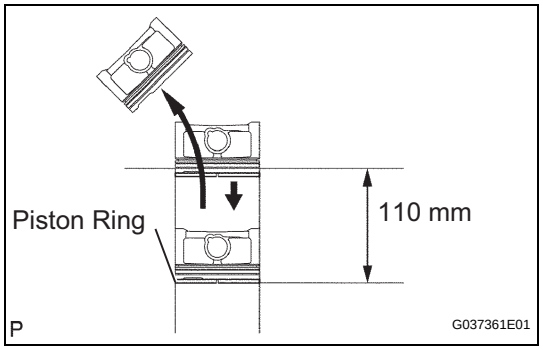
43. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Ring groove clearance

No.1	**0.020 to 0.075 mm (0.0008 to 0.0030 in.)**
No.2	**0.020 to 0.065 mm (0.0008 to 0.0026 in.)**
Oil	**0.020 to 0.070 mm (0.0008 to 0.0028 in.)**

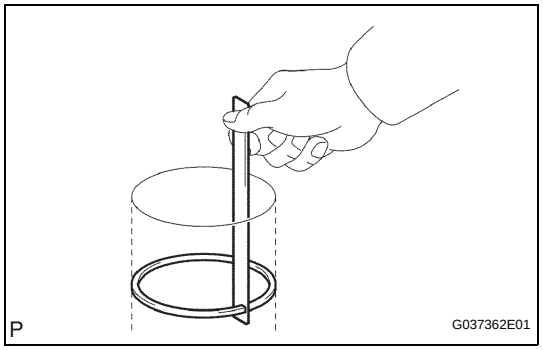
If the clearance is not as specified, replace the piston.



44. INSPECT PISTON RING END GAP

(a) Insert the piston ring into the cylinder bore.

(b) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(c) Using a feeler gauge, measure the end gap.

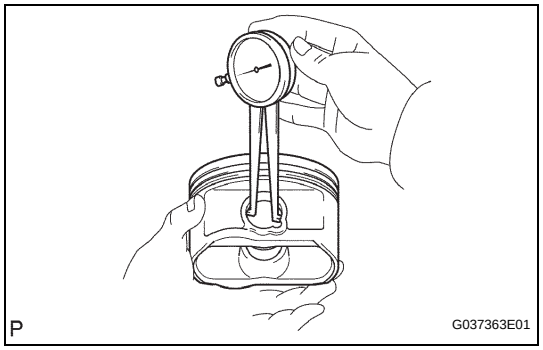
Standard end gap

No.1	**0.22 to 0.34 mm (0.0087 to 0.0134 in.)**
No.2	**0.45 to 0.57 mm (0.0177 to 0.0224 in.)**
Oil	**0.10 to 0.40 mm (0.0039 to 0.0157 in.)**

Maximum end gap

No. 1	**0.90 mm (0.0354 in.)**
No.2	**1.36 mm (0.0535 in.)**
Oil	**0.75 mm (0.0295 in.)**

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum, even with a new piston ring, rebore all the 4 cylinders or replace the cylinder block.

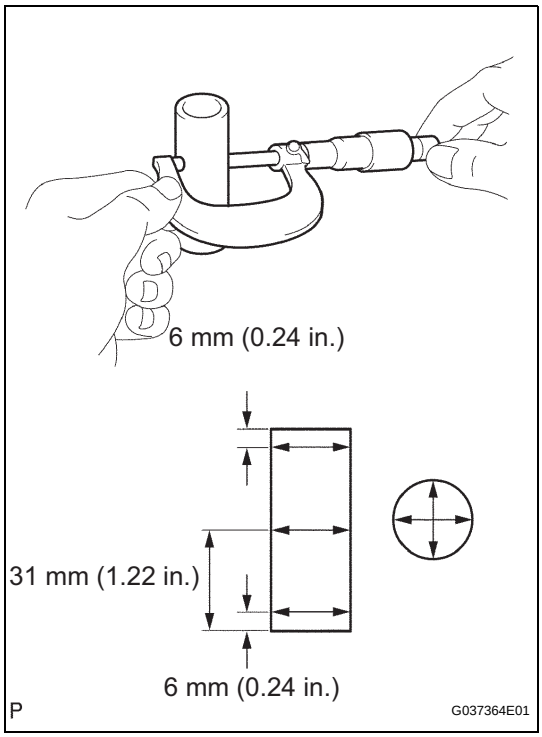


45. INSPECT PISTON PIN OIL CLEARANCE

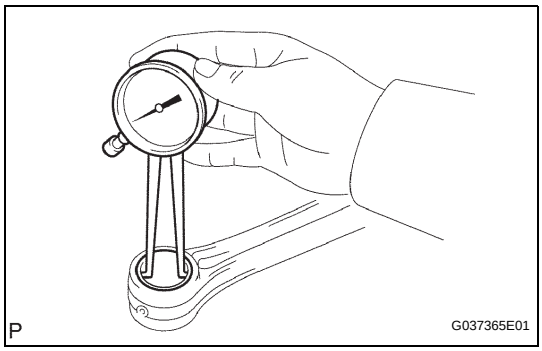
(a) Using a caliper gauge, measure the inside diameter of the piston pin hole.

Piston pin hole inside diameter:
22.001 to 22.010 mm (0.8662 to 0.8665 in.)

EM



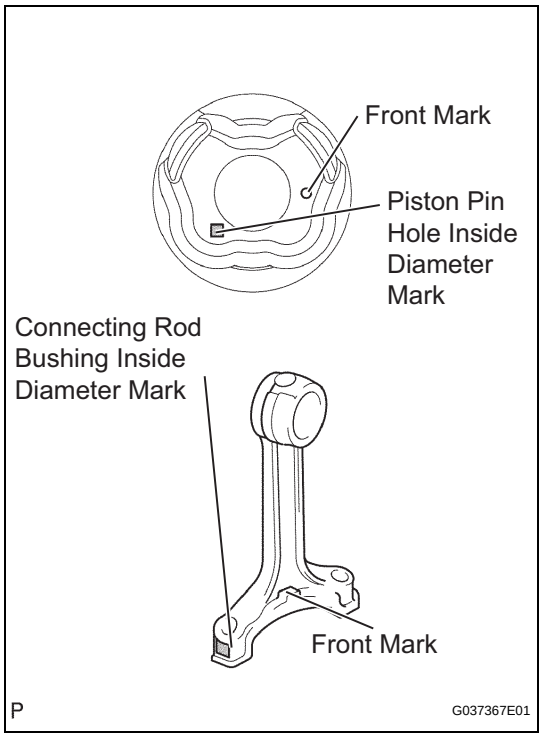
(b) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)



(c) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.
Bushing inside diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)

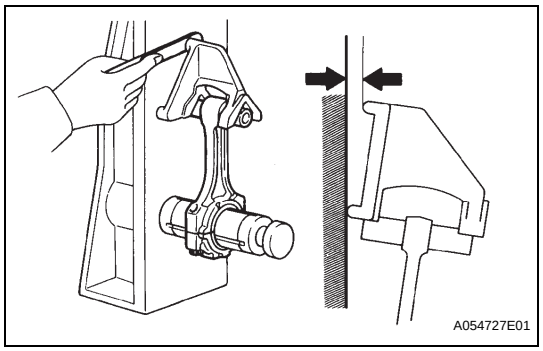
(d) Subtract the piston pin diameter measurement from the piton pin hole diameter measurement.
Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.00028 in.)
Maximum oil clearance:
0.010 mm (0.0004 in.)
HINT:
If the oil clearance is greater than the maximum, replace the piston and piston pin as a set.

EM



(e) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.
Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.025 mm (0.0010 in.)

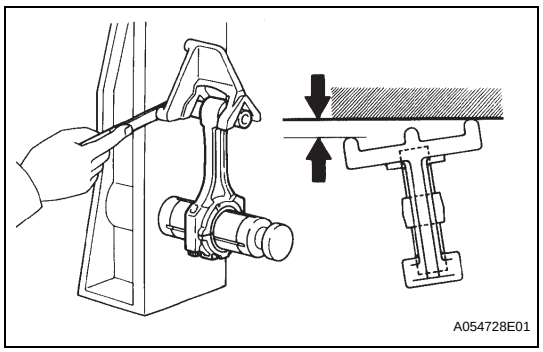
(f) If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the connecting rod and piston pin as a set.



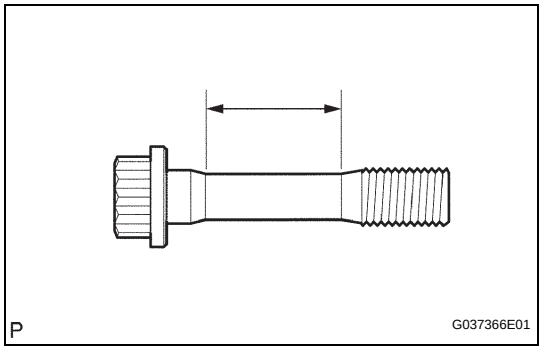
46. INSPECT CONNECTING ROD

(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for bend.
Maximum bend:
0.03 mm (0.0012 in.) per 100 mm (3.94 in.)
If the bend is greater than the maximum, replace the connecting rod sub-assembly.

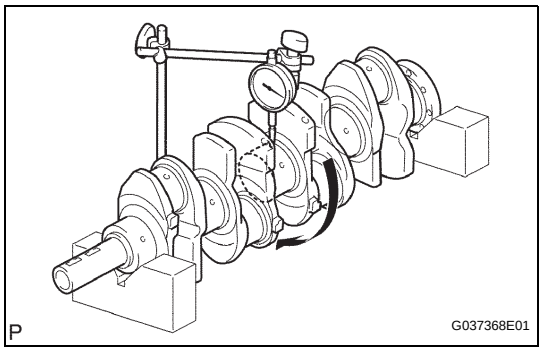


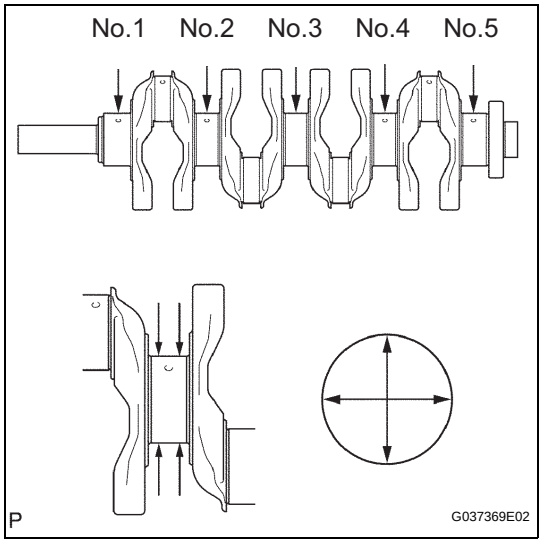
(2) Check for twist.
Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
If the twist is greater than the maximum, replace the connecting rod sub-assembly.

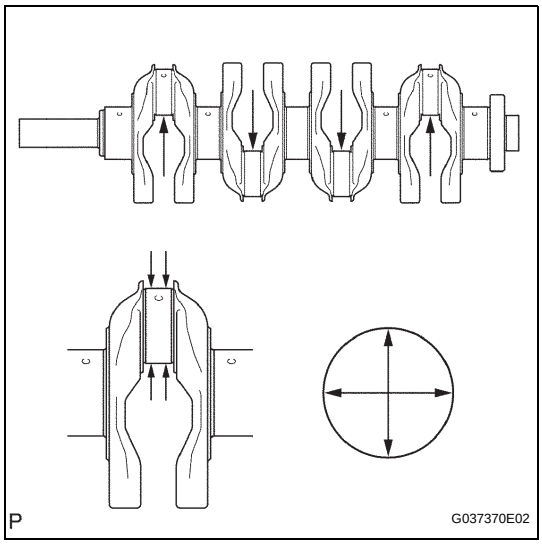


47. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolt.
Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)
If the diameter is less than the minimum, replace the bolt.







48. INSPECT CRANKSHAFT

(a) Inspect for circle runout.
  (1) Place the crankshaft on V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.03 mm (0.0012 in.)
  If the circle runout is greater than the maximum, replace the crankshaft.

(b) Inspect the main journals.
  (1) Using a micrometer, measure the diameter of each main journal.
  Standard journal diameter:

No.3 journal	**59.981 to 59.994 mm (2.3615 to 2.3620 in.)**
Except No.3 journal	**59.987 to 60.000 mm (2.3619 to 2.3622 in.)**

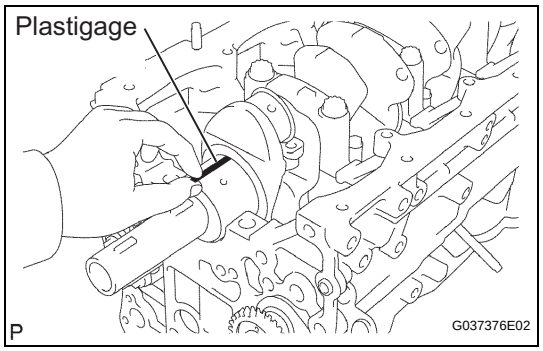
  If the diameter is not as specified, check the oil clearance (see step 30). If necessary, replace the crankshaft.
  (2) Check each main journal for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.005 mm (0.0002 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.

(c) Inspect the crank pin.
  (1) Using a micrometer, measure the diameter of each crank pin.
  Diameter:
  52.989 to 53.002 mm (2.0862 to 2.0867 in.)
  If the diameter is not as specified, check the oil clearance (see step 2). If necessary, replace the crankshaft.
  (2) Check each crank pin for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.003 mm (0.0001 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.

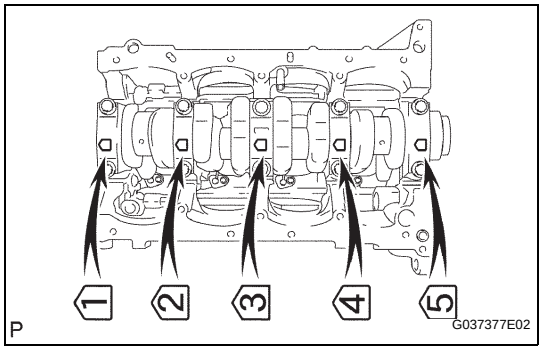
49. INSPECT CRANKSHAFT OIL CLEARANCE

HINT:
- Keep the lower bearings and crankshaft bearing caps together.
- Arrange the thrust washers in the correct order.
- Keep the upper crankshaft bearings and upper thrust washers together with the cylinder block.

(a) Clean each main journal and bearing.
(b) Check each main journal and bearing for pitting and scratches.
  If the journal or bearing is damaged, replace the bearing.
(c) Place the crankshaft on the cylinder block.



(d) Lay a strip of Plastigage across each journal.



(e) Install the 5 crankshaft bearing caps in their proper locations.

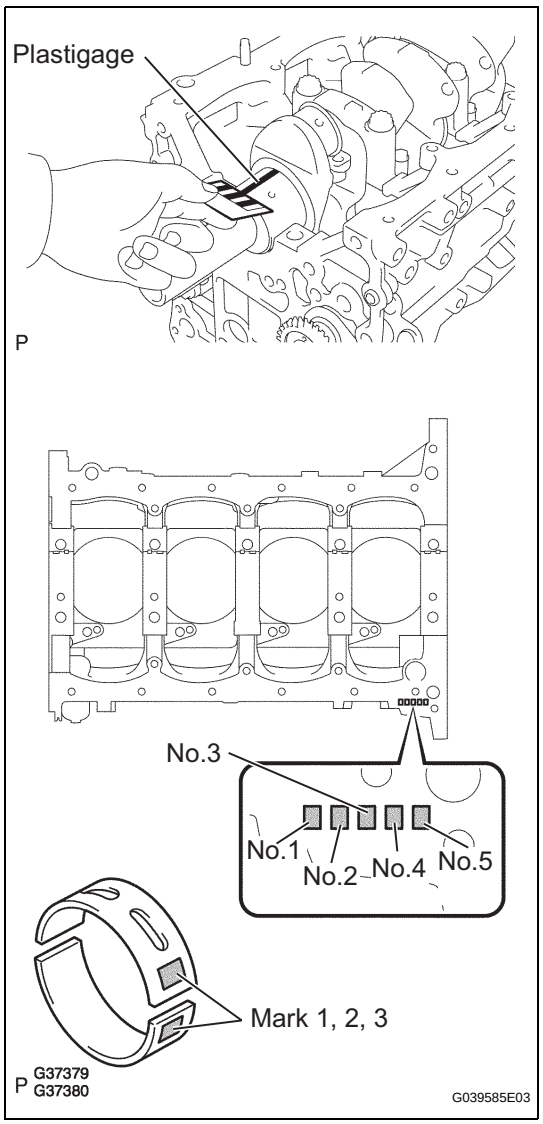
(f) Install the 5 crankshaft bearing caps with the 10 bolts (see step 49).

NOTICE:

Do not turn the crankshaft.

(g) Remove the 10 bolts and 5 crankshaft bearing caps.

EM



(h) Measure the Plastigage at its widest point.

Standard oil clearance

Bearing Cap	Standard
No.3	0.030 to 0.055 mm (0.0012 to 0.0022 in.)
Others	0.024 to 0.049 mm (0.0009 to 0.0019 in.)

Maximum oil clearance:
0.10 mm (0.0039 in.)

If the oil clearance is greater than the maximum, replace the crankshaft bearing.

HINT:

- If replacing the cylinder block, measure the bearing standard clearance.
- If replacing a bearing, first check the number on the cylinder block for the bearing's respective journal. Then replace the bearing with one that has the same number. Each bearing's standard thickness is indicated by a 1, 2 or 3 mark on its surface.

Reference

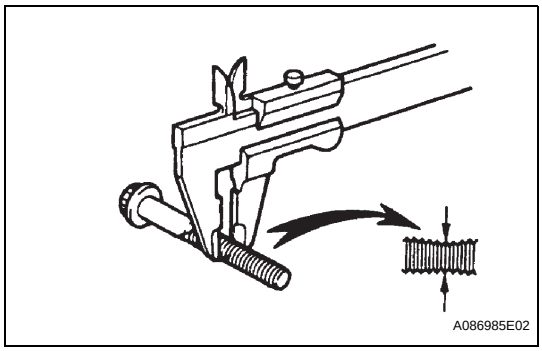
Cylinder block main journal bore diameter

Mark	Diameter
1	64.004 to 64.010 mm (2.5198 to 2.5201 in.)
2	64.011 to 64.016 mm (2.5201 to 2.5203 in.)
3	64.017 to 64.022 mm (2.5203 to 2.5206 in.)

Standard bearing center wall thickness

Mark	Thickness
1	1.987 to 1.990 mm (0.0782 to 0.0783 in.)
2	1.991 to 1.993 mm (0.0784 to 0.0785 in.)
3	1.994 to 1.996 mm (0.0785 to 0.0786 in.)

(i) Completely remove the Plastigage.

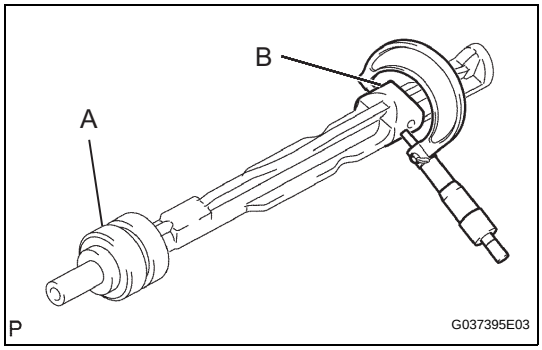


50. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the minimum diameter of the compressed thread at the measuring point.

Standard diameter:
10.76 to 10.97 mm (0.4236 to 0.4319 in.)
Minimum diameter:
10.66 mm (0.4197 in.)

If the diameter is less than the minimum, replace the bolt.



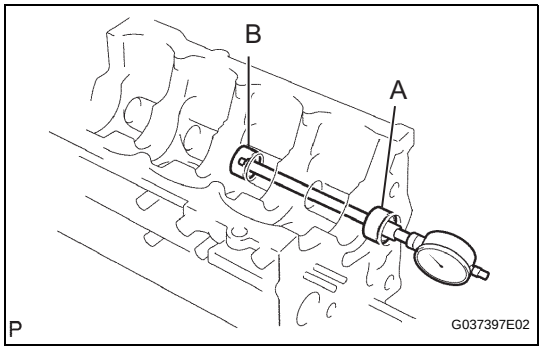
51. INSPECT NO.1 BALANCESHAFT

(a) Inspect the diameter of the journal.

(1) Using a micrometer, measure the diameter of the balanceshaft main journals.

Main journal diameter

A	37.969 to 37.985 mm (1.4948 to 1.4955 in.)
B	37.449 to 37.465 mm (1.4744 to 1.4750 in.)



(b) Inspect the diameter of bearing.

(1) Using a cylinder gauge, measure the inside diameter of the balanceshaft bearing.

Bearing inside diameter

A	38.025 to 38.045 mm (1.4970 to 1.4978 in.)
B	37.525 to 37.545 mm (1.4774 to 1.4781 in.)

(c) Inspect oil clearance.

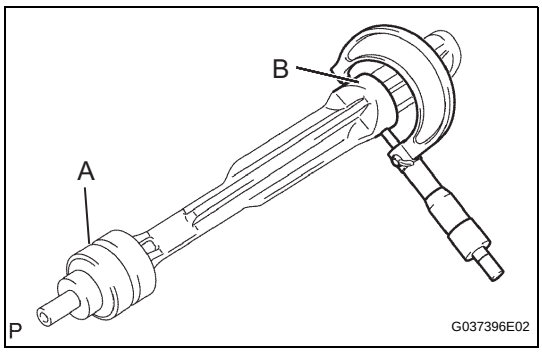
(1) Subtract the balanceshaft main journal diameter measurement from the balanceshaft bearing inside diameter measurement.

Standard oil clearance

A	0.040 to 0.076 mm (0.0016 to 0.0030 in.)
B	0.060 to 0.096 mm (0.0024 to 0.0038 in.)

Maximum oil clearance:
0.15 mm (0.0059 in.)

If the oil clearance is greater than the maximum, replace the cylinder block and balanceshaft.



52. INSPECT NO.2 BALANCESHAFT

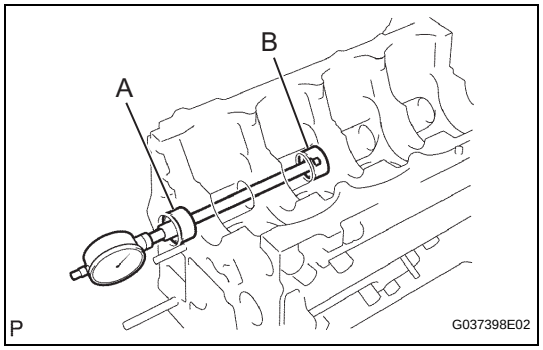
(a) Inspect the diameter of the journal.

(1) Using a micrometer, measure the diameter of the balanceshaft main journals.

Main journal diameter

A	37.969 to 37.985 mm (1.4948 to 1.4955 in.)
B	37.449 to 37.465 mm (1.4744 to 1.4750 in.)

EM



(b) Inspect the diameter of bearing.
(1) Using a cylinder gauge, measure the inside diameter of the balanceshaft bearing.
Bearing inside diameter

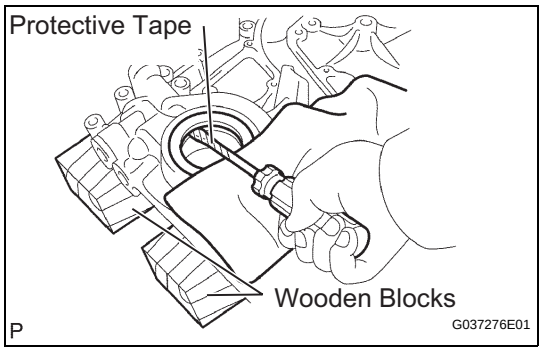
A	**38.025 to 38.045 mm (1.4970 to 1.4978 in.)**
B	**37.525 to 37.545 mm (1.4774 to 1.4781 in.)**

(c) Inspect oil clearance.
Standard oil clearance

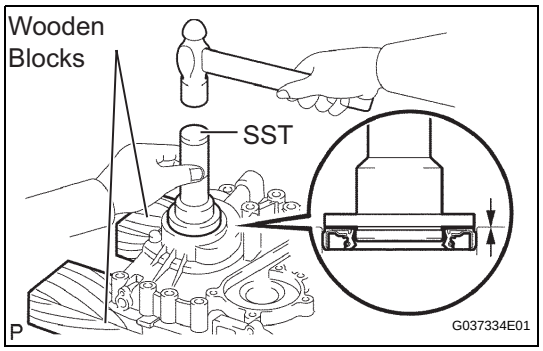
A	**0.040 to 0.076 mm (0.0016 to 0.0030 in.)**
B	**0.060 to 0.096 mm (0.0024 to 0.0038 in.)**

Maximum oil clearance:
0.15 mm (0.0059 in.)
If the oil clearance is greater than the maximum, replace the cylinder block and balanceshaft.

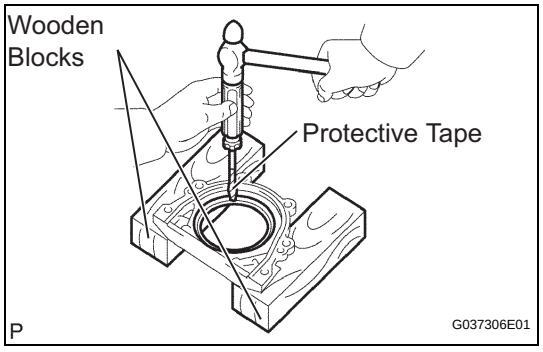
REPLACEMENT



1. REMOVE TIMING CHAIN COVER OIL SEAL
(a) Using a screwdriver with its tip taped, pry out the oil seal.
HINT:
Tape the screwdriver tip before use.

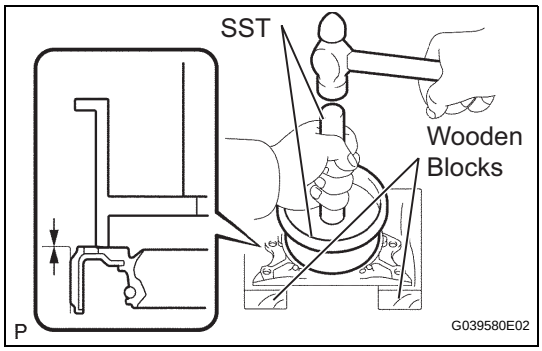


2. INSTALL TIMING CHAIN COVER OIL SEAL
(a) Place the timing chain cover on wooden blocks.
(b) Using SST, tap in a new oil seal until its surface is flush with the timing gear case edge.
SST 09223-50010
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**



3. REMOVE ENGINE REAR OIL SEAL
(a) Place the oil seal retainer on wooden blocks.
(b) Using a screwdriver with its tip taped and a hammer, tap out the oil seal.
HINT:
Tape the screwdriver tip before use.

EM



4. INSTALL ENGINE REAR OIL SEAL

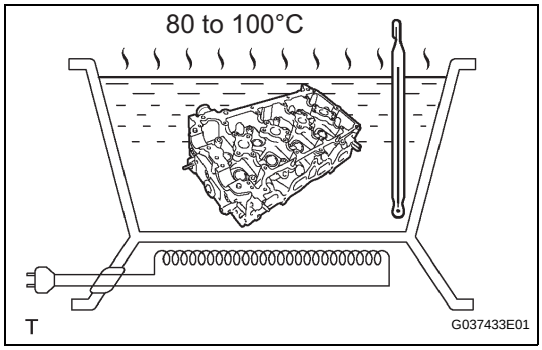
(a) Place the oil seal retainer on wooden blocks.

(b) Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.

SST 09223-15030, 09950-70010 (09951-07150)

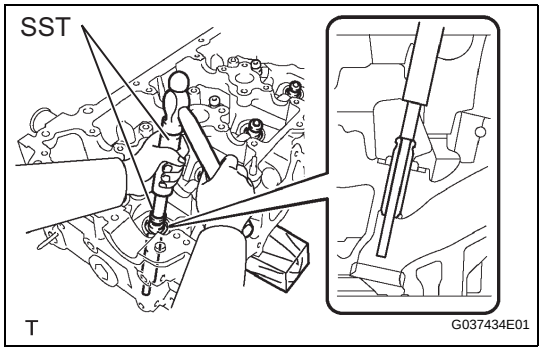
NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**



5. REMOVE INTAKE VALVE GUIDE BUSH

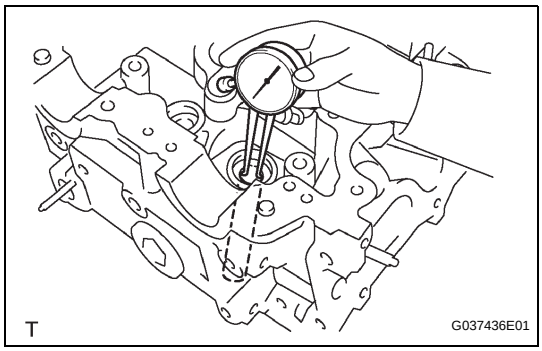
(a) Heat the cylinder head to 80 to 100 °C(176 to 212°F).



(b) Place the cylinder head on wooden blocks.

(c) Using SST and a hammer, tap out the guide bush.

SST 09201-01055, 09950-70010 (09951-07100)



6. INSTALL INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Cylinder bore diameter:

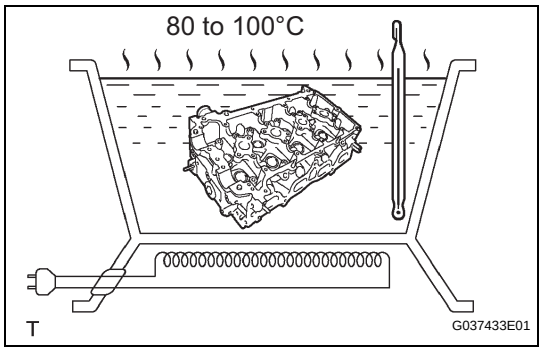
10.285 to 10.306 mm (0.4049 to 0.4057)

(b) Select a new guide bush (STD or O/S 0.05).

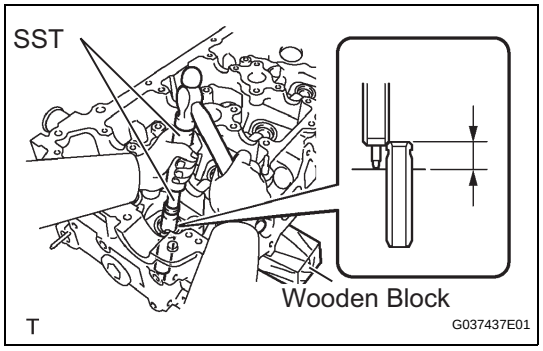
Bush bore diameter	Bush size
10.285 to 10.306 mm (0.4049 to 0.4057 in.)	Use STD
10.335 to 10.356 mm (0.4069 to 0.4077 in.)	Use O/S 0.05

If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush.

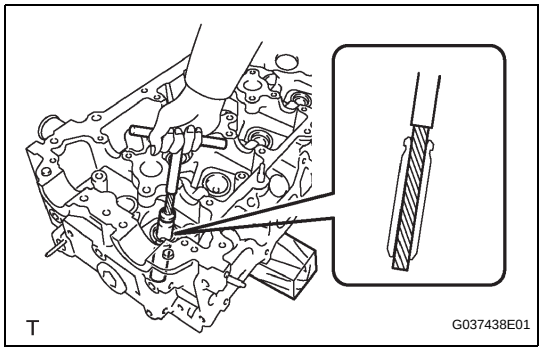
If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.



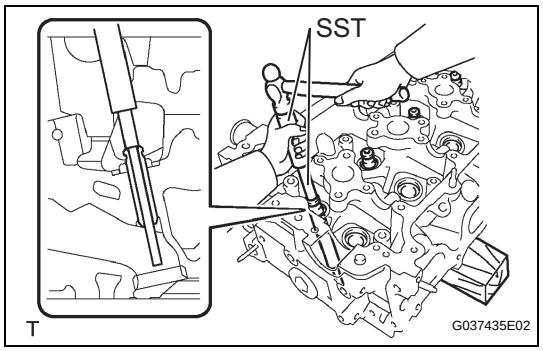
(c) Heat the cylinder head to 80 to 100°C (176 to 212°F).



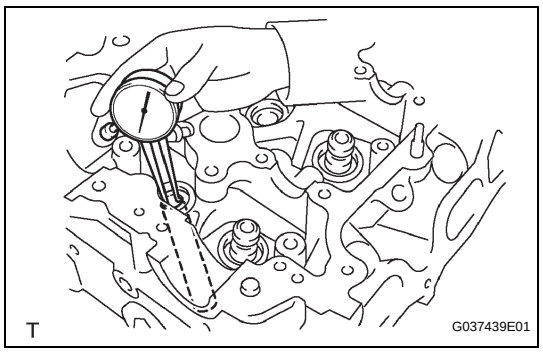
(d) Place the cylinder head on wooden blocks.
(e) Using SST, tap in a new valve guide bush to the specified protrusion height.
SST 09201-01055, 09950-70010 (09951-07100)
Protrusion height (A):
9.8 to 10.2 mm (0.3858 to 0.4016 in.)



(f) Using a sharp 5.5 mm reamer, ream the valve guide bush to obtain the standard specified clearance.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0023 in.)



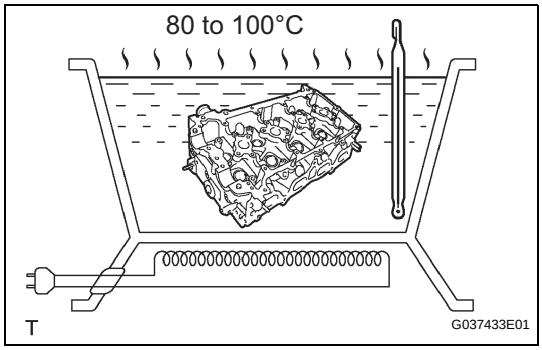
7. REMOVE EXHAUST VALVE GUIDE BUSH
(a) Heat the cylinder head to 80 to 100°C(176 to 212°F)
(b) Place the cylinder head on wooden blocks.
(c) Using SST and a hammer, tap out the guide bush.
SST 09201-01055, 09950-70010 (09951-07100)



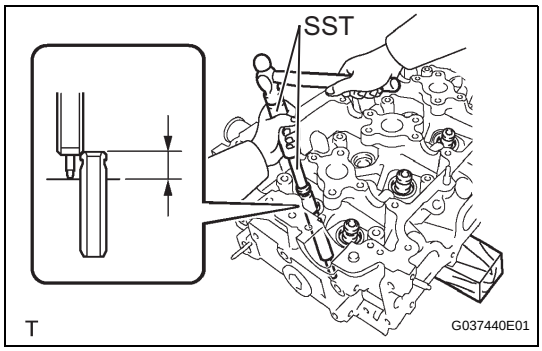
8. INSTALL EXHAUST VALVE GUIDE BUSH
(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057)
(b) Select a new guide bush (STD or O/S 0.05).

Bush bore diameter	Bush size
10.285 to 10.306 mm (0.4049 to 0.4057 in.)	Use STD
10.335 to 10.356 mm (0.4069 to 0.4077 in.)	Use O/S 0.05

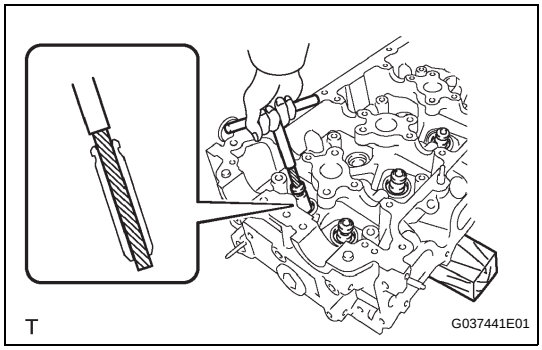
If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush.
If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.



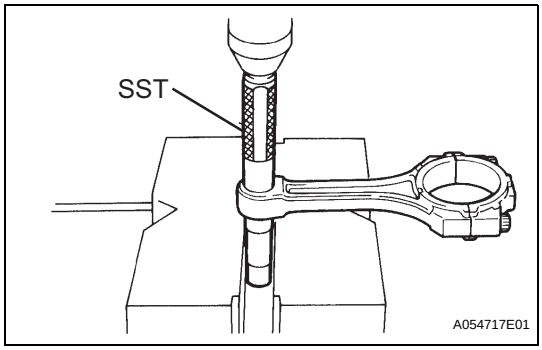
(c) Heat the cylinder head to 80 to 100°C (176 to 212°F).



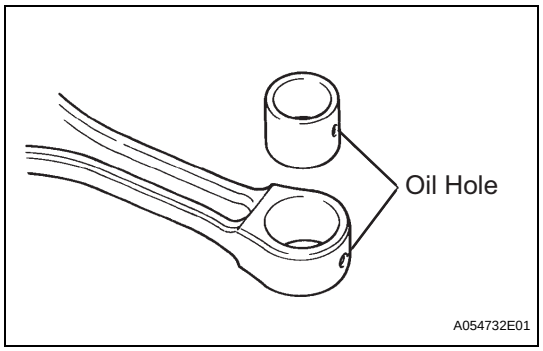
(d) Place the cylinder head on wooden blocks.
(e) Using SST, tap in a new valve guide bush to the specified protrusion height.
SST 09201-01055, 09950-70010 (09951-07100)
Protrusion height (A):
7.6 to 8.0 mm (0.2992 to 0.3150 in.)



(f) Using a sharp 5.5 mm reamer, ream the valve guide bushing to obtain the standard specified clearance.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)

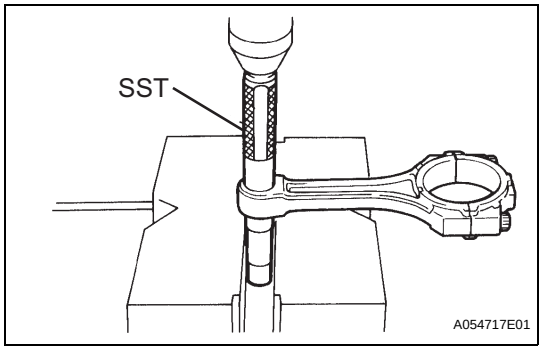


9. REMOVE CONNECTING ROD SMALL END BUSH
(a) Using SST and a press, press out the bush.
SST 09222-30010

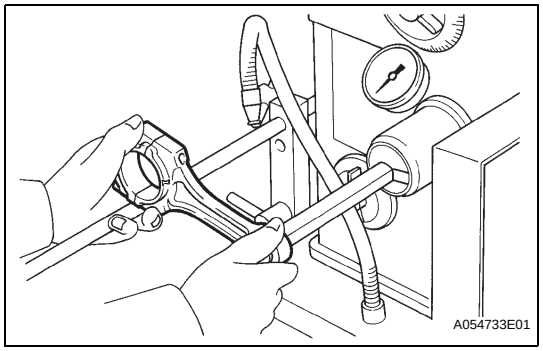


10. INSTALL CONNECTING ROD SMALL END BUSH

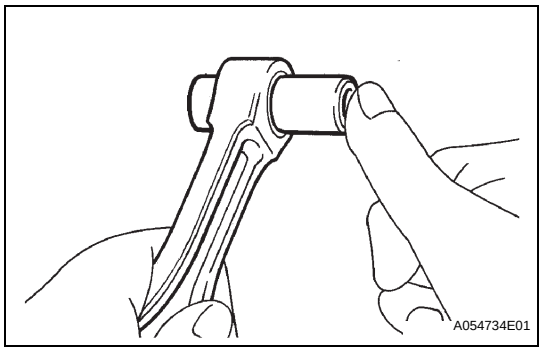
(a) Align the oil holes of a new bush and the connecting rod.



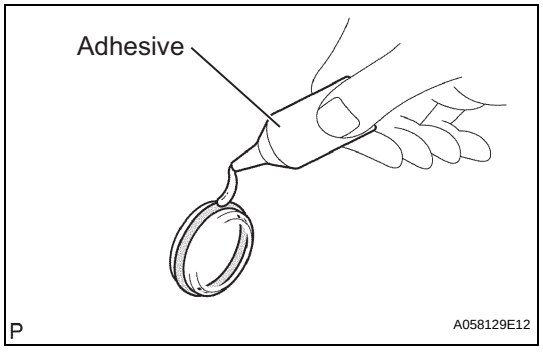
(b) Using SST and a press, press in the bush.
SST 09222-30010



(c) Using a pin hole grinder, hone the bush to obtain the standard specified clearance (see step 26.) between the bush and piston pin.



(d) Check that the piston pin fits at normal room temperature.
(1) Coat the piston pin with engine oil, and push it into the connecting rod with your thumb.



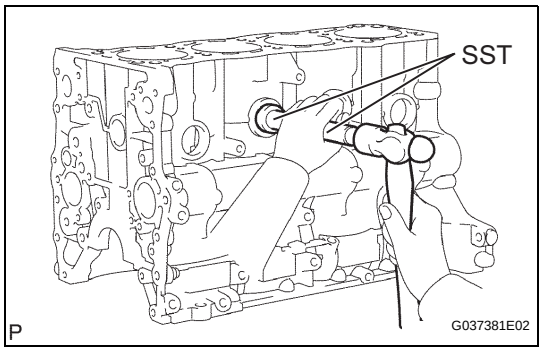
REASSEMBLY

1. INSTALL TIGHT PLUG

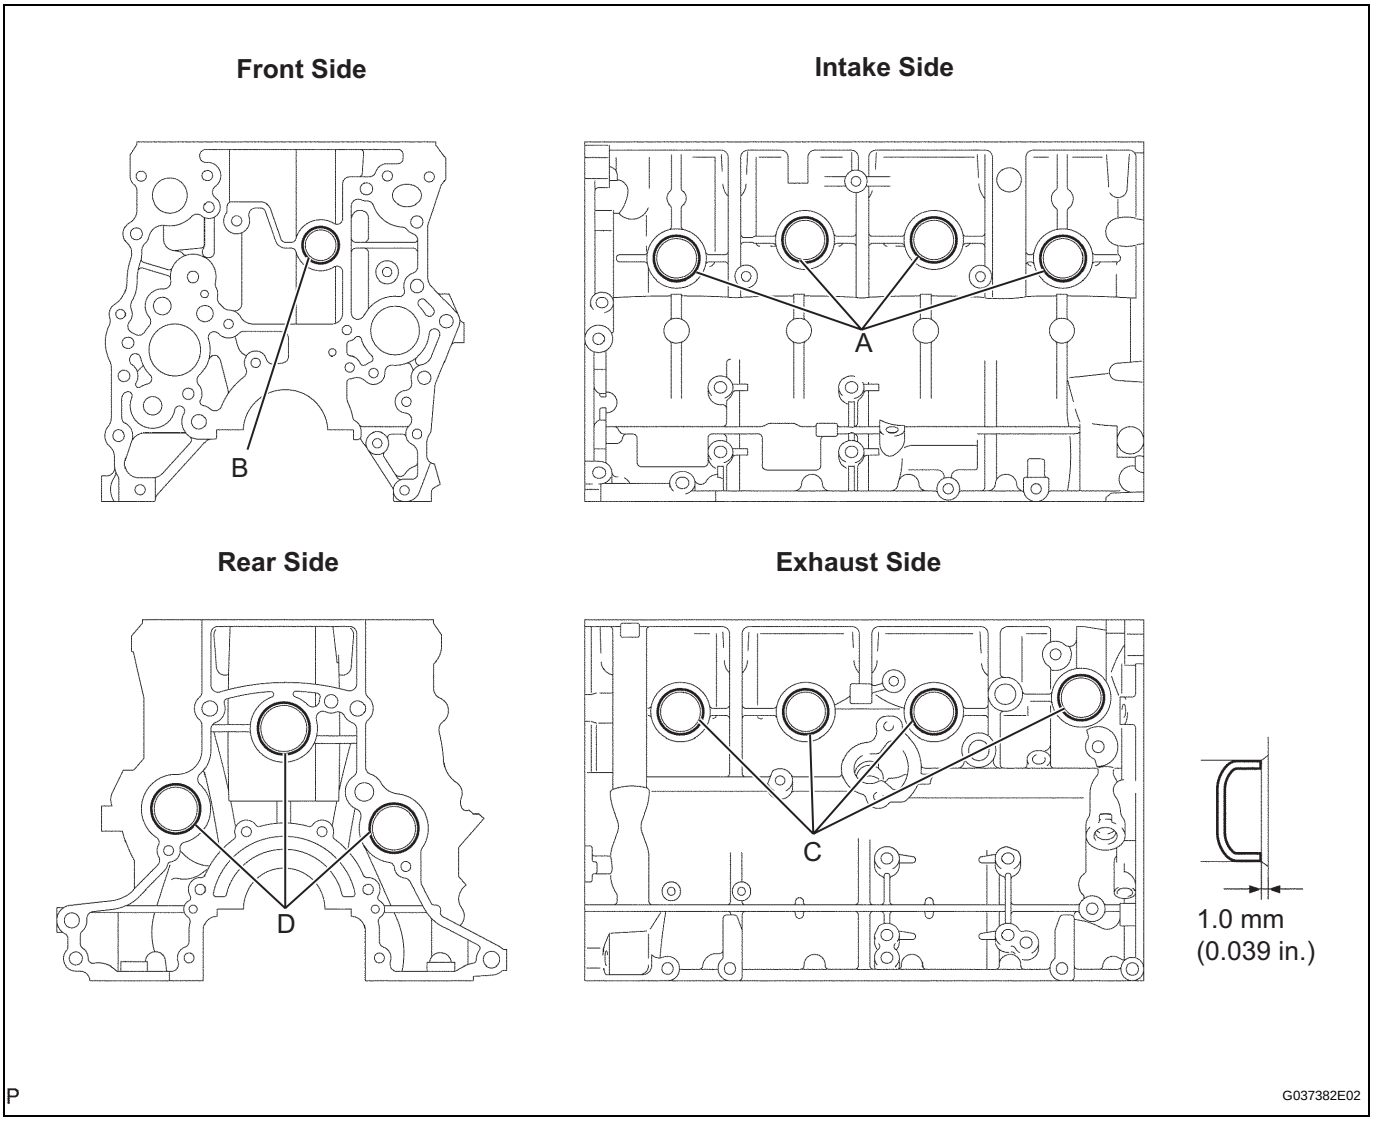
NOTICE:
If water leaks from the tight plug or the plug corrodes, replace it.

(a) Apply adhesive around the tight plugs.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent.

EM



(b) Using SST and a hammer, tap in new tight plugs as shown in the illustration.
(c) Using SST, tap in the 8 tight plugs A and C.
SST 09950-60010 (09951-00350), 09950-70010 (09951-07100)
(d) Using SST, tap in the tight plug B.
SST 09950-60010 (09951-00300), 09950-70010 (09951-07100)
(e) Using SST, tap in the 3 tight plugs D.
SST 09950-60010 (09951-00400), 09950-70010 (09951-07100)



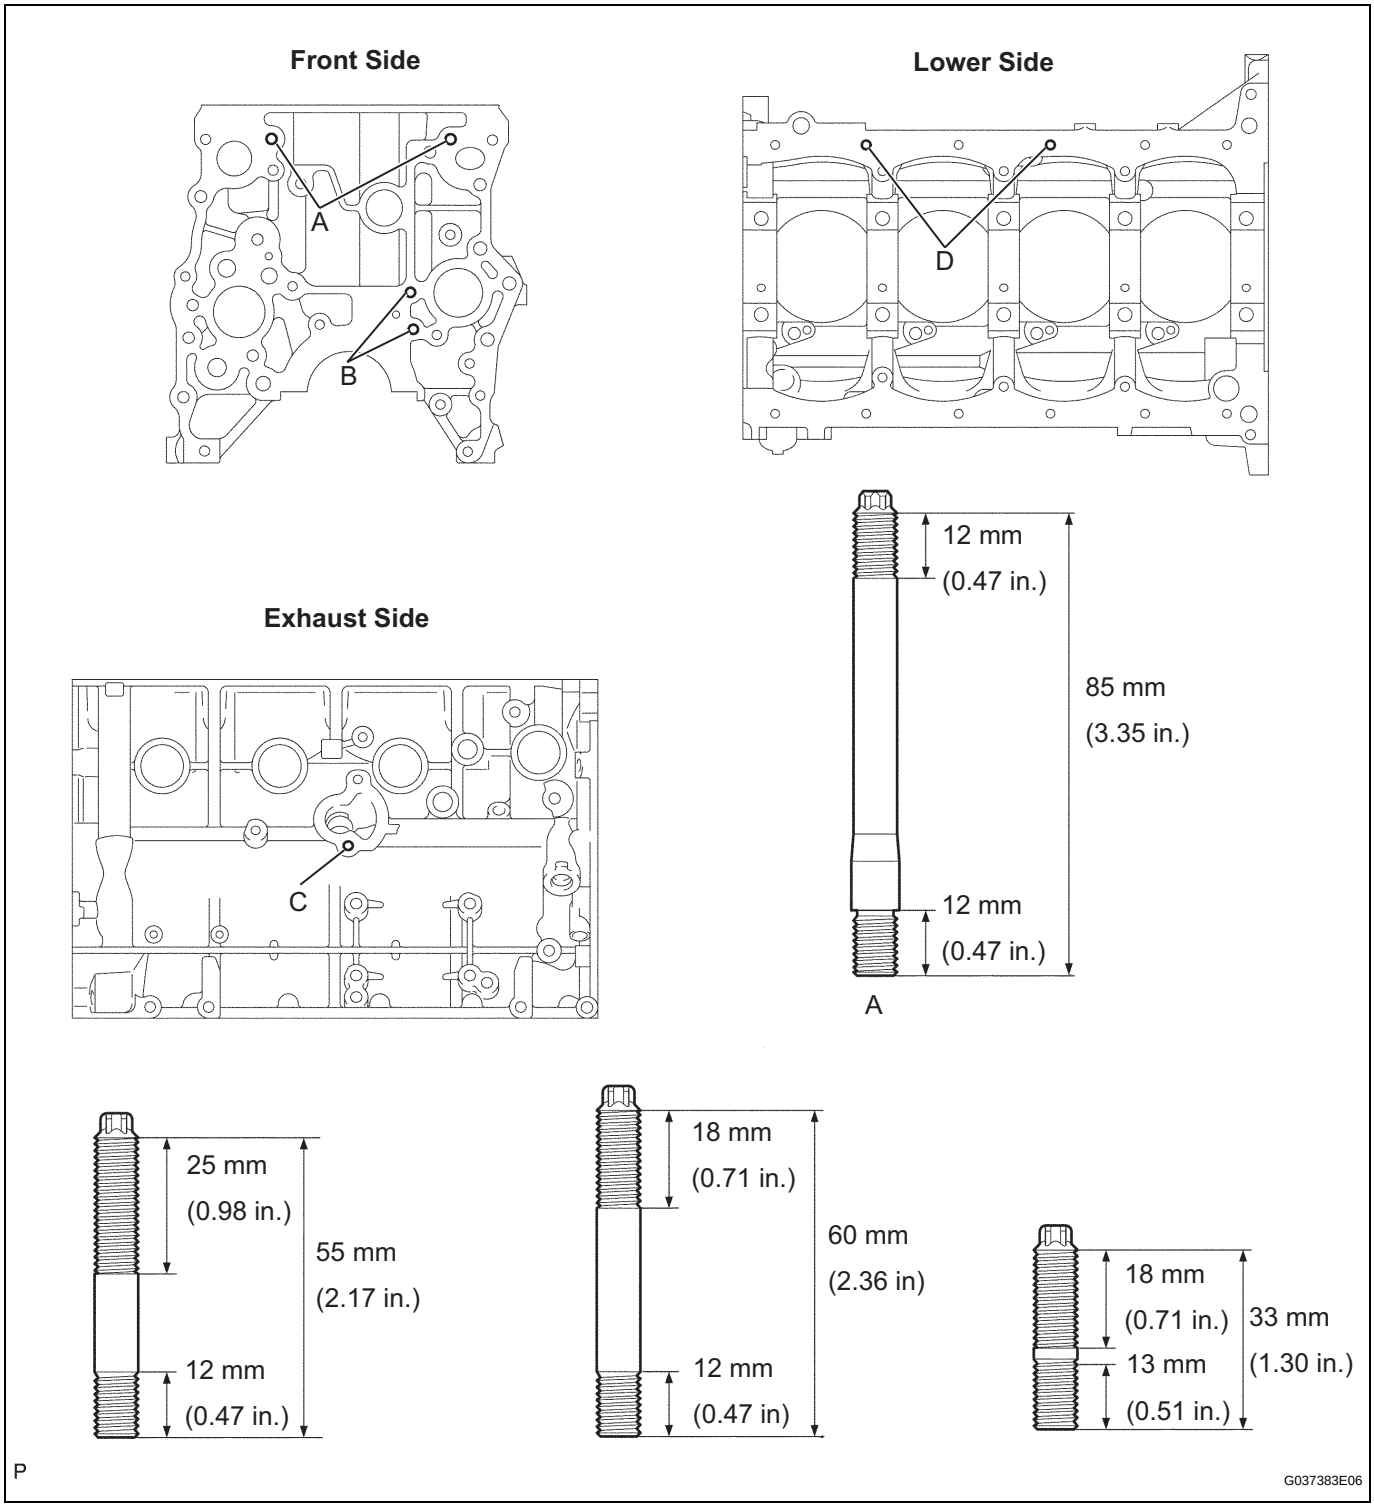
2. INSTALL STUD BOLT
(a) Using an E7 "torx" socket wrench, install the stud bolts B and D.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf) for stud bolts B and D
(b) Using an E8 "torx" socket wrench, install the stud bolts A.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf) for stud bolts A

(c) Apply adhesive to the hole for the stud bolt C on the cylinder block. Using an E7 "torx" socket wrench, install the stud bolts C.

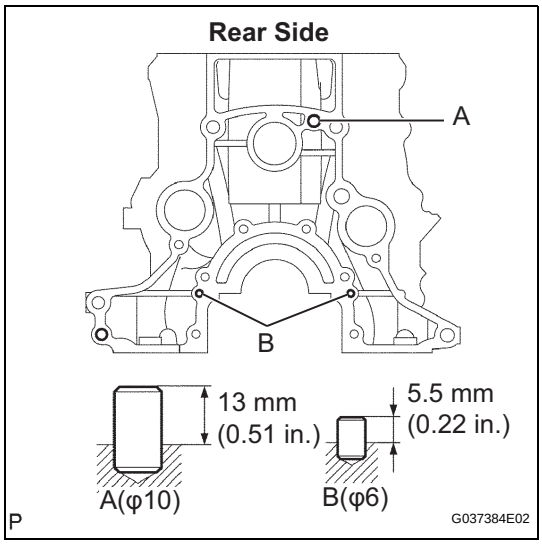
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf) for stud bolt C

NOTICE:

If the stud bolt is deformed or the threads are damaged, replace it.



EM



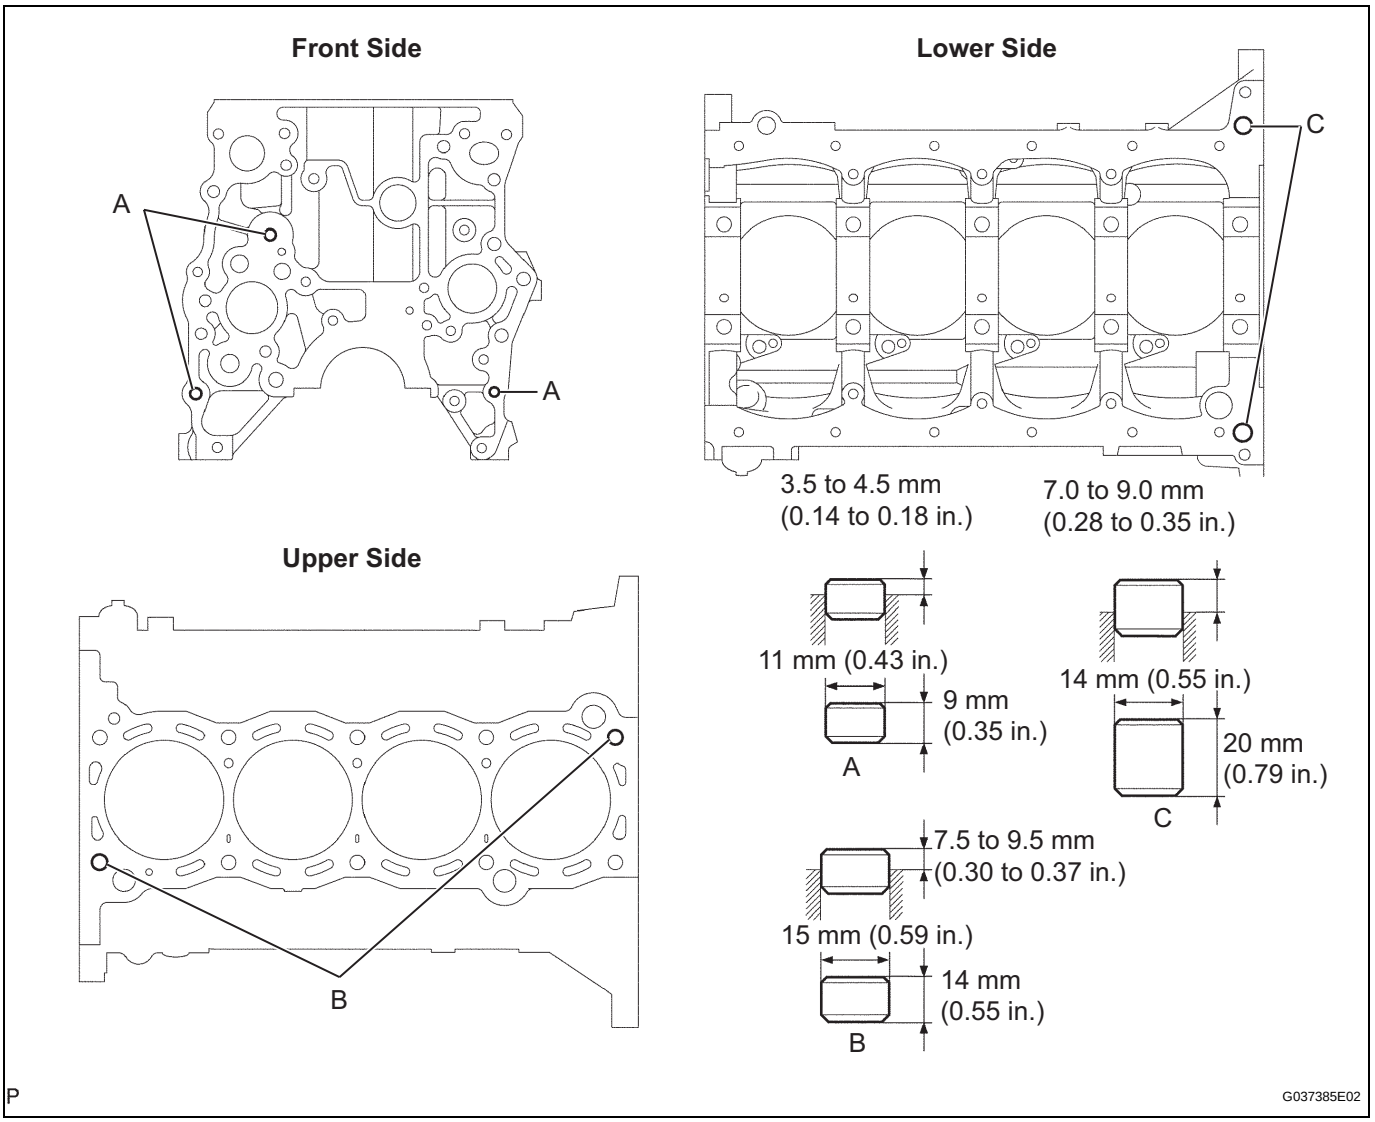
3. INSTALL STRAIGHT PIN

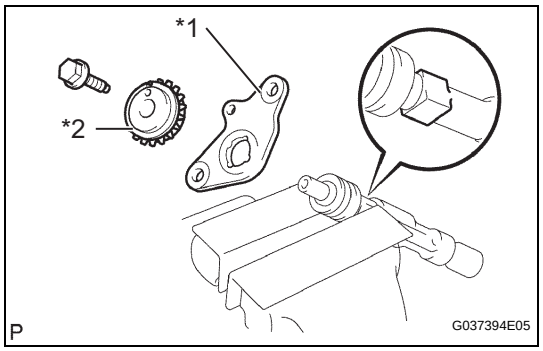
(a) Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

4. INSTALL RING PIN

(a) Using a plastic-faced hammer, tap in new ring pins to the cylinder block.

EM





5. INSTALL NO. 2 BALANCESHAFT DRIVEN GEAR

(a) Mount the head portion of the balanceshaft in a vise.

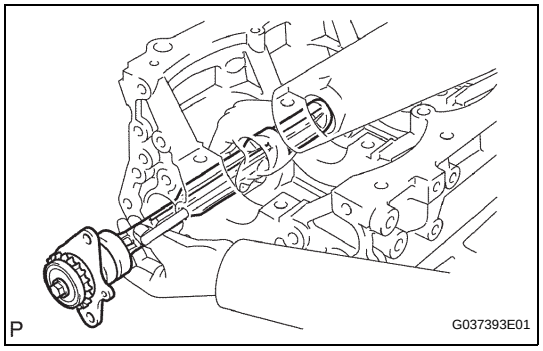
NOTICE:

Be careful not to damage the balanceshaft.

(b) Install the balanceshaft thrust washer No.2 (* 1) and balanceshaft driven gear No.2 (* 2).

(c) Install and torque the bolt.

Torque: 36 N*m (365 kgf*cm, 26 ft.*lbf)



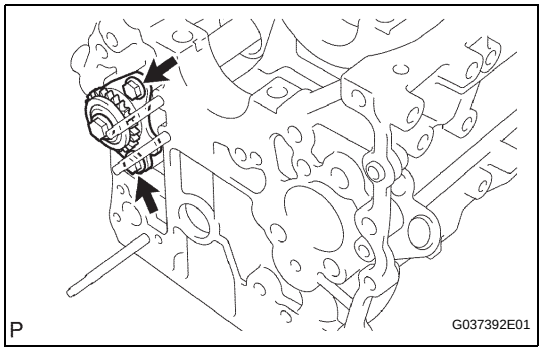
6. INSTALL NO.2 BALANCESHAFT

(a) Install the balanceshaft to the cylinder block.

NOTICE:

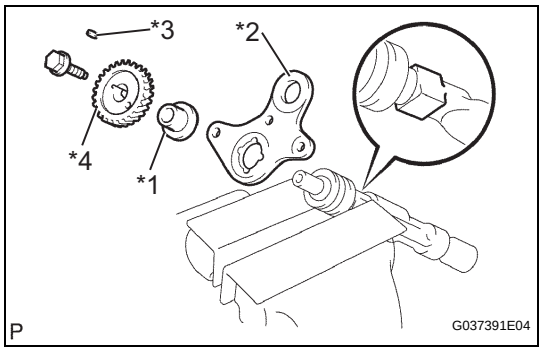
When installing the balanceshaft, make sure to support the balanceshaft with both hands and avoid scratching the balanceshaft bearing on the cylinder block side.

EM



(b) Install and torque the 2 bolts.

Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



7. INSTALL NO. 1 BALANCESHAFT DRIVEN GEAR

(a) Mount the head portion of the balanceshaft in a vise.

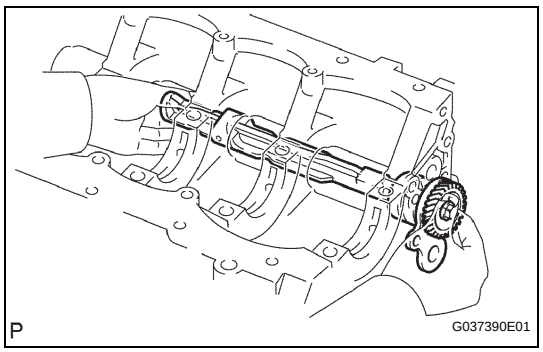
NOTICE:

Be careful not to damage the balanceshaft.

(b) Install the balanceshaft thrust spacer (* 1), balanceshaft thrust washer No.1 (* 2), sliding key (* 3) and balanceshaft driven gear No.1 (* 4).

(c) Install and torque the bolt.

Torque: 36 N*m (365 kgf*cm, 26 ft.*lbf)

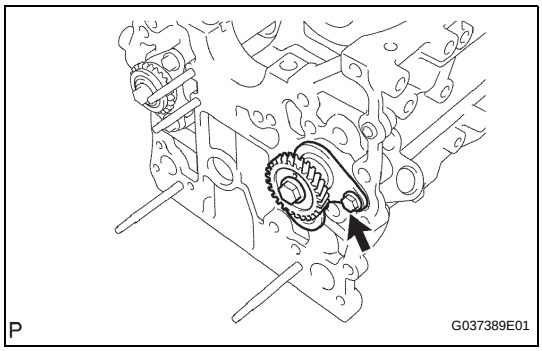


8. INSTALL NO.1 BALANCESHAFT

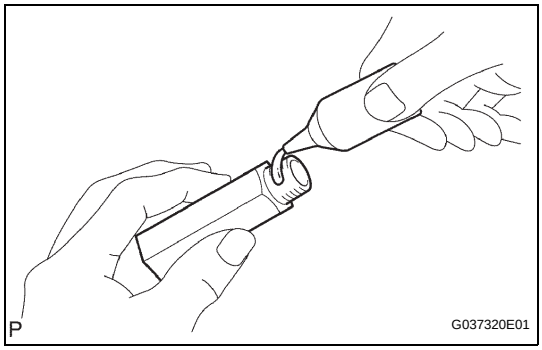
(a) Install the No.1 balanceshaft to the cylinder block.

NOTICE:

When installing the balanceshaft, make sure to support the balanceshaft with both hands and avoid scratching the balanceshaft bearing on the cylinder block side.

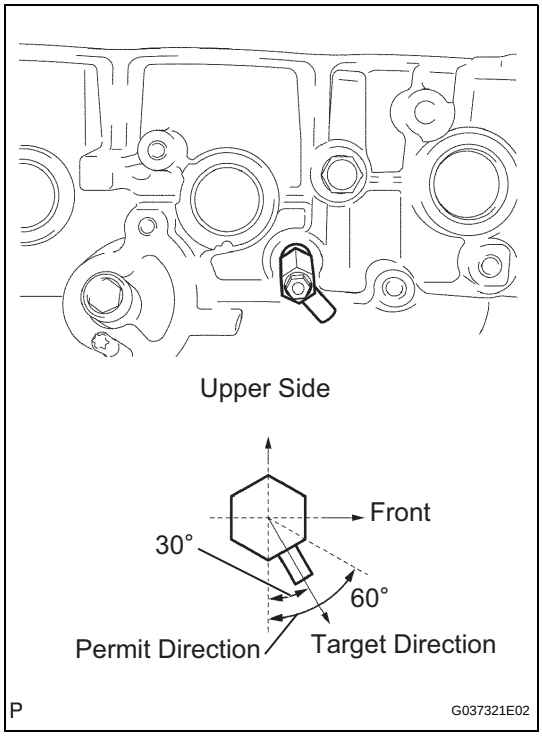


(b) Install and torque the bolt.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



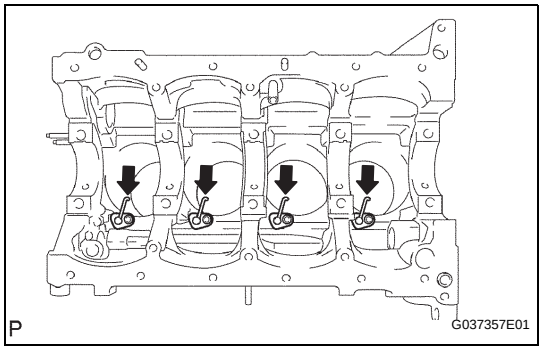
9. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive around the drain cock.



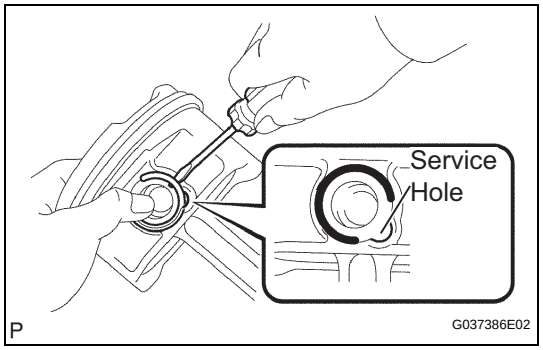
(b) Install the cylinder block water drain cock as shown in the illustration.
Torque: 25 N*m (250 kgf*cm, 18 in.*lbf)

(c) Install the water drain cock plug to the water drain cock sub-assembly.
Torque: 13 N*m (130 kgf*cm, 9 in.*lbf)



10. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

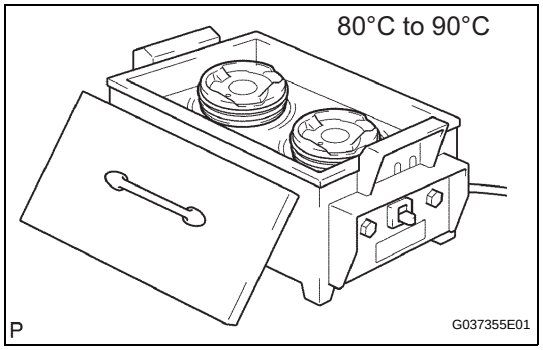
(a) Using an E7 "torx" socket wrench, install the oil nozzles.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



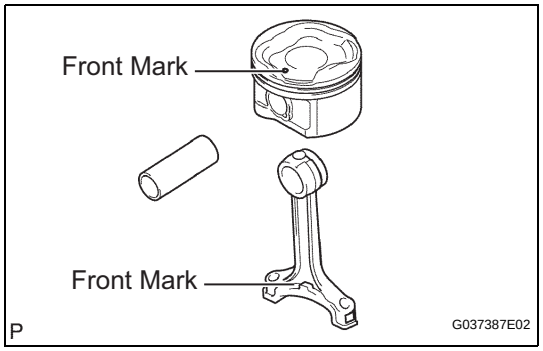
11. INSTALL WITH PIN PISTON SUB-ASSEMBLY

(a) Assemble the piston and connecting rod.

(1) Using a screwdriver, install a new snap ring at one end of the piston pin hole.

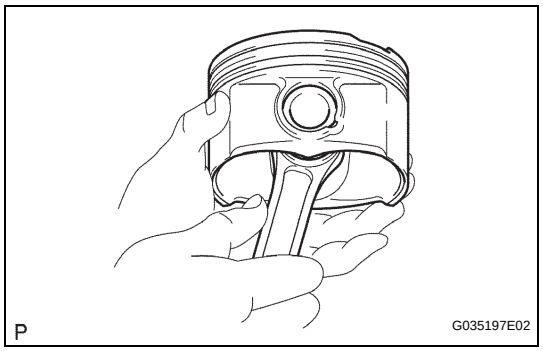


(2) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

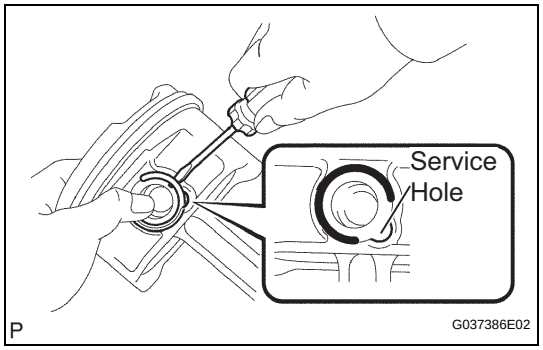


(3) Coat the piston pin with engine oil.

(4) Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.
HINT:
The piston and pin are a matched set.

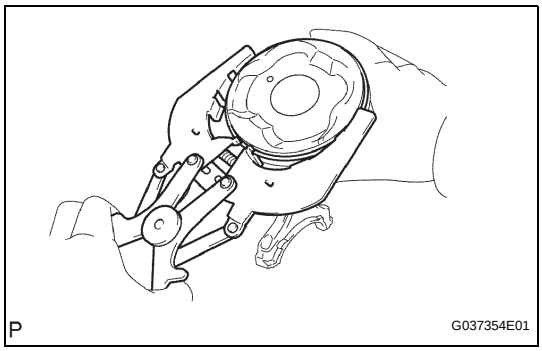


(5) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



(6) Using a screwdriver, install a new snap ring at the other end of the piston pin hole.

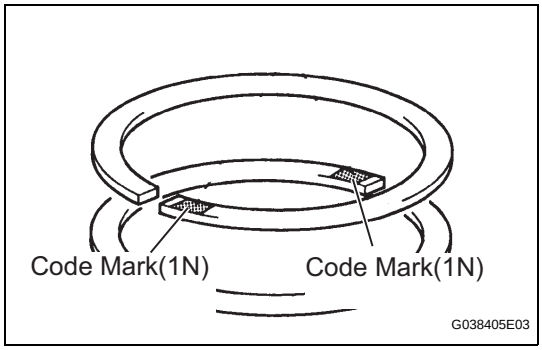
EM



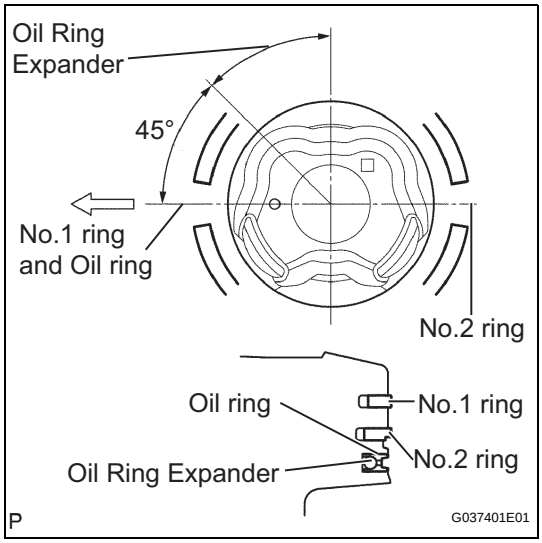
12. INSTALL PISTON RING SET

(a) Install the oil ring expander by hand.

(b) Using a piston ring expander, install the oil ring rail.



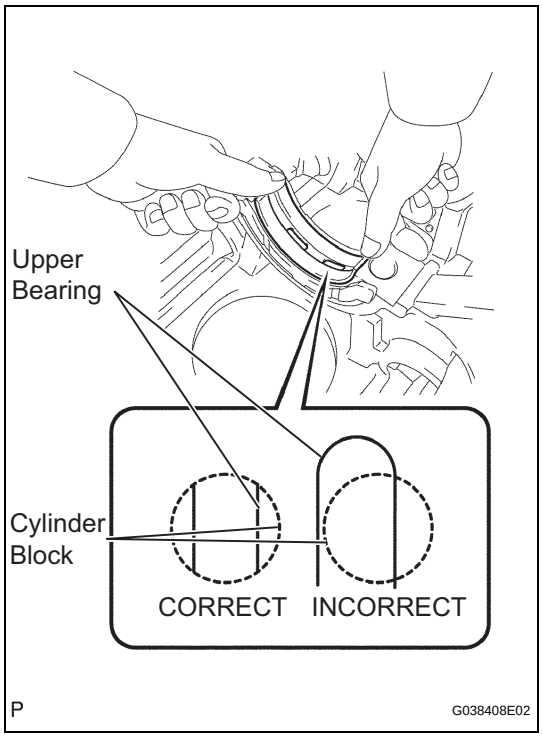
(c) Using a piston ring expander, install the 2 compression rings so that the painted marks are positioned as shown in the illustration.
HINT:
- Install the compression ring No.1 with the code mark (1N) facing upward.
- Install the compression ring No.2 with the code mark (2N) facing upward.



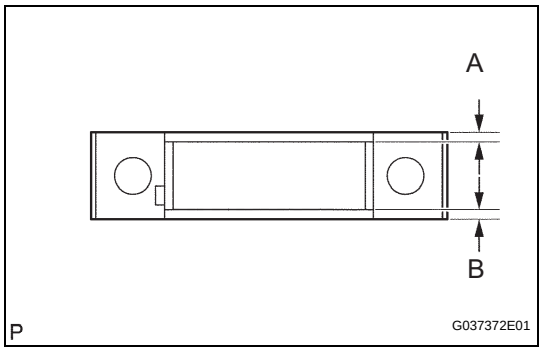
(d) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
Do not align the ring ends.

13. INSTALL CRANKSHAFT BEARING
NOTICE:
- **Do not apply engine oil to the bearing's contact area and backside.**
- **The crankshaft bearing cap bolt is tightened in 2 progressive steps.**

(a) Clean the main journal, and the both surfaces of the bearing.



(b) Install the upper bearing.
(1) Install the upper bearing to the cylinder block as shown in the illustration.
NOTICE:
Do not apply engine oil to the bearing's contact area and backside.



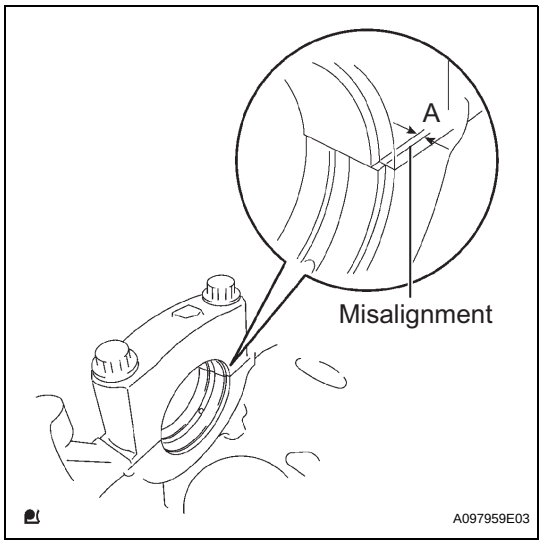
(c) Install the lower bearing.
(1) Install the lower bearing to the bearing cap.
(2) Using vernier calipers, measure the distance between the bearing cap's edge and the lower bearing's edge.
Dimension (A - B):
0.3 mm (0.0118 in.) or less
HINT:

Journal	Dimension (A)
#1, 5	3.75 mm (0.1476 in.)
#3	1.75 mm (0.0689 in.)
#2, 4	2.75 mm (0.1083 in.)

NOTICE:
Do not apply engine oil to the bearing's contact area and backside.

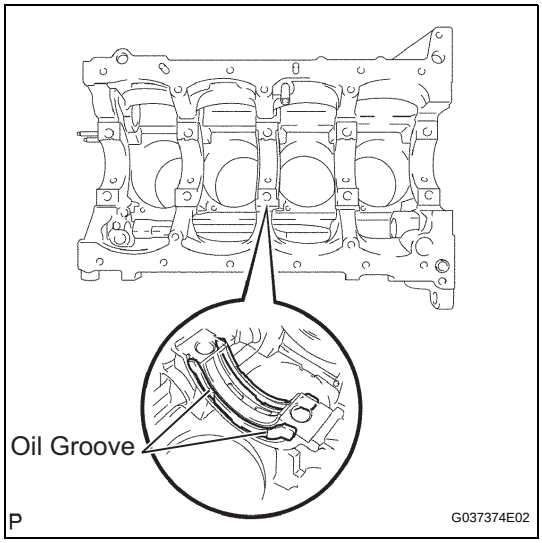
(d) With the upper bearing and lower bearing installed, use a plastic-faced hammer to install the bearing caps to the cylinder block.
NOTICE:
Make sure that the bearing caps are installed in the correct positions and direction.

EM

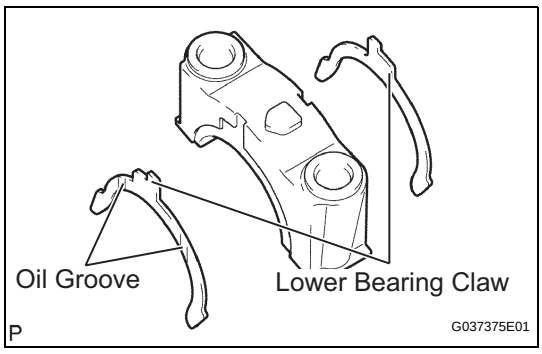


(e) Using vernier calipers, measure the amount of misalignment between the upper bearing and lower bearing, as shown in the illustration.
Standard:
0.9 mm (0.035 in.) or less

(f) Remove the bearing cap.



(g) Install the crankshaft thrust washer upper to the cylinder block.
(1) Install the 2 thrust washers under the No.3 journal position of the cylinder block with the oil grooves facing outward.
NOTICE:
Be careful when installing the thrust bearing upper and lower as they are similar but cannot be interchanged.

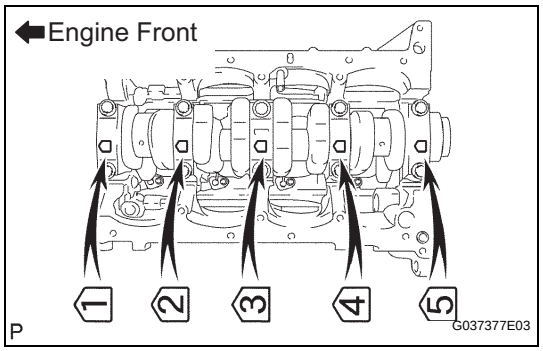


(h) Install the 2 thrust washers on the No.3 bearing cap with the grooves facing outward.
NOTICE:
Be careful when installing the thrust bearing upper and lower as they are similar but cannot be interchanged. The bearing lower has a claw as shown in the illustration.

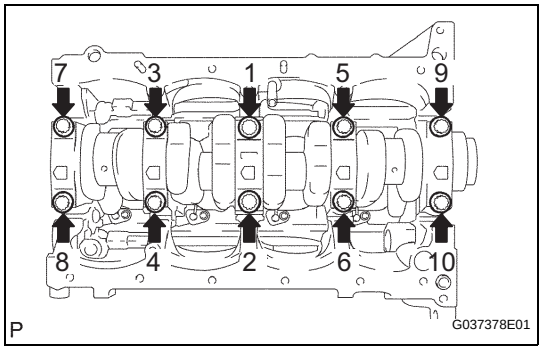
(i) Apply engine oil to the lower bearing.

14. INSTALL CRANKSHAFT

(a) Apply engine oil to the upper bearing, then place the crankshaft on the cylinder block.

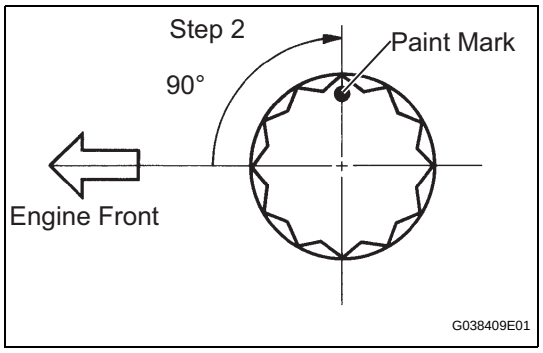


(b) Install the 5 crankshaft bearing caps in their proper locations.



(c) Install the crankshaft bearing cap bolts.
HINT:
The main bearing cap bolts are tightened in 2 progressive steps.

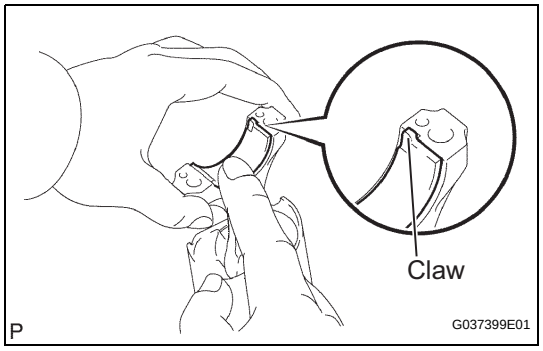
(d) Step 1
(1) Install and uniformly tighten the 10 main bearing cap bolts in the sequence shown in the illustration.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
If any of the main bearing cap bolts does not meet the torque specification, replace the main bearing cap bolt.



(e) Step 2
(1) Mark the front of the bearing cap bolts with paint.
(2) Retighten the bearing cap bolts by 90° in the order above.
(3) Check that the painted mark is now at a 90° angle to the front.

(f) Check that the crankshaft turns smoothly.

(g) Check the crankshaft thrust clearance (see step 5).



15. INSTALL CONNECTING ROD BEARING

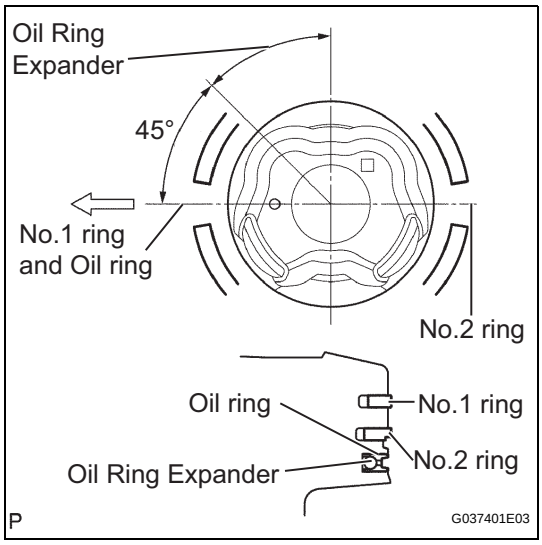
(a) Align the bearing claw with the groove of the connecting rod or connecting cap.

(b) Install the bearings in the connecting rod and connecting rod cap.
NOTICE:
Clean the backside of the bearing and the bearing surface of the connecting rod.

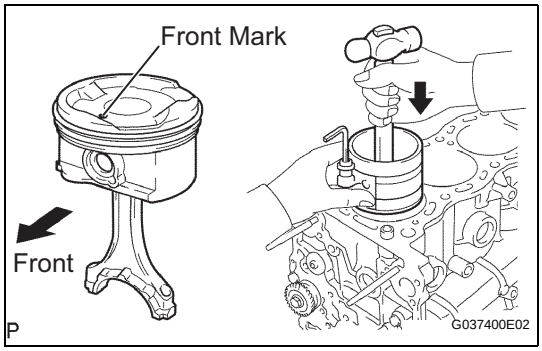
16. INSTALL PISTON SUB-ASSEMBLY WITH CONNENTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.

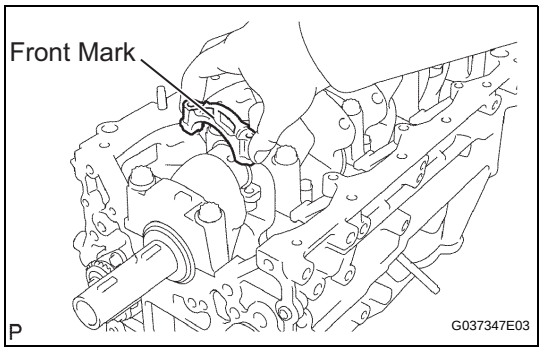
EM



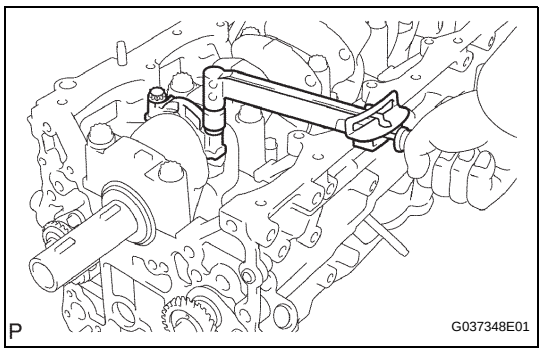
(b) Position the piston rings so that the ring ends are as shown in the illustration.
CAUTION:
Do not align the ring ends.



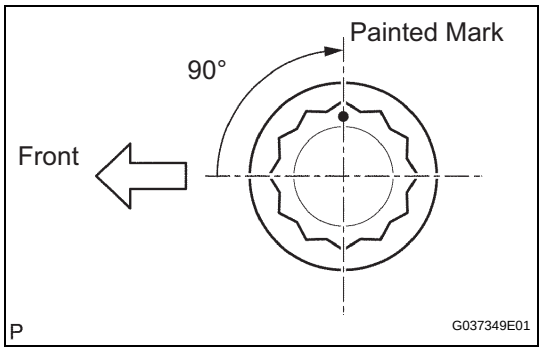
(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assembly into the cylinder with the front mark of the piston facing forward.
(d) Match the numbered connecting rod cap with the connecting rod.
NOTICE:
- **Match the numbered connecting rod cap with the connecting rod.**



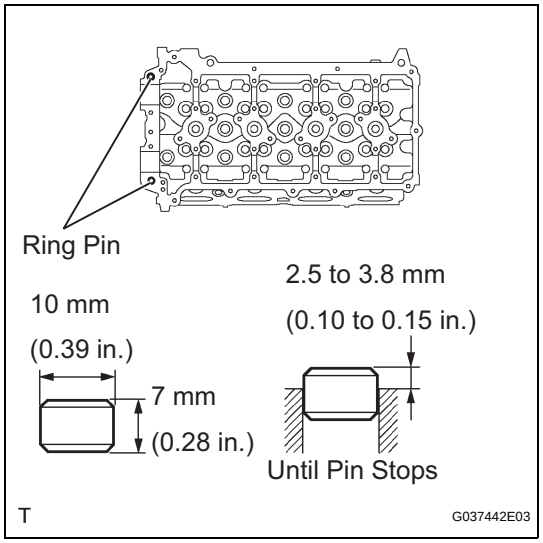
(e) Check that the front mark of the connecting rod cap is facing forward.
(f) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.



(g) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



(h) Mark the front side of each connecting cap bolt with paint.
(i) Retighten the cap bolts by 90° as shown.
(j) Check that the painted mark is now at a 90° angle to the front.
(k) Check that the crankshaft turns smoothly.
(l) Check the connecting rod thrust clearance (see step 1).



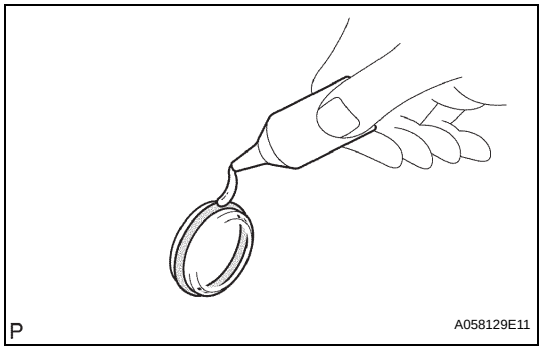
17. INSTALL CAMSHAFT BEARING CAP SETTING RING PIN

NOTICE:

It is not necessary to remove with head pin unless it is being replaced.

(a) Using a plastic-faced hammer, tap in a new ring pin until the pin stops.

EM



18. INSTALL NO. 1 TIGHT PLUG

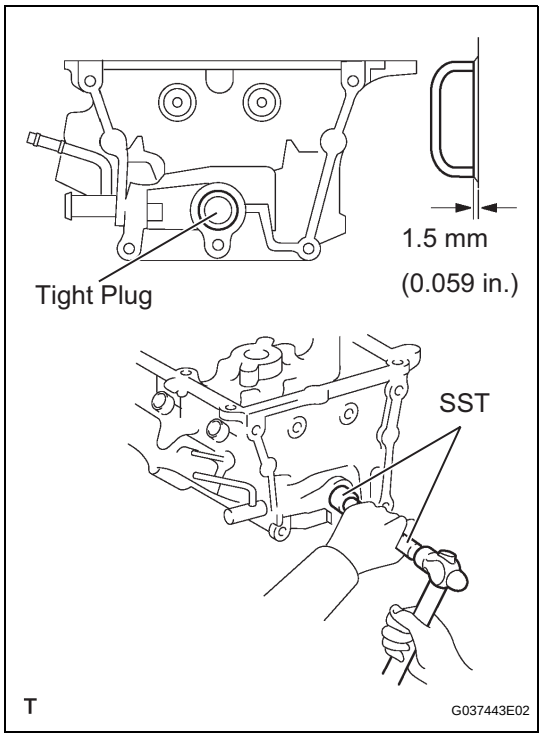
NOTICE:

If water leaks from the tight plug or the plug corrodes, replace it.

(a) Apply adhesive to the tight plug hole of the cylinder head.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent.

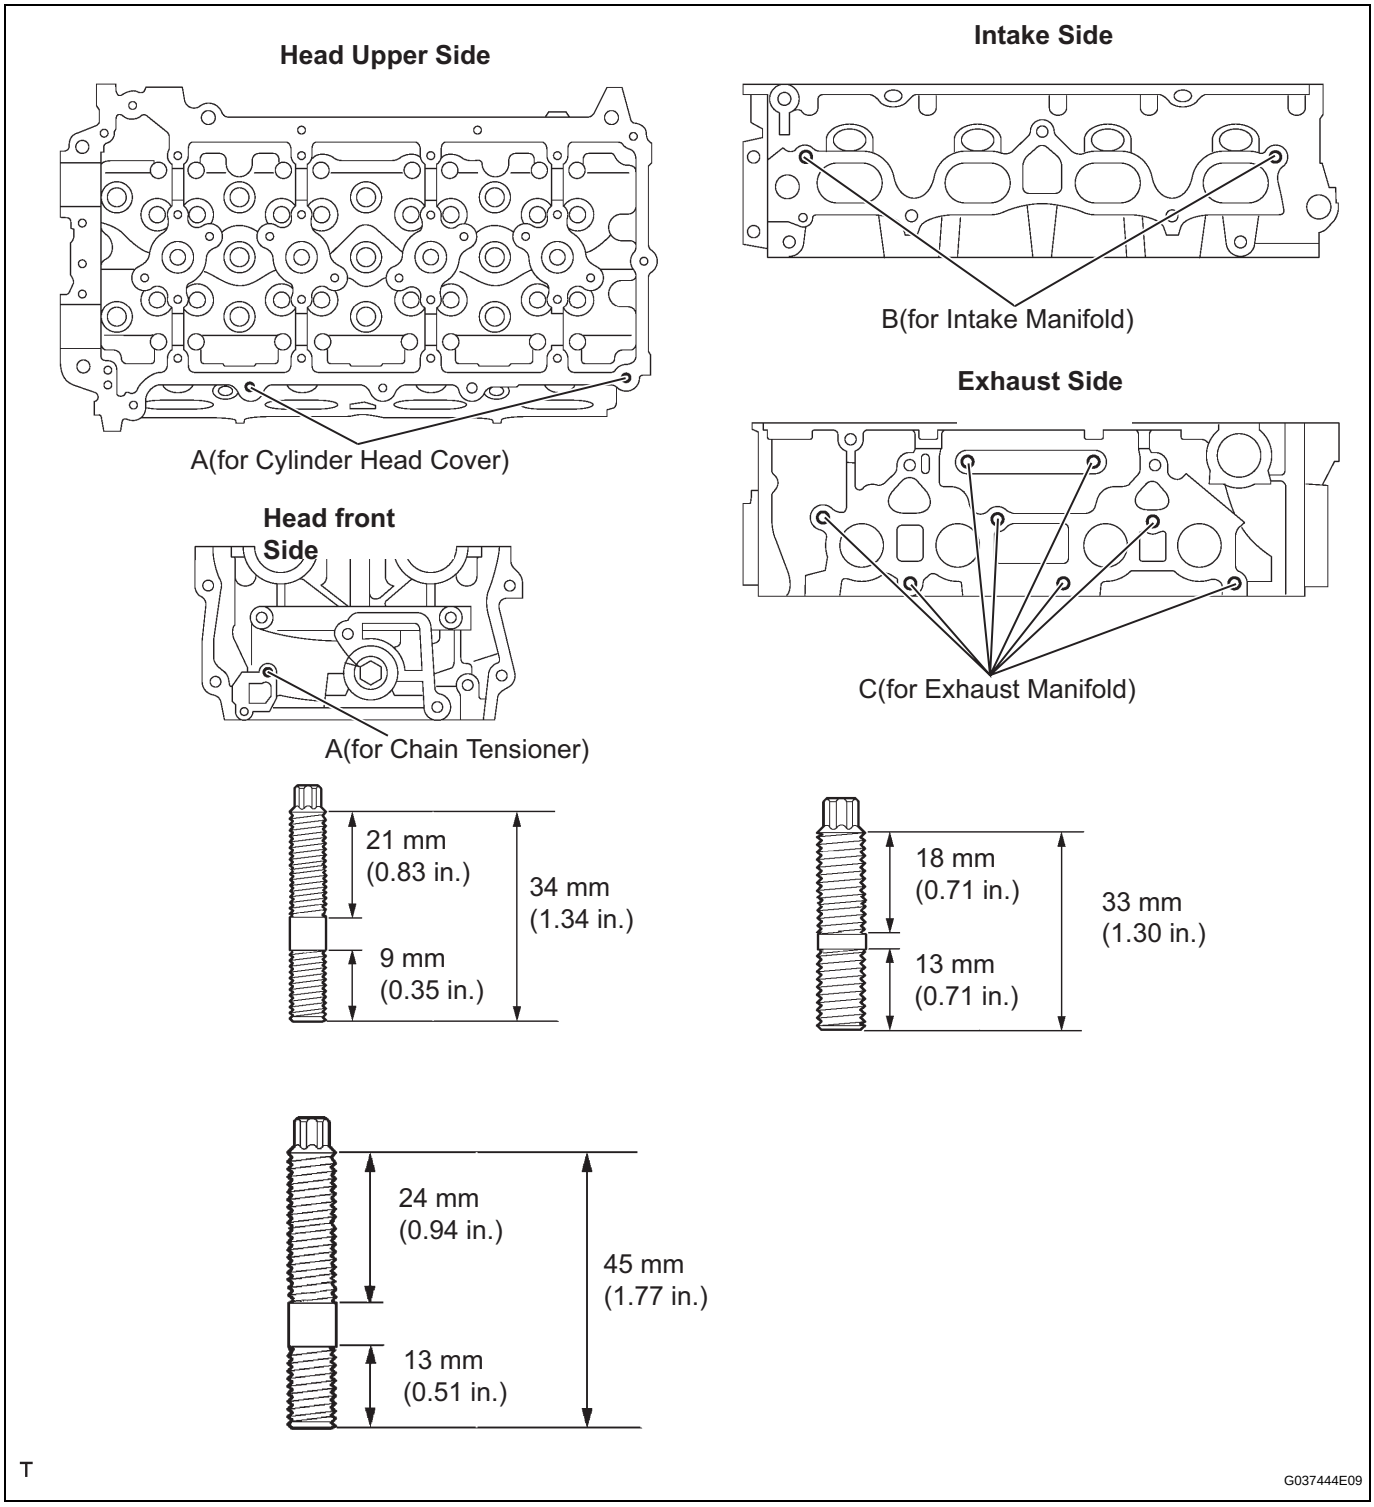


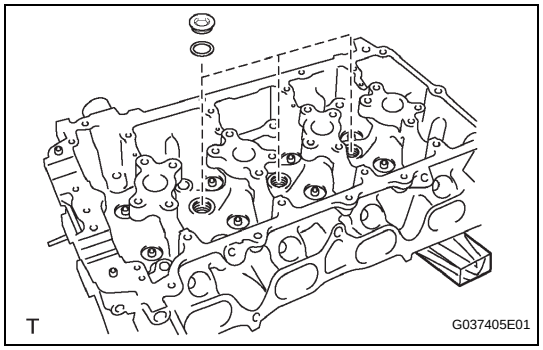
(b) Using SST, tap in a new tight plug to the cylinder head as shown in the illustration.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)

19. INSTALL STUD BOLT
NOTICE:
If the stud bolt is deformed or the threads are damaged, replace it.

(a) Using E6 and E7 "torx" socket wrenchs, install the stud bolts.
Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf) for stud bolt A
7.5 N*m (76 kgf*cm, 66 in.*lbf) for stud bolt B
9.5 N*m (97 kgf*cm, 84 in.*lbf) for stud bolt C

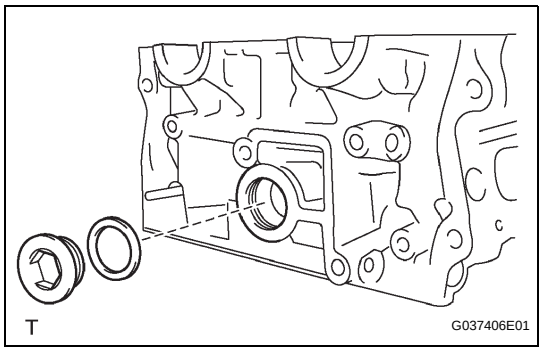
EM





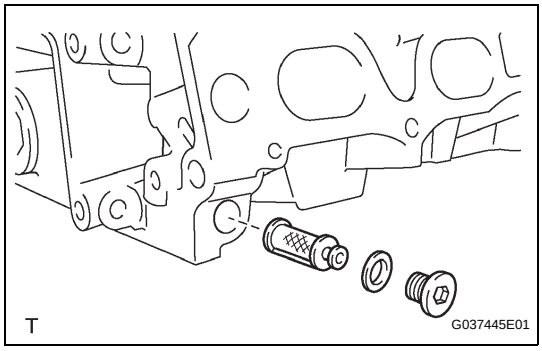
20. INSTALL NO. 1 WITH HEAD STRAIGHT SCREW PLUG

(a) Using a 10 mm hexagon wrench, install 3 new gaskets and the straight screw plugs.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



21. INSTALL NO. 2 WITH HEAD STRAIGHT SCREW PLUG

(a) Using a 19 mm hexagon wrench, install a new gasket and the straight screw plug.
Torque: 90 N*m (918 kgf*cm, 66 ft.*lbf)



22. INSTALL OIL CONTROL VALVE FILTER

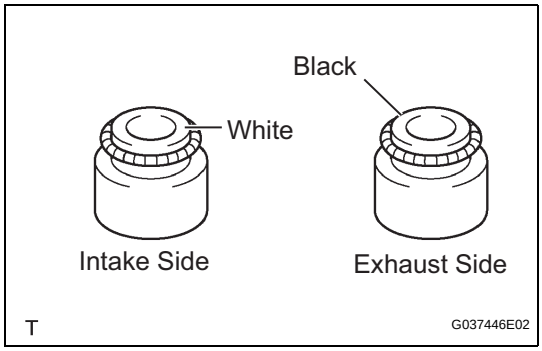
(a) Check that no foreign matter is on the mesh part of the filter.
If foreign objects are present, clean the part thoroughly.

(b) Using a 8 mm hexagon wrench, install a new gasket and the oil control valve filter with the screw plug.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

EM

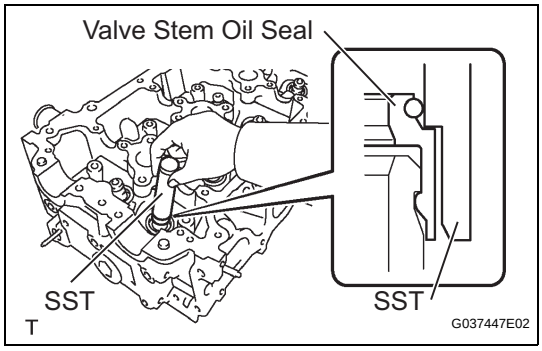
23. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats to the cylinder head.

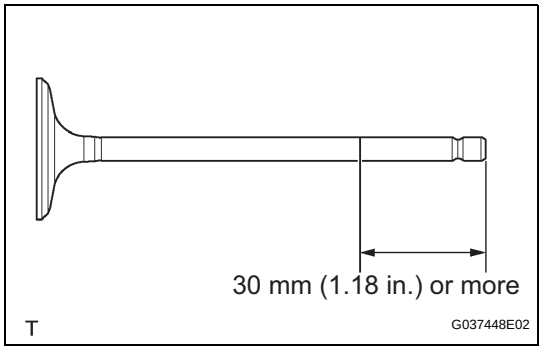


24. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new oil seals.
NOTICE:
Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
The intake valve oil seals are white and the exhaust valve oil seals are black.

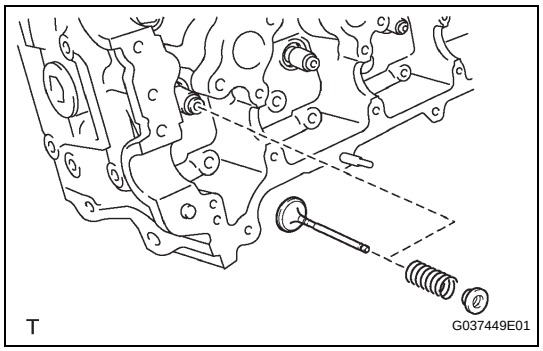


(b) Using SST, push in the oil seals.
SST 09201-41020
NOTICE:
Failure to use SST will cause the seal to be damaged or improperly seated.

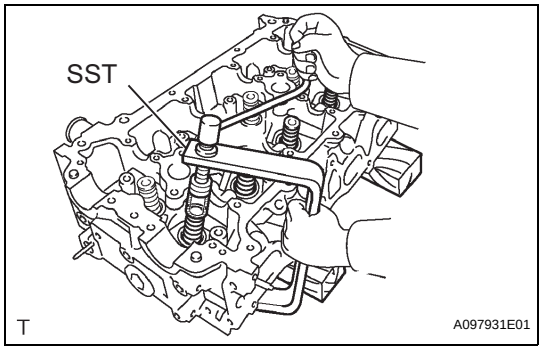


25. INSTALL INTAKE VALVE

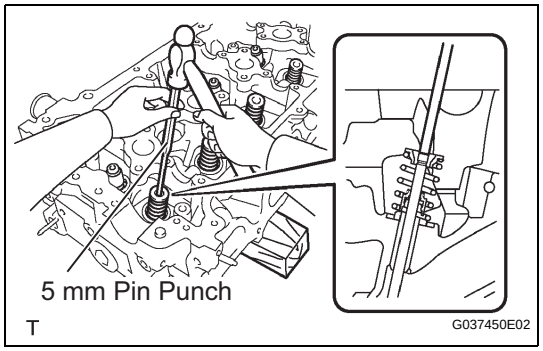
(a) Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.



(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
Install the same parts in the same combination to the original locations.



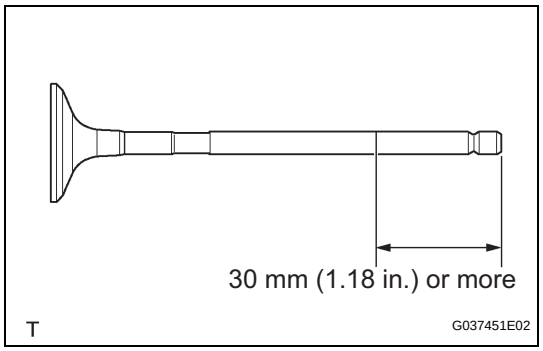
(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)

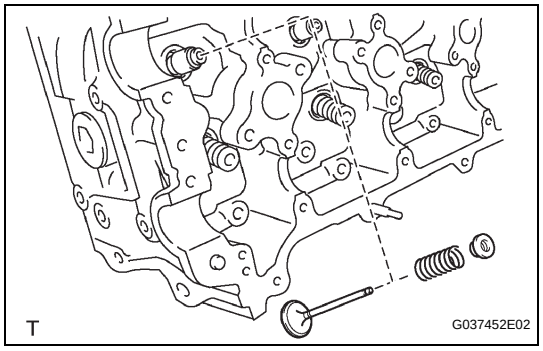


(d) Using a 5 mm pin punch and plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.

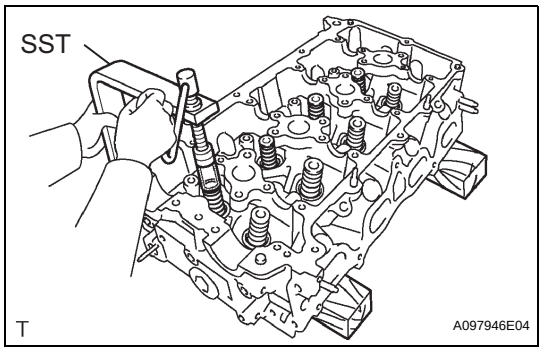
26. INSTALL EXHAUST VALVE

(a) Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.

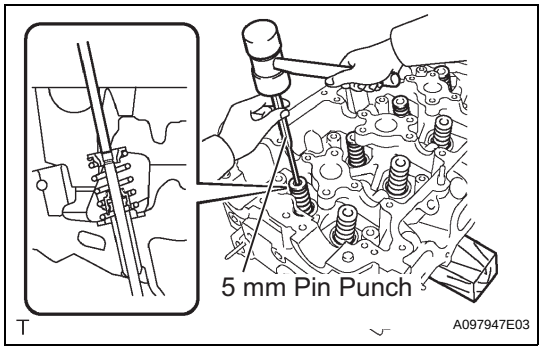




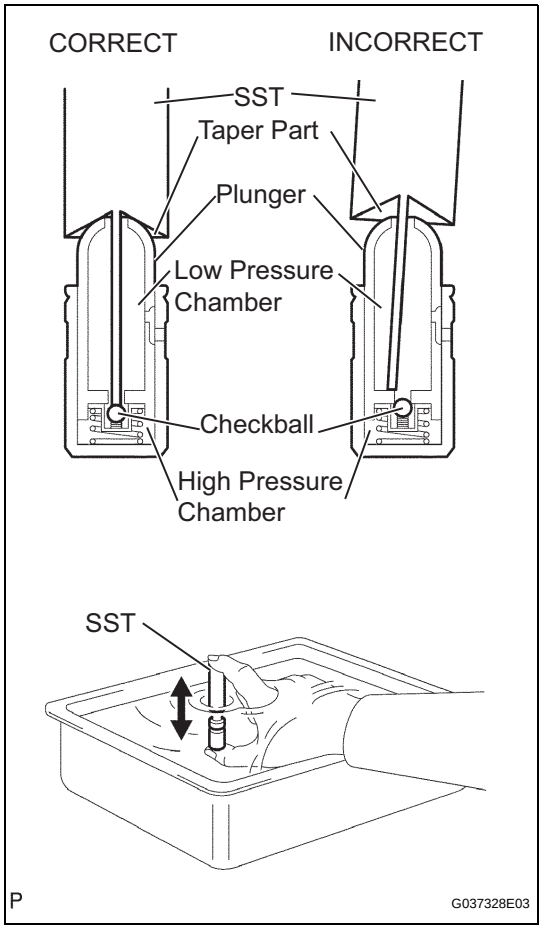
(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
Install the same parts in the same combination to the original locations.



(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)

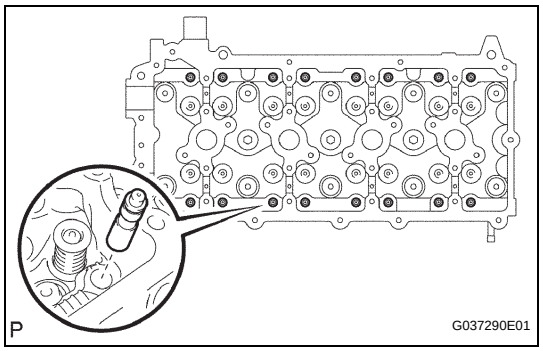


(d) Using a 5 mm pin punch and plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.

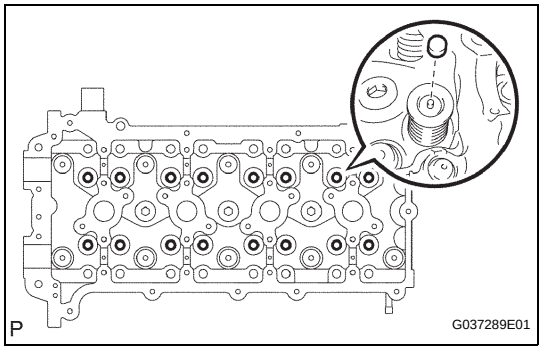


27. INSTALL VALVE LASH ADJUSTER ASSEMBLY
NOTICE:
- **Keep the lash adjuster free from dirt and foreign objects.**
- **Only use clean engine oil.**

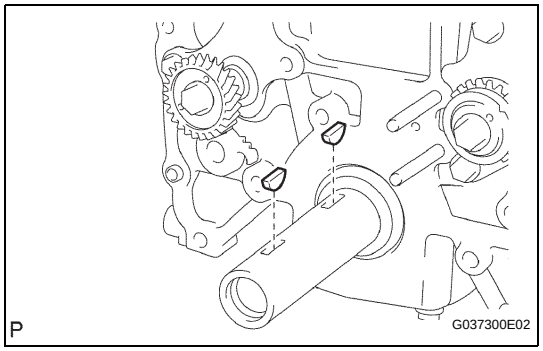
(a) Place the lash adjuster into a container full of engine oil.
(b) Insert SST's tip into the lash adjuster's plunger and use the tip to press down on the checkball inside the plunger.
SST 09276-75010
(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.
(d) Check the movement of the plunger and bleed the air.
OK:
Plunger moves up and down.
NOTICE:
When bleeding high-pressure air from the compression chamber, make sure that the tip of the SST is actually pressing the checkball as shown in the illustration. If the checkball is not pressed, air will not bleed.
(e) After bleeding the air, remove the SST. Then quickly and firmly press the plunger with a finger.
OK:
Plunger is very difficult to move.
If the result is not as specified, replace the lash adjuster.



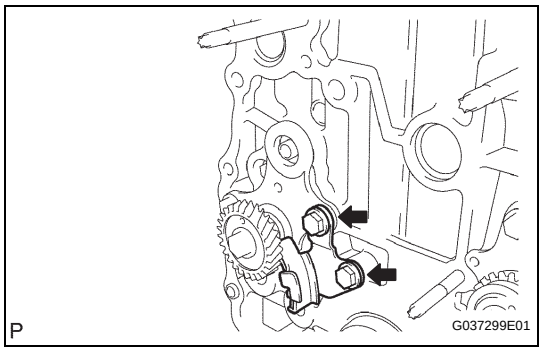
(f) Install the lash adjusters.
NOTICE:
Install the lash adjuster to the original position.



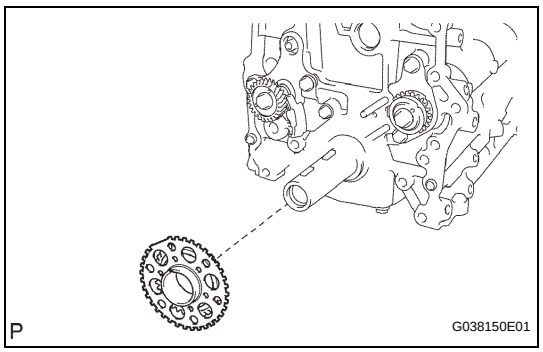
28. INSTALL VALVE STEM CAP
(a) Apply a light coat of engine oil to the valve stem caps.
(b) Install the valve stem caps to the cylinder head.



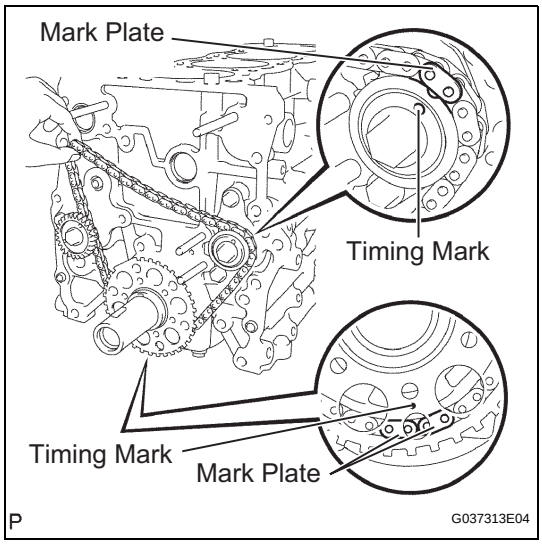
29. INSTALL CRANKSHAFT PULLEY SET CRANKSHAFT KEY
(a) Install the 2 pulley keys to the crankshaft.



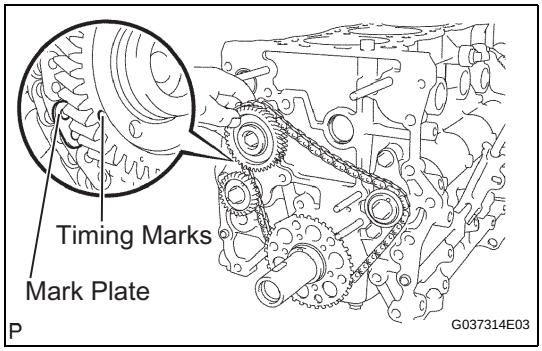
30. INSTALL NO. 4 CHAIN VIBRATION DAMPER
(a) Install the vibration damper No.4 with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)



31. INSTALL NO.2 CHAIN SUB-ASSEMBLY
(a) Install the timing sprocket No.2 as shown in the illustration.
NOTICE:
Check that the No.1 cylinder is at TDC and that the weights of the No.1 and No.2 balanceshafts are at the bottom side.
HINT:
Install the sensor plate with the front mark facing forward.

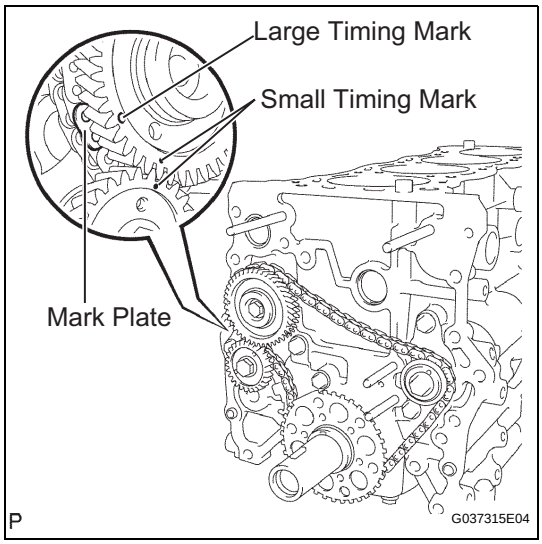


(b) As shown in the illustration, install the chain on the sprocket and gear with the painted marks aligned with the timing marks on the sprocket and gear.



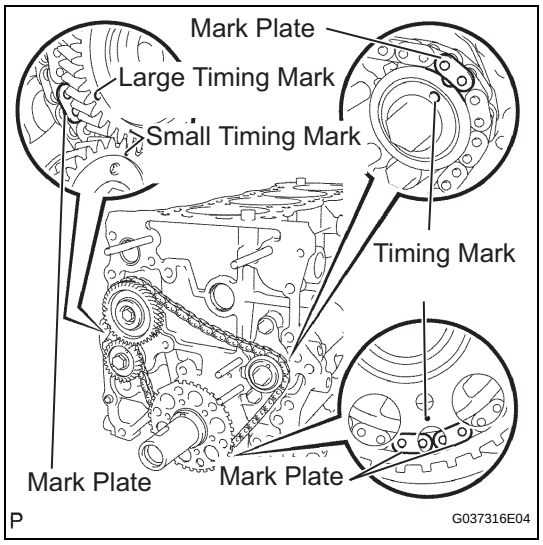
(c) Fit the other mark link of the crankshaft timing sprocket behind the large timing mark of the balanceshaft drive gear.

(d) Insert the balanceshaft drive gear shaft through the balanceshaft drive gear so that it fits into the thrust plate hole.

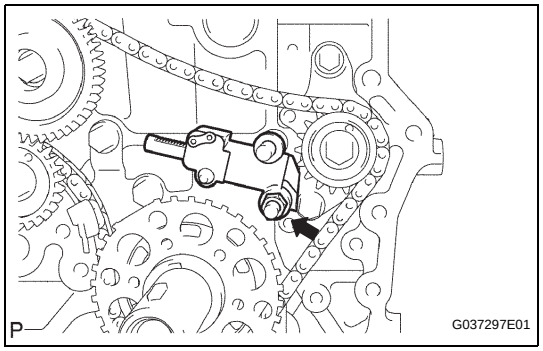


(e) Align the small timing mark of the balanceshaft drive gear with the timing mark of the balanceshaft timing gear.

(f) Install the bolt to the balanceshaft drive gear and tighten it.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

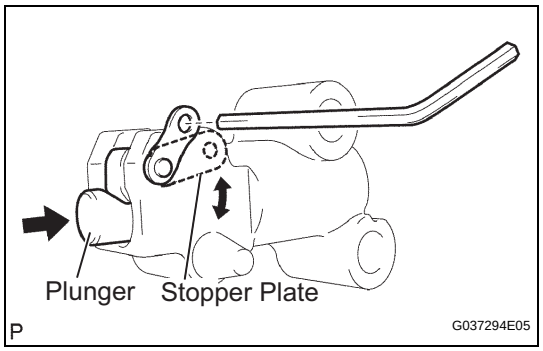


(g) Check that each timing mark is matched with the corresponding mark link.
NOTICE:
Check that the No.1 cylinder is at TDC and that the weights of the No.1 and No.2 balanceshafts are at the bottom side.

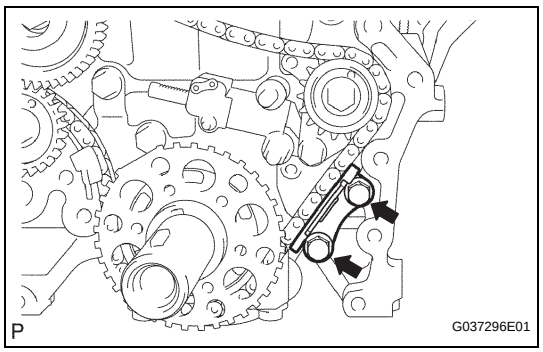


32. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Install the chain tensioner assembly No.2 with the nut.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)
NOTICE:
Assemble the chain tensioner with the pin installed, then remove the pin after assembly. When doing this, avoid pushing the vibration damper against the chain.



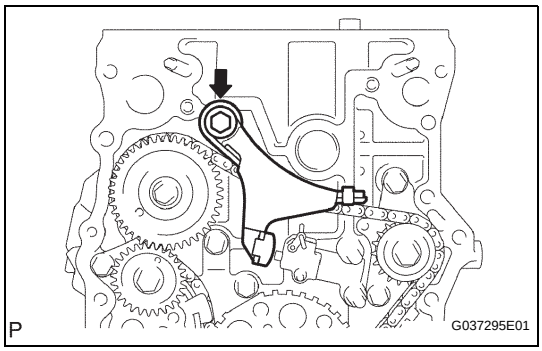
(b) Move the stopper plate downward to release the lock, and push the plunger deep into the tensioner.
(c) Move the stopper plate upward to set the lock, and insert a hexagon wrench into the stopper plate's hole.



33. INSTALL NO. 3 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper No.3 with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

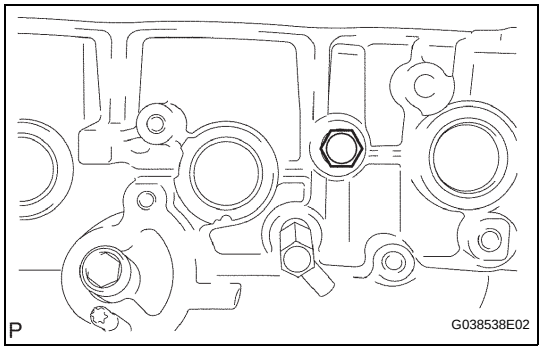
EM



34. INSTALL NO. 2 CHAIN VIBRATION DAMPER

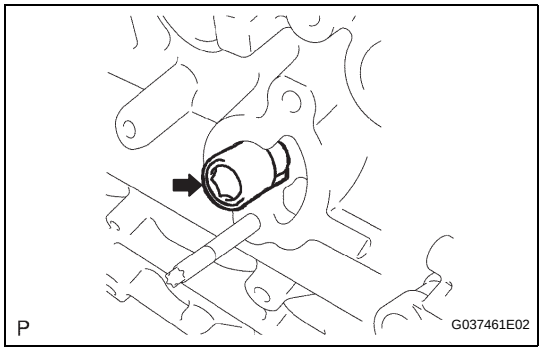
(a) Install the chain vibration damper No.2 with the bolt.
Torque: 27 N*m (270 kgf*cm, 20 ft.*lbf)

(b) Remove a pin from the chain tensioner assy No.2 and release the plunger.



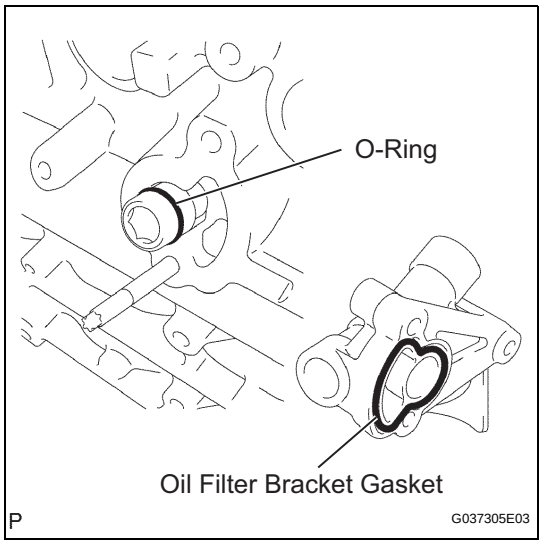
35. INSTALL NO. 1 WITH HEAD TAPER SCREW PLUG

(a) Install the screw plug No.1 to the cylinder block.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



36. INSTALL OIL FILTER BRACKET SUB-ASSEMBLY

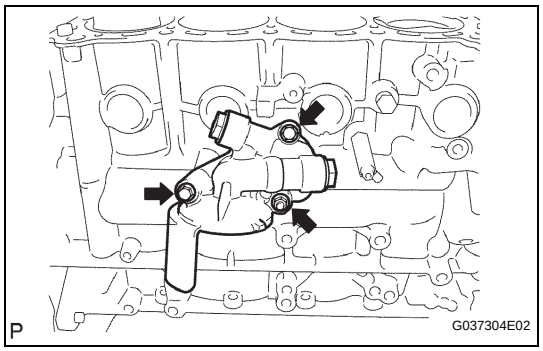
(a) Using a hexagon wrench, install the oil filter bracket union.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



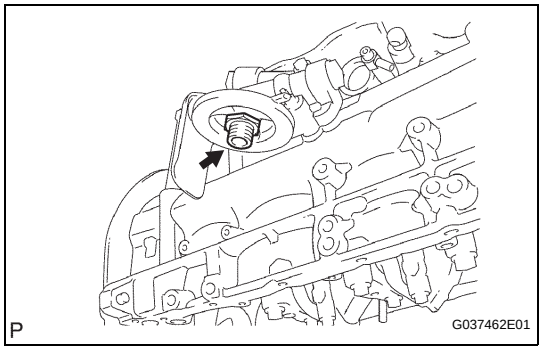
(b) Install a new oil filter bracket gasket to the oil filter bracket.

(c) Install a new O-ring to the oil filter bracket union.
NOTICE:
Apply a light coat of engine oil to the new O-ring and oil filter bracket.

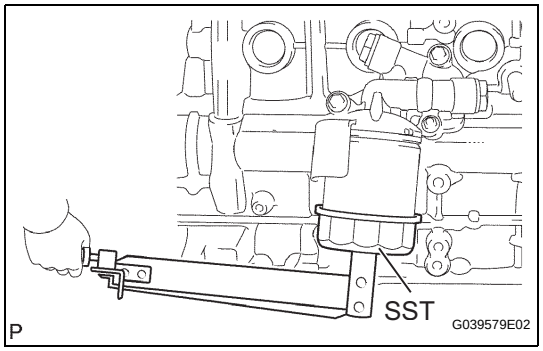
(d) Install 2 new gaskets and the 2 screw plugs to the oil filter bracket.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



(e) Install the oil filter bracket with the 2 bolts and nut.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

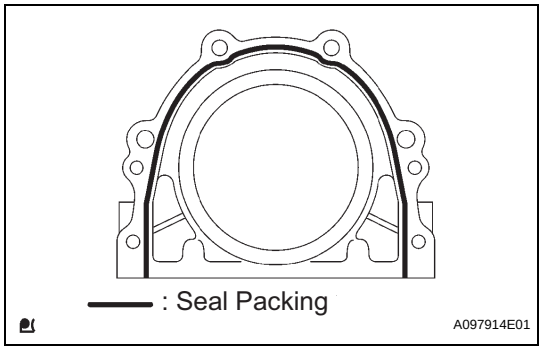


(f) Using a 27 mm socket wrench, install the oil filter union.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)



37. INSTALL OIL FILTER SUB-ASSEMBLY

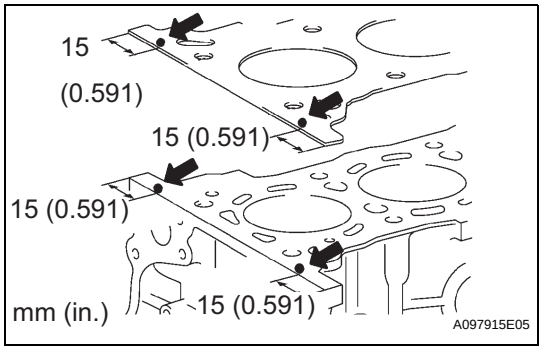
(a) Check and clean the oil filter installation surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.
(d) Using SST, tighten the oil filter.
SST 09228-07501
(1) When using a torque wrench:
Using a torque wrench, tighten the oil filter.
Torque: 17 N*m (175 kgf*cm, 13 ft.*lbf)
(2) When not using a torque wrench:
Tighten it an additional 3/4 turn.



38. INSTALL ENGINE REAR OIL SEAL RETAINER

(a) Apply seal packing in a continuous bead as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
Seal width:
2 to 3 mm (0.079 to 0.118 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 4 hours after installing.**

(b) Install the oil seal retainer with the 6 bolts.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

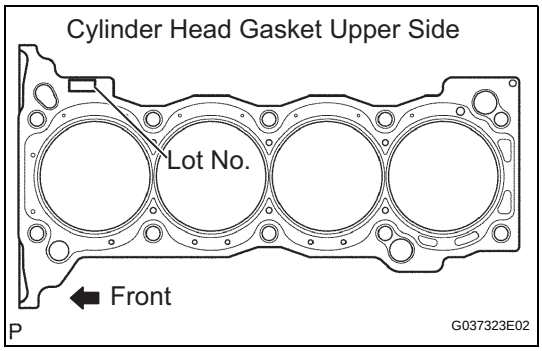


39. INSTALL CYLINDER HEAD GASKET

(a) Apply a continuous bead (seal width: 4 to 7 mm (0.15 to 0.28 in.)) of seal packing to the cylinder block upper side and cylinder head gasket upper side as shown in the illustration.

Seal packing:
Part No. 08826-00100 or equivalent
Seal width:
4 to 7 mm (0.15 to 0.28 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes after applying the seal packing.**
- **Install the cylinder head bolt within 15 minutes after applying the seal packing.**
- **Do not put into engine oil within 4 hours of installation.**

EM



(b) Install a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upper side facing upward.

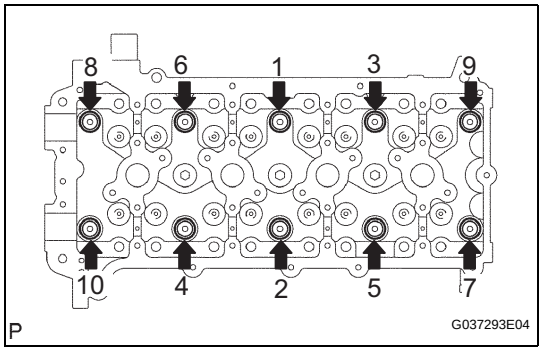
NOTICE:
- **Make sure that the installation direction is correct.**
- **Place the cylinder head gently to avoid damaging the gasket with the bottom part of the head.**

40. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
The cylinder head bolts are tightened in 3 progressive steps.

(a) Place the cylinder head on the cylinder block.

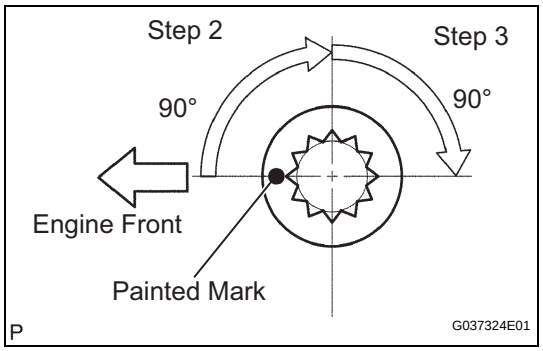
(b) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



(c) Step 1

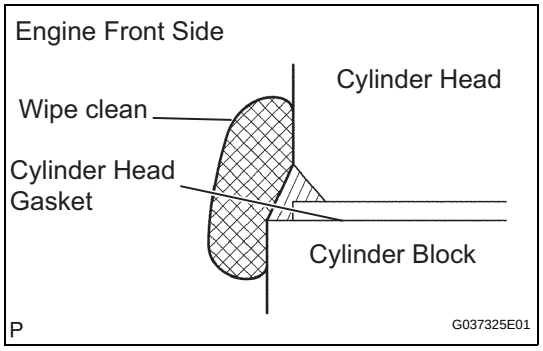
(1) Install and uniformly tighten the 10 cylinder head bolts with the plate washers, in several steps, in the sequence shown.

Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

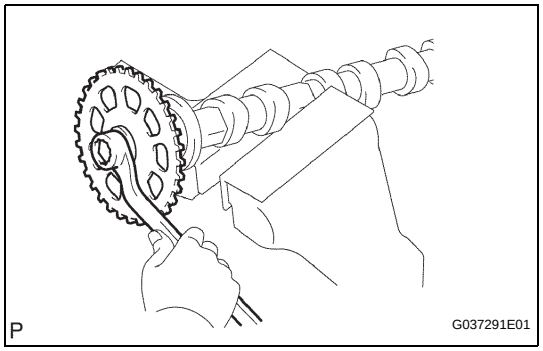


(d) Step 2
  (1) Mark the cylinder head bolt head with paint as shown in the illustration.
  (2) Retighten the cylinder head bolts by 90°.

(e) Step 3
  (1) Retighten the cylinder head bolts by an additional 90°.
  (2) Check that the painted mark is now facing rearward.

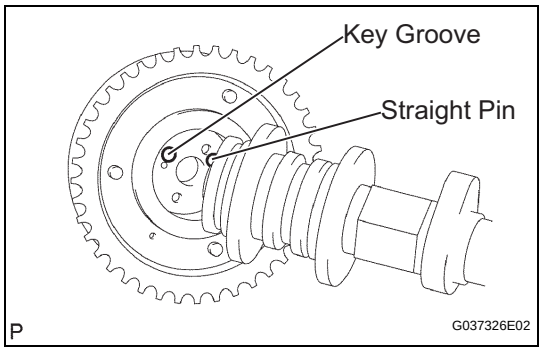


(f) Seal packing will seep out on the engine's front side. Thoroughly wipe clean any seal packing.



41. INSTALL CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vise and then install the camshaft timing sprocket to the camshaft with the sprocket bolt.
Torque: 78 N*m (795 kgf*cm, 58 ft.*lbf)
NOTICE:
Be careful not to damage the camshaft in the vise.



42. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

(a) Put the camshaft timing gear and camshaft together by aligning the key groove and straight pin.

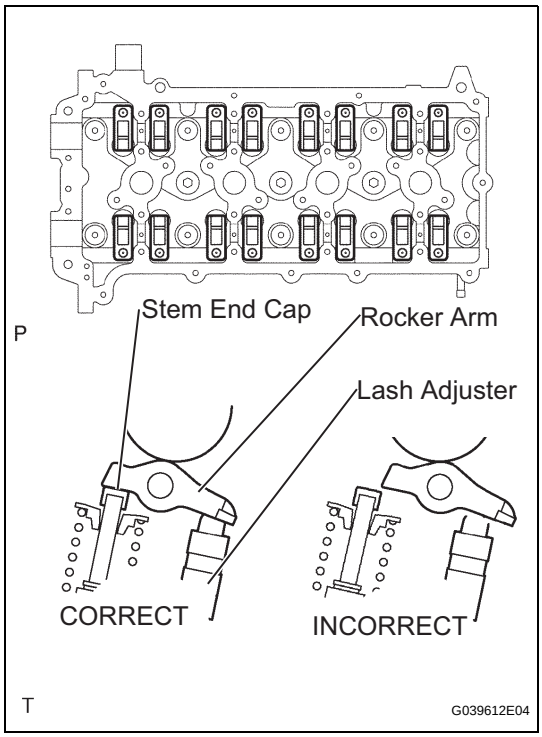
(b) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
CAUTION:
Be sure not to turn the camshaft timing gear in the retard direction (the right angle).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 78 N*m (795 kgf*cm, 58 ft.*lbf)

(e) Check that the camshaft timing gear can move in the retard direction (the right angle), and is locked at the most retarded position.

EM

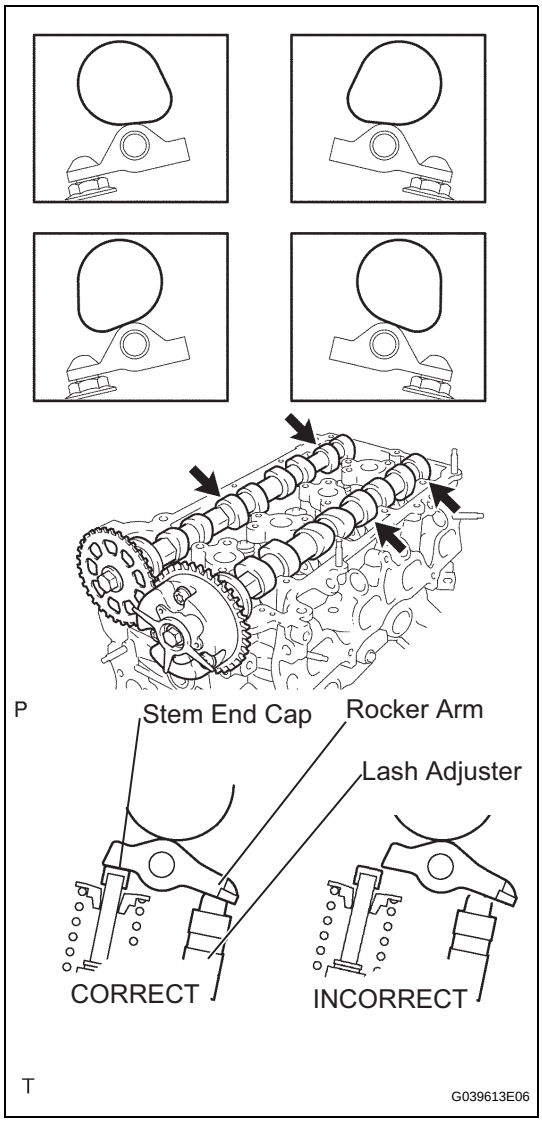


43. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Set the 16 rocker arms to the lash adjusters.

NOTICE:

Before and after setting the camshaft and No.2 camshaft, firmly set the rocker arm to the lash adjuster.



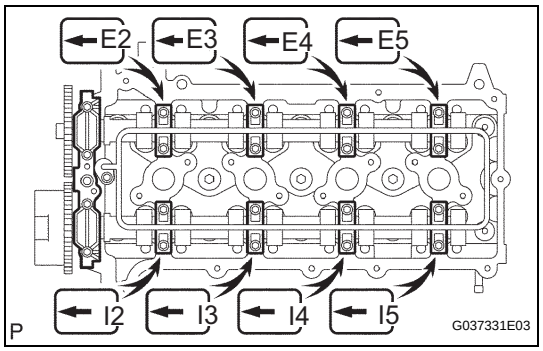
44. INSTALL CAMSHAFTS

(a) Apply clean engine oil to the camshaft's cam portion and the cylinder head journals.

(b) Set the camshaft and No.2 camshaft as shown in the illustration.

NOTICE:

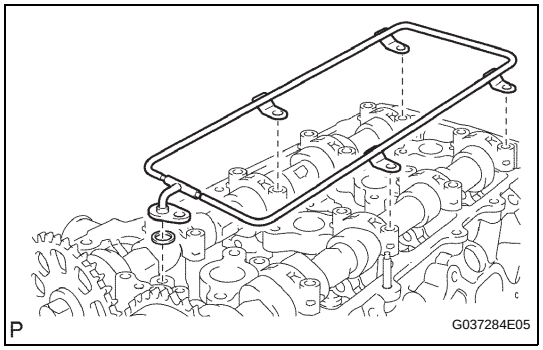
Before and after setting the camshaft and No.2 camshaft, firmly set the rocker arm to the lash adjuster.



45. INSTALL CAMSHAFT BEARING CAP

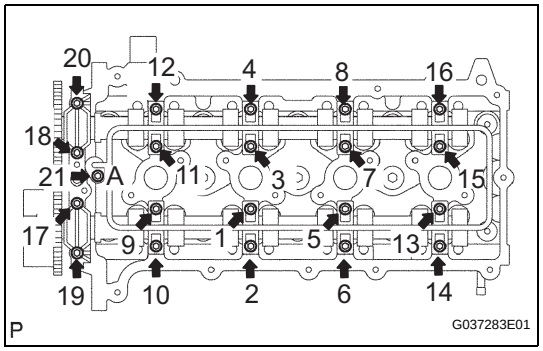
(a) Temporarily install the camshaft bearing cap No.1.

(b) Check the proper location of each camshaft bearing cap No.2 and install them.



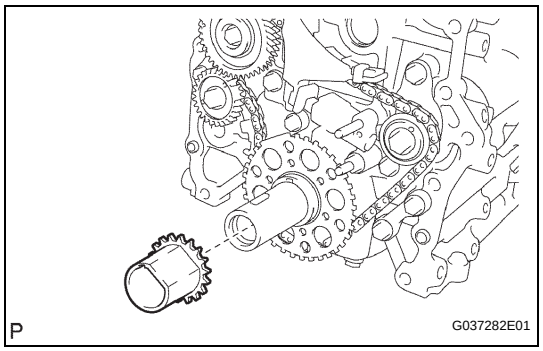
(c) Install a new O-ring to the camshaft bearing cap No.1.

(d) Temporarily install the oil delivery pipe.



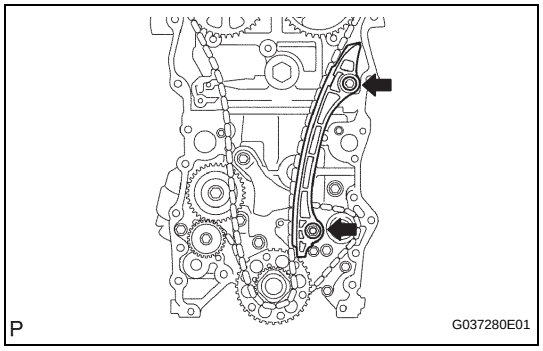
(e) Tighten the 21 bolts and 20 washers in the order shown in the illustration.

Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf) for bolt A
16 N*m (160 kgf*cm, 11 ft.*lbf) for except bolt A



46. INSTALL CRANKSHAFT TIMING SPROCKET

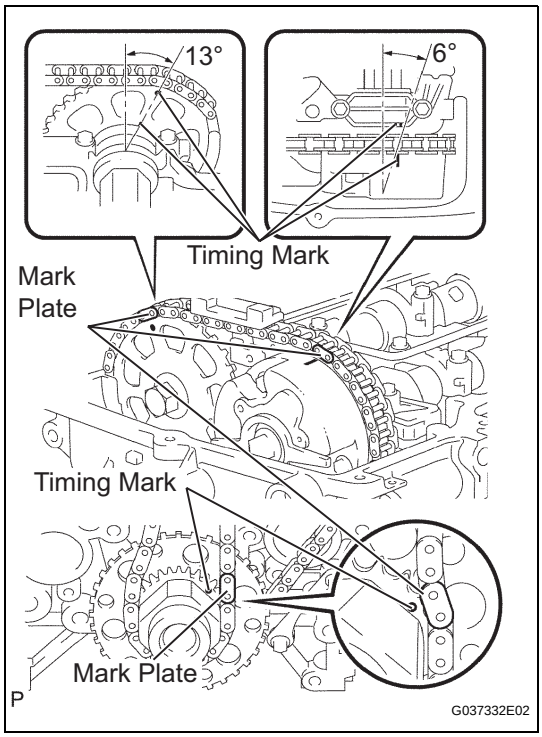
(a) Install the timing sprocket as shown in the illustration.



47. INSTALL NO. 1 CHAIN VIBRATION DAMPER

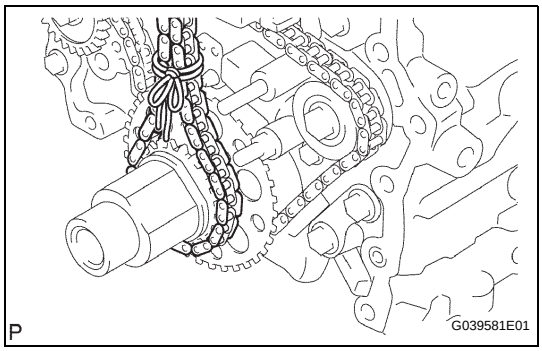
(a) Install the vibration damper with the bolt and nut.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

EM

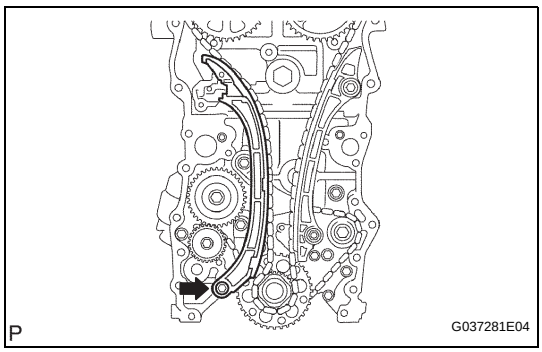


48. INSTALL CHAIN SUB-ASSEMBLY

(a) As shown in the illustration, install the chain on the sprocket and gear with the painted marks aligned with the timing marks on the sprocket and gear.
HINT:
- The camshaft mark plate is yellow.
- The crankshaft mark plate is orange.

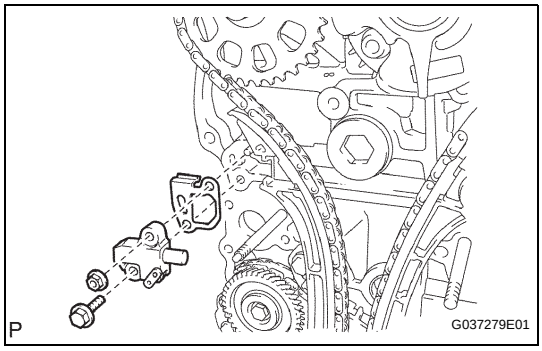


(b) Use a rope to tie the chain of the crankshaft timing sprocket. Tie the rope near the sprocket.
NOTICE:
After the chain tensioner has been installed, the rope must be removed.
HINT:
The rope is tied so that the chain will not jump a tooth.



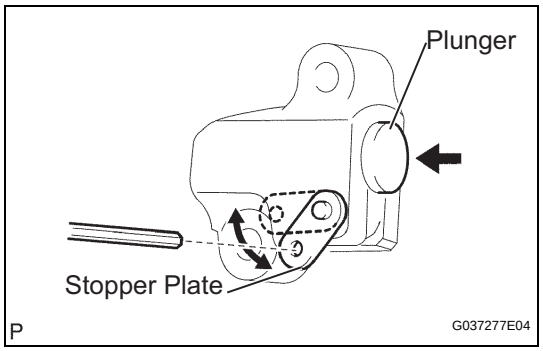
49. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the tensioner slipper with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

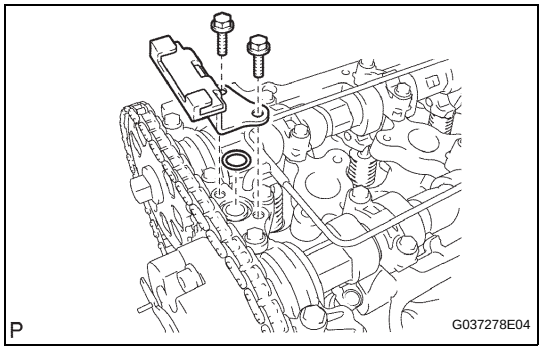


50. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Install a new gasket and the chain tensioner No.1 with the bolt and nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

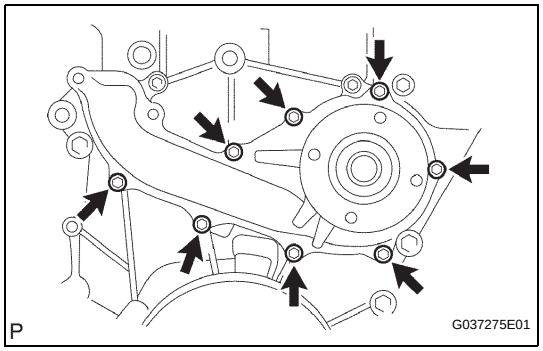


(b) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.
(c) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the stopper plate's hole.



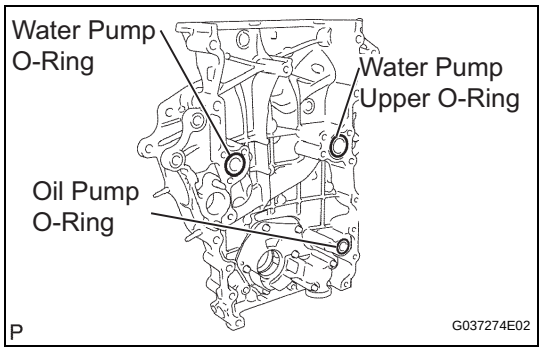
51. INSTALL TIMING CHAIN GUIDE

(a) Install a new O-ring and the chain guide with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



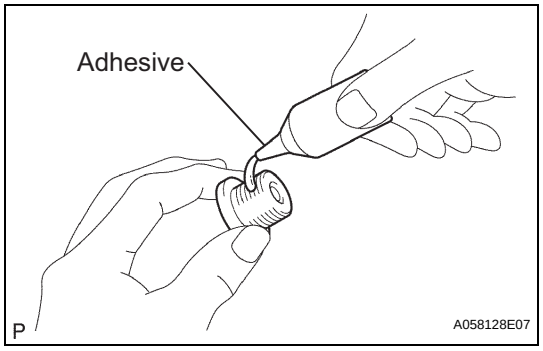
52. INSTALL WATER PUMP ASSEMBLY

(a) Install a new gasket and the water pump with the 8 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

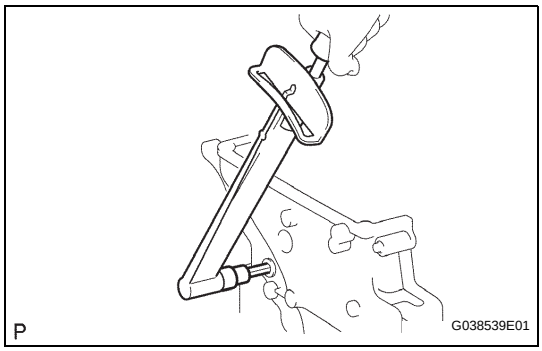


53. INSTALL TIMING CHAIN COVER

(a) Install 3 new O-rings to the timing chain cover as shown in the illustration.



(b) Apply adhesive to the timing gear case plug.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent



(c) Using a 10 mm socket hexagon wrench, install the timing chain cover plug.
Torque: 17 N*m (170 kgf*cm, 12 ft.*lbf)

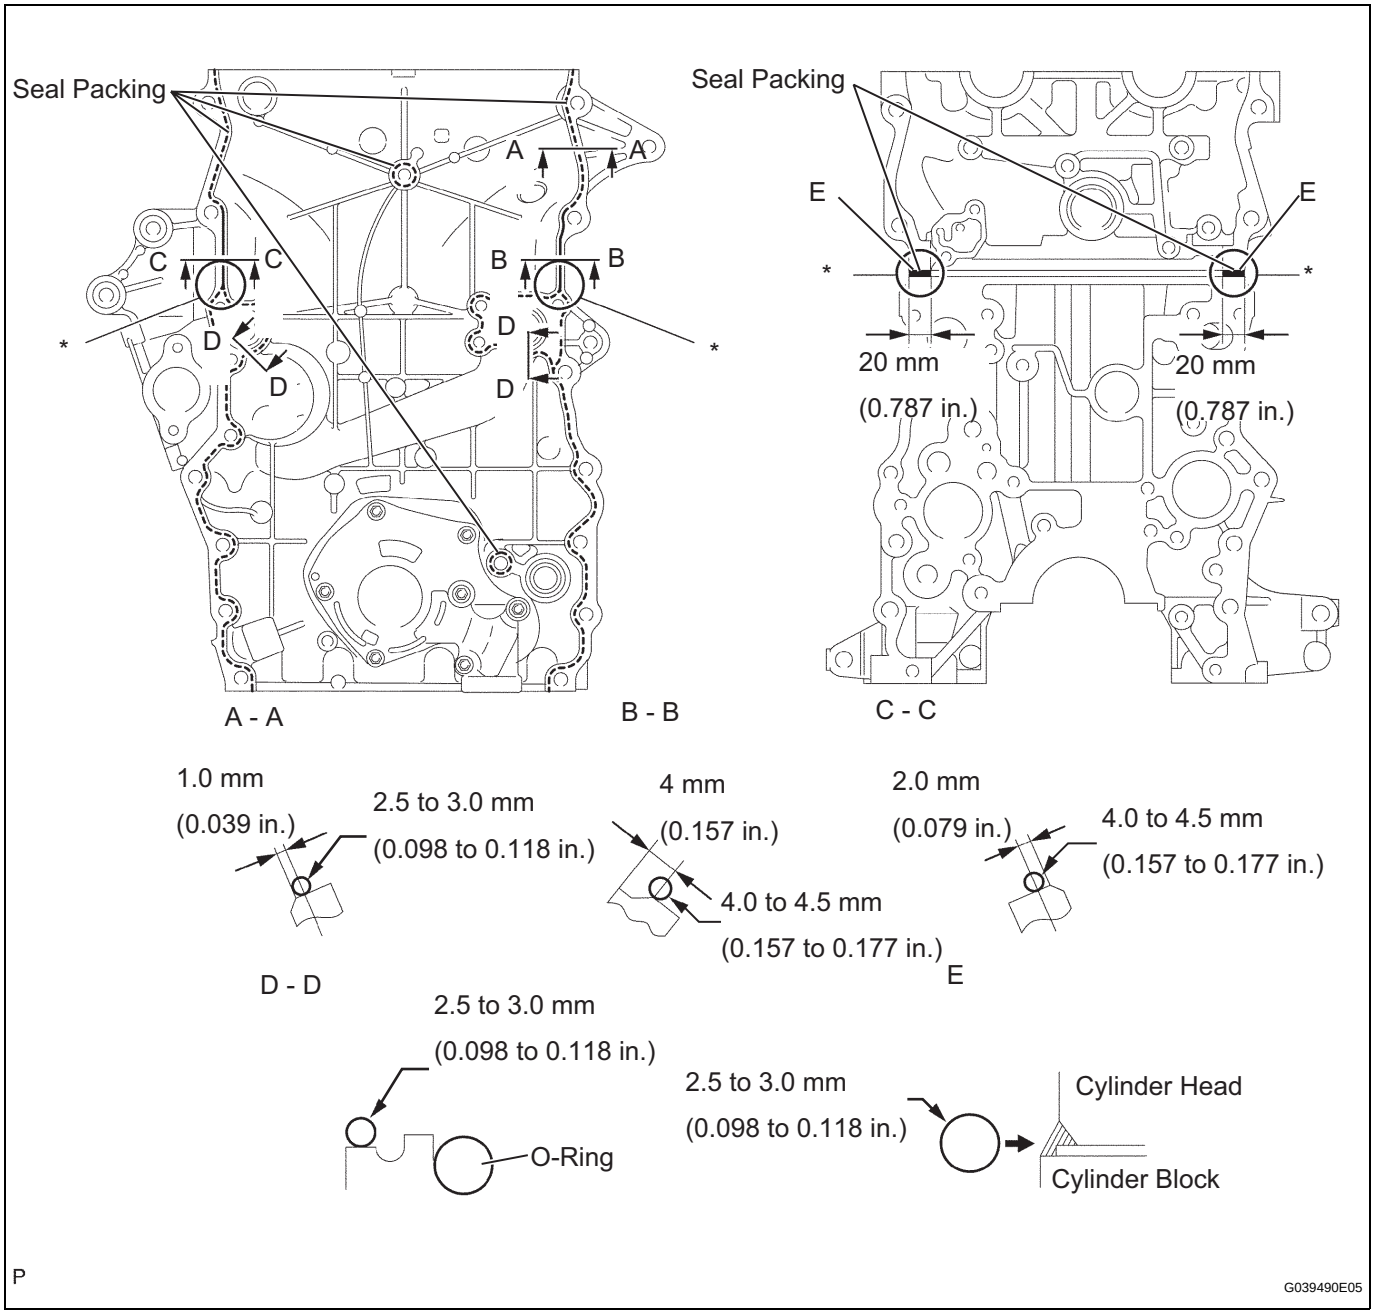
(d) Apply seal packing in a continuous bead to the timing chain cover as shown in the following illustration.
Seal packing:
Part No. 08826-00080 or equivalent

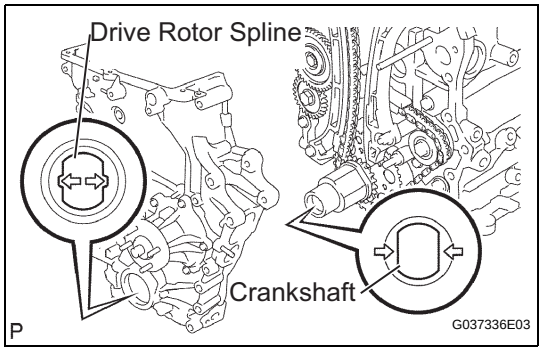
Seal width

Position	Specified Condition
A - A,	2.5 to 3.0 mm (0.098 to 0.118 in.)
B - B, C - C	4.0 to 4.5 mm (0.157 to 0.177 in.)
D - D	2.5 to 3.0 mm (0.098 to 0.118 in.)
E	2.5 to 3.5 mm (0.098 to 0.138 in.)

EM

NOTICE:
- **Be sure to clean and degrease the contact surfaces, especially 4 areas indicated by * in the illustration.**
- **When the contact surfaces are wet, wipe off with an oil-free cloth before applying seal packing.**
- **Install the crankcase within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 4 hours after installing.**





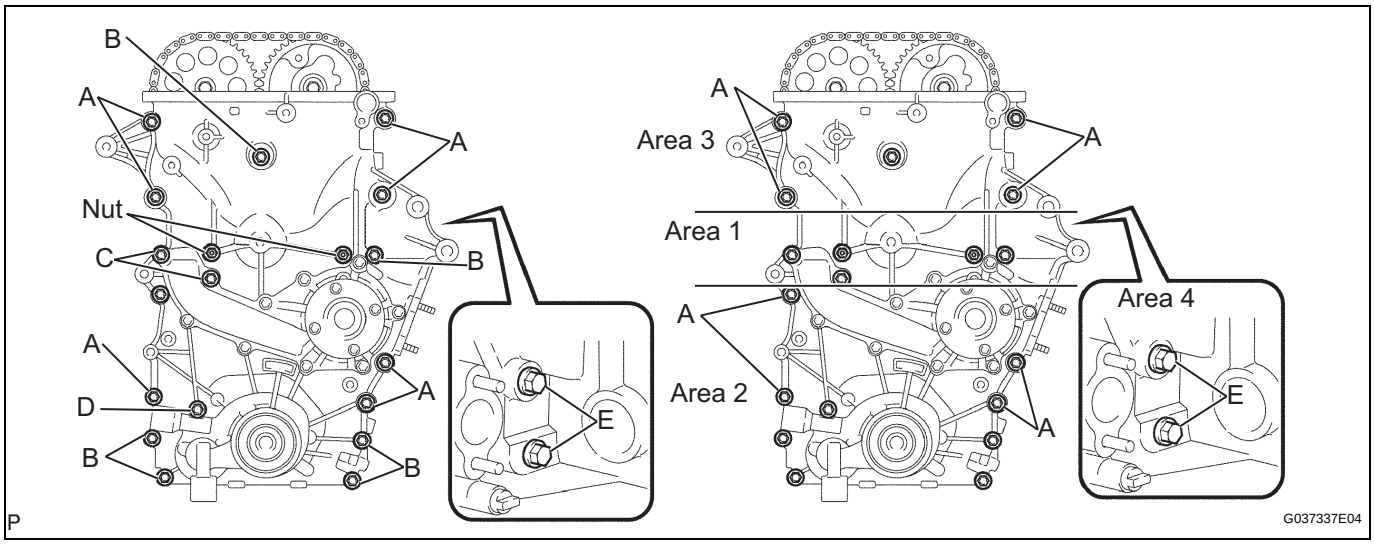
(e) Align the oil pump's drive rotor spline and the crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

(f) Temporarily install the the timing chain cover with the 19 bolts and 2 nuts, but do not tighten the bolts and nuts yet.

(g) Excluding bolts A, fully tighten the bolts and nuts in this order: Area 1, Area 2 and Area 3.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
HINT:
Bolt length:
75 mm (2.95 in.) for bolt A (M10)
75 mm (2.95 in.) for bolt B (M8)
87 mm (3.43 in.) for bolt C
95 mm (3.74 in.) for bolt D

(h) Fully tighten the bolts labeled A in this order: Area 2 and Area 3.
Torque: 46 N*m (469 kgf*cm, 34 ft.*lbf)

(i) Fully tighten the bolts labeled E in Area 4.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
HINT:
Bolt length: 35 mm (1.37 in.) for bolt E

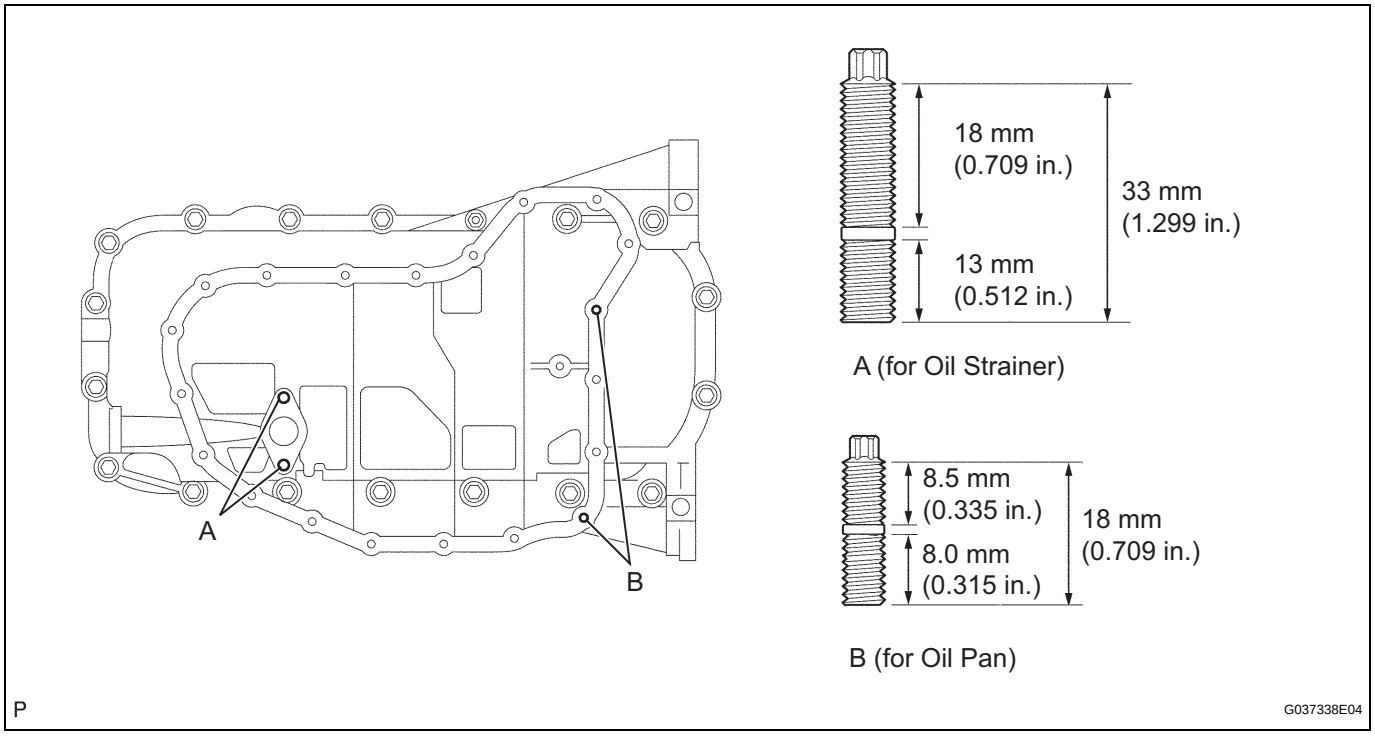


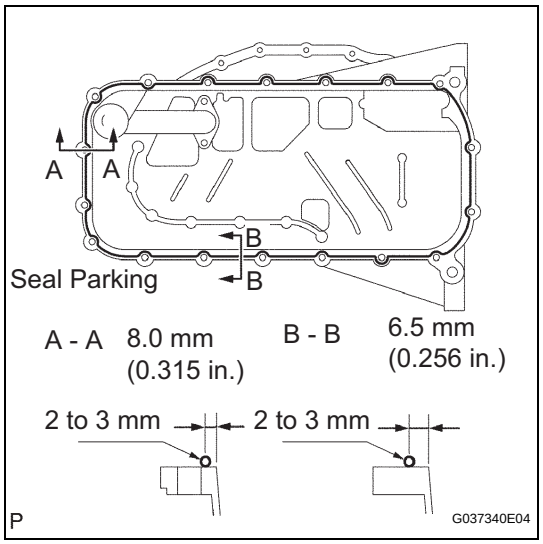
54. INSTALL OIL PAN SUB-ASSEMBLY

(a) Install the stud bolt.

(1) Using an E5 "torx" socket wrench, install the stud bolts labeled A for the oil pan as shown in the illustration.

(2) Using an E7 "torx" socket wrench, install the stud bolts labeled B for the oil strainer as shown in the illustration.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf) for stud bolt A
3.0 N*m (31 kgf*cm, 27 in.*lbf) for stud bolt B





(b) Apply seal packing in a continuous bead as shown in the illustration.

Seal packing:

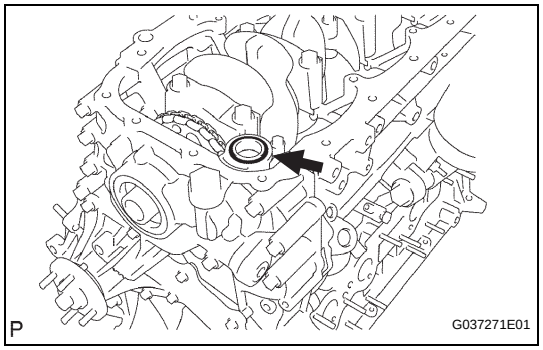
No. 08826-00080 or equivalent

Seal width:

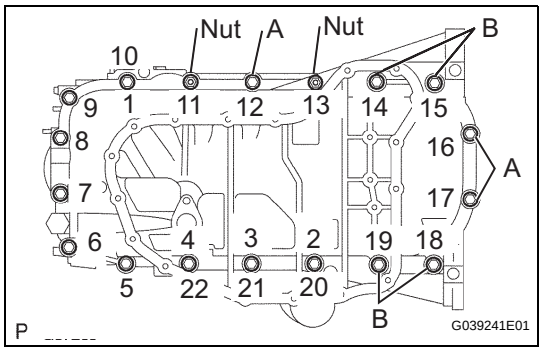
2 to 3 mm (0.08 to 0.12 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 4 hours after installing.**

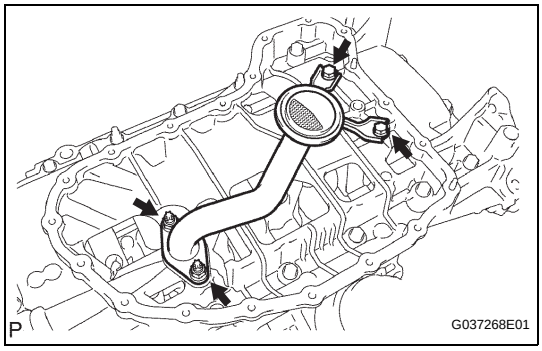


(c) Install a new O-ring.



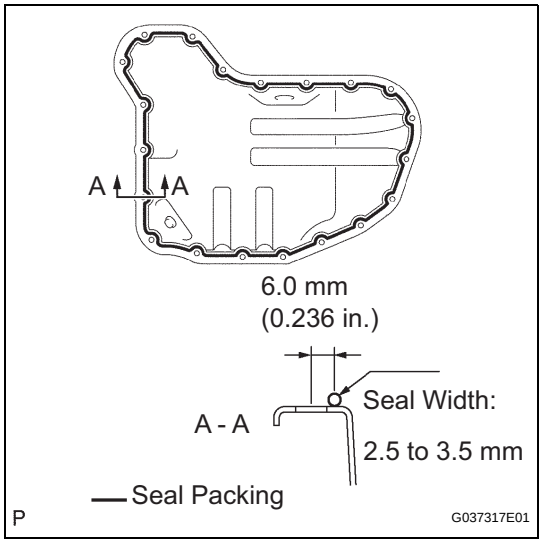
(d) Temporarily install the oil pan with the 16 bolts and 2 nuts.
HINT:
Bolt length:
20 mm (0.79 in.) for bolt A
40 mm (1.57 in.) for bolt B

(e) Uniformly tighten the 16 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



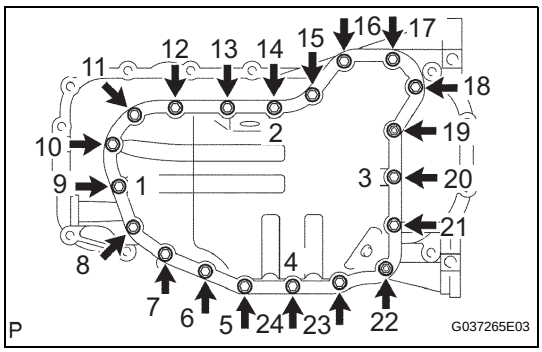
55. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



56. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

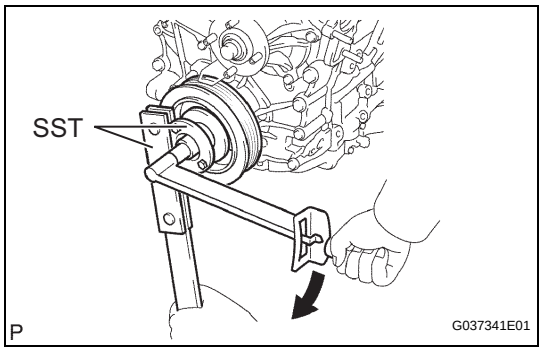
(a) Apply seal packing in a continuous bead as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
Seal width:
2.5 to 3.5 mm (0.098 to 0.138 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 4 hours after installing.**



(b) Temporarily install the oil pan with the 18 bolts and 2 nuts.

(c) Uniformly tighten the 18 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

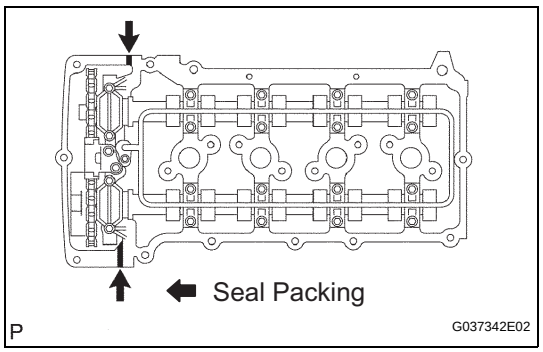
(d) Install a new gasket and the drain plug.
Torque: 38 N*m (382 kgf*cm, 28 ft.*lbf)



57. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.

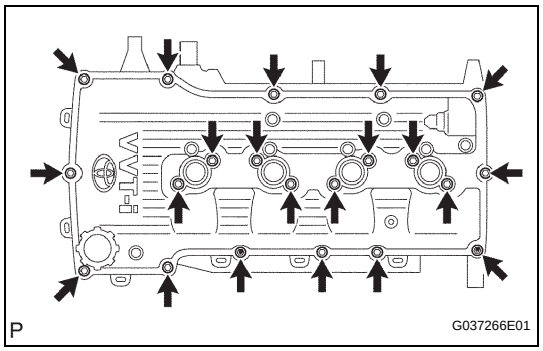
(b) Using SST, install the new pulley bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 260 N*m (2,650 kgf*cm, 192 ft.*lbf)
NOTICE:
Do not reuse the pulley bolt.



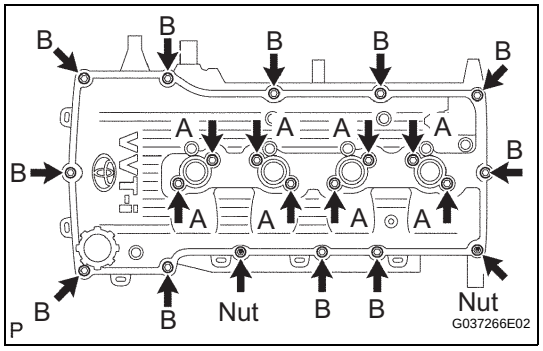
58. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Apply seal packing as shown in the illustration.

(b) Install the 2 gaskets to the head cover.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 4 hours after installing.**

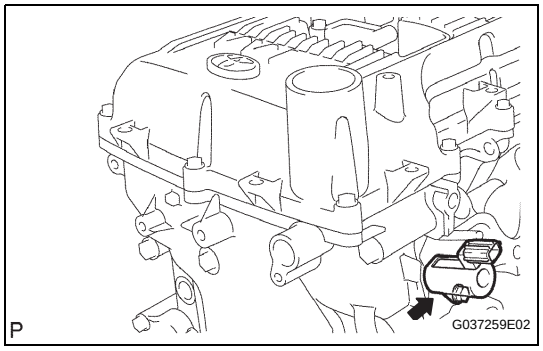


(c) Temporarily install the cover with the 19 bolts and 2 nuts.



(d) Fully tighten the bolts (A) shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

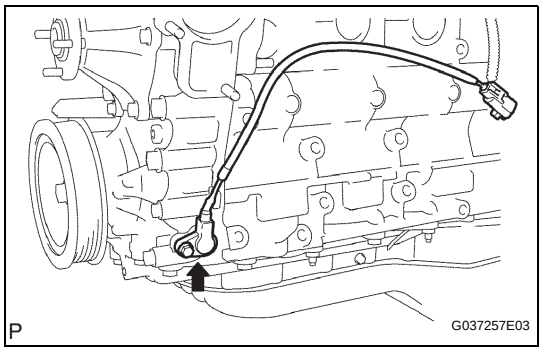
(e) Fully tighten the bolts (B) shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
HINT:
Make sure the tightening torque of bolts (A).



59. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Install the camshaft timing oil control valve assembly with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

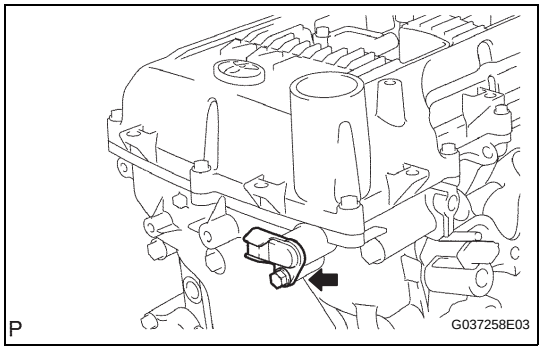
EM



60. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply engine oil to the O-ring.

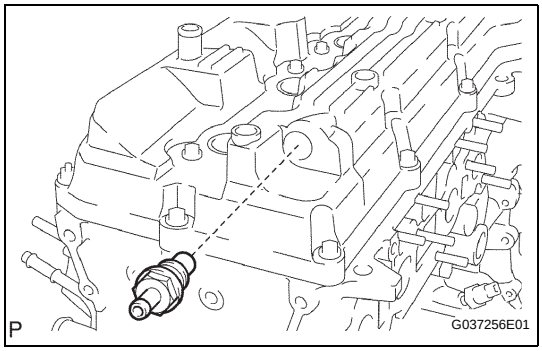
(b) Install the crankshaft position sensor with the bolt.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



61. INSTALL CAMSHAFT POSITION SENSOR

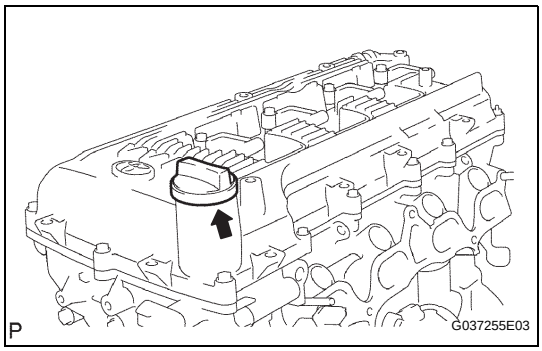
(a) Apply engine oil to the O-ring.

(b) Install the camshaft position sensor with the bolt.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



62. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Install the ventilation valve sub-assembly.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



63. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install the oil filler cap assembly.

FUEL SYSTEM

PRECAUTION

1. PRECAUTION

(a) Before working on the fuel system, disconnect the cable from the battery negative terminal.

(b) Do not work on the fuel system near fire. Never smoke during the work.

(c) Keep rubber and leather parts away from gasoline.

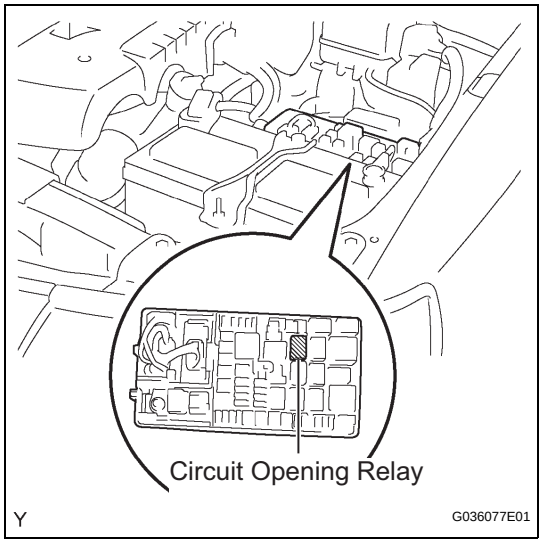
2. DISCHARGE FUEL PRESSURE

CAUTION:

- **Before removing fuel system parts, take precautions to prevent gasoline spillage.**
- **As some pressure remains in the fuel line even after taking precautions to prevent gasoline spillage, use a shop rag to prevent gasoline splashes when disconnecting the fuel line.**

(a) Disconnect the cable from the battery negative terminal.

(b) Remove the engine relay block cover.



(c) Remove the circuit opening relay.

(d) Connect the cable to the battery negative terminal.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

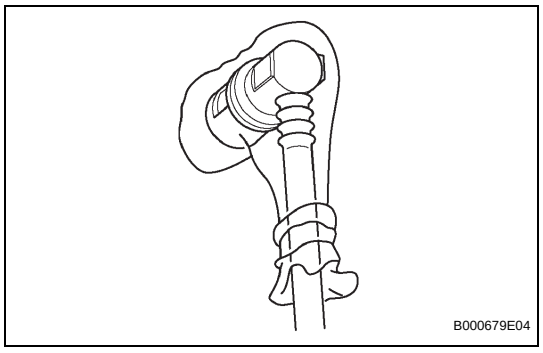
(e) Start the engine.

(f) Turn the ignition switch to ON after the engine stops.
HINT:
DTC P0171 (system to lean) may be present.

(g) Crank the engine again and check that the engine stops.

(h) Remove the fuel tank cap and discharge the pressure in the fuel tank completely.

(i) Install the circuit opening relay.



3. FUEL SYSTEM

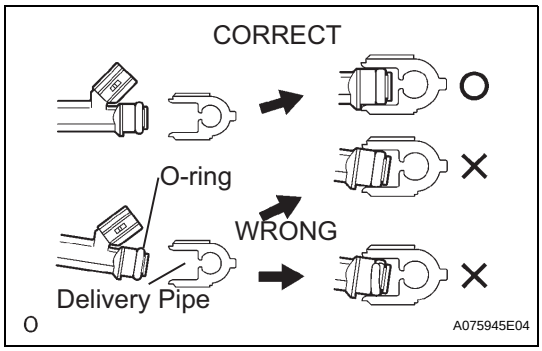
(a) When disconnecting the high-pressure fuel line, a large amount of gasoline will splash. So take the following precautions.

(1) Discharge the fuel system pressure (step 2).

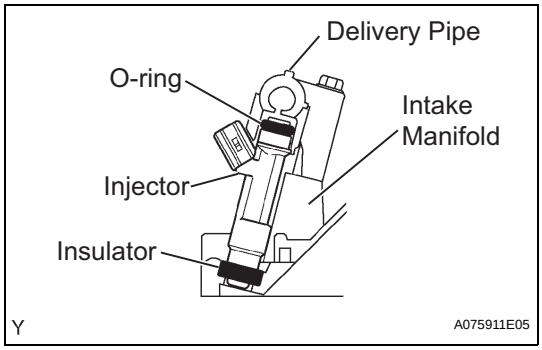
(2) Disconnect the fuel tank main tube (see page FU-30).

(3) Drain the fuel remaining in the fuel tank main tube.

(4) Cover the disconnected fuel tank main tube (fuel tube joint and fuel tube connector) with a vinyl bag to prevent damage and the intrusion of foreign objects.

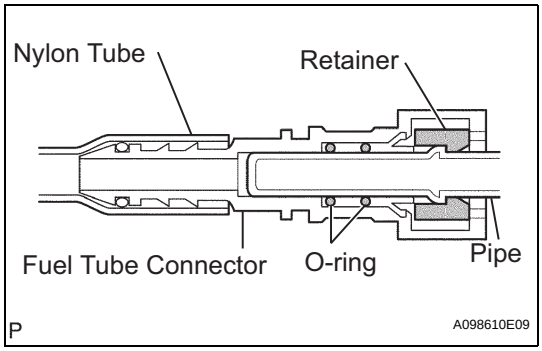


(b) Take the following precautions when installing the fuel injector.
(1) Do not reuse the O-ring.
(2) Do not damage a new O-ring when installing it into the fuel injector.
(3) Before installing a new O-ring, apply gasoline or spindle oil.
NOTICE:
Do not use engine oil, gear oil or brake oil.

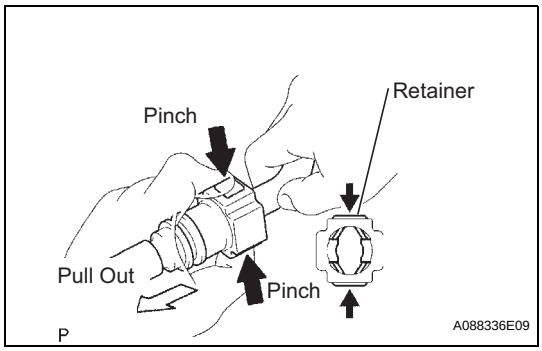


(4) Install the fuel injector into the fuel delivery pipe and cylinder head as illustrated.
NOTICE:
Apply gasoline or spindle oil to the contact surface of the fuel delivery pipe and fuel injector before installing the fuel injector.

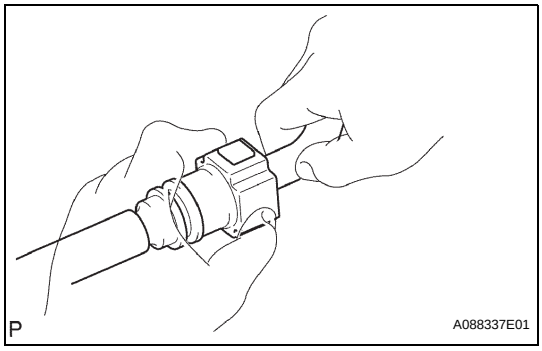
FU



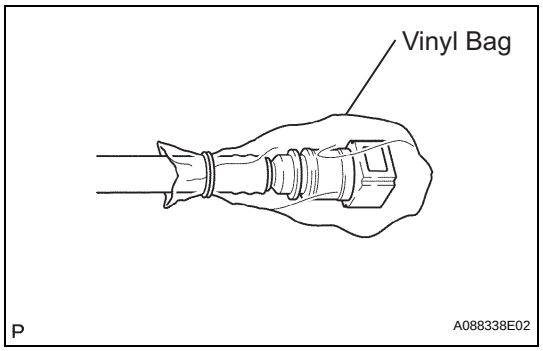
(c) Take the following precautions when disconnecting the fuel tube connector (type A).
HINT:
The structure of the fuel tube connector is as shown in the illustration.
(1) Check the fuel tube connector and pipe for dirt and mud before removing the fuel tube connector.
If dirty, wipe it with a shop rag.



(2) Pinch the retainer as illustrated, and pull the fuel tube connector out of the pipe.



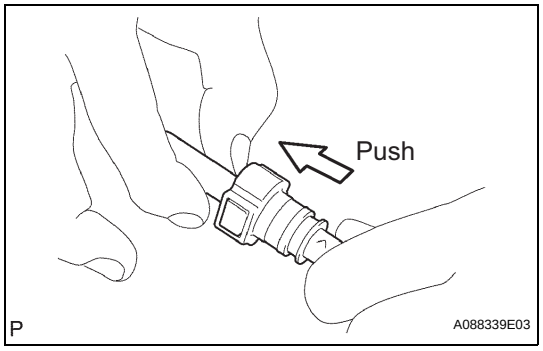
(3) If the fuel tube connector and pipe are stuck, pinch the pipe, then push and pull the fuel tube connector to release and disconnect it.
NOTICE:
Never use any tools.
(4) After removing the fuel tube, check the sealing surface of the pipe for dirt and mud.
If dirty, wipe it with a shop rag.

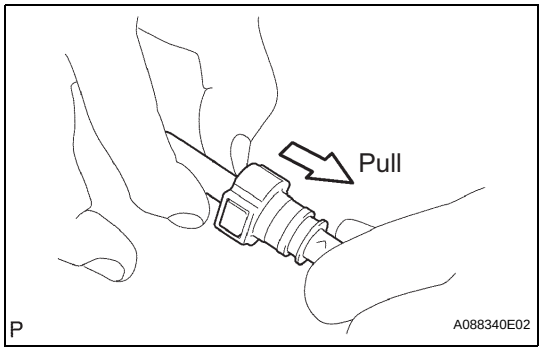


(5) Cover the disconnected fuel tube connector and pipe with a vinyl bag to prevent damage and the intrusion of foreign objects.

(d) Take the following precautions when installing the fuel tube connector (type A).

(1) Align the fuel tube connector with the pipe, then push in the fuel tube connector until the retainer makes a "click" sound.





(2) After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling them.

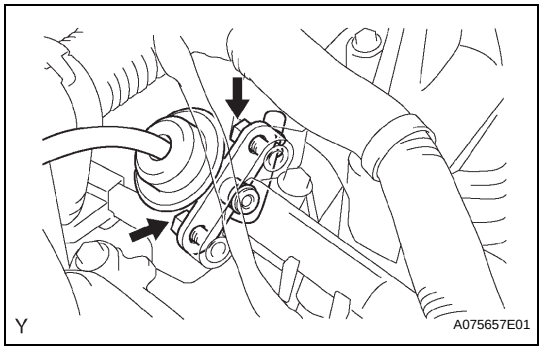
FUEL PRESSURE REGULATOR

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
6. **REMOVE FUEL PRESSURE REGULATOR ASSEMBLY**
   (a) Remove the 2 bolts, then remove the fuel pressure regulator.
   (b) Remove the vacuum hose.



FU

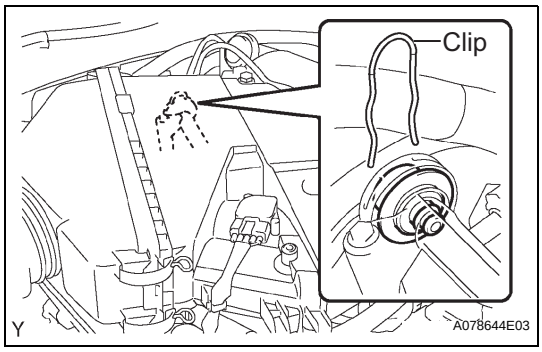
INSTALLATION

1. **INSTALL FUEL PRESSURE REGULATOR ASSEMBLY**
   (a) Install the vacuum hose.
   (b) Apply a light coat of spindle oil or gasoline to a new O-ring and install it onto the fuel pressure regulator.
   (c) Install the fuel pressure regulator with the 2 bolts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
2. **CONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-17)**
3. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**
4. **INSTALL V-BANK COVER (See page ES-416)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **CHECK FOR FUEL LEAKAGE**

FUEL PRESSURE PULSATION DAMPER

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Remove the clip.
   (b) Pull the fuel pressure pulsation damper out of the fuel delivery pipe.



INSTALLATION

1. **INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Apply a light coat of spindle oil or gasoline to a new O-ring and install it onto the fuel pressure pulsation damper.
   (b) Install the fuel pressure pulsation damper onto the fuel delivery pipe.
   (c) Install the clip.
2. **INSTALL V-BANK COVER (See page ES-416)**
3. **CHECK FOR FUEL LEAKAGE**

FUEL PUMP RESISTOR

INSPECTION

1. INSPECT FUEL PUMP RESISTER

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

0.71 to 0.75 Ω

If the result is not as specified, replace the fuel pump resistor.

MADE BY VB-SERVICES

FUEL SYSTEM

PRECAUTION

1. PRECAUTION

(a) Before working on the fuel system, disconnect the cable from the negative battery terminal.

(b) Do not work on the fuel system near fire. Never smoke during the work.

(c) Keep rubber and leather parts away from gasoline.

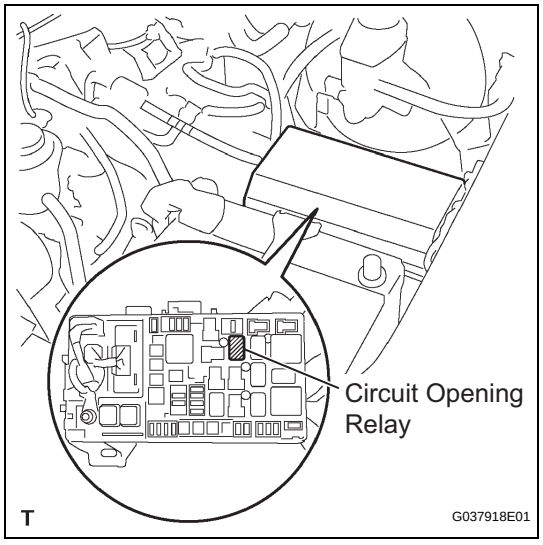
2. DISCHARGE FUEL PRESSURE

CAUTION:

- **Before removing fuel system parts, take precautions to prevent gasoline spillage.**
- **As some pressure remains in the fuel line even after taking precautions to prevent gasoline spillage, use a shop rag to prevent gasoline splashes when disconnecting the fuel line.**

(a) Disconnect the cable from the negative battery terminal.

(b) Remove the engine relay block cover.



(c) Remove the circuit opening relay.

(d) Connect the cable to the negative battery terminal.
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

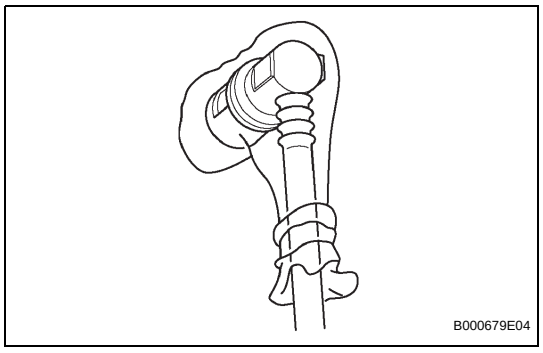
(e) Start the engine.

(f) Turn the ignition switch to ON after the engine stops.
HINT:
DTC P0171 (system to lean) may be present.

(g) Crank the engine again, and check that the engine stops.

(h) Remove the fuel tank cap, and discharge the pressure in the fuel tank completely.

(i) Install the circuit opening relay.



3. FUEL SYSTEM

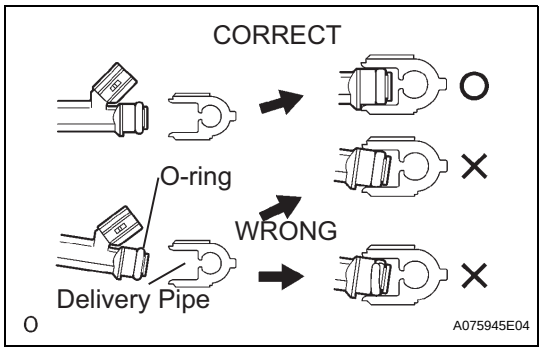
(a) When disconnecting the high-pressure fuel line, a large amount of gasoline will splash. So take the following precautions.

(1) Discharge the fuel system pressure (step 2).

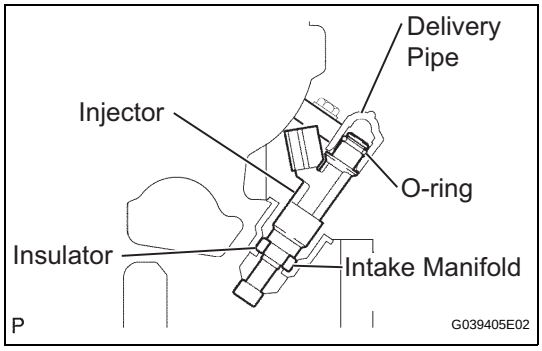
(2) Disconnect the fuel tank main tube (see page FU-30).

(3) Drain the fuel remaining in the fuel tank main tube.

(4) Cover the disconnected fuel tank main tube (fuel tube joint and fuel tube connector) with a vinyl bag to prevent damage and the intrusion of foreign objects.

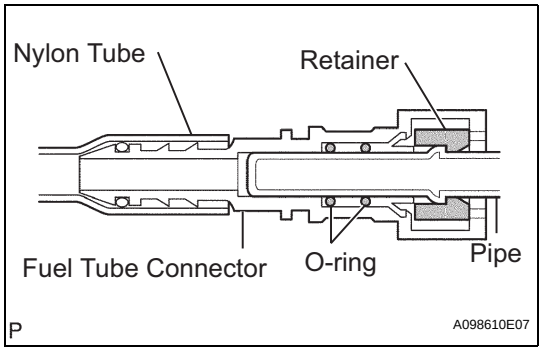


(b) Take the following precautions when installing the fuel injector.
(1) Do not reuse the O-ring.
(2) Do not damage a new O-ring when installing it onto the fuel injector.
(3) Before installing a new O-ring, apply gasoline or spindle oil.
NOTICE:
Do not use engine oil, gear oil or brake oil.

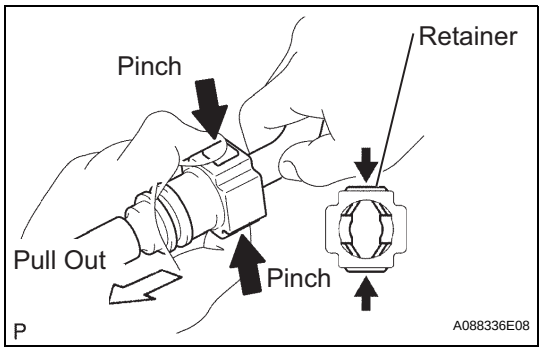


(4) Install the fuel injector into the fuel delivery pipe and cylinder head as illustrated.
HINT:
Apply gasoline or spindle oil to the contact surface of the fuel delivery pipe and fuel injector before installing the fuel injector.

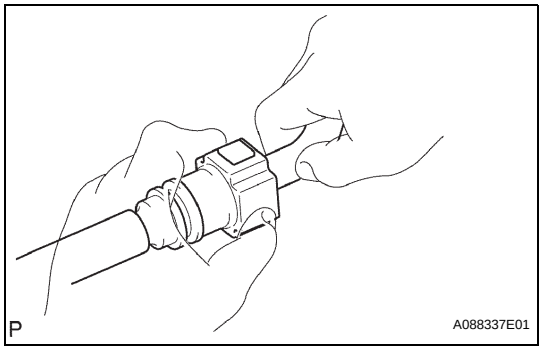
FU



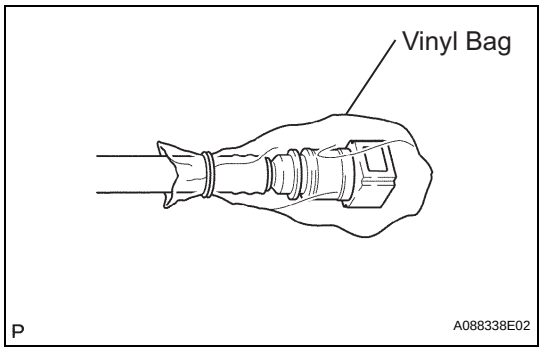
(c) Take the following precautions when disconnecting the fuel tube connector.
HINT:
The structure of the fuel tube connector is as shown in the illustration.
(1) Check the fuel tube connector and pipe for dirt and mud before removing the fuel tube connector.
If dirty, wipe it with a shop rag.



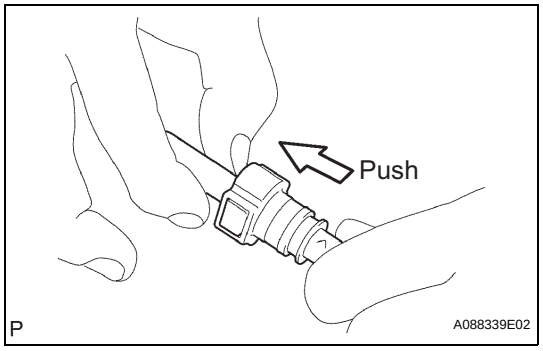
(2) Pinch the retainer as illustrated, then pull the fuel tube connector out of the pipe.



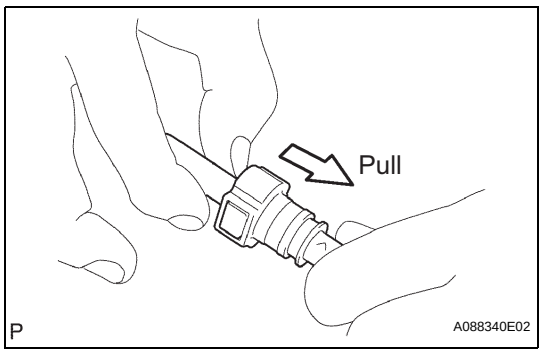
(3) If the fuel tube connector and pipe are stuck, pinch the pipe and push and pull the fuel tube connector to release it.
NOTICE:
Never use any tools.
(4) After disconnecting the fuel tube, check the sealing surface of the pipe for dirt and mud.
If dirty, wipe it with a shop rag.



(5) Cover the disconnected fuel tube connector and pipe with a vinyl bag to prevent damage and the intrusion of foreign objects.



(d) Take the following precautions when installing the fuel tube connector.
(1) Align the fuel tube connector with the pipe, then push in the fuel tube connector until the retainer makes a "click" sound.



(2) After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling them.

FUEL PRESSURE REGULATOR

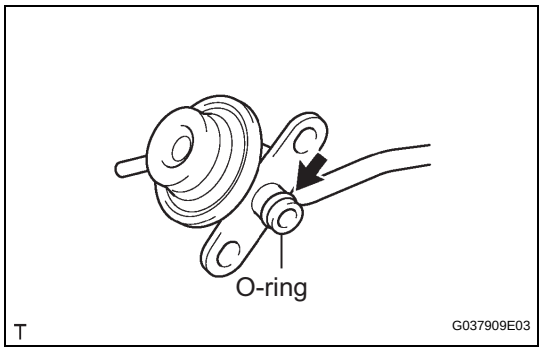
REMOVAL

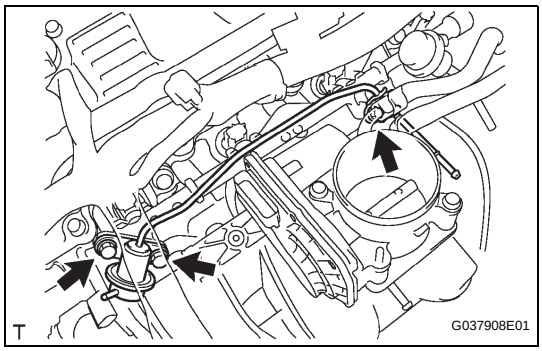
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE INTAKE AIR CONNECTOR (See page ES-452)**
4. **DISCONNECT NO. 2 FUEL HOSE (See page FU-11)**
5. **REMOVE FUEL PRESSURE REGULATOR**
   (a) Disconnect the throttle with motor body connectors.
   (b) Disconnect the VSV connector.
   (c) Disconnect the engine wire harness clamp.
   (d) Remove the bolt, then remove the harness clamp bracket.

   (e) Remove the 3 bolts, then remove the fuel pressure regulator.

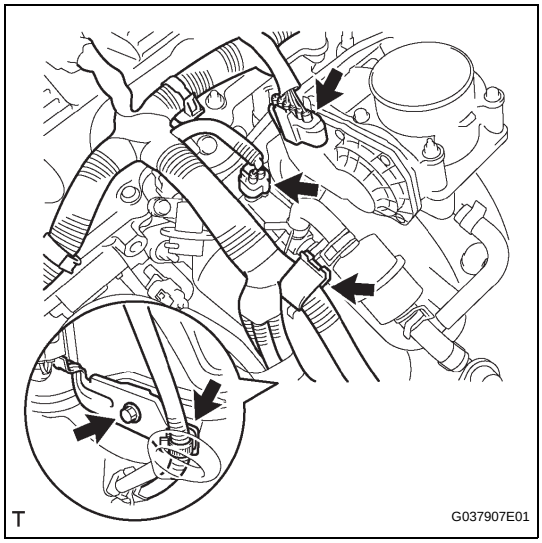
INSTALLATION

1. **INSTALL FUEL PRESSURE REGULATOR ASSEMBLY**
   (a) Apply a light coat of gasoline or spindle oil to the O-ring.





(b) Install the fuel pressure regulator with the 3 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



(c) Install the harness clamp bracket with the bolt.
Torque: 8.2 N*m (84 kgf*cm, 73 in.*lbf)
(d) Connect the engine wire harness clamp.
(e) Connect the VSV connector.
(f) Connect the throttle with motor body connectors.

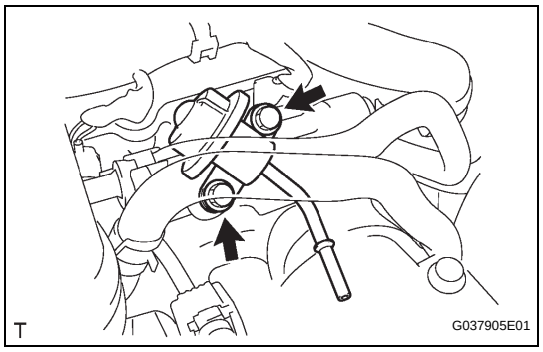
2. **CONNECT NO. 2 FUEL HOSE (See page FU-17)**
3. **INSTALL INTAKE AIR CONNECTOR (See page ES-455)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
5. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

FU

FUEL PRESSURE PULSATION DAMPER

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT FUEL HOSE (See page FU-11)**
3. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Remove the 2 bolts, then remove the fuel pressure pulsation damper.



INSTALLATION

1. **INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Apply a light coat of gasoline or spindle oil to the O-ring.

   (b) Install the fuel pressure pulsation damper with the 2 bolts.
   Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
2. **CONNECT FUEL HOSE (See page FU-17)**
3. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

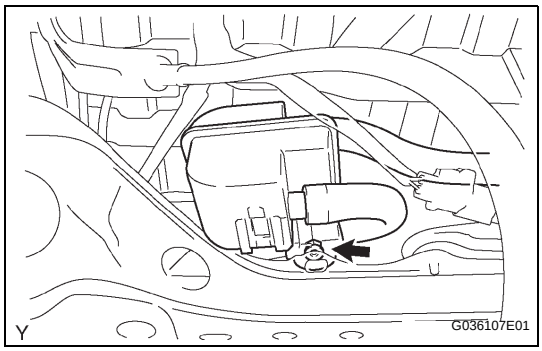
CANISTER

REMOVAL

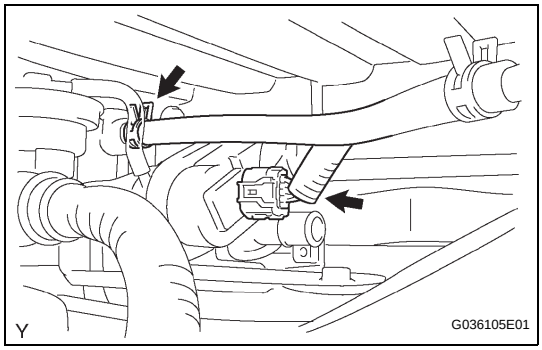
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE FUEL TANK PROTECTOR SUB-ASSEMBLY NO.1**
4. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-30)**
5. **REMOVE FUEL TANK ASSEMBLY (See page FU-30)**
6. **REMOVE CHARCOAL CANISTER FILTER NO.2**
   (a) Remove the bolt, then remove the ABS wire harness clamp from the charcoal canister.

   (b) Release the EVAP pipe from the hose clamp.
   (c) Disconnect the breather hose from the pipe.
   (d) Disengage the hose clamp.

   (e) Disconnect the breather hose from the charcoal canister.



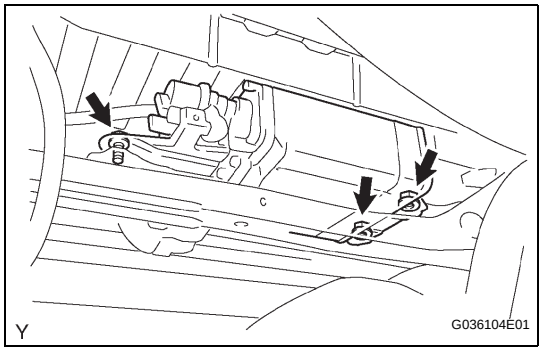
(f) Remove the nut, then remove the charcoal canister filter No. 2.



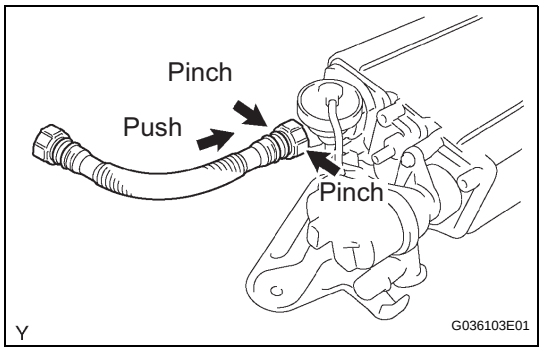
7. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Disconnect the connector.

(b) Disconnect the EVAP tube.



(c) Remove the bolt and 2 nuts, then remove the charcoal canister.



(d) Disconnect the fuel tank vent hose.

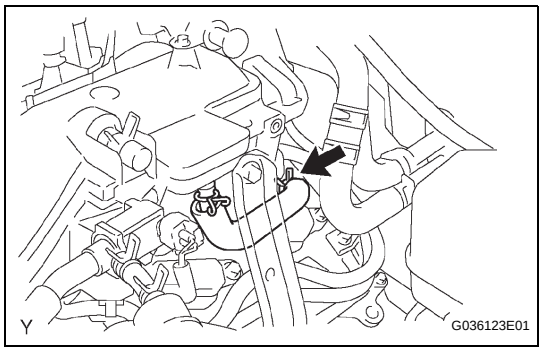
(1) Pinch the retainer and pull the fuel tank vent hose connector out of the charcoal canister to disconnect the fuel tank vent hose from the charcoal canister.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tank vent hose connector before performing the work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tank vent hose connector has the O?ring that seals the pipe.**
- **Perform the work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tank vent hose.**
- **If the fuel vent connector and pipe are stuck, push and pull them to release.**

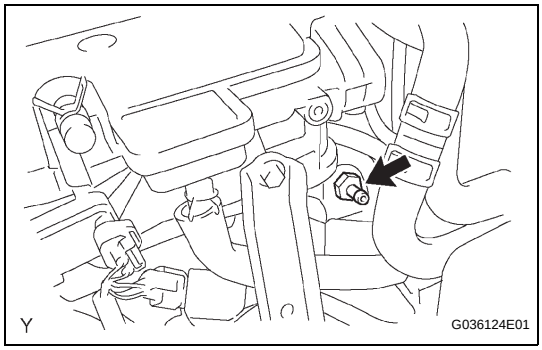
VENTILATION VALVE

REMOVAL



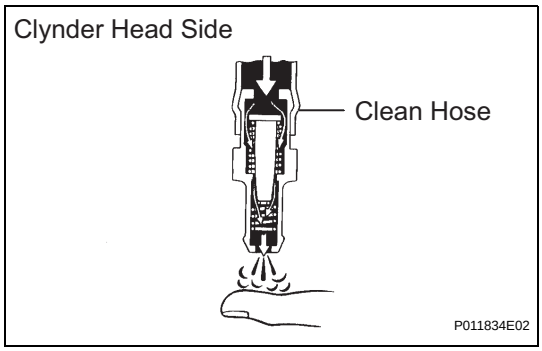
1. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Disconnect the ventilation hose.



(b) Remove the ventilation valve.

INSPECTION



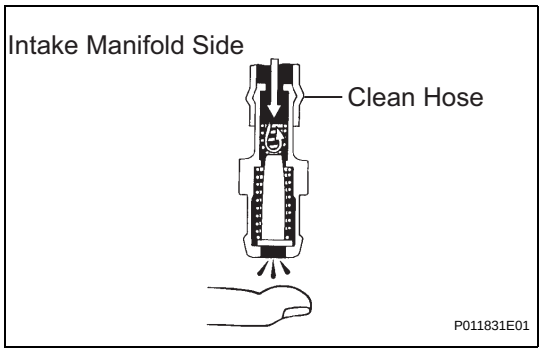
1. INSPECT VENTILATION VALVE SUB-ASSEMBLY

(a) Check the operation.

(1) Install a clean hose as shown in the illustration.

(2) Blow air into the cylinder head side and check that the air passes through freely.

CAUTION:
Do not suck air through the ventilation valve. Petroleum substances inside the ventilation valve are harmful.



(3) Blow air into the intake manifold side and check that the air does not pass through freely.
If the operation is not as specified, replace the ventilation valve.

INSTALLATION

1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Install the ventilation valve.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

(b) Connect the ventilation hose.

DUTY VACUUM SWITCHING VALVE

REMOVAL

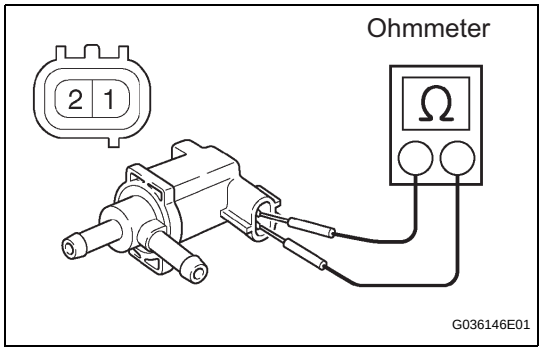
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE DUTY VACUUM SWITCHING VALVE**
   (a) Disconnect the connector.
   (b) Disconnect the fuel vapor feed hose.

   (c) Remove the bolt, then separate the vacuum switching valve from the intake air surge tank.
   (d) Disconnect the hose, then remove the vacuum switching valve.

EC

INSPECTION

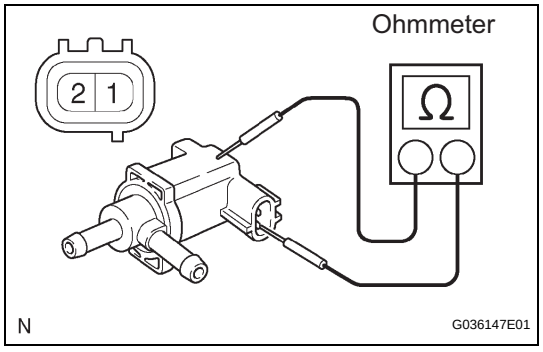
1. **INSPECT DUTY VACUUM SWITCHING VALVE**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard



Tester Connection	Specified Condition
1 - 2	26 to 30 Ω at 20°C (68°F)

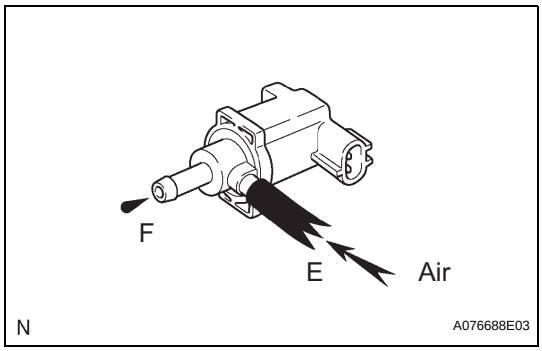
If the result is not as specified, replace the vacuum switching valve No. 1.

   (b) Check the vacuum switching valve No. 1 for ground.
      (1) Using an ohmmeter, check the resistance between each terminal and the body.
      Standard



Tester Connection	Specified Condition
1 - Body	10 MΩ or higher
2 - Body	10 MΩ or higher

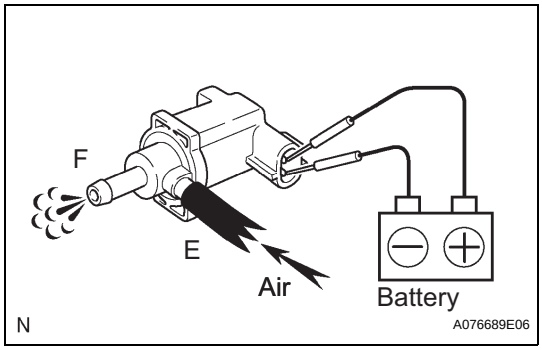
If the result is not as specified, replace the vacuum switching valve No. 1.



(c) Check the operation.

(1) Check that air does not flow from port E to port F.

If the operation is not as specified, replace the vacuum switching valve No. 1.



(2) Apply battery voltage across the terminals.

(3) Check that air flows from port E to port F.

If the operation is not as specified, replace the vacuum switching valve No. 1.

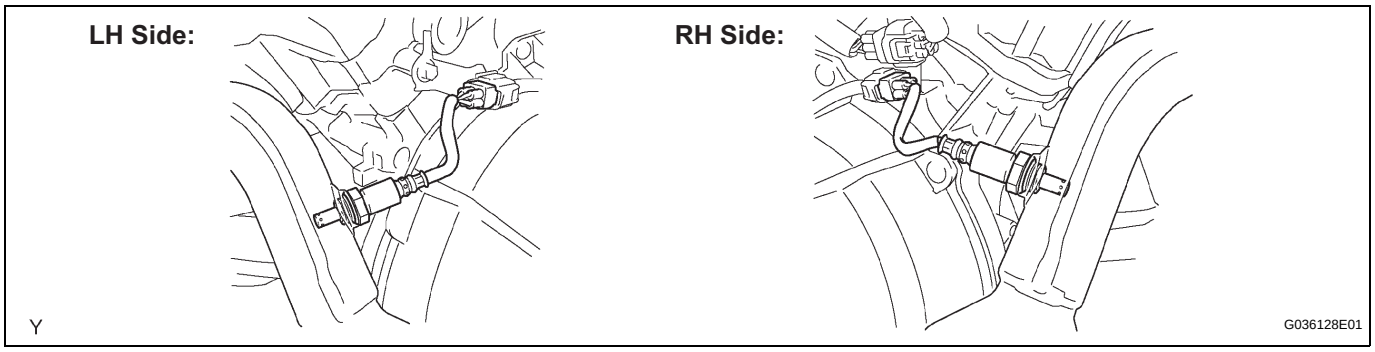
EC

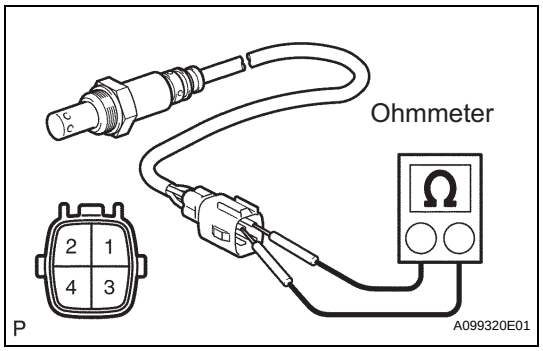
AIR FUEL RATIO SENSOR

REMOVAL

1. **DISCONNECT CABLE FROM BATTERY NEGATIVE TERMINAL**

2. **REMOVE AIR FUEL RATIO SENSOR**
   (a) Disconnect the 2 air fuel ratio sensor connectors.
   (b) Remove the 2 air fuel ratio sensors from the exhaust manifold.





INSPECTION

1. **INSPECT AIR FUEL RATIO SENSOR**
   (a) Check the resistance. (Bank 1 Sensor 1)
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard

Tester Connection	Specified Condition
1 (HT) - 2 (+B)	1.8 to 3.4 Ω at 20°C (68°F)
1 (HT) - 4 (E1)	10 kΩ or higher

If the result is not as specified, replace the air fuel ratio sensor.

EC

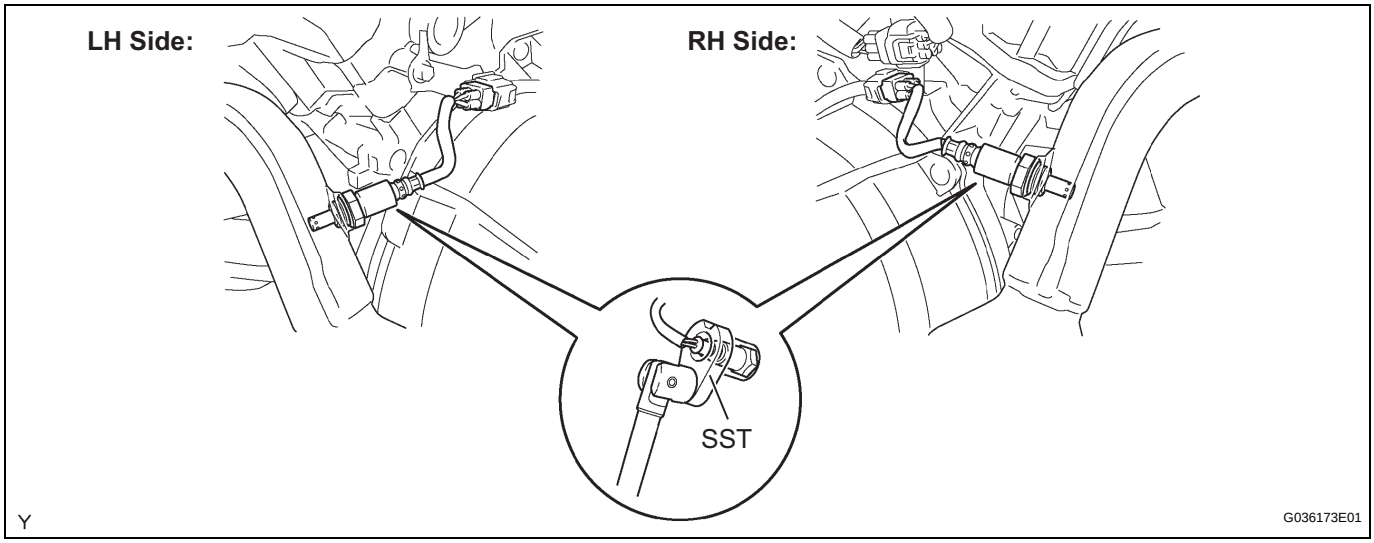
INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR

(a) Using SST, install the 2 air fuel ratio sensors onto the exhaust manifold.

SST 09224-00010

Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)



EC

(b) Connect the 2 air fuel ratio sensor connectors.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

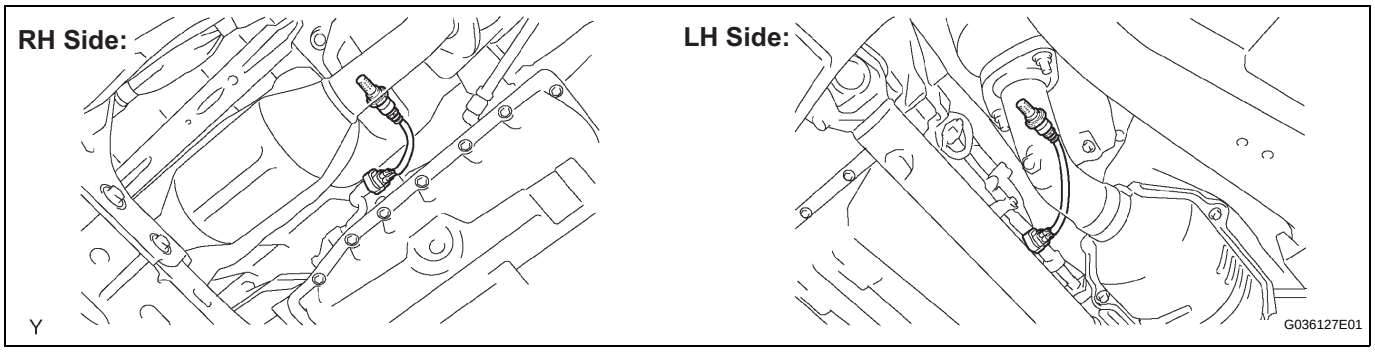
3. CHECK FOR EXHAUST GAS LEAKAGE

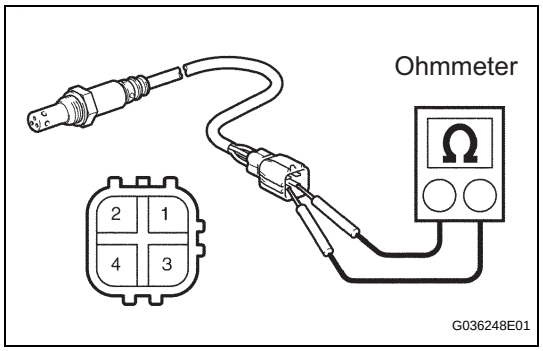
HEATED OXYGEN SENSOR

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE HEATED OXYGEN SENSOR**
   (a) Disconnect the 2 heated oxygen sensor connectors.
   (b) Remove the 2 heated oxygen sensors from the exhaust pipe.





INSPECTION

1. **INSPECT HEATED OXYGEN SENSOR**
   (a) Check the resistance. (Bank 1 Sensor 2)
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard

Tester Connection	Specified Condition
1 (HT) - 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) - 4 (E)	10 kΩ or higher

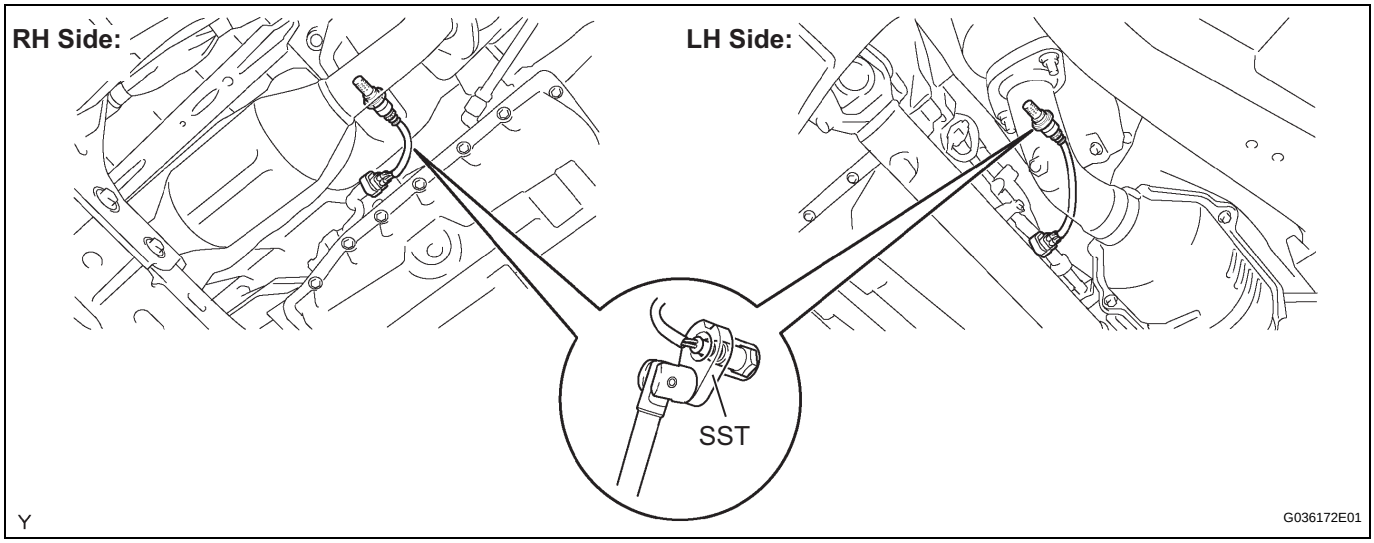
If the result is not as specified, replace the heated oxygen sensor.

EC

INSTALLATION

1. INSTALL HEATED OXYGEN SENSOR

(a) Using SST, install the 2 heated oxygen sensors onto the exhaust pipe.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)

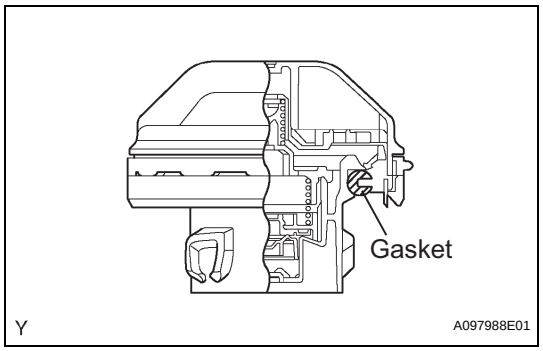


EC

(b) Connect the 2 heated oxygen sensor connectors.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

3. CHECK FOR EXHAUST GAS LEAKAGE



FUEL TANK CAP

INSPECTION

1. INSPECT FUEL TANK CAP ASSEMBLY

(a) Check the appearance.

(1) Visually check the fuel tank cap and gasket for any deformation and damage.
If necessary, repair or replace the cap and/or gasket.

AIR PUMP

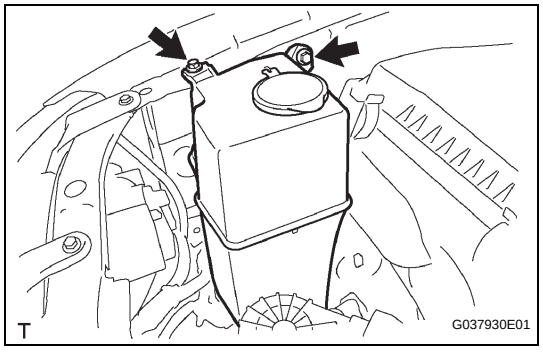
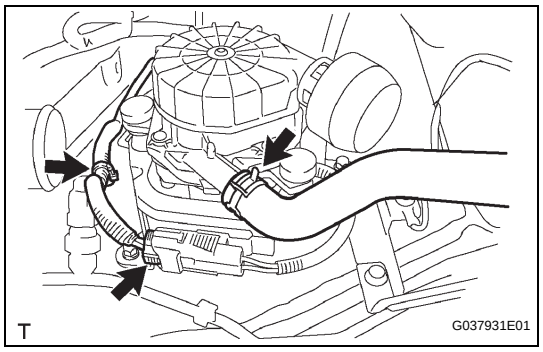
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

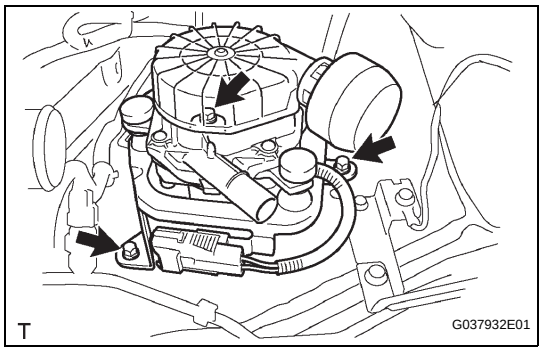
2. REMOVE AIR PUMP ASSEMBLY



(a) Remove the 2 bolts, then separate the washer jar.
HINT:
Perform the above procedure to make space for removing the air pump assy.

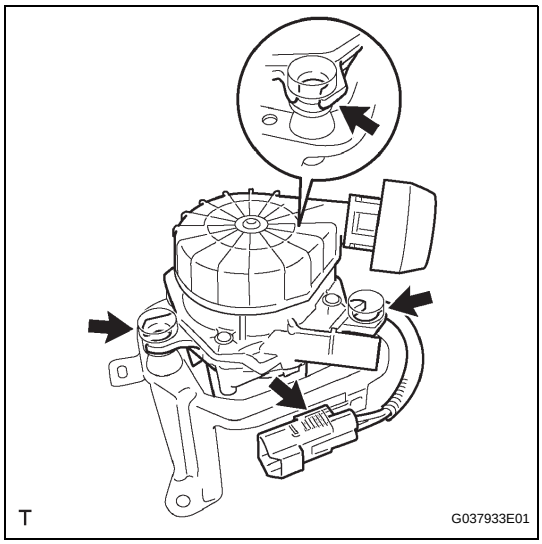


(b) Disconnect the air injection system No. 1 hose.
(c) Disconnect the air pump connector and wire harness clamp.



(d) Remove the 3 bolts, then remove the air pump with bracket.

EC

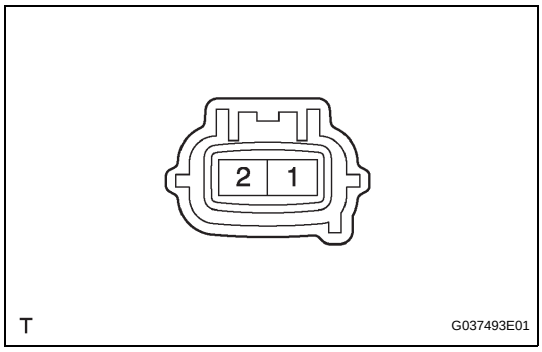


(e) Disconnect the air pump connector clamp.
(f) Disengage the 3 fittings of the air pump insulator, and remove the air pump from the bracket.

INSPECTION

1. INSPECT AIR PUMP ASSEMBLY

(a) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the terminals.
Resistance:
0.4 to 1.0 Ω at 20°C (68°F)
If the result is not as specified, replace the air pump.

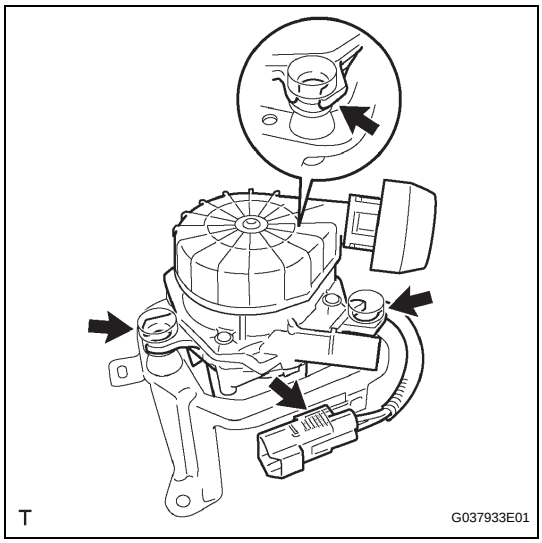


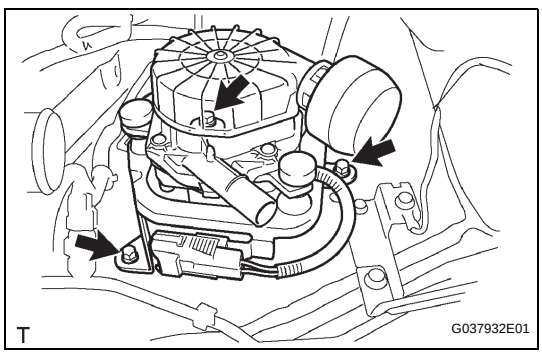
EC

INSTALLATION

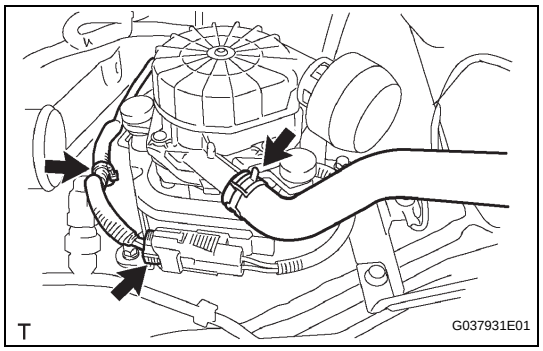
1. INSTALL AIR PUMP ASSEMBLY

(a) Engage the 3 fittings of the air pump insulator, and install the air pump onto the bracket.
(b) Connect the air pump connector clamp.

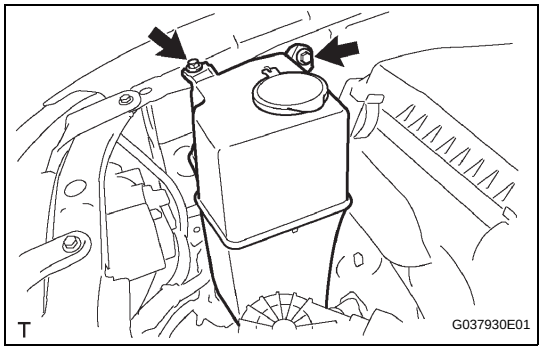




(c) Install the air pump with bracket with the 3 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



(d) Connect the air pump connector and wire harness clamp.
(e) Connect the air injection system No. 1 hose.



(f) Install the washer jar with the 2 bolts.
Torque: 6 N*m (56 kgf*cm, 49 in.*lbf)

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

EC

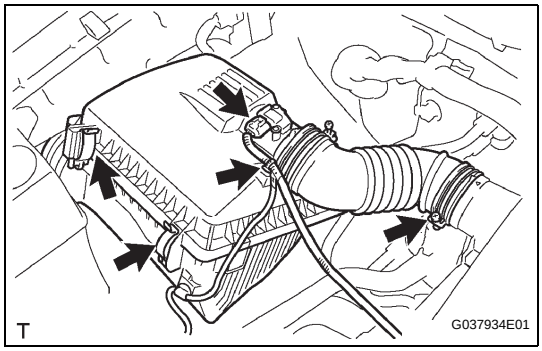
AIR SWITCHING VALVE

REMOVAL

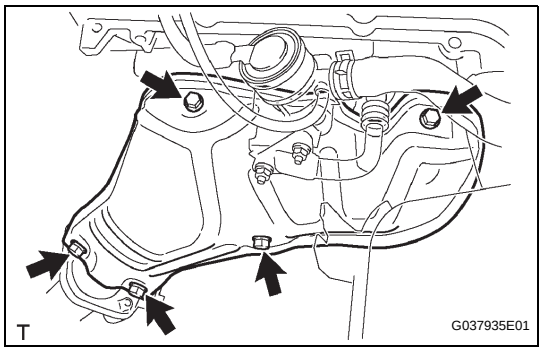
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE INTAKE AIR CONNECTOR (See page ES-452)**

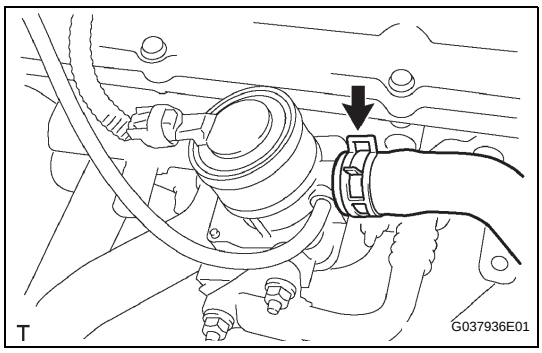
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY**
   (a) Disconnect the mass air flow meter connector.
   (b) Disconnect the wire harness clamp.
   (c) Loosen the hose clamp bolt, then disconnect the air cleaner hose No. 1.
   (d) Disconnect the 2 air cleaner clamps.
   (e) Remove the air cleaner cap together with the air cleaner hose No. 1.



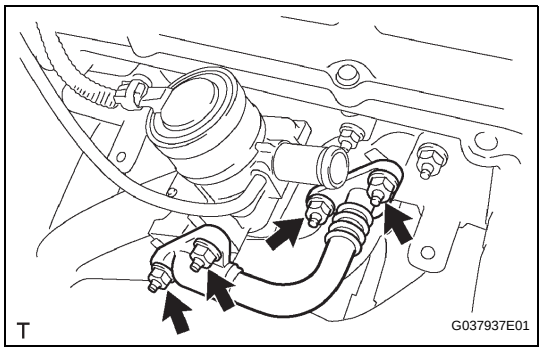
4. **REMOVE NO.1 EXHAUST MANIFOLD HEAT INSULATOR**
   (a) Remove the 5 bolts, then remove the exhaust manifold heat insulator No. 1.



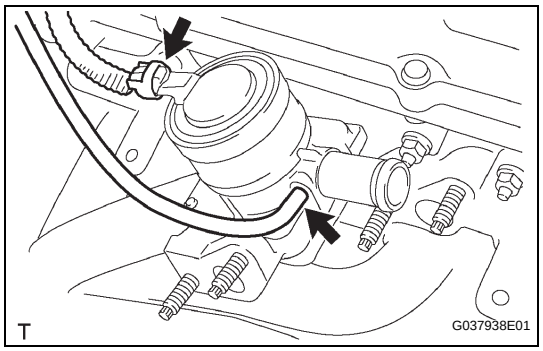
5. **DISCONNECT AIR INJECTION SYSTEM NO.1 HOSE**
   (a) Disconnect the air injection system No. 1 hose from the air switching valve.



6. **REMOVE INTAKE PIPE INSULATOR**
   (a) Remove the 4 nuts, then remove the intake pipe insulator.
   (b) Remove the 2 gaskets.



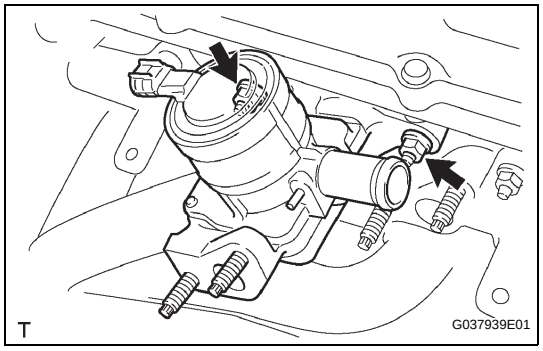
EC



7. REMOVE AIR SWITCHING VALVE ASSEMBLY

(a) Disconnect the vacuum hose.

(b) Disconnect the air switching valve connector.



(c) Remove the 2 nuts, then remove the air switching valve.

(d) Remove the gasket.

INSPECTION

1. INSPECT AIR SWITCHING VALVE ASSEMBLY

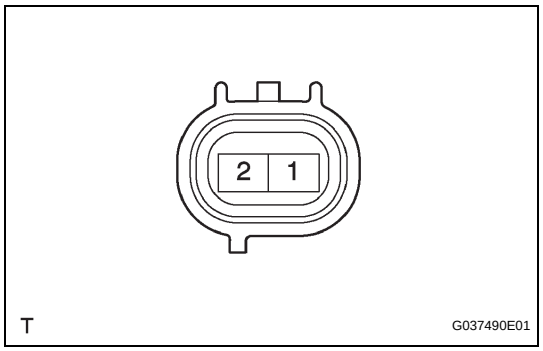
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

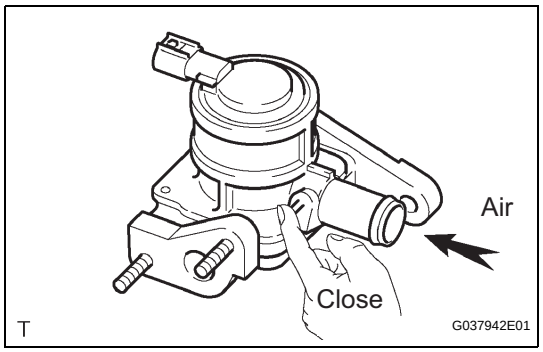
4.5 to 5.5 Ω at 20°C (68°F)

If the result is not as specified, replace the air switching valve.



(b) Check the operation.

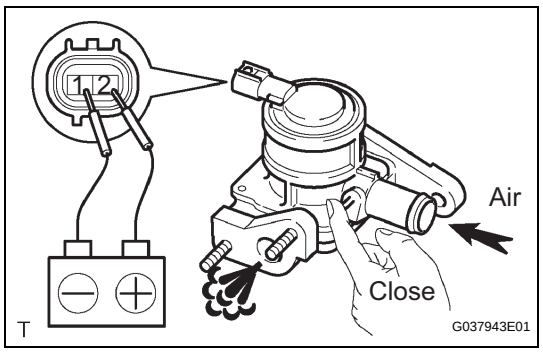
(1) Check that air does not flow from the port.



(2) Apply battery positive voltage across the terminals.

(3) Check that air flows from the port.

If the operation is not as specified, replace the air switching valve.



EC

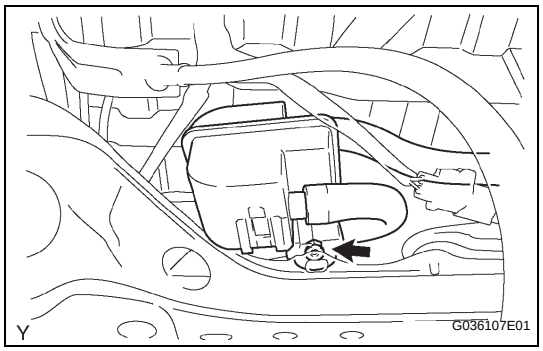
CANISTER

REMOVAL

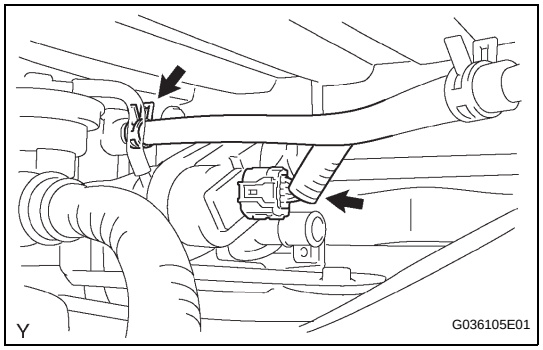
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **DISCONNECT FUEL TANK MAIN TUBE AND FUEL TANK RETURN TUBE (See page FU-30)**
4. **REMOVE FUEL TANK ASSEMBLY (See page FU-31)**
5. **REMOVE CHARCOAL CANISTER FILTER NO.2**
   (a) Remove the bolt, then remove the ABS wire harness clamp from the charcoal canister.

   (b) Release the EVAP pipe from the hose clamp.
   (c) Disconnect the breather hose from the pipe.
   (d) Disengage the hose clamp.

   (e) Disconnect the breather hose from the charcoal canister.



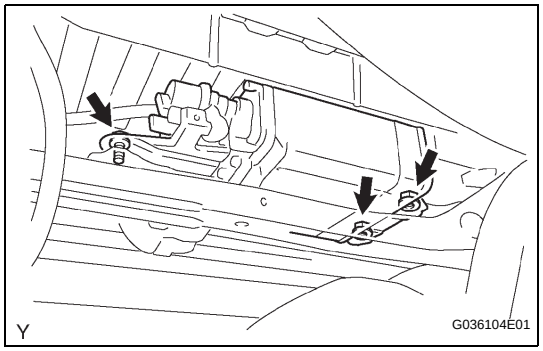
(f) Remove the nut, then remove the charcoal canister filter No. 2.



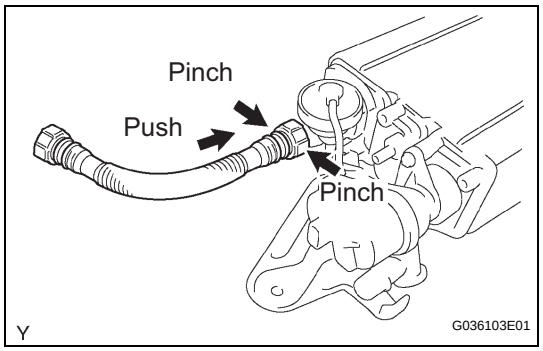
6. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Disconnect the connector.

(b) Disconnect the EVAP tube.



(c) Remove the bolt and 2 nuts, then remove the charcoal canister.



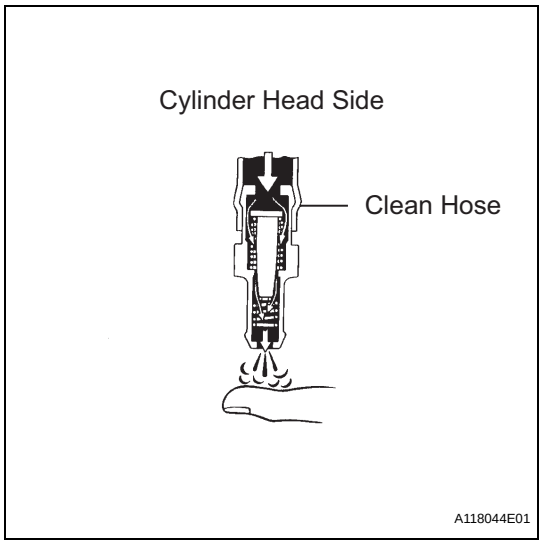
(d) Disconnect the fuel tank vent hose.

(1) Pinch the retainer and pull the fuel tank vent hose connector out of the charcoal canister to disconnect the fuel tank vent hose from the charcoal canister.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tank vent hose connector before performing the work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tank vent hose connector has the O-ring that seals the pipe.**
- **Perform the work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a vinyl bag after disconnecting the fuel tank vent hose.**
- **If the fuel vent connector and pipe are stuck, push and pull them to release.**

EC



VENTILATION VALVE

INSPECTION

1. INSPECT VENTILATION VALVE SUB-ASSY

(a) Check the operation.

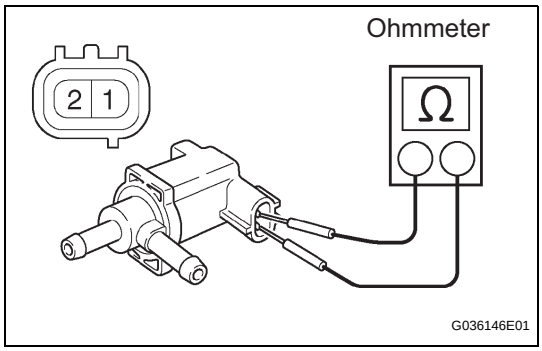
(1) Install a clean hose as shown in the illustration.

(2) Blow air into the cylinder head side and check that the air passes through freely.

CAUTION:
Do not suck air through the ventilation valve. Petroleum substances inside the ventilation valve are harmful.

(3) Blow air into the intake manifold side and check that the air does not pass through freely.
If the operation is not as specified, replace the ventilation valve.

EC



DUTY VACUUM SWITCHING VALVE

INSPECTION

1. INSPECT DUTY VACUUM SWITCHING VALVE

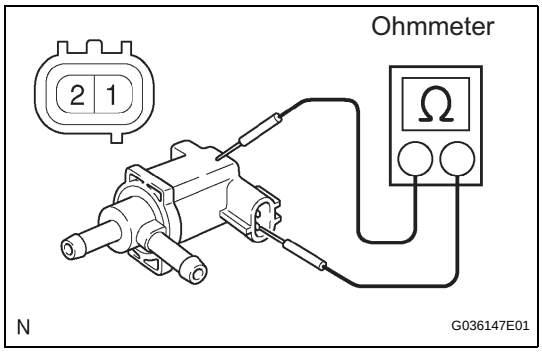
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
1 - 2	26 to 30 Ω at 20°C (68°F)

If the result is not as specified, replace the duty vacuum switching valve.



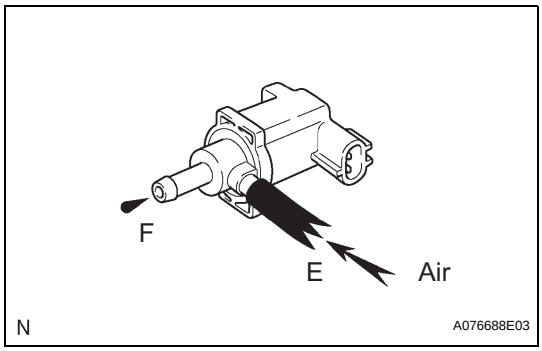
(b) Check the vacuum switching valve No. 1 for ground.

(1) Using an ohmmeter, check the resistance between each terminal and the body.

Standard

Tester Connection	Specified Condition
1 - Body	10 MΩ or higher
2 - Body	10 MΩ or higher

If the result is not as specified, replace the duty vacuum switching valve.



(c) Check the operation.

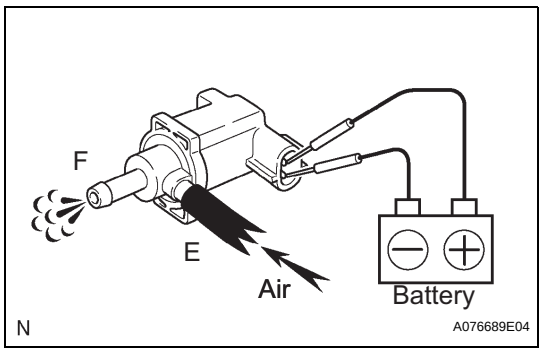
(1) Check that air does not flow from port E to port F.

If the operation is not as specified, replace the duty vacuum switching valve.

(2) Apply battery voltage across the terminals.

(3) Check that air flows from port E to port F.

If the operation is not as specified, replace the duty vacuum switching valve.



AIR FUEL RATIO SENSOR

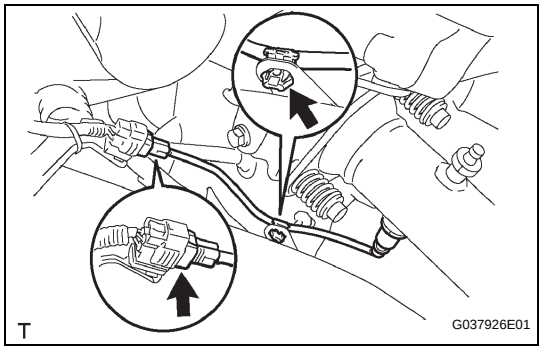
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

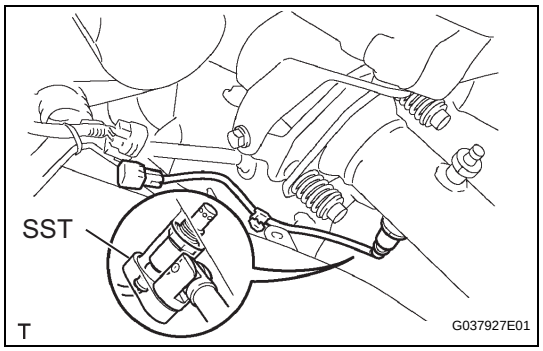
2. REMOVE AIR FUEL RATIO SENSOR

(a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the wire harness clamp.



(c) Using SST, remove the air fuel ratio sensor.
SST 09224-00010

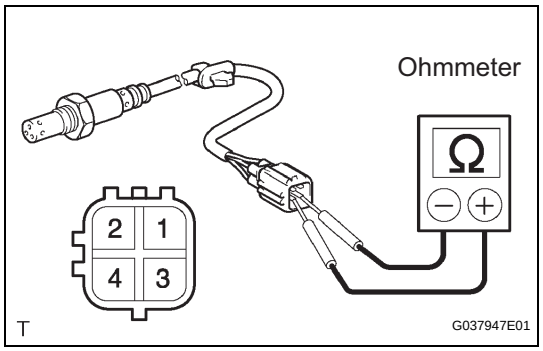


INSPECTION

1. INSPECT AIR FUEL RATIO SENSOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.
Standard



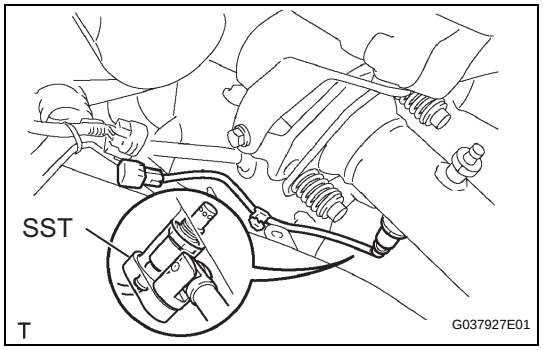
Tester Connection	Specified Condition
1 (HT) - 2 (+B)	1.8 to 3.4 Ω at 20°C (68°F)
1 (HT) - 4 (AF-)	10 kΩ or higher

If the result is not as specified, replace the air fuel ratio sensor.

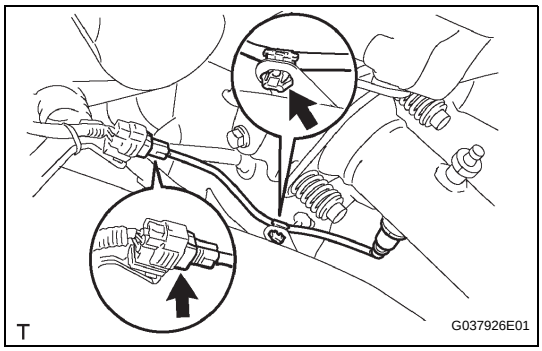
INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR

(a) Using SST, install the air fuel ratio sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)
40 N*m (408 kgf*cm, 30 ft.*lbf) with SST
NOTICE:
Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).



EC



(b) Connect the wire harness clamp.
(c) Connect the air fuel ratio sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

HEATED OXYGEN SENSOR

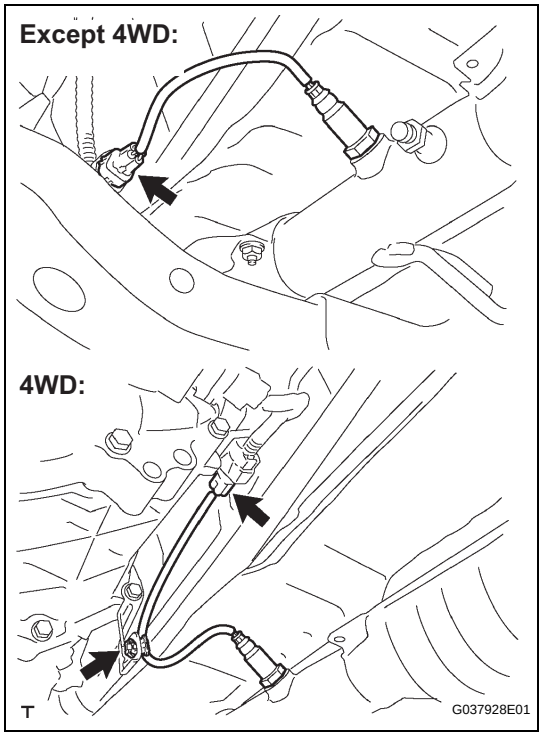
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

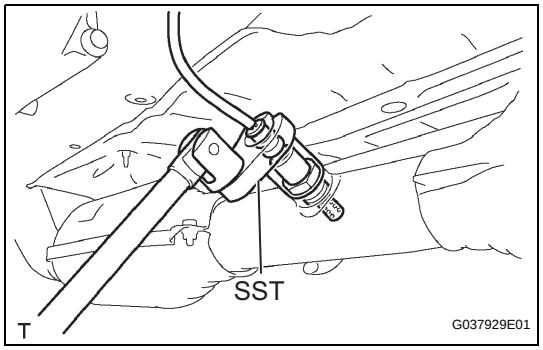
2. REMOVE HEATED OXYGEN SENSOR

(a) Disconnect the heated oxygen sensor connector.

(b) Disconnect the wire harness clamp. (4WD DRIVE TYPE)



(c) Using SST, remove the heated oxygen sensor.
SST 09224-00010

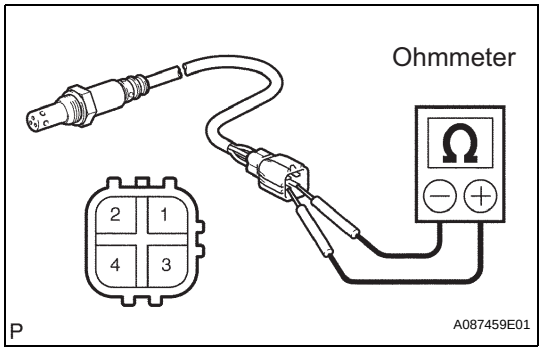


INSPECTION

1. INSPECT HEATED OXYGEN SENSOR

(a) Check the resistance.

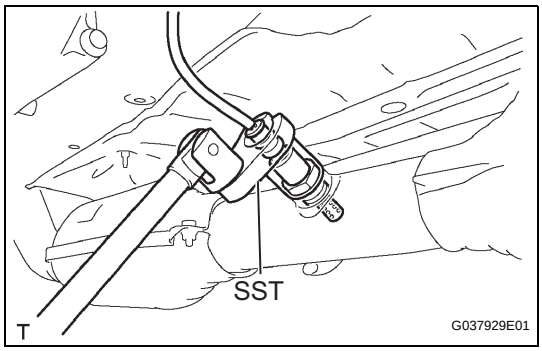
(1) Using an ohmmeter, measure the resistance between the terminals.
Standard

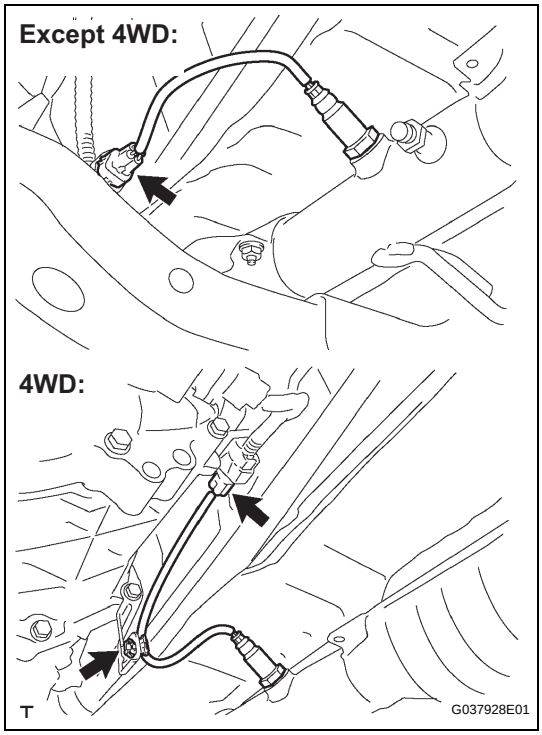


Tester Connection	Specified Condition
1 (HT) - 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) - 4 (E)	10 kΩ or higher

If the result is not as specified, replace the heated oxygen sensor.

EC





INSTALLATION

1. INSTALL HEATED OXYGEN SENSOR

(a) Using SST, install the heated oxygen sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)
40 N*m (408 kgf*cm, 30 ft.*lbf) with SST
NOTICE:
Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).

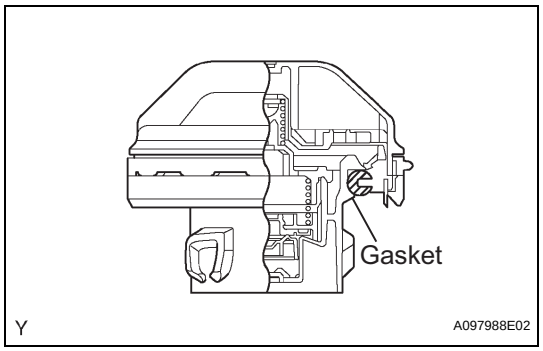
(b) Connect the wire harness clamp. (4WD DRIVE TYPE)

(c) Connect the oxygen sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

3. CHECK FOR EXHAUST GAS LEAKAGE

EC



FUEL TANK CAP

INSPECTION

1. INSPECT FUEL TANK CAP ASSEMBLY

(a) Check the appearance.

(1) Visually check whether the fuel tank cap and gasket are deformed or damaged.
If necessary, repair or replace the cap and/or gasket.

REMOVAL

1. **CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE AIR FUEL RATIO SENSOR (See page EC-25)**
3. **REMOVE OXYGEN SENSOR (See page EC-27)**
4. **REMOVE EXHAUST PIPE ASSEMBLY TAIL**
   (a) Remove the 2 bolts and 2 nuts.
   (b) Remove the exhaust pipe tail from the 4 exhaust pipe supports.
   (c) Remove the gasket from the exhaust pipe front.
5. **REMOVE EXHAUST PIPE ASSEMBLY FRONT**
   (a) Remove the 2 bolts and 2 compression springs.
   (b) Remove the exhaust pipe front from the exhaust pipe support.
   (c) Remove the gasket from the exhaust manifold.

INSTALLATION

1. **INSTALL EXHAUST PIPE ASSEMBLY FRONT**
   (a) Check the free length.
      (1) Using vernier calipers, measure the free length of the compression spring.
      Minimum:
      40.5 mm (1.594 in.)
      If the free length is less than the minimum, replace the compression spring.

   (b) Using a wooden block and plastic-faced hammer, tap in a new gasket until it is flush with the exhaust manifold.
      NOTICE:
      - **Make sure that the gasket is in the correct angle when installing.**
      - **Do not reuse the removed gasket.**
      - **Never push a new gasket into the exhaust manifold by installing the exhaust pipe front into the exhaust manifold.**

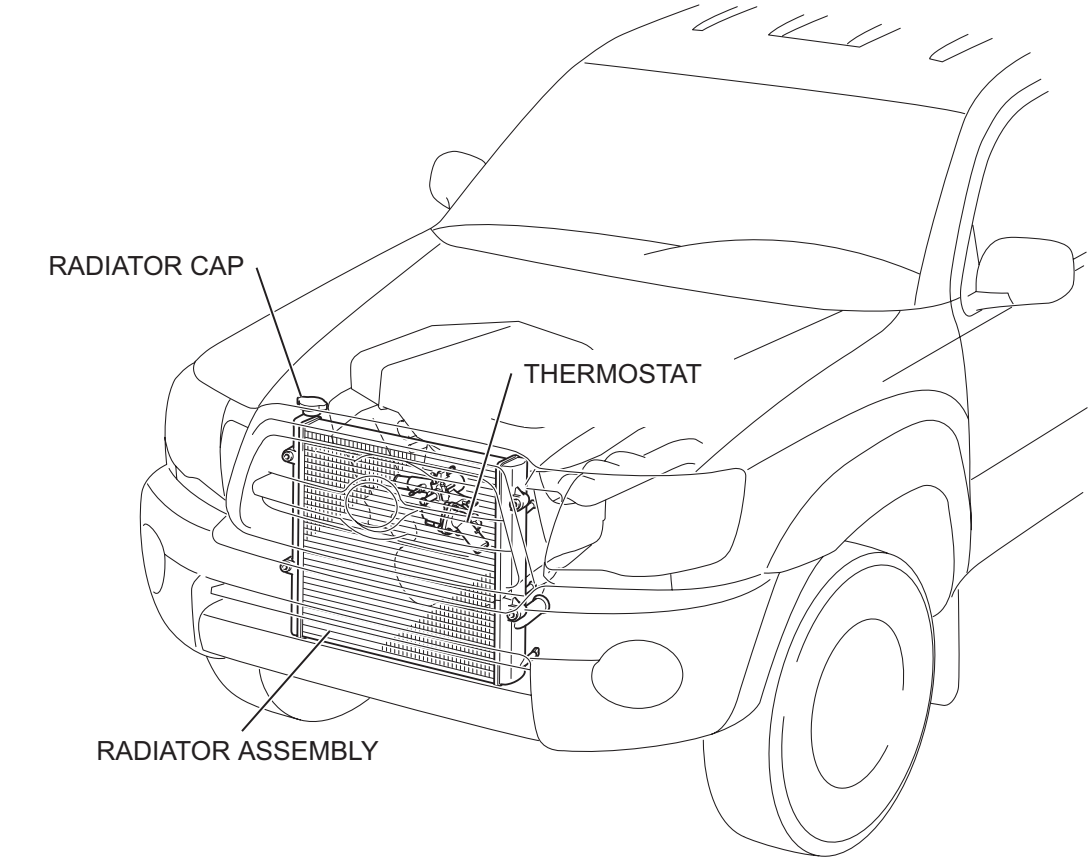
   (c) Install the exhaust pipe front into the exhaust pipe support.
   (d) Tighten the 2 bolts and 2 compression springs.
      Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
2. **INSTALL EXHAUST PIPE ASSEMBLY TAIL**
   (a) Install a new gasket onto the exhaust pipe front.
   (b) Install the exhaust pipe tail onto the 4 exhaust pipe supports.
   (c) Tighten the 2 bolts and 2 nuts.
      Torque: 48 N*m (489 kgf*cm, 35 ft.*lbf)
3. **INSTALL OXYGEN SENSOR (See page EC-28)**
4. **INSTALL AIR FUEL RATIO SENSOR (See page EC-28)**

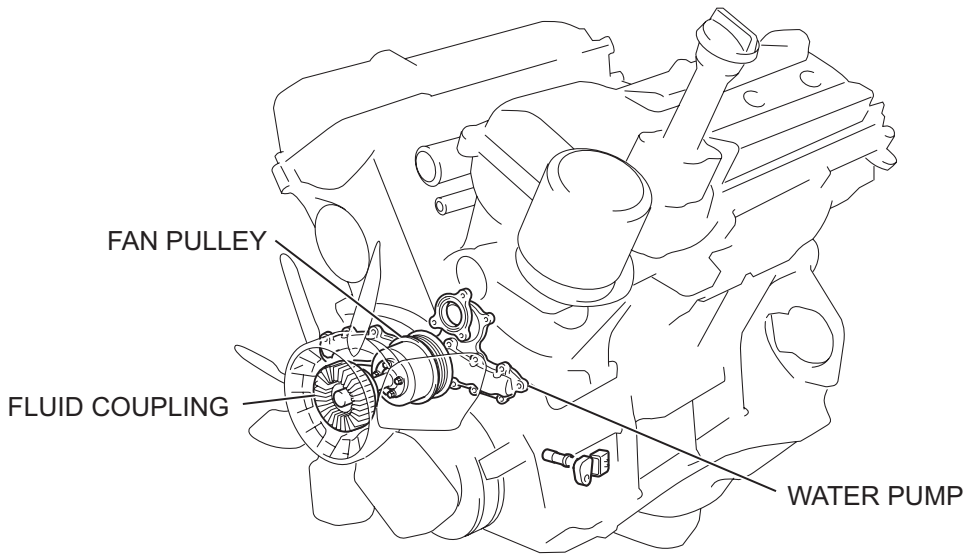
EX

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **CHECK FOR EXHAUST GAS LEAKAGE**

COOLING SYSTEM

PARTS LOCATION





Y

A113579E01

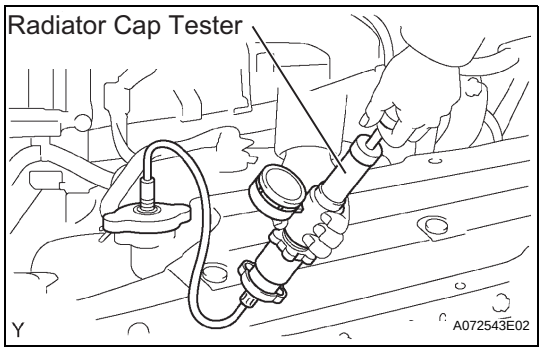
CO

ON-VEHICLE INSPECTION

1. CHECK COOLING SYSTEM FOR LEAKAGE

(a) Remove the radiator cap.

CAUTION:
To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.



(b) Fill the radiator with coolant and attach a radiator cap tester.

(c) Warm up the engine.

(d) Pump it to 118 kPa (1.2 kgf/cm^2, 17.1 psi), then check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leakage. If there are no signs of external coolant leakage, check the heater core, cylinder block and head.

(e) Reinstall the radiator cap.

2. CHECK COOLANT LEVEL OF RESERVOIR

(a) The engine coolant should be between the LOW and FULL lines when the engine is cold.
If low, check for leakage and add Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology up to the FULL line.

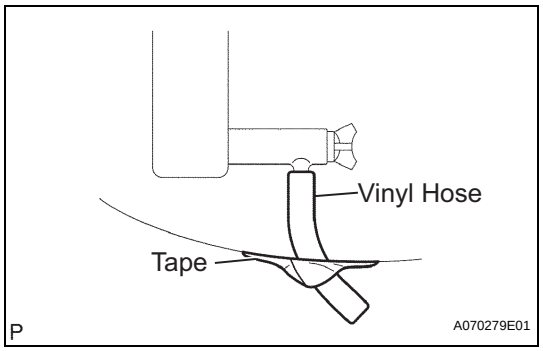
3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.

CAUTION:
To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(b) Check for any excessive deposits of rust or scale around the radiator cap and radiator filler hole; the coolant should be free of oil.
If excessively dirty, replace the coolant.

(c) Reinstall the radiator cap.



COOLANT

REPLACEMENT

1. DRAIN ENGINE COOLANT

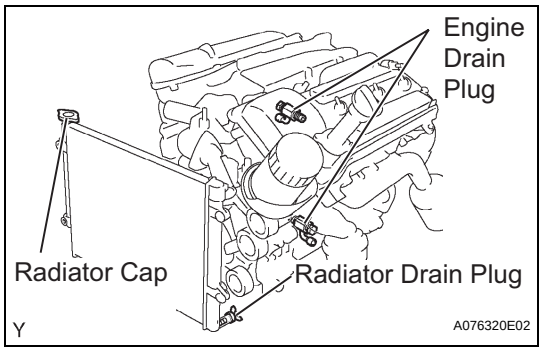
CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the service hole cover from the engine under cover.

(b) Install a vinyl hose onto the drain on the radiator side.

(c) Fix the vinyl hose with tape.



(d) Loosen the 3 drain plugs on the engine and radiator, and drain the coolant.

(e) Remove the radiator cap.

(f) Drain the coolant from the reservoir tank.

(g) Tighten the 3 drain plugs.

Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf) for the engine

(h) Remove the vinyl hose from the radiator.

2. ADD ENGINE COOLANT

(a) Pour coolant into the radiator until it overflows.

Capacity

Transmission	Capacity
Manual Transmission	9.7 liters (10.3 Us qts, 8.5 Imp. qts)
Automatic Transmission	9.8 liters (10.4 Us qts, 8.6 Imp. qts)

HINT:

- Use of improper coolants may damage the engine cooling system.
- Use only Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).
- New Toyota vehicles are filled with Toyota Super Long Life Coolant (color is pink, premixed ethylene glycol concentration is approximately 50 % and freezing temperature is -35°C (-31°F)). When replacing the coolant, Toyota Super Long Life Coolant is recommended.

NOTICE:

Do not substitute plain water for engine coolant.

(b) Check the coolant level inside the radiator by squeezing the inlet and outlet radiator hoses several times by hand. If the coolant level goes down, add coolant.

(c) Install the radiator cap securely.

(d) Slowly pour coolant into the radiator reservoir until it reaches the FULL line.
(e) Warm up the engine until the cooling fan operates.
(1) Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan Speed	Any setting except OFF
Temperature	Toward WARM
Air Conditioning Switch	OFF

(2) Maintain the engine speed at 2,000 to 2,500 rpm and warm up the engine until the cooling fan operates.
(f) Squeeze the inlet and outlet radiator hoses several times by hand while warming up the engine.
(g) Stop the engine and wait until the coolant cools down.
(h) Remove the radiator cap and check the coolant level inside the radiator.
(i) If the coolant level is below the full level, perform the steps from (a) through (h) and repeat the operation until the coolant level remains at the full level.
(j) Check the coolant level inside the radiator reservoir tank again. If it is below the full level, add coolant.

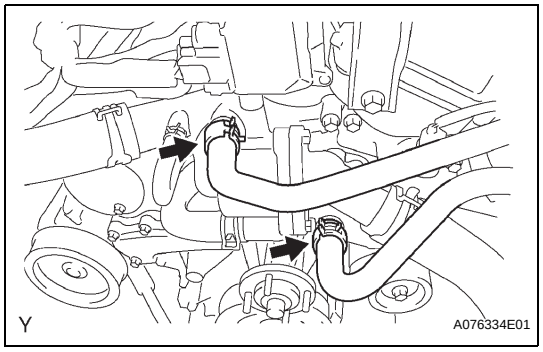
3. CHECK FOR ENGINE COOLANT LEAKAGE

(a) Fill the radiator with coolant and attach a radiator cap tester.
(b) Pump it to 118 kPa (1.2 kgf/cm^2 17.1 psi), then check for leakage.

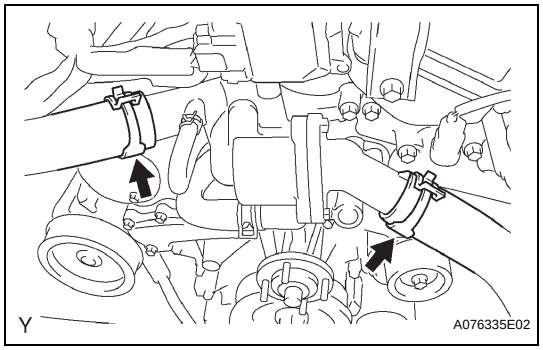
WATER PUMP

REMOVAL

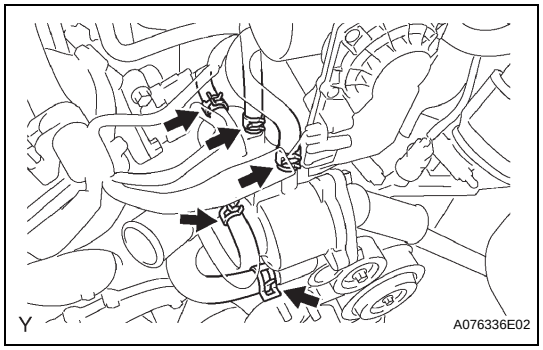
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the engine under cover.
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
5. **REMOVE V-BANK COVER (See page ES-414)**
6. **REMOVE FAN SHROUD (See page CO-15)**
7. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
8. **REMOVE WATER INLET**
   (a) Disconnect the 2 oil cooler hoses (with oil cooler).



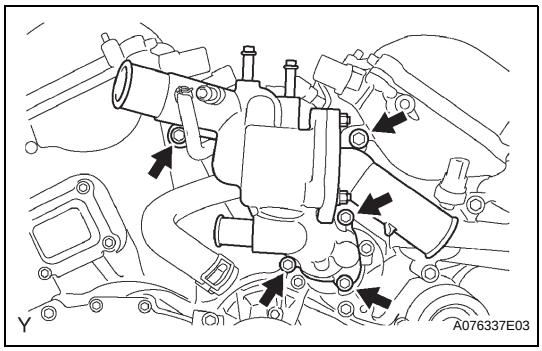
(b) Disconnect the 2 radiator hoses.



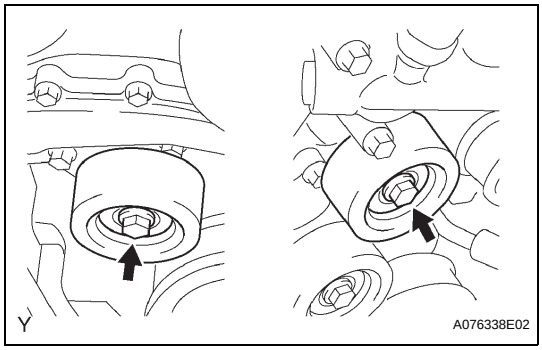
(c) Disconnect the 5 water by-pass hoses.



CO



(d) Remove the 5 bolts and water inlet.
(e) Remove the O-ring from the water outlet pipe.
(f) Remove the gasket from the water pump.



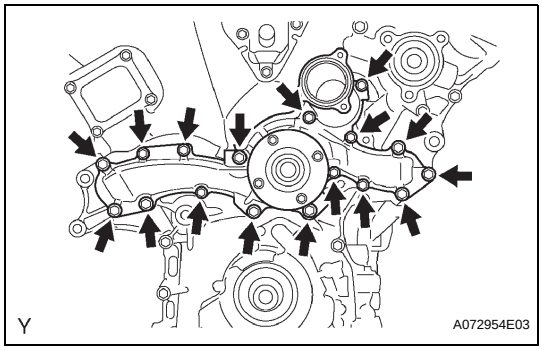
9. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY
(a) Remove the 2 bolts, then remove the 2 idler pulleys.

10. REMOVE GENERATOR ASSEMBLY (See page CH-7)

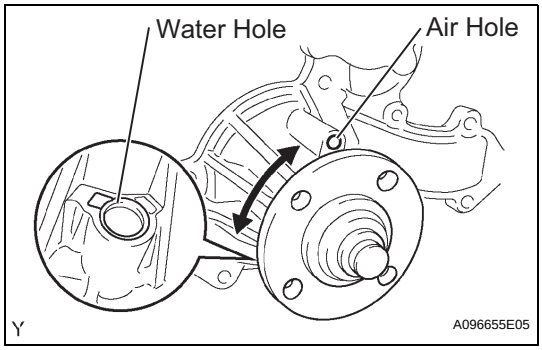
11. SEPARATE COOLER COMPRESSOR ASSEMBLY (See page ES-409)

12. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY
HINT:

Drive Type	See Page
2WD	EM-23
Pre Runner and 4WD	EM-44



13. REMOVE WATER PUMP ASSEMBLY
(a) Remove the 17 bolts, then remove the water pump and gasket.



INSPECTION

1. INSPECT WATER PUMP ASSEMBLY
(a) Visually check the water hole for coolant leakage.
If leakage is found, replace the water pump assembly.
(b) Turn the pulley and check that the water pump bearing moves smoothly and quietly.
If necessary, replace the water pump assembly.

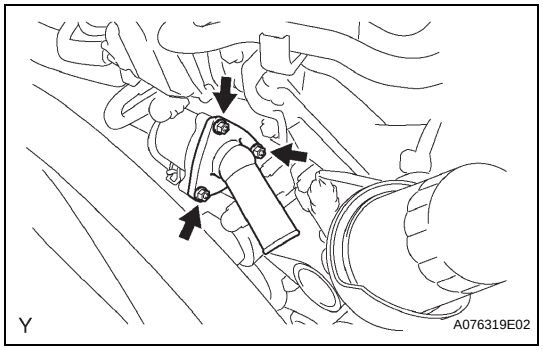
CO

THERMOSTAT

REMOVAL

HINT:
If the thermostat is not installed, cooling efficiency will be reduced. Do not remove the thermostat, to prevent the engine overheating.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE NO.2 RADIATOR HOSE**
5. **REMOVE WATERY INLET WITH THERMOSTAT**
   (a) Remove the 3 nuts, then remove the water inlet with thermostat and gasket.

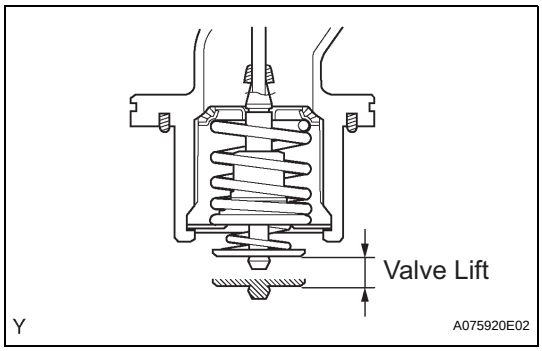


INSPECTION

1. **INSPECT WATER INLET WITH THERMOSTAT**
   HINT:
   The valve opening temperature is inscribed on the thermostat.

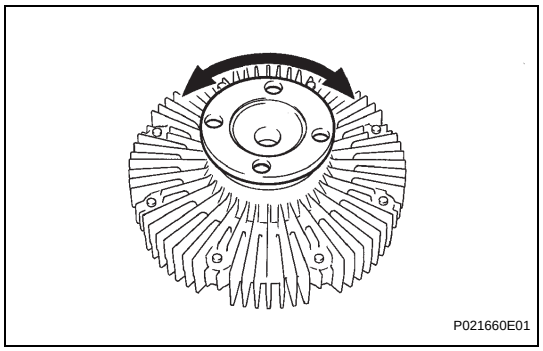
   (a) Immerse the thermostat in water, then gradually heat the water.
   (b) Check the valve opening temperature of the thermostat.
   Valve opening temperature:
   80 to 84°C (176 to 183°F)
   If the valve opening temperature is not as specified, replace the thermostat.

CO



(c) Check the valve lift.
Valve lift:
8.0 mm (0.31 in.) or more at 95°C (203°F)
If the valve lift is not as specified, replace the thermostat.

(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).
If not fully closed, replace the thermostat.



FAN

INSPECTION

1. INSPECT FLUID COUPLING ASSEMBLY

(a) Check the fluid coupling for damage and silicon oil leakage.
If necessary, replace the fluid coupling.

RADIATOR

COMPONENTS

ON-VEHICLE INSPECTION

1. INSPECT COOLING SYSTEM FOR LEAKAGE

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Fluid and steam could be blown out under pressure.

(a) Fill the radiator with coolant and attach a radiator cap tester.

(b) Warm up the engine.

(c) Pump it up to 118 kPa (1.2 kgf/cm^2, 17.1 psi) and check that the pressure does not drop.

HINT:

If the pressure drops, check the hose, radiator and water pump for leakage. If no external leakage is found, check the heater core, cylinder block and cylinder head.

2. CHECK ENGINE COOLANT LEVEL AT RESERVOIR

(a) Check that the coolant level in the reservoir tank is between the FULL and LOW lines when the engine is cold.

If low, check for leakage and add Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology up to the FULL line.

3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Fluid and steam could be blown out under pressure.

(b) Check that there are no excessive deposits of rust or scale around the radiator cap or radiator filler hole.

If excessively dirty, replace the coolant.

(c) Attach the radiator cap.

COOLANT

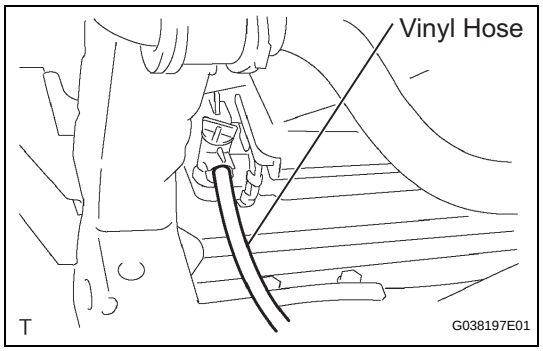
REPLACEMENT

1. DRAIN ENGINE COOLANT

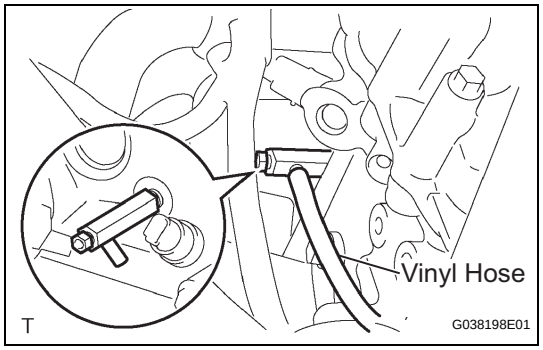
CAUTION:
To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the 4 bolts, then remove the engine under cover No. 1. (PRE RUNNER AND 4WD TYPE)

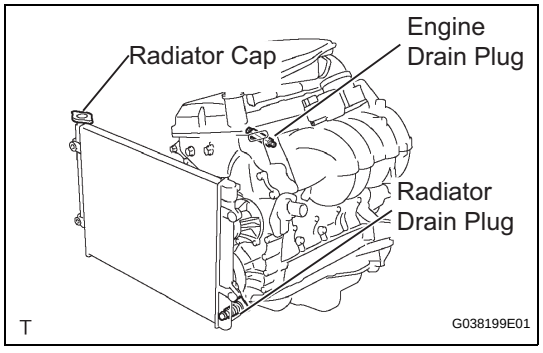
(b) Install a vinyl hose onto the radiator side.



(c) Install a vinyl hose onto the engine side.



(d) Loosen the engine drain plug.
(e) Loosen the radiator drain plug.
(f) Remove the radiator cap and drain coolant.
(g) Drain the coolant from the reservoir tank.



2. ADD ENGINE COOLANT

(a) Tighten the engine drain plug.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)
(b) Tighten the radiator drain plug.
(c) Disconnect the 2 vinyl hoses.
(d) Slowly fill the system with engine coolant.
Capacity:
M/T: 8.7 liters (9.2 US qts, 7.7 lmp. qts)
A/T: 8.6 liters (9.1 US qts, 7.6 lmp. qts)
HINT:
- Use of improper coolants may damage the engine cooling system.

CO

- Use only Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids.)
- New Toyota vehicles are filled with Toyota Super Long Life Coolant. When replacing the coolant, Toyota Super Long Life Coolant (color is pink, premixed ethylene glycol concentration is approximately 50 % and freezing temperature is -35°C (-31°F)) is recommended.

NOTICE:

Do not substitute plain water for engine coolant.

(e) Check the coolant level inside the radiator by squeezing the inlet and outlet radiator hoses several times by hand. If the coolant level goes down, add coolant.

(f) Install the radiator cap securely.

(g) Slowly pour coolant into the radiator reservoir until it reaches the FULL line.

(h) Warm up the engine until the cooling fan operates.

- Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except OFF
Temperature	Toward warm
Air condition switch	OFF

(i) Squeeze the inlet and outlet radiator hoses several times by hand while warning up the engine.

(j) Stop the engine and wait until the coolant cools down.

(k) Remove the radiator cap and check the coolant level inside the radiator.

(l) If the coolant level is below the full level, perform the steps from (d) through (k) and repeat the operation until the coolant level remains at the full level.

(m) Check the coolant level inside the radiator reservoir tank again. If it is below the full level, add coolant.

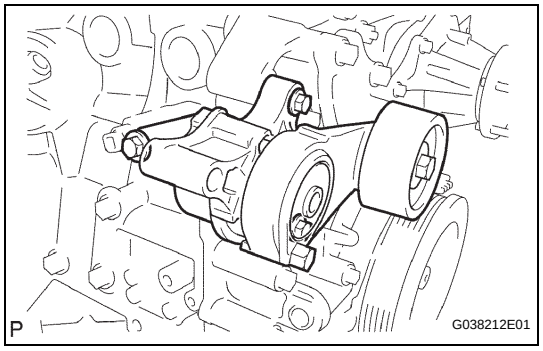
(n) Install the engine under cover No. 1 with the 4 bolts. (PRE RUNNER AND 4WD TYPE)
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

3. CHECK FOR ENGINE COOLANT LEAKAGE

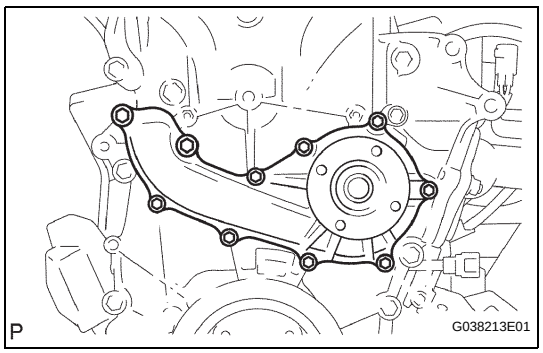
WATER PUMP

REMOVAL

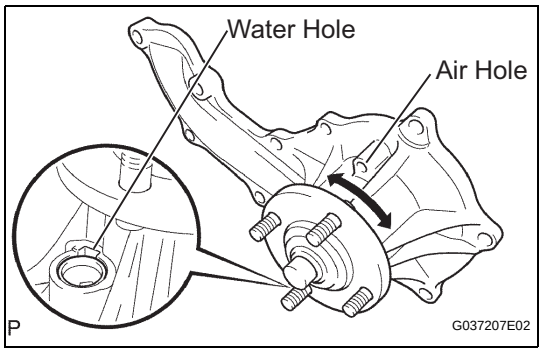
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)**
   (a) Remove the 4 bolts, then remove the engine under cover No. 1.
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-12)**
5. **REMOVE FAN SHROUD (See page CO-13)**
6. **REMOVE GENERATOR ASSEMBLY**
   (See page CH-7)
7. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY**
   (a) Remove the 3 bolts, then remove the V-ribbed belt tensioner.



8. **REMOVE WATER PUMP ASSEMBLY**
   (a) Remove the 10 bolts, then remove the water pump and gasket.

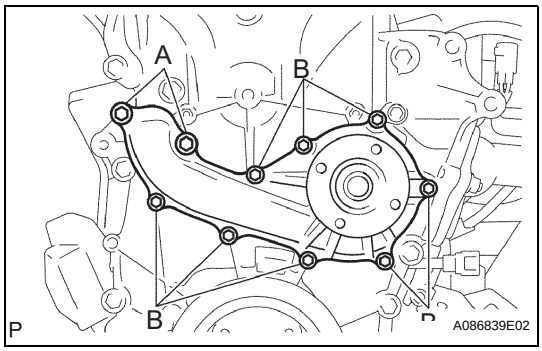


INSPECTION



1. **INSPECT WATER PUMP ASSEMBLY**
   (a) Visually check the air hole and water hole for coolant leakage.
   If any leakage is found, replace the water pump.
   (b) Turn the pulley seat and check that the water pump bearing moves smoothly and does not make a noise.
   If necessary, replace the water pump.

CO

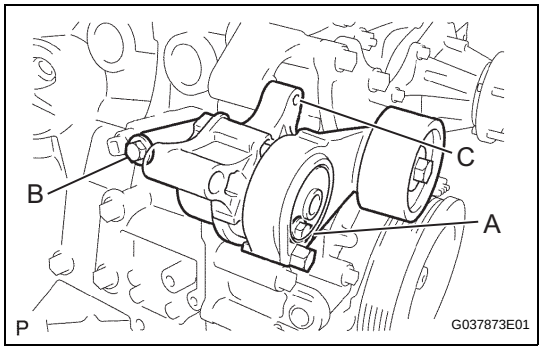


INSTALLATION

1. INSTALL WATER PUMP ASSEMBLY

(a) Install a new gasket, then install the water pump with the 10 bolts.

Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
9 N*m (92 kgf*cm, 80 in.*lbf) for bolt B



2. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Provisionally install the V-ribbed belt tensioner with bolts A and B.

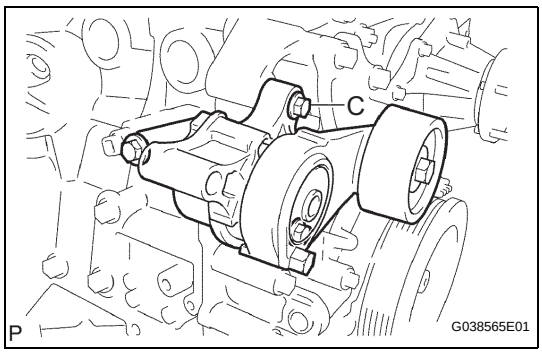
(b) Tighten bolt B.

Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

(c) Tighten bolt A.

Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

(d) Check that the bolt holes of the V-ribbed belt tensioner and timing chain cover are aligned, and install bolt C.



(e) Tighten bolt C.

Torque: 43 N*m (434 kgf*cm, 32 ft.*lbf)

3. INSTALL GENERATOR ASSEMBLY

(See page CH-13)

4. INSTALL FAN SHROUD (See page CO-18)

5. INSTALL RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-19)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

7. ADD ENGINE COOLANT (See page CO-3)

8. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)

9. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY (for Pre Runner and 4WD Type)

(a) Install the engine under cover No. 1 with the 4 bolts.

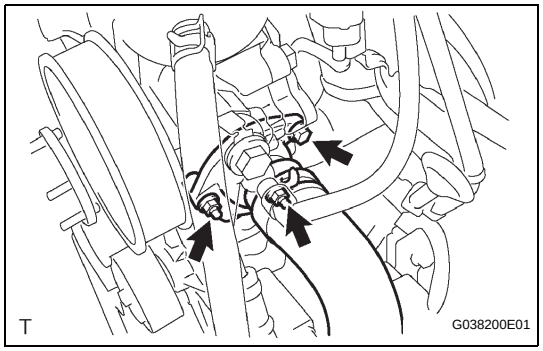
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

CO

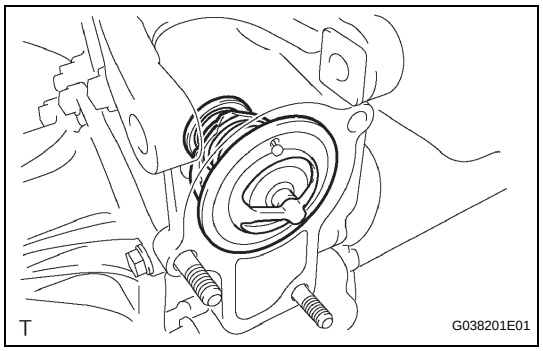
THERMOSTAT

REMOVAL

1. **DRAIN ENGINE COOLANT (See page CO-3)**
2. **REMOVE WATER INLET**
   (a) Remove the bolt and 2 nuts, then remove the water inlet.
   (b) Remove the gasket from the timing chain cover.



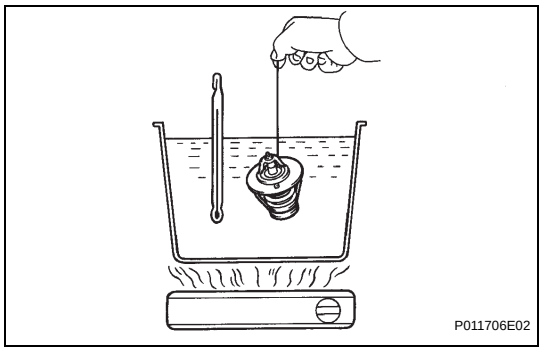
3. **REMOVE THERMOSTAT**
   (a) Remove the thermostat from the timing chain cover.



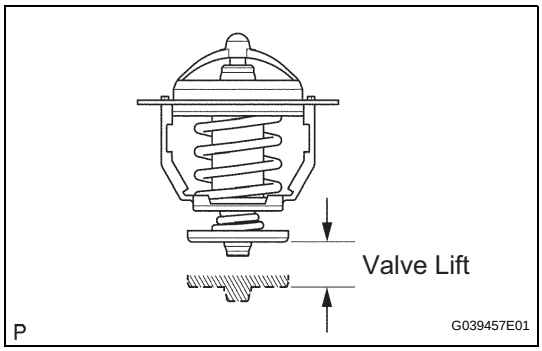
INSPECTION

1. **INSPECT THERMOSTAT**
   HINT:
   The valve opening temperature is inscribed on the thermostat.

   (a) Immerse the thermostat in water, then gradually heat the water.
   (b) Check the valve opening temperature of the thermostat.
   Valve opening temperature:
   80 to 84°C (176 to 183°F)
   If the valve opening temperature is not as specified, replace the thermostat.

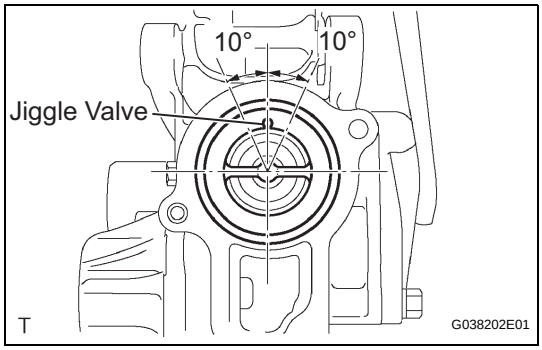


CO



(c) Check the valve lift.
Valve lift:
8.5 mm (0.355 in.) or more at 95°C (203°F)
If the valve lift is not as specified, replace the thermostat.

(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).
If not fully closed, replace the thermostat.

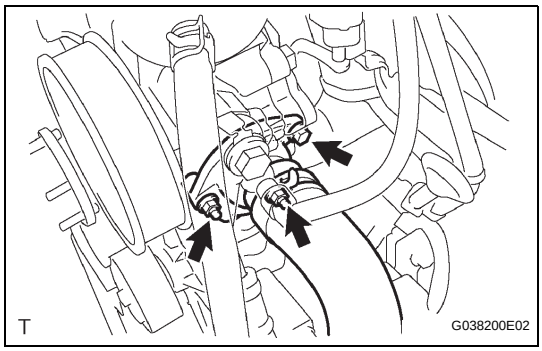


INSTALLATION

1. INSTALL THERMOSTAT

(a) Install a new gasket onto the thermostat.

(b) Install the thermostat with the jiggle valve upward.
HINT:
The jiggle valve may be set within 10° to either side of the prescribed position.

