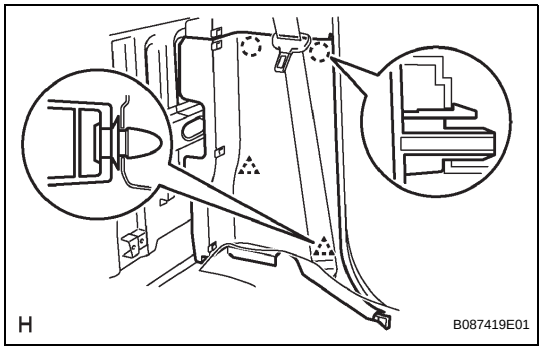
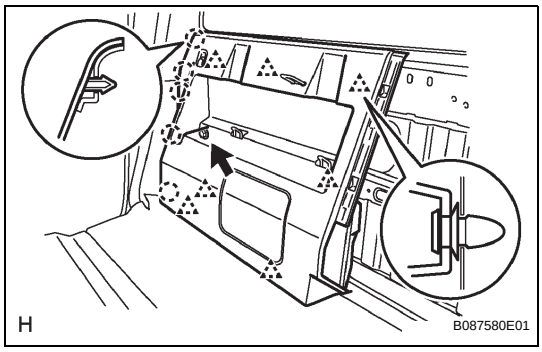
- **Be careful not to place the rear seat outer belt over the convex areas of the floor panel.**

13. INSTALL QUARTER INSIDE TRIM BOARD RH
HINT:
Follow the same procedures as for the quarter inside trim board LH.



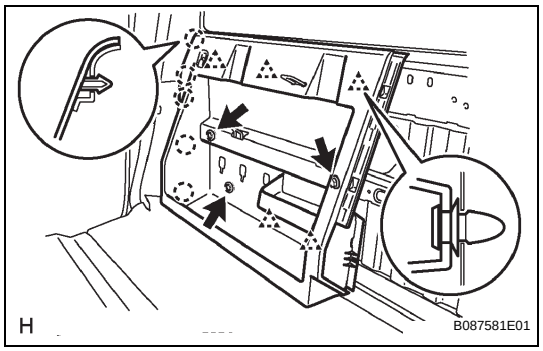
14. INSTALL QUARTER TRIM LOWER PANEL LH
(a) Engage the 2 claws and 2 clips, and install the quarter trim lower panel.

15. INSTALL QUARTER TRIM LOWER PANEL RH
HINT:
Follow the same procedures as for the quarter trim lower panel LH.



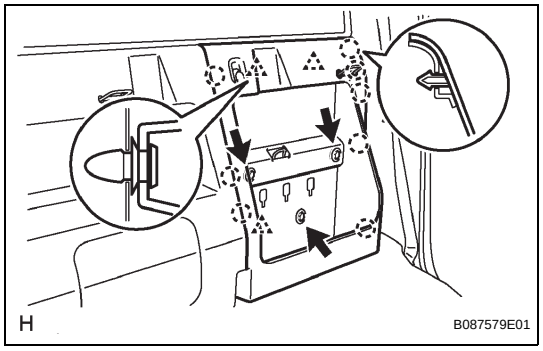
16. INSTALL LUGGAGE COMPARTMENT SIDE TRAY RH
(a) w/ Woofer:
(1) Engage the 5 claws and 7 clips, and install the luggage compartment side tray.
(2) Tighten the bolt.

IR

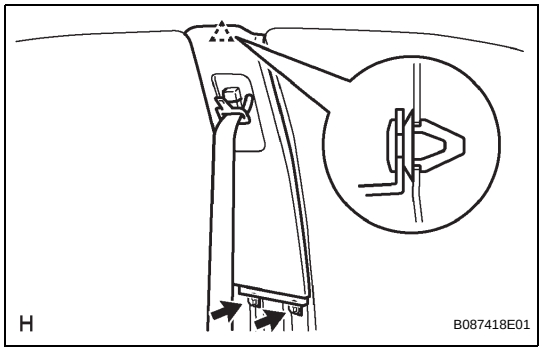


(b) w/o Woofer:
(1) Engage the 5 claws and 5 clips, and install the luggage compartment side tray.
(2) Tighten the 3 bolts.

17. INSTALL REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY (See page SE-77)

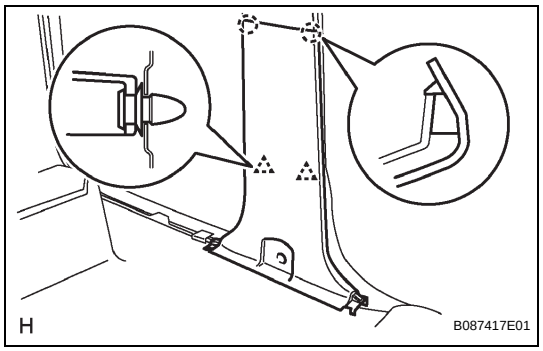


18. INSTALL LUGGAGE COMPARTMENT SIDE TRAY LH
(a) Engage the 8 claws and 3 clips, and install the luggage compartment side tray.
(b) Tighten the 3 bolts.

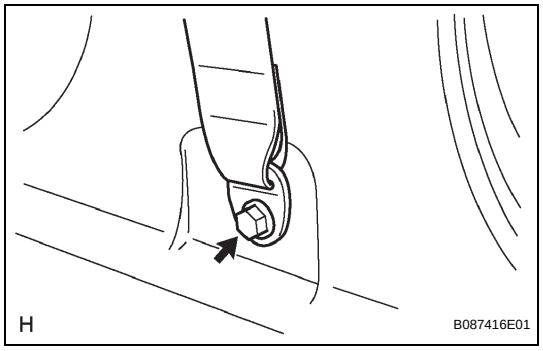


19. INSTALL CENTER PILLAR UPPER GARNISH LH
(a) Engage the clip and install the center pillar upper garnish.
(b) Tighten the 2 screws.

20. INSTALL CENTER PILLAR UPPER GARNISH RH
HINT:
Follow the same procedures as for the center pillar upper garnish LH.



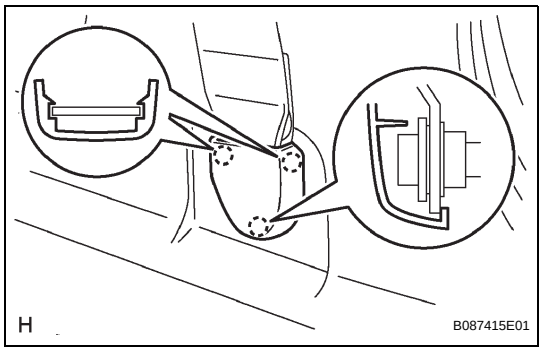
21. INSTALL CENTER PILLAR LOWER GARNISH LH
(a) Engage the 2 claws and 2 clips, and install the center pillar lower garnish.



(b) Install the floor anchor of the front seat outer belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

22. INSTALL CENTER PILLAR LOWER GARNISH RH
HINT:
Follow the same procedures as for the center pillar lower garnish LH.

IR



23. **INSTALL LAP BELT OUTER ANCHOR COVER**
HINT:
Follow the same procedures as for the opposite side.
(a) Engage the 3 claws and install the lap belt outer anchor cover.

24. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-18)**

25. **CONNECT PASSENGER AIRBAG CONNECTOR**

26. **INSTALL INSTRUMENT SIDE PANEL (See page IP-20)**

27. **INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)**

28. **INSTALL INSTRUMENT LOWER PANEL (See page IP-20)**

29. **INSTALL INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-20)**

30. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**

31. **INSTALL INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**

32. **INSTALL COMBINATION METER ASSEMBLY (See page IP-21)**

33. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**

34. **INSTALL INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-22)**

35. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**

36. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)**

37. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)**

38. **INSTALL FRONT CONSOLE BOX**
(a) for Automatic Transmission:
(1) Install the front console box (See page IP-24).
(b) for Manual Transmission:
(1) Install the front console box (See page IP-23).

39. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission) (See page IP-24)**

40. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-24)**

41. **INSTALL REAR CONSOLE UPPER PANEL SUB-ASSEMBLY**
(a) for Automatic Transmission:
(1) Install the rear console upper panel sub-assembly (See page IP-25).

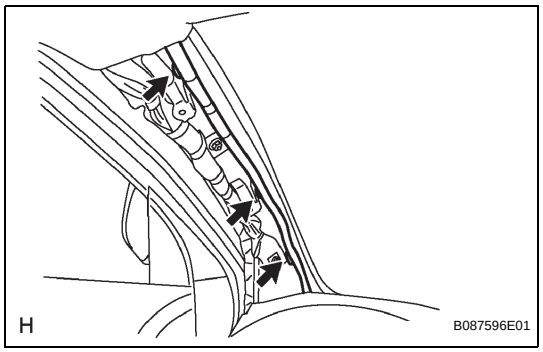
(b) for Manual Transmission:
(1) Install the rear console upper panel sub-assembly (See page IP-25).

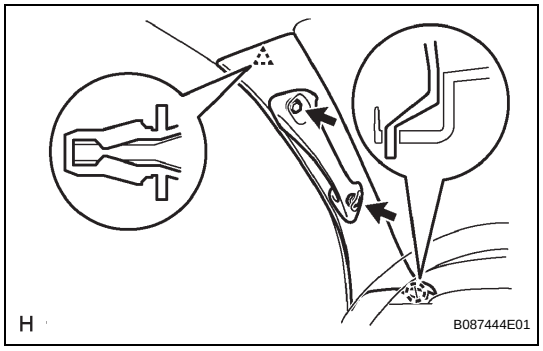
42. INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)

43. INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)

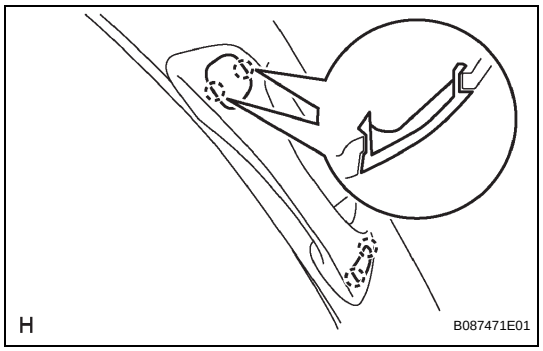
44. INSTALL FRONT PILLAR GARNISH LH

(a) Install the 3 wire harness clamps (LH side only).





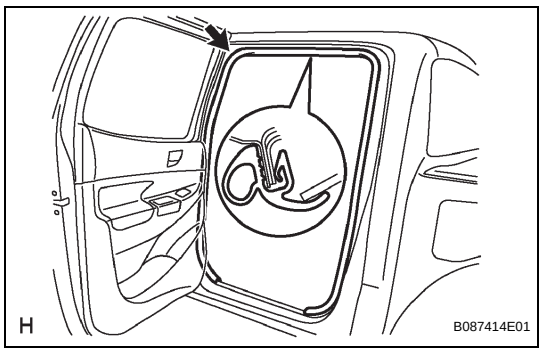
(b) Engage the claw and clip, and install the front pillar garnish.
(c) Tighten the 2 screws.



(d) Engage the 2 claws and install the assist grip plug.
HINT:
Follow the same procedures as for the opposite side.

45. INSTALL FRONT PILLAR GARNISH RH

HINT:
Follow the same procedures as for the front pillar garnish LH.



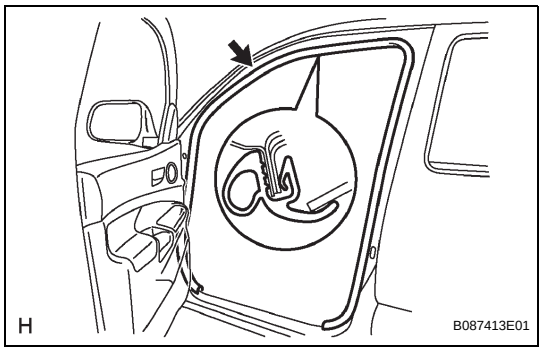
46. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

(a) Install the rear door opening trim weatherstrip.

47. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:
Follow the same procedures as for the rear door opening trim weatherstrip.

IR

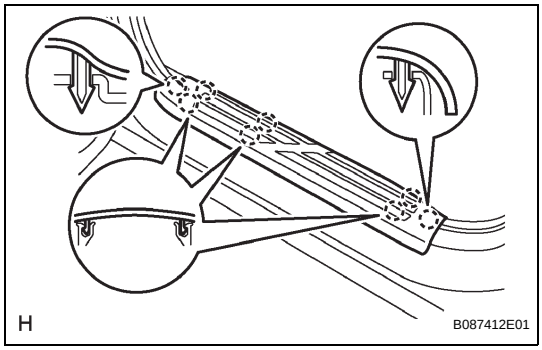


48. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Install the front door opening trim weatherstrip.

49. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:
Follow the same procedures as for the front door opening trim weatherstrip.



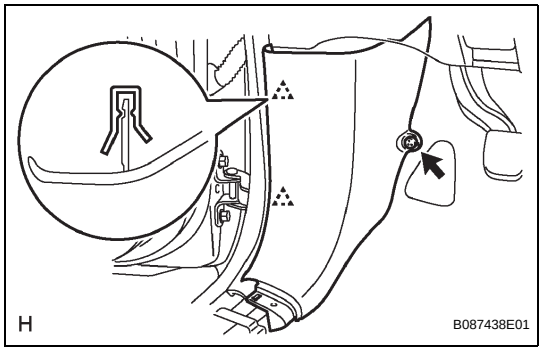
50. INSTALL REAR DOOR SCUFF PLATE LH

(a) Engage the 8 claws and install the rear door scuff plate.

51. INSTALL REAR DOOR SCUFF PLATE RH

HINT:
Follow the same procedures as for the rear door scuff plate LH.

IR

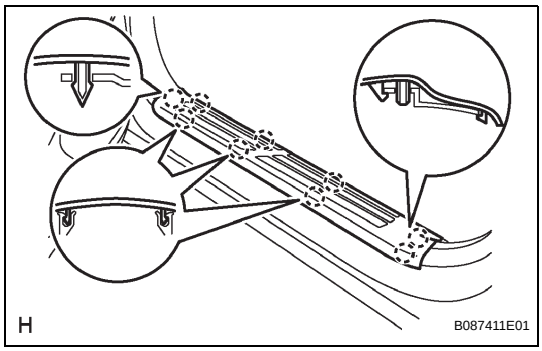


52. INSTALL COWL SIDE TRIM BOARD LH

(a) Engage the 2 clips and install the cowl side trim board.
(b) Install the clip.

53. INSTALL COWL SIDE TRIM BOARD RH

HINT:
Follow the same procedures as for the cowl side trim board LH.



54. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 9 claws and install the front door scuff plate.

55. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:
Follow the same procedures as for the front door scuff plate LH.

56. INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY LH (See page SE-77)

57. INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY RH

HINT:
Follow the same procedures as for the rear seat back hinge sub-assembly LH.

58. INSTALL FRONT FLOOR FOOTREST (See page IR-1)

59. INSTALL REAR SEAT BACK ASSEMBLY LH (See page SE-77)

60. INSTALL REAR SEAT BACK ASSEMBLY RH (See page SE-90)

61. INSTALL REAR SEAT BACK HINGE COVER

(a) for LH Side:

(1) Install the rear seat back hinge cover (See page SE-78).

(b) for RH Side:

(1) Install the rear seat back hinge cover (See page SE-90).

62. INSTALL REAR SEAT CUSHION ASSEMBLY LH (See page SE-78)

63. INSTALL REAR SEAT CUSHION ASSEMBLY RH (See page SE-90)

64. INSTALL FRONT SEAT ASSEMBLY LH (See page SE-34)

65. INSTALL FRONT SEAT ASSEMBLY RH

(a) for Separate Folding Seat Type:

(1) Install the front seat assembly RH (See page SE-19).

(b) for Separate Seat Type Front Passenger Side:

(1) Install the front seat assembly RH (See page SE-48).

66. INSTALL SEAT TRACK COVER LH (See page SE-34)

67. INSTALL SEAT TRACK COVER RH

(a) for Separate Folding Seat Type:

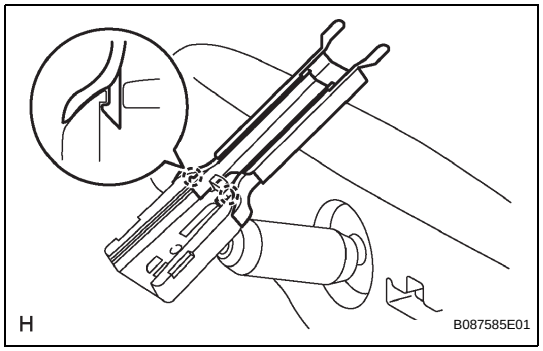
(1) Install the seat track cover RH (See page SE-19).

(b) for Separate Seat Type Front Passenger Side:

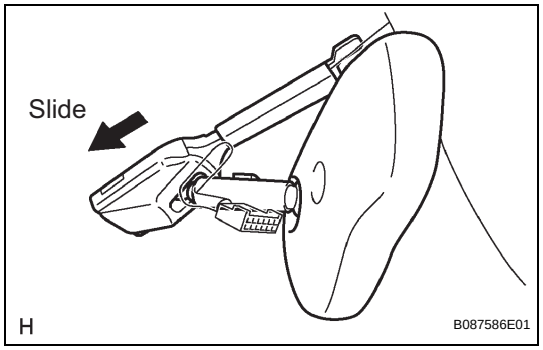
(1) Install the seat track cover RH (See page SE-48).

68. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

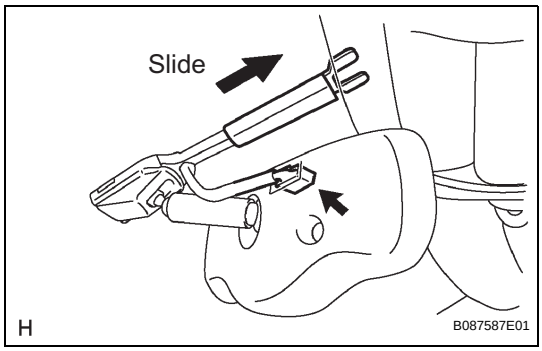
(a) Engage the 2 claws and install the inner rear view mirror cover.



(b) Slide and install the inner rear view mirror.



IR



(c) Slide the inner rear view mirror cover.
(d) Connect the EC mirror connector.

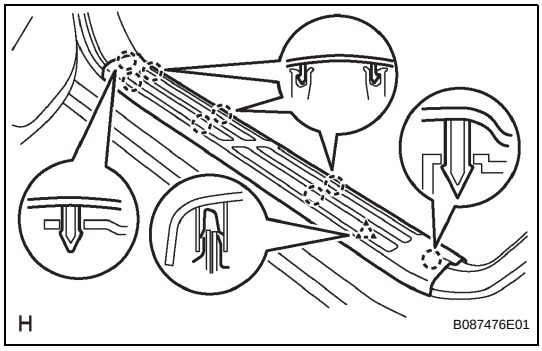
69. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

70. INSPECT SRS WARNING LIGHT
(See page RS-28)

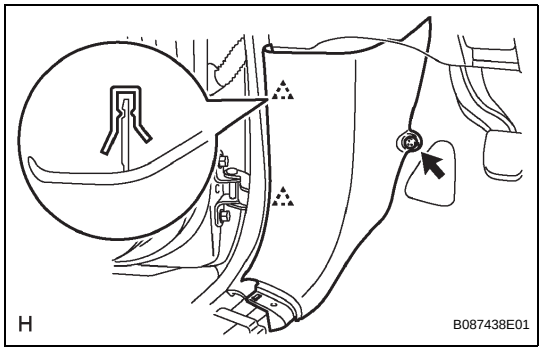
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

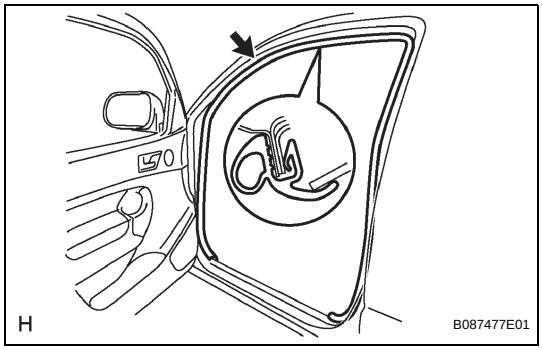
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
3. **REMOVE FRONT DOOR SCUFF PLATE LH**
   (a) Disengage the 8 claws and clip, and remove the front door scuff plate.
4. **REMOVE FRONT DOOR SCUFF PLATE RH**
   HINT:
   Follow the same procedures as for the front door scuff plate LH.

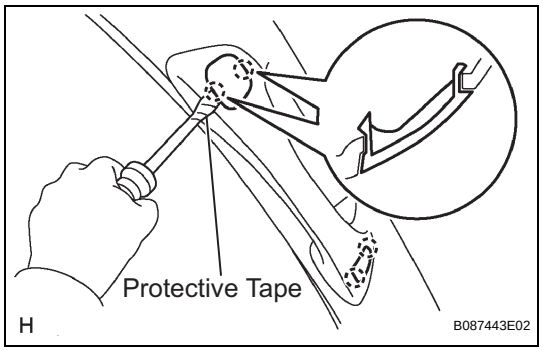


5. **REMOVE COWL SIDE TRIM BOARD LH**
   (a) Remove the clip.
   (b) Disengage the 2 clips and remove the cowl side trim board.
6. **REMOVE COWL SIDE TRIM BOARD RH**
   HINT:
   Follow the same procedures as for the cowl side trim board LH.



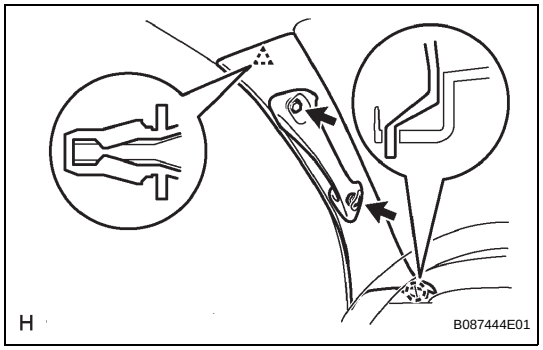
7. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   (a) Remove the front door opening trim weatherstrip.
8. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
   HINT:
   Follow the same procedures as for the front door opening trim weatherstrip LH.



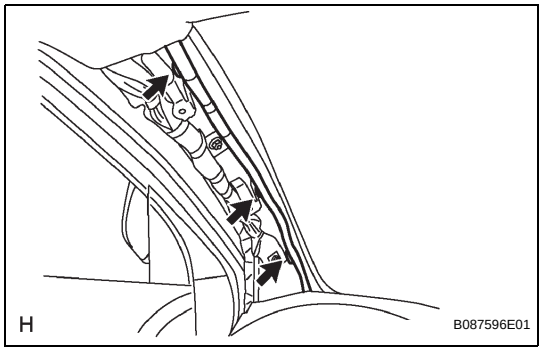


9. REMOVE FRONT PILLAR GARNISH LH

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the assist grip plug.
HINT:
Follow the same procedures as for the opposite side.



(b) Remove the 2 screws.
(c) Disengage the clip and claw and remove the front pillar garnish.



(d) for LH Side:
(1) Using a clip remover, remove the 3 wire harness clamps.

10. REMOVE FRONT PILLAR GARNISH RH

HINT:
Follow the same procedures as for the front pillar garnish LH.

11. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)

12. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)

13. REMOVE REAR CONSOLE UPPER PANEL SUB-ASSEMBLY

(a) for Automatic Transmission on Separate Seat Type:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).
(b) for Manual Transmission on Separate Seat Type:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).

14. REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)

15. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)

16. REMOVE FRONT CONSOLE BOX

(a) for Automatic Transmission on Separate Seat Type:
(1) Remove the front console box (See page IP-10).

(b) for Manual Transmission on Separate Seat Type:
(1) Remove the front console box (See page IP-11).

(c) for Automatic Transmission on Bench Seat Type:
(1) Remove the front console box (See page IP-11).

(d) for Manual Transmission on Bench Seat Type:
(1) Remove the front console box (See page IP-11).

17. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)**

18. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)**

19. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**

20. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-12)**

21. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**

22. **REMOVE COMBINATION METER ASSEMBLY (See page IP-13)**

23. **REMOVE INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)**

24. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**

25. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-14)**

26. **REMOVE INSTRUMENT LOWER PANEL (See page IP-14)**

27. **REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-14)**

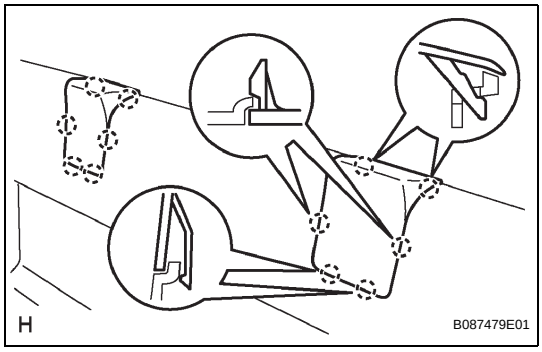
28. **REMOVE INSTRUMENT SIDE PANEL (See page IP-14)**

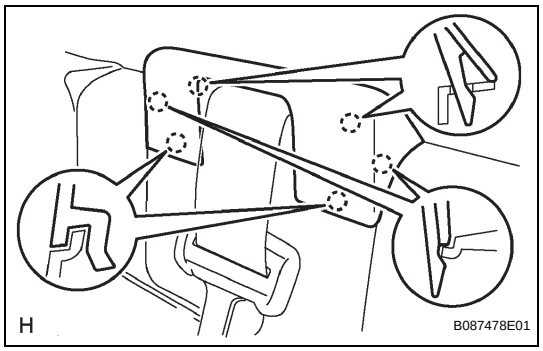
29. **DISCONNECT PASSENGER AIRBAG CONNECTOR (See page RS-576)**

30. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)**

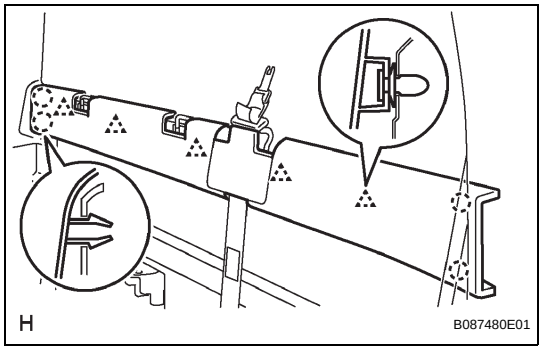
31. **REMOVE BACK PANEL TRIM COVER**

(a) for Separate Seat Type and Bench Seat Type:
HINT:
Follow the same procedures as for the opposite side (for Bench Seat Type).
(1) Disengage the 6 claws and remove the back panel trim cover.



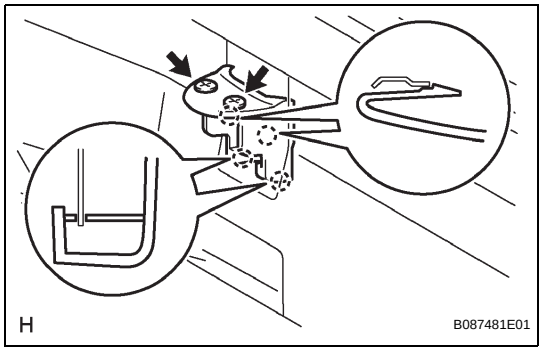


(b) for Bench Seat Type:
(1) Disengage the 6 claws and remove the back panel trim cover.

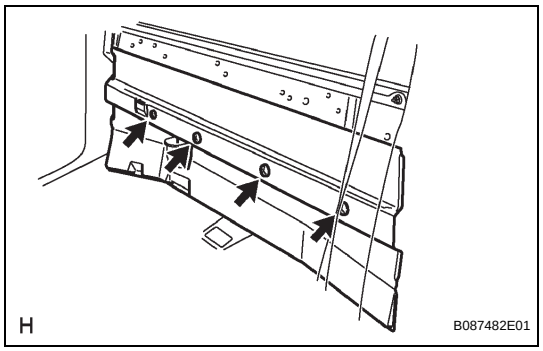


32. REMOVE BACK PANEL UPPER GARNISH
(a) Disengage the 4 claws and 5 clips, and remove the back panel upper garnish.

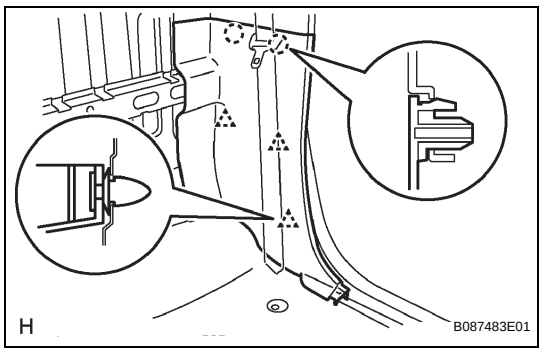
33. REMOVE JACK ASSEMBLY (for Separate Seat Type)



34. REMOVE BACK PANEL TRIM COVER (for Separate Seat Type)
(a) Remove the 2 clips.
(b) Disengage the 4 claws and remove the back panel trim cover.



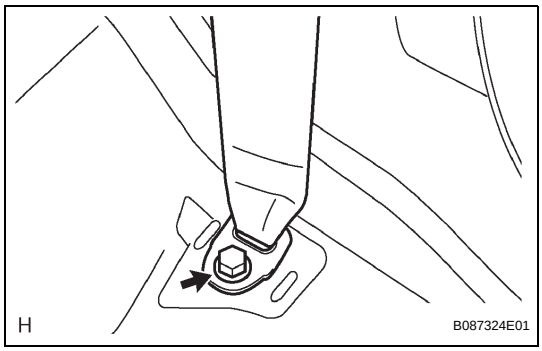
35. REMOVE BACK PANEL TRIM (for Separate Seat Type)
(a) Remove the 4 clips and back panel trim.



36. REMOVE QUARTER TRIM LOWER PANEL LH
(a) Disengage the 2 claws and 3 clips, and remove the quarter trim lower panel.

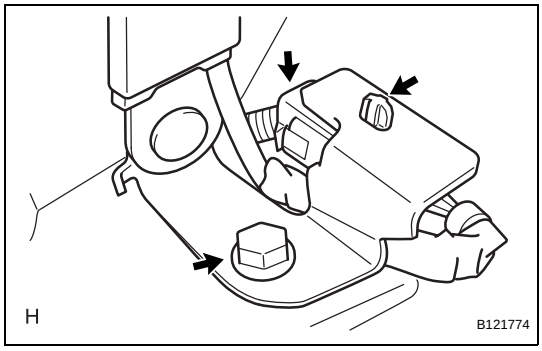
37. REMOVE QUARTER TRIM LOWER PANEL RH
HINT:
Follow the same procedures as for the quarter trim lower panel LH.

IR

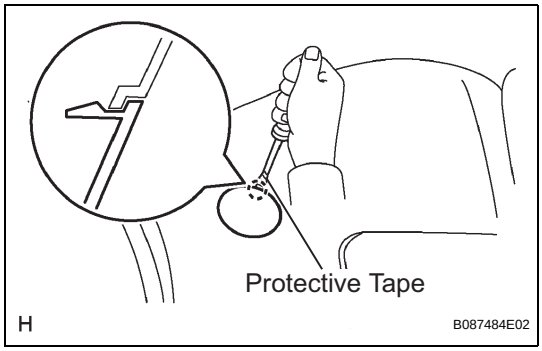


38. REMOVE QUARTER INSIDE TRIM BOARD LH

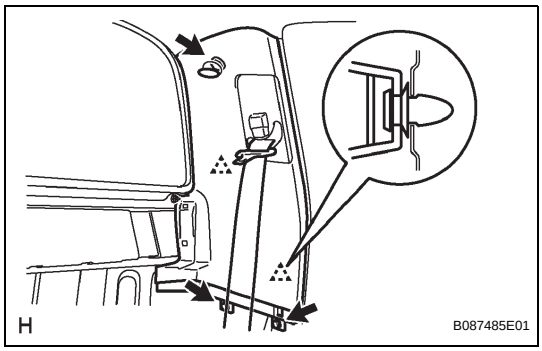
(a) for LH Side and Separate Seat Type RH side:
  (1) Remove the bolt and the floor anchor of the front seat outer belt.



(b) for Bench Seat Type RH Side:
  (1) Remove the bolt and the floor anchor of the front seat outer belt.
  (2) Disconnect the belt tension sensor connector.
  (3) Remove the wiring harness clamp.



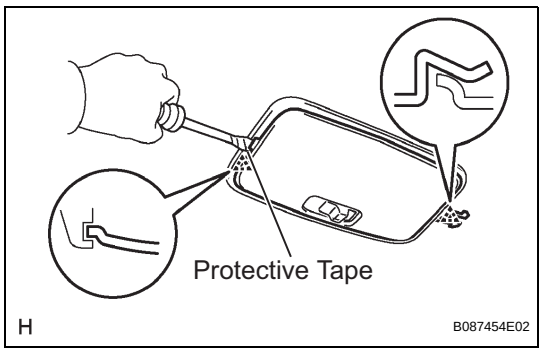
(c) Using a screwdriver with its tip taped in protective tape, disengage the claw and open the cover.



(d) Remove the 3 screws.
(e) Disengage the 2 clips and remove the quarter trim board.

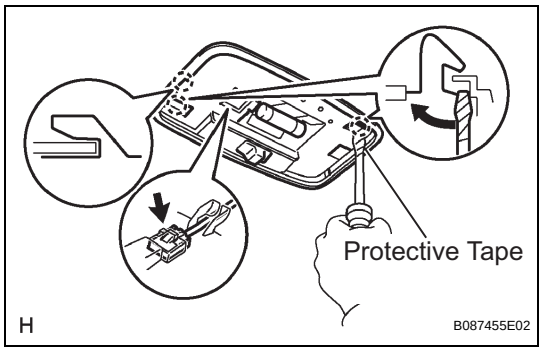
39. REMOVE QUARTER INSIDE TRIM BOARD RH

HINT:
Follow the same procedures as for the quarter trim board LH.

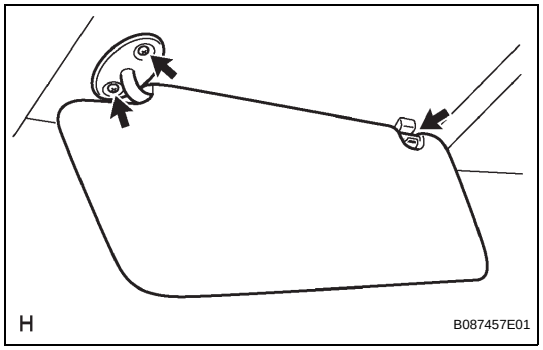


40. REMOVE ROOM LIGHT ASSEMBLY

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the room light lens.

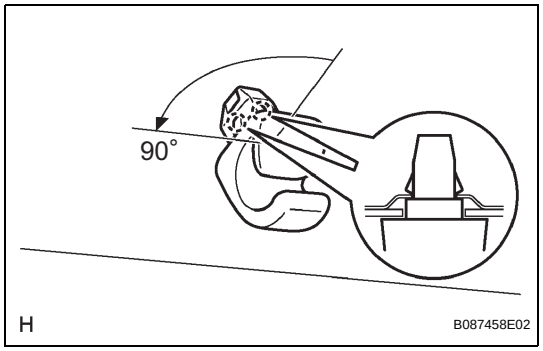


(b) Using a screwdriver with its tip taped in protective tape, disengage the 3 claws.
(c) Disconnect the room light connector and remove the room light.

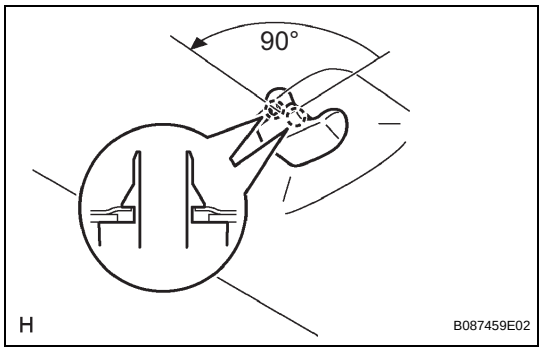


41. REMOVE VISOR ASSEMBLY LH
(a) Remove the 2 screws.
(b) Remove the visor from the visor holder.

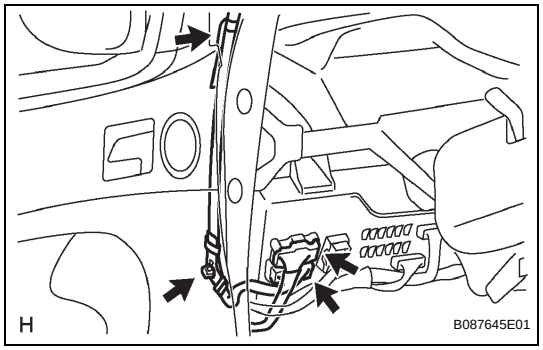
42. REMOVE VISOR ASSEMBLY RH
HINT:
Follow the same procedures as for the visor assembly LH.



43. REMOVE VISOR HOLDER
HINT:
Follow the same procedures as for the opposite side.
(a) Turn the visor holder 90° counterclockwise and remove it.

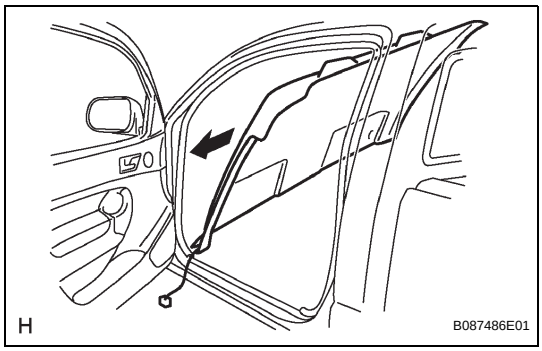


44. REMOVE COAT HOOK
HINT:
Follow the same procedures as for the opposite side.
(a) Turn the coat hook 90° counterclockwise and remove it.

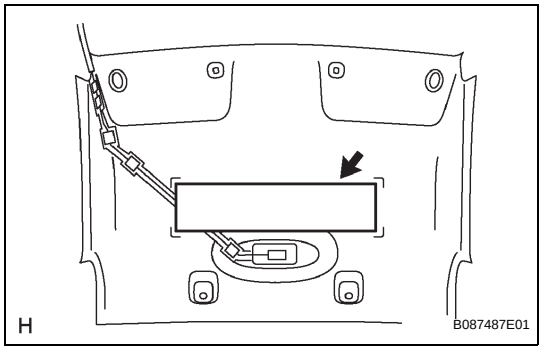


45. REMOVE ROOF HEADLINING ASSEMBLY
(a) Disconnect the frame wire connector.
(b) Disconnect the roof wire connector.
(c) Using a clip remover, remove the 2 wire harness clamps.

IR

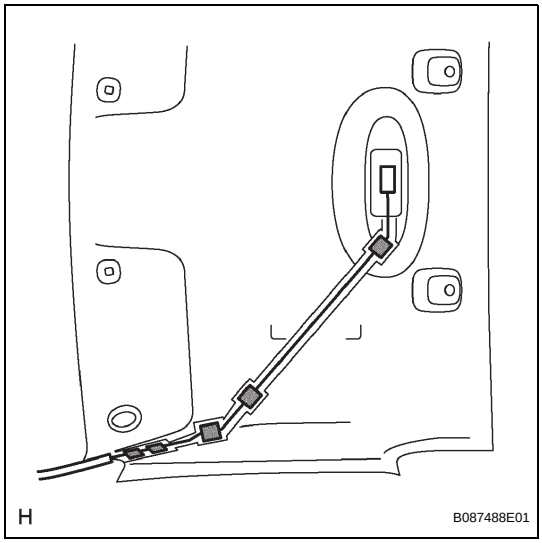


(d) Remove the roof headlining from the vehicle.



46. REMOVE ROOF HEADLINING PAD

(a) Remove the roof headlining pad from the roof headlining.

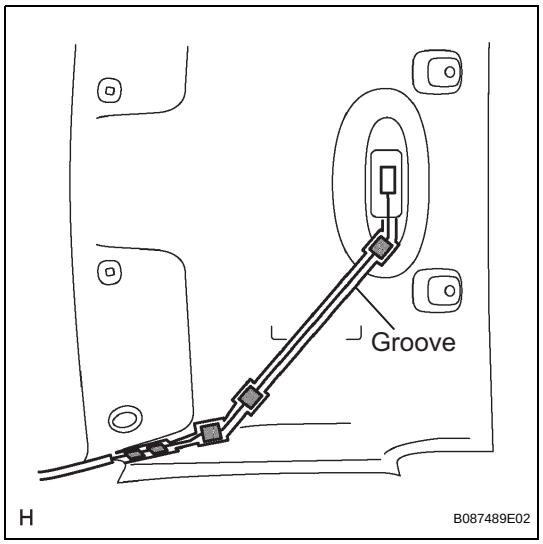


47. REMOVE ROOF WIRE

(a) Remove the 5 adhesive tapes and roof wire.

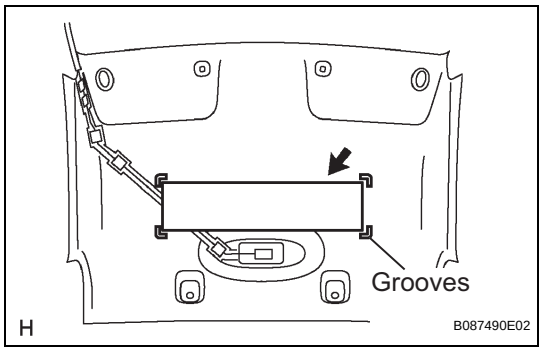
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



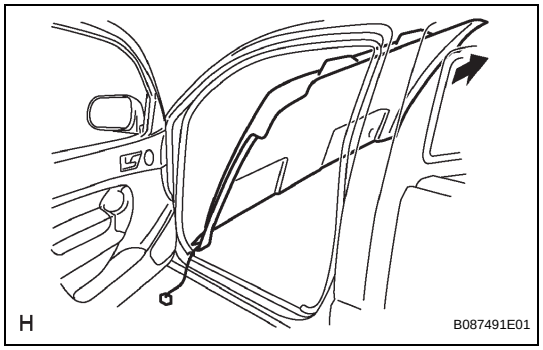
1. INSTALL ROOF WIRE

(a) Install the roof wire with 5 new adhesive tapes, as shown in the illustration.



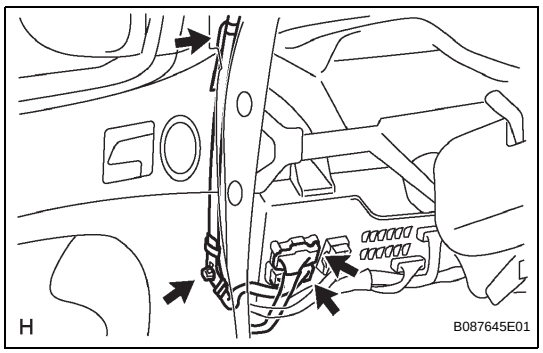
2. INSTALL ROOF HEADLINING PAD

(a) Install a new roof headlining pad onto the roof headlining, as shown in the illustration.



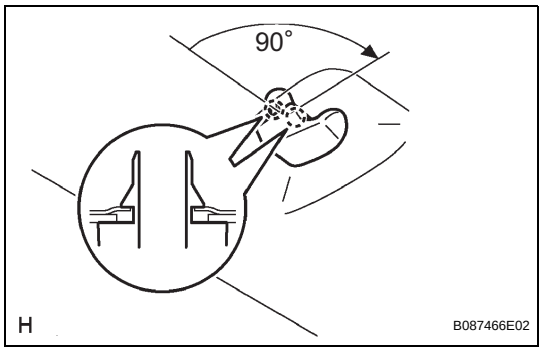
3. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining into the vehicle.



(b) Install the 2 wire harness clamps.
(c) Connect the roof wire connector.
(d) Connect the frame wire connector.

IR

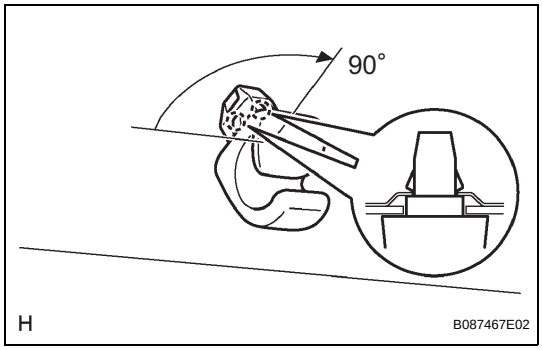


4. INSTALL COAT HOOK

HINT:

Follow the same procedures as for the opposite side.

(a) Turn the coat hook 90° clockwise and install it.

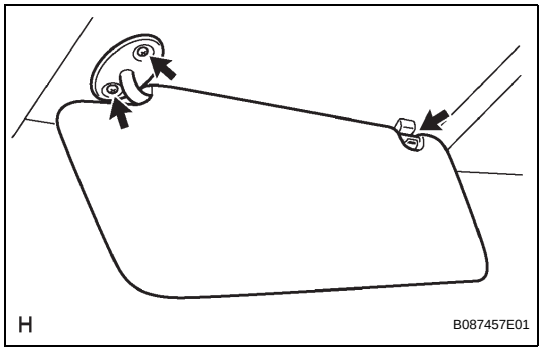


5. INSTALL VISOR HOLDER

HINT:

Follow the same procedures as for the opposite side.

(a) Turn the visor holder 90° clockwise and install it.



6. INSTALL VISOR ASSEMBLY LH

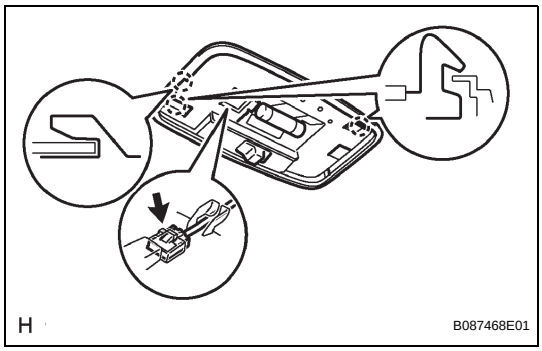
(a) Install the visor into the visor holder.

(b) Install the 2 screws.

7. INSTALL VISOR ASSEMBLY RH

HINT:

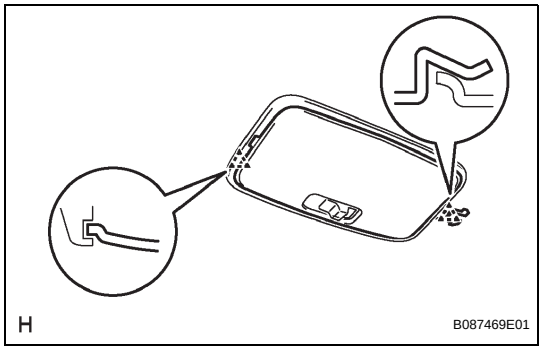
Follow the same procedures as for the visor assembly LH.



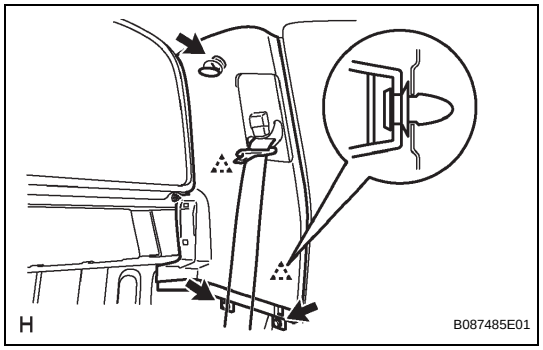
8. INSTALL ROOM LIGHT ASSEMBLY

(a) Connect the room light connector.

(b) Engage the 3 claws and install the room light.



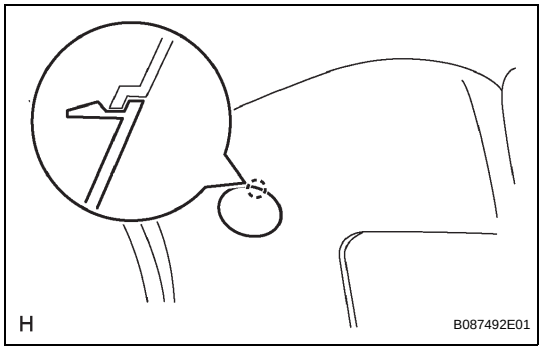
(c) Engage the 2 claws and install the room light lens.



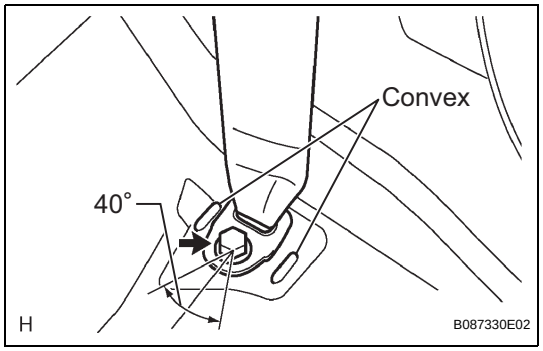
9. INSTALL QUARTER INSIDE TRIM BOARD LH

(a) Engage the 2 clips and install the quarter trim board.

(b) Tighten the 3 screws.



(c) Engage the claw and close the cover.



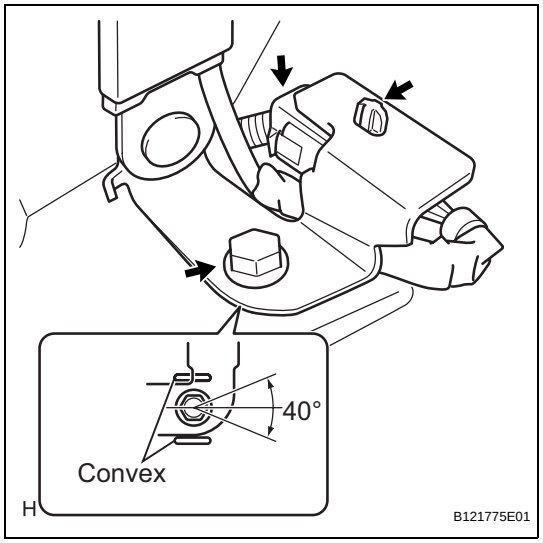
(d) for LH Side and Separate Seat Type RH Side:

(1) Install the floor anchor of the front seat outer belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Make sure that the floor anchor of the front seat outer belt is oriented in the correct direction when installing.**
- **Be careful not to place the floor anchor of the front seat outer belt over the convex areas of the floor panel.**



(e) for Bench Seat Type RH Side:

(1) Install the wiring harness clamp.

(2) Connect the belt tension sensor connector.

(3) Install the floor anchor of the front seat outer belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

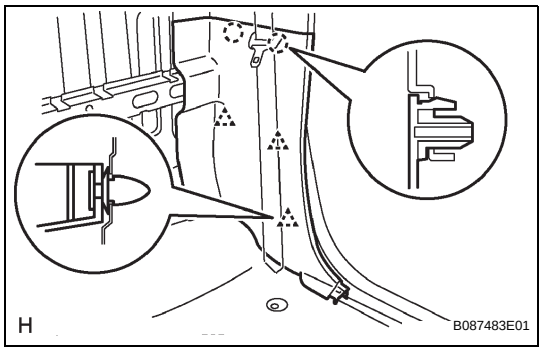
- **Make sure that the floor anchor of the front seat outer belt is oriented in the correct direction when installing.**
- **Be careful not to place the floor anchor of the front seat outer belt over the convex areas of the floor panel.**

10. INSTALL QUARTER INSIDE TRIM BOARD RH

HINT:

Follow the same procedures as for the quarter inside trim board LH.

IR



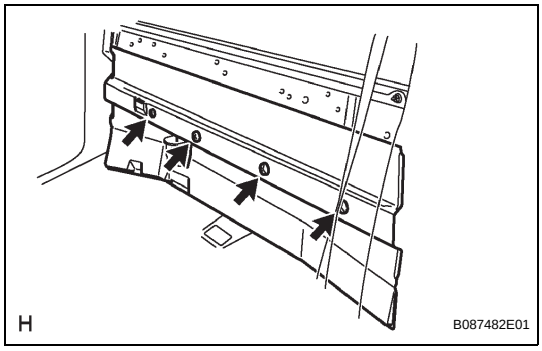
11. INSTALL QUARTER TRIM LOWER PANEL LH

(a) Engage the 2 claws and 3 clips, and install the quarter trim lower panel.

12. INSTALL QUARTER TRIM LOWER PANEL RH

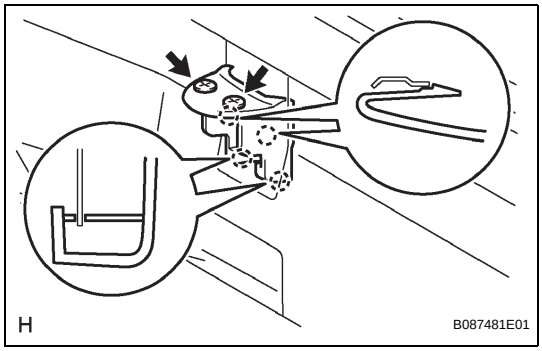
HINT:

Follow the same procedures as for the quarter trim lower panel LH.



13. INSTALL BACK PANEL TRIM COVER (for Separate Seat Type)

(a) Install the back panel trim with the 4 clips.

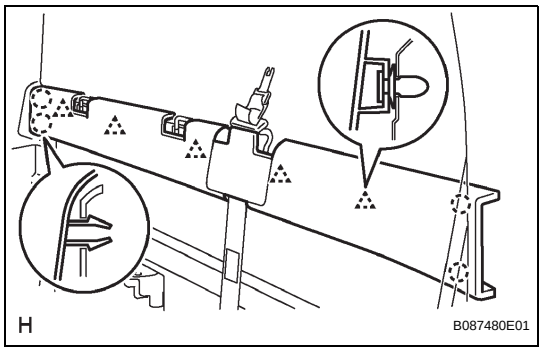


14. INSTALL BACK PANEL TRIM COVER (for Separate Seat Type)

(a) Engage the 4 claws and install the back panel trim cover.

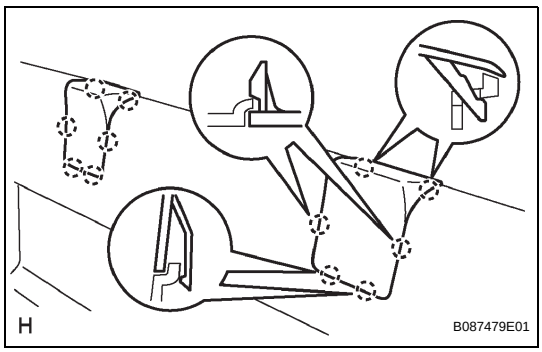
(b) Install the 2 clips.

15. INSTALL JACK ASSEMBLY (for Separate Seat Type)



16. INSTALL BACK PANEL UPPER GARNISH

(a) Engage the 4 claws and 5 clips, and install the back panel upper garnish.



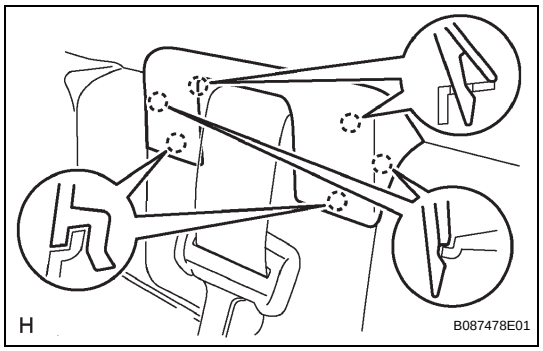
17. INSTALL BACK PANEL TRIM COVER

(a) for Separate Seat Type and Bench Seat Type:

(1) Engage the 6 claws and install the back panel trim cover.

HINT:

Follow the same procedures as for the opposite side (for Bench Seat Type).



(b) for Bench Seat Type:
(1) Engage the 6 claws and install the back panel trim cover.

18. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-18)**
19. **CONNECT PASSENGER AIRBAG CONNECTOR**
20. **INSTALL INSTRUMENT SIDE PANEL (See page IP-20)**
21. **INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)**
22. **INSTALL INSTRUMENT LOWER PANEL (See page IP-20)**
23. **INSTALL INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-20)**
24. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
25. **INSTALL INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
26. **INSTALL COMBINATION METER ASSEMBLY (See page IP-21)**
27. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
28. **INSTALL INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-22)**
29. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
30. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)**
31. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)**
32. **INSTALL FRONT CONSOLE BOX**
(a) for Automatic Transmission on Separate Seat Type:
(1) Install the front console box (See page IP-24).
(b) for Automatic Transmission on Bench Seat Type:
(1) Install the front console box (See page IP-23).
(c) for Manual Transmission on Separate Seat Type:
(1) Install the front console box (See page IP-23).
(d) for Manual Transmission on Bench Seat Type:
(1) Install the front console box (See page IP-22).
33. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
34. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**

35. INSTALL REAR CONSOLE UPPER PANEL SUB-ASSEMBLY

(a) for Automatic Transmission on Separate Seat Type:
  (1) Install the rear console upper panel sub-assembly (See page IP-25).

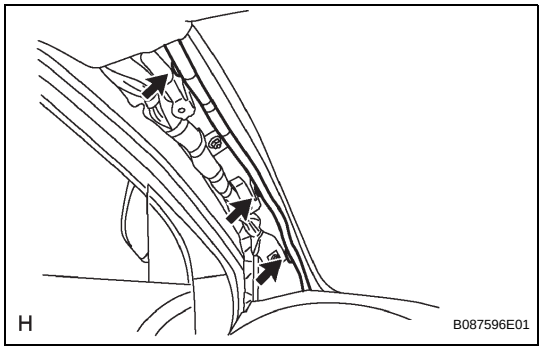
(b) for Manual Transmission on Separate Seat Type:
  (1) Install the rear console upper panel sub-assembly (See page IP-25).

36. INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)

37. INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)

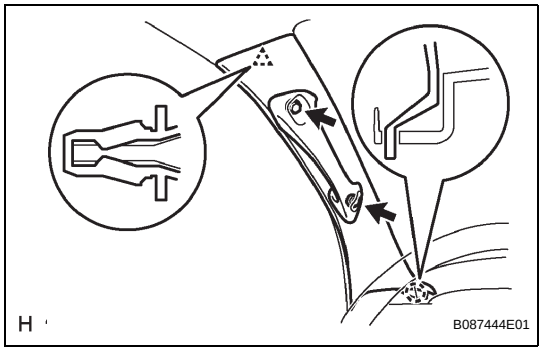
38. INSTALL FRONT PILLAR GARNISH LH

(a) for LH Side:
  (1) Install the 3 wire harness clamps.

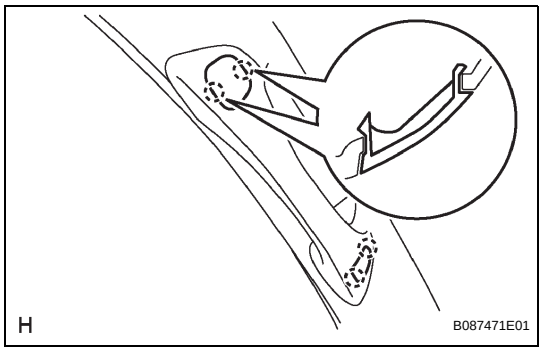


(b) Engage the claw and clip, and install the front pillar garnish.

(c) Tighten the 2 screws.

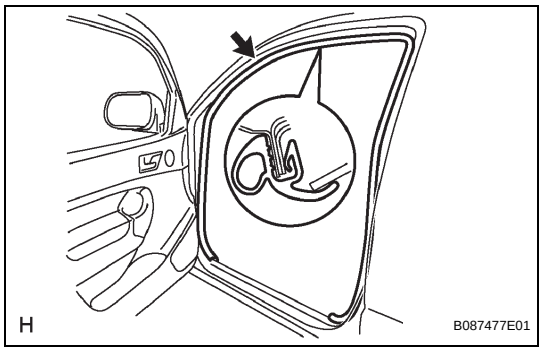


(d) Engage the 2 claws and install the assist grip plug.



39. INSTALL FRONT PILLAR GARNISH RH

HINT:
Follow the same procedures as for the front pillar garnish LH.



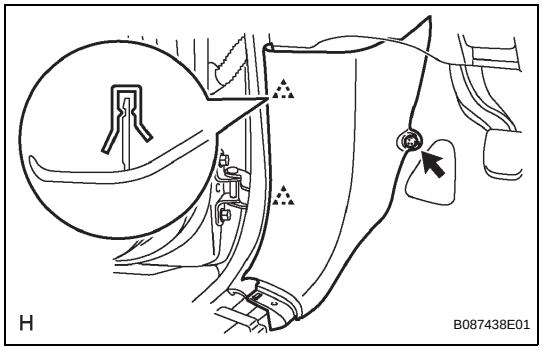
40. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Install the front door opening trim weatherstrip.

41. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Follow the same procedures as for the front door opening trim weatherstrip LH.



42. INSTALL COWL SIDE TRIM BOARD LH

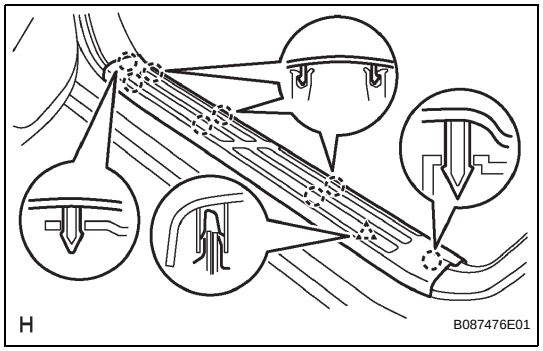
(a) Engage the 2 clips and install the cowl side trim board.

(b) Install the clip.

43. INSTALL COWL SIDE TRIM BOARD RH

HINT:

Follow the same procedures as for the cowl side trim board LH.



44. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 8 claws and clip, and install the front door scuff plate.

45. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Follow the same procedures as for the front door scuff plate LH.

46. INSTALL FRONT FLOOR FOOTREST (See page IR-1)

47. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

48. INSPECT SRS WARNING LIGHT

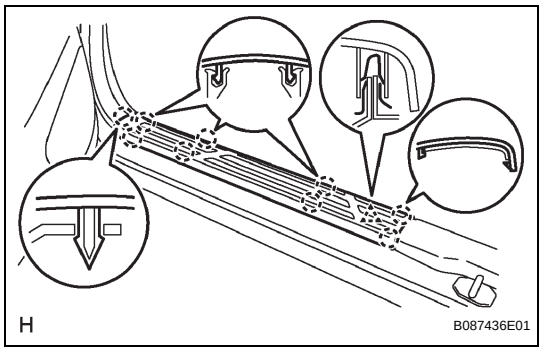
(See page RS-28)

IR

REMOVAL

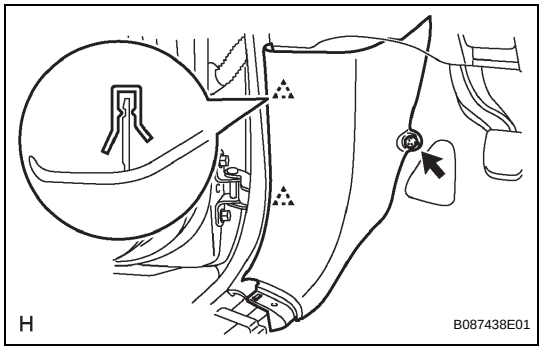
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror) (See page IR-11)**
3. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
4. **REMOVE FRONT DOOR SCUFF PLATE LH**
   (a) Disengage the 9 claws and clip, and remove the front door scuff plate.

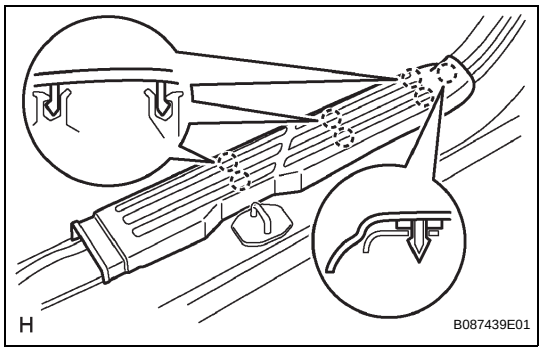


5. **REMOVE FRONT DOOR SCUFF PLATE RH**
   HINT:
   Follow the same procedures as for the front door scuff plate LH.

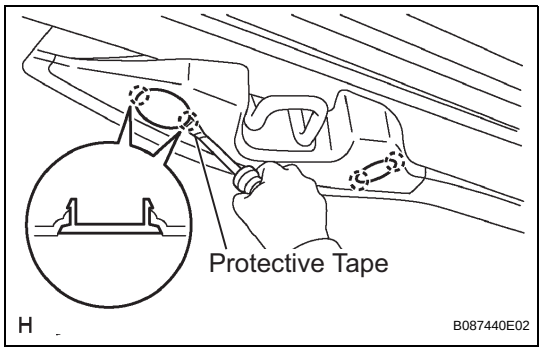
6. **REMOVE COWL SIDE TRIM BOARD LH**
   (a) Remove the clip.
   (b) Disengage the 2 clips and remove the cowl side trim board.



7. **REMOVE COWL SIDE TRIM BOARD RH**
   HINT:
   Follow the same procedures as for the cowl side trim board LH.
8. **REMOVE REAR DOOR SCUFF PLATE LH**
   (a) Disengage the 7 claws and remove the rear door scuff plate.



9. **REMOVE REAR DOOR SCUFF PLATE RH**
   HINT:
   Follow the same procedures as for the rear door scuff plate LH.



10. REMOVE ROOF SIDE INNER GARNISH COVER LH

HINT:

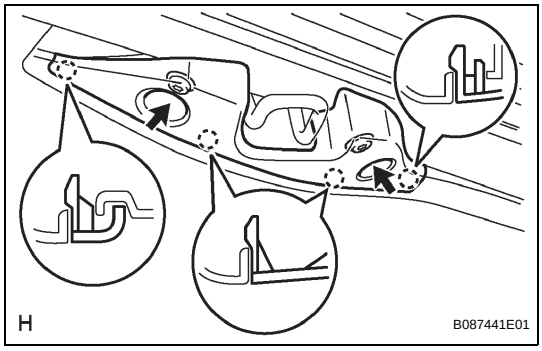
Follow the same procedures as for the opposite side.

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the roof side inner garnish cover.

11. REMOVE ROOF SIDE INNER GARNISH COVER RH

HINT:

Follow the same procedures as for the roof side inner garnish cover LH.



12. REMOVE ROOF SIDE INNER GARNISH CAP LH

(a) Using a "Torx" socket wrench T30, remove the 2 screws.

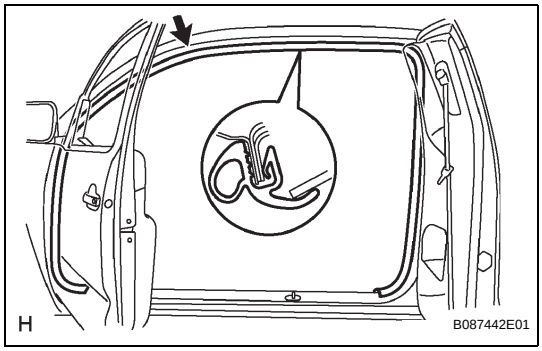
(b) Disengage the 4 claws and remove the roof side inner garnish cap.

13. REMOVE ROOF SIDE INNER GARNISH CAP RH

HINT:

Follow the same procedures as for the roof side inner garnish cap LH.

IR



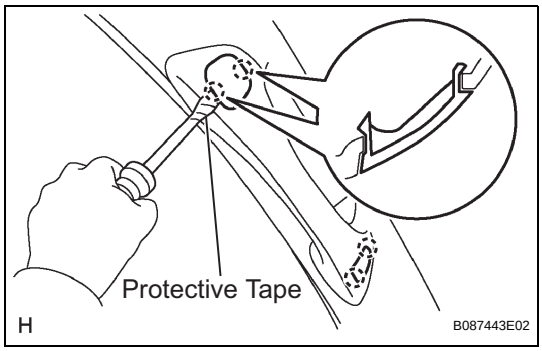
14. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Remove the front door opening trim weatherstrip.

15. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Follow the same procedures as for the front door opening trim weatherstrip LH.

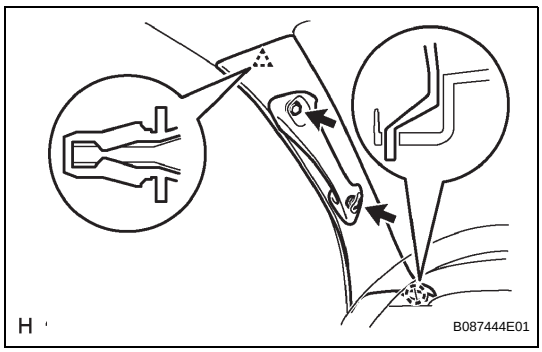


16. REMOVE FRONT PILLAR GARNISH LH

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the assist grip plug.

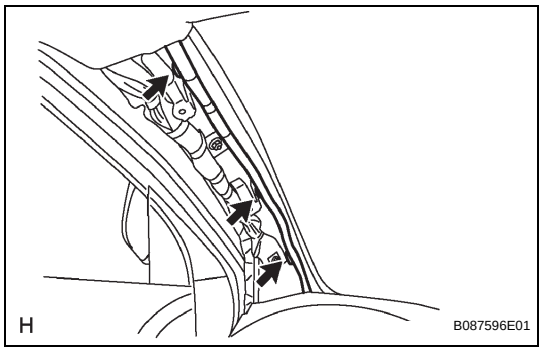
HINT:

Follow the same procedures as for the opposite side.



(b) Remove the 2 screws.

(c) Disengage the claw and clip, and remove the front pillar garnish.



(d) for LH Side:
(1) Using a clip remover, remove the 3 wire harness clamps.

17. REMOVE FRONT PILLAR GARNISH RH
HINT:
Follow the same procedures as for the front pillar garnish LH.

18. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)

19. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)

20. REMOVE REAR CONSOLE UPPER PANEL SUB-ASSEMBLY
(a) for Automatic Transmission:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).
(b) for Manual Transmission:
(1) Remove the rear console upper panel sub-assembly (See page IP-9).

21. REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-10)

22. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission) (See page IP-10)

23. REMOVE FRONT CONSOLE BOX
(a) for Automatic Transmission:
(1) Remove the front console box (See page IP-10).
(b) for Manual Transmission:
(1) Remove the front console box (See page IP-11).

24. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)

25. REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)

26. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)

27. REMOVE INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-12)

28. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)

29. REMOVE COMBINATION METER ASSEMBLY (See page IP-13)

30. REMOVE INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)

31. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)

32. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-14)**

33. **REMOVE INSTRUMENT LOWER PANEL (See page IP-14)**

34. **REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-14)**

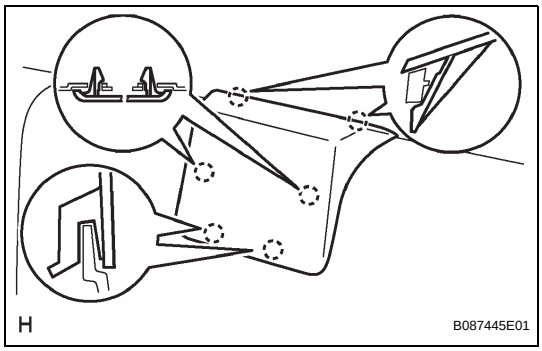
35. **REMOVE INSTRUMENT SIDE PANEL (See page IP-14)**

36. **DISCONNECT PASSENGER AIRBAG CONNECTOR (See page RS-576)**

37. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)**

38. **REMOVE BACK PANEL TRIM COVER**

(a) Disengage the 6 claws and remove the back panel trim cover.

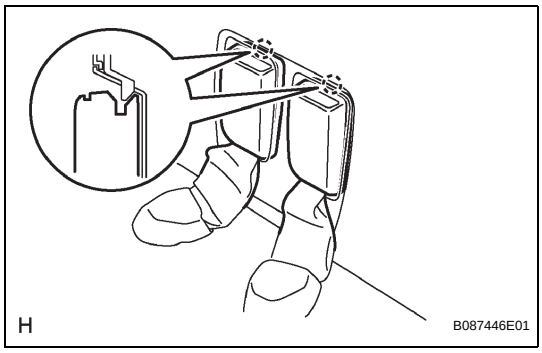


39. **REMOVE REAR SEAT INNER BELT ASSEMBLY**

HINT:

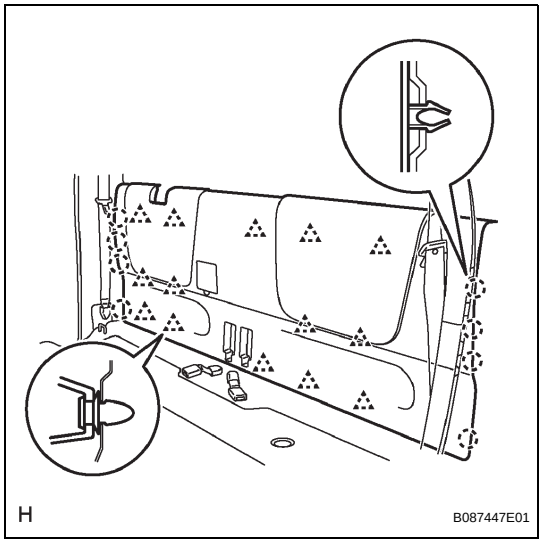
Follow the same procedures as for the opposite side.

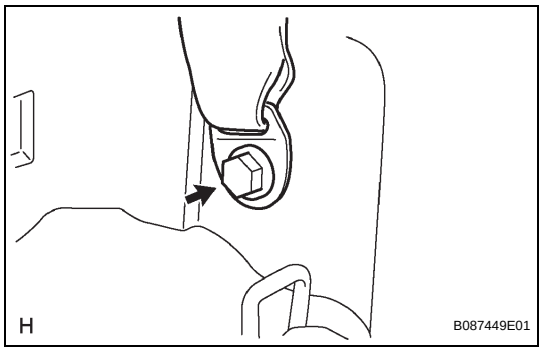
(a) Disengage the claw and remove the buckle of the rear seat belt inner.



40. **REMOVE BACK PANEL TRIM**

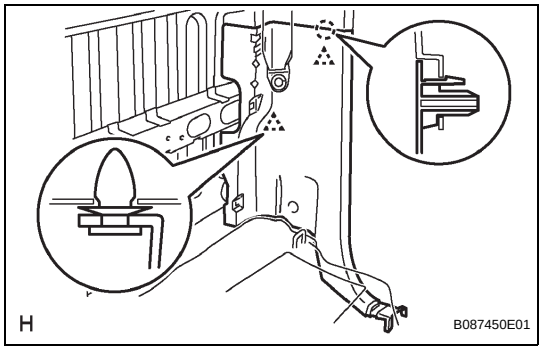
(a) Disengage the 8 claws and 14 clips, and remove the back panel trim.





41. REMOVE QUARTER TRIM LOWER PANEL LH

(a) Remove the bolt and floor anchor of the rear seat belt outer.

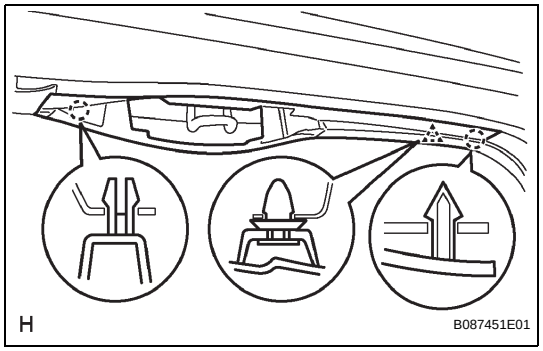


(b) Disengage the claw and 2 clips, and remove the quarter trim lower panel.

42. REMOVE QUARTER TRIM LOWER PANEL RH

HINT:

Follow the same procedures as for the quarter trim lower panel LH.



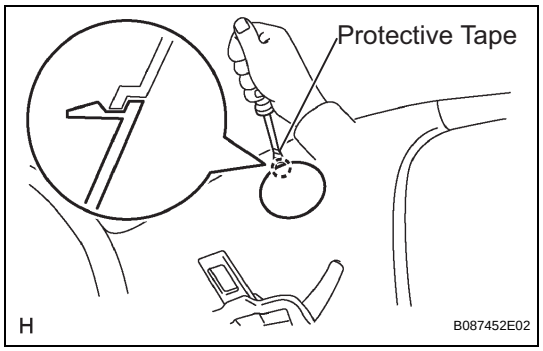
43. REMOVE ROOF SIDE INNER GARNISH LH

(a) Disengage the 2 claws and clip, and remove the roof side inner garnish.

44. REMOVE ROOF SIDE INNER GARNISH RH

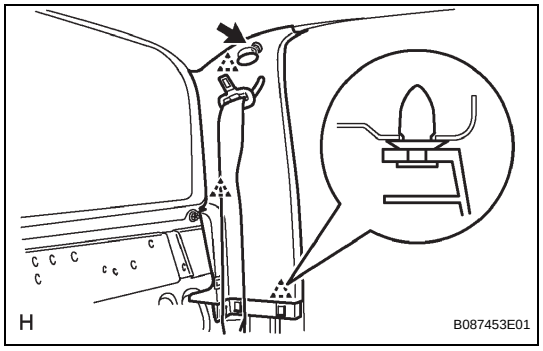
HINT:

Follow the same procedures as for the roof side inner garnish LH.



45. REMOVE QUARTER INSIDE TRIM BOARD LH

(a) Using a screwdriver with its tip taped in protective tape, disengage the claw and open the cover.



(b) Remove the screw.

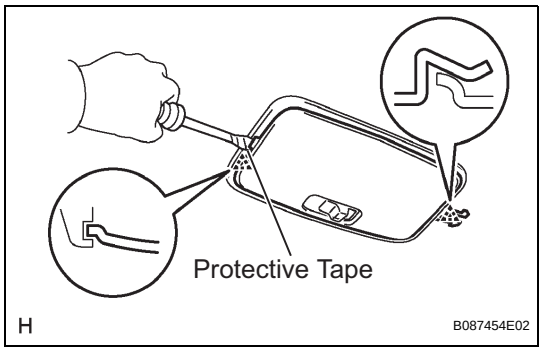
(c) Disengage the 3 clips and remove the quarter inside trim board.

46. REMOVE QUARTER INSIDE TRIM BOARD RH

HINT:

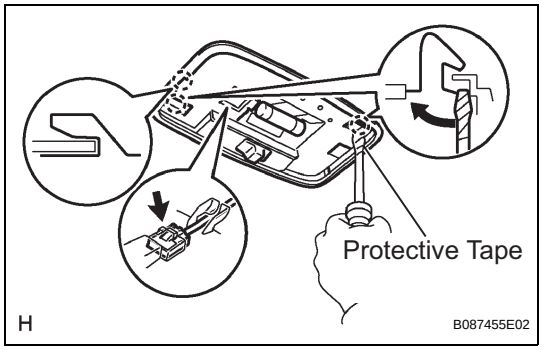
Follow the same procedures as for the quarter inside trim board LH.

IR



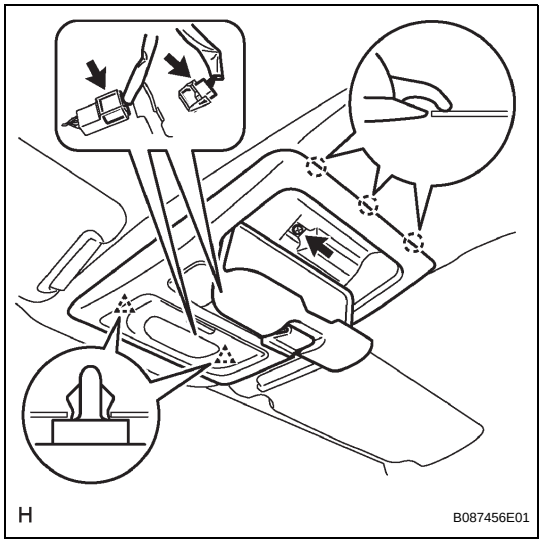
47. REMOVE ROOM LIGHT ASSEMBLY

(a) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws and remove the room light lens.



(b) Using a screwdriver with its tip taped in protective tape, disengage the 2 claws.

(c) Disconnect the room light connector and remove the room light.

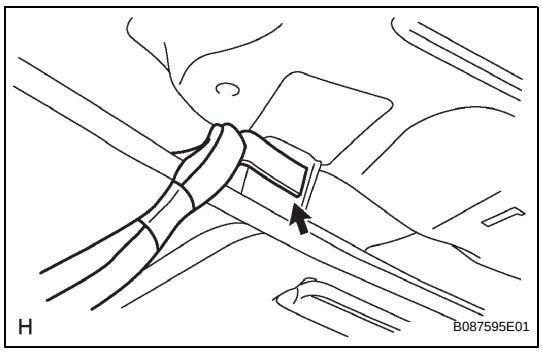


48. REMOVE ROOF CONSOLE BOX ASSEMBLY

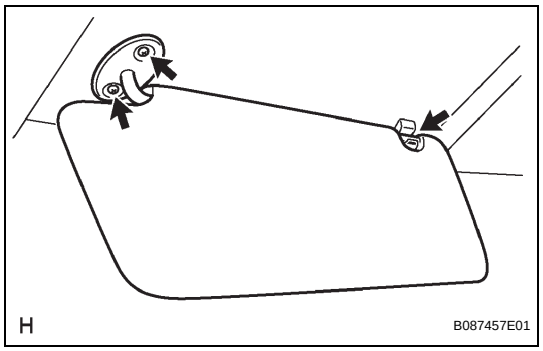
(a) Remove the screw.

(b) Disengage the 2 clips and 3 claws.

(c) Disconnect the accessory meter connector and map lamp connector, and remove the roof console box.



(d) Using a clip remover, remove the wire harness clamp.



49. REMOVE VISOR ASSEMBLY LH

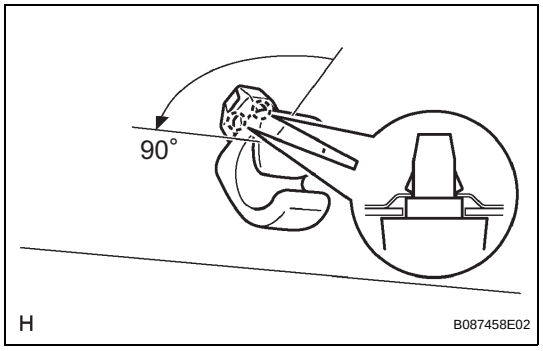
(a) Remove the 2 screws.

(b) Remove the visor from the visor holder.

50. REMOVE VISOR ASSEMBLY RH

HINT:

Follow the same procedures as for the visor assembly LH.

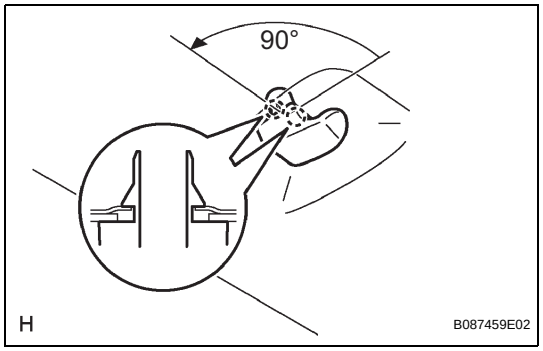


51. REMOVE VISOR HOLDER

HINT:

Follow the same procedures as for the opposite side.

(a) Turn the visor holder 90° counterclockwise and remove it.

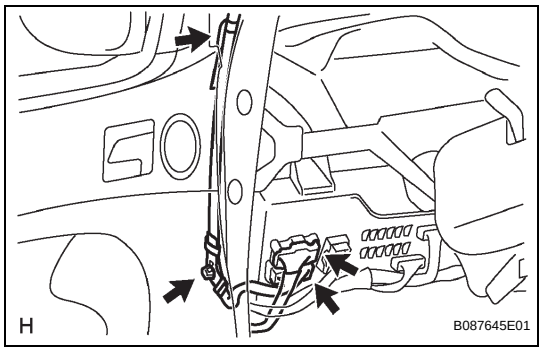


52. REMOVE COAT HOOK

HINT:

Follow the same procedures as for the opposite side.

(a) Turn the coat hook 90° counterclockwise and remove it.

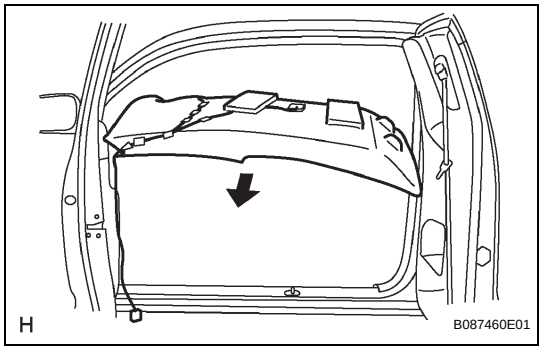


53. REMOVE ROOF HEADLINING ASSEMBLY

(a) Disconnect the frame wire connector.

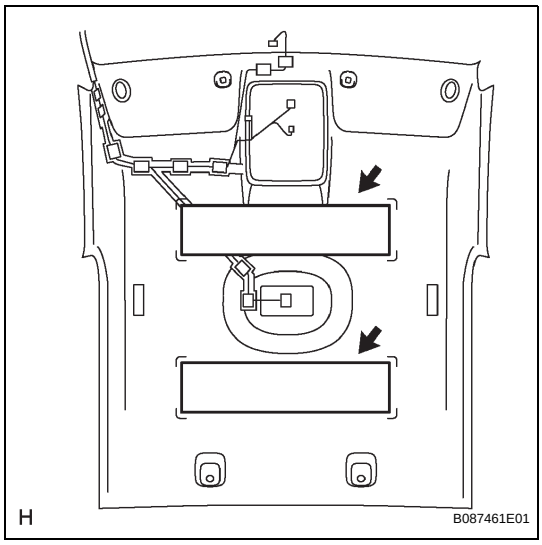
(b) Disconnect the roof wire connector.

(c) Using a clip remover, remove the 2 wire harness clamps.



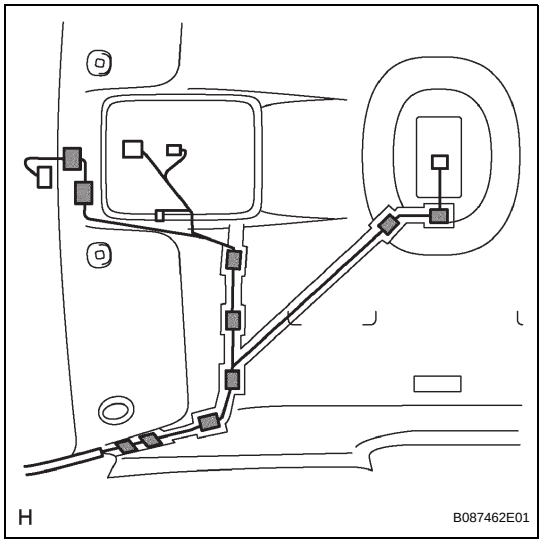
(d) Remove the roof headlining from the vehicle.

IR



54. REMOVE ROOF HEADLINING PAD

(a) Remove the 2 roof headlining pads from the roof headlining.



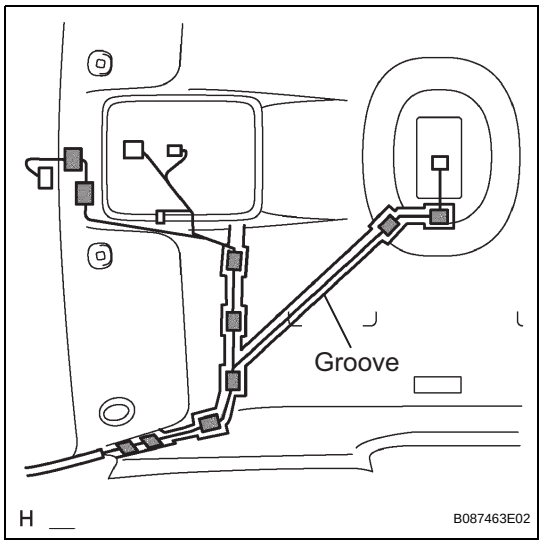
55. REMOVE ROOF WIRE

(a) w/ EC mirror:
  (1) Remove the 10 adhesive tapes and roof wire.

(b) w/o EC mirror:
  (1) Remove the 8 tapes and roof wire.

INSTALLATION

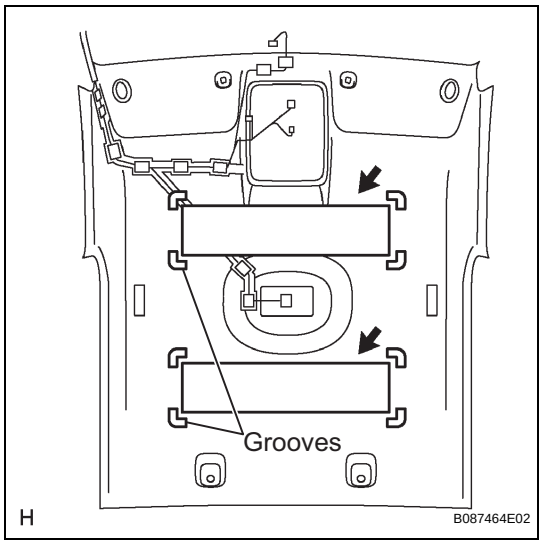
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



1. INSTALL ROOF WIRE

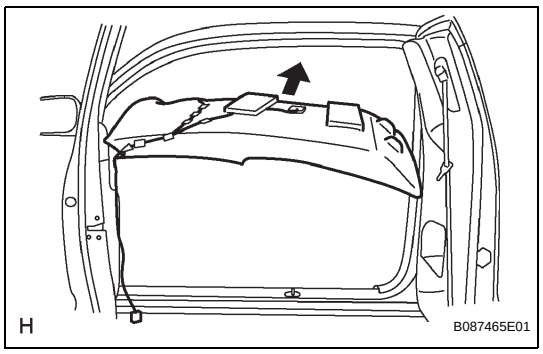
(a) w/ EC Mirror:
  (1) Install the roof wire with 10 new adhesive tapes, as shown in the illustration.

(b) w/o EC Mirror:
  (1) Install the roof wire with 8 new tapes, as shown in the illustration.



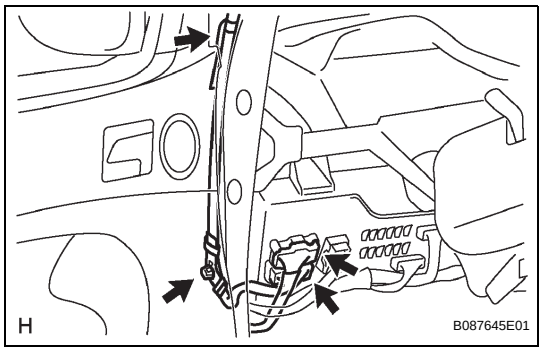
2. INSTALL ROOF HEADLINING PAD

(a) Install the 2 new roof headlining pads onto the roof headlining, as shown in the illustration.

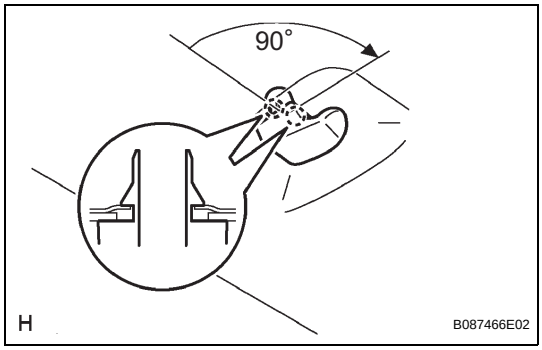


3. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining into the vehicle.

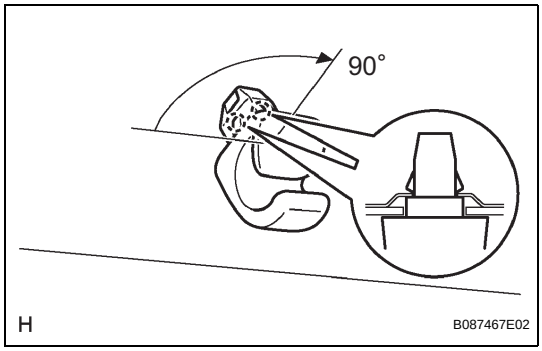


(b) Install the 2 wire harness clamps.
(c) Connect the roof wire connector.
(d) Connect the frame wire connector.



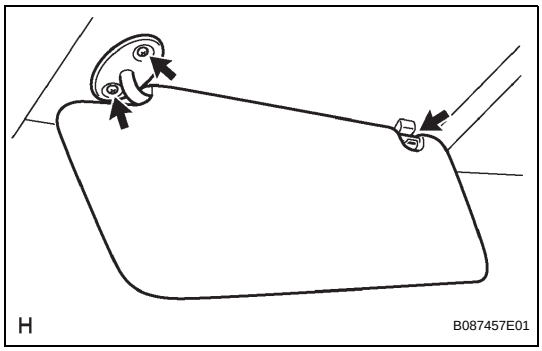
4. INSTALL COAT HOOK

HINT:
Follow the same procedures as for the opposite side.
(a) Turn the coat hook 90° clockwise and install it.



5. INSTALL VISOR HOLDER

HINT:
Follow the same procedures as for the opposite side.
(a) Turn the visor holder 90° clockwise and install it.

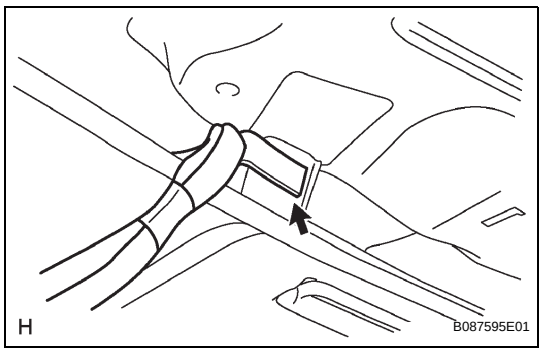


6. INSTALL VISOR ASSEMBLY LH

(a) Install the visor into the visor holder.
(b) Tighten the 2 screws.

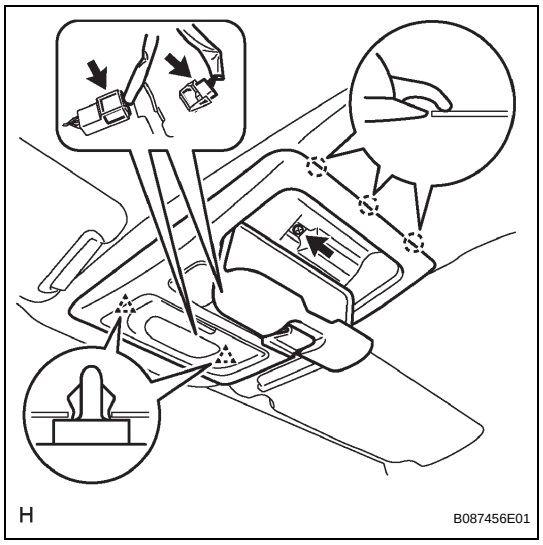
7. INSTALL VISOR ASSEMBLY RH

HINT:
Follow the same procedures as for the visor assembly LH.

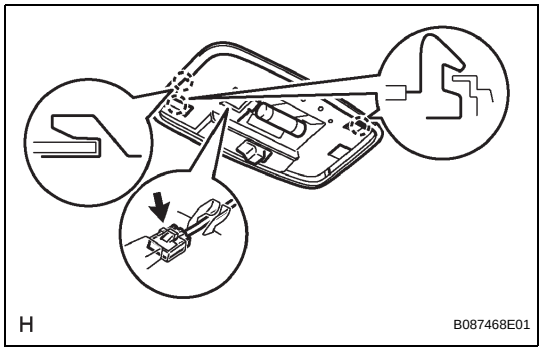


8. INSTALL ROOF CONSOLE BOX ASSEMBLY

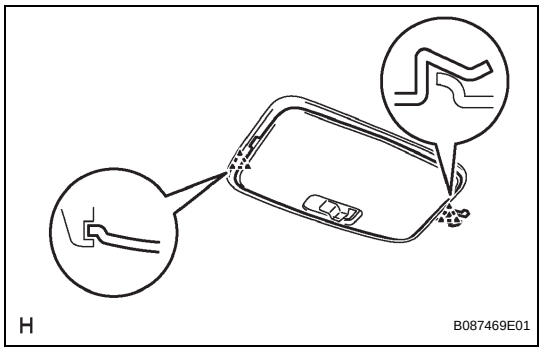
(a) Install the wire harness clamp.



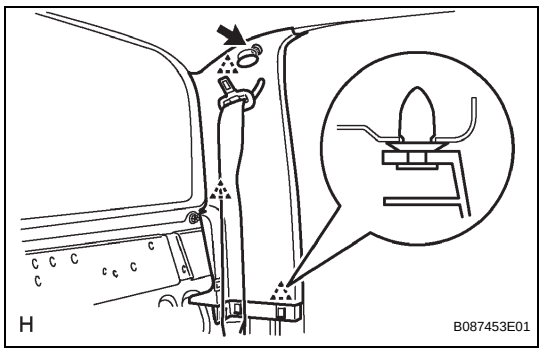
(b) Connect the accessory meter connector and map lamp connector.
(c) Engage the 2 clips and 3 claws and install the map lamp.
(d) Tighten the screw.



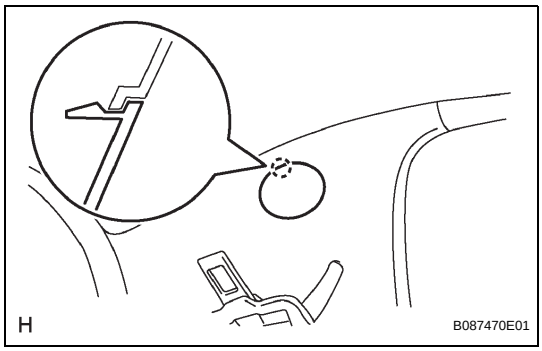
9. INSTALL ROOM LIGHT ASSEMBLY
(a) Connect the room light connector.
(b) Engage the 3 claws and install the room light.



(c) Engage the 2 claws and install the room light lens.



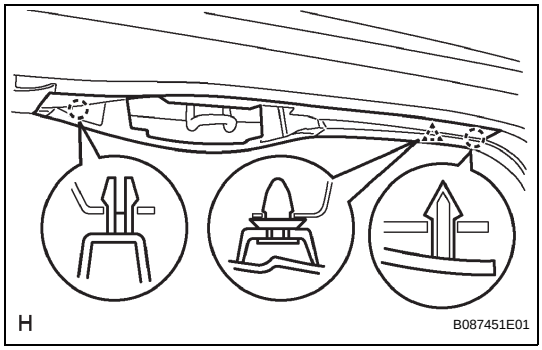
10. INSTALL QUARTER INSIDE TRIM BOARD LH
(a) Engage the 3 clips and install the quarter inside trim board.
(b) Tighten the screw.



(c) Engage the claw and close the cover.

11. INSTALL QUARTER INSIDE TRIM BOARD RH

HINT:
Follow the same procedures as for the quarter inside trim board LH.



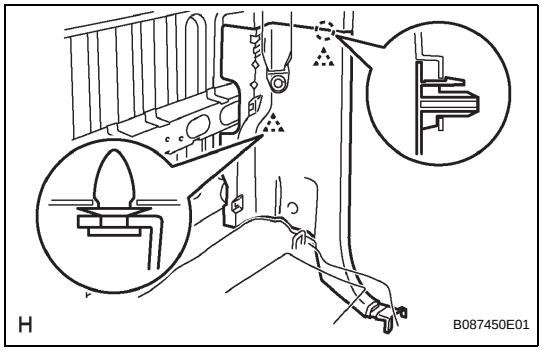
12. INSTALL ROOF SIDE INNER GARNISH LH

(a) Engage the 2 claws and clip, and install the roof side inner garnish.

13. INSTALL ROOF SIDE INNER GARNISH RH

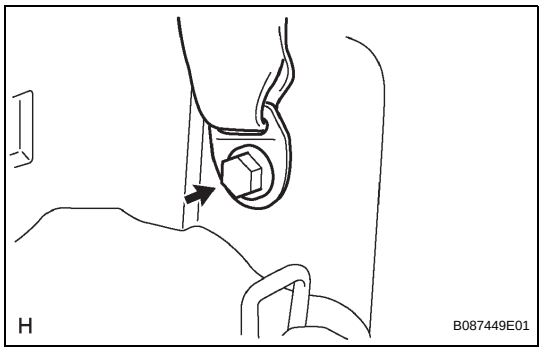
HINT:
Follow the same procedures as for the roof side inner garnish LH.

IR



14. INSTALL QUARTER TRIM LOWER PANEL LH

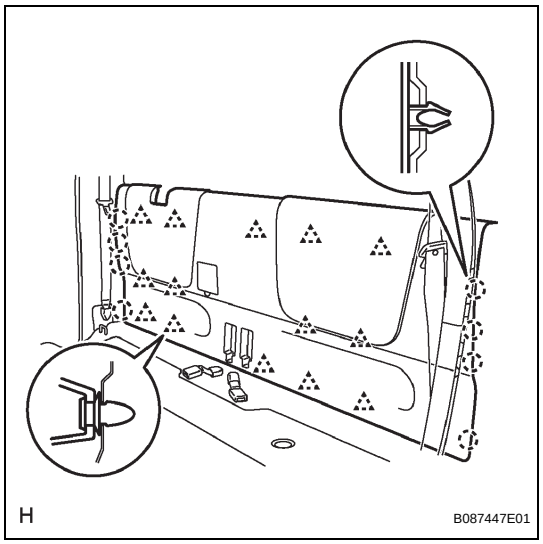
(a) Engage the claw and 2 clips, and install the quarter trim lower panel.



(b) Install the floor anchor of the rear seat belt outer with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

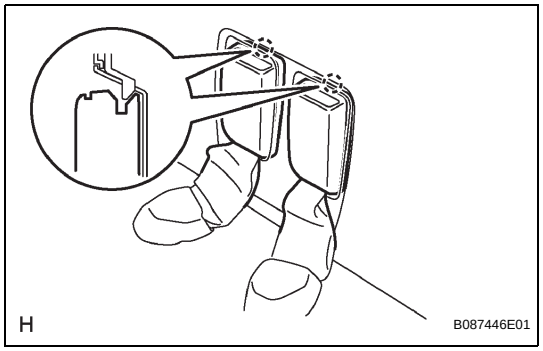
15. INSTALL QUARTER TRIM LOWER PANEL RH

HINT:
Follow the same procedures as for the quarter trim lower panel LH.



16. INSTALL BACK PANEL TRIM

(a) Engage the 8 claws and 14 clips, and install the back panel trim.

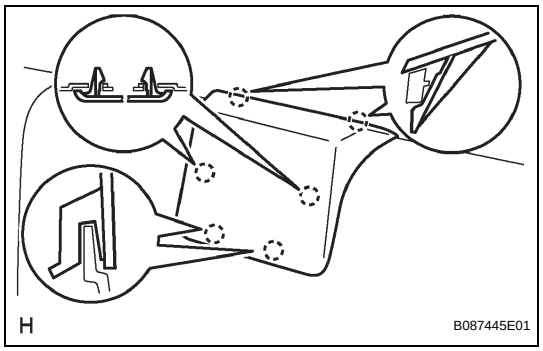


17. INSTALL REAR SEAT INNER BELT ASSEMBLY

HINT:

Follow the same procedures as for the opposite side.

(a) Engage the claw and install the buckle of the rear seat belt inner.



18. INSTALL BACK PANEL TRIM COVER

(a) Engage the 6 claws and install the back panel trim cover.

19. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-18)

20. CONNECT PASSENGER AIRBAG CONNECTOR

21. INSTALL INSTRUMENT SIDE PANEL (See page IP-20)

22. INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)

23. INSTALL INSTRUMENT LOWER PANEL (See page IP-20)

24. INSTALL INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-20)

25. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)

26. INSTALL INSTRUMENT CENTER CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)

27. INSTALL COMBINATION METER ASSEMBLY (See page IP-21)

28. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)

29. INSTALL INSTRUMENT LOWER PANEL FINISH PANEL (See page IP-22)

30. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)

31. INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)

32. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)

33. INSTALL FRONT CONSOLE BOX

(a) for Automatic Transmission:

(1) Install the front console box (See page IP-24).

(b) for Manual Transmission:

(1) Install the front console box (See page IP-23).

34. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission) (See page IP-24)

35. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-24)

36. INSTALL REAR CONSOLE UPPER PANEL SUB-ASSEMBLY

(a) for Automatic Transmission:

(1) Install the rear console upper panel sub-assembly (See page IP-25).

(b) for Manual Transmission:

(1) Install the rear console upper panel sub-assembly (See page IP-25).

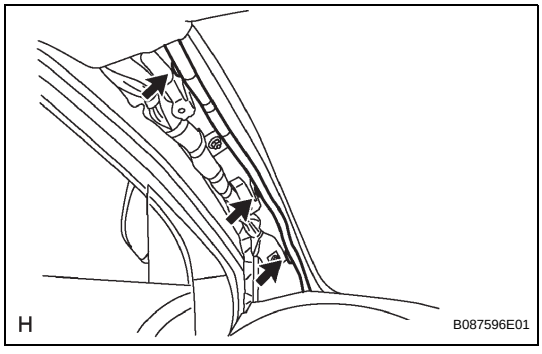
37. INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)

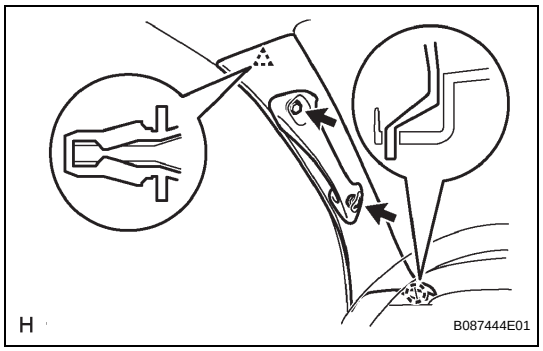
38. INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)

39. INSTALL FRONT PILLAR GARNISH LH

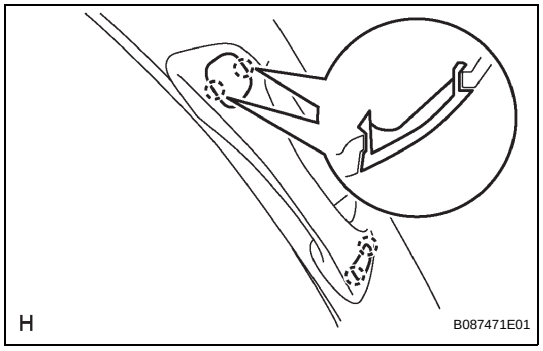
(a) for LH Side:

(1) Install the 3 wire harness clamps.



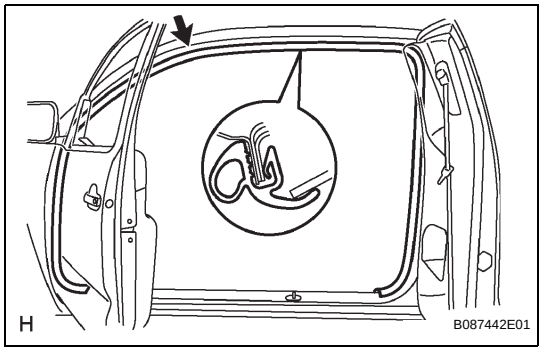


(b) Engage the claw and clip, and install the front pillar garnish.
(c) Tighten the 2 screws.



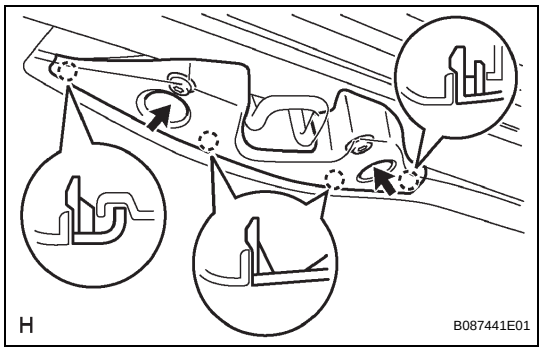
(d) Engage the 2 claws and install the assist grip plug.
HINT:
Follow the same procedures as for the opposite side.

40. INSTALL FRONT PILLAR GARNISH RH
HINT:
Follow the same procedures as for the front pillar garnish LH.



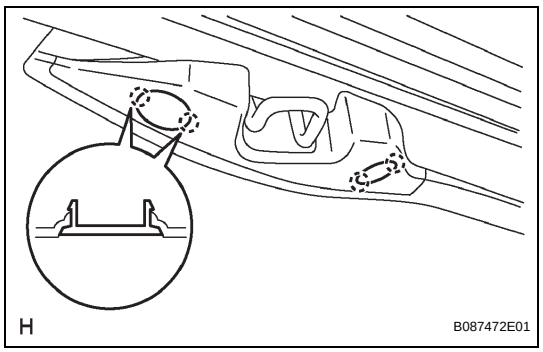
41. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH
(a) Install the front door opening trim weatherstrip.

42. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH
HINT:
Follow the same procedures as for the front door opening trim weatherstrip LH.



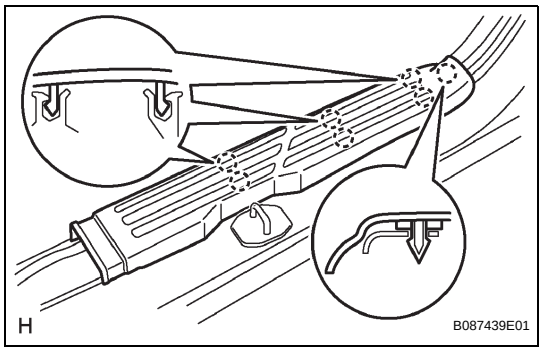
43. INSTALL ROOF SIDE INNER GARNISH CAP LH
(a) Engage the 4 claws and install the roof side inner garnish cap.
(b) Using a "Torx" socket wrench T30, tighten the 2 screws.

44. INSTALL ROOF SIDE INNER GARNISH CAP RH
HINT:
Follow the same procedures as for the roof side inner garnish cap LH.



45. INSTALL ROOF SIDE INNER GARNISH COVER LH
HINT:
Follow the same procedures as for the opposite side.
(a) Engage the 2 claws and install the roof side inner garnish cover.

46. INSTALL ROOF SIDE INNER GARNISH COVER RH
HINT:
Follow the same procedures as for the roof side inner garnish cover LH.

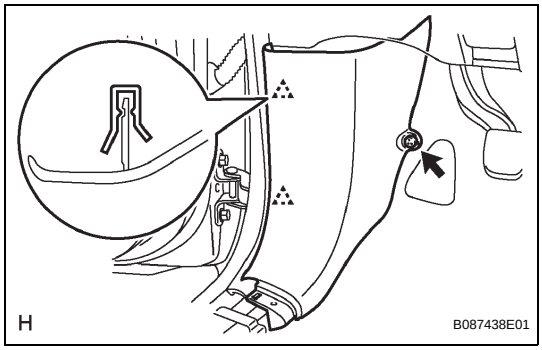


47. INSTALL REAR DOOR SCUFF PLATE LH

(a) Engage the 7 claws and install the rear door scuff plate.

48. INSTALL REAR DOOR SCUFF PLATE RH

HINT:
Follow the same procedures as for the rear door scuff plate LH.

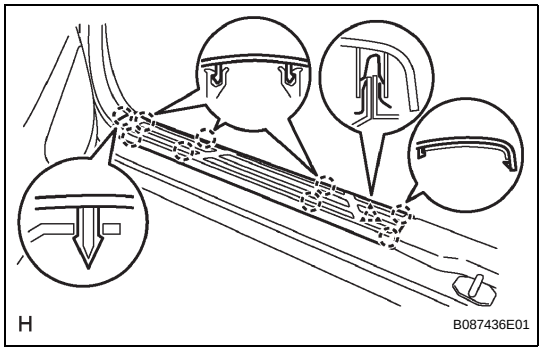


49. INSTALL COWL SIDE TRIM BOARD LH

(a) Engage the 2 clips and install the cowl side trim board.
(b) Install the clip.

50. INSTALL COWL SIDE TRIM BOARD RH

HINT:
Follow the same procedures as for the cowl side trim board LH.



51. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 9 claws and clip, and install the front door scuff plate.

52. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:
Follow the same procedures as for the front door scuff plate LH.

53. INSTALL FRONT FLOOR FOOTREST (See page IR-1)

54. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror) (See page IR-30)

55. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

56. INSPECT SRS WARNING LIGHT
(See page RS-28)

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

(a) CAN (Controller Area Network) is a serial data communication system for real time application. It is an in-vehicle multiplex communication system which has a high communication speed (500 kbps) and a function to detect malfunctions.

(b) The CAN performs communication based on differential voltage by pairing the CANH bus line and CANL bus line.

(c) This vehicle uses the CAN communication system for communication between the components in the ABS with EBD & BA & TRAC & VSC system.

(d) The CAN has two resistors of 120 Ω that are necessary for communication with the main bus line.

2. DEFINITION OF TERMS

(a) Main bus line

(1) The main bus line is a wire harness between the two terminus circuits on the bus (communication line). This is the main bus in the CAN communication system.

(b) Sub bus line

(1) The sub bus line is a wire harness which diverges from the main bus line to an ECU or sensor.

(c) Terminus circuit

(1) The terminus circuit is a circuit which is placed to convert communication current of the CAN communication into bus voltage. It consists of a resistor and condenser. Two terminus circuits are necessary on a bus.

(d) CAN J/C

(1) The CAN J/C is a junction designed for CAN communication, which stores a terminus circuit.

3. COMPONENTS WHICH COMMUNICATE THROUGH THE CAN COMMUNICATION SYSTEM

(a) Skid control ECU

(b) Steering angle sensor

(c) Yaw rate sensor

(d) ECM

4. DIAGNOSTIC CODES FOR THE CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0073/94, U0123/62, U0124/95, U0126/63, U0100/65

5. REMARKS FOR TROUBLESHOOTING

(a) Trouble in the CAN bus (communication line) can be checked from the DLC3 (except a wire break in lines other than the DLC3 sub bus line).

(b) The CAN communication system cannot detect trouble in the DLC3 sub bus line even though the DLC3 is also connected to the CAN communication system.

6. HOW TO DISTINGUISH THE CAN J/C CONNECTOR

(a) In the CAN communication system, the shape of all connectors connected to the CAN J/C is the same. The connectors connected to the CAN J/C can be distinguished by the colors of the bus line and the connecting side of the connector.
HINT:
See "TERMINALS OF ECU" (See page CA-8) for bus line color or the type of connecting surface.

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- **DTCs for the CAN communication system are as follows: U0073/94, U0100/65, U0123/62, U0124/95, U0126/63.**
- **Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.**

1	CHECK AND CLEAR DTCs

NEXT

2	CHECK CAN BUS LINE

NEXT

3	CHECK USING INTELLIGENT TESTER VIA CAN VIM

(a) Select "BUS CHECK" (See page CA-14)

Result:

A	All ECUs and sensors connected to the CAN communication system are displayed.
B	All ECU or sensor not connected to the CAN communication system is displayed.
C	A few ECUs or sensors not connected to the CAN communication system are displayed.

B → **COMMUNICATION STOP MODE TABLE**

C → **CHECK FOR AN OPEN IN ONE SIDE OF THE CAN BUS LINE**

A

4	DTC COMBINATION TABLE

(a) Confirm trouble according to the combination of output DTCs regarding the CAN communication system.

HINT:

Previous CAN communication system DTCs may be the cause if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on the intelligent tester's "BUS CHECK" screen via the CAN VIM.

PROBLEM SYMPTOMS TABLE

1. COMMUNICATION STOP MODE TABLE

(a) Complete "CHECK CAN BUS LINE" to confirm that there is no malfunction in the CAN bus line. Select "BUS CHECK" on the hand-held tester via the CAN VIM .

(b) Check the communication stop mode of the ECUs or sensors not displayed among the following: "ENGINE", "ABS/VSC/TRAC", "YAW / DECELERAT" or "STEERING SENSOR".

NOTICE:

If 2 or more ECUs or sensors are not displayed on the hand-held tester via the CAN VIM, perform troubleshooting for the communication stop mode of each undisplayed ECU or sensor. (Either side of the CAN sub bus lines may be open.)

Symptom	Suspected area	See page
"ENGINE" is not displayed on the handheld tester via CAN VIM.	ECM COMMUNICATION STOP MODE	*1
"ABS/VSC/TARC" is not displayed on the hand-held tester via CAN VIM.	SKID CONTROL ECU COMMUNICATION STOP MODE	CA-16
"STEERING SENSOR" is not displayed on the hand-held tester via CAN VIM.	STEERING ANGLE SENSOR COMMUNICATION STOP MODE	CA-18
"YAW /DECELERAT" is not displayed on the hand-held tester via CAN VIM.	YAW RATE SENSOR COMMUNICATION STOP MODE	CA-20

CA

HINT:

*1

"ENGINE" is not displayed on the intelligent tester via the CAN VIM if no power is supplied to the ECM.

2. DTC COMBINATION TABLE

(a) Perform troubleshooting according to the combination of DTCs output.

Trouble Mode	U0100/65	U0073/94	U0123/62	U0124/95	U0126/63
SKID CONTROL COMMUNICATION STOP MODE	○	○	○	○	○
YAW RATE SENSOR COMMUNICATION STOP MODE	-	-	○	○	-
STEERING ANGLE SENSOR COMMUNICATION STOP MODE	-	-	-	-	○
ECM COMMUNICATION STOP MODE *2	○	-	-	-	-

HINT:

- Previous CAN communication system DTCs may be the cause if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on the intelligent tester's "BUS CHECK" screen via the CAN VIM.

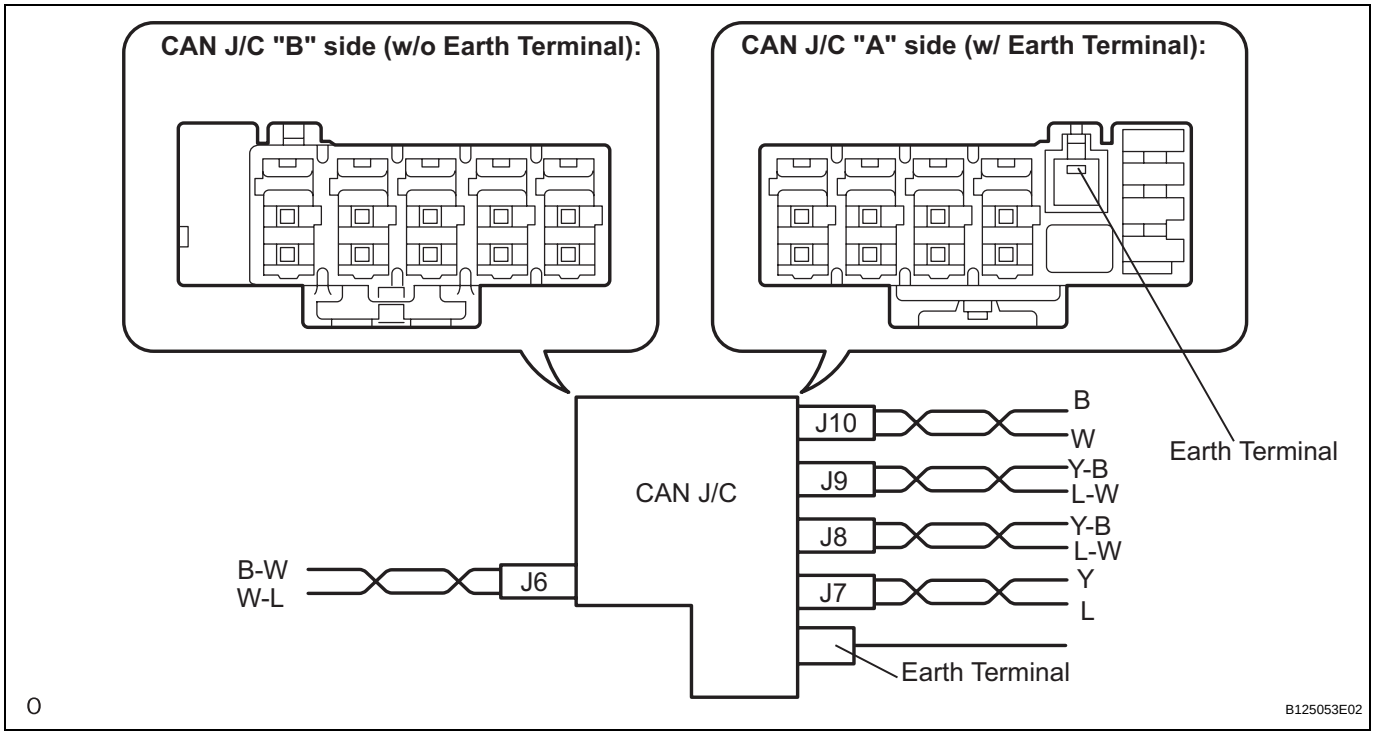
- U0073/94, U0123/62, U0124/95, U0126/63 and U0100/65 are the DTCs in the CAN communication system.
- *2
- U0100/65 is output if no power is supplied to the ECM.
- The above table shows combination of these DTCs.
- O: DTCs that are being output.
- -: DTCs that are not being output.
- SKID CONTROL ECU COMMUNICATION STOP MODE
- STEERING ANGLE SENSOR COMMUNICATION STOP MODE
- YAW RATE SENSOR COMMUNICATION STOP MODE
- ECM COMMUNICATION STOP MODE

TERMINALS OF ECU

HINT:
This section describes the standard CAN values for all CAN related components.

1. CAN JUNCTION CONNECTOR

(a) CAN J/C connectors.
HINT:
- The connectors connected to the CAN J/C can be distinguished by the colors of the bus lines and the connecting side of the connector.
- J7, J8, J9 and J10 are interchangeable.



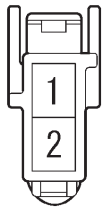
Wiring color

CAN J/C connectors ("A" side, w/ earth terminal)	Color (CAN-H Side)	Color (CAN-L Side)
ECM (J10)	B	W
DLC3 (J9)	Y-B	L-W
Steering angle sensor (J8)	Y-B	L-W
Yaw rate sensor (J7)	W	R

Wiring color

CAN J/C connectors (B side, w/o earth terminal)	Color (CAN-H Side)	Color (CAN-L Side)
Skid control ECU (J6)	B	W

CAN J/C Connector Front View:

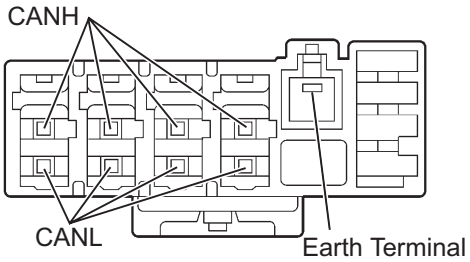


G026205E01

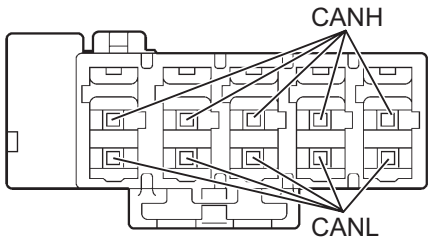
(b) The terminals of the CAN J/C connectors.

Terminal	Terminal symbol
1	CANH
2	CANL

CAN J/C "A" Side (w/ Earth Terminal):



CAN J/C "B" Side (w/o Earth Terminal):



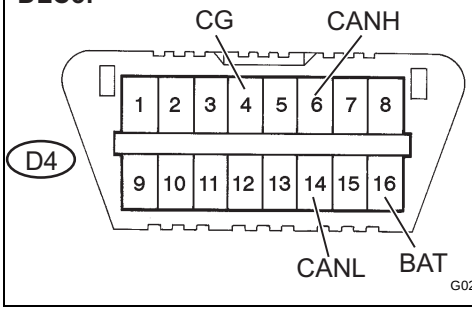
G026214E08

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance

Terminal	Specified value
CANH - CANL	**108 to 132 Ω**

DLC3:



G026206E56

2. DLC3

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance

Terminals	Terminal Description	Condition	Specified Condition
D4-6 (CANH) - D4-14 (CANL)	**HIGH-level CAN bus line - LOW-level CAN bus line**	**IG switch OFF Stop light switch OFF**	**54 to 69 Ω**
D4-6 (CANH) - D4-16 (BAT)	**HIGH-level CAN bus line - Battery positive**	**IG switch OFF Stop light switch OFF**	**1 MΩ or higher**
D4-14 (CANL) - D4-16 (BAT)	**LOW-level CAN bus line - Battery positive**	**IG switch OFF Stop light switch OFF**	**1 MΩ or higher**
D4-6 (CANH) - D4-4 (CG)	**HIGH-level CAN bus line - Ground**	**IG switch OFF Stop light switch OFF**	**3 kΩ or higher**

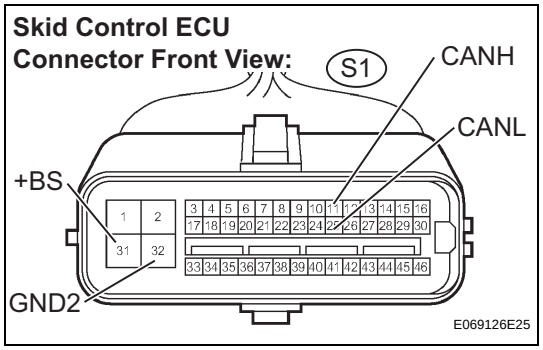
Terminals	Terminal Description	Condition	Specified Condition
D4-14 (CANL) - D4-4 (CG)	LOW-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher

3. SKID CONTROL ECU

(a) Check the skid control ECU harness side connector (S1).

(1) Disconnect the connector (S1) from the skid control ECU.

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
S1-11 (CANH) - S1-25 (CANL)	B-W - W-L	HIGH-level CAN bus line - LOW-level CAN bus line	IG switch OFF Stop light switch OFF	54 to 69 Ω
S1-11 (CANH) - S1-32 (GND2)	B-W - W-B	HIGH-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
S1-25 (CANL) - S1-32 (GND2)	W-B - W-B	LOW-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
S1-11 (CANH) - S1-31 (+BS)	B-W - R	HIGH-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher
S1-25 (CANL) - S1-31 (+BS)	W-L - R	LOW-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher

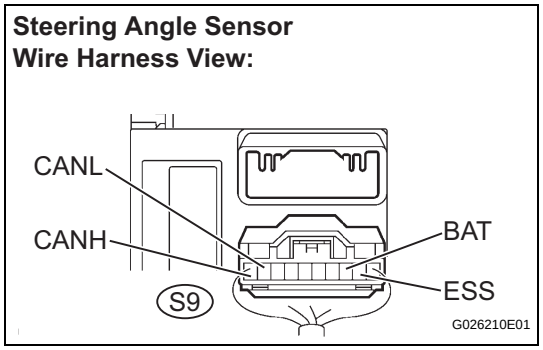
CA

4. STEERING ANGLE SENSOR

(a) Check the harness side connector (S9) of the steering angle sensor.

(1) Disconnect the connector (S9) from the steering angle sensor.

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
S9-3 (CANH) - S9-11 (CANL)	Y-B - L-W	HIGH-level CAN bus line - LOW-level CAN bus line	IG switch OFF Stop light switch OFF	54 to 69 Ω

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
S9-3 (CANH) - S9-2 (ESS)	Y-B - W-B	HIGH-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
S9-11 (CANL) - S9-21 (ESS)	L-W - W-B	LOW-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
S9-3 (CANH) - S9-9 (BAT)	Y-B - R	HIGH-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher
S9-11 (CANL) - S9-9 (BAT)	L-W - R	LOW-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher

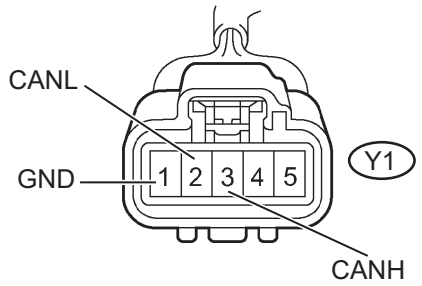
5. YAW RATE SENSOR

(a) Check the yaw rate sensor harness side connector (Y1).

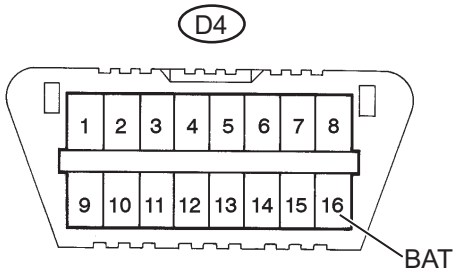
(1) Disconnect the connector (Y1) from the yaw rate sensor.

(2) Measure the resistance according to the value(s) in the table below.

Yaw Rate Sensor Connector Front View:



DLC3:



G026641E06

Standard Resistance

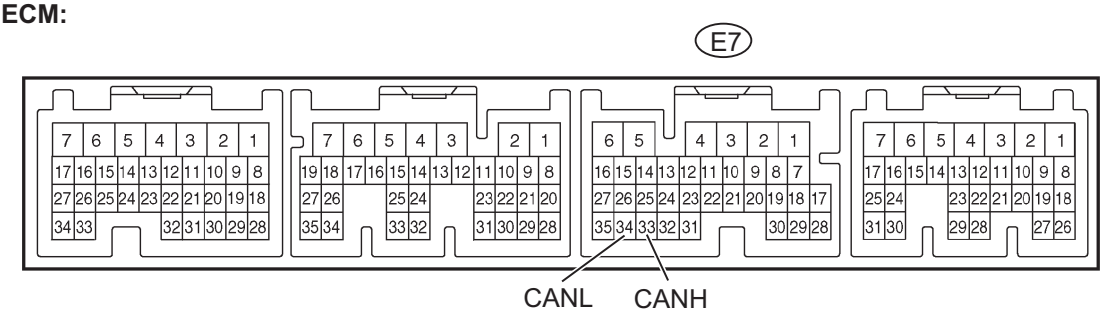
Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
Y1-3 (CANH) - Y1-2 (CANL)	Y - L	HIGH-level CAN bus line - LOW-level CAN bus line	IG switch OFF Stop light switch OFF	54 to 69 Ω
Y1-3 (CANH) - Y1-1 (GND)	Y - W-B	HIGH-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
Y1-2 (CANL) - Y1-1 (GND)	L - W-B	LOW-level CAN bus line - Ground	IG switch OFF Stop light switch OFF	3 kΩ or higher
Y1-3 (CANH) - D4-16 (BAT)	Y - Y	HIGH-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher
Y1-2 (CANL) - D4-16 (BAT)	L - Y	LOW-level CAN bus line - Battery positive	IG switch OFF Stop light switch OFF	1 MΩ or higher

CA

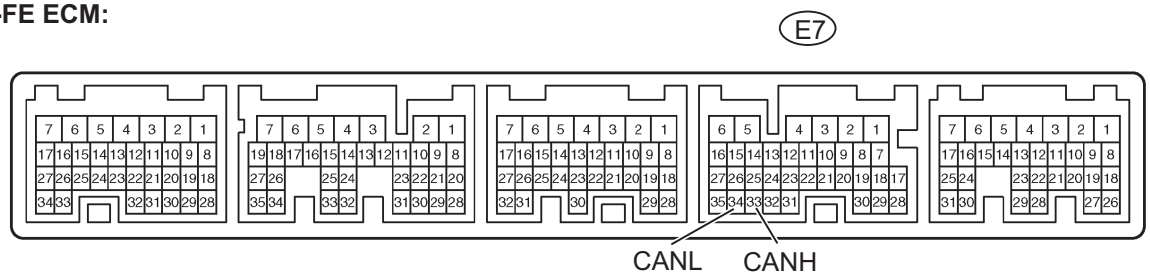
6. ECM

(a) Measure the resistance according to the value(s) in the table below.

2TR-FE ECM:



1GR-FE ECM:

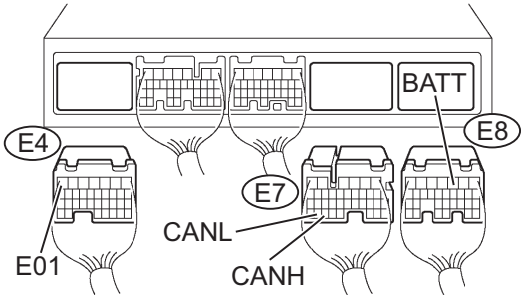


G100738E01

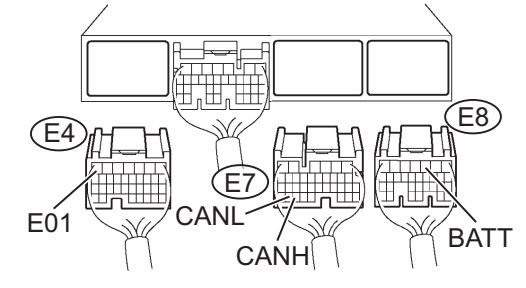
Standard resistance

Terminals	Condition	Specified Condition
E7-33 (CANH) - E7-34 (CANL)	IG switch OFF Stop light switch OFF	108 to 132 Ω

ECM Wire Harness View 1GR-FE:



ECM Wire Harness View 2TR-FE:



G100737E01

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Condition	Specified Condition
E7-33 (CANH) - E7-34 (CANL)	B - W	IG switch OFF Stop light switch OFF	108 to 132 Ω

CA

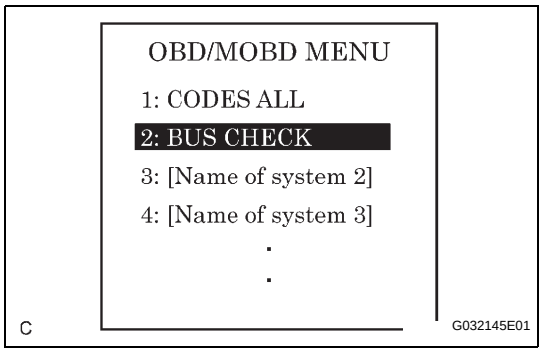
Terminals	Wiring Color	Condition	Specified Condition
E7-33 (CANH) - E4-7 (E01)	B - W-B	IG switch OFF Stop light switch OFF	3 kΩ or more
E7-34 (CANL) - E4-7 (E01)	W - W-B	IG switch OFF Stop light switch OFF	3 kΩ or more
E7-33 (CANH) - E8-3 (BATT)	B - L	IG switch OFF Stop light switch OFF	1 MΩ or more
E7-34 (CANL) - E8-3 (BATT)	W - L	IG switch OFF Stop light switch OFF	1 MΩ or more

DIAGNOSIS SYSTEM

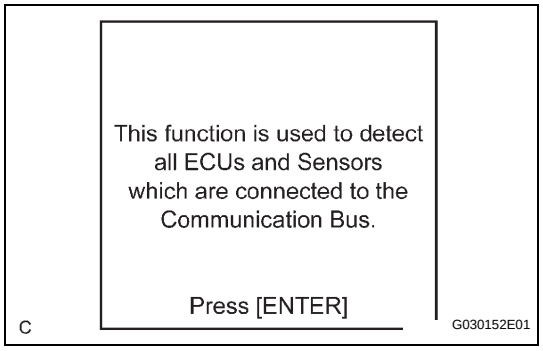
1. BUS CHECK

HINT:
The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the intelligent tester via CAN VIM.

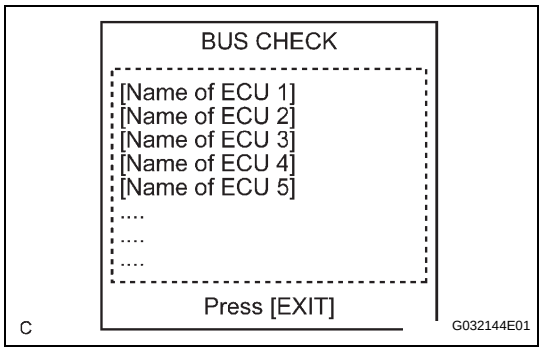
(a) Select "BUS CHECK" from the "OBD/MOBD MENU" screen.



(b) Press "ENTER" on the intelligent tester via CAN VIM.



(c) The screen displays the ECUs and sensors that are properly connected to the CAN communication system.
HINT:
There is a communication stop in the system of any properly connected ECUs or sensors that are not displayed (See page CA-7).



2. DTC TABLE BY ECU

HINT:
If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to "HOW TO PROCEED WITH TROUBLESHOOTING" (See page CA-6).

(a) Skid Control ECU
HINT:
DTC communication uses the SIL line.

DTC No.2	Detection Item
U0073/94	Control Module Communication Bus Off
U0100/65	Lost Communication With ECM/PCM "A"
U0123/62	Lost Communication With Yaw Rate Sensor Module
U0124/95	Lost Communication With Lateral Acceleration Sensor Module
U0126/63	Lost Communication With Steering Angle Sensor Module

(b) ECM
HINT:
The ECM is connected to the CAN communication system but CAN communication system DTCs are not output.

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the CAN bus lines (communication lines) due to a short circuit or any other causes, the fail-safe function, which is specified for each system, operates to prevent the system from malfunctioning.

(b) This function operates for each system when communication is impossible. (For further details, see the pages for each system.)

Function	ECM	Skid Control ECU	Steering Angle Sensor	Yaw Rate Sensor	Action when unable to communicate	DTC detection (Driver detectable)
VSC Control (Controls VSC/TRAC engine output)	-	Rx	Tx	Tx	VSC function stops	Detectable (Light comes on)
VSC Control (Controls VSC/TRAC engine output)	Rx	Tx	-	-	VSC function stops	Detectable (Light comes on)

HINT:

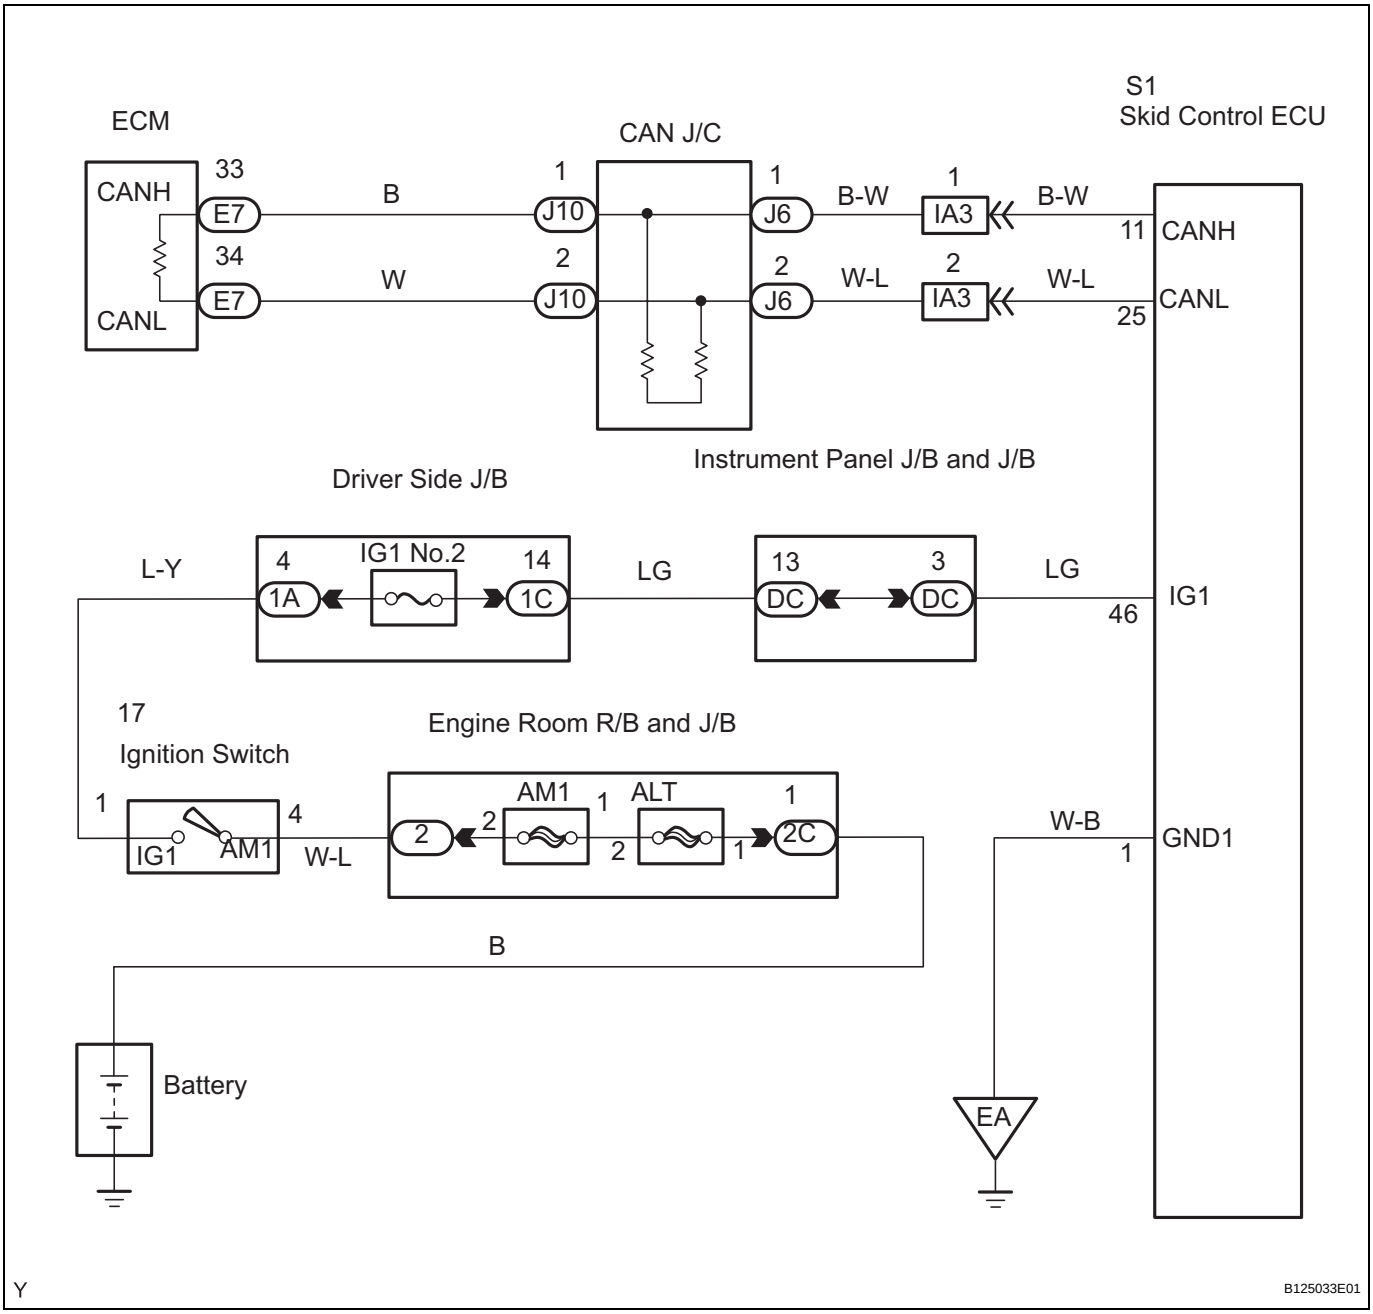
- Rx: Reception from each ECU (sensor)
- Tx: Transmission to each ECU (sensor)

Skid Control ECU Communication Stop Mode

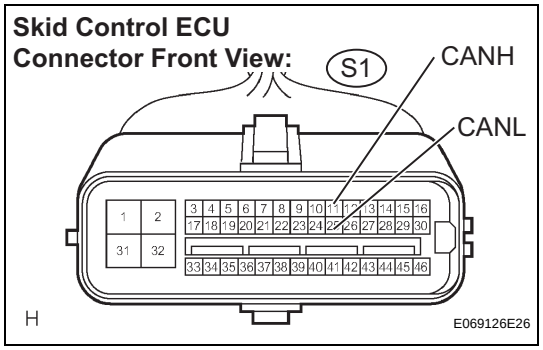
DESCRIPTION

Detection Item	Symptom	Trouble Area
SKID CONTROL ECU COMMUNICATION STOP MODE	• ABS/VSC/TARC is not displayed on the "BUS CHECK" screen of the intelligent tester via the CAN VIM. • DTCs are output from each ECU in skid control ECU communication stop mode as shown in the "DTC COMBINATION TABLE" (See page CA-7).	• Power source or inside the skid control ECU • Skid control ECU sub bus line or connector

WIRING DIAGRAM



1	CHECK CAN BUS LINE FOR DISCONNECTION (SKID CONTROL ECU SUB BUS LINE)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the skid control ECU connector (S1).
(c) Measure the resistance according to the value(s) in the table below.

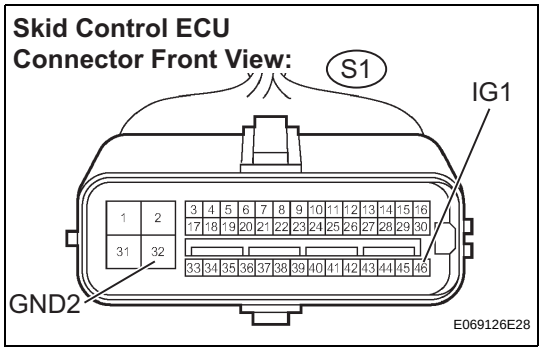
Standard resistance

Tester Connection	Condition	Specified Value
S1-11 (CANH) - S1-25 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE SKID CONTROL ECU BRANCH LINE OR CONNECTOR (CAN-H, CAN-L)**

OK

2	CHECK WIRE HARNESS (IG, GND2)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
S1-32 (GND2) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
S1-46 (IG1) - Body ground	• Ignition switch ON • Stop light switch OFF	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS OR CONNECTOR**

OK

REPLACE MASTER CYLINDER SOLENOID

CA

Steering Angle Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
STEERING ANGLE SENSOR COMMUNICATION STOP MODE	• "STEERING SENSOR" is not displayed on the "Bus Check "screen of the intelligent tester via the CAN VIM. • DTCs are output from each ECU in steering angle sensor communication stop mode as shown in the "DTC COMBINATION TABLE" (See page CA-7).	• Power source or inside the steering angle sensor • Steering angle sensor sub bus line or connector

WIRING DIAGRAM

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the steering angle sensor connector (S9).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

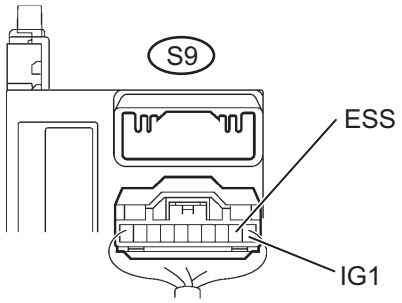
Tester Connection	Condition	Specified Value
S9-10 (CANH) - S9-9 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE STEERING ANGLE SENSOR SUB BUS LINE OR CONNECTOR (CAN-H, CAN-L)**

OK

2	**CHECK WIRE HARNESS (IG1, ESS)**

Steering Angle Sensor Wire Harness View:



G030155E24

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
S9-2 (ESS) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
S9-1 (IG) - Body ground	• Ignition switch ON • Stop light switch OFF	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS OR CONNECTOR**

OK

REPLACE STEERING ANGLE SENSOR

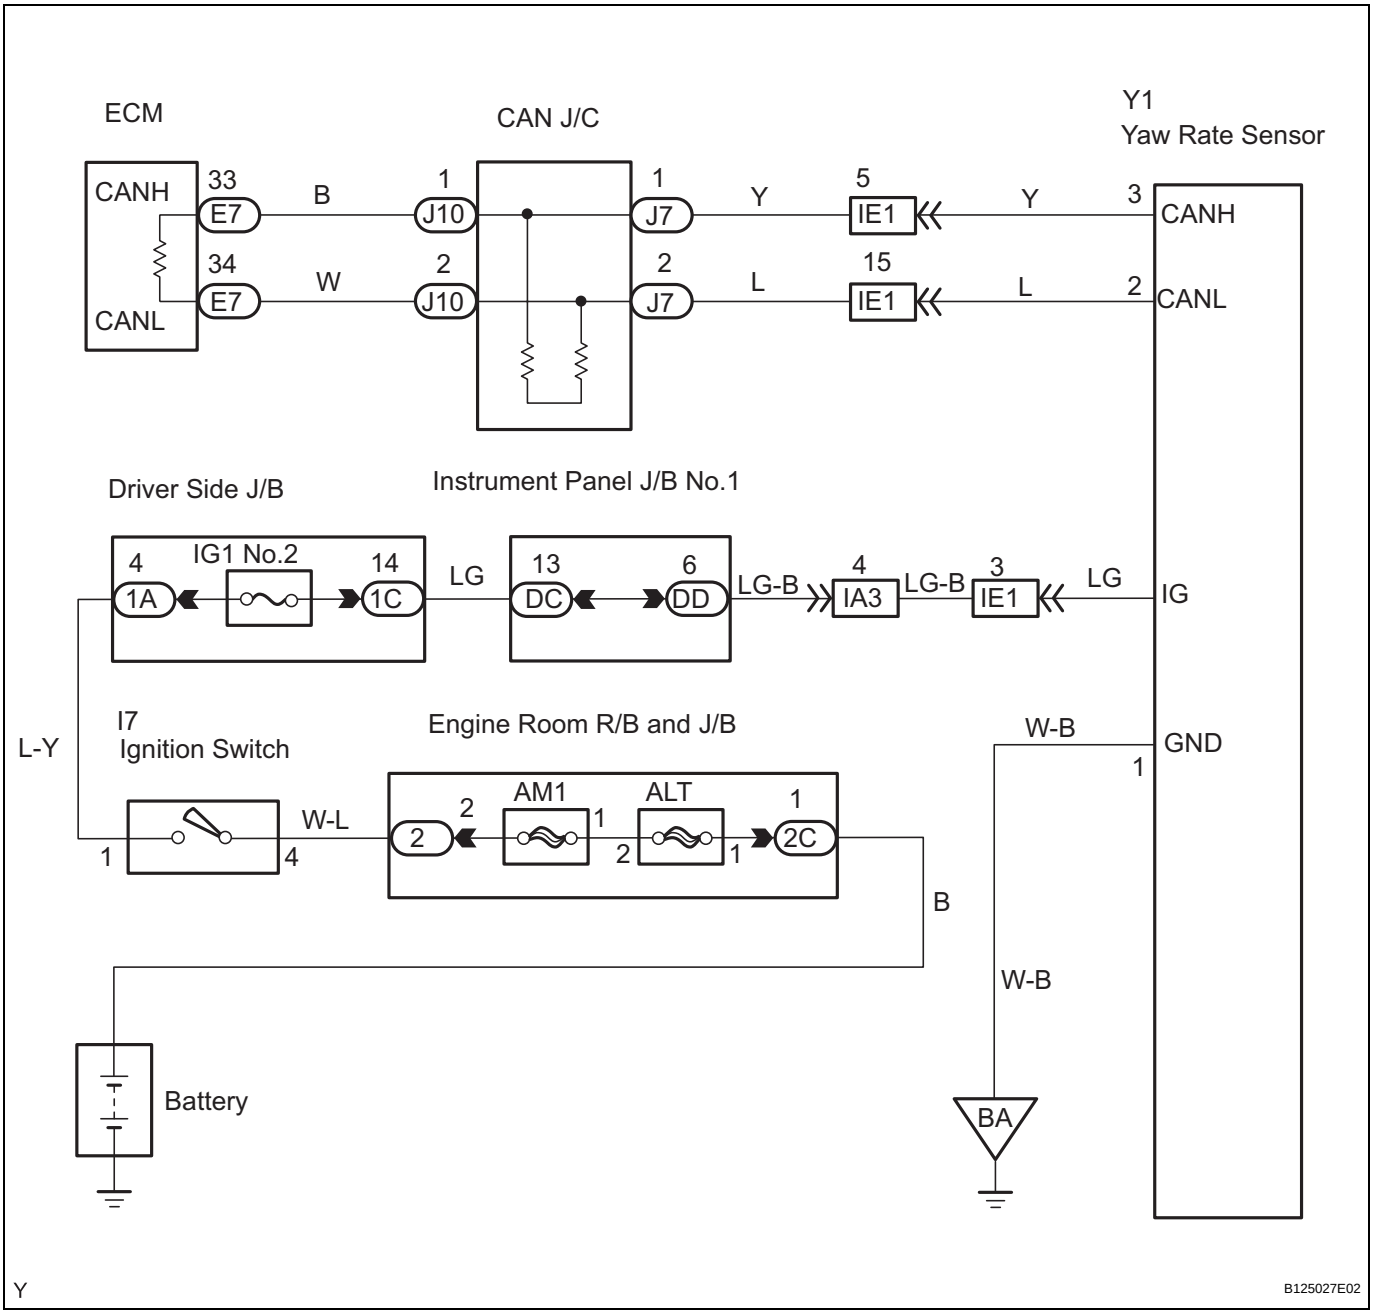
CA

Yaw Rate Sensor Communication Stop Mode

DESCRIPTION

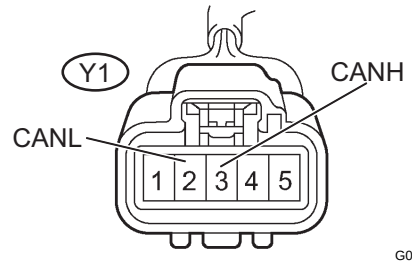
Detection Item	Symptom	Trouble Area
YAW RATE SENSOR COMMUNICATION STOP MODE	• YAW/DECELERAT is not displayed on the" BUS CHECK" screen of the intelligent tester via the CAN VIM • "CHECK" screen of the intelligent tester via the CAN VIM. DTCs are output from each ECU in yaw rate sensor communication stop mode as shown in the "DTC COMBINATION TABLE" (See page CA-7).	• Power source or inside the yaw rate sensor • Yaw rate sensor sub bus line or connector

WIRING DIAGRAM



1	CHECK CAN BUS LINE FOR DISCONNECTION (YAW RATE SENSOR SUB BUS LINE)

Yaw Rate Sensor Wire Harness View:



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the yaw rate sensor connector (Y1).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

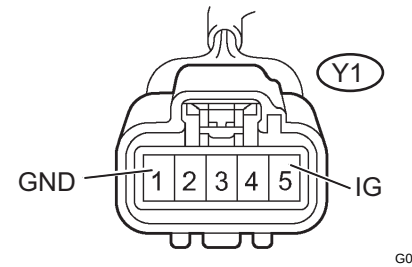
Tester Connection	Condition	Specified Value
Y1-2 (CANH) - Y1-3 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE YAW RATE SENSOR SUB BUS LINE OR CONNECTOR (CAN-H, CAN-L)**

OK

2	CHECK WIRE HARNESS (IG, GND)

Yaw Rate Sensor Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
Y1-1 (GND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage

Tester Connection	Condition	Specified Value
Y1-5 (IG) - Body ground	• Ignition switch ON • Stop light switch OFF	10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE YAW RATE SENSOR

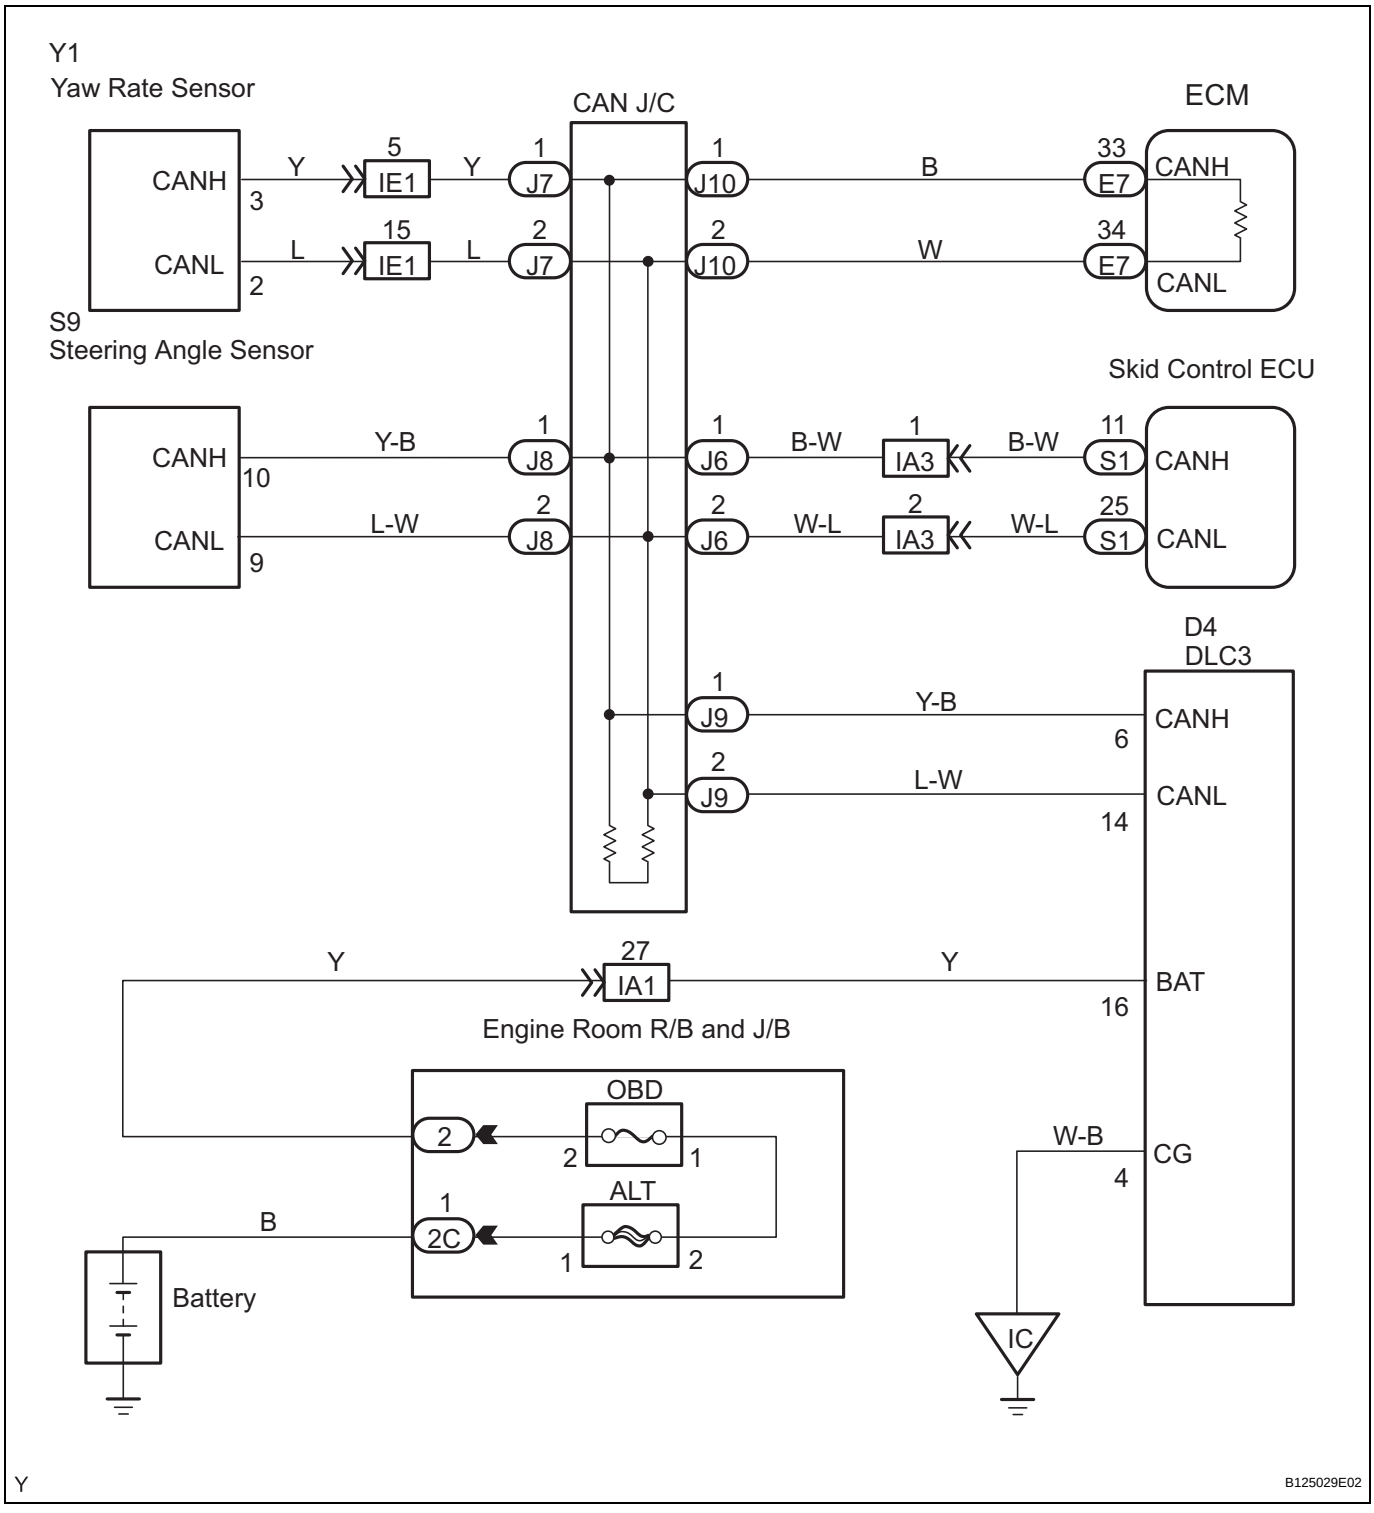
CA

CAN Bus Line

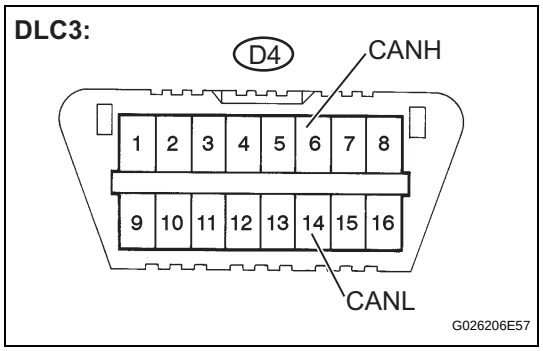
DESCRIPTION

When any DTC of the CAN communication system is output, first measure the resistance between the terminals of the DLC3 and the yaw rate sensor connector to specify the trouble area.

WIRING DIAGRAM



1	**CHECK CAN BUS LINE (MAIN BUS LINE FOR DISCONNECTION, BUS LINES FOR SHORT CIRCUIT)**



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value	Result
D4-6 (CANH) -D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω	OK
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	69 Ω or higher	NG-A
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	Below 54 Ω	NG-B

CA

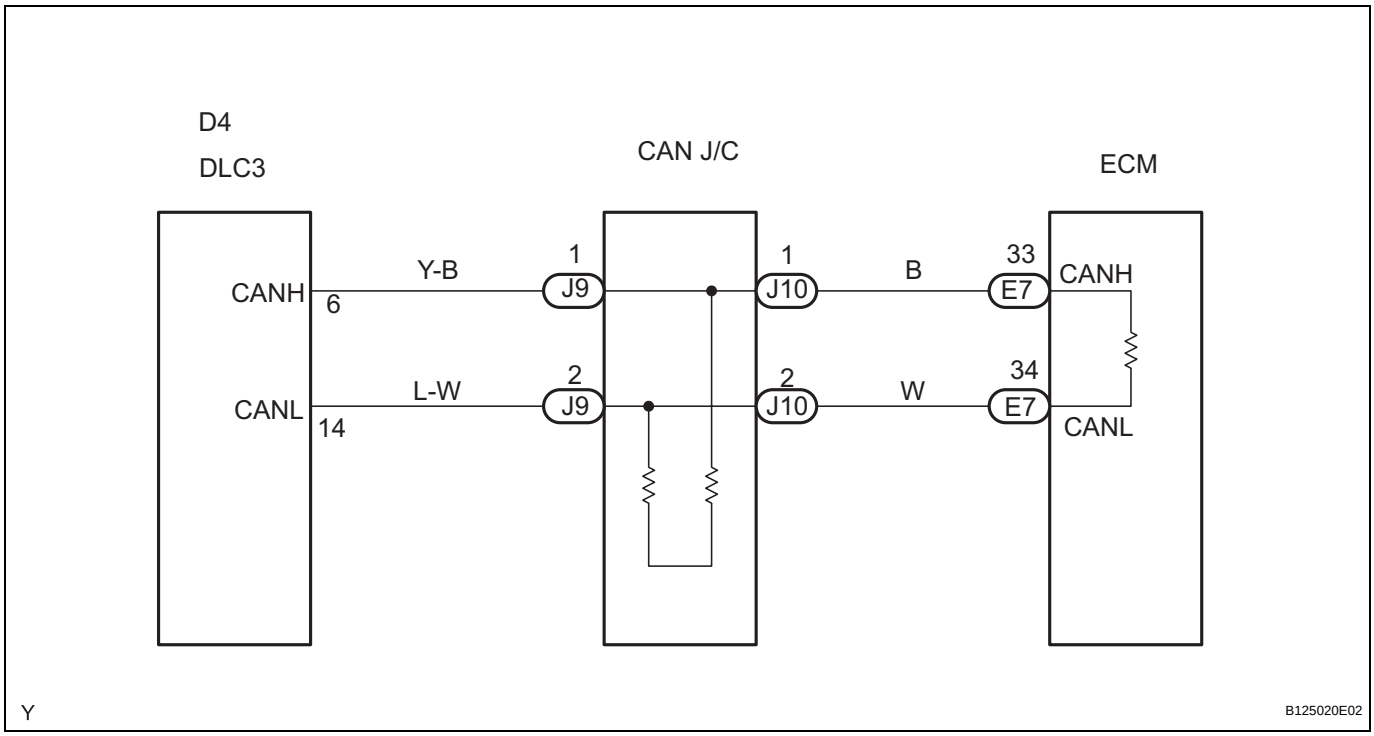
Can Main Bus Line for Disconnection

DESCRIPTION

The CAN main bus line and DLC3 sub bus line may have a disconnection when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is more than 69 Ω.

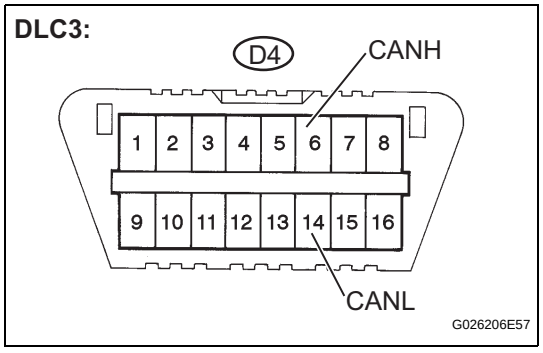
Symptom	Trouble Area
Resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is more than 69 Ω.	• CAN main bus line • ECM • CAN J/C

WIRING DIAGRAM



CA

1	CHECK DLC3



(a) Measure the resistance according to the value(s) in the table below.

Result

Tester connection	Condition	Specified value	Result
D4-6 (CANH) - D4-14 (CANL)	• IG switch OFF • Stop light switch OFF	108 to 132 Ω	A
D4-6 (CANH) - D4-14 (CANL)	• IG switch OFF • Stop light switch OFF	132 Ω or higher	B

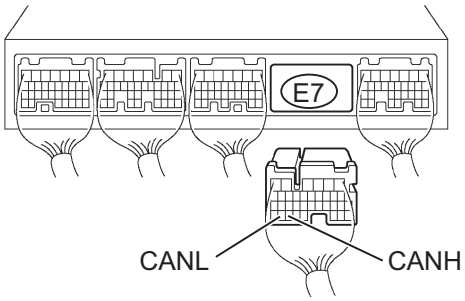
NOTICE:
When the measured value is 132 Ωor more and a CAN communication system diagnostic code is output, there may be a fault other than a disconnection of the DLC3 sub bus line.
For that reason, troubleshooting should be performed again from "How to Proceed with Troubleshooting" after repairing the trouble area.

B → **REPAIR OR REPLACE DLC3 BRANCH LINE OR CONNECTOR (CAN-H, CAN-L)**

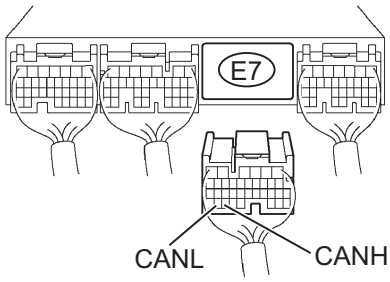
A

2 CHECK CAN MAIN BUS LINE FOR DISCONNECTION (ECM - CAN J/C)

ECM Wire Harness View 1GR-FE:



ECM Wire Harness View 2TR-FE:



I101322E03

(a) Disconnect the connector (E7) from the ECM.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E7-33 (CANH) - E7-34 (CANL)	• IG switch OFF • Stop light switch OFF	108 to 132 Ω

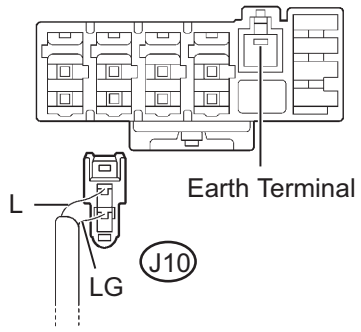
OK → **REPLACE ECM**

NG

CA

3	INSPECT CAN J/C

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



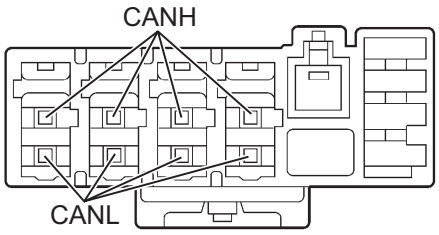
G031933E12

(a) Disconnect the CAN main bus line connector (J10) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

CAN J/C "A" Side (w/ Earth Terminal):



G026370E02

(b) Measure the resistance according to the value in the table below.

Standard resistance

Between the terminals where the connector (J10) was connected	Condition	Specified value
CANH - CANL	•IG switch OFF •Stop light switch OFF	108 to 132 Ω

CA

NG → **REPLACE CAN J/C**

OK

REPAIR OR REPLACE CAN MAIN BUS LINE OR CONNECTOR (CAN J/C - ECM)

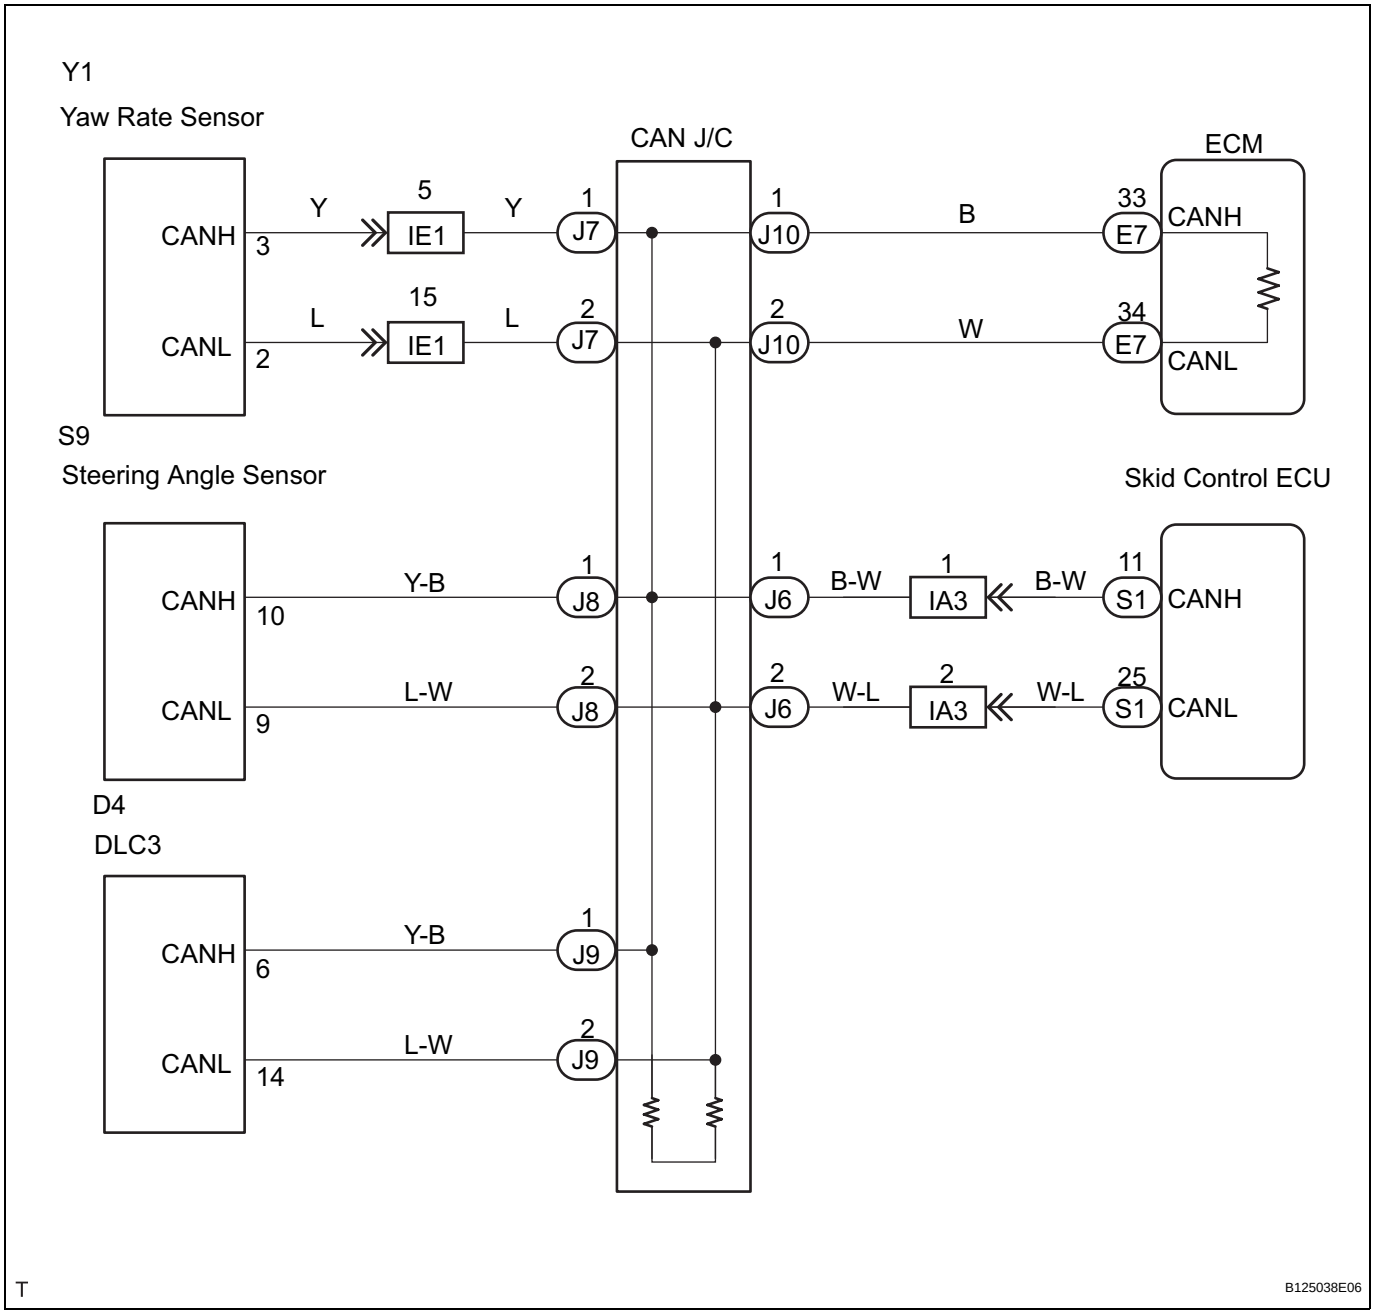
Short in CAN Bus Lines

DESCRIPTION

The CAN bus lines are considered to be shorted when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is below 54 Ω.

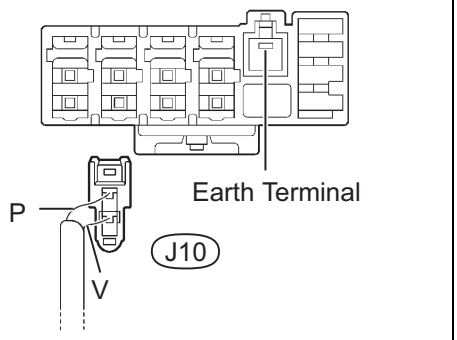
Symptom	Trouble Area
Resistance between terminals 6(CANH) and 14(CANL) of the DLC3 is below 54 Ω.	• Short in CAN bus lines • Skid control ECU • Steering angle sensor • Yaw rate sensor • ECM • CAN junction connector

WIRING DIAGRAM



1	**CHECK CAN BUS LINES FOR SHORT CIRCUIT (DLC3 SUB BUS LINE)**

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



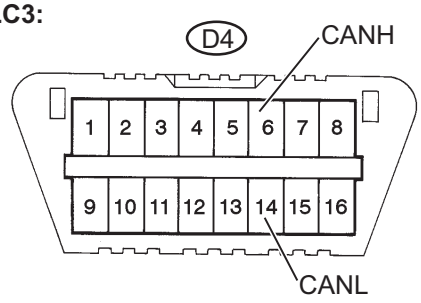
G031933E09

(a) Disconnect the DLC3 sub bus line connector (J10) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E57

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	1 MΩ or more

CA

NG → **REPAIR OR REPLACE DLC3 BRANCH LINE OR CONNECTOR (CAN-H, CAN-L)**

OK

2	**CONNECT CONNECTOR**

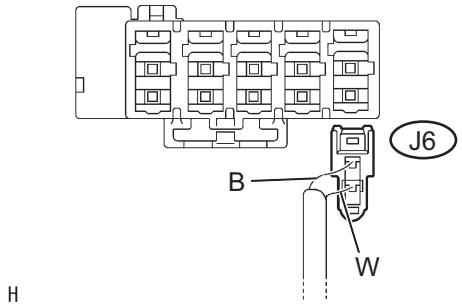
NEXT

3	CHECK CAN BUS LINES FOR SHORT CIRCUIT (SKID CONTROL ECU SUB BUS LINE)

CAN J/C "B" Side (w/o Earth Terminal) Wire Harness View:



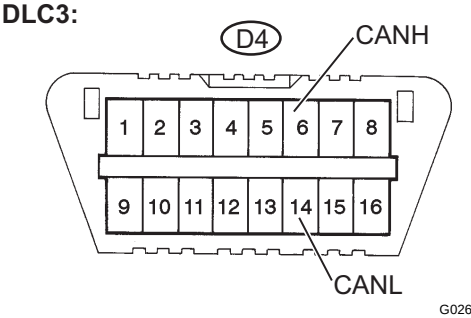
G031932E78

(a) Disconnect the skid control ECU sub bus line connector (J6) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E57

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

OK → **Go to step 10**

NG

4	CONNECT CONNECTOR

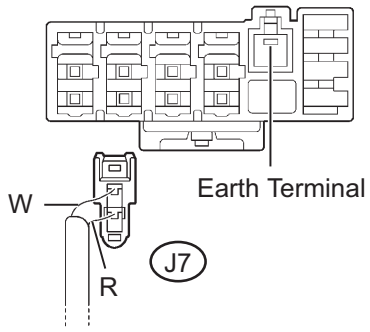
(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

NEXT

CA

5	CHECK CAN BUS LINES FOR SHORT CIRCUIT (YAW RATE SENSOR SUB BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



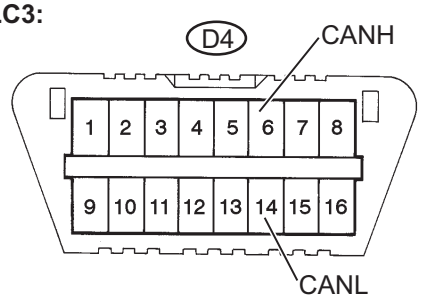
G031933E10

(a) Disconnect the yaw rate sensor sub bus line connector (J7) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E57

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

CA

OK → **Go to step 12**

NG

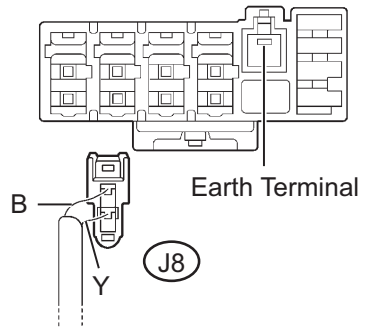
6	CONNECT CONNECTOR

(a) Reconnect the yaw rate sensor sub bus line connector (J7) to the CAN J/C.

NEXT

7	CHECK CAN BUS LINES FOR SHORT CIRCUIT (STEERING ANGLE SENSOR SUB BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



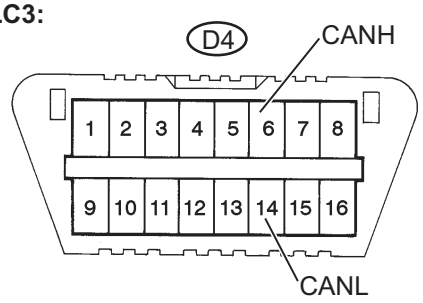
G031933E11

(a) Disconnect the steering angle sensor sub bus line connector (J8) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E57

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	•Ignition switch OFF •Stop light switch OFF	54 to 69 Ω

OK → **Go to step 14**

NG

8	CONNECT CONNECTOR

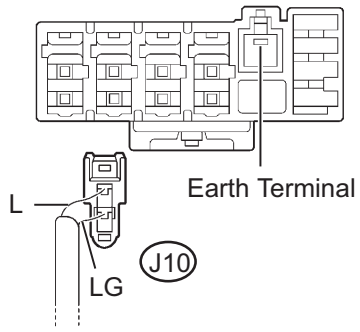
(a) Reconnect the steering angle sensor sub bus line connector (J8) to the CAN J/C.

NEXT

CA

9	CHECK CAN BUS LINES FOR SHORT CIRCUIT (ECM MAIN BUS LINE)

CAN J/C "A" Side (w/ Earth Terminal) Wire Harness View:



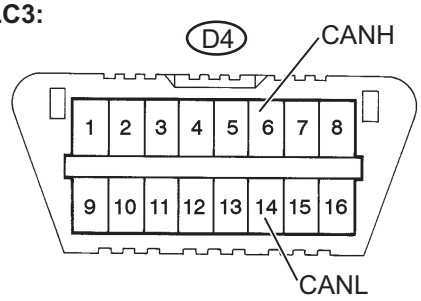
G031933E12

(a) Disconnect the ECM main bus line connector (J10) from the CAN J/C.

NOTICE:

- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



G026206E57

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	•Ignition switch OFF •Stop light switch OFF	108 to 132 Ω

CA

OK → **Go to step 16**

NG

REPLACE CAN J/C

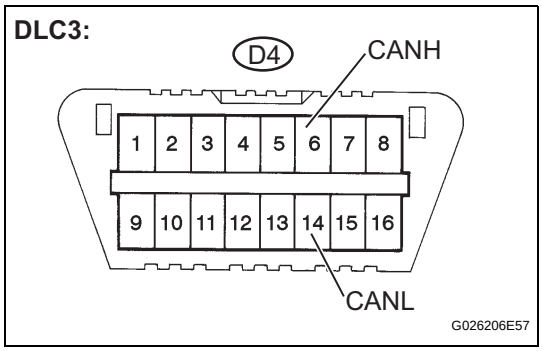
10	CONNECT CONNECTOR

(a) Reconnect the skid control ECU sub bus line connector (J6) to the CAN J/C.

NEXT

11	CHECK CAN BUS LINES FOR SHORT CIRCUIT (SKID CONTROL ECU SUB BUS LINE)

(a) Disconnect the skid control ECU connector (S1).



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

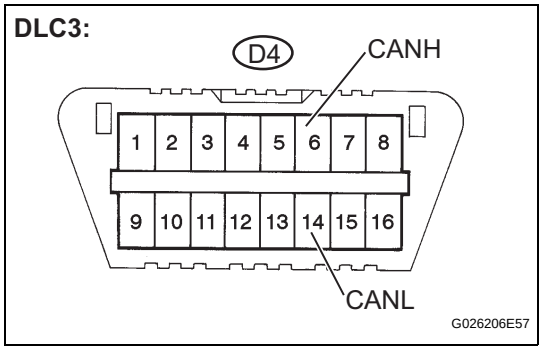
REPAIR OR REPLACE SKID CONTROL ECU WITH ACTUATOR SUB BUS LINE OR CONNECTOR (CAN-H, CAN-L)

12 CONNECT CONNECTOR

(a) Reconnect the yaw rate sensor sub bus line connector (J7) to the CAN J/C.

NEXT

13 CHECK CAN BUS LINES FOR SHORT CIRCUIT (YAW RATE SENSOR SUB BUS LINE)



(a) Disconnect the yaw rate sensor connector (Y1).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω

OK → **REPLACE YAW RATE SENSOR**

NG

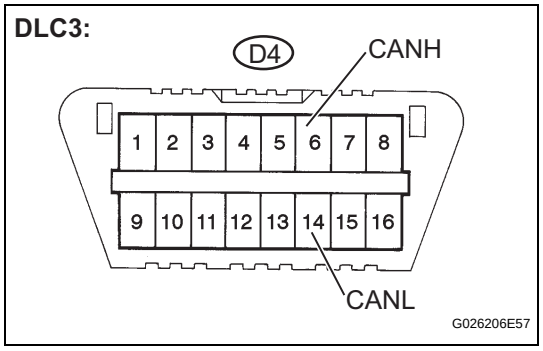
REPAIR OR REPLACE YAW RATE SENSOR SUB BUS LINE OR CONNECTOR (CAN-H, CAN-L)

14 CONNECT CONNECTOR

(a) Reconnect the steering angle sensor sub bus line connector (J8) to the CAN J/C.

NEXT

15	CHECK CAN BUS LINES FOR SHORT CIRCUIT (STEERING ANGLE SENSOR SUB BUS LINE)



(a) Disconnect the steering angle sensor connector (S9).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	54 to 69 Ω

OK → REPLACE STEERING ANGLE SENSOR

NG

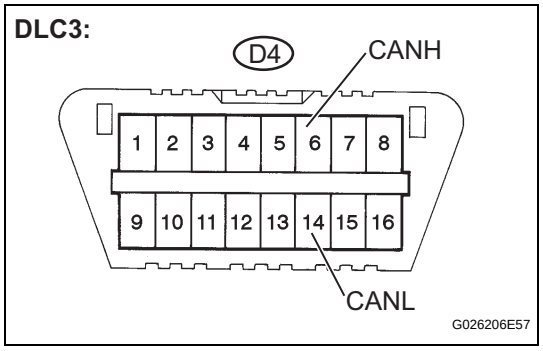
REPAIR OR REPLACE STEERING ANGLE SENSOR BRANCH LINE OR CONNECTOR (CAN-H, CAN-L)

16	CONNECT CONNECTOR

(a) Reconnect the ECM main bus line connector (J10) to the CAN J/C.

NEXT

17	CHECK CAN BUS LINES FOR SHORT CIRCUIT (ECM MAIN BUS LINE)



(a) Disconnect the ECM connector (E7).
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Value
D4-6 (CANH) - D4-14 (CANL)	• Ignition switch OFF • Stop light switch OFF	108 to 132 Ω

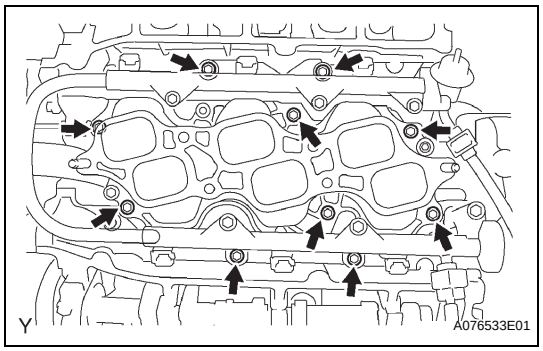
OK → REPLACE ECM

NG

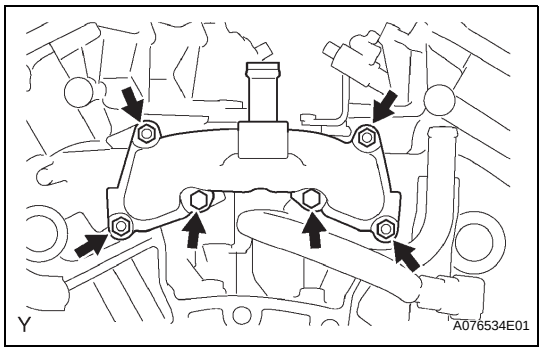
REPAIR OR REPLACE ECM MAIN BUS LINE OR CONNECTOR (CAN -H, CAN-L)

REMOVAL

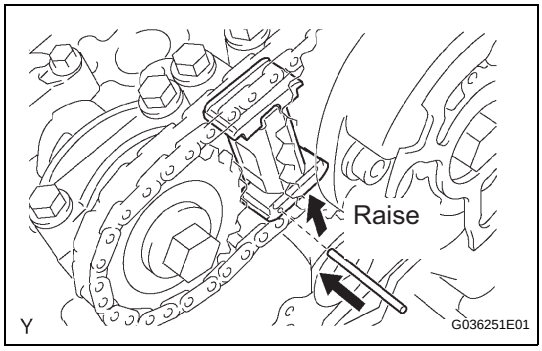
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE POWER STEERING LINK ASSEMBLY**
   (See page PS-53)
6. **REMOVE FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)**
   (See page DF-19)
7. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-34)
8. **REMOVE CHAIN SUB-ASSEMBLY**
   (See page EM-44)
9. **REMOVE NO.1 COOL AIR INLET**
   (a) Remove the 2 bolts, then remove the cool air inlet.
10. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
    (See page EX-3)
11. **REMOVE MANIFOLD STAY**
    (a) Remove the 3 bolts, then remove the exhaust manifold stay.
12. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY**
    (a) Disconnect the air fuel ratio sensor connector.
    (b) Remove the 6 nuts, then remove the exhaust manifold and gasket.
13. **DISCONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
14. **DISCONNECT NO.2 FUEL PIPE SUB-ASSEMBLY (See page FU-13)**
15. **REMOVE INTAKE MANIFOLD**
    (a) Disconnect the 6 fuel injector connectors.
    (b) Remove the 10 bolts, then remove the intake manifold and gasket.
16. **REMOVE WATER BY-PASS JOINT RR**
    (a) Disconnect the engine coolant temperature sensor connector.
    (b) Disconnect the heater hose.



EM

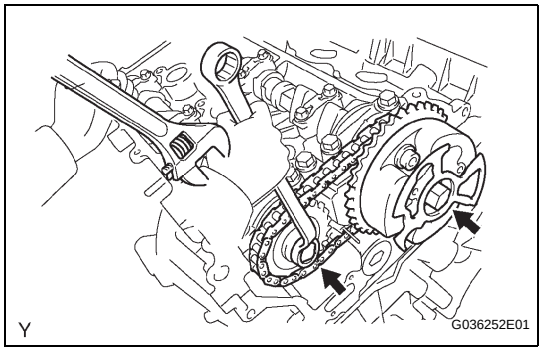


(c) Remove the 2 bolts and 4 nuts, then remove the water by-pass joint RR and 2 gaskets.
(d) Remove the O-ring from the water outlet hose.

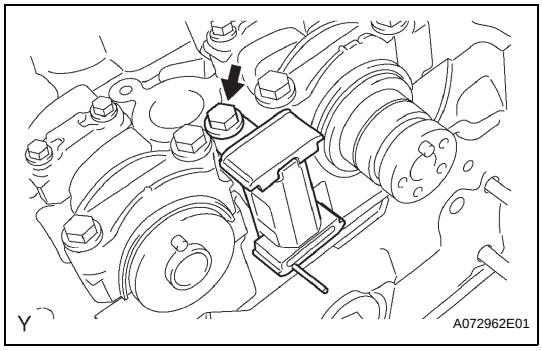


17. REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) While raising the chain tensioner No. 2, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



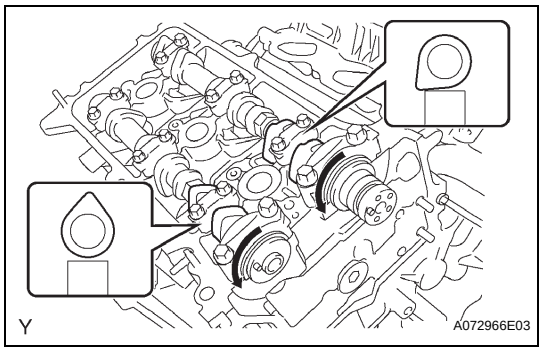
(b) Hold the hexagonal portion of the camshaft with a wrench.
NOTICE:
Be careful not to damage the cylinder head and valve lifter with the wrench.
(c) Remove the 2 bolts, then remove the camshaft timing gear, camshaft timing gear assembly and timing chain No. 2.
NOTICE:
Do not disassemble the camshaft timing gear assembly.



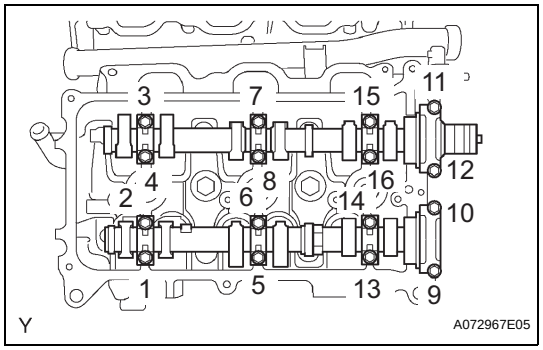
18. REMOVE NO.2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt, then remove the chain tensioner No. 2.

19. REMOVE CAMSHAFTS
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.



(a) Rotate the camshafts counterclockwise using a wrench so that the cam lobes of No. 1 cylinder face in the directions shown in the illustration.



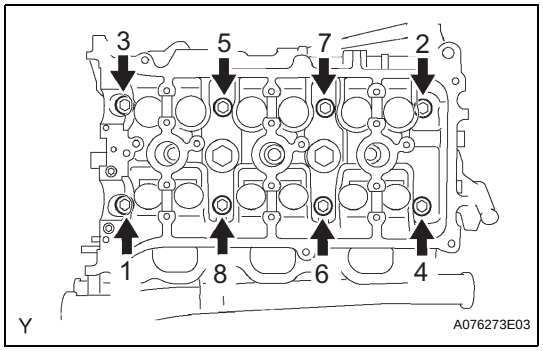
(b) Using several steps, loosen and remove the 16 bearing cap bolts uniformly in the sequence shown in the illustration.

(c) Remove the 8 bearing caps and 2 camshafts.

20. REMOVE NO.2 CAMSHAFT BEARING

21. REMOVE CYLINDER HEAD SUB-ASSEMBLY

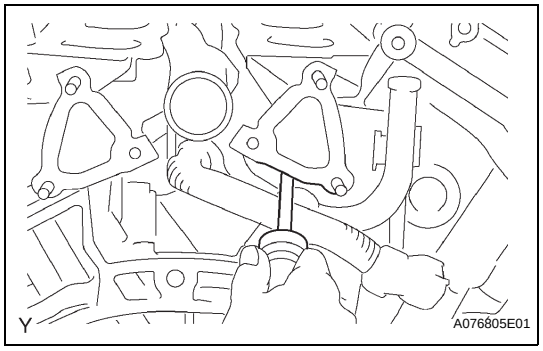
(a) Remove the 2 bolts and separate the 2 ground cables.



(b) Using several steps, loosen the 8 cylinder head bolts on the cylinder head uniformly with a 10 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 8 cylinder head bolts and 8 plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing the bolts in the wrong order.**



(c) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a bench.

NOTICE:

Be careful not to drop the plate washers into the cylinder head.

If the cylinder head is difficult to lift off, pry between the cylinder head and cylinder block with a screwdriver.

22. REMOVE CYLINDER HEAD GASKET

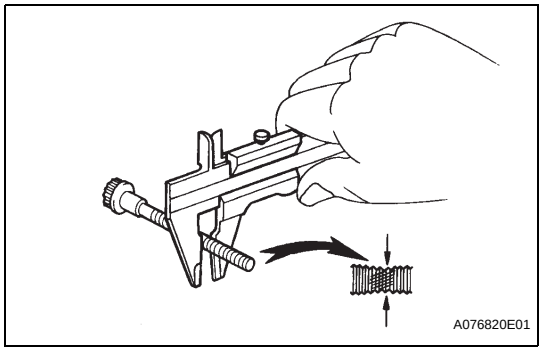
INSPECTION

1. INSPECT CYLINDER HEAD SET BOLT

(a) Using a vernier caliper, measure the outside diameter of the bolt thread.

Standard outside diameter:
10.85 to 11.00 mm (0.4272 to 0.4331 in.)

Minimum outside diameter:
10.7 mm (0.421 in.)

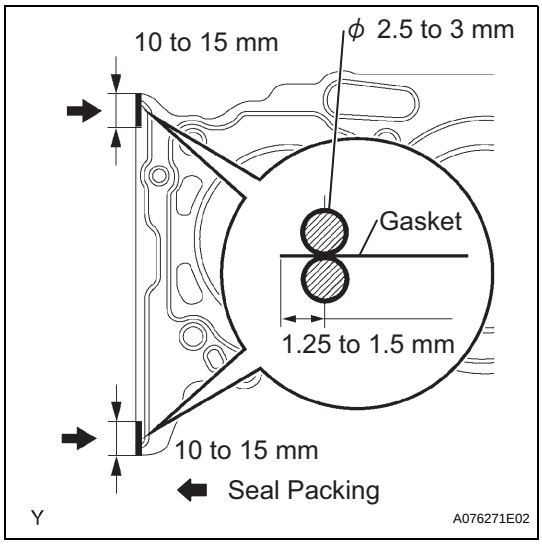


INSTALLATION

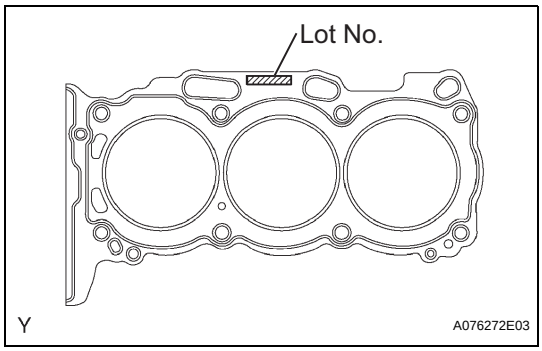
1. INSTALL CYLINDER HEAD GASKET

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.

(b) Apply a continuous bead of the seal packing (diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.
Seal packing:
Part No. 08826-00080 or equivalent
NOTICE:
Install the cylinder head within 3 minutes of applying seal packing. Tighten the cylinder head bolts within 15 minutes of installing the cylinder head. Otherwise, the seal packing must be removed and reapplied.



(c) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**



2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

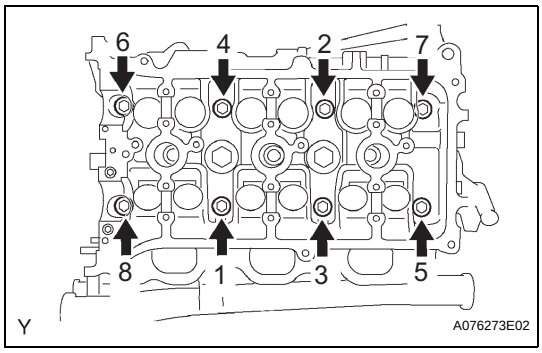
(a) Place the cylinder head on the cylinder head gasket.

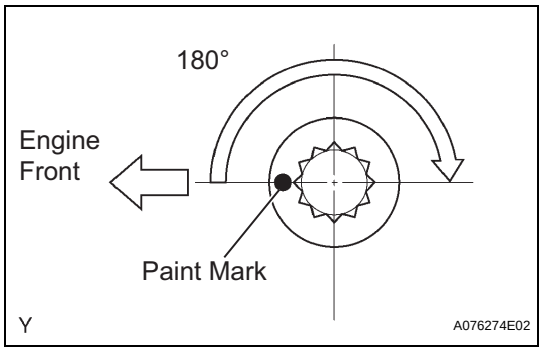
(b) Install the 8 cylinder head bolts.
HINT:
- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
- If any cylinder head bolts are broken or deformed, replace them.

(1) Apply a light coat of engine oil to the threads of the cylinder head bolts.

(2) Install the plate washer onto the cylinder head bolt.

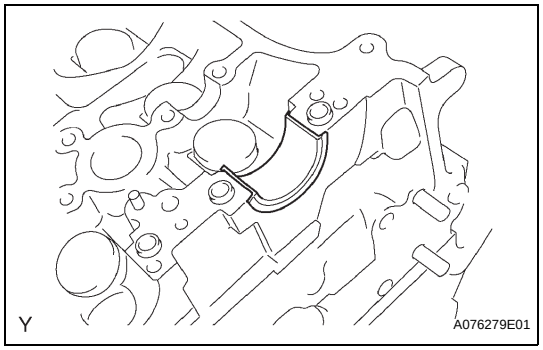
(3) Using several steps, tighten each bolt uniformly with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)
If any cylinder head bolts do not meet the torque specification, replace them.
NOTICE:
Do not drop the washers into the cylinder head.





(4) Mark the front side of each cylinder head bolt with paint.
(5) Retighten the cylinder head bolts 180° as shown.
(6) Check that the painted marks are now at 180° from the engine front.

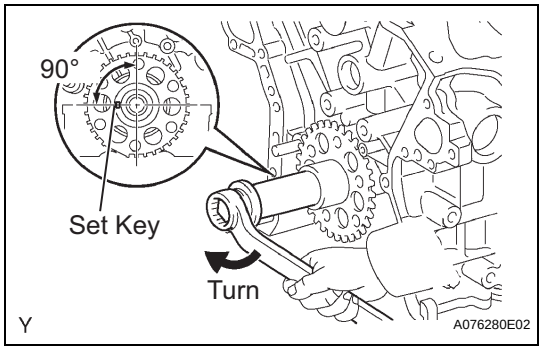
(c) Install the ground cables with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



3. INSTALL NO.2 CAMSHAFT BEARING

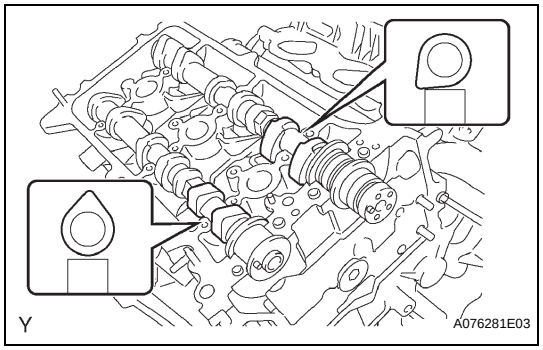
(a) Install the camshaft bearing No. 2 onto the cylinder head.
NOTICE:
Clean the installation planes of the back side of the bearing and cylinder head and keep them free of oils and fats.

4. INSTALL CAMSHAFTS
NOTICE:
Keep the camshaft level while it is being removed. The camshaft thrust clearance is very small and failing to keep it level could crack or damage the cylinder head journal surface, which receives the thrust. This could subsequently lead the camshaft to seize or break. Perform the following steps to avoid such problems.

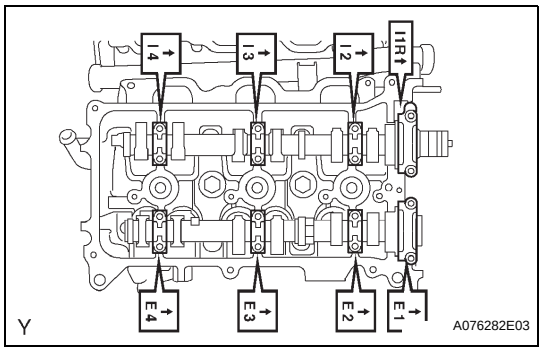


(a) Set the crankshaft position.
(1) Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key in the left horizontal position.
NOTICE:
Installing the crankshaft at the wrong angle could cause the piston head and valve head to come into contact with each other when installing the camshaft. This could cause damage, so always set the crankshaft at the correct angle.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.

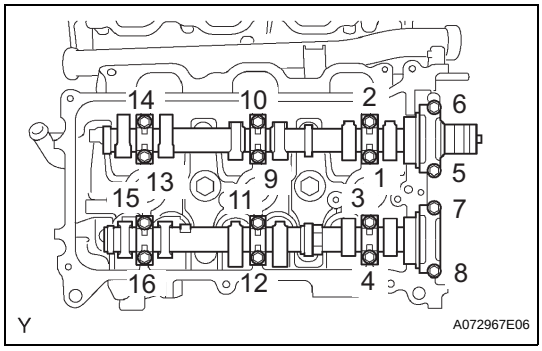


(c) Place the 2 camshafts onto the cylinder head with the cam lobes of No. 1 cylinder facing in the directions shown in the illustration.



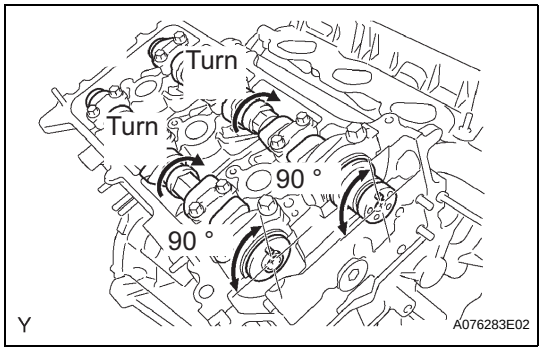
(d) Install the 8 bearing caps in the proper locations as shown.

(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(f) Using several steps, uniformly install and tighten the 16 bearing cap bolts in the sequence shown in the illustration.

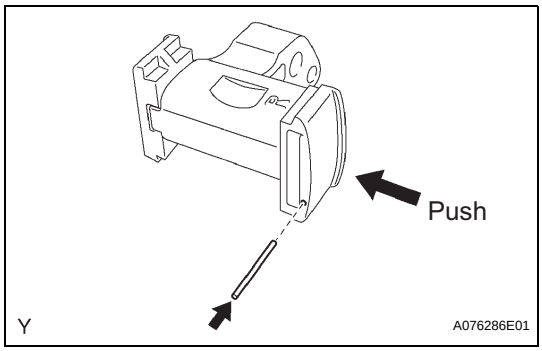
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf) for 10 mm (0.39 in.) head
24 N*m (245 kgf*cm, 18 ft.*lbf) for 12 mm (0.47 in.) head

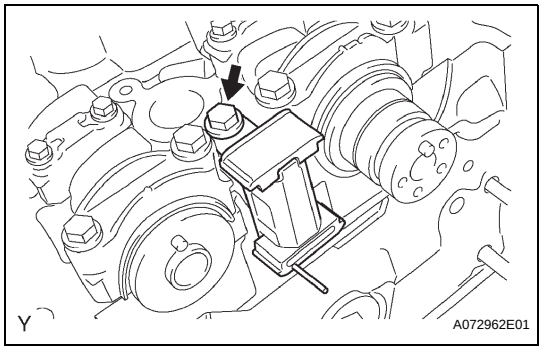


(g) Turn the camshafts clockwise until the knock pin comes to a position 90° to the cylinder head.

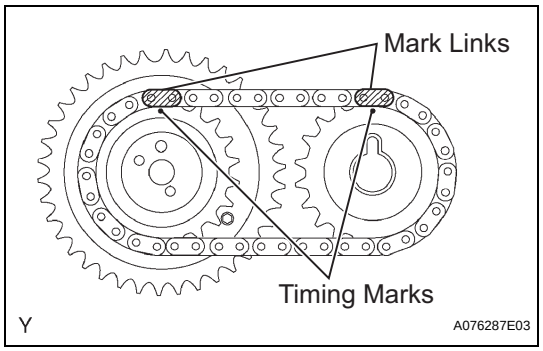
5. INSTALL NO.2 CHAIN TENSIONER ASSEMBLY

(a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.



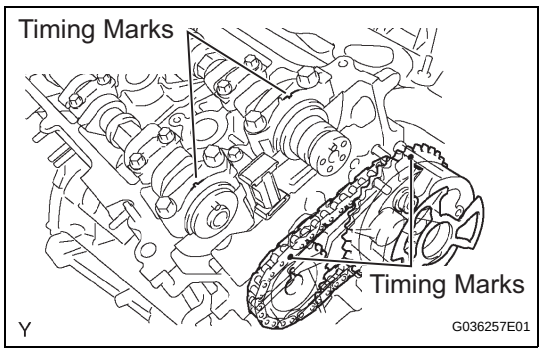


(b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



6. INSTALL CAMSHAFT TIMING GEARS AND NO.2 CHAIN (for Bank 1)

(a) Align the yellow mark links with the timing marks (1 dot mark) of camshaft timing gears as shown in the illustration.

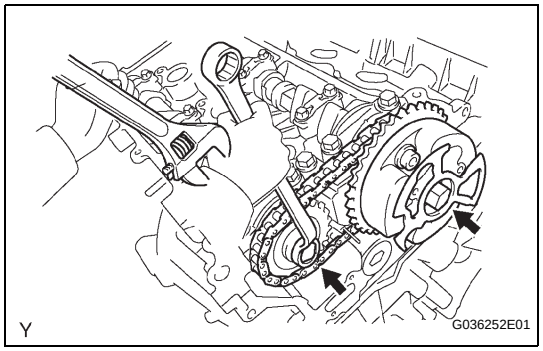


(b) Align the timing marks on the camshaft timing gears with the timing marks on the bearing caps, and install the camshaft timing gears with the chain onto the RH camshafts.

(c) Temporarily install the 2 camshaft timing gear bolts.

NOTICE:

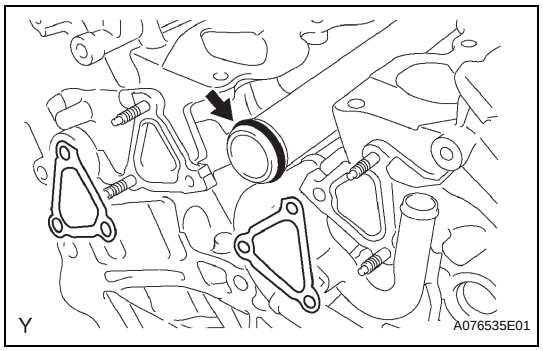
Do not push the camshaft timing gear assembly onto the camshaft forcibly when installing it.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the tensioner No. 2.



7. INSTALL WATER BY-PASS JOINT RR

(a) Install a new O-ring onto the water outlet pipe.

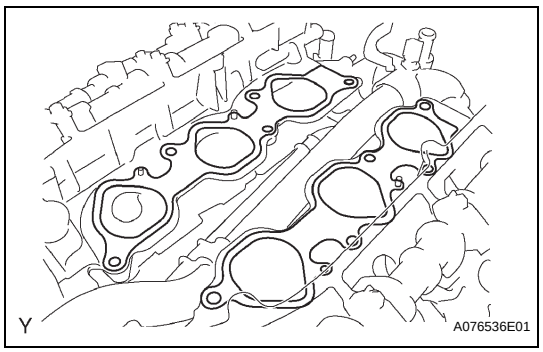
(b) Apply soapy water to the O-ring.

(c) Install 2 new gaskets and water by-pass joint rear with the 2 bolts and 4 nuts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Connect the heater hose.

(e) Connect the engine coolant temperature sensor connector.



8. INSTALL INTAKE MANIFOLD

(a) Set a new gasket on each cylinder head.