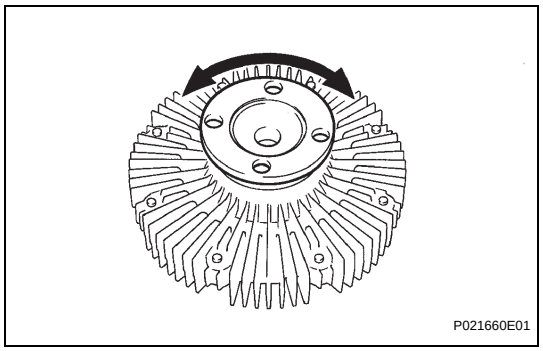


2. INSTALL WATER INLET

(a) Install a new gasket and the water inlet with the bolt and 2 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

3. ADD ENGINE COOLANT (See page CO-3)

4. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-2)



P021660E01

FAN

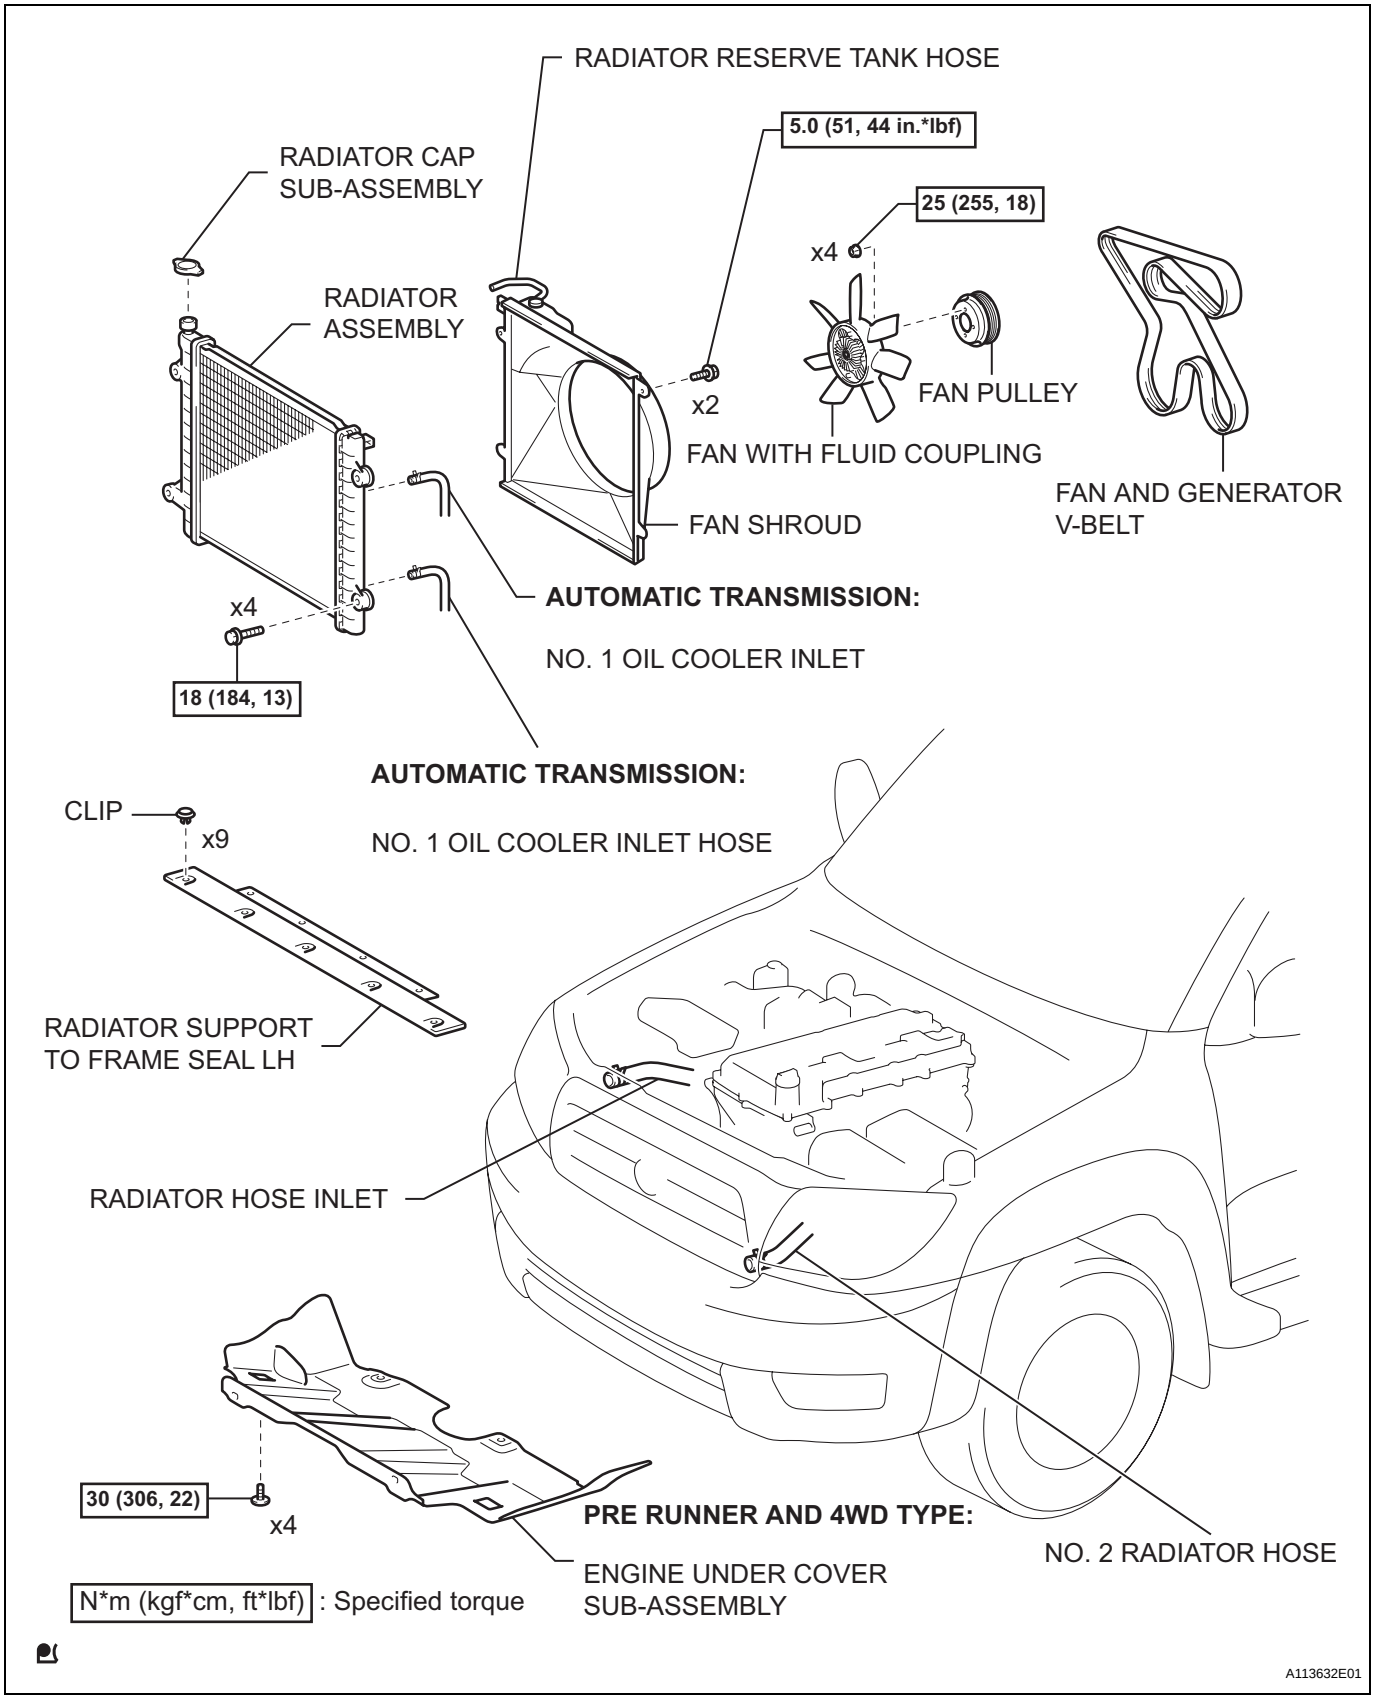
INSPECTION

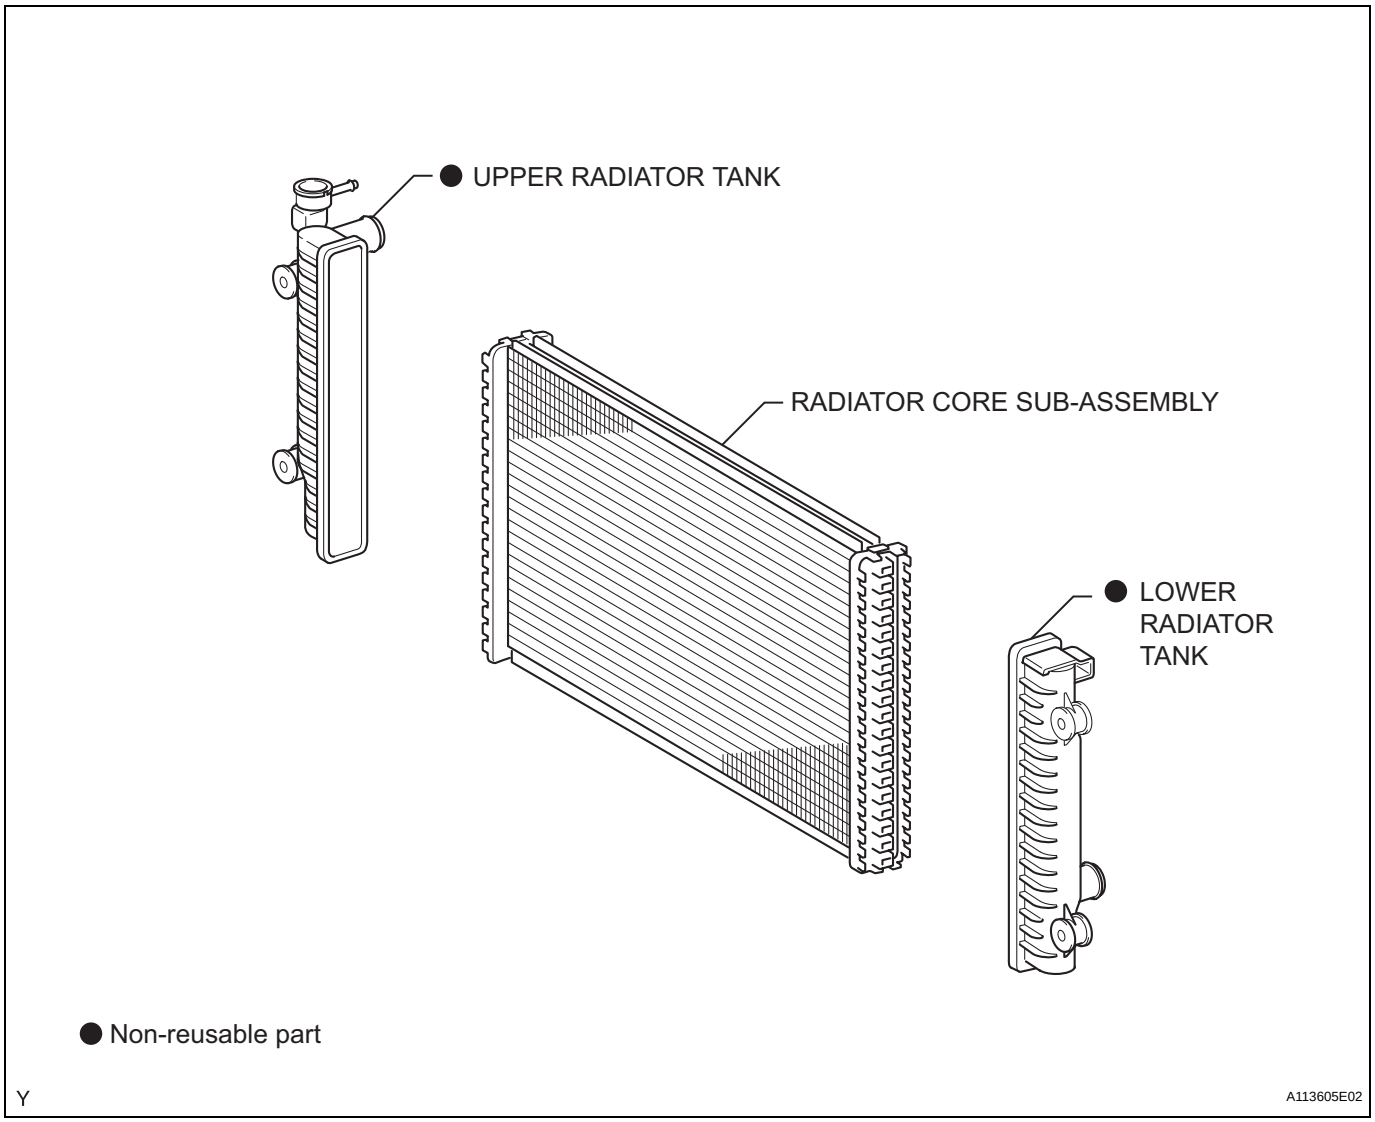
1. INSPECT FLUID COUPLING ASSY

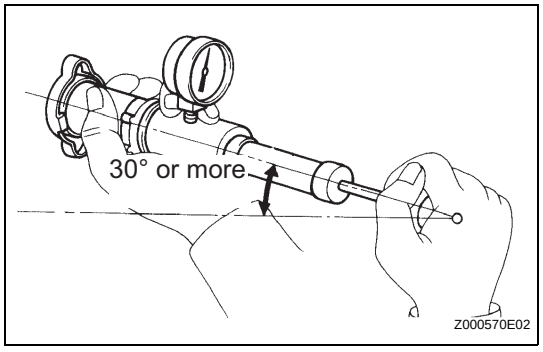
(a) Check the fluid coupling for damage and silicon oil leakage.
If necessary, replace the fluid coupling.

RADIATOR

COMPONENTS







ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Using a radiator cap tester, slowly pump and check that air comes from the vacuum valve.

Pumping speed:

1 push every 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air does not come from the vacuum valve, replace the radiator cap.

(b) Pump the tester and measure the relief valve opening pressure.

Standard opening pressure:

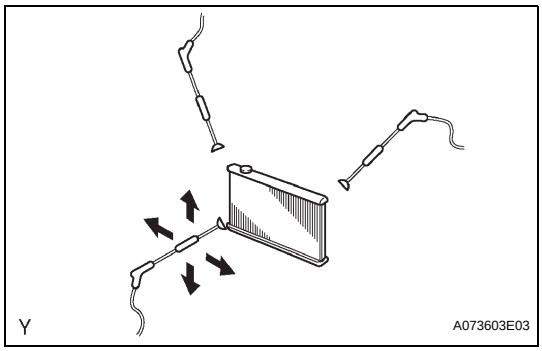
93 to 123 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)

Minimum opening pressure:

78 kPa (0.8 kgf/cm^2, 11.4 psi)

CO

NOTICE:
The above pumping speed is for the first pumping only (in order to close the vacuum valve). After the first pumping, the pumping speed can be reduced.
HINT:
Use the tester's maximum reading as the opening pressure. If the opening pressure is less than the minimum, replace the radiator cap.



ON-VEHICLE CLEANING

1. CHECK FINS FOR BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner and then dry them with compressed air.

NOTICE:

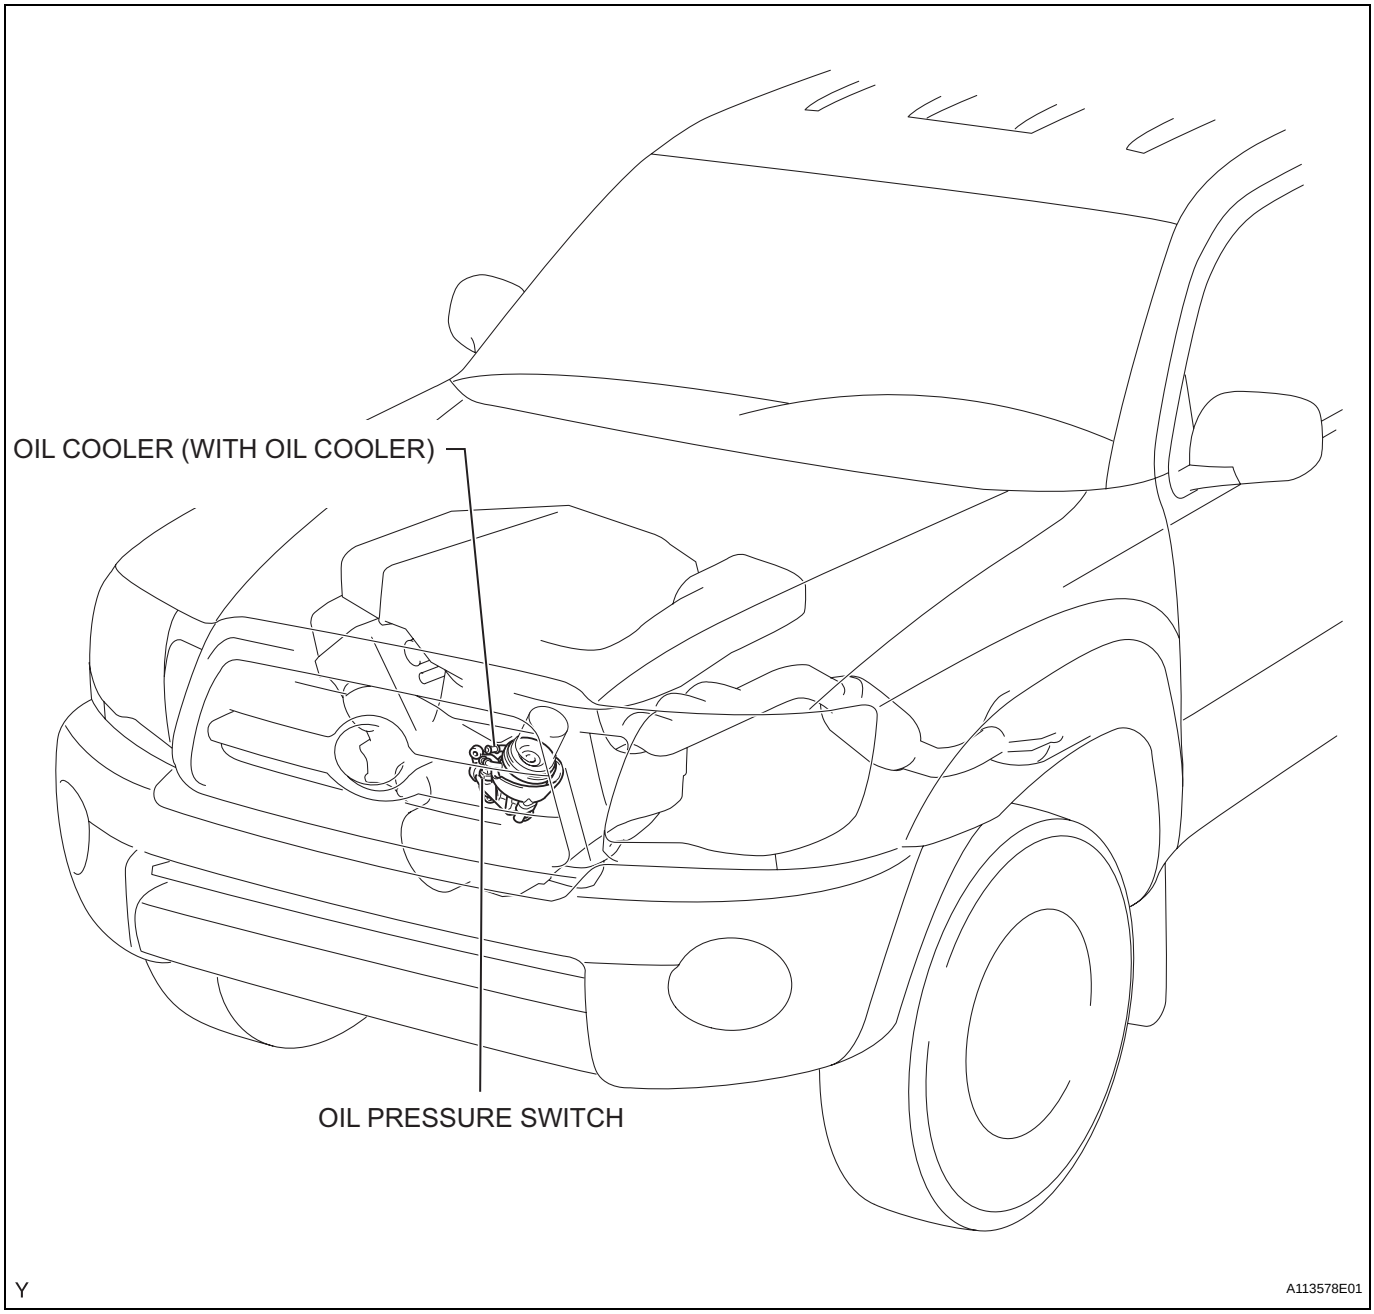
- **If the distance between the steam cleaner and core is too small, the fins may be damaged. So, keep to the following injection distances.**

Injection Pressure kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

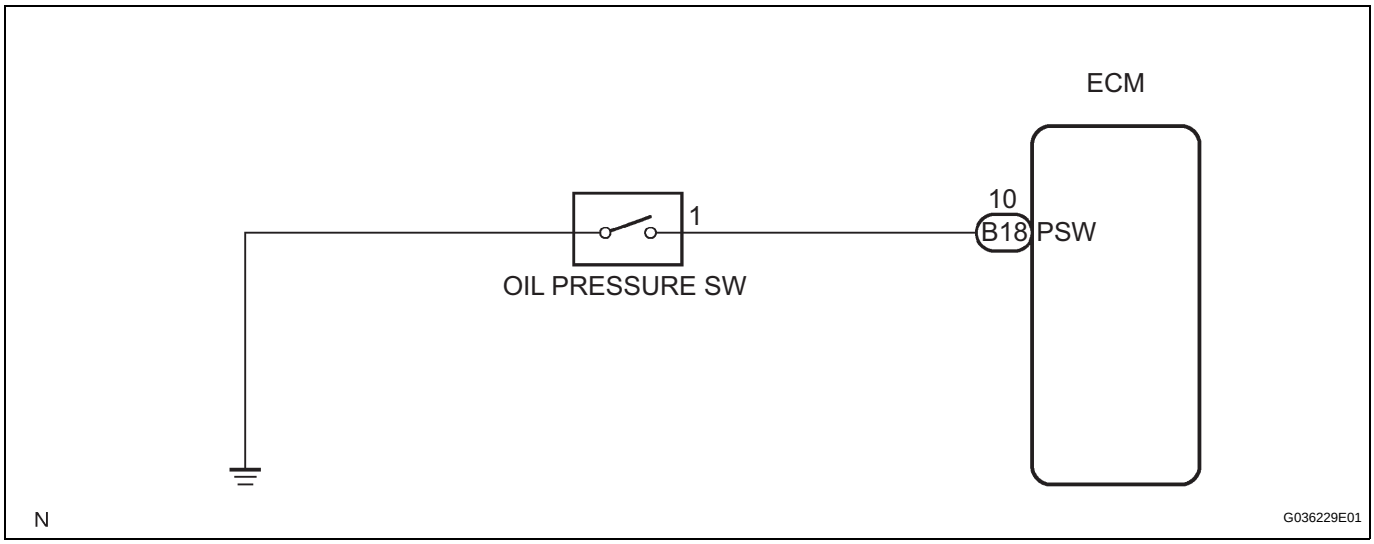
- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not to expose electronic components to water.**

LUBRICATION SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



OIL FILTER

REMOVAL

CAUTION:

- **Prolonged and repeated contact with engine oil will cause the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil.**
- **Wash your skin thoroughly with soap and water, or use waterless hand cleaner to remove any used engine oil. Do not use gasoline, thinners, or solvents.**
- **For environmental protection, used oil and used oil filters must be disposed of only at designated disposal sites.**

1. DRAIN ENGINE OIL

(a) Remove the engine under cover seal No. 3.

(b) Remove the oil pan drain plug and drain the engine oil.

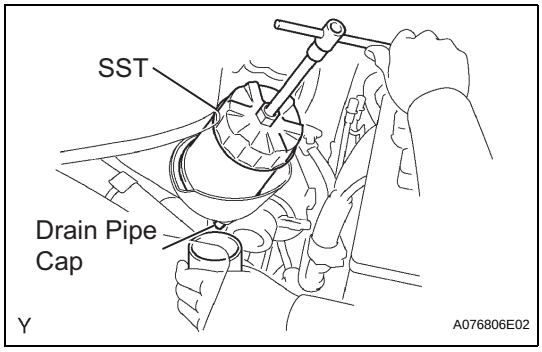
(c) Clean the oil pan drain plug and install it with a new gasket.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

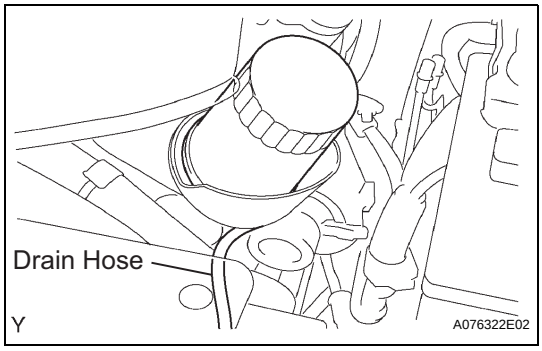
2. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Remove the drain pipe cap.

(b) While removing the oil filter with SST, catch the oil from the oil filter with a container.
SST 09228-07501

(c) Install the drain pipe cap.



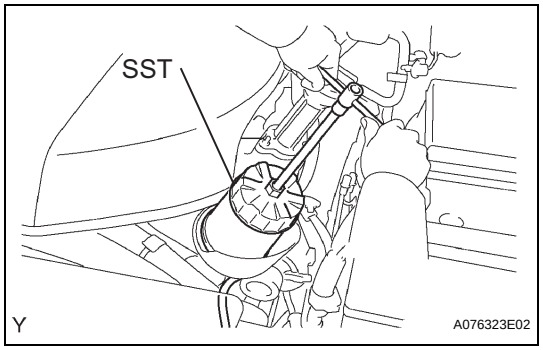


(d) Clean the oil catch plate.
HINT:
When using a drain hose, perform the following procedures.

(e) Remove the drain pipe cap.

(f) Connect a drain hose to the oil filter bracket.
HINT:
- Drain hose inside diameter: 8 mm (0.31 in.)
- Drain hose length: 900 mm (35.43 in.)

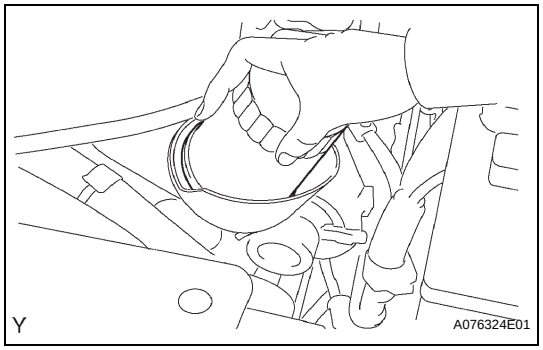
(g) Feed the drain hose down through the engine under cover, and put the drain oil container beneath the drain hose to catch the oil from the oil filter.



(h) Using SST, remove the oil filter.
SST 09228-07501

(i) Remove the drain hose and install the drain pipe cap.

(j) Clean the oil catch plate.



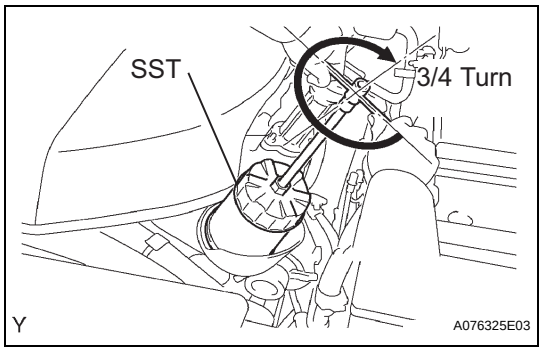
INSTALLATION

1. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Clean the oil filter contact surface on the oil filter bracket.

(b) Apply clean engine oil to the rubber gasket of a new oil filter.

(c) Tighten the oil filter by hand until the rubber gasket comes into contact with the seat of the filter bracket.



(d) Using SST, tighten it an additional 3/4 turn to set the filter.
SST 09228-07501
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

2. ADD ENGINE OIL

(a) Fill with fresh engine oil.
Capacity:
2WD

Drain and refill with oil filter change	**4.5 liters (4.8 US qts, 4.0 lmp. qts)**
Drain and refill without oil filter change	**4.2 liters (4.4 US qts, 3.7 lmp. qts)**
Dry fill	**5.6 liters (5.9 US qts, 4.9 lmp. qts)**

PRE RUNNER and 4WD

Drain and refill with oil filter change	**5.2 liters (5.5 US qts, 4.6 lmp. qts)**
Drain and refill without oil filter change	**4.9 liters (5.2 US qts, 4.3 lmp. qts)**
Dry fill	**6.0 liters (6.3 US qts, 5.3 lmp. qts)**

(b) Reinstall the oil filler cap.

3. CHECK FOR ENGINE OIL LEAKAGE

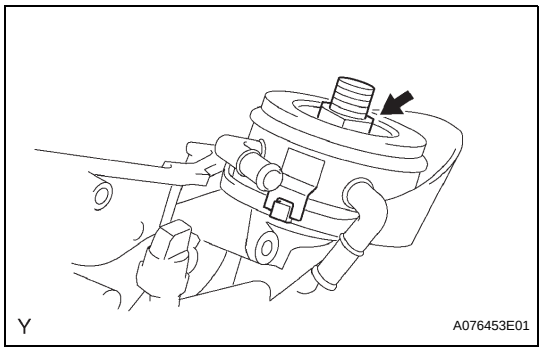
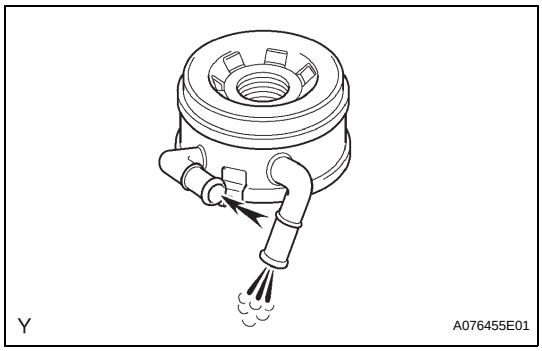
ENGINE OIL COOLER

REMOVAL

1. **DRAIN ENGINE COOLANT (See page CO-3)**
2. **REMOVE OIL FILTER SUB-ASSEMBLY (See page LU-4)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE OIL COOLER ASSEMBLY**
   (a) Disconnect the 2 oil cooler hoses from the oil cooler.
   (b) Remove the union bolt, then remove the plate washer and oil cooler.
   (c) Remove the O-ring from the oil cooler.

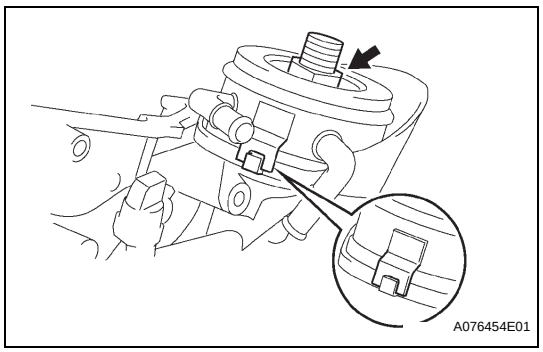




INSPECTION

1. **INSPECT OIL COOLER ASSEMBLY**
   (a) Check the oil cooler for damage and clogging.
   If necessary, replace the oil cooler.

INSTALLATION



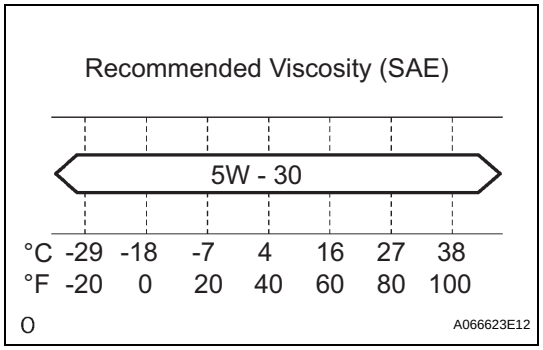
1. **INSTALL OIL COOLER ASSEMBLY**
   (a) Clean the oil cooler contact surface on the cooler mounting.
   (b) Install a new O-ring onto the oil cooler.
   (c) Apply a light coat of engine oil to the threads of the union bolt.
   (d) Install the oil cooler and plate washer with the union bolt.
   Torque: 68 N*m (693 kgf*cm, 50 ft.*lbf)
   (e) Connect the 2 oil cooler hoses to the oil cooler.
2. **INSTALL OIL FILTER SUB-ASSEMBLY (See page LU-5)**
3. **ADD ENGINE COOLANT (See page CO-3)**
4. **ADD ENGINE OIL (See page LU-5)**
5. **CHECK ENGINE OIL LEVEL**
6. **CHECK FOR ENGINE OIL LEAKAGE**
7. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
8. **INSTALL V-BANK COVER (See page ES-416)**

LUBRICATION SYSTEM

ON-VEHICLE INSPECTION

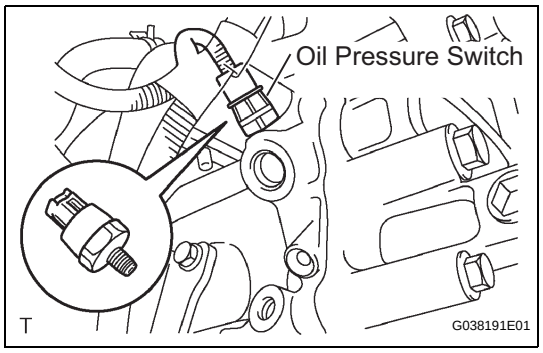
1. CHECK ENGINE OIL LEVEL

(a) Warm up the engine, then stop the engine and wait for 5 minutes. Check that the engine oil level is between low and full marks on the oil level gage.
If the engine oil level is low, check for oil leakage and add engine oil up to the full level mark.
NOTICE:
Do not add engine oil to above the full level mark.



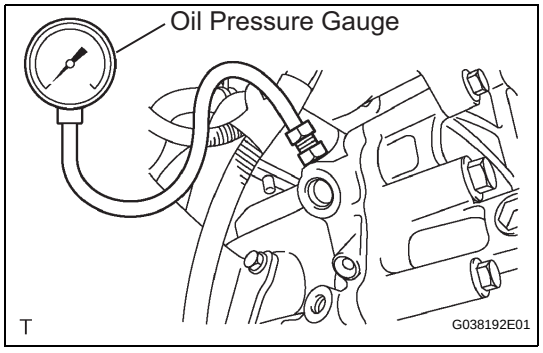
2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water intrusion, discoloration or thinning.
If the quality is visibly poor, replace the oil.
Oil grade:
Use API grade SM "Energy-Conserving", or ILSAC multigrade engine oil.
SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.
If SAE 5W-30 is not available, use SAE 10W-30. However, it should be replaced with SAE 5W-30 at the next oil replacement.



3. INSPECT OIL PRESSURE

(a) Remove the 4 bolts, then remove the No. 1 engine under cover. (PRE RUNNER AND 4WD TYPE)
(b) Disconnect the oil pressure switch connector.
(c) Using a 24 mm deep socket wrench, remove the oil pressure switch.

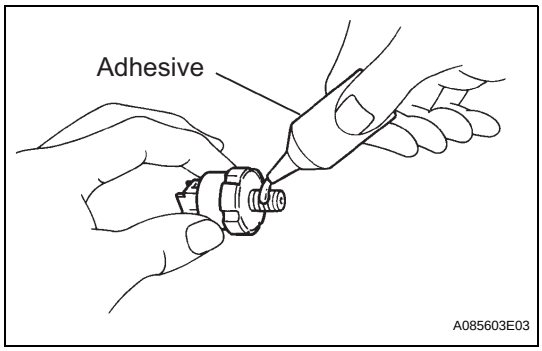


(d) Install the oil pressure gauge.
(e) Warm up the engine.
(f) Inspect the oil pressure.
Oil pressure

When Idling	**29 kPa (0.3 kgf*cm^2, 4.2 psi) or more**
At 3,000 rpm	**160 to 490 kPa (1.6 to 5.3 kgf*cm^2, 23 to 75 psi)**

(g) Remove the oil pressure gauge.

LU



(h) Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

(i) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not start the engine for at least 1 hour after installation.

(j) Connect the oil pressure switch connector.

(k) Check for engine oil leakage.

(l) Install the engine under cover No. 1 with the 4 bolts. (PRE RUNNER AND 4WD TYPE)
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

OIL FILTER

REMOVAL

CAUTION:

- **Prolonged and repeated contact with engine oil causes removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use a waterless hand cleaner to remove any used engine oil. Do not use gasoline, thinners or solvents.**
- **For environmental protection, used oil and used oil filters must be disposed of at designated disposal sites.**

1. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

(b) Remove the oil pan drain plug and drain the engine oil.

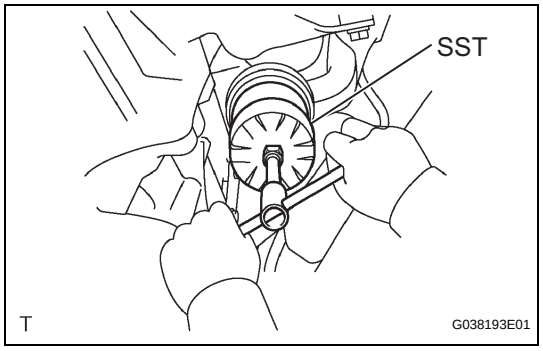
(c) Install a new gasket, then install the oil pan drain plug.

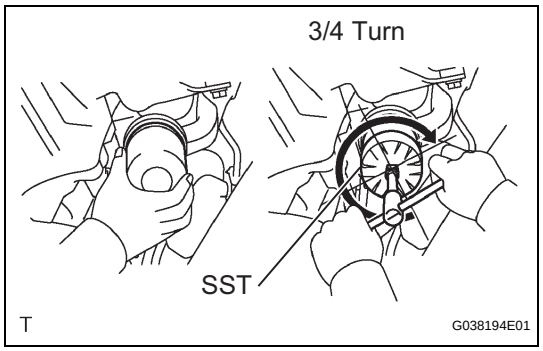
Torque: 38 N*m (382 kgf*cm, 28 ft.*lbf)

2. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.

SST 09228-07501





INSTALLATION

1. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Remove any dirt or foreign objects from the contact surface of the engine side.

(b) Apply a light coat of engine oil to the O-ring of a new oil filter.

(c) Install the oil filter by hand until the O-ring comes into contact with the seat.

(d) Using SST, retighten it by 3/4 turn.

SST 09228-07501

Reference torque:

13 N*m(133 kgf/cm, 10 ft.*lbf)

2. ADD ENGINE OIL

(a) Fill with fresh engine oil.

Capacity

Drain and refill with oil filter change	**5.8 liters (6.1 US qts, 5.1 lmp. qts)**
Drain and refill without oil filter change	**5.1 liters (5.4 US qts, 4.5 lmp. qts)**
Dry fill	**6.1 liters (6.4 US qts, 5.4 lmp. qts)**

3. CHECK FOR ENGINE OIL LEAKAGE

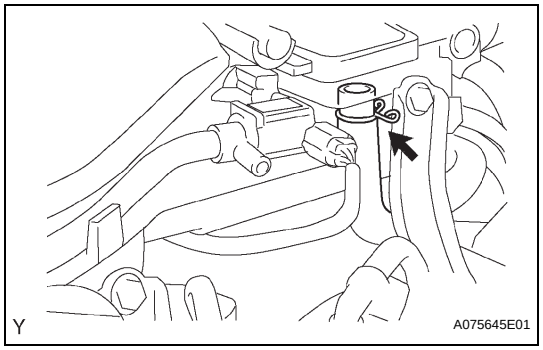
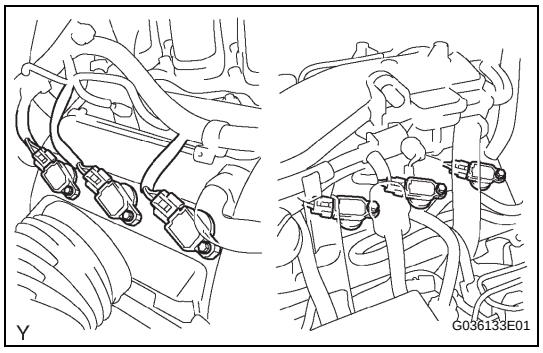
IGNITION COIL

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
4. **DISCONNECT VENTILATION HOSE**
   (a) Disconnect the ventilation hose from the intake air surge tank.



5. **REMOVE IGNITION COIL ASSEMBLY**
   (a) Disconnect the 6 connectors.
   (b) Remove the 6 bolts, then remove the 6 ignition coils.



IG

INSTALLATION

1. **INSTALL IGNITION COIL ASSEMBLY**
   (a) Install the 6 ignition coils with the 6 bolts.
   Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)
   (b) Connect the 6 ignition coil connectors.
2. **CONNECT VENTILATION HOSE**
3. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**
4. **INSTALL V-BANK COVER (See page ES-416)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **INSPECT IGNITION TIMING (See page EM-1)**
7. **INSPECT ENGINE IDLING SPEED (See page EM-2)**

VVT SENSOR

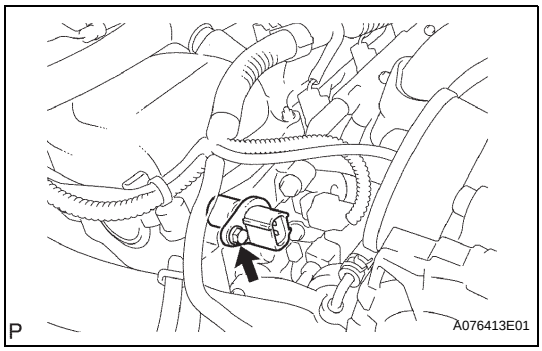
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **REMOVE VVT SENSOR**

(a) RH bank side VVT sensor:

(1) Disconnect the VVT sensor connector.

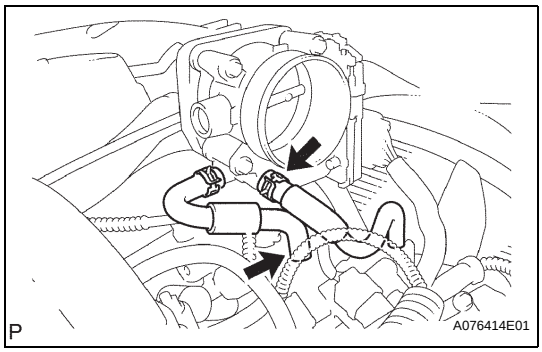
(2) Remove the bolt and VVT sensor.



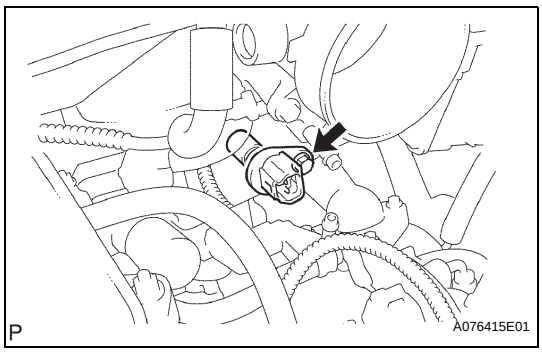
(b) LH bank side VVT sensor:

(1) Disconnect the water by-pass hoses No. 4 and No. 5 .

(2) Disconnect the VVT sensor connector.



(3) Remove the bolt and VVT sensor.

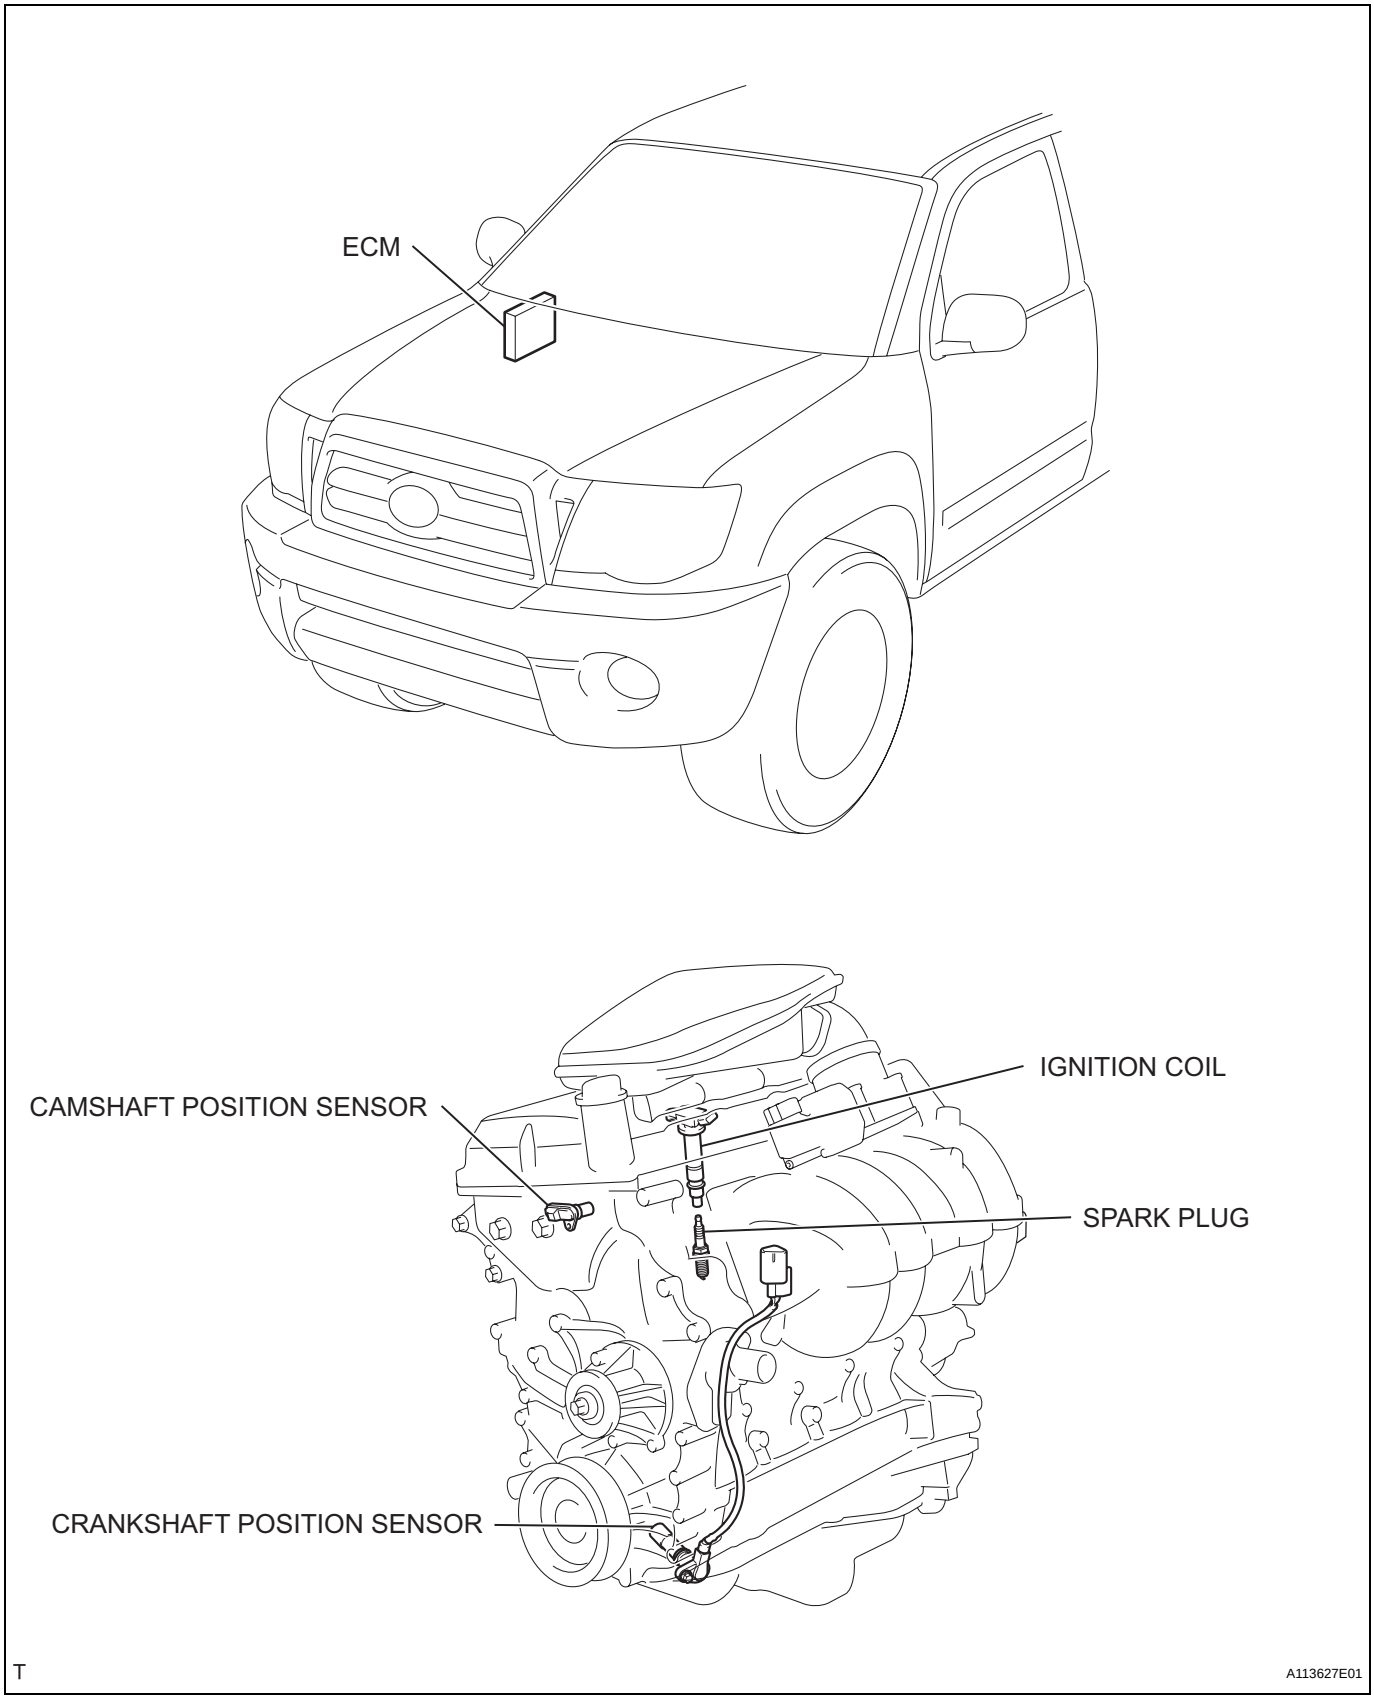


INSTALLATION

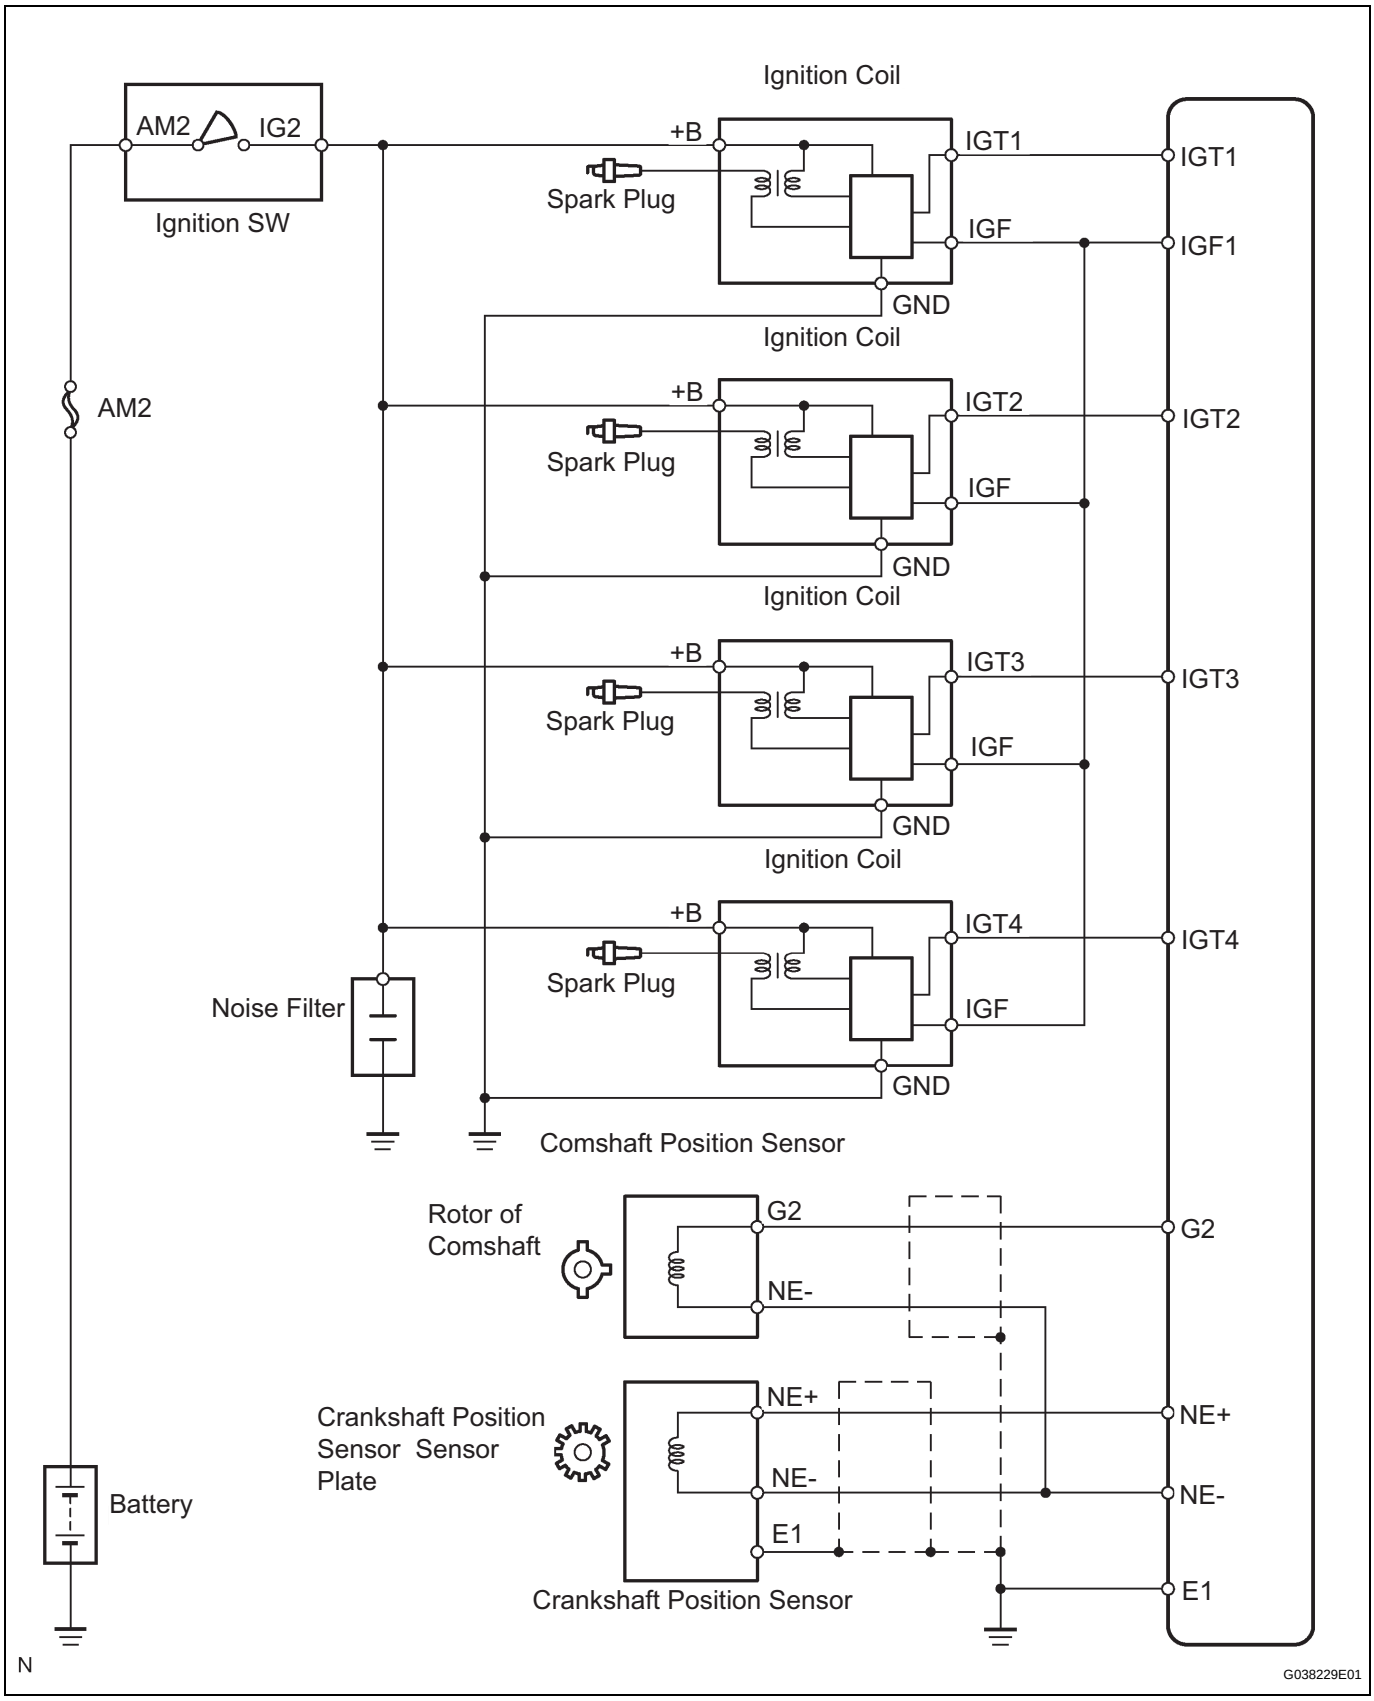
1. **INSTALL VVT SENSOR**
   (a) LH bank side VVT sensor:
      (1) Apply a light coat of engine oil to the O-ring of the VVT sensor.
      (2) Install the VVT sensor with the bolt.
      Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
      (3) Connect the VVT sensor connector.
      (4) Connect the water by-pass hoses No. 4 and No. 5.
   (b) RH bank side VVT sensor:
      (1) Apply a light coat of engine oil to the O-ring of the VVT sensor.
      (2) Install the VVT sensor with the bolt.
      Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
      (3) Connect the VVT sensor connector.
2. **INSTALL AIR CLEANER ASSEMBLY (See page ES-416)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
4. **ADD ENGINE COOLANT (See page CO-3)**
5. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
6. **INSTALL V-BANK COVER**
   (a) Install the V-bank cover with the 2 nuts.
   Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

IGNITION SYSTEM

PARTS LOCATION

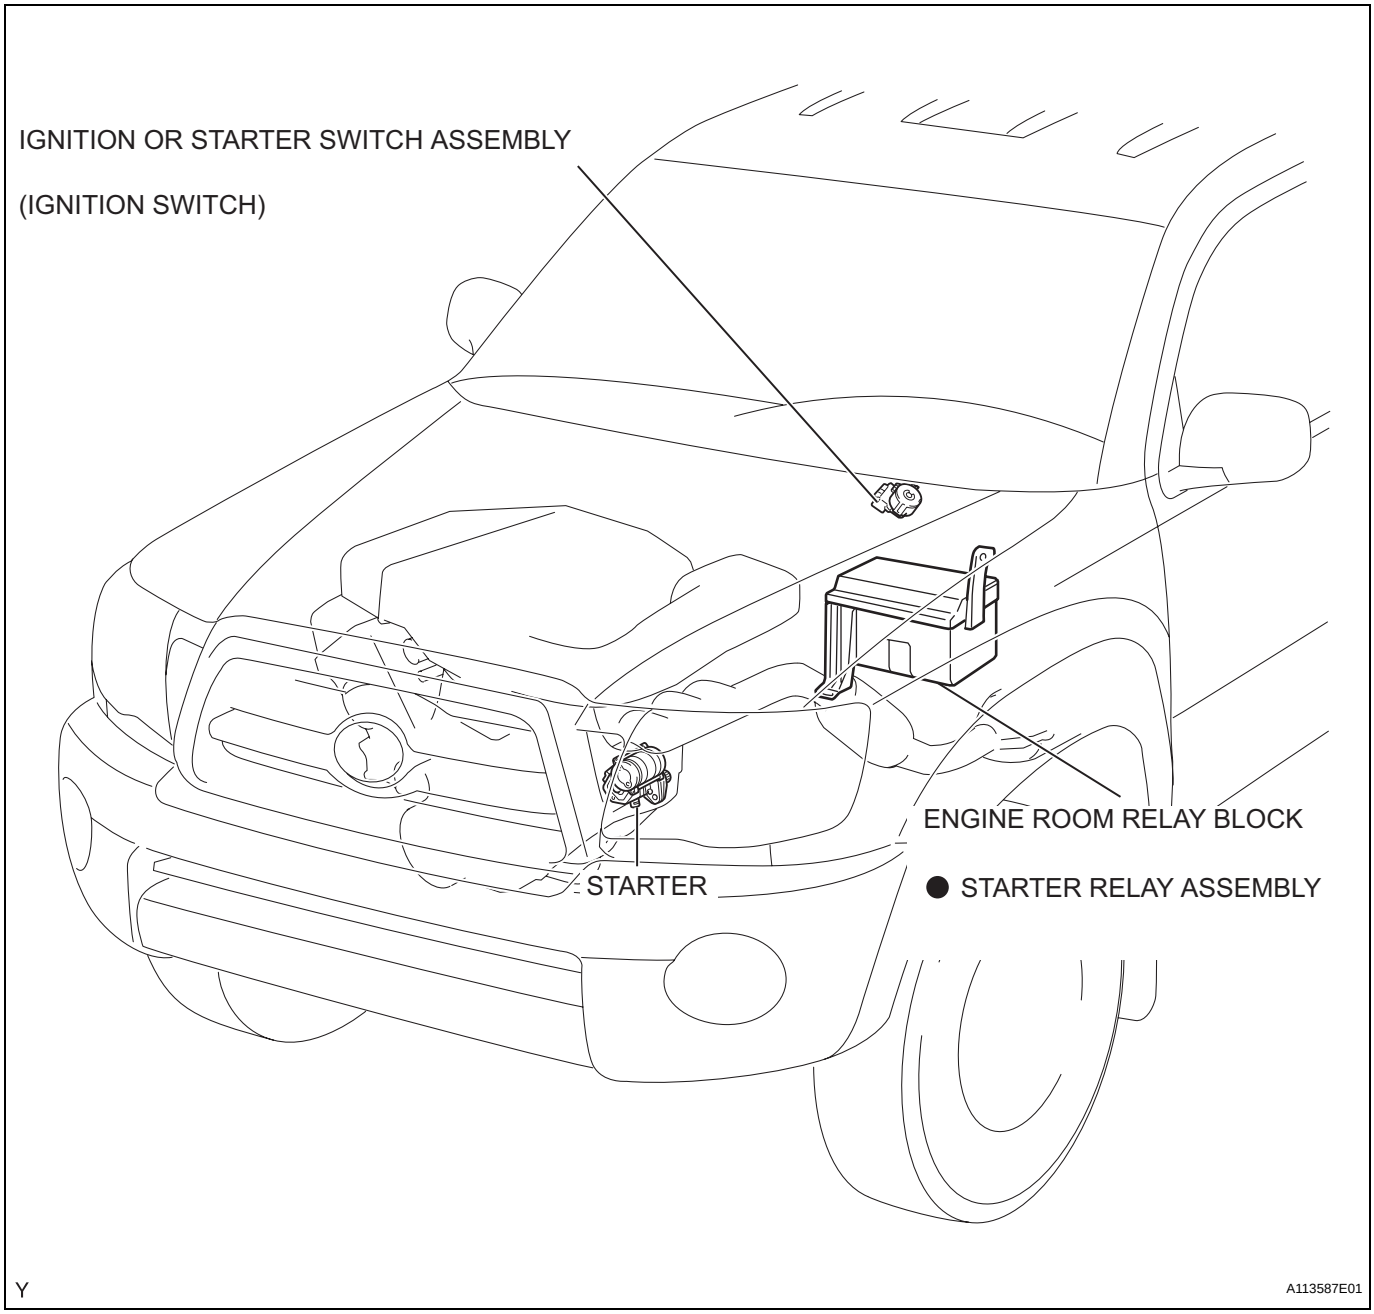


SYSTEM DIAGRAM

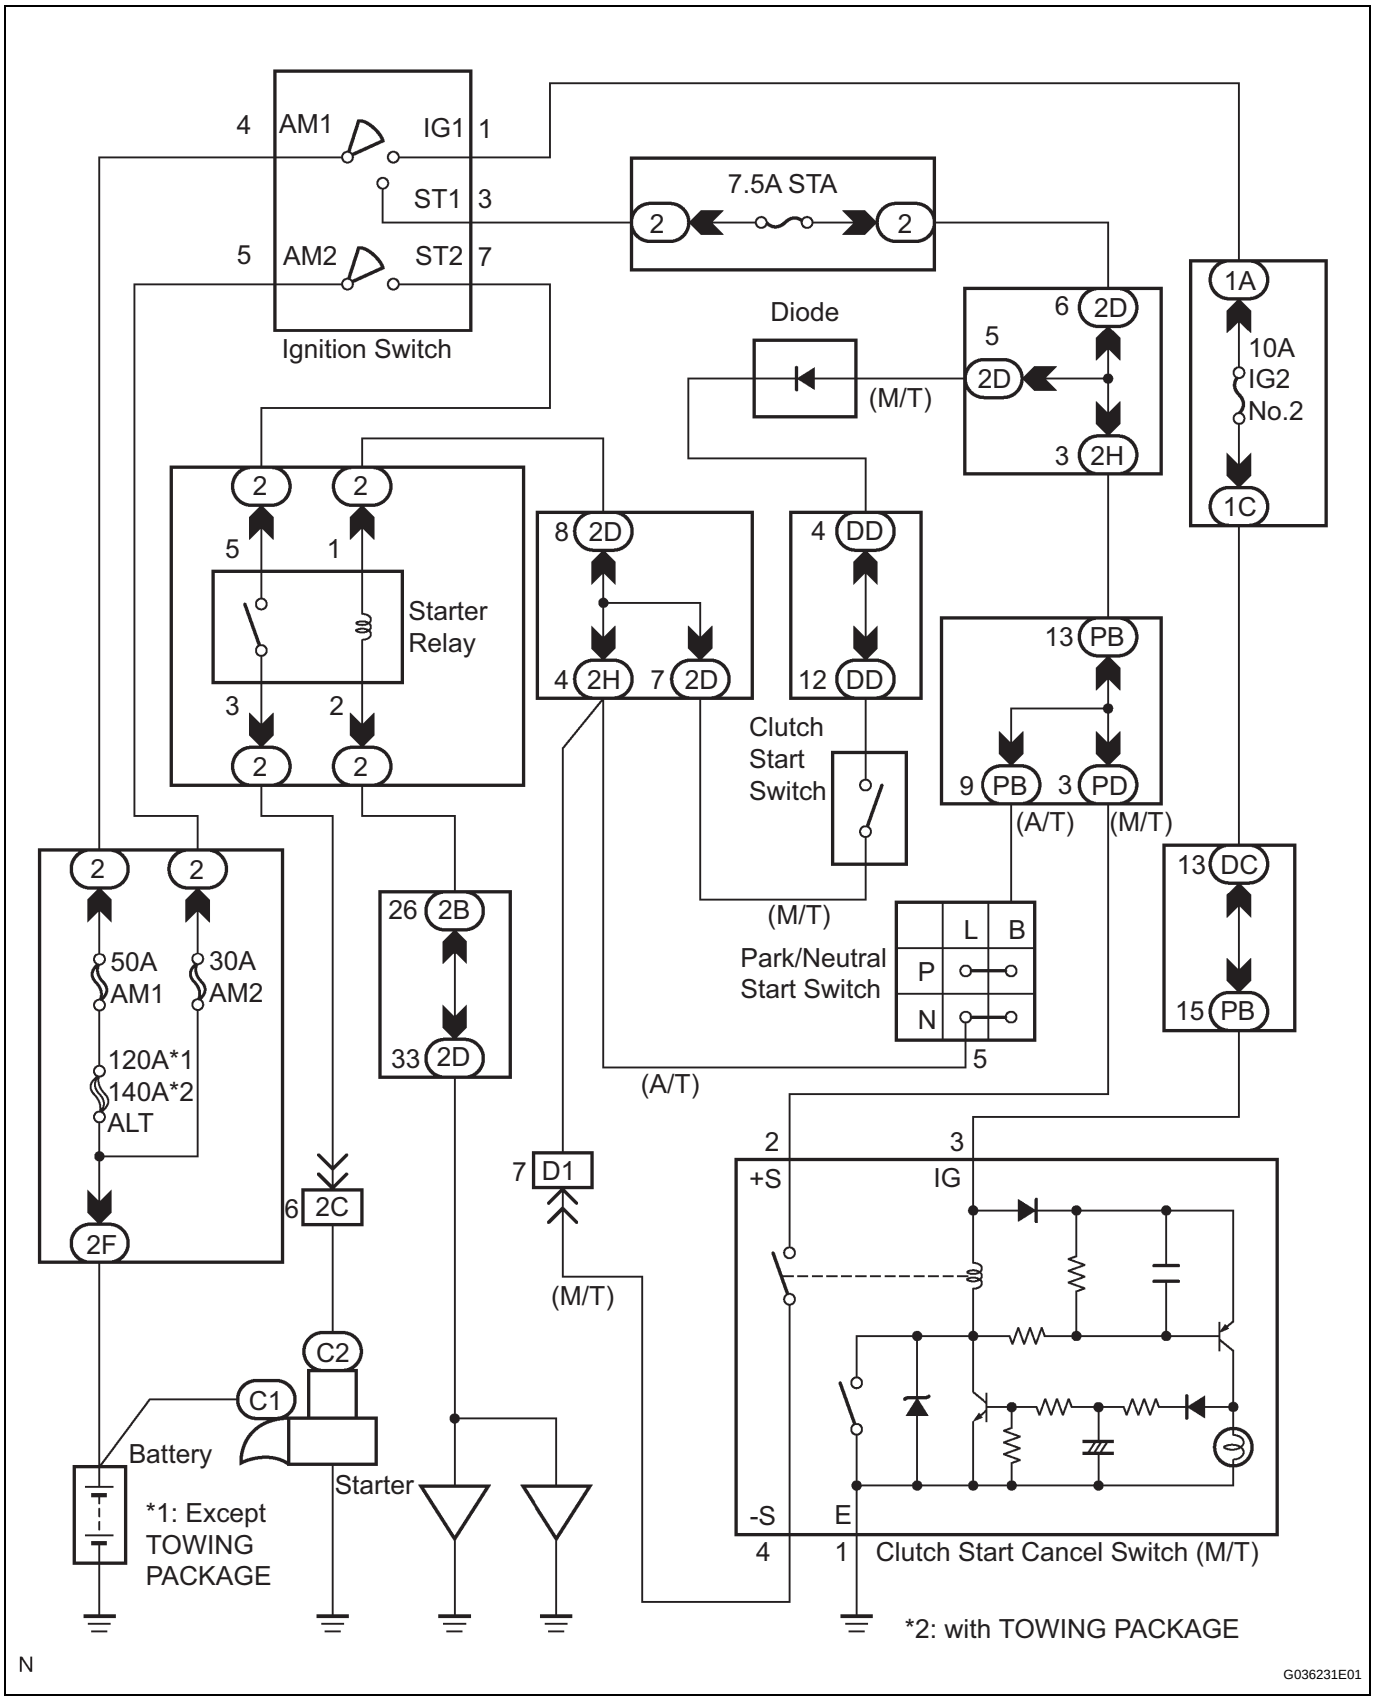


STARTING SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



ST

INSPECTION

1. INSPECT STARTER ASSEMBLY

NOTICE:

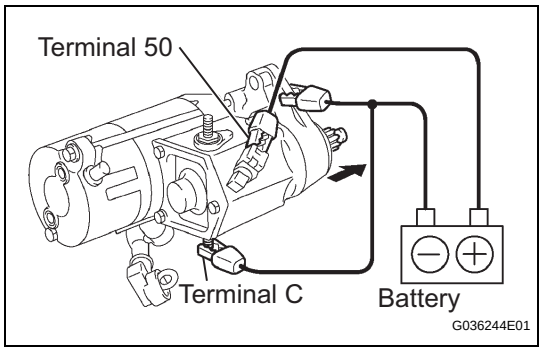
These tests must be performed within 3 to 5 seconds to prevent burnout of the coil.

(a) Perform the pull-in test.

(1) Remove the nut, then disconnect the lead wire from terminal C.

(2) Connect the battery to the starter magnetic switch as shown in the illustration. Check that the clutch pinion gear is extended.

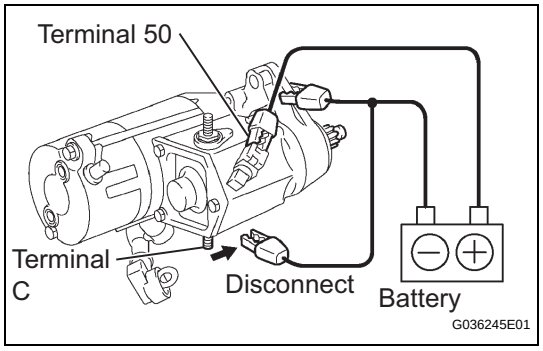
If the clutch pinion gear does not move, replace the magnet starter switch.



(b) Perform the hold-in test.

(1) Disconnect the negative (-) lead from terminal C. Check that the clutch pinion gear is extended.

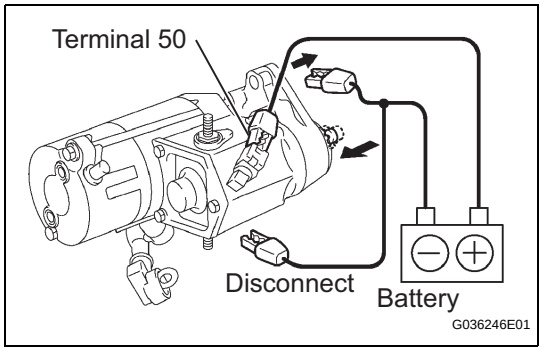
If the clutch pinion gear returns inward, replace the starter magnet starter switch.



(c) Check the operation.

(1) Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear returns.

If the clutch pinion gear does not return inward, replace the magnet starter switch.



(d) Perform the no-load performance test.

(1) Connect the lead wire to terminal C. Make sure that the lead is not grounded.

Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

(2) Clamp the starter in a vise.

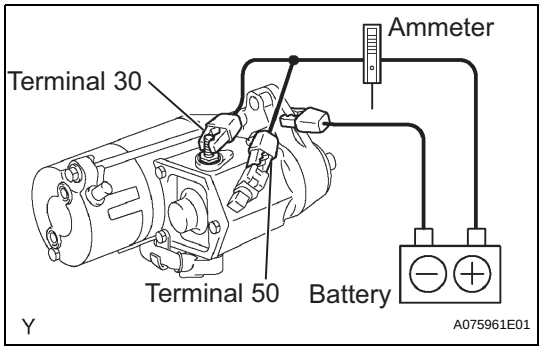
(3) Connect the battery and an ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Standard:

100 A or less at 11.5 V

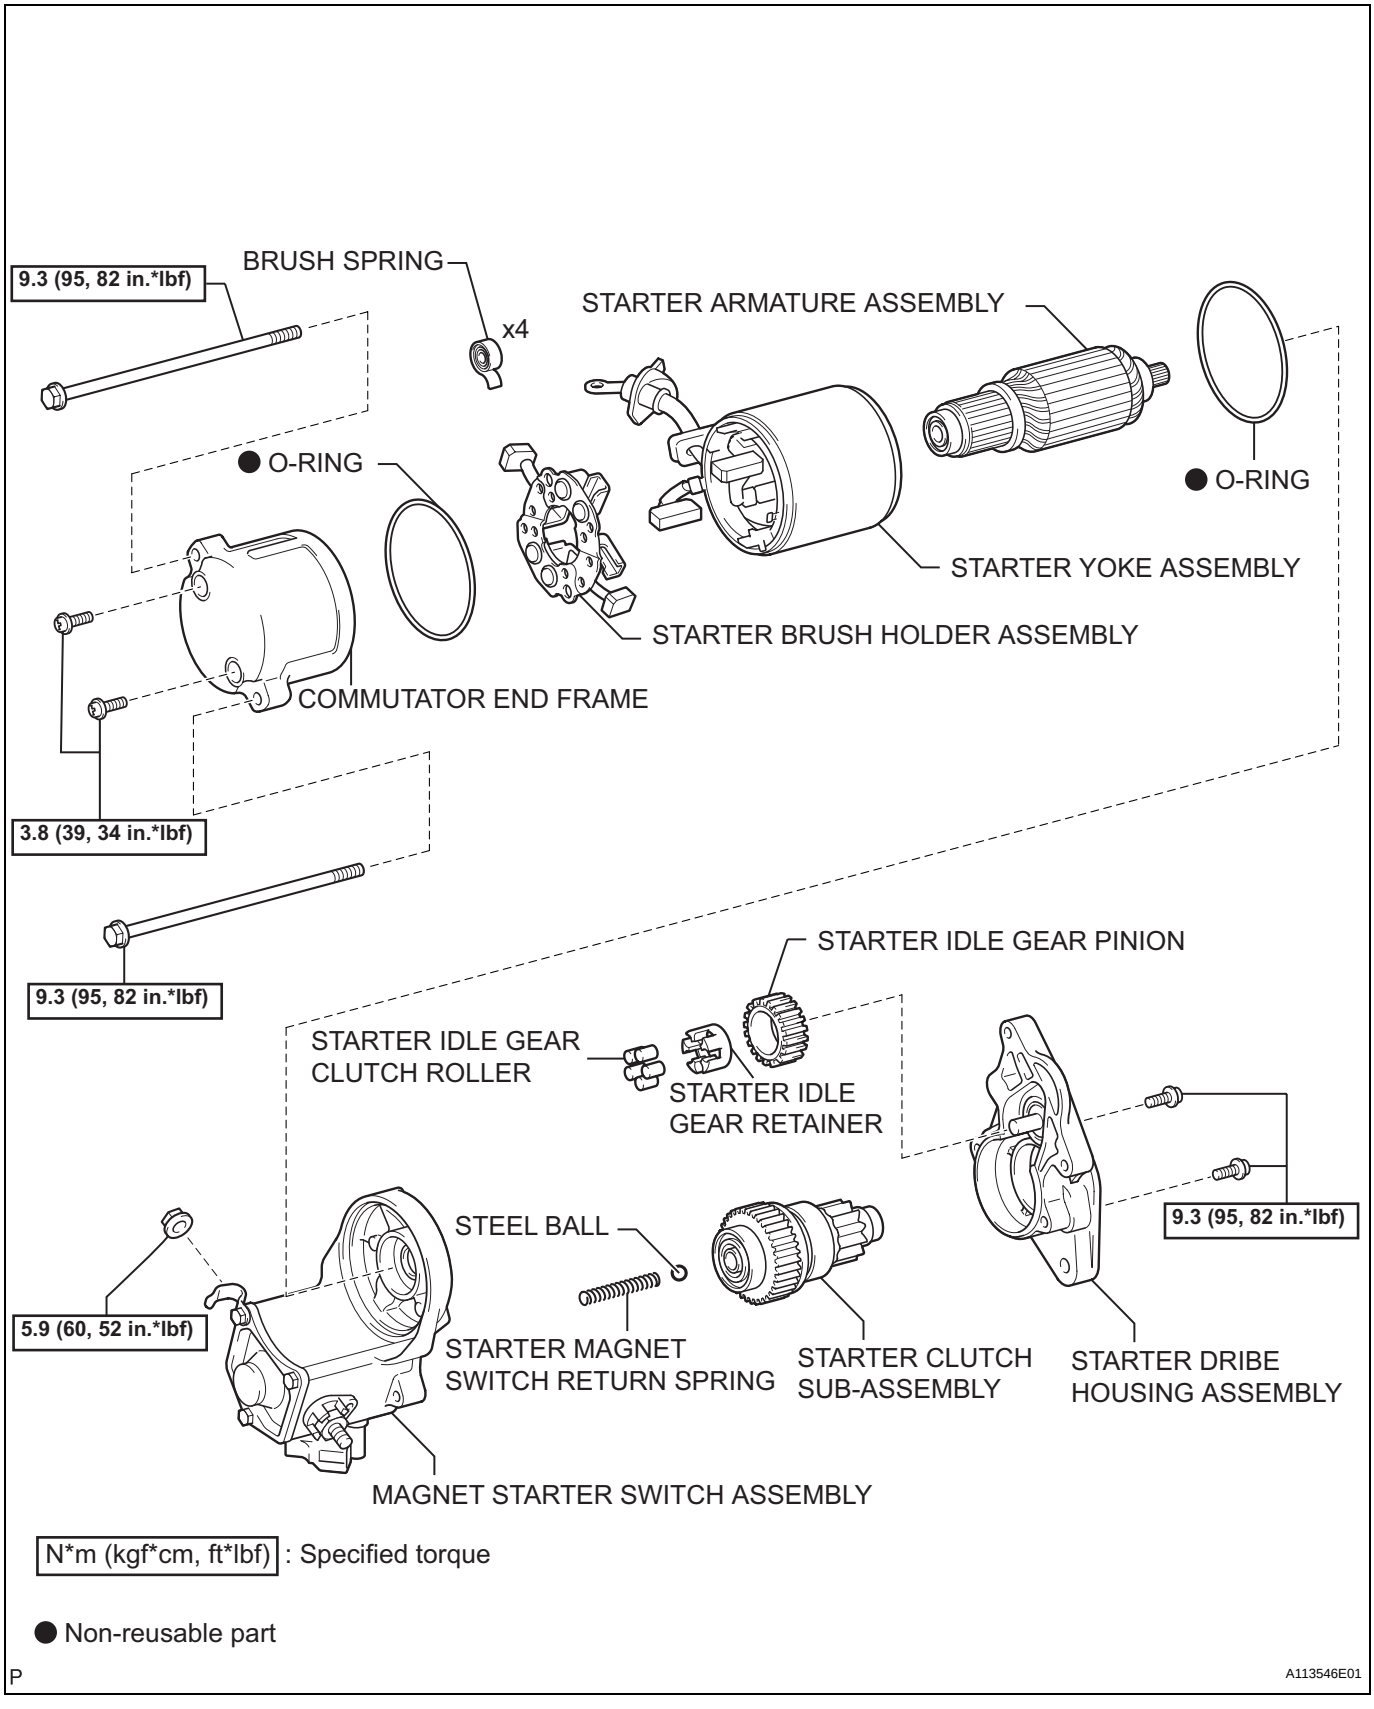
If the result is not as specified, replace the starter.



ST

STARTER (for 2WD and Pre-Runner)

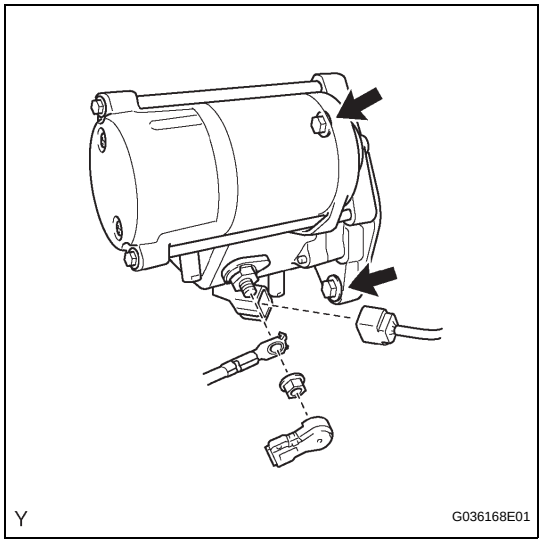
COMPONENTS



ST

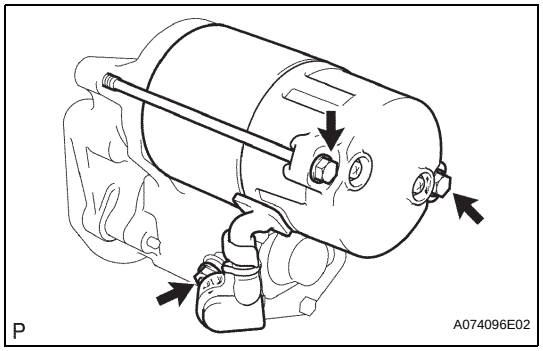
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY (for Off Road Package)**
   (a) Remove the 4 bolts, then remove the engine under cover.
3. **REMOVE NO.2 MANIFOLD STAY**
   (a) Remove the 3 bolts, then remove the manifold stay No. 2.
4. **SEPARATE WIRE HARNESS**
   (a) Remove the bolt, then separate the earth wire harness from the cylinder block.
5. **REMOVE STARTER ASSEMBLY**
   (a) Disconnect the terminal 50 connector from the starter assy.
   (b) Remove the nut, then disconnect the wire harness from terminal 30.
   (c) Remove the 2 bolts, then remove the starter assembly.

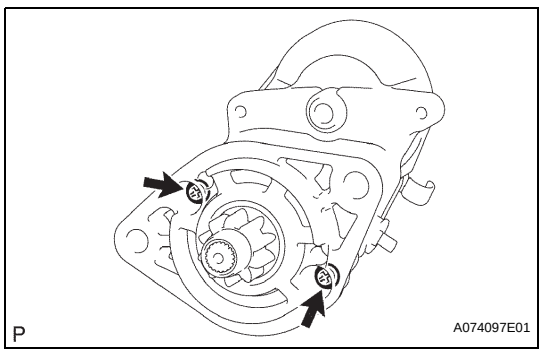


DISASSEMBLY

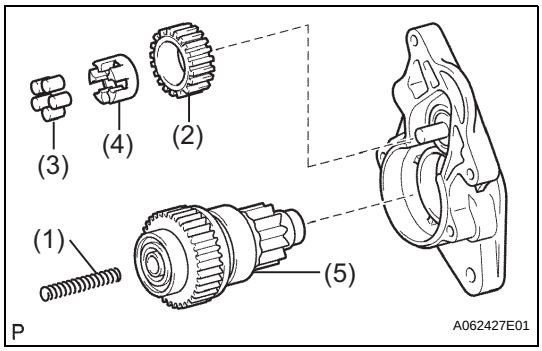
1. **REMOVE STARTER YOKE ASSEMBLY**
   (a) Remove the nut, then disconnect the lead wire from terminal C.
   (b) Remove the 2 through bolts.
   (c) Pull the starter yoke and the armature out together.
   (d) Remove the O-ring from the starter yoke.



2. **REMOVE MAGNET STARTER SWITCH ASSEMBLY**
   (a) Remove the 2 screws, then remove the magnet starter switch.

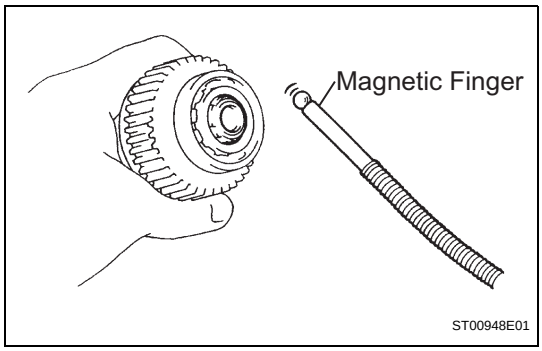


ST

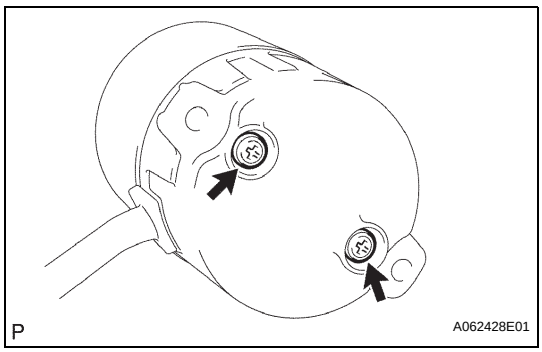


(b) Remove these parts from the starter drive housing.

(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch



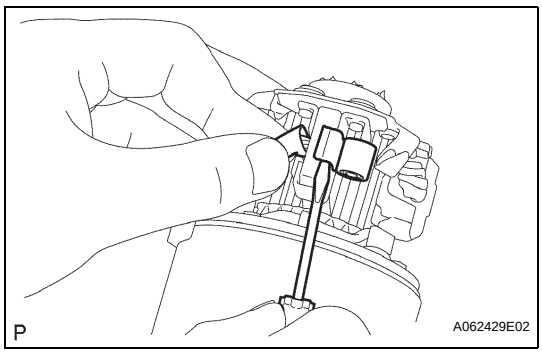
(c) Using a magnetic finger, remove the steel ball from the clutch shaft hole.



3. REMOVE STARTER BRUSH HOLDER ASSEMBLY

(a) Remove the 2 screws, then remove the end frame from the starter yoke.

(b) Remove the O-ring from the starter yoke.



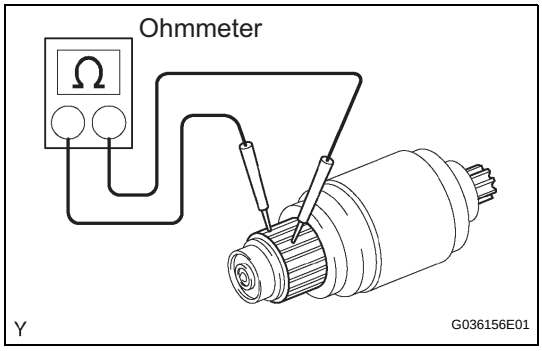
(c) Using a screwdriver, hold the spring back and disconnect the 4 brushes from the brush holder.

(d) Remove the brush holder from the armature.

4. REMOVE STARTER ARMATURE ASSEMBLY

ST

INSPECTION



1. INSPECT STARTER ARMATURE ASSEMBLY

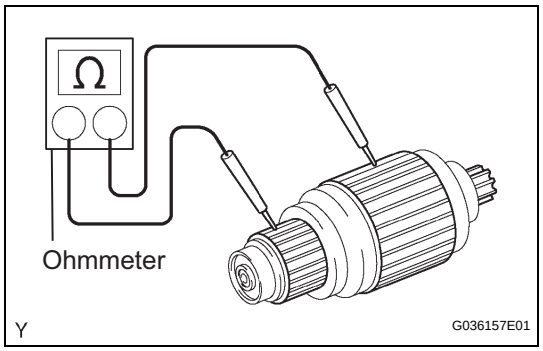
(a) Check the commutator for an open circuit.

(1) Using an ohmmeter, measure the resistance between the segments of the commutator.

Standard:

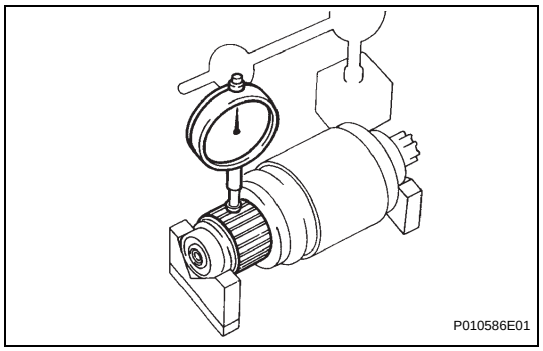
1 Ω or lower

If the result is not as specified, replace the starter armature.

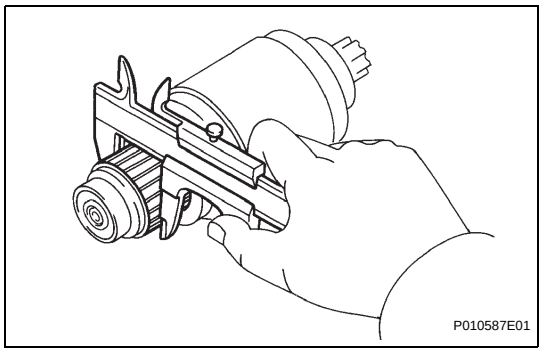


(b) Check the commutator for ground.
(1) Using an ohmmeter, measure the resistance between the commutator and armature coil core.
Standard:
10 kΩ or higher
If the result is not as specified, replace the starter armature.

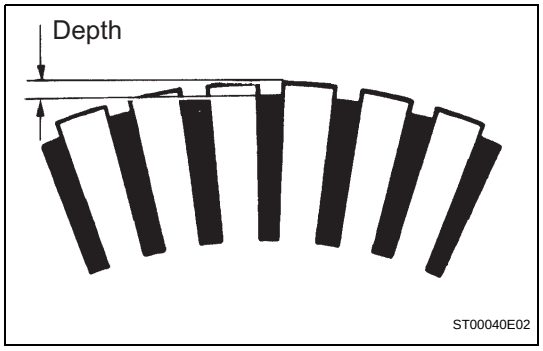
(c) Check whether the commutator surface is dirty or burnt.
If necessary, clean it with sandpaper (No. 400) or a lathe.



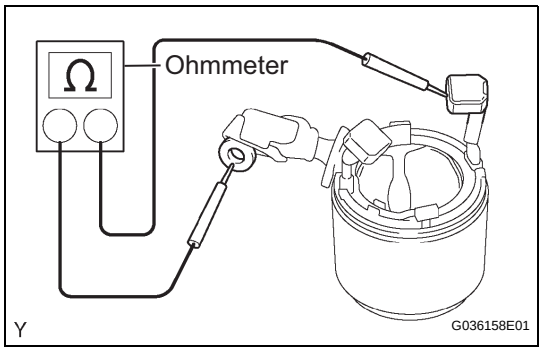
(d) Check the commutator for runout.
(1) Place the commutator on V-blocks.
(2) Using a dial gauge, measure the runout.
Maximum runout:
0.05 mm (0.0020 in.)
If the runout is greater than the maximum, correct it on a lathe.



(e) Using vernier calipers, measure the commutator diameter.
Standard diameter:
35.0 mm (1.378 in.)
Minimum diameter:
34.0 mm (1.339 in.)
If the diameter is less than the minimum, replace the armature.



(f) Check that the undercut portion between the segments is free of foreign objects. Measure its depth.
Standard undercut depth:
0.7 mm (0.028 in.)
Minimum undercut depth:
0.2 mm (0.008 in.)
If the undercut depth is less than the minimum, correct it with a hacksaw blade.



2. INSPECT STARTER YOKE ASSEMBLY

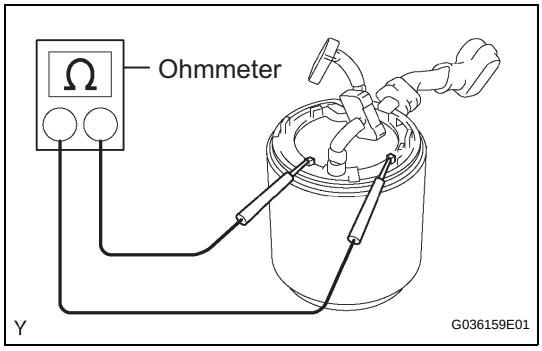
(a) Check the starter yoke for an open circuit.

(1) Using an ohmmeter, measure the resistance between the lead wire and brushes.

Standard:

1 Ω or lower

If the result is not as specified, replace the starter yoke.



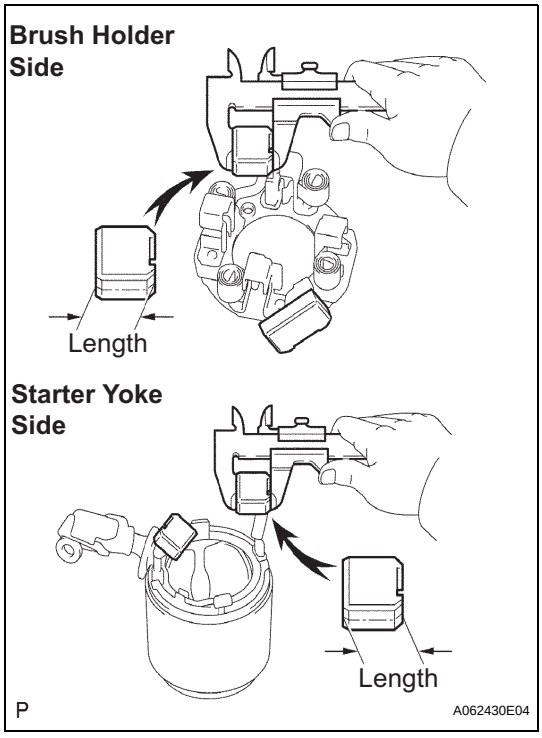
(b) Check the shunt coil for an open circuit.

(1) Using an ohmmeter, measure the resistance between shunt coil terminals A and B.

Standard:

1.5 to 1.9 Ω at 20°C (68°F)

If the result is not as specified, replace the starter yoke.



3. INSPECT BRUSH

(a) Check the brush length.

(1) Using vernier calipers, measure the brush length.

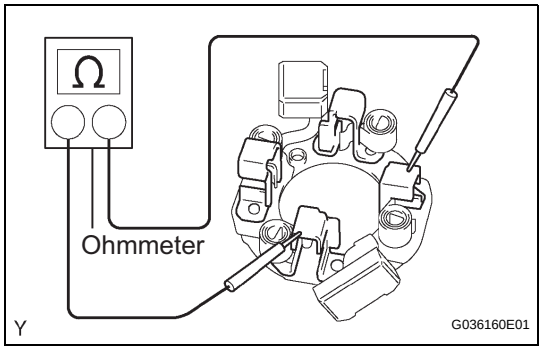
Standard length:

15.0 mm (0.591 in.)

Minimum length:

9.0 mm (0.354 in.)

If the length is less than the minimum, replace the brush holder and starter yoke.



4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

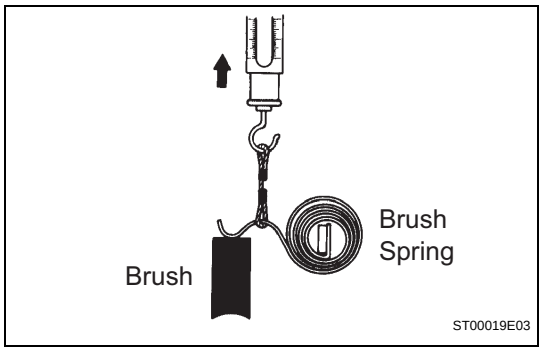
(a) Check the blush holder insulation.

(1) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brush holders.

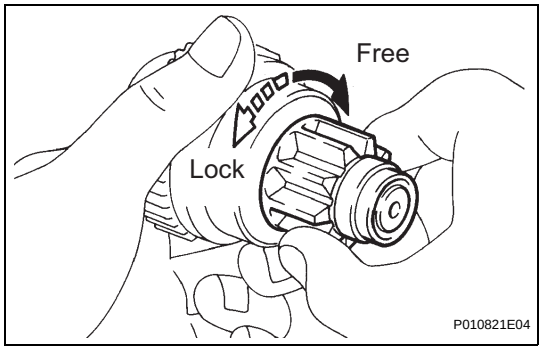
Standard:

10 kΩ or higher

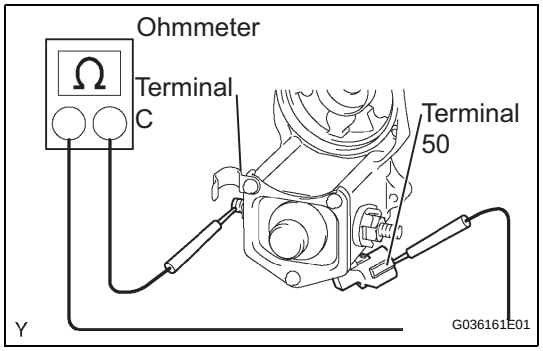
If the result is not as specified, replace the brush holder.



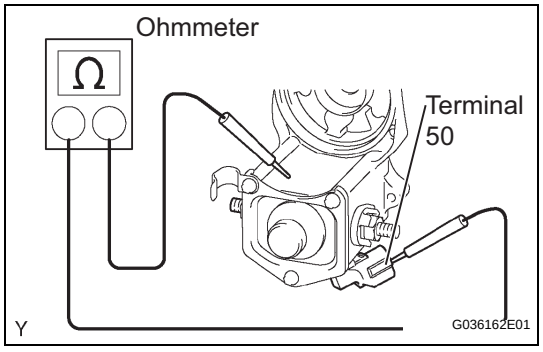
(b) Check the brush spring load.
(1) Take the pull scale reading as soon as the brush spring separates from the brush.
Standard spring load:
21.5 to 27.5 N (2.2 to 2.8 kgf, 4.8 to 6.2 lbf)
Minimum spring load:
12.7 N (1.3 kgf, 2.9 lbf)
If the spring load is less than the minimum, replace the brush holder.



5. INSPECT STARTER CLUTCH SUB-ASSEMBLY
(a) Check the clutch pinion gear.
(1) Hold the starter clutch, rotate the pinion gear clockwise and check that it turns freely.
(2) Try to rotate the pinion gear counterclockwise and check that it locks.
If necessary, replace the starter clutch.



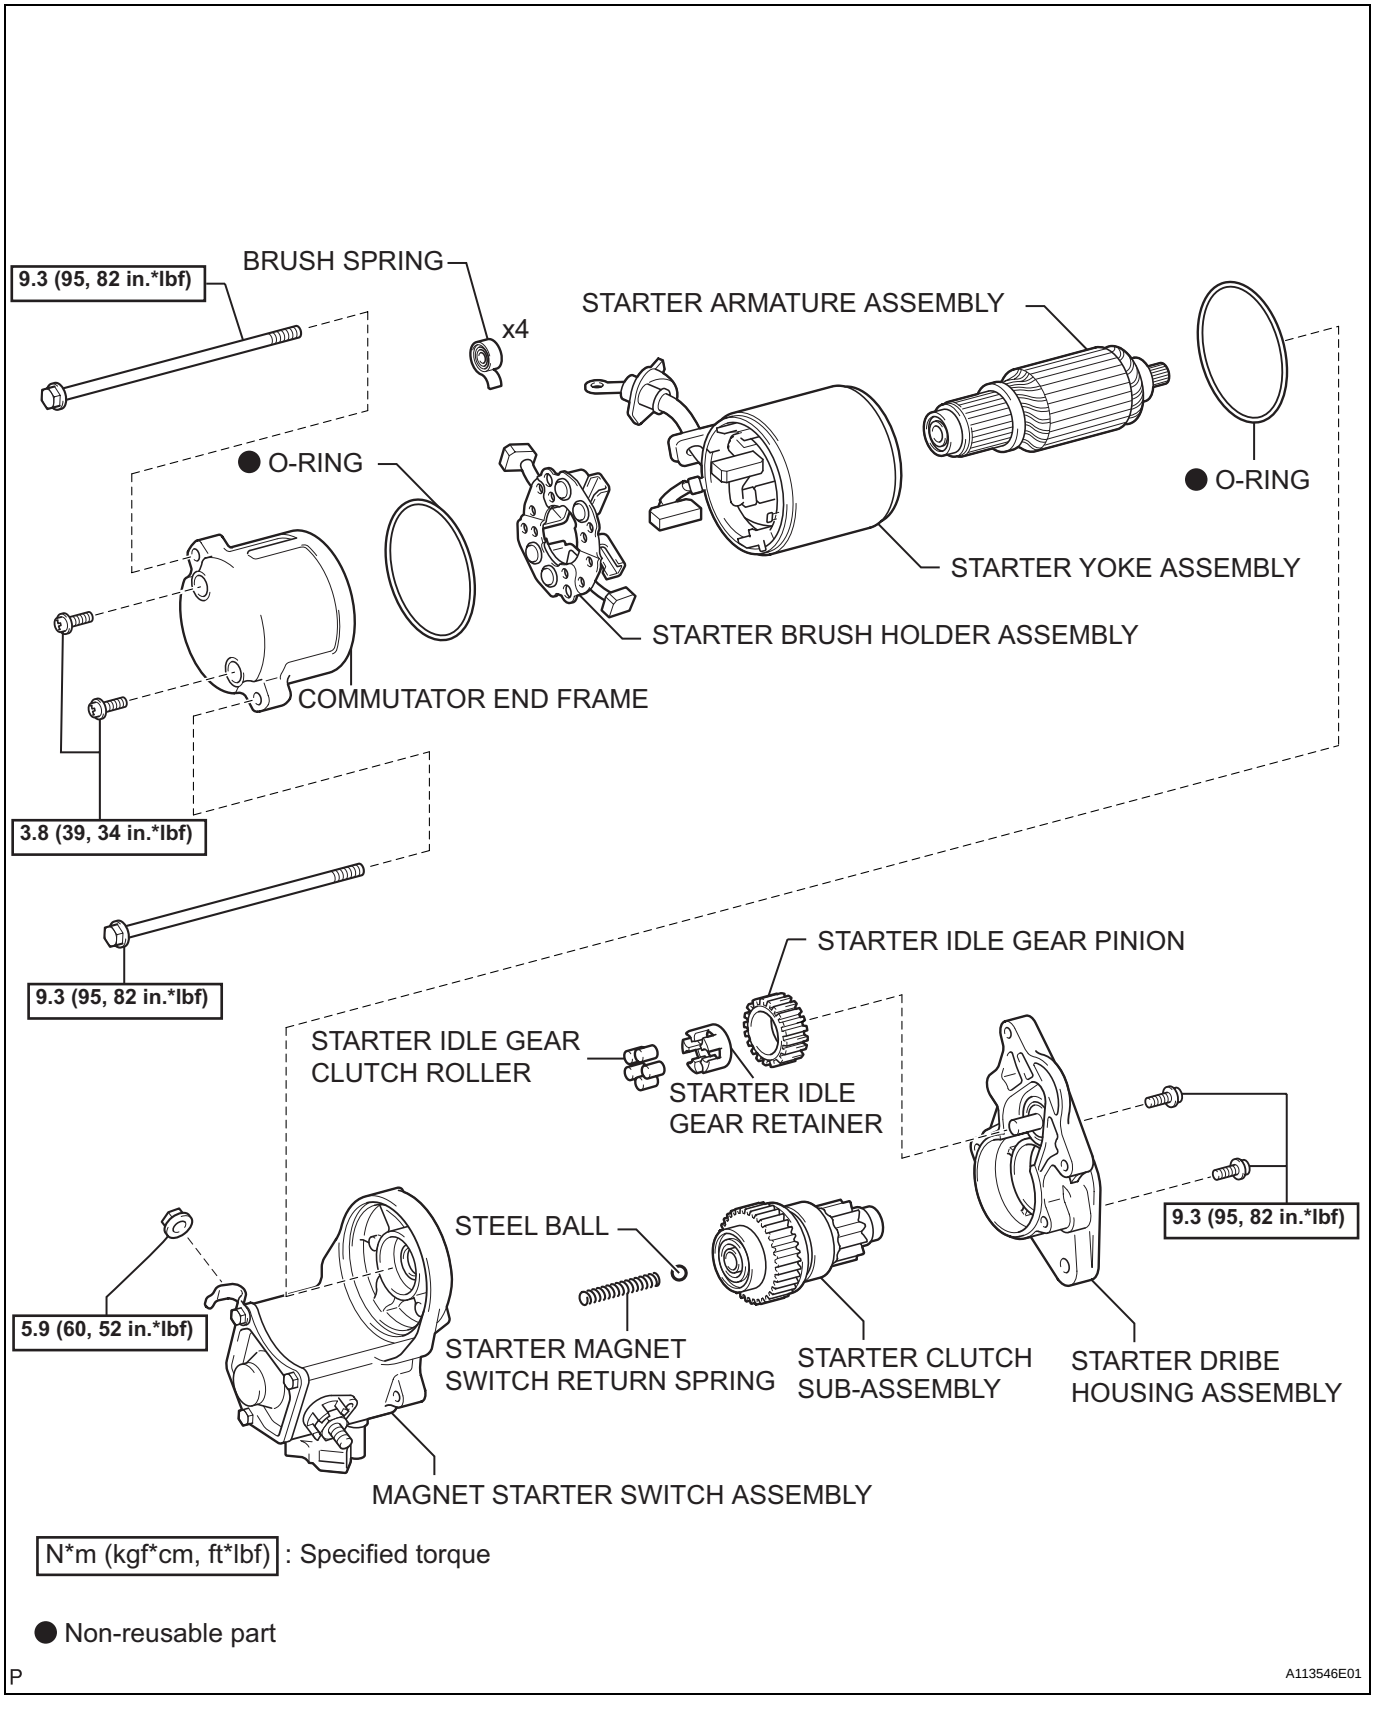
6. INSPECT MAGNET STARTER SWITCH ASSEMBLY
(a) Check the pull-in coil for an open circuit.
(1) Using an ohmmeter, measure the resistance between terminals 50 and C.
Standard:
1 Ω or lower
If the result is not as specified, replace the magnet starter switch.



(b) Check the holding coil for an open circuit.
(1) Using an ohmmeter, measure the resistance between terminal 50 and the switch body.
Standard:
2 Ω or lower
If the result is not as specified, replace the magnet starter switch.

STARTER (for 4WD)

COMPONENTS



ST

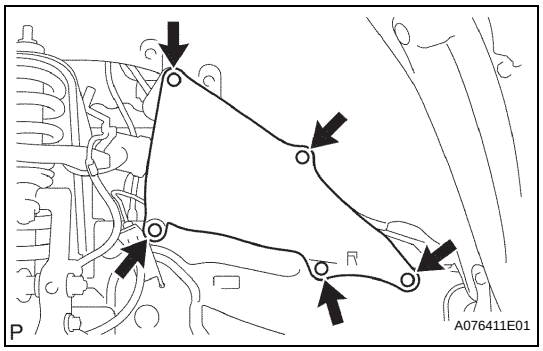
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

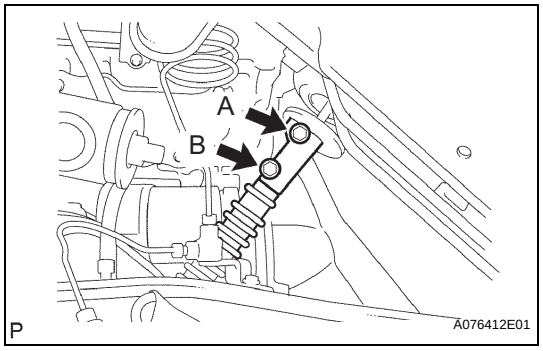
2. **REMOVE NO.1 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts, then remove the engine under cover.

3. **REMOVE NO.2 EXHAUST FRONT PIPE ASSEMBLY**
   (See page EX-3)

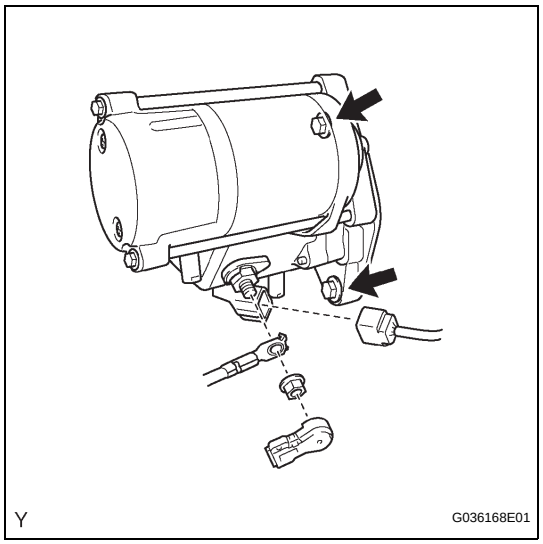
4. **REMOVE FRONT FENDER SEAL LH**
   (a) Remove the 5 clips, then remove the front fender splash shield rear LH.



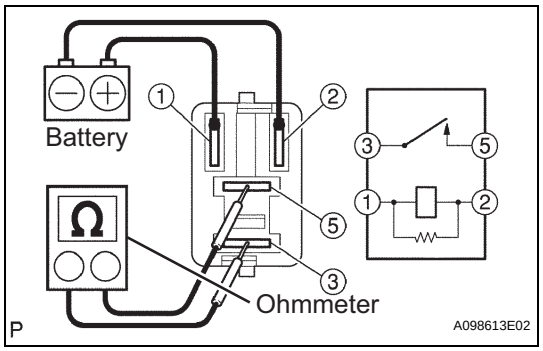
5. **REMOVE NO.2 STEERING INTERMEDIATE SHAFT**
   (a) Loosen bolt A and remove bolt B, then separate the steering intermediate shaft No. 2



6. **REMOVE STARTER ASSEMBLY**
   (a) Disconnect the terminal 50 connector from the starter assembly.
   (b) Remove the nut, then remove the wire harness from terminal 30.
   (c) Remove the 2 bolts, then remove the starter assembly.



ST



STARTER RELAY

INSPECTION

1. INSPECT STARTER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the starter relay.

IGNITION SWITCH

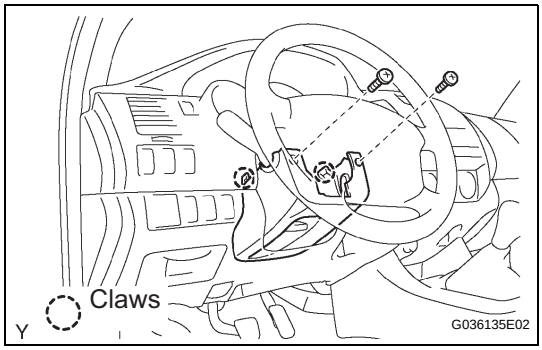
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STEERING COLUMN COVER LWR

(a) Remove the 2 screws.

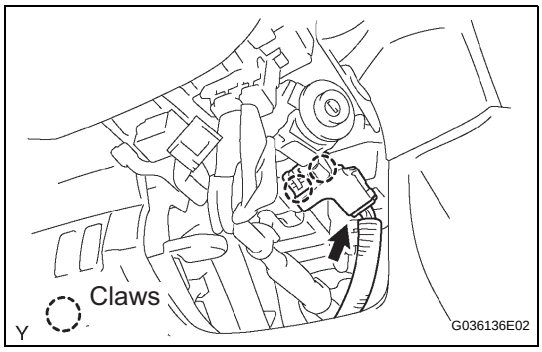
(b) Disengage the 2 claws and remove the steering column cover LWR.



3. REMOVE IGNITION SWITCH

(a) Disconnect the connector.

(b) Disengage the 2 clamps, then remove the ignition switch.



INSPECTION

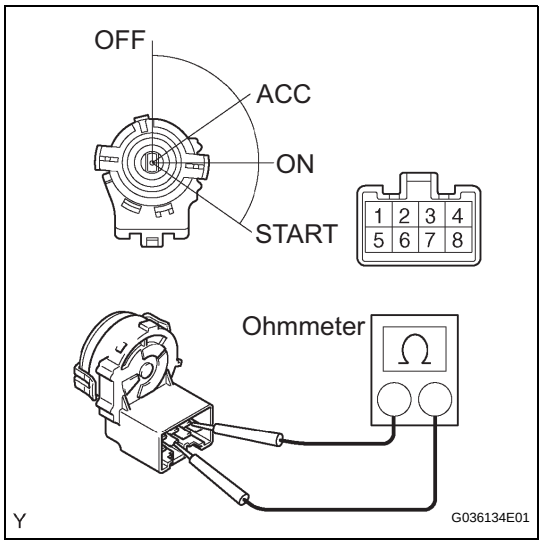
1. INSPECT IGNITION SWITCH

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Switch Condition	Switch Condition	Specified Condition
LOCK	-	10 kΩ or higher
ACC	1 (AM1)-3 (ACC)	Below 1 Ω
ON	1 (AM1) - 3 (ACC) - 4 (IG1) 7 (IG2) - 8 (AM2)	Below 1 Ω
START	1 (AM1) - 2 (ST1) - 4 (IG1) 6 (ST2) - 7 (IG2) - 8 (AM2)	Below 1 Ω



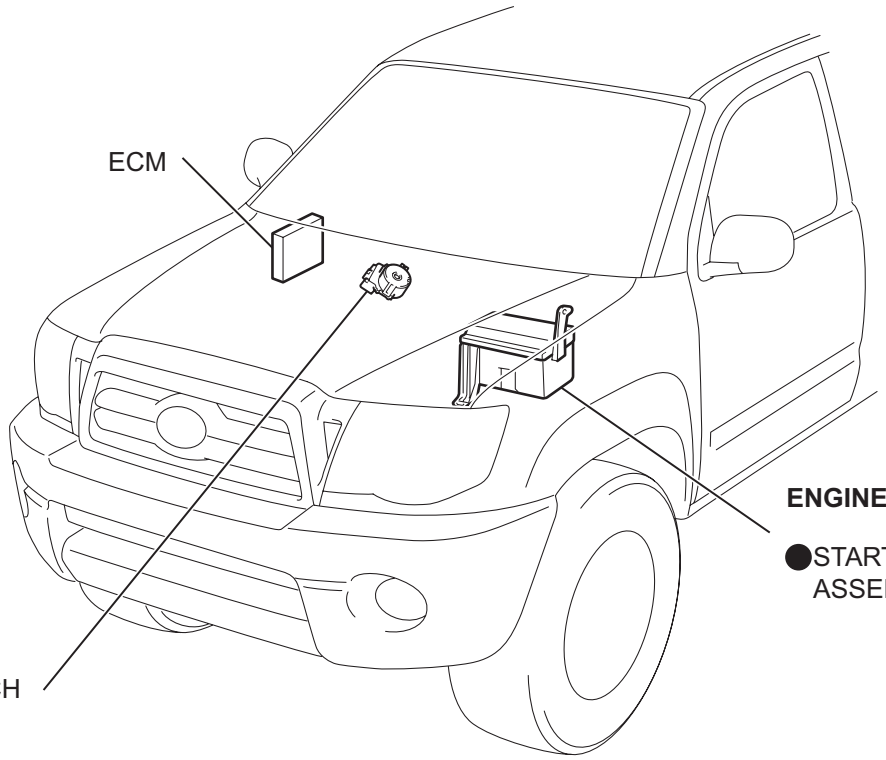
If the result is not as specified, replace the ignition switch.

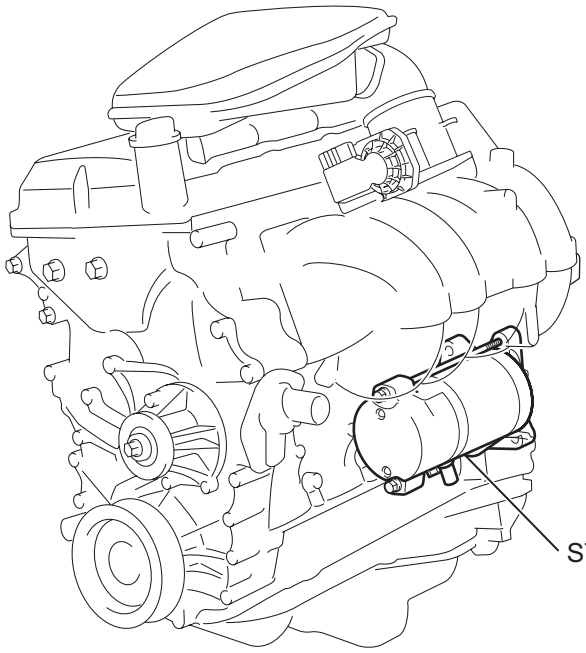
INSTALLATION

1. **INSTALL IGNITION SWITCH**
2. **INSTALL STEERING COLUMN COVER LWR**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

STARTING SYSTEM

PARTS LOCATION

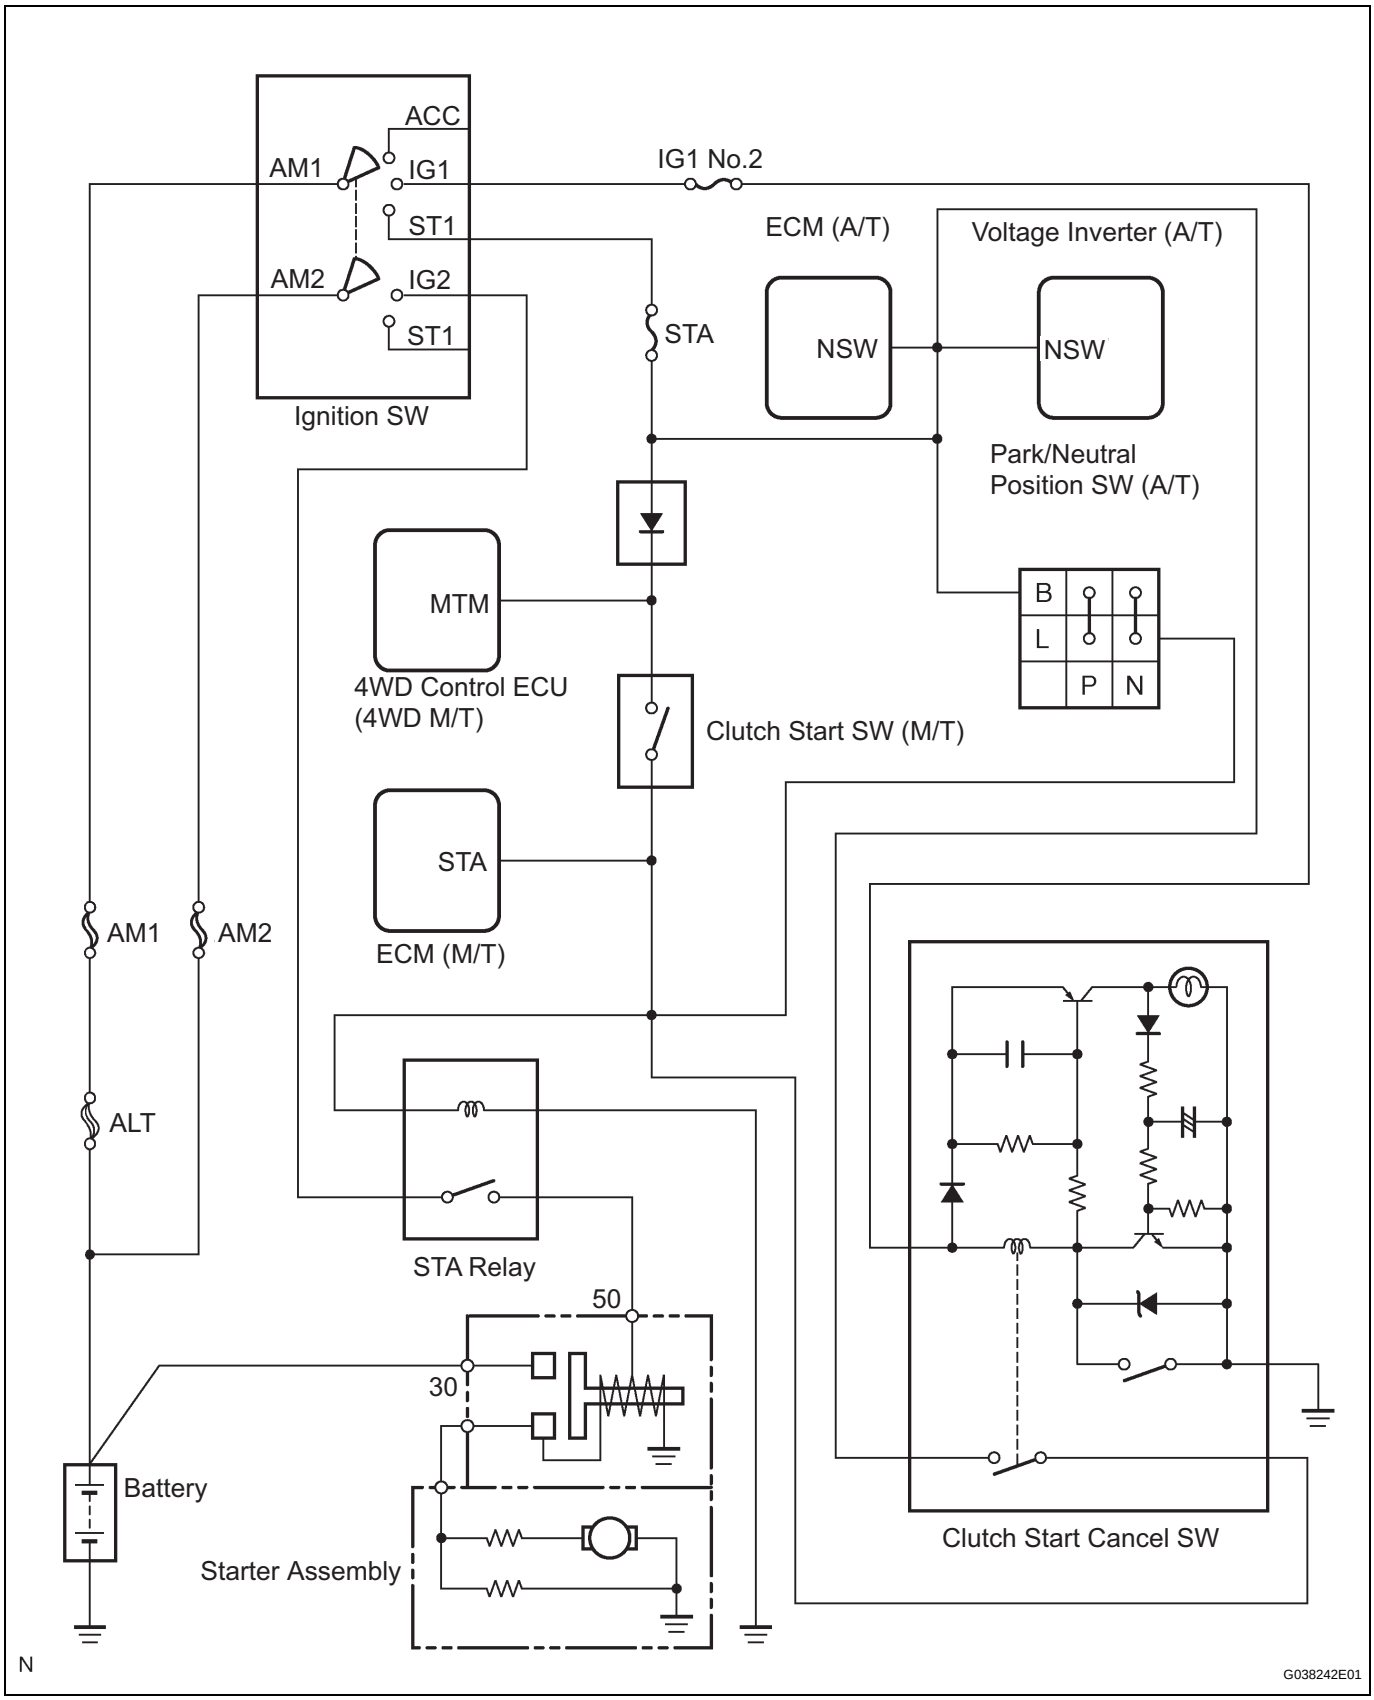




T

A113629E01

SYSTEM DIAGRAM



ST

INSPECTION

1. INSPECT STARTER ASSEMBLY

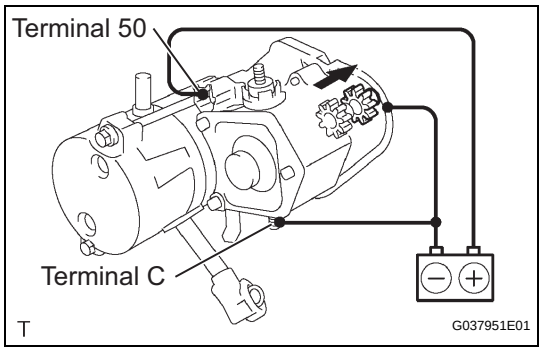
NOTICE:

These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Perform the pull-in test.

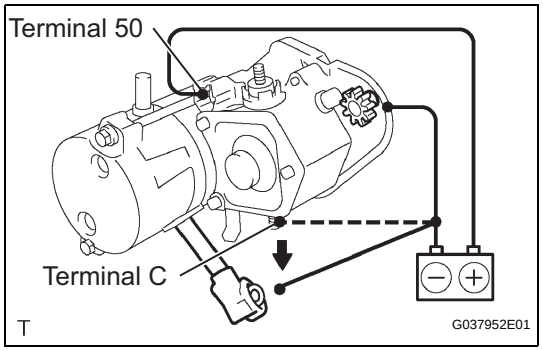
(1) Disconnect the field coil lead wire from terminal C.

(2) Connect the battery to the magnetic switch as shown in the illustration. Check that the clutch pinion gear protrudes.



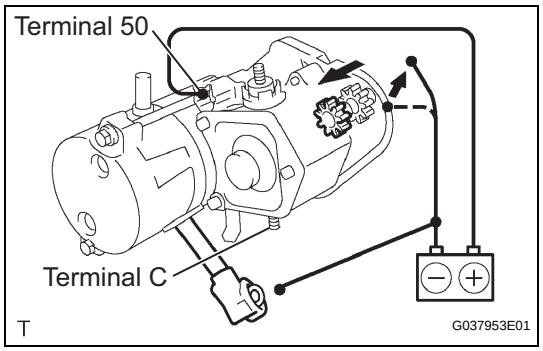
(b) Perform the hold-in test.

(1) Disconnect the negative (-) lead from terminal C with the above condition (a) being sustained. Check that the pinion gear remains extended.



(c) Check the operation.

(1) Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear returns inward.



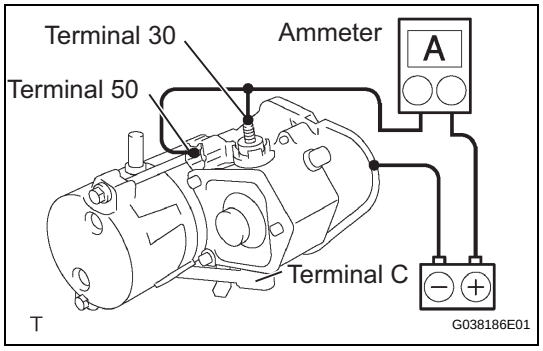
(d) Perform the operation test without any load.

(1) Connect the field coil lead wire to terminal C.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

(2) Clamp the starter in a vise.

(3) Connect the battery and ammeter to the starter as shown in the illustration.

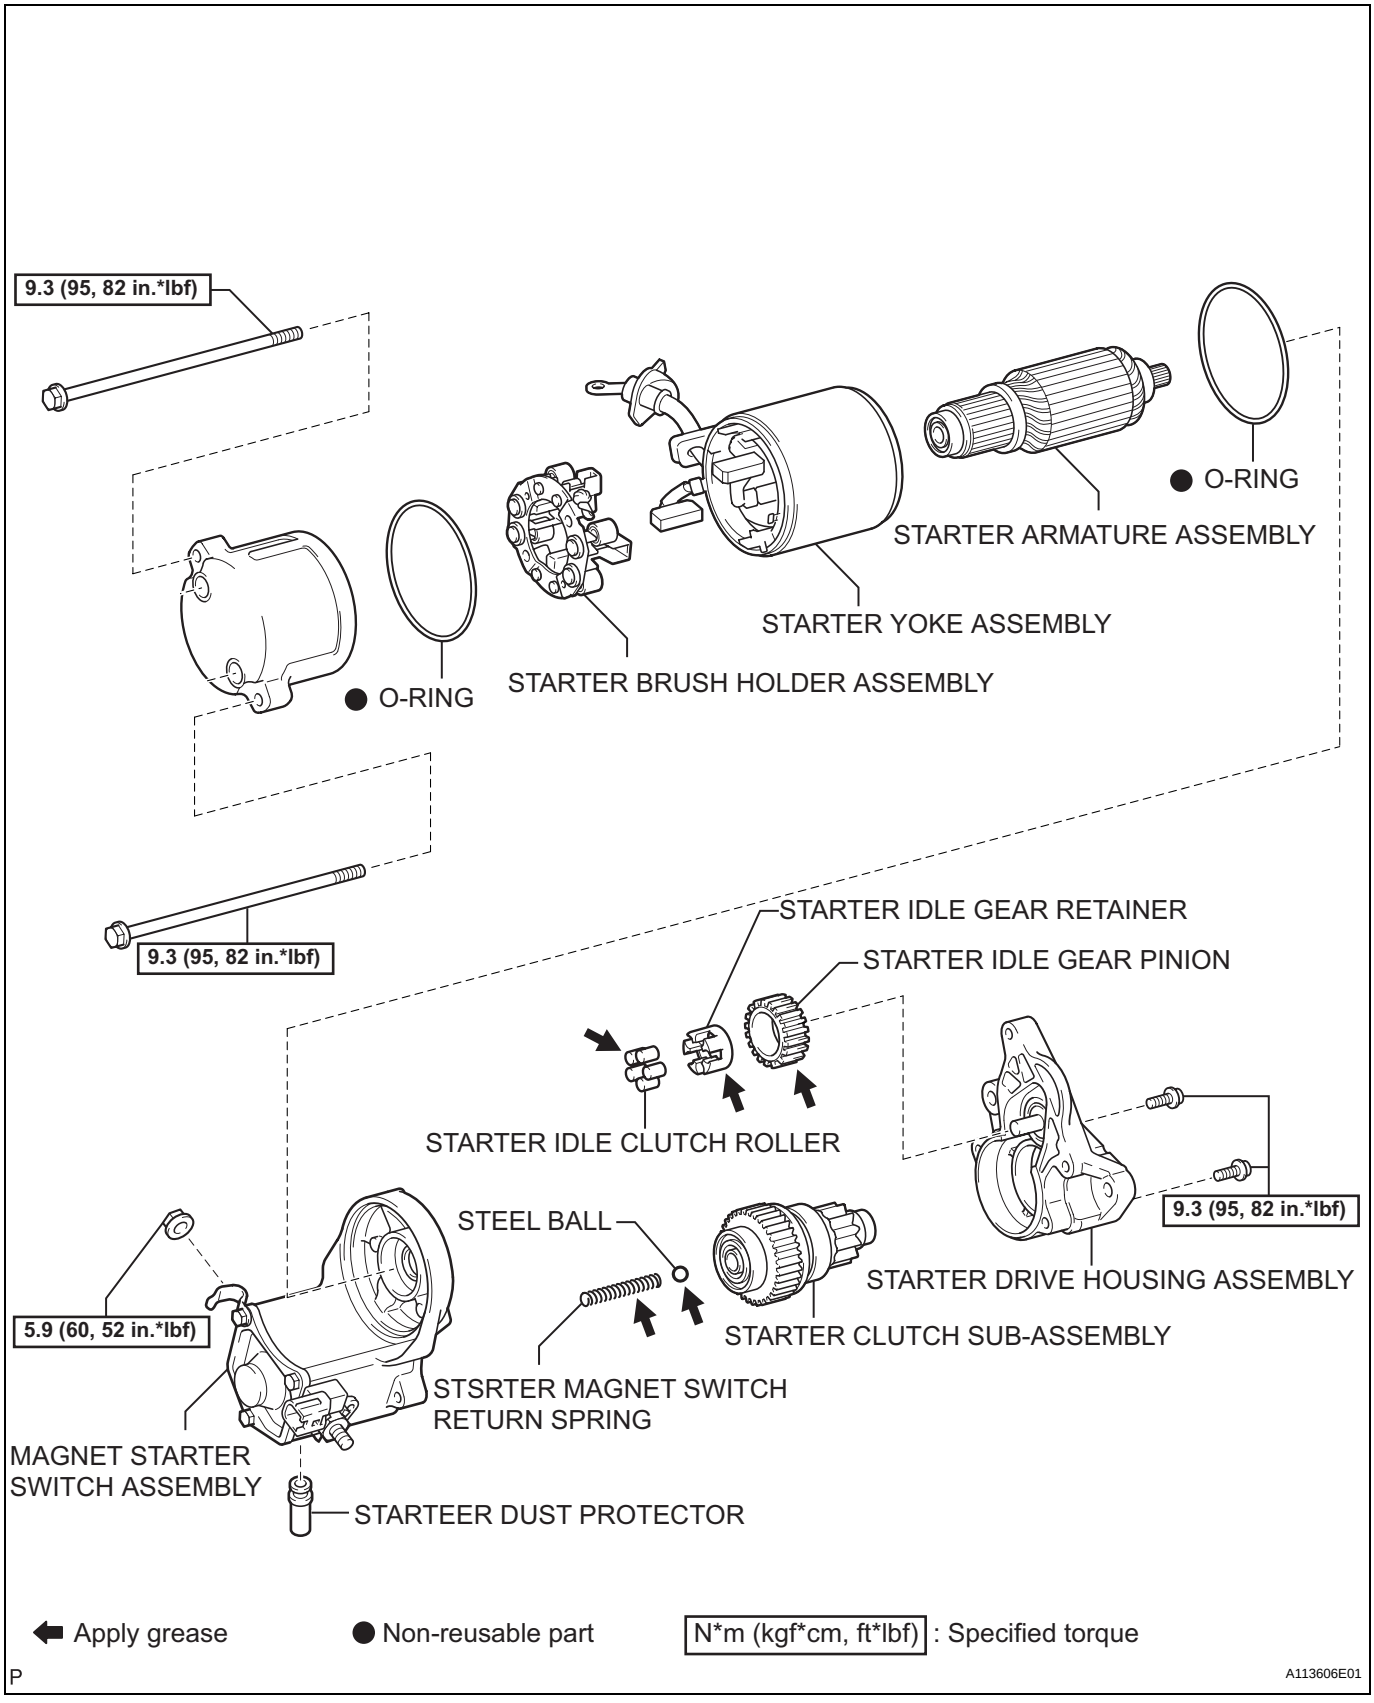
(4) Check that the ammeter indicates the specified current.
Specified current:
100 A or less at 11.5 V



ST

STARTER

COMPONENTS



ST

REMOVAL

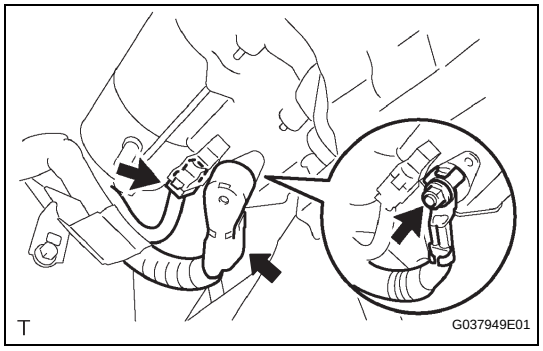
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STARTER ASSEMBLY

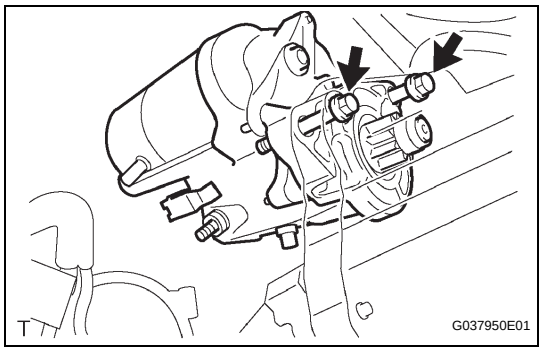
(a) Remove the terminal cap.

(b) Remove the nut, then remove the starter wire harness.

(c) Disconnect the starter connector.



(d) Remove the 2 bolts, then remove the starter.



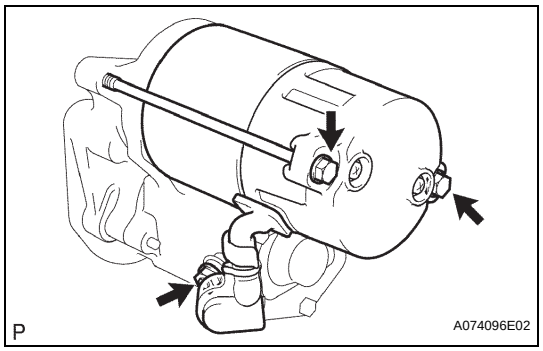
DISASSEMBLY

1. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the nut, then disconnect the lead wire from terminal C.

(b) Remove the 2 through bolts, then pull the starter yoke and starter commutator end frame out together.

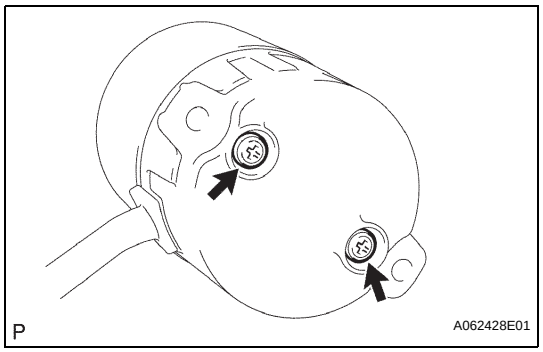
(c) Remove the O-ring from the starter yoke.



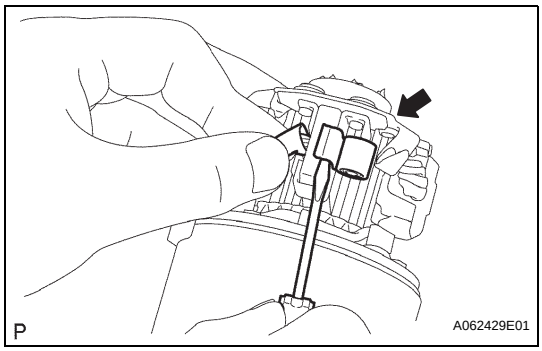
2. REMOVE STARTER BRUSH HOLDER ASSEMBLY

(a) Remove the 2 screws, then remove the end cover from the starter yoke.

(b) Remove the O-ring from the starter yoke.

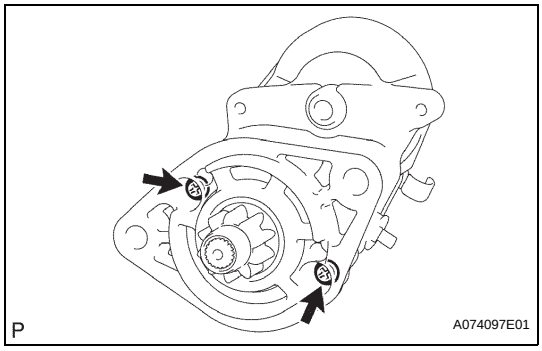


ST

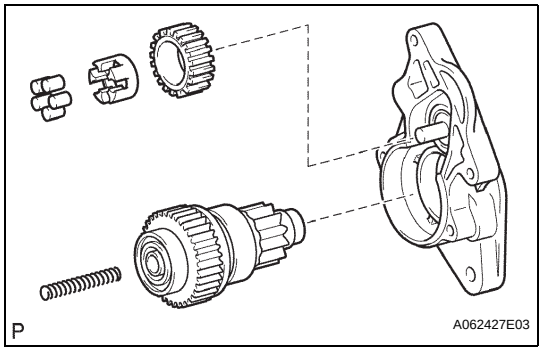


(c) Using a screwdriver, hold the spring back and disconnect the 4 brushes from the brush holder.
(d) Remove the brush holder from the starter yoke.

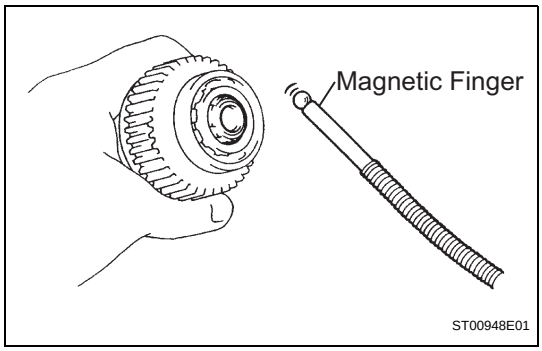
3. REMOVE STARTER ARMATURE ASSEMBLY
NOTICE:
Turn the armature and check that it turns freely.



4. REMOVE STARTER CLUTCH SUB-ASSEMBLY
(a) Remove the 2 screws, then remove the starter drive housing.
NOTICE:
Do not drop the starter idle gear pinion, starter idle gear retainer or starter idle gear clutch roller.

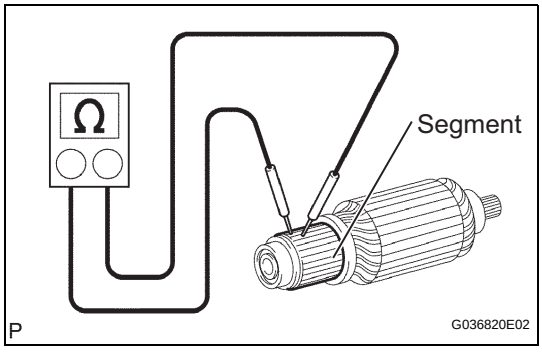


(b) Remove the starter idle gear pinion from the starter drive housing.
(c) Remove the starter idle gear retainer from the starter drive housing.
(d) Remove the starter idle gear clutch roller from the starter drive housing.
(e) Remove the starter clutch from the starter drive housing.
(f) Remove the starter magnet switch return spring from the starter drive housing.



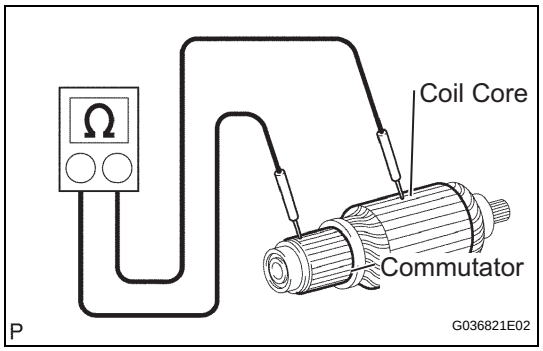
(g) Using a magnetic finger, remove the steel ball from the clutch shaft hole.

ST



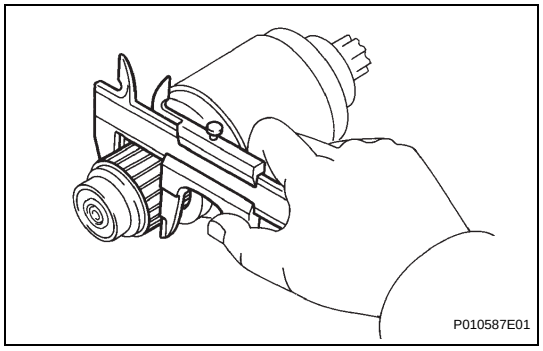
INSPECTION

1. INSPECT STARTER ARMATURE ASSEMBLY
(a) Check the resistance.
(1) Using an ohmmeter, check the resistance between the segments of the commutator.
Standard:
1Ω or lower
If the result is not as specified, replace the starter armature.

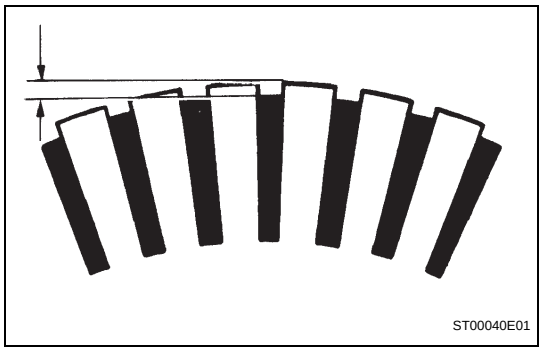


(b) Check the resistance.
(1) Using an ohmmeter, check the resistance between the commutator and armature coil core.
Standard:
10 kΩor higher
If the result is not as specified, replace the starter armature.

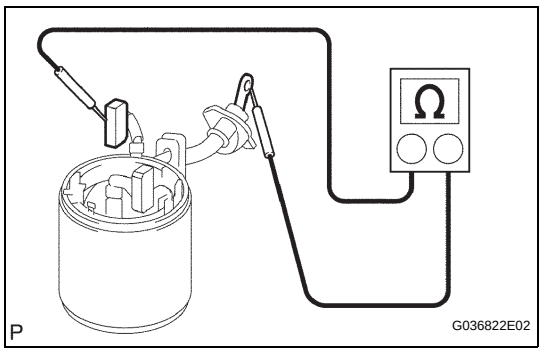
(c) Check the commutator surface for dirt and burn.
If the surface is dirty or burnt, smooth the surface with 400- grit sandpaper or a lathe.



(d) Check the commutator diameter.
(1) Using vernier calipers, measure the commutator diameter.
Standard diameter:
35.0 mm (1.378in.)
Minimum diameter:
34.0 mm (1.339in.)
If the diameter is less than the minimum, replace the armature.

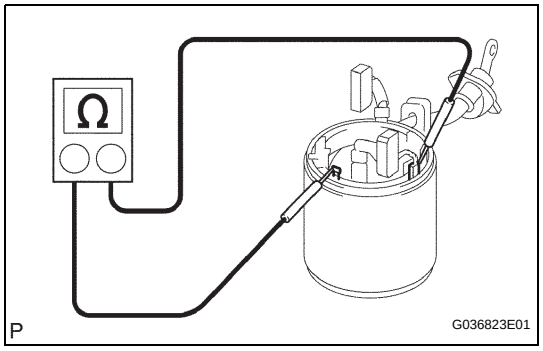


(e) Check the undercut depth.
(1) Check that the undercut portion between the segments is free of foreign objects and measure its depth.
Standard undercut depth:
0.7 mm (0.028in.)
Minimum undercut depth:
0.2 mm (0.008in.)
If the undercut depth is less than the minimum, correct it with a hacksaw blade.



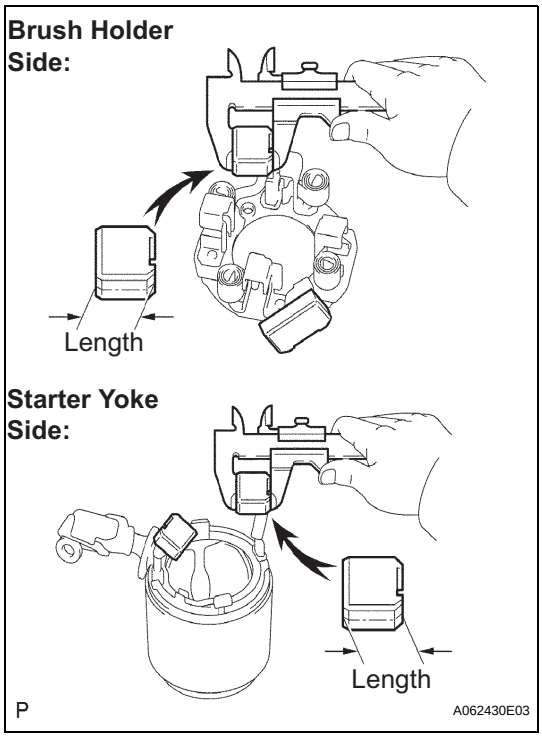
2. INSPECT STARTER YOKE ASSEMBLY

(a) Check the resistance.
(1) Using an ohmmeter, check the resistance between the lead wire and brushes.
Standard:
1 Ωor lower
If the result is not as specified, replace the starter yoke.



(b) Check the resistance.
(1) Using an ohmmeter, check the resistance between shunt coil terminals (A) and (B).
Standard:
1.5 to 1.9 Ωat 20°C(68°F)
If the result is not as specified, replace the starter yoke.

ST



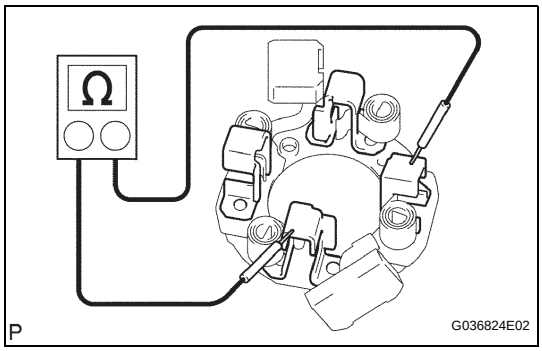
3. INSPECT BRUSH

(a) Check the brush length.

(1) Using vernier calipers, measure the brush length

Standard length:
15.0 mm (0.591in.)
Minimum length:
9.0 mm (0.354in.)

If the length is less than the minimum, replace the brush holder and starter yoke.



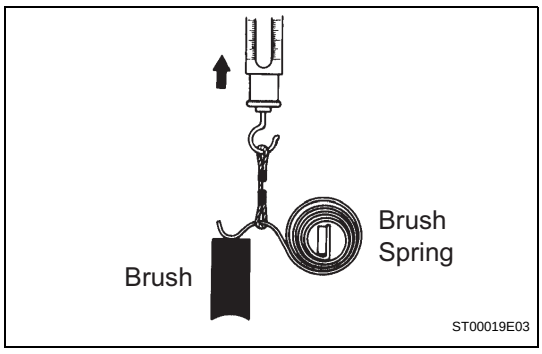
4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brush holders.

Standard:
10 kΩ or higher

If the result is not as specified, repair or replace the brush holder assy.



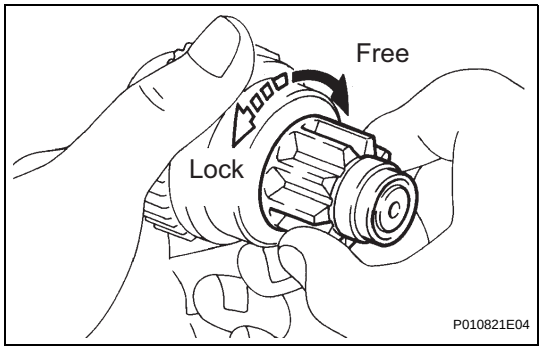
(b) Check the brush spring load.

(1) Check the pull scale reading as soon as the brush spring is separated from the brush.

Standard spring load:
21.5 to 27.5 N (2.2 to 2.8kgf,4.8 to 6.2lbf)
Minimum spring load:
12.7N(1.3kgf,2.9lbf)

If the spring load is less than the minimum, replace the brush holder assy.

ST

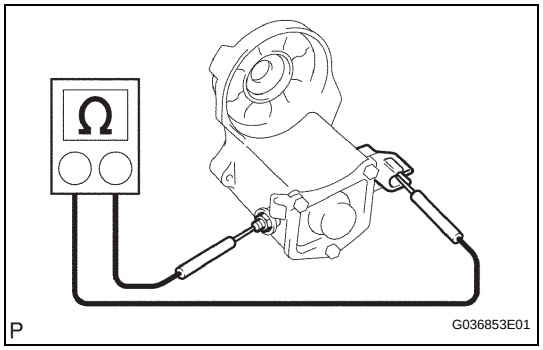


5. INSPECT STARTER CLUTCH SUB-ASSEMBLY

(a) Check the operation.

(1) Turn the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.

If necessary, replace the starter clutch.



6. INSPECT MAGNET STARTER SWITCH ASSEMBLY

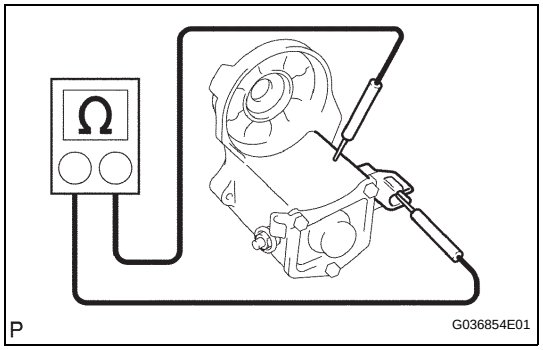
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between terminals 50 and C.

Standard:

1Ωor lower

If the result is not as specified, replace the magnet switch



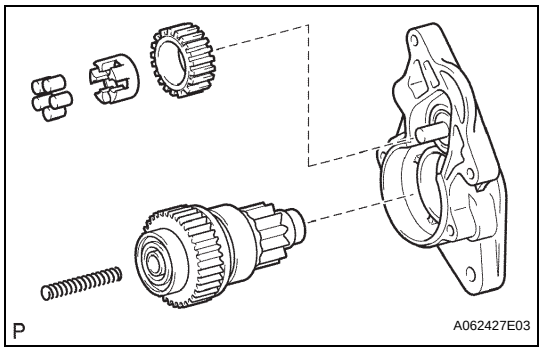
(b) Check the resistance.

(1) Using an ohmmeter, measure the resistance between terminal 50 and the switch body.

Standard:

2.0Ωor lower

If the result is not as specified, replace the magnet switch.



REASSEMBLY

1. INSTALL STARTER CLUTCH SUB-ASSEMBLY

(a) Apply grease to the steel ball and install it onto the starter drive housing.

(b) Apply grease to the magnet switch return spring and install it onto the starter drive housing.

(c) Apply grease to the starter clutch, and install it onto the starter drive housing.

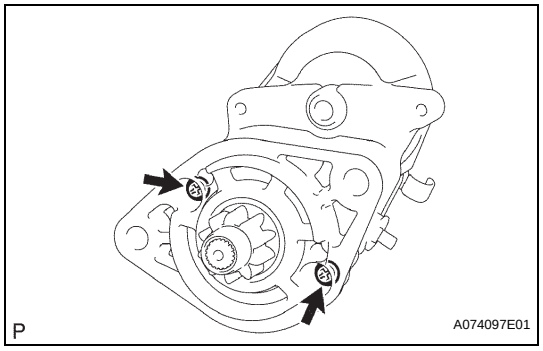
(d) Apply grease to the starter idle gear clutch roller and install it onto the starter idle gear retainer.

(e) Apply grease to the starter idle gear retainer and install it onto the starter idle gear pinion.

(f) Apply grease to the starter idle gear pinion and install it onto the starter drive housing.

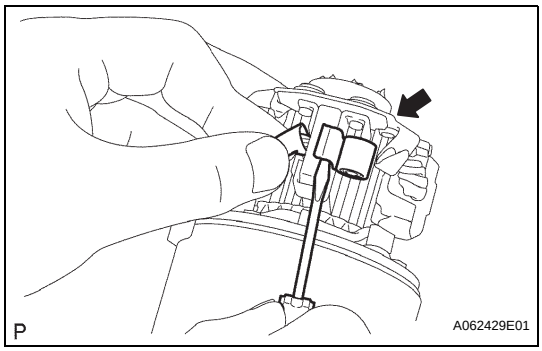
(g) Install the starter drive housing with the 2 screws.

Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)



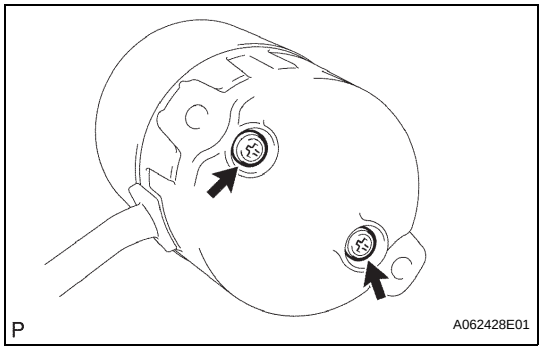
2. INSTALL STARTER ARMATURE ASSEMBLY

(a) Apply grease to the bearings and install it onto the starter yoke.

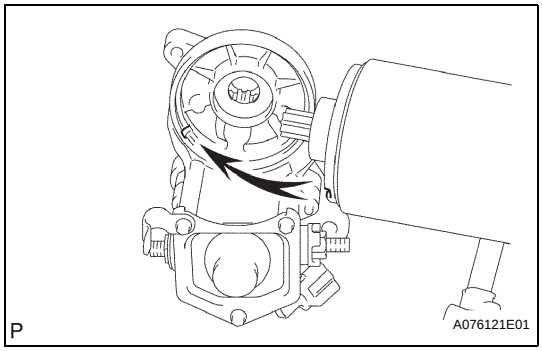


3. INSTALL STARTER BRUSH HOLDER ASSEMBLY

(a) Place the brush holder assy on the starter yoke.
(b) Using a screwdriver, install the 4 brushes.
(c) Install a new O-ring onto the groove of the field frame.

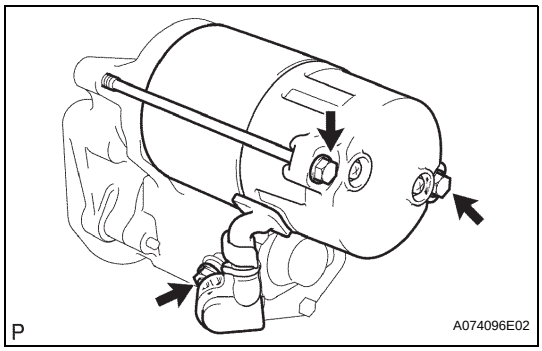


(d) Install the end frame with the 2 screws.



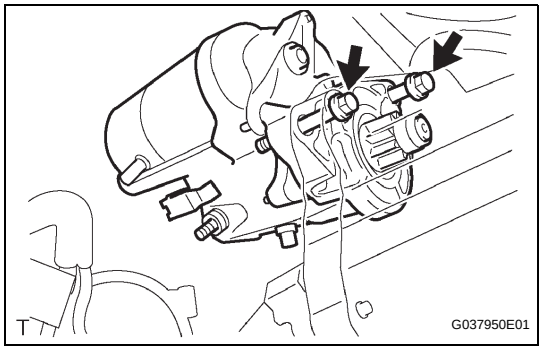
4. INSTALL STARTER YOKE ASSEMBLY

(a) Install a new O-ring onto the groove of the starter yoke.
(b) Align the key of the starter yoke with the groove of the magnet starter switch.



(c) Tighten the 2 through bolts.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)
(d) Connect the lead wire to terminal C with the nut.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

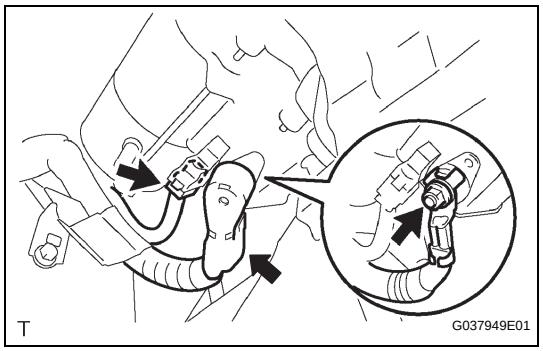
ST



INSTALLATION

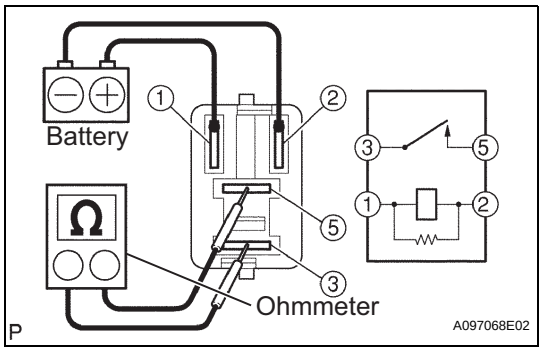
1. INSTALL STARTER ASSEMBLY

(a) Install the starter with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



(b) Connect the starter connector.
(c) Install the starter wire harness with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(d) Install the terminal cap.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



STARTER RELAY

INSPECTION

1. INSPECT STARTER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3-5	10kΩor higher
3-5	Below 1Ω(Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the starter relay.

IGNITION SWITCH

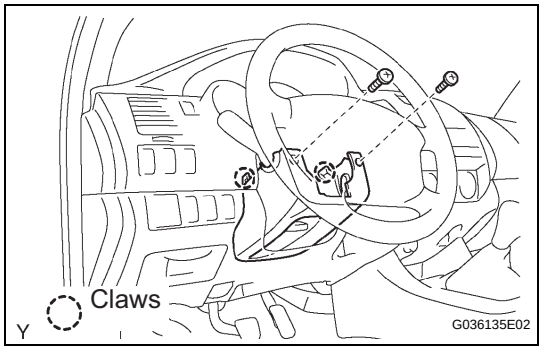
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STEERING COLUMN COVER LWR

(a) Remove the 2 screws.

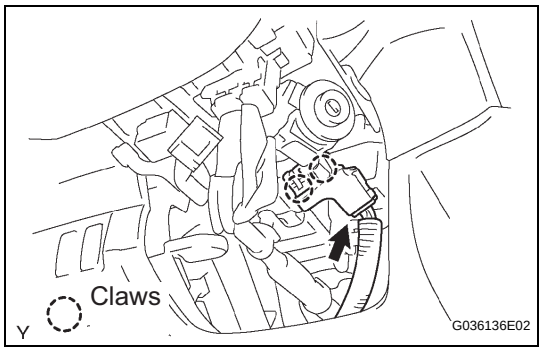
(b) Disengage the 2 claws and remove the steering column cover LWR.



3. REMOVE IGNITION SWITCH

(a) Disconnect the connector.

(b) Disengage the 2 clamps, then remove the ignition or starter switch.



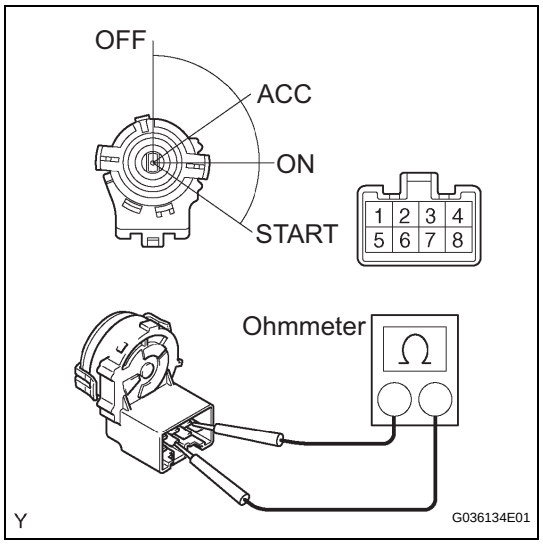
INSPECTION

1. INSPECT IGNITION SWITCH

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard



Switch Condition	Tester Connection	Specified Condition
LOCK	-	10 kΩor higher
ACC	1 (AM1) -3 (ACC)	Below 1Ω
ON	1 (AM1) -3 (ACC) -4 (IG1) 7 (IG2) -8 (AM2)	Below 1Ω
START	1 (AM1) -2 (ST1) -4 (IG1) 6 (ST2) -7 (IG2) -8 (AM2)	Below 1Ω

If the result is not as specified, replace the ignition switch.

INSTALLATION

1. **INSTALL IGNITION SWITCH**
2. **INSTALL STEERING COLUMN COVER LWR**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

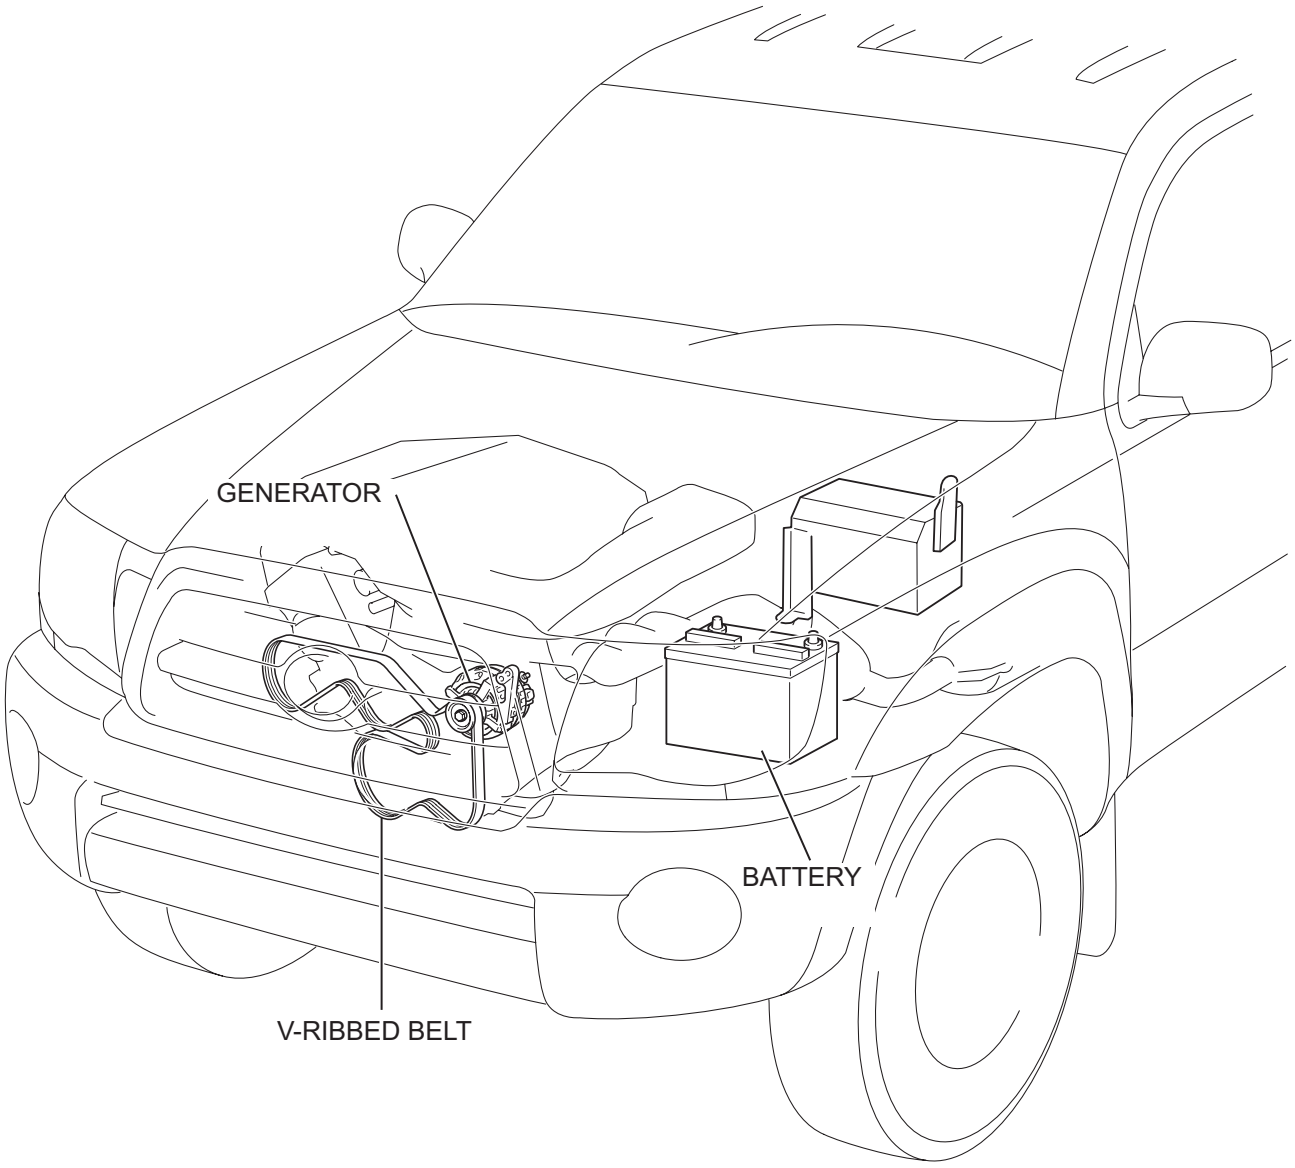
CHARGING SYSTEM

PRECAUTION

1. PRECAUTION

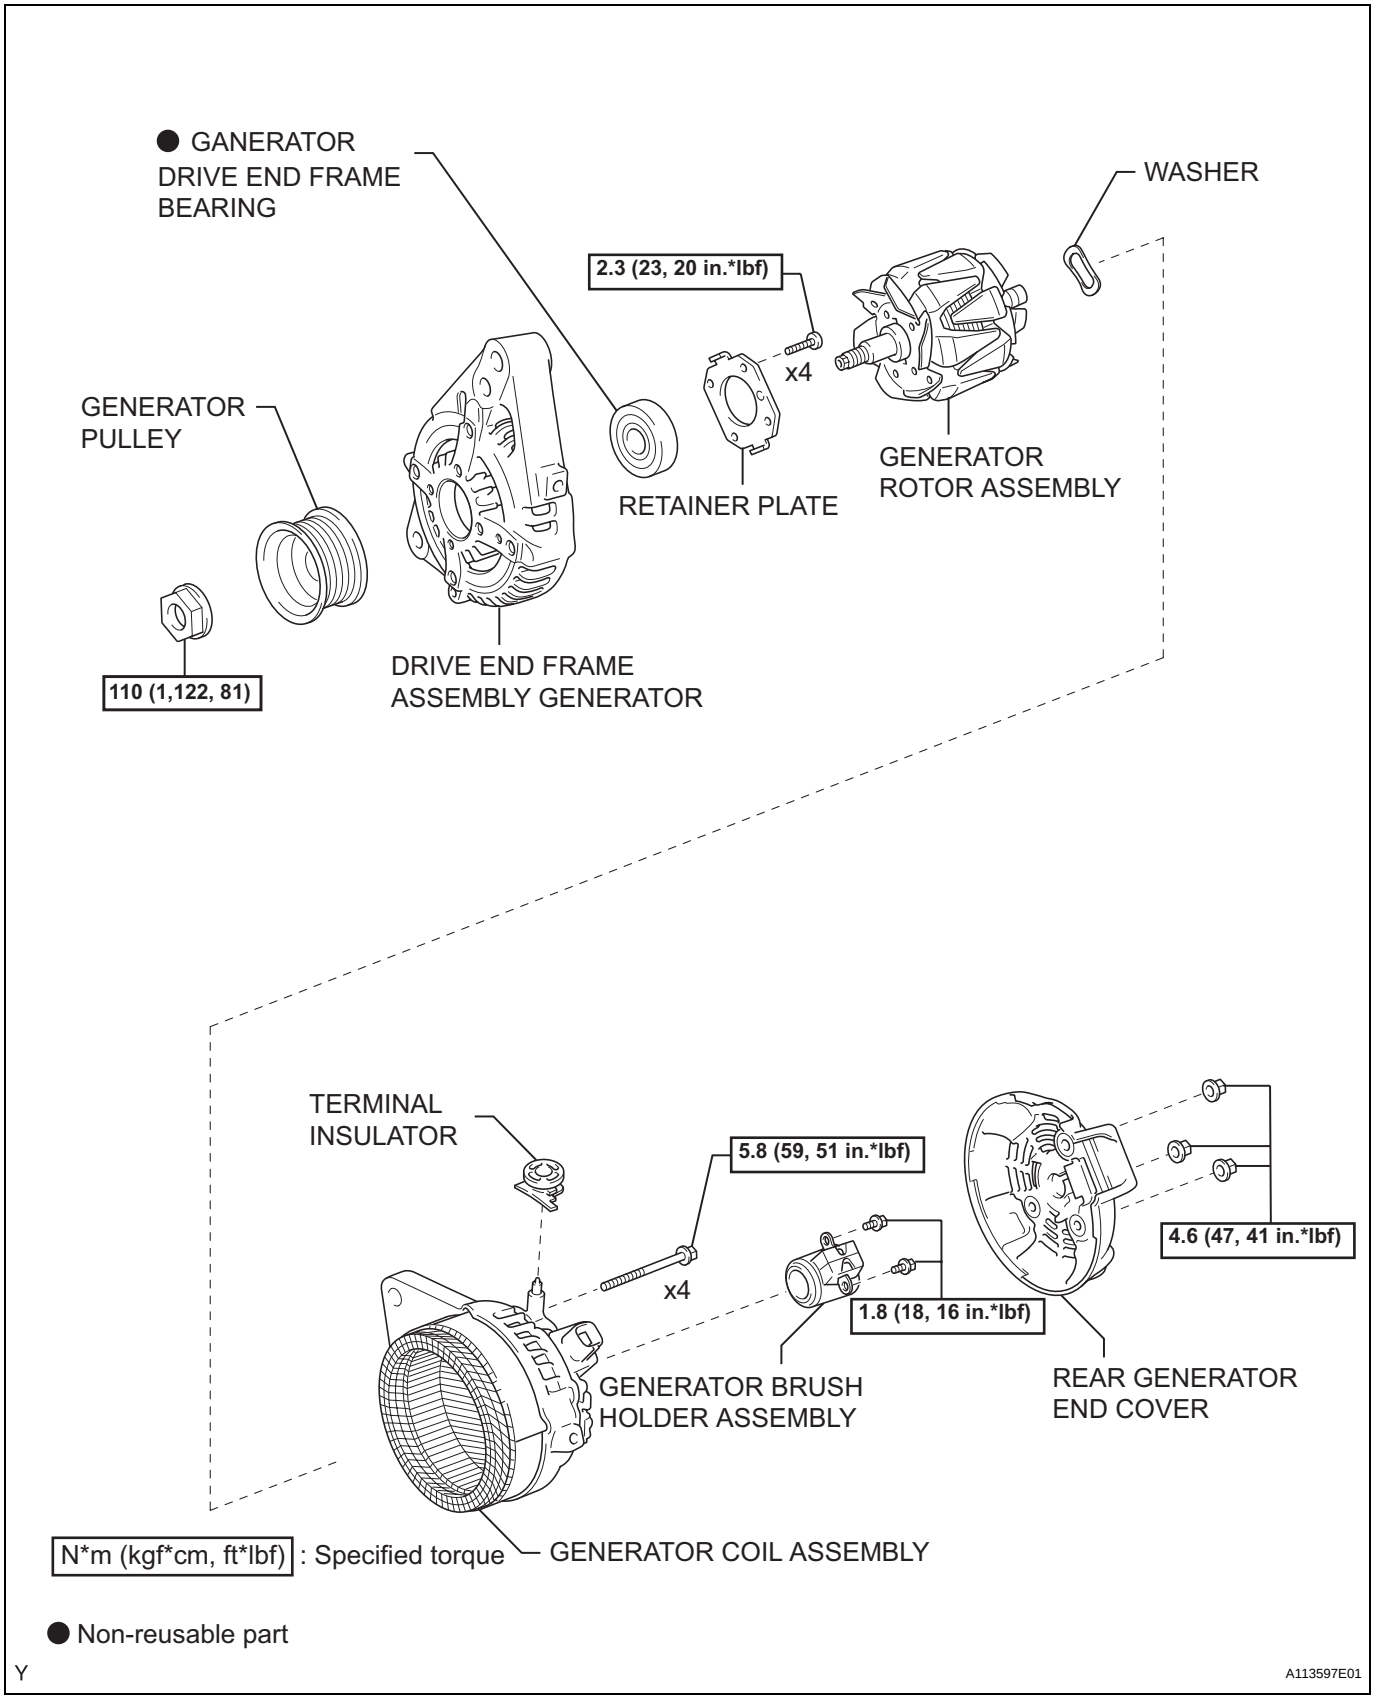
(a) Check that the battery cables are connected to the correct terminals.
(b) Disconnect the battery cables if the battery is charged quickly.
(c) Do not perform tests using a high voltage insulation resistance tester.
(d) Never disconnect the cable from the battery while the engine is running.
(e) Check that the charging cables are tightly connected to terminals B of the generator and the fuse box.
(f) Do not check whether the generator generates current or not while terminal F is connected to the other terminals.

PARTS LOCATION



GENERATOR (for DENSO Made)

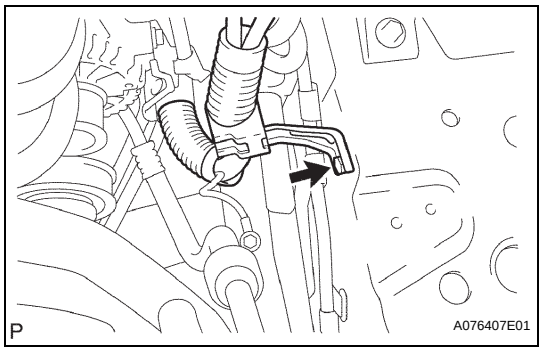
COMPONENTS



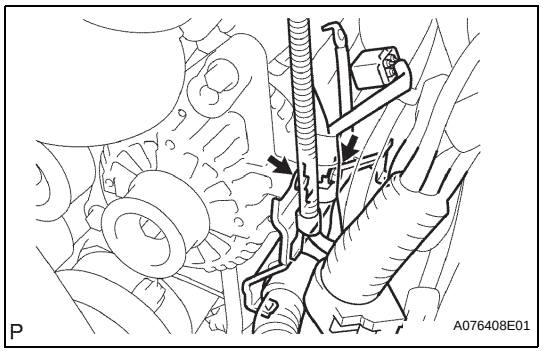
CH

REMOVAL

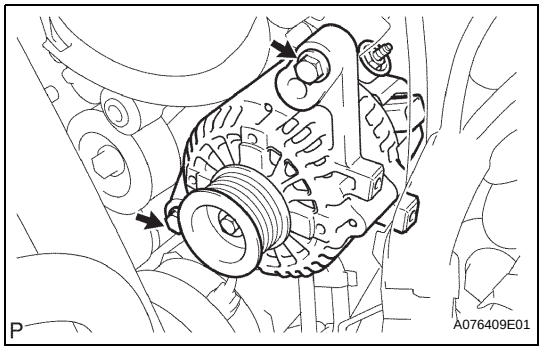
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
4. **REMOVE FAN SHROUD (See page CO-15)**
5. **REMOVE GENERATOR ASSEMBLY**
   (a) Disconnect the wire harness.
   (1) Remove the bolt and wire harness stay.
   (2) Disconnect the connector from the generator assembly.
   (3) Remove the terminal cap and nut.
   (4) Disconnect the wire harness from terminal B.



(b) Remove the 2 bolts, then separate the wire harness clamp bracket from the generator assembly.



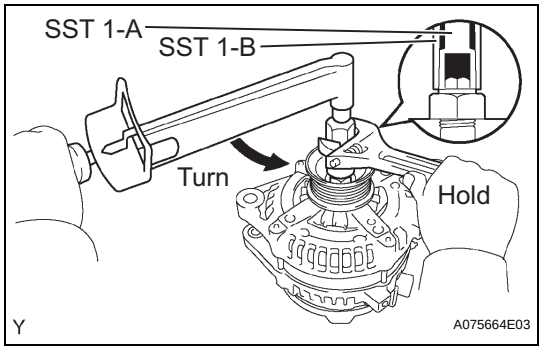
(c) Remove the 2 bolts, then remove the generator assembly.



DISASSEMBLY

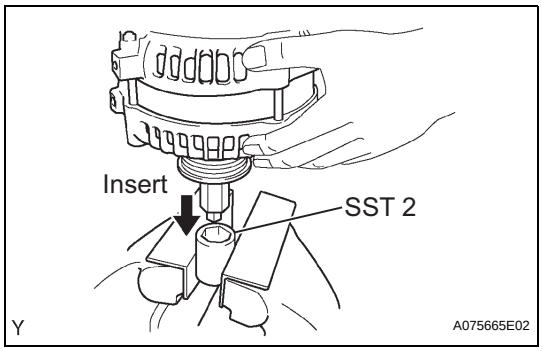
1. **REMOVE GENERATOR PULLEY**
   SST 09820-63010 (09820-06010, 09820-06020)
   HINT:

SST 1-A and B	09820-06010
SST 2	09820-06020

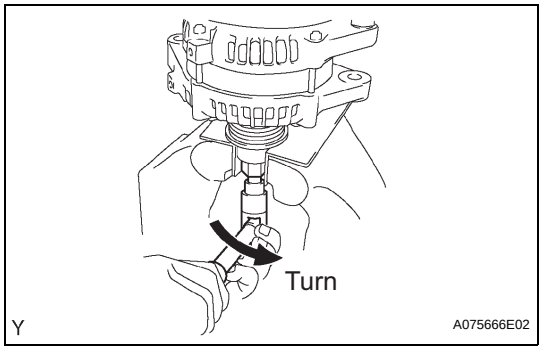


(a) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise to the specified torque.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)
NOTICE:
Check that SST is secured on the rotor shaft.

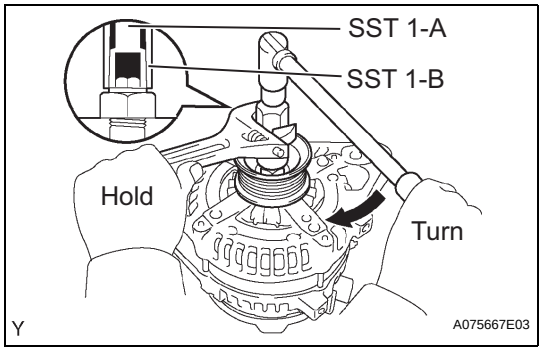
CH



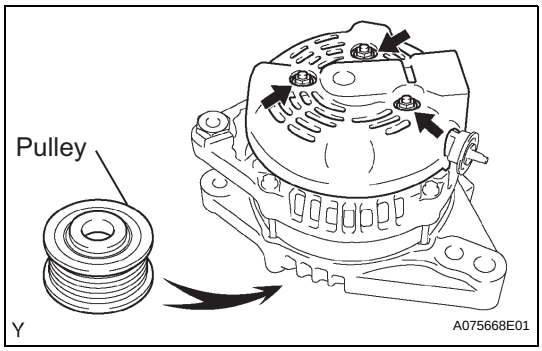
(b) Mount SST 2 in a vise.
(c) Insert SST 1-A and B into SST 2, and attach the pulley nut to SST 2.



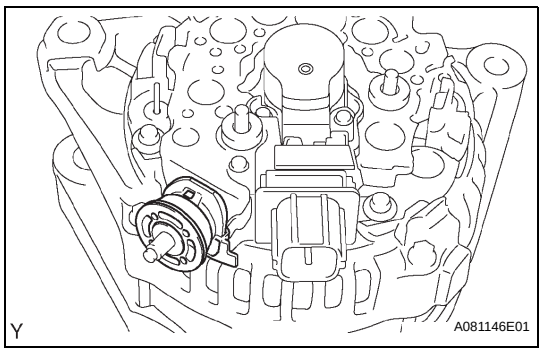
(d) To loosen the pulley nut, turn SST 1-A in the direction shown in the illustration.
NOTICE:
To prevent damage to the rotor shaft, do not loosen the pulley nut more than one-half turn.
(e) Remove the generator from SST 2.



(f) Turn SST 1-B, and remove SST 1-A and B.
(g) Remove the pulley nut and pulley.

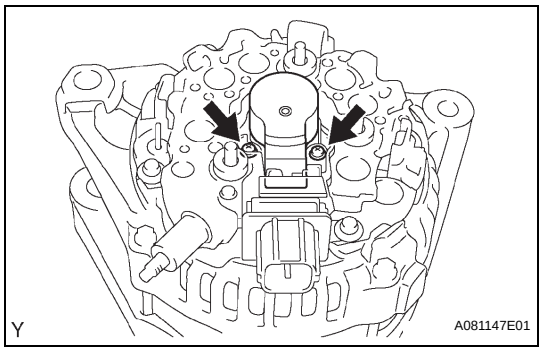


2. REMOVE REAR GENERATOR END COVER
(a) Place the generator on the pulley.
(b) Remove the 3 nuts, then remove the rear end cover.



3. REMOVE TERMINAL INSULATOR

CH

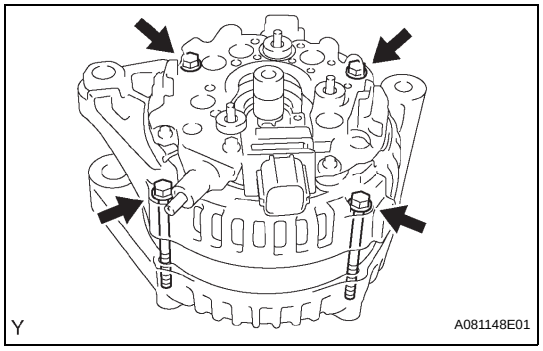


4. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY

(a) Remove the plate seal.

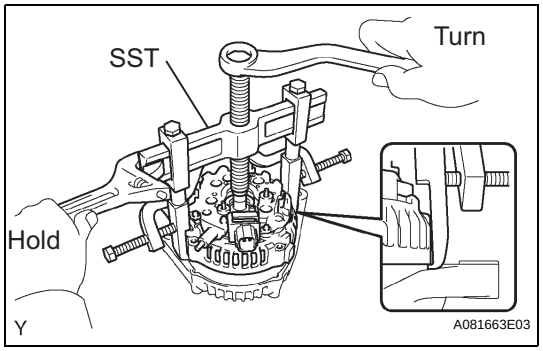
(b) Remove the 2 nuts, then remove the brush holder.

(c) Remove the plate seal.



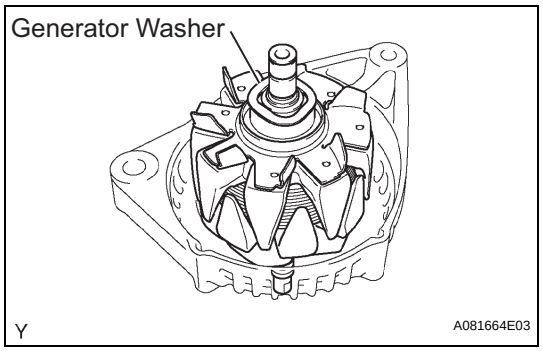
5. REMOVE GENERATOR COIL ASSEMBLY

(a) Remove the 4 bolts.



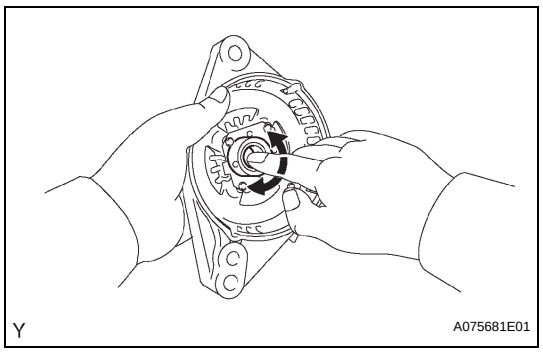
(b) Using SST, remove the coil.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011)



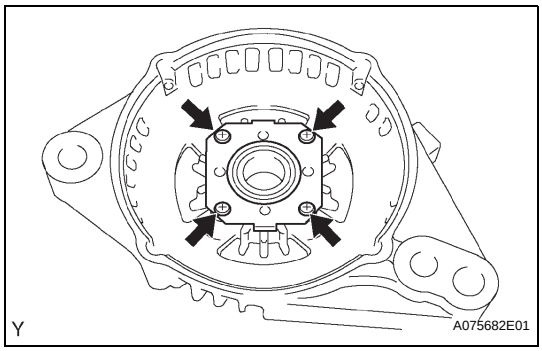
6. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the generator washer and the generator rotor.

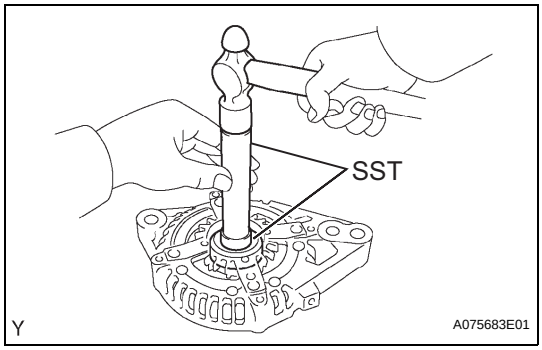


7. REMOVE GENERATOR DRIVE END FRAME BEARING

(a) Check the bearing whether it is rough or worn. If necessary, replace the bearing.



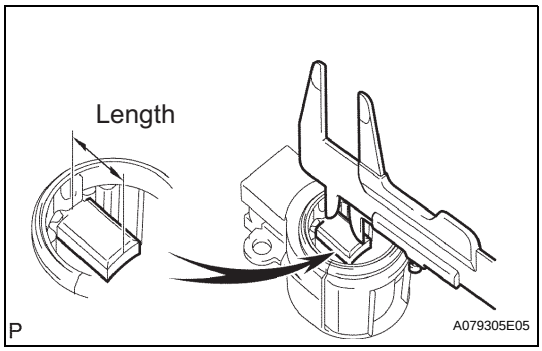
(b) Remove the 4 screws, then remove the retainer plate.



(c) Using SST, tap out the bearing.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)

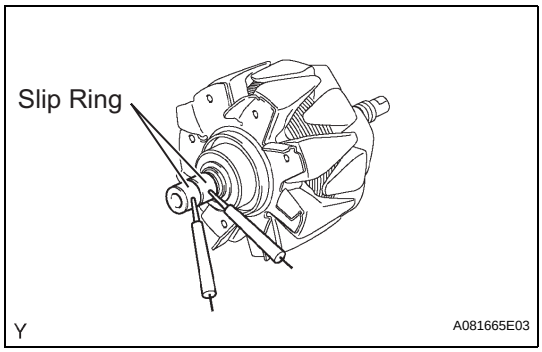
INSPECTION

1. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

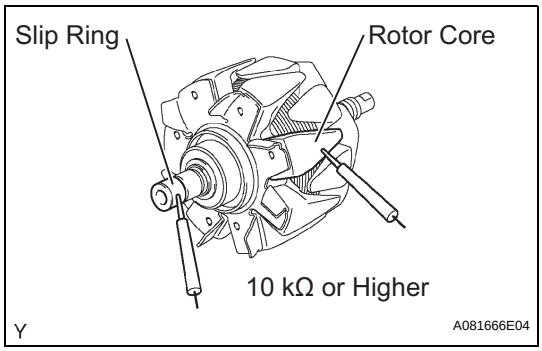


(a) Using vernier calipers, measure the exposed brush length.
Standard exposed brush length:
10.5 mm (0.413 in.)
Minimum exposed brush length:
4.5 mm (0.177 in.)
If the exposed brush length is less than the minimum, replace the brush holder.

2. INSPECT GENERATOR ROTOR ASSEMBLY



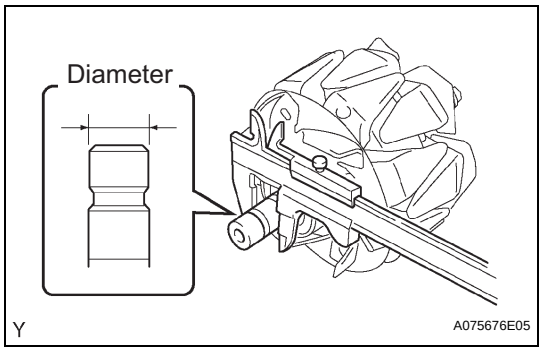
(a) Check the rotor for an open circuit.
(1) Using an ohmmeter, measure the resistance between the slip rings.
Standard:
2.3 to 2.7Ω at 20°C(68°F)
If the result is not as specified, replace the rotor.



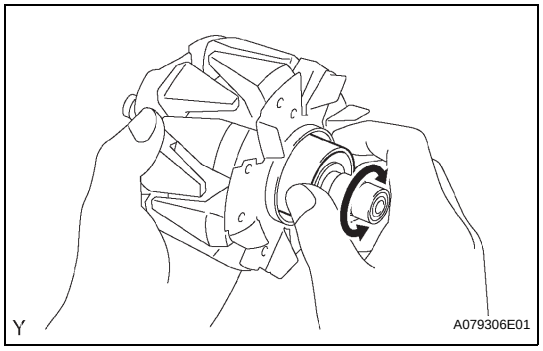
(b) Check the rotor for ground.
(1) Using an ohmmeter, measure the resistance between the slip ring and rotor.
Standard:
10 kΩ or higher
If the result is not as specified, replace the rotor.

(c) Inspect the slip rings.
(1) Check that the slip rings are not rough or scored. If rough or scored, replace the rotor.

CH

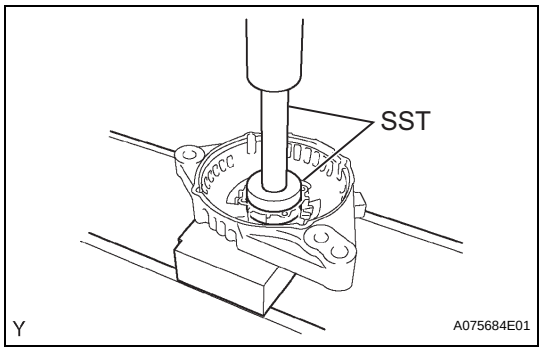


(2) Using vernier calipers, measure the slip ring diameter.
Standard diameter:
14.2 to 14.4 mm (0.559 to 0.567 in.)
Minimum diameter:
14.0 mm (0.551 in.)
If the diameter is less than the minimum, replace the rotor.



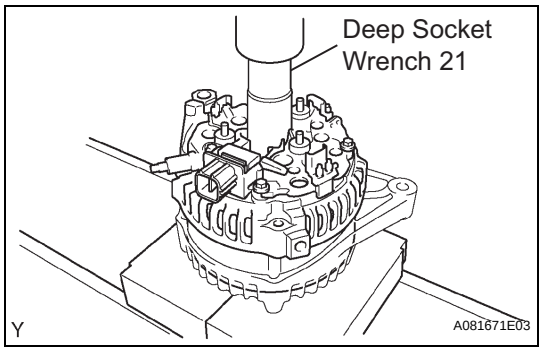
3. INSPECT GENERATOR ROTOR BEARING
(a) Check the bearing whether it is rough or worn. If necessary, replace the generator rotor.

REASSEMBLY

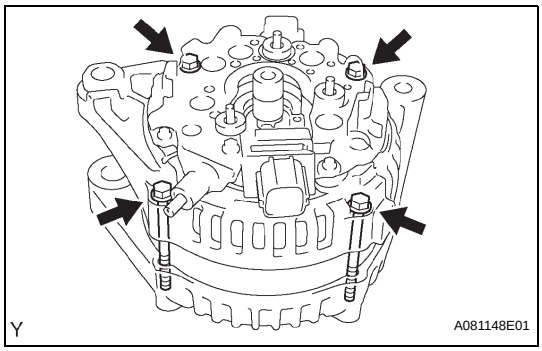


1. INSTALL GENERATOR DRIVE END FRAME BEARING
(a) Using SST and a press, press in a new bearing.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)
(b) Install the retainer plate with the 4 screws.
Torque: 2.2 N*m (22 kgf*cm, 19 in.*lbf)

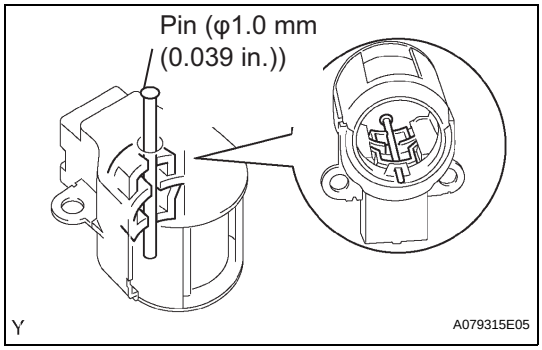
2. INSTALL GENERATOR ROTOR ASSEMBLY
(a) Place the drive end frame on the rotor.
(b) Install the rotor and washer.



3. INSTALL GENERATOR COIL ASSEMBLY
(a) Using a deep socket wrench 21 and a press, in the generator rectifier end frame carefully.

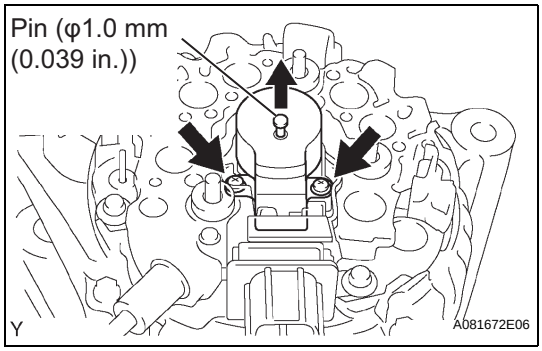


(b) Install the 4 bolts.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)



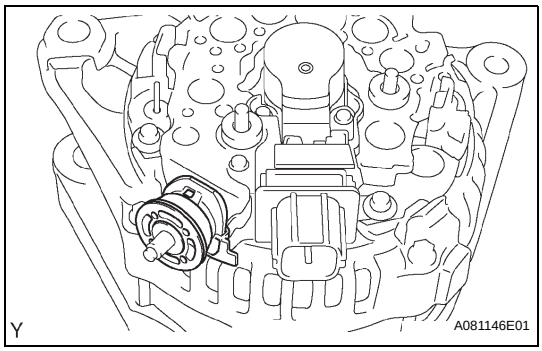
4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

(a) While pushing the 2 brushes to inside the brush holder, insert a pin (ϕ1.0 mm (0.039 in.)) into the brush holder hole.



(b) Install the generator brush holder with the 2 screws.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

(c) Pull out the pin (ϕ1.0 mm (0.039 in.)) from the generator brush hold.

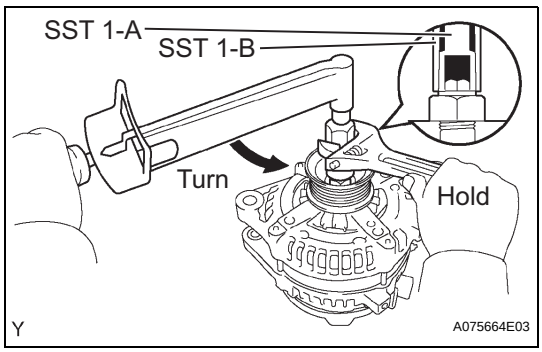


5. INSTALL TERMINAL INSULATOR

(a) Install the terminal insulator to the generator rectifier end frame.
NOTICE:
Pay attention the mounting orientation of the terminal insulator.

6. INSTALL REAR GENERATOR END COVER

(a) Install the rear end cover with the 3 nuts.
Torque: 4.6 N*m (47 kgf*cm, 41 in.*lbf)



7. INSTALL GENERATOR PULLEY
SST 09820-63010 (09820-06010, 09820-06020)
HINT:

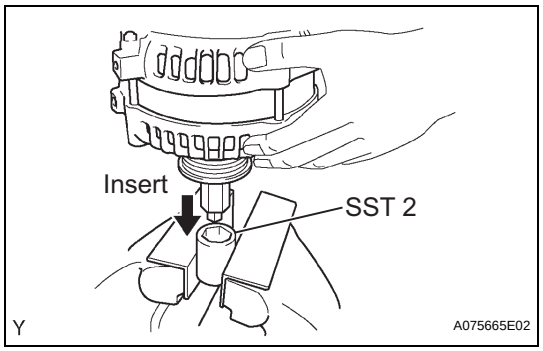
SST 1-A and B	09820-06010
SST 2	09820-06020

(a) Install the pulley onto the rotor shaft by tightening the pulley nut by hand.

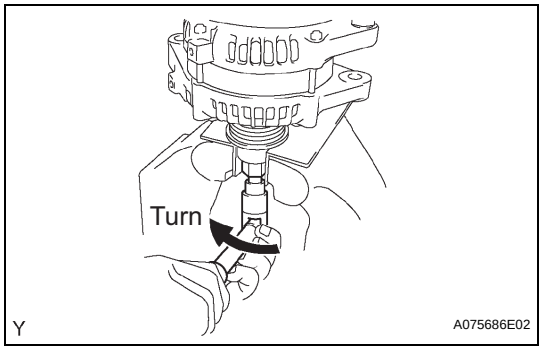
(b) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise to the specified torque.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

CH

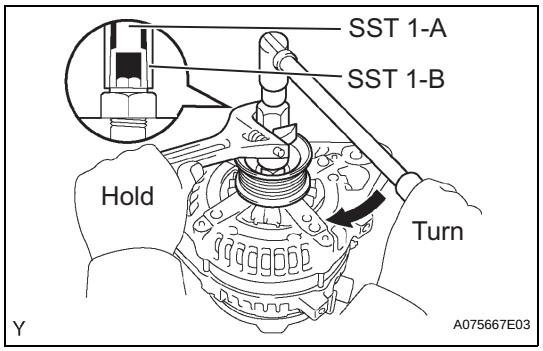
NOTICE:
Check that SST is secured to the rotor shaft.



(c) Mount SST 2 in a vise.
(d) Insert SST 1-A and B into SST 2, and attach the pulley nut to SST 2.



(e) Tighten the pulley nut by turning SST 1-A in the direction shown in the illustration.
Torque: 111 N*m (1,125 kgf*cm, 81 ft.*lbf)
(f) Remove the generator from SST 2.



(g) Turn SST 1-B, and remove SST 1-A and B.
(h) Turn the pulley and check that the pulley moves smoothly.

GENERATOR (for BOSCH Made)

REMOVAL

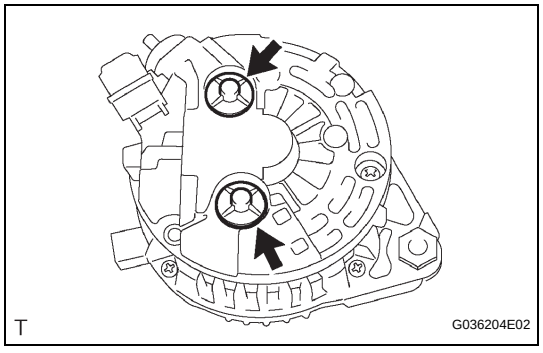
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE RADIATOR SUPPORT TO FRAME SEAL LH (See page CO-15)**
4. **REMOVE FAN SHROUD (See page CO-15)**
5. **REMOVE GENERATOR ASSEMBLY**
   (a) Disconnect the wire harness.
      (1) Remove the bolt and wire harness stay.
      (2) Disconnect the connector from the generator assembly.
      (3) Remove the terminal cap and nut.
      (4) Disconnect the wire harness from terminal B.

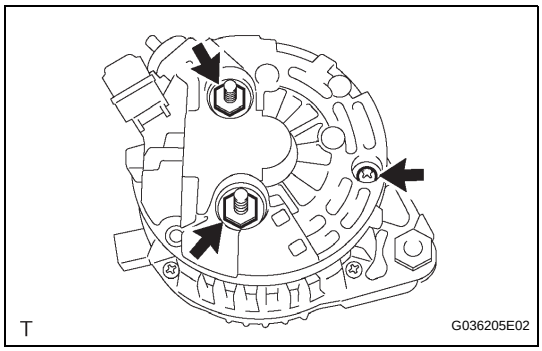
   (b) Remove the 2 bolts, then separate the wire harness clamp bracket from the generator assembly.

   (c) Remove the 2 bolts, then remove the generator assembly.

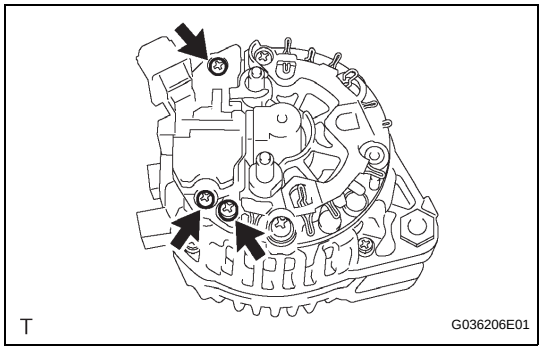
DISASSEMBLY

1. **REMOVE REAR GENERATOR END COVER**
   (a) Remove the 2 terminal covers by turning them counterclockwise.



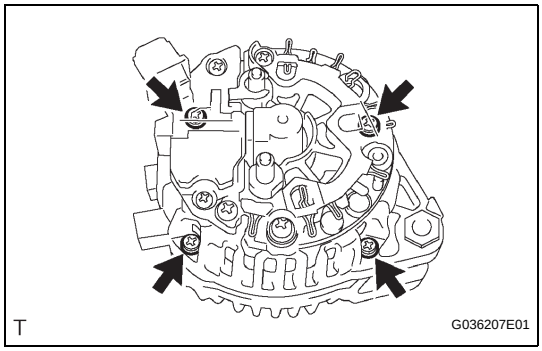


(b) Using a 15 mm socket wrench, remove the 2 nuts from the generator rear end cover.
(c) Remove the screw, then remove the generator rear end cover.



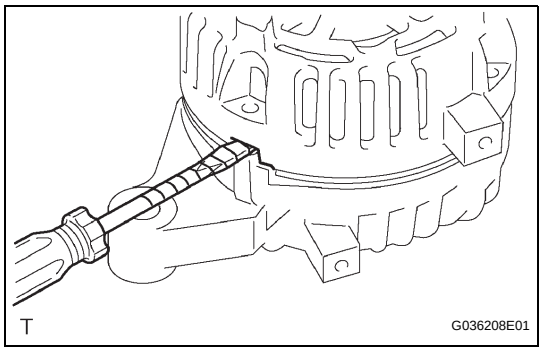
2. REMOVE REGULATOR SUB-ASSEMBLY GENERATOR W/BRUSH

(a) Remove the 3 screws, then remove the regulator generator with brush.

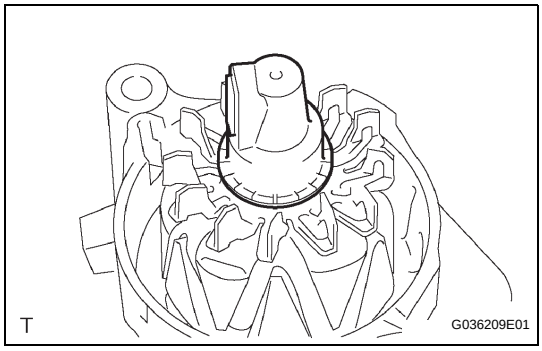


3. REMOVE STATOR SUB-ASSEMBLY GENERATOR W/ RECTIFIER

(a) Remove the 4 screws.



(b) Using a screwdriver, pry out the stator generator with rectifier.

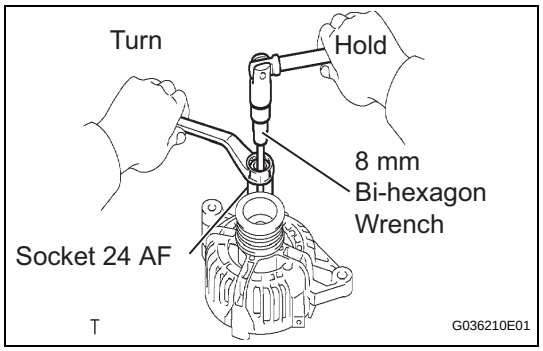


4. REMOVE BEARING SET GENERATOR

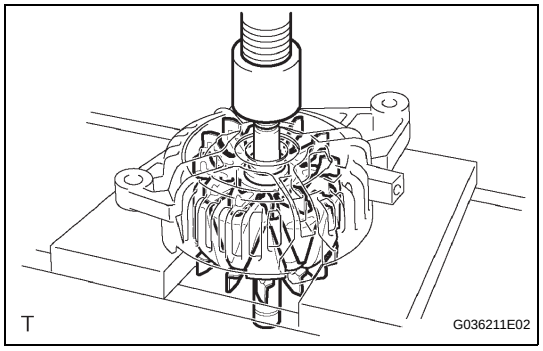
5. REMOVE PULLEY SET GENERATOR

(a) Clamp the swivel arm in a vise.
NOTICE:
Do not clamp the generator rotor in a vise.

CH



(b) Using a socket 24 AF and 8 mm bi-hexagon wrench, remove the nut and spring washer, then detach the pulley.



6. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Using a press, press out the generator rotor assembly and spacer ring.

INSPECTION

1. INSPECT GENERATOR ROTOR ASSEMBLY

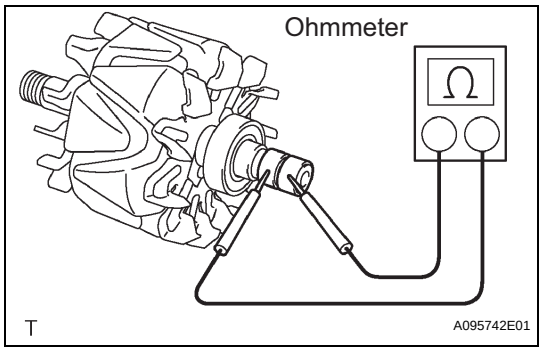
(a) Inspect the generator rotor assembly for an open circuit.

(1) Using an ohmmeter, measure the resistance between the slip rings.

Standard:

1.8 to 2.8 Ω at 20°C(68°F)

If the result is not as specified, replace the generator rotor.



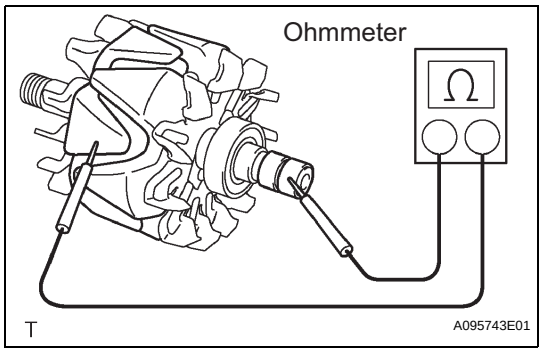
(b) Inspect the generator rotor assembly for ground.

(1) Using an ohmmeter, measure the resistance between the slip ring and generator rotor assembly.

Standard:

10 kΩ or higher

If the result is not as specified, replace the generator rotor.



(c) Check the appearance.

(1) Check that the slip rings are not rough or scored.

If rough or scored, replace the generator rotor.

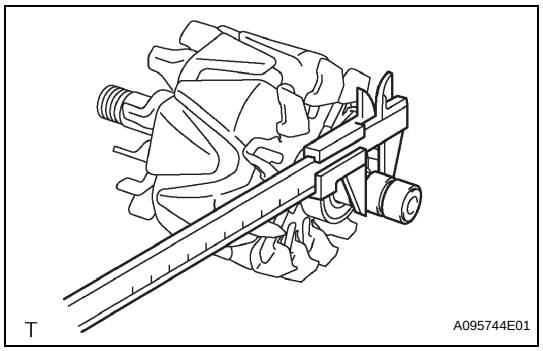
(2) Using vernier calipers, measure the slip ring diameter.

Standard diameter:

15.3 to 15.5 mm (0.602 to 0.610 in.)

Minimum diameter:

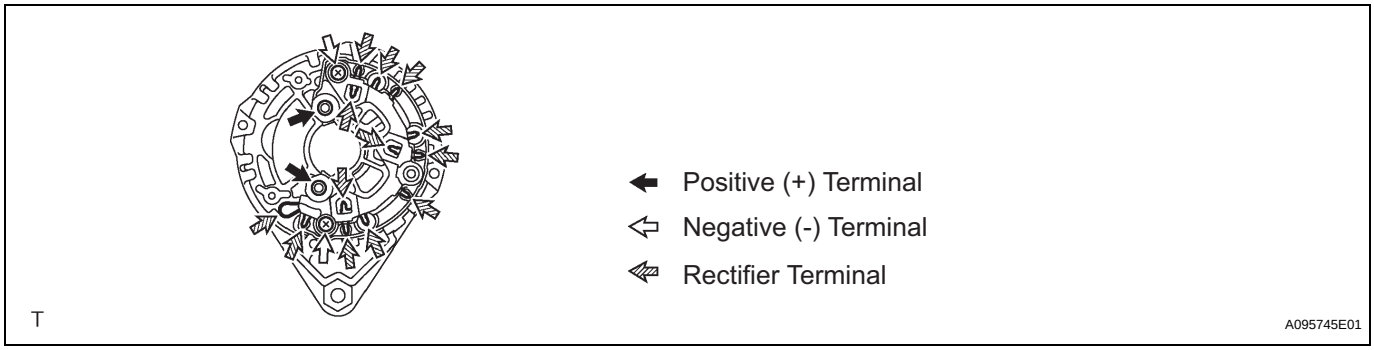
14.9 mm (0.587 in.)

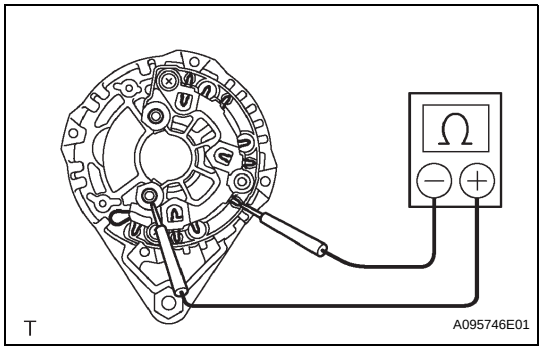


If the diameter is less than the minimum, replace the generator rotor.

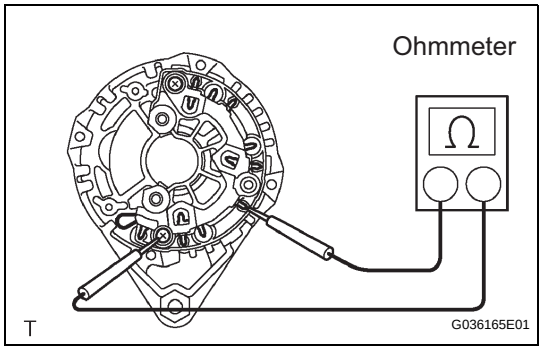
2. INSPECT STATOR SUB-ASSEMBLY GENERATOR WITH RECTIFIER

HINT:
For terminal positions of the stator generator, refer to the illustration below.



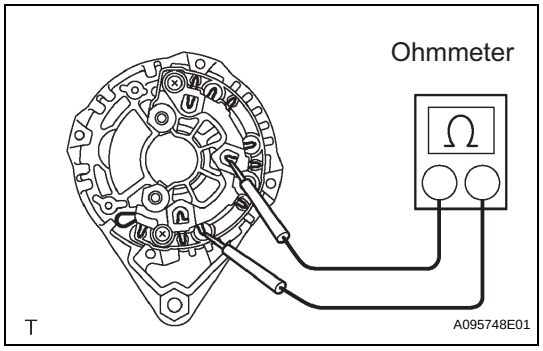


(a) Inspect the positive (+) rectifier.
HINT:
Inspect the positive terminal after pulling it up.
(1) Using an ohmmeter, connect the positive (+) tester probe to the positive (+) terminal and the negative (-) tester probe to each rectifier terminal.
(2) Measure the resistance between the positive (+) terminal and rectifier terminal.
Standard:
Below 1 Ω
If the result is not as specified, replace the stator generator.
(3) Reverse the polarity of the tester probes and repeat step (1).
(4) Measure the resistance between the positive (+) terminal and rectifier terminal.
Standard:
10 kΩ or higher
If the result is not as specified, replace the stator generator.

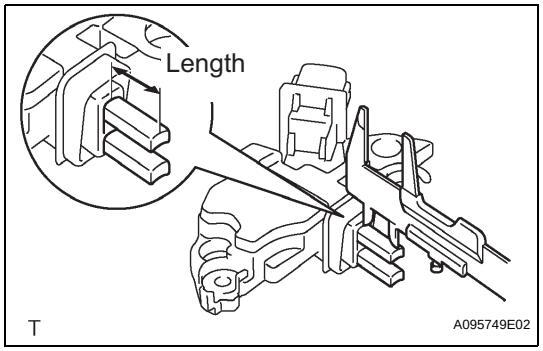


(b) Inspect the negative (-) rectifier.
(1) Using an ohmmeter, connect the positive (+) tester probe to each negative (-) terminal and the negative (-) tester prove to each rectifier terminal.
(2) Measure the resistance between the negative (-) terminal and rectifier terminal.
Standard:
10 kΩ or higher
If the result is not as specified, replace the stator generator.
(3) Reverse the polarity of the tester probes and repeat step (1).

(4) Measure the resistance between the negative (-) terminal and rectifier terminal.
Standard:
Below 1 Ω
If the result is not as specified, replace the stator generator.



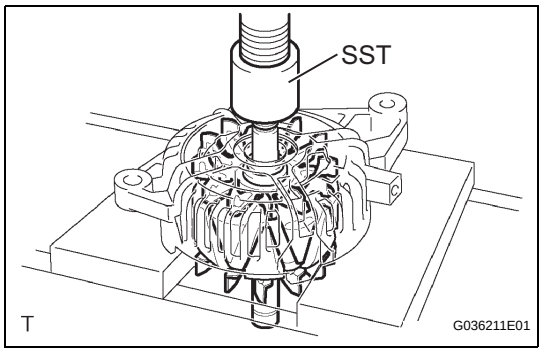
(c) Inspect the stator for an open circuit.
(1) Using an ohmmeter, measure the resistance between the rectifier terminals.
Standard:
Below 1 Ω
If the result is not as specified, replace the stator generator.



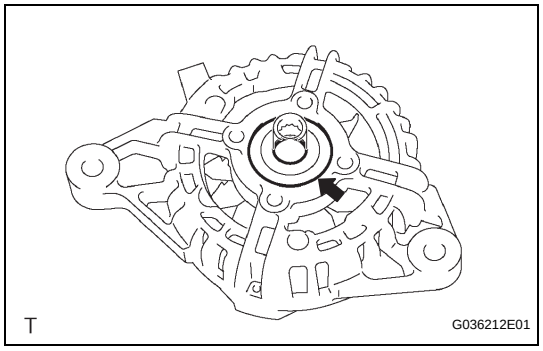
3. INSPECT BRUSH
(a) Using vernier calipers, measure the brush length.
Exposed length on new brush:
13.2 mm (0.520 in.)
Minimum exposed length:
6 mm (0.236 in.)
If the exposed length is less than the minimum, replace the voltage regulator and brush assembly.

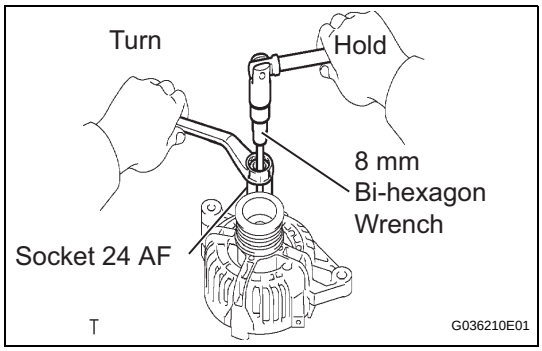
REASSEMBLY

1. INSTALL GENERATOR ROTOR ASSEMBLY
(a) Using SST and a press, press in the generator rotor assembly.
SST 09285-76010
NOTICE:
Avoid misalignment during pressing.

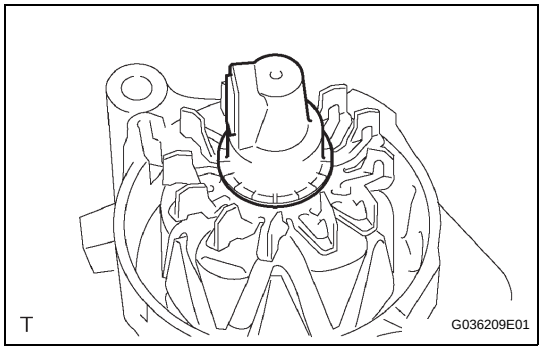


2. INSTALL PULLEY SET GENERATOR
(a) Install the spacer ring.



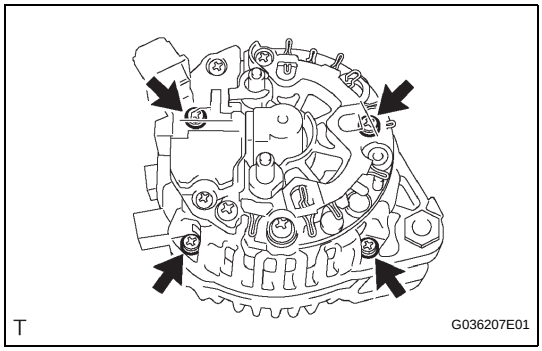


(b) Using a socket 24 AF and 8 mm bi-hexagon wrench, install the pulley with the spring washer and nut.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



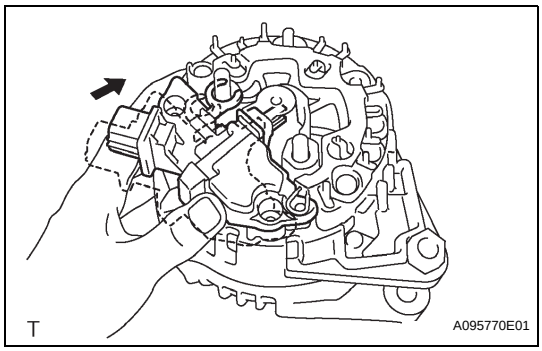
3. INSTALL BEARING SET GENERATOR

(a) Align the 3 cutouts of the bearing set generator with the stator generator with rectifier.



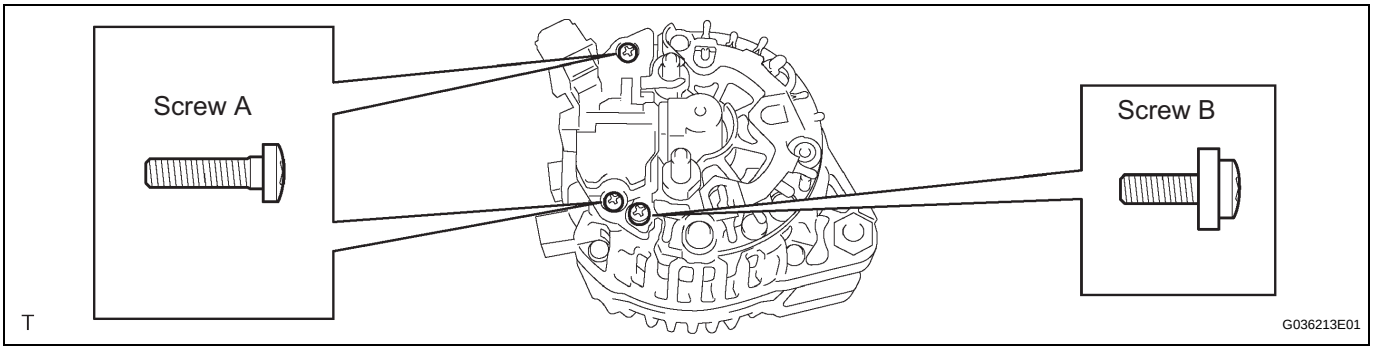
4. INSTALL STATOR SUB-ASSEMBLY GENERATOR WITH RECTIFIER

(a) Align the key of the drive end frame with the keyway of the stator sub-assembly generator with rectifier.
(b) Install the stator generator with rectifier with the 4 bolts.
Torque: 4.3 N*m (44 kgf*cm, 38 in.*lbf)



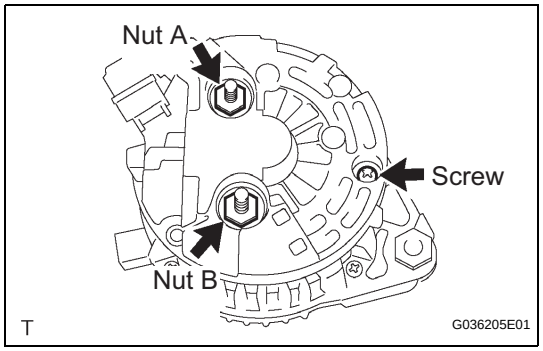
5. INSTALL REGULATOR SUB-ASSEMBLY GENERATOR WITH BRUSH

(a) Attach the brushes and terminals to the rectifier end frame of the regulator generator with brush.
(b) Install the regulator generator with brush with the 3 screws.
HINT:
Install the screw B into the position shown in the illustration.



CH

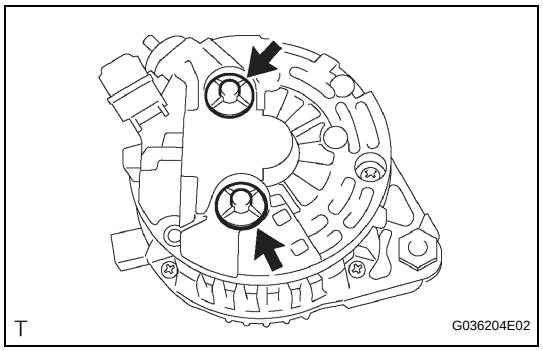
Torque: 2.5 N*m (25 kgf*cm, 22 in.*lbf) for screw A
1.2 N*m (12 kgf*cm, 11 in.*lbf) for screw B



6. INSTALL REAR GENERATOR END COVER

(a) Install the generator rear end cover with the 2 nuts and screw.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for nut A
12 N*m (122 kgf*cm, 9 ft.*lbf) for nut B
2.8 N*m (29 kgf*cm, 25 in.*lbf) for screw



(b) Install the 2 terminal covers by turning them clockwise.

CHARGING SYSTEM

PRECAUTION

1. PRECAUTION

(a) Check that the battery cables are connected to the correct terminals.
(b) Disconnect the battery cables if the battery is charged quickly.
(c) Do not perform tests using a high voltage insulation resistance tester.
(d) Never disconnect any cable from the battery while the engine is running.
(e) Check that the charging cables are tightly connected to terminal B of the generator and the fuse box.
(f) Do not check whether the generator generates current or not while terminal F is connected to the other terminals.

3. **REMOVE GENERATOR ASSEMBLY**
   (a) Remove the terminal cap.
   (b) Remove the nut, then remove the generator wire.
   (c) Disconnect the generator connector.

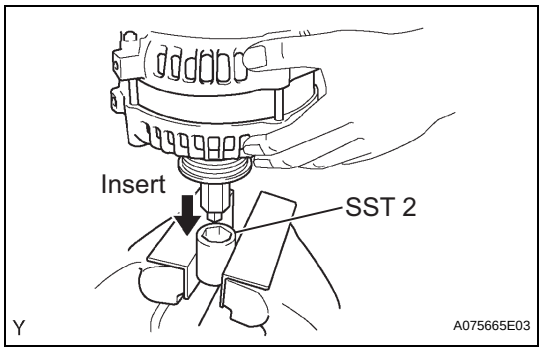
   (d) Remove the 2 bolts, then remove the generator.

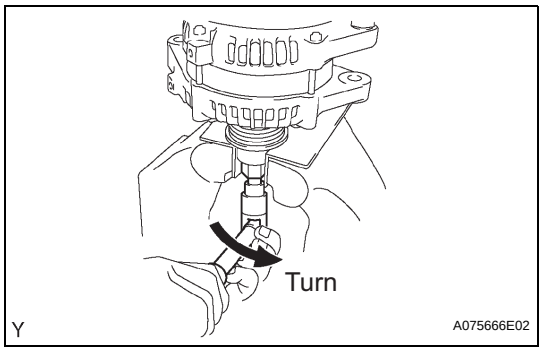
DISASSEMBLY

1. **REMOVE GENERATOR PULLEY**
   SST 09820-63010 (09820-06010, 09820-06020)
   HINT:

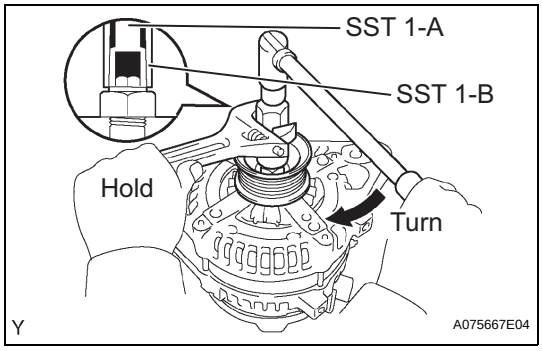
SST 1-A and B	09820-06010
SST 2	09820-06020

   (a) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise with the specified torque.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)
   NOTICE:
   Check that the SST is secured to the generator rotor shaft.
   (b) Mount SST 2 in a vise.
   (c) Insert SST 1-A and B into SST 2, and attach the generator pulley nut to SST 2.

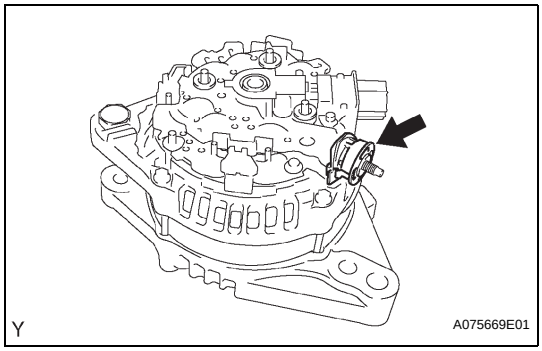




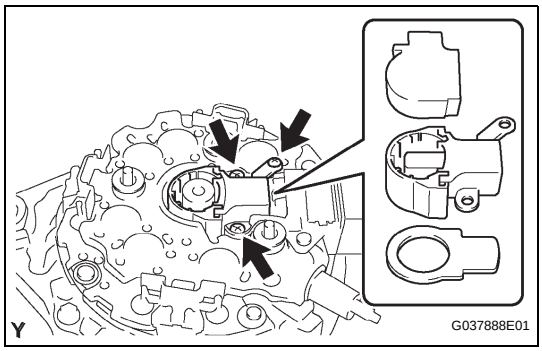
(d) To loosen the generator pulley nut, turn SST 1-A in the direction shown in the illustration.
NOTICE:
To prevent damage to the rotor shaft, do not loosen the generator pulley nut more than one-half turn.
(e) Remove the generator from SST 2.



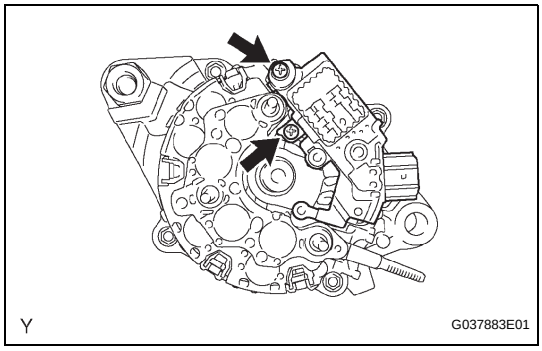
(f) Turn SST 1-B, and remove SST 1-A and B.
(g) Remove the generator pulley nut and generator pulley.



2. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY
(a) Remove the nut and terminal insulator.
(b) Remove the nut, screw and rectifier plate.
(c) Remove the 2 nuts and rear end cover.

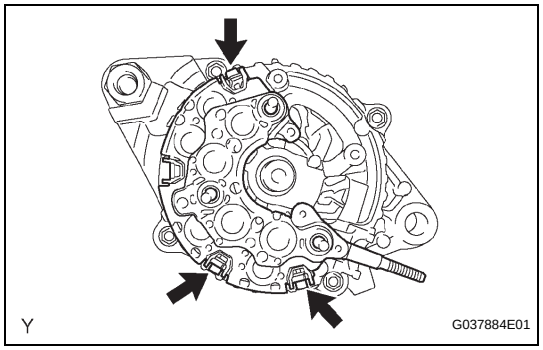


(d) Remove the brush cover from the generator brush holder assembly.
(e) Remove the 3 screws and generator brush holder assembly.
(f) Remove the plate seal.



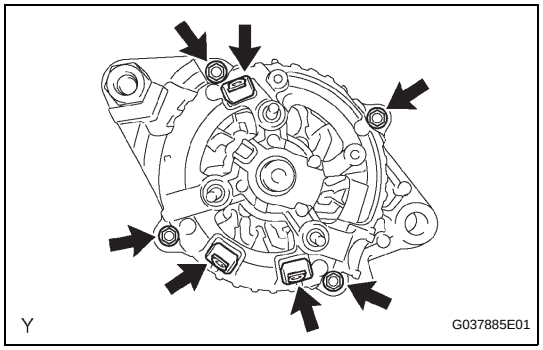
3. REMOVE GENERATOR REGULATOR ASSEMBLY
(a) Remove the 2 screws and generator regulator assembly.

CH



4. REMOVE GENERATOR HOLDER WITH RECTIFIER

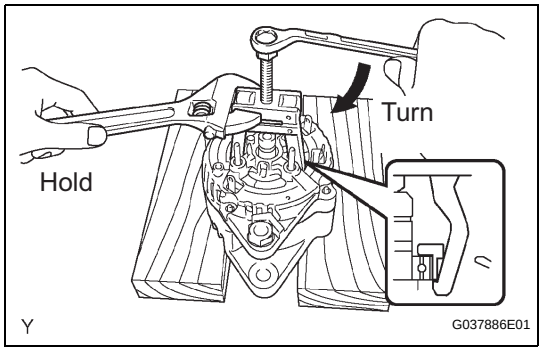
(a) Remove the 3 screws and generator rectifier holder.



5. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the 3 terminal insulators from the rectifier end frame.

(b) Remove the 4 nuts.



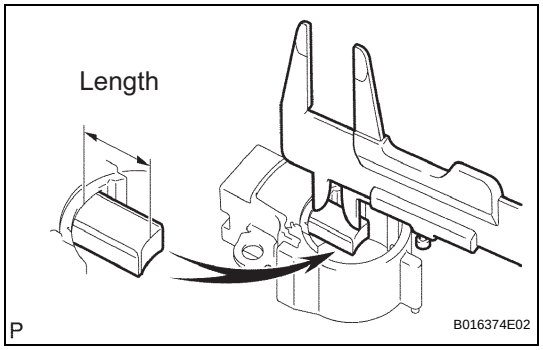
(c) Using SST, remove the rectifier end frame.
SST 09286-46011

(d) Remove the plate retainer.

(e) Remove the generator rotor assembly from the drive end frame.
NOTICE:
Do not drop the generator rotor assembly.
HINT:
If the generator rotor is engaged too firmly, lightly tap the generator rotor shaft to remove it using a plastic hammer.

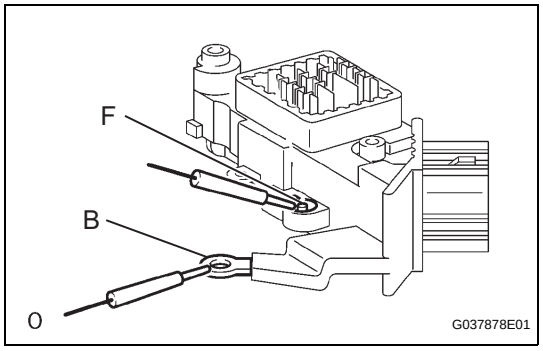
INSPECTION

1. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

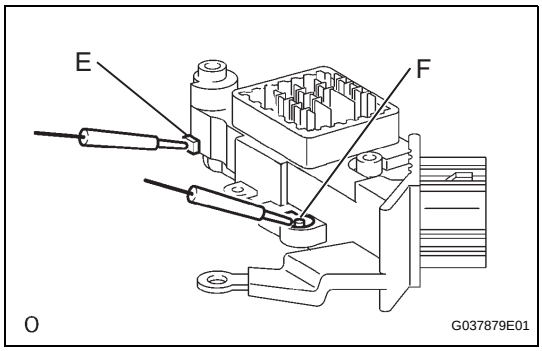


(a) Using vernier calipers, measure the exposed brush length.
Standard exposed length:
9.5 to 11.5 mm (0.374 to 0.453 in.)
Minimum exposed length:
4.5 mm (0.177 in.)
If the exposed length is less than the minimum, replace the generator brush holder assembly.

2. INSPECT GENERATOR REGULATOR ASSEMBLY



(a) Using an ohmmeter, check the continuity between terminals F and B.
Standard:
When the positive and negative poles between terminals F and B are exchanged, there is continuity in one way but no continuity in another way.
If the continuity is not specified, replace the generator regulator assembly.

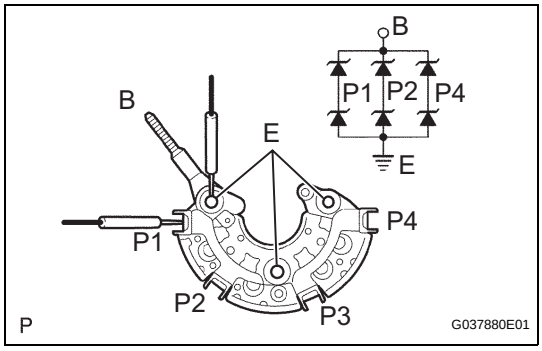


(b) Using an ohmmeter, check the continuity between terminals F and E.

Standard:

When the positive and negative poles between terminals F and B are exchanged, there is continuity in one way but no continuity in another way.

If the continuity is not specified, replace the generator regulator assembly.



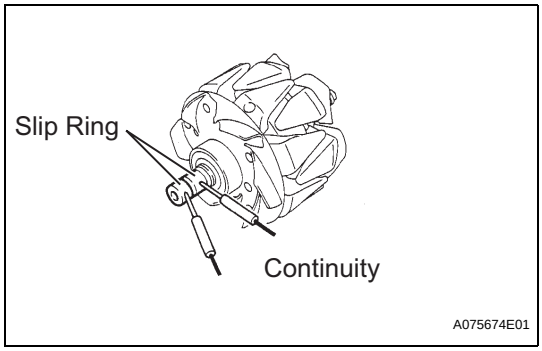
3. INSPECT GENERATOR HOLDER WITH RECTIFIER

(a) Using an ohmmeter, check the continuity between terminals P1, P2, P3, P4 and B, and between P1, P2, P3, P4 and E.

Standard

Terminals	Specified Condition
P1, P2, P3, P4 and B	Continuity in one direction but no continuity in the other direction
P1, P2, P3, P4 and E	Continuity in one direction but no continuity in the other direction

If the continuity is not as specified, replace the generator rectifier holder.



4. INSPECT GENERATOR ROTOR ASSEMBLY

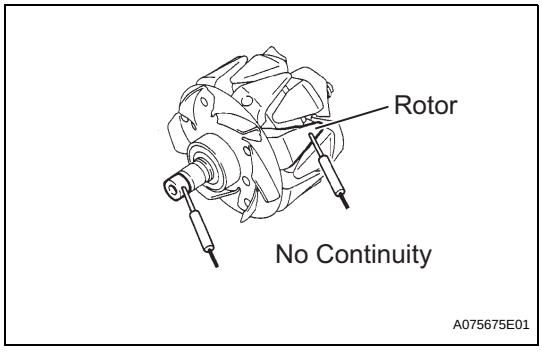
(a) Check for open in the generator rotor circuit.

(1) Using an ohmmeter, measure the resistance between the slip rings.

Standard resistance:

1.7 to 2.1 Ω at 20°C(68°F)

If the resistance is not as specified, replace the generator rotor assembly.



(b) Check for short in the generator rotor circuit.

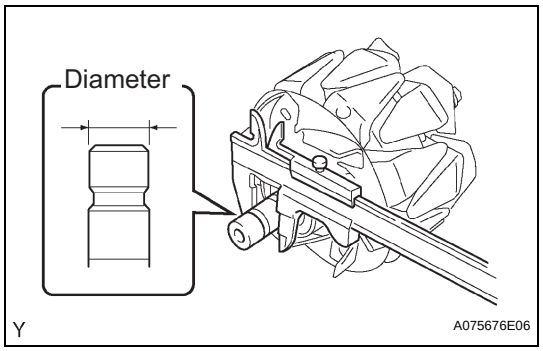
(1) Using an ohmmeter, check that there is no continuity between the slip ring and generator rotor assembly.

If there is continuity, replace the generator rotor assembly.

(c) Inspect slip rings.

(1) Check that the slip rings are not rough or scored.

If rough or scored, replace the generator rotor assembly.



(2) Using vernier calipers, measure the slip ring diameter.

Standard diameter:

14.2 to 14.4 mm (0.559 to 0.567 in)

Minimum diameter:

14.0 mm (0.551 in)

If the diameter is less than the minimum, replace the generator rotor assembly.

AUTOMATIC TRANSMISSION SYSTEM

PRECAUTION

1. **INITIALIZATION**
   NOTICE:
   - **Perform the AT initialization when replacing the automatic transmission assembly, engine assembly or ECM.**
   - **Perform the REGISTRATION (VIN registration) when replacing the ECM. (See page ES-16).**

   HINT:
   Initialization can be completed by only disconnecting the battery terminal.
2. **FOR USING INTELLIGENT TESTER**
   CAUTION:
   Observe the following instructions for safety reasons:
   - **Read its instruction books before using the tester.**
   - **Prevent the tester cable from being caught on the pedals, shift lever and steering wheel when driving with the tester connected to the vehicle.**
   - **When driving the vehicle for testing purposes using the tester, two persons are required. One is for driving the vehicle, and the other operates the tester.**
3. **CONNECT BATTERY NEGATIVE TERMINAL**
   (a) Connect the battery negative terminal to the cable and run the engine at no less than 2,000 rpm for 1 minute.
   NOTICE:
   If the engine exceeds 2,000 rpm, the clutch is automatically disengaged by the compressor protection control system.
4. **DISASSEMBLY AND REASSEMBLY**
   CAUTION:
   When using compressed air, always aim away from yourself to prevent Automatic Transmission Fluid (ATF) or kerosene from spraying on your face.
   NOTICE:
   - **The automatic transmission is composed of precision-made parts, necessitating careful inspection before reassembly because even a small nick could cause fluid leakage or affect performance.**
   - **The procedures are organized so that you work on only one component group at a time. This will help avoid confusion with similar-looking parts of different sub-assemblies being on your workbench at the same time.**
   - **The component groups are inspected and repaired from the converter housing side.**

- **Whenever possible, complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups.**
- **When changing the automatic transmission fluid, use only "Toyota Genuine ATF Type T- IV" (ATF JWS3309 or NWS6500)**
- **All disassembled parts should be washed clean, and compressed air should be blown through any fluid passages and holes.**
- **Dry all parts with compressed air. Never use cloth.**
- **The recommended ATF or kerosene should be used for cleaning.**
- **After cleaning, the parts should be arranged in the order they were removed for efficient inspection, repairs, and reassembly.**
- **When disassembling a valve body, be sue to match each valve with its corresponding spring.**
- **New discs for the brakes and clutches that will be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**
- **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
- **All old gaskets and rubber O-rings must be replaced.**
- **Do not apply adhesive cement to gaskets and similar parts.**
- **Make sure that the ends of the snap rings are not aligned with any cutouts. Also make sure that snap rings are correctly installed into the grooves.**
- **If a worn bushing is to be replaced, the sub-assembly containing the bushing must also be replaced.**
- **Check the thrust bearings and races for wear or damage. Replace if necessary.**
- **Use petroleum jelly to keep parts in place.**

- **When working with FIPG material, perform the following:**
  Using a razor blade and gasket scraper, remove all old FIPG material from the gasket surface.
  Clean all components thoroughly to remove all foreign matter.
  Clean both sealing surfaces with a non-residue solvent.
  Apply FIPG material in a continuous line approximately 1 mm (0.04 in.) in diameter on the sealing surface.
  Reassemble parts within 10 minutes of applying FIPG material. Failing to do so will require the FIPG material to be removed and reapplied.

AUTOMATIC TRANSMISSION FLUID

ON-VEHICLE INSPECTION

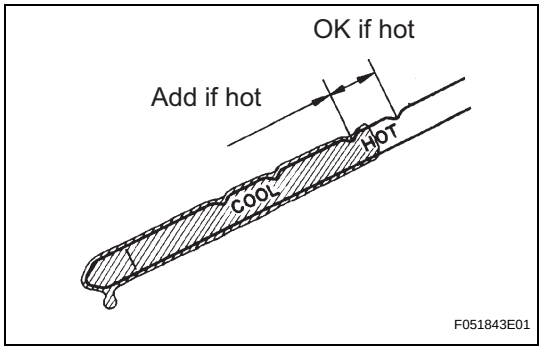
1. CHECK THE FLUID LEVEL

HINT:

Drive the vehicle until the engine and transmission are at normal operating temperature.

Fluid temperature:

70 to 80 °C (158 to 176 °F)



(a) Park the vehicle on a level surface and engage the parking brake.

(b) With the engine idling and the brake pedal depressed, shift the shift lever into all positions from P to L, and then return it to the P position.

(c) Pull out the oil level gage and wipe it clean.

(d) Push it back fully into the pipe.

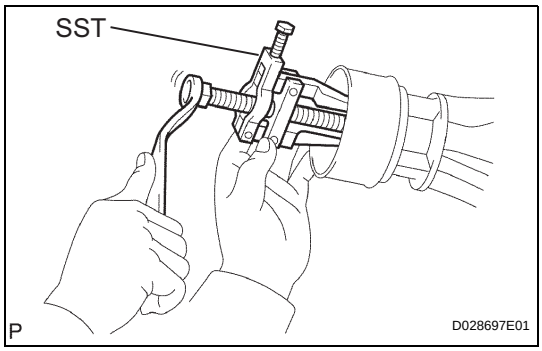
(e) Pull it out and check that the fluid level is within the HOT range.

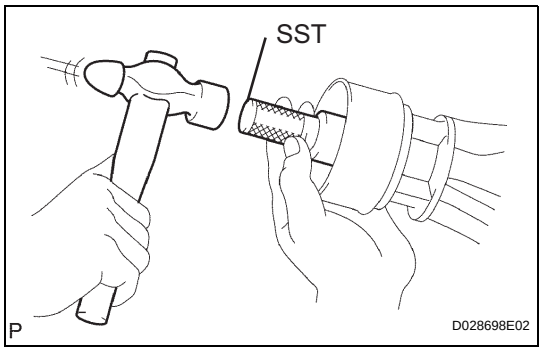
If there is any leakage, repair or replace O-rings, FIPGs, oil seals, plugs or other parts.

EXTENSION HOUSING REAR OIL SEAL

REMOVAL

1. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-3)**
2. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-27)**
3. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)
4. **REMOVE AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST, remove the oil seal.
   SST 09308-00010

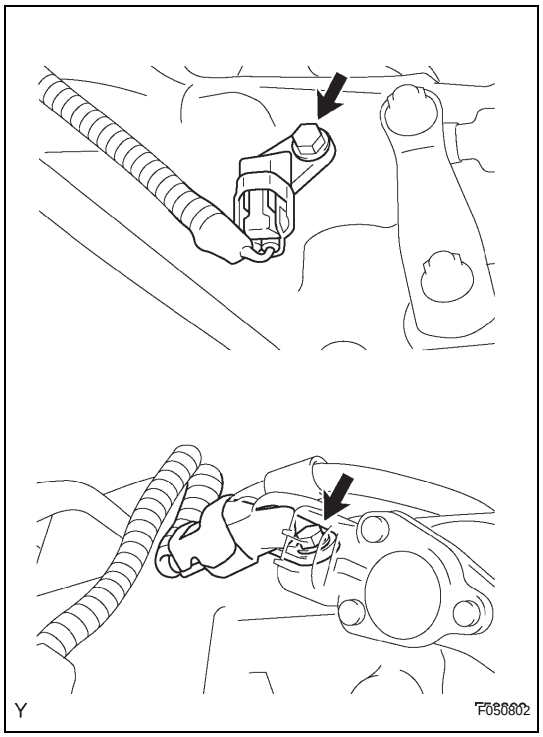




INSTALLATION

1. **INSTALL AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST and a hammer, carefully tap a new oil seal in until it is flush with the automatic transmission extension housing oil seal.
   SST 09325-40010
   Oil seal depth from flat end:
   5.8 to 6.2 mm (0.228 to 0.244 in.)
   (b) Coat the oil seal lip with MP grease.
2. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-32)**
3. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-6)**
4. **ADD AUTOMATIC TRANSMISSION FLUID**
5. **INSPECT AUTOMATIC TRANSMISSION FLUID (See page AT-85)**

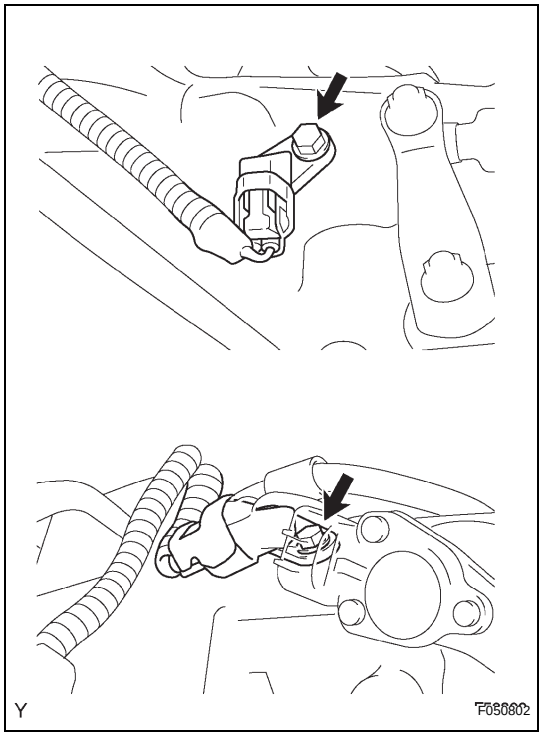
SPEED SENSOR



REMOVAL

1. REMOVE SPEED SENSOR

(a) Disconnect the speed sensor connector.
(b) Remove the bolt and speed sensor.
(c) Remove the O-ring from the speed sensor.



INSTALLATION

1. INSTALL SPEED SENSOR

(a) Coat a new O-ring with ATF.
(b) Install the speed sensor with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(c) Connect the speed sensor connector.

TRANSMISSION WIRE

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

- Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.
- Thoroughly clean all components to remove all loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.
- Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

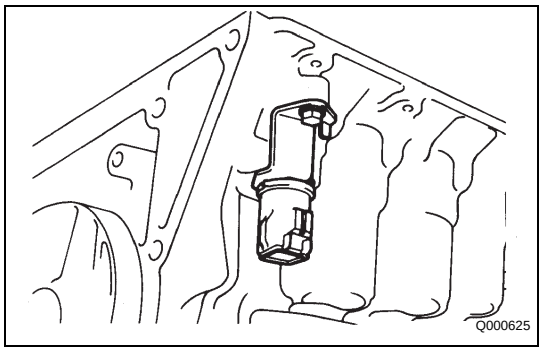
3. **REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (See page AT-110)**

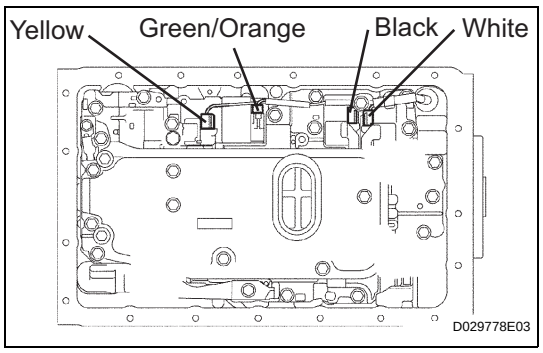
4. **REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-94)**

5. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AT-95)**

6. **REMOVE TRANSMISSION WIRE**
   (a) Disconnect the 4 connectors from each shift solenoid valve.

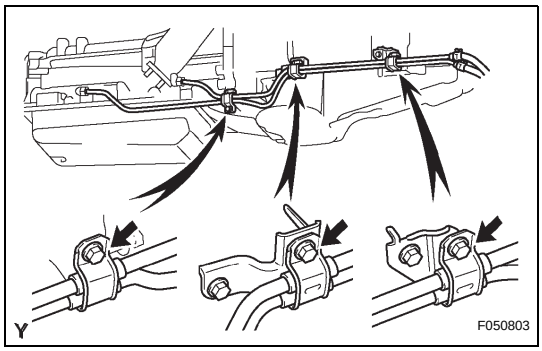
   (b) Remove the bolt and the stopper plate from the case.
   (c) Pull the solenoid wiring out of the transmission case.
   (d) Remove the O-ring from the solenoid wiring.





INSTALLATION

1. **INSTALL TRANSMISSION WIRE**
   (a) Coat a new O-ring with ATF, and install it onto the solenoid wiring.
   (b) Install the solenoid wiring onto the case, and install the stopper plate.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
   (c) Connect the connectors to each shift solenoid valve.
2. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AT-96)**
3. **INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-97)**
4. **INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (See page AT-116)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **ADD AUTOMATIC TRANSMISSION FLUID**
7. **INSPECT AUTOMATIC TRANSMISSION FLUID (See page AT-85)**

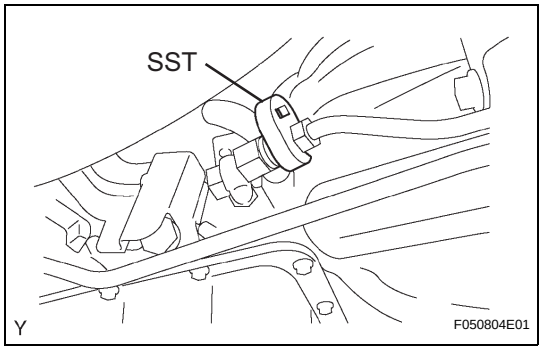


ATF TEMPERATURE SENSOR

REMOVAL

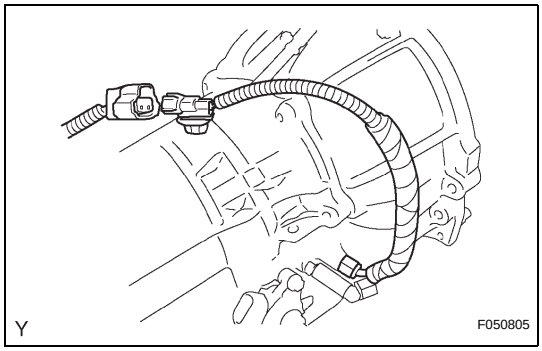
1. DISCONNECT NO. 1 OIL COOLER INLET TUBE

(a) Remove the 3 bolts and 3 clamps.



(b) Using SST, disconnect the oil cooler inlet tube No. 1.

SST 09023-12701



2. REMOVE TEMPERATURE SENSOR

(a) Disconnect the temperature sensor connector.

(b) Remove the temperature sensor.

(c) Remove the O-ring from the temperature sensor.

INSTALLATION

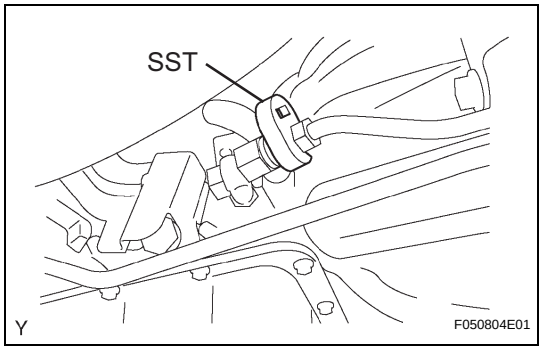
1. INSTALL TEMPERATURE SENSOR

(a) Coat a new O-ring with ATF and install it onto the temperature sensor.

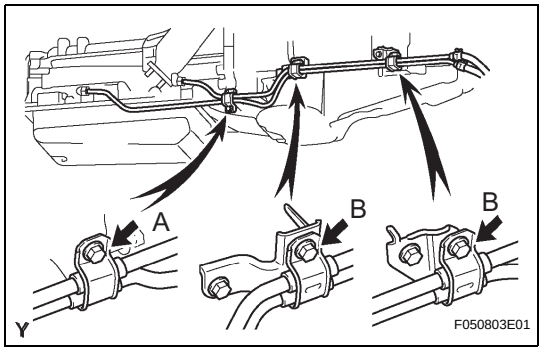
(b) Install the temperature sensor.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)

(c) Connect the temperature sensor connector.

2. CONNECT NO. 1 OIL COOLER INLET TUBE



(a) Using SST, tighten oil cooler inlet tube No. 1.
SST 09023-12701
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



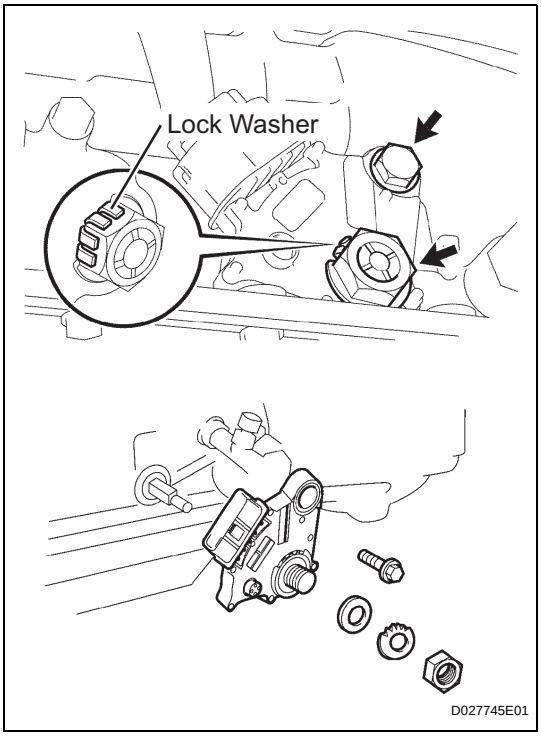
(b) Install the 3 clamps and 3 bolts.
Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf) for bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf) for bolt B

3. INSPECT AUTOMATIC TRANSMISSION FLUID (See page AT-85)

PARK / NEUTRAL POSITION SWITCH

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**
3. **REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**
   (a) Using a screwdriver, unstake the lock washer.
   (b) Remove the nut, lock washer and grommet.
   (c) Remove the bolt and park/neutral position switch.



ADJUSTMENT

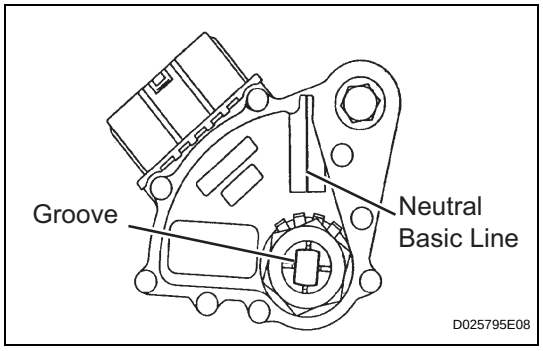
1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Apply the parking brake and turn the ignition switch to ON.

(b) Depress the brake pedal and check that the engine starts only when the shift lever is set in the N or P position and that it does not start in any other positions.

(c) Check that the back-up light comes on and the reverse warning buzzer sounds only when the shift lever is set in the R position and not in other positions.

If any failure is found, check the park/neutral position switch for continuity.



2. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Loosen the bolt of the park/neutral position switch and set the shift lever to the N position.

(b) Align the groove and the neutral basic line.

(c) Hold the switch in position and tighten the bolt.

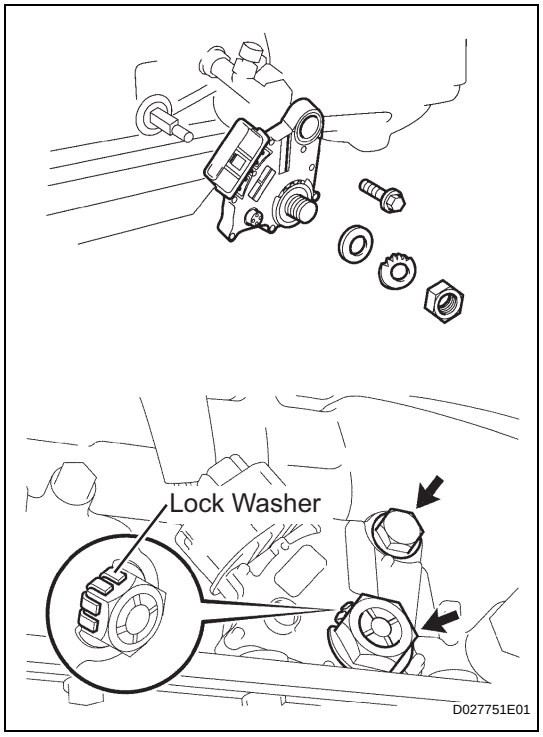
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

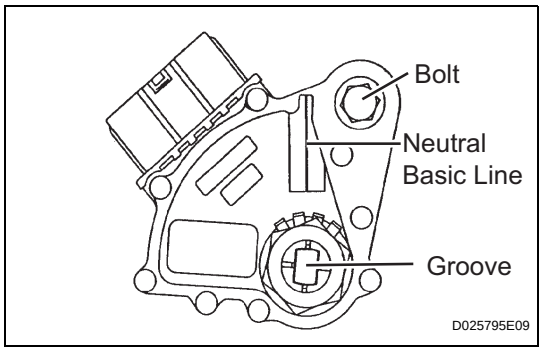
(d) After making an adjustment, perform the inspection described in step 1.

INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch onto the manual valve lever shaft and provisionally tighten the adjusting bolt.





(b) Install the grommet, a new lock washer and the nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)
(c) Install the manual valve lever shaft onto the groove and turn it 2 notches counterclockwise to the neutral position.
(d) Align the neutral basic line with the switch groove and tighten the adjusting bolt.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)
(e) Bend the tabs of the lock washer.
HINT:
Bend at least 2 of the lock washer tabs.

2. CONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

4. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-92)

5. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-92)

6. ADJUST SHIFT LEVER POSITION (See page AT-105)

7. INSPECT SHIFT LEVER POSITION (See page AT-105)

VALVE BODY ASSEMBLY

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

- Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.
- Thoroughly clean all components to remove all loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.
- Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. DRAIN AUTOMATIC TRANSMISSION FLUID

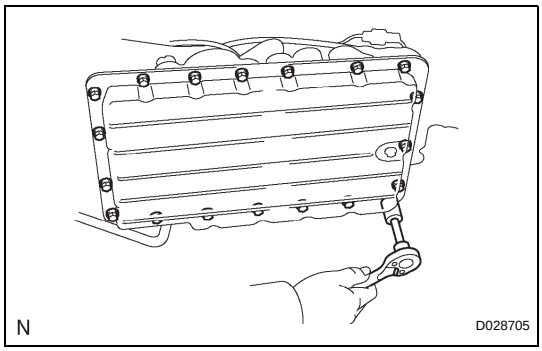
(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and drain plug.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

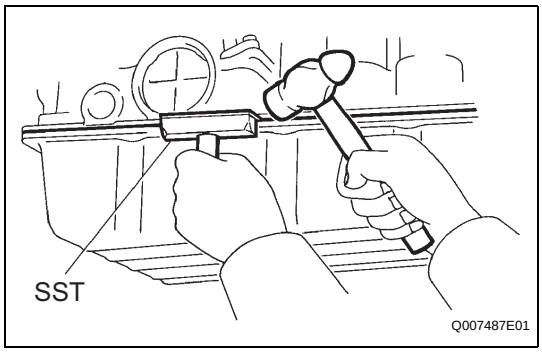
3. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (See page AT-110)

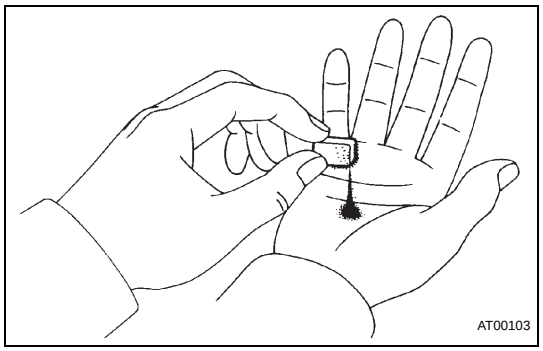
4. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY
NOTICE:
Some fluid will remain in the oil pan.

(a) Remove the 19 bolts and oil pan sub-assembly.

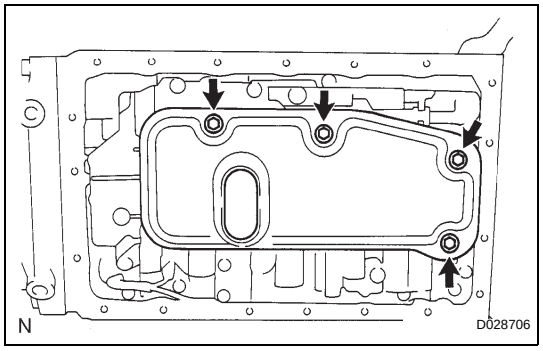


(b) Insert the blade of SST between the transmission case and oil pan, cut off applied sealer and remove the oil pan.
SST 09032-00100
NOTICE:
When removing the oil pan, be careful not to damage the oil pan flange.





(c) Examine the particles in the pan.
  (1) Remove the magnets and use them to collect steel particles. Carefully inspect the foreign matter and particles in the pan and on the magnets to anticipate the type of wear you will find in the transmission.
  Steel (magnetic) ... bearing, gear and clutch plate wear
  Brass (non-magnetic) ... bushing wear

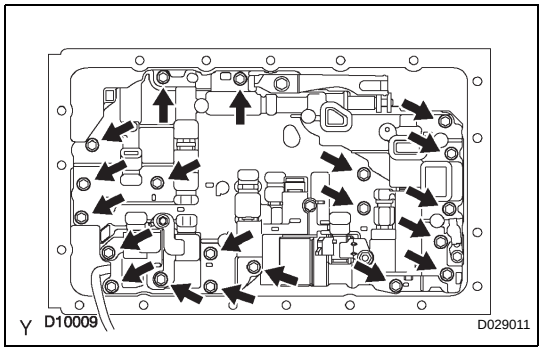


5. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 4 bolts and oil strainer.
NOTICE:
Be careful as some fluid will come out of the oil strainer.

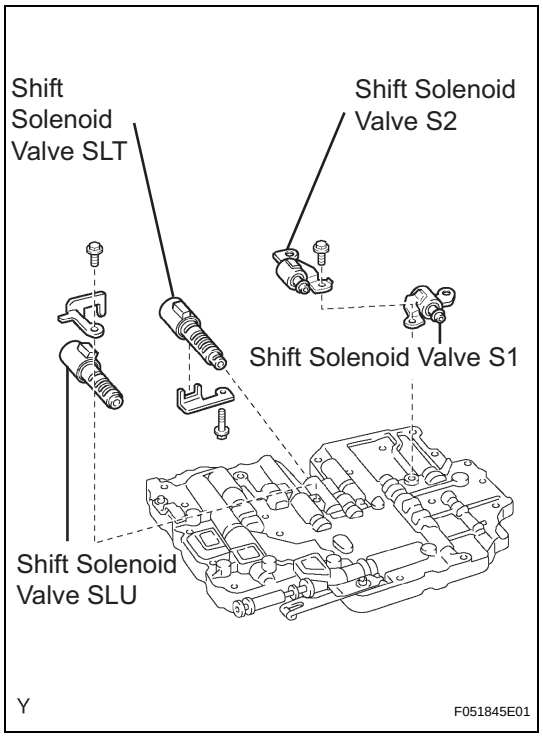
(b) Remove the 5 gaskets from the oil strainer.

6. REMOVE TRANSMISSION WIRE (See page AT-88)



7. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the 20 bolts and valve body assembly.



(b) Remove the bolt and shift solenoid valves S1 and S2.

(c) Remove the bolt and shift solenoid valve SLU.

(d) Remove the bolt and shift solenoid valve SLT.

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Shift the shift lever to the P position.
(b) Turn the ignition switch to LOCK.
(c) Check that the shift lever cannot be shifted to any positions other than P.
(d) Turn the ignition switch to ON, depress the brake pedal, and check that the shift lever can be shifted to other positions.

2. CHECK SHIFT LOCK RELEASE LINK OPERATION

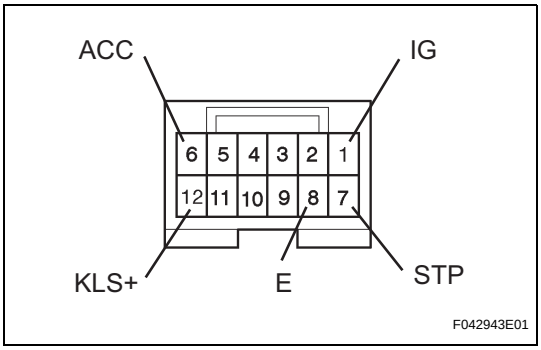
(a) Using a small screwdriver, remove the shift lever cap.
(b) When operating the shift lever with the shift lock release link pressed, check that the lever can be shifted to any positions other than P.

3. CHECK KEY INTERLOCK OPERATION

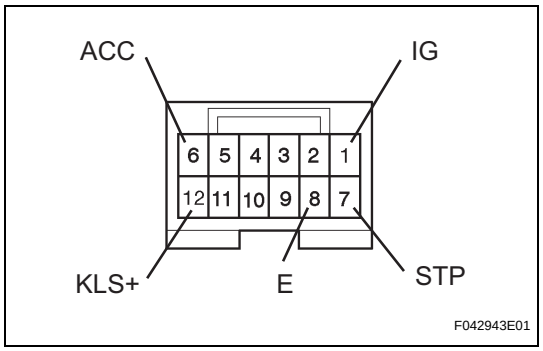
(a) Turn the ignition switch to ON.
(b) Depress the brake pedal and shift the shift lever to any positions other than P.
(c) Check that the ignition key cannot be turned to LOCK.
(d) Shift the shift lever to the P position, turn the ignition key to LOCK, and check that the ignition key can be removed.

4. INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Using a voltmeter, measure the voltage at each terminal.
HINT:
Do not disconnect the shift lock control ECU connector.

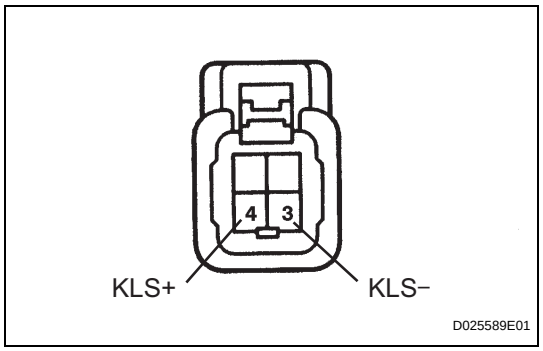


Terminal	Measuring Condition	Voltage (V)
1 (KLS+) - 8 (E)	(1) Ignition switch ACC and P position (2) Ignition switch ACC and except P position (3) Ignition switch ACC and except P position (After approx. 1 second)	0 7.5 to 11 6 to 9
4 (ACC) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch ACC	10 to 14
	Ignition switch OFF	0
9 (STP) - 8 (E)	Depress brake pedal	10 to 14
	Release brake pedal	0
5 (IG) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch OFF	0



(b) Using an ohmmeter, measure the resistance at terminal E (8) and body ground.
HINT:
Do not disconnect the shift lock control ECU connector.

Terminal	Measuring Condition	Specified Value
8 (E) - Body ground	Always	Below 1 Ω



5. INSPECT KEY INTER LOCK SOLENOID

(a) Disconnect the solenoid connector.
(b) Connect KLS+ (4) terminal to the battery positive (+) terminal, and KLS- (3) terminal to the battery negative (-) terminal, and apply about 12V between KLS+ and KLS- terminals.
Check that operation noise can be heard from the solenoid.
If the solenoid does not operate, replace the solenoid.

TORQUE CONVERTER CLUTCH AND DRIVE PLATE

INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

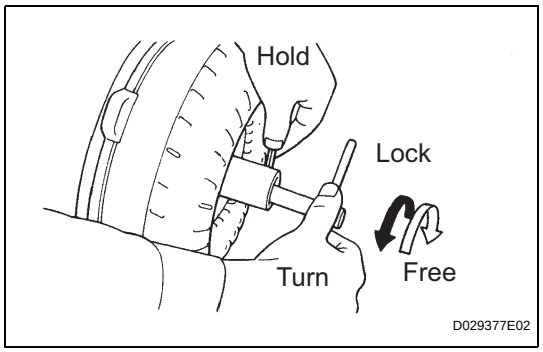
(a) Inspect the one-way clutch.

(1) Install SST into the inner race of the one-way clutch.

SST 09350-32014 (09351-32010)

(2) Set SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.

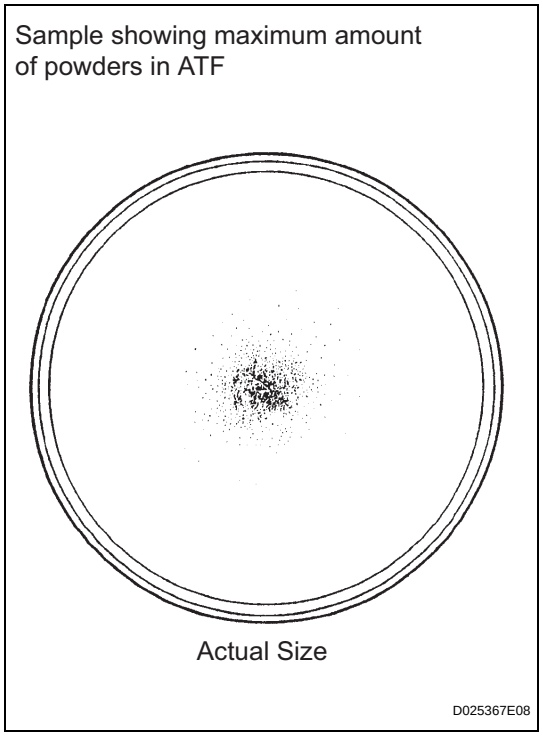
SST 09350-32014 (09351-32020)



(3) With the torque converter standing on its side, check that the clutch locks when turned counterclockwise and rotates freely and smoothly clockwise.

If necessary, clean the converter and check the one-way clutch again.

Replace the converter if the one-way clutch still doesn't operate as specified.



(b) Check the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly matches any of the cases mentioned below, replace the torque converter clutch.

Malfunction item:

Any metallic sound is heard from the torque converter clutch during stall test or when the shift lever is in the neutral position.

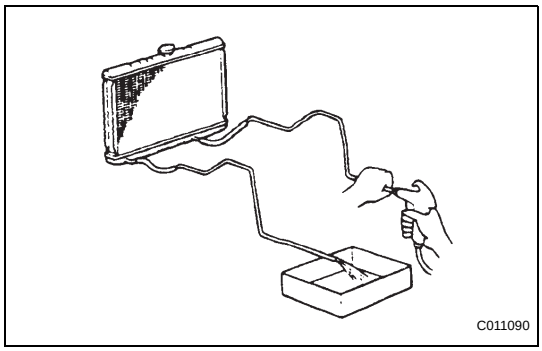
One-way clutch is free or locked in both directions. Fine powders exceeding the sample limit are identified in ATF. (See the sample.)

HINT:

The sample shows the auto fluid of approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.

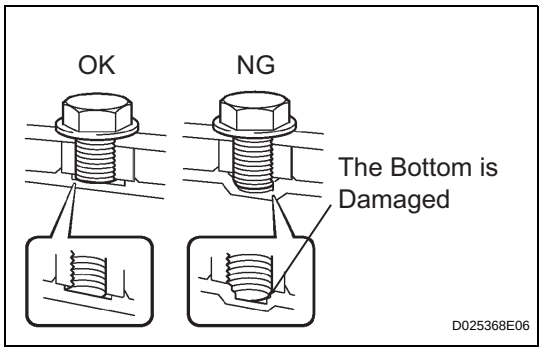
(c) Replace the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it with the installation surface facing up.

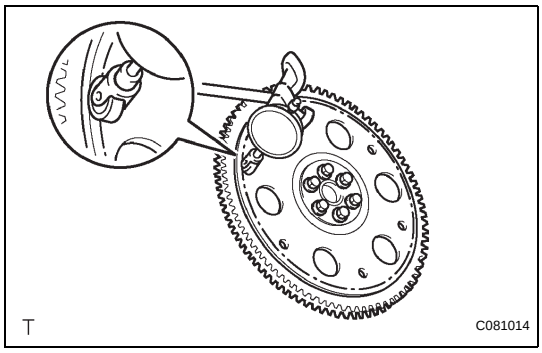


(d) Clean and then check the oil cooler and oil pipe line.
  (1) If inspecting the torque converter clutch or exchanging the ATF, clean the oil cooler and oil pipe line.
  HINT:
  - Apply compressed air of 196 kPa (2 kgf/ cm2, 28 psi) from the inlet hose.
  - If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean the ATF again.

  (2) If the ATF is cloudy, inspect the oil cooler (radiator).



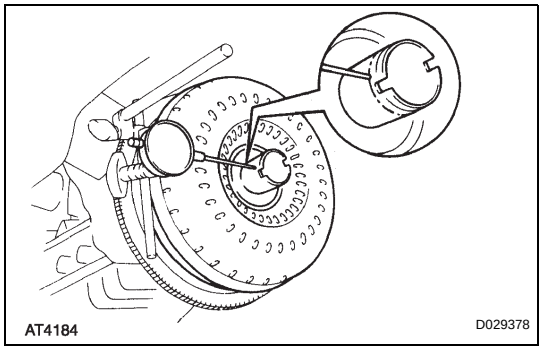
(e) Be careful not to deform the torque converter clutch or damage the oil pump gear.
  (1) When any marks due to interference are found on the end of the bolt on the torque converter clutch and on the bottom of the bolt hole, replace the bolt and the torque the converter clutch.
  (2) All the bolts should be the same length.
  (3) Do not lose any spring washers.



2. INSPECT RUNOUT OF DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Set up a dial indicator and measure the drive plate runout.

(b) Check the ring gear for damage.
Maximum runout:
0.20 mm (0.0079 in.)
If the runout is not within the specification or the ring gear is damaged, replace the drive plate.



3. INSPECT RUNOUT OF TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Provisionally mount the torque converter onto the drive plate, set up a dial indicator, and measure the torque converter sleeve runout.
Maximum runout:
0.30 mm (0.0118 in.)
If the runout is not within the specification, try to correct it by reinstalling the converter to the correct orientation.
HINT:
Mark the position of the converter to ensure correct installation.

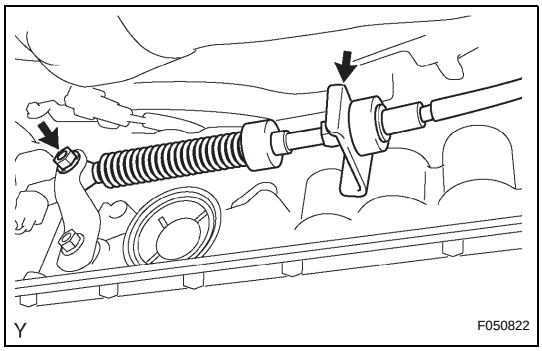
TRANSMISSION CONTROL CABLE

REMOVAL

1. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-9)**
2. **REMOVE CONSOLE BOX ASSEMBLY REAR (See page IP-10)**
3. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-10)**
4. **REMOVE CONSOLE BOX FRONT (See page IP-10)**
5. **REMOVE VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-104)**
6. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Disconnect the transmission control cable assembly from the shift lever assembly.
   (b) Remove the clip and disconnect the transmission control cable.

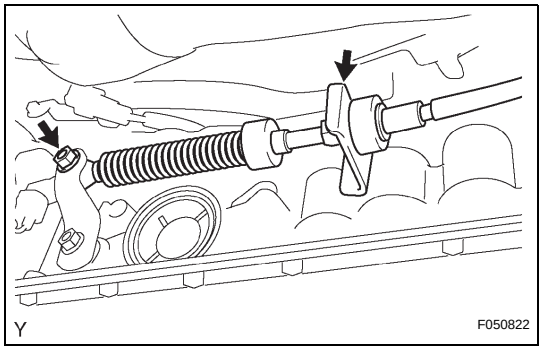
   (c) Remove the 2 nuts and disconnect the transmission control cable assembly from the body.

   (d) Remove the nut and disconnect the transmission control cable assembly from the body.



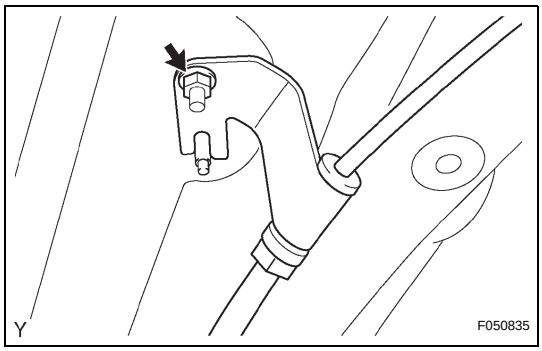
(e) Remove the clip and transmission control cable bracket.
(f) Remove the nut and transmission control cable assembly.

INSTALLATION

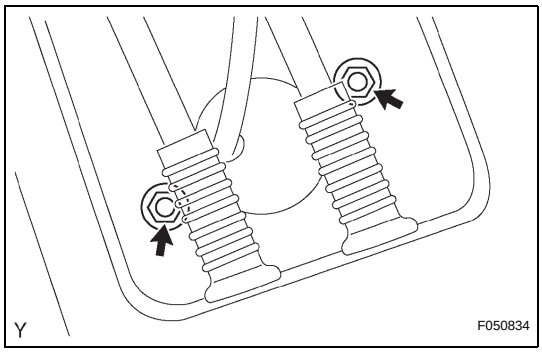


1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

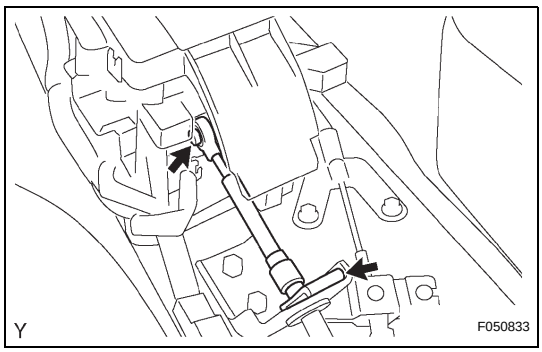
(a) Install the transmission control cable assembly with the nut.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
(b) Install the transmission control cable bracket and lock plate.



(c) Connect the transmission control cable with the nut to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(d) Connect the transmission control cable with the 2 nuts to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(e) Connect the transmission control cable with the lock plate to the floor shift assembly.
(f) Install the transmission control cable onto the floor shift assembly.

2. INSTALL VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-105)

3. INSTALL CONSOLE BOX FRONT (See page IP-24)

4. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-24)

5. **INSTALL CONSOLE BOX ASSEMBLY REAR (See page IP-24)**
6. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-25)**
7. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
8. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

AUTOMATIC TRANSMISSION SYSTEM

PRECAUTION

1. **PRECAUTION**
   NOTICE:
   - **Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AT-17).**
   - **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-14).**

   HINT:
   RESET MEMORY cannot be completed by only disconnecting the negative cable from the battery.
2. **CONNECT BATTERY NEGATIVE TERMINAL**
   (a) Connect the battery negative terminal to the cable and run the engine at no less than 2,000 rpm for 1 minute.
   NOTICE:
   If the engine exceeds 2,000 rpm, the clutch is automatically disengaged by the compressor protection control system.
3. **PRECAUTION FOR DISASSEMBLY AND REASSEMBLY**
   CAUTION:
   When using compressed air, always aim away from yourself to prevent Automatic Transmission Fluid (ATF) or kerosene from spraying on your face.
   NOTICE:
   - **The automatic transaxle is composed of precision-made parts, necessitating careful inspection before reassembly because even a small nick could cause fluid leakage or affect performance.**
   - **The procedures are organized so that you work on only one component group at a time. This will help avoid confusion with similar-looking parts of different sub-assemblies being on your workbench at the same time.**
   - **The component groups are inspected and repaired from the converter housing side.**
   - **Whenever possible, complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups.**

- **When changing the automatic transmission fluid, use only "Toyota Genuine ATF WS" (ATF JWS3324 or NWS9638).**
- **All disassembled parts should be washed clean, and compressed air should be blown through any fluid passages and holes.**
- **Dry all parts with compressed air. Never use cloth.**
- **The recommended ATF or kerosene should be used for cleaning.**
- **After cleaning, the parts should be arranged in the order they were removed for efficient inspection, repairs, and reassembly.**
- **When disassembling a valve body, be sue to match each valve with its corresponding spring.**
- **New discs for the brakes and clutches that will be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**
- **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
- **All old gaskets and rubber O-rings must be replaced.**
- **Do not apply adhesive cement to gaskets and similar parts.**
- **Make sure that the ends of the snap rings are not aligned with any cutouts. Also make sure that snap rings are correctly installed into the grooves.**
- **If a worn bushing is to be replaced, the sub-assembly containing the bushing must also be replaced.**
- **Check the thrust bearings and races for wear or damage. Replace if necessary.**
- **Use petroleum jelly to keep parts in place.**
- **When working with FIPG material, perform the following:**
  Using a razor blade and gasket scraper, remove all old FIPG material from the gasket surface.
  Clean all components thoroughly to remove all foreign matter.
  Clean both sealing surfaces with a non-residue solvent.
  Apply FIPG material in a continuous line approximately 1 mm (0.04 in.) in diameter on the sealing surface.
  Reassemble parts within 10 minutes of applying FIPG material. Failing to do so will require the FIPG material to be removed and reapplied.

AUTOMATIC TRANSMISSION FLUID

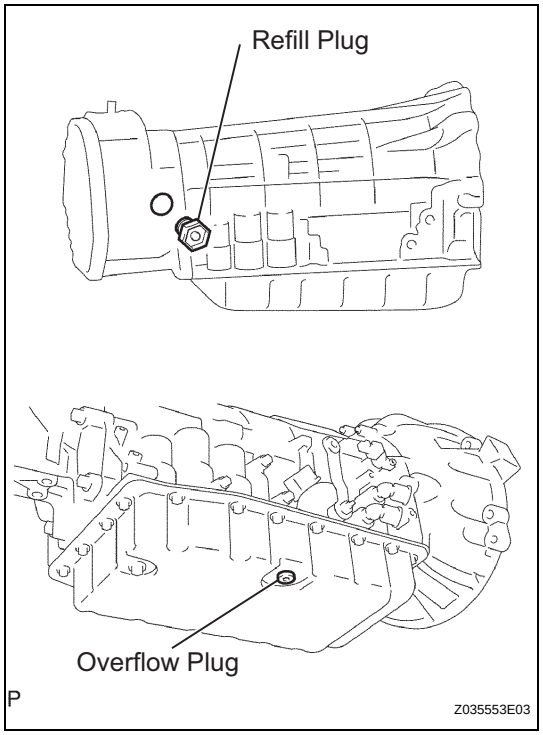
ADJUSTMENT

1. BEFORE FILLING TRANSMISSION

- This transmission requires Toyota Genuine ATF WS.
- It is necessary to refill the transmission with the correct amount of fluid.
- The vehicle must remain level while adjusting the transmission fluid level.
- On vehicles equipped with active suspension, turn the suspension control switch OFF if it is necessary to jack up the vehicle with the engine running.

2. TRANSMISSION PAN FILL

(a) Remove the refill plug and overflow plug.



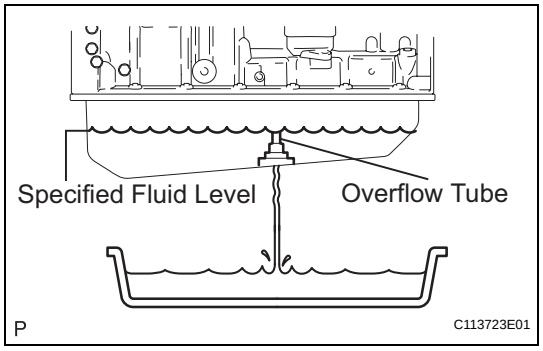
(b) Fill the transmission through the refill hole until fluid begins to trickle out of the overflow tube.

(c) Reinstall the overflow plug.

3. TRANSMISSION FILL

(a) Fill the transmission with the correct amount of fluid as listed in the table below.

(b) Reinstall the refill plug to avoid fluid splash.



Repair	Fill Amount
Transmission pan and drain plug removal	1.3 L (1.37 US qts, 1.14 lmp qts)
Transmission valve body removal	3.9 L (4.12 US qts, 3.43 lmp qts)
Torque converter removal	5.3 L (5.60 US qts, 4.66 lmp qts)
Entire transmission assembly	5.3 L (5.60 US qts, 4.66 lmp qts)

HINT:

If you cannot add the listed amount of fluid, do the following:

- Install the refill plug.
- Allow the engine to idle with the air conditioning OFF.
- Move the shift lever through entire gear range to circulate fluid.
- Wait for 30 seconds with the engine idling.
- Stop the engine.
- Remove the refill plug and add fluid.
- Reinstall the refill plug.

4. FLUID CIRCULATION

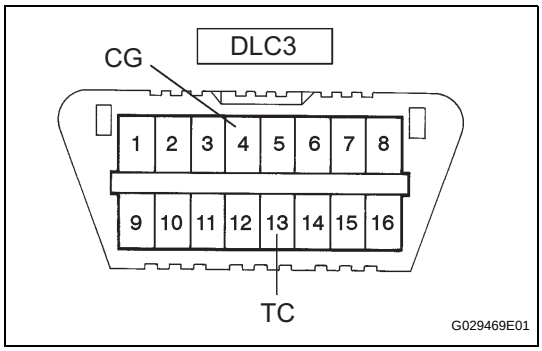
(a) Allow the engine to idle with the air conditioning OFF.

(b) Move the shift lever through entire gear range to circulate fluid.

5. FLUID TEMPERATURE CHECK

NOTICE:

The fluid temperature should be less then 30°C (86°F) before beginning the fluid temperature check.



(a) With intelligent tester

(1) Connect the intelligent tester to the DLC3.

(2) Select the tester menus: OBD/MOBD, ENGINE, DATA LIST and A/T.

(3) Check A/T OIL TEMP.

(4) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

(b) Without intelligent tester (Using A/T OIL TEMP indicator)

(1) Connect terminals between CG (4) and TC (13) of the DLC3 using SST (09843-18040).

(2) Move the shift lever back and forth between N and D every 1.5 seconds for six seconds.

(3) The D shift indicator on the combination meter comes on for two seconds. This indicates that the fluid temperature check mode has been started.

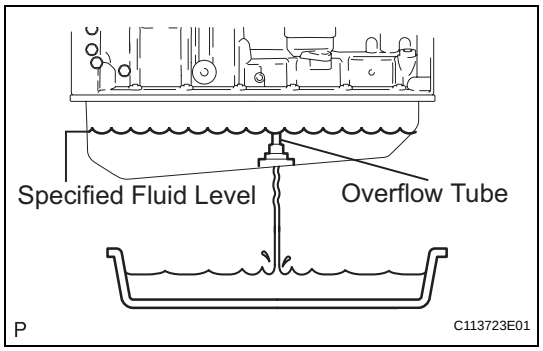
(4) The D shift indicator will come on again when the fluid temperature reaches 46°C (115°F) and will blink when it exceeds 56°C (130°F).

(5) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

6. FLUID LEVEL CHECK

NOTICE:

The fluid temperature must be between 46°C (115°F) and 56°C (130°F) to accurately check the fluid level.



(a) Remove the overflow plug with the engine idling.
(b) Check that the fluid comes out of the overflow tube.
If fluid does not come out, proceed to step 7.
If fluid comes out, wait until the overflow slows to a trickle and proceed to step 8.

7. TRANSMISSION REFILL

(a) Install the overflow plug.
(b) Stop the engine.
(c) Remove the refill plug.
(d) Add 0.4 liters (0.42 US qts, 0.35 lmp qts) of fluid.
(e) Allow the engine to idle and wait for 10 seconds.
(f) Proceed to step 6.

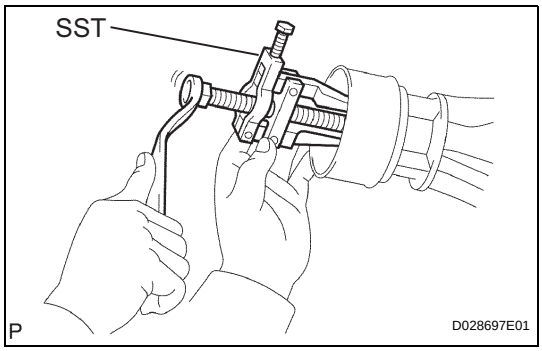
8. COMPLETE

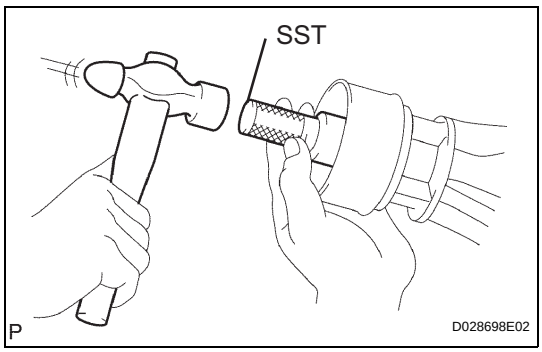
(a) Install the overflow plug with a new gasket.
(b) Stop the engine.
(c) Install the refill plug with a new gasket.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf) for overflow plug
39 N*m (400 kgf*cm, 29 ft.*lbf) for refill plug

EXTENSION HOUSING REAR OIL SEAL

REMOVAL

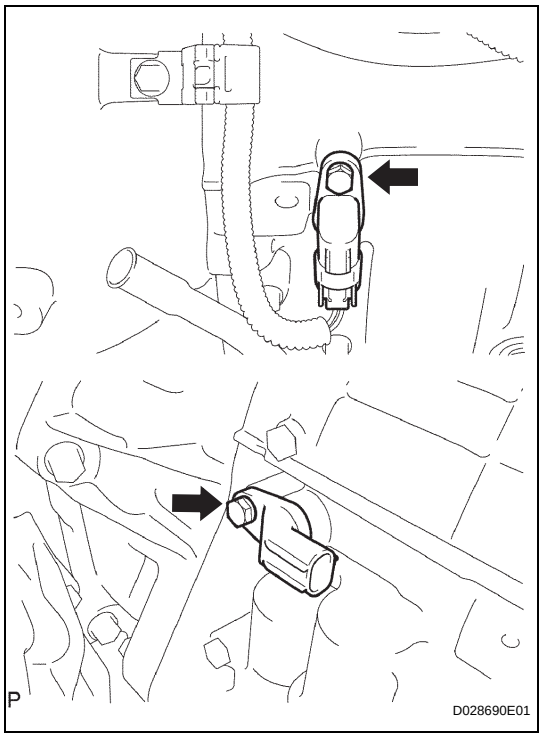
1. **REMOVE PROPELLER WITH/CENTER BEARING SHAFT ASSEMBLY (See page PR-27)**
2. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)
3. **REMOVE AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST, remove the oil seal.
   SST 09308-00010





INSTALLATION

1. **INSTALL AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST and a hammer, carefully tap in a new oil seal until it is flush with the automatic transmission extension housing.
   SST 09316-60011 (09316-00011, 09316-00051)
   Oil seal depth from flat end:
   5.4 to 5.8 mm (0.213 to 0.228 in.)
   (b) Coat the oil seal lip with MP grease.
2. **INSTALL PROPELLER WITH/CENTER BEARING SHAFT ASSEMBLY (See page PR-32)**
3. **ADD AUTOMATIC TRANSMISSION FLUID**
   (See page AT-135)



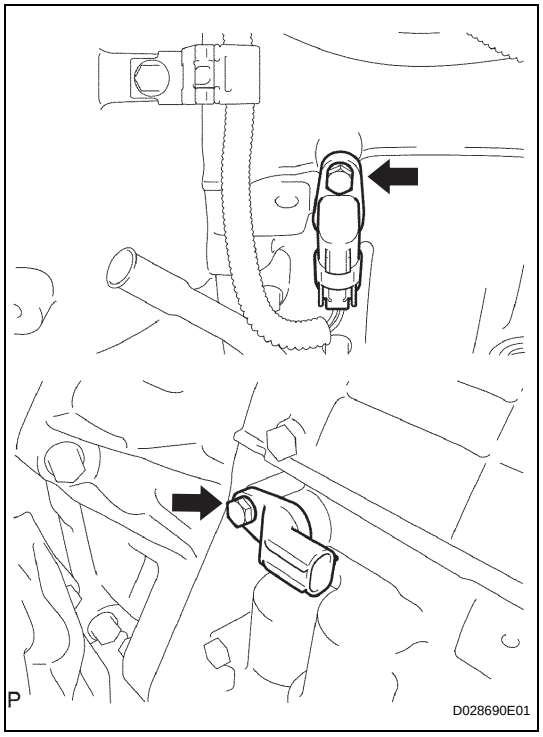
SPEED SENSOR

REMOVAL

1. REMOVE TRANSMISSION REVOLUTION SENSOR

(a) Disconnect the connector.

(b) Remove the bolt and speed sensor.



INSTALLATION

1. INSTALL TRANSMISSION REVOLUTION SENSOR

(a) Coat a new O-ring with ATF.

(b) Install the speed sensor with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(c) Connect the connector.

TRANSMISSION WIRE

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

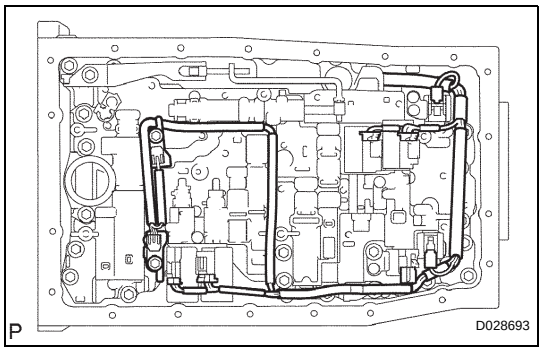
- **Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.**
- **Thoroughly clean all components to remove all loose material.**
- **Clean both sealing surfaces with a non-residue solvent.**
- **Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.**
- **Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.**

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

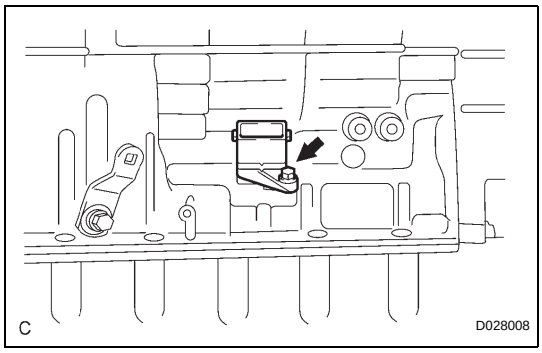
2. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)

3. **REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-144)**

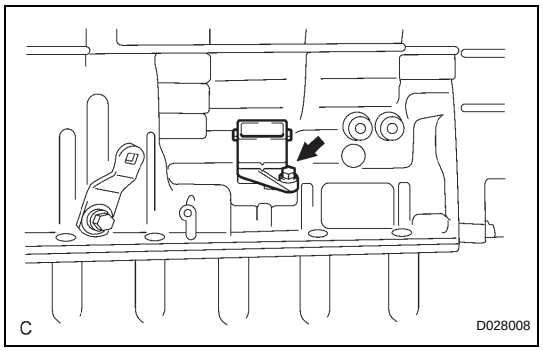
4. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AT-145)**



5. **SEPARATE TRANSMISSION WIRE**
   (a) Remove the bolt and clamp.
   (b) Disconnect the ATF temperature sensor.
   (c) Disconnect the 7 connectors from the solenoid valves.

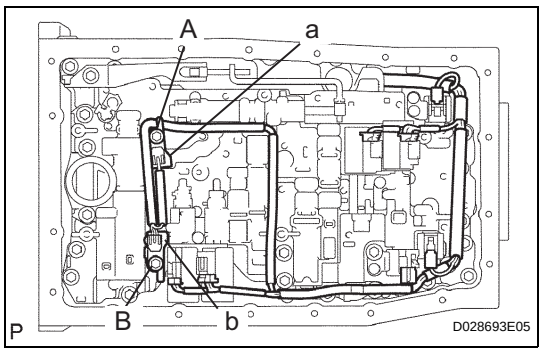


6. **REMOVE TRANSMISSION WIRE**
   (a) Disconnect the transmission wire connector.
   (b) Remove the bolt and pull out the transmission wire.



INSTALLATION

1. **INSTALL TRANSMISSION WIRE**
   (a) Install the transmission wire with the bolt.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
   (b) Connect the transmission wire connector.



2. **CONNECT TRANSMISSION WIRE**
   (a) Connect the 7 connectors to the solenoid valves.
   (b) Install the clamp with the bolt.
   Torque: A
   10 N*m (100 kgf*cm, 7 in.*lbf)
   B
   11 N*m (110 kgf*cm, 8 in.*lbf)
   (c) Connect the ATF temperature sensor.
   Wiring color:
   a: Orange
   b: Blue

3. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AT-146)**

4. **INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-146)**

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

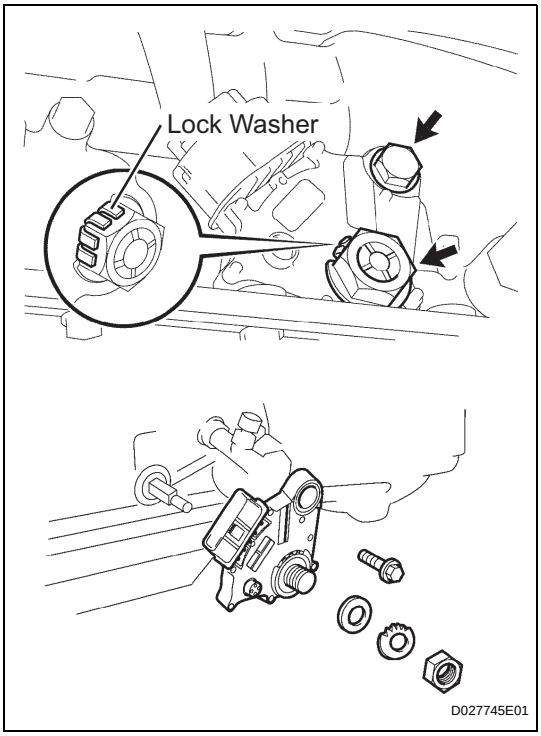
6. **PERFORM INITIALIZATION**
   (See page AT-17)

7. **ADD AUTOMATIC TRANSMISSION FLUID**
   (See page AT-135)

PARK / NEUTRAL POSITION SWITCH

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**
3. **REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**
   (a) Using a screwdriver, unstake the lock washer.
   (b) Remove the nut, lock washer and grommet.
   (c) Remove the bolt and park/neutral position switch.