NOTICE:

- **Align the port holes of the gasket and cylinder head.**
- **Be careful of the installation direction.**

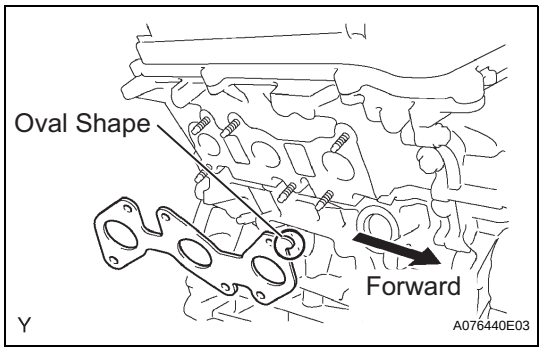
(b) Set the intake manifold on the cylinder heads.

(c) Install and tighten the 10 bolts uniformly in several steps.

Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(d) Connect the 6 fuel injector connectors.

EM



9. **CONNECT NO.2 FUEL PIPE SUB-ASSEMBLY**
10. **CONNECT NO.1 FUEL PIPE SUB-ASSEMBLY (See page FU-17)**
11. **INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH**
    (a) Set a new gasket to the RH cylinder head with the oval shape facing forward.
    NOTICE:
    Be careful of the installation direction.
    (b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.
    Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
    (c) Connect the air fuel ratio sensor connector.
12. **INSTALL MANIFOLD STAY**
    (a) Install the manifold stay with the 3 bolts.
    Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
13. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
    (See page EX-3)
14. **INSTALL NO.1 COOL AIR INLET**
    (a) Install the cool air inlet with the 2 bolts.
    Torque: 12 N*m (122 kgf*cm, 9.0 ft.*lbf)
15. **INSTALL CHAIN TENSIONER SLIPPER**
16. **INSTALL NO.1 CHAIN TENSIONER ASSEMBLY (See page EM-27)**
17. **INSTALL CHAIN SUB-ASSEMBLY**
    (See page EM-48)
18. **INSTALL TIMING CHIAN OR BELT COVER SUB-ASSEMBLY**
    LU-38
19. **INSTALL FRONT DIFFERENTIAL CARRIER ASSEMBLY (for 4WD)**
    (See page DF-38)
20. **INSTALL POWER STEERING LINK ASSEMBLY**
    (See page PS-67)
21. **INSTALL BATTERY**
22. **ADD ENGINE OIL (See page LU-5)**
23. **ADD ENGINE COOLANT (See page CO-3)**
24. **ADD DIFFERENTIAL OIL (for 4WD)**
25. **INSPECT DIFFERENTIAL OIL (for 4WD) (See page DF-8)**
26. **ADD POWER STEERING FLUID**
27. **BLEED POWER STEERING FLUID (See page PS-2)**
28. **CHECK FOR ENGINE OIL LEAKAGE**
29. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
30. **CHECK FOR FUEL LEAKAGE**

31. **CHECK FOR EXHAUST GAS LEAKAGE**
32. **CHECK FOR POWER STEERING FLUID LEAKAGE**
33. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-7)
34. **INSPECT IGNITION TIMING (See page EM-1)**
35. **INSPECT ENGINE IDLING SPEED (See page EM-2)**
36. **INSPECT CO/HC (See page EM-3)**
37. **REMOVE COMPRESSION (See page EM-2)**

MADE BY VB-SERVICES

HOW TO USE THIS MANUAL

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.
  (1) Diagnosis
  (2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting
  (3) Final Inspection

(b) The following procedures are omitted from this manual. However, these procedures must be performed.
  (1) Use a jack or lift to perform operations.
  (2) Clean all removed parts.
  (3) Perform a visual check.

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help you find the item to be repaired.

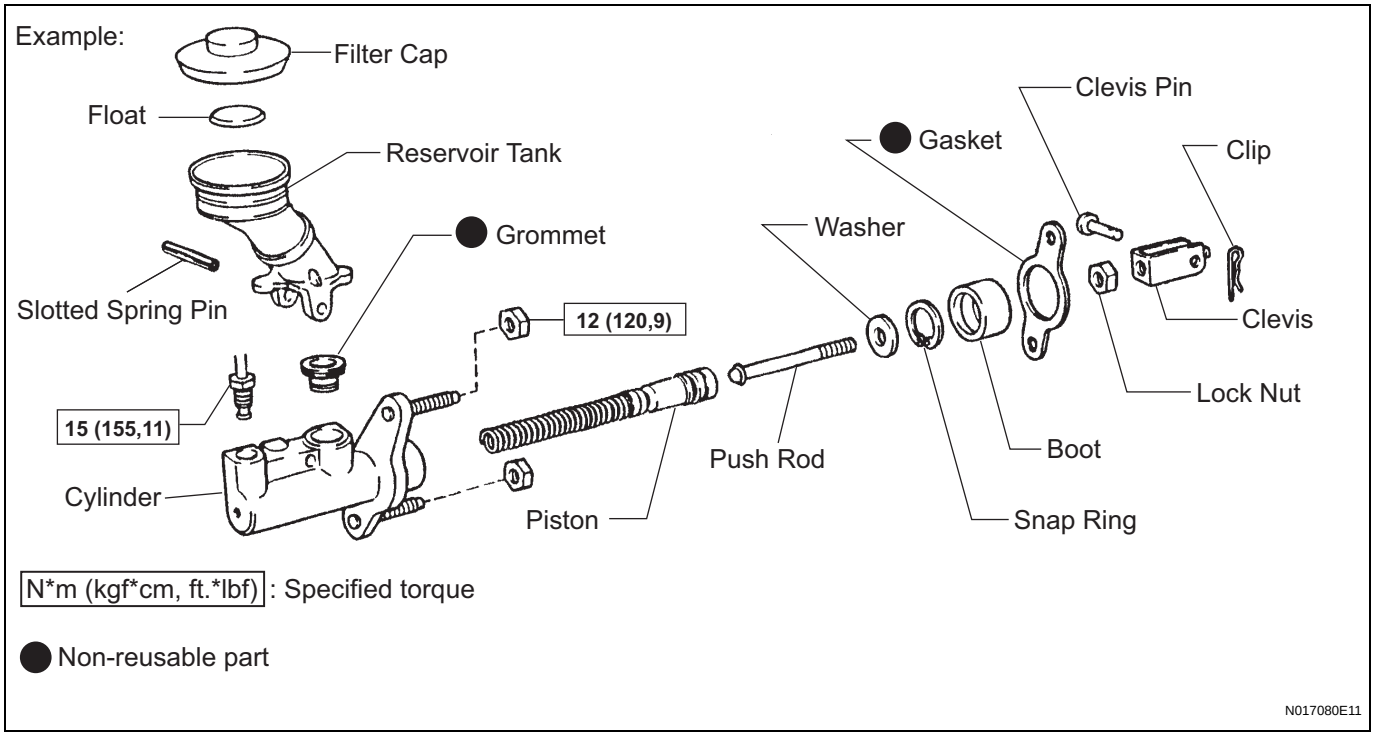
3. PREPARATION

(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the working procedures properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
The following illustration is an example.



(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.
HINT:
There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	• How to perform the task • Information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

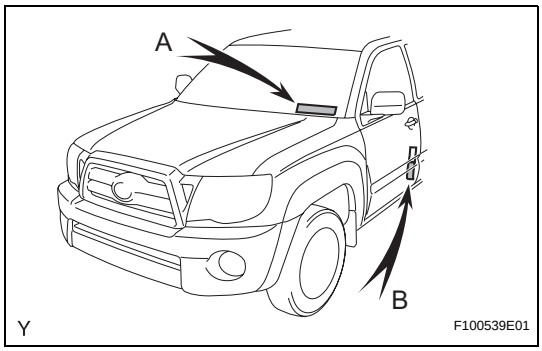
6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Units from the metric system and the English system are also provided.
Example:
Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)

 MADE BY VB-SERVICES



IDENTIFICATION INFORMATION

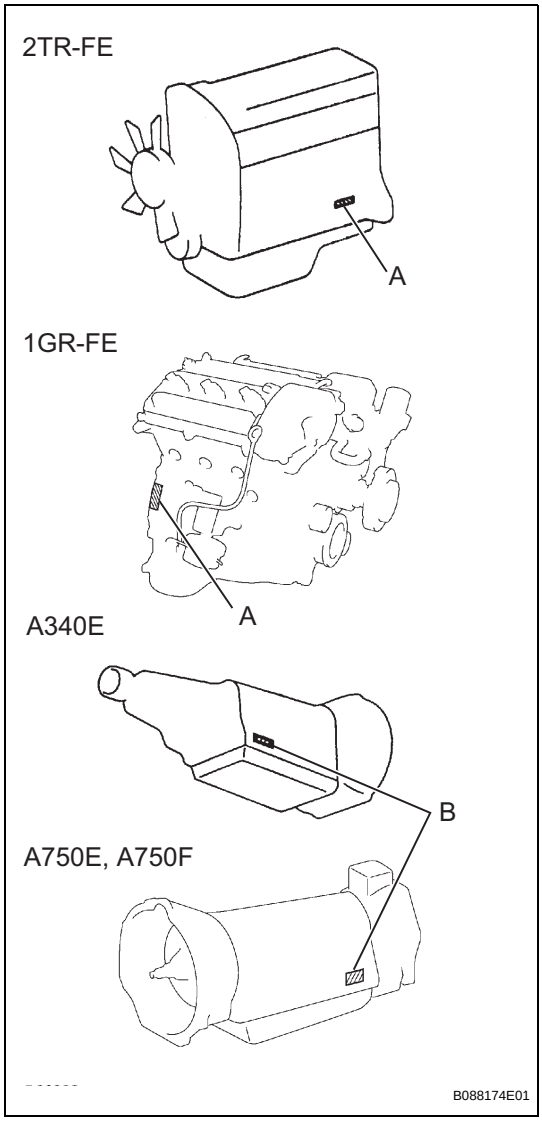
VEHICLE IDENTIFICATION AND SERIAL NUMBERS

1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle body and on the certification label, as shown in the illustration.

A:
Vehicle Identification Number

B:
Certification Label



2. ENGINE SERIAL NUMBER AND TRANSMISSION SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine and the transmission serial number is stamped on the housing as shown in the illustration.

A:
Engine Serial Number

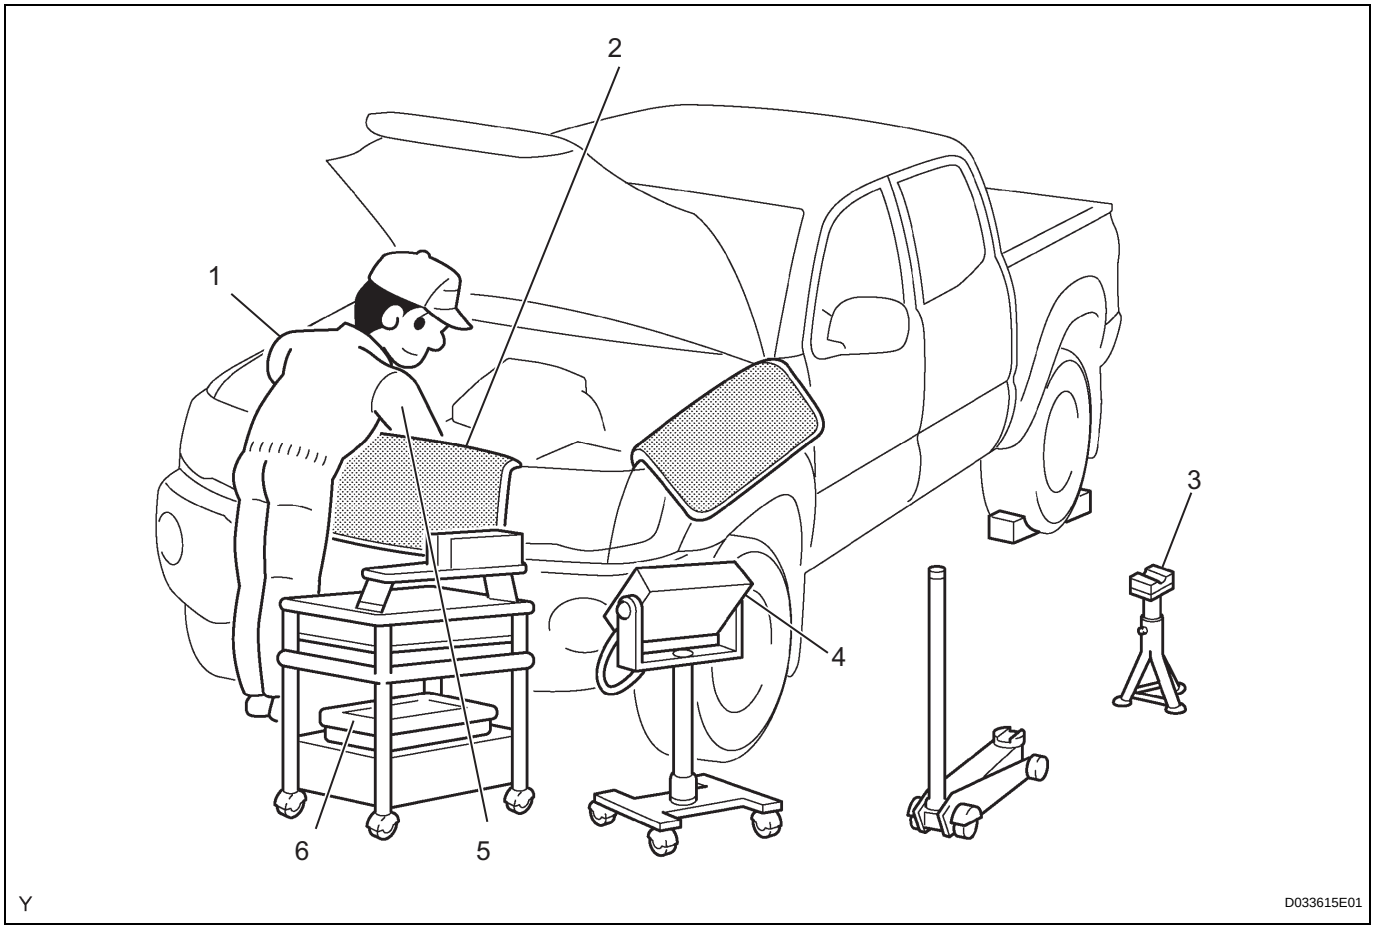
B:
Transmission Serial Number

REPAIR INSTRUCTION

PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS

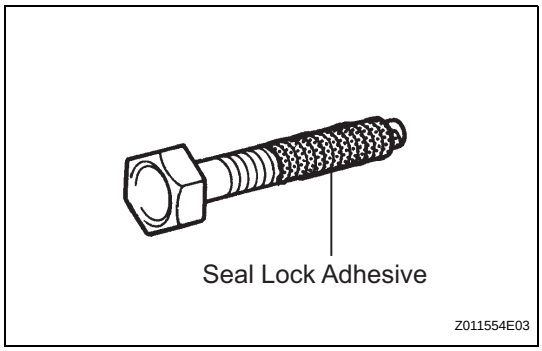


1	Attire	• Always wear a clean uniform. • A hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting the operation.
3	Safe operation	• When working with 2 or more persons, be sure to check safety for one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring gauge	Before starting the operation, prepare a tool stand, SST, gauge, oil and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing parts, check the general condition of the assembly and for deformation and damage. • When the assembly is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to ensure reassembly of components to their original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.

6	Removed parts	• Place removed parts in a separate box to avoid mixing them up with new parts or contaminating new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.

IN

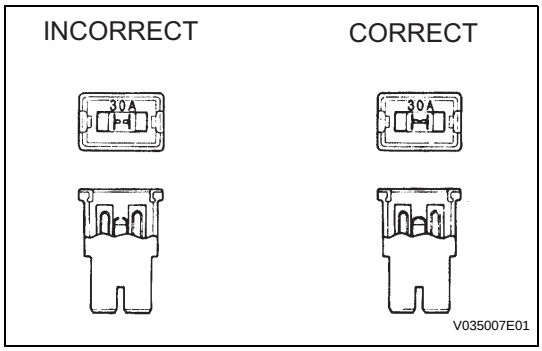
(b) JACKING UP AND SUPPORTING VEHICLE
(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.



(c) PRECOATED PARTS
(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.
(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriate to that part.
(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS
(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.



(f) FUSES
(1) When inspecting a fuse, check that the wire of the fuse is not broken.
(2) When replacing fuses, be sure that the new fuse has the correct amperage rating. Do not exceed the rating or use one with a lower rating.

Illustration	Symbol	Part Name	Abbreviation
 N	N	FUSE	FUSE

Illustration	Symbol	Part Name	Abbreviation
 N	 N	MEDIUM CURRENT FUSE	M-FUSE
 N	N	HIGH CURRENT FUSE	H-FUSE
N	N	FUSIBLE LINK	FL
 N	N	CIRCUIT BREAKER	CB

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

HINT:

If clips are damaged during a procedure, always replace the damaged clip with a new clip.

IN

Shape (Example)	Illustration	Procedures
 N	 N	1. Remove the clips with a clip remover or pliers.
 N	 N	1. Remove the clips with a clip remover or screwdriver.
 N	 N	1. Remove the clips with a wide scraper to prevent panel damage.
 N	 N	1. Remove the clips by pushing the center pin through and prying out the shell.

Shape (Example)	Illustration	Procedures
 N	 N	1. Remove the clips by unscrewing the center pin and prying out the shell.
 N	 N	1. Remove the clips by prying out the pin and then prying out the shell.

(h) CLAWS

(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

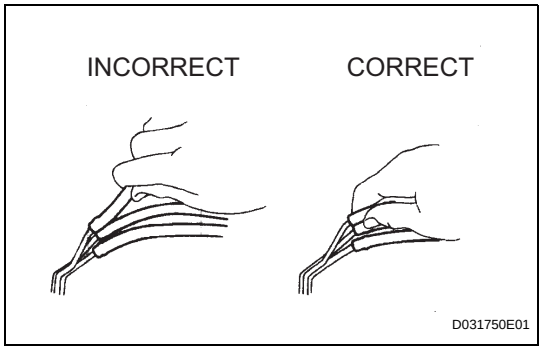
HINT:

If claws are damaged during a procedure, always replace the damaged claws with new caps or covers.

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.
		1. Using a screwdriver, detach the claws and remove the cap or covers.

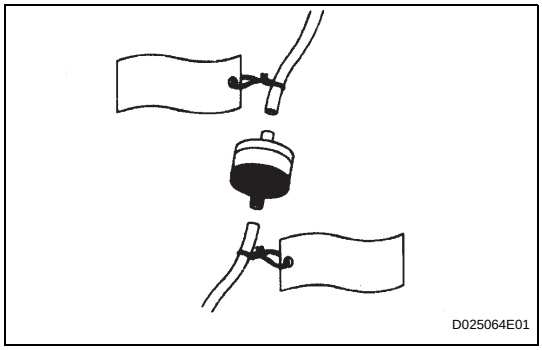
IN

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.



(i) REMOVAL AND INSTALLATION OF VACUUM HOSES

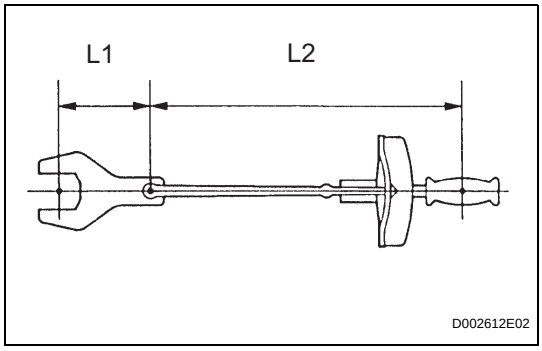
(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may cause damage.



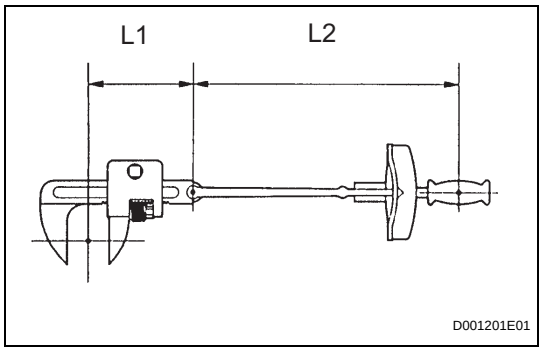
(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, it may leak air. Use a step-down adapter if necessary.



(j) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL



(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with a torque wrench.
Formula:
T' = L2 / (L1 + L2) * T

T'	**Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}**
T	**Torque {N*m (kgf*cm, ft.*lbf)}**
L1	**Length of SST or extension tool {cm (in.)}**
L2	**Length of torque wrench {cm (in.)}**

NOTICE:
If an extension tool or SST is combined with a torque wrench and the wrench is used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND FRONT SEAT OUTER BELT ASSEMBLY WITH PRETENSIONER

The TOYOTA TACOMA is equipped with a Supplemental Restraint System (SRS).

CAUTION:
Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check the DTCs before disconnecting the battery.

IN

(2) Work must be started at least 90 seconds after the ignition switch is turned OFF and after the cable is disconnected from the negative (-) battery terminal.
(The SRS is equipped with a backup power source. If work is started within 90 seconds after turning the ignition switch OFF and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.
When the cable is disconnected from the negative (-) battery terminal, clock and audio system memory is erased. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.
CAUTION:
Never use a backup power source (battery or other) to avoid erasing system memory. The backup power source may inadvertently power the SRS and cause it to deploy.

(3) Even in cases of a minor collision where the SRS does not deploy, the steering wheel pad, front passenger airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and seat belt pretensioner should be inspected

(4) In minor collisions where the SRS does not deploy, the steering wheel pad, front passenger airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and seat belt pretensioner should be inspected before further use of the vehicle.

(5) Never use SRS parts from another vehicle. When replacing parts, use new parts.

(6) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.

(7) Never disassemble and attempt to repair the steering wheel pad, front passenger airbag assembly, side airbag assembly, curtain shield airbag assembly and seat belt pretensioner.

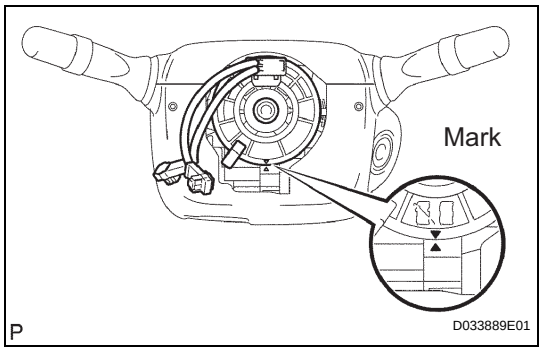
(8) Replace the steering wheel pad, front passenger airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and seat belt pretensioner if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.

(9) Do not directly expose the airbag sensor assemblies or airbag assemblies to hot air or flames.

(10) Use an ohmmeter / voltmeter with high impedance (10 kΩ/V minimum) for troubleshooting electrical circuits.

(11)Information labels are attached to the SRS components. Follow the instructions on the labels.

(12)After work on the SRS is completed, check the SRS warning light.

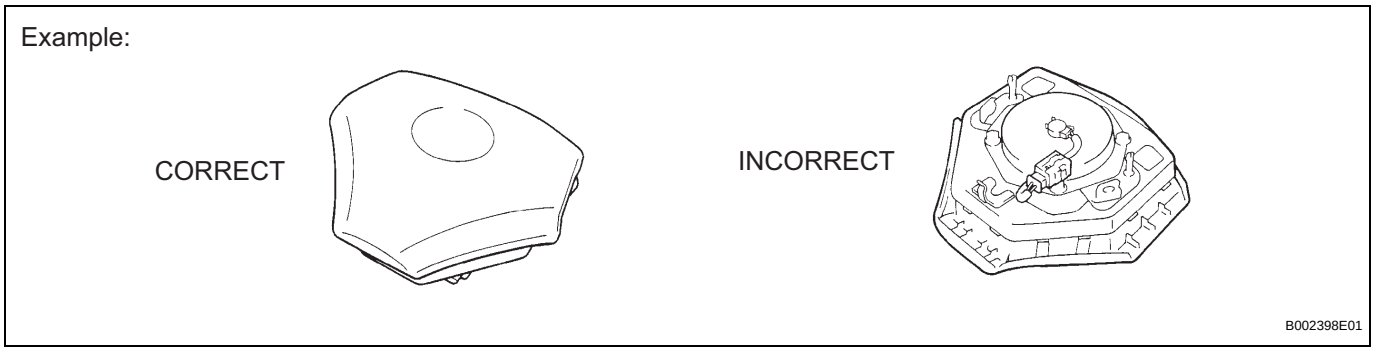


(b) SPIRAL CABLE

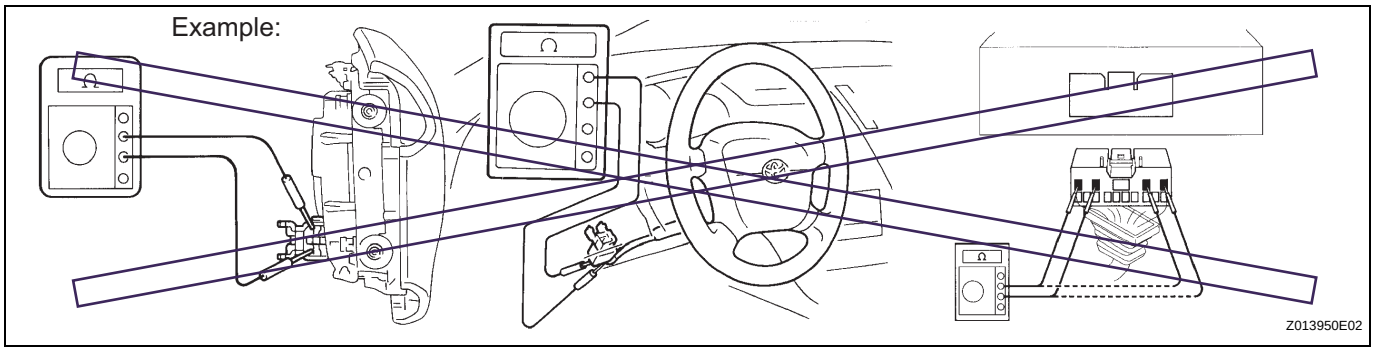
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel.

(c) STEERING PAD

(1) Always place a removed or new steering pad surface upward as shown in the illustration. Placing the horn button with the pad surface facing down could cause a serious accident if the airbag inflates. Also, do not place anything on top of the horn button.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the horn button.

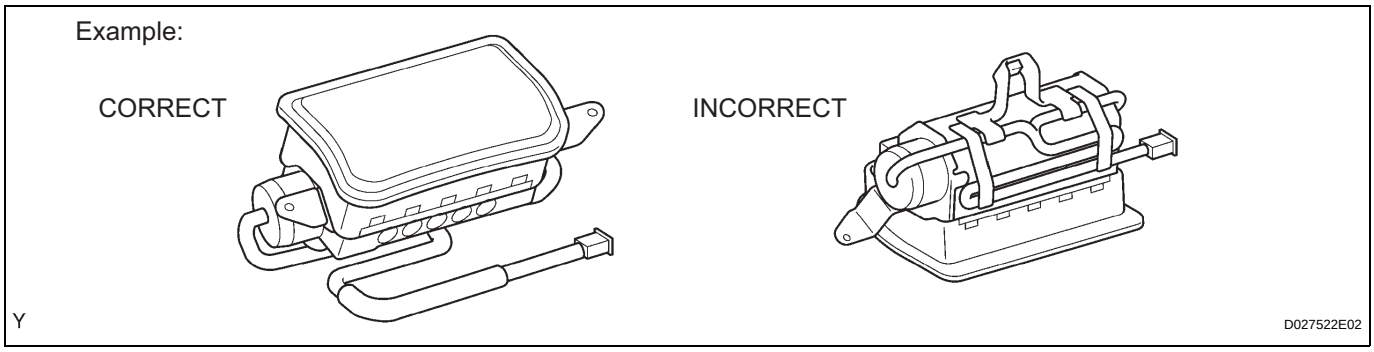
(4) Store the horn button assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

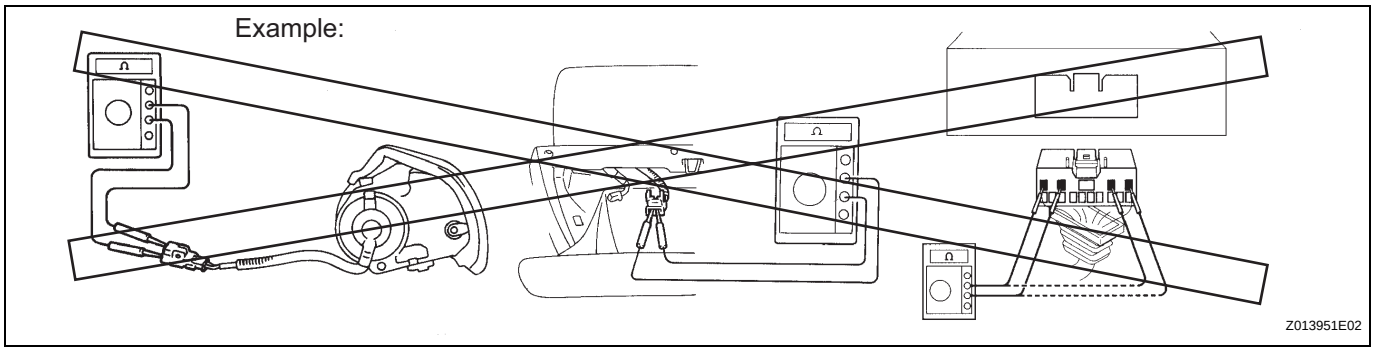
(6) When disposing of the vehicle or the horn button assembly by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag inflation direction facing down could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.

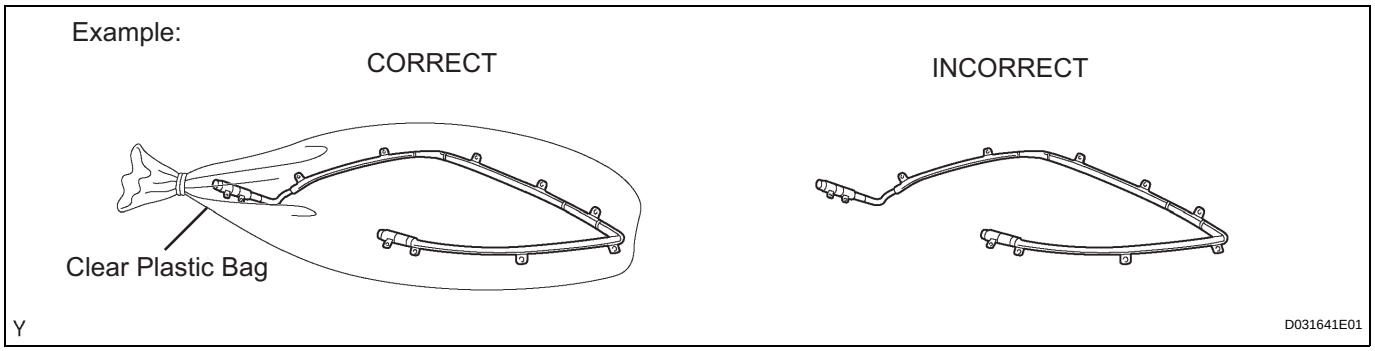
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

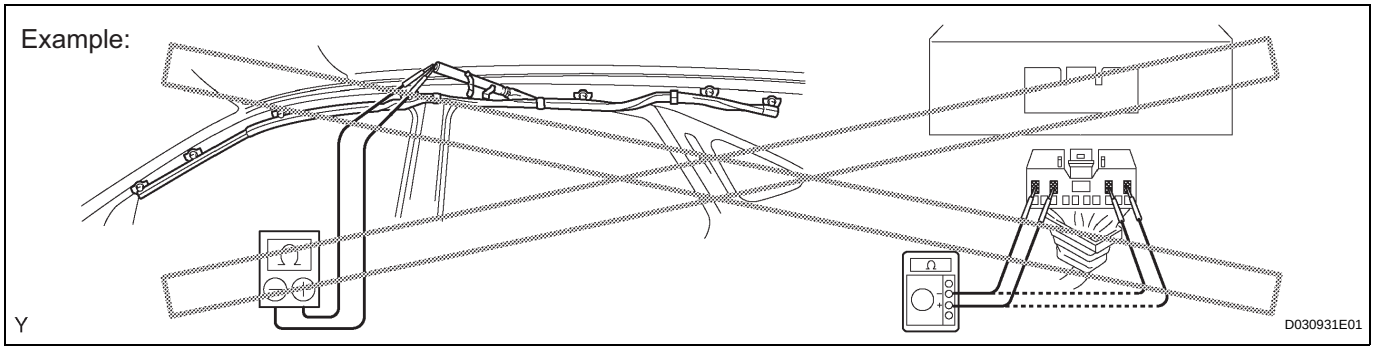
(e) CURTAIN SHIELD AIRBAG ASSEMBLY

(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.



CAUTION:
The plastic bag is not reusable.
NOTICE:
Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.

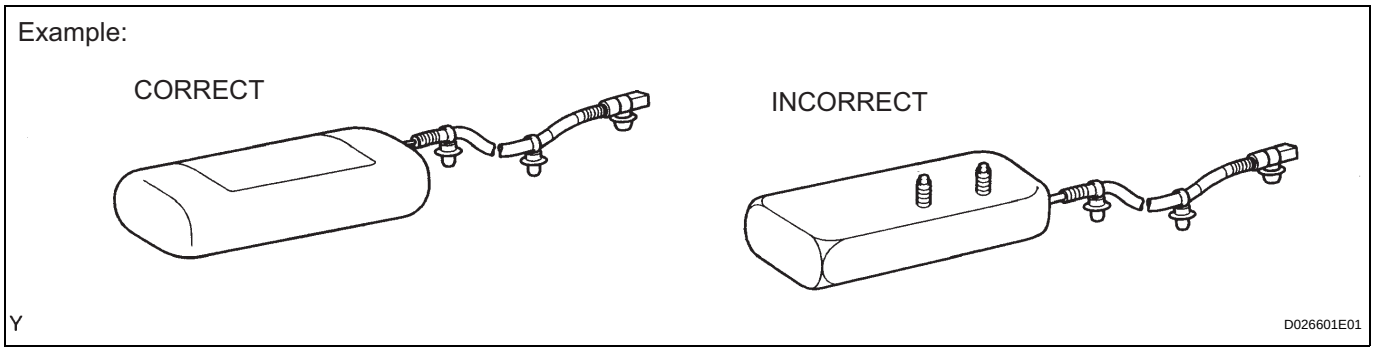
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

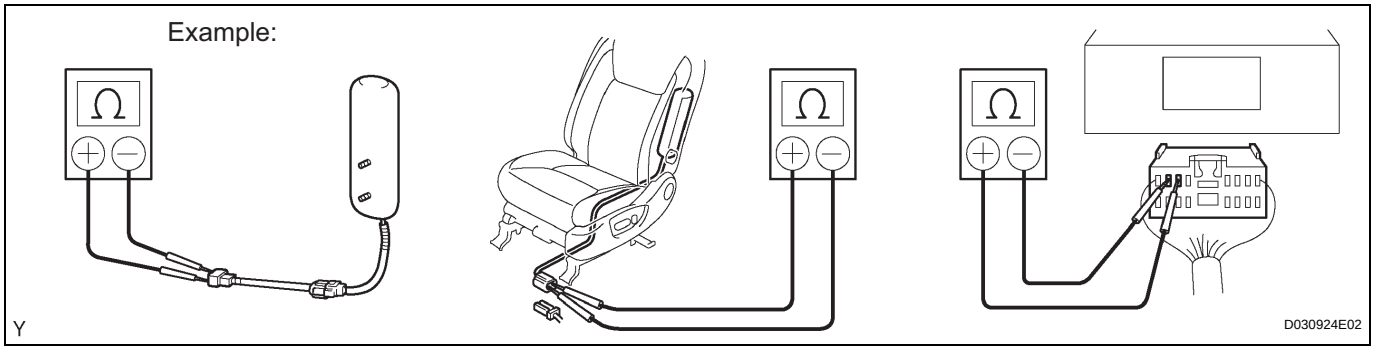
(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

(f) FRONT SEAT SIDE AIRBAG ASSEMBLY

(1) Always place a removed or new front seat airbag assembly with the airbag inflation direction facing up.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the front seat airbag assembly.

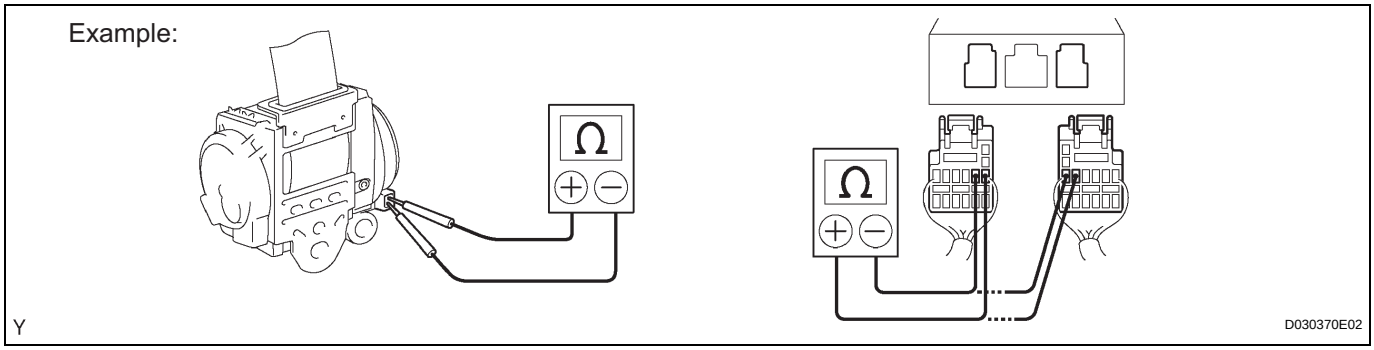
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

(g) FRONT SEAT OUTER BELT ASSEMBLY WITH PRETENSIONER

(1) Never measure the resistance of the seat outer belt. This may cause the pretensioner of the seat belt to activate, which could cause serious injury.



(2) Never disassemble the seat outer belt.

(3) Never install the seat outer belt on another vehicle.

(4) Store the seat outer belt in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the pretensioner deploying due to currents entering the squib wiring.

(6) When disposing of a vehicle or the seat outer belt assembly by itself, the seat outer belt should be activated before disposal. Activate it in a safe place away from electrical noise.

(7) As the seat outer belt is hot after the pretensioner is activated, allow some time for it to cool down sufficiently before disposal. Never apply water to try to cool down the seat outer belt.

(8) Grease, detergents, oil or water should not be applied to the front seat outer belt.

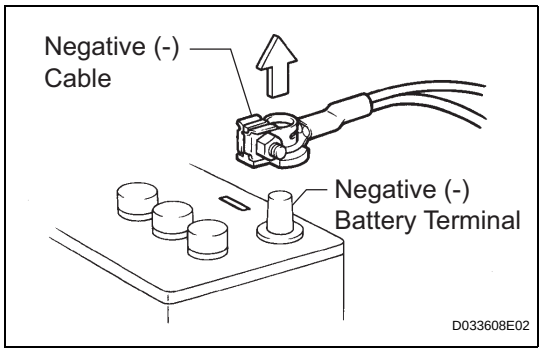
(h) AIRBAG SENSOR ASSEMBLY

(1) Never reuse an airbag sensor assembly that has been involved in a collision where the SRS has deployed.

(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor placed on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not placed on the floor, the SRS may activate.

(3) Work must be started at least 90 seconds after the ignition switch is turned OFF and the cable is disconnected from the negative (-) battery terminal, even if only loosening the set bolts of the airbag sensor assembly.

(i) WIRE HARNESS AND CONNECTOR
(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are a standard yellow color. If the SRS wire harness becomes disconnected or the connector becomes broken, repair or replace it.



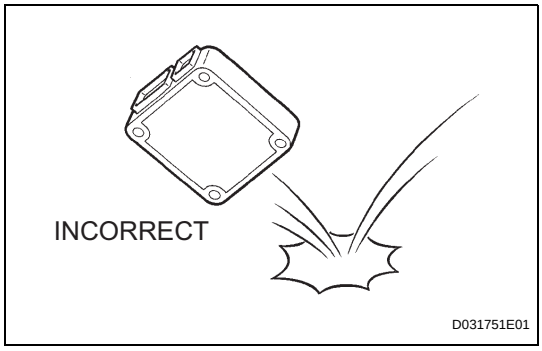
3. ELECTRONIC CONTROL

(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

NOTICE:

Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.

(1) Before performing electronic work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.
(2) When disconnecting the cable, turn the ignition switch off and the headlight dimmer switch OFF and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.
(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.



(b) HANDLING OF ELECTRONIC PARTS
(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.
(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector.
(3) Be careful not to drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.
(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.
(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
(6) When measuring the resistance of a wire connector, insert the tester probe carefully to prevent terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources.

(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS

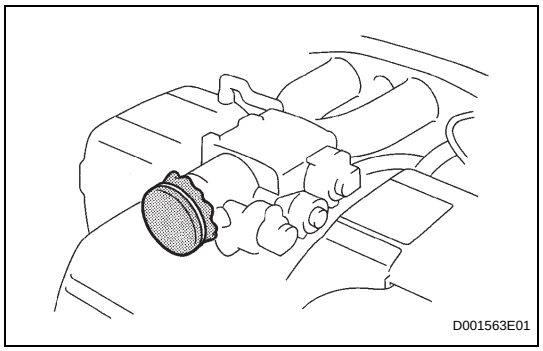
(1) Prepare a fire extinguisher before starting the operation.

(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, and do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.

(3) Avoid using electric motors, working lights and other electric equipment that can cause sparks or high temperatures.

(4) Avoid using iron hammers as they may create sparks.

(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.

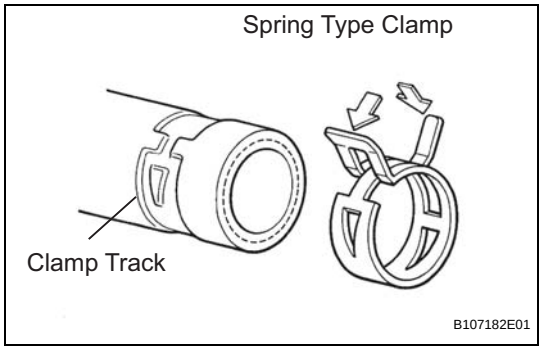


5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal particles enter inlet system parts, they may damage the engine.

(b) When removing and installing inlet system parts, cover the openings of the removed parts and engine openings. Use gummed tape or other suitable materials.

(c) When installing inlet system parts, check that no metal particles have entered the engine or the installed parts.



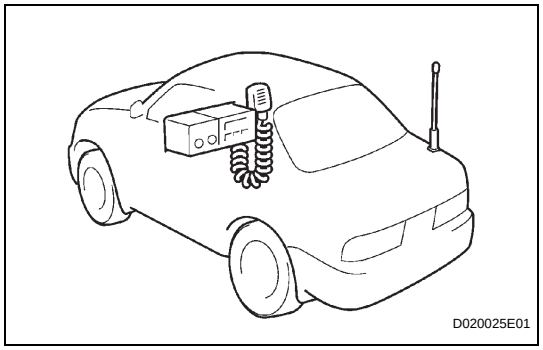
6. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the clamp position so that it can be reinstalled in the same position.

(b) Replace any deformed or dented clamps with new ones.

(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.

(d) For a spring type clamp, you may want to spread the tabs slightly after installation by pushing in the direction of the arrows as shown in the illustration.

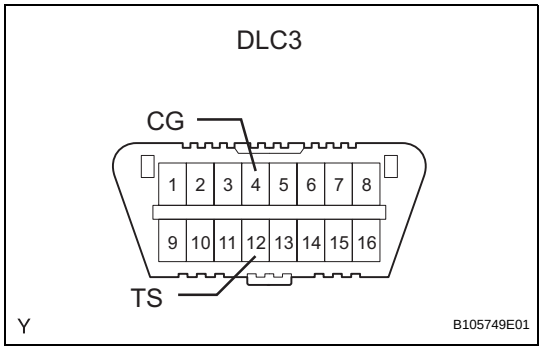


7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.

(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensor locations, refer to the section of the applicable components.

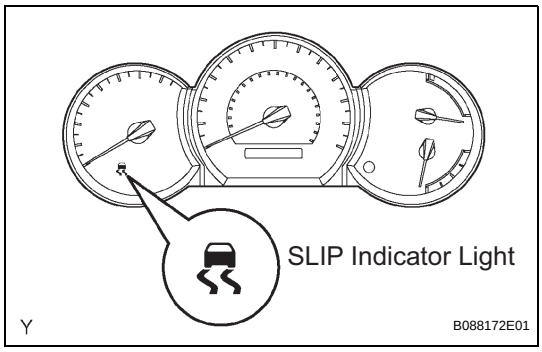
(c) Keep the antenna and feeder separate from other wiring as much as possible. This will prevent signals from the communication equipment from affecting vehicle equipment and vice versa.
(d) Check that the antenna and feeder are correctly adjusted.
(e) Do not install a high-powered mobile communication system.



8. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRAC) SYSTEM

When testing with a 2-wheel drum tester such as a speedometer tester, a combination tester of the speedometer and brake, a chassis dynamometer, or when jacking up the front wheels and driving the wheels, always turn the TRAC system OFF.

(a) Confirm that the TRAC system is OFF.
  (1) Ignition switch to OFF.
  (2) Connect SST to terminals TS and CG of DLC3.
  NOTICE:
  Confirm that the VSC/TRAC warning light blinks.
(b) Begin testing.
(c) Disconnect SST from DLC3.
(d) Check that the VSC/TRAC warning light turns OFF.
  HINT:
  The SLIP indicator light blinks when the TRAC system is operating.



9. FOR VEHICLES EQUIPPED WITH VEHICLE STABILITY CONTROL (VSC) SYSTEM

(a) NOTICES WHEN USING DRUM TESTER
  (1) Before beginning testing, to disable the VSC, turn the ignition switch OFF and connect SST to terminals TS and CG of the DLC3.
  SST 09843-18040
  NOTICE:
  - **Confirm that the VSC warning light blinks.**
  - **VSC system will be reset when the engine is restarted.**
  - **For safety, secure the vehicle with restraint chains while using a wheel dynamometer.**
(b) NOTICES OF RELATED OPERATIONS TO VSC
  (1) Do not carry out unnecessary installation and removal as it might affect the adjustment of VSC related parts.
  (2) Be sure to follow the instructions for work preparation and final confirmation of proper operation of the VSC system.

10. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause overheating and create a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.

(b) Avoid idling the engine for more than 20 minutes.

(c) Avoid performing unnecessary spark jump tests.

(1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.

(2) While testing, never race the engine.

(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

GENERAL INFORMATION

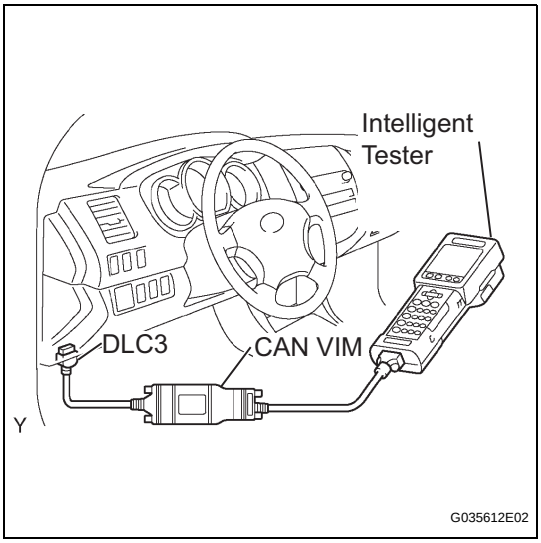
IN

A large number of ECU controlled systems are used in the TOYOTA TACOMA. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system's circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnoses and necessary repairs.

FOR USING INTELLIGENT TESTER

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

* If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
* If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:
Perform troubleshooting in accordance with the procedures below. The following is an outline of basic troubleshooting procedures. Confirm the troubleshooting procedures for the circuit you are working on before beginning troubleshooting.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4 SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.
(b) Warm up the engine to the normal operating temperature.
(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **Go to step 6**

A

5	DTC CHART

(a) Check the results obtained in "SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK". Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT → **Go to step 7**

6	PROBLEM SYMPTOMS CHART

(a) Check the results obtained in "SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK". Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT

7	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Confirm the malfunctioning circuit or part.

NEXT

8	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction occurred the first time.

NEXT

END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in the TOYOTA TACOMA has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

  By using these functions, the problem areas can be narrowed down and troubleshooting is more effective. Diagnostic functions are incorporated in the following system in the TOYOTA TACOMA.

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze-frame Data	Sensor Check / Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
1GR-FE SFI SYSTEM	○	○	○	-	○	○	-
2TR-FE SFI SYSTEM	○	○	○	-	○	○	-
A340E AUTOMATIC TRANSAXLE SYSTEM	○	○	-	-	○	○	-
A750E AUTOMATIC TRANSAXLE SYSTEM	○	○	-	-	○	○	-
A750F AUTOMATIC TRANSAXLE SYSTEM	○	○	-	-	○	○	-

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze-frame Data	Sensor Check / Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
TIRE PRESSURE WARNING SYSTEM	○	-	-	-	○	-	-
ANTI-LOCK BRAKE SYSTEM	○	-	○	○	○	○	-
VEHICLE STABILITY CONTROL SYSTEM	○	-	○	○	○	○	-
AIRBAG SYSTEM	○	○	-	-	○	-	-
OCCUPANT CLASSIFICATION SYSTEM	○	-	-	-	○	-	-
ENGINE IMMOBILISER SYSTEM	○	-	-	-	○	-	-
CRUISE CONTROL SYSTEM	○	-	-	-	○	-	-
AUDIO AND VISUAL SYSTEM	○	○	-	-	-	-	-
CAN COMMUNICATION SYSTEM	○	-	-	-	-	-	-

- In the DTC check, it is very important to determine whether the problem indicated by the DTC is either: 1) still occurring, or 2) occurred in the past but has since returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedures listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1	DTC CHECK

NEXT

2	MAKE A NOTE OF DTCS DISPLAYED AND THEN CLEAR MEMORY

NEXT

3	SYMPTOM CONFIRMATION

Result

Result	Proceed to
No symptoms exist	A

NEXT

5	DTC CHECK

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → TROUBLESHOOTING OF PROBLEM INDICATED BY DTC

A

6	SYMPTOM CONFIRMATION

Result

Result	Proceed to
Symptoms exist	A
No symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B → SYSTEM NORMAL

A

TROUBLESHOOTING OF EACH PROBLEM SYMPTOM

The problem is still occurring in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION

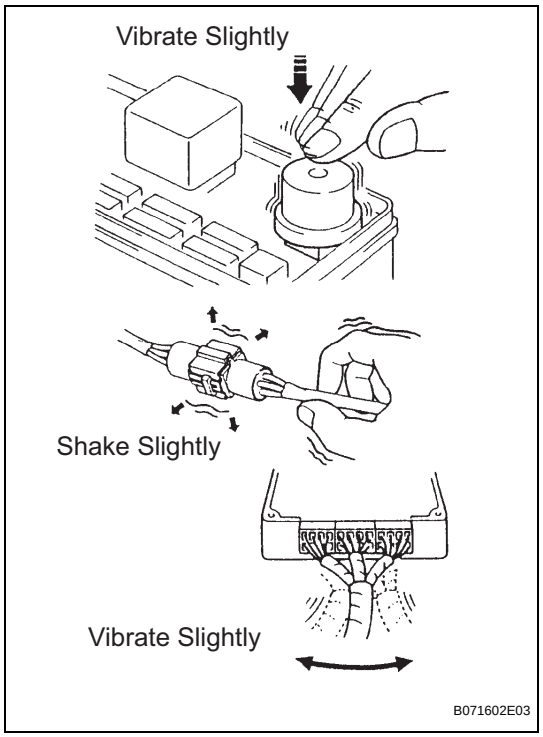
HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

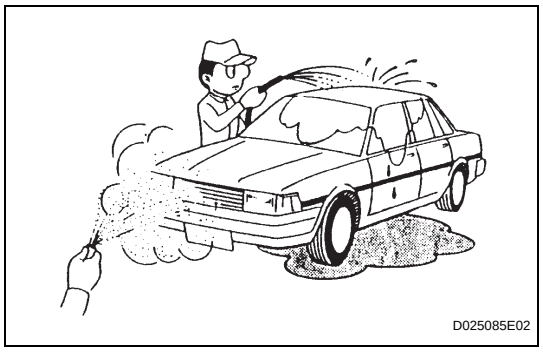
With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or on a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied on a stationary vehicle. Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.



(a) VIBRATION METHOD:
When a malfunction seems to occur as a result of vibration.
(1) PART AND SENSOR
Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether or not the malfunction occurs.
NOTICE:
Applying strong vibration to relays may open them.
(2) CONNECTORS
Slightly shake the connector vertically and horizontally.
(3) WIRE HARNESS
Slightly shake the wire harness vertically and horizontally.
HINT:
The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

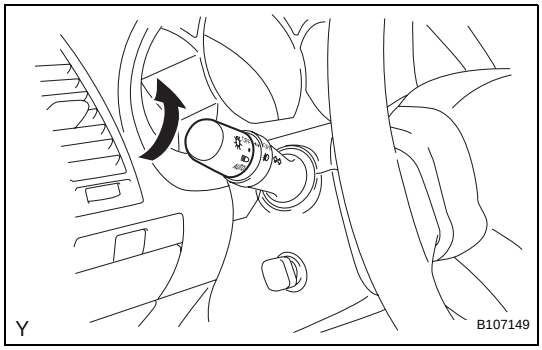
(b) HEAT METHOD:
When a malfunction seems to occur when the area in question is heated.
(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.
NOTICE:
- **Do not heat to more than 60°C (140°F). Exceeding this temperature may damage components.**
- **Do not apply heat directly to the parts in the ECU.**



(c) WATER SPRINKLING METHOD:
When a malfunction seems to occur on a rainy day or in high-humidity.
(1) Sprinkle water onto the vehicle and check if the malfunction occurs.
NOTICE:
- **Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **Never apply water directly onto the electronic components.**

HINT:
If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

IN



(d) HIGH ELECTRICAL LOAD METHOD:
When a malfunction seems to occur when electrical load is excessive.
(1) Turn on the heater blower, headlight, rear window defogger and all other electrical loads. Check if the malfunction reoccurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns are below.

Item	Description
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspect areas of the problem
See Page	Indicates the page where the inspection procedures for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When a "Normal" code is output during a DTC check but the problem is still occurring, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptom are in the table. The suspected areas are listed in order of probability. A description of each of the chart's columns are below.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom is present. It is possible that the problem is occurring outside the detection range of the diagnostic system, or that the problem is occurring in a completely different system.

Item	Description
Problem Symptom	-
Circuit Inspection, Inspection Order	Indicates the order in which the circuits need to be checked
Circuit or Part Name	Indicates the circuit or part which needs to be checked
See Page	Indicates the page where the flowchart for each circuit is located

7. CIRCUIT INSPECTION

A description of the main areas of each circuit inspection is below.

Item	Description
Circuit Description	The major role, operation of the circuit and its component parts are explained.
Diagnostic Trouble Code No. and Detection Item	Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspected areas for a problem

Item	Description
Wiring Diagram	This shows a wiring diagram of the circuit. Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit. Wire colors are indicated by an alphabetical code: • B = Black • L = Blue • R = Red • BR = Brown • LG = Light Green • V = Violet • G = Green • O = Orange • W = White • GR = Gray • P = Pink • Y = Yellow • SB = Sky Blue The first letter indicates the basic wire color and the second letter indicates the color of the stripe.
Inspection Procedures	Use the inspection procedures to determine if the circuit is normal or abnormal. If abnormal, use the inspection procedures to determine whether the problem is located in the sensors, actuators, wire harnesses or ECU.
Indicates the condition of the connector of the ECU during the check	Connector being checked is connected. Connections of tester are indicated by (+) or (-) after the terminal name. Connector being checked is disconnected. For illustrations of inspections between a connector and body ground, information about the body ground is not shown in the illustration.

ABS	Anti-Lock Brake System
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
AFS	Adaptive Front-Lighting System
AHC	Active Height Control Suspension
AID	Air Injection Control Driver
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSB	Assembly Services Sdn. Bhd.
ASSY	Assembly
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B/L	Bi-Level
B/S	Bore-Stroke Ratio
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
C/V	Check Valve
Calif.	California
CAN	Controller Area Network
CB	Circuit Breaker

ABBREVIATIONS	MEANING
CCo	Catalytic Converter For Oxidation
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
CV	Control Valve
CW	Curb Weight
D/INJ	Direct Injection
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
E/G	Engine
EBD	Electronic Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission/Transaxle
ECU	Electronic Control Unit
ED	Electro-Deposited Coating
EDIC	Electronic Diesel Injection Control
EDU	Electronic Driving Unit
EFI	Electronic Fuel Injection
EGR	Electronic Gas Recirculation
EGR	Exhaust Gas Recirculation
EGR-VM	EGR-Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance

ABBREVIATIONS	MEANING
ETCS-i	Electronic Throttle Control System-intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
F/G	Fuel Gauge
F/P	Fuel Pump
F/W	Flywheel
FE	Fuel Economy
FF	Front-Engine Front-Wheel-Drive
FIPG	Formed In Place Gasket
FL	Fusible Link
FPU	Fuel Pressure Up
FR / Fr	Front
FW/D	Flywheel Damper
FWD	Front-Wheel-Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
GSA	Gear Shift Actuator
H/B	Hatchback
HAC	High Altitude Compensator
H-FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Headlamp)
HPU	Hydraulic Power Unit
HSG	Housing
HT	Hard Top
HV	Hybrid Vehicle
HWS	Heated Windshield System
I/P	Instrument Panel
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick-Down
L/H/W	Length, Height, Width
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left-Hand

ABBREVIATIONS	MEANING
LHD	Left-Hand Drive
LLC	Long-Life Coolant
LNG	Liquefied Natural Gas
LO	Low
LPG	Liquefied Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning and Bypass Valve
LSPV	Load Sensing Proportioning Valve
M/T, MTM	Manual Transmission (Transaxle)
MAP	Manifold Absolute Pressure
MAX.	Maximum
MG1	Motor Generator No.1
MG2	Motor Generator No.2
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MMT	Multi-mode Manual Transmission
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO. / No.	Number
O/D	Overdrive
O/S	Oversize
O2S	Oxygen Sensor
OC	Oxidation Catalyst
OCV	Oil Control Valve
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On-board Refilling Vapor Recovery
P & BV	Proportioning And Bypass Valve
P/W	Power Window
PBD	Power Back Door
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PROM	Programmable Read Only Memory
PS	Power Steering
PSD	Power Slide Door
PTC	Positive Temperature Coefficient
PTO	Power Take-Off
PZEV	Partial Zero Emission Vehicle
R & P	Rack and Pinion

ABBREVIATIONS	MEANING
R/B	Relay Block
R/F	Reinforcement
RAM	Random Access Memory
RBS	Recirculating Ball Type Steering
RFS	Rigid Front Suspension
RH	Right-Hand
RHD	Right-Hand Drive
RLY	Relay
ROM	Read Only Memory
RR / Rr	Rear
RRS	Rigid Rear Suspension
RSE	Rear Seat Entertainment
RWD	Rear-Wheel Drive
SC	Supercharger
SCV	Swirl Control Valve
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold-Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
T/M	Transmission
TACH	Tachometer
TAM	P.T. TOYOTA-Astra Motor
TASA	TOYOTA Argentina S.A.
TAT	TOYOTA Motor Thailand Co. Ltd.
TAW	TOYOTA Auto Works Co. Ltd.
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer-Controlled System
TCV	Timing Control Valve

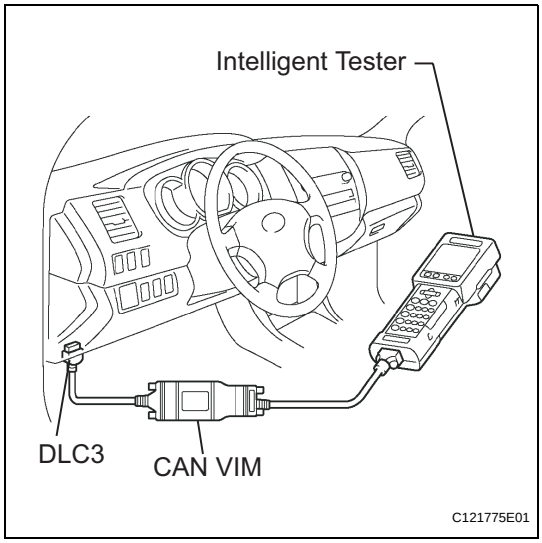
CHECK MODE PROCEDURE

1. DESCRIPTION

Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

2. CHECK MODE PROCEDURE



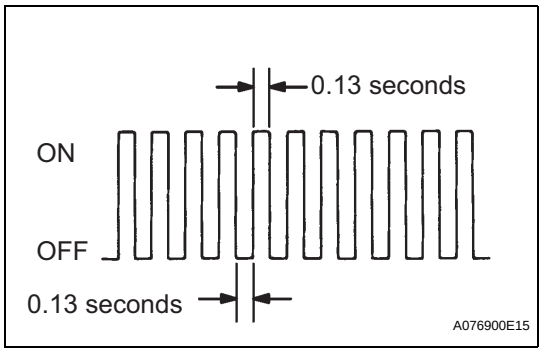
(a) Ensure the following conditions:
  (1) Battery positive voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transmission in the P or N position
  (4) A/C switched OFF

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the Controller Area Network Vehicle Interface Module (CAN VIM) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ CHECK MODE.



(f) Change the ECM to check mode. Make sure the MIL flashes as shown in the illustration.

NOTICE:

All recorded DTCs and freeze frame data will be erased if:

1) the intelligent tester is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from ON to ACC or LOCK.

Before entering check mode, make notes of the DTCs and freeze frame data.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test. (See page AT-15).
(Or, simulate the conditions of the malfunction described by the customer).

(i) After simulating the malfunction conditions, use the intelligent tester diagnosis selector to check the DTC and freeze frame data.

FAIL-SAFE CHART

1. FAIL-SAFE

This function minimizes the loss of the ECT (Electronic Controlled Automatic Transmission) functions when any malfunction occurs in each sensor or solenoid.

Malfunction Part	Function
Input Speed Sensor (NCO)	During an input speed sensor malfunction, shift control is effected through the output speed sensor signal (SP2). During an input speed sensor malfunction, AI-SHIFT*1 and flex lock-up clutch control are prohibited.
Output Speed Sensor (SP2)	During an output speed sensor malfunction, shift control is effected through the input speed sensor signal (NCO). During an output speed sensor malfunction, AI-SHIFT*1 and flex lock-up clutch control are prohibited.
No. 1 ATF Temperature Sensor	During an No. 1 ATF temperature sensor malfunction, flex lock-up clutch control is prohibited.
Shift Solenoid Valve S1 and S2	The current to the failed solenoid valve is cut off and control is effected by operating the other solenoid valves with normal operation. Shift control is effected depending on the failed solenoid as described in the table on the next page.
Shift Solenoid Valve SLU	During a solenoid valve SLU malfunction, the current to the solenoid valve is stopped. This stops lock-up control and flex lock-up control, and fuel economy decreases.
Shift Solenoid Valve SLT	During a solenoid valve SLT malfunction, the current to the solenoid valve is stopped. This stops line pressure optimal control, and the shift shock increases. However, shifting is effected through normal clutch pressure control.

*1: AI (Artificial Intelligence) -SHIFT control
In addition to switching of the shift pattern through the pattern select switch, the AI-SHIFT control enables the ECM to estimate the road conditions and the driver's intention in order to automatically select the optimal shift pattern. As a result, a comfortable ride has been realized.

2. FAIL-SAFE FUNCTION:

If either of the shift solenoid valve circuits has an open or short failure, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.
When a short circuit occurs, the ECM cuts the supply of current to the short circuited solenoid.
Even if starting the engine again in fail-safe mode, the gear position remains in the same position.

Position	NORMAL			SHIFT SOLENOID S1 MALFUNCTIONING			SHIFT SOLENOID S2 MALFUNCTIONING			BOTH SOLENOIDS MALFUNCTIONING
	Solenoid valve		Gear	Solenoid valve		Gear	Solenoid valve		Gear	Gear when shift selector is manually operated
	S1	S2		S1	S2		S1	S2		
D	ON	OFF	1st	X	ON	3rd	ON	X	1st	4th
	ON	ON	2nd	X	ON	3rd	OFF	X	4th	4th
	OFF	ON	3rd	X	ON	3rd	OFF	X	4th	4th

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
SPD (NCO)	Input Speed display: 50 rpm	HINT: • 3rd Gear Lock-up ON (After warming up the engine); Input turbine speed (NCO) equal to the engine speed • 4th Gear Lock-up ON (After warming up the engine); Input turbine speed (NCO): 0 rpm • Lock-up OFF (Idling at N position); Input turbine speed (NCO) nearly equal to the engine speed	-
SPD (SP2)	Counter Gear Speed display/ min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h)	-
PNP SW [NSW]	PNP SW Status/ ON or OFF	Shift lever position is; P or N: ON Except P and N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AT-34.
STOP LIGHT SW	Stop Lamp Switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
SHIFT	Actual Gear Position/ 1st, 2nd, 3rd or 4th	Shift Lever Position is; • L: 1st • 2: 1st or 2nd • 3: 1st, 2nd or 3rd • D: 1st, 2nd, 3rd or 4th	-

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
REVERSE	PNP SW Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AT-34.
DRIVE	PNP SW Status/ ON or OFF	Shift lever position is; D and 3: ON Except D and 3: OFF	
3RD	PNP SW Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	
2ND	PNP SW Status/ ON or OFF	Shift lever position is; 2: ON Except 2: OFF	
LOW	PNP SW Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	
A/T OIL TEMP1	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temperature sensor circuit is open or short.
A/T OIL TEMP3	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature during cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temperature sensor circuit is open or short.
ATF	ATF Condition	ATF Condition NG: ON OK: OFF	Replace ATF when ATF condition is ON.
LOCK UP SOL	Lock-up solenoid status/ ON or OFF	• Lock-up: ON • Except lock-up: OFF	-
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	-
SOLENOID (SLU)	Shift Solenoid SLU Status/ ON or OFF	• Lock-up: ON • Except Lock-up: OFF	-

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST".

(g) According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] • IDL: ON • Less than 31 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves.
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 37 mph (60 km/h) or more	Possible to check the SLU operation.
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT to raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON HINT: OFF: Line pressure up (When the active test of "LINE PRESS UP" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-14) as well.

HINT:

The pressure values in the ACTIVE TEST and HYDRAULIC TEST are different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.
HINT:

- *1: "Comes on" means the MIL (Malfunction Indicator Lamp) illuminates.
- *2: "DTC stored" means the ECM stores the malfunction code if the ECM detects the DTC detection condition.
- These DTCs may be output when the clutch, brake and gear components etc. inside the automatic transmission are damaged.

AUTOMATIC TRANSMISSION SYSTEM

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	1. Open or short in park/neutral position switch circuit 2. Park/neutral position switch 3. ECM	Comes on	DTC stored	AT-34
P0710	Transmission Fluid Temperature Sensor "A" Circuit	1. Open or short in No. 2 ATF temperature sensor circuit 2. No. 2 ATF temperature sensor 3. ECM	Comes on	DTC stored	AT-40
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	1. Short in No. 2 ATF temperature sensor circuit 2. No. 2 ATF temperature sensor 3. ECM	Comes on	DTC stored	AT-40
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	1. Open in No. 2 ATF temperature sensor circuit 2. No. 2 ATF temperature sensor 3. ECM	Comes on	DTC stored	AT-40
P0717	Turbine Speed Sensor Circuit No Signal	1. Open or short in speed sensor (NCO) circuit 2. Speed sensor (NCO) 3. ECM	Comes on	DTC stored	AT-44
P0722	Output Speed Sensor Circuit No Signal	1. Open or short in speed sensor (SP2) circuit 2. Speed sensor (SP2) 3. ECM	Comes on	DTC stored	AT-48
P0724	Brake Switch "B" Circuit High	1. Short in stop light switch signal circuit 2. Stop light switch 3. ECM	Comes on	DTC stored	AT-52

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)	1. Shift solenoid valve S1 is stuck open or closed 2. Valve body is blocked 3. Shift solenoid valve S1 4. Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-55
P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)	1. Shift solenoid valve S2 is stuck open or closed 2. Valve body is blocked 3. Shift solenoid valve S2 4. Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-59
P0850	Park / Neutral Switch Input Circuit	1. Short in park/ neutral position switch circuit 2. Park/neutral position switch 3. ECM	Comes on	DTC stored	AT-34
P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)	1. Short in shift solenoid valve S1 circuit 2. Shift solenoid valve S1 3. ECM	Comes on	DTC stored	AT-64
P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)	1. Open in shift solenoid valve S1 circuit 2. Shift solenoid valve S1 3. ECM	Comes on	DTC stored	AT-64
P0976	Shift Solenoid "B" Control Circuit Low (Shift Solenoid Valve S2)	1. Short in shift solenoid valve S2 circuit 2. Shift solenoid valve S2 3. ECM	Comes on	DTC stored	AT-64
P0977	Shift Solenoid "B" Control Circuit High (Shift Solenoid Valve S2)	1. Open in shift solenoid valve S2 circuit 2. Shift solenoid valve S2 3. ECM	Comes on	DTC stored	AT-64
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	1. Open or short in shift solenoid valve SLT circuit 2. Shift solenoid valve SLT 3. ECM	Comes on	DTC stored	AT-68
P2740	Transmission Fluid Temperature Sensor "B" Circuit	1. Open or short in No. 1 ATF temperature sensor circuit 2. Transmission wire (No. 1 ATF temperature sensor) 3. ECM	Comes on	DTC stored	AT-72

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input	1. Short in No. 1 ATF temperature sensor circuit 2. Transmission wire (No. 1 ATF temperature sensor) 3. ECM	Comes on	DTC stored	AT-72
P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input	1. Open in No. 1 ATF temperature sensor circuit 2. Transmission wire (No. 1 ATF temperature sensor) 3. ECM	Comes on	DTC stored	AT-72
P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)	1. Shift solenoid valve SLU remains open or closed 2. Valve body is blocked 3. Shift solenoid valve SLU 4. Torque converter clutch 5. Automatic transmission (clutch, brake or gear, etc.) 6. Line pressure is too low	Comes on	DTC stored	AT-76
P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)	1. Open or short in shift solenoid valve SLU circuit 2. Shift solenoid valve SLU 3. ECM	Comes on	DTC stored	AT-81

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DTC	P0850	Park / Neutral Switch Input Circuit

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Conditions	Trouble Areas
P0705	Either of the following conditions is met: (a) Any 2 or more of the following signals are ON simultaneously. (2-trip detection logic) • Park/neutral position switch input signal is ON • R input signal is ON • D input signal is ON • 2 input signal is ON (b) Any 2 or more of the following signals are ON simultaneously. (2-trip detection logic) • Park/neutral position switch input signal is ON • R input signal is ON • 3 input signal is ON • L input signal is ON	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM
P0850	Park/neutral position switch remains ON (P, N position) while driving under conditions (a) and (b) for 15 seconds. (2-trip detection logic) (a) Vehicle speed: 43.5 mph (70 km/h) or more (b) Engine speed: 1,500 to 2,500 rpm	• Short in park/neutral position switch circuit • Park/neutral position switch • ECM

MONITOR DESCRIPTION

These DTCs indicate a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.

For security, the park/neutral position switch detects the shift lever position so that the engine can be started only when the vehicle is in the P or N shift position.

When the park/neutral position switch sends more than one signal at a time from switch positions P, R, N or D, the ECM interprets this as a fault in the switch. The ECM turns on the MIL and store a DTC.

MONITOR STRATEGY

P0705:

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	2 seconds
MIL operation	2 driving cycles
Sequence of operation	None

P0850:

Related DTCs	P0850: Park/Neutral position switch/Verify switch cycling
Required sensors/Components	Park/Neutral position switch
Frequency of operation	Continuous
Duration	15 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0705:

The monitor will run whenever the following DTCs are not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

P0850:

The monitor will run whenever the following DTCs are not present.	None
Vehicle speed	43.5 mph (70 km/h) or more
Engine speed	1,500 rpm or more and 2,500 rpm or less
Intake air amount per revolution	0.6 g/rev. or more

TYPICAL MALFUNCTION THRESHOLDS

P0705: One of the following conditions is met: Condition (A) or (B)

Condition (A)

Number of the following signal input at the same time	2 or more
Park/neutral position switch	ON
R switch	ON
D switch	ON
2 switch	ON

Condition (B)

Number of the following signal input at the same time	2 or more
Park/neutral position switch	ON
R switch	ON
3 switch	ON
L switch	ON

P0850:

Park/neutral position switch	ON

COMPONENT OPERATING RANGE

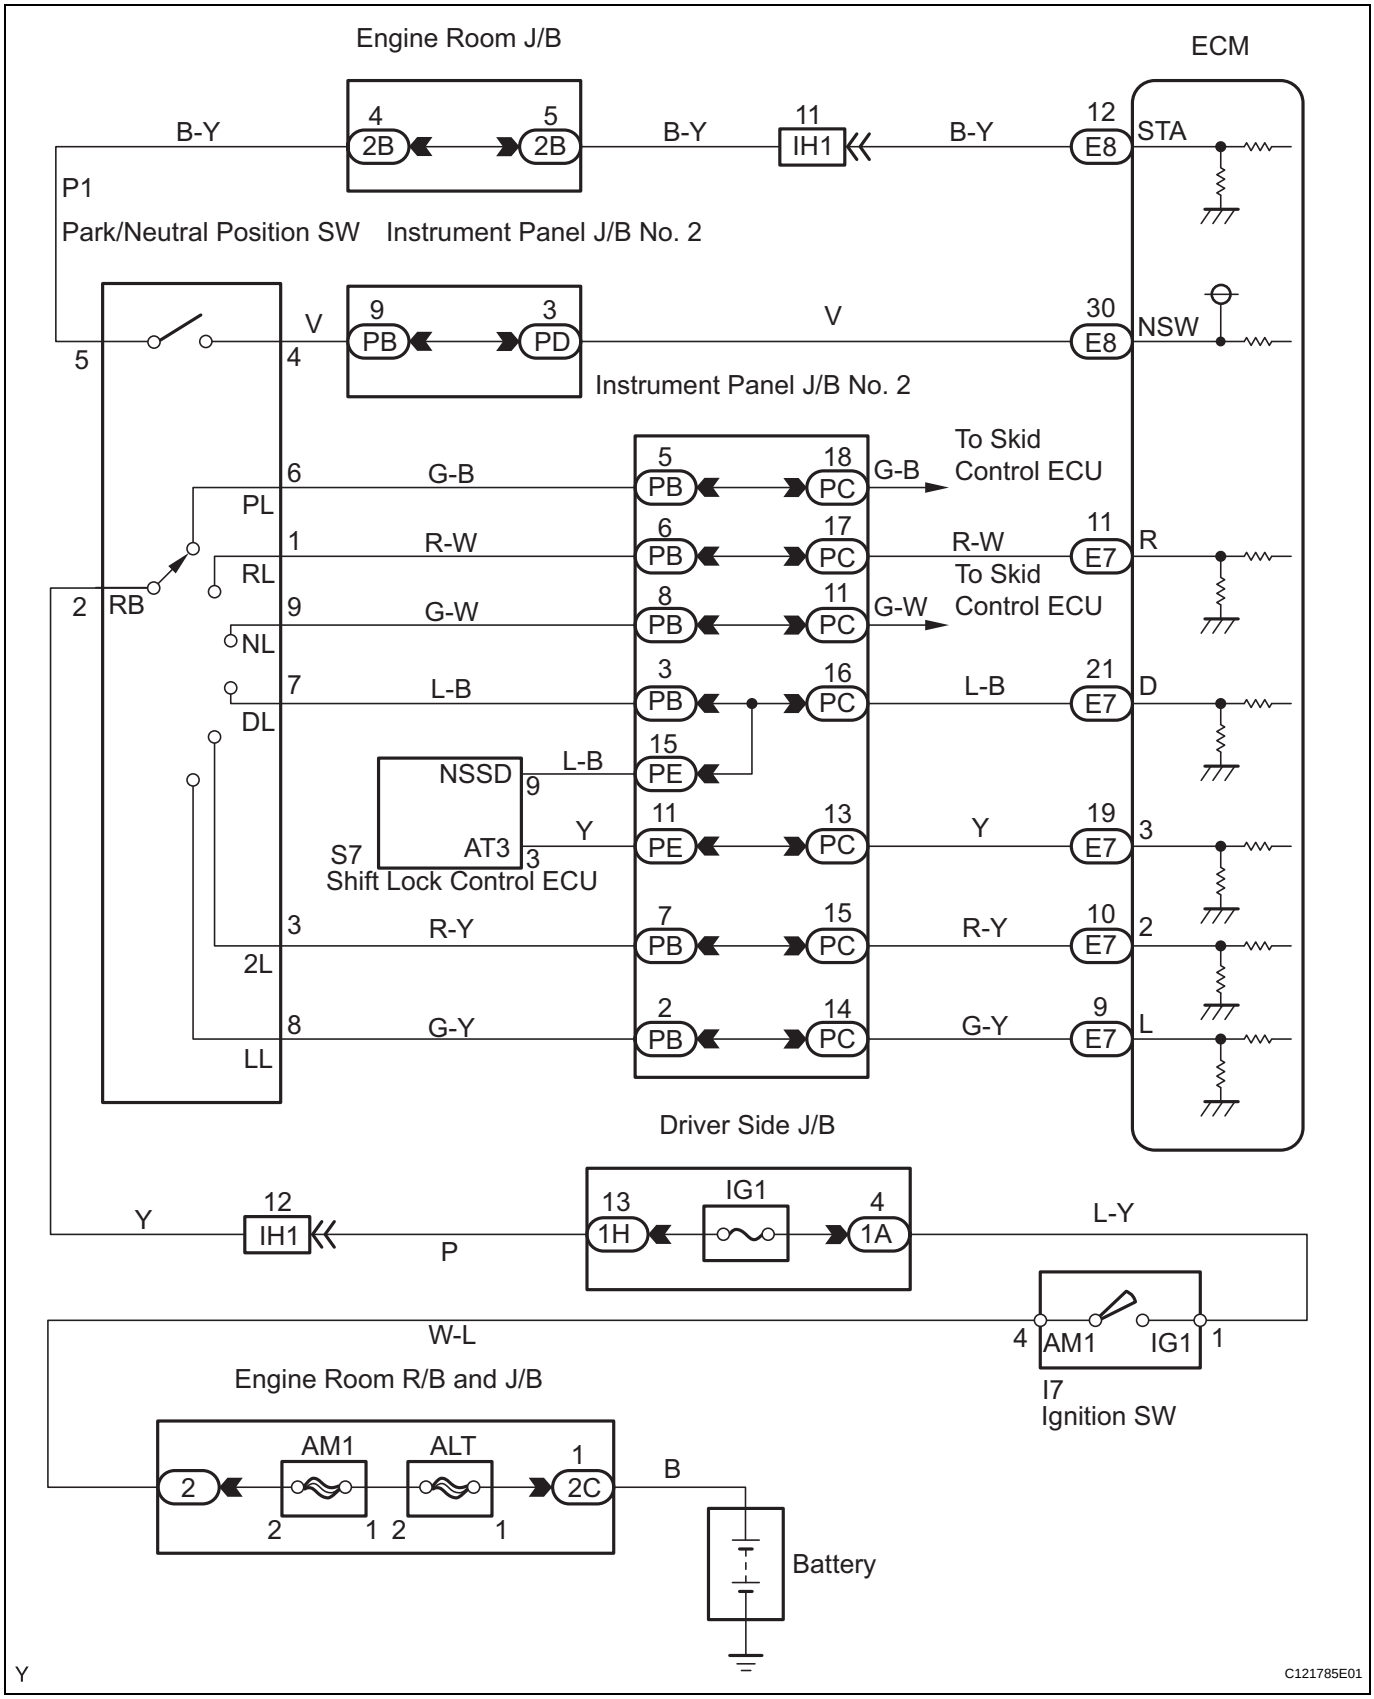
P0705:

Park/neutral position switch	The park/neutral position switch sends only one signal to the ECM.

P0850:

Park/neutral position switch	The park/neutral position switch is OFF when vehicle speed is 43.5 mph (70 km/h) or more and engine speed is between 1,500 rpm and 2,500 rpm.

WIRING DIAGRAM



1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

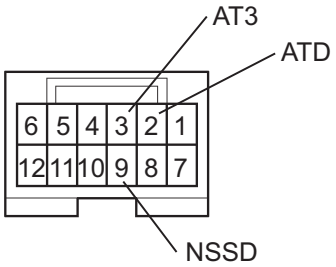
(a) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Push the "ON" button of the tester.
(d) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(e) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP SW Status/ ON or OFF	Shift lever position is; P or N: ON Except P and N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP SW Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	
DRIVE	PNP SW Status/ ON or OFF	Shift lever position is; D: ON Except D: OFF	
3RD	PNP SW Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	
2ND	PNP SW Status/ ON or OFF	Shift lever position is; 2: ON Except 2: OFF	
LOW	PNP SW Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	

1	INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY (TRANSMISSION CONTROL SWITCH)

Component Side:

(Connector Front View): S7



C121789E01

(a) Disconnect the shift lock control ECU connector.
(b) Measure the resistance when the shift lever is moved to each position.

Standard resistance

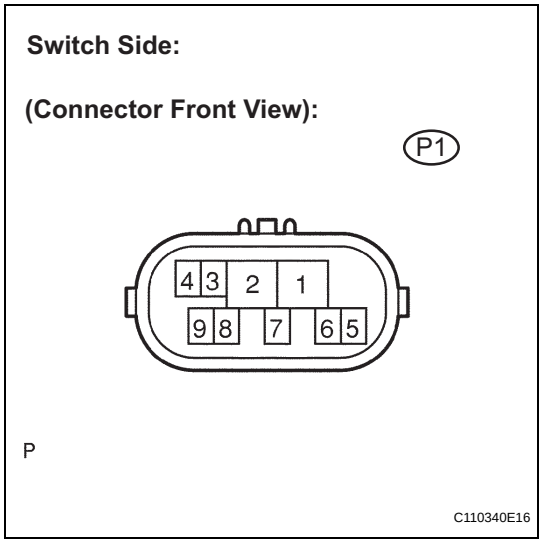
Shift Position	Tester Connection	Specified Condition
D	9 (NSSD) - 2 (ATD)	Below 1 Ω
3	9 (NSSD) - 2 (ATD)	10 kΩ or higher
D	9 (NSSD) - 3 (AT3)	10 kΩ or higher
3	9 (NSSD) - 3 (AT3)	Below 1 Ω

NG → **REPLACE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY**

AT

OK

2 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY



(a) Connect the shift lock control ECM connector.
(b) Disconnect the park/neutral position switch connector.
(c) Measure the resistance when the shift lever is moved to each position.

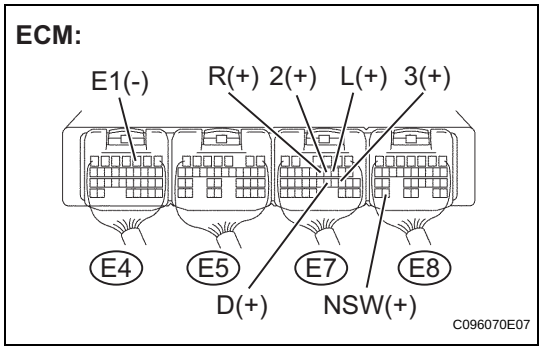
Standard resistance

Shift Position	Tester Connection	Specified Condition
P	2 - 6 and 4 - 5	Below 1 Ω
Except P	2 - 6 and 4 - 5	10 kΩ or higher
R	1 - 2	Below 1 Ω
Except R	1 - 2	10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N	2 - 9 and 4 - 5	10 kΩ or higher
D, 3	2 - 7	Below 1 Ω
Except D, 3	2 - 7	10 kΩ or higher
2	2 - 3	Below 1 Ω
Except 2	2 - 3	10 kΩ or higher
L	2 - 8	Below 1 Ω
Except L	2 - 8	10 kΩ or higher

NG → REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

OK

3 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)



(a) Connect the park/neutral position switch connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P and N	E8-30 (NSW) - E4-3 (E1)	Below 1 V
Except P and N	E8-30 (NSW) - E4-3 (E1)	10 to 14 V
R	E7-11 (R) - E4-3 (E1)	10 to 14 V*
Except R	E7-11 (R) - E4-3 (E1)	Below 1 V
D	E7-21 (D) - E4-3 (E1)	10 to 14 V
Except D	E7-21 (D) - E4-3 (E1)	Below 1 V
3	E7-19 (3) - E4-3 (E1)	10 to 14 V
Except 3	E7-19 (3) - E4-3 (E1)	Below 1 V
2	E7-10 (2) - E4-3 (E1)	10 to 14 V
Except 2	E7-10 (2) - E4-3 (E1)	Below 1 V
L	E7-9 (L) - E4-3 (E1)	10 to 14 V
Except L	E7-9 (L) - E4-3 (E1)	Below 1 V

HINT:
*: The voltage will drop slightly due to illumination of the back up light.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM. The No. 2 ATF temperature sensor is on the transmission and just before the oil cooler inlet pipeline.

HINT:

- The ATF temperature is liable to increase under conditions such as towing, climbing hills and in traffic.

The symptoms and recovery conditions, when the sensor is normal or there is a short malfunction in the sensor, are as shown in the table below.

No. 2 ATF temperature sensor Status	Detection Condition	Symptom	Recovery Condition
Sensor is normal	• ATF temperature more than 130°C (266°F)	• Shift point too low	• ATF temperature less than 125°C (257°F)
Sensor is normal	When conditions (a) and (b) are satisfied continuously. (a) ATF temperature more than 130°C (266°F) (b) Engine coolant temperature more than 98°C (208.4°F)	• Lock-up in 4th or 3rd gear *1	• ATF temperature less than 110°C (230°F) and engine coolant temperature less than 98°C (208.4°F)
Sensor circuit is short	• Any conditions	• Shift point too low	• Symptom still occurs
Sensor circuit is short	• Engine coolant temperature more than 95°C (203°F)	• Lock-up in 4th or 3rd gear *1	• Symptom still occurs

HINT:

*1: When the ATF temperature is normal, the transmission locks up in 4th gear with the shift lever in the D position and in 3rd gear with the shift lever in the 3rd position.

DTC No.	DTC Detection Conditions	Trouble Areas
P0710	(a) and (b) are detected momentarily within 0.5 seconds when neither P0712 nor P0713 is detected. (1-trip detection logic) (a) No. 2 ATF temperature sensor resistance is less than 79 Ω. (b) No. 2 ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 seconds the malfunction changes from (a) to (b) or from (b) to (a).	• Open or short in No. 2 ATF temperature sensor circuit • No. 2 ATF temperature sensor • ECM
P0712	No. 2 ATF temperature sensor resistance is less than 79 Ωfor 0.5 seconds or more. (1-trip detection logic)	• Short in No. 2 ATF temperature sensor circuit • No. 2 ATF temperature sensor • ECM
P0713	No. 2 ATF temperature sensor resistance is more than 156 kΩ for 0.5 seconds or more 15 minutes or more after starting engine. (1-trip detection logic)	• Open in No. 2 ATF temperature sensor circuit • No. 2 ATF temperature sensor • ECM

MONITOR DESCRIPTION

The Automatic Transmission Fluid (ATF) temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the AFT temperature circuit. If the resistance of the ATF temperature is less than 79 Ωor more than 156 kΩ, the ECM interprets this as a fault in the ATF temperature sensor or its wiring. The ECM turns on the MIL and stores a DTC.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Fluttering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0710: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0712: Range check (Low resistance)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0713: Range check (High resistance)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Fluttering)

TFT Sensor resistance	Less than 79 Ω or more than 156 kΩ

P0712: Range check (Low resistance)

TFT Sensor resistance	Less than 79 Ω

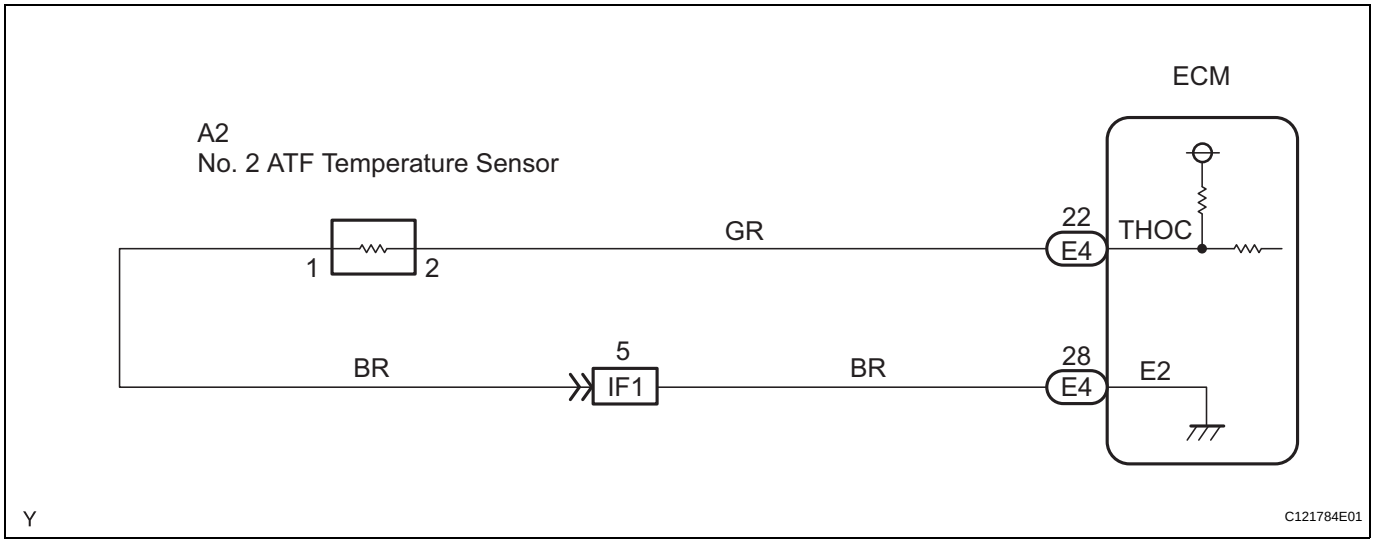
P0713: Range check (High resistance)

TFT Sensor resistance	More than 156 kΩ

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature - approximately 130°C (266°F)

WIRING DIAGRAM



1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
A/T OIL TEMP3	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:

When DTC P0712 is output and the intelligent tester reading is 150°C (302°F) or more, there is an short circuit.

When DTC P0713 is output and the intelligent tester reading is -40°C (-40°F), there is a open circuit.

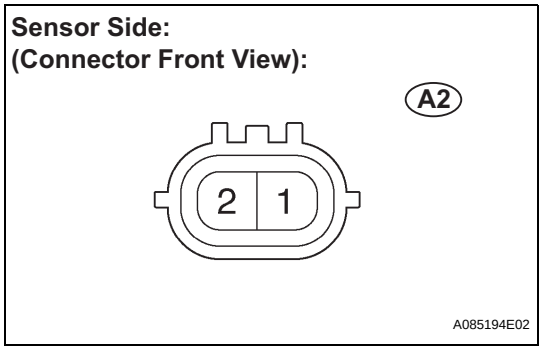
Measure the resistance between terminal THOC and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
160 °C (320°F) or more	Short circuit

HINT:

If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds).

1	INSPECT TEMPERATURE SENSOR



(a) Disconnect the ATF temperature sensor connector from the transmission.
(b) Measure the resistance between the sensor connector terminals.

Standard resistance

Tester Connection	Specified Condition
1 - 2	79 Ω to 156 kΩ
1 - Body ground	10 kΩ or higher
2 - Body ground	10 kΩ or higher

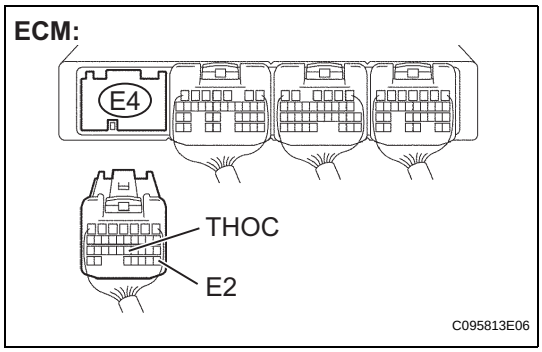
HINT:
If the resistance is outside the specified range at either of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature:	Resistance:
20 °C (68°F)	10.3 to 13.9 kΩ
110°C (230°F)	0.68 to 0.88 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2	CHECK HARNESS AND CONNECTOR (ATF TEMPERATURE - ECM)



(a) Connect the transmission wire connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
E4-22 (THOC) - E4-28 (E2)	79 Ω to 156 kΩ
E4-22 (THOC) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

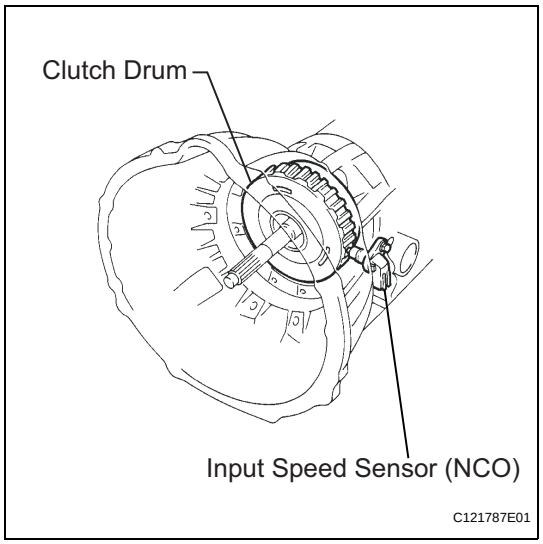
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

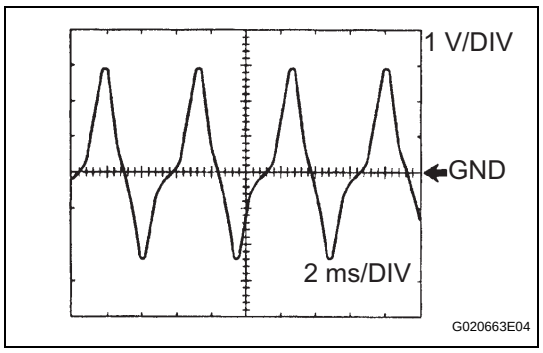
DTC	P0717	Turbine Speed Sensor Circuit No Signal

DESCRIPTION



The sensor detects the rotation speed of the turbine which shows the input revolution of the transmission. By comparing the input turbine speed signal (NCO) with the counter gear speed sensor signal (SP2), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.

DTC No.	DTC Detection Conditions	Trouble Areas
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 seconds or more. (1-trip detection logic) (a) Output shaft speed is 500 rpm or more. (Vehicle speed: 31 mph (50 km/h) or more) (b) Park/neutral position switch: NSW input signal is OFF R input signal is OFF (c) Speed sensor (NCO): Less than 300 rpm	• Open or short in speed sensor (NCO) circuit • Speed sensor (NCO) • ECM



1. Reference (Using an oscilloscope):
Check the waveform between terminals NCO+ and NCO- of the ECM connector.
Standard:
Refer to the illustration.

Item	Content
Terminal	**NCO+ (E5-34) - NCO- (E5-26)**
Tool setting	**1 V/DIV** **2 ms/DIV**
Vehicle condition	**Engine idling speed (P or N position)**

MONITOR DESCRIPTION

This DTC indicates that a pulse is not output from the speed sensor NCO (Turbine (input) speed sensor) or is weak. The NCO terminal of the ECM detects the revolving signal from speed sensor (NCO) (input RPM). The ECM outputs a gearshift signal comparing the speed sensor (NCO) with the output speed sensor (SP2).

If the input shaft revolution is less than 300 rpm*1 although the output shaft revolution is more than 500 rpm or more*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

AT

*2: The vehicle speed is approximately 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NCO)/ Verify pulse input
Required sensors/Components	Speed sensor (NCO)
Frequency of operation	Continuous
Duration	5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
Shift change	Each shift change is completed before starting next shift change operation
Output shaft rpm	500 rpm or more
Turbine speed sensor malfunction	Not detected
R switch	OFF
Park/neutral position switch	OFF

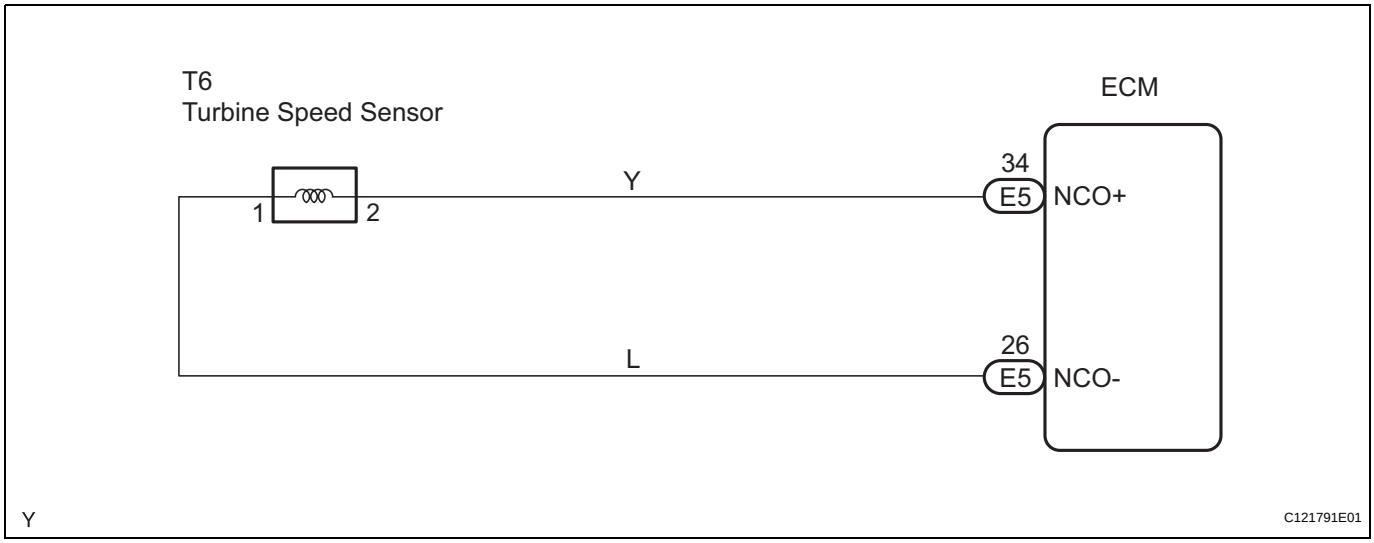
TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Speed sensor (NCO)	Input speed is equal to engine speed when lock-up ON.

WIRING DIAGRAM



AT

1. DATA LIST

HINT:

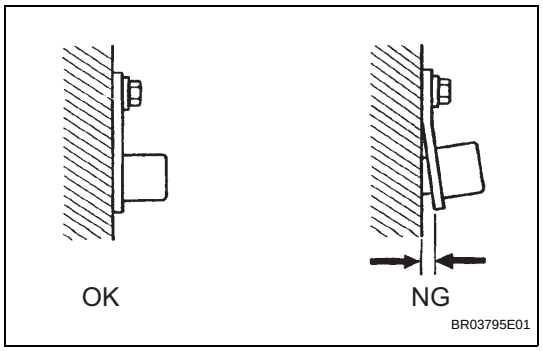
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NCO)	Input Turbine Speed/ display: 50 rpm	HINT: • 3rd gear lock-up ON (After warming up the engine); Input turbine speed (NCO) equal to the engine speed • 4th gear lock-up ON (After warming up the engine); Input turbine speed (NCO): 0 rpm • Lock-up OFF (Idling at N position); Input turbine speed (NCO) nearly equal to the engine speed

HINT:
- SPD (NCO) is always 0 while driving indicates:
  3rd Gear: Open or short in the sensor or circuit.
  4th Gear: Engine speed 0 rpm
- SPD (NCO) is always less than 300 rpm while driving the vehicle at 31 mph (50 km/h) or more indicates:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION

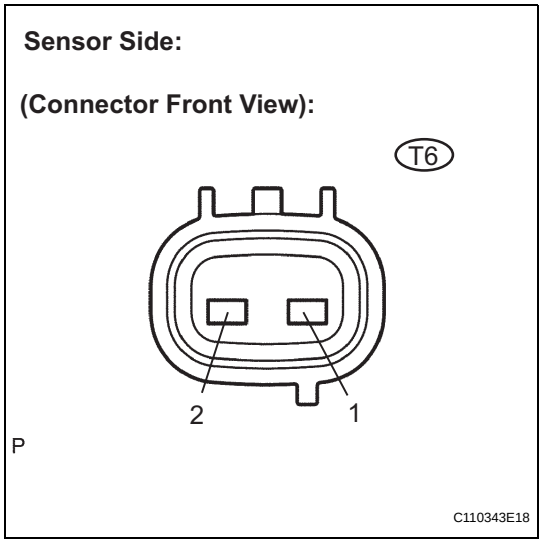


(a) Check the speed sensor (NCO) installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (NCO)**

OK

2 INSPECT SPEED SENSOR (NCO)



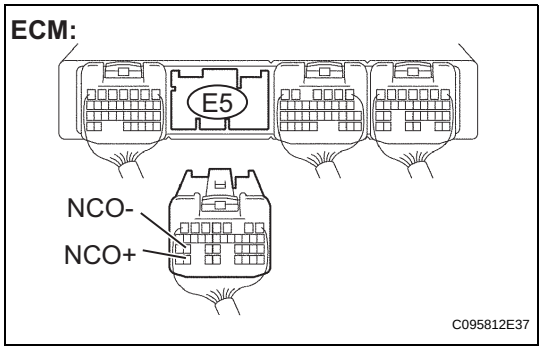
(a) Disconnect the speed sensor connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	560 to 680 Ω at 20 °C (68 °F)

NG → **REPLACE SPEED SENSOR (NCO)**

OK

3 CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-34 (NCO+) - E5-26 (NCO-)	560 to 680 Ω at 20 °C (68 °F)
E5-34 (NCO+) - Body ground	10 kΩ or higher
E5-26 (NCO-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

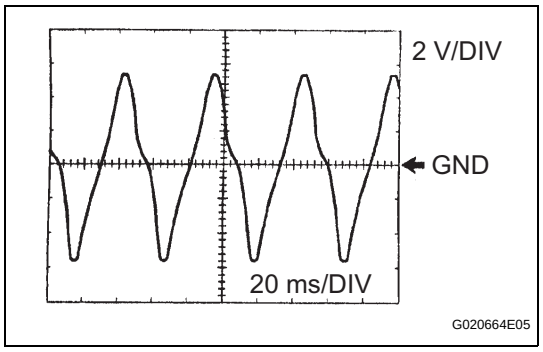
REPLACE ECM

DTC	P0722	Output Speed Sensor Circuit No Signal

DESCRIPTION

The speed sensor SP2 detects the rotation speed of the transmission output shaft and sends signals to the ECM. The ECM determines the vehicle speed based on these signals.
An AC voltage is generated in the speed sensor SP2 coil as the rotor mounted on the output shaft rotates, and this voltage is sent to the ECM.
The gear shift point and lock-up timing are controlled by the ECM based on the signals from the speed sensor and the throttle position sensor.

DTC No.	DTC Detection Conditions	Trouble Areas
P0722	All conditions below are detected 500 times or more continuously. (2-trip detection logic) • No signal from speed sensor (SP2) is input to ECM while 4 pulses of No. 1 vehicle speed sensor signal are sent • Vehicle speed is 5.6 mph (9 km/h) or more for at least 4 seconds • Park/neutral position switch is OFF	• Open or short in speed sensor (SP2) circuit • Speed sensor (SP2) • ECM



1. Reference (Using an oscilloscope):
Check the waveform between terminals SP2+ and SP2- of the ECM connector.
Standard:
Refer to the illustration.

Item	Content
Terminal	**SP2+ (E5-35) - SP2- (E5-27)**
Tool setting	**2 V/DIV** **20 ms/DIV**
Vehicle condition	**Vehicle speed 12 mph (20 km/h)**

MONITOR DESCRIPTION

The output speed sensor monitors the output shaft speed. The ECM controls the gearshift point and the lock up timing based on the signals from the output speed sensor and throttle position sensor.
If the ECM detects no signal from the output speed sensor even while the vehicle is moving, it will conclude that there is a malfunction in the output speed sensor. The ECM will illuminate the MIL and set the DTC.