ADJUSTMENT

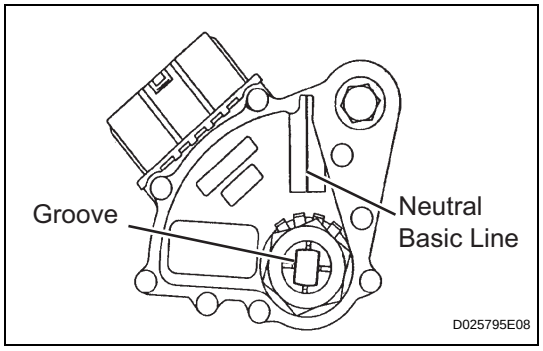
1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Apply the parking brake and turn the ignition switch to ON.

(b) Depress the brake pedal and check that the engine starts only when the shift lever is set in the N or P position and that it does not start in any other positions.

(c) Check that the back-up light comes on and the reverse warning buzzer sounds only when the shift lever is set in the R position and not in other positions.

If any failure is found, check the park/neutral position switch for continuity.



2. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Loosen the bolt of the park/neutral position switch and set the shift lever to the N position.

(b) Align the groove and the neutral basic line.

(c) Hold the switch in position and tighten the bolt.

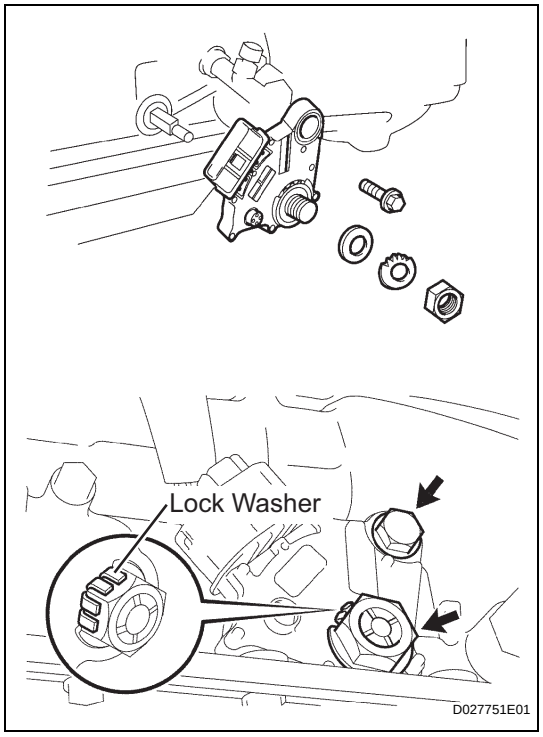
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

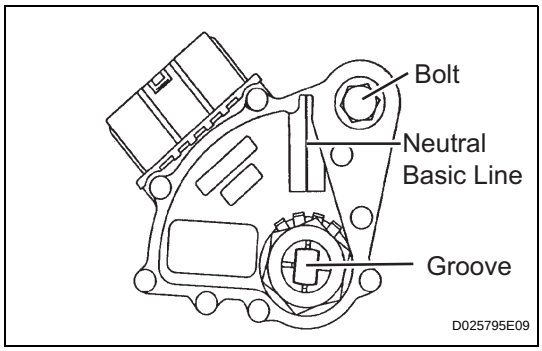
(d) After making an adjustment, perform the inspection described in step 1.

INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch onto the manual valve lever shaft and provisionally tighten the adjusting bolt.





(b) Install the grommet, a new lock washer and the nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)
(c) Install the manual valve lever shaft onto the groove and turn it 2 notches counterclockwise to the neutral position.
(d) Align the neutral basic line with the switch groove and tighten the adjusting bolt.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)
(e) Bend the tabs of the lock washer.
HINT:
Bend at least 2 of the lock washer tabs.

2. **CONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
4. **INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-142)**
5. **ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-142)**
6. **ADJUST SHIFT LEVER POSITION (See page AT-155)**
7. **INSPECT SHIFT LEVER POSITION (See page AT-155)**

VALVE BODY ASSEMBLY

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

- **Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.**
- **Thoroughly clean all components to remove all loose material.**
- **Clean both sealing surfaces with a non-residue solvent.**
- **Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.**
- **Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. DRAIN AUTOMATIC TRANSMISSION FLUID

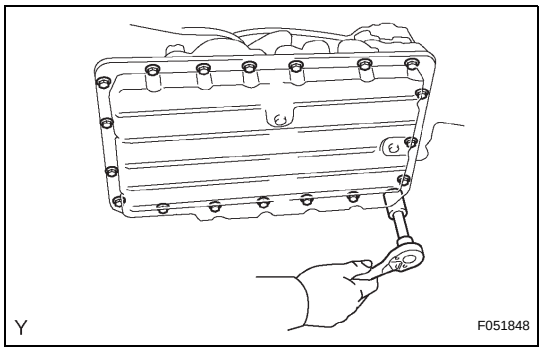
(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and drain plug.
Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)

3. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

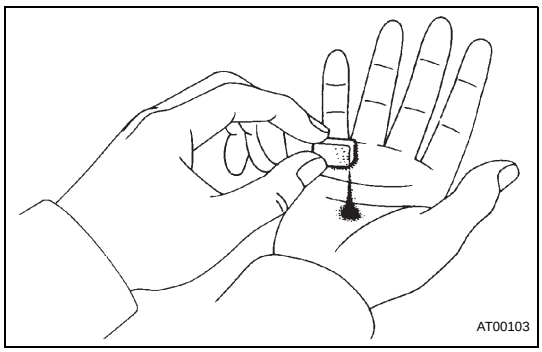
NOTICE:
Some fluid will remain in the oil pan.

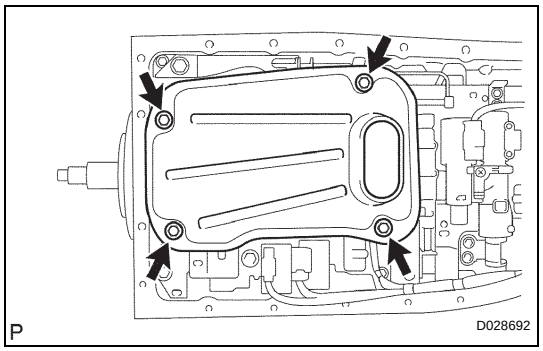
(a) Remove the 20 bolts, gasket and oil pan sub-assembly.



(b) Examine the particles in the pan.

(1) Remove the magnets and use them to collect steel particles. Carefully inspect the foreign matter and particles in the pan and on the magnets to anticipate the type of wear you will find in the transmission.
Steel (magnetic) ... bearing, gear and clutch plate wear
Brass (non-magnetic) ... bushing wear





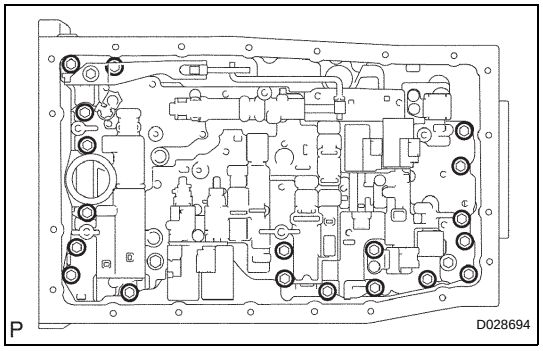
4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 4 bolts, oil strainer and O-ring.

NOTICE:

Be careful as some fluid will come out of the oil strainer.

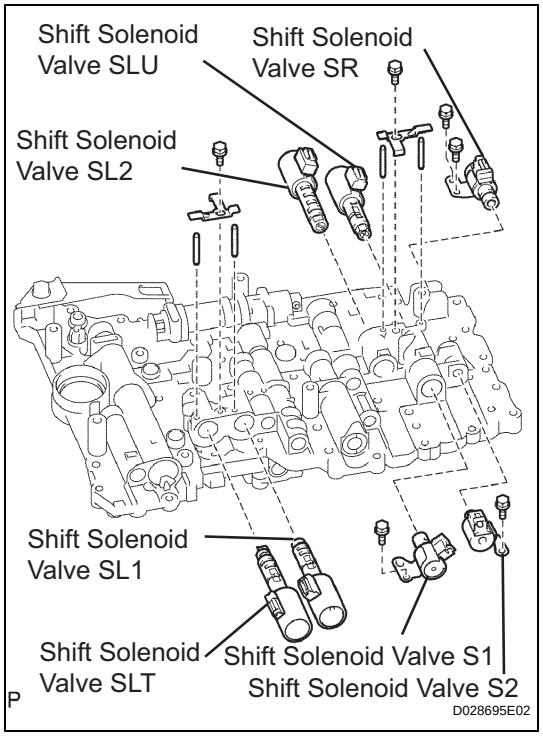
5. SEPARATE TRANSMISSION WIRE (See page AT-140)



6. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the 19 bolts and valve body.

(b) Remove the 3 drum seal gaskets.



(c) Remove the bolt, lock plate, pin and shift solenoid valves SLT and SL1.

(d) Remove the bolt, lock plate, pin and shift solenoid valves SLU and SL2.

(e) Remove the 2 bolts and shift solenoid valve SR.

(f) Remove the bolt and shift solenoid valve S1.

(g) Remove the bolt and shift solenoid valve S2.

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Shift the shift lever to the P position.
(b) Turn the ignition switch to LOCK.
(c) Check that the shift lever cannot be shifted to any positions other than P.
(d) Turn the ignition switch to ON, depress the brake pedal, and check that the shift lever can be shifted to other positions.

2. CHECK SHIFT LOCK RELEASE LINK OPERATION

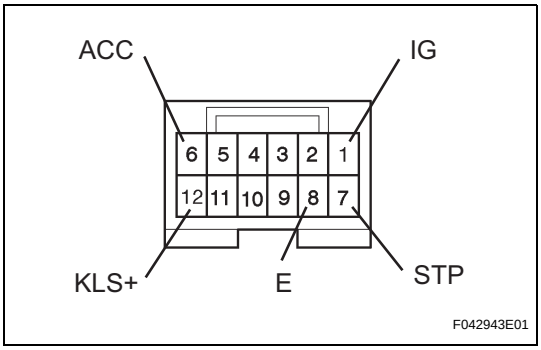
(a) Using a small screwdriver, remove the shift lever cap.
(b) When operating the shift lever with the shift lock release link pressed, check that the lever can be shifted to any positions other than P.

3. CHECK KEY INTERLOCK OPERATION

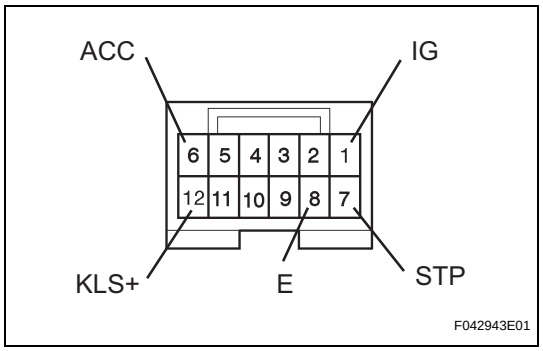
(a) Turn the ignition switch to ON.
(b) Depress the brake pedal and shift the shift lever to any positions other than P.
(c) Check that the ignition key cannot be turned to LOCK.
(d) Shift the shift lever to the P position, turn the ignition key to LOCK, and check that the ignition key can be removed.

4. INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Using a voltmeter, measure the voltage at each terminal.
HINT:
Do not disconnect the shift lock control ECU connector.

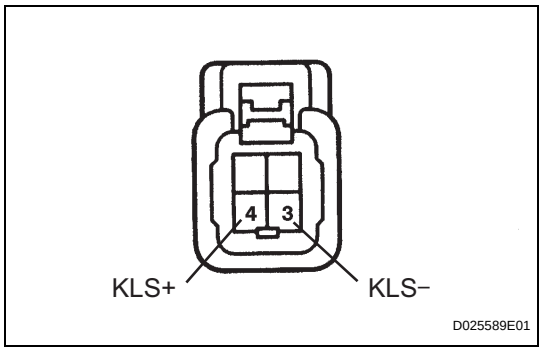


Terminal	Measuring Condition	Voltage (V)
1 (KLS+) - 8 (E)	(1) Ignition switch ACC and P position (2) Ignition switch ACC and except P position (3) Ignition switch ACC and except P position (After approx. 1 second)	0 7.5 to 11 6 to 9
4 (ACC) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch ACC	10 to 14
	Ignition switch OFF	0
9 (STP) - 8 (E)	Depress brake pedal	10 to 14
	Release brake pedal	0
5 (IG) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch OFF	0



(b) Using an ohmmeter, measure the resistance at terminal E (8) and body ground.
HINT:
Do not disconnect the shift lock control ECU connector.

Terminal	Measuring Condition	Specified Value
8 (E) - Body ground	Always	Below 1 Ω



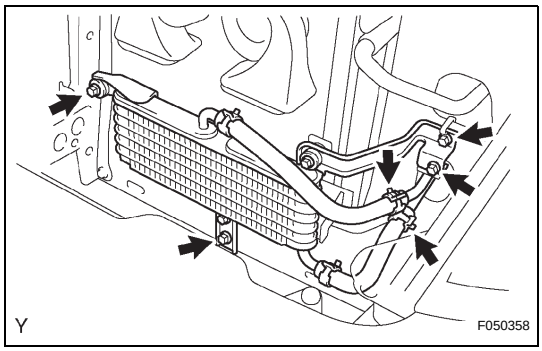
5. INSPECT KEY INTER LOCK SOLENOID

(a) Disconnect the solenoid connector.
(b) Connect KLS+ (4) terminal to the battery positive (+) terminal, and KLS- (3) terminal to the battery negative (-) terminal, and apply about 12V between KLS+ and KLS- terminals.
Check that operation noise can be heard from the solenoid.
If the solenoid does not operate, replace the solenoid.

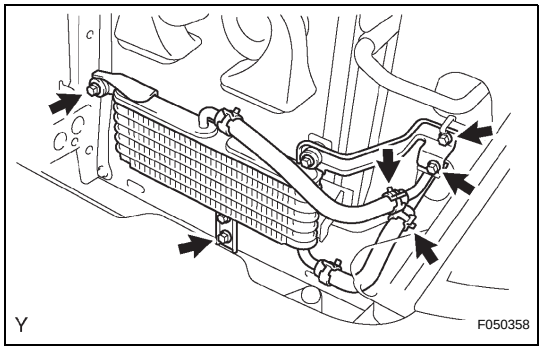
AIR COOLED OIL COOLER

REMOVAL

1. **REMOVE RADIATOR GRILLE (See page ET-4)**
2. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)
3. **REMOVE OIL COOLER WITH HOSE ASSEMBLY**
   (a) Loosen the 2 clips and disconnect the 2 oil cooler hoses.
   (b) Remove the 4 bolts and the oil cooler with hose assembly.



INSTALLATION



1. **INSTALL OIL COOLER WITH HOSE ASSEMBLY**
   (a) Install the oil cooler with hose assembly with the 4 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Install the 2 oil cooler hoses and 2 clips.
2. **ADD AUTOMATIC TRANSMISSION FLUID**
   (See page AT-135)
3. **INSTALL RADIATOR GRILLE (See page ET-11)**

TORQUE CONVERTER CLUTCH AND DRIVE PLATE

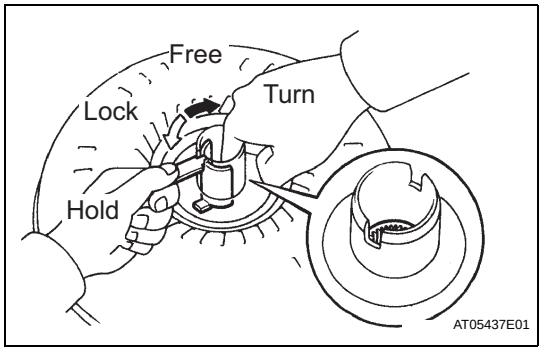
INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the one-way clutch.

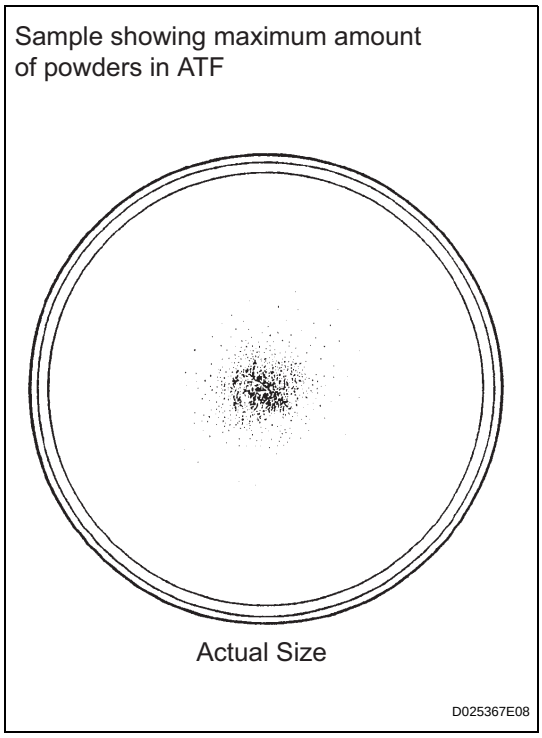
(1) Install SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.
SST 09350-32014 (09351-32020)

(2) Press on the serrations of the starter with a finger and rotate it.
Check if it rotates smoothly when turned clockwise and locks up when turned counterclockwise.
If necessary, clean the converter and check the one-way clutch again.
Replace the converter if the one-way clutch still won't operate as specified.



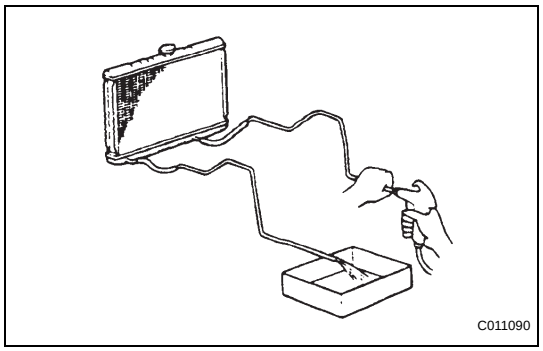
(b) Check the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly meets any of the cases mentioned below, replace the torque converter clutch.
Malfunction item:
Any metallic sound is heard from the torque converter clutch during stall test or when the shift lever is in the neutral position.
One-way clutch is free or locked in both directions. Fine powders exceeding the sample limit are identified in ATF. (See the sample.)
HINT:
The sample shows the auto fluid of approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.



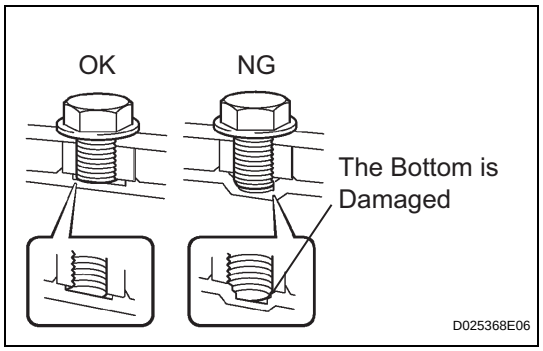
(c) Replace the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it with the installation surface facing up.

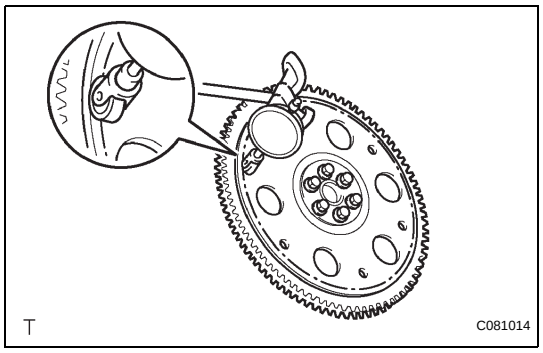


(d) Clean and then check the oil cooler and oil pipe line.
  (1) If inspecting the torque converter clutch or exchanging the ATF, clean the oil cooler and oil pipe line.
  HINT:
  - Apply compressed air of 196 kPa (2 kgf/ cm2, 28 psi) from the inlet hose.
  - If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean the ATF again.

  (2) If the ATF is cloudy, inspect the oil cooler (radiator).



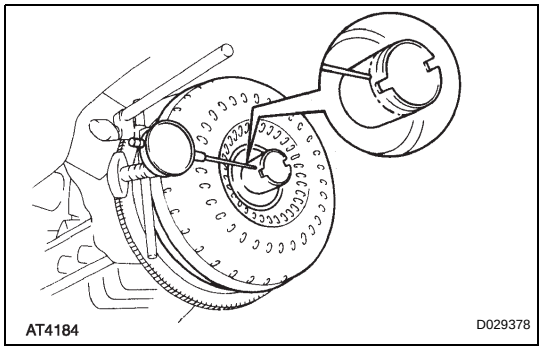
(e) Be careful not to deform the torque converter clutch or damage the oil pump gear.
  (1) When any marks due to interference are found on the end of the bolt to the torque converter clutch or on the bottom of the bolt hole, replace the bolt and the torque converter clutch.
  (2) All the bolts should be the same length.
  (3) Do not lose any spring washers.



2. INSPECT DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Set up a dial indicator and measure the drive plate runout.
Maximum runout:
0.20 mm (0.0079 in.)

(b) Check the ring gear for damage.
If the runout is not within the specification or the ring gear is damaged, replace the drive plate.



3. INSPECT RUNOUT OF TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Provisionally mount the torque converter onto the drive plate, set up a dial indicator, and measure the torque converter sleeve runout.
Maximum runout:
0.30 mm (0.0118 in.)
If the runout is not within the specification, try to correct it by reinstalling the converter to the correct orientation.
HINT:
Mark the position of the converter to ensure correct installation.

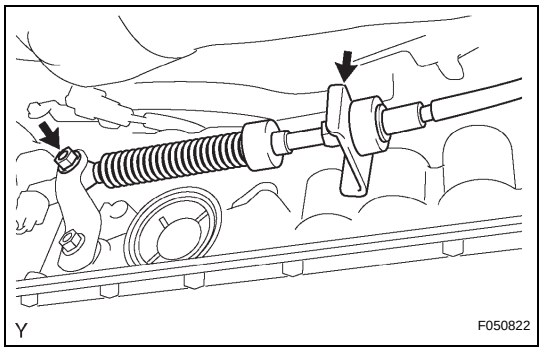
TRANSMISSION CONTROL CABLE

REMOVAL

1. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-9)**
2. **REMOVE CONSOLE BOX ASSEMBLY REAR (See page IP-10)**
3. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-10)**
4. **REMOVE CONSOLE BOX FRONT (See page IP-10)**
5. **REMOVE VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-104)**
6. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Disconnect the transmission control cable assembly from the shift lever assembly.
   (b) Remove the clip and disconnect the transmission control cable.

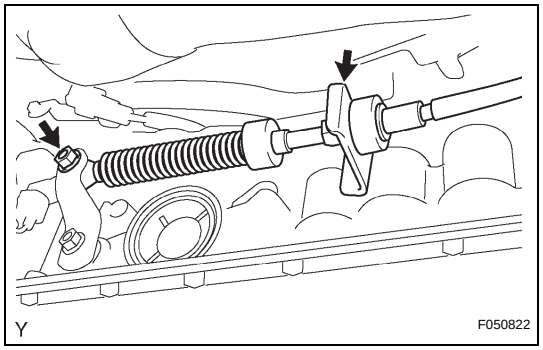
   (c) Remove the 2 nuts and disconnect the transmission control cable assembly from the body.

   (d) Remove the nut and disconnect the transmission control cable assembly from the body.



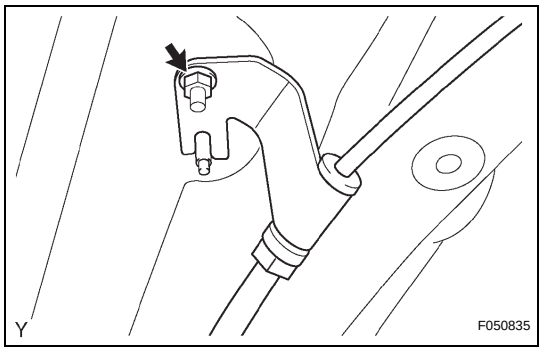
(e) Remove the clip and transmission control cable bracket.
(f) Remove the nut and transmission control cable assembly.

INSTALLATION

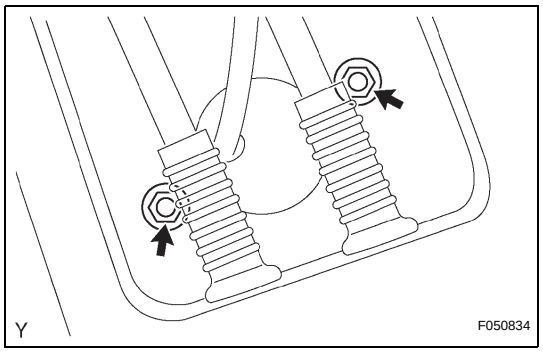


1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

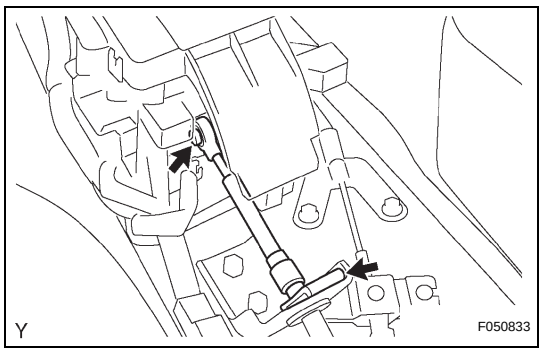
(a) Install the transmission control cable assembly with the nut.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
(b) Install the transmission control cable bracket and lock plate.



(c) Connect the transmission control cable with the nut to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(d) Connect the transmission control cable with the 2 nuts to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(e) Connect the transmission control cable with the lock plate to the floor shift assembly.
(f) Install the transmission control cable onto the floor shift assembly.

2. INSTALL VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-105)

3. INSTALL CONSOLE BOX FRONT (See page IP-24)

4. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-24)

5. **INSTALL CONSOLE BOX ASSEMBLY REAR (See page IP-24)**
6. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-25)**
7. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
8. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

AUTOMATIC TRANSMISSION SYSTEM

PRECAUTION

1. **PRECAUTION**

   NOTICE:

   - **Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AT-17).**
   - **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-14).**
   - **Re-set the function of the ATF (Automatic Transmission Fluid) temperature warning light, if the ECM has been replaced or RESET MEMORY (AT initialization) has been performed (See page AT-17).**

   HINT:

   RESET MEMORY cannot be completed by only disconnecting the negative cable from the battery.

2. **CONNECT BATTERY NEGATIVE TERMINAL**

   (a) Connect the battery negative terminal to the cable and run the engine at no less than 2,000 rpm for 1 minute.

   NOTICE:

   If the engine exceeds 2,000 rpm, the clutch is automatically disengaged by the compressor protection control system.

3. **PRECAUTION FOR DISASSEMBLY AND REASSEMBLY**

   CAUTION:

   When using compressed air, always aim away from yourself to prevent Automatic Transmission Fluid (ATF) or kerosene from spraying on your face.

   NOTICE:

   - **The automatic transaxle is composed of precision-made parts, necessitating careful inspection before reassembly because even a small nick could cause fluid leakage or affect performance.**
   - **The procedures are organized so that you work on only one component group at a time. This will help avoid confusion with similar-looking parts of different sub-assemblies being on your workbench at the same time.**
   - **The component groups are inspected and repaired from the converter housing side.**

AT

- **Whenever possible, complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups.**
- **When changing the automatic transmission fluid, use only "Toyota Genuine ATF WS" (ATF JWS3324 or NWS9638).**
- **All disassembled parts should be washed clean, and compressed air should be blown through any fluid passages and holes.**
- **Dry all parts with compressed air. Never use cloth.**
- **The recommended ATF or kerosene should be used for cleaning.**
- **After cleaning, the parts should be arranged in the order they were removed for efficient inspection, repairs, and reassembly.**
- **When disassembling a valve body, be sue to match each valve with its corresponding spring.**
- **New discs for the brakes and clutches that will be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**
- **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
- **All old gaskets and rubber O-rings must be replaced.**
- **Do not apply adhesive cement to gaskets and similar parts.**
- **Make sure that the ends of the snap rings are not aligned with any cutouts. Also make sure that snap rings are correctly installed into the grooves.**
- **If a worn bushing is to be replaced, the sub-assembly containing the bushing must also be replaced.**
- **Check the thrust bearings and races for wear or damage. Replace if necessary.**
- **Use petroleum jelly to keep parts in place.**

- **When working with FIPG material, perform the following:**
  Using a razor blade and gasket scraper, remove all old FIPG material from the gasket surface.
  Clean all components thoroughly to remove all foreign matter.
  Clean both sealing surfaces with a non-residue solvent.
  Apply FIPG material in a continuous line approximately 1 mm (0.04 in.) in diameter on the sealing surface.
  Reassemble parts within 10 minutes of applying FIPG material. Failing to do so will require the FIPG material to be removed and reapplied.

AUTOMATIC TRANSMISSION FLUID

ADJUSTMENT

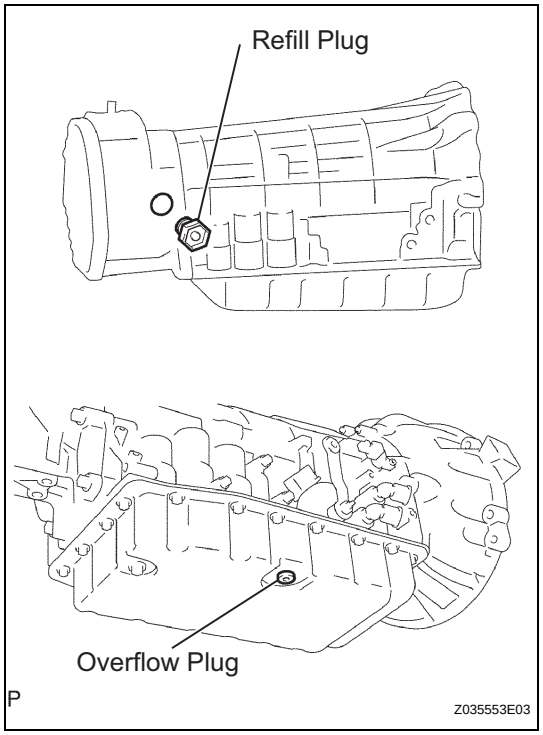
AT

1. BEFORE REFILL TRANSMISSION

- This transmission requires Toyota Genuine ATF WS.
- It is necessary to refill the transmission with the correct amount of fluid.
- The vehicle must remain level while adjusting the transmission fluid level.
- On vehicles equipped with active suspension, turn the suspension control switch OFF if it is necessary to jack up the vehicle with the engine running.

2. TRANSMISSION PAN FILL

(a) Remove the refill plug and overflow plug.



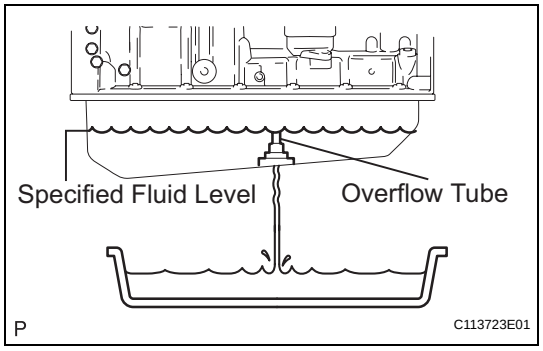
(b) Fill the transmission through the refill hole until fluid begins to trickle out of the overflow tube.

(c) Reinstall the overflow plug.

3. TRANSMISSION FILL

(a) Fill the transmission with the correct amount of fluid as listed in the table below.

(b) Reinstall the refill plug to avoid fluid splash.



Repair	Fill Amount
Transmission pan and drain plug removal	1.3 L (1.37 US qts, 1.14 lmp qts)
Transmission valve body removal	3.9 L (4.12 US qts, 3.43 lmp qts)
Torque converter removal	5.3 L (5.60 US qts, 4.66 lmp qts)
Entire transmission assembly	5.3 L (5.60 US qts, 4.66 lmp qts)

HINT:

If you cannot add the listed amount of fluid, do the following:

AT

- Install the refill plug.
- Allow the engine to idle with the air conditioning OFF.
- Move the shift lever through entire gear range to circulate fluid.
- Wait for 30 seconds with the engine idling.
- Stop the engine.
- Remove the refill plug and add fluid.
- Reinstall the refill plug.

4. FLUID CIRCULATION

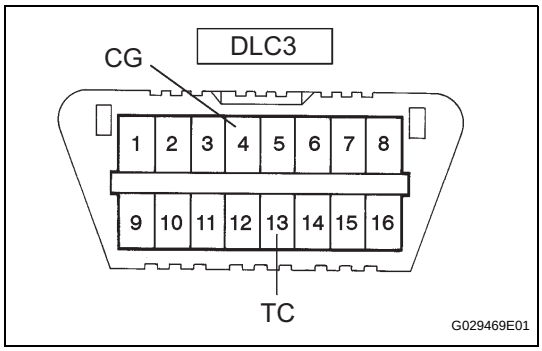
(a) Allow the engine to idle with the air conditioning OFF.

(b) Move the shift lever through entire gear range to circulate fluid.

5. FLUID TEMPERATURE CHECK

NOTICE:

The fluid temperature should be less than 30°C (86°F) before beginning the fluid temperature check.



(a) With intelligent tester

(1) Connect the intelligent tester to the DLC3.

(2) Select the tester menus: OBD/MOBD, ENGINE, DATA LIST and A/T.

(3) Check A/T OIL TEMP.

(4) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

(b) Without intelligent tester (Using A/T OIL TEMP indicator)

(1) Create a terminals between CG (4) and TC (13) of the DLC3 using SST (09843-18040).

(2) Move the shift lever back and forth between N and D every 1.5 seconds for six seconds.

(3) The D shift indicator on the combination meter comes on for two seconds. This indicates that the fluid temperature check mode has been started.

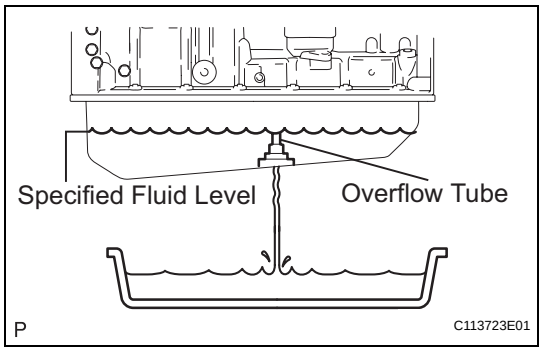
(4) The D shift indicator will come on again when the fluid temperature reaches 46°C (115°F) and will blink when it exceeds 56°C (130°F).

(5) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

6. FLUID LEVEL CHECK

NOTICE:

The fluid temperature must be between 46°C (115°F) and 56°C (130°F) to accurately check the fluid level.



(a) Remove the overflow plug with the engine idling.
(b) Check that the fluid comes out of the overflow tube.
If fluid does not come out, proceed to step 7.
If fluid comes out, wait until the overflow slows to a trickle and proceed to step 8.

7. TRANSMISSION REFILL

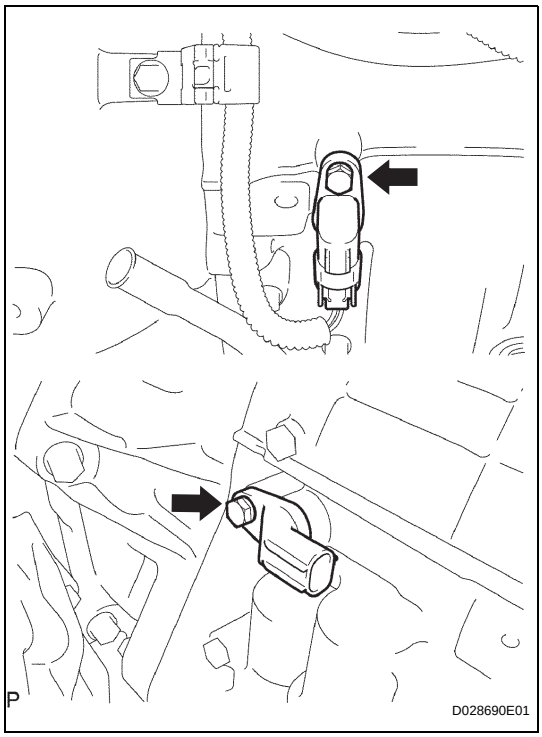
(a) Install the overflow plug.
(b) Stop the engine.
(c) Remove the refill plug.
(d) Add 0.4 liters (0.42 US qts, 0.35 lmp qts) of fluid.
(e) Allow the engine to idle and wait for 10 seconds.
(f) Proceed to step 6.

8. COMPLETE

(a) Install the overflow plug with a new gasket.
(b) Stop the engine.
(c) Install the refill plug with a new gasket.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf) for overflow plug
39 N*m (400 kgf*cm, 29 ft.*lbf) for refill plug

AT

AT



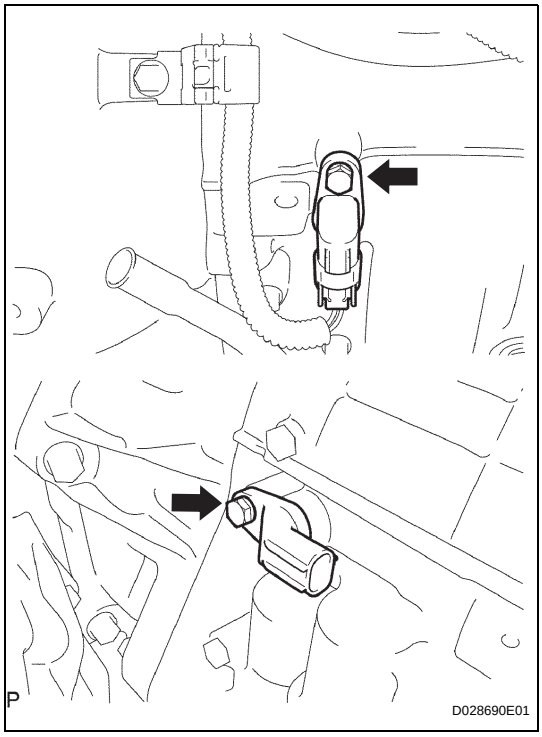
SPEED SENSOR

REMOVAL

1. REMOVE TRANSMISSION REVOLUTION SENSOR

(a) Disconnect the connector.

(b) Remove the bolt and speed sensor.



INSTALLATION

1. INSTALL TRANSMISSION REVOLUTION SENSOR

(a) Coat a new O-ring with ATF.

(b) Install the speed sensor with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(c) Connect the connector.

TRANSMISSION WIRE

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

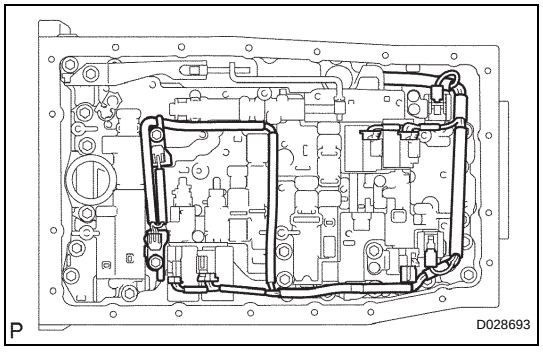
- Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.
- Thoroughly clean all components to remove all loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.
- Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

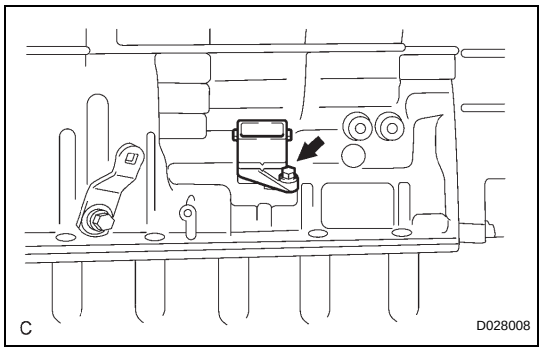
2. DRAIN AUTOMATIC TRANSMISSION FLUID
(a) Remove the drain plug, gasket and drain ATF.
(b) Install a new gasket and drain plug.
Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)

3. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-147)

4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AT-148)

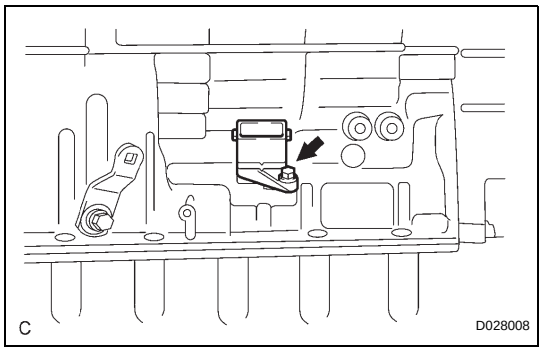


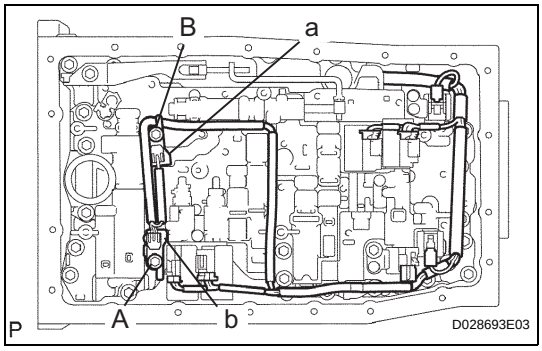
5. SEPARATE TRANSMISSION WIRE
(a) Remove the bolt and clamp.
(b) Disconnect the ATF temperature sensor.
(c) Disconnect the 7 connectors from the solenoid valves.



6. REMOVE TRANSMISSION WIRE
(a) Disconnect the transmission wire connector.
(b) Remove the bolt and pull out the transmission wire.

AT





INSTALLATION

1. **INSTALL TRANSMISSION WIRE**
   (a) Install the transmission wire with the bolt.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
   (b) Connect the transmission wire connector.

2. **CONNECT TRANSMISSION WIRE**
   (a) Connect the 7 connectors to the solenoid valves.
   (b) Install the clamp with the bolt.
   Torque: A
   10 N*m (100 kgf*cm, 7 in.*lbf)
   B
   11 N*m (110 kgf*cm, 8 in.*lbf)
   (c) Connect the ATF temperature sensor.
   Wiring color:
   a: Orange
   b: Blue

3. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AT-149)**

4. **INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY (See page AT-149)**

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

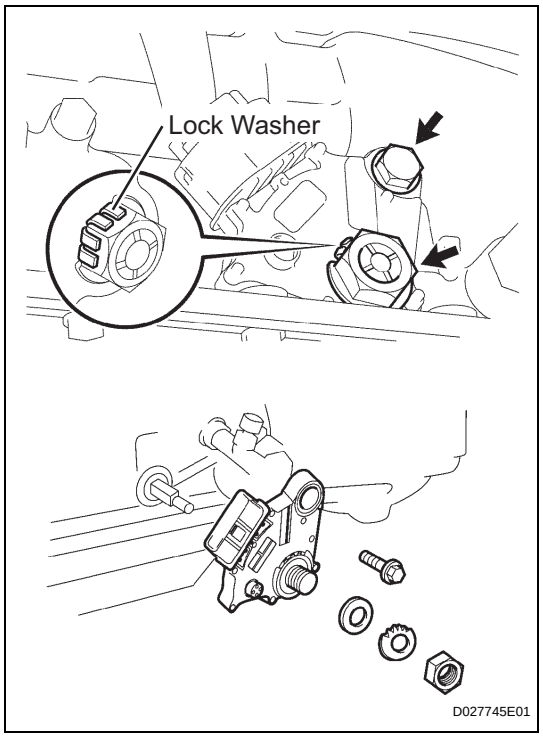
6. **PERFORM INITIALIZATION**
   (See page AT-17)

7. **ADD AUTOMATIC TRANSMISSION FLUID**
   (See page AT-139)

PARK / NEUTRAL POSITION SWITCH

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**
3. **REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**
   (a) Using a screwdriver, unstake the lock washer.
   (b) Remove the nut, lock washer and grommet.
   (c) Remove the bolt and park/neutral position switch.



AT

ADJUSTMENT

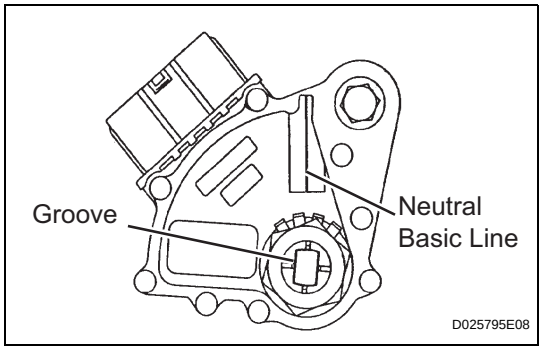
1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Apply the parking brake and turn the ignition switch to ON.

(b) Depress the brake pedal and check that the engine starts only when the shift lever is set in the N or P position and that it does not start in any other positions.

(c) Check that the back-up light comes on and the reverse warning buzzer sounds only when the shift lever is set in the R position and not in other positions.

If any failure is found, check the park/neutral position switch for continuity.



2. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Loosen the bolt of the park/neutral position switch and set the shift lever to the N position.

(b) Align the groove and the neutral basic line.

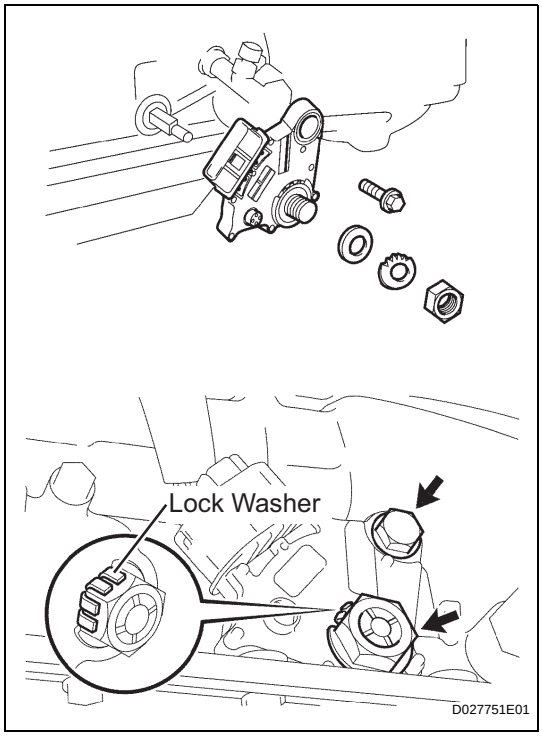
(c) Hold the switch in position and tighten the bolt.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

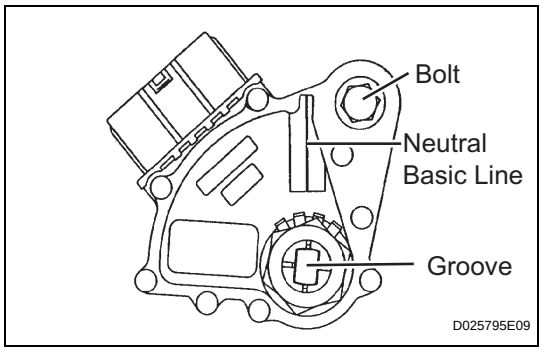
(d) After making an adjustment, perform the inspection described in step 1.

INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch onto the manual valve lever shaft and provisionally tighten the adjusting bolt.





(b) Install the grommet, a new lock washer and the nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

(c) Install the manual valve lever shaft onto the groove and turn it 2 notches counterclockwise to the neutral position.

(d) Align the neutral basic line with the switch groove and tighten the adjusting bolt.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

(e) Bend the tabs of the lock washer.
HINT:
Bend at least 2 of the lock washer tabs.

2. CONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

4. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-145)

5. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AT-145)

6. ADJUST SHIFT LEVER POSITION (See page AT-158)

7. INSPECT SHIFT LEVER POSITION (See page AT-158)

VALVE BODY ASSEMBLY

REMOVAL

CAUTION:
When working with FIPG material, you must observe the following guidelines.

- **Using a razor blade and gasket scraper, remove all the old FIPG material from the gasket surfaces.**
- **Thoroughly clean all components to remove all loose material.**
- **Clean both sealing surfaces with a non-residue solvent.**
- **Apply FIPG in an approximately 1 mm (0.04 in.) wide bead along the sealing surface.**
- **Parts must be assembled within 10 minutes of application. Otherwise, the FIPG material must be removed and reapplied.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

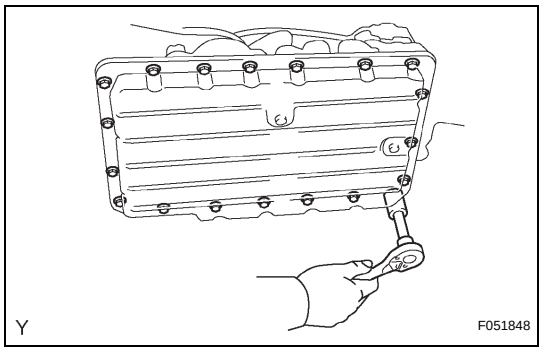
2. DRAIN AUTOMATIC TRANSMISSION FLUID

(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and drain plug.
Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)

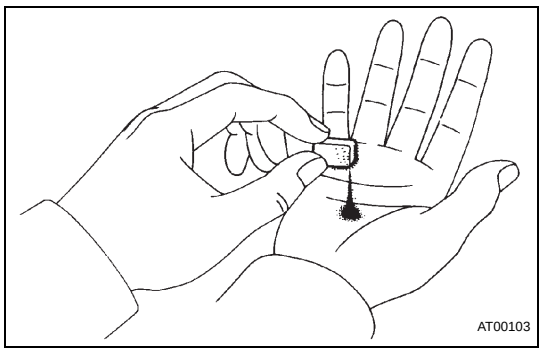
3. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY
NOTICE:
Some fluid will remain in the oil pan.

(a) Remove the 20 bolts, gasket and oil pan sub-assembly.

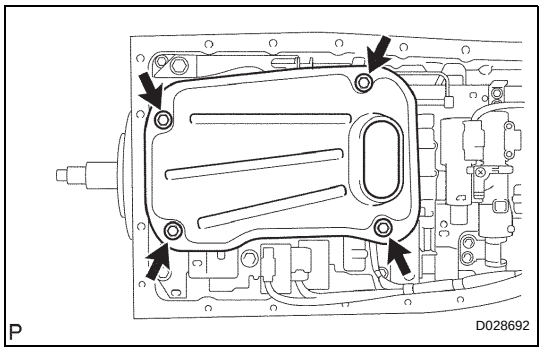


(b) Examine the particles in the pan.

(1) Remove the magnets and use them to collect steel particles. Carefully inspect the foreign matter and particles in the pan and on the magnets to anticipate the type of wear you will find in the transmission.
Steel (magnetic) ... bearing, gear and clutch plate wear
Brass (non-magnetic) ... bushing wear



AT



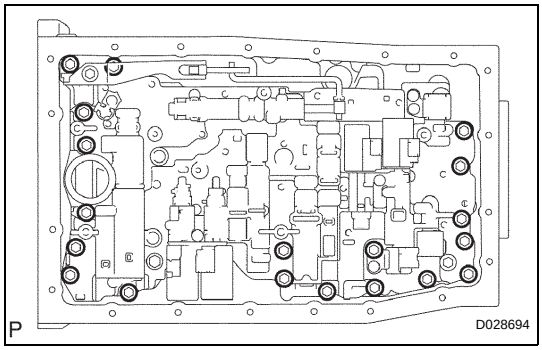
4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 4 bolts, oil strainer and O-ring.

NOTICE:

Be careful as some fluid will come out of the oil strainer.

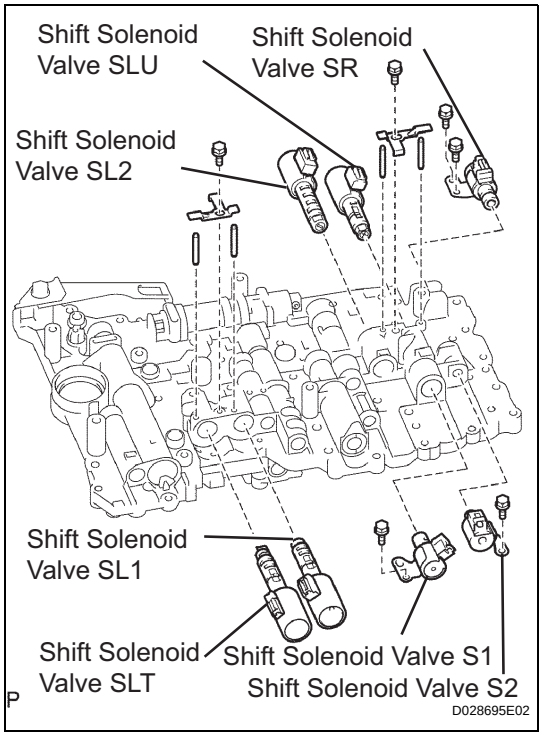
5. SEPARATE TRANSMISSION WIRE (See page AT-143)



6. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the 19 bolts and valve body.

(b) Remove the 3 drum seal gaskets.



(c) Remove the bolt, lock plate, pin and shift solenoid valves SLT and SL1.

(d) Remove the bolt, lock plate, pin and shift solenoid valves SLU and SL2.

(e) Remove the 2 bolts and shift solenoid valve SR.

(f) Remove the bolt and shift solenoid valve S1.

(g) Remove the bolt and shift solenoid valve S2.

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Shift the shift lever to the P position.
(b) Turn the ignition switch to LOCK.
(c) Check that the shift lever cannot be shifted to any positions other than P.
(d) Turn the ignition switch to ON, depress the brake pedal, and check that the shift lever can be shifted to other positions.

2. CHECK SHIFT LOCK RELEASE LINK OPERATION

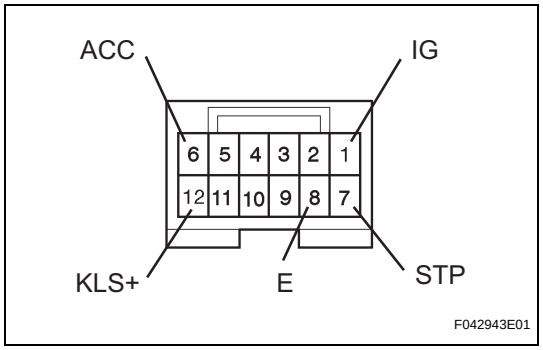
(a) Using a small screwdriver, remove the shift lever cap.
(b) When operating the shift lever with the shift lock release link pressed, check that the lever can be shifted to any positions other than P.

3. CHECK KEY INTERLOCK OPERATION

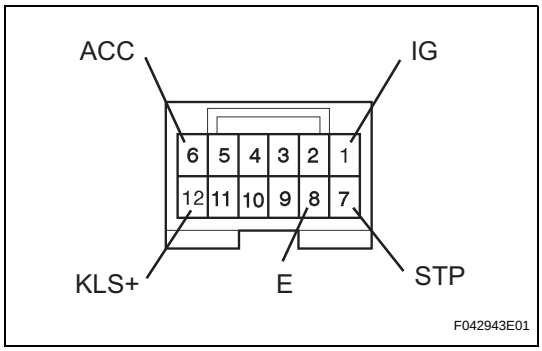
(a) Turn the ignition switch to ON.
(b) Depress the brake pedal and shift the shift lever to any positions other than P.
(c) Check that the ignition key cannot be turned to LOCK.
(d) Shift the shift lever to the P position, turn the ignition key to LOCK, and check that the ignition key can be removed.

4. INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Using a voltmeter, measure the voltage at each terminal.
HINT:
Do not disconnect the shift lock control ECU connector.

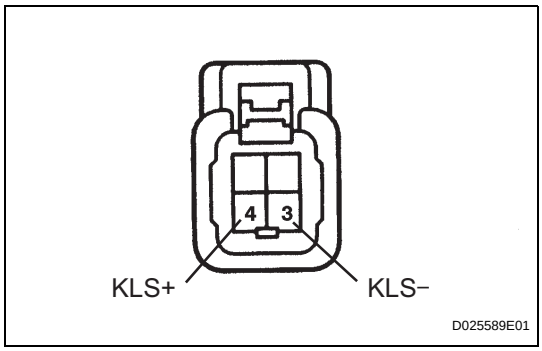


Terminal	Measuring Condition	Voltage (V)
1 (KLS+) - 8 (E)	(1) Ignition switch ACC and P position (2) Ignition switch ACC and except P position (3) Ignition switch ACC and except P position (After approx. 1 second)	0 7.5 to 11 6 to 9
4 (ACC) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch ACC	10 to 14
	Ignition switch OFF	0
9 (STP) - 8 (E)	Depress brake pedal	10 to 14
	Release brake pedal	0
5 (IG) - 8 (E)	Ignition switch ON	10 to 14
	Ignition switch OFF	0



(b) Using an ohmmeter, measure the resistance at terminal E (8) and body ground.
HINT:
Do not disconnect the shift lock control ECU connector.

Terminal	Measuring Condition	Specified Value
8 (E) - Body ground	Always	Below 1 Ω



5. INSPECT KEY INTER LOCK SOLENOID

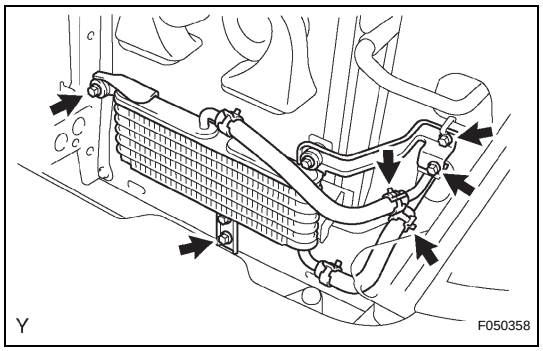
(a) Disconnect the solenoid connector.

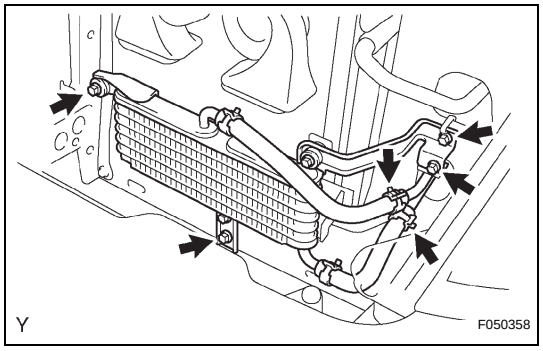
(b) Connect KLS+ (4) terminal to the battery positive (+) terminal, and KLS- (3) terminal to the battery negative (-) terminal, and apply about 12V between KLS+ and KLS- terminals.
Check that operation noise can be heard from the solenoid.
If the solenoid does not operate, replace the solenoid.

AIR COOLED OIL COOLER

REMOVAL

1. **REMOVE RADIATOR GRILLE (See page ET-4)**
2. **DRAIN AUTOMATIC TRANSMISSION FLUID**
   (a) Remove the drain plug, gasket and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 28 N*m (285 kgf*cm, 21 ft.*lbf)
3. **REMOVE OIL COOLER WITH HOSE ASSEMBLY**
   (a) Loosen the 2 clips and disconnect the 2 oil cooler hoses.
   (b) Remove the 4 bolts and the oil cooler with hose assembly.





INSTALLATION

1. **INSTALL OIL COOLER WITH HOSE ASSEMBLY**
   (a) Install the oil cooler with hose assembly with the 4 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Install the 2 oil cooler hoses and 2 clips.
2. **ADD AUTOMATIC TRANSMISSION FLUID**
   (See page AT-139)
3. **INSTALL RADIATOR GRILLE (See page ET-11)**

TORQUE CONVERTER CLUTCH AND DRIVE PLATE

INSPECTION

AT

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the one-way clutch.

(1) Install SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.
SST 09350-32014 (09351-32020)

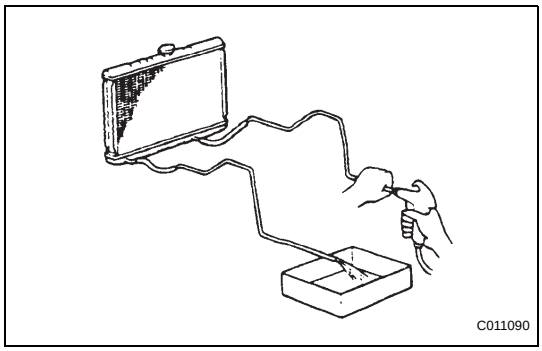
(2) Press on the serrations of the starter with a finger and rotate it.
Check if it rotates smoothly when turned clockwise and locks up when turned counterclockwise.
If necessary, clean the converter and check the one-way clutch again.
Replace the converter if the one-way clutch still won't operate as specified.

(b) Check the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly meets any of the cases mentioned below, replace the torque converter clutch.
Malfunction item:
Any metallic sound is heard from the torque converter clutch during stall test or when the shift lever is in the neutral position.
One-way clutch is free or locked in both directions. Fine powders exceeding the sample limit are identified in ATF. (See the sample.)
HINT:
The sample shows the auto fluid of approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.

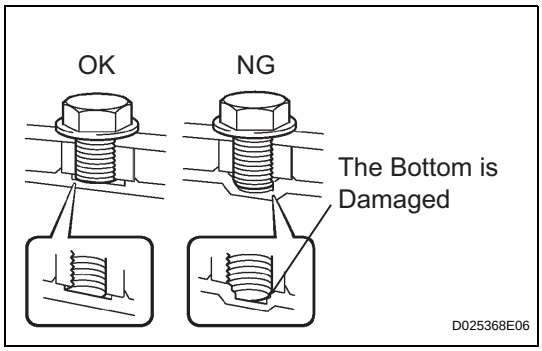
(c) Replace the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it with the installation surface facing up.

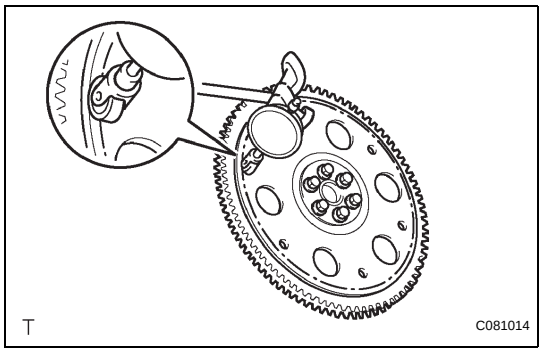


(d) Clean and then check the oil cooler and oil pipe line.
  (1) If inspecting the torque converter clutch or exchanging the ATF, clean the oil cooler and oil pipe line.
  HINT:
  - Apply compressed air of 196 kPa (2 kgf/ cm2, 28 psi) from the inlet hose.
  - If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean the ATF again.

  (2) If the ATF is cloudy, inspect the oil cooler (radiator).



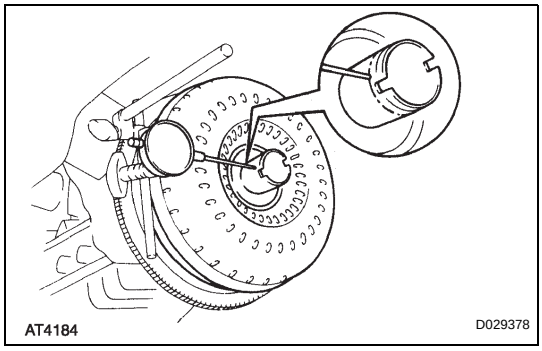
(e) Be careful not to deform the torque converter clutch or damage the oil pump gear.
  (1) When any marks due to interference are found on the end of the bolt to the torque converter clutch or on the bottom of the bolt hole, replace the bolt and the torque converter clutch.
  (2) All the bolts should be the same length.
  (3) Do not lose any spring washers.



2. INSPECT DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Set up a dial indicator and measure the drive plate runout.
Maximum runout:
0.20 mm (0.0079 in.)

(b) Check the ring gear for damage.
If the runout is not within the specification or the ring gear is damaged, replace the drive plate.



3. INSPECT RUNOUT OF TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Provisionally mount the torque converter onto the drive plate, set up a dial indicator, and measure the torque converter sleeve runout.
Maximum runout:
0.30 mm (0.0118 in.)
If the runout is not within the specification, try to correct it by reinstalling the converter to the correct orientation.
HINT:
Mark the position of the converter to ensure correct installation.

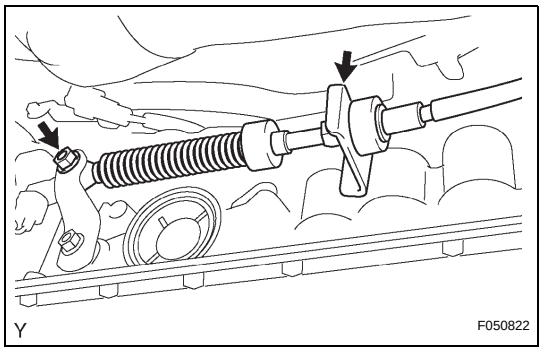
TRANSMISSION CONTROL CABLE

REMOVAL

1. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-9)**
2. **REMOVE CONSOLE BOX ASSEMBLY REAR (See page IP-10)**
3. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-10)**
4. **REMOVE CONSOLE BOX FRONT (See page IP-10)**
5. **REMOVE VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-104)**
6. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Disconnect the transmission control cable assembly from the shift lever assembly.
   (b) Remove the clip and disconnect the transmission control cable.

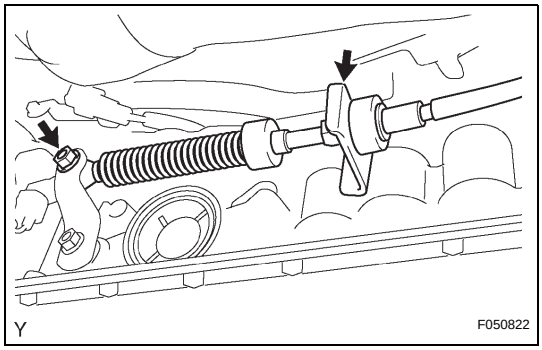
   (c) Remove the 2 nuts and disconnect the transmission control cable assembly from the body.

   (d) Remove the nut and disconnect the transmission control cable assembly from the body.



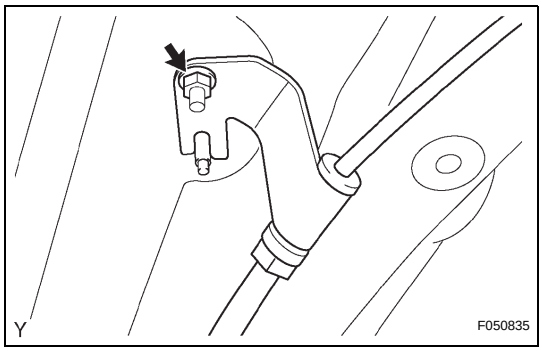
(e) Remove the clip and transmission control cable bracket.
(f) Remove the nut and transmission control cable assembly.

INSTALLATION

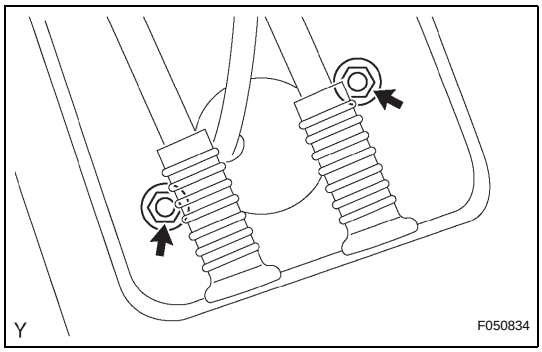


1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

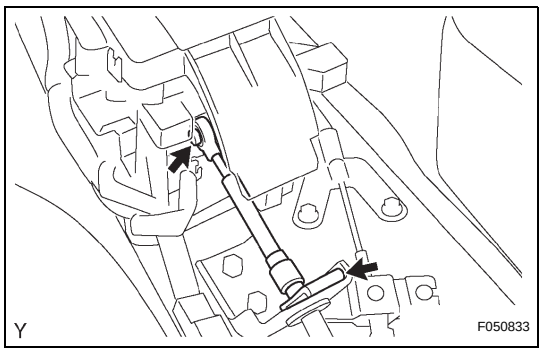
(a) Install the transmission control cable assembly with the nut.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
(b) Install the transmission control cable bracket and lock plate.



(c) Connect the transmission control cable with the nut to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(d) Connect the transmission control cable with the 2 nuts to the body.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



(e) Connect the transmission control cable with the lock plate to the floor shift assembly.
(f) Install the transmission control cable onto the floor shift assembly.

2. INSTALL VOLTAGE INVERTER ASSEMBLY (w/ Voltage Inverter) (See page AV-105)

3. INSTALL CONSOLE BOX FRONT (See page IP-24)

4. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (See page IP-24)

5. **INSTALL CONSOLE BOX ASSEMBLY REAR (See page IP-24)**
6. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-25)**
7. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
8. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

CLUTCH SYSTEM (for R155)

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these parts.

Symptom	Suspected area	See page
Clutch grabs/chatters	1. Engine mounting (Loose)	-
	2. Clutch disc (Excessive runout)	CL-31
	3. Clutch disc (Oily)	CL-31
	4. Clutch disc (Worn out)	CL-31
	5. Clutch disc torsion rubber (Damaged)	CL-31
	6. Clutch disc (Glazed)	CL-31
	7. Diaphragm spring (Tip out of alignment)	CL-31
Clutch pedal spongy	1. Clutch line (Air in line)	-
	2. Release cylinder rubber (Damaged)	CL-15
Clutch noisy	1. Release bearing (Worn, dirty or damaged)	CL-31
	2. Clutch disc torsion rubber (Damaged)	CL-31
Clutch slips	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch disc (Oily)	CL-31
	3. Clutch disc (Worn out)	CL-31
	4. Diaphragm spring (Damaged)	CL-31
	5. Flywheel (Distorted)	CL-31
Clutch does not disengage	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch line (Air in line)	-
	3. Release cylinder cup (Damaged)	CL-15
	4. Clutch disc (Out of line)	CL-31
	5. Clutch disc (Runout excessive)	CL-31
	6. Clutch disc (Lining broken)	CL-31
	7. Clutch disc (Dirty or burned)	CL-31
	8. Clutch disc (Oily)	CL-31
	9. Clutch disc (Lack of spline grease)	CL-31

CLUTCH SYSTEM (for R155F)

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these parts.

Symptom	Suspected area	See page
Clutch grabs/chatters	1. Engine mounting (Loose)	-
	2. Clutch disc (Excessive runout)	CL-36
	3. Clutch disc (Oily)	CL-36
	4. Clutch disc (Worn out)	CL-36
	5. Clutch disc torsion rubber (Damaged)	CL-36
	6. Clutch disc (Glazed)	CL-36
	7. Diaphragm spring (Tip out of alignment)	CL-36
Clutch pedal spongy	1. Clutch line (Air in line)	-
	2. Release cylinder rubber (Damaged)	CL-18
Clutch noisy	1. Release bearing (Worn, dirty or damaged)	CL-36
	2. Clutch disc torsion rubber (Damaged)	CL-36
Clutch slips	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch disc (Oily)	CL-36
	3. Clutch disc (Worn out)	CL-36
	4. Diaphragm spring (Damaged)	CL-36
	5. Flywheel (Distorted)	CL-36
Clutch does not disengage	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch line (Air in line)	-
	3. Release cylinder cup (Damaged)	CL-18
	4. Clutch disc (Out of line)	CL-36
	5. Clutch disc (Runout excessive)	CL-36
	6. Clutch disc (Lining broken)	CL-36
	7. Clutch disc (Dirty or burned)	CL-36
	8. Clutch disc (Oily)	CL-36
	9. Clutch disc (Lack of spline grease)	CL-36

CLUTCH SYSTEM (for RA60)

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these parts.

Symptom	Suspected area	See page
Clutch grabs/chatters	1. Engine mounting (Loose)	-
	2. Clutch disc (Excessive runout)	CL-41
	3. Clutch disc (Oily)	CL-41
	4. Clutch disc (Worn out)	CL-41
	5. Clutch disc torsion rubber (Damaged)	CL-41
	6. Clutch disc (Glazed)	CL-41
	7. Diaphragm spring (Tip out of alignment)	CL-41
Clutch pedal spongy	1. Clutch line (Air in line)	-
	2. Release cylinder rubber (Damaged)	CL-21
Clutch noisy	1. Release bearing (Worn, dirty or damaged)	CL-41
	2. Clutch disc torsion rubber (Damaged)	CL-41
Clutch slips	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch disc (Oily)	CL-41
	3. Clutch disc (Worn out)	CL-41
	4. Diaphragm spring (Damaged)	CL-41
	5. Flywheel (Distorted)	CL-41
Clutch does not disengage	1. Clutch pedal (Free play out of adjustment)	CL-6
	2. Clutch line (Air in line)	-
	3. Release cylinder cup (Damaged)	CL-21
	4. Clutch disc (Out of line)	CL-41
	5. Clutch disc (Runout excessive)	CL-41
	6. Clutch disc (Lining broken)	CL-41
	7. Clutch disc (Dirty or burned)	CL-41
	8. Clutch disc (Oily)	CL-41
	9. Clutch disc (Lack of spline grease)	CL-41

CLUTCH SYSTEM (for RA60F)

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these parts.

Symptom	Suspected area	See page
Clutch grabs/chatters	1. Engine mounting (Loose)	-
	2. Clutch disc (Excessive runout)	CL-45
	3. Clutch disc (Oily)	CL-45
	4. Clutch disc (Worn out)	CL-45
	5. Clutch disc torsion rubber (Damaged)	CL-45
	6. Clutch disc (Glazed)	CL-45
	7. Diaphragm spring (Tip out of alignment)	CL-45
Clutch pedal spongy	1. Clutch line (Air in line)	-
	2. Release cylinder rubber (Damaged)	CL-24
Clutch noisy	1. Release bearing (Worn, dirty or damaged)	CL-45
	2. Clutch disc torsion rubber (Damaged)	CL-45

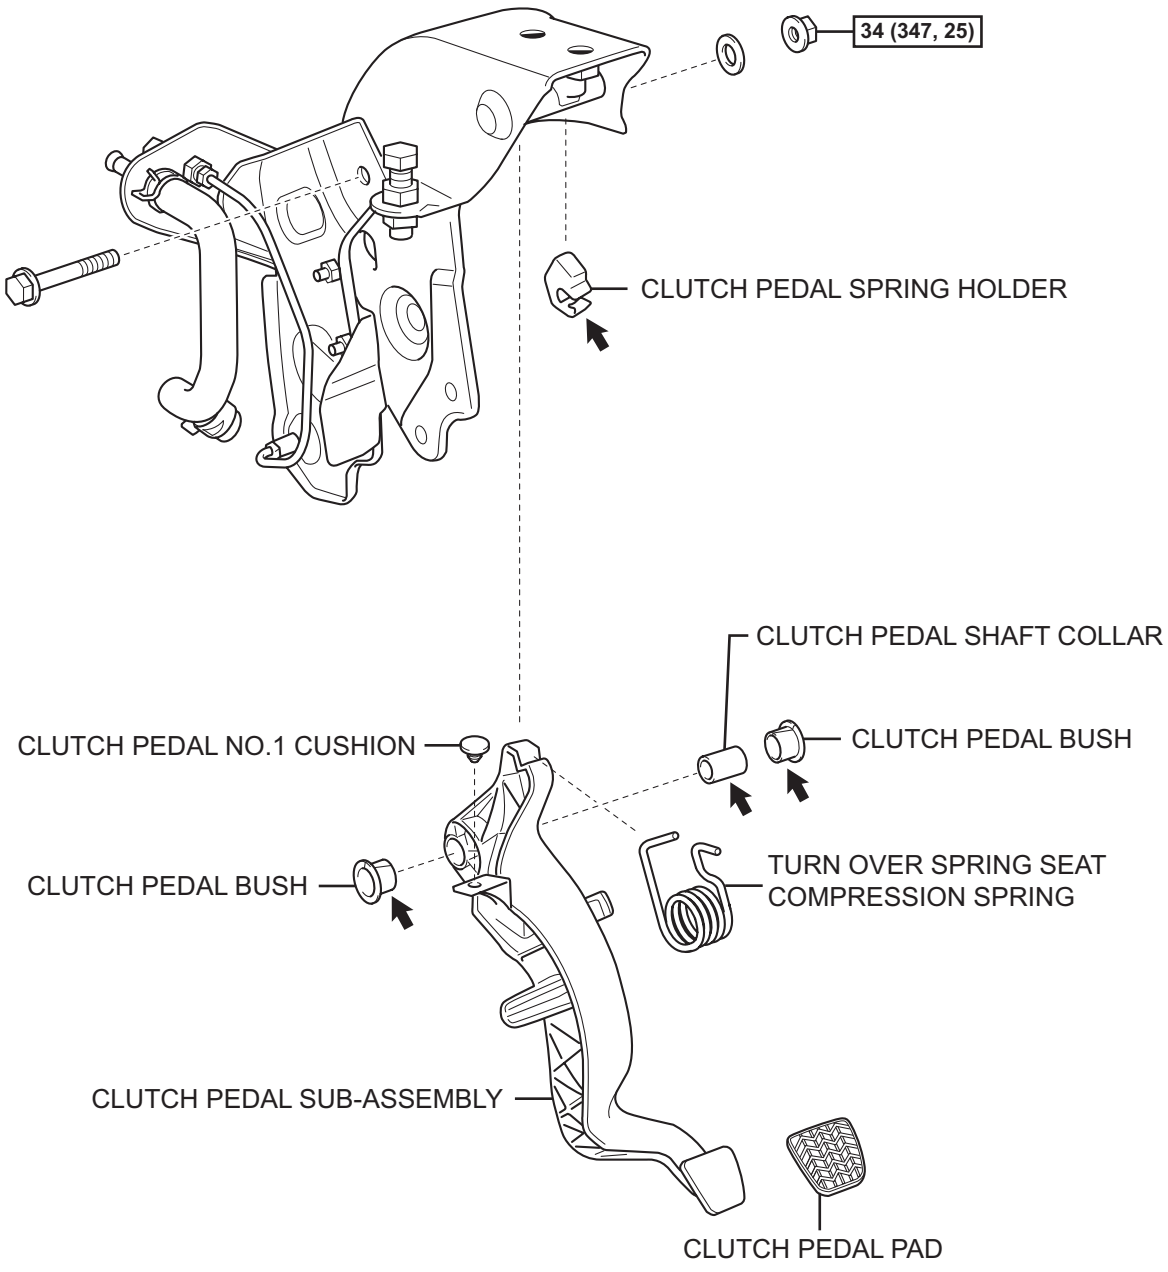
	7. Clutch disc (Dirty or burned)	CL-45
	8. Clutch disc (Oily)	CL-45
	9. Clutch disc (Lack of spline grease)	CL-45

CLUTCH PEDAL

COMPONENTS



N*m (kgf*cm, ft*lbf) :Specified torque

Apply MP grease

Y

C114211E01

ON-VEHICLE INSPECTION

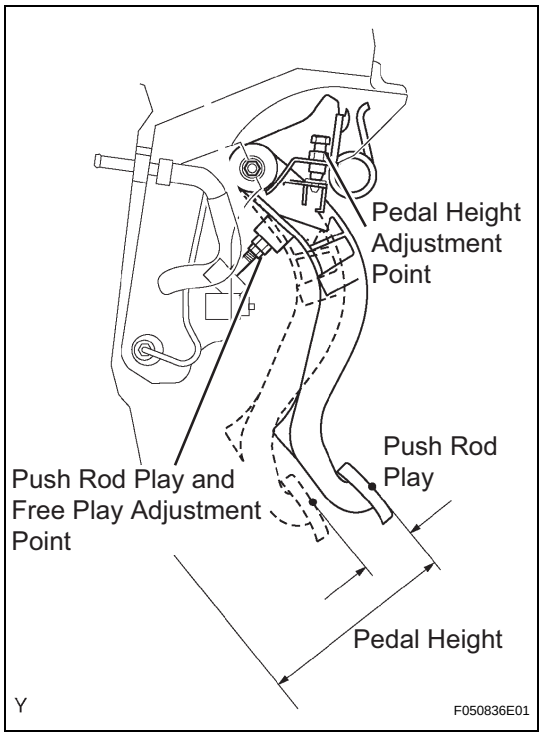
1. INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY

(a) Lift the floor carpet.

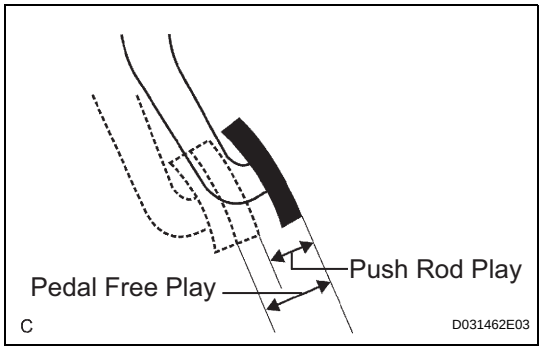
(b) Check that the pedal height is correct.
Pedal height from asphalt sheet:
168.5 to 178.5 mm (6.634 to 7.028 in.)

(c) Adjust the pedal height.
(1) Loosen the lock nut and turn the stopper bolt until the height is correct. Tighten the lock nut.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)

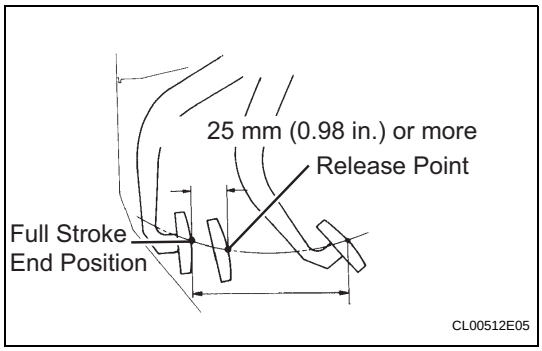
(d) Check that the pedal free play and push rod play are correct.
(1) Depress the pedal until the clutch resistance begins to be felt.
Pedal free play:
5.0 to 15.0 mm (0.197 to 0.591 in.)
(2) Gently depress the pedal until the resistance begins to increase a little.
Push rod play at pedal top:
1.0 to 5.0 mm (0.039 to 0.197 in.)



(e) Adjust the pedal free play and push rod play.
(1) Loosen the lock nut and turn the push rod until the free play and push rod play are correct.
(2) Tighten the lock nut.
(3) After adjusting the pedal free play, check the pedal height.
(4) Connect the air duct and install the lower finish panel.



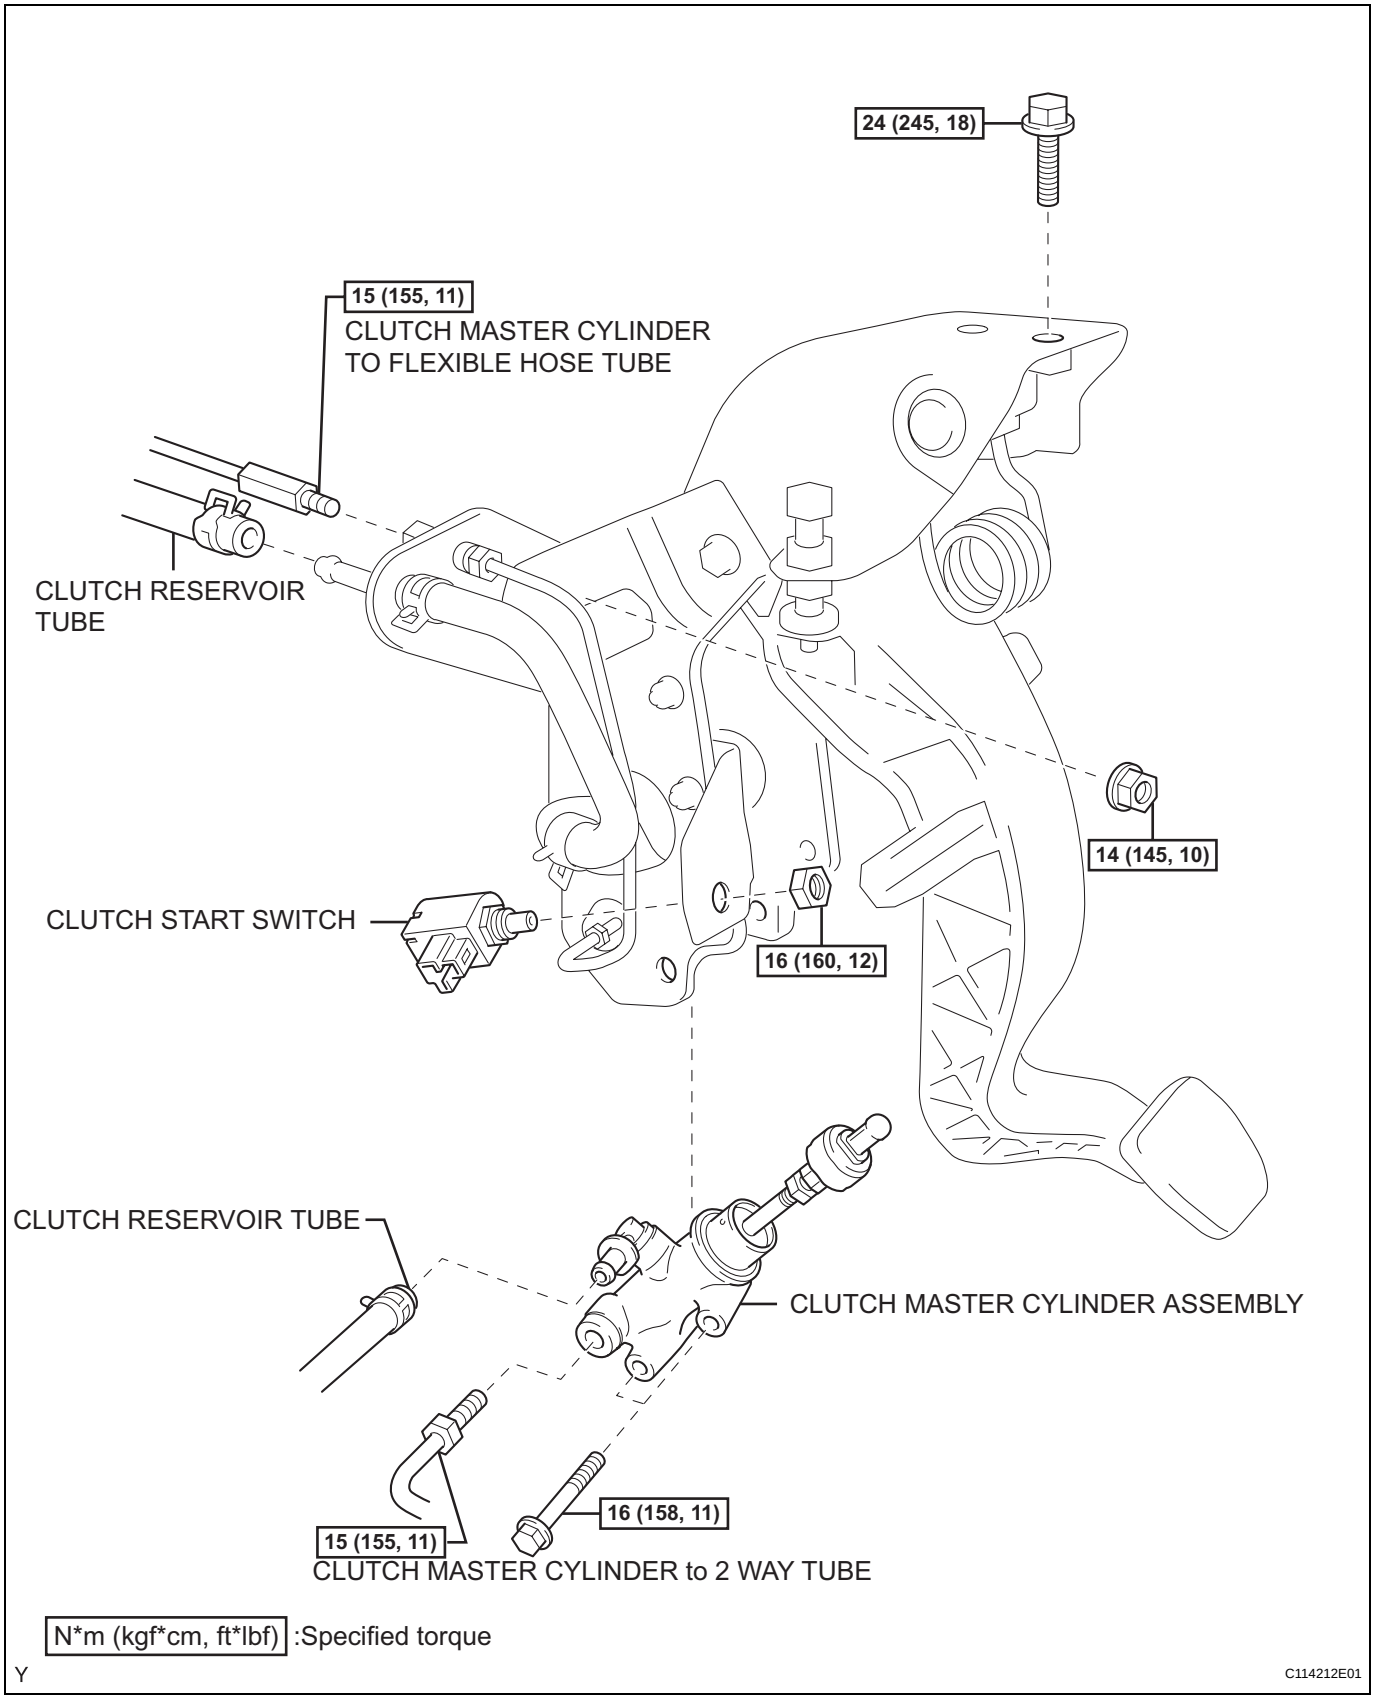
(f) Check the clutch release point.
(1) Pull the parking brake lever and use wheel chocks.
(2) Start the engine and allow it to idle.
(3) Without depressing the clutch pedal, slowly move the shift lever into the reverse position until the gears engage.
(4) Gradually depress the clutch pedal and measure the stroke distance from the point that the gear noise stops (release point) up to the full stroke end position.
Standard distance:
25 mm (0.984 in.) or more
(From pedal stroke end position to release point)
If the distance is not as specified, perform the following operations.



- Check the pedal height.
- Check the push rod play and pedal free play.
- Bleed the clutch line.
- Check the clutch cover assembly and disc assembly.

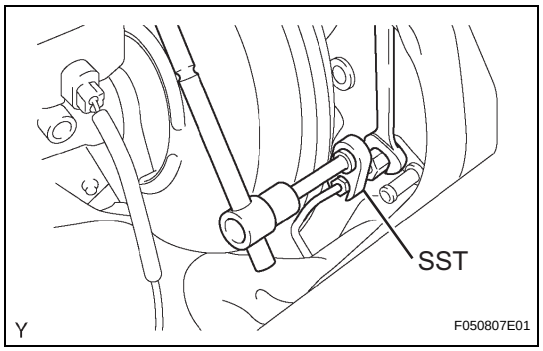
CLUTCH MASTER CYLINDER

COMPONENTS

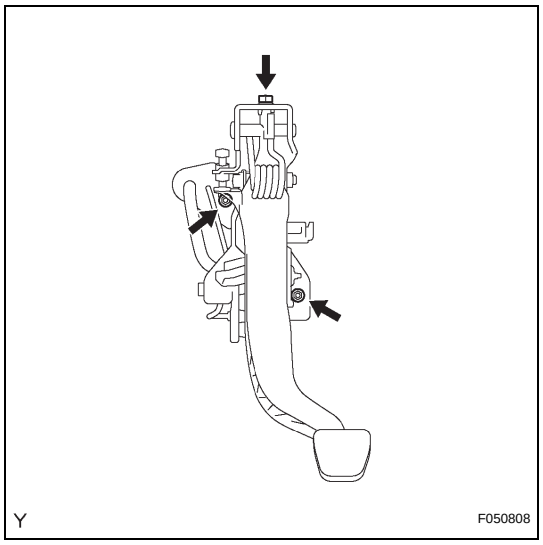


REMOVAL

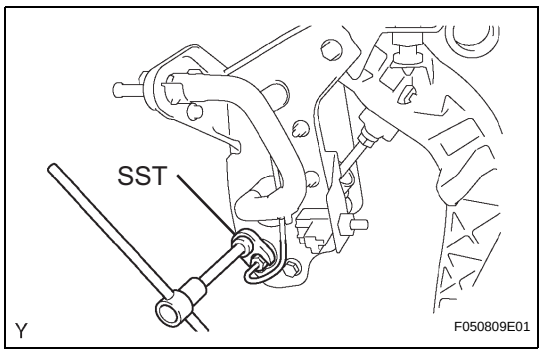
1. **DRAIN CLUTCH FLUID**
2. **DISCONNECT CLUTCH RESERVOIR TUBE**
3. **DISCONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE**
   (a) Using SST, disconnect the flexible hose tube.
   SST 09023-00101

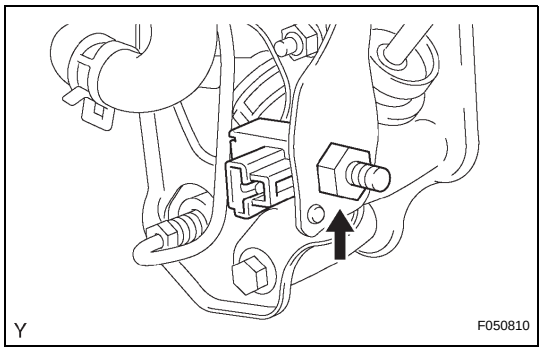


4. **REMOVE FRONT DOOR SCUFF PLATE LH**
5. **REMOVE COWL SIDE TRIM BOARD LH**
6. **REMOVE LOWER NO. 1 INSTRUMNT PANEL FINISH PANEL (See page IP-12)**
7. **SEPARATE DRIVER SIDE JUNCTION BLOCK**
8. **REMOVE CLUTCH PEDAL WITH CLUTCH MASTER CYLINDER**
   (a) Disconnect the clutch start switch connector.
   (b) Remove the 2 nuts and bolt, then remove the clutch pedal with clutch master cylinder.

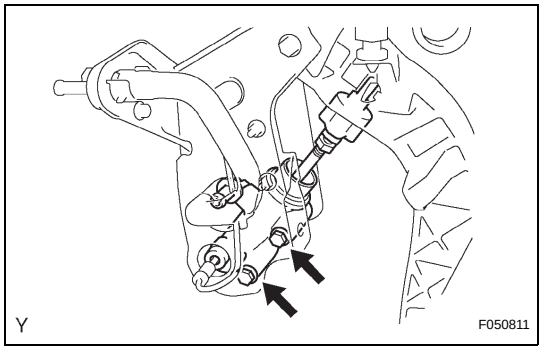


9. **REMOVE CLUTCH MASTER CYLINDER ASSEMBLY**
   (a) Disconnect the clutch reservoir tube.
   (b) Using SST, disconnect the 2 way tube from the clutch master cylinder.
   SST 09023-00101



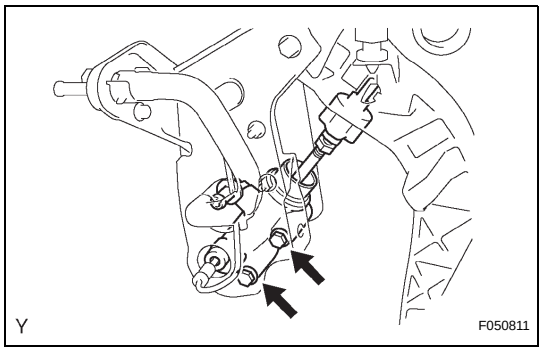


(c) Remove the nut and clutch start switch from the clutch pedal support.



(d) Remove the 2 bolts, then remove the clutch master cylinder.

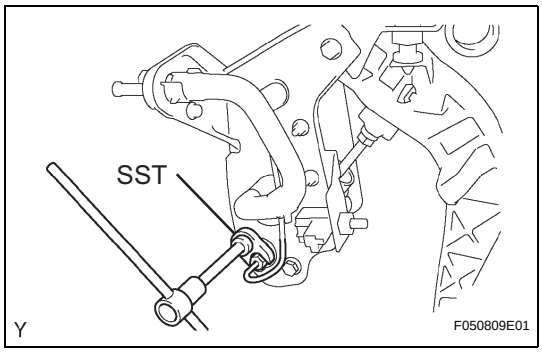
INSTALLATION



1. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY

(a) Install the clutch master cylinder with the 2 bolts.
Torque: 16 N*m (158 kgf*cm, 11 ft.*lbf)

(b) Install the clutch start switch with the nut.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



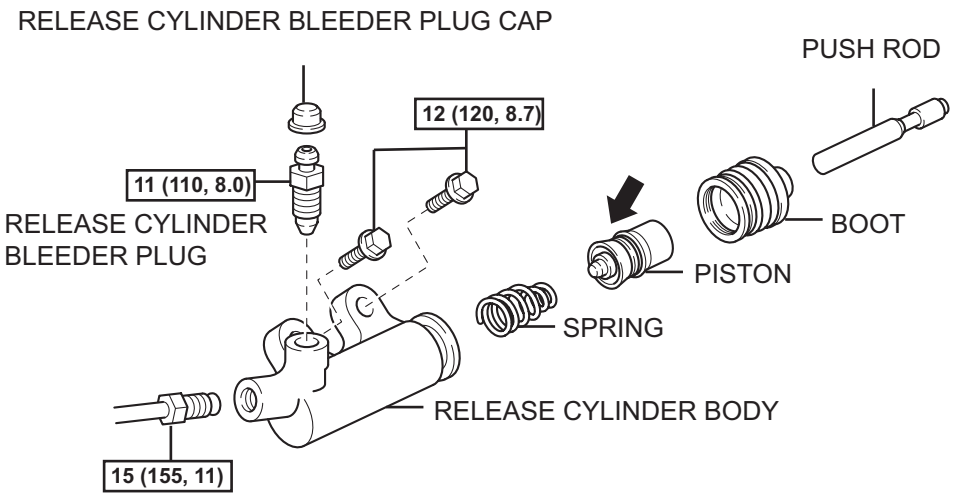
(c) Using SST, connect the clutch master cylinder to 2 way tube.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

(d) Connect the clutch reservoir tube.

CLUTCH RELEASE CYLINDER (for R155)

COMPONENTS

CL



CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

N*m (kgf*cm, ft*lbf) :Specified torque

Lithium soap base glycol grease

Y

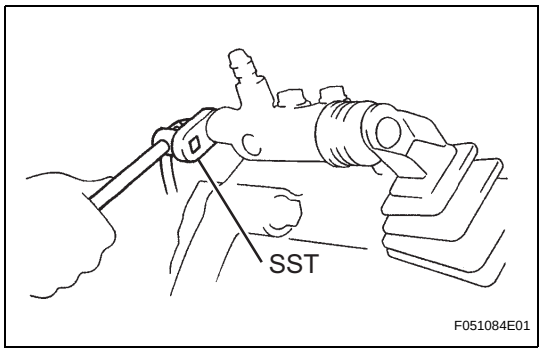
C114063E01

REMOVAL

1. DRAIN CLUTCH FLUID

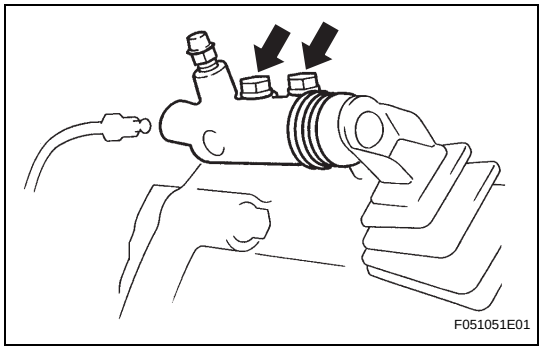
2. DISCONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST, disconnect the flexible hose tube.
SST 09023-00101



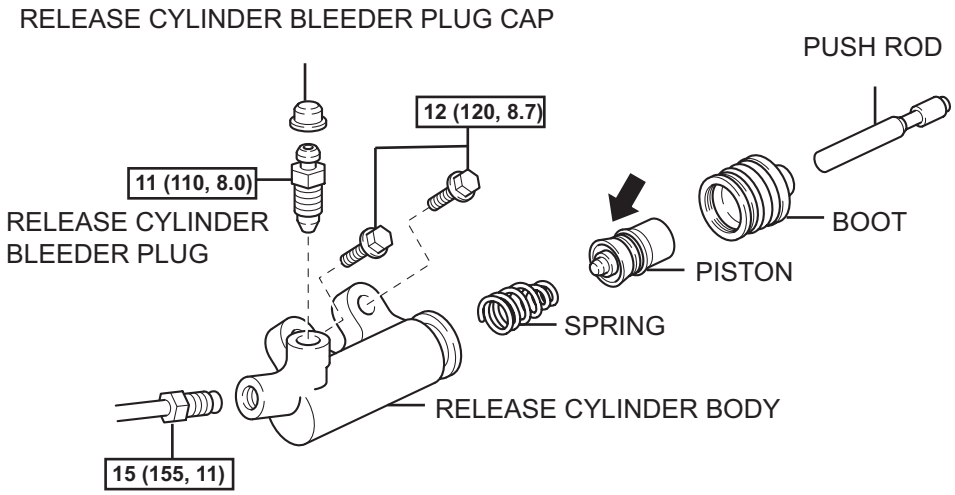
3. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and pull out the clutch release cylinder.



CLUTCH RELEASE CYLINDER (for R155F)

COMPONENTS



CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

N*m (kgf*cm, ft*lbf) :Specified torque

Lithium soap base glycol grease

Y

C114063E01

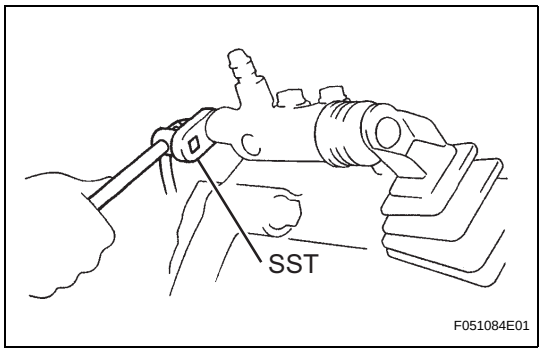
CL

REMOVAL

1. DRAIN CLUTCH FLUID

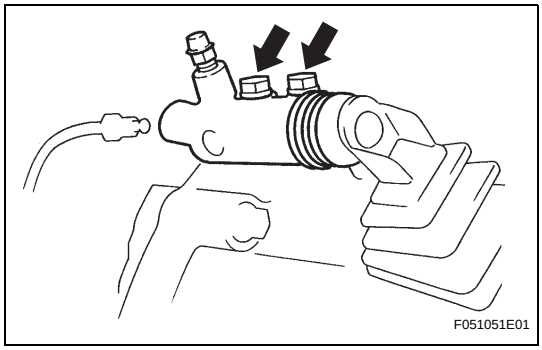
2. DISCONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST, disconnect the flexible hose tube.
SST 09023-00101



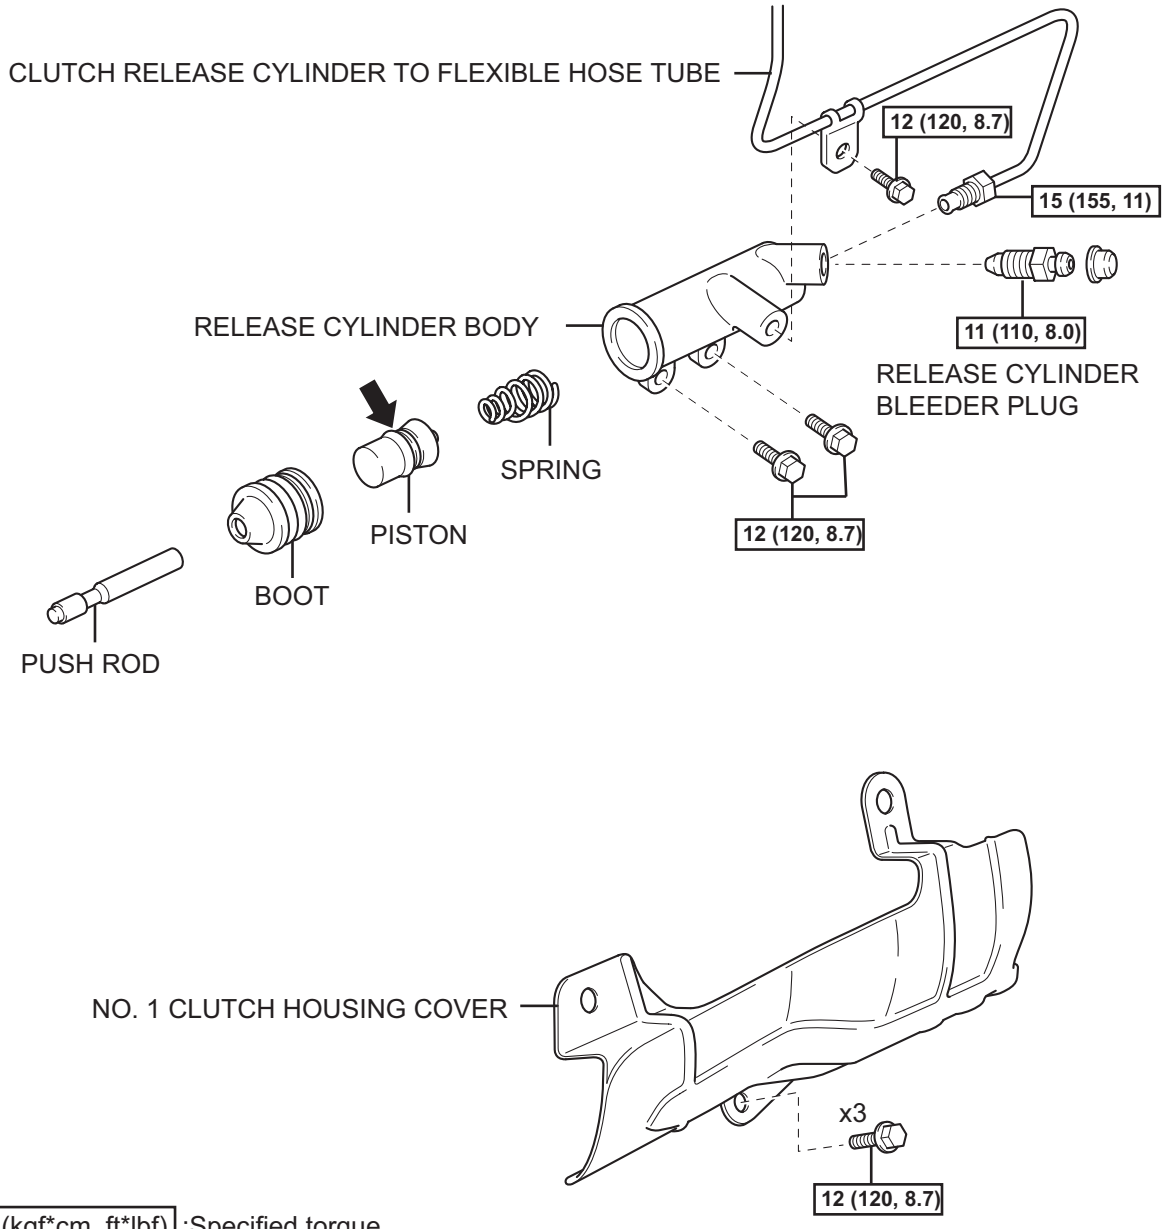
3. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and pull out the clutch release cylinder.



CLUTCH RELEASE CYLINDER (for RA60)

COMPONENTS

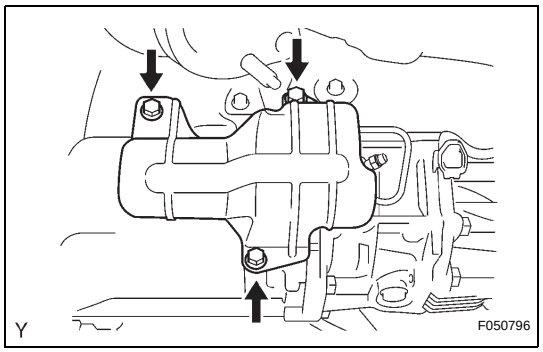


REMOVAL

1. DRAIN CLUTCH FLUID

2. REMOVE NO. 1 CLUTCH HOUSING COVER

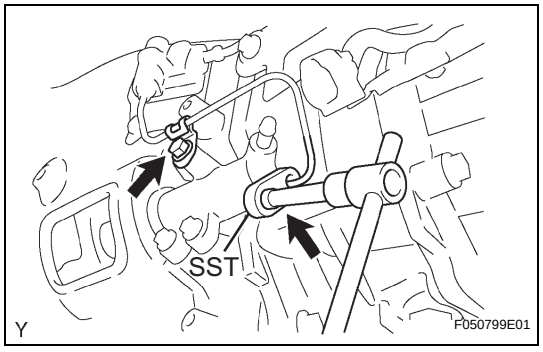
(a) Remove the 3 bolts and clutch housing cover No. 1.



3. DISCONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

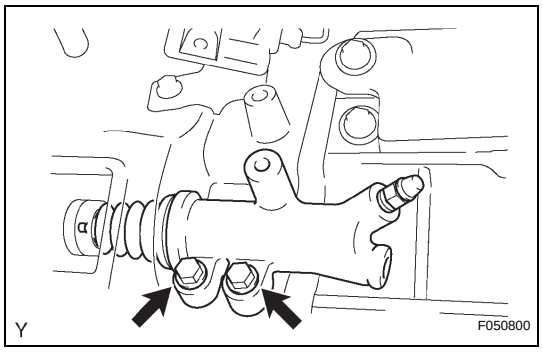
(a) Using SST, disconnect the flexible hose tube.
SST 09023-00101

(b) Remove the bolt and clutch line bracket.
HINT:
Use a container to catch the fluid.



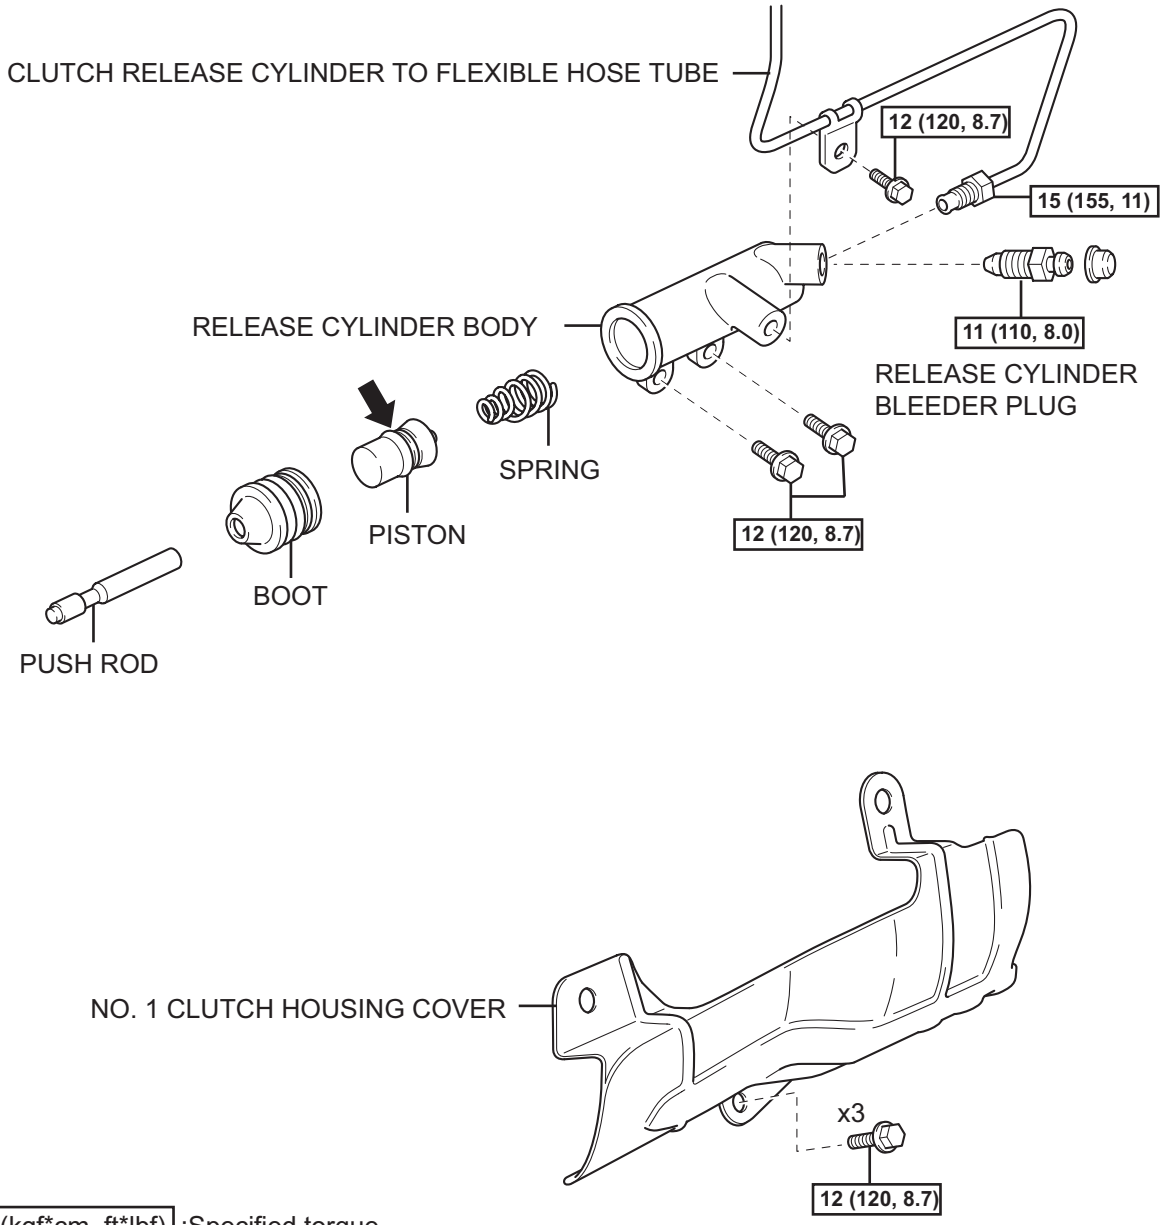
4. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and pull out the clutch release cylinder.



CLUTCH RELEASE CYLINDER (for RA60F)

COMPONENTS



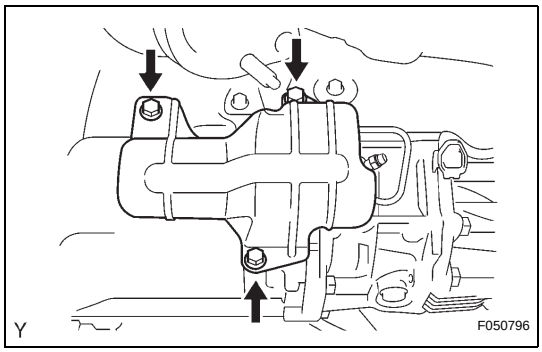
CL

REMOVAL

1. DRAIN CLUTCH FLUID

2. REMOVE NO. 1 CLUTCH HOUSING COVER

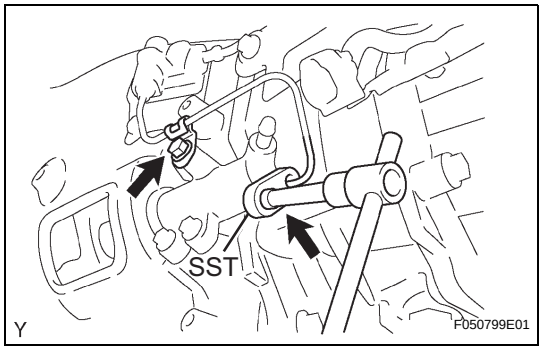
(a) Remove the 3 bolts and clutch housing cover No. 1.



3. DISCONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE

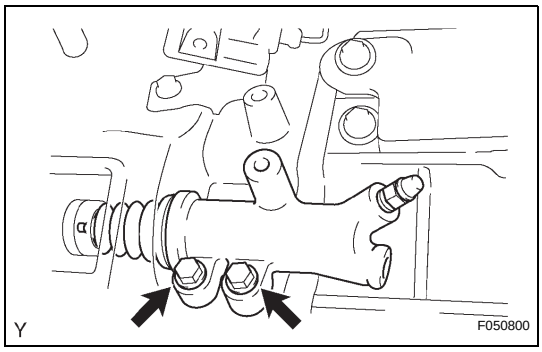
(a) Using SST, disconnect the flexible hose tube.
SST 09023-00101

(b) Remove the bolt and clutch line bracket.
HINT:
Use a container to catch the fluid.



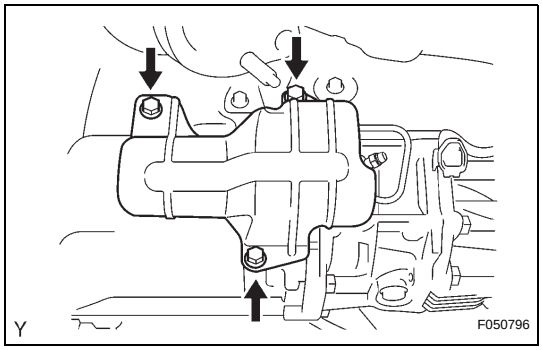
4. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and pull out the clutch release cylinder.



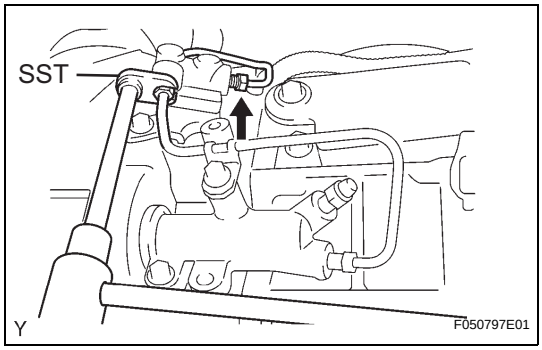
CLUTCH ACCUMULATOR (for RA60)

REMOVAL



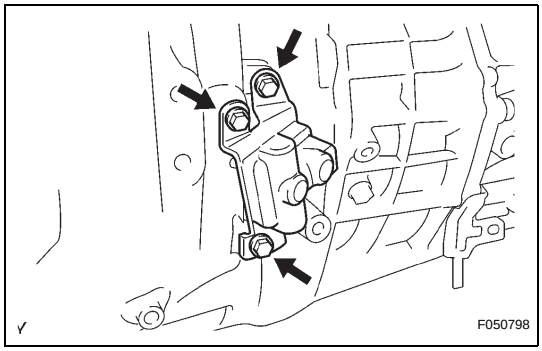
1. REMOVE NO. 1 CLUTCH HOUSING COVER

(a) Remove the 3 bolts and clutch housing cover No. 1.



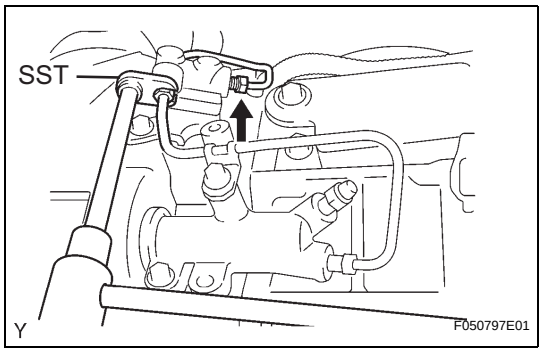
2. REMOVE CLUTCH ACCUMULATOR ASSEMBLY

(a) Using SST, disconnect the 2 flexible hose tubes from the clutch accumulator.
SST 09023-00101
HINT:
Use a container to catch the fluid.



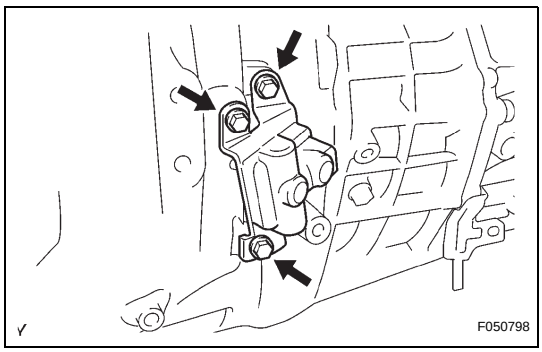
(b) Remove the 3 bolts and clutch accumulator.

INSTALLATION

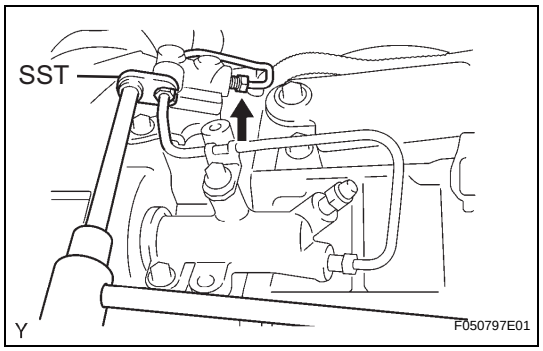


1. INSTALL CLUTCH ACCUMULATOR ASSEMBLY

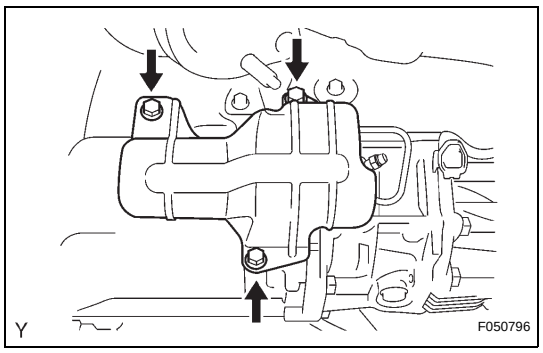
(a) Using SST, connect the 2 flexible hose tubes to the clutch accumulator.
SST 09023-00101



(b) Install the clutch accumulator with the 3 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



(c) Using SST, tighten the 2 flexible hose tubes.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)



2. INSTALL NO. 1 CLUTCH HOUSING COVER

(a) Install the clutch housing cover No. 1 with the 3 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)

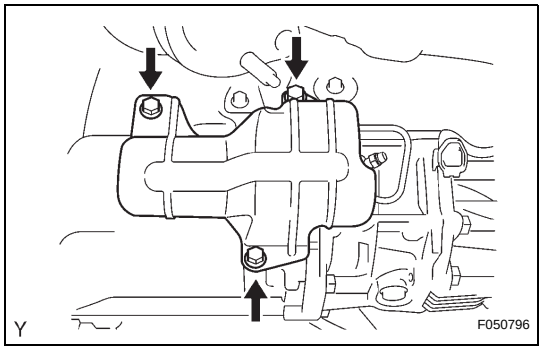
3. BLEED CLUTCH PIPE LINE

(a) Fill the brake reservoir tank with the brake fluid and bleed the clutch system.
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

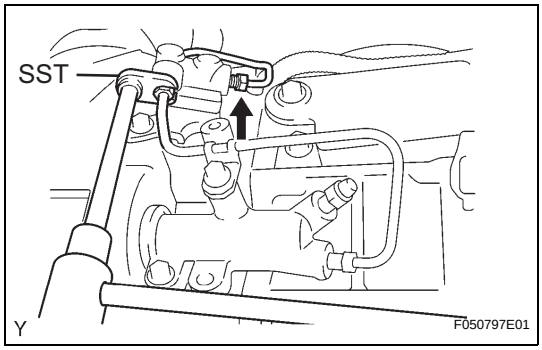
CLUTCH ACCUMULATOR (for RA60F)

REMOVAL



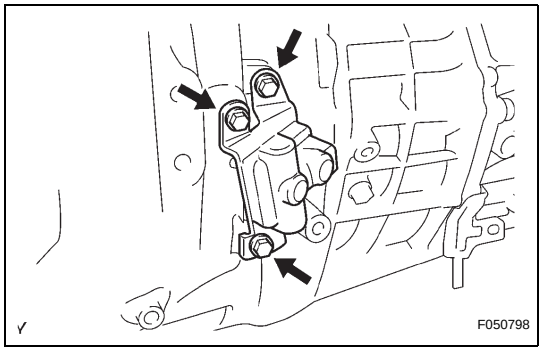
1. REMOVE NO. 1 CLUTCH HOUSING COVER

(a) Remove the 3 bolts and clutch housing cover No. 1.



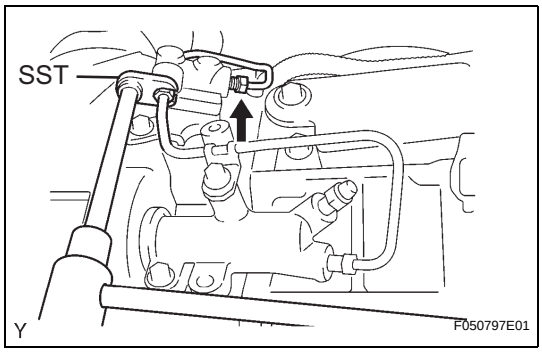
2. REMOVE CLUTCH ACCUMULATOR ASSEMBLY

(a) Using SST, disconnect the 2 flexible hose tubes from the clutch accumulator.
SST 09023-00101
HINT:
Use a container to catch the fluid.



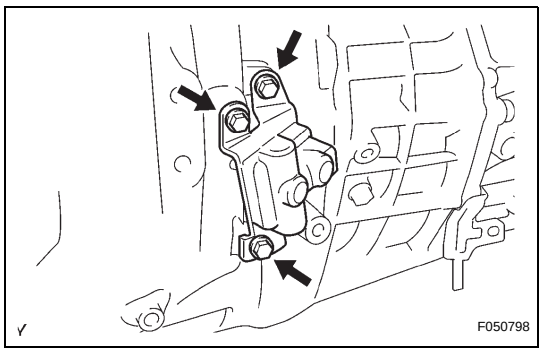
(b) Remove the 3 bolts and clutch accumulator.

INSTALLATION

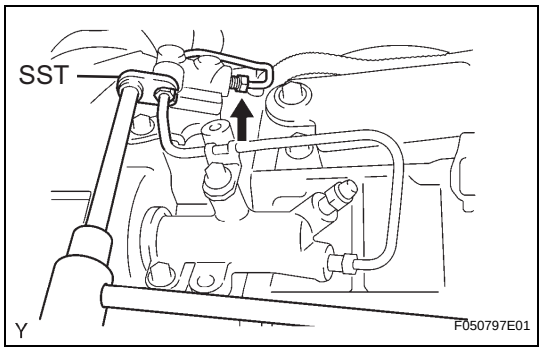


1. INSTALL CLUTCH ACCUMULATOR ASSEMBLY

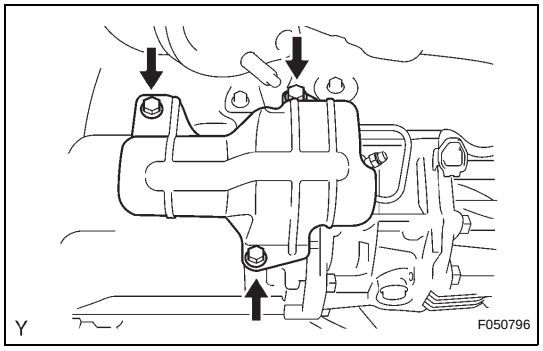
(a) Using SST, connect the 2 flexible hose tubes to the clutch accumulator.
SST 09023-00101



(b) Install the clutch accumulator with the 3 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



(c) Using SST, tighten the 2 flexible hose tubes.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)



2. INSTALL NO. 1 CLUTCH HOUSING COVER

(a) Install the clutch housing cover No. 1 with the 3 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)

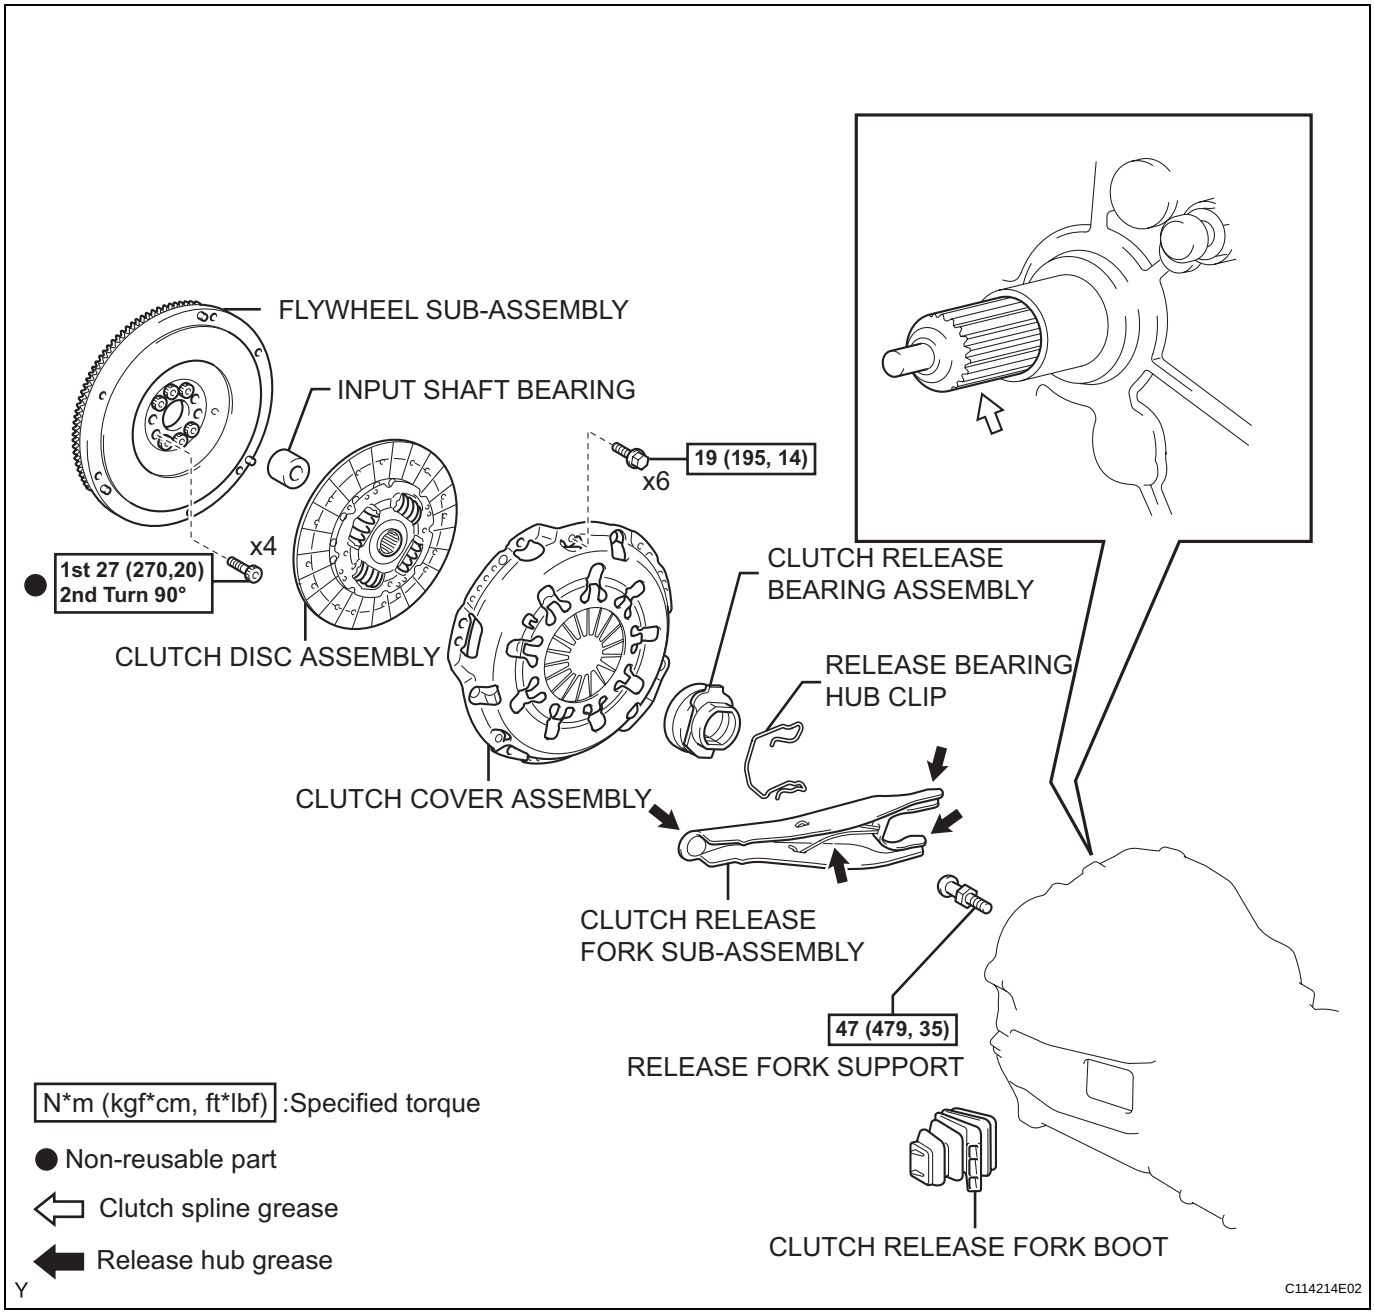
3. BLEED CLUTCH PIPE LINE

(a) Fill the brake reservoir tank with the brake fluid and bleed the clutch system.
Torque: 11 N*m (110 kgf*cm, 8.0 ft.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

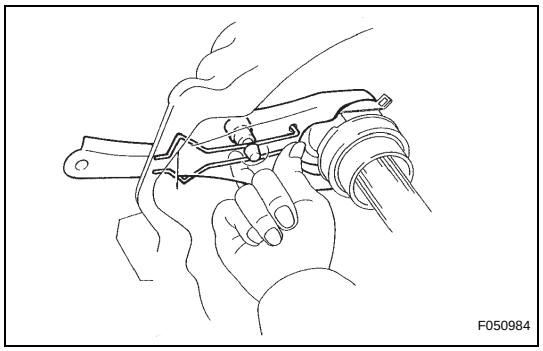
CLUTCH UNIT (for R155)

COMPONENTS



REMOVAL

1. **REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY**
   (See page MT-6)



2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork together with the clutch release bearing from the transmission assembly.

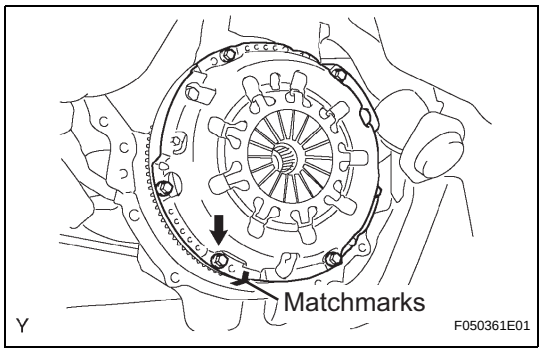
3. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the clutch release bearing assembly from the clutch release fork.

4. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the transaxle assembly.

5. **REMOVE RELEASE BEARING HUB CLIP**

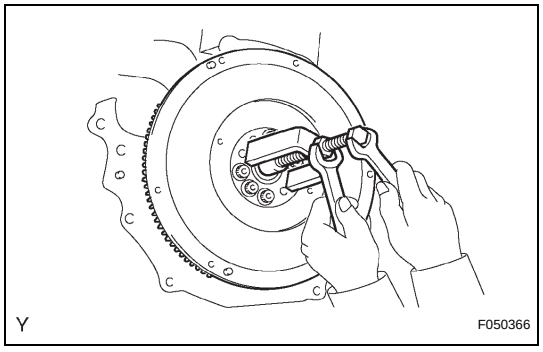
6. **REMOVE CLUTCH RELEASE FORK BOOT**

7. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Align the matchmark on the clutch cover assembly with the one on the flywheel sub-assembly.
   (b) Loosen each set bolt one turn at a time until the spring tension is released.
   (c) Remove the 6 bolts and clutch cover assembly.
   NOTICE:
   Do not drop the clutch disc assembly.



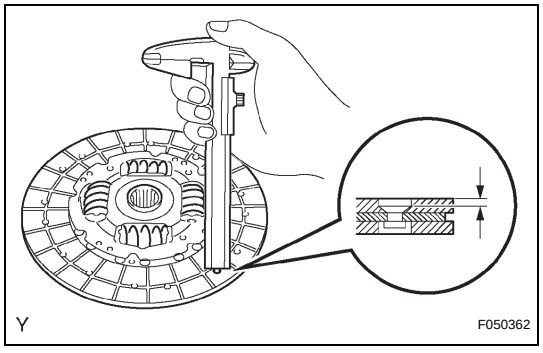
8. **REMOVE CLUTCH DISC ASSEMBLY**
   NOTICE:
   Keep the lining part of the clutch disc assembly, pressure plate and surface of the flywheel sub-assembly free from oil and foreign matter.

9. **REMOVE INPUT SHAFT BEARING**
   (a) Remove the 4 bolts at diametrically opposite points.
   (b) Using SST, remove the pilot bearing.
   SST 09303-35011

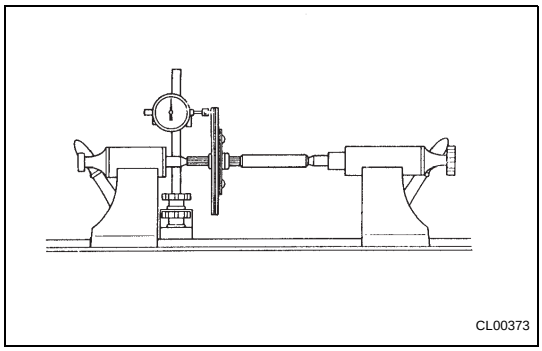


INSPECTION

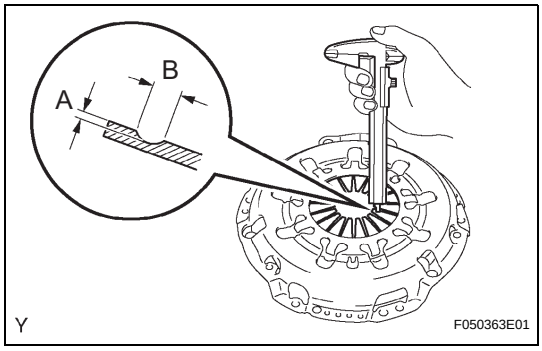
1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Maximum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.



(b) Install the clutch disc assembly onto the transaxle assembly.
NOTICE:
Take care not to insert the clutch disc assembly in the wrong orientation.

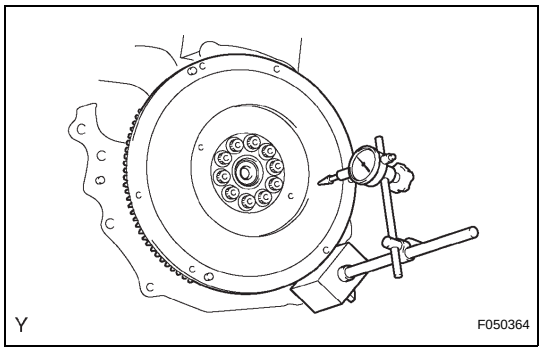


(c) Using a dial indicator, check the clutch disc assembly runout.
Minimum runout:
0.8 mm (0.031 in.)
If necessary, replace the clutch disc assembly.



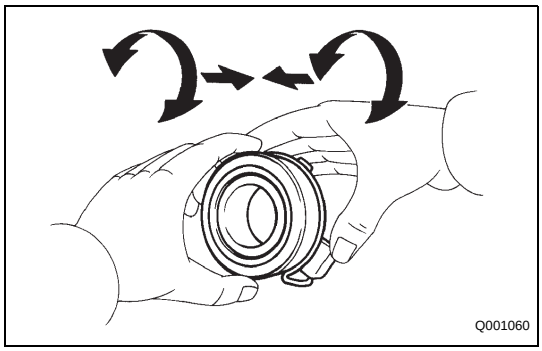
2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using vernier calipers, inspect the depth and width of wear of the diaphragm spring.
Minimum:
A (Depth): 0.5 mm (0.020 in.)
B (Width): 6.0 mm (0.236 in.)
If necessary, replace the clutch cover assembly.



3. INSPECT FLYWHEEL SUB-ASSEMBLY

(a) Using a dial indicator, inspect the flywheel sub-assembly runout.
Maximum runout:
0.1 mm (0.004 in.)
If necessary, replace the flywheel sub-assembly.

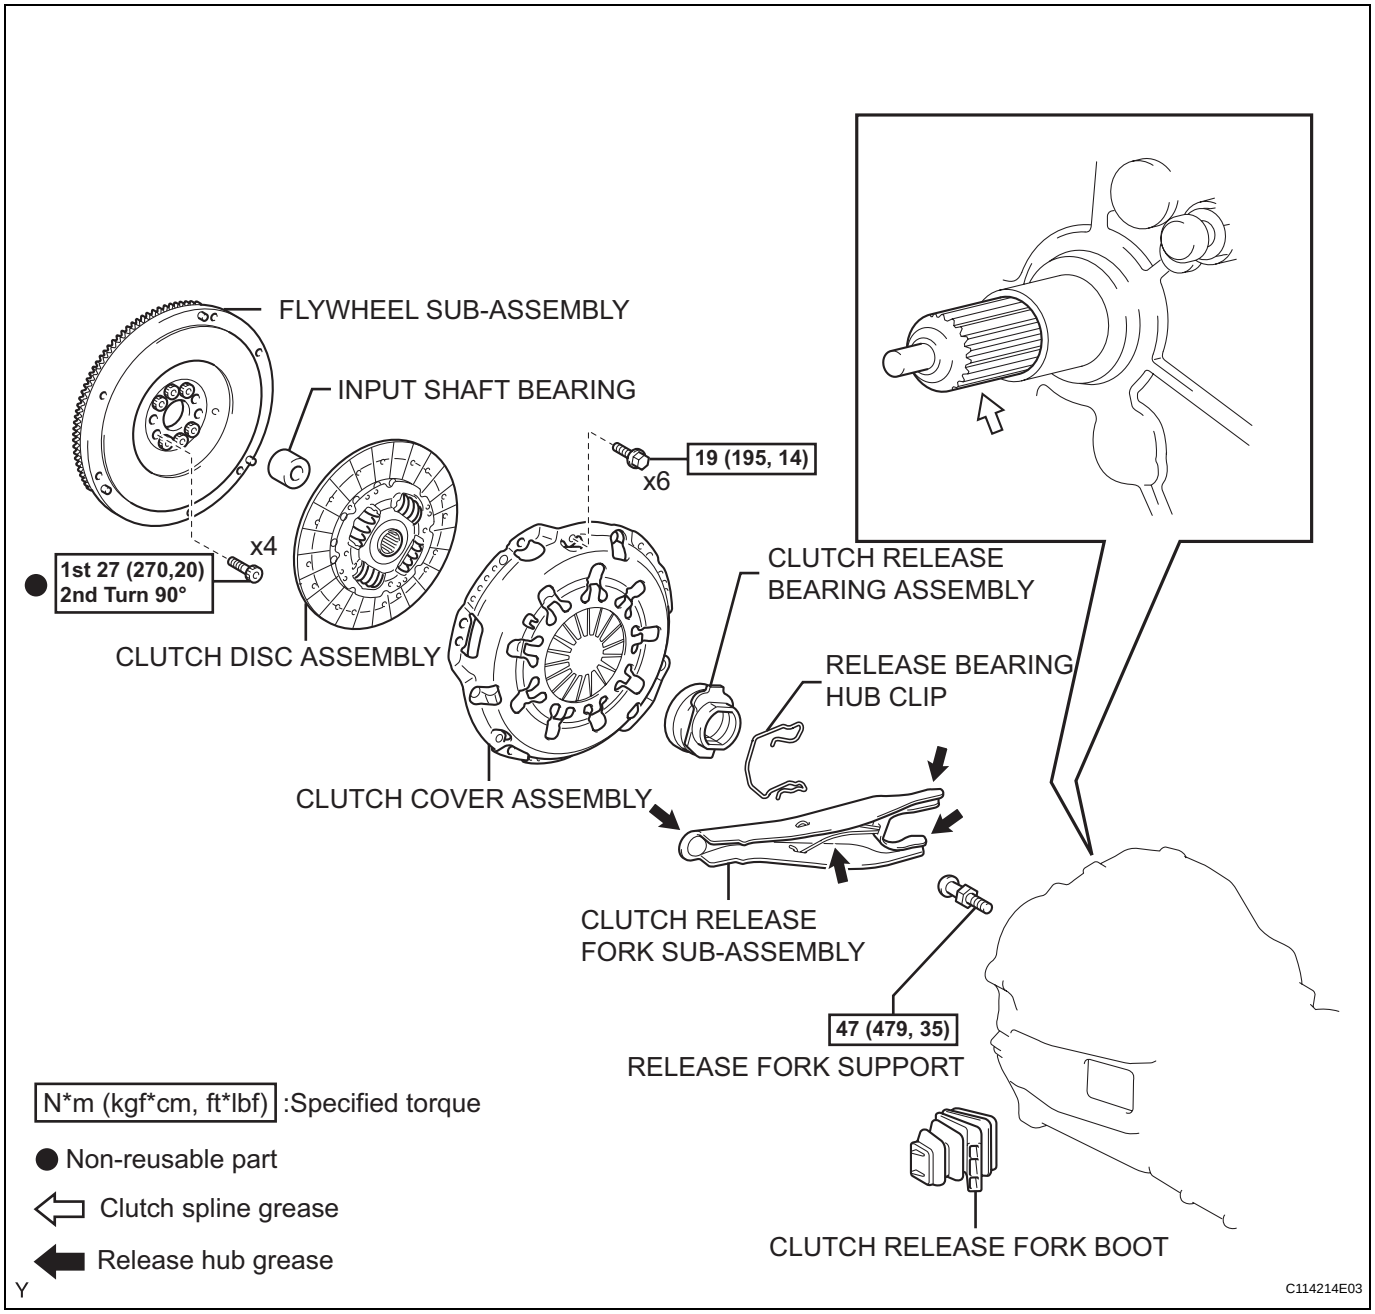


4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

(a) Turn the release bearing by hand while applying force in the axial direction.
HINT:
The bearing is permanently lubricated and requires no cleaning or lubrication.
If necessary, replace the release bearing assembly.

CLUTCH UNIT (for R155F)

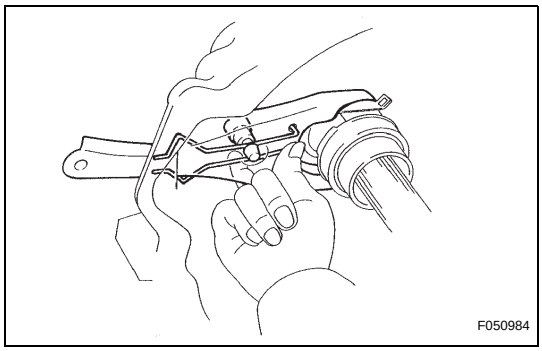
COMPONENTS



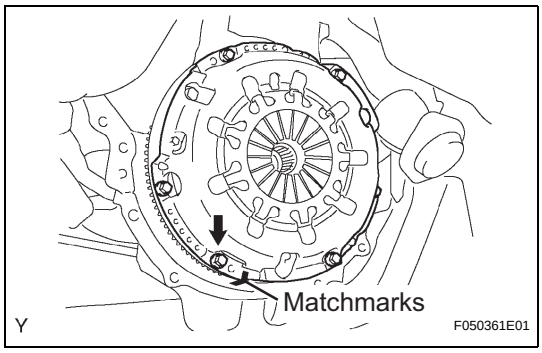
CL

REMOVAL

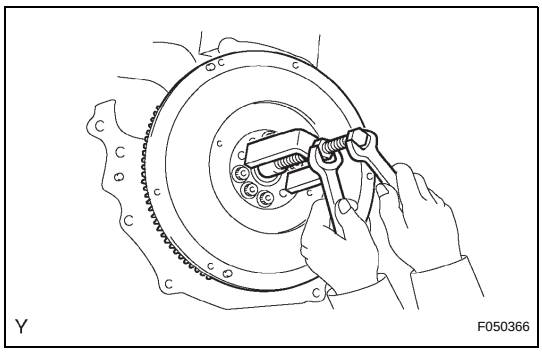
1. **REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY**
   (See page MT-8)



2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork together with the clutch release bearing from the transmission assembly.
3. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the clutch release bearing assembly from the clutch release fork.
4. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the transaxle assembly.
5. **REMOVE RELEASE BEARING HUB CLIP**
6. **REMOVE CLUTCH RELEASE FORK BOOT**
7. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Align the matchmark on the clutch cover assembly with the one on the flywheel sub-assembly.
   (b) Loosen each set bolt one turn at a time until the spring tension is released.
   (c) Remove the 6 bolts and clutch cover assembly.
   NOTICE:
   Do not drop the clutch disc assembly.

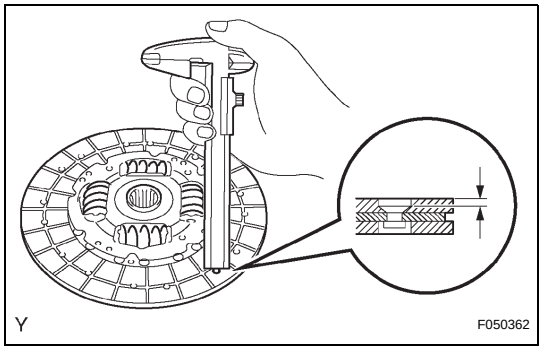


8. **REMOVE CLUTCH DISC ASSEMBLY**
   NOTICE:
   Keep the lining part of the clutch disc assembly, pressure plate and surface of the flywheel sub-assembly free from oil and foreign matter.
9. **REMOVE INPUT SHAFT BEARING**
   (a) Remove the 4 bolts at diametrically opposite points.
   (b) Using SST, remove the pilot bearing.
   SST 09303-35011

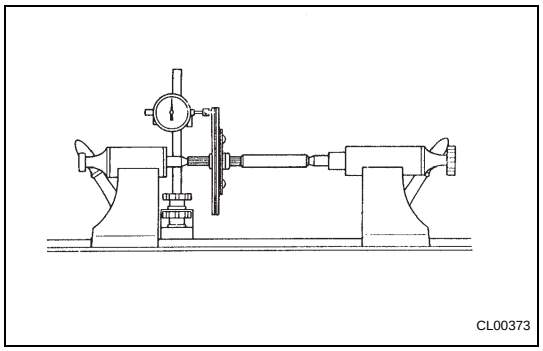


INSPECTION

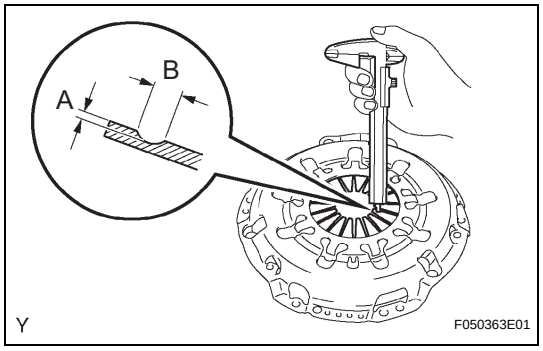
1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Maximum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.



(b) Install the clutch disc assembly onto the transaxle assembly.
NOTICE:
Take care not to insert the clutch disc assembly in the wrong orientation.

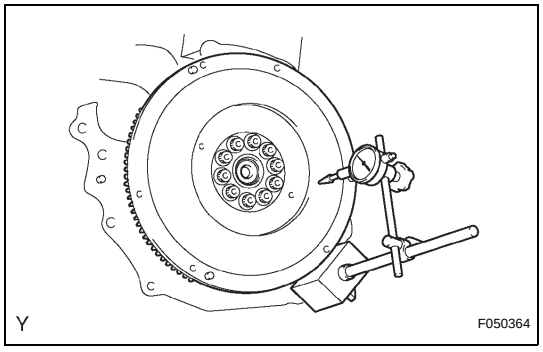


(c) Using a dial indicator, check the clutch disc assembly runout.
Minimum runout:
0.8 mm (0.031 in.)
If necessary, replace the clutch disc assembly.



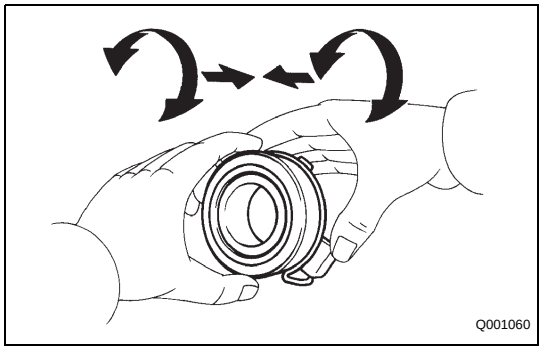
2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using vernier calipers, inspect the depth and width of wear of the diaphragm spring.
Minimum:
A (Depth): 0.5 mm (0.020 in.)
B (Width): 6.0 mm (0.236 in.)
If necessary, replace the clutch cover assembly.



3. INSPECT FLYWHEEL SUB-ASSEMBLY

(a) Using a dial indicator, inspect the flywheel sub-assembly runout.
Maximum runout:
0.1 mm (0.004 in.)
If necessary, replace the flywheel sub-assembly.

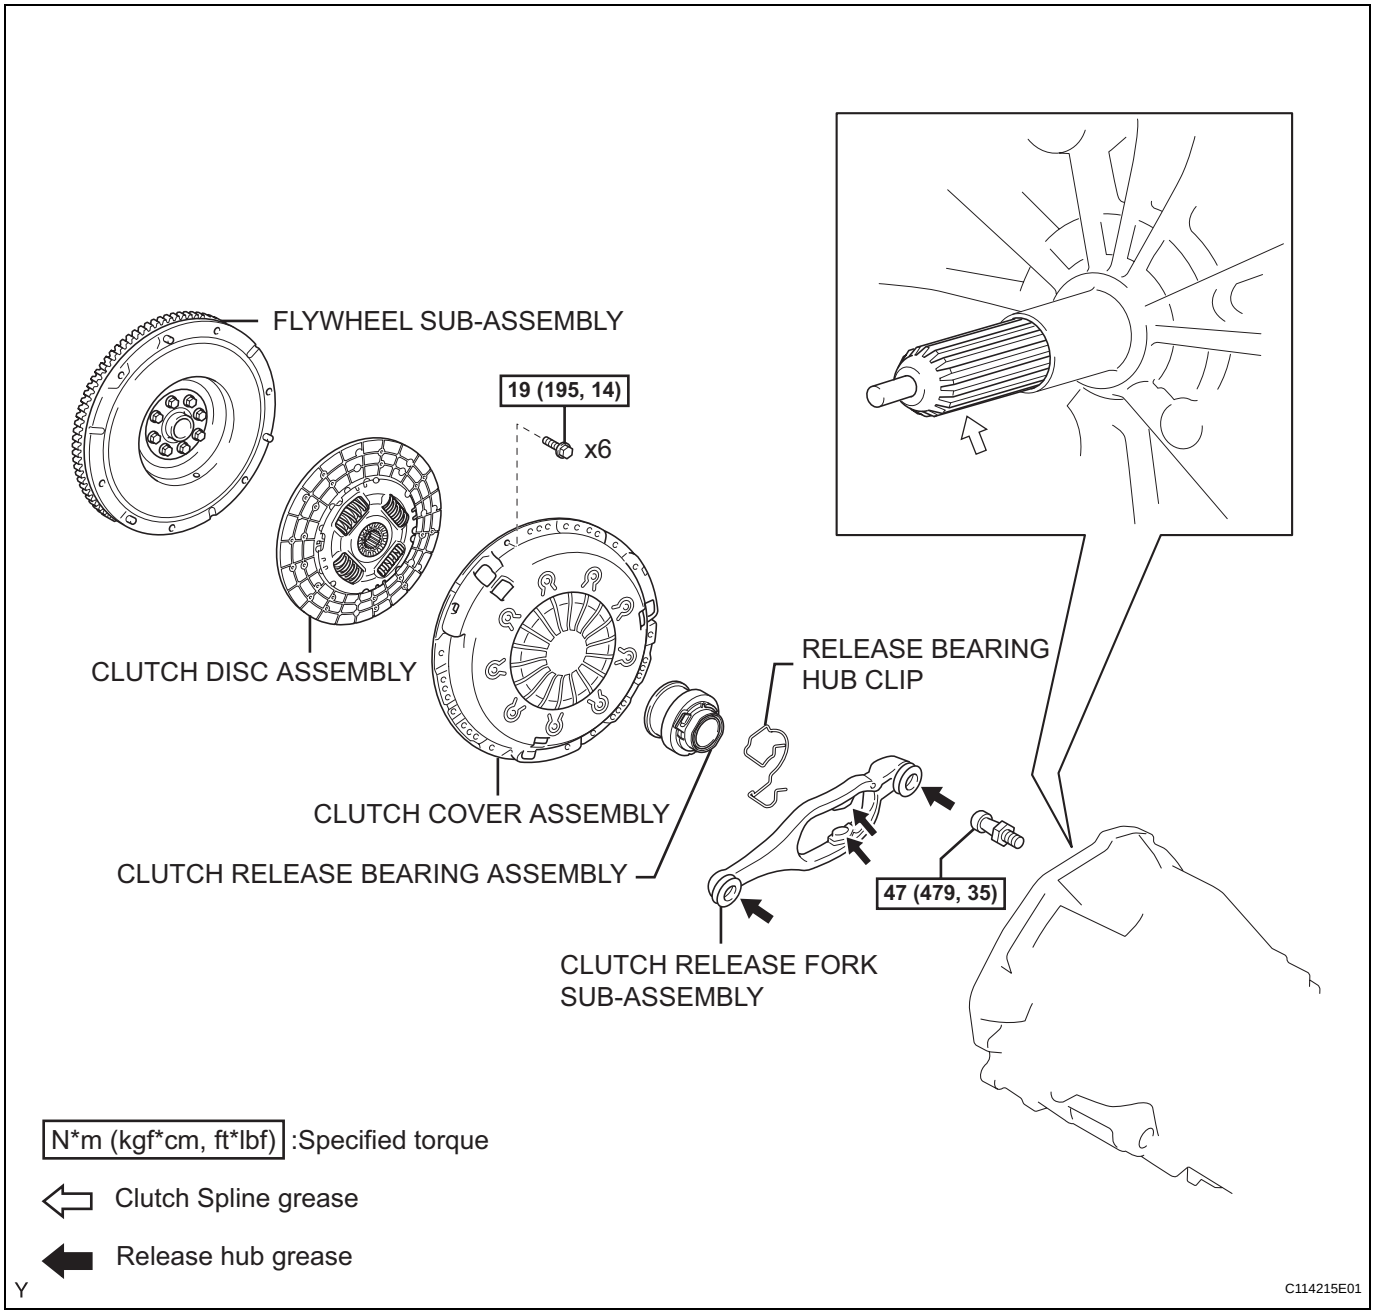


4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

(a) Turn the release bearing by hand while applying force in the axial direction.
HINT:
The bearing is permanently lubricated and requires no cleaning or lubrication.
If necessary, replace the release bearing assembly.

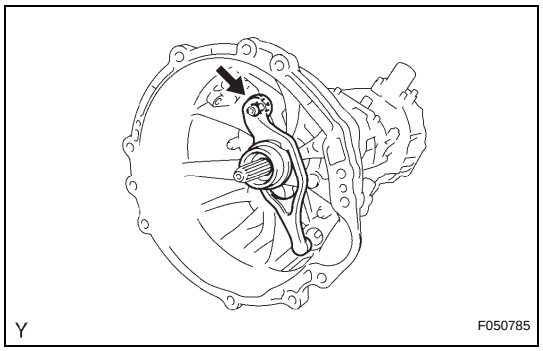
CLUTCH UNIT (for RA60)

COMPONENTS



REMOVAL

1. **REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY**
   (See page MT-7)

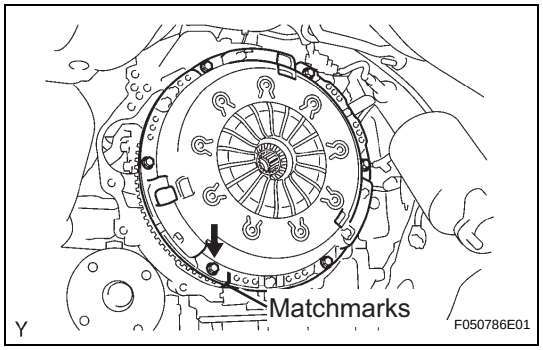


2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork together with the clutch release bearing from the transmission assembly.

3. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the clutch release bearing assembly from the clutch release fork.

4. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the transaxle assembly.

5. **REMOVE RELEASE BEARING HUB CLIP**



6. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Align the matchmark on the clutch cover assembly with the one on the flywheel sub-assembly.
   (b) Loosen each set bolt one turn at a time until the spring tension is released.
   (c) Remove the 6 bolts and clutch cover assembly.
   NOTICE:
   Do not drop the clutch disc assembly.

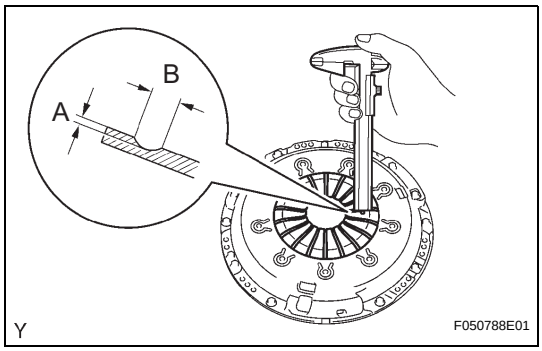
7. **REMOVE CLUTCH DISC ASSEMBLY**
   NOTICE:
   Keep the lining part of the clutch disc assembly, pressure plate and surface of the flywheel sub-assembly free from oil and foreign matter.

INSPECTION

1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Maximum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.

   (b) Install the clutch disc assembly onto the transaxle assembly.
   NOTICE:
   Take care not to insert the clutch disc assembly in the wrong orientation.

   (c) Using a dial indicator, check the clutch disc assembly runout.
   Minimum runout:
   1.0 mm (0.039 in.)
   If necessary, replace the clutch disc assembly.



2. INSPECT CLUTCH COVER ASSEMBLY

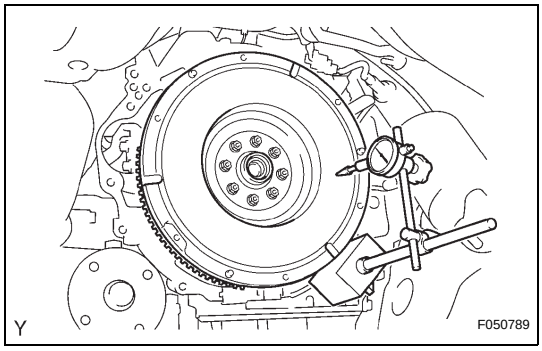
(a) Using vernier calipers, inspect the depth and width of wear of the diaphragm spring.

Minimum:

A (Depth): 0.5 mm (0.020 in.)

B (Width): 6.0 mm (0.236 in.)

If necessary, replace the clutch cover assembly.



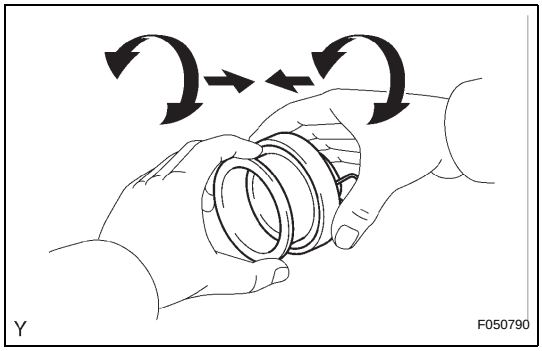
3. INSPECT FLYWHEEL SUB-ASSEMBLY

(a) Using a dial indicator, inspect the flywheel sub-assembly runout.

Maximum runout:

0.1 mm (0.004 in.)

If necessary, replace the flywheel sub-assembly.



4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

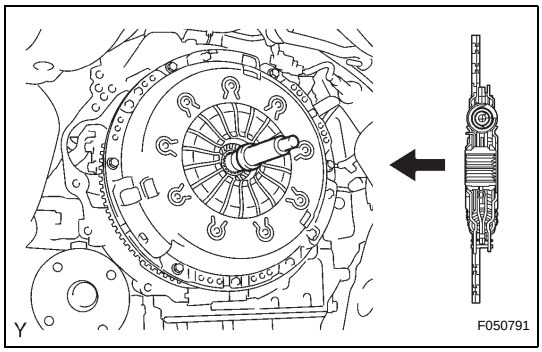
(a) Turn the release bearing by hand while applying force in the axial direction.

HINT:

The bearing is permanently lubricated and requires no cleaning or lubrication.

If necessary, replace the release bearing assembly.

INSTALLATION



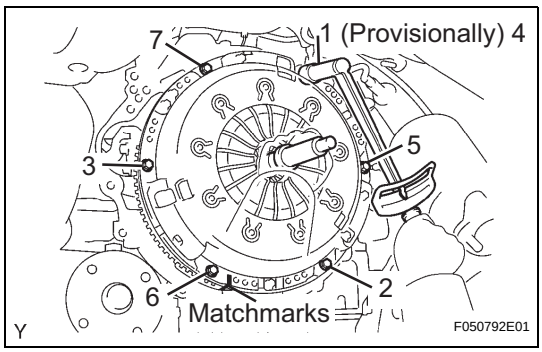
1. INSTALL CLUTCH DISC ASSEMBLY

(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.

SST 09301-00220

NOTICE:

Take care not to insert the clutch disc assembl in the wrong orientation.



2. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly and flywheel sub-assembly.

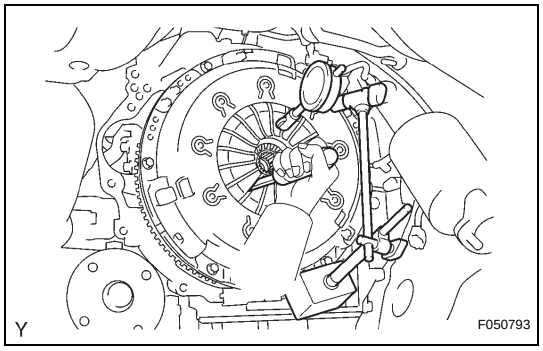
(b) Following the procedures shown in the illustration, tighten the 6 bolts, in the order starting with the bolt located near the knock pin on the top.

Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)

HINT:

- Following the order in the illustration, uniformly tighten the bolts.

- Move SST up and down, right and left lightly, after checking that the disc is in the center, and tighten the bolts.



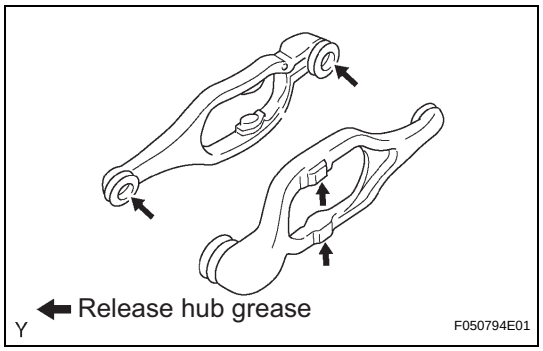
3. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with roller instrument, check the diaphragm spring tip alignment.
Maximum non-alignment:
0.5 mm (0.020 in.)
If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.
SST 09333-00013

4. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

5. INSTALL RELEASE BEARING HUB CLIP



6. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the release fork and release the bearing assembly contact surfaces, release fork and push rod contact surface and release fork pivot point.
Sealant:
Part No. 08887-01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork onto the release bearing assembly.

7. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

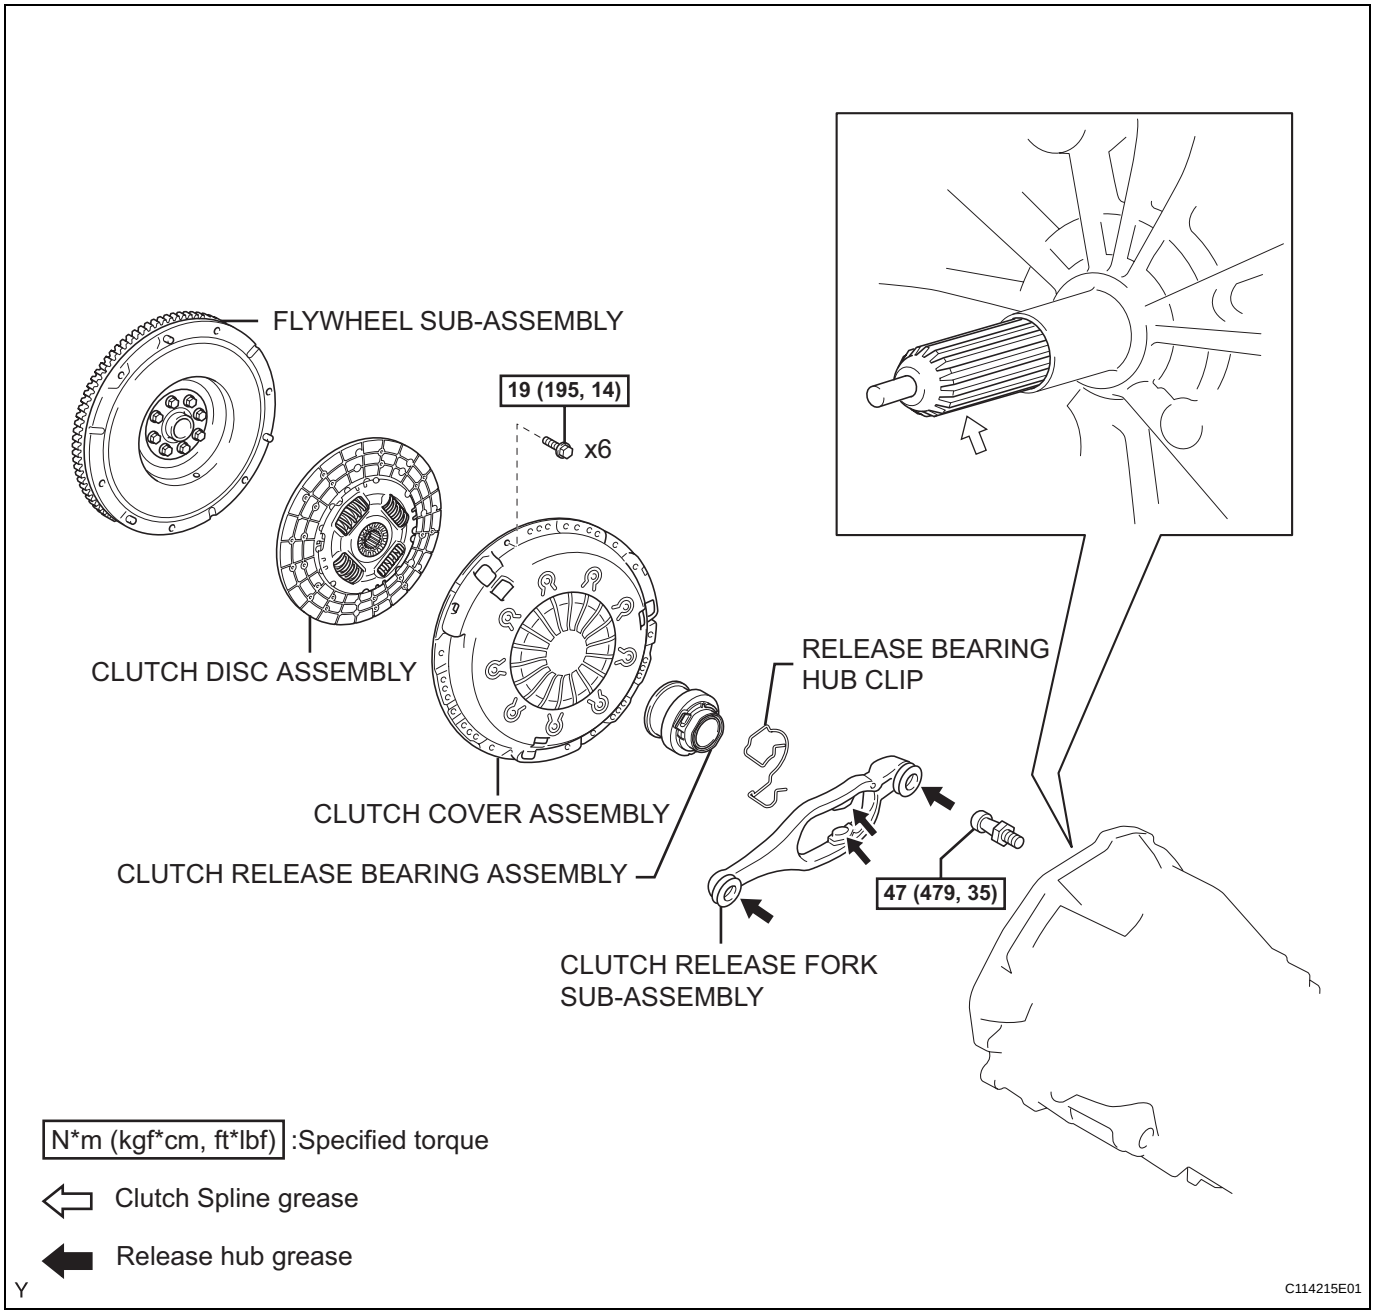
(a) Apply clutch spline grease to the input shaft spline.
Sealant:
Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

(b) Install the bearing onto the release fork, and then install them onto the transaxle assembly.
NOTICE:
After installation, move the fork forward and backward to check that the release bearing slides smoothly.

8. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY
(See page MT-9)

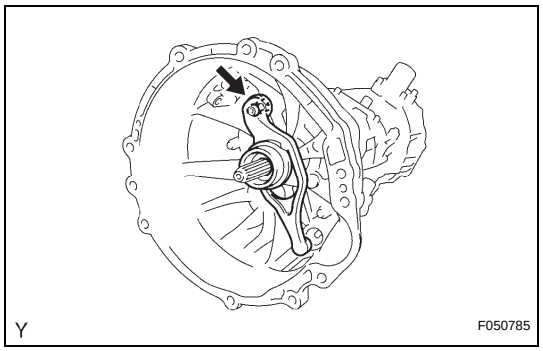
CLUTCH UNIT (for RA60F)

COMPONENTS



REMOVAL

1. **REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY**
   (See page MT-6)

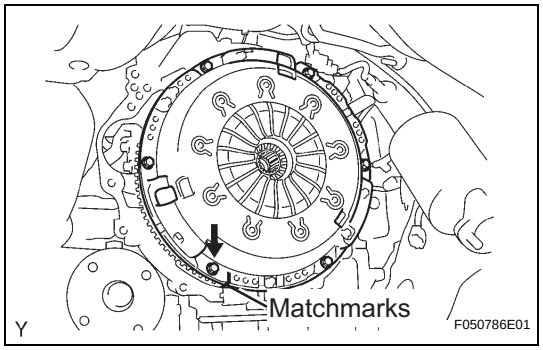


2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork together with the clutch release bearing from the transmission assembly.

3. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the clutch release bearing assembly from the clutch release fork.

4. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the transaxle assembly.

5. **REMOVE RELEASE BEARING HUB CLIP**



6. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Align the matchmark on the clutch cover assembly with the one on the flywheel sub-assembly.
   (b) Loosen each set bolt one turn at a time until the spring tension is released.
   (c) Remove the 6 bolts and clutch cover assembly.
   NOTICE:
   Do not drop the clutch disc assembly.

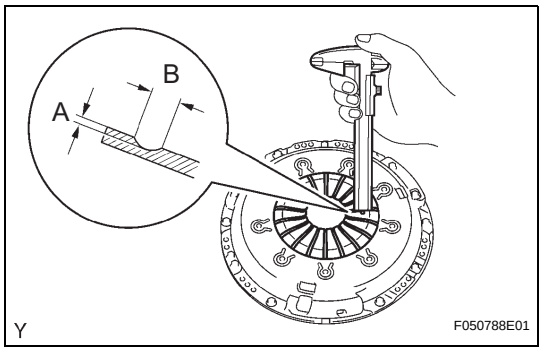
7. **REMOVE CLUTCH DISC ASSEMBLY**
   NOTICE:
   Keep the lining part of the clutch disc assembly, pressure plate and surface of the flywheel sub-assembly free from oil and foreign matter.

INSPECTION

1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Maximum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.

   (b) Install the clutch disc assembly onto the transaxle assembly.
   NOTICE:
   Take care not to insert the clutch disc assembly in the wrong orientation.

   (c) Using a dial indicator, check the clutch disc assembly runout.
   Minimum runout:
   1.0 mm (0.039 in.)
   If necessary, replace the clutch disc assembly.



2. INSPECT CLUTCH COVER ASSEMBLY

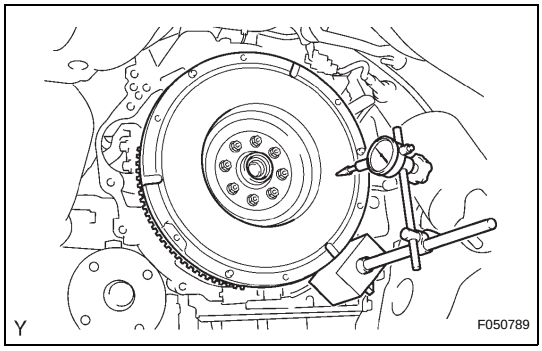
(a) Using vernier calipers, inspect the depth and width of wear of the diaphragm spring.

Minimum:

A (Depth): 0.5 mm (0.020 in.)

B (Width): 6.0 mm (0.236 in.)

If necessary, replace the clutch cover assembly.



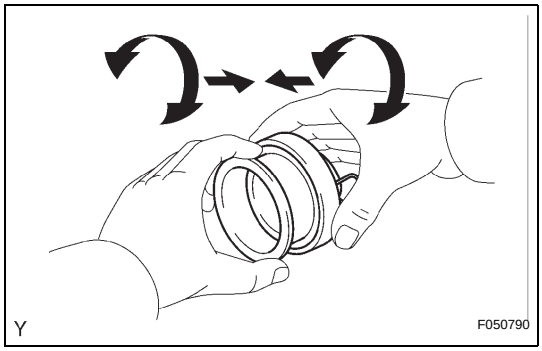
3. INSPECT FLYWHEEL SUB-ASSEMBLY

(a) Using a dial indicator, inspect the flywheel sub-assembly runout.

Maximum runout:

0.1 mm (0.004 in.)

If necessary, replace the flywheel sub-assembly.



4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

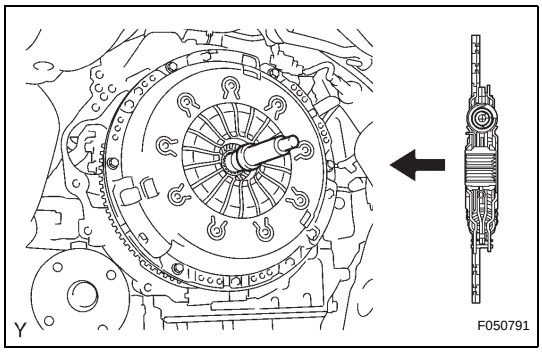
(a) Turn the release bearing by hand while applying force in the axial direction.

HINT:

The bearing is permanently lubricated and requires no cleaning or lubrication.

If necessary, replace the release bearing assembly.

INSTALLATION



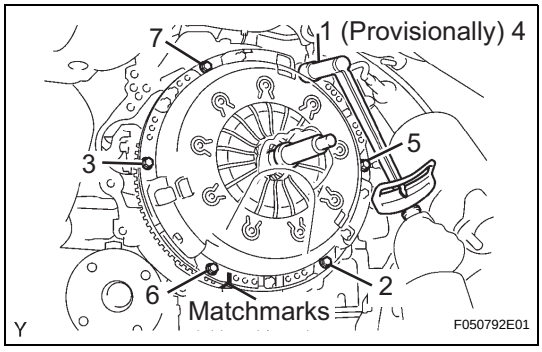
1. INSTALL CLUTCH DISC ASSEMBLY

(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.

SST 09301-00220

NOTICE:

Take care not to insert the clutch disc assembly in the wrong orientation.



2. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly and flywheel sub-assembly.

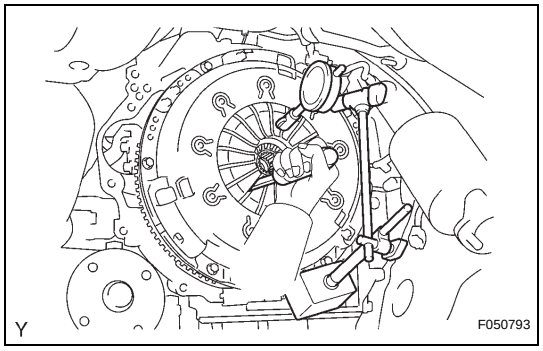
(b) Following the procedures shown in the illustration, tighten the 6 bolts, in the order starting with the bolt located near the knock pin on the top.

Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)

HINT:

- Following the order in the illustration, uniformly tighten the bolts.

- Move SST up and down, right and left lightly, after checking that the disc is in the center, and tighten the bolts.



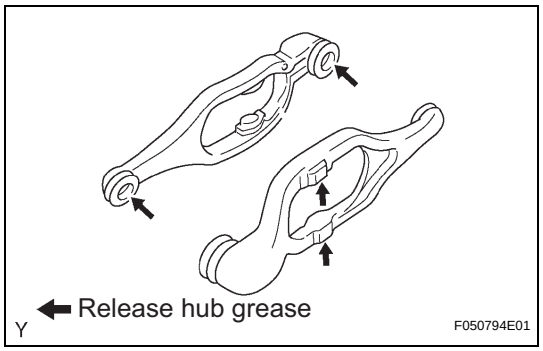
3. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with roller instrument, check the diaphragm spring tip alignment.
Maximum non-alignment:
0.5 mm (0.020 in.)
If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.
SST 09333-00013

4. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

5. INSTALL RELEASE BEARING HUB CLIP



6. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the release fork and release the bearing assembly contact surfaces, release fork and push rod contact surface and release fork pivot point.
Sealant:
Part No. 08887-01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork onto the release bearing assembly.

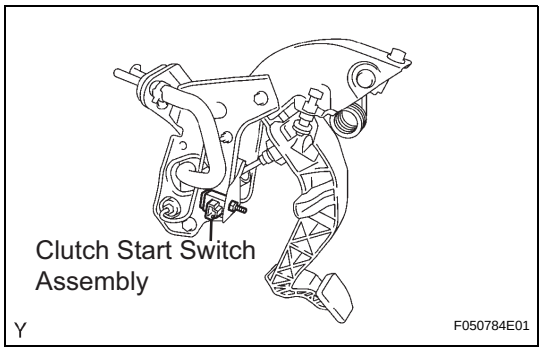
7. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

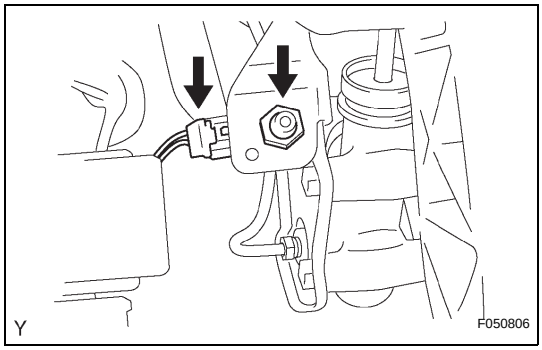
(a) Apply clutch spline grease to the input shaft spline.
Sealant:
Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

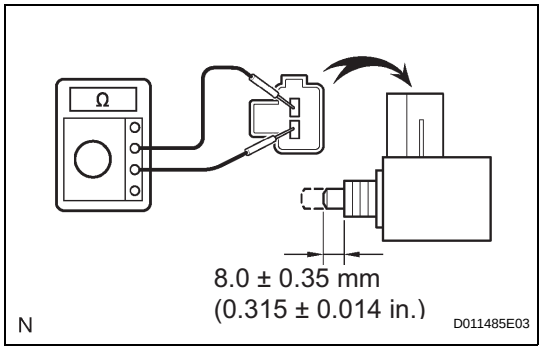
(b) Install the bearing onto the release fork, and then install them onto the transaxle assembly.
NOTICE:
After installation, move the fork forward and backward to check that the release bearing slides smoothly.

8. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

(See page MT-8)







CLUTCH START SWITCH

ON-VEHICLE INSPECTION

1. CHECK CLUTCH START SYSTEM

(a) Check that the engine does not start when the clutch pedal is released.

(b) Check that the engine starts when the clutch pedal is fully depressed.
If necessary, replace the clutch start switch assembly.

REMOVAL

1. REMOVE CLUTCH START SWITCH ASSEMBLY

(a) Disconnect the clutch start switch assembly connector.

(b) Remove the nut and clutch start switch assembly from the clutch pedal support.

INSPECTION

1. INSPECT CLUTCH START SWITCH ASSEMBLY

(a) Measure the resistance between the terminals when the switch is ON and OFF.

Switch Position	Specified Condition
ON (pushed)	Below 1Ω
OFF (free)	10 kΩ or higher

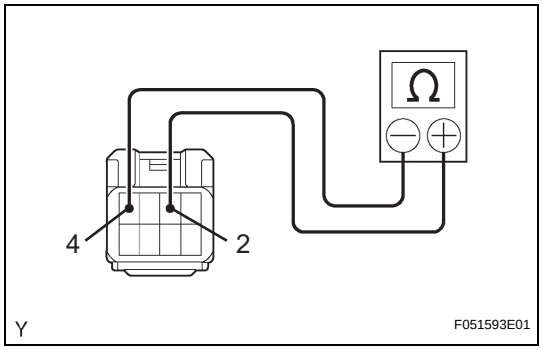
INSTALLATION

1. **INSTALL CLUTCH START SWITCH ASSEMBLY**
   (a) Install the clutch start switch assembly with the nut.
   Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)
   (b) Connect the clutch start switch assembly connector.
2. **INSPECT CLUTCH START SWITCH ASSEMBLY (See page CL-48)**

CLUTCH START CANCEL SWITCH

INSPECTION

1. INSPECT CLUTCH START CANCEL SWITCH ASSEMBLY

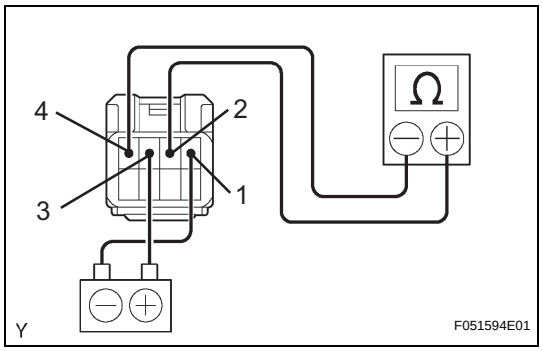


(a) Using an ohmmeter, check that there is resistance between terminals 2 and 4.

Standard:

10 kΩor higher

If the result is not as specified, replace the clutch start cancel switch.



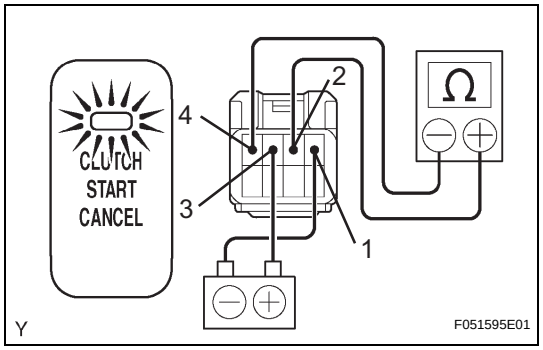
(b) Connect the positive (+) lead from the battery to terminal 3 and connect negative (-) lead to terminal 1.

(c) Using an ohmmeter, check that there is resistance between terminals 2 and 4.

Standard:

10 kΩor higher

If the result is not as specified, replace the clutch start cancel switch.

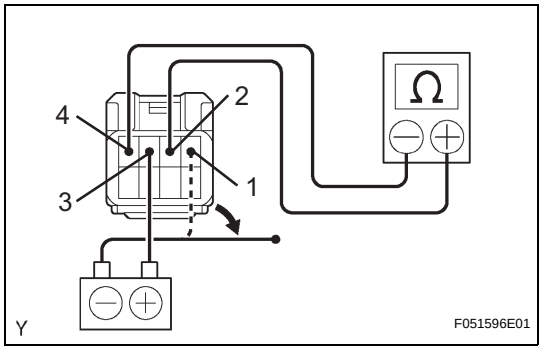


(d) Check that the indicator light comes on and there is resistance between terminals 2 and 4 when the switch is pressed.

Standard:

Blow 1 Ω

If the result is not as specified, replace the clutch start cancel switch.



(e) Using an ohmmeter, check that there is resistance between terminals 2 and 4 when the battery lead is disconnected.

Standard:

10 kΩor higher

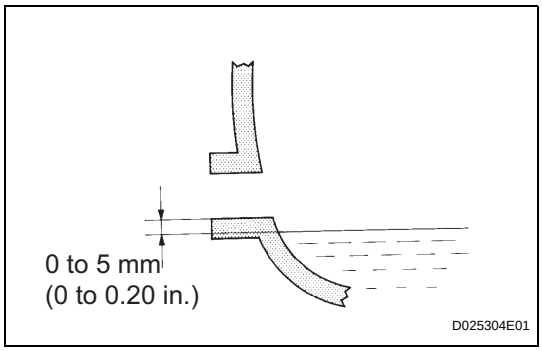
If the result is not as specified, replace the clutch start cancel switch.

MANUAL TRANSMISSION SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Abnormal noise	1. Oil level (Low)	MT-2
	2. Oil (Wrong)	MT-2
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-
Oil leakage	1. Oil level (High)	MT-2
	2. Gasket (Damaged)	-
	3. Oil seal (Worn or damaged)	-
	4. O-Ring (Worn or damaged	-
Hard shifting or will not shift	1. Synchronizer ring (Worn or damaged)	-
	2. Shift key spring (Damaged)	-
Jumps out of gear	1. Locking ball spring (Damaged)	-
	2. Shift fork (Worn)	-
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-



MANUAL TRANSMISSION OIL

ON-VEHICLE INSPECTION

1. INSPECT TRANSMISSION OIL

(a) Park the vehicle in a level place.

(b) Remove the transmission filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the lowest point of the transmission filler plug opening.

NOTICE:

- **Problems may occur when the oil level is too high or low.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

(d) Check for oil leakage when the oil level is low.

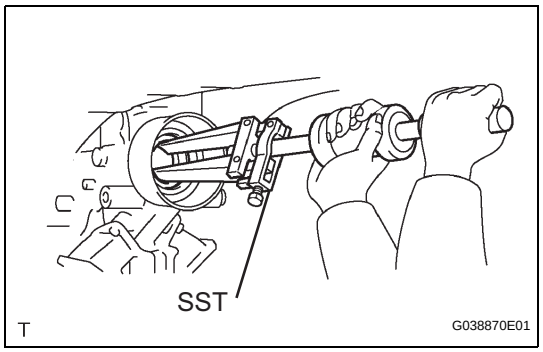
(e) Install the transmission filler plug and a new gasket.

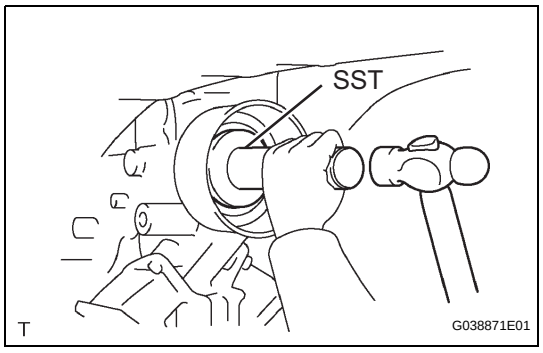
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

REMOVAL

1. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-8)**
2. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-3)**
3. **REMOVE MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST, remove the oil seal.
   SST 09308-00010
   NOTICE:
   Do not damage the oil-seal-fitted surface of the extension housing.





INSTALLATION

1. **INSTALL MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST and a hammer, tap in the new oil seal to the extension housing.
   SST 09223-00010
   Drive in depth:
   -0.5 to 0.5 mm (-0.020 to 0.020 in.)
   NOTICE:
   Be careful not to damage the oil seal rip
   (b) Coat the lip of a new oil seal with MP grease.
2. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab) (See page PR-13)**
3. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-6)**
4. **CHECK FOR MANUAL TRANSMISSION OIL LEAKAGE**

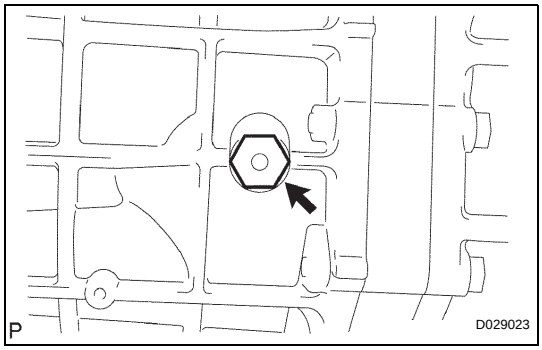
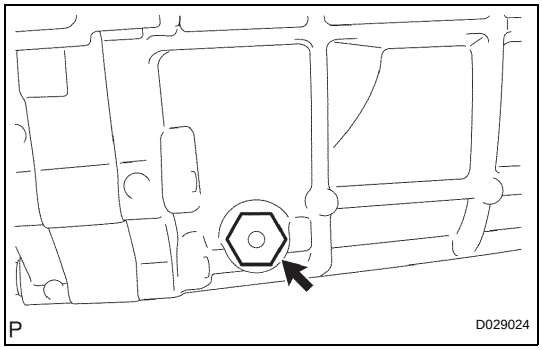
DISASSEMBLY



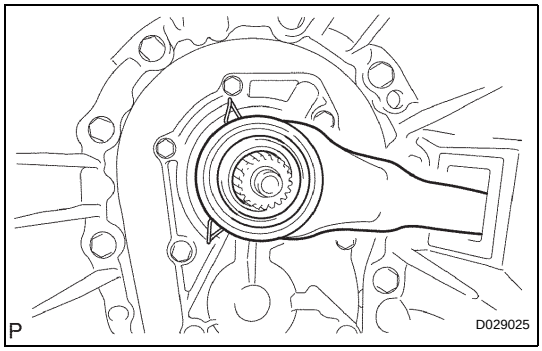
1. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the transmission filler plug and gasket from the transmission case.



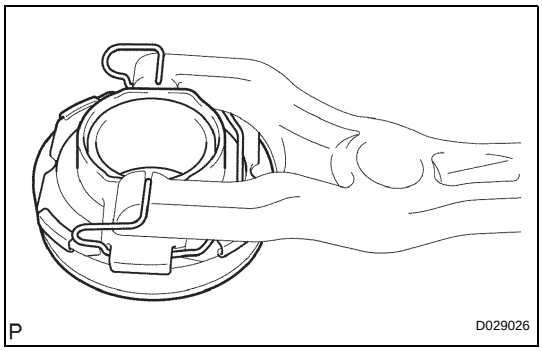
2. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the transmission drain plug and gasket from the transmission case.



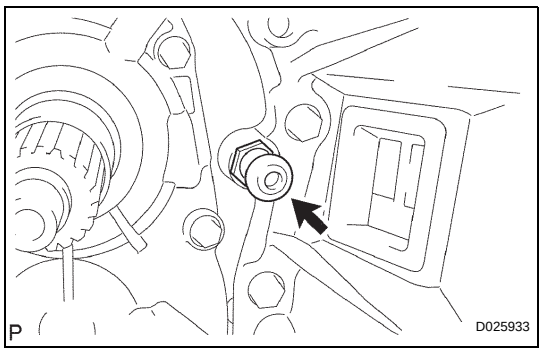
3. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Remove the clutch release fork and clutch release bearing from the clutch housing.



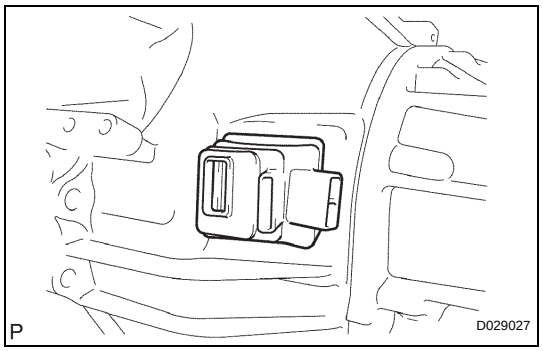
4. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

(a) Remove the release bearing hub clip, and then remove the clutch release bearing from the clutch release fork.



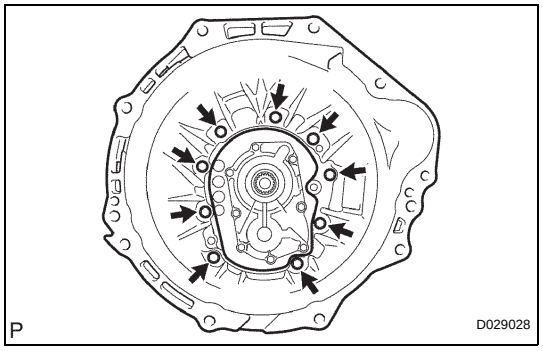
5. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the clutch housing.



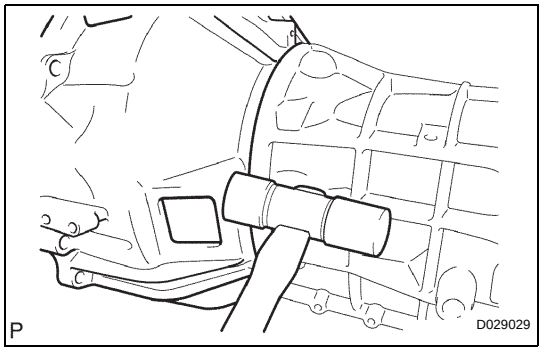
6. REMOVE CLUTCH RELEASE FORK BOOT

(a) Remove the clutch release fork boot from the clutch housing.

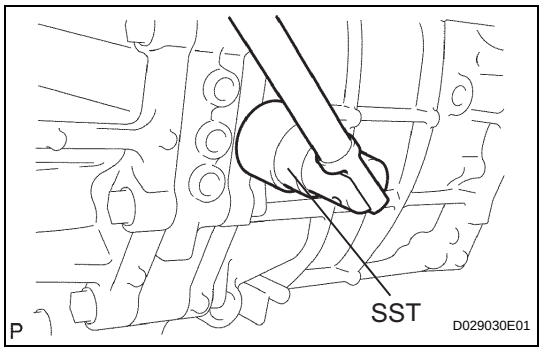


7. REMOVE CLUTCH HOUSING

(a) Remove the 9 bolts.



(b) Using a plastic hammer, remove the clutch housing from the transmission case.



8. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

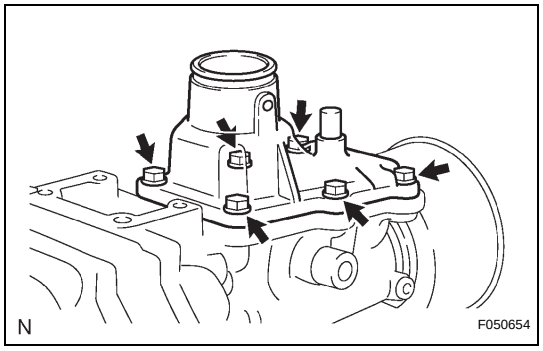
(a) Using SST, remove the back-up light switch assembly and the gasket from the transmission case.

SST 09817-16011

9. REMOVE SPEEDOMETER SENSOR

(a) Remove the bolt and speedometer sensor from the extension housing.

(b) Remove the O-ring from the speedometer sensor.

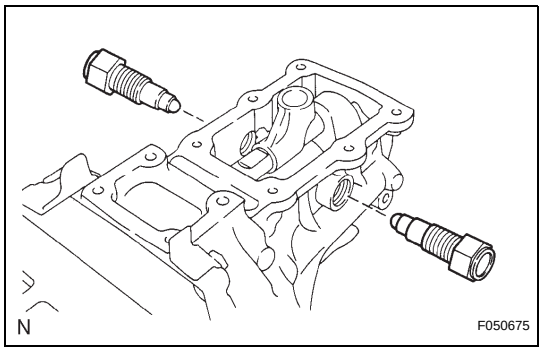


10. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the 6 bolts.

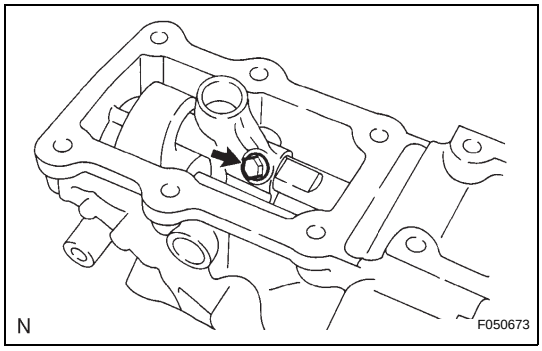
(b) Remove the floor shift control shift lever retainer gasket from the extension housing.

(c) Remove the control shift lever retainer gasket from the extension housing.



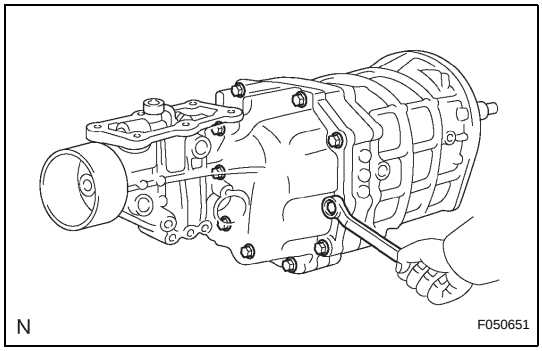
11. REMOVE REVERSE RESTRICT PIN

(a) Remove the 2 reverse restrict pins from the extension housing or transfer adapter.



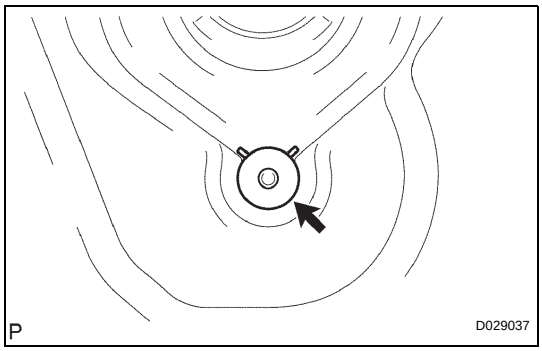
12. REMOVE EXTENSION HOUSING SUB-ASSEMBLY

(a) Remove the shift lever housing set bolt from the shift lever housing.



(b) Remove the 10 bolts.

(c) Using a plastic hammer, remove the extension housing, shift lever housing and shift and select lever.



13. REMOVE OIL RECEIVER

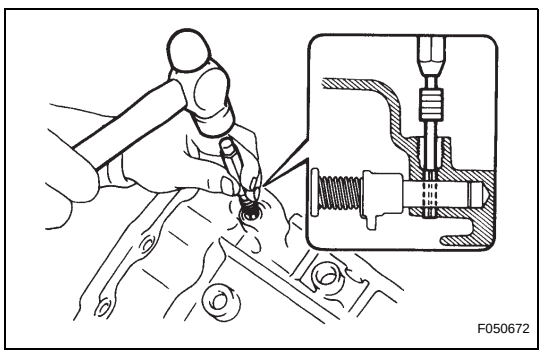
(a) Remove the oil receiver from the extension housing.

14. REMOVE EXTENSION HOUSING OIL RECEIVER PIPE

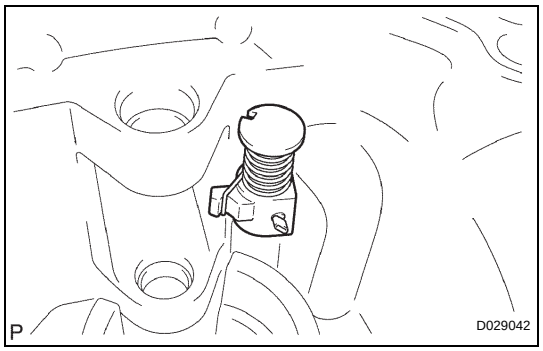
(a) Remove the bolt and oil receiver pipe from the extension housing.

15. REMOVE REVERSE RESTRICT PIN ASSEMBLY

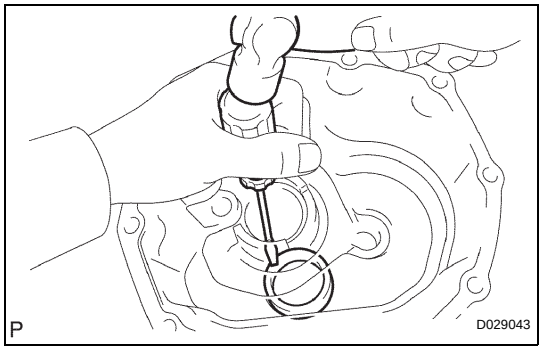
(a) Using a "Torx" socket wrench T40, remove the reverse restrict pin plug from the transfer adapter.



(b) Using a pin punch (5 mm) and a hammer, remove the reverse restrict pin slotted from the transfer adapter or extension housing.

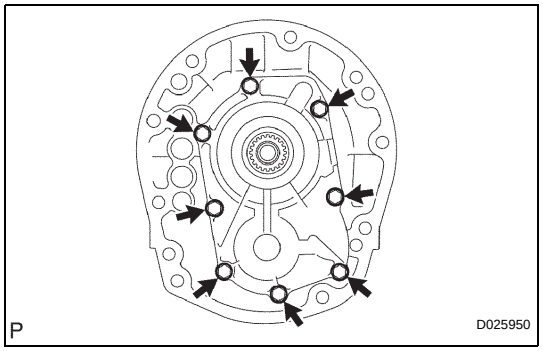


(c) Remove the reverse restrict pin from the transfer adapter or extension housing.



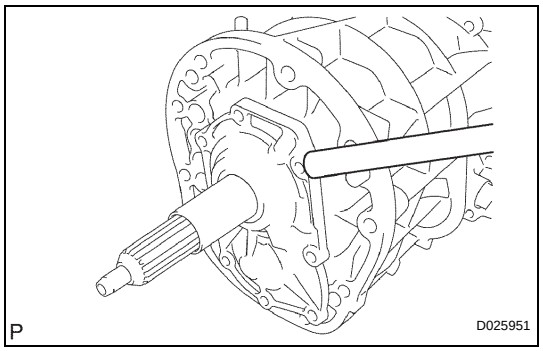
16. REMOVE MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

(a) Using a screwdriver, remove the extension housing oil seal from the extension housing.

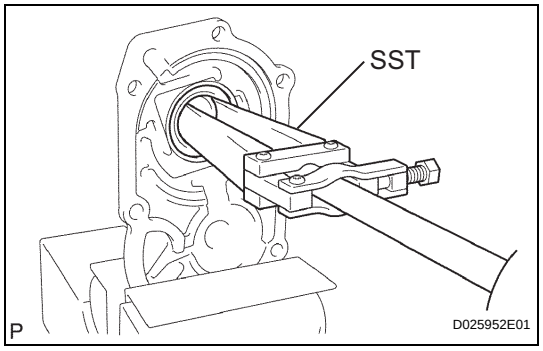


17. REMOVE FRONT BEARING RETAINER

(a) Remove the 8 bolts.



(b) Using a brass bar and a hammer, remove the front bearing retainer from the transmission case.

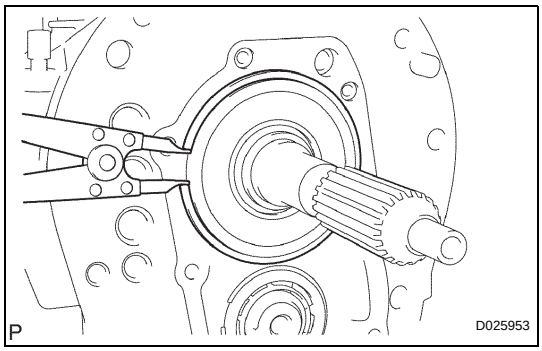


18. REMOVE TRANSMISSION FRONT BEARING RETAINER OIL SEAL

(a) Fix the front bearing retainer in a vise, between aluminum plate.

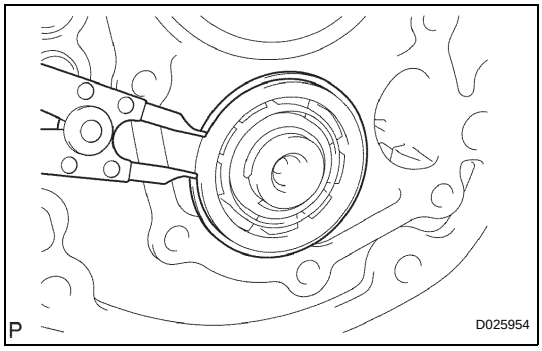
(b) Using SST, remove the transmission front bearing retainer oil seal.

SST 09308-00010



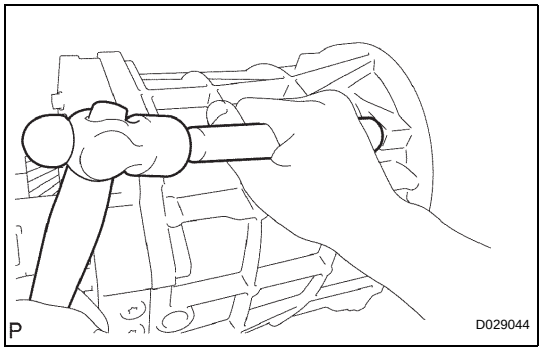
19. REMOVE FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, remove the front bearing shaft snap ring from the transmission case.



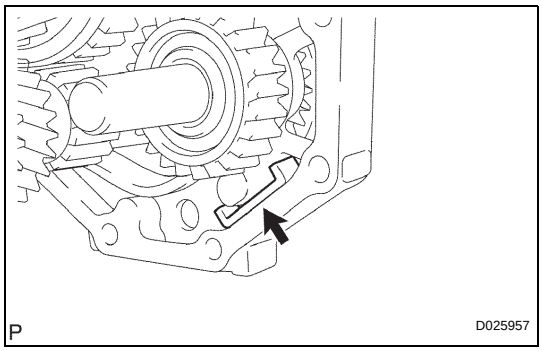
20. REMOVE NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Using a snap ring expander, remove the counter gear front bearing snap ring No. 1 from the transmission case.



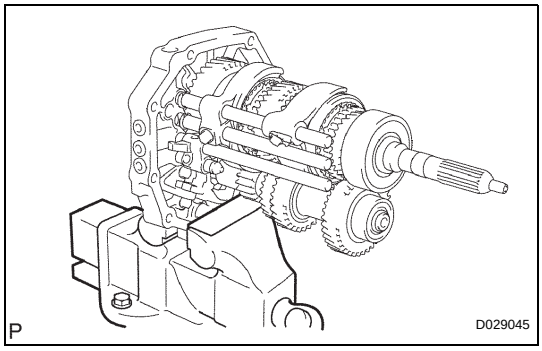
21. REMOVE MANUAL TRANSMISSION CASE

(a) Using a brass bar and a hammer, remove the transmission case from the intermediate plate.



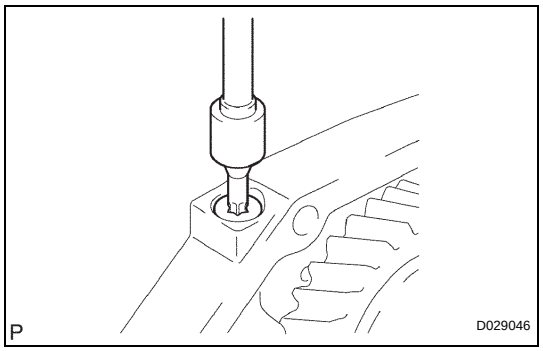
22. REMOVE TRANSMISSION MAGNET

(a) Remove the transmission magnet from the intermediate plate.



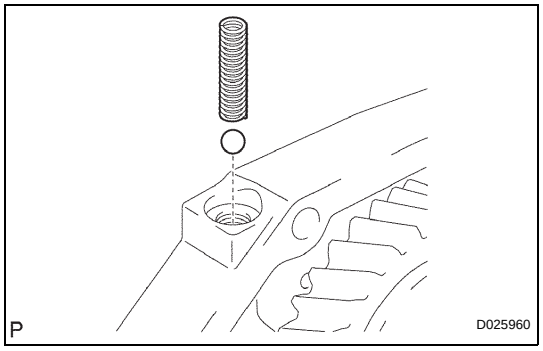
23. FIX INTERMEDIATE PLATE

(a) Fix the intermediate plate in a vice between aluminum plates.

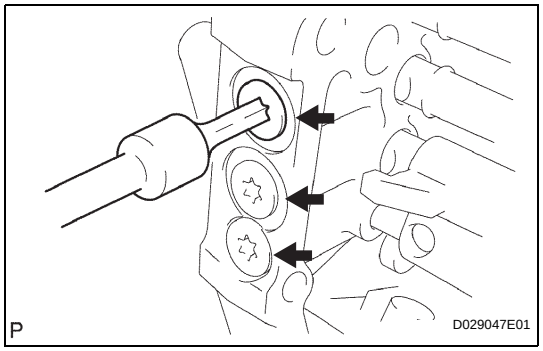


24. REMOVE NO. 1 SHIFT DETENT BALL SPRING SEAT

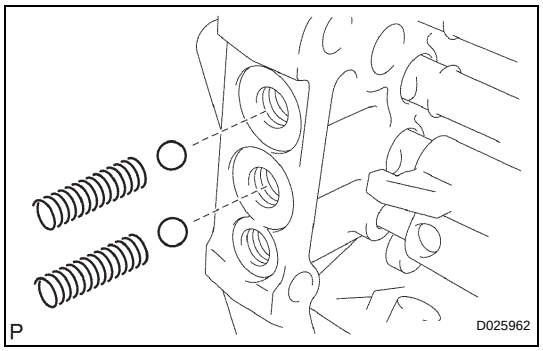
(a) Using a "Torx" socket wrench T40, remove the shift detent ball spring seat No. 1 from the intermediate plate.



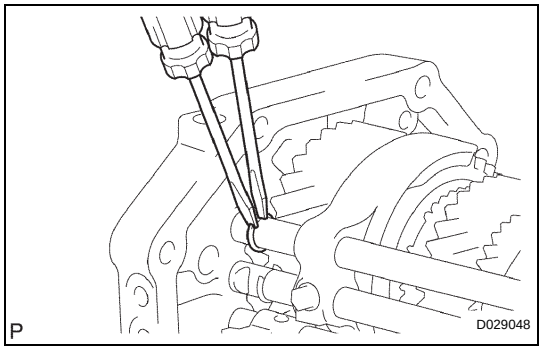
(b) Using a magnetic finger, remove the shift detent ball low side compression spring and the shift detent ball from the intermediate plate.



(c) Using a "Torx" socket wrench T40, remove the 3 shift detent ball spring seats No. 1 from the intermediate plate.



(d) Using a magnetic finger, remove the 2 shift detent ball low side compression springs and the 2 shift detent balls from the intermediate plate.

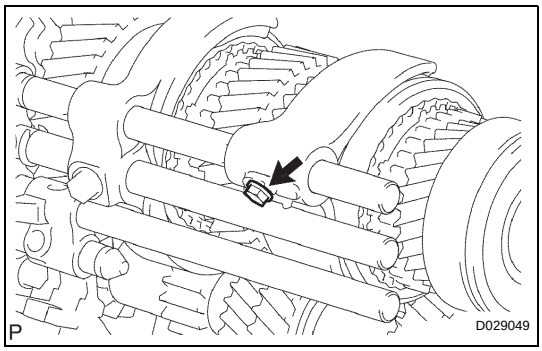


25. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

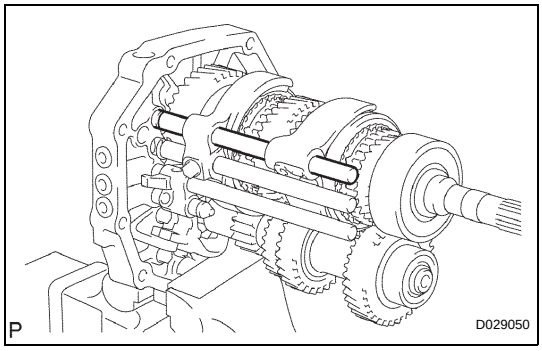
(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the gear shift fork shaft No. 2.

NOTICE:

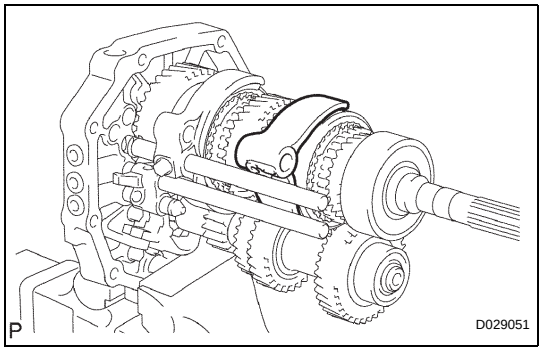
Use a shop rag to prevent the snap ring from flying off.



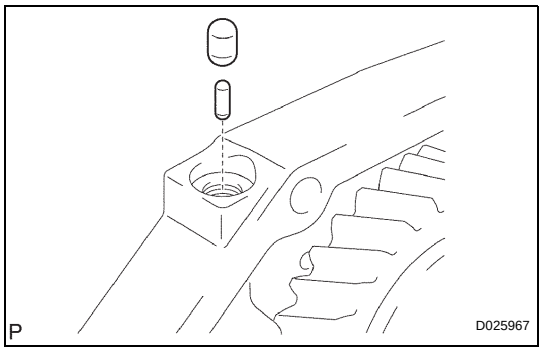
(b) Remove the shift fork set bolt from the gear shift fork No. 2.



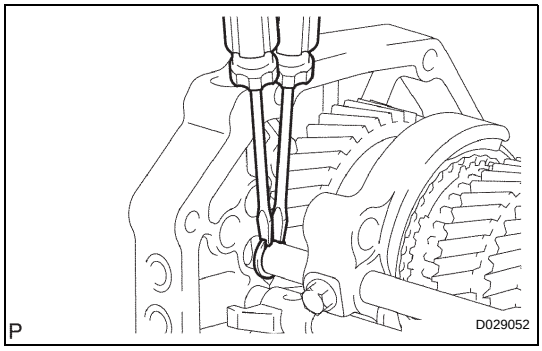
(c) Remove the gear shift fork shaft No. 2 from the intermediate plate.



(d) Remove the gear shift fork No. 2 from the transmission hub sleeve No. 2.



(e) Using a magnetic finger, remove the shift interlock No. 1 roller and the shift interlock pin (ball) from the intermediate plate.

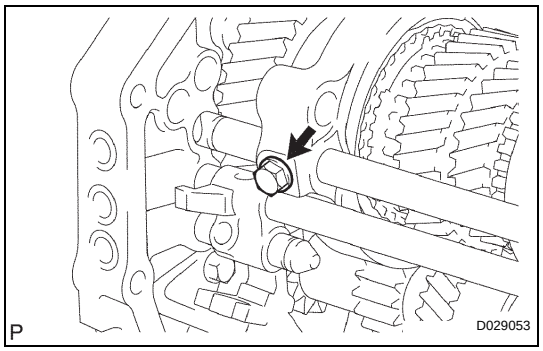


26. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

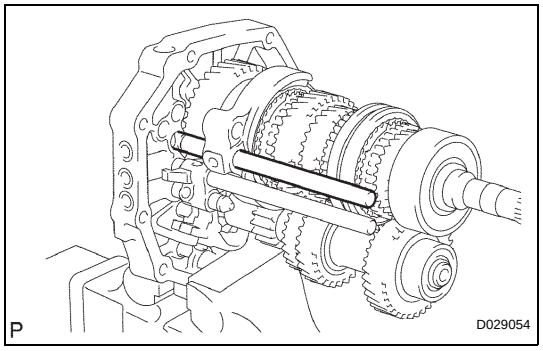
(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the gear shift fork shaft No. 1.

NOTICE:

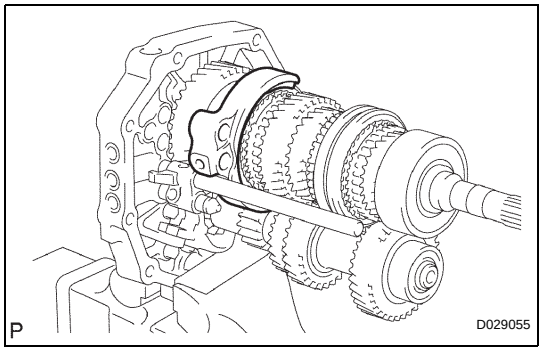
Use a shop rag to prevent the snap ring from flying off.



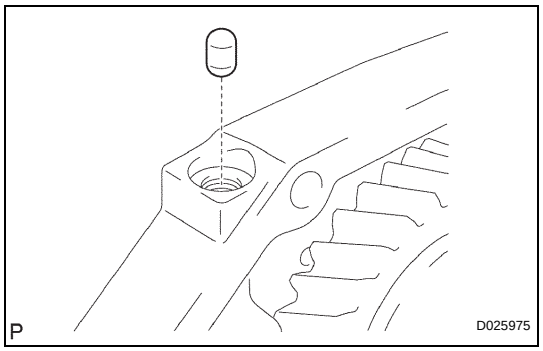
(b) Remove the shift fork set bolt from the gear shift fork No. 1.



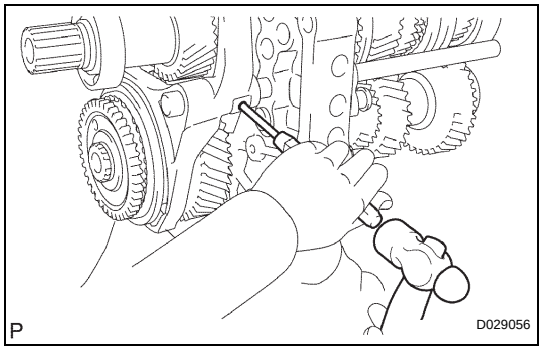
(c) Remove the gear shift fork shaft No. 1 from the intermediate plate.



(d) Remove the gear shift fork No. 1 from the reverse gear.

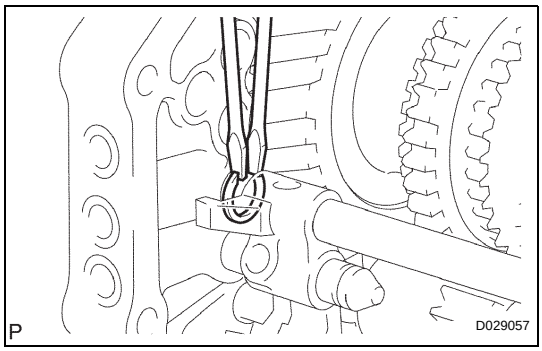


(e) Using a magnetic finger, remove the shift interlock No. 1 roller from the intermediate plate.

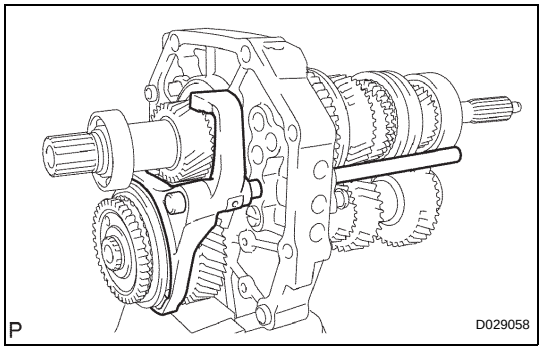


27. REMOVE REVERSE SHIFT FORK SHAFT

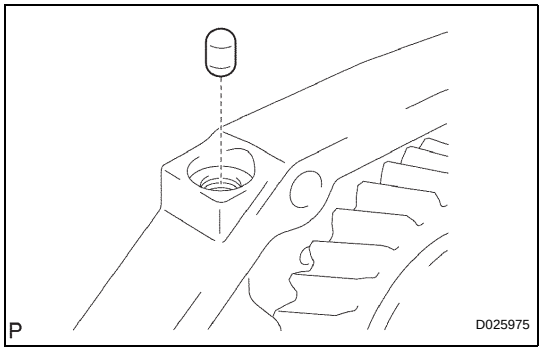
(a) Using a pin punch (5 mm) and a hammer, remove the shift fork set slotted spring pin from the gear shift fork No. 3.



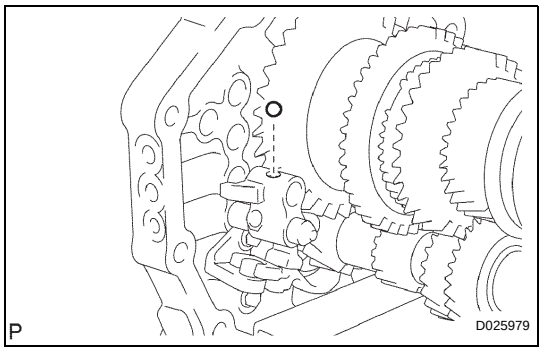
(b) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the reverse shift fork shaft.
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



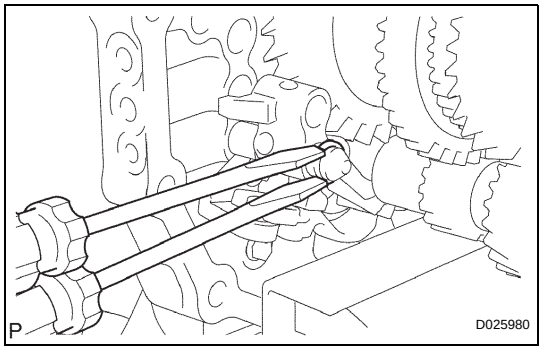
(c) Remove the gear shift fork No. 3 and reverse shift fork shaft from the intermediate plate.



(d) Using a magnetic finger, remove the shift interlock No. 1 roller from the intermediate plate.

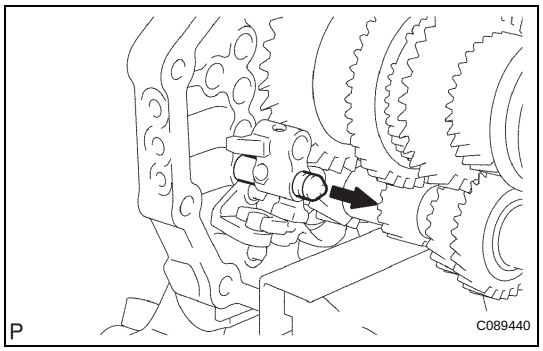


(e) Using a magnetic finger, remove the reverse shift fork ball from the reverse shift fork.

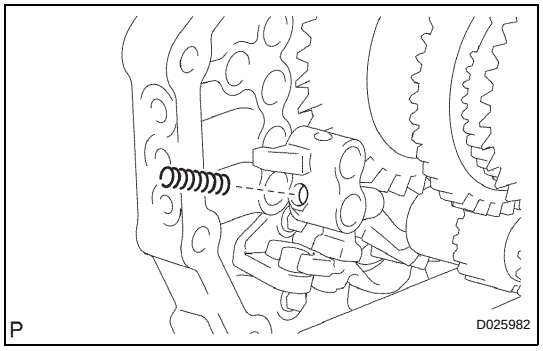


28. REMOVE 5TH SHIFT ARM SHAFT

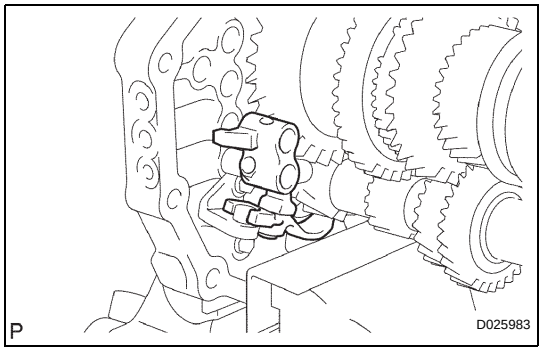
(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the 5th shift arm shaft.
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



(b) Remove the 5th shift arm shaft from the intermediate plate.
NOTICE:
Cover the hole with a shop rag to prevent the reverse shift fork ball from popping out.

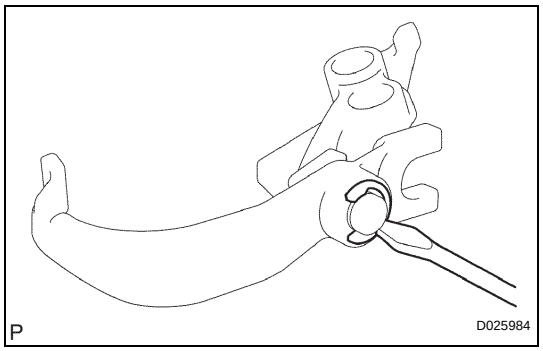


(c) Using a magnetic finger, remove the reverse shift fork return compression spring from the reverse shift fork.

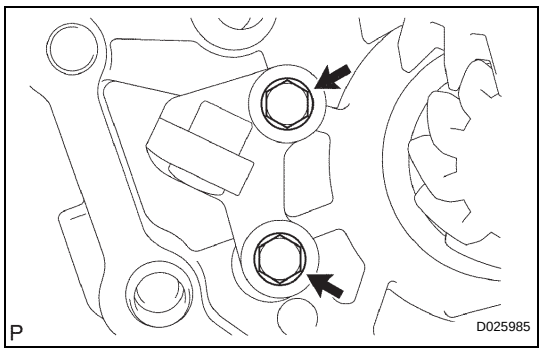


29. REMOVE REVERSE SHIFT FORK

(a) Remove the reverse shift fork together with the reverse shift arm from the intermediate plate.

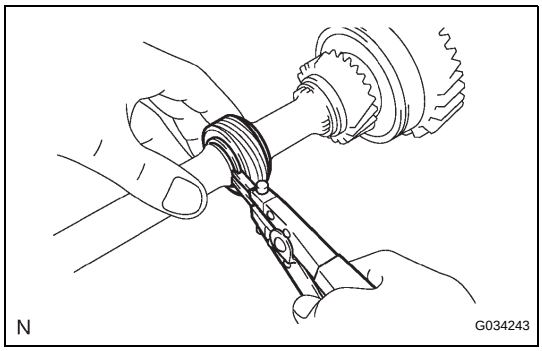


(b) Using a screwdriver, remove the reverse shift arm end shaft ring and the reverse shift fork from the reverse shift arm.



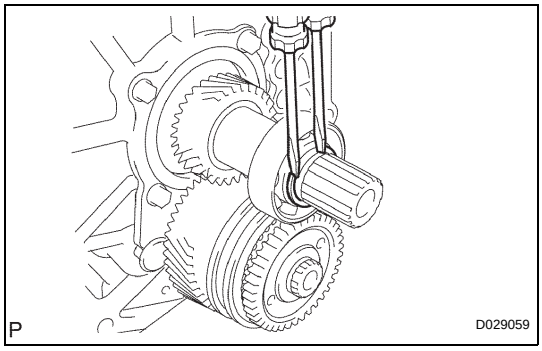
30. REMOVE REVERSE SHIFT ARM BRACKET

(a) Remove the 2 bolts and reverse shift arm bracket from the intermediate plate.



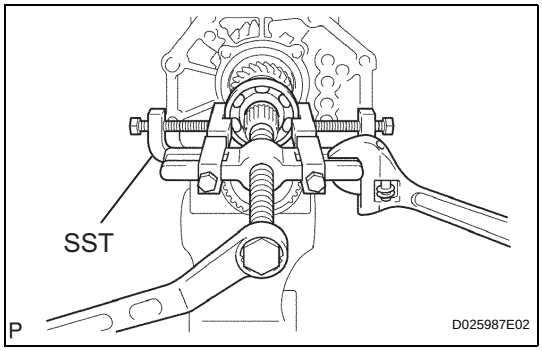
31. REMOVE SPEEDOMETER DRIVE GEAR

(a) Using snap ring pliers, remove the snap ring.
(b) Remove the speedometer driver gear and ball.
(c) Using a magnetic finger, remove the steel ball.
(d) Using snap ring pliers, remove the snap ring.



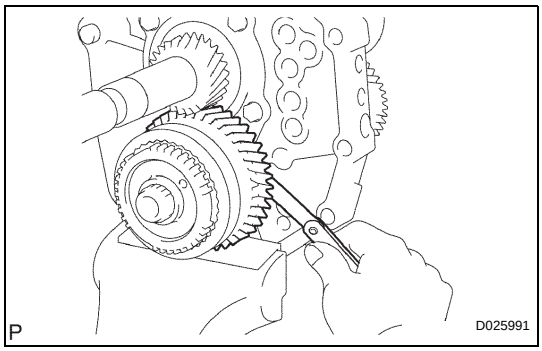
32. REMOVE OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the output shaft bearing shaft snap ring from the output shaft.



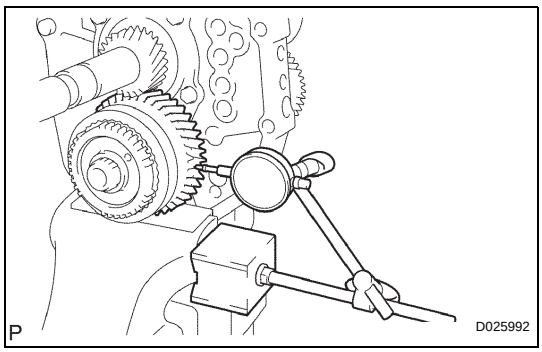
33. REMOVE OUTPUT SHAFT REAR BEARING

(a) Using SST, remove the output shaft rear bearing and output shaft spacer from the output shaft.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04051, 09957-04010, 09958-04011)



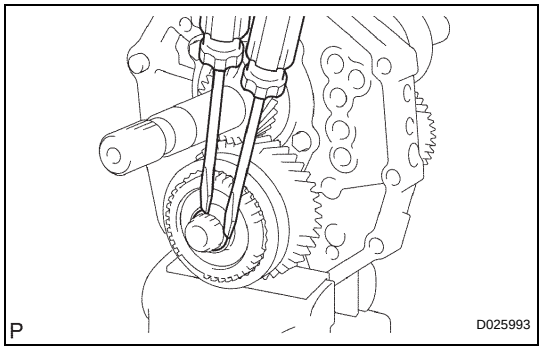
34. INSPECT COUNTER SHAFT 5TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the counter shaft 5th gear thrust clearance.
Standard clearance:
0.10 to 0.35 mm (0.0039 to 0.0138 in.)



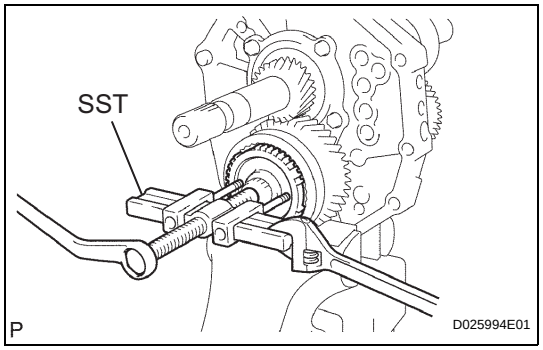
35. INSPECT COUNTER SHAFT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the counter shaft 5th gear.
Standard clearance:
0.015 to 0.068 mm (0.0059 to 0.0027 in.)
If the clearance is not within the specified values, replace the counter 5th gear bearing with a new one.



36. REMOVE COUNTER GEAR REAR SHAFT SNAP RING

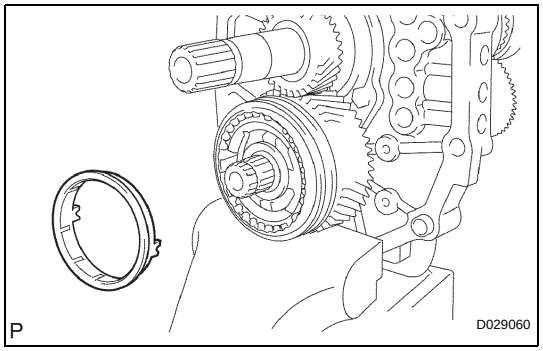
(a) Using 2 screwdrivers and a hammer, remove the counter gear rear shaft snap ring from the counter gear.



37. REMOVE NO. 5 GEAR SPLINE PIECE

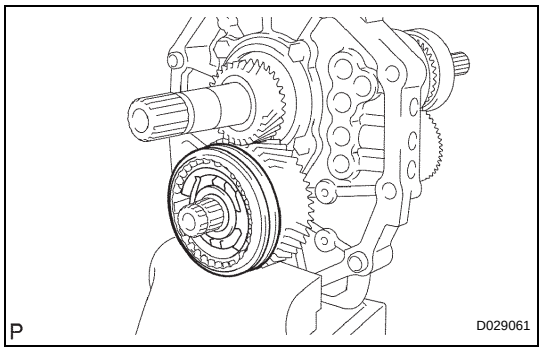
(a) Using SST, remove the gear spline piece No. 5 from the counter gear.

SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021, 09957-04010)



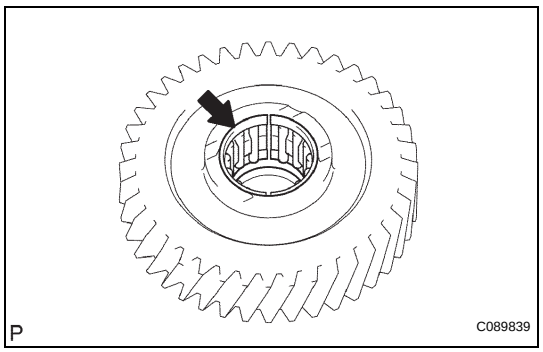
38. REMOVE NO. 3 SYNCHRONIZER RING OUTER

(a) Remove the synchronizer ring outer No. 3 from the counter gear.



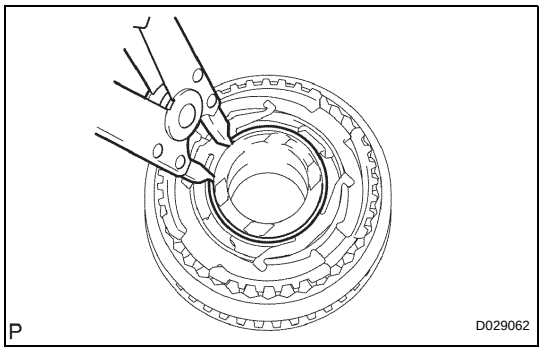
39. REMOVE COUNTER SHAFT 5TH GEAR

(a) Remove the counter shaft 5th gear and transmission hub sleeve No. 3 assembly from the counter gear.



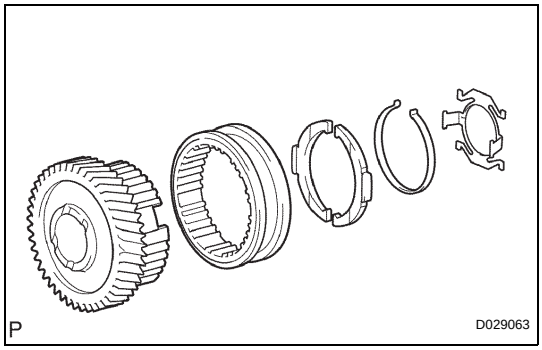
40. REMOVE COUNTER 5TH GEAR BEARING

(a) Remove the counter 5th gear bearing from the counter 5th gear.

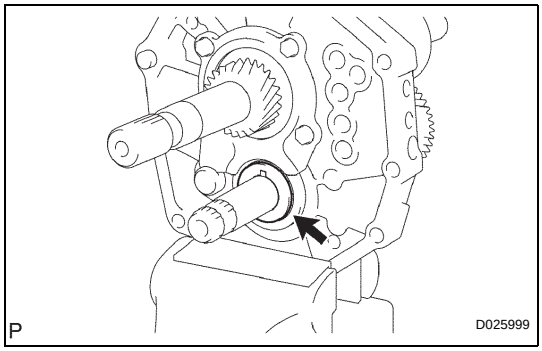


41. REMOVE NO. 3 TRANSMISSION HUB SLEEVE

(a) Using a snap ring expander, remove the snap ring.

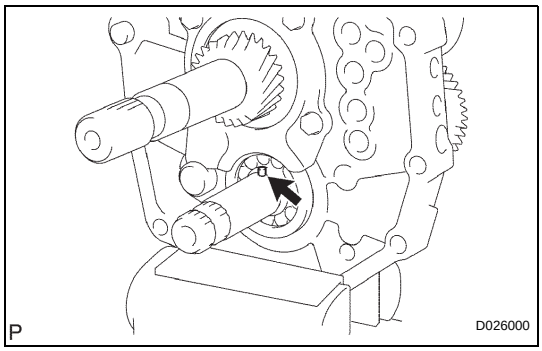


(b) Remove the transmission hub sleeve No. 3, 2 synchromesh shifting keys No. 3 and 2 synchromesh shifting key springs No. 3 from the counter shaft 5th gear.



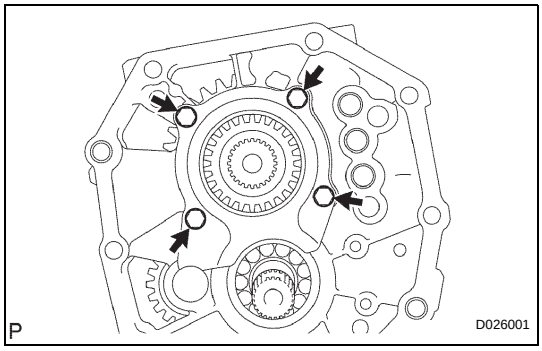
42. REMOVE 5TH GEAR THRUST WASHER

(a) Remove the 5th gear thrust washer from the counter gear.



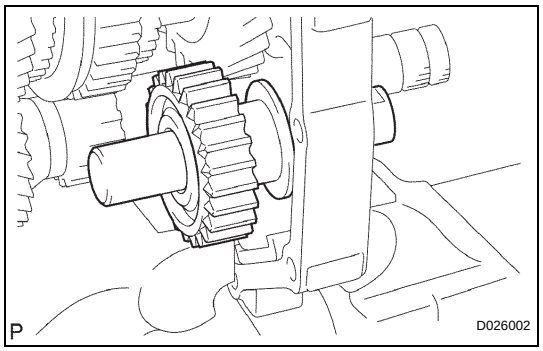
43. REMOVE 5TH GEAR THRUST WASHER PIN

(a) Remove the 5th gear thrust washer pin from the counter gear.



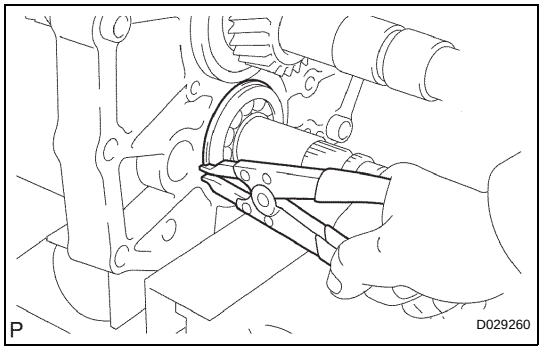
44. REMOVE OUTPUT SHAFT REAR BEARING RETAINER

(a) Remove the 4 bolts and output shaft rear bearing retainer from the intermediate plate.



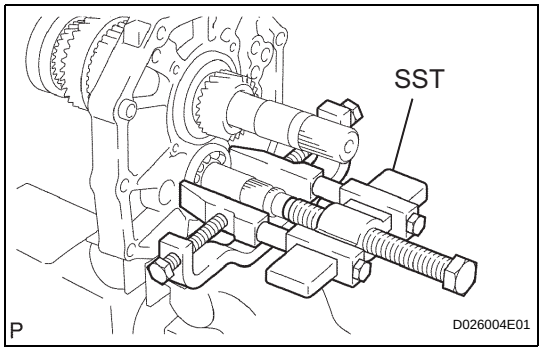
45. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Pull out the reverse idler gear shaft to the rear side and remove the reverse idler gear from the intermediate plate.



46. REMOVE COUNTER SHAFT CENTER BEARING

(a) Using a snap ring expander, remove the snap ring.

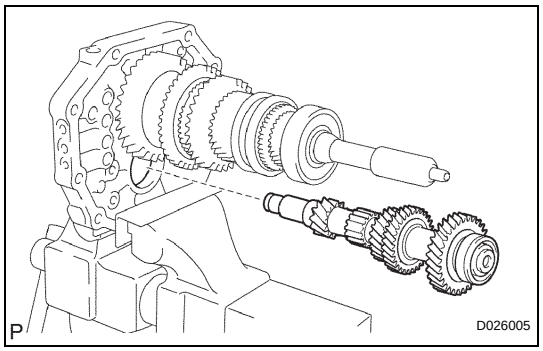


(b) Using SST, remove the counter shaft center bearing from the intermediate plate.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011)

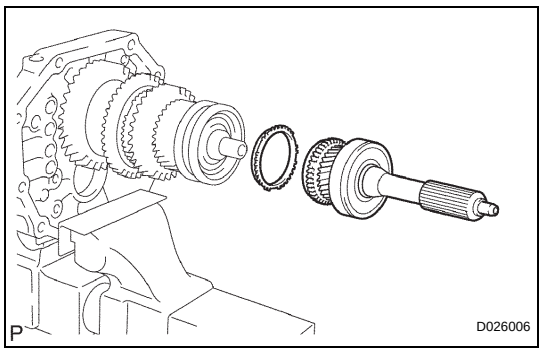
HINT:

Remove the bearing while tapping the tip of the counter gear so that the counter gear assembly is not pushed forward into the side wall of the output shaft gear.



47. REMOVE COUNTER GEAR

(a) Remove the counter gear assembly from the intermediate plate.

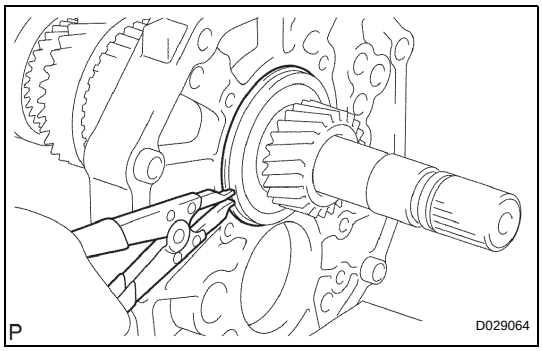


48. REMOVE INPUT SHAFT ASSEMBLY

(a) Remove the input shaft assembly and synchronizer ring No. 2 from the output shaft.

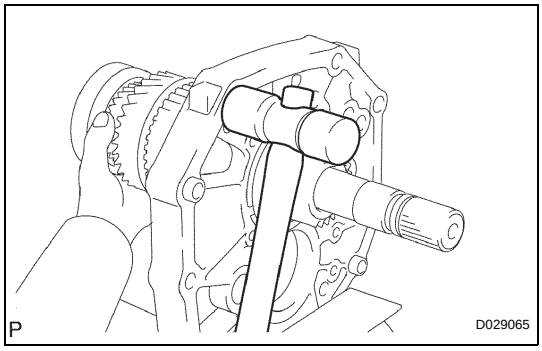
NOTICE:

Do not drop the input shaft bearing and synchronizer ring No. 2.



49. REMOVE OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, remove the output shaft bearing shaft snap ring from the output shaft.



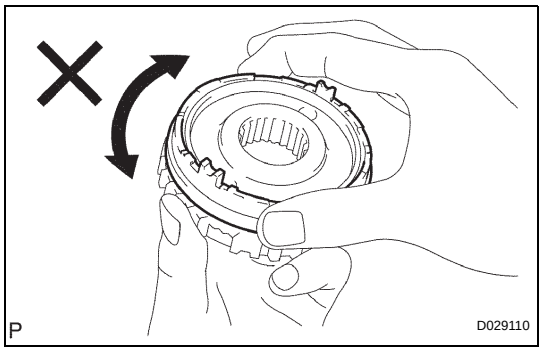
50. REMOVE OUTPUT SHAFT ASSEMBLY

(a) Using a plastic hammer, remove the output shaft assembly by tapping the intermediate plate.

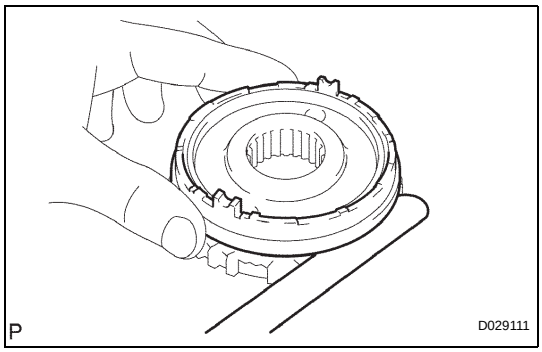
INSPECTION

1. INSPECT NO. 3 SYNCHRONIZER RING OUTER

(a) Apply gear oil to the cone part of gear spline piece No. 5, and check that it does not turn in both directions while pushing the synchronizer ring outer No. 3 to the gear spline piece No. 5.
If it turns, replace the synchronizer ring.



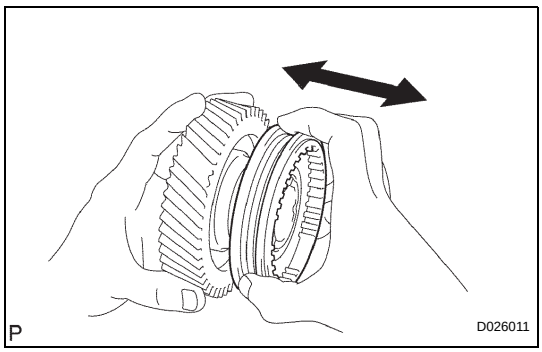
(b) Measure the clearance between the synchronizer ring outer No. 3 and gear spline piece No. 5 while pushing the synchronizer ring outer No. 3 to the cone part of the gear spline piece No. 5.
Standard clearance:
0.68 to 1.32 mm (0.0267 to 0.0610 in.)
If the clearance is not within the specified values, replace synchronizer ring outer No. 3 with a new one.

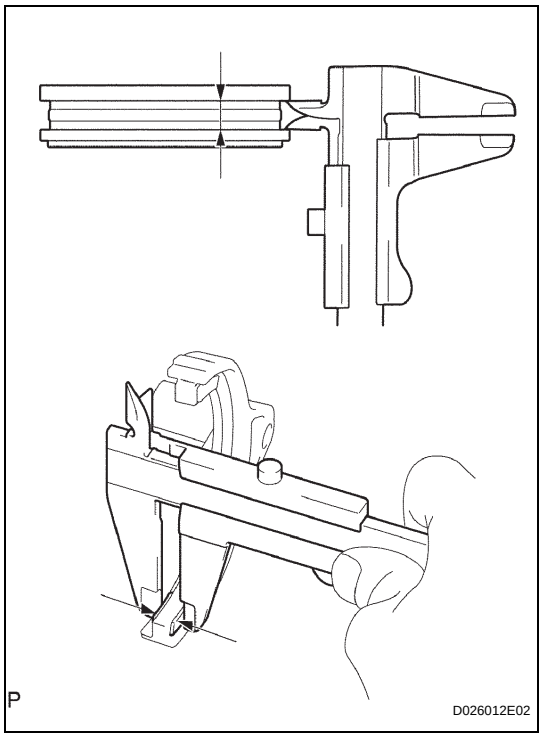


2. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Check that the counter shaft 5th gear and transmission hub sleeve No. 3 slide smoothly each other.

(b) Check the tip of the spline gear of the transmission hub sleeve No. 3 for wear.
If there are any detects, replace the transmission hub sleeve No. 3.



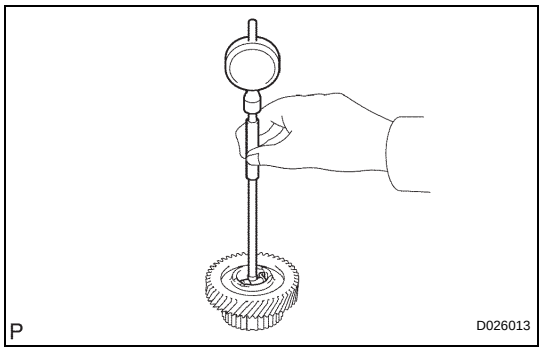


(c) Using vernier calipers, measure the transmission hub sleeve No. 3 groove and the thickness of the claw part of the shift fork No. 3 to calculate the clearance.

Standard clearance:

0.26 to 0.84 mm (0.0102 to 0.0331 in.)

If the clearance is not within the specified values, replace the transmission hub sleeve No. 3 and shift fork No. 3 with new ones.



3. INSPECT COUNTERSHAFT 5TH GEAR

(a) Using a cylinder gauge, measure the inner diameter of the counter 5th gear.

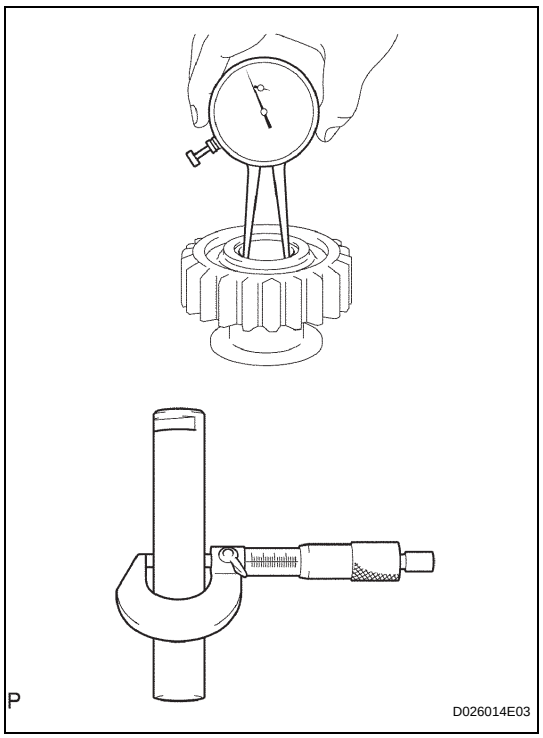
Standard diameter:

38.015 to 38.040 mm (1.4967 to 1.4976 in.)

Maximum diameter:

38.040 mm (1.4976 in.)

If the diameter greater than the maximum, replace the counter shaft 5th gear with a new one.



4. INSPECT REVERSE IDLER GEAR SUB-ASSY

(a) Using a caliper gauge, measure the inner diameter of the reverse idler gear.

Standard diameter:

24.040 to 24.061 mm (0.9465 to 0.9473 in.)

Maximum diameter:

24.061 mm (0.9473 in.)

If the clearance is greater than the maximum, replace the reverse idler gear with a new one.

(b) Using a micrometer, measure the outer diameter of the sliding part of the reverse idler gear on the reverse idler gear shaft.

Standard diameter:

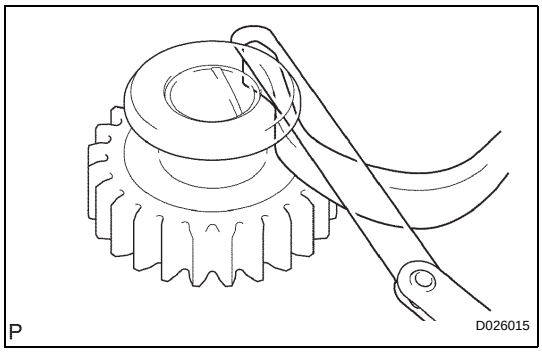
23.979 to 24.000 mm (0.9441 to 0.9449 in.)

Minimum diameter:

23.979 mm (0.9441 in.)

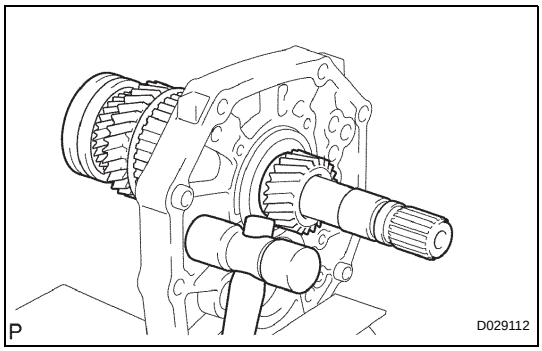
If the diameter is outside the specification, replace the reverse idler gear shaft with a new one.

(c) Subtract the reverse idler gear shaft inside diameter measurement from the reverse idler gear diameter clearance.
Standard clearance:
0.040 to 0.082 mm (0.0016 to 0.0032 in.)
If the clearance is not as specified, replace the reverse idler gear or reverse idler gear shaft.



(d) Using a feeler gauge, measure the thrust clearance of the shoe part between the reverse idler gear and the reverse shift arm.
Standard clearance:
0.05 to 0.35 mm (0.0020 to 0.0138 in.)
If the clearance is outside the specification, replace the idler gear and reverse shift arm with new ones.

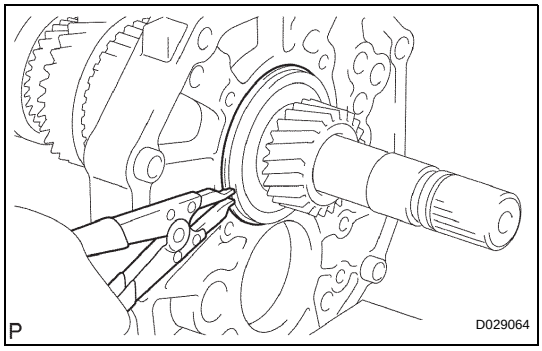
REASSEMBLY



1. INSTALL OUTPUT SHAFT ASSEMBLY

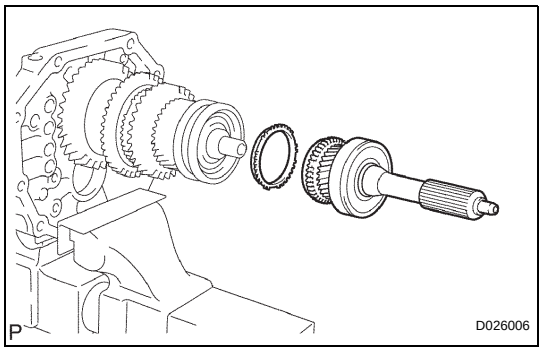
(a) Apply gear oil to the sliding part of the output assembly.

(b) Using a plastic hammer, install the output shaft assembly by tapping the intermediate plate.



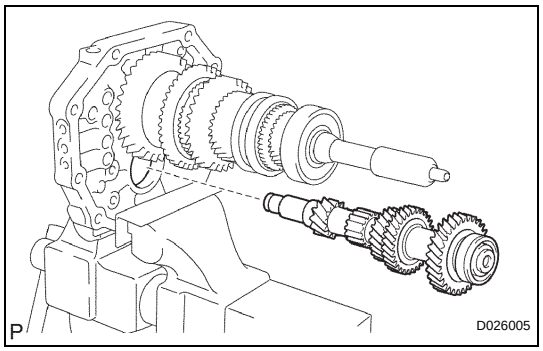
2. INSTALL OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, install the output shaft bearing shaft snap ring onto the output shaft.



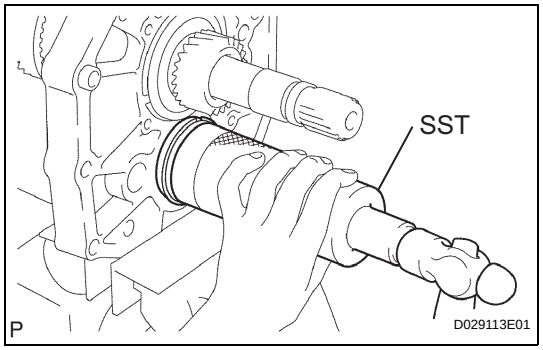
3. INSTALL INPUT SHAFT ASSEMBLY

(a) Apply gear oil to the input shaft assembly and synchronizer ring No. 2, and install them onto the output shaft.
NOTICE:
- **Install the synchronizer ring No. 2 so that its groove fits into the synchromesh shifting key No. 2.**
- **Check that the input shaft assembly rotates smoothly.**



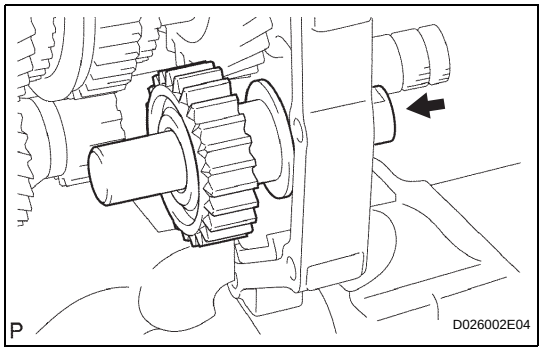
4. INSTALL COUNTER GEAR

(a) Provisionally install the counter gear assembly onto the intermediate plate.



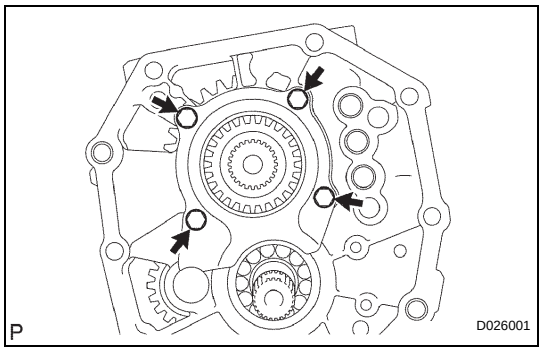
5. INSTALL COUNTER SHAFT CENTER BEARING

(a) Using SST and a hammer, install the new counter shaft center bearing onto the intermediate plate.
SST 09316-60011 (09316-00011)
HINT:
Remove the bearing while tapping the tip of the counter gear so that the counter gear assembly is not pushed forward into the side wall of the output shaft gear.



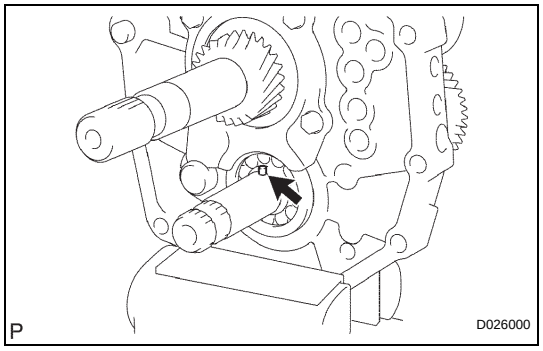
6. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Apply gear oil to each sliding part of the reverse idler gear and the reverse idler gear shaft, and install them onto the intermediate plate.
NOTICE:
Orient the groove side of the reverse idler shaft to the rear side and install it from the rear side.



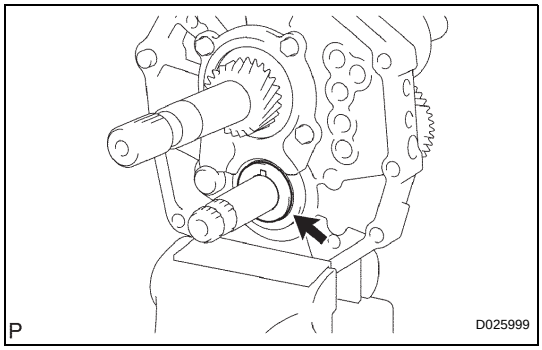
7. INSTALL OUTPUT SHAFT REAR BEARING RETAINER

(a) Install the output shaft rear bearing retainer into the groove of the reverse idler gear shaft with the 4 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)



8. INSTALL 5TH GEAR THRUST WASHER PIN

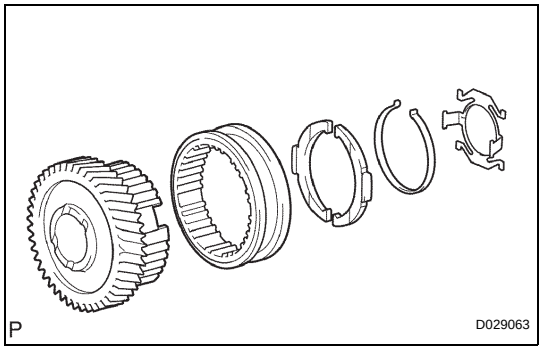
(a) Apply MP grease to the 5th gear thrust washer pin, and install it onto the counter gear.



9. INSTALL 5TH GEAR THRUST WASHER

(a) Apply gear oil to the 5th gear thrust washer, and install it onto the counter gear.

NOTICE:
Install the thrust washer so that its chamfer side faces to the front side.

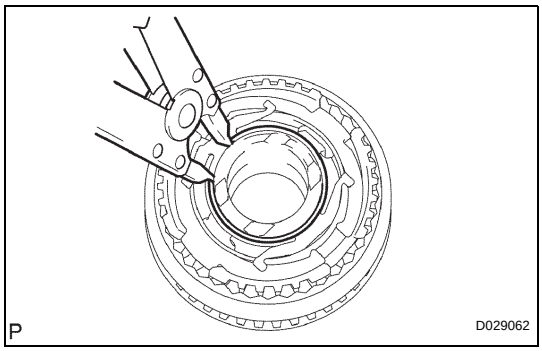


10. INSTALL NO. 3 TRANSMISSION HUB SLEEVE

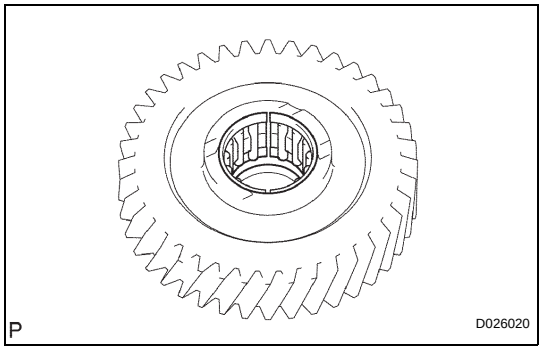
(a) Apply gear oil to the sliding part of transmission hub sleeve No. 3, and install it onto the counter shaft 5th gear.

NOTICE:
Make sure that the transmission hub sleeve No. 3 and counter 5th gear are oriented in the correct direction.

(b) Install the 2 synchromesh shifting keys No. 3 and the 2 synchromesh shifting key springs onto the counter shaft 5th gear.

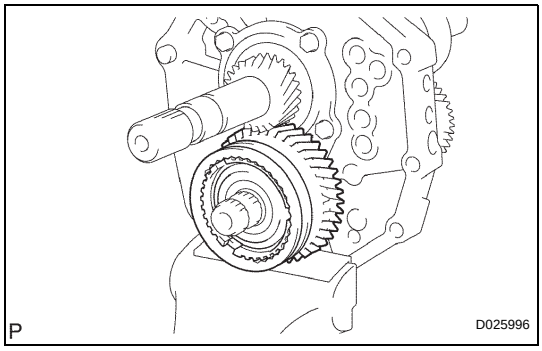


(c) Using a snap ring expander, install the bearing shaft snap ring onto the counter 5th gear.



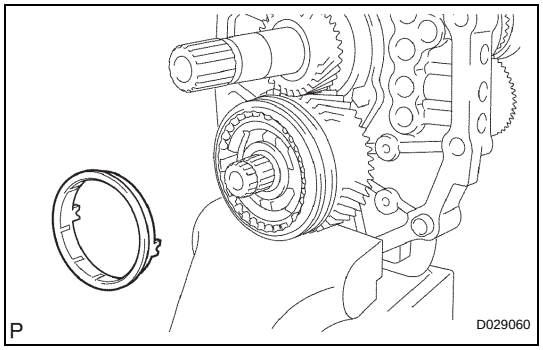
11. INSTALL COUNTER 5TH GEAR BEARING

(a) Apply gear oil to the counter 5th gear bearing and install it onto the counter 5th gear.



12. INSTALL COUNTER SHAFT 5TH GEAR

(a) Apply gear oil to the counter 5th gear and transmission hub sleeve No. 3 assembly, and install them onto the counter gear.

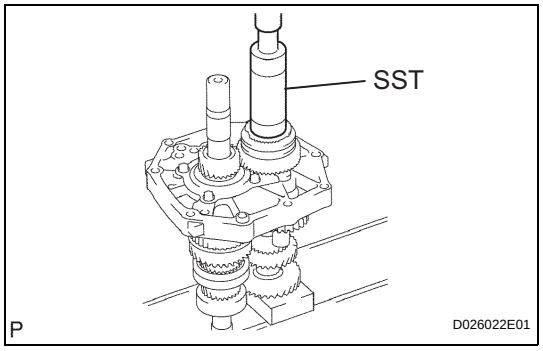


13. INSTALL NO. 3 SYNCHRONIZER RING OUTER

(a) Apply gear oil to the synchronizer ring outer No. 3, and install it onto the counter gear.

NOTICE:

Install the synchronizer ring outer No. 3 so that its groove fits into the synchromesh shifting key No. 3.



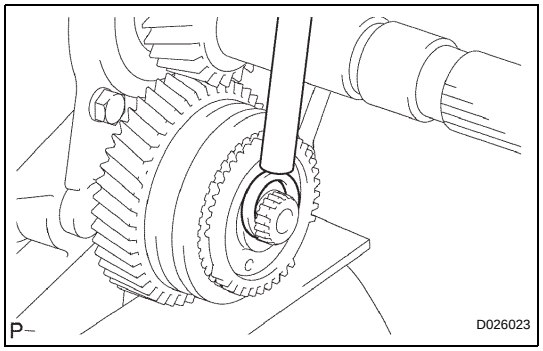
14. INSTALL NO. 5 GEAR SPLINE PIECE

(a) Using SST and a press, install the gear spline piece No. 5 onto the counter gear.

SST 09316-60011 (09316-00011)

NOTICE:

Check that the gear rotates smoothly.



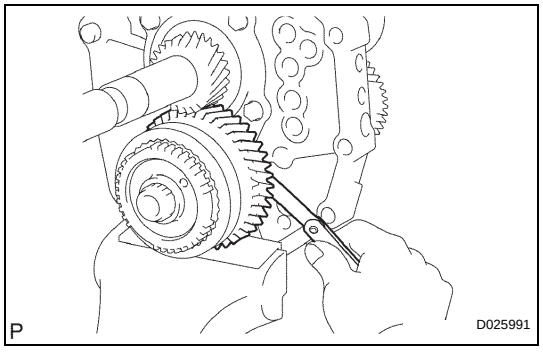
15. INSTALL COUNTER GEAR REAR SHAFT SNAP RING

(a) Select the counter gear rear shaft snap ring so that the thrust gap between gear spline piece No. 5 and counter gear rear shaft snap ring is within the specified values, and using a brass bar and a hammer, install it onto the counter gear.

Standard clearance:

0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.80 to 2.85 (0.1102 to 0.1122)
B	2.85 to 2.90 (0.1122 to 0.1141)
C	2.90 to 2.95 (0.1141 to 0.1160)
D	2.95 to 3.00 (0.1160 to 0.1181)
E	3.00 to 3.05 (0.1181 to 0.1200)
F	3.05 to 3.10 (0.1200 to 0.1220)
G	3.10 to 3.15 (0.1220 to 0.1240)

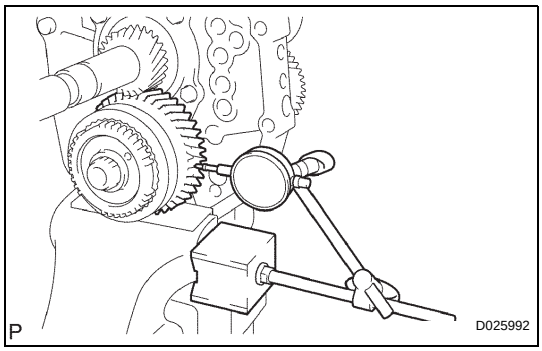


16. INSPECT COUNTER SHAFT 5TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, check the thrust clearance of the counter 5th gear.

Standard clearance:

0.10 to 0.35 mm (0.0039 to 0.0138 in.)



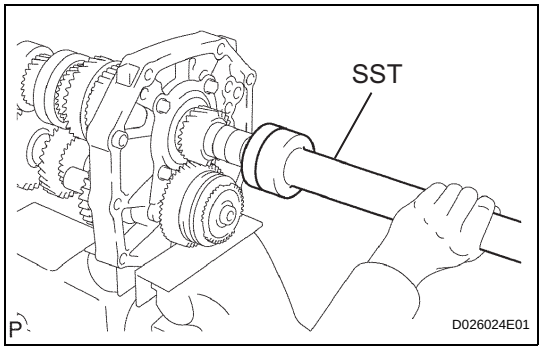
17. INSPECT COUNTER SHAFT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, check the counter 5th gear radial clearance.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

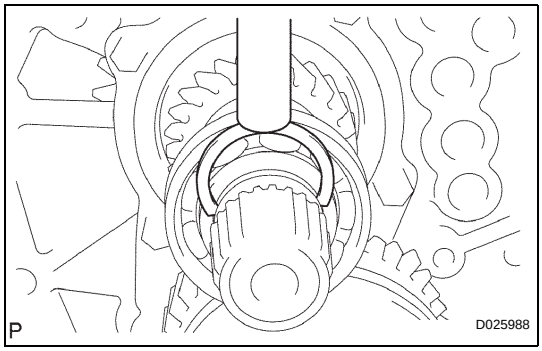
If the clearance is out of specification the counter 5th gear bearing.



18. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install the new spacer and output shaft rear bearing onto the output shaft.

SST 09309-35010



19. INSTALL OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Select an output shaft bearing shaft snap ring so the thrust gap between the snap ring and the bearing is within the specified values. Use a brass bar and hammer to install it onto the output shaft.

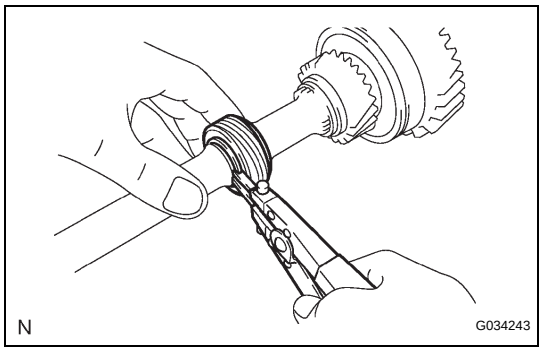
Standard clearance:

0.1 mm (0.0039 in.) or less

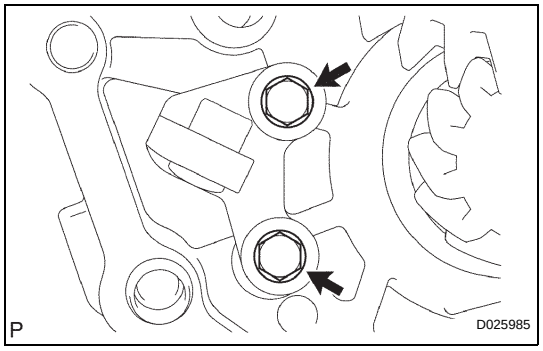
Mark	Thickness mm (in.)
A	2.65 to 2.70 (0.1043 to 0.1063)
B	2.70 to 2.75 (0.1063 to 0.1083)
C	2.75 to 2.80 (0.1083 to 0.1102)
D	2.80 to 2.85 (0.1102 to 0.1122)
E	2.85 to 2.90 (0.1122 to 0.1141)
F	2.90 to 2.95 (0.1141 to 0.1160)
G	2.95 to 3.00 (0.1160 to 0.1181)
H	3.00 to 3.05 (0.1181 to 0.1200)
J	3.05 to 3.10 (0.1200 to 0.1220)
K	3.10 to 3.15 (0.1220 to 0.1240)
L	3.15 to 3.20 (0.1240 to 0.1260)
M	3.20 to 3.25 (0.1260 to 0.1280)
N	3.25 to 3.30 (0.1280 to 0.1299)
P	3.30 to 3.35 (0.1299 to 0.1319)
Q	3.35 to 3.40 (0.1319 to 0.1339)
R	3.40 to 3.45 (0.1339 to 0.1358)
S	3.45 to 3.50 (0.1358 to 0.1378)

20. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install output shaft spacer.

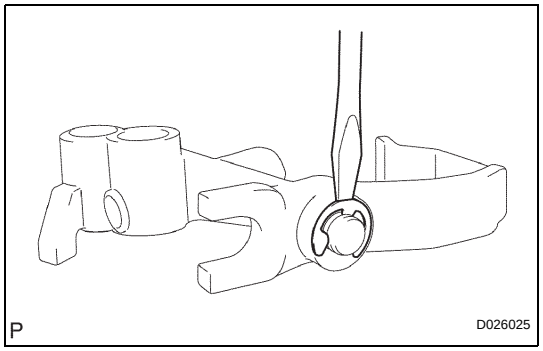


(b) Using snap ring pliers, install the snap ring.
(c) Install the ball and drive gear.
(d) Using snap ring pliers, install the snap ring.



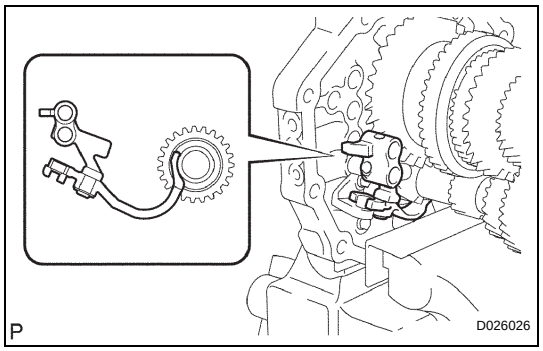
21. INSTALL REVERSE SHIFT ARM BRACKET

(a) Install the reverse shift arm bracket onto the intermediate plate with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

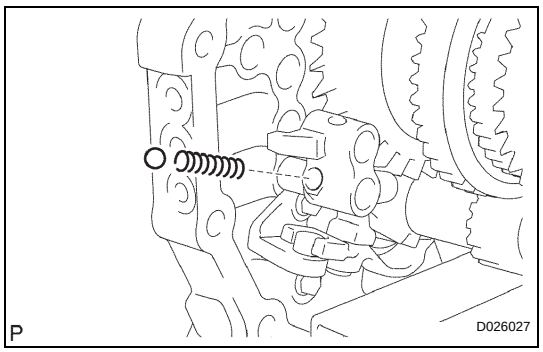


22. INSTALL REVERSE SHIFT FORK

(a) Install the reverse shift arm onto the reverse shift fork. Using a screwdriver and a hammer, install the new reverse shift arm end shaft ring.

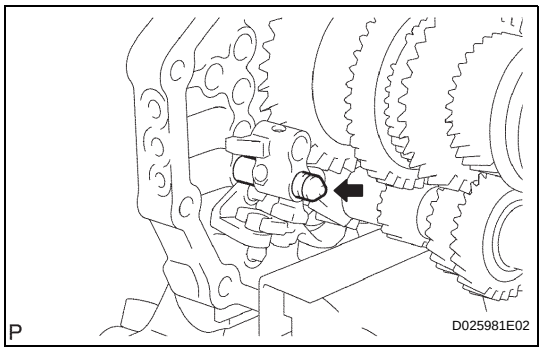


(b) Install the tip of the reverse shift arm onto the reverse idler gear. Align the cut end of the reverse shift arm with the reverse shift arm bracket pin, and install them.

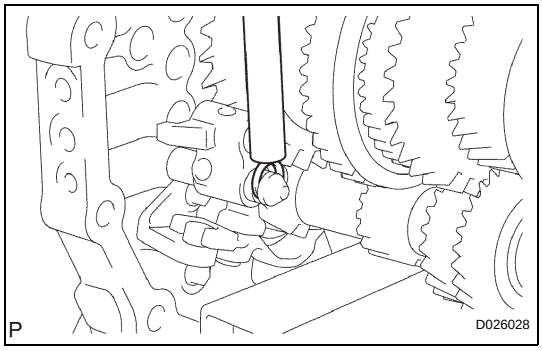


23. INSTALL 5TH SHIFT ARM SHAFT

(a) Install the reverse shift fork return compression spring and the reverse shift fork ball into the reverse shift fork.

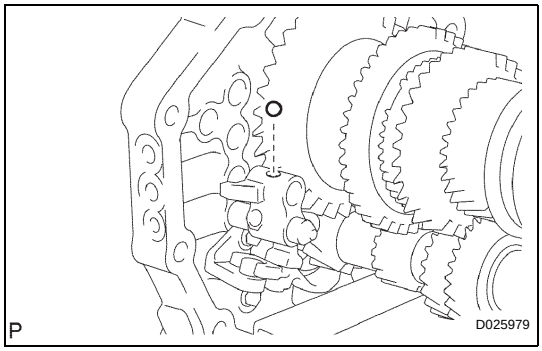


(b) Apply gear oil to the sliding part of the 5th shift arm shaft.
(c) Using a screwdriver, install the 5th shift arm shaft by pushing the reverse shift fork ball gently.

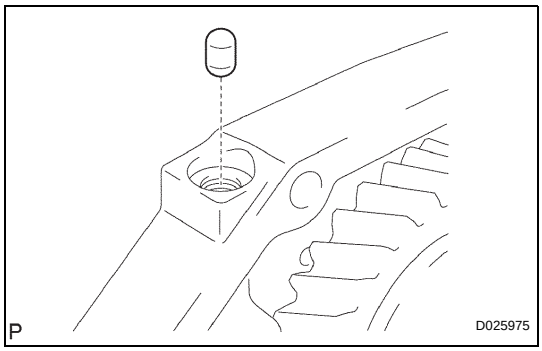


(d) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the 5th shift arm shaft.

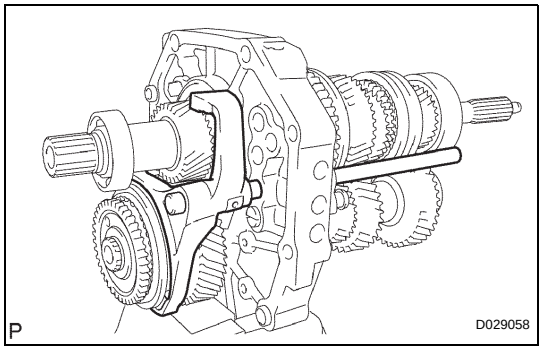
24. INSTALL REVERSE SHIFT FORK SHAFT



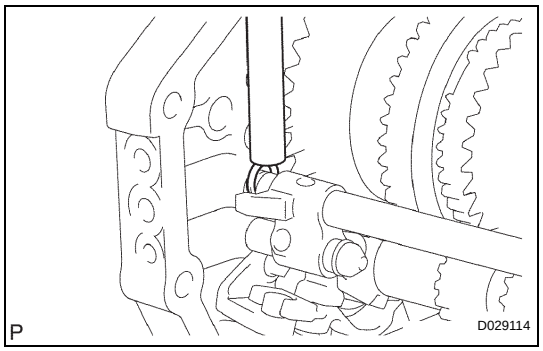
(a) Install the reverse shift fork ball into the reverse shift fork.



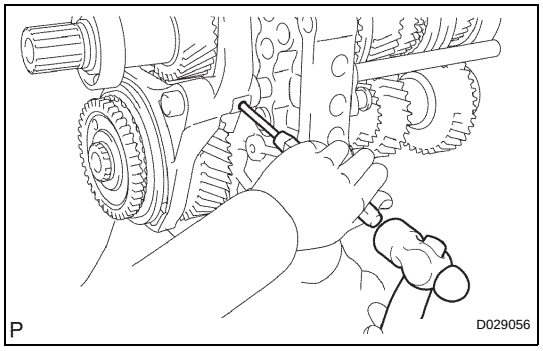
(b) Install the shift interlock No. 1 roller onto the intermediate plate.



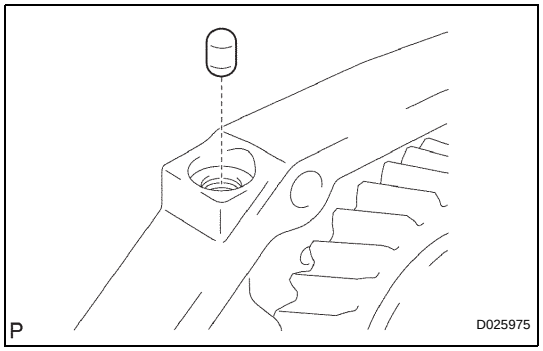
(c) Install the shift fork No. 3 onto the transmission hub sleeve No. 3 and the reverse shift fork shaft onto the intermediate plate from the front side.



(d) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the reverse shift fork shaft.

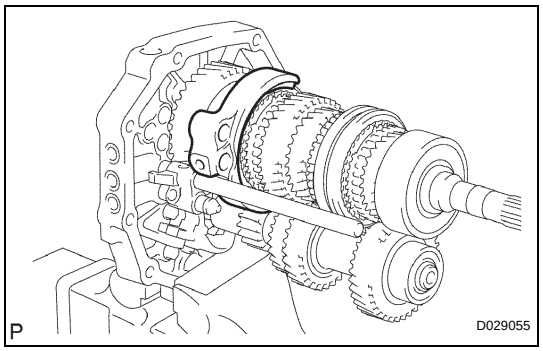


(e) Using a pin punch (5 mm) and a hammer, install the shift fork set slotted spring pin into the gear shift fork No. 3.

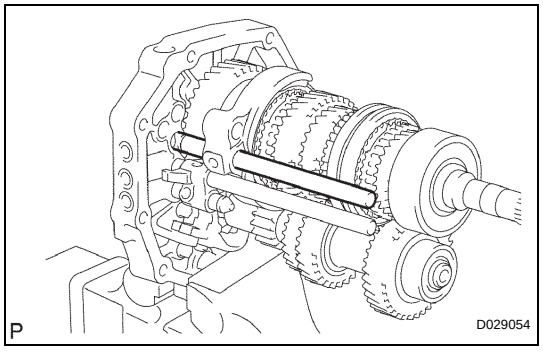


25. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

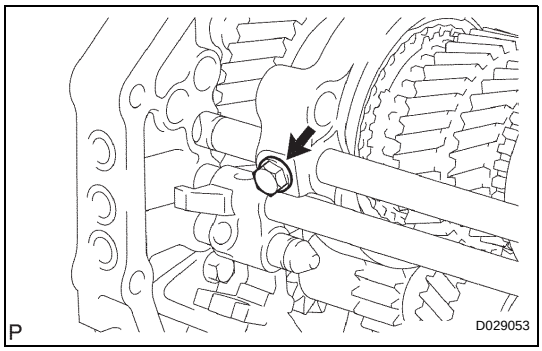
(a) Install the shift interlock No. 1 roller onto the intermediate plate.



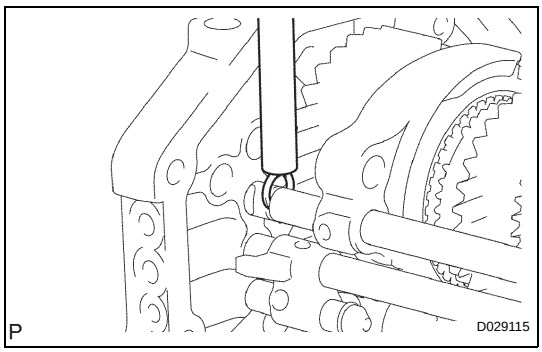
(b) Install the gear shift fork No. 1 onto the reverse gear.



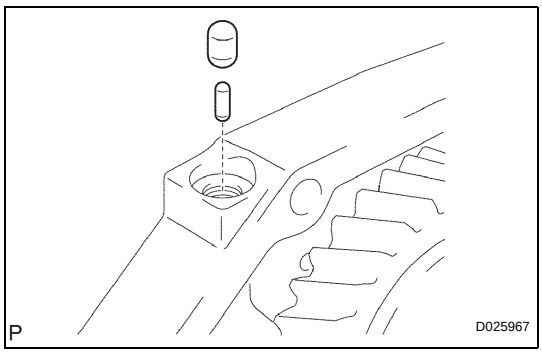
(c) Install the gear shift fork shaft No. 1 onto the intermediate plate from the rear side.



(d) Install the new shift fork set bolt onto the gear shift fork No. 1.
Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)

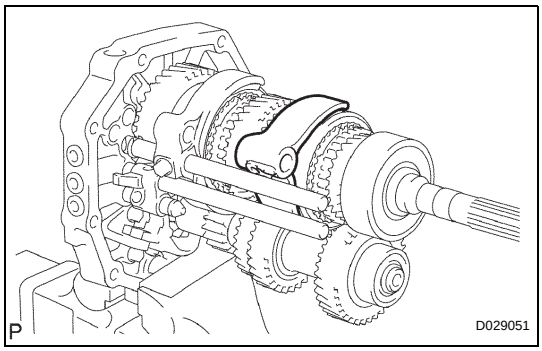


(e) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the gear shift fork shaft No. 1.

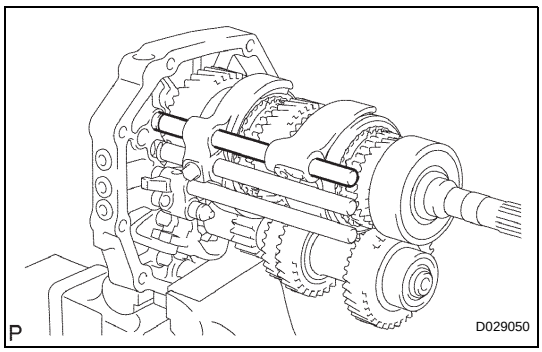


26. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

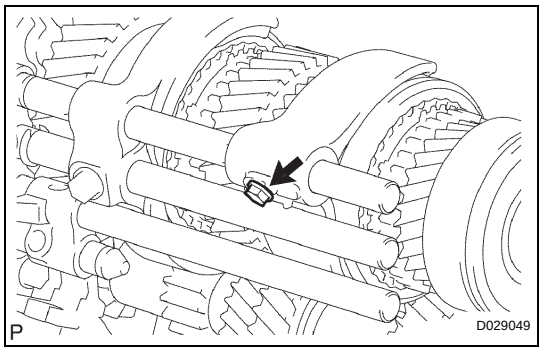
(a) Install the shift interlock pin (ball) and shift interlock No. 1 roller into the intermediate plate.



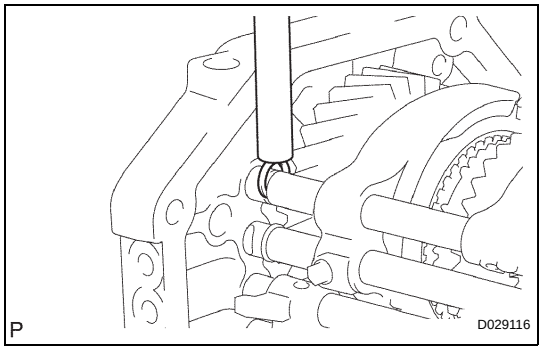
(b) Install the gear shift fork No. 2 onto the transmission hub sleeve No. 2.



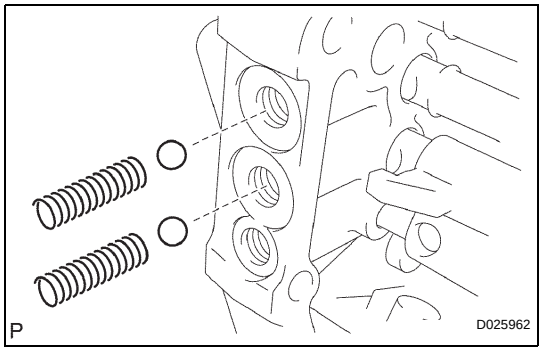
(c) Apply gear oil to the gear shift fork shaft No. 2, and install it onto the intermediate plate from the rear side.



(d) Install the new shift fork set bolt onto the gear shift fork No. 2.
Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)

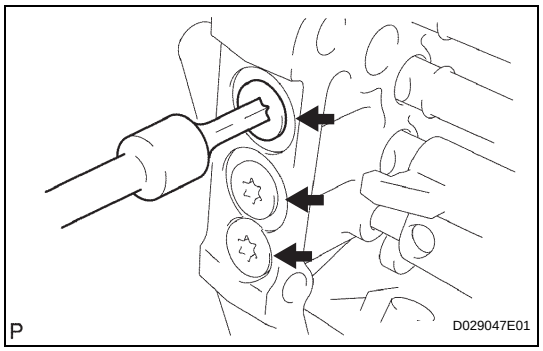


(e) Using a brass bar and a hammer, install the shift fork shaft snap ring onto the gear shift fork shaft No. 2.

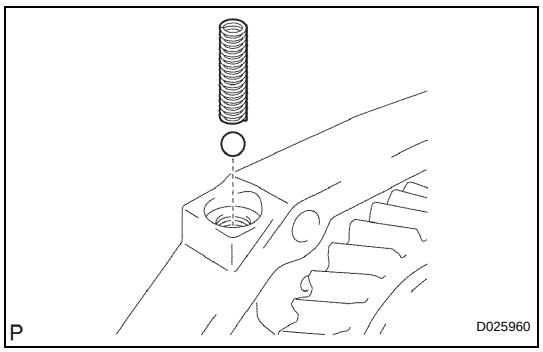


27. INSTALL NO. 1 SHIFT DETENT BALL SPRING SEAT

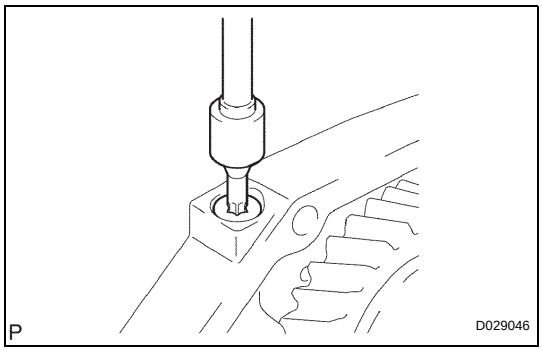
(a) Install the 2 shift detent ball low side compression springs and 2 shift detent balls into the intermediate plate.



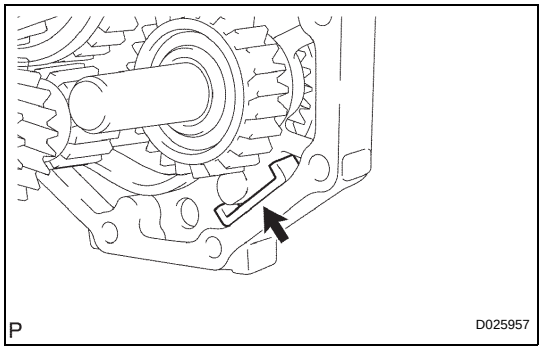
(b) Using a "Torx" socket wrench T40, install the 3 shift detent ball spring seats No. 1 onto the intermediate plate.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)



(c) Install the shift detent ball and the shift detent ball low side compression spring into the intermediate plate.

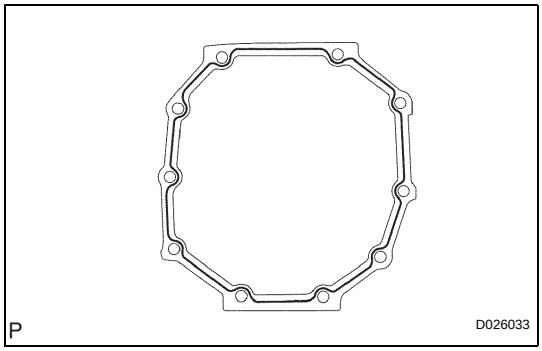


(d) Using a "Torx" socket wrench T40, install the shift detent ball spring seat No. 1 onto the intermediate plate.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)



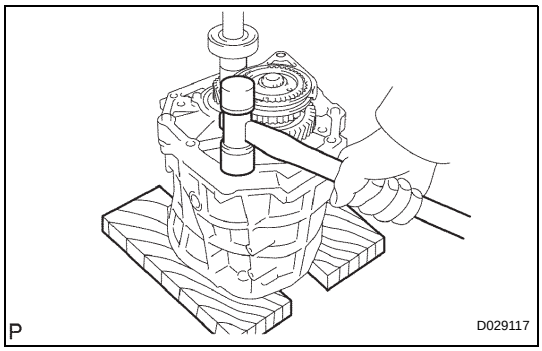
28. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet, and install it onto the intermediate plate.

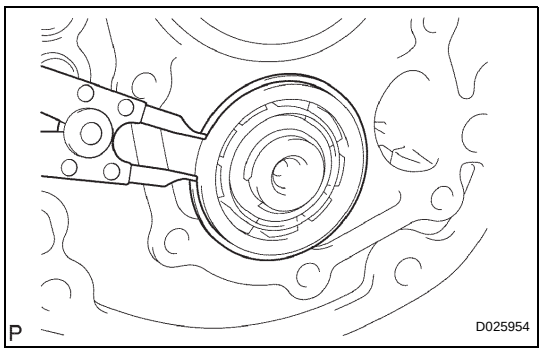


29. INSTALL MANUAL TRANSMISSION CASE

(a) Apply seal packing to the manual transmission case as shown in the illustration.
Seal packing:
Part No.08826-00090, THREE BOND 1281 or equivalent.

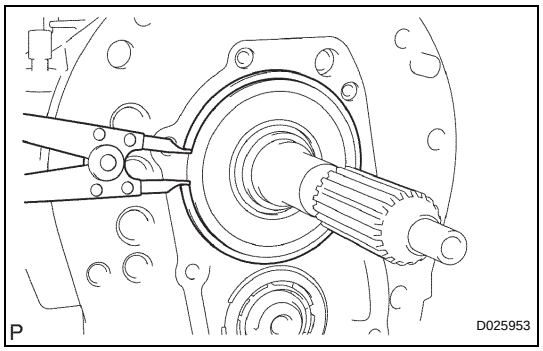


(b) Using a plastic hammer, tap the manual transmission case to attach it to the intermediate plate.



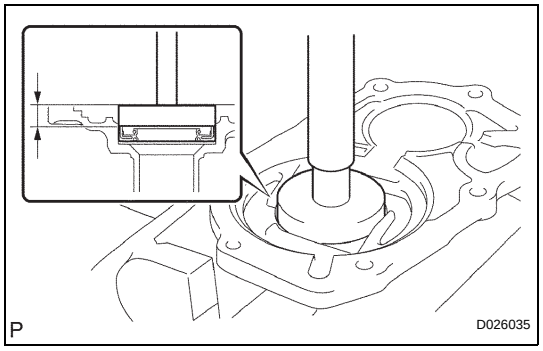
30. INSTALL NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Using a snap ring expander, install the counter gear front bearing snap ring No. 1 onto the transmission case.



31. INSTALL FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, install the front bearing shaft snap ring onto the transmission case.



32. INSTALL TRANSMISSION FRONT BEARING RETAINER OIL SEAL

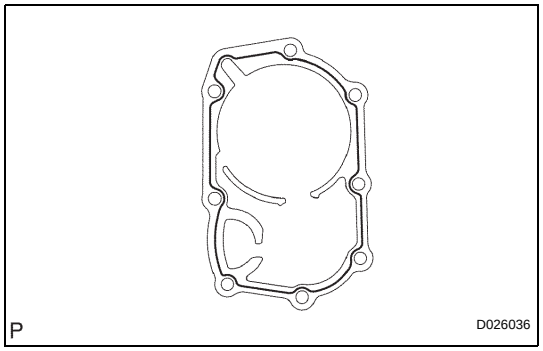
(a) Using SST and a hammer, install the new transmission front bearing retainer oil seal onto the transmission front bearing retainer.

SST 09950-60010 (09951-00300, 09951-00520, 09952-06010), 09950-70010 (09951-07100)

Drive in depth:

11.2 to 12.2 mm (0.4409 to 0.4803 in.)

(b) Coat the lip of the oil seal with MP grease.

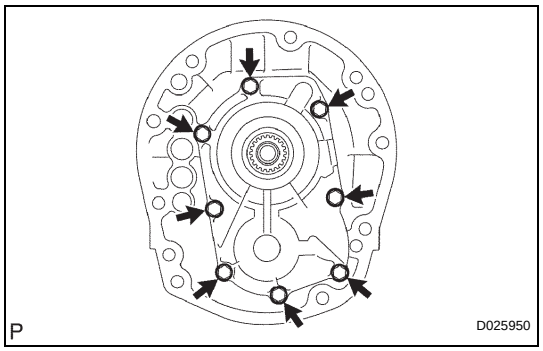


33. INSTALL FRONT BEARING RETAINER

(a) Apply seal packing to the bearing retainer front as shown in the illustration.

Seal packing:

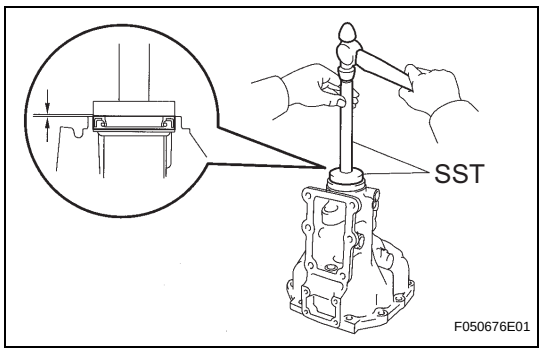
Part No.08826-00090, THREE BOND 1281 or equivalent.



(b) Install the front bearing retainer onto the transmission case with the 8 bolts.

Torque: 16.5 N*m (168 kgf*cm, 12 ft.*lbf)

(c) Check that the input shaft and output shaft rotate smoothly.



34. INSTALL MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

(a) Using SST and a hammer, install the new extension housing oil seal onto the extension housing.

SST 09710-30050, 09950-70010 (09951-07100)

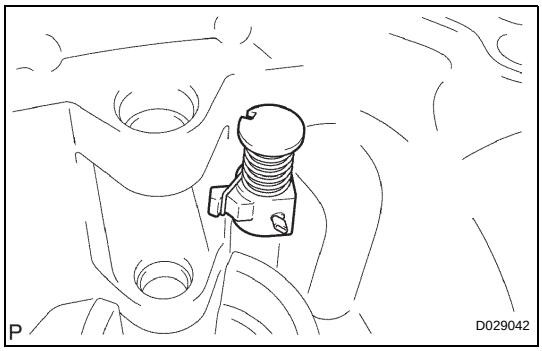
Drive in depth:

-0.5 to 0.5 mm (-0.020 to 0.020 in.)

NOTICE:

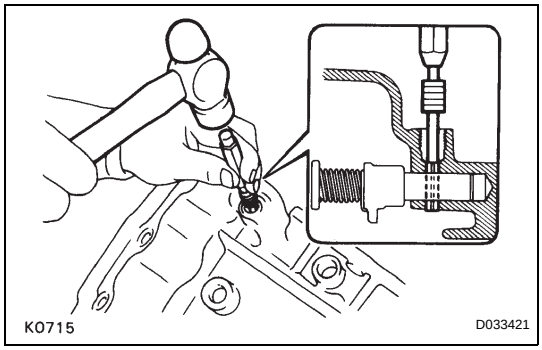
Be careful not to damage the oil seal lip.

(b) Lightly apply MP grease to the tip of the oil seal.



35. INSTALL REVERSE RESTRICT PIN ASSEMBLY

(a) Install the reverse restrict pin into the extension housing.

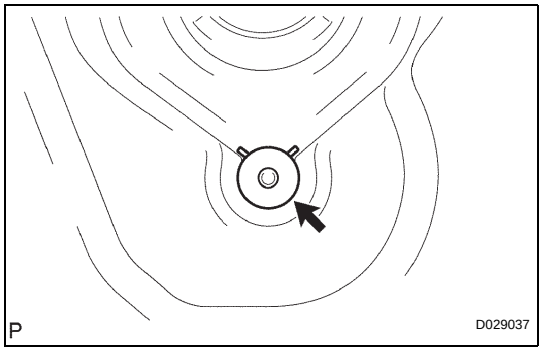


(b) Using a pin punch (5 mm) and a hammer, install the reverse restrict slotted pin into the extension housing.

(c) Using a "Torx" socket wrench T40, install the reverse restrict pin plug onto the extension housing.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)

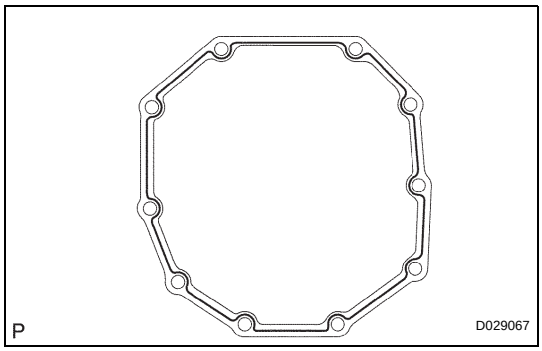
36. INSTALL EXTENSION HOUSING OIL RECEIVER PIPE

(a) Install the oil receiver pipe with the bolt.



37. INSTALL OIL RECEIVER

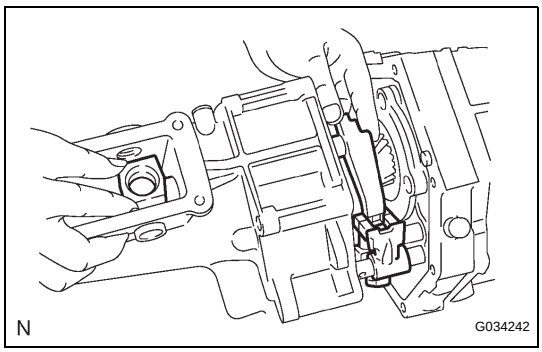
(a) Install the oil receiver onto the extension housing.



38. INSTALL EXTENSION HOUSING SUB-ASSEMBLY

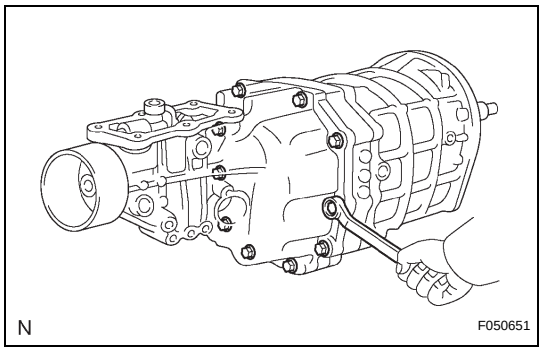
(a) Apply seal packing to the extension housing as shown in the illustration.
Seal packing:
Part No. 08826-00090, THREE BOND 1218 or equivalent

(b) Insert the shift and select lever to the extension housing.

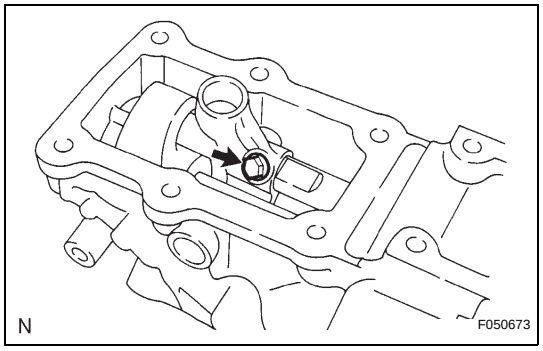


(c) Connect the shift and select lever to the fork shaft and put in the shift lever housing.

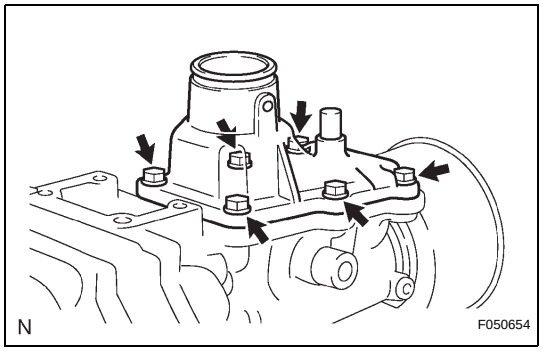
(d) Align shift and select lever to the extension housing installation hole and push in the extension housing.



(e) Install the extension housing, onto the transmission case with the 10 bolts.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

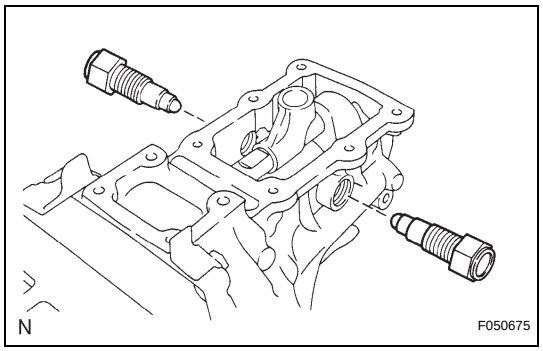


(f) Install the shift lever housing set bolt.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)



39. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Install the floor shift control shift lever retainer and the extension housing oil deflector onto the transfer adapter with the 6 bolts.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

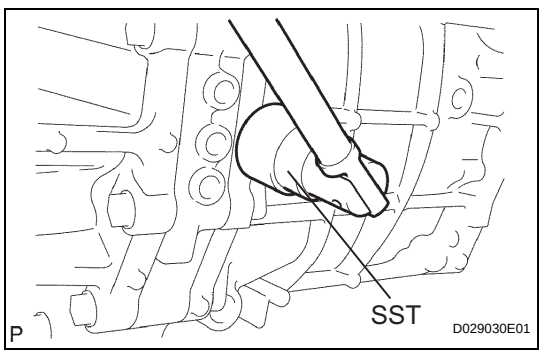


40. INSTALL REVERSE RESTRICT PIN ASSEMBLY

(a) Install the 2 reverse restrict pins into the extension housing or transfer adapter.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

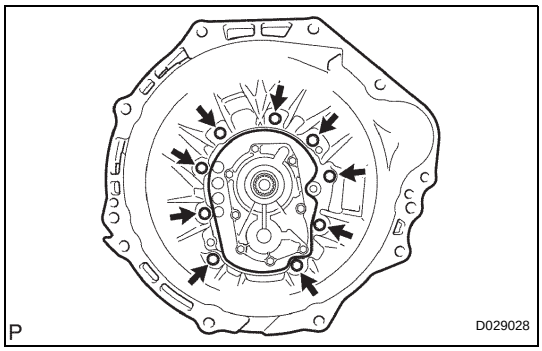
41. INSTALL SPEEDOMETER SENSOR

(a) Install a new O-ring onto the speedometer sensor.
(b) Install the speedometer sensor with the bolt.
Torque: 11.5 N*m (117 kgf*cm, 8 ft.*lbf)



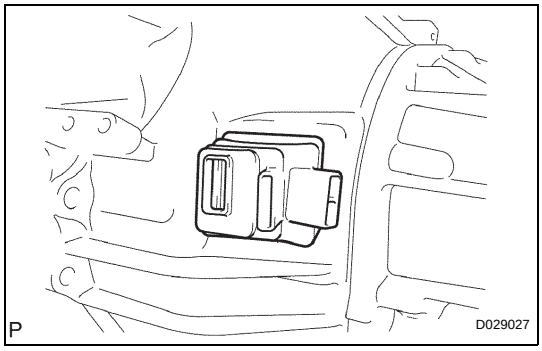
42. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch assembly and the gasket onto the transmission case.
SST 09817-16011
Torque: 44 N*m (450 kgf*cm, 32 ft.*lbf)



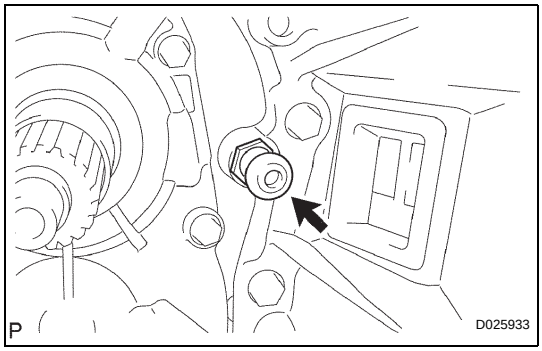
43. INSTALL CLUTCH HOUSING

(a) Install the clutch housing onto the transmission case with the 9 bolts.
Torque: 36 N*m (370 kgf*cm, 27 ft.*lbf)



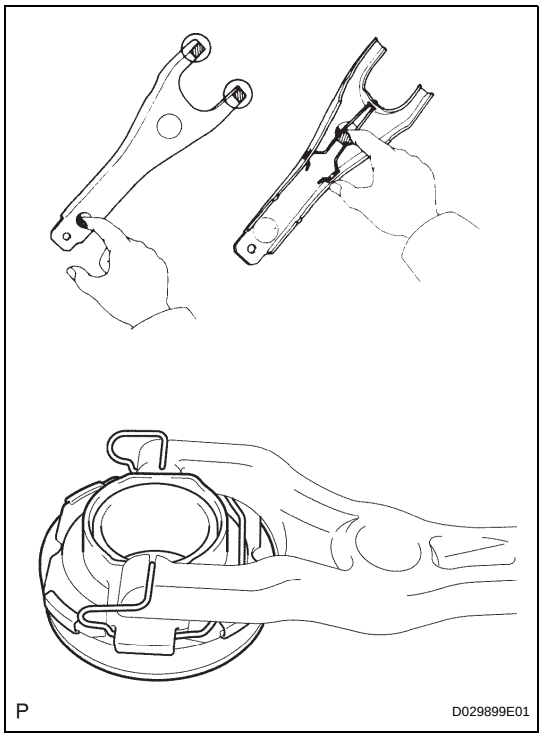
44. INSTALL CLUTCH RELEASE FORK BOOT

(a) Install the clutch release fork boot onto the clutch housing.



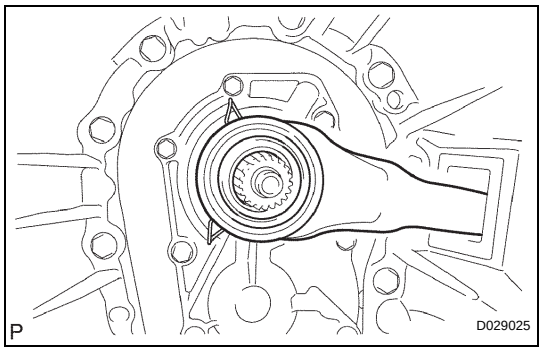
45. INSTALL RELEASE FORK SUPPORT

(a) Install the clutch release fork support onto the clutch housing.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)



46. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

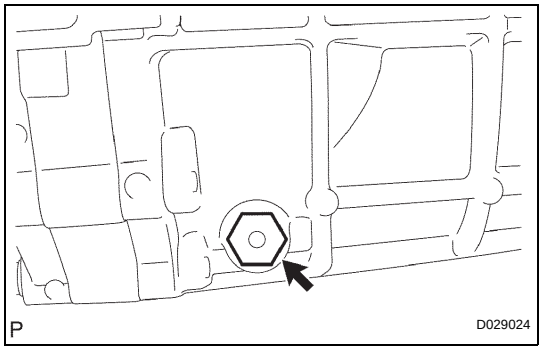
(a) Apply clutch release hub grease to the clutch release bearing, and install it onto the clutch release fork.



47. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

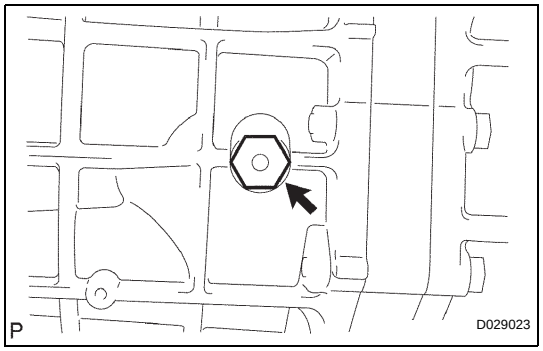
(a) Install the clutch release fork.

(b) Apply the clutch spline grease to the spline of the input shaft.



48. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug onto the transmission case through a new gasket.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

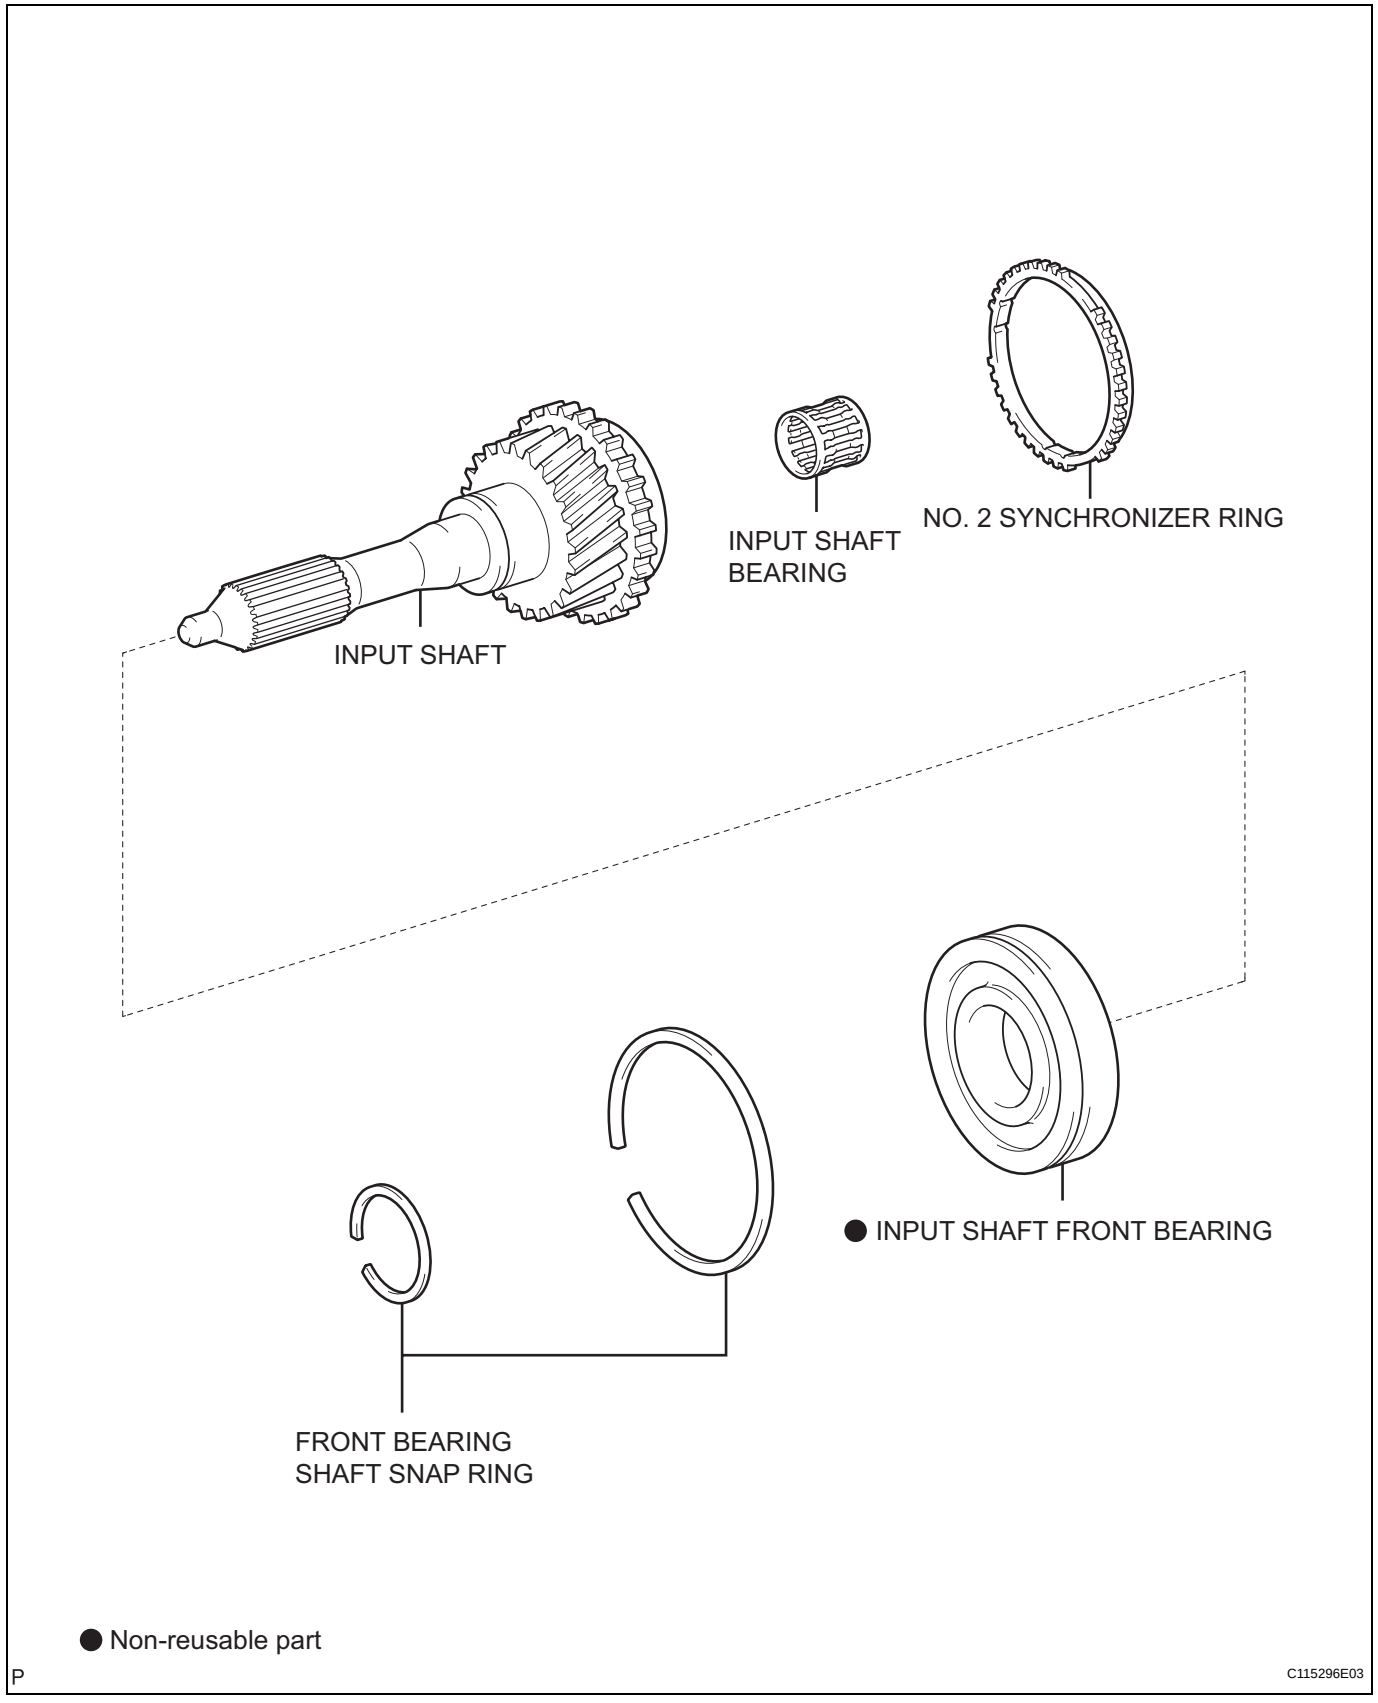


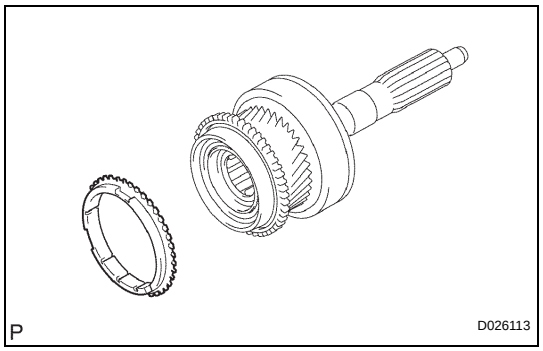
49. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the filler plug onto the transmission case through a new gasket.
Torque: 37 N*m (380 kgf*cm, 27 ft.*lbf)

INPUT SHAFT

COMPONENTS

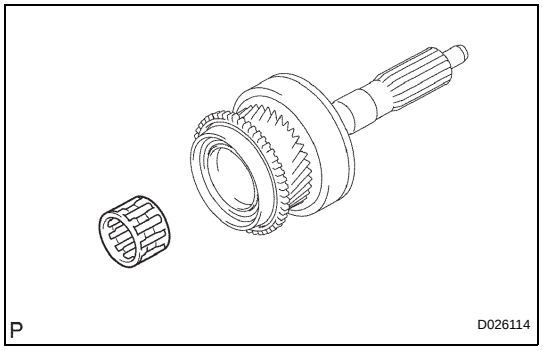




DISASSEMBLY

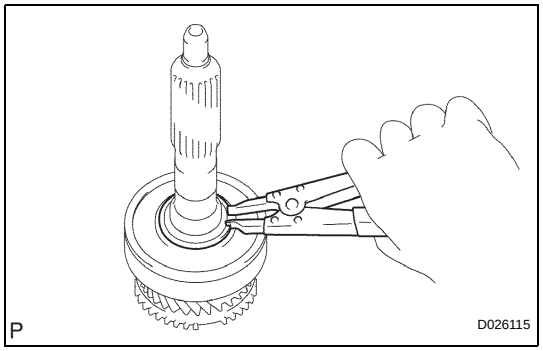
1. REMOVE NO. 2 SYNCHRONIZER RING

(a) Remove synchronizer ring No. 2 from the input shaft.



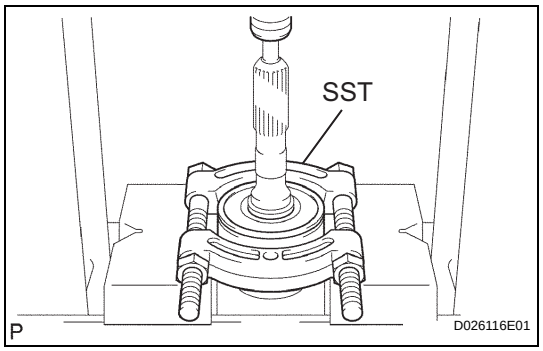
2. REMOVE INPUT SHAFT BEARING

(a) Remove the input shaft bearing from the input shaft.



3. REMOVE FRONT BEARING SHAFT SNAP RING

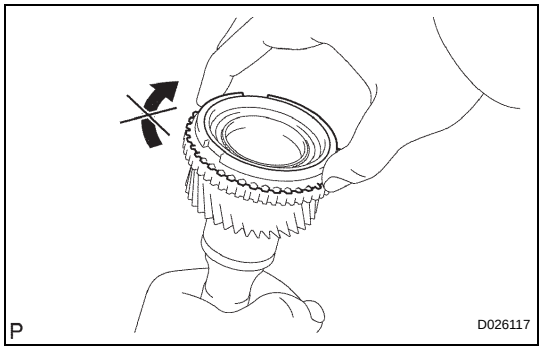
(a) Using a snap ring expander, remove the front bearing shaft snap ring from the input shaft.



4. REMOVE INPUT SHAFT FRONT BEARING

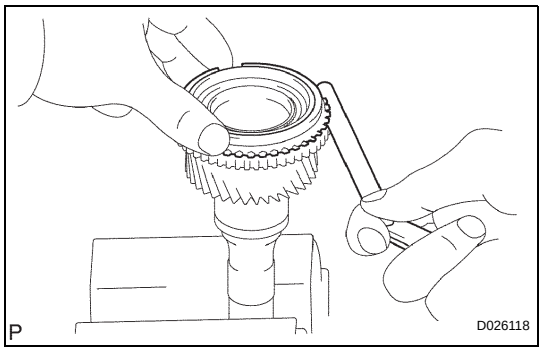
(a) Using SST and a press, remove the input shaft front bearing FR from the input shaft.
SST 09950-00020

INSPECTION

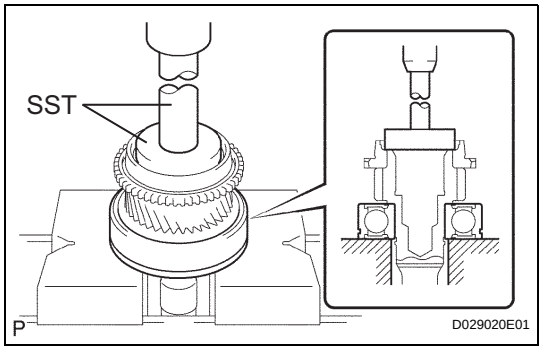


1. INSPECT NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the cone of the input shaft, and check that it does not turn in the both directions while pushing the synchronizer ring No. 2.



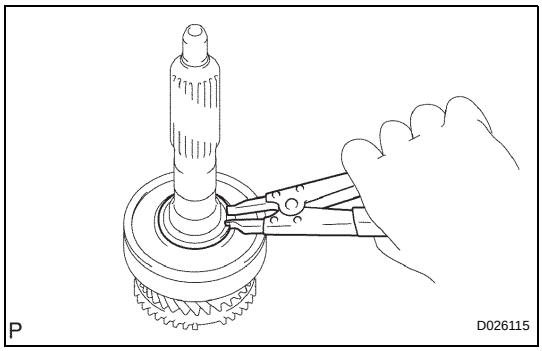
(b) Check the clearance between the synchronizer ring No. 2 and input shaft while pushing the synchronizer ring No. 2 to the cone of the input shaft.
Standard clearance:
0.70 to 1.70 mm (0.0276 to 0.0669 in.)
If the clearance is not within the specified values, replace synchronizer ring No. 2 with a new one.



REASSEMBLY

1. INSTALL INPUT SHAFT FRONT BEARING

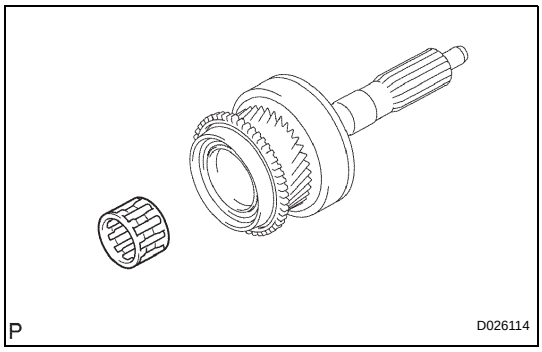
(a) Using SST and a press, install a new input shaft front bearing FR onto the input shaft.
SST 09950-60010 (09951-00570), 09950-70010 (09951-07100)
NOTICE:
Install the input shaft front bearing with the snap ring groove facing to the front.



2. INSTALL FRONT BEARING SHAFT SNAP RING

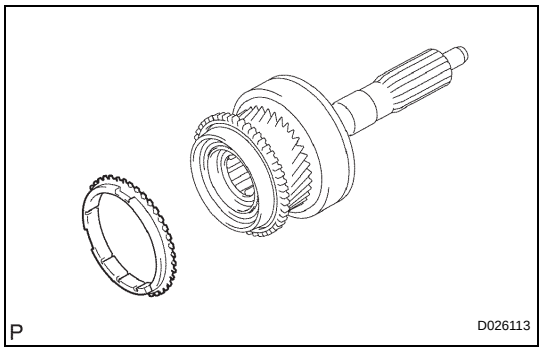
(a) Select the correct input shaft front bearing snap ring so that the clearance between the input shaft and input shaft front bearing is within the specified values.
Standard clearance:
0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)



3. INSTALL INPUT SHAFT BEARING

(a) Apply gear oil to the input shaft bearing and install it onto the input shaft.

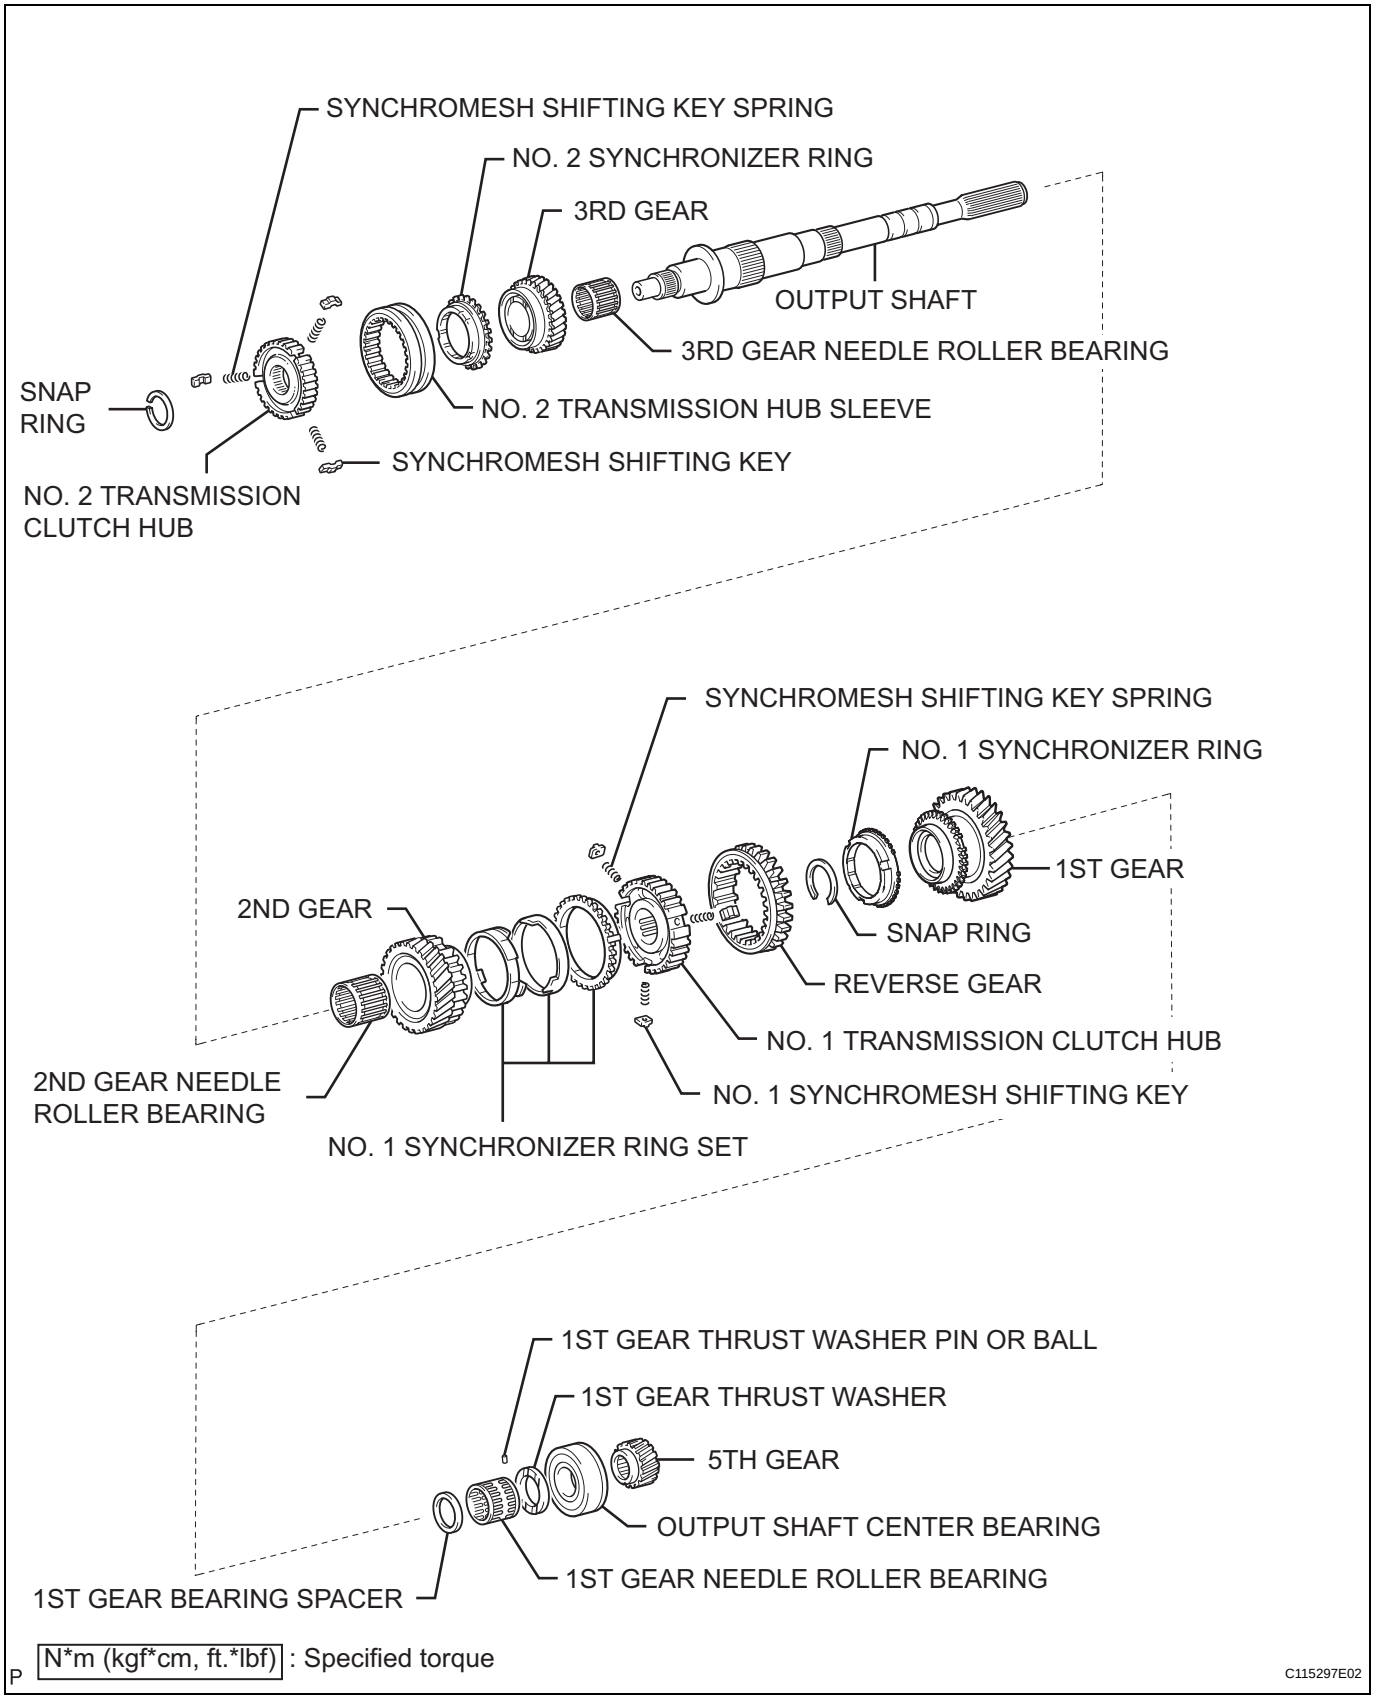


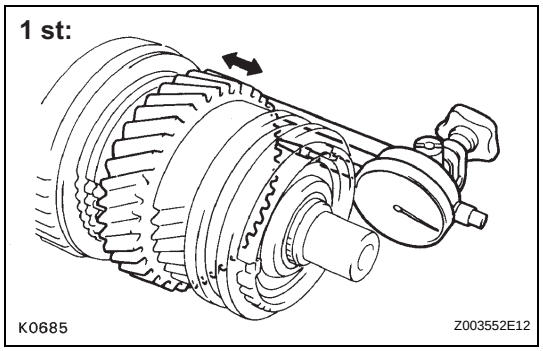
4. INSTALL NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to synchronizer ring No. 2, and install it onto the input shaft.

OUTPUT SHAFT

COMPONENTS





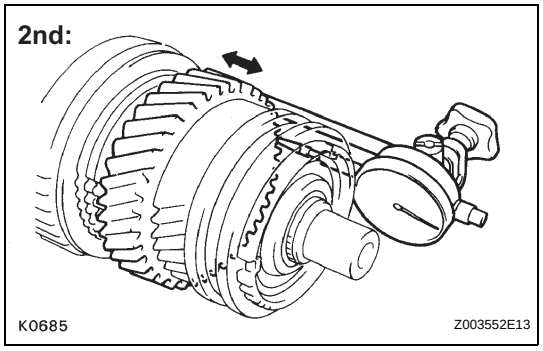
DISASSEMBLY

1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator measure the thrust clearance of the 1st gear.

Standard clearance:

0.20 to 0.45 mm(0.0079 to 0.0177 in.)

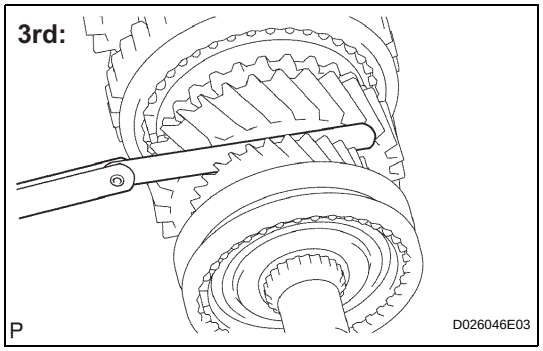


2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator measure the thrust clearance of the 2nd gear.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

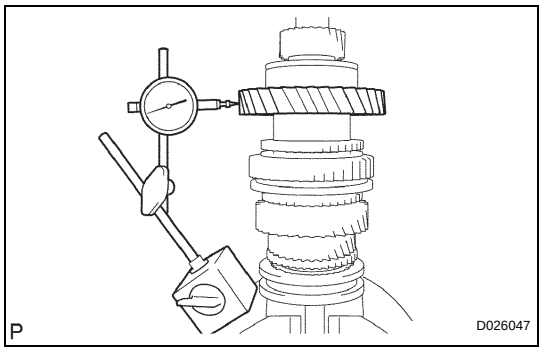


3. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the thrust clearance of the 3rd gear.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)



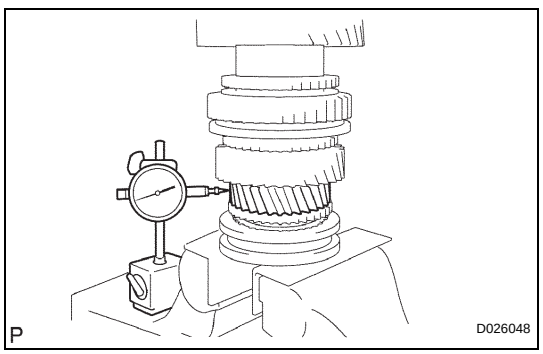
4. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 1st gear.

Standard clearance:

0.020 to 0.073 mm (0.0008 to 0.0029 in.)

If the clearance is not within the specified values, replace the 1st gear needle roller bearing with a new one.



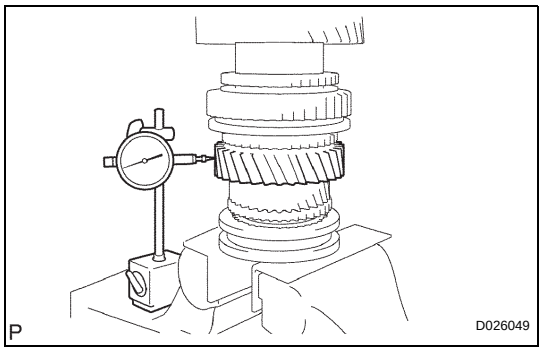
5. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 2nd gear.

Standard clearance:

0.015 to 0.068mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 2nd gear needle roller bearing with a new one.



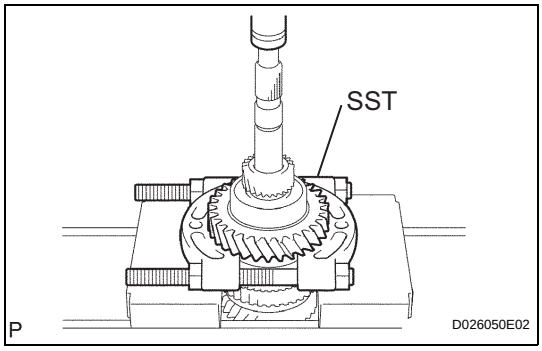
6. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 3rd gear.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

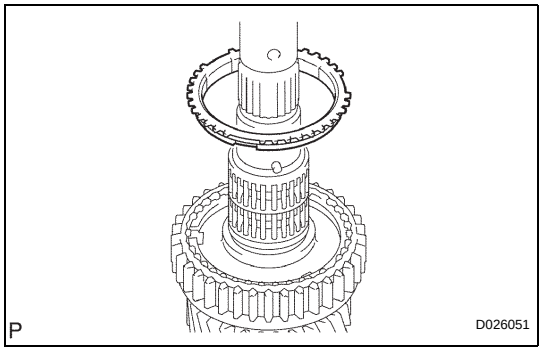
If the clearance is not within the specified values, replace the 3rd gear needle roller bearing with a new one.



7. REMOVE 1ST GEAR

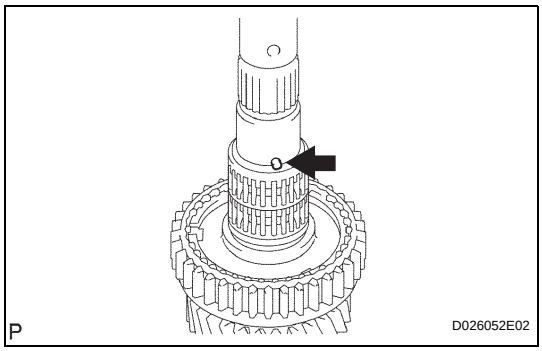
(a) Using SST and a press, remove the 5th gear, output shaft center bearing, 1st gear thrust washer and 1st gear from the output shaft.

SST 09950-00020



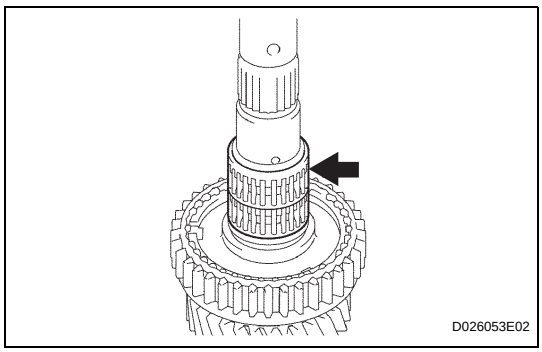
8. REMOVE NO. 1 SYNCHRONIZER RING

(a) Remove synchronizer ring No. 1 (for the 1st gear) from the output shaft.



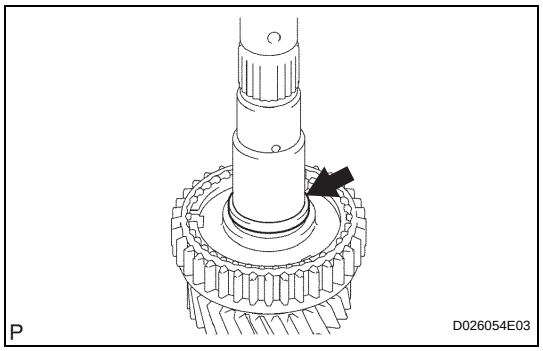
9. REMOVE 1ST GEAR THRUST WASHER PIN OR BALL

(a) Remove the 1st gear thrust washer pin from the output shaft.



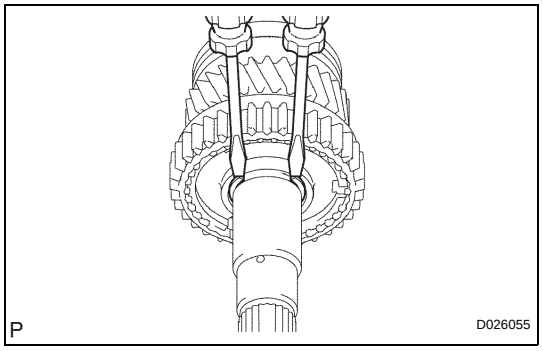
10. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.



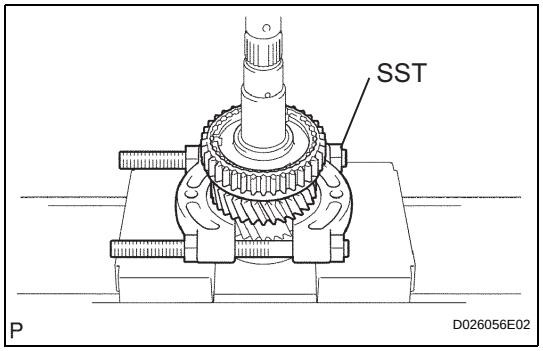
11. REMOVE 1ST GEAR BEARING SPACER

(a) Remove the 1st gear bearing spacer from the output shaft.



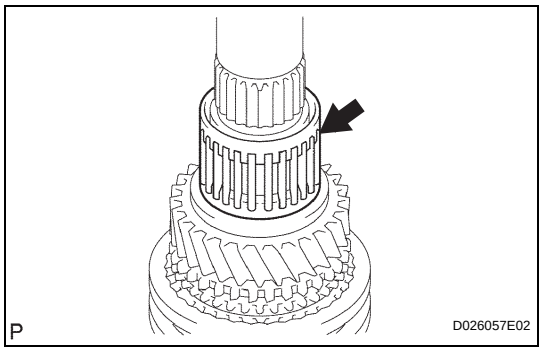
12. REMOVE BEARING SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the bearing shaft snap ring from the output shaft.
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



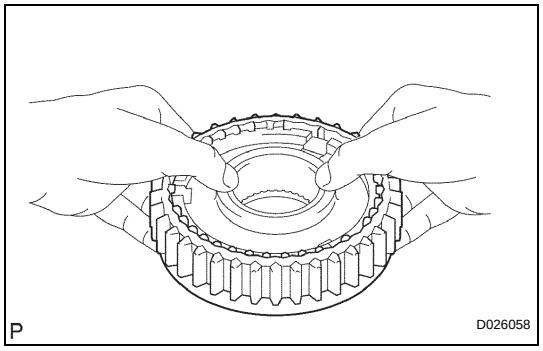
13. REMOVE 2ND GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 1, reverse gear, synchronizer ring No. 1 and 2nd gear from the output shaft.
SST 09950-00020



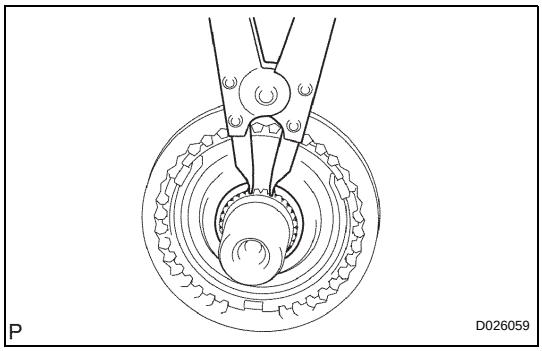
14. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing from the output shaft.



15. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys No. 1 and 3 synchromesh shifting key springs. Use a shop rag to prevent the shifting key and the shifting spring from popping out.

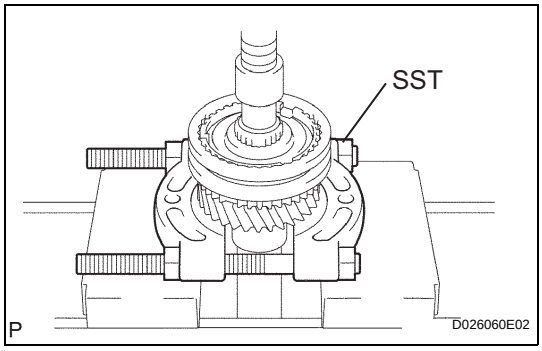


16. REMOVE CLUTCH HUB SET SHAFT SNAP RING

(a) Using snap ring pliers, remove the clutch hub set shaft snap ring from the output shaft.

NOTICE:

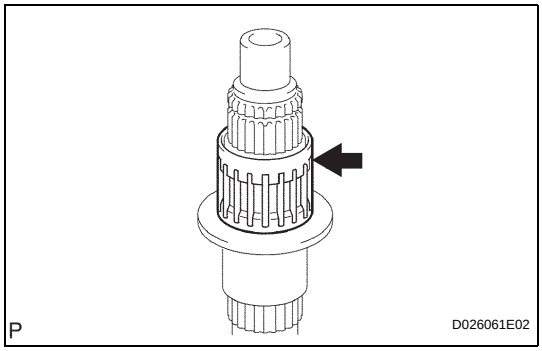
Do not damage the sliding surface of the bearing.



17. REMOVE 3RD GEAR

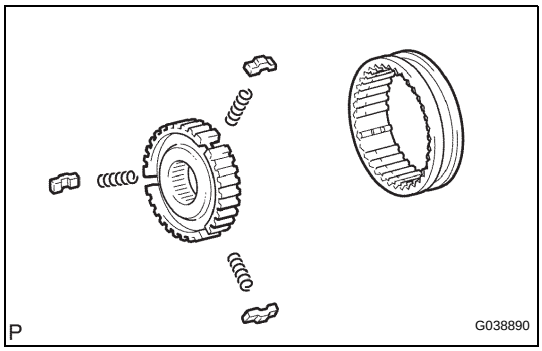
(a) Using SST and a press, remove the clutch hub No. 2 with the hub sleeve No. 2, synchronizer ring No. 2 and 3rd gear from the output shaft.

SST 09950-00020



18. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

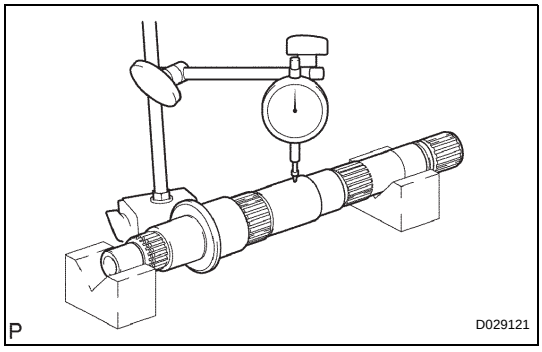
(a) Remove the 3rd gear needle roller bearing from the output shaft.



19. REMOVE NO. 2 TRANSMISSION HUB SLEEVE

(a) Remove the transmission hub sleeve No. 2, 3 synchromesh shifting key springs and 3 synchromesh shifting keys No. 2 from the transmission clutch hub No. 2.

INSPECTION



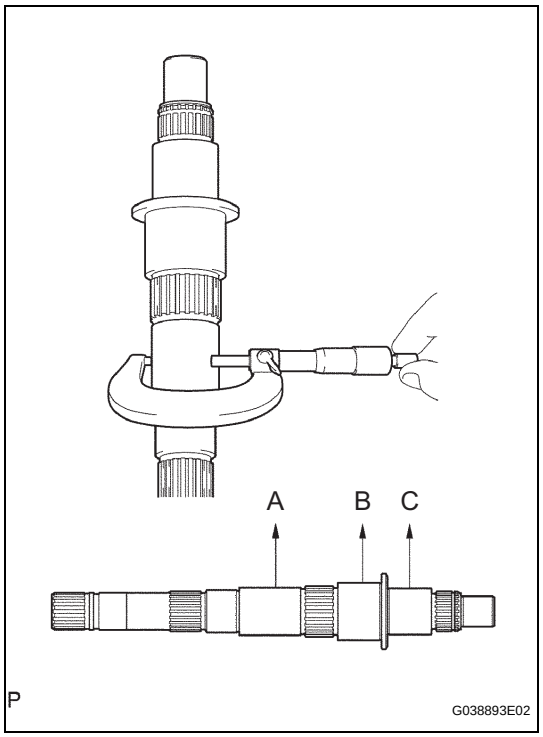
1. INSPECT OUTPUT SHAFT

(a) Using a dial indicator, measure the circle runout of the output shaft.

Maximum circle runout:

0.03 mm (0.0012 in.)

If the circle runout is greater than the maximum, replace the output shaft with a new one.



(b) Using a micrometer, measure the outer diameter of the output shaft at A, B and C.

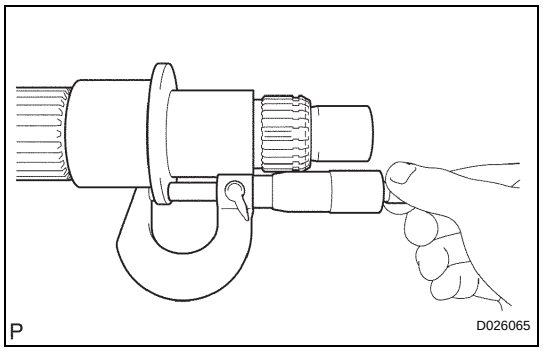
Standard diameter:

38.979 to 38.995 mm (1.5334 to 1.5352 in.) for A
46.984 to 47.000 mm (1.8498 to 1.8504 in.) for B
37.984 to 38.000 mm (1.4954 to 1.4961 in.) for C

Minimum diameter:

38.979 mm (1.5334 in.) for A
46.984 mm (1.8498 in.) for B
37.984 mm (1.4954 in.) for C

If the outer diameter is less than the minimum, replace the output shaft with a new one.

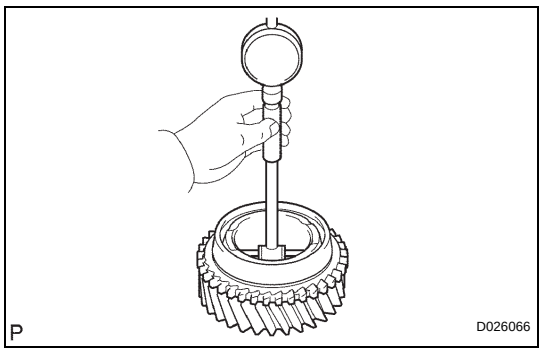


(c) Using a micrometer, measure the thickness of the output shaft flange as shown in the illustration.

Standard thickness:

4.8 to 5.2 mm (0.1890 to 0.2047 in.)

If the thickness is not within the specified values, replace the output shaft.



2. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inner diameter of the 3rd gear.

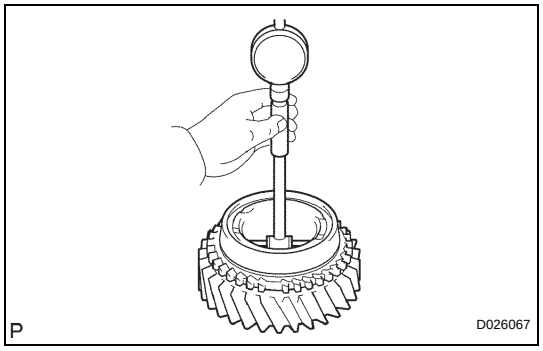
Standard diameter:

44.015 to 44.040 mm (1.7329 to 1.7339 in.)

Maximum diameter:

44.040 mm (1.7339 in.)

If the inner diameter is greater than the maximum, replace the 3rd gear with a new one.



3. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inner diameter of the 2nd gear.

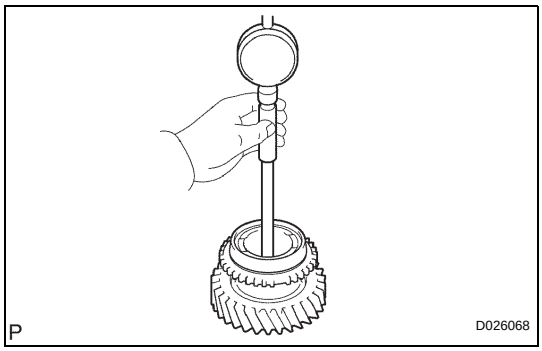
Standard diameter:

53.015 to 53.040 mm (2.0872 to 2.0881 in.)

Maximum diameter:

53.040 mm(2.0881 in.)

If the inner diameter is greater than the maximum, replace the 2nd gear with a new one.

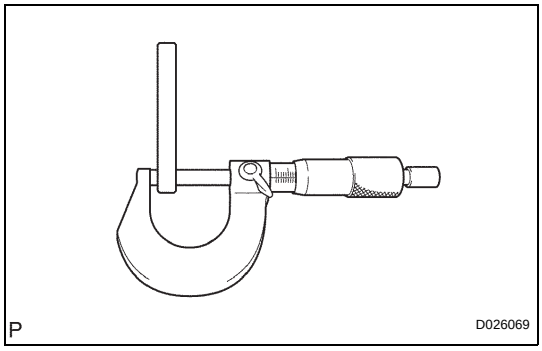


4. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inner diameter of the 1st gear.

Standard diameter:
46.015 to 46.040 mm (1.812 to 1.8126 in.)
Maximum diameter:
46.040 mm (1.8126 in.)

If the inner diameter is greater than the maximum, replace the 1st gear with a new one.

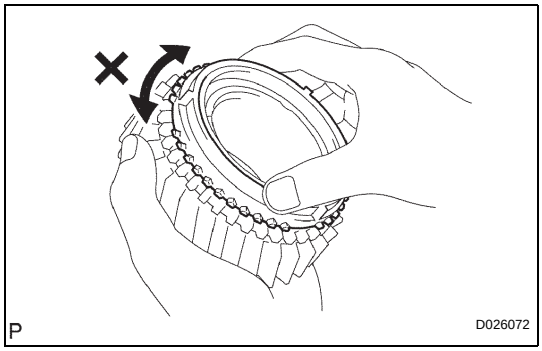


5. INSPECT 1ST GEAR THRUST WASHER

(a) Using a micrometer, measure the thickness of the 1st gear thrust washer.

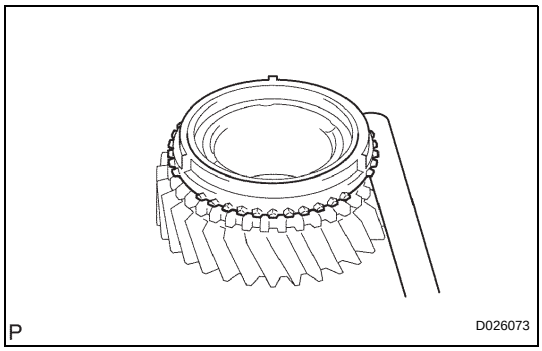
Standard thickness:
5.95 to 6.05 mm (0.2346 to 0.2382 in.)
Minimum thickness:
5.96 mm (0.2346 in.)

If the thickness is out of specification, replace the 1st gear thrust washer.



6. INSPECT NO. 1 SYNCHRONIZER RING

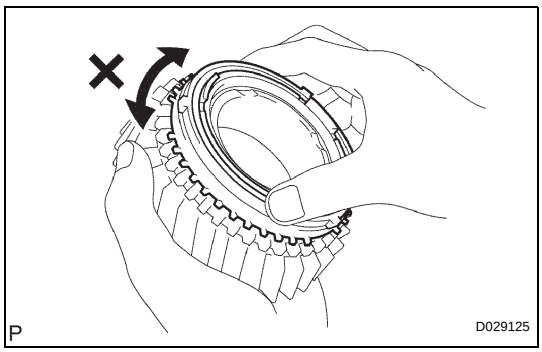
(a) Apply gear oil to the cone of the 1st gear, and check that it does not turn in both directions while pushing the synchronizer ring No. 1 (for the 1st gear).
If it turns, replace the synchronizer ring No. 1.



(b) Measure the clearance between the synchronizer ring No. 1 and the 1st gear while pushing the synchronizer ring No. 1 to the cone of the 1st gear.

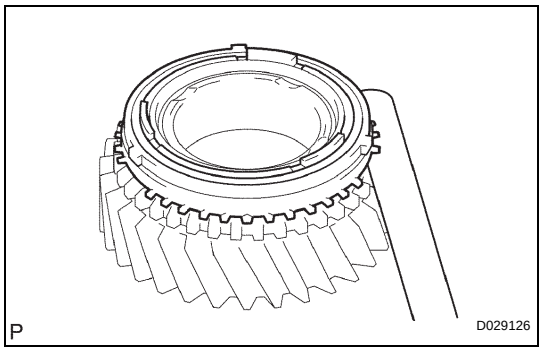
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0649 in.)

If the clearance is not within the specified values, replace the synchronizer ring No. 1 with a new one.



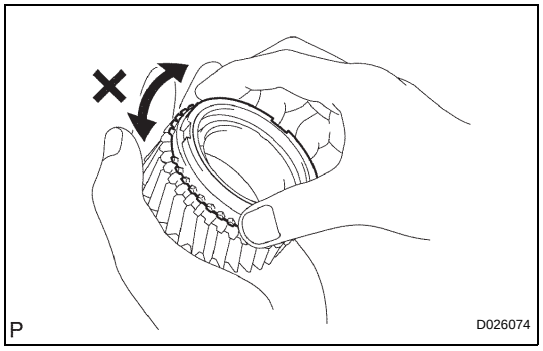
7. INSPECT NO. 1 SYNCHRONIZER RING SET

(a) Apply gear oil to the cone of the 2nd gear, and check that it does not turn in both directions while pushing the synchronizer ring set No. 1 (for the 2nd synchronizer ring).
If it turns, replace the synchronizer ring set No. 1.



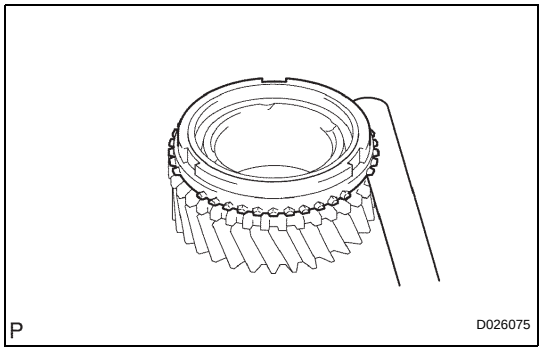
(b) Measure the clearance between the synchronizer ring set No. 1 (for the 2nd synchronizer ring) and 2nd gear while pushing the synchronizer ring set No. 1 to the cone of the 2nd gear.
Standard clearance:
0.65 to 1.75 mm (0.0256 to 0.0689 in.)
If the clearance is not within the specified values, replace the synchronizer ring set No. 1 (for the 2nd synchronizer ring) with a new one.

MT

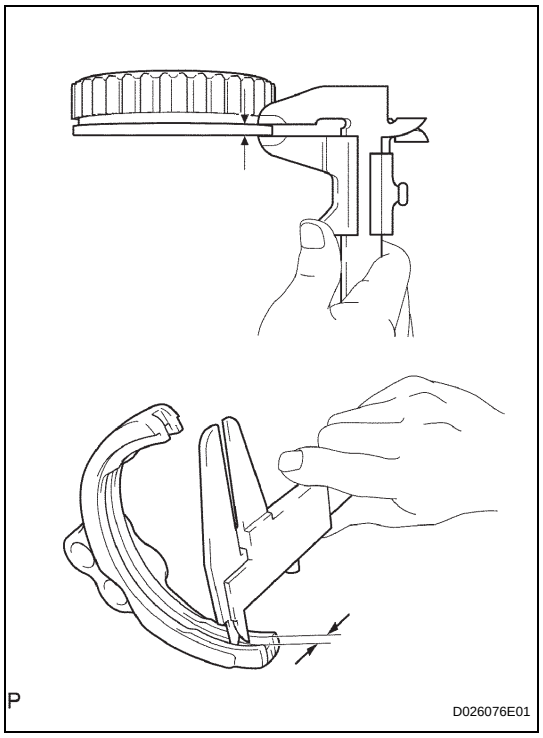


8. INSPECT NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the cone of the 3rd gear, and check that it does not turn in both directions while pushing the synchronizer ring No. 2 (for the 3rd synchronizer ring).
If it turns, replace the synchronizer ring No. 2.

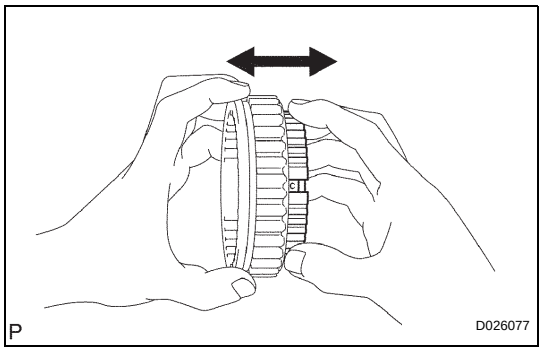


(b) Check the clearance between the synchronizer ring No. 2 (for the 3rd synchronizer ring) and 3rd gear while pushing the synchronizer ring No. 2 (for the 2nd synchronizer ring) to the cone of the 3rd gear.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)
If the clearance is not within the specified values, replace the synchronizer ring No. 2 (for the 3rd synchronizer ring) with a new one.



9. INSPECT REVERSE GEAR

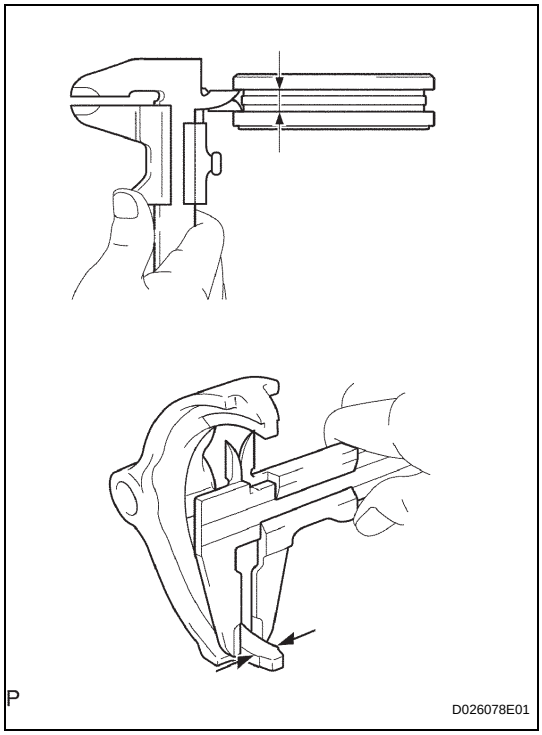
(a) Using vernier calipers, measure the reverse gear groove and the thickness of the gear shift fork claw No. 1 clearance.
Standard clearance:
0.15 to 0.41 mm (0.0060 to 0.0161 in.)
If the clearance is not within the specified values, replace the reverse gear and the shift fork No. 1 with new ones.



10. INSPECT NO. 1 TRANSMISSION CLUTCH HUB

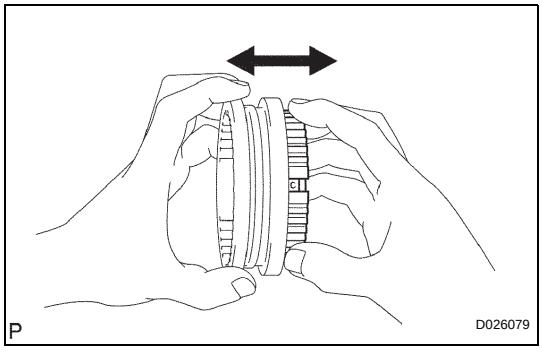
(a) Check that the transmission clutch hub No. 1 and reverse gear slide smoothly each other.

(b) Check the tip of the spline gear sleeve of the reverse gear for wear.
If there are any defects, replace the transmission clutch hub No. 1.



11. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

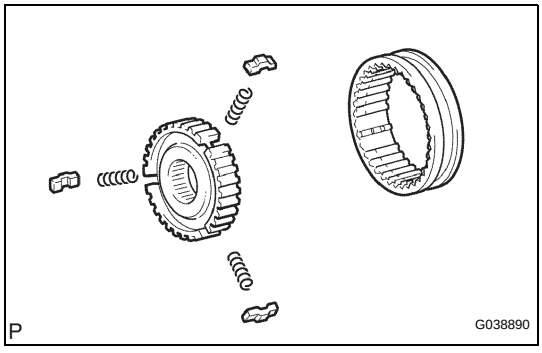
(a) Using vernier calipers, measure the clearance between the transmission hub No. 2 groove and claw of the gear shift fork No. 2.
Standard clearance:
0.15 to 0.35 mm (0.0059 to 0.0138 in.)
If the clearance is not within the specified values, replace the No. 2 transmission hub sleeve No. 2 and the shift fork No. 2 with the new ones.



12. INSPECT NO. 2 TRANSMISSION CLUTCH HUB

(a) Check the sliding condition between the transmission clutch hub No. 2 and the transmission hub sleeve No. 2.

(b) Check the tip of the spline gear of the sleeve of the reverse gear for wear.

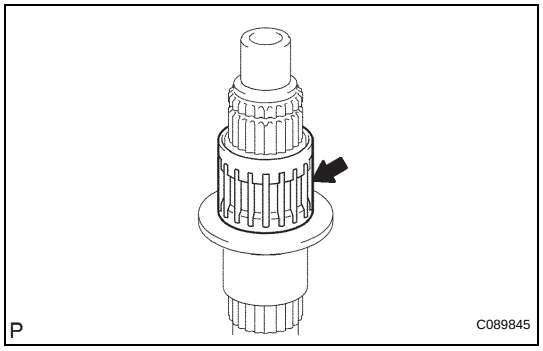


REASSEMBLY

1. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

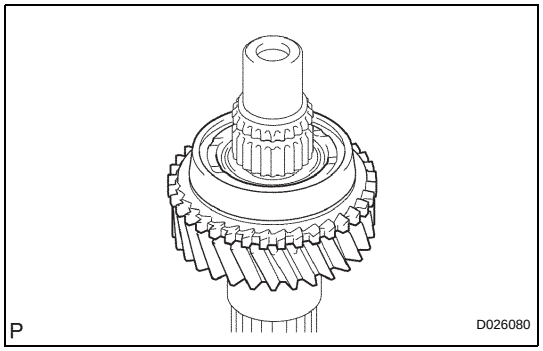
(a) Install the 3 synchromesh shifting key springs No. 2 and the 3 synchro-mesh shifting key No. 2 to the transmission clutch hub No. 2.
NOTICE:
Make sure that the transmission hub sleeve No. 2 and transmission clutch hub No. 2 are oriented in the correct direction.

(b) Apply gear oil to the sliding part of the transmission hub sleeve No. 2, and install it onto the transmission clutch hub No. 2.



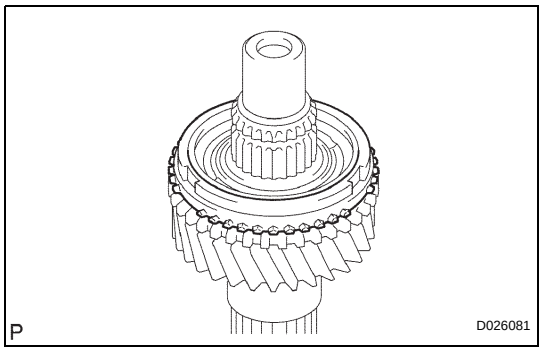
2. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 3rd gear needle roller bearing, and install it onto the output shaft.



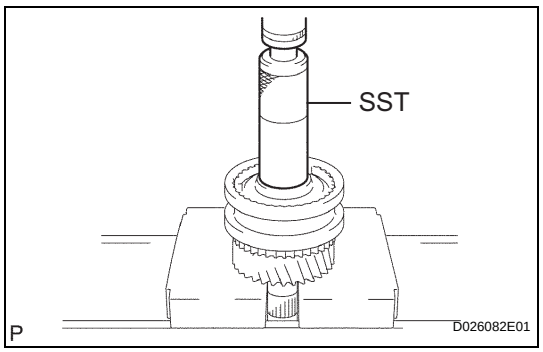
3. INSTALL 3RD GEAR

(a) Apply gear oil to the 3rd gear, and install it onto the output shaft.



4. INSTALL NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the synchronizer ring No. 2, and install it onto the 3rd gear.



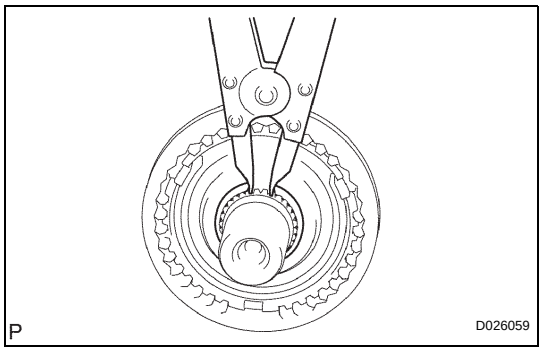
5. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

(a) Using SST, install the transmission clutch hub No. 2 onto the output shaft.

SST 09608-06041

NOTICE:

- **Install it with the synchronizer ring key No. 2 groove aligned with the shifting key position.**
- **Make sure that the 3rd gear rotates smoothly.**



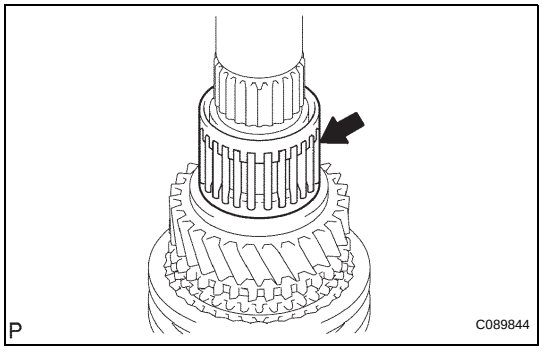
MT

(b) Select the correct clutch hub shaft snap ring so that the clearance between the transmission clutch hub No. 2 and shaft snap ring thrust is within the specified values. Then install it onto the output shaft.

Standard clearance:
0.1 mm or less

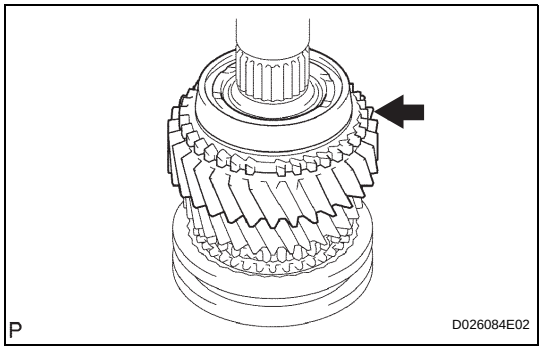
NOTICE:
Do not damage the sliding surface of the bearing.

Mark	Thickness mm (in.)
A	1.80 to 1.85 (0.0709 to 0.0728)
B	1.85 to 1.90 (0.0728 to 0.0748)
C	1.90 to 1.95 (0.0748 to 0.0768)
D	1.95 to 2.00 (0.0768 to 0.0787)
E	2.00 to 2.05 (0.0787 to 0.0807)
F	2.05 to 2.10 (0.0807 to 0.0827)
G	2.10 to 2.15 (0.0827 to 0.0846)



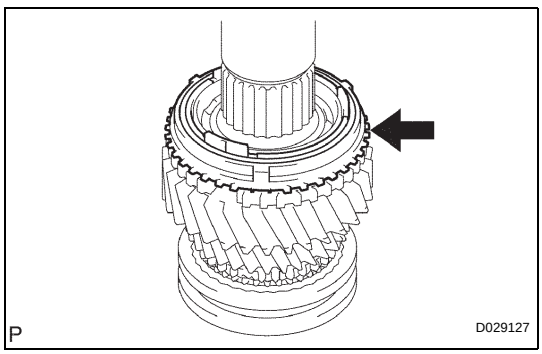
6. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 2nd gear needle roller bearing, and install it onto the output shaft.



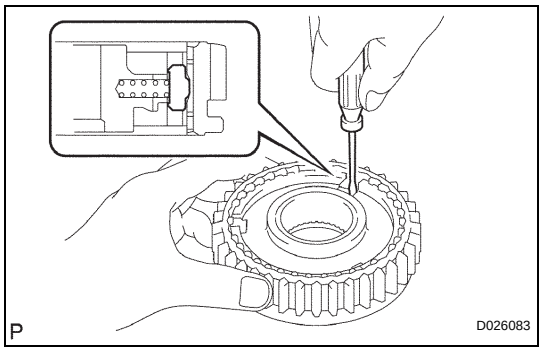
7. INSTALL 2ND GEAR

(a) Apply gear oil to the 2nd gear, and install it onto the output shaft.



8. INSTALL NO. 1 SYNCHRONIZER RING SET

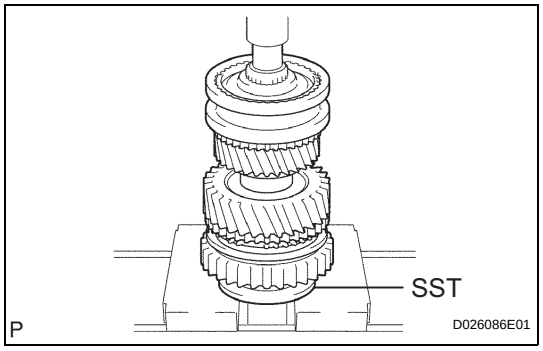
(a) Apply gear oil to the synchronizer ring set No. 1, and install it onto the 2nd gear.



9. INSTALL REVERSE GEAR

(a) Using a screwdriver, install the 3 synchromesh shifting key springs and 3 synchromesh shifting key No.1 onto the transmission clutch hub No. 1.

(b) Apply gear oil to the revers gear, and install it onto the transmission clutch hub No. 1



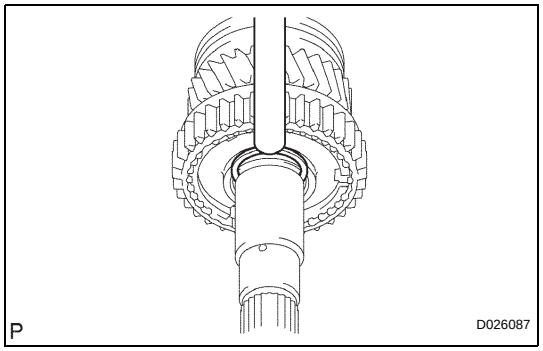
10. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install transmission clutch hub No. 1 onto the output shaft.

SST 09316-60011 (09316-00041)

NOTICE:

- **Perform installation making sure that the synchronizer ring key No. 1 groove and synchro-mesh shifting key No. 1 are in place.**
- **Make sure that the 1st gear rotates smoothly.**



(b) Select the correct bearing shaft snap ring so that the clearance between the transmission clutch hub No. 1 and bearing shaft snap ring is within the specified values. Then install it onto the output shaft.

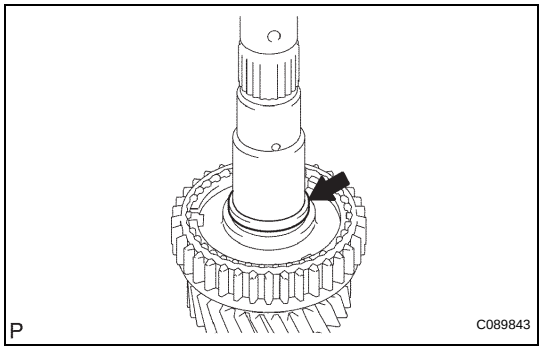
Standard clearance:

0.1mm (0.039 in.) or less

NOTICE:

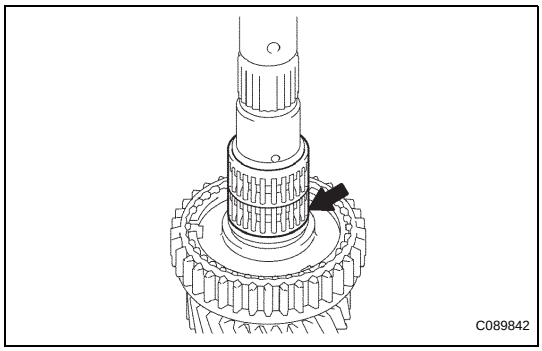
Do not damage the sliding surface of the bearing.

Mark	Thickness mm (in.)
A	2.30 to 2.35 (0.0906 to 0.0925)
B	2.35 to 2.40 (0.0925 to 0.0945)
C	2.40 to 2.45 (0.0945 to 0.0965)
D	2.45 to 2.50 (0.0965 to 0.0984)
E	2.50 to 2.55 (0.0984 to 0.1004)
F	2.55 to 2.60 (0.1004 to 0.1024)
G	2.60 to 2.65 (0.1024 to 0.1043)



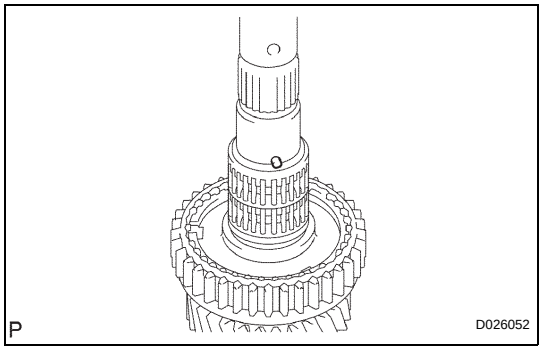
11. INSTALL 1ST GEAR BEARING SPACER

(a) Apply gear oil to the 1st gear bearing spacer, and install it onto the output shaft.



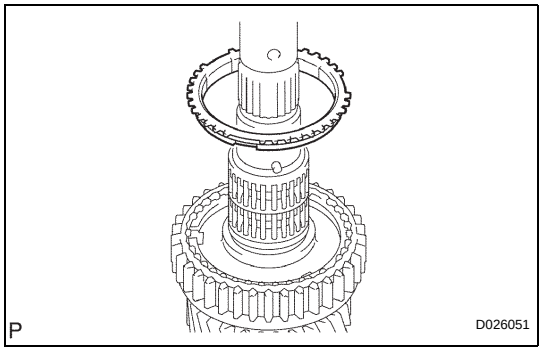
12. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 1st gear needle roller bearing, and install it onto the output shaft.



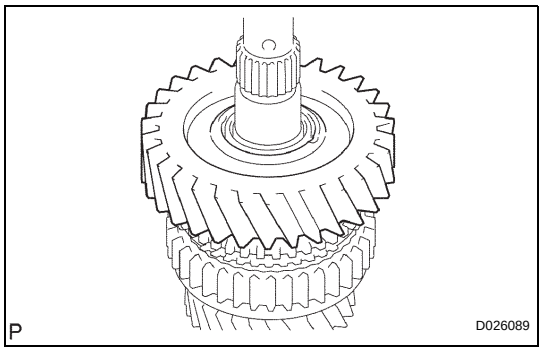
13. INSTALL 1ST GEAR THRUST WASHER PIN OR BALL

(a) Install the 1st gear thrust washer pin onto the output shaft.



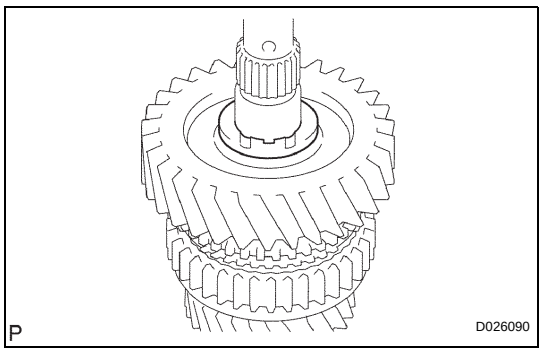
14. INSTALL NO. 1 SYNCHRONIZER RING

(a) Apply gear oil to the synchronizer ring No. 1, and install it onto the output shaft.



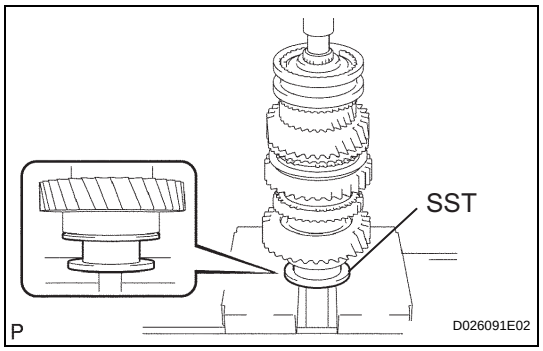
15. INSTALL 1ST GEAR

(a) Apply gear oil to the 1st gear, and install it onto the output shaft.



16. INSTALL 1ST GEAR THRUST WASHER

(a) Apply gear oil to the 1st gear thrust washer, and install it onto the output shaft.



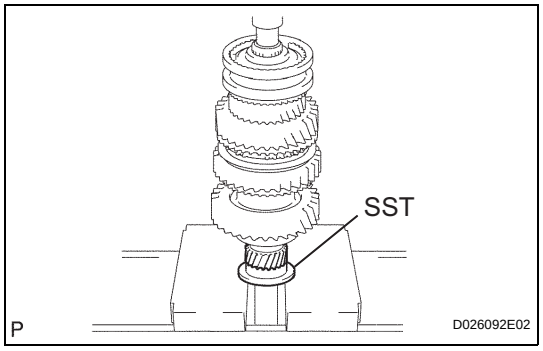
17. INSTALL OUTPUT SHAFT CENTER BEARING

(a) Using SST and a press, install a new output shaft center bearing onto the output shaft.

SST 09316-60011 (09316-00031)

NOTICE:

Install it with the snap ring groove of the bearing facing to the rear side.



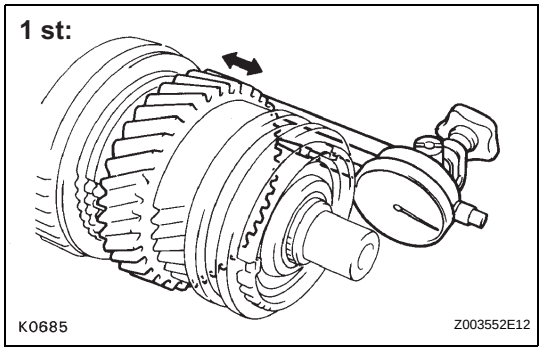
18. INSTALL 5TH GEAR

(a) Using SST and a press, install the 5th gear onto the output shaft.

SST 09316-60011 (09316-00031)

NOTICE:

- **Check that the 5th gear is fitted into the spline of the output shaft before installing.**
- **Face the convex part of the gear to the front side.**

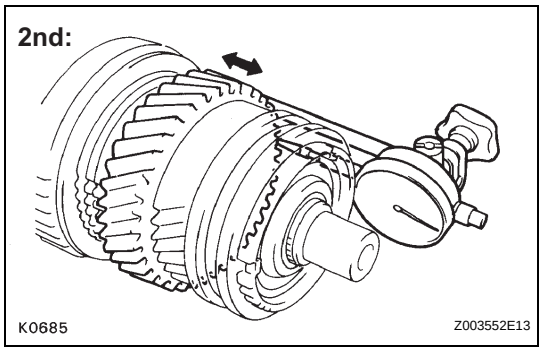


19. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.20 to 0.45 mm (0.0079 to 0.0177 in.)

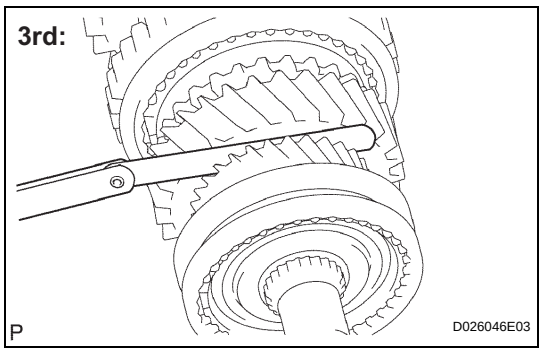


20. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

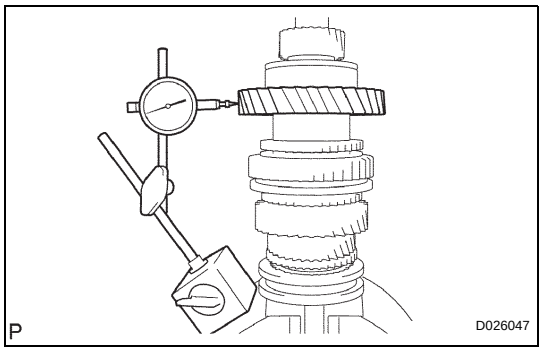


21. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)



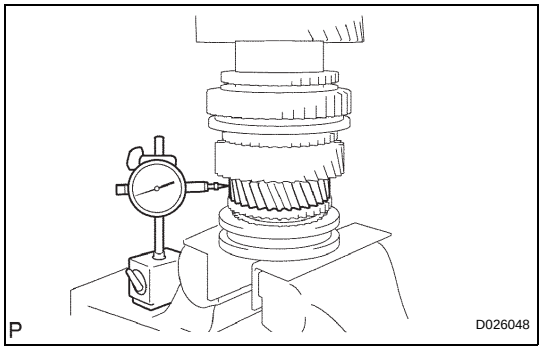
22. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.020 to 0.073 mm (0.0008 to 0.0029 in)

If the clearance is not within the specified values, replace the 1st gear needle roller bearing with a new one.



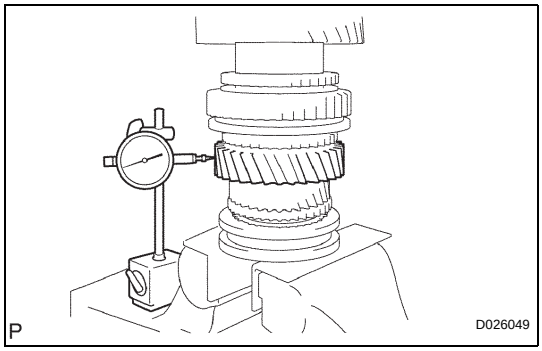
23. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 2nd gear needle roller bearing with a new one.



24. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

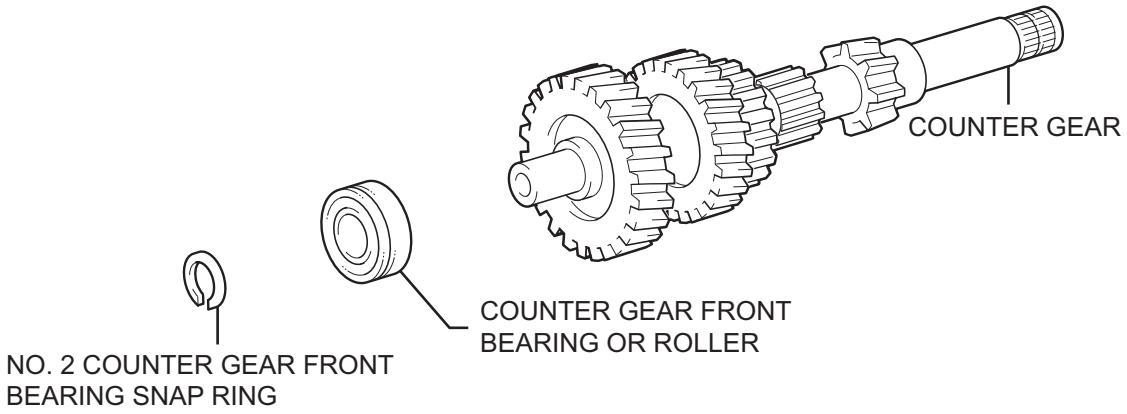
Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 3rd gear needle roller bearing with a new one.

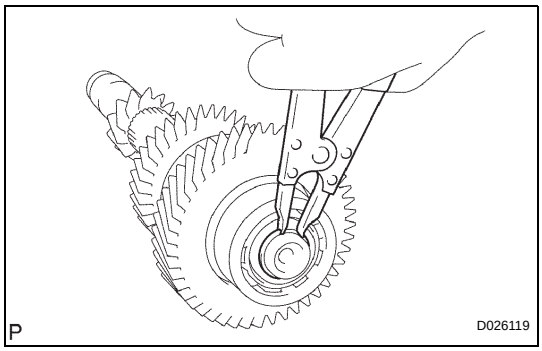
COUNTER GEAR AND REVERSE IDLER GEAR

COMPONENTS



P

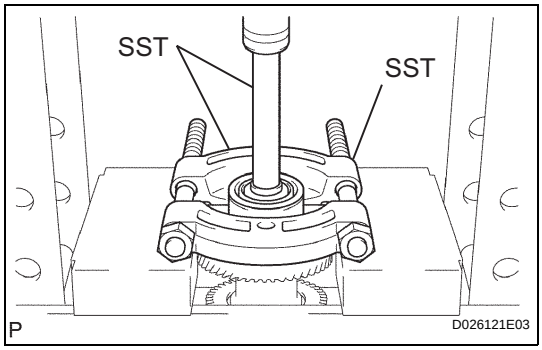
C115299E03



DISASSEMBLY

1. REMOVE NO. 2 COUNTER GEAR FRONT BEARING SNAP RING

(a) Using a snap ring expander, remove the No. 2 counter gear front bearing snap ring from the counter gear.



2. REMOVE COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, remove the counter gear front bearing from the counter gear.

SST 09950-00020, 09950-60010 (09951-00220), 09950-70010 (09951-07100)

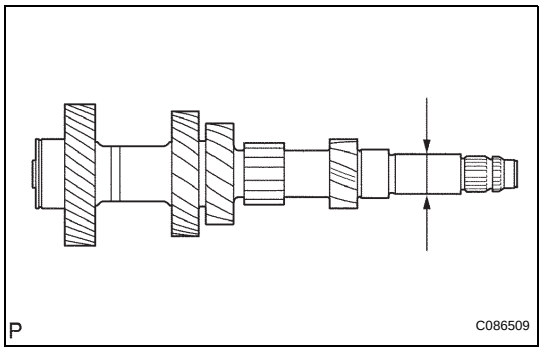
INSPECTION

1. INSPECT COUNTER GEAR

(a) Using a micrometer, measure the outer diameter of the counter gear as shown in the diagram.

Standard diameter:
29.984 to 30.000 mm(1.1805 to 1.1811 in.)
Minimum diameter:
29.984 mm (1.1805 in.)

If the outer diameter is less than the minimum, replace the counter gear with a new one.



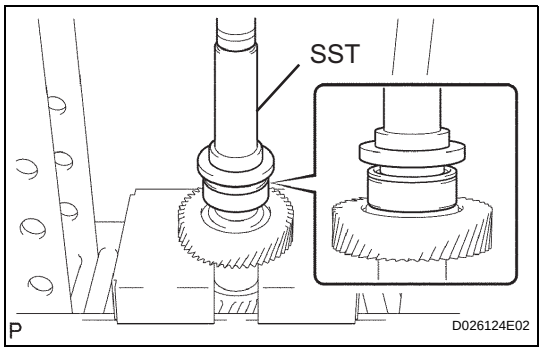
REASSEMBLY

1. INSTALL COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, install the counter gear front bearing onto the counter gear.

SST 09515-10010

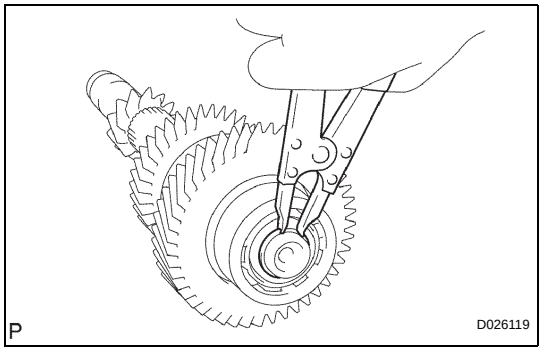
Install it so that the snap ring groove of the bearing faces to the front side.



2. INSTALL NO. 2 COUNTER GEAR FRONT BEARING SNAP RING

(a) Select the correct counter gear front bearing No. 2 snap ring so that the clearance between the counter gear and No. 2 counter gear front bearing snap ring No. 2 is within the specified values. Using a brass bar and a hammer, install it onto the counter gear.

Standard clearance:
0.1 mm (0.0039 in.) or less



Mark	Thickness mm (in.)
A	2.05 to 2.10 (0.0807 to 0.0827)

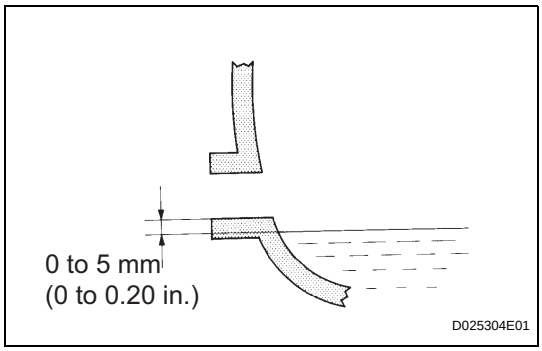
Mark	Thickness mm (in.)
B	2.10 to 2.15 (0.0827 to 0.0846)
C	2.15 to 2.20 (0.0846 to 0.0866)
D	2.20 to 2.25 (0.0866 to 0.0886)
E	2.25 to 2.30 (0.0886 to 0.0906)
F	2.30 to 2.35 (0.0906 to 0.0925)

MANUAL TRANSMISSION SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Abnormal noise	1. Oil level (Low)	MT-2
	2. Oil (Wrong)	MT-2
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-
Oil leakage	1. Oil level (High)	MT-2
	2. Gasket (Damaged)	-
	3. Oil seal (Worn or damaged)	-
	4. O-ing (Worn or damaged)	-
Hard shifting or will not shift	1. Synchronizer ring (Worn or damaged)	-
	2. Shift key spring (Damaged)	-
Jumps out of gear	1. Locking ball spring (Damaged)	-
	2. Shift fork (Worn)	-
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-



MT

MANUAL TRANSMISSION OIL

ON-VEHICLE INSPECTION

1. INSPECT TRANSMISSION OIL

(a) Park the vehicle in a level place.

(b) Remove the transmission filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the lowest point of the transmission filler plug opening.

NOTICE:

- **Problems may occur when the oil level is too high or low.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

(d) Check for oil leakage when the oil level is low.

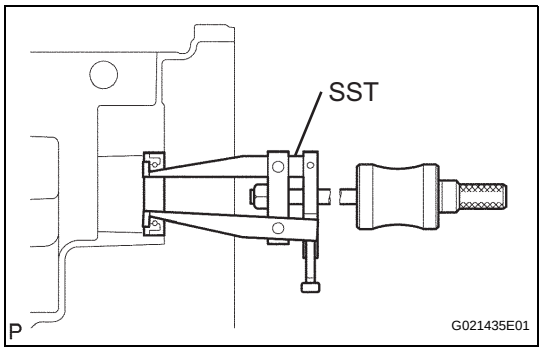
(e) Install the transmission filler plug and a new gasket.

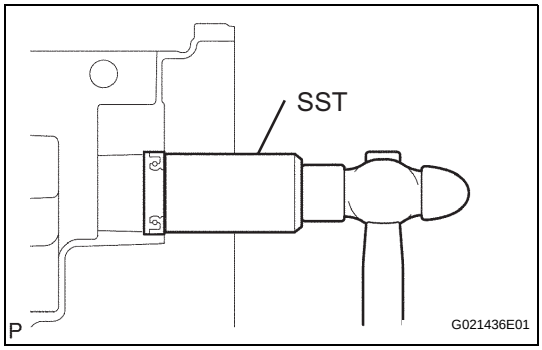
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

TRANSFER ADAPTOR OIL SEAL

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-9)
3. REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)
4. REMOVE FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-11)
5. REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-11)
6. REMOVE SHIFT LEVER BOOT ASSEMBLY (See page MT-9)
7. REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY (See page MT-9)
8. REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (See page MT-9)
9. DRAIN MANUAL TRANSMISSION OIL (See page MT-9)
10. REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)
11. REMOVE FRONT PROPELLER SHAFT ASSEMBLY
12. REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab)
13. REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab)
14. REMOVE MANIFOLD STAY (See page MT-9)
15. REMOVE STARTER ASSEMBLY (See page ST-5)
16. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY (See page MT-10)
17. REMOVE NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY (See page MT-10)
18. REMOVE NO. 1 ENGINE MOUNTING INSULATOR REAR (See page MT-10)
19. DISCONNECT WIRE HARNESS (See page MT-11)
20. REMOVE MANUAL TRANSMISSION WITH TRANSFER (See page MT-11)
21. REMOVE TRANSFER ASSEMBLY (See page TF-14)





22. REMOVE TRANSFER ADAPTER OIL SEAL

(a) Using SST, remove the transfer adapter oil seal.

SST 09308-00010

NOTICE:

Do not damage the oil seal fitted surface of the transfer adapter.

MT

INSTALLATION

1. INSTALL TRANSFER ADAPTER OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal.

SST 09223-00010

Drive in depth:

45.4 to 46.4 mm (1.787 to 1.827 in.)

NOTICE:

Be careful not to damage the oil seal.

(b) Coat the lip of the oil seal with MP grease.

2. INSTALL TRANSFER ASSEMBLY (See page TF-38)

3. INSTALL MANUAL TRANSMISSION WITH TRANSFER (See page MT-11)

4. CONNECT WIRE HARNESS (See page MT-11)

5. INSTALL NO. 1 ENGINE MOUNTING INSULATOR REAR (See page MT-11)

6. INSTALL NO. 3 FRAME CROSSMEMBER SUB-ASSEMBLY (See page MT-12)

7. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (See page MT-12)

8. INSTALL STARTER ASSEMBLY (See page ST-10)

9. INSTALL MANIFOLD STAY (See page MT-12)

10. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Access Cab)

11. INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab)

12. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

13. INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)

14. ADD MANUAL TRANSMISSION OIL

15. ADJUST MANUAL TRANSMISSION OIL (See page MT-2)

16. INSTALL NO.2 ENGINE UNDER COVER SUB-ASSEMBLY (See page MT-13)

17. INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY (See page MT-13)

18. **INSTALL SHIFT LEVER BOOT ASSEMBLY (See page MT-13)**
19. **INSTALL FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-22)**

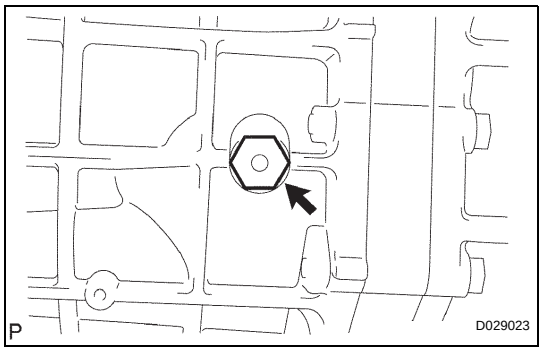
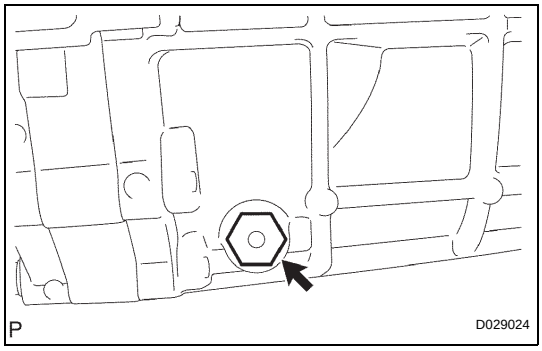
DISASSEMBLY



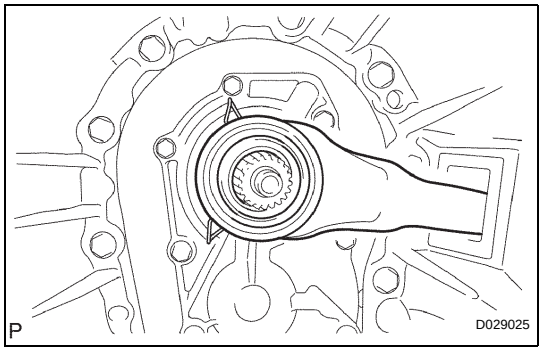
1. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the transmission filler plug and gasket from the transmission case.



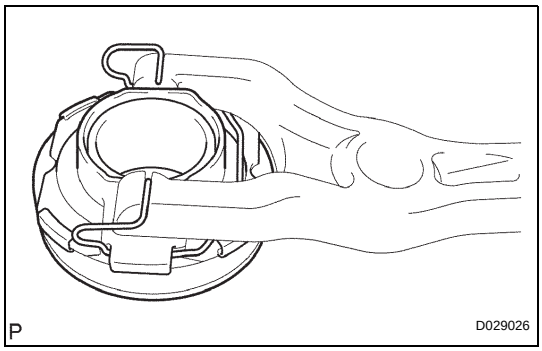
2. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the transmission drain plug and gasket from the transmission case.



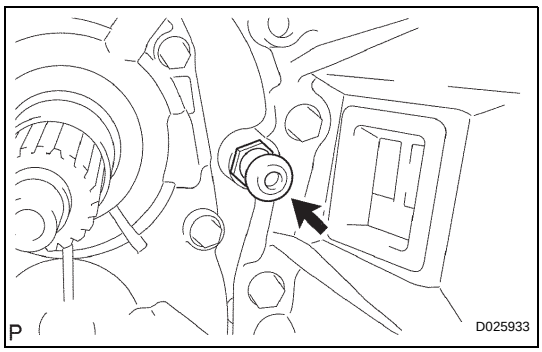
3. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Remove the clutch release fork and clutch release bearing from the clutch housing.



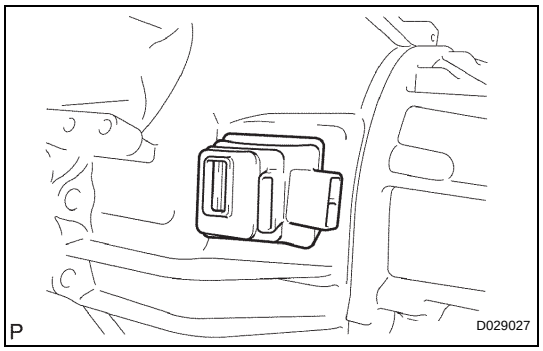
4. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

(a) Remove the release bearing hub clip, and then remove the clutch release bearing from the clutch release fork.



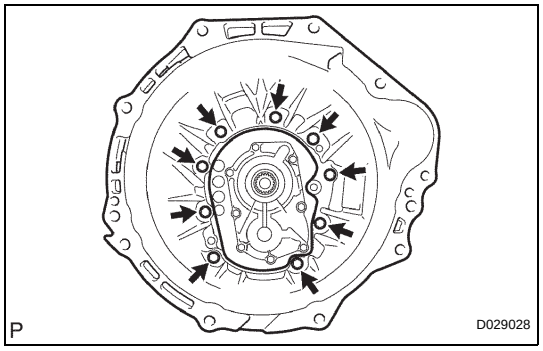
5. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the clutch housing.



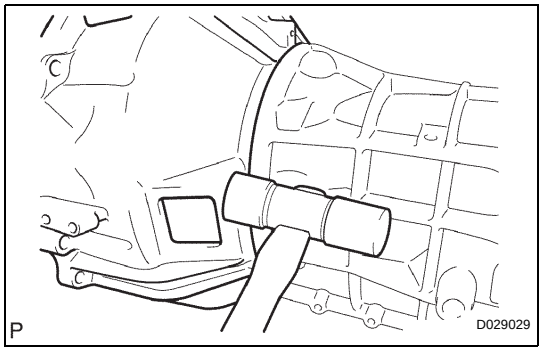
6. REMOVE CLUTCH RELEASE FORK BOOT

(a) Remove the clutch release fork boot from the clutch housing.

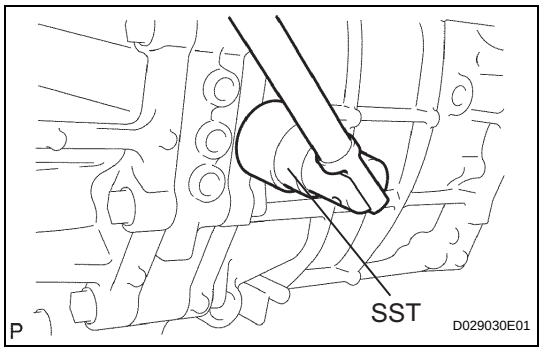


7. REMOVE CLUTCH HOUSING

(a) Remove the 9 bolts.



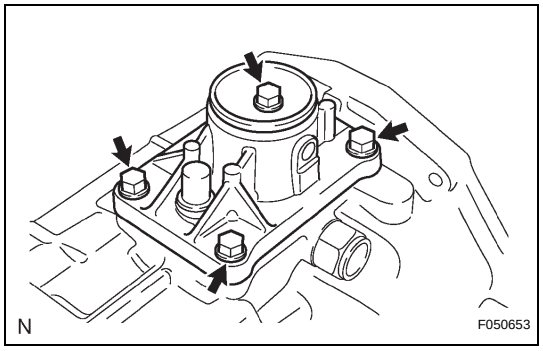
(b) Using a plastic hammer, remove the clutch housing from the transmission case.



8. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, remove the back-up light switch assembly and the gasket from the transmission case.

SST 09817-16011



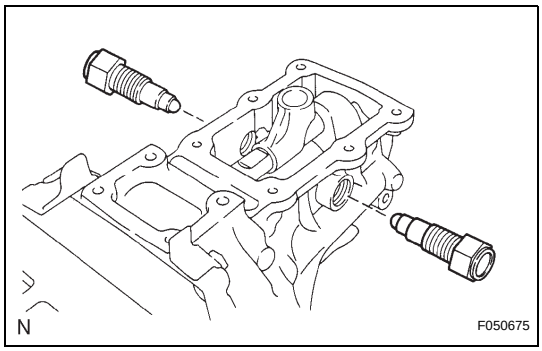
9. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the 4 bolts.

(b) Remove the floor shift control shift lever retainer from the transfer adapter.

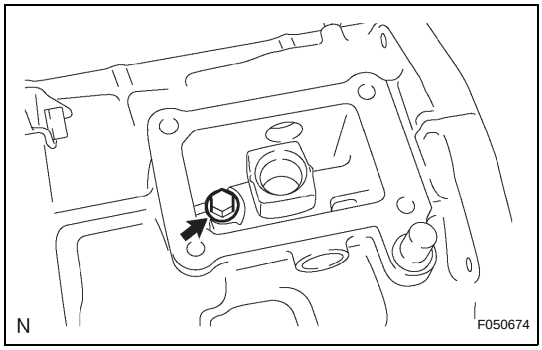
(c) Remove the oil deflector from the transfer adapter.

MT



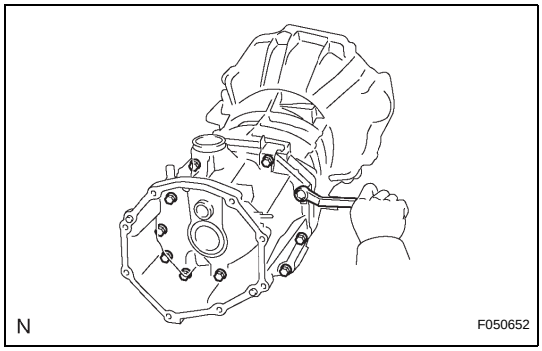
10. REMOVE REVERSE RESTRICT PIN

(a) Remove the 2 reverse restrict pins from the extension housing or transfer adapter.



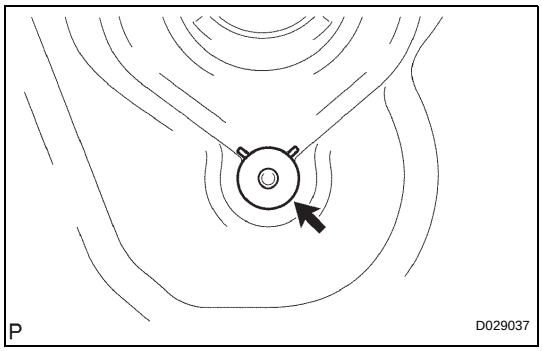
11. REMOVE TRANSFER ADAPTER

(a) Remove the shift lever housing set bolt.



(b) Remove the 10 bolts.

(c) Using a plastic hammer, remove the adapter, shift lever housing and shift and select lever from the transmission case.

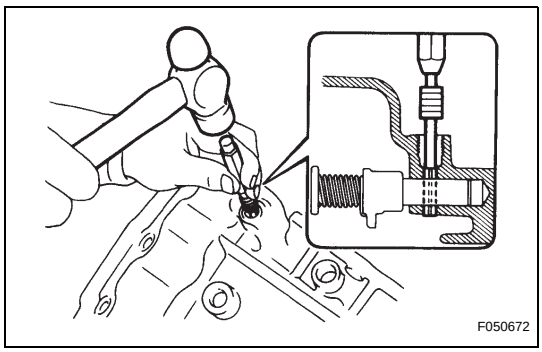


12. REMOVE OIL RECEIVER

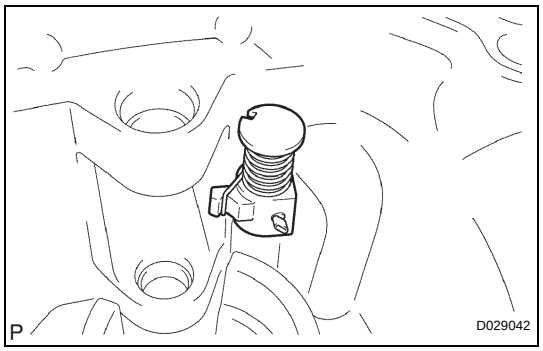
(a) Remove the oil receiver from the transfer adapter.

13. REMOVE REVERSE RESTRICT PIN ASSEMBLY

(a) Using a "Torx" socket wrench T40, remove the reverse restrict pin plug from the transfer adapter.



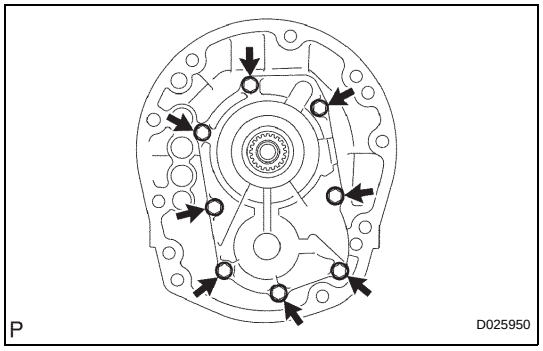
(b) Using a pin punch (5 mm) and a hammer, remove the reverse restrict pin slotted from the transfer adapter or extension housing.



(c) Remove the reverse restrict pin from the transfer adapter or extension housing.

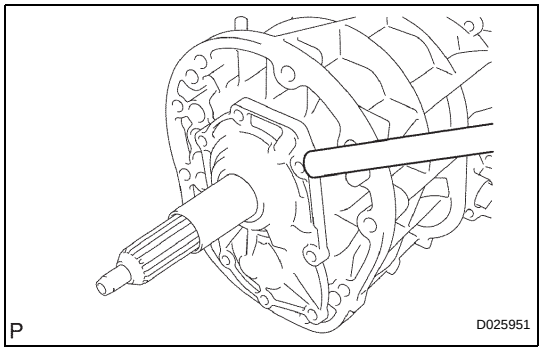
14. REMOVE TRANSFER ADAPTER OIL SEAL

(a) Using a screwdriver, remove the transfer adapter oil seal from the transfer adapter.

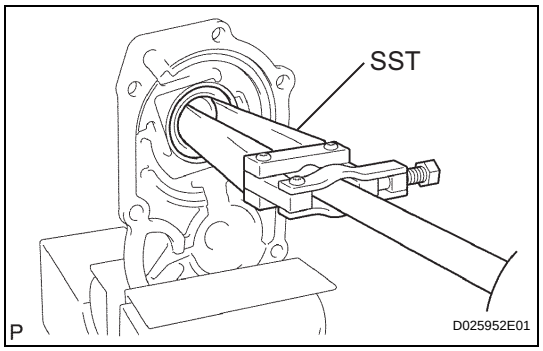


15. REMOVE FRONT BEARING RETAINER

(a) Remove the 8 bolts.



(b) Using a brass bar and a hammer, remove the front bearing retainer from the transmission case.

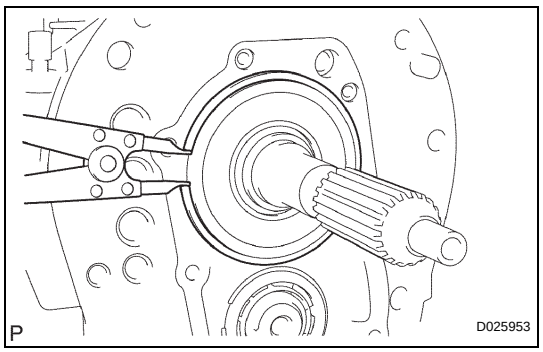


16. REMOVE TRANSMISSION FRONT BEARING RETAINER OIL SEAL

(a) Fix the front bearing retainer in a vise, between aluminum plate.

(b) Using SST, remove the transmission front bearing retainer oil seal.

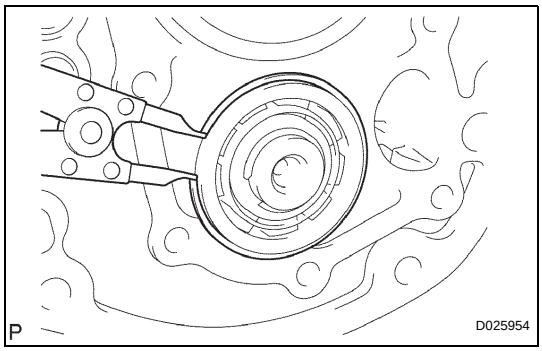
SST 09308-00010



17. REMOVE FRONT BEARING SHAFT SNAP RING

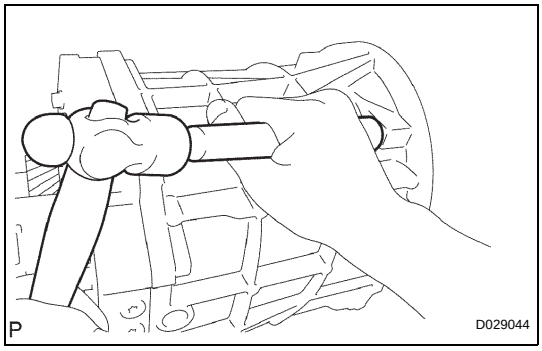
(a) Using a snap ring expander, remove the front bearing shaft snap ring from the transmission case.

MT



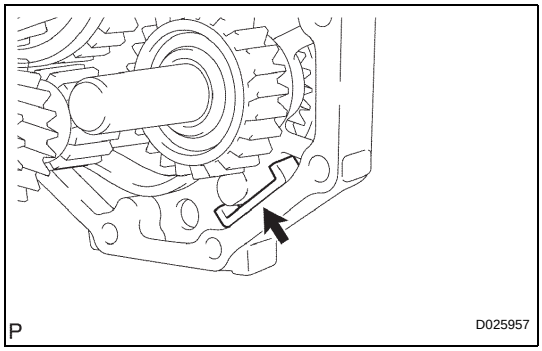
18. REMOVE NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Using a snap ring expander, remove the counter gear front bearing snap ring No. 1 from the transmission case.



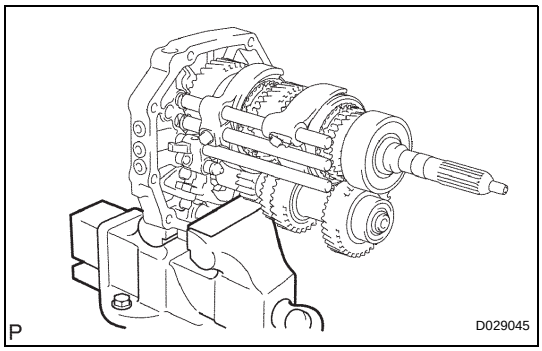
19. REMOVE MANUAL TRANSMISSION CASE

(a) Using a brass bar and a hammer, remove the transmission case from the intermediate plate.



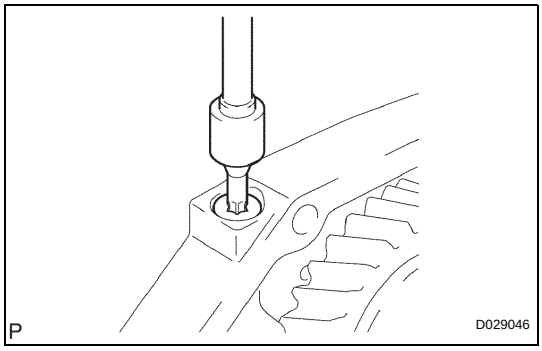
20. REMOVE TRANSMISSION MAGNET

(a) Remove the transmission magnet from the intermediate plate.



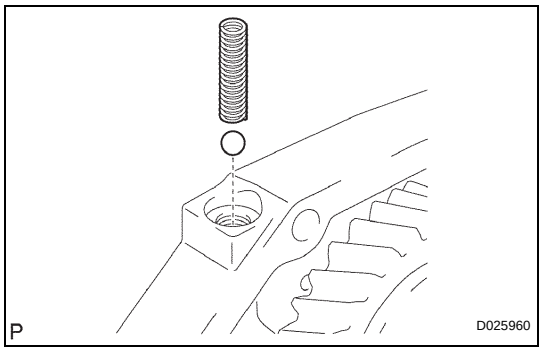
21. FIX INTERMEDIATE PLATE

(a) Fix the intermediate plate in a vice between aluminum plates.

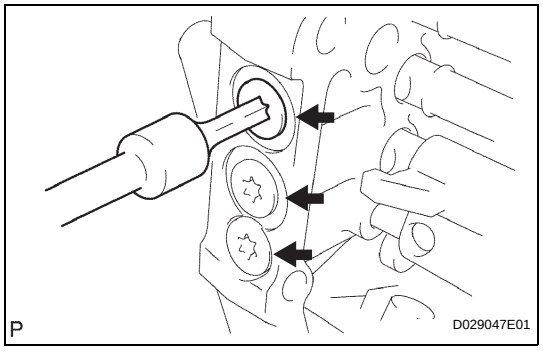


22. REMOVE NO. 1 SHIFT DETENT BALL SPRING SEAT

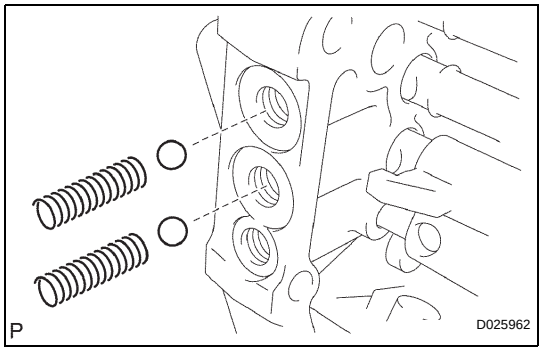
(a) Using a "Torx" socket wrench T40, remove the shift detent ball spring seat No. 1 from the intermediate plate.



(b) Using a magnetic finger, remove the shift detent ball low side compression spring and the shift detent ball from the intermediate plate.

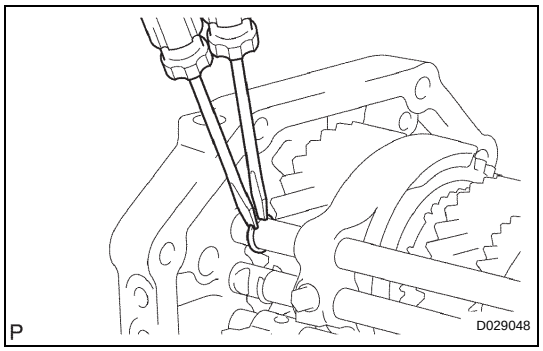


(c) Using a "Torx" socket wrench T40, remove the 3 shift detent ball spring seats No. 1 from the intermediate plate.



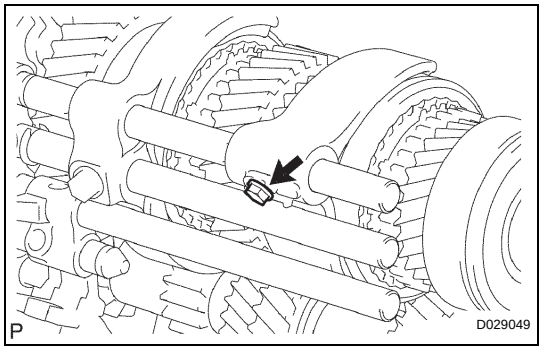
(d) Using a magnetic finger, remove the 2 shift detent ball low side compression springs and the 2 shift detent balls from the intermediate plate.

23. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

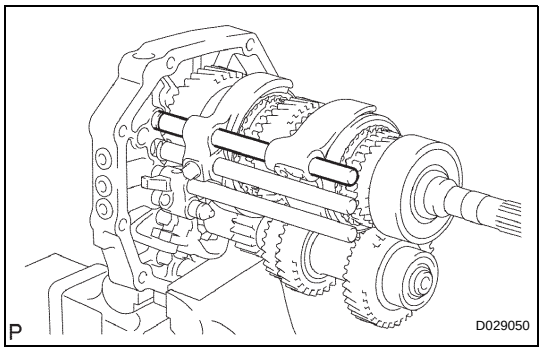


(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the gear shift fork shaft No. 2.

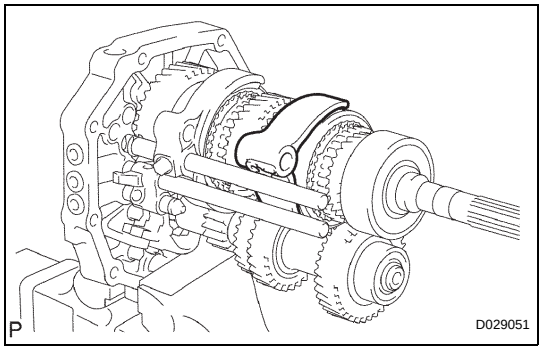
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



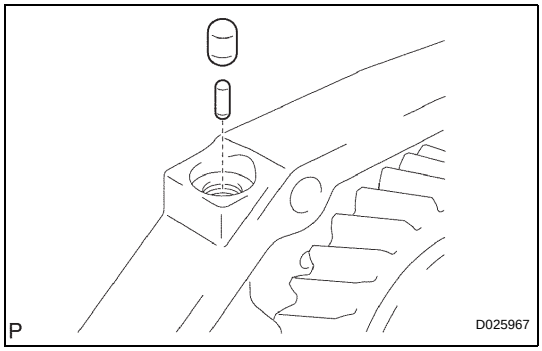
(b) Remove the shift fork set bolt from the gear shift fork No. 2.



(c) Remove the gear shift fork shaft No. 2 from the intermediate plate.

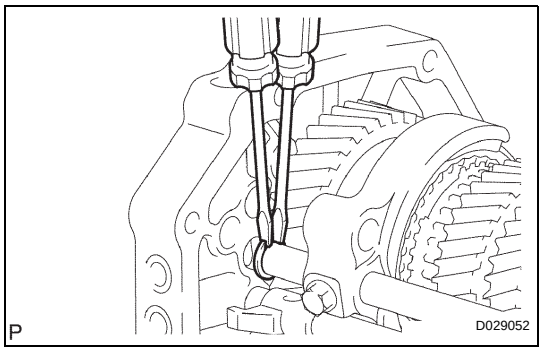


(d) Remove the gear shift fork No. 2 from the transmission hub sleeve No. 2.



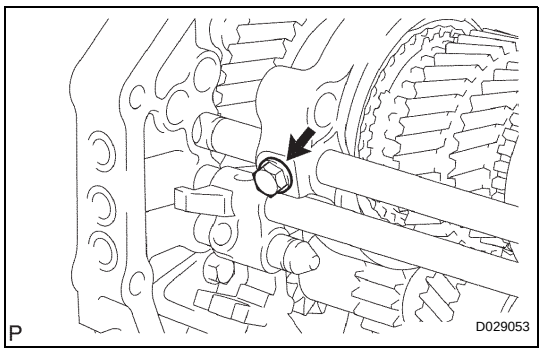
(e) Using a magnetic finger, remove the shift interlock No. 1 roller and the shift interlock pin (ball) from the intermediate plate.

24. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

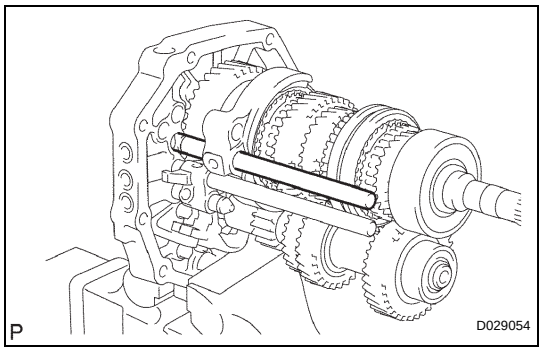


(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the gear shift fork shaft No. 1.

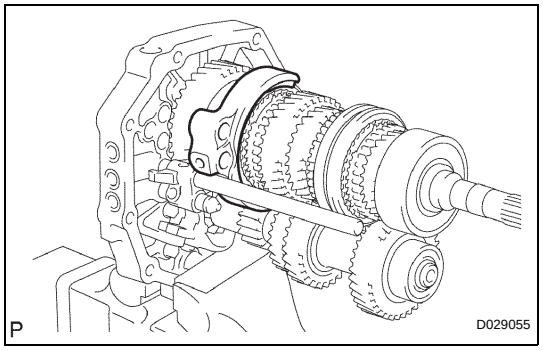
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



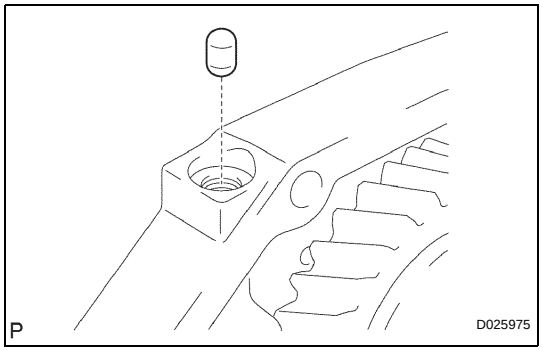
(b) Remove the shift fork set bolt from the gear shift fork No. 1.



(c) Remove the gear shift fork shaft No. 1 from the intermediate plate.

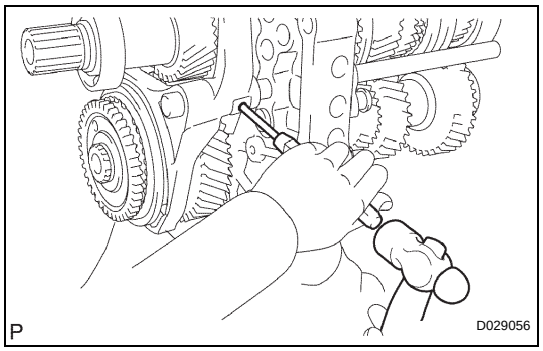


(d) Remove the gear shift fork No. 1 from the reverse gear.

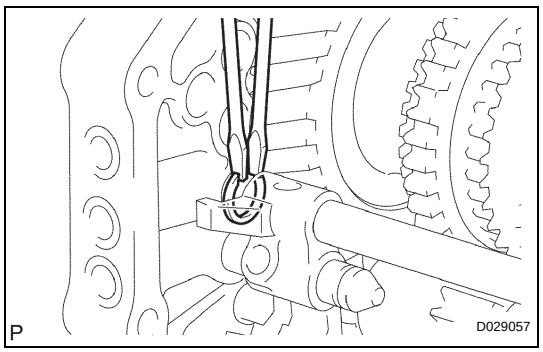


(e) Using a magnetic finger, remove the shift interlock No. 1 roller from the intermediate plate.

25. REMOVE REVERSE SHIFT FORK SHAFT

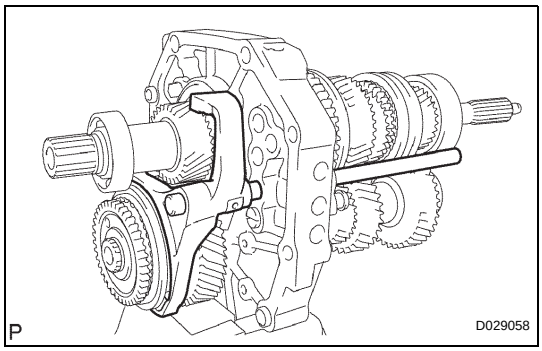


(a) Using a pin punch (5 mm) and a hammer, remove the shift fork set slotted spring pin from the gear shift fork No. 3.



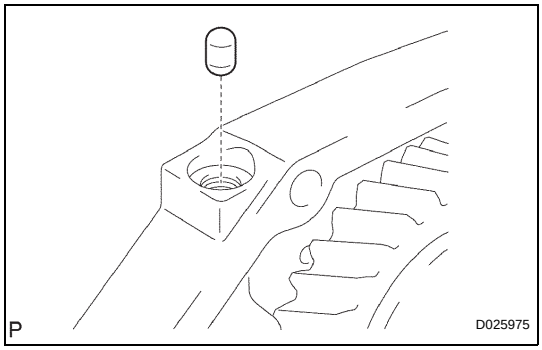
(b) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the reverse shift fork shaft.

NOTICE:
Use a shop rag to prevent the snap ring from flying off.

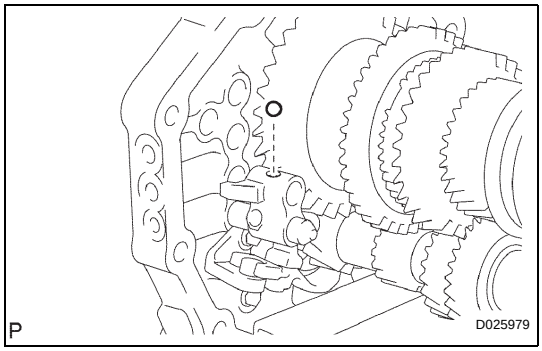


(c) Remove the gear shift fork No. 3 and reverse shift fork shaft from the intermediate plate.

MT

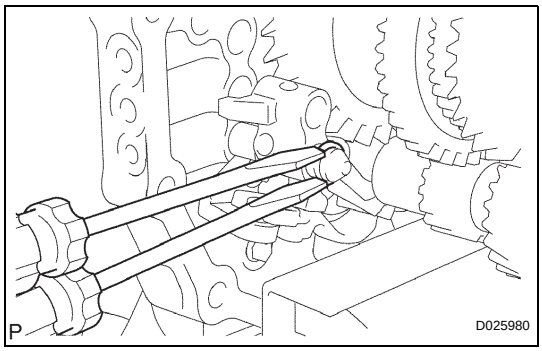


(d) Using a magnetic finger, remove the shift interlock No. 1 roller from the intermediate plate.

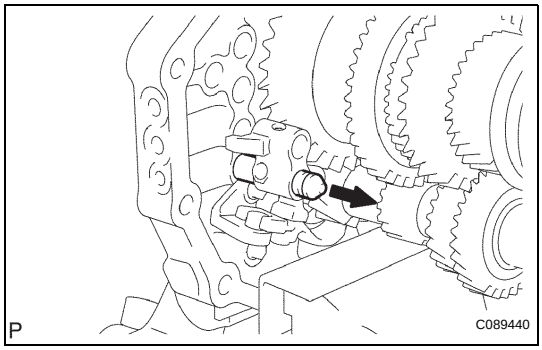


(e) Using a magnetic finger, remove the reverse shift fork ball from the reverse shift fork.

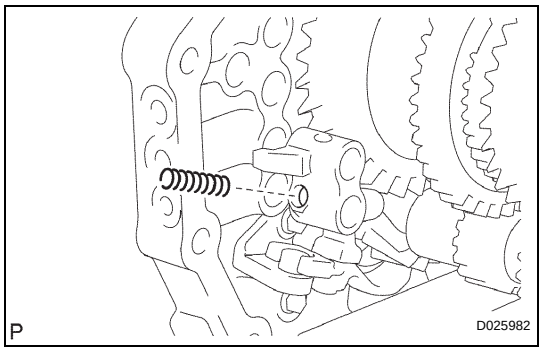
26. REMOVE 5TH SHIFT ARM SHAFT



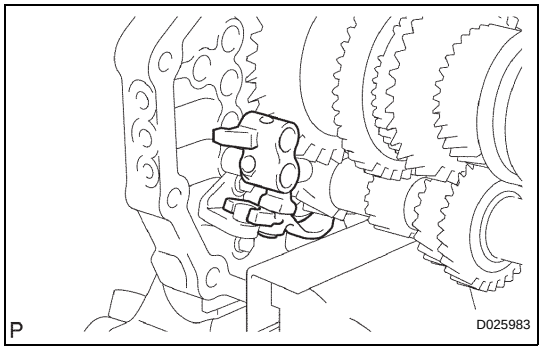
(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the 5th shift arm shaft.
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



(b) Remove the 5th shift arm shaft from the intermediate plate.
NOTICE:
Cover the hole with a shop rag to prevent the reverse shift fork ball from popping out.

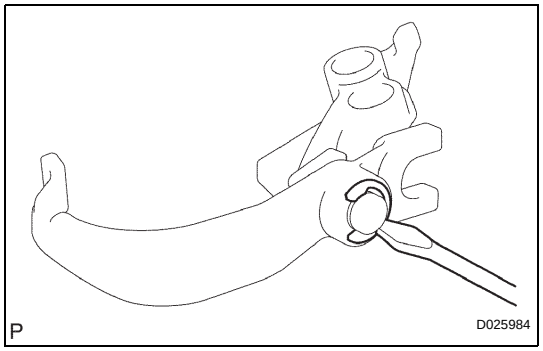


(c) Using a magnetic finger, remove the reverse shift fork return compression spring from the reverse shift fork.

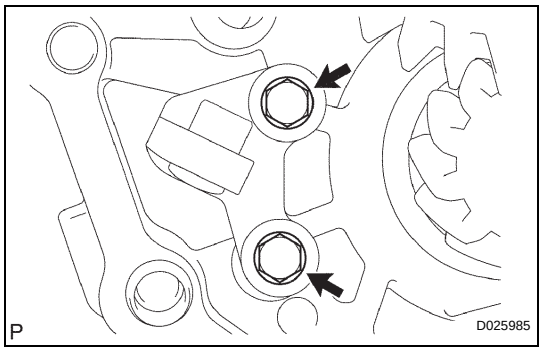


27. REMOVE REVERSE SHIFT FORK

(a) Remove the reverse shift fork together with the reverse shift arm from the intermediate plate.

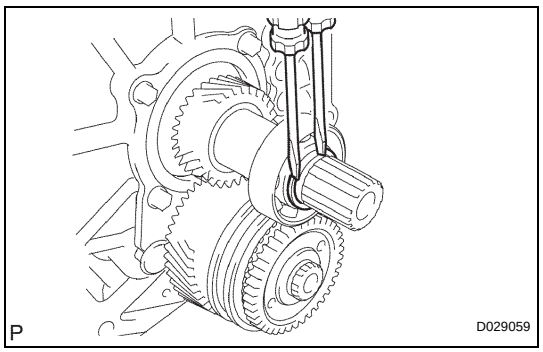


(b) Using a screwdriver, remove the reverse shift arm end shaft ring and the reverse shift fork from the reverse shift arm.



28. REMOVE REVERSE SHIFT ARM BRACKET

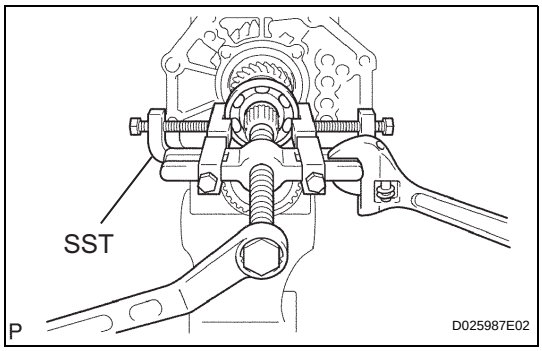
(a) Remove the 2 bolts and reverse shift arm bracket from the intermediate plate.



29. REMOVE OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the output shaft bearing shaft snap ring from the output shaft.

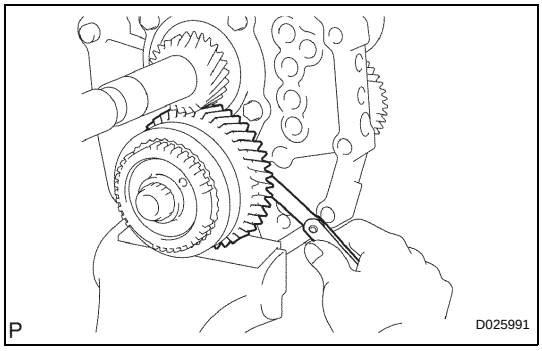
MT



30. REMOVE OUTPUT SHAFT REAR BEARING

(a) Using SST, remove the output shaft rear bearing and output shaft spacer from the output shaft.

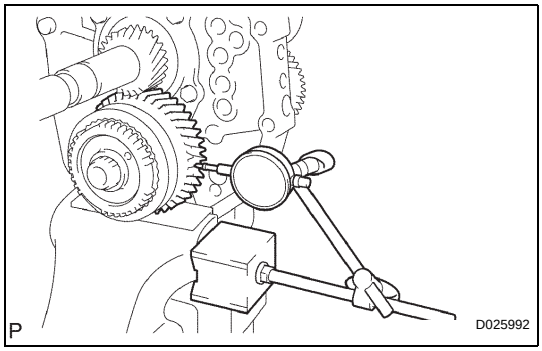
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04051, 09957-04010, 09958-04011)



31. INSPECT COUNTER SHAFT 5TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the counter shaft 5th gear thrust clearance.

Standard clearance:
0.10 to 0.35 mm (0.0039 to 0.0138 in.)

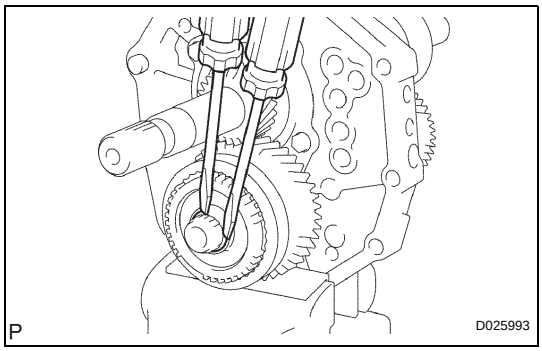


32. INSPECT COUNTER SHAFT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the counter shaft 5th gear.

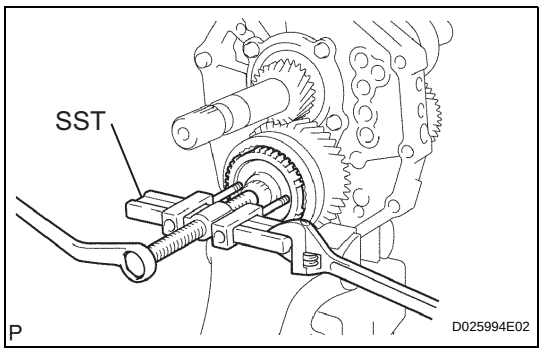
Standard clearance:
0.015 to 0.068 mm (0.0059 to 0.0027 in.)

If the clearance is not within the specified values, replace the counter 5th gear bearing with a new one.



33. REMOVE COUNTER GEAR REAR SHAFT SNAP RING

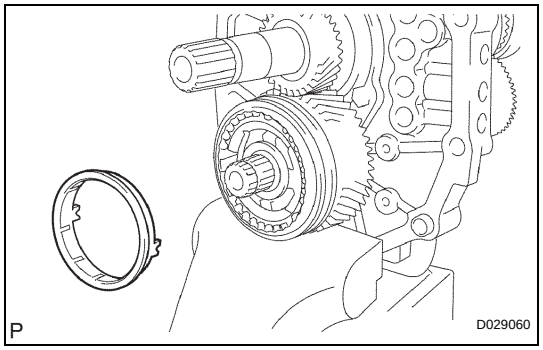
(a) Using 2 screwdrivers and a hammer, remove the counter gear rear shaft snap ring from the counter gear.



34. REMOVE NO. 5 GEAR SPLINE PIECE

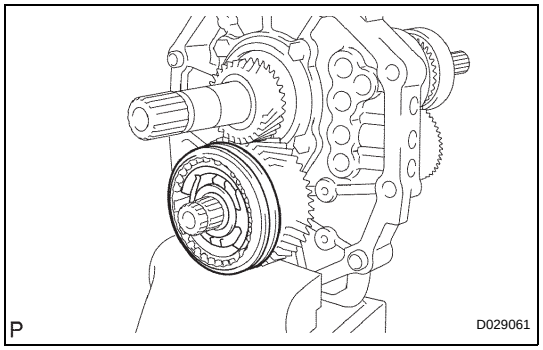
(a) Using SST, remove the gear spline piece No. 5 from the counter gear.

SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021, 09957-04010)



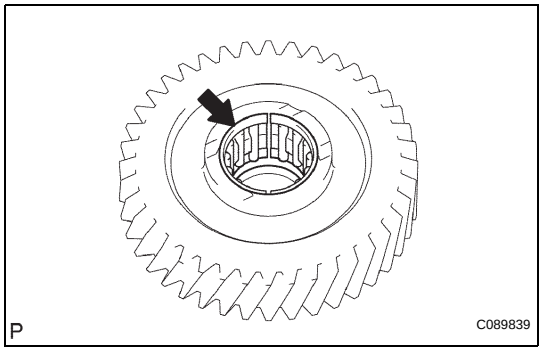
35. REMOVE NO. 3 SYNCHRONIZER RING OUTER

(a) Remove the synchronizer ring outer No. 3 from the counter gear.



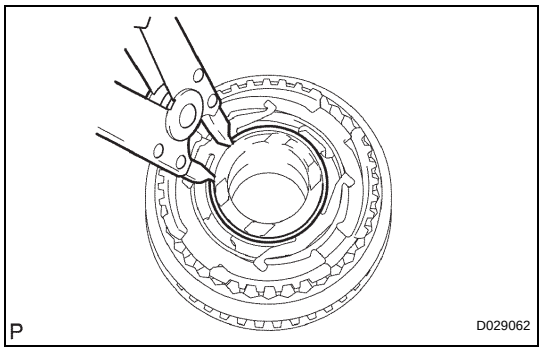
36. REMOVE COUNTER SHAFT 5TH GEAR

(a) Remove the counter shaft 5th gear and transmission hub sleeve No. 3 assembly from the counter gear.



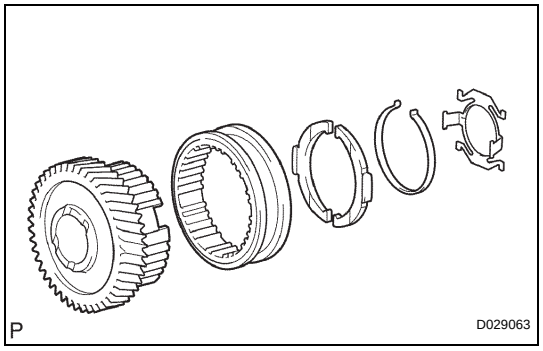
37. REMOVE COUNTER 5TH GEAR BEARING

(a) Remove the counter 5th gear bearing from the counter 5th gear.



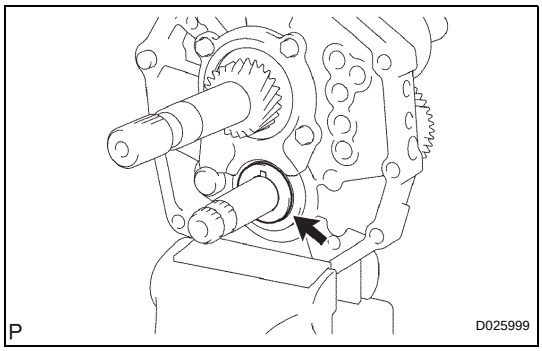
38. REMOVE NO. 3 TRANSMISSION HUB SLEEVE

(a) Using a snap ring expander, remove the snap ring.



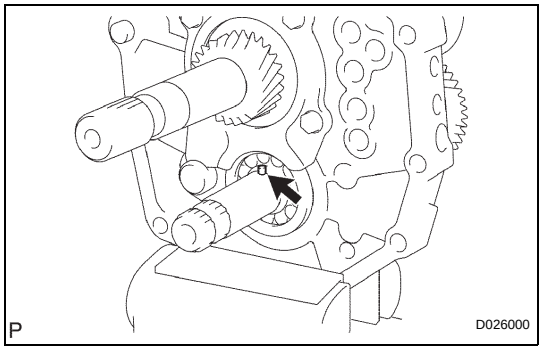
(b) Remove the transmission hub sleeve No. 3, 2 synchromesh shifting keys No. 3 and 2 synchromesh shifting key springs No. 3 from the counter shaft 5th gear.

MT



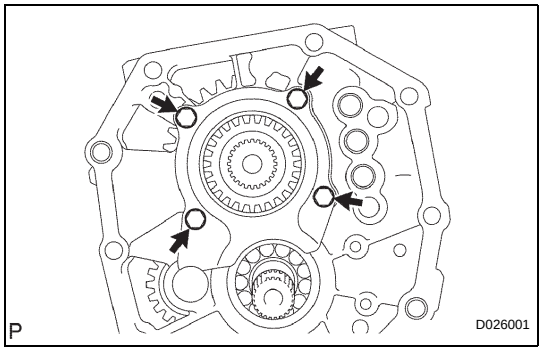
39. REMOVE 5TH GEAR THRUST WASHER

(a) Remove the 5th gear thrust washer from the counter gear.



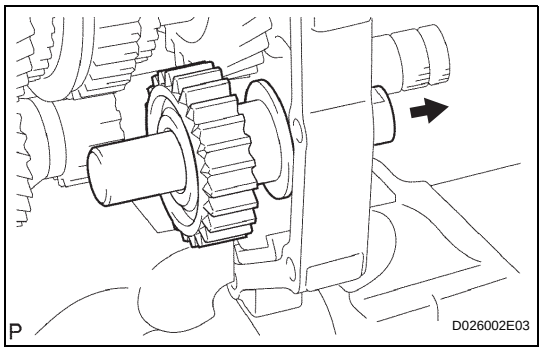
40. REMOVE 5TH GEAR THRUST WASHER PIN

(a) Remove the 5th gear thrust washer pin from the counter gear.



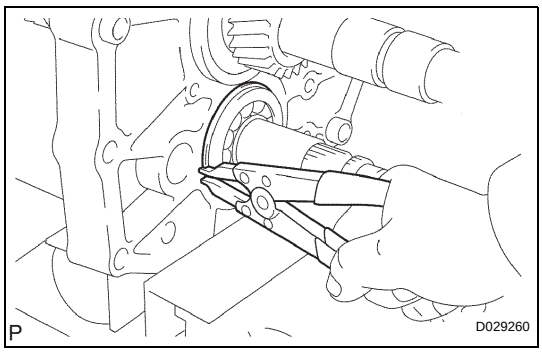
41. REMOVE OUTPUT SHAFT REAR BEARING RETAINER

(a) Remove the 4 bolts and output shaft rear bearing retainer from the intermediate plate.



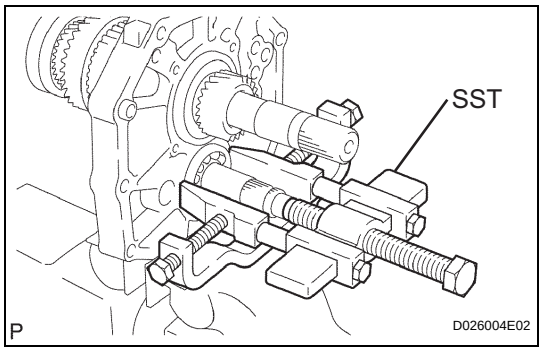
42. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Pull out the reverse idler gear shaft to the rear side and remove the reverse idler gear from the intermediate plate.



43. REMOVE COUNTER SHAFT CENTER BEARING

(a) Using a snap ring expander, remove the snap ring.

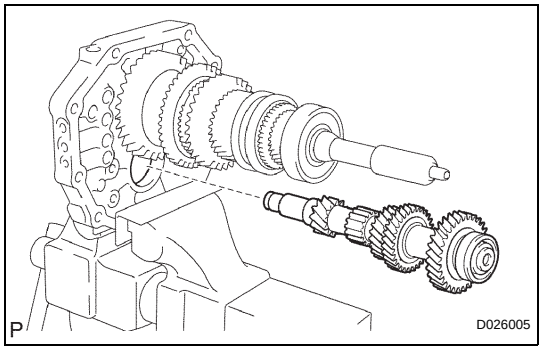


(b) Using SST, remove the counter shaft center bearing from the intermediate plate.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011)

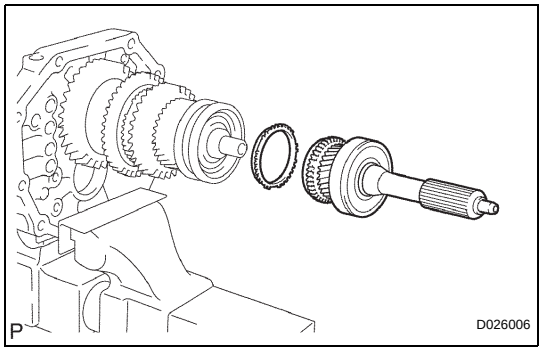
HINT:

Remove the bearing while tapping the tip of the counter gear so that the counter gear assembly is not pushed forward into the side wall of the output shaft gear.



44. REMOVE COUNTER GEAR

(a) Remove the counter gear assembly from the intermediate plate.

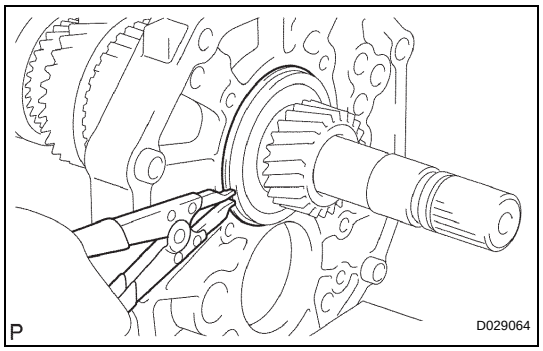


45. REMOVE INPUT SHAFT ASSEMBLY

(a) Remove the input shaft assembly and synchronizer ring No. 2 from the output shaft.

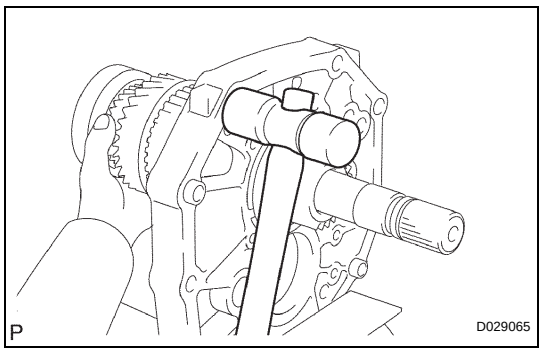
NOTICE:

Do not drop the input shaft bearing and synchronizer ring No. 2.



46. REMOVE OUTPUT SHAFT BEARING SHAFT SNAP RING

(a) Using a snap ring expander, remove the output shaft bearing shaft snap ring from the output shaft.



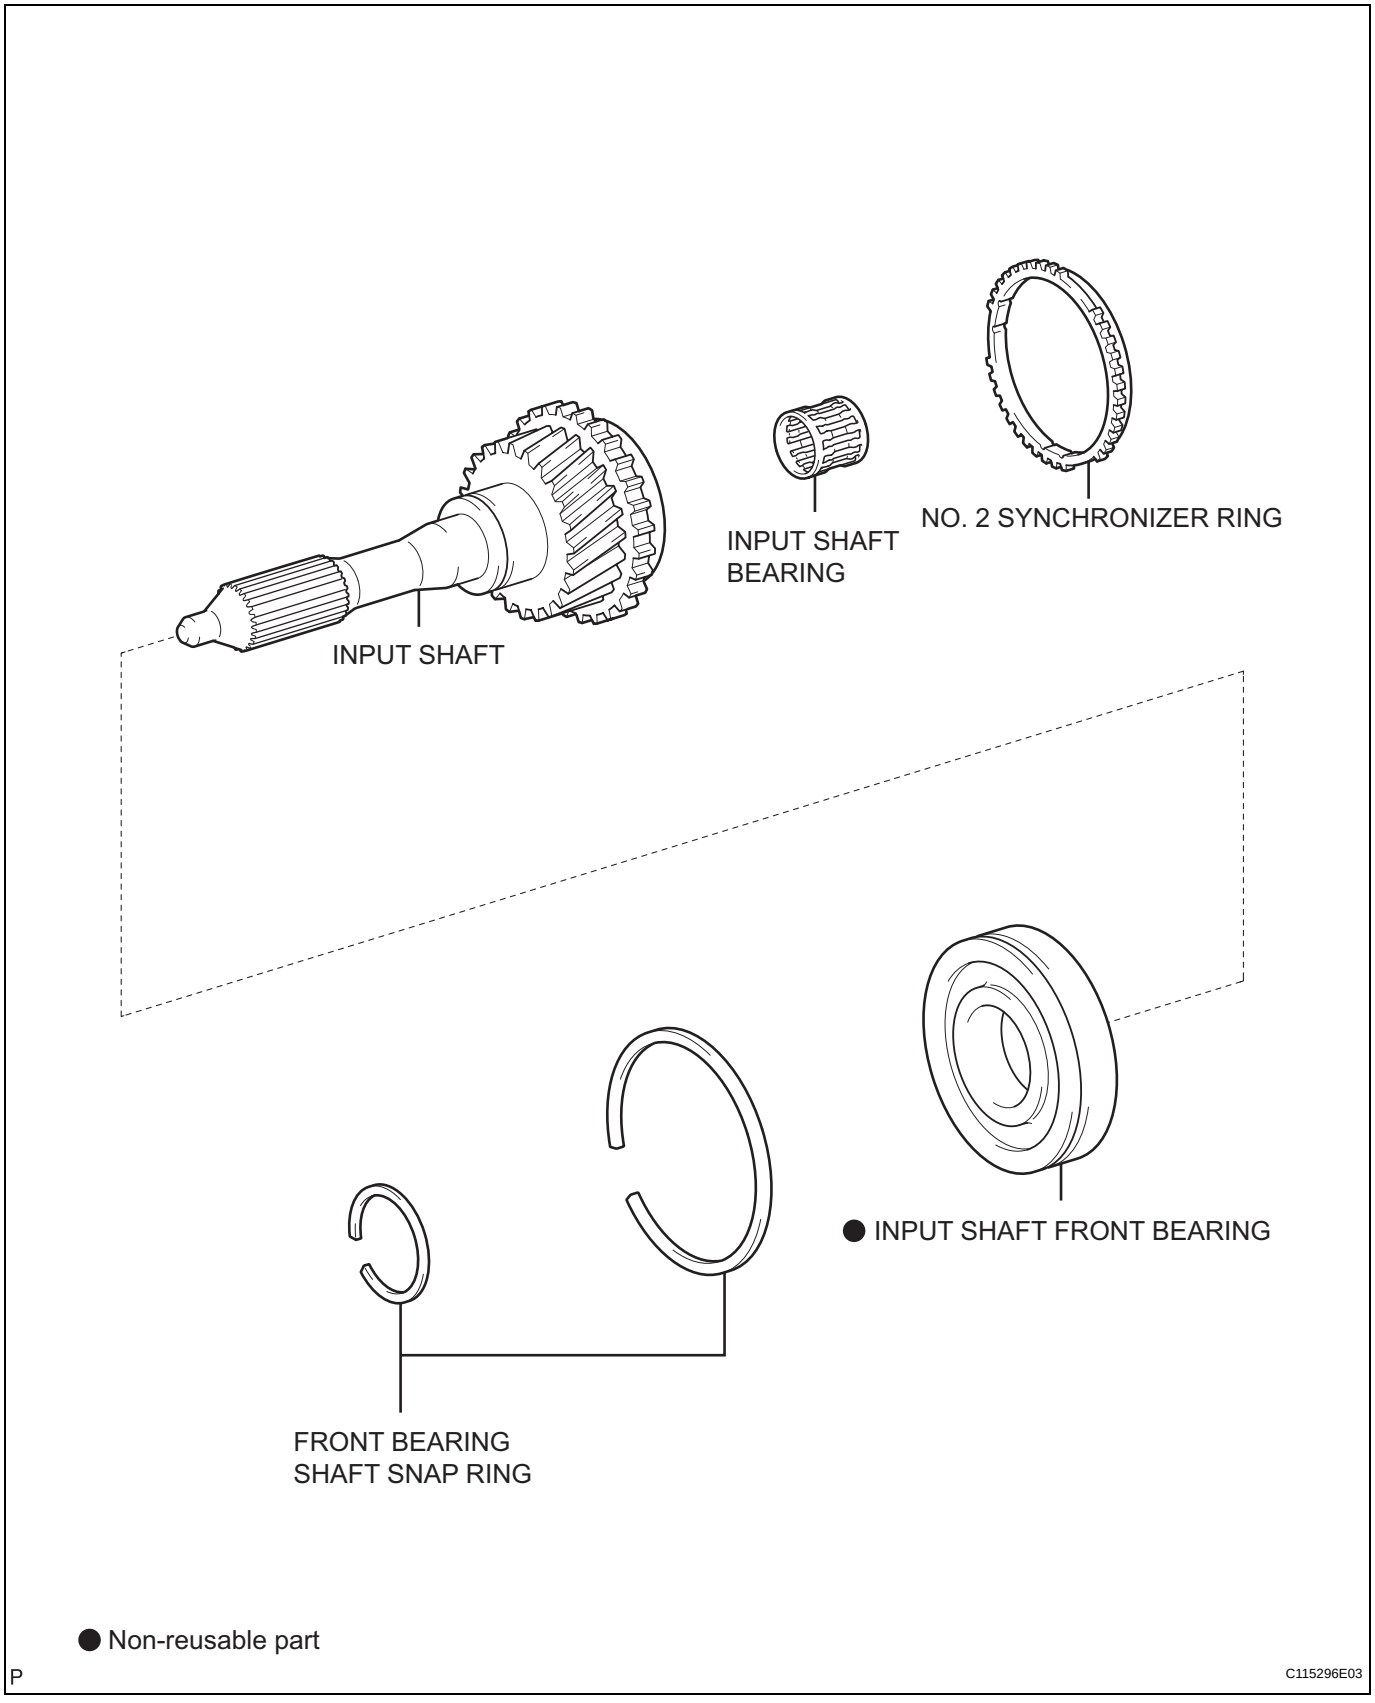
47. REMOVE OUTPUT SHAFT ASSEMBLY

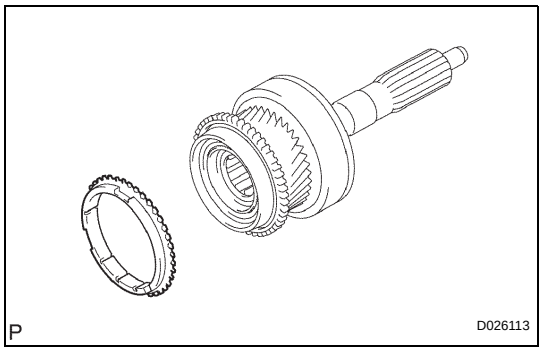
(a) Using a plastic hammer, remove the output shaft assembly by tapping the intermediate plate.

MT

INPUT SHAFT

COMPONENTS

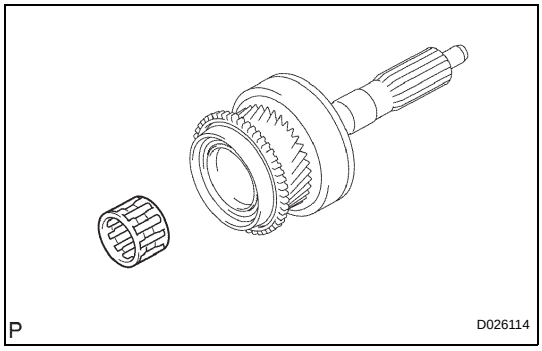




DISASSEMBLY

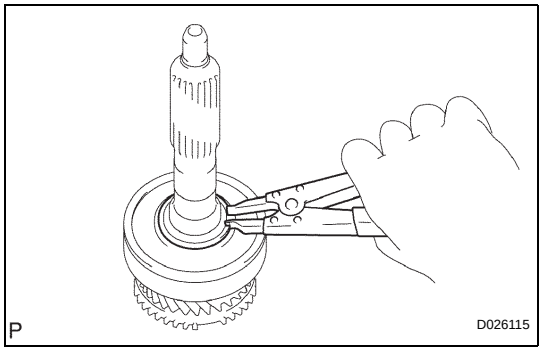
1. REMOVE NO. 2 SYNCHRONIZER RING

(a) Remove synchronizer ring No. 2 from the input shaft.



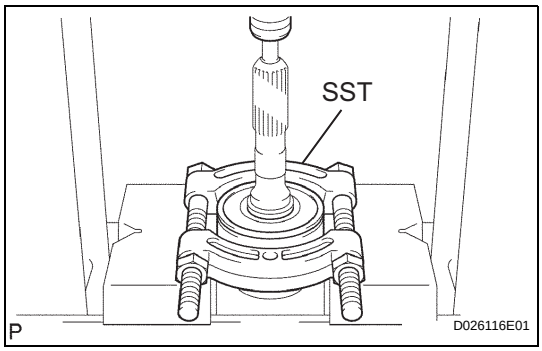
2. REMOVE INPUT SHAFT BEARING

(a) Remove the input shaft bearing from the input shaft.



3. REMOVE FRONT BEARING SHAFT SNAP RING

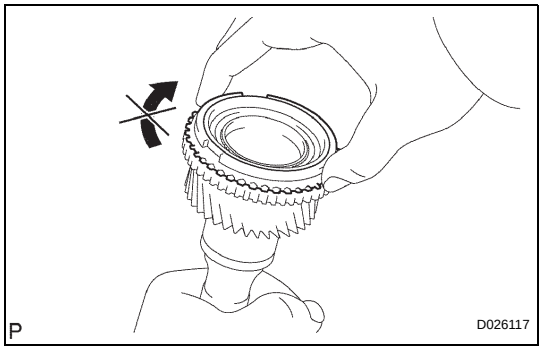
(a) Using a snap ring expander, remove the front bearing shaft snap ring from the input shaft.



4. REMOVE INPUT SHAFT FRONT BEARING

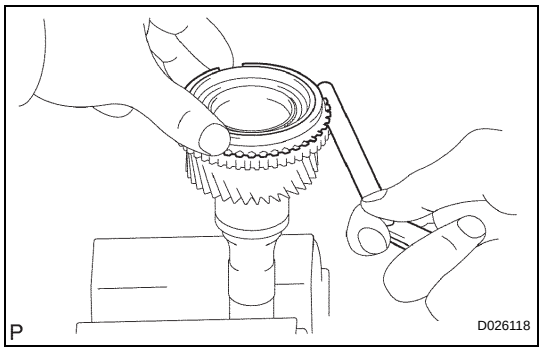
(a) Using SST and a press, remove the input shaft front bearing FR from the input shaft.
SST 09950-00020

INSPECTION



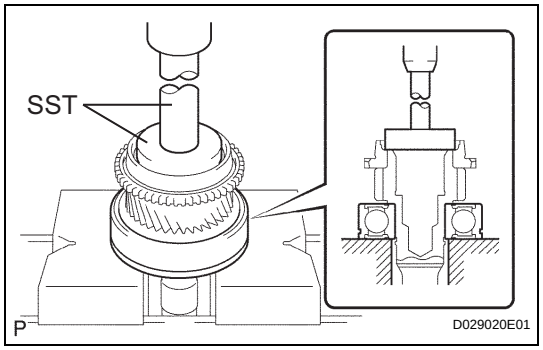
1. INSPECT NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the cone of the input shaft, and check that it does not turn in the both directions while pushing the synchronizer ring No. 2.



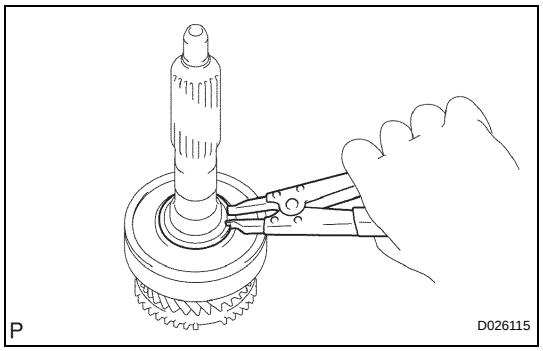
(b) Check the clearance between the synchronizer ring No. 2 and input shaft while pushing the synchronizer ring No. 2 to the cone of the input shaft.
Standard clearance:
0.70 to 1.70 mm (0.0276 to 0.0669 in.)
If the clearance is not within the specified values, replace synchronizer ring No. 2 with a new one.

REASSEMBLY



1. INSTALL INPUT SHAFT FRONT BEARING

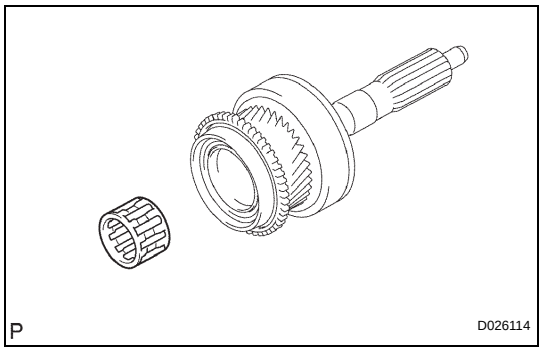
(a) Using SST and a press, install a new input shaft front bearing FR onto the input shaft.
SST 09950-60010 (09951-00570), 09950-70010 (09951-07100)
NOTICE:
Install the input shaft front bearing with the snap ring groove facing to the front.



2. INSTALL FRONT BEARING SHAFT SNAP RING

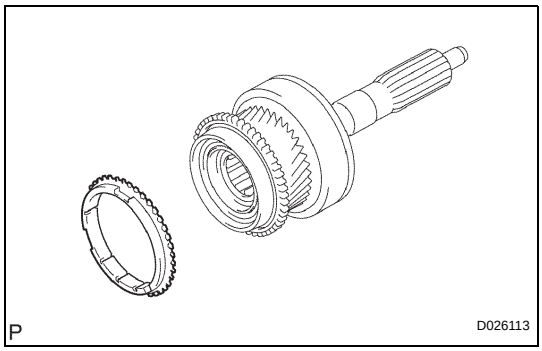
(a) Select the correct input shaft front bearing snap ring so that the clearance between the input shaft and input shaft front bearing is within the specified values.
Standard clearance:
0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)



3. INSTALL INPUT SHAFT BEARING

(a) Apply gear oil to the input shaft bearing and install it onto the input shaft.

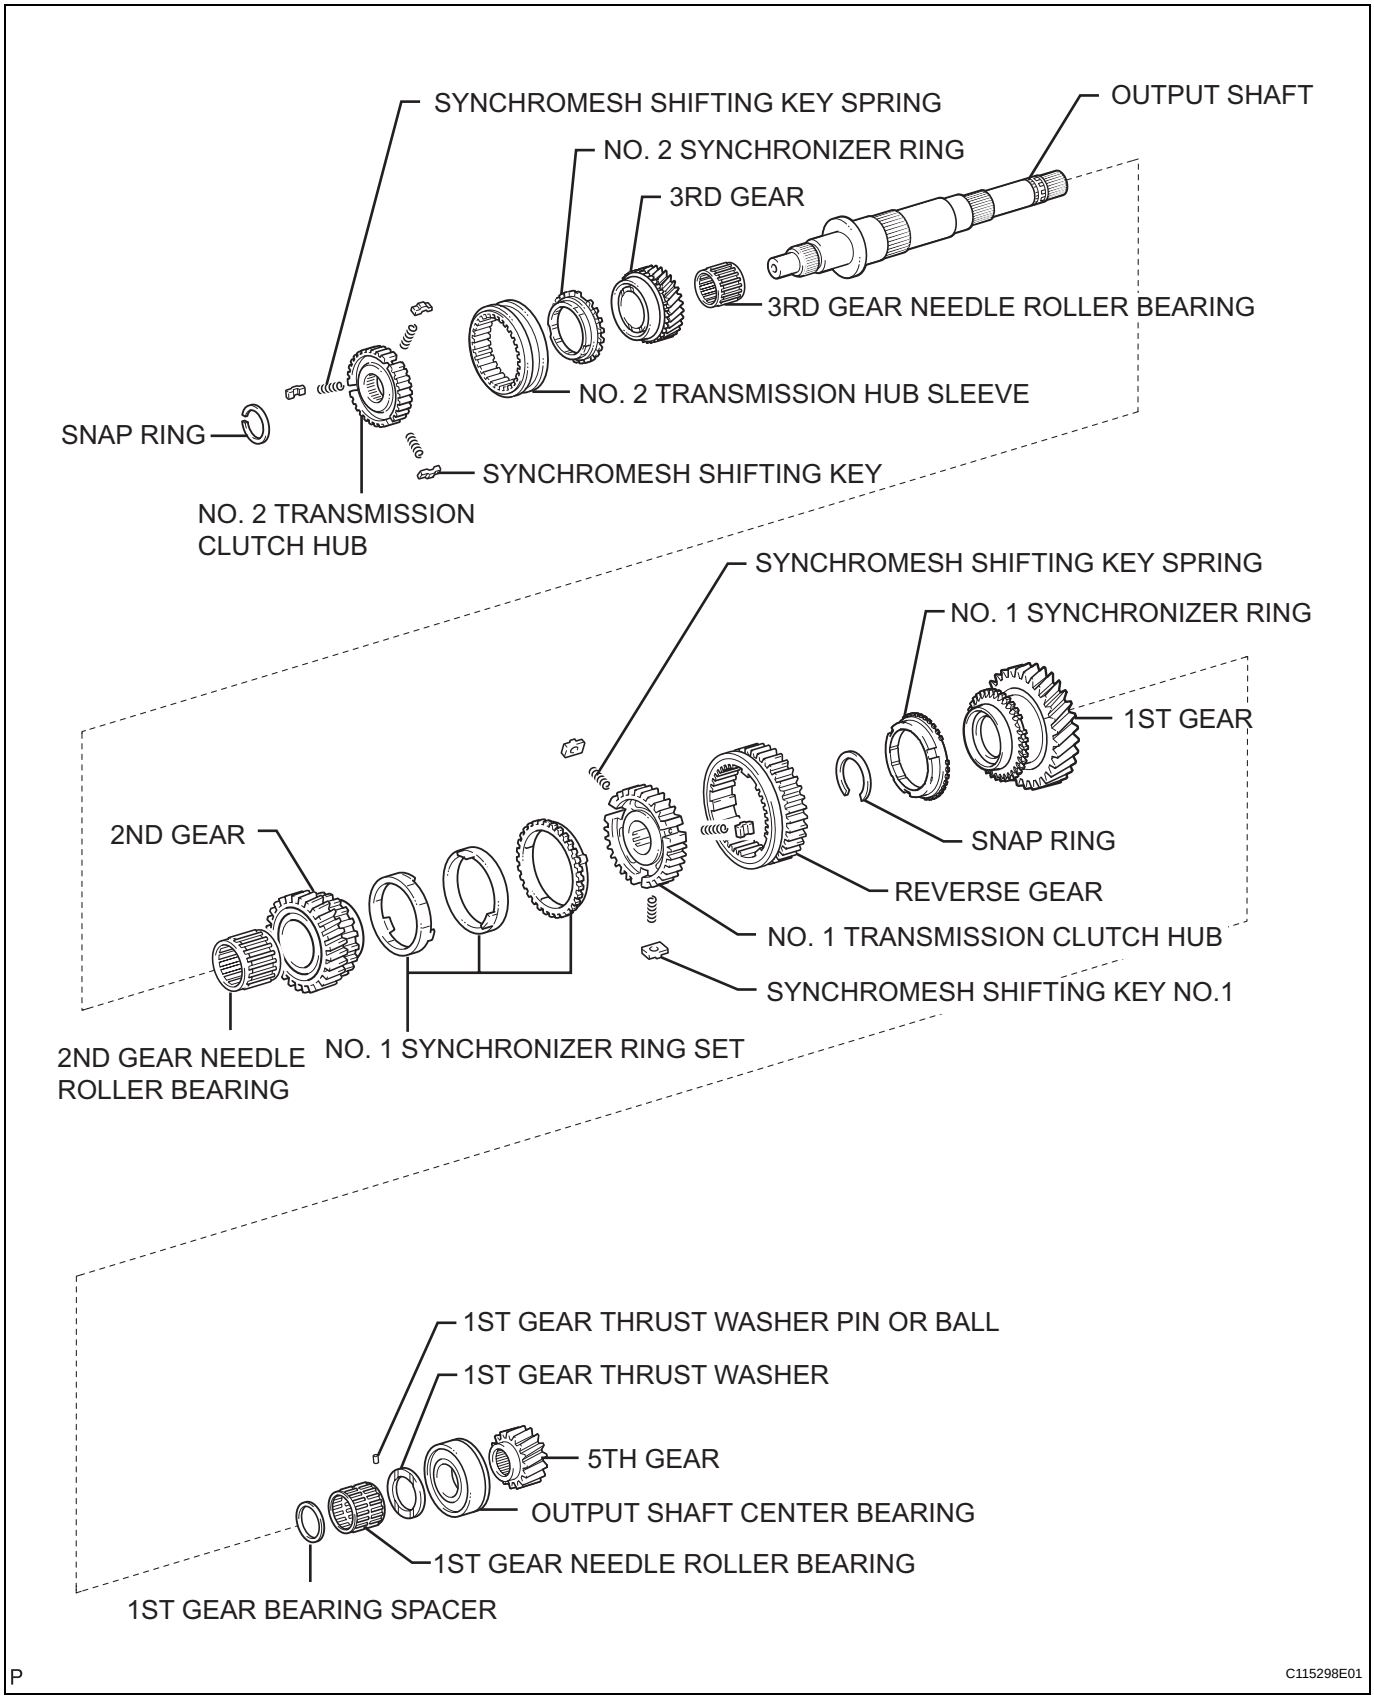


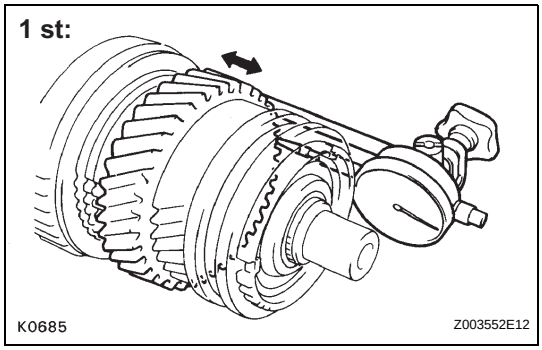
4. INSTALL NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to synchronizer ring No. 2, and install it onto the input shaft.

OUTPUT SHAFT

COMPONENTS





DISASSEMBLY

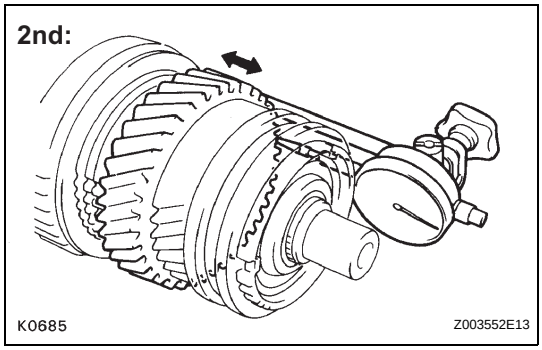
1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator measure the thrust clearance of the 1st gear.

Standard clearance:

0.20 to 0.45 mm(0.0079 to 0.0177 in.)

MT

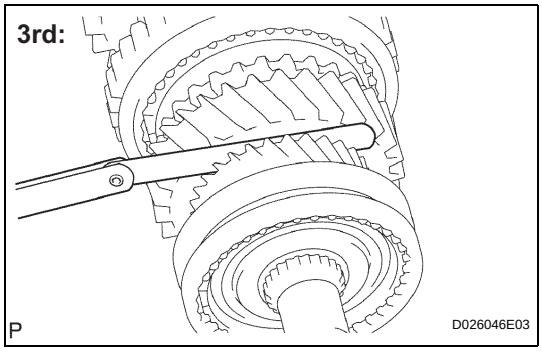


2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator measure the thrust clearance of the 2nd gear.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

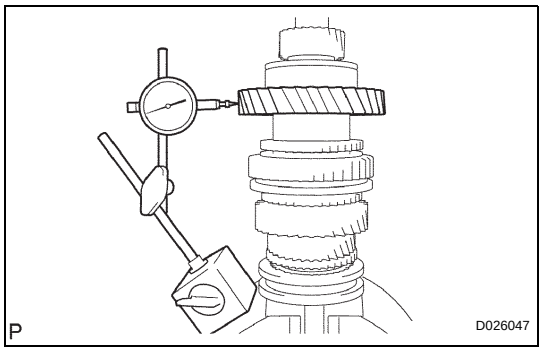


3. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the thrust clearance of the 3rd gear.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)



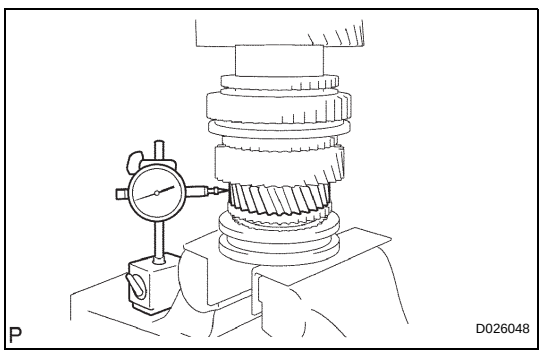
4. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 1st gear.

Standard clearance:

0.020 to 0.073 mm (0.0008 to 0.0029 in.)

If the clearance is not within the specified values, replace the 1st gear needle roller bearing with a new one.



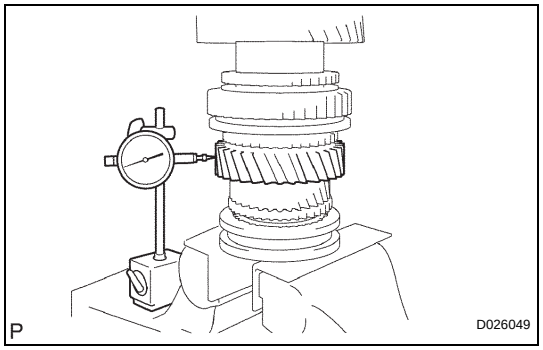
5. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 2nd gear.

Standard clearance:

0.015 to 0.068mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 2nd gear needle roller bearing with a new one.



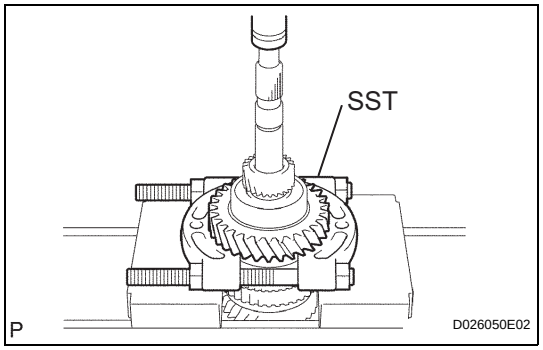
6. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance of the 3rd gear.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

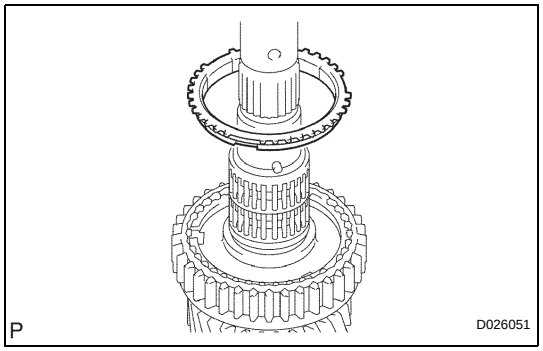
If the clearance is not within the specified values, replace the 3rd gear needle roller bearing with a new one.



7. REMOVE 1ST GEAR

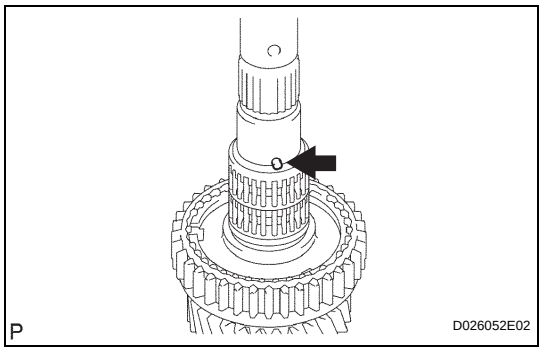
(a) Using SST and a press, remove the 5th gear, output shaft center bearing, 1st gear thrust washer and 1st gear from the output shaft.

SST 09950-00020



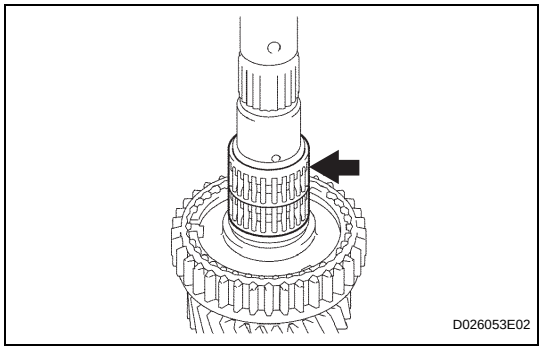
8. REMOVE NO. 1 SYNCHRONIZER RING

(a) Remove synchronizer ring No. 1 (for the 1st gear) from the output shaft.



9. REMOVE 1ST GEAR THRUST WASHER PIN OR BALL

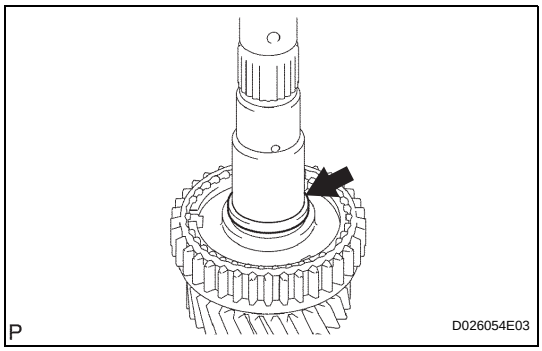
(a) Remove the 1st gear thrust washer pin from the output shaft.



10. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.

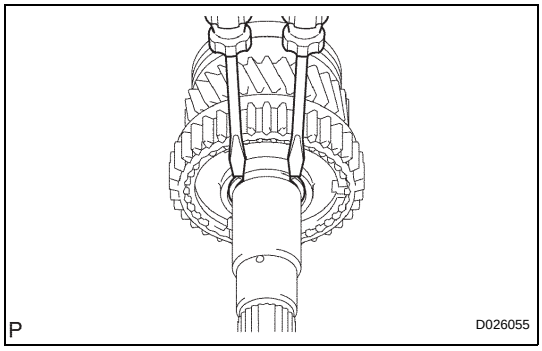
MT



11. REMOVE 1ST GEAR BEARING SPACER

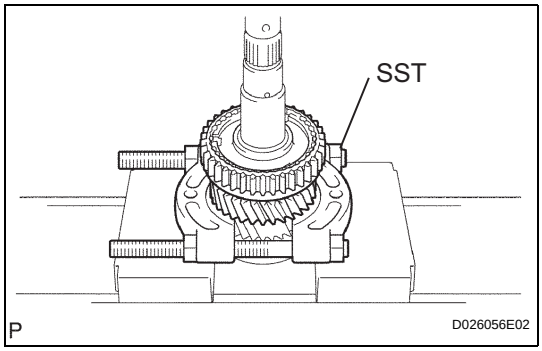
(a) Remove the 1st gear bearing spacer from the output shaft.

MT



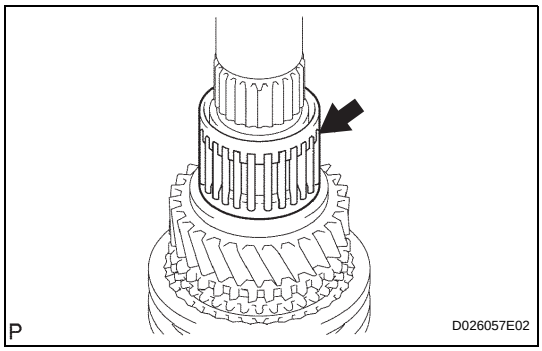
12. REMOVE BEARING SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the bearing shaft snap ring from the output shaft.
NOTICE:
Use a shop rag to prevent the snap ring from flying off.



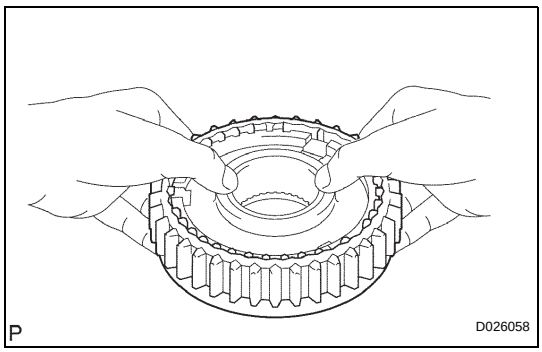
13. REMOVE 2ND GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 1, reverse gear, synchronizer ring No. 1 and 2nd gear from the output shaft.
SST 09950-00020



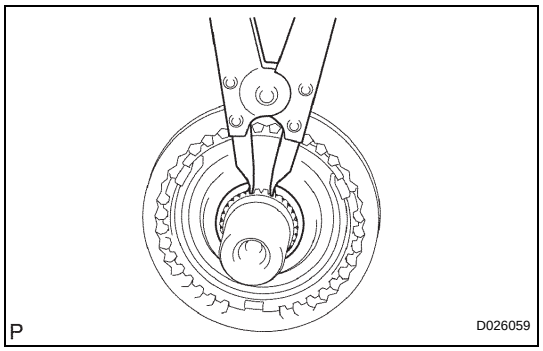
14. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing from the output shaft.



15. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys No. 1 and 3 synchromesh shifting key springs. Use a shop rag to prevent the shifting key and the shifting spring from popping out.

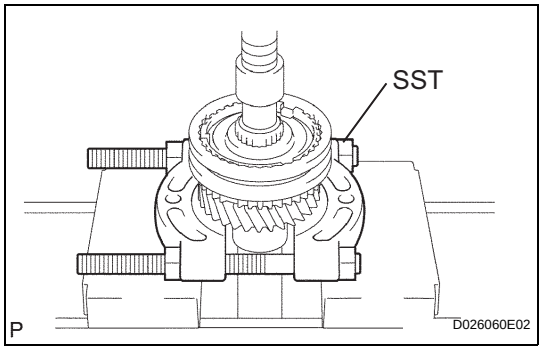


16. REMOVE CLUTCH HUB SET SHAFT SNAP RING

(a) Using snap ring pliers, remove the clutch hub set shaft snap ring from the output shaft.

NOTICE:

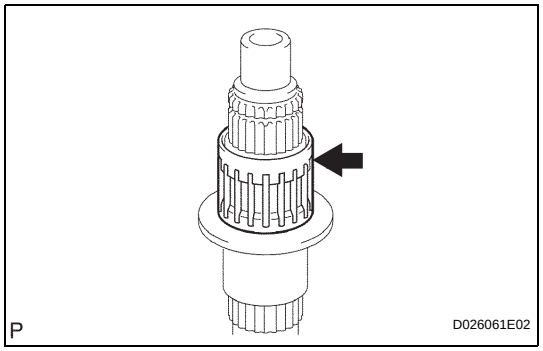
Do not damage the sliding surface of the bearing.



17. REMOVE 3RD GEAR

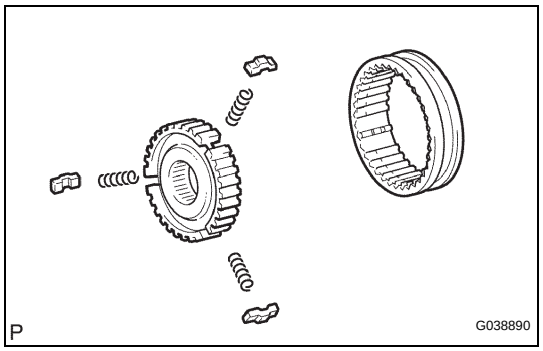
(a) Using SST and a press, remove the clutch hub No. 2 with the hub sleeve No. 2, synchronizer ring No. 2 and 3rd gear from the output shaft.

SST 09950-00020



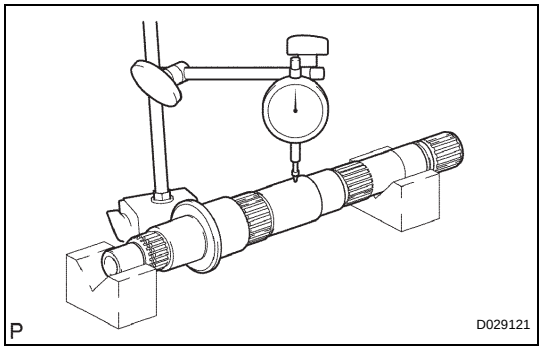
18. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the output shaft.



19. REMOVE NO. 2 TRANSMISSION HUB SLEEVE

(a) Remove the transmission hub sleeve No. 2, 3 synchromesh shifting key springs and 3 synchromesh shifting keys No. 2 from the transmission clutch hub No. 2.



INSPECTION

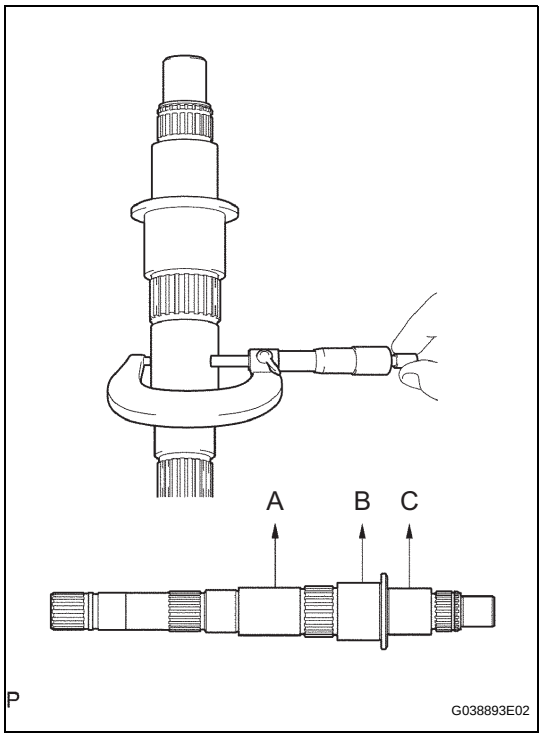
1. INSPECT OUTPUT SHAFT

(a) Using a dial indicator, measure the circle runout of the output shaft.

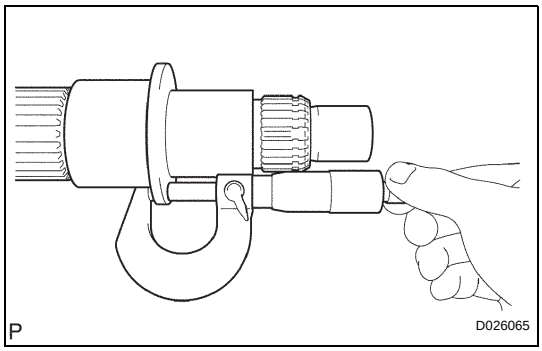
Maximum circle runout:

0.03 mm (0.0012 in.)

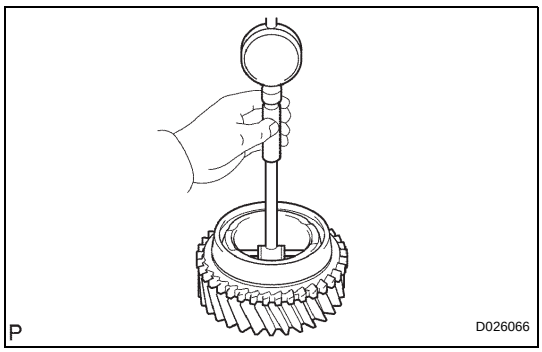
If the circle runout is greater than the maximum, replace the output shaft with a new one.



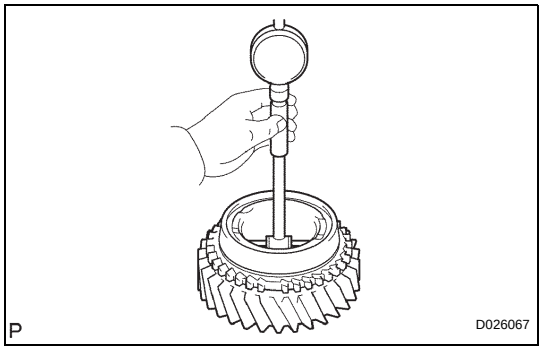
(b) Using a micrometer, measure the outer diameter of the output shaft at A, B and C.
Standard diameter:
38.979 to 38.995 mm (1.5334 to 1.5352 in.) for A
46.984 to 47.000 mm (1.8498 to 1.8504 in.) for B
37.984 to 38.000 mm (1.4954 to 1.4961 in.) for C
Minimum diameter:
38.979 mm (1.5334 in.) for A
46.984 mm (1.8498 in.) for B
37.984 mm (1.4954 in.) for C
If the outer diameter is less than the minimum, replace the output shaft with a new one.



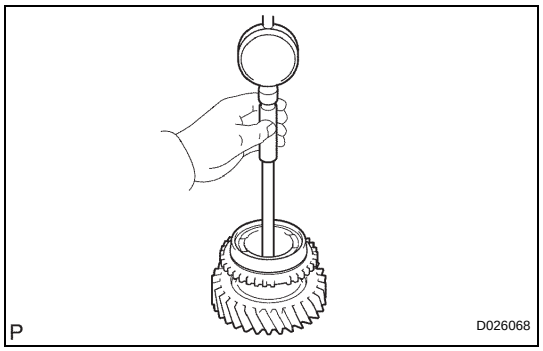
(c) Using a micrometer, measure the thickness of the output shaft flange as shown in the illustration.
Standard thickness:
4.8 to 5.2 mm (0.1890 to 0.2047 in.)
If the thickness is not within the specified values, replace the output shaft.



2. INSPECT 3RD GEAR
(a) Using a cylinder gauge, measure the inner diameter of the 3rd gear.
Standard diameter:
44.015 to 44.040 mm (1.7329 to 1.7339 in.)
Maximum diameter:
44.040 mm (1.7339 in.)
If the inner diameter is greater than the maximum, replace the 3rd gear with a new one.



3. INSPECT 2ND GEAR
(a) Using a cylinder gauge, measure the inner diameter of the 2nd gear.
Standard diameter:
53.015 to 53.040 mm (2.0872 to 2.0881 in.)
Maximum diameter:
53.040 mm(2.0881 in.)
If the inner diameter is greater than the maximum, replace the 2nd gear with a new one.

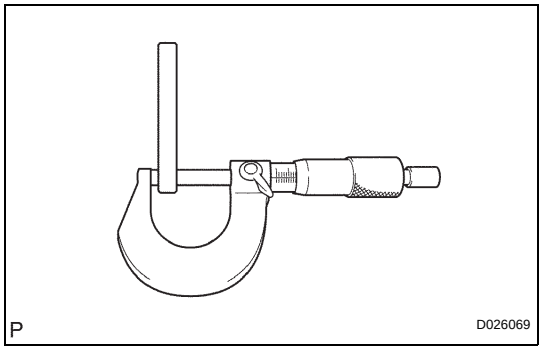


4. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inner diameter of the 1st gear.

Standard diameter:
46.015 to 46.040 mm (1.812 to 1.8126 in.)
Maximum diameter:
46.040 mm (1.8126 in.)

If the inner diameter is greater than the maximum, replace the 1st gear with a new one.

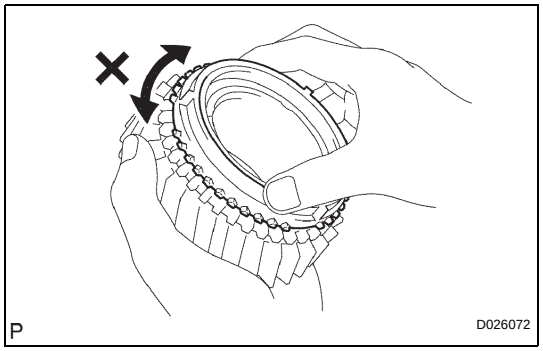


5. INSPECT 1ST GEAR THRUST WASHER

(a) Using a micrometer, measure the thickness of the 1st gear thrust washer.

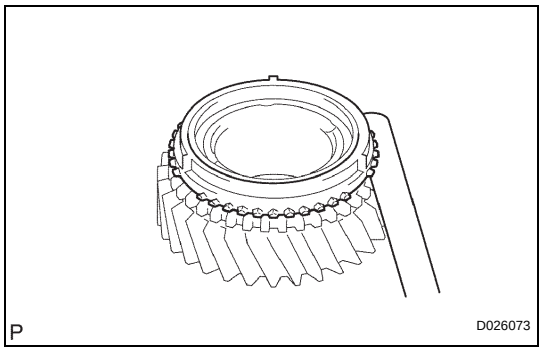
Standard thickness:
5.95 to 6.05 mm (0.2346 to 0.2382 in.)
Minimum thickness:
5.96 mm (0.2346 in.)

If the thickness is out of specification, replace the 1st gear thrust washer.



6. INSPECT NO. 1 SYNCHRONIZER RING

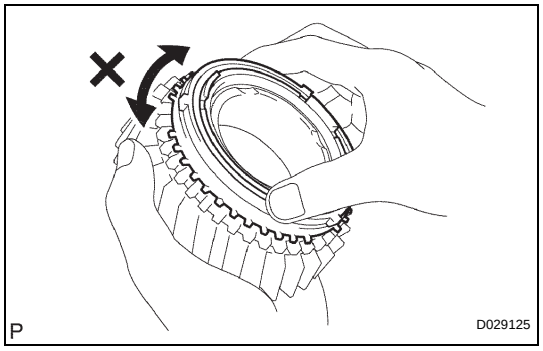
(a) Apply gear oil to the cone of the 1st gear, and check that it does not turn in both directions while pushing the synchronizer ring No. 1 (for the 1st gear).
If it turns, replace the synchronizer ring No. 1.



(b) Measure the clearance between the synchronizer ring No. 1 and the 1st gear while pushing the synchronizer ring No. 1 to the cone of the 1st gear.

Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0649 in.)

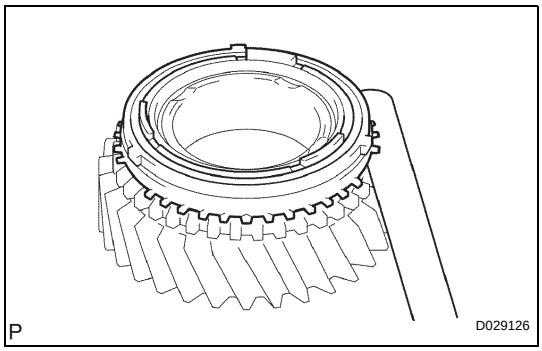
If the clearance is not within the specified values, replace the synchronizer ring No. 1 with a new one.



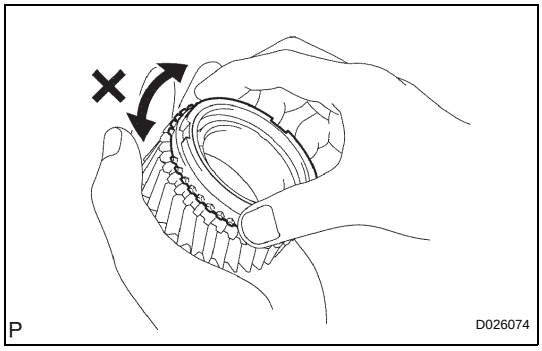
7. INSPECT NO. 1 SYNCHRONIZER RING SET

(a) Apply gear oil to the cone of the 2nd gear, and check that it does not turn in both directions while pushing the synchronizer ring set No. 1 (for the 2nd synchronizer ring).
If it turns, replace the synchronizer ring set No. 1.

MT

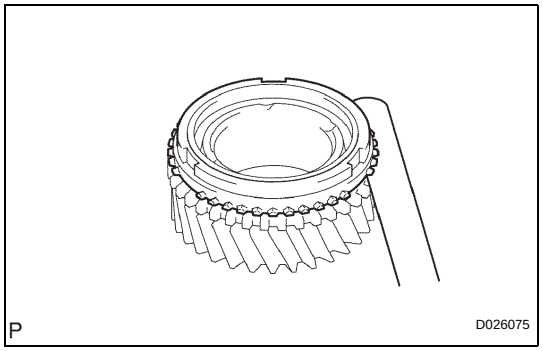


(b) Measure the clearance between the synchronizer ring set No. 1 (for the 2nd synchronizer ring) and 2nd gear while pushing the synchronizer ring set No. 1 to the cone of the 2nd gear.
Standard clearance:
0.65 to 1.75 mm (0.0256 to 0.0689 in.)
If the clearance is not within the specified values, replace the synchronizer ring set No. 1 (for the 2nd synchronizer ring) with a new one.

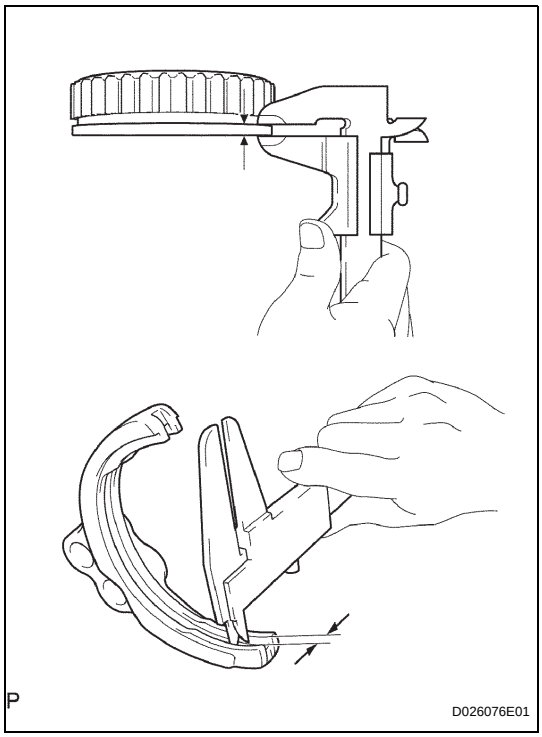


8. INSPECT NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the cone of the 3rd gear, and check that it does not turn in both directions while pushing the synchronizer ring No. 2 (for the 3rd synchronizer ring).
If it turns, replace the synchronizer ring No. 2.

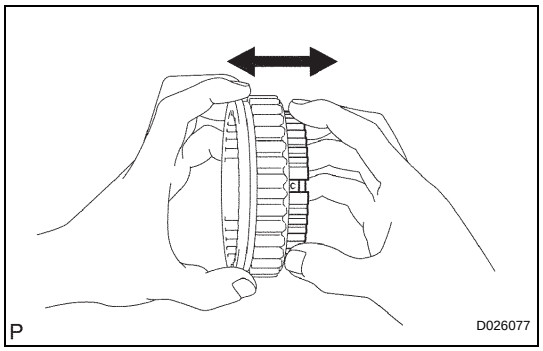


(b) Check the clearance between the synchronizer ring No. 2 (for the 3rd synchronizer ring) and 3rd gear while pushing the synchronizer ring No. 2 (for the 2nd synchronizer ring) to the cone of the 3rd gear.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)
If the clearance is not within the specified values, replace the synchronizer ring No. 2 (for the 3rd synchronizer ring) with a new one.



9. INSPECT REVERSE GEAR

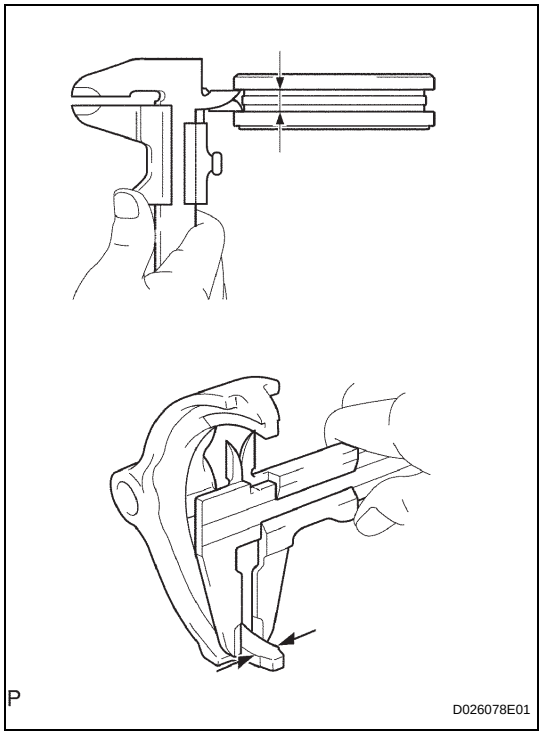
(a) Using vernier calipers, measure the reverse gear groove and the thickness of the gear shift fork claw No. 1 clearance.
Standard clearance:
0.15 to 0.41 mm (0.0060 to 0.0161 in.)
If the clearance is not within the specified values, replace the reverse gear and the shift fork No. 1 with new ones.



10. INSPECT NO. 1 TRANSMISSION CLUTCH HUB

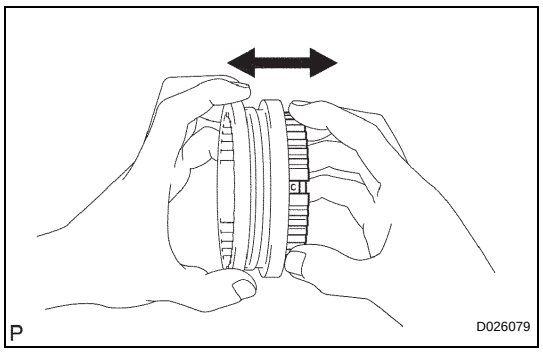
(a) Check that the transmission clutch hub No. 1 and reverse gear slide smoothly each other.

(b) Check the tip of the spline gear sleeve of the reverse gear for wear.
If there are any defects, replace the transmission clutch hub No. 1.



11. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

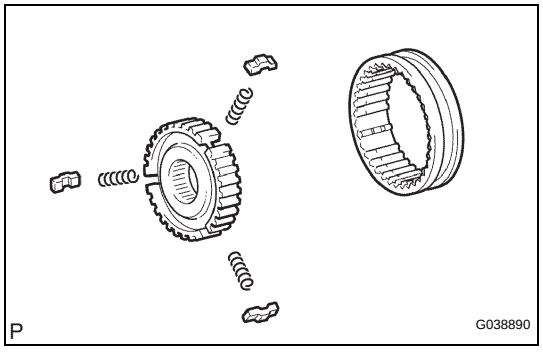
(a) Using vernier calipers, measure the clearance between the transmission hub No. 2 groove and claw of the gear shift fork No. 2.
Standard clearance:
0.15 to 0.35 mm (0.0059 to 0.0138 in.)
If the clearance is not within the specified values, replace the No. 2 transmission hub sleeve No. 2 and the shift fork No. 2 with the new ones.



12. INSPECT NO. 2 TRANSMISSION CLUTCH HUB

(a) Check the sliding condition between the transmission clutch hub No. 2 and the transmission hub sleeve No. 2.

(b) Check the tip of the spline gear of the sleeve of the reverse gear for wear.

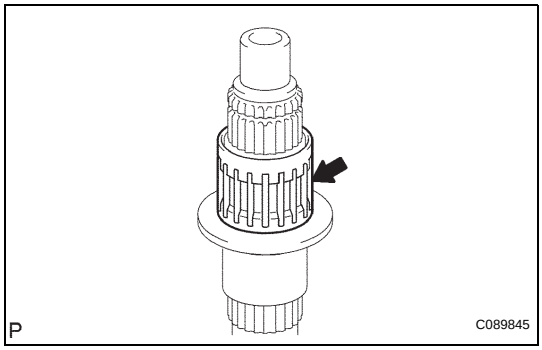


REASSEMBLY

1. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

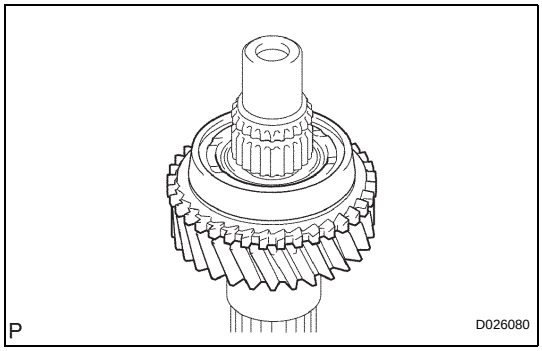
(a) Install the 3 synchromesh shifting key springs No. 2 and the 3 synchro-mesh shifting key No. 2 to the transmission clutch hub No. 2.
NOTICE:
Make sure that the transmission hub sleeve No. 2 and transmission clutch hub No. 2 are oriented in the correct direction.

(b) Apply gear oil to the sliding part of the transmission hub sleeve No. 2, and install it onto the transmission clutch hub No. 2.



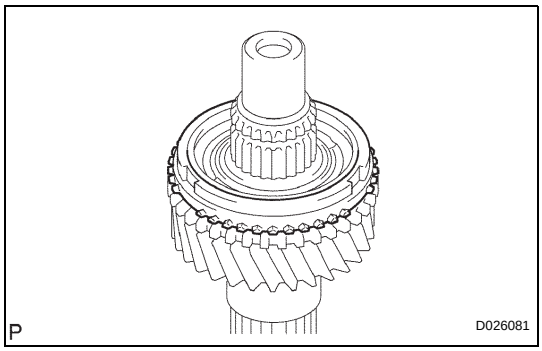
2. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 3rd gear needle roller bearing, and install it onto the output shaft.



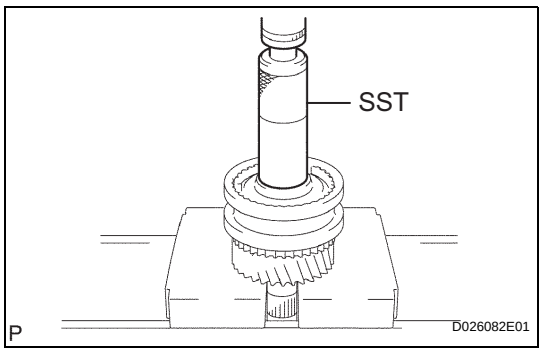
3. INSTALL 3RD GEAR

(a) Apply gear oil to the 3rd gear, and install it onto the output shaft.



4. INSTALL NO. 2 SYNCHRONIZER RING

(a) Apply gear oil to the synchronizer ring No. 2, and install it onto the 3rd gear.



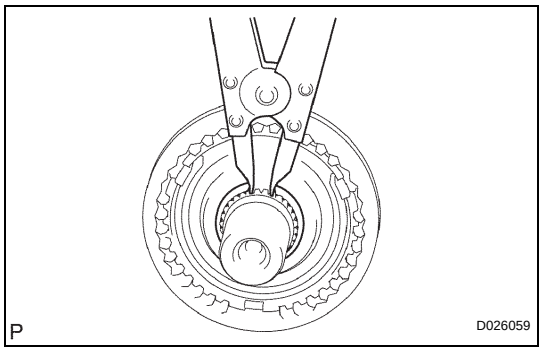
5. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

(a) Using SST, install the transmission clutch hub No. 2 onto the output shaft.

SST 09608-06041

NOTICE:

- **Install it with the synchronizer ring key No. 2 groove aligned with the shifting key position.**
- **Make sure that the 3rd gear rotates smoothly.**

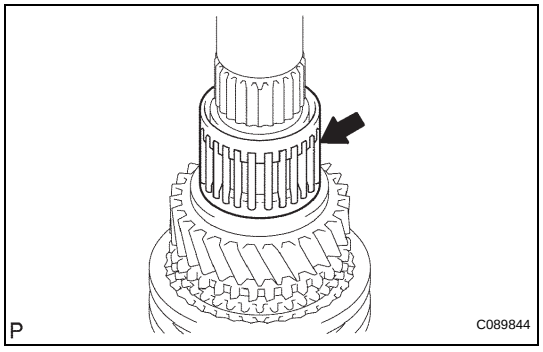


(b) Select the correct clutch hub shaft snap ring so that the clearance between the transmission clutch hub No. 2 and shaft snap ring thrust is within the specified values. Then install it onto the output shaft.

Standard clearance:
0.1 mm or less

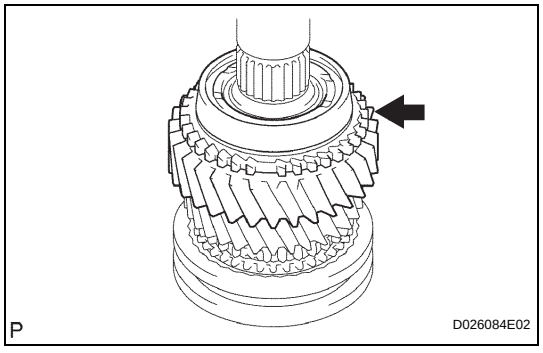
NOTICE:
Do not damage the sliding surface of the bearing.

Mark	Thickness mm (in.)
A	1.80 to 1.85 (0.0709 to 0.0728)
B	1.85 to 1.90 (0.0728 to 0.0748)
C	1.90 to 1.95 (0.0748 to 0.0768)
D	1.95 to 2.00 (0.0768 to 0.0787)
E	2.00 to 2.05 (0.0787 to 0.0807)
F	2.05 to 2.10 (0.0807 to 0.0827)
G	2.10 to 2.15 (0.0827 to 0.0846)



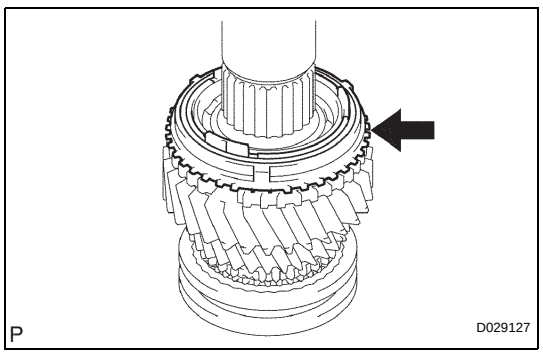
6. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 2nd gear needle roller bearing, and install it onto the output shaft.



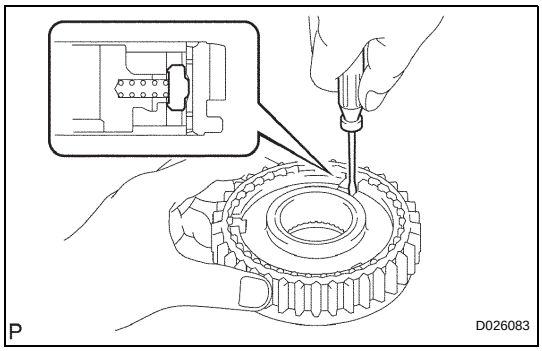
7. INSTALL 2ND GEAR

(a) Apply gear oil to the 2nd gear, and install it onto the output shaft.



8. INSTALL NO. 1 SYNCHRONIZER RING SET

(a) Apply gear oil to the synchronizer ring set No. 1, and install it onto the 2nd gear.

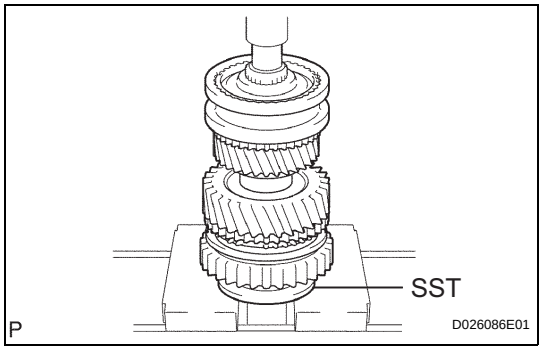


9. INSTALL REVERSE GEAR

(a) Using a screwdriver, install the 3 synchromesh shifting key springs and 3 synchromesh shifting key No.1 onto the transmission clutch hub No. 1.

(b) Apply gear oil to the revers gear, and install it onto the transmission clutch hub No. 1

MT



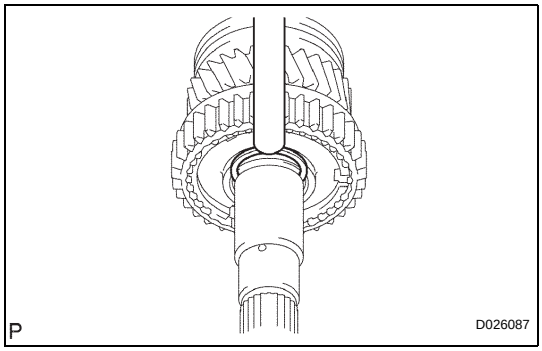
10. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install transmission clutch hub No. 1 onto the output shaft.

SST 09316-60011 (09316-00041)

NOTICE:

- **Perform installation making sure that the synchronizer ring key No. 1 groove and synchro-mesh shifting key No. 1 are in place.**
- **Make sure that the 1st gear rotates smoothly.**



(b) Select the correct bearing shaft snap ring so that the clearance between the transmission clutch hub No. 1 and bearing shaft snap ring is within the specified values. Then install it onto the output shaft.

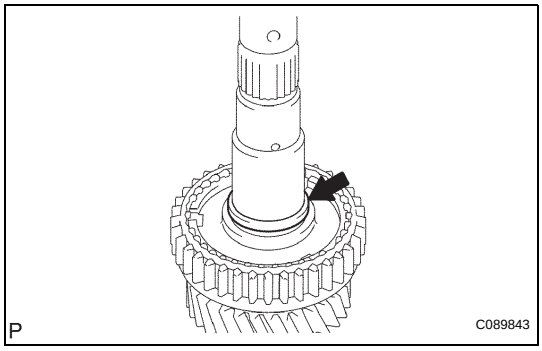
Standard clearance:

0.1mm (0.039 in.) or less

NOTICE:

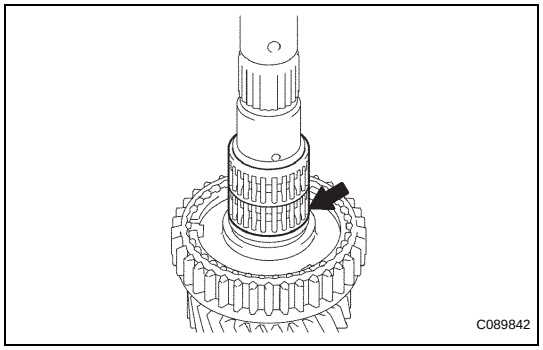
Do not damage the sliding surface of the bearing.

Mark	Thickness mm (in.)
A	2.30 to 2.35 (0.0906 to 0.0925)
B	2.35 to 2.40 (0.0925 to 0.0945)
C	2.40 to 2.45 (0.0945 to 0.0965)
D	2.45 to 2.50 (0.0965 to 0.0984)
E	2.50 to 2.55 (0.0984 to 0.1004)
F	2.55 to 2.60 (0.1004 to 0.1024)
G	2.60 to 2.65 (0.1024 to 0.1043)



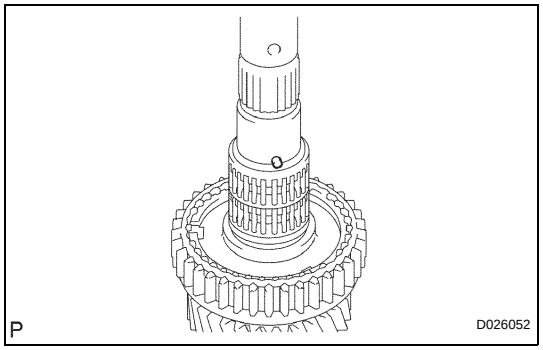
11. INSTALL 1ST GEAR BEARING SPACER

(a) Apply gear oil to the 1st gear bearing spacer, and install it onto the output shaft.



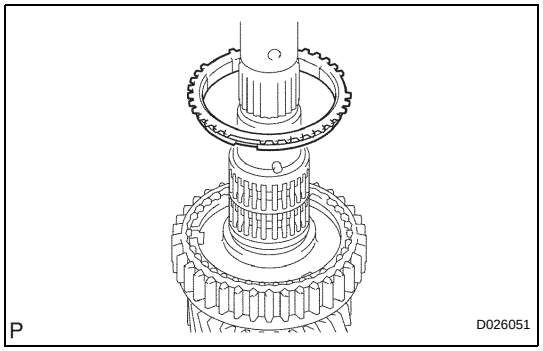
12. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Apply gear oil to the 1st gear needle roller bearing, and install it onto the output shaft.



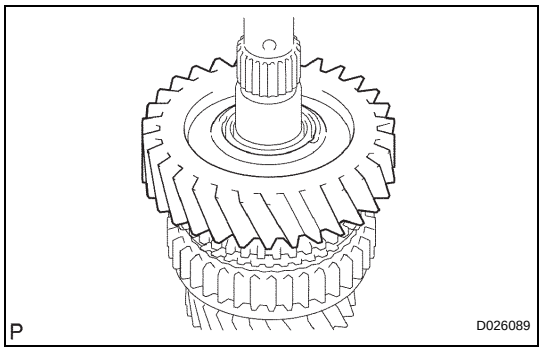
13. INSTALL 1ST GEAR THRUST WASHER PIN OR BALL

(a) Install the 1st gear thrust washer pin onto the output shaft.



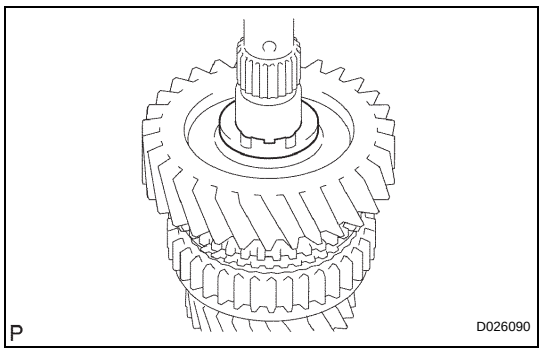
14. INSTALL NO. 1 SYNCHRONIZER RING

(a) Apply gear oil to the synchronizer ring No. 1, and install it onto the output shaft.



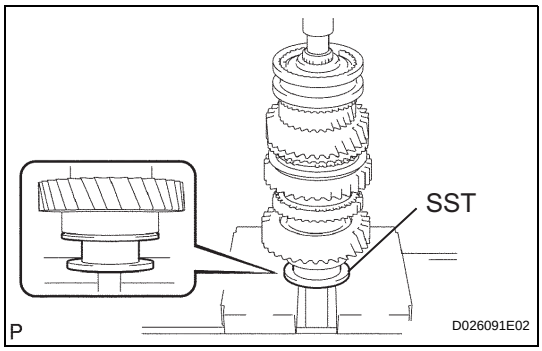
15. INSTALL 1ST GEAR

(a) Apply gear oil to the 1st gear, and install it onto the output shaft.



16. INSTALL 1ST GEAR THRUST WASHER

(a) Apply gear oil to the 1st gear thrust washer, and install it onto the output shaft.



17. INSTALL OUTPUT SHAFT CENTER BEARING

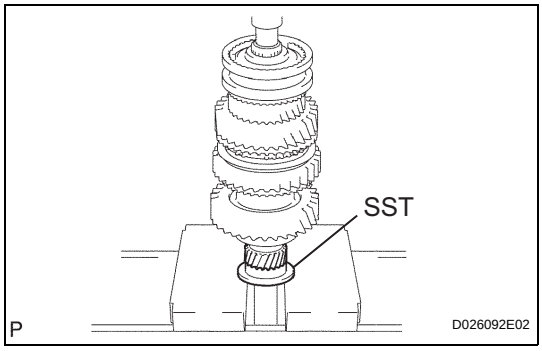
(a) Using SST and a press, install a new output shaft center bearing onto the output shaft.

SST 09316-60011 (09316-00031)

NOTICE:

Install it with the snap ring groove of the bearing facing to the rear side.

MT



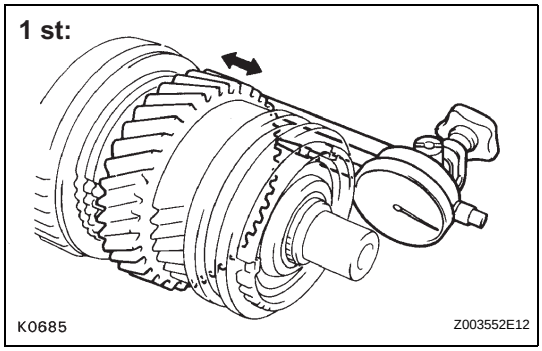
18. INSTALL 5TH GEAR

(a) Using SST and a press, install the 5th gear onto the output shaft.

SST 09316-60011 (09316-00031)

NOTICE:

- **Check that the 5th gear is fitted into the spline of the output shaft before installing.**
- **Face the convex part of the gear to the front side.**

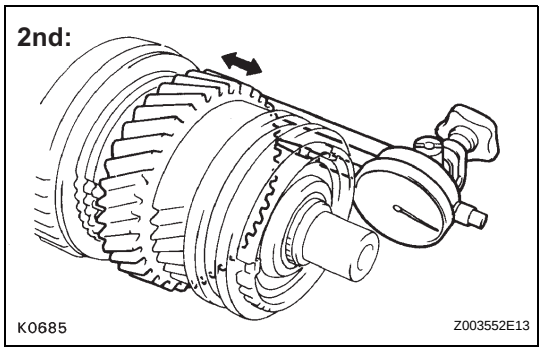


19. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.20 to 0.45 mm (0.0079 to 0.0177 in.)

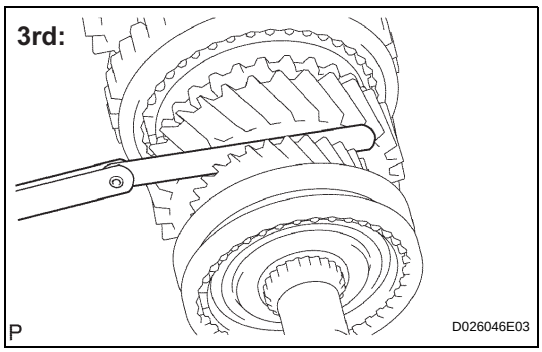


20. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

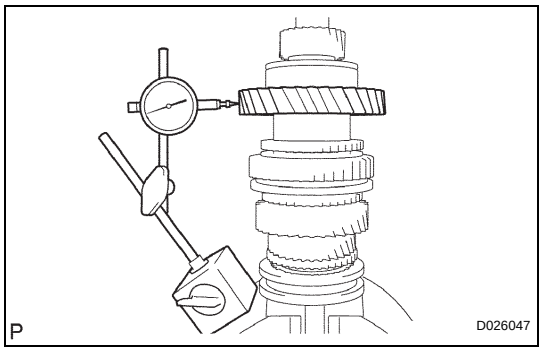


21. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)



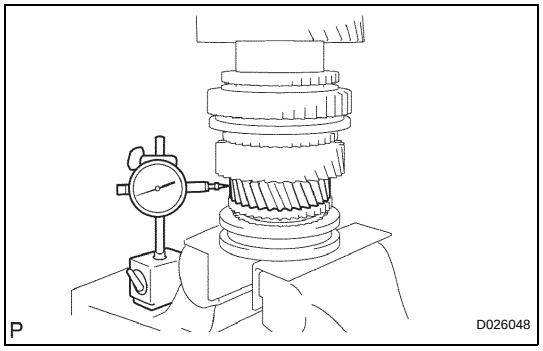
22. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.020 to 0.073 mm (0.0008 to 0.0029 in)

If the clearance is not within the specified values, replace the 1st gear needle roller bearing with a new one.



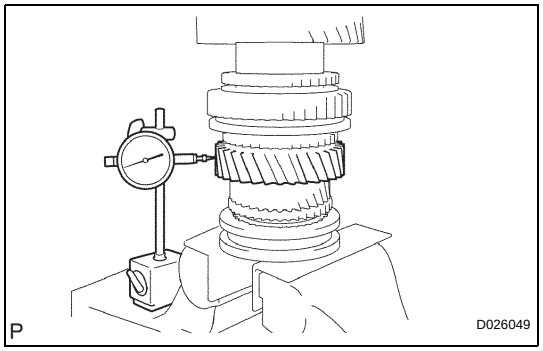
23. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

0.015 to 0.068 mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 2nd gear needle roller bearing with a new one.



24. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

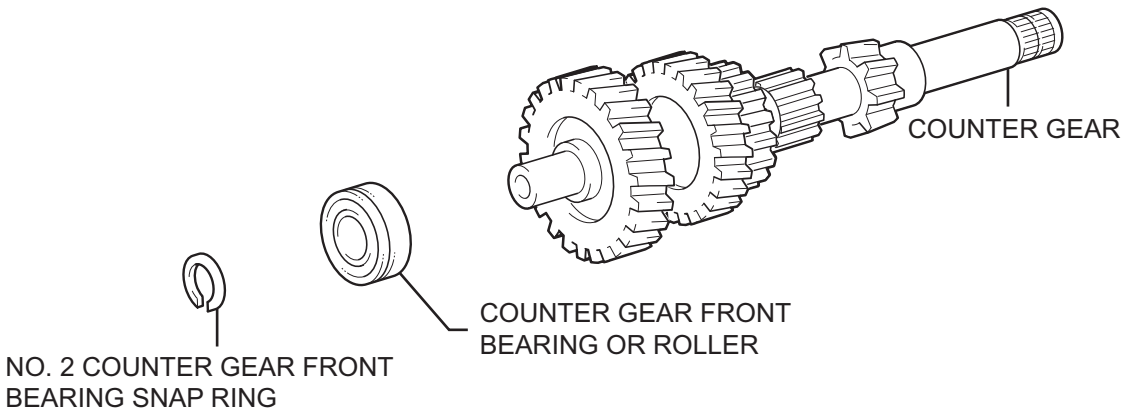
0.015 to 0.068 mm (0.0006 to 0.0027 in.)

If the clearance is not within the specified values, replace the 3rd gear needle roller bearing with a new one.

COUNTER GEAR AND REVERSE IDLER GEAR

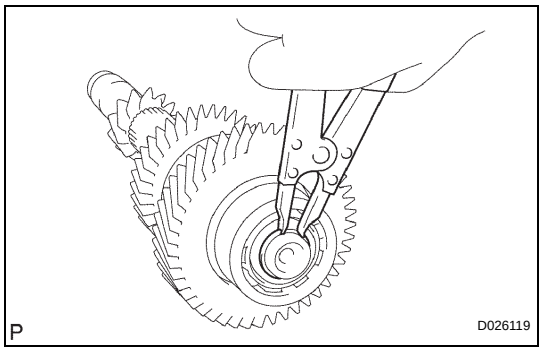
COMPONENTS

MT



P

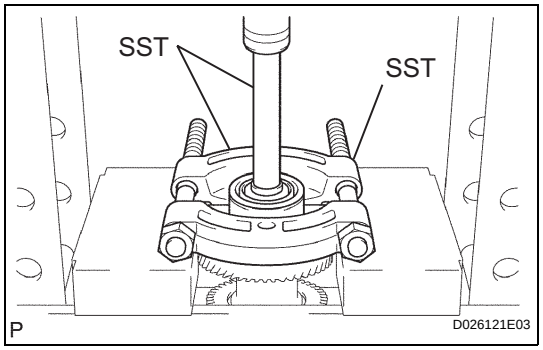
C115299E03



DISASSEMBLY

1. REMOVE NO. 2 COUNTER GEAR FRONT BEARING SNAP RING

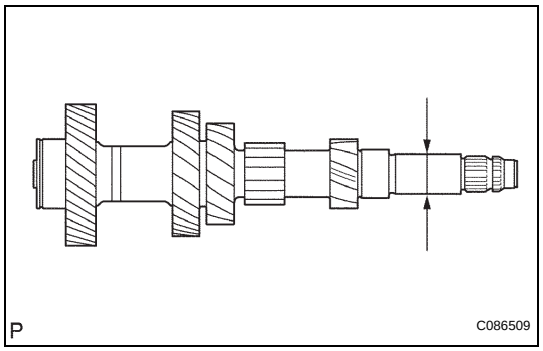
(a) Using a snap ring expander, remove the No. 2 counter gear front bearing snap ring from the counter gear.



2. REMOVE COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, remove the counter gear front bearing from the counter gear.

SST 09950-00020, 09950-60010 (09951-00220), 09950-70010 (09951-07100)



INSPECTION

1. INSPECT COUNTER GEAR

(a) Using a micrometer, measure the outer diameter of the counter gear as shown in the diagram.

Standard diameter:
29.984 to 30.000 mm(1.1805 to 1.1811 in.)
Minimum diameter:
29.984 mm (1.1805 in.)

If the outer diameter is less than the minimum, replace the counter gear with a new one.

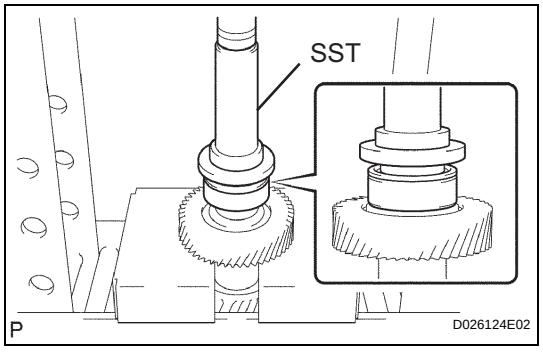
REASSEMBLY

1. INSTALL COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, install the counter gear front bearing onto the counter gear.

SST 09515-10010

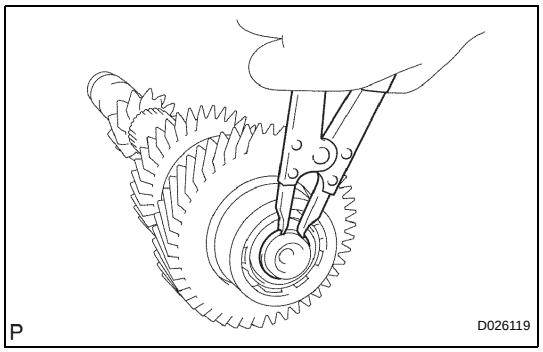
Install it so that the snap ring groove of the bearing faces to the front side.



2. INSTALL NO. 2 COUNTER GEAR FRONT BEARING SNAP RING

(a) Select the correct counter gear front bearing No. 2 snap ring so that the clearance between the counter gear and No. 2 counter gear front bearing snap ring No. 2 is within the specified values. Using a brass bar and a hammer, install it onto the counter gear.

Standard clearance:
0.1 mm (0.0039 in.) or less



Mark	Thickness mm (in.)
A	2.05 to 2.10 (0.0807 to 0.0827)

MT

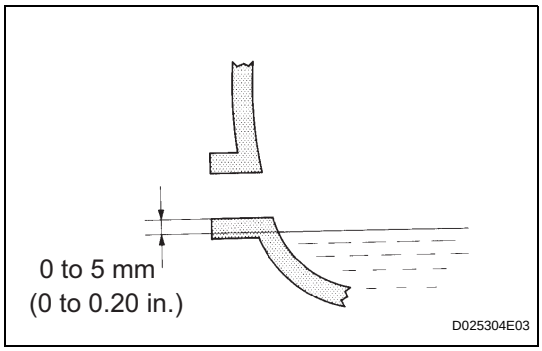
Mark	Thickness mm (in.)
B	2.10 to 2.15 (0.0827 to 0.0846)
C	2.15 to 2.20 (0.0846 to 0.0866)
D	2.20 to 2.25 (0.0866 to 0.0886)
E	2.25 to 2.30 (0.0886 to 0.0906)
F	2.30 to 2.35 (0.0906 to 0.0925)

MANUAL TRANSMISSION SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Abnormal noise	1. Oil level (Low)	MT-2
	2. Oil (Wrong)	MT-2
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-
Oil leakage	1. Oil level (High)	MT-2
	2. Gasket (Damaged)	-
	3. Oil seal (Worn or damaged)	-
	4. O-ing (Worn or damaged)	-
Hard shifting or will not shift	1. Synchronizer ring (Worn or damaged)	-
	2. Shift key spring (Damaged)	-
Jumps out of gear	1. Locking ball spring (Damaged)	-
	2. Shift fork (Worn)	-
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-



MANUAL TRANSMISSION OIL

ON-VEHICLE INSPECTION

1. INSPECT TRANSMISSION OIL

(a) Park the vehicle in a level place.

(b) Remove the transmission filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the lowest point of the transmission filler plug opening.

NOTICE:

- **Problems may occur when the oil level is too high or low.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

(d) Check for oil leakage when the oil level is low.

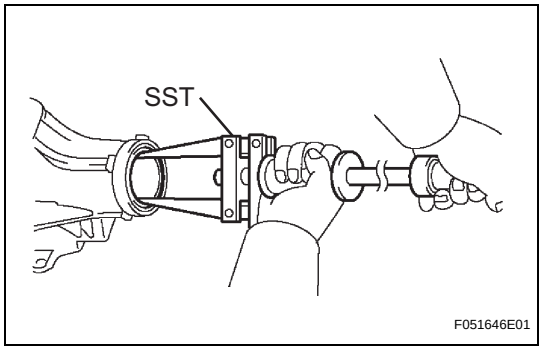
(e) Install the transmission filler plug and a new gasket.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

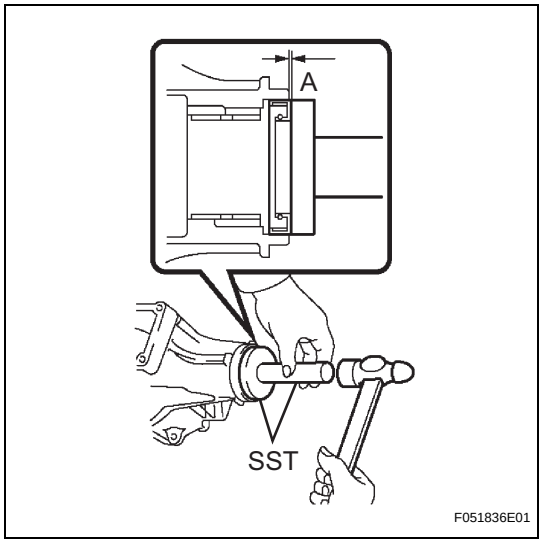
MT

MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

REMOVAL

1. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-8)**
2. **REMOVE EXTENSION HOUSING DUST DEFLECTOR**
   (a) Using a plastic hammer, remove the extension housing dust deflector.
3. **REMOVE MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST, remove the transmission extension housing oil seal.
   SST 09308-00010





INSTALLATION

1. **INSTALL MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL**
   (a) Using SST and hammer, tap a new oil seal into the extension housing in accordance with the dimension specified in the illustration.
   SST 09950-60020 (09951-00640), 09950-70010 (09951-07100)
   Dimension A:
   -0.5 to 0.5 mm (-0.197 to 0.197 in.)
   (b) Apply gear oil to the lip of the oil seal.
2. **INSTALL EXTENSION HOUSING DUST DEFLECTOR**
   (a) Using a plastic hammer, install the extension housing dust deflector.
3. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-13)**
4. **INSPECT MANUAL TRANSMISSION OIL**

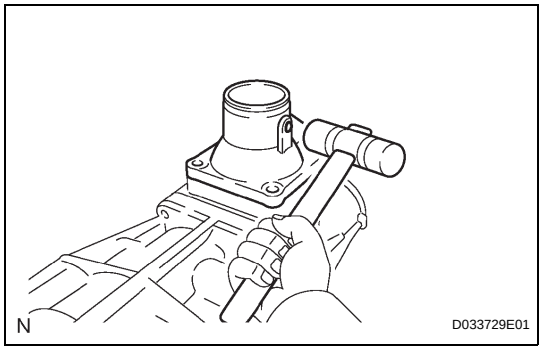
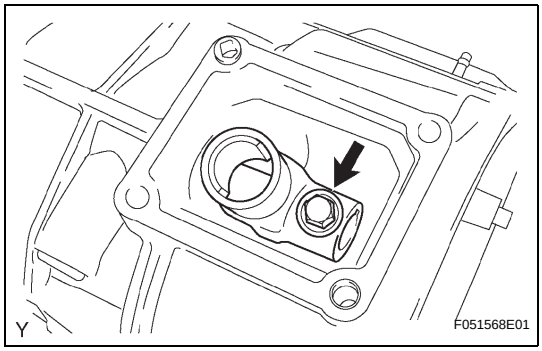
DISASSEMBLY

1. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the 4 bolts, then remove the floor shift control shift lever retainer.

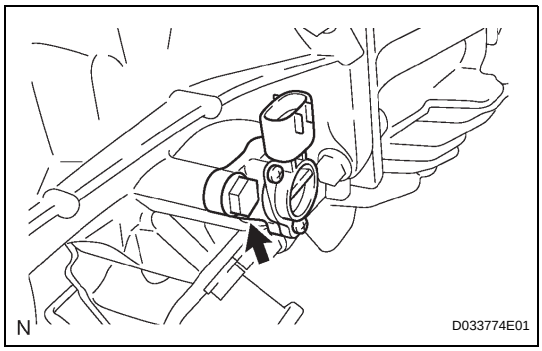


(b) Using a plastic hammer, remove the floor shift control shift lever retainer.



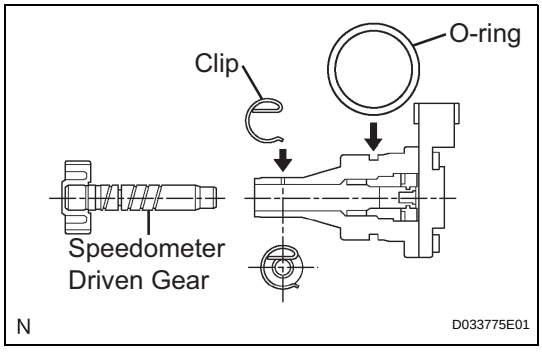
2. REMOVE SHIFT LEVER HOUSING

(a) Remove the bolt, then separate the shift lever housing.

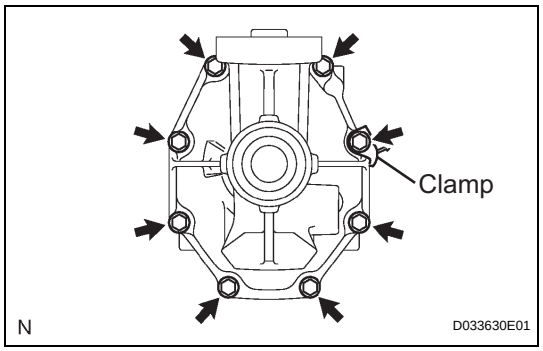


3. REMOVE SPEEDOMETER SENSOR

(a) Remove the bolt and speedometer sensor.

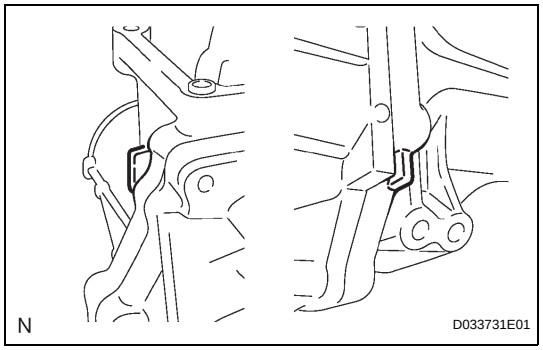


(b) Remove the clip from the speedometer sensor.
(c) Remove the driven gear from the speedometer sensor.
(d) Remove the O-ring from the speedometer sensor.
(e) Check the speedometer driven gear teeth.
If the driven gear is damaged, replace it.



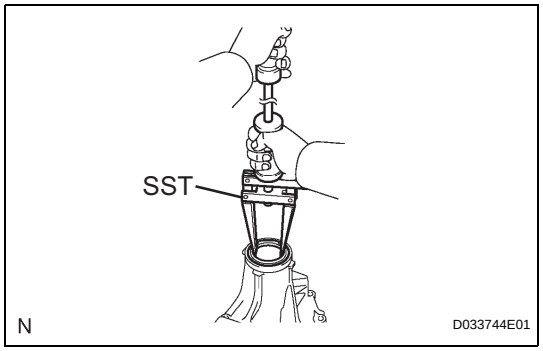
4. REMOVE EXTENSION HOUSING SUB-ASSEMBLY

(a) Remove the 8 bolts and clamp, then remove the extension housing sub-assembly.



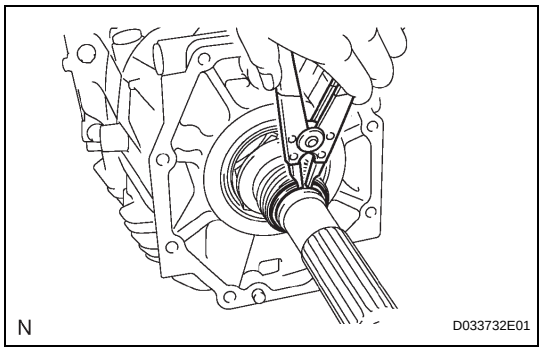
(b) Using a plastic hammer, carefully tap out the extension housing.

(c) Remove the shift lever housing.



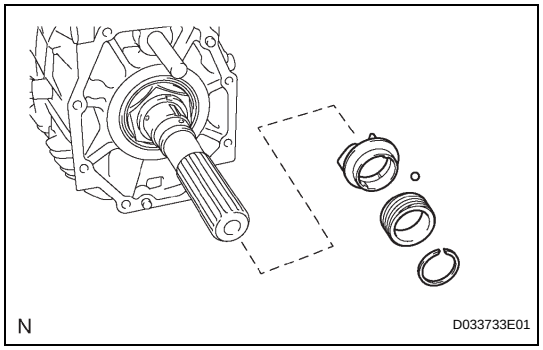
5. REMOVE MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

(a) Using SST, remove the extension housing oil seal.
SST 09308-00010

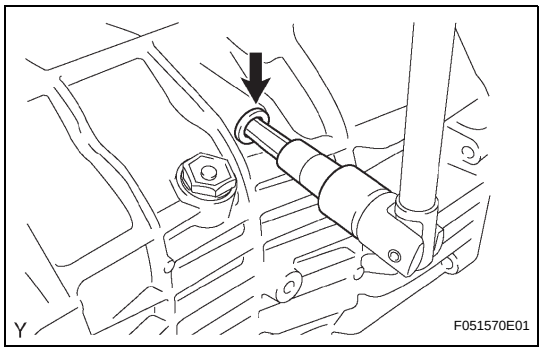


6. REMOVE SPEEDOMETER DRIVE GEAR

(a) Using a snap ring expander, remove the snap ring.



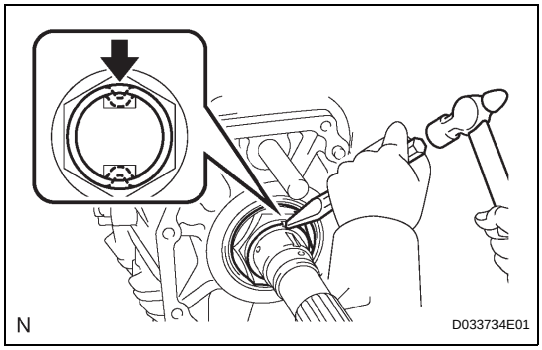
(b) Remove the speedometer drive gear, ball and oil receiver pipe.



7. REMOVE SHIFT DETENT BALL PLUG

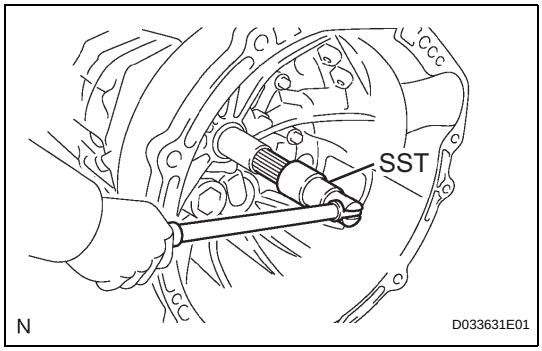
(a) Using a socket hexagon wrench (10 mm), remove the shift detent ball plug from the transmission rear case.

(b) Remove the ball and compression spring from the transmission rear case.



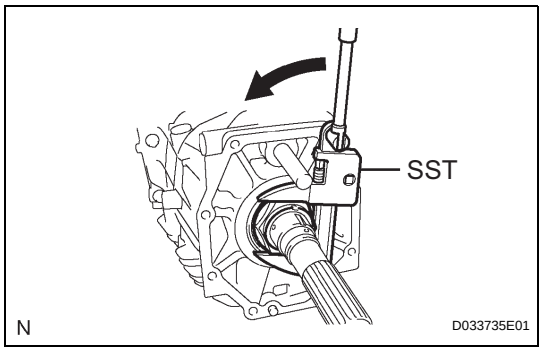
8. REMOVE OUTPUT SHAFT ADJUST NUT

(a) Using a chisel and hammer, unstake the nut.



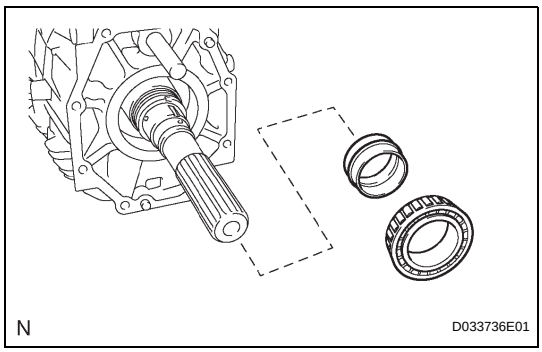
(b) Place the gearshift into 5th gear, and then fix the input shaft using SST.
SST 09556-16030

(c) Using a belt and wooden block, fasten the transmission to the workbench.

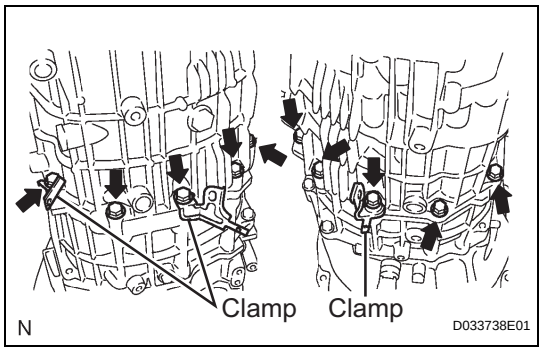


(d) Using SST, remove the nut from the output shaft.
SST 09922-10010

(e) Remove the belt and wooden block from the transmission.

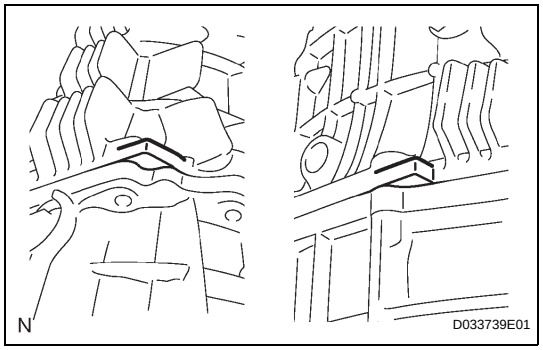


(f) Remove the taper roller bearing No. 2 and spacer.

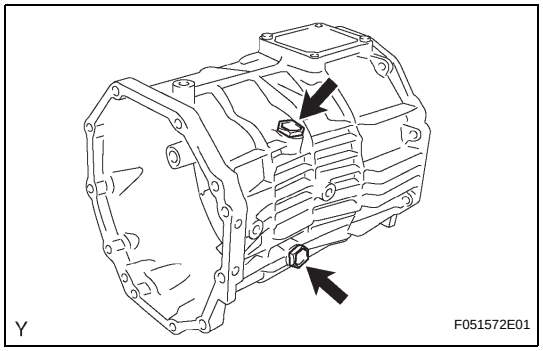


9. REMOVE TRANSMISSION REAR CASE

(a) Remove the 10 bolts and 3 clamps.

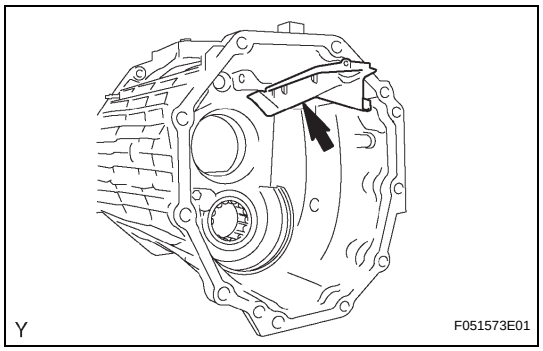


(b) Using a plastic hammer, carefully tap out the rear case.



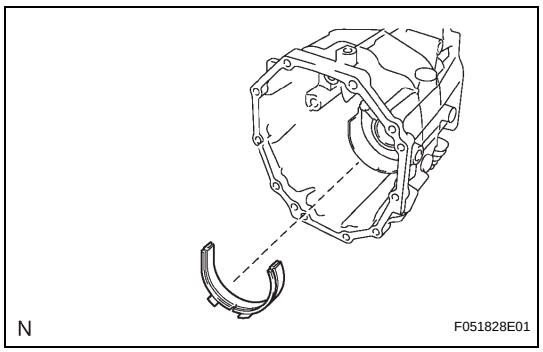
10. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the 2 transmission filler plugs and 2 gaskets from the transmission rear case.



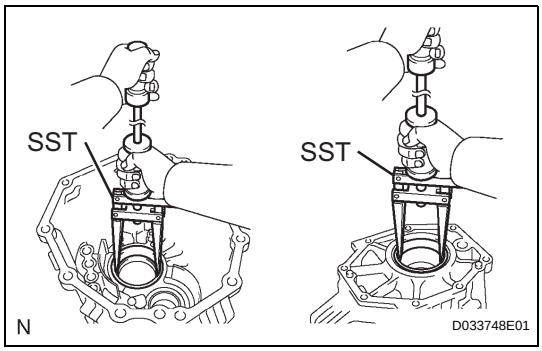
11. REMOVE EXTENSION HOUSING OIL RECEIVER PIPE

(a) Remove the extension housing oil receiver pipe from the transmission rear case.



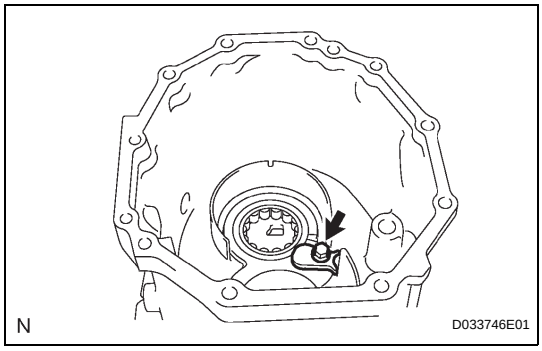
12. REMOVE OIL SEPARATOR PACKING SEAL

(a) Remove the oil separator packing seal from the transmission rear case.



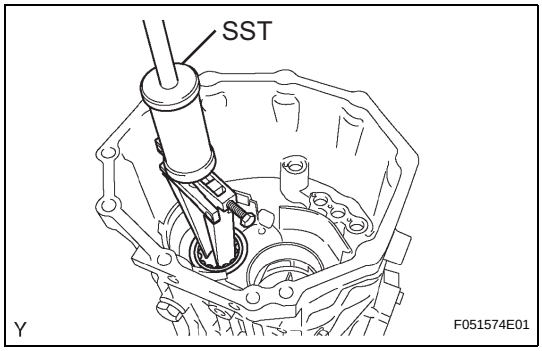
13. REMOVE OUTPUT SHAFT REAR BEARING OUTER RACE

(a) Using SST, remove the 2 bearing outer races.
SST 09308-00010

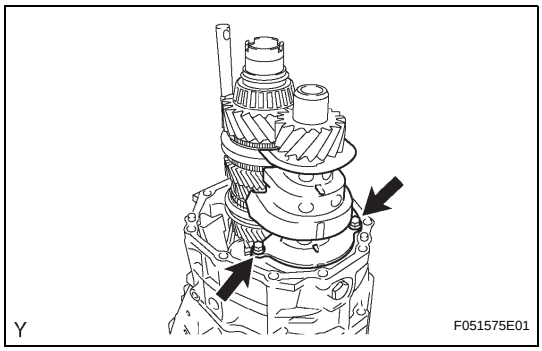


14. REMOVE COUNTER GEAR REAR RADIAL BALL BEARING

(a) Remove the bolt, then remove the bearing lock plate.

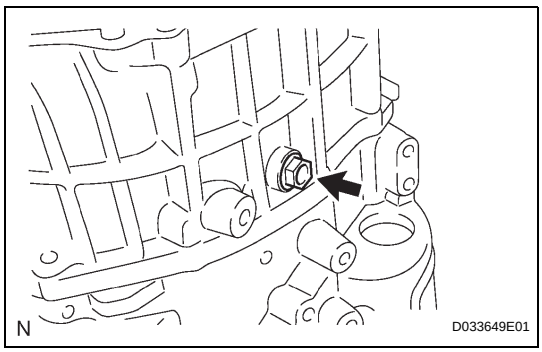


(b) Using SST, remove the counter gear rear radial ball bearing from the transmission rear case.
SST 09308-00010



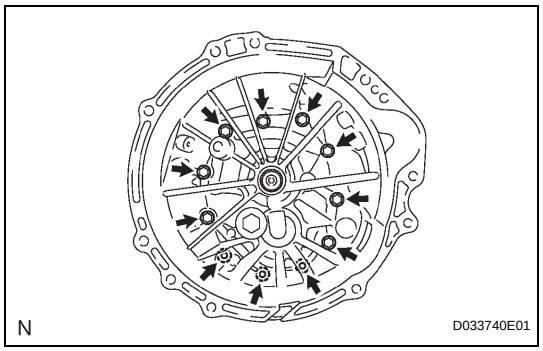
15. REMOVE TRANSMISSION OIL SEPARATOR

(a) Remove the 2 bolts, then remove the oil separator.



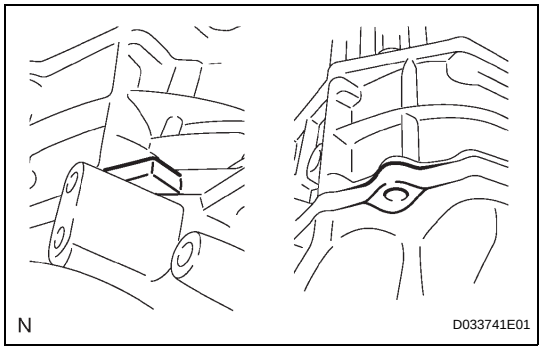
16. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt from the transmission middle case.

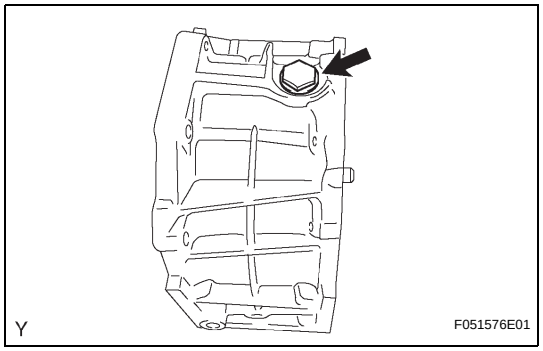


17. REMOVE TRANSMISSION MIDDLE CASE

(a) Remove the 11 bolts, then remove the transmission middle case.

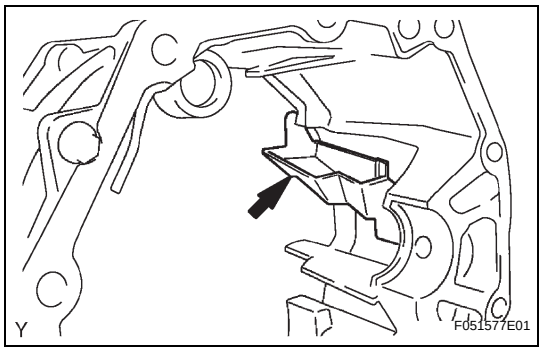


(b) Using a plastic hammer, carefully tap out the middle case.



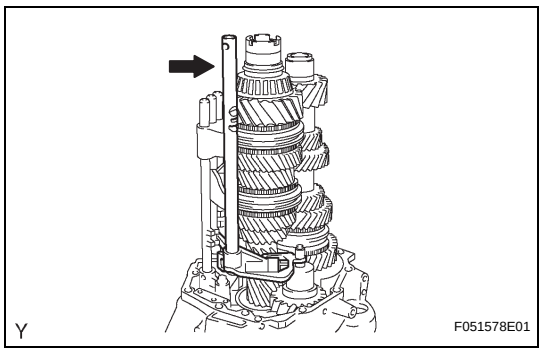
18. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the drain plug and gasket from the transmission middle case.



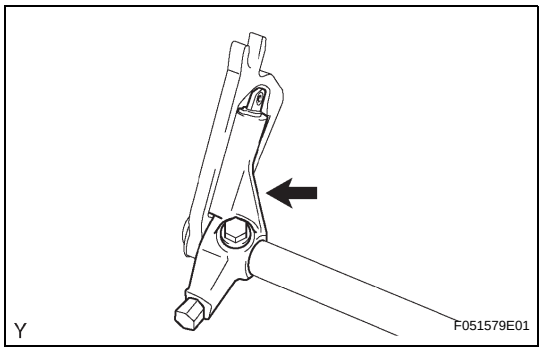
19. REMOVE NO. 2 OIL RECEIVER PIPE

(a) Remove the oil receiver pipe No. 2 from the transmission middle case.



20. REMOVE SHIFT AND SELECT LEVER SHAFT

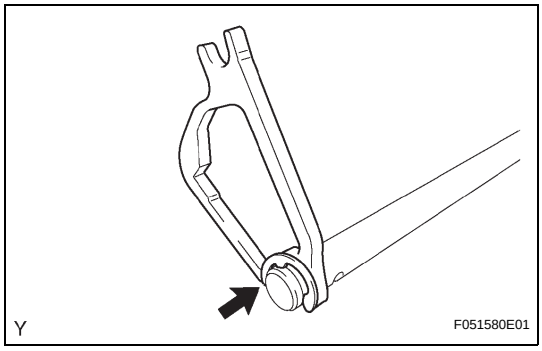
(a) Remove the shift and select lever shaft from the reverse gear shaft.



21. REMOVE SHIFT AND SELECT LEVER

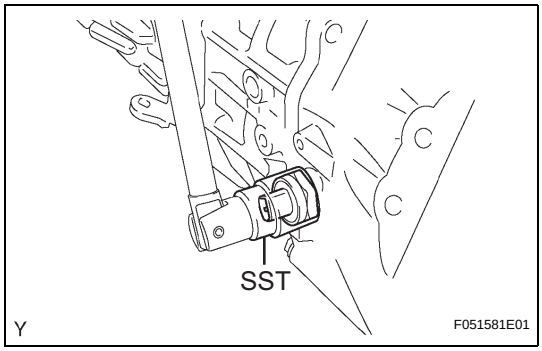
(a) Remove the bolt, then remove the shift and select lever.

(b) Remove the lock ball pin and spring from the shift and select lever.



22. REMOVE SHIFT AND SELECT LEVER CAM

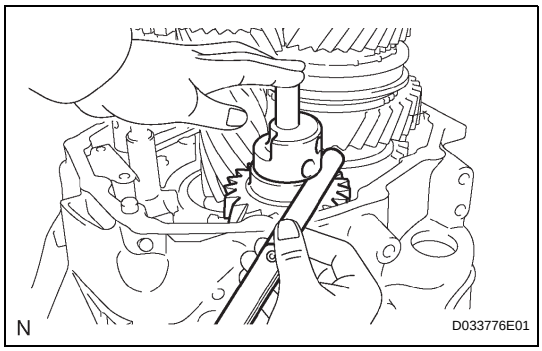
(a) Using a screwdriver, remove the E ring and the shift and select lever cam from the shift and select lever shaft.



23. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, remove the back-up light switch and gasket.

SST 09817-16011

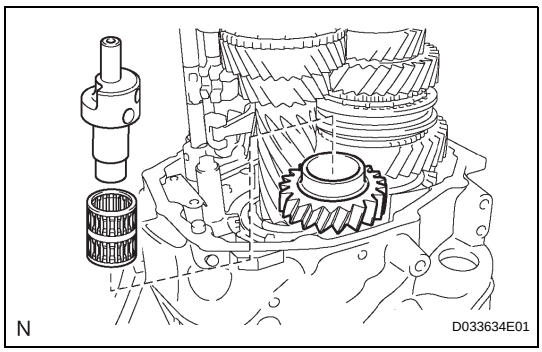


24. INSPECT REVERSE IDLER GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the thrust clearance.

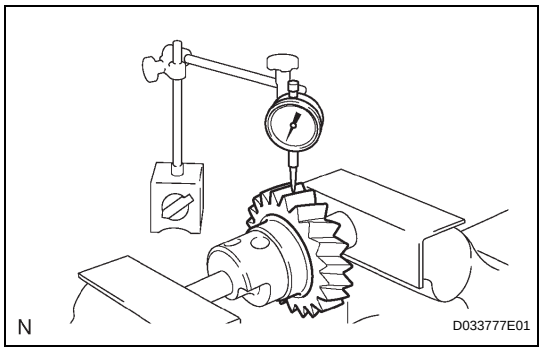
Standard clearance:
0.10 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 to (0.0217 in.)

If the clearance is exceeds the maximum, replace the reverse idler gear shaft.



25. REMOVE REVERSE IDLER GEAR

(a) Remove the reverse idle gear shaft, needle roller bearing and reverse idler gear.

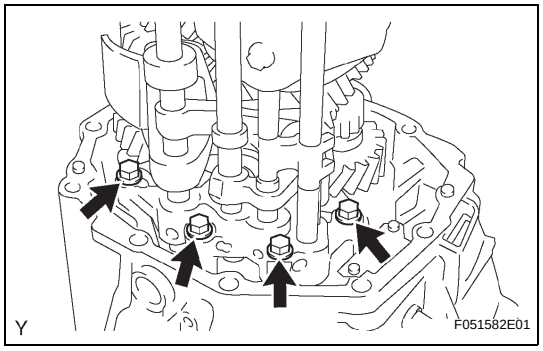


26. INSPECT REVERSE IDLER GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance.

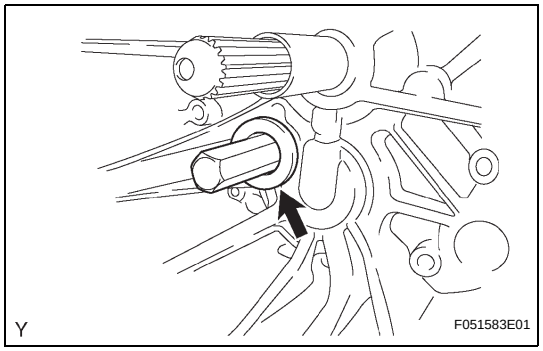
Standard clearance:
0.015 to 0.050 mm (0.0006 to 0.0020 in.)
Maximum clearance:
0.050 mm (0.0020 in.)

If the clearance exceeds the maximum, replace the needle roller bearing.

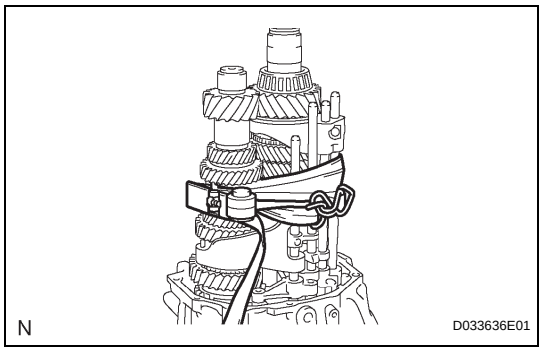


27. REMOVE TRANSMISSION FRONT CASE

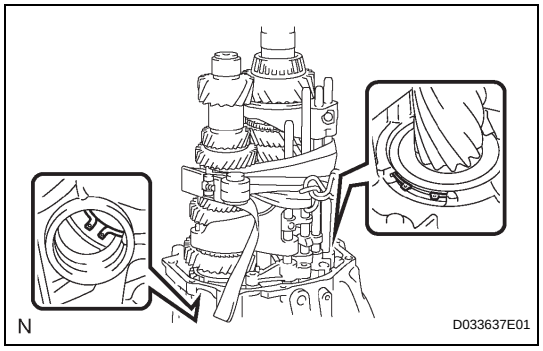
(a) Remove the 4 bolts from the interlock bracket.



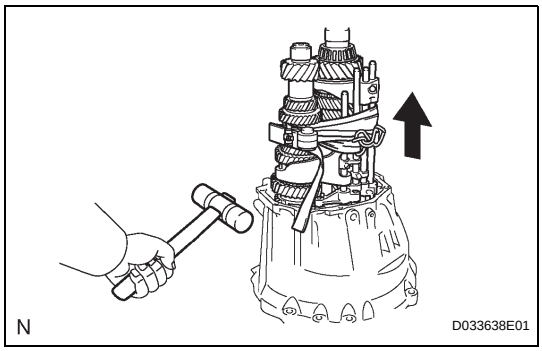
(b) Using a hexagon wrench (24 mm), remove the plug.



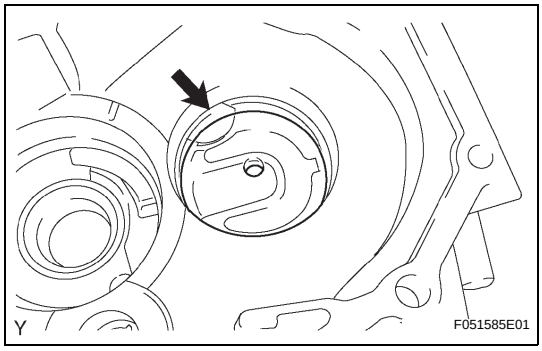
(c) Tie the input shaft, counter gear and control assembly with a rope or string.



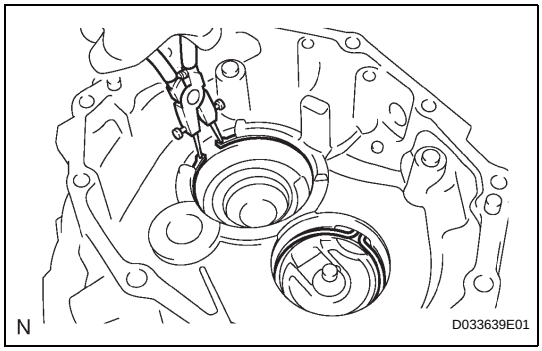
(d) Expand the 2 snap rings, and lift up the output shaft, input shaft, counter gear and control assembly.



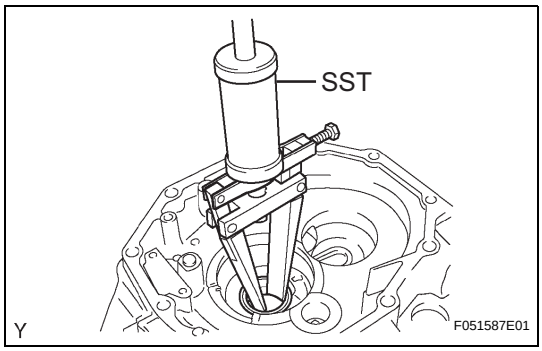
(e) Remove the output shaft, input shaft, counter gear shaft and control assembly while gently tapping the clutch housing with a plastic hammer.
NOTICE:
Take care not to subject the output shaft, input shaft, counter gear shaft and control assembly to any impact. This could cause the ball and spring to come out.
(f) Separate the output shaft, input shaft, counter gear shaft and control assembly.



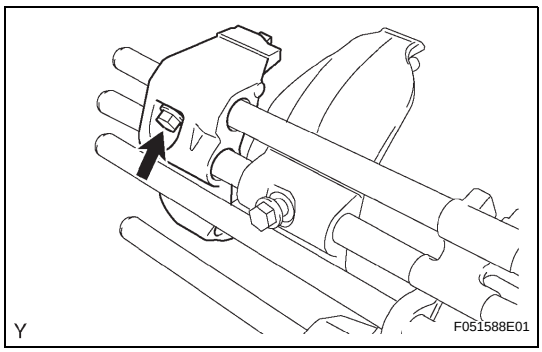
28. REMOVE NO. 1 OIL RECEIVER PIPE
(a) Remove the oil receiver pipe No. 1 from the transmission front case.



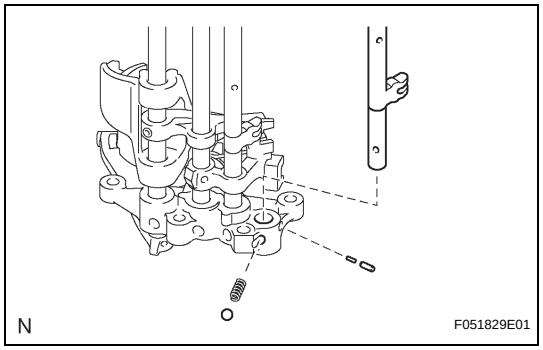
29. REMOVE FRONT BEARING SHAFT SNAP RING
(a) Using a snap ring plier, remove the 2 snap rings.



30. REMOVE TRANSMISSION CASE OIL SEAL
(a) Using SST, remove the transmission case oil seal from the transmission front case.
SST 09308-00010

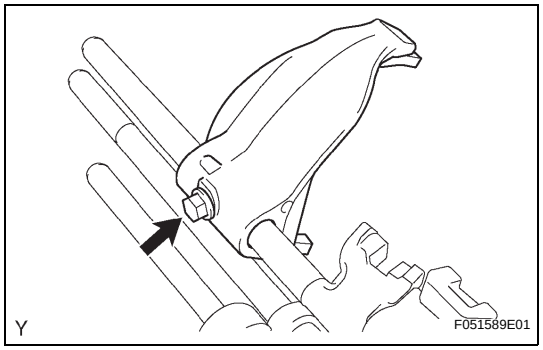


31. REMOVE NO. 3 GEAR SHIFT FORK
(a) Remove the bolt, then remove the gear shift fork No. 3.



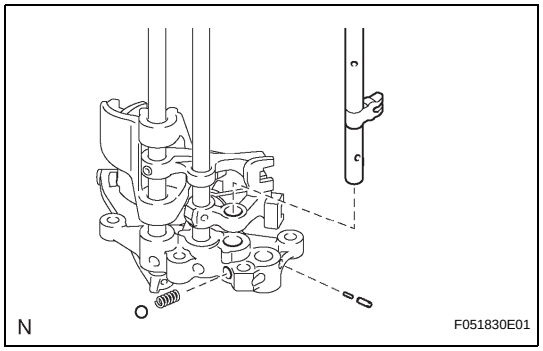
32. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 3, boll, spring, interlock pin No. 2 and interlock pin No. 3.



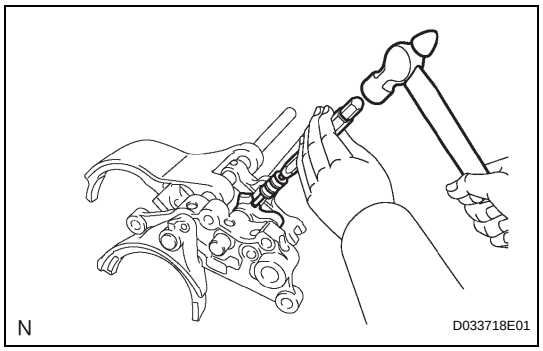
33. REMOVE NO. 2 GEAR SHIFT FORK

(a) Remove the bolt, then remove the gear shift fork No. 2.



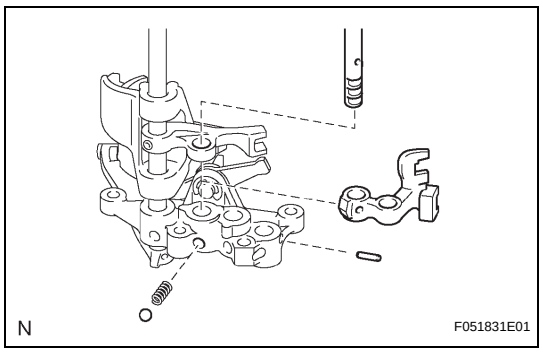
34. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 2, ball, spring, interlock pin No. 2 and interlock pin No. 3.



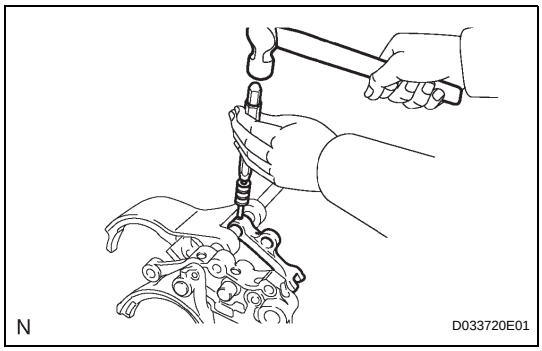
35. REMOVE NO. 1 GEAR SHIFT HEAD

(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.



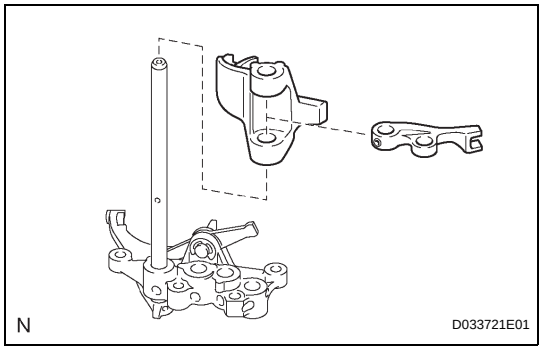
36. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 1, ball, spring, shift head No. 1 and interlock pin No. 1.

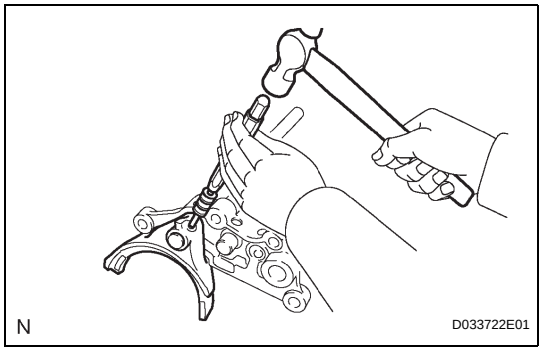


37. REMOVE NO. 1 GEAR SHIFT FORK

(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.



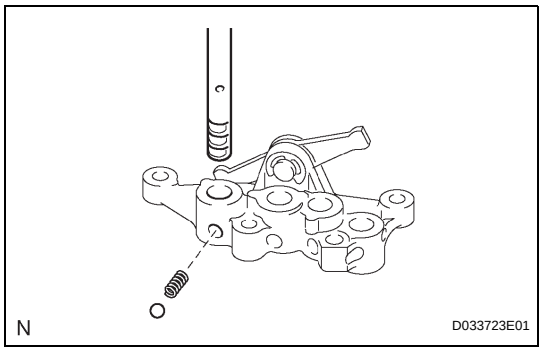
(b) Remove the shift head No. 2 and shift fork No. 1.



38. REMOVE NO. 4 GEAR SHIFT FORK

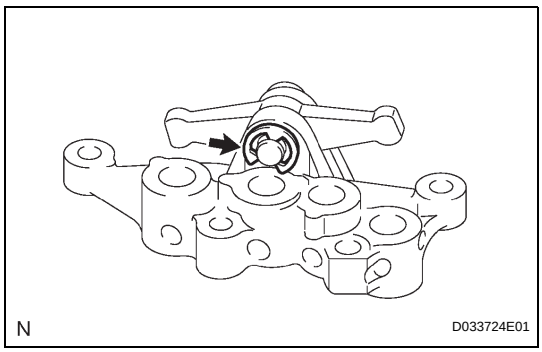
(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.

(b) Remove the shift fork No. 4.



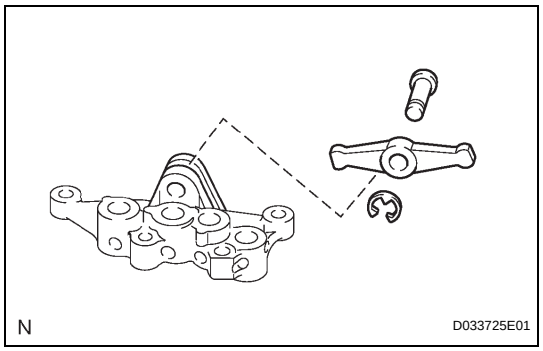
39. REMOVE NO. 4 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 4, ball and spring.



40. REMOVE 1ST AND REVERSE SHIFT ARM

(a) Using a screwdriver, remove the E-ring.

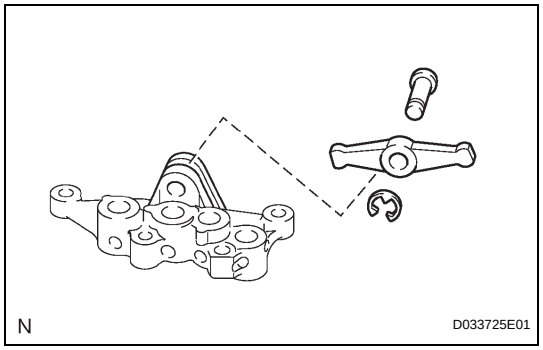


(b) Remove the shift arm pivot and shift arm.

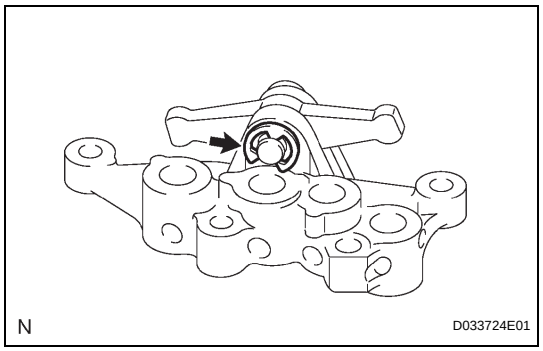
REASSEMBLY

1. INSTALL 1ST AND REVERSE SHIFT ARM

(a) Install the shift arm and shift arm pivot onto the interlock bracket.



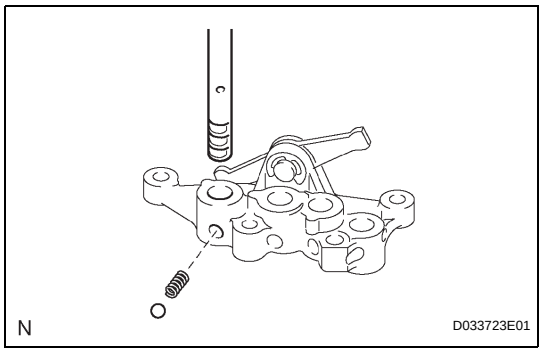
(b) Install a new E-ring onto the shift arm pivot.



2. INSTALL NO. 4 GEAR SHIFT FORK SHAFT

(a) Install the spring and ball onto the interlock bracket.

(b) Install the shift fork shaft No. 4.



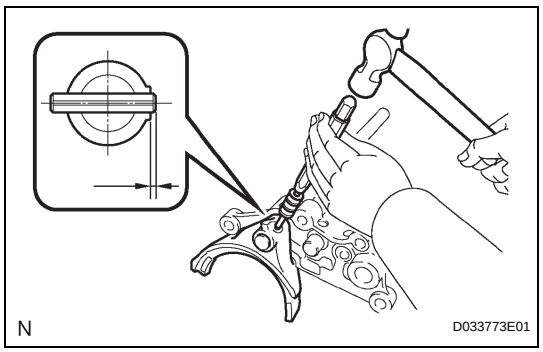
3. INSTALL NO. 4 GEAR SHIFT FORK

(a) Install the shift fork No. 4 onto the shift fork shaft No. 4.

(b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap the new slotted pin into the shaft fork No. 4 and shift fork shaft No. 4.

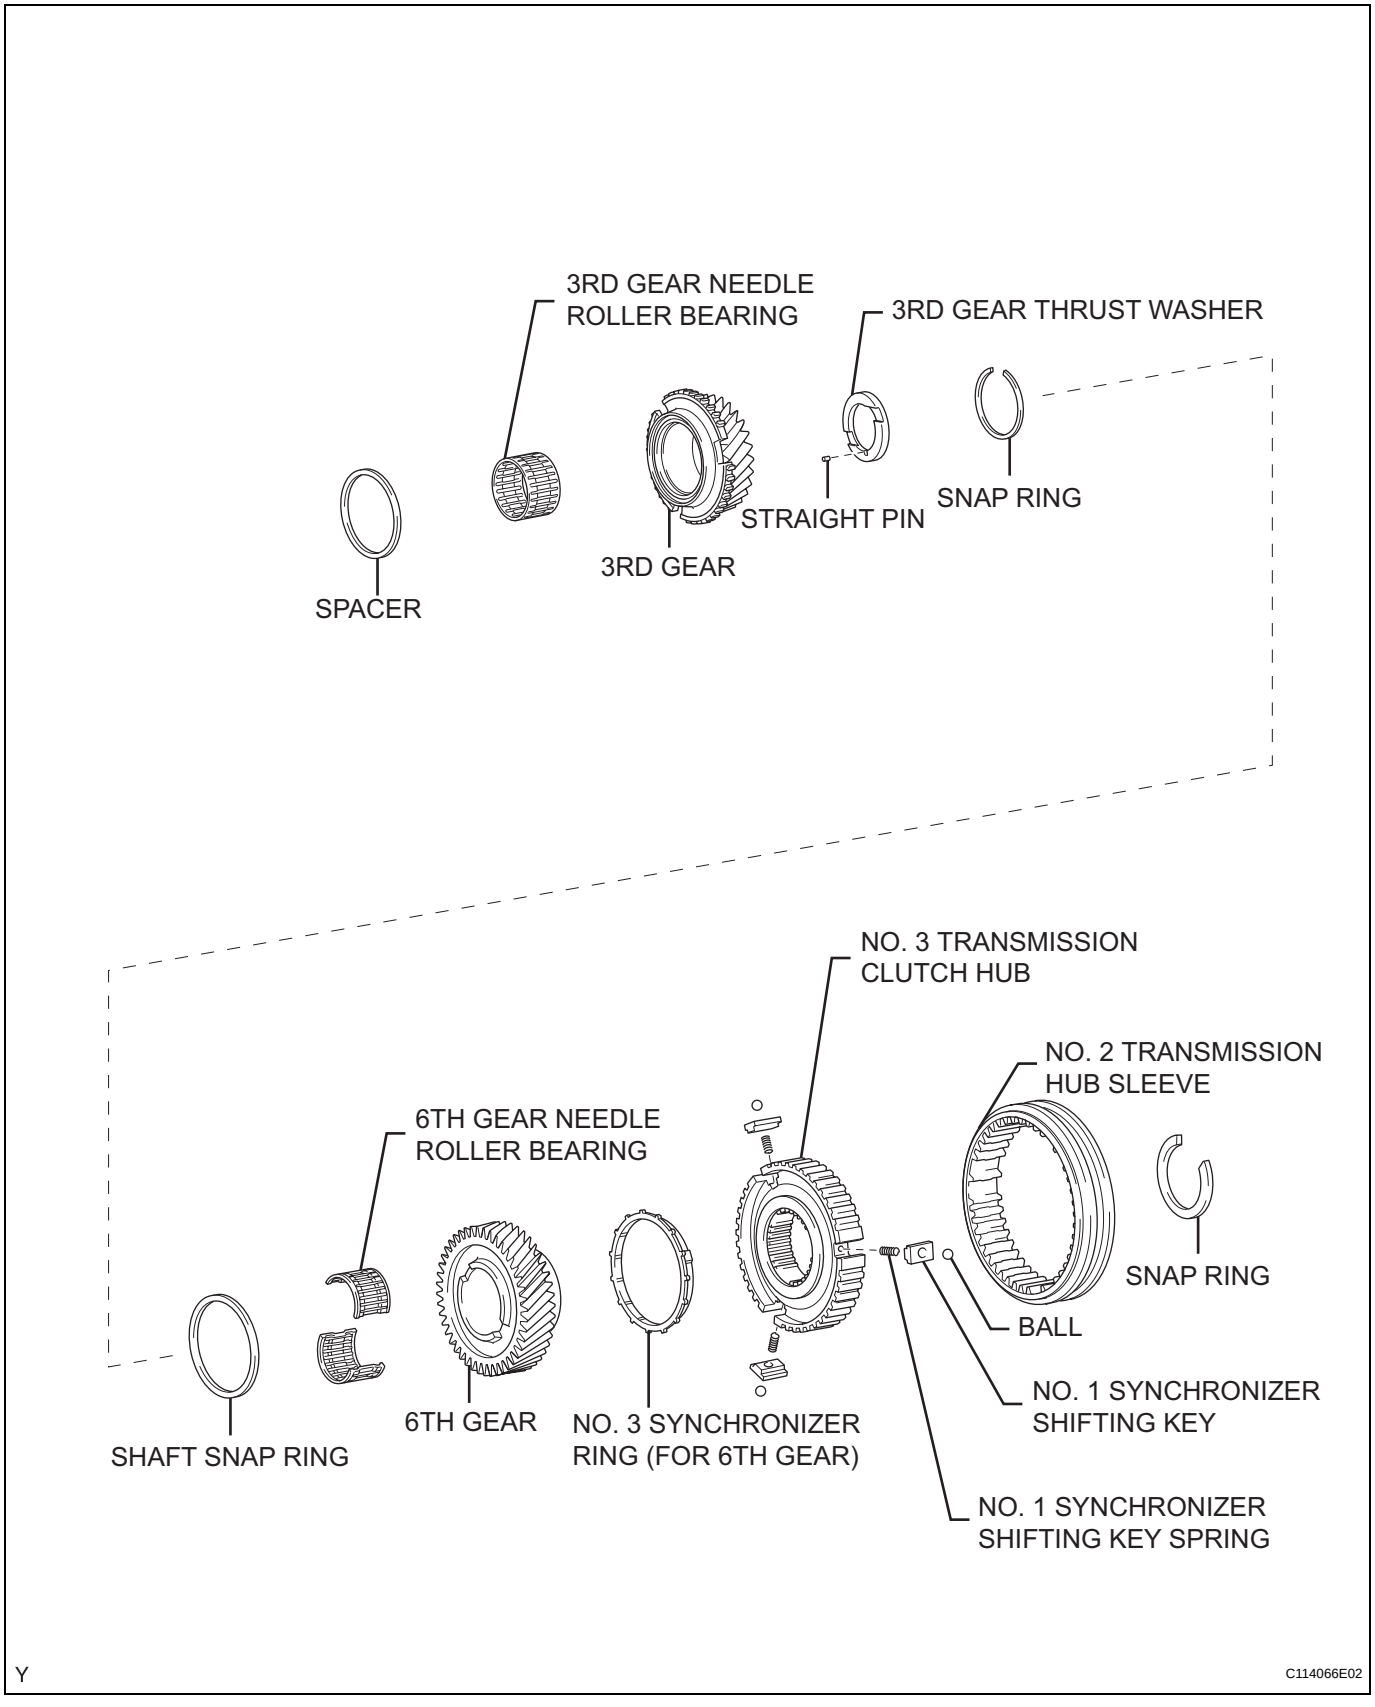
Drive in depth:

0 to 0.5 mm (0 to 0.050 in.)