MONITOR STRATEGY

Related DTCs	P0722: Speed sensor SP2/Verify pulse input
Required sensors/Components	Speed sensor SP2
Frequency of operation	Continuous
Duration	500 output shaft revolutions
MIL operation	2 driving cycles
Sequence of operation	None

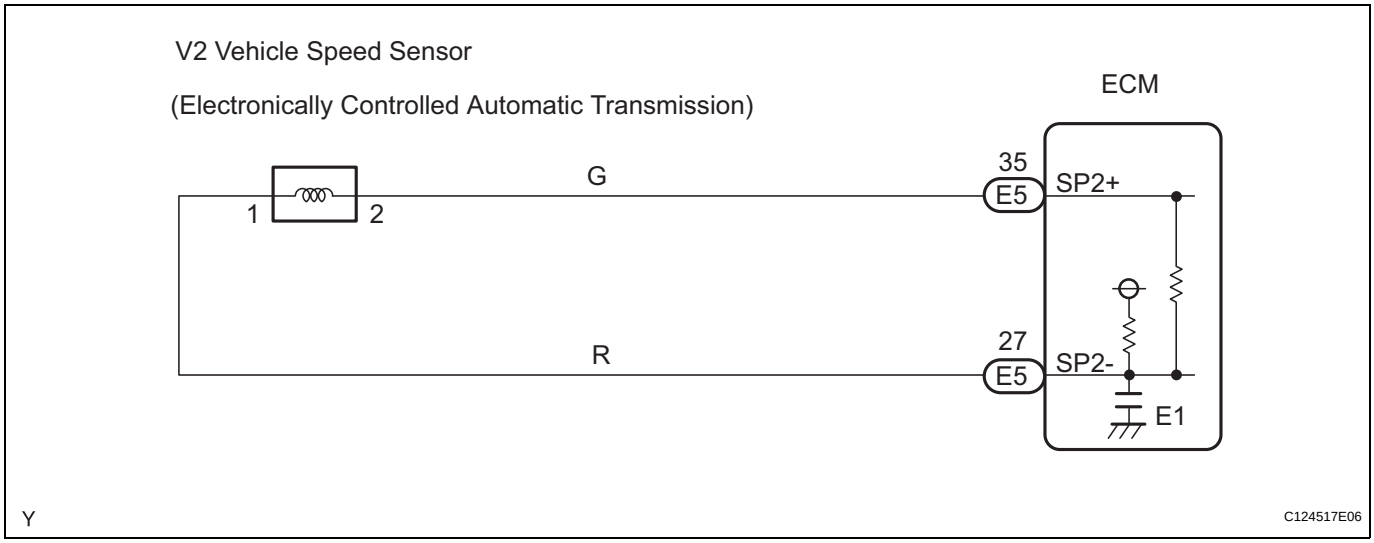
TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
Vehicle speed range (4 seconds or more)	5.6 mph (9 km/h) or more
Park/neutral position switch	OFF

TYPICAL MALFUNCTION THRESHOLDS

No pulse input during 4 vehicle speed sensor pulse inputs	500 times or more

WIRING DIAGRAM

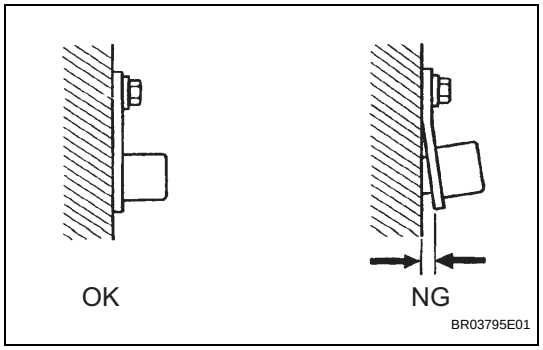


HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.
(a) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Push the "ON" button of the tester.
(d) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(e) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (SP2)	Counter Gear Speed display/ min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h) [HINT] Equal to vehicle speed

HINT:
- SPD (SP2) is always 0 while driving:
  Open or short in the sensor or circuit.
- The SPD (SP2) value displayed on the tester is much lower than the actual vehicle speed:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION



(a) Check the speed sensor (SP2) installation.

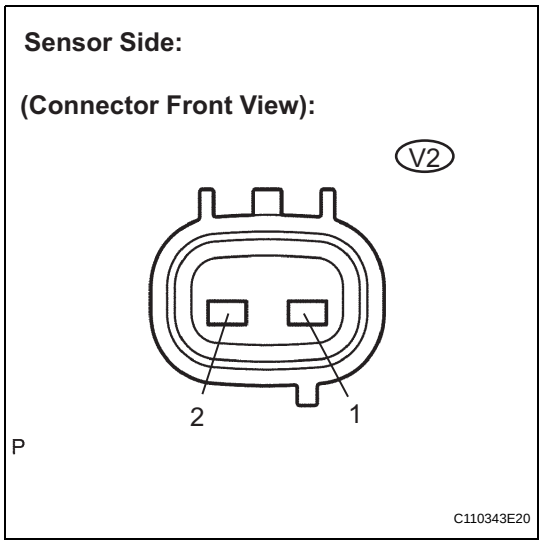
OK:

The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (SP2)**

OK

2 INSPECT SPEED SENSOR (SP2)



(a) Disconnect the speed sensor connector from the transmission.

(b) Measure the resistance.

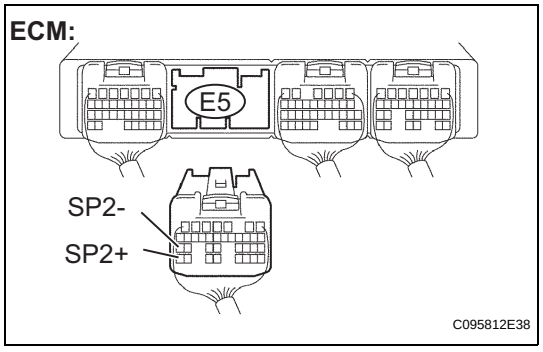
Standard resistance

Tester Connection	Specified Condition
1 - 2	560 to 680 Ω at 20 °C (68 °F)

NG → **REPLACE SPEED SENSOR (SP2)**

OK

3 CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
E5-35 (SP2+) - E5-27 (SP2-)	560 to 680 Ωat 20 °C (68 °F)
E5-35 (SP2+) - Body ground	10 kΩ or higher
E5-27 (SP2-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock-up condition, when the brakes are suddenly applied.
When the brake pedal is depressed, this switch sends signals to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detection Condition	Trouble Area
P0724	The stop light switch remains ON even when the vehicle is driven in a GO (18.6 mph (30 km/h) or more) and STOP (less than 1.9 mph (3 km/h)) pattern 5 times. (2-trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during STOP and GO driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 1.9 mph (3 km/h)) and go (18.6 mph (30 km/h) or more) 5 times during 2 driving cycles, in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components	Stop light switch
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

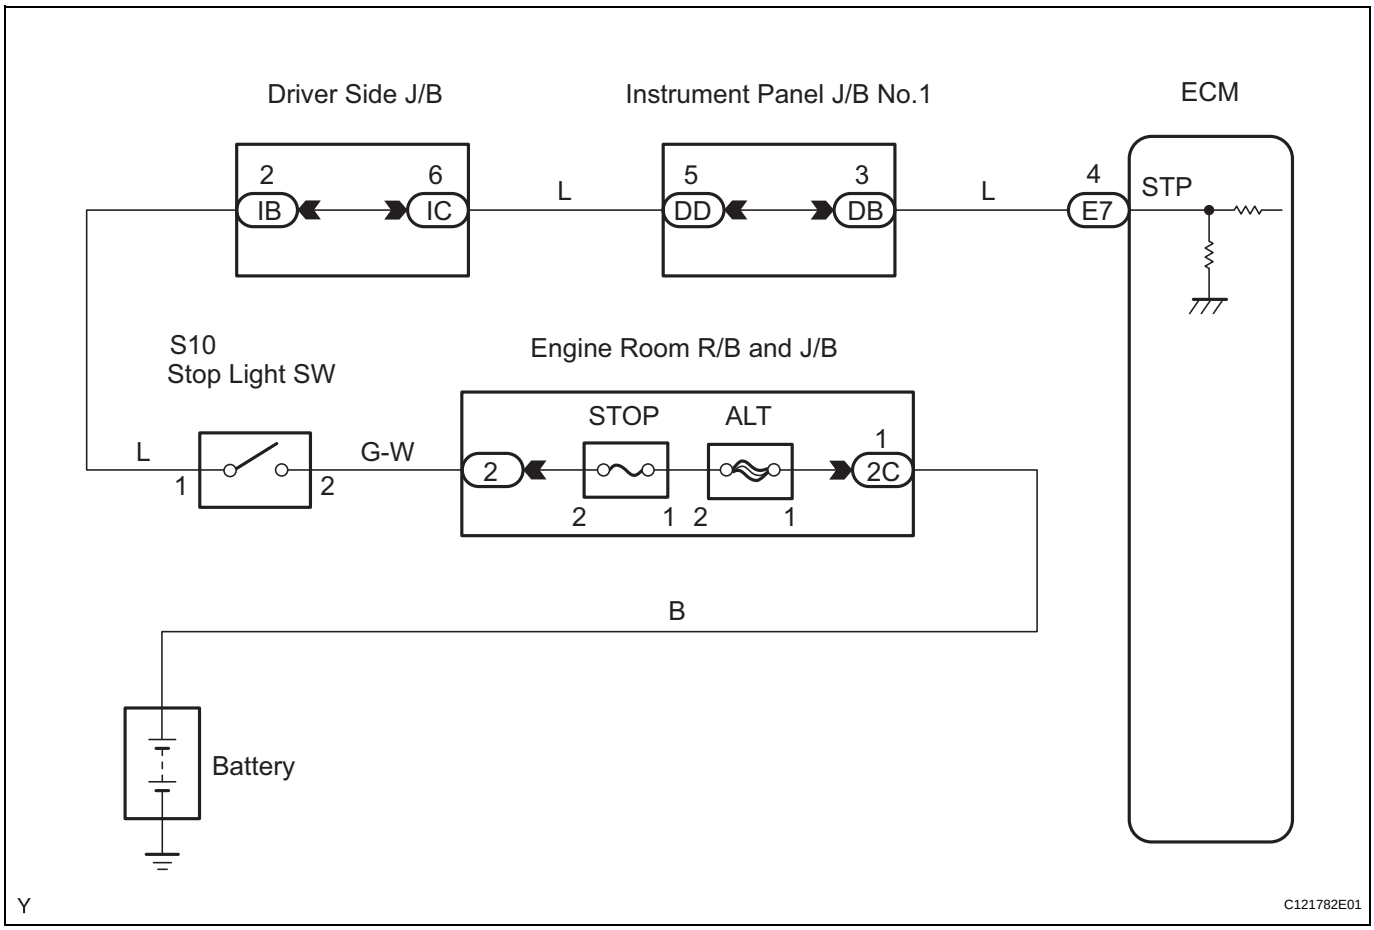
The stop light switch remains ON during GO and STOP 5 times.
GO and STOP are defined as follows;

The monitor will run whenever the following DTCs are not present.	None
GO: Vehicle speed	18.6 mph (30 km/h) or more
STOP: Vehicle speed	Less than 1.9 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Stop light switch status	Stuck ON

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

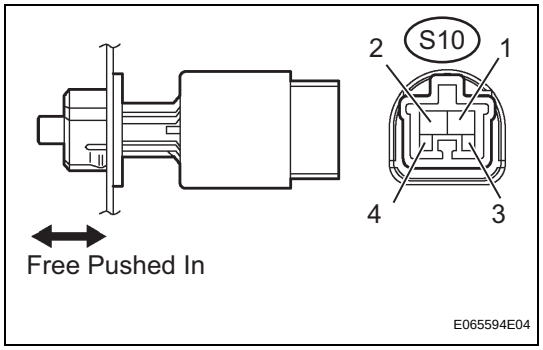
NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

(a) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Push the "ON" button of the tester.
(d) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(e) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
STOP LIGHT SW	Stop light Switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF

1 INSPECT STOP LIGHT SWITCH ASSEMBLY



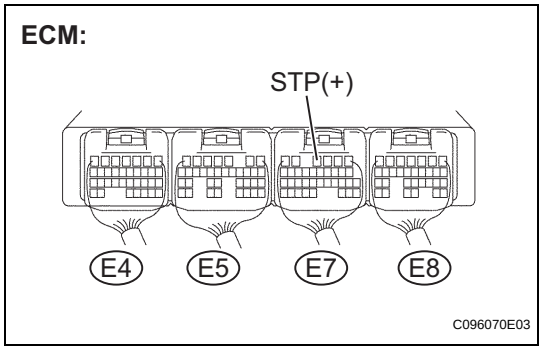
(a) Remove the stop light switch assembly.
(b) Measure the resistance.
Standard resistance

Switch position	Tester Connection	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher
Switch pin free	3 - 4	10 kΩ or higher
Switch pin pushed in	3 - 4	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

2 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - ECM)



(a) Install the stop light switch assembly.
(b) Measure the voltage when the brake pedal is depressed and released.
Standard voltage

Condition	Tester Connection	Specified Condition
Brake pedal is depressed	E7-4 (STP) - Body ground	10 to 14 V
Brake pedal is released	E7-4 (STP) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)

SYSTEM DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd or 4th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0751	S1 stuck ON malfunction*1: The ECM determines that there is a malfunction when the following conditions are met: (a) When the ECM directs the gearshift to switch to 4th gear, the engine overruns (clutch slips). (b) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 1st.	• Shift solenoid valve S1 is stuck open • Valve body is blocked • Shift solenoid valve S1 • Automatic transmission (clutch, brake or gear, etc.)
P0751	S1 stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following conditions are met: (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 4th. (b) When the ECM directs the gearshift to switch to 4th gear, the actual gear is also shifted to 4th.	• Shift solenoid valve S1 is stuck closed • Valve body is blocked • Shift solenoid valve S1 • Automatic transmission (clutch, brake or gear, etc.)

HINT:

- Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th
*1: Actual gear position under S1 stuck ON malfunction	1st	2nd	2nd	1st
*2: Actual gear position under S1 stuck OFF malfunction	4th	3rd	3rd	4th

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S1.
The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0751: Shift solenoid valve S1/OFF malfunction Shift solenoid valve S1/ON malfunction
Required sensors/Components	Shift solenoid valve S1, Speed sensor (SP2), Speed sensor (NCO), Crankshaft position sensor (NE), Throttle position sensor, MAF
Frequency of operation	Continuous
Duration	OFF malfunction (A): 1.0 second OFF malfunction (B): 0.4 seconds ON malfunction (A): 0.8 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B) and ON malfunctions (A), (B).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
Shift solenoid "A" (S1) circuit Shift solenoid "B" (S2) circuit ECT (Engine Coolant Temperature) sensor circuit Input speed sensor (NCO) circuit Output speed sensor (SP2) circuit	There is no malfunction in the sensor circuits shown on the left
Transmission shift position	"D"
ECT (Engine Coolant Temperature)	40°C (104°F) or more
Spark advance from max. retard timing by knock control	0° CA or more
Engine	Running

OFF malfunction (A)

ECM selected gear	1st
Vehicle speed	6.2 mph (10 km/h) or more and Less than 24.8 mph (40 km/h)
Throttle valve opening angle	15 % or more and 6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

Current ECM selected gear	4th
Last ECM selected gear	3rd
Actual gear when ECM selected 3th gear	3rd

ON malfunction (A)

ECM selected gear	4th
Vehicle speed at current ECM selected gear - Vehicle speed at last ECM selected gear	Less than 6.2 mph (10 km/h)
Throttle valve opening angle at current ECM selected gear - Throttle valve opening angle at last ECM selected gear	Less than 10 %
Throttle valve opening angle	Less than 20 %
Vehicle speed	Less than 52.8 mph (85 km/h)

ON malfunction (B)

Current ECM selected gear	4th
Last ECM selected gear	3rd

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

Both of the following conditions are met: OFF malfunctions (A) and (B)
2 detections are necessary in 1 driving cycle.
1st detection: Temporary flag ON
2nd detection: Pending fault code ON

OFF malfunctions (A) and (B)

Input speed/Output speed (NC0/SP2)	0.00 or more and 0.22 or less (This means actual gear is 4th)

[ON malfunction]

Both of the following conditions are met: ON malfunctions (A) and (B)

ON malfunction (A)

NE current - NE last NE current: Engine speed at current ECM selected gear NE last: Engine speed at last ECM selected gear	950 rpm or more

ON malfunction (B)

Input speed/Output speed (NC0/SP2)	Not change as follows 0.93 or more and 1.07 or less (This means actual gear is 3rd) ↓ 0.00 or more and 0.22 or less (This means actual gear is 4th)

1. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Push the "ON" button of the tester.

(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".

(g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:

While driving, the shift position can be changed with the intelligent tester.

Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AT-27).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by manually. [Vehicle Condition] • IDL: ON • Less than 31 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 31 mph (50 km/h) or less.
- The 3rd to 4th up-shifting must be performed with the accelerator pedal released.
- The 4th to 3rd down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S1 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th
Shift solenoid valve S1	ON	ON	OFF	OFF

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0751)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

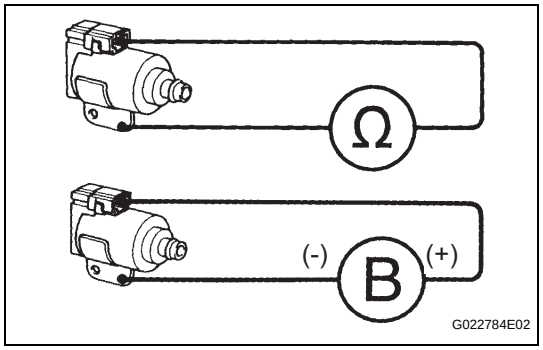
Display (DTC Output)	Proceed to
Only "P0751" is output	A
"P0751" and other DTCs	B

HINT:
If any codes besides "P0751" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT SHIFT SOLENOID VALVE S1



(a) Remove the shift solenoid valve S1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(c) Connect positive (+) lead to the terminal of the solenoid connector, negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID VALVE S1

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)

SYSTEM DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd or 4th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0756	S2 stuck OFF malfunction*2: Shifting to 1st and 4th gears is impossible. The ECM determines that there is a malfunction when the following conditions are met: (a) When the ECM directs the gearshift to switch to 2nd gear, the actual gear is shifted to 1st. (b) When the ECM directs the gearshift to switch to 3rd gear, the actual gear is shifted to 4th.	• Shift solenoid valve S2 is stuck open • Valve body is blocked • Shift solenoid valve S2 • Automatic transmission (clutch, brake or gear, etc.)
P0756	S2 stuck ON malfunction*1: The vehicle starts in 2nd gear and shifting to 3rd gear is impossible. The ECM determines that there is a malfunction when the following conditions are met: (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 2nd. (b) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 3rd.	• Shift solenoid valve S2 is stuck closed • Valve body is blocked • Shift solenoid valve S2 • Automatic transmission (clutch, brake or gear, etc.)

HINT:

- Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th
*1: Actual gear position under S2 stuck ON malfunction	2nd	2nd	3rd	3rd
*2: Actual gear position under S2 stuck OFF malfunction	1st	1st	4th	4th

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S1.
The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0756: Shift solenoid valve S2/OFF malfunction Shift solenoid valve S2/ON malfunction
Required sensors/Components	Shift solenoid valve S2
Frequency of operation	Continuous
Duration	1.0 second
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B), (C) and ON malfunctions (A), (B), (C).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
Shift solenoid "A" (S1) circuit Shift solenoid "B" (S2) circuit ECT (Engine Coolant Temperature) sensor circuit Input speed sensor circuit Output speed sensor circuit	There is no malfunction in the sensor circuits shown on the left
Transmission shift position	"D"
ECT (Engine Coolant Temperature)	40°C (104°F) or more
Spark advance from max. retard timing by knock control	0°CA or more
Engine	Running

OFF malfunction (A)

ECM selected gear	2nd
Vehicle speed	6.2 mph (10 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

ECM selected gear	3rd
Vehicle speed	6.2 mph (10 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (C)

ECM selected gear	4th
Vehicle speed	6.2 mph (10 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	6.2 mph (10 km/h) or more and Less than 24.8 mph (40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	3rd
Vehicle speed	6.2 mph (10 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (C)

ECM selected gear	4th
Vehicle speed	6.2 mph (10 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

All of the following conditions are met: OFF malfunctions (A), (B) and (C)
2 detections are necessary in 1 driving cycle.
1st detection: Temporary flag ON
2nd detection: Pending fault code ON

OFF malfunction (A)

Input speed/Output speed (NC0/SP2)	2.63 or more and 3.20 or less (This means actual gear is 1st)

OFF malfunction (B)

Input speed/Output speed (NC0/SP2)	0.00 or more and 0.22 or less (This means actual gear is 4th)

OFF malfunction (C)

Input speed/Output speed (NC0/SP2)	0.00 or more and 0.22 or less (This means actual gear is 4th)

[ON malfunction]

All of the following conditions are met: ON malfunctions (A), (B) and (C)

ON malfunction (A)

Input speed/Output speed (NC0/SP2)	1.40 or more and 1.67 or less (This means actual gear is 2nd)

ON malfunction (B)

Input speed/Output speed (NC0/SP2)	0.93 or more and 1.07 or less (This means actual gear is 3rd)

ON malfunction (C)

Input speed/Output speed (NC0/SP2)	0.93 or more and 1.07 or less (This means actual gear is 3rd)

1. ACTIVE TEST

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
(g) According to the display on the tester, perform the "ACTIVE TEST".
HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AT-27).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by manually. [Vehicle Condition] • IDL: ON • Less than 31 mph (50 km/h) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:
- This test can be conducted when the vehicle speed is 31 mph (50 km/h) or less.
- The 3rd to 4th up-shifting must be performed with the accelerator pedal released.
- The 4th to 3rd down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th
Shift solenoid valve S2	OFF	ON	ON	OFF

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0756)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

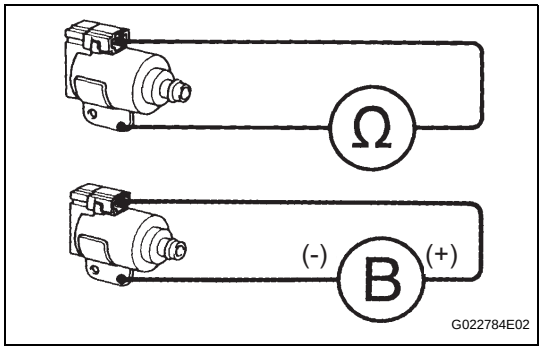
Display (DTC Output)	Proceed to
Only "P0756" is output	**A**
"P0756" and other DTCs	**B**

HINT:
If any codes besides "P0756" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2	INSPECT SHIFT SOLENOID VALVE S2



(a) Remove the shift solenoid valve S2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S2) - Solenoid Body (S2)	11 to 15 Ω at 20°C (68°F)

(c) Connect positive (+) lead to the terminal of the solenoid connector, negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE S2**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)

DTC	P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)

DTC	P0976	Shift Solenoid "B" Control Circuit Low (Shift Solenoid Valve S2)

DTC	P0977	Shift Solenoid "B" Control Circuit High (Shift Solenoid Valve S2)

DESCRIPTION

Shifting from 1st to 4th is performed in combination with the ON and OFF operation of the shift solenoid valves No. 1 and No. 2 which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be driven smoothly. (In case of an open or short circuit, the ECM stops sending current to the circuit.)
Fail-safe functions (See page AT-27)

DTC No.	DTC Detection Conditions	Trouble Areas
P0973	ECM detects short in solenoid valve S1 circuit 2 times when solenoid valve S1 is operated. (1-detection logic)	• Short in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0974	ECM detects open in solenoid valve S1 circuit 2 times when solenoid valve S1 is not operated. (1-detection logic)	• Open in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0976	ECM detects short in solenoid valve S2 circuit 2 times when solenoid valve S2 is operated. (1-trip detection logic)	• Short in shift solenoid valve S2 circuit • Shift solenoid valve S2 • ECM
P0977	ECM detects open in solenoid valve S2 circuit 2 times when solenoid valve S2 is not operated. (1-trip detection logic)	• Open in shift solenoid valve S2 circuit • Shift solenoid valve S2 • ECM

MONITOR DESCRIPTION

The ECM controls the gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in either shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores a DTC. And the ECM performs the fail-safe function and turns the other shift solenoid valves in good condition "ON/OFF". (In case of an open or short circuit, the ECM stops sending current to the circuit.)

MONITOR STRATEGY

P0973, P0974:

Related DTCs	P0973: Shift solenoid valve S1/Range check (Low resistance) P0974: Shift solenoid valve S1/Range check (High resistance)

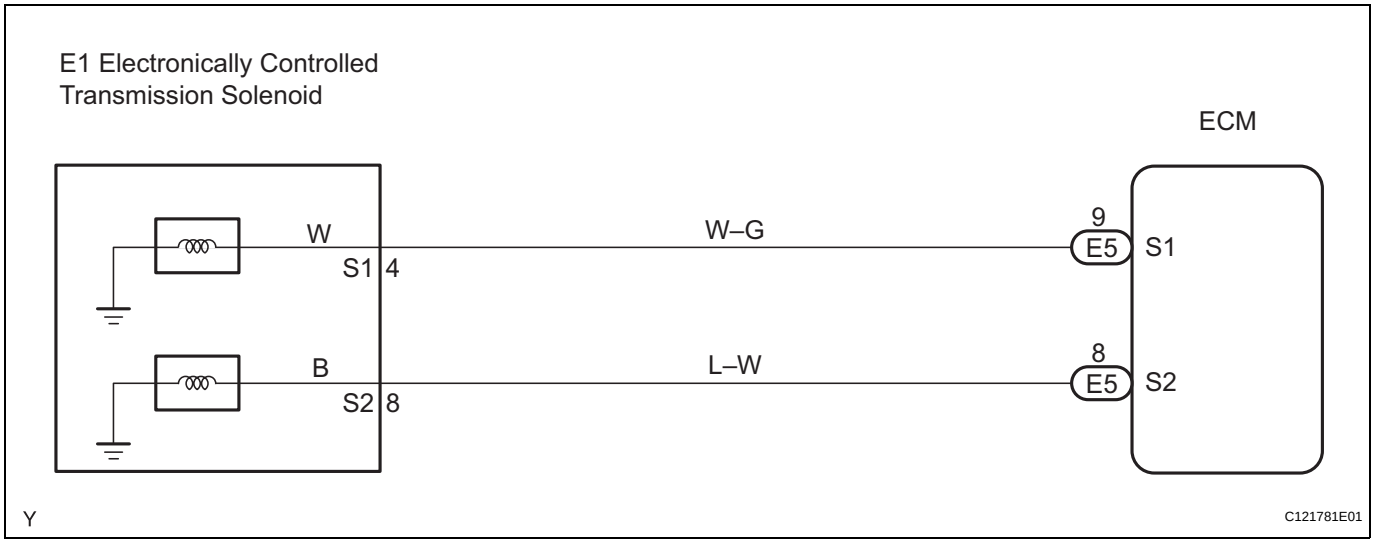
WIRING DIAGRAM

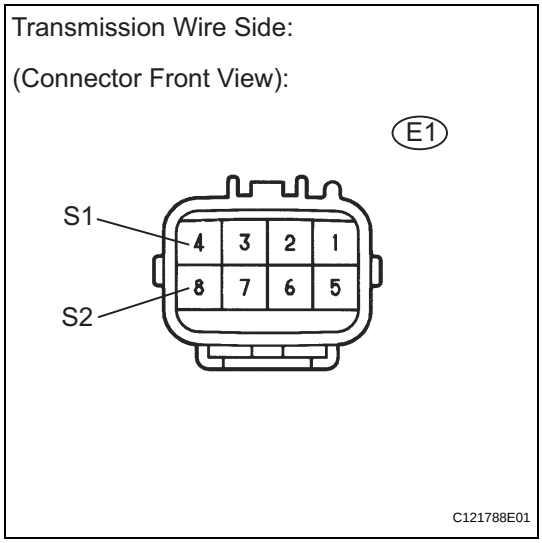


HINT:

- The shift solenoid valve S1 or S2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th
Shift solenoid valve S1	ON	ON	OFF	OFF
Shift solenoid valve S2	OFF	ON	ON	OFF

1	INSPECT TRANSMISSION WIRE (S1/S2)



(a) Disconnect the transmission wire connector from the transmission.

(b) Measure the resistance.

Standard resistance

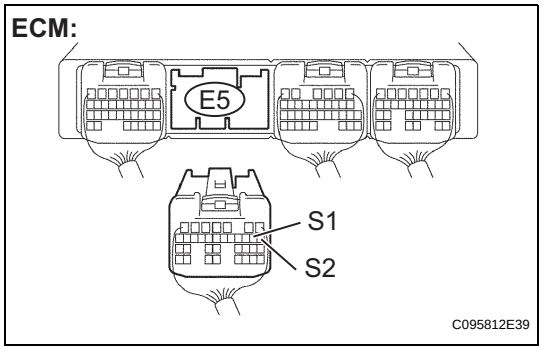
Tester Connection	Specified Condition
4 - Body ground	11 to 15 Ω at 20°C (68°F)
8 - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **Go to step 3**

OK

AT

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

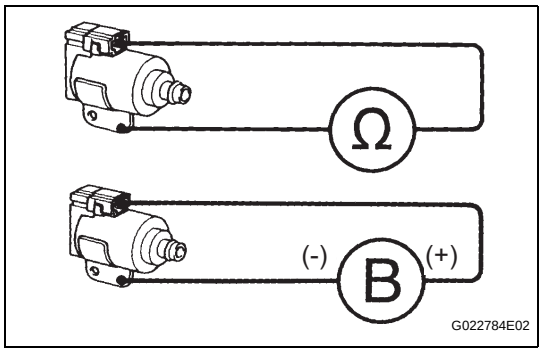
Tester Connection	Specified Condition
E5-9 (S1) - Body ground	11 to 15 Ω at 20°C (68°F)
E5-8 (S2) - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE (S1/S2)



(a) Remove the shift solenoid valve S1 or S2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)
Solenoid Connector (S2) - Solenoid Body (S2)	11 to 15 Ω at 20°C (68°F)

(c) Connect positive (+) lead to the terminal of the solenoid connector, negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating sound.

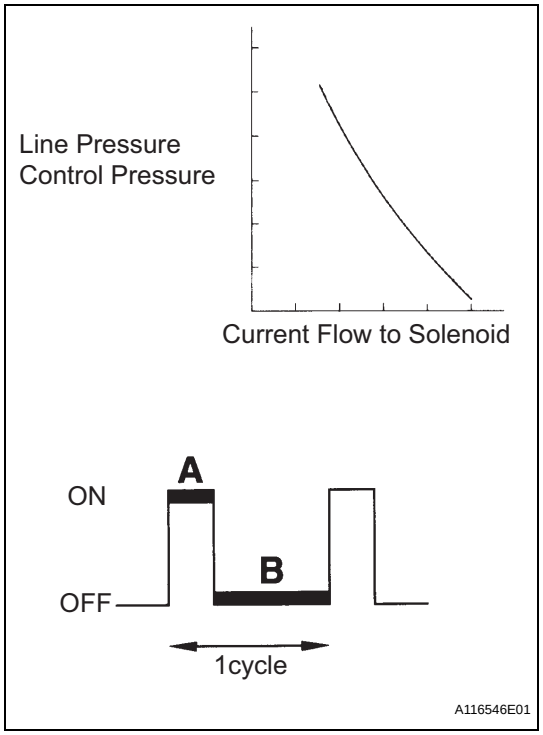
NG → **REPLACE SHIFT SOLENOID VALVE (S1/S2)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

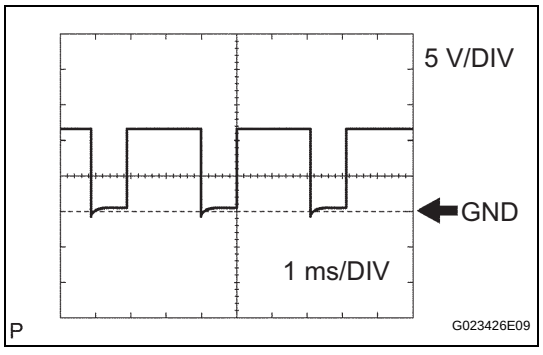
DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION



The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty cycle of the SLT solenoid valve to control the hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.
Duty Ratio:
The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio = A / (A + B) x 100 (%).

DTC No.	DTC Detection Conditions	Trouble Areas
P2716	Open or short is detected in shift solenoid valve SLT circuit for 1 second or more while driving. (1-trip detection logic)	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM



1. Reference (Using an oscilloscope):
Check the waveform between terminals SLT+ and SLT- of the ECM connector.
Standard:
Refer to the illustration.

Item	Content
Terminal	**SLT+ (E5-12) - SLT- (E5-13)**
Tool setting	**5 V/DIV** **1 ms/DIV**
Vehicle condition	**Engine idle speed**

AT

MONITOR DESCRIPTION

When an open or short is detected in the linear solenoid valve (SLT) circuit, the ECM interprets this as a fault. The ECM turns on the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check
Required sensors/Components	Shift solenoid valve SLT
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Solenoid current cut status	Not cut
Battery voltage	11 V or more
CPU command duty ratio to SLT	19 % or more

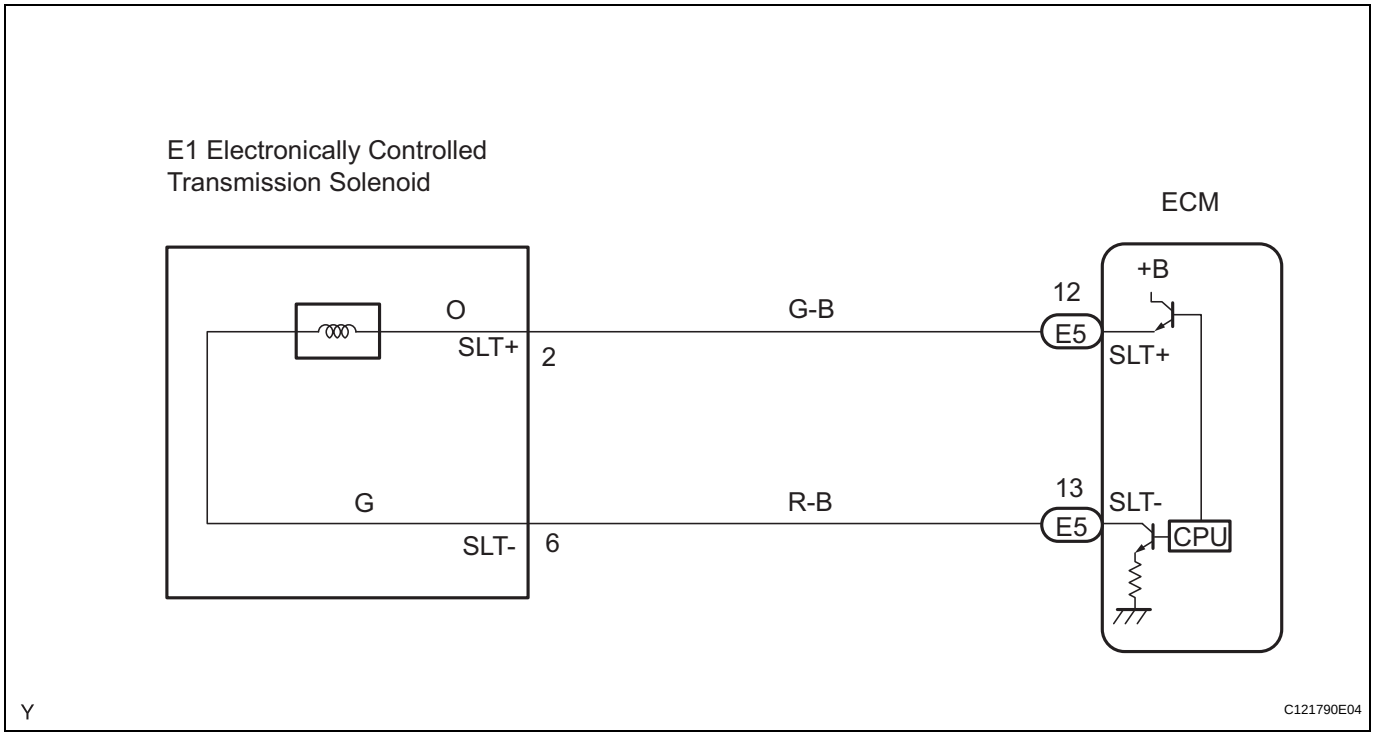
TYPICAL MALFUNCTION THRESHOLDS

Solenoid status (SLT) from IC	Fail (Open or short) (Output signal duty ratio equal to 100 %)

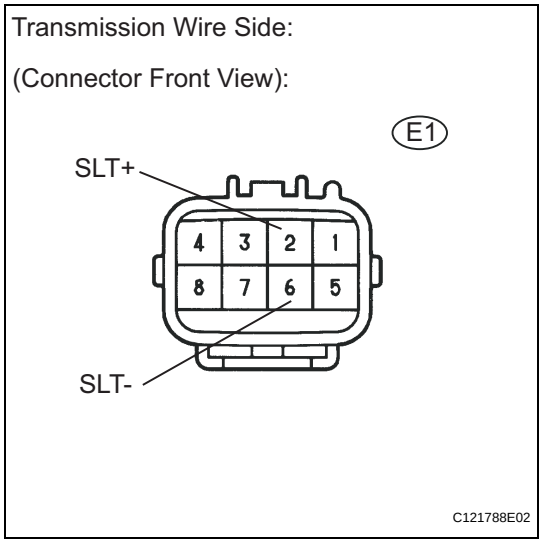
COMPONENT OPERATING RANGE

Output signal duty ratio	Less than 100 %

WIRING DIAGRAM



1	INSPECT TRANSMISSION WIRE (SLT)



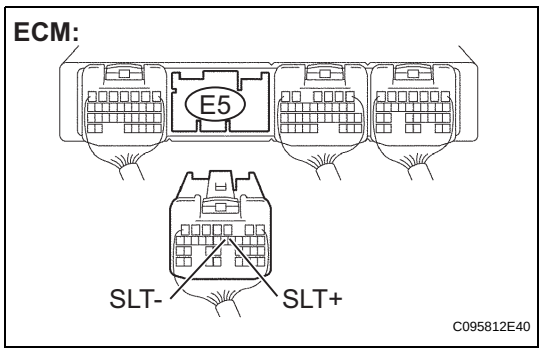
(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
2 (SLT+) - 6 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)
2 (SLT+) - Body ground	10 kΩ or higher
6 (SLT-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

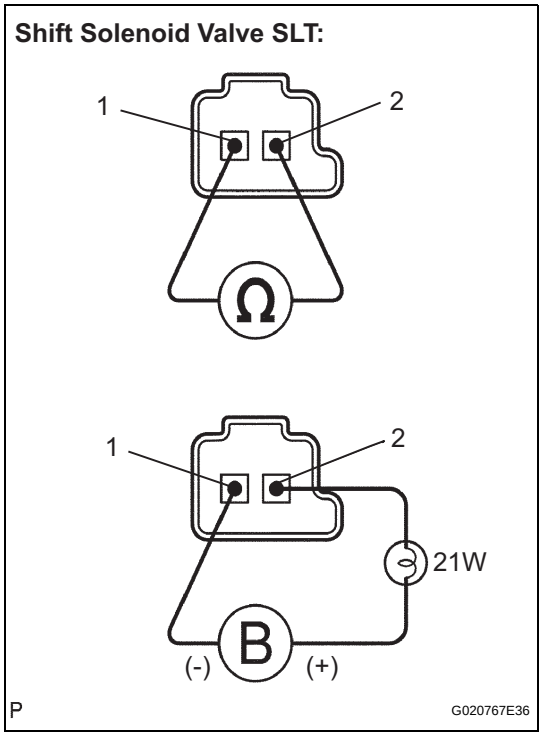
Tester Connection	Specified Condition
E5-12 (SLT+) - E5-13 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)
E5-12 (SLT+) - Body ground	10 kΩ or higher
E5-13 (SLT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE (SLT)



(a) Remove the shift solenoid valve (SLT).
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (SLT)**

OK

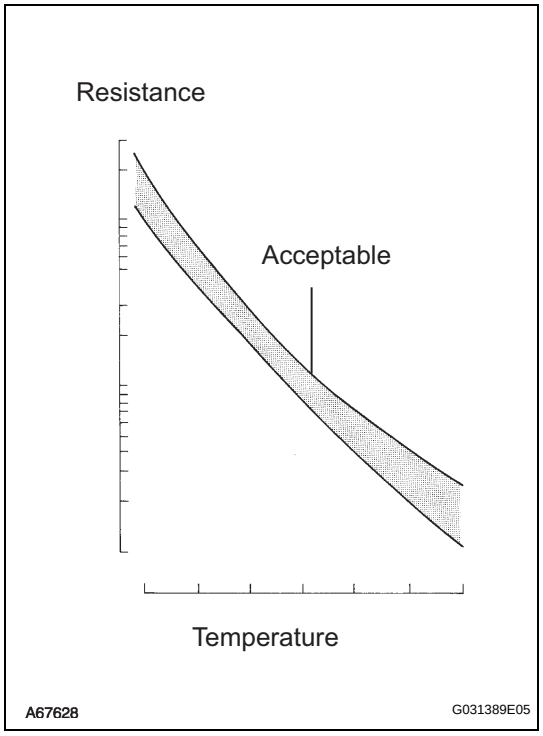
REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2740	Transmission Fluid Temperature Sensor "B" Circuit

DTC	P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input

DTC	P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO1.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance and the voltage decrease as the temperature becomes higher.
The ECM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detecting Conditions	Trouble Areas
P2740	Conditions (a) and (b) are detected momentarily within 0.5 seconds when neither P2742 nor P2743 is detected. (1-trip detection logic) (a) No. 1 ATF temperature sensor voltage is less than 0.142 V. (b) No. 1 ATF temperature sensor voltage is more than 4.915 V. HINT: Within 0.5 seconds the malfunction changes from (a) to (b) or (b) to (a).	• Open or short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

DTC No.	DTC Detecting Conditions	Trouble Areas
P2742	No. 1 ATF temperature sensor voltage is less than 0.142 V for 0.5 seconds or more. (1-trip detection logic)	• Short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM
P2743	No. 1 ATF temperature sensor voltage is more than 4.915 V for 0.5 seconds or more 15 minutes or more after starting engine. (1-trip detection logic)	• Open in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

MONITOR DESCRIPTION

The Automatic Transmission Fluid (ATF) temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the AFT temperature circuit. If the output voltage of the ATF temperature is less than 0.142 V*1 or more than 4.915 V*2, the ECM interprets this as a fault in the ATF temperature sensor or its wiring. The ECM turns on the MIL and stores a DTC.

*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.

*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.

HINT:

The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P2740: ATF temperature sensor/Range check (Fluttering) P2742: ATF temperature sensor/Range check (Low voltage) P2743: ATF temperature sensor/Range check (High voltage)
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P2740: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2742: Range check (Low voltage)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2743: Range check (High voltage)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P2740: Range check (Fluttering)

TFT Sensor voltage	Less than 0.142 V or More than 4.915 V

AT

P2742: Range check (Low voltage)

TFT Sensor voltage	Less than 0.142 V

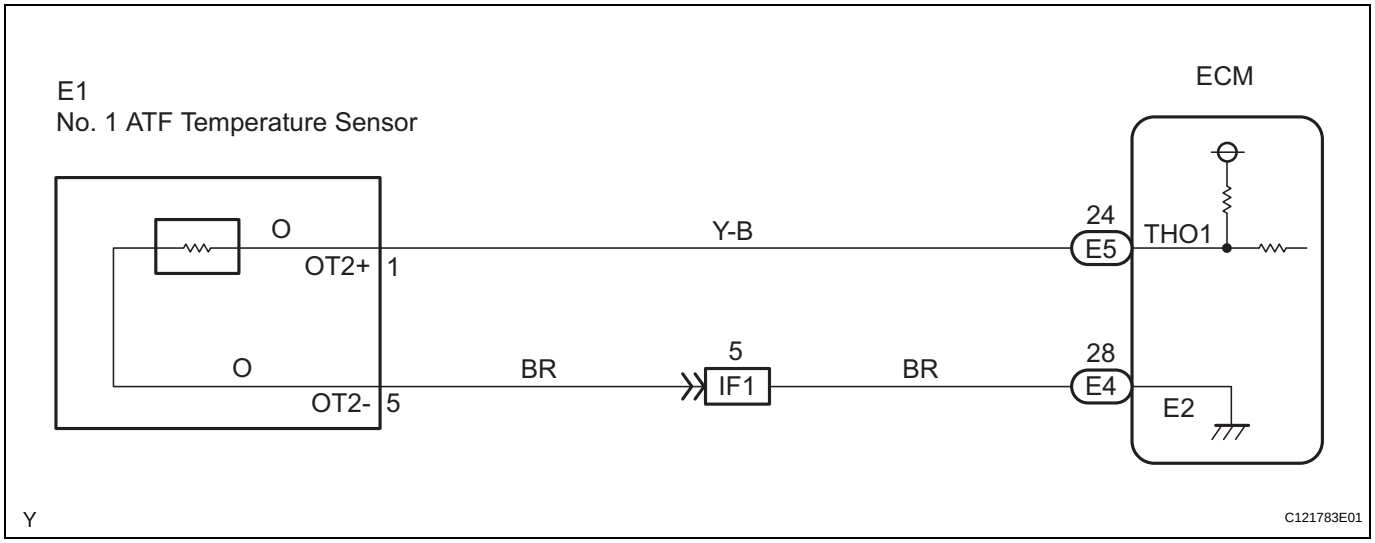
P2743: Range check (High voltage)

TFT Sensor voltage	More than 4.915 V

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature - approximately 130°C (266°F)

WIRING DIAGRAM



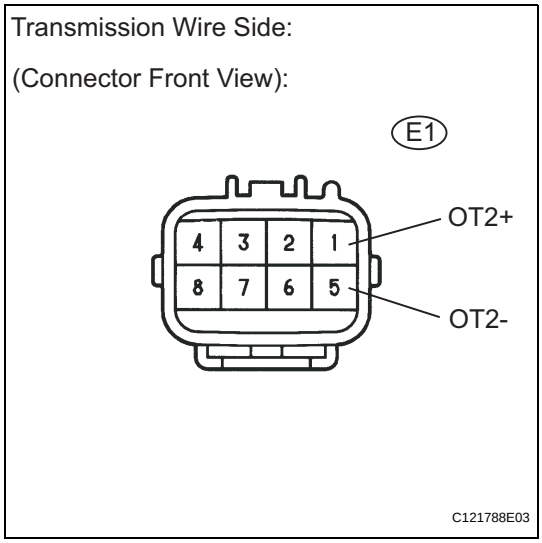
HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.
(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
A/T OIL TEMP1	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:
When DTC P2742 is output and the intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P2743 is output and the intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

1 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 (OT2+) - 5 (OT2-)	79 Ω to 156 kΩ
1 (OT2+) - Body ground	10 kΩ or higher
5 (OT2-) - Body ground	10 kΩ or higher

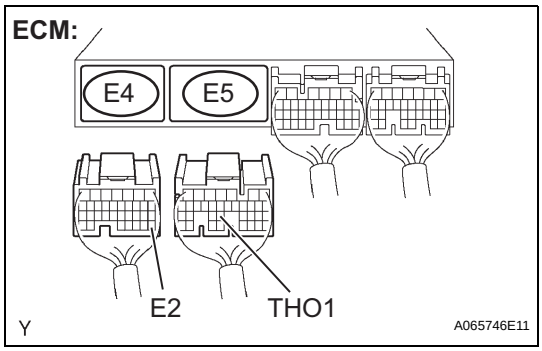
HINT:
If the resistance is outside the specified range at either of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature:	Resistance:
20 °C (68°F)	3 to 4 kΩ
110 °C (230°F)	0.22 to 0.28 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connectors.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-24 (THO1) - E4-28 (E2)	79 Ω to 156 kΩ
E5-24 (THO1) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

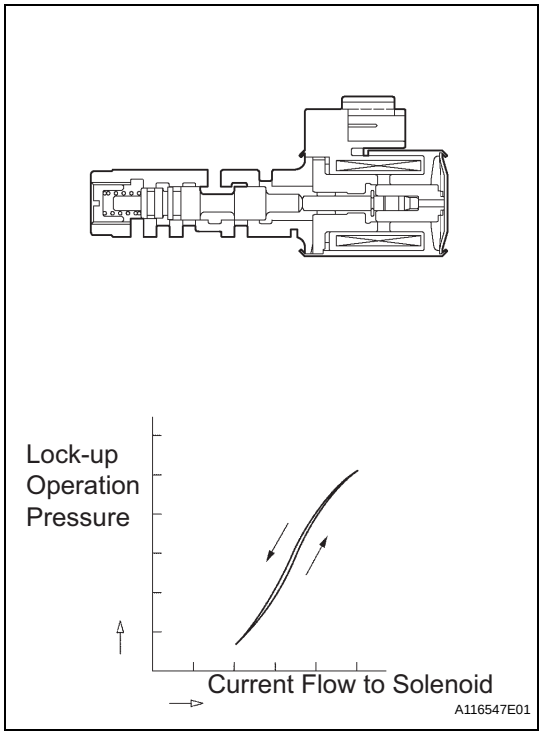
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)

SYSTEM DESCRIPTION



The ECM uses the signals from the throttle position sensor, mass air-flow meter, turbine (input) speed sensor, output speed sensor and crankshaft position sensor, to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect any mechanical problems with the shift solenoid valve SLU, valve body or torque converter clutch.

DTC No.	DTC Detection Conditions	Trouble Areas
P2757	Lock-up does not occur when driving in the lock-up range (normal driving at 50 mph [80 km/h]), or lock-up remains ON in the lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Shift solenoid valve SLU • Torque converter clutch • Automatic transmission (clutch, brake or gear, etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on turbine (input) speed sensor NCO, output speed sensor SP2, engine rpm, engine load, engine coolant temperature, vehicle speed, transmission fluid temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) with the input turbine rpm (NCO). The ECM calculates the actual transmission gear by comparing the input turbine rpm (NCO) with output shaft rpm (SP2). When the conditions are appropriate, the ECM requests "lock-up" by applying the control voltage to the shift solenoid SLU. When the SLU is turned on, the solenoid SLU applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance.

The ECM turns on the MIL and stores the DTC.
Example:
When any of the following are met, the ECM interprets it as a malfunction.
(a) There is a difference in rotation between before and after the torque converter even when the ECM requests lock-up.
(Engine speed is at least 70 rpm greater than the input turbine speed.)
(b) There is no difference in rotation between before and after the torque converter even when the ECM requests lock-up off.
(The difference between the engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU/OFF malfunction Shift solenoid valve SLU/ON malfunction
Required sensors/Components	Shift solenoid valve SLU
Frequency of operation	Continuous
Duration	OFF malfunction: 2 seconds ON malfunction: 1.8 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following items are common to all conditions below:

OFF malfunction and ON malfunction

The monitor will run whenever the following DTCs are not present.	None
Shift solenoid "A" (S1) circuit Shift solenoid "B" (S2) circuit ECT (Engine Coolant Temperature) sensor circuit Input speed sensor (NCO) circuit Output speed sensor (SP2) circuit	There is no malfunction in the sensor circuits shown on the left
ETCS (Electronic Throttle Control System)	System not down
Transmission shift position	"D"
ECT (Engine Coolant Temperature)	40°C (104°F) or more
Spark advance from max. retard timing by knock control	0°CA or more
Engine	Engine is running
ECM selected gear	3rd or 4th
Vehicle speed	15.5 mph (25 km/h) or more
Transfer neutral position switch	OFF

OFF malfunction

ECM lock-up request	ON (SLU pressure: 90 % or more)
Duration time from lock-up on request	3 seconds or more
Vehicle speed	6.2 mph (10 km/h) or more and Less than 62.2 mph (100 km/h)

ON malfunction

ECM lock-up request	OFF (SLU pressure: less than 10 %)
Throttle valve opening angle	10 % or more
Duration time from lock-up off request	1 second or more
Vehicle speed	Less than 37.3 mph (60 km/h)

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction

Engine speed - Output speed x 4th gear ratio	70 rpm or more

ON malfunction

2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON
Vehicle speed must be under 6 mph (10 km/h) once before the 2nd detection.

Engine speed - Input speed	Less than 35 rpm

COMPONENT OPERATING RANGE

Speed sensor (NCO)	Input speed is equal to engine speed when lock-up ON.

1. ACTIVE TEST

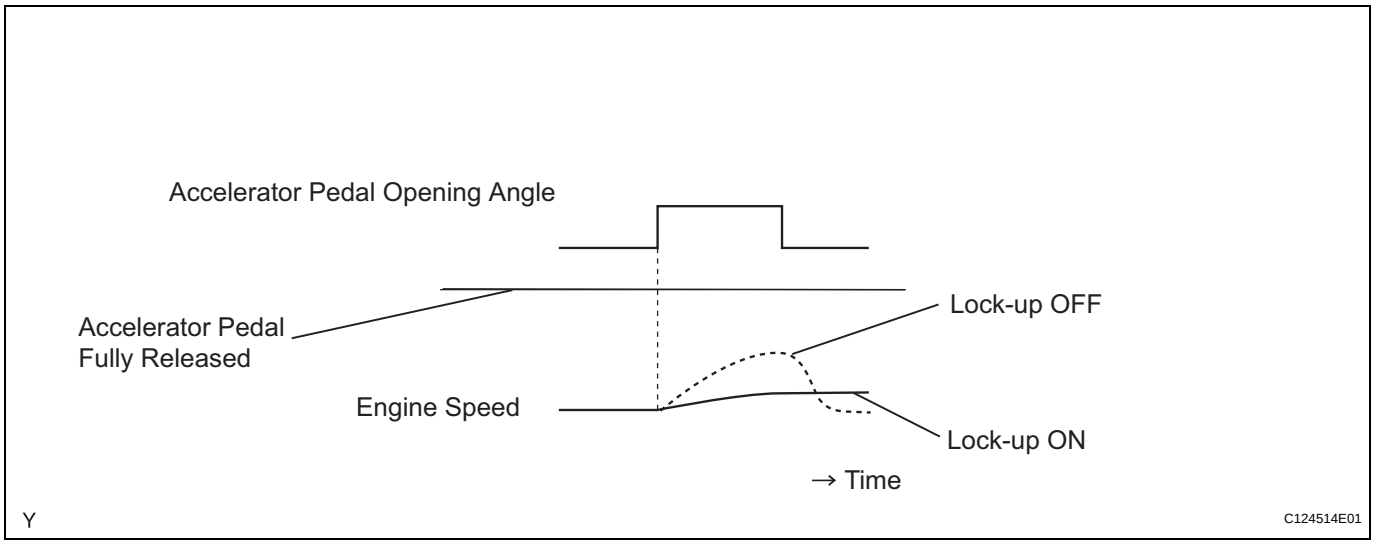
HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ LOCK UP".
(g) According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 37.3 mph (60 km/h) or more	Possible to check the SLU operation.

HINT:
This test can be conducted when the vehicle speed is 37 mph (60 km/h) or more.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.
HINT:
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal causes closure of the throttle valve and lock-up may be turned off automatically.)



1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC Output)	Proceed to
Only "P2757" is output	A
"P2757" and other DTCs	B

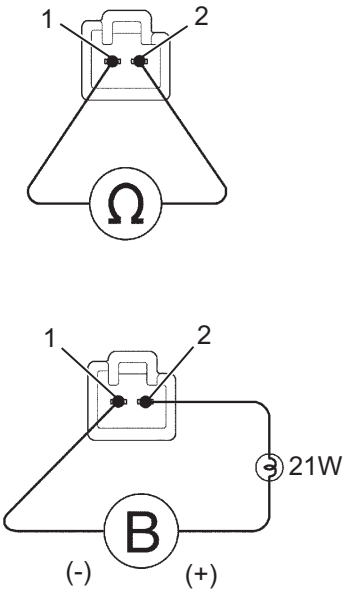
HINT:
If any codes besides "P2757" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2 **INSPECT SHIFT SOLENOID VALVE SLU**

Shift Solenoid Valve SLU:



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.1 to 5.5 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

3 **INSPECT TRANSMISSION VALVE BODY ASSEMBLY**

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4 **INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY**

OK:
The torque converter clutch operates normally.

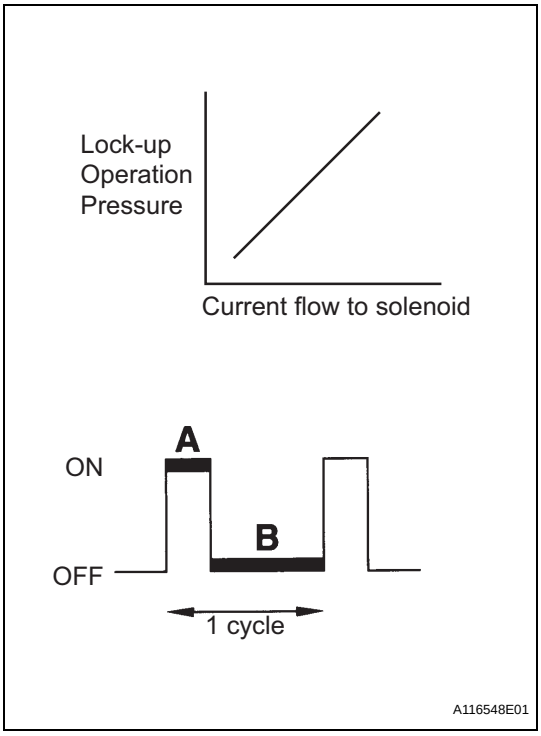
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)

DESCRIPTION



The current flow to the solenoid is controlled by the duty ratio* of the ECM output signal. The higher the duty ratio becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.

*: The duty ratio is the ratio of the period of continuity in one cycle.

For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio = A/(A+B) x 100(%).

DTC No.	DTC Detection Condition	Trouble Area
P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving. (1-trip detection logic)	• Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • ECM

MONITOR DESCRIPTION

When an open or short is detected in the shift solenoid valve (SLU) circuit, the ECM determines that there is a malfunction. The ECM turns on the MIL and stores this DTC.

MONITOR STRATEGY

Related DTCs	P2759: Shift solenoid valve SLU/Range check
Required sensors/Components	Shift solenoid valve SLU
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Solenoid current cut status	Not cut
Battery voltage	11 V or more
CPU commanded duty ratio to SLU	19 % or more

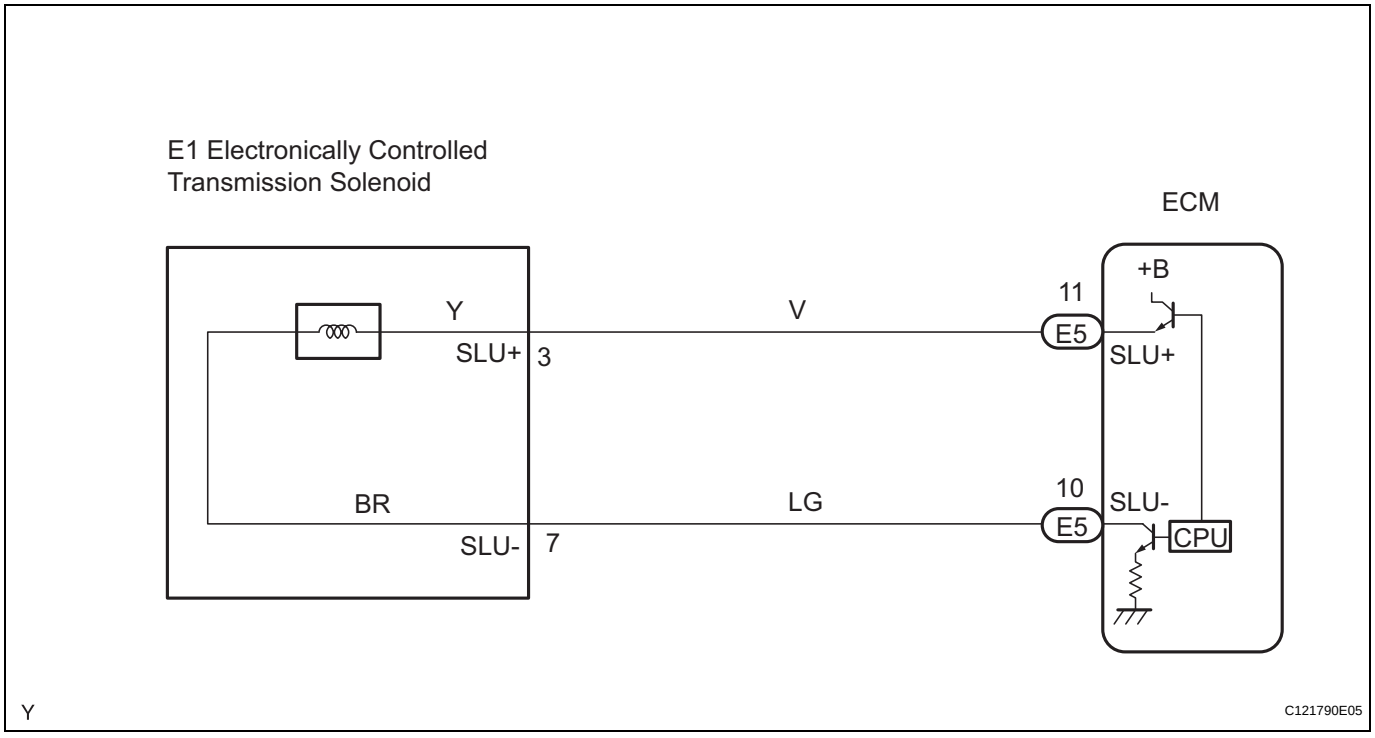
TYPICAL MALFUNCTION THRESHOLDS

Solenoid status (SLU) from IC	Fail (Open or short) (Output signal duty ratio equal to 100 %)

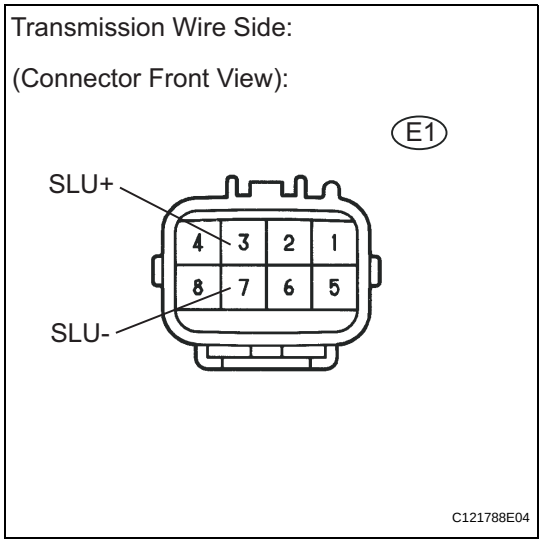
COMPONENT OPERATING RANGE

Output signal duty ratio	Less than 100 %

WIRING DIAGRAM



1 INSPECT TRANSMISSION WIRE (SLU)



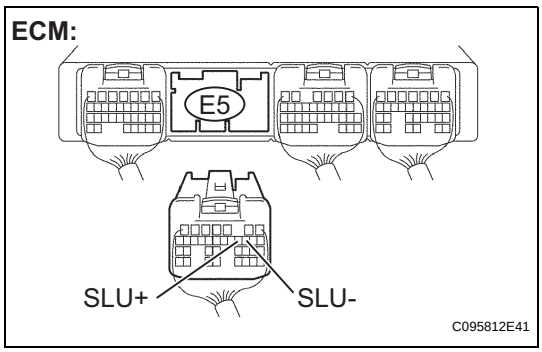
(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
3 (SLU+) - 7 (SLU-)	5.1 to 5.5 Ω at 20°C (68°F)
3 (SLU+) - Body ground	10 kΩ or higher
7 (SLU-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-11 (SLU+) - E5-10 (SLU-)	5.1 to 5.5 Ω at 20°C (68°F)
E5-11 (SLU+) - Body ground	10 kΩ or higher
E5-10 (SLU-) - Body ground	10 kΩ or higher

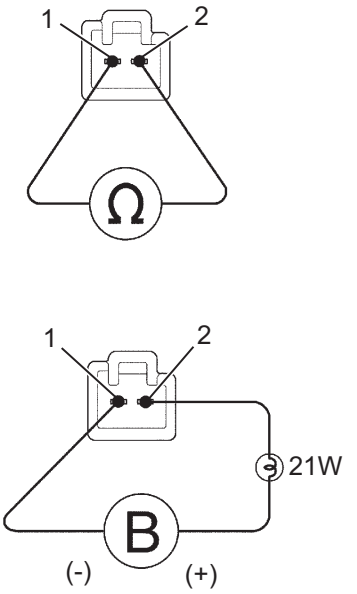
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SLU

Shift Solenoid Valve SLU:



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.1 to 5.5 Ω at 20°C (68°F)

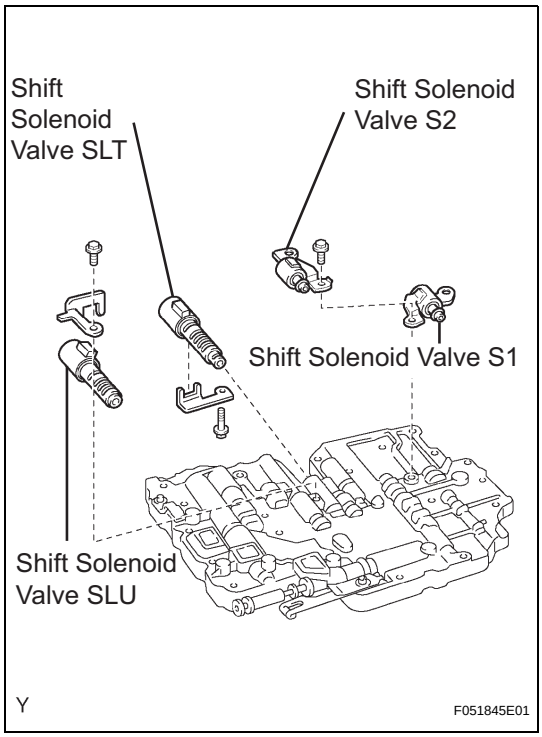
(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

INSTALLATION

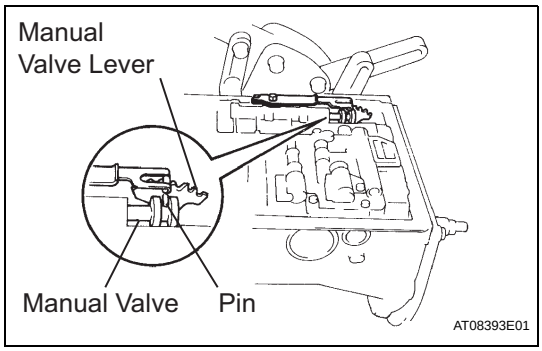


1. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

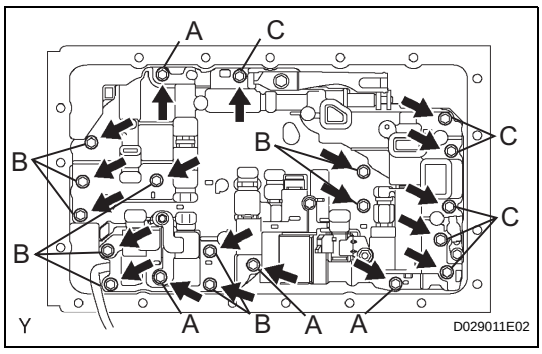
(a) Install the shift solenoid valve SLU with the bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(b) Install the shift solenoid valves S1 and S2 with the bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(c) Install the shift solenoid valve SLT with the bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

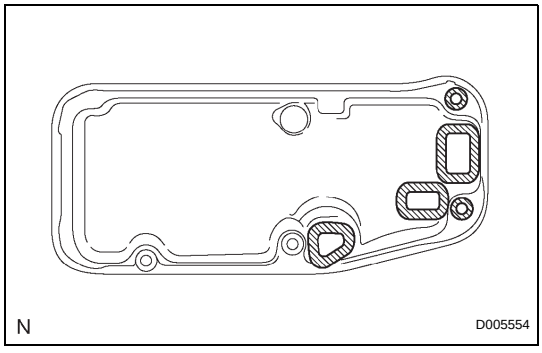


(d) Align the groove of the manual valve with the pin of the lever.



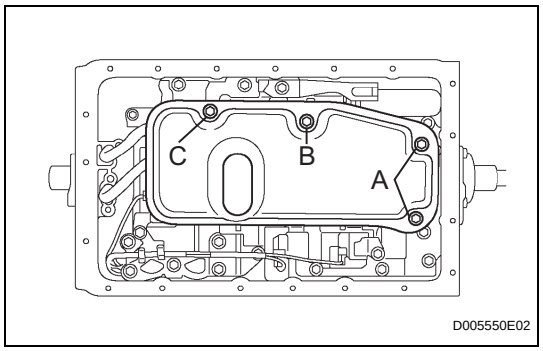
(e) Install the 20 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)
Bolt length:
Bolt A: 23 mm (0.91 in.)
Bolt B: 28 mm (1.10 in.)
Bolt C: 36 mm (1.42 in.)

2. INSTALL TRANSMISSION WIRE (See page AT-89)

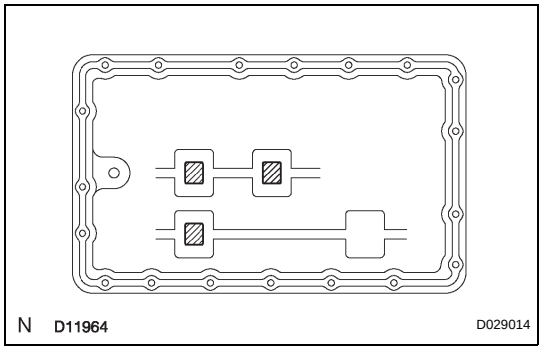


3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

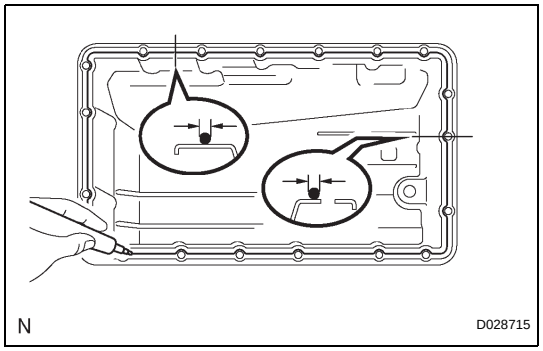
(a) Install 5 new gaskets.



(b) Install the oil strainer with the 4 bolts.
Torque: 10 N*m (100 kgf*cm, 7 ft.*lbf)
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 20 mm (0.79 in.)
Bolt C: 23 mm (0.91 in.)



4. INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY
HINT:
Remove any packing material and be careful not to drop oil on the contact surfaces of the transmission case and oil pan sub-assembly.
(a) Install the 3 magnets onto the oil pan sub-assembly, in the portions indicated in the illustration.



(b) Apply FIPG to the oil pan, as shown in the illustration.
FIPG:
Part No.08826-00090, THREE BOND 1281 or equivalent
(c) Install the oil pan sub-assembly with the 19 bolts.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)

5. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (See page AT-116)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

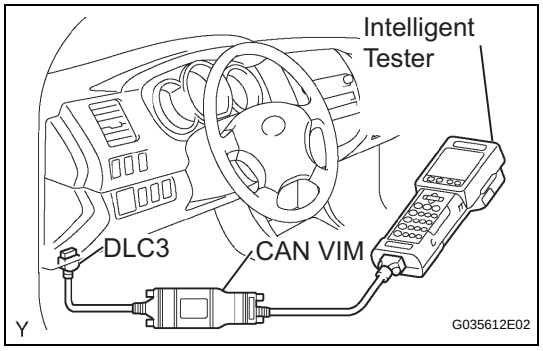
7. ADD AUTOMATIC TRANSMISSION FLUID

8. INSPECT AUTOMATIC TRANSMISSION FLUID (See page AT-85)

CHECK MODE PROCEDURE

1. DESCRIPTION

Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1 trip detection logic.



2. CHECK MODE PROCEDURE

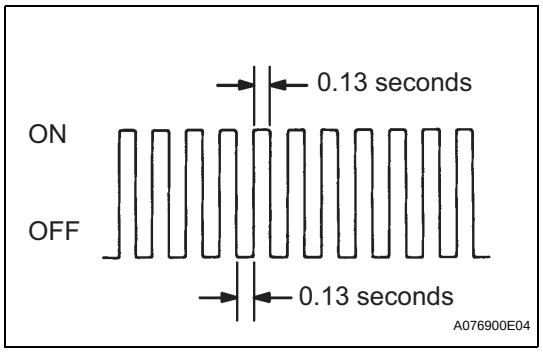
(a) Ensure the following conditions:
  (1) Battery positive voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transmission in the P or N position
  (4) A/C switched off

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the Controller Area Network Vehicle Interface Module (CAN VIM) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ CHECK MODE.



(f) Change the ECM to check mode. Make sure the MIL flashes as shown in the illustration.

NOTICE:

All recorded DTCs and freeze frame data will be erased if: 1) the intelligent tester is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from ON to ACC or LOCK.

Before entering check mode, make notes of the DTCs and freeze frame data.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test (See page AT-19).

(Or, simulate the conditions of the malfunction described by the customer).

(i) After simulating the malfunction conditions, use the intelligent tester diagnosis selector to check the DTC and freeze frame data.

FAIL-SAFE CHART

1. FAIL-SAFE CHART

This function minimizes the loss of the ECT functions when a malfunction occurs in each sensor or solenoid.

Malfunction Part	Function
DTC P0710, P0712 and P0713: No. 1 ATF Temperature Sensor	During a No. 1 ATF temperature sensor malfunction, up-shift to the 5th gear and flex lock-up clutch control are prohibited.
DTC P0722: Output Speed Sensor (SP2)	During an output speed sensor malfunction, shift control is effected through the input speed sensor signal (NT).
DTC P0751, P0756, P0771, P0973, P0974, P0976, P0977, P0985 and P0986: Shift Solenoid Valve S1, S2 and SR	The current to the failed solenoid valve is cut off and control is effected by operating the other solenoid valves with normal operation. Shift control is effected depending on the failed solenoid as described in the table below.
DTC P0748, P0776 and P0778: Shift Solenoid Valve SL1 and SL2	During a solenoid valve SL1 or SL2 malfunction, up-shift to the 5th gear is prohibited.
DTC P02714 and P2716: Shift Solenoid Valve SLT	During a solenoid valve SLT malfunction, the current to the solenoid valve is stopped. This stops line pressure optimal control, and shift shock increases. However, shifting is effected through normal clutch pressure control.
DTC P2757: Shift Solenoid Valve SLU	During a solenoid valve SLU malfunction, the current to the solenoid valve is stopped. This stops lock-up control and flex lock-up control, and fuel economy decreases.

Fail-safe function:

If either of the shift solenoid valve circuits has an open or short failure, the ECM turns the other shift solenoid ON and OFF in order to shift into the gear positions shown in the table below.

In case of a short circuit, the ECM stops sending current to the short circuit solenoid.

Even if starting the engine again in the fail-safe mode, the gear position remains in the same position.

Position	NORMAL						S1 OFF

- E/B: Engine brake.

AT

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Push the "ON" button of the tester.

(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".

(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
SPD (SP2)	Counter Gear Speed / min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h)	-
SPD (NT)	Input Turbine Speed/ display: 50 rpm	[HINT] • Lock-up ON (After warming up the engine); Input turbine speed (NT) equal to the engine speed. • Lock-up OFF (Idling in N position); Input turbine speed (NT) nearly equal to the engine speed.	-
PNP SW [NSW]	PNP Switch Status/ ON or OFF	Shift lever position is; P or N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts. (See page AT-142)
STOP LIGHT SW	Stop Light Switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
SHIFT	ECM gear shift command/ 1st, 2nd, 3rd, 4th or 5th	Shift Lever Position is; • L: 1st • 2: 1st or 2nd • 3: 1st, 2nd or 3rd • 4: 1st, 2nd, 3rd or 4th • D: 1st, 2nd, 3rd, 4th or 5th	-
REVERSE	PNP Switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	Same as PNP SW [NSW]

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; D and 4: ON Except D and 4: OFF	Same as PNP SW [NSW]
4th/DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; 4: ON Except 4: OFF	Same as PNP SW [NSW]
3RD	PNP Switch Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	Same as PNP SW [NSW]
2ND	PNP Switch Status/ ON or OFF	Shift lever position is; 2 and L: ON Except 2 and L: OFF	Same as PNP SW [NSW]
LOW	PNP Switch Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	Same as PNP SW [NSW]
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature during cold soak	If the value is "-40°C (-40°F)" or "150°C (302°F) or more", No. 1 ATF temperature sensor circuit is open or short.
AT OIL TEMP2	No. 2 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature during cold soak	If the value is "-40°C (-40°F)" or "150°C (302°F) or more", No. 2 ATF temperature sensor circuit is open or short.
LOCK UP SOL	Lock Up Solenoid Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLU)	Shift Solenoid SLU Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	IG SW ON: ON	-

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST".

(g) According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT to raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON [HINT] OFF: Line pressure up (When the active test of "LINE PRESS UP" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more	Possible to check the SLU operation.
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well.
HINT:
The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed in the table below and proceed to the page given.
HINT:

- *1: "Comes on" means that the MIL will illuminate.
- *2: "DTC stored" means that the ECM memorizes the malfunction code if the DTC detection condition(s) are met.
- These DTCs may be output when the clutch, brake and gear components, etc., inside the automatic transmission are damaged.

DTC No.	Detection Item	Trouble Areas	MIL *1	Memory *2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	- Open or short in park/neutral position switch circuit - Park/neutral position switch - ECM	Comes on	DTC stored	AT-43
P0710	Transmission Fluid Temperature Sensor "A" Circuit	- Open or short in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0711	Transmission Fluid Temperature Sensor "A" Performance	- Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-54
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	- Short in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	- Open in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0717	Input Speed Sensor Circuit No Signal	- Open or short in speed sensor (NT) circuit - Speed sensor (NT) - ECM	Comes on	DTC stored	AT-57

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Conditions	Trouble Areas
P0705	When any one of following conditions (A) to (C) is met (2-trip detection logic): (A) Any 2 or more signals of the following are ON simultaneously • NSW input signal is ON. • R input signal is ON. • D input signal is ON. • 3 input signal is ON. • 2 input signal is ON. (B) All switches are OFF simultaneously for P (NSW), R, N (NSW), D, 3 and 2 positions (C) When NSW or R input signal is ON, 4 or L input signal is ON	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM

MONITOR DESCRIPTION

The DTC indicates a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
For security, the park/neutral position switch detects the shift lever position so that the engine can be started only when the vehicle is in the P or N shift position.
When the park/neutral position switch sends more than one signal at a time from switch positions P, R, N, D, 3 or 2, the ECM interprets this as a fault in the switch. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	Conditions (A) and (C): 2 seconds Condition (B): 60 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met: Condition (A), (B) or (C)

Condition (A)

Number of the following signals input at the same time	2 or more
Park/neutral position switch	ON
R switch	ON
D switch	ON
3 switch	ON
2 switch	ON

Condition (B)

All of following conditions are met

Park/neutral position switch	OFF
R switch	OFF
D switch	OFF
3 switch	OFF
2 switch	OFF

Condition (C)

Both (i) and (ii) are met

(i) One of following conditions is met

Park/neutral position switch	ON
R switch	ON

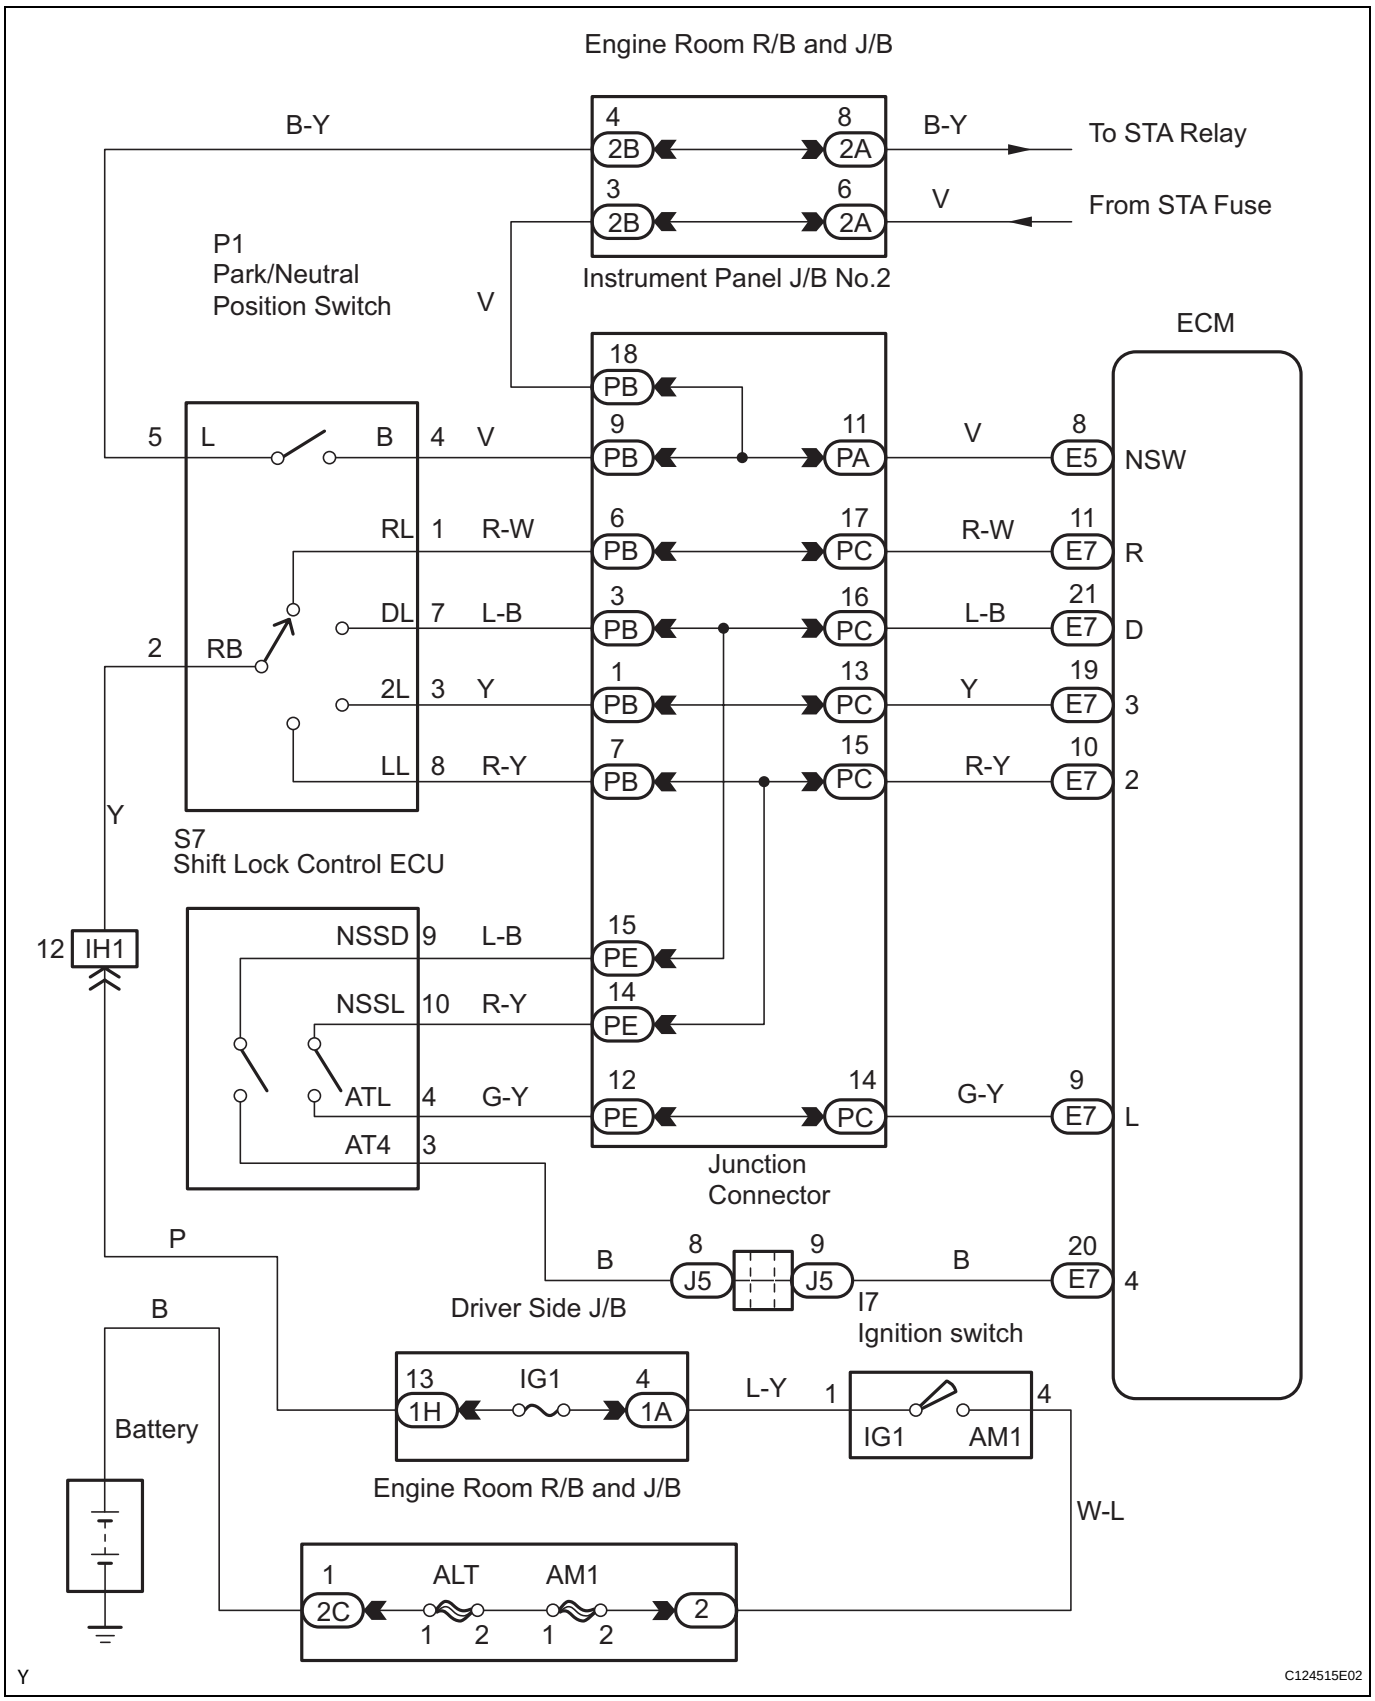
(ii) One of following conditions is met

4 switch	ON
L switch	ON

COMPONENT OPERATING RANGE

Park/neutral position switch	The park/neutral position switch sends only one signal to the ECM

WIRING DIAGRAM



AT

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

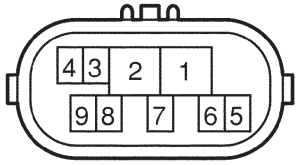
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
2. Turn the ignition switch to the ON position.
3. Push the "ON" button of the tester.
4. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
5. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP Switch Status/ ON or OFF	Shift lever position is; P or N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP Switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	
DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; D and 4: ON Except D and 4: OFF	
4th/DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; 4: ON Except 4: OFF	
3RD	PNP Switch Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	
2ND	PNP Switch Status/ ON or OFF	Shift lever position is; 2 and L: ON Except 2 and L: OFF	
LOW	PNP Switch Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	

1 INSPECT PARK / NEUTRAL POSITION SWITCH ASSEMBLY

Switch side (Connector Front View):



P G026080E19

(a) Disconnect the park/neutral position switch connector.
(b) Measure the resistance when the shift lever is moved to each position.

Standard resistance

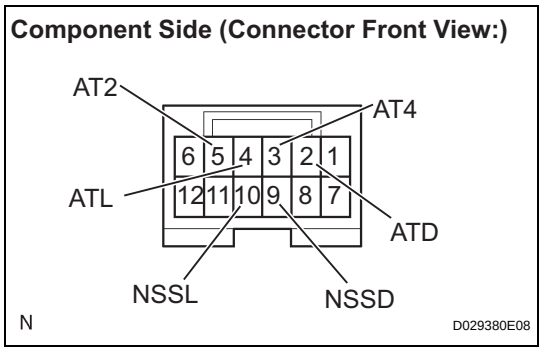
Shift Position	Tester Connection	Specified Condition
P	2 - 6 and 4 - 5	Below 1 Ω
Except P	2 - 6 and 4 - 5	10 kΩ or higher
R	1 - 2	Below 1 Ω
Except R	1 - 2	10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N	2 - 9 and 4 - 5	10 kΩ or higher
D, 4	2 - 7	Below 1 Ω
Except D, 4	2 - 7	10 kΩ or higher
3	2 - 3	Below 1 Ω
Except 3	2 - 3	10 kΩ or higher
2, L	2 - 8	Below 1 Ω

Shift Position	Tester Connection	Specified Condition
Except 2, L	2 - 8	10 kΩ or higher

NG → REPLACE PARK / NEUTRAL POSITION SWITCH ASSEMBLY

OK

2 INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY



(a) Connect the park/neutral position switch connector.
(b) Disconnect the shift lock control ECU connector.
(c) Measure the resistance when the shift lever is moved to each position.

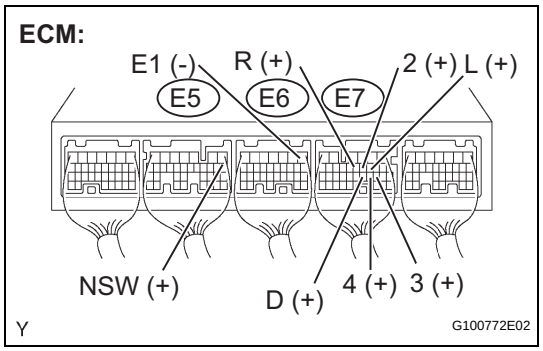
Standard resistance

Shift Position	Tester Connection	Specified Condition
D	9 (NSSD) - 2 (ATD)	Below 1 Ω
4	9 (NSSD) - 2 (ATD)	10 kΩ or higher
D	9 (NSSD) - 3 (AT4)	10 kΩ or higher
4	9 (NSSD) - 3 (AT4)	Below 1 Ω
2	10 (NSSL) - 5 (AT2)	Below 1 Ω
L	10 (NSSL) - 5 (AT2)	10 kΩ or higher
2	10 (NSSL) - 4 (ATL)	10 kΩ or higher
L	10 (NSSL) - 4 (ATL)	Below 1 Ω

NG → REPLACE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

OK

3 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)



(a) Connect the shift lock control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P and N	E5-8 (NSW) - E6-1 (E1)	Below 2 V
Except P and N	E5-8 (NSW) - E6-1 (E1)	10 to 14 V
R	E7-11 (R) - E6-1 (E1)	10 to 14 V*
Except R	E7-11 (R) - E6-1 (E1)	Below 1 V
D and 4	E7-21 (D) - E6-1 (E1)	10 to 14 V
Except D and 4	E7-21 (D) - E6-1 (E1)	Below 1 V
4	E7-20 (4) - E6-1 (E1)	10 to 14 V
Except 4	E7-20 (4) - E6-1 (E1)	Below 1 V
3	E7-19 (3) - E6-1 (E1)	10 to 14 V
Except 3	E7-19 (3) - E6-1 (E1)	Below 1 V
2 and L	E7-10 (2) - E6-1 (E1)	10 to 14 V
Except 2 and L	E7-10 (2) - E6-1 (E1)	Below 1 V

Shift Position	Tester Connection	Specified Condition
L	E7-9 (L) - E6-1 (E1)	10 to 14 V
Except L	E7-9 (L) - E6-1 (E1)	Below 1 V

HINT:
*: The voltage will drop slightly due to illumination of the back up light.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

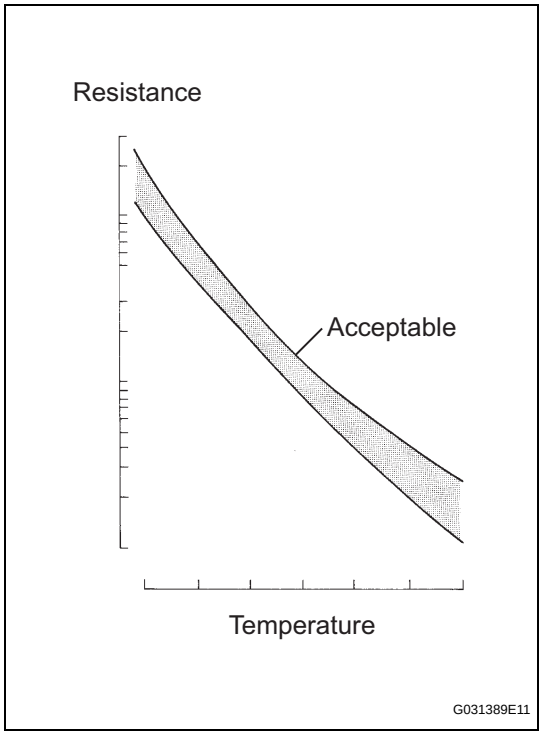
REPLACE ECM

DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO1.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance and the voltage decrease as the temperature becomes higher.
The ECM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detection Conditions	Trouble Areas
P0710	(a) and (b) are detected momentarily within 0.5 seconds when neither P0712 nor P0713 is detected (1-trip detection logic) (a) No. 1 ATF temperature sensor resistance is less than 79 Ω. (b) No. 1 ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 seconds, the malfunction changes from (a) to (b) or from (b) to (a)	• Open or short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P0712	No. 1 ATF temperature sensor resistance is less than 79 Ω for 0.5 seconds or more (1-trip detection logic)	• Short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM
P0713	No. 1 ATF temperature sensor resistance is more than 156 kΩ for 0.5 seconds or more 15 minutes or more after starting engine (1-trip detection logic)	• Open in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the Automatic Transmission Fluid (ATF) temperature sensor circuit.
The ATF temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the ECM interprets this as a fault in the ATF sensor or its wiring. The ECM turns on the MIL and stores a DTC.
*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.
HINT:
The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Fluttering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0710: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0712: Range check (Low resistance)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0713: Range check (High resistance)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Fluttering)

ATF temperature sensor resistance	Less than 79 Ω or More than 156 kΩ

AT

P0712: Range check (Low resistance)

ATF temperature sensor resistance	Less than 79 Ω

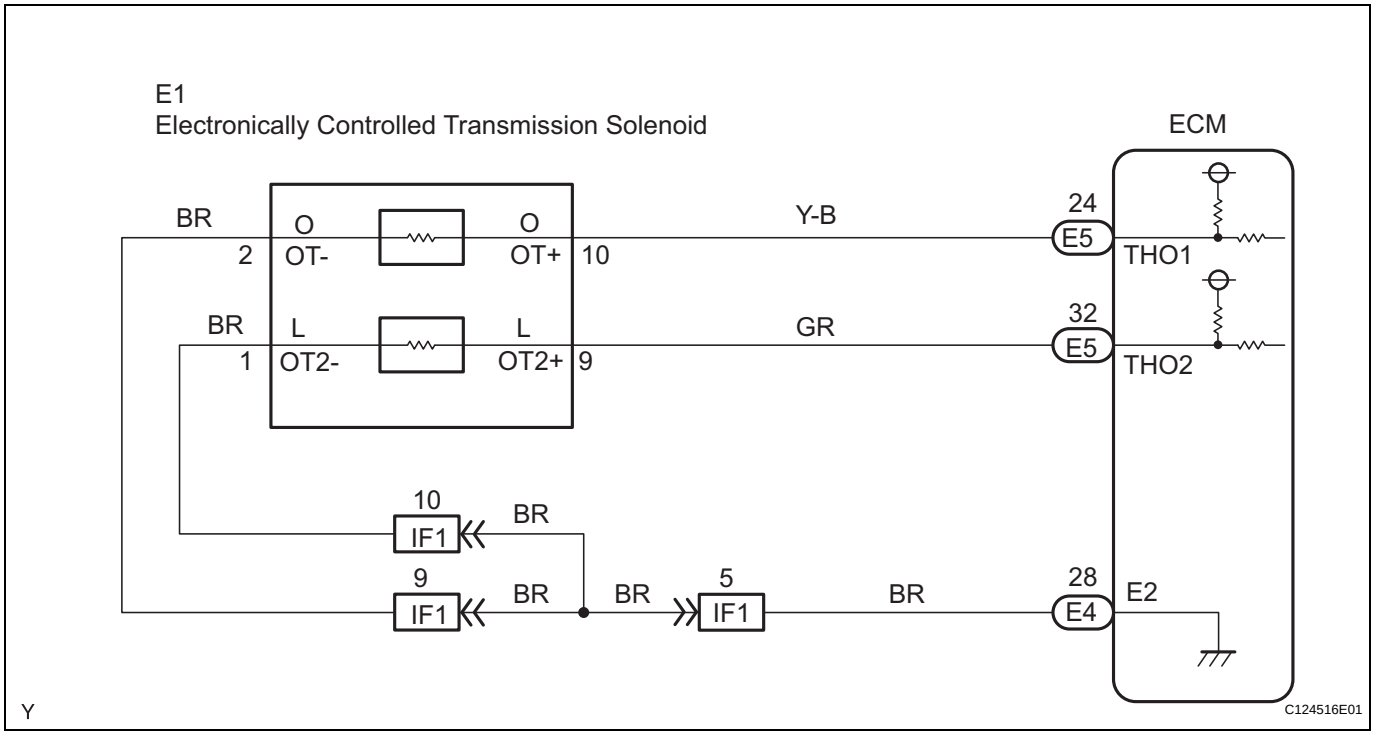
P0713: Range check (High resistance)

ATF temperature sensor resistance	More than 156 kΩ

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature up to approximately 130°C (266°F)

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

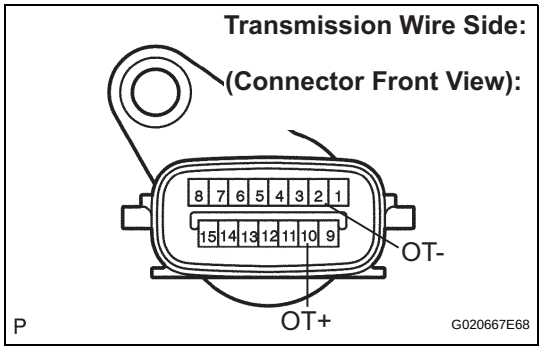
Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

HINT:
When DTC P0712 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 (OT) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
2 (OT-) - 10 (OT+)	**79 Ω to 156 kΩ**

(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
2 (OT-) - Body ground	**10 kΩ or higher**
10 (OT+) - Body ground	**10 kΩ or higher**

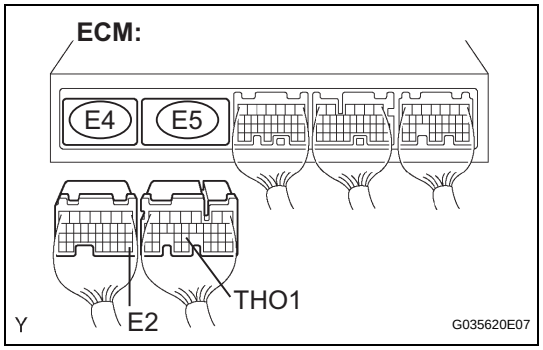
HINT:
If the resistance is outside the specified range at either of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connectors.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-24 (THO1) - E4-28 (E2)	79 Ω to 156 kΩ

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-24 (THO1) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

Refer to DTC P0710 (See page AT-49).

DTC No.	DTC Detection Conditions	Trouble Areas
P0711	Both (a) and (b) are detected (2-trip detection logic): (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start (b) After normal driving for over 22 minutes and 5.6 miles (9 km) or more, ATF temperature is less than 20°C (68°F)	• Transmission wire (No. 1 ATF temperature sensor) • ECM

MONITOR DESCRIPTION

This DTC indicates that there is a problem with the output from the automatic transmission fluid (ATF) temperature sensor and that the sensor itself is defective. The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects any open or short malfunctions in the ATF temperature circuit or a fault of the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	3 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
ATF temperature sensor "A" circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
IAT (Intake air temperature) sensor circuit	Functioning normally
Time after engine start	21 minutes and 40 seconds or more
Driving distance after engine start	5.6 miles (9 km) or more
IAT (12 seconds after engine start)	-10°C (14°F) or more
ECT (12 seconds after engine start)	-10°C (14°F) or more

TYPICAL MALFUNCTION THRESHOLDS

ATF temperature	Less than 20°C (68°F) (Conditions vary with ATF temperature at engine start)

WIRING DIAGRAM

Refer to DTC P0710 (See page AT-51).

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

HINT:
When DTC P0712 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 (OT) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0711" is output	A
"P0711" and other DTCs	B

HINT:
If any codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	CHECK TRANSMISSION FLUID LEVEL

OK:
Automatic transmission fluid level is correct.

NG → **ADD FLUID**

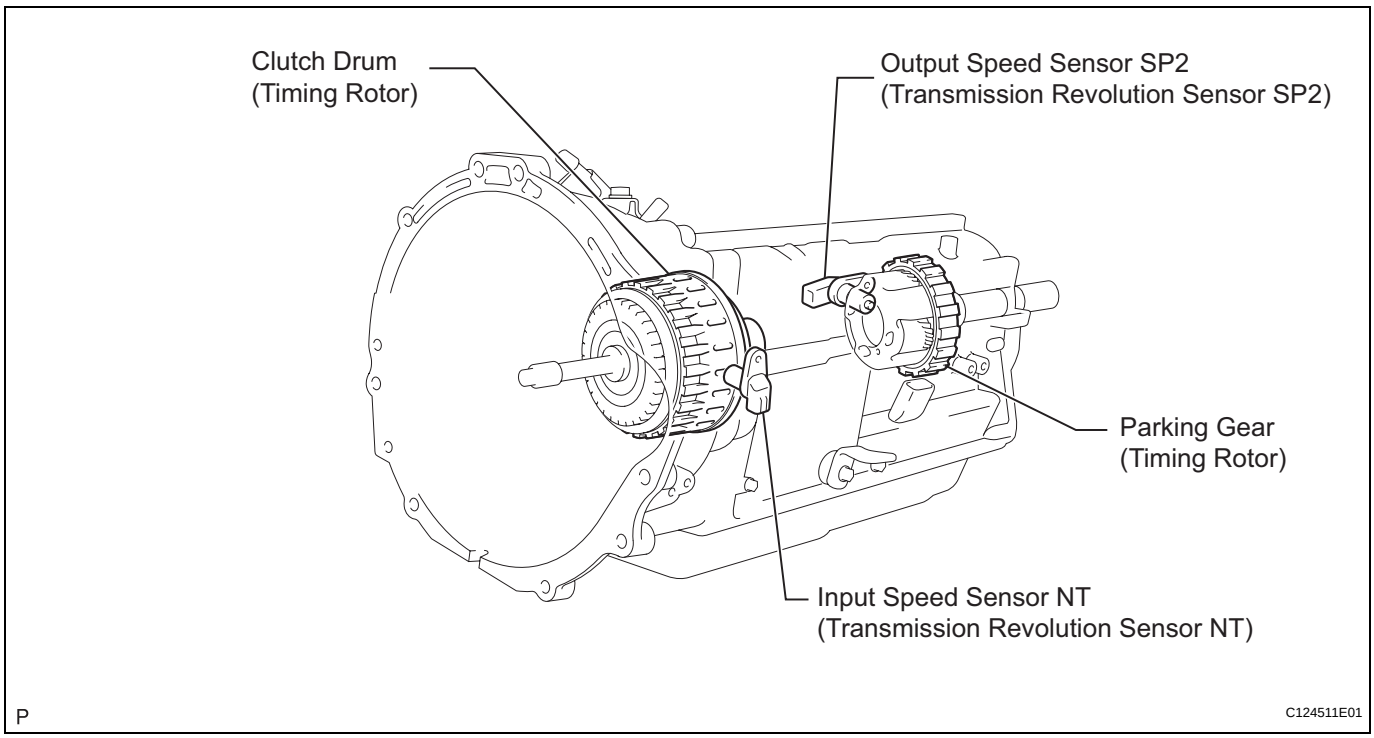
OK

REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

DTC	P0717	Input Speed Sensor Circuit No Signal

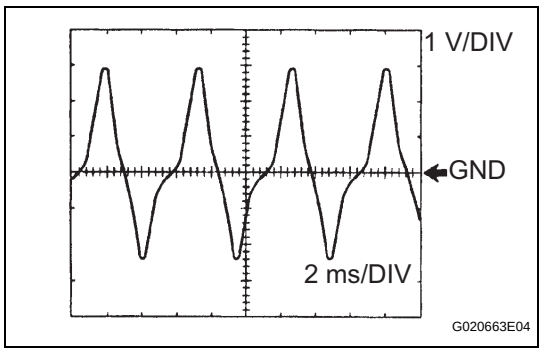
DESCRIPTION

This sensor detects the rotation speed of the turbine which shows the input revolution of the transmission. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (SP2), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.



DTC No.	DTC Detection Conditions	Trouble Areas
P0717	All conditions below are detected for 5 seconds or more (1-trip detection logic): (a) Gear change not being performed (b) Gear position: 4th or 5th (c) T/M input shaft rpm: 300 rpm or less (d) T/M output shaft rpm: 1,000 rpm or more (e) Park/neutral position switch: OFF (f) Shift solenoid valves, park/neutral position switch and vehicle speed sensor are in normal operation	• Open or short in speed sensor (NT) circuit • Speed sensor (NT) • ECM

Reference (Using an oscilloscope):



Check the waveform between terminals NT+ and NT- of the ECM connector.

Standard:

Refer to the illustration.

Terminal	NT+ - NT-
Tool setting	1 V/DIV, 2 ms/DIV
Vehicle condition	Engine idling speed (P or N position)

MONITOR DESCRIPTION

This DTC indicates that a pulse is not output from the speed sensor NT (Turbine (input) sped sensor) or is weak. The NT terminal of the ECM detects the revolving signal from speed sensor (NT) (input RPM). The ECM outputs a gearshift signal comparing the input speed sensor (NT) with the output speed sensor (SP2). While the vehicle is operating in the 4th or 5th gear position in the shift position of D, if the input shaft revolution is less than 300 rpm*1 although the output shaft revolution is more than 1,000 rpm or more*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is approximately 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT)/Verify pulse input
Required sensors/Components (Main)	Speed sensor (NT)
Required sensors/Components (Related)	Speed sensor (SP2)
Frequency of operation	Continuous
Duration	5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748 - P0799: Trans solenoid (range)
Shift change	Each shift change is completed before starting next shift change operation
ECM selected gear	4th or 5th
Output shaft rpm	1,000 rpm or more
Park/neutral position switch	OFF
R switch	OFF
L switch	OFF
Engine	Running
Ignition Switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Speed sensor (NT)	Input speed is equal to engine speed when lock-up ON

WIRING DIAGRAM

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

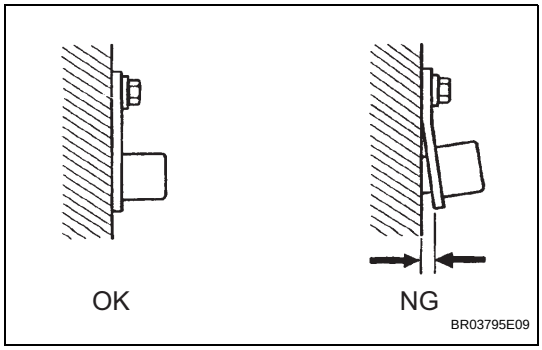
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NT)	Input Turbine Speed/ display: 50 rpm	[HINT] • Lock-up ON (After warming up the engine); Input turbine speed (NT) equal to the engine speed. • Lock-up OFF (Idling at N position); Input turbine speed (NT) nearly equal to the engine speed.