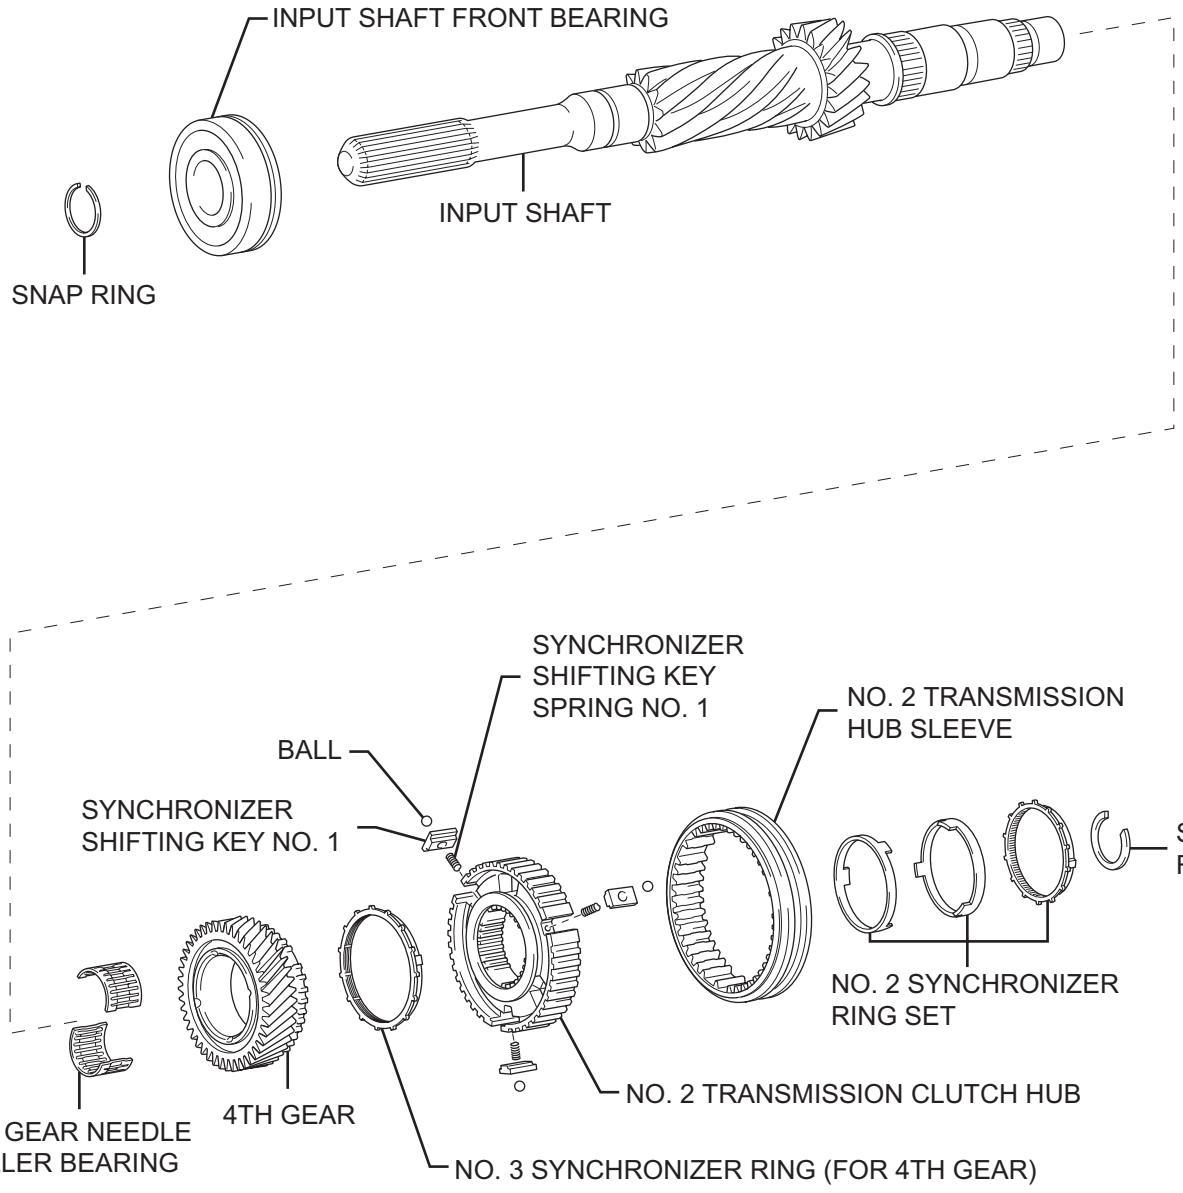


INPUT SHAFT

COMPONENTS

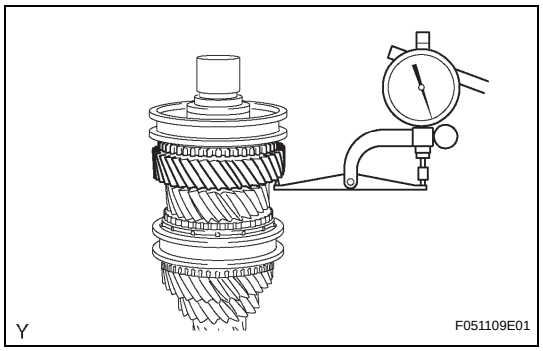


MT



Y

C114065E03



DISASSEMBLY

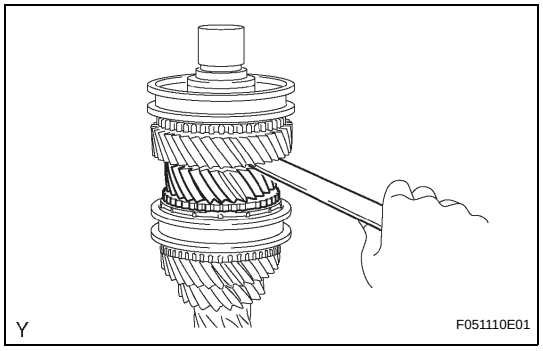
1. INSPECT 6TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 6th gear thrust clearance.

Standard clearance:

0.20 to 0.49 mm (0.0079 to 0.0193 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



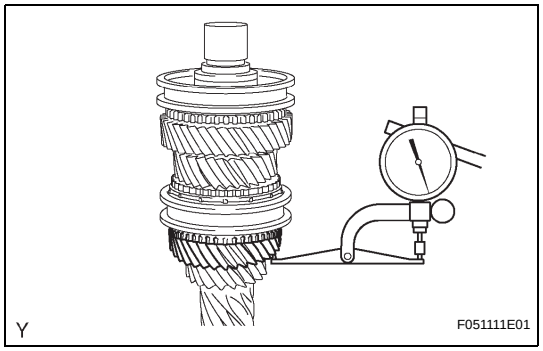
2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.09 to 0.52 mm (0.0035 to 0.0205 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 2.



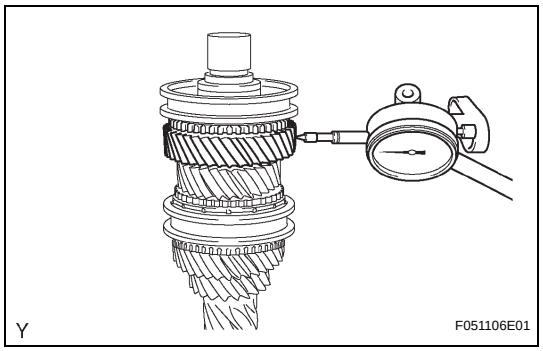
3. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 4th gear thrust clearance.

Standard clearance:

0.12 to 0.38 mm (0.0047 to 0.0150 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



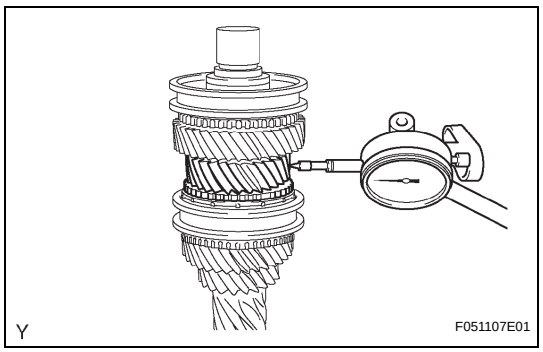
4. INSPECT 6TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 6th gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



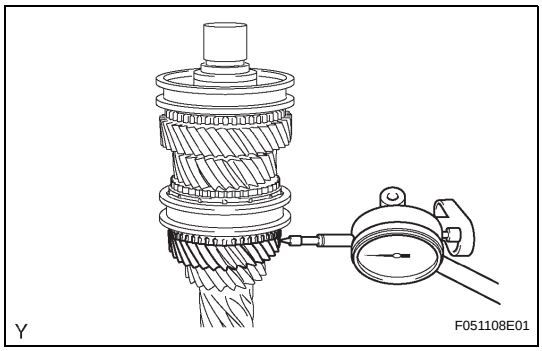
5. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



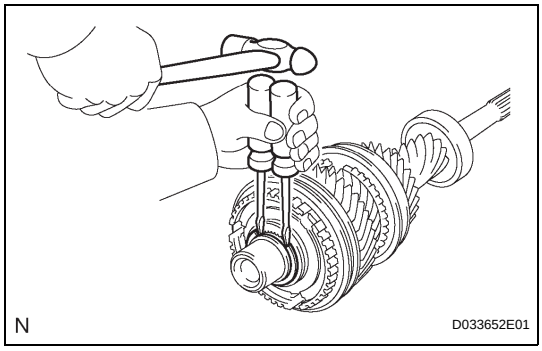
6. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.

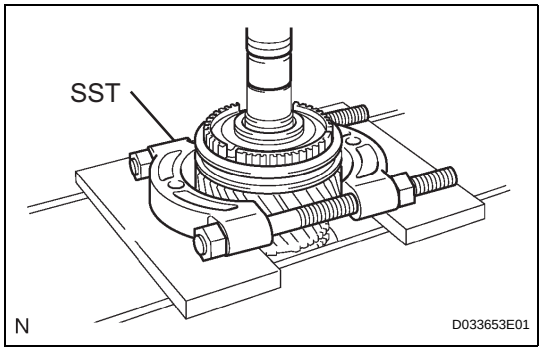


7. REMOVE TRANSMISSION CLUTCH HUB NO.3 SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.

HINT:

Use a shop rag to prevent the snap ring from flying off.



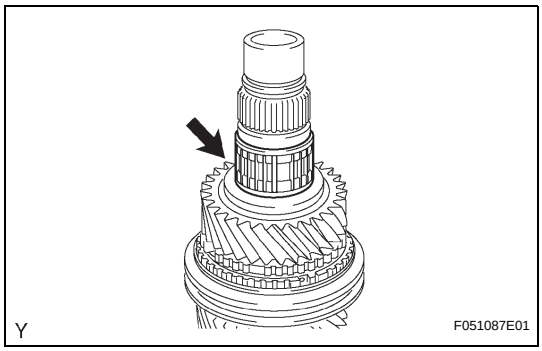
8. REMOVE 6TH GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 3, hub sleeve, synchronizer ring and 6th gear from the input shaft.

SST 09950-00020, 09950-70010 (09951-07200), 09950-60010 (09951-00300)

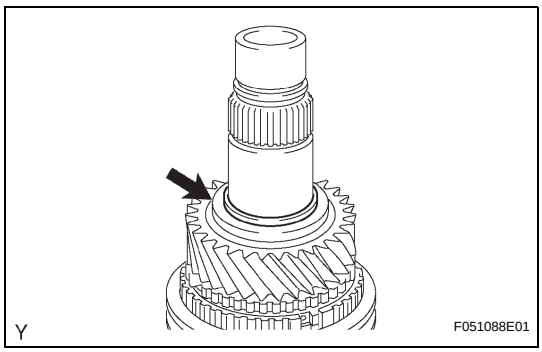
NOTICE:

- **Do not tighten SST excessively.**
- **Support the input shaft by hand so that it does not fall off.**



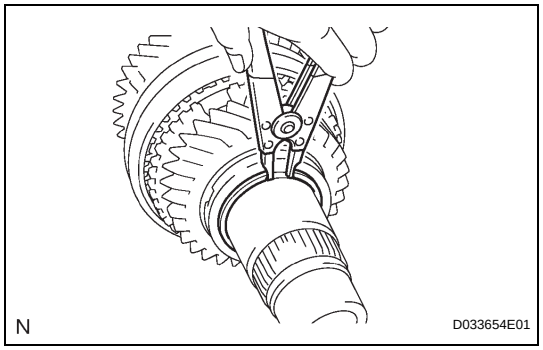
9. REMOVE 6TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 6th gear needle roller bearing from the input shaft.



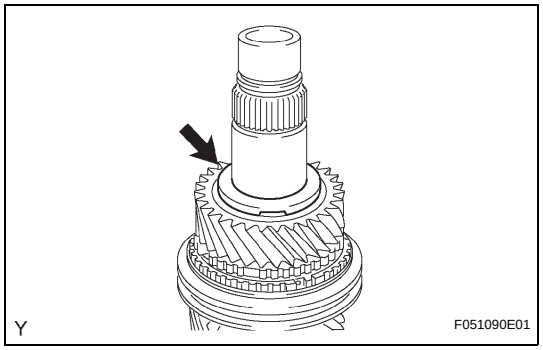
10. REMOVE SHAFT SNAP RING

(a) Remove the shaft snap ring from the input shaft.



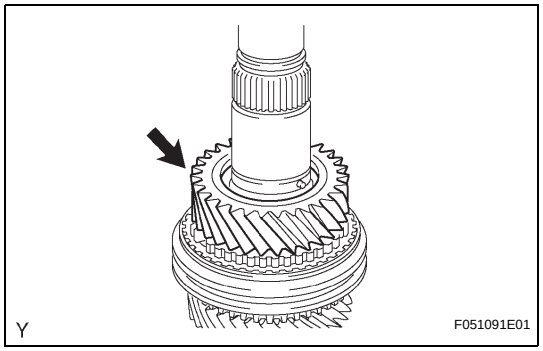
11. REMOVE GEAR THRUST WASHER SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the input shaft.



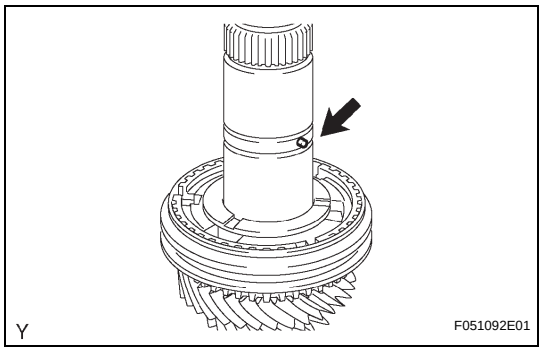
12. REMOVE 3RD GEAR THRUST WASHER

(a) Remove the 3rd gear thrust washer from the input shaft.



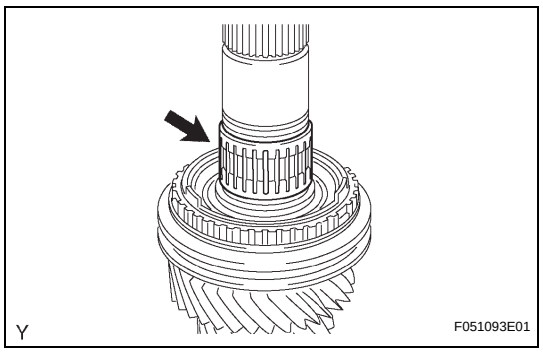
13. REMOVE 3RD GEAR

(a) Remove the 3rd gear from the input shaft.



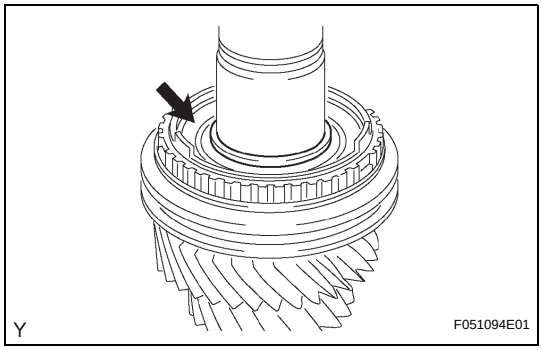
14. REMOVE STRAIGHT PIN

(a) Remove the straight pin from the input shaft.



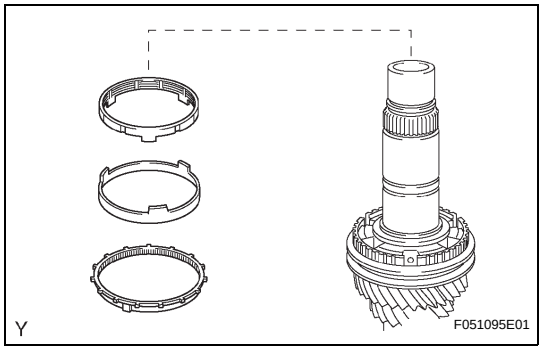
15. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.



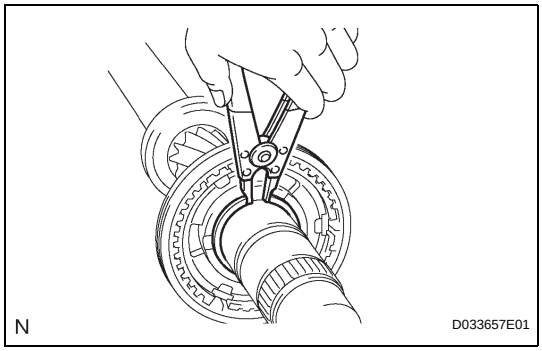
16. REMOVE SPACER

(a) Remove the spacer from the input shaft.



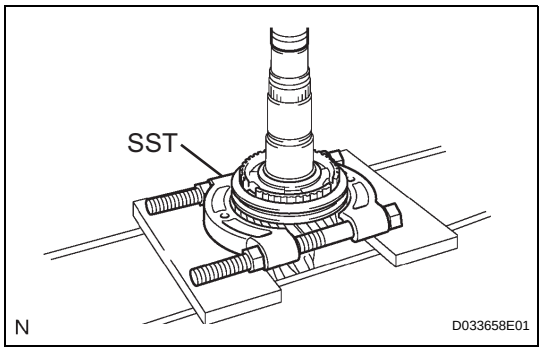
17. REMOVE NO. 2 SYNCHRONIZER RING SET

(a) Remove the synchronizer ring set No. 2 from the input shaft.



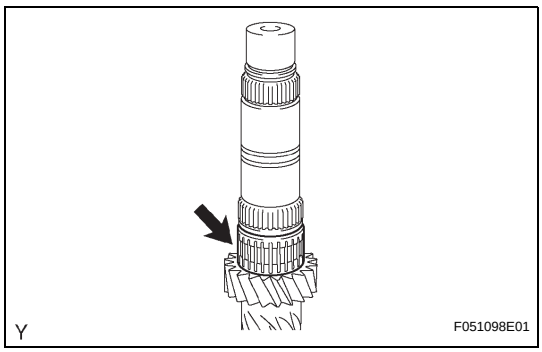
18. REMOVE CLUTCH HUB NO.2 SETTING SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the input shaft.



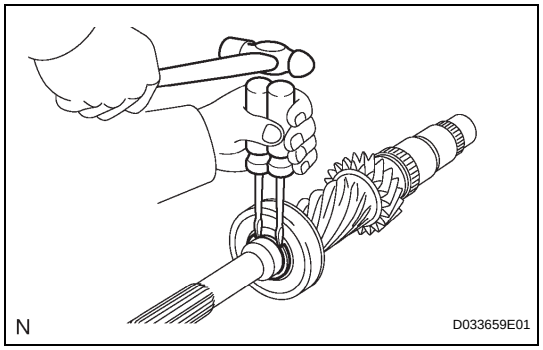
19. REMOVE 4TH GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 2, hub sleeve, synchronizer ring and 4th gear from the input shaft.
SST 09950-00020
NOTICE:
Support the input shaft by hand so that it does not fall off.



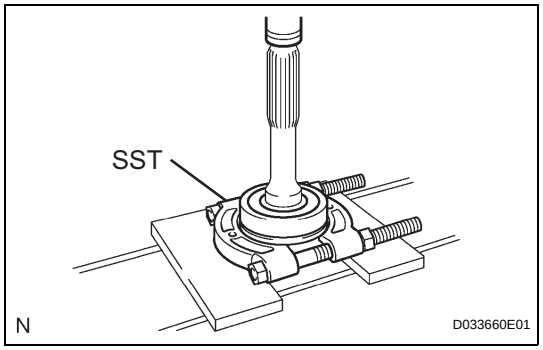
20. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 4th gear needle roller bearing from the input shaft.



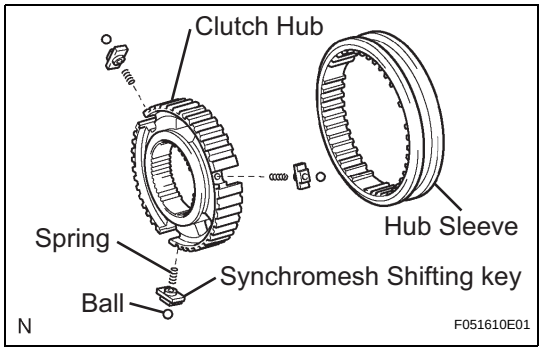
21. REMOVE INPUT SHAFT FRONT BEARING SNAP RING

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.
HINT:
Use a shop rag to prevent the snap ring from flying off.



22. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the input shaft front bearing from the input shaft.
SST 09950-00020
NOTICE:
Support the input shaft by hand so that it does not fall off.

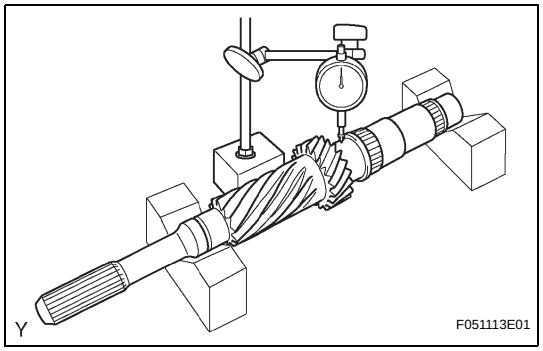


23. REMOVE NO. 2 TRANSMISSION CLUTCH HUB

(a) Remove the clutch hub, 3 synchromesh shifting keys, 3 balls and 3 springs from the hub sleeve.
HINT:
Use a shop rag to prevent the ball and spring from flying off.

24. REMOVE NO. 3 TRANSMISSION CLUTCH HUB

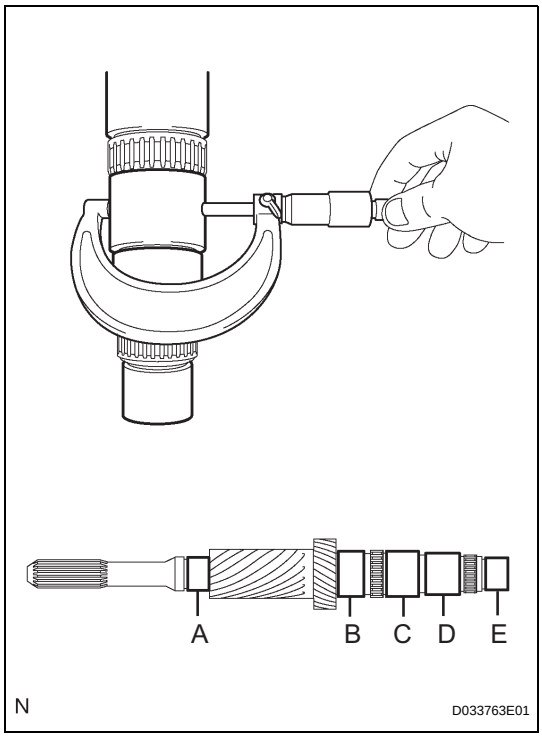
(a) Perform the same procedures as for clutch hub No. 2.



INSPECTION

1. INSPECT INPUT SHAFT

(a) Using a dial indicator and 2 V-blocks, measure the shaft runout.
Maximum runout:
0.03 mm (0.0012 in.)
If the runout exceeds the maximum, replace the input shaft.



(b) Using a micrometer, measure the outer diameter of the input shaft journal surface.

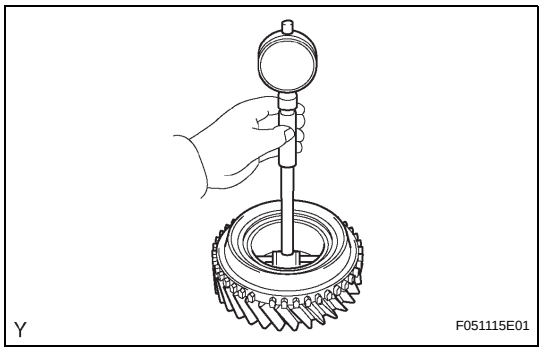
Standard

Part	Outer diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	44.985 to 45.000 (1.7711 to 1.7717)
C	44.985 to 45.000 (1.7711 to 1.7717)
D	41.985 to 42.000 (1.6530 to 1.6535)
E	32.967 to 32.980 (1.2979 to 1.2984)

Minimum

Part	Outer diameter mm (in.)
A	34.002 (1.3387)
B	44.985 (1.7711)
C	44.985 (1.7711)
D	41.985 (1.6530)
E	32.967 (1.2979)

If the outer diameter is less than the minimum, replace the input shaft.

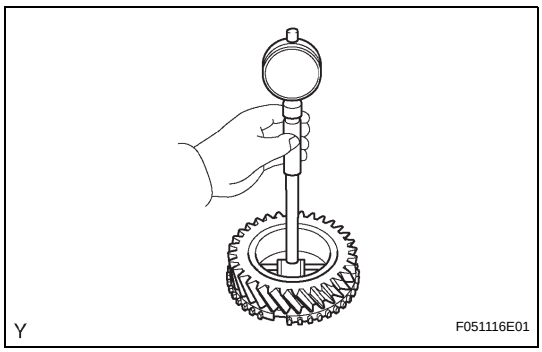


2. INSPECT 6TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 6th gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the 4th gear.

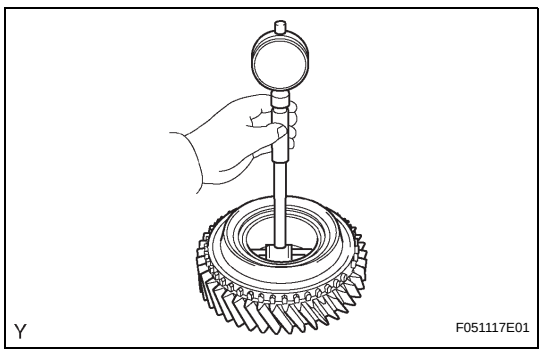


3. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the 3rd gear.

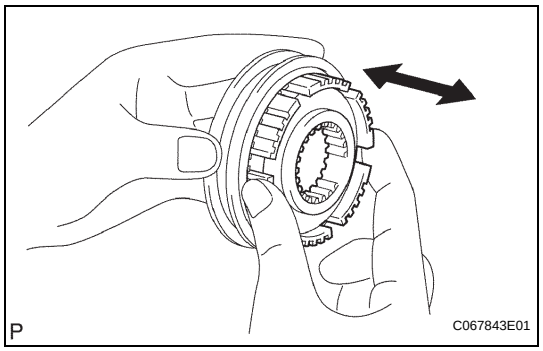


4. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

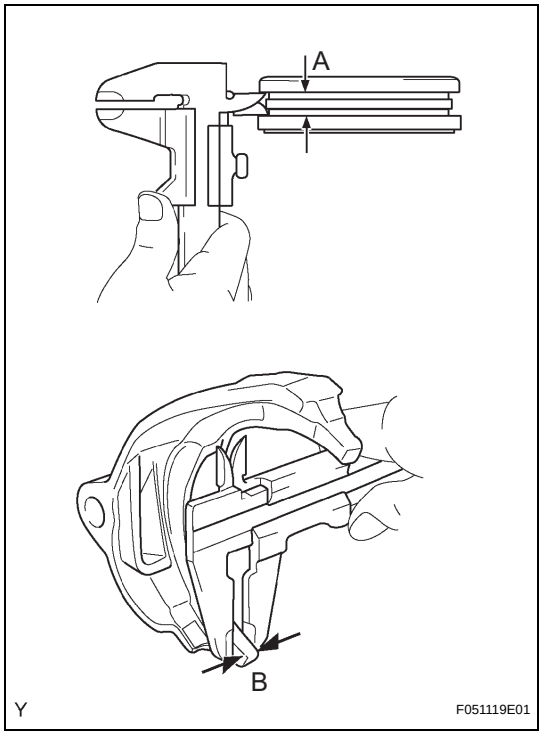
If the inside diameter exceeds the maximum, replace the 4th gear.



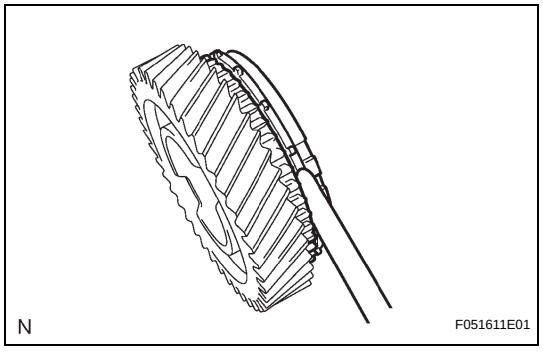
5. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the transmission hub No. 2 and transmission hub sleeve No. 2.

(b) Check that the spline gear teeth of the transmission hub sleeve No. 2 are not worn.

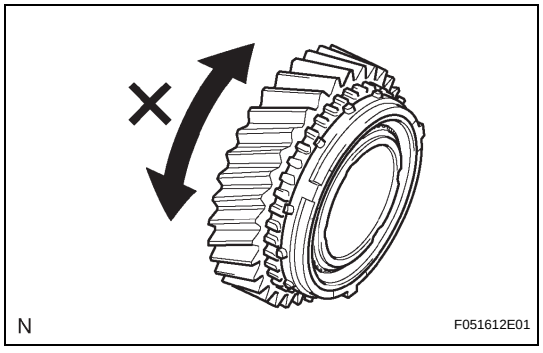


(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 2 groove (A) and the thickness of the claw part on the gear shift forks No. 2 or No. 3 (B), and calculate the clearance.
Standard clearance:
(A - B);
0.26 to 0.84 mm (0.0102 to 0.0331 in.)
If the clearance is outside the specification, replace the transmission hub sleeve No. 2 and gear shift fork.

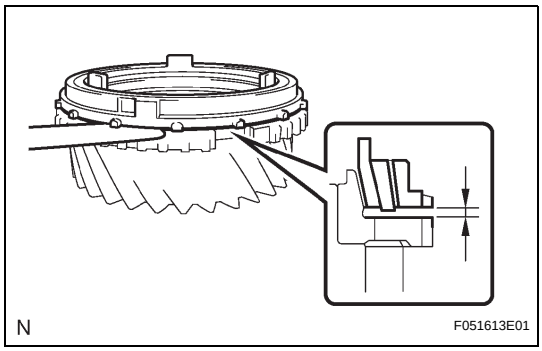


6. INSPECT NO. 3 SYNCHRONIZER RING (FOR 6TH GEAR)

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and the 6th gear.
Standard clearance:
0.70 to 1.50 mm (0.0276 to 0.0591 in.)
Minimum clearance:
0.70 mm (0.0276 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 6th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 6th gear cone. Check that the ring locks.

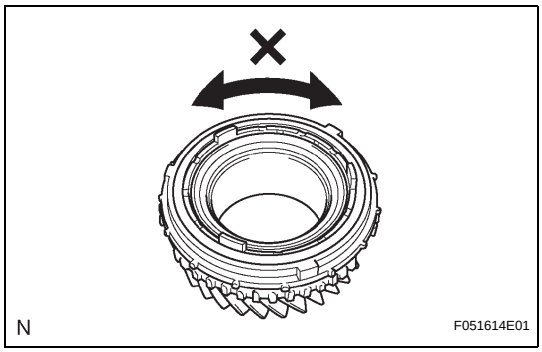


7. INSPECT NO. 2 SYNCHRONIZER RING SET

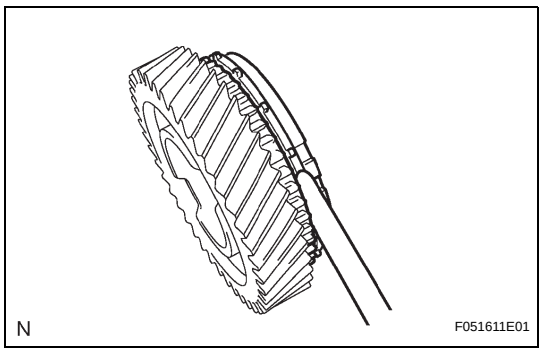
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and the 3rd gear.

Standard clearance:
Inner:
1.20 to 2.20 mm (0.0472 to 0.0866 in.)
Middle:
0.60 to 1.80 mm (0.0236 to 0.0709 in.)
Outer:
0.80 to 1.80 mm (0.0315 to 0.0709 in.)
Minimum clearance:
Inner:
1.20 mm (0.0472 in.)
Middle:
0.60 mm (0.0236 in.)
Outer:
0.80 mm (0.0315 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 3rd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 3rd gear cone. Check that the ring locks.

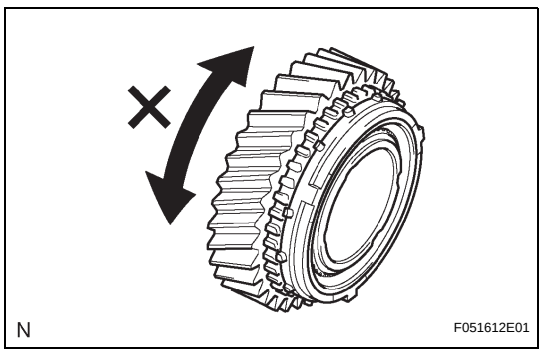


8. INSPECT NO. 3 SYNCHRONIZER RING (FOR 4TH GEAR)

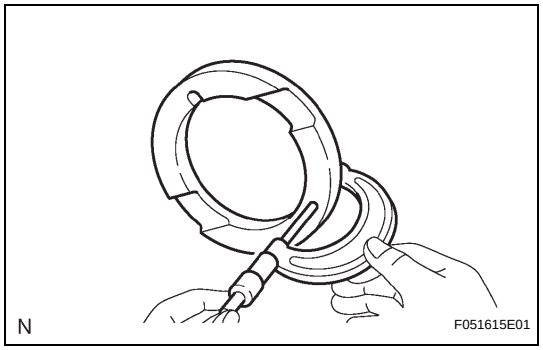
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 4th gear.

Standard clearance:
0.70 to 1.50 mm (0.0276 to 0.0591 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 4th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 4th gear cone. Check that the ring locks.



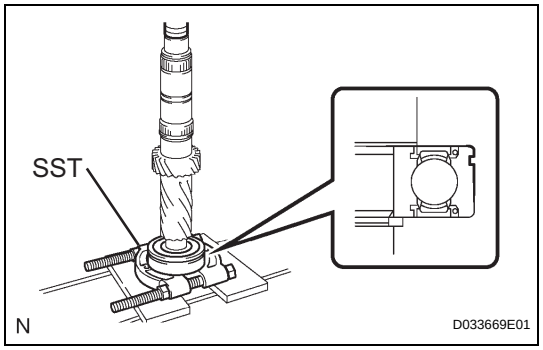
9. INSPECT 3RD GEAR THRUST WASHER

(a) Using a micrometer, measure the thrust washer thickness.

Standard thickness:
7.12 to 7.18 mm (0.2803 to 0.2827 in.)
Minimum thickness:
7.12 mm (0.2803 in.)

If the thickness is less than the minimum, replace the thrust washer.

REASSEMBLY



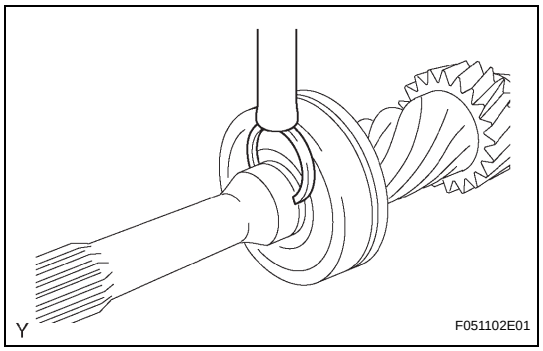
1. INSTALL INPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the input shaft front bearing onto the input shaft.

SST 09950-00020

HINT:

Make sure that the groove of the bearing faces the correct direction as shown in the illustration.



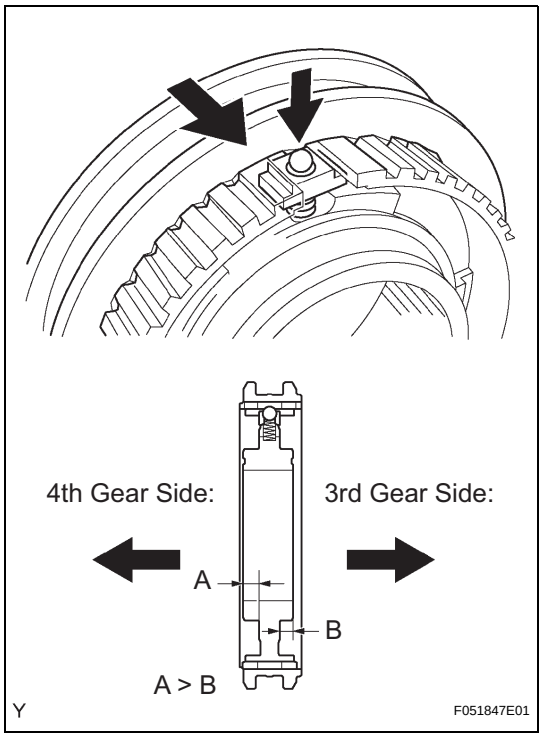
2. INSTALL INPUT SHAFT FRONT BEARING SNAP RING

(a) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-31026	2.65 to 2.70 (0.1043 to 0.1063)	A
90520-31027	2.70 to 2.75 (0.1063 to 0.1083)	B
90520-31028	2.75 to 2.80 (0.1083 to 0.1102)	C
90520-31029	2.80 to 2.85 (0.1102 to 0.1122)	D
90520-31030	2.85 to 2.90 (0.1122 to 0.1142)	E
90520-31031	2.90 to 2.95 (0.1142 to 0.1161)	F

(b) Using a brass bar and hammer, install the snap ring onto the input shaft.



3. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

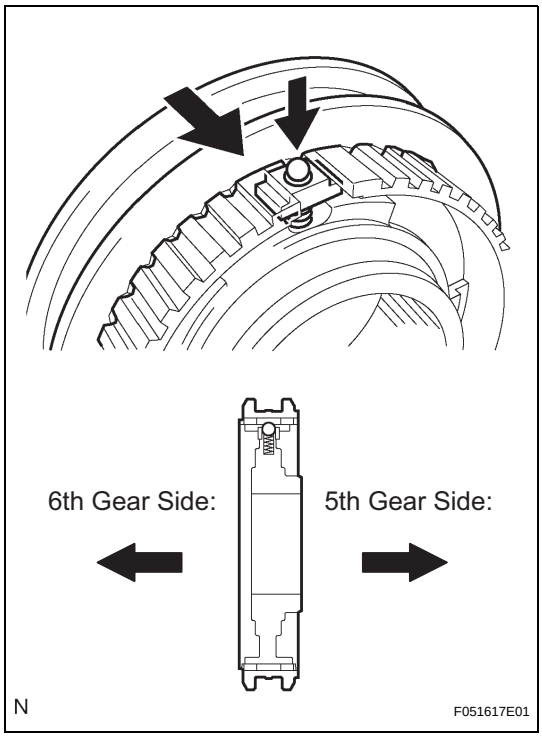
(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub No. 2.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.

NOTICE:

Take care to prevent the ball from flying off.

HINT:

Make sure that the clutch hub No. 2 faces the correct direction as shown in the illustration.



4. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

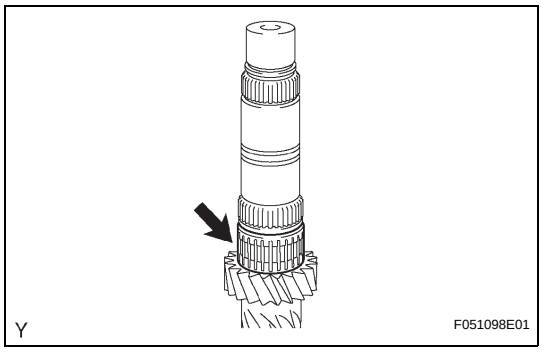
(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub No. 3.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.

NOTICE:

Take care to prevent the ball from flying off.

HINT:

Make sure that the clutch hub No. 3 faces the correct direction as shown in the illustration.

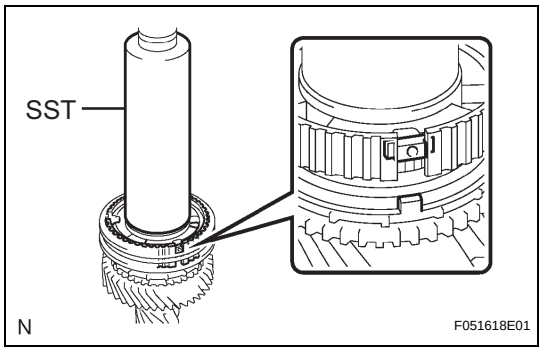


5. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 4th gear needle roller bearing with gear oil, then install it onto the input shaft.

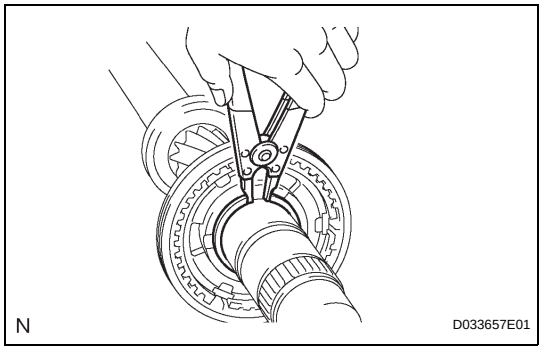
6. INSTALL 4TH GEAR

(a) Coat the 4th gear and synchronizer ring No. 3 with gear oil, then install them onto the input shaft.



(b) Using SST and a press, install the clutch hub No. 2 onto the input shaft.
SST 09308-14010
HINT:
Align the convex portion of the synchronizer ring with the groove of the clutch hub.

(c) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.

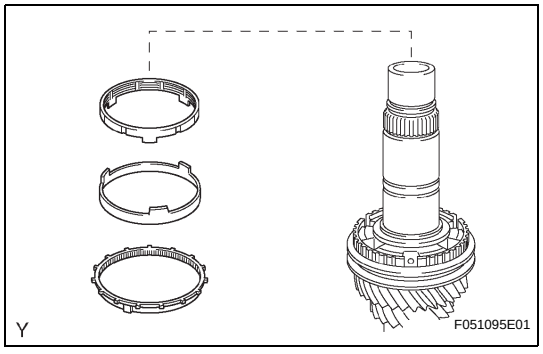


7. INSTALL CLUTCH HUB NO.2 SETTING SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

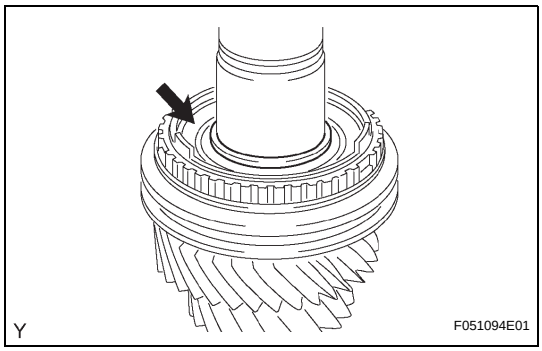
Part No.	Thickness: mm (in.)	Mark
90520-42012	1.77 to 1.82 (0.0697 to 0.0717)	A
90520-42013	1.82 to 1.87 (0.0717 to 0.0736)	B
90520-42014	1.87 to 1.92 (0.0736 to 0.0756)	C
90520-42015	1.92 to 1.97 (0.0756 to 0.0776)	D
90520-42016	1.97 to 2.02 (0.0776 to 0.0795)	E
90520-42017	2.02 to 2.07 (0.0795 to 0.0815)	F
90520-42018	2.07 to 2.12 (0.0815 to 0.0835)	G

(b) Using a snap ring expander, install the snap ring onto the input shaft.



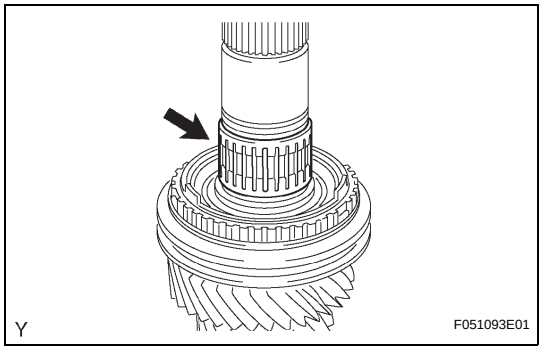
8. INSTALL NO. 2 SYNCHRONIZER RING SET

(a) Coat the synchronizer ring set No. 2 with gear oil, then install it onto the input shaft.



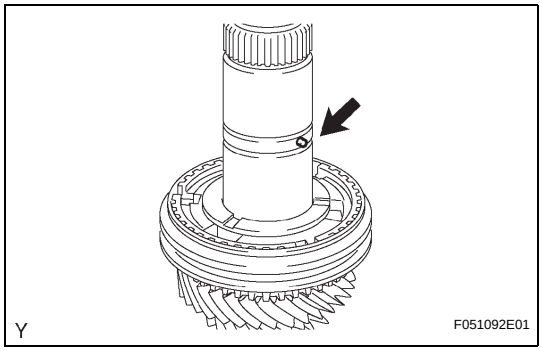
9. INSTALL SPACER

(a) Coat the spacer with gear oil, and install it onto the input shaft.



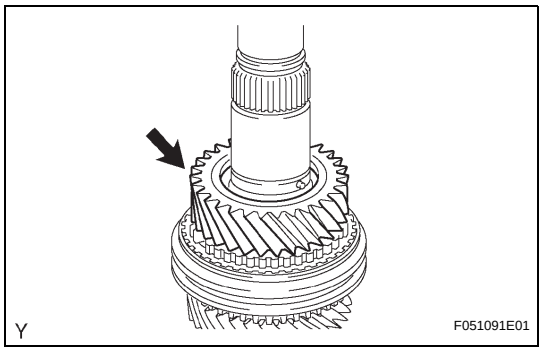
10. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear needle roller bearing with gear oil, and install it onto the input shaft.



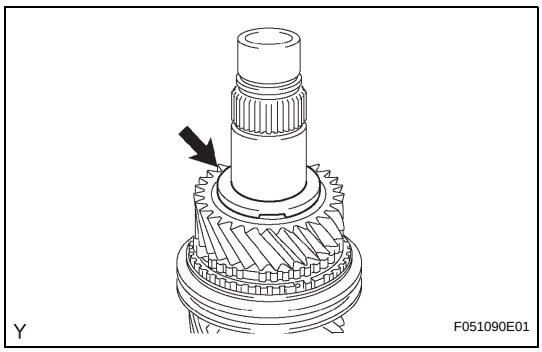
11. INSTALL STRAIGHT PIN

(a) Install the straight pin onto the input shaft.



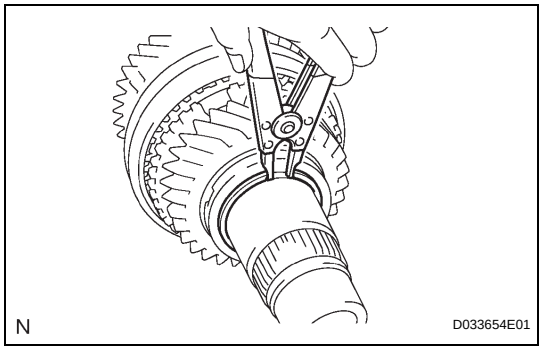
12. INSTALL 3RD GEAR

(a) Coat the 3rd gear with gear oil, and install it onto the input shaft.



13. INSTALL 3RD GEAR THRUST WASHER

(a) Coat the 3rd gear thrust washer with gear oil, and install it onto the input shaft.
HINT:
Align the straight pin with the groove of the gear thrust washer and install it.



14. INSTALL GEAR THRUST WASHER SHAFT SNAP RING

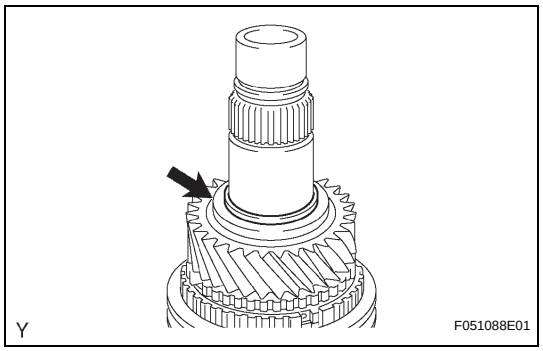
(a) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.004 in.) or less

Snap ring thickness

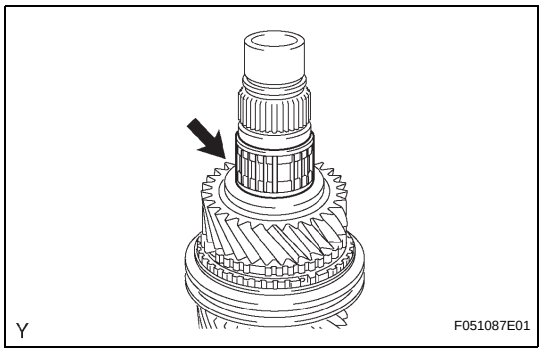
Part No.	Thickness: mm (in.)	Mark
90520-39026	2.07 to 2.12 (0.0815 to 0.0835)	A
90520-39027	2.12 to 2.17 (0.0835 to 0.0854)	B
90520-39028	2.17 to 2.22 (0.0854 to 0.0874)	C
90520-39029	2.22 to 2.27 (0.0874 to 0.0894)	D
90520-39030	2.27 to 2.32 (0.0894 to 0.0913)	E
90520-39031	2.32 to 2.37 (0.0913 to 0.0933)	F

(b) Using a snap ring expander, install the snap ring onto the input shaft.



15. INSTALL SHAFT SNAP RING

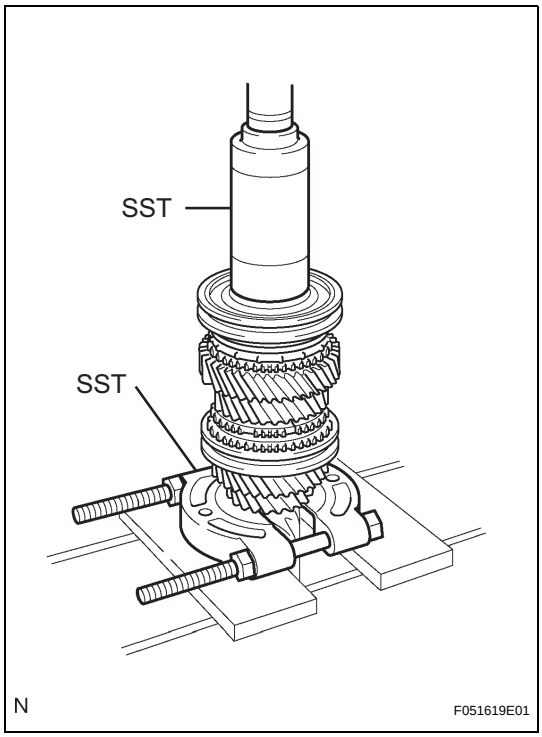
(a) Coat the shaft snap ring with gear oil, and install it onto the input shaft.



16. INSTALL 6TH GEAR NEEDLE ROLLER BEARING

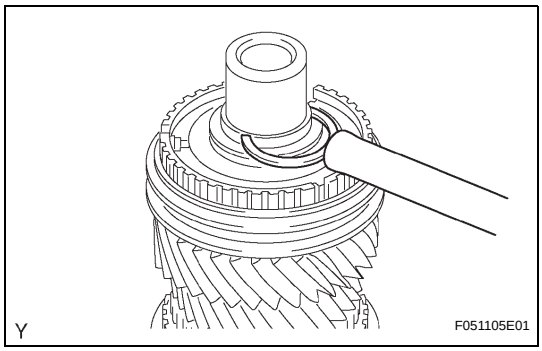
(a) Coat the 6th gear needle roller bearing with gear oil, and install it onto the input shaft.

MT



17. INSTALL 6TH GEAR

(a) Install the 6th gear onto the input shaft.
(b) Install the synchronizer ring onto the input shaft.
(c) Using SST and a press, install the clutch hub onto the input shaft.
SST 09309-37010, 09950-00020
(d) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.

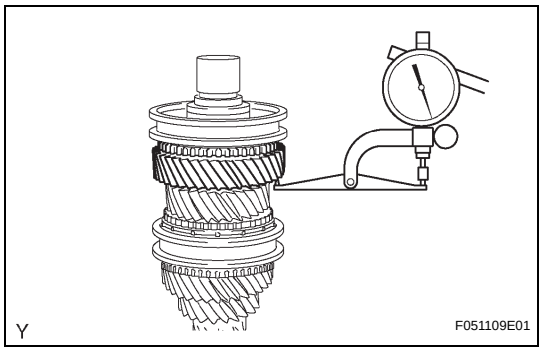


18. INSTALL TRANSMISSION CLUTCH HUB NO.3 SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-33022	2.10 to 2.15 (0.0827 to 0.0847)	A
90520-33023	2.15 to 2.20 (0.0847 to 0.0866)	B
90520-33024	2.20 to 2.25 (0.0866 to 0.0886)	C
90520-33025	2.25 to 2.30 (0.0886 to 0.0906)	D
90520-33026	2.30 to 2.35 (0.0906 to 0.0925)	E
90520-33027	2.35 to 2.40 (0.0925 to 0.0945)	F
90520-33028	2.40 to 2.45 (0.0945 to 0.0965)	G

(b) Using a brass bar and a hammer, install the snap ring onto the input shaft.



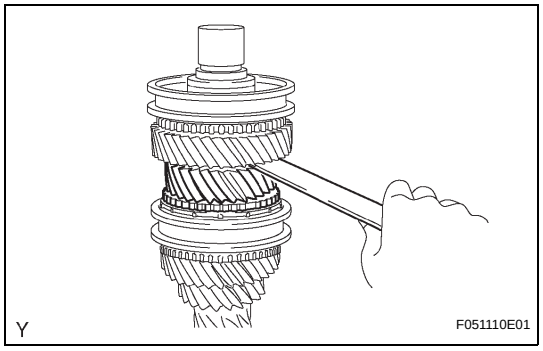
19. INSPECT 6TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 6th gear thrust clearance.

Standard clearance:

0.20 to 0.49 mm (0.0079 to 0.0193 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



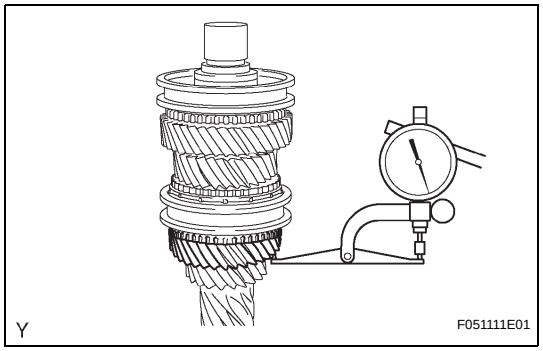
20. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.09 to 0.52 mm (0.0035 to 0.0205 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 2.



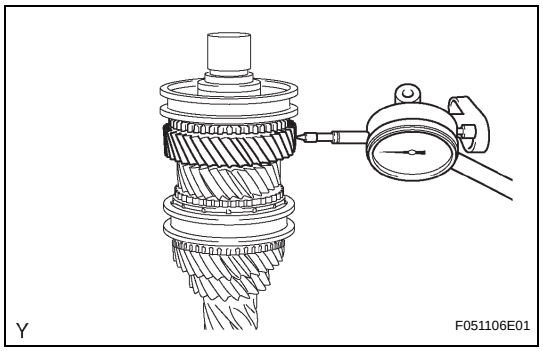
21. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 4th gear thrust clearance.

Standard clearance:

0.12 to 0.38 mm (0.0047 to 0.0150 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



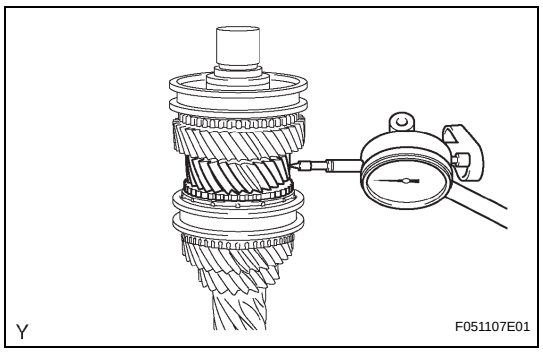
22. INSPECT 6TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 6th gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



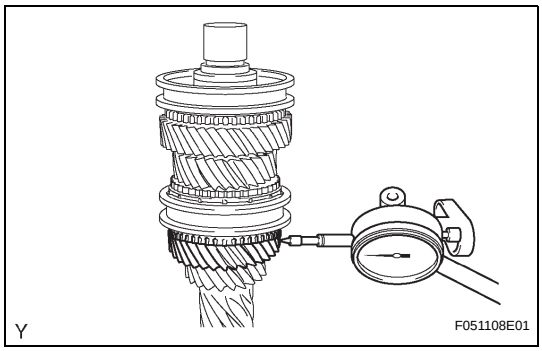
23. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



24. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

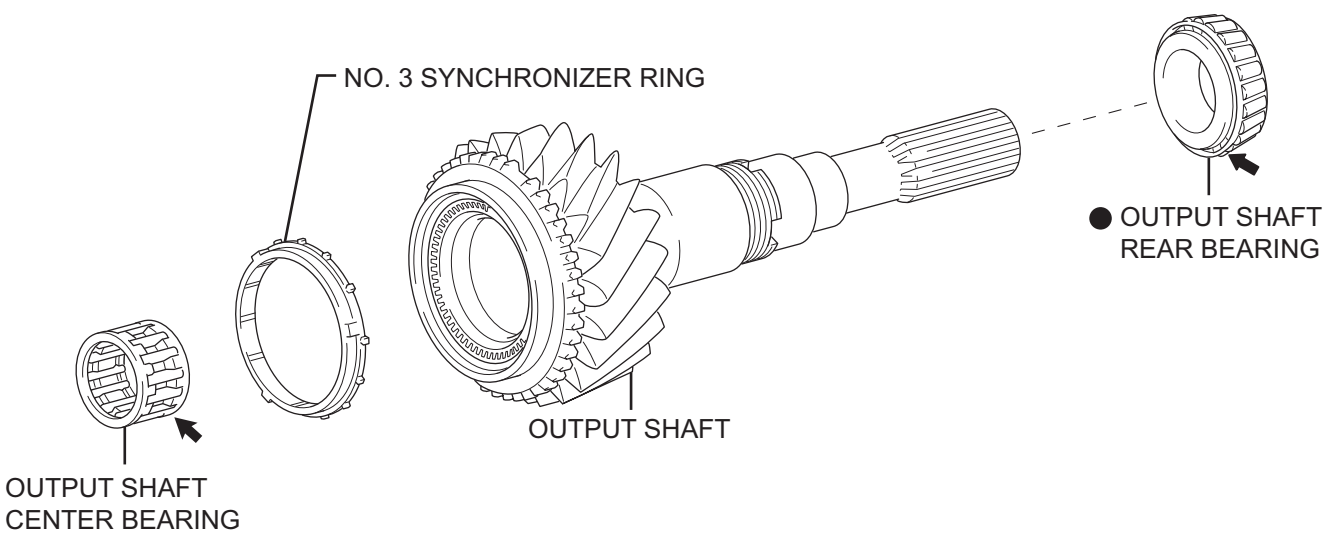
Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.

OUTPUT SHAFT

COMPONENTS



● Non-reusable part

⬅ Apply MP grease

Y

C114067E02

MT

MT

DISASSEMBLY

1. REMOVE NO. 3 SYNCHRONIZER RING

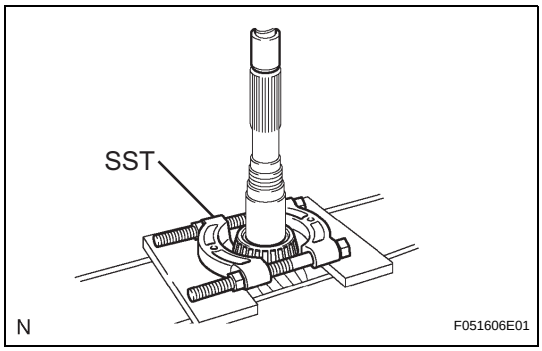
(a) Remove synchronizer ring No. 3 from the output shaft.

2. REMOVE OUTPUT SHAFT CENTER BEARING

(a) Remove the output shaft center bearing from the output shaft.

3. REMOVE OUTPUT SHAFT REAR BEARING

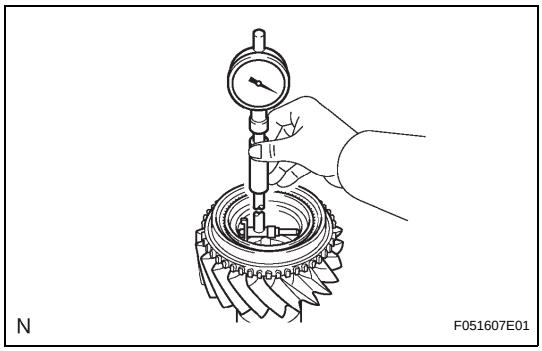
(a) Using SST and a press, remove the output shaft bearing.
SST 09950-00020



INSPECTION

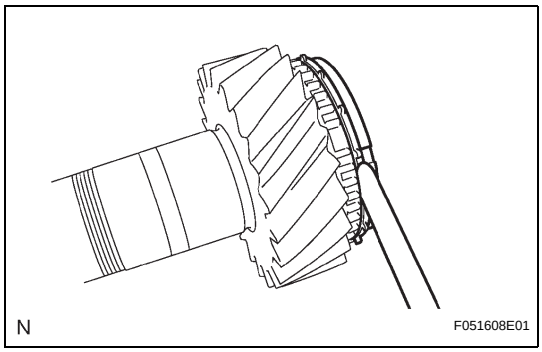
1. INSPECT OUTPUT SHAFT

(a) Using a cylinder gauge, measure the inside diameter of the output shaft.
Standard inside diameter:
45.009 to 45.025 mm (1.7720 to 1.7726 in.)
Maximum inside diameter:
45.025 mm (1.7726 in.)
If the diameter exceeds the maximum, replace the output shaft.

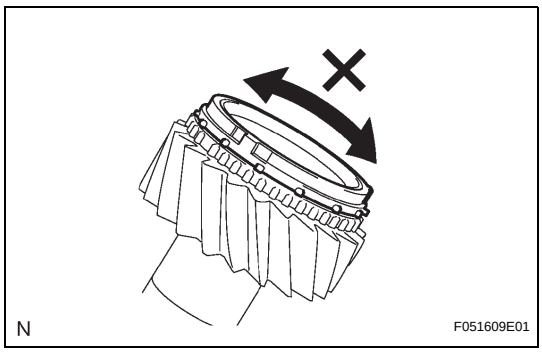


2. INSPECT NO. 3 SYNCHRONIZER RING

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and gear spline.
Standard clearance:
0.70 to 1.50 mm (0.0276 to 0.0591 in.)
Minimum clearance:
0.70 mm (0.0276 in.)
If the clearance is less than the minimum, replace the synchronizer ring.

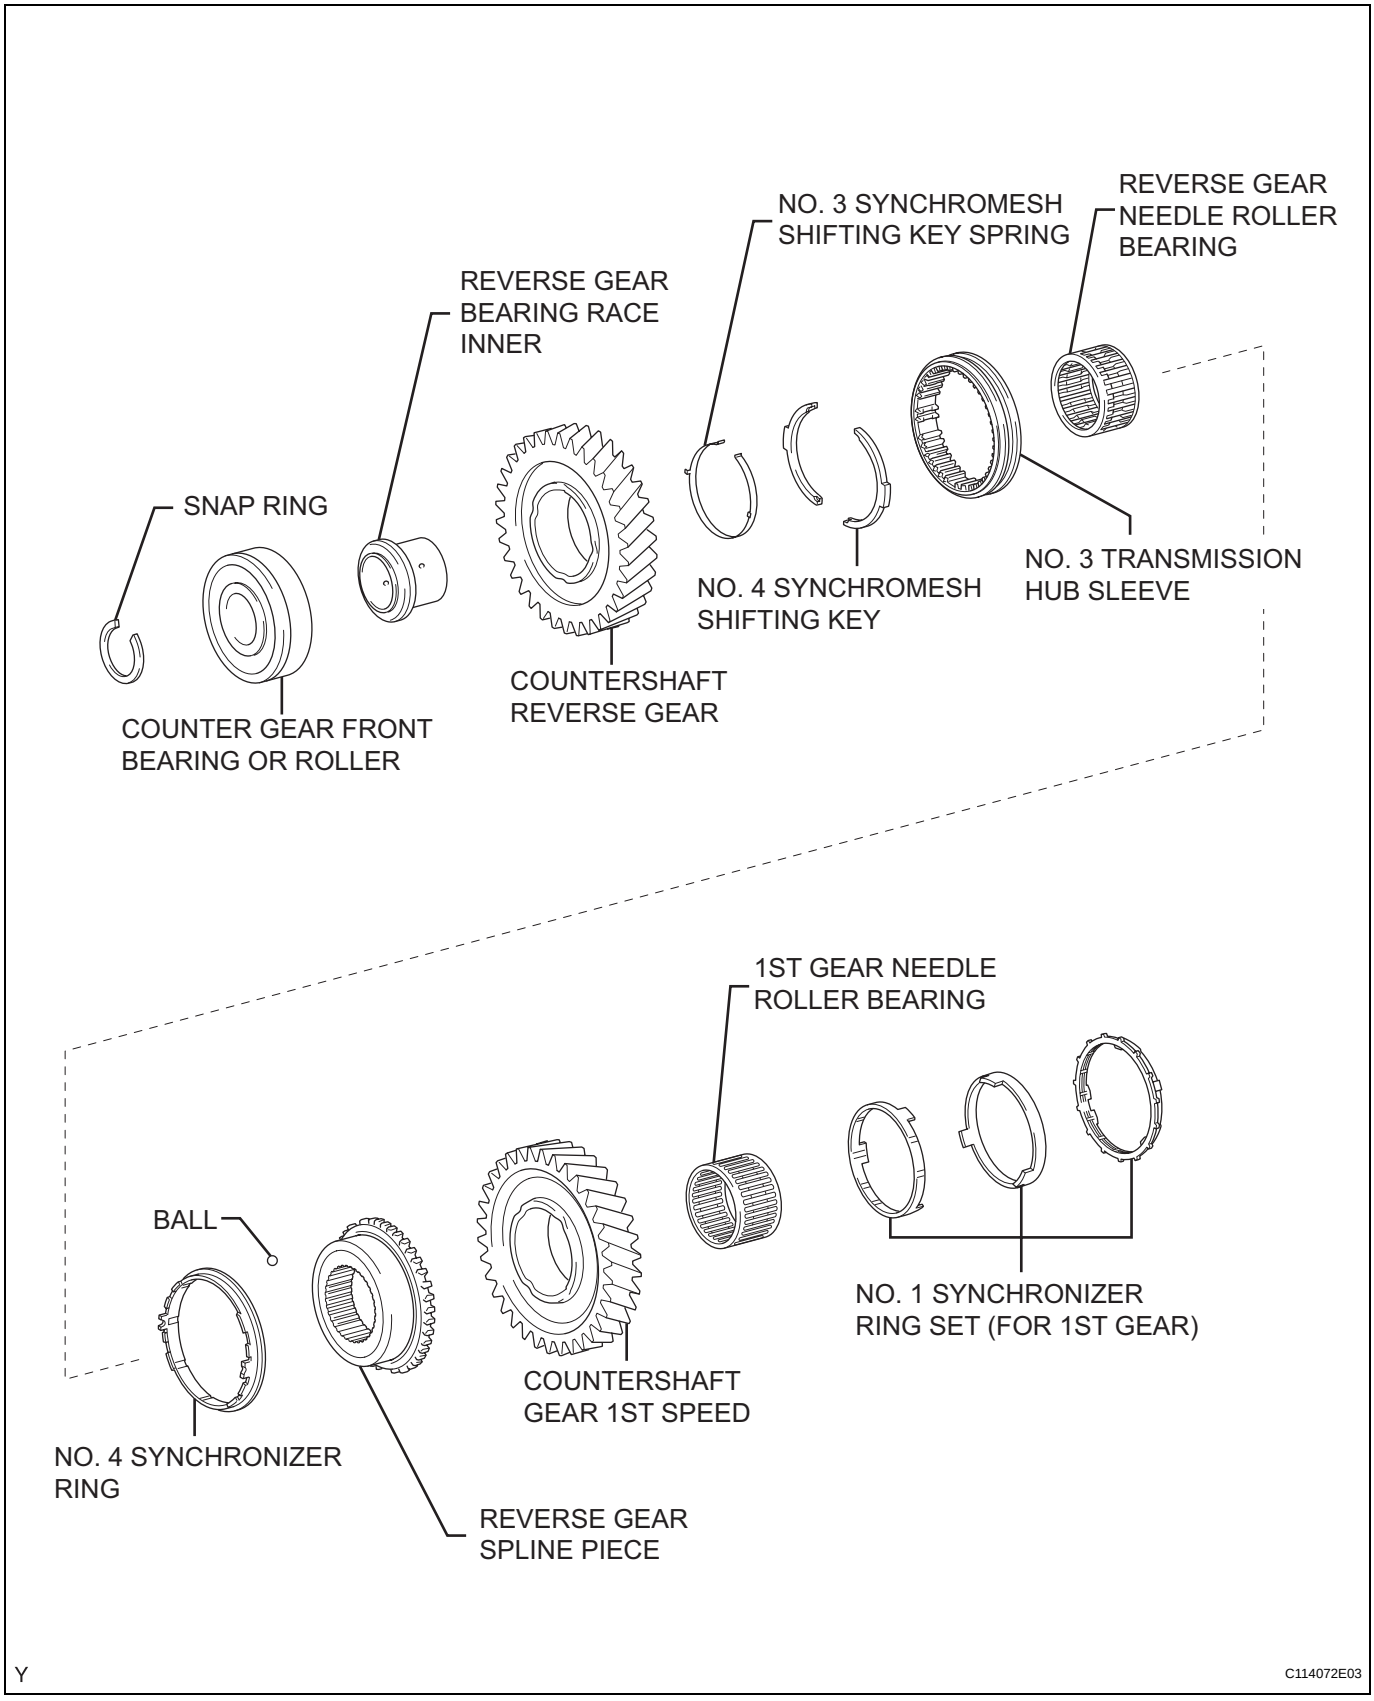


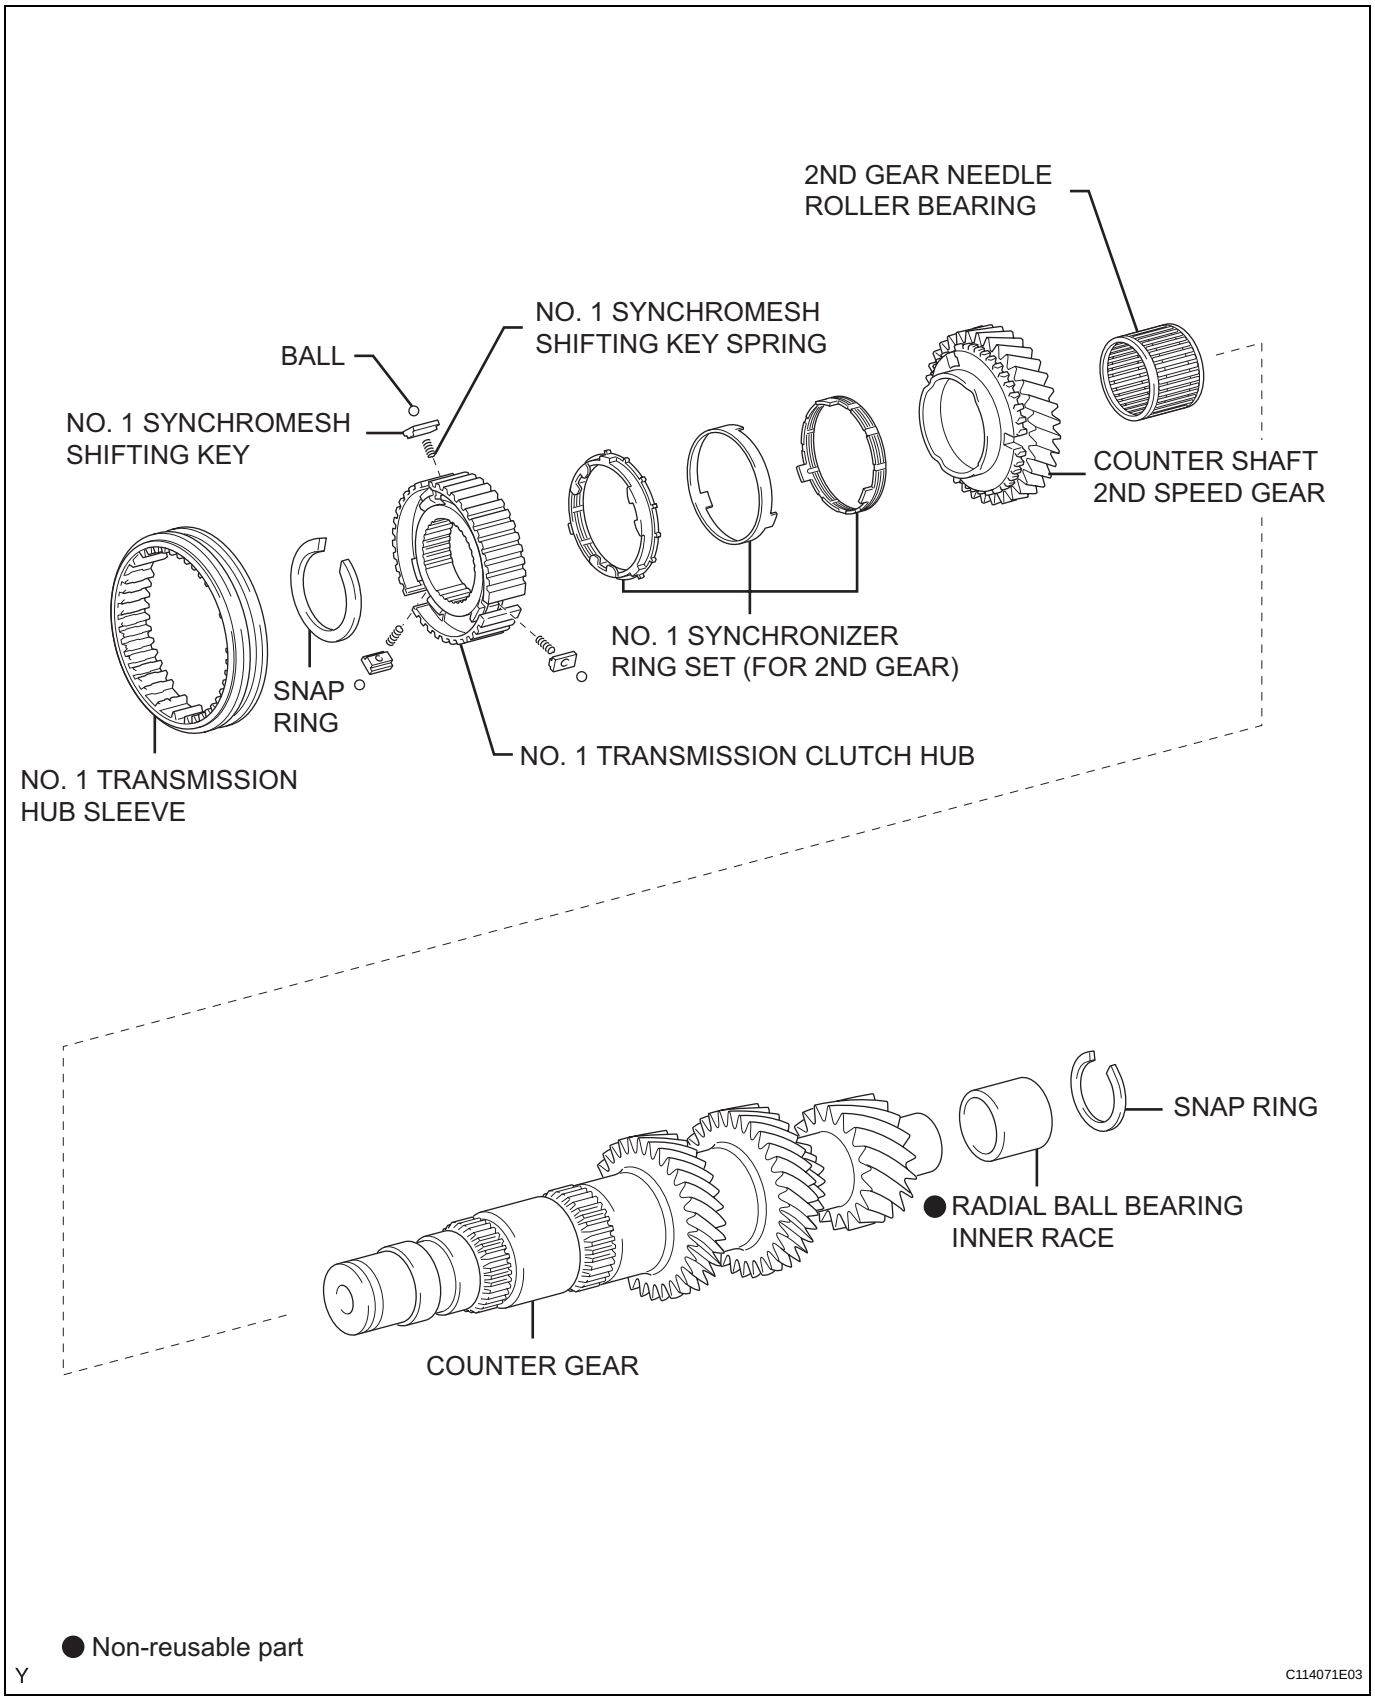
(b) Coat the output shaft and synchronizer ring cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the gear cone. Check that the ring locks.



COUNTER GEAR AND REVERSE IDLER GEAR

COMPONENTS





2ND GEAR NEEDLE ROLLER BEARING

DISASSEMBLY

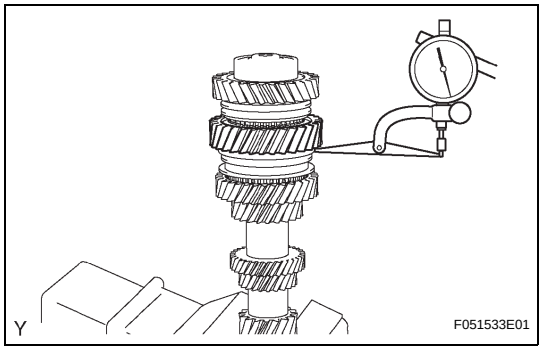
1. INSPECT REVERSE GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the reverse gear thrust clearance.

Standard clearance:

0.12 to 0.37 mm (0.0047 to 0.0146 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 4.



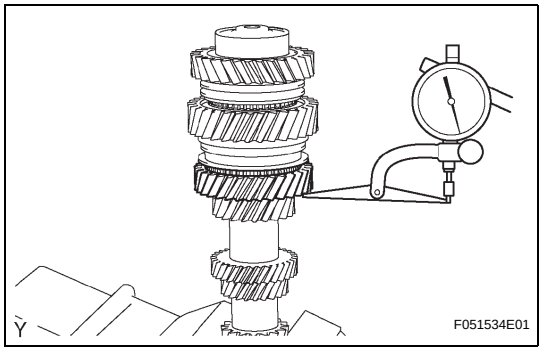
2. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



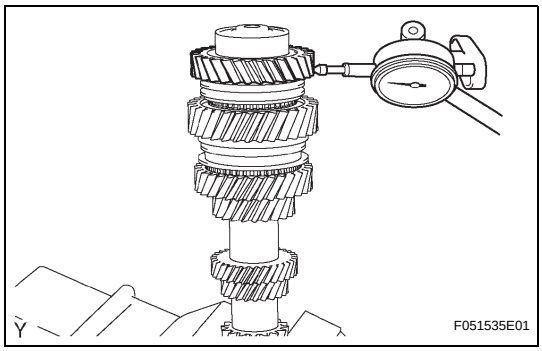
3. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



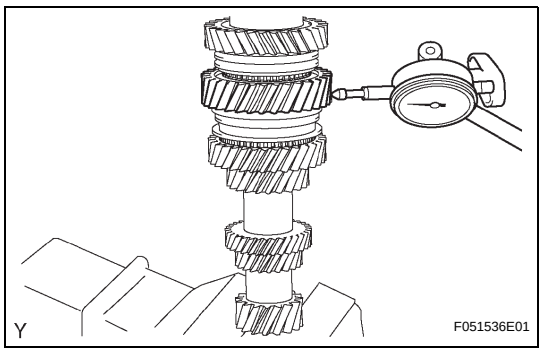
4. INSPECT REVERSE GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the reverse gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the reverse gear needle roller bearing or shaft.



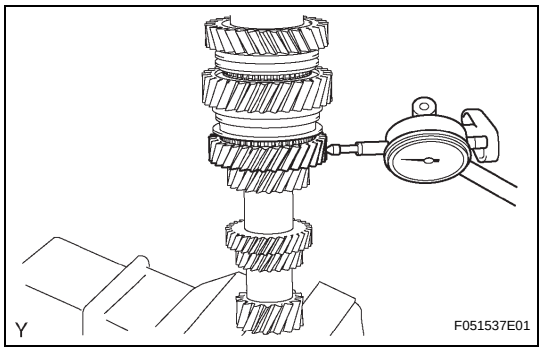
5. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 1st gear needle roller bearing or shaft.



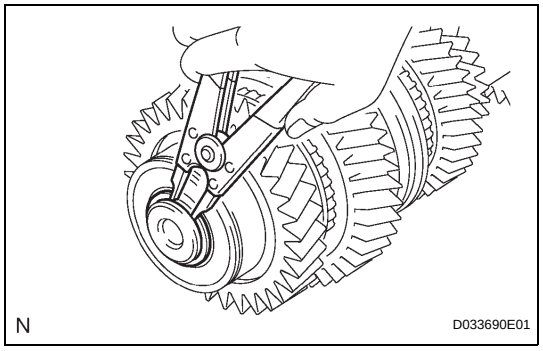
6. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

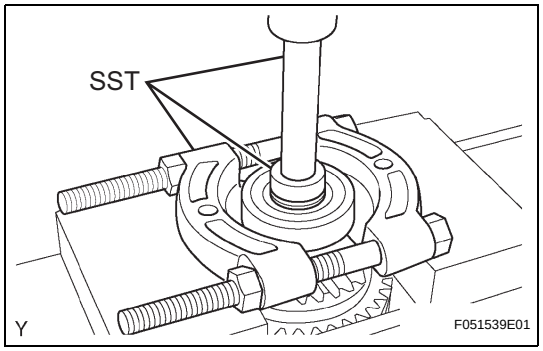
0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 2nd gear needle roller bearing or shaft.



7. REMOVE NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

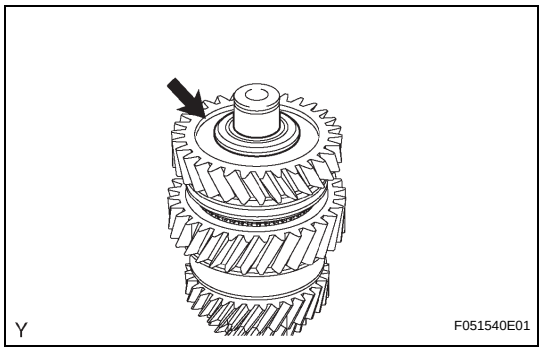
(a) Using a snap ring expander, remove the snap ring from the counter gear.



8. REMOVE COUNTER GEAR FRONT BEARING OR ROLLER

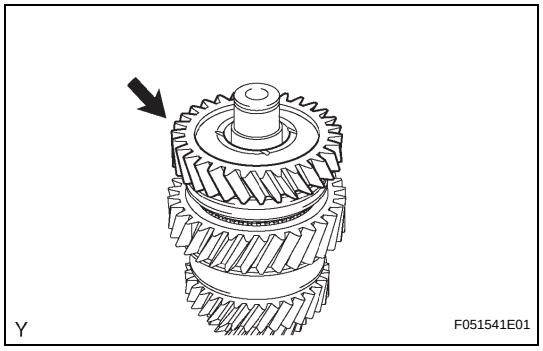
(a) Using SST and a press, remove the counter gear front bearing or roller from the counter gear.

SST 09950-00020, 09950-70010 (09951-07100), 09950-60010 (09951-00320)



9. REMOVE REVERSE GEAR BEARING RACE INNER

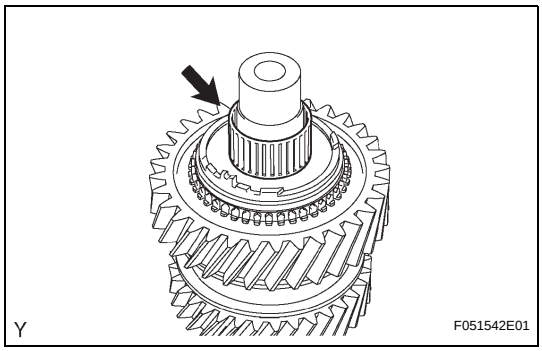
(a) Remove the reverse gear bearing race inner from the counter gear.



10. REMOVE COUNTERSHAFT REVERSE GEAR

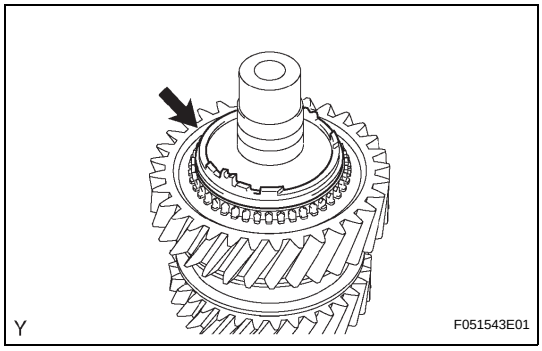
(a) Remove the countershaft reverse gear from the counter gear.

(b) Remove the hub sleeve, 2 shifting keys and key spring from the countershaft reverse gear.



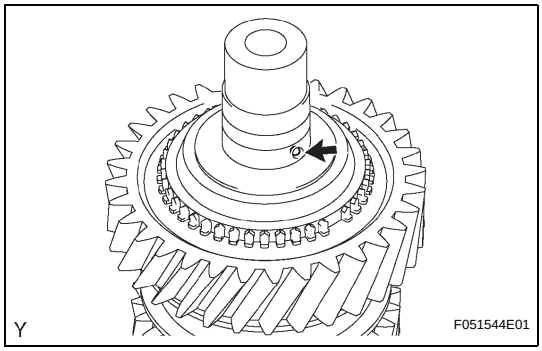
11. REMOVE REVERSE GEAR NEEDLE ROLLER BEARING

(a) Remove the reverse gear needle roller bearing from the counter gear.



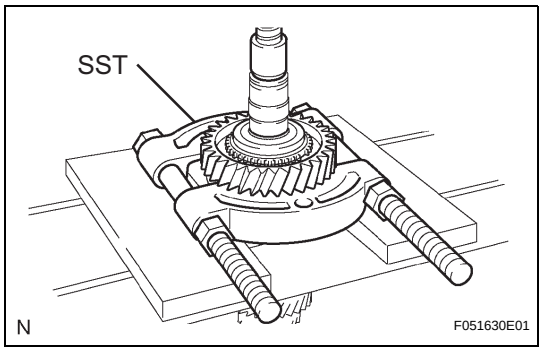
12. REMOVE NO. 4 SYNCHRONIZER RING

(a) Remove the synchronizer ring No. 4 from the counter gear.



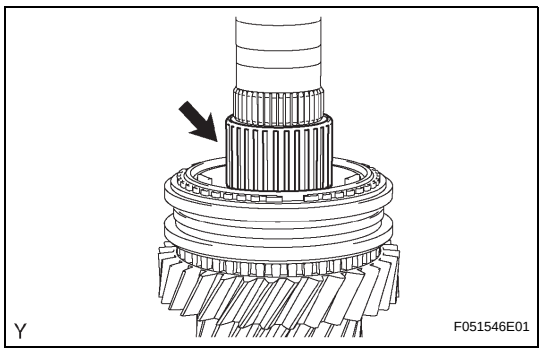
13. REMOVE BALL

(a) Remove the ball from the counter gear.



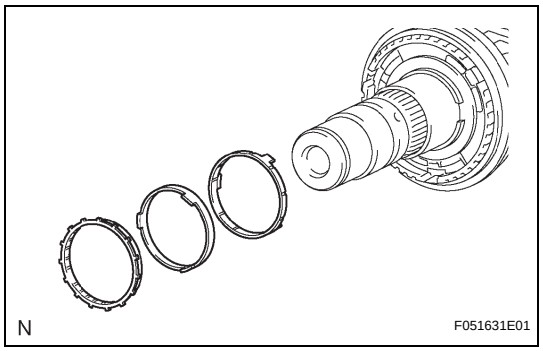
14. REMOVE COUNTERSHAFT GEAR 1ST SPEED

(a) Using a press, remove the countershaft gear 1st speed together with reverse gear spline piece from the counter gear.
SST 09950-00020



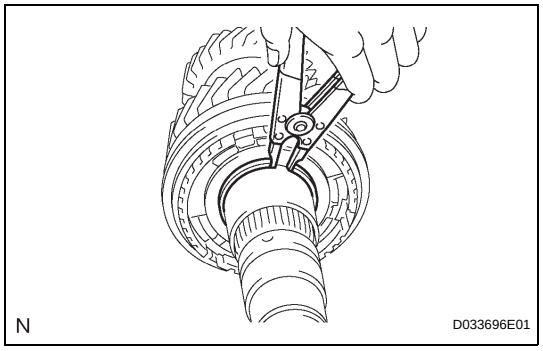
15. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the counter gear.



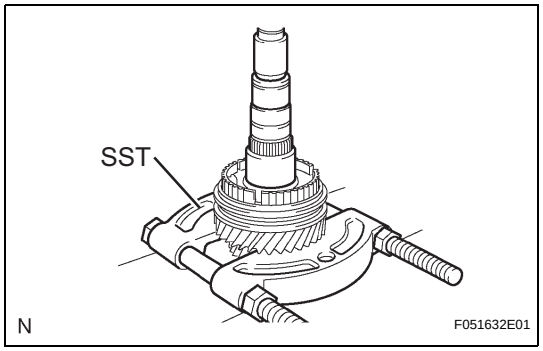
16. REMOVE NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

(a) Remove the synchronizer ring set No. 1 from the counter gear.



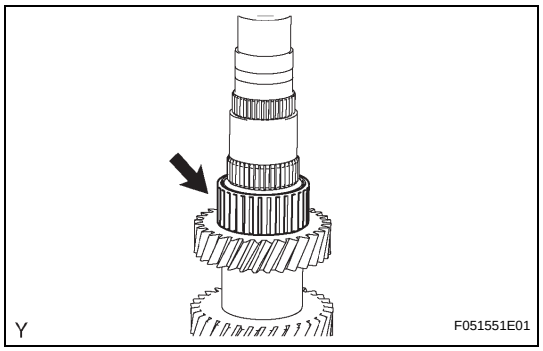
17. REMOVE CLUTCH HUB NO.1 SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the counter gear.



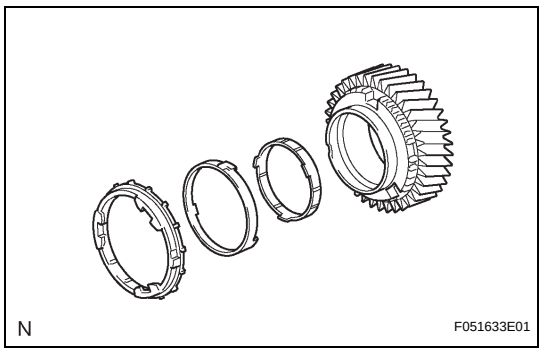
18. REMOVE COUNTER SHAFT 2ND SPEED GEAR

(a) Using a press, remove the counter shaft 2nd speed gear together with transmission clutch hub No. 1 from the counter gear.
SST 09950-00020



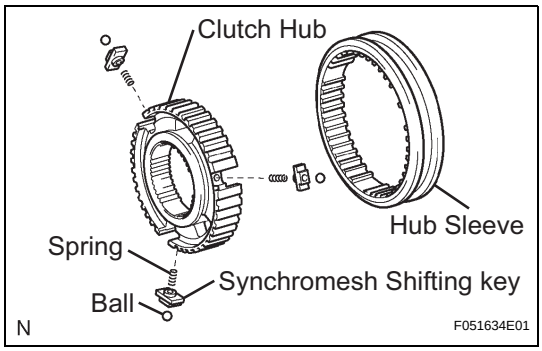
19. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd needle roller bearing from the counter gear.



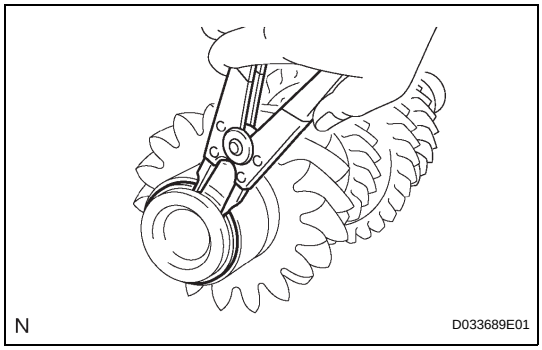
20. REMOVE NO. 1 SYNCHRONIZER RING SET (FOR 2ND GEAR)

(a) Remove the synchronizer ring set No. 1 from the 2nd gear.



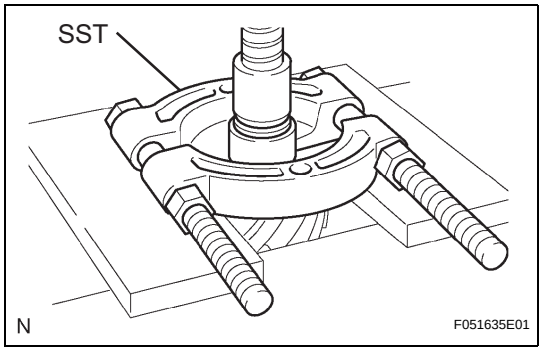
21. REMOVE NO. 1 TRANSMISSION CLUTCH HUB

(a) Remove the hub sleeve, 3 synchromesh shifting keys, 3 balls and 3 springs from the clutch hub.
HINT:
Use a shop rag to prevent the ball and spring from flying off.



22. REMOVE SNAP RING COUNTER GEAR REAR BEARING

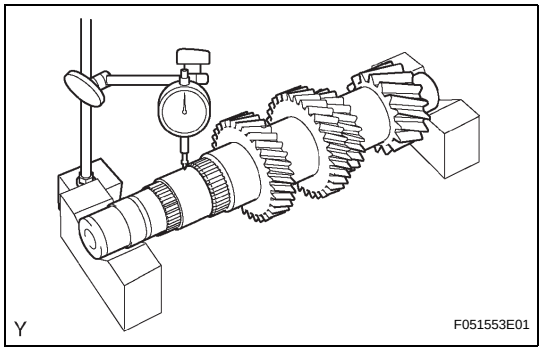
(a) Using a snap ring expander, remove the snap ring from the counter gear.



23. REMOVE RADIAL BALL BEARING INNER RACE

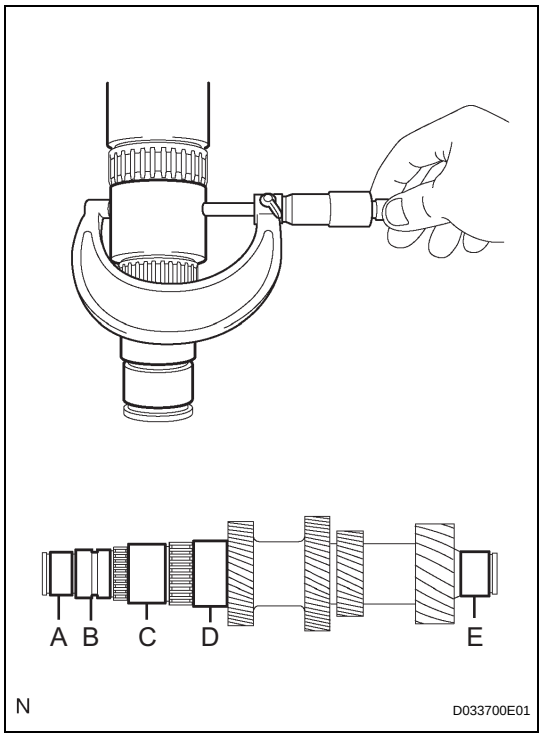
(a) Using SST and a press, remove the needle roller bearing inner race.
SST 09950-00020

INSPECTION



1. INSPECT COUNTER GEAR

(a) Using a dial indicator and 2 V-blocks, measure the shaft runout.
Maximum runout:
0.03 mm (0.0012 in.)
If the runout exceeds the maximum, replace the counter gear.



(b) Using a micrometer, measure the outer diameter of the input shaft journal surface.

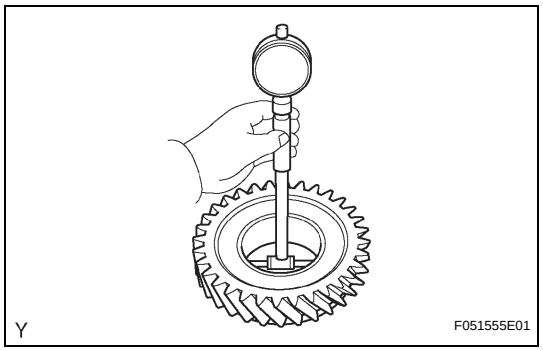
Standard

Part	Outer diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	36.985 to 37.000 (1.4561 to 1.4567)
C	47.985 to 48.000 (1.8892 to 1.8898)
D	53.985 to 54.000 (2.1254 to 2.1260)
E	34.002 to 34.015 (1.3387 to 1.3392)

Minimum

Part	Outer diameter mm (in.)
A	34.002 (1.3387)
B	36.985 (1.4561)
C	47.985 (1.8892)
D	53.985 (2.1254)
E	34.002 (1.3387)

If the diameter is less than the minimum, replace the counter gear shaft.

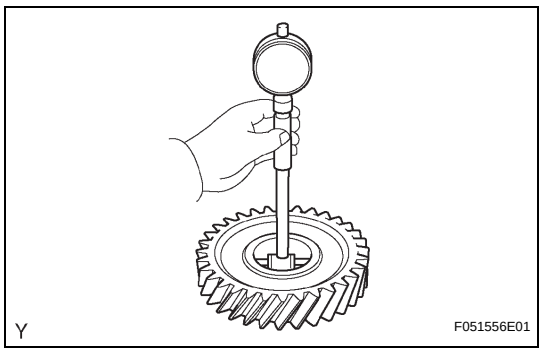


2. INSPECT COUNTERSHAFT REVERSE GEAR

(a) Using cylinder gauge, measure the inside diameter of the reverse gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the reverse gear.

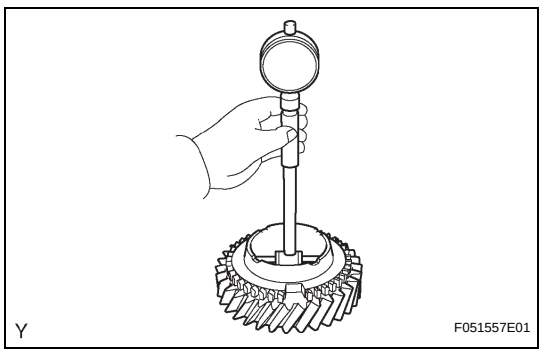


3. INSPECT COUNTERSHAFT GEAR 1ST SPEED

(a) Using cylinder gauge, measure the inside diameter of the 1st gear.

Standard inside diameter:
54.015 to 54.040 mm (2.1266 to 2.1276 in.)
Maximum inside diameter:
54.040 mm (2.1276 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.

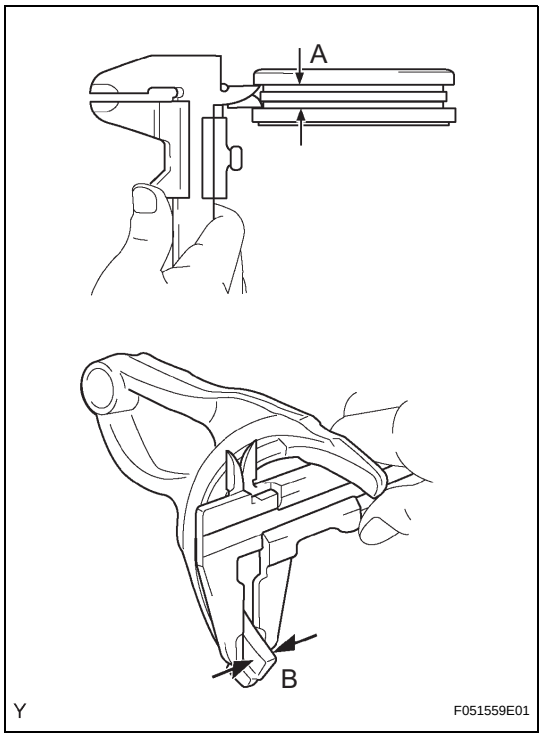


4. INSPECT COUNTER SHAFT 2ND SPEED GEAR

(a) Using cylinder gauge, measure the inside diameter of the 2nd gear.

Standard inside diameter:
60.015 to 60.040 mm (2.3628 to 2.3638 in.)
Maximum inside diameter:
60.040 mm (2.3638 in.)

If the inside diameter exceeds the maximum, replace the 2nd gear.



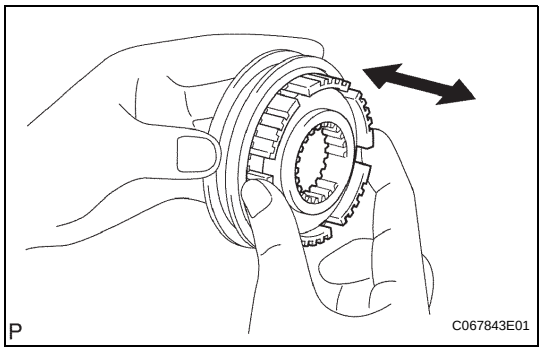
5. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Using vernier calipers, measure the width of the transmission hub sleeve No. 3 groove (A) and the thickness of the claw part on the gear shift fork No. 4 (B), and calculate the clearance.

Standard clearance (A - B):

0.26 to 0.84 mm (0.0102 to 0.0331 in.)

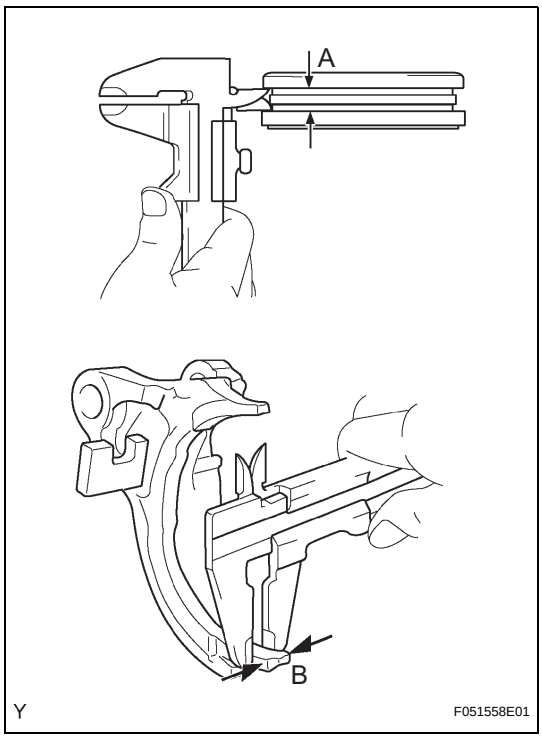
If the clearance is outside the specification, replace the transmission hub sleeve No. 3 and gear shift fork No. 4.



6. INSPECT NO. 1 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the transmission hub No. 1 and transmission hub sleeve No. 1.

(b) Check that the spline gear teeth of the transmission hub sleeve No. 1 are not worn.

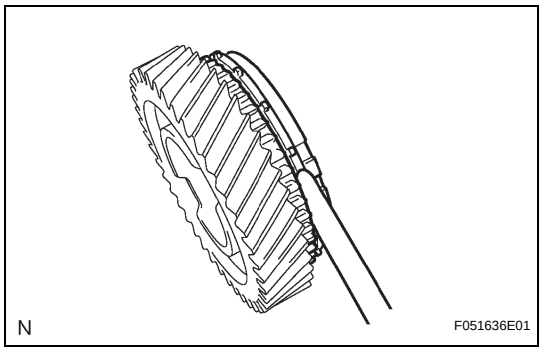


(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 1 groove (A) and the thickness of the claw part on the gear shift fork No. 1 (B), and calculate the clearance.

Standard clearance (A - B):

0.15 to 0.35 mm (0.0059 to 0.0138 in.)

If the clearance is outside the specification, replace the transmission hub sleeve No. 1 and gear shift fork No. 1.

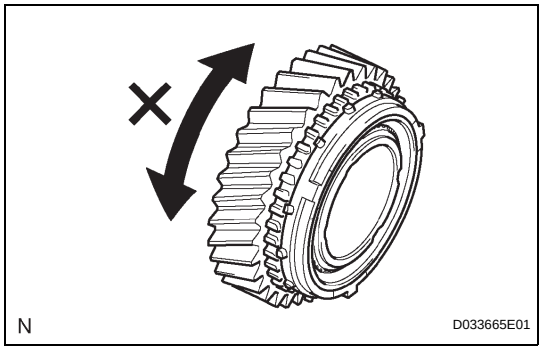


7. INSPECT NO. 4 SYNCHRONIZER RING

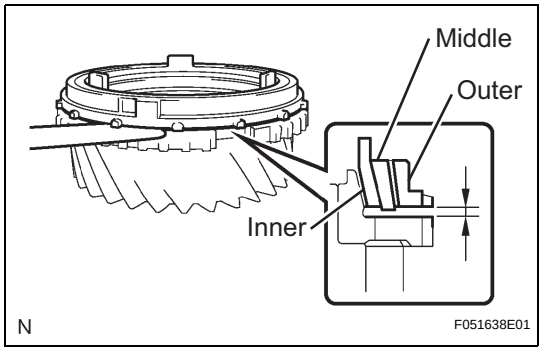
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and reverse gear.

Standard clearance:
0.70 to 1.30 mm (0.0276 to 0.0512 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the reverse gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the reverse gear cone. Check that the ring locks.

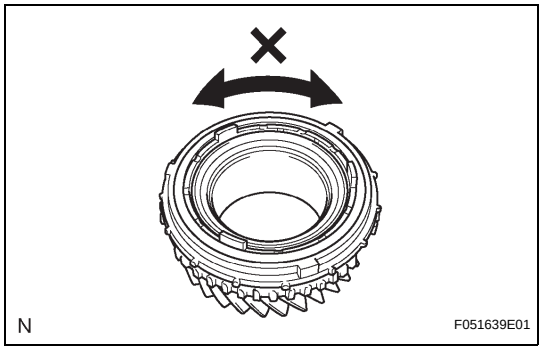


8. INSPECT NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

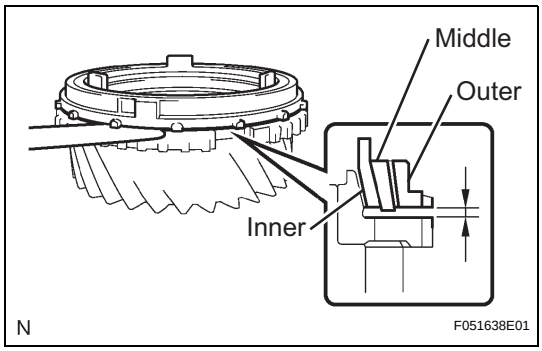
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 1st gear.

Standard clearance:
Inner:
1.48 to 2.12 mm (0.0583 to 0.0835 in.)
Middle:
0.68 to 1.92 mm (0.0268 to 0.0756 in.)
Outer:
0.88 to 1.72 mm (0.0346 to 0.0677 in.)
Minimum clearance:
Inner:
1.48 mm (0.0583 in.)
Middle:
0.68 mm (0.0268 in.)
Outer:
0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 1st gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 1st gear cone. Check that the ring locks.

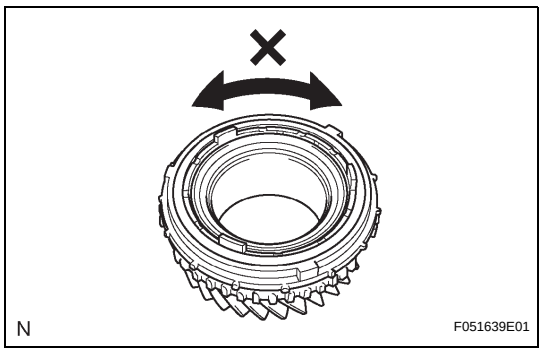


9. INSPECT NO. 1 SYNCHRONIZER RING SET (FOR 2ND GEAR)

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 2nd gear.

Standard clearance:
Inner:
1.48 to 2.12 mm (0.0583 to 0.0835 in.)
Middle:
0.68 to 1.92 mm (0.0268 to 0.0756 in.)
Outer:
0.88 to 1.72 mm (0.0346 to 0.0677 in.)
Minimum clearance:
Inner:
1.48 mm (0.0583 in.)
Middle:
0.68 mm (0.0268 in.)
Outer:
0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



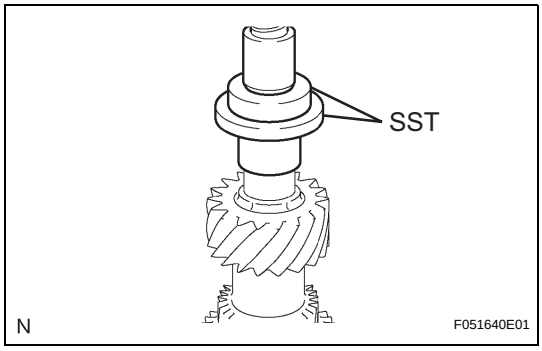
(b) Coat the 2nd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 2nd gear cone. Check that the ring locks.

REASSEMBLY

1. INSTALL RADIAL BALL BEARING INNER RACE

(a) Using SST and a press, install a new needle roller bearing inner race.

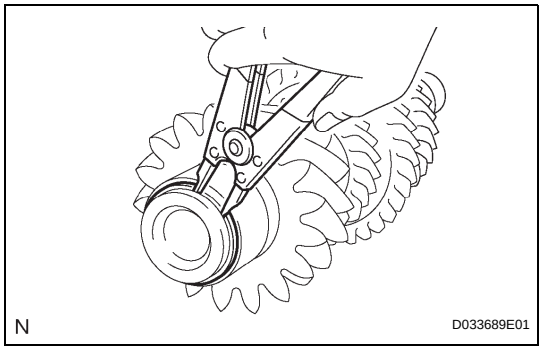
SST 09950-60010 (09951-00540)



2. INSTALL SNAP RING COUNTER GEAR REAR BEARING

(a) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness



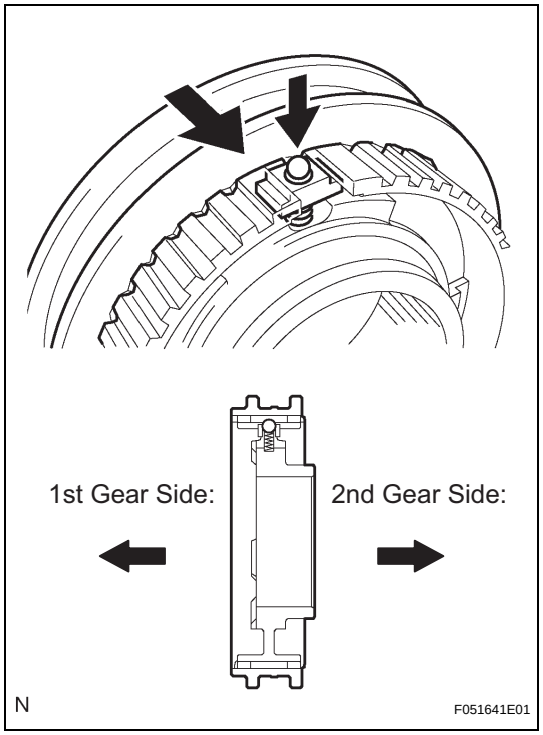
Part No.	Thickness: mm (in.)	Mark
90520-31015	2.35 to 2.40 (0.0925 to 0.0945)	A
90520-31016	2.40 to 2.45 (0.0945 to 0.0965)	B
90520-31017	2.45 to 2.50 (0.0965 to 0.0984)	C

Part No.	Thickness: mm (in.)	Mark
90520-31018	2.50 to 2.55 (0.0984 to 0.1004)	D
90520-31019	2.55 to 2.60 (0.1004 to 0.1024)	E
90520-31020	2.60 to 2.65 (0.1024 to 0.1043)	F
90520-31021	2.65 to 2.70 (0.1043 to 0.1063)	G
90520-31022	2.70 to 2.75 (0.1063 to 0.1083)	H
90520-31023	2.75 to 2.80 (0.1083 to 0.1102)	J
90520-31024	2.80 to 2.85 (0.1102 to 0.1122)	K
90520-31025	2.85 to 2.90 (0.1122 to 0.1142)	L
90520-31033	2.90 to 2.95 (0.1142 to 0.1161)	M

(b) Using a snap ring expander, install the snap ring onto the counter gear.

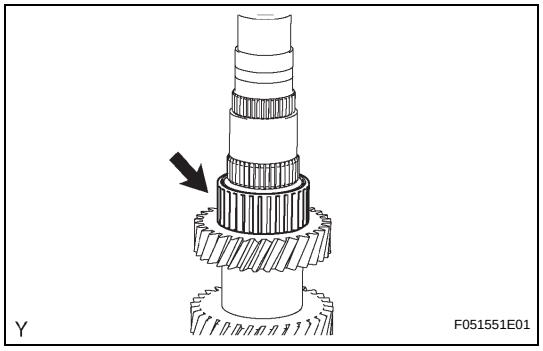
3. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

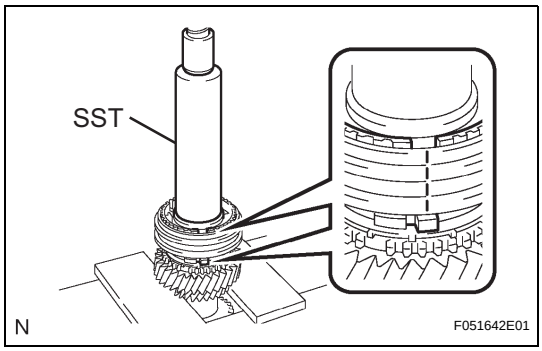
(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.
NOTICE:
Take care to prevent the ball from flying off.



4. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing with gear oil, then install it onto the counter gear.





5. INSTALL COUNTER SHAFT 2ND SPEED GEAR

(a) Coat the countershaft 2nd speed gear with gear oil, then install it onto the counter gear.

(b) Coat the synchronizer ring set No. 1 with gear oil, then install it onto the counter gear.

(c) Using SST and a press, install the transmission clutch hub No. 1 onto the counter gear.

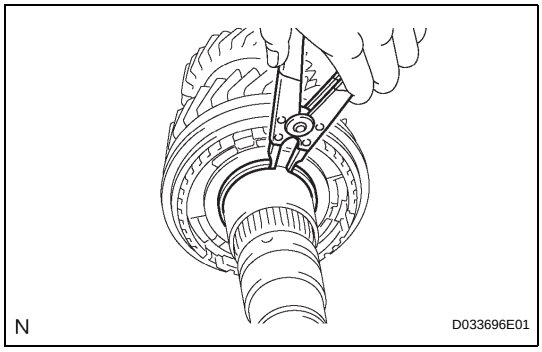
SST 09308-14010

HINT:

Align the convex portion of the synchronizer ring with the groove of the clutch hub.

(d) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.

MT



6. INSTALL CLUTCH HUB NO.1 SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.

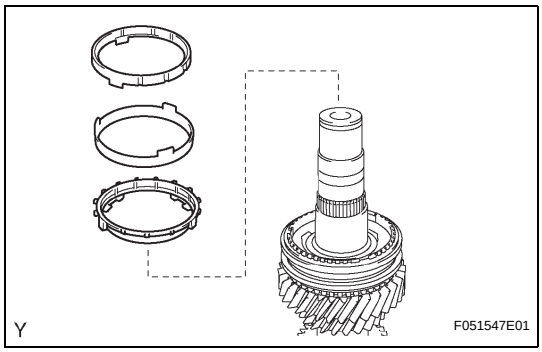
Standard clearance:

0.1 mm (0.004 in.) or less

Snap ring thickness

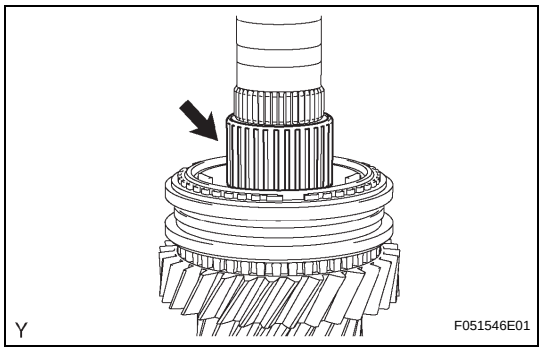
Part No.	Thickness: mm (in.)	Mark
90520-45013	2.28 to 2.33 (0.0898 to 0.0917)	A
90520-45014	2.33 to 2.38 (0.0917 to 0.0937)	B
90520-45015	2.38 to 2.43 (0.0937 to 0.0957)	C
90520-45016	2.43 to 2.48 (0.0957 to 0.0976)	D
90520-45017	2.48 to 2.53 (0.0976 to 0.0996)	E
90520-45018	2.53 to 2.58 (0.0996 to 0.1016)	F
90520-45019	2.58 to 2.63 (0.1016 to 0.1035)	G

(b) Using a snap ring expander, install the snap ring onto the counter gear.



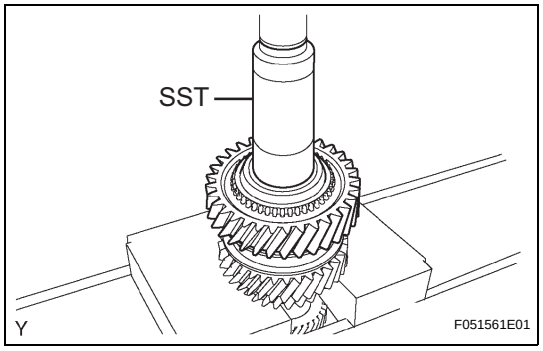
7. INSTALL NO. 1 SYNCHRONIZER RING SET

(a) Coat the synchronizer ring set No. 1 with gear oil, then install it onto the counter gear.



8. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil, then install it onto the counter gear.

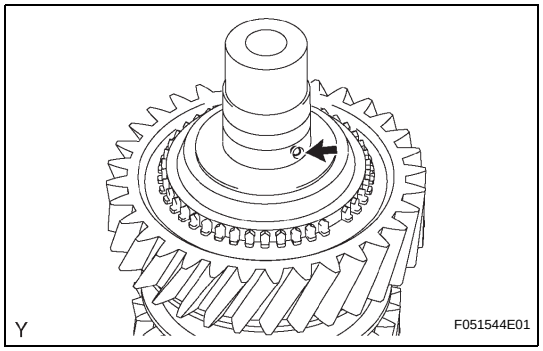


9. INSTALL COUNTERSHAFT GEAR 1ST SPEED

(a) Coat the countershaft gear 1st speed with gear oil, and install it onto the counter gear.

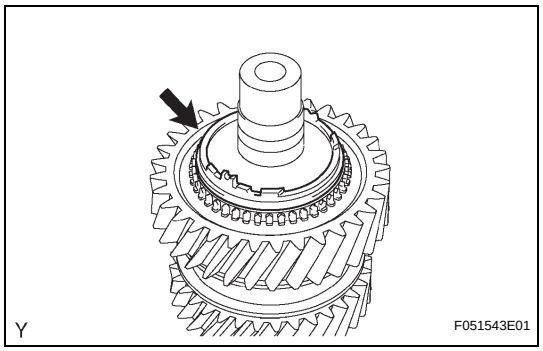
(b) Using SST and a press, install the reverse gear spline piece.

SST 09309-37010



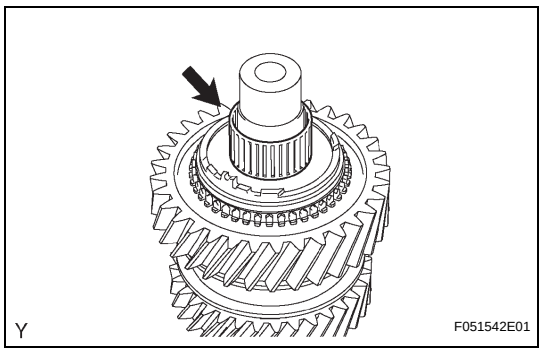
10. INSTALL BALL

(a) Install the ball into the counter gear.



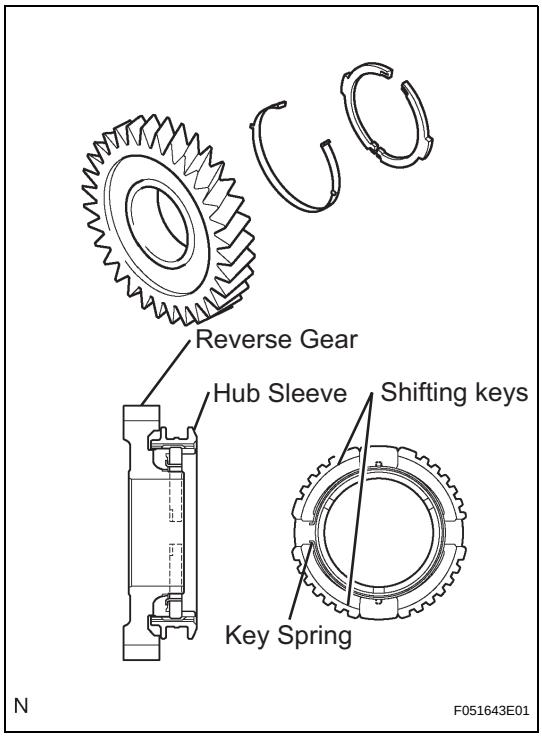
11. INSTALL NO. 4 SYNCHRONIZER RING

(a) Coat the synchronizer ring No. 4 with gear oil, and install it onto the counter gear.



12. INSTALL REVERSE GEAR NEEDLE ROLLER BEARING

(a) Coat the reverse gear needle roller bearing with gear oil, and install it onto the counter gear.

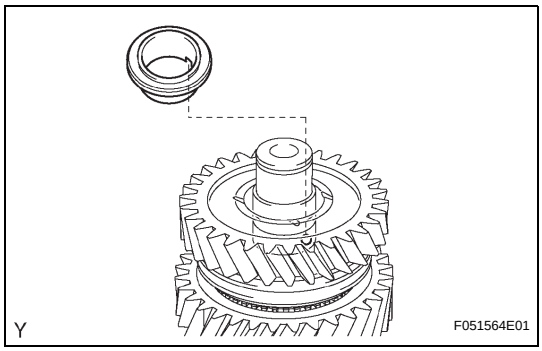


13. INSTALL COUNTERSHAFT REVERSE GEAR

(a) Install the key spring and 2 shifting keys onto the reverse gear.
HINT:
- Install the shifting key with its groove on the reverse gear side.
- Install the key spring with its claw on the reverse gear side.
- Refer to the illustration when installing the key spring.

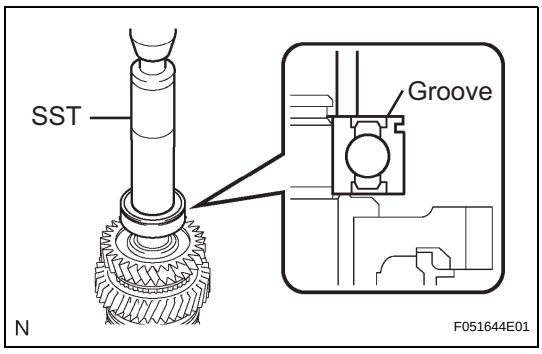
(b) Install the hub sleeve onto the reverse gear.

(c) Coat the countershaft reverse gear with gear oil, then install it onto the counter gear.



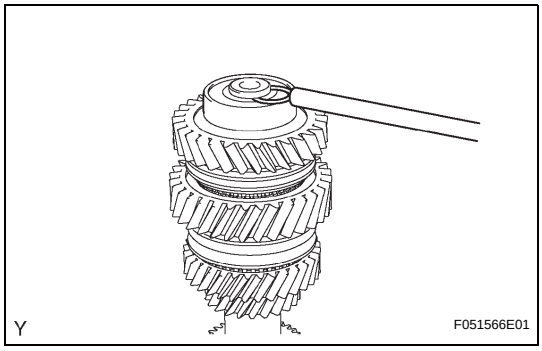
14. INSTALL REVERSE GEAR BEARING RACE INNER

(a) Align the groove of the reverse gear bearing race inner with the ball, and install them.



15. INSTALL COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, install counter gear front bearing or roller onto the counter gear.
SST 09608-06041
HINT:
Make sure that the groove of the bearing faces the correct direction as shown in the illustration.



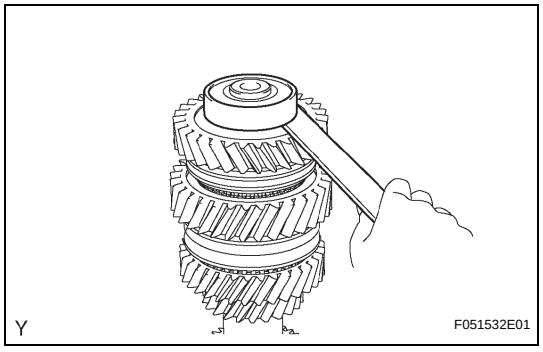
16. REMOVE NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-31015	2.35 to 2.40 (0.0925 to 0.0945)	A

Part No.	Thickness: mm (in.)	Mark
90520-31016	2.40 to 2.45 (0.0945 to 0.0965)	B
90520-31017	2.45 to 2.50 (0.0965 to 0.0984)	C
90520-31018	2.50 to 2.55 (0.0984 to 0.1004)	D
90520-31019	2.55 to 2.60 (0.1004 to 0.1024)	E
90520-31020	2.60 to 2.65 (0.1024 to 0.1043)	F
90520-31021	2.65 to 2.70 (0.1043 to 0.1063)	G
90520-31022	2.70 to 2.75 (0.1063 to 0.1083)	H
90520-31023	2.75 to 2.80 (0.1083 to 0.1102)	J
90520-31024	2.80 to 2.85 (0.1102 to 0.1122)	K
90520-31025	2.85 to 2.90 (0.1122 to 0.1142)	L
0520-31033	2.90 to 2.95 (0.1142 to 0.1161)	M

(b) Using a snap ring expander, install the snap ring onto the counter gear.



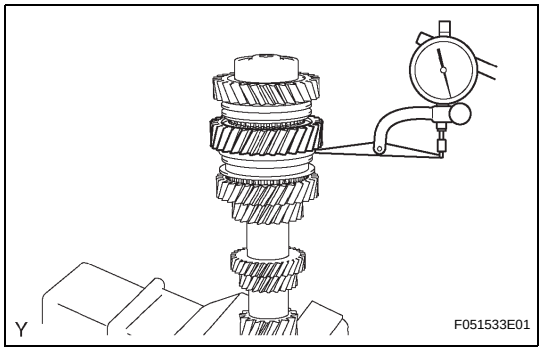
17. INSPECT REVERSE GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the reverse gear thrust clearance.

Standard clearance:

0.12 to 0.37 mm (0.0047 to 0.0146 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 4.



18. INSPECT 1ST GEAR THRUST CLEARANCE

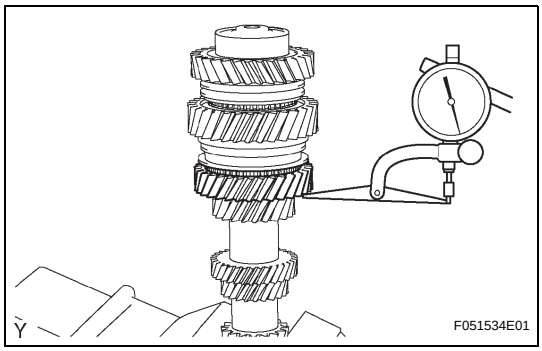
(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.

MT



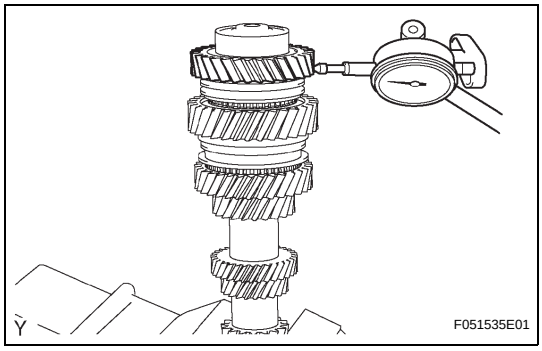
19. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



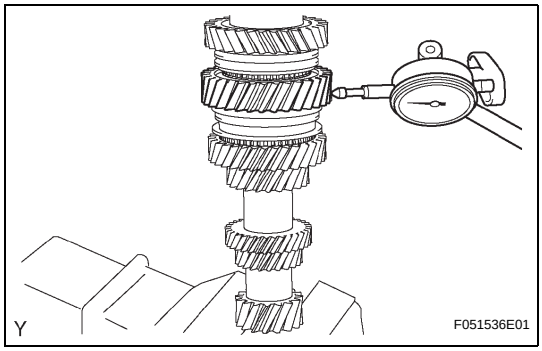
20. INSPECT REVERSE GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the reverse gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the reverse gear needle roller bearing or shaft.



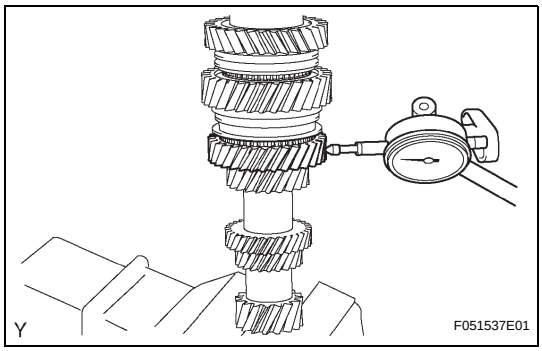
21. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 1st gear needle roller bearing or shaft.



22. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

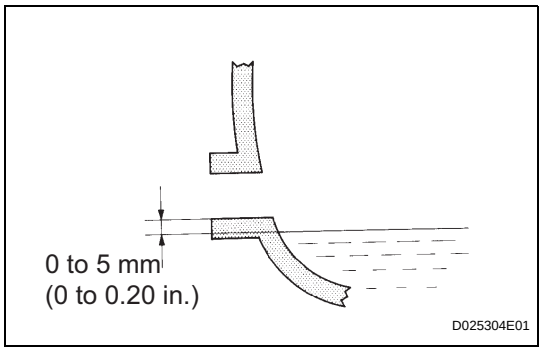
If the clearance is outside the specification, replace the 2nd gear needle roller bearing or shaft.

MANUAL TRANSMISSION SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Abnormal noise	1. Oil level (Low)	MT-2
	2. Oil (Wrong)	MT-2
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-
Oil leakage	1. Oil level (High)	MT-2
	2. Gasket (Damaged)	-
	3. Oil seal (Worn or damaged)	-
	4. O-Ring (Worn or damaged)	-
Hard shifting or will not shift	1. Synchronizer ring (Worn or damaged)	-
	2. Shift key spring (Damaged)	-
Jumps out of gear	1. Locking ball spring (Damaged)	-
	2. Shift fork (Worn)	-
	3. Gears (Worn or damaged)	-
	4. Bearings (Worn or damaged)	-



MANUAL TRANSMISSION OIL

ON-VEHICLE INSPECTION

1. INSPECT TRANSMISSION OIL

(a) Park the vehicle in a level place.

(b) Remove the transmission filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the lowest point of the transmission filler plug opening.

NOTICE:

- **Problems may occur when the oil level is too high or low.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

(d) Check for oil leakage when the oil level is low.

(e) Install the transmission filler plug and a new gasket.

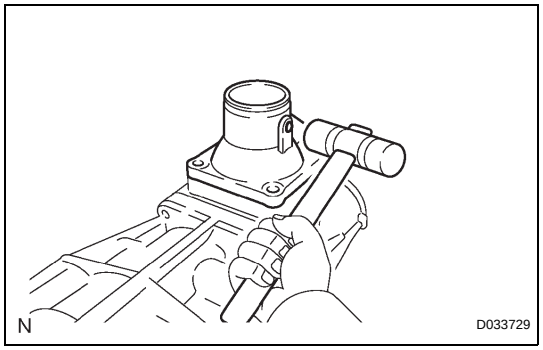
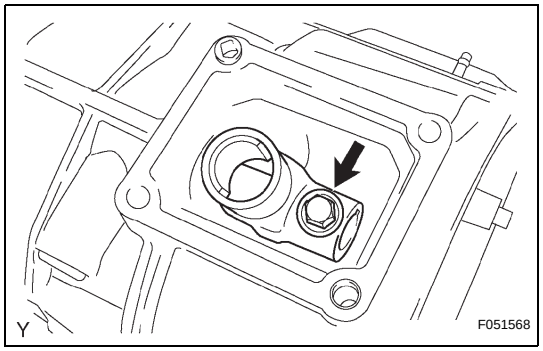
DISASSEMBLY

1. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the 4 bolts, then remove the floor shift control shift lever retainer.

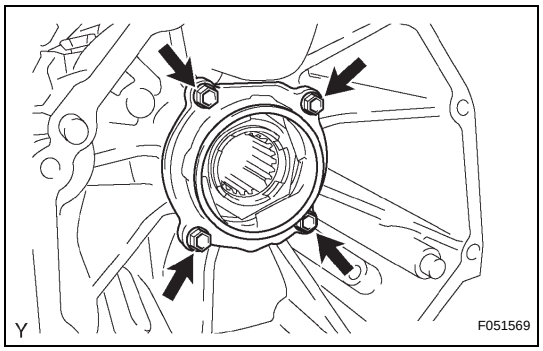


(b) Using a plastic hammer, remove the floor shift control shift lever retainer.



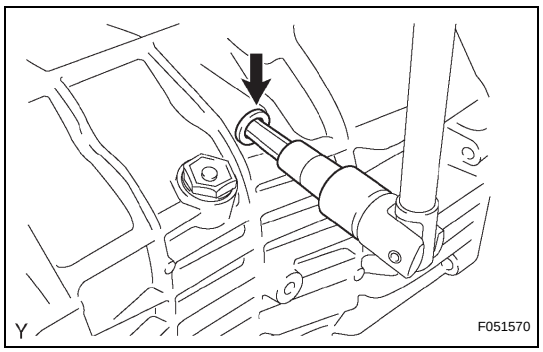
2. REMOVE SHIFT LEVER HOUSING

(a) Remove the bolt, then separate the shift lever housing.



3. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

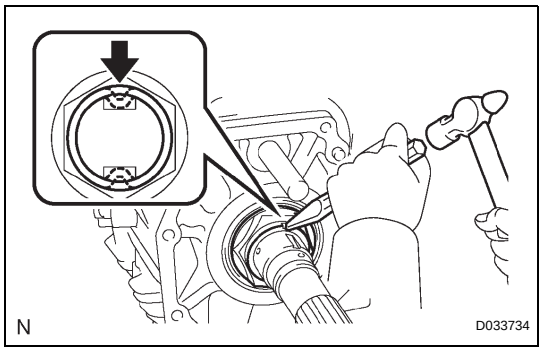
(a) Remove the 4 bolts, then remove the transmission case cover.



4. REMOVE SHIFT DETENT BALL PLUG

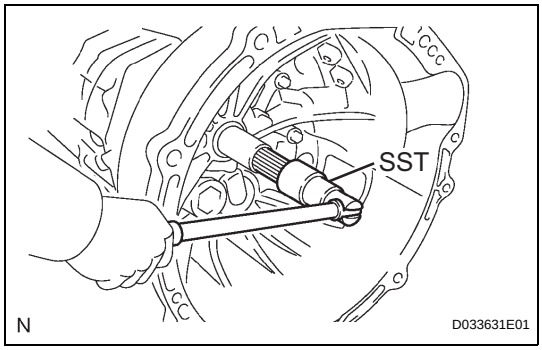
(a) Using a socket hexagon wrench (10 mm), remove the shift detent ball plug from the transmission rear case.

(b) Remove the ball and compression spring from the transmission rear case.



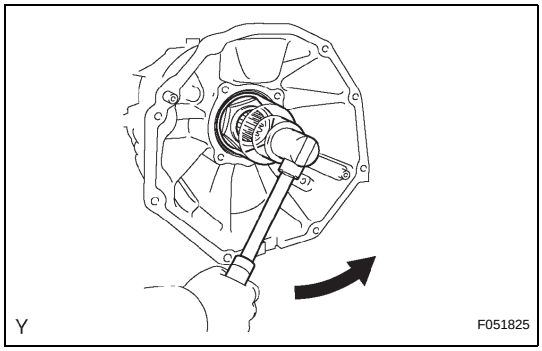
5. REMOVE OUTPUT SHAFT ADJUST NUT

(a) Using a chisel and hammer, unstake the nut.



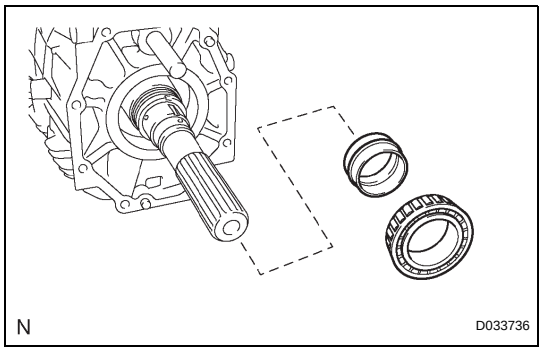
(b) Place the gearshift into 5th gear, and then fix the input shaft using SST.
SST 09556-16030

(c) Using a belt and wooden block, fasten the transmission to the workbench.

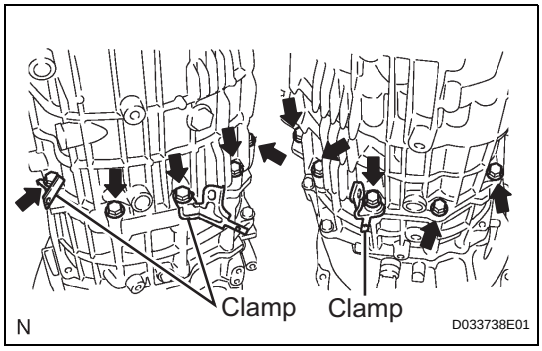


(d) Using a socket wrench (60 mm), remove the nut from the transmission rear case.

(e) Remove the belt and wooden block from the transmission.

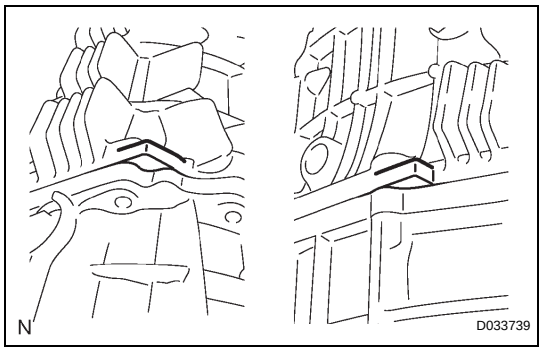


(f) Remove the taper roller bearing No. 2 and spacer.

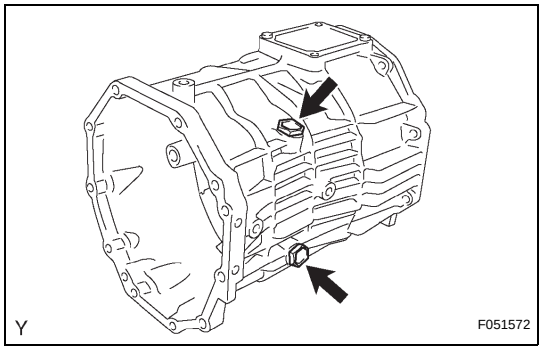


6. REMOVE TRANSMISSION REAR CASE

(a) Remove the 10 bolts and 3 clamps.

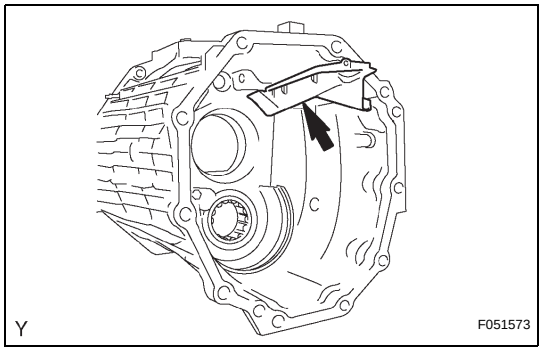


(b) Using a plastic hammer, carefully tap out the rear case.



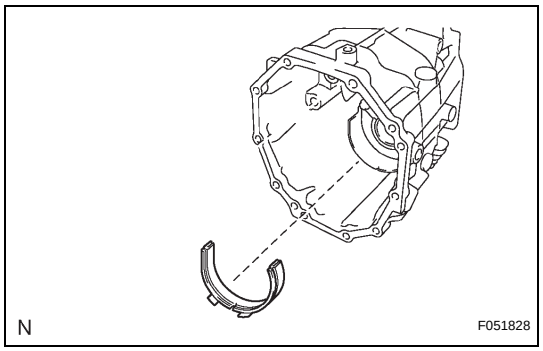
7. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the 2 transmission filler plugs and 2 gaskets from the transmission rear case.



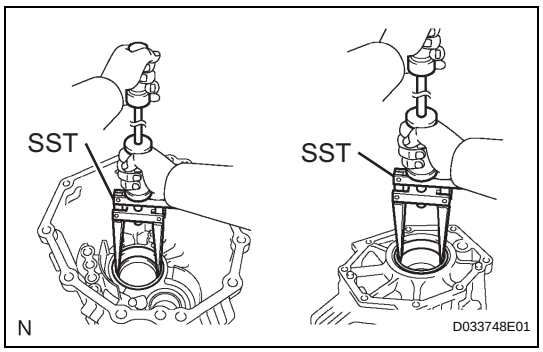
8. REMOVE EXTENSION HOUSING OIL RECEIVER PIPE

(a) Remove the extension housing oil receiver pipe from the transmission rear case.



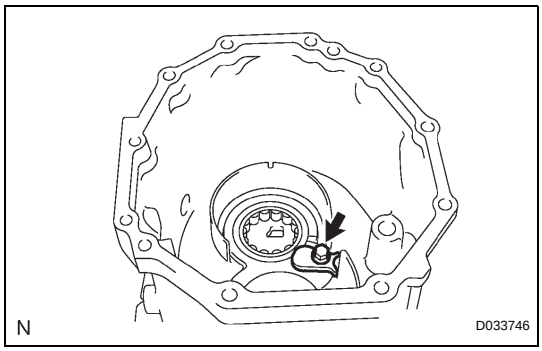
9. REMOVE OIL SEPARATOR PACKING SEAL

(a) Remove the oil separator packing seal from the transmission rear case.



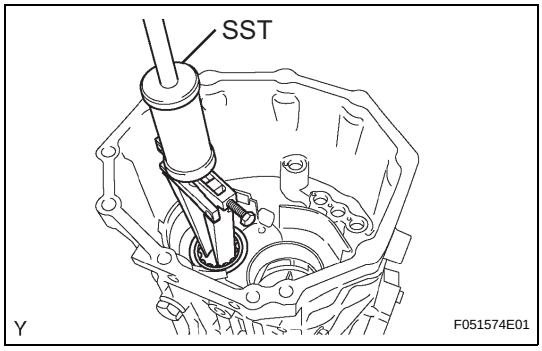
10. REMOVE OUTPUT SHAFT REAR BEARING OUTER RACE

(a) Using SST, remove the 2 bearing outer races.
SST 09308-00010

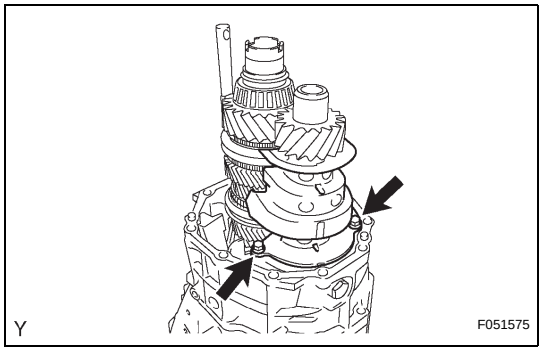


11. REMOVE COUNTER GEAR REAR RADIAL BALL BEARING

(a) Remove the bolt, then remove the bearing lock plate.

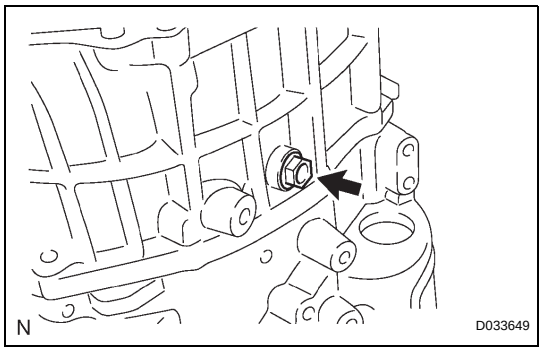


(b) Using SST, remove the counter gear rear radial ball bearing from the transmission rear case.
SST 09308-00010



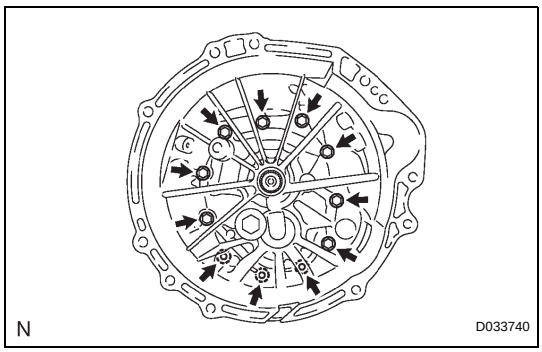
12. REMOVE TRANSMISSION OIL SEPARATOR

(a) Remove the 2 bolts, then remove the oil separator.



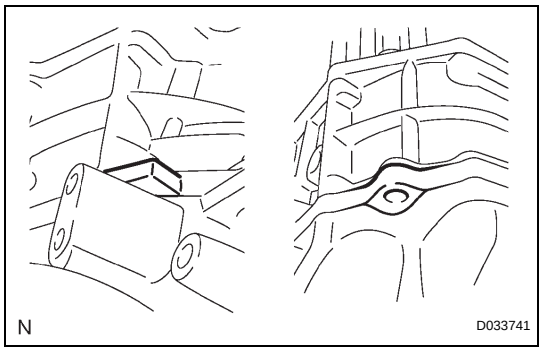
13. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt from the transmission middle case.

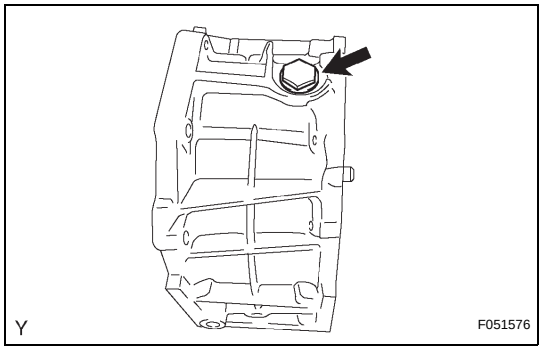


14. REMOVE TRANSMISSION MIDDLE CASE

(a) Remove the 11 bolts, then remove the transmission middle case.

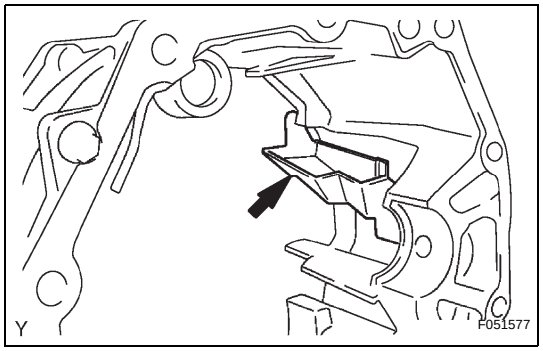


(b) Using a plastic hammer, carefully tap out the middle case.



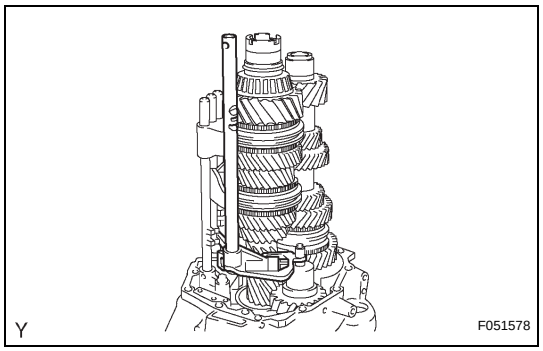
15. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the drain plug and gasket from the transmission middle case.



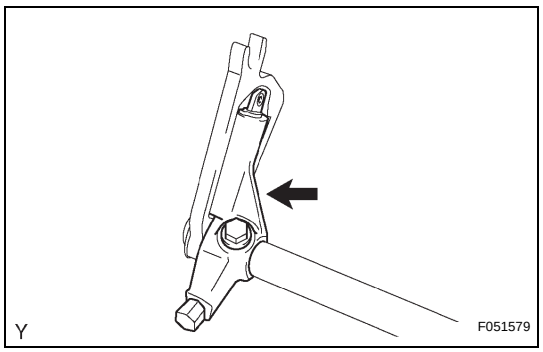
16. REMOVE NO. 2 OIL RECEIVER PIPE

(a) Remove the oil receiver pipe No. 2 from the transmission middle case.



17. REMOVE SHIFT AND SELECT LEVER SHAFT

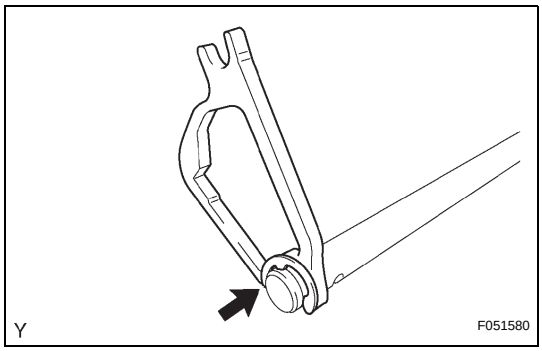
(a) Remove the shift and select lever shaft from the reverse gear shaft.



18. REMOVE SHIFT AND SELECT LEVER

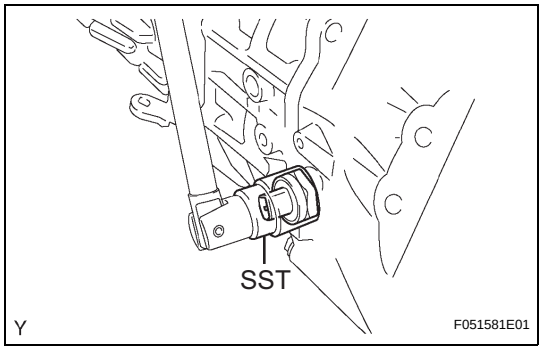
(a) Remove the bolt, then remove the shift and select lever.

(b) Remove the lock ball pin and spring from the shift and select lever.



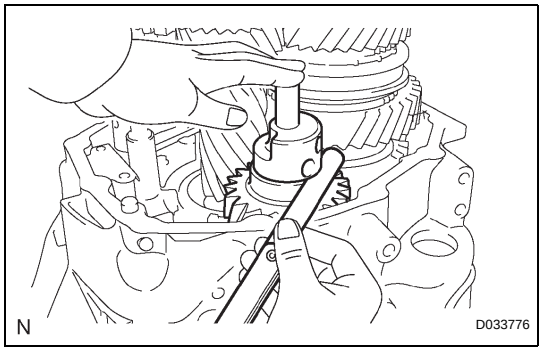
19. REMOVE SHIFT AND SELECT LEVER CAM

(a) Using a screwdriver, remove the E ring and the shift and select lever cam from the shift and select lever shaft.



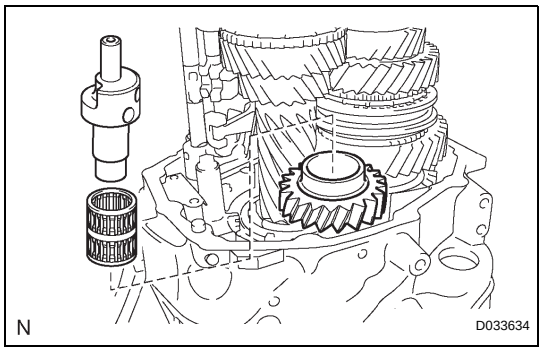
20. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, remove the back-up light switch and gasket.
SST 09817-16011



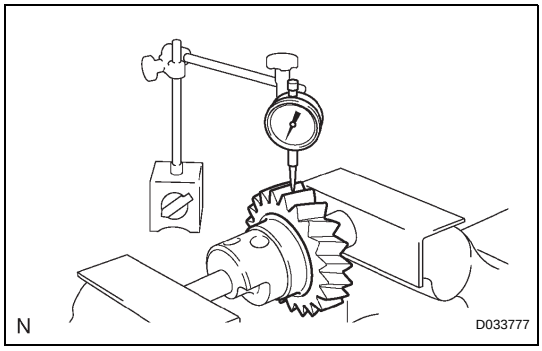
21. INSPECT REVERSE IDLER GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the thrust clearance.
Standard clearance:
0.10 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 to (0.0217 in.)
If the clearance is exceeds the maximum, replace the reverse idler gear shaft.



22. REMOVE REVERSE IDLER GEAR

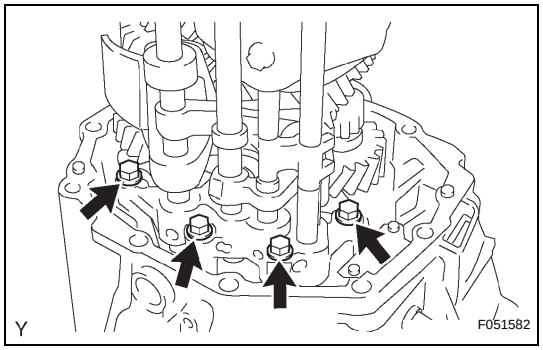
(a) Remove the reverse idle gear shaft, needle roller bearing and reverse idler gear.



23. INSPECT REVERSE IDLER GEAR RADIAL CLEARANCE

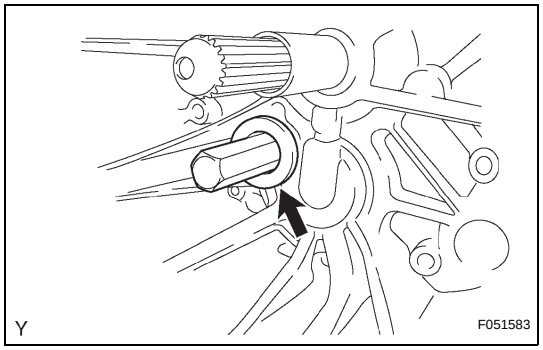
(a) Using a dial indicator, measure the radial clearance.
Standard clearance:
0.015 to 0.050 mm (0.0006 to 0.0020 in.)
Maximum clearance:
0.050 mm (0.0020 in.)
If the clearance exceeds the maximum, replace the needle roller bearing.

MT

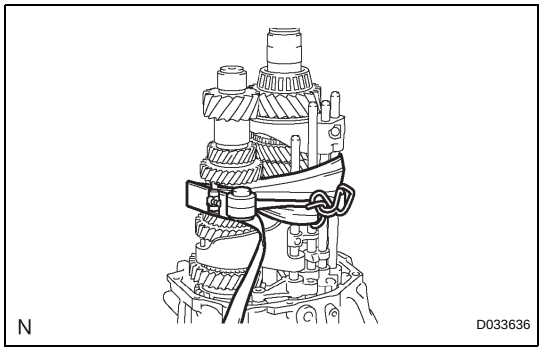


24. REMOVE TRANSMISSION FRONT CASE

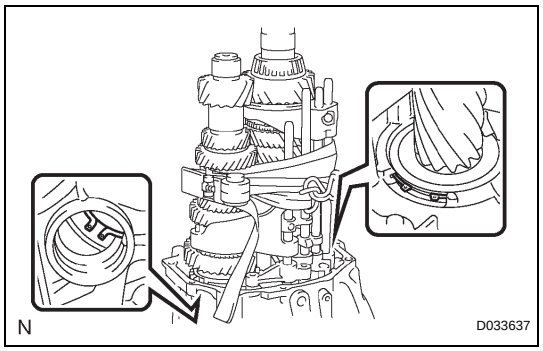
(a) Remove the 4 bolts from the interlock bracket.



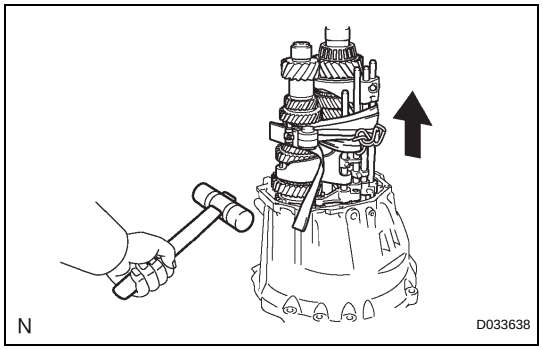
(b) Using a hexagon wrench (24 mm), remove the plug.



(c) Tie the input shaft, counter gear and control assembly with a rope or string.



(d) Expand the 2 snap rings, and lift up the output shaft, input shaft, counter gear and control assembly.

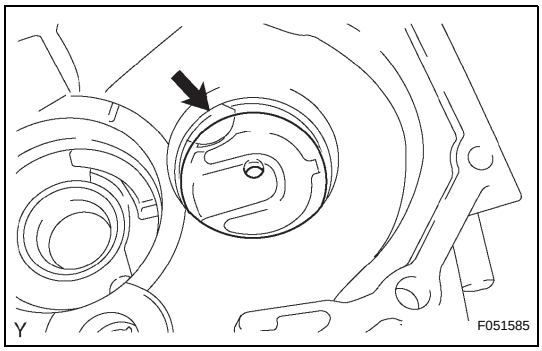


(e) Remove the output shaft, input shaft, counter gear shaft and control assembly while gently tapping the clutch housing with a plastic hammer.

NOTICE:

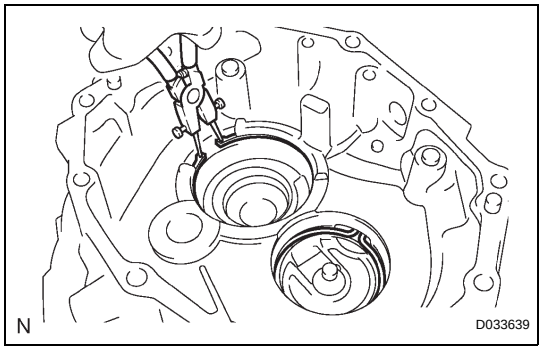
Take care not to subject the output shaft, input shaft, counter gear shaft and control assembly to any impact. This could cause the ball and spring to come out.

(f) Separate the output shaft, input shaft, counter gear shaft and control assembly.



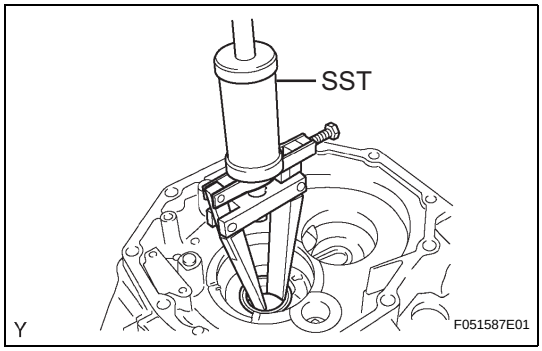
25. REMOVE NO. 1 OIL RECEIVER PIPE

(a) Remove the oil receiver pipe No. 1 from the transmission front case.



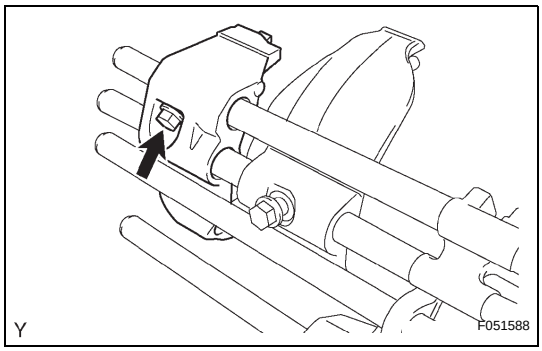
26. REMOVE FRONT BEARING SHAFT SNAP RING

(a) Using a snap ring plier, remove the 2 snap rings.



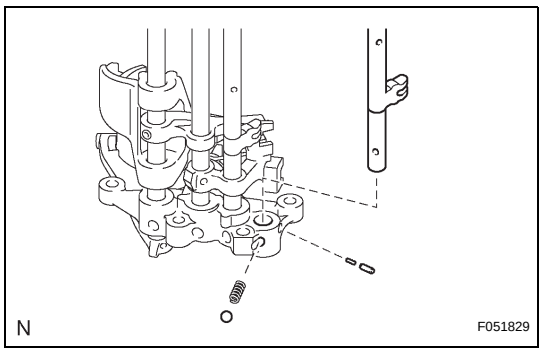
27. REMOVE TRANSMISSION CASE OIL SEAL

(a) Using SST, remove the transmission case oil seal from the transmission front case.
SST 09308-00010



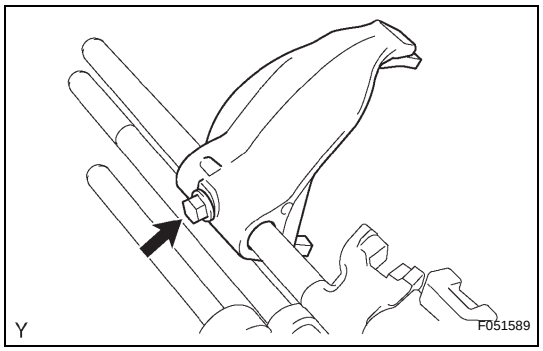
28. REMOVE NO. 3 GEAR SHIFT FORK

(a) Remove the bolt, then remove the gear shift fork No. 3.



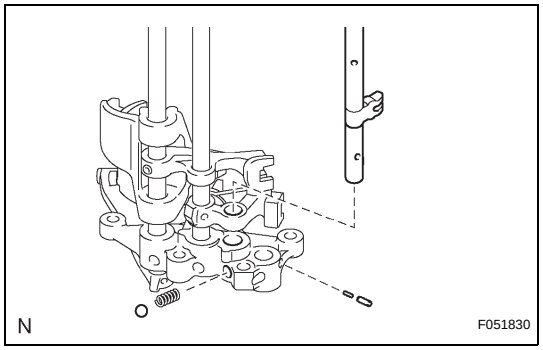
29. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 3, boll, spring, interlock pin No. 2 and interlock pin No. 3.



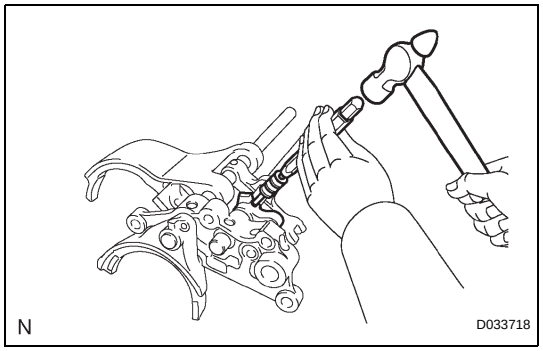
30. REMOVE NO. 2 GEAR SHIFT FORK

(a) Remove the bolt, then remove the gear shift fork No. 2.



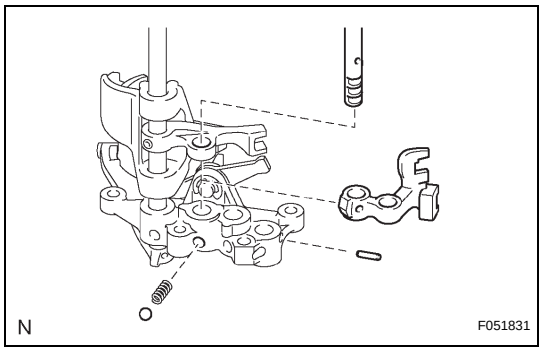
31. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 2, ball, spring, interlock pin No. 2 and interlock pin No. 3.



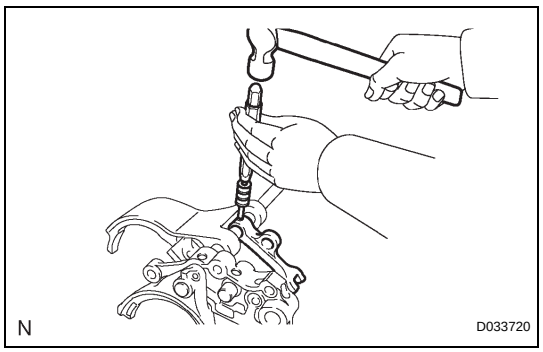
32. REMOVE NO. 1 GEAR SHIFT HEAD

(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.



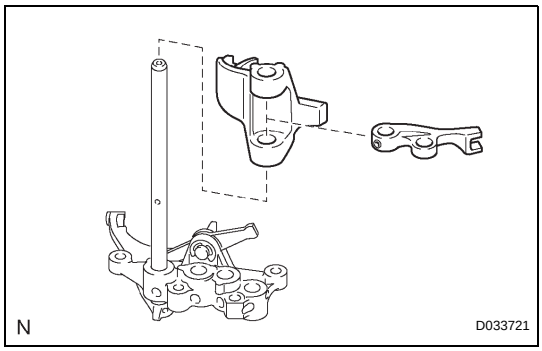
33. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 1, ball, spring, shift head No. 1 and interlock pin No. 1.

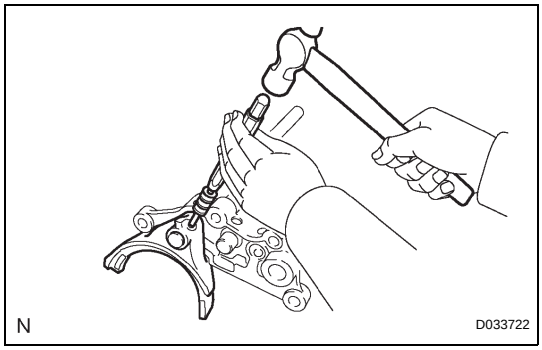


34. REMOVE NO. 1 GEAR SHIFT FORK

(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.



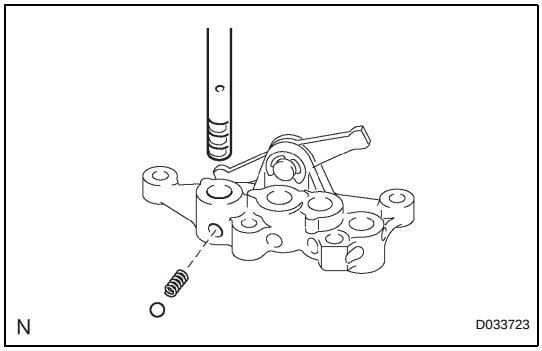
(b) Remove the shift head No. 2 and shift fork No. 1.



35. REMOVE NO. 4 GEAR SHIFT FORK

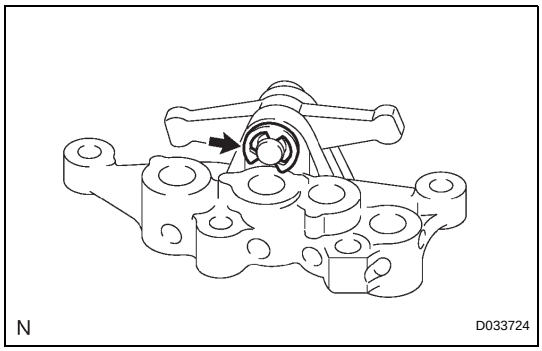
(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.

(b) Remove the shift fork No. 4.



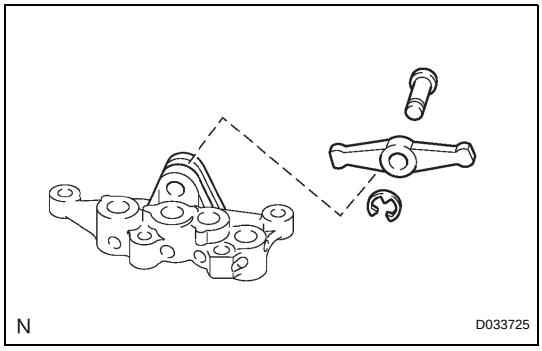
36. REMOVE NO. 4 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork shaft No. 4, ball and spring.



37. REMOVE 1ST AND REVERSE SHIFT ARM

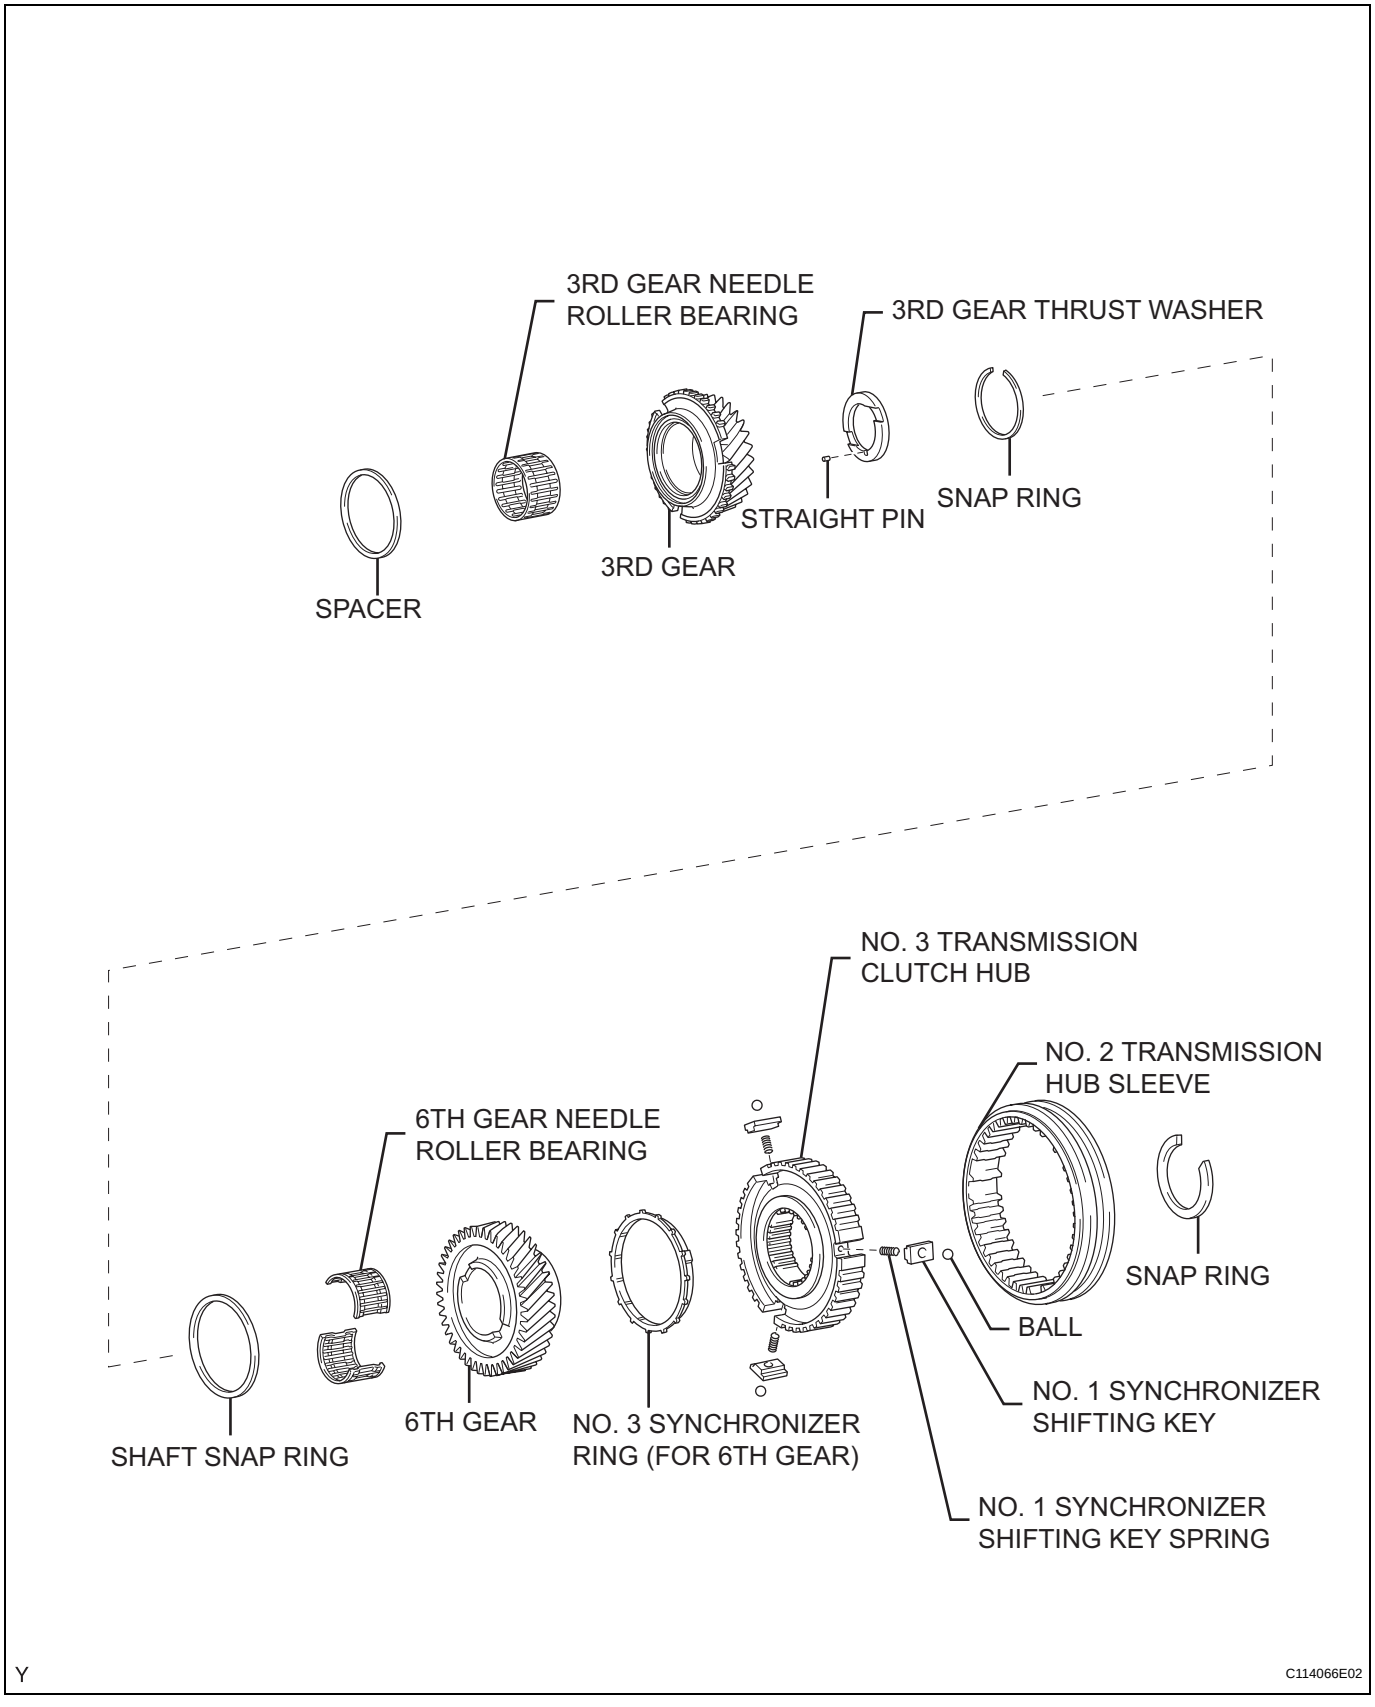
(a) Using a screwdriver, remove the E-ring.



(b) Remove the shift arm pivot and shift arm.

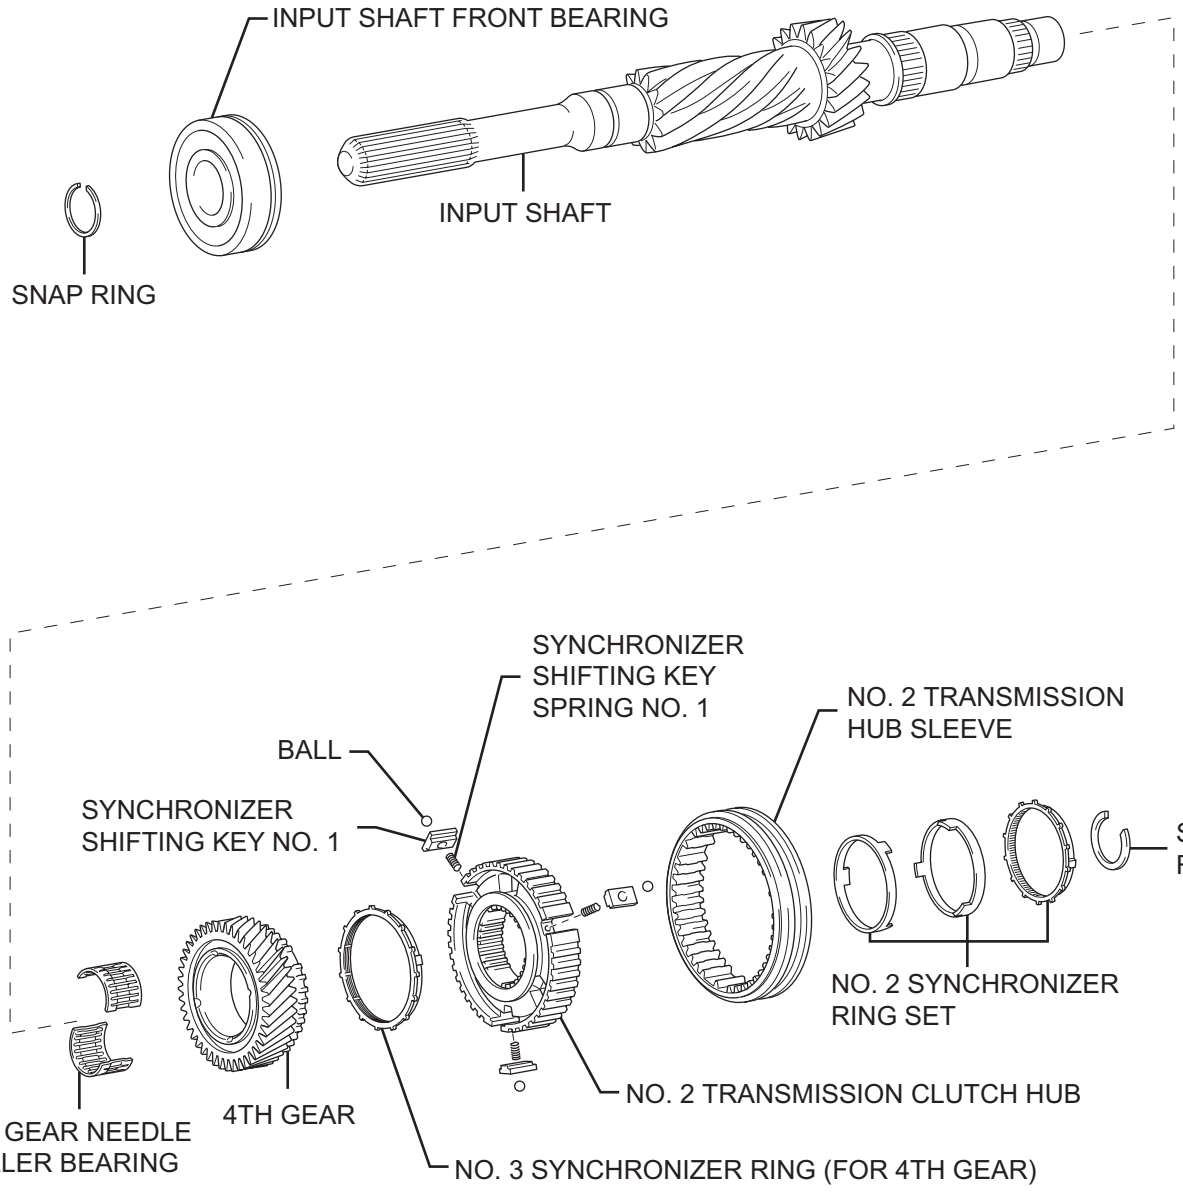
INPUT SHAFT

COMPONENTS



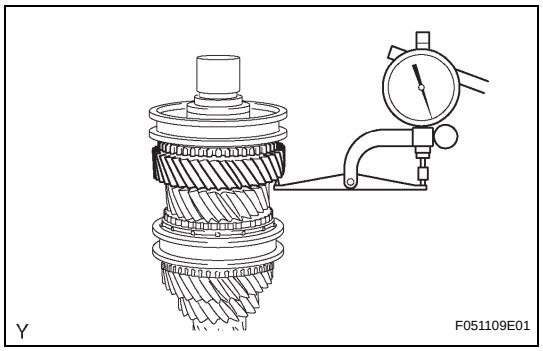
MT

MT



Y

C114065E03



DISASSEMBLY

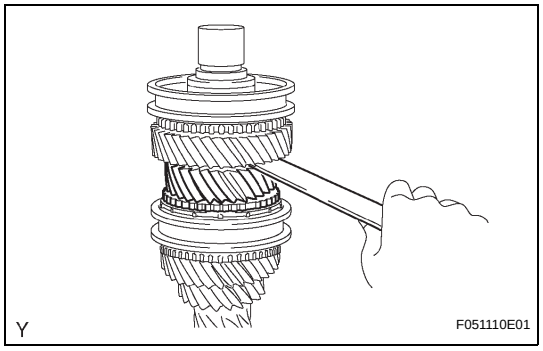
1. INSPECT 6TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 6th gear thrust clearance.

Standard clearance:

0.20 to 0.49 mm (0.0079 to 0.0193 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



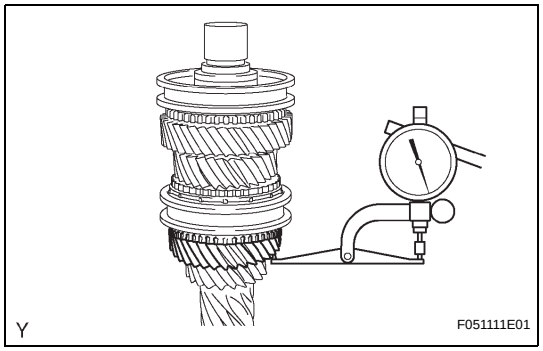
2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.09 to 0.52 mm (0.0035 to 0.0205 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 2.



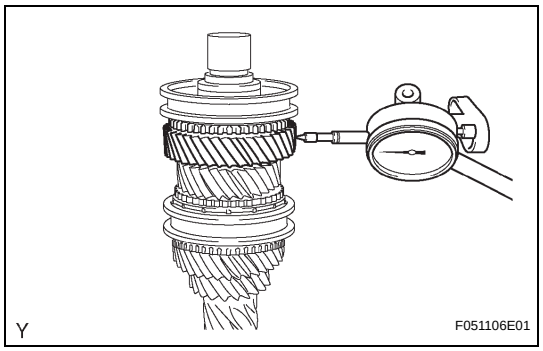
3. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 4th gear thrust clearance.

Standard clearance:

0.12 to 0.38 mm (0.0047 to 0.0150 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



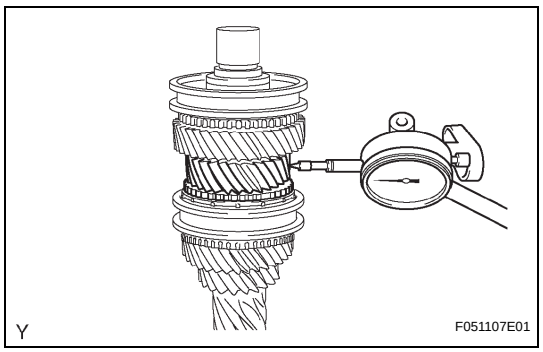
4. INSPECT 6TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 6th gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



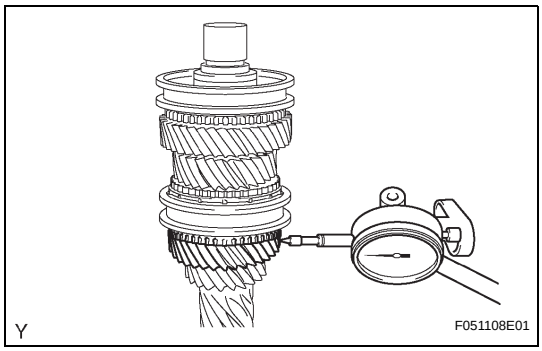
5. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



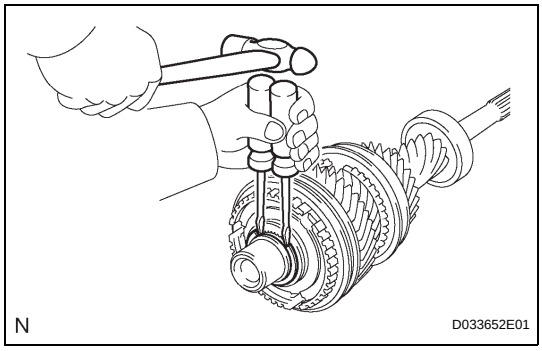
6. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.

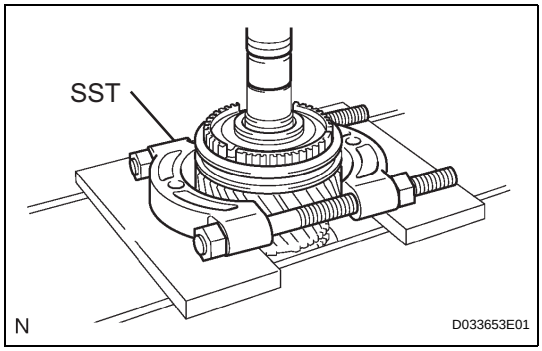


7. REMOVE TRANSMISSION CLUTCH HUB NO.3 SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.

HINT:

Use a shop rag to prevent the snap ring from flying off.



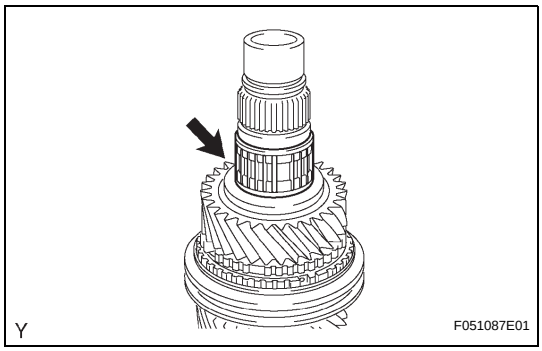
8. REMOVE 6TH GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 3, hub sleeve, synchronizer ring and 6th gear from the input shaft.

SST 09950-00020, 09950-70010 (09951-07200), 09950-60010 (09951-00300)

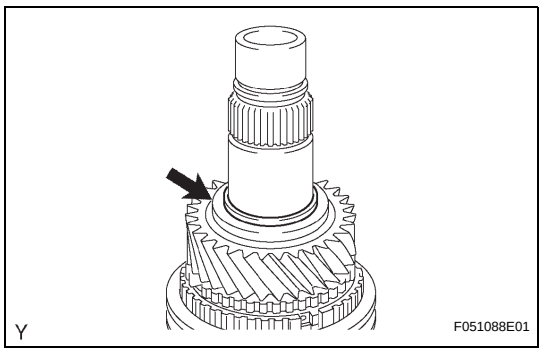
NOTICE:

- **Do not tighten SST excessively.**
- **Support the input shaft by hand so that it does not fall off.**



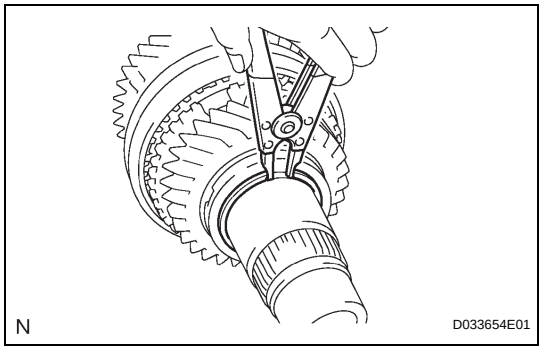
9. REMOVE 6TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 6th gear needle roller bearing from the input shaft.



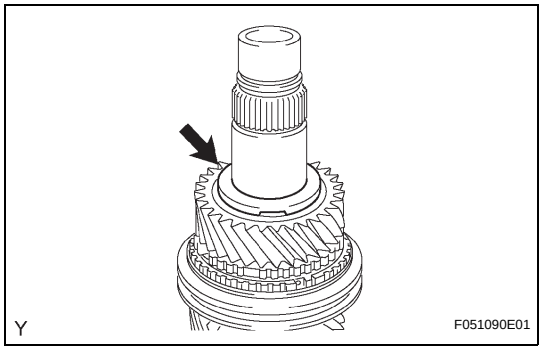
10. REMOVE SHAFT SNAP RING

(a) Remove the shaft snap ring from the input shaft.



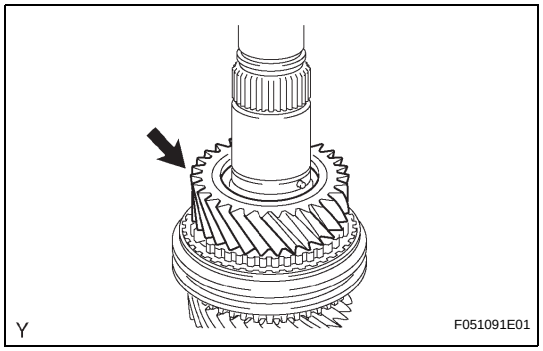
11. REMOVE GEAR THRUST WASHER SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the input shaft.



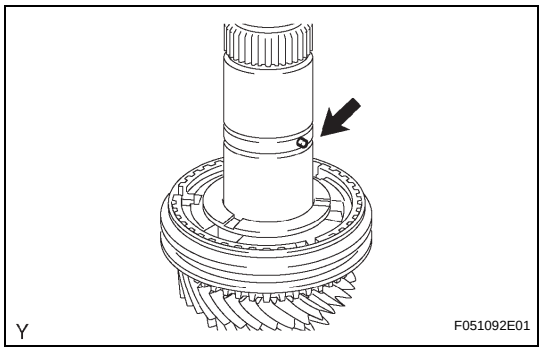
12. REMOVE 3RD GEAR THRUST WASHER

(a) Remove the 3rd gear thrust washer from the input shaft.



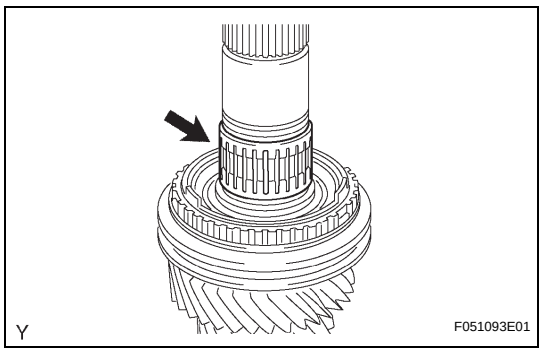
13. REMOVE 3RD GEAR

(a) Remove the 3rd gear from the input shaft.



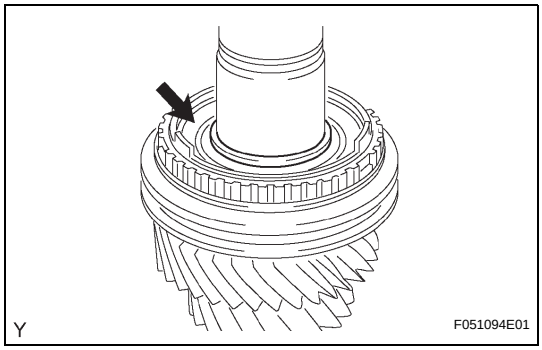
14. REMOVE STRAIGHT PIN

(a) Remove the straight pin from the input shaft.



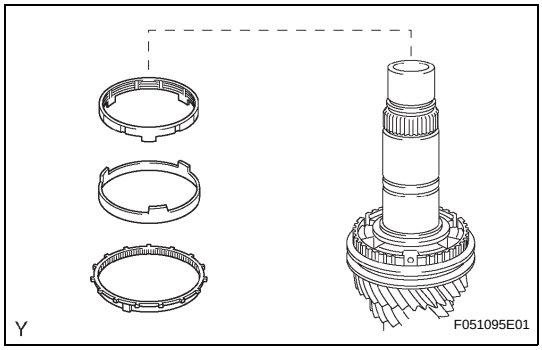
15. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.



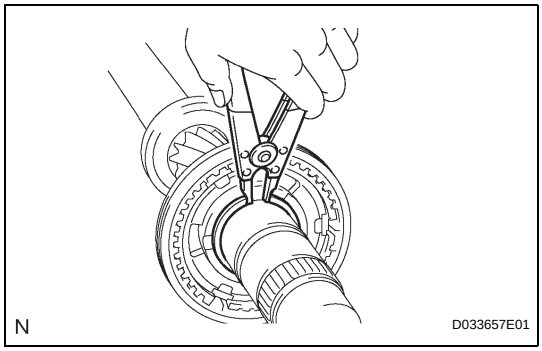
16. REMOVE SPACER

(a) Remove the spacer from the input shaft.



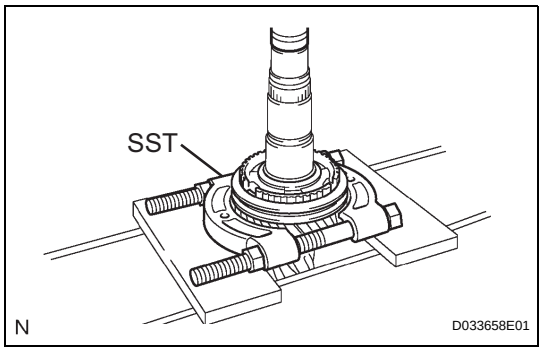
17. REMOVE NO. 2 SYNCHRONIZER RING SET

(a) Remove the synchronizer ring set No. 2 from the input shaft.



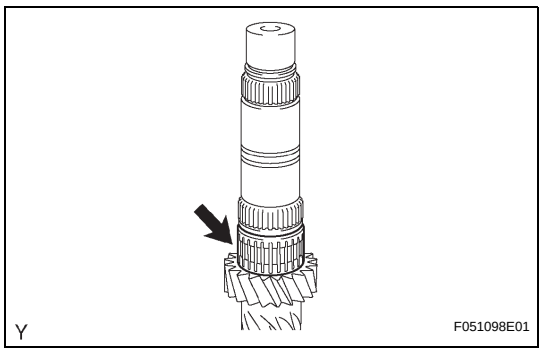
18. REMOVE CLUTCH HUB NO.2 SETTING SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the input shaft.



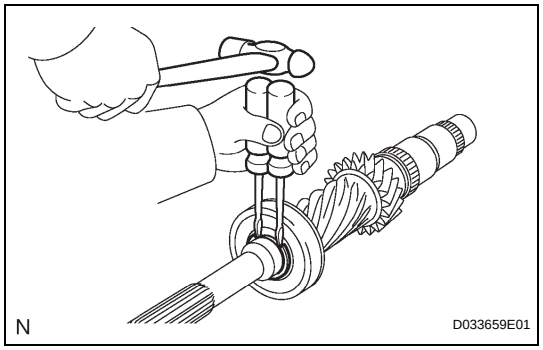
19. REMOVE 4TH GEAR

(a) Using SST and a press, remove the transmission clutch hub No. 2, hub sleeve, synchronizer ring and 4th gear from the input shaft.
SST 09950-00020
NOTICE:
Support the input shaft by hand so that it does not fall off.



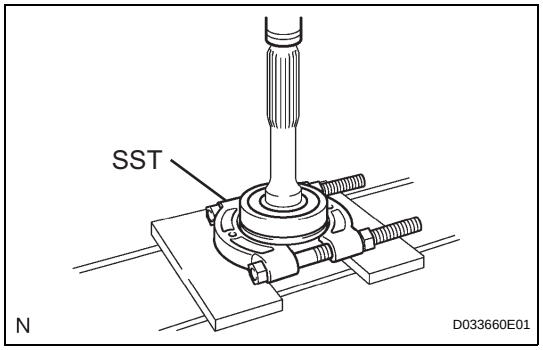
20. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 4th gear needle roller bearing from the input shaft.



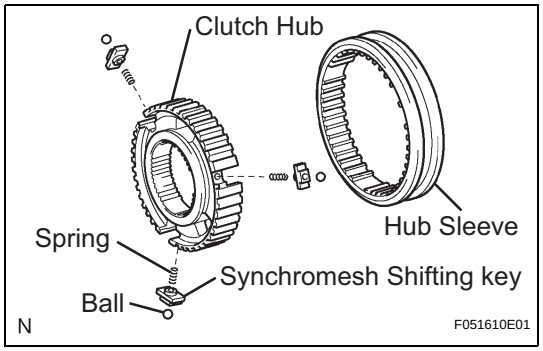
21. REMOVE INPUT SHAFT FRONT BEARING SNAP RING

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.
HINT:
Use a shop rag to prevent the snap ring from flying off.



22. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the input shaft front bearing from the input shaft.
SST 09950-00020
NOTICE:
Support the input shaft by hand so that it does not fall off.

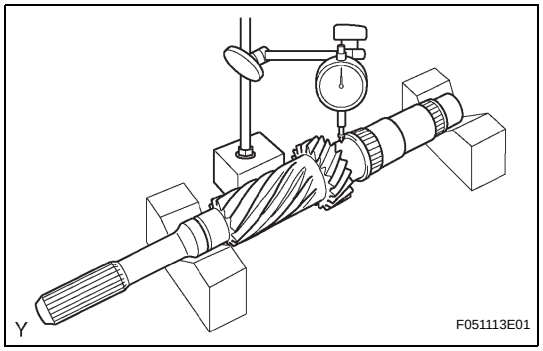


23. REMOVE NO. 2 TRANSMISSION CLUTCH HUB

(a) Remove the clutch hub, 3 synchromesh shifting keys, 3 balls and 3 springs from the hub sleeve.
HINT:
Use a shop rag to prevent the ball and spring from flying off.

24. REMOVE NO. 3 TRANSMISSION CLUTCH HUB

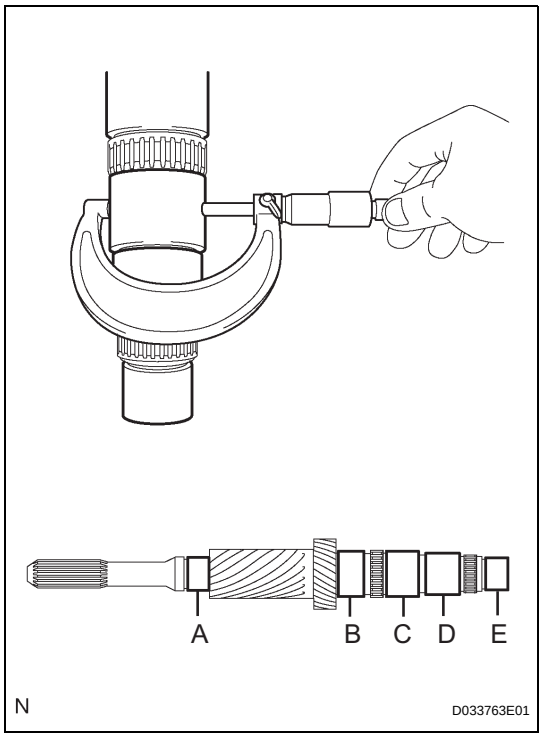
(a) Perform the same procedures as for clutch hub No. 2.



INSPECTION

1. INSPECT INPUT SHAFT

(a) Using a dial indicator and 2 V-blocks, measure the shaft runout.
Maximum runout:
0.03 mm (0.0012 in.)
If the runout exceeds the maximum, replace the input shaft.



(b) Using a micrometer, measure the outer diameter of the input shaft journal surface.

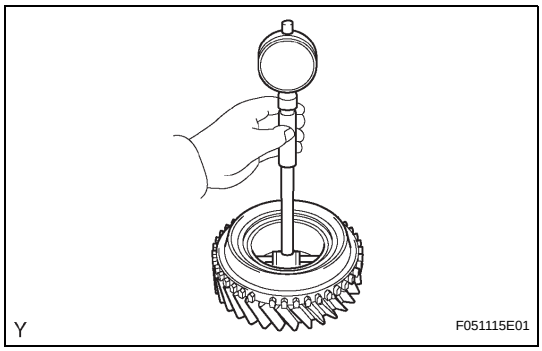
Standard

Part	Outer diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	44.985 to 45.000 (1.7711 to 1.7717)
C	44.985 to 45.000 (1.7711 to 1.7717)
D	41.985 to 42.000 (1.6530 to 1.6535)
E	32.967 to 32.980 (1.2979 to 1.2984)

Minimum

Part	Outer diameter mm (in.)
A	34.002 (1.3387)
B	44.985 (1.7711)
C	44.985 (1.7711)
D	41.985 (1.6530)
E	32.967 (1.2979)

If the outer diameter is less than the minimum, replace the input shaft.

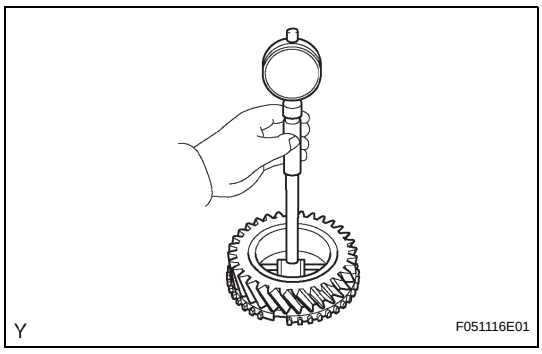


2. INSPECT 6TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 6th gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the 4th gear.

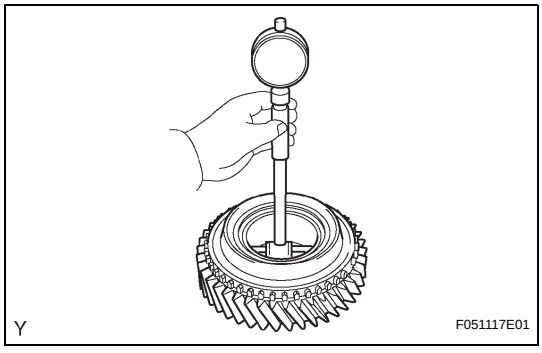


3. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the 3rd gear.

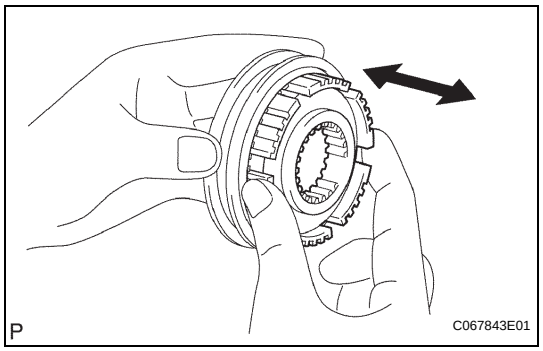


4. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

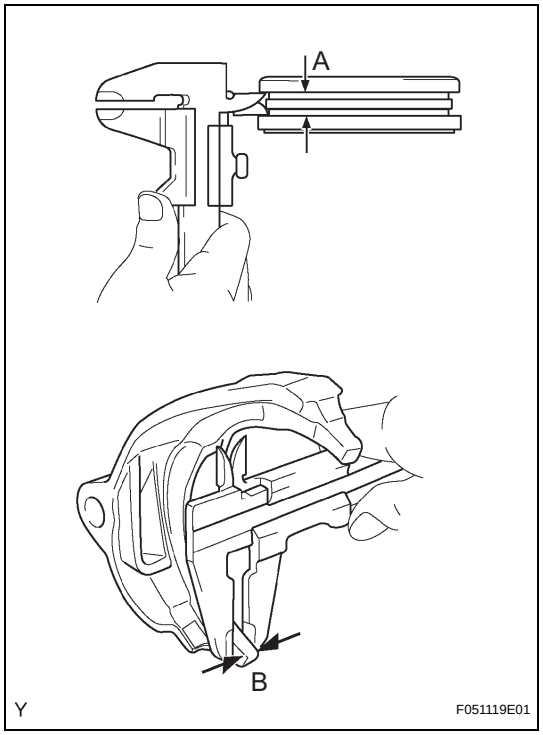
If the inside diameter exceeds the maximum, replace the 4th gear.



5. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the transmission hub No. 2 and transmission hub sleeve No. 2.

(b) Check that the spline gear teeth of the transmission hub sleeve No. 2 are not worn.



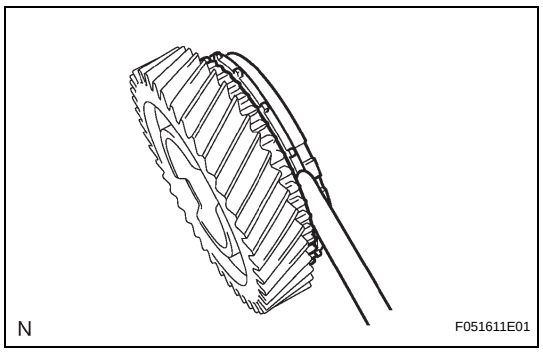
(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 2 groove (A) and the thickness of the claw part on the gear shift forks No. 2 or No. 3 (B), and calculate the clearance.

Standard clearance:

(A - B);

0.26 to 0.84 mm (0.0102 to 0.0331 in.)

If the clearance is outside the specification, replace the transmission hub sleeve No. 2 and gear shift fork.



6. INSPECT NO. 3 SYNCHRONIZER RING (FOR 6TH GEAR)

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and the 6th gear.

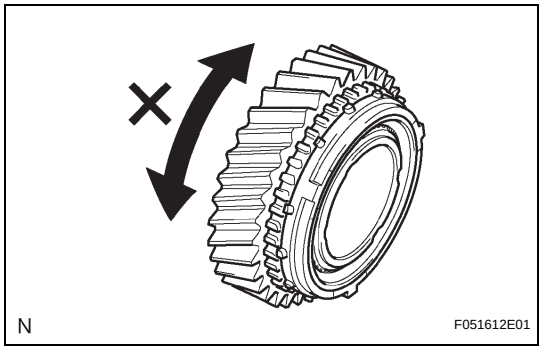
Standard clearance:

0.70 to 1.50 mm (0.0276 to 0.0591 in.)

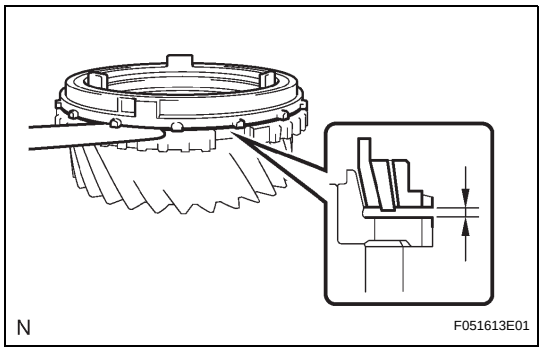
Minimum clearance:

0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 6th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 6th gear cone. Check that the ring locks.

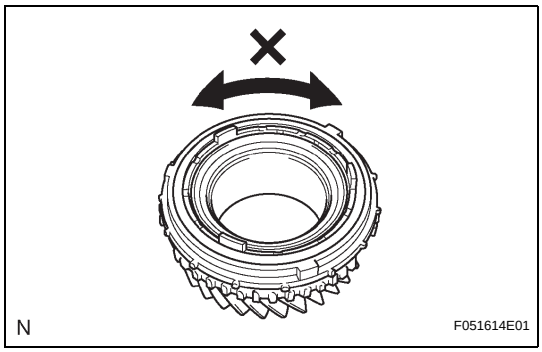


7. INSPECT NO. 2 SYNCHRONIZER RING SET

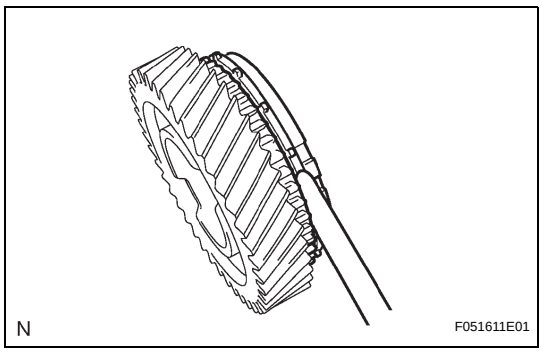
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and the 3rd gear.

Standard clearance:
Inner:
1.20 to 2.20 mm (0.0472 to 0.0866 in.)
Middle:
0.60 to 1.80 mm (0.0236 to 0.0709 in.)
Outer:
0.80 to 1.80 mm (0.0315 to 0.0709 in.)
Minimum clearance:
Inner:
1.20 mm (0.0472 in.)
Middle:
0.60 mm (0.0236 in.)
Outer:
0.80 mm (0.0315 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 3rd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 3rd gear cone. Check that the ring locks.

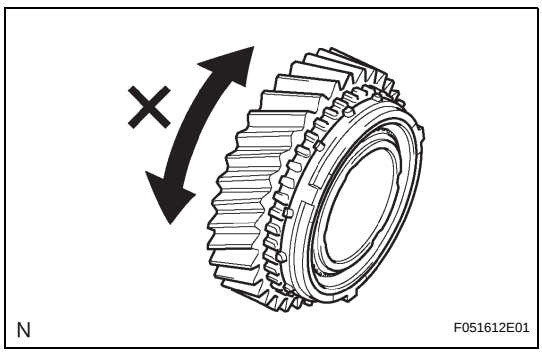


8. INSPECT NO. 3 SYNCHRONIZER RING (FOR 4TH GEAR)

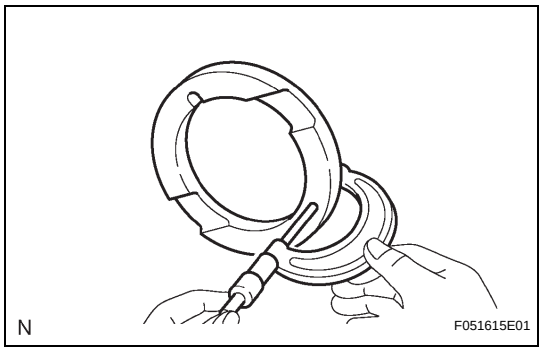
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 4th gear.

Standard clearance:
0.70 to 1.50 mm (0.0276 to 0.0591 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 4th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 4th gear cone. Check that the ring locks.



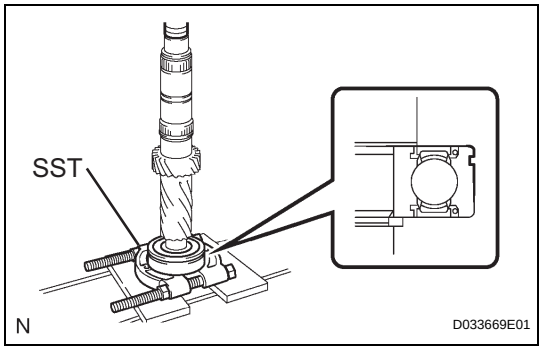
9. INSPECT 3RD GEAR THRUST WASHER

(a) Using a micrometer, measure the thrust washer thickness.

Standard thickness:
7.12 to 7.18 mm (0.2803 to 0.2827 in.)
Minimum thickness:
7.12 mm (0.2803 in.)

If the thickness is less than the minimum, replace the thrust washer.

REASSEMBLY



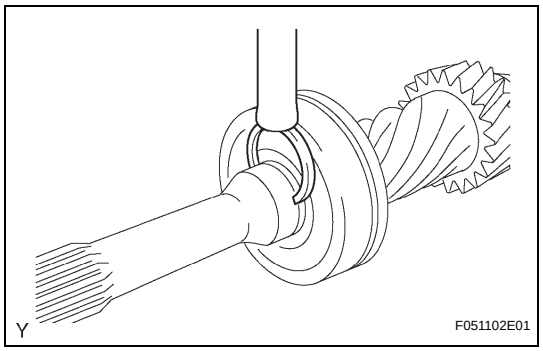
1. INSTALL INPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the input shaft front bearing onto the input shaft.

SST 09950-00020

HINT:

Make sure that the groove of the bearing faces the correct direction as shown in the illustration.



2. INSTALL INPUT SHAFT FRONT BEARING SNAP RING

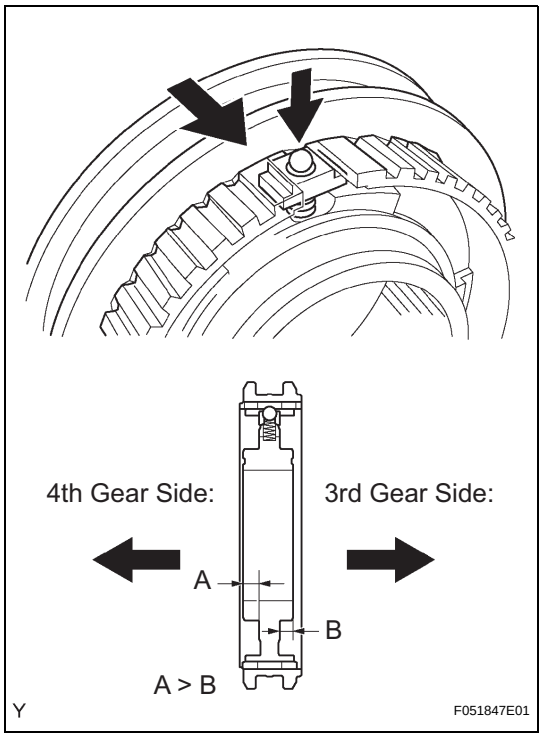
(a) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-31026	2.65 to 2.70 (0.1043 to 0.1063)	A
90520-31027	2.70 to 2.75 (0.1063 to 0.1083)	B
90520-31028	2.75 to 2.80 (0.1083 to 0.1102)	C
90520-31029	2.80 to 2.85 (0.1102 to 0.1122)	D
90520-31030	2.85 to 2.90 (0.1122 to 0.1142)	E
90520-31031	2.90 to 2.95 (0.1142 to 0.1161)	F

(b) Using a brass bar and hammer, install the snap ring onto the input shaft.

MT



3. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

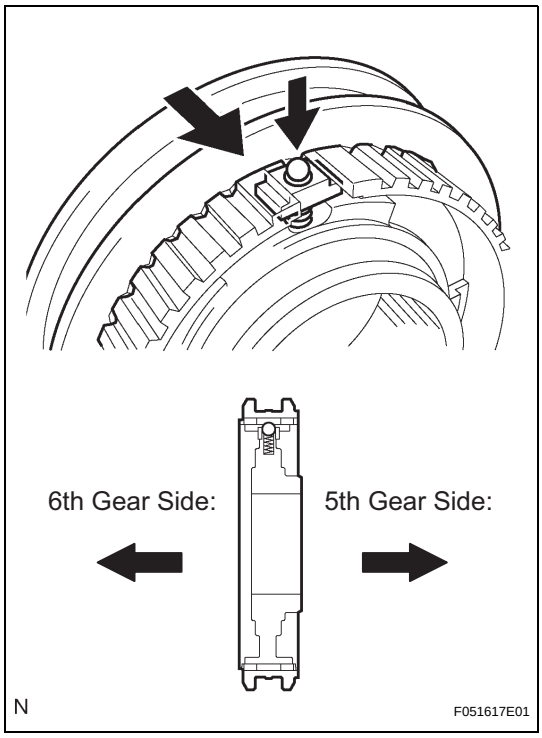
(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub No. 2.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.

NOTICE:

Take care to prevent the ball from flying off.

HINT:

Make sure that the clutch hub No. 2 faces the correct direction as shown in the illustration.



4. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

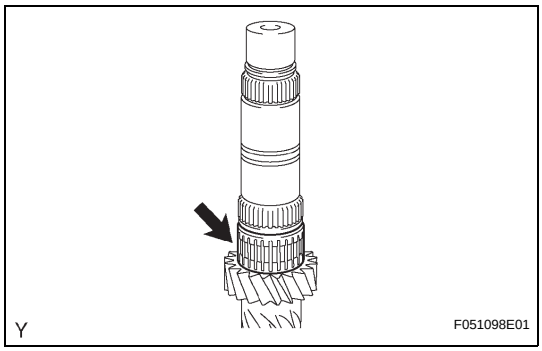
(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub No. 3.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.

NOTICE:

Take care to prevent the ball from flying off.

HINT:

Make sure that the clutch hub No. 3 faces the correct direction as shown in the illustration.



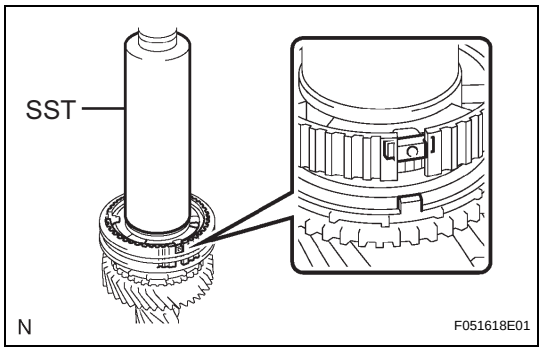
5. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 4th gear needle roller bearing with gear oil, then install it onto the input shaft.

6. INSTALL 4TH GEAR

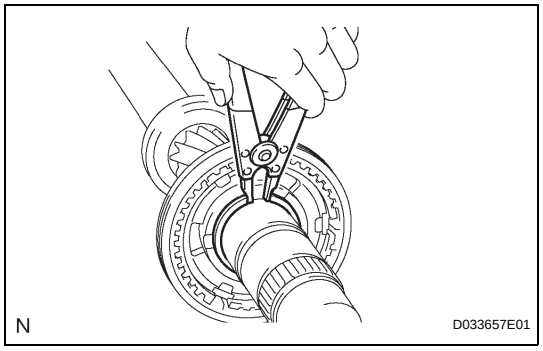
(a) Coat the 4th gear and synchronizer ring No. 3 with gear oil, then install them onto the input shaft.

MT



(b) Using SST and a press, install the clutch hub No. 2 onto the input shaft.
SST 09308-14010
HINT:
Align the convex portion of the synchronizer ring with the groove of the clutch hub.

(c) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.

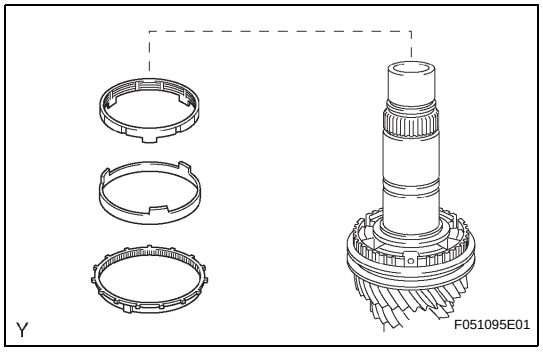


7. INSTALL CLUTCH HUB NO.2 SETTING SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-42012	1.77 to 1.82 (0.0697 to 0.0717)	A
90520-42013	1.82 to 1.87 (0.0717 to 0.0736)	B
90520-42014	1.87 to 1.92 (0.0736 to 0.0756)	C
90520-42015	1.92 to 1.97 (0.0756 to 0.0776)	D
90520-42016	1.97 to 2.02 (0.0776 to 0.0795)	E
90520-42017	2.02 to 2.07 (0.0795 to 0.0815)	F
90520-42018	2.07 to 2.12 (0.0815 to 0.0835)	G

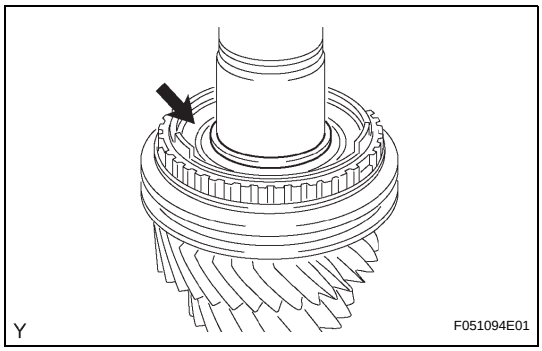
(b) Using a snap ring expander, install the snap ring onto the input shaft.



8. INSTALL NO. 2 SYNCHRONIZER RING SET

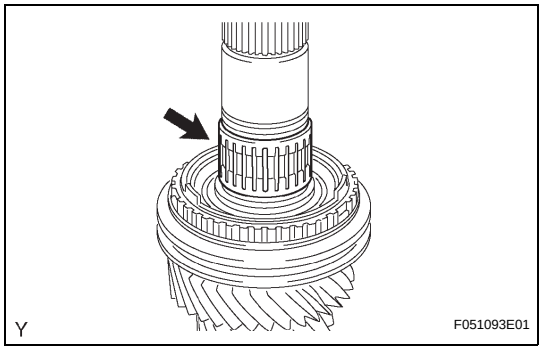
(a) Coat the synchronizer ring set No. 2 with gear oil, then install it onto the input shaft.

MT



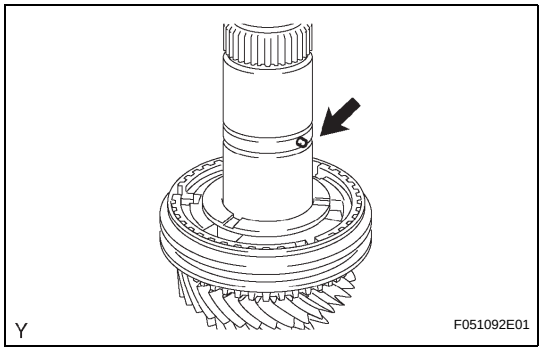
9. INSTALL SPACER

(a) Coat the spacer with gear oil, and install it onto the input shaft.



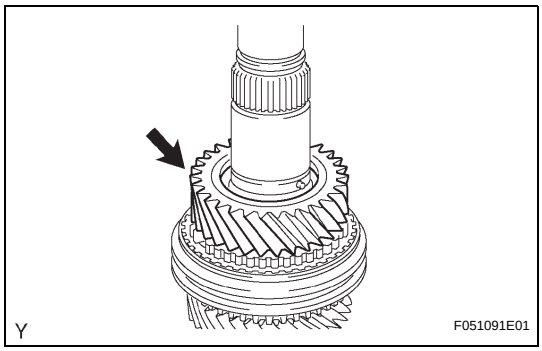
10. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear needle roller bearing with gear oil, and install it onto the input shaft.



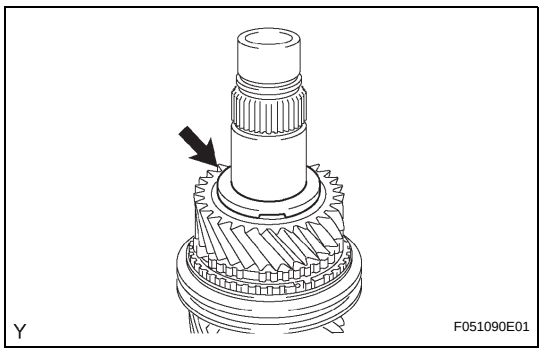
11. INSTALL STRAIGHT PIN

(a) Install the straight pin onto the input shaft.



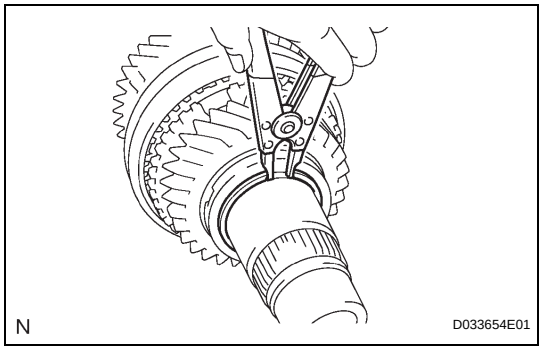
12. INSTALL 3RD GEAR

(a) Coat the 3rd gear with gear oil, and install it onto the input shaft.



13. INSTALL 3RD GEAR THRUST WASHER

(a) Coat the 3rd gear thrust washer with gear oil, and install it onto the input shaft.
HINT:
Align the straight pin with the groove of the gear thrust washer and install it.



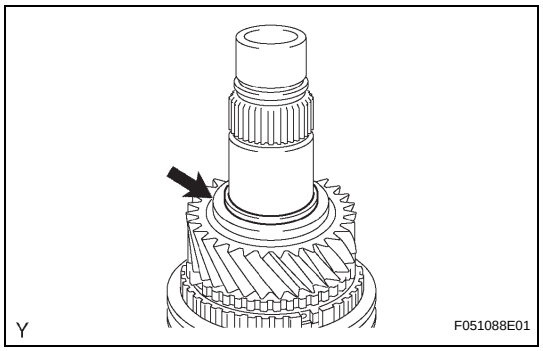
14. INSTALL GEAR THRUST WASHER SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

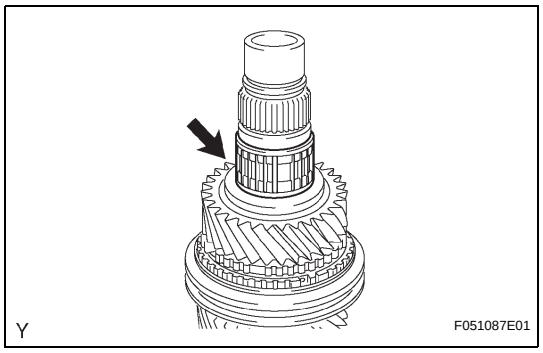
Part No.	Thickness: mm (in.)	Mark
90520-39026	2.07 to 2.12 (0.0815 to 0.0835)	A
90520-39027	2.12 to 2.17 (0.0835 to 0.0854)	B
90520-39028	2.17 to 2.22 (0.0854 to 0.0874)	C
90520-39029	2.22 to 2.27 (0.0874 to 0.0894)	D
90520-39030	2.27 to 2.32 (0.0894 to 0.0913)	E
90520-39031	2.32 to 2.37 (0.0913 to 0.0933)	F

(b) Using a snap ring expander, install the snap ring onto the input shaft.



15. INSTALL SHAFT SNAP RING

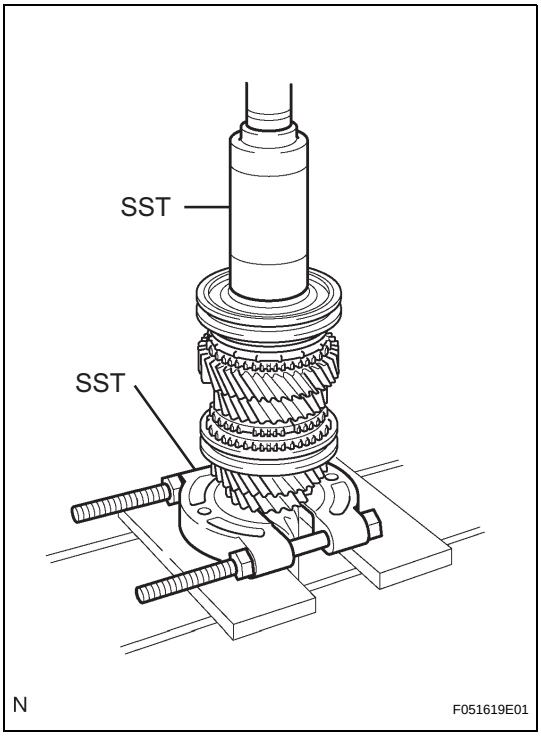
(a) Coat the shaft snap ring with gear oil, and install it onto the input shaft.



16. INSTALL 6TH GEAR NEEDLE ROLLER BEARING

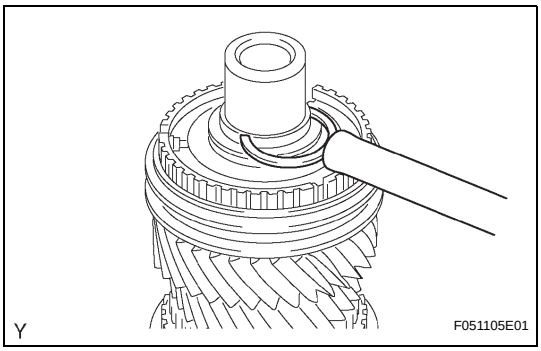
(a) Coat the 6th gear needle roller bearing with gear oil, and install it onto the input shaft.

MT



17. INSTALL 6TH GEAR

(a) Install the 6th gear onto the input shaft.
(b) Install the synchronizer ring onto the input shaft.
(c) Using SST and a press, install the clutch hub onto the input shaft.
SST 09309-37010, 09950-00020
(d) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.



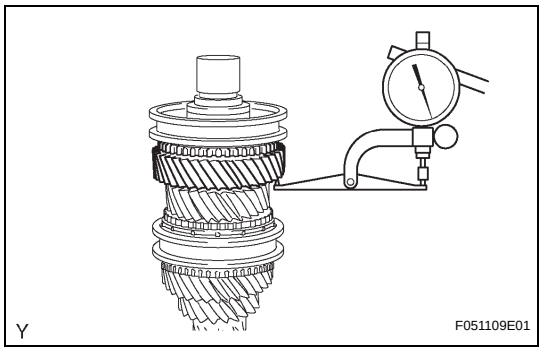
18. INSTALL TRANSMISSION CLUTCH HUB NO.3 SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-33022	2.10 to 2.15 (0.0827 to 0.0847)	A
90520-33023	2.15 to 2.20 (0.0847 to 0.0866)	B
90520-33024	2.20 to 2.25 (0.0866 to 0.0886)	C
90520-33025	2.25 to 2.30 (0.0886 to 0.0906)	D
90520-33026	2.30 to 2.35 (0.0906 to 0.0925)	E
90520-33027	2.35 to 2.40 (0.0925 to 0.0945)	F
90520-33028	2.40 to 2.45 (0.0945 to 0.0965)	G

(b) Using a brass bar and a hammer, install the snap ring onto the input shaft.

MT



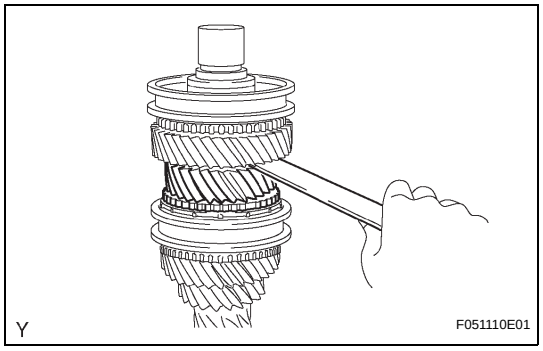
19. INSPECT 6TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 6th gear thrust clearance.

Standard clearance:

0.20 to 0.49 mm (0.0079 to 0.0193 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



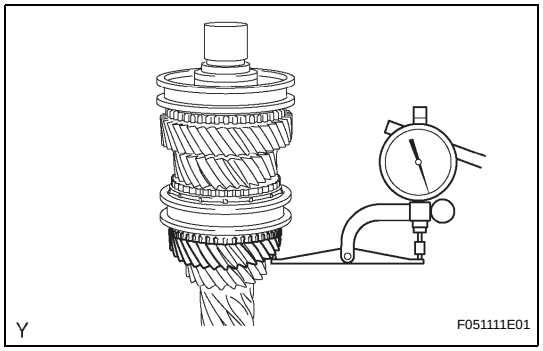
20. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 3rd gear thrust clearance.

Standard clearance:

0.09 to 0.52 mm (0.0035 to 0.0205 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 2.



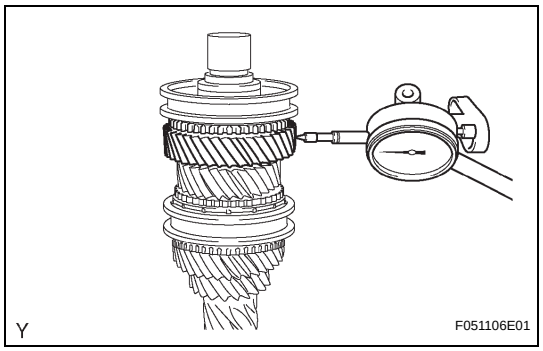
21. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 4th gear thrust clearance.

Standard clearance:

0.12 to 0.38 mm (0.0047 to 0.0150 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 3.



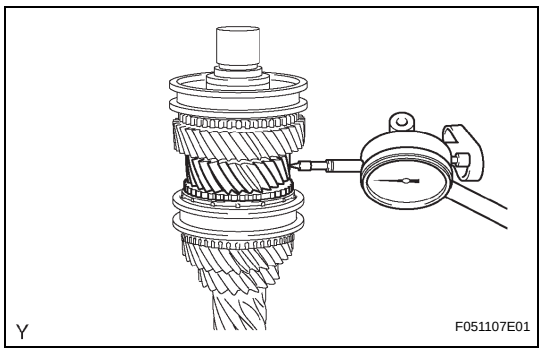
22. INSPECT 6TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 6th gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



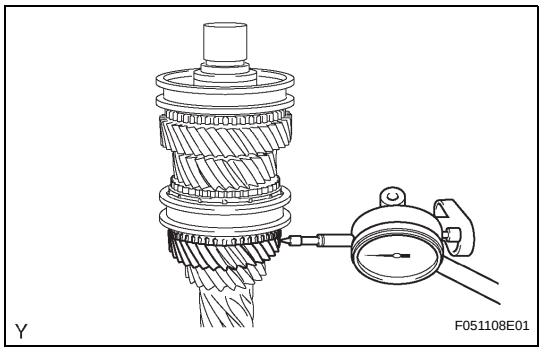
23. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.



24. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

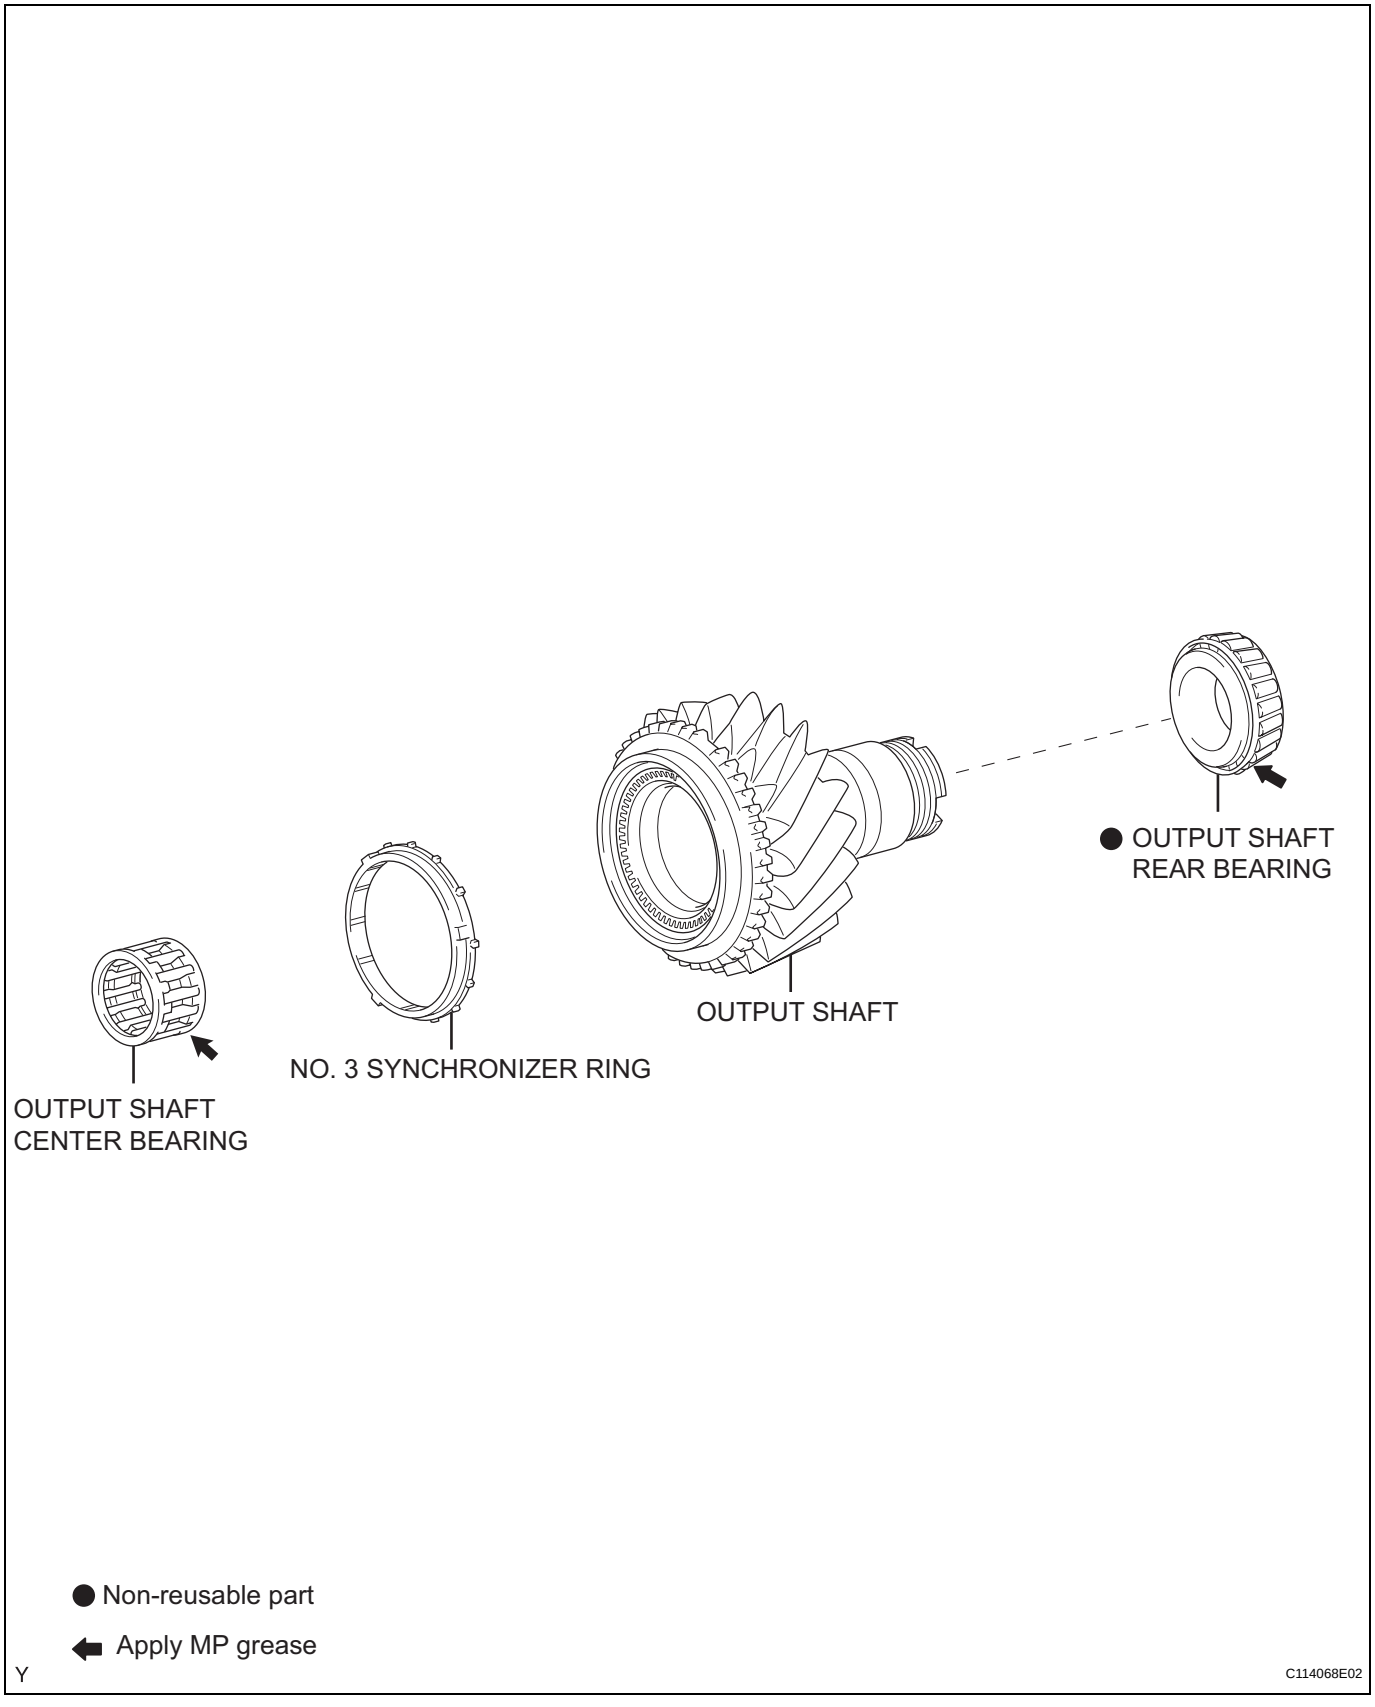
Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the defective gear, needle roller bearing or shaft.

OUTPUT SHAFT

COMPONENTS



MT

DISASSEMBLY

1. REMOVE NO. 3 SYNCHRONIZER RING

(a) Remove synchronizer ring No. 3 from the output shaft.

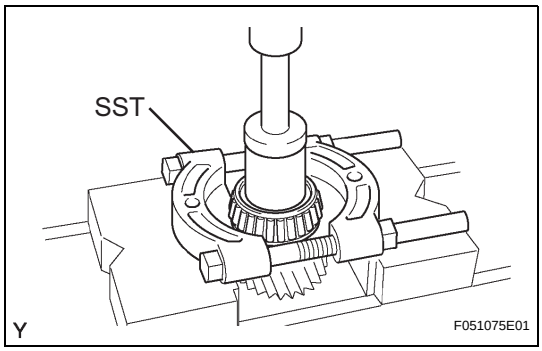
2. REMOVE OUTPUT SHAFT CENTER BEARING

(a) Remove the output shaft center bearing from the output shaft.

3. REMOVE OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, remove the output shaft rear bearing from the output shaft.

SST 09950-00020, 09950-70010 (09951-07100), 09950-60010 (09951-00510)



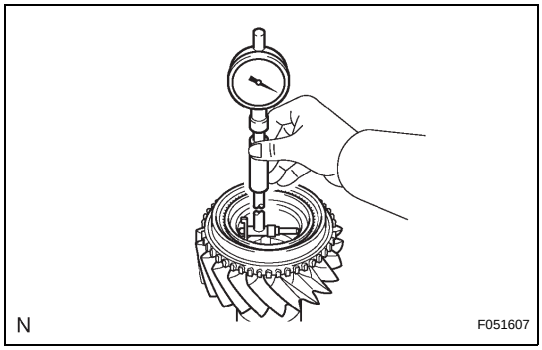
INSPECTION

1. INSPECT OUTPUT SHAFT

(a) Using a cylinder gauge, measure the inside diameter of the output shaft.

Standard inside diameter:
45.009 to 45.025 mm (1.7720 to 1.7726 in.)
Maximum inside diameter:
45.025 mm (1.7726 in.)

If the diameter exceeds the maximum, replace the output shaft.

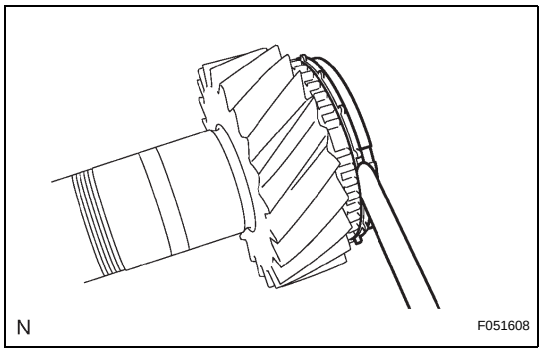


2. INSPECT NO. 3 SYNCHRONIZER RING

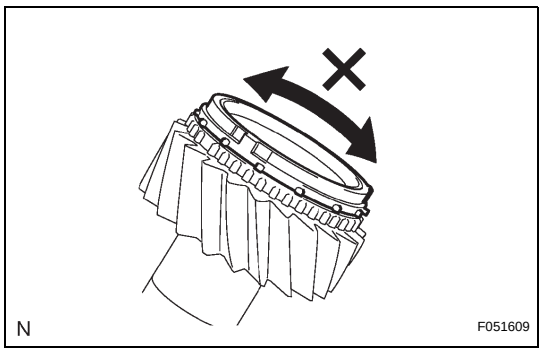
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and gear spline.

Standard clearance:
0.70 to 1.50 mm (0.0276 to 0.0591 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the output shaft and synchronizer ring cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the gear cone. Check that the ring locks.



COUNTER GEAR AND REVERSE IDLER GEAR

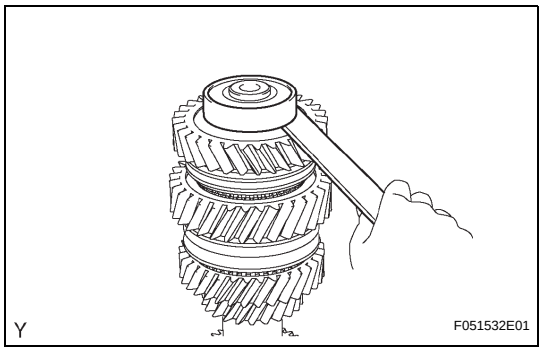
MT



DISASSEMBLY

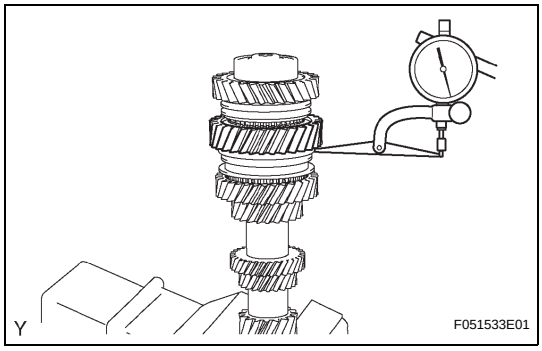
1. INSPECT REVERSE GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the reverse gear thrust clearance.

Standard clearance:

0.12 to 0.37 mm (0.0047 to 0.0146 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 4.



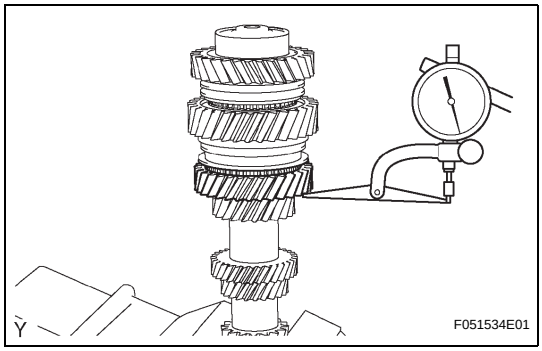
2. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



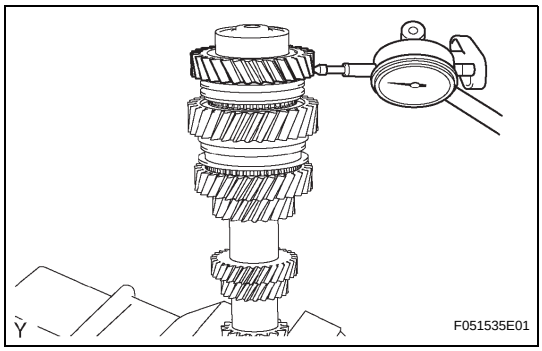
3. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



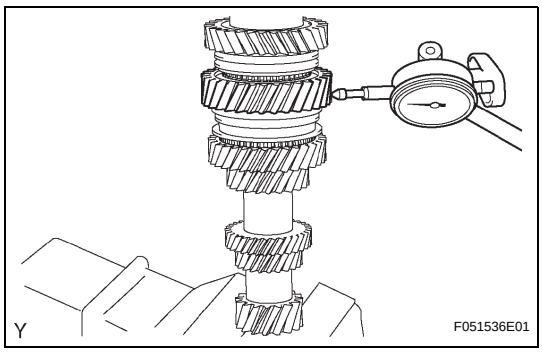
4. INSPECT REVERSE GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the reverse gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the reverse gear needle roller bearing or shaft.



5. INSPECT 1ST GEAR RADIAL CLEARANCE

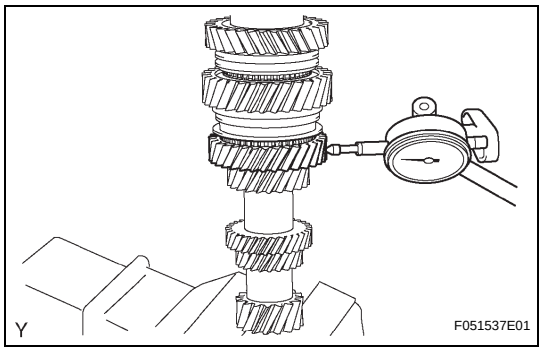
(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 1st gear needle roller bearing or shaft.

MT



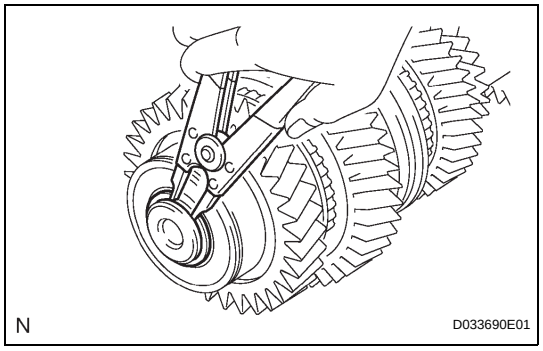
6. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

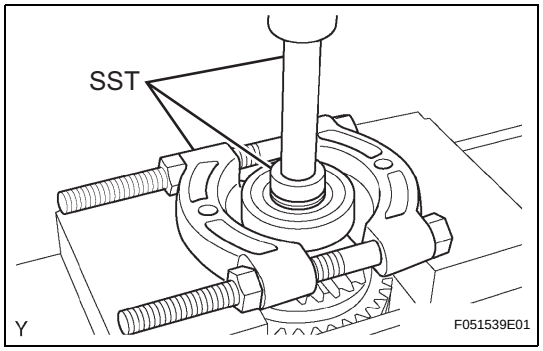
0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 2nd gear needle roller bearing or shaft.



7. REMOVE COUNTER GEAR FRONT BEARING SNAP RING NO.1

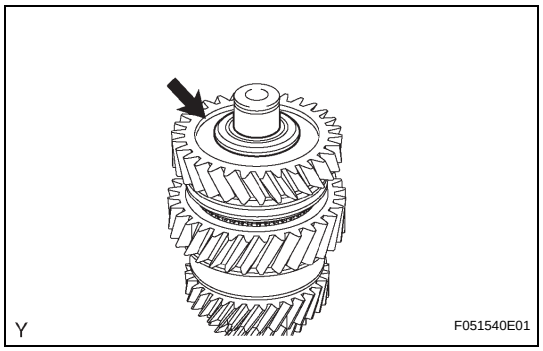
(a) Using a snap ring expander, remove the snap ring from the counter gear.



8. REMOVE COUNTER GEAR FRONT BEARING OR ROLLER

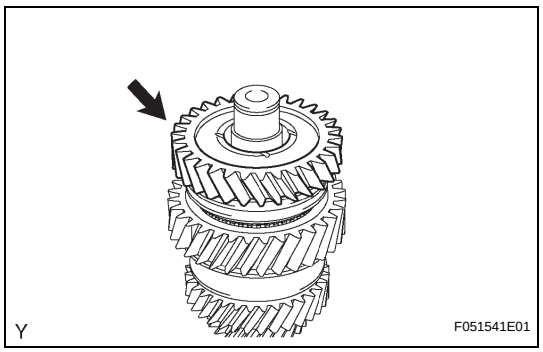
(a) Using SST and a press, remove the counter gear front bearing or roller from the counter gear.

SST 09950-00020, 09950-70010 (09951-07100), 09950-60010 (09951-00320)



9. REMOVE REVERSE GEAR BEARING RACE INNER

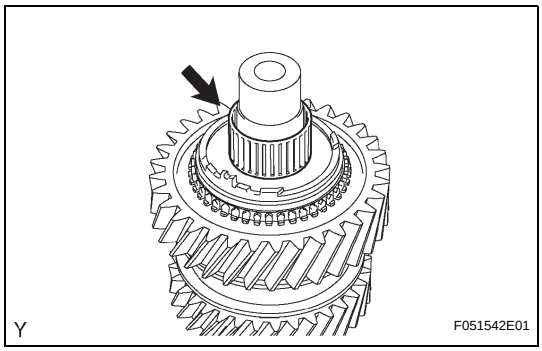
(a) Remove the reverse gear bearing race inner from the counter gear.



10. REMOVE COUNTERSHAFT REVERSE GEAR

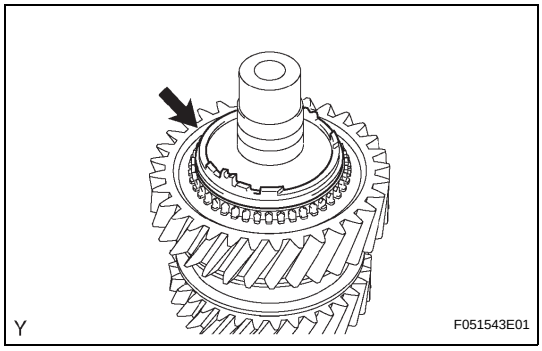
(a) Remove the countershaft reverse gear from the counter gear.

(b) Remove the hub sleeve, 2 shifting keys and key spring from the countershaft reverse gear.



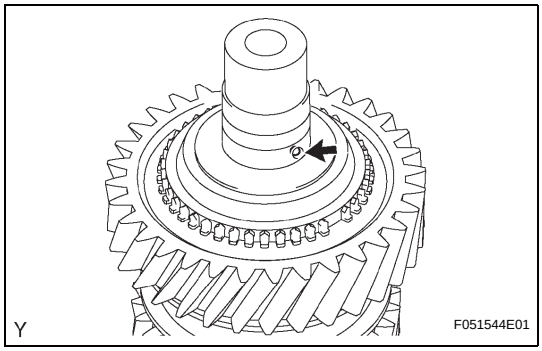
11. REMOVE REVERSE GEAR NEEDLE ROLLER BEARING

(a) Remove the reverse gear needle roller bearing from the counter gear.



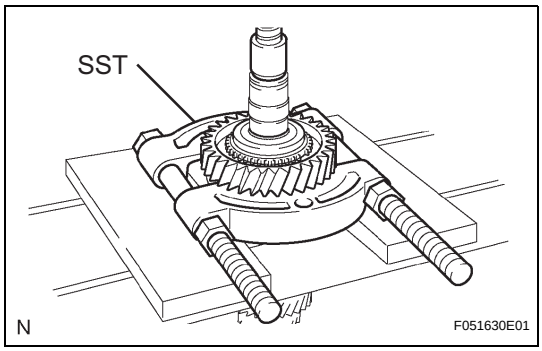
12. REMOVE NO. 4 SYNCHRONIZER RING

(a) Remove the synchronizer ring No. 4 from the counter gear.



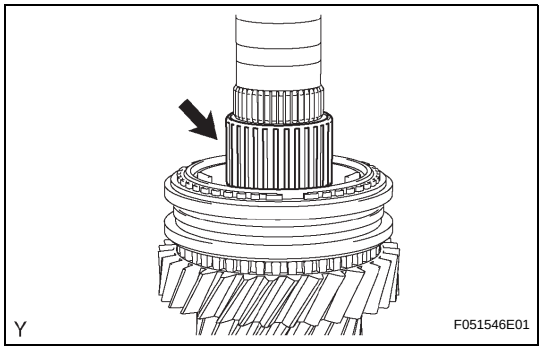
13. REMOVE BALL

(a) Remove the ball from the counter gear.



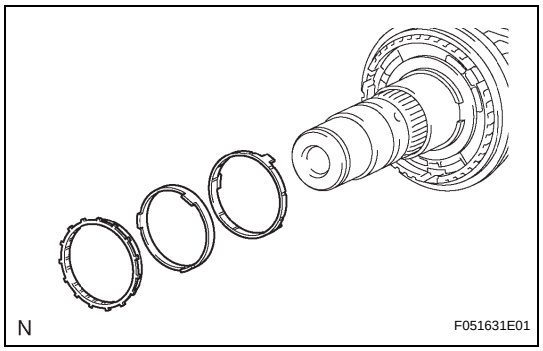
14. REMOVE COUNTERSHAFT GEAR 1ST SPEED

(a) Using a press, remove the countershaft gear 1st speed together with reverse gear spline piece from the counter gear.
SST 09950-00020



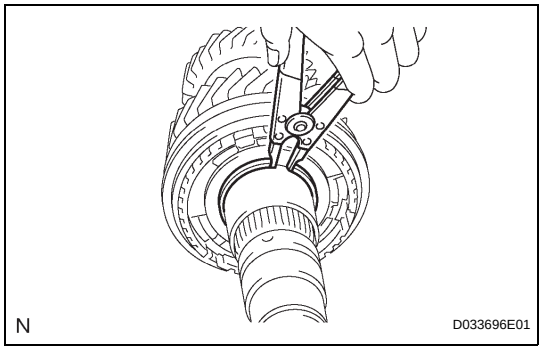
15. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the counter gear.



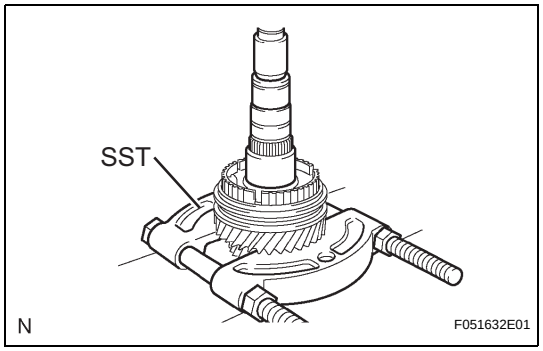
16. REMOVE NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

(a) Remove the synchronizer ring set No. 1 from the counter gear.



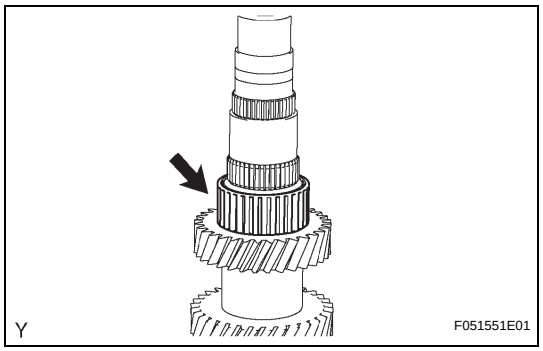
17. REMOVE CLUTCH HUB NO.1 SHAFT SNAP RING

(a) Using a snap ring expander, remove the snap ring from the counter gear.



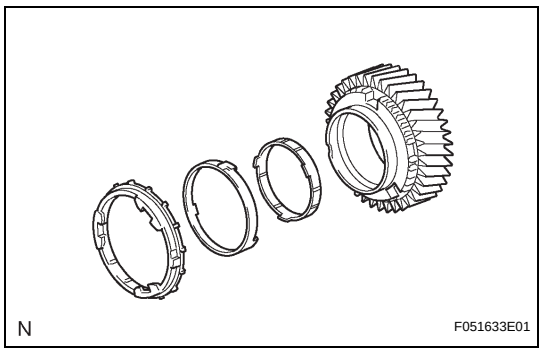
18. REMOVE COUNTER SHAFT 2ND SPEED GEAR

(a) Using a press, remove the counter shaft 2nd speed gear together with transmission clutch hub No. 1 from the counter gear.
SST 09950-00020



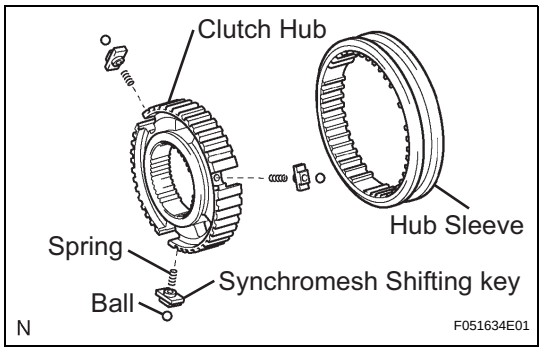
19. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd needle roller bearing from the counter gear.



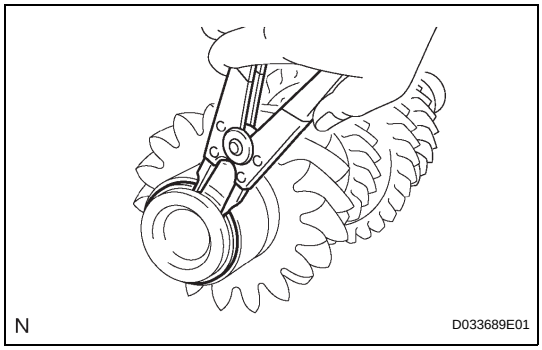
20. REMOVE NO. 1 SYNCHRONIZER RING SET (FOR 2ND GEAR)

(a) Remove the synchronizer ring set No. 1 from the 2nd gear.



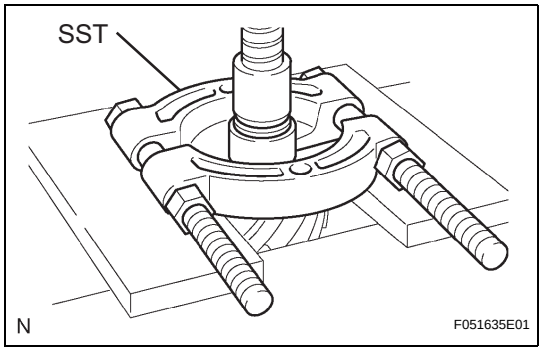
21. REMOVE NO. 1 TRANSMISSION CLUTCH HUB

(a) Remove the hub sleeve, 3 synchromesh shifting keys, 3 balls and 3 springs from the clutch hub.
HINT:
Use a shop rag to prevent the ball and spring from flying off.



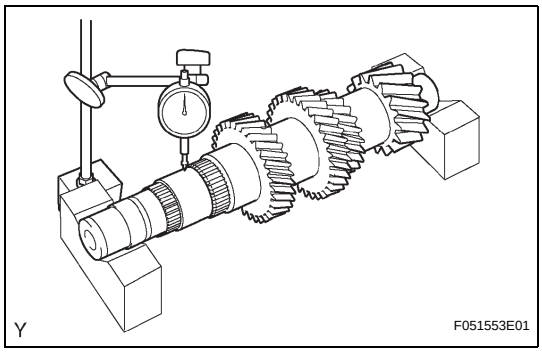
22. REMOVE SNAP RING COUNTER GEAR REAR BEARING

(a) Using a snap ring expander, remove the snap ring from the counter gear.



23. REMOVE RADIAL BALL BEARING INNER RACE

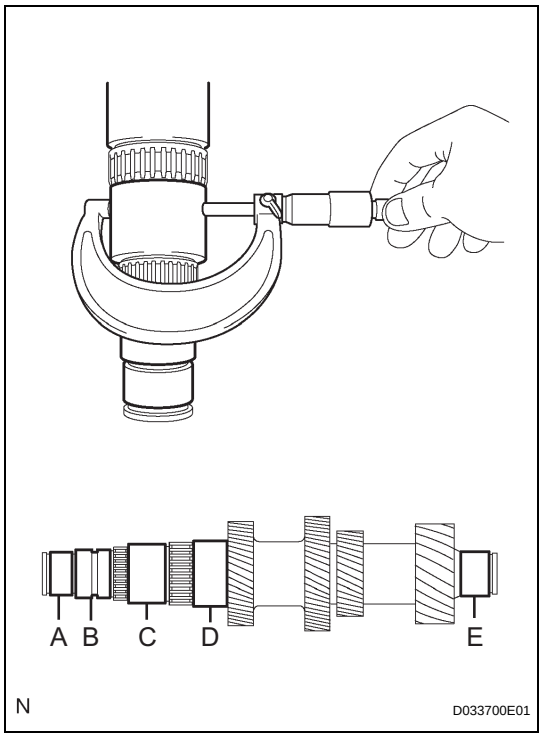
(a) Using SST and a press, remove the needle roller bearing inner race.
SST 09950-00020



INSPECTION

1. INSPECT COUNTER GEAR

(a) Using a dial indicator and 2 V-blocks, measure the shaft runout.
Maximum runout:
0.03 mm (0.0012 in.)
If the runout exceeds the maximum, replace the counter gear.



(b) Using a micrometer, measure the outer diameter of the input shaft journal surface.

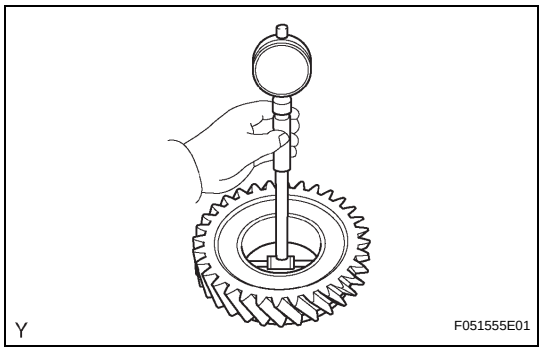
Standard

Part	Outer diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	36.985 to 37.000 (1.4561 to 1.4567)
C	47.985 to 48.000 (1.8892 to 1.8898)
D	53.985 to 54.000 (2.1254 to 2.1260)
E	34.002 to 34.015 (1.3387 to 1.3392)

Minimum

Part	Outer diameter mm (in.)
A	34.002 (1.3387)
B	36.985 (1.4561)
C	47.985 (1.8892)
D	53.985 (2.1254)
E	34.002 (1.3387)

If the diameter is less than the minimum, replace the counter gear shaft.

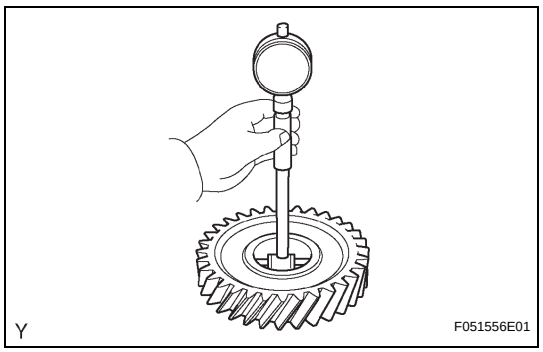


2. INSPECT COUNTERSHAFT REVERSE GEAR

(a) Using cylinder gauge, measure the inside diameter of the reverse gear.

Standard inside diameter:
51.015 to 51.040 mm (2.0085 to 2.0095 in.)
Maximum inside diameter:
51.040 mm (2.0095 in.)

If the inside diameter exceeds the maximum, replace the reverse gear.

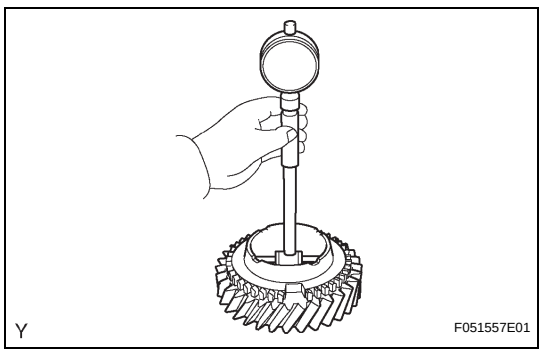


3. INSPECT COUNTERSHAFT GEAR 1ST SPEED

(a) Using cylinder gauge, measure the inside diameter of the 1st gear.

Standard inside diameter:
54.015 to 54.040 mm (2.1266 to 2.1276 in.)
Maximum inside diameter:
54.040 mm (2.1276 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.



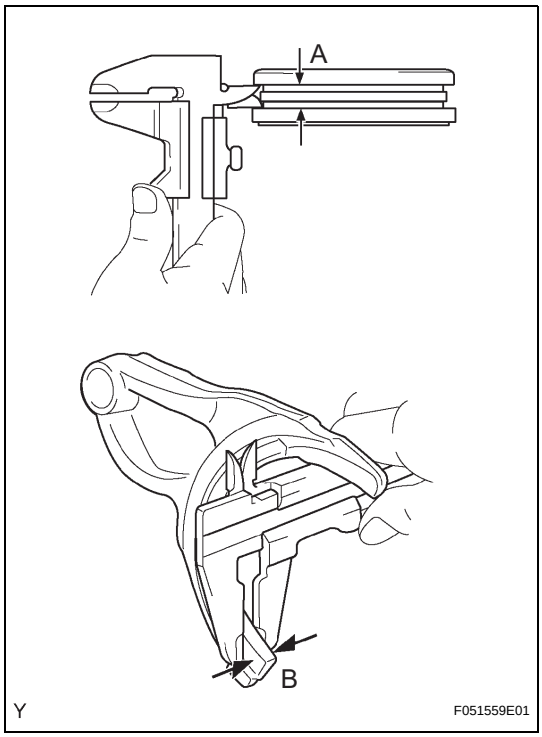
4. INSPECT COUNTER SHAFT 2ND SPEED GEAR

(a) Using cylinder gauge, measure the inside diameter of the 2nd gear.

Standard inside diameter:
60.015 to 60.040 mm (2.3628 to 2.3638 in.)
Maximum inside diameter:
60.040 mm (2.3638 in.)

If the inside diameter exceeds the maximum, replace the 2nd gear.

MT



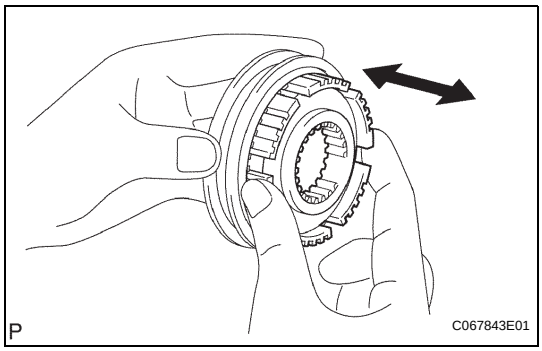
5. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Using vernier calipers, measure the width of the transmission hub sleeve No. 3 groove (A) and the thickness of the claw part on the gear shift fork No. 4 (B), and calculate the clearance.

Standard clearance (A - B):

0.26 to 0.84 mm (0.0102 to 0.0331 in.)

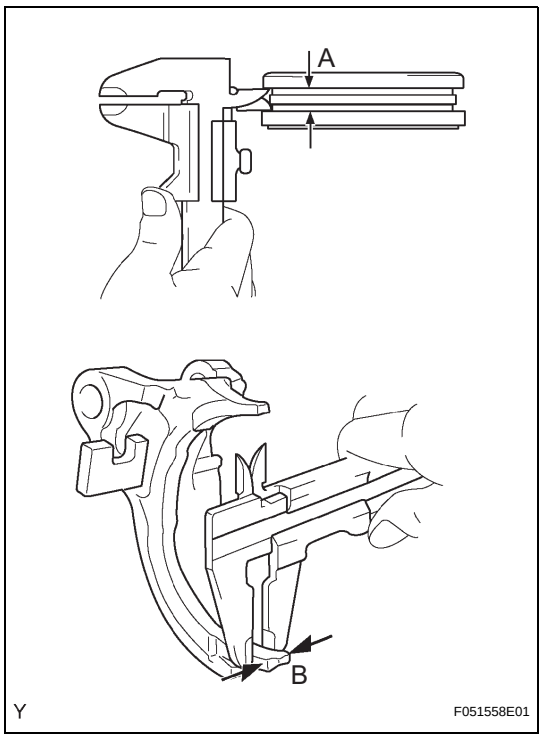
If the clearance is outside the specification, replace the transmission hub sleeve No. 3 and gear shift fork No. 4.



6. INSPECT NO. 1 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the transmission hub No. 1 and transmission hub sleeve No. 1.

(b) Check that the spline gear teeth of the transmission hub sleeve No. 1 are not worn.

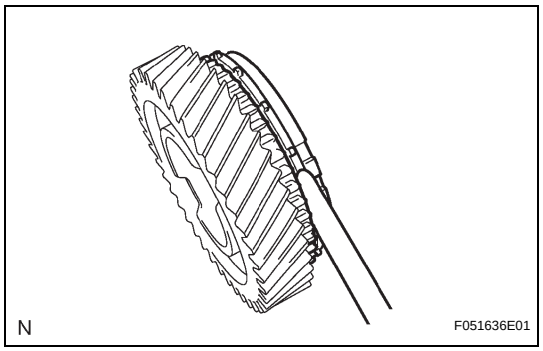


(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 1 groove (A) and the thickness of the claw part on the gear shift fork No. 1 (B), and calculate the clearance.

Standard clearance (A - B):

0.15 to 0.35 mm (0.0059 to 0.0138 in.)

If the clearance is outside the specification, replace the transmission hub sleeve No. 1 and gear shift fork No. 1.

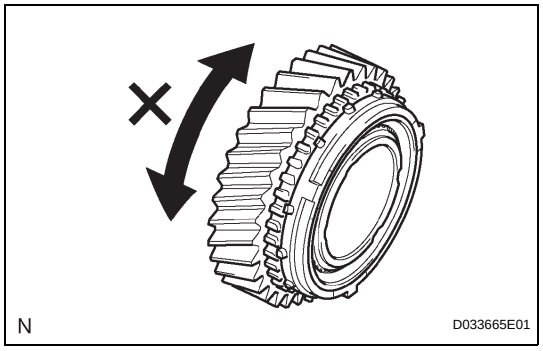


7. INSPECT NO. 4 SYNCHRONIZER RING

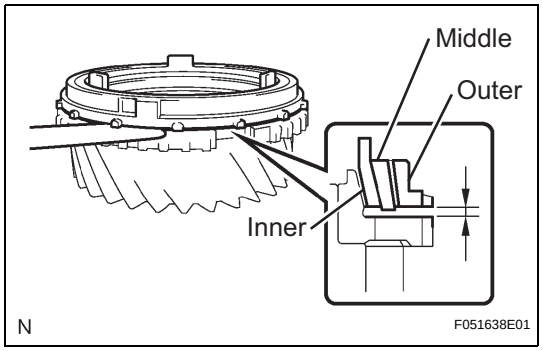
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and reverse gear.

Standard clearance:
0.70 to 1.30 mm (0.0276 to 0.0512 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the reverse gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the reverse gear cone. Check that the ring locks.

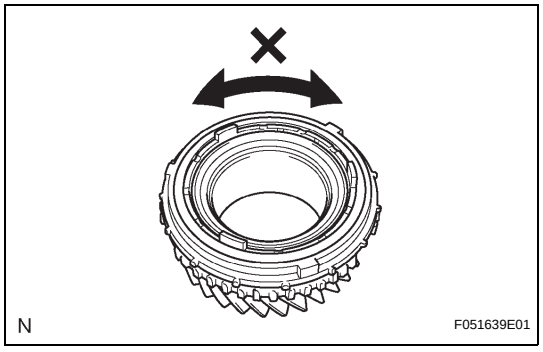


8. INSPECT NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

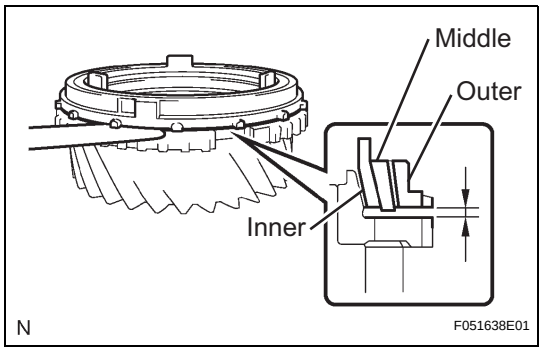
(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 1st gear.

Standard clearance:
Inner:
1.48 to 2.12 mm (0.0583 to 0.0835 in.)
Middle:
0.68 to 1.92 mm (0.0268 to 0.0756 in.)
Outer:
0.88 to 1.72 mm (0.0346 to 0.0677 in.)
Minimum clearance:
Inner:
1.48 mm (0.0583 in.)
Middle:
0.68 mm (0.0268 in.)
Outer:
0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



(b) Coat the 1st gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 1st gear cone. Check that the ring locks.

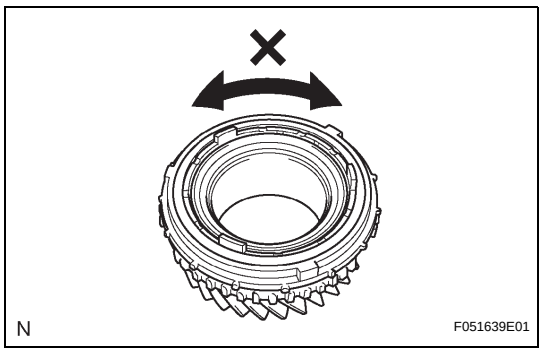


9. INSPECT NO. 1 SYNCHRONIZER RING SET (FOR 2ND GEAR)

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and 2nd gear.

Standard clearance:
Inner:
1.48 to 2.12 mm (0.0583 to 0.0835 in.)
Middle:
0.68 to 1.92 mm (0.0268 to 0.0756 in.)
Outer:
0.88 to 1.72 mm (0.0346 to 0.0677 in.)
Minimum clearance:
Inner:
1.48 mm (0.0583 in.)
Middle:
0.68 mm (0.0268 in.)
Outer:
0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring.



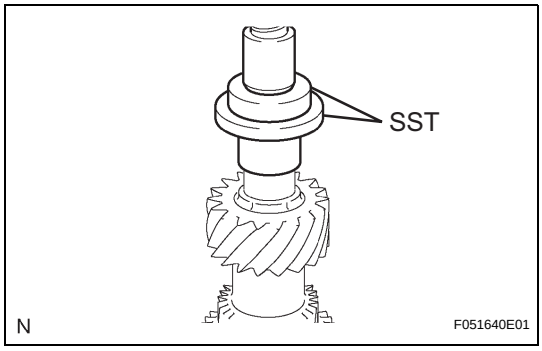
(b) Coat the 2nd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the 2nd gear cone. Check that the ring locks.

REASSEMBLY

1. INSTALL RADIAL BALL BEARING INNER RACE

(a) Using SST and a press, install a new needle roller bearing inner race.

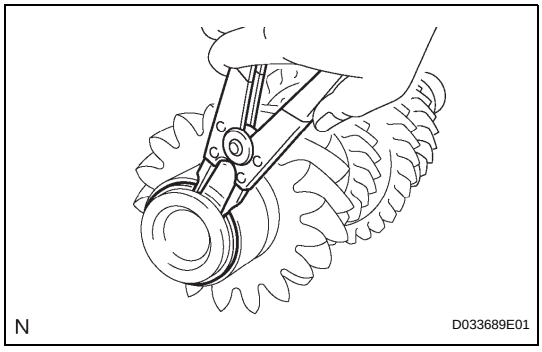
SST 09950-60010 (09951-00540)



2. INSTALL SNAP RING COUNTER GEAR REAR BEARING

(a) Select a snap ring that will allow minimum axial play.

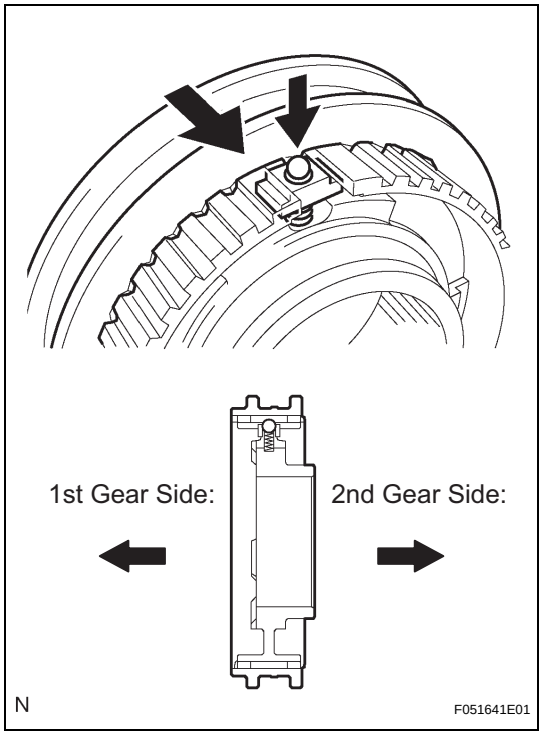
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness



Part No.	Thickness: mm (in.)	Mark
90520-31015	2.35 to 2.40 (0.0925 to 0.0945)	A
90520-31016	2.40 to 2.45 (0.0945 to 0.0965)	B
90520-31017	2.45 to 2.50 (0.0965 to 0.0984)	C

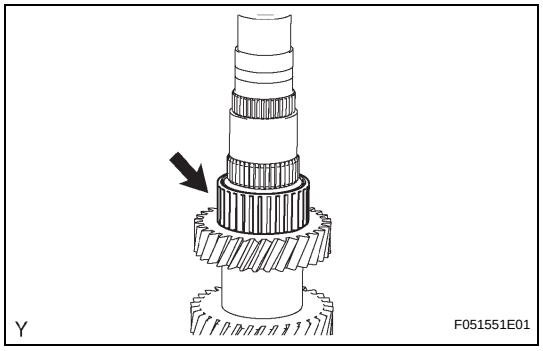
Part No.	Thickness: mm (in.)	Mark
90520-31018	2.50 to 2.55 (0.0984 to 0.1004)	D
90520-31019	2.55 to 2.60 (0.1004 to 0.1024)	E
90520-31020	2.60 to 2.65 (0.1024 to 0.1043)	F
90520-31021	2.65 to 2.70 (0.1043 to 0.1063)	G
90520-31022	2.70 to 2.75 (0.1063 to 0.1083)	H
90520-31023	2.75 to 2.80 (0.1083 to 0.1102)	J
90520-31024	2.80 to 2.85 (0.1102 to 0.1122)	K
90520-31025	2.85 to 2.90 (0.1122 to 0.1142)	L
90520-31033	2.90 to 2.95 (0.1142 to 0.1161)	M

(b) Using a snap ring expander, install the snap ring onto the counter gear.



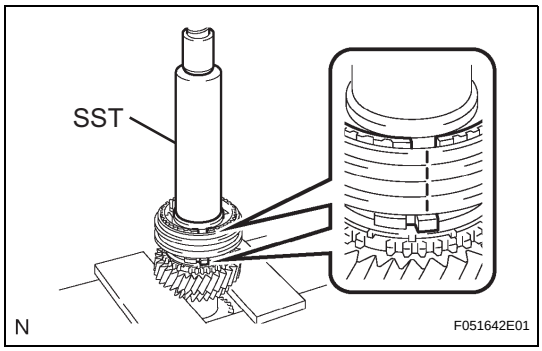
3. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Apply a light coat of gear oil to the sleeve and hub.
(b) Install the clutch hub sleeve onto the clutch hub.
(c) Install the 3 shifting keys onto the clutch hub.
(d) Install the 3 shifting key springs onto the clutch hub.
(e) Place the ball in the hole of the shifting key, and install the hub sleeve while pushing in the ball.
NOTICE:
Take care to prevent the ball from flying off.



4. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing with gear oil, then install it onto the counter gear.



5. INSTALL COUNTER SHAFT 2ND SPEED GEAR

(a) Coat the countershaft 2nd speed gear with gear oil, then install it onto the counter gear.

(b) Coat the synchronizer ring set No. 1 with gear oil, then install it onto the counter gear.

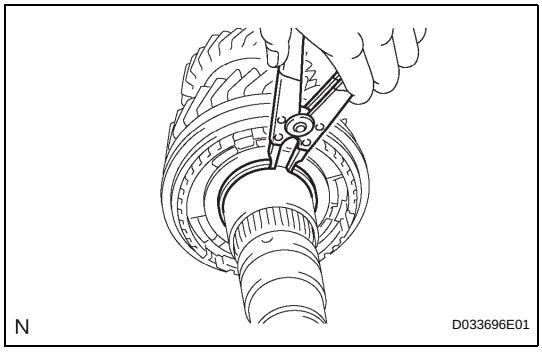
(c) Using SST and a press, install the transmission clutch hub No. 1 onto the counter gear.

SST 09308-14010

HINT:

Align the convex portion of the synchronizer ring with the groove of the clutch hub.

(d) Install the clutch hub and confirm that the gear and synchronizer ring move smoothly.



6. INSTALL CLUTCH HUB NO.1 SHAFT SNAP RING

(a) Select a snap ring that will allow minimum axial play.

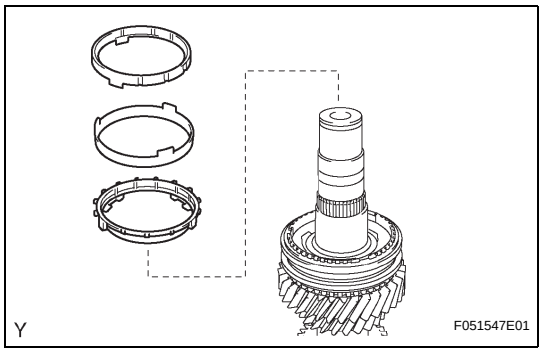
Standard clearance:

0.1 mm (0.004 in.) or less

Snap ring thickness

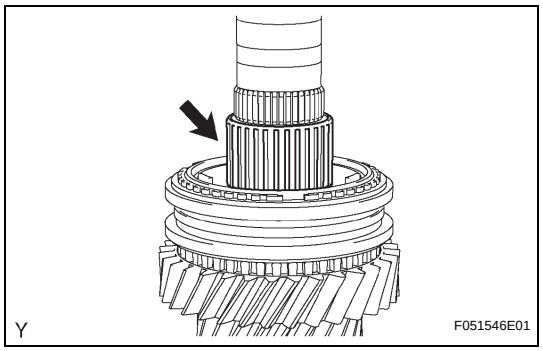
Part No.	Thickness: mm (in.)	Mark
90520-45013	2.28 to 2.33 (0.0898 to 0.0917)	A
90520-45014	2.33 to 2.38 (0.0917 to 0.0937)	B
90520-45015	2.38 to 2.43 (0.0937 to 0.0957)	C
90520-45016	2.43 to 2.48 (0.0957 to 0.0976)	D
90520-45017	2.48 to 2.53 (0.0976 to 0.0996)	E
90520-45018	2.53 to 2.58 (0.0996 to 0.1016)	F
90520-45019	2.58 to 2.63 (0.1016 to 0.1035)	G

(b) Using a snap ring expander, install the snap ring onto the counter gear.



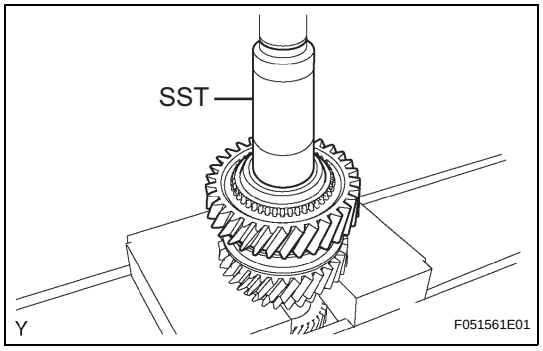
7. INSTALL NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

(a) Coat the synchronizer ring set No. 1 with gear oil, then install it onto the counter gear.



8. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil, then install it onto the counter gear.



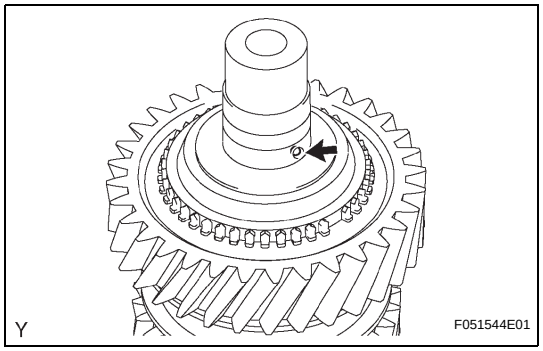
9. INSTALL COUNTERSHAFT GEAR 1ST SPEED

(a) Coat the countershaft gear 1st speed with gear oil, and install it onto the counter gear.

(b) Using SST and a press, install the reverse gear spline piece.

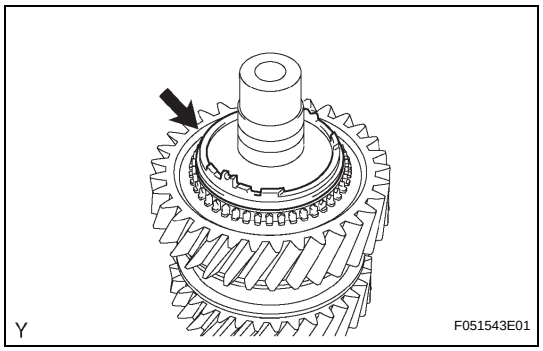
SST 09309-37010

MT



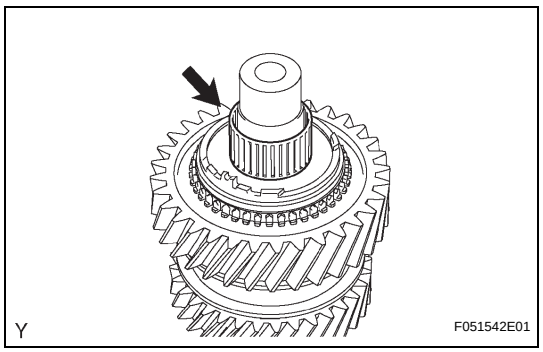
10. INSTALL BALL

(a) Install the ball into the counter gear.



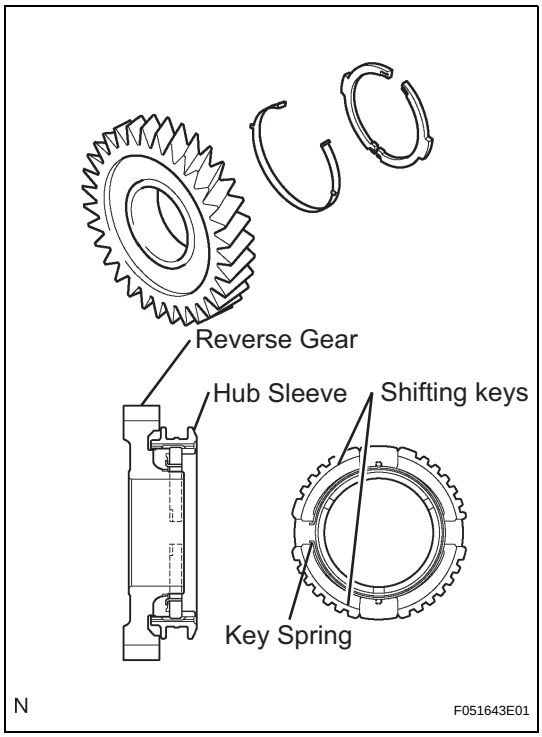
11. INSTALL NO. 4 SYNCHRONIZER RING

(a) Coat the synchronizer ring No. 4 with gear oil, and install it onto the counter gear.



12. INSTALL REVERSE GEAR NEEDLE ROLLER BEARING

(a) Coat the reverse gear needle roller bearing with gear oil, and install it onto the counter gear.

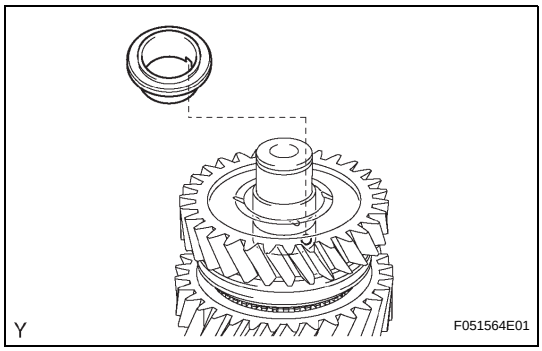


13. INSTALL COUNTERSHAFT REVERSE GEAR

(a) Install the key spring and 2 shifting keys onto the reverse gear.
HINT:
- Install the shifting key with its groove on the reverse gear side.
- Install the key spring with its claw on the reverse gear side.
- Refer to the illustration when installing the key spring.

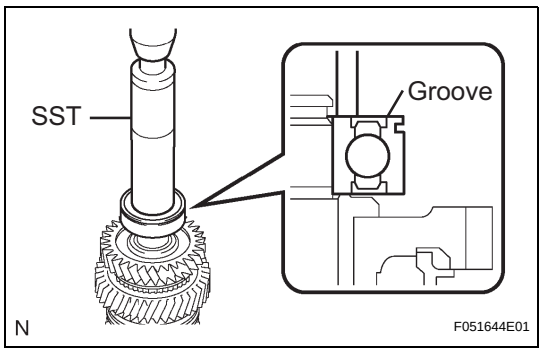
(b) Install the hub sleeve onto the reverse gear.

(c) Coat the countershaft reverse gear with gear oil, then install it onto the counter gear.



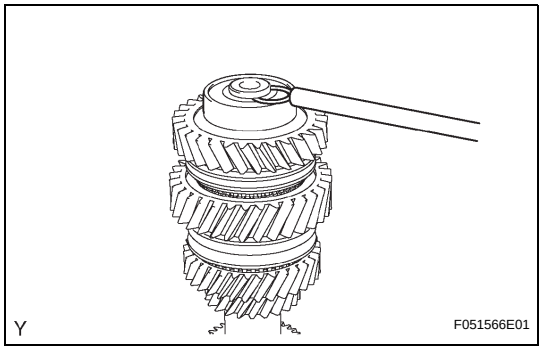
14. INSTALL REVERSE GEAR BEARING RACE INNER

(a) Align the groove of the reverse gear bearing race inner with the ball, and install them.



15. INSTALL COUNTER GEAR FRONT BEARING OR ROLLER

(a) Using SST and a press, install counter gear front bearing or roller onto the counter gear.
SST 09608-06041
HINT:
Make sure that the groove of the bearing faces the correct direction as shown in the illustration.



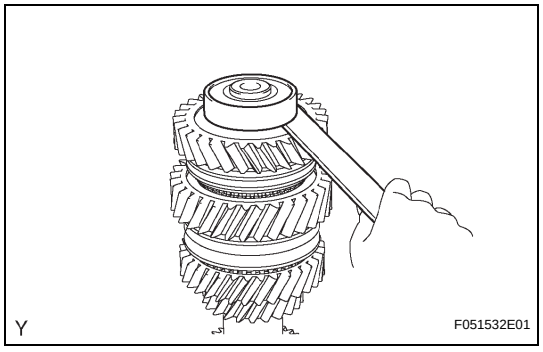
16. REMOVE NO. 1 COUNTER GEAR FRONT BEARING SNAP RING

(a) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.004 in.) or less
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520-31015	2.35 to 2.40 (0.0925 to 0.0945)	A

Part No.	Thickness: mm (in.)	Mark
90520-31016	2.40 to 2.45 (0.0945 to 0.0965)	B
90520-31017	2.45 to 2.50 (0.0965 to 0.0984)	C
90520-31018	2.50 to 2.55 (0.0984 to 0.1004)	D
90520-31019	2.55 to 2.60 (0.1004 to 0.1024)	E
90520-31020	2.60 to 2.65 (0.1024 to 0.1043)	F
90520-31021	2.65 to 2.70 (0.1043 to 0.1063)	G
90520-31022	2.70 to 2.75 (0.1063 to 0.1083)	H
90520-31023	2.75 to 2.80 (0.1083 to 0.1102)	J
90520-31024	2.80 to 2.85 (0.1102 to 0.1122)	K
90520-31025	2.85 to 2.90 (0.1122 to 0.1142)	L
0520-31033	2.90 to 2.95 (0.1142 to 0.1161)	M

(b) Using a snap ring expander, install the snap ring onto the counter gear.



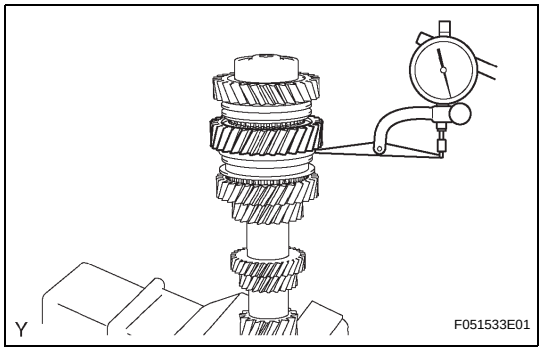
17. INSPECT REVERSE GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the reverse gear thrust clearance.

Standard clearance:

0.12 to 0.37 mm (0.0047 to 0.0146 in.)

If the clearance is outside the specification, replace the synchronizer ring No. 4.



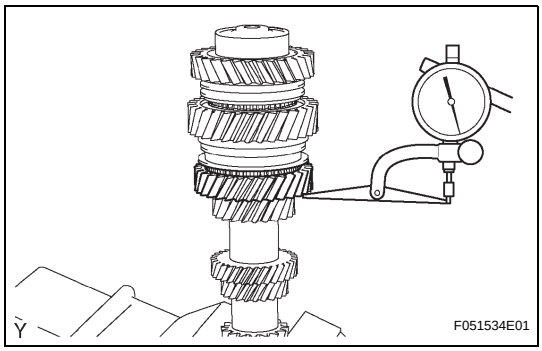
18. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 1st gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



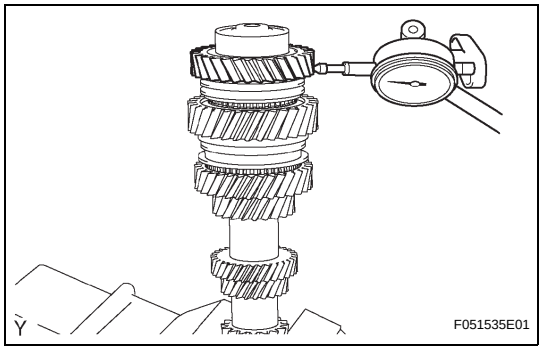
19. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.43 mm (0.0039 to 0.0169 in.)

If the clearance is outside the specification, replace the synchronizer ring set No. 1.



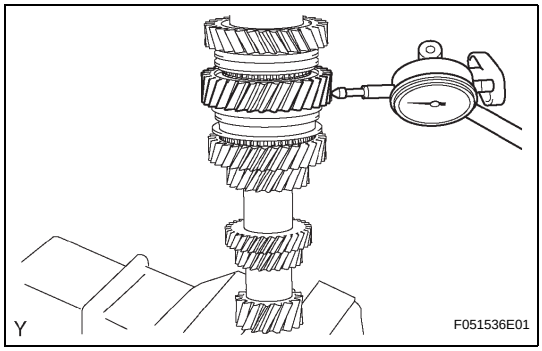
20. INSPECT REVERSE GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the reverse gear radial clearance.

Standard clearance:

0.015 to 0.065 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the reverse gear needle roller bearing or shaft.



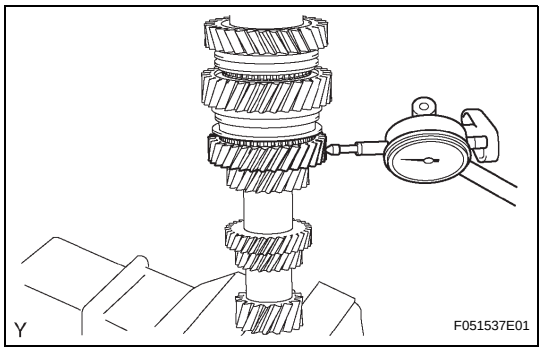
21. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 1st gear needle roller bearing or shaft.



22. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

0.015 to 0.067 mm (0.0006 to 0.0026 in.)

If the clearance is outside the specification, replace the 2nd gear needle roller bearing or shaft.

TRANSFER SYSTEM

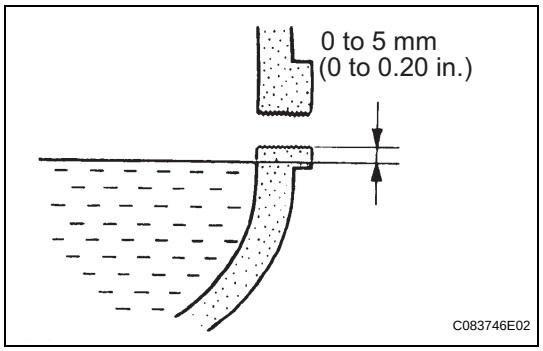
PRECAUTION

- Before disassembly, clean the transfer assembly and remove any deposited sand and mud to prevent it from entering the transfer during disassembly and assembly.
- When removing any light alloy parts such as the transfer covers, do not pry them off with a tool like a screwdriver, but tap them out with a plastic hammer.
- Always organize the removed parts properly and protect them from dust.
- After cleaning and drying the transfer completely before installation, apply hypoid gear oil to each part. Do not use alkaline chemicals when cleansing aluminum or rubber parts or ring gear set bolts. Also, do not use any cleansing oil (ex. white gasoline) to clean rubber parts such as oil seals.
- Apply sufficient hypoid gear oil to all sliding surfaces and rotating parts.
- Do not directly hold any parts in a vise. Be sure to put an aluminum sheet between them.
- Replace any damaged or deformed snap rings with new ones.
- If the mating surface of the case is scratched, it could cause oil leakage. Therefore, handle with care to prevent such damage.
- Using a razor blade and gasket scraper, remove old FIPG from the seal surface.
- Clean all the components to remove the redundant FIPG completely.
- Clean the sealing surface with solvent so that no residue remains on the seal surface.
- Apply a line of FIPG approximately 1.2 mm (0.047 in.) diameter of bead state along the sealing surface.
- Be sure to assemble parts within 10 minutes of application. Otherwise, the FIPG must be removed and reapplied.
- Do not pour in oil immediately after installing sealed parts. Leave it for at least an hour.
- Scratches on the contact surface with an oil seal or gasket could cause oil leakage. Handle with care to prevent such damage.
- When press-fitting an oil seal, take care to prevent the oil seal lip and its periphery from being damaged.

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem.
The numbers indicate the ranked order of probability of each of the possible causes.
Check each part in order.
Replace the applicable parts as necessary.

Symptom	Suspected area	See page
Noise	1. Oil (Level low)	TF-3
	2. Oil (Wrong)	TF-3
	3. Transfer faulty	TF-14
Oil leakage	1. Oil (Level too high)	TF-3
	2. Gasket (Damaged)	TF-14
	3. Oil seal (Worn or damaged)	TF-14
	4. O-ring (Worn or damaged)	TF-14
Tight corner braking	1. Transfer faulty	TF-14
Shift from 4WD (H4) to 4WD (L4) impossible	1. Four wheel drive control switch	TF-41
	2. Wire harness	-
	3. Four wheel drive control ECU	TF-41
Shift from 4WD (L4) to 4WD (H4) impossible	1. Four wheel drive control switch	TF-41
	2. Wire harness	-
	3. Four wheel drive control ECU	TF-41



TRANSFER OIL

ADJUSTMENT

1. INSPECT TRANSFER OIL

(a) Remove the filler plug and gasket.

(b) Check that the oil level is within 5 mm (0.20 in.) of the bottom of the filler plug hole.

NOTICE:

- **When replacing the oil, recheck the oil level after driving.**
- **Excessively large or small quantities of oil may cause troubles.**

(c) When the oil level is too low, check for oil leakage.

(d) Tighten the filler plug with a new gasket.

Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

2. ADJUST TRANSFER OIL

(a) Remove the filler plug and gasket then supply oil.

NOTICE:

- **When supplying oil, pour slowly.**
- **Pour the oil in several stages allowing several minutes between each step.**

HINT:

The oil level should be within 5 mm (0.20 in.) of the bottom of the oil filler plug hole.

(b) After leaving it alone for 5 minutes, check the oil level again.

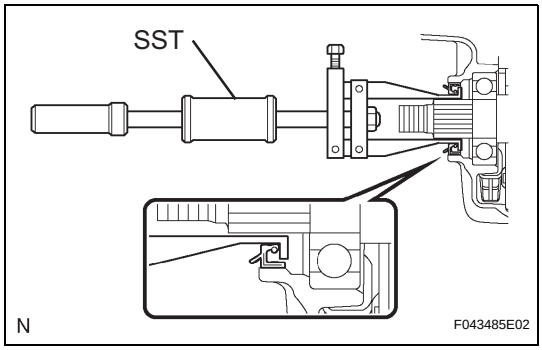
(c) Tighten the filler plug with a new gasket.

Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

TRANSFER CASE OIL SEAL

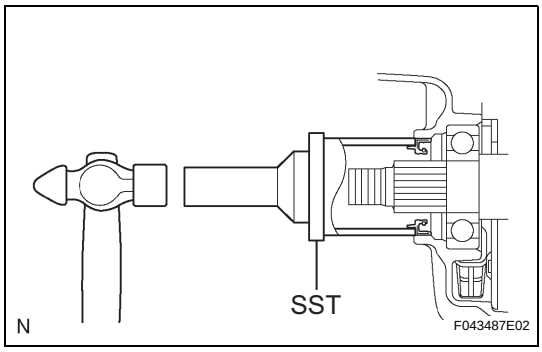
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for 1GR-FE)**
2. **DRAIN TRANSFER OIL**
3. **REMOVE EXHAUST FRONT PIPE ASSEMBLY NO. 2 (for 1GR-FE) (See page EX-3)**
4. **REMOVE PROPELLER SHAFT HEAT INSULATOR BRACKET SUB-ASSEMBLY (for 1GR-FE) (See page PR-16)**
5. **REMOVE PROPELLER SHAFT ASSEMBLY FRONT (See page PR-16)**
6. **REMOVE OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY (See page TF-14)**
7. **REMOVE TRANSFER CASE OIL SEAL**
   (a) Using SST, remove the oil seal.
   SST 09308-00010
   NOTICE:
   Do not damage the oil-seal-fitted surface of the case.



INSTALLATION

1. **INSTALL TRANSFER CASE OIL SEAL**
   (a) Coat the lip of a new oil seal with MP grease.
   (b) Using SST and a hammer, tap in the oil seal until its surface is flush with the case upper surface.
   SST 09316-60011 (09316-00011)
2. **INSTALL OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY (See page TF-37)**
3. **INSTALL PROPELLER SHAFT ASSEMBLY FRONT (See page PR-19)**
4. **INSTALL PROPELLER SHAFT HEAT INSULATOR BRACKET SUB-ASSEMBLY (for 1GR-FE) (See page PR-20)**
5. **INSTALL EXHAUST FRONT PIPE ASSEMBLY NO. 2 (for 1GR-FE) (See page EX-3)**
6. **ADD TRANSFER OIL**
7. **INSPECT TRANSFER OIL (See page TF-3)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for 1GR-FE)**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
9. **CHECK FOR EXHAUST GAS LEAKAGE**

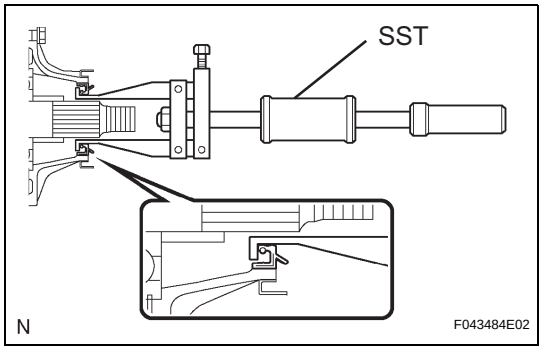


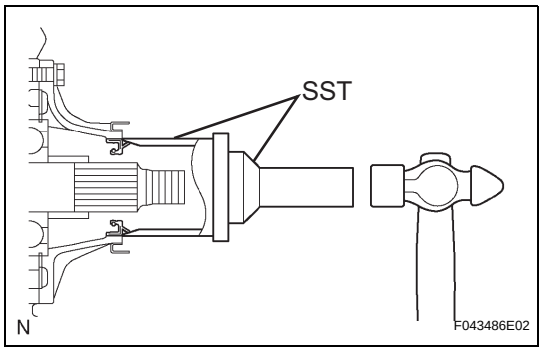
10. CHECK FRO TRANSFER OIL LEAKAGE

EXTENSION HOUSING OIL SEAL

REMOVAL

1. **DRAIN TRANSFER OIL**
2. **REMOVE PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-22)**
3. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-8)**
4. **REMOVE OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY (See page TF-15)**
5. **REMOVE TRANSFER EXTENSION HOUSING TYPE T OIL SEAL**
   (a) Using SST, remove the oil seal.
   SST 09308-00010
   NOTICE:
   Do not damage the oil-seal-fitted surface of the extension housing sub-assembly rear.





INSTALLATION

1. **INSTALL TRANSFER EXTENSION HOUSING TYPE T OIL SEAL**
   (a) Coat the lip of a new oil seal with MP grease.
   (b) Using SST and a hammer, tap in the oil seal until its surface is flush with the housing upper surface.
   SST 09223-46011, 09631-32020
2. **INSTALL OUTPUT SHAFT COMPANION FLANGE SUB-ASSEMBLY (See page TF-37)**
3. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for Except Regular Cab) (See page PR-13)**
4. **INSTALL PROPELLER SHAFT ASSEMBLY (for Regular Cab) (See page PR-25)**
5. **ADD TRANSFER OIL**
6. **INSPECT TRANSFER OIL (See page TF-3)**
7. **CHECK FOR TRANSFER OIL LEAKAGE**

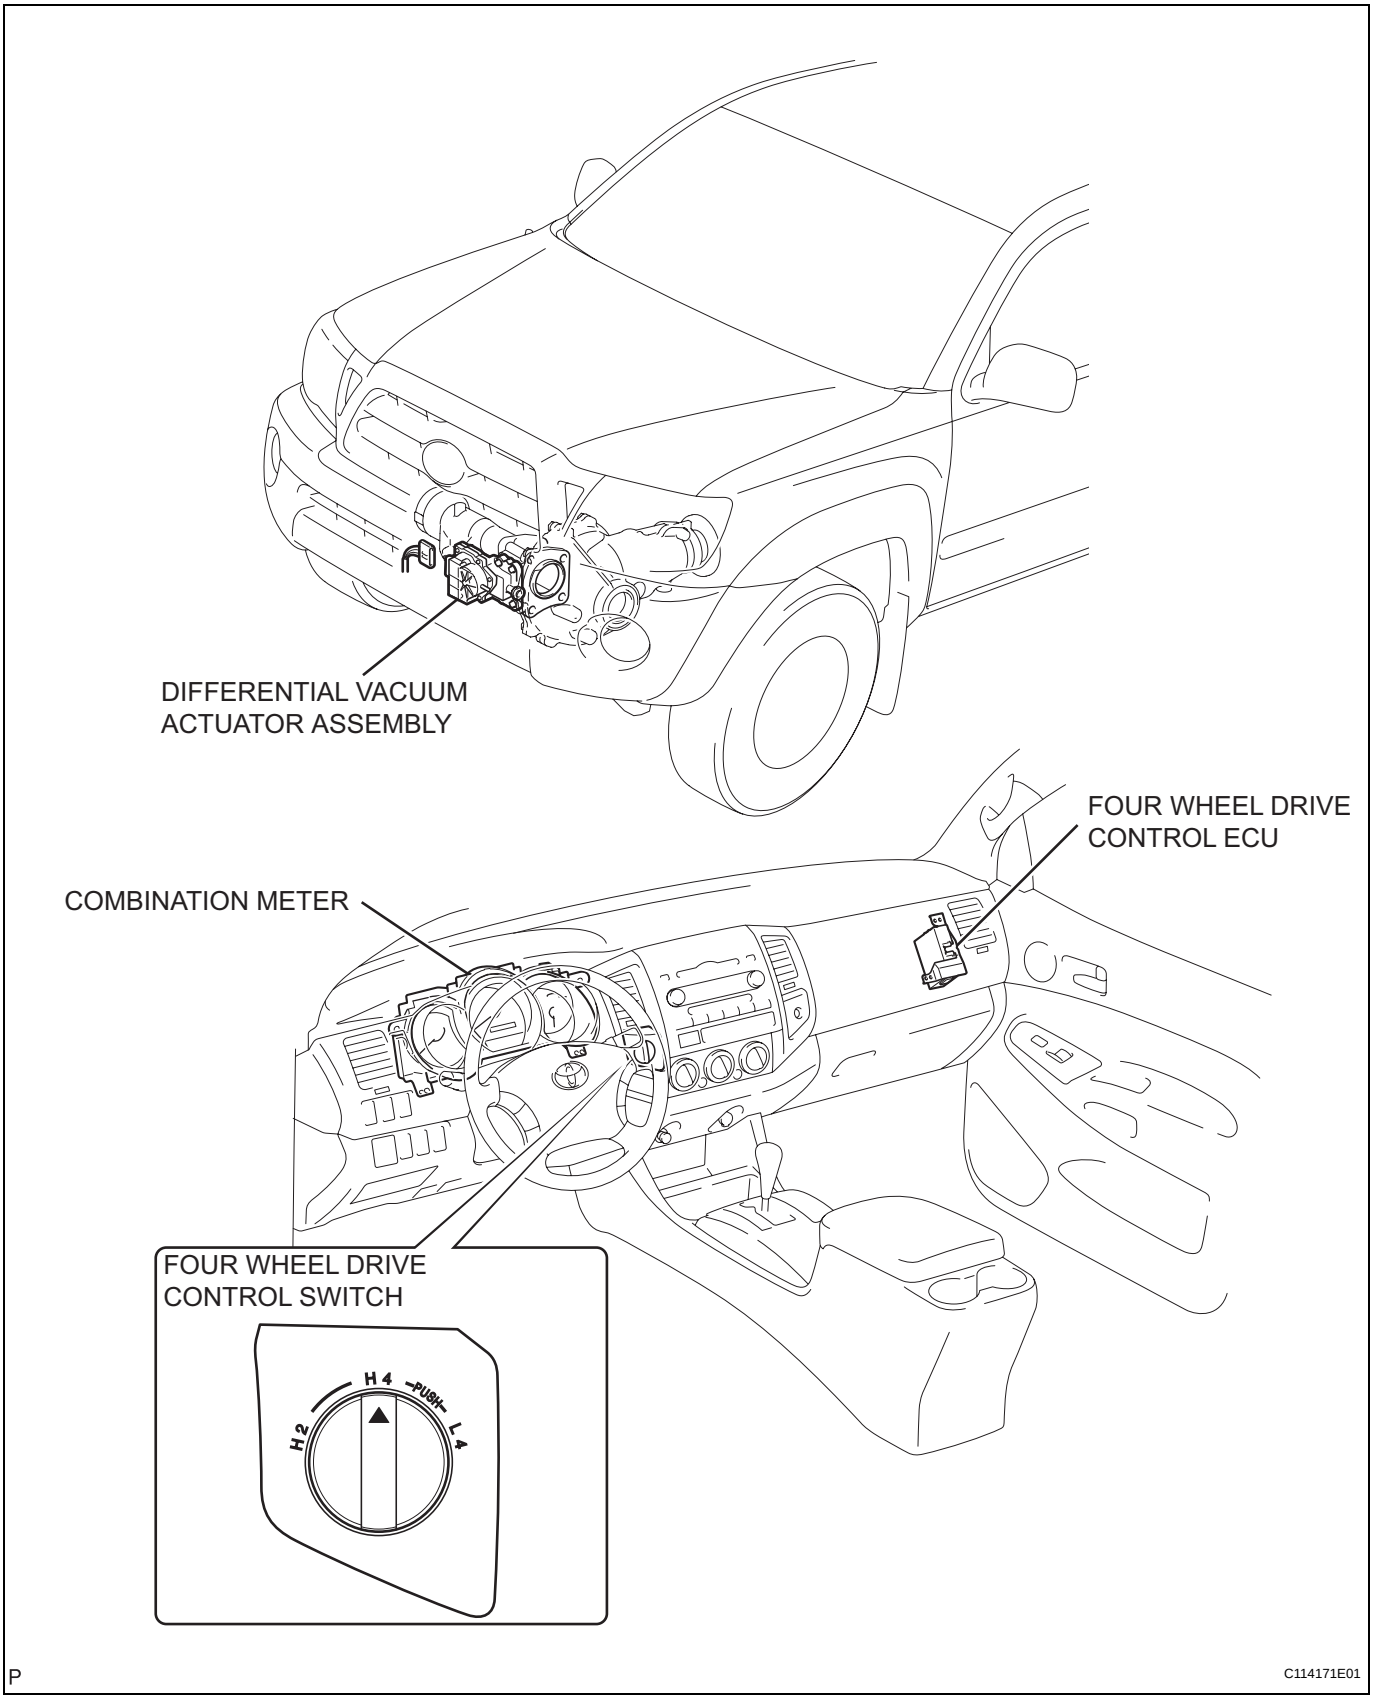
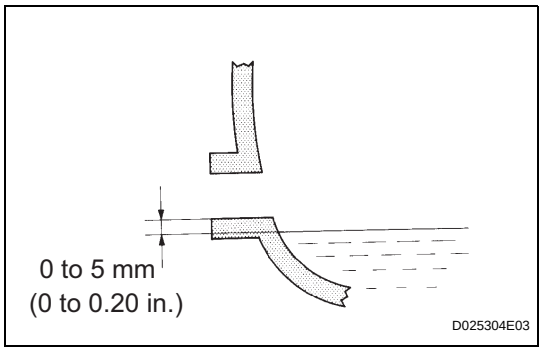
DIFFERENTIAL SYSTEM

PRECAUTION

1. **Before disassembly, clean the outside of the front and rear differential assembly and remove any sand and mud to prevent it from entering the assembly during disassembly and installation.**
2. **When removing connected parts made of a light alloy, such as front and rear differential carrier covers, tap them off with a plastic hammer. Do not attempt to pry them off with a screwdriver.**
3. **Always arrange disassembled parts in order and protect them from dust.**
4. **Before installation, thoroughly clean and dry each part and then apply hypoid gear oil LSD to it. Do not use alkaline cleaner for aluminum or rubber parts and ring gear set bolts. Also, do not clean rubber parts such as O-rings or oil seals with white gasoline.**
5. **Coat all sliding surfaces and rotating parts with hypoid gear oil LSD.**
6. **When holding components in a vice, be sure to place an aluminum sheet under the M part. Do not put them directly in the vice.**
7. **Be careful not to damage the contact surfaces of the case. Such damage could cause oil leakage.**
8. **Before applying sealant, remove any deposited oil sealant and clean the part to be sealed using white gasoline.**
9. **Do not supply oil immediately after installing sealed parts. Leave them for at least an hour.**
10. **Damage to the surfaces in direct contact with oil seals, O-rings or gaskets could cause oil leakage. Special attention should be paid.**
11. **When press-fitting an oil seal, be careful not to damage the oil seal lip and outside periphery.**
12. **When replacing a bearing, replace the inner and outer races as a set.**

PARTS LOCATION





DIFFERENTIAL OIL

ADJUSTMENT

1. INSPECT DIFFERENTIAL OIL

(a) Stop the vehicle on a level place.

(b) Remove the differential filler plug and gasket.

(c) Check that the oil level is within 5mm (0 to 0.20 in.) of the bottom of the filler plug opening.

NOTICE:

- **Excessively large or small quantities of oil may cause problems.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

HINT:

If necessary, fill the rear differential carrier assembly with hypoid gear oil.

Oil grade:

Hypoid gear oil API GL-5
Recommended viscosity:
Above -18°C (0°F) SAE 90
Below -18°C (0°F) SAE 80W or 80W-90

Capacity:

Differential carrier assembly front:
1.45 to 1.55 litters
(1.54 to 1.64 US qts, 1.28 to 1.36 lmp. qts)
Rear differential carrier assembly:
2WD: 3.26 to 3.36 litters
(3.45 to 3.55 US qts, 2.87 to 2.95 lmp. qts)
Pre, 4WD: 2.75 to 2.85 litters
(2.91 to 3.01 US qts, 2.42 to 2.50 lmp. qts)

(d) Check for oil leakage if the oil level is low.

(e) Install the differential filler plug and a new gasket.

Torque: Front differential carrier assembly
39 N*m (398 kgf*cm, 29 ft.*lbf)
Rear differential carrier assembly
49 N*m (500 kgf*cm, 36 ft.*lbf)

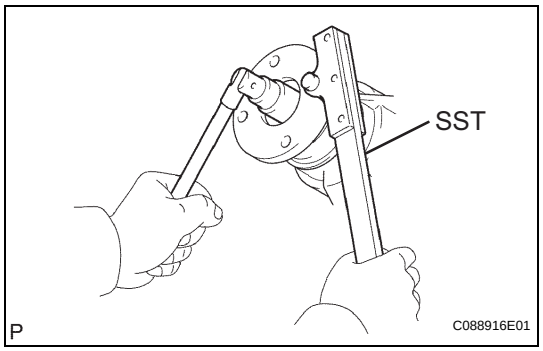
DF

REAR DIFFERENTIAL CARRIER OIL SEAL

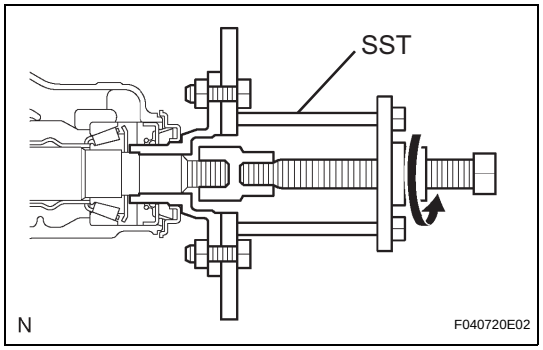
REMOVAL

1. **DRAIN DIFFERENTIAL OIL**
2. **REMOVE PROPELLER SHAFT ASSEMBLY (for 2WD on, Regular Cab) (See page PR-3)**
3. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 2WD on, Except Regular Cab) (See page PR-8)**
4. **REMOVE PROPELLER SHAFT ASSEMBLY (for 4WD on, Regular Cab) (See page PR-16)**
5. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (for 4WD on, Regular Cab) (See page PR-27)**
6. **REMOVE REAR DRIVE PINION NUT**
   (a) Using SST and a hammer, unstake the nut.
   SST 09930-00010

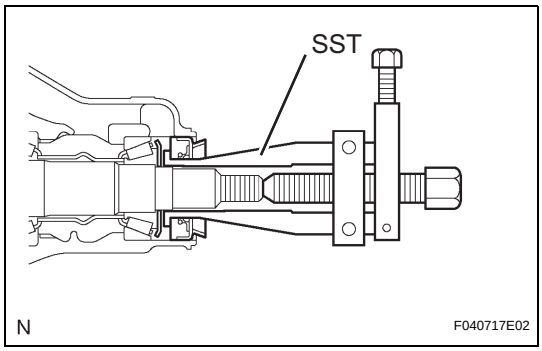
   (b) Using SST to hold the companion flange, remove the nut.
   SST 09330-00021



7. **REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY REAR**
   (a) Using SST, remove the companion flange.
   SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)



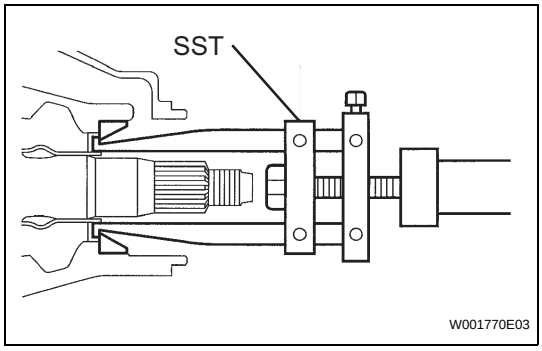
DF



8. REMOVE REAR DIFFERENTIAL CARRIER OIL SEAL

(a) Using SST, remove the oil seal.
SST 09308-10010

9. REMOVE REAR DIFFERENTIAL DRIVE PINION OIL SLINGER (w/ Differential Lock)



10. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front bearing.
SST 09556-22010

(b) Using SST, remove the front bearing outer race.
SST 09308-00010

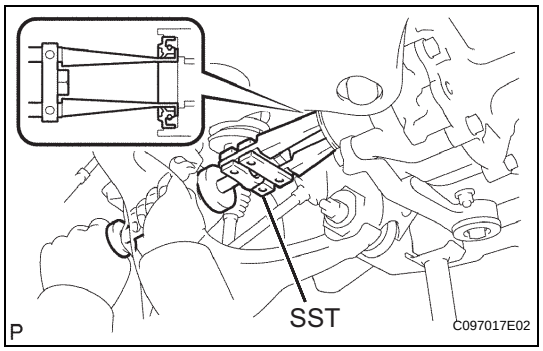
(c) Using a screwdriver, bend the oil storage ring and remove it.

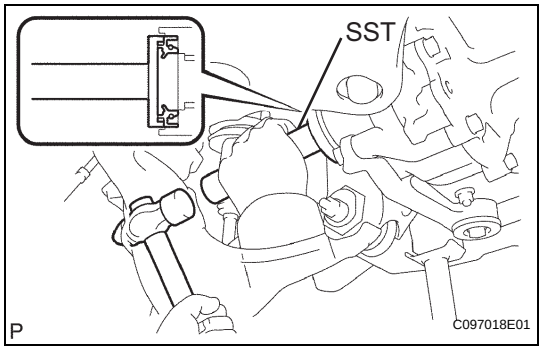
11. REMOVE REAR DIFFERENTIAL DRIVE PINION BEARING SPACER

DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL (for 4WD)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEELS**
3. **REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY**
   (a) Remove the 4 bolts and No. 1 engine under cover sub-assembly.
4. **REMOVE NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (w/ Engine Under Cover No, 2)**
   (a) Remove the 4 bolts and No. 2 engine under cover sub-assembly.
5. **DRAIN DIFFERENTIAL OIL**
6. **REMOVE FRONT AXLE HUB LH NUT (See page DS-3)**
7. **REMOVE FRONT AXLE HUB RH NUT**
   HINT:
   Use the same procedure as for the LH side.
8. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-50)**
9. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH (See page SP-50)**
10. **SEPARATE FRONT SPEED SENSOR LH (See page BC-303)**
11. **SEPARATE FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedure as for the LH side.
12. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page PS-54)**
13. **SEPARATE TIE ROD END SUB-ASSEMBLY RH (See page PS-54)**
14. **REMOVE FRONT SUSPENSION LOWER ARM LH (See page DS-4)**
15. **REMOVE FRONT SUSPENSION LOWER ARM RH**
    HINT:
    Use the same procedure as for the LH side.
16. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-4)**
17. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH**
    HINT:
    Use the same procedure as for the LH side.





18. **REMOVE DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL**
    (a) Using SST, remove the oil seal.
    SST 09308-00010

INSTALLATION

1. **INSTALL DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL**
    (a) Using SST and a hammer, install a new oil seal.
    SST 09554-30011
    (b) Coat the oil seal lip with MP grease.
2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)**
3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
    HINT:
    Use the same procedure as for the LH side.
4. **INSTALL FRONT SUSPENSION LOWER ARM LH (See page DS-9)**
5. **INSTALL FRONT SUSPENSION LOWER ARM RH**
    HINT:
    Use the same procedure as for the LH side.
6. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page PS-68)**
7. **INSTALL TIE ROD END SUB-ASSEMBLY RH (See page PS-68)**
8. **INSTALL FRONT SPEED SENSOR LH (See page DS-10)**
9. **INSTALL FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedure as for the LH side.
10. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-51)**
11. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH (See page SP-51)**
12. **INSTALL FRONT AXLE HUB LH NUT (See page AH-20)**
13. **INSTALL FRONT AXLE HUB RH NUT**
    HINT:
    Use the same procedure as for the LH side.
14. **ADD DIFFERENTIAL OIL (See page DF-8)**
15. **INSPECT DIFFERENTIAL OIL (See page DF-8)**

16. **INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY**
    (a) Install the No. 1 engine under cover sub-assembly with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

17. **INSTALL NO. 2 ENGINE UNDER COVER SUB-ASSEMBLY (w/ Engine Under Cover No, 2)**
    (a) Install the No. 2 engine under cover sub-assembly with the 4 bolts.
    Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

18. **INSTALL FRONT WHEELS**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

19. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    (See page SP-7)

20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

21. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
    HINT:
    (See page BC-103)

22. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
    HINT:
    (See page BC-7)

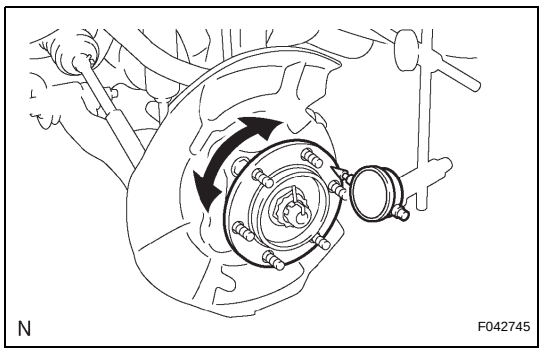
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in order. If necessary, replace these parts.

Symptom	Suspected area	See page
Wander/pulls	1. Tires (Worn or improperly inflated)	TW-1
	2. Front wheel alignment (Incorrect) (2WD)	SP-2
	3. Front wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	4. Hub bearings (Loosen or worn)	AH-1
	5. Steering gear (Out of adjustment or broken)	-
Front wheel shimmy	1. Tires (Worn or improperly inflated)	TW-1
	2. Wheels (Out of balance)	TW-1
	3. Front shock absorber (Worn out) (2WD)	SP-16
	4. Front shock absorber (Worn out) (4WD and Pre-Runner)	SP-22
	5. Front wheel alignment (Incorrect) (2WD)	SP-2
	6. Front wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	7. Upper ball joints (Worn) (2WD)	SP-27
	8. Upper ball joints (Worn) (4WD and Pre-Runner)	SP-31
	9. Lower ball joints (Worn) (2WD)	SP-36
	10. Lower ball joints (Worn) (4WD and Pre-Runner)	SP-43
	11. Hub bearings (Loosen or worn)	AH-1
	12. Steering gear (Out of adjustment or broken)	-
Rear wheel shimmy	1. Tires (Worn or improperly inflated)	TW-1
	2. Wheels (Out of balance)	TW-1
	3. Rear shock absorber (Worn out)	SP-60
	4. Hub bearings (Loosen or worn)	AH-2

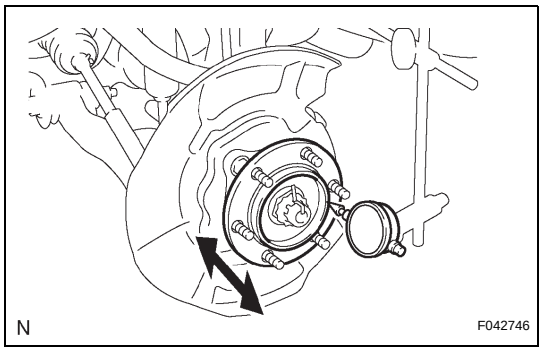


ON-VEHICLE INSPECTION

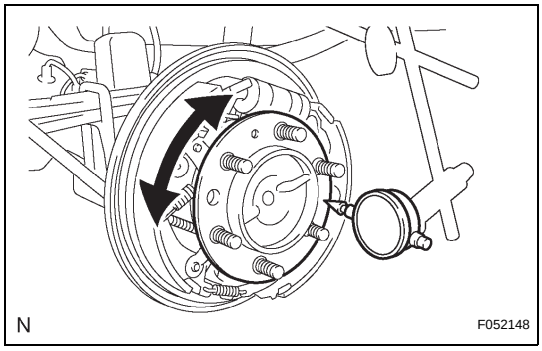
1. INSPECT FRONT AXLE HUB BEARING

(a) Remove the front wheel.
(b) for 4WD:
  (1) Remove the front axle hub grease cap (See page AH-16).
(c) for 2WD:
  (1) Remove the front disc brake caliper (See page AH-7).
(d) for 4WD and Pre-Runner
  (1) Remove the front disc brake caliper (See page AH-15).
(e) Remove the front disc.
(f) Inspect the axle hub backlash.
  (1) Using a dial indicator, check the backlash near the center of the axle hub.
  Maximum:
  0.05 mm (0.0020 in.)
  If the backlash exceeds the maximum, replace the bearing.

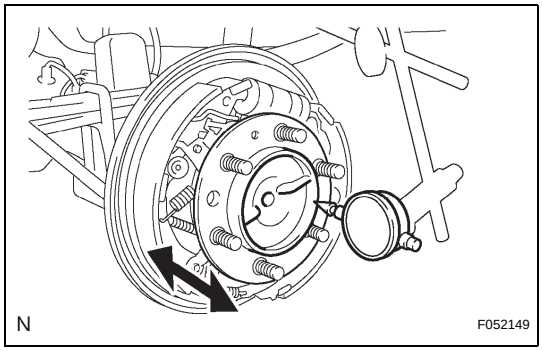
AH



(g) Inspect the axle hub deviation.
(1) Using a dial indicator, check the distortion of the surface of the axle hub.
Maximum:
0.05 mm (0.0020 in.)
If the deviation exceeds the maximum, replace the bearing.



2. INSPECT REAR AXLE HUB BEARING
(a) Remove the rear wheel.
(b) Remove the rear brake drum (See page BR-68).
(c) Inspect the axle shaft backlash.
(1) Using a dial indicator, check the backlash near the center of the axle shaft.
Maximum:
0.05 mm (0.0020 in.)
If the backlash exceeds the maximum, replace the bearing.

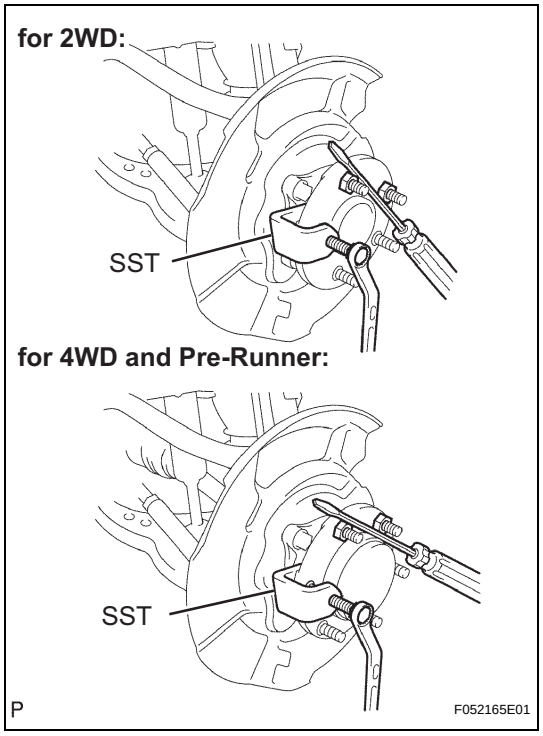


(d) Inspect the axle shaft deviation.
(1) Using a dial indicator, check the distortion of the surface of the axle shaft.
Maximum:
0.05 mm (0.0020 in.)
If the deviation exceeds the maximum, replace the bearing.

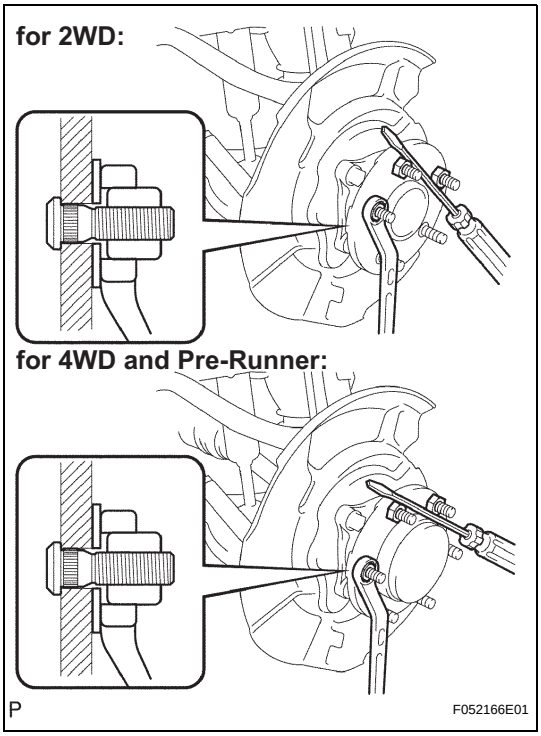
FRONT AXLE HUB BOLT

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with painted surfaces.
4. **REMOVE FRONT DISC BRAKE CALIPER ASSEMBLY (for 2WD) (See page AH-7)**
5. **REMOVE FRONT DISC BRAKE CALIPER ASSEMBLY (for 4WD and Pre-Runner) (See page AH-15)**
6. **REMOVE FRONT DISC**
7. **REMOVE FRONT AXLE HUB BOLT**
   (a) Using SST and a screwdriver, remove the hub bolt.
   SST 09611-12010



AH



INSTALLATION

1. **INSTALL FRONT AXLE HUB BOLT**
   (a) Install a new hub bolt through the axle hub.
   (b) Install the washer plate, as shown in the illustration, through the hub bolt, and install the hub bolt by tightening the hub nut.
2. **INSTALL FRONT DISC**
3. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (for 2WD) (See page AH-11)**
4. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (for 4WD and Pre-Runner) (See page AH-21)**
5. **INSTALL FRONT WHEEL**
   Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   (See page IN-5)
7. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
8. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
9. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
10. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
11. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
12. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
13. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
14. **CHECK FOR BRAKE FLUID LEAKAGE**

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these applicable parts.

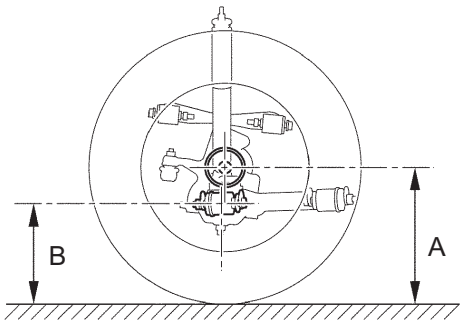
Symptom	Suspected area	See page
Bottoming	1. Vehicle (Overloaded)	-
	2. Front coil spring (Weak) (2WD)	SP-15
	3. Front coil spring (Weak) (4WD and Pre-Runner)	SP-22
	4. Rear leaf spring	SP-54
	5. Front shock absorber (Worn) (2WD)	SP-16
	6. Front shock absorber (Worn) (4WD and Pre-Runner)	SP-22
	7. Rear shock absorber (Worn)	SP-60
Swaying/pitching	1. Tire (Worn or improperly inflated)	TW-1
	2. Front stabilizer bar (Bent or broken) (2WD)	SP-47
	3. Front stabilizer bar (Bent or broken) (4WD and Pre-Runner)	SP-50
	4. Rear stabilizer bar (Bent or broken) (Sport Suspension Package)	SP-63
	5. Front shock absorber (Worn) (2WD)	SP-16
	6. Front shock absorber (Worn) (4WD and Pre-Runner)	SP-22
	7. Rear shock absorber (Worn)	SP-60
Front wheel shimmy	1. Tire (Worn or improperly inflated)	TW-1
	2. Wheel (Out of balance)	TW-1
	3. Front shock absorber (Worn) (2WD)	SP-16
	4. Front shock absorber (Worn) (4WD and Pre-Runner)	SP-22
	5. Wheel alignment (Incorrect) (2WD)	SP-2
	6. Wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	7. Upper ball joint (Worn) (2WD)	SP-27
	8. Upper ball joint (Worn) (4WD and Pre-Runner)	SP-31
	9. Lower ball joint (Worn) (2WD)	SP-36
	10. Lower ball joint (Worn) (4WD and Pre-Runner)	SP-43
	11. Hub bearing (Worn)	AH-1
	12. Steering linkage (Loose or worn)	-
Rear wheel shimmy	1. Tire (Worn or improperly inflated)	TW-1
	2. Wheel (Out of balance)	TW-1
	3. Rear shock absorber (Worn)	SP-60
	4. Wheel alignment (Incorrect) (2WD)	SP-2
	5. Wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	6. Hub bearing (Worn)	AH-2
Abnormal tire wear	1. Tire (Worn or improperly inflated)	TW-1
	2. Wheel alignment (Incorrect) (2WD)	SP-2
	3. Wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	4. Front shock absorber (Worn) (2WD)	SP-16
	5. Front shock absorber (Worn) (4WD and Pre-Runner)	SP-22
	6. Rear shock absorber (Worn)	SP-60
	7. Suspension parts (Worn)	-

FRONT WHEEL ALIGNMENT (for 2WD)

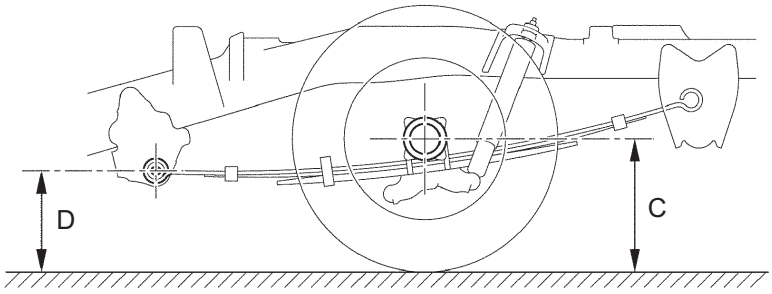
ADJUSTMENT

1. **INSPECT TIRES (See page TW-1)**
2. **MEASURE VEHICLE HEIGHT**

Front:



Rear:



P

F051670E01

SP

Vehicle height:

Vehicle Model	Tire Size	A - B	C - D
TRN220L-TRMDKA	P215/70R15	87 mm (3.43 in.)	48 mm (1.89 in.)
TRN220L-TRPDKA	P215/70R15	88 mm (3.46 in.)	48 mm (1.89 in.)
TRN225L-CRMDKA	P215/70R15	86 mm (3.39 in.)	50 mm (1.97 in.)
TRN225L-CRPDKA	P215/70R15	87 mm (3.43 in.)	50 mm (1.97 in.)
GRN225L-CRFDKA	P255/45R18	118 mm (4.65 in.)	85 mm (3.35 in.)

Measuring points:

A:
Ground clearance of front wheel center

B:
Ground clearance of adjustment cam bolt center (front side)

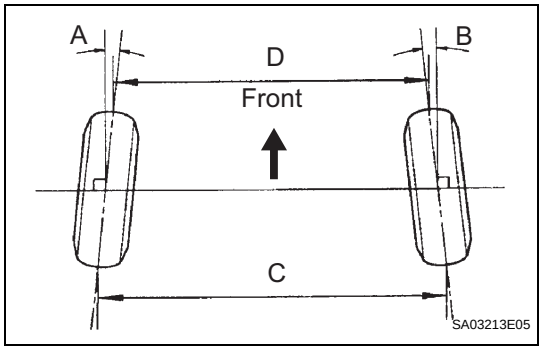
C:
Ground clearance of rear wheel center

D:
Ground clearance of rear leaf spring front side bush center

NOTICE:

Before inspecting the wheel alignment, check the vehicle height.

Bounce the vehicle up and down at the corners to stabilize the suspension before inspecting the vehicle height.



3. INSPECT TOE-IN

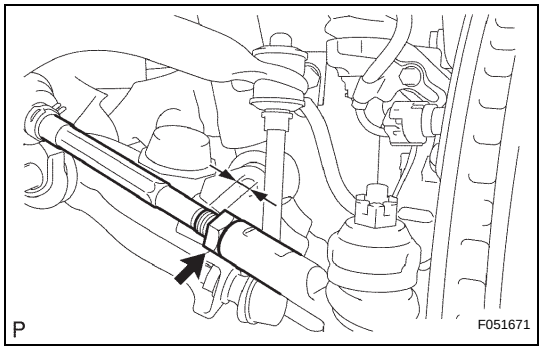
Toe-in

Vehicle Model	Tire Size	A + B	C - D
TRN220L-TRMDKA	P215/70R15	4.8' +- 6.5' (0.081° +- 0.108°)	0.96 +- 2 mm (0.038 +- 0.08 in.)
TRN220L-TRPDKA	P215/70R15	4.3' +- 6.5' (0.072° +- 0.108°)	0.86 +- 2 mm (0.034 +- 0.08 in.)
TRN225L-CRMDKA	P215/70R15	5.3' +- 6.5' (0.089° +- 0.108°)	1.06 +- 2 mm (0.042 +- 0.08 in.)
TRN225L-CRPDKA	P215/70R15	4.8' +- 6.5' (0.081° +- 0.108°)	0.96 +- 2 mm (0.038 +- 0.08 in.)
GRN225L-CRFDKA	P255/45R18	1.8' +- 6.5' (0.030° +- 0.108°)	0.36 +- 2 mm (0.014 +- 0.08 in.)

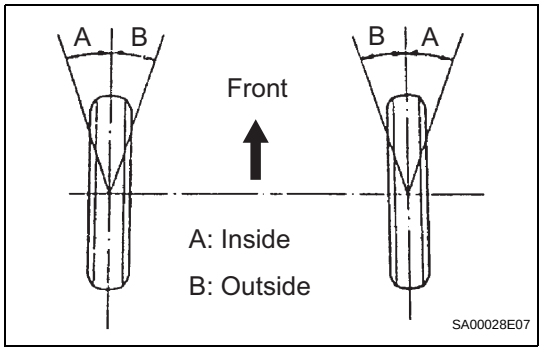
If the toe-in is not within the specified range, adjust it at the rack ends.

4. ADJUST TOE-IN

(a) Remove the rack boot set clips.
(b) Loosen the tie rod end lock nuts.
(c) Turn the right and left rack ends uniformly to adjust the toe-in.
HINT:
Try to adjust the toe-in to the middle of the specified range.



(d) Make sure that the lengths of the right and left rack ends are the same.
(e) Torque the tie rod end lock nuts.
Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)
(f) Install the boots onto the seats with the clips.
HINT:
Make sure that the boots are not twisted.



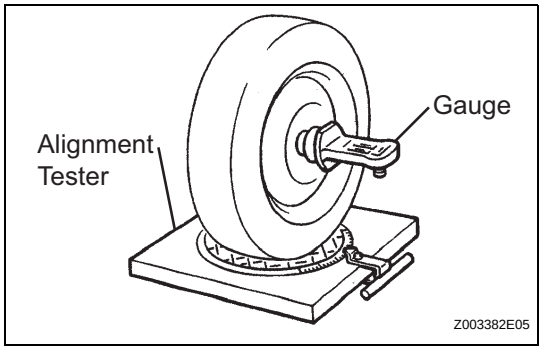
5. INSPECT WHEEL TURNING ANGLE

(a) Turn the steering wheel fully, and measure the turning angle.
Wheel turning angle

Inside wheel	Outside wheel (Reference)
38°48' (36°48' to 39°48') 38.80° (36.80° to 39.80°)	32°30' (30°30' to 33°30') 32.50° (30.50° to 33.50°)

If the right and left turning angles of the inside and outside wheels are not within the specified ranges, check the right and left rack end lengths.

SP



6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Install the camber-caster-kingpin gauge and position the front wheel on the wheel alignment tester.

(b) Inspect the camber, caster and steering axis inclination.

Camber, caster and steering axis inclination

Vehicle Model	Tire Size	Camber	Caster	Steering Axis Inclination
TRN220L-TRMDKA	P215/70R15	0°13' +- 45' (0.22° +- 0.75°)	3°52' +- 45' (3.86° +- 0.75°)	10°42' +- 45' (10.70° +- 0.75°)
TRN220L-TRPDKA	P215/70R15	0°12' +- 45' (0.20° +- 0.75°)	3°52' +- 45' (3.86° +- 0.75°)	10°44' +- 45' (10.73° +- 0.75°)
TRN225L-CRMDKA	P215/70R15	0°14' +- 45' (0.24° +- 0.75°)	4°01' +- 45' (4.01° +- 0.75°)	10°41' +- 45' (10.69° +- 0.75°)
TRN225L-CRPDKA	P215/70R15	0°13' +- 45' (0.22° +- 0.75°)	4°01' +- 45' (4.02° +- 0.75°)	10°42' +- 45' (10.70° +- 0.75°)
GRN225L-CRFDKA	P255/45R18	-0°40' +- 45' (-0.66° +- 0.75°)	5°09' +- 45' (5.15° +- 0.75°)	11°34' +- 45' (11.56° +- 0.75°)

NOTICE:

- **Perform the inspection while the vehicle is empty (without spare tires or tools on board).**
- **The tolerance for the difference between the left and right wheels is 30' (0.50°) or less for both the camber and caster.**

If the steering axis inclination is not as specified after the camber and caster have been correctly adjusted, recheck the steering knuckle and front wheel for distortion and slack.

7. ADJUST CAMBER AND CASTER

NOTICE:

Inspect the toe-in after the camber has been adjusted.

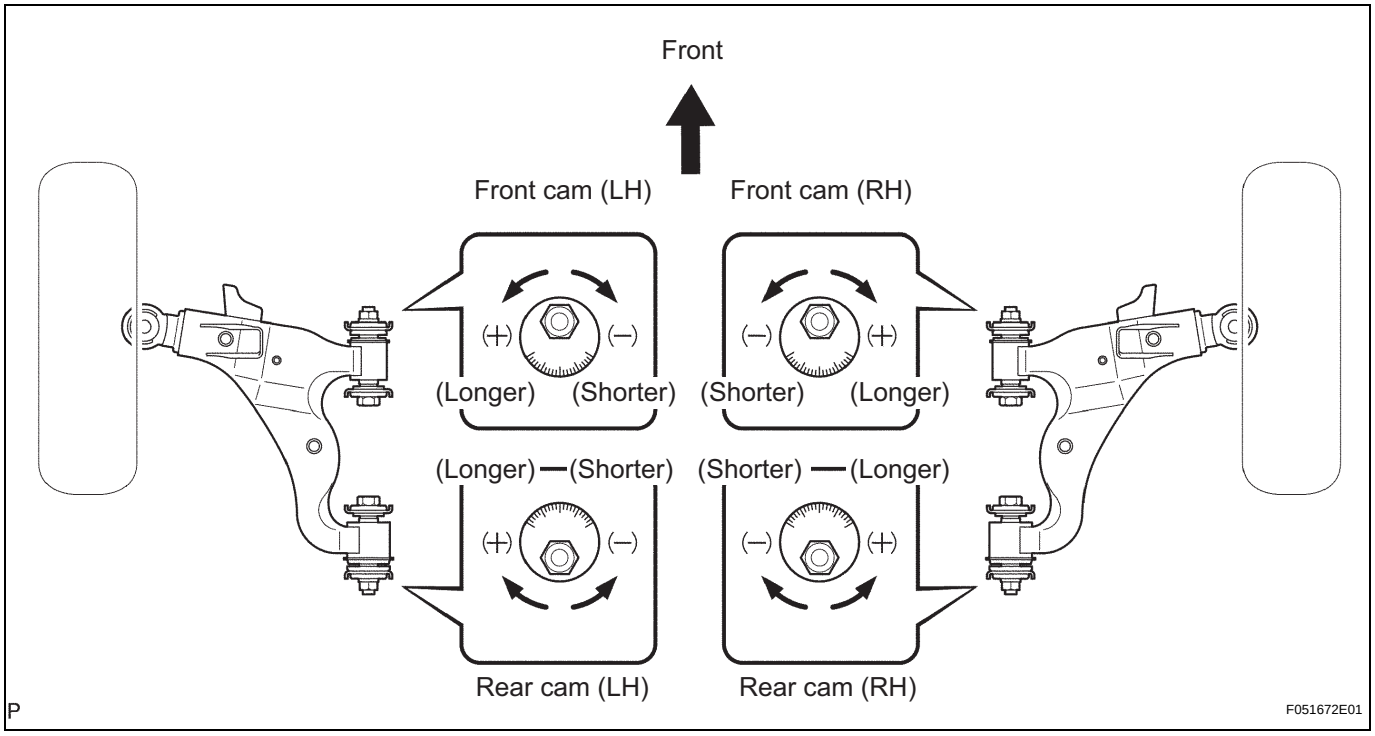
(a) Loosen the 2 nuts.

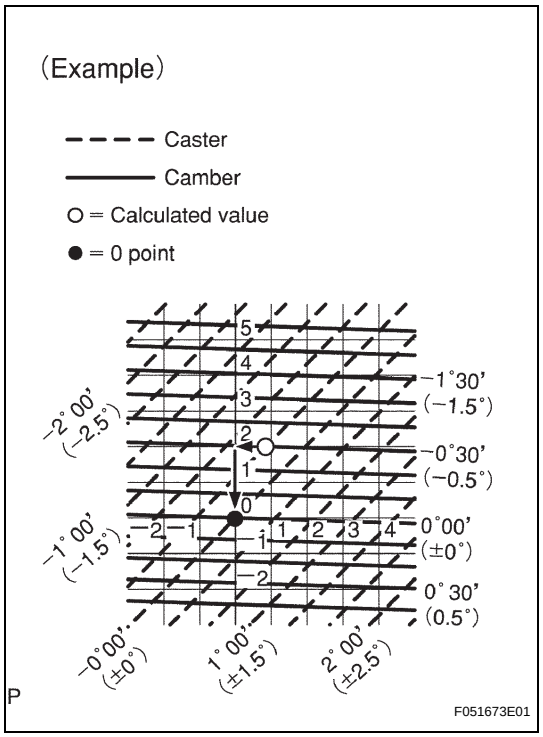
(b) Turn the camber adjust cam and adjust the camber and caster.

HINT:

Try to adjust the camber and caster to the central value.

SP





(c) How to read the adjustment chart (using examples).

(1) Measure the present alignment.

Camber:
-0°17' (0.28°)
Caster:
3°30' (3.50°)

(2) Calculate the difference between the standard value (A) and the measured value (B) on the adjustment chart.

Standard value:
Camber:
0°13' (0.22°)
Caster:
3°50' (3.84°)
Formula:
B - A = C
Camber:
-0°17' - 0°13' = -0°30'
Caster:
3°30' - 3°50' = -0°20'

(3) As shown in the chart, read the distance from the marked point to 0 point, and adjust the front and/or rear adjusting cams accordingly.

Front adjust cam:
- (Shorter) 1.9
Rear adjust cam:
- (Shorter) 0.8

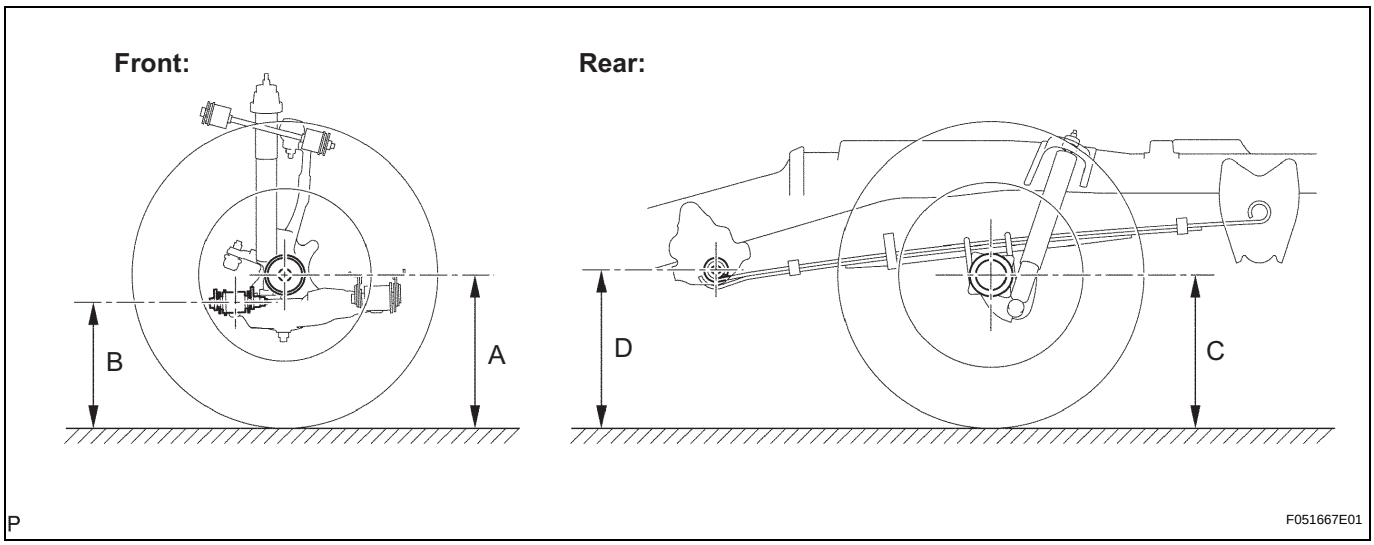
FRONT WHEEL ALIGNMENT (for 4WD and Pre-Runner)

ADJUSTMENT

1. **INSPECT TIRES (See page TW-1)**
2. **MEASURE VEHICLE HEIGHT**



Vehicle height:
for Pre-Runner (North America)

Vehicle Model	Tire Size	A-B	C-D
TRN260L-TRMDKA	P245/75R16	62 mm (2.44 in.)	-47 mm (-1.85 in.)
TRN265L-CRMDKA	P245/75R16	60 mm (2.36 in.)	-47 mm (-1.85 in.)
GRN265L-CRFDKA	P245/75R16	66 mm (2.60 in.)	-44 mm (-1.73 in.)
GRN265L-CRFDKA	P265/70R16	69 mm (2.72 in.)	-46 mm (-1.81 in.)
GRN265L-CRFDKA	P265/65R17	66 mm (2.60 in.)	-44 mm (-1.73 in.)
GRN265L-CRADKA	P245/75R16	63 mm (2.48 in.)	-44 mm (-1.73 in.)
GRN265L-CRADKA	P265/70R16	70 mm (2.76 in.)	-45 mm (-1.77 in.)
GRN265L-CRADKA	P265/65R17	63 mm (2.48 in.)	-44 mm (-1.73 in.)
GRN265L-PRADKA	P245/75R16	64 mm (2.52 in.)	-39 mm (-1.54 in.)
GRN265L-PRADKA	P265/70R16	62 mm (2.44 in.)	-43 mm (-1.69 in.)

GRN245L-PRFDKA	P245/75R16	64 mm (2.52 in.)	-38 mm (-1.50 in.)
GRN245L-PRFDKA	P265/70R16	69 mm (2.72 in.)	-39 mm (-1.54 in.)
GRN245L-PRFDKA	P265/65R17	64 mm (2.52 in.)	-38 mm (-1.50 in.)
GRN245L-PRADKA	P245/75R16	65 mm (2.56 in.)	-37 mm (-1.46 in.)
GRN245L-PRADKA	P265/70R16	70 mm (2.76 in.)	-38 mm (-1.50 in.)
GRN245L-PRADKA	P265/65R17	65 mm (2.56 in.)	-37 mm (-1.46 in.)
GRN250L-PRADKA	P245/75R16	66 mm (2.60 in.)	-35 mm (-1.38 in.)
GRN250L-PRADKA	P265/65R17	66 mm (2.60 in.)	-35 mm (-1.38 in.)

Measuring points:

A:
Ground clearance of front wheel center

B:
Ground clearance of adjustment cam bolt center (front side)

C:
Ground clearance of rear wheel center

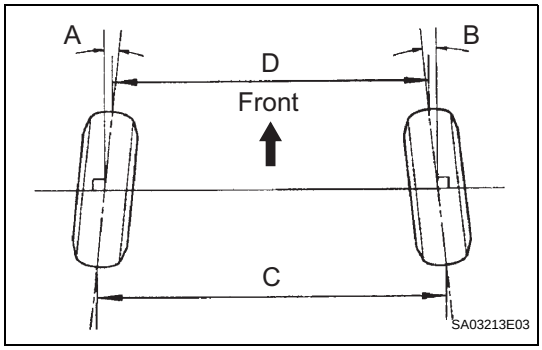
D:
Ground clearance of rear leaf spring front side bush center

SP

NOTICE:

Before inspecting the wheel alignment, check the vehicle height.

Bounce the vehicle up and down at the corners to stabilize the suspension before inspecting the vehicle height.



3. INSPECT TOE-IN

Toe-in:

for Pre-Runner (North America)

Vehicle Model	Tire Size	A+B	C-D
TRN260L-TRMDKA	P245/75R16	7.3' +- 6.5' (0.121° +- 0.108°)	1.64 +- 2 mm (0.065 +- 0.08 in.)
TRN265L-CRMDKA	P245/75R16	8.6' +- 6.5' (0.144° +- 0.108°)	1.94 +- 2 mm (0.076 +- 0.08 in.)
GRN265L-CRFDKA	P245/75R16	4.6' +- 6.5' (0.077° +- 0.108°)	1.04 +- 2 mm (0.041 +- 0.08 in.)
GRN265L-CRFDKA	P265/70R16	2.7' +- 6.5' (0.044° +- 0.108°)	0.60 +- 2 mm (0.024 +- 0.08 in.)
GRN265L-CRFDKA	P265/65R17	4.6' +- 6.5' (0.077° +- 0.108°)	1.05 +- 2 mm (0.041 +- 0.08 in.)
GRN265L-CRADKA	P245/75R16	6.6' +- 6.5' (0.110° +- 0.108°)	1.48 +- 2 mm (0.058 +- 0.08 in.)
GRN265L-CRADKA	P265/70R16	2.0' +- 6.5' (0.033° +- 0.108°)	0.45 +- 2 mm (0.018 +- 0.08 in.)
GRN265L-CRADKA	P265/65R17	6.6' +- 6.5' (0.111° +- 0.108°)	1.50 +- 2 mm (0.059 +- 0.08 in.)
GRN265L-PRADKA	P245/75R16	5.2' +- 6.5' (0.087° +- 0.108°)	1.18 +- 2 mm (0.046 +- 0.08 in.)
GRN265L-PRADKA	P265/70R16	6.6' +- 6.5' (0.110° +- 0.108°)	1.49 +- 2 mm (0.059 +- 0.08 in.)

Vehicle Model	Tire Size	A+B	C-D
GRN265L-PRADKA	P265/65R17	5.3' +- 6.5' (0.089° +- 0.108°)	1.20 +- 2 mm (0.047 +- 0.08 in.)
GRN270L-PRADKA	P245/75R16	4.6' +- 6.5' (0.077° +- 0.108°)	1.04 +- 2 mm (0.041 +- 0.08 in.)
GRN270L-PRADKA	P265/65R17	4.6' +- 6.5' (0.077° +- 0.108°)	1.05 +- 2 mm (0.041 +- 0.08 in.)

for Pre-Runner (Mexico)

Vehicle Model	Tire Size	A+B	C-D
GRN265L-PRADKA	P245/75R16	12.7' +- 6.5' (0.212° +- 0.108°)	2.87 +- 2 mm (0.113 +- 0.08 in.)
GRN265L-PRADKA	P265/65R17	12.9' +- 6.5' (0.215° +- 0.108°)	2.91 +- 2 mm (0.115 +- 0.08 in.)

for 4WD

Vehicle Model	Tire Size	A+B	C-D
TRN240L-TRMDKA	P245/75R16	6.6' +- 6.5' (0.110° +- 0.108°)	1.48 +- 2 mm (0.058 +- 0.08 in.)
TRN245L-CRMDKA	P245/75R16	6.6' +- 6.5' (0.110° +- 0.108°)	1.48 +- 2 mm (0.058 +- 0.08 in.)
GRN245L-CRFDKA	P245/75R16	2.6' +- 6.5' (0.044° +- 0.108°)	0.59 +- 2 mm (0.023 +- 0.08 in.)
GRN245L-CRFDKA	P265/70R16	1.3' +- 6.5' (0.022° +- 0.108°)	0.30 +- 2 mm (0.012 +- 0.08 in.)
GRN245L-CRFDKA	P265/65R17	2.7' +- 6.5' (0.044° +- 0.108°)	0.60 +- 2 mm (0.024 +- 0.08 in.)
GRN245L-CRADKA	P245/75R16	5.2' +- 6.5' (0.087° +- 0.108°)	1.18 +- 2 mm (0.046 +- 0.08 in.)
GRN245L-CRADKA	P265/70R16	1.3' +- 6.5' (0.022° +- 0.108°)	0.30 +- 2 mm (0.012 +- 0.08 in.)
GRN245L-CRADKA	P265/65R17	5.3' +- 6.5' (0.089° +- 0.108°)	1.20 +- 2 mm (0.047 +- 0.08 in.)
GRN245L-PRFDKA	P245/75R16	5.2' +- 6.5' (0.087° +- 0.108°)	1.18 +- 2 mm (0.046 +- 0.08 in.)
GRN245L-PRFDKA	P265/70R16	2.7' +- 6.5' (0.044° +- 0.108°)	0.60 +- 2 mm (0.024 +- 0.08 in.)
GRN245L-PRFDKA	P265/65R17	5.3' +- 6.5' (0.089° +- 0.108°)	1.20 +- 2 mm (0.047 +- 0.08 in.)
GRN245L-PRADKA	P245/75R16	4.6' +- 6.5' (0.077° +- 0.108°)	1.04 +- 2 mm (0.041 +- 0.08 in.)
GRN245L-PRADKA	P265/70R16	2.0' +- 6.5' (0.033° +- 0.108°)	0.45 +- 2 mm (0.018 +- 0.08 in.)
GRN245L-PRADKA	P265/65R17	4.6' +- 6.5' (0.077° +- 0.108°)	1.05 +- 2 mm (0.041 +- 0.08 in.)
GRN250L-PRADKA	P245/75R16	4.0' +- 6.5' (0.066° +- 0.108°)	0.89 +- 2 mm (0.035 +- 0.08 in.)
GRN250L-PRADKA	P265/65R17	4.0' +- 6.5' (0.066° +- 0.108°)	0.90 +- 2 mm (0.035 +- 0.08 in.)

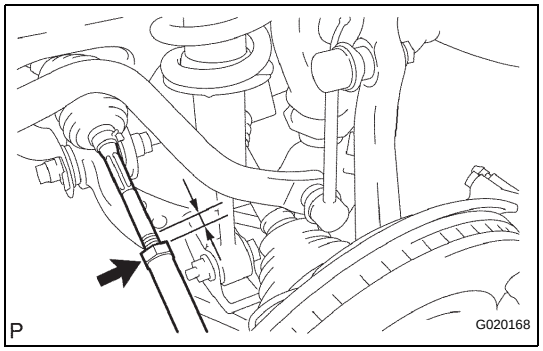
If the toe-in is not within the specified range, adjust it at the rack ends.

4. ADJUST TOE-IN

(a) Remove the rack boot set clips.

(b) Loosen the tie rod end lock nuts.

(c) Turn the right and left rack ends uniformly to adjust the toe-in.
HINT:
Try to adjust the toe-in to the middle of the specified range.

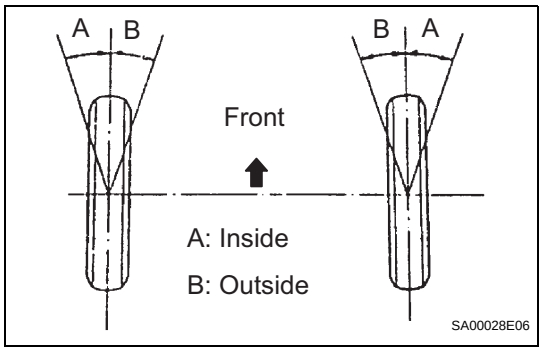


(d) Make sure that the lengths of the right and left rack ends are the same.

(e) Torque the tie rod end lock nuts.
Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)

(f) Place the boots on the seats and install the clips.
HINT:
Make sure that the boots are not twisted.

SP



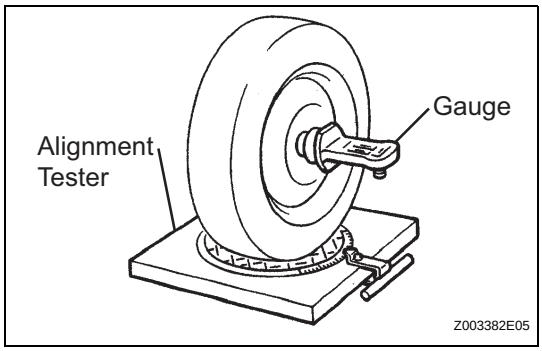
5. INSPECT WHEEL TURNING ANGLE

(a) Turn the steering wheel fully, and measure the turning angle.

Wheel turning angle

Inside wheel	Outside wheel (Reference)
40°18' (38°18' to 41°18') 40.30° (38.30° to 41.30°)	35°54' (33°54' to 36°54') 35.90° (33.90° to 36.90°)

If the right and left turning angles of the inside and outside wheels are not within the specified ranges, check the right and left rack end lengths.



6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Install the camber-caster-kingpin gauge and position the front wheel on the wheel alignment tester.

(b) Inspect the camber, caster and steering axis inclination.

Camber, caster and steering axis inclination: for Pre-Runner (North America)

Vehicle Model	Tire Size	Camber	Caster	Steering Axis Inclination
TRN260L-TRMDKA	P245/75R16	0°35' +- 45' (0.59° +- 0.75°)	1°41' +- 45' (1.68° +- 0.75°)	11°52' +- 45' (11.86° +- 0.75°)

NOTICE:

- **Perform the inspection while the vehicle is empty (without spare tires or tools on board).**
- **The tolerance for the difference between the left and right wheels is 30' (0.50°) or less for both the camber and caster.**

If the steering axis inclination is not as specified after the camber and caster have been correctly adjusted, recheck the steering knuckle and front wheel for distortion and slack.

7. ADJUST CAMBER AND CASTER

NOTICE:

Inspect the toe-in after the camber has been adjusted.

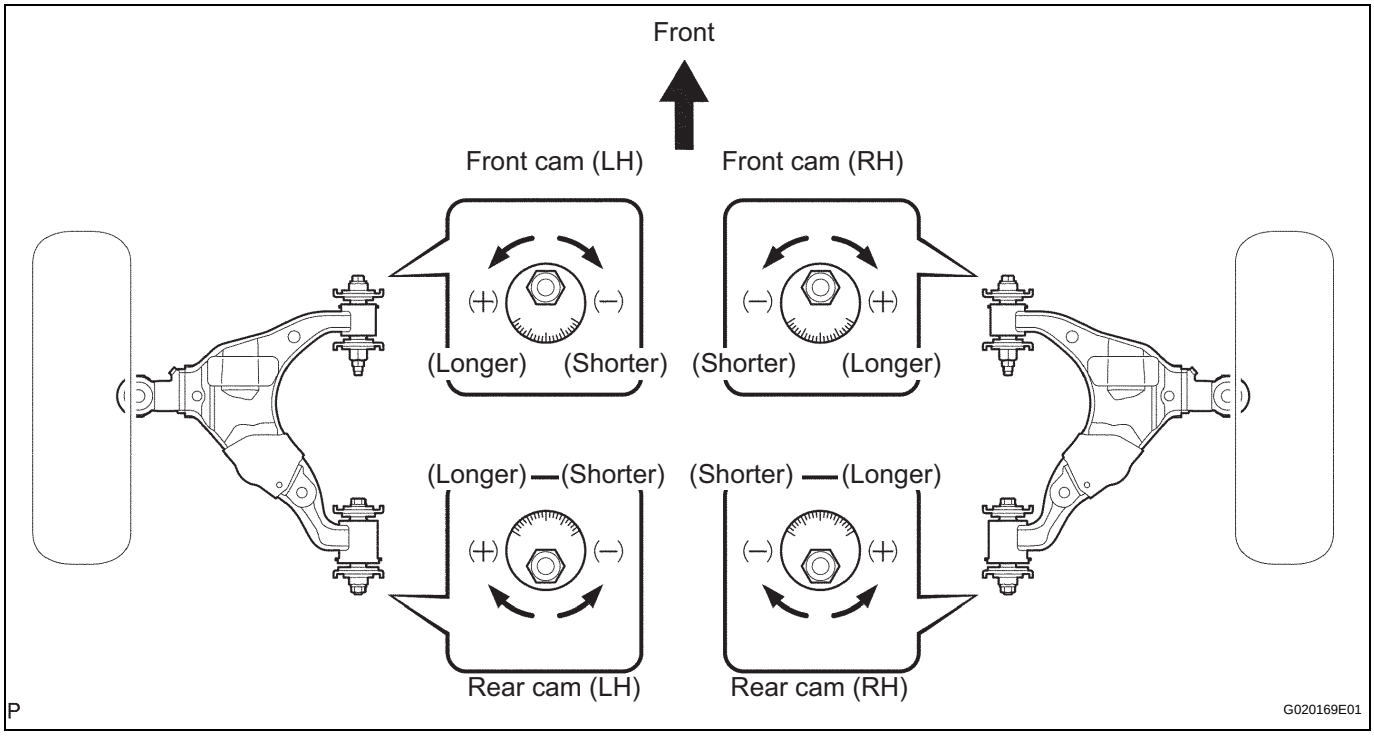
(a) Loosen the nut and bolt.

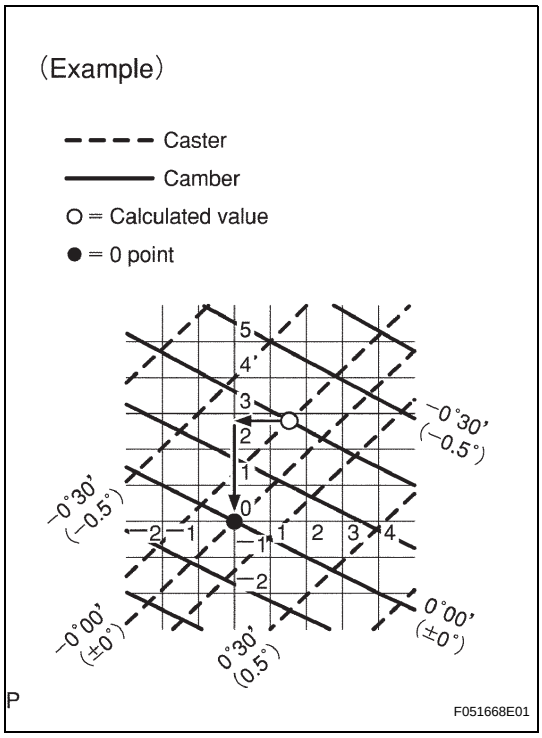
(b) Turn camber adjust cam No. 2 and the toe adjust cam and adjust the camber and the caster.

HINT:

Try to adjust the camber and caster to the central values.

SP





(c) How to read the adjustment chart (using examples).

(1) Measure the present alignment.

Camber:
0°17' (0.28°)
Caster:
1°28' (1.47°)

(2) Calculate the difference between the standard value (A) and the measured value (B) on the adjustment chart.

Standard value:
Camber:
0°37' (0.61°)
Caster:
1°38' (1.64°)
Formula:
B - A = C
Camber:
0°17' - (0°37') = -0°20'
Caster:
1°28' - (1°38') = -0°10'

(3) As shown in the chart, read the distance from the marked point to 0 point, and adjust the front and/or rear adjusting cams accordingly.

Toe adjust cam:
- (Shorter) 2.8
Camber adjust cam:
- (Shorter) 1.5

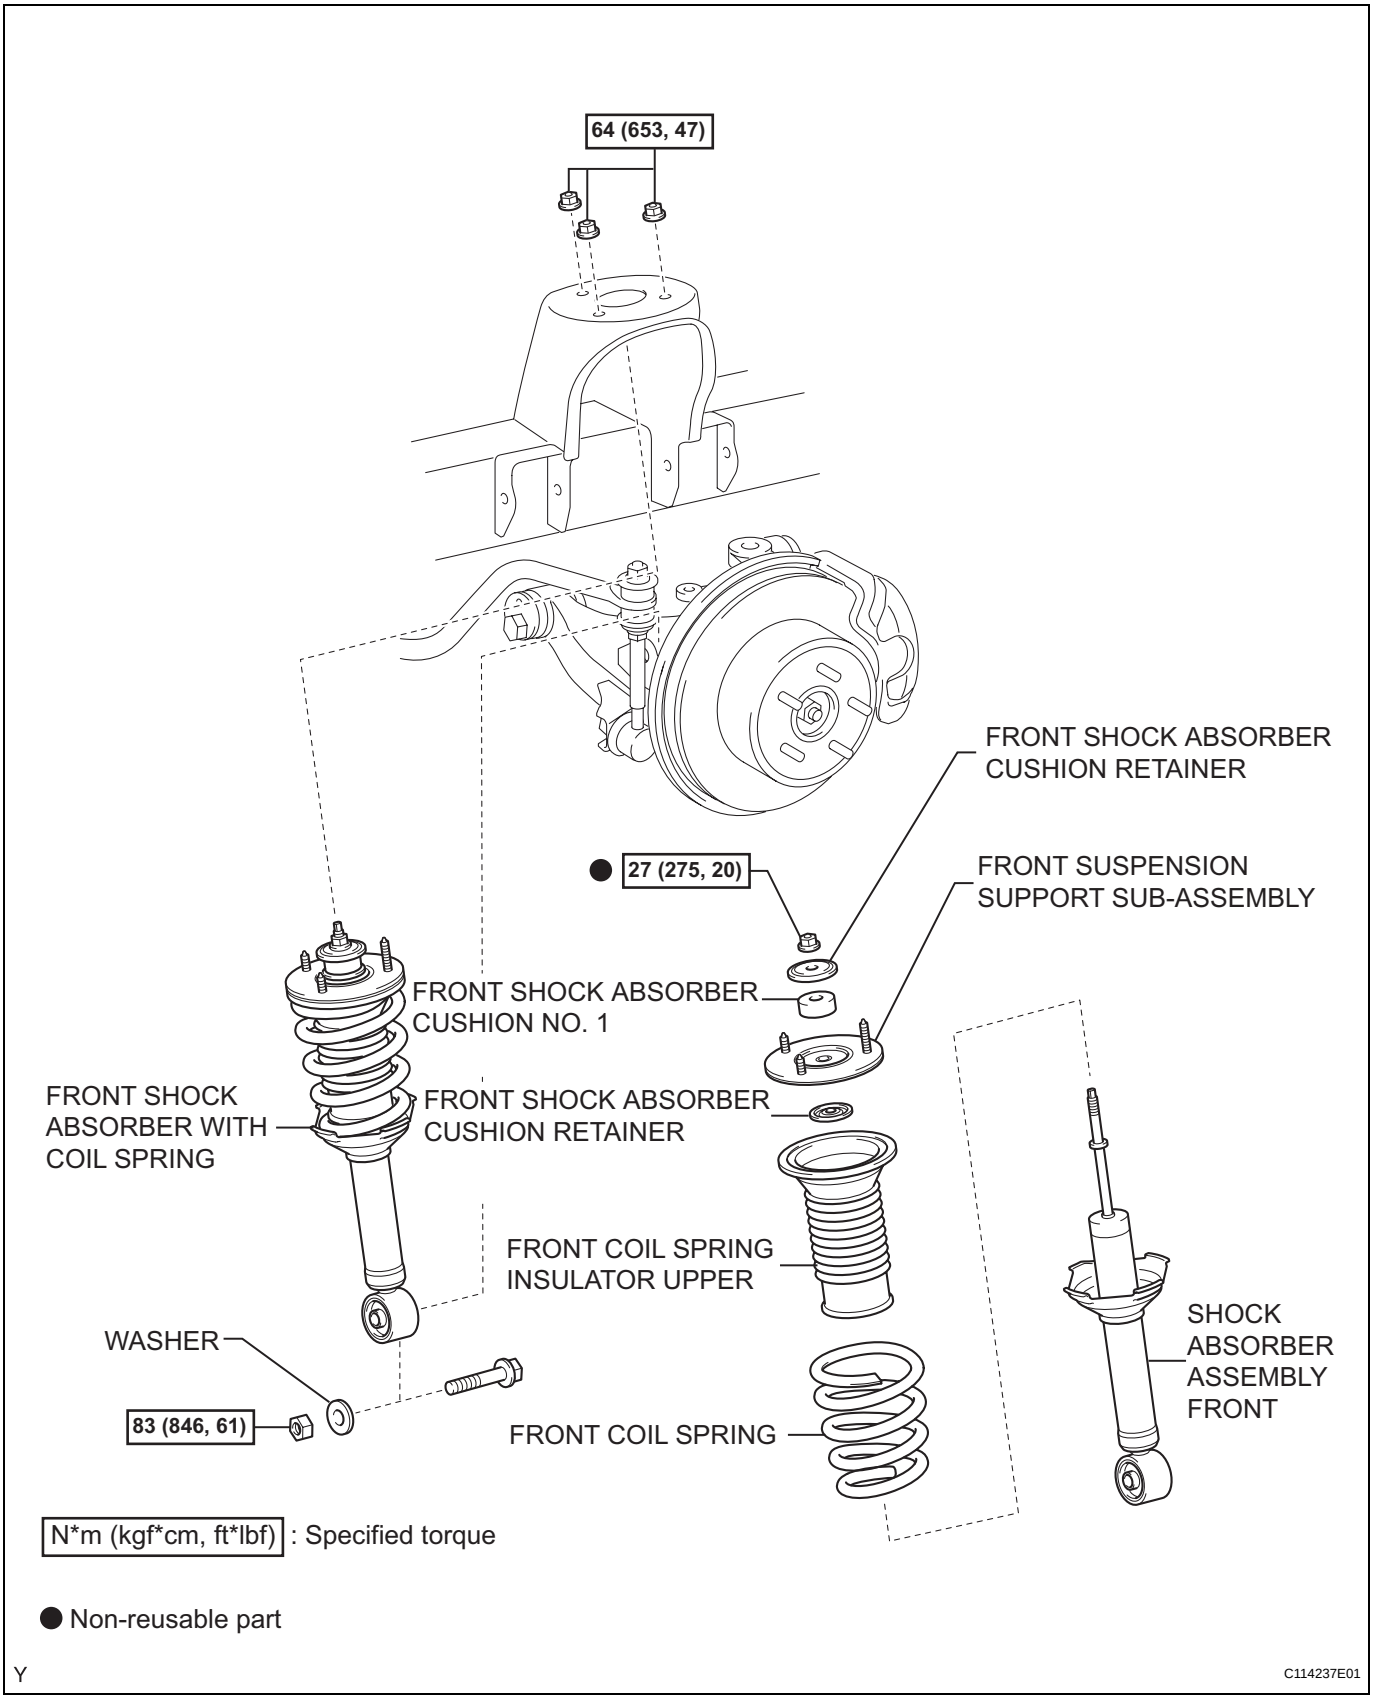
SP

FRONT SHOCK ABSORBER WITH COIL SPRING (for 2WD)

COMPONENTS



REMOVAL

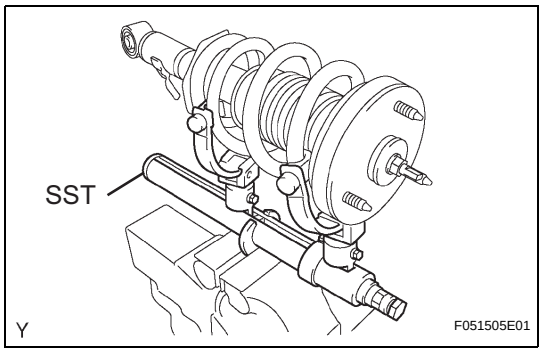
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **SEPARATE SKID CONTROL SENSOR WIRE (See page SP-26)**
4. **SEPARATE FRONT FLEXIBLE HOSE (See page SP-26)**
5. **REMOVE FRONT SUSPENSION UPPER ARM (See page SP-26)**
6. **REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING**
   (a) Remove the bolt, nut and washer.

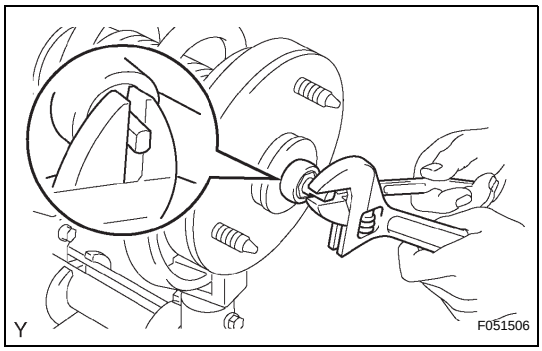
   (b) Remove the 3 nuts on the upper side of the front shock absorber with coil spring.
   (c) Remove the front shock absorber with coil spring.

SP

DISASSEMBLY

1. **REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT**
   (a) Using SST, compress the coil spring.
   SST 09727-30021 (09727-00010, 09727-00031), 09727-00060
   NOTICE:
   Do not use an impact wrench. It will damage SST.

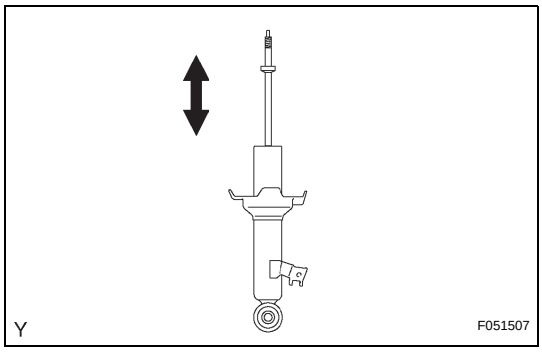




(b) While holding the shock absorber rod, remove the nut.
NOTICE:
Do not use an impact wrench. It will damage the shock absorber rod.

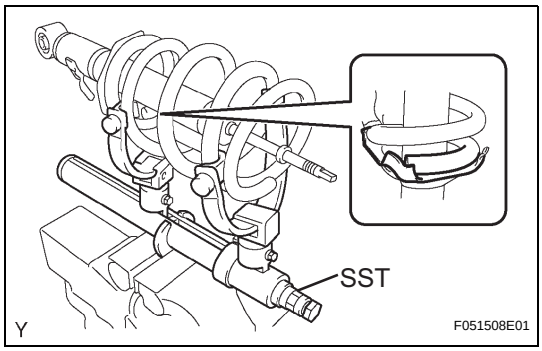
2. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
3. **REMOVE FRONT SHOCK ABSORBER CUSHION NO. 1**
4. **REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY**
5. **REMOVE FRONT COIL SPRING INSULATOR UPPER**
6. **REMOVE FRONT SHOCK ABSORBER CUSHION RETAINER**
7. **REMOVE FRONT COIL SPRING**

INSPECTION



1. **INSPECT SHOCK ABSORBER ASSEMBLY FRONT**
   (a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual sound during operation.
   If there is any abnormality, replace the shock absorber front with a new one.
   NOTICE:
   When disposing of the shock absorber front, see DISPOSAL on page SP-18.

REASSEMBLY



1. **INSTALL FRONT COIL SPRING**
   (a) Using SST, compress the front coil spring LH.
   SST 09727-30021 (09727-00010, 09727-00031), 09727-00060
   NOTICE:
   Do not use an impact wrench. It will damage SST.
   (b) Install the front coil spring onto the shock absorber front.
   HINT:
   Fit the lower end of the front coil spring into the gap of the spring lower seat.
2. **INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER**
3. **INSTALL FRONT COIL SPRING INSULATOR UPPER**
4. **INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY**
5. **INSTALL FRONT SHOCK ABSORBER CUSHION NO. 1**
6. **INSTALL FRONT SHOCK ABSORBER CUSHION RETAINER**

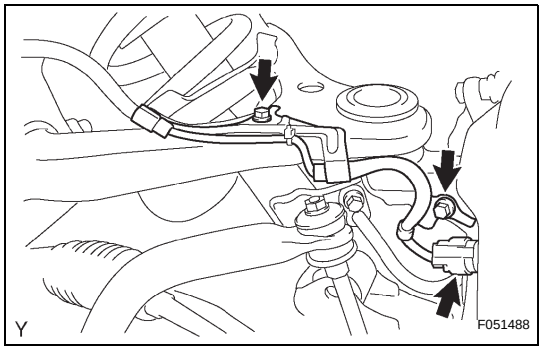
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT WHEEL

3. INSPECT FRONT SUSPENSION UPPER ARM

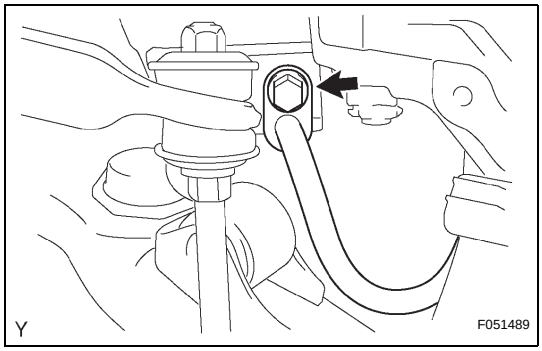
(a) Check that there is no slack on the ball joint by shaking the upper arm up and down by hand.



4. SEPARATE SKID CONTROL SENSOR WIRE

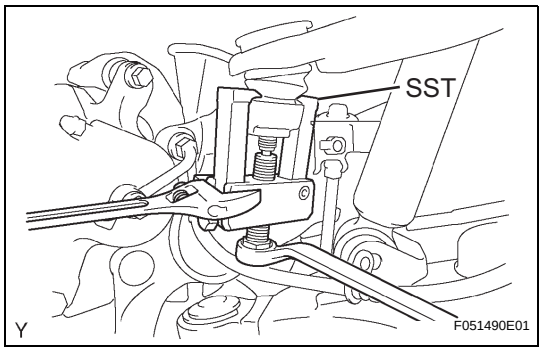
(a) Remove the speed sensor connector.

(b) Remove the 2 bolts, and separate the skid control sensor wire.



5. SEPARATE FRONT FLEXIBLE HOSE

(a) Remove the bolt, and separate the front flexible hose.



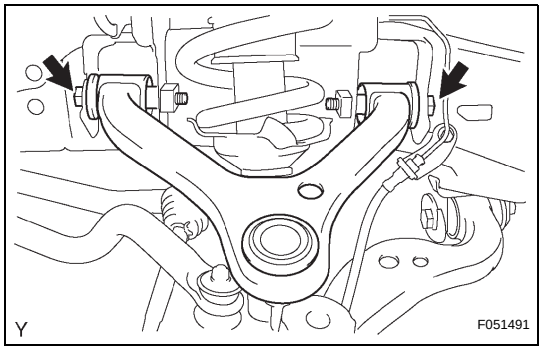
6. REMOVE FRONT SUSPENSION UPPER ARM

(a) Support the front suspension lower arm with a jack.

(b) Remove the clip and nut.

(c) Using SST, separate the upper ball joint from the steering knuckle.

SST 09628-62011

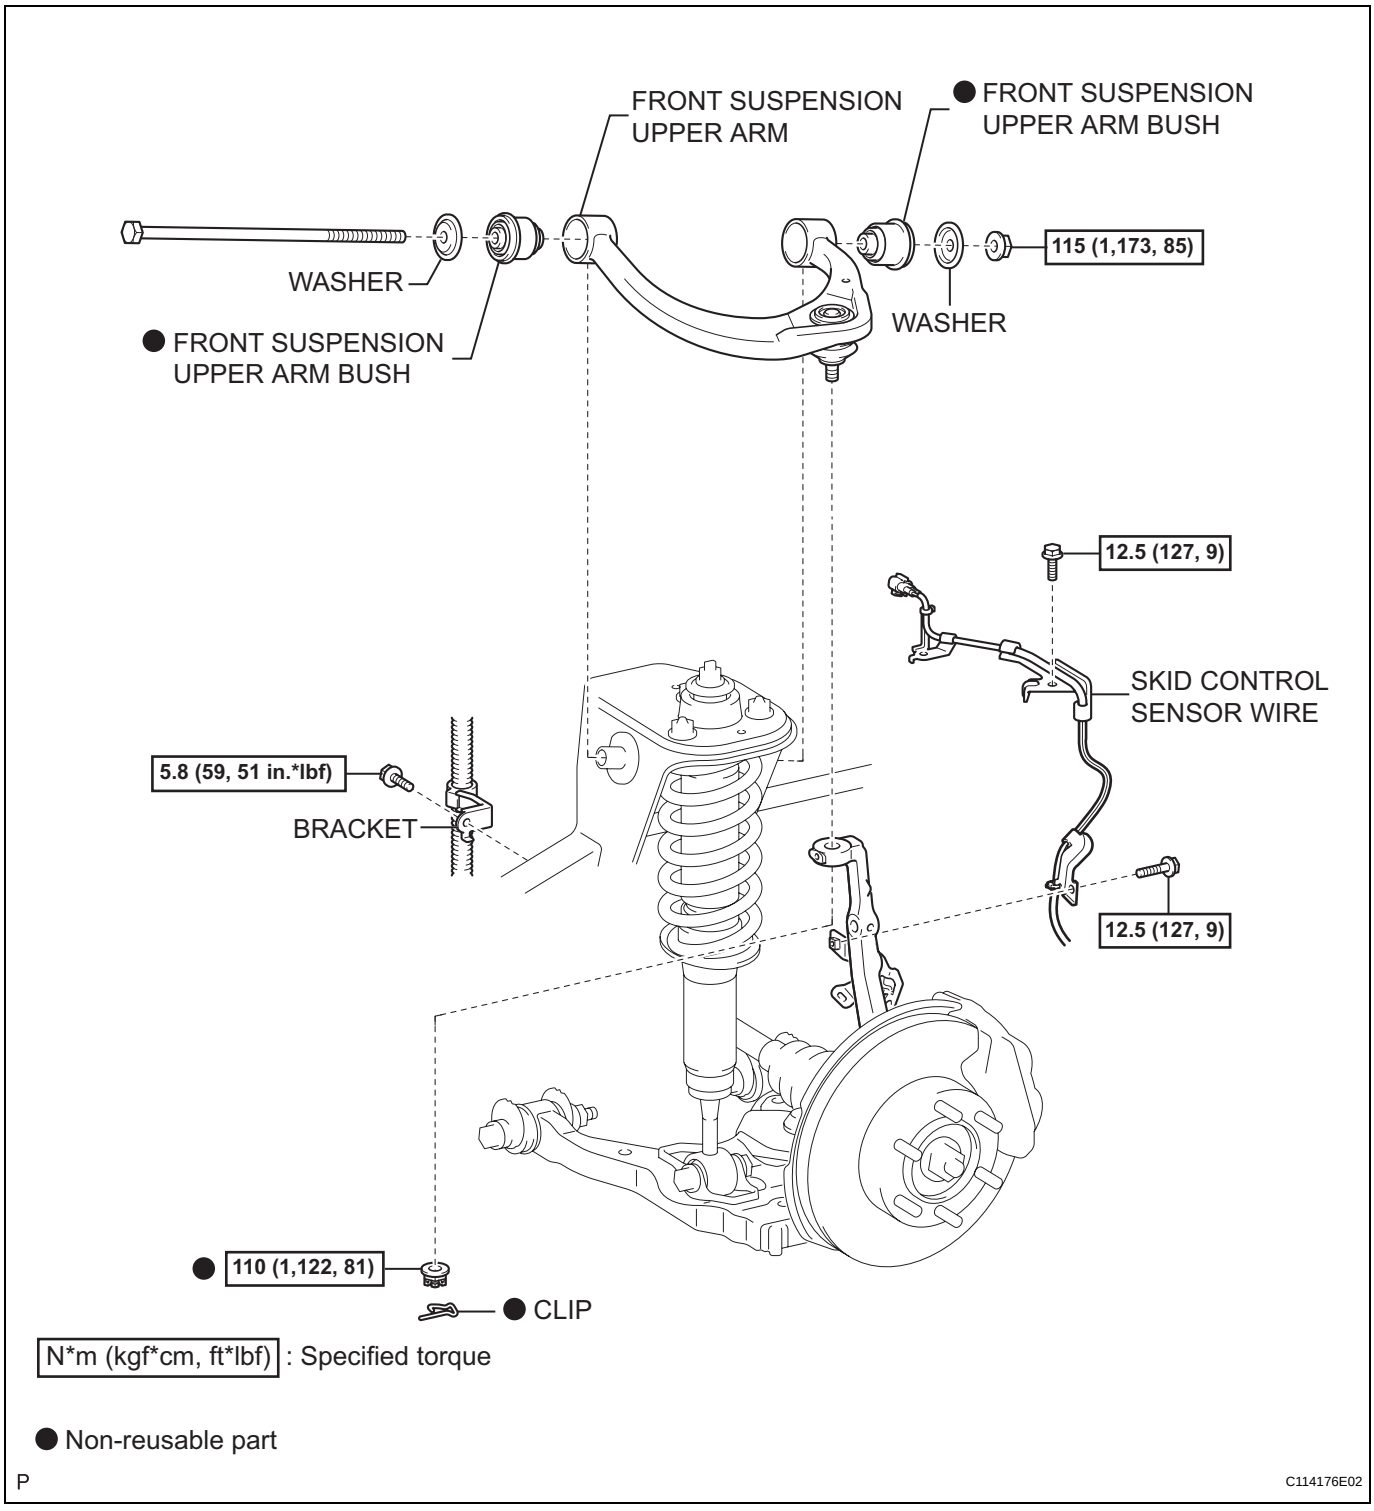


(d) Remove the 2 bolts.

(e) Remove the front suspension upper arm.

FRONT UPPER SUSPENSION ARM (for 4WD and Pre-Runner)

COMPONENTS



SP

REMOVAL

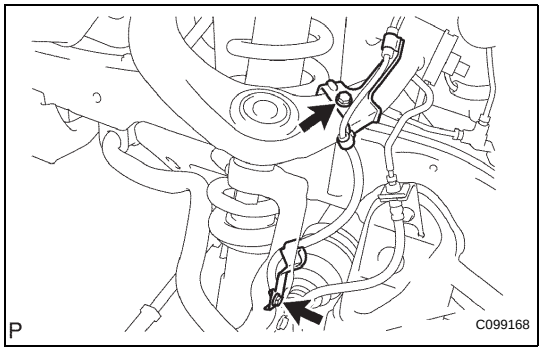
1. REMOVE FRONT WHEEL

2. INSPECT FRONT SUSPENSION UPPER ARM

(a) Check that there is no slack on the ball joint by shaking the upper arm up and down by hand.

3. SEPARATE SKID CONTROL SENSOR WIRE

(a) Remove the 2 bolts, and separate the skid control sensor wire.



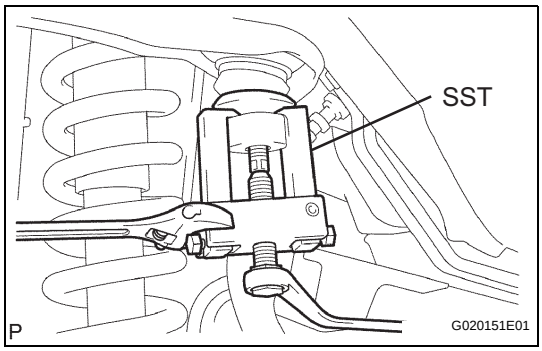
4. REMOVE FRONT SUSPENSION UPPER ARM

(a) Support the front suspension lower arm LH with a jack.

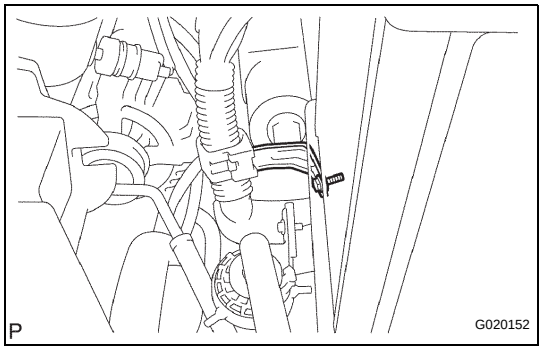
(b) Remove the clip and nut.

(c) Using SST, separate the upper ball joint from the steering knuckle.

SST 09628-62011

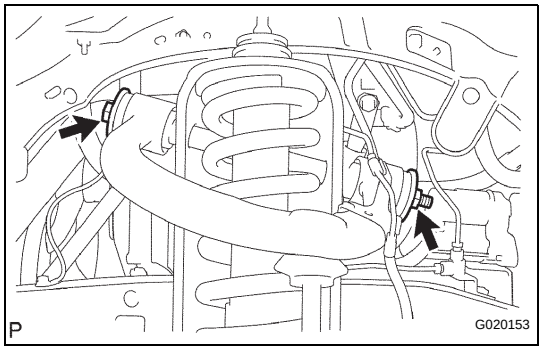


(d) Remove the bolt and bracket.



(e) Remove the bolt, 2 washers and nut.

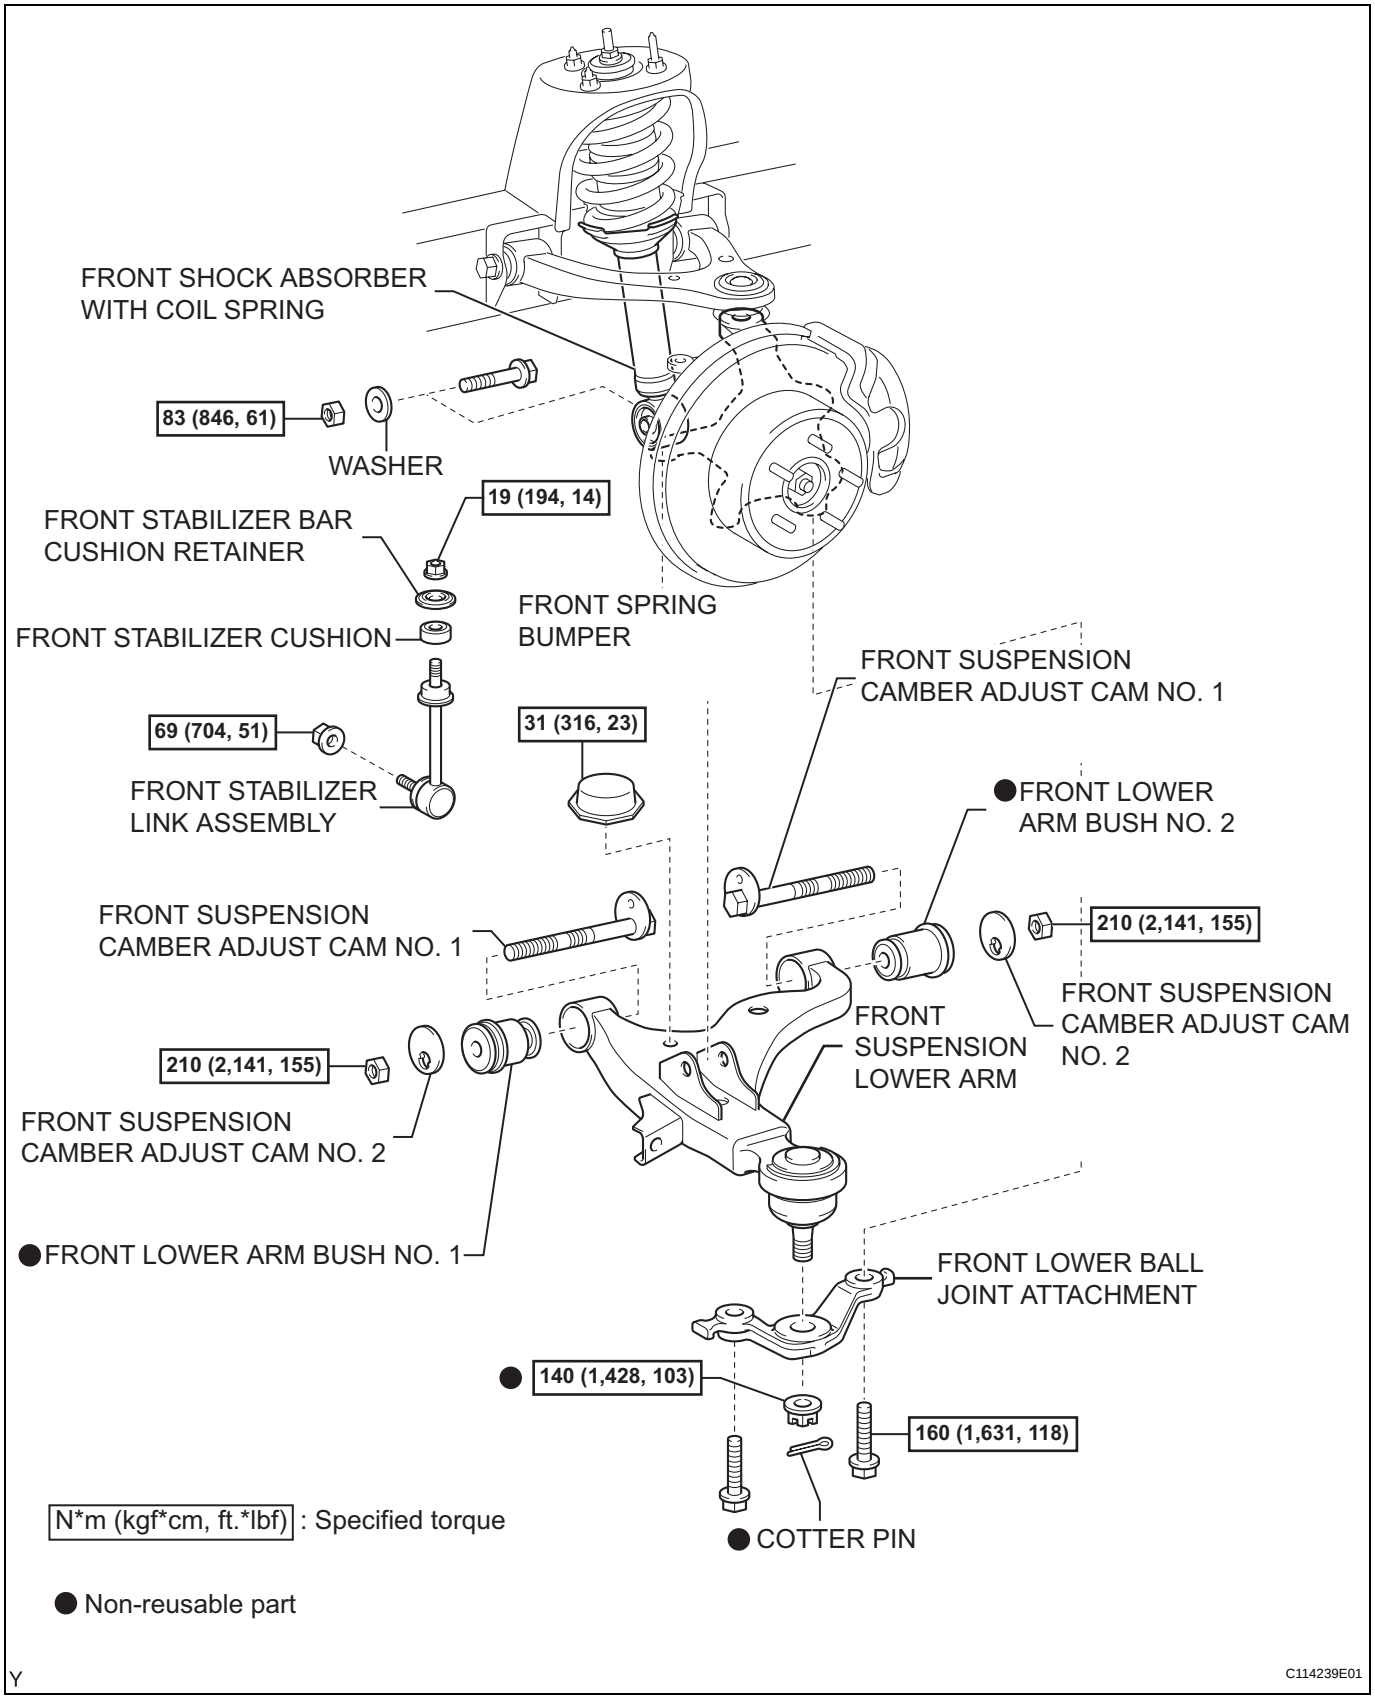
(f) Remove the front suspension upper arm.



SP

FRONT LOWER SUSPENSION ARM (for 2WD)

COMPONENTS



SP

REMOVAL

1. REMOVE FRONT WHEEL

2. INSPECT FRONT SUSPENSION LOWER ARM

(a) Install the hub nuts onto the disc.

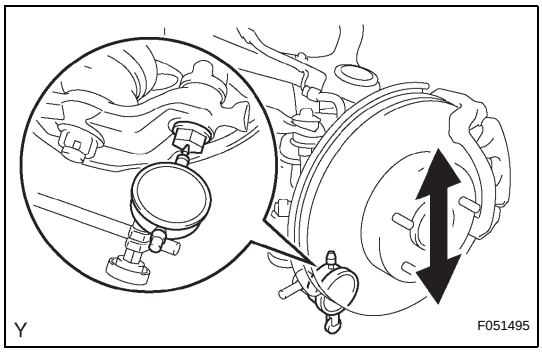
(b) Using a dial indicator, check the lower ball joint for excessive play when you push the hub nuts up and down with a force of 294 N (30 kgf, 66 lbf).

Maximum:

0.5 mm (0.020 in.)

HINT:

If it is not within the specification, replace the lower arm.

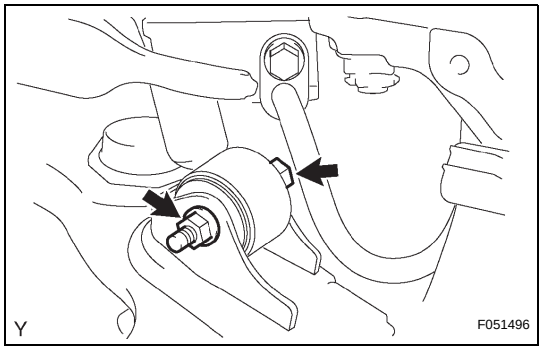


3. REMOVE FRONT STABILIZER LINK ASSEMBLY (See page SP-47)

4. SEPARATE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Remove the bolt, nut and washer.

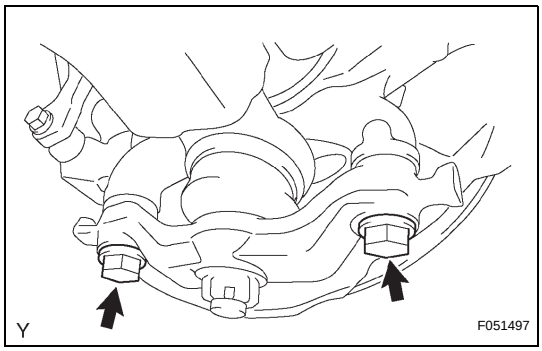
(b) Separate the front shock absorber with coil spring from the suspension lower arm.



SP

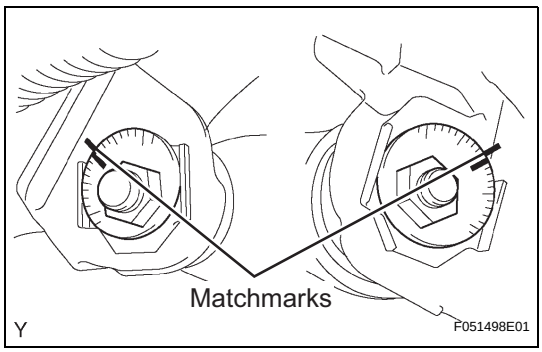
5. REMOVE FRONT SUSPENSION LOWER ARM

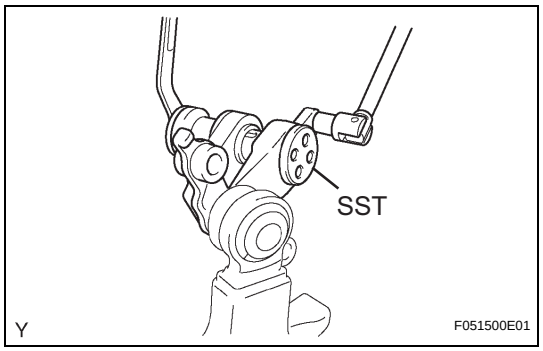
(a) Remove the 2 bolts, and separate the front lower ball joint attachment from the front axle.



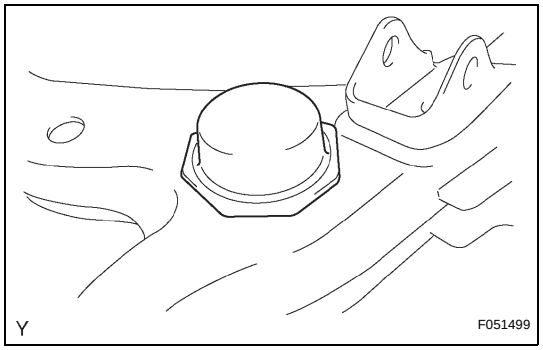
(b) Place matchmarks on the camber adjust cam No. 2.

(c) Remove the 2 nuts, 2 No. 2 camber adjust cams, 2 No. 1 camber adjust cams and front suspension lower arm.



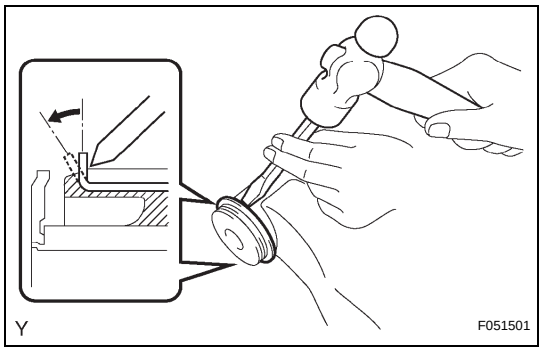


(d) Remove the cotter pin and nut.
(e) Using SST, remove the front lower ball joint attachment.
SST 09628-00011



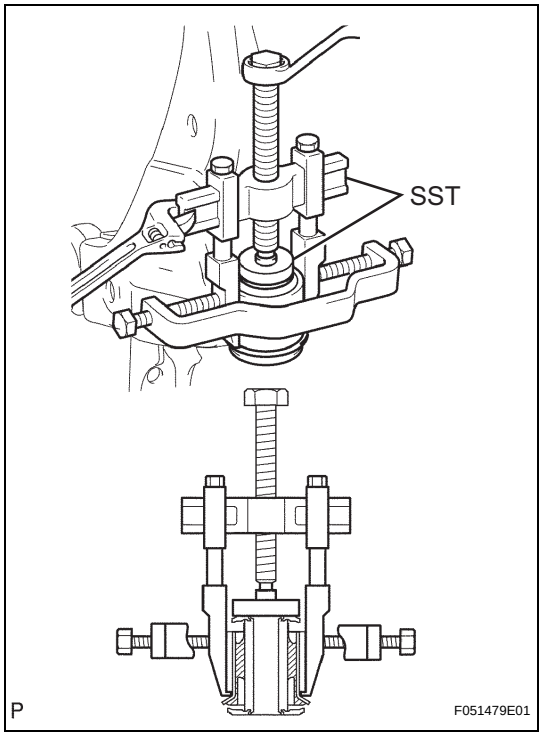
6. REMOVE FRONT SPRING BUMPER
(a) Remove the front spring bumper.

DISASSEMBLY

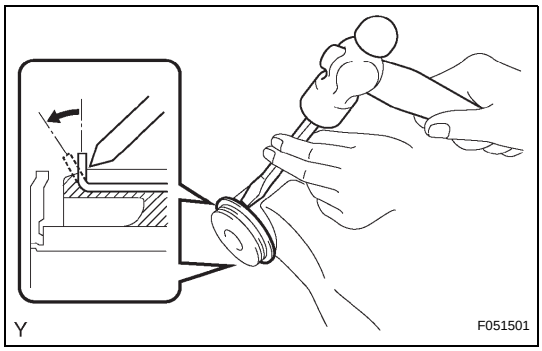


1. REMOVE FRONT LOWER ARM BUSH NO. 1
(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.

SP

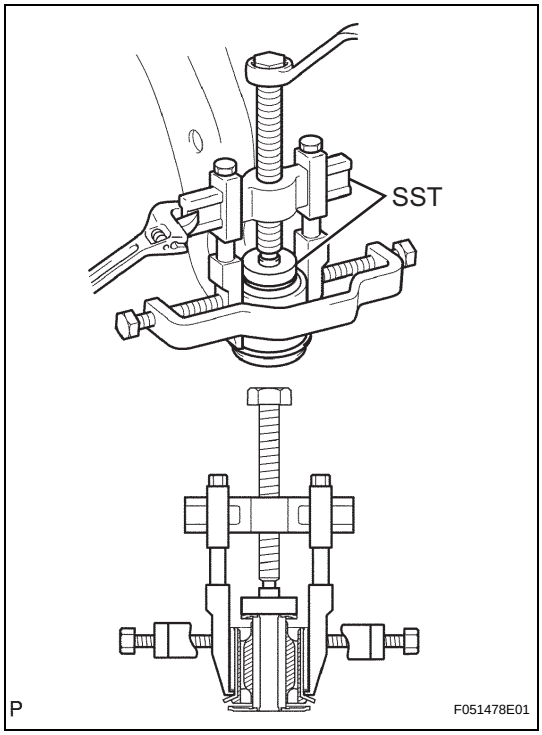


(b) Using SST, remove the lower arm bush.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00450)



2. REMOVE FRONT LOWER ARM BUSH NO. 2

(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.

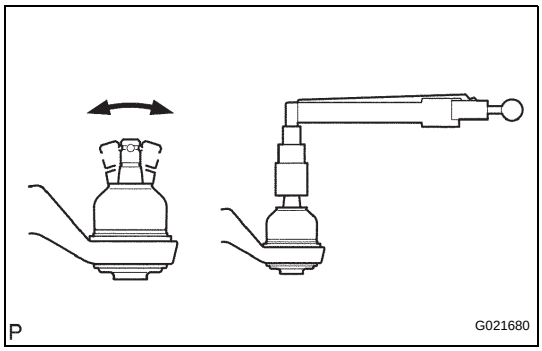


(b) Using SST, remove the lower arm bush.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00450)

SP

INSPECTION



1. INSPECT FRONT SUSPENSION LOWER ARM

(a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.

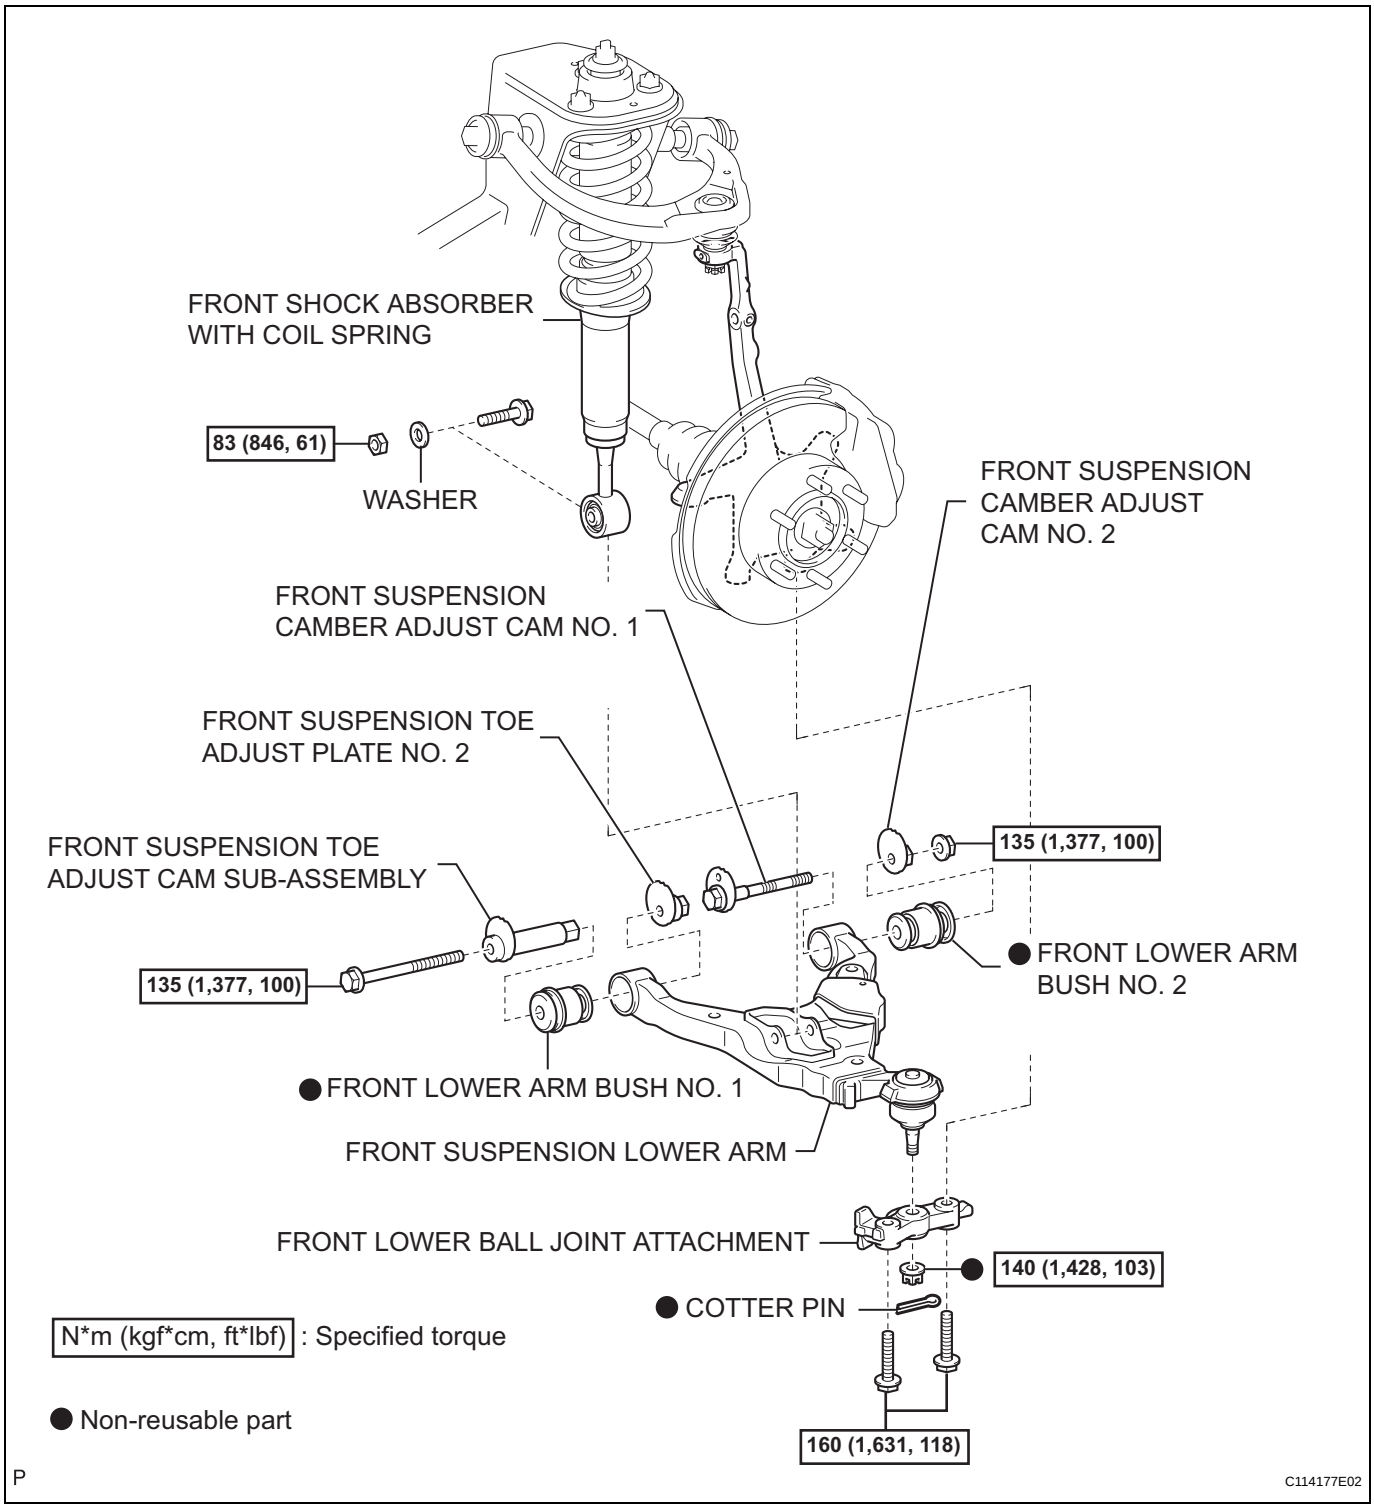
(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.

Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf) or less

(c) Check for any cracks and grease leakage on the ball joint dust cover.

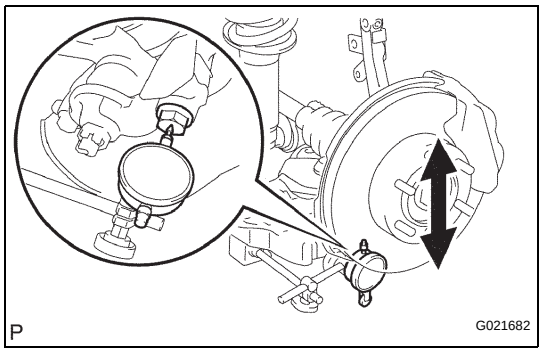
FRONT LOWER SUSPENSION ARM (for 4WD and Pre-Runner)

COMPONENTS



REMOVAL

1. REMOVE FRONT WHEEL



2. INSPECT FRONT SUSPENSION LOWER ARM

(a) Install the hub nuts onto the disc.

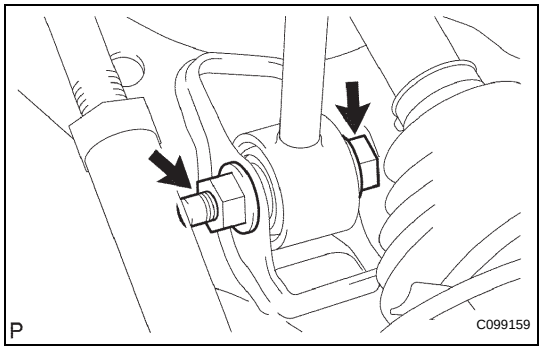
(b) Using a dial indicator, check the lower ball joint for excessive play when you push the hub nuts up and down with a force of 294 N (30 kgf, 66 lbf).

Maximum:

0.5 mm (0.020 in.)

HINT:

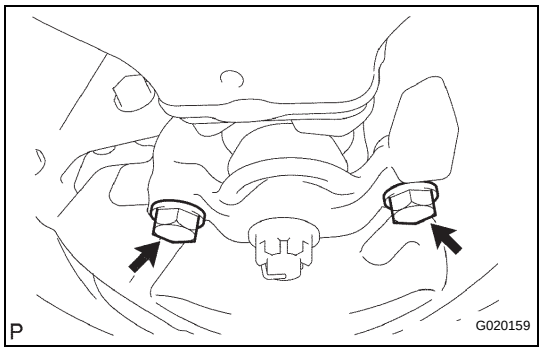
If it is not within the specification, replace the lower arm.



3. SEPARATE FRONT SHOCK ABSORBER WITH COIL SPRING

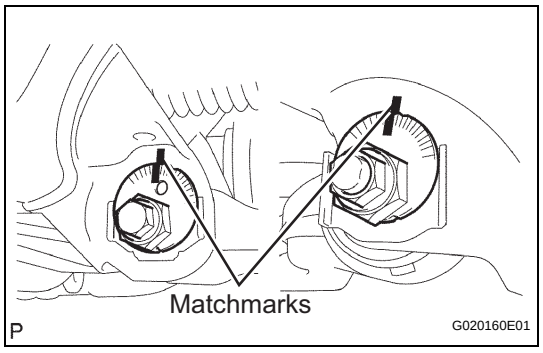
(a) Remove the bolt, nut and washer.

(b) Separate the front shock absorber with coil spring from the suspension lower arm.



4. REMOVE FRONT SUSPENSION LOWER ARM

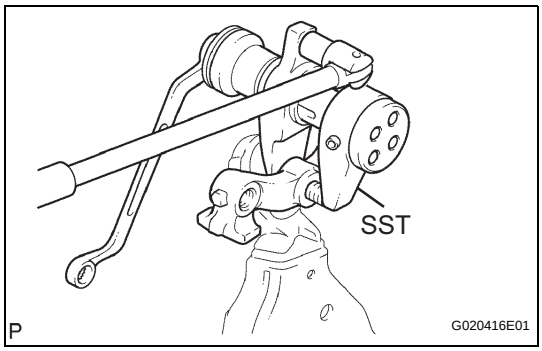
(a) Remove the 2 bolts, and separate the front lower ball joint attachment from the front axle.



(b) Place matchmarks on the camber adjust cam No. 2 and toe adjust cam.

(c) Remove the nut, camber adjust cam No. 2, camber adjust cam No. 1, bolt, toe adjust cam, toe adjust plate No. 2 and front suspension lower arm.

SP

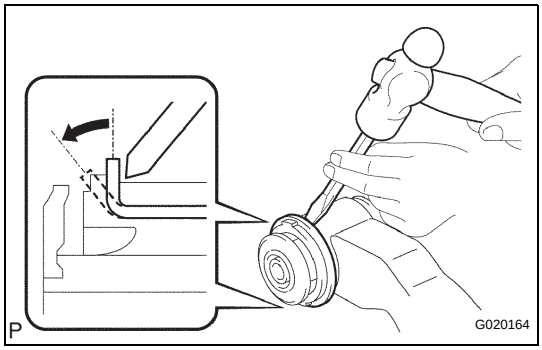


(d) Remove the cotter pin and the nut.
(e) Using SST, remove the front lower ball joint attachment LH.
SST 09628-00011

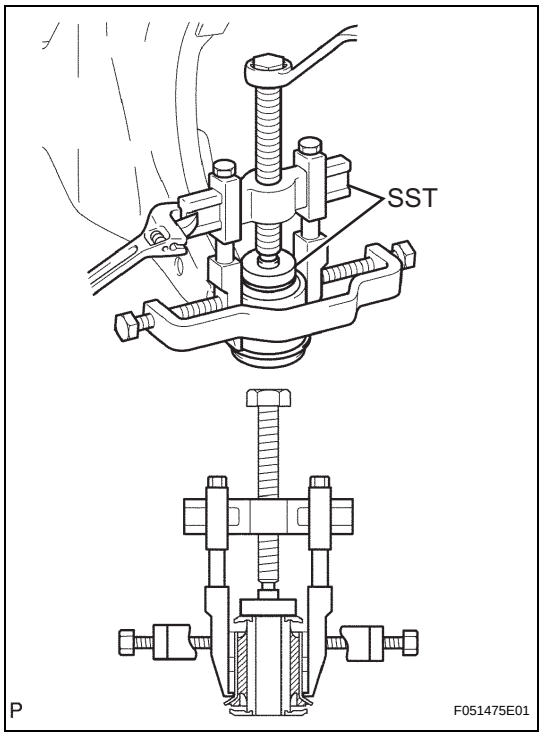
DISASSEMBLY

1. REMOVE FRONT LOWER ARM BUSH NO. 1

(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.

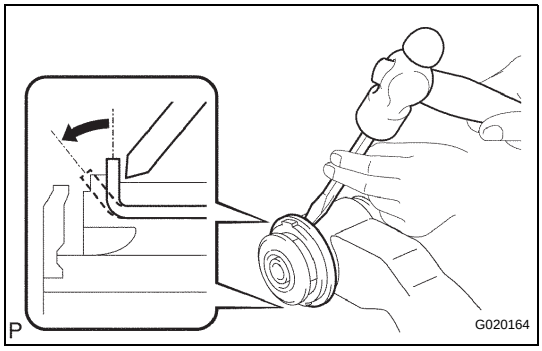


(b) Using SST, remove the lower arm bush.
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00470)



2. REMOVE FRONT LOWER ARM BUSH NO. 2

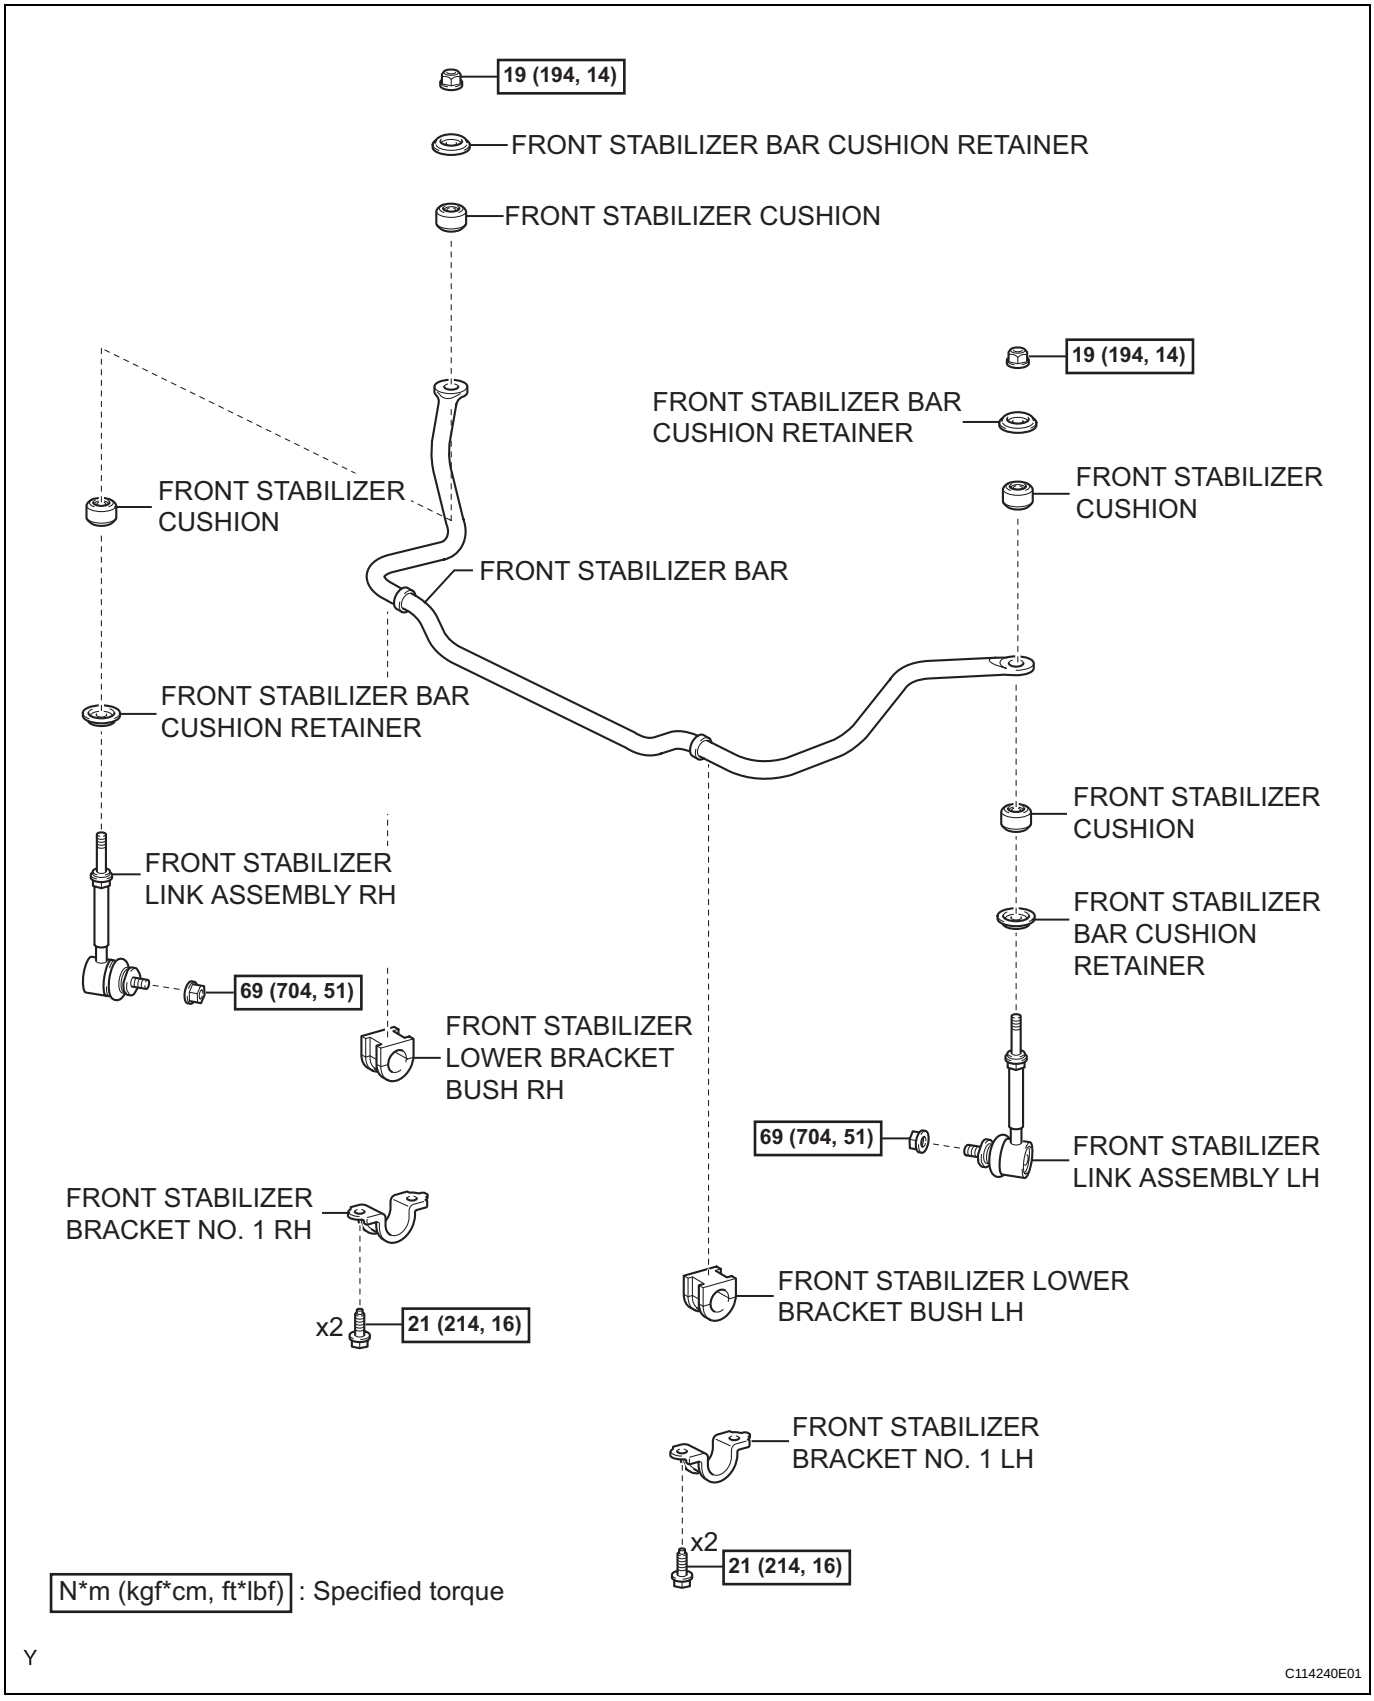
(a) Using a hammer and chisel, raise the flange of the bush diagonally as shown in the illustration.



SP

FRONT STABILIZER BAR (for 2WD)

COMPONENTS

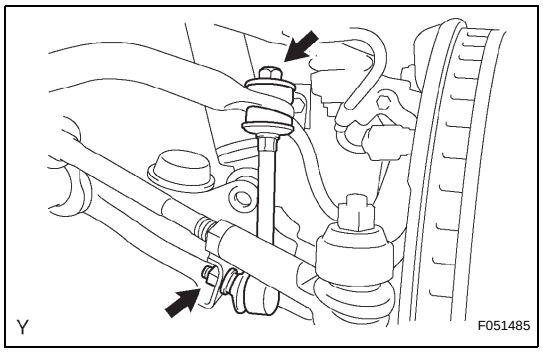


REMOVAL

1. REMOVE FRONT WHEELS

2. REMOVE FRONT STABILIZER LINK ASSEMBLY LH

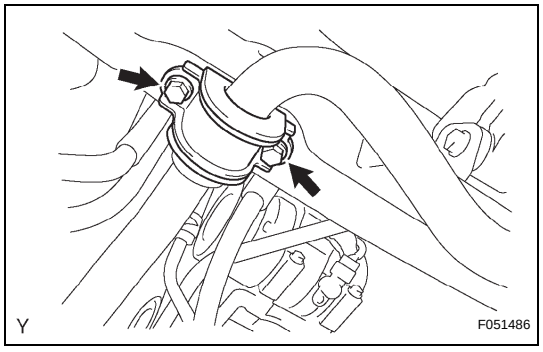
(a) Remove the 2 nuts, 2 retainers, 2 cushions and the front stabilizer link LH.
HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



3. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
The removal procedure for the RH side is the same as that for the LH side.

4. REMOVE FRONT STABILIZER BRACKET NO. 1 LH

(a) Remove the 2 bolts and front stabilizer bracket.



5. REMOVE FRONT STABILIZER BRACKET NO. 1 RH
HINT:
The removal procedure for the RH side is the same as that for the LH side.

6. REMOVE FRONT STABILIZER LOWER BRACKET BUSH LH

7. REMOVE FRONT STABILIZER LOWER BRACKET BUSH RH

8. REMOVE FRONT STABILIZER BAR

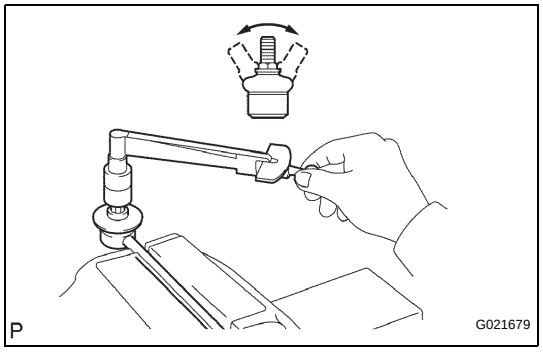
INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

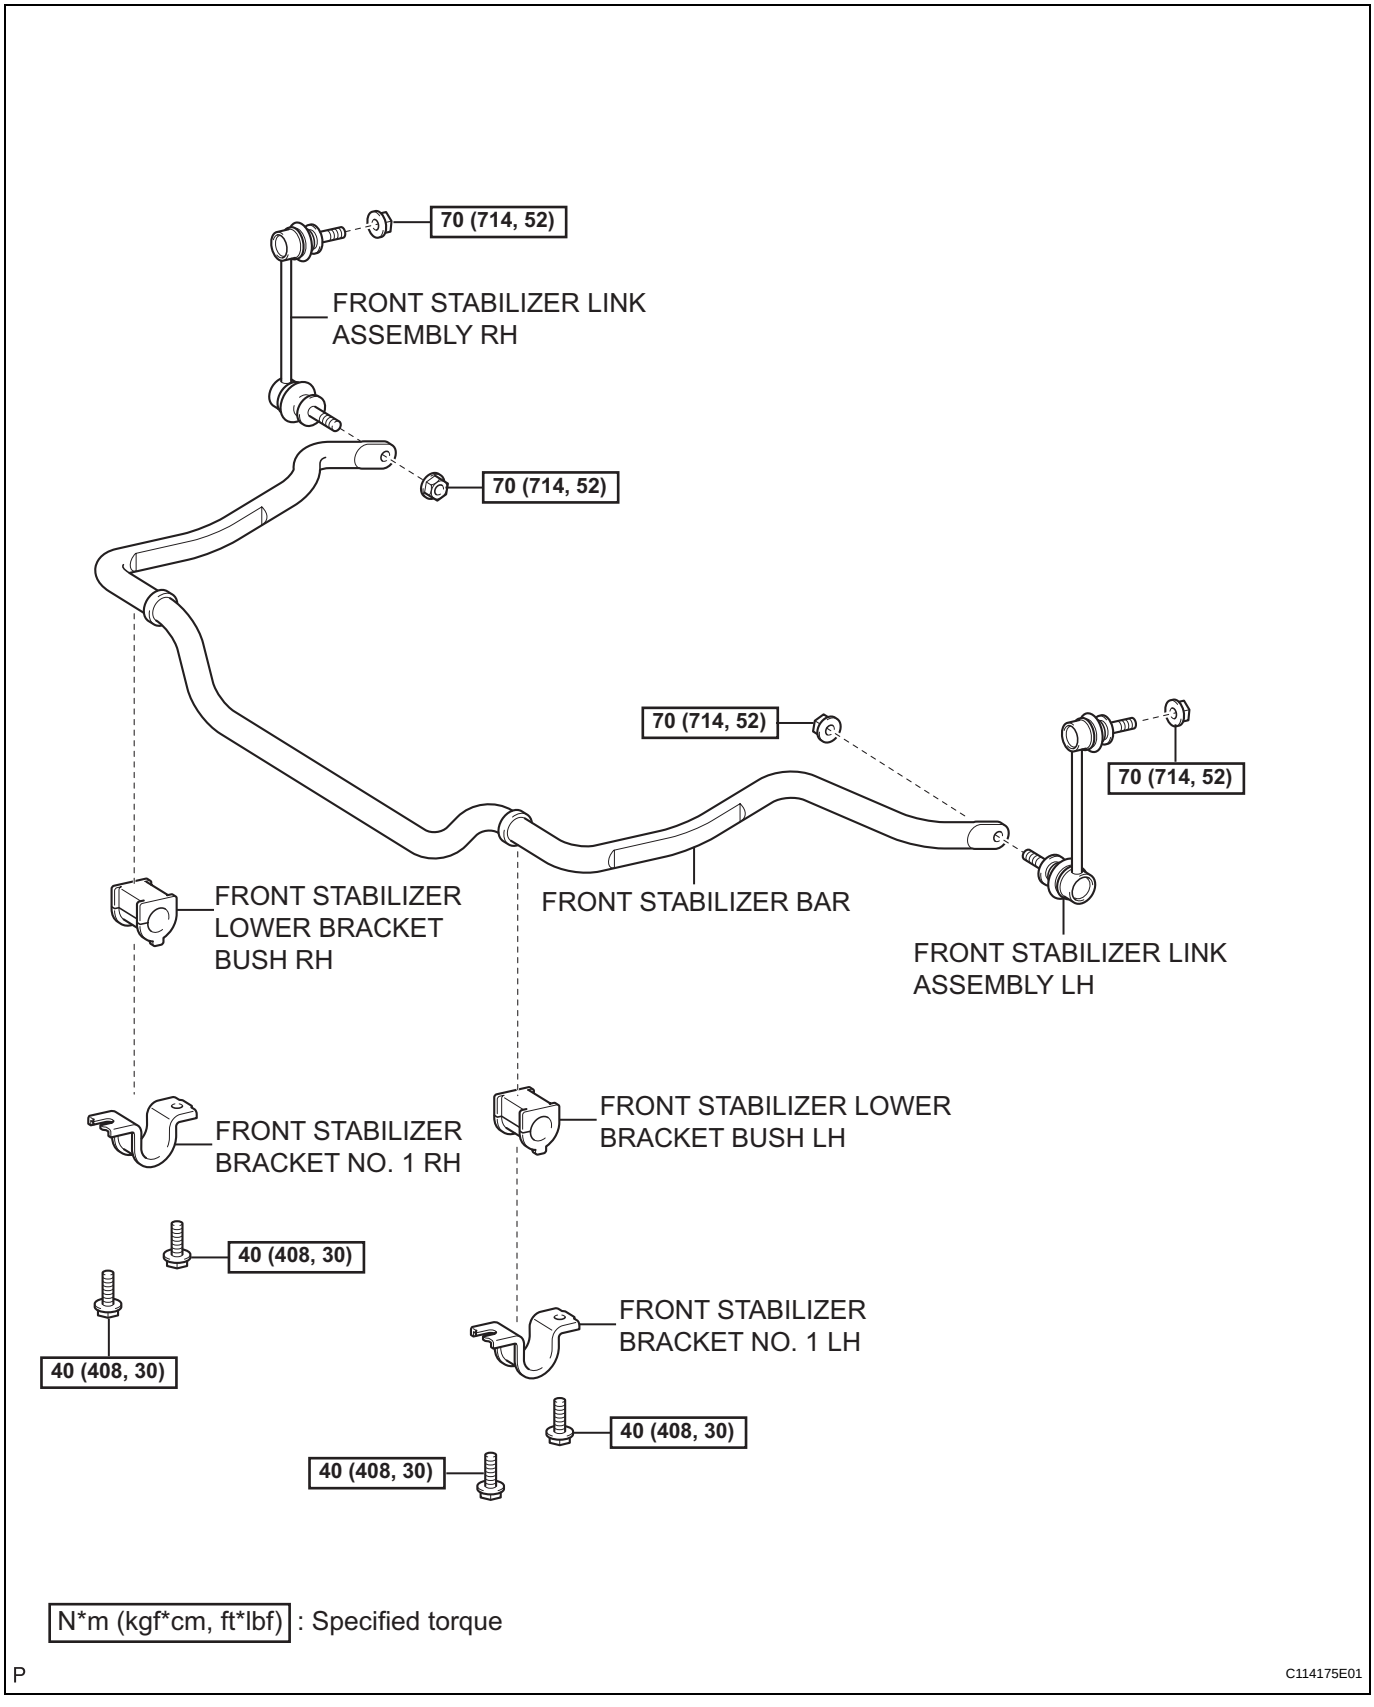
(c) Check for any cracks and grease leakage on the ball joint dust cover.



SP

FRONT STABILIZER BAR (for 4WD and Pre-Runner)

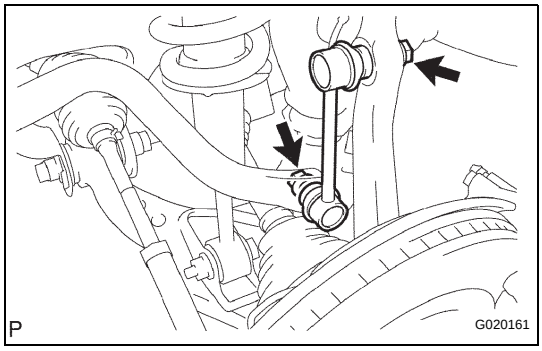
COMPONENTS



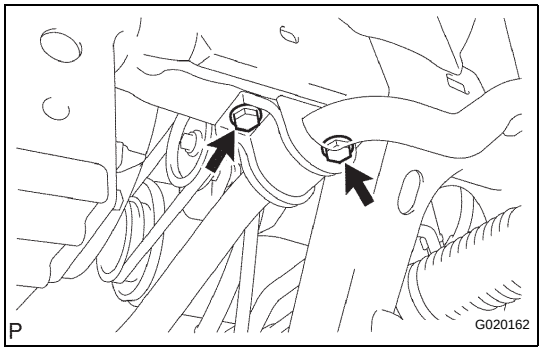
SP

REMOVAL

1. **REMOVE FRONT WHEELS**
2. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO. 1**
3. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Remove the 2 nuts and front stabilizer link LH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



4. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
5. **REMOVE FRONT STABILIZER BRACKET NO. 1 LH**
   (a) Remove the 2 bolts and front stabilizer bracket.



6. **REMOVE FRONT STABILIZER BRACKET NO. 1 RH**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
7. **REMOVE FRONT STABILIZER LOWER BRACKET BUSH LH**
8. **REMOVE FRONT STABILIZER LOWER BRACKET BUSH RH**
9. **REMOVE FRONT STABILIZER BAR**

INSPECTION

1. **INSPECT FRONT STABILIZER LINK ASSEMBLY**
   (a) Flip the ball joint stud back and forth 5 times, as shown in the illustration, before installing the nut.
   (b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
   Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf) or less
   (c) Check for any cracks and grease leakage on the ball joint dust cover.

N*m (kgf*cm, ft*lbf) : Specified torque

● Non-reusable part

Y

C114233E01

SP

REMOVAL

1. REMOVE REAR WHEEL

2. REMOVE REAR SHOCK ABSORBER

(a) Support the rear axle housing.

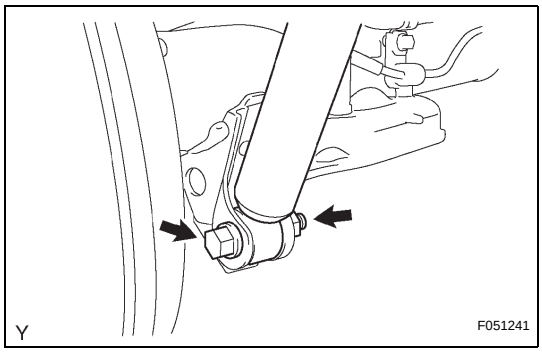
(b) Remove the bolt, nut and washer.

(c) for 2WD:

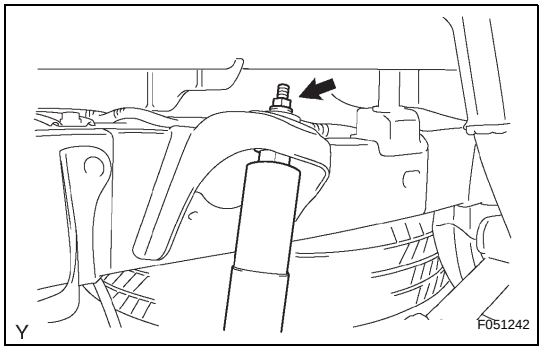
(1) Separate the shock absorber from the rear spring seat.

(d) for 4WD and Pre-Runner:

(1) Separate the shock absorber from the rear axle housing.



(e) Remove the nut, 3 cushion retainers, cushion No. 1, cushion No. 3 and shock absorber.

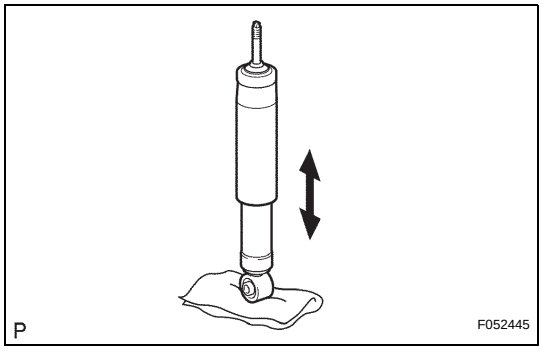


SP

INSPECTION

1. INSPECT REAR SHOCK ABSORBER

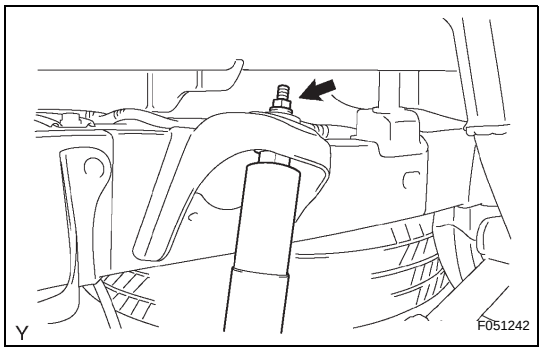
(a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or abnormal sounds during operation.
If there is any abnormality, replace the shock absorber with a new one.
NOTICE:
When disposing of the shock absorber, see DISPOSAL on page SP-61.

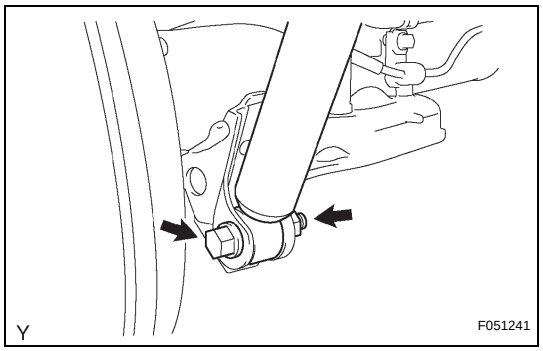


INSTALLATION

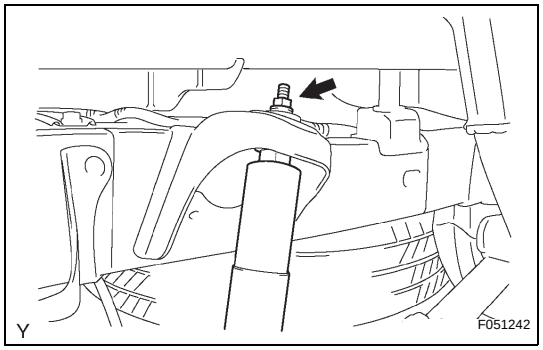
1. INSTALL REAR SHOCK ABSORBER

(a) Install the 3 cushion retainers, cushion No. 1, cushion No. 3 and shock absorber with a new nut.





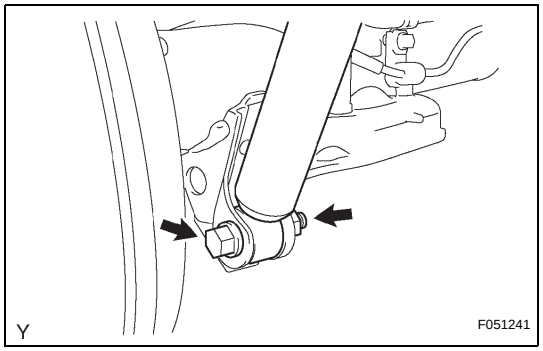
(b) Install the shock absorber with the bolt, nut and washer.



(c) Fully tighten the nut.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

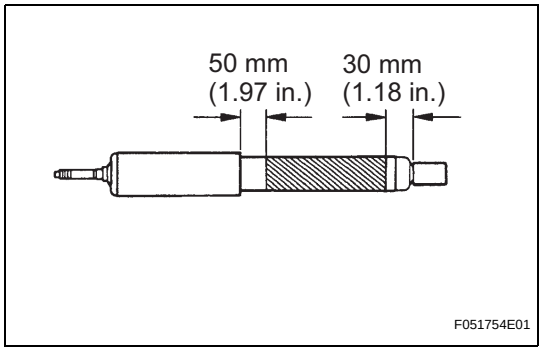
2. INSTALL REAR WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

3. STABILIZE SUSPENSION
(a) Jack down the vehicle.
(b) Bounce the vehicle up and down several times to stabilize the suspension.



4. FULLY TIGHTEN REAR SHOCK ABSORBER
(a) Fully tighten the nut.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

SP

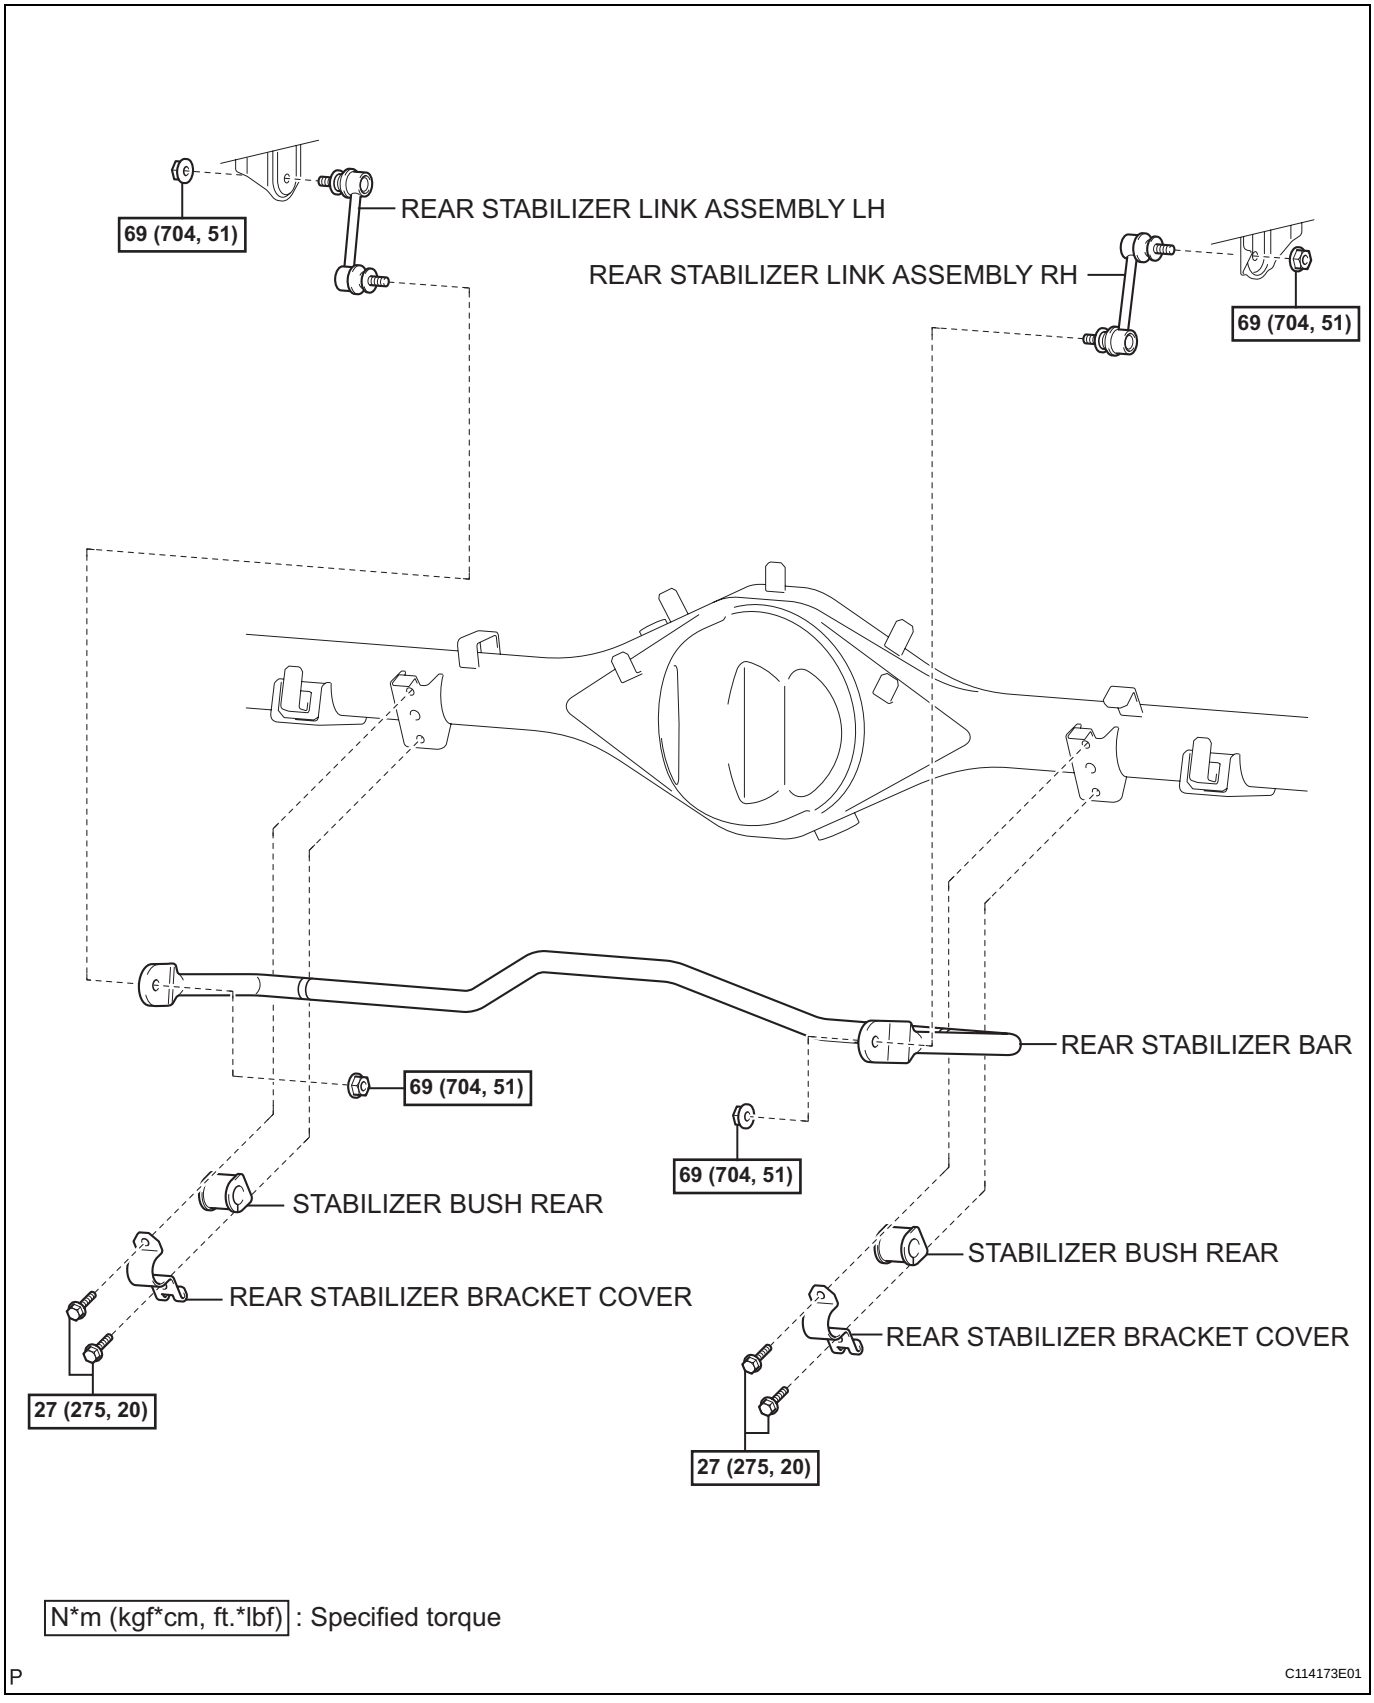


DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER
(a) Fully extend the shock absorber rod.
(b) Using a drill, make a hole in the shaded area of the cylinder as shown in the illustration, to discharge the gas inside.
CAUTION:
- **Be careful when drilling because shards of metal may scatter.**
- **The gas is colorless, odorless and non-poisonous.**

REAR STABILIZER BAR (for Sport Suspension Package)

COMPONENTS



SP

N*m (kgf*cm, ft.*lbf) : Specified torque

P

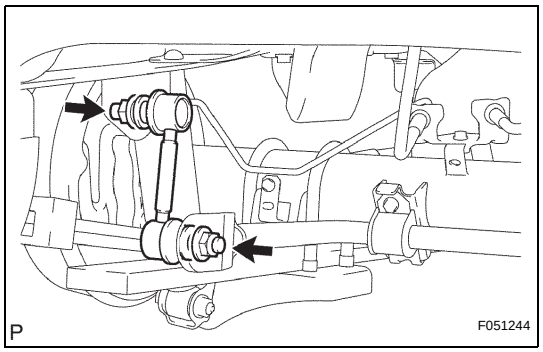
C114173E01

REMOVAL

1. REMOVE REAR WHEEL

2. REMOVE REAR STABILIZER LINK ASSEMBLY LH

(a) Remove the 2 nuts and stabilizer link (LH side).
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

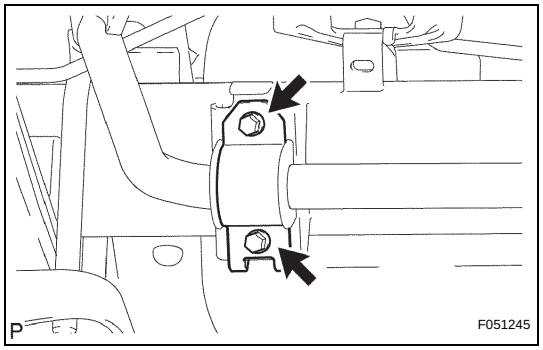


3. REMOVE REAR STABILIZER LINK ASSEMBLY RH

HINT:
The removal procedure for the RH side is the same as that for the LH side.

4. REMOVE REAR STABILIZER BAR

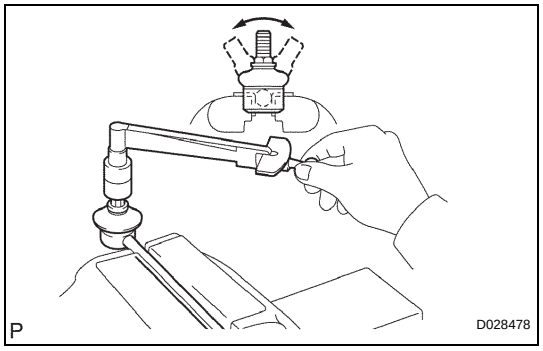
(a) Remove the 4 bolts, 2 stabilizer brackets and stabilizer bar.
(b) Remove the 2 stabilizer bushes from the stabilizer bar.



INSPECTION

1. INSPECT REAR STABILIZER LINK ASSEMBLY

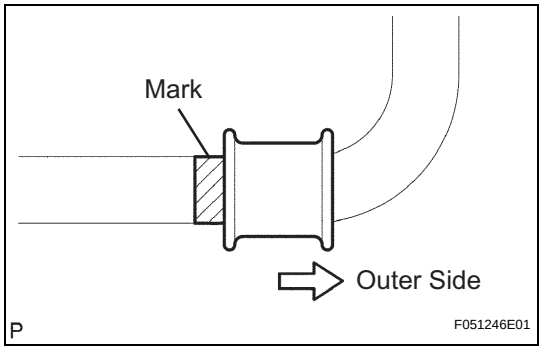
(a) Flip the ball joint back and forth 5 times, as shown in the illustration, before installing the nut.
(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn, and take the torque reading on the 5th turn.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf) or less
(c) Check for any cracks and grease leakage on the ball joint dust cover.



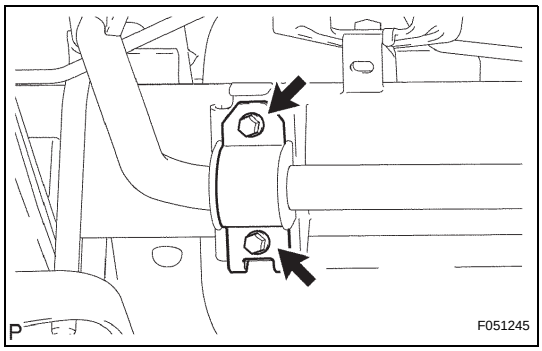
INSTALLATION

1. INSTALL REAR STABILIZER BAR

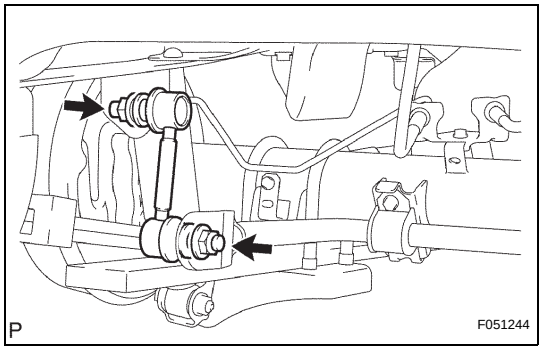
(a) Install the 2 stabilizer bushes onto the stabilizer bar.
HINT:
Install the stabilizer bush onto the outer side of the mark on the stabilizer bar.



SP



(b) Install the stabilizer bar and 2 stabilizer brackets with the 4 bolts.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)



2. INSTALL REAR STABILIZER LINK ASSEMBLY LH

(a) Install the stabilizer link with the 2 nuts.
Torque: 69 N*m (704 kgf*cm, 51 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

3. INSTALL REAR STABILIZER LINK ASSEMBLY RH
NOTICE:
The installation procedure for the RH side is the same as that for the LH side.

4. INSTALL REAR WHEEL
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

SP

TIRE AND WHEEL SYSTEM

PRECAUTION

1. REMOVAL AND INSTALLATION OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) When installing a tire, make sure that the tire pressure warning valve and transmitter does not interfere with the tire bead in order to prevent damage to the sensor.

(b) After completing the operation, remove the valve core to rapidly release air and check that the warning light comes on. If not, the system may have a defect.

(c) If there is air leakage, tighten the nut to 4.0 N*m (41 kgf*cm, 35 in.*lbf) and push the valve core 2 or 3 times to remove any dirt attached to the valve core. If there is still air leakage, replace the grommet, the washer and the nut all together.

(d) When installing the tire pressure warning valve and transmitter, check whether the rim, grommet, washer and nut are clean. Use a manufacturer-specified cap.

(e) When putting air into the tire, first install the tire pressure valve straight onto the stem of the tire pressure warning valve and transmitter.

2. TIRE AND WHEEL REPLACEMENT OR TIRE ROTATION

(a) When replacing the tires, be sure to check if the grommet of the tire valve is damaged. If so, replace the grommet together with the washer and nut.

(b) When the tires and wheels are replaced, make sure to register the transmitter ID.

NOTICE:

Transmitter IDs of all tires including spare on vehicle should be correspond to IDs registered in ECU.

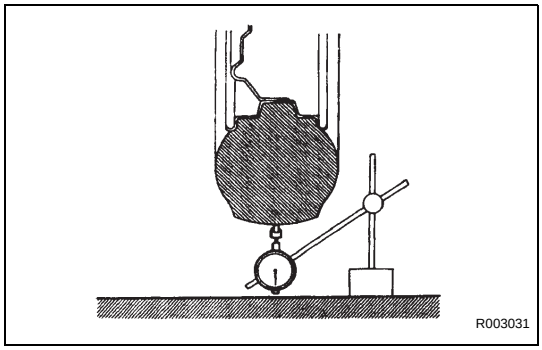
INSPECTION

1. INSPECT TIRES

(a) Check the tires for wear and proper inflation pressure.

Cold tire inflation pressure

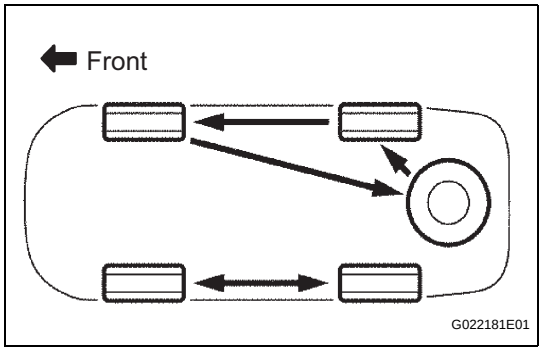
Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)
P215/70R15 97S	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P255/45R18 99V	240 (2.4, 35)	240 (2.4, 35)	240 (2.4, 35)
P245/75R16 109S	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)
P265/70R16 111T	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P265/65R17 110S	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)



(b) Using a dial indicator, check the tire runout.

Tire runout:

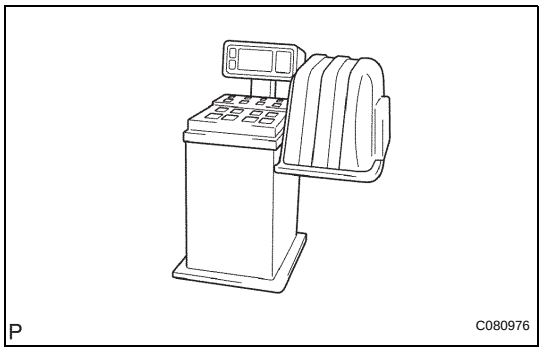
3.0 mm (0.118 in.) or less



2. ROTATE TIRES

HINT:

See the illustration on the left for how to rotate the tires, when you include the spare tire in the rotation.



3. INSPECT WHEEL BALANCE

(a) Perform off-car balancing.

(b) If necessary, perform on-car balancing.

Imbalance after adjustment:

8 g (0.018 lb) or less

4. INSPECT FRONT AXLE HUB BEARING (See page AH-1)

5. INSPECT REAR AXLE HUB BEARING (See page AH-2)

TW

TIRE PRESSURE WARNING SYSTEM

PRECAUTION

1. TIRE PRESSURE WARNING SYSTEM PRECAUTION

(a) Under the following conditions, the system may not function properly;
- Areas, facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.
- Large amounts snow or ice are stuck to the vehicle, especially on the wheels and around the wheel houses.
- The battery of the transmitter is depleted.
- Tires and wheels without tire pressure warning valves and transmitters are used.
- Snow tires and tire chains are used.
- If wheels other than the specified ones are used, the system may not function properly because different radio waves are transmitted from the tire pressure warning valve and transmitter.
- Depending on the tire type, the tire pressure warning valve and transmitter may not function properly even though the specified wheels are used.
- The system may not function properly if it is initialized with tire pressures which are not the specified values.

(b) Tire and wheel replacement or tire rotation.
- After tires or wheels are replaced, it is necessary to register the transmitter IDs of the new tire pressure warning valve and transmitters (See page TW-11).
- It is not necessary to register the transmitter IDs when only tire rotation is performed.
- When a tire needs to be removed from a wheel, first drop the tire pressure warning valve and transmitter into the tire (See page TW-95).
  NOTICE:
  Always drop the tire pressure warning valve and transmitter into the tire first. Otherwise, the tire bead and tire pressure warning valve and transmitter come into contact with each other, causing damage to the tire pressure warning valve and transmitter.
- The initialization is necessary to reset the warning threshold in accordance with variant tire pressure settings due to tire types.

(c) When replacing the tire pressure warning ECU and the tire pressure warning valves and transmitters;
It is necessary to perform the initialization (See page TW-15) after the registration (See page TW-11).

(d) Precautions about the tire pressure;
- The tire pressures decrease naturally.
- In winter, tire pressures may decrease due to low ambient temperatures (tire pressure decreases by approximately 10 kPa (0.2 kgf/cm^2, 1.45 psi) for every 10°C (50°F) drop in the ambient temperature).
  Therefore, the tire pressure warning is more likely to operate if the tire pressures are not adjusted appropriately.
  If the daily temperature variation is large, pressurize the tires high so that the tire pressures are suitable under cold conditions. Incorrect tire pressure warning operation becomes less likely.

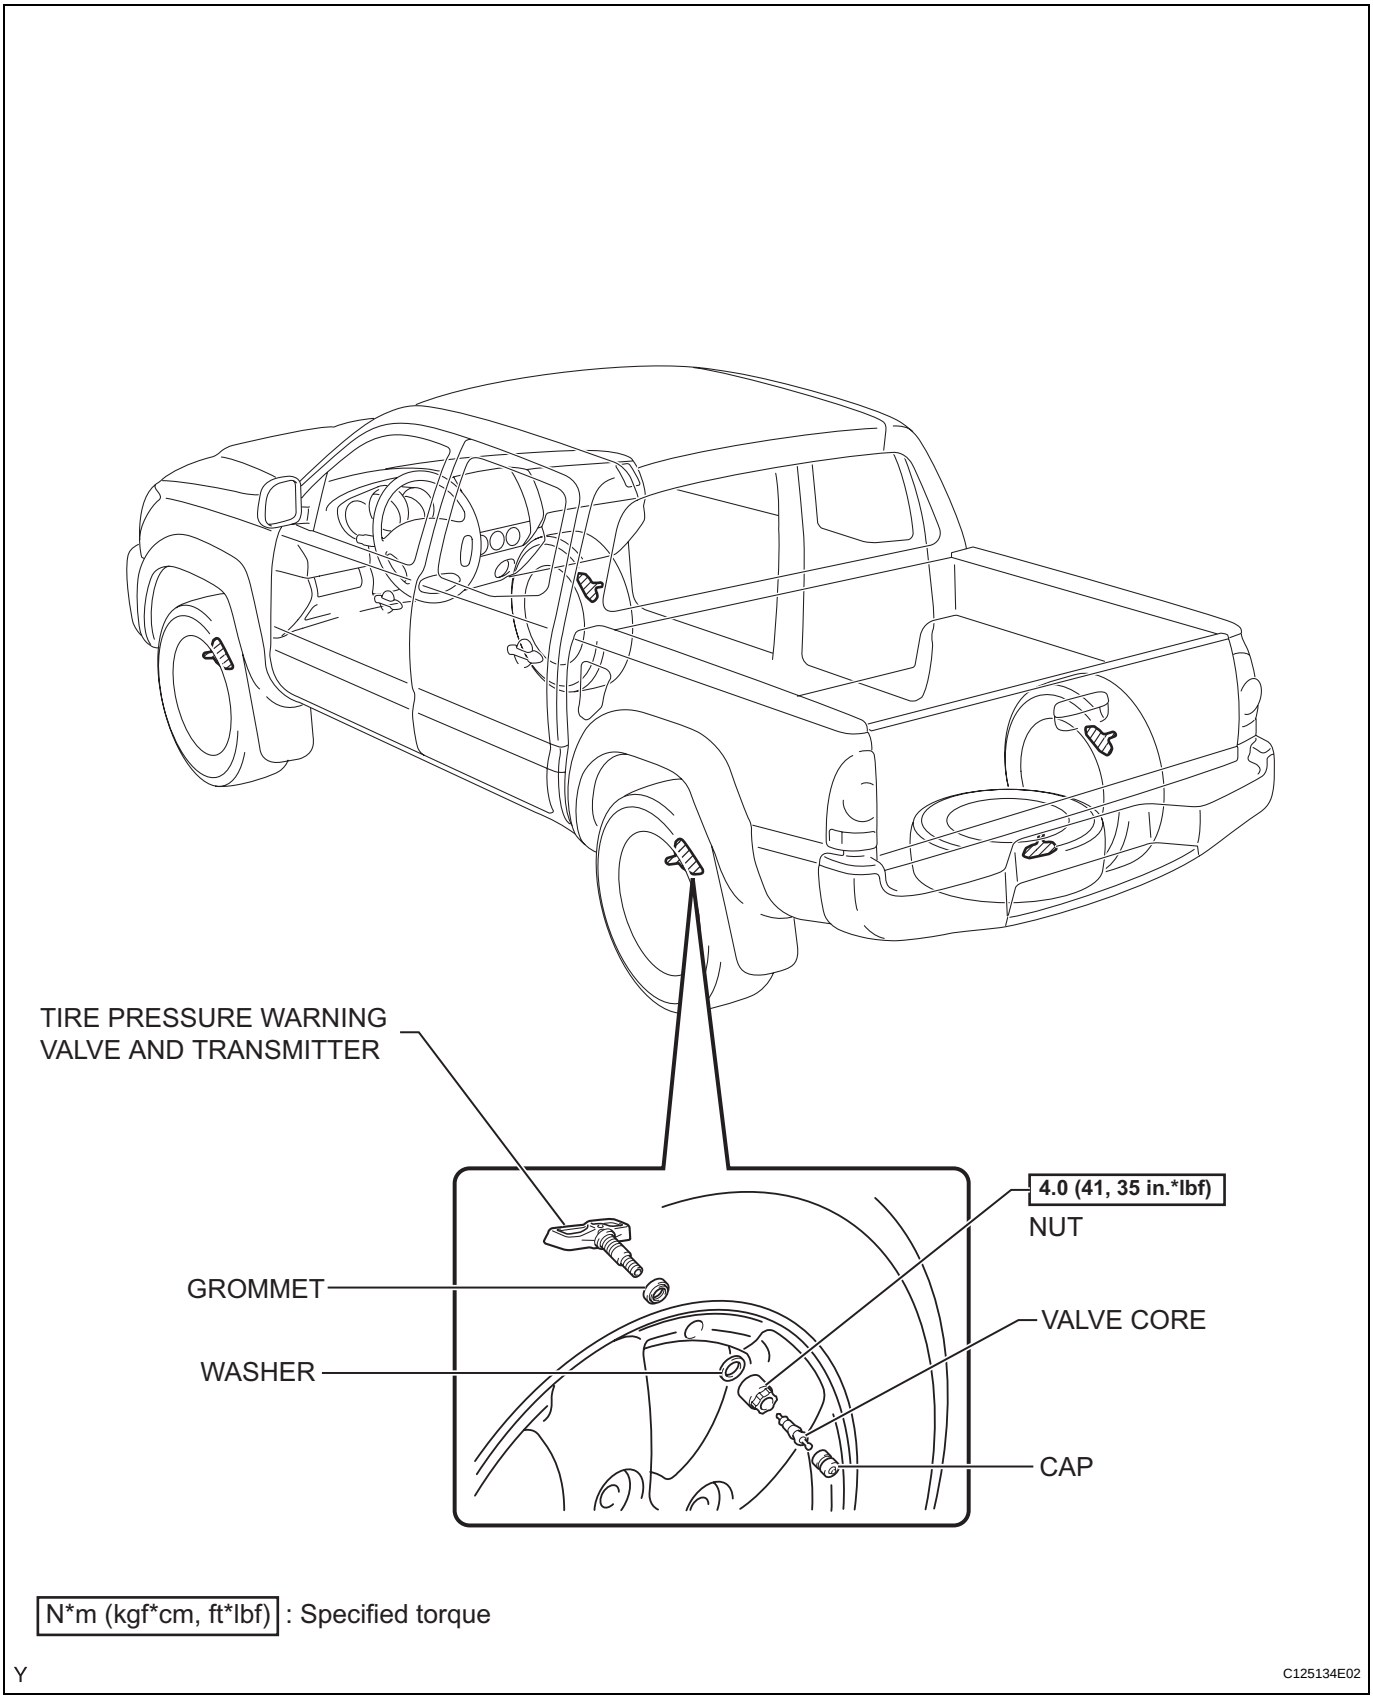
TIRE PRESSURE WARNING VALVE AND TRANSMITTER

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

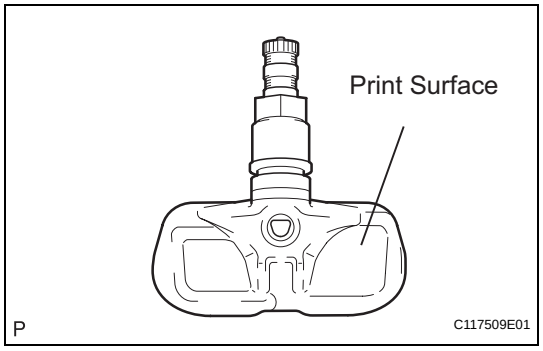
Y

C125134E02

REMOVAL

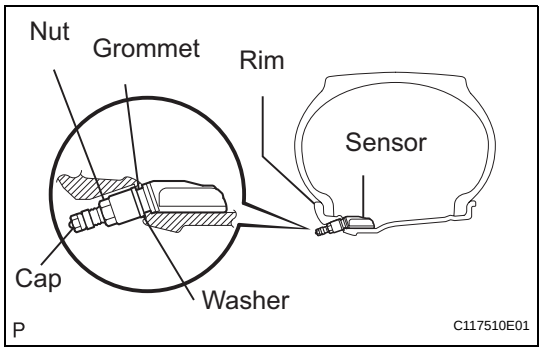
1. **REMOVE FRONT TIRE**
2. **REMOVE REAR TIRE**
3. **REMOVE SPARE TIRE**
4. **REMOVE TIRE PRESSURE WARNING VALVE AND TRANSMITTER**
   (a) Remove the valve core and the cap, and release air from the tire.
   (b) After ensuring that air is sufficiently released, remove the nut and washer that are used to fix the tire pressure warning valve and transmitter and drop the valve sensor inside the tire.
   HINT:
   Keep the removed cap, valve core, nut and washer.

   (c) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of the tire remover.
   NOTICE:
   Do not damage the tire pressure warning valve and transmitter because of interference between the sensor and tire bead.
   (d) Remove the bead on the upper side.
   (e) Take the valve sensor out of the tire and remove the bead on the valve.
   HINT:
   Check that there are no cracks or damage to the grommet. If any damage is found, replace the grommet together with the washer and nut.



INSTALLATION

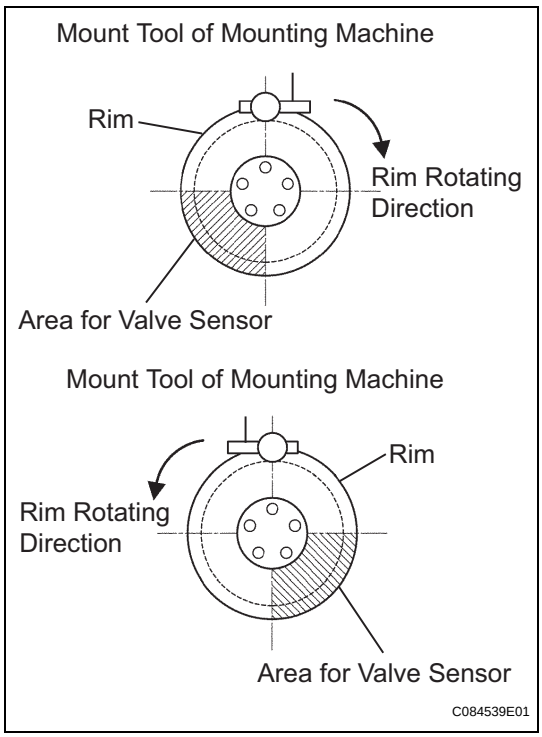
1. **INSTALL TIRE PRESSURE WARNING VALVE AND TRANSMITTER**
   (a) Insert the tire pressure warning valve and transmitter into the valve installation hole. Insert it from the inside of the rim so that the print surface can be seen.
   NOTICE:
   - **Check that there is no visible deformation, damage or other abnormalities in the transmitter.**
   - **Check that there is no foreign matter on the inner grommet and around the rim hole.**
   - **If installed in the reverse direction, the tire pressure warning valve and transmitter may be damaged or fail to transmit signals when running at high speed.**
   - **If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.**
   - **It is necessary to register the ID in the ECU after installation (See page TW-11).**



(b) Install the washer onto the tire pressure warning valve and transmitter from the rim side and tighten it with the nut.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
NOTICE:
- **The specified torque only applies the first time washer is used.**
- **Check that there is no foreign matter on the washer or nut.**
- **If the tire pressure warning valve and transmitter is removed when the tire is removed for replacement, check that there is no damage or cuts, and no foreign matter such as mud, dirt or sand attached to the grommet. Replace the grommet with a new one if necessary.**
- **Check that there is no oil, water or lubricant around the rim hole, tire pressure warning valve and transmitter, washer and nut. Failing to check may result in improper installation.**

(c) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque and then check for air leaks with soapy water.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
NOTICE:
The specified torque only applies the first time washer is used.

TW



(d) Set the wheel disc to the mounting machine and install the lower tire bead. Position the main body of the valve sensor in the shaded area shown in the illustration.
NOTICE:
If the valve sensor is positioned outside this area, it generates interference with the tire bead, causing possible damage to the valve sensor.

(e) Install the upper bead.
NOTICE:
Make sure that the tire bead and tool do not interfere with the main body of the valve sensor and that the valve sensor is not interfered with the bead.

2. **INSTALL FRONT WHEEL**
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

3. **INSTALL REAR WHEEL**
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

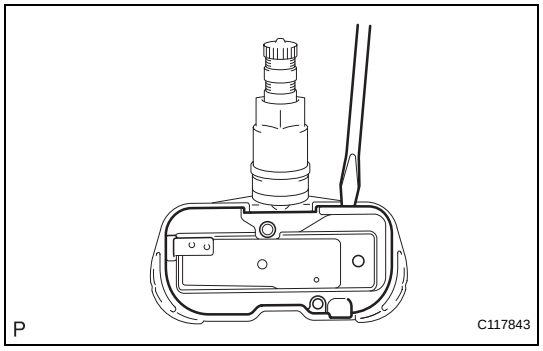
4. **INSTALL SPARE TIRE**

5. **REGISTER TRANSMITTER ID (See page TW-11)**

6. **INSPECT TIRE PRESSURE WARNING SYSTEM**
(See page TW-11)

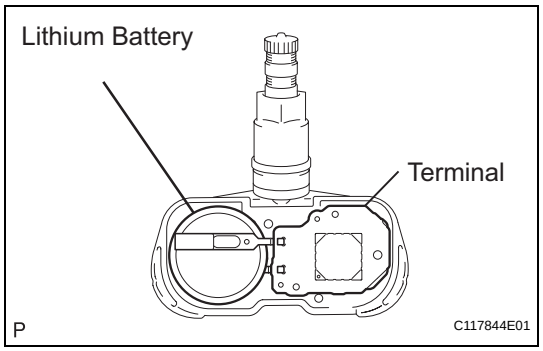
DISPOSAL

HINT:
The tire pressure warning valve and transmitter is powered by a lithium battery. When disposing of the tire pressure warning valve and transmitter, remove the battery and dispose of it correctly.



1. DISPOSE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Using a screwdriver, pry off the cover. Remove the back cover.



(b) Remove the battery and cut the 2 terminals which connect the battery and base board.
HINT:
The battery and base board covered with silicone resin are exposed.

ANTI-LOCK BRAKE SYSTEM

PRECAUTION

- When there is a malfunction in the contact point of the terminals or installation problems with any parts, removal and reinstallation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
- In order to determine the location of the malfunction, be sure to check the conditions at the time the malfunction occurred, through data such as DTC and freeze frame data outputs. Record this information before disconnecting any connectors and removing or installing any parts.
- Be sure to remove and install the brake actuator and each sensor with the ignition switch off, unless specified in the inspection procedures.
- When removing and installing the brake actuator assembly and each sensor, be sure to check that the normal display is output during a test mode inspection and a DTC output inspection after installing all the parts.

VEHICLE STABILITY CONTROL SYSTEM

PRECAUTION

- When there is a malfunction in the contact point of the terminals or installation problems with parts, removal and reinstallation of the suspected problem parts may return the system to its normal condition either completely or temporarily.
- In order to determine the location of the malfunction, be sure to check the engine conditions at the time the malfunction occurred, through data such as DTC and freeze frame data outputs. Record this information before disconnecting any connectors and removing or installing any parts.
- Since the Vehicle Stability Control system may be influenced by malfunctions in other systems, be sure to check for DTCs in other systems.
- Be sure to remove and reinstall the hydraulic brake booster and each sensor with the ignition switch OFF unless specified in the inspection procedure.
- When removing and installing the hydraulic brake booster and each sensor, be sure to check that the normal display is output during a test mode inspection and a DTC output inspection after reinstalling all the parts.
- After replacing the master cylinder solenoid (skid control ECU) and/or the yaw rate sensor and deceleration sensor, be sure to perform the yaw rate sensor and deceleration sensor zero point calibration (See page BC-99).
- The CAN communication system is used for data communication between the skid control ECU, the steering angle sensor, and the yaw rate sensor (the deceleration sensor is included).
- If there is trouble in the CAN communication line, the DTC relating to the communication line is output. If a DTC relating to the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the Vehicle Stability Control system.
- Since the CAN communication line has a specific length and route, it cannot be repaired temporarily with a bypass wire.

BRAKE ACTUATOR (w/o VSC)

ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and allow it to idle.
(c) Select ACTIVE TEST mode on the intelligent tester.
HINT:
Refer to the intelligent tester operator manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

(a) With the motor relay ON, check the actuator motor operation noise.
(b) Turn the motor relay OFF.
(c) Depress the brake pedal and hold it for about 15 seconds. Check that the brake pedal cannot be depressed.
(d) With the motor relay ON, check that the pedal does not pulsate.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. When operating it continuously, allow intervals of more than 20 seconds.
(e) Turn the motor relay OFF and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:
Never turn ON any solenoids other than those described below.

(a) With the brake pedal depressed, perform the following operations.
(b) Turn SFRH and SFRR solenoids ON simultaneously, and check that the pedal cannot be depressed.
NOTICE:
Do not keep the solenoids ON for more than 2 seconds continuously. When operating them continuously, allow intervals of more than 20 seconds.
(c) Turn SFRH and SFRR solenoids OFF simultaneously, and check that the pedal can be depressed.
(d) Turn the motor relay ON, and check that the pedal returns.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. When operating it continuously, allow intervals of more than 20 seconds.
(e) Turn the motor relay OFF and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

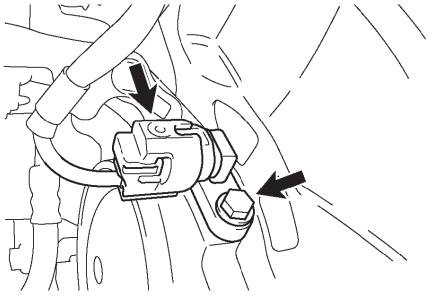
(a) Check the solenoids of the other wheels using the same procedures as above.
HINT:
Left front wheel: SFLH, SFLR
Right rear wheel: SRRH, SRRR
Left rear wheel: SRLH, SRLR

FRONT SPEED SENSOR

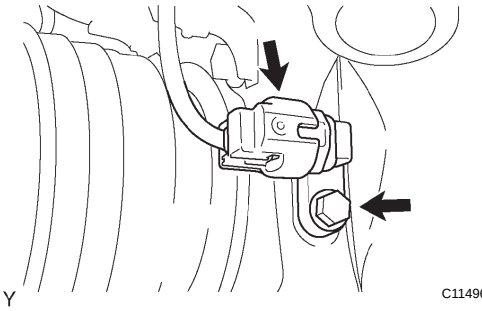
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **REMOVE FRONT SPEED SENSOR**
   (a) Disconnect the speed sensor connector.
   (b) Remove the bolt and front speed sensor.
   NOTICE:
   - **Do not attach any foreign matter to the sensor tip.**
   - **Ensure that no foreign matter enters the sensor installation part.**

for 2WD:



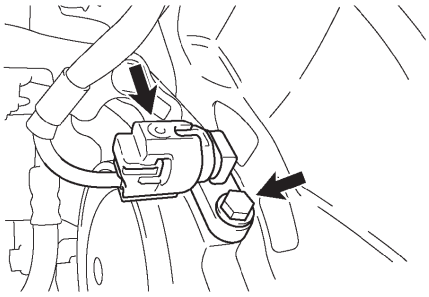
for 4WD and Pre-Runner:



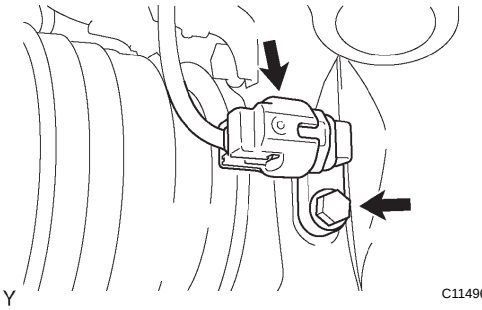
INSTALLATION

1. **INSTALL FRONT SPEED SENSOR**
   (a) Install the front speed sensor with the bolt.
   Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
   NOTICE:
   Make sure that the sensor tip is clean.
   (b) Connect the speed sensor connector.
2. **INSTALL FRONT WHEEL**
   Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   (See page IN-5)
4. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
   (See page BC-103)
5. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
   (See page BC-7)

for 2WD:



for 4WD and Pre-Runner:

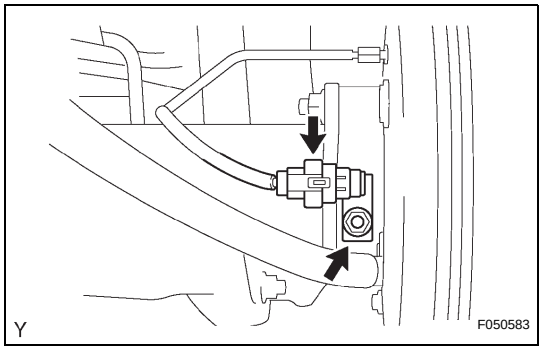


REAR SPEED SENSOR

REMOVAL

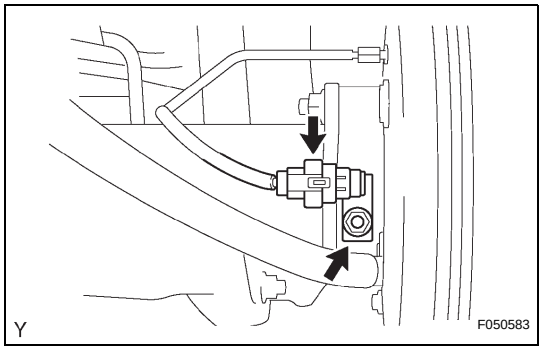
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE REAR SPEED SENSOR**
   (a) Disconnect the speed sensor connector.
   (b) Remove the nut and speed sensor rear.
   NOTICE:
   - **Do not attach any foreign matter to the sensor tip.**
   - **Ensure that no foreign matter enters the sensor installation hole.**



INSTALLATION

1. **INSTALL REAR SPEED SENSOR**
   (a) Install the rear speed sensor with the nut.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   NOTICE:
   Make sure that the sensor tip is clean.
   (b) Connect the speed sensor connector.



2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   (See page IN-5)

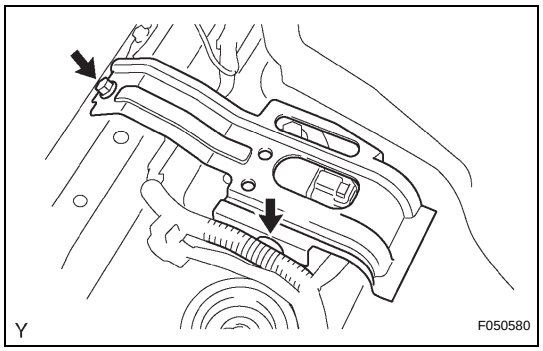
3. **CHECK VSC SENSOR SIGNAL (w/ VSC)**
   (See page BC-103)

4. **CHECK ABS SENSOR SIGNAL (w/o VSC)**
   (See page BC-7)

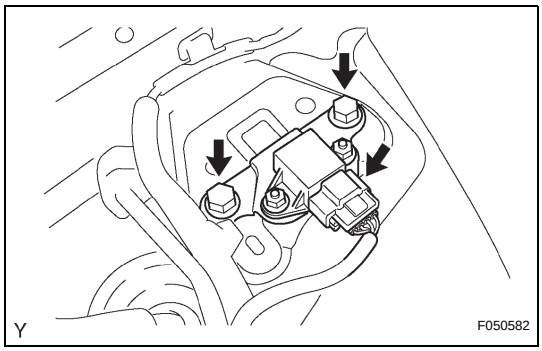
DECELERATION SENSOR (for 4WD and Pre-Runner without VSC)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SEAT INNER BELT ASSEMBLY LH (for Bench Seat Type) (See page SB-12)**
3. **REMOVE FRONT SEAT INNER BELT ASSEMBLY RH (for Bench Seat Type) (See page SB-12)**
4. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Bench Seat Type) (See page SE-53)**
5. **REMOVE FRONT SEAT ASSEMBLY (for Bench Seat Type) (See page SE-53)**
6. **REMOVE SEAT TRACK COVER (for Separate Seat Type) (See page SE-23)**
7. **REMOVE FRONT SEAT ASSEMBLY (for Separate Seat Type) (See page SE-23)**
8. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
9. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
10. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-40)**
11. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
12. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
13. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-40)**
14. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
15. **REMOVE SENSOR BRACKET**
    (a) Turn up the floor carpet.
    (b) Remove the wire harness clamp.
    (c) Remove the bolt and bracket.



BC

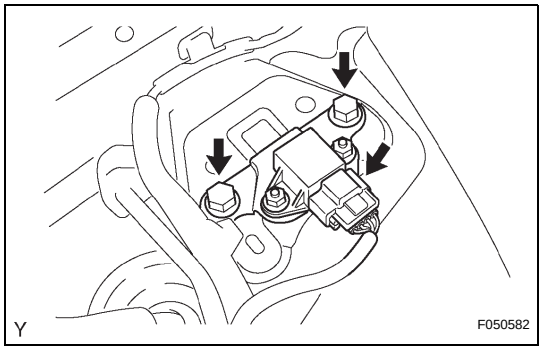


16. REMOVE DECELERATION SENSOR

(a) Disconnect the deceleration sensor connector.

(b) Remove the 2 bolts and deceleration sensor.

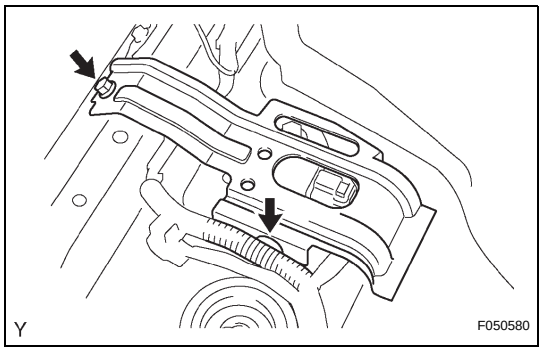
INSTALLATION



1. INSTALL DECELERATION SENSOR

(a) Install the deceleration sensor with the 2 bolts.
Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)
NOTICE:
Make sure the sensor is at the correct angle when installing.

(b) Connect the deceleration sensor connector.



2. INSTALL SENSOR BRACKET

(a) Install the bracket with the bolt.
Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)

(b) Install the wire harness clamp.

3. INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)

4. INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-75)

5. INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)

6. INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)

7. INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)

8. INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)

9. INSTALL FRONT FLOOR FOOTREST (See page IR-1)

10. INSTALL FRONT SEAT ASSEMBLY (for Bench Seat Type) (See page SE-67)

11. INSTALL FRONT SEAT HEADREST ASSEMBLY (for Bench Seat Type) (See page SE-68)

12. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH (for Bench Seat Type) (See page SB-13)

13. INSTALL FRONT SEAT INNER BELT ASSEMBLY RH (for Bench Seat Type) (See page SB-14)

14. INSTALL FRONT SEAT ASSEMBLY (for Separate Seat Type) (See page SE-34)

15. **INSTALL SEAT TRACK COVER (for Separate Seat Type) (See page SE-34)**

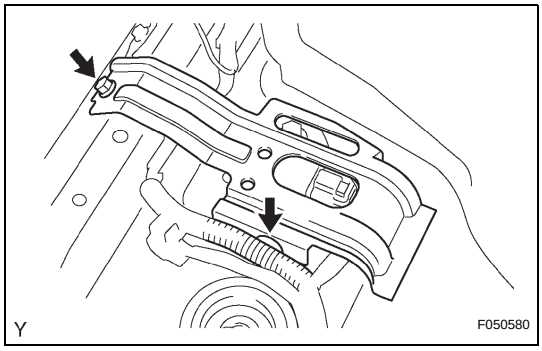
16. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

17. **CHECK ABS SENSOR SIGNAL**
(See page BC-7)

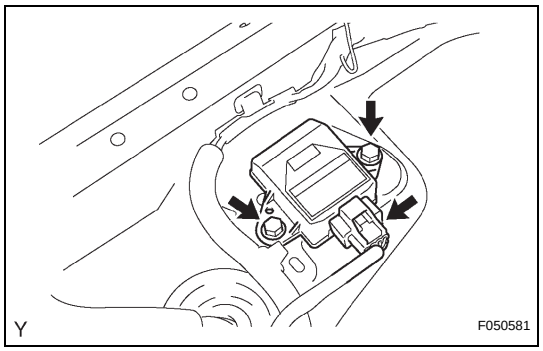
YAW RATE AND DECELERATION SENSOR (w/ VSC)

REMOVAL

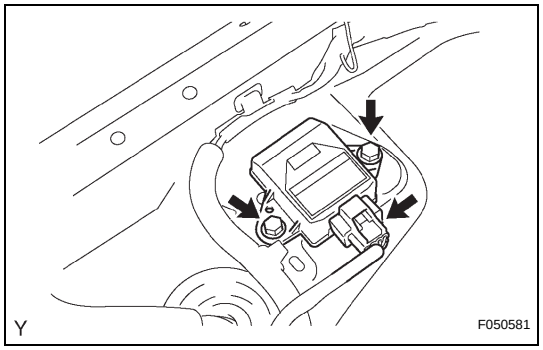
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SEAT INNER BELT ASSEMBLY LH (for Bench Seat Type) (See page SB-12)**
3. **REMOVE FRONT SEAT INNER BELT ASSEMBLY RH (for Bench Seat Type) (See page SB-12)**
4. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Bench Seat Type) (See page SE-53)**
5. **REMOVE FRONT SEAT ASSEMBLY (for Bench Seat Type) (See page SE-53)**
6. **REMOVE SEAT TRACK COVER (for Separate Seat Type) (See page SE-23)**
7. **REMOVE FRONT SEAT ASSEMBLY (for Separate Seat Type) (See page SE-23)**
8. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
9. **REMOVE FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-40)**
10. **REMOVE FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-61)**
11. **REMOVE FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-12)**
12. **REMOVE COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-40)**
13. **REMOVE COWL SIDE TRIM BOARD (for Access Cab) (See page IR-61)**
14. **REMOVE COWL SIDE TRIM BOARD (for Double Cab) (See page IR-12)**
15. **REMOVE SENSOR BRACKET**
    (a) Turn up the floor carpet.
    (b) Remove the wire harness clamp.
    (c) Remove the bolt and bracket.



BC

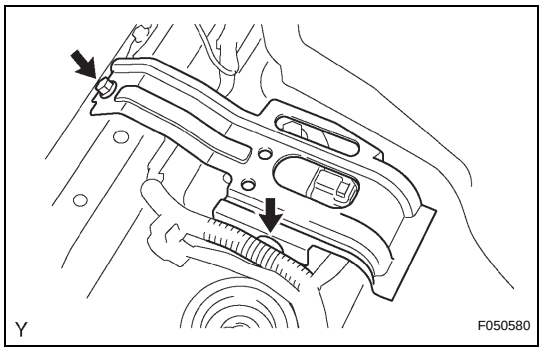


16. **REMOVE YAW RATE SENSOR**
    (a) Disconnect the yaw rate sensor connector.
    (b) Remove the 2 bolts and yaw rate sensor.



INSTALLATION

1. **INSTALL YAW RATE SENSOR**
    (a) Install the yaw rate sensor with the 2 bolts.
    Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)
    NOTICE:
    Make sure that the sensor is at the correct angle when installing.
    (b) Connect the yaw rate sensor connector.



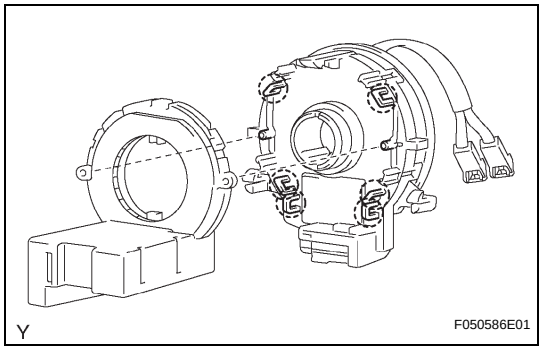
2. **INSTALL SENSOR BRACKET**
    (a) Install the bracket with the bolt.
    Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)
    (b) Install the wire harness clamp.
3. **INSTALL COWL SIDE TRIM BOARD (for Regular Cab) (See page IR-52)**
4. **INSTALL COWL SIDE TRIM BOARD (for Access Cab) (See page IR-75)**
5. **INSTALL COWL SIDE TRIM BOARD (for Double Cab) (See page IR-29)**
6. **INSTALL FRONT DOOR SCUFF PLATE (for Regular Cab) (See page IR-52)**
7. **INSTALL FRONT DOOR SCUFF PLATE (for Access Cab) (See page IR-75)**
8. **INSTALL FRONT DOOR SCUFF PLATE (for Double Cab) (See page IR-29)**
9. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
10. **INSTALL FRONT SEAT ASSEMBLY (for Bench Seat Type) (See page SE-67)**
11. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Bench Seat Type) (See page SE-68)**
12. **INSTALL FRONT SEAT INNER BELT ASSEMBLY LH (for Bench Seat Type) (See page SB-13)**
13. **INSTALL FRONT SEAT INNER BELT ASSEMBLY RH (for Bench Seat Type) (See page SB-14)**
14. **INSTALL FRONT SEAT ASSEMBLY (for Separate Seat Type) (See page SE-34)**

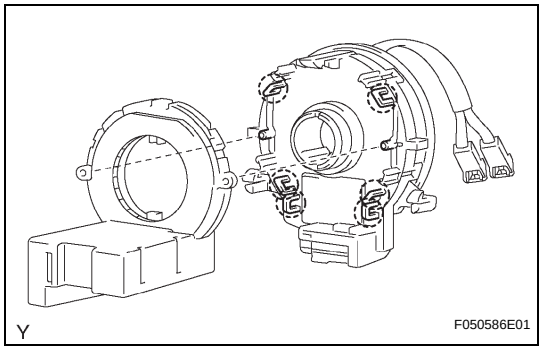
15. **INSTALL SEAT TRACK COVER (for Separate Seat Type) (See page SE-34)**
16. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
17. **PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION**
    (See page BC-99)
18. **CHECK VSC SENSOR SIGNAL**
    (See page BC-103)

STEERING ANGLE SENSOR (w/ VSC)

REMOVAL

1. **PRECAUTION**
   (See page RS-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   (a) Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE STEERING WHEEL COVER LOWER NO. 2 (See page SR-9)**
5. **REMOVE STEERING WHEEL COVER LOWER NO. 3 (See page SR-9)**
6. **REMOVE STEERING PAD ASSEMBLY (See page RS-558)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-9)**
8. **REMOVE STEERING COLUMN COVER LOWER (See page RS-566)**
9. **REMOVE STEERING COLUMN COVER UPPER (See page RS-566)**
10. **REMOVE SPIRAL CABLE (See page RS-566)**
11. **REMOVE STEERING SENSOR**
    (a) Release 6 claw fittings and remove the steering sensor from the spiral cable.





INSTALLATION

1. **INSTALL STEERING SENSOR**
   (a) Install the steering sensor onto the spiral cable.
   NOTICE:
   - **Engage the claws securely.**
   - **Be careful not to damage the claws.**
2. **REMOVE PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **INSTALL SPIRAL CABLE (See page RS-567)**
4. **CENTER SPIRAL CABLE (See page RS-567)**

BC

5. **INSTALL STEERING COLUMN COVER UPPER (See page RS-568)**
6. **INSTALL STEERING COLUMN COVER LOWER (See page RS-568)**
7. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-18)**
8. **INSTALL STEERING PAD ASSEMBLY (See page RS-558)**
9. **INSTALL STEERING WHEEL COVER LOWER NO. 3 (See page SR-18)**
10. **INSTALL STEERING WHEEL COVER LOWER NO. 2 (See page SR-18)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
12. **INSPECT STEERING PAD ASSEMBLY**
13. **INSPECT SRS WARNING LIGHT**
    (See page RS-28)

BRAKE SYSTEM

PRECAUTION

1. **Necessary care must be taken to replace each part properly as it could affect the brake system performance. This could cause driving hazards. Replace each part with an identical part with the same number.**
2. **It is very important to keep parts and the area clean when repairing the brake system.**
3. **If the vehicle is equipped with a mobile communication system, refer to the precautions in the INTRODUCTION section.**

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these applicable parts.

Symptom	Suspected area	See page
Low pedal or spongy pedal	1. Fluid leakage in brake system	-
	2. Air in brake system (w/ VSC)	BR-4
	3. Air in brake system (w/o VSC)	BR-7
	4. Piston seal (Worn or damaged) (2WD)	BR-57
	5. Piston seal (Worn or damaged) (4WD and Pre-Runner)	BR-63
	6. Cylinder cup	BR-69
	7. Rear brake (Shoe clearance out of adjustment)	BR-74
	8. Brake master cylinder (Faulty) (w/o VSC)	BR-21
	9. Hydraulic brake booster (Faulty) (w/ VSC)	BR-44
	10. Booster push rod (Out of adjustment)	BR-21
Brake drag	1. Brake pedal free play (Minimum)	BR-14
	2. Parking brake pedal travel (Out of adjustment)	PB-1
	3. Parking brake lever travel (Out of adjustment)	PB-1
	4. Parking brake wire (Sticking)	PB-18
	5. Rear brake (Shoe clearance out of adjustment)	BR-74
	6. Pad (Cracked or distorted) (2WD)	BR-57
	7. Pad (Cracked or distorted) (4WD and Pre-Runner)	BR-64
	8. Brake shoe (Cracked or distorted)	BR-70
	9. Front disc brake piston (Stuck) (2WD)	BR-57
	10. Front Disc brake piston (Stuck) (4WD and Pre-Runner)	BR-63
	11. Piston (Stuck)	BR-69
	12. Front disc brake piston (Frozen) (2WD)	BR-57
	13. Front Disc brake piston (Frozen) (4WD and Pre-Runner)	BR-63
	14. Piston (Frozen)	BR-69
	15. Tension or return spring (Faulty)	BR-68
	16. Booster push rod (Out of adjustment)	BR-21
	17. Booster system (Vacuum leakage)	BR-26
	18. Brake master cylinder (Faulty) (w/o VSC)	BR-21
	19. Hydraulic brake booster (Faulty) (w/ VSC)	BR-44

Symptom	Suspected area	See page
Brake pull	1. Front disc brake piston (Stuck) (2WD)	BR-57
	2. Front Disc brake piston (Stuck) (4WD and Pre-Runner)	BR-63
	3. Piston (Stuck)	BR-69
	4. Pad (Oily) (2WD)	BR-57
	5. Pad (Oily) (4WD and Pre-Runner)	BR-64
	6. Brake shoe (Oily)	BR-70
	7. Front disc brake piston (Frozen) (2WD)	BR-57
	8. Front Disc brake piston (Frozen) (4WD and Pre-Runner)	BR-63
	9. Piston (Frozen)	BR-69
	10. Front disc (Scored) (2WD)	BR-58
	11. Front disc (Scored) (4WD and Pre-Runner)	BR-65
	12. Pad (Cracked or distorted) (2WD)	BR-57
	13. Pad (Cracked or distorted) (4WD and Pre-Runner)	BR-64
	14. Brake shoe (Cracked or distorted)	BR-70
Firm pedal but braking inefficient	1. Fluid leakage in brake system	-
	2. Air in brake system (w/ VSC)	BR-4
	3. Air in brake system (w/o VSC)	BR-7
	4. Pad (Worn) (2WD)	BR-57
	5. Pad (Worn) (4WD and Pre-Runner)	BR-64
	6. Brake shoe (Worn)	BR-70
	7. Pad (Cracked or distorted) (2WD)	BR-57
	8. Pad (Cracked or distorted) (4WD and Pre-Runner)	BR-64
	9. Brake shoe (Cracked or distorted)	BR-70
	10. Rear brake (Shoe clearance out of adjustment)	BR-74
	11. Pad (Oily) (2WD)	BR-57
	12. Pad (Oily) (4WD and Pre-Runner)	BR-64
	13. Brake shoe (Oily)	BR-70
	14. Pad (Glazed) (2WD)	BR-57
	15. Pad (Glazed) (4WD and Pre-Runner)	BR-64
	16. Brake shoe (Glazed)	BR-70
	17. Front disc (Scored) (2WD)	BR-58
	18. Front disc (Scored) (4WD and Pre-Runner)	BR-65
	19. Booster push rod (Out of adjustment)	BR-21
	20. Booster system (Vacuum leakage)	BR-26

Symptom	Suspected area	See page
Noise from brakes	1. Pad (Cracked or distorted) (2WD)	BR-57
	2. Pad (Cracked or distorted) (4WD and Pre-Runner)	BR-64
	3. Brake shoe (Cracked or distorted)	BR-70
	4. Installation bolt (Loose) (2WD)	BR-58
	5. Installation bolt (Loose) (4WD and Pre-Runner)	BR-64
	6. Front disc (Scored) (2WD)	BR-58
	7. Front disc (Scored) (4WD and Pre-Runner)	BR-65
	8. Pad support plate (Loose)	BR-55
	9. Sliding pin (Worn)	BR-55
	10. Pad (Dirty) (2WD)	BR-57
	11. Pad (Dirty) (4WD and Pre-Runner)	BR-64
	12. Brake shoe (Dirty)	BR-70
	13. Pad (Glazed) (2WD)	BR-57
	14 Pad (Glazed) (4WD and Pre-Runner)	BR-64
	15. Brake shoe (Glazed)	BR-70
	16. Tension or return spring (Faulty)	BR-68
	17. Anti-squeal shim (Damaged) (2WD)	BR-55
	18. Anti-squeal shim (Damaged) (4WD and Pre-Runner)	BR-62
	19. Shoe hold-down spring (Damaged)	BR-68
Noise from hydraulic brake booster (Abnormal pump motor operation noise)	1. Accumulator bracket clearance (Out of adjustment)	BR-44
Brake warning light illuminates (Parking brake pedal (lever) released)	1. Brake fluid level	-
	2. Brake master cylinder power supply system (Faulty)	BR-33
Brake warning light illuminates and skid control buzzer sounds	1. Brake master cylinder power supply system (Faulty)	BR-33
ABS warning light illuminates	1. Anti-lock brake system (Faulty)	-
	2. Brake master cylinder power supply system (Faulty)	BR-33

BRAKE FLUID (w/ VSC)

BLEEDING

NOTICE:

- **Immediately wash off any brake fluid that comes into contact with any painted surfaces.**
- **Depressing the brake pedal with the reservoir cap removed will cause the fluid to spray.**

HINT:

- If any work is done on the brake system or if air in the brake lines is suspected, bleed the air from the system.
- When bleeding, maintain the amount of fluid in the reservoir between the Min. and Max. lines.

1. FILL RESERVOIR WITH BRAKE FLUID

Fluid:

SAE J1703 or FMVSS NO. 116 DOT3

2. BLEED BRAKE BOOSTER WITH ACCUMULATOR PUMP ASSEMBLY

HINT:

If the brake master cylinder is disassembled, the brake line is disconnected from the brake master cylinder or if the reservoir becomes empty, bleed the brake master cylinder.

(a) Turn the ignition switch to ON, and wait until the pump motor has stopped (step A).

HINT:

Pump operating sound can be heard.

(b) Turn the ignition switch to OFF, and depress the brake pedal more than 20 times (step B).

HINT:

When pressure in the accumulator is released, the reaction force becomes lighter and the stroke becomes longer.

(c) Repeat step A and B 5 times (step C).

(d) Turn the ignition switch to ON, and check that the pump stops after approximately 8 to 14 seconds.

NOTICE:

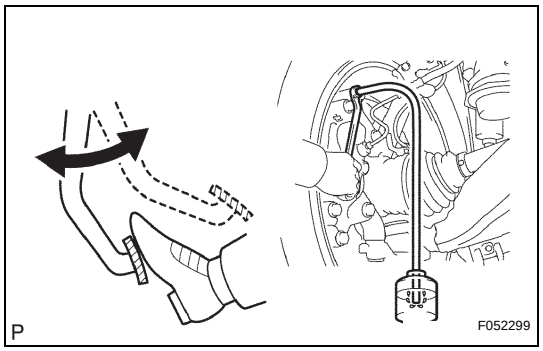
If the pump does not stop, repeat step C again.

3. BLEED BRAKE LINE

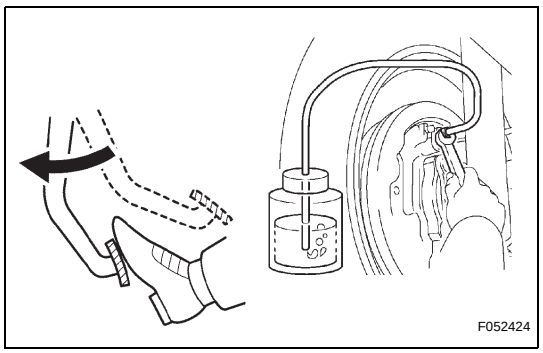
(a) Turn the ignition switch to ON, and wait until the pump motor has stopped.

HINT:

Pump operating sound can be heard.



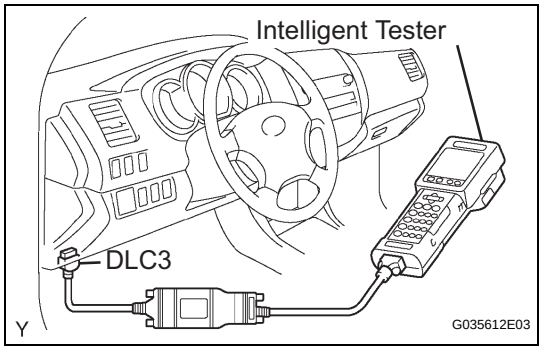
(b) Front brake line.
  (1) Connect the vinyl tube to the brake caliper.
  (2) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down (step D).
  (3) At the point when the fluid stops coming out, tighten the bleeder plug, then release the brake pedal (step E).
  (4) Repeat step D and E until all the air in the fluid has been bled out.
  Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
  (5) Repeat the above procedures to bleed the other brake line.



(c) Rear brake line.
  (1) Connect the vinyl tube to the wheel cylinder.
  (2) Depress the brake pedal, hold it, and then loosen the bleeder plug.
  HINT:
  Brake fluid is pumped out automatically.
  (3) Loosen the bleeder plug and release air.
  NOTICE:
  Keep brake fluid in the reservoir tank above the MIN line during the above procedures.
  (4) When the air is completely bled out of the brake fluid through the bleeder plug, tighten the bleeder plug.
  Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
  (5) Repeat the above procedures to bleed the other brake line.

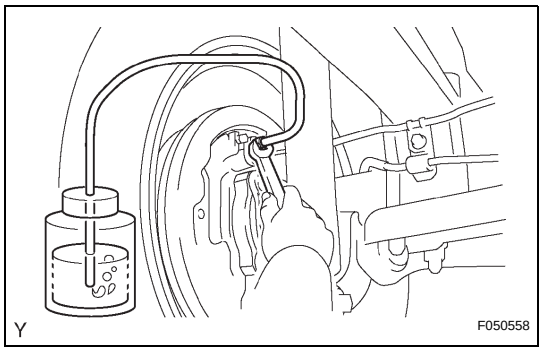
4. BLEED MASTER CYLINDER SOLENOID

HINT:
If the brake master cylinder is disassembled, the brake line is disconnected from the brake master cylinder or if the reservoir become empty, bleed the brake master cylinder.



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Select "ACTIVE TEST" mode on the intelligent tester.

BR



(d) Connect the vinyl tube to the rear wheel cylinder.
(e) Loosen the bleeder plug.
(f) Select "SRMF & SRMR" to drive the solenoids and bleed air from the rear wheel cylinder (step F).
NOTICE:
- **Do not depress the brake pedal.**
- **Keep brake fluid in the reservoir tank above the MIN line during the above procedures.**

HINT:
- Brake fluid is sent through the pump.
- To protect the solenoids, the intelligent tester turns OFF automatically 2 seconds after every solenoid has been turned ON.

(g) Repeat step F until all the air in the brake fluid is bled out.
(h) When the air is completely bled out of the brake fluid through the bleeder plug, tighten the bleeder plug.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
(i) Repeat the above procedures to bleed the other brake line.
(j) Turn the ignition switch to OFF.
(k) Turn the ignition switch to ON.
(l) Clear DTC (see page BC-118).

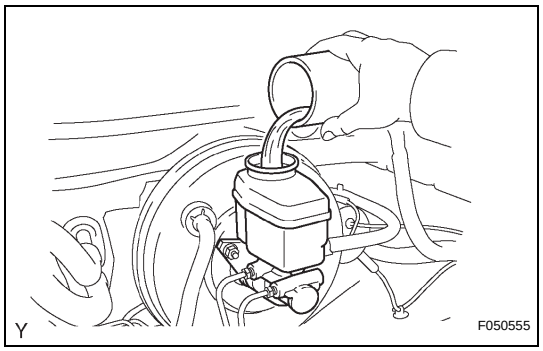
5. CHECK FLUID LEVEL IN RESERVOIR

(a) Turn the ignition switch to OFF, and depress the brake pedal more than 20 times (until the pedal reaction feels light and pedal stroke becomes longer), and adjust the fluid level to the MAX level.
(b) When the ignition switch is turned to the ON, brake fluid is sent to the accumulator and the fluid level decreases by approximately 5 mm from the level when the ignition switch is off (normal).

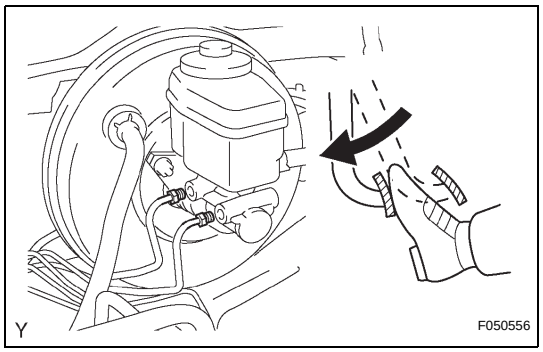
BRAKE FLUID (w/o VSC)

BLEEDING

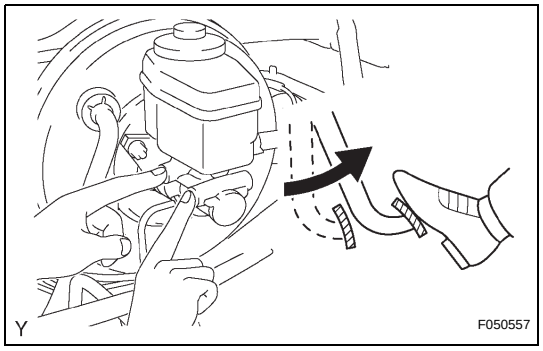
HINT:
If any work is done on the brake system or if air in the brake lines is suspected, bleed the air from the system.
NOTICE:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.



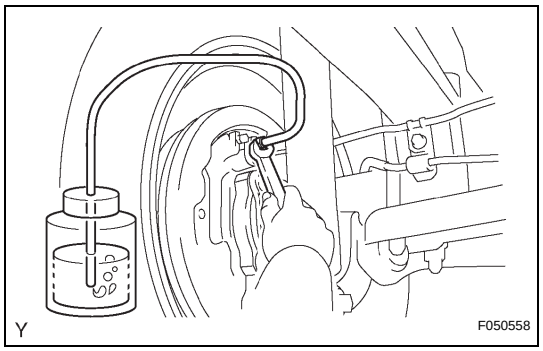
1. FILL RESERVOIR WITH BRAKE FLUID
Fluid:
SAE J1703 or FMVSS NO. 116 DOT3



2. BLEED MASTER CYLINDER
HINT:
If the master cylinder has been disassembled or if the reservoir becomes empty, bleed the air from the master cylinder.
(a) Using SST, disconnect the brake lines from the master cylinder.
SST 09023-00101
(b) Slowly depress the brake pedal and hold it there (step A).



(c) Block the outer holes with your fingers, and release the brake pedal (step B).
(d) Repeat step A and B 3 or 4 times.



3. BLEED BRAKE LINE
(a) Connect the vinyl tube to the bleeder plug.
(b) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down (step C).
(c) At the point where the fluid stops coming out, tighten the bleeder plug, then release the brake pedal (step D).
(d) Repeat step C and D until all the air in the fluid has been bled out.

(e) Repeat the above procedure to bleed the air out of the brake line for each wheel.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

4. CHECK FLUID LEVEL IN RESERVOIR

(a) Check the fluid level and add fluid if necessary.
Fluid:
SAE J1703 or FMVSS NO. 116 DOT3

ON-VEHICLE INSPECTION

1. INSPECT BRAKE PEDAL HEIGHT

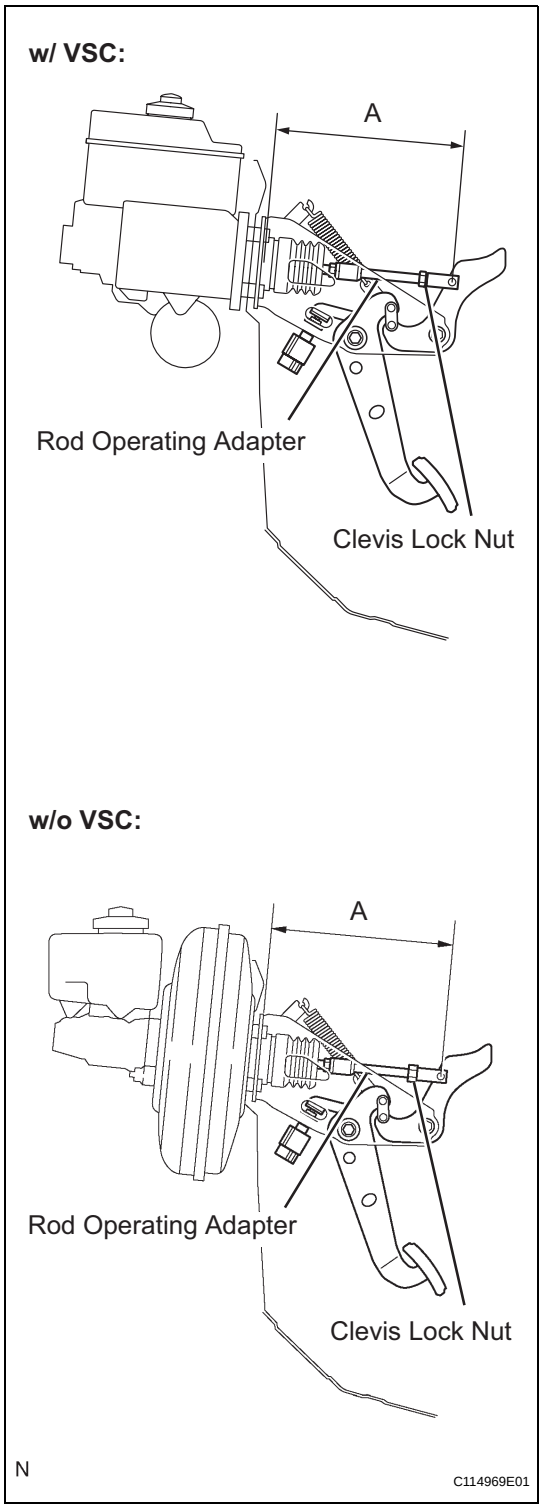
(a) Check the brake pedal height.

Pedal height from dash panel:
158.1 to 168.1 mm (6.224 to 6.618 in.)

NOTICE:

Do not adjust the pedal height. Doing so by changing the push rod length will structurally change the pedal ratio.

If the pedal height is incorrect, adjust the rod operating adapter length.



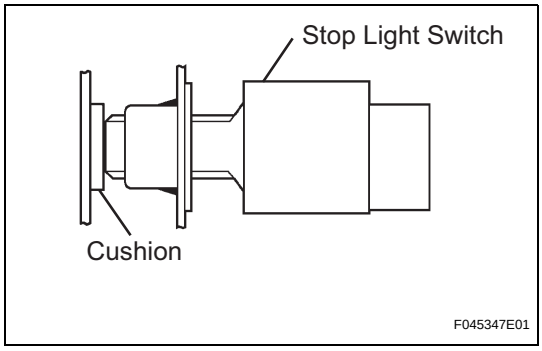
(b) Adjust the rod operating adapter length.
(1) Remove the clip and clevis pin.
(2) Loosen the clevis lock nut.
(3) Adjust the rod operating adapter length by turning the pedal push rod clevis.
Rod operating adapter length A:
w/ VSC:
214 to 224 mm (8.425 to 8.818 in.)
w/o VSC:
212 to 222 mm (8.346 to 8.740 in.)
(4) Tighten the clevis lock nut.
Torque: 25.5 N*m (260 kgf*cm, 19 ft.*lbf)
(5) Install the clip and clevis pin.
- If the pedal height is incorrect even when the rod operating adapter is adjusted, check that there is no damage in the brake pedal, brake pedal lever, brake pedal bracket or dash panel.
- Even if there is damage, there is no problem if the reserve distance is within the standard value.
- If necessary, replace the parts.

2. INSPECT AND ADJUST STOP LIGHT SWITCH

HINT:

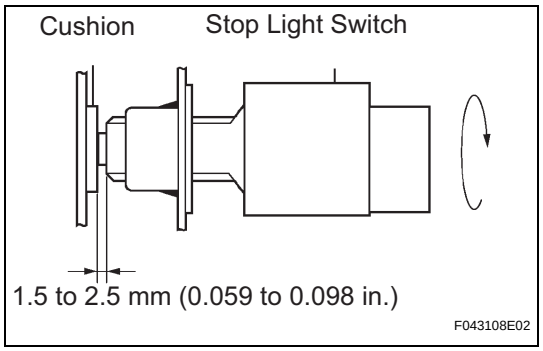
If the pedal height is incorrect, check and adjust the stop light switch.

(a) Disconnect the stop light switch connector from the stop light switch.
(b) Turn the stop light switch counterclockwise, and remove the stop light switch.



(c) Insert the stop light switch until the body comes into contact with the cushion.
NOTICE:
- **When inserting the stop light switch, support the pedal from behind so that the pedal is not pushed in.**
- **Take care not to depress the pedal during the operation.**

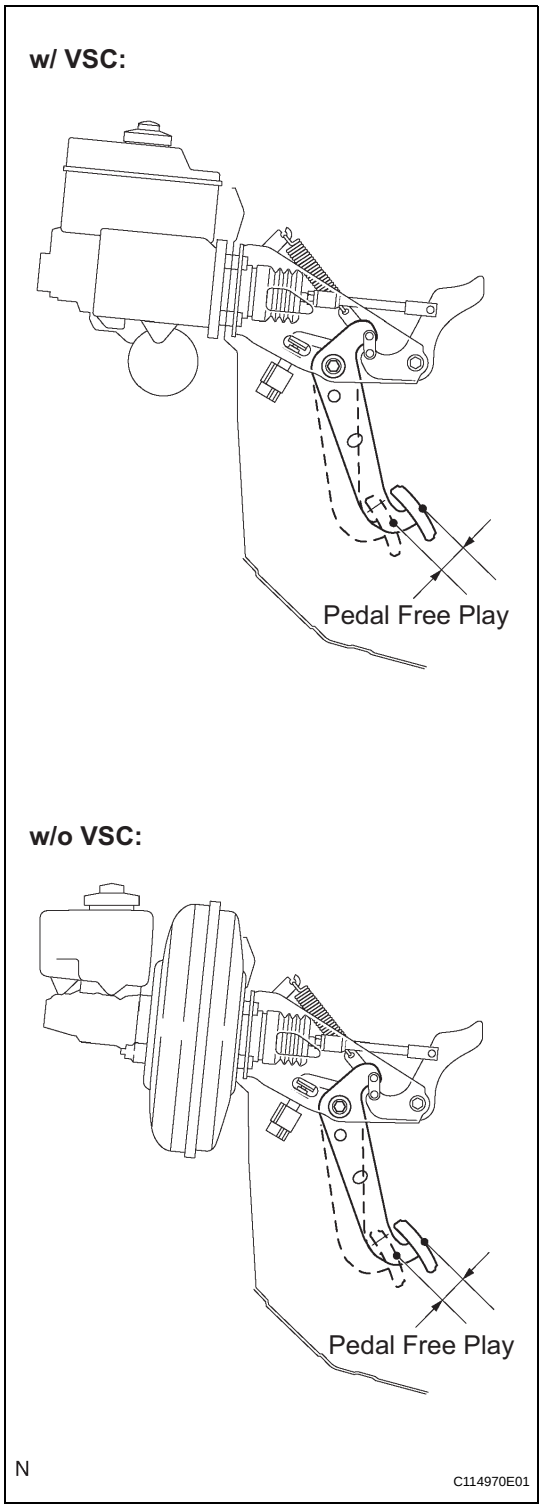
BR



(d) Make a quarter turn clockwise to install the stop light switch.
NOTICE:
The turning torque for installing the stop light switch:
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
HINT:
Due to the inverse screw structure, turning the stop light switch clockwise will cause it to become loose and eventually detach from the adjuster.

(e) Connect the stop light switch connector to the stop light switch.

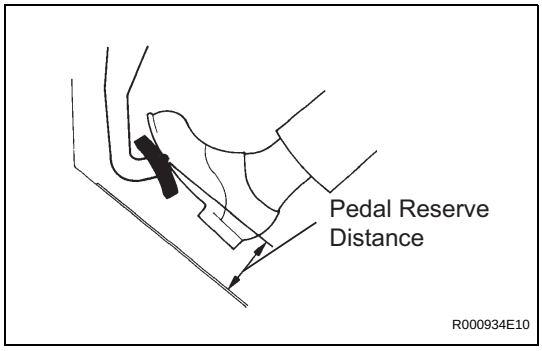
(f) Check the protrusion of the rod.
Protrusion of the rod:
1.5 to 2.5 mm (0.059 to 0.098 in.)



3. INSPECT PEDAL FREE PLAY

(a) Stop the engine and depress the brake pedal several times until there is no more vacuum left in the booster.

(b) Push in the pedal until the beginning of the resistance is felt. Measure the distance as shown.
Pedal free play:
1 to 6 mm (0.04 to 0.24 in.)

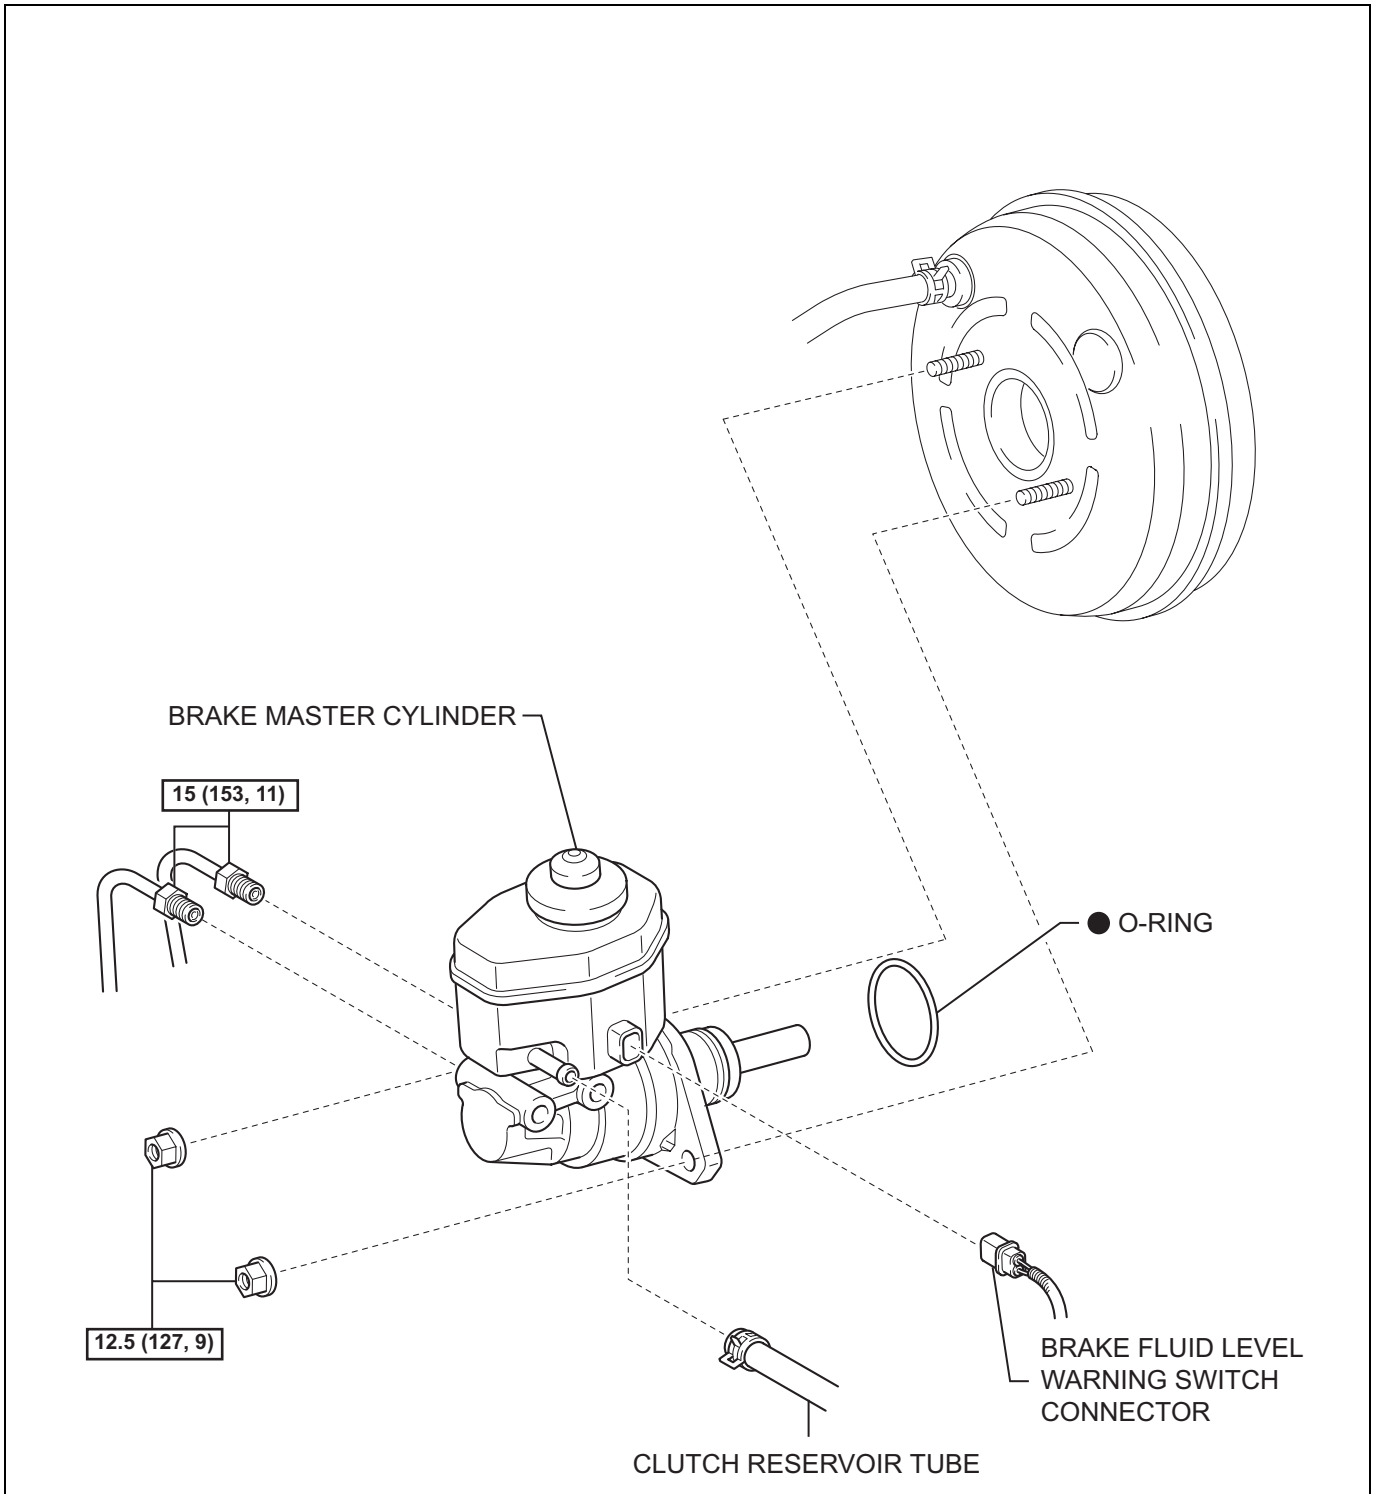


4. INSPECT PEDAL RESERVE DISTANCE

(a) Release the parking brake pedal.
With the engine running, depress the pedal and measure the pedal reserve distance as shown.
Pedal reserve distance from asphalt sheet at 490 N (50 kgf, 110.2 lbf):
More than 55 mm (2.17 in.)
If incorrect, troubleshoot the brake system.

BRAKE MASTER CYLINDER (w/o VSC)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

● Non-reusable part

Y

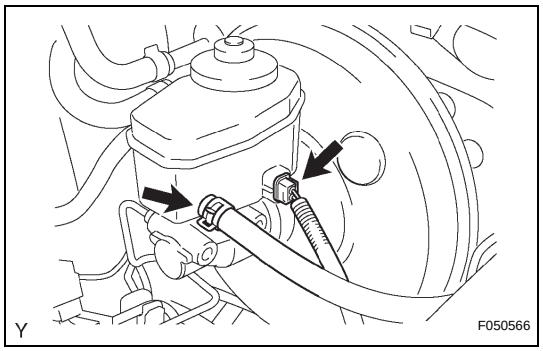
BR

REMOVAL

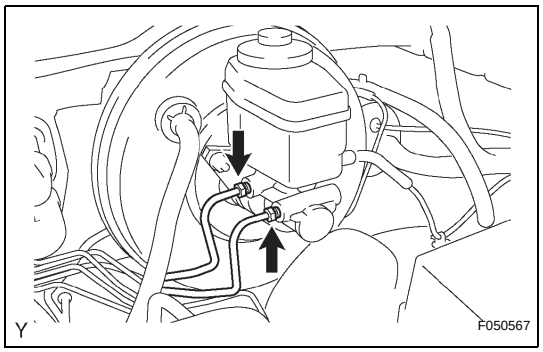
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. DRAIN BRAKE FLUID
NOTICE:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.

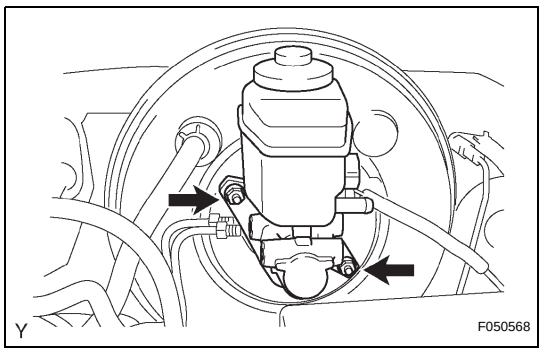
3. REMOVE BRAKE MASTER CYLINDER



(a) Disconnect the brake fluid level warning switch connector.
(b) for Manual Transmission:
  (1) Disconnect the clutch reservoir tube from the reservoir.



(c) Using SST, disconnect the 2 brake lines from the brake master cylinder.
SST 09023-00101



(d) Remove the 2 nuts, then pull the brake master cylinder out of the brake booster.
(e) Remove the O-ring from the brake master cylinder.

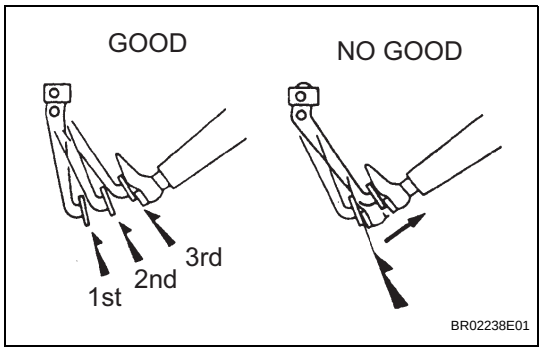
BR



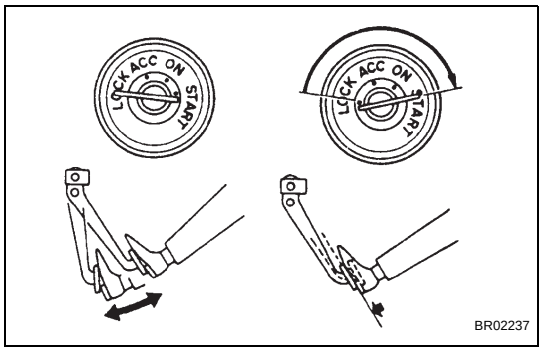
ON-VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER

(a) Check the air tightness.

(1) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.
HINT:
If the pedal can be depressed to the floor the 1st time, but cannot be depressed as far on the 2nd or 3rd time, the booster is airtight.

(2) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed.
HINT:
If there is no change in the pedal reserve distance after holding the pedal for 30 seconds, the booster is airtight.



(b) Check the operation.

(1) Depress the brake pedal several times with the ignition switch at OFF and check that there is no change in the pedal reserve distance.

(2) Depress the brake pedal and start the engine.
HINT:
If the pedal goes down slightly, the operation is normal.

2. INSPECT VACUUM CHECK VALVE

(a) Check the vacuum check valve.

(1) Slide the clip and disconnect the vacuum hose.

(2) Remove the vacuum check valve.

(3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.
If any fault is found, replace the vacuum check valve.

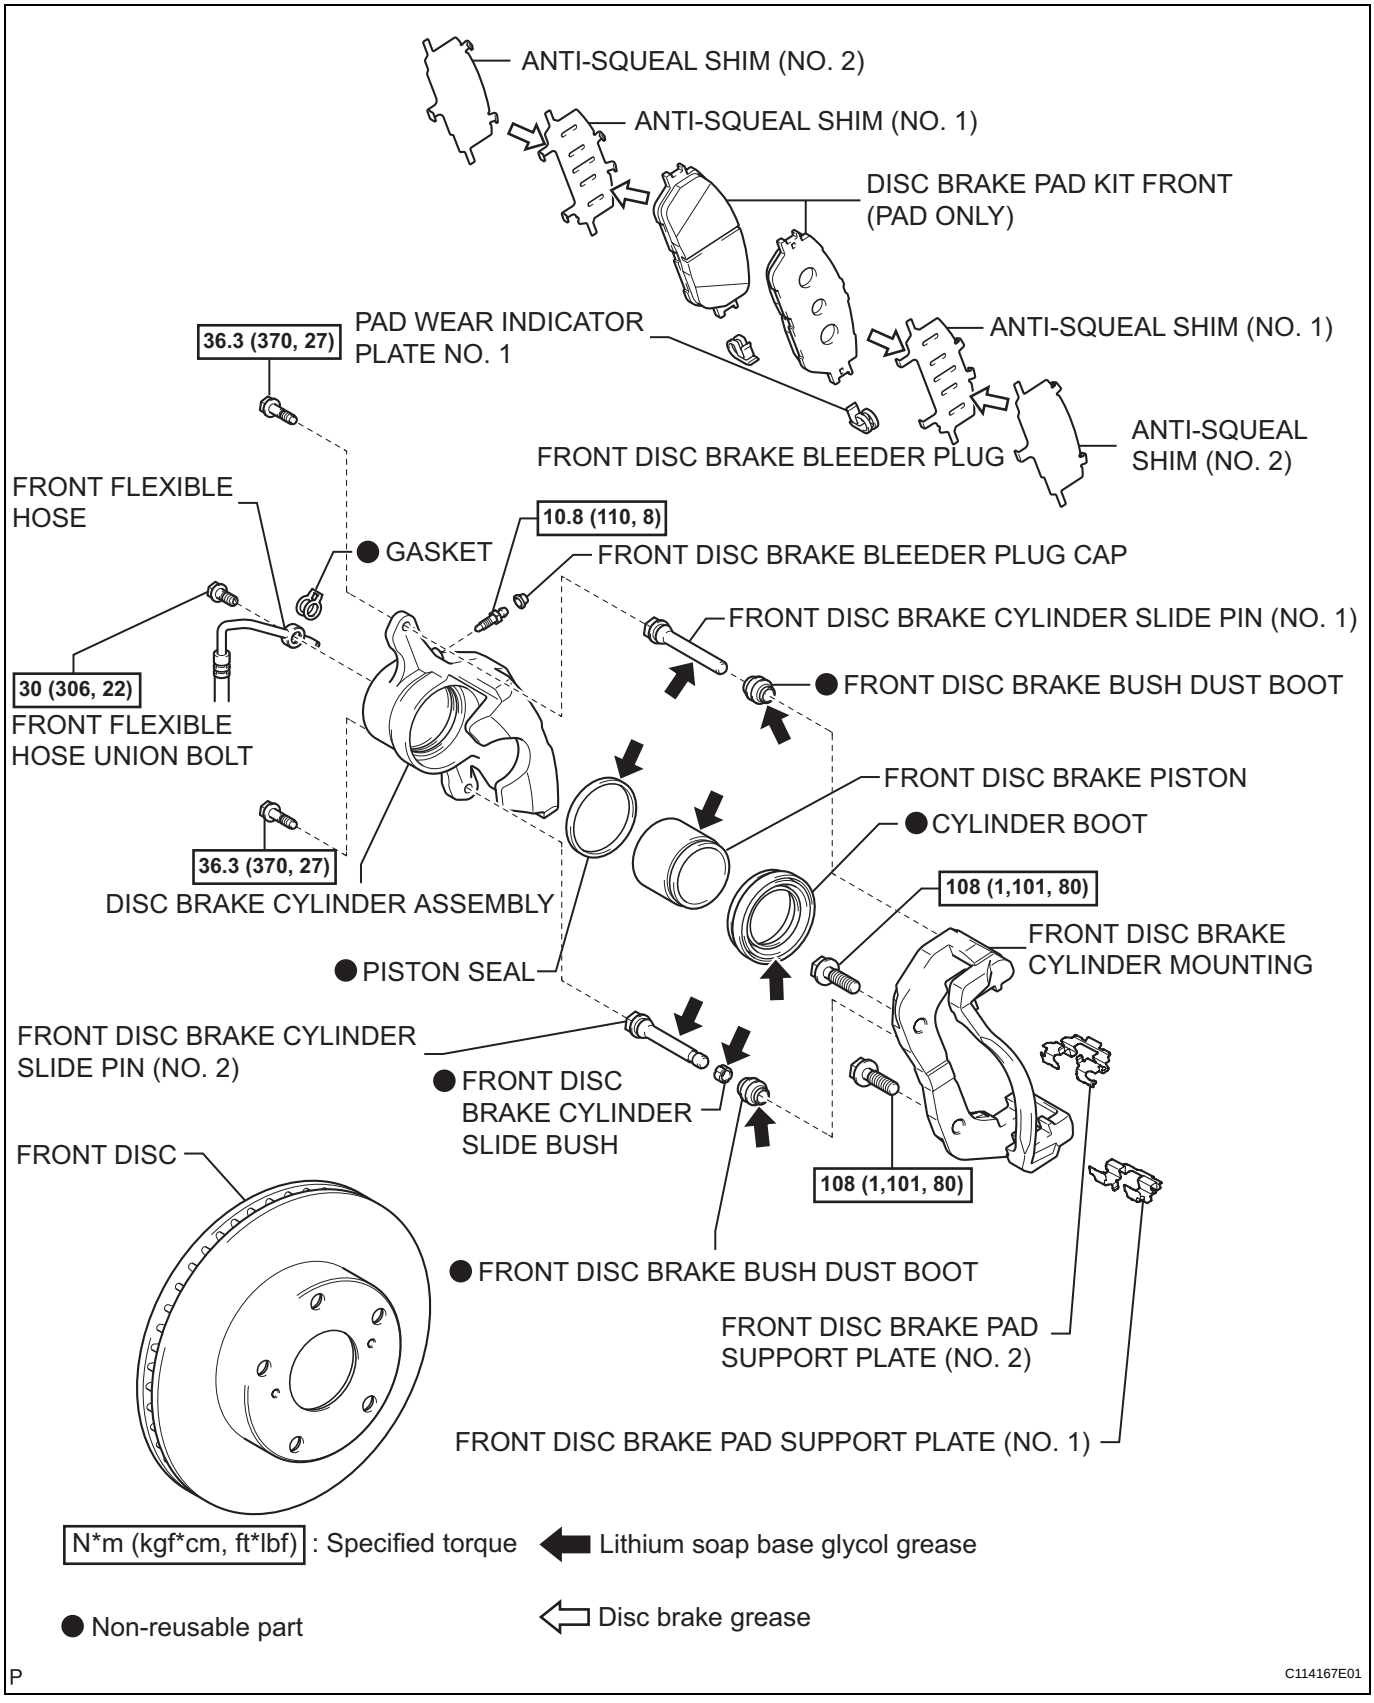
FRONT BRAKE (for 2WD)

COMPONENTS



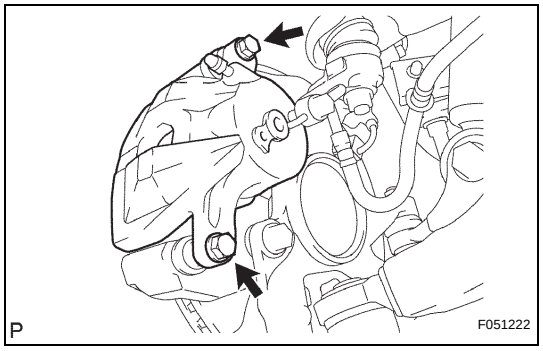
REMOVAL

1. **REMOVE FRONT WHEEL**

2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.

3. **REMOVE DISC BRAKE CYLINDER ASSEMBLY**
   (a) Remove the union bolt and gasket from the disc brake cylinder, then disconnect the flexible hose.

   (b) Hold the disc brake cylinder slide pin and remove the 2 bolts.



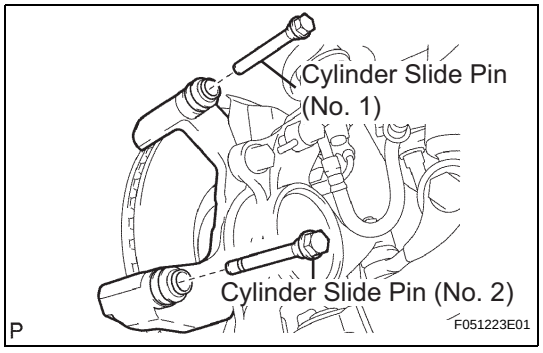
4. **REMOVE DISC BRAKE PAD KIT FRONT (PAD ONLY)**
   (a) Remove the 2 disc brake pads with anti-squeal shim from the disc brake cylinder mounting.

5. **REMOVE ANTI SQUEAL SHIM KIT FRONT**
   (a) Remove the 4 anti-squeal shims from each pad.
   (b) Remove the pad wear indicator plate from each pad.

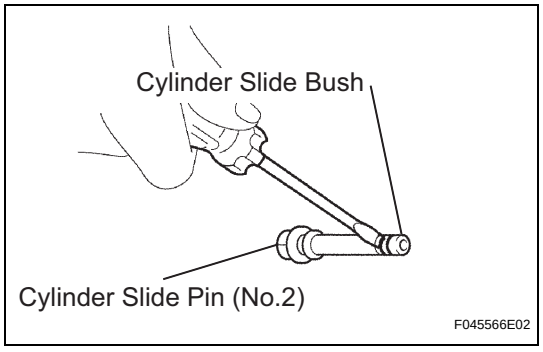
6. **REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE**
   (a) Remove the 2 disc brake pad support plates from the disc brake cylinder mounting.

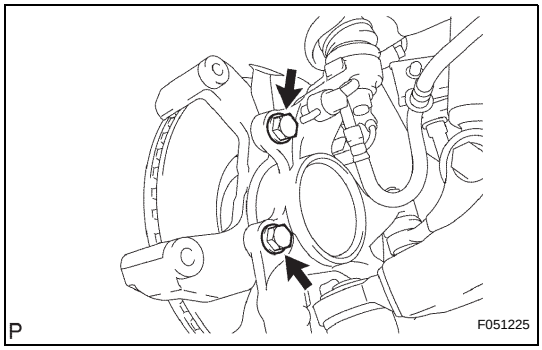
BR

7. **REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN**
   (a) Remove the disc brake cylinder slide pin from the disc brake cylinder mounting.



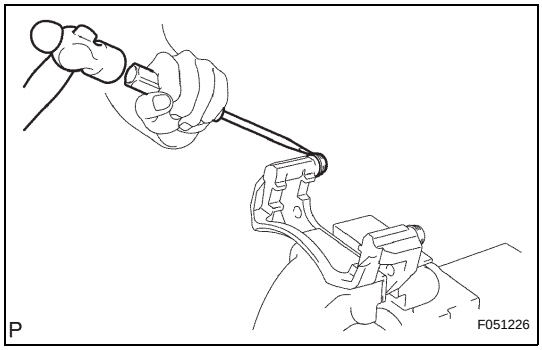
8. **REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSH**
   (a) Using a screwdriver, remove the disc brake cylinder slide bush from the disc brake cylinder slide pin (No. 2).
   NOTICE:
   Be careful not to damage the disc brake cylinder slide pin (No. 2).





9. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING

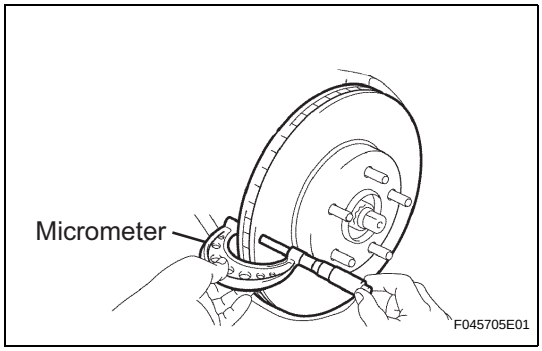
(a) Remove the 2 bolts and disc brake cylinder mounting.



10. REMOVE FRONT DISC BRAKE BUSH DUST BOOT

(a) Place soft jaws on a vise and hold the disc brake cylinder mounting in the vise through aluminum plates.

(b) Using a screwdriver and hammer, remove the 2 disc brake bush dust boots from the disc brake cylinder mounting.



11. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

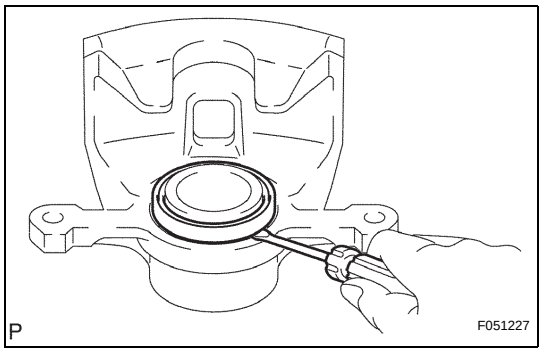
Standard thickness:
25.0 mm (0.984 in.)
Minimum thickness:
23.0 mm (0.906 in.)

If the disc thickness is less than the minimum, replace the disc.

12. REMOVE FRONT DISC

(a) Make matchmarks on the front disc and the axle hub.

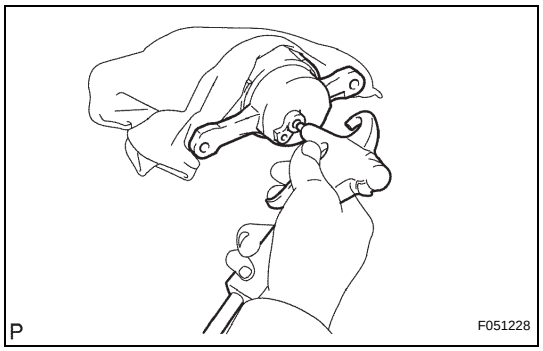
(b) Remove the front disc.



DISASSEMBLY

1. REMOVE CYLINDER BOOT

(a) Using a screwdriver, remove the cylinder boot.

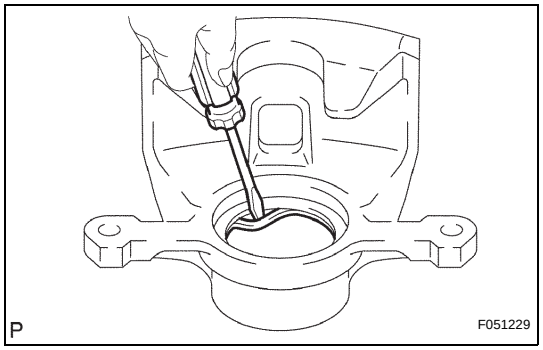


2. REMOVE FRONT DISC BRAKE PISTON

(a) Place a shop rag or equivalent between the disc brake piston and disc brake cylinder.

(b) Use compressed air to remove the disc brake piston from the disc brake cylinder.

CAUTION:
Be careful not to place your fingers in front of the piston when using compressed air.
NOTICE:
Be careful not to spatter the brake fluid.



3. REMOVE PISTON SEAL

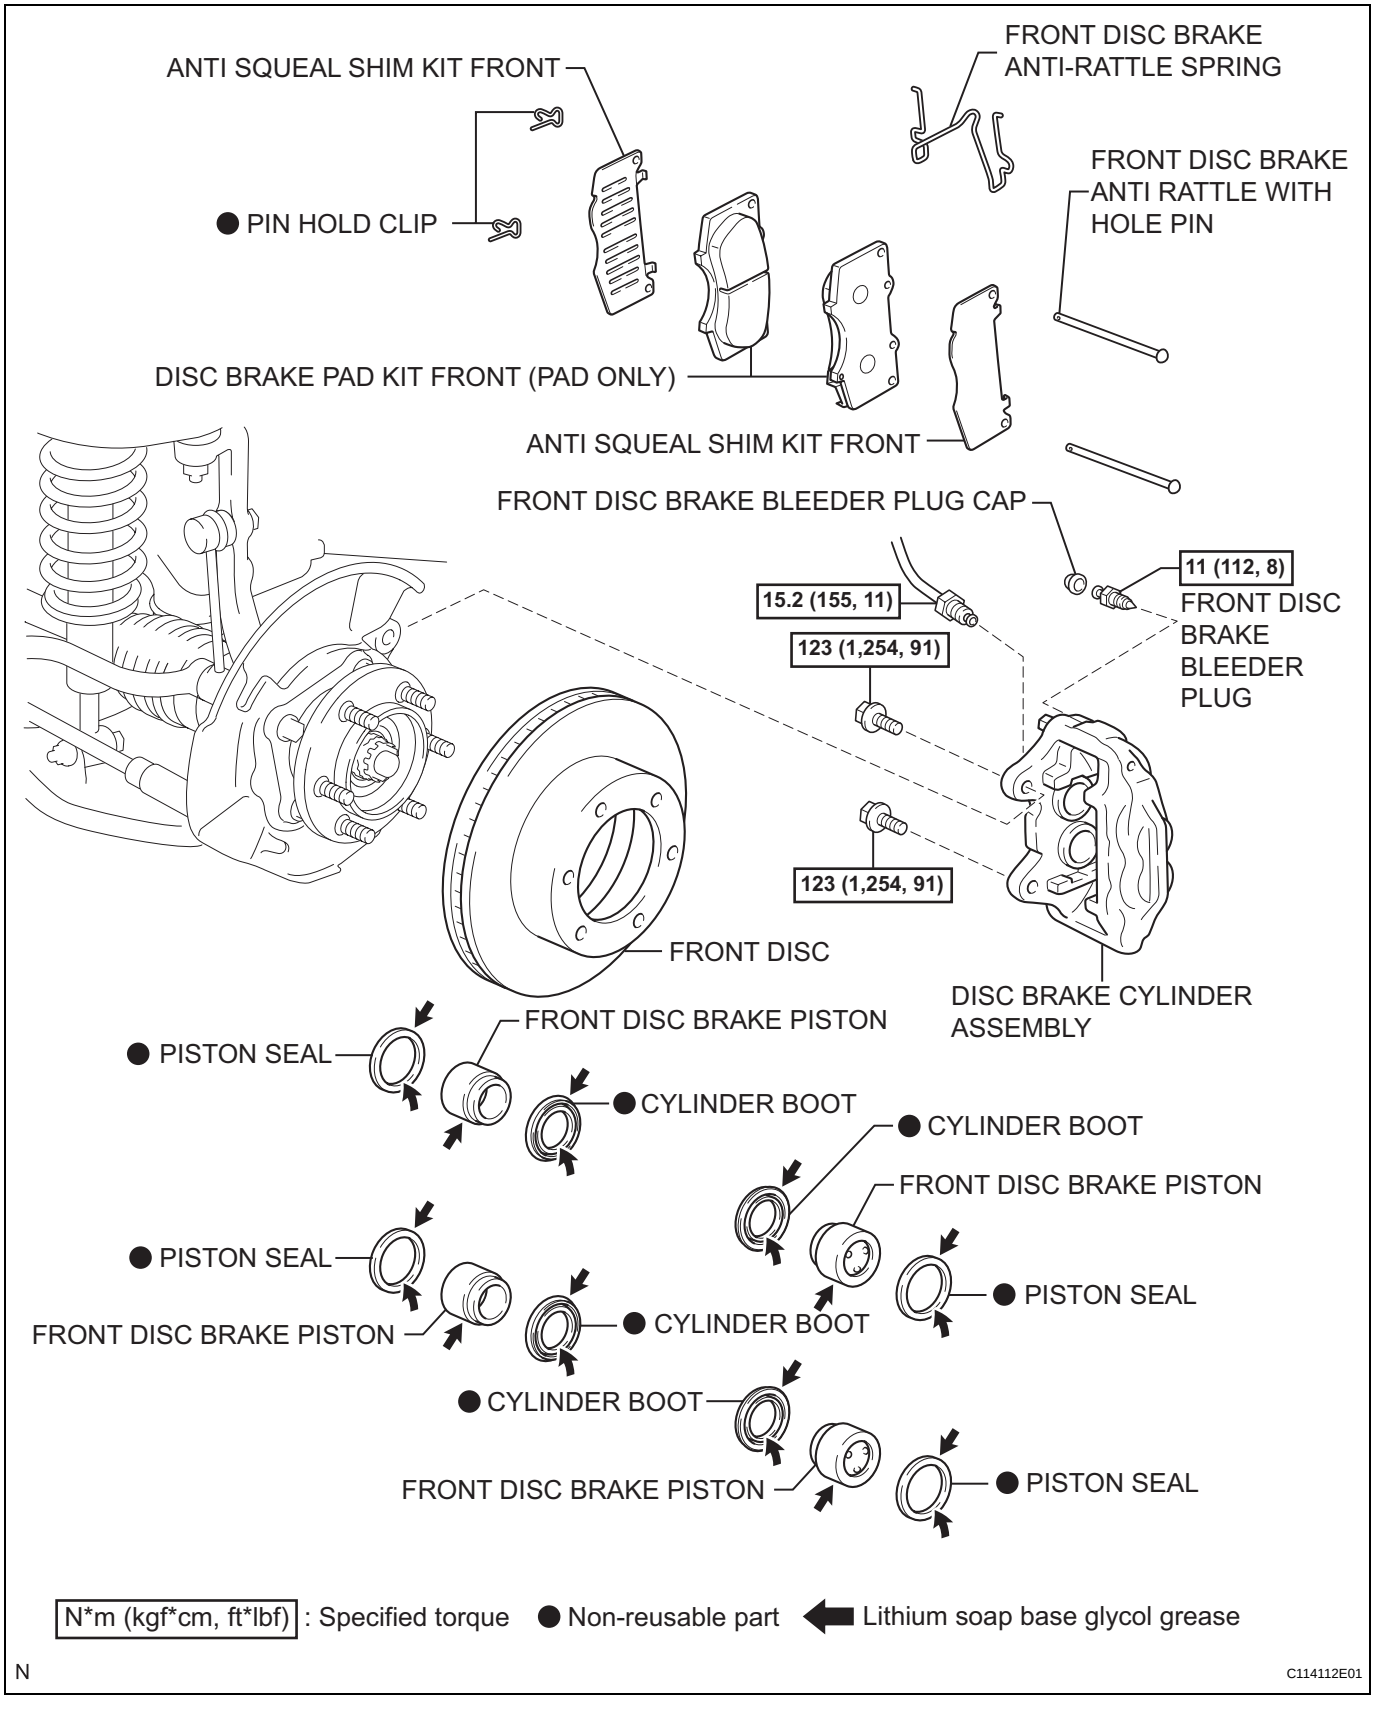
(a) Using a screwdriver, remove the piston seal from the front disc brake cylinder.

NOTICE:
Be careful not to damage the inner cylinder or cylinder groove.

4. REMOVE FRONT DISC BRAKE BLEEDER PLUG

FRONT BRAKE (for 4WD and Pre-Runner)

COMPONENTS

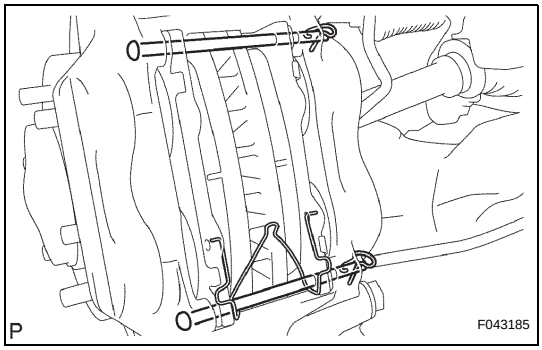


BR

REMOVAL

1. REMOVE FRONT WHEEL

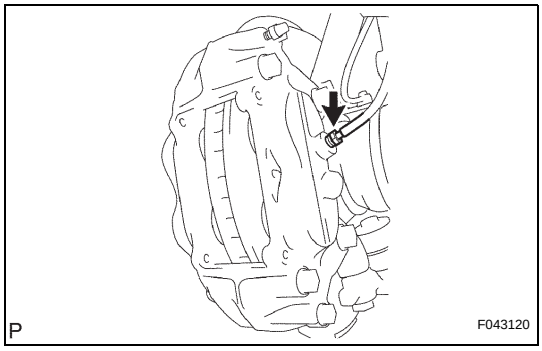
2. DRAIN BRAKE FLUID
NOTICE:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.



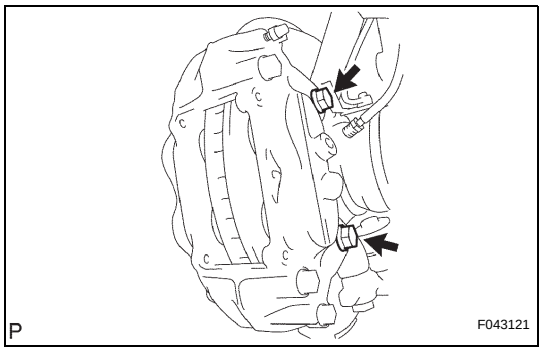
3. REMOVE FRONT DISC BRAKE ANTI RATTLE WITH HOLE PIN
(a) Remove the 2 pin hold clips, then remove the 2 anti-rattle w/ hole pins from the disc brake cylinder.
(b) Remove the anti-rattle spring from the disc brake pad.

4. REMOVE DISC BRAKE PAD KIT FRONT (PAD ONLY)
(a) Remove the 2 disc brake pads with anti-squeal shim from the disc brake cylinder.

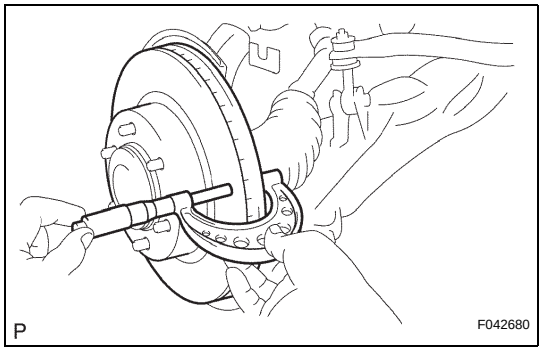
5. REMOVE ANTI SQUEAL SHIM KIT FRONT
(a) Remove the 2 anti-squeal shims from each of the disc brake pads.



6. REMOVE DISC BRAKE CYLINDER ASSEMBLY
(a) Using SST, disconnect the brake tube from the disc brake cylinder.
SST 09023-00101
HINT:
Use a container to collect the brake fluid as it drains out.



(b) Remove the 2 bolts and disc brake cylinder.



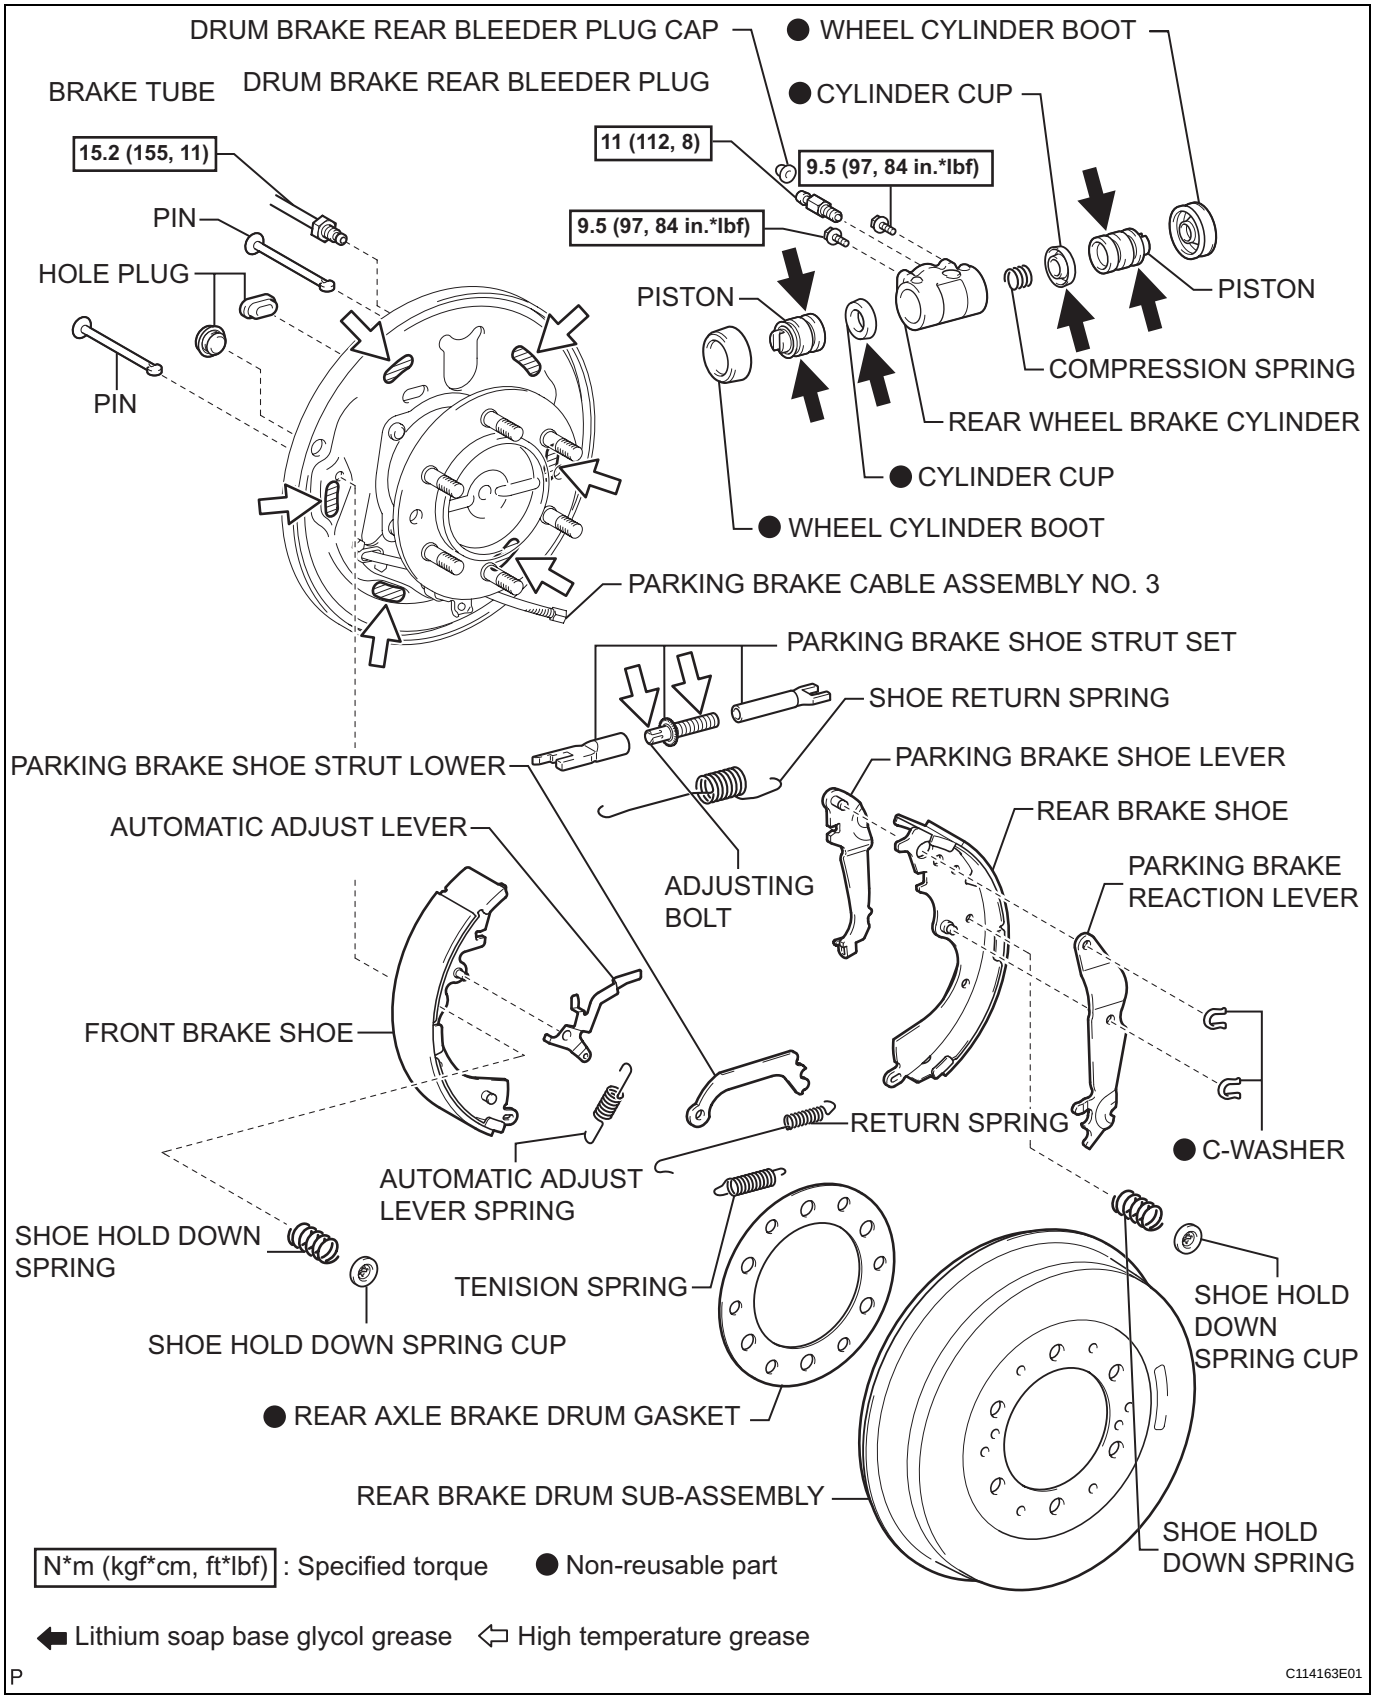
7. INSPECT DISC THICKNESS
(a) Using a micrometer, measure the disc thickness.
Standard thickness:
28.0 mm (1.102 in.)
Minimum thickness:
26.0 mm (1.024 in.)

8. REMOVE FRONT DISC
(a) Make matchmarks on the disc and the axle hub.
(b) Remove the front disc.

BR

REAR BRAKE

COMPONENTS



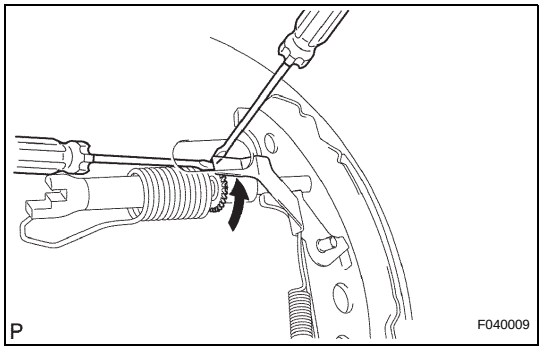
BR

REMOVAL

1. REMOVE REAR WHEEL

2. DRAIN BRAKE FLUID

HINT:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.



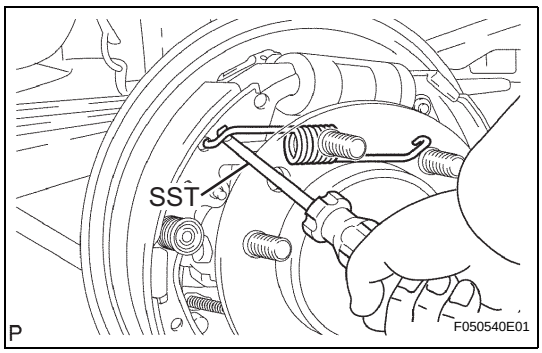
3. REMOVE REAR BRAKE DRUM SUB-ASSEMBLY

(a) Release the parking brake, and remove the rear brake drum.
If the rear brake drum cannot be removed easily, perform the following procedures.
(b) Remove the hole plug and insert a screwdriver through the hole into the backing plate, and hold the automatic adjusting lever away from the adjuster.
(c) Using another screwdriver, contract the brake shoe by turning the adjusting bolt.
(d) Remove the drum gasket from the rear brake drum.

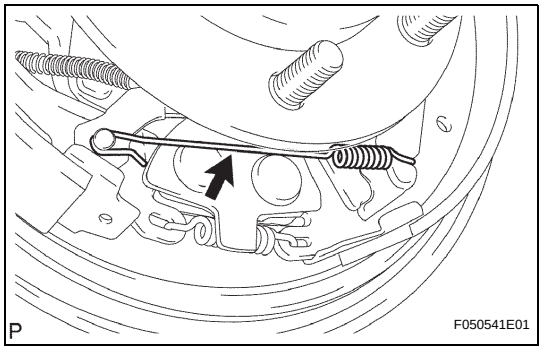
DISASSEMBLY

1. REMOVE FRONT BRAKE SHOE

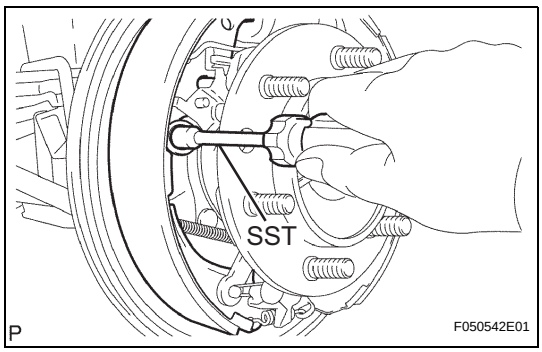
(a) Using SST, remove the shoe return spring from the front brake shoe.
SST 09921-00010



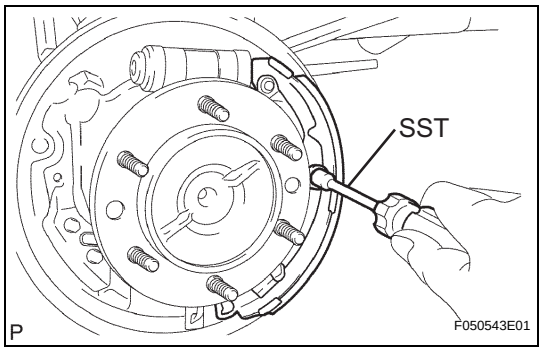
(b) Using needle-nose pliers, remove the return spring.



(c) Using SST, remove the shoe hold down spring cup, shoe hold down spring and pin.
SST 09718-00010
(d) Remove the parking brake shoe strut lower.
(e) Remove the tension spring and front brake shoe.
(f) Remove the automatic adjust lever spring and automatic adjust lever LH from the front brake shoe.

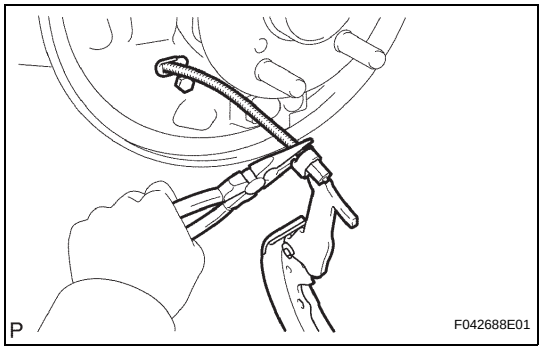


BR

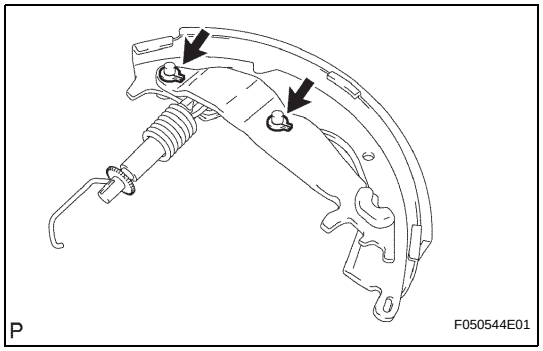


2. REMOVE REAR BRAKE SHOE

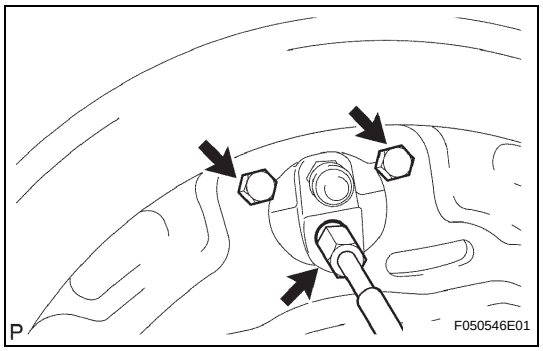
(a) Using SST, remove the shoe hold down spring cup, shoe hold down spring and pin.
SST 09718-00010



(b) Using needle-nose pliers, disconnect the parking brake cable No. 3 and remove the rear brake shoe.



(c) Using a screwdriver, remove the 2 C-washers, parking brake shoe lever, parking brake reaction lever and parking brake shoe strut set.



3. REMOVE FRONT OR UPPER REAR WHEEL BRAKE CYLINDER ASSEMBLY

(a) Using SST, disconnect the brake tube, and use a container to collect the brake fluid as it flows out.
SST 09023-00101

(b) Remove the 2 bolts and rear wheel brake cylinder assembly.

4. REMOVE REAR WHEEL CYLINDER CUP KIT

(a) Remove the 2 wheel cylinder boots from the rear wheel brake cylinder.
(b) Remove the 2 pistons and compression spring.
(c) Remove the 2 cylinder cups from each piston.
(d) Remove the bleeder plug cap and bleeder plug from the rear wheel brake cylinder.

PARKING BRAKE SYSTEM

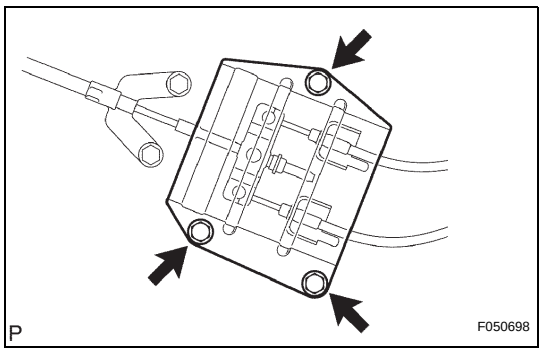
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these parts.

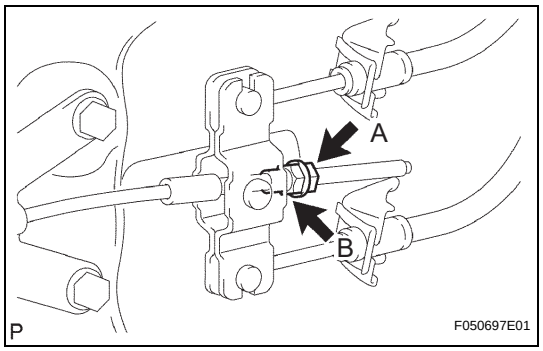
Symptom	Suspected area	See page
Brake drag	1. Parking brake pedal travel (Out of adjustment) (Automatic Transmission)	PB-2
	2. Parking brake lever travel (Out of adjustment) (Manual Transmission)	PB-2
	3. Parking brake wire (Sticking)	PB-18
	4. Parking brake shoe clearance (Out of adjustment)	BR-74
	5. Parking brake shoe lining (Cracked or distorted)	BR-70
	6. Tension or return spring (Damaged)	BR-68

ADJUSTMENT

1. **REMOVE REAR WHEEL**
2. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-74)**
3. **INSTALL REAR WHEEL**
   Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)
4. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission)**
   (a) Slowly depress the parking brake pedal to the fully applied position, and count the number of clicks.
   Parking brake pedal travel at 300 N (31 kgf, 67 lbf):
   7 to 10 clicks
5. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transmission)**
   (a) Slowly pull the parking brake lever to the fully applied position, and count the number of clicks.
   Parking brake lever travel at 200 N (20 kgf, 45 lbf):
   7 to 10 clicks
6. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)**
7. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)**
8. **REMOVE CONSOLE BOX ASSEMBLY REAR (for Separate Seat Type) (See page IP-10)**
9. **REMOVE PARKING BRAKE CABLE JOINT PROTECTOR (for Bench Seat Type)**
   (a) Slide the seat to the rearmost position.
   (b) Pull up the floor carpet around the cable joint protector, along its seams.
   (c) Remove the 3 bolts and parking brake cable joint protector.
10. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transmission)**
    (a) Confirm that the parking brake pedal is released.



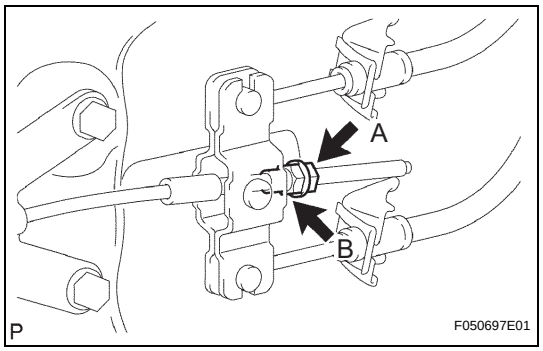
PB



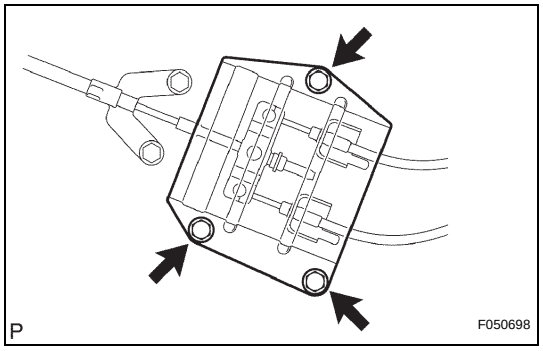
(b) Loosen the lock nut A and turn the adjusting nut B until the parking brake pedal travel is corrected to the specified value.
(c) Tighten the lock nut.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)
(d) Check whether the parking brake drags or not.
(e) When operating the parking brake pedal, check that the parking brake pedal indicator light comes on.

11. ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transmission)

(a) Confirm that the parking brake lever is released.



(b) Loosen the lock nut A and turn the adjusting nut B until the parking brake lever travel is corrected to the specified value.
(c) Tighten the lock nut.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)
(d) Check whether the parking brake drags or not.
(e) When operating the parking brake lever, check that the parking brake lever indicator light comes on.



12. INSTALL PARKING BRAKE CABLE JOINT PROTECTOR (for Bench Seat Type)

(a) Install the 3 bolts and parking brake cable joint protector.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)
(b) Return the floor carpet to its original position.
(c) Return the seat to its original position.

13. INSTALL CONSOLE BOX ASSEMBLY REAR (for Separate Seat Type) (See page IP-24)

14. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)

15. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)

STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS ON STEERING SYSTEM

(a) Care must be taken when replacing parts. Incorrect replacement may affect the performance of the steering system and result in driving hazards.

2. HANDLING PRECAUTIONS ON SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the supplemental restraint system (see page 60-6).

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order shown. Repair or replace the parts as necessary.

STEERING SYSTEM

Symptom	Suspected area	See page
Hard steering	1. Tires (Improperly inflated)	TW-1
	2. Power steering fluid level (Low)	PS-2
	3. Drive belt (Loose)	PS-2
	4. Front wheel alignment (Incorrect) (2WD)	SP-2
	5. Front wheel alignment (Incorrect) (4WD Pre)	SP-7
	6. Steering system joints (Worn)	-
	7. Suspension arm ball joints (2WD) (Worn)	SP-34
	8. Suspension arm ball joints (4WD Pre) (Worn)	SP-40
	9. Steering column (Binding)	-
	10.Power steering vane pump (2TR)	PS-19
	11.Power steering vane pump (1GR)	PS-9
	12.Power steering gear (2WD)	PS-29
	13.Power steering gear (4WD Pre)	PS-53
Poor return	1. Tires (Improperly inflated)	TW-1
	2. Front wheel alignment (Incorrect) (2WD)	SP-2
	3. Front wheel alignment (Incorrect) (4WD Pre)	SP-7
	4. Steering column (Binding)	-
	5. Power steering gear (2WD)	PS-29
	6. Power steering gear (4WD Pre)	PS-53
Excessive free play	1. Steering system joints (Worn)	-
	2. Suspension arm ball joints (Worn) (2WD)	SP-34
	3. Suspension arm ball joints (Worn) (4WD Pre)	SP-40
	4. Intermediate shaft, Sliding yoke (Worn)	-
	5. Front wheel bearing (Worn) (2WD)	AH-7

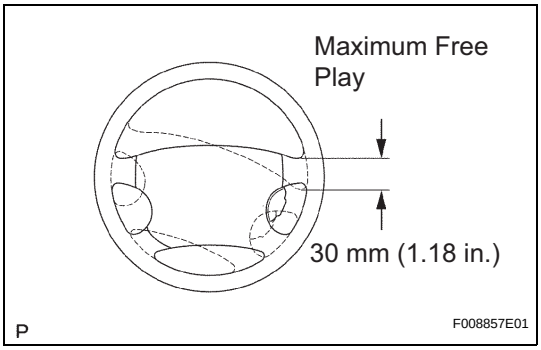
	8. Power steering gear (4WD Pre)	PS-53
Abnormal noise	1. Power steering fluid level (Low)	PS-2
	2. Steering system joints (Worn)	-
	3. Power steering vane pump (2TR)	PS-19
	4. Power steering vane pump (1GR)	PS-9
	5. Power steering gear (2WD)	PS-29
	6. Power steering gear (4WD Pre)	PS-53



ON-VEHICLE INSPECTION

1. CHECK STEERING WHEEL FREE PLAY

(a) Stop the vehicle and align the tires facing straight ahead.

(b) Gently turn the steering wheel right and left by hand, and check the steering wheel free play.

Maximum free play:

30 mm (1.18 in.)

If the free play exceeds the maximum, replace the steering intermediate shaft or steering gear.

POWER STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR STEERING SYSTEM

(a) Care must be taken when replacing parts. Incorrect replacement could affect the performance of the steering system and result in driving hazards.

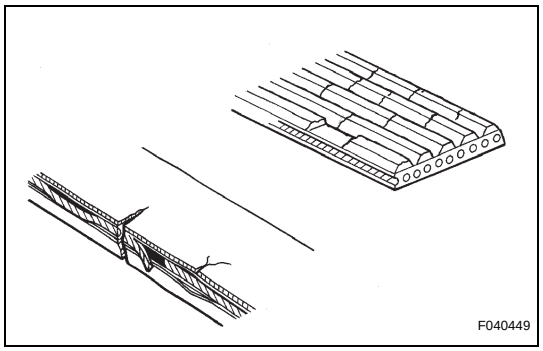
2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System), such as airbags. If service operation is not carried out properly in the correct sequence, the airbag may suddenly deploy and this may result in serious injury. Before servicing (including inspection, replacement, removal and inspection of parts), be sure to read the precautionary notices for the supplemental restraint system (See page RS-1).

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problems. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace these applicable parts.