HINT:

- SPD (NT) is always 0 while driving:
  Open or short in the sensor or circuit.
- SPD (NT) is always less than 300 rpm while driving the vehicle at 31 mph (50 km/h) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION

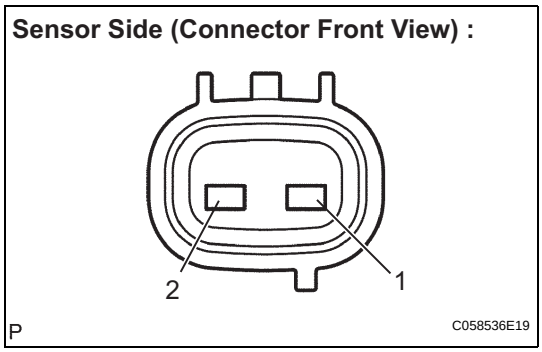


(a) Check the speed sensor (NT) installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (NT)**

OK

2 INSPECT SPEED SENSOR (NT)



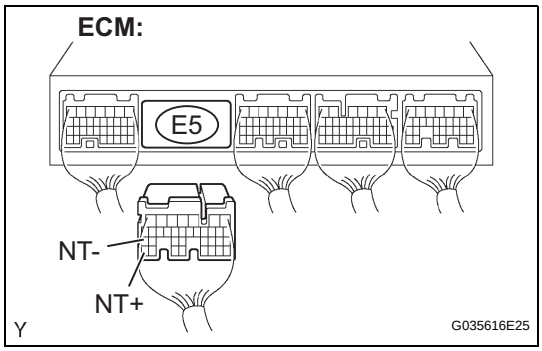
(a) Disconnect the speed sensor (NT) connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	560 to 680 Ωat 20°C (68°F)

NG → **REPLACE SPEED SENSOR (NT)**

OK

3 CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-35 (NT+) - E5-27 (NT-)	560 to 680 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-35 (NT+) - Body ground	10 kΩ or higher
E5-27 (NT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

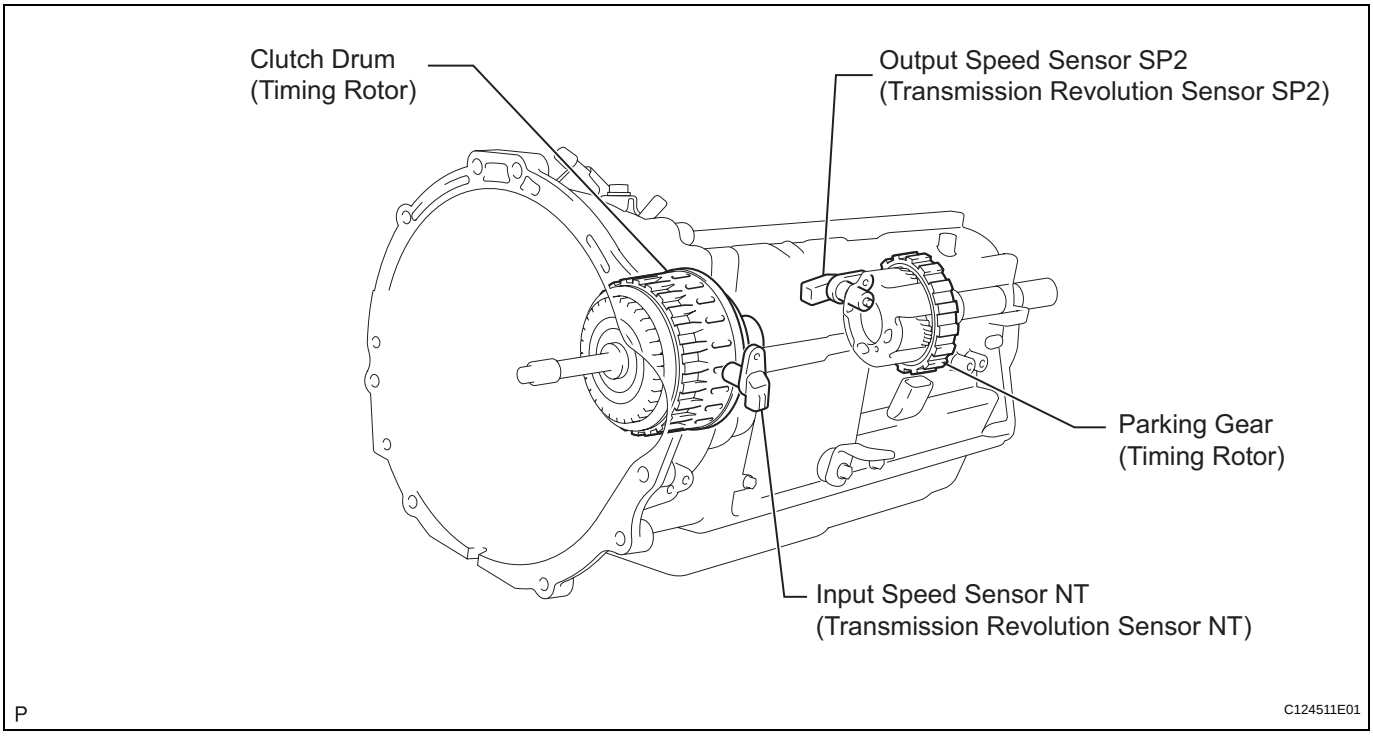
OK

REPLACE ECM

DTC	P0722	Output Speed Sensor Circuit No Signal

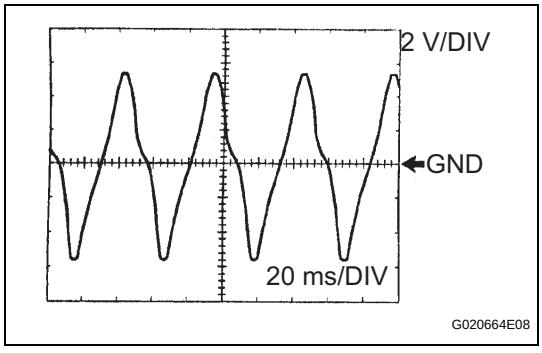
DESCRIPTION

The speed sensor SP2 detects the rotation speed of the transmission output shaft and sends signals to the ECM. The ECM determines the vehicle speed based on these signals. An AC voltage is generated in the speed sensor SP2 coil as the parking gear mounted on the rear planetary gear assembly rotates, and this voltage is sent to the ECM. The parking gear on the rear planetary gear is used as the timing rotor for this sensor. The gear shift point and lock-up timing are controlled by the ECM based on the signals from the vehicle speed sensor and the throttle position sensor.



DTC No.	DTC Detection Conditions	Trouble Areas
P0722	All conditions below are detected 500 times or more continuously (1-trip detection logic) (a) No signal from speed sensor (SP2) is input to ECM while 4 pulses of No. 1 vehicle speed sensor signal are sent (b) Vehicle speed is 5.59 mph (9 km/h) or more for at least 4 seconds (c) Park/neutral position switch is OFF	• Open or short in speed sensor (SP2) circuit • Speed sensor (SP2) • ECM

Reference (Using an oscilloscope):



AT

Check the waveform between terminals SP2+ and SP2- of the ECM connector.

Standard:

Refer to the illustration.

Terminal	SP2+ - SP2-
Tool setting	2 V/DIV, 20 ms/DIV
Vehicle condition	Vehicle speed 12 mph (20 km/h)

MONITOR DESCRIPTION

The output speed sensor monitors the output shaft speed. The ECM controls the gearshift point and the lock up timing based on the signals from the output speed sensor and throttle position sensor.
If the ECM detects no signal from the output shaft speed sensor even while the vehicle is moving, it will conclude that is a malfunction in the output speed sensor. The ECM will illuminate the MIL and set the DTC.

MONITOR STRATEGY

Related DTCs	P0722: Speed sensor SP2/Verify pulse input
Required sensors/Components	Speed sensor SP2
Frequency of operation	Continuous
Duration	500 output shaft revolutions
MIL operation	Immediate
Sequence of operation	None

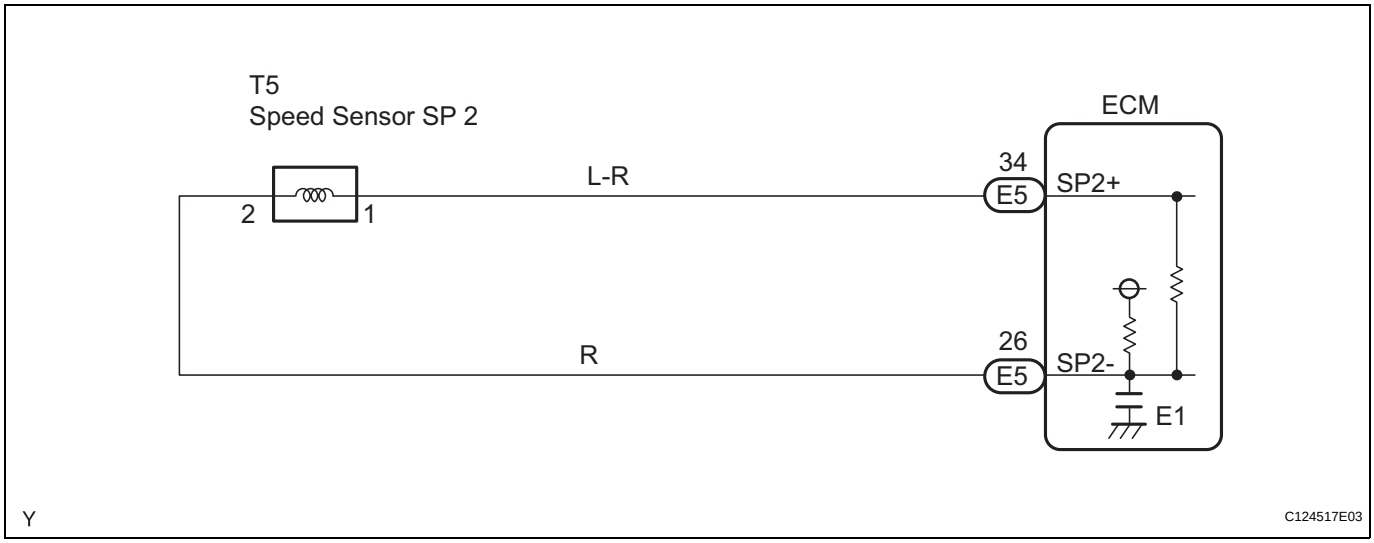
TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748 - P0799: Trans solenoid (range)
Vehicle speed sensor pulse input	4 times
Vehicle speed range (4 seconds or more)	5.59 mph (9 km/h) or more
Park/neutral position switch	OFF
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Output speed sensor pulse input	No input

WIRING DIAGRAM



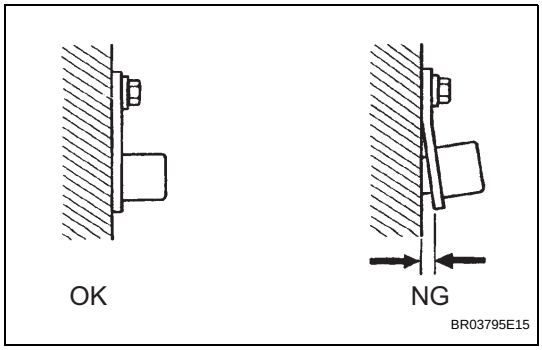
AT

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.
1. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
2. Turn the ignition switch to the ON position.
3. Push the "ON" button of the tester.
4. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
5. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (SP2)	Counter Gear Speed display/ min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h) [HINT] Equal to vehicle speed

HINT:
- SPD (SP2) is always 0 while driving:
  Open or short in the sensor or circuit.
- The SPD (SP2) value displayed on the tester is much lower than the actual vehicle speed:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION



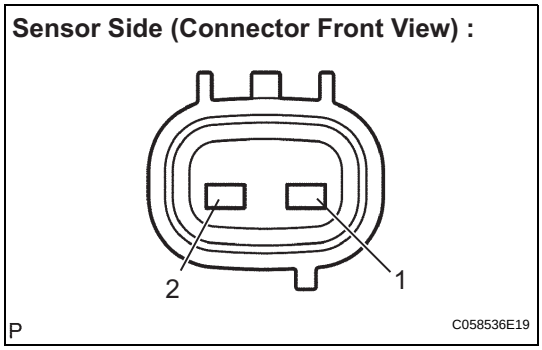
(a) Check the speed sensor (SP2) installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (SP2)**

OK

2 INSPECT SPEED SENSOR (SP2)

Sensor Side (Connector Front View) :



(a) Disconnect the speed sensor (SP2) connector from the transmission.
(b) Measure the resistance.
Standard resistance

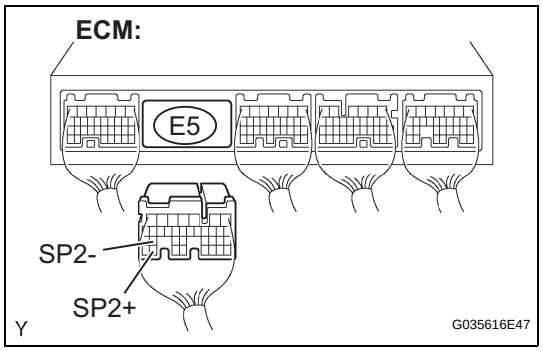
Tester Connection	Specified Condition
1 - 2	560 to 680 Ω at 20°C (68°F)

NG → **REPLACE SPEED SENSOR (SP2)**

AT

OK

3	CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-34 (SP2+) - E5-26 (SP2-)	560 to 680 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-34 (SP2+) - Body ground	10 kΩ or higher
E5-26 (SP2-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0748	The ECM checks for an open or short in the shift solenoid valve SL1 circuit (1-trip detection logic) • Output signal duty equals to 100 %. (NOTE: SL1 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL1 circuit. The ECM controls the gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other functioning shift solenoid valves "ON/OFF". (If an open or short circuit is detected, the ECM cuts the current to the circuit.)
If the ECM detects an open or short in the shift solenoid valve SL1 circuit, the ECM determines that there is a malfunction (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0748 : Shift solenoid valve SL1/Range check
Required sensors/Components	Shift solenoid valve SL1
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU commanded duty	Less than 75 %
Ignition switch	ON
Starter	OFF

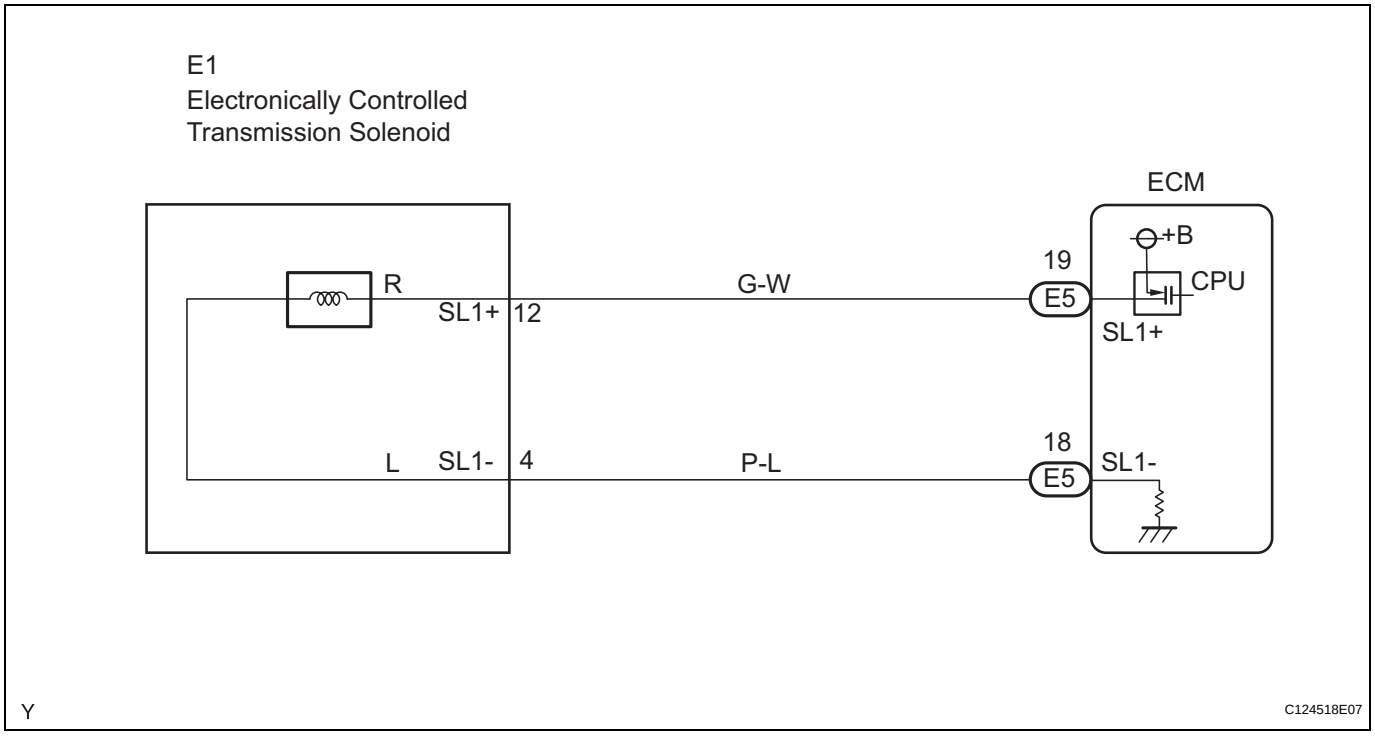
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

COMPONENT OPERATING RANGE

Output signal duty	Less than 100 %

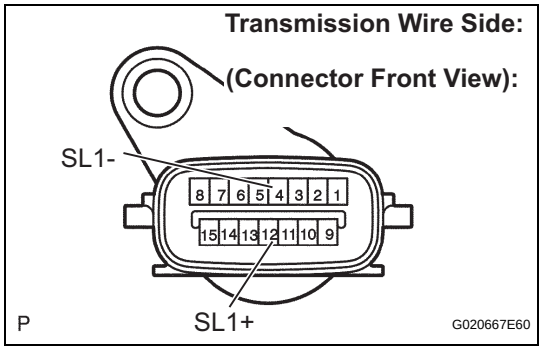
WIRING DIAGRAM



HINT:
The shift solenoid valve SL1 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SL1	OFF	OFF	OFF	OFF	ON

1	INSPECT TRANSMISSION WIRE (SL1)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
12 (SL1+) - 4 (SL1-)	5.0 to 5.6 Ωat 20°C (68°F)

(c) Measure the resistance.
Standard resistance (Check for short)

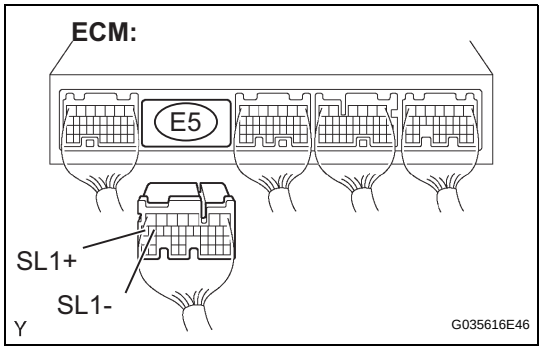
Tester Connection	Specified Condition
12 (SL1+) - Body ground	10 kΩ or higher
4 (SL1-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

AT

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission connector to the transmission.
(b) Disconnect the connector from the ECM.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-19 (SL1+) - E5-18 (SL1-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

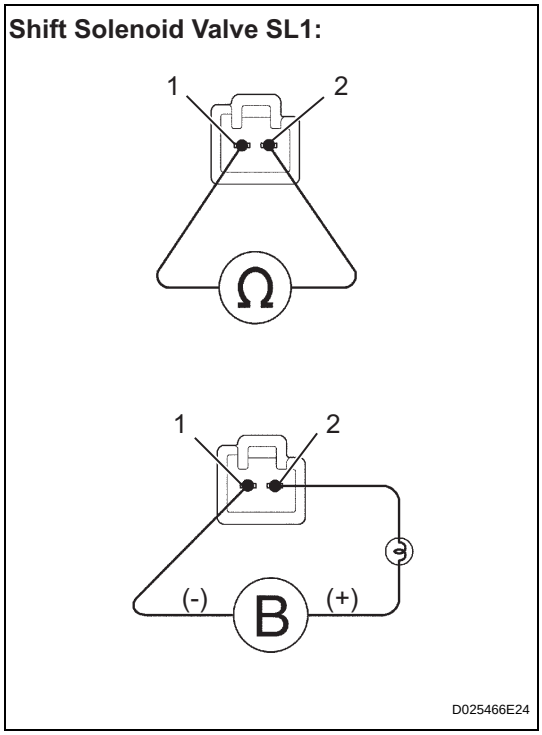
Tester Connection	Specified Condition
E5-19 (SL1+) - Body ground	10 kΩ or higher
E5-18 (SL1-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SL1



(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL1**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AT

DTC	P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0751	S1 stuck ON malfunction*1: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 1st. (b) When the ECM directs the gearshift to switch to 1st gear, the actual gear is also shifted to 1st.	• Shift solenoid valve S1 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	S1 stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 4th. (b) When the ECM directs the gearshift to switch to 5th gear, the actual gear is also shifted to 5th.	• Shift solenoid valve S1 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under S1 stuck ON malfunction	1st	2nd	2nd	1st	N*
*2: Actual gear position under S1 stuck OFF malfunction	4th	3rd	3rd	4th	5th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S1. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0751: Shift solenoid valve S1/OFF malfunction Shift solenoid valve S1/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve S1
Required sensors/Components (Related)	Vehicle speed sensor, Throttle position sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous
Duration	OFF malfunctions (A) and (B): 0.4 seconds OFF malfunction (C): Immediate ON malfunctions (A), (B) and (C): 0.4 seconds ON malfunction (D): 3 seconds ON malfunction (E): 0.5 seconds
MIL operation	2 driving cycles

Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B), (C) and ON malfunctions (A), (B), (C), (D), (E).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P0799: Trans solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting

OFF malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	8 % or more and 6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

Current ECM selected gear	5th
Last ECM selected gear	4th
Continuous time of ECM selecting 4th gear	2 seconds or more
Actual gear when ECM selected 4th gear	4th

OFF malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (C)

ECM selected gear	3rd
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (D)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

ON malfunction (E)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]
All of the following conditions are met: OFF malfunctions (A), (B) and (C)
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

OFF malfunction (B)

Turbine speed/Output speed	0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (C)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]
Either of the following conditions is met:

- ON malfunctions (A) and (B)
- ON malfunction (B) or (C) and ON malfunction (D) or (E)

ON malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (B)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (C)

Turbine speed/Output speed	1.91 to 2.35 (Actual gear is 2nd)

ON malfunction (D)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (E)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S1 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve S1	ON	ON	OFF	OFF	OFF

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0751)

(a) Connect the the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

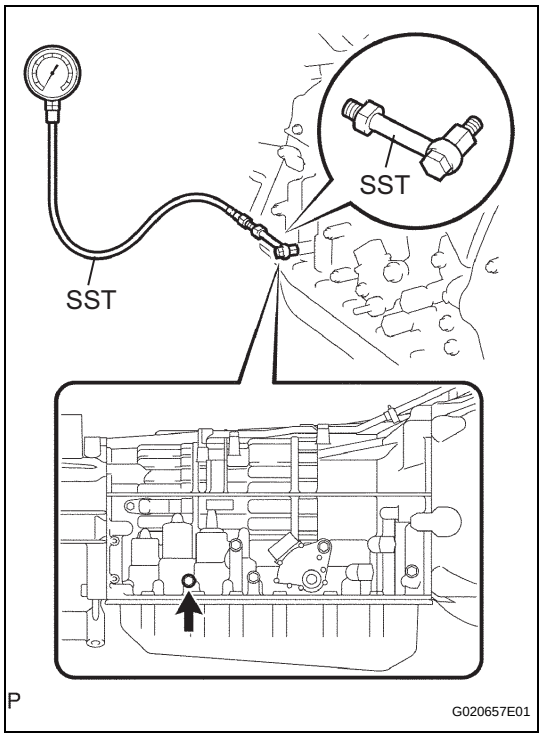
Display (DTC Output)	Proceed to
Only "P0751" is output	A
"P0751" and other DTCs	B

HINT:
If any codes besides "P0751" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP)



NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**
- **Be careful to prevent SST's hose from interfering with the exhaust pipe.**
- **Perform the test with the A/C OFF.**

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.

The DATA LIST can be displayed during the ACTIVE TEST.

(a) Remove the test plug on the transmission case center right side and connect SST.

SST 09992-00095 (09992-00231, 09992-00271)

(b) Connect the intelligent tester to the DLC3.

(c) Start the engine and warm it up.

(d) Measure the line pressure with SST.

(e) Turn the intelligent tester ON.

(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.

(g) Follow the instructions on the tester and perform the ACTIVE TEST.

(h) Measure the line pressure with SST.

Item	Test Details	Diagnostic Note
LINE PRESS UP*	[Test Details] Operate shift solenoid SLT and raise line pressure. [Vehicle Condition] • Vehicle stopped • IDL: ON HINT: OFF: Line pressure up (when Active Test of "LINE PRESS UP" is performed, ECM commands SLT solenoid to turn OFF) ON: No action (normal operation)	-

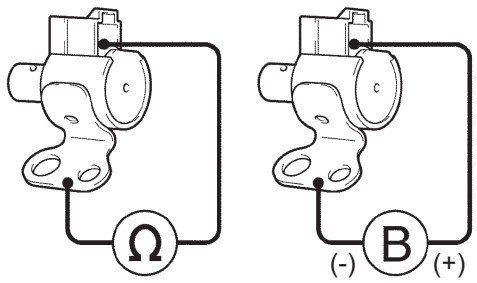
*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well. Please note that the pressure values in the ACTIVE TEST and HYDRAULIC TEST are different.

NG → REPLACE SHIFT SOLENOID VALVE SLT

OK

3	INSPECT SHIFT SOLENOID VALVE S1

Shift Solenoid Valve S1:



A110986E04

(a) Remove the shift solenoid valve S1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE S1**

OK

4	INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0756	S2 stuck ON malfunction*1; The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 2nd. (b) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Shift solenoid valve S2 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	S2 stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is also shifted to 1st. (b) When the ECM directs the gearshift to switch to 2nd gear, the actual gear is shifted to 1st. (c) When the ECM directs the gearshift to switch to 5th gear, the actual gear is also shifted to 5th.	• Shift solenoid valve S2 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under S2 stuck ON malfunction	2nd	2nd	3rd	3rd	N*
*2: Actual gear position under S2 stuck OFF malfunction	2nd	1st	4th	4th	5th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S2. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0756: Shift solenoid valve S2/OFF malfunction Shift solenoid valve S2/ON malfunction

Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]
All of the following conditions are met: OFF malfunctions (A), (B), (C) and (D)
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

OFF malfunction (B)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

OFF malfunction (C)

Turbine speed/Output speed	0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (D)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]
ON malfunction (A) or (B) and ON malfunction (C) or (D) are met:

ON malfunction (A)

Turbine speed/Output speed	1.91 to 2.35 (Actual gear is 2nd)

ON malfunction (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

ON malfunction (C)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (D)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve S2	OFF	ON	ON	OFF	OFF

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0756)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".

(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0756" is output	A
"P0756" and other DTCs	B

HINT:
If any codes besides "P0756" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

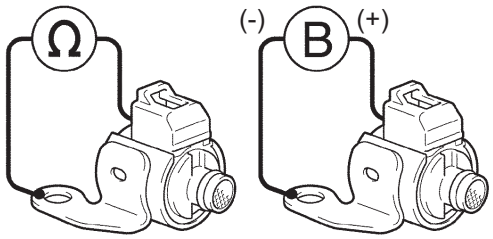
2 **PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-79)**

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

3 **INSPECT SHIFT SOLENOID VALVE S2**

Shift Solenoid Valve S2:



A110987E04

(a) Remove the shift solenoid valve S2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S2) - Solenoid Body (S2)	11 to 15 Ωat 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE S2**

OK

4 **INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)**

OK:
There are no foreign objects on any valves and they operate smoothly.

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0771	Shift Solenoid "E" Performance (Shift Solenoid Valve SR)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0771	SR stuck ON malfunction*1: The ECM determines that there is a malfunction when the following condition is met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 2nd gear, the engine overruns (clutch slips)	• Shift solenoid valve SR remains open • Shift solenoid valve SL1 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	SR stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following condition is met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 5th gear, the actual gear is shifted to 4th.	• Shift solenoid valve SR remains closed • Shift solenoid valve SL1 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under SR stuck ON malfunction	1st	N*	3rd	4th	5th
*2: Actual gear position under SR stuck OFF malfunction	1st	2nd	3rd	4th	4th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve SR or SL1. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0771: Shift solenoid valve SR/OFF malfunction Shift solenoid valve SR/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SR
Required sensors/Components (Related)	Speed sensor (NT), Speed sensor (SP2), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	OFF malfunction (A): 0.4 seconds OFF malfunctions (B) and (C): Immediate ON malfunction: 0.15 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B), (C) and ON malfunction.

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P0799: Trans solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting

OFF malfunction (A)

ECM selected gear	5th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

Current ECM selected gear	5th
Last ECM selected gear	4th
Continuous time of ECM selecting 4th gear	2 seconds or more

OFF malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th

ON malfunction

Current ECM selected gear	2nd
Last ECM selected gear	1st
Throttle valve opening angle (During transition from 1st to 2nd gear)	5.5 % or more at engine speed of 3,000 rpm (Conditions vary with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

All of the following conditions are met: OFF malfunctions (A), (B) and (C)

2 detections are necessary in 1 driving cycle.

1st detection; temporary flag ON

2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

OFF malfunction (B)

Turbine speed/Output speed	No change as follow: 0.93 to 1.07 (Actual gear is 4th) ↓ 0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (C)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON

Turbine speed - Output speed x 1st gear ratio	150 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve SR and S1 are turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SR	OFF	OFF	OFF	OFF	ON
Shift solenoid valve SL1	OFF	OFF	OFF	OFF	ON

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0771)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0771" is output	A
P0771" and other DTCs	B

HINT:
If any codes besides "P0771" are output, perform troubleshooting for those DTCs first

B → GO TO DTC CHART

A

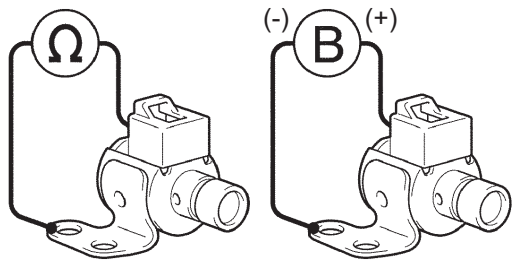
2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-79)

NG → REPLACE SHIFT SOLENOID VALVE SLT

OK

3	INSPECT SHIFT SOLENOID VALVE SR

Shift Solenoid Valve SR:



A110988E05

(a) Remove the shift solenoid valve SR.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (SR) - Solenoid Body (SR)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise

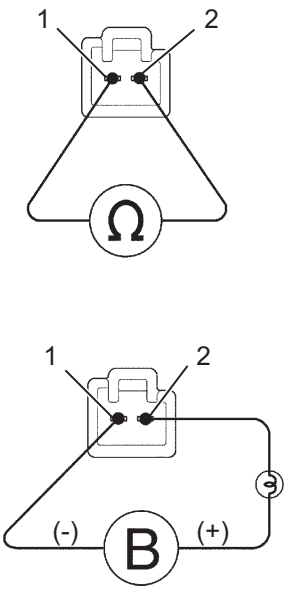
NG → REPLACE SHIFT SOLENOID VALVE SR

OK

AT

4	INSPECT SHIFT SOLENOID VALVE SL1

Shift Solenoid Valve SL1:



D025466E24

(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL1**

OK

5	INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0776	SL2 stuck ON malfunction*1: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 4th gear, the actual gear is also shifted to 4th. (b) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Shift solenoid valve SL2 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under SL2 stuck ON malfunction	1st	2nd	3rd	4th	N*

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" of the shift solenoid valve SL2.
The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0776: Shift solenoid valve SL2/ON malfunction

Required sensors/Components (Related)	Speed sensor (NT), Speed sensor (SP2), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	ON malfunctions (A), (B) and (C): 0.4 seconds ON malfunction (D): 3 seconds ON malfunction (E): 0.5 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all ON malfunctions (A), (B), (C), (D) and (E).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P0799: Trans solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally

Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	3rd
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (C)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (D)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

ON malfunction (E)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[ON malfunction]

Both of the following conditions are met:

- ON malfunctions (A) and (B), or ON malfunction (C)
- ON malfunction (D) or (E)

ON malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

ON malfunction (C)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

ON malfunction (D)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (E)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SL2	ON	ON	ON	ON	OFF

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0776)**

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0778	The ECM checks for an open or short in the shift solenoid valve SL2 circuit (1-trip detection logic): • Output signal duty equals 100 %. (NOTE: SL2 output signal duty is less than 100 % under normal conditions)	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The ECM controls the gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other functioning shift solenoid valves "ON/OFF". (If an open or short circuit is detected, the ECM cuts the current to the circuit.)
If the ECM detects an open or short in the shift solenoid valve SL2 circuit, the ECM determines that there is a malfunction (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0778: Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate

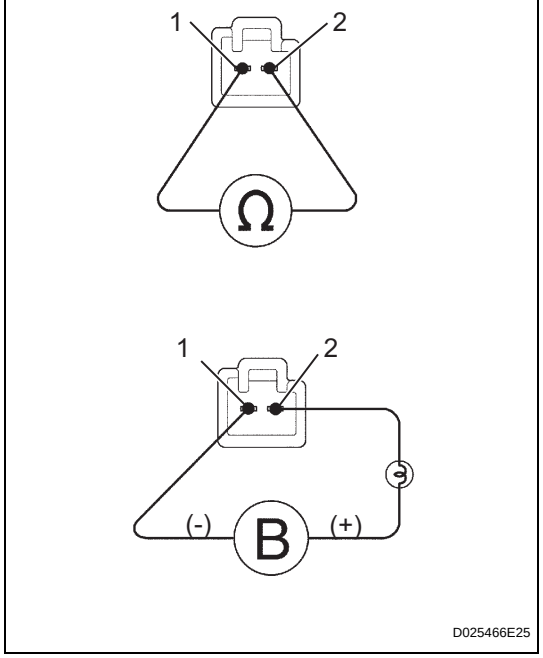
3 INSPECT SHIFT SOLENOID VALVE SL2

Shift Solenoid Valve SL2:



(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

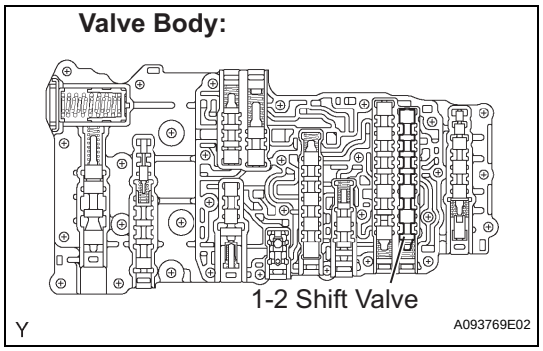
NG → **REPLACE SHIFT SOLENOID VALVE SL2**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0781	1-2 Shift (1-2 Shift Valve)

DESCRIPTION



The 1-2 shift valve performs shifting to 1st gear and other gears.

DTC No.	DTC Detection Conditions	Trouble Areas
P0781	1-2 shift valve malfunction: The ECM determines that there is a malfunction when the following conditions (a) and (b), or (a) and (c) are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 2nd gear, the actual gear is shifted to 1st. (b) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 3rd. (c) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Valve body is blocked up or stuck (1-2 shift valve) • Shift solenoid valve SLT remains open or closed • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a 1-2 shift valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Actual gear position under malfunction	1st	1st	3rd	3rd	N*

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates that the 1-2 shift valve in the valve body is locked in the direction of the spring compression. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF" and switching oil pressure to the valves in the valve body.
The ECM calculates the "actual" transmission gear by comparing the signals from the input speed sensor (NT) and the output speed sensor (SP2). The ECM can detect many mechanical problems in the shift solenoids, valve body, and the transmission clutches, brakes, and gears. If the ECM detects that the actual gear position and the commanded gear position are different, it will illuminate the MIL and store the DTC .

MONITOR STRATEGY

Related DTCs	P0781: Valve body/Rationality check
Required sensors/Components (Main)	Valve body
Required sensors/Components (Related)	Automatic transmission assembly, Speed sensor (NT), Speed sensor (SP2), Vehicle speed sensor, Throttle position sensor

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Condition (A) and Conditions (B), (C) or (D) are met:

Condition (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

Condition (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

Condition (C)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

Condition (D)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0781)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0781" is output	A
"P0781" and other DTCs	B

HINT:
If any codes besides "P0781" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SHIFT)

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- Gear positions in the event of a solenoid valve mechanical problem:

Gearshift operated by tester	1st	2nd	3rd	4th	5th
Actual gear position under malfunction	1st	1st	3rd	3rd	N*

N*: Neutral
OK:
Gear position changes in accordance with the tester operation.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

3	**PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-79)**

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

4	**CLEAR DTC AND PERFORM RUNNING TEST**

(a) Clear the DTC, and check for the DTC again after conducting the "MONITOR DRIVE PATTERN FOR ECT TEST" (See page AT-19).
OK:
No DTC

AT

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

END

DTC	P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)

DTC	P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0973	ECM detects short in solenoid valve S1 circuit 2 times when solenoid valve S1 is operated (1-trip detection logic)	• Short in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0974	ECM detects open in solenoid valve S1 circuit 2 times when solenoid valve S1 is not operated (1-trip detection logic)	• Open in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve S1 circuit. When there is an open or short circuit in any shift solenoid valve circuits, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve S1 is on, if the resistance is 8 Ω or less, the ECM determines that there is a short malfunction in the shift solenoid valve S1 circuit.
When the shift solenoid valve S1 is off, if the resistance is 100 kΩ or more, the ECM determines that the shift solenoid valve S1 circuit is open (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0973: Shift solenoid valve S1/Range check (Low resistance) P0974: Shift solenoid valve S1/Range check (High resistance)
Required sensors/Components	Shift solenoid valve S1
Frequency of operation	Continuous
Duration	0.064 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0973: Range check (Low resistance)

The monitor will run whenever the following DTCs are not present.	None
Shift solenoid valve S1	ON

P0974: Range check (High resistance)

The monitor will run whenever the following DTCs are not present.	None
Shift solenoid valve S1	OFF

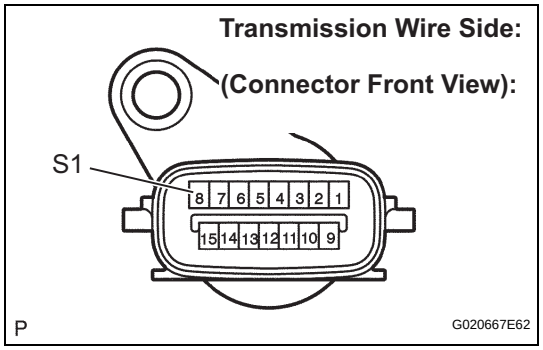
1	INSPECT TRANSMISSION WIRE (S1)



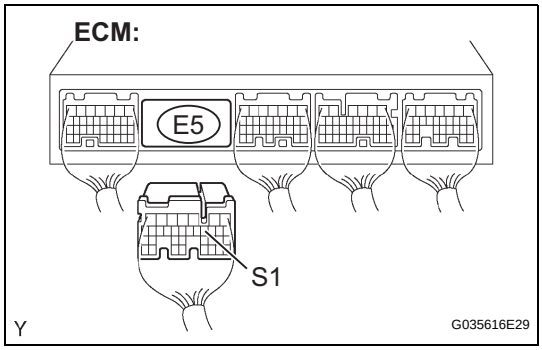
(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
8 - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

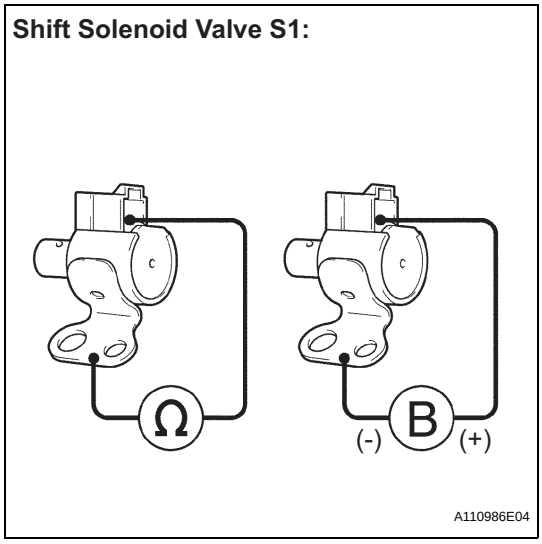
Tester Connection	Specified Condition
E5-11 (S1) - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE S1



(a) Remove the shift solenoid valve S1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE S1**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0976	Shift Solenoid "B" Control Circuit Low (Shift Solenoid Valve S2)

DTC	P0977	Shift Solenoid "B" Control Circuit High (Shift Solenoid Valve S2)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0976	ECM detects short in solenoid valve S2 circuit 2 times when solenoid valve S2 is operated (1-trip detection logic)	• Short in shift solenoid valve S2 circuit • Shift solenoid valve S2 • ECM
P0977	ECM detects open in solenoid valve S2 circuit 2 times when solenoid valve S2 is not operated (1-trip detection logic)	• Open in shift solenoid valve S2 circuit • Shift solenoid valve S2 • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve S2 circuit. When there is an open or short circuit in any shift solenoid valve circuits, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve S2 is on, if the resistance is 8 Ω or less, the ECM determines that there is a short malfunction in the shift solenoid valve S2 circuit.
When the shift solenoid valve S2 is off, if the resistance is 100 kΩ or more, the ECM determines that the shift solenoid valve S2 circuit is open (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0976: Shift solenoid valve S2/Range check (Low resistance) P0977: Shift solenoid valve S2/Range check (High resistance)
Required sensors/Components	Shift solenoid valve S2

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0985	Shift Solenoid "E" Control Circuit Low (Shift Solenoid Valve SR)

DTC	P0986	Shift Solenoid "E" Control Circuit High (Shift Solenoid Valve SR)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0985	ECM detects short in solenoid valve SR circuit 2 times when solenoid valve SR is operated (1-trip detection logic)	• Short in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM
P0986	ECM detects open in solenoid valve SR circuit 2 times when solenoid valve SR is not operated (1-trip detection logic)	• Open in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve SR circuit. When there is an open or short circuit in any shift solenoid valve circuits, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve SR is on, if the resistance is 8 Ω or less, the ECM determines that there is a short malfunction in the shift solenoid valve SR circuit.
When the shift solenoid valve SR is off, if the resistance is 100 kΩ or more, the ECM determines that the shift solenoid valve SR circuit is open (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0985: Shift solenoid valve SR/Range check (Low resistance) P0986: Shift solenoid valve SR/Range check (High resistance)
Required sensors/Components	Shift solenoid valve SR
Frequency of operation	Continuous
Duration	0.064 seconds

Tester Connection	Specified Condition
E5-9 (SR) - Body ground	11 to 15 Ω at 20°C (68°F)

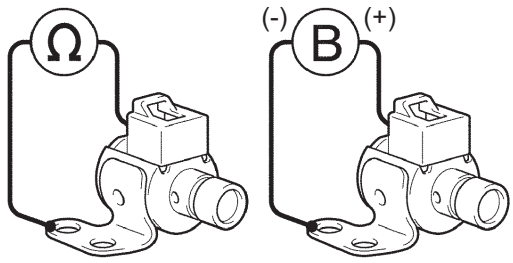
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SR

Shift Solenoid Valve SR:



A110988E05

(a) Remove the shift solenoid valve SR.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (SR) - Solenoid Body (SR)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

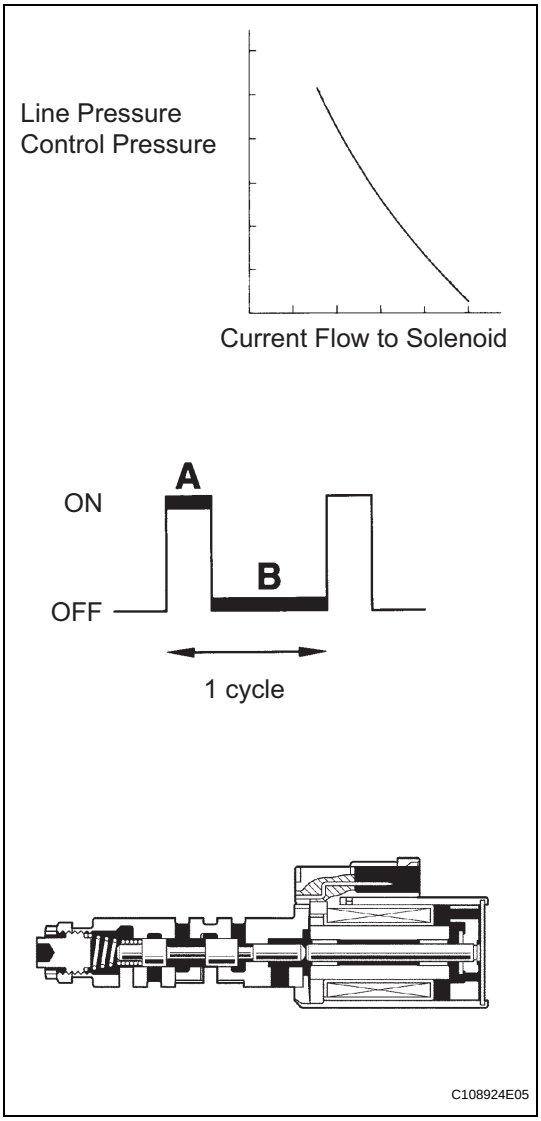
NG → **REPLACE SHIFT SOLENOID VALVE SR**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

DESCRIPTION



The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty ratio* of the SLT solenoid valve output signal to control the hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.
*: The duty ratio is the ratio of the period of continuity in one cycle.
For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio=A/(A+B) x 100 (%)

DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects malfunctions on SLT (ON side) according to the revolution difference between the turbine and the output shaft, and also by monitoring the oil pressure. (2 trip detection logic)	• Shift solenoid valve SLT remains open or closed • Shift solenoid valve S1, S2, SR, SL1 or SL2 remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

The ECM calculates the amount of heat absorbed by the friction material based on the difference in revolution (clutch slippage) between the turbine and output shaft. The ECM turns on the MIL and outputs this DTC when the amount of heat absorption exceeds the specified value.
When the shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.
NOTE: If driving continues under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Related DTCs	P2714 : Shift solenoid valve SLT/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SLT
Required sensors/Components (Related)	Valve body, ATF temperature sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous
Duration	Immediate
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Transmission fluid temperature sensor "A" circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
Pressure control solenoid "D" (SLT) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
ATF temperature	10°C (50°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Summation of C1 clutch heat generations = SUM (Turbine speed - Output speed x Temporary gear ratio)	Specified value

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.
1. Warm up the engine.

2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ LINE PRESS UP".
8. According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT to raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON [HINT] OFF: Line pressure up (When the active test of "LINE PRESS UP" is performed the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well.

HINT:

- The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.
- Normally, the line pressure detected in the ACTIVE TEST is approximately half of the value detected in the HYDRAULIC TEST's stall test.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2714)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P2714" is output	A
"P2714" and other DTCs	B

HINT:
If any codes besides "P2714" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-79)

NG → **Go to step 9**

OK

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SHIFT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester ON.
(d) Clear the DTC (See page AT-30).
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(f) Follow the instructions on the tester and perform the ACTIVE TEST.

HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position. [Vehicle Condition] • IDL: ON • Less than 30 mph (50 km/h) [Other information] • Press "→" button: Shift up • Press "←" button: Shift down	The operation of the shift solenoid valves can be checked.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shift must be performed with the accelerator pedal released.
- The 5th to 4th down-shift must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position commanded by the ECM is shown in the DATA LIST (SHIFT) display on the intelligent tester.

(g) Compare the ECM gear shift command and the actual gear position.

ECM gear shift command			1st	2nd	3rd	4th	5th	Proceed to
Actual gear position under malfunction	Shift solenoid S1	Stuck ON	1st	2nd	2nd	1st	N*1	A
		Stuck OFF	4th	3rd	3rd	4th	5th	
	Shift solenoid S2	Stuck ON	2nd	2nd	3rd	3rd	N*1	B
		Stuck OFF	1st	1st	4th	4th	5th	
	Shift solenoid SL2	Stuck ON	1st	2nd	3rd	4th	N*1	C
		Stuck OFF	1st	2nd	3rd	4th	5th	
	Shift solenoid SR	Stuck ON*2	1st	2nd	3rd	4th	5th	D
		Stuck OFF	1st	2nd	3rd	4th	4th	

HINT:
- *1: Neutral
- *2: Shift shock increases extremely when a malfunction occurs.
- Gear shift can be determined by paying attention to changes in rpm.

B	Go to step 5
C	Go to step 6
D	Go to step 7
OK	Go to step 9

A

4	INSPECT SHIFT SOLENOID VALVE S1 (See page AT-108)

OK

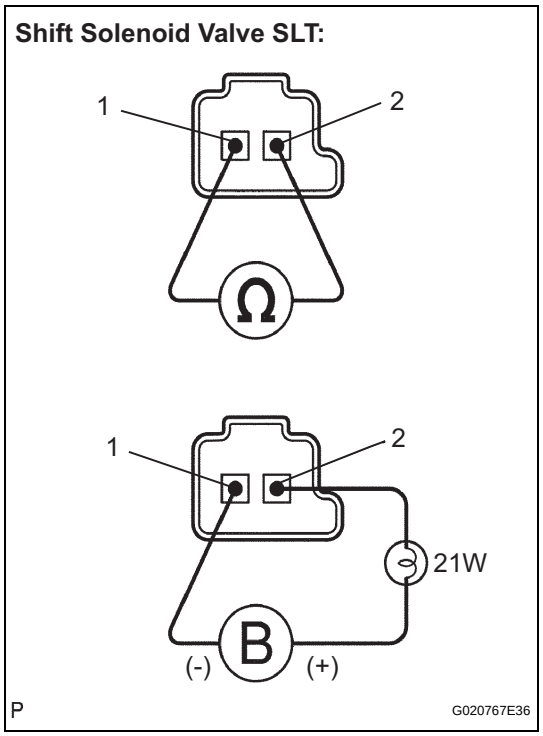
8	INSPECT SHIFT SOLENOID VALVE SL1 (See page AT-74)

OK	Go to step 10

NG

REPLACE SHIFT SOLENOID VALVE SL1

9 **INSPECT SHIFT SOLENOID VALVE SLT**



(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

10 **INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)**

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

11 **INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY**

(a) Check the torque converter clutch assembly (See page AT-166).
OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION

Refer to DTC P2714 (See page AT-110).

DTC No.	DTC Detection Conditions	Trouble Areas
P2716	Open or short is detected in shift solenoid valve SLT circuit for 1 second or more while driving (1-trip detection logic)	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM

MONITOR DESCRIPTION

When an open or short is detected in the linear solenoid valve (SLT) circuit, the ECM interprets this as a fault.
The ECM turns on the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check
Required sensors/Components	Shift solenoid valve SLT
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU requested duty ratio to SLT	Less than 75 %
Ignition switch	ON
Starter	OFF

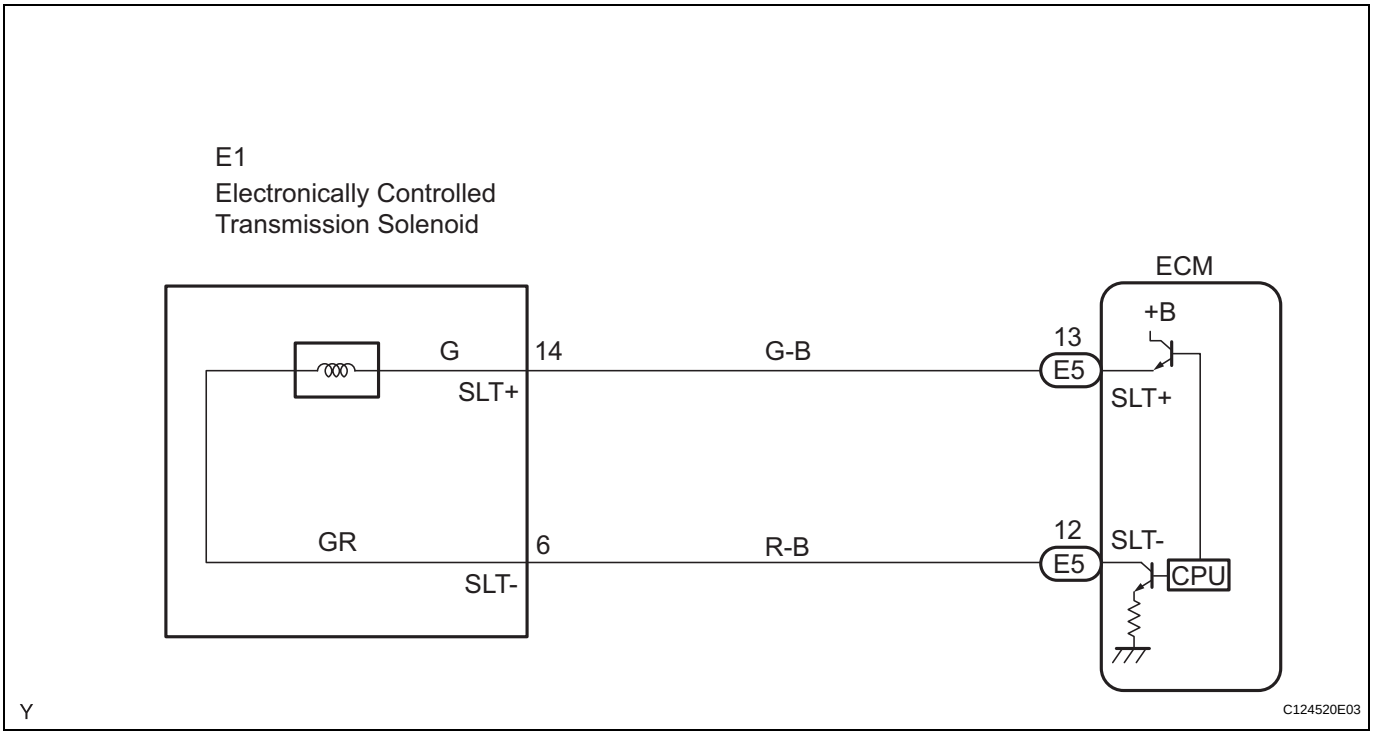
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

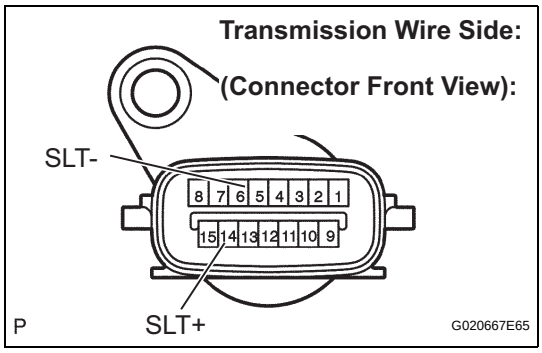
COMPONENT OPERATING RANGE

Output signal duty ratio	Less than 100 %

WIRING DIAGRAM



1	INSPECT TRANSMISSION WIRE (SLT)



(a) Disconnect the transmission wire connector from the transmission.

(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
14 (SLT+) - 6 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)

(c) Measure the resistance.

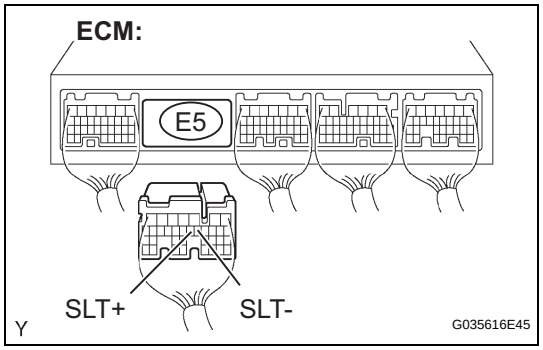
Standard resistance (Check for short)

Tester Connection	Specified Condition
14 (SLT+) - Body ground	10 kΩ or higher
6 (SLT-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-13 (SLT+) - E5-12 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

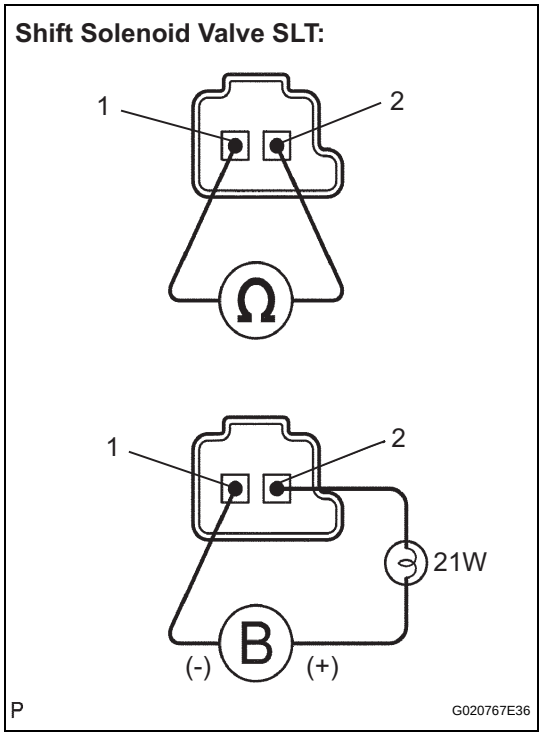
Tester Connection	Specified Condition
E5-13 (SLT+) - Body ground	10 kΩ or higher
E5-12 (SLT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2740	Transmission Fluid Temperature Sensor "B" Circuit

DTC	P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input

DTC	P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input

DESCRIPTION

The No. 2 Automatic Transmission Fluid (ATF) temperature sensor is on the transmission, just before the oil cooler inlet pipeline.

If the ECM detects an abnormally high ATF temperature through this sensor, it illuminates the warning light to indicate the problem to the driver.

HINT:

- The ATF temperature is liable to increase under vehicle conditions such as towing, climbing hills and in traffic.
- If there is a short malfunction in the No. 2 ATF temperature sensor, the ECM receives signals from the sensor, which indicate that the ATF temperature is 150°C (302°F) or more.

The symptoms and recovery conditions, when the sensor is normal or there is a short malfunction in the sensor, are as shown in the table below.

No.2 ATF Temperature Sensor Status	Detection Condition	Symptom	Recovery Condition
Sensor is normal	• ATF temperature more than 150°C (302°F)	• ATF temperature warning light remains on	• ATF temperature less than 135°C (275°F) *2
	• ATF temperature more than 130°C (266°F)	• Shift point too high	• ATF temperature less than 110°C (230°F)
	When the conditions (a) and (b) are satisfied continually (a) ATF temperature more than130°C (266°F) (b) Engine coolant temperature more than 95°C (203°F)	• Lock-up in 3rd gear *1	• ATF temperature less than 110°C (230°F) *2 and engine coolant temperature less than 95°C (203°F)
Sensor is short	• Any conditions	• ATF temperature warning light remains on • Shift point too high	• Symptoms still occur
	• Engine coolant temperature more than 95°C (203°F)	• Lock-up in 3rd gear *1	• Symptom still occurs

HINT:

*1: When the ATF temperature is normal, the transmission locks up in 5th gear with the shift lever in the D position and in 4th gear with the shift lever in the 4th position.

*2: When the ATF temperature is in the normal range, it decreases to less than 135°C (275°F) within 5 minutes of the shift lever being moved to the P or N position, while idling.

DTC No.	DTC Detection Conditions	Trouble Areas
P2740	Conditions (a) and (b) are detected momentarily within 0.5 seconds when neither P2742 nor P2743 is detected (1-trip detection logic) (a) No. 2 ATF temperature sensor resistance (voltage) is less than 25 Ω (0.046 V) (b) No. 2 ATF temperature sensor resistance (voltage) is more than 156 kΩ (4.915 V) HINT: Within 0.5 seconds the malfunction changes from (a) to (b) or (b) to (a)	• Open or short in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P2742	No. 2 ATF temperature sensor resistance (voltage) is less than 25 Ω (0.046 V) for 0.5 seconds or more (1-trip detection logic)	• Short in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM
P2743	No. 2 ATF temperature sensor resistance (voltage) is more than 156 kΩ (4.915 V) for 0.5 seconds or more 15 minutes or more after starting engine (1-tip detection logic)	• Open in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the No. 2 Automatic Transmission Fluid (ATF) temperature sensor circuit. The No. 2 ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the No. 2 ATF temperature sensor circuit. If the resistance (voltage) of the No. 2 ATF temperature sensor is less than 25 Ω (0.046 V) or more than 156 kΩ (4.915 V), the ECM interprets this as a fault in the No. 2 ATF temperature sensor or its wiring. The ECM turns on the MIL and stores a DTC.

MONITOR STRATEGY

Related DTCs	P2740 : No. 2 ATF temperature sensor/Range check (Fluttering) P2742 : No. 2 ATF temperature sensor/Range check (Low voltage) P2743 : No. 2 ATF temperature sensor/Range check (High voltage)
Required sensors/Components	No. 2 ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P2740: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2742: Range check (Low voltage)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2743: Range check (High voltage)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P2740: Range check (Fluttering)

No. 2 ATF temperature sensor voltage	Less than 0.046 V or More than 4.915 V

P2742: Range check (Low voltage)

No. 2 ATF temperature sensor voltage	Less than 0.046 V

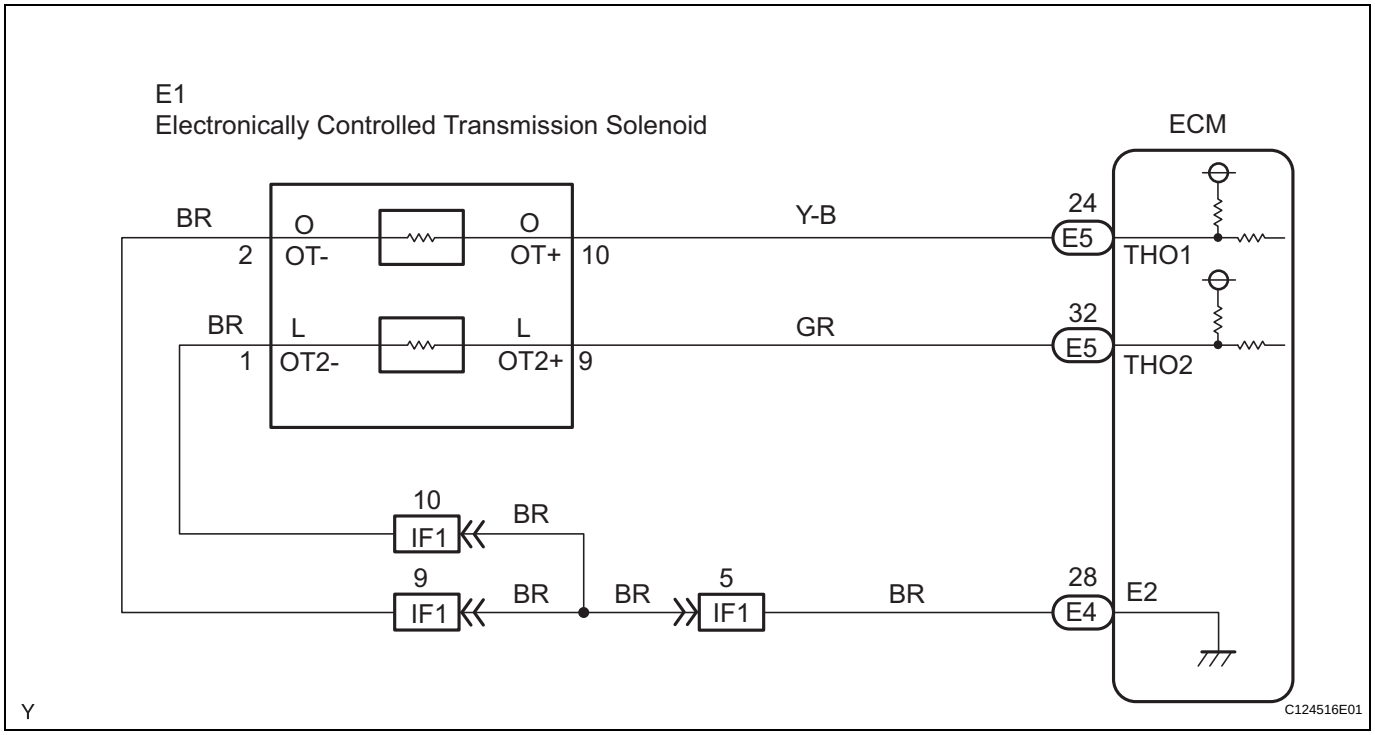
P2743: Range check (High voltage)

No. 2 ATF temperature sensor voltage	More than 4.915 V

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature up to approximately 130°C (266°F)

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors, actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST"/ A/T.
7. According to the display on the tester, read the "DATA LIST".

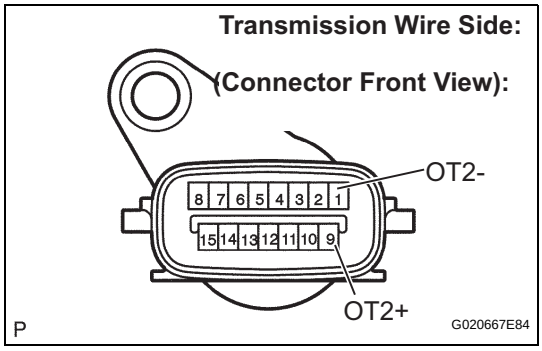
Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP2	No. 2 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

HINT:
When DTC P2742 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P2743 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO2 (OT2) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

1 INSPECT TRANSMISSION WIRE (NO.2 ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 (OT2-) - 9 (OT2+)	79 Ω to 156 kΩ

(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
1 (OT2-) - Body ground	10 kΩ or higher
9 (OT2+) - Body ground	10 kΩ or higher

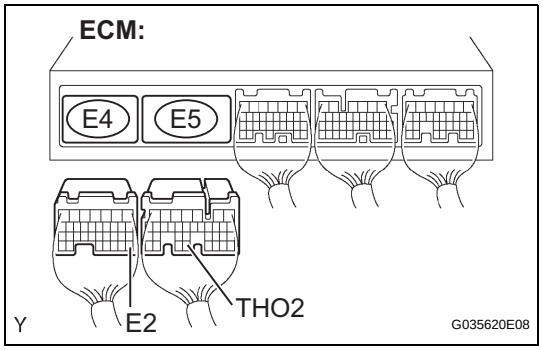
HINT:
If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connectors.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-32 (THO2) - E4-28 (E2)	79 Ω to 156 kΩ

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-32 (THO2) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

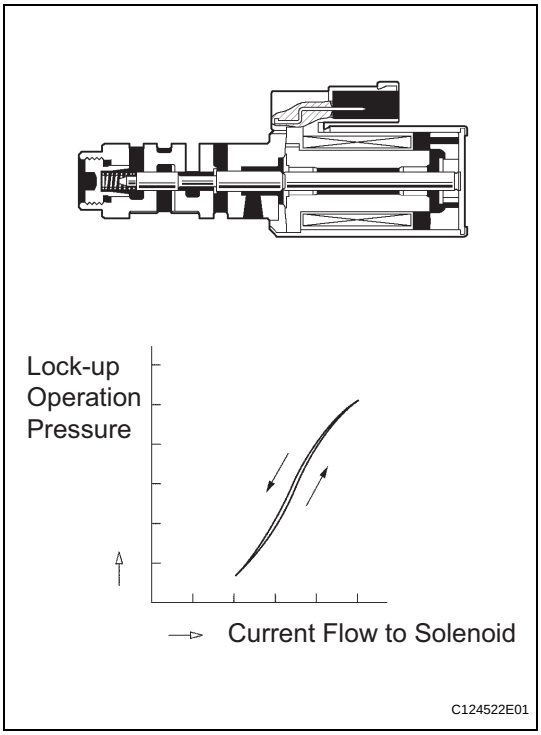
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)

DESCRIPTION



The ECM uses the signals from the throttle position sensor, mass air flow meter, turbine (input) speed sensor, output speed sensor and crankshaft position sensor, to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect any mechanical problems with the shift solenoid valve SLU, valve body or torque converter clutch.

DTC No.	DTC Detection Conditions	Trouble Areas
P2757	Lock-up does not occur when driving in the lock-up range (normal driving at 50 mph [80 km/h]), or lock-up remains ON in the lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Shift solenoid valve SLU • Torque converter clutch • Automatic transmission (clutch, brake or gear, etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on turbine (input) speed sensor NT, output speed sensor SP2, engine rpm, engine load, engine coolant temperature, vehicle speed, transmission fluid temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) with the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) with output shaft rpm (SP2). When the conditions are appropriate, the ECM requests "lock-up" by applying the control voltage to the shift solenoid SLU. When the SLU is turned on, solenoid SLU applies pressure to the lock-up relay valve and locks the torque converter clutch.

AT

If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance. The ECM turns on the MIL and stores the DTC.

Example:
When any of the following are met, the ECM interprets it as a malfunction.
1. There is a difference in rotation between before and after the torque converter even when the ECM requests lock-up.
   (Engine speed is at least 70 rpm greater than the input turbine speed.)
2. There is no difference in rotation between before and after the torque converter even when the ECM requests lock-up off.
   (The difference between the engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU/OFF malfunction Shift solenoid valve SLU/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SLU
Required sensors/Components (Related)	Valve body, Vehicle speed sensor, Throttle position sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous
Duration	OFF malfunction (A): 2 seconds OFF malfunction (B): 0.4 seconds ON malfunction: 1.8 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B) and ON malfunction.

The monitor will run whenever the following DTCs are not present.	None
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Torque converter clutch pressure control solenoid circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
ECM selected gear	4th or 5th
Vehicle speed	15.5 mph (25 km/h) or more
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
1-2 shift valve	Functioning normally

OFF malfunction (A)

ECM lock-up request	ON (SLU pressure: 513 kPa or more)
Vehicle speed	Less than 62.2 mph (100 km/h)

OFF malfunction (B)

ECM selected gear	2nd
Vehicle speed	1.2 mph (2 km/h) or more
Output speed	2nd → 1st down shift point or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction

ECM lock-up request	OFF (SLU pressure: less than 4 kPa)
Throttle valve opening angle	7 % or more
Vehicle speed	Less than 37.3 mph (60 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Both of the following conditions are met: OFF malfunction (A) and (B)

OFF malfunction (A)

Engine speed - Turbine speed	70 rpm or more

OFF malfunction (B)

Turbine speed/Output speed	Not 3.3 to 7.50

ON malfunction
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON
Vehicle speed must be under 6.2 mph (10 km/h) once before the 2nd detection.

Difference between engine speed and turbine speed	Less than 35 rpm

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as, the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

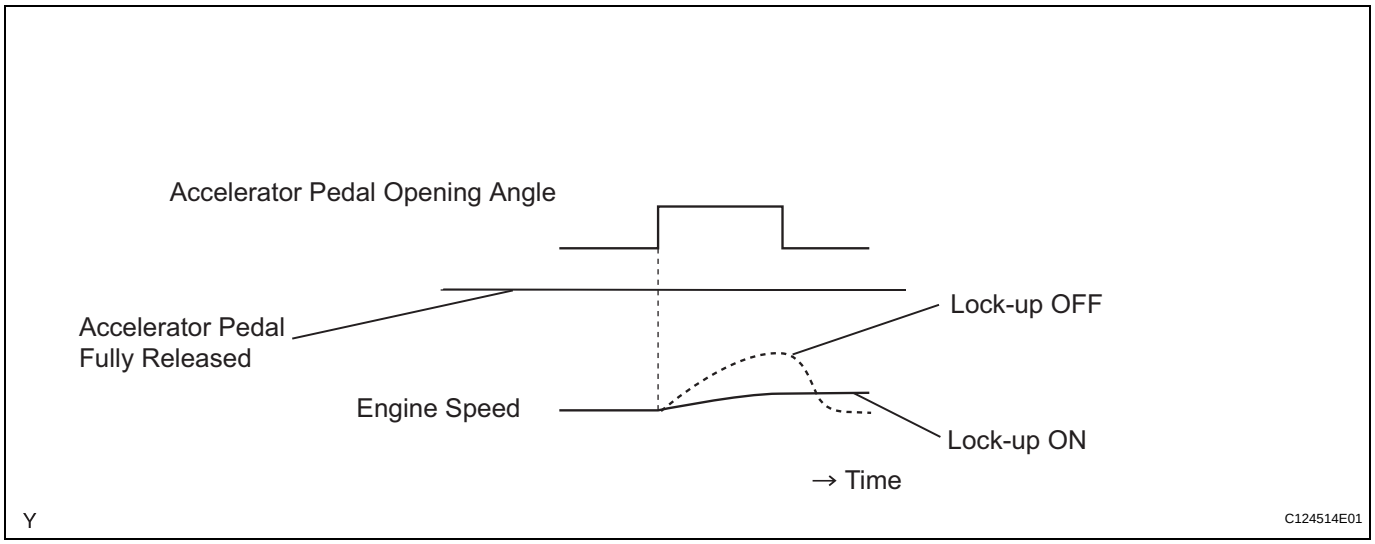
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ LOCK UP".
8. According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more	Possible to check the SLU operation.

HINT:
This test can be conducted when the vehicle speed is 36 mph (60 km/h) or more.

9. Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal causes closure of the throttle valve and lock-up may be turned off automatically.)



1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

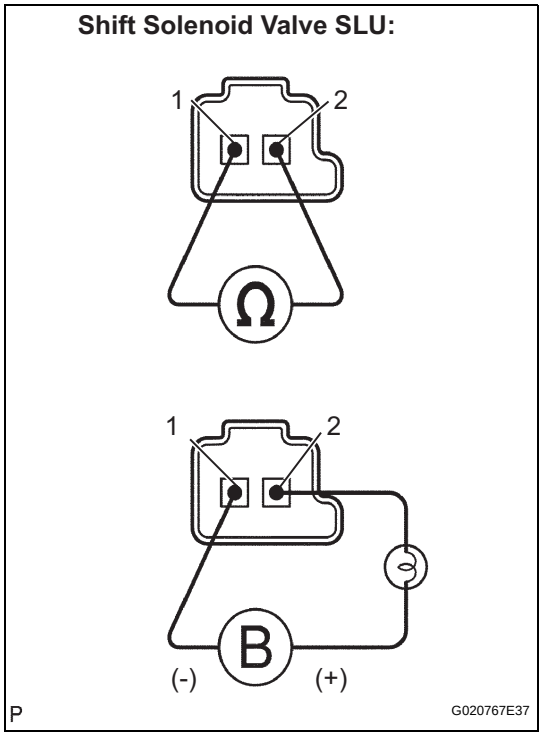
Display (DTC Output)	Proceed to
Only "P2757" is output	A
P2757" and other DTCs	B

HINT:
If any codes besides "P2757" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2 INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

3 INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4 INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the torque converter clutch assembly (See page AT-166).

OK:
The torque converter clutch operates normally.

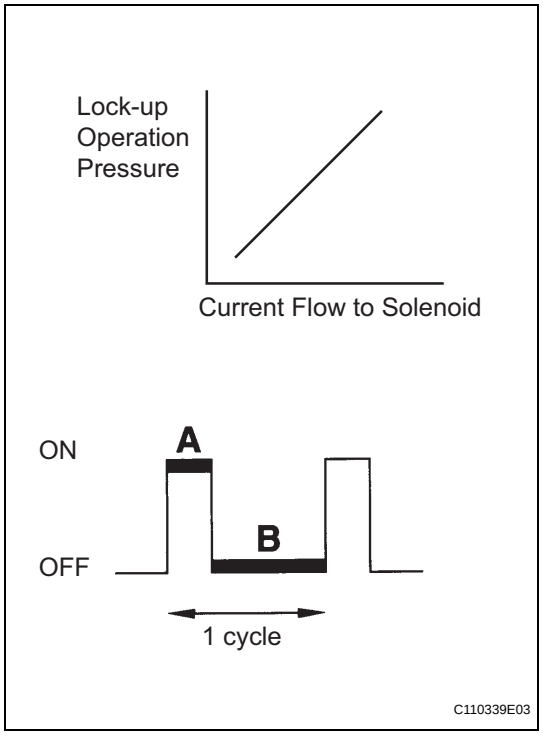
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)

DESCRIPTION



The current flow to the solenoid is controlled by the duty ratio* of the ECM output signal. The higher the duty ratio becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.
*: The duty ratio is the ratio of the period of continuity in one cycle.
For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio = A/(A+B) x 100(%).

DTC No.	DTC Detection Conditions	Trouble Areas
P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving (1-trip detection logic)	• Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • ECM

MONITOR DESCRIPTION

When an open or short is detected in the shift solenoid valve (SLU) circuit, the ECM determines that there is a malfunction. The ECM turns on the MIL and stores this DTC.

MONITOR STRATEGY

Related DTCs	P2759: Shift solenoid valve SLU/Range check
Required sensors/Components	Shift solenoid valve SLU
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU requested duty ratio to SLU	75 % or more
Ignition switch	ON
Starter	OFF

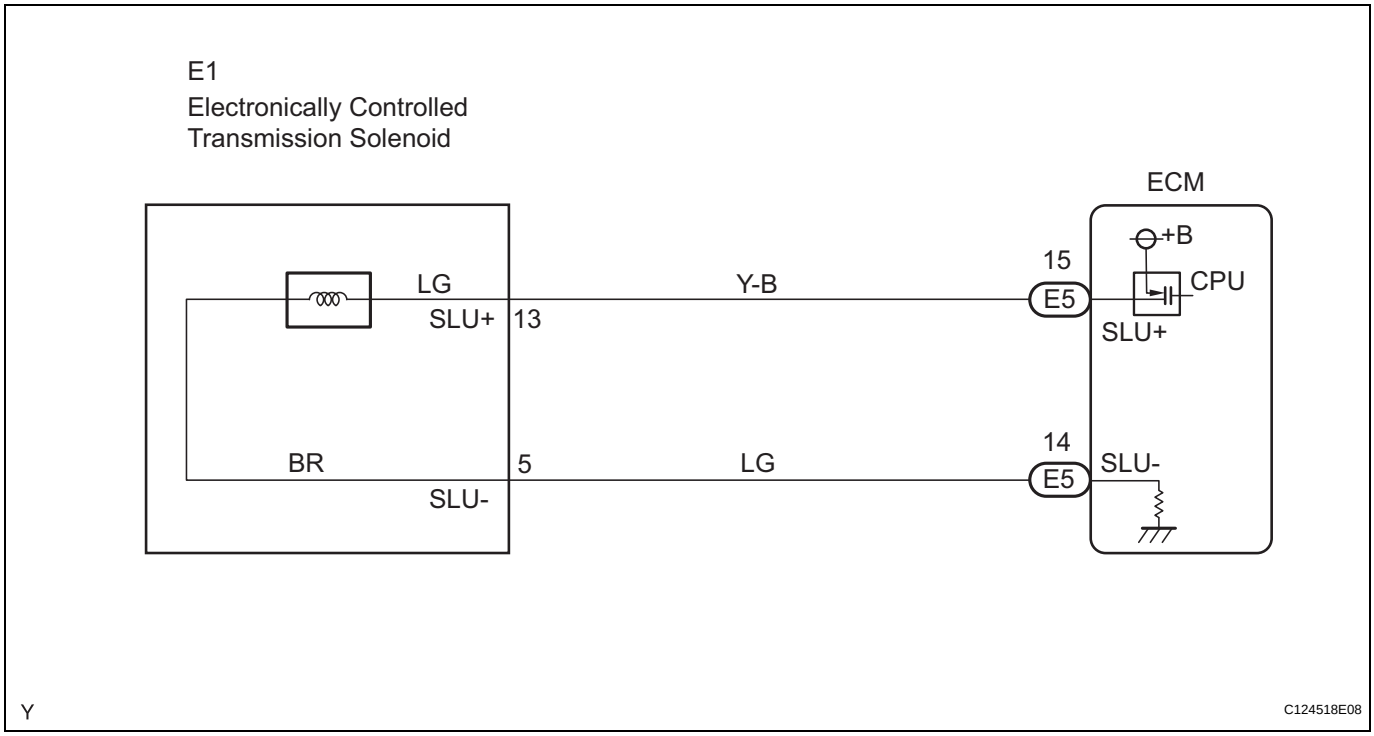
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

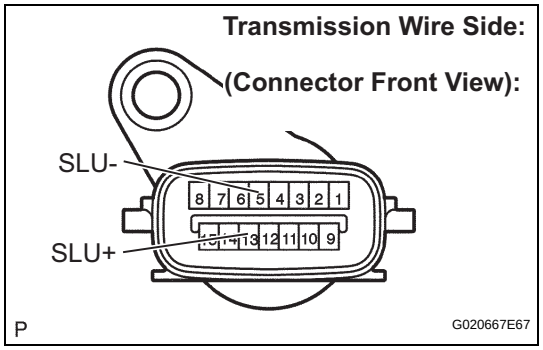
COMPONENT OPERATING RANGE

Output signal duty	Less than 100 %

WIRING DIAGRAM



1	INSPECT TRANSMISSION WIRE (SLU)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
13 (SLU+) - 5 (SLU-)	5.0 to 5.6 Ω at 20°C (68°F)

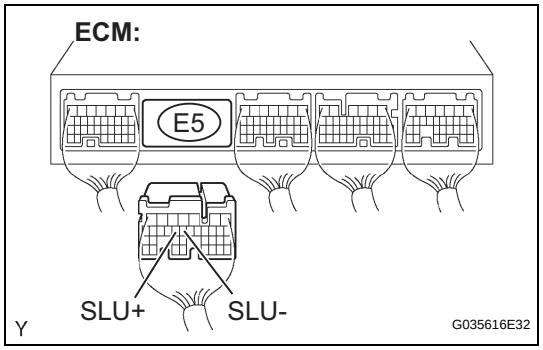
(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
13 (SLU+) - Body ground	10 kΩ or higher
5 (SLU-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-15 (SLU+) - E5-14 (SLU-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

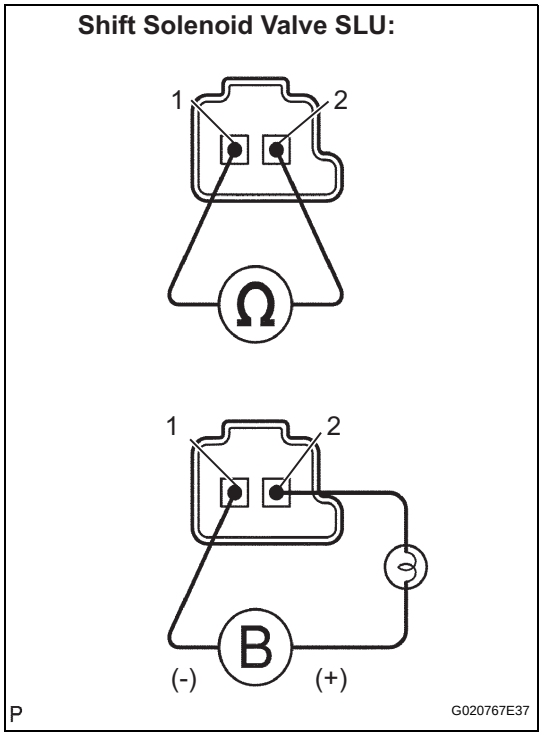
Tester Connection	Specified Condition
E5-15 (SLU+) - Body ground	10 kΩ or higher
E5-14 (SLU-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

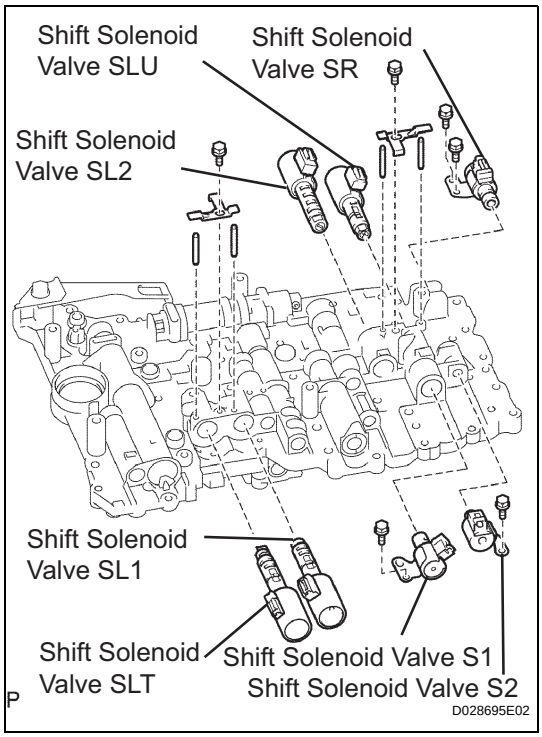
Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

REPAIR OR REPLACE TRANSMISSION WIRE



INSTALLATION

1. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

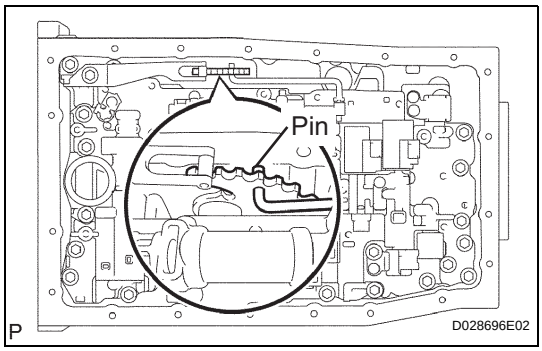
(a) Install the shift solenoid valve S2 with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(b) Install the shift solenoid valve S1 with the bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(c) Install the shift solenoid valve SR with the 2 bolts.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

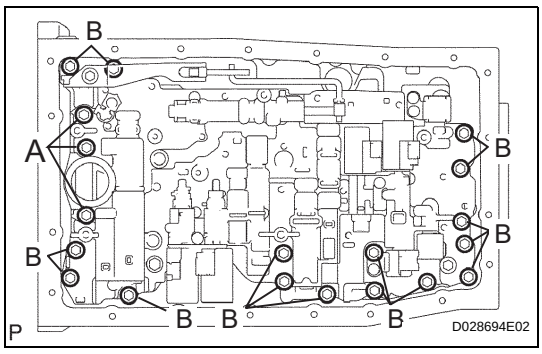
(d) Install the shift solenoid valves SLU and SL2 with the pin, lock plate and bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(e) Install the shift solenoid valves SLT and SL1 with the pin, lock plate and bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)



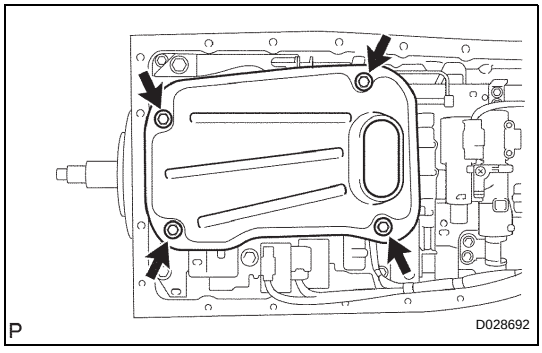
(f) Insert the pin of the lever into the hole of the manual valve.

(g) Install 3 new drum seal gaskets onto the transmission case.



(h) Install the 19 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)
Bolt length:
Bolt A: 36 mm (1.42 in.)
Bolt B: 25 mm (0.98 in.)

2. INSTALL TRANSMISSION WIRE (See page AT-141)

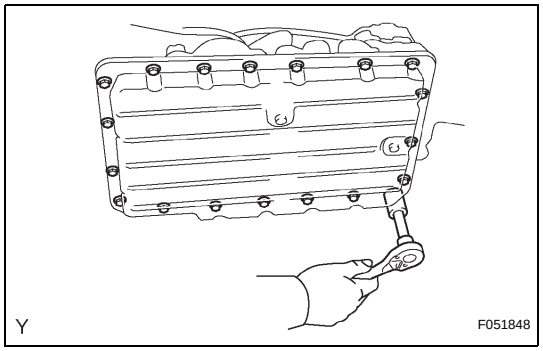


3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Install a new O-ring and the oil strainer with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

4. INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

HINT:
Remove all packing material and be careful not to drop oil on the contact surfaces of the transmission case and oil pan.



(a) Install a new gasket and the oil pan sub-assembly.

(b) Install the oil pan with the 20 bolts.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf)

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

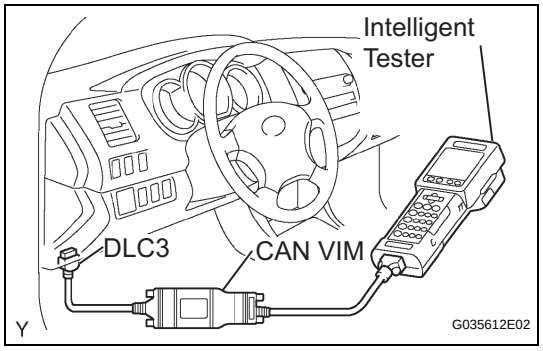
6. **PERFORM INITIALIZATION**
(See page AT-17)

7. **ADD AUTOMATIC TRANSMISSION FLUID**
(See page AT-135)

CHECK MODE PROCEDURE

1. DESCRIPTION

Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1 trip detection logic.



2. CHECK MODE PROCEDURE

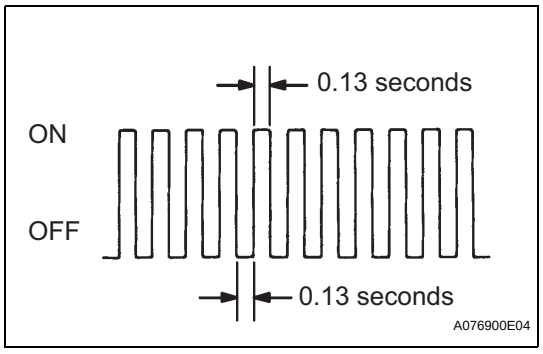
(a) Ensure the following conditions:
  (1) Battery positive voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transmission in the P or N position
  (4) A/C switched off

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the Controller Area Network Vehicle Interface Module (CAN VIM) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Enter the following menus: DIAGNOSIS/ ENHANCED OBD II/ CHECK MODE.



(f) Change the ECM to check mode. Make sure the MIL flashes as shown in the illustration.

NOTICE:

All recorded DTCs and freeze frame data will be erased if: 1) the intelligent tester is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from ON to ACC or LOCK.

Before entering check mode, make notes of the DTCs and freeze frame data.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test (See page AT-19).

(Or, simulate the conditions of the malfunction described by the customer).

(i) After simulating the malfunction conditions, use the intelligent tester diagnosis selector to check the DTC and freeze frame data.

FAIL-SAFE CHART

1. FAIL-SAFE CHART

This function minimizes the loss of the ECT functions when a malfunction occurs in each sensor or solenoid.

AT

Malfunction Part	Function
DTC P0710, P0712 and P0713: No. 1 ATF Temperature Sensor	During a No. 1 ATF temperature sensor malfunction, up-shift to the 5th gear and flex lock-up clutch control are prohibited.
DTC P0722: Output Speed Sensor (SP2)	During an output speed sensor malfunction, shift control is effected through the input speed sensor signal (NT).
DTC P0751, P0756, P0771, P0973, P0974, P0976, P0977, P0985 and P0986: Shift Solenoid Valve S1, S2 and SR	The current to the failed solenoid valve is cut off and control is effected by operating the other solenoid valves with normal operation. Shift control is effected depending on the failed solenoid as described in the table below.
DTC P0748, P0776 and P0778: Shift Solenoid Valve SL1 and SL2	During a solenoid valve SL1 or SL2 malfunction, up-shift to the 5th gear is prohibited.
DTC P02714 and P2716: Shift Solenoid Valve SLT	During a solenoid valve SLT malfunction, the current to the solenoid valve is stopped. This stops line pressure optimal control, and shift shock increases. However, shifting is effected through normal clutch pressure control.
DTC P2757: Shift Solenoid Valve SLU	During a solenoid valve SLU malfunction, the current to the solenoid valve is stopped. This stops lock-up control and flex lock-up control, and fuel economy decreases.

Fail-safe function:

If either of the shift solenoid valve circuits has an open or short failure, the ECM turns the other shift solenoid ON and OFF in order to shift into the gear positions shown in the table below.

In case of a short circuit, the ECM stops sending current to the short circuit solenoid.

Even if starting the engine again in the fail-safe mode, the gear position remains in the same position.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Push the "ON" button of the tester.

(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".

(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
SPD (SP2)	Counter Gear Speed / min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h)	-
SPD (NT)	Input Turbine Speed/ display: 50 rpm	[HINT] • Lock-up ON (After warming up the engine); Input turbine speed (NT) equal to the engine speed. • Lock-up OFF (Idling in N position); Input turbine speed (NT) nearly equal to the engine speed.	-
PNP SW [NSW]	PNP Switch Status/ ON or OFF	Shift lever position is; P or N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts. (See page AT-145)
STOP LIGHT SW	Stop Light Switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
SHIFT	ECM gear shift command/ 1st, 2nd, 3rd, 4th or 5th	Shift Lever Position is; • L: 1st • 2: 1st or 2nd • 3: 1st, 2nd or 3rd • 4: 1st, 2nd, 3rd or 4th • D: 1st, 2nd, 3rd, 4th or 5th	-
REVERSE	PNP Switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	Same as PNP SW [NSW]

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; D and 4: ON Except D and 4: OFF	Same as PNP SW [NSW]
4th/DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; 4: ON Except 4: OFF	Same as PNP SW [NSW]
3RD	PNP Switch Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	Same as PNP SW [NSW]
2ND	PNP Switch Status/ ON or OFF	Shift lever position is; 2 and L: ON Except 2 and L: OFF	Same as PNP SW [NSW]
LOW	PNP Switch Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	Same as PNP SW [NSW]
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature during cold soak	If the value is "-40°C (-40°F)" or "150°C (302°F) or more", No. 1 ATF temperature sensor circuit is open or short.
AT OIL TEMP2	No. 2 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature during cold soak	If the value is "-40°C (-40°F)" or "150°C (302°F) or more", No. 2 ATF temperature sensor circuit is open or short.
LOCK UP SOL	Lock Up Solenoid Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLU)	Shift Solenoid SLU Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	IG SW ON: ON	-

AT

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the tester.
(f) Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST".

(g) According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT to raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON [HINT] OFF: Line pressure up (When the active test of "LINE PRESS UP" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more	Possible to check the SLU operation.
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well.
HINT:
The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed in the table below and proceed to the page given.
HINT:

- *1: "Comes on" means that the MIL will illuminate.
- *2: "DTC stored" means that the ECM memorizes the malfunction code if the DTC detection condition(s) are met.
- These DTCs may be output when the clutch, brake and gear components, etc., inside the automatic transmission are damaged.

DTC No.	Detection Item	Trouble Areas	MIL *1	Memory *2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	- Open or short in park/neutral position switch circuit - Park/neutral position switch - ECM	Comes on	DTC stored	AT-43
P0710	Transmission Fluid Temperature Sensor "A" Circuit	- Open or short in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0711	Transmission Fluid Temperature Sensor "A" Performance	- Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-54
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	- Short in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	- Open in No. 1 ATF temperature sensor circuit - Transmission wire (No. 1 ATF temperature sensor) - ECM	Comes on	DTC stored	AT-49
P0717	Input Speed Sensor Circuit No Signal	- Open or short in speed sensor (NT) circuit - Speed sensor (NT) - ECM	Comes on	DTC stored	AT-57
P0722	Output Speed Sensor Circuit No Signal	- Open or short in speed sensor (SP2) circuit - Speed sensor (SP2) - ECM	Comes on	DTC stored	AT-62
P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)	- Open or short in shift solenoid valve SL1 circuit - Shift solenoid valve SL1 - ECM	Comes on	DTC stored	AT-67

DTC No.	Detection Item	Trouble Areas	MIL *1	Memory *2	See page
P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)	- Shift solenoid valve S1 remains open or closed - Shift solenoid valve SLT remains open or closed - Valve body is blocked - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-70
P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)	- Shift solenoid valve S2 remains open or closed - Shift solenoid valve SLT remains open or closed - Valve body is blocked - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-76
P0771	Shift Solenoid "E" Performance (Shift Solenoid Valve SR)	- Shift solenoid valve SR remains open or closed - Shift solenoid valve SL1 remains open or closed - Shift solenoid valve SLT remains open or closed - Valve body is blocked - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-82
P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)	- Shift solenoid valve SL2 remains open or closed - Shift solenoid valve SLT remains open or closed - Valve body is blocked - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-87
P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)	- Open or short in shift solenoid valve SL2 circuit - Shift solenoid valve SL2 - ECM	Comes on	DTC stored	AT-92
P0781	1-2 Shift (1-2 Shift Valve)	- Valve body is blocked up or stuck (1-2 shift valve) - Shift solenoid valve SLT remains open or closed - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-96

DTC No.	Detection Item	Trouble Areas	MIL *1	Memory *2	See page
P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)	- Short in shift solenoid valve S1 circuit - Shift solenoid valve S1 - ECM	Comes on	DTC stored	AT-101
P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)	- Open in shift solenoid valve S1 circuit - Shift solenoid valve S1 - ECM	Comes on	DTC stored	AT-101
P0976	Shift Solenoid "B" Control Circuit Low (Shift Solenoid Valve S2)	- Short in shift solenoid valve S2 circuit - Shift solenoid valve S2 - ECM	Comes on	DTC stored	AT-104
P0977	Shift Solenoid "B" Control Circuit High (Shift Solenoid Valve S2)	- Open in shift solenoid valve S2 circuit - Shift solenoid valve S2 - ECM	Comes on	DTC stored	AT-104
P0985	Shift Solenoid "E" Control Circuit Low (Shift Solenoid Valve SR)	- Short in shift solenoid valve SR circuit - Shift solenoid valve SR - ECM	Comes on	DTC stored	AT-107
P0986	Shift Solenoid "E" Control Circuit High (Shift Solenoid Valve SR)	- Open in shift solenoid valve SR circuit - Shift solenoid valve SR - ECM	Comes on	DTC stored	AT-107
P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)	- Shift solenoid valve SLT remains open or closed - Shift solenoid valve S1, S2, SR, SL1 or SL2 remains open or closed - Valve body is blocked - Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AT-111
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	- Open or short in shift solenoid valve SLT circuit - Shift solenoid valve SLT - ECM	Comes on	DTC stored	AT-118
P2740	Transmission Fluid Temperature Sensor "B" Circuit	- Open or short in No. 2 ATF temperature sensor circuit - No. 2 ATF temperature sensor - ECM	Comes on	DTC stored	AT-122

DTC No.	Detection Item	Trouble Areas	MIL *1	Memory *2	See page
P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input	- Short in No. 2 ATF temperature sensor circuit - No. 2 ATF temperature sensor - ECM	Comes on	DTC stored	AT-122
P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input	- Open in No. 2 ATF temperature sensor circuit - No. 2 ATF temperature sensor - ECM	Comes on	DTC stored	AT-122
P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)	- Shift solenoid valve SLU remains open or closed - Valve body is blocked - Shift solenoid valve SLU - Torque converter clutch - Automatic transmission (clutch, brake or gear, etc.) - Line pressure is too low	Comes on	DTC stored	AT-127
P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)	- Open or short in shift solenoid valve SLU circuit - Shift solenoid valve SLU - ECM	Comes on	DTC stored	AT-132
P2772	Transfer "L4" Switch Circuit	- Short in transfer L4 position switch circuit - Transfer L4 position switch - ECM	Comes on	DTC stored	AT-136

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Conditions	Trouble Areas
P0705	When any one of following conditions (A) to (C) is met (2-trip detection logic): (A) Any 2 or more signals of the following are ON simultaneously • NSW input signal is ON. • R input signal is ON. • D input signal is ON. • 3 input signal is ON. • 2 input signal is ON. (B) All switches are OFF simultaneously for P (NSW), R, N (NSW), D, 3 and 2 positions (C) When NSW or R input signal is ON, 4 or L input signal is ON	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM

MONITOR DESCRIPTION

The DTC indicates a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
For security, the park/neutral position switch detects the shift lever position so that the engine can be started only when the vehicle is in the P or N shift position.
When the park/neutral position switch sends more than one signal at a time from switch positions P, R, N, D, 3 or 2, the ECM interprets this as a fault in the switch. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	Conditions (A) and (C): 2 seconds Condition (B): 60 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met: Condition (A), (B) or (C)

Condition (A)

Number of the following signals input at the same time	2 or more
Park/neutral position switch	ON
R switch	ON
D switch	ON
3 switch	ON
2 switch	ON

Condition (B)

All of following conditions are met

Park/neutral position switch	OFF
R switch	OFF
D switch	OFF
3 switch	OFF
2 switch	OFF

Condition (C)

Both (i) and (ii) are met

(i) One of following conditions is met

Park/neutral position switch	ON
R switch	ON

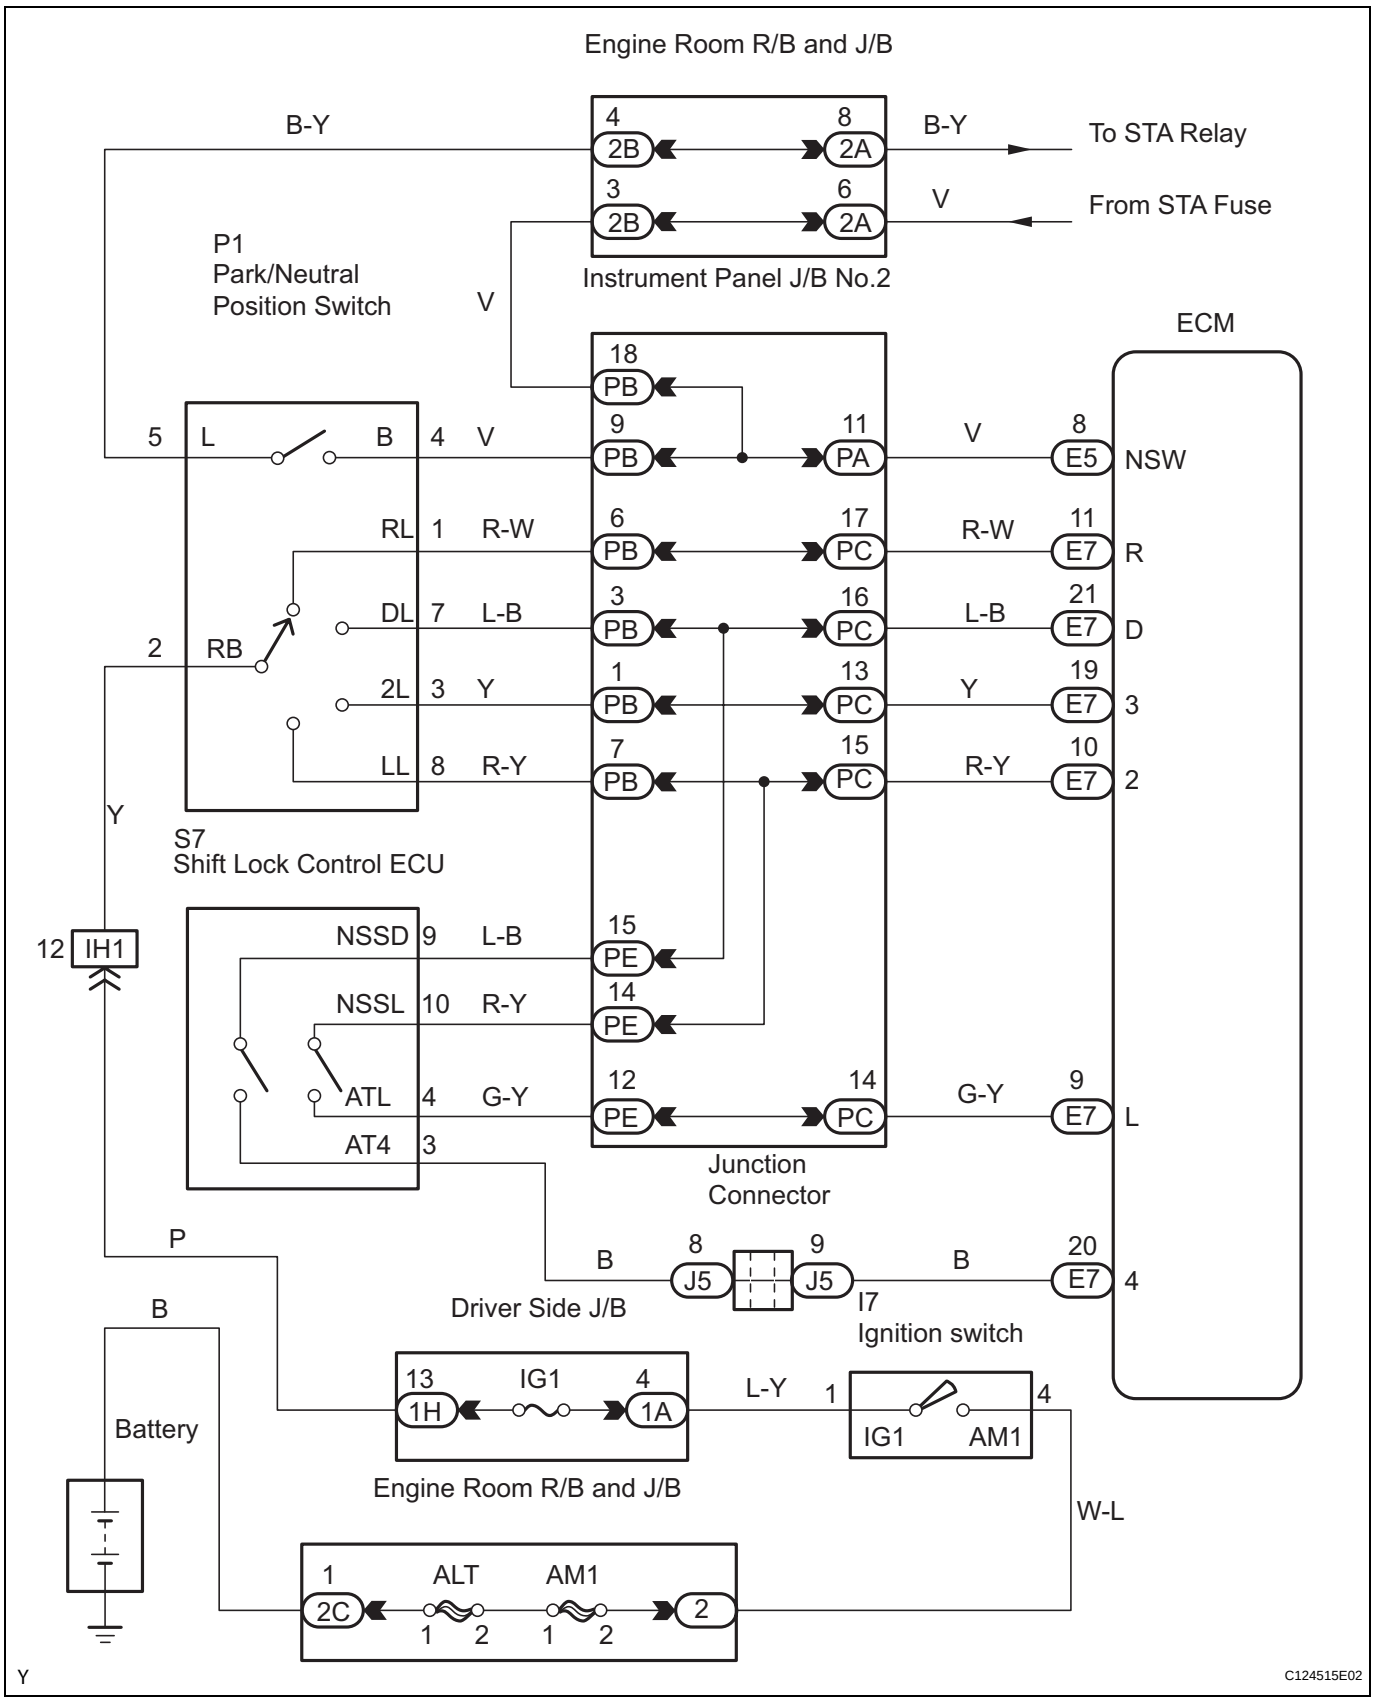
(ii) One of following conditions is met

4 switch	ON
L switch	ON

COMPONENT OPERATING RANGE

Park/neutral position switch	The park/neutral position switch sends only one signal to the ECM

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

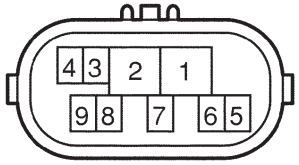
AT

1. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
2. Turn the ignition switch to the ON position.
3. Push the "ON" button of the tester.
4. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
5. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP Switch Status/ ON or OFF	Shift lever position is; P or N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP Switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	
DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; D and 4: ON Except D and 4: OFF	
4th/DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; 4: ON Except 4: OFF	
3RD	PNP Switch Status/ ON or OFF	Shift lever position is; 3: ON Except 3: OFF	
2ND	PNP Switch Status/ ON or OFF	Shift lever position is; 2 and L: ON Except 2 and L: OFF	
LOW	PNP Switch Status/ ON or OFF	Shift lever position is; L: ON Except L: OFF	

1 INSPECT PARK / NEUTRAL POSITION SWITCH ASSEMBLY

Switch side (Connector Front View):



P G026080E19

(a) Disconnect the park/neutral position switch connector.
(b) Measure the resistance when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P	2 - 6 and 4 - 5	Below 1 Ω
Except P	2 - 6 and 4 - 5	10 kΩ or higher
R	1 - 2	Below 1 Ω
Except R	1 - 2	10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N	2 - 9 and 4 - 5	10 kΩ or higher
D, 4	2 - 7	Below 1 Ω
Except D, 4	2 - 7	10 kΩ or higher
3	2 - 3	Below 1 Ω
Except 3	2 - 3	10 kΩ or higher
2, L	2 - 8	Below 1 Ω

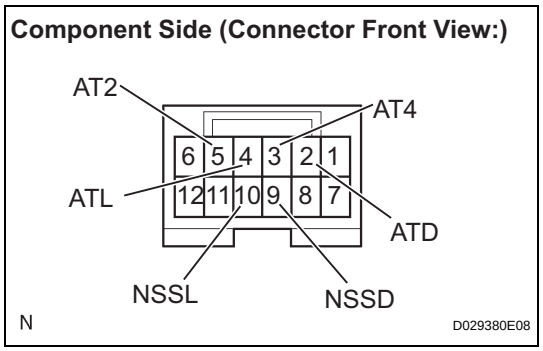
Shift Position	Tester Connection	Specified Condition
Except 2, L	2 - 8	10 kΩ or higher

NG → REPLACE PARK / NEUTRAL POSITION SWITCH ASSEMBLY

OK

AT

2 INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY



(a) Connect the park/neutral position switch connector.
(b) Disconnect the shift lock control ECU connector.
(c) Measure the resistance when the shift lever is moved to each position.