Symptom	Suspected area	See page
Hard steering	1. Tires (Improperly inflated)	TW-1
	2. Power steering fluid level (Low)	PS-3
	3. Drive belt (Loose) (2TR-FE)	EM-5
	4. Drive belt (Loose) (1GR-FE)	EM-5
	5. Front wheel alignment (Incorrect) (2WD)	SP-2
	6. Front wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	7. Steering system joints (Worn)	-
	8. Suspension arm ball joints (Worn) (2WD)	SP-36
	9. Suspension arm ball joints (Worn) (4WD and Pre-Runner)	SP-43
	10. Steering column (Binding)	-
	11. Vane pump (2TR-FE)	PS-21
	12. Vane pump (1GR-FE)	PS-11
	13. Power steering link (2WD)	PS-35
	14. Power steering link (4WD and Pre-Runner)	PS-60
Poor return	1. Tires (Improperly inflated)	TW-1
	2. Front wheel alignment (Incorrect) (2WD)	SP-2
	3. Front wheel alignment (Incorrect) (4WD and Pre-Runner)	SP-7
	4. Steering column (Binding)	-
	5. Power steering link (2WD)	PS-35
	6. Power steering link (4WD and Pre-Runner)	PS-60
Excessive play	1. Steering system joints (Worn)	-
	2. Suspension arm ball joints (Worn) (2WD)	SP-36
	3. Suspension arm ball joints (Worn) (4WD and Pre-Runner)	SP-43
	4. Intermediate shaft, Sliding yoke (Worn)	-
	5. Front wheel bearing (Worn)	AH-1
	6. Power steering link (2WD)	PS-35
	7. Power steering link (4WD and Pre-Runner)	PS-60
Abnormal noise	1. Power steering fluid level (Low)	PS-3
	2. Steering system joints (Worn)	-
	3. Vane pump (2TR-FE)	PS-21
	4. Vane pump (1GR-FE)	PS-11
	5. Power steering link (2WD)	PS-35
	6. Power steering link (4WD and Pre-Runner)	PS-60



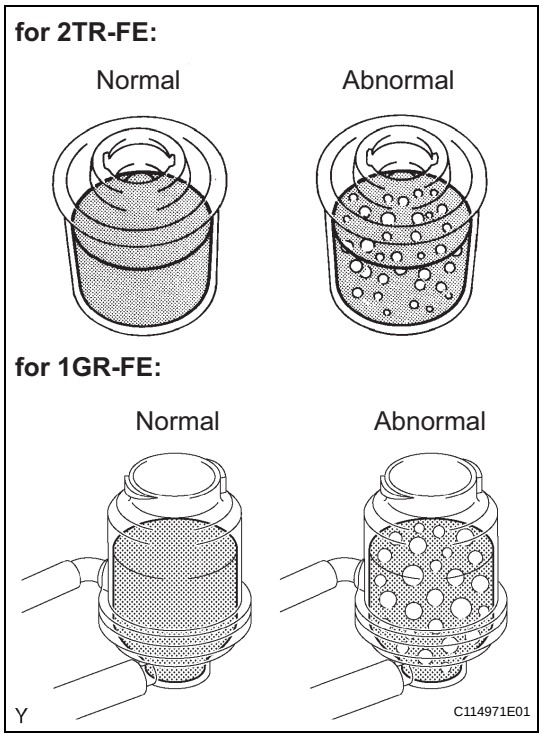
ON-VEHICLE INSPECTION

1. INSPECT DRIVE BELT

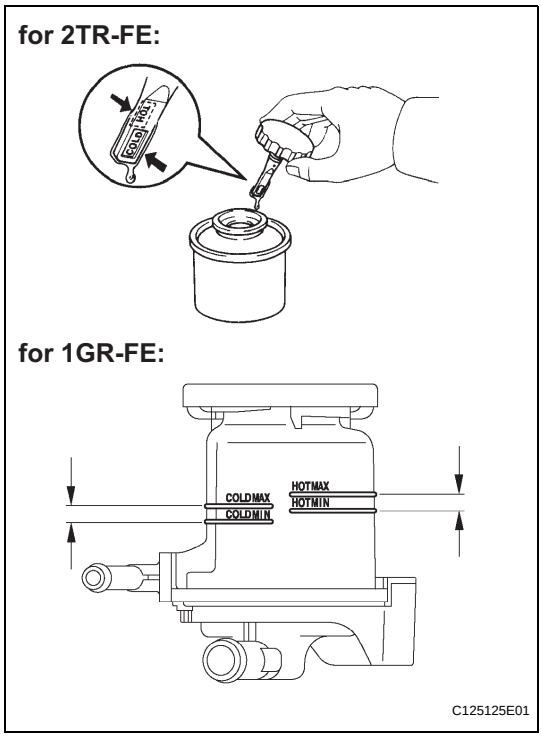
(a) Visually check the belt for defects, such as excessive wear and frayed cords.
If any defects are found, replace the drive belt.
HINT:
Cracks on the rib side of a belt are considered acceptable. Replace the belt if there are any missing ribs.

2. BLEED POWER STEERING SYSTEM

(a) Check the fluid level.
(b) Jack up the front of the vehicle and support it with stands.
(c) Turn the steering wheel.
  (1) With the engine stopped, turn the wheel slowly from lock to lock several times.
(d) Lower the vehicle.
(e) Start the engine.
  (1) Run the engine at idle for a few minutes.
(f) Turn the steering wheel.
  (1) With the engine idling, turn the wheel to the left or right full lock position and keep it there for 2 to 3 seconds. Then turn the wheel to the opposite full lock position and keep it there for 2 to 3 seconds (step A).
  (2) Repeat step A several times.
(g) Stop the engine.
(h) Check for foaming or emulsification.
Especially, if the system has to be bled twice because of foaming or emulsification, check for fluid leakage in the system.
(i) Check the fluid level.



PS



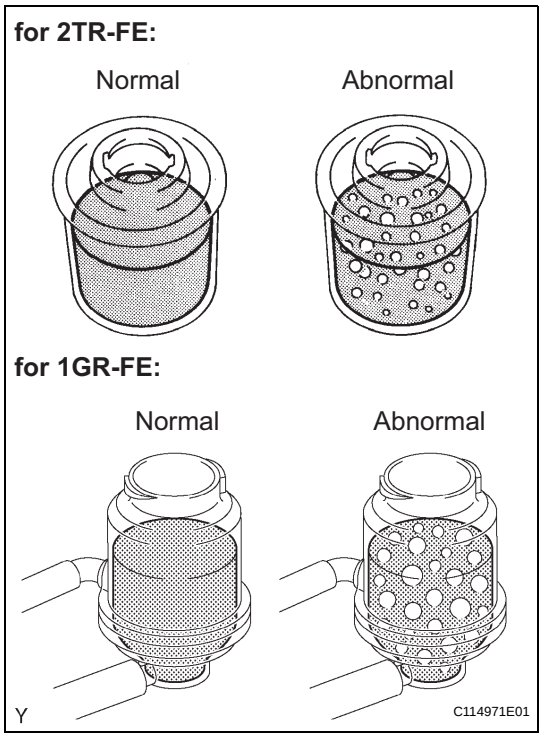
3. INSPECT FLUID LEVEL

(a) Keep the vehicle level.

(b) With the engine stopped, check the fluid level in the oil reservoir.
If necessary, add fluid.
Fluid:
ATF "DEXRON" II or III
HINT:
Check that the fluid level is within the HOT level range in the reservoir tank. If the fluid is cold, check that it is within the COLD level range.

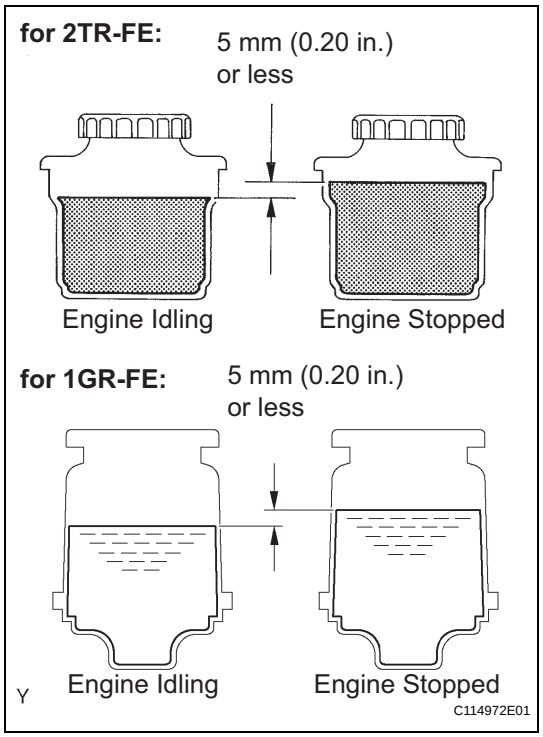
(c) Start the engine and let it idle.

(d) Turn the steering wheel from lock to lock several times to raise fluid temperature.
Fluid temperature:
75 to 80°C (167 to 176°F)



(e) Check for foaming or emulsification.
If any foaming or emulsification is identified, bleed the power steering system.

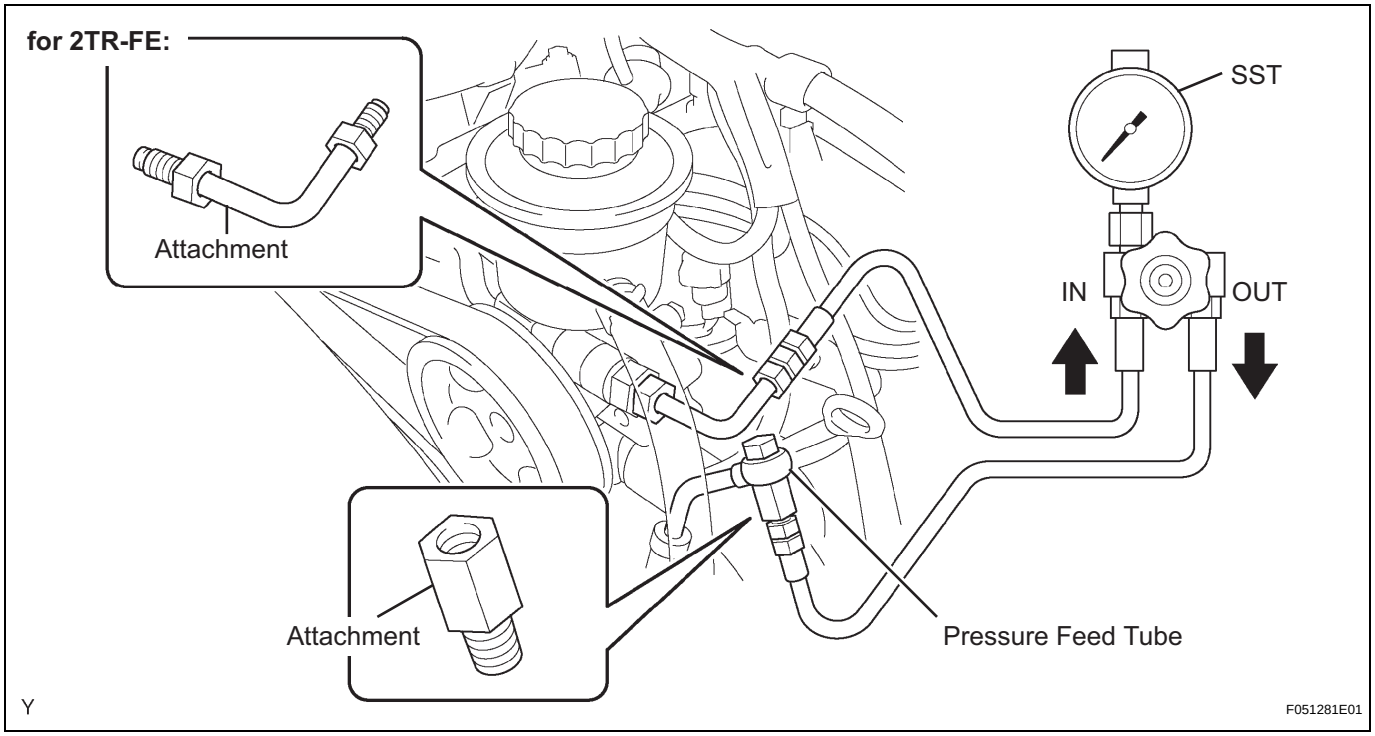
PS



(f) With the engine idling, measure the fluid level in the oil reservoir.
(g) Stop the engine.
(h) Wait a few minutes and measure the fluid level in the oil reservoir again.
Maximum fluid level rise:
5 mm (0.20 in.)
If any problems are found, bleed the power steering system.
(i) Check the fluid level.

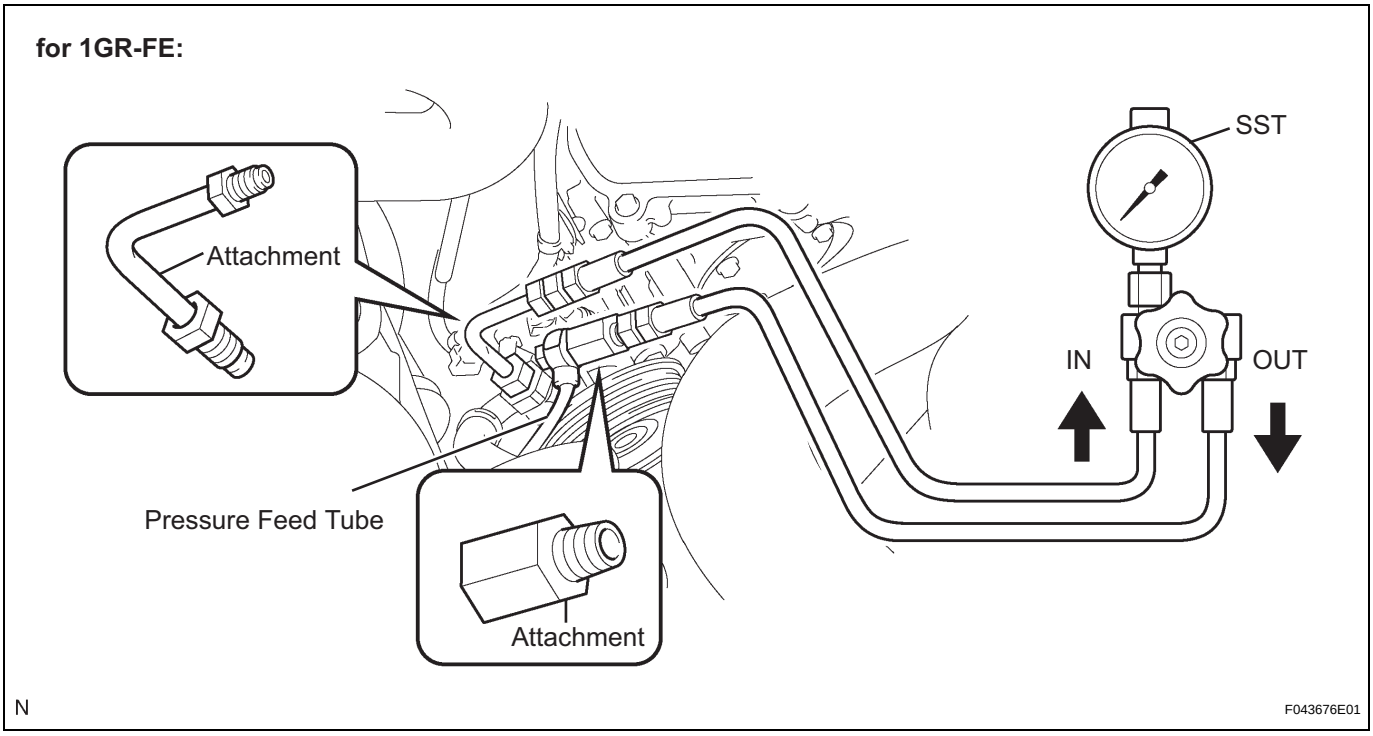
4. INSPECT STEERING FLUID PRESSURE

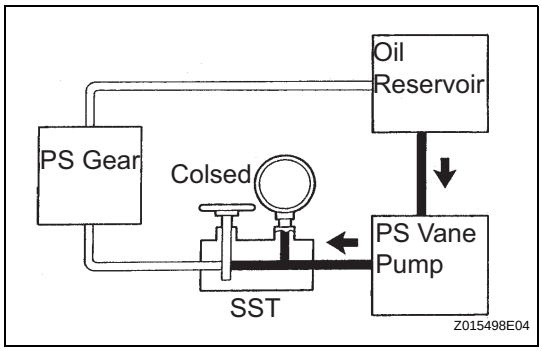
(a) for 2TR-FE:
(1) Disconnect the pressure feed tube from the vane pump (See page PS-19).
(b) for 1GR-FE:
(1) Disconnect the pressure feed tube from the vane pump (See page PS-9).
(c) Connect SST as shown in the illustration.
SST 09640-10010 (09641-01010, 09641-01030, 09641-01060)
NOTICE:
Check that the valve of SST is in the open position.
(d) Bleed the power steering system.
(e) Start the engine and let it idle.
(f) Turn the steering wheel from lock to lock several times to raise the fluid temperature.
Fluid temperature:
75 to 80 °C (167 to 176 °F)



PS

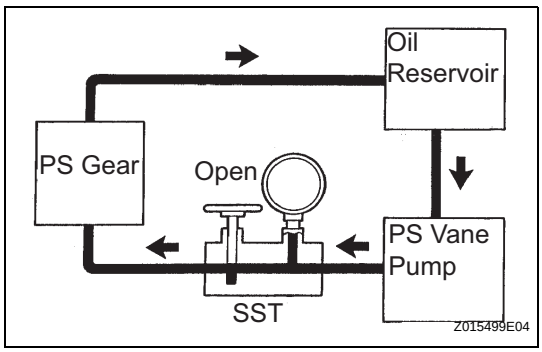
for 1GR-FE:





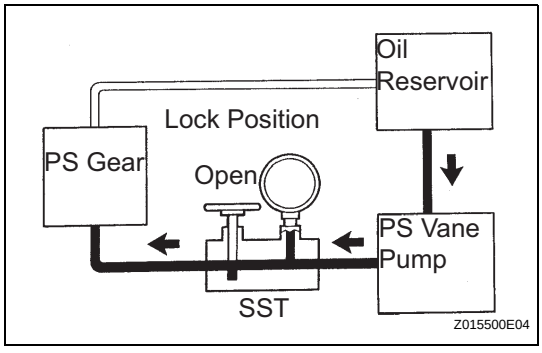
(g) With the engine idling, close the valve of SST and check the reading on SST.
Fluid pressure:

8,300 to 8,800 kPa (85 to 90 kgf/cm^2, 1,209 to 1,280 psi)
NOTICE:
- **Do not keep the valve closed for more than 10 seconds.**
- **Do not let the fluid temperature become too high.**



(h) With the engine idling, fully open the valve.
(i) Measure the fluid pressure at the engine speeds of 1,000 rpm and 3,000 rpm.
Fluid pressure difference:

490 kPa (5 kgf/cm^2, 71 psi) or less
NOTICE:
Do not turn the steering wheel.

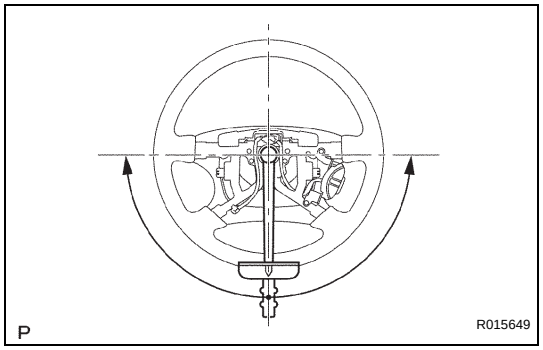


(j) With the engine idling and valve fully open, turn the steering wheel to the full lock position.
Fluid pressure:

8,300 to 8,800 kPa (85 to 90 kgf/cm^2, 1,209 to 1,280 psi)
NOTICE:
- **Do not keep the steering wheel in the full lock position for more than 10 seconds.**
- **Do not let the fluid temperature become too high.**

PS

(k) Disconnect SST.
(l) for 2TR-FE:
  (1) Connect the pressure feed tube to the vane pump (See page PS-25).
(m) for 1GR-FE:
  (1) Connect the pressure feed tube to the vane pump (See page PS-15).
(n) Bleed the power steering system.



5. INSPECT STEERING EFFORT

(a) Center the steering wheel assembly.
(b) Remove the horn button assembly (See page RS-558).
(c) Start the engine and let it idle.
(d) Measure the steering effort in both directions.
Steering effort (Reference):
6.0 N*m (60 kgf*cm, 53 in.*lbf) or less
HINT:
Check the tire type, pressure and contact surfaces before making a diagnosis.
(e) Install the steering wheel assembly set nut.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
(f) Install the horn button assembly (See page RS-558).

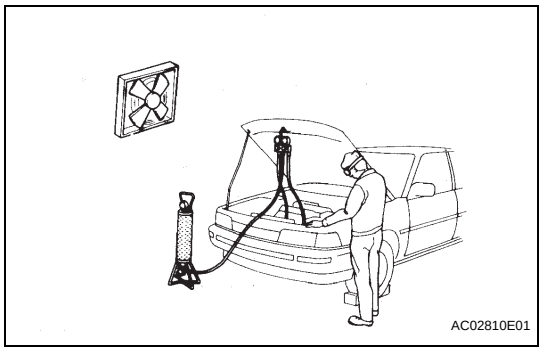
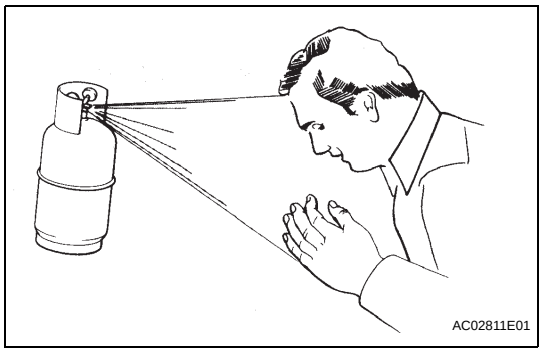
AIR CONDITIONING SYSTEM

PRECAUTION

1. **CONNECT THE BATTERY NEGATIVE TERMINAL TO THE CABLE AND RUN THE ENGINE AT NO LESS THAN 2,000 RPM FOR 1 MINUTE**
   NOTICE:
   If the engine exceeds 2,000 rpm, the clutch is automatically disengaged by the compressor protection control system.
2. **DO NOT HANDLE REFRIGERANT IN ENCLOSED AREAS OR NEAR OPEN FLAMES**
3. **ALWAYS WEAR EYE PROTECTION**

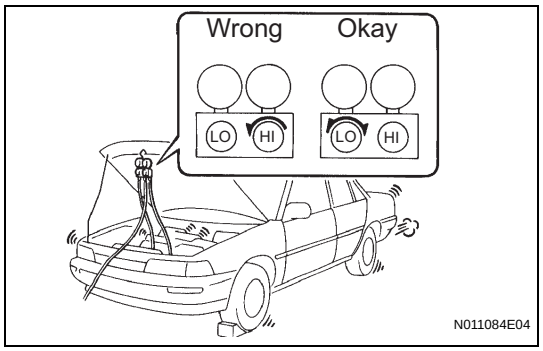


AC02810E01



AC02811E01

4. **BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN**
   if liquid refrigerant gets in your eyes or on your skin:
   (a) Wash the area with lots of cold water.
   CAUTION:
   Do not rub your eyes or skin.
   (b) Apply clean petroleum jelly to the skin.
   (c) Go immediately to a hospital or a physician for professional treatment.
5. **NEVER HEAT CONTAINER OR EXPOSE IT TO NAKED FLAME**
6. **BE CAREFUL NOT TO DROP CONTAINER OR APPLY ANY PHYSICAL SHOCKS TO IT**



N011084E04

7. **DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM**
   If there is not enough refrigerant in the refrigerant system, oil lubrication will be insufficient and compressor burnout may occur. Necessary care should be taken to avoid this.
8. **DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING**
   Open and close only the low pressure valve. If the high pressure valve is open, refrigerant flows in the reverse direction. This could cause the charging cylinder to rupture.
9. **BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT**
   If the refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy and engine overheating.

10. DO NOT OPERATE ENGINE AND COMPRESSOR WITH NO REFRIGERANT
CAUTION:
This may damage the inside of the compressor.

REFRIGERANT

ON-VEHICLE INSPECTION

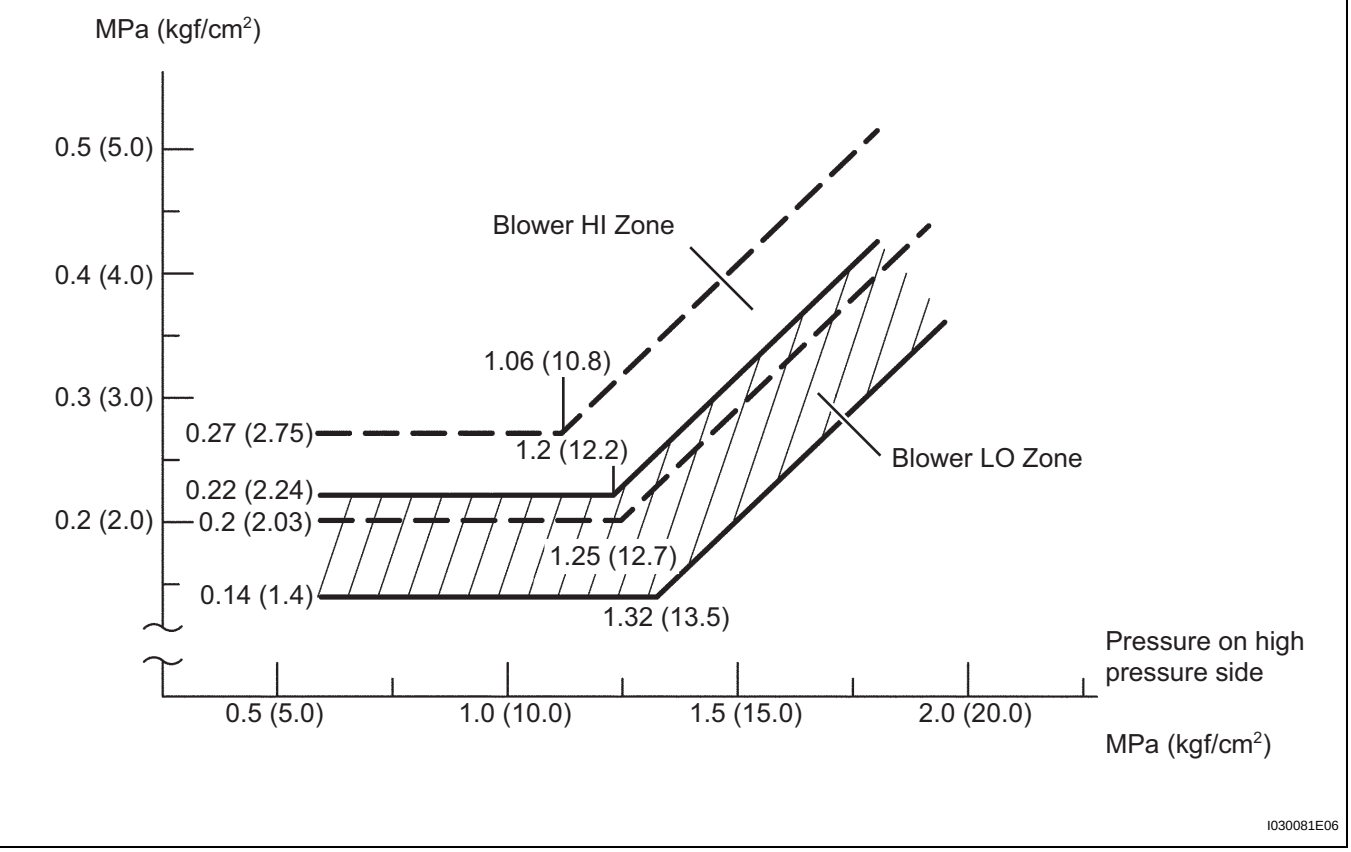
1. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

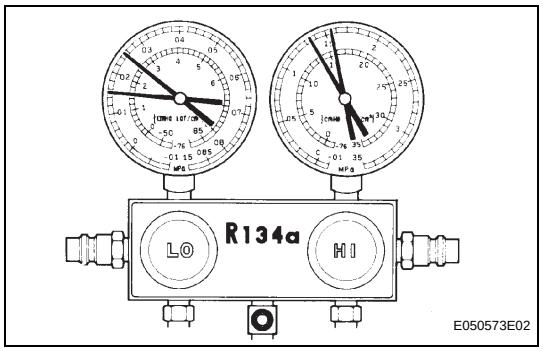
(a) This is a method to specify trouble areas by using a manifold gauge set. Read the manifold gauge pressure when the following conditions are established.

Test conditions:

- Engine has been warmed up.
- All doors are fully open.
- A/C switch is ON.
- Engine is running at 1,500 rpm.
- Air inlet mode selector damper is set at recirculation.
- Temperature control switch is in MAX. COLD position.
- Blower speed control switch is in HI position.
- Air temperature at the air inlet is 30 to 35°C (86 to 95°F).

Gauge readings (Reference)

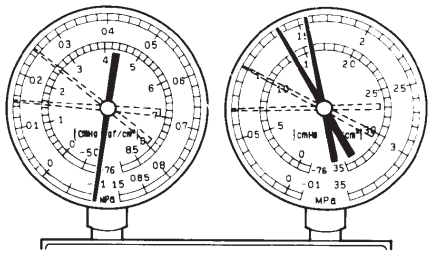




(1) When the refrigerant volume is proper:
Gauge reading:
Low pressure side:
0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2)
High pressure side:
1.37 to 1.57 MPa (14 to 16 kgf/cm^2)

(2) When there is moisture in the refrigeration system:

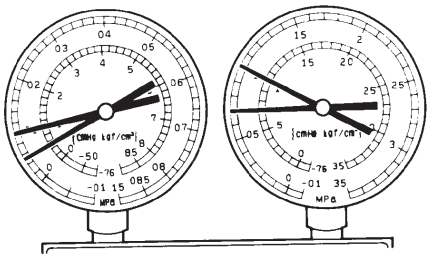
Condition: Air conditioning system periodically repeats proper and improper function.



Symptoms	Probable Cause	Diagnosis	Corrective Actions
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at expansion valve orifice, causing temporary stop of cycle. However, when melted, normal state restored	• Drier overly saturated • Moisture in refrigeration system freezes at expansion valve orifice and blocks refrigerant circulation	1. Replace cooler drier 2. Remove moisture from cycle by repeatedly evacuating air 3. Supply appropriate volume of new refrigerant

(3) When cooling is insufficient:

Condition: Air conditioning system does not function effectively.

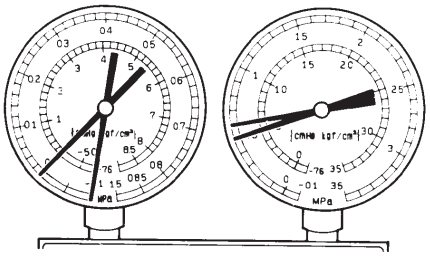


Symptoms	Probable Cause	Diagnosis	Corrective Actions
• Pressure low on both low and high pressure sides • Cooling performance insufficient	Gas leakage from refrigeration system	• Insufficient refrigerant • Refrigerant leakage	1. Check for gas leakage and repair if necessary 2. Supply appropriate volume of new refrigerant 3. If indicated pressure value close to 0 when connected to gauge, create vacuum after inspecting and repairing the location of leakage

AC

(4) When the circulation of the refrigerant is poor:

Condition: Air conditioning system does not function effectively.

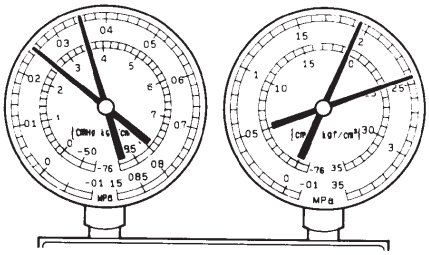


I022119E04

Symptoms	Probable Cause	Diagnosis	Corrective Action
• Pressure low on both low and high pressure sides • Frost exists on piping from condenser to A/C unit	Refrigerant flow obstructed by dirt in condenser	Condenser clogged	Replace condenser

(5) When the refrigerant does not circulate:

Condition: Air conditioning system does not function. (Sometimes it may function)



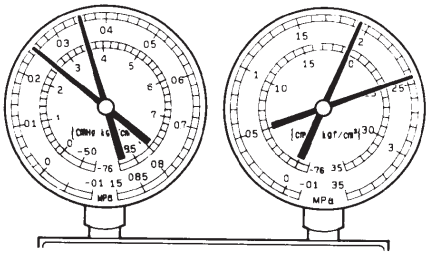
I022121E05

Symptoms	Probable Causes	Diagnosis	Corrective Actions
• Vacuum indicated on low pressure side, and extremely low pressure indicated on high pressure side • Frost or condensation seen on piping on both sides of condenser or expansion valve	• Refrigerant flow obstructed by moisture or dirt in refrigeration system • Refrigerant flow obstructed by gas leakage from expansion valve	Refrigerant does not circulate	1. Check expansion valve 2. Clean expansion valve by blowing air 3. Replace condenser 4. Evacuate air and charge appropriate volume of new refrigerant 5. For gas leakage from expansion valve, replace expansion valve

AC

(6) When the refrigerant is overcharged or cooling of condenser is insufficient:

Condition: Air conditioning system does not function effectively.



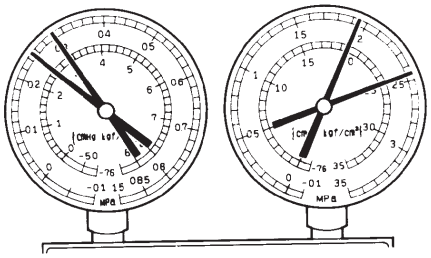
I022121E06

Symptoms	Probable Causes	Diagnosis	Corrective Actions
Pressure extremely high on both low and high pressure sides	• Excessive refrigerant • Cooling performance of condenser insufficient	• Excessive refrigerant • Cooling performance of condenser insufficient	1. Clean condenser 2. Check condenser fan motor operation 3. If 1 and 2 normal, check the amount of refrigerant and supply appropriate volume of refrigerant

(7) When there is air in the refrigeration system:

Condition: Air conditioning system does not function.

NOTE: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging.

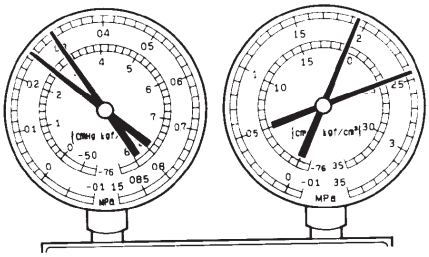


I022122E05

Symptoms	Probable Cause	Diagnosis	Corrective Actions
• Pressure extremely high on both low and high pressure sides • The low pressure piping too hot to touch	Air in refrigeration system	• Air in refrigeration system • Vacuum purging insufficient	1. Check whether compressor oil dirty or insufficient 2. Evacuate air and charge new refrigerant

(8) When the expansion valve malfunctions:

Condition: Air conditioning system does not function effectively.



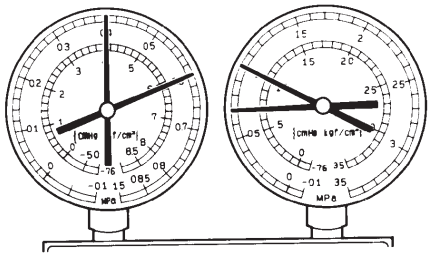
I022123E04

Symptoms	Probable Cause	Diagnosis	Corrective Action
• Pressure extremely high on both low and high pressure sides • Frost or condensation on piping on low pressure side	Trouble in expansion valve	• Excessive refrigerant in low pressure piping • Expansion valve too wide open	Replace expansion valve

AC

(9) When the compressor is defective:

Condition: Air conditioning system does not function.



I022124E04

Symptoms	Probable Cause	Diagnosis	Corrective Action
• Pressure extremely high on both low and high pressure sides • Pressure extremely low on high pressure side	Internal leakage in compressor	• Compression failure • Leakage from damaged valve or broken sliding parts	Repair or replace compressor

BLOWER MOTOR

INSPECTION

1. INSPECT BLOWER MOTOR

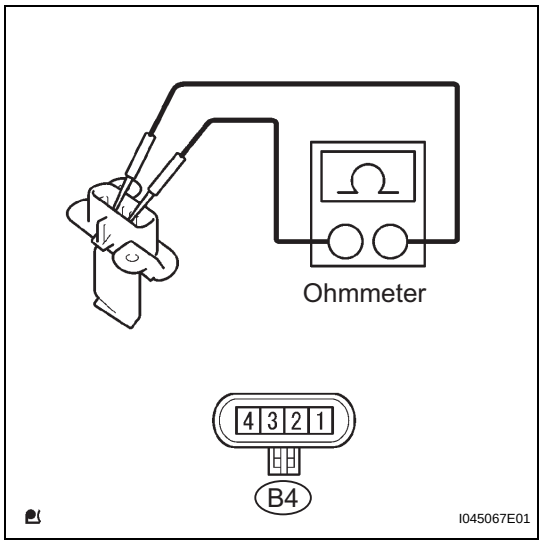
(a) Inspect the blower motor.

(1) Connect the positive (+) lead from to terminal 1 and negative (-) lead to terminal 2, then check that the motor operates smoothly.

CAUTION:

- **Use safety glasses**
- **Do not use battery power, use DC power supply (30 A).**
- **Do not operate the motor and fan assembly at over 5 V.**
- **Be sure to hold the motor in a stable and safe way.**

If the result is not as specified, replace the blower motor.



BLOWER RESISTOR

INSPECTION

1. INSPECT BLOWER RESISTOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
1 (M1) - 3 (COMMON)	0.792 to 0.968 Ω at 20°C (68°F)
2 (M2) - 3 (COMMON)	0.342 to 0.418 Ω at 20°C (68°F)
4 (Lo) - 3 (COMMON)	2.07 to 2.53 Ω at 20°C (68°F)

If the result is not as specified, replace the blower resistor.

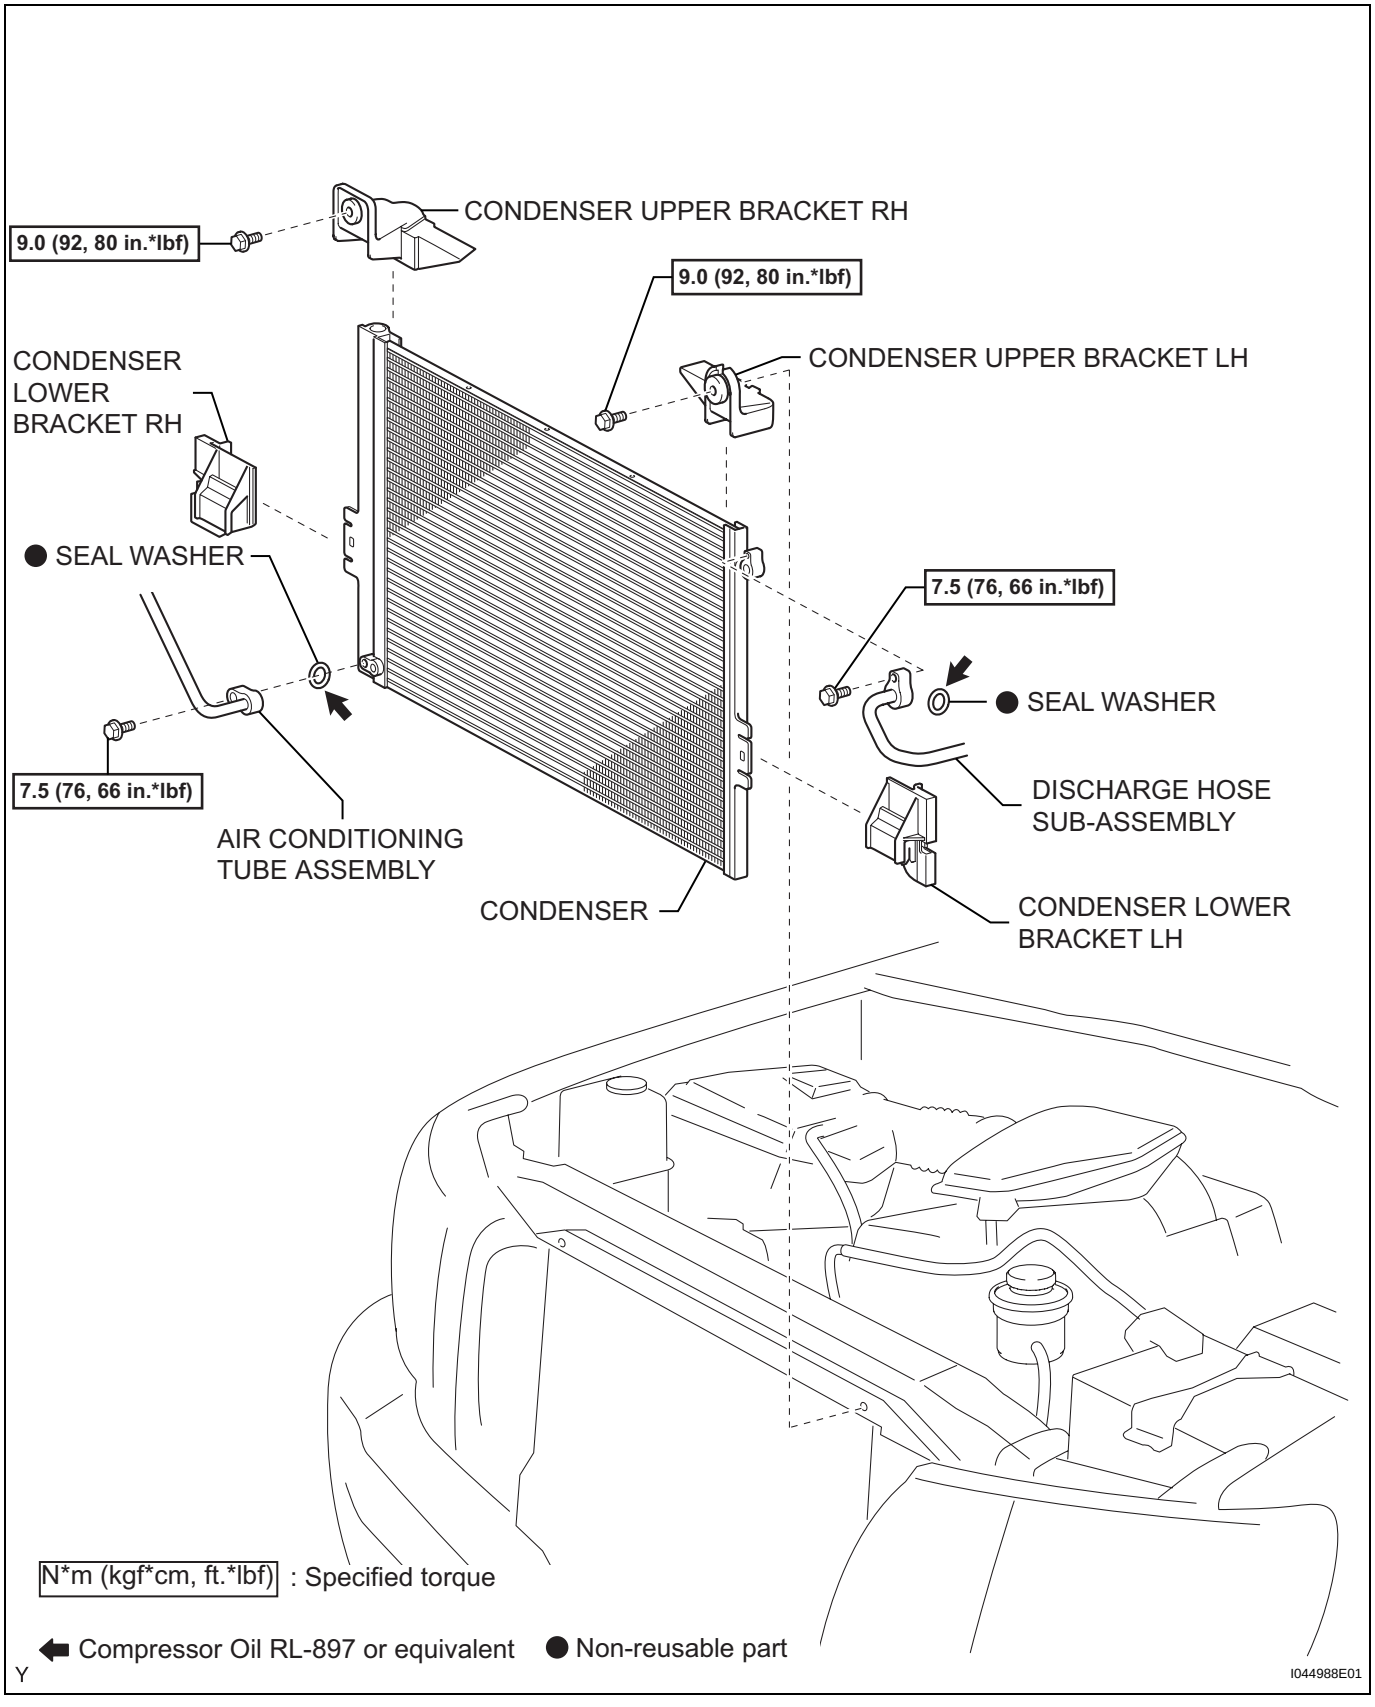
CONDENSER

COMPONENTS



AC

ON-VEHICLE INSPECTION

1. INSPECT COOLER CONDENSER ASSEMBLY

(a) If the fins of the cooler condenser assembly are dirty, clean them with water and dry them with compressed air.

NOTICE:

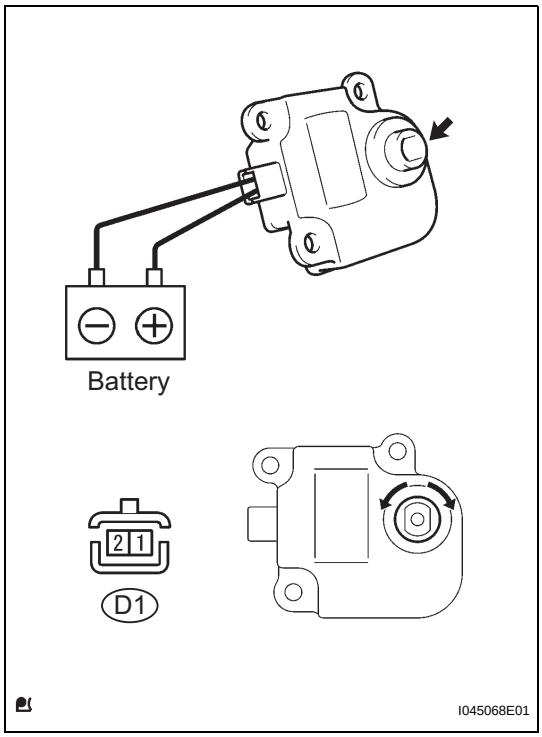
Do not damage the fins of the condenser assembly.

(b) If the fins of the cooler condenser assembly are bent, straighten them using a screwdriver or pliers.

2. CHECK CONDENSER FOR REFRIGERANT LEAKAGE

(a) Check the pipe joints for gas leakage, using a halogen leak detector.

(b) Check the tightening torque of the joints if gas leakage is detected in any pipe joints.



SERVO MOTOR

INSPECTION

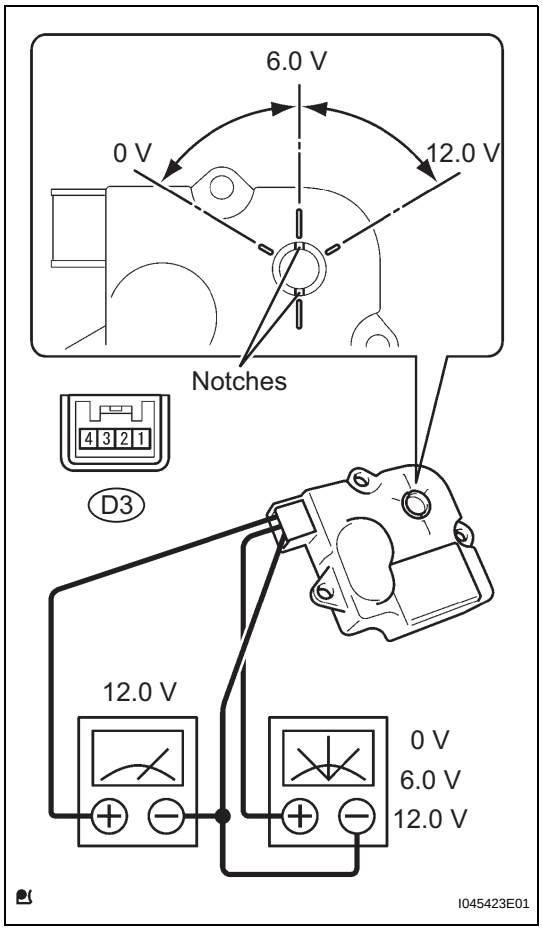
1. INSPECT AIR INLET CONTROL SERVO MOTOR

(a) Inspect the servo motor operation.

(1) Connect the positive (+) lead from the battery to terminal 1 (FRS) and negative (-) lead to terminals 2 (REC), then check that the shaft rotates clockwise smoothly.

(2) Connect the positive (+) lead from the battery to terminal 2 (REC) and negative (-) lead to terminal 1 (FRS) then check that the shaft rotates counter clockwise smoothly.

If the operations are not as specified, replace the air control servo motor.



2. INSPECT MODE CONTROL SERVO MOTOR

(a) Inspect the servo motor operation.

(1) When 12V is applied between terminals 4 (IGN) and 1 (GND), and 0V is applied between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 0V position.

If the result is not as specified, replace the mode control servo motor.

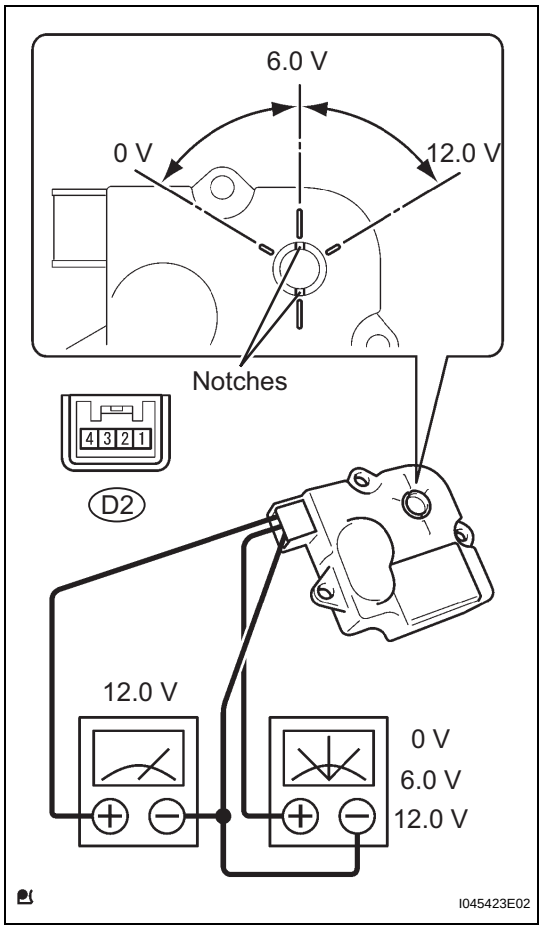
(2) When 12V is applied between terminals 4 (IGN) and 1 (GND), and 6V is applied between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 6V position.

If the result is not as specified, replace the mode control servo motor.

(3) When 12V is applied between terminals 4 (IGN) and 1 (GND), and between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 12V position.

If the result is not as specified, replace the mode control servo motor.

AC



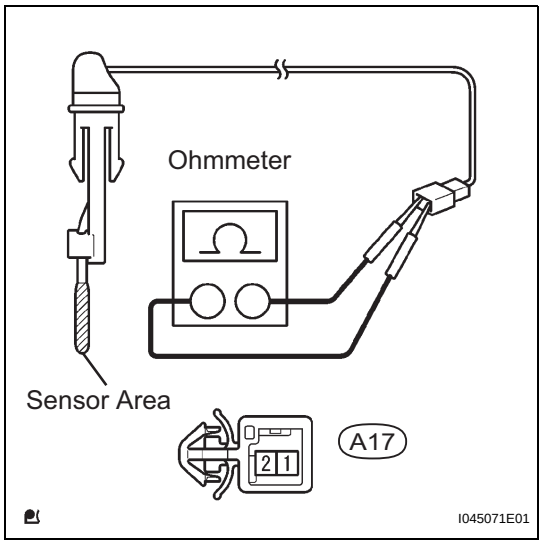
3. INSPECT AIR MIX CONTROL SERVO MOTOR

(a) Inspect the servo motor operation.

(1) When 12 V is applied between terminals 4 (IGN) and 1 (GND), and 0V is applied between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 0V position.
If the result is not as specified, replace the air mix control servo motor.

(2) When 12V is applied between terminals 4 (IGN) and 1 (GND), and 6V is applied between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 6V position.
If the result is not as specified, replace the air mix control servo motor.

(3) When 12V is applied between terminals 4 (IGN) and 1 (GND), and between terminals 2 (SIG) and 1 (GND), check that the line connecting the 2 notches moves to the 12V position.
If the result is not as specified, replace the air mix control servo motor.

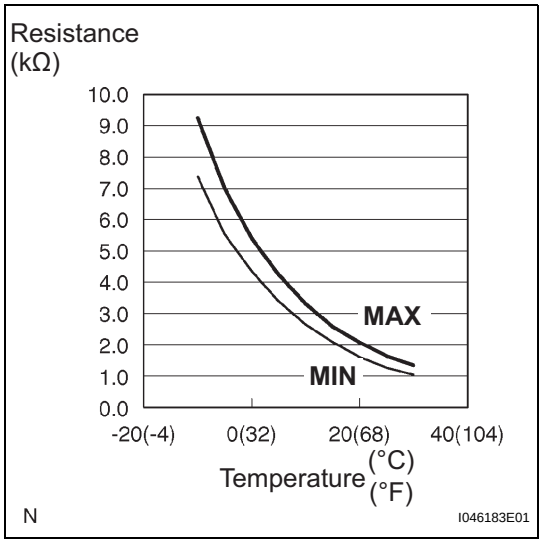


EVAPORATOR TEMPERATURE SENSOR

INSPECTION

1. INSPECT COOLER THERMISTOR SENSOR

(a) Check the resistance.



(1) Measure the resistance and check the results in accordance with the values in the table below.

Standard

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.40 to 9.20 kΩ
1 - 2	-5°C (23°F)	5.65 to 7.00 kΩ
1 - 2	0°C (32°F)	4.35 to 5.40 kΩ
1 - 2	5°C (41°F)	3.40 to 4.20 kΩ
1 - 2	10°C (50°F)	2.68 to 3.30 kΩ
1 - 2	15°C (59°F)	2.10 to 2.60 kΩ
1 - 2	20°C (68°F)	1.66 to 2.10 kΩ
1 - 2	25°C (77°F)	1.32 to 1.66 kΩ
1 - 2	30°C (86°F)	1.05 to 1.35 kΩ

If the result is not as specified, replace the cooler thermistor sensor.

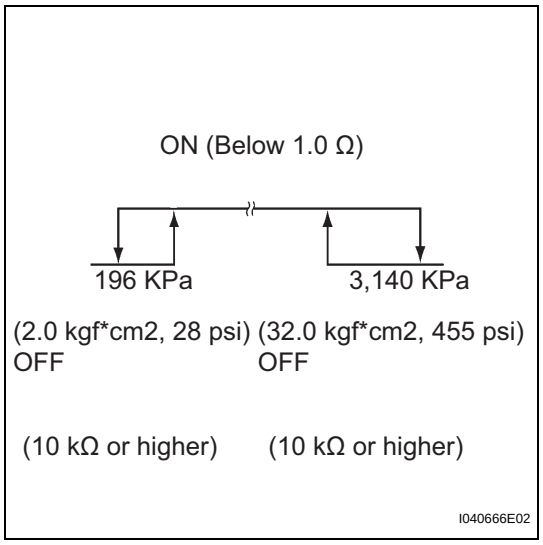
NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be almost the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph on the left).

AC



PRESSURE SWITCH

ON-VEHICLE INSPECTION

1. INSPECT PRESSURE NO.1 SWITCH

HINT:

- The pressure switch is installed onto the air conditioning pipe on the high pressure side.
- The switch detects a drop in refrigerant pressure, such as from refrigerant leakage, and turns the magnet clutch off (*1) to prevent damage to the compressor.
- The switch detects abnormally high pressure in the air conditioning cycle and turns the magnet clutch off (*1) to prevent damage to parts in the air conditioning cycle.

  (*1): The ECM turns the magnet clutch on or off upon receiving the signal from the pressure switch.
- As the pressure switch operates when there is a malfunction with the refrigerant pressure, its function cannot be inspected on-vehicle. Follow the procedures below to inspect it.

(a) Inspect refrigerant pressure in the air conditioning cycle.

(b) Read the manifold gauge pressure when the conditions below are established. (*2)

Test conditions:

- Engine is running at 1,500 rpm
- Blower speed control knob is in HI position
- Temperature control knob is in COOL position
- Air conditioning switch is ON
- Recirculation
- Doors fully open

Standard:

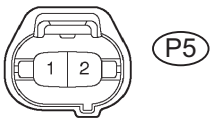
Pressure on high pressure side:

1.37 to 1.57 MPa (13.9 to 16.0 kgf*cm^2, 198 to 228 psi)

HINT:

- If the refrigerant pressure is not within the standard range, inspect and repair the air conditioning cycle.
  AC-14
- Proceed to step (*2) if the refrigerant pressure is within the specified range.
- If the refrigerant pressure is below 196 KPa (2.0 kgf*cm^2, 28 psi), the refrigerant amount in the air conditioning cycle may have decreased significantly for reasons such as a gas leakage.

Pressure Switch Connector Wire Harness View:



C I036436E02

(c) Check the air conditioning operation.
(1) Disconnect the pressure switch connector.
(2) Connect terminals 1 and 2 of the pressure switch connector on the vehicle wire harness side using a service wire.
(3) Start the engine.
(4) Turn the air conditioning switch on and check that the magnet clutch is turned on.
(5) Check that the magnet clutch is turned off when disconnecting terminals 1 and 2 (that are connected in the prior step).

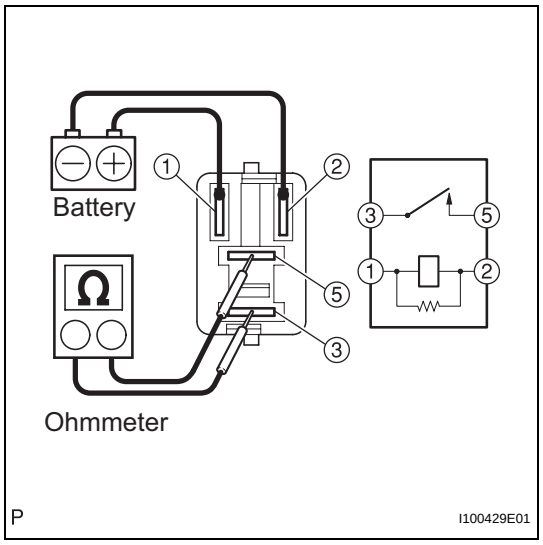
Standard:

Terminals 1 and 2 connected: Magnet clutch is ON

Terminals 1 and 2 disconnected: Magnet clutch is OFF

Replace the pressure switch if the magnet clutch operates normally.

Inspect and repair the wire harness between the pressure switch and the ECM.



MAGNETIC CLUTCH RELAY

INSPECTION

1. INSPECT MAGNET-CLUTCH RELAY

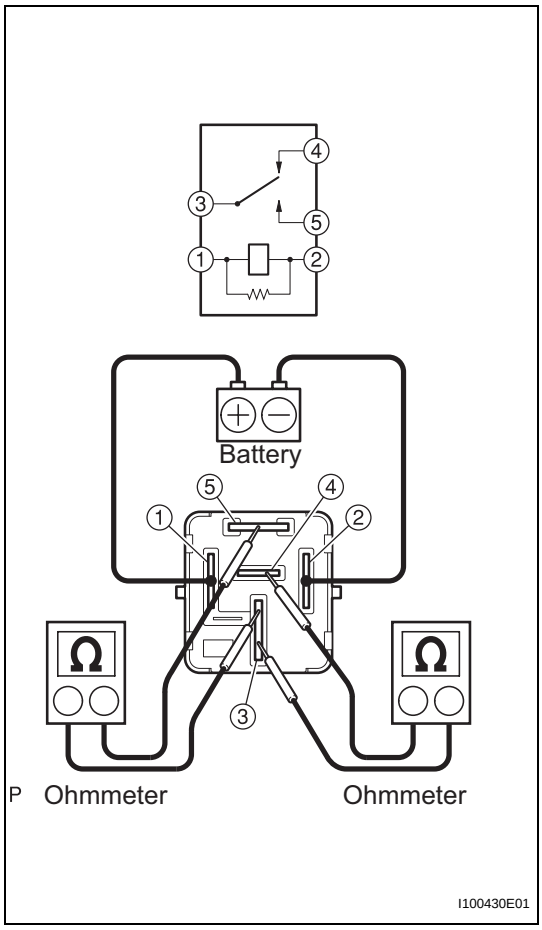
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the relay.



HEATER RELAY

INSPECTION

1. INSPECT HEATER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between each terminal.

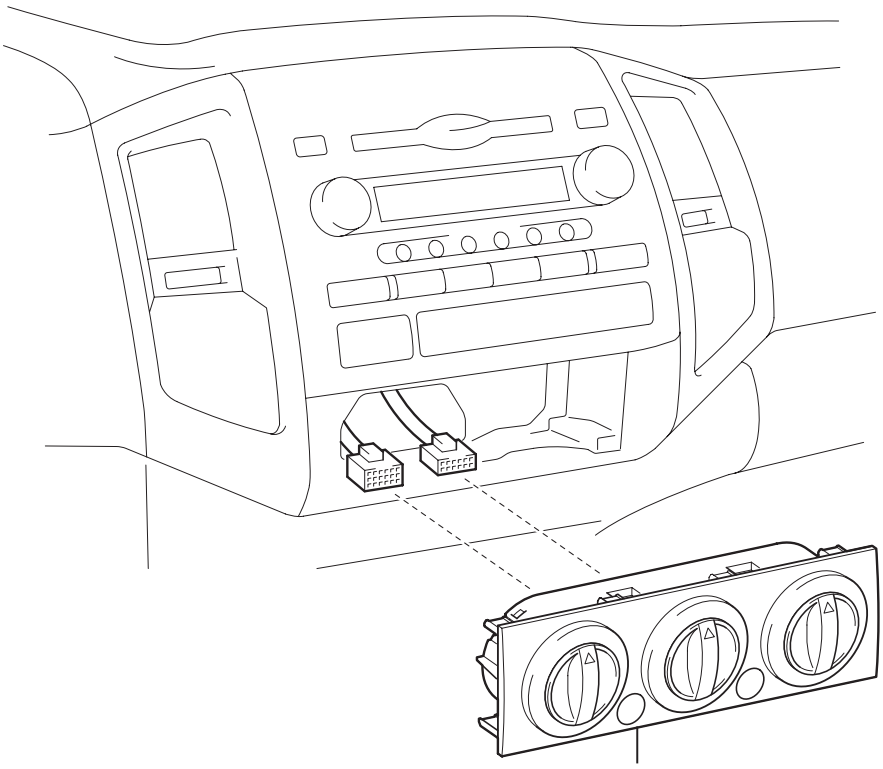
Standard

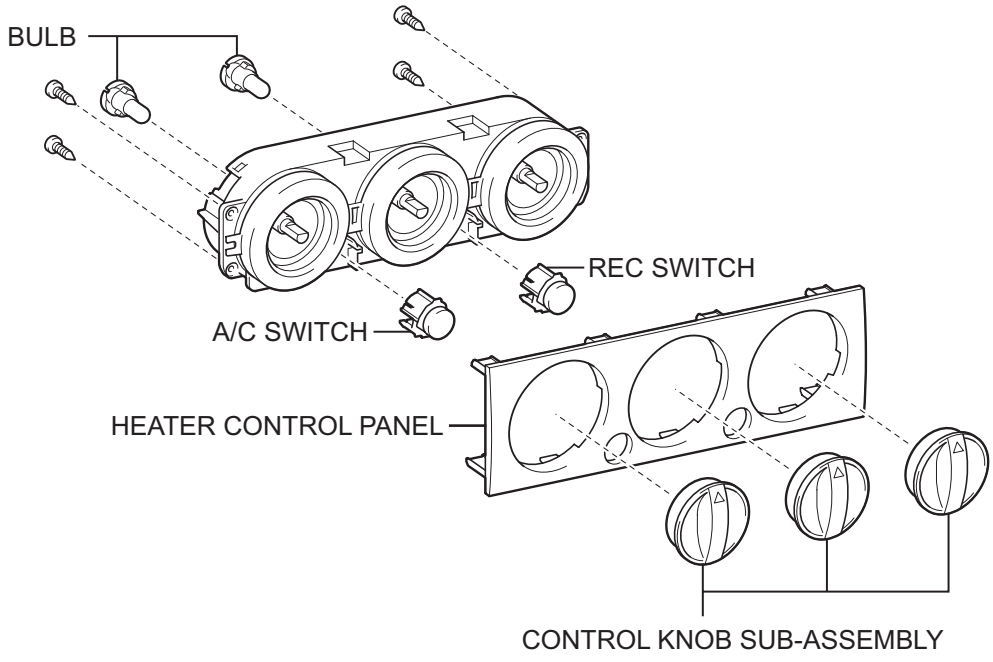
Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (Apply battery voltage to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the relay.

AIR CONDITIONING CONTROL ASSEMBLY

COMPONENTS





P

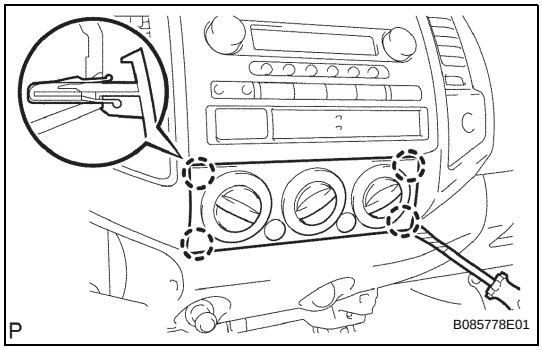
I045036E01

AC

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE AIR CONDITIONING CONTROL ASSEMBLY

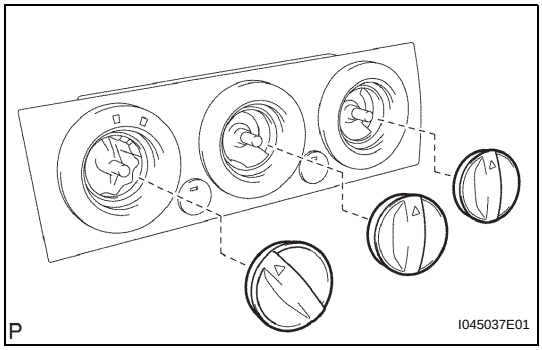


(a) Using a screwdriver, disengage the 4 clips and remove the air conditioner control assembly.
HINT:
Tape up the screwdriver tip before use.

(b) Disconnect the 2 connectors.

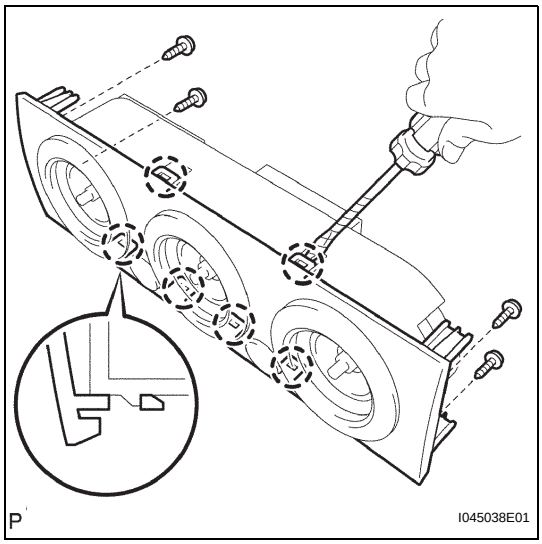
DISASSEMBLY

1. REMOVE CONTROL KNOB SUB-ASSEMBLY



(a) Remove the 3 control knob sub-assemblies.

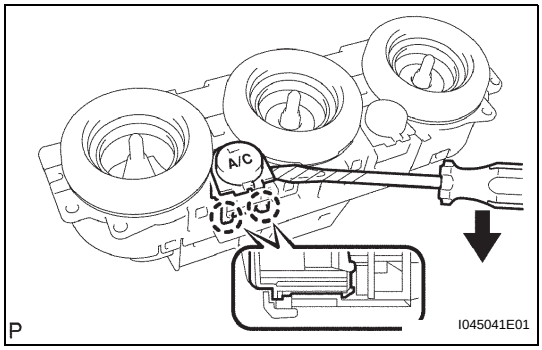
2. REMOVE HEATER CONTROL PANEL



(a) Remove the 4 screws.

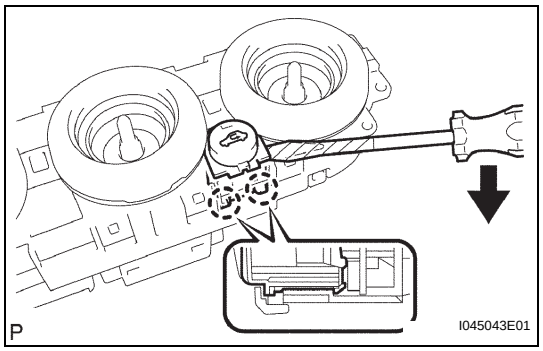
(b) Using a screwdriver, disengage the 6 claws and remove the heater control panel.
HINT:
Tape up the screwdriver tip before use.

3. REMOVE A/C SWITCH



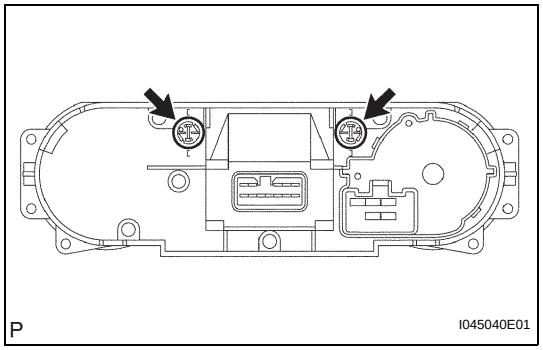
(a) Using a screwdriver, pry out the A/C switch.
HINT:
Tape up the screwdriver tip before use.

AC



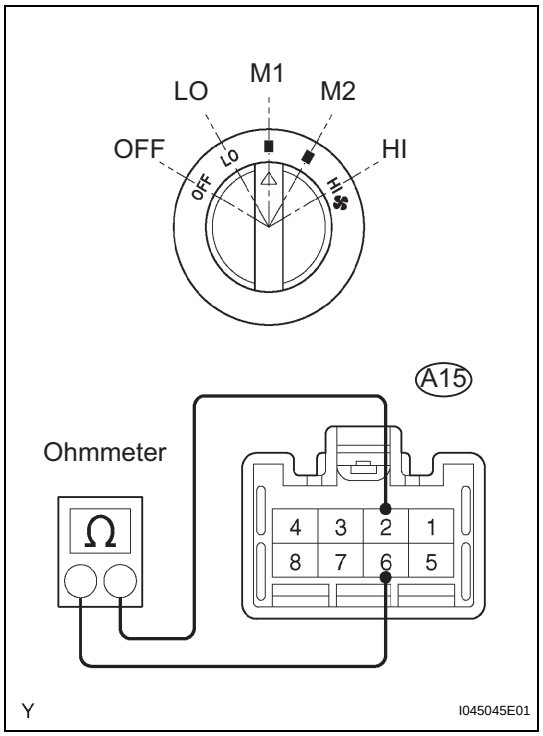
4. REMOVE REC SWITCH

(a) Using a screwdriver, pry out the REC switch.
HINT:
Tape up the screwdriver tip before use.



5. REMOVE BULB

(a) Using a screwdriver, turn the 2 bulbs counterclockwise and pull them out.



INSPECTION

1. INSPECT AIR CONDITIONING CONTROL ASSEMBLY

(a) Check the blower switch resistance.

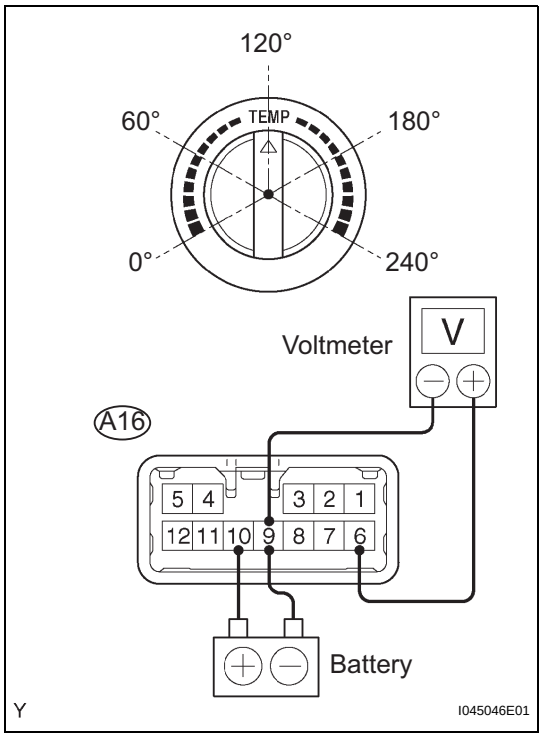
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard

Tester connection	Blower Switch Position	Specified Condition
2 - 3 - 4 - 6 - 7	OFF	10 KΩ or higher
2 - 6	LO	Below 1 Ω
2 - 6 - 7	LO - M1	Below 1 Ω
2 - 6 - 7	M1	Below 1 Ω
2 - 4 - 6 - 7	M1 - M2	Below 1 Ω
2 - 4 - 6	M2	Below 1 Ω
2 - 3 - 4 - 6	M2 - HI	Below 1 Ω
2 - 3 - 6	HI	Below 1 Ω

If the result is not as specified, replace the air conditioning control assembly.

AC

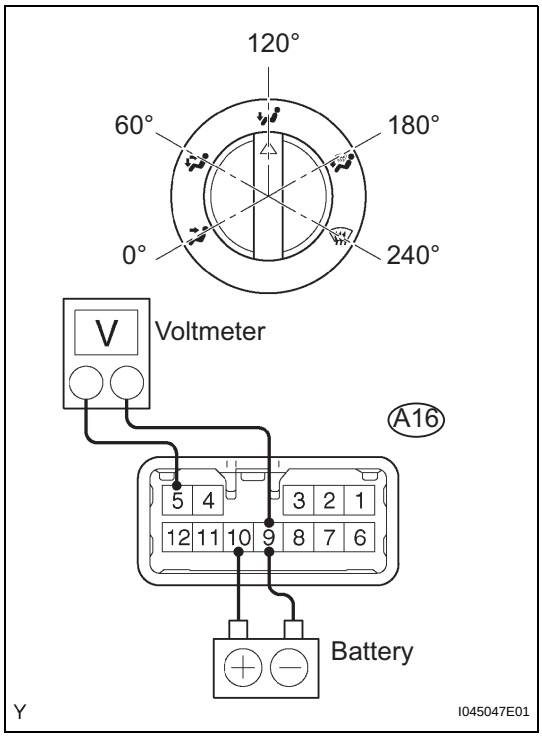


(b) Check the temperature selector switch voltage.
(1) Apply battery voltage (13.5V) across terminals 10 (IG) and 9 (GND).
(2) Connect the positive (+) tester probe of a voltmeter to terminal 6 (AMSW) and the negative (-) tester probe to terminal 9 (GND), then check the voltage.

Standard

Angle (Position)	Specified Condition
0° (MAX COOL)	13.0 to 13.5 V
60° (COOL)	9.7 to 10.6 V
120°	6.3 to 7.2 V
180° (HOT)	2.9 to 3.8 V
240° (MAX HOT)	0 to 0.5 V

If the result is not as specified, replace the air conditioning control assembly.

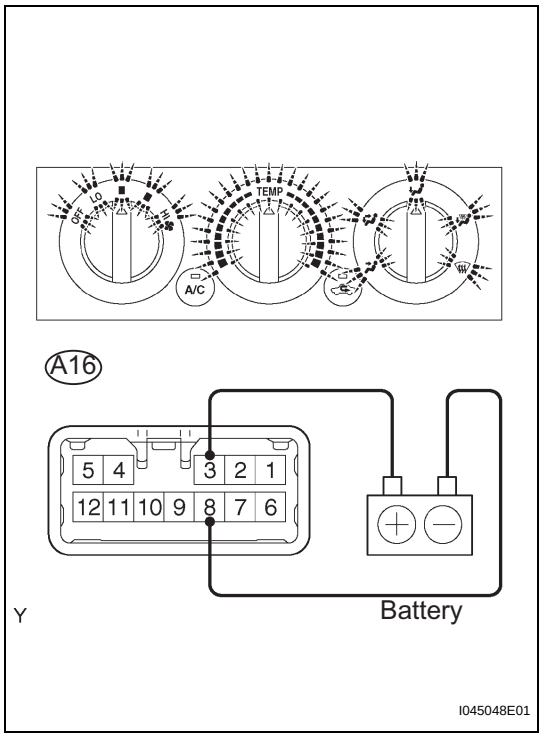


(c) Check the mode selector switch voltage.
(1) Apply battery voltage (13.5V) across terminals 10 (IG) and 9 (GND).
(2) Connect the positive (+) tester probe of a voltmeter to terminal 5 (MSET) and the negative (-) tester probe to terminal 9 (GND), then check the voltage.

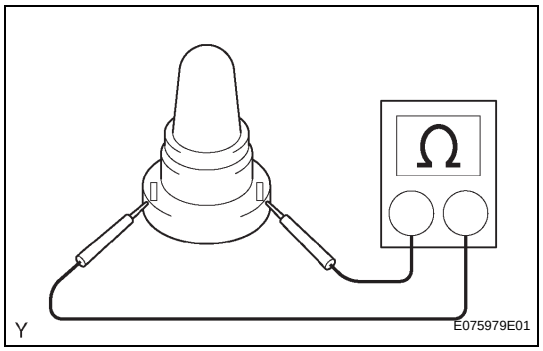
Standard

Angle (Position)	Specified Condition
0° (FACE)	13.3 to 13.5 V
60° (B/L)	10.1 to 11.0 V
120° (FOOT)	6.3 to 7.2 V
180° (FOOT/DEF)	2.7 to 3.4 V
240° (DEF)	0 to 0.2 V

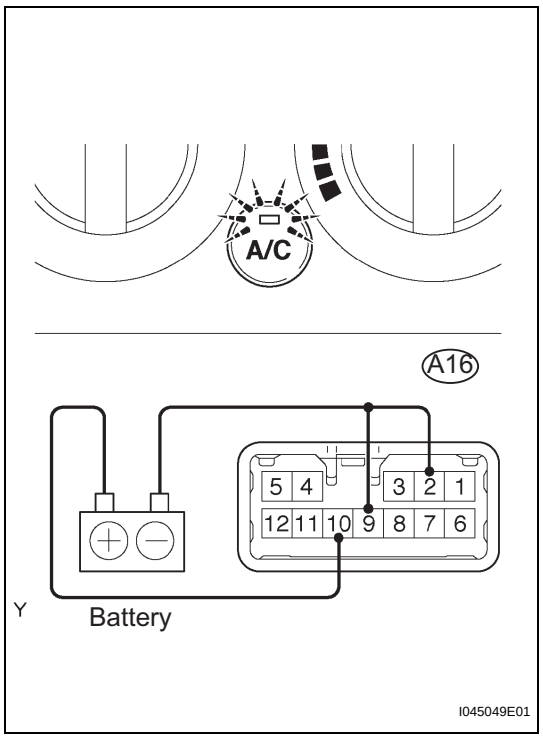
If the result is not as specified, replace the air conditioning control assembly.



(d) Inspect the illumination operation.
(1) Connect the positive (+) lead from the battery to terminal 3 (ILL+) and negative (-) lead to terminal 8 (ILL-), then check that the illuminations light up.
Standard:
Illuminations light up
If the result is not as specified, check the faulty bulb.

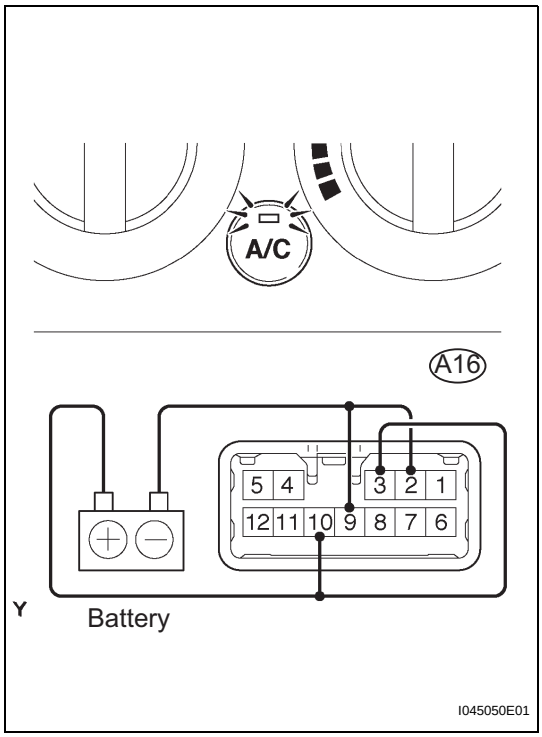


(e) Inspect the bulb.
(1) Inspect continuity of the bulb by connecting the tester as shown in the illustration.
Standard:
7 to 11 Ω at 20°C (68°F)
If continuity exists, replace the heater control.
If no continuity exists, replace the bulb.

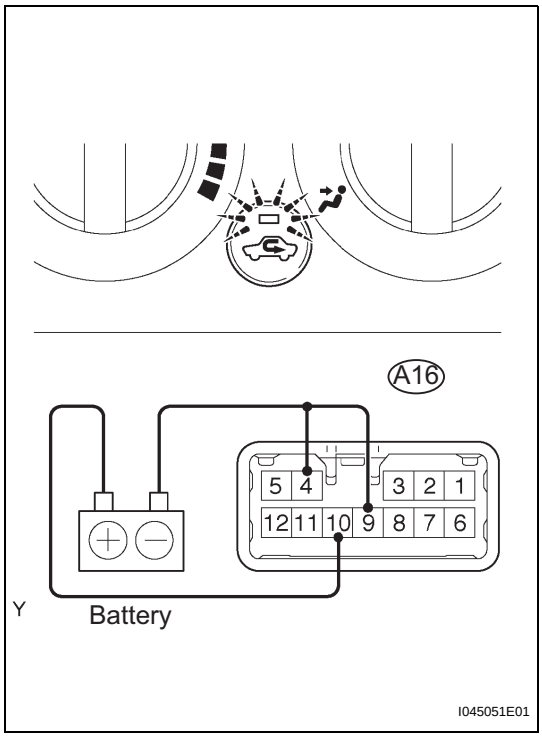


(f) Inspect A/C indicator operation.
(1) Connect the positive (+) lead from the battery to terminal 10 (IG) and negative (-) lead to terminal 2 (ACID) and 9 (GND).
(2) Push the A/C button in and then check that the indicator lights up.
Standard:
Indicator lights up
If the result is not as specified, replace the air conditioning control assembly.

AC

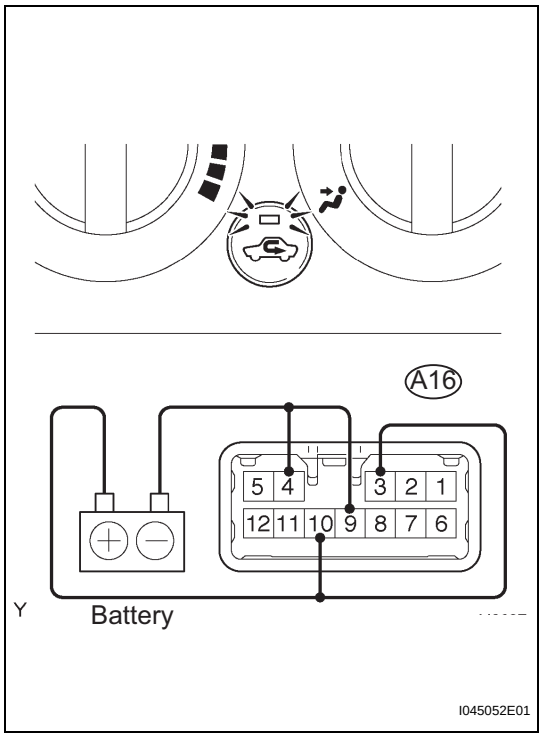


(3) Under the above condition, connect the positive (+) lead from the battery to terminal 3 (ILL+) and then check that the indicator dims.
Standard:
Indicator dims
If the result is not as specified, replace the air conditioning control assembly.



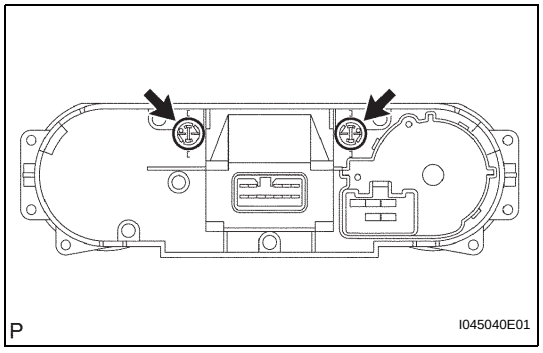
(g) Inspect the REC indicator operation.
(1) Connect the positive (+) lead from the battery to terminal 10 (IG) and negative (-) lead to terminal 4 (REC) and 9 (GND).
(2) Push the REC button in and then check that the indicator lights up.
Standard:
Indicator lights up
If the result is not as specified, replace the air conditioning control assembly.

AC

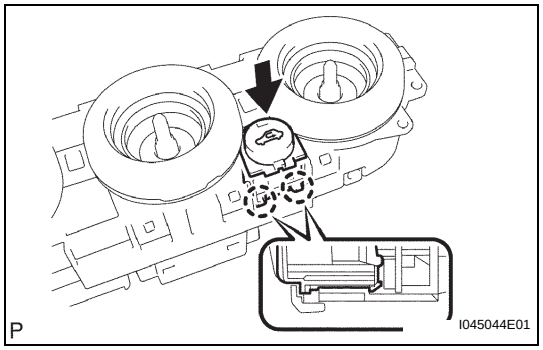


(3) Under the above condition, connect the positive (+) lead from the battery to terminal 3 (ILL+) and then check that the indicator dims.
Standard:
Indicator dims
If the result is not as specified, replace the air conditioning control assembly.

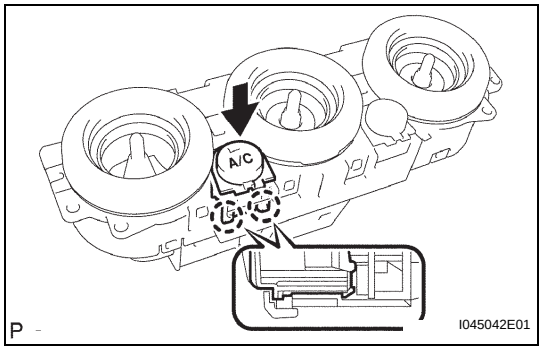
REASSEMBLY



1. INSTALL BULB
(a) Using a screwdriver, turn the 2 bulbs clockwise to install them.

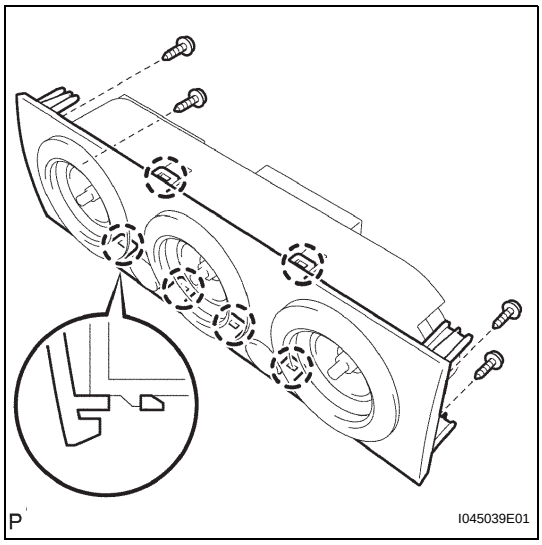


2. INSTALL REC SWITCH
(a) Engage the 2 claws and install the REC switch.



3. INSTALL A/C SWITCH
(a) Engage the 2 claws and install the A/C switch.

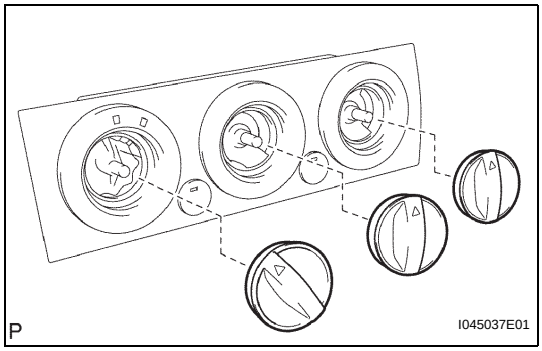
AC



4. INSTALL HEATER CONTROL PANEL

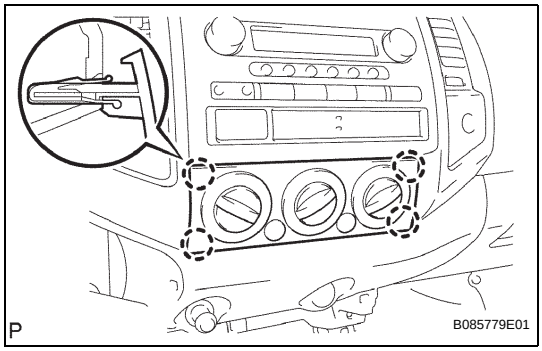
(a) Engage the 6 claws and install the heater control panel.

(b) Install the 4 screws.



5. INSTALL CONTROL KNOB SUB-ASSEMBLY

(a) Install the 3 control knob sub-assemblies.



INSTALLATION

1. INSTALL AIR CONDITIONING CONTROL ASSEMBLY

(a) Connect the 2 connectors.

(b) Engage the 4 clips and install the air conditioning control assembly.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

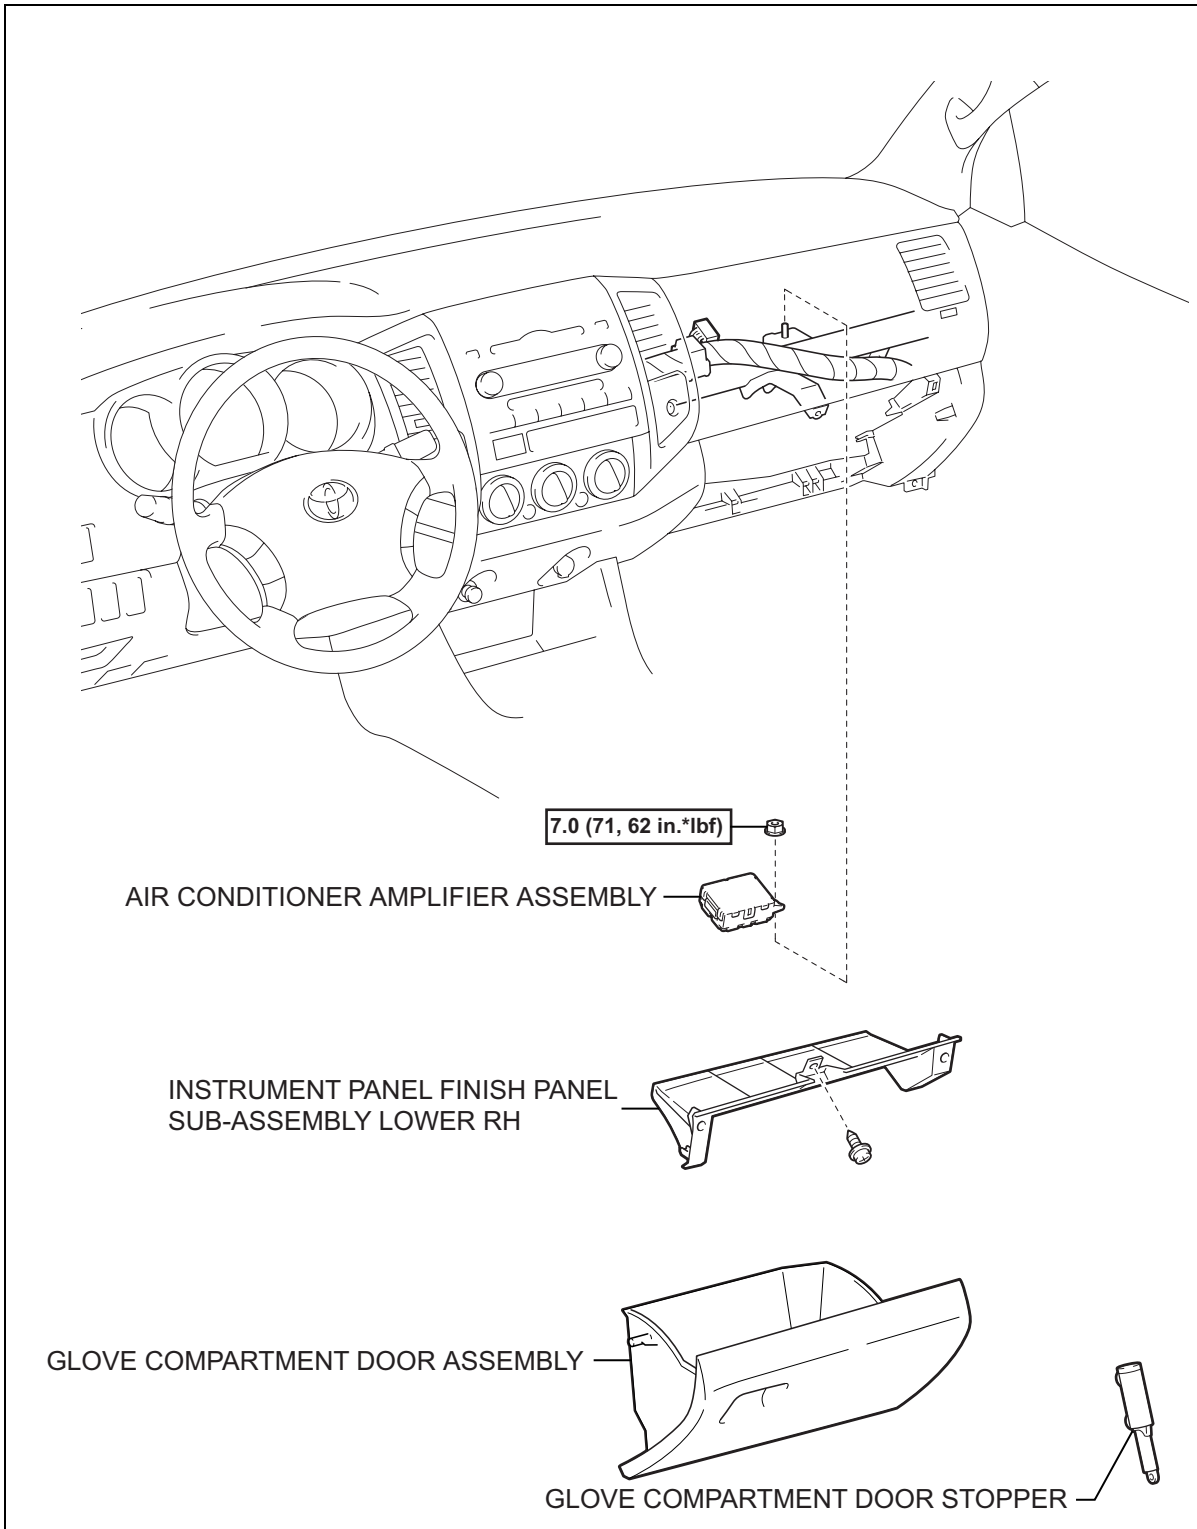
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

NOTICE:

AC-1

AIR CONDITIONING AMPLIFIER

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

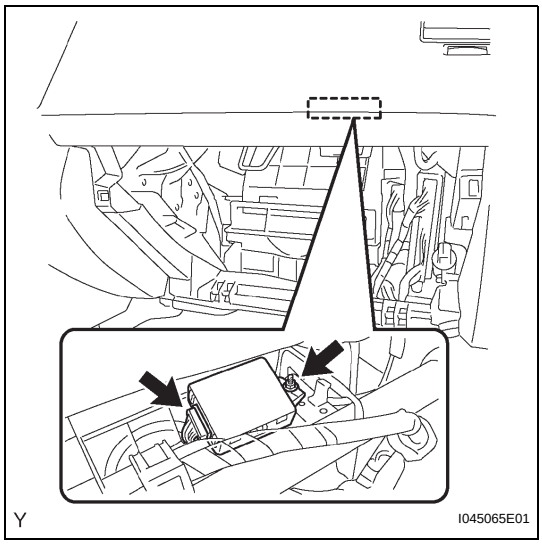
P

I045419E01

AC

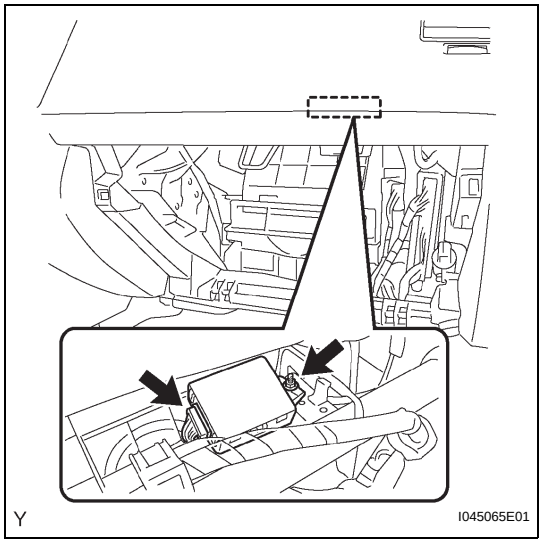
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait at least for 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-14)**
4. **REMOVE AIR CONDITIONER AMPLIFIER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the nut and the air conditioner amplifier assembly.



INSTALLATION

1. **INSTALL AIR CONDITIONER AMPLIFIER ASSEMBLY**
   (a) Install the air conditioner amplifier assembly with the nut.
   Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
   (b) Connect the connector.
2. **INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-20)**
3. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
   NOTICE:
   (See page AC-1)



AC

AIRBAG SYSTEM

PRECAUTION

CAUTION:

- **The vehicle is equipped with SRS, which consists of a driver airbag, front passenger airbag, side airbags and curtain shield airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Further more, if a mistake is made in servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the correct procedures indicated in the repair manual.**
- **Wait at least 90 seconds after the ignition switch is turned to the LOCK position and the negative (-) terminal cable is disconnected from the battery. (The SRS is equipped with a back-up power source, so if work is started within 90 seconds after disconnecting the negative (-) terminal cable of the battery, the SRS may be deployed.)**
- **Do not directly expose the Steering pad, front panel passenger airbag assembly, Center airbag sensor assembly, front airbag sensor, front seat side airbag assembly, side airbag sensor, curtain shield airbag assembly, rear airbag sensor, seat position sensor or occupant classification ECU to hot air or flames.**
- **Be sure to perform the initialization of the occupant classification ECU if any of the following conditions occur (See page RS-357 or RS-480). If the initialization is not performed, the SRS may not operate properly.**
  - **The occupant classification ECU is replaced.**
  - **Accessories (seatback tray, seat cover, etc.) are installed onto the vehicle.**
  - **The passenger seat is removed from the vehicle, and then reinstalled or replaced.**
  - **The passenger airbag ON/OFF indicator light (OFF) comes on when the passenger seat is not occupied.**
  - **The vehicle is brought to the workshop for repair due to an accident or collision.**

NOTICE:

- **Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.**

- **Even in the case of a minor collision when the SRS does not deploy, the Steering pad, front passenger airbag assembly, Center airbag sensor assembly, front airbag sensor, front seat side airbag assembly, side airbag sensor, Curtain shield airbag assembly, rear airbag sensor, seat position sensor and occupant classification ECU should be inspected.**
- **Before repair work, remove the airbag sensor if any kind of shock is likely to occur to the airbag sensor during the operation.**
- **Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.**
- **Never disassemble or repair the Steering pad, front passenger airbag assembly, Center airbag sensor assembly, front airbag sensor, front seat side airbag assembly, side airbag sensor, Curtain shield airbag assembly, rear airbag sensor, seat position sensor or occupant classification ECU in order to reuse it.**
- **If the Steering pad, front passenger airbag assembly, Center airbag sensor assembly, front airbag sensor, front seat side airbag assembly, side airbag sensor, curtain shield airbag assembly, rear airbag sensor, seat position sensor or occupant classification ECU has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached to the periphery of the SRS components. Follow the instructions in the cautions.**
- **After work on the SRS is completed, perform the SRS warning light check (See page RS-28).**
- **When the negative (-) terminal cable is disconnected from the battery, the memory will be cleared. Thus, be sure to make a record of the contents stored in each system before starting work. When the work is finished, reset each system, as it was before. Never use a back-up power supply from outside the vehicle to avoid erasing the memory in any system.**
- **If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION section.**

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

HINT:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

- Center Airbag Sensor assembly
- Front Airbag Sensor LH
- Front Airbag Sensor RH
- Side Airbag Sensor LH

RS

- Side Airbag Sensor RH
- Rear Airbag Sensor LH
- Rear Airbag Sensor RH

(a) Before starting the following operations, wait for at least 90 seconds after disconnecting the negative (-) terminal cable from the battery:
  (1) Replacement of the airbag sensors.
  (2) Adjustment of the front/rear doors of the vehicle equipped with the side airbag and curtain shield airbag (fitting adjustment).

(b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.

(c) Do not use the airbag sensors which has been dropped during the operation or transportation.

(d) Do not disassemble the airbag sensors.

(e) If engine is run immediately after reconnecting negative battery terminal cable, keep it at less than 2000rpm for at least 1 minute.

(f) If the engine exceeds 2,000rpm, the clutch is automatically disengaged by the compressor protection control system.

2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) When the airbag has not deployed, check for DTCs by checking the SRS warning light blinking patterns or using a intelligent tester. If any DTCs are present, perform troubleshooting for those DTCs.

(b) When any of the airbags have deployed, replace the airbag sensor and check the installation condition.

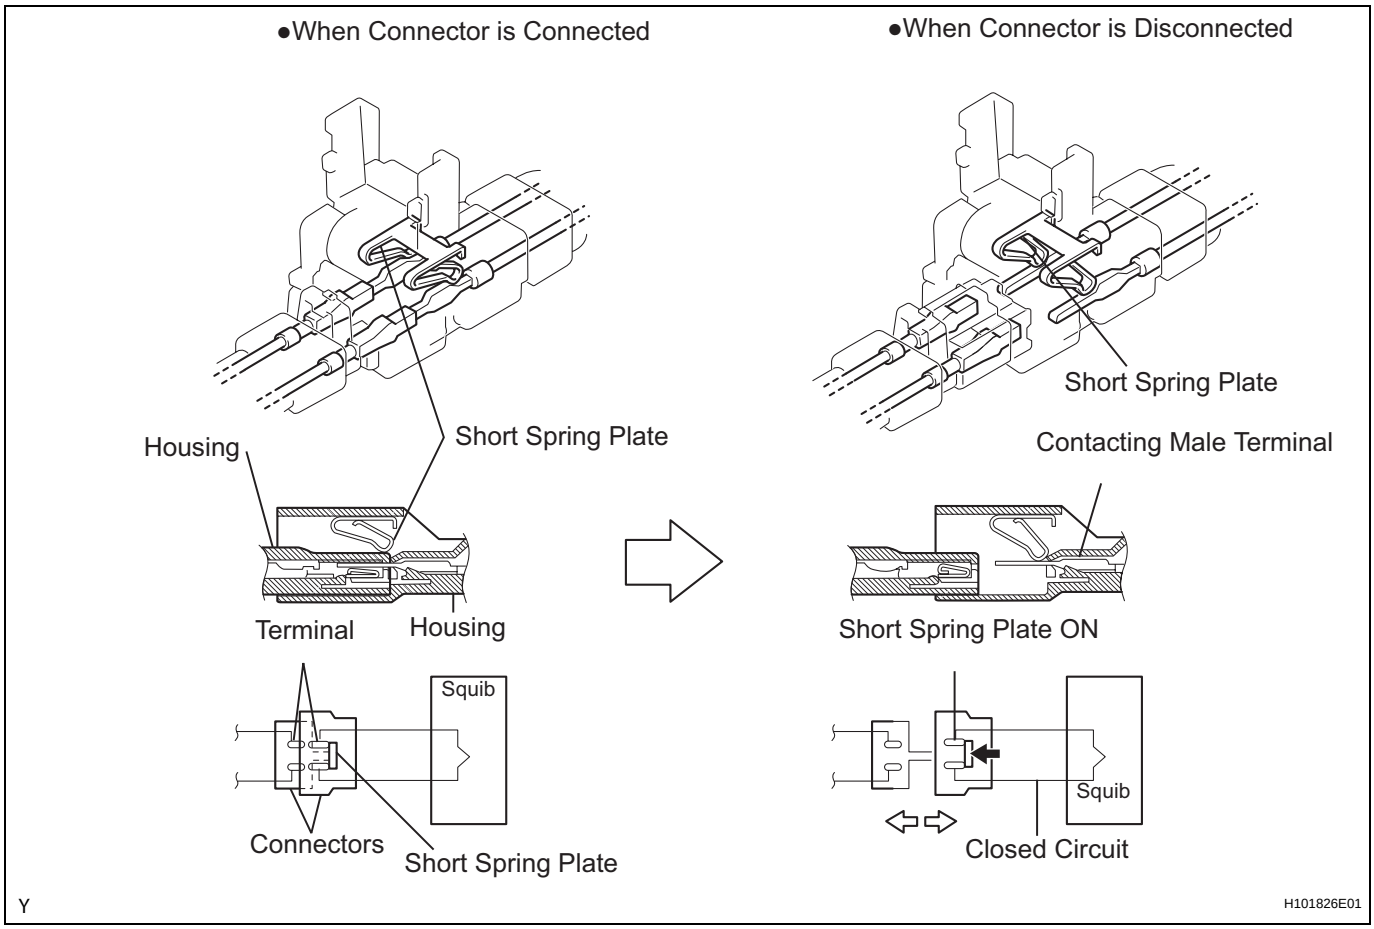
No.	Connector Type	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 2, 4, 6, 8, 10, 19, 20, 21, 23, 24, 31, 41
(2)	Activation Prevention Mechanism	Connectors 2, 4, 22, 32, 42
(3)	Half Connection Prevention Mechanism	Connectors 6, 8, 10, 20, 21, 41
(4)	Connector Lock Mechanism (1)	Connectors 19, 25, 27, 33, 35, 43, 45
(5)	Connector Lock Mechanism (2)	Connectors 2, 4
(6)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3

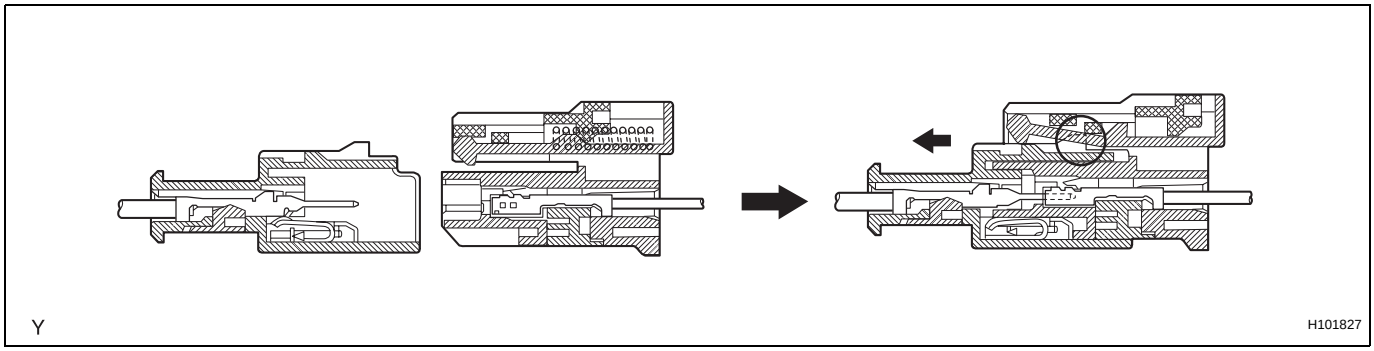
(a) All connectors in the SRS except the seat position sensor connector and the occupant classification ECU connector are colored yellow to distinguish them from other connectors. Some connectors have special functions, and are specially designed for the SRS. These connectors use durable gold-plated terminals, and are placed in the locations shown on the previous page to ensure high reliability.

(1) Terminal twin-lock mechanism:
Each connector has a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent the terminals from becoming disconnected.

(2) Activation prevention mechanism:
Each connector contains a short spring plate. When the connector is disconnected, the short spring plate automatically connects the positive (+) and negative (-) terminals of the squib.

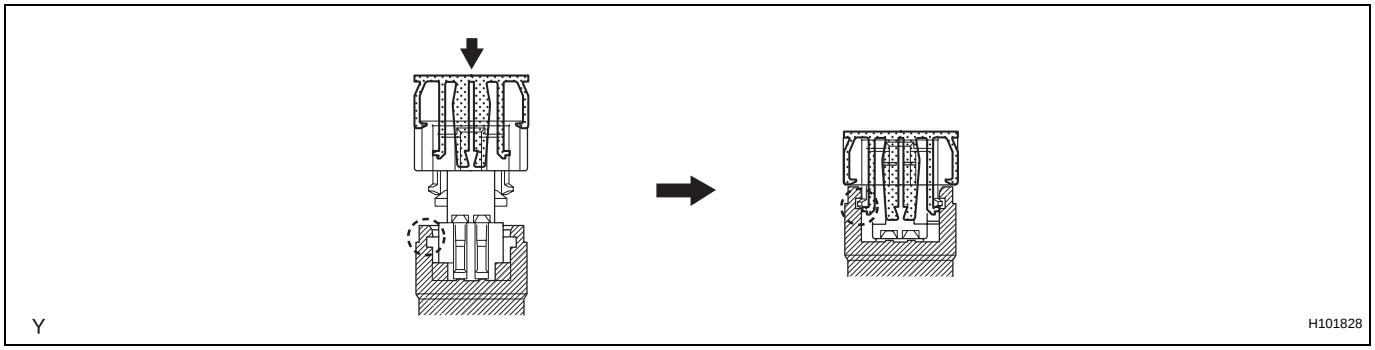


(3) Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected due to the spring operation so that no continuity exists.

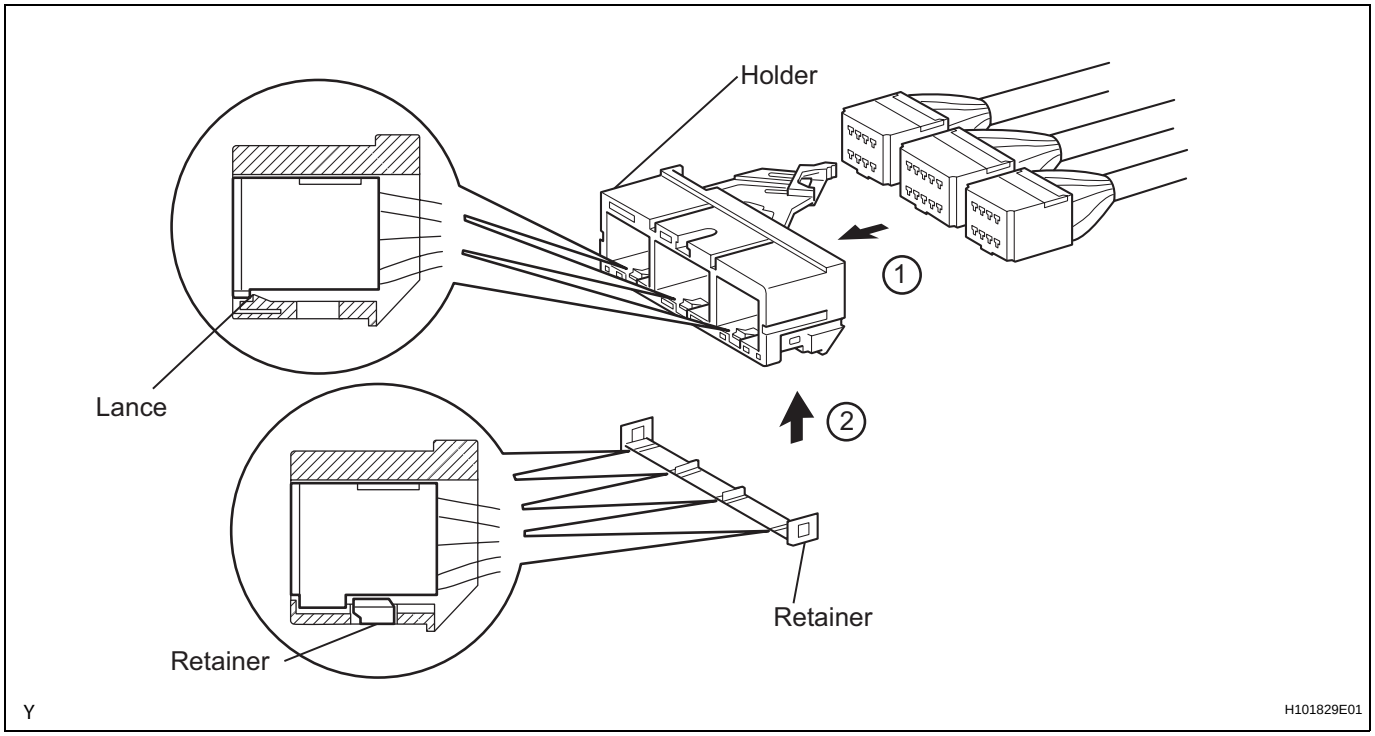


RS

(4) Connector lock mechanism (1):
Locking the connector lock button connects the connector securely.

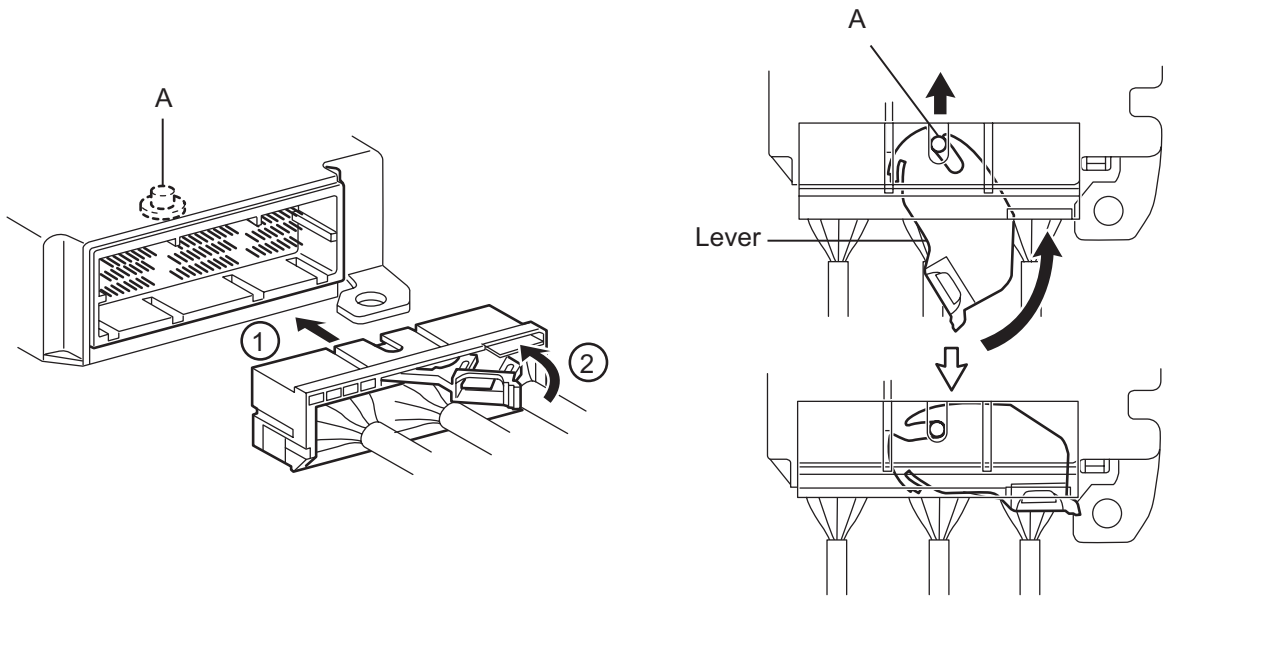


(5) Connector lock mechanism (2):
Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from becoming disconnected.



RS

(6) Improper connection prevention lock mechanism:
When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.



(b) When the vehicle is involved in a frontal collision in the hatched area (Fig.1) and the shock is larger than the predetermined level, the SRS is activated automatically. The safing sensor is designed to activate at a lower deceleration rate than the airbag sensor. As illustrated in Fig.2, ignition is caused when a current flows to the squib, which happens when the safing sensor and the deceleration sensor go on simultaneously. When a deceleration force acts on the sensors, 2 squibs in the driver airbag and front passenger airbag ignite and generate gas. The gas discharging into the driver airbag and front passenger airbag rapidly increases the pressure inside the bags, breaking the Steering pad and instrument panel. The deployment of the bags then ends, and the bags deflate as the gas is discharged through discharge holes at the rear of the bag.

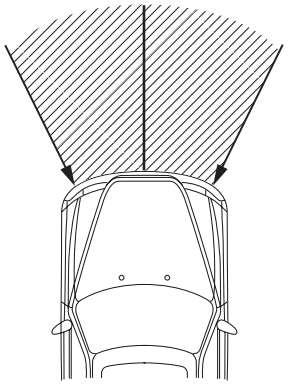


Fig.1

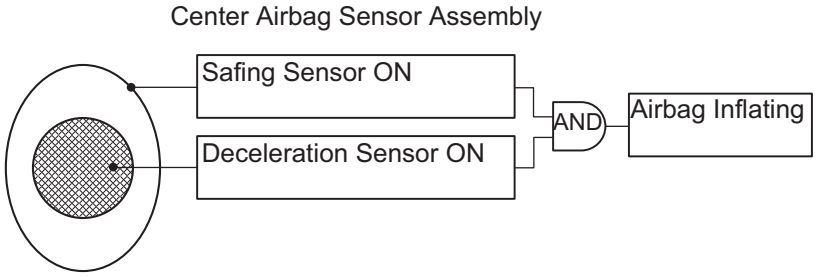

Fig.2

Y

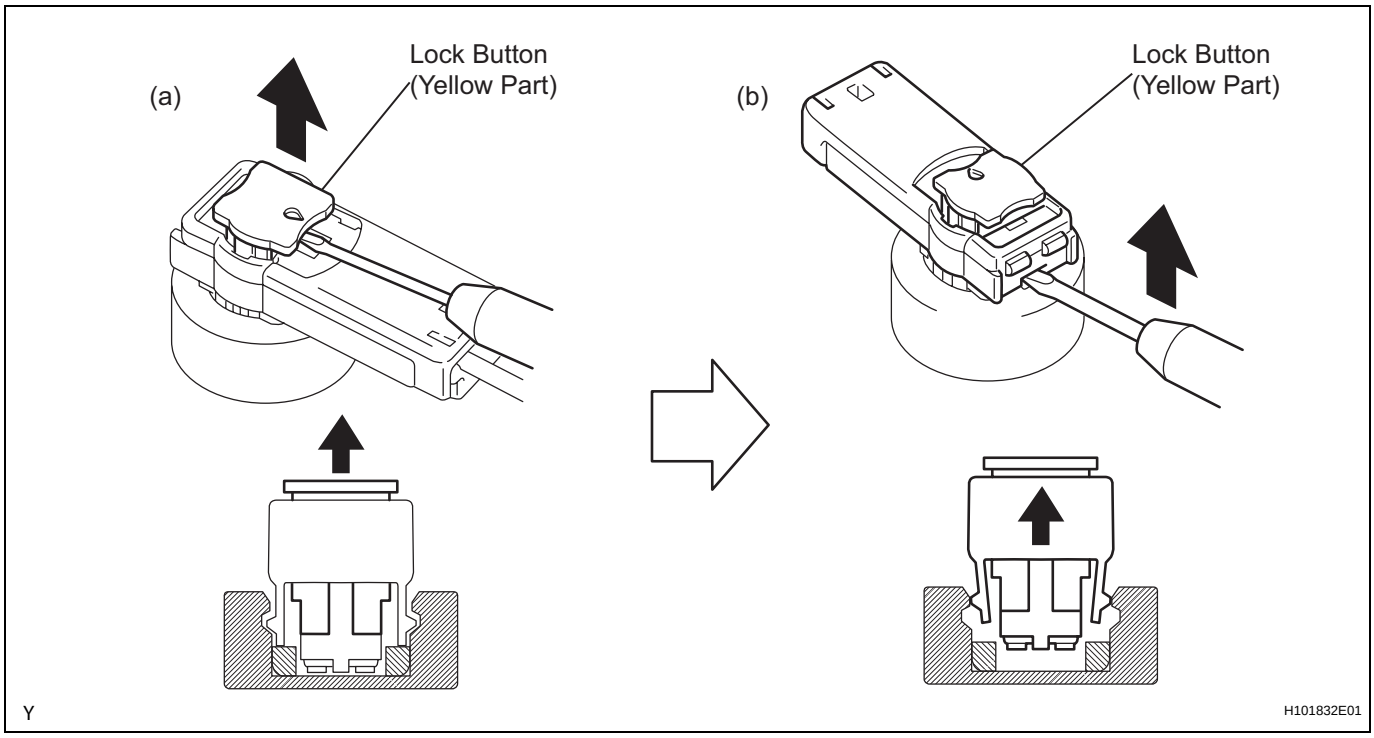
H101831E01

4. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY AND CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Release the lock button (yellow part) of the connector using a screwdriver.

RS

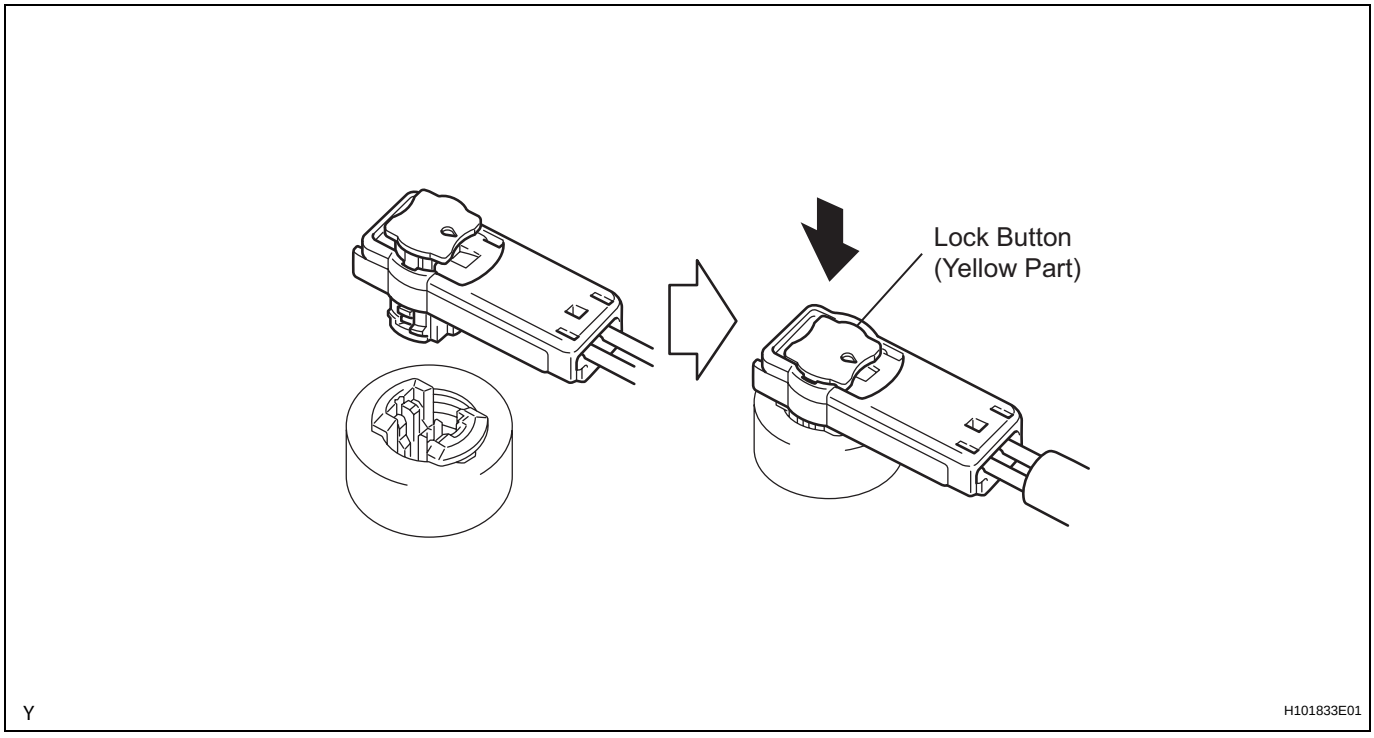
(b) Insert the screwdriver tip between the connector and the base, and then raise the connector.



5. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY AND CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Connect the connector.

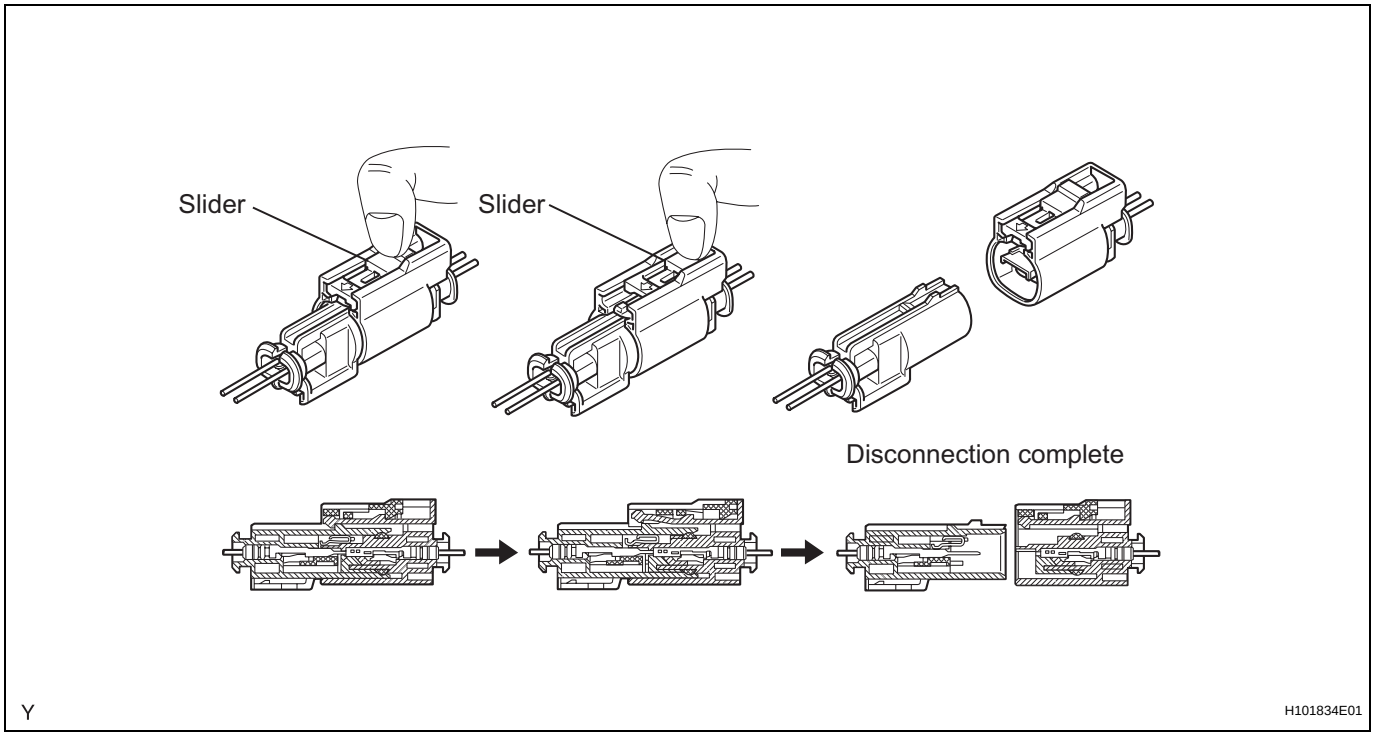
(b) Push down securely on the lock button (yellow part) of the connector. (When locking, a click sound can be heard.)



RS

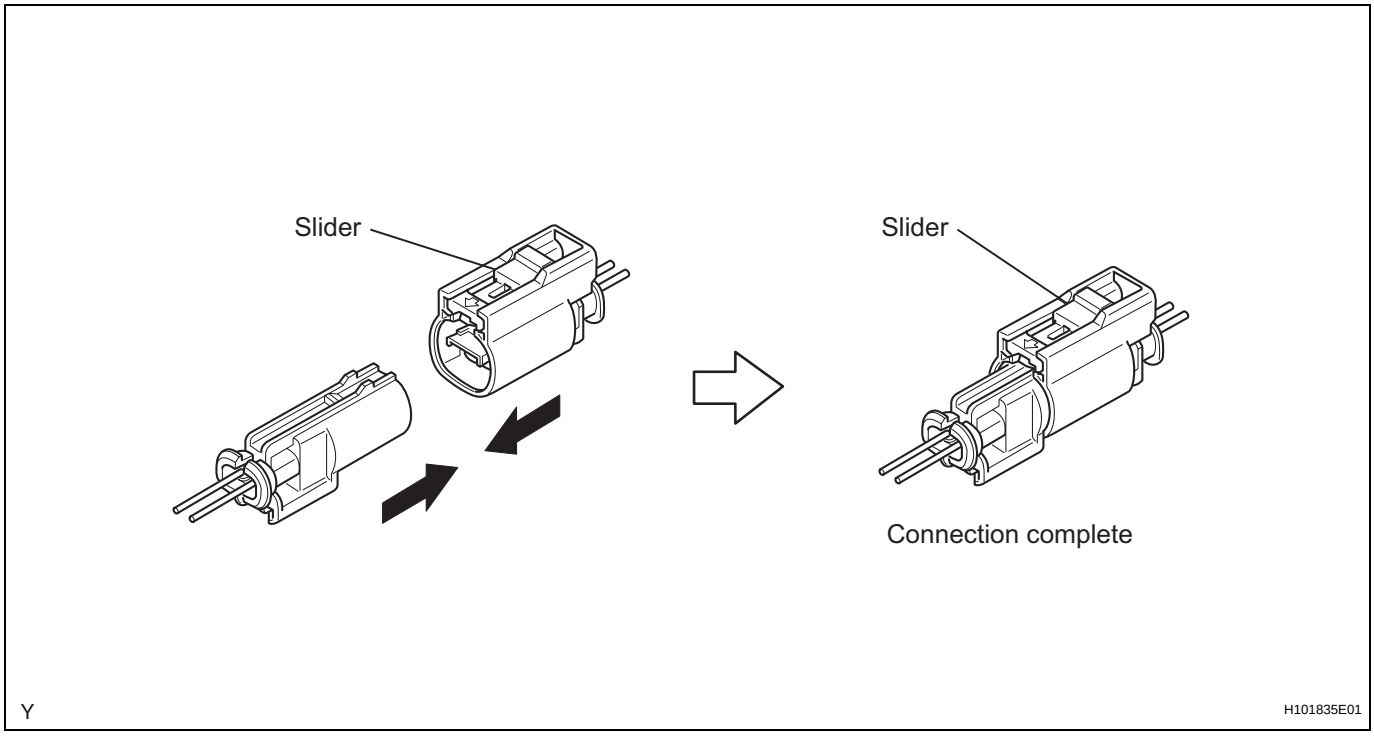
6. DISCONNECTION OF CONNECTOR FOR FRONT SEAT SIDE AIRBAG ASSEMBLY

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



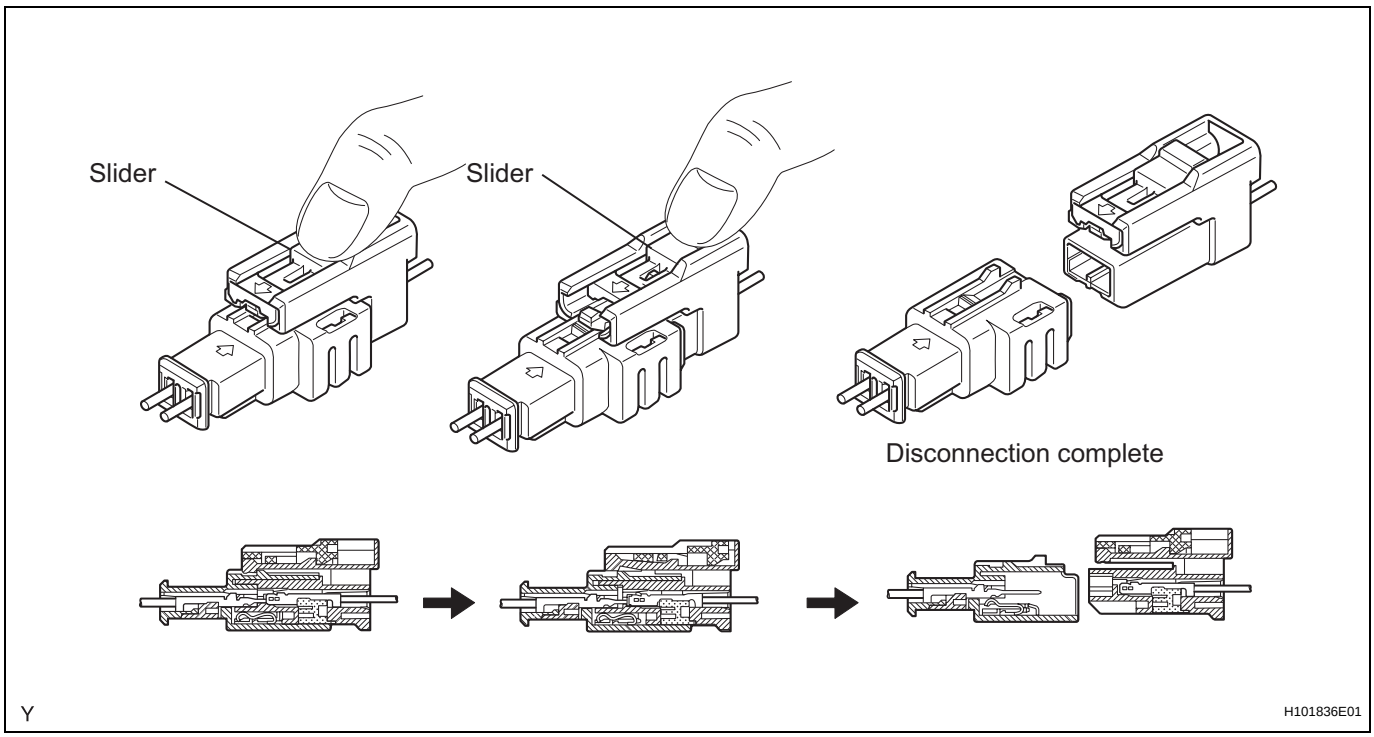
7. CONNECTION OF CONNECTOR FOR SEAT SIDE AIRBAG ASSEMBLY

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as this may result in an insecure fit.



8. DISCONNECTION OF CONNECTOR FOR FRONT PASSENGER AIRBAG ASSEMBLY

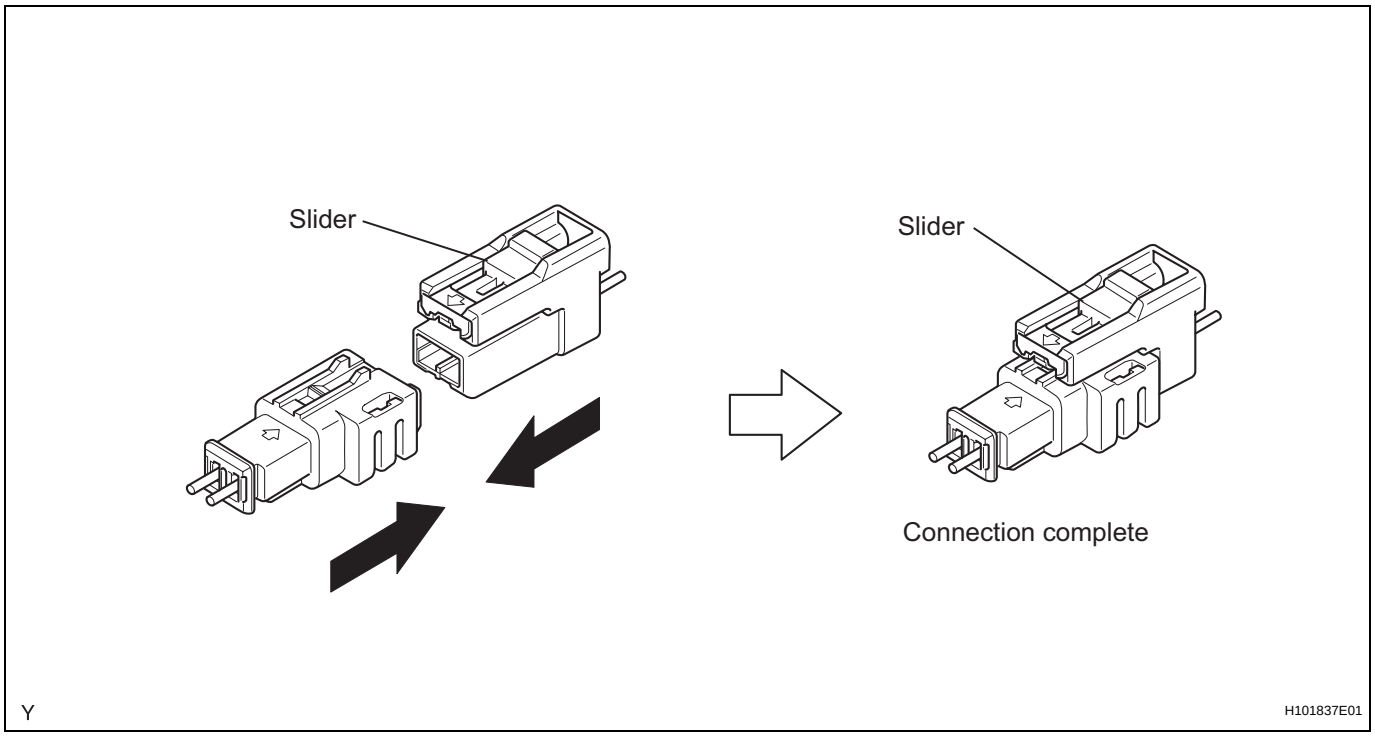
(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



RS

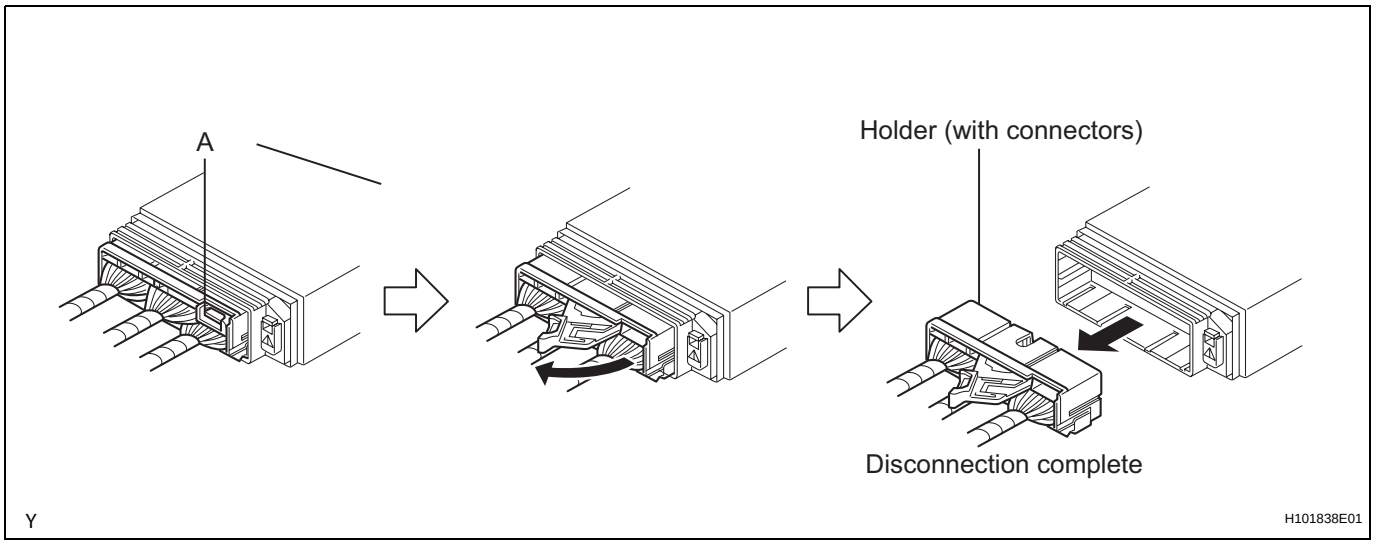
9. CONNECTION OF CONNECTOR FOR FRONT PASSENGER AIRBAG ASSEMBLY

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as this may result in an insecure fit.



10. DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

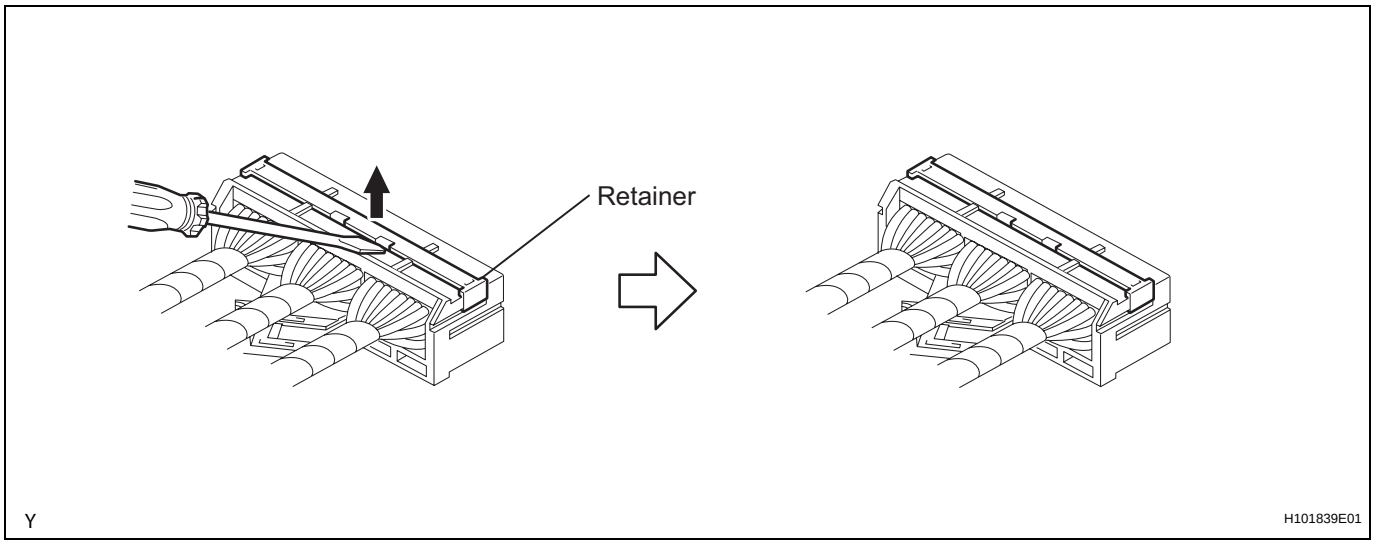
(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).



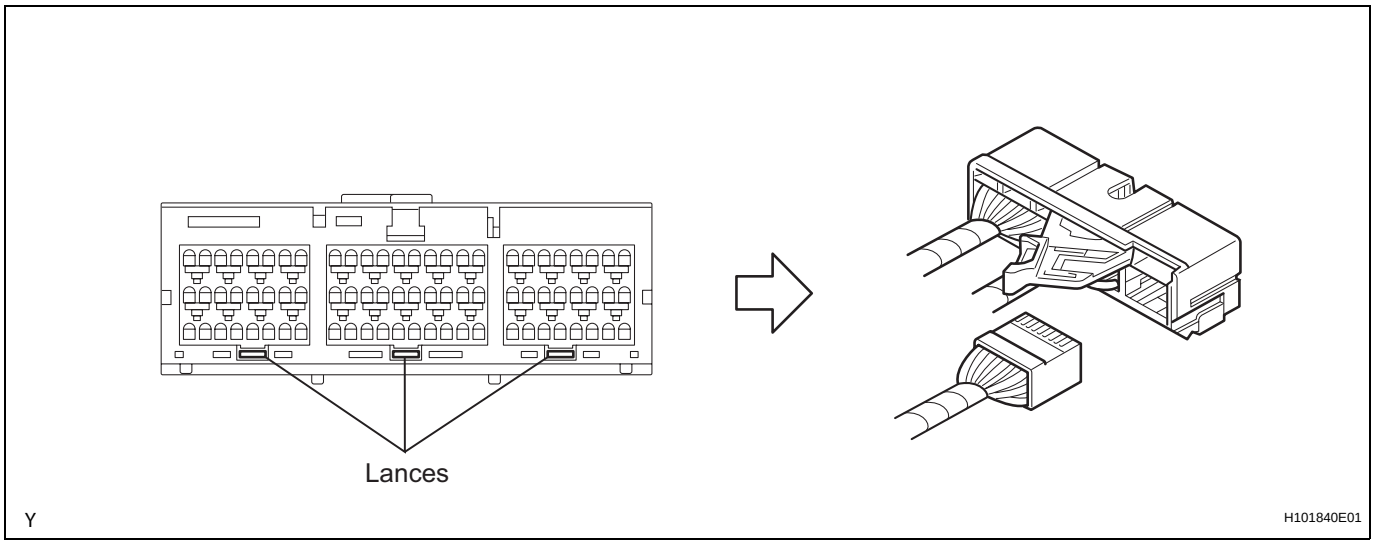
RS

HINT:
Perform the following procedures when replacing the holder.

(b) Remove the holder.
(1) Using a screwdriver, unlock the retainer.



(2) Release the fitting lances and remove the holder.



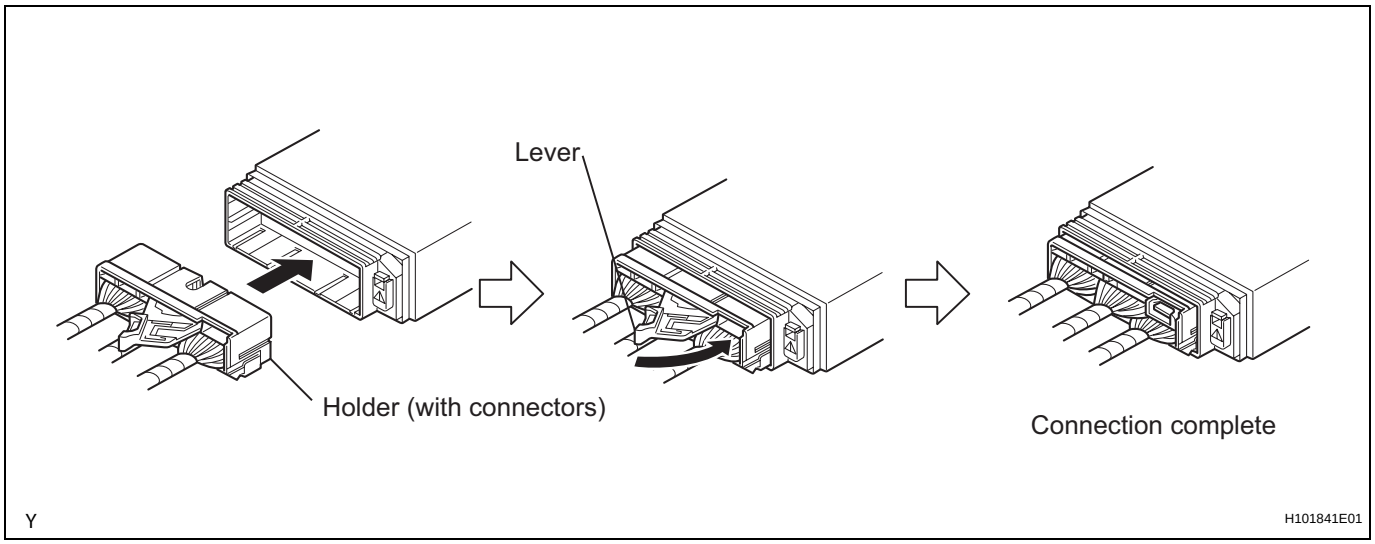
(c) Install the holder.
(1) Install the connectors into the holder. (When locking, a click sound can be heard.)
HINT:
The retainer is locked when the holder is connected.

11. CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Firmly insert the holder (with connectors) until it can not be pushed any further.

RS

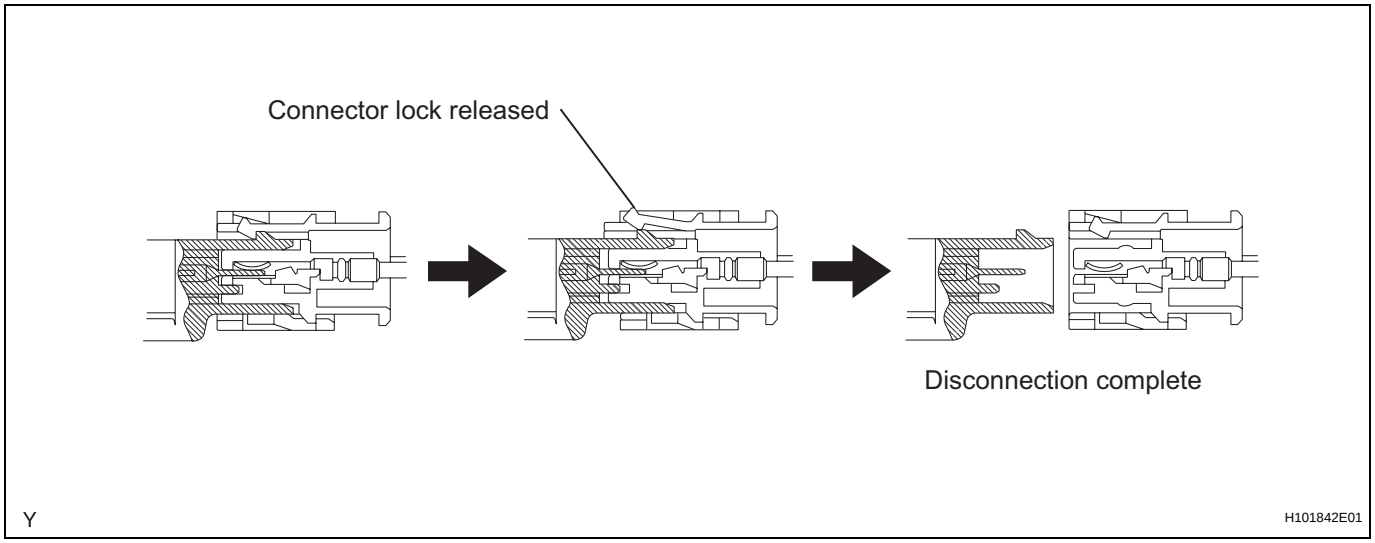
(b) Push the lever to connect the holder (with connectors). (When locking, a click sound can be heard.)
HINT:
The holder slides when connecting. Holding the holder when connecting may result in an insecure connection.



12. DISCONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR, SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) While holding both outer flank sides, slide the outer in the direction shown by the arrow.

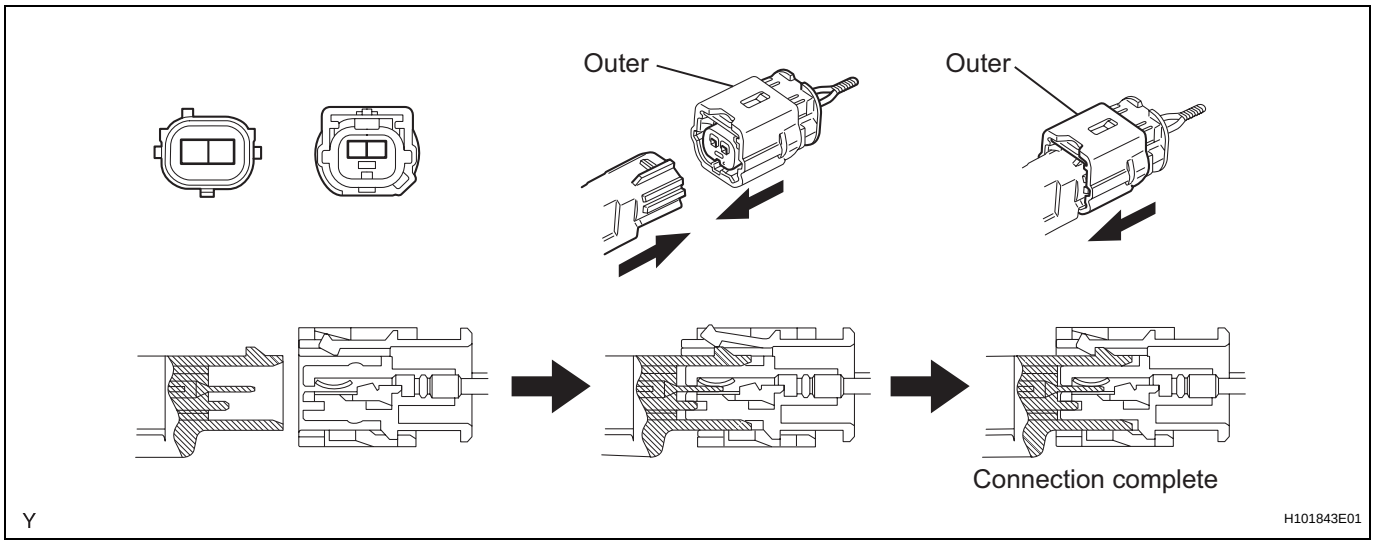
(b) When the connector lock is released, the connectors are disconnected.
HINT:
Be sure to hold both outer flank sides. Holding the top and bottom sides will make disconnection difficult.



RS

13. CONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR, SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) Connect the connector as shown in the illustration. (When locking, make sure that the outer returns to its original position and a click sound can be heard.)
HINT:
When connecting, the outer will slide. Be sure not to hold the outer while connecting, as it may result in an insecure fit.



OCCUPANT CLASSIFICATION SYSTEM (for Separate Seat Type)

PRECAUTION

1. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) Perform the zero point calibration and sensitivity check if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

NOTICE:

When an accident vehicle is brought into the workshop for repair, check the flatness of the floor where the front passenger seat is mounted. If the flatness is not within +- 3.0 mm (0.118 in.), adjust it to the specified range.

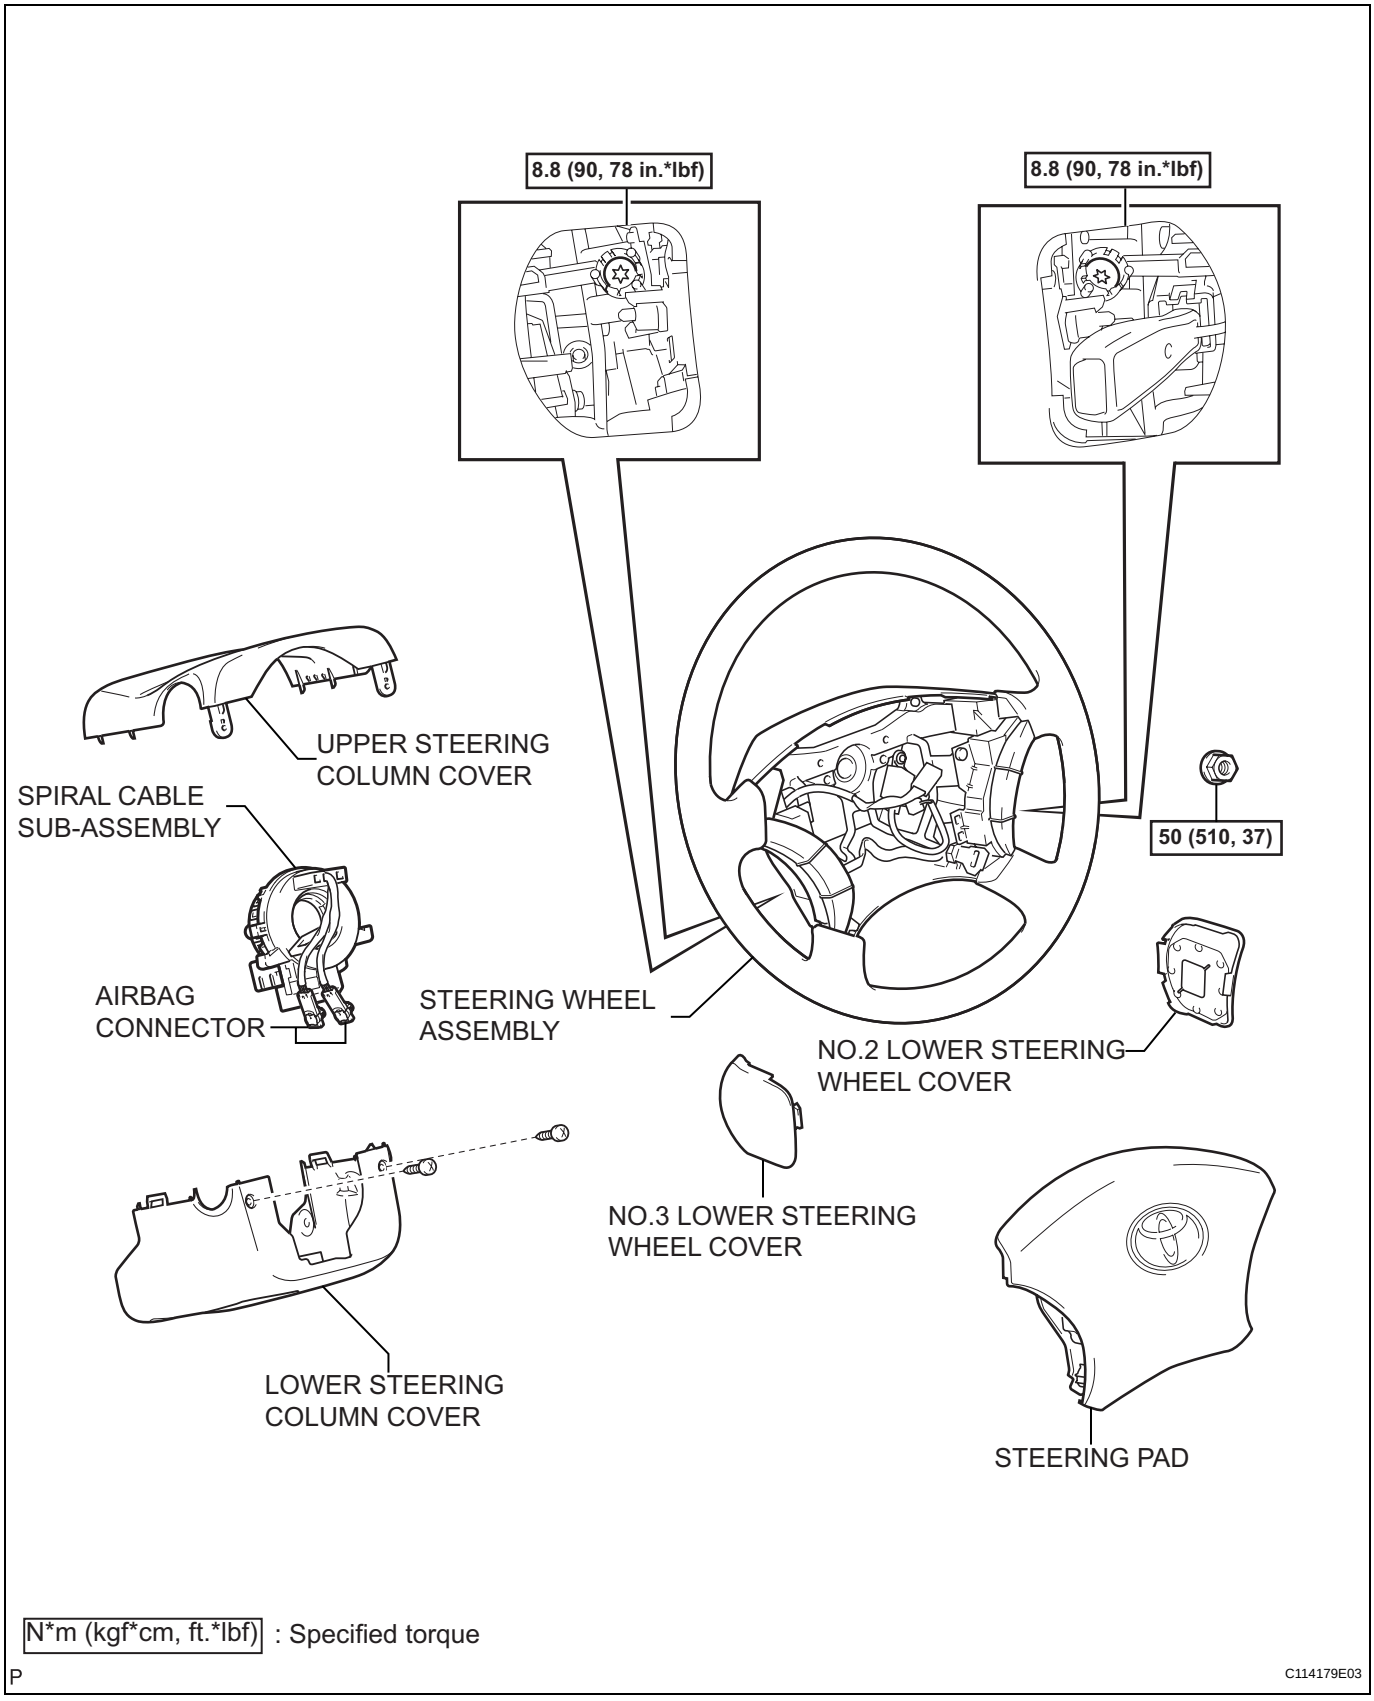
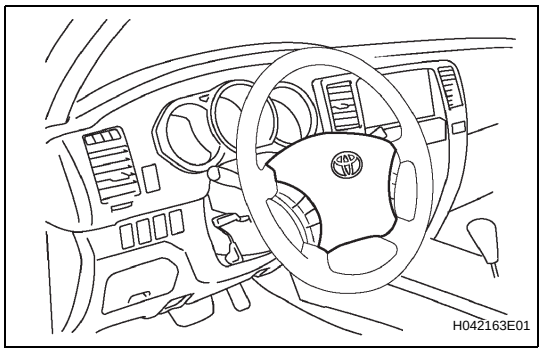
STEERING PAD

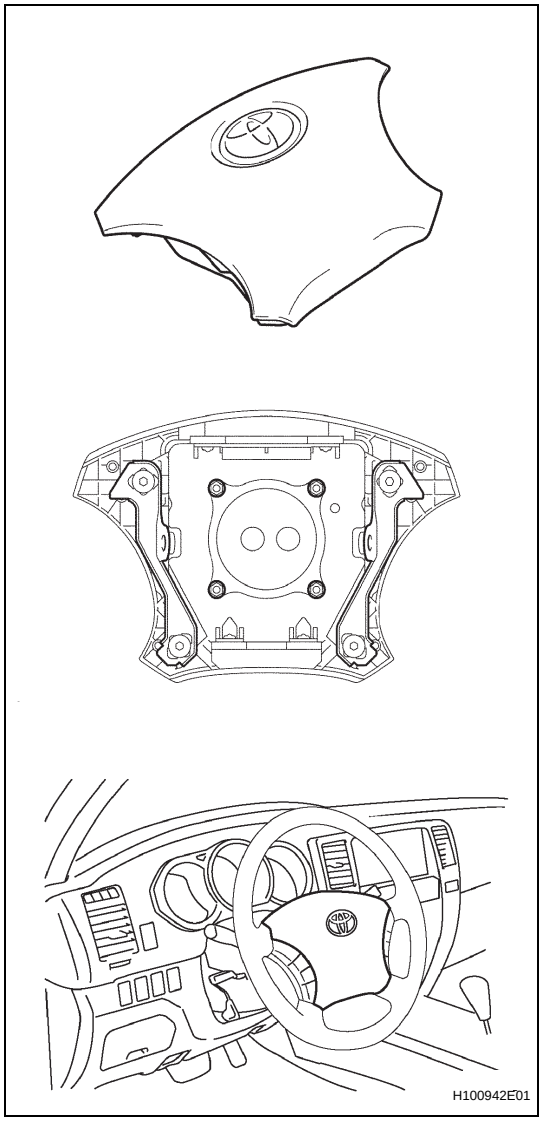
COMPONENTS



RS

ON-VEHICLE INSPECTION





1. INSPECT STEERING PAD (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check (see page RS-37).

(b) With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

2. INSPECT STEERING PAD (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check (see page RS-37).

(b) With the steering pad removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad or steering wheel assembly with a new one:

- Cuts, minute cracks or marked discoloration on the horn button assembly top surface or in the grooved portion.
- Cracks or other damage to the connectors.
- Deformation of the steering wheel assembly.
- Deformation of the horn button contact plate of the steering pad.
- There should be no interference between the steering pad and steering wheel assembly, and the clearance should be uniform all the way around when the new steering pad is installed on the steering wheel assembly.

CAUTION:
For removal and installation procedures of the steering pad. Be sure to follow the correct procedure.

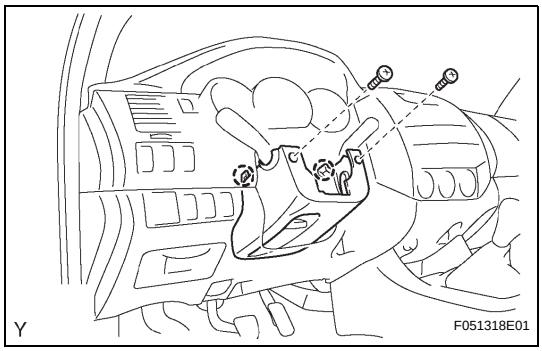
RS

SPIRAL CABLE

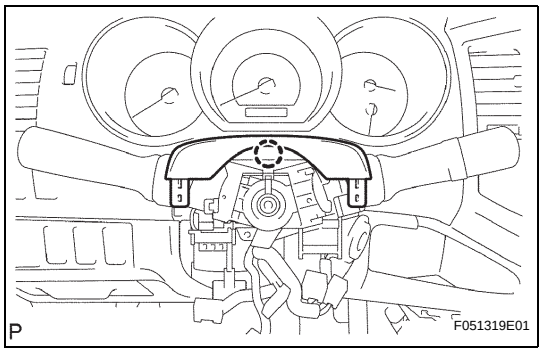
REMOVAL

HINT:
COMPONENTS: See page RS-556

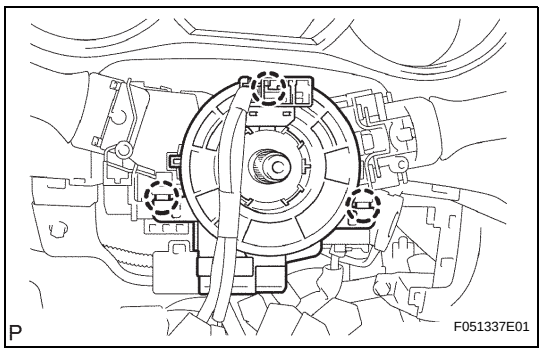
1. **PRECAUTION**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE NO.2 LOWER STEERING WHEEL COVER (See page SR-9)**
5. **REMOVE NO.3 LOWER STEERING WHEEL COVER (See page SR-9)**
6. **REMOVE STEERING PAD (See page RS-558)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-9)**
8. **REMOVE LOWER STEERING COLUMN COVER**
   (a) Remove the 2 screws.
   (b) Disengage the 2 claws to remove the steering column cover lower.



9. **REMOVE UPPER STEERING COLUMN COVER**
   (a) Disengage the claw, then remove the upper steering column cover.



10. **REMOVE SPIRAL CABLE SUB-ASSEMBLY**
    (a) Disconnect the airbag connector and the connector from the spiral cable sub-assembly.
    NOTICE:
    When handling the airbag connector, take care not to damage the airbag with harness.
    (b) Disengage the 3 claws and remove the spiral cable sub-assembly.



RS

INSPECTION

1. INSPECT SPIRAL CABLE SUB-ASSEMBLY

(a) If any of the following conditions is identified, replace the spiral cable sub-assembly with a new one.

Condition:

Scratches or cracks on the connector
Cracks, dents or chipping of the spiral cable sub-assembly

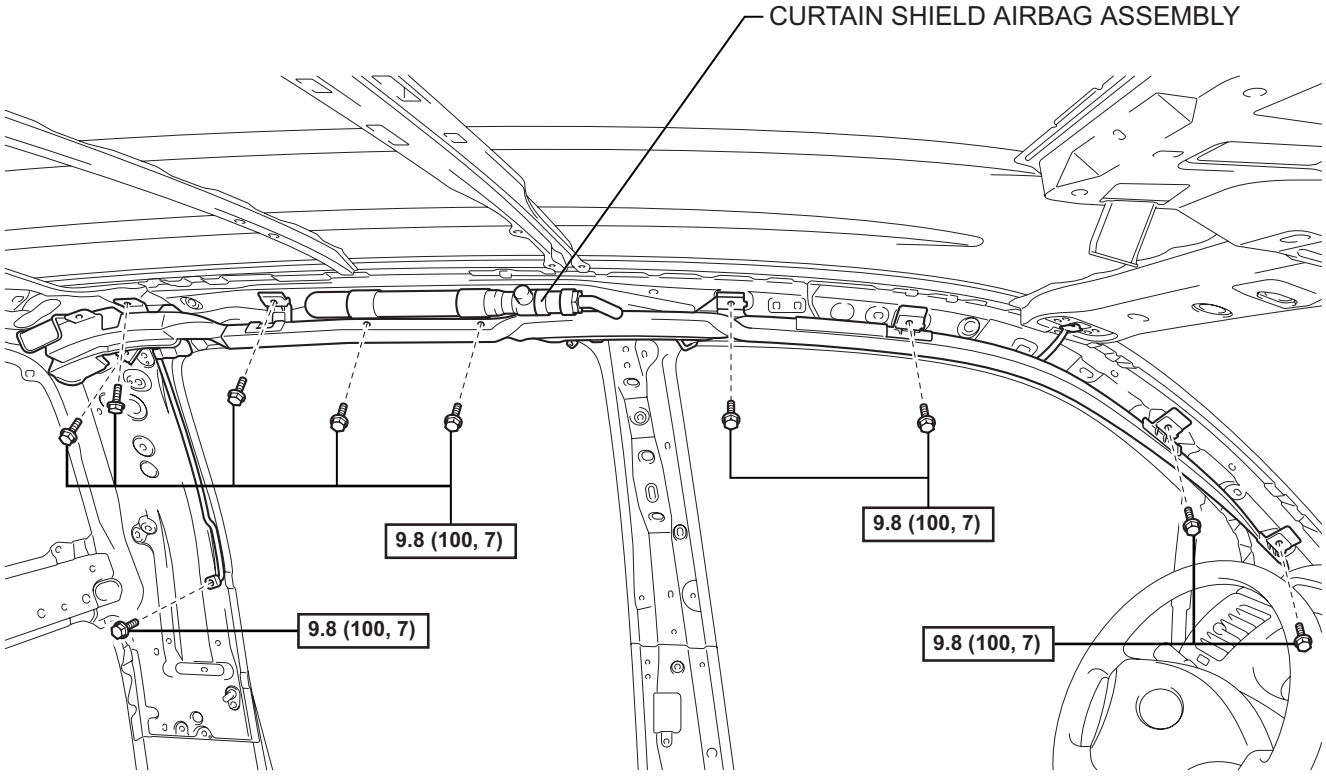
CURTAIN SHIELD AIRBAG ASSEMBLY

COMPONENTS

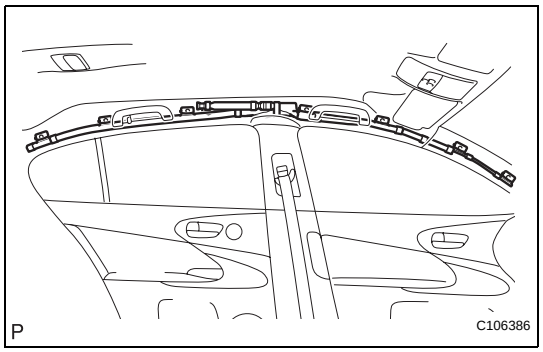


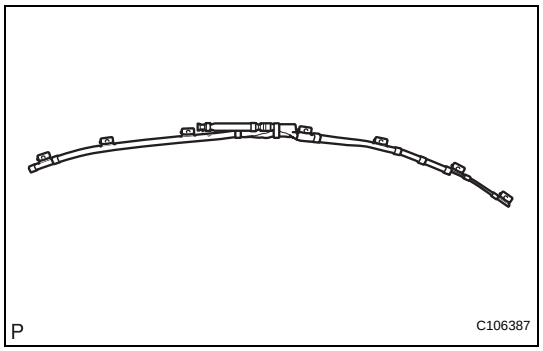
N*m (kgf*cm, ft.*lbf) : Specified torque

P

C114181E02

ON-VEHICLE INSPECTION





1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check (see page RS-37).

(b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front pillar garnish or roof headlining assembly with a new one: Cuts, minute cracks or marked discoloration on the front pillar garnish or roof headlining assembly around the curtain shield airbag assembly.

2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check (see page RS-37).

(b) With the curtain shield airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag assembly with a new one:

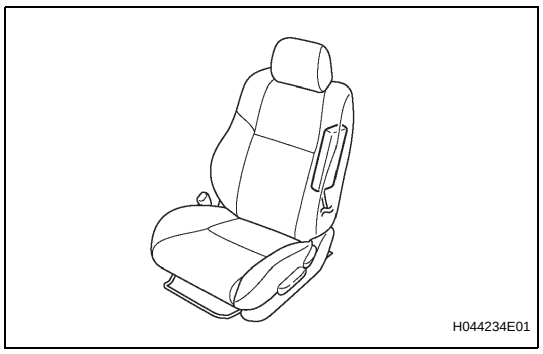
- Cuts, minute cracks or marked discoloration on the curtain shield airbag assembly.
- Cracks or other damage to the connectors.

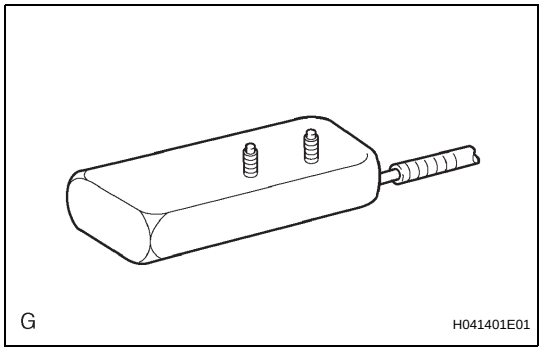
CAUTION:
For removal and installation procedures of the curtain shield airbag assembly. Be sure to follow the correct procedure.

RS

FRONT SEAT SIDE AIRBAG ASSEMBLY

ON-VEHICLE INSPECTION





1. **FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (see page RS-37).
   (b) With the front seat airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat assembly with a new one:
   Cuts, minute cracks or marked discoloration on the front seat back assembly around the front seat airbag assembly.

2. **FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (see page RS-37).
   (b) With the front seat airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat airbag assembly with a new one:
   - Cuts, minute cracks or marked discoloration on the front seat airbag assembly.
   - Cracks or other damage to the wire harness or connector.

   CAUTION:
   For removal and installation procedures of the front seat airbag assembly. Be sure to follow the correct procedure.

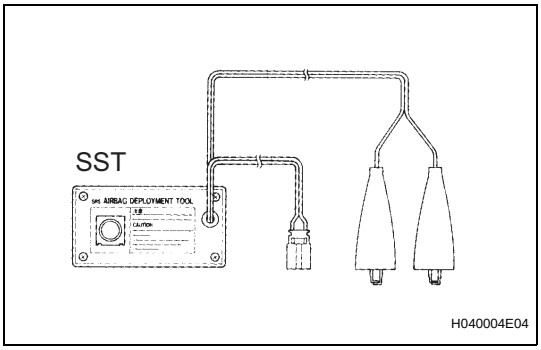
DISPOSAL

HINT:

- When scrapping a vehicle equipped with the SRS or disposing of the front seat side airbag assembly, be sure to deploy the airbag in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.
- When disposing of a front seat side airbag assembly with an airbag deployed in a collision, follow the procedure in step 1-(e) in DISPOSAL.

CAUTION:

- **Never dispose of a front seat side airbag assembly which has an undeployed airbag.**
- **The airbag produces a loud exploding sound when it deploys, so perform the operation outdoors, where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool), perform the operation in a place away from electrical noise.**
- **When deploying an airbag, perform the operation at least 10 m (33 ft) away from the airbag assembly.**
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat side airbag assembly with the deployed airbag.**

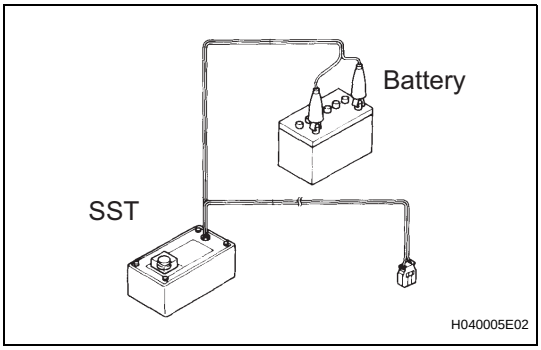


1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

HINT:

Have a battery as the power source to deploy the airbag.

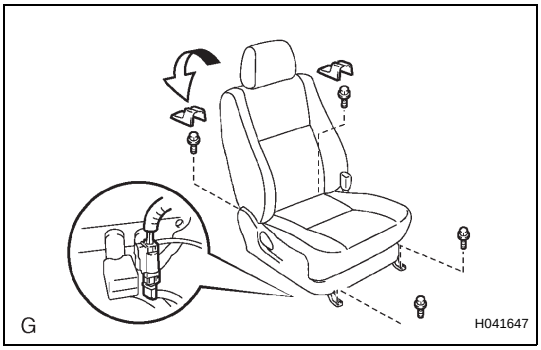
(a) Check the function of SST (see step 1-(a) on page RS-559).



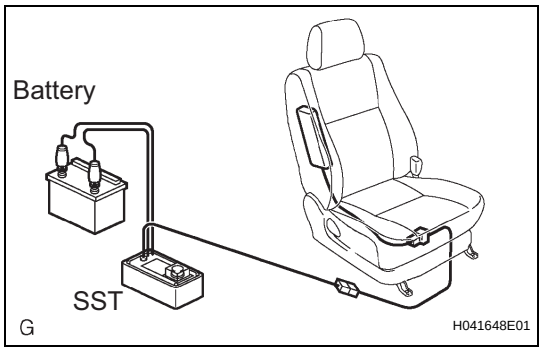
(b) Disconnect the front seat side airbag assembly connector.

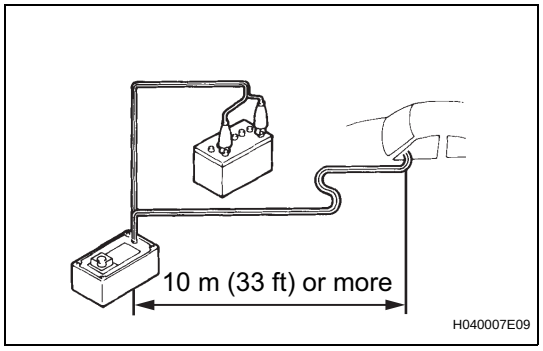
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.



RS





(c) Set SST.
(1) Connect the connectors of 2 SSTs to the front seat side airbag assembly connector.
SST 09082-00700, 09082-00750
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Move SST at least 10 m (33 ft) away from the front of the vehicle.
(3) Close all the doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(4) Connect the SST red clip to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

(d) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
HINT:
The airbag deploys simultaneously when the LED of the SST activation switch lights up.

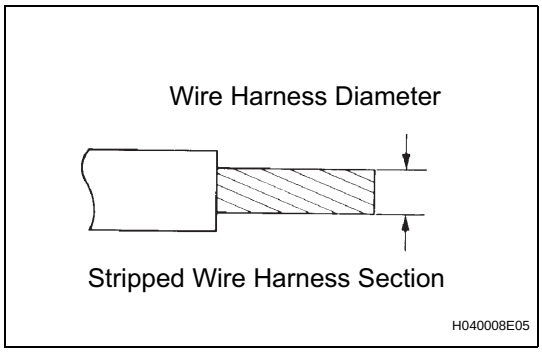
(e) Dispose of the front seat side airbag assembly.
CAUTION:
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly a the deployed airbag.**
- **Do not apply water, etc. to a front seat side airbag assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the front seat side airbag assembly installed.

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)
NOTICE:
- **When disposing of the front seat side airbag assembly only, never use the customers vehicle to deploy the airbag.**
- **Be sure to follow the procedure given below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Remove the front seat side airbag assembly.
  (1) Remove the 2 nuts and front seat side airbag assembly from the seatback assembly.
  CAUTION:
  Place the front seat side airbag assembly with the airbag deployment side facing upward.



(b) Using a service-purpose wire harness, tie down the front seat side airbag assembly.
Wire harness:

Stripped wire harness section 1.25 mm^2 or more (0.0019 in^2 or more)

CAUTION:
If the wire harness is too thin or any other object is used to tie down the front seat side airbag assembly, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Be sure to use a wire harness for vehicle use with the wire size of at least 1.25 mm^2 (0.0019 in^2).

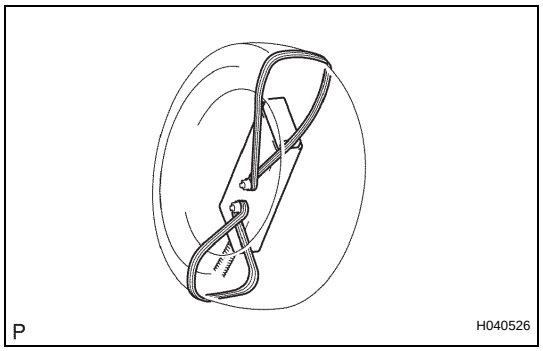
HINT:
To calculate the area of the stripped wire harness section :
Area:

3.14 x $(Diameter)^2$ divided by 4

  (1) Install the 2 nuts in the front seat side airbag assembly.

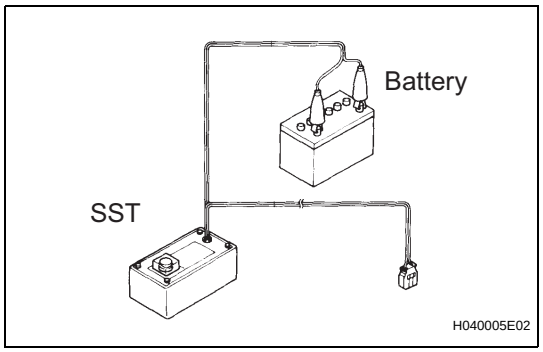
  (2) Wind the wire harness around the stud bolts of the front seat side airbag assembly, as shown in the illustration.

RS

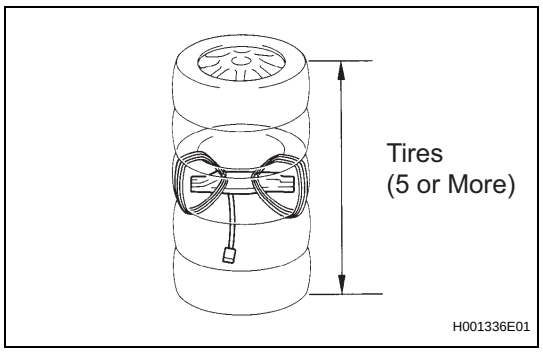


(3) Position the front seat side airbag assembly inside the tire with the airbag deployment side facing inside.
Tire size:
Must exceed the following dimensions:
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)
CAUTION:
- **Make sure that the wire harness is tight. It is very dangerous if it is loose, as this could cause the front seat side airbag assembly to come free due to the shock when the airbag is deployed.**
- **Always tie down the front seat side airbag assembly with the airbag deployment side facing inside.**

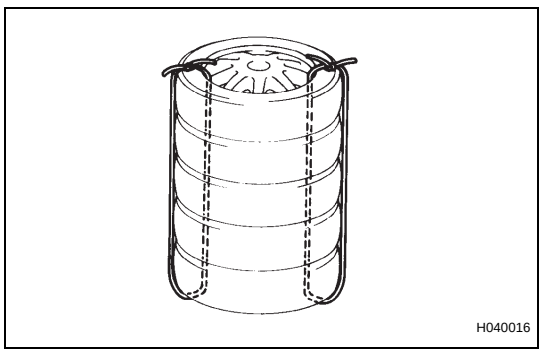
NOTICE:
The tires will be marked by the airbag deployment, so use spare tires.



(c) Check the function of SST (see step 1-(a) on page RS-559).

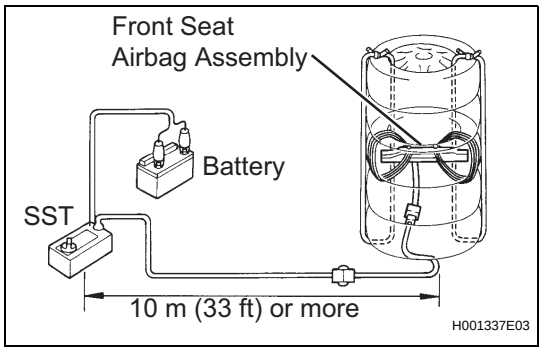


(d) Place tires.
(1) Place at least 2 tires under the tire to which the front seat side airbag assembly is tied.
(2) Place at least 2 tires over the tire to which the front seat side airbag assembly is tied. The top tire should have the wheel installed.



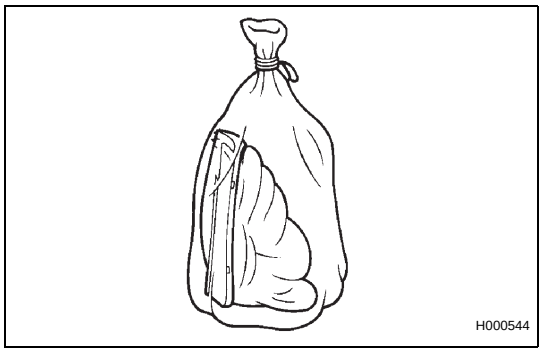
(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. It is very dangerous if it is loose, as this could cause the tires to come free due to the shock when the airbag is deployed.
HINT:
Place the SST connector and wire harness inside the tires. Secure at least 1 m (3 ft) of slack for the wire harness.

RS



(e) Set SST.
Connect the connectors of 2 SSTs to the front seat side airbag assembly connector.
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(f) Deploy the airbag.
(1) Connect the red clip of SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front seat side airbag assembly is tied.
(3) Press the SST activation switch and deploy the airbag.
HINT:
The airbag deploys simultaneously when the LED of the SST activation switch lights up.

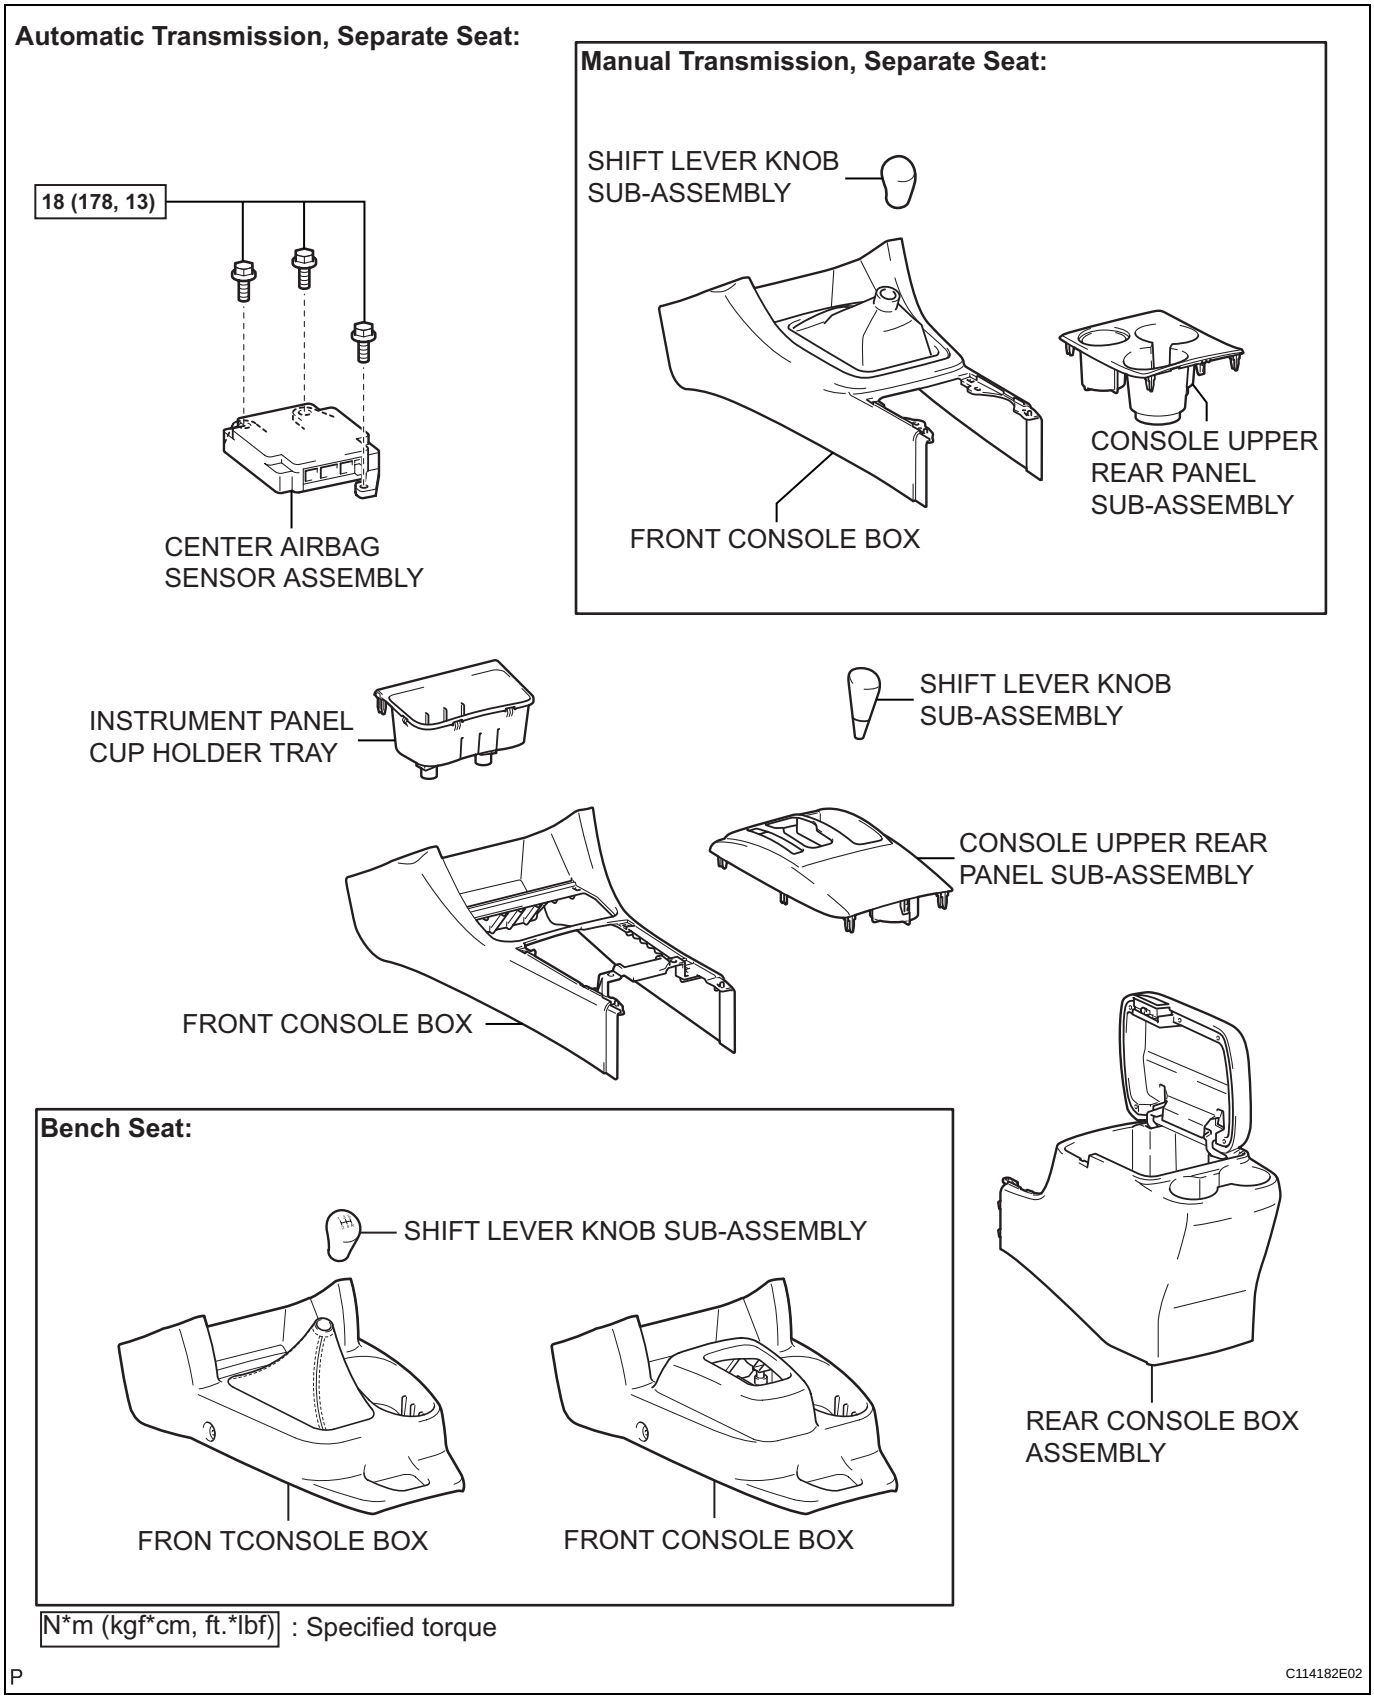


(g) Dispose of the front seat side airbag assembly.
CAUTION:
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly with the deployed airbag.**
- **Do not apply water etc. to a front seat side airbag assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the front seat side airbag assembly from the tire.
(2) Place the front seat side airbag assembly in a vinyl bag, tie the end tightly and dispose of it in the same way as other general parts.

CENTER AIRBAG SENSOR ASSEMBLY

COMPONENTS



RS

ON-VEHICLE INSPECTION

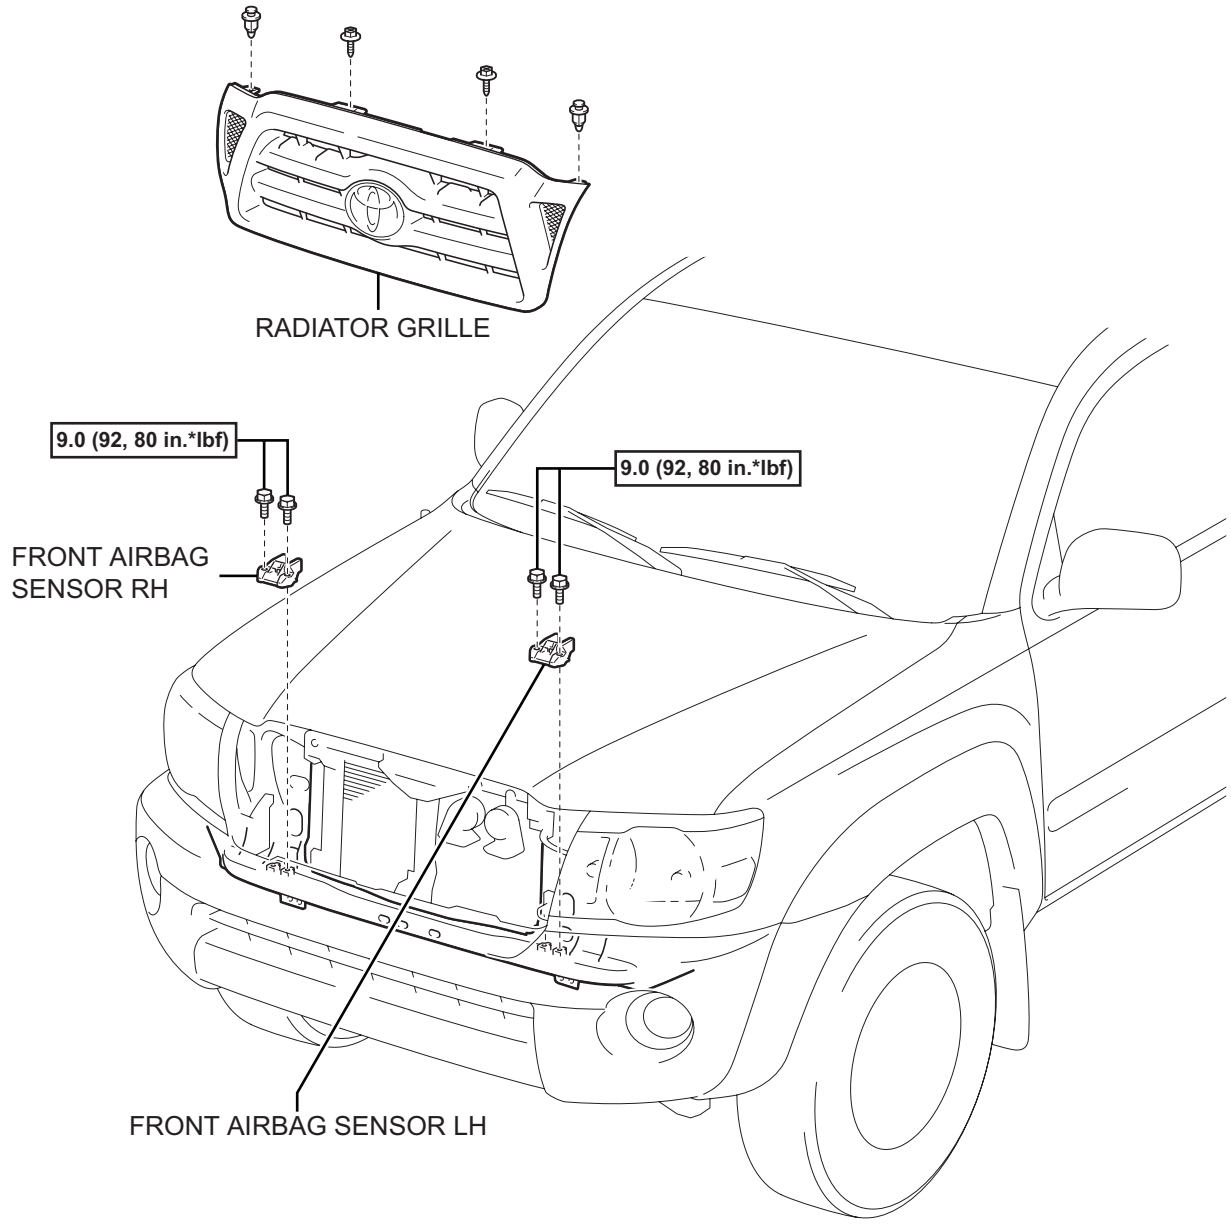
1. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (see page RS-37).

2. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (see page RS-37).

3. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   (a) Replace the front airbag sensor.
   CAUTION:
   For removal and installation procedures of the front airbag sensor. Be sure to follow the correct procedure.
   HINT:
   The front airbag sensor should be replaced after any of the airbags has deployed, as it has been subjected to the impact.

FRONT AIRBAG SENSOR

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

P

C114183E02

RS

ON-VEHICLE INSPECTION

1. **INSPECT FRONT AIRBAG SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (see page RS-37).

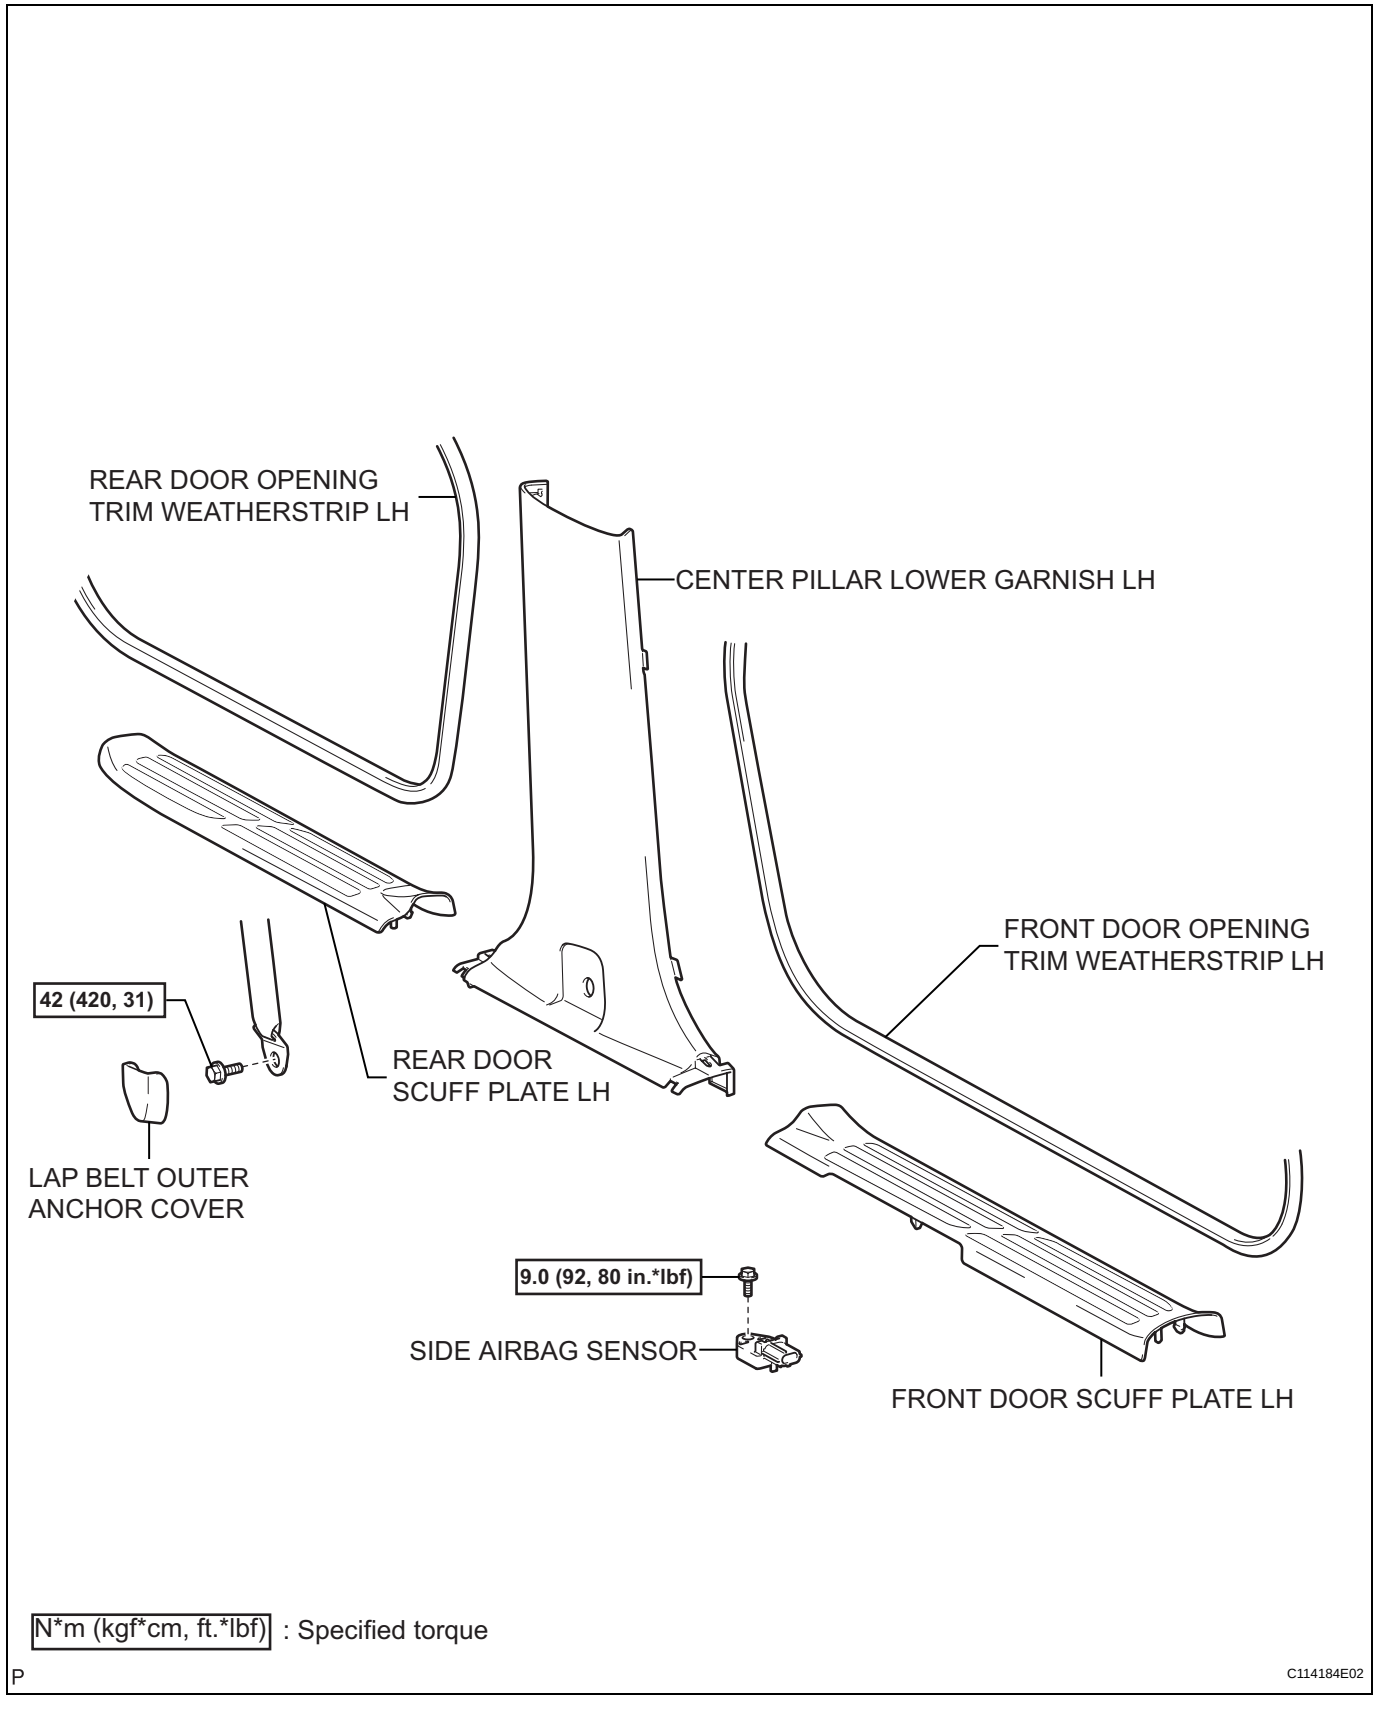
2. **INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (see page RS-37).
   (b) When the front bumper of the vehicle or its area is damaged, check if there is any damage to the front airbag sensor. If any of the front airbag sensor have defects as mentioned below, replace it with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   For removal and installation procedures of the front airbag sensor. Be sure to follow the correct procedure.

3. **INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision)**
   (a) Replace the front airbag sensor.
   CAUTION:
   For removal and installation procedures of the front airbag sensor. Be sure to follow the correct procedure.
   HINT:
   The front airbag sensor on the impacted side should be replaced after the steering pad, front passenger airbag assembly, driver side knee airbag assembly or front passenger side knee airbag assembly has deployed.

SIDE AIRBAG SENSOR

COMPONENTS



RS

ON-VEHICLE INSPECTION

1. **INSPECT SIDE AIRBAG SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (see page RS-37).

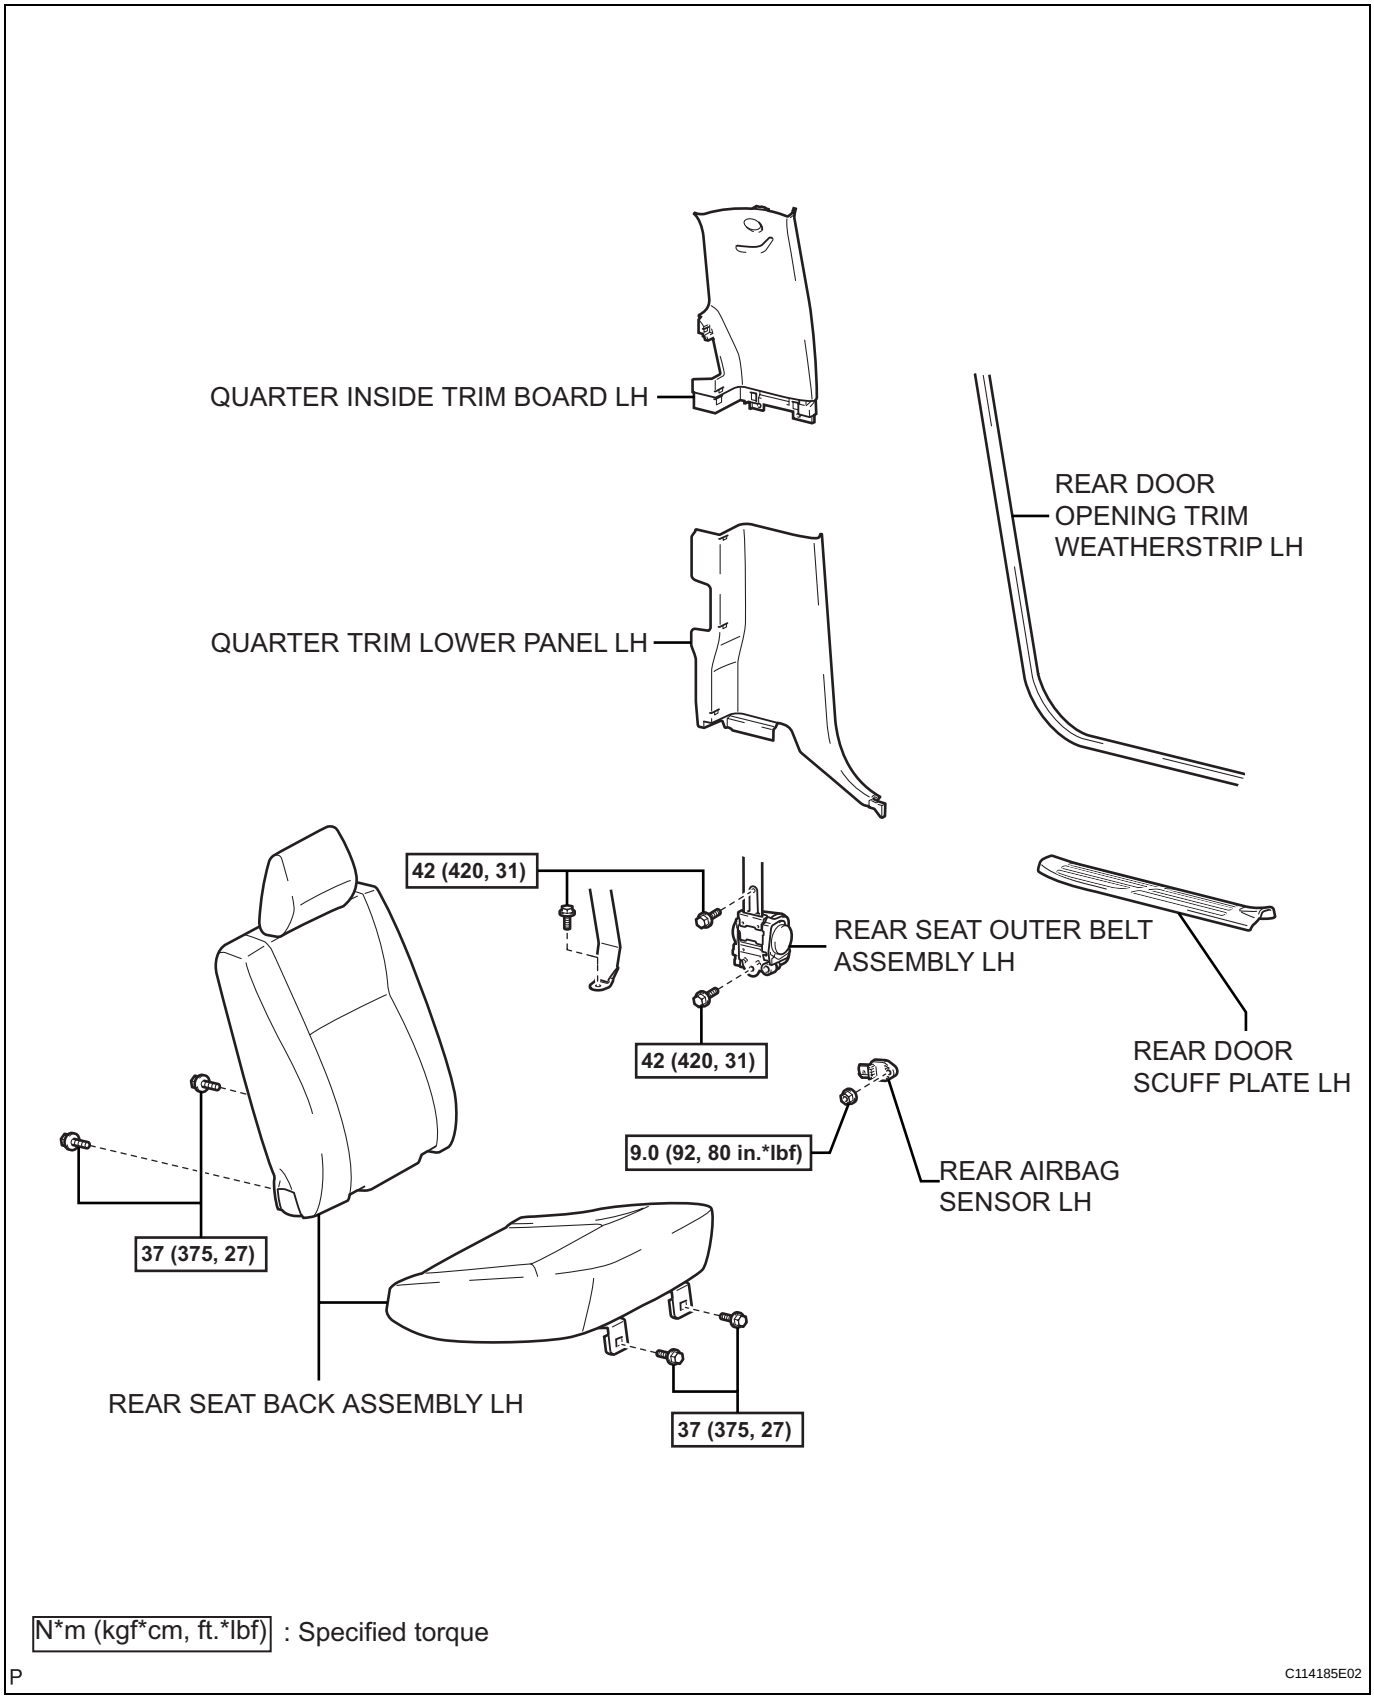
2. **INSPECT SIDE AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (see page RS-37).
   (b) When the center pillar of the vehicle or its area is damaged, check if there is any damage to the side airbag sensor. If there are any defects as mentioned below, replace the side airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   For removal and installation procedures of the side airbag sensor. Be sure to follow the correct procedure.

3. **INSPECT SIDE AIRBAG SENSOR (for Vehicle Involved in Collision)**
   (a) Replace the side airbag sensor.
   CAUTION:
   For removal and installation procedures of the side airbag sensor. Be sure to follow the correct procedure.
   HINT:
   The side airbag sensor on the impacted side should be replaced after the front seat airbag assembly and curtain shield airbag assembly have deployed.

REAR AIRBAG SENSOR

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

P

C114185E02

RS

ON-VEHICLE INSPECTION

1. **INSPECT REAR AIRBAG SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (see page RS-37).

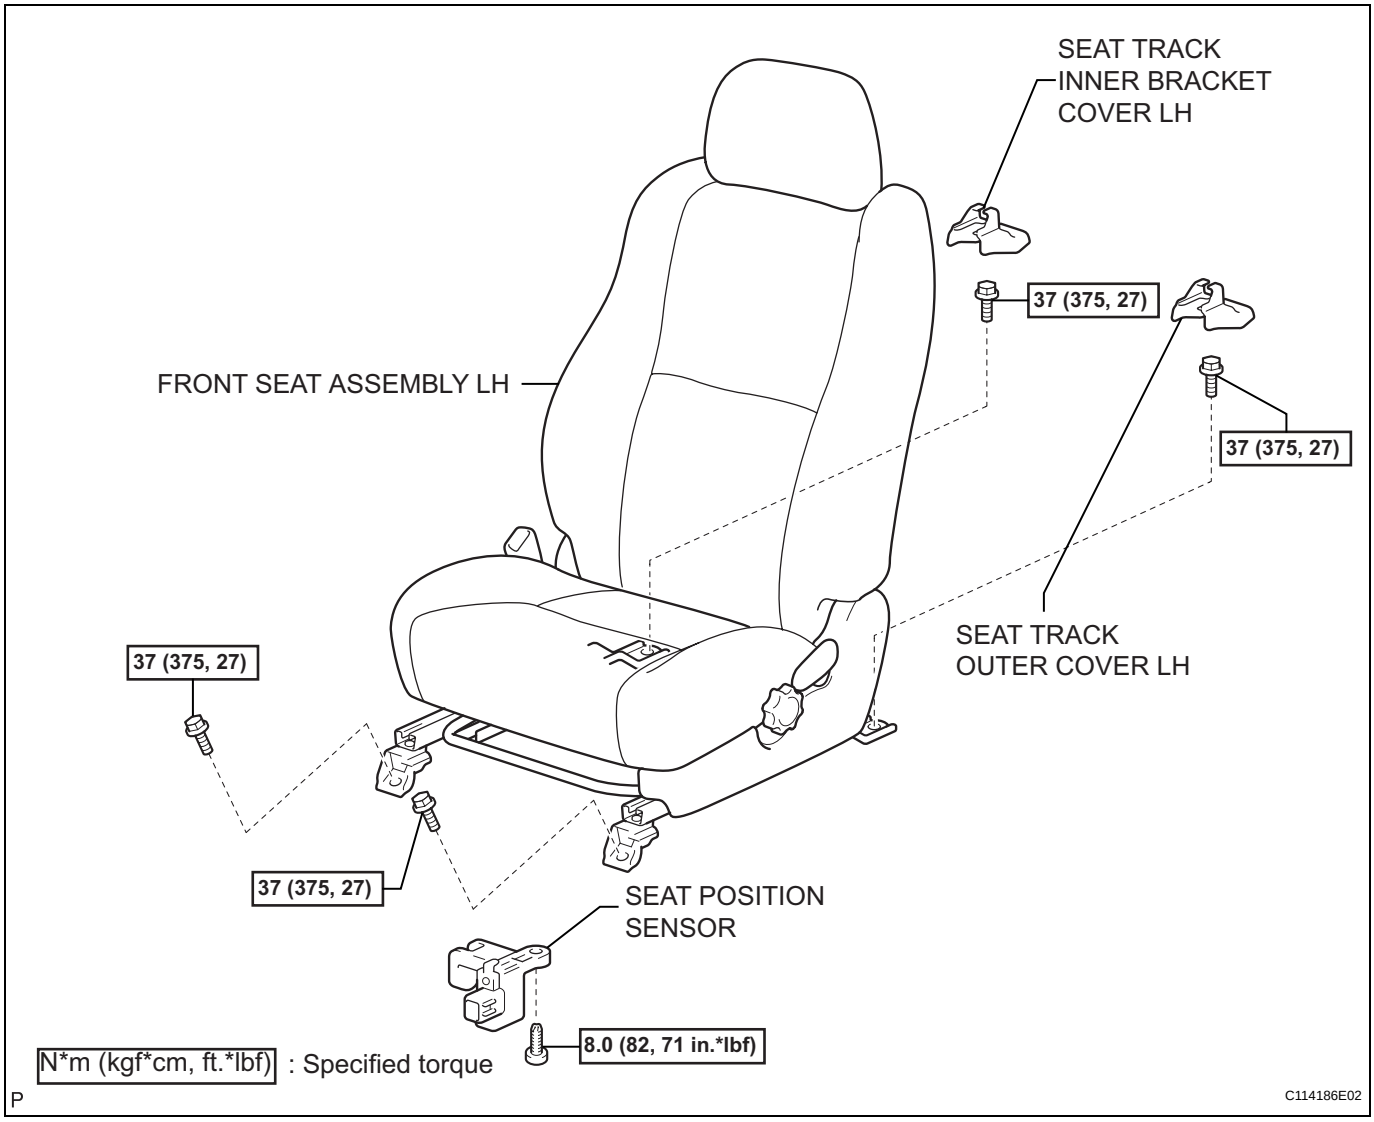
2. **INSPECT REAR AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (see page RS-37).
   (b) When the quarter panel of the vehicle or its area is damaged, check if there is any damage to the rear airbag sensor. If there are any defects as mentioned below, replace the rear airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   For removal and installation procedures of the rear airbag sensor. Be sure to following the correct procedure.

3. **INSPECT REAR AIRBAG SENSOR (for Vehicle Involved in Collision)**
   (a) Replace the rear airbag sensor.
   CAUTION:
   For removal and installation procedures of the rear airbag sensor. Be sure to follow the correct procedure.
   HINT:
   The rear airbag sensor on the impacted side should be replaced after the curtain shield airbag assembly has deployed.

SEAT POSITION SENSOR (for Separate Seat Type)

COMPONENTS



RS

ON-VEHICLE INSPECTION

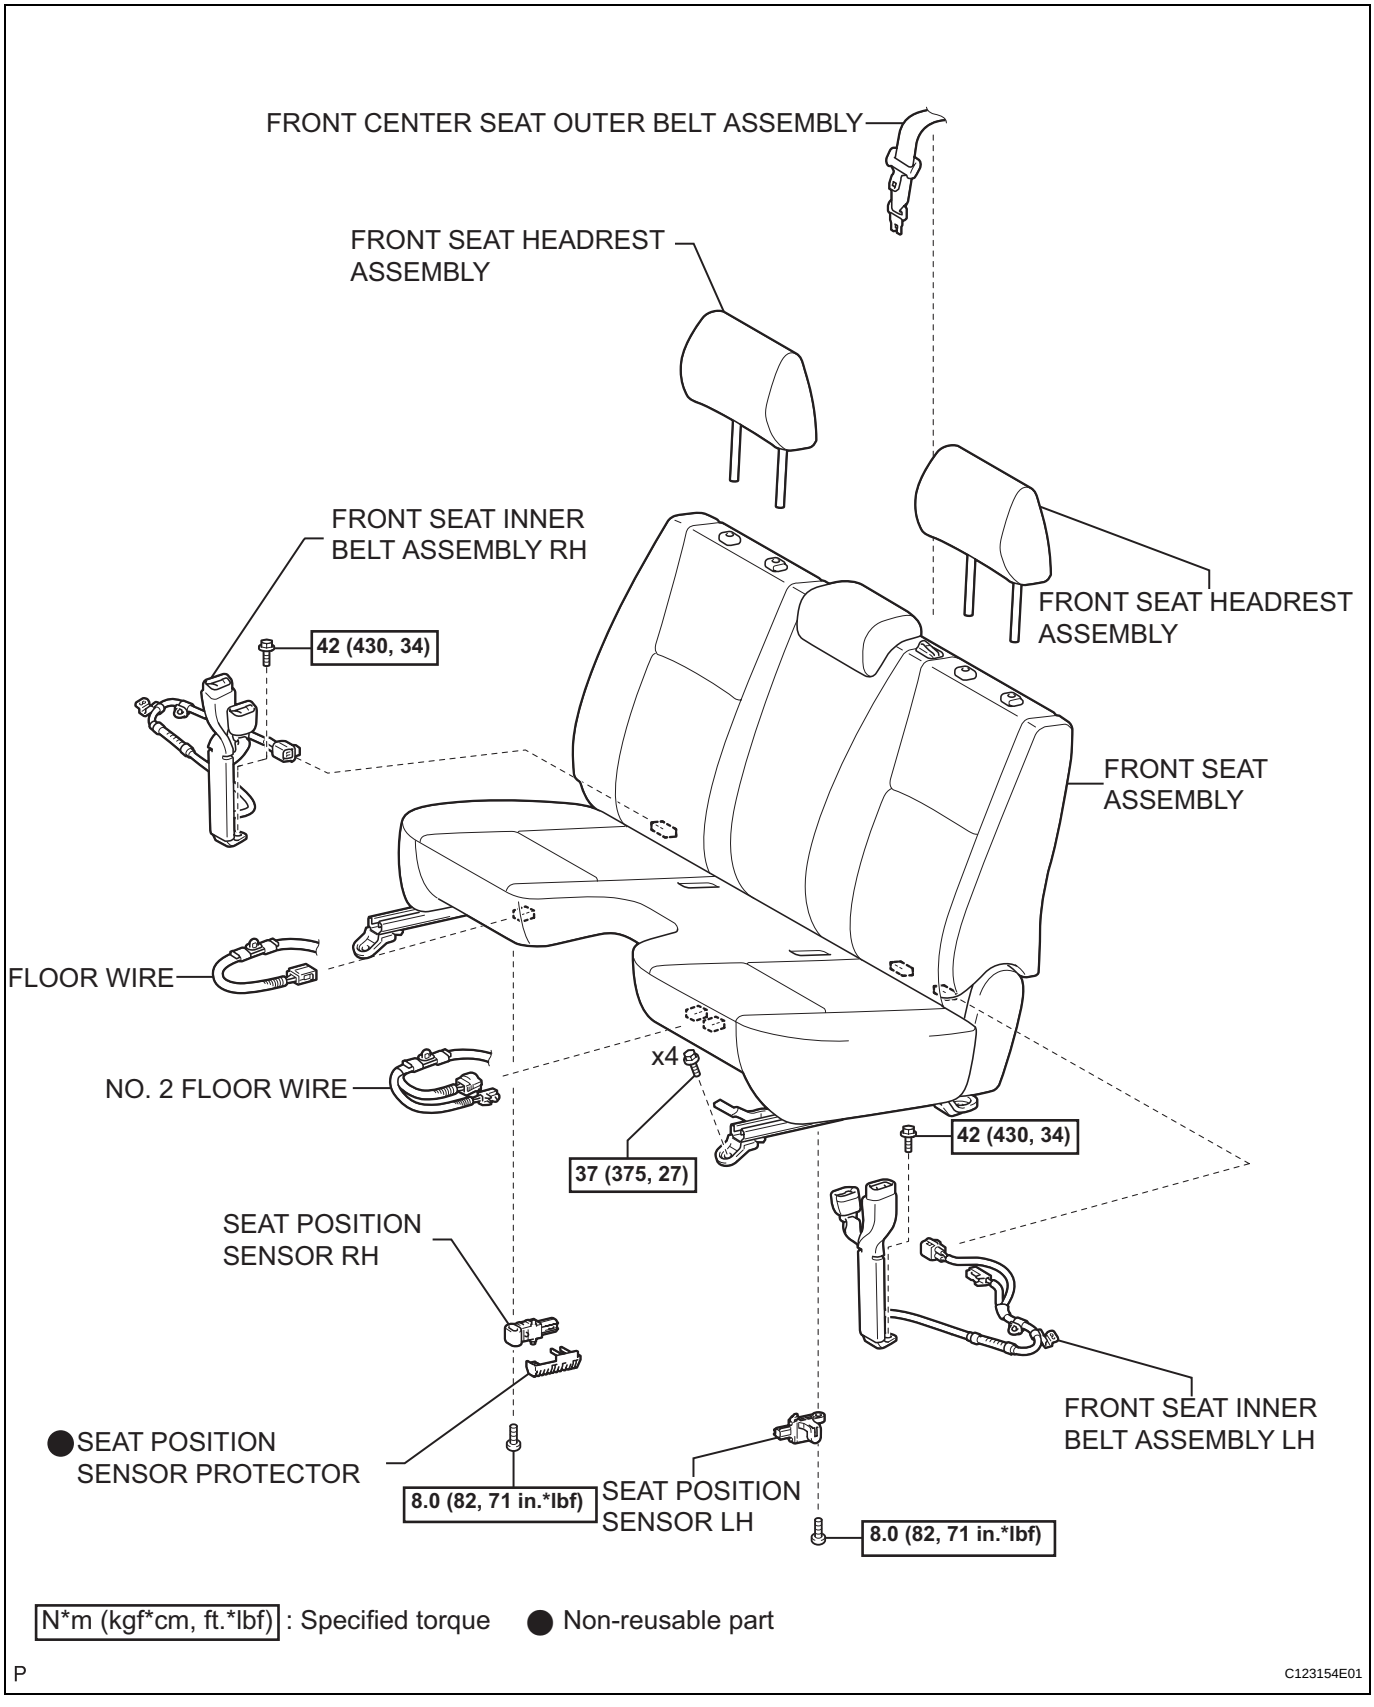
1. **SEAT POSITION SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).

2. **SEAT POSITION SENSOR (for Vehicle Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).
   (b) Even if the airbag was not deployed, perform a visual check for damage to the seat position sensor. If there are any defects as mentioned below, replace the seat position sensor with a new one:
   - Cracks, dents or chips in the case.
   - Cracks or other damage to the connector.

   CAUTION:
   For removal and installation procedures of the seat position sensor, see page RS-617, RS-620, and be sure to follow the correct procedure.

SEAT POSITION SENSOR (for Bench Seat Type)

COMPONENTS



RS

ON-VEHICLE INSPECTION

1. **REMOVE SEAT POSITION SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).

2. **REMOVE SEAT POSITION SENSOR (for Vehicle Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).
   (b) Even if the airbag was not deployed, perform a visual check for damage to the seat position airbag sensor. If there are any defects as mentioned below, replace the seat position airbag sensor with a new one:
   - Cracks, dents or chips in the case.
   - Cracks or other damage to the connector.

   CAUTION:
   For removal and installation procedures of the seat position airbag sensor, see pages RS-620 and RS-621, and be sure to follow the correct procedure.

ON-VEHICLE INSPECTION

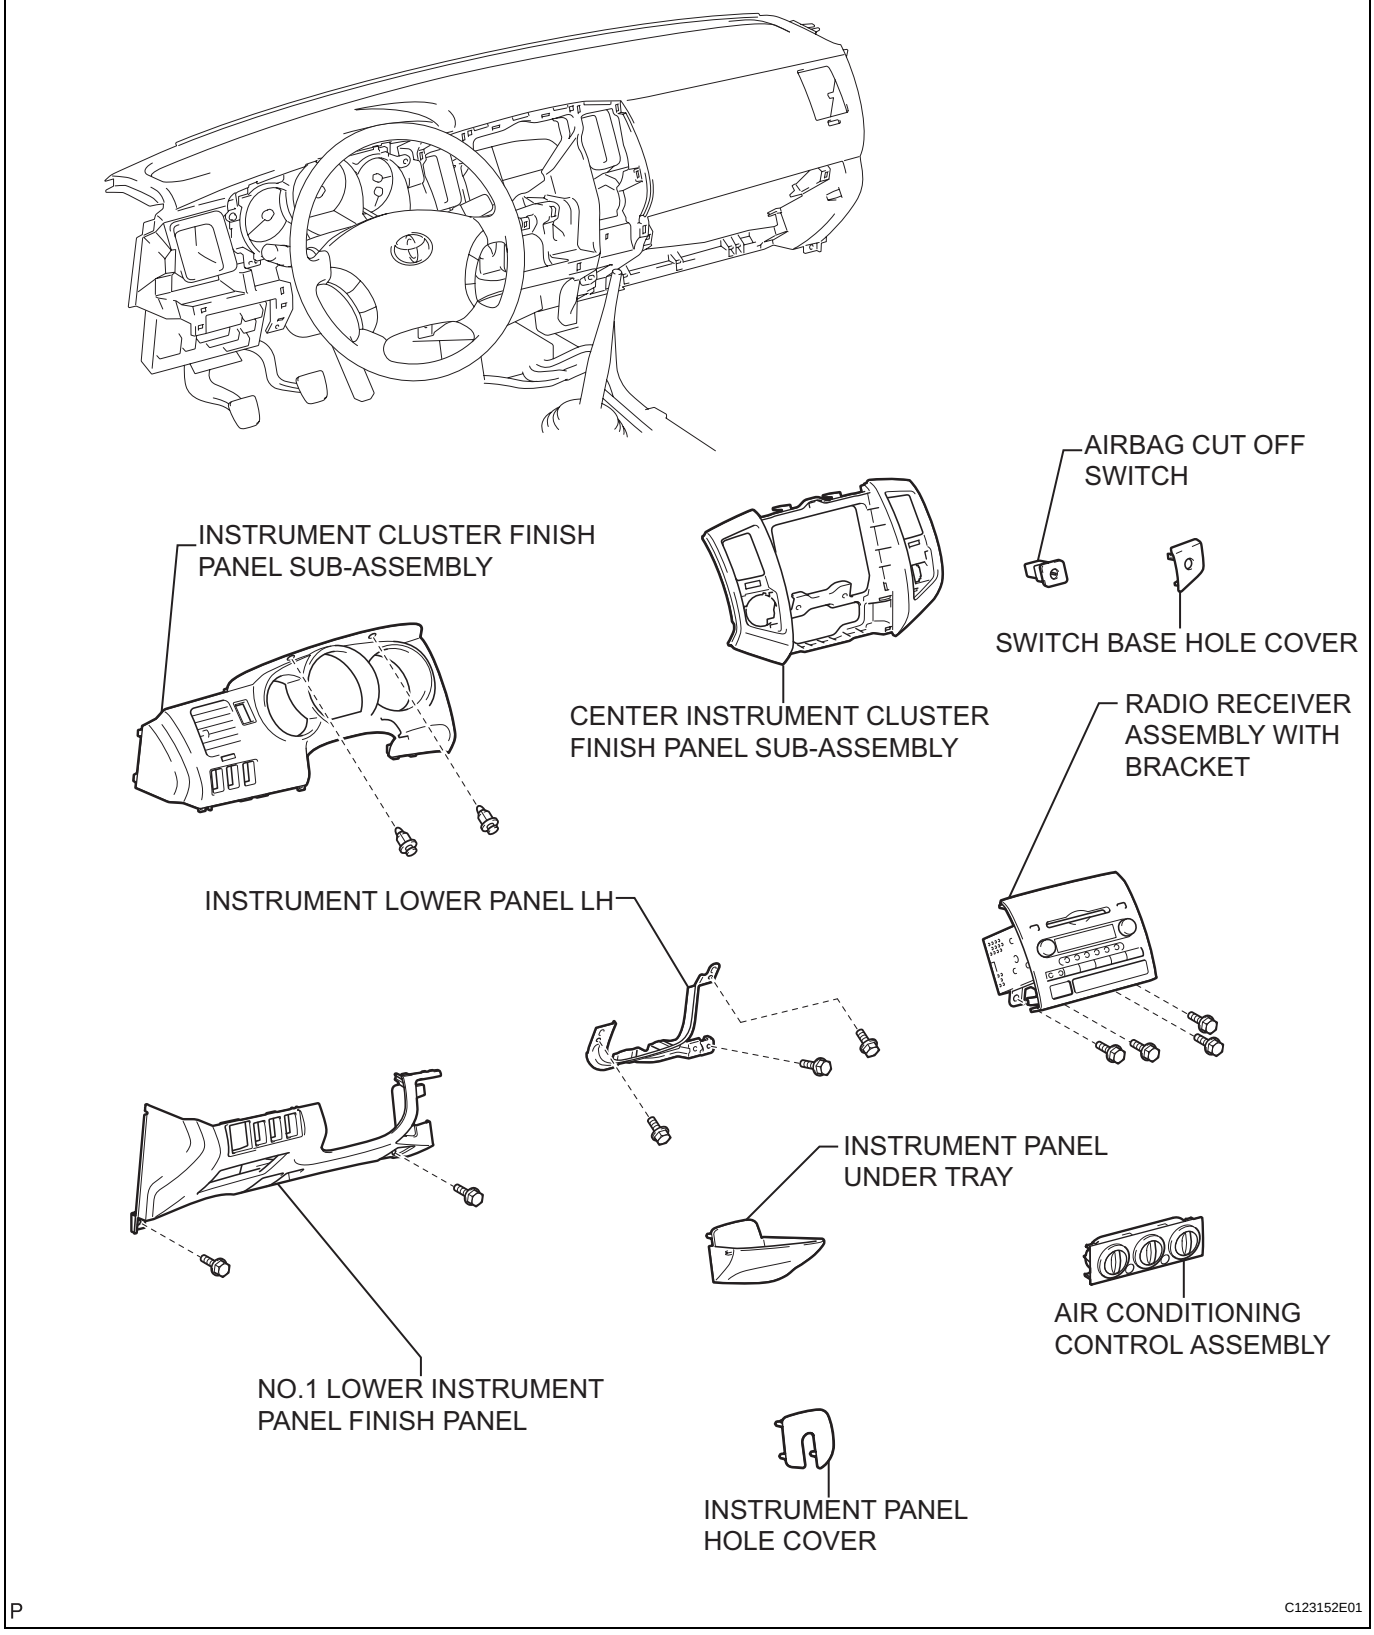
1. **INSPECT OCCUPANT CLASSIFICATION ECU (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).

2. **REMOVE OCCUPANT CLASSIFICATION ECU (for Vehicle Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-34).
   (b) Even if the airbag was not deployed, check if there is any damage to the occupant classification ECU. If there are any defects as mentioned below, replace the occupant classification ECU with a new one:
   - Cracks, dents or chips on the case.
   - Cracks or other damage to the connector.

   CAUTION:
   Be sure to follow the correct removal and installation procedures.

AIRBAG CUT-OFF SWITCH

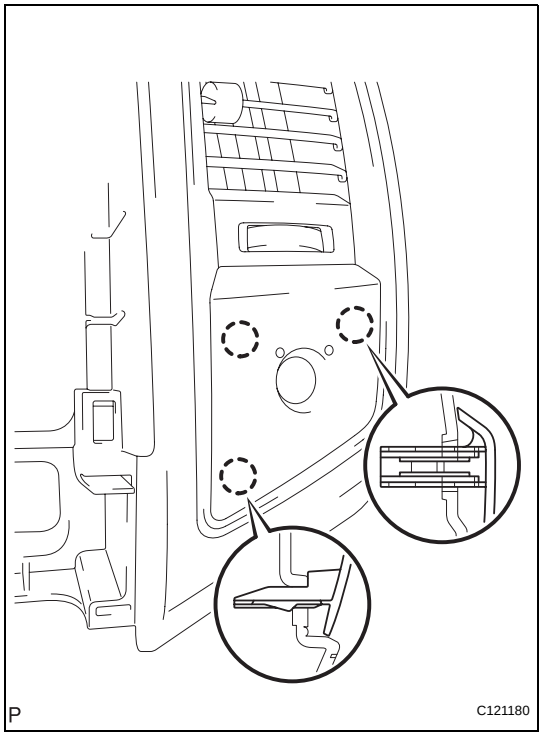
COMPONENTS

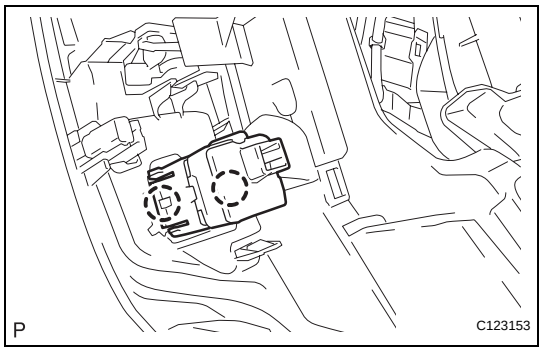


RS

REMOVAL

1. **PRECAUTION**
   (See page RS-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)**
4. **REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)**
5. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)**
6. **REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (See page AV-69)**
7. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
8. **REMOVE NO.1 LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
9. **REMOVE INSTRUMENT LOWER PANEL LH (See page IP-14)**
10. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**
11. **REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)**
12. **REMOVE SWITCH BASE HOLE COVER**
    (a) Disengage the 3 claws and remove the switch base hole cover.

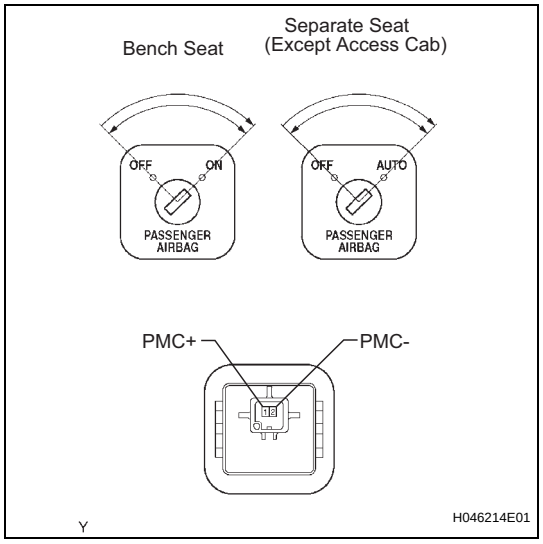




13. REMOVE AIRBAG CUT OFF SWITCH

(a) Disconnect the airbag cut off switch connector.

(b) Remove the instrument cluster finish panel sub-assembly center while holding the 2 claws of the airbag cut off switch.



INSPECTION

1. INSPECT AIRBAG CUT OFF SWTCH

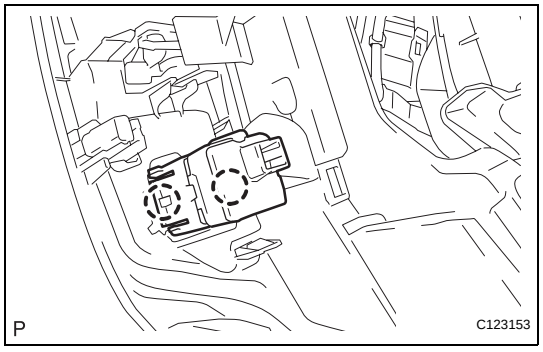
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard :

Switch Connection	Tester Condition	Specified Condition
OFF	1 (MSW+) - 2 (MSW-)	80 to 120Ω
ON	1 (MSW+) - 2 (MSW-)	320 to 480Ω

If the result is not as specified, replace the air bag cut off switch.



INSTALLATION

1. INSTALL AIRBAG CUT-OFF SWITCH

(a) Engage the 2 claws of the cut off switch with the instrument cluster finish panel sub-assembly center.

(b) Attach the connector to the airbag cut off switch.

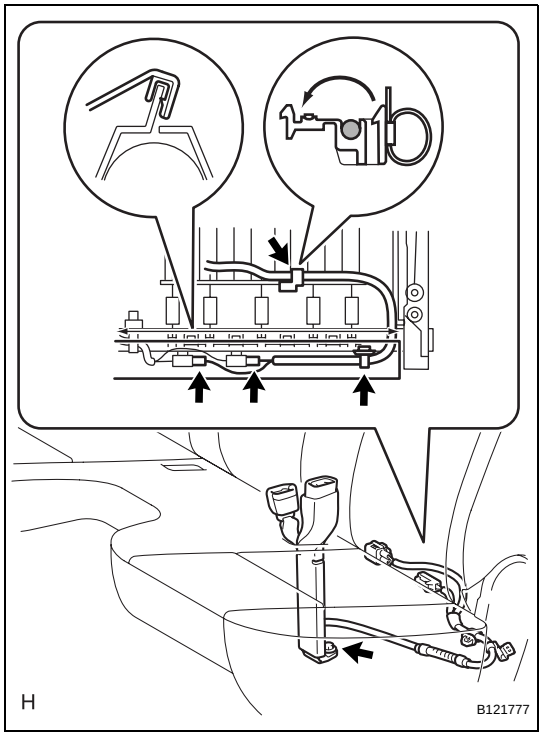
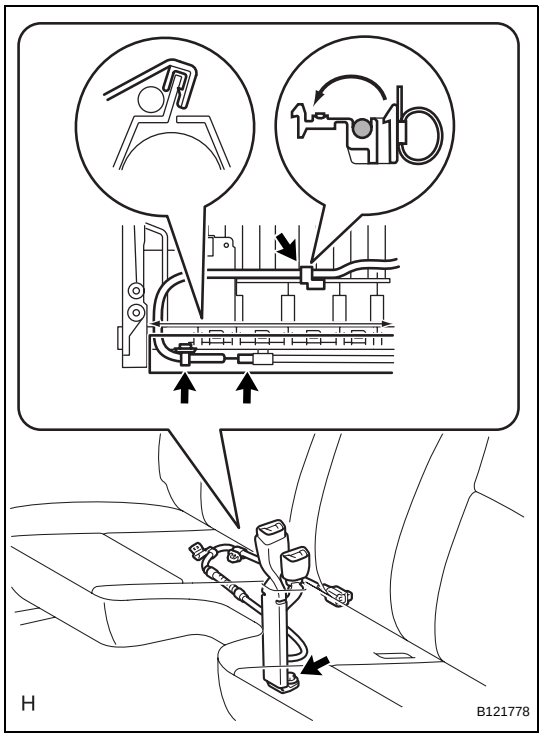
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



2. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH

(a) Slide the front seat to the most forward position.
(b) Disengage the hook.
(c) Disconnect the 2 connectors.
(d) Using a clip remover, remove the wiring harness clamp.
(e) Remove the wiring harness clamp.
(f) Remove the bolt and the front seat inner belt.

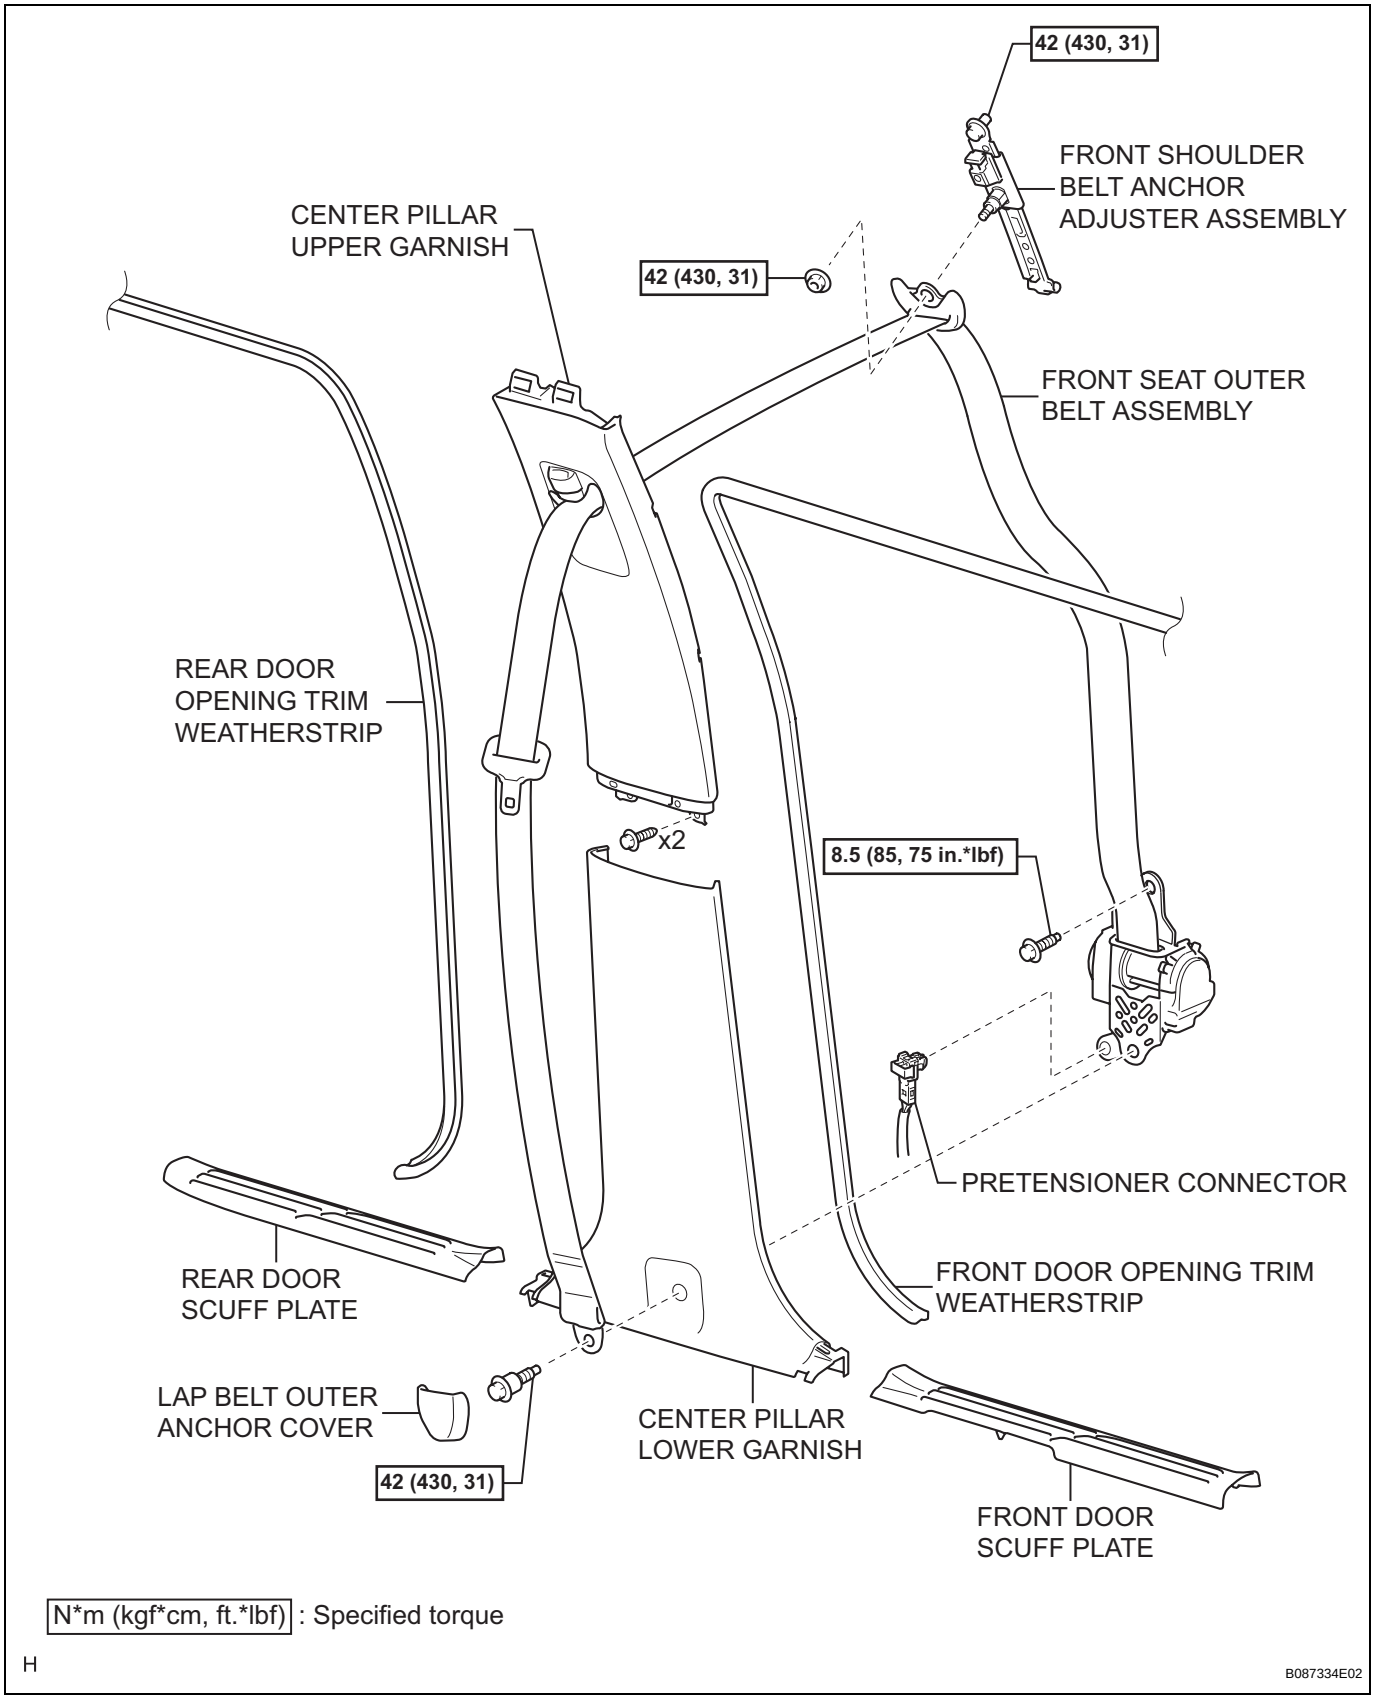


3. REMOVE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Slide the front seat to the most forward position.
(b) Disengage the hook.
(c) Disconnect the connector.
(d) Using a clip remover, remove the wiring harness clamp.
(e) Remove the wiring harness clamp.
(f) Remove the bolt and the front seat inner belt.

FRONT SEAT OUTER BELT ASSEMBLY (for Double Cab)

COMPONENTS

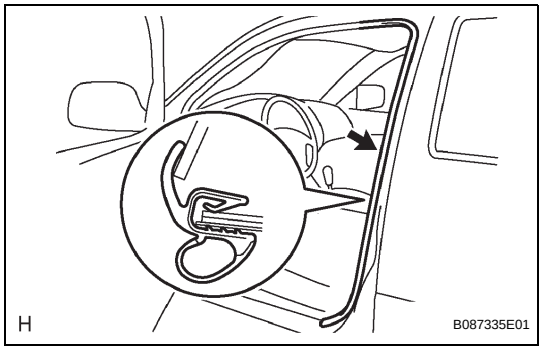


SB

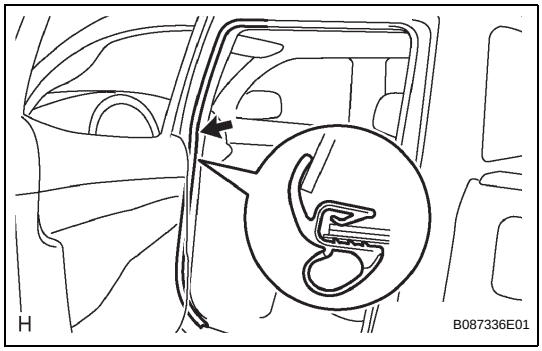
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

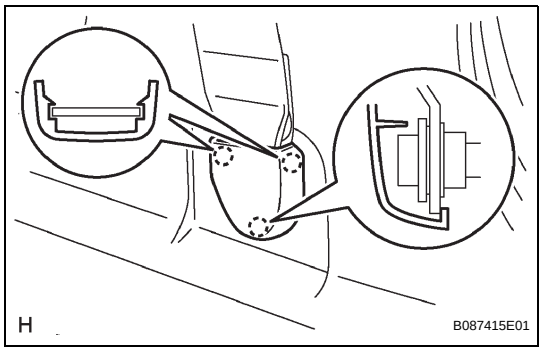
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the air bag from working.
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-12)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-13)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Separate the front door opening trim weatherstrip to the extent which allows the removal of the center pillar lower garnish and center pillar upper garnish.



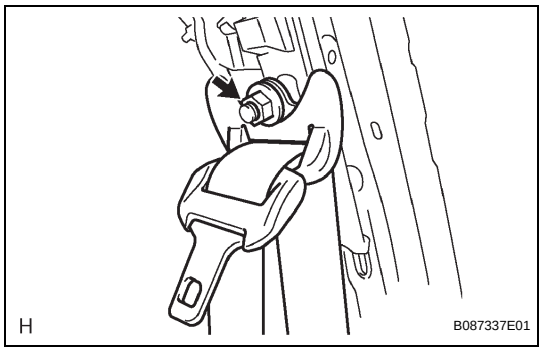
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Separate the rear door opening trim weatherstrip to the extent which allows the removal of the center pillar lower garnish and center pillar upper garnish.



6. **REMOVE LAP BELT OUTER ANCHOR COVER**
   (a) Disengage the 3 claws and remove the lap belt outer anchor cover.
7. **REMOVE CENTER PILLAR LOWER GARNISH (See page IR-15)**
8. **REMOVE CENTER PILLAR UPPER GARNISH (See page IR-16)**

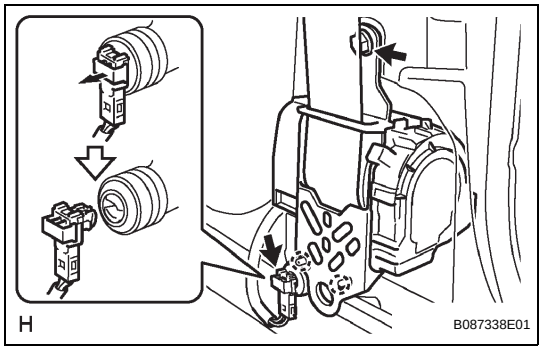


SB



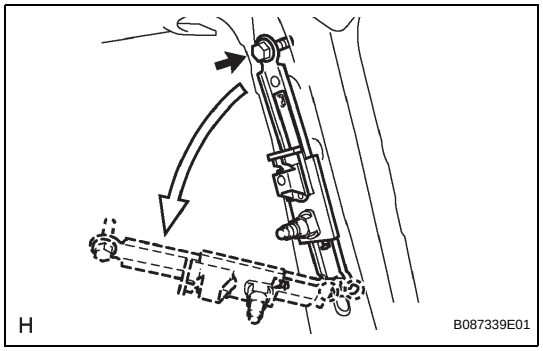
9. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

(a) Remove the nut and shoulder anchor.



(b) Disconnect the pretensioner connector as shown in the illustration.

(c) Remove the bolt and retractor.



10. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the bolt.

(b) Disengage the 2 claws and remove the front shoulder belt anchor adjuster.

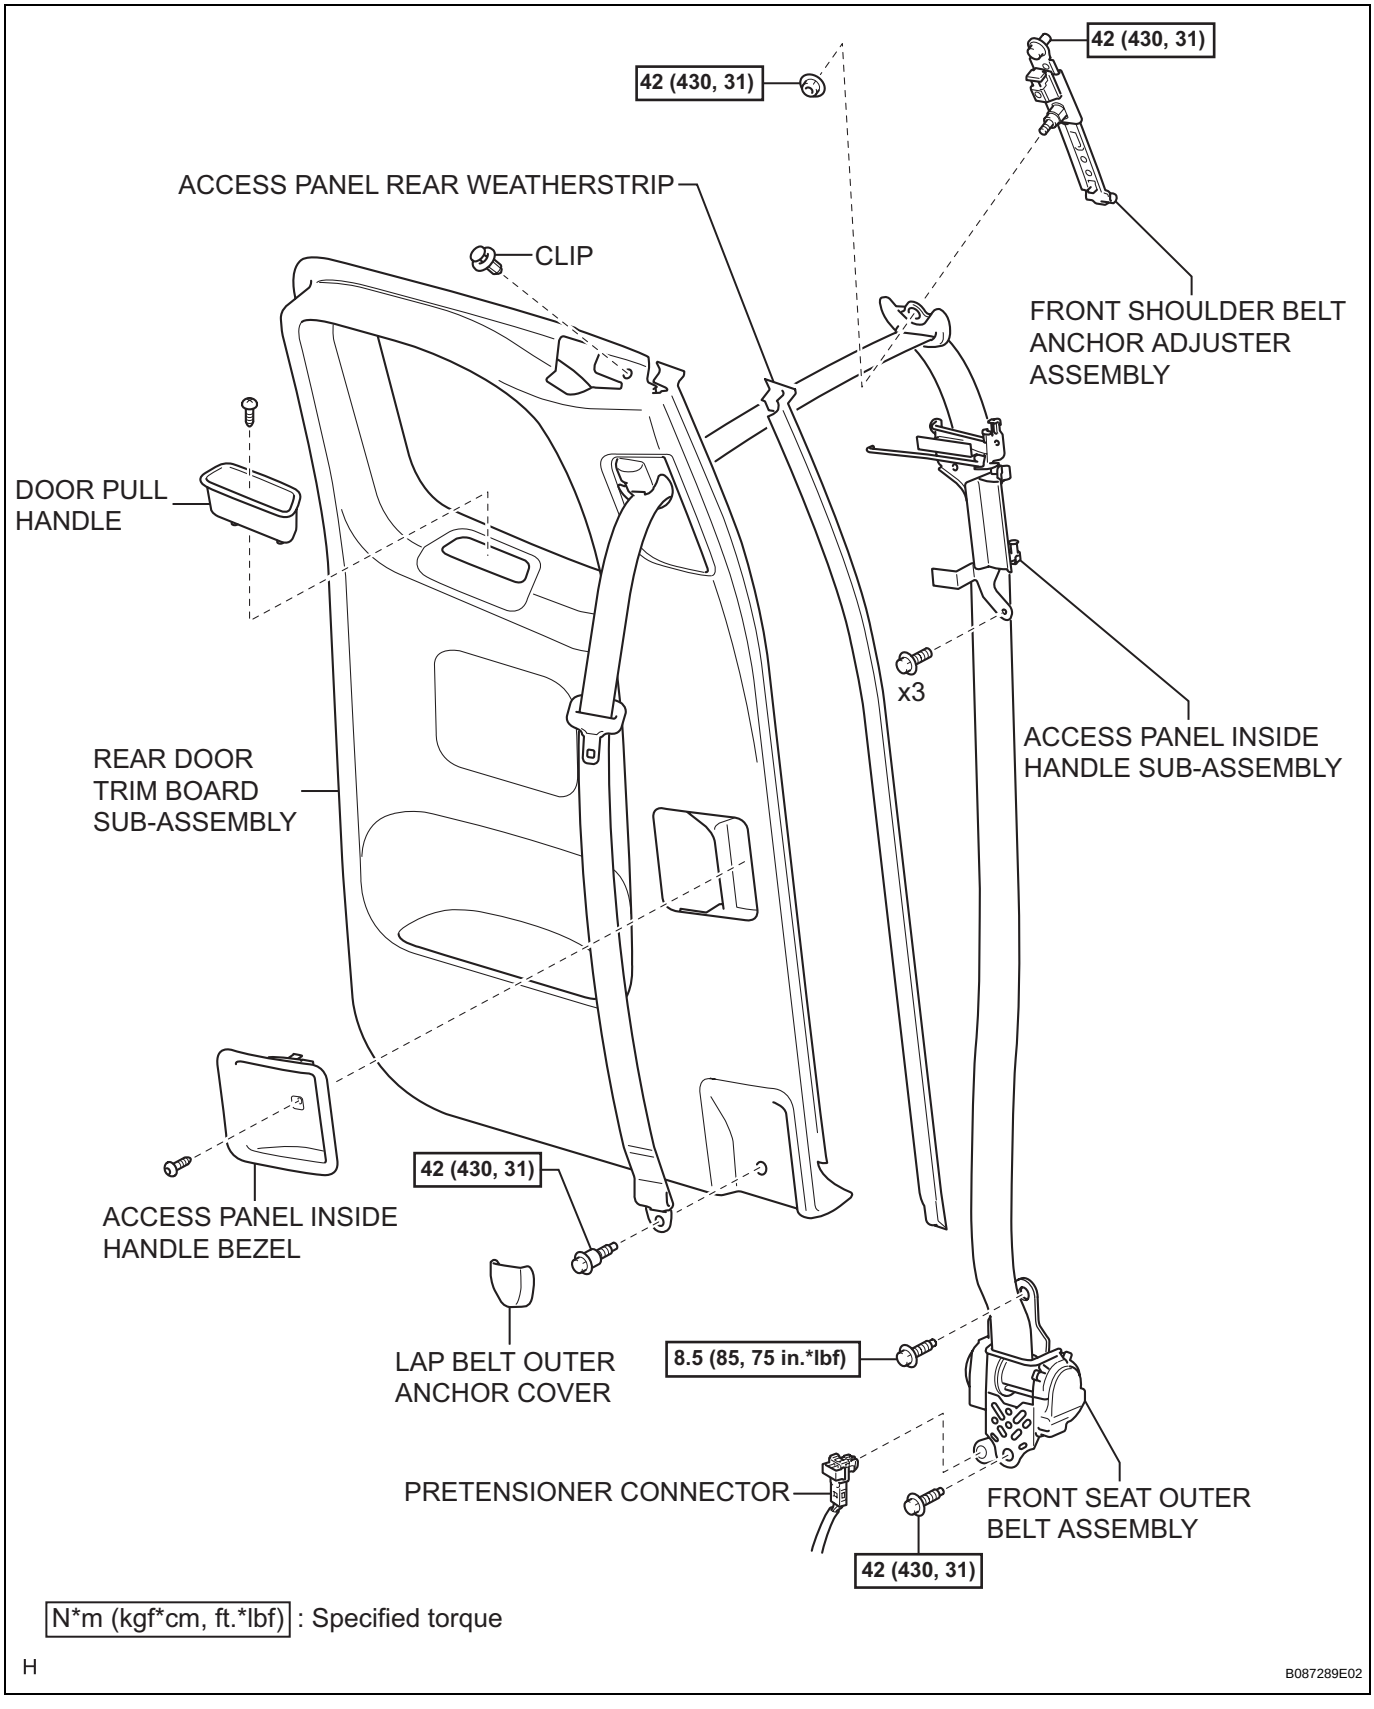
FRONT SEAT OUTER BELT ASSEMBLY (for Access Cab)

COMPONENTS

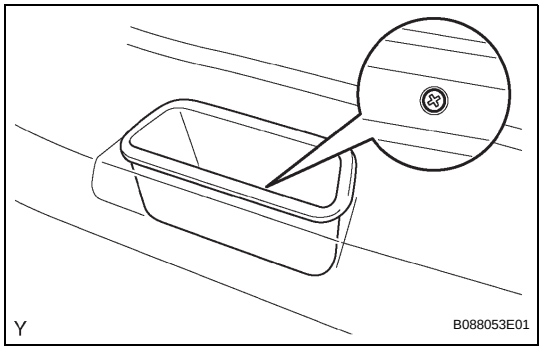


SB

REMOVAL

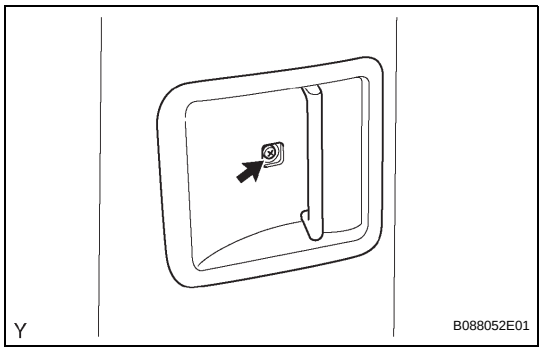
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

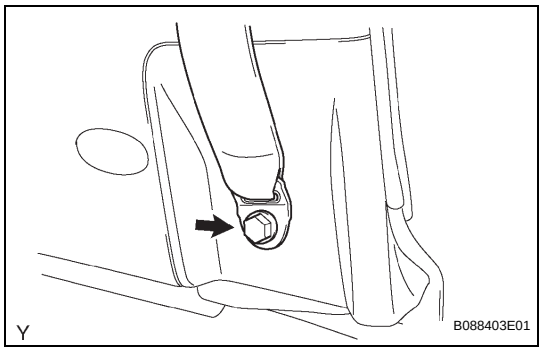
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the air bag from working.
2. **REMOVE ACCESS PANEL REAR WEATHERSTRIP (See page ED-53)**
3. **REMOVE LAP BELT OUTER ANCHOR COVER (See page ED-53)**
4. **REMOVE DOOR PULL HANDLE**
   (a) Remove the screw, then remove the door pull handle.



5. **REMOVE ACCESS PANEL INSIDE HANDLE BEZEL**
   (a) Using a screwdriver with its tip wrapped in protective tape, open the cover.

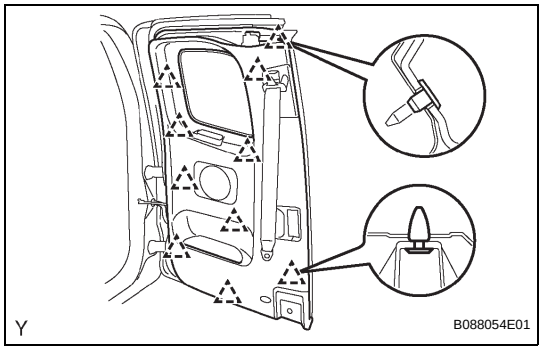
   (b) Remove the screw, then remove the access panel inside handle bezel.





6. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

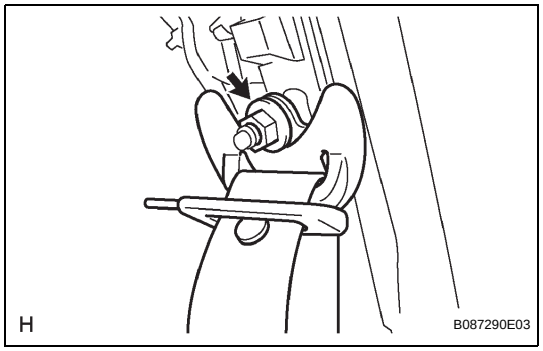
(a) Remove the bolt and floor anchor of the front seat outer belt.



(b) Remove the clip.

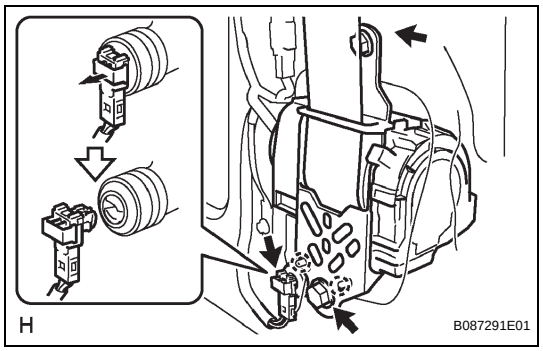
(c) Disengage the 9 clips and remove the rear door trim board.

7. REMOVE ACCESS PANEL INSIDE HANDLE SUB-ASSEMBLY (See page ED-54)



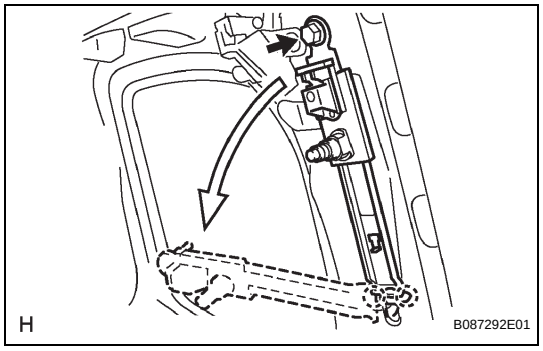
8. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

(a) Remove the nut and shoulder anchor.



(b) Disconnect the pretensioner connector as shown in the illustration.

(c) Remove the 2 bolts and retractor.



9. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

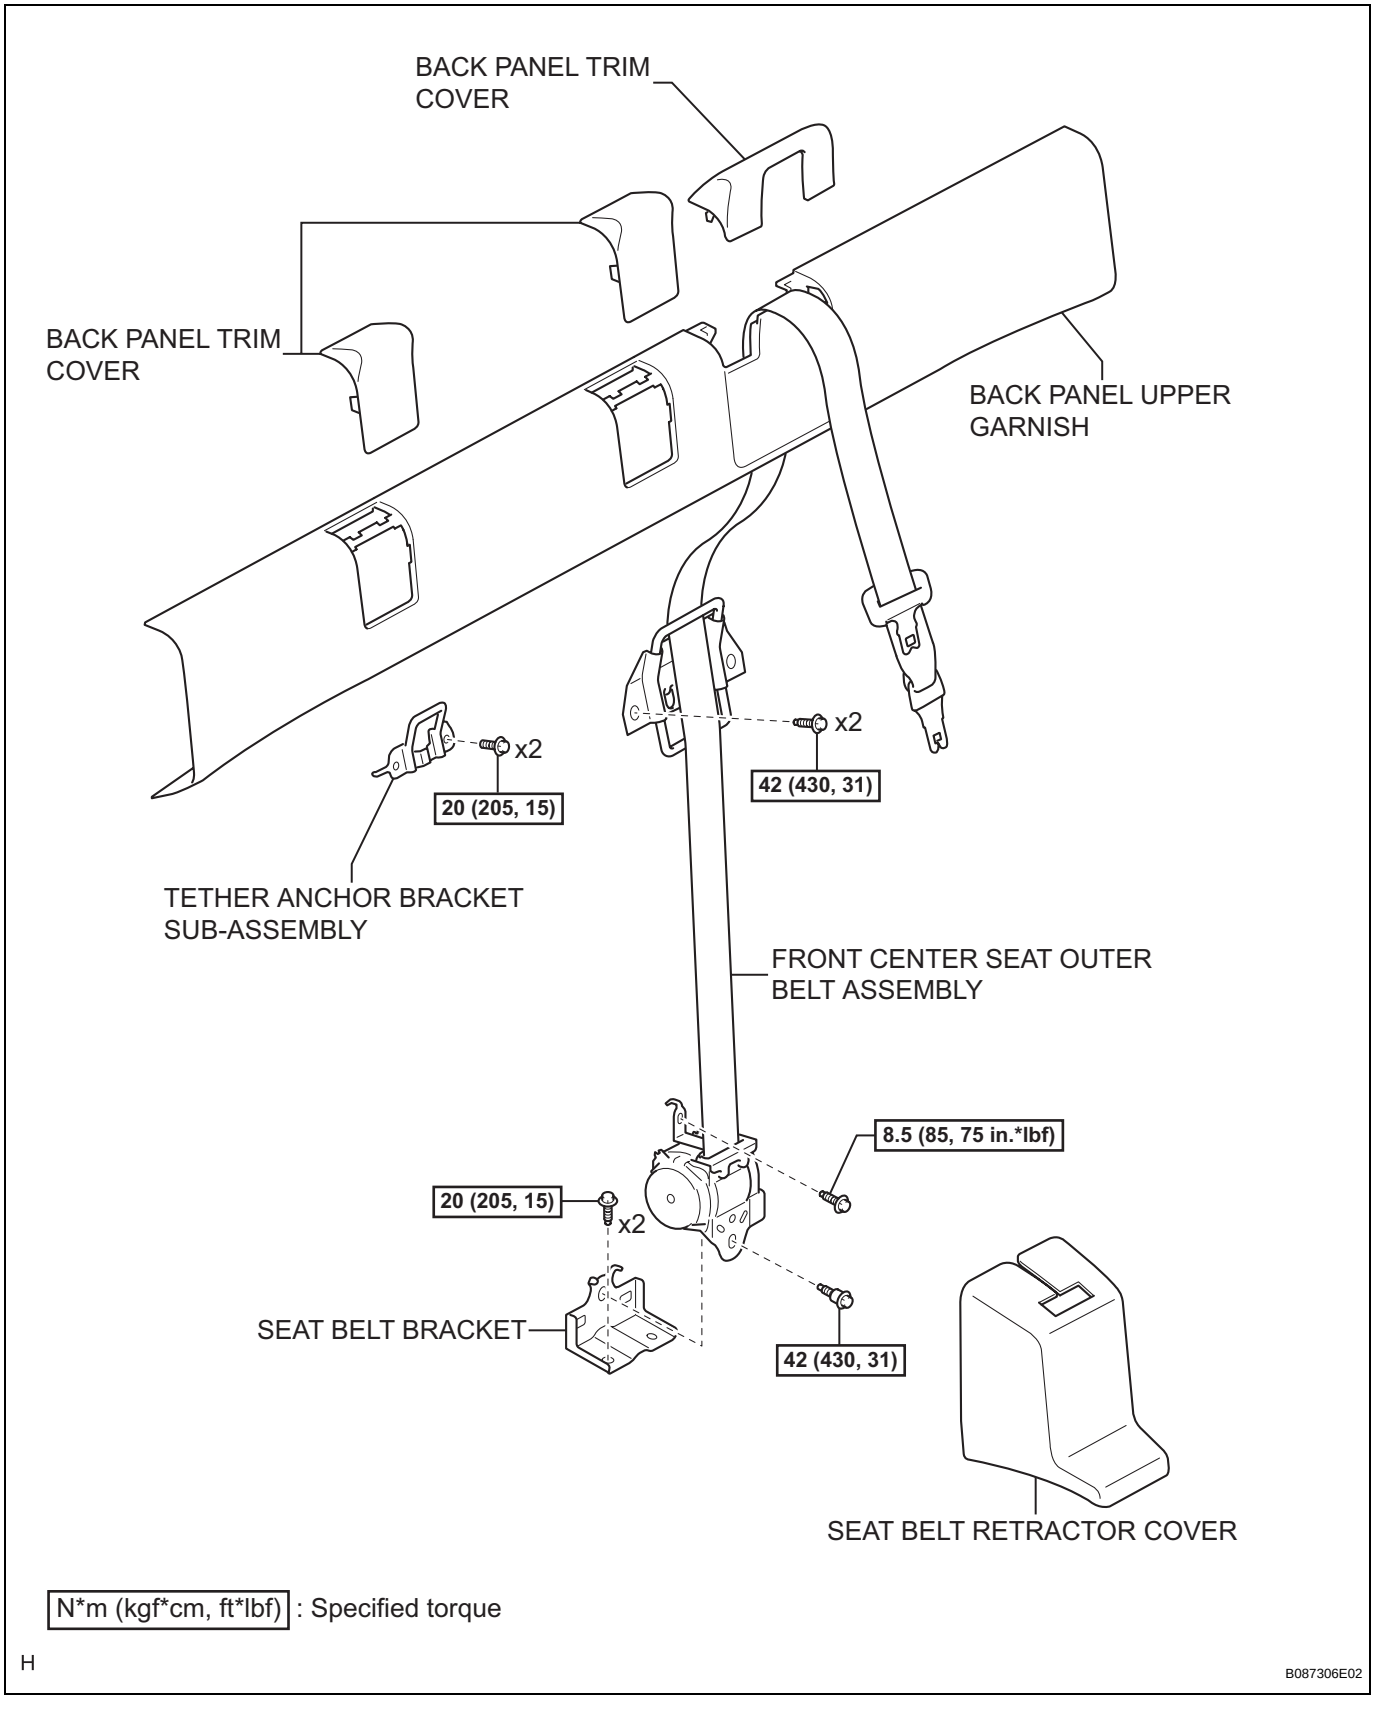
(a) Remove the bolt.

(b) Disengage the 2 claws and remove the front shoulder belt anchor adjuster.

SB

FRONT CENTER SEAT OUTER BELT (for Bench Seat Type)

COMPONENTS



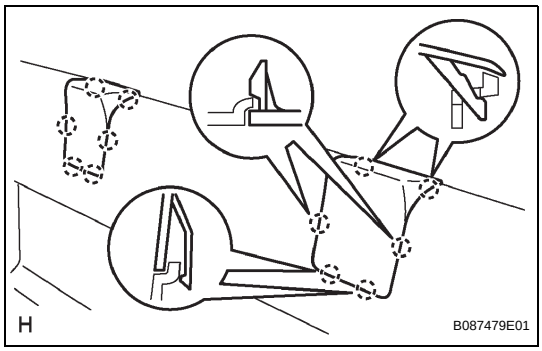
N*m (kgf*cm, ft*lbf) : Specified torque

H

B087306E02

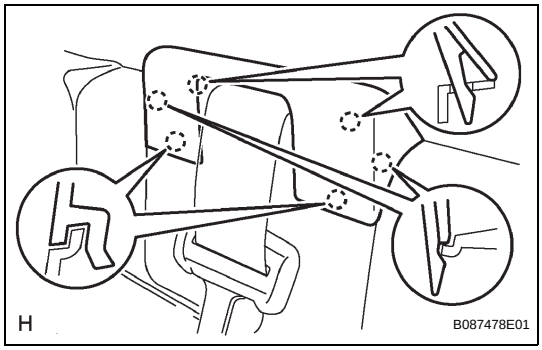
SB

REMOVAL



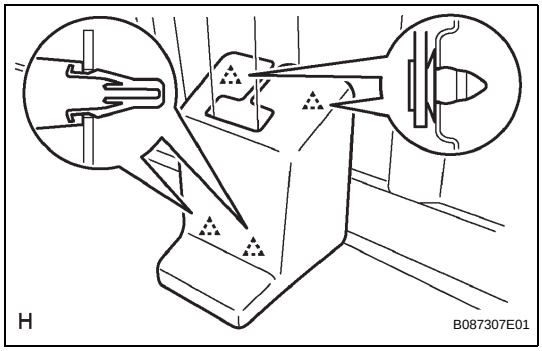
1. REMOVE BACK PANEL TRIM COVER

(a) Disengage the 6 claws and remove the back panel trim cover.
HINT:
Follow the same procedures as for the opposite side.



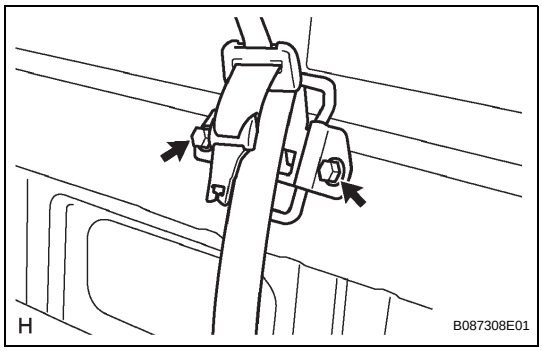
(b) Disengage the 6 claws and remove the back panel trim cover.

2. REMOVE BACK PANEL UPPER GARNISH (See page IR-43)



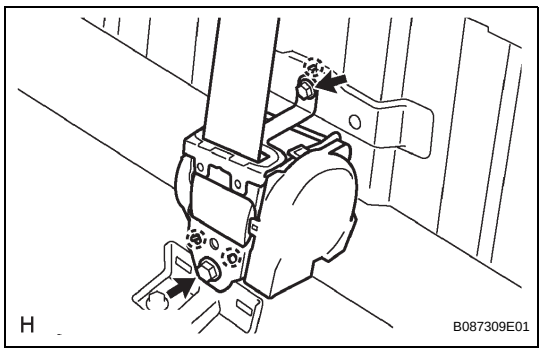
3. REMOVE SEAT BELT RETRACTOR COVER

(a) Disengage the 4 clips and remove the seat retractor cover.



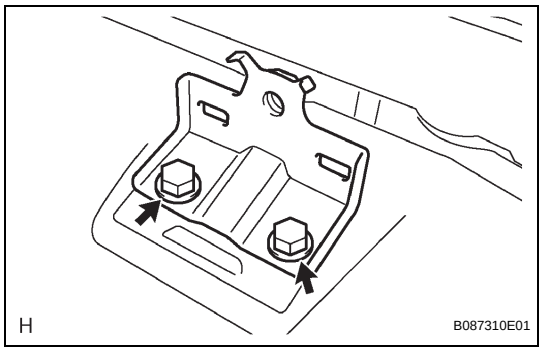
4. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Remove the 2 bolts and shoulder anchor.



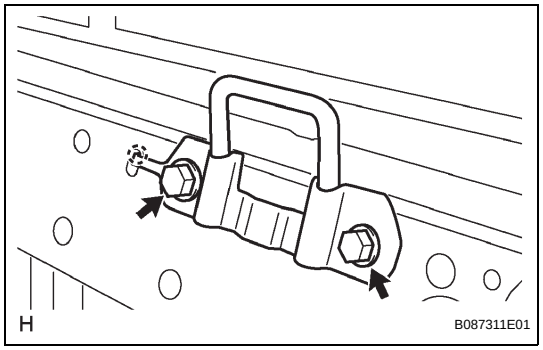
(b) Remove the 2 bolts and retractor.

SB



5. REMOVE SEAT BELT BRACKET

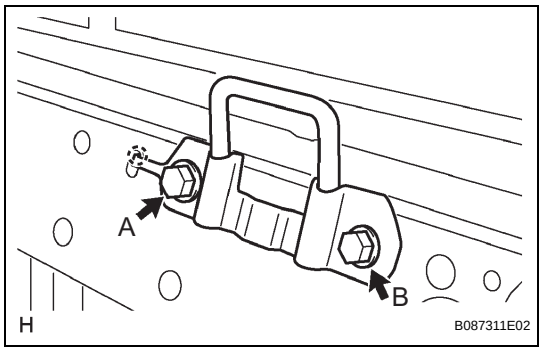
(a) Remove the 2 bolts and seat belt bracket.



6. REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY

(a) Remove the 2 bolts and tether anchor bracket.

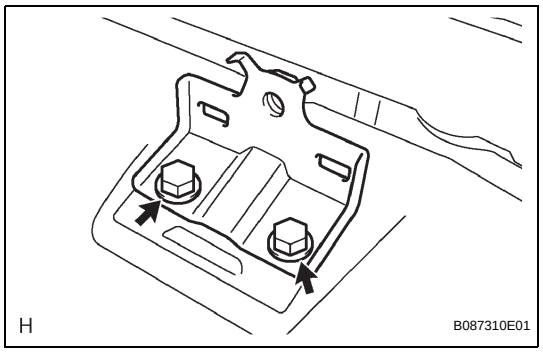
INSTALLATION



1. INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY

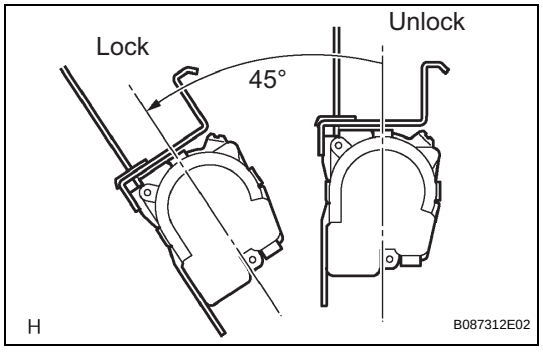
(a) Hook the claw of the tether anchor bracket into the body hole.

(b) Tighten bolt A, and then tighten bolt B.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)



2. INSTALL SEAT BELT BRACKET

(a) Install the seat belt bracket with the 2 bolts.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)



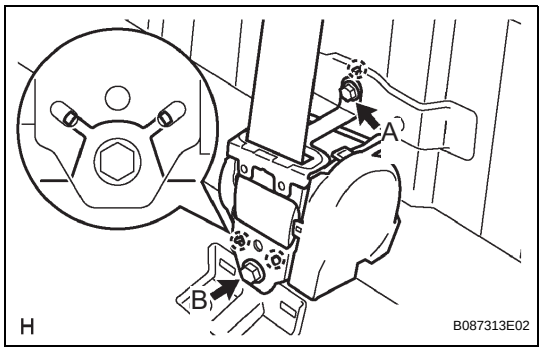
3. INSTALL REAR SEAT SHOULDER BELT GUIDE

(a) Check the amount of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any directions. Also check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.

SB

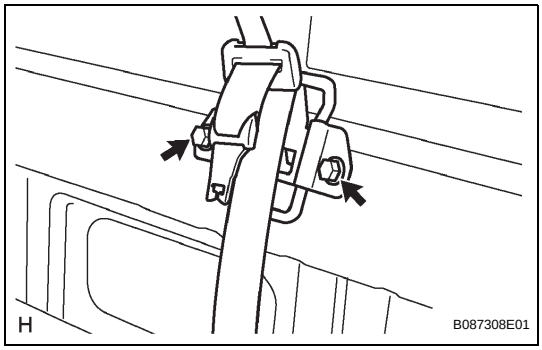
If operation is not as specified, replace the rear center seat outer belt.



(b) Hook the lower stay of the retractor onto the 2 hooks of the seat belt bracket.

(c) Tighten bolt A, and then tighten bolt B.

Torque: 8.5 N*m (85 kgf*cm, 75 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 in.*lbf) for bolt B



(d) Install the shoulder anchor with the 2 bolts.

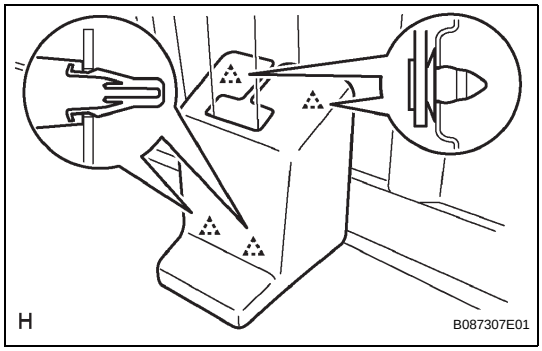
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

(e) Check the ELR lock.

NOTICE:

- **The check should be performed with the rear center seat outer belt installed.**
- **Do not allow the anchor part of the rear center seat outer belt and the protruding parts of the floor panel to overlap.**

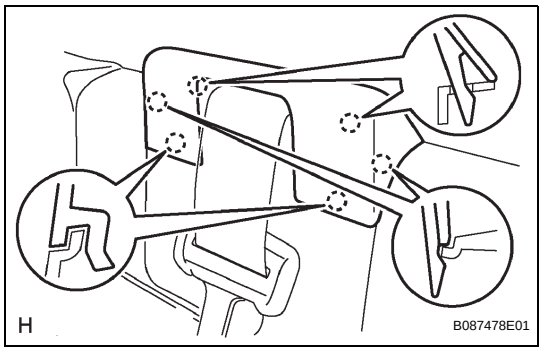
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If operation is not as specified, replace the rear center seat outer belt.



4. INSTALL SEAT BELT RETRACTOR COVER

(a) Engage the 4 clips and install the seat retractor cover.

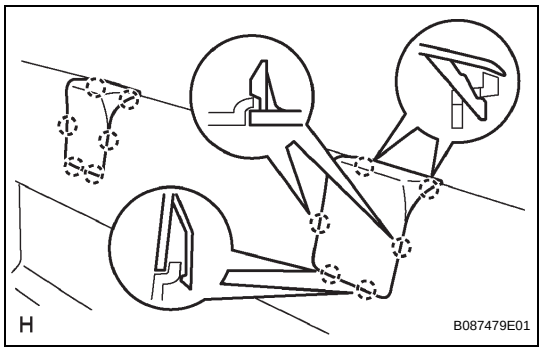
5. INSTALL BACK PANEL UPPER GARNISH (See page IR-50)



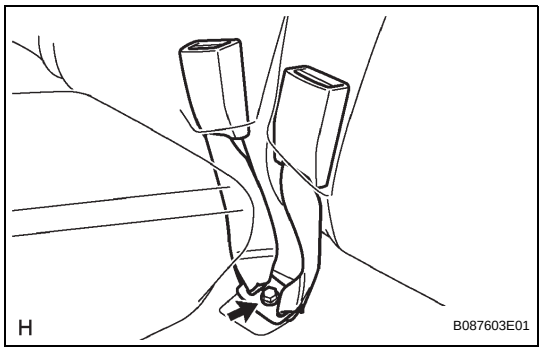
6. INSTALL BACK PANEL TRIM COVER

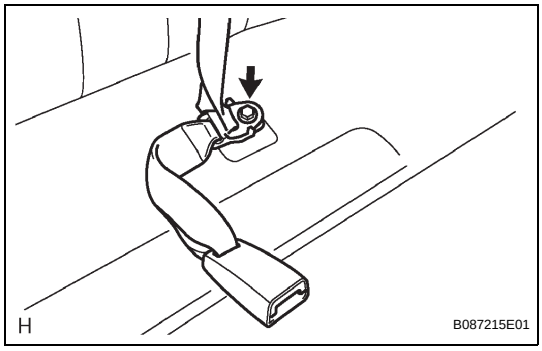
(a) Engage the 6 claws and install the back panel trim cover.

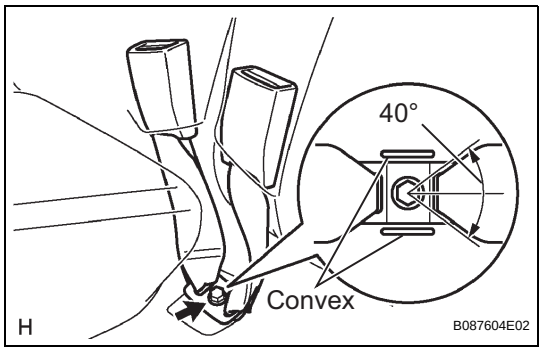
SB

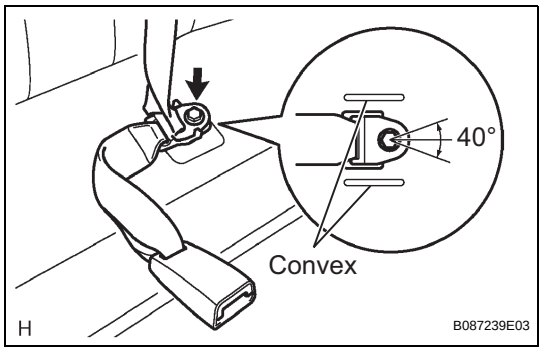


(b) Engage the 6 claws and install the back panel trim cover.
HINT:
Follow the same procedures as for the opposite side.









REAR SEAT INNER BELT ASSEMBLY (for Double Cab)

REMOVAL

1. REMOVE REAR SEAT INNER BELT ASSEMBLY

(a) for LH Side:

(1) Remove the bolt and rear seat inner belt.

(b) for RH Side:

(1) Remove the bolt, rear seat inner belt and floor anchor of the rear center seat outer belt.

INSTALLATION

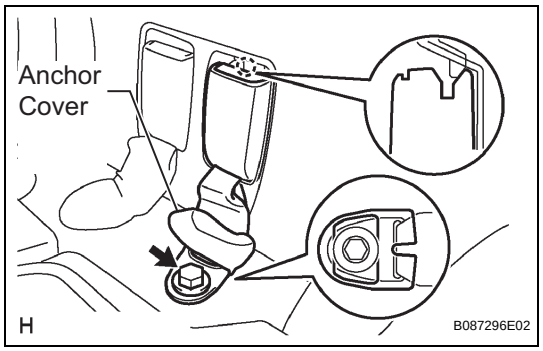
1. INSTALL REAR SEAT INNER BELT ASSEMBLY

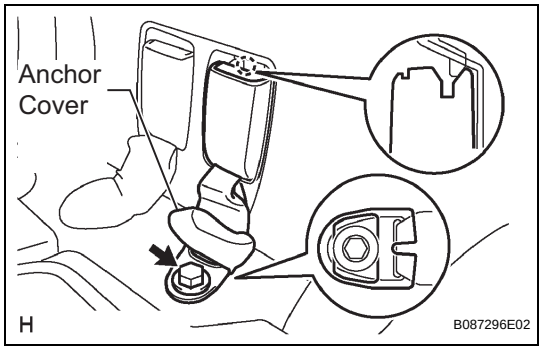
(a) for LH Side:

(1) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Make sure that the rear seat inner belt is oriented in the correct direction when installing.**
- **Be careful not to place the rear seat inner belt over the convex areas of the floor panel.**

(b) for RH Side:

(1) Install the rear seat belt inner and floor anchor of the rear seat belt outer center with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Make sure that the rear seat inner belt and floor anchor of the rear center seat outer belt are oriented in the correct direction when installing.**
- **Be careful not to place the rear seat inner belt (and floor anchor of the rear center seat outer belt) over the convex areas of the floor panel.**





REAR SEAT INNER BELT ASSEMBLY (for Access Cab)

REMOVAL

1. REMOVE REAR SEAT INNER BELT ASSEMBLY

(a) Disengage the claw and remove the buckle.
(b) Open the anchor cover.
(c) Remove the bolt and rear seat inner belt.

INSTALLATION

1. INSTALL REAR SEAT INNER BELT ASSEMBLY

(a) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(b) Check that the floor anchor rotates smoothly.
(c) Close the anchor cover.
(d) Engage the claw and install the buckle.

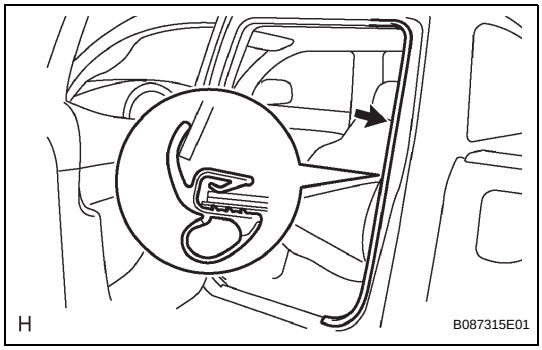
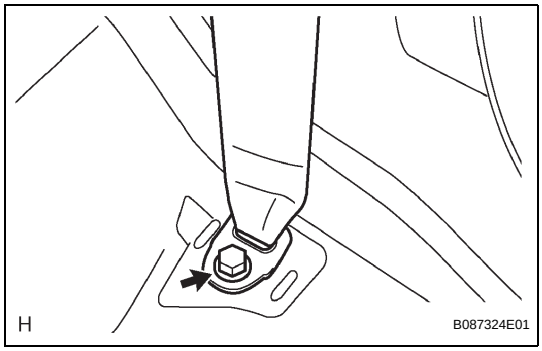
REMOVAL

1. **REMOVE REAR SEAT BACK HINGE COVER**
   HINT:
   Follow the same procedure as for the opposite side.
   (a) Using a screwdriver with its tip taped in protective tape, disengage the 3 claws and remove the rear seat back hinge cover.
2. **REMOVE REAR SEAT BACK ASSEMBLY (See page SE-71)**
3. **REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY (See page SE-71)**
4. **REMOVE REAR DOOR SCUFF PLATE (See page IR-13)**

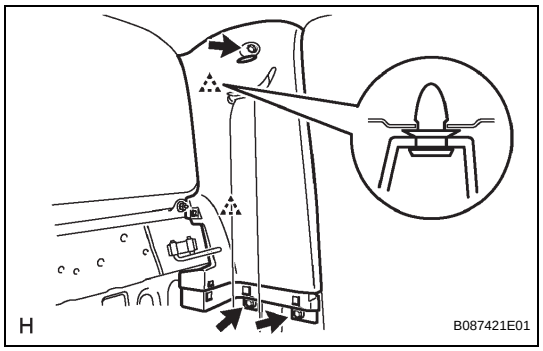


5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Separate the rear door opening trim weatherstrip to the extent which allows the removal of the quarter trim lower panel and quarter inside trim board.
6. **REMOVE LUGGAGE COMPARTMENT SIDE TRAY (See page IR-16)**
7. **REMOVE QUARTER TRIM LOWER PANEL (See page IR-17)**



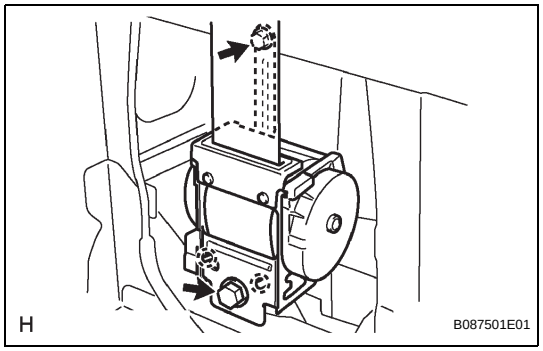
8. **REMOVE QUARTER INSIDE TRIM BOARD**
   (a) Remove the bolt and remove the floor anchor of the rear seat outer belt.

   (b) Using a screwdriver with its tip taped in protective tape, disengage the claw and open the cover.



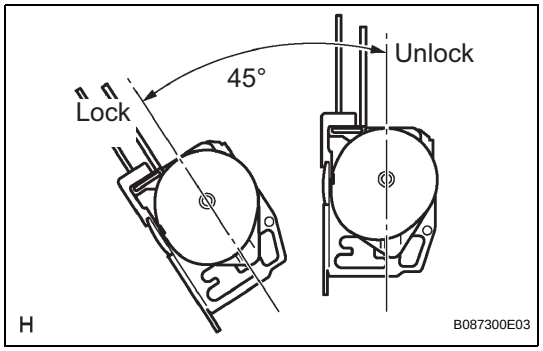
(c) Remove the 3 screws.
(d) Disengage the 2 clips and remove the quarter inside trim board.

9. REMOVE REAR SEAT OUTER BELT ASSEMBLY
(a) Remove the bolt and shoulder anchor.



(b) Remove the 2 bolts and retractor.