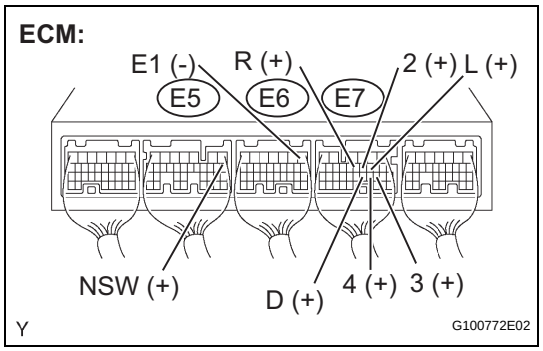
Standard resistance

Shift Position	Tester Connection	Specified Condition
D	9 (NSSD) - 2 (ATD)	Below 1 Ω
4	9 (NSSD) - 2 (ATD)	10 kΩ or higher
D	9 (NSSD) - 3 (AT4)	10 kΩ or higher
4	9 (NSSD) - 3 (AT4)	Below 1 Ω
2	10 (NSSL) - 5 (AT2)	Below 1 Ω
L	10 (NSSL) - 5 (AT2)	10 kΩ or higher
2	10 (NSSL) - 4 (ATL)	10 kΩ or higher
L	10 (NSSL) - 4 (ATL)	Below 1 Ω

NG → REPLACE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

OK

3 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)



(a) Connect the shift lock control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P and N	E5-8 (NSW) - E6-1 (E1)	Below 2 V
Except P and N	E5-8 (NSW) - E6-1 (E1)	10 to 14 V
R	E7-11 (R) - E6-1 (E1)	10 to 14 V*
Except R	E7-11 (R) - E6-1 (E1)	Below 1 V
D and 4	E7-21 (D) - E6-1 (E1)	10 to 14 V
Except D and 4	E7-21 (D) - E6-1 (E1)	Below 1 V
4	E7-20 (4) - E6-1 (E1)	10 to 14 V
Except 4	E7-20 (4) - E6-1 (E1)	Below 1 V
3	E7-19 (3) - E6-1 (E1)	10 to 14 V
Except 3	E7-19 (3) - E6-1 (E1)	Below 1 V
2 and L	E7-10 (2) - E6-1 (E1)	10 to 14 V
Except 2 and L	E7-10 (2) - E6-1 (E1)	Below 1 V

Shift Position	Tester Connection	Specified Condition
L	E7-9 (L) - E6-1 (E1)	10 to 14 V
Except L	E7-9 (L) - E6-1 (E1)	Below 1 V

HINT:
*: The voltage will drop slightly due to illumination of the back up light.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

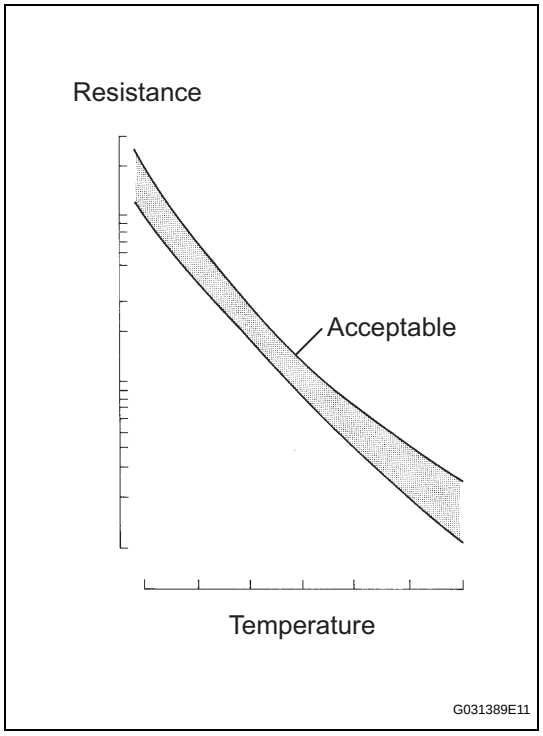
REPLACE ECM

DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO1.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance and the voltage decrease as the temperature becomes higher.
The ECM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detection Conditions	Trouble Areas
P0710	(a) and (b) are detected momentarily within 0.5 seconds when neither P0712 nor P0713 is detected (1-trip detection logic) (a) No. 1 ATF temperature sensor resistance is less than 79 Ω. (b) No. 1 ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 seconds, the malfunction changes from (a) to (b) or from (b) to (a)	• Open or short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P0712	No. 1 ATF temperature sensor resistance is less than 79 Ω for 0.5 seconds or more (1-trip detection logic)	• Short in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM
P0713	No. 1 ATF temperature sensor resistance is more than 156 kΩ for 0.5 seconds or more 15 minutes or more after starting engine (1-trip detection logic)	• Open in No. 1 ATF temperature sensor circuit • Transmission wire (No. 1 ATF temperature sensor) • ECM

AT

MONITOR DESCRIPTION

These DTCs indicate an open or short in the Automatic Transmission Fluid (ATF) temperature sensor circuit.
The ATF temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the ECM interprets this as a fault in the ATF sensor or its wiring. The ECM turns on the MIL and stores a DTC.
*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.
HINT:
The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Fluttering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0710: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0712: Range check (Low resistance)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P0713: Range check (High resistance)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Fluttering)

ATF temperature sensor resistance	Less than 79 Ω or More than 156 kΩ

P0712: Range check (Low resistance)

ATF temperature sensor resistance	Less than 79 Ω

P0713: Range check (High resistance)

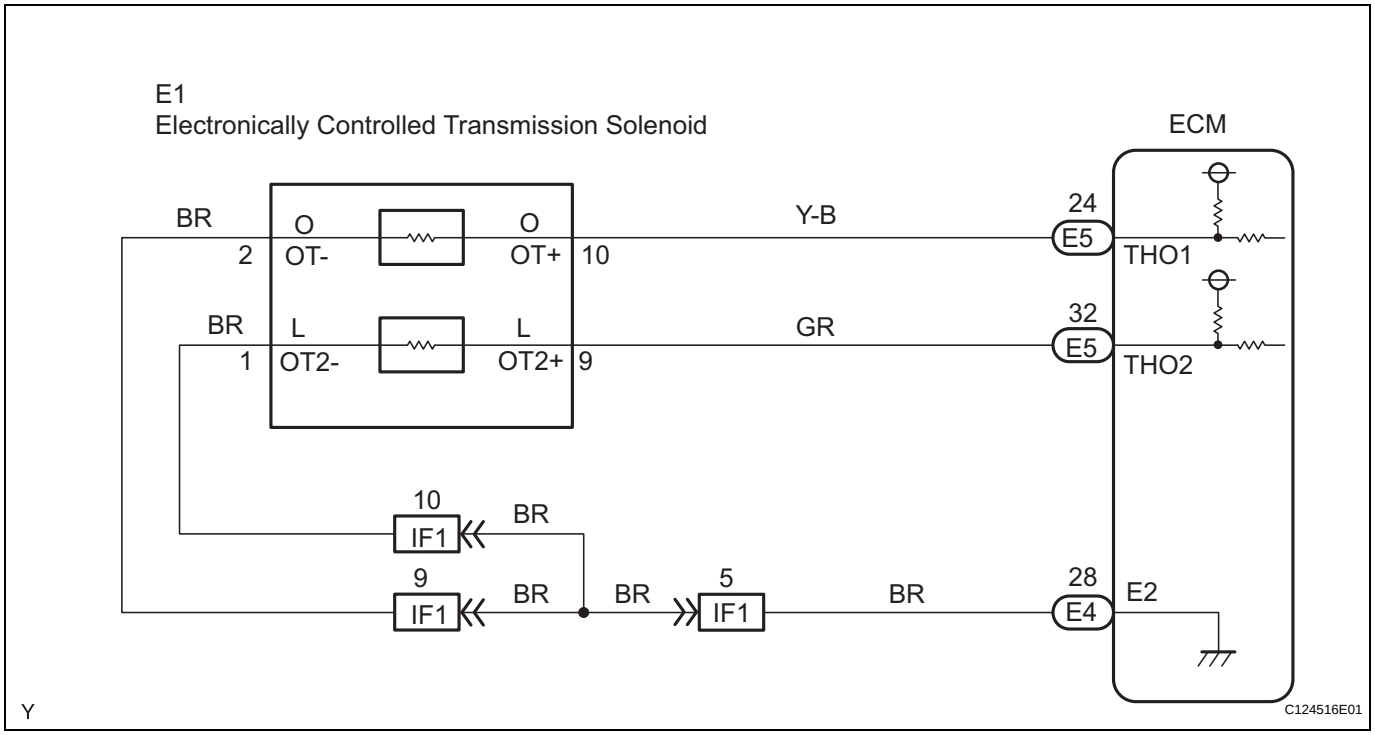
ATF temperature sensor resistance	More than 156 kΩ

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature up to approximately 130°C (266°F)

AT

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

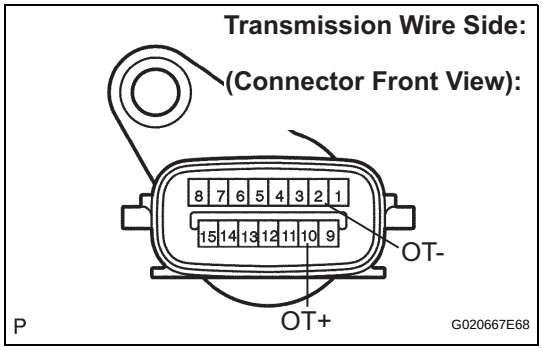
HINT:
When DTC P0712 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 (OT) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

AT

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
2 (OT-) - 10 (OT+)	79 Ω to 156 kΩ

(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
2 (OT-) - Body ground	10 kΩ or higher
10 (OT+) - Body ground	10 kΩ or higher

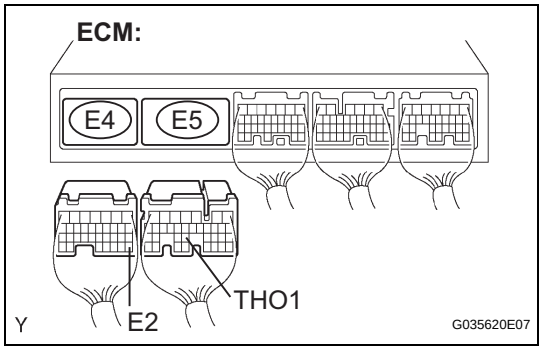
HINT:
If the resistance is outside the specified range at either of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connectors.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-24 (THO1) - E4-28 (E2)	79 Ω to 156 kΩ

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-24 (THO1) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

Refer to DTC P0710 (See page AT-49).

DTC No.	DTC Detection Conditions	Trouble Areas
P0711	Both (a) and (b) are detected (2-trip detection logic): (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start (b) After normal driving for over 22 minutes and 5.6 miles (9 km) or more, ATF temperature is less than 20°C (68°F)	• Transmission wire (No. 1 ATF temperature sensor) • ECM

MONITOR DESCRIPTION

This DTC indicates that there is a problem with the output from the automatic transmission fluid (ATF) temperature sensor and that the sensor itself is defective. The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects any open or short malfunctions in the ATF temperature circuit or a fault of the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	3 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
ATF temperature sensor "A" circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
IAT (Intake air temperature) sensor circuit	Functioning normally
Time after engine start	21 minutes and 40 seconds or more
Driving distance after engine start	5.6 miles (9 km) or more
IAT (12 seconds after engine start)	-10°C (14°F) or more
ECT (12 seconds after engine start)	-10°C (14°F) or more

TYPICAL MALFUNCTION THRESHOLDS

ATF temperature	Less than 20°C (68°F) (Conditions vary with ATF temperature at engine start)

WIRING DIAGRAM

Refer to DTC P0710 (See page AT-51).

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	No. 1 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

HINT:
When DTC P0712 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 (OT) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0711" is output	A
"P0711" and other DTCs	B

HINT:
If any codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

2	CHECK TRANSMISSION FLUID LEVEL

AT

OK:
Automatic transmission fluid level is correct.

NG → **ADD FLUID**

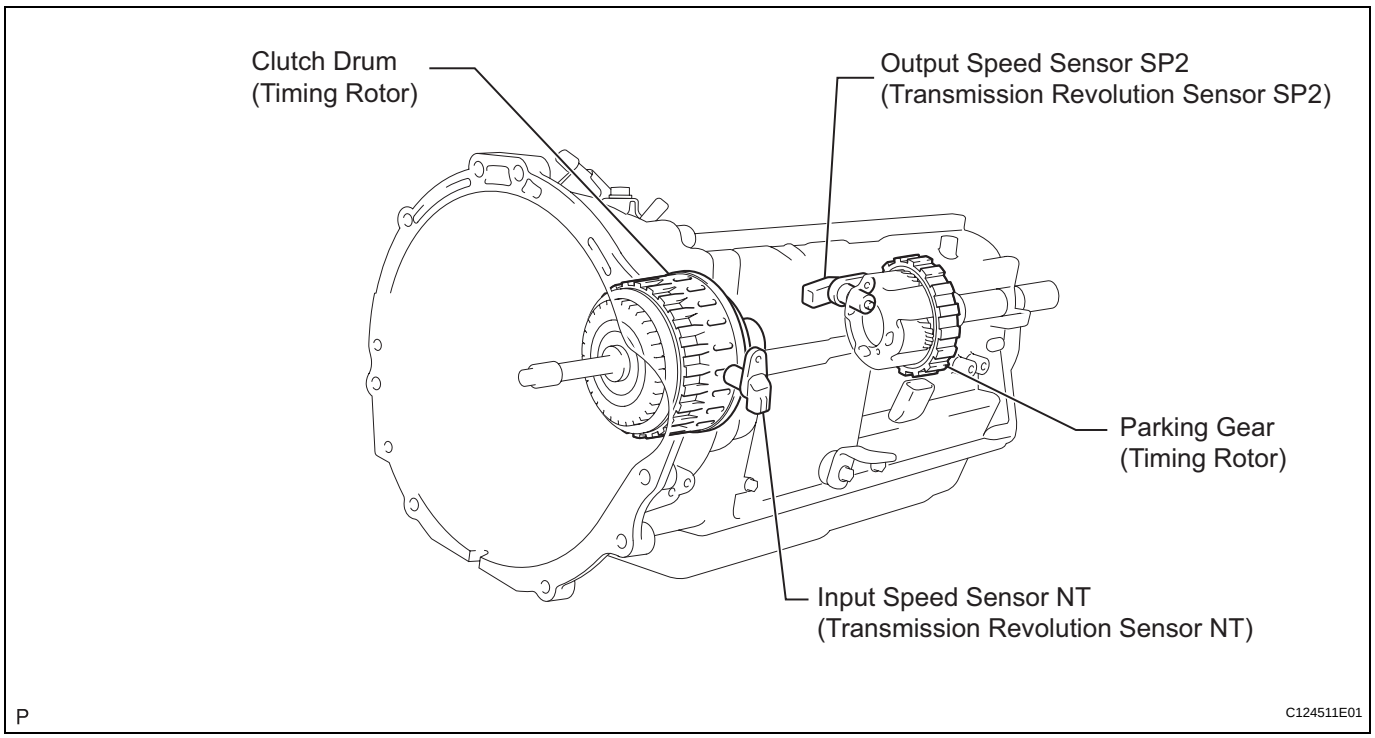
OK

REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

DTC	P0717	Input Speed Sensor Circuit No Signal

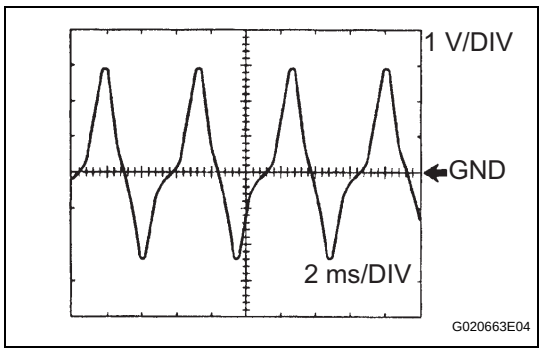
DESCRIPTION

This sensor detects the rotation speed of the turbine which shows the input revolution of the transmission. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (SP2), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.



DTC No.	DTC Detection Conditions	Trouble Areas
P0717	All conditions below are detected for 5 seconds or more (1-trip detection logic): (a) Gear change not being performed (b) Gear position: 4th or 5th (c) T/M input shaft rpm: 300 rpm or less (d) T/M output shaft rpm: 1,000 rpm or more (e) Park/neutral position switch: OFF (f) Shift solenoid valves, park/neutral position switch and vehicle speed sensor are in normal operation	• Open or short in speed sensor (NT) circuit • Speed sensor (NT) • ECM

Reference (Using an oscilloscope):



Check the waveform between terminals NT+ and NT- of the ECM connector.

Standard:

Refer to the illustration.

Terminal	NT+ - NT-
Tool setting	1 V/DIV, 2 ms/DIV
Vehicle condition	Engine idling speed (P or N position)

MONITOR DESCRIPTION

This DTC indicates that a pulse is not output from the speed sensor NT (Turbine (input) sped sensor) or is weak. The NT terminal of the ECM detects the revolving signal from speed sensor (NT) (input RPM). The ECM outputs a gearshift signal comparing the input speed sensor (NT) with the output speed sensor (SP2). While the vehicle is operating in the 4th or 5th gear position in the shift position of D, if the input shaft revolution is less than 300 rpm*1 although the output shaft revolution is more than 1,000 rpm or more*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is approximately 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT)/Verify pulse input
Required sensors/Components (Main)	Speed sensor (NT)
Required sensors/Components (Related)	Speed sensor (SP2)
Frequency of operation	Continuous
Duration	5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748 - P0799: Trans solenoid (range)
Shift change	Each shift change is completed before starting next shift change operation
ECM selected gear	4th or 5th
Output shaft rpm	1,000 rpm or more
Park/neutral position switch	OFF
R switch	OFF
L switch	OFF
Engine	Running
Ignition Switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Speed sensor (NT)	Input speed is equal to engine speed when lock-up ON

WIRING DIAGRAM

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
7. According to the display on the tester, read the "DATA LIST".

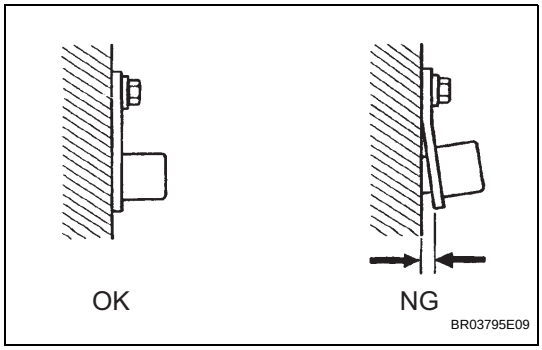
Item	Measurement Item/ Range (display)	Normal Condition
SPD (NT)	Input Turbine Speed/ display: 50 rpm	[HINT] • Lock-up ON (After warming up the engine); Input turbine speed (NT) equal to the engine speed. • Lock-up OFF (Idling at N position); Input turbine speed (NT) nearly equal to the engine speed.

HINT:

- SPD (NT) is always 0 while driving:
  Open or short in the sensor or circuit.
- SPD (NT) is always less than 300 rpm while driving the vehicle at 31 mph (50 km/h) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

AT

1 INSPECT SPEED SENSOR INSTALLATION



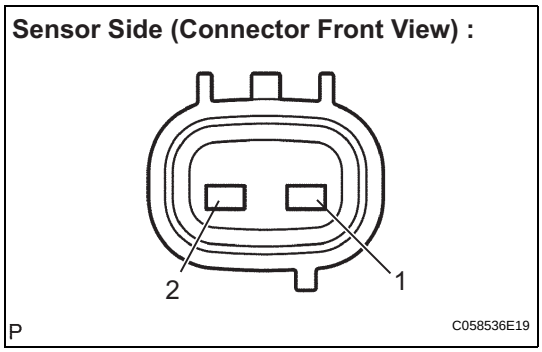
(a) Check the speed sensor (NT) installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (NT)**

OK

2 INSPECT SPEED SENSOR (NT)

Sensor Side (Connector Front View) :



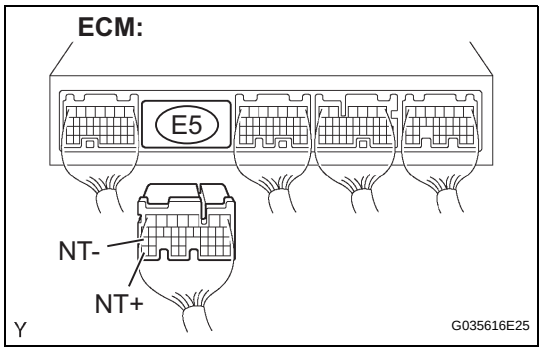
(a) Disconnect the speed sensor (NT) connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	560 to 680 Ωat 20°C (68°F)

NG → **REPLACE SPEED SENSOR (NT)**

OK

3 CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-35 (NT+) - E5-27 (NT-)	560 to 680 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-35 (NT+) - Body ground	10 kΩ or higher
E5-27 (NT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

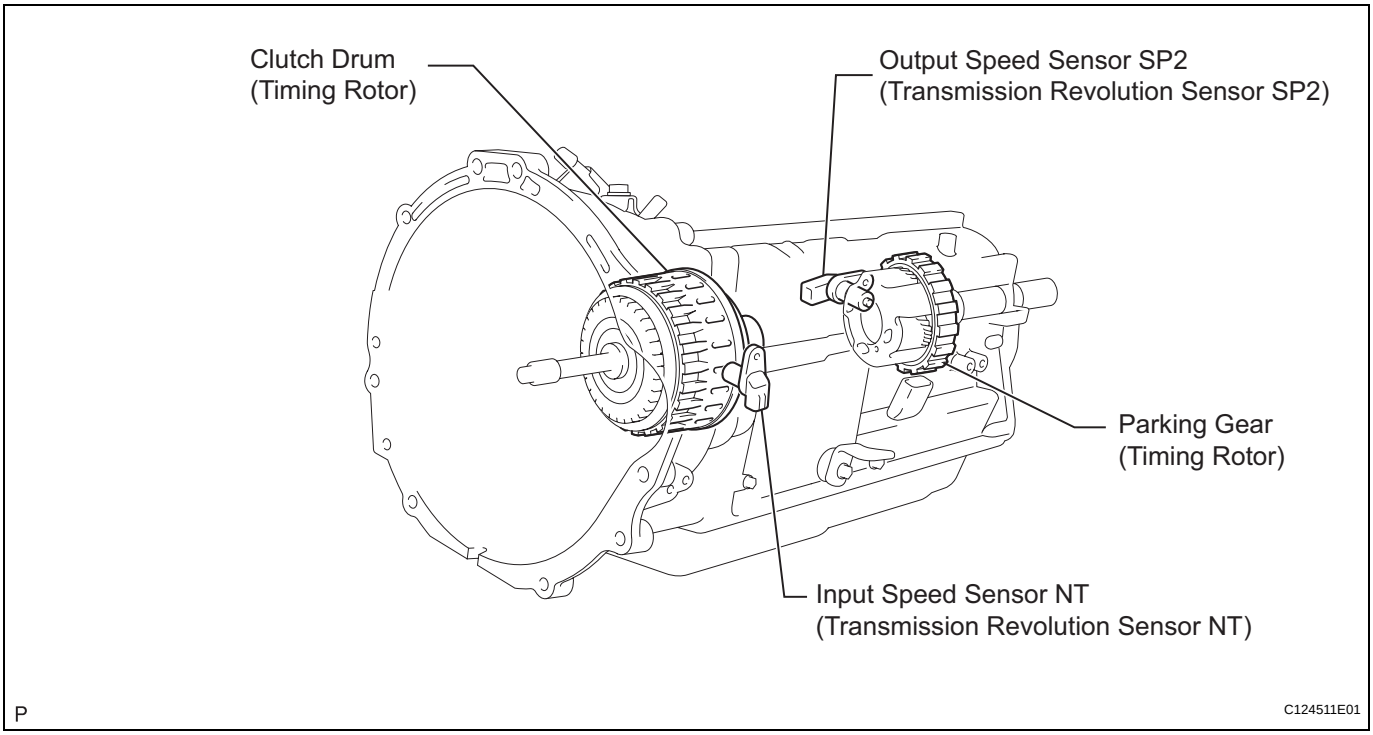
OK

REPLACE ECM

DTC	P0722	Output Speed Sensor Circuit No Signal

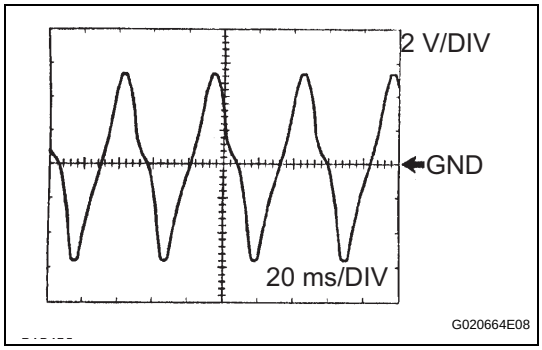
DESCRIPTION

The speed sensor SP2 detects the rotation speed of the transmission output shaft and sends signals to the ECM. The ECM determines the vehicle speed based on these signals. An AC voltage is generated in the speed sensor SP2 coil as the parking gear mounted on the rear planetary gear assembly rotates, and this voltage is sent to the ECM. The parking gear on the rear planetary gear is used as the timing rotor for this sensor. The gear shift point and lock-up timing are controlled by the ECM based on the signals from the vehicle speed sensor and the throttle position sensor.



DTC No.	DTC Detection Conditions	Trouble Areas
P0722	All conditions below are detected 500 times or more continuously (1-trip detection logic) (a) No signal from speed sensor (SP2) is input to ECM while 4 pulses of No. 1 vehicle speed sensor signal are sent (b) Vehicle speed is 5.59 mph (9 km/h) or more for at least 4 seconds (c) Park/neutral position switch is OFF (d) Transfer is in any position other than neutral position	• Open or short in speed sensor (SP2) circuit • Speed sensor (SP2) • ECM

Reference (Using an oscilloscope):



Check the waveform between terminals SP2+ and SP2- of the ECM connector.

Standard:
Refer to the illustration.

Terminal	SP2+ - SP2-
Tool setting	2 V/DIV, 20 ms/DIV
Vehicle condition	Vehicle speed 12 mph (20 km/h)

MONITOR DESCRIPTION

The output speed sensor monitors the output shaft speed. The ECM controls the gearshift point and the lock up timing based on the signals from the output speed sensor and throttle position sensor.
If the ECM detects no signal from the output shaft speed sensor even while the vehicle is moving, it will conclude that is a malfunction in the output speed sensor. The ECM will illuminate the MIL and set the DTC.

MONITOR STRATEGY

Related DTCs	P0722: Speed sensor SP2/Verify pulse input
Required sensors/Components	Speed sensor SP2
Frequency of operation	Continuous
Duration	500 output shaft revolutions
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

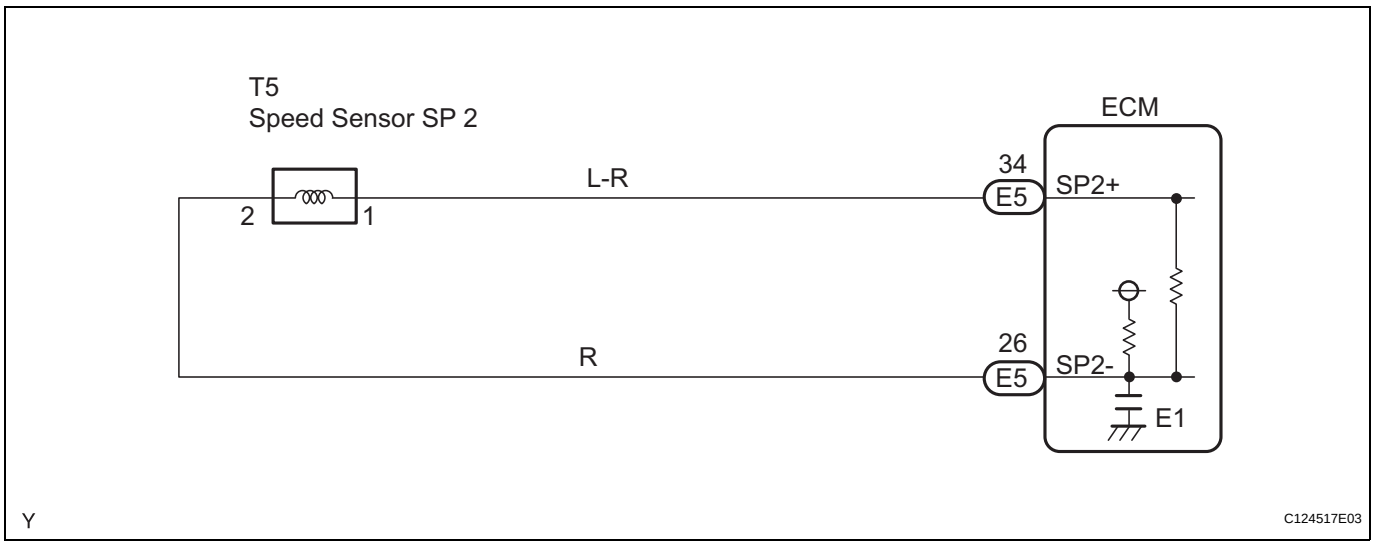
The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748 - P0799: Trans solenoid (range)
Vehicle speed sensor pulse input	4 times
Vehicle speed range (4 seconds or more)	5.59 mph (9 km/h) or more
Park/neutral position switch	OFF
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Output speed sensor pulse input	No input

AT

WIRING DIAGRAM



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

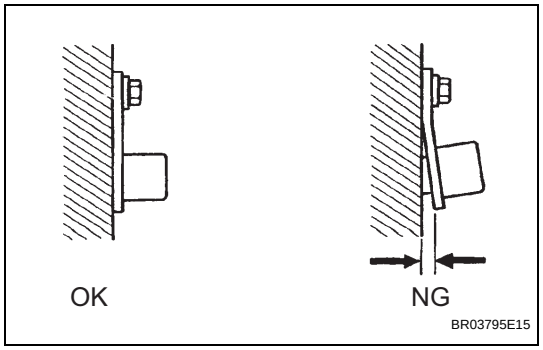
1. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
2. Turn the ignition switch to the ON position.
3. Push the "ON" button of the tester.
4. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST/ A/T".
5. According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (SP2)	Counter Gear Speed display/ min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h) [HINT] Equal to vehicle speed

HINT:

- SPD (SP2) is always 0 while driving:
  Open or short in the sensor or circuit.
- The SPD (SP2) value displayed on the tester is much lower than the actual vehicle speed:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION

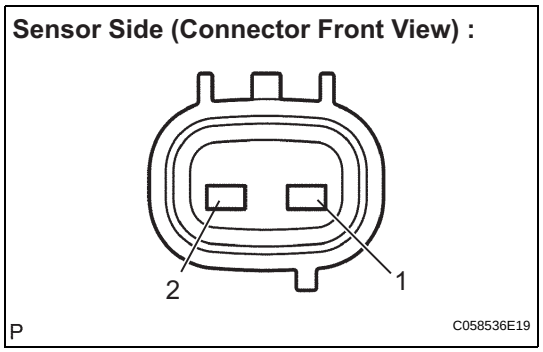


(a) Check the speed sensor (SP2) installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG → **REPLACE SPEED SENSOR (SP2)**

OK

2 INSPECT SPEED SENSOR (SP2)



(a) Disconnect the speed sensor (SP2) connector from the transmission.
(b) Measure the resistance.

REPLACE ECM

DTC	P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0748	The ECM checks for an open or short in the shift solenoid valve SL1 circuit (1-trip detection logic) • Output signal duty equals to 100 %. (NOTE: SL1 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL1 circuit. The ECM controls the gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other functioning shift solenoid valves "ON/OFF". (If an open or short circuit is detected, the ECM cuts the current to the circuit.)
If the ECM detects an open or short in the shift solenoid valve SL1 circuit, the ECM determines that there is a malfunction (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0748 : Shift solenoid valve SL1/Range check
Required sensors/Components	Shift solenoid valve SL1
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate

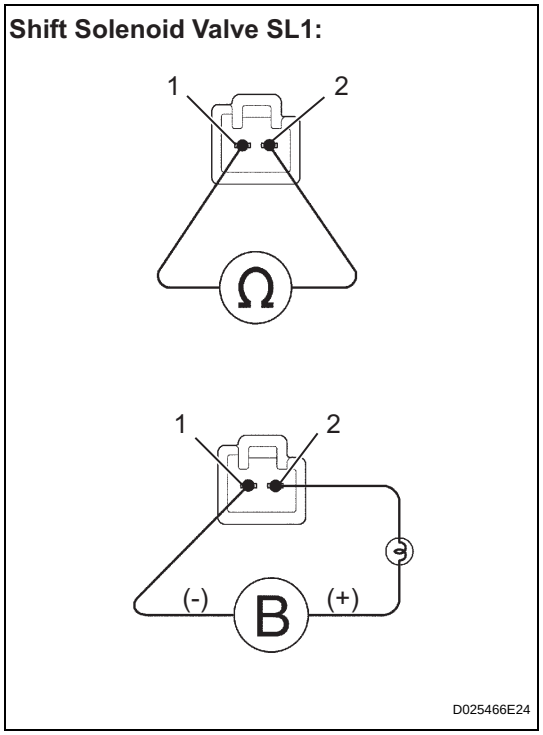
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE SL1



(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL1**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)

DESCRIPTION

AT

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0751	S1 stuck ON malfunction*1: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 1st. (b) When the ECM directs the gearshift to switch to 1st gear, the actual gear is also shifted to 1st.	• Shift solenoid valve S1 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	S1 stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 4th. (b) When the ECM directs the gearshift to switch to 5th gear, the actual gear is also shifted to 5th.	• Shift solenoid valve S1 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under S1 stuck ON malfunction	1st	2nd	2nd	1st	N*
*2: Actual gear position under S1 stuck OFF malfunction	4th	3rd	3rd	4th	5th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S1. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0751: Shift solenoid valve S1/OFF malfunction Shift solenoid valve S1/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve S1
Required sensors/Components (Related)	Vehicle speed sensor, Throttle position sensor, Speed sensor (NT), Speed sensor (SP2)

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally
Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

OFF malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	8 % or more and 6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

Current ECM selected gear	5th
Last ECM selected gear	4th
Continuous time of ECM selecting 4th gear	2 seconds or more
Actual gear when ECM selected 4th gear	4th

OFF malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

AT

ON malfunction (C)

ECM selected gear	3rd
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (D)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

ON malfunction (E)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]
All of the following conditions are met: OFF malfunctions (A), (B) and (C)
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

OFF malfunction (B)

Turbine speed/Output speed	0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (C)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]
Either of the following conditions is met:

- ON malfunctions (A) and (B)
- ON malfunction (B) or (C) and ON malfunction (D) or (E)

ON malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (B)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (C)

Turbine speed/Output speed	1.91 to 2.35 (Actual gear is 2nd)

ON malfunction (D)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (E)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S1 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve S1	ON	ON	OFF	OFF	OFF

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0751)**

(a) Connect the the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".

(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0751" is output	A
"P0751" and other DTCs	B

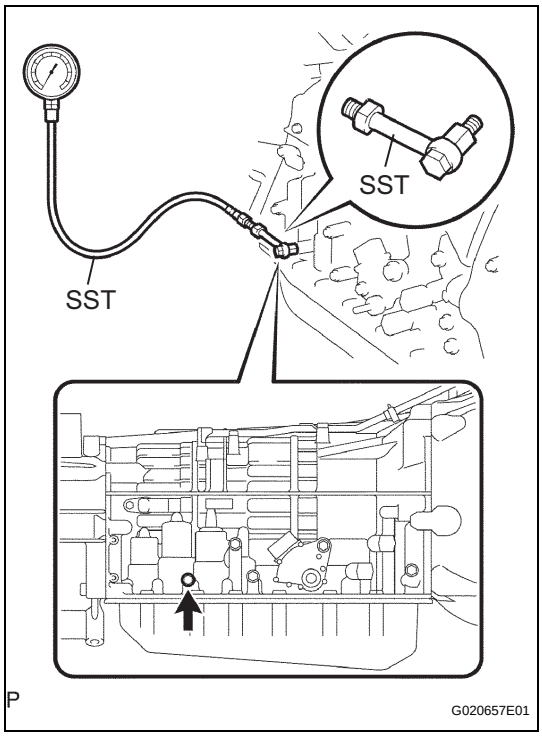
AT

HINT:
If any codes besides "P0751" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP)



NOTICE:
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**
- **Be careful to prevent SST's hose from interfering with the exhaust pipe.**
- **Perform the test with the A/C OFF.**

HINT:
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.
The DATA LIST can be displayed during the ACTIVE TEST.

(a) Remove the test plug on the transmission case center right side and connect SST.
SST 09992-00095 (09992-00231, 09992-00271)
(b) Connect the intelligent tester to the DLC3.
(c) Start the engine and warm it up.
(d) Measure the line pressure with SST.
(e) Turn the intelligent tester ON.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(g) Follow the instructions on the tester and perform the ACTIVE TEST.
(h) Measure the line pressure with SST.

Item	Test Details	Diagnostic Note
LINE PRESS UP*	[Test Details] Operate shift solenoid SLT and raise line pressure. [Vehicle Condition] • Vehicle stopped • IDL: ON HINT: OFF: Line pressure up (when Active Test of "LINE PRESS UP" is performed, ECM commands SLT solenoid to turn OFF) ON: No action (normal operation)	-

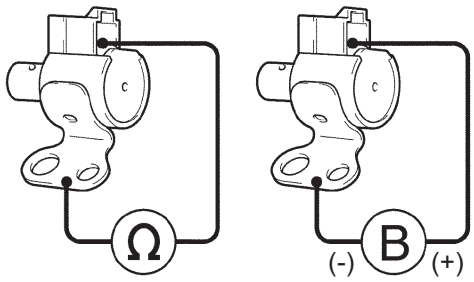
*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well. Please note that the pressure values in the ACTIVE TEST and HYDRAULIC TEST are different.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

3 INSPECT SHIFT SOLENOID VALVE S1

Shift Solenoid Valve S1:



A110986E04

(a) Remove the shift solenoid valve S1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE S1**

OK

4 INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)

DESCRIPTION

AT

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0756	S2 stuck ON malfunction*1; The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is shifted to 2nd. (b) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Shift solenoid valve S2 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	S2 stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 1st gear, the actual gear is also shifted to 1st. (b) When the ECM directs the gearshift to switch to 2nd gear, the actual gear is shifted to 1st. (c) When the ECM directs the gearshift to switch to 5th gear, the actual gear is also shifted to 5th.	• Shift solenoid valve S2 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under S2 stuck ON malfunction	2nd	2nd	3rd	3rd	N*
*2: Actual gear position under S2 stuck OFF malfunction	2nd	1st	4th	4th	5th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S2. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0756: Shift solenoid valve S2/OFF malfunction Shift solenoid valve S2/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve S2
Required sensors/Components (Related)	Vehicle speed sensor, Throttle position sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous

Duration	OFF malfunctions (A), (B) and (C): 0.4 seconds OFF malfunction (D): Immediate ON malfunctions (A) and (B): 0.4 seconds ON malfunction (C): 3 seconds ON malfunction (D): 0.5 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B), (C), (D) and ON malfunctions (A), (B), (C), (D).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P799: Trans solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
Transfer range	"High" *1

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally
Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

OFF malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

ECM selected gear	2nd
Vehicle speed	1.2 mph (2 km/h) or more
Output speed	2nd → 1st down shift point or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th
Continuous time of ECM selecting 4th gear	2 seconds or more
Actual gear when ECM selected 4th gear	4th

OFF malfunction (D)

Current ECM selected gear	5th
Last ECM selected gear	4th

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

ON malfunction (D)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

All of the following conditions are met: OFF malfunctions (A), (B), (C) and (D)

2 detections are necessary in 1 driving cycle.

1st detection; temporary flag ON

2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

OFF malfunction (B)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

OFF malfunction (C)

Turbine speed/Output speed	0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (D)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]

ON malfunction (A) or (B) and ON malfunction (C) or (D) are met:

ON malfunction (A)

Turbine speed/Output speed	1.91 to 2.35 (Actual gear is 2nd)

ON malfunction (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

ON malfunction (C)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (D)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve S2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve S2	OFF	ON	ON	OFF	OFF

AT

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0756)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0756" is output	A
"P0756" and other DTCs	B

HINT:
If any codes besides "P0756" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-82)

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0771	Shift Solenoid "E" Performance (Shift Solenoid Valve SR)

DESCRIPTION

AT

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0771	SR stuck ON malfunction*1: The ECM determines that there is a malfunction when the following condition is met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 2nd gear, the engine overruns (clutch slips)	• Shift solenoid valve SR remains open • Shift solenoid valve SL1 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)
	SR stuck OFF malfunction*2: The ECM determines that there is a malfunction when the following condition is met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 5th gear, the actual gear is shifted to 4th.	• Shift solenoid valve SR remains closed • Shift solenoid valve SL1 remains closed • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under SR stuck ON malfunction	1st	N*	3rd	4th	5th
*2: Actual gear position under SR stuck OFF malfunction	1st	2nd	3rd	4th	4th

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve SR or SL1. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0771: Shift solenoid valve SR/OFF malfunction Shift solenoid valve SR/ON malfunction

Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

OFF malfunction (A)

ECM selected gear	5th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

OFF malfunction (B)

Current ECM selected gear	5th
Last ECM selected gear	4th
Continuous time of ECM selecting 4th gear	2 seconds or more

OFF malfunction (C)

Current ECM selected gear	5th
Last ECM selected gear	4th

ON malfunction

Current ECM selected gear	2nd
Last ECM selected gear	1st
Throttle valve opening angle (During transition from 1st to 2nd gear)	5.5 % or more at engine speed of 3,000 rpm (Conditions vary with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

All of the following conditions are met: OFF malfunctions (A), (B) and (C)

2 detections are necessary in 1 driving cycle.

1st detection; temporary flag ON

2nd detection; pending fault code ON

OFF malfunction (A)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

OFF malfunction (B)

Turbine speed/Output speed	No change as follow: 0.93 to 1.07 (Actual gear is 4th) ↓ 0.65 to 0.79 (Actual gear is 5th)

OFF malfunction (C)

Output record from ECM for 4th → 5th upshifting	Recorded

[ON malfunction]
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON

Turbine speed - Output speed x 1st gear ratio	150 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve SR and S1 are turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th

Shift solenoid valve SR	OFF	OFF	OFF	OFF	ON
Shift solenoid valve SL1	OFF	OFF	OFF	OFF	ON

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0771)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0771" is output	A
P0771" and other DTCs	B

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC No.	DTC Detection Conditions	Trouble Areas
P0776	SL2 stuck ON malfunction*1: The ECM determines that there is a malfunction when the following conditions are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 4th gear, the actual gear is also shifted to 4th. (b) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Shift solenoid valve SL2 remains open • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
*1: Actual gear position under SL2 stuck ON malfunction	1st	2nd	3rd	4th	N*

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" of the shift solenoid valve SL2.
The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF". When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0776: Shift solenoid valve SL2/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SL2
Required sensors/Components (Related)	Speed sensor (NT), Speed sensor (SP2), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	ON malfunctions (A), (B) and (C): 0.4 seconds ON malfunction (D): 3 seconds ON malfunction (E): 0.5 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all ON malfunctions (A), (B), (C), (D) and (E).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P0799: Trans solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally

Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
Transfer range	"High" *1

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally
Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

ON malfunction (A)

ECM selected gear	1st
Vehicle speed	1.2 to 24.9 mph (2 to 40 km/h)
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (B)

ECM selected gear	3rd
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (C)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction (D)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

ON malfunction (E)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)	150 rpm or less
Vehicle speed (After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

[ON malfunction]

Both of the following conditions are met:

- ON malfunctions (A) and (B), or ON malfunction (C)

- ON malfunction (D) or (E)

ON malfunction (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

ON malfunction (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

ON malfunction (C)

Turbine speed/Output speed	0.93 to 1.07 (Actual gear is 4th)

ON malfunction (D)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

ON malfunction (E)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press → button: Shift up • Press ← button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SL2	ON	ON	ON	ON	OFF

AT

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0776)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0776" is output	A
"P0776" and other DTCs	B

HINT:
If any codes besides "P0776" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

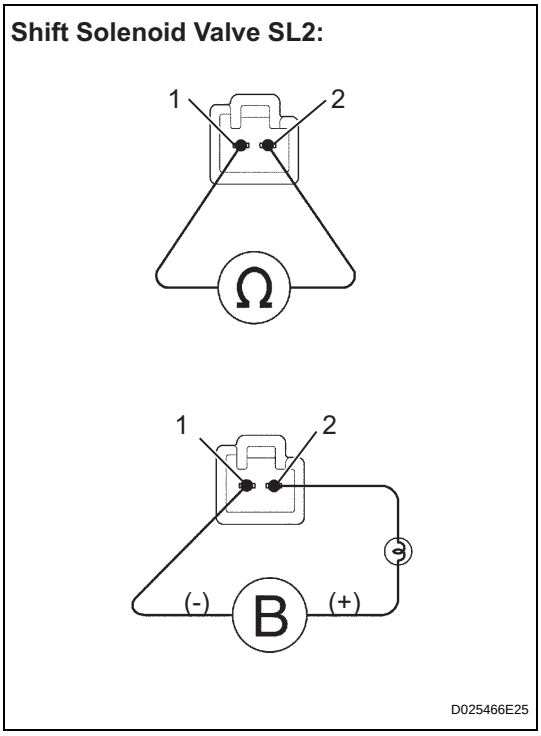
2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-82)

NG → REPLACE SHIFT SOLENOID VALVE SLT

OK

3	INSPECT SHIFT SOLENOID VALVE SL2

Shift Solenoid Valve SL2:



(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ωat 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → REPLACE SHIFT SOLENOID VALVE SL2

OK

4	INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)

DESCRIPTION

AT

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0778	The ECM checks for an open or short in the shift solenoid valve SL2 circuit (1-trip detection logic): • Output signal duty equals 100 %. (NOTE: SL2 output signal duty is less than 100 % under normal conditions)	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The ECM controls the gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other functioning shift solenoid valves "ON/OFF". (If an open or short circuit is detected, the ECM cuts the current to the circuit.)
If the ECM detects an open or short in the shift solenoid valve SL2 circuit, the ECM determines that there is a malfunction (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0778: Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU requested duty ratio to SL2	Less than 75 %
Ignition switch	ON
Starter	OFF

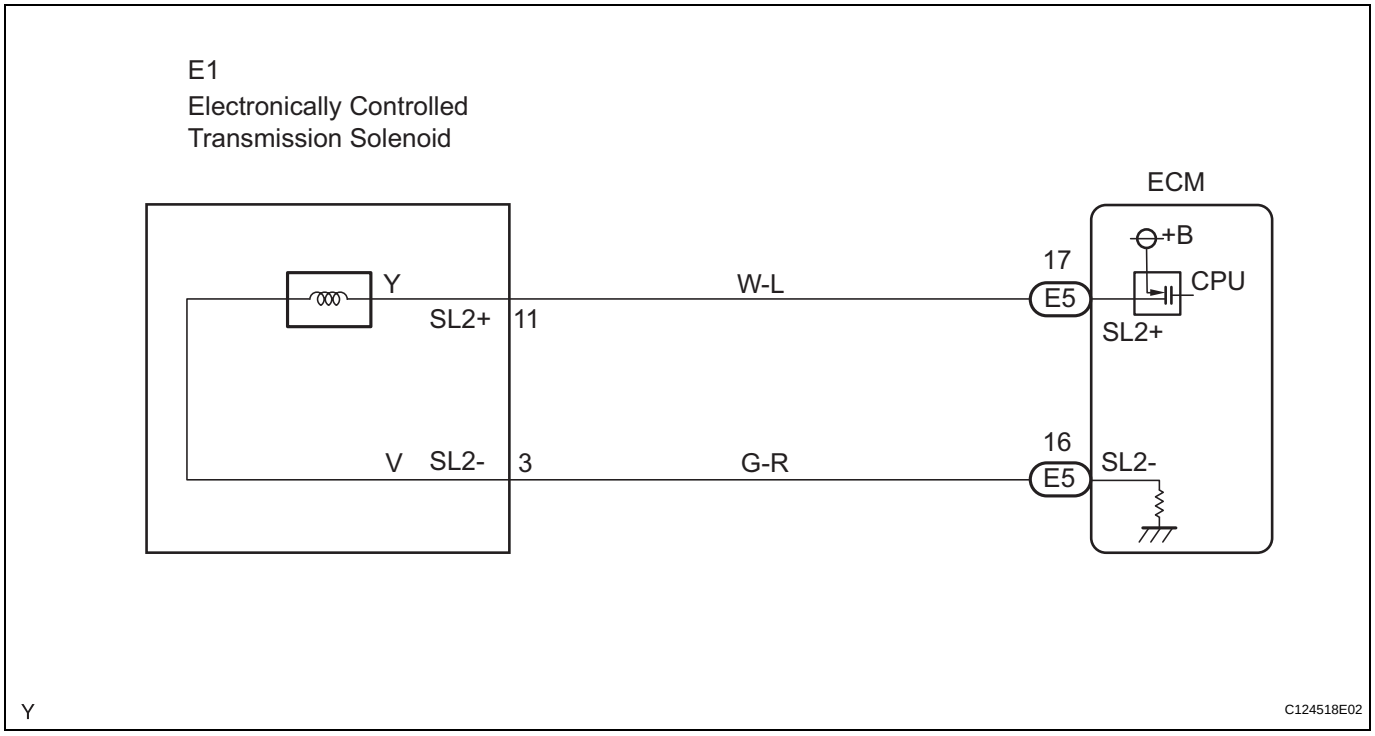
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

COMPONENT OPERATING RANGE

Output signal duty	Less than 100 %

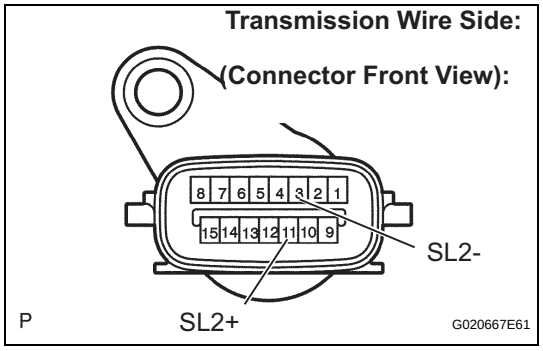
WIRING DIAGRAM



HINT:
The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SL2	ON	ON	ON	ON	OFF

1	INSPECT TRANSMISSION WIRE (SL2)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
11 (SL2+) - 3 (SL2-)	5.0 to 5.6 Ωat 20°C (68°F)

(c) Measure the resistance.
Standard resistance (Check for short):

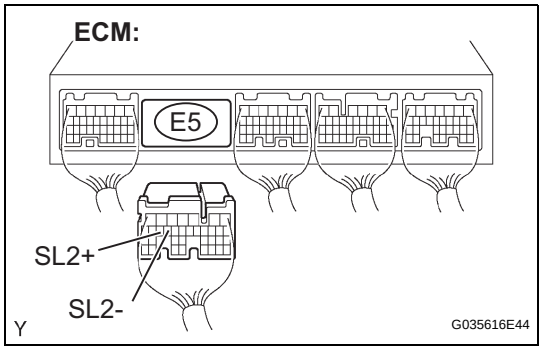
Tester Connection	Specified Condition
11 (SL2+) - Body ground	10 kΩ or higher
3 (SL2-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

AT

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-17 (SL2+) - E5-16 (SL2-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

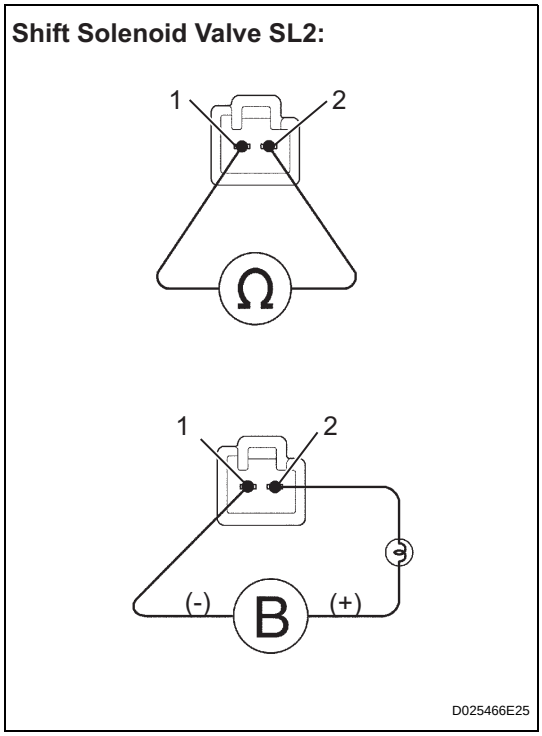
Tester Connection	Specified Condition
E5-17 (SL2+) - Body ground	10 kΩ or higher
E5-16 (SL2-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE SL2



(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

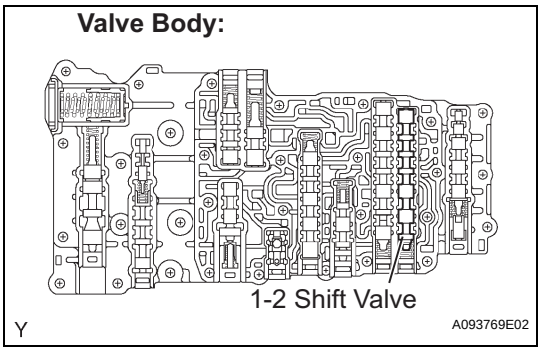
NG → **REPLACE SHIFT SOLENOID VALVE SL2**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0781	1-2 Shift (1-2 Shift Valve)

DESCRIPTION



The 1-2 shift valve performs shifting to 1st gear and other gears.

DTC No.	DTC Detection Conditions	Trouble Areas
P0781	1-2 shift valve malfunction: The ECM determines that there is a malfunction when the following conditions (a) and (b), or (a) and (c) are met (2-trip detection logic): (a) When the ECM directs the gearshift to switch to 2nd gear, the actual gear is shifted to 1st. (b) When the ECM directs the gearshift to switch to 4th gear, the actual gear is shifted to 3rd. (c) When the ECM directs the gearshift to switch to 5th gear, the engine overruns (clutch slips)	• Valve body is blocked up or stuck (1-2 shift valve) • Shift solenoid valve SLT remains open or closed • Automatic transmission (clutch, brake or gear, etc.)

HINT:
Gear positions in the event of a 1-2 shift valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Actual gear position under malfunction	1st	1st	3rd	3rd	N*

N*: Neutral

MONITOR DESCRIPTION

This DTC indicates that the 1-2 shift valve in the valve body is locked in the direction of the spring compression. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF" and switching oil pressure to the valves in the valve body.
The ECM calculates the "actual" transmission gear by comparing the signals from the input speed sensor (NT) and the output speed sensor (SP2). The ECM can detect many mechanical problems in the shift solenoids, valve body, and the transmission clutches, brakes, and gears. If the ECM detects that the actual gear position and the commanded gear position are different, it will illuminate the MIL and store the DTC .

MONITOR STRATEGY

Related DTCs	P0781: Valve body/Rationality check
Required sensors/Components (Main)	Valve body
Required sensors/Components (Related)	Automatic transmission assembly, Speed sensor (NT), Speed sensor (SP2), Vehicle speed sensor, Throttle position sensor
Frequency of operation	Continuous
Duration	Conditions (A) and (B) 0.4 seconds Condition (C) 3 seconds Condition (D) 0.5 seconds
MIL operation	2 driving cycles

Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all Conditions (A), (B), (C) and (D).

The monitor will run whenever the following DTCs are not present.	P0115 - P0118: ECT sensor P0125: Insufficient ECT for Closed Loop P0500: VSS P0748 - P0799: Trans Solenoid (range)
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0°CA or more
Engine	Starting
Transfer range	"High" *1

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally
Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

Condition (A)

ECM selected gear	2nd
Vehicle speed	1.2 mph (2 km/h) or more
Output speed	2nd → 1st down shift point or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

Condition (B)

ECM selected gear	4th
Vehicle speed	1.2 mph (2 km/h) or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

Condition (C)

Current ECM selected gear	5th
Last ECM selected gear	4th
Vehicle speed (During transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

Condition (D)

ECM selected gear	5th
Engine speed - Turbine speed (NE - NT) After transition from 4th to 5th gear)	150 rpm or less

Vehicle speed After transition from 4th to 5th gear)	Less than 62.2 mph (100 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Condition (A) and Conditions (B), (C) or (D) are met:

AT

Condition (A)

Turbine speed/Output speed	3.30 to 7.50 (Actual gear is 1st)

Condition (B)

Turbine speed/Output speed	1.28 to 1.53 (Actual gear is 3rd)

Condition (C)

Turbine speed - Output speed x 4th gear ratio	1,000 rpm or more

Condition (D)

Turbine speed - Output speed x 5th gear ratio	1,000 rpm or more

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0781)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P0781" is output	A
"P0781" and other DTCs	B

HINT:
If any codes besides "P0781" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SHIFT)

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.

3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester.
Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-32).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down	Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/ SHIFT display on the intelligent tester.
- Gear positions in the event of a solenoid valve mechanical problem:

Gearshift operated by tester	1st	2nd	3rd	4th	5th
Actual gear position under malfunction	1st	1st	3rd	3rd	N*

N*: Neutral

OK:

Gear position changes in accordance with the tester operation.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK ↓

3	**PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-82)**

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

4	CLEAR DTC AND PERFORM RUNNING TEST

AT

(a) Clear the DTC, and check for the DTC again after conducting the "MONITOR DRIVE PATTERN FOR ECT TEST" (See page AT-19).

OK:

No DTC

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

END

DTC	P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)

DTC	P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0973	ECM detects short in solenoid valve S1 circuit 2 times when solenoid valve S1 is operated (1-trip detection logic)	• Short in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0974	ECM detects open in solenoid valve S1 circuit 2 times when solenoid valve S1 is not operated (1-trip detection logic)	• Open in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve S1 circuit. When there is an open or short circuit in any shift solenoid valve circuits, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve S1 is on, if the resistance is 8 Ω or less, the ECM determines that there is a short malfunction in the shift solenoid valve S1 circuit.
When the shift solenoid valve S1 is off, if the resistance is 100 kΩ or more, the ECM determines that the shift solenoid valve S1 circuit is open (See page AT-32).

MONITOR STRATEGY

Related DTCs	P0973: Shift solenoid valve S1/Range check (Low resistance) P0974: Shift solenoid valve S1/Range check (High resistance)

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0985	Shift Solenoid "E" Control Circuit Low (Shift Solenoid Valve SR)

DTC	P0986	Shift Solenoid "E" Control Circuit High (Shift Solenoid Valve SR)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with the ON and OFF operation of the shift solenoid valves S1, S2, SR, SL1 and SL2 which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be driven smoothly (See page AT-32).

DTC No.	DTC Detection Conditions	Trouble Areas
P0985	ECM detects short in solenoid valve SR circuit 2 times when solenoid valve SR is operated (1-trip detection logic)	• Short in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM
P0986	ECM detects open in solenoid valve SR circuit 2 times when solenoid valve SR is not operated (1-trip detection logic)	• Open in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve SR circuit. When there is an open or short circuit in any shift solenoid valve circuits, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve SR is on, if the resistance is 8 Ω or less, the ECM determines that there is a short malfunction in the shift solenoid valve SR circuit.
When the shift solenoid valve SR is off, if the resistance is 100 kΩ or more, the ECM determines that the shift solenoid valve SR circuit is open (See page AT-32).

MONITOR STRATEGY

Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0985: Range check (Low resistance)

The monitor will run whenever the following DTCs are not present.	None
Shift solenoid valve SR	ON
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

P0986: Range check (High resistance)

The monitor will run whenever the following DTCs are not present.	None
Shift solenoid valve SR	OFF
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P0985: Range check (Low resistance)

Shift solenoid valve SR resistance	8 Ω or less

P0986: Range check (High resistance)

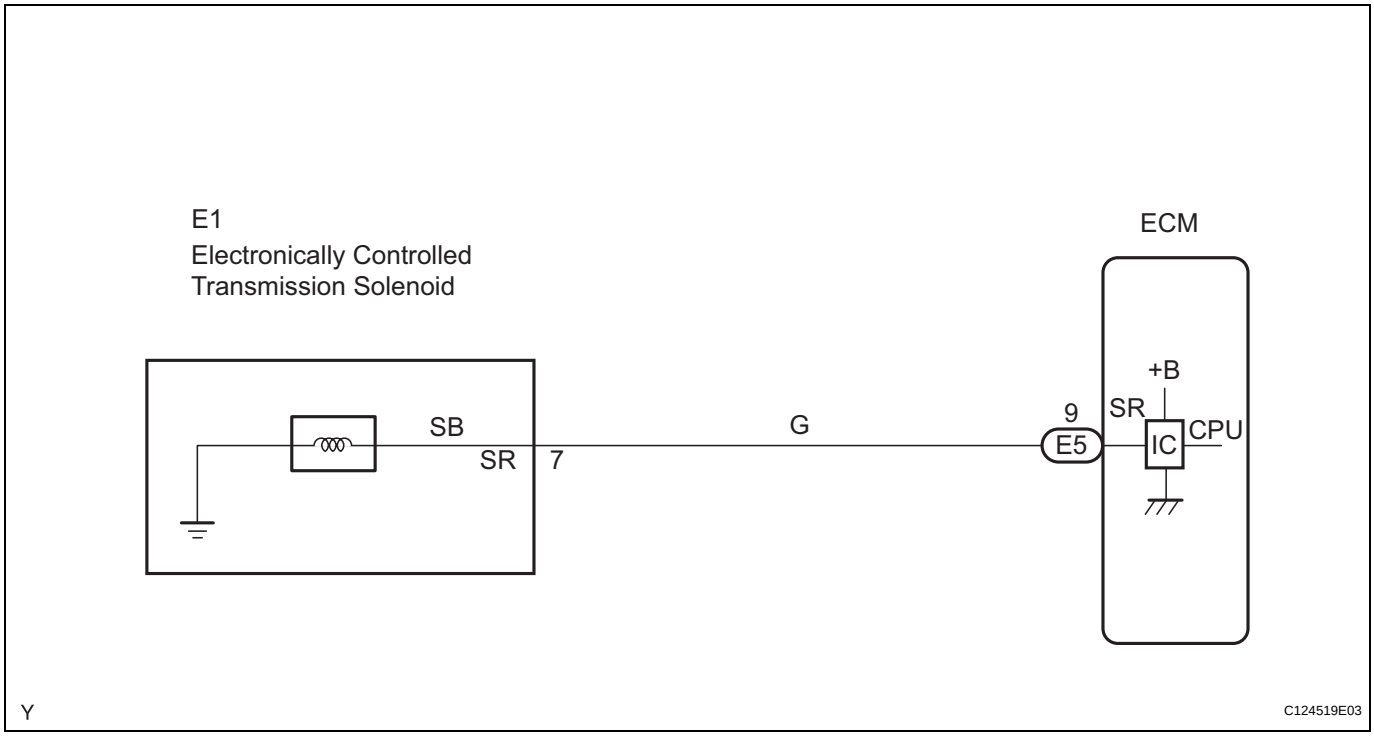
AT

Shift solenoid valve SR resistance	100 kΩ or more

COMPONENT OPERATING RANGE

Shift solenoid valve SR resistance	11 to 15 Ω at 20°C (68°F)

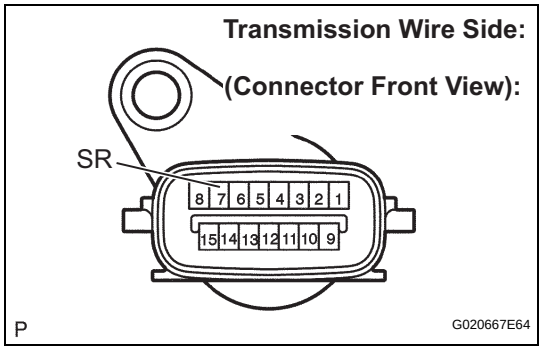
WIRING DIAGRAM



HINT:
The shift solenoid valve SR is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th	5th
Shift solenoid valve SR	OFF	OFF	OFF	OFF	ON

1	INSPECT TRANSMISSION WIRE (SR)



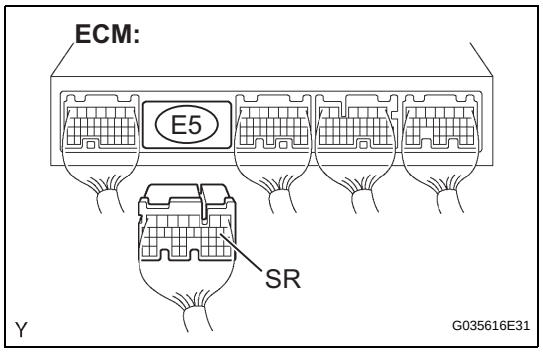
(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
7 - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-9 (SR) - Body ground	11 to 15 Ω at 20°C (68°F)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

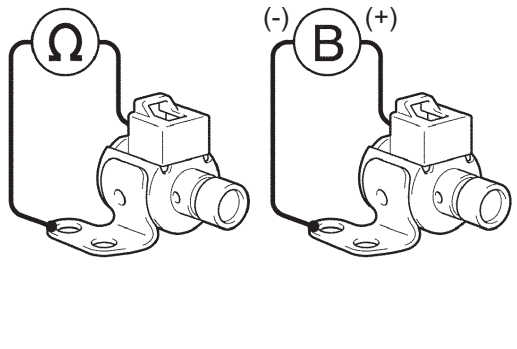
OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SR

AT

Shift Solenoid Valve SR:



A110988E05

(a) Remove the shift solenoid valve SR.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (SR) - Solenoid Body (SR)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.
OK:
The solenoid makes an operating noise.

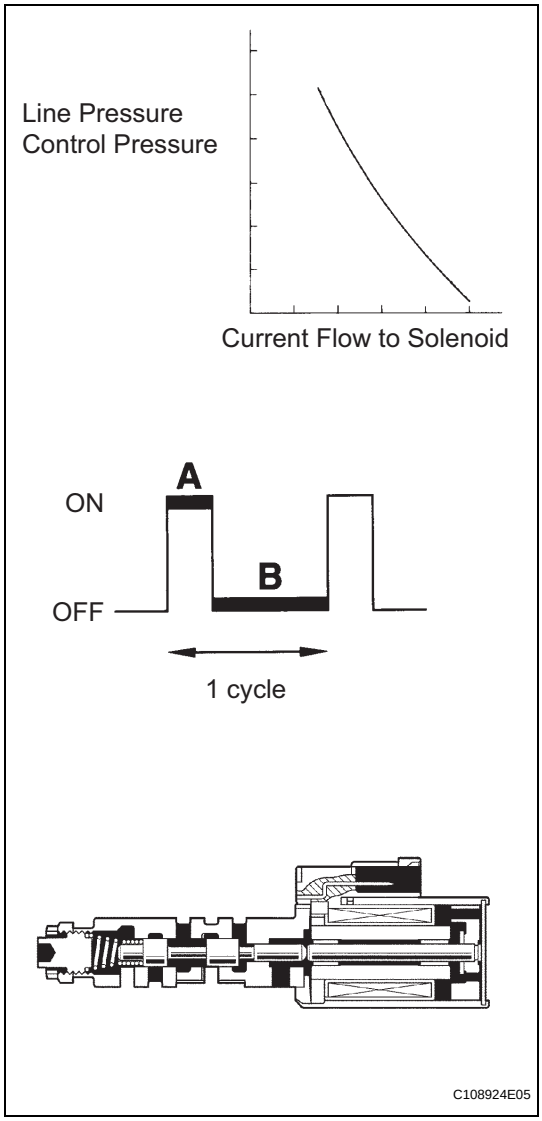
NG → **REPLACE SHIFT SOLENOID VALVE SR**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

DESCRIPTION



The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty ratio* of the SLT solenoid valve output signal to control the hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.
*: The duty ratio is the ratio of the period of continuity in one cycle.
For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio=A/(A+B) x 100 (%)

DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects malfunctions on SLT (ON side) according to the revolution difference between the turbine and the output shaft, and also by monitoring the oil pressure. (2 trip detection logic)	• Shift solenoid valve SLT remains open or closed • Shift solenoid valve S1, S2, SR, SL1 or SL2 remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

The ECM calculates the amount of heat absorbed by the friction material based on the difference in revolution (clutch slippage) between the turbine and output shaft. The ECM turns on the MIL and outputs this DTC when the amount of heat absorption exceeds the specified value.
When the shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.
NOTE: If driving continues under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Related DTCs	P2714 : Shift solenoid valve SLT/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SLT
Required sensors/Components (Related)	Valve body, ATF temperature sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous
Duration	Immediate
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Transmission fluid temperature sensor "A" circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Pressure control solenoid "A" (SL1) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
Pressure control solenoid "D" (SLT) circuit	Functioning normally
ECT (Engine coolant temperature) sensor circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
Transfer range	"High"*1
ATF temperature	10°C (50°F) or more

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally
Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

TYPICAL MALFUNCTION THRESHOLDS

Summation of C1 clutch heat generations = SUM (Turbine speed - Output speed x Temporary gear ratio)	Specified value

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ LINE PRESS UP".
8. According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT to raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON [HINT] OFF: Line pressure up (When the active test of "LINE PRESS UP" is performed the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transmission, which is used in the HYDRAULIC TEST (See page AT-16) as well.

HINT:
- The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.
- Normally, the line pressure detected in the ACTIVE TEST is approximately half of the value detected in the HYDRAULIC TEST's stall test.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2714)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

Display (DTC Output)	Proceed to
Only "P2714" is output	A
"P2714" and other DTCs	B

HINT:
If any codes besides "P2714" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (LINE PRESS UP) (See page AT-82)

NG → Go to step 9

AT

OK

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SHIFT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester ON.
(d) Clear the DTC (See page AT-31).
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(f) Follow the instructions on the tester and perform the ACTIVE TEST.

HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position. [Vehicle Condition] • IDL: ON • Less than 30 mph (50 km/h) [Other information] • Press "→" button: Shift up • Press "←" button: Shift down	The operation of the shift solenoid valves can be checked.

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shift must be performed with the accelerator pedal released.
- The 5th to 4th down-shift must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position commanded by the ECM is shown in the DATA LIST (SHIFT) display on the intelligent tester.

(g) Compare the ECM gear shift command and the actual gear position.

ECM gear shift command			1st	2nd	3rd	4th	5th	Proceed to
Actual gear position under malfunction	Shift solenoid S1	Stuck ON	1st	2nd	2nd	1st	N*1	A
		Stuck OFF	4th	3rd	3rd	4th	5th	
	Shift solenoid S2	Stuck ON	2nd	2nd	3rd	3rd	N*1	B
		Stuck OFF	1st	1st	4th	4th	5th	
	Shift solenoid SL2	Stuck ON	1st	2nd	3rd	4th	N*1	C
		Stuck OFF	1st	2nd	3rd	4th	5th	
	Shift solenoid SR	Stuck ON*2	1st	2nd	3rd	4th	5th	D
		Stuck OFF	1st	2nd	3rd	4th	4th	

HINT:
- *1: Neutral
- *2: Shift shock increases extremely when a malfunction occurs.
- Gear shift can be determined by paying attention to changes in rpm.

B	Go to step 5
C	Go to step 6
D	Go to step 7
OK	Go to step 9

A

4	INSPECT SHIFT SOLENOID VALVE S1 (See page AT-111)

OK	Go to step 10

8	INSPECT SHIFT SOLENOID VALVE SL1 (See page AT-77)

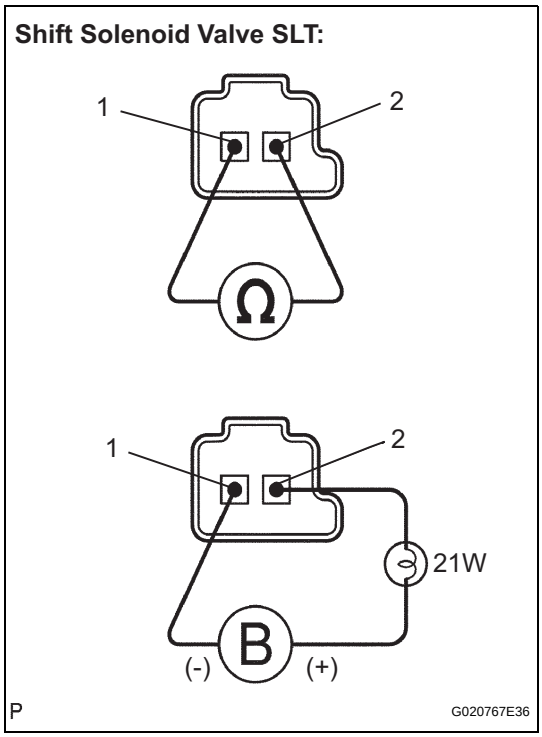
AT

OK → Go to step 10

NG

REPLACE SHIFT SOLENOID VALVE SL1

9	INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → REPLACE SHIFT SOLENOID VALVE SLT

OK

10	INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

11	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (See page AT-169).

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION

Refer to DTC P2714 (See page AT-111).

DTC No.	DTC Detection Conditions	Trouble Areas
P2716	Open or short is detected in shift solenoid valve SLT circuit for 1 second or more while driving (1-trip detection logic)	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM

MONITOR DESCRIPTION

When an open or short is detected in the linear solenoid valve (SLT) circuit, the ECM interprets this as a fault.
The ECM turns on the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check
Required sensors/Components	Shift solenoid valve SLT
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU requested duty ratio to SLT	Less than 75 %
Ignition switch	ON
Starter	OFF

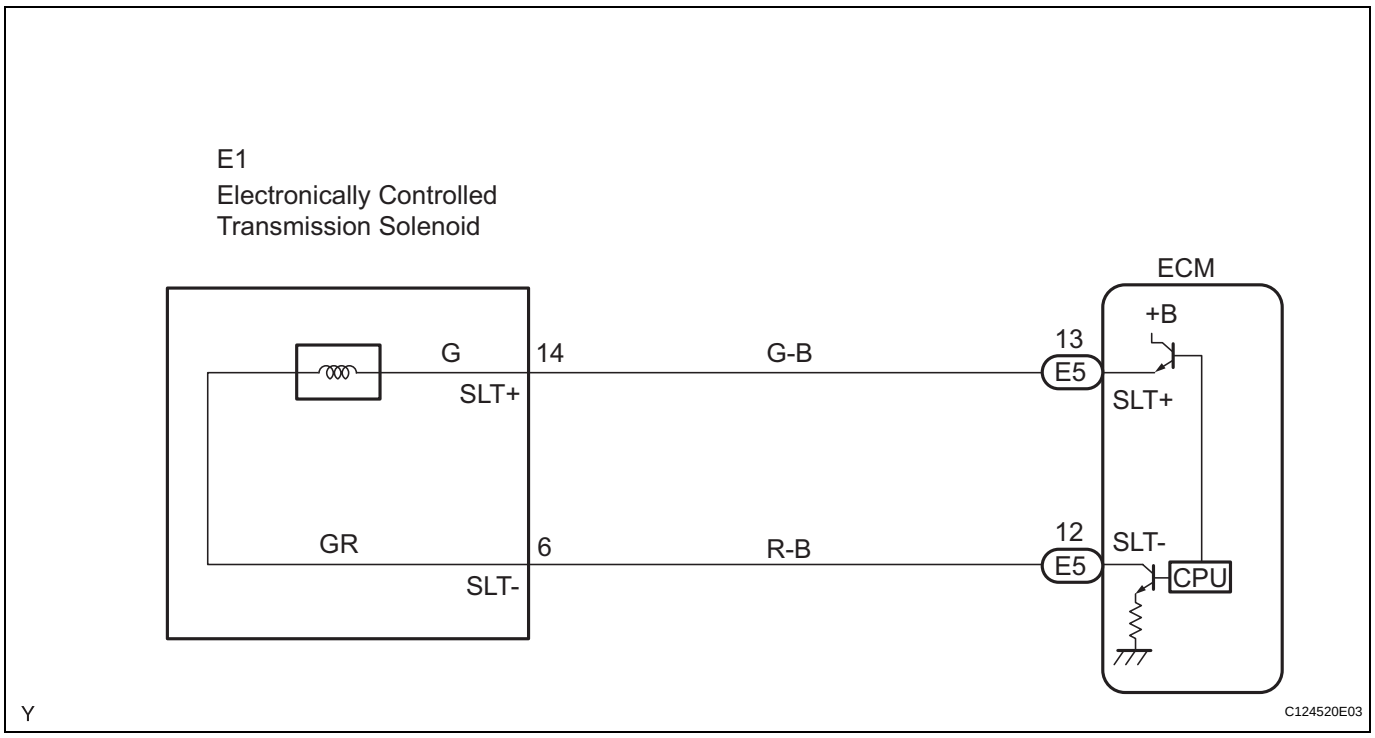
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

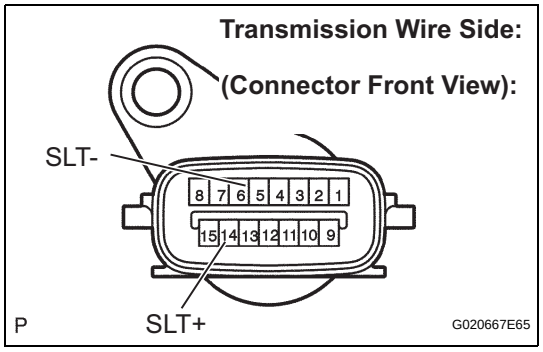
COMPONENT OPERATING RANGE

Output signal duty ratio	Less than 100 %

WIRING DIAGRAM



1	INSPECT TRANSMISSION WIRE (SLT)



(a) Disconnect the transmission wire connector from the transmission.

(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
14 (SLT+) - 6 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)

(c) Measure the resistance.

Standard resistance (Check for short)

Tester Connection	Specified Condition
14 (SLT+) - Body ground	10 kΩ or higher
6 (SLT-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

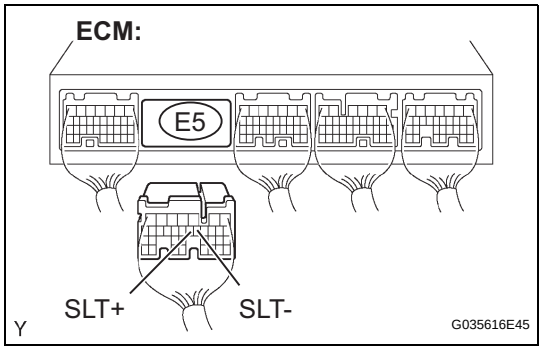
2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-13 (SLT+) - E5-12 (SLT-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

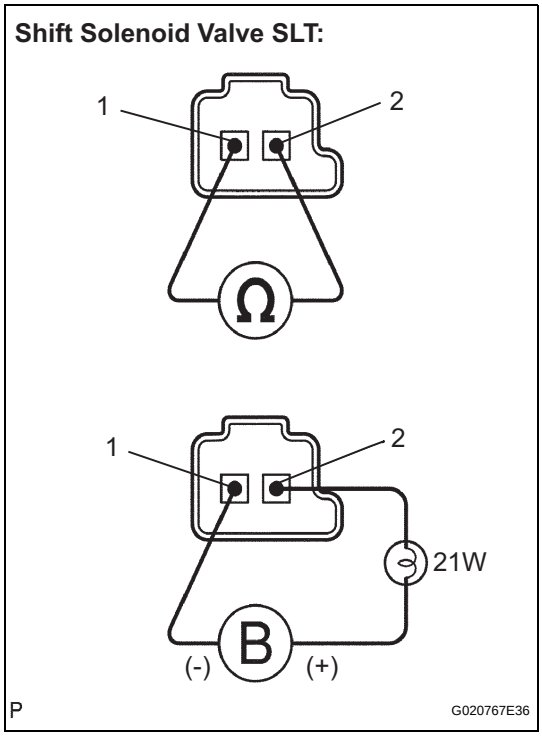
Tester Connection	Specified Condition
E5-13 (SLT+) - Body ground	10 kΩ or higher
E5-12 (SLT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2740	Transmission Fluid Temperature Sensor "B" Circuit

DTC	P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input

DTC	P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input

AT

DESCRIPTION

The No. 2 Automatic Transmission Fluid (ATF) temperature sensor is on the transmission, just before the oil cooler inlet pipeline.

If the ECM detects an abnormally high ATF temperature through this sensor, it illuminates the warning light to indicate the problem to the driver.

HINT:

- The ATF temperature is liable to increase under vehicle conditions such as towing, climbing hills and in traffic.
- If there is a short malfunction in the No. 2 ATF temperature sensor, the ECM receives signals from the sensor, which indicate that the ATF temperature is 150°C (302°F) or more.

The symptoms and recovery conditions, when the sensor is normal or there is a short malfunction in the sensor, are as shown in the table below.

No.2 ATF Temperature Sensor Status	Detection Condition	Symptom	Recovery Condition
Sensor is normal	• ATF temperature more than 150°C (302°F)	• ATF temperature warning light remains on	• ATF temperature less than 135°C (275°F) *2
	• ATF temperature more than 130°C (266°F)	• Shift point too high	• ATF temperature less than 110°C (230°F)
	When the conditions (a) and (b) are satisfied continually (a) ATF temperature more than130°C (266°F) (b) Engine coolant temperature more than 95°C (203°F)	• Lock-up in 3rd gear *1	• ATF temperature less than 110°C (230°F) *2 and engine coolant temperature less than 95°C (203°F)
Sensor is short	• Any conditions	• ATF temperature warning light remains on • Shift point too high	• Symptoms still occur
	• Engine coolant temperature more than 95°C (203°F)	• Lock-up in 3rd gear *1	• Symptom still occurs

HINT:

*1: When the ATF temperature is normal, the transmission locks up in 5th gear with the shift lever in the D position and in 4th gear with the shift lever in the 4th position.

*2: When the ATF temperature is in the normal range, it decreases to less than 135°C (275°F) within 5 minutes of the shift lever being moved to the P or N position, while idling.

DTC No.	DTC Detection Conditions	Trouble Areas
P2740	Conditions (a) and (b) are detected momentarily within 0.5 seconds when neither P2742 nor P2743 is detected (1-trip detection logic) (a) No. 2 ATF temperature sensor resistance (voltage) is less than 25 Ω (0.046 V) (b) No. 2 ATF temperature sensor resistance (voltage) is more than 156 kΩ (4.915 V) HINT: Within 0.5 seconds the malfunction changes from (a) to (b) or (b) to (a)	• Open or short in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P2742	No. 2 ATF temperature sensor resistance (voltage) is less than 25 Ω (0.046 V) for 0.5 seconds or more (1-trip detection logic)	• Short in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM
P2743	No. 2 ATF temperature sensor resistance (voltage) is more than 156 kΩ (4.915 V) for 0.5 seconds or more 15 minutes or more after starting engine (1-tip detection logic)	• Open in No.2 ATF temperature sensor circuit • No.2 ATF temperature sensor • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the No. 2 Automatic Transmission Fluid (ATF) temperature sensor circuit. The No. 2 ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and detects any open or short malfunctions in the No. 2 ATF temperature sensor circuit. If the resistance (voltage) of the No. 2 ATF temperature sensor is less than 25 Ω (0.046 V) or more than 156 kΩ (4.915 V), the ECM interprets this as a fault in the No. 2 ATF temperature sensor or its wiring. The ECM turns on the MIL and stores a DTC.

MONITOR STRATEGY

Related DTCs	P2740 : No. 2 ATF temperature sensor/Range check (Fluttering) P2742 : No. 2 ATF temperature sensor/Range check (Low voltage) P2743 : No. 2 ATF temperature sensor/Range check (High voltage)
Required sensors/Components	No. 2 ATF temperature sensor
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P2740: Range check (Fluttering)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2742: Range check (Low voltage)

The monitor will run whenever the following DTCs are not present.	None
The typical enabling condition is not available.	-

P2743: Range check (High voltage)

The monitor will run whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P2740: Range check (Fluttering)

No. 2 ATF temperature sensor voltage	Less than 0.046 V or More than 4.915 V

P2742: Range check (Low voltage)

No. 2 ATF temperature sensor voltage	Less than 0.046 V

P2743: Range check (High voltage)

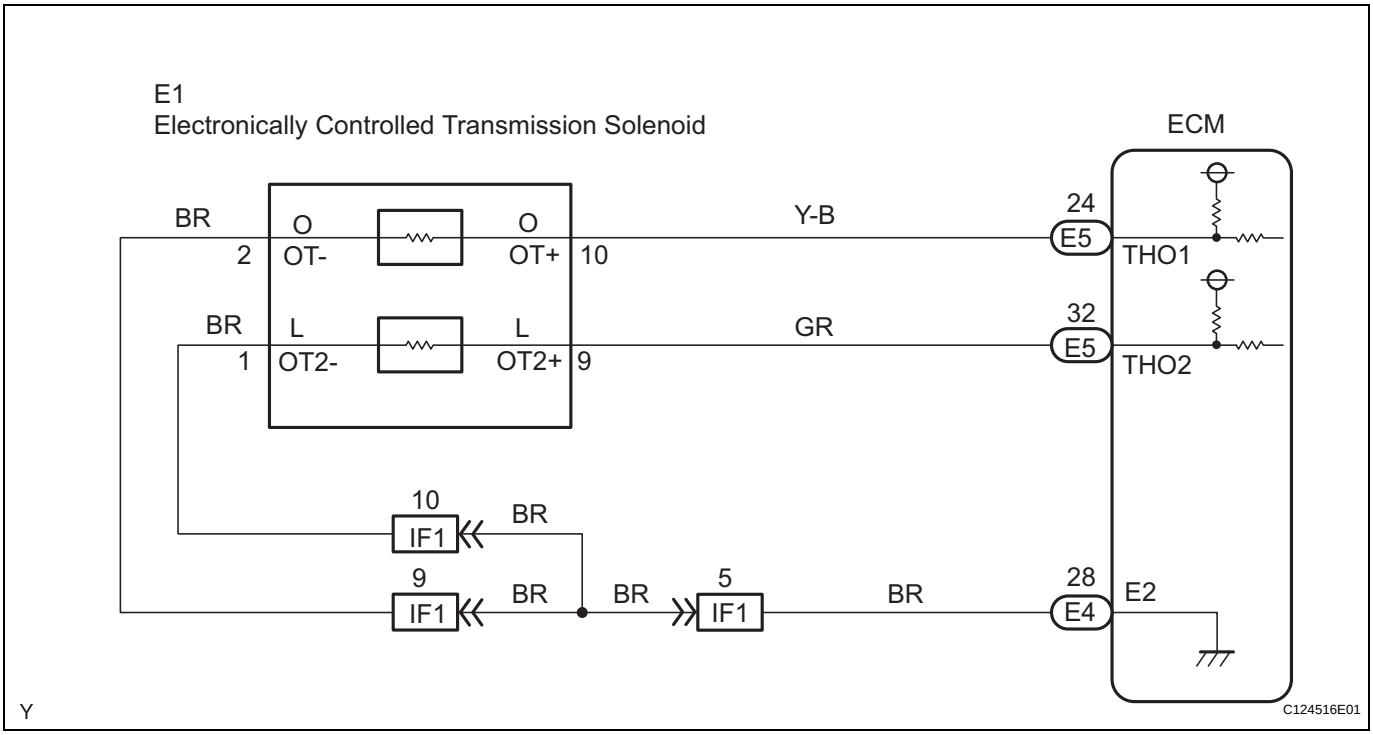
No. 2 ATF temperature sensor voltage	More than 4.915 V

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature up to approximately 130°C (266°F)

WIRING DIAGRAM

AT



HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors, actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Select the items "DIAGNOSIS/ ENHANCED OBD II/ DATA LIST"/ A/T.
7. According to the display on the tester, read the "DATA LIST".

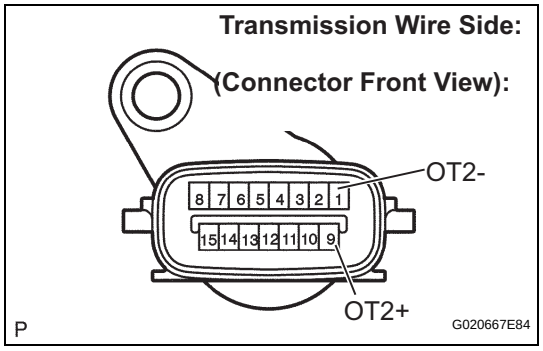
Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP2	No. 2 ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approximately 80°C (176°F) • Equal to ambient temperature during cold soak

HINT:
When DTC P2742 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P2743 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO2 (OT2) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

1 INSPECT TRANSMISSION WIRE (NO.2 ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 (OT2-) - 9 (OT2+)	79 Ω to 156 kΩ

(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
1 (OT2-) - Body ground	10 kΩ or higher
9 (OT2+) - Body ground	10 kΩ or higher

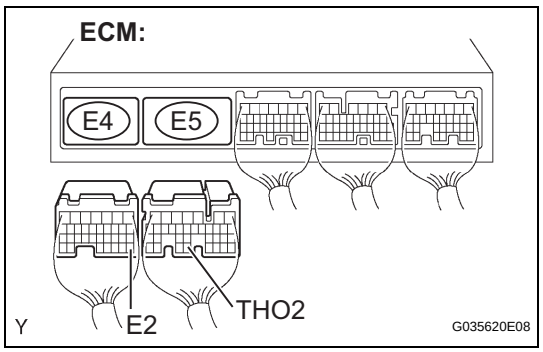
HINT:
If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connectors.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-32 (THO2) - E4-28 (E2)	79 Ω to 156 kΩ

(d) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
E5-32 (THO2) - Body ground	10 kΩ or higher
E4-28 (E2) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

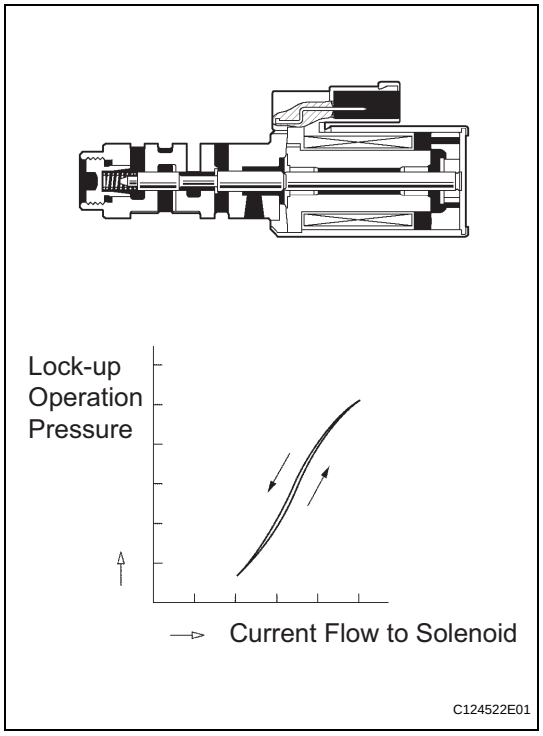
OK

AT

REPLACE ECM

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)

DESCRIPTION



The ECM uses the signals from the throttle position sensor, mass air flow meter, turbine (input) speed sensor, output speed sensor and crankshaft position sensor, to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect any mechanical problems with the shift solenoid valve SLU, valve body or torque converter clutch.

DTC No.	DTC Detection Conditions	Trouble Areas
P2757	Lock-up does not occur when driving in the lock-up range (normal driving at 50 mph [80 km/h]), or lock-up remains ON in the lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Shift solenoid valve SLU • Torque converter clutch • Automatic transmission (clutch, brake or gear, etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on turbine (input) speed sensor NT, output speed sensor SP2, engine rpm, engine load, engine coolant temperature, vehicle speed, transmission fluid temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) with the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) with output shaft rpm (SP2). When the conditions are appropriate, the ECM requests "lock-up" by applying the control voltage to the shift solenoid SLU. When the SLU is turned on, solenoid SLU applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance. The ECM turns on the MIL and stores the DTC.

Example:
When any of the following are met, the ECM interprets it as a malfunction.
1. There is a difference in rotation between before and after the torque converter even when the ECM requests lock-up.
   (Engine speed is at least 70 rpm greater than the input turbine speed.)
2. There is no difference in rotation between before and after the torque converter even when the ECM requests lock-up off.
   (The difference between the engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU/OFF malfunction Shift solenoid valve SLU/ON malfunction
Required sensors/Components (Main)	Shift solenoid valve SLU
Required sensors/Components (Related)	Valve body, Vehicle speed sensor, Throttle position sensor, Speed sensor (NT), Speed sensor (SP2)
Frequency of operation	Continuous
Duration	OFF malfunction (A): 2 seconds OFF malfunction (B): 0.4 seconds ON malfunction: 1.8 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions (A), (B) and ON malfunction.

The monitor will run whenever the following DTCs are not present.	None
Turbine speed sensor (NT) circuit	Functioning normally
Output speed sensor (SP2) circuit	Functioning normally
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Shift solenoid "E" (SR) circuit	Functioning normally
Torque converter clutch pressure control solenoid circuit	Functioning normally
Knock sensor circuit	Functioning normally
ETCS (Electronic throttle control system)	System not down
Transmission shift position	"D"
ECT	40°C (104°F) or more
Spark advance from max. retard timing by knock sensor control	0° CA or more
Engine	Starting
ECM selected gear	4th or 5th
Vehicle speed	15.5 mph (25 km/h) or more
Shift solenoid "A" (S1) circuit	Functioning normally
Shift solenoid "B" (S2) circuit	Functioning normally
Pressure control solenoid "B" (SL2) circuit	Functioning normally
1-2 shift valve	Functioning normally
Transfer neutral position switch	OFF
Transfer range	"High" *1

*1: Following conditions are met

Vehicle speed sensor "A" circuit	Functioning normally

Output speed sensor circuit	Functioning normally
Transfer output speed	143 rpm or more
Transfer input speed/Transfer output speed	0.9 to 1.1

OFF malfunction (A)

ECM lock-up request	ON (SLU pressure: 513 kPa or more)
Vehicle speed	Less than 62.2 mph (100 km/h)

OFF malfunction (B)

ECM selected gear	2nd
Vehicle speed	1.2 mph (2 km/h) or more
Output speed	2nd → 1st down shift point or more
Throttle valve opening angle	6.5 % or more at engine speed of 2,000 rpm (Conditions vary with engine speed)

ON malfunction

ECM lock-up request	OFF (SLU pressure: less than 4 kPa)
Throttle valve opening angle	7 % or more
Vehicle speed	Less than 37.3 mph (60 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Both of the following conditions are met: OFF malfunction (A) and (B)

OFF malfunction (A)

Engine speed - Turbine speed	70 rpm or more

OFF malfunction (B)

Turbine speed/Output speed	Not 3.3 to 7.50

ON malfunction
2 detections are necessary in 1 driving cycle.
1st detection; temporary flag ON
2nd detection; pending fault code ON
Vehicle speed must be under 6.2 mph (10 km/h) once before the 2nd detection.

Difference between engine speed and turbine speed	Less than 35 rpm

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as, the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS/ ENHANCED OBD II/ ACTIVE TEST/ LOCK UP".

8. According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more	Possible to check the SLU operation.

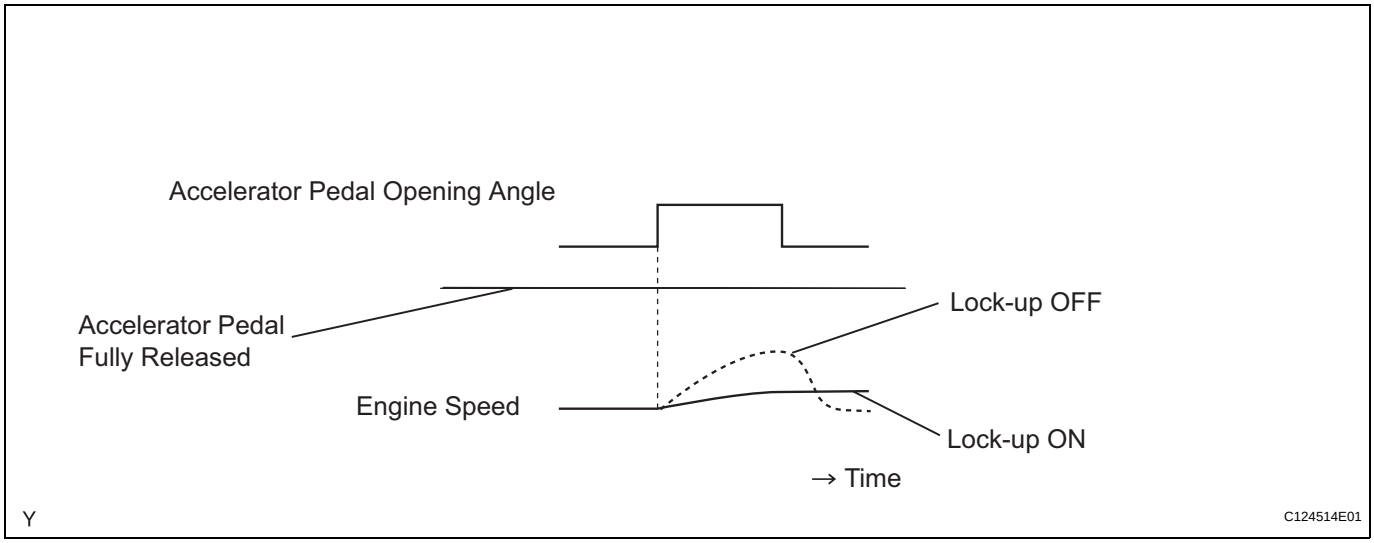
AT

HINT:
This test can be conducted when the vehicle speed is 36 mph (60 km/h) or more.

9. Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal causes closure of the throttle valve and lock-up may be turned off automatically.)



1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the intelligent tester main switch ON.
(c) Select the items "DIAGNOSIS/ ENHANCED OBD II/ DTC INFO/ CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result:

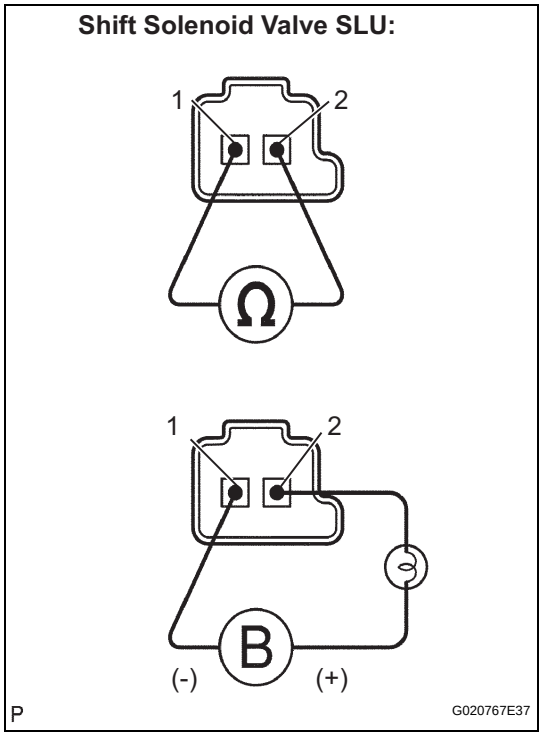
Display (DTC Output)	Proceed to
Only "P2757" is output	A
P2757" and other DTCs	B

HINT:
If any codes besides "P2757" are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2	INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY (See chapter 2 in the problem symptoms table)

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the torque converter clutch assembly (See page AT-169).
OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

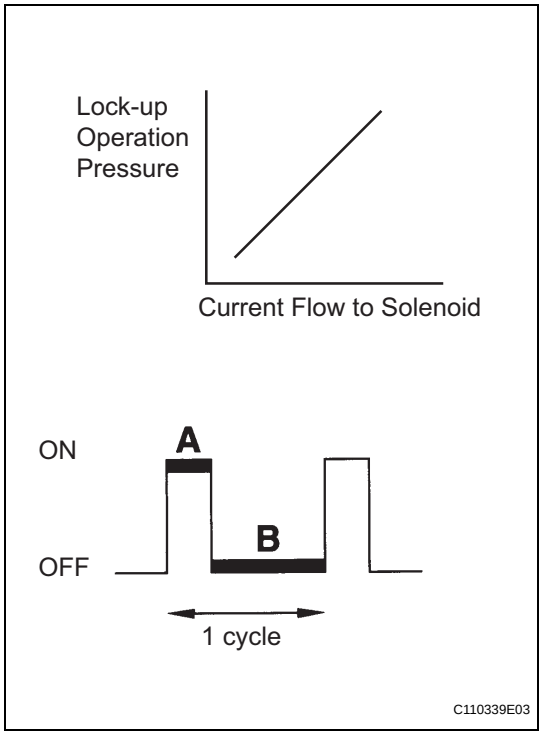
OK

REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)

AT

DESCRIPTION



The current flow to the solenoid is controlled by the duty ratio* of the ECM output signal. The higher the duty ratio becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.
*: The duty ratio is the ratio of the period of continuity in one cycle.
For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio = A/(A+B) x 100(%).

DTC No.	DTC Detection Conditions	Trouble Areas
P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving (1-trip detection logic)	• Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • ECM

MONITOR DESCRIPTION

When an open or short is detected in the shift solenoid valve (SLU) circuit, the ECM determines that there is a malfunction. The ECM turns on the MIL and stores this DTC.

MONITOR STRATEGY

Related DTCs	P2759: Shift solenoid valve SLU/Range check
Required sensors/Components	Shift solenoid valve SLU
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	None
Battery voltage	10 V or more
CPU requested duty ratio to SLU	75 % or more
Ignition switch	ON
Starter	OFF

AT

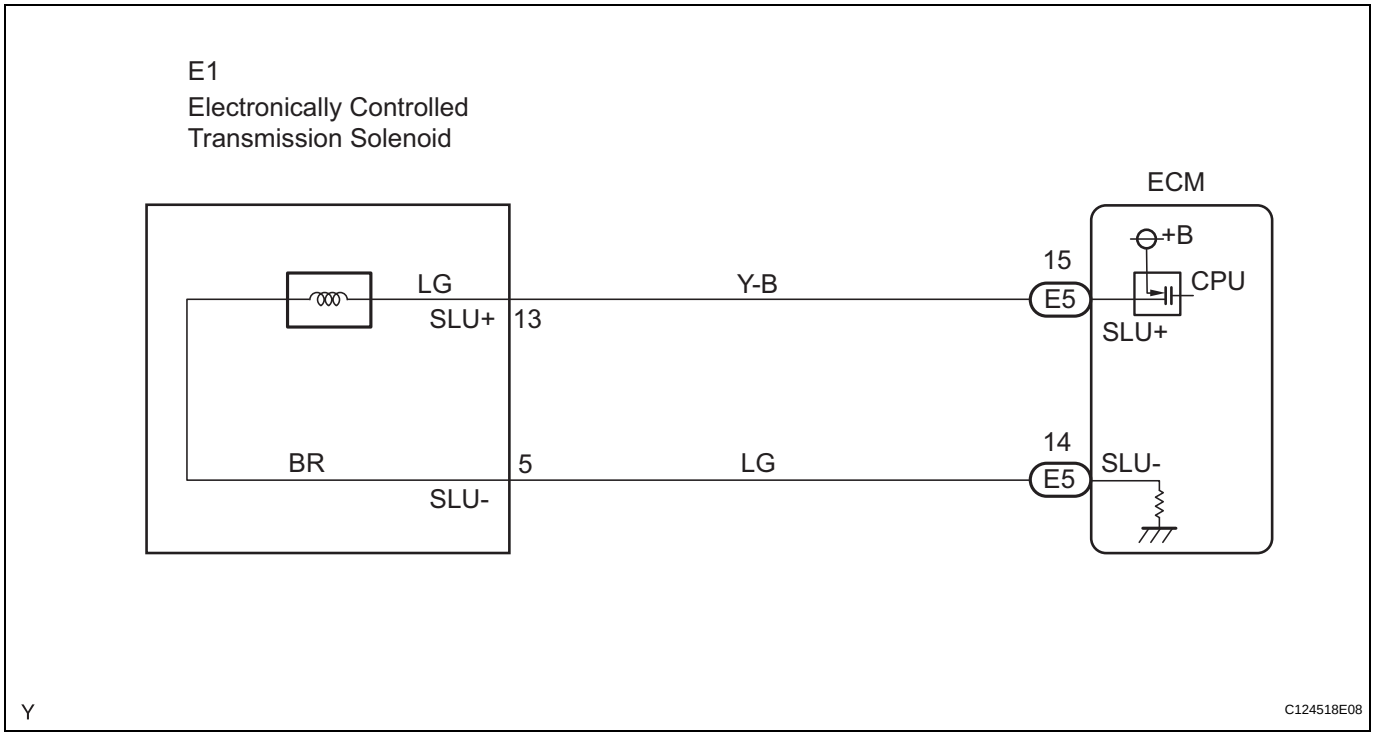
TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100 %

COMPONENT OPERATING RANGE

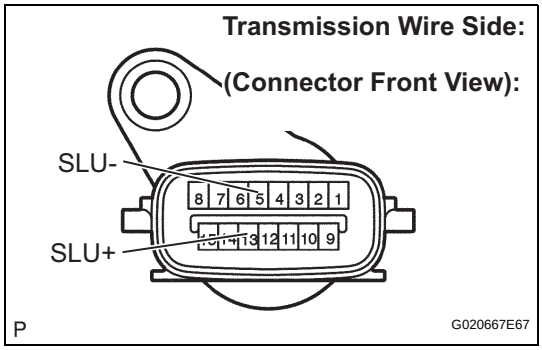
Output signal duty	Less than 100 %

WIRING DIAGRAM



AT

1	INSPECT TRANSMISSION WIRE (SLU)



(a) Disconnect the transmission wire connector from the transmission.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
13 (SLU+) - 5 (SLU-)	5.0 to 5.6 Ω at 20°C (68°F)

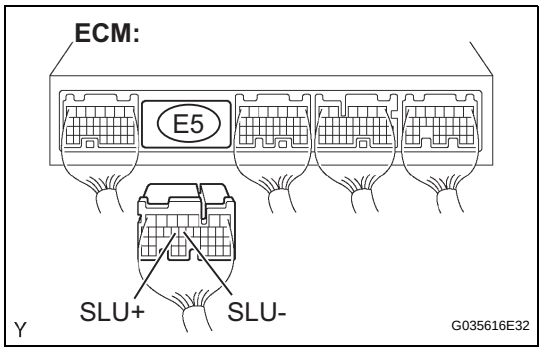
(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
13 (SLU+) - Body ground	10 kΩ or higher
5 (SLU-) - Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transmission.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E5-15 (SLU+) - E5-14 (SLU-)	5.0 to 5.6 Ω at 20°C (68°F)

(d) Measure the resistance.
Standard resistance (Check for short)

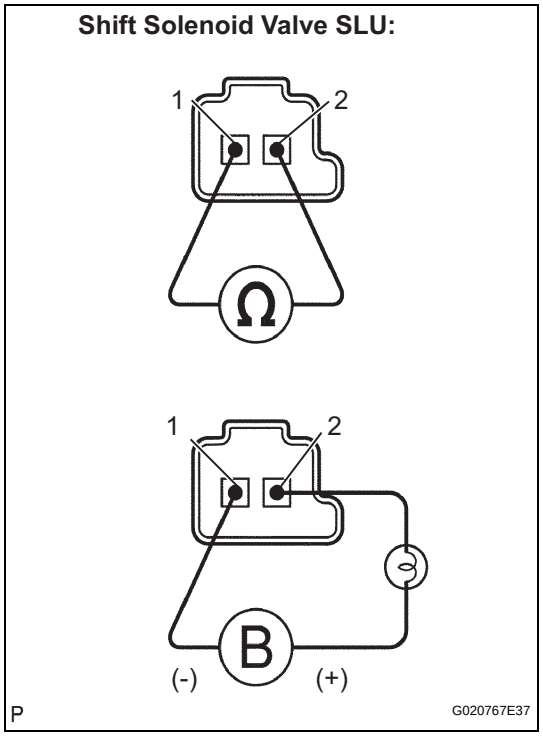
Tester Connection	Specified Condition
E5-15 (SLU+) - Body ground	10 kΩ or higher
E5-14 (SLU-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AT

DTC P2772 Transfer "L4" Switch Circuit

DESCRIPTION

The ECM detects the signal from the transfer L4 position switch.
This DTC indicates that the transfer L4 position switch remains ON.

AT

DTC No.	DTC Detection Conditions	Trouble Areas
P2772	Transfer L4 position switch remains ON while vehicle running under following conditions for 1.8 seconds or more (1-trip detection logic) (a) Output shaft speed: between 1,000 rpm and 3,000 rpm (b) Transfer shift position: H	• Short in transfer L4 position switch circuit • Transfer L4 position switch • ECM

MONITOR DESCRIPTION

The ECM monitors the transfer-case L4 position switch to determine whether the transfer-case L4 gear is engaged. If the transfer-case L4 gears remain engaged under the following conditions, the ECM determines that there is a malfunction of the L4 position switch:

- L4 switch indicates that the L4 transfer-case gears are engaged.
- Transfer-case shifter is in the "H" position.
- Transfer-case output shaft rpm is between 1,000 and 3,000 rpm.
- The specified time period has elapsed.

If all of the above conditions are met, the ECM determines that there is a malfunction of the L4 switch, illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P2772 : Transfer L4 position switch/ON malfunction
Required sensors/Components	Transfer L4 position switch
Frequency of operation	Continuous
Duration	ON malfunction (A) 1.8 seconds ON malfunction (B) 0.5 seconds
MIL operation	1 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all ON malfunctions (A) and (B).

The monitor will run whenever the following DTCs are not present.	None
Output speed sensor (SP2) circuit	Functioning normally
Vehicle speed sensor "A" circuit	Functioning normally
Transmission neutral position switch	OFF

ON malfunction (A)

Output speed (Transfer output speed)	1,000 to 3,000 rpm

ON malfunction (B)

Output speed (Transfer output speed)	143 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

Both of the following conditions are met: ON malfunctions (A) and (B)

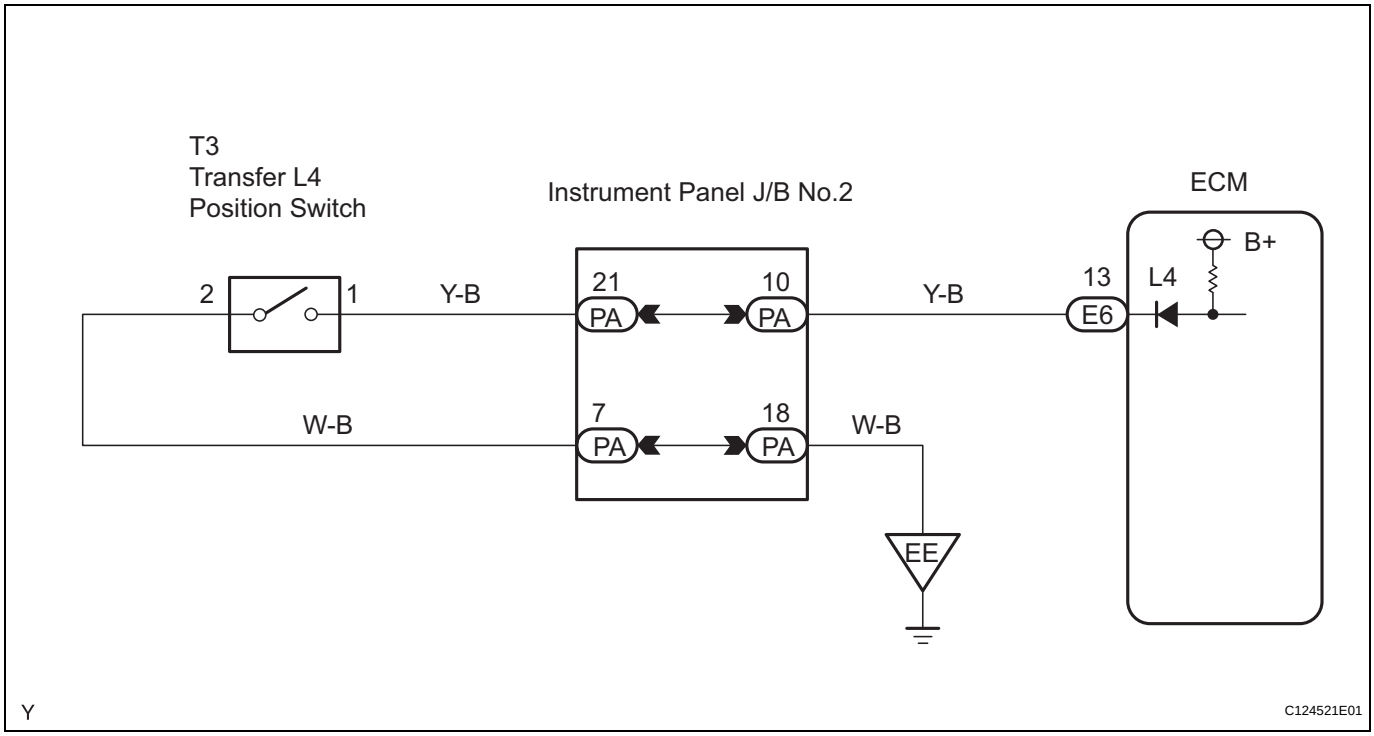
ON malfunction (A)

L4 switch	ON

ON malfunction (B)

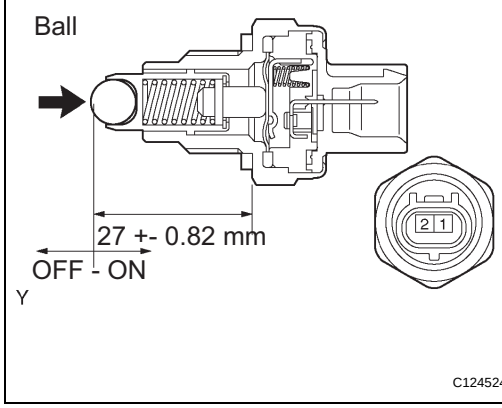
Actual transfer gear ratio Transfer input speed/Transfer output speed	0.9 to 1.1

WIRING DIAGRAM



1	INSPECT NO. 2 TRANSFER INDICATOR SWITCH (TRANSFER L4 POSITION SWITCH)

Transfer L4 Position Switch:



(a) Remove the transfer L4 position switch.
(b) Measure the resistance when pushing the ball at the tip of the switch.

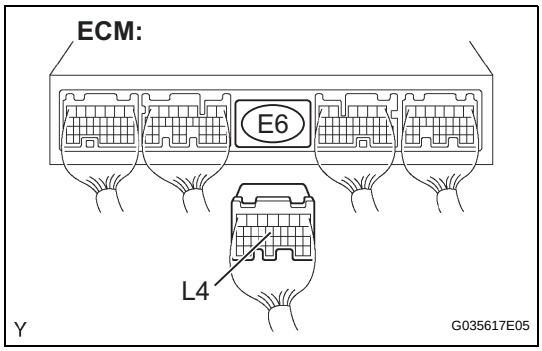
Standard resistance

Switch Ball	Tester Connection	Specified Condition
Push	1 - 2	Below 1 Ω
Free	1 - 2	10 kΩ or higher

NG → **REPLACE NO. 2 TRANSFER INDICATOR SWITCH (TRANSFER L4 POSITION SWITCH)**

OK

2	CHECK HARNESS AND CONNECTOR (ECM - L4 POSITION SWITCH, L4 POSITION SWITCH - BODY GROUND)



(a) Install the transfer L4 position switch.
(b) Disconnect the ECM connector.
(c) Measure the resistance when the transfer shift lever is in any position other than the L position.

Standard resistance

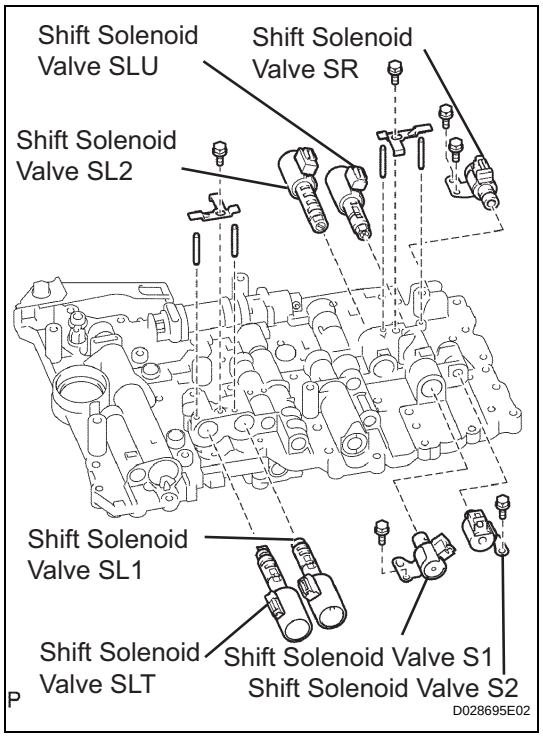
Condition	Tester Connection	Specified Condition
Transfer shift lever other than L position	E6-13 (L4) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

INSTALLATION



1. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

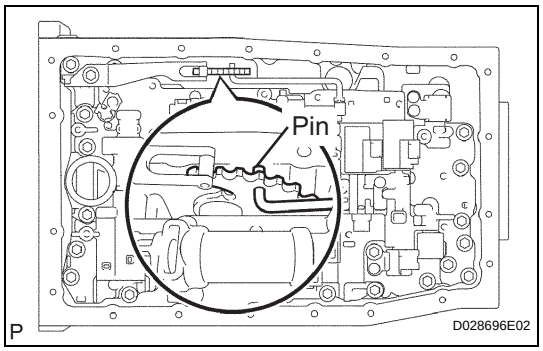
(a) Install the shift solenoid valve S2 with the bolt.
Torque: 10 N*m (100 kgf*cm, 7 ft.*lbf)

(b) Install the shift solenoid valve S1 with the bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(c) Install the shift solenoid valve SR with the 2 bolts.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

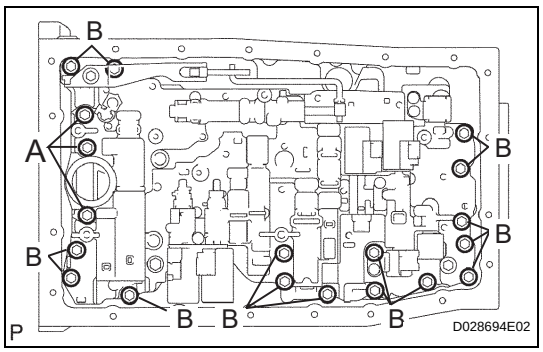
(d) Install the shift solenoid valves SLU and SL2 with the pin, lock plate and bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)

(e) Install the shift solenoid valves SLT and SL1 with the pin, lock plate and bolt.
Torque: 6.4 N*m (65 kgf*cm, 56 in.*lbf)



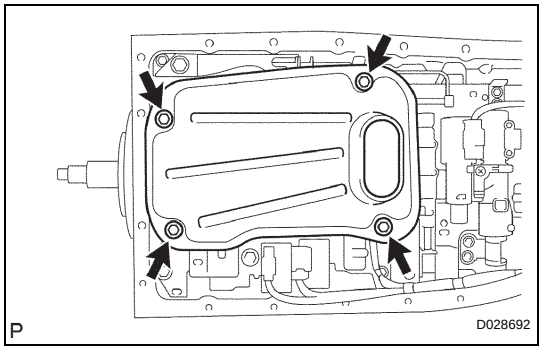
(f) Insert the pin of the lever into the hole of the manual valve.

(g) Install 3 new drum seal gaskets onto the transmission case.



(h) Install the 19 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)
Bolt length:
Bolt A: 36 mm (1.42 in.)
Bolt B: 25 mm (0.98 in.)

2. INSTALL TRANSMISSION WIRE (See page AT-144)

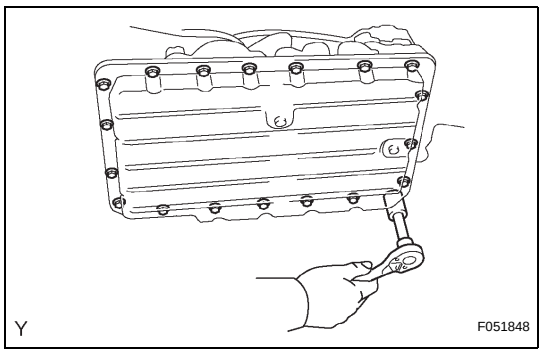


3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Install a new O-ring and the oil strainer with the 4 bolts.
Torque: 10 N*m (100 kgf*cm, 7 ft.*lbf)

4. INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

HINT:
Remove all packing material and be careful not to drop oil on the contact surfaces of the transmission case and oil pan.



(a) Install a new gasket and the oil pan sub-assembly.

(b) Install the oil pan with the 20 bolts.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf)

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

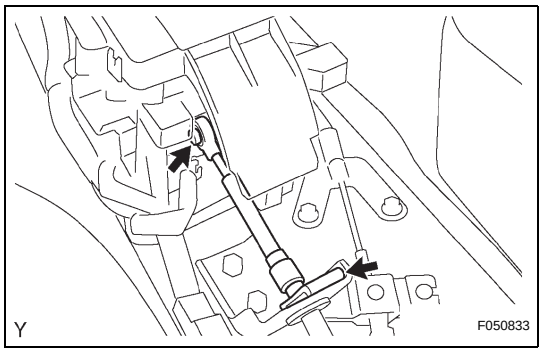
6. **PERFORM INITIALIZATION**
(See page AT-17)

7. **ADD AUTOMATIC TRANSMISSION FLUID**
(See page AT-139)

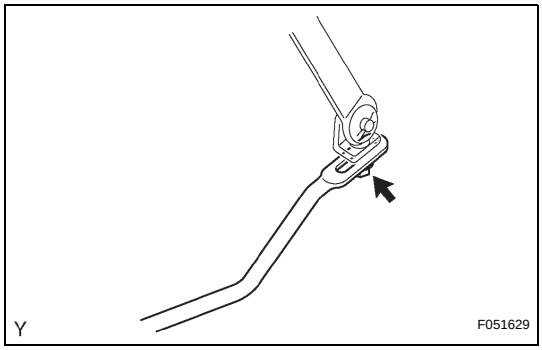
AT

REMOVAL

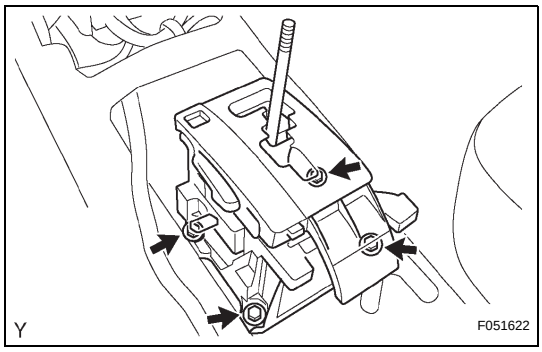
1. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-9)**
2. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
3. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Separate Seat Type) (See page IP-10)**
4. **REMOVE FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-10)**
5. **REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-11)**
6. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) CABLE TYPE:
      (1) Disconnect the transmission control cable assembly from the shift lever assembly.
      (2) Remove the clip and disconnect the transmission control cable.



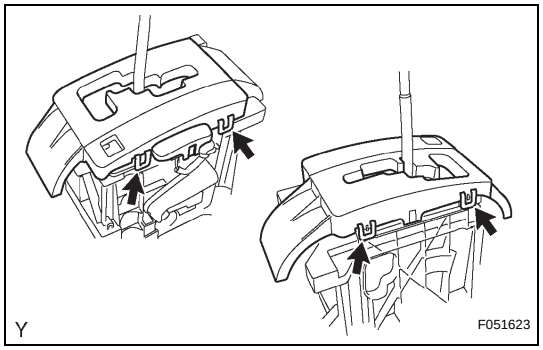
7. **SEPARATE FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY**
   (a) ROD TYPE:
      (1) Remove the nut, then separate the floor shift gear shifting rod.



8. **REMOVE FLOOR SHIFT ASSEMBLY**
   (a) Disconnect the 2 connectors and 2 clamps.
   (b) Remove the 4 bolts and floor shift assembly.

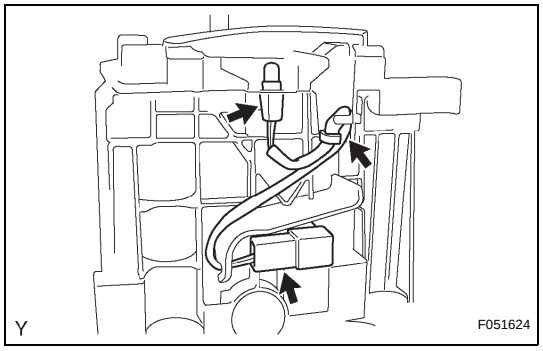


DISASSEMBLY



1. REMOVE UPPER POSITION INDICATOR HOUSING

(a) Release the 4 claws with a screwdriver and remove the position indicator housing and slide cover.

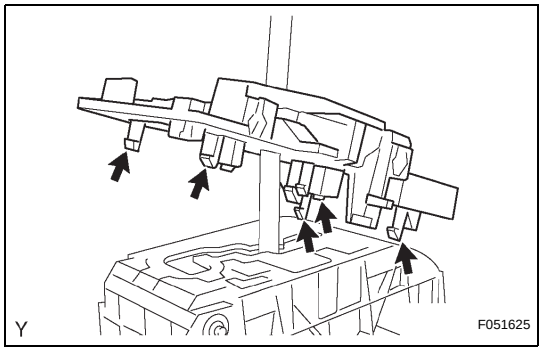


2. REMOVE INDICATOR LAMP WIRE SUB-ASSEMBLY

(a) Remove the indicator lamp wire sub-assembly.

(b) Remove the bulb from the indicator lamp wire sub-assembly.

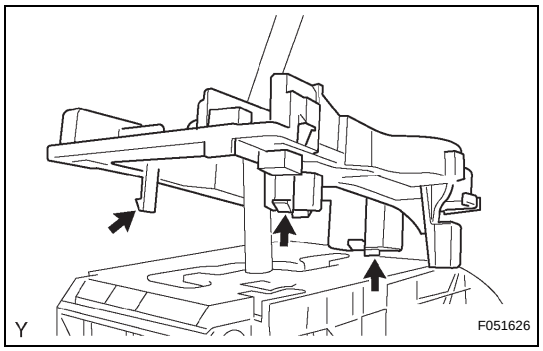
3. REMOVE SHIFT LOCK RELEASE BUTTON



4. REMOVE LOWER POSITION INDICATOR HOUSING

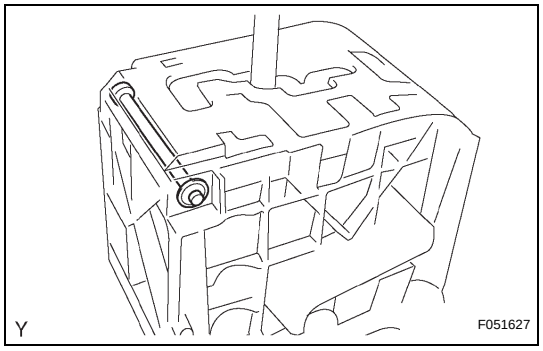
(a) CABLE TYPE:

(1) Release the 5 claws with a screwdriver and remove the position indicator housing lower.



(b) ROD TYPE:

(1) Release the 3 claws with a screwdriver and remove the position indicator housing lower.

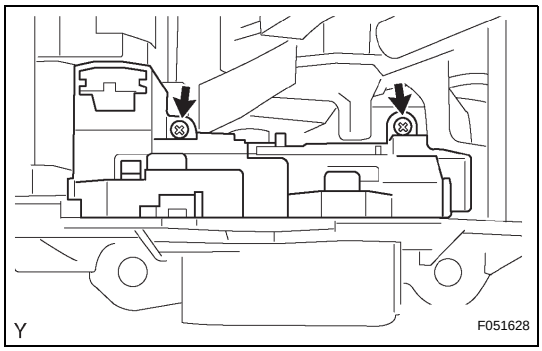


5. REMOVE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Remove the shift lever nut and shift lever lock pin.

(b) Remove the shift lever guide housing.

(c) Release the 2 claws with a screwdriver and remove the shift lock release link and spring.



(d) Remove the 2 screws and the shift lock control ECU.

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

(a) Check that the shift lever moves smoothly and appropriately from the P to R position, only when the ignition switch is turned to ON and the brake pedal is depressed.

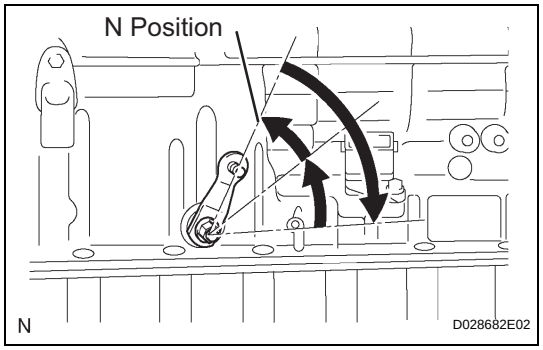
(b) When starting the engine, make sure that the vehicle moves forward when shifting the lever from the N to D position and moves rearward when shifting the lever to the R position.

2. ADJUST SHIFT LEVER POSITION

(a) Push the control shaft fully rearward.

(b) Turn the control shaft lever 2 notches counterclockwise to the N position.

(c) Set the shift lever to the N position.



REASSEMBLY

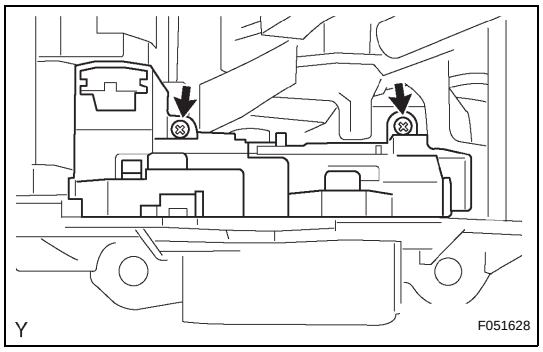
1. INSTALL SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Install the shift lock control ECU with the 2 screws.

(b) Install the spring and shift lock release link.

(c) Install the shift lever guide housing.

(d) Install the lever lock and new shift lever nut.



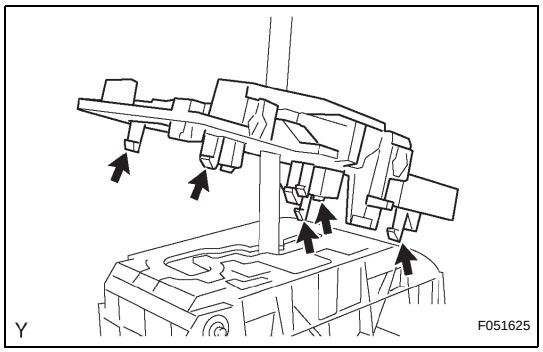
2. INSTALL POSITION INDICATOR HOUSING LOWER

(a) CABLE TYPE:

(1) Install the position indicator housing lower.

HINT:

Firmly make the claws fit.

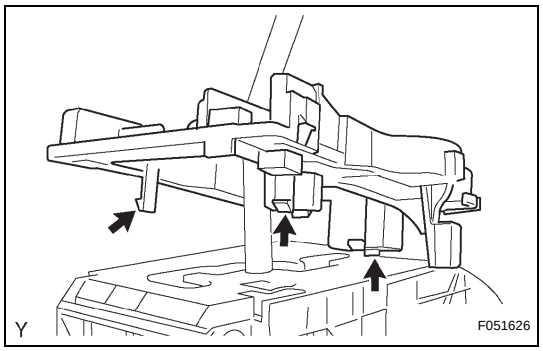


(b) ROD TYPE:

(1) Install the position indicator housing lower.

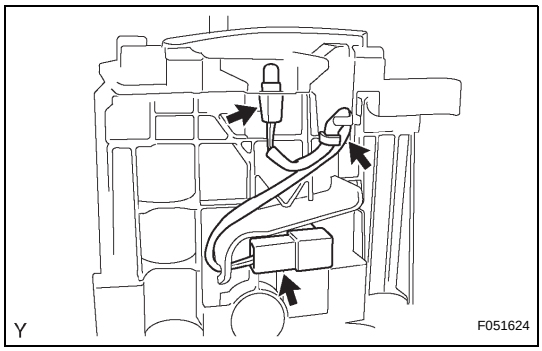
HINT:

Firmly make the claws fit.



3. INSTALL SHIFT LOCK RELEASE BUTTON

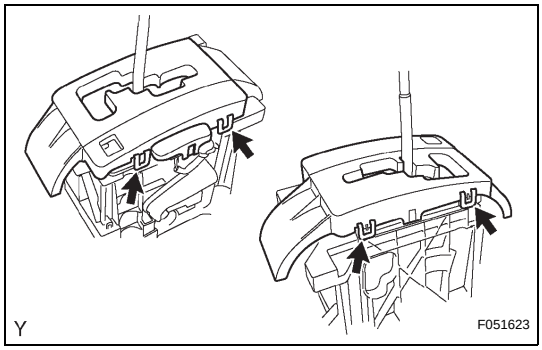
AT



4. INSTALL INDICATOR LAMP WIRE SUB-ASSEMBLY

(a) Install the bulb into the indicator lamp wire sub-assembly.

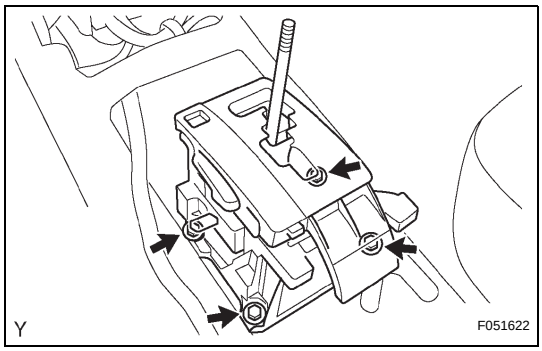
(b) Install the indicator lamp wire sub-assembly.



5. INSTALL POSITION INDICATOR HOUSING UPPER

(a) Install the slide cover and position indicator housing sub-assembly onto the shift lever guide housing.
HINT:
Firmly make the claws fit.

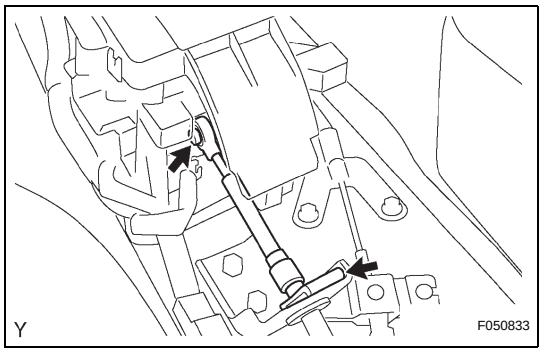
INSTALLATION



1. INSTALL FLOOR SHIFT ASSEMBLY

(a) Install the floor shift with the 4 bolts.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

(b) Connect the 2 clamps and 2 connectors.

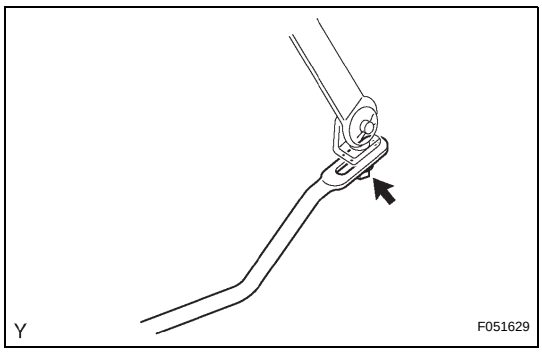


2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) CABLE TYPE:

(1) Connect the transmission control cable with the clip to floor shift assembly.

(2) Install the transmission control cable onto the floor shift assembly.



3. INSTALL FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

(a) ROD TYPE:

(1) Install the floor shift gear shifting rod with nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

4. REMOVE FRONT CONSOLE BOX (for Bench Seat Type) (See page IP-23)

5. INSTALL FRONT CONSOLE BOX (for Separate Seat Type) (See page IP-24)

6. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Separate Seat Type) (See page IP-24)**
7. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
8. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Separate Seat Type) (See page IP-25)**
9. **ADJUST SHIFT LEVER POSITION (See page AT-105)**
10. **INSPECT SHIFT LEVER POSITION (See page AT-105)**

No. 2 chain	Length	Maximum	146.8 mm (5.780 in.)
Idle gear shaft	Idle gear shaft diameter		22.987 to 23.000 mm (0.9050 to 0.9055 in.)
	Idle gear internal diameter		23.02 to 23.03 mm (0.9063 to 0.9067 in.)
	Oil clearance	Standard	0.020 to 0.043 mm (0.0008 to 0.0017 in.)
		Maximum	0.093 mm (0.0037 in.)
Chain tensioner assembly No. 2	Wear	Maximum	1.0 mm (0.039 in.)
Chain tensioner assembly No. 3	Wear	Maximum	1.0 mm (0.039 in.)
Chain tensioner slipper	Wear	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No. 1	Wear	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No. 2	Wear	Maximum	1.0 mm (0.039 in.)
Cylinder head sub-assembly	Warpage	Maximum	0.10 mm (0.0039 in.)
Intake valve	Valve stem diameter		5.470 to 5.485 mm (0.2154 to 0.2159 in.)
	Valve face angle		44.5°
	Margin thickness	Standard	1.0 mm (0.039 in.)
		Minimum	0.5 mm (0.020 in.)
	Overall length	Standard	106.95 mm (4.2106 in.)
		Minimum	106.70 mm (4.2008 in.)

Exhaust valve	Valve stem diameter		5.465 to 5.480 mm (0.2152 to 0.2158 in.)
	Valve face angle		44.5°
	Margin thickness	Standard	1.0 mm (0.039 in.)
		Minimum	0.5 mm (0.020 in.)
	Overall length	Standard	105.80 mm (41654 in.)
		Minimum	105.55 mm (4.1555 in.)
Inner compression spring	Deviation	Maximum	2.0 mm (0.079 in.)
	Free length	Maximum	47.80 mm (1.8819 in.)
	Tension	at 33.3 mm (1.311 in.)	186.2 to 205.8 N (19.0 to 21.0 kgf, 41.9 to 46.3 lbf)
Intake valve guide bush	Inside diameter		5.51 to 5.53 mm (0.2169 to 0.2177 in.)
	Oil clearance	Standard	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
		Maximum	0.08 mm (0.0031 in.)
	Bush bore diameter		10.295 to 10.315 mm (0.4053 to 0.4061 in.)
	Protrusion height		9.3 to 9.7 mm (0.366 to 0.382 in.)
Exhaust valve guide bush	Inside diameter		5.51 to 5.53 mm (0.2169 to 0.2177 in.)
	Oil clearance	Standard	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
		Maximum	0.10 mm (0.0039 in.)
	Bush bore diameter		10.295 to 10.315 mm (0.4053 to 0.4061 in.)
	Protrusion height		9.3 to 9.7 mm (0.366 to 0.382 in.)
Valve lifter	Diameter		30.966 to 30.976 mm (1.2191 to 1.2195 in.)
	Lifter bore diameter		31.009 to 31.025 mm (1.2208 to 1.2215 in.)
	Oil clearance	Standard	0.033 to 0.059 mm (0.0013 to 0.0023 in.)
		Maximum	0.08 mm (0.0031 in.)
No. 1 camshaft	Journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
		Other journals	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Circle runout	Maximum	0.06 mm (0.0024 in.)
	Cam lobe height	Standard	44.168 to 44.268 mm (1.7389 to 1.7428 in.)
		Minimum	44.018 mm (1.7330 in.)
	Oil clearance	Standard No. 1 journal	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
		Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
		Maximum No. 1 journal	0.07 mm (0.0028 in.)
		Other journals	0.10 mm (0.0039 in.)
	Thrust clearance	Standard	0.04 to 0.09 mm (0.016 to 0.035 in.)
		Maximum	0.11 mm (0.0043 in.)
No. 2 camshaft	Journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
		Other journals	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Circle runout	Maximum	0.06 mm (0.0024 in.)
	Cam lobe height	Standard	44.580 to 44.680 mm (1.7551 to 1.7591 in.)
		Minimum	44.430 mm (1.7492 in.)
	Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
		Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
		Maximum	0.10 mm (0.0039 in.)
	Thrust clearance	Standard	0.04 to 0.09 mm (0.016 to 0.035 in.)
		Maximum	0.11 mm (0.0043 in.)

No. 3 camshaft sub-assembly	Journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
		Other journals	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Circle runout	Maximum	0.06 mm (0.0024 in.)
	Cam lobe height	Standard	44.168 to 44.268 mm (1.7389 to 1.7428 in.)
		Minimum	44.018 mm (1.7330 in.)
	Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
		Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
		Maximum	0.10 mm (0.0039 in.)
	Thrust clearance	Standard	0.04 to 0.09 mm (0.016 to 0.035 in.)
		Maximum	0.11 mm (0.0043 in.)
No. 4 camshaft sub-assembly	Journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
		Other journals	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Circle runout	Maximum	0.06 mm (0.0024 in.)
	Cam lobe height	Standard	44.580 to 44.680 mm (1.7551 to 1.7591 in.)
		Minimum	44.430 mm (1.7492 in.)
	Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
		Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
		Maximum	0.10 mm (0.0039 in.)
	Thrust clearance	Standard	0.04 to 0.09 mm (0.016 to 0.035 in.)
		Maximum	0.11 mm (0.0043 in.)
Ring pin for cylinder head sub-assembly and cylinder head LH	Protrusion height		2.7 to 3.3 mm (0.106 to 0.130 in.)
Straight pin for cylinder head sub-assembly and cylinder head LH	Protrusion height	A	17.5 to 19.5 mm (0.689 to 0.768 in.)
		B	7.5 to 8.5 mm (0.295 to 0.335 in.)
		C	7.0 to 9.0 mm (0.276 to 0.354 in.)
Tight plug for cylinder head sub-assembly and cylinder head LH	Depth		1.5 mm (0.059 in.)
Connecting rod	Thrust clearance	Standard	0.15 to 0.30 mm (0.0059 to 0.0118 in.)
		Maximum	0.35 mm (0.0138 in.)
	Oil clearance	Standard	0.026 to 0.046 mm (0.0010 to 0.0018 in.)
		Maximum	0.066 mm (0.0025 in.)
Crankshaft thrust clearance		Standard	0.04 to 0.24 mm (0.0016 to 0.0094 in.)
		Maximum	0.30 mm (0.0118 in.)
Cylinder block warpage		Maximum	0.05 mm (0.0020 in.)
Cylinder bore diameter		Standard	94.000 to 94.012 mm (3.7008 to 3.7013 in.)
		Maximum	94.132 mm (3.7060 in.)
Piston	Diameter		93.910 to 93.940 mm (3.6972 to 3.6984 in.)
	Oil clearance	Standard	0.060 to 0.102 mm (0.0031 to 0.0040 in.)
		Maximum	0.13 mm (0.0051 in.)
Connecting rod out-of alignment		Maximum	0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
Connecting rod twist		Maximum	0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
Connecting rod bushing inside diameter			22.001 to 22.010 mm (0.8662 to 0.8665 in.)
Piston pin diameter			21.997 to 22.006 mm (0.8660 to 0.8664 in.)
Oil clearance		Standard	0.005 to 0.011 mm (0.0002 to 0.0004 in.)
		Maximum	0.050 mm (0.0020 in.)
Piston ring groove clearance		No. 1	0.02 to 0.07 mm (0.0008 to 0.0028 in.)
		No. 2	0.02 to 0.06 mm (0.0008 to 0.0024 in.)
		Oil	0.07 to 0.15 mm (0.0028 to 0.0060 in.)

Piston ring end gap	Standard	No. 1	0.30 to 0.40 mm (0.0118 to 0.0157 in.)
		No. 2	0.40 to 0.50 mm (0.0157 to 0.0197 in.)
		Oil (Side rail)	0.10 to 0.40 mm (0.0039 to 0.0157 in.)
	Maximum	No. 1	1.0 mm (0.039 in.)
		No. 2	1.1 mm (0.043 in.)
		Oil (Side rail)	1.0 mm (0.039 in.)
Connecting rod bolt diameter		Standard	7.2 to 7.3 mm (0.283 to 0.287 in.)
		Minimum	7.0 mm (0.276 in.)
Crankshaft bearing cap set bolt diameter		Standard	10.0 to 10.2 mm (0.393 to 0.402 in.)
Crankshaft circle runout		Maximum	0.06 mm (0.0024 in.)
Main journal diameter			71.988 to 72.000 mm (2.8342 to 2.8346 in.)
Main journal taper and out-of-round		Maximum	0.02 mm (0.0008 in.)
Crank pin diameter			55.992 to 56.000 mm (2.2044 to 2.2047 in.)
Crank pin taper and out-of-round		Maximum	0.02 mm (0.0008 in.)
Crankshaft oil clearance		Standard	0.018 to 0.030 mm (0.0007 to 0.0012 in.)
		Maximum	0.046 mm (0.0018 in.)
Straight pin	Standard protrusion	Pin A	22.5 to 23.5 mm (0.886 to 0.925 in.)
		Pin B	10.5 to 11.5 mm (0.413 to 0.453 in.)
		Pin C	8.5 to 9.5 mm (0.335 to 0.374 in.)
		Pin D	5.5 to 6.5 mm (0.217 to 0.256 in.)

2TR-FE ENGINE MECHANICAL

SERVICE DATA

Idling speed			600 to 700 rpm
Compression		Compression pressure	1,230 kPa (12.5 kgf/cm^2, 178 psi)
		Minimum pressure	880 kPa (9.0 kgf/cm^2, 128 psi) or more
		Difference between each cylinder	68 kPa (0.7 kgf/cm^2, 10 psi) or less
Ignition timing		Terminals TC and CG of DLC3 connected	3 to 7° BTDC idle
Cylinder head set bolt outside diameter		Standard	10.76 to 10.97 mm (0.4236 to 0.4319 in.)
		Minimum	10.40 mm (0.4094 in.)
Timing chain	Chain elongation	Maximum	147.5 mm (5.807 in.)
	Camshaft sprocket diameter (with chain)	Maximum	113.8 mm (4.480 in.)
	Crankshaft sprocket diameter (with chain)	Maximum	59.4 mm (2.339 in.)
	Sprocket worn distance	Minimum	1.0 mm (0.039 in.)
	Tensioner slipper wear	Maximum	2.0 mm (0.079 in.)
	Vibration damper wear	Maximum	2.0 mm (0.079 in.)
	Guide wear	Maximum	0.5 mm (0.020 in.)
Timing chain No. 2	Chain elongation No. 2	Maximum	123.6 mm (4.866 in.)
	Camshaft sprocket No. 2 diameter (with chain)	Maximum	96.7 mm (3.807 in.)
	Balanceshaft drive gear No. 2 diameter (with chain)	Maximum	75.9 mm (2.988 in.)
	Vibration damper No. 2 wear	Minimum	1.0 mm (0.039 in.)
	Vibration damper No. 3 wear	Maximum	1.0 mm (0.039 in.)
	Vibration damper No. 4 wear	Maximum	1.0 mm (0.039 in.)

Cylinder head	Cylinder block surface warpage	Maximum	0.05 mm (0.0020 in.)
	Intake manifold surface warpage	Maximum	0.05 mm (0.0020 in.)
	Exhaust manifold surface warpage	Maximum	0.05 mm (0.0020 in.)
	Valve seat	Refacing angle	30°, 45°, 60°
		Contacting angle	45°
		Contacting width	1.0 to 1.4 mm (0.039 to 0.055 in.)
	Valve guide bush bore diameter	STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
		O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
	Cylinder head set bolt outside diameter	STD	10.76 to 10.97 mm (0.4236 to 0.4319 in.)
		Minimum	10.40 mm (0.4094 in.)
Valve guide bush	Inside diameter		5.510 to 5.530 mm (0.2169 to 0.2177 in.)
	Outside diameter (for repair part)	STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
		O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Valve	Valve overall length	STD Intake	106.26 mm (4.1835 in.)
		STD Exhaust	106.74 mm (4.2024 in.)
		Minimum Intake	105.96 mm (4.1716 in.)
		Minimum Exhaust	106.44 mm (4.1905 in.)
	Stem diameter	Intake	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
		Exhaust	5.465 to 5.480 mm (0.2151 to 0.2157 in.)
	Stem oil clearance	STD Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
		STD Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
		Maximum Intake	0.08 mm (0.0032 in.)
		Maximum Exhaust	0.10 mm (0.0039 in.)
	Margin thickness	STD Intake	1.05 to 1.45 mm (0.0413 to 0.0571 in.)
		STD Exhaust	1.2 to 1.6 mm (0.0472 to 0.0630 in.)
		Minimum Intake	0.50 mm (0.0197 in.)
		Minimum Exhaust	0.50 mm (0.0197 in.)
Valve compression spring	Deviation	Maximum	1.5 mm (0.059 in.)
	Free length		48.53 mm (1.9106 in.)
Camshaft	Thrust clearance	STD	0.10 to 0.24 mm (0.0039 to 0.009 in.)
		Maximum	0.26 mm (0.010 in.)
	Journal oil clearance	STD No. 1	0.035 to 0.072 mm (0.0014 to 0.0029 in.)
		Others	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
		Maximum	0.08 mm (0.003 in.)
	Journal diameter	STD No. 1	35.949 to 35.965 mm (1.4153 to 1.4159 in.)
		Others	26.959 to 26.975 mm (1.0614 to 1.0620 in.)
	Circle runout	Maximum	0.03 mm (0.0012 in.)
	Cam lobe height	STD Intake	42.855 to 42.955 mm (1.6872 to 1.6911 in.)
		STD Exhaust	42.854 to 42.954 mm (1.6872 to 1.6911 in.)
		Minimum Intake	42.855 mm (1.6872 in.)
		Minimum Exhaust	42.854 mm (1.6872 in.)
Cylinder block	Cylinder head surface warpage	Maximum	0.05 mm (0.0020 in.)
	Cylinder bore diameter	STD	94.990 to 95.003 mm (3.7398 to 3.7403 in.)
	Crankshaft bearing cap bolt outside diameter	STD	10.76 to 10.97 mm (0.4236 to 0.4319 in.)
		Minimum	10.66 mm (0.4197 in.)

Piston and piston ring	Piston diameter	STD	94.941 to 94.971 mm (3.7378 to 3.7390 in.)
		O/S 0.50	95.441 to 95.471 mm (3.7575 to 3.7587 in.)
	Piston oil clearance		0.019 to 0.052 mm (0.0007 to 0.0020 in.)
	Piston ring groove clearance	No. 1	0.020 to 0.075 mm (0.0008 to 0.0030 in.)
		No. 2	0.020 to 0.065 mm (0.0008 to 0.0026 in.)
		Oil	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	Piston ring end gap	STD No. 1	0.22 to 0.034 mm (0.0087 to 0.0134 in.)
		No. 2	0.45 to 0.57 mm (0.0177 to 0.0224 in.)
		Oil	0.10 to 0.40 mm (0.0039 to 0.0157 in.)
No. 1 balanceshaft	Thrust clearance	Standard	0.07 to 0.13 mm (0.0027 to 0.0051 in.)
		Maximum	0.20 mm (0.0079 in.)
	Main journal diameter	A	37.969 to 37.985 mm (1.4948 to 1.4955 in.)
		B	37.449 to 37.465 mm (1.4744 to 1.4750 in.)
	Bearing inside diameter	A	38.025 to 38.045 mm (1.4970 to 1.4978 in.)
		B	37.525 to 37.545 mm (1.4774 to 1.4781 in.)
	Oil clearance	Standard A	0.040 to 0.076 mm (0.0016 to 0.0031 in.)
		B	0.060 to 0.096 mm (0.0024 to 0.0038 in.)
		Maximum	0.15 mm (0.0059 in.)
No. 2 balanceshaft	Thrust clearance	Standard	0.07 to 0.13 mm (0.0027 to 0.0051 in.)
		Maximum	0.20 mm (0.0079 in.)
	Main journal diameter	A	37.969 to 37.985 mm (1.4948 to 1.4955 in.)
		B	37.449 to 37.465 mm (1.4744 to 1.4750 in.)
	Bearing inside diameter	A	38.025 to 38.045 mm (1.4970 to 1.4978 in.)
		B	37.525 to 37.545 mm (1.4774 to 1.4781 in.)
	Oil clearance	Standard A	0.040 to 0.076 mm (0.0016 to 0.0031 in.)
		B	0.060 to 0.096 mm (0.0024 to 0.0038 in.)
		Maximum	0.15 mm (0.0059 in.)
Crankshaft bearing	Lower bearing dimension	No. 1, 5	3.75 mm (0.1476 in.)
		No. 3	1.75 mm (0.0689 in.)
		No. 2, 4	2.75 mm (0.1083 in.)
Connecting rod	Thrust clearance	STD	0.150 to 0.350 mm (0.0059 to 0.0138 in.)
		Maximum	0.4 mm (0.016 in.)
	Connecting rod oil clearance	STD	0.024 to 0.049 mm (0.0009 to 0.0019 in.)
	Connecting rod bearing center wall thickness (Reference)	Mark 4	1.484 to 1.487 mm (0.0584 to 0.0585 in.)
		5	1.488 to 1.490 mm (0.0586 to 0.0587 in.)
		6	1.491 to 1.493 mm (0.0587 to 0.0588 in.)
	Rod bend	Maximum per 100 mm (3.94 in.)	0.03 mm (0.0012 in.)
	Rod twist	Maximum per 100 mm (3.94 in.)	0.15 mm (0.0059 in.)
	Bush inside diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
	Piston pin diameter	Mark A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
		Mark B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
		Mark C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)
		Mark D	22.007 to 22.009 mm (0.8664 to 0.8665 in.)
	Bush oil clearance	STD	0.001 to 0.007 mm (0.00004 to 0.00028 in)
		Maximum	0.010 mm (0.0039 in.)
	Connecting rod bolt tension portion diameter	STD	7.2 to 7.3 mm (0.283 to 0.287 in.)
		Maximum	7.0 mm (0.276 in.)

SS

Crankshaft	Thrust clearance	STD	0.020 to 0.220 mm (0.0008 to 0.0087 in.)
		Maximum	0.30 mm (0.0118 in.)

BRAKE

SERVICE DATA

Brake pedal height (from dash panel)		158.1 to 168.1 mm (6.224 to 6.618 in.)
Rod operating adapter length	w/ VSC w/o VSC	214 to 224 mm (8.425 to 8.818 in.) 212 to 222 mm (8.346 to 8.740 in.)
Stop light switch clearance		1.5 to 2.5 mm (0.059 to 0.098 in.)
Brake pedal free play		1 to 6 mm (0.04 to 0.24 in.)
Brake pedal reserve distance (from asphalt sheet) at 490 N (50 kgf, 110.2 lbf)		More than 55 mm (2.17 in.)
Brake booster push rod to piston clearance		0 mm (0 in.)
Front disc thickness (2WD)	Standard Minimum	25.0 mm (0.984 in.) 23.0 mm (0.906 in.)
Front disc brake pad lining thickness (2WD)	Standard Minimum	12.0 mm (0.472 in.) 1.0 mm (0.039 in.)
Front disc runout	Maximum	0.05 mm (0.0020 in.)
Front disc thickness (4WD and Pre-Runner)	Standard Minimum	28.0 mm (1.102 in.) 26.0 mm (1.024 in.)
Front disc brake pad lining thickness (4WD and Pre-Runner)	Standard Minimum	11.5 mm (0.453 in.) 1.0 mm (0.039 in.)
Rear brake drum inside diameter	Standard Maximum	254 mm (10.00 in.) 256 mm (10.08 in.)
Rear drum brake shoe lining thickness	Standard Minimum	5.0 mm (0.197 in.) 1.0 mm (0.039 in.)
Rear brake shoe clearance		0.5 mm (0.020 in.)

DTC	C2115/15	Transmitter ID5 Operation Stop

DESCRIPTION

Tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressures of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure values are less than this threshold, the warning light in the combination meter comes on.
The tire pressure warning ECU stores a DTC when the tire pressure warning valve and transmitter stops transmitting signals. At this time, forcibly transmit the signals by releasing the tire pressure rapidly. The stored DTC is cleared when the signal transmission is resumed.

DTC No.	DTC Detecting Condition	Trouble Area
C2111/11 C2112/12 C2113/13 C2114/14 C2115/15	Tire pressure warning valve and transmitters stop transmitting signals	• Tire pressure warning valve and transmitter (Forced transmission of transmitter ID) • Tire pressure warning ECU

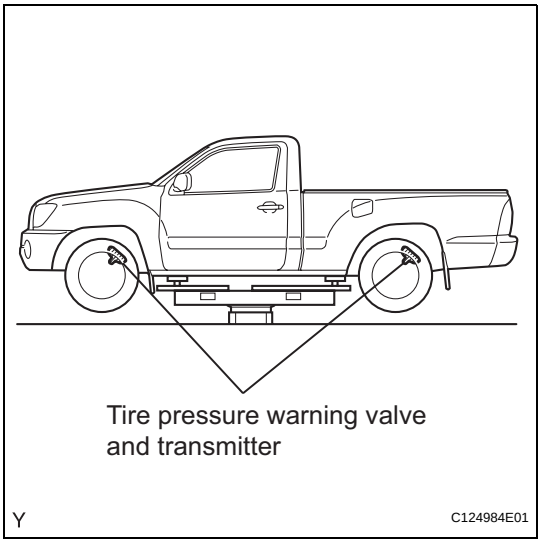
NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See pageTW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

1	**PERFORM FORCIBLY TRANSMIT TRANSMITTER ID (ALL WHEELS)**

(a) Set the tire pressures to the appropriate specified values.



(b) Jack up the vehicle.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch ON and turn the tester ON.
(e) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Items	Measurement Item/ Range (Display)
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS2	ID2 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS3	ID3 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS4	ID4 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS5	ID5 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)

TW

(f) Rapidly release the pressures from each wheel by approximately 40 kPa (0.4 kgf/cm^2, 5.8 psi)/ 30 seconds or more.
  (1) Check that the each tire pressure data displayed on the intelligent tester screen changes.
  OK:
  The each tire pressure data displayed on the intelligent tester screen changes with the value of the tire pressure.
  NOTICE:
  - **It may take up to 1 minute to display the updated tire pressure data.**
  - **When none of the TIREPRESS data (IDs 1 to 5) change, reset the tire pressure to the appropriate specified value and rotate the tires 90 to 270 degrees and recheck.**
  (2) After confirming that the all of the tire pressure data displayed on the intelligent tester screen have changed, set the tire pressures to the appropriate specified values.
  HINT:
  If the tire pressure data displayed on the intelligent tester screen has not changed after rechecking, go to the other troubleshooting procedure related to DTCs C2121/21 to C2125/25 which indicate transmission or reception malfunctions (See page TW-37).

NG → **INSPECT OTHER PROBLEM (MALFUNCTION IN TRANSMISSION OR RECEPTION FUNCTION)**

OK

DESCRIPTION

TW

Tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressures of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure values are less than this threshold, the warning light in the combination meter comes on. The tire pressure warning valve and transmitter constantly sends radio waves to the tire pressure warning antenna and receiver.

Under the following conditions, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valve and transmitters, and a DTC is output.

– Areas, facilities, or devices that use similar radio frequencies are located in the vicinity of the vehicle.
– Devices using similar radio frequencies are used in the vehicle.

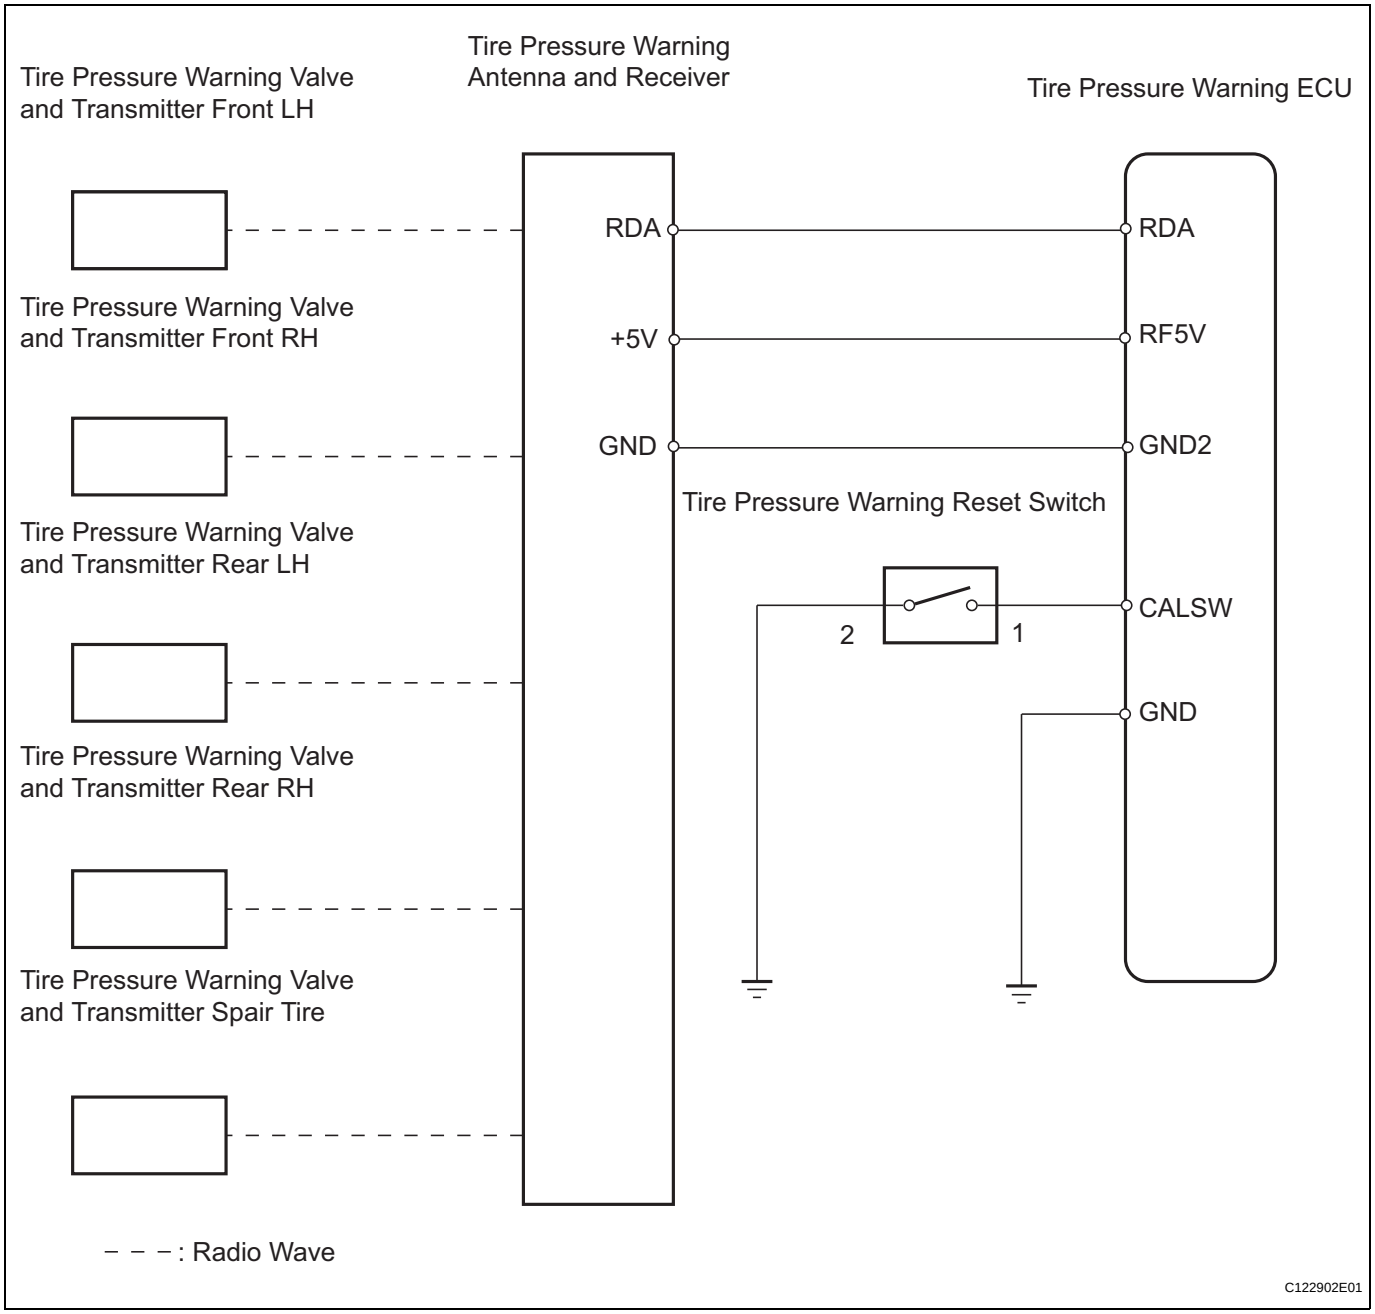
HINT:

When no signals are received for 30 minutes or more, a DTC is output.

DTCs C2121/21 to C2125/25 can only be cleared by using the tester. DTCs C2181/81 to C2185/85 can be cleared when the transmitter in the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs C2181/81 to C2185/85 are output only in test mode.

DTC No.	DTC Detection Condition	Trouble Area
C2121/21 C2122/22 C2123/23 C2124/24 C2125/25	When no signals received for 30 minutes or more, vehicle speed of 5 mph (8 km/h) or more detected and still no signals received for 12 minutes or more.	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU
C2181/81 C2182/82 C2183/83 C2184/84 C2185/85	Malfunction in transmission / reception circuit	• Tire pressure warning antenna and receiver • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Wire harness or connector

WIRING DIAGRAM



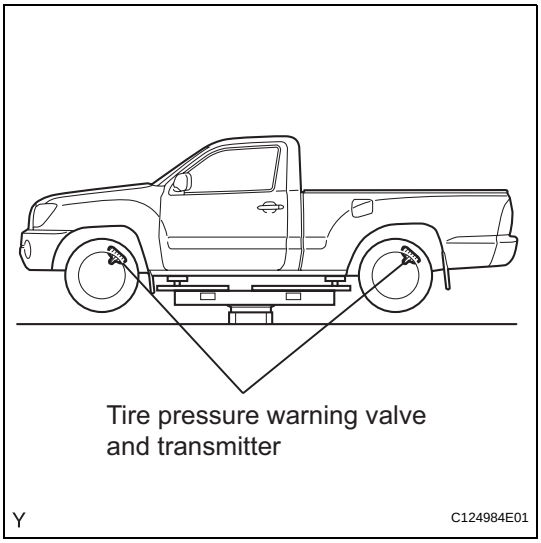
NOTICE:

- **Tires and wheels without tire pressure warning valves and transmitters are used.**
- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

1	**IDENTIFY TRANSMITTER (CORRESPONDING TO DTC)**

(a) Set the tire pressures to the appropriate specified values.

TW



(b) Jack up the vehicle.
(c) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Item	Measurement Item/ Range (Display)
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)

DTC	C2143/43	Transmitter ID3 Error

DTC	C2144/44	Transmitter ID4 Error

DTC	C2145/45	Transmitter ID5 Error

DESCRIPTION

Tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressures of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure values are less than this threshold, the warning light in the combination meter comes on. When the internal circuits of the tire pressure warning valve and transmitters are defected, these DTCs are output.

DTC No.	DTC Detection Condition	Trouble Area
C2141/41 C2142/42 C2143/43 C2144/44 C2145/45	• If ERROR signal received 3 times consecutively, tire pressure warning valve and transmitter determined to be defective. • This occurs in situations where tire pressure outside range 0 to 637.5 kPa (0 to 6.5 kgf / cm^2, 0 to 92.5 psi), tire internal temperature outside specified range - 40 to 120°C (- 40 to 248°F), or error occurs in tire pressure warning valve and transmitter	• Tire pressure warning valve and transmitter

TW

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/ or tire pressure warning valve and transmitter have been replaced.**

1	IDENTIFY TRANSMITTER (CORRESPONDING TO DTC)

(a) Set the tire pressures to the appropriate specified values.

Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)

REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

DTC	C2165/65	Abnormal Temperature Inside ID1 Tire

DTC	C2166/66	Abnormal Temperature Inside ID2 Tire

DTC	C2167/67	Abnormal Temperature Inside ID3 Tire

DTC	C2168/68	Abnormal Temperature Inside ID4 Tire

DTC	C2169/69	Abnormal Temperature Inside ID5 Tire

DESCRIPTION

Tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the internal temperature of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. If the measured temperatures exceed the specified temperature, the tire pressure warning ECU determines it as a malfunction, outputs DTCs, and blinks the tire pressure warning light.

DTC No.	DTC Detecting Condition	Trouble Area
C2165/65 C2166/66 C2167/67 C2168/68 C2169/69	Tire internal temperature exceeds 119 °C (246.2°F) more than once.	• Tire • Tire pressure warning valve and transmitter

NOTICE:
It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning valve and transmitter have been replaced.

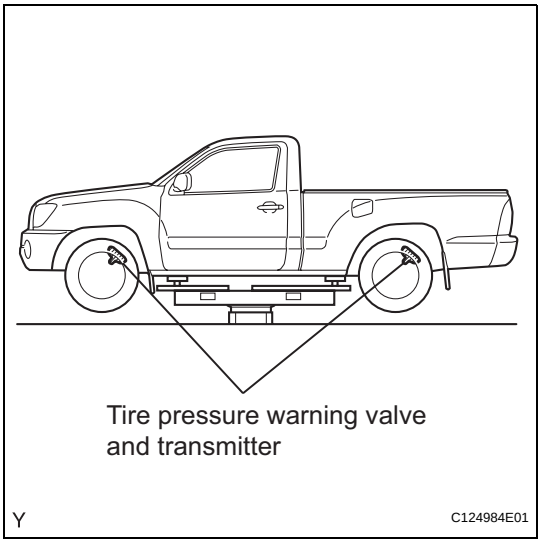
TW

1	IDENTIFY TRANSMITTER (CORRESPONDING TO DTC)

(a) Set the tire pressures to the appropriate specified values.

Tire Size	Front Wheel kPa (kgf/cm^2, psi)	Rear Wheel kPa (kgf/cm^2, psi)	Spare Wheel kPa (kgf/cm^2, psi)
P215/70R 15	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P255/45 R18	240 (2.4, 34)	240 (2.4, 34)	240 (2.4, 34)
P245/75 R16	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)
P265/70 R16 (ORP)*	200 (2.0, 29)	220 (2.2, 32)	220 (2.2, 32)
P265/65 R17	200 (2.0, 29)	200 (2.0, 29)	200 (2.0, 29)

*: Used on Off Road Package Models



(b) Jack up the vehicle.
(c) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Item	Measurement Item/ Range (Display)
TIREPRESS1	ID1 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS2	ID2 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS3	ID3 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS4	ID4 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)
TIREPRESS5	ID5 tire inflation pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)

(d) Rapidly release the tire pressure from any tire to 40 kPa (0.4 kgf/cm^2, 5.8 psi)/ 30 seconds or more.
Result

Display	Detection Condition
One of TIREPRESS data (ID1 to ID5) changed	**Normal**
No TIREPRESS data changed	**Transmitter corresponding to DTC**

NOTICE:
- **It may take up to 1 minute to display the updated data.**
- **When none of the TIREPRESS data (IDs 1 to 5) change, reset the tire pressure to the appropriate specified value and rotate the tires 90 to 270 degrees and recheck.**
- **When the transmitter is normal, record the tire location and the transmitter ID.**

(e) When one of the TIREPRESS data (IDs 1 to 5) changes, repeat the same procedure on the rest of tires one by one to identify which tire pressure warning valve and transmitter the DTC corresponds to. Set the tire pressures to the appropriate specified values.
(f) When all the TIREPRESS data (IDs 1 to 5) has been change, identify the malfunctioning tire pressure warning valve and transmitter by using recorded ID numbers and output DTC.

TW

NEXT

2	**CHECK TIRES**

Check the that the tires are not flat, and there are no indications of air pressure decreases.

NG → **REPLACE TIRES AND TIRE PRESSURE WARNING VALVE AND TRANSMITTERS**

OK

REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

DTC	C2171/71	Transmitter ID not Registered

DESCRIPTION

The IDs of each tire pressure warning valve and transmitters are registered to the tire pressure warning ECU.
When the ECU detects that an ID is not the one of registered IDs, or cannot receive an ID signal, a DTC is output.

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

1	CONFIRM REGISTRATION CONDITION (REGISTERED ID CODES)

(a) Connect the intelligent tester to the DLC3 connector.
(b) Turn the ignition switch to the ON position and turn the tester ON.
(c) Select REGIT ID CODE by following the prompts displayed on the intelligent tester.
OK:
The registered transmitter ID codes are displayed on the intelligent tester screen.

TW

OK → **REPLACE TIRE PRESSURE WARNING ECU**

NG

2	PERFORM REGISTRATION (TRANSMITTER ID)

(a) Register the transmitter IDs for all the wheels (See page TW-11).
(b) Set the tire pressures of all the wheels to the appropriate specified values.

NEXT

3	READ VALUE OF DATA LIST

(a) Check the DATA LIST (See page TW-28).
(b) Select TIREPRESS by following the prompts displayed on the intelligent tester.
HINT:
It may take up to 1 minute to display the tire pressure data.

Result

Condition	Proceed to
All tire pressure readings are equal to specified values.	A
Tire pressure values not display.	B

A

END

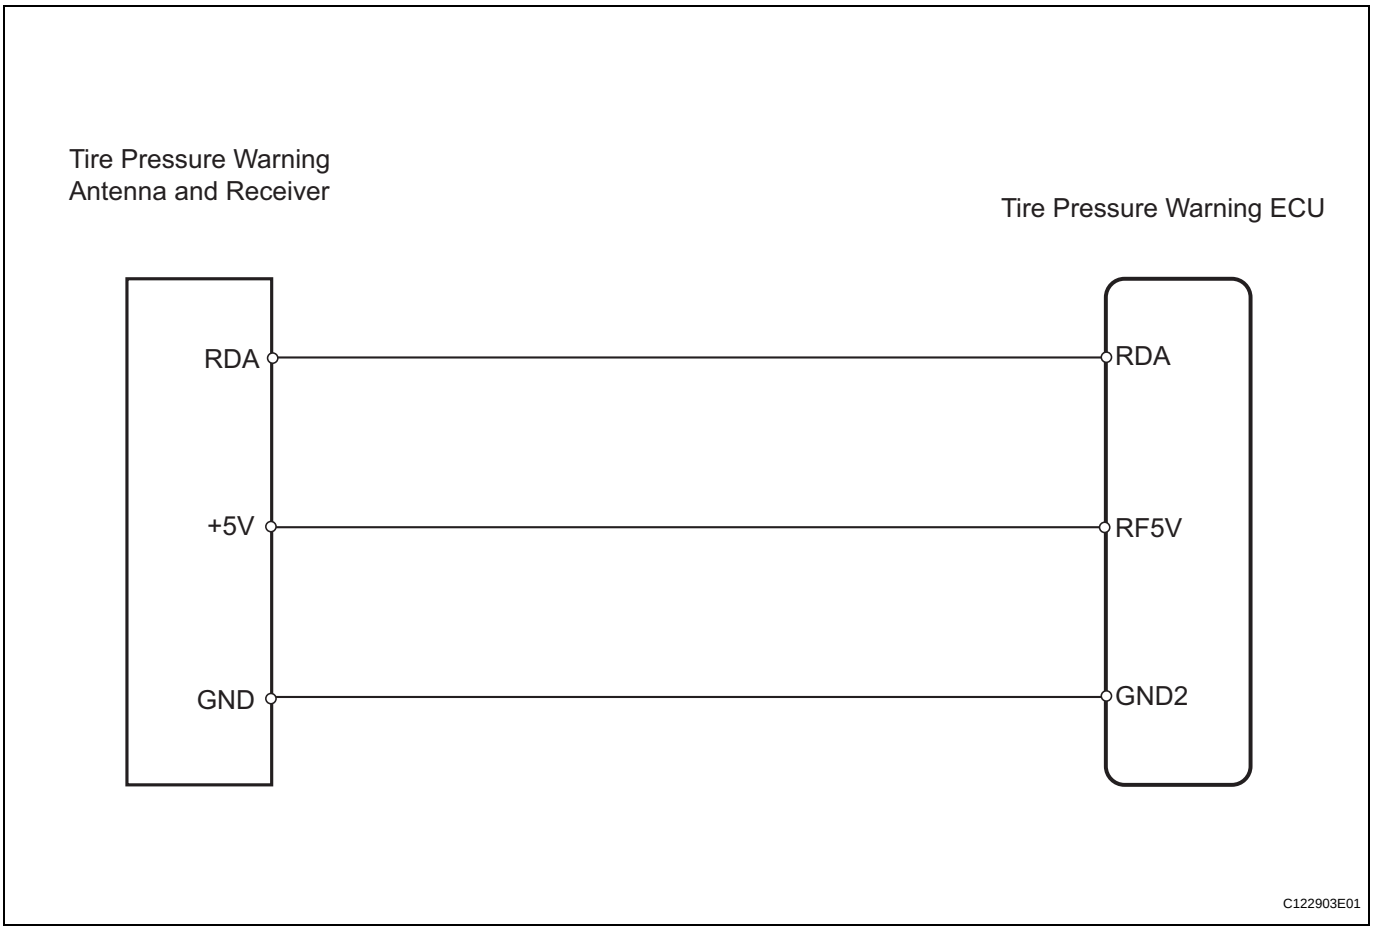
DTC	C2176/76	Receiver Error

DESCRIPTION

The signals are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU.

DTC No.	DTC Detection Condition	Trouble Area
C2176/76	When either of following detected: • EEPROM in tire pressure warning ECU malfunction • Terminal RF5V shorted to ground	• Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness or connector

WIRING DIAGRAM

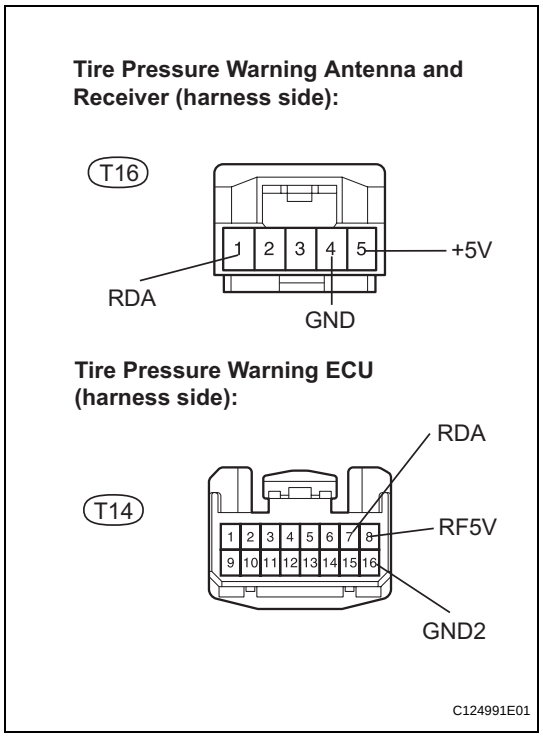


TW

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

1 CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - TIRE PRESSURE WARNING RECEIVER)



(a) Disconnect the connectors from the tire pressure warning antenna and receiver and tire pressure warning ECU.

(b) Measure the resistance.

Standard resistance

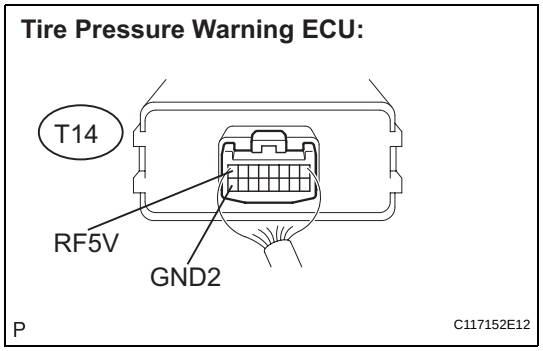
Tester Connection	Specified Condition
RDA (T14-7) - RDA (T16-1)	Below 1 Ω
RF5V (T14-8) - +5V (T16-5)	Below 1 Ω
GND2 (T14-16) - GND (T16-4)	Below 1 Ω
RDA (T14-7) - Body ground	10 k Ω or higher
RF5V (T14-8) - Body ground	10 k Ω or higher
GND2 (T14-16) - Body ground	10 k Ω or higher

(c) Reconnect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT TIRE PRESSURE WARNING ECU



(a) Turn the ignition switch to the ON position.

(b) Measure the voltage of the terminals between RF5V and GND2 of the tire pressure warning ECU.

Standard voltage

Tester Connection	Specified Condition
GND2 (T14-16) - RF5V (T14-8)	4.5 to 5.5 V

NG → **REPLACE TIRE PRESSURE WARNING ECU**

OK

3 INSPECT TIRE PRESSURE WARNING ECU

(a) Replace the tire pressure warning ECU with a normally functioning or new one.

(b) Register the transmitter IDs again (See page TW-11).

(c) Perform TEST MODE PROCEDURE (See page TW-17).

(d) Perform the forcible transmission of all the transmitter IDs.

TW

(e) Confirm that DTCs C2181/81 to C2185/85 are cleared.
Result

Result	Proceed to
DTCs all cleared	A
DTCs not cleared	B

A → **REPLACE TIRE PRESSURE WARNING ECU**

B

REPLACE TIRE PRESSURE WARNING ANTENNA AND RECEIVER

DTC	C2177/77	Initialization not Completed

DESCRIPTION

The initialization procedure starts when the tire pressure warning reset switch is pressed for 3 seconds or more with the ignition switch in the ON position.
The tire pressure warning ECU registers the tire pressure data by the signals from the tire pressure warning valve and transmitter, and start the tire pressure warning light blinking 3 times at 1 second intervals.

DTC No.	DTC Detection Condition	Trouble Area
C2177/77	Initialization not complete after vehicle driven at 5 mph (8 km/h) or more for total of 20 minutes or more.	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

1	CHECK DTC

(a) Check for DTCs (See page TW-26).

Result

Result	Proceed to
DTC C2177 output with another DTCs	A
Only DTC C2177 output	B

HINT:

- When the tire pressure warning ECU receives no signals for several minutes after the initialization procedure has finished, a DTC is output.
- When only DTC C2177 is output, refer to the other troubleshooting procedure (See page TW-37).

B → **GO TO OTHER PROBLEM (MALFUNCTION IN TRANSMISSION OR RECEPTION)**

A

INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC

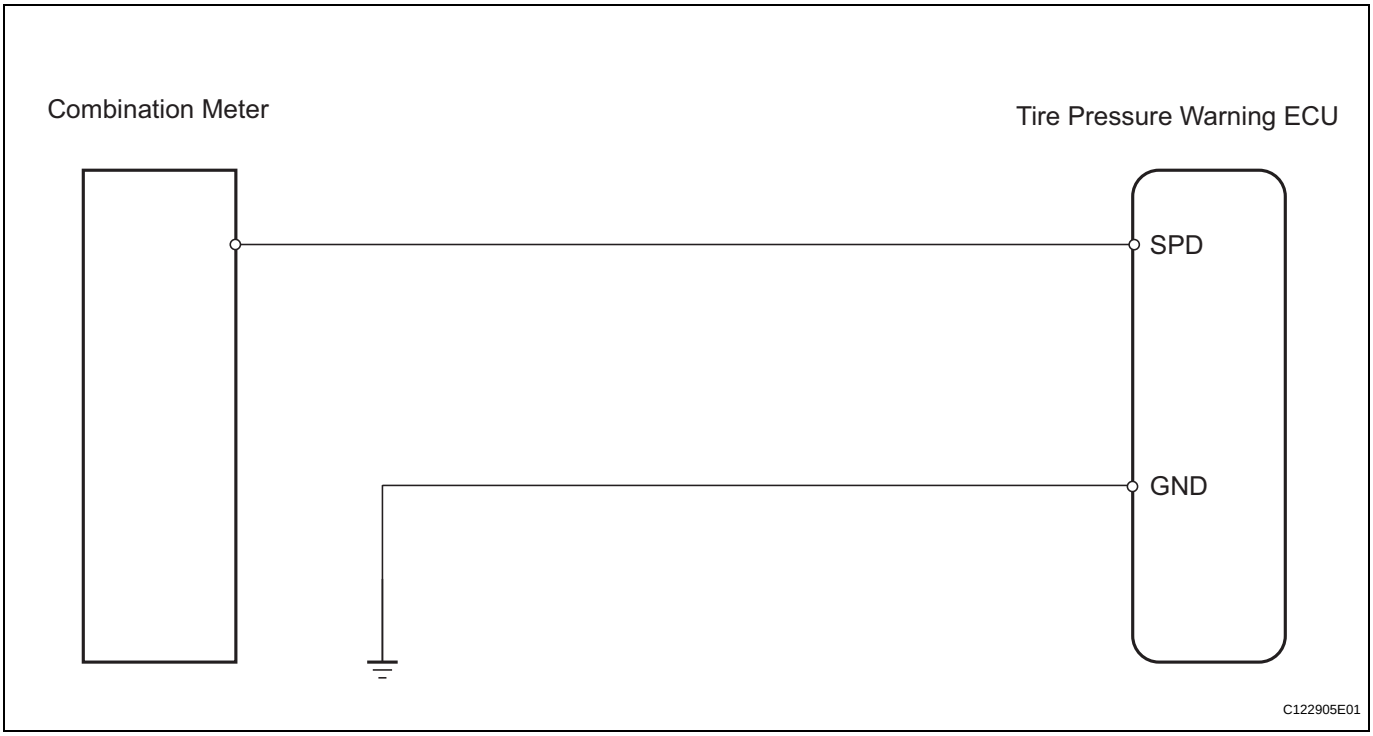
DTC	C2191/91	Vehicle Speed Signal Error (Test Mode DTC)

DESCRIPTION

The tire pressure warning ECU receives a speed signal from the combination meter. This DTC is stored upon entering test mode, and cleared when a vehicle speed signal of 12 mph (20 km/h) is detected for 3 seconds or more. The DTC is output only during test mode.

DTC No.	DTC Detection Condition	Trouble Area
C2191/91	Speed sensor signal circuit malfunction.	• Combination meter • Vehicle speed sensor • Tire pressure warning ECU • Wire harness or connector

WIRING DIAGRAM



NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

HINT:

Start the inspection from step 1 when using the intelligent tester, and start from step 2 when not using the intelligent tester.

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position, and turn the intelligent tester on.

(c) Select the item shown in the table below from the DATA LIST, and read the value displayed on the intelligent tester.
HINT:
Enter the following menus: Chassis/TPWS/DATA LIST

VEHICLE SPEED

Item	Normal Condition
VEHICLE SPEED	Actual vehicle speed

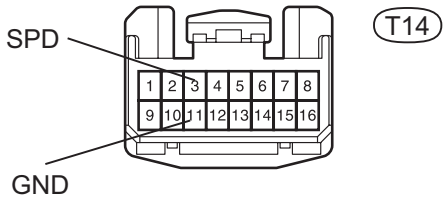
(d) Check that the values indicated on the tester and on the combination meter are the same.
OK:
Vehicle speed displayed on the intelligent tester indicates the actual vehicle speed.

OK → **REPLACE TIRE PRESSURE WARNING ECU**

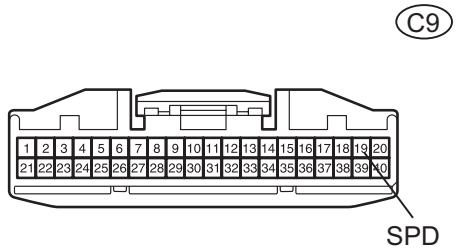
NG

2 CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - COMBINATION METER)

Tire Pressure Warning ECU (harness side):



Combination Meter (harness side):



C124992E01

(a) Disconnect the connectors from the combination meter and tire pressure warning ECU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
SPD (T14-3) - SPD (C9-19)	Below 1 Ω
SPD (T14-3) - Body ground	10 kΩ or higher
GND (T14-11) - Body ground	Below 1 Ω

Reconnect the connectors.

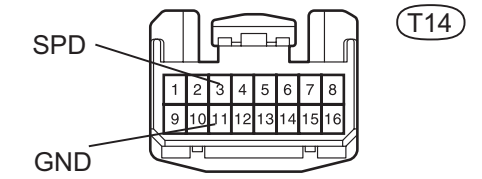
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

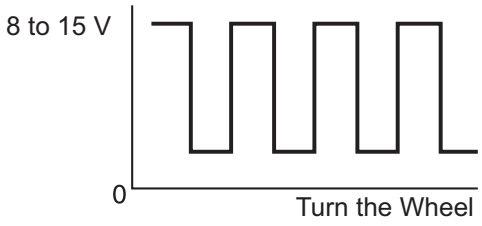
OK

TW

3	INSPECT TIRE PRESSURE WARNING ECU

Tire Pressure Warning ECU (harness side):





C124993E02

(a) Disconnect the connector from the tire pressure warning ECU.

(b) Check the voltage
  (1) Move the shift lever to the neutral position.
  (2) Jack up one of the rear wheels.
  (3) Turn the ignition switch to the ON position.
  (4) Measure the voltage between terminals SPD and GND of the tire pressure warning ECU as the rear tire is turned slowly.

OK:

Voltage is generated intermittently.

HINT:

As the vehicle speed (wheel revolution speed) increases, the cycle of the fluctuation in the waveform becomes faster.

NG → **CHECK COMBINATION METER (SPEED SIGNAL CIRCUIT)**

OK

REPLACE TIRE PRESSURE WARNING ECU

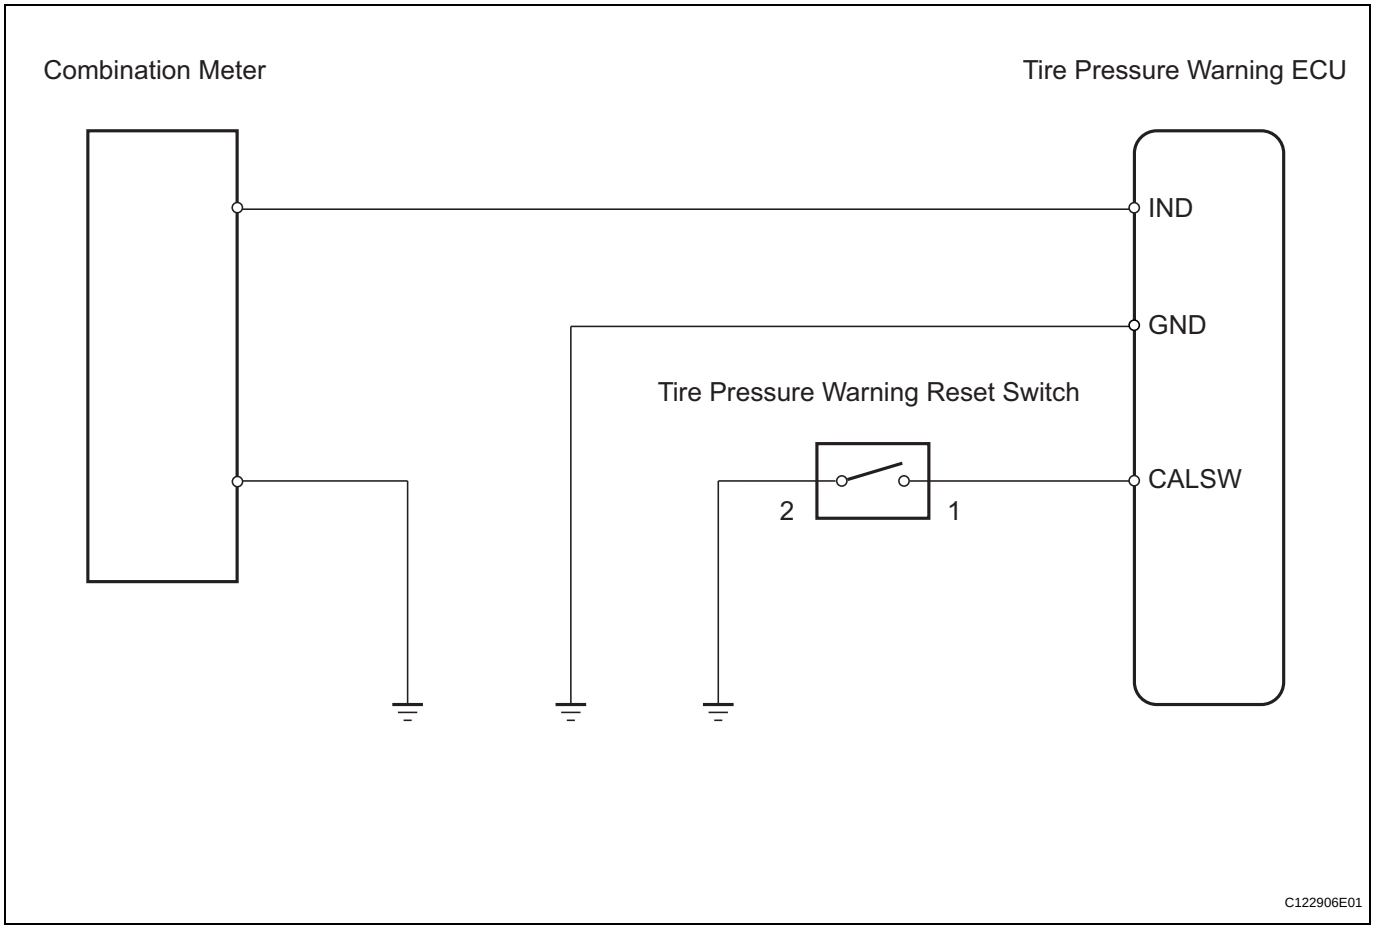
TW

Tire Pressure Warning Reset Switch Circuit

DESCRIPTION

Tire pressure warning reset switch is adopted for initialization of the tire pressure warning threshold. When the tire pressure warning reset switch is pressed for 3 seconds or more, the tire pressure data is registered in the tire pressure warning ECU.
The tire pressure warning reset switch condition is checked through the DATA MONITOR using the intelligent tester or by conducting the TEST MODE PROCEDURE.

WIRING DIAGRAM



NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

1	READ VALUE OF DATA LIST (INITIAL SW)

(a) Connect the intelligent tester to the DLC3 connector.
(b) Turn the ignition switch to the ON position and turn the tester ON.
(c) Select INITIAL SW by following the prompts displayed on the intelligent tester.

TW

Standard

Item	Condition	Specified Condition
INITIAL SW	Tire pressure warning reset switch OFF → ON	Display OFF → ON

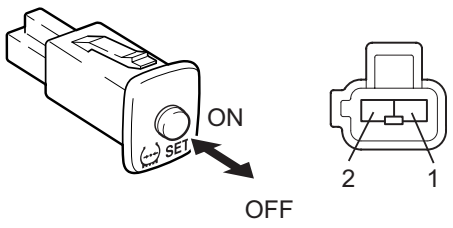
NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT TIRE PRESSURE WARNING RESET SWITCH

Tire Pressure Warning Reset Switch:



(a) Disconnect the connector from the tire pressure warning reset switch.
(b) Measure the resistance between terminals 1 and 2 of the tire pressure warning reset switch.
Standard resistance

Switch Condition	Specified Condition
ON	Below 1 Ω
OFF	10 kΩ or higher

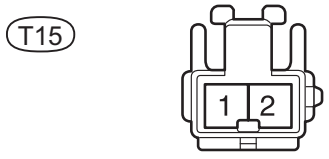
NG → **REPLACE TIRE PRESSURE WARNING RESET SWITCH**

TW

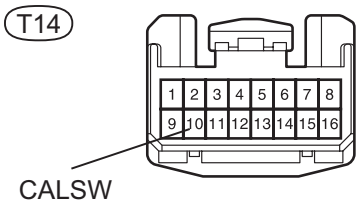
OK

3 CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING RESET SWITCH-TIRE PRESSURE WARNING ECU)

Tire Pressure Warning Reset Switch (harness side):



Tire Pressure Warning ECU (harness side):



(a) Disconnect the connector from the tire pressure warning ECU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
CALSW (T14-10) - T15-1	Below 1 Ω
CALSW (T14-10) - Body ground	10 kΩ or higher
T15-2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

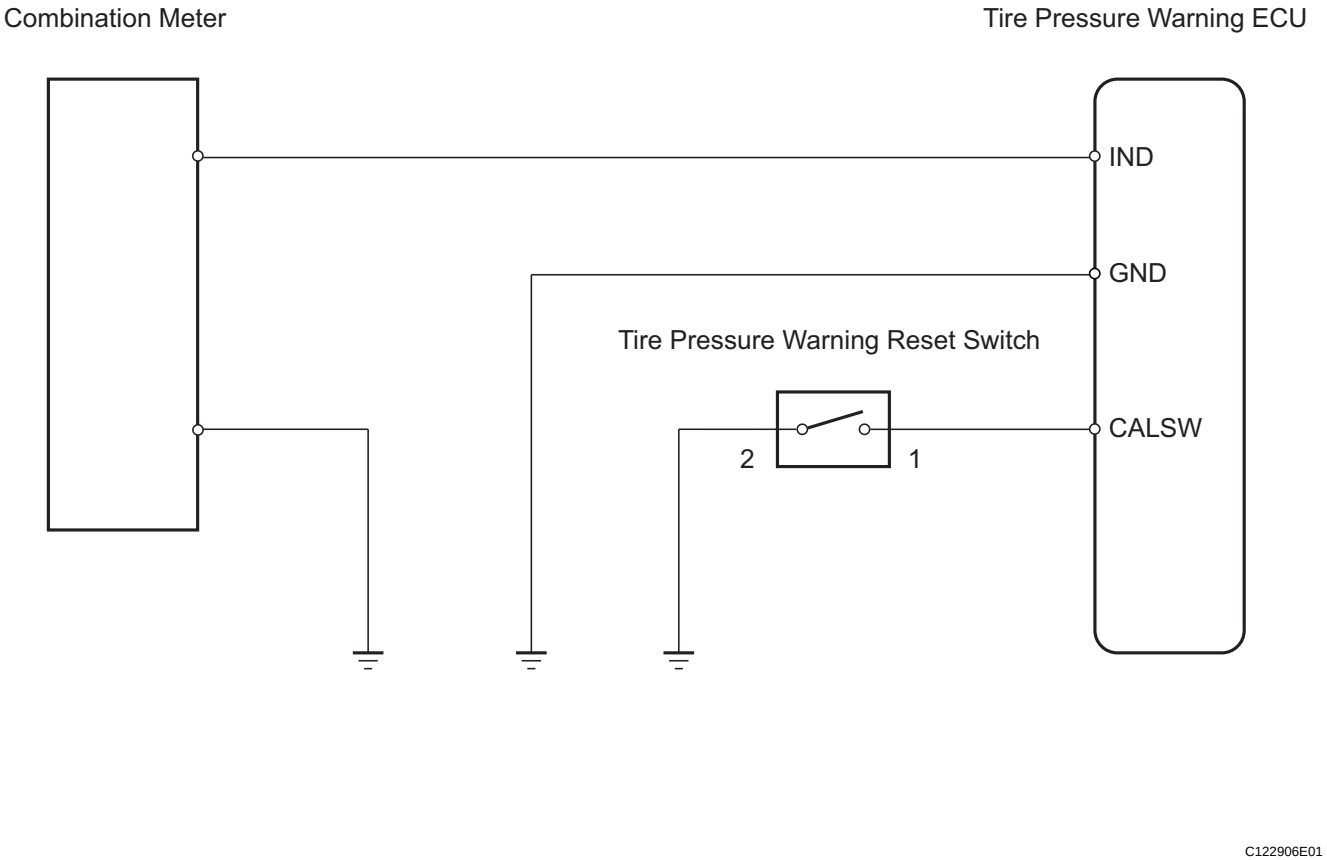
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Tire Pressure Warning Light Circuit

DESCRIPTION

If the tire pressure warning ECU detects a malfunction, the tire pressure warning light comes on and the tire pressure monitor is cancelled simultaneously. At this time, the ECU stores DTCs in the memory. Connecting terminals TC and CG of the DLC3 causes the tire pressure warning light to blink and output DTCs.

WIRING DIAGRAM



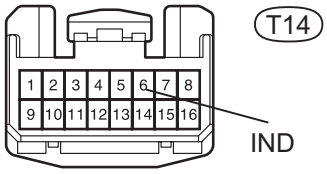
NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-26).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

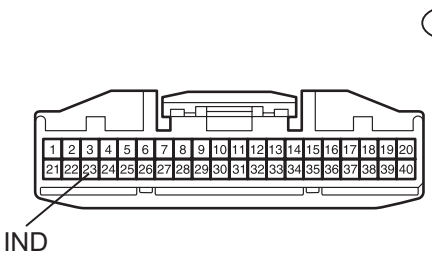
TW

1	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - COMBINATION METER)

Tire Pressure Warning ECU (harness side):



Combination Meter (harness side):



C124992E02

(a) Disconnect the connectors from the tire pressure warning ECU and combination meter.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
IND (T14-6) - IND (C9-23)	Below 1 Ω
IND (T14-6) - Body ground	10 kΩ or higher

(c) Reconnect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT COMBINATION METER

(a) Disconnect the connector from the tire pressure warning ECU.
(b) Turn the ignition switch to the ON position, check the condition of the tire pressure warning light illumination.
Result

Condition	Proceed to
Illuminates	A
Does not illuminate	B

B → **REPLACE COMBINATION METER**

A

REPLACE TIRE PRESSURE WARNING ECU

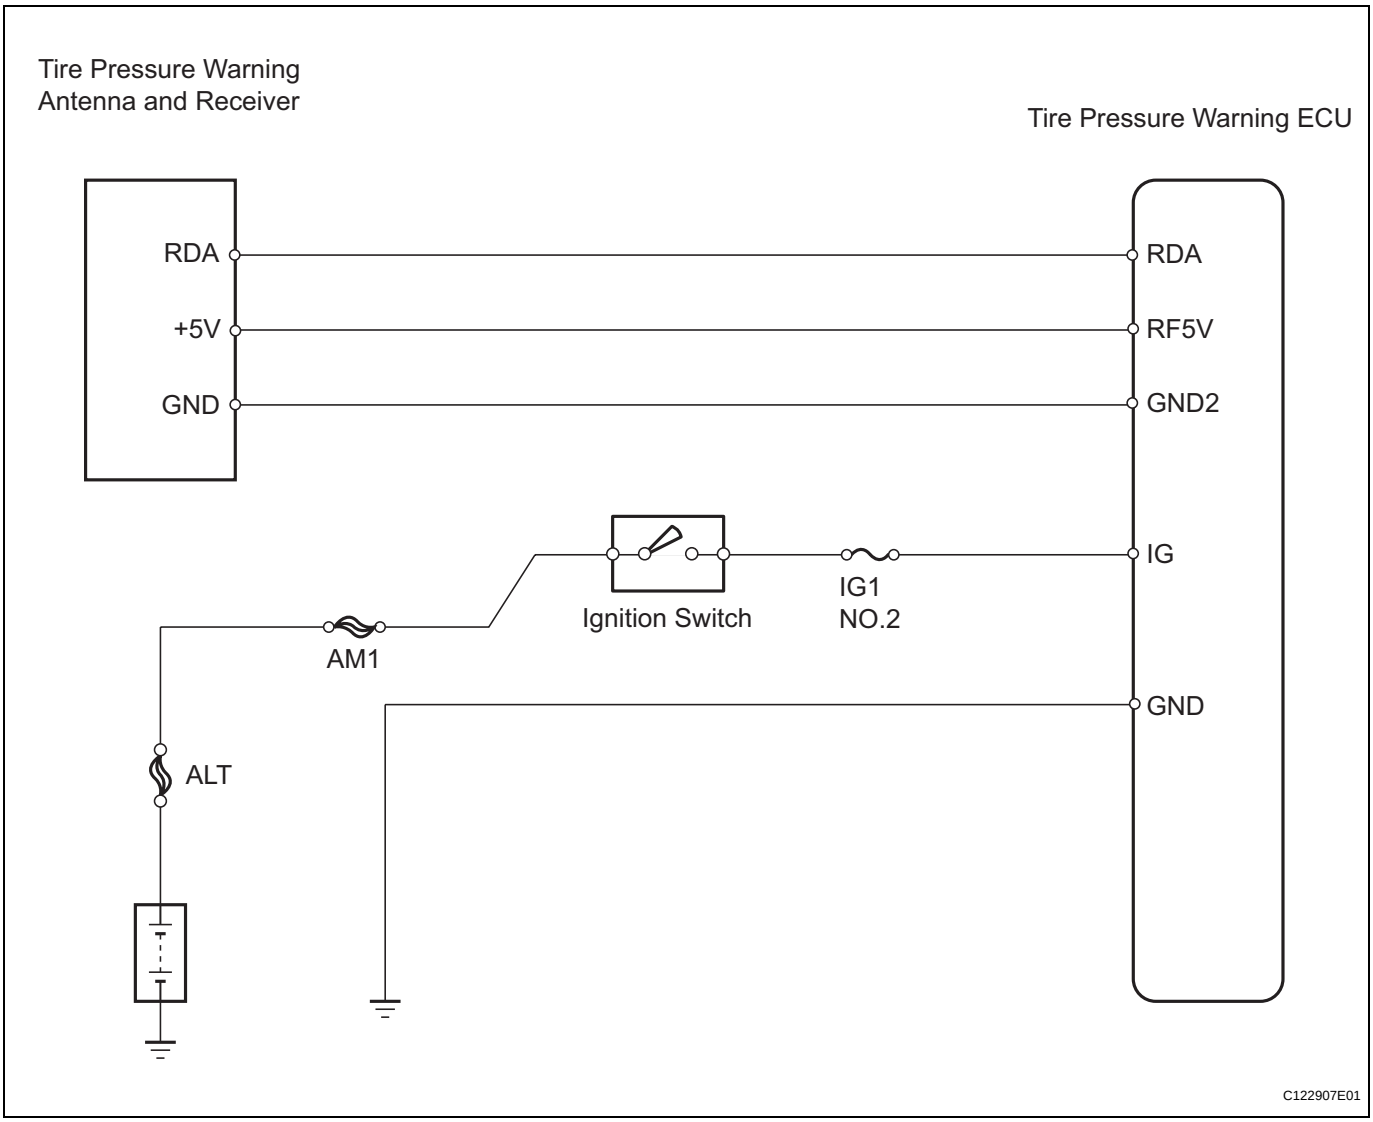
TW

ECU Power Source Circuit

DESCRIPTION

This circuit supplies power to the tire pressure warning ECU. The power is also supplied to the tire pressure warning antenna and receiver via the ECU.
The tire pressure warning system is disabled, when the system circuit has a defect. At This time the tire pressure warning light on the combination meter will come on.