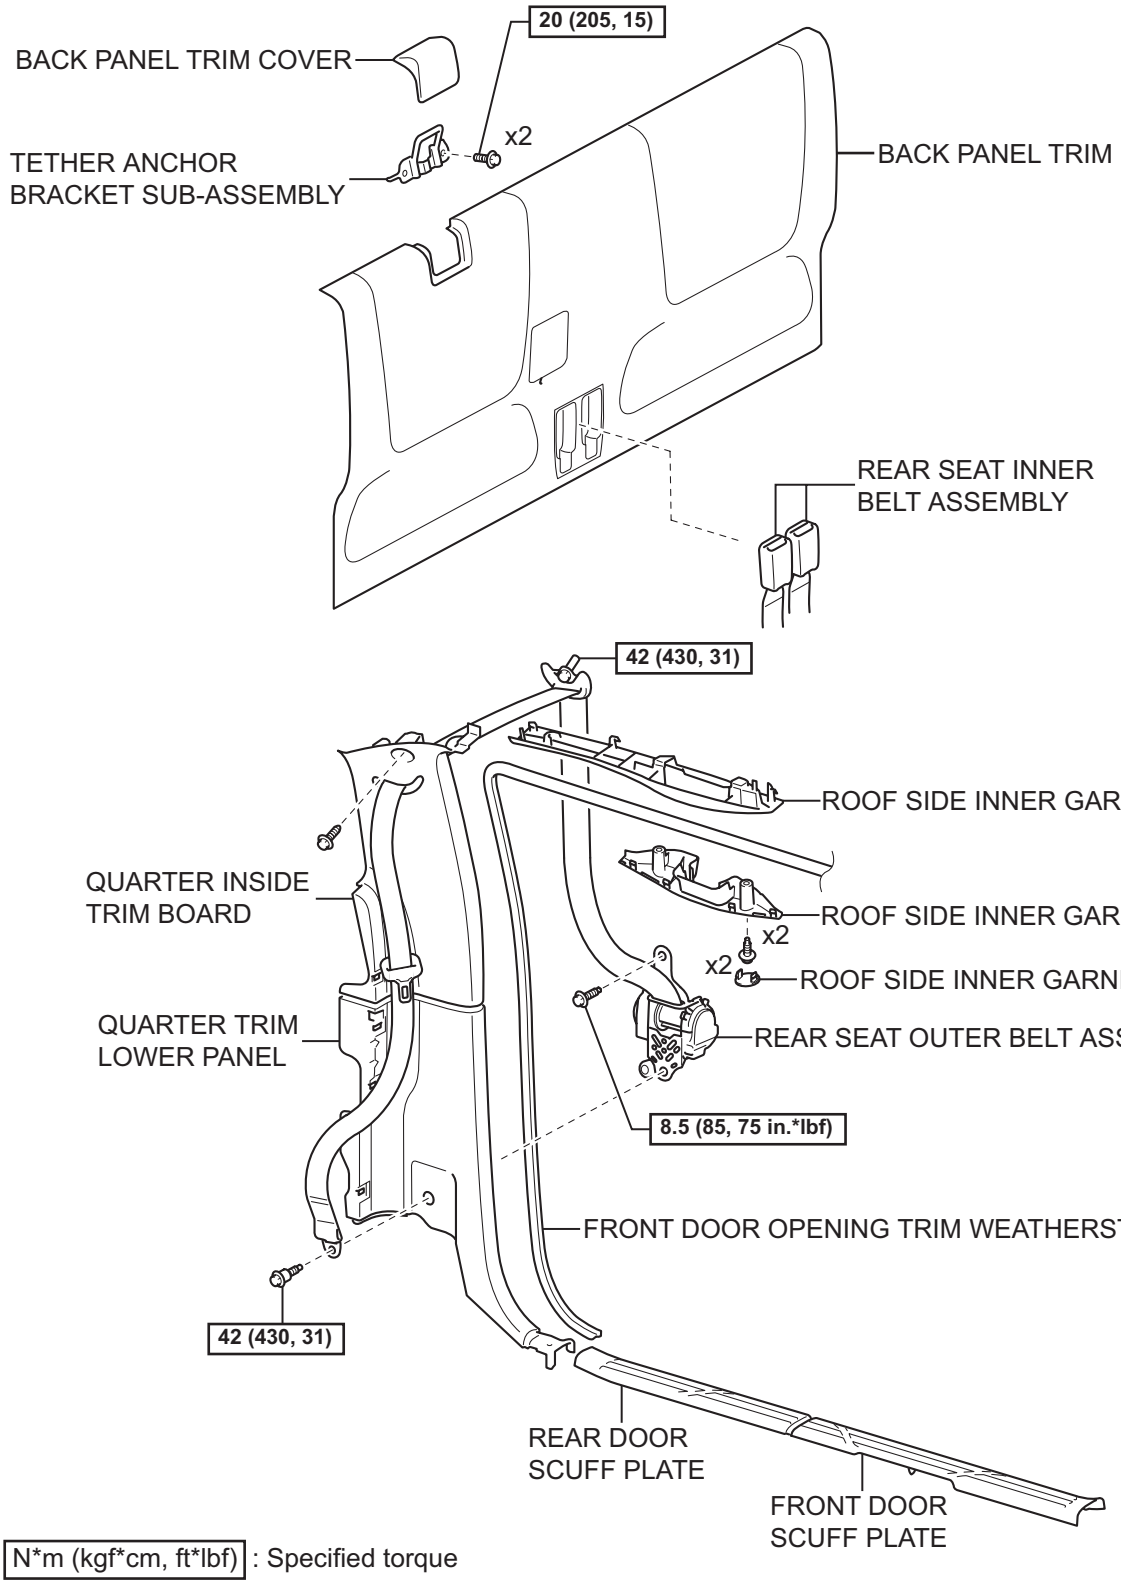
INSTALLATION



1. INSTALL REAR SEAT OUTER BELT ASSEMBLY
(a) Check the amount of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any directions. Also check that the belt locks when inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If operation is not as specified, replace the rear seat outer belt.

REAR SEAT OUTER BELT ASSEMBLY (for Access Cab)

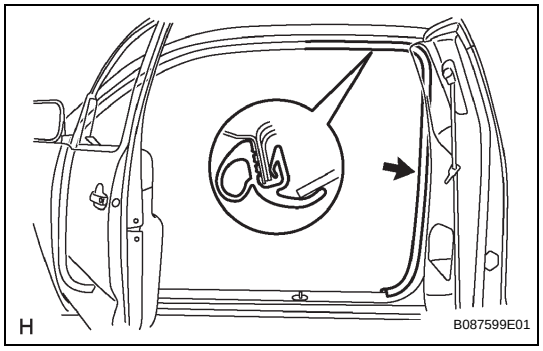
COMPONENTS

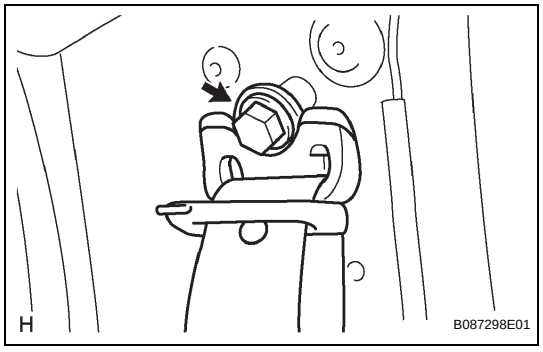


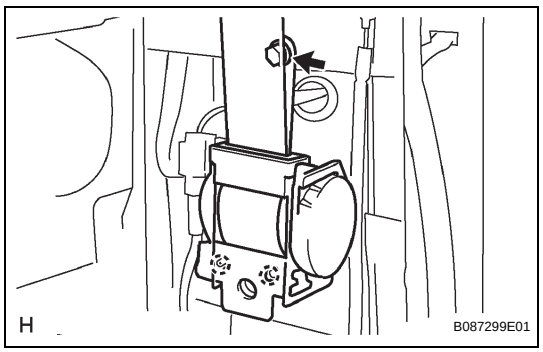
SB

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-61)**
2. **REMOVE REAR DOOR SCUFF PLATE (See page IR-61)**
3. **REMOVE ROOF SIDE INNER GARNISH COVER (See page IR-62)**
4. **REMOVE ROOF SIDE INNER GARNISH CAP (See page IR-62)**
5. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Separate the front door opening trim weatherstrip to the extent which allows the removal of the roof side garnish inner, quarter trim lower panel and quarter inside trim board.
6. **REMOVE BACK PANEL TRIM COVER (See page IR-64)**
7. **REMOVE REAR SEAT INNER BELT ASSEMBLY (See page IR-64)**
8. **REMOVE BACK PANEL TRIM (See page IR-64)**
9. **REMOVE QUARTER TRIM LOWER PANEL (See page IR-65)**
10. **REMOVE ROOF SIDE INNER GARNISH (See page IR-65)**
11. **REMOVE QUARTER INSIDE TRIM BOARD (See page IR-65)**
12. **REMOVE REAR SEAT OUTER BELT ASSEMBLY**
    (a) Remove the bolt and shoulder anchor.

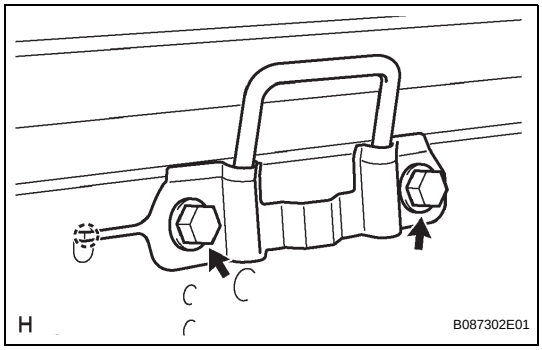






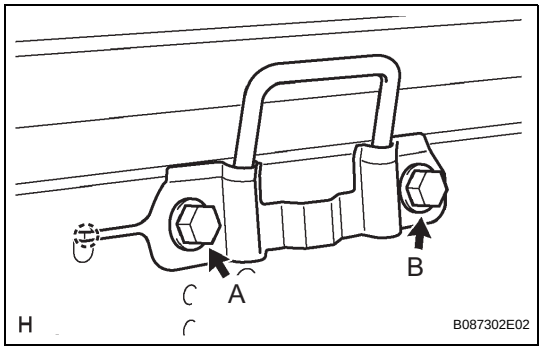
(b) Remove the bolt and retractor.

SB



13. REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY

(a) Remove the 2 bolts and tether anchor bracket.

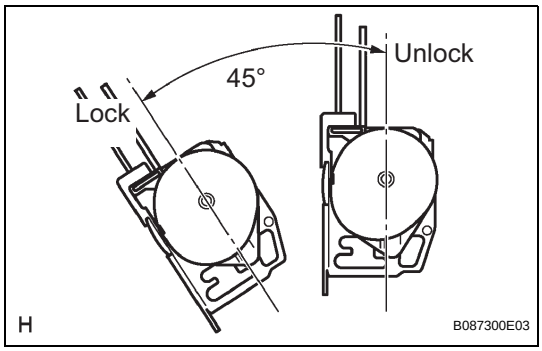


INSTALLATION

1. INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY

(a) Hook the claw of the tether anchor bracket into the body hole.

(b) Tighten bolt A, and then tighten bolt B.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)



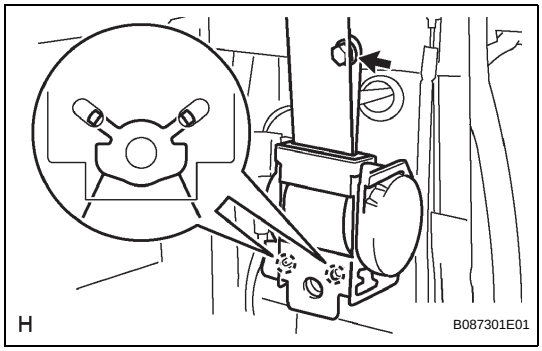
2. INSTALL REAR SEAT OUTER BELT ASSEMBLY

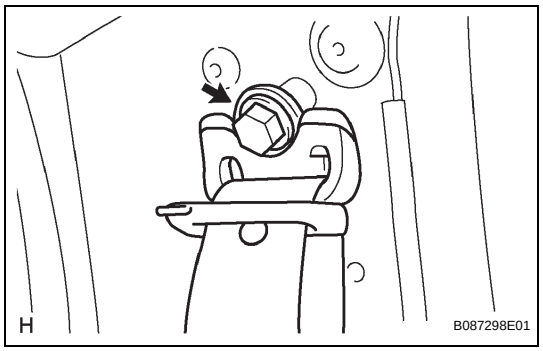
(a) Check the amount of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any directions. Also check the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If operation is not as specified, replace the rear seat outer belt.

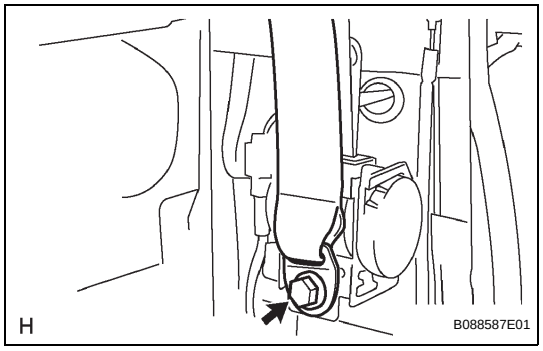
(b) Hook the lower stay of the retractor onto the 2 body hooks.

(c) Tighten the bolt.
Torque: 8.5 N*m (85 kgf*cm, 75 in.*lbf)





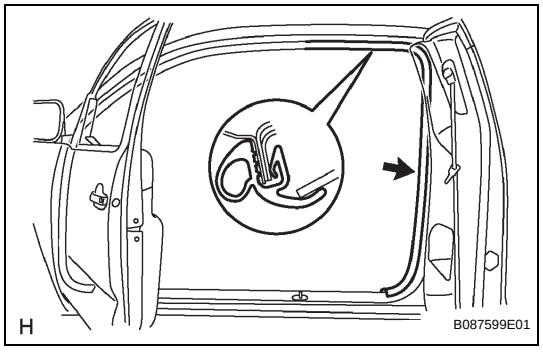
(d) Install the shoulder anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the shoulder anchor rotates smoothly.



(f) Install the floor anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(g) Check the ELR lock.
NOTICE:
- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If operation is not as specified, replace the rear seat outer belt.
(h) Remove the bolt and floor anchor.

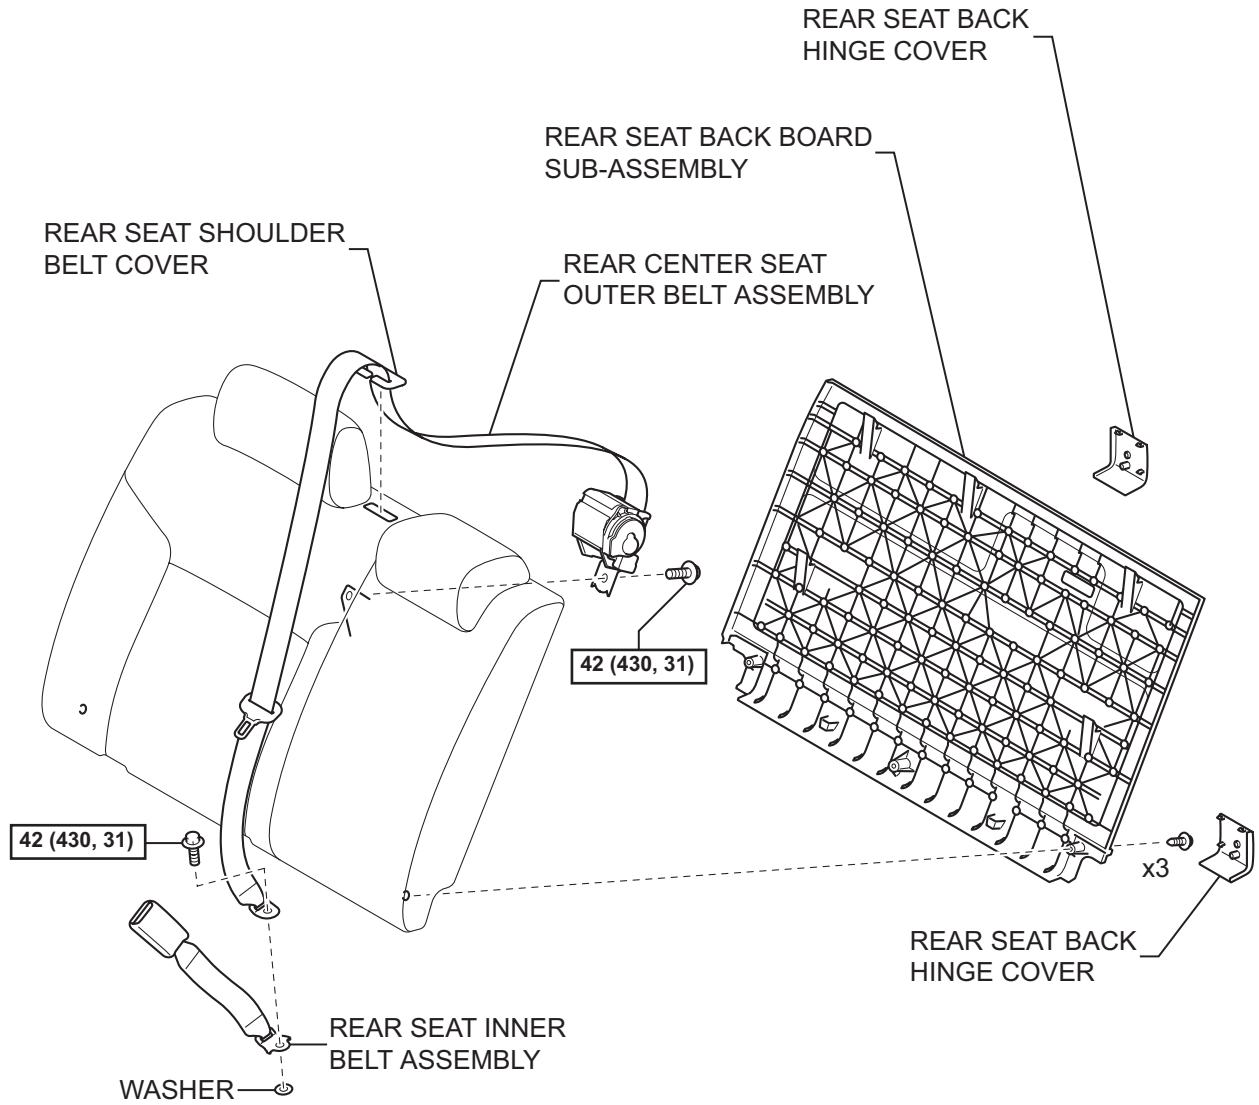
3. **INSTALL QUARTER INSIDE TRIM BOARD (See page IR-71)**
4. **INSTALL ROOF SIDE INNER GARNISH (See page IR-71)**
5. **INSTALL QUARTER TRIM LOWER PANEL (See page IR-72)**
6. **INSTALL REAR SEAT INNER BELT ASSEMBLY (See page IR-72)**
7. **INSTALL BACK PANEL TRIM (See page IR-72)**
8. **INSTALL BACK PANEL TRIM COVER (See page IR-73)**



9. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
(a) Install the front door opening trim weatherstrip.
10. **INSTALL ROOF SIDE INNER GARNISH CAP (See page IR-75)**
11. **INSTALL ROOF SIDE INNER GARNISH COVER (See page IR-75)**
12. **INSTALL REAR DOOR SCUFF PLATE (See page IR-75)**
13. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-75)**

REAR CENTER SEAT OUTER BELT ASSEMBLY (for Double Cab)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

H

B087318E02

SB

REMOVAL

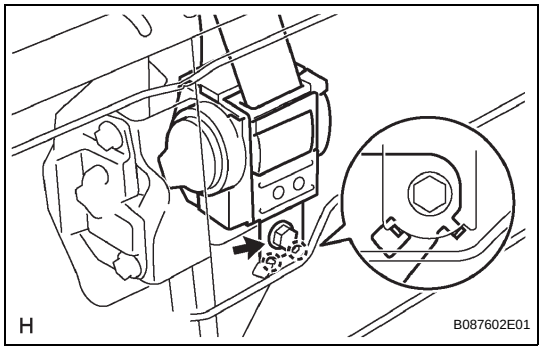
1. **REMOVE REAR SEAT BACK HINGE COVER (See page SE-82)**
2. **REMOVE REAR SEAT BACK BOARD SUB-ASSEMBLY (See page SE-84)**
3. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SE-84)**
4. **REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY**
   (a) Remove the bolt, floor anchor of the rear center seat outer belt and rear seat inner belt.

   (b) Insert the belt through the hole into the rear seat back frame.
   (c) Remove the bolt and rear center seat outer belt.

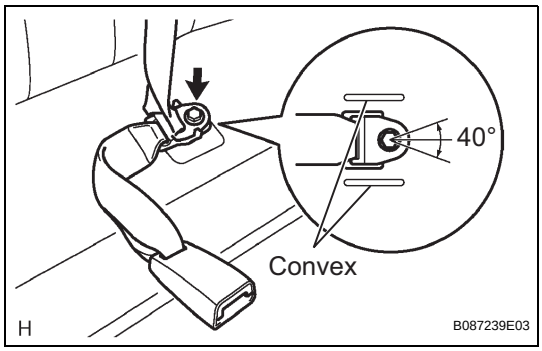
INSTALLATION

1. **INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY**
   (a) Check the amount of inclination required to lock the ELR.
      (1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any directions. Also check that the belt locks when the inclination of the retractor is 45° or more.
      NOTICE:
      Do not disassemble the retractor.

   (b) Align the retractor with the positioning hooks of the rear seat back frame and install the retractor with the bolt.
   Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
   (c) Insert the belt through the hole into the rear seat back frame.



SB



(d) Install the rear seat belt inner and floor anchor of the rear seat belt outer center with the bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Make sure that the rear seat inner belt and floor anchor of the rear center seat outer belt are oriented in the correct direction when installing.**
- **Be careful not to place the rear seat inner belt (and floor anchor of the rear center seat outer belt) over the convex areas of the floor panel.**

2. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SE-87)**
3. **INSTALL REAR SEAT BACK BOARD SUB-ASSEMBLY (See page SE-87)**
4. **INSTALL REAR SEAT BACK HINGE COVER (See page SE-90)**

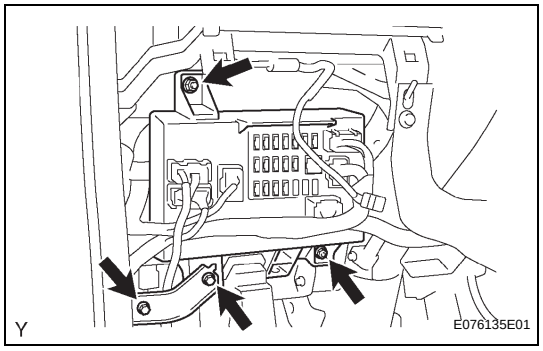
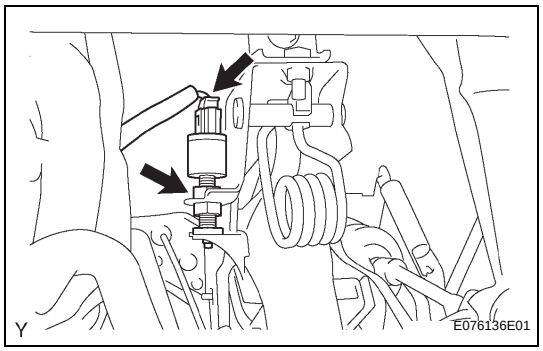
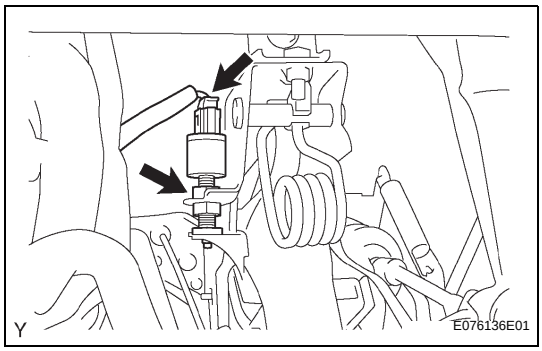
3. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
4. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)**
6. **REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)**
7. **REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)**
8. **REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**
9. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)**
10. **REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)**
11. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
12. **REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
13. **SEPARATE DRIVER SIDE JUNCTION BLOCK**
    (a) Remove the 2 bolts and bracket.
    (b) Remove the 2 nuts and separate the driver side junction block assembly.

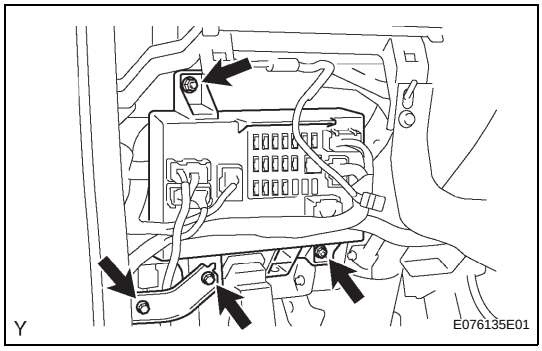


14. **REMOVE CLUTCH SWITCH ASSEMBLY**
    (a) Disconnect the connector.
    (b) Loosen the nut and remove the clutch switch assembly.



CC





INSTALLATION

1. **INSTALL CLUTCH SWITCH ASSEMBLY**
   (a) Install the clutch switch assembly and tighten the nut.
   (b) Connect the connector.

2. **INSTALL DRIVER SIDE JUNCTION BLOCK**
   (a) Install the driver side junction block assembly with the 2 nuts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (b) Install the bracket with the 2 bolts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

3. **INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)**

4. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**

5. **INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)**

6. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)**

7. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**

8. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**

9. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**

10. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**

11. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**

12. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**

13. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

LIGHTING SYSTEM

PRECAUTION

1. PRECAUTION OF HEADLIGHT BULB REPLACEMENT

(a) If even a thin film of oil is left on the surface of the halogen light, its service life will be shortened because the light will burn at a higher temperature.

(b) Handle any halogen light with great care. Dropping, hitting or damaging the bulb in any way may result in exploding and shattering it because the internal pressure is high.

(c) Always prepare a new bulb for immediate replacement. While replacing the bulb, the lens may attract dust and moisture if removed from the vehicle for too long.

(d) Always use a bulb of the same wattage for replacement.

(e) Firmly reinstall the socket after bulb replacement. The lens may become cloudy or the light cavity may fill with water through the gaps around the socket.

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

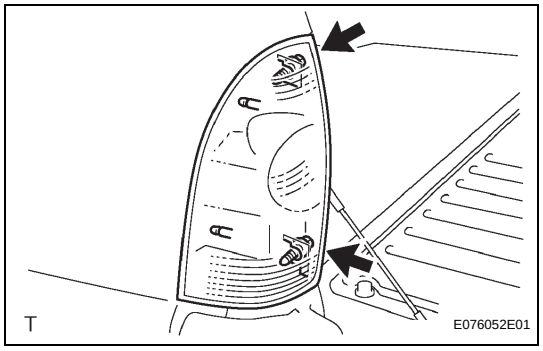
2. REMOVE REAR COMBINATION LIGHT ASSEMBLY

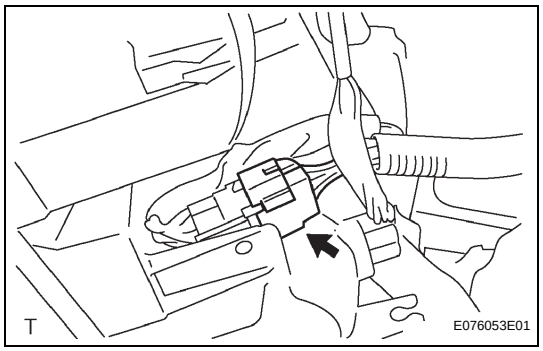
(a) Remove the 2 bolts.

(b) Slide the tail light (rear combination light) assembly LH toward the rear of the vehicle and release the 2 pins.



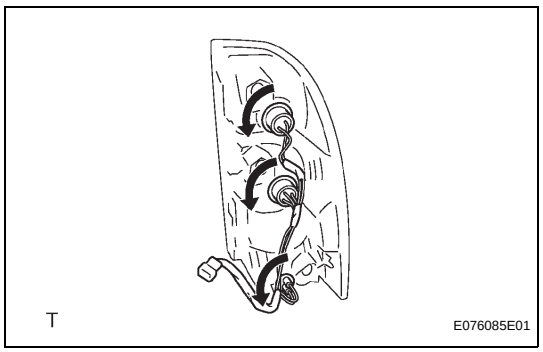
(c) Disconnect the connector, then remove the tail light (rear combination light) assembly LH.

(d) Remove the wire harness clamp.



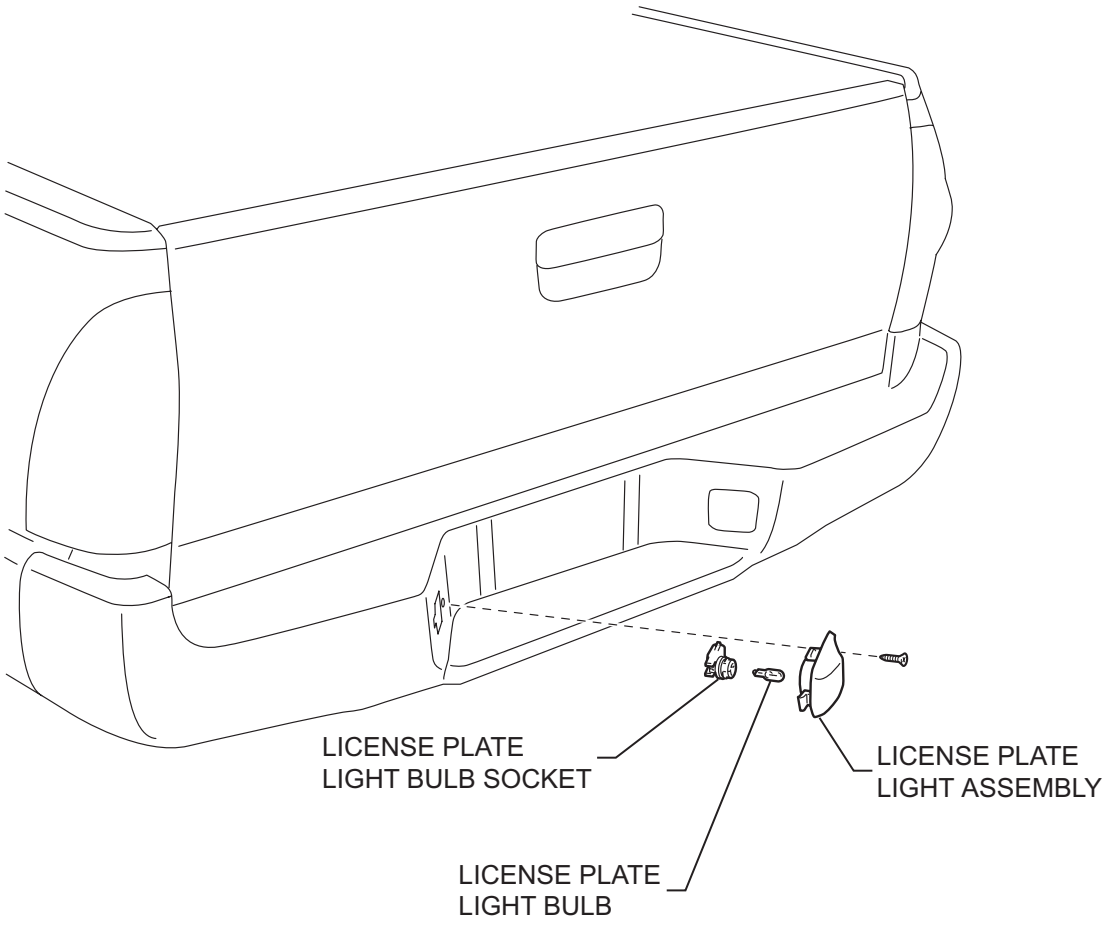
(e) To remove the 3 light bulb sockets and 3 bulbs, turn them in the direction indicated by the arrow in the illustration.

(f) Remove the 3 light bulbs from the 3 light sockets.



LICENSE PLATE LIGHT ASSEMBLY

COMPONENTS



T

E076095E01

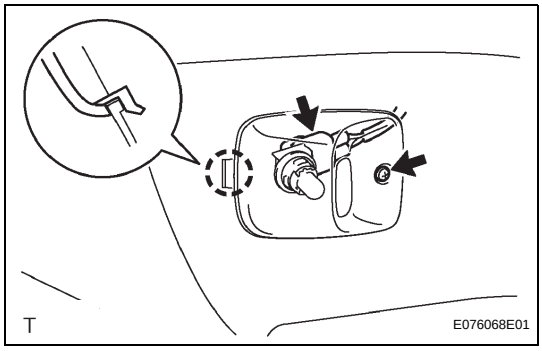
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LICENSE PLATE LIGHT ASSEMBLY

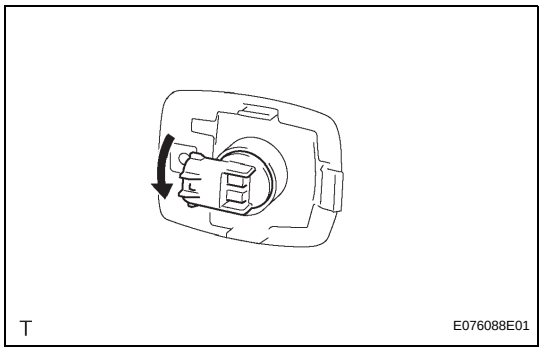
(a) Disconnect the connector.

(b) Remove the screw and license plate light assembly.



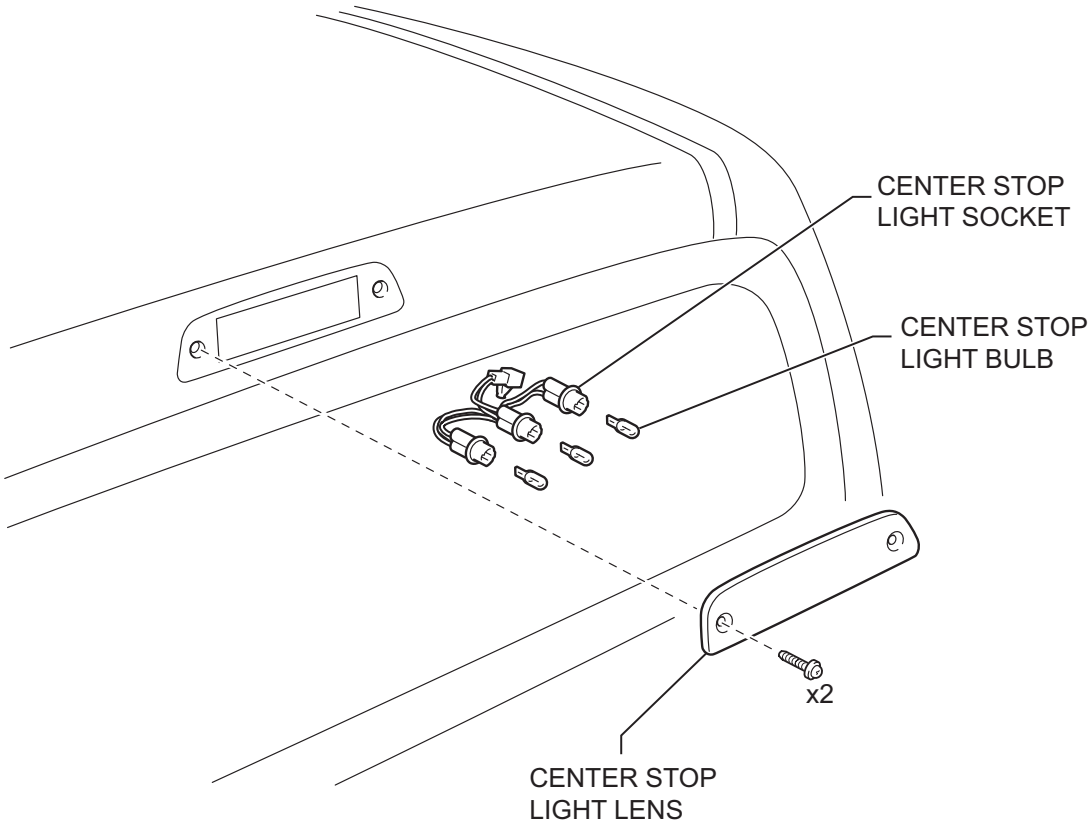
(c) To remove the license plate light bulb socket and bulb, turn them in the direction indicated by the arrow in the illustration.

(d) Remove the license plate light bulb from the light socket.



HIGH MOUNTED STOP LIGHT ASSEMBLY

COMPONENTS



T

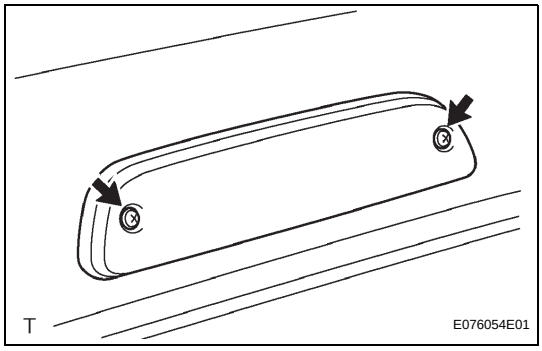
E076096E01

REMOVAL

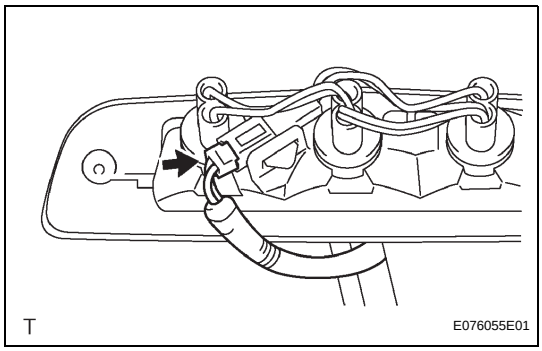
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CENTER STOP LIGHT ASSEMBLY

(a) Remove the 2 screws, then remove the center stop light assembly.



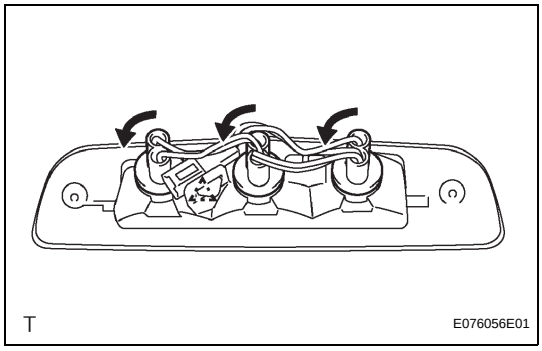
(b) Disconnect the connector.



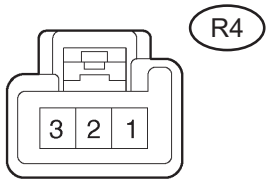
(c) Remove the wire harness clamp.

(d) To remove the 3 center stop light sockets and bulbs, turn them in the direction indicated by the arrow in the illustration.

(e) Remove the 3 center stop light bulbs from the 3 light sockets.



Connector Front Side:



T E076078E01

MAP LIGHT ASSEMBLY

INSPECTION

1. INSPECT MAP LIGHT ASSEMBLY

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1-2	OFF	10 kΩ or higher
1-2	ON	Below 1 Ω

If the result is not as specified, replace the map light assembly.

(b) Check the light operation.

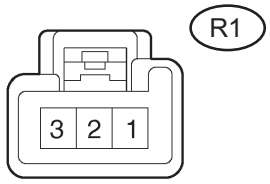
(1) Connect the battery positive (+) lead to terminal 1 and the battery positive (-) lead to terminal 2, then check that the light comes on.

Standard:

Light comes on.

If the light does not come on, replace the bulb.

Connector Front Side:



T E076078E03

ROOM LIGHT ASSEMBLY

INSPECTION

1. INSPECT ROOM LIGHT ASSEMBLY

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1 - 2	OFF	10 kΩ or higher
1 - 3	OFF	10 kΩ or higher
2 - 3	OFF	10 kΩ or higher
1 - 2	DOOR	Below 1 Ω
1 - 3	ON	Below 1 Ω

If the result is not as specified, replace the room light assembly.

(b) Check the light operation.

(1) Connect the battery positive (+) lead to terminal 1 and the battery negative (-) lead to terminal 2, then check that the light comes on when the switch is in the DOOR position.

Standard:

Light comes on.

If the light does not come on, replace the bulb.

(2) Connect the battery positive (+) lead to terminal 1 and the battery negative (-) lead to terminal 3, then check that the light comes on when the switch is in the ON position.

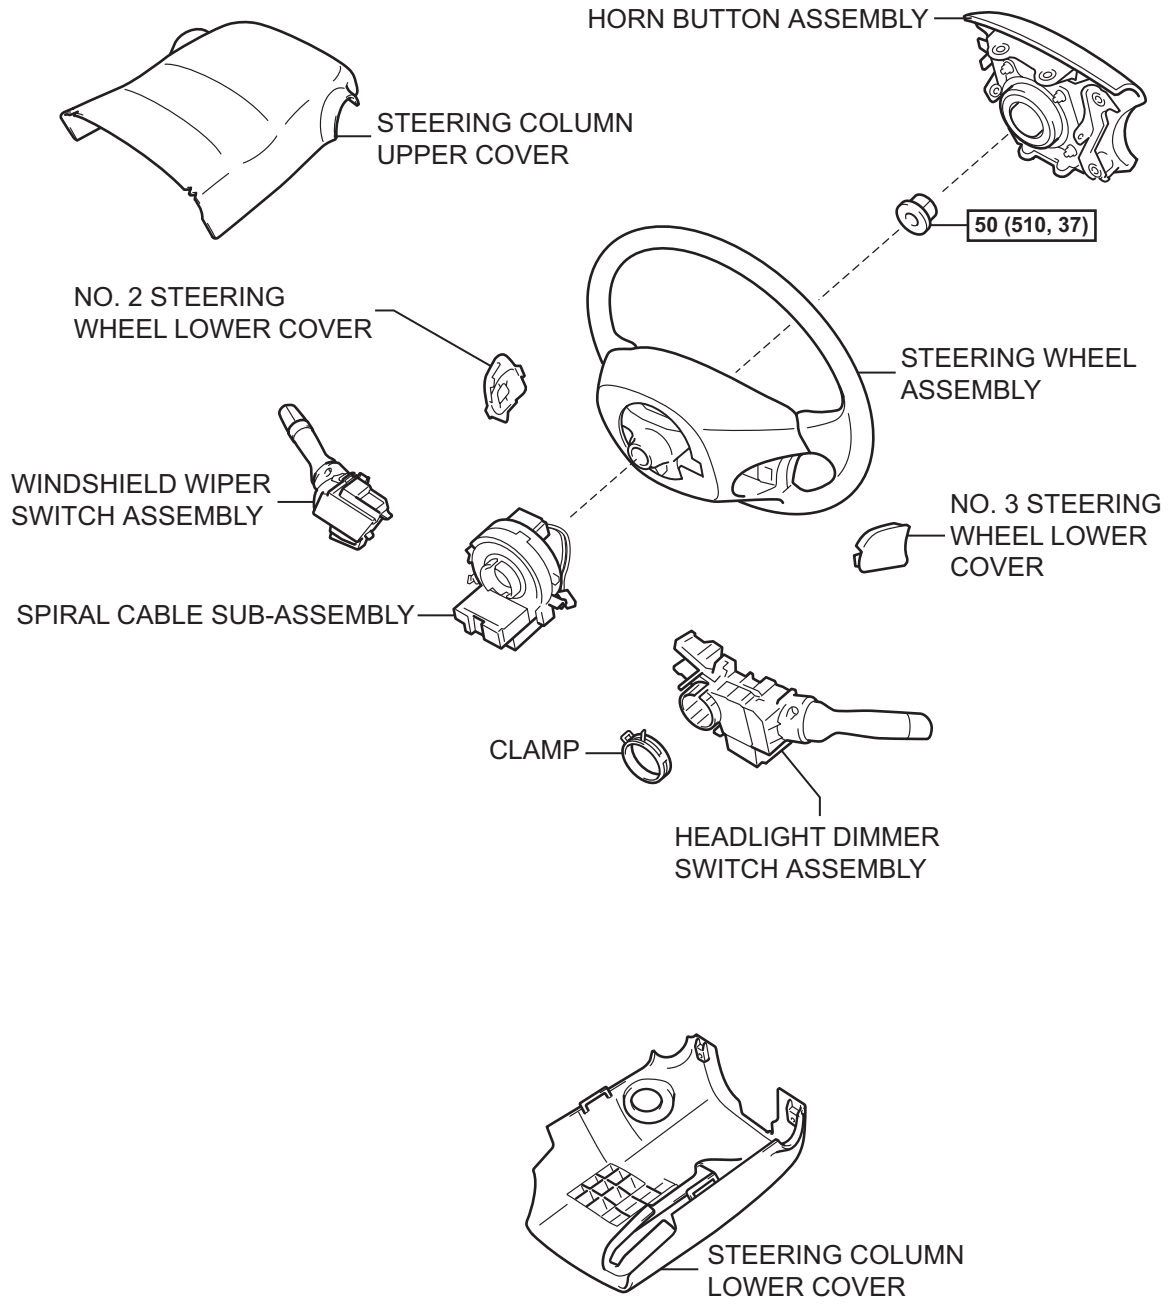
Standard:

Light comes on.

If the light does not come on, replace the bulb.

HEADLIGHT DIMMER SWITCH

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

T

E076120E01

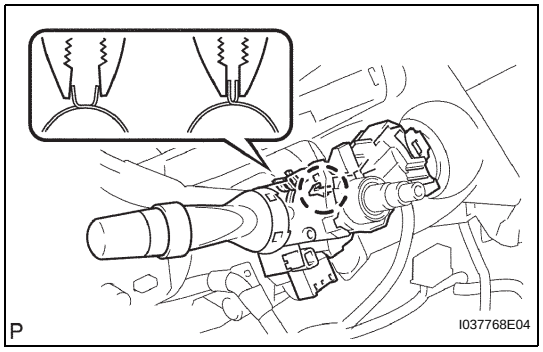
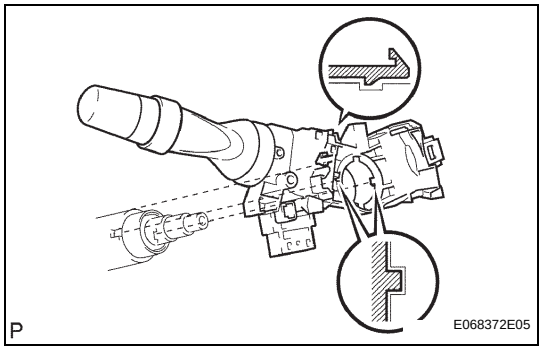
REMOVAL

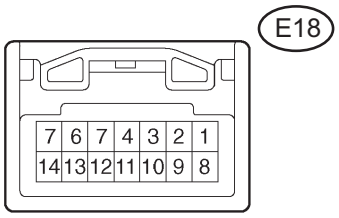
1. **PRECAUTION**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE NO. 2 STEERING WHEEL LOWER COVER (See page RS-558)**
5. **REMOVE NO. 3 STEERING WHEEL LOWER COVER (See page RS-558)**
6. **REMOVE HORN BUTTON ASSEMBLY (See page RS-558)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-9)**
8. **REMOVE STEERING COLUMN LOWER COVER (See page SR-9)**
9. **REMOVE STEERING COLUMN UPPER COVER (See page SR-10)**
10. **REMOVE SPIRAL CABLE SUB-ASSEMBLY (See page RS-566)**
11. **REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-17)**
12. **REMOVE HEADLIGHT DIMMER SWITCH ASSEMBLY**
    (a) Disconnect the connector.
    (b) Remove the headlight dimmer switch assembly as shown in the illustration.





(c) Disengage the 2 claws and remove the headlight dimmer switch assembly.

Connector Front Side:



T E076077E01

HAZARD WARNING SWITCH

INSPECTION

1. INSPECT HAZARD WARNING SWITCH

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
7-9	OFF	10 kΩ or higher
7-9	ON	Below 1 Ω
10-11	Illumination circuit	Below 1 Ω

If the result is not as specified, replace the hazard warning signal switch assembly.

(b) Check the illumination operation.

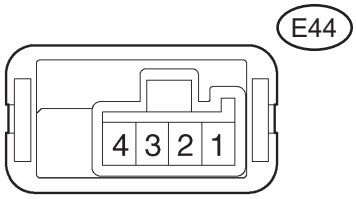
(1) (1) Connect the battery positive (+) lead to terminal 11 and the battery negative (-) lead to terminal 10, then check that the illumination comes on.

Standard:

Illumination comes on.

If the illumination does not come on, replace the bulb.

Connector Front Side:



T E076076E02

FRONT FOG LIGHT SWITCH

INSPECTION

1. INSPECT FRONT FOG LIGHT SWITCH

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1-2	Illumination circuit	Below 1 Ω
3-4	OFF	10 kΩ or higher
3-4	ON	Below 1 Ω

If the result is not as specified, replace the front fog light switch assembly.

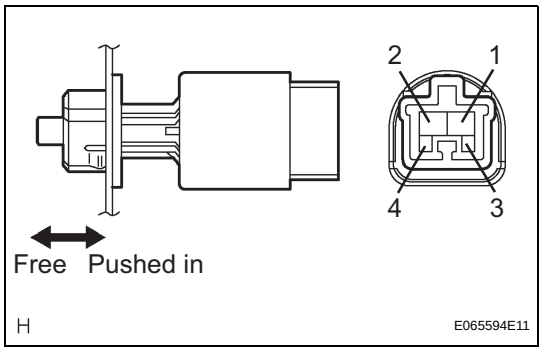
(b) Check the illumination operation.

(1) Connect the battery positive (+) lead to terminal 1 and the battery negative (-) lead to terminal 2, then check that the illumination comes on.

Standard:

Illumination comes on.

If the illumination does not come on, replace the bulb.



STOP LIGHT SWITCH

INSPECTION

1. INSPECT STOP LIGHT SWITCH

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1-2	Switch pin free	Below 1 Ω
3-4	Switch pin free	10 kΩ or higher
1-2	Switch pin pushed in	10 kΩ or higher
3-4	Switch pin pushed in	Below 1 Ω

If the result is not as specified, replace the stop light switch assembly.

FRONT DOOR COURTESY SWITCH

INSPECTION

1. INSPECT FRONT DOOR COURTESY SWITCH

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1-Switch body	ON (When shaft is pressed)	10 kΩ or higher
1-Switch body	OFF (When shaft is not pressed)	Below 1 Ω

If the result is not as specified, replace the front door courtesy light switch assembly.

REAR DOOR COURTESY SWITCH

INSPECTION

1. INSPECT REAR DOOR COURTESY SWITCH

(a) Check the resistance.

(1) Measure the resistance using an ohmmeter, and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
1-Switch body	ON (When shaft is pressed)	10 kΩ or higher
1-Switch body	OFF (When shaft is not pressed)	Below 1 Ω

If the result is not as specified, replace the rear door courtesy light switch assembly.

TURN SIGNAL FLASHER ASSEMBLY

ON-VEHICLE INSPECTION

1. INSPECT TURN SIGNAL FLASHER ASSEMBLY (w/o Daytime Running Light System)

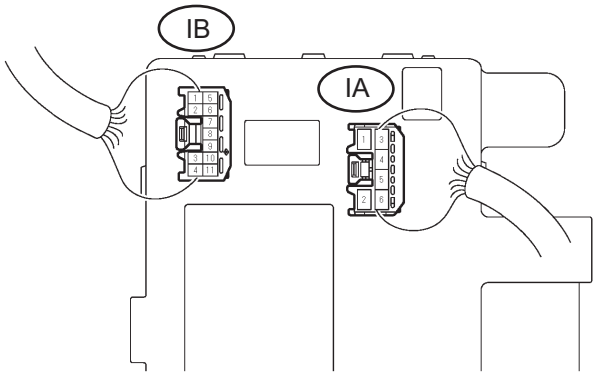
(a) Check the power source circuit and ground circuit.

(1) Remove the turn signal flasher assembly from the instrument panel junction block assembly.

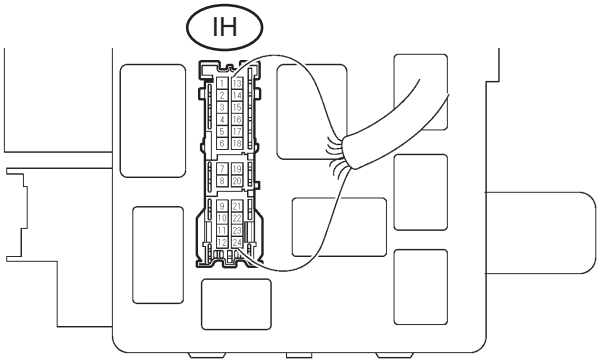
(2) Measure the voltage and check the results in accordance with the value(s) in the table below.

Instrument Panel Junction Block

Front side:



Back side:



T

E076121E01

Standard

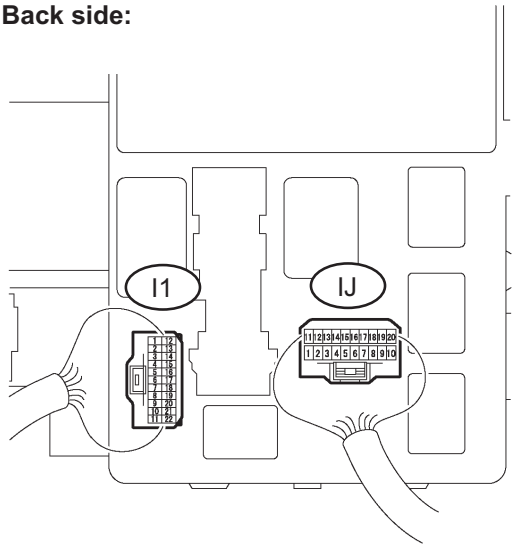
Tester Connection	Condition	Specified Condition
IA-4 - Body ground	Ignition switch ON	10 to 14 V
IA-4 - Body ground	Ignition switch OFF	0 V
IB-4 - Body ground	Always	10 to 14 V

(3) Measure the resistance and check the result in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
IH-18 - Body ground	Always	Below 1 Ω

Instrument Panel Junction Block Back side:



T

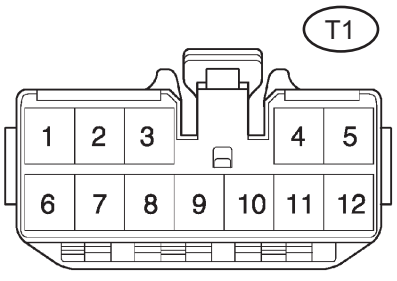
E076122E01

(b) Check the output operation signal.
(1) Install the turn signal flasher assembly onto the instrument panel junction block assembly.
(2) Measure the voltage and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
I1-11 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
I1-11 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
I1-12 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
I1-12 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IJ-8 - Body ground	Turn signal switch (left turn) OFF → ON	10 to 14 V → 0 V
IJ-18 - Body ground	Turn signal switch (right turn) OFF → ON	10 to 14 V → 0 V
IJ-11 - Body ground	Hazard switch OFF → ON	10 to 14 V → 0 V

Connector Front Side:



T

E076115E01

2. INSPECT TURN SIGNAL FLASHER ASSEMBLY (w/ Daytime Running Light System)

(a) Check the power source circuit and ground circuit.
(1) Disconnect the connector from the turn signal flasher assembly.
(2) Measure the voltage and check the results in accordance with the value(s) in the table below.

Standard

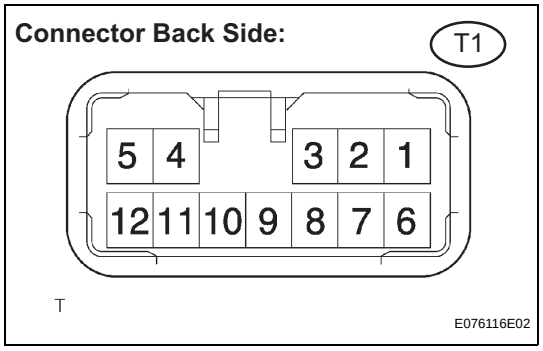
Tester Connection	Condition	Specified Condition
1 - Body ground	Ignition switch ON	10 to 14 V

Tester Connection	Condition	Specified Condition
1 - Body ground	Ignition switch OFF	0 V
6 - Body ground	Always	10 to 14 V

(3) Measure the resistance and check the result in accordance with the value(s) in the table below.

Standard

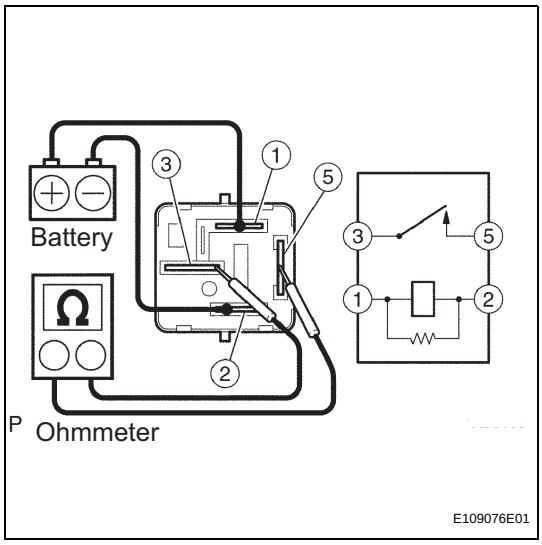
Tester Connection	Condition	Specified Condition
9 - Body ground	Always	Below 1 Ω



(b) Check the output operation signal.
(1) Connect the connector to the turn signal flasher assembly.
(2) Measure the voltage and check the results in accordance with the value(s) in the table below.

Standard

Tester Connection	Condition	Specified Condition
2 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
2 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
2 - Body ground	Turn signal switch (right turn) ON → OFF	10 to 14 V (60 to 120 times per minute) → 10 to 14 V
3 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
3 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
4 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
4 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
4 - Body ground	Turn signal switch (left turn) ON → OFF	10 to 14 V (60 to 120 times per minute) → 10 to 14 V
5 - Body ground	Hazard switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
5 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
7 - Body ground	Turn signal switch (left turn) OFF → ON	10 to 14 V → 0 V
8 - Body ground	Turn signal switch (right turn) OFF → ON	10 to 14 V → 0 V
10 - Body ground	Hazard switch OFF → ON	10 to 14 V → 0 V



HEADLIGHT RELAY

INSPECTION

1. INSPECT HEADLIGHT RELAY

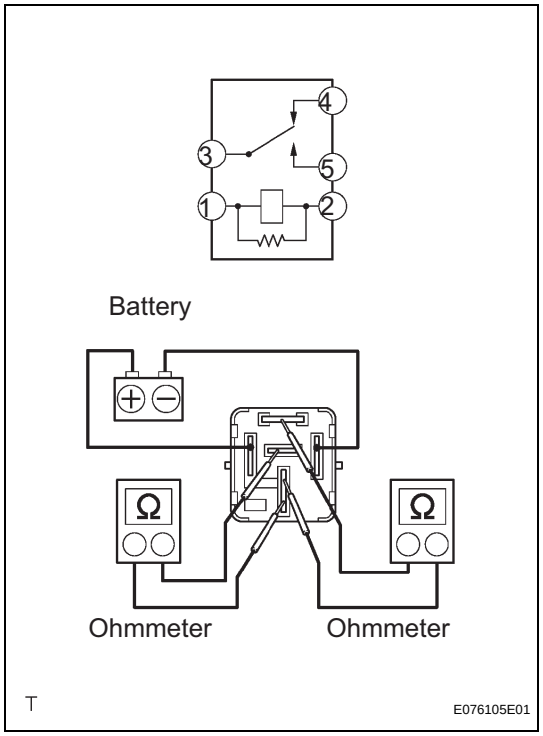
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3-5	10 kΩ or higher
3-5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the headlight relay.



HEADLIGHT DIMMER RELAY

INSPECTION

1. INSPECT HEADLIGHT DIMMER RELAY

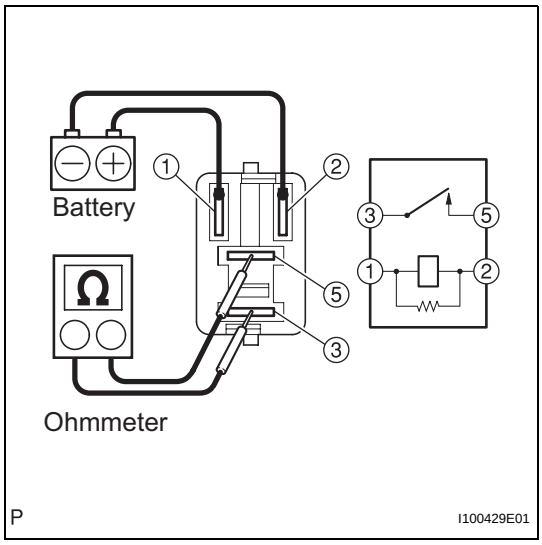
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3-4	Below 1 Ω
3-4	10 kΩ or higher (When battery voltage applied to terminals 1 and 2)
3-5	10 kΩ or higher
3-5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace, the headlight dimmer relay.



TAILLIGHT RELAY

INSPECTION

1. INSPECT TAIL LIGHT RELAY

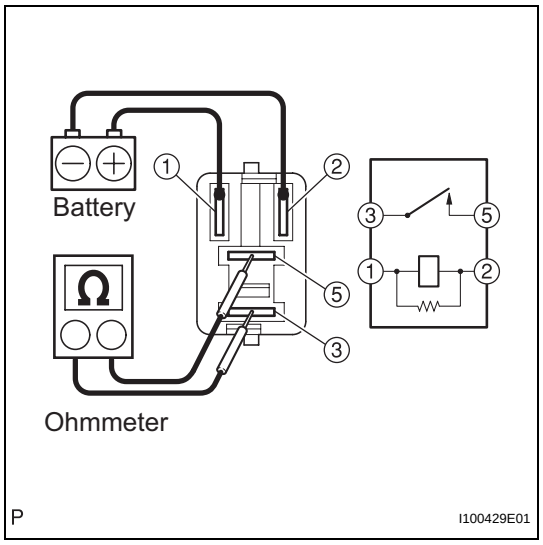
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3-5	10 kΩ or higher
3-5	Below 1 Ω (When 1 battery voltage applied to terminals 1and 2)

If the result is not as specified, replace the tail light relay.



FOG LIGHT RELAY

INSPECTION

1. INSPECT FOG LIGHT RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

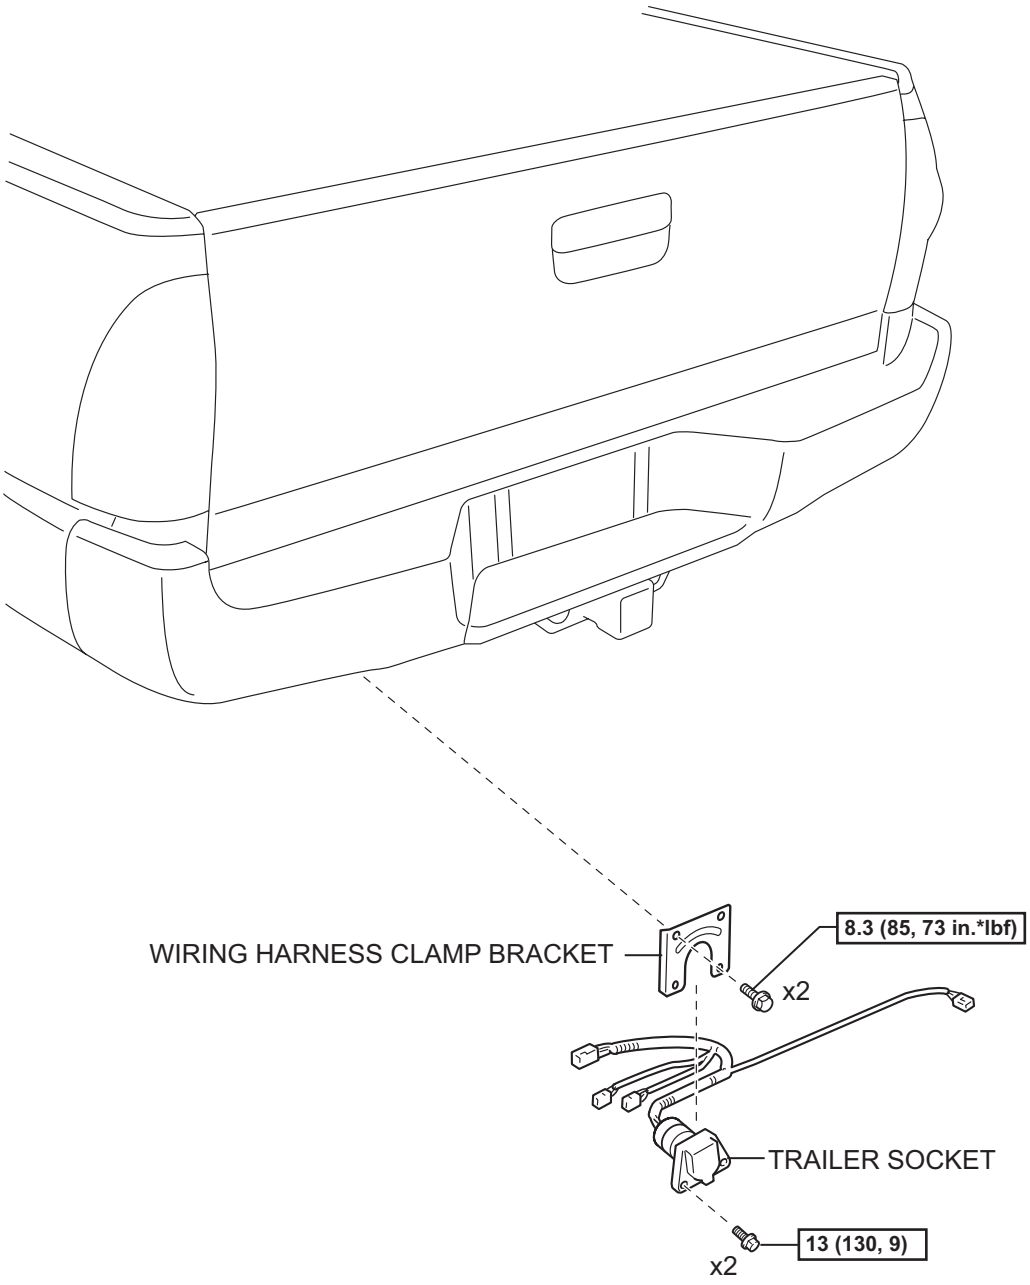
Standard

Tester Connection	Specified Condition
3-5	10 kΩ or higher
3-5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the fog light relay.

TRAILER SOCKET

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

T

E076097E01

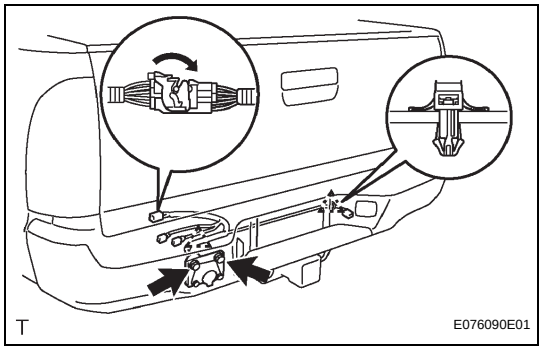
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

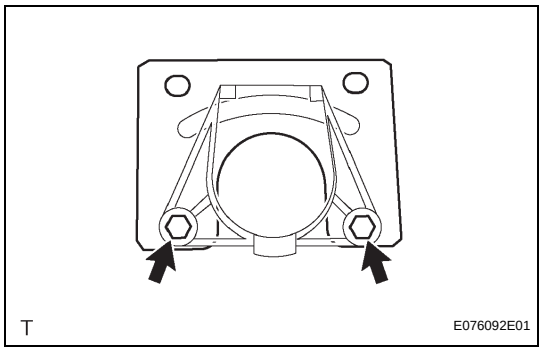
2. REMOVE TRAILER SOCKET

(a) Disconnect the 4 connectors and disengage the 2 clamps.

(b) Remove the 2 bolts, then remove the No. 3 wire frame.



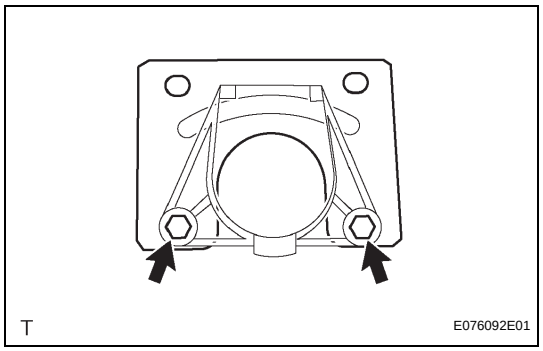
(c) Remove the 2 bolts, then remove the wiring harness clamp bracket.



INSTALLATION

1. INSTALL TRAILER SOCKET

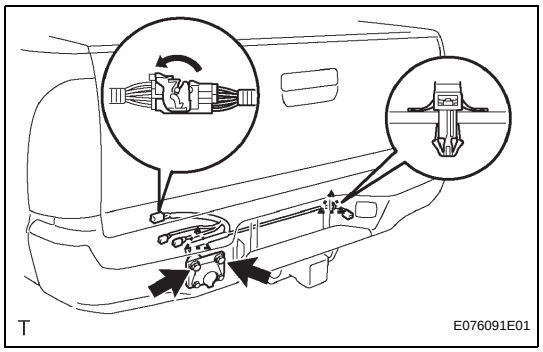
(a) Install the 2 bolts and wiring harness clamp bracket.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

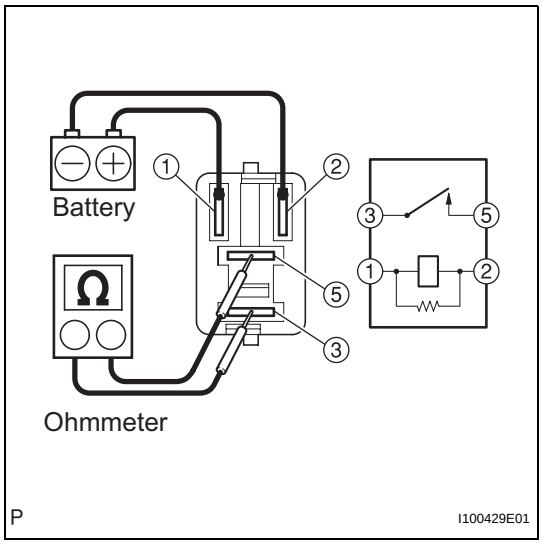


(b) Install the 2 bolts and No. 3 wire flame.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

(c) Connect the 4 connectors and engage the 2 clamps.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)





TOWING TAIL RELAY

INSPECTION

1. INSPECT TOWING TAIL RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3-5	10 kΩ or higher
3-5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the towing tail relay.

WIPER AND WASHER SYSTEM

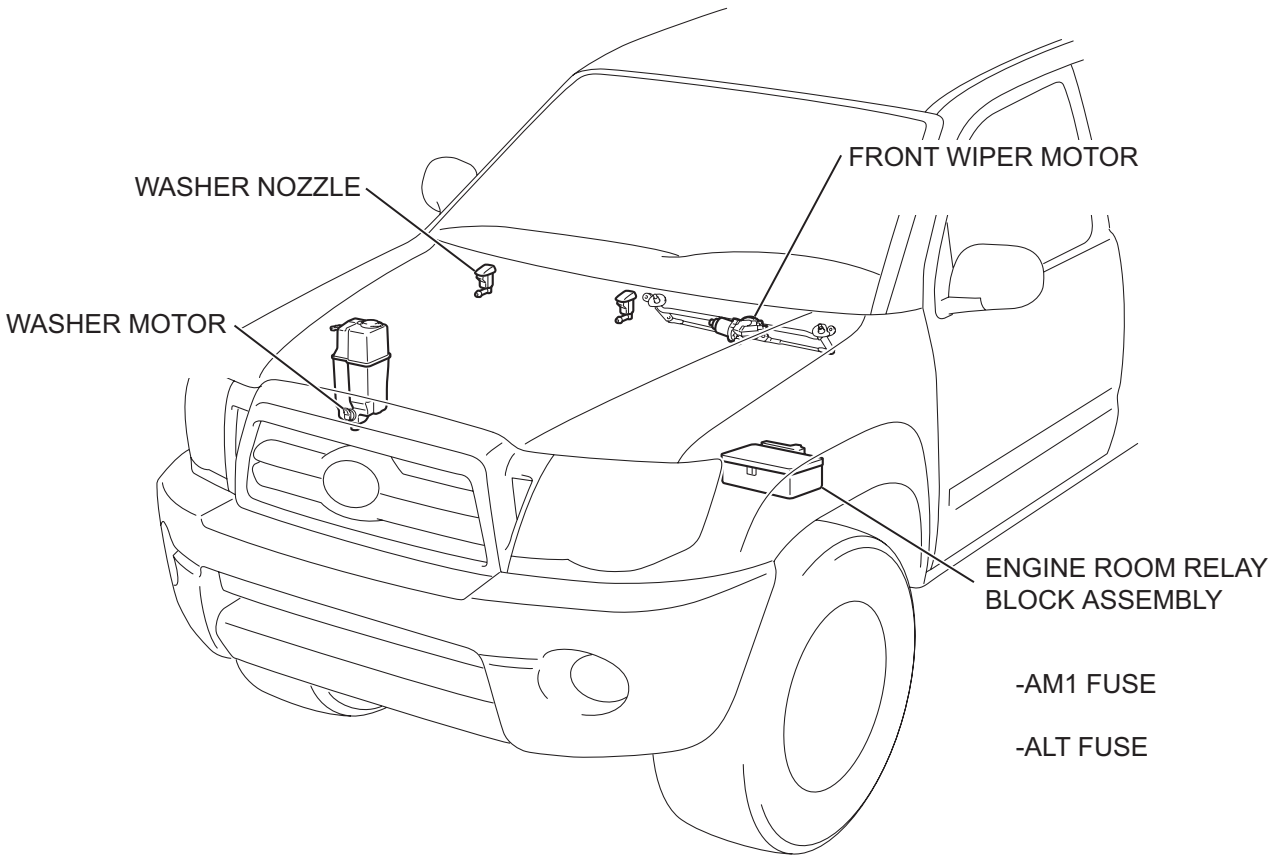
PRECAUTION

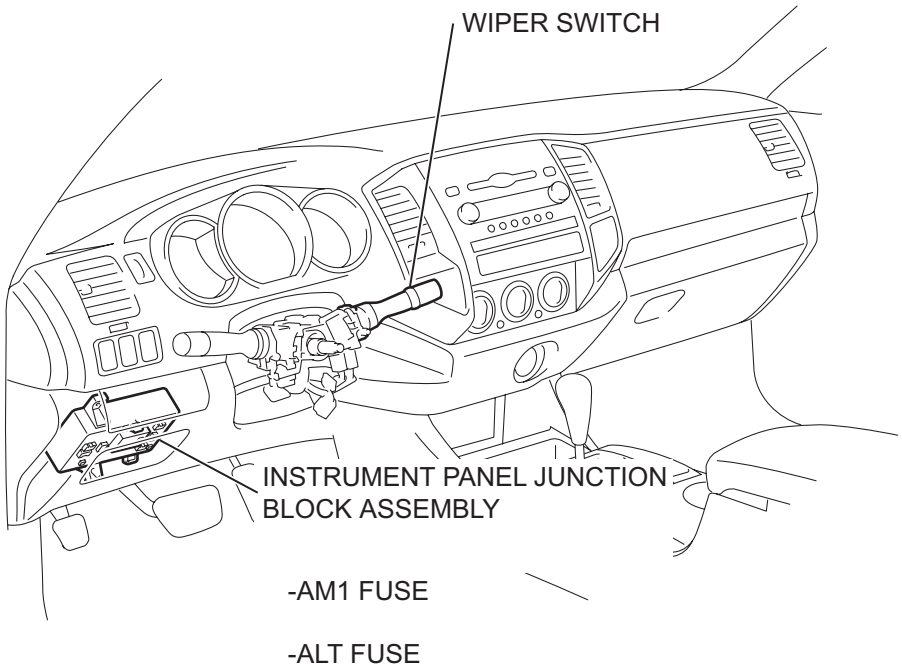
1. PRECAUTION OF WASHER NOZZLE ADJUSTMENT

(a) Do not clean or adjust the washer nozzle with sharp metal objects, such as safety pins because;
  (1) the washer nozzle tip is made of resin and could be damaged.
  (2) adjustment is not necessary because it has a spray type nozzle.

(b) If the washer nozzle is clogged with materials such as wax, remove the objects and clean the nozzle hole with a soft resin brush, etc.

PARTS LOCATION





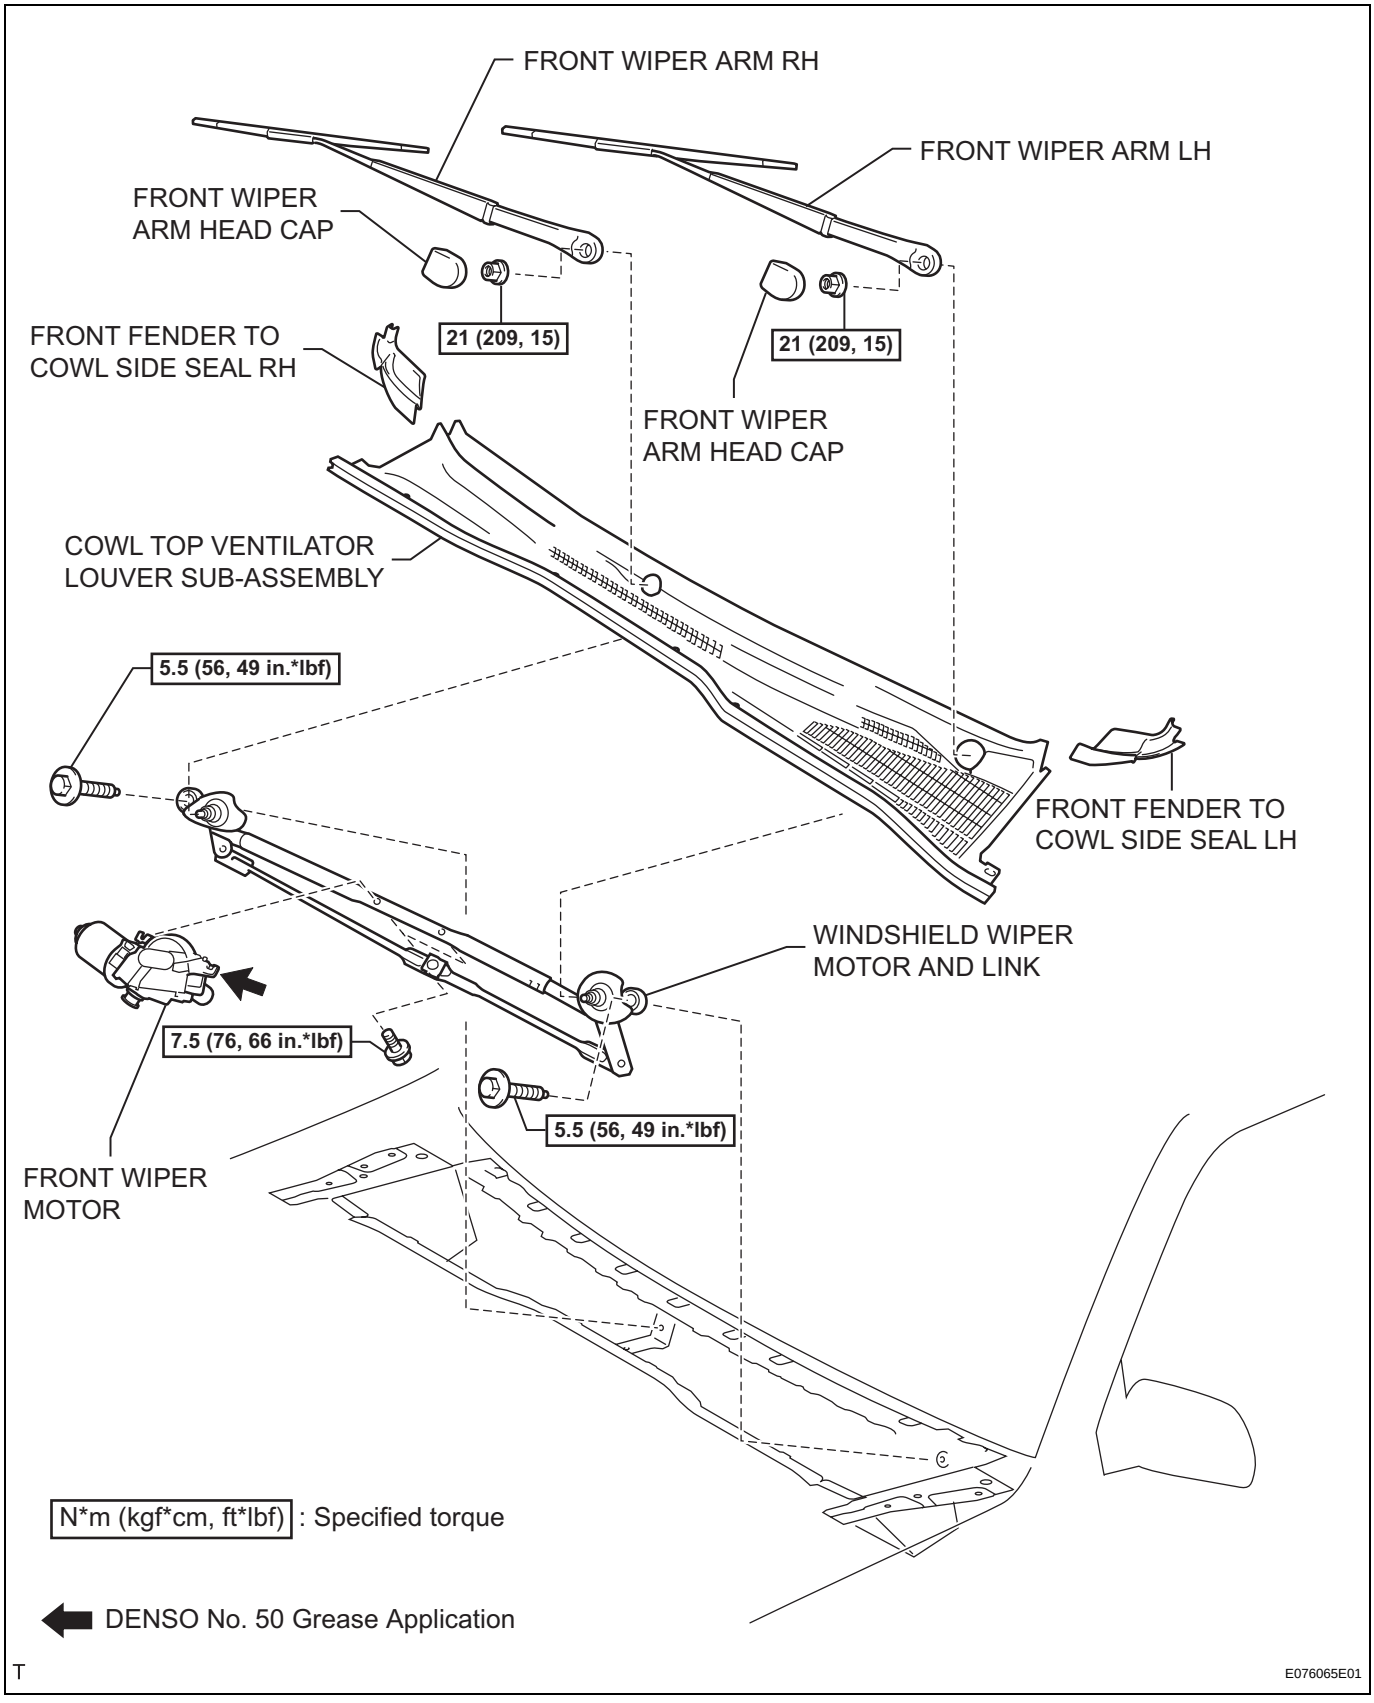
T

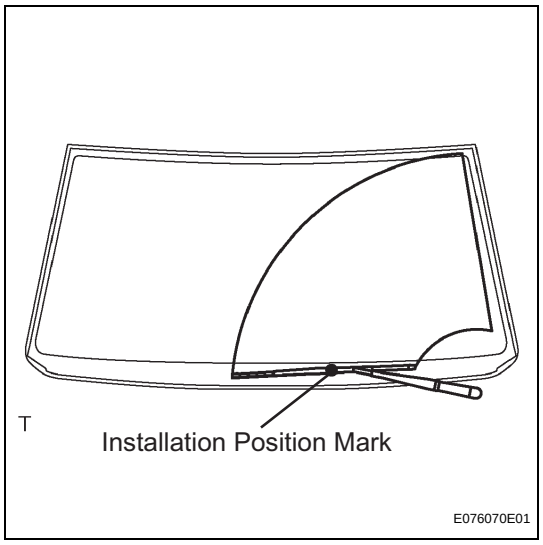
E076106E01

WW

FRONT WIPER MOTOR

COMPONENTS





ON-VEHICLE INSPECTION

1. INSPECT FRONT WIPER MOTOR (for Driver Side)

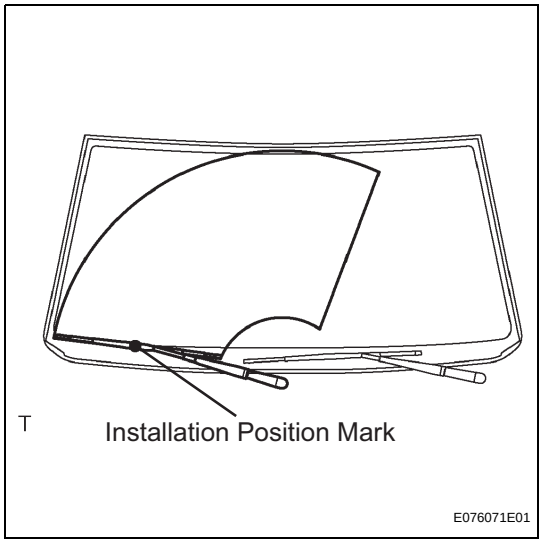
(a) Check the automatic stop position.

(1) Operate the windshield wiper motor assembly, then stop the operation.

(2) Check the automatic stop position when stopping the windshield wiper motor assembly operation.

Standard:

Front wiper arm stops at the position shown in the illustration.



2. INSPECT FRONT WIPER MOTOR (for Front Passenger Side)

(a) Check the automatic stop position.

(1) Operate the windshield wiper motor assembly, then stop the operation.

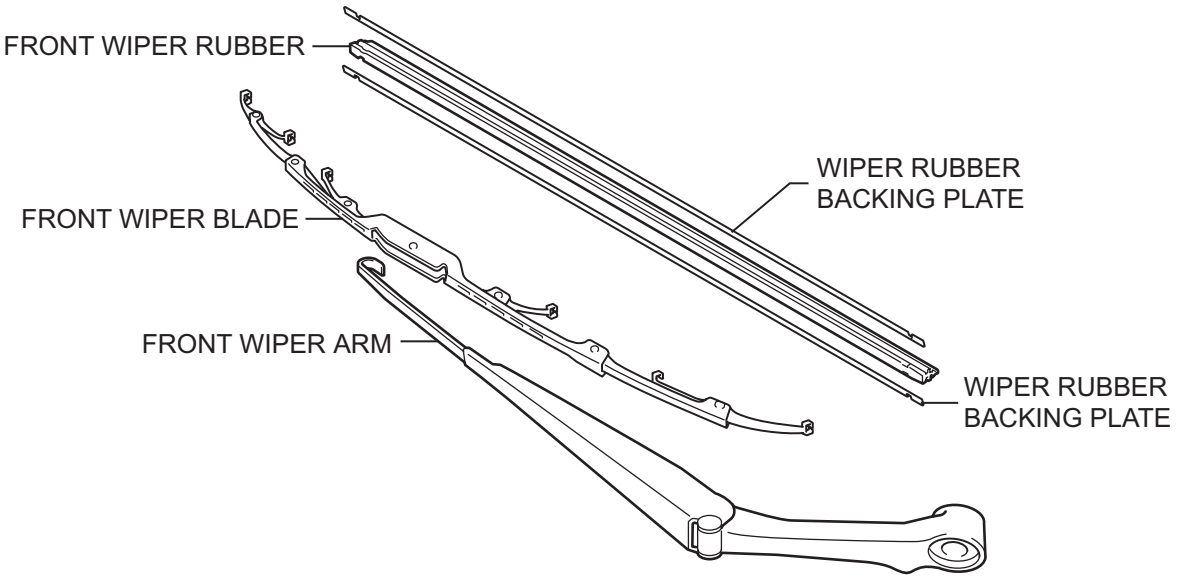
(2) Check the automatic stop position when stopping the windshield wiper motor assembly operation.

Standard:

Front wiper arm stops at the position shown in the illustration.

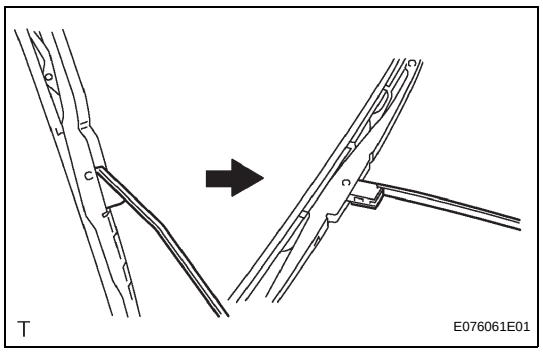
FRONT WIPER RUBBER

COMPONENTS



T

E076066E01



T

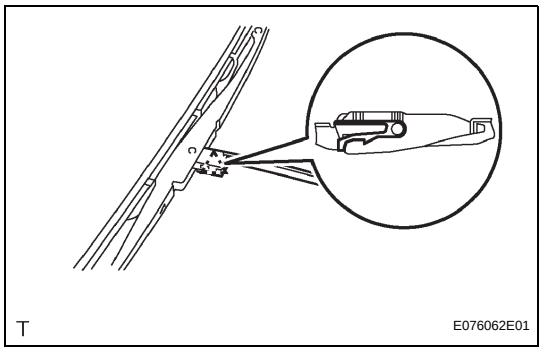
E076061E01

REMOVAL

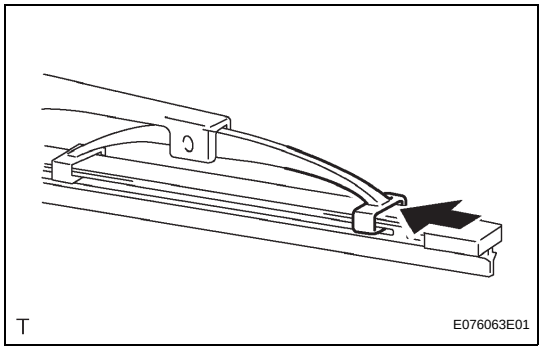
1. REMOVE FRONT WIPER BLADE

(a) Raise the front wiper blade to the position as shown in the illustration.

WW

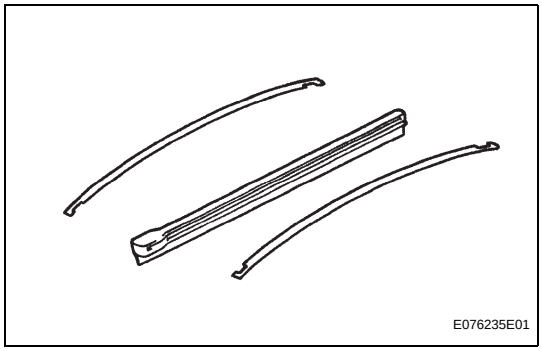


(b) Disengage the claw and remove the front wiper blade LH from the front wiper arm LH.
NOTICE:
Do not bend the front wiper arm with the front wiper blade LH removed, as the arm tip could damage the windshield surface.

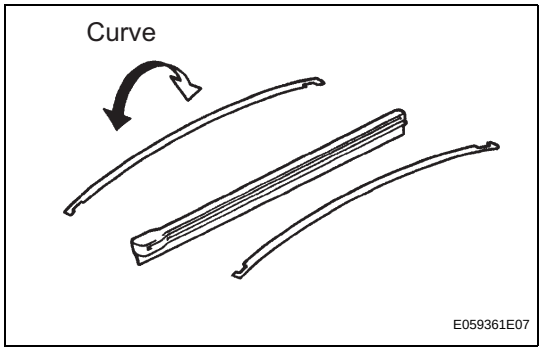


2. REMOVE FRONT WIPER RUBBER

(a) Remove the front wiper rubber LH from the front wiper blade.



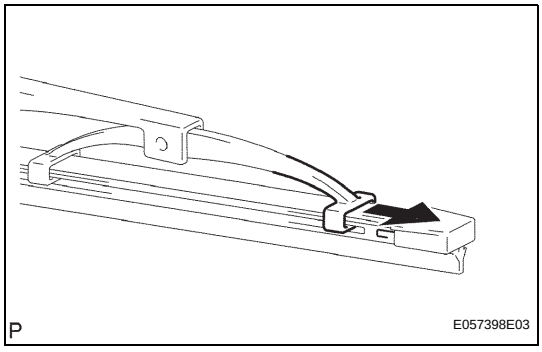
(b) Remove the 2 wiper rubber backing plates from the wiper rubber LH.



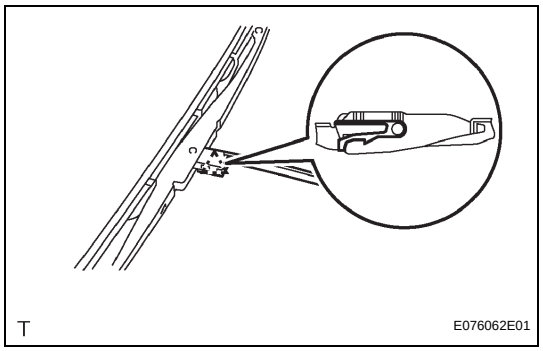
INSTALLATION

1. REMOVE FRONT WIPER RUBBER

(a) Install the 2 wiper rubber backing plates onto the wiper rubber LH.
NOTICE:
Be sure to install the wiper rubber backing plates in the correct direction.

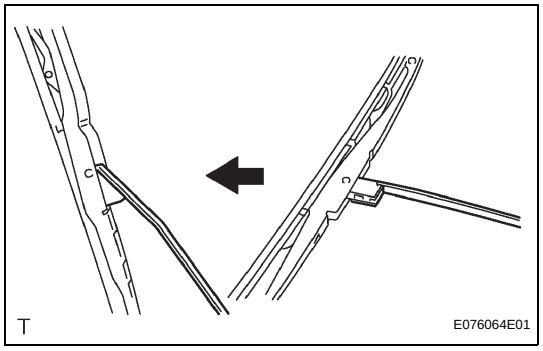


(b) Install the wiper rubber LH so that the head part (Larger side) of the wiper rubber faces the arm axle side.
NOTICE:
Push the front wiper blade into the grooves of the wiper rubber to engage them completely.



2. REMOVE FRONT WIPER BLADE

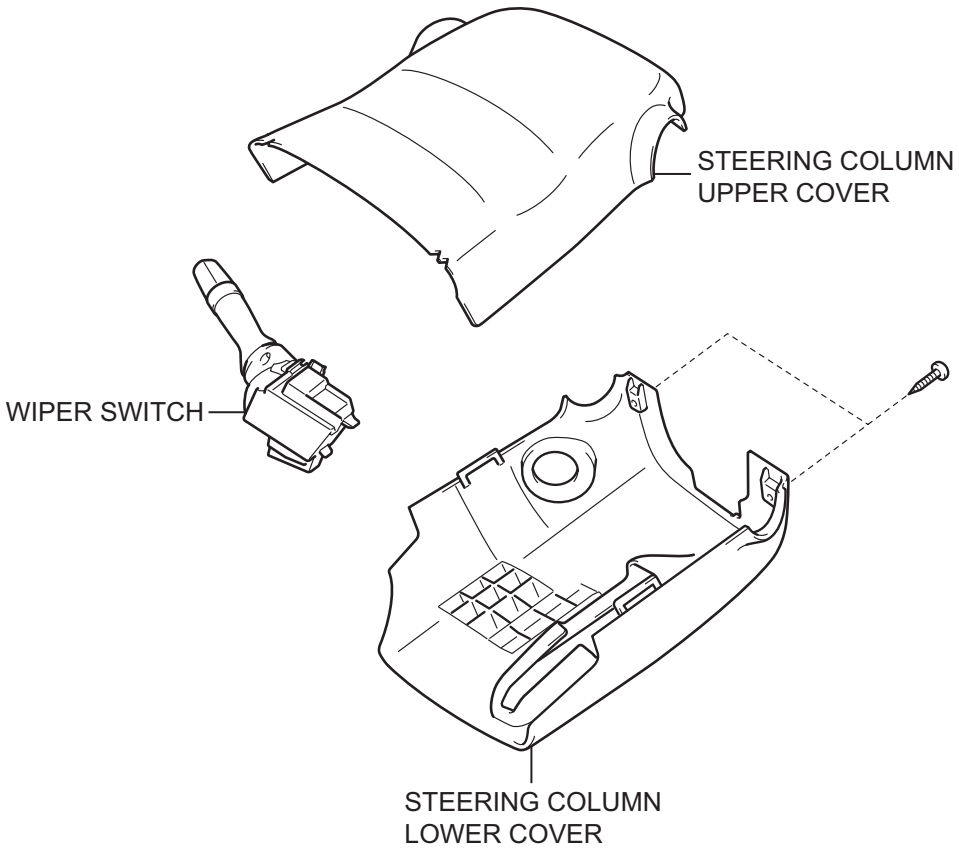
(a) Engage the claw and install the front wiper blade LH onto the front wiper arm LH.



(b) Hold down the front wiper blade LH as shown in the illustration.

WIPER SWITCH

COMPONENTS

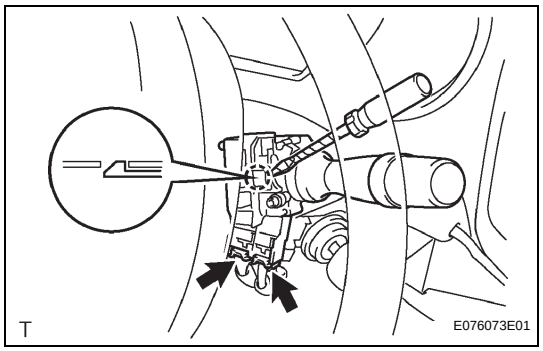


T

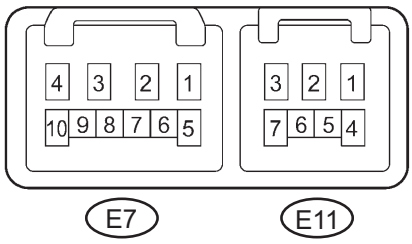
E076072E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE STEERING COLUMN LOWER COVER (See page SR-9)**
3. **REMOVE STEERING COLUMN UPPER COVER (See page SR-10)**
4. **REMOVE WIPER SWITCH**
   (a) Disconnect the 2 connectors.
   (b) Using a screwdriver wrapped with protective tape, disengage the claw and remove the windshield wiper switch assembly.
   NOTICE:
   The claw will break if pressed too hard.



Windshield Wiper Switch Assembly Connector Front View:



E113070E01

INSPECTION

1. **INSPECT WIPER SWITCH**
   (a) Check the resistance.
   (1) Measure the resistance and check the results in accordance with the value(s) in the table below.
   Standard:
   Wiper Switch

Tester connection	Condition	Specified condition
+B(E7-2) - +1(E7-3)	MIST	Below 1 Ω
+S(E7-1) - +1(E7-3)	OFF	Below 1 Ω
+S(E7-1) - +1(E7-3)	INTO	Below 1 Ω
+B(E7-2) - +1(E7-3)	LO	Below 1 Ω
+B(E7-2) - +2(E7-4)	HI	Below 1 Ω

If the result is not as specified, replace the windshield wiper switch assembly.

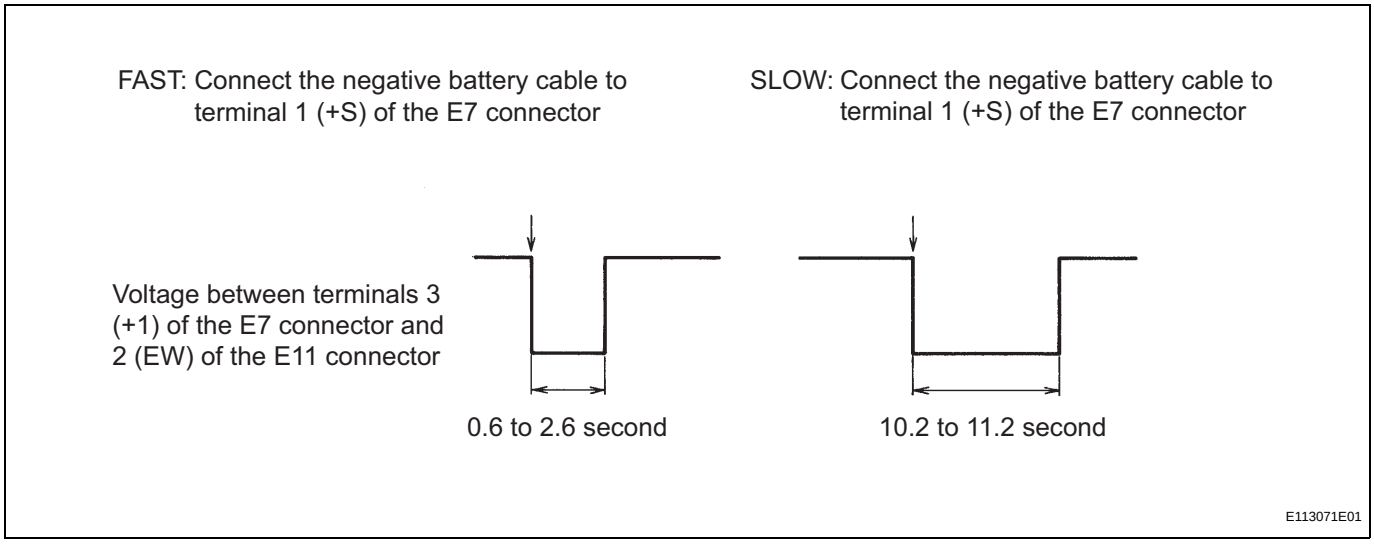
Standard:
Washer Switch

Tester connection	Condition	Specified condition
EW(E11-2) - WF(E11-3)	OFF	10 kΩ or higher
EW(E11-2) - WF(E11-3)	ON	Below 1 Ω

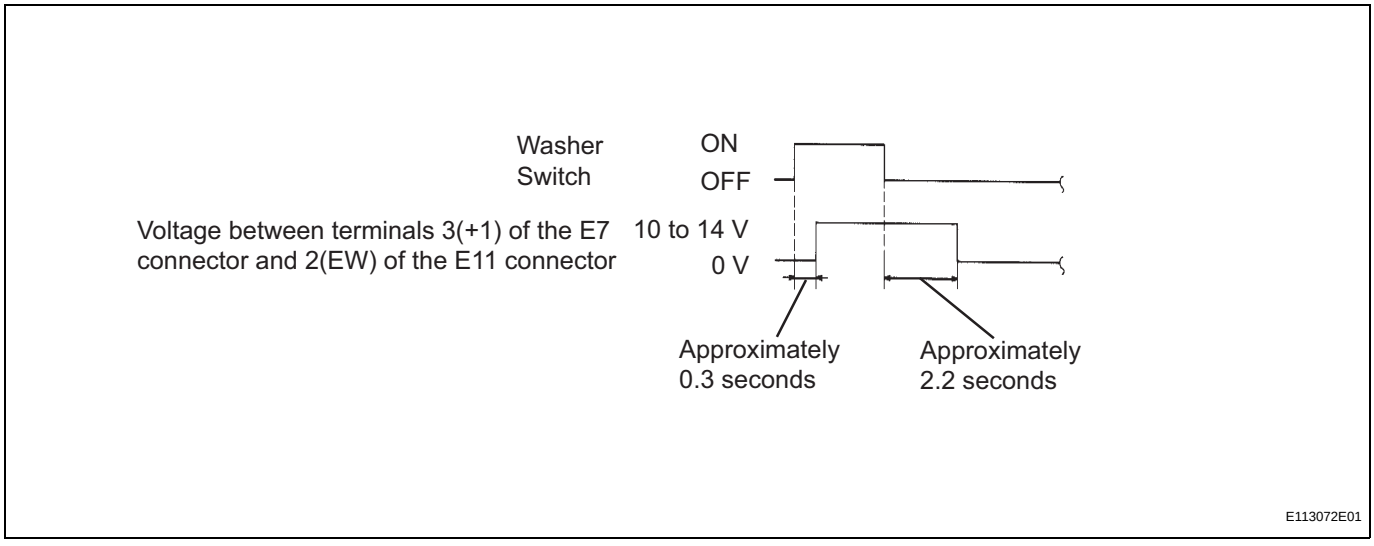
If the result is not as specified, replace the windshield wiper switch assembly.

(b) Check the intermittent operation.
(1) Connect the voltmeter positive terminal to terminal 3 (+1) of the E7 connector and the voltmeter negative terminal to terminal 2 (EW) of the E11 connector.

(2) Connect the battery positive (+) lead to terminal 2 (+B) of the E7 connector and the battery negative (-) lead to terminals 2 (EW) of the E11 connector and 1 (+S) of the E7 connector.
(3) Turn the wiper switch to the INT position.
(4) Connect the battery positive (+) lead to terminal 1 (+S) of the E7 connector for 5 seconds.
(5) Connect the battery negative lead to terminal 1 (+S) of the E7 connector. Operate the intermittent wiper relay and check the voltage between terminals 3 (+1) of the E7 connector and 2 (EW) of the E11 connector.

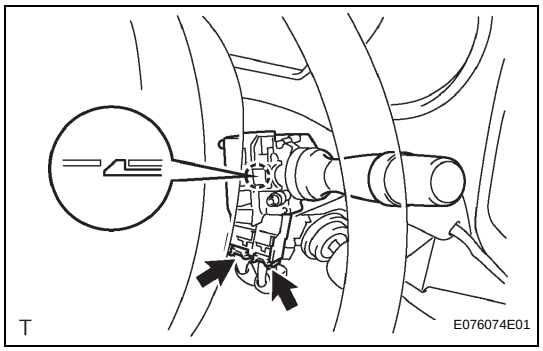


(c) Check the operation



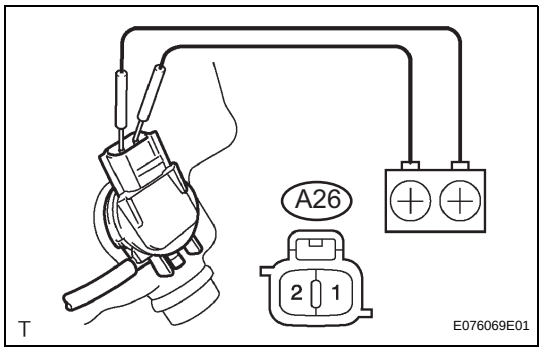
(1) Turn the wiper switch off.
(2) Connect the battery positive lead to terminal 2 (+B) of the E7 connector and the battery negative lead to terminals 1 (+S) of the E7 connector and 2 (EW) of the E11 connector.

(3) Connect the voltmeter positive terminal to terminal 3 (+1) of the E7 connector and the voltmeter negative terminal to terminal 2 (EW) of the E11 connector. Turn the washer switch on and off, and check the voltage between terminals 3 (+1) of the E7 connector and 2 (EW) of the E11 connector.



INSTALLATION

1. **INSTALL WIPER SWITCH**
   (a) Engage the claw and install the windshield wiper switch assembly.
   (b) Connect the 2 connectors.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
3. **INSTALL STEERING COLUMN UPPER COVER (See page SR-18)**
4. **INSTALL STEERING COLUMN LOWER COVER (See page SR-18)**



WASHER MOTOR

ON-VEHICLE INSPECTION

1. INSPECT WASHER MOTOR

(a) Check the operation.

(1) Fill the washer jar with washer fluid.
HINT:
Operation should be performed with the windshield washer motor and pump assembly installed onto the washer jar assembly.

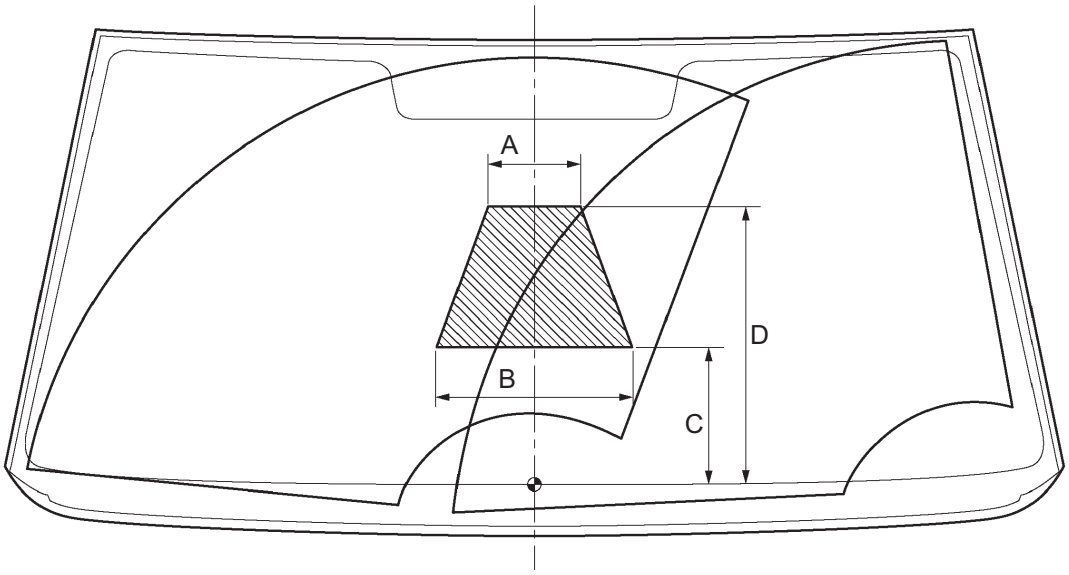
(2) Connect the positive battery (+) lead to terminal 1 of the windshield washer motor and pump assembly, then the negative battery (-) lead to terminal 2. Check that washer fluid flows from the washer jar.
Standard:
Washer fluid flows from the washer jar.

WASHER NOZZLE

INSPECTION

1. INSPECT WASHER NOZZLE

(a) With the engine running, check that the washer fluid hits in the range indicated by the hatched lines on the windshield.



Standard: The washer fluied intersects within the range above.

A: 173.7 mm (6.83 in.)

B: 273 mm (10.75 in.)

C: 191.1 mm (7.52 in.)

D: 397.5 mm (15.65 in.)

T

E076098E01

HINT:
This washer nozzle does not have an adjustment function because it has a spray type nozzle.

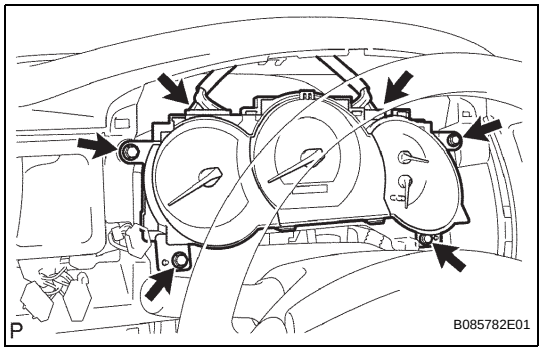
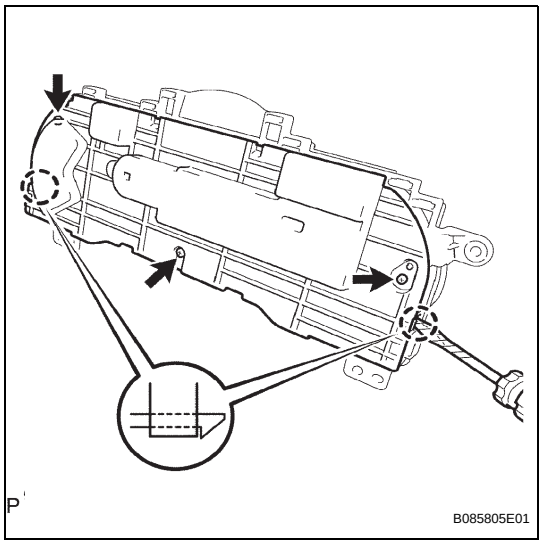
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
3. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
4. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)**
6. **REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)**
7. **REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)**
8. **REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**
9. **REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)**
10. **REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)**
11. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
12. **REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
13. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**
14. **REMOVE COMBINATION METER ASSEMBLY**
    (a) Remove the 4 screws and the combination meter assembly.
    (b) Disconnect the 2 connectors.



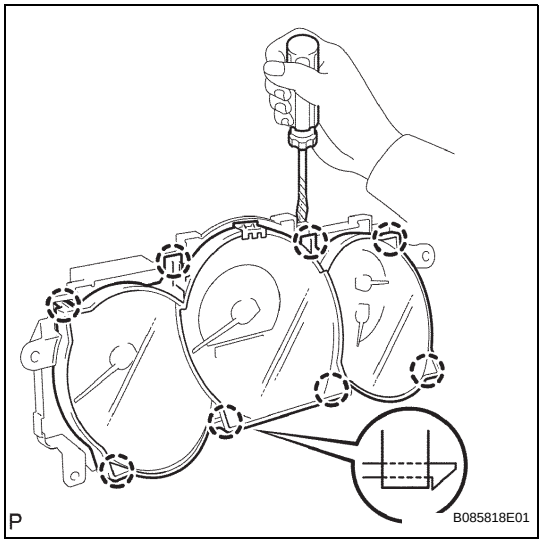


DISASSEMBLY

1. REMOVE BACK COVER

(a) Remove the 3 screws.

(b) Using a screwdriver, disengage the 2 claws and remove the back cover.
HINT:
Tape up the screwdriver tip before use.



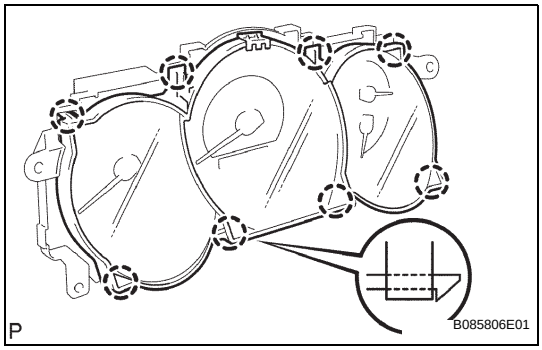
2. REMOVE COMBINATION METER GLASS

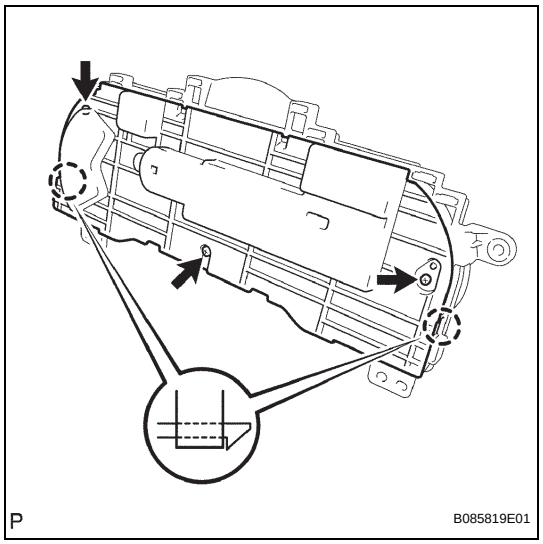
(a) Using a screwdriver, disengage the 8 claws and remove the combination meter glass.
HINT:
Tape up the screwdriver tip before use.

REASSEMBLY

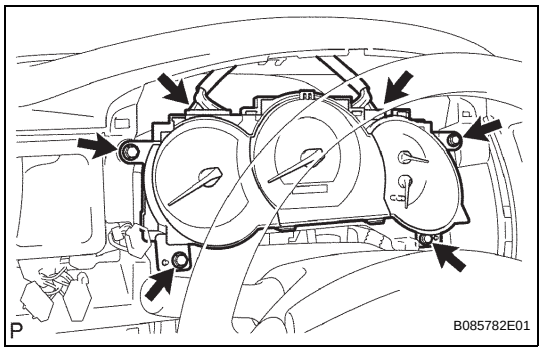
1. INSTALL COMBINATION METER GLASS

(a) Engage the 8 claws and install the combination meter glass.





2. **REMOVE BACK COVER**
   (a) Engage the 2 claws and install the back cover.
   (b) Install the 3 screws.



INSTALLATION

1. **INSTALL COMBINATION METER ASSEMBLY**
   (a) Connect the 2 connectors.
   (b) Install the combination meter assembly with the 4 screws.
   Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
2. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
3. **INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)**
4. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
5. **INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)**
6. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)**
7. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**
8. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**
9. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)**
10. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
11. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
12. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
13. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

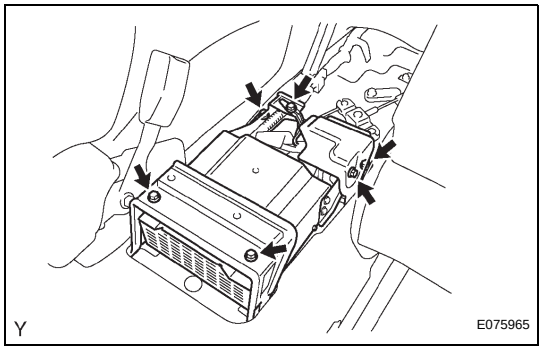
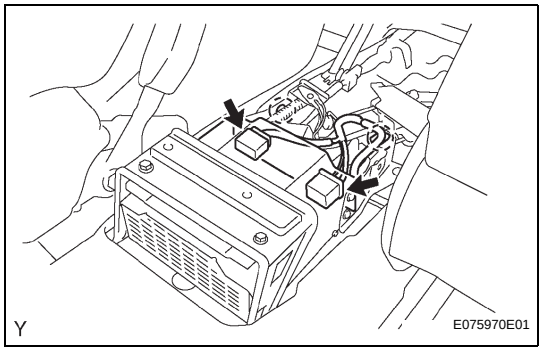
   (a) Remove the 6 bolts.



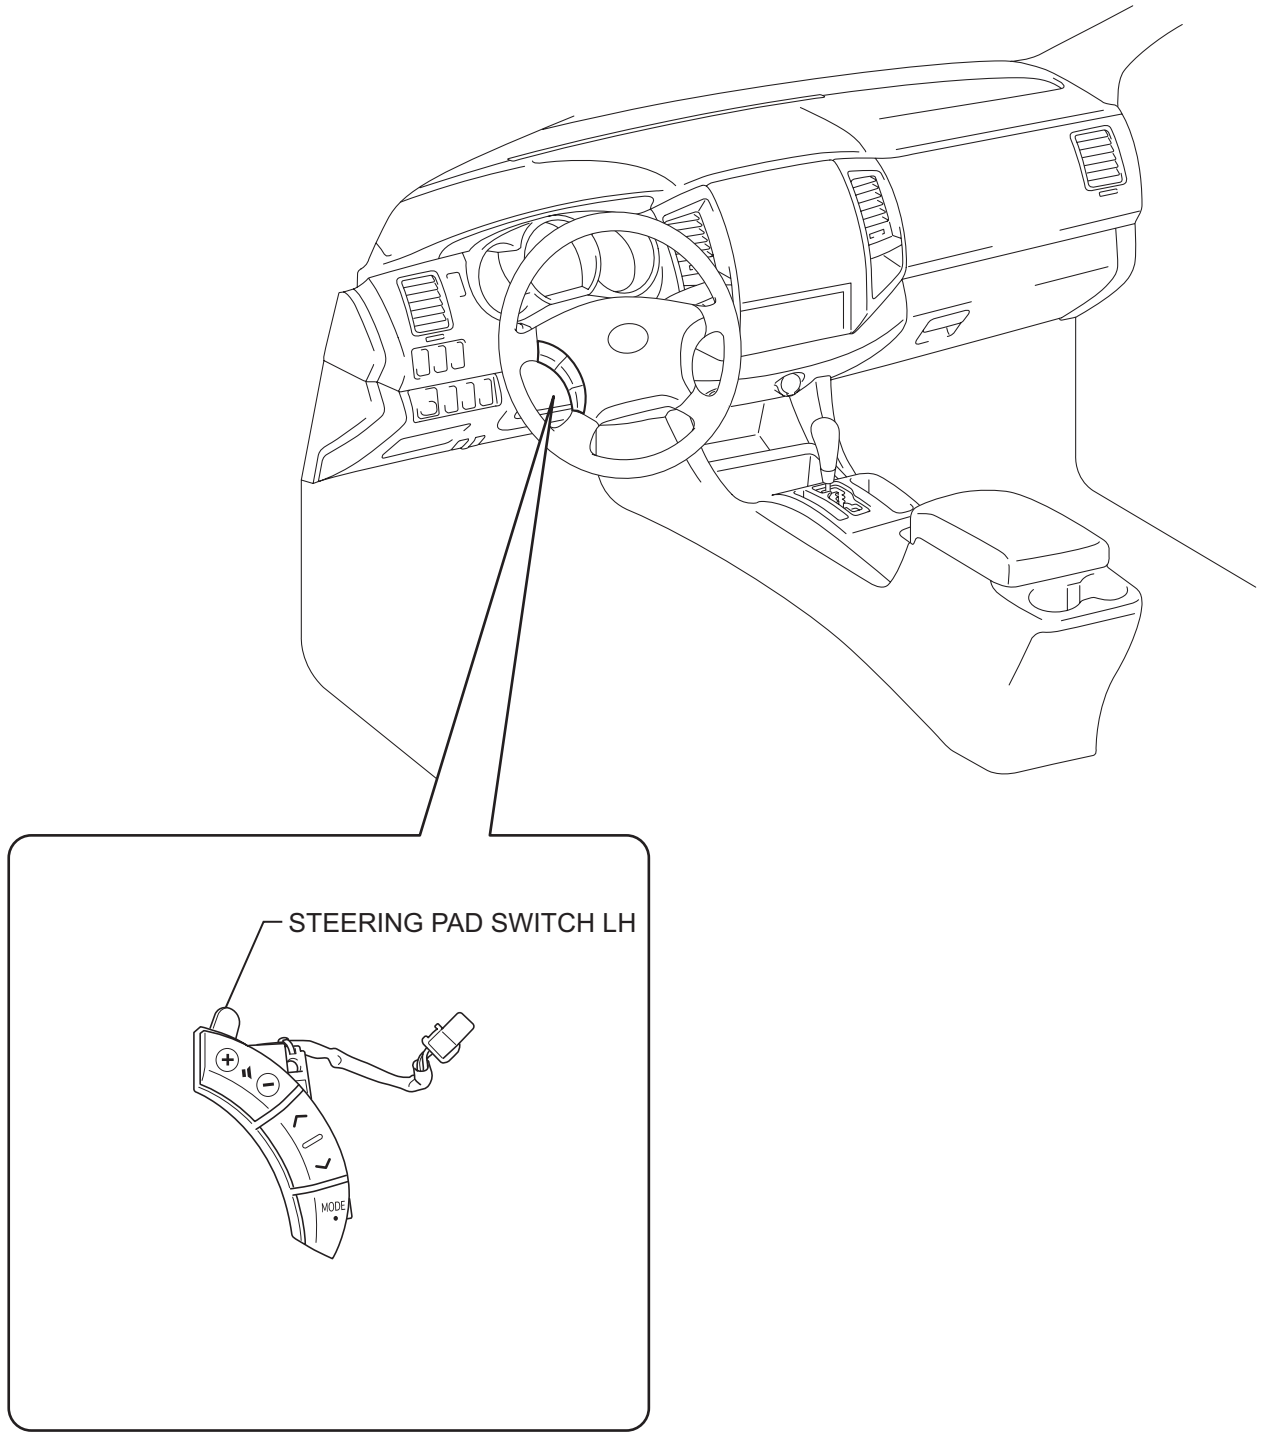
(b) Disconnect the 2 connectors and remove the 2 wire harness clamps.



STEERING PAD SWITCH

COMPONENTS

AV

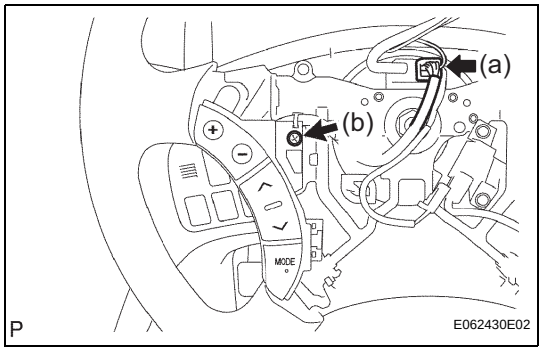


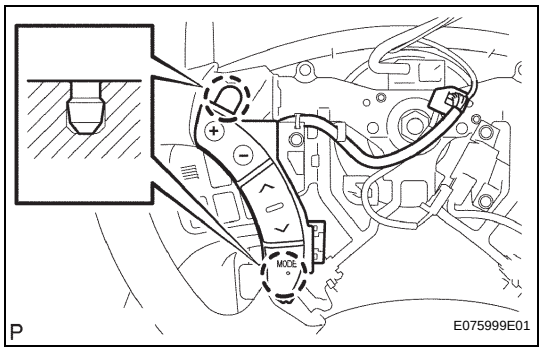
Y

E123176E01

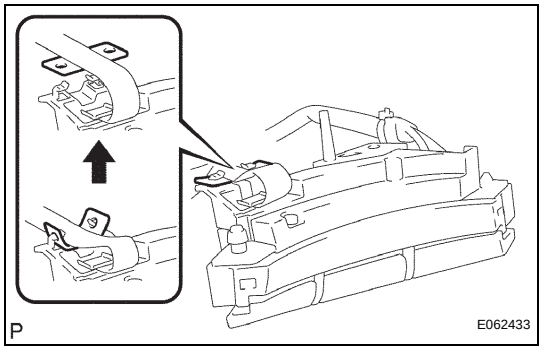
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
2. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page SR-9)**
3. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page SR-9)**
4. **REMOVE HORN BUTTON ASSEMBLY (See page RS-558)**
5. **REMOVE STEERING PAD SWITCH LH**
   (a) Disconnect the connector.
   (b) Remove the screw.

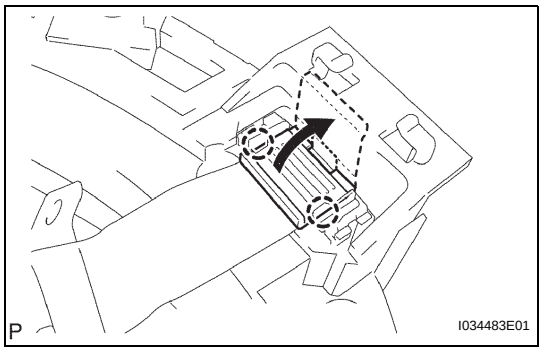




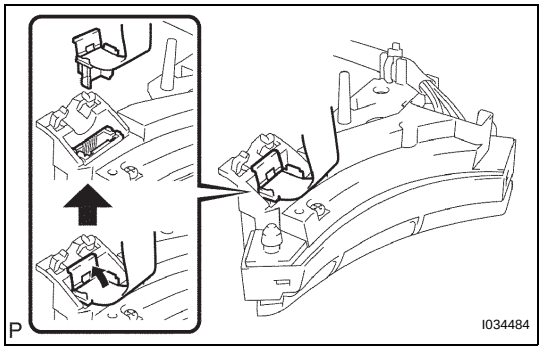
(c) Disengage the 2 pins and remove the steering pad switch LH.



(d) Release the tab of the steering pad switch cable from the steering pad switch LH as shown in the illustration.



(e) Disengage the 2 claws and open the latch on the top of the connector as shown in the illustration.

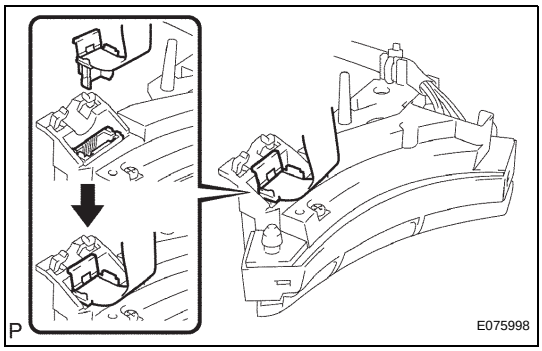


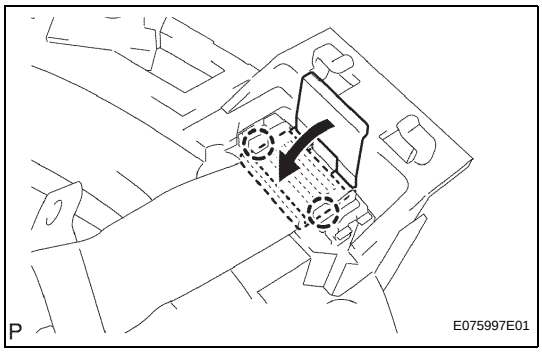
(f) Pull out the connector while pinching the latch with fingers and disconnect the steering pad switch cable from the steering pad switch LH.

INSTALLATION

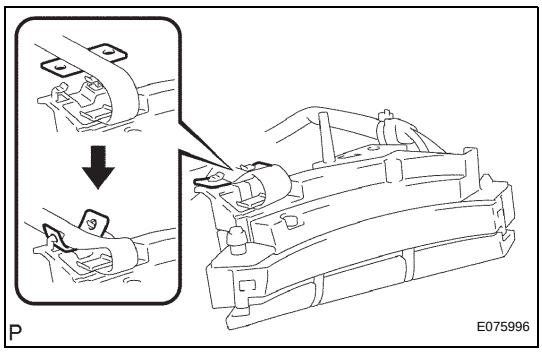
1. INSTALL STEERING PAD SWITCH LH

(a) Install the steering pad switch cable onto the steering pad switch LH while holding the connector cover.





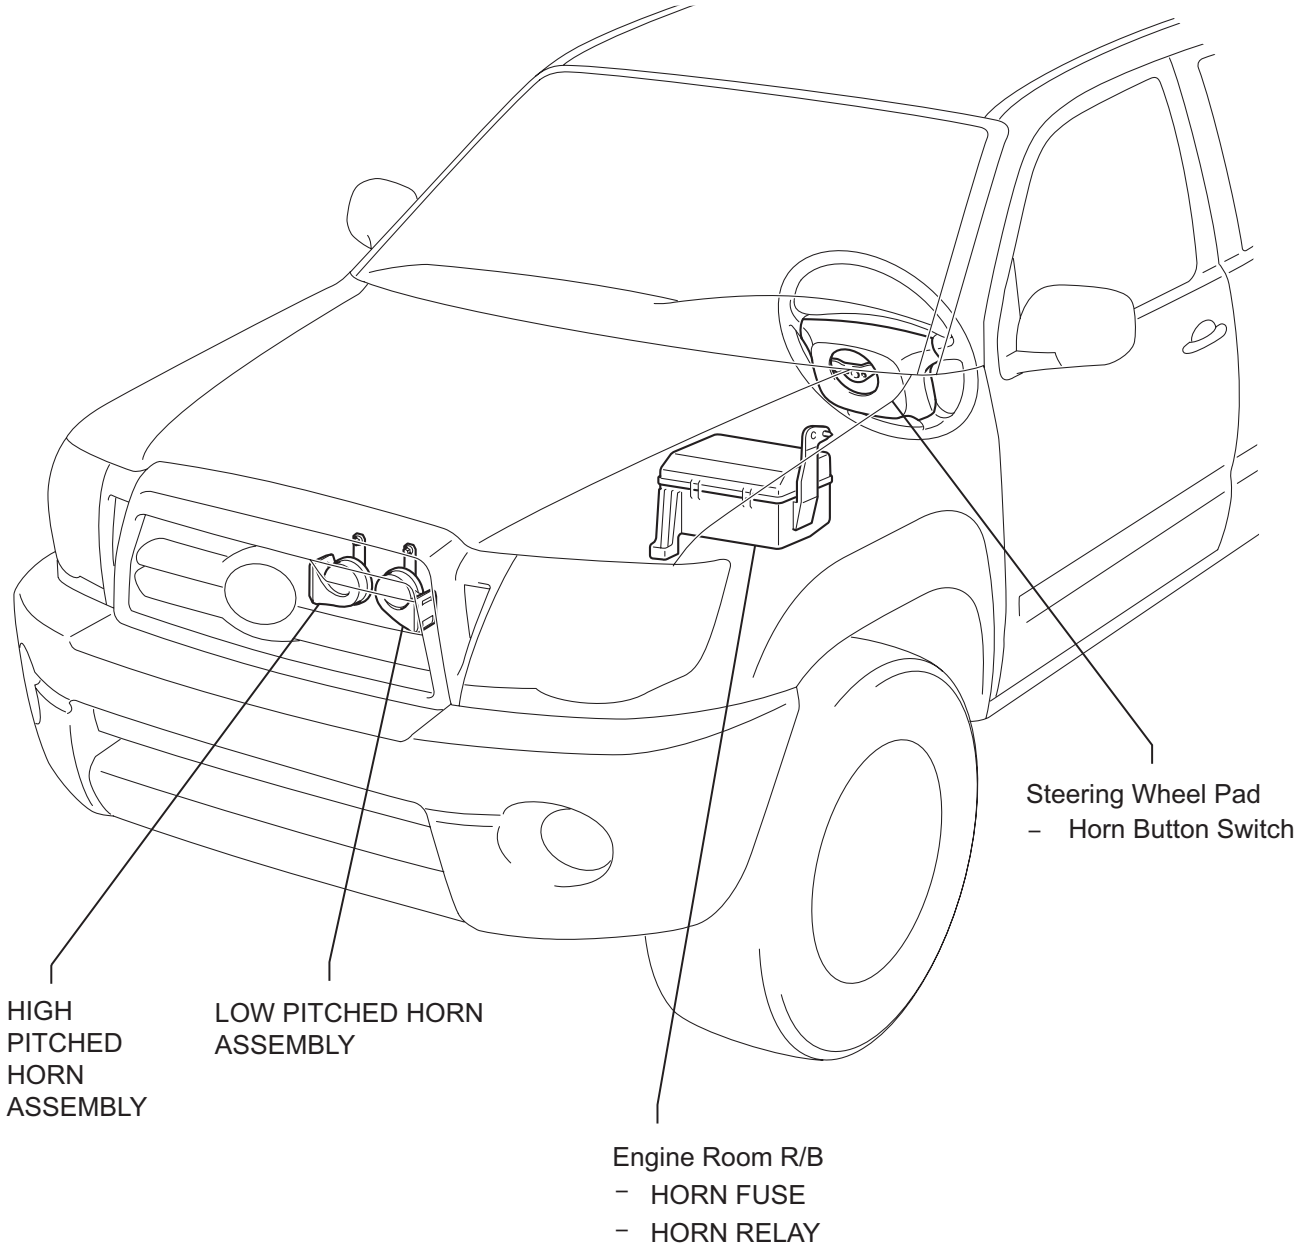
(b) Hold the connector cover down to engage the 2claws as shown in the illustration.



(c) Install the tab of the steering pad switch cable onto the steering pad switch LH as shown in the illustration.

HORN SYSTEM

COMPONENTS



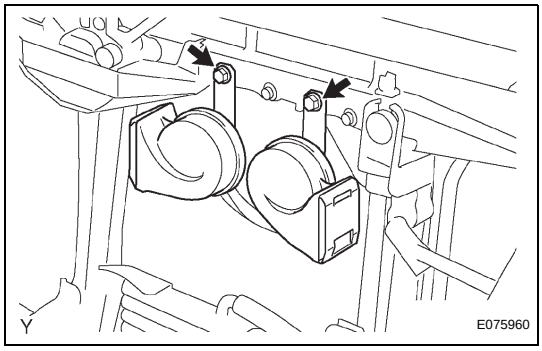
Y

E075994E01

HO

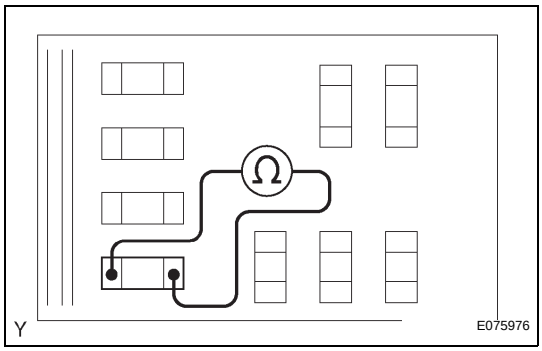
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE RADIATOR GRILLE (See page ET-4)**
3. **REMOVE HIGH PITCHED HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and horn.
4. **REMOVE LOW PITCHED HORN ASSEMBLY**



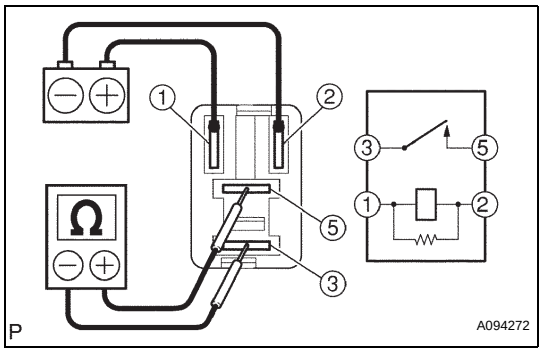
INSPECTION

1. **INSPECT HORN FUSE**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between each terminals.
      Standard resistance:
      Below 1 Ω
      If the result is not as specified, replace the fuse.



2. **INSPECT HORN RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance:

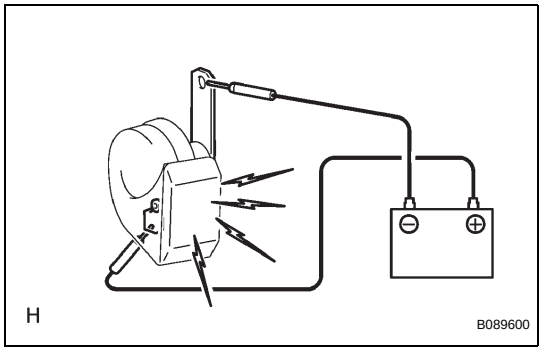
Tester Connection	Specified Condition
3-5	10 kΩ or higher
3-5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

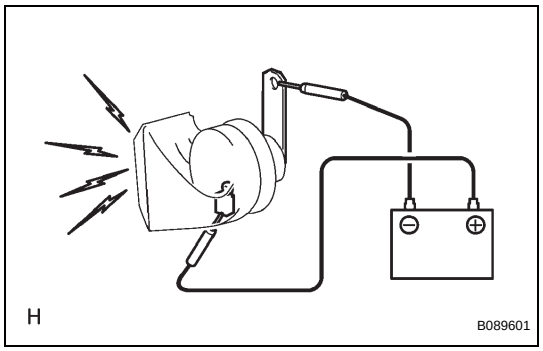


3. **INSPECT HIGH PITCHED HORN ASSEMBLY**
   (a) Check the operation.
      (1) Apply battery voltage, then check the horn.
      OK:

Measurement Condition	Specified Operation
Battery positive(+) → Terminal 1 Battery negative(-) → Horn bracket	Horn sounds

If the result is not as specified, replace the horn.





4. INSPECT LOW PITCHED HORN ASSEMBLY

(a) Check the operation.

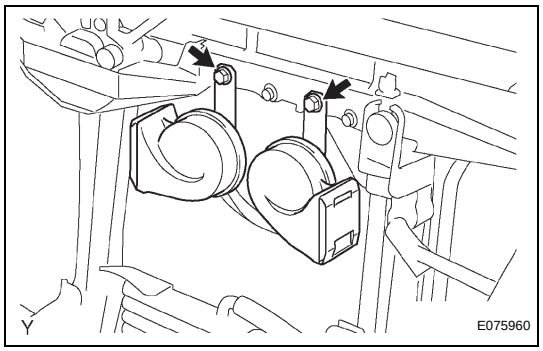
(1) Apply battery voltage, then check the horn.

OK:

Measurement Condition	Specified Operation
Battery positive(+) → Terminal 1 Battery negative(-) → Horn bracket	Horn sounds

If the result is not as specified, replace the horn.

If all the check results are as specified above and the wire harness is normal, replace the horn button switch (steering wheel pad) (See page RS-558).



INSTALLATION

1. INSTALL HIGH PITCHED HORN ASSEMBLY

(a) Place the stay onto the baffle part in the upper radiator support, and then install the horn with the bolt.

Torque: 9.9 N*m (101 kgf*cm, 73 ft.*lbf)

(b) Connect the connector.

2. INSTALL LOW PITCHED HORN ASSEMBLY

(a) Place the stay onto the baffle part in the upper radiator support, and then install the horn with the bolt.

Torque: 9.9 N*m (101 kgf*cm, 73 ft.*lbf)

(b) Connect the connector.

3. INSTALL RADIATOR GRILLE (See page ET-11)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

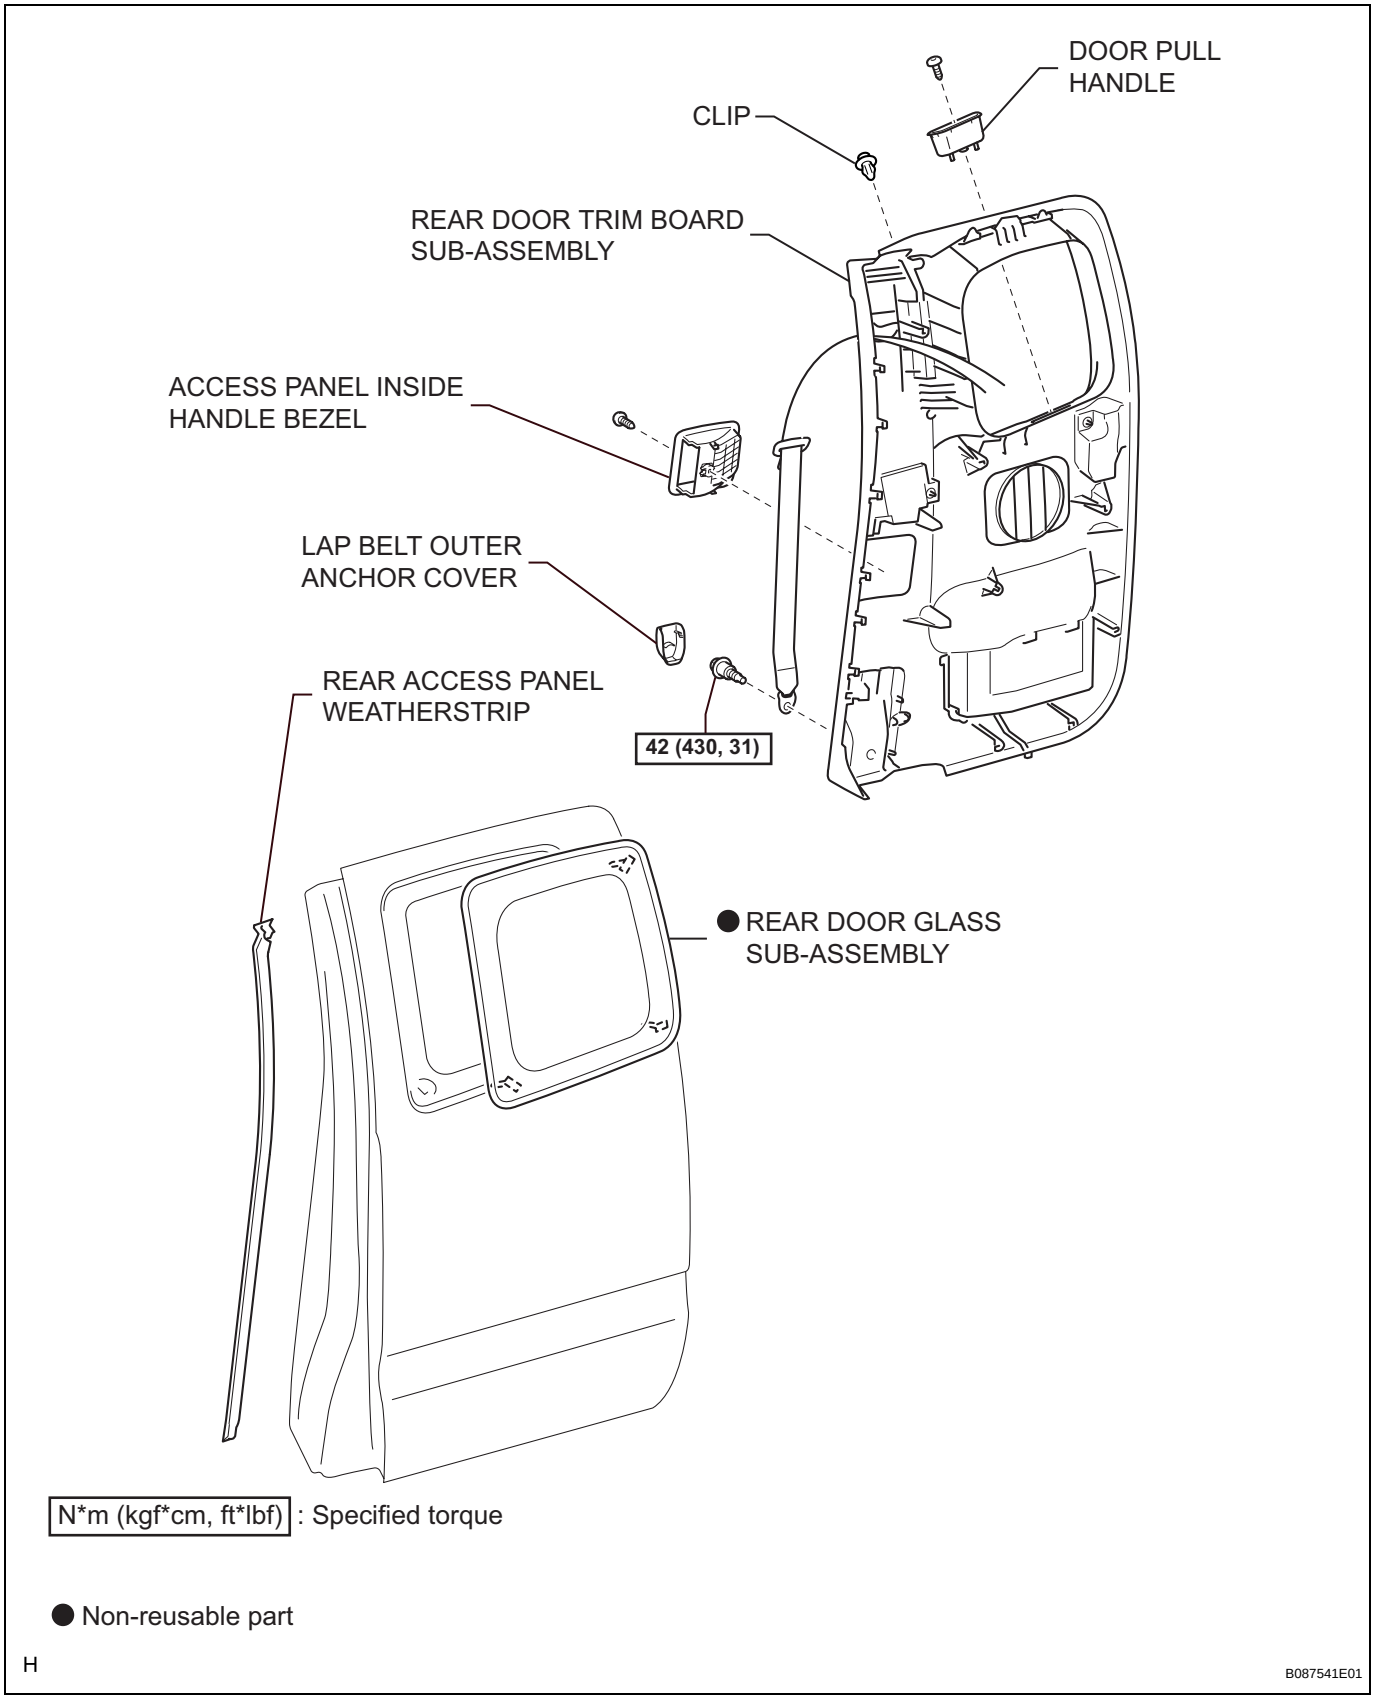
QUARTER WINDOW GLASS (for Access Cab)

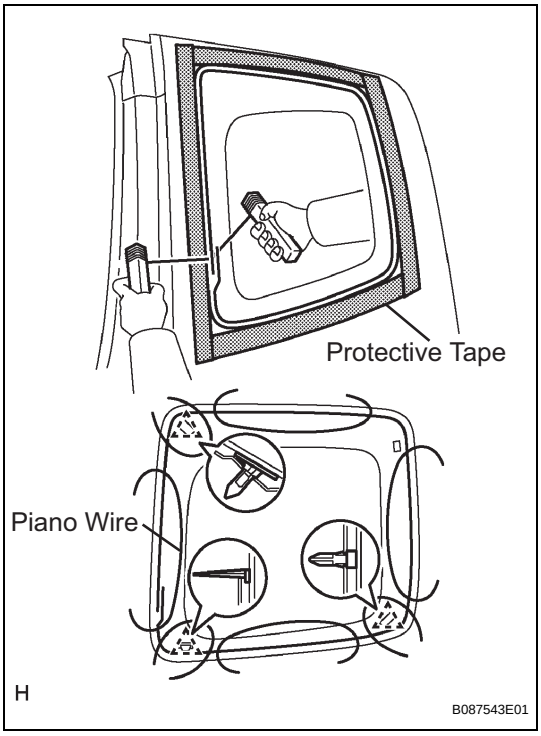
COMPONENTS

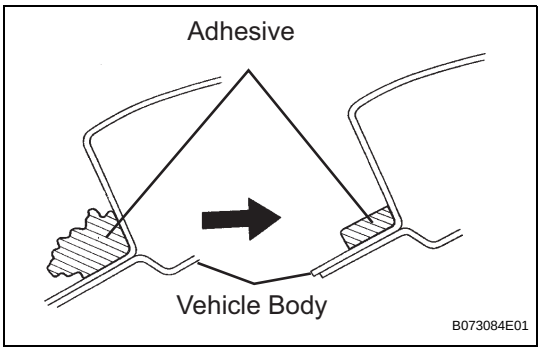


WS

REMOVAL

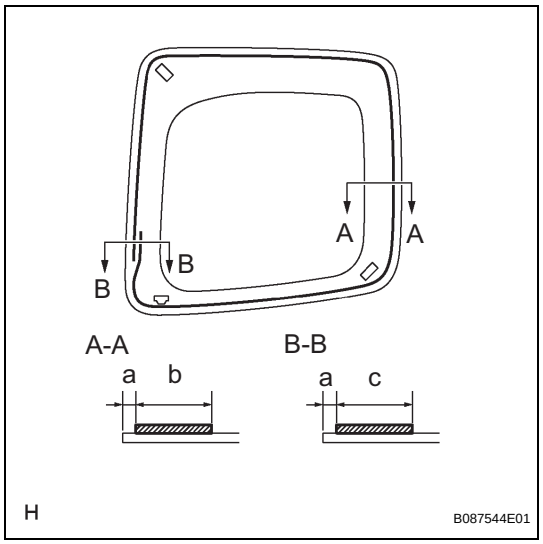
1. **REMOVE REAR ACCESS PANEL WEATHERSTRIP (See page ED-53)**
2. **REMOVE LAP BELT OUTER ANCHOR COVER (See page ED-53)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-53)**
4. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY**
   (a) Apply protective tape to the outer circumference of the quarter window, as shown in the illustration.
   (b) From the interior, insert piano wires between the vehicle body and quarter window, as shown in the illustration.
   (c) When separating the quarter window from the vehicle, be careful not to damage the vehicle's paint or exterior/interior ornaments.
   NOTICE:
   When separating the quarter window from the vehicle, be careful not to damage the vehicle's paint or exterior/interior ornaments.
   (d) Cut through the adhesive by pulling the piano wire around the quarter window.

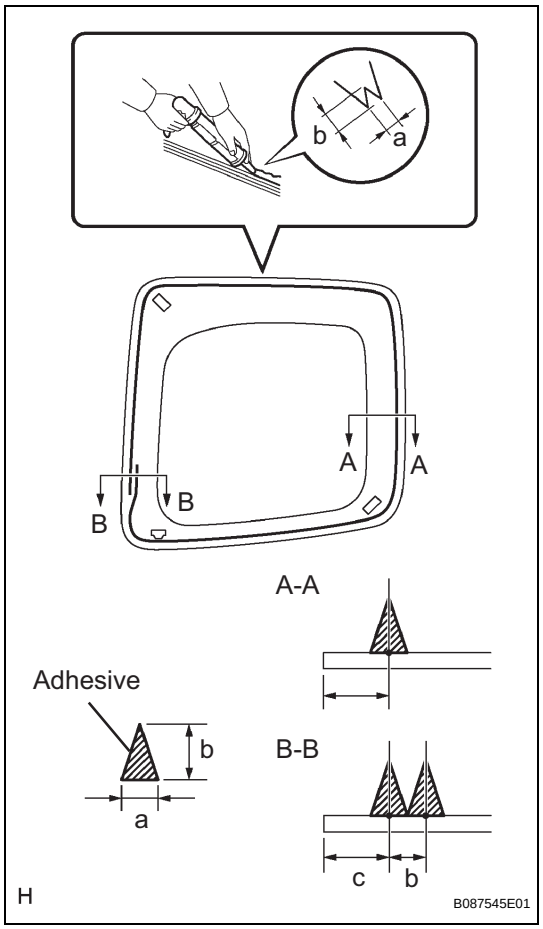




INSTALLATION

1. **CLEAN VEHICLE BODY**
   (a) Clean and shape the contact surface of the vehicle body.
      (1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.
      NOTICE:
      Be careful not to damage the vehicle body.
      HINT:
      Leave as much adhesive on the vehicle body as possible.
      (2) Clean the contact surface of the vehicle body with a shop rag saturated with cleaner.
      HINT:
      Even if all the adhesive has been removed, clean the vehicle body.
2. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY LH**
   (a) Using a brush, apply Primer M to the exposed part of the vehicle body.
   NOTICE:
   - **Allow the primer to dry for 3 minutes or more.**
   - **Do not apply Primer M to the adhesive.**





- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

(b) Using a brush or sponge, apply Primer G to the edge of the quarter window and contact surface.
Specification

Area	Measurement
a	5 mm (0.197 in.)
b	20 mm (0.787 in.)
c	26 mm (1.023 in.)

NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

HINT:
If Primer G is applied to any areas other than that which is specified, wipe off the primer with a clean shop rag before it dries.

(c) Apply adhesive.
Adhesive:
Part No. 08850-00801 or equivalent
(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.
HINT:
After cutting off the tip, use all adhesive within the time indicated in the table bellow.
Usage time frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.
(3) Apply adhesive to the quarter window as shown in the illustration.
Specification

Area	Measurement
a	8 mm (0.315 in.)
b	12 mm (0.472 in.)
c	13 mm (0.512 in.)

3. CHECK FOR LEAKAGE AND REPAIR
(a) Conduct a leak test after the adhesive has completely hardened.
(b) Seal any leakage with auto glass sealer.

4. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-63)

5. INSTALL LAP BELT OUTER ANCHOR COVER (See page ED-63)

6. INSTALL REAR ACCESS PANEL WEATHERSTRIP (See page ED-64)

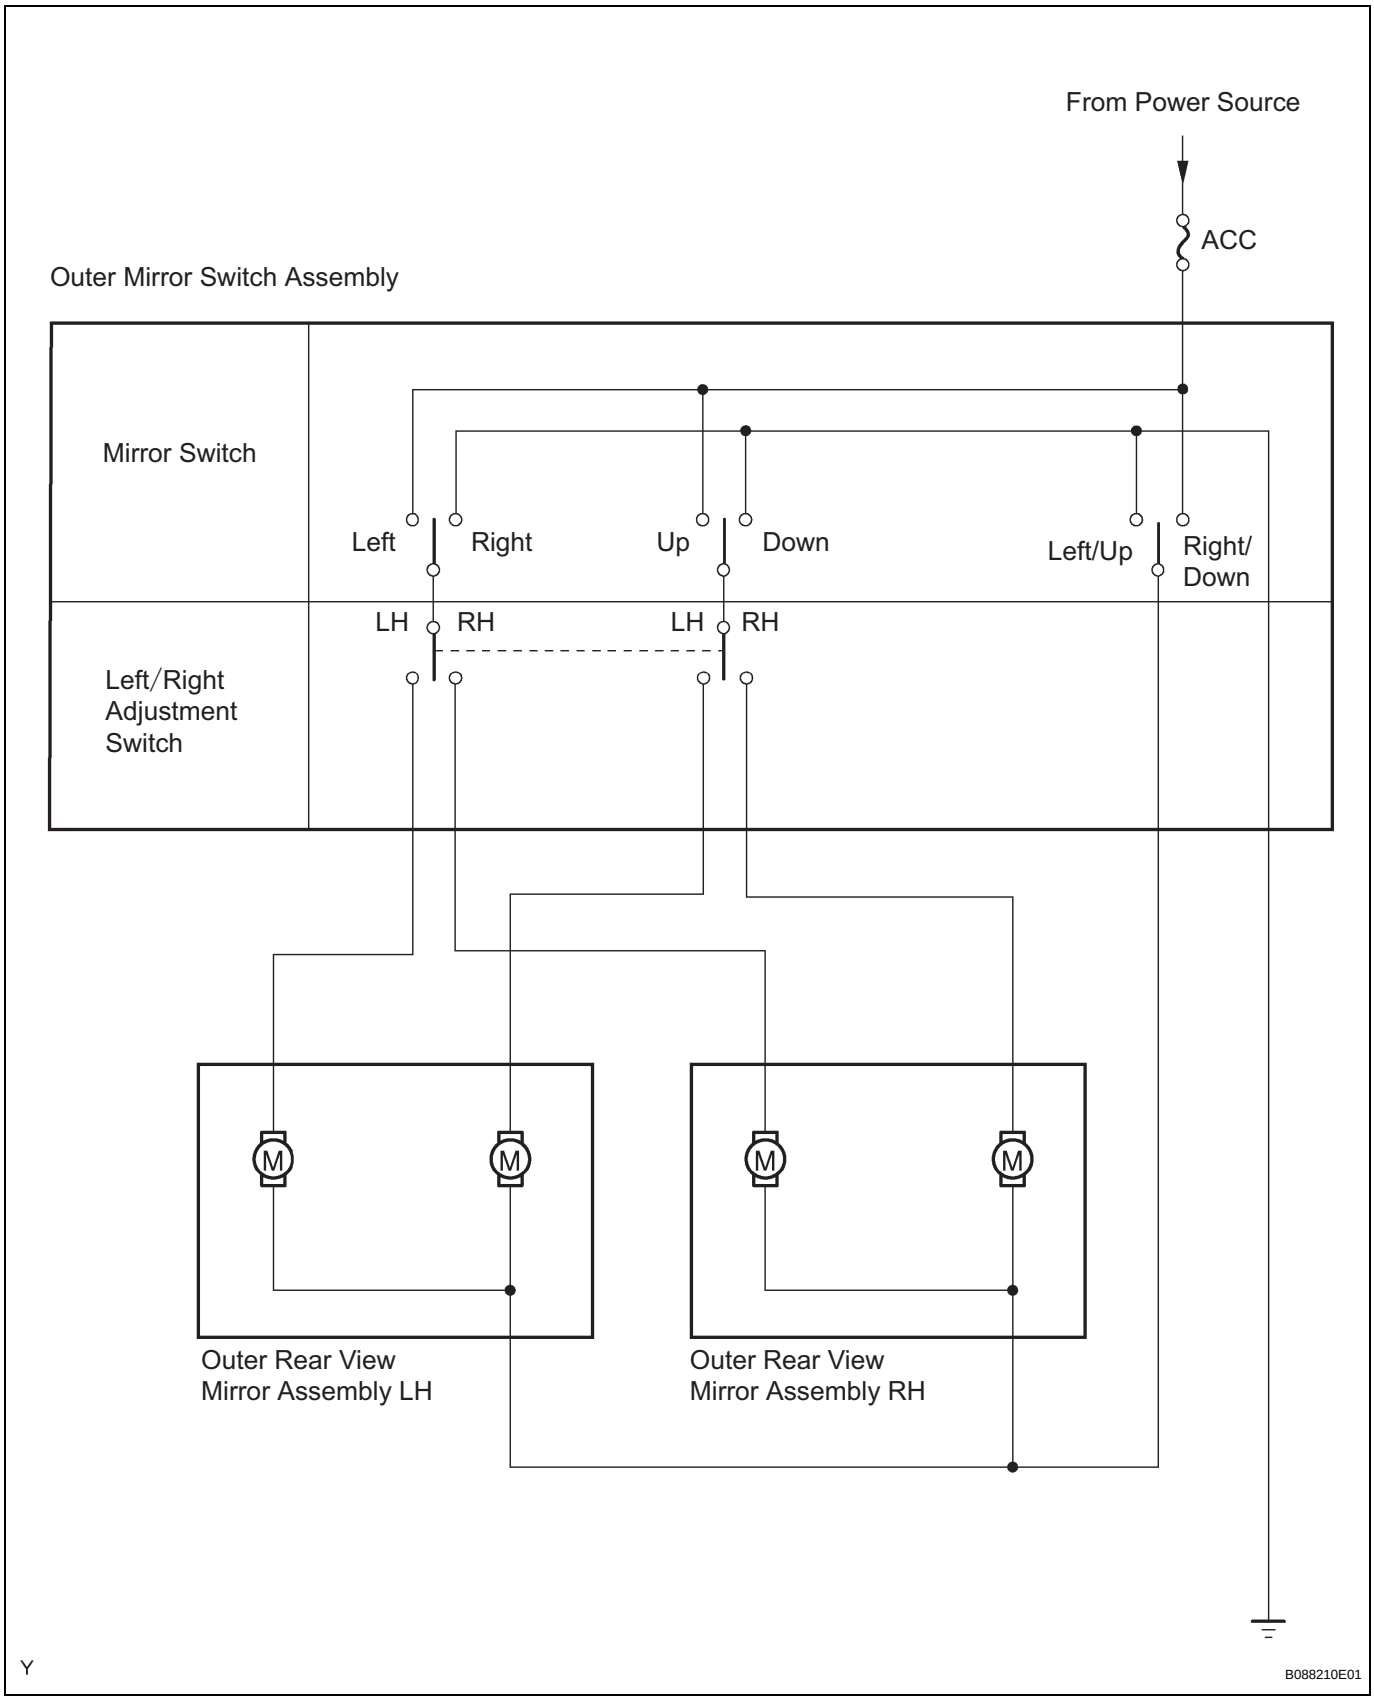
SYSTEM DIAGRAM



INNER REAR VIEW MIRROR

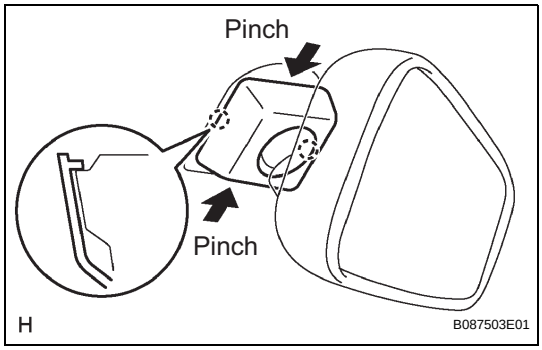
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ EC Mirror)

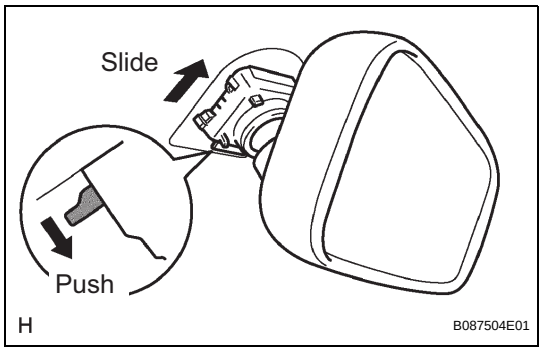
2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) w/o Automatic glare-resistant EC mirror:

(1) Pinch the cover and disengage the 2 claws, and remove the cover.



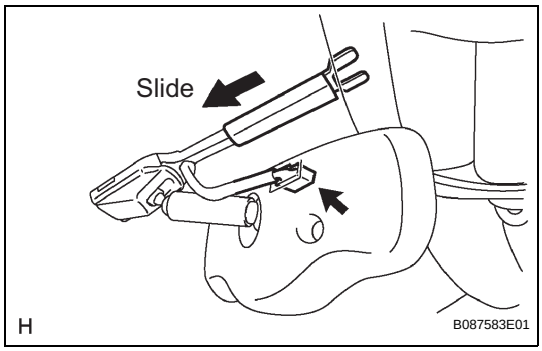
(2) Push the lever, and slide and remove the inner rear view mirror.



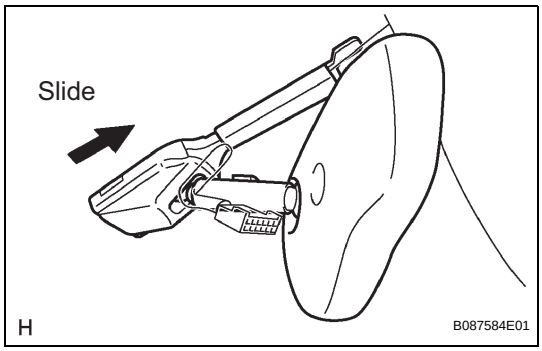
(b) w/ Automatic glare-resistant EC mirror.

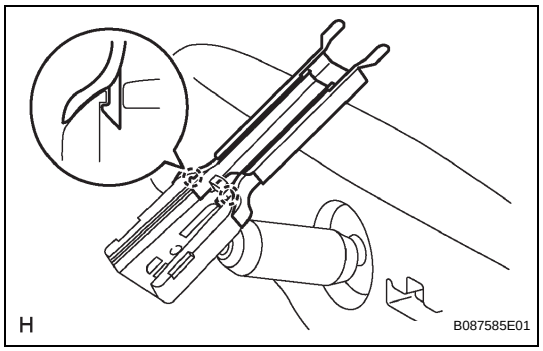
(1) Disconnect the EC mirror connector.

(2) Slide the inner rear view mirror cover.

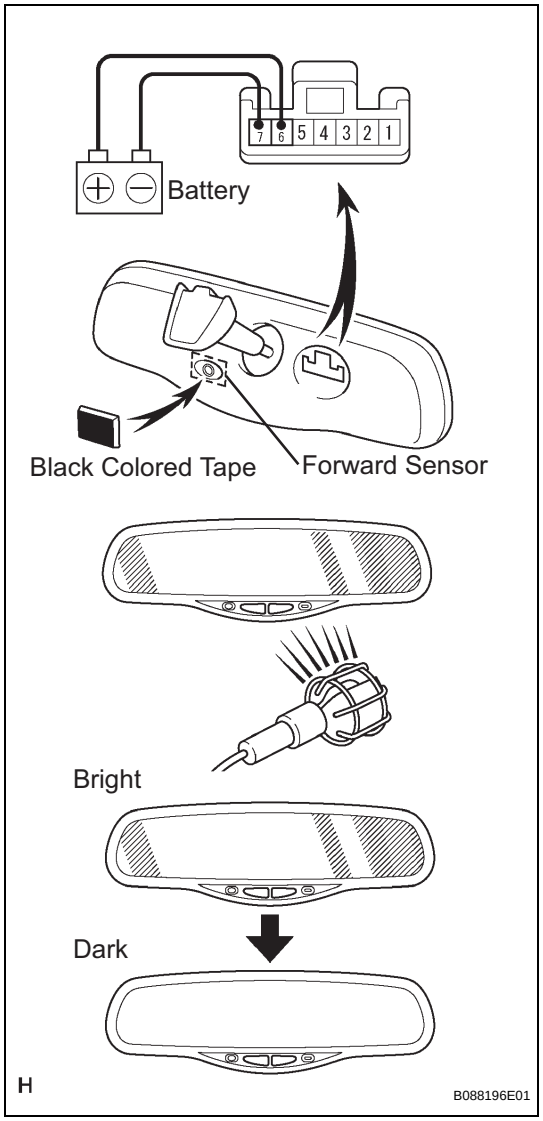


(3) Slide the inner rear view mirror.





(4) Disengage the 2 claws and remove the inner rear view mirror cover.



INSPECTION

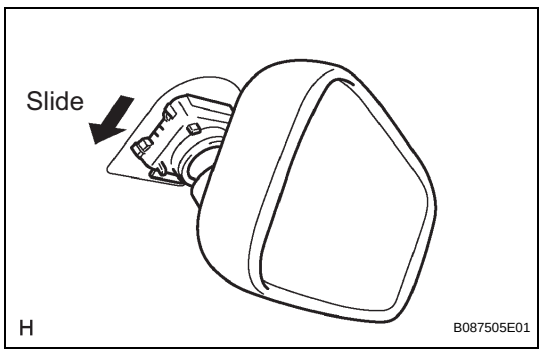
1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

(a) Check the operation.

(1) Connect the battery's positive (+) lead to terminal 6 and the negative (-) lead to terminal 7.

(2) Apply black colored tape to the forward sensor to prevent it from sensing.

(3) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.
If the result is not as specified, replace the inner rear view mirror.

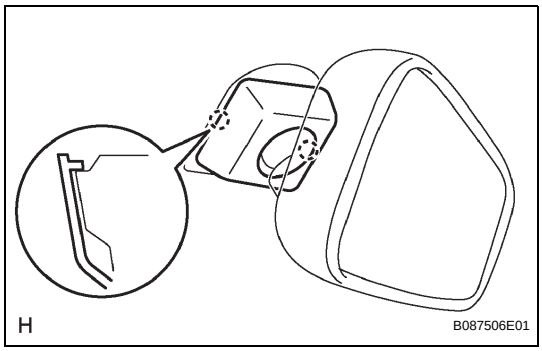


INSTALLATION

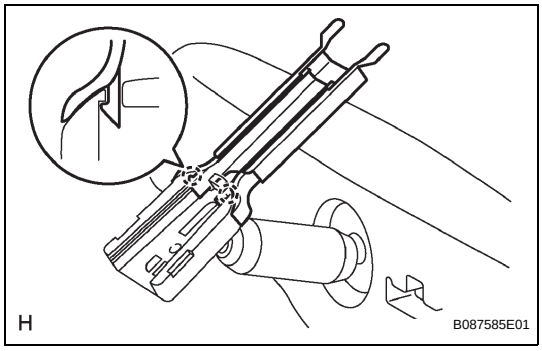
1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

(a) w/o Automatic glare-resistant EC mirror:

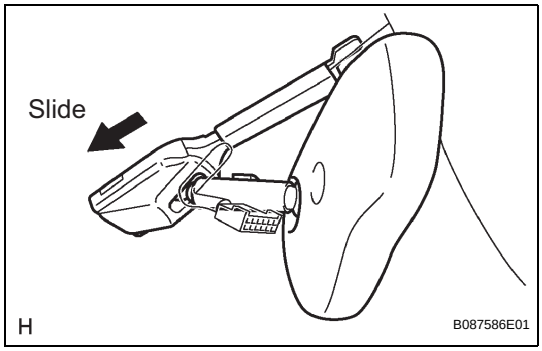
(1) Slide and install the inner rear view mirror.



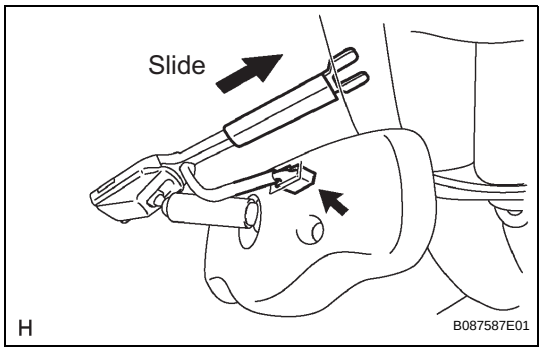
(2) Engage the 2 claws and install the cover.



(b) w/ Automatic glare-resistant EC mirror:
(1) Engage the 2 claws and install the inner rear view mirror cover.



(2) Slide and install the inner rear view mirror.

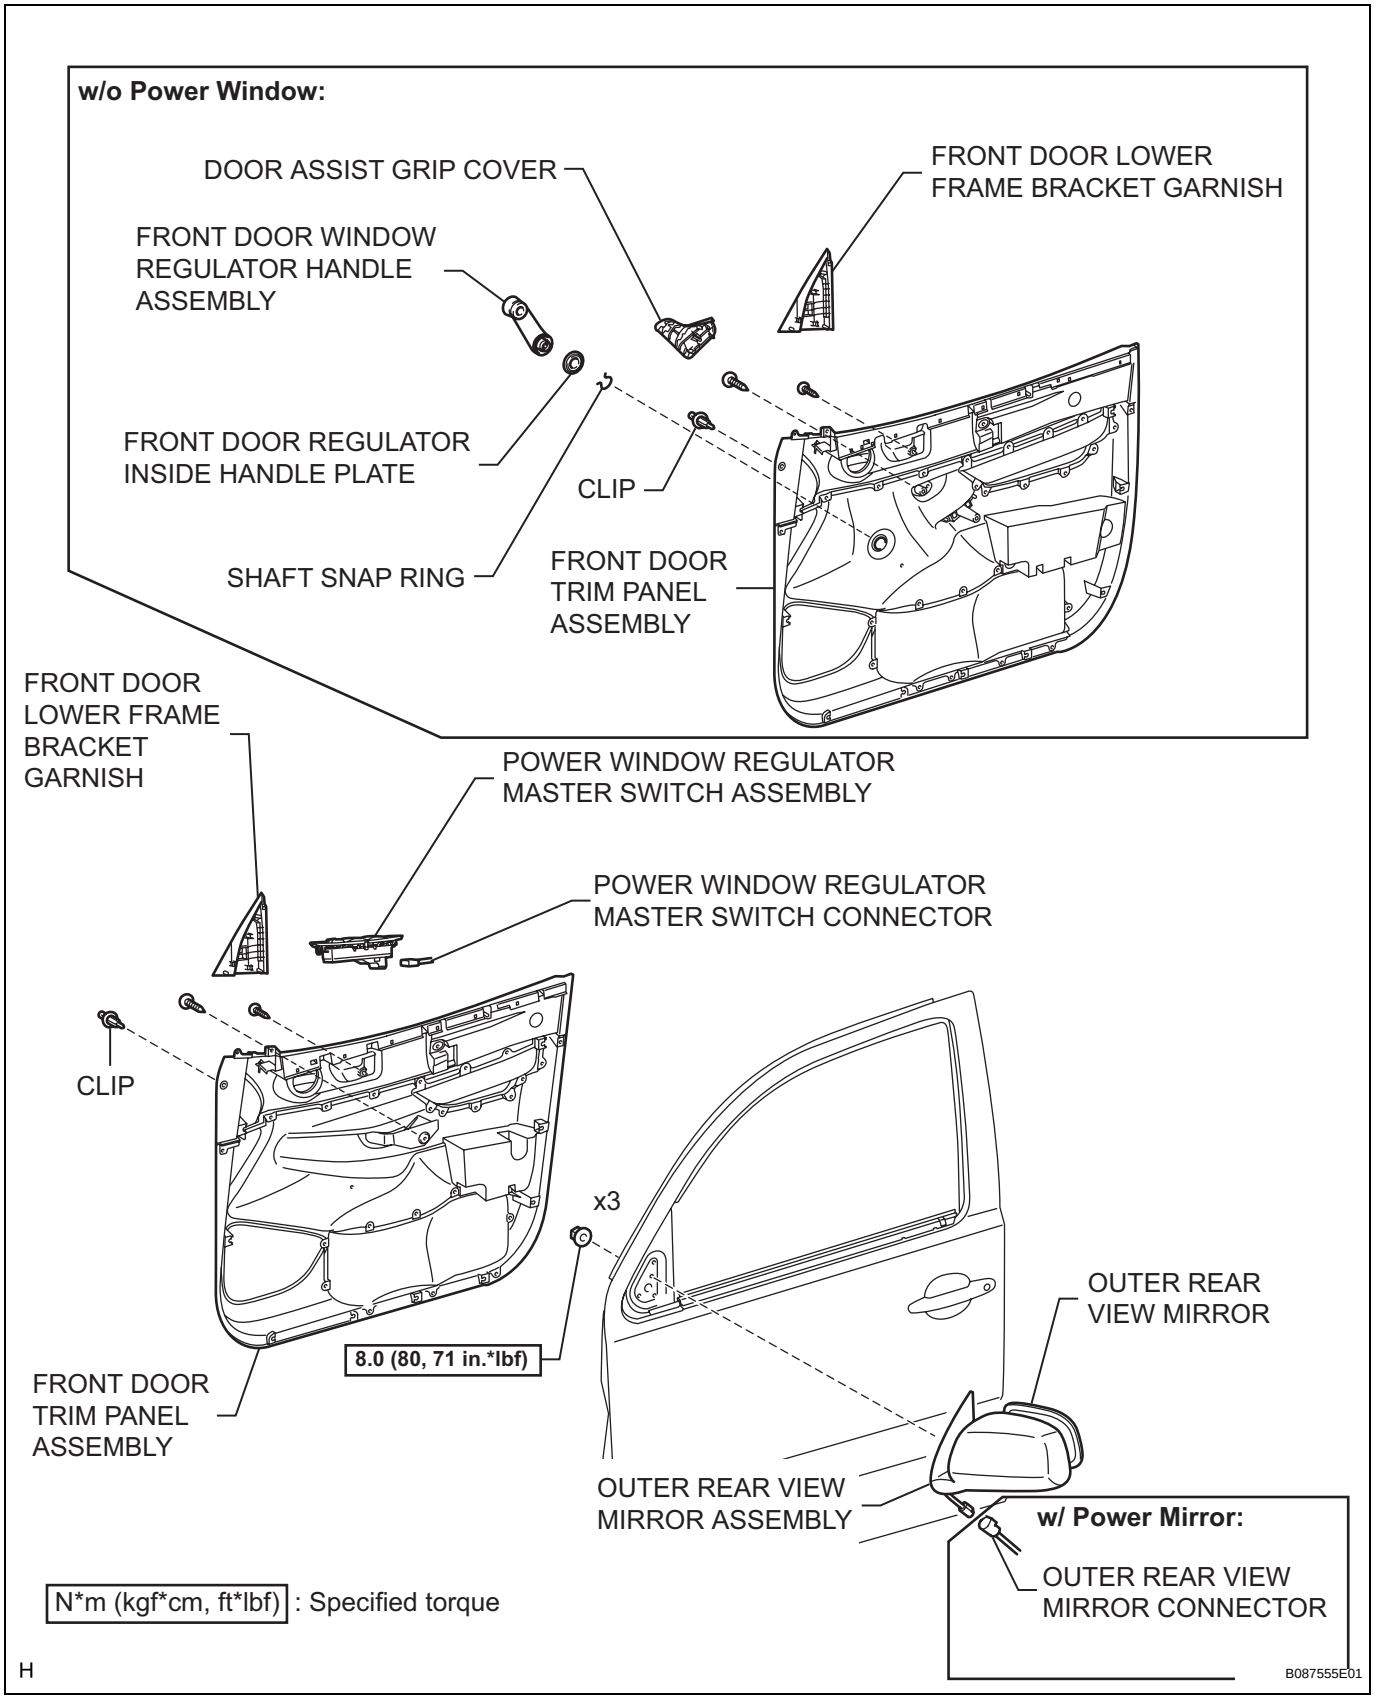


(3) Slide the inner rear view mirror cover.
(4) Connect the EC mirror connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ EC Mirror)
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

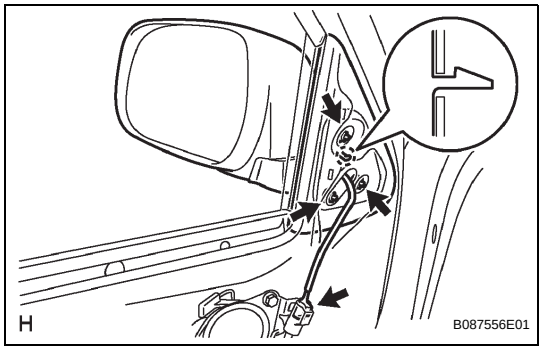
OUTER REAR VIEW MIRROR

COMPONENTS

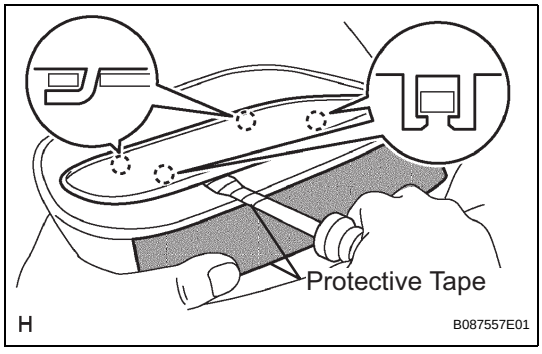


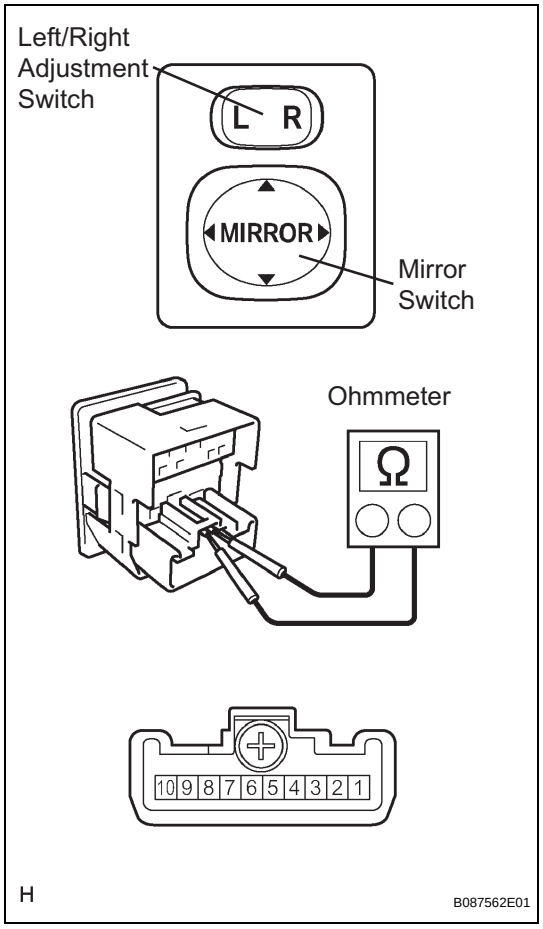
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Power Window) (See page ED-13)**
3. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/o Power Window) (See page ED-34)**
4. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (See page ED-34)**
5. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Double Cab) (See page ED-13)**
6. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Access Cab) (See page ED-13)**
7. **REMOVE FRONT DOOR TRIM PANEL ASSEMBLY (w/ Power Window) (See page ED-14)**
8. **REMOVE FRONT DOOR TRIM PANEL ASSEMBLY (w/ o Power Window) (See page ED-35)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY**
   (a) Disconnect the outer rear view mirror connector (w/ Power mirror).
   (b) Remove the 3 nuts.
   (c) Disengage the claw and remove the outer rear view mirror.



10. **REMOVE OUTER REAR VIEW MIRROR**
    (a) Apply protective tape to the outer circumference of the outer rear view mirror, as shown in the illustration.
    (b) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws.
    (c) Disengage the 2 claws and remove the outer rear view mirror.





OUTER MIRROR SWITCH

INSPECTION

1. INSPECT OUTER MIRROR SWITCH ASSEMBLY

(a) Check the resistance.

(1) Press L on the left/right adjustment switch.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard

Terminal Connection	Mirror Switch Condition	Specified Condition
4 (VL) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
4 (VL) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
5 (HL) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below1 Ω
5 (HL) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

If the result is not as specified, replace the outer mirror switch.

(3) Press R on the left/right adjustment switch.

(4) Using an ohmmeter, measure the resistance between the terminals.

Standard

Terminal Connection	Mirror Switch Condition	Specified Condition
3 (VR) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
3 (VR) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
2 (HR) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
2 (HR) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

If the result is not as specified, replace the outer mirror switch.

INSTRUMENT PANEL SAFETY PAD

PRECAUTION

1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the SRS airbag NOTICE (see page RS-1).

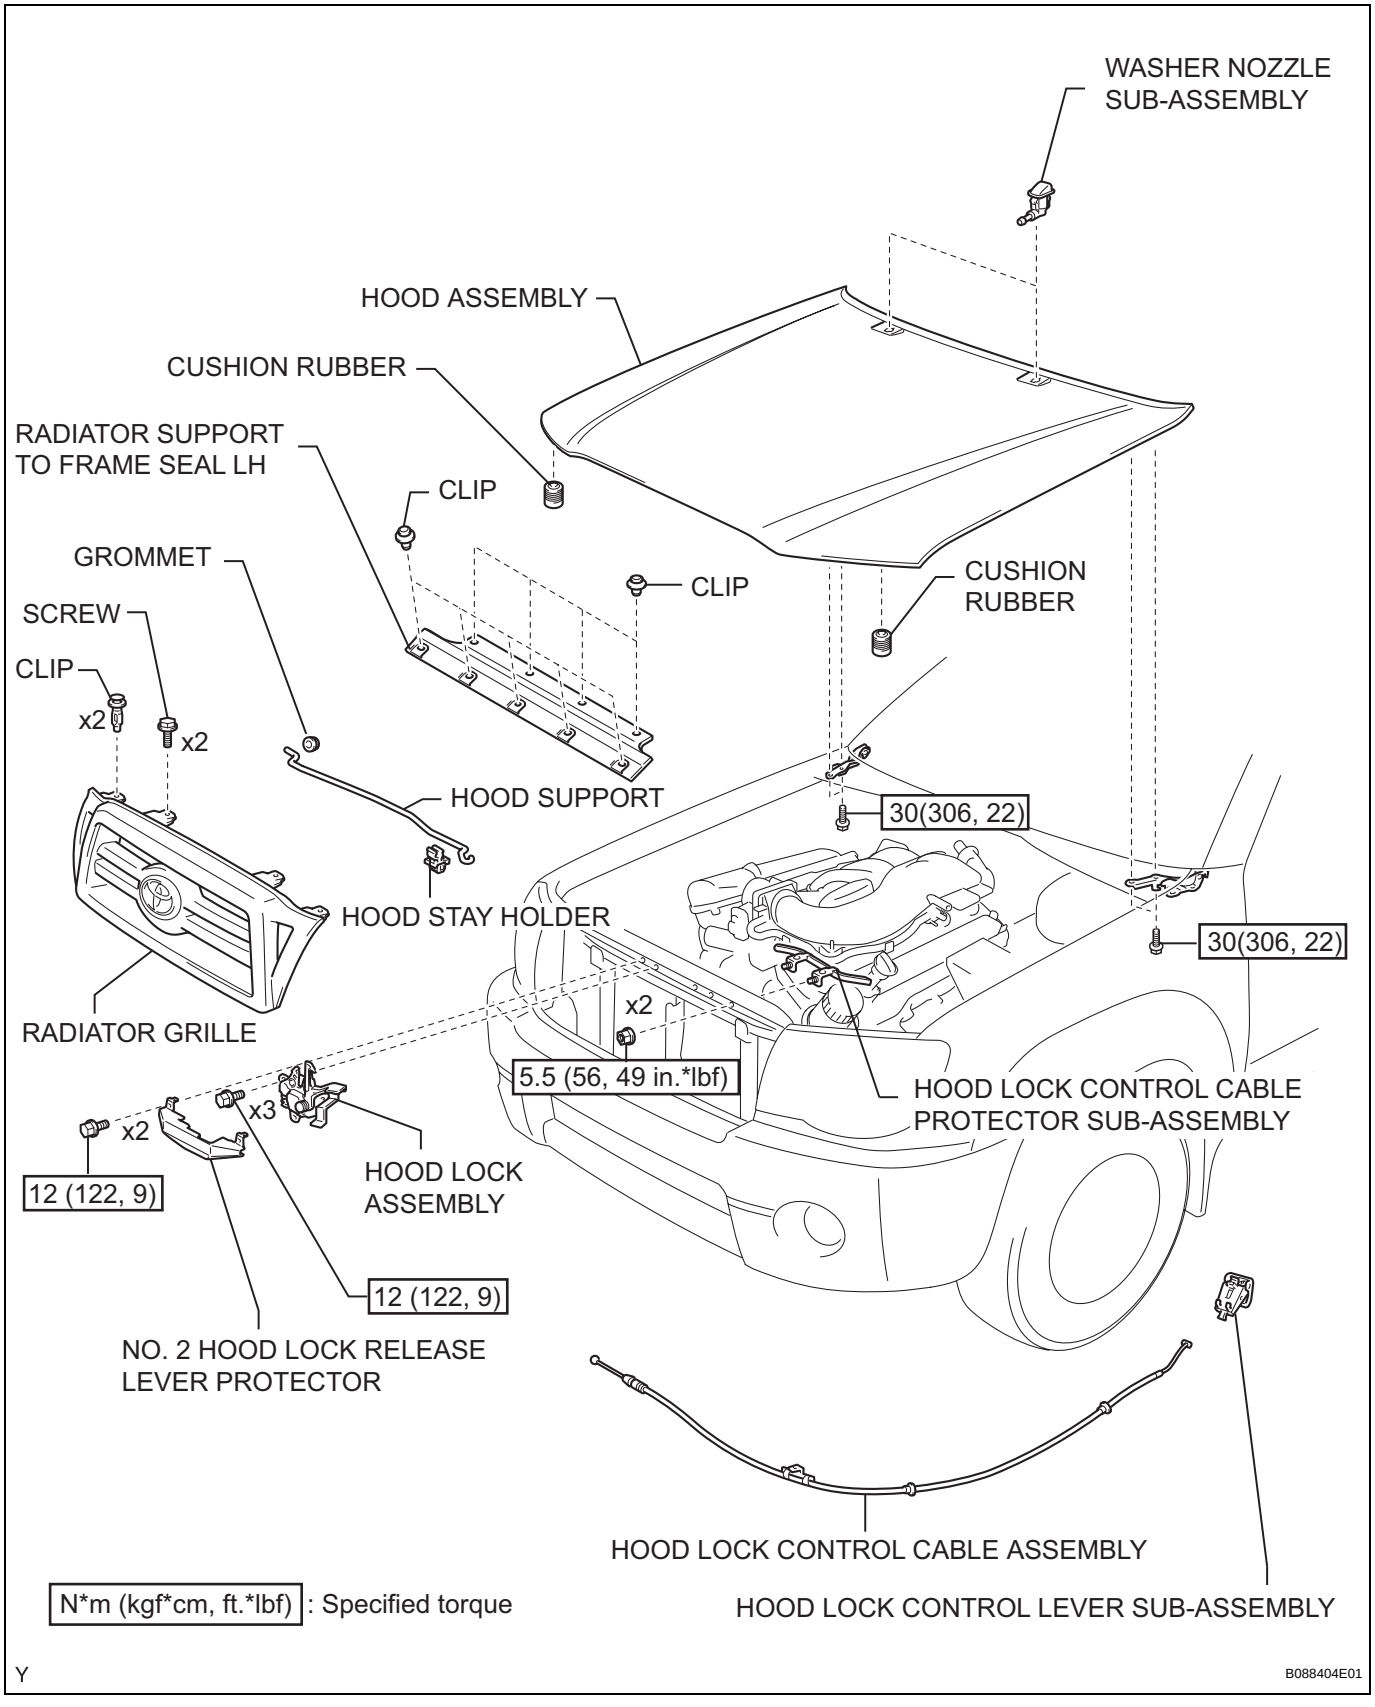
HOOD

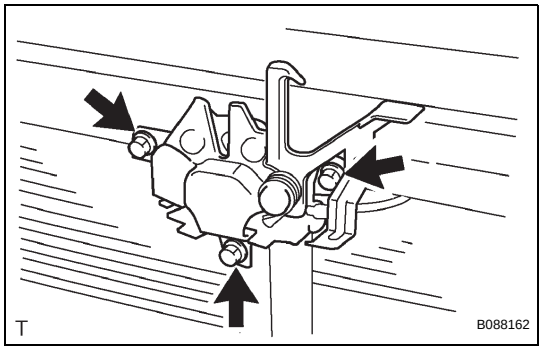
COMPONENTS



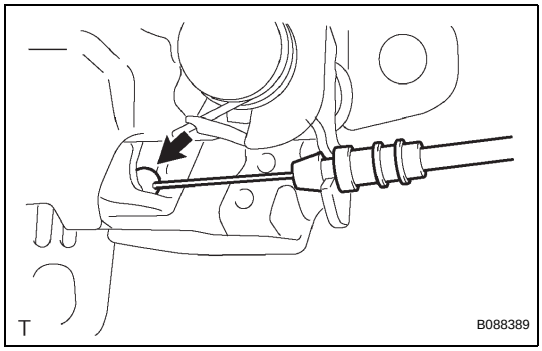
DISASSEMBLY

HINT:
For bolts without torque specifications, check the standard bolt chart (See page SS-2).

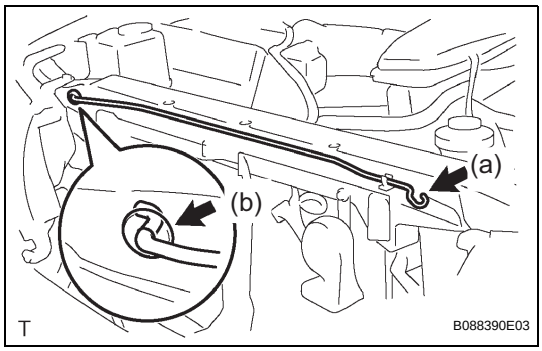
1. **REMOVE RADIATOR GRILLE (See page ET-4)**
2. **REMOVE NO. 2 HOOD LOCK RELEASE LEVER PROTECTOR (See page ED-5)**
3. **REMOVE HOOD LOCK ASSEMBLY**
   (a) Remove the 3 bolts.



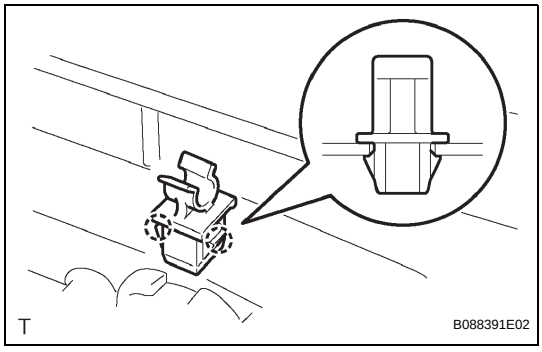
(b) Disconnect the hood lock control cable assembly, then remove the hood lock assembly.

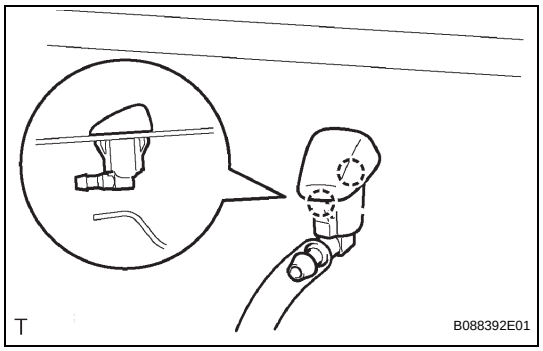


4. **REMOVE HOOD SUPPORT**
   (a) Remove the hood support.
   (b) Remove the grommet.



(c) Using a clip remover, disengage the 2 claws and remove the hood stay holder.

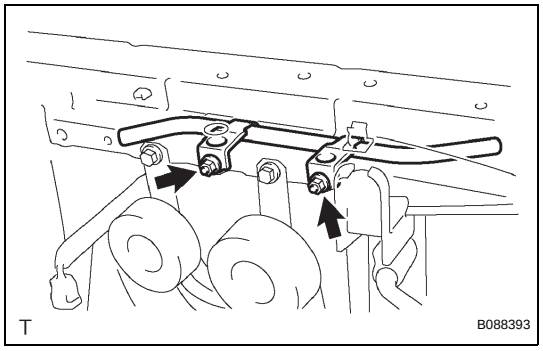




5. REMOVE WASHER NOZZLE SUB-ASSEMBLY

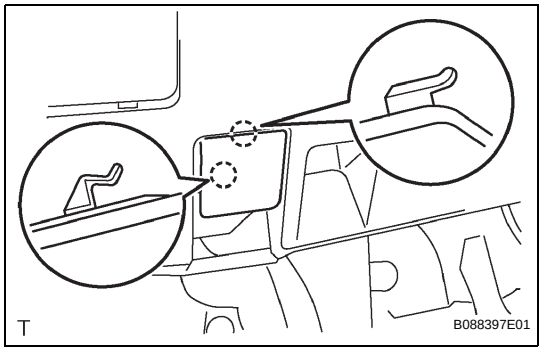
(a) Disengage the 2 claws and remove the washer nozzle sub-assembly.

(b) Disconnect the washer hose.



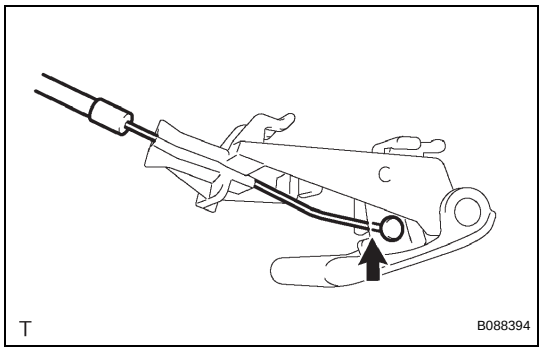
6. REMOVE HOOD LOCK CONTROL CABLE PROTECTOR SUB-ASSEMBLY

(a) Remove the 2 nuts, then remove the hood lock control cable protector sub-assembly.

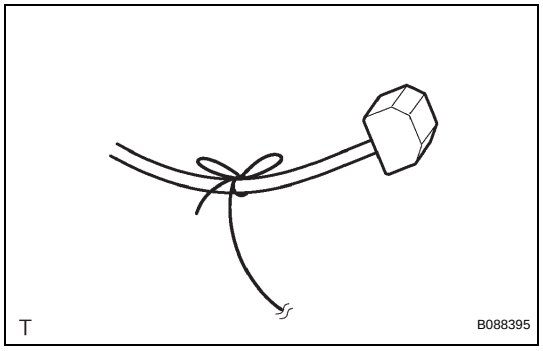


7. REMOVE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Disengage the 2 claws.



(b) Disconnect the hood lock control cable assembly and remove the hood lock control lever sub-assembly.



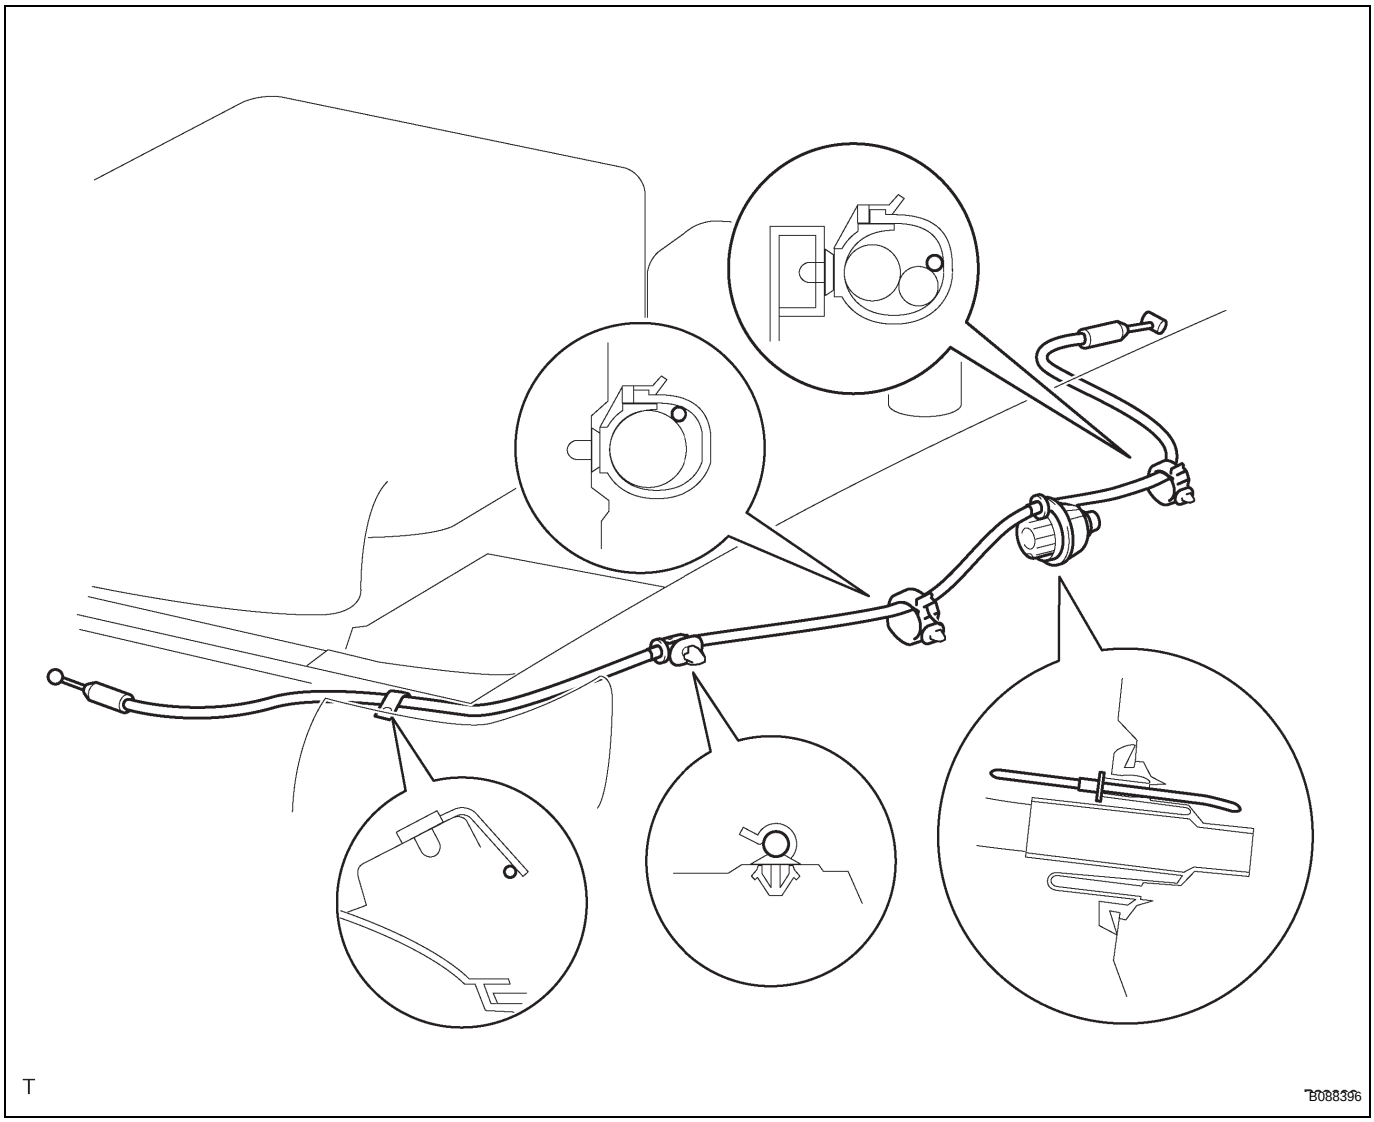
8. REMOVE HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Tie a piece of string to the tip of the hood lock control cable assembly.

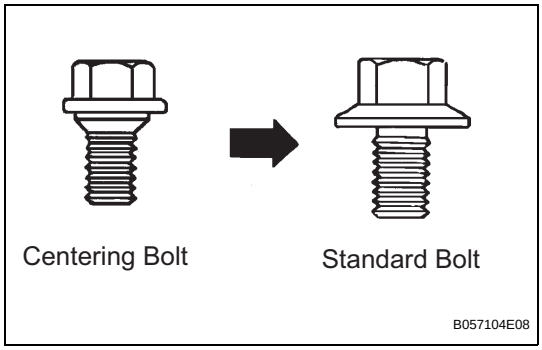
HINT:

Use a piece of string which is longer than the hood lock control cable assembly.

(b) Remove the hood lock control cable assembly referring to the illustration.



NOTICE:
Leave the string inside the wire harness grommet for the installation of the hood lock control cable assembly.



ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute the standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (See page SS-2).

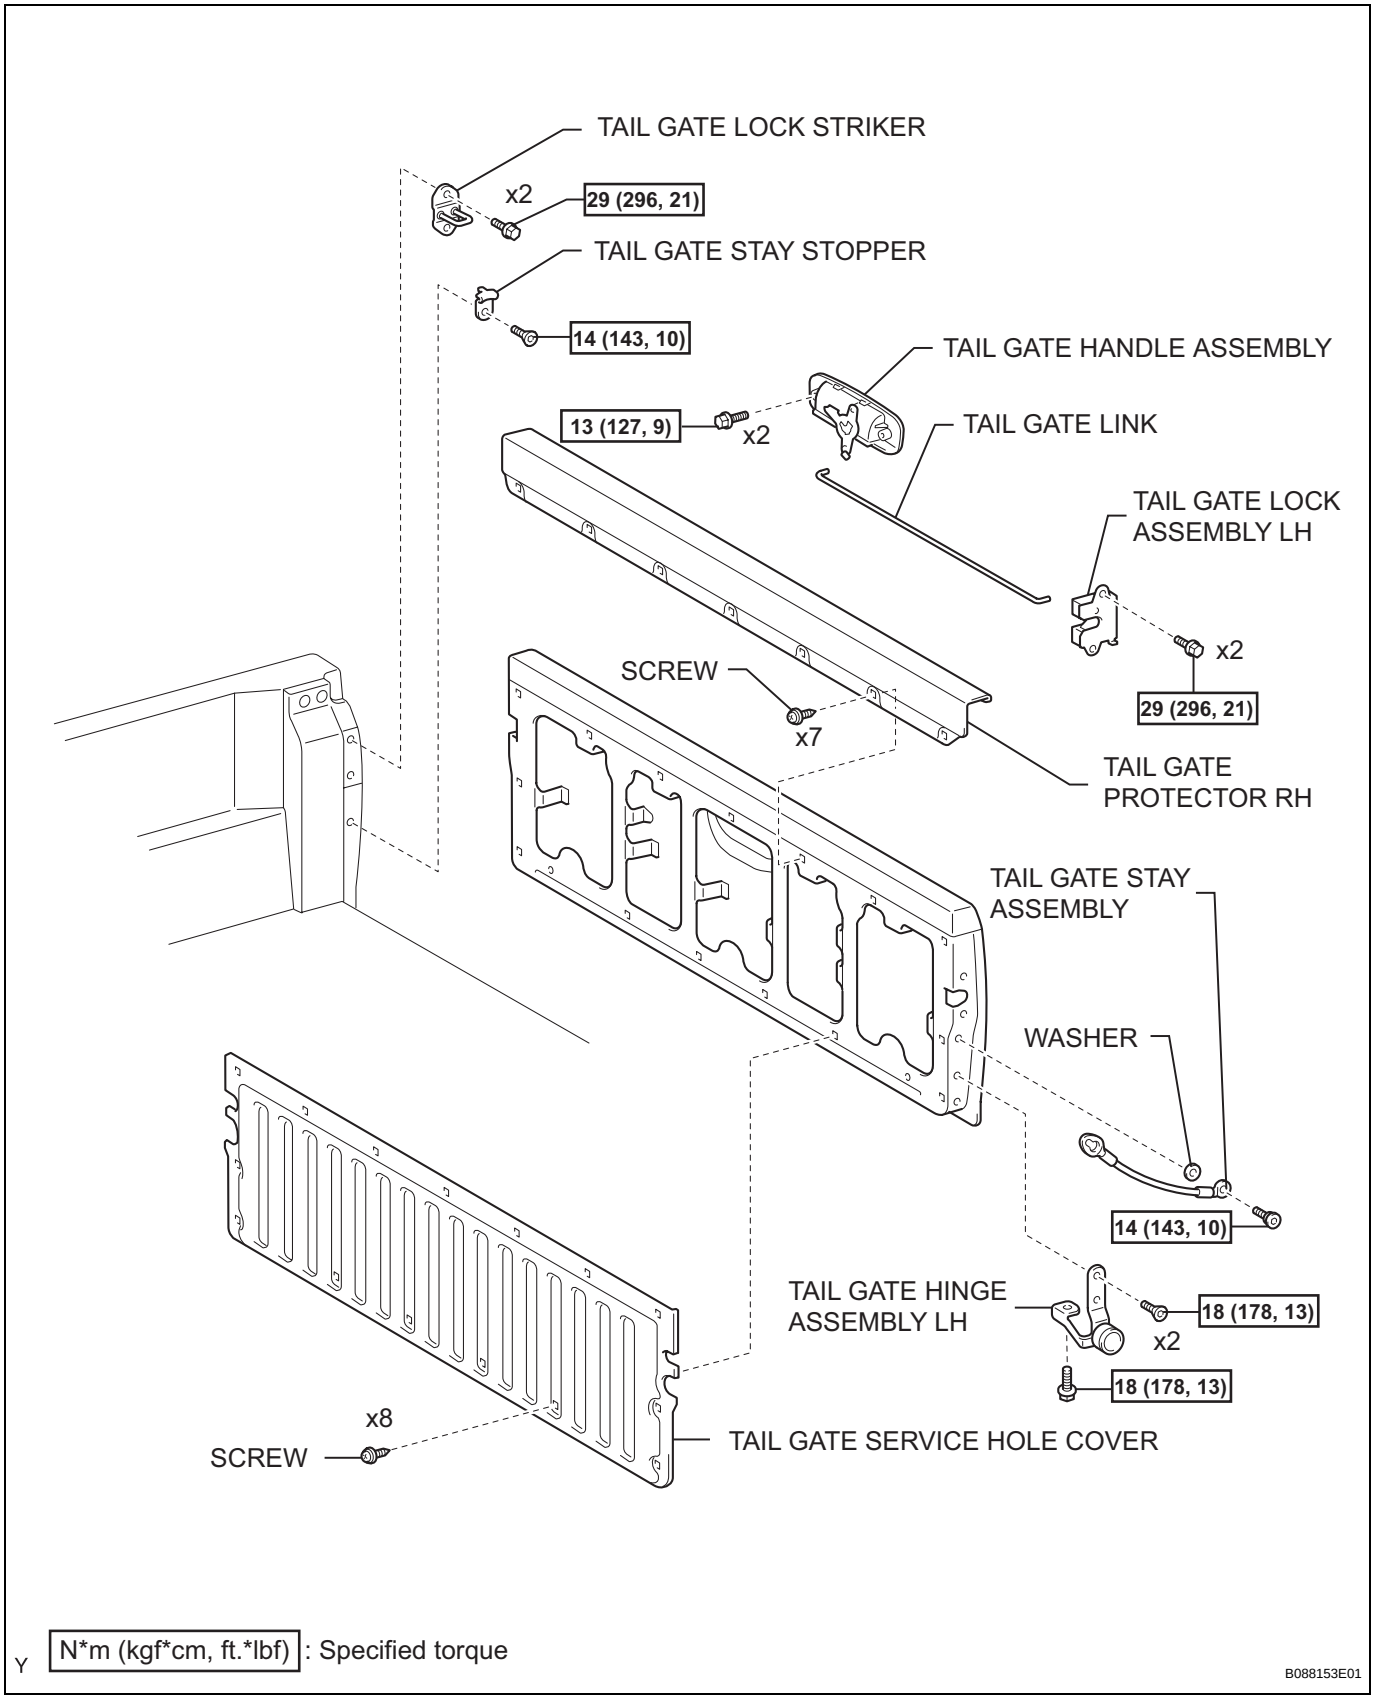
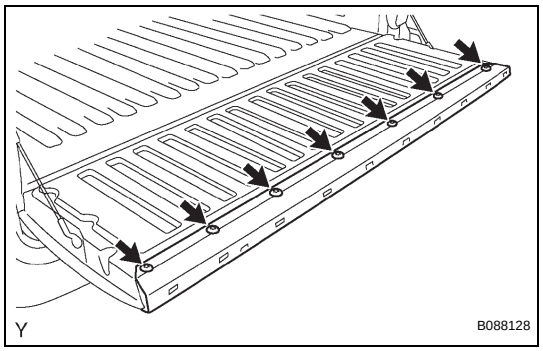
TAIL GATE

COMPONENTS

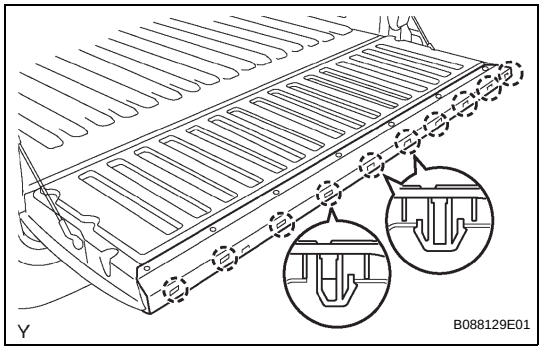


DISASSEMBLY

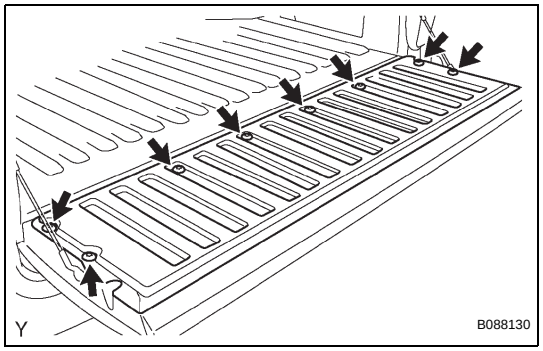


1. REMOVE TAIL GATE PROTECTOR RH

(a) Using a torx socket wrench T30 , remove the 7 screws.

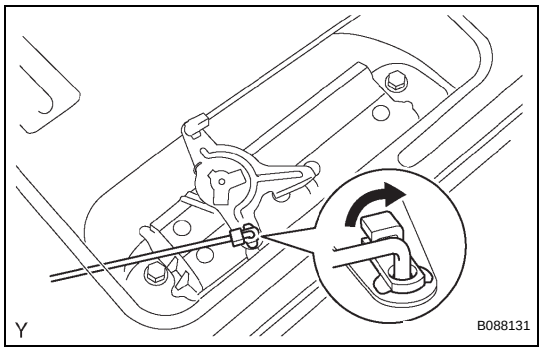


(b) Disengage the 10 claws and remove the tail gate protector RH.



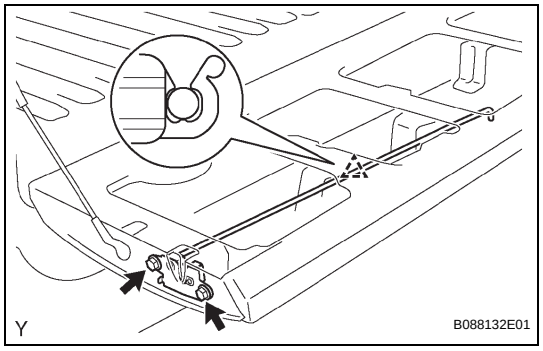
2. REMOVE TAIL GATE SERVICE HOLE COVER

(a) Using a torx socket wrench T30, remove the 8 screws and tail gate service hole cover.



3. REMOVE TAIL GATE LOCK ASSEMBLY LH

(a) Disconnect the tail gate link as shown in the illustration.



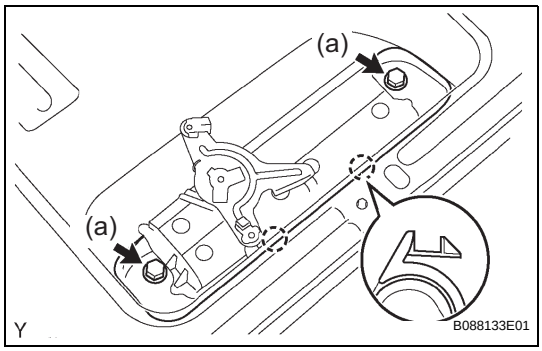
(b) Disengage the clip and remove the 2 bolts, then remove the tail gate lock assembly LH from the tail gate.

4. REMOVE TAIL GATE LOCK ASSEMBLY RH

HINT:

Use the same procedure as described for the LH side.

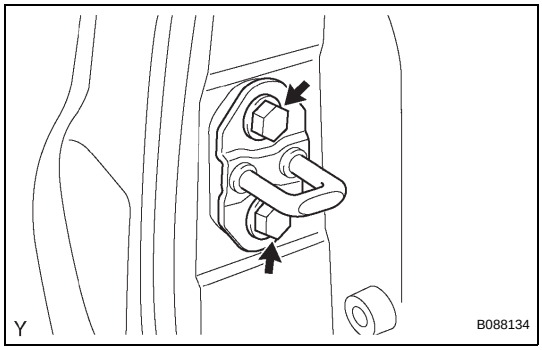
ED



5. REMOVE TAIL GATE HANDLE ASSEMBLY

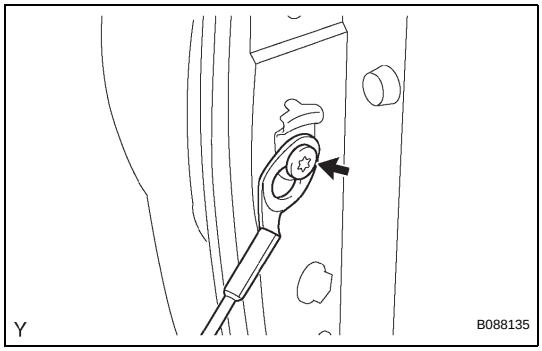
(a) Remove the 2 bolts.

(b) Disengage the 2 claws and remove the tail gate handle assembly.



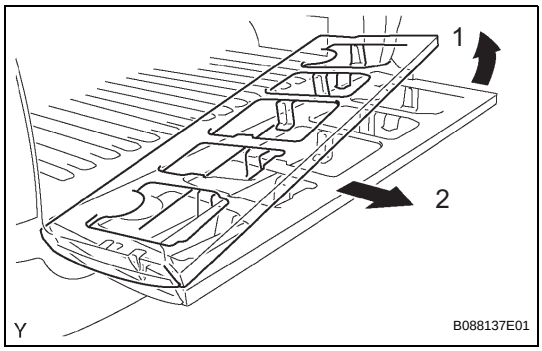
6. REMOVE TAIL GATE LOCK STRIKER

(a) Remove the 2 bolts and tail gate lock striker.
HINT:
Use the same procedures for both the LH and RH sides.

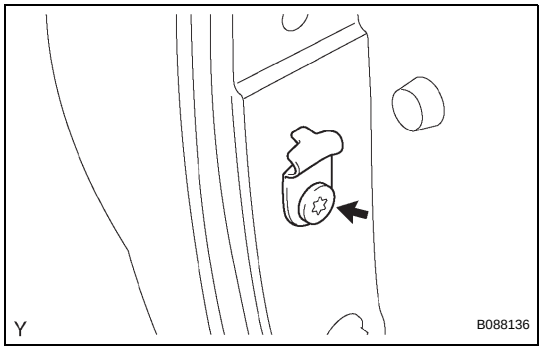


7. REMOVE TAIL GATE

(a) Disconnect the tail gate stay.
HINT:
Use the same procedures for both the LH and RH sides.

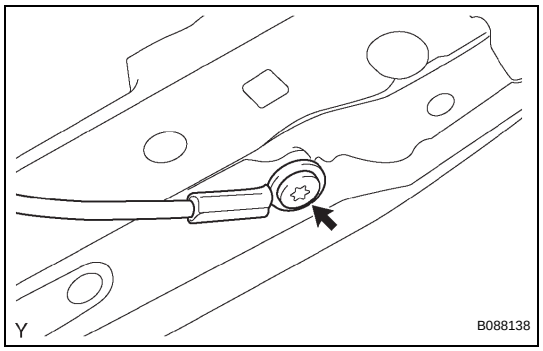


(b) Remove the tail gate from the vehicle as shown in the illustration.
NOTICE:
Be careful not to drop the tail gate.
HINT:
Remove the tail gate from the vehicle by lifting up the right side and sliding it slightly to the right.



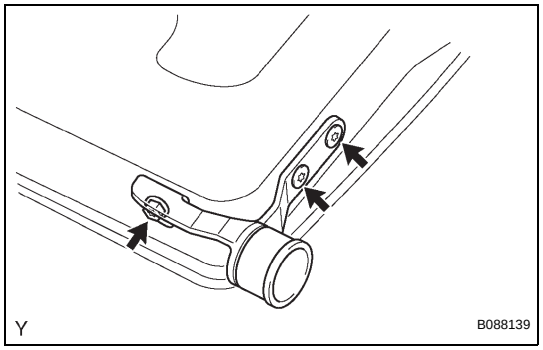
8. REMOVE TAIL GATE STAY STOPPER

(a) Using a torx socket wrench T40, remove the screw and tail gate stopper.
HINT:
Use the same procedure for both the LH and RH sides.



9. REMOVE TAIL GATE STAY ASSEMBLY

(a) Using a torx socket wrench T40 , remove the screw, washer and tail gate stay assembly.
HINT:
Use the same procedure for both the LH and RH sides.

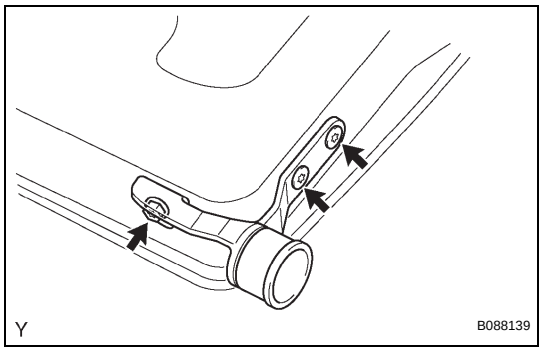


10. REMOVE TAIL GATE HINGE ASSEMBLY LH

(a) Using a torx socket wrench T40 , remove the bolt, 2 screws and tail gate hinge assembly LH.
HINT:
Perform the same procedure as above on the opposite side.

11. REMOVE TAIL GATE HINGE ASSEMBLY RH

HINT:
Use the same procedures as described for the LH side.



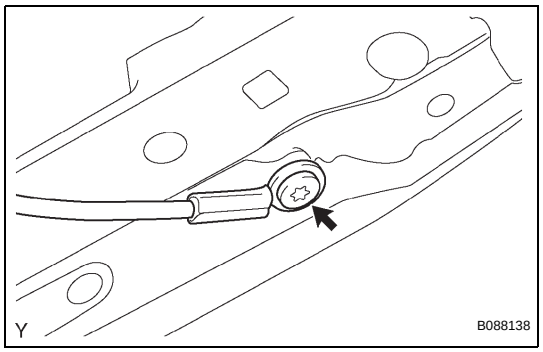
REASSEMBLY

1. INSTALL TAIL GATE HINGE ASSEMBLY LH

(a) Using a torx socket wrench T40 , install the tail gate hinge assembly LH with the bolt and 2 screws.
Torque: 18 N*m (178 kgf*cm, 13 ft.*lbf)

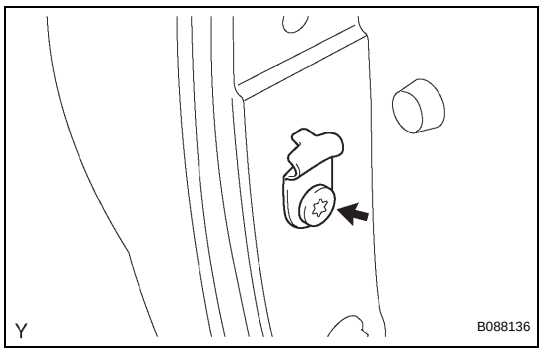
2. INSTALL TAIL GATE HINGE ASSEMBLY RH

HINT:
Use the same procedures as described for the LH side.



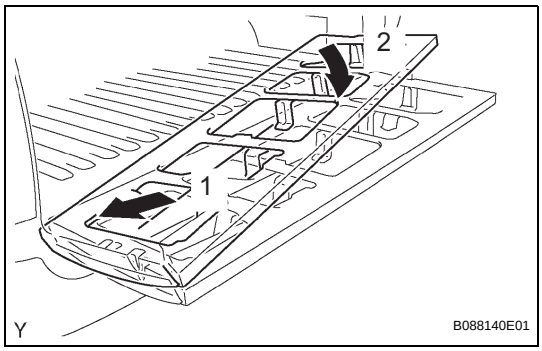
3. INSTALL TAIL GATE STAY ASSEMBLY

(a) Using a torx socket wrench T40 , install the tail gate stay assembly with the screw and washer.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
Use the same procedure for both the LH and RH sides.



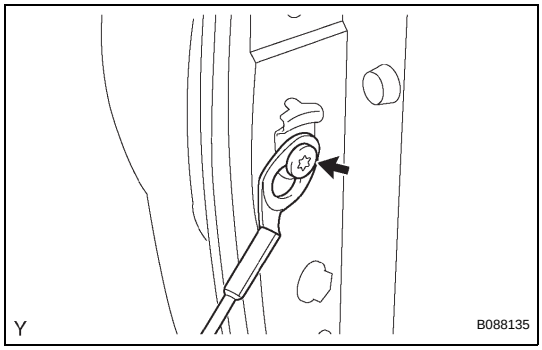
4. INSTALL TAIL GATE STAY STOPPER

(a) Using a torx socket wrench T40 , install the tail gate stopper with the screw.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
Use the same procedure for both the LH and RH sides.

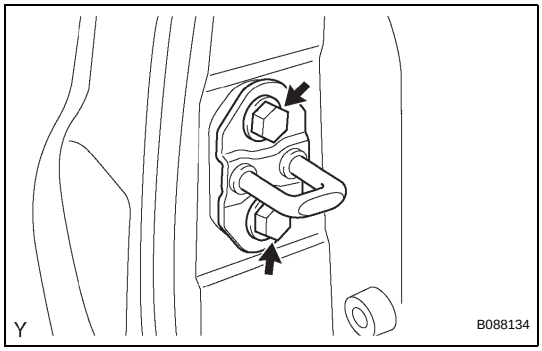


5. INSTALL TAIL GATE

(a) Install the tail gate onto the vehicle.
NOTICE:
Be careful not to drop the tail gate.
HINT:
Install the tail gate onto the vehicle by engaging the hinge on the left side first and then the hinge on the right side.

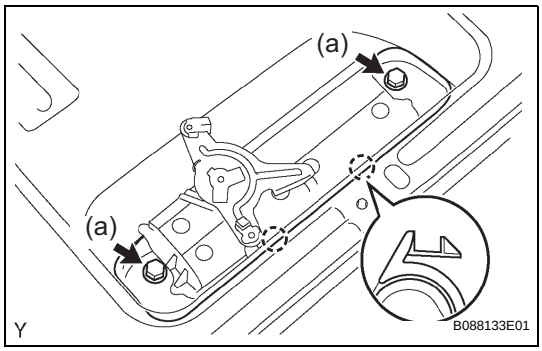


(b) Connect the tail gate stay.
HINT:
Use the same procedure for both the LH and RH sides.



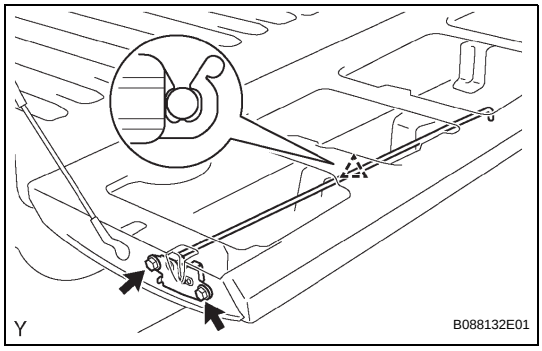
6. INSTALL TAIL GATE LOCK STRIKER

(a) Install the tail gate lock striker with the 2 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)
HINT:
Use the same procedure for both the LH and RH sides.



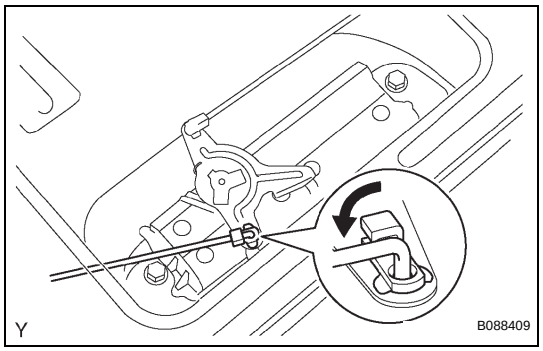
7. INSTALL TAIL GATE HANDLE ASSEMBLY

(a) Engage the 2 claws and install the tail gate handle assembly with the 2 bolts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)



8. INSTALL TAIL GATE LOCK ASSEMBLY LH

(a) Engage the clip and install the tail gate lock assembly LH with the 2 bolts and clip.
Torque: 29 N*m (269 kgf*cm, 21 ft.*lbf)

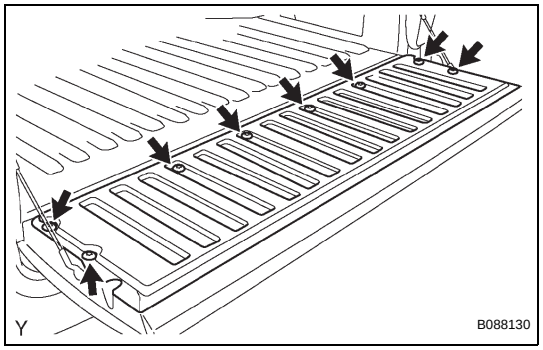


(b) Connect the tail gate link as shown in the illustration.

9. INSTALL TAIL GATE LOCK ASSEMBLY RH

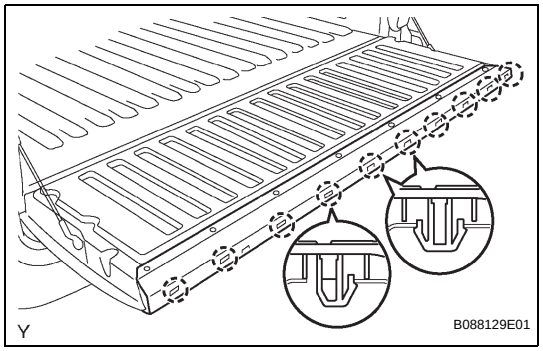
HINT:

Use the same procedure as described for the LH side.



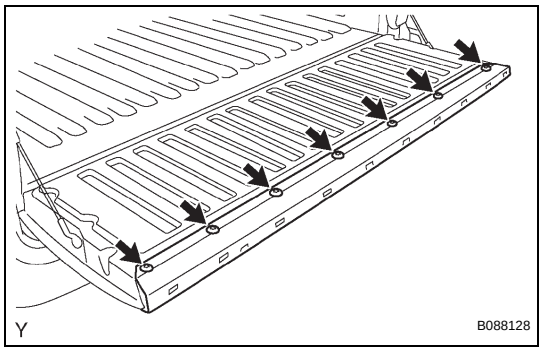
10. INSTALL TAIL GATE SERVICE HOLE COVER

(a) Using a torx socket wrench T30 , install the tail gate service hole cover with the 8 screws.



11. INSTALL TAIL GATE PROTECTOR RH

(a) Engage the 10 claws and install the tail gate protector.



(b) Using a torx socket wrench T30 , tighten the 7 screws to the tail gate protector.

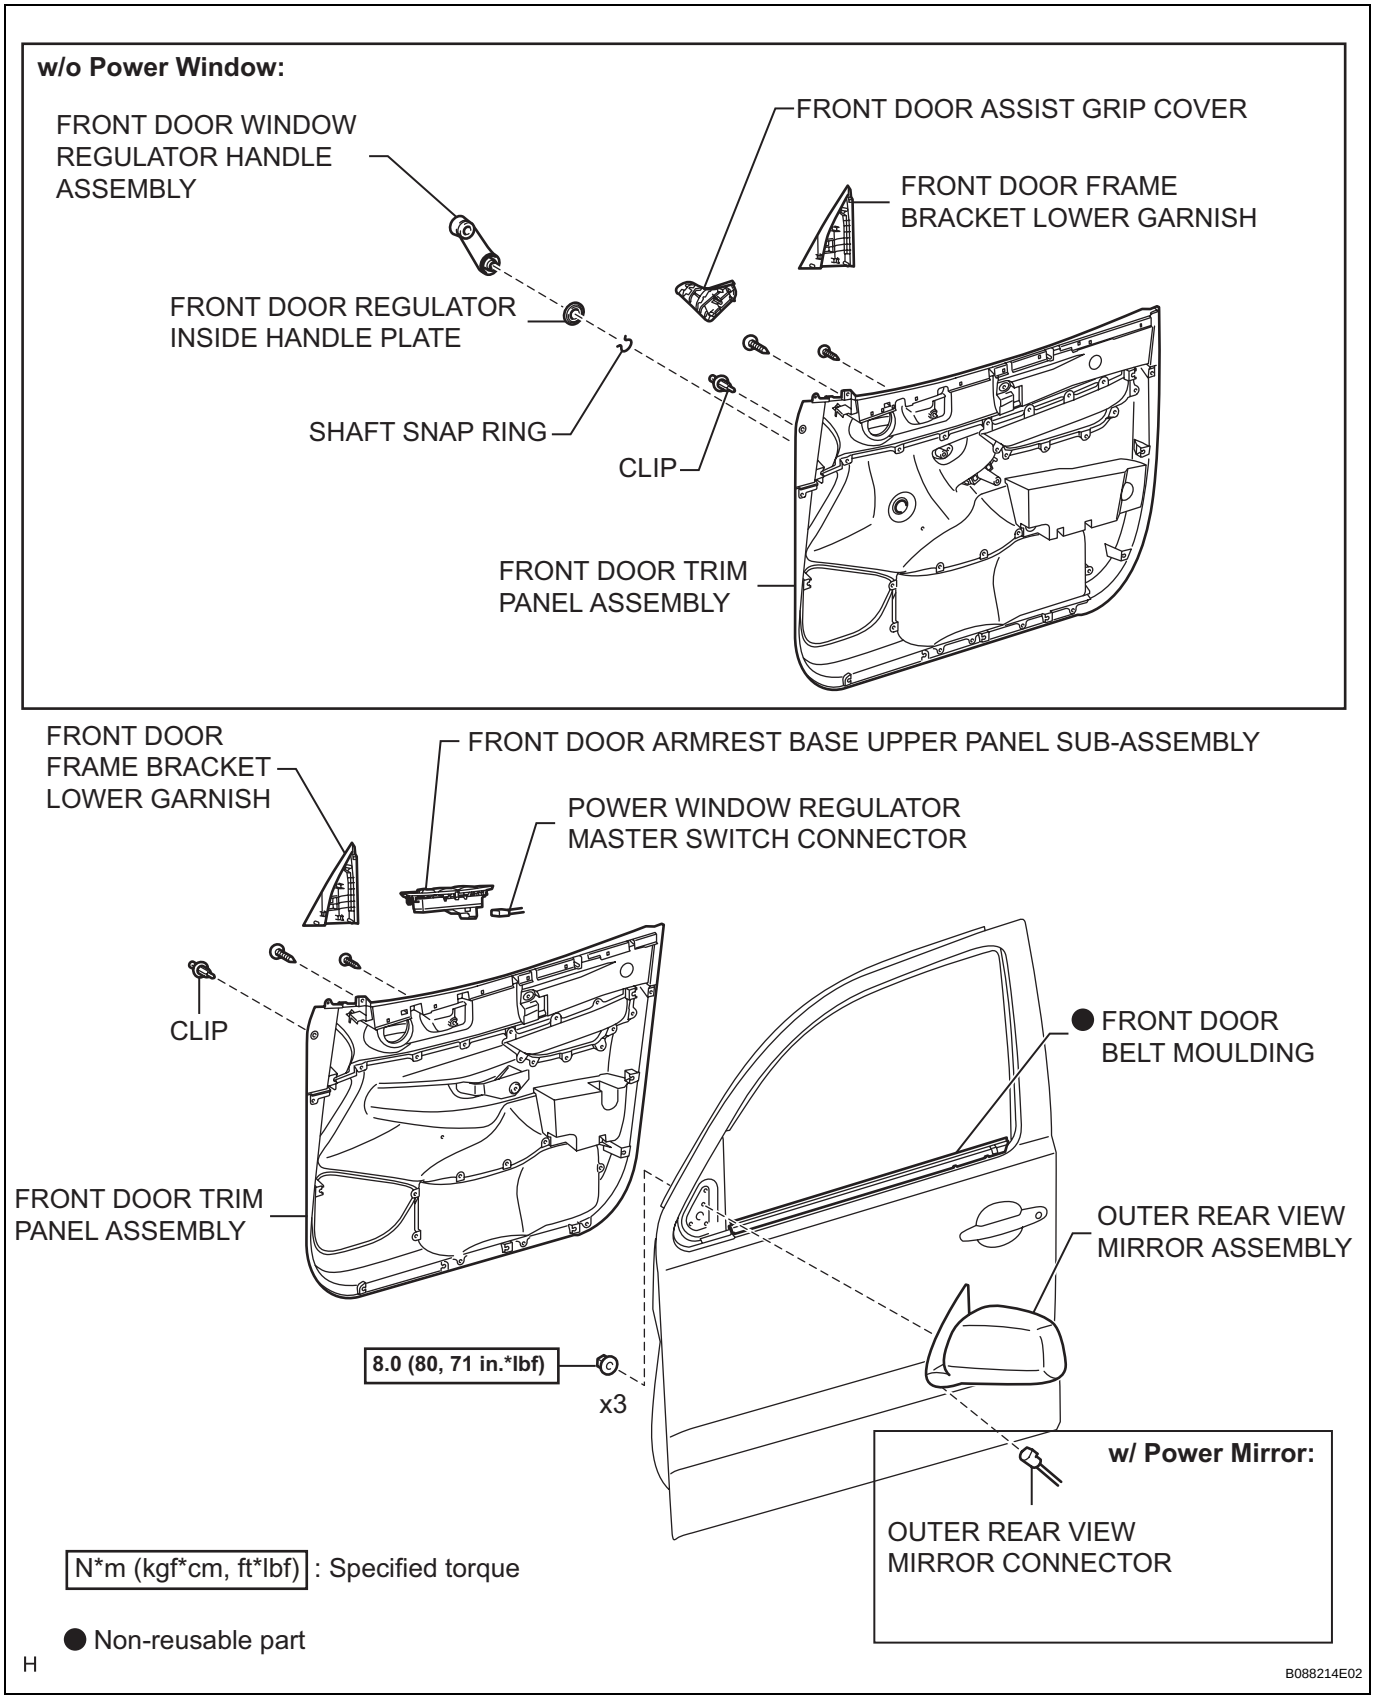
FRONT DOOR BELT MOULDING

COMPONENTS



ET

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE FRONT DOOR FRAME BRACKET LOWER GARNISH**
   (a) w/ Power Window:
      (1) Remove the front door frame bracket lower garnish (See page ED-13).
   (b) w/o Power Window:
      (1) Remove the front door frame bracket lower garnish (See page ED-34).

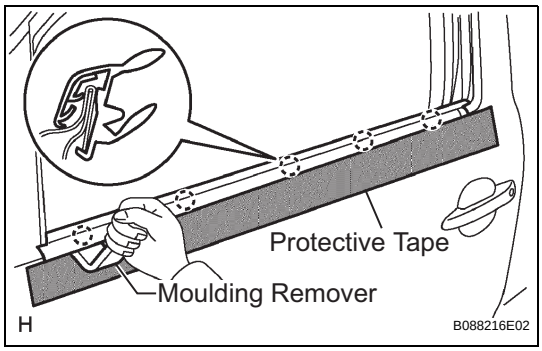
3. **REMOVE FRONT DOOR ARMREST BASE UPPER PANEL SUB-ASSEMBLY (w/ Power Window)**
   (a) for Double Cab:
      (1) Remove the front door armrest base upper panel sub-assembly (See page ED-13).
   (b) for Access Cab and Regular Cab:
      (1) Remove the front door armrest base upper panel sub-assembly (See page ED-13).

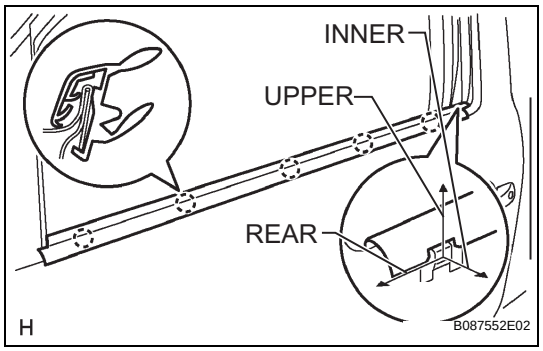
4. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-34)**

5. **REMOVE FRONT DOOR TRIM PANEL ASSEMBLY**
   (a) w/ Power Window:
      (1) Remove the front door trim panel assembly (See page ED-14).
   (b) w/o Power Window:
      (1) Remove the front door trim panel assembly (See page ED-35).

6. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-8)**

7. **REMOVE FRONT DOOR BELT MOULDING**
   (a) Apply protective tape to the outer circumference of the front door belt moulding, as shown in the illustration.
   (b) Using a moulding remover, disengage the 5 claws and remove the front door belt moulding.





INSTALLATION

1. **INSTALL FRONT DOOR BELT MOULDING**
   (a) Engage the 5 claws and install a new front door belt moulding.

2. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-10)**

3. **INSTALL FRONT DOOR TRIM PANEL ASSEMBLY**
   (a) w/ Power Window:
      (1) Install the front door trim panel assembly (See page ED-29).
   (b) w/o Power Window:
      (1) Install the front door trim panel assembly (See page ED-48).

4. **INSTALL FRONT DOOR ARMREST BASE UPPER PANEL SUB-ASSEMBLY (w/ Power Window)**
   (a) for Double Cab:
      (1) Install the front door armrest base upper panel sub-assembly (See page ED-30).
   (b) for Access Cab and Regular Cab:
      (1) Install the front door armrest base upper panel sub-assembly (See page ED-30).

5. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-49)**

6. **INSTALL FRONT DOOR FRAME BRACKET LOWER GARNISH**
   (a) w/ Power Window:
      (1) Install the front door frame bracket lower garnish (See page ED-30).
   (b) w/o Power Window:
      (1) Install the front door frame bracket lower garnish (See page ED-49).

7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

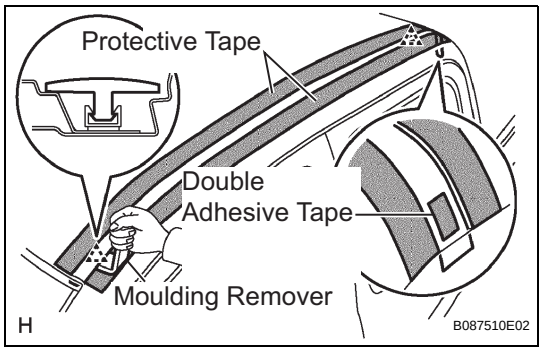
ET



ROOF DRIP SIDE FINISH MOULDING

REMOVAL

1. REMOVE ROOF DRIP SIDE FINISH MOULDING

(a) Apply protective tape to the outer circumference of the roof drip side finish moulding, as shown in the illustration.

(b) Using a heat light, heat the roof drip side finish moulding.

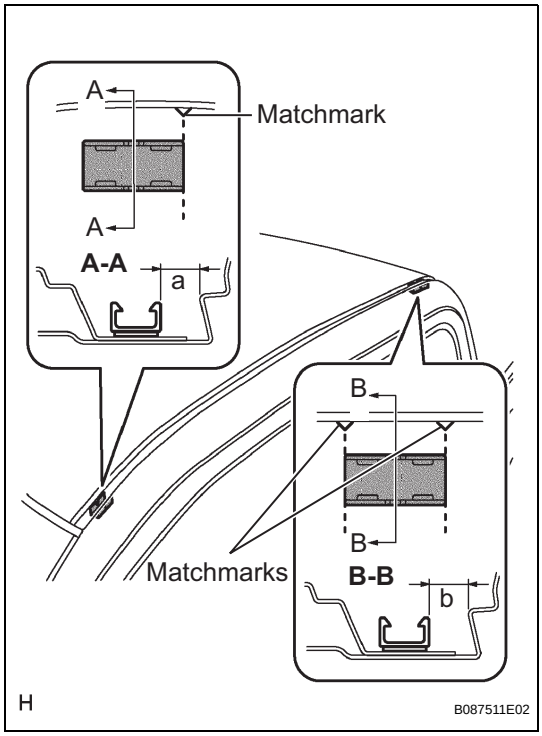
Heating temperature:
40 to 60°C (104 to 140°F)

NOTICE:
Do not heat the roof drip side finish moulding and vehicle body excessively.

(c) Using a moulding remover, disengage the 2 clips and remove the roof drip side finish moulding.

NOTICE:
- **Do not remove the clips from the vehicle body.**
- **If the clips are damaged or removed accidentally, replace them.**

ET



INSTALLATION

1. INSTALL ROOF DRIP SIDE FINISH MOULDING

HINT:
Use the following steps (a) to (c) only when replacing the clips.

(a) Remove the tape that remains on the mounting surface of the vehicle body, and clean the surface with white gasoline.

(b) Using a heat light, heat the clip installation surfaces of the vehicle body and roof drip side finish moulding.

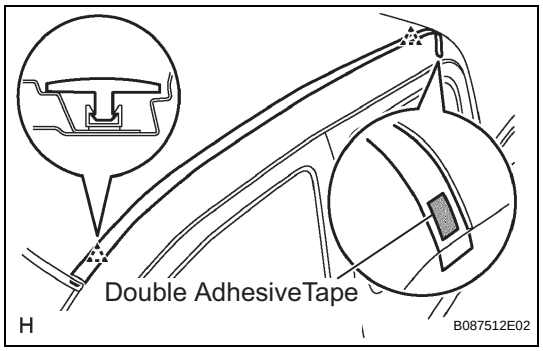
(c) Install new clips in the positions shown in the illustration. Press the clips by hand.

Specification

Area	Measurement
a	7.0 mm (0.276 in.)
b	8.2 mm (0.323 in.)

NOTICE:
After pressing the clips, wait 30 minutes or more before installing the roof drip side finish moulding.

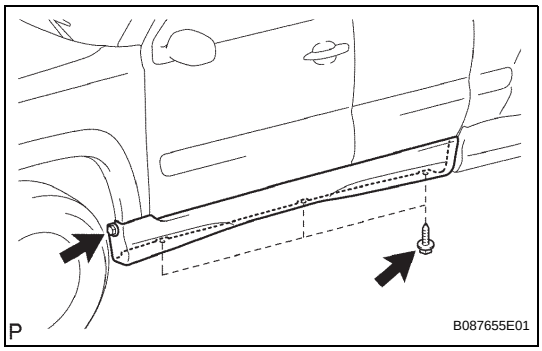
HINT:
- Minimum hardening time: 30 minutes
- Time needed for complete hardening: 24 hours



(d) Engage the 2 clips and install the roof drip side finish moulding.

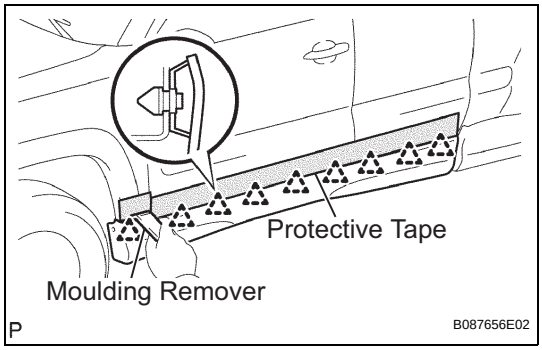
ROCKER PANEL MOULDING

REMOVAL



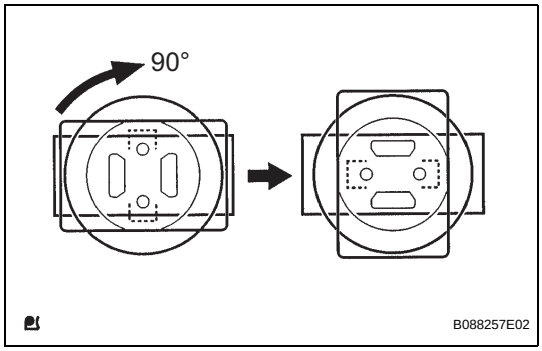
1. REMOVE ROCKER PANEL MOULDING

(a) Remove the 4 screws.

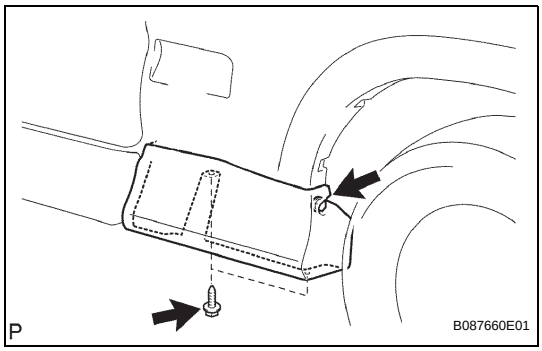


(b) Apply protective tape to the outer circumference of the rocker panel moulding, as shown in the illustration.

(c) Using a moulding remover, disengage the 9 clips and remove the rocker panel moulding.

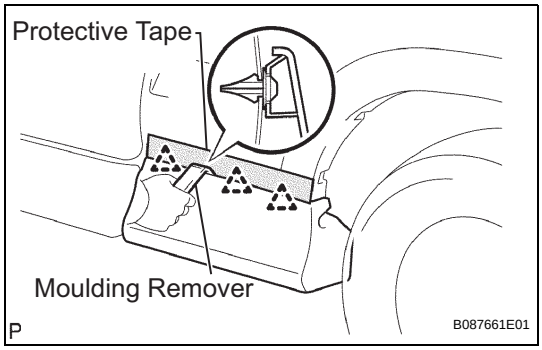


(d) Turn the clips 90° clockwise and remove them.



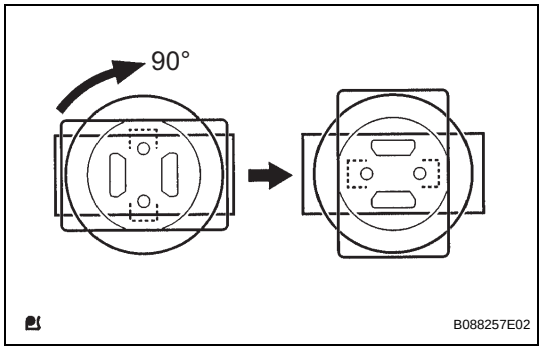
2. REMOVE BODY ROCKER PANEL MOULDING ASSEMBLY

(a) Remove the 3 screws.

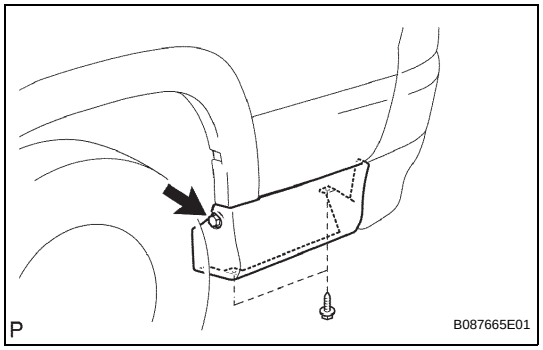


(b) Apply protective tape to the outer circumference of the body rocker panel moulding, as shown in the illustration.

(c) Using a moulding remover, disengage the 3 clips and remove the body rocker panel moulding.

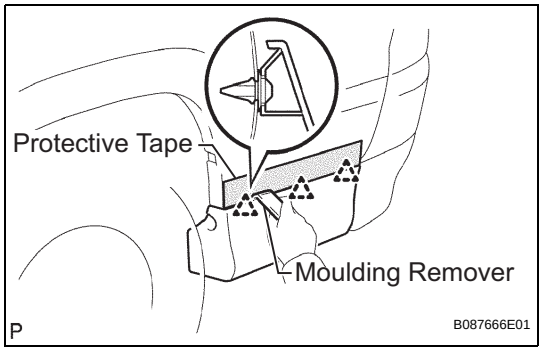


(d) Turn the 90° clockwise and remove them.



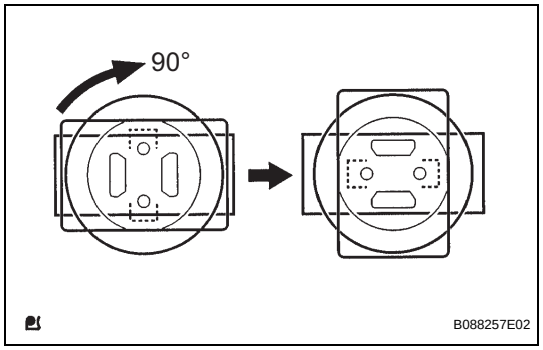
3. REMOVE BACK DOOR OUTSIDE MOULDING SUB-ASSEMBLY

(a) Remove the 3 screws.



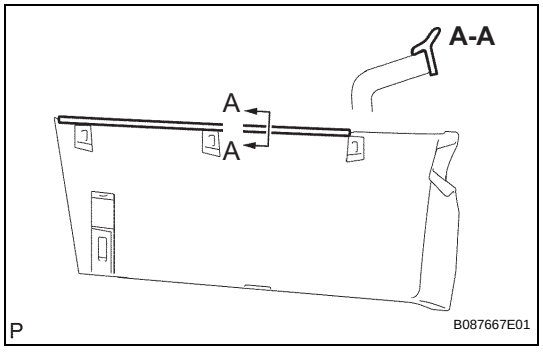
(b) Apply protective tape to the outer circumference of the back door outside moulding, as shown in the illustration.

(c) Using a moulding remover, disengage the 3 clips and remove the back door outside moulding.



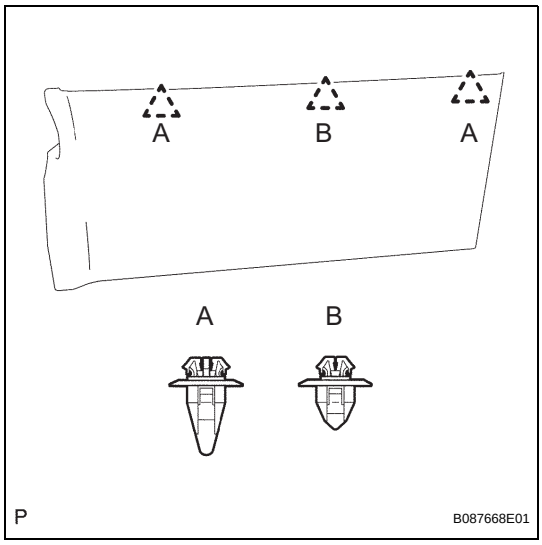
(d) Turn the clips 90° clockwise and remove them.

INSTALLATION

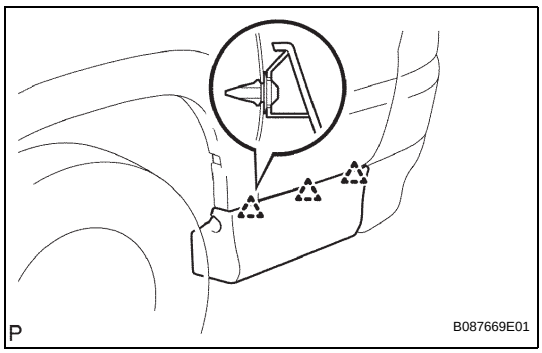


1. INSTALL BACK DOOR OUTSIDE MOULDING SUB-ASSEMBLY

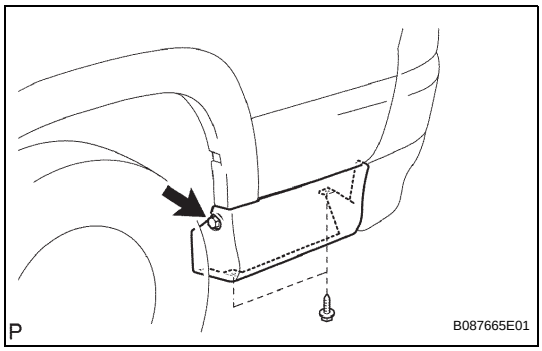
(a) Install new No. 3 body outside moulding pad in the position shown in the illustration.



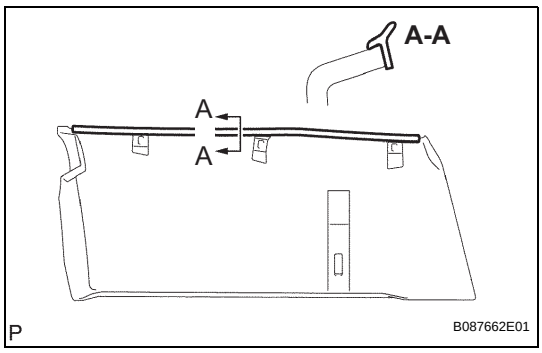
(b) Install each clip in the position shown in the illustration.
NOTICE:
If you install the clips wrongly, the installation of the back door outside moulding would be improper.



(c) Engage the 3 clips and install the back door outside moulding.

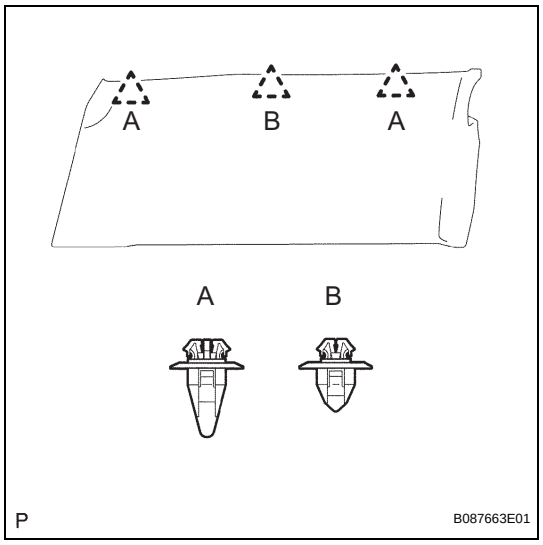


(d) Tighten the 3 screws.

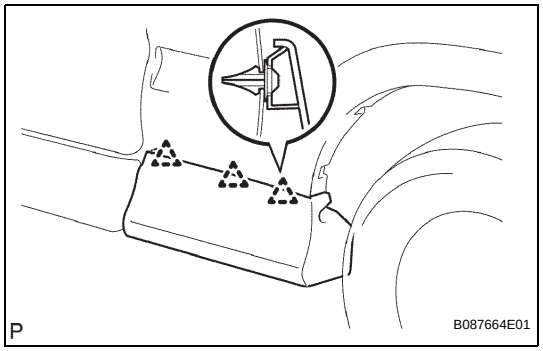


2. INSTALL BODY ROCKER PANEL MOULDING ASSEMBLY

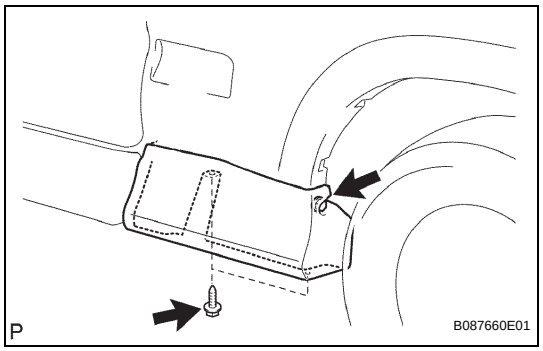
(a) Install new No. 2 body outside moulding pad in the position shown in the illustration.



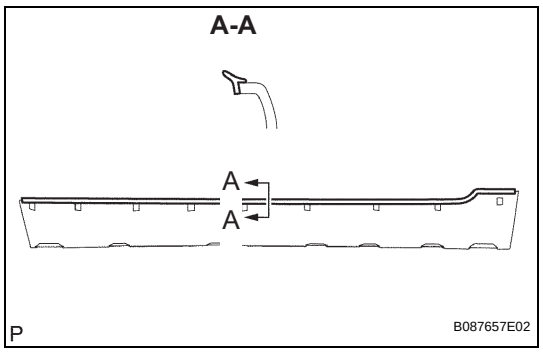
(b) Install each clip in the position shown in the illustration.
NOTICE:
If you install the clips wrongly, the installation of the body rocker panel moulding would be improper.



(c) Engage the 3 claws and install the body rocker panel moulding.



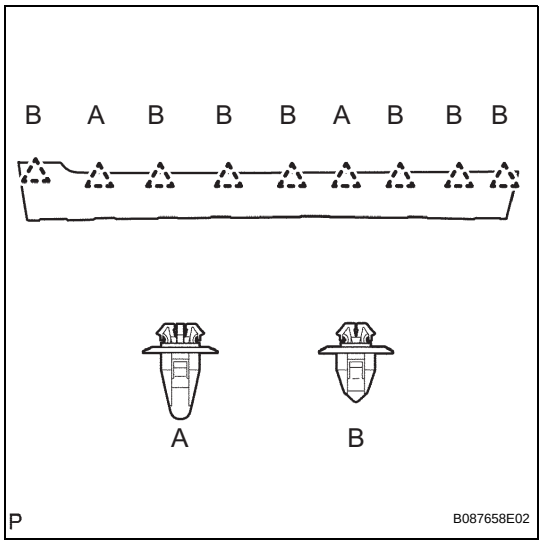
(d) Tighten the 3 screws.



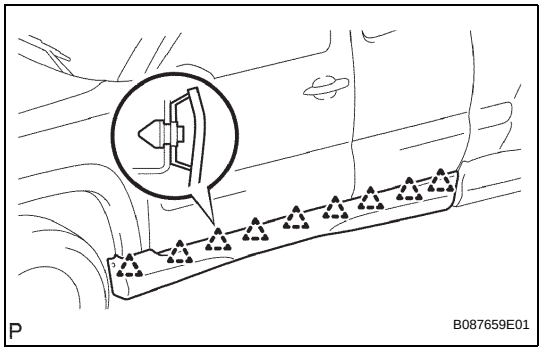
3. INSTALL ROCKER PANEL MOULDING

(a) Install new No. 1 body outside moulding pad in the position shown in the illustration.

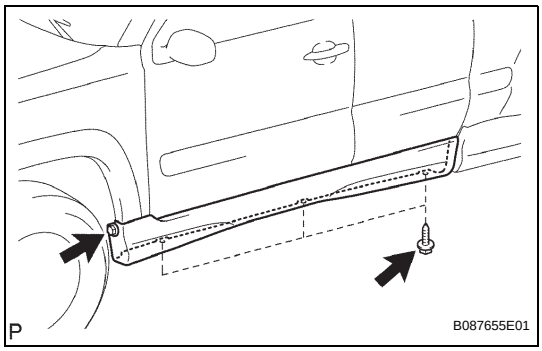
ET



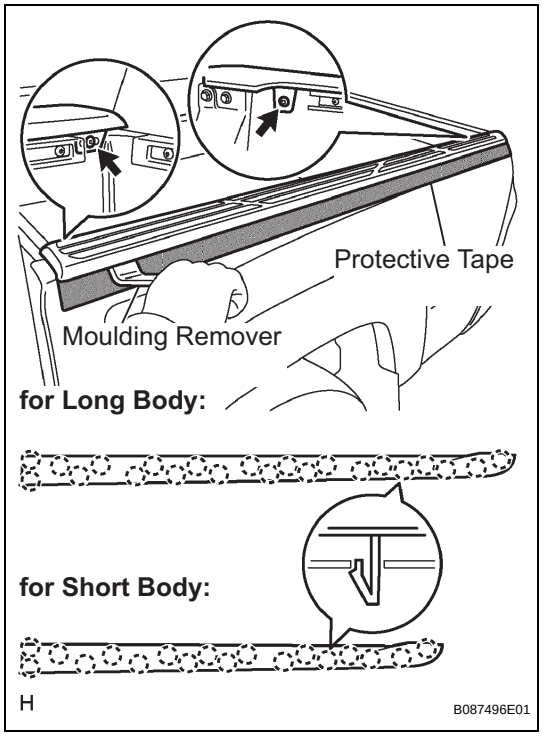
(b) Install each clip in the position shown in the illustration.
NOTICE:
If you install the clips wrongly, the installation of the rocker panel moulding would be improper.



(c) Engage the 9 clips and install the rocker panel moulding.



(d) Tighten the 4 screws.

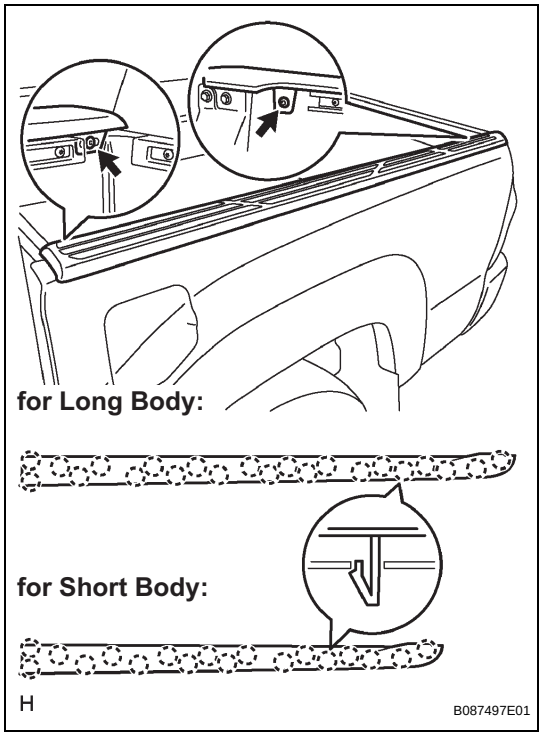


REAR BODY SIDE PANEL PROTECTOR

REMOVAL

1. REMOVE REAR BODY SIDE PANEL PROTECTOR

(a) Apply protective tape to the outer circumference of the rear body side panel protector.
(b) Remove the 2 clips.
(c) for Long Body:
  (1) Using a moulding remover, disengage the 22 claws and remove the rear body side panel protector.
(d) for Short Body:
  (1) Using a moulding remover, disengage the 18 claws and remove the rear body side panel protector.



INSTALLATION

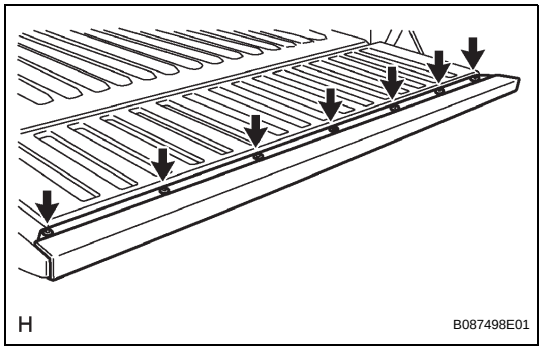
1. INSTALL REAR BODY SIDE PANEL PROTECTOR

(a) for Long Body:
  (1) Engage the 22 claws and install the rear body side panel protector.
(b) for Short Body:
  (1) Engage the 18 claws and install the rear body side panel protector.
(c) Install the 2 clips.

ET

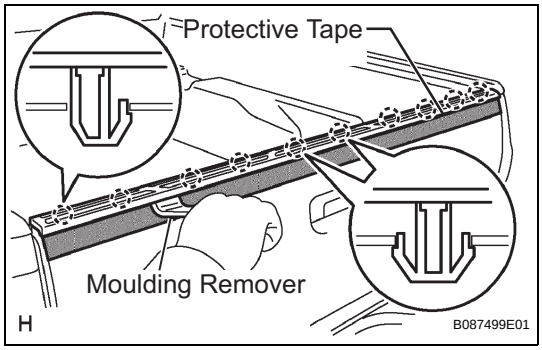
TAIL GATE PROTECTOR

REMOVAL



1. REMOVE TAIL GATE PROTECTOR

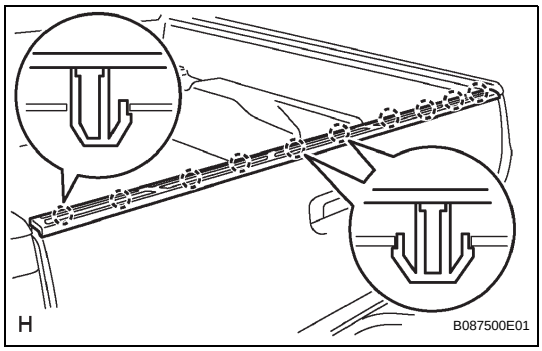
(a) Using "Torx" socket wrench T30, remove the 7 screws.



(b) Apply protective tape to the outer circumference of the tail gate protector.

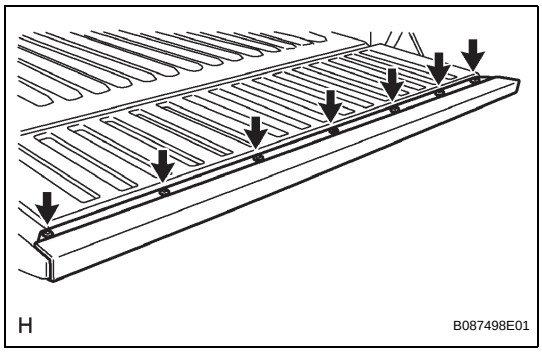
(c) Using a moulding remover, disengage the 10 claws and remove the tail gate protector.

INSTALLATION

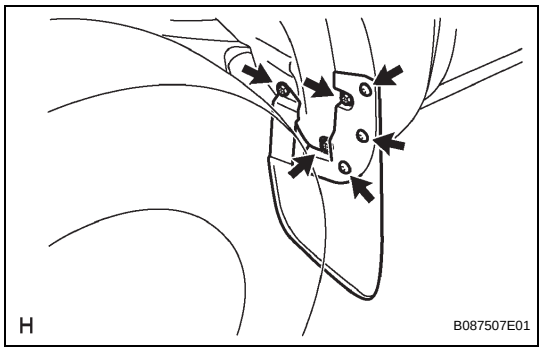


1. INSTALL TAIL GATE PROTECTOR

(a) Engage the 10 claws and install the tail gate protector.



(b) Using "Torx" socket wrench T30, tighten the 7 screws.



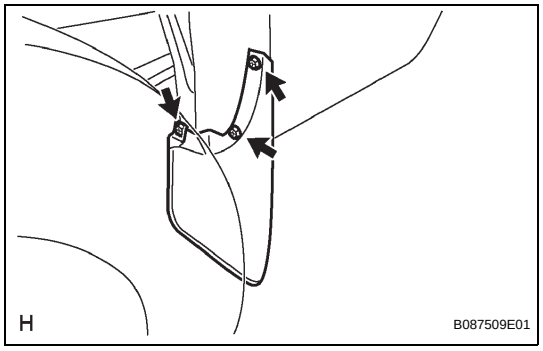
FENDER PANEL MUDGUARD

REMOVAL

1. REMOVE FRONT FENDER MUDGUARD

(a) Using a clip remover, remove the 3 clips.

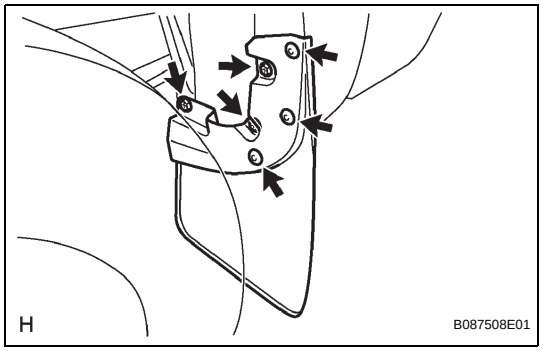
(b) Remove the 3 screws and front fender mudguard.



2. REMOVE REAR QUARTER PANEL MUDGUARD

(a) for 2WD:

(1) Remove the 3 screws and rear quarter panel mudguard.

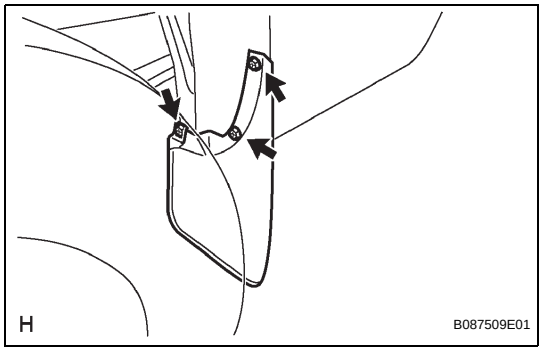


(b) for 4WD and Pre Runner:

(1) Using a clip remover, remove the 3 clips.

(2) Remove the 3 screws and rear quarter panel mudguard.

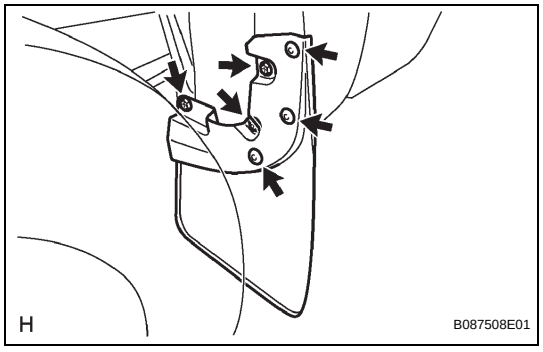
INSTALLATION



1. INSTALL REAR QUARTER PANEL MUDGUARD

(a) for 2WD:

(1) Install the rear quarter panel mudguard with the 3 screws.

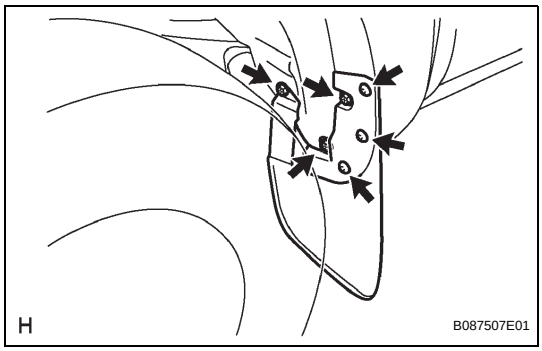


(b) for 4WD and Pre Runner:

(1) Install the rear quarter panel mudguard with the 3 screws.

(2) Install the 3 clips.

ET



2. INSTALL FRONT FENDER MUDGUARD

(a) Install the front fender mudguard with the 3 screws.

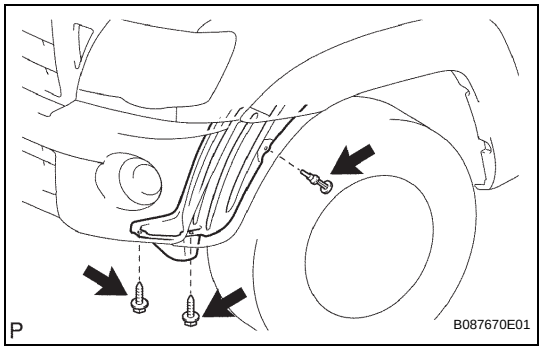
(b) Install the 3 clips.

FRONT BUMPER EXTENSION

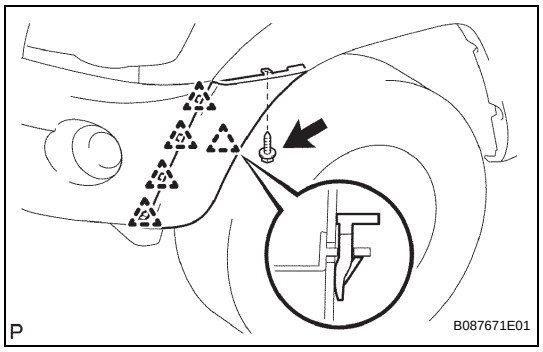
REMOVAL

1. **REMOVE FRONT SPOILER COVER (for X-Runner) (See page ET-5)**

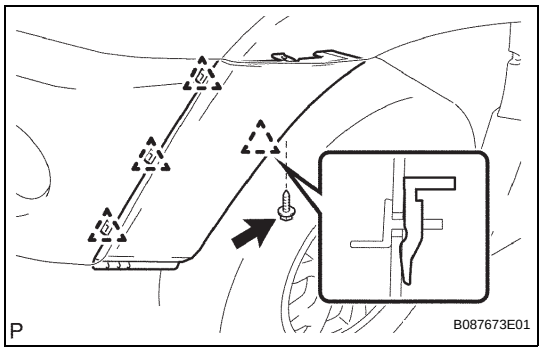
2. **REMOVE FRONT BUMPER EXTENSION**



(a) Remove the 2 screws and clip, and open the front fender liner.



(b) for 4WD and Pre Runner:
(1) Remove the screw.
(2) Remove the 5 retainers and front bumper extension.

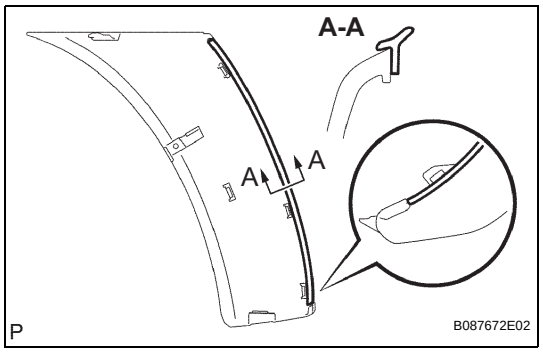


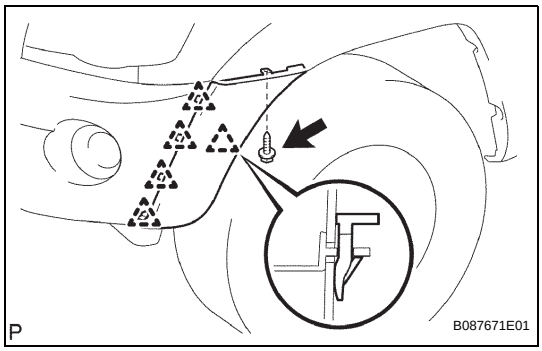
(c) for X-Runner:
(1) Remove the 4 retainers and front bumper extension.

INSTALLATION

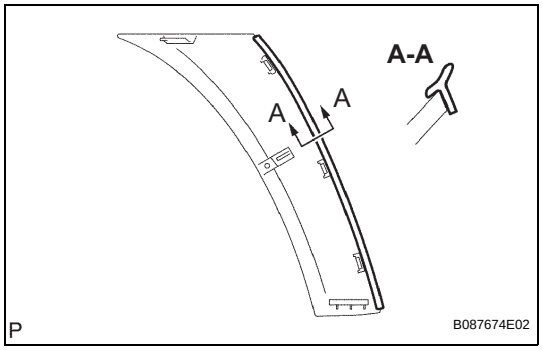
1. **INSTALL FRONT BUMPER EXTENSION**

(a) for 4WD and Pre Runner:
(1) Install new front spoiler side protector in the position shown in the illustration.

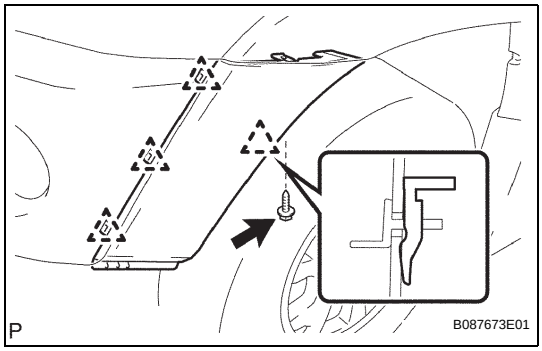




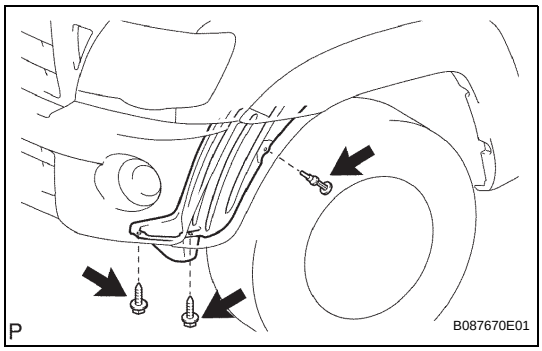
(2) Install the front bumper with the 5 retainers.
(3) Tighten the screw.



(b) for X-Runner:
(1) Install new front spoiler side protector in the position shown in the illustration.



(2) Install the front bumper with the 4 retainers.
(3) Tighten the screw.



(c) Tighten the 2 screws.
(d) Install the clip.

2. INSTALL FRONT SPOILER COVER (for X-Runner) (See page ET-10)

WHEEL OPENING MOULDING

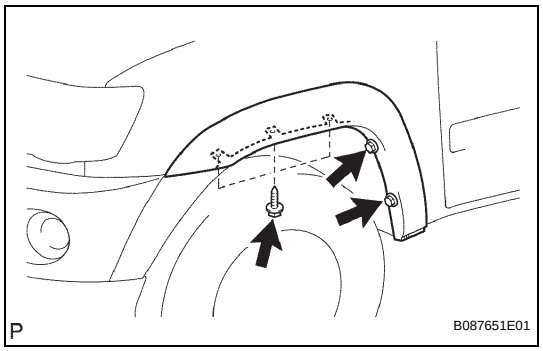
REMOVAL

1. **REMOVE FRONT FENDER MUDGUARD (for 4WD and Pre-Runner) (See page ET-45)**
2. **REMOVE ROCKER PANEL MOULDING (for X-Runner) (See page ET-38)**
3. **REMOVE FRONT FENDER WHEEL OPENING MOULDING**
   (a) for 4WD and Pre Runner:
      (1) Remove the 4 screws.

      (2) Apply protective tape to the outer circumference of the front fender wheel opening moulding, as shown in the illustration.
      (3) Using a moulding remover, disengage the 9 clips and remove the front fender wheel opening moulding.

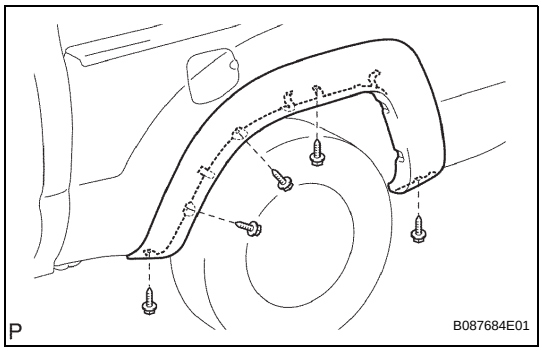
      (4) Turn the clips 90° clockwise and remove them.

   (b) for X-Runner:
      (1) Remove the 5 screws and front fender wheel opening moulding.



4. **REMOVE REAR QUARTER PANEL MUDGUARD (for 4WD and Pre-Runner) (See page ET-45)**
5. **REMOVE BACK DOOR OUTSIDE MOULDING SUB-ASSEMBLY (for X-Runner) (See page ET-39)**
6. **REMOVE BODY ROCKER PANEL MOULDING ASSEMBLY (for X-Runner) (See page ET-38)**

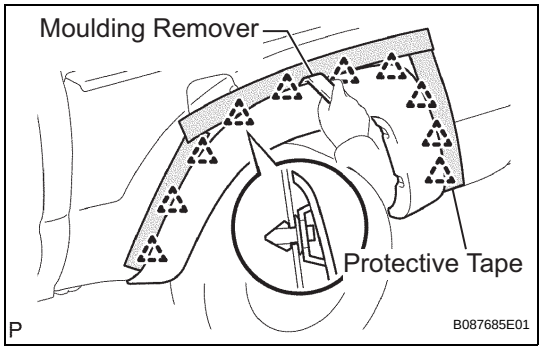
ET



7. REMOVE QUARTER PANEL WHEEL OPENING MOULDING

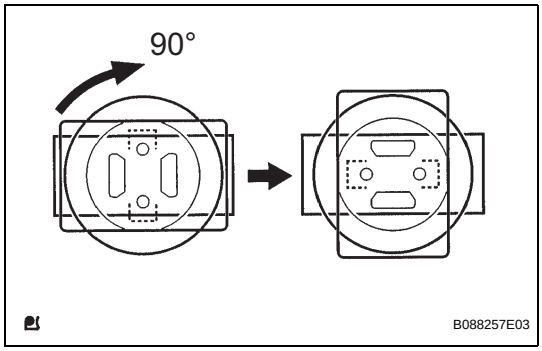
(a) for 4WD and Pre Runner:

(1) Remove the 5 screws.

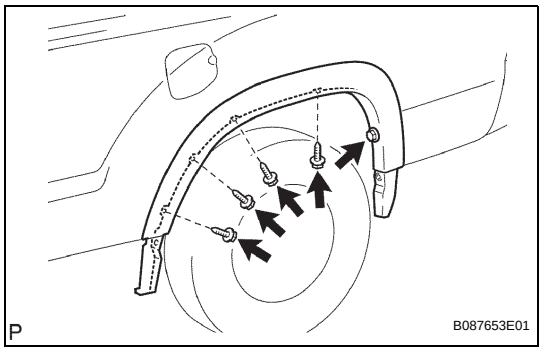


(2) Apply protective tape to the outer circumference of the quarter panel wheel opening moulding, as shown in the illustration.

(3) Using a moulding remover, disengage the 10 clips and remove the quarter panel wheel opening moulding.

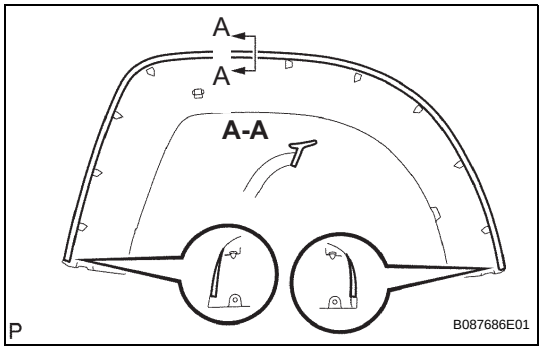


(4) Turn the clips 90° clockwise and remove them.



(b) for X-Runner:

(1) Remove the 5 screws and quarter panel wheel opening moulding.

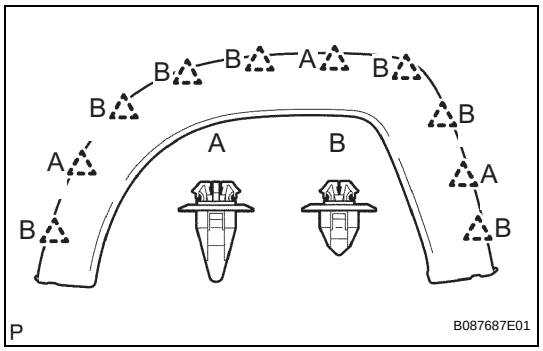


INSTALLATION

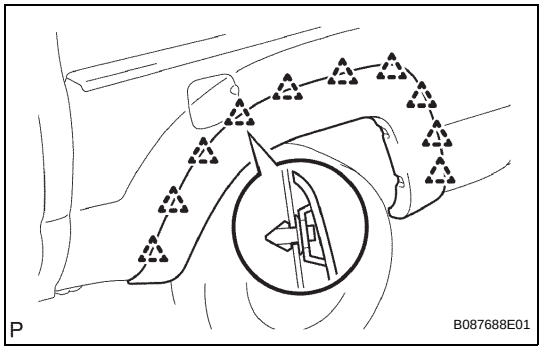
1. INSTALL QUARTER PANEL WHEEL OPENING MOULDING

(a) for 4WD and Pre Runner:

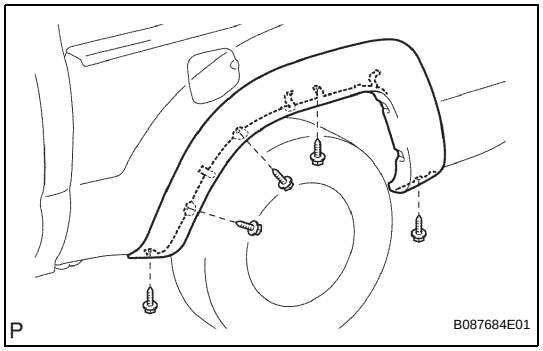
(1) Install new No. 1 quarter panel moulding pad in the position shown in the illustration.



(2) Install each clip in the position shown in the illustration.
NOTICE:
If you install the clips wrongly, the installation of the quarter panel wheel opening moulding would be improper.

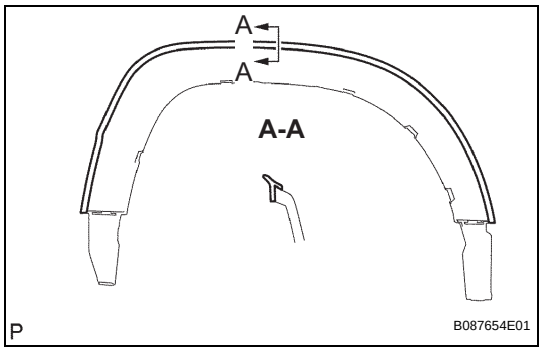


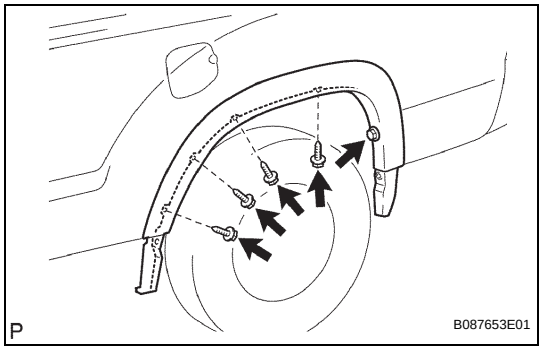
(3) Engage the 10 clips and install the quarter panel wheel opening moulding.



(4) Tighten the 5 screws.

(b) for X-Runner:
(1) Install new No. 1 quarter panel moulding pad in the position shown in the illustration.





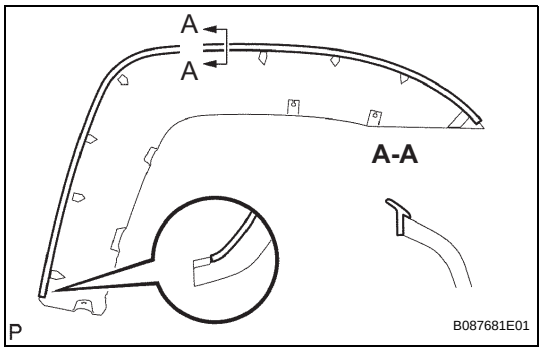
(2) Install the quarter panel wheel opening moulding with the 5 screws.

2. INSTALL BODY ROCKER PANEL MOULDING ASSEMBLY (for X-Runner) (See page ET-40)

3. INSTALL BACK DOOR OUTSIDE MOULDING SUB-ASSEMBLY (for X-Runner) (See page ET-39)

4. INSTALL REAR QUARTER PANEL MUDGUARD (for 4WD and Pre-Runner) (See page ET-45)

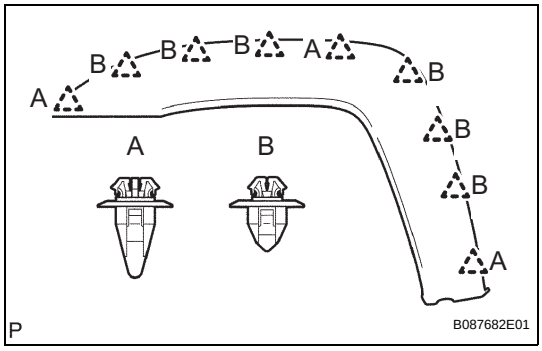
ET



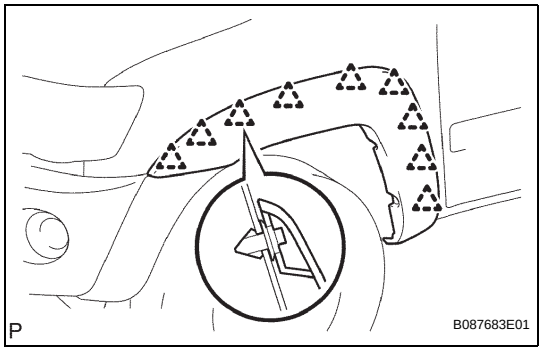
5. INSTALL FRONT FENDER WHEEL OPENING MOULDING

(a) for 4WD and Pre Runner:

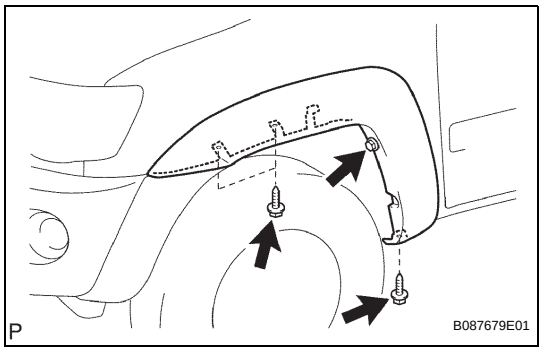
(1) Install new No. 1 front fender wheel opening extension pad in the position shown in the illustration.



(2) Install each clip in the position shown in the illustration.
NOTICE:
If you install the clip wrongly, the installation of the front fender wheel opening moulding would be improper.



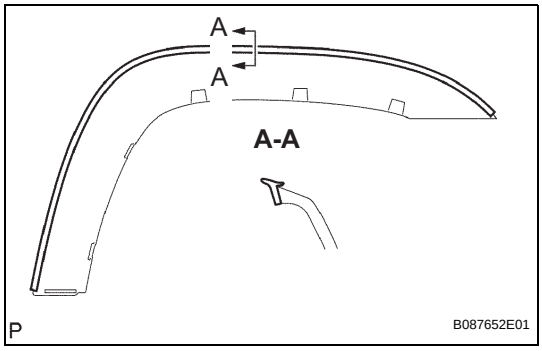
(3) Engage the 9 clips and install the front fender wheel opening moulding.



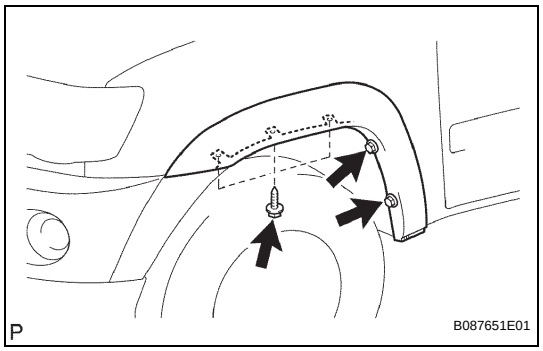
(4) Tighten the 4 screws.

(b) for X-Runner:

(1) Install new No. 2 body outside moulding pad in the position shown in the illustration.



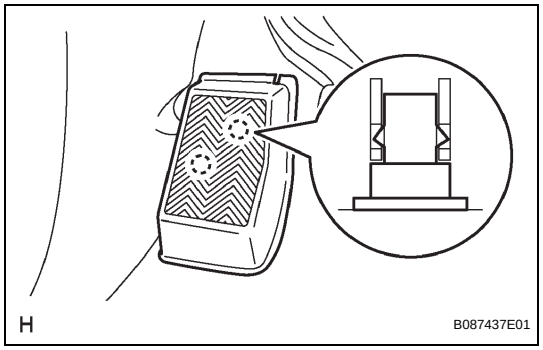
ET



(2) Install the front fender wheel opening moulding with the 5 screws.

6. **INSTALL ROCKER PANEL MOULDING (for X-Runner) (See page ET-41)**

7. **INSTALL FRONT FENDER MUDGUARD (for 4WD and Pre-Runner) (See page ET-46)**

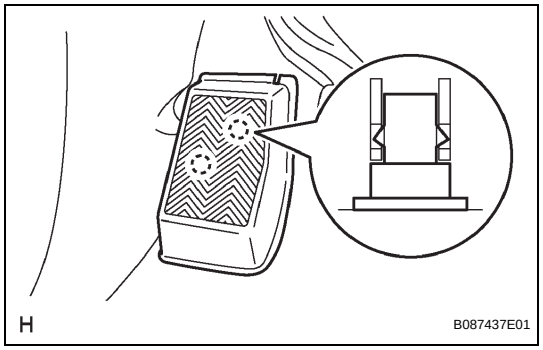


FRONT FLOOR FOOTREST

REMOVAL

1. REMOVE FRONT FLOOR FOOTREST

(a) Disengage the 2 clips and remove the front floor footrest.



INSTALLATION

1. INSTALL FRONT FLOOR FOOTREST

(a) Engage the 2 clips and install the front floor footrest.

CAN COMMUNICATION SYSTEM

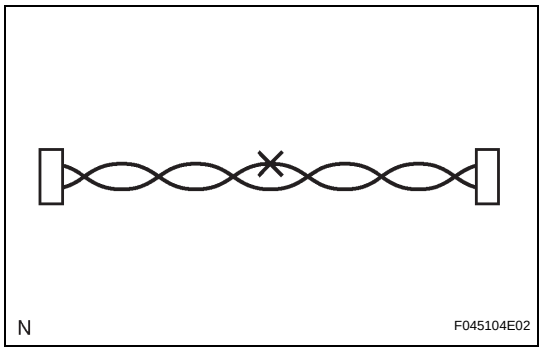
PRECAUTION

1. HANDLING PRECAUTIONS ON STEERING SYSTEM

(a) Care must be taken when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

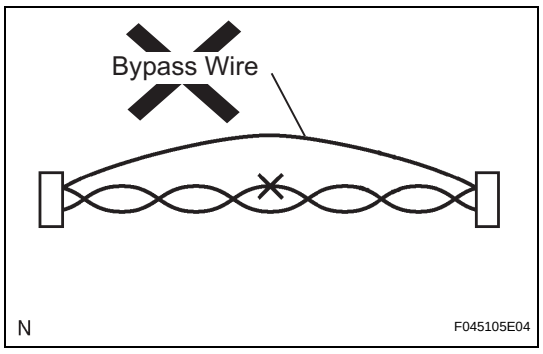
2. HANDLING PRECAUTIONS ON SRS AIRBAG SYSTEM

(a) This vehicle is equipped with an SRS (Supplemental Restraint System), such as the driver airbag and front passenger airbag. Failure to carry out service operations in the correct sequence could cause the SRS airbag to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notice for the SRS (See page RS-1).



3. WIRE HARNESS REPAIR

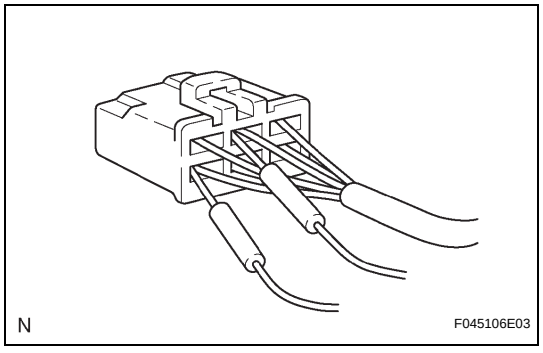
(a) After repairing the wire bus line with a solder, wrap the repaired part with vinyl tape.
NOTICE:
- **The CANL bus line and CANH bus line must be installed together all the time. When installing, make sure to twist them.**
- **The difference in length of the CANL bus line and CANH bus line should be within 100 mm (3.93 in.).**
- **Untwisted parts around the connector should be within 80 mm (3.15 in.).**



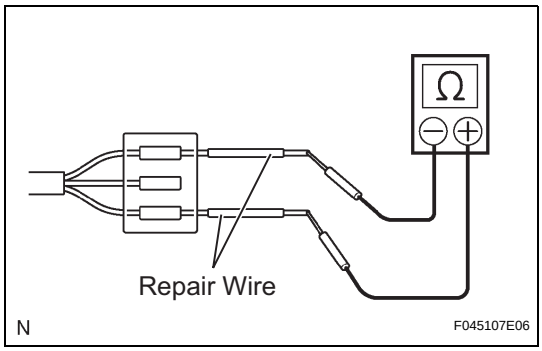
(b) Do not use bypass wiring between the connectors.
NOTICE:
If you use a bypass wire, the characteristic of the twisted wire harness will be lost.

4. CONNECTOR HANDLING

(a) When inserting tester probes into a connector, insert them from the rear of the connector.



CA



(b) Use a repair wire to check the connector if it is impossible to check continuity from the rear of the connector.