WIRING DIAGRAM



NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See page TW-11) the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

1	**INSPECT BATTERY**

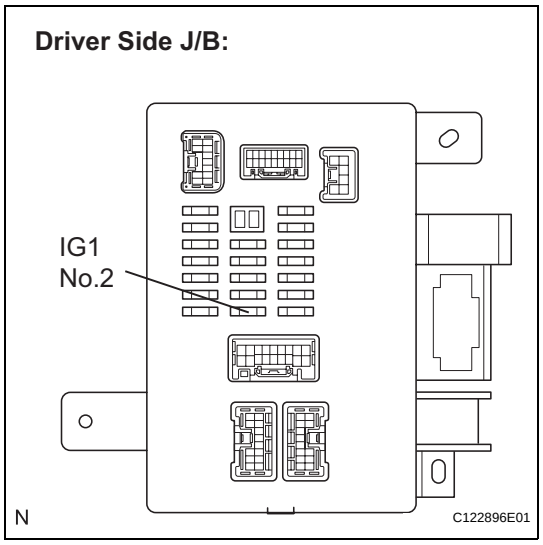
(a) Check the battery voltage.

Standard voltage:
11 to 14 V

NG → **CHECK AND REPAIR CHARGING SYSTEM**

OK

2 INSPECT FUSE (IG1 No.2)

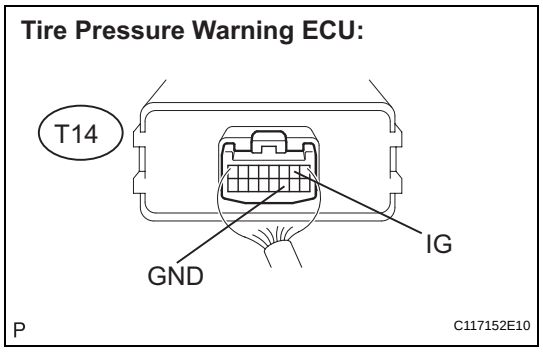


(a) Remove the IG1 No.2 fuse from the driver side J/B.
(b) Measure the resistance of the IG1 No.2 fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the IG1 No.2 fuse.

NG → **CHECK SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

3 INSPECT TIRE PRESSURE WARNING ECU



(a) Remove the tire pressure warning ECU with the connector connected.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
IG (T14-2) - GND (T14-11)	10 to 16 V

NG → **Go to step 4**

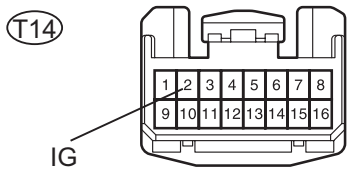
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TW

4	CHECK HARNESS AND CONNECTOR (BATTERY - TIRE PRESSURE WARNING ECU)

Tire Pressure Warning ECU (Harness Side):



(a) Disconnect the connector from the tire pressure warning ECU.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
IG (T14-2) - Body ground	10 to 16 V

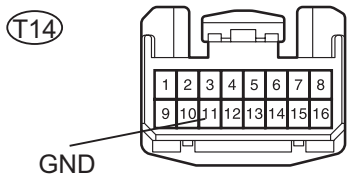
(d) Reconnect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - BODY GROUND)

Tire Pressure Warning ECU (Harness Side):



(a) Disconnect the connector from the tire pressure warning ECU.
(b) Measure the resistance.
Standard resistance

Tester connection	Specified Condition
GND (T14-11) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TW

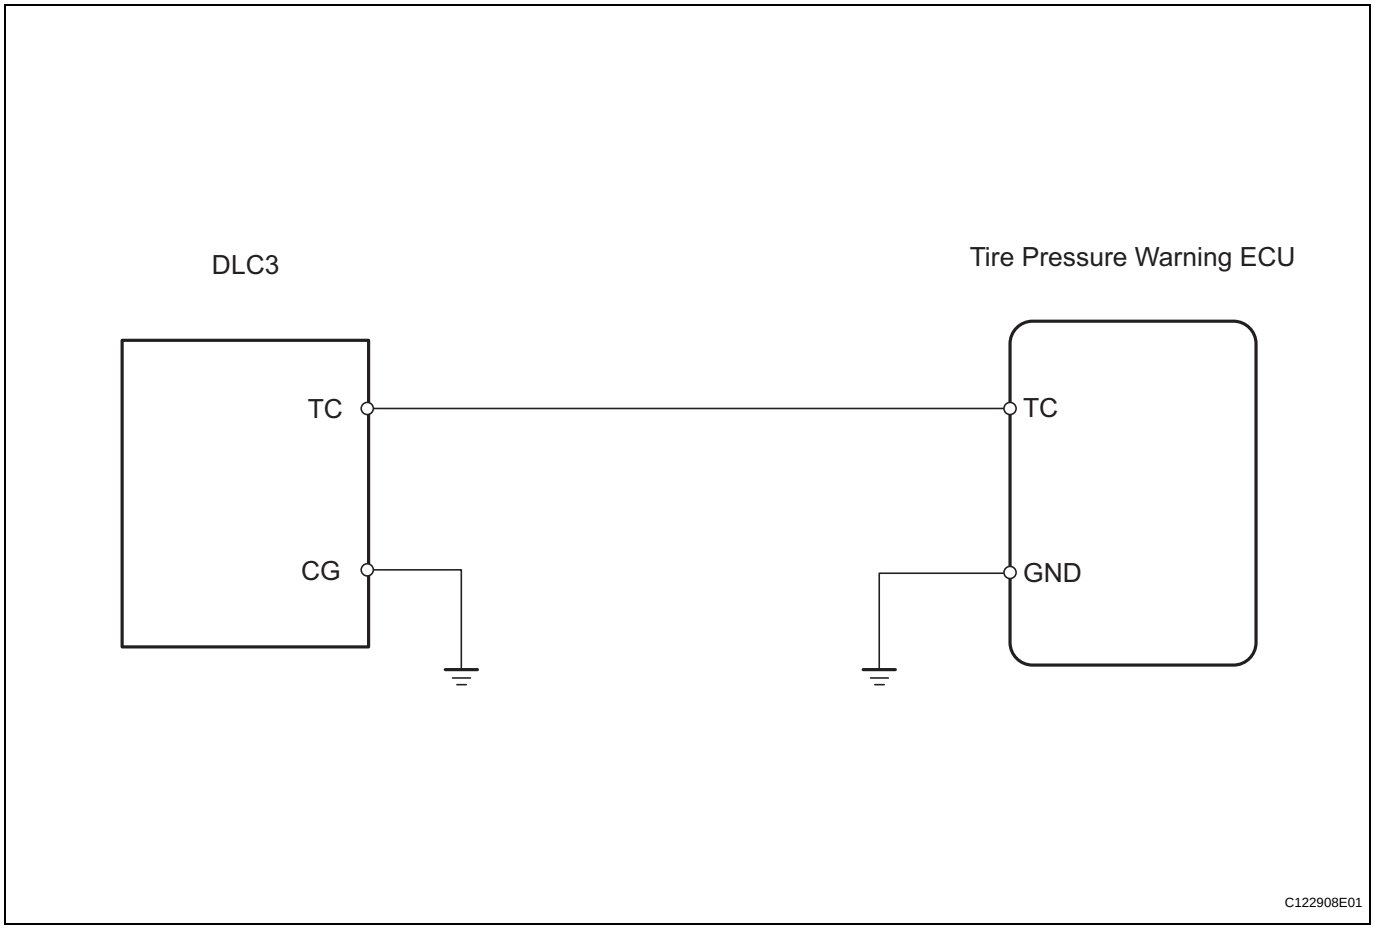
TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3. The stored DTCs are indicated by the blinking patterns of the tire pressure warning light.

WIRING DIAGRAM

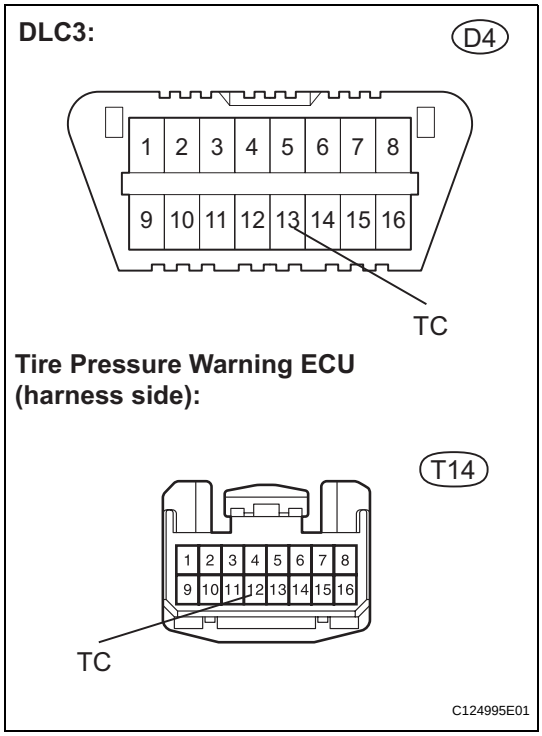
HINT:
When all the warning lights continue blinking, a ground short in the wiring of terminal TC of the DLC3 is suspected.



NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal (See page TW-28).**
- **It is necessary to perform initialization (See page TW-15) after registration (See pageTW-11) the transmitter IDs into the tire pressure warning ECU after the tire pressure warning ECU and/or tire pressure warning valve and transmitter have been replaced.**

1	CHECK HARNESS AND CONNECTOR (DLC3 - TIRE PRESSURE WARNING ECU)



(a) Disconnect the connector from the tire pressure warning ECU.
(b) Measure the resistance.
Standard resistence

Tester Connection	Specified Condition
TC (T14-12) - TC (D4-13)	Below 1 Ω

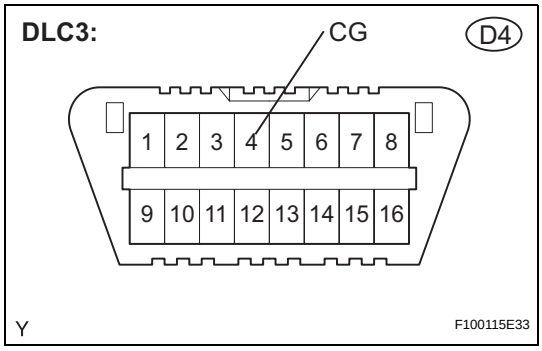
(c) Reconnect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

TW

2	CHECK HARNESS AND CONNECTOR (DLC3 - BODY GROUND)



(a) Measure the resistance.
Standard resistance

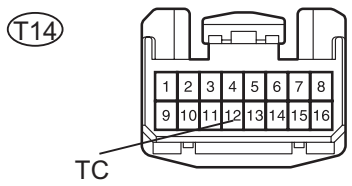
Tester Connection	Specified Condition
CG (D4-4) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - BODY GROUND)

Tire Pressure Warning ECU (Harness Side):



(a) Disconnect the connector from the tire pressure warning ECU.

(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
TC (T14-12) - Body ground	10 kΩ or higher

94. REMOVE VISOR HOLDER (for Access Cab) (See page IR-67)

95. REMOVE COAT HOOK (for Regular Cab) (See page IR-45)

96. REMOVE COAT HOOK (for Access Cab) (See page IR-67)

97. REMOVE COAT HOOK (for Double Cab) (See page IR-20)

98. SEPARATE ROOF HEADLINING ASSEMBLY (for Regular Cab)

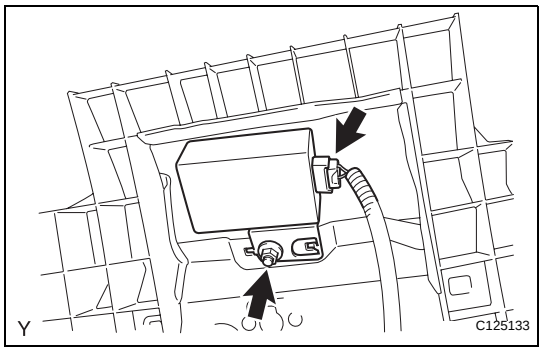
99. SEPARATE ROOF HEADLINING ASSEMBLY (for Double Cab)

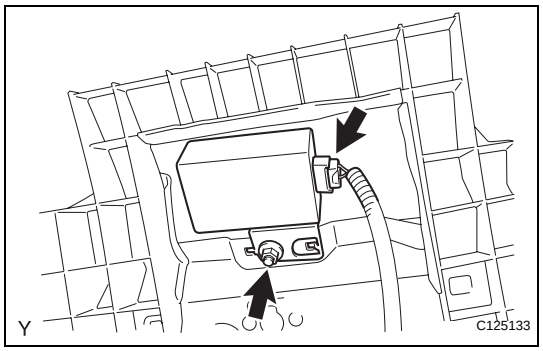
100. SEPARATE ROOF HEADLINING ASSEMBLY (for Access Cab)

101. REMOVE TIRE PRESSURE WARNING RECEIVER

(a) Disconnect the connector.

(b) Remove the nut and the tire pressure warning receiver.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING RECEIVER**
   (a) Install the tire pressure warning receiver with the nut.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Connect the connector.
2. **INSTALL ROOF HEADLINING ASSEMBLY (for Double Cab)**
3. **INSTALL ROOF HEADLINING ASSEMBLY (for Regular Cab)**
4. **INSTALL ROOF HEADLINING ASSEMBLY (for Access Cab)**
5. **INSTALL COAT HOOK (for Double Cab) (See page IR-22)**
6. **INSTALL COAT HOOK (for Regular Cab) (See page IR-47)**
7. **INSTALL COAT HOOK (for Access Cab) (See page IR-69)**
8. **INSTALL VISOR HOLDER (for Double Cab) (See page IR-22)**
9. **INSTALL VISOR HOLDER (for Regular Cab) (See page IR-47)**
10. **INSTALL VISOR HOLDER (for Access Cab) (See page IR-70)**
11. **INSTALL VISOR ASSEMBLY LH (for Double Cab) (See page IR-22)**
12. **INSTALL VISOR ASSEMBLY LH (for Regular Cab) (See page IR-48)**
13. **INSTALL VISOR ASSEMBLY LH (for Access Cab) (See page IR-70)**
14. **INSTALL VISOR ASSEMBLY RH (for Double Cab) (See page IR-22)**
15. **INSTALL VISOR ASSEMBLY RH (for Regular Cab) (See page IR-48)**
16. **INSTALL VISOR ASSEMBLY RH (for Access Cab) (See page IR-70)**
17. **INSTALL ASSIST GRIP PLUG (for Double Cab) (See page IR-23)**
18. **INSTALL ASSIST GRIP SUB-ASSEMBLY (for Double Cab) (See page IR-23)**
19. **INSTALL ROOF CONSOLE BOX ASSEMBLY (for Double Cab) (See page IR-23)**
20. **INSTALL ROOF CONSOLE BOX ASSEMBLY (for Access Cab) (See page IR-70)**

21. **INSTALL ROOM LIGHT ASSEMBLY (for Double Cab) (See page IR-24)**
22. **INSTALL ROOM LIGHT ASSEMBLY (for Regular Cab) (See page IR-48)**
23. **INSTALL ROOM LIGHT ASSEMBLY (for Access Cab) (See page IR-71)**
24. **INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror) (See page IR-30)**
25. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Double Cab) (See page IR-24)**
26. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Regular Cab) (See page IR-48)**
27. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Access Cab) (See page IR-71)**
28. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Double Cab) (See page IR-25)**
29. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Regular Cab) (See page IR-49)**
30. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Access Cab) (See page IR-71)**
31. **INSTALL QUARTER TRIM LOWER PANEL LH (for Double Cab) (See page IR-25)**
32. **INSTALL QUARTER TRIM LOWER PANEL LH (for Regular Cab) (See page IR-49)**
33. **INSTALL QUARTER TRIM LOWER PANEL LH (for Access Cab) (See page IR-72)**
34. **INSTALL QUARTER TRIM LOWER PANEL RH (for Double Cab) (See page IR-25)**
35. **INSTALL QUARTER TRIM LOWER PANEL RH (for Regular Cab) (See page IR-49)**
36. **INSTALL QUARTER TRIM LOWER PANEL RH (for Access Cab) (See page IR-72)**
37. **INSTALL CENTER PILLAR UPPER GARNISH LH (for Double Cab) (See page IR-26)**
38. **INSTALL CENTER PILLAR UPPER GARNISH RH (for Double Cab) (See page IR-26)**
39. **INSTALL CENTER PILLAR LOWER GARNISH LH (for Double Cab) (See page IR-26)**
40. **INSTALL CENTER PILLAR LOWER GARNISH RH (for Double Cab) (See page IR-26)**
41. **INSTALL LAP BELT OUTER ANCHOR COVER (for Double Cab) (See page IR-27)**
42. **INSTALL FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-28)**

43. INSTALL FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-51)
44. INSTALL FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-74)
45. INSTALL FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-28)
46. INSTALL FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-52)
47. INSTALL FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-74)
48. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (for Double Cab) (See page IR-28)
49. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (for Double Cab) (See page IR-28)
50. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Double Cab) (See page IR-29)
51. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Regular Cab) (See page IR-52)
52. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Access Cab) (See page IR-74)
53. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Double Cab) (See page IR-29)
54. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Regular Cab) (See page IR-52)
55. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Access Cab) (See page IR-74)
56. INSTALL ROOF SIDE INNER GARNISH LH (for Access Cab) (See page IR-71)
57. INSTALL ROOF SIDE INNER GARNISH RH (for Access Cab) (See page IR-71)
58. INSTALL ROOF SIDE INNER GARNISH CAP LH (for Access Cab) (See page IR-75)
59. INSTALL ROOF SIDE INNER GARNISH CAP RH (for Access Cab) (See page IR-75)
60. INSTALL ROOF SIDE INNER GARNISH COVER LH (for Access Cab) (See page IR-75)
61. INSTALL ROOF SIDE INNER GARNISH COVER RH (for Access Cab) (See page IR-75)

62. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)**
63. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**
64. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**
65. **INSTALL COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-29)**
66. **INSTALL COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-52)**
67. **INSTALL COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-75)**
68. **INSTALL REAR DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
69. **INSTALL REAR DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
70. **INSTALL REAR DOOR SCUFF PLATE RH (for Double Cab) (See page IR-29)**
71. **INSTALL REAR DOOR SCUFF PLATE RH (for Access Cab) (See page IR-75)**
72. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
73. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
74. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
75. **INSTALL FRONT DOOR SCUFF PLATE RH (for Double Cab) (See page IR-29)**
76. **INSTALL FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-52)**
77. **INSTALL FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-75)**
78. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
79. **INSTALL BACK PANEL TRIM (for Regular Cab on Separate Seat Type) (See page IR-49)**
80. **INSTALL BACK PANEL TRIM (for Access Cab) (See page IR-72)**
81. **INSTALL REAR SEAT INNER BELT ASSEMBLY (for Access Cab) (See page IR-72)**
82. **INSTALL BACK PANEL TRIM COVER (for Regular Cab on Separate Seat Type) (See page IR-50)**
83. **INSTALL JACK ASSEMBLY (for Regular Cab on Separate Seat Type)**

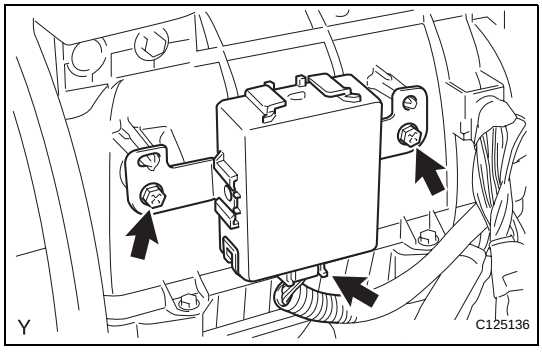
84. **INSTALL BACK PANEL UPPER GARNISH (for Regular Cab) (See page IR-50)**
85. **INSTALL BACK PANEL TRIM COVER (for Regular Cab) (See page IR-50)**
86. **INSTALL BACK PANEL TRIM COVER (for Access Cab) (See page IR-73)**
87. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY RH (for Double Cab) (See page IR-25)**
88. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY LH (for Double Cab) (See page IR-26)**
89. **INSTALL REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY (for Double Cab) (See page SE-77)**
90. **INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY LH (for Double Cab) (See page SE-77)**
91. **INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY RH (for Double Cab) (See page SE-90)**
92. **INSTALL REAR SEAT BACK ASSEMBLY LH (for Double Cab) (See page SE-77)**
93. **INSTALL REAR SEAT BACK ASSEMBLY RH (for Double Cab) (See page SE-90)**
94. **INSTALL REAR SEAT BACK HINGE COVER (for Double Cab) (See page IR-30)**
95. **INSTALL REAR SEAT CUSHION ASSEMBLY LH (for Double Cab) (See page SE-78)**
96. **INSTALL REAR SEAT CUSHION ASSEMBLY RH (for Double Cab) (See page SE-90)**
97. **INSTALL FRONT SEAT ASSEMBLY LH (for Double Cab) (See page SE-34)**
98. **INSTALL FRONT SEAT ASSEMBLY RH (for Double Cab) (See page SE-47)**
99. **INSTALL SEAT TRACK COVER LH (for Double Cab) (See page SE-34)**
100. **INSTALL SEAT TRACK COVER RH (for Double Cab) (See page SE-48)**
101. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

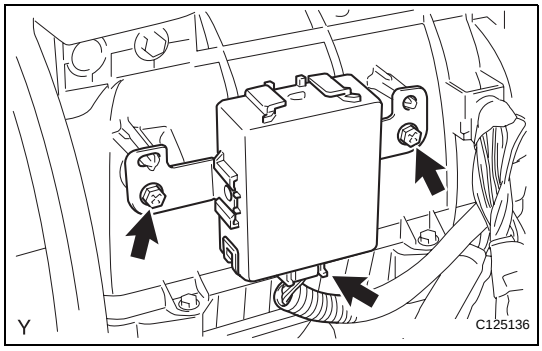
TW

REMOVAL

1. BOLT, SCREW AND NUT TABLE (See page IP-7)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
3. REMOVE FRONT FLOOR FOOTREST (See page IR-1)
4. REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)
5. REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)
6. REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)
7. REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)
8. REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)
9. REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)
10. REMOVE INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-9)
11. REMOVE INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-9)
12. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)
13. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)
14. REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)
15. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)
16. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-10)
17. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-11)
18. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-11)
19. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-11)
20. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)

21. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-69)**
22. **SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)**
23. **REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
24. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)**
25. **REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)**
26. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
27. **REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-14)**
28. **REMOVE LOWER INSTRUMENT PANEL LH (See page IP-14)**
29. **REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-14)**
30. **REMOVE TIRE PRESSURE WARNING ECU**
    (a) Disconnect the connector.
    (b) Remove the 2 screws and the tire pressure warning ECU.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING ECU**
    (a) Install the tire pressure warning ECU with the 2 screws.
    Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
    (b) Connect the connector.
2. **INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-20)**
3. **INSTALL LOWER INSTRUMENT PANEL LH (See page IP-20)**
4. **INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-20)**
5. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
6. **INSTALL INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
7. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**

8. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)
9. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)
10. INSTALL RADIO RECEIVER ASSEMBLY (See page AV-70)
11. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)
12. INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)
13. INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)
14. INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)
15. INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)
16. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)
17. INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)
18. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)
19. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)
20. INSTALL INSTRUMENT PANEL HOLE COVER (for Manual Transmission) (See page IP-25)
21. INSTALL INSTRUMENT PANEL UNDER TRAY (for Automatic Transmission) (See page IP-25)
22. INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)
23. INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)
24. INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)
25. INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)
26. INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)
27. INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)

28. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
29. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
    (See page IN-5)
30. **REGISTER TRANSMITTER ID (See page TW-11)**
31. **INSPECT TIRE PRESSURE WARNING SYSTEM**
    (See page TW-11)

OUTSIDE VEHICLE

GENERAL MAINTENANCE

Performing these maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center.
Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner perform these checks.
The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (month) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire pressure with a gauge. Make adjustments if necessary.
(b) Check the surfaces of tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION

(a) Check the maintenance schedule in the owner's manual supplement.

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks when they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.
(b) If you smell gasoline fumes or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

(a) Check if all of the doors and the tailgate operate smoothly and if all the latches lock securely.
(b) When the primary latch is released, check if the engine hood secondary latch prevents the hood from opening.

INSIDE VEHICLE

GENERAL MAINTENANCE

Performing these maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center.
Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner perform these checks.
The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (month) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check if the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink. Also, check if they have enough brightness.
(b) Check if the headlights are aimed properly.

3. WARNING LIGHTS AND BUZZERS

(a) Check if all the warning lights and buzzers are working.

4. HORNS

(a) Check if the horn is working.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPERS AND WASHER

(a) Check if the wind washers are aimed properly. Also, check if the washer fluid hits the center of the operating rage of each wiper on the windshield.
(b) Check if the wipers streak or not.

7. WINDSHIELD DEFROSTER

(a) When the heater or air conditioner is on the defroster setting, check if air comes out of the defroster outlet.

8. REAR VIEW MIRROR

(a) Check if the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check if the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check if the steering wheel has the proper free play. Also check for steering difficulty, free play in the steering wheel and unusual noises.

11. SEATS

(a) Check if the seat adjusters, seatback recliner and other front seat controls operate smoothly.
(b) Check if all the latches lock securely in all positions.
(c) Check if the locks hold securely in all latched positions.
(d) Check if the head restraints move up and down smoothly and if the locks hold securely in all latched positions.
(e) When the rear seatbacks are folded down, check if the latches lock securely.

12. SEAT BELTS

(a) Check that the seat belt system such as the buckles, retractors and anchors operate properly and smoothly.
(b) Check if the belt webbing is not cut, frayed, worn or damaged. Replace if necessary.

13. ACCELERATOR PEDAL

(a) Check the pedal for smooth operation, uneven pedal effort and catching.

14. CLUTCH PEDAL

(a) Check the pedal for smooth operation.
(b) Check if the pedal has the proper free play.

15. BRAKE PEDAL

(a) Check the pedal for smooth operation.
(b) Check if the pedal has the proper reserve distance and free play.
(c) Start the engine and check the brake booster function.

16. BRAKES

(a) In a safe place, check if the vehicle remains straight when applying the brakes.

17. PARKING BRAKE

(a) Check that the lever has the proper range of motion.
(b) On a low incline, check if the parking brake alone can stabilize the vehicle.

18. AUTOMATIC TRANSMISSION "PARK" MECHANISM

(a) Check the lock release button of the selector lever for proper and smooth operation.
(b) On a low incline, check if the parking brake alone can stabilize the vehicle.

UNDER HOOD

GENERAL MAINTENANCE

1. GENERAL NOTES

- Maintenance items may vary from country to country. Check the owner's manual supplement in which the maintenance schedule is shown.
- Every service item in the periodic maintenance schedule must be performed.
- Periodic maintenance service must be performed according to whichever interval in the periodic maintenance schedule occurs first, the odometer reading (miles) or the time interval (months).
- Maintenance service after the last period should be performed at the same interval as before unless noted.
- Failure to do even one of the items can cause the engine to run poorly and increase the exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check if there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check if the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check if the front of the radiator is clean and not blocked by leaves, dirt or bugs.
(b) Check the hoses for cracks, kinks, rot or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check if the electrolyte level of all the battery cells is between the upper and lower level lines on the case.

6. BRAKE FLUID LEVEL

(a) Check if the brake fluid levels are near the upper level line on the see-through reservoirs.

7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oiliness.

8. ENGINE OIL LEVEL

(a) Check the level on the dipstick with the engine turned off.

9. POWER STEERING FLUID LEVEL

(a) Check the level on the dipstick.
(b) The level should be in the "HOT" or "COLD" range depending on the fluid temperature.

10. AUTOMATIC TRANSMISSION FLUID LEVEL

(a) Visually check the overflow plug and oil pan for fluid leaks or traces of fluid.

11. EXHAUST SYSTEM

(a) If any change in the sound of the exhaust or the smell of the exhaust fumes is noticed, locate and correct the cause.

ENGINE

GENERAL MAINTENANCE

HINT:
Inspect these items when the engine is cold.

1. REPLACE CHAIN SUB-ASSEMBLY
HINT:
- 2TR-FE: See page EM-21
- 1GR-FE, 2WD: See page EM-23
- 1GR-FE, 4WD and Pre-runner: See page EM-44

2. INSPECT DRIVE BELT
HINT:
- 2TR-FE: See page EM-5
- 1GR-FE: See page EM-5

3. REPLACE SPARK PLUGS
HINT:
- 2TR-FE: See page IG-3
- 1GR-FE: See page IG-3

4. REPLACE AIR CLEANER FILTER
(a) Replace the air filter with a new one.

5. REPLACE ENGINE OIL AND OIL FILTER
HINT:
- 2TR-FE: See page LU-3
- 1GR-FE: See page LU-4

6. REPLACE ENGINE COOLANT
HINT:
- 2TR-FE: See page CO-3
- 1GR-FE: See page CO-3

7. INSPECT RADIATOR FIN
(a) Check that the radiator and condenser are not blocked with leaves, dirt, or insets, and clean the hose connection.

8. INSPECT GASKET IN FUEL TANK CAP
HINT:
- 2TR-FE: See page EC-29
- 1GR-FE: See page EC-21

9. INSPECT CHARCOAL CANISTER
HINT:
- 2TR-FE: See page EC-20
- 1GR-FE: See page EC-11

10. INSPECT FUEL LINES, CONNECTIONS AND FUEL TANK VAPOR VENT SYSTEM HOSES AND FUEL TANK BAND
(a) Visually check the fuel lines for cracks, leakage, loose connections, deformation or tank band looseness.

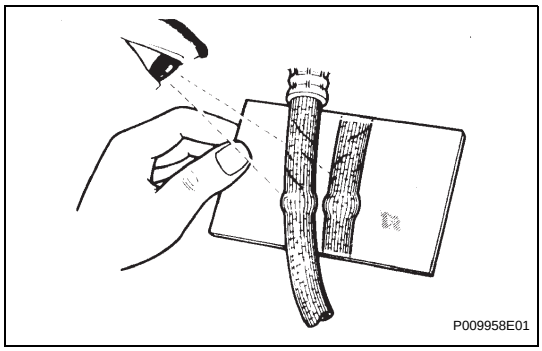
11. INSPECT EXHAUST PIPE AND MOUNTING

(a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

12. INSPECT VALVE CLEARANCE (for 1GR-FE)

HINT:

See page EM-7



P009958E01

MA

BRAKE

GENERAL MAINTENANCE

1. INSPECT BRAKE LINE PIPES AND HOSES

HINT:

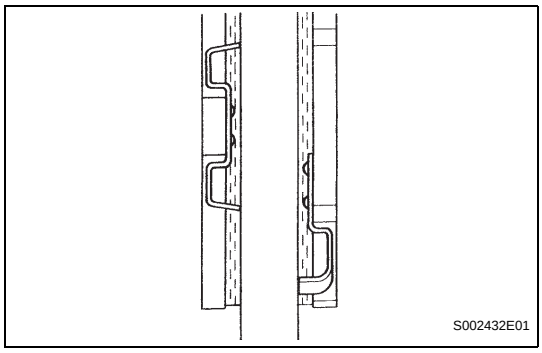
Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning.

(a) Check all the brake lines and hoses for:
- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all the clamps for tightness and the connections for leakage.

(c) Check if the hoses and lines are not near sharp edges, moving parts and the exhaust system.

(d) Check if the lines are installed pass through the center of the grommets.



S002432E01

2. INSPECT FRONT BRAKE PADS AND DISCS

HINT:
- 2WD: See page BR-57
- 4WD and Pre-runner: See page BR-63
- If a squealing or scraping noise is heard from the brake while driving, check the pad wear indicator.
- If there are traces of the indicator contacting the disc rotor, the disc pad should be replaced.

3. INSPECT REAR BRAKE DRUM

HINT:

See page BR-70

4. INSPECT BRAKE FLUID

Fluid:

SAE J1703 or FMVSS No. 116 DOT3

HINT:
- w/ VSC (See page BR-4)
- w/o VSC (See page BR-7)

CHASSIS

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE

(a) Check the steering wheel free play (See page SR-2).

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

2. INSPECT STEERING GEAR HOUSING OIL

(a) Check the steering gear housing for oil leakage.

HINT:

If leakage is found, check and repair the cause.

3. INSPECT BALL JOINTS AND DUST COVERS

(a) Inspect the ball joints for excessive looseness.

(b) Check the dust cover for damage.

4. INSPECT DRIVE SHAFT BOOT (for 4WD)

(a) Check the drive shaft boots for clamp looseness, oil leakage or damage.

5. REPLACE TRANSFER OIL (for 4WD)

(a) Remove the filler plug and feel inside the hole with your finger.

(b) Check that the oil comes to within 5 mm (0.20 in.) from the bottom edge of the hole.

HINT:

If the level is low, add oil until it begins to run out of the filler hole.

6. REPLACE DIFFERENTIAL OIL

(a) Remove the filler plug and feel inside the hole with your finger.

(b) Check that the oil comes to within 5 mm (0.20 in.) from the bottom edge of the hole.

HINT:

If the level is low, add oil until it begins to run out of the filler hole.

7. INSPECT AUTOMATIC TRANSMISSION FLUID

HINT:

- A750E (See page AT-135)
- A750F (See page AT-139)
- A340E (See page AT-85)

MA

8. LUBRICATE PROPELLER SHAFT (for 4WD)

(a) Lubricate propeller shaft, referring to the lubrication chart. Before pumping in grease, wipe off any mud and dust on the grease fitting (See page PR-18, PR-24 or PR-29).

Grease grade:

Lithium base chassis grease NLGI No. 2

9. TIGHTEN PROPELLER SHAFT BOLT

(a) Tighten the bolts for propeller shaft.

HINT:

- Regular Cab 2WD (See page PR-6).
- Access Cab 2WD and Double Cab 2WD (See page PR-13).
- Front propeller shaft 4WD (See page PR-19).
- Rear propeller shaft Regular Cab 4WD (See page PR-25).
- Rear propeller shaft Access Cab 4WD and Double Cab 4WD (See page PR-31).

10. ROTATE TIRES (See page TW-2)

BODY

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS ON CHASSIS AND BODY

(a) Tighten the bolts and nuts on the chassis parts listed below, if necessary.
- Front axle and suspension
- Drive train
- Rear axle and suspension
- Brake system
- Engine mounting
- Other chassis parts

(b) Tighten the bolts and nuts on the body parts listed below, if necessary.
- Seat belt system
- Seats
- Doors and hood
- Body mountings
- Fuel tank
- Exhaust pipe system
- Other body parts

2. REPLACE CLEAN AIR FILTER SUB-ASSEMBLY

(a) Remove the glove compartment assembly.
(b) Remove the filter case from the filter outlet.
(c) Remove the filter from the filter case.
(d) Replace the filter with a new one.
(e) The installation procedures are the removal procedures in reverse order.

DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**

DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**

DTC	**C1238/38**	**Foreign Object is Attached on Tip of Rear Speed Sensor RH**

DTC	**C1239/39**	**Foreign Object is Attached on Tip of Rear Speed Sensor LH**

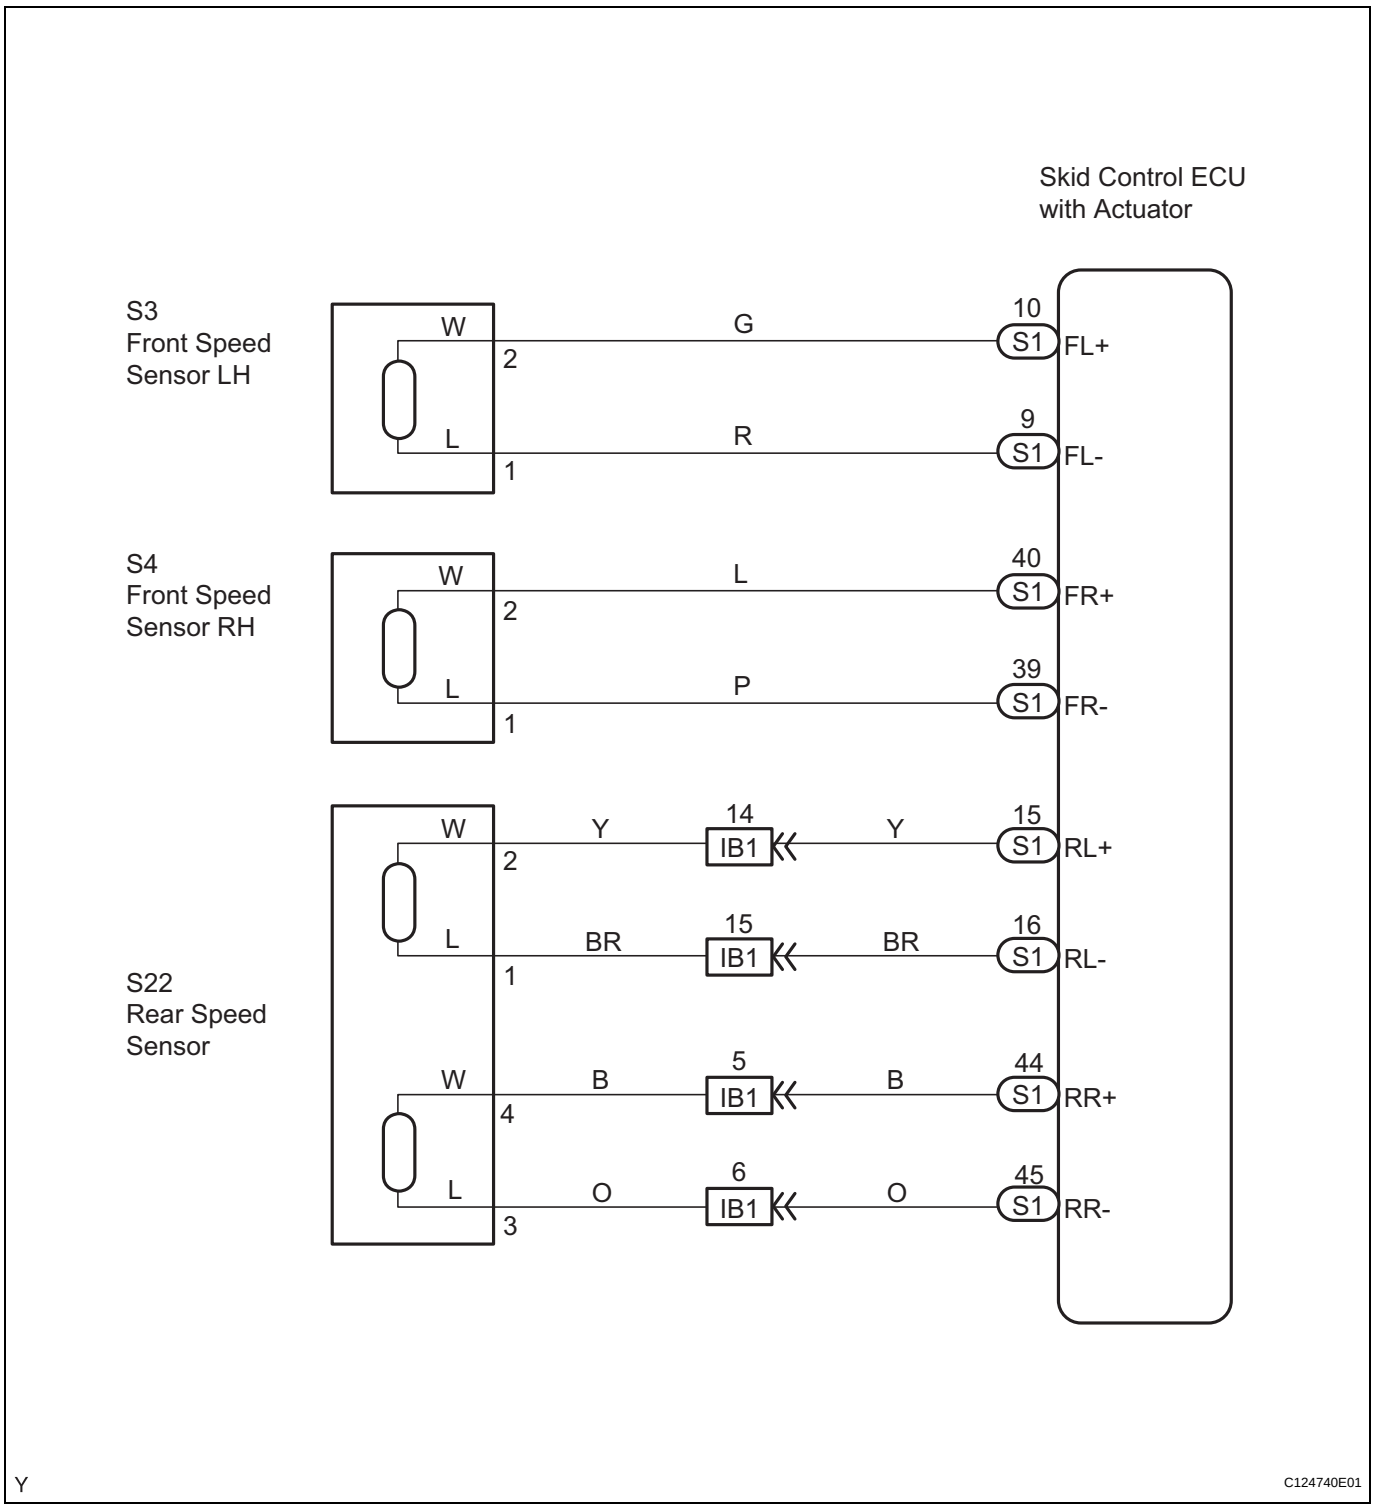
DESCRIPTION

The Skid Control ECU sets this DTC if, according to abnormal signals input by the sensor, it detects that foreign material is adhering to the speed sensor tip or the sensor rotor, or the rotor has any missing teeth. This DTC may be set if parts such as the speed sensor circuit connector or wire harness are malfunctioning.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1235/35 C1236/36 C1238/38 C1239/39	• At vehicle speed of 12 mph (20 km/h) or more, noise in speed sensor signal continues for 5 seconds or more. • At vehicle speed of 6 mph (10 km/h) or more, noise detected as rotor turns, for 15 seconds or more.	• Speed sensor • Speed sensor circuit • Speed sensor rotor • Brake actuator (skid control ECU)

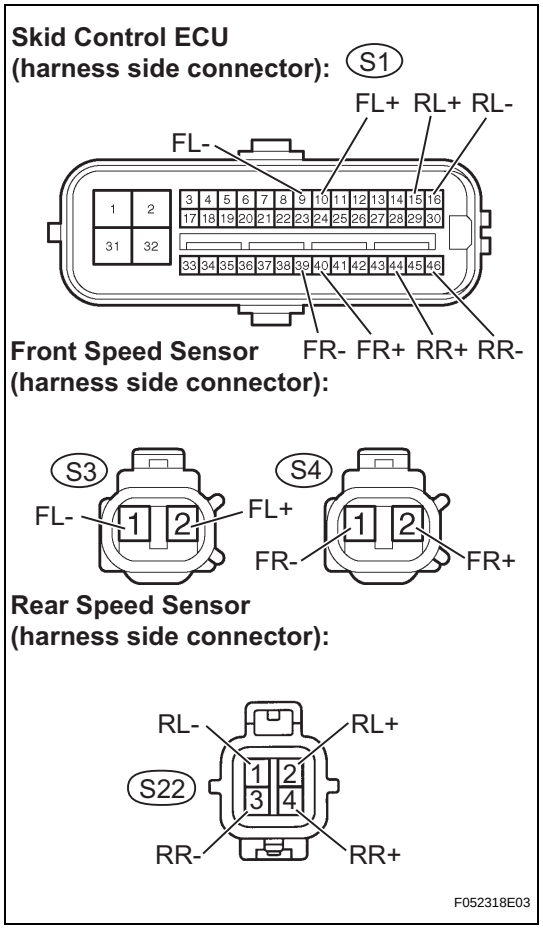
HINT:
DTC C1235/35 relates to the front right speed sensor.
DTC C1236/36 relates to the front left speed sensor.
DTC C1238/38 relates to the rear right speed sensor.
DTC C1239/39 relates to the rear left speed sensor.

WIRING DIAGRAM



BC

1	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SPEED SENSOR)



(a) Disconnect the skid control ECU connector.
(b) Disconnect speed sensor connectors.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - S3-2 (FL+)	Below 1 Ω
S1-9 (FL-) - S3-1 (FL-)	Below 1 Ω
S1-40 (FR+) - S4-2 (FR+)	Below 1 Ω
S1-39 (FR-) - S4-1 (FR-)	Below 1 Ω
S1-15 (RL+) - S22-2 (RL+)	Below 1 Ω
S1-16(RL-) - S22-1 (RL-)	Below 1 Ω
S1-44 (RR+) - S22-4 (RR+)	Below 1 Ω
S1-45 (RR-) - S22-3 (RR-)	Below 1 Ω

(d) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - Body ground	10 kΩ or higher
S1-9 (FL-) - Body ground	10 kΩ or higher
S1-40 (FR+) - Body ground	10 kΩ or higher
S1-39 (FR-) - Body ground	10 kΩ or higher
S1-15 (RL+) - Body ground	10 kΩ or higher
S1-16(RL-) - Body ground	10 kΩ or higher
S1-44 (RR+) - Body ground	10 kΩ or higher
S1-45 (RR-) - Body ground	10 kΩ or higher

(e) Reconnect speed sensor connectors.
(f) Reconnect the skid control ECU connector.

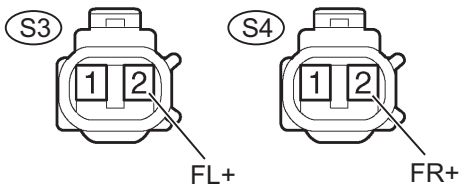
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

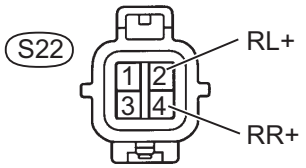
BC

2 INSPECT BRAKE ACTUATOR (TERMINAL VOLTAGE)

Front Speed Sensor (harness side connector):



Rear Speed Sensor (harness side connector):



F052319E02

(a) Disconnect the speed sensor connectors.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
S3-2 (FL+) - Body ground	7.5 to 12 V
S4-2 (FR+) - Body ground	7.5 to 12 V
S22-2 (RL+) - Body ground	7.5 to 12 V
S22-4 (RR-) - Body ground	7.5 to 12 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the speed sensor connectors.

NG → **REPLACE BRAKE ACTUATOR**

OK

BC

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at 6 mph (10 km/h) or more to activate initial check.
(c) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

4 INSPECT SPEED SENSOR

(a) Remove the speed sensor (See page BC-303 or BC-304).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

CLEAN OR REPLACE SPEED SENSOR

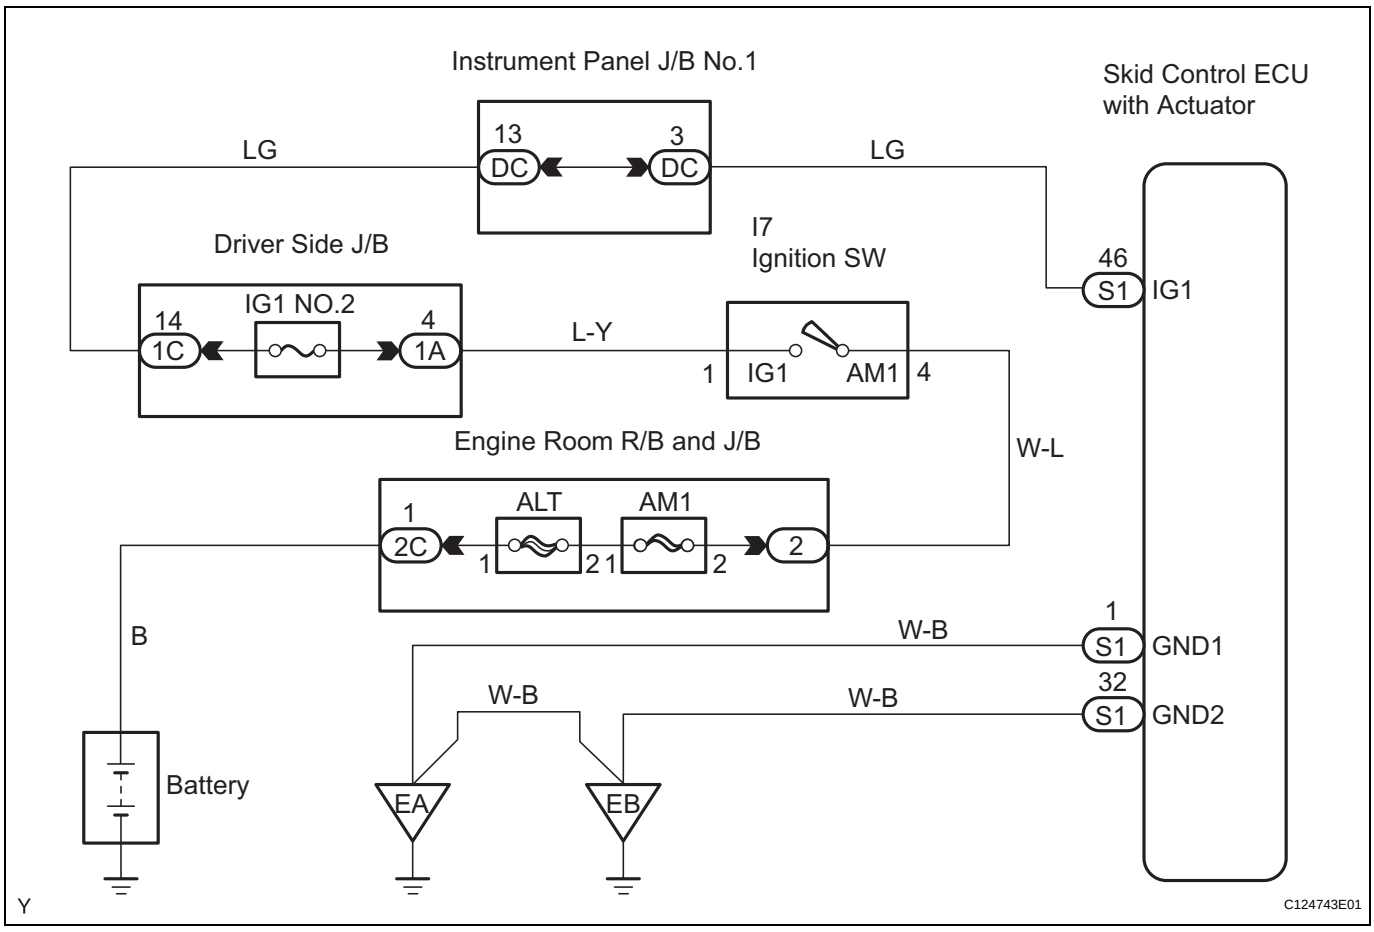
DTC	C1241/41	Low Battery Positive Voltage

DESCRIPTION

If there is a problem with the brake actuator (skid control ECU) power supply circuit, the skid control ECU outputs a DTC and prohibits operation under the fail safe function.
If the voltage supplied to the IG1 terminal is not within the DTC detection threshold due to malfunctions in parts such as the battery or alternator circuit, this DTC is stored.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1241/41	• At vehicle speed of 2 mph (3 km/h) or more, voltage at IG1 terminal remains at 9.5 V or less for 10 seconds or more. • When solenoid relay ON, voltage at IG1 terminal 0.5 V or less, and contact of relay OFF for 0.2 seconds or more. • When voltage at IG1 terminal 9.5 V or less, voltage of speed sensor power supply decreases for 60 seconds or more.	• Battery • Charging system • Power source circuit

WIRING DIAGRAM



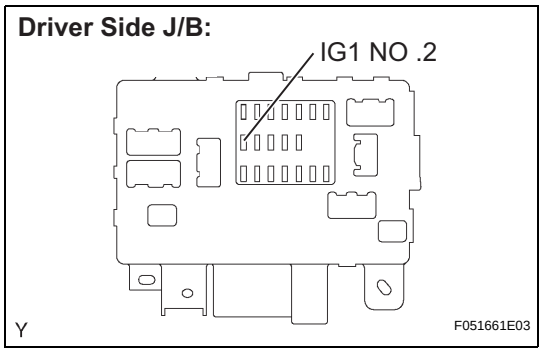
1	INSPECT BATTERY

(a) Check the battery voltage.
Standard Voltage:
11 to 14 V

NG → INSPECT CHARGING SYSTEM

OK

2 INSPECT FUSE (IG1 NO. 2)



(a) Remove the IG1 NO . 2 fuse from the driver side J/B.
(b) Measure the resistance of the IG1 NO. 2 fuse.
Standard Resistance:
Below 1 Ω
(c) Reinstall the IG1 NO. 2 fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

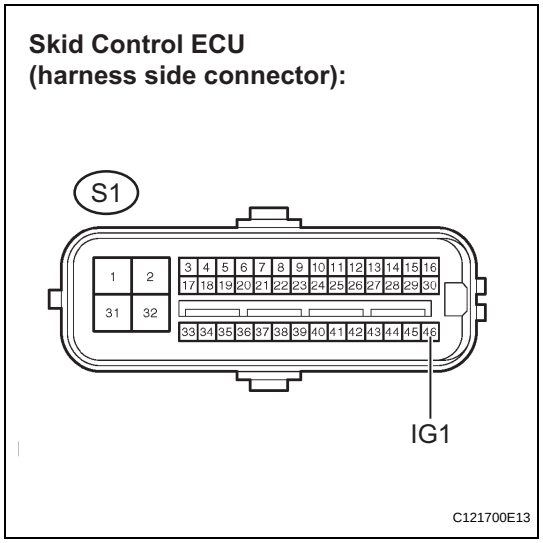
3 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (IG1 TERMINAL)

(a) When using intelligent tester:
(1) Start the engine.
(2) Connect the intelligent tester to the DLC3.
(3) Turn the intelligent tester ON.
(4) Select the DATA LIST mode on the intelligent tester.
(5) Measure the voltage condition output from the ECU displayed on the intelligent tester.

BC

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
IG VOLTAGE	ECU power supply voltage: TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 V or 14 V TOO LOW: Below 9.5 V	-

OK:
"Normal" is displayed.



(b) When not using intelligent tester:
(1) Disconnect the skid control ECU connector.
(2) Turn the ignition switch to the ON position.
(3) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
S1-46 (IG1) - Body ground	10 to 14 V

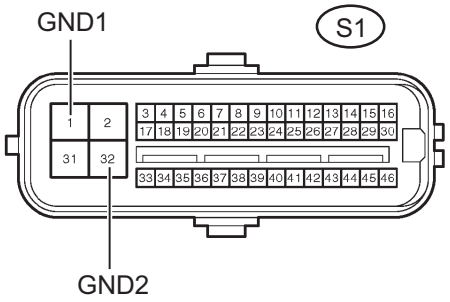
(4) Turn the ignition switch to OFF.
(5) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU
(harness side connector):



C121700E06

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at 1.9 mph (3 km/h) or more for 10 seconds or more.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

NG → **END**

A

REPLACE BRAKE ACTUATOR

BC

DTC	C1243/43	Acceleration Sensor Stuck Malfunction

DTC	C1244/44	Open or Short in Deceleration Sensor Circuit

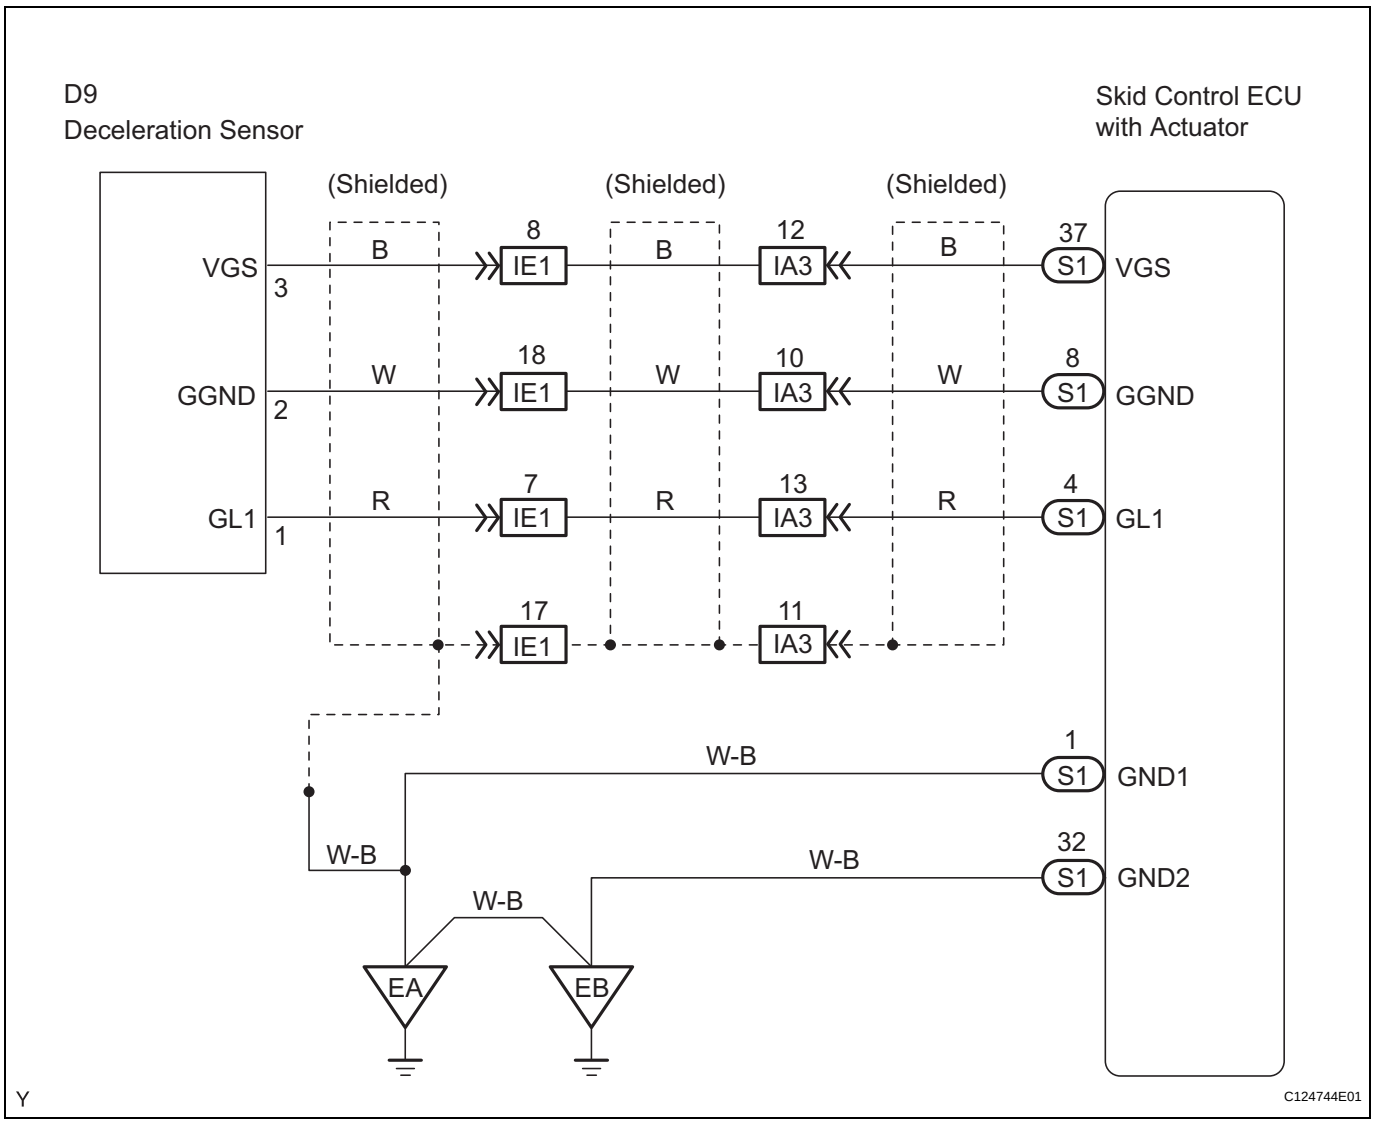
DTC	C1245/45	Acceleration Sensor Output Malfunction

DESCRIPTION

This sensor detects deceleration of the vehicle speed. The sensor signal is used in ABS control. If the sensor functions abnormally, the ABS warning light turns on.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1243/43	While vehicle speed decreases from 18 mph (30 km/h) to 0 mph (0 km/h), sensor signal does not change 16 times or more.	• Deceleration sensor • Deceleration sensor circuit • Brake actuator (skid control ECU)
C1244/44	When any of following 1 through 3 detected: 1. ECU terminal GL1 value of -1.5 G or less or 1.5 G or more continues for 1.2 seconds or more. 2. Deceleration sensor terminal VGS voltage of 4.4 V or less or 5.6 V or more continues for 1.2 seconds or more. 3. Deceleration sensor signal momentary open occurs 7 times or more.	• Deceleration sensor • Deceleration sensor circuit • Brake actuator (skid control ECU)
C1245/45	At vehicle speed of 18 mph (30 km/h) or more, difference between back and forth G value calculated using G sensor signals and back and forth G value calculated using vehicle speed, exceeds 0.35 G for 60 seconds or more.	• Deceleration sensor • Deceleration sensor circuit • Brake actuator (skid control ECU)

WIRING DIAGRAM



BC

1	READ VALUE OF DATA LIST (DECELERATION SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) Select the DATA LIST mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
DECELERAT SEN	Deceleration sensor 1 reading / min.: -1.869 G, max.: 1.869 G	Approximately 0 +-0.13G in still condition	Reading changes when vehicle bounced

(e) Check that the deceleration value of the deceleration sensor displayed on the intelligent tester changes when the vehicle is tilted.
OK:
Deceleration value must change.

NG	Go to step 3

OK

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are detected.

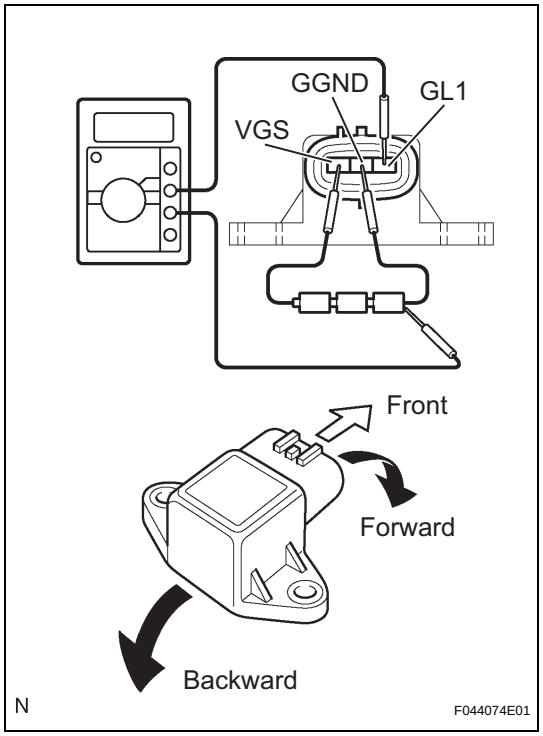
Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE BRAKE ACTUATOR

3 INSPECT DECELERATION SENSOR



(a) Remove the deceleration sensor.
(b) Connect the 3 dry batteries of 1.5 V in series.
(c) Connect the VGS terminal to the batteries' positive (+) terminal and the GGND terminal to the batteries' negative (-) terminal.
(d) Apply about 4.5 V between the VGS and GGND terminals.
NOTICE:
Do not apply voltage of 6 V or more to terminals VGS and GGND.
(e) Check the output voltage of the GL1 terminal when the sensor is tilted forward and backward.
Standard Voltage

Sensor Condition	Specified Condition
Horizontal	About 2.3 V
Lean forward	0.4 to 2.3 V
Lean backward	2.3 to 4.0 V

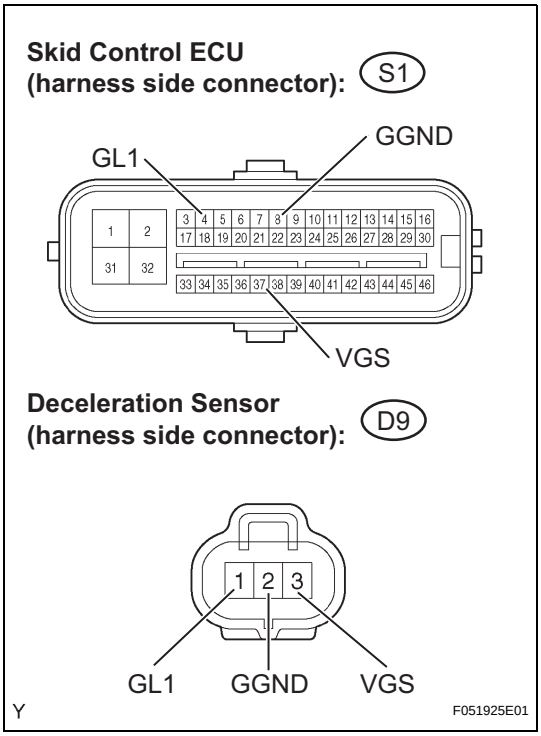
HINT:
- If the sensor is tilted too much it may show the wrong value.
- If dropped, the sensor should be replaced with a new one.
- Check and ensure the correct installation direction of the deceleration sensor.

NG → **REPLACE DECELERATION SENSOR**

OK

BC

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DECELERATION SENSOR)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the deceleration sensor connector.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-37 (VGS) - D9-3 (VGS)	Below 1 Ω
S1-8 (GGND) - D9-2 (GGND)	Below 1 Ω
S1-4 (GL1) - D9-1 (GL1)	Below 1 Ω

(d) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-37 (VGS) - Body ground	10 kΩ or higher
S1-8 (GGND) - Body ground	10 kΩ or higher
S1-4 (GL1) - Body ground	10 kΩ or higher

(e) Reconnect the deceleration sensor connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE ACTUATOR

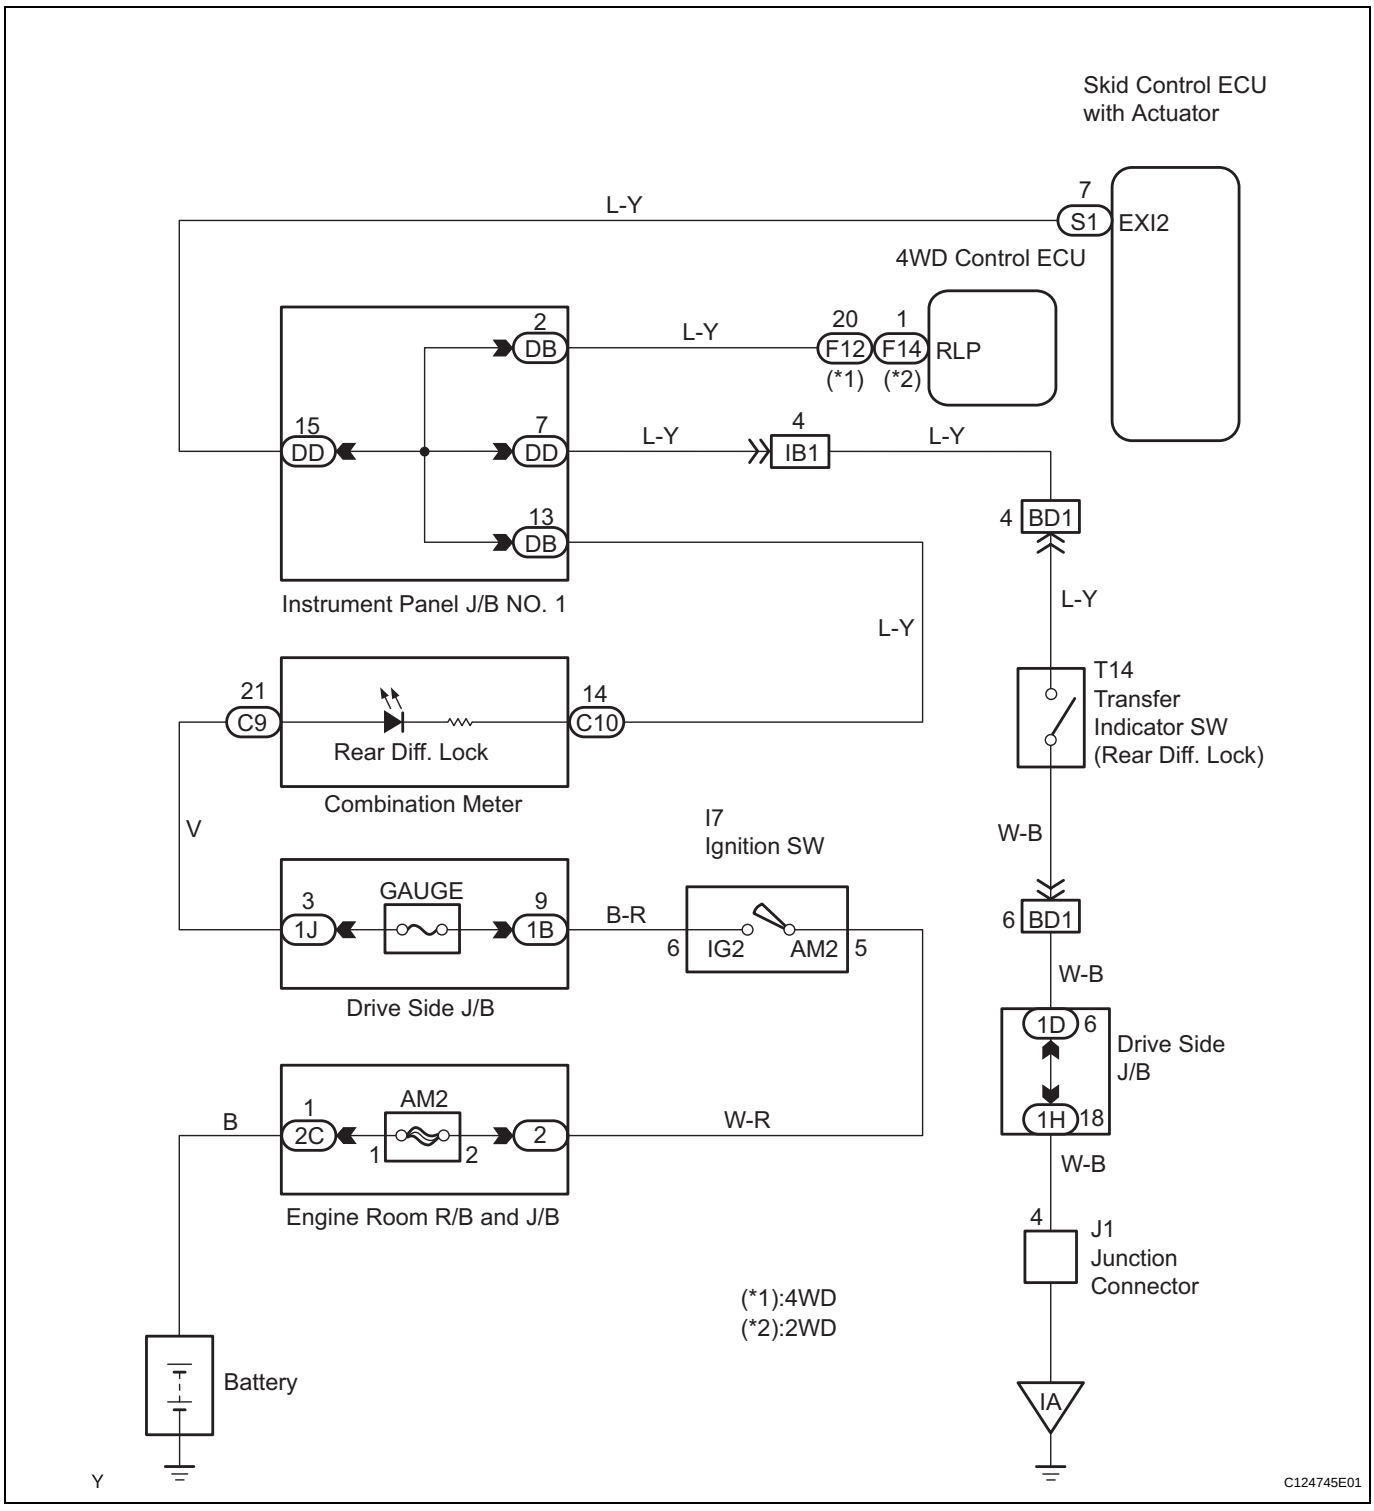
DTC	C1248/48	Open Circuit in Rear Differential Lock

DESCRIPTION

The 4WD control ECU stimulates the actuator to lock the rear differential in accordance with the rear diff. lock switch. The skid control ECU monitors the transfer indicator switch (rear diff. lock) and if the rear differential is locked, at which time the rear diff. lock indicator light is illuminated, prohibits ABS control. At the same time, the skid control ECU illuminates the ABS warning light.

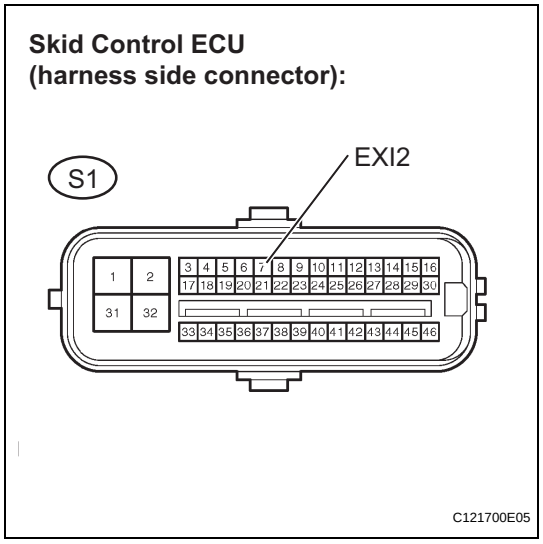
DTC No.	DTC Detecting Condition	Trouble Areas
C1248/48	At vehicle speed of 31 mph (50 km/h) or more, 3 seconds or more elapse after rear differential changes from free to lock.	• Transfer indicator switch (rear diff. lock) • Rear differential lock circuit • Brake actuator (skid control ECU) • 4WD control ECU

WIRING DIAGRAM



BC

1 INSPECT SKID CONTROL ECU (EXI2 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
(d) Check the rear diff. lock indicator light.

Standard

Terminal Connection	Vehicle Condition	Specified Condition	Rear Diff. Indicator Light
S1-7 (EXI2) - Body ground	Rear Differential free	8 to 14 V	OFF
S1-7 (EXI2) - Body ground	Rear Differential locked	1.5 V	ON

(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

NG → Go to step 3

OK

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Drive the vehicle at a speed of 31 mph (50 km/h) or more for 3 seconds or more with the rear differential free.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

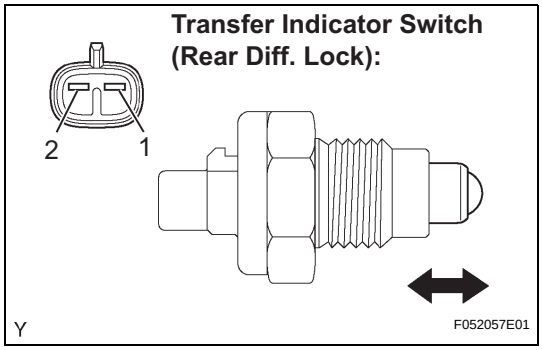
B → END

A

REPLACE BRAKE ACTUATOR

BC

3 INSPECT TRANSFER INDICATOR SWITCH (REAR DIFF. LOCK)



(a) Disconnect the transfer indicator switch connector.
(b) Remove the transfer indicator switch.
(c) Measure the resistance.

Standard Resistance

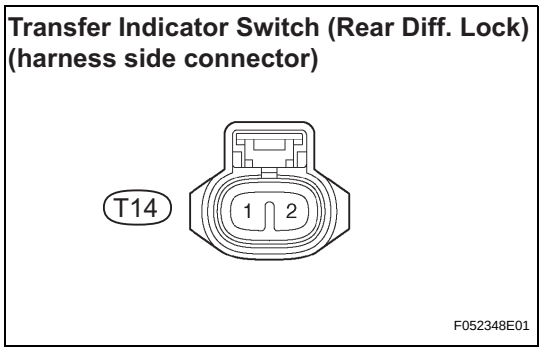
Tester Connection	Switch Position	Specified Condition
1 - 2	Push	Below 1 Ω
1 - 2	Free	10 kΩ or higher

(d) Reinstall the transfer indicator switch.
(e) Reconnect the transfer indicator switch connector.

NG → **REPLACE TRANSFER INDICATOR SWITCH**

OK

4 CHECK HARNESS AND CONNECTOR



(a) Disconnect the skid control ECU connector.
(b) Disconnect the 4WD control ECU connector.
(c) Disconnect the transfer indicator switch connector.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard Voltage

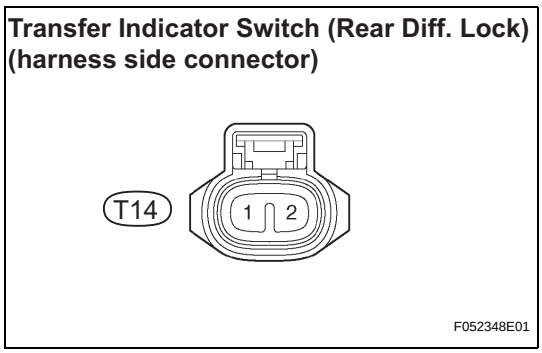
Tester Connection	Specified Condition
T14-2 - Body ground	8 to 14 V

(f) Turn the ignition switch to OFF.
(g) Reconnect the transfer indicator switch connector.
(h) Reconnect the 4WD control ECU connector.
(i) Reconnect the skid control ECU connector.

OK → **REPLACE 4WD CONTROL ECU**

NG

5 CHECK HARNESS AND CONNECTOR



(a) Disconnect the skid control ECU connector.
(b) Disconnect the 4WD control ECU connector.
(c) Disconnect the transfer indicator switch connector.
(d) Disconnect the combination meter connector.
(e) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
T14-2 - Body ground	10 kΩ or higher

(f) Reconnect the combination meter connector.
(g) Reconnect the transfer indicator switch connector.
(h) Reconnect the 4WD control ECU connector.
(i) Reconnect the skid control ECU connector.

BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER

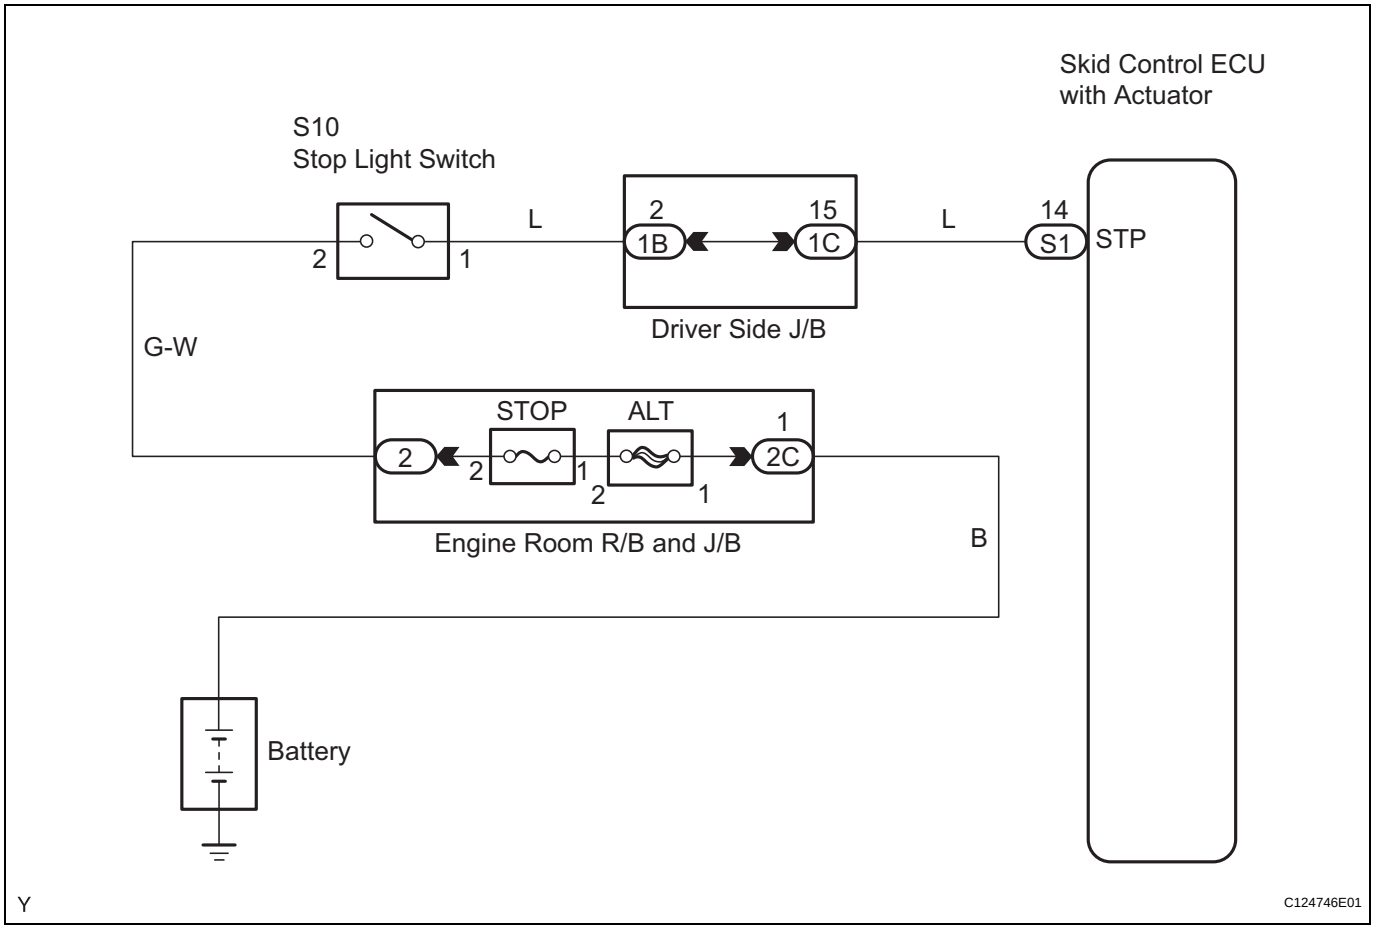
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

The skid control ECU inputs the stop light switch signal and detects the status of the brake operation.

DTC No.	DTC Detecting Condition	Trouble Areas
C1249/49	ECU terminal IG1 voltage 9.5 V to 17.2 V and open in stop light switch circuit for 0.3 seconds or more.	• Stop light assembly • Stop light switch circuit

WIRING DIAGRAM



BC

1	CHECK STOP LIGHT SWITCH OPERATION

(a) Check that the stop lights come on when the brake pedal is depressed and go off when the brake pedal is released.

OK

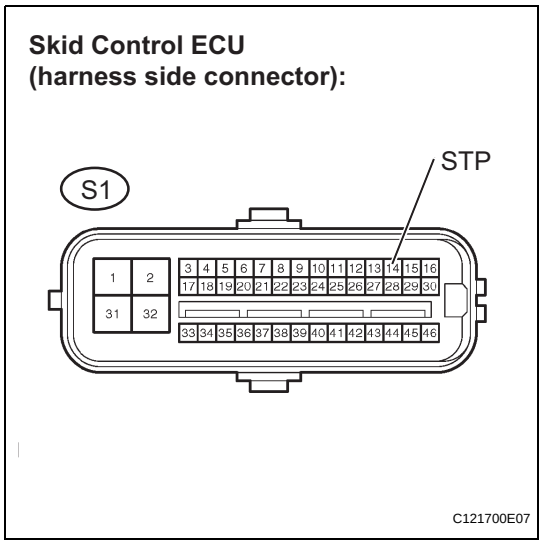
Pedal Condition	Illumination condition
Brake pedal depressed	ON
Brake pedal released	OFF

HINT:
Check the stop light bulb as it may have burnt out.

NG → Go to step 4

OK

2 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (STP TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.

Standard Voltage

Tester Connection	Switch Condition	Specified Condition
S1-14 (STP) - Body ground	Brake pedal depressed	8 to 16 V
S1-14 (STP) - Body ground	Brake pedal pressed	Below 1.5 V

(c) Reconnect the skid control ECU connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

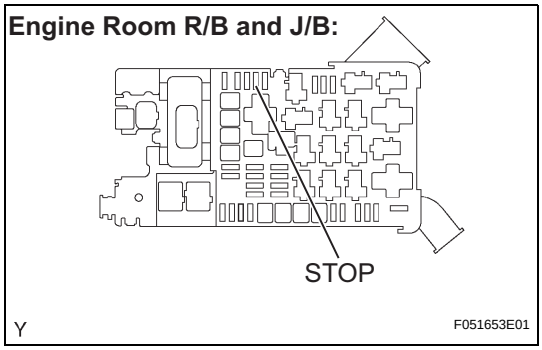
NG → END

A

REPLACE BRAKE ACTUATOR

BC

4	INSPECT FUSE (STOP)

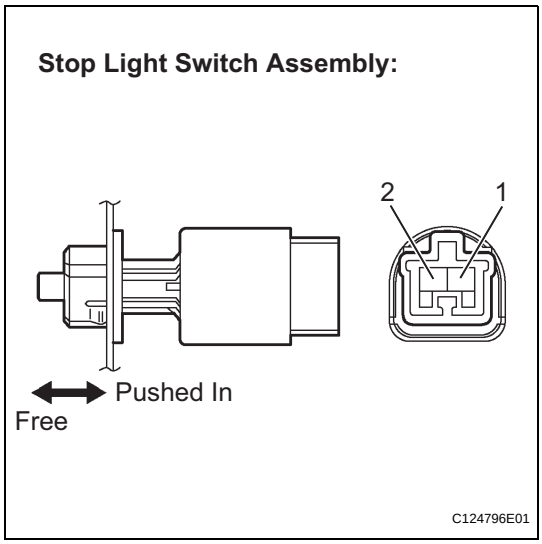


(a) Remove the STOP fuse from the engine room R/B and J/B.
(b) Measure the resistance of the STOP fuse.
Standard Resistance:
Below 1 Ω
(c) Reinstall the STOP fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

5	INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Disconnect the stop light switch connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

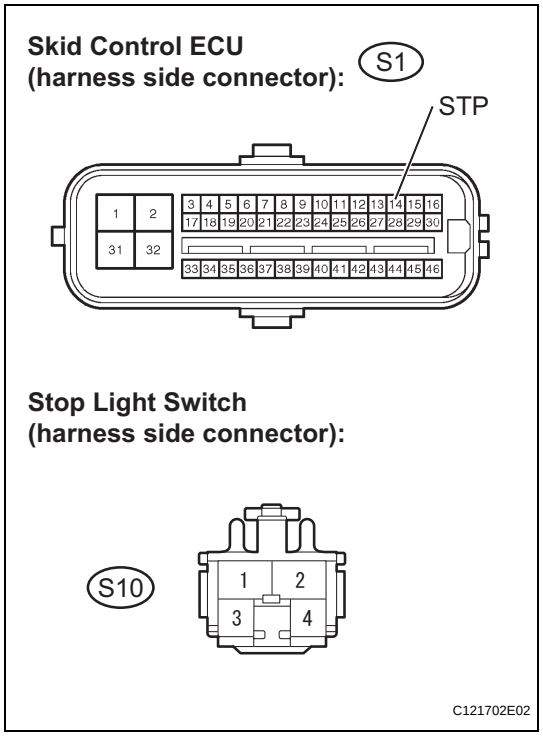
(c) Reconnect the stop light switch connector.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

BC

6 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - SKID CONTROL ECU)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the stop light switch connector.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-14 (STP) - S10-1 (STP)	Below 1 Ω

(d) Reconnect the stop light switch connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 RECONFIRM DTC

BC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are detected.

DTC output	A
DTC not output	B

NG → **END**

A

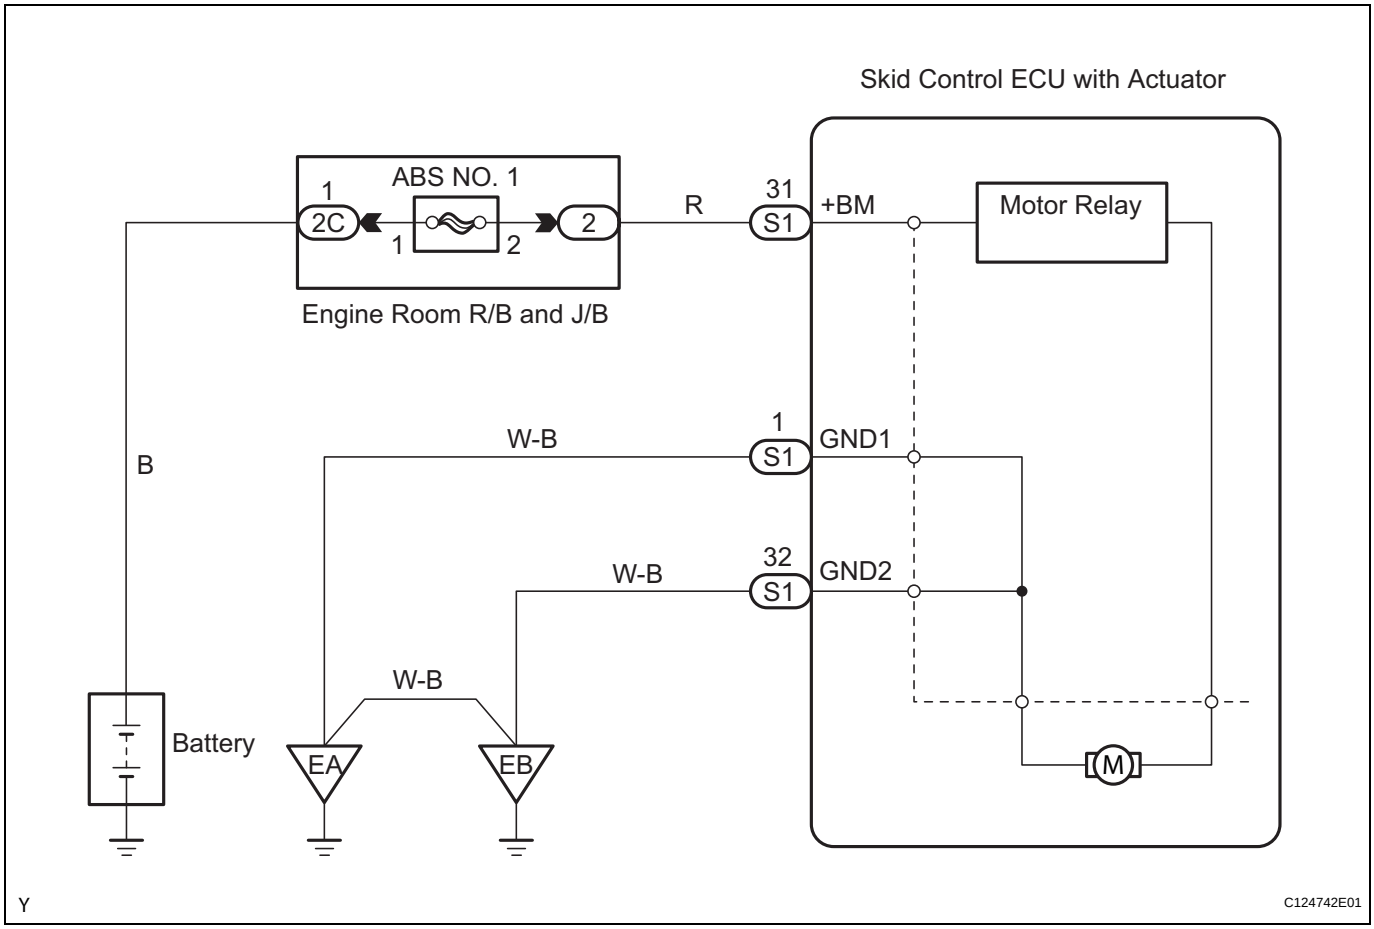
REPLACE BRAKE ACTUATOR

DTC	C1251/51	Open in Pump Motor Circuit

DESCRIPTION

DTC No.	DTC Detecting Conditions	Trouble Areas
C1251/51	• Actuator pump motor does not operate properly. • Open in actuator pump motor circuit continues for at least 2 seconds.	• Brake actuator • Brake actuator circuit

WIRING DIAGRAM



Start the inspection from step 1 when using a intelligent tester and start from step 3 when not using a intelligent tester.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the intelligent tester ON.
(d) Select the ACTIVE TEST mode on the intelligent tester.
(e) Check the operation sound of the ABS motor individually when operating it with the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS MOT RELAY	Turns ABS motor relay ON / OFF	Operation of motor can be heard

OK:
The operation sound of the ABS motor should be heard.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are detected.

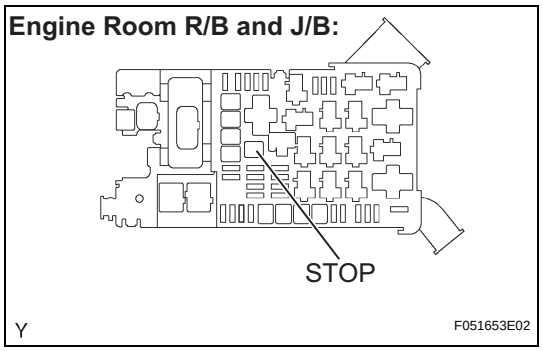
Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE BRAKE ACTUATOR

3 INSPECT FUSE (ABS NO. 1)



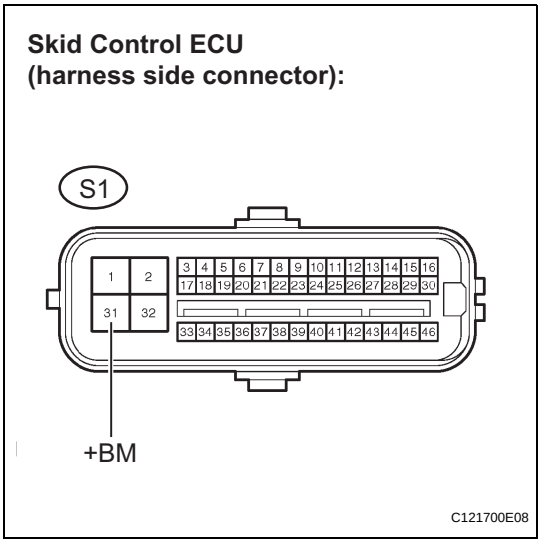
(a) Remove the ABS NO. 1 fuse from the engine room R/B and J/B.
(b) Measure the resistance of the ABS NO. 1 fuse.
Standard Resistance:
Below 1 Ω
(c) Reinstall the ABS NO. 1 fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

BC

4	INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (+BM TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

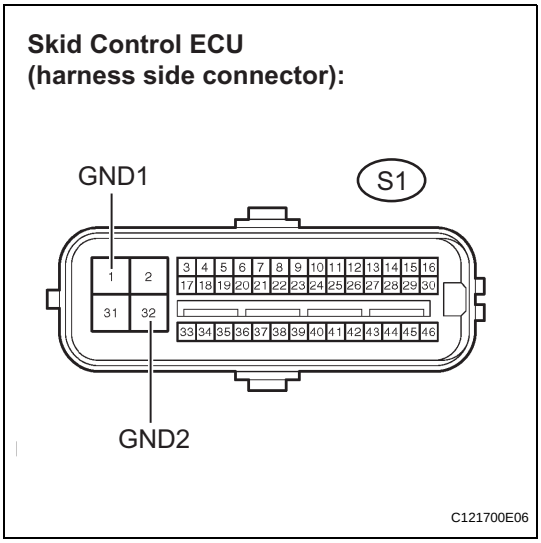
Tester Connection	Specified Condition
S1-31 (+BM) - Body ground	10 to 14 V

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (GND1, GND2 - BODY GROUND)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE ACTUATOR

BC

DTC	C1337/37	Different Diameter Tire Malfunction

DESCRIPTION

The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing whether all 4 wheels are operating properly. Therefore, all of the wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Areas
C1337/37	At vehicle speed of 18 mph (30 km/h) or more, difference of wheel speeds between front 2 wheels and rear 2 wheels, or front left and right wheels 20 % or more for 60 seconds or more.	• Speed sensor • Speed sensor rotor • Speed sensor circuit • Tire size • Brake actuator (skid control ECU)

1 CHECK TIRES

(a) Check tire size and condition of all 4 wheels.
OK:
All 4 wheels are in same condition.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE SAME IN SIZE**

OK ↓

2 CHECK SPEED SENSOR ROTOR

(a) Remove the drive shaft, and check around the speed sensor rotor.
OK:
No scratches or foreign matter on the sensor tip.

NG → **REPLACE SPEED SENSOR ROTOR**

OK ↓

3 CHECK SPEED SENSOR

NG → **REPLACE SPEED SENSOR**

OK ↓

4 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - EACH SPEED SENSOR)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ↓

BC

5	RECONFIRM DTC

(a) Clear the DTCs (See page BC-16).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A → REPLACE BRAKE ACTUATOR

ABS Warning Light Remains ON

DESCRIPTION

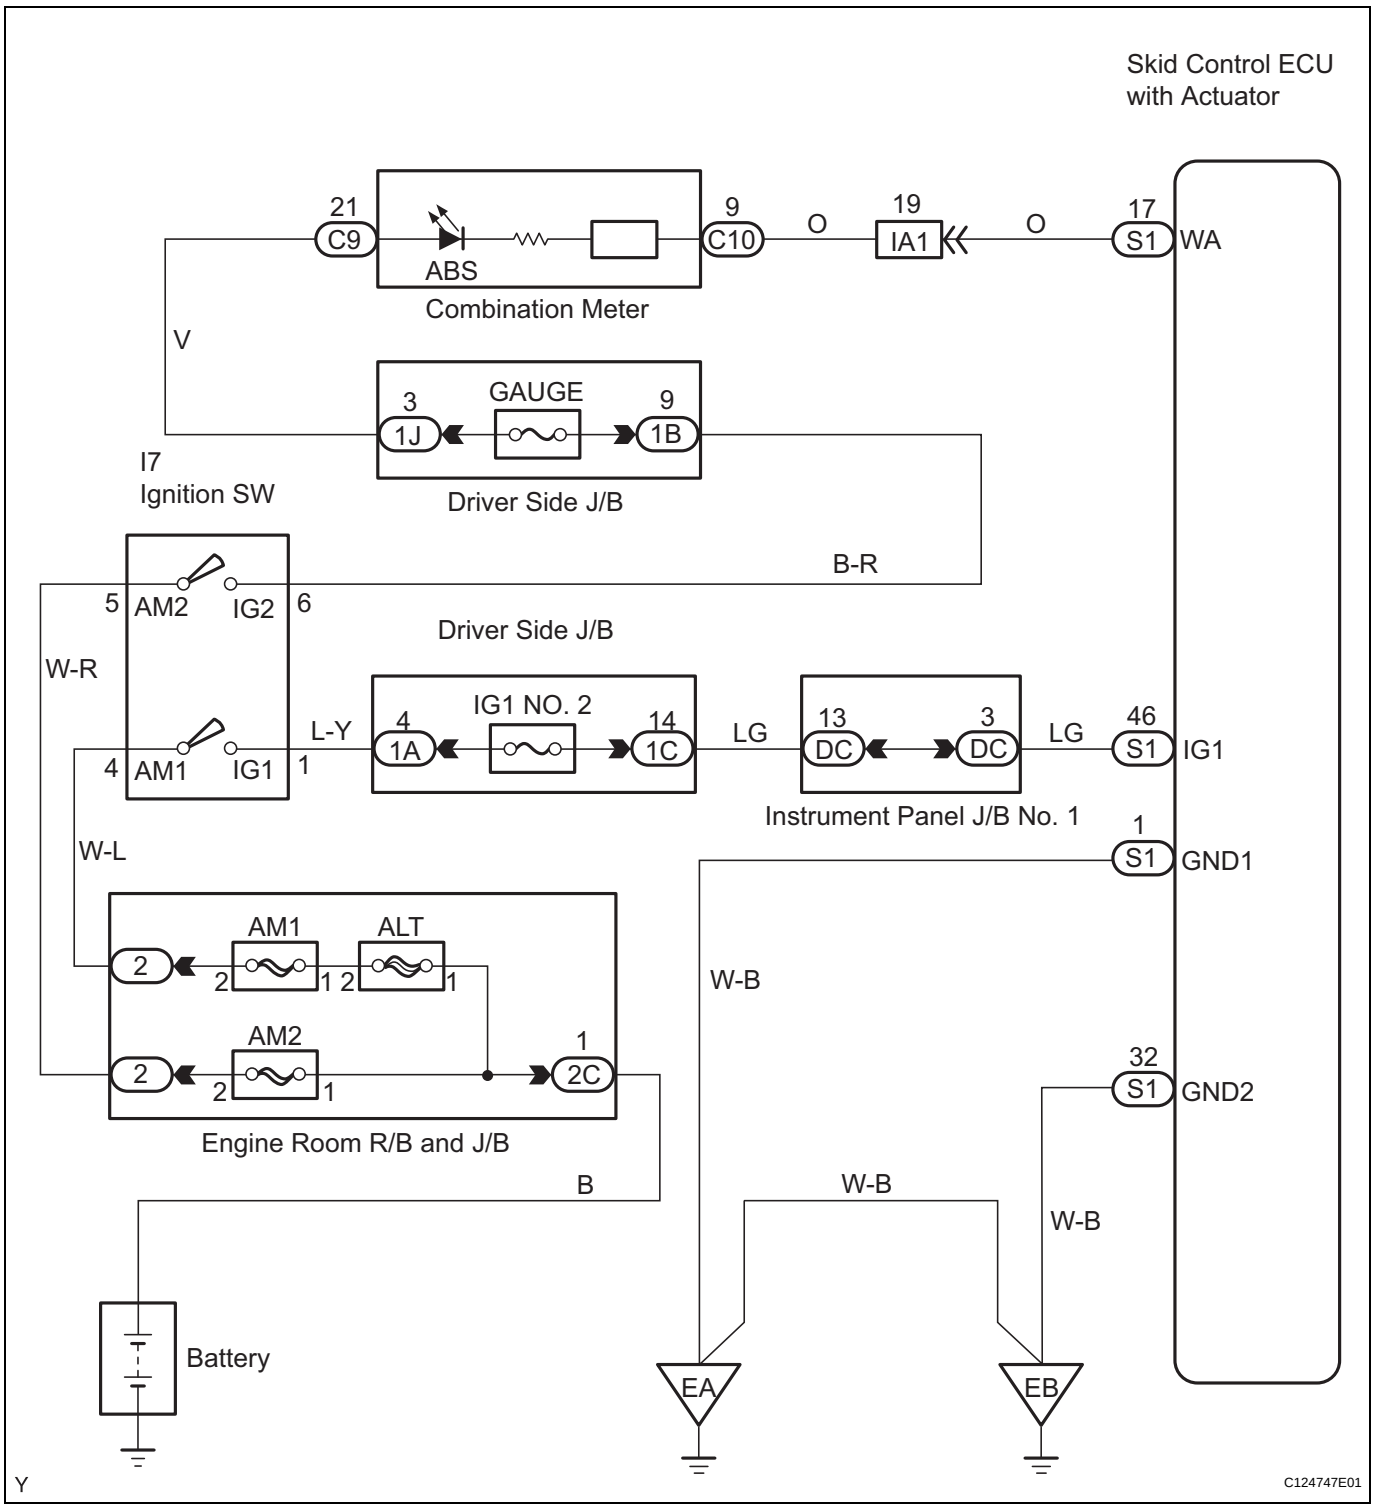
If any of the following is detected, the ABS warning light remains ON.

1. The skid control ECU connectors are disconnected from the skid control ECU.
2. There is a malfunction in the skid control ECU internal circuit.
3. There is an open in the harness between the combination meter and skid control ECU.

HINT:

- When reading DTCs by SST (CHECK WIRE), if the ABS warning light remains on, troubleshoot by following the inspection flow.
- The intelligent tester may not be usable when there is a malfunction in the skid control ECU.

WIRING DIAGRAM



1	CHECK DTC

(a) Check if DTCs for ABS are recorded.

Result	Proceed to
Normal system code output	A
DTC output	B

Result	Proceed to
Other than above	C

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

C → Go to step 4

A

2 CHECK REAR DIFFERENTIAL LOCK SWITCH CONDITION

HINT:
Only for vehicles with rear differential locks.

(a) Check the rear diff. lock switch condition.

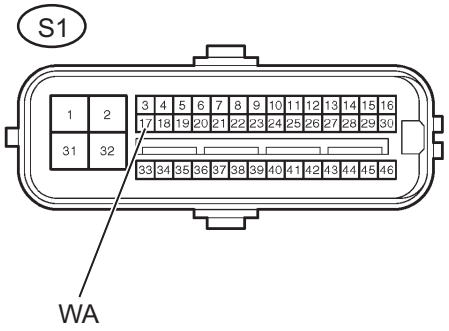
Result	Proceed to
Rear diff. lock switch OFF	A
Rear diff. lock switch ON	B

NG → SWITCH REAR DIFFERENTIAL LOCK SWITCH TO OFF (AFTER THIS FOLLOW TO STEP 3)

OK

3 CHECK ABS WARNING LIGHT

Skid Control ECU (harness side connector):



C121700E09

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Ground terminal WA of the skid control ECU.
(d) Check ABS warning light.

OK

WA - GND Condition	Illumination Condition
Connecting	OFF
Disconnecting	ON

(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

NG → REPAIR COMBINATION METER SYSTEM

OK

REPLACE BRAKE ACTUATOR

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

(a) When using intelligent tester:

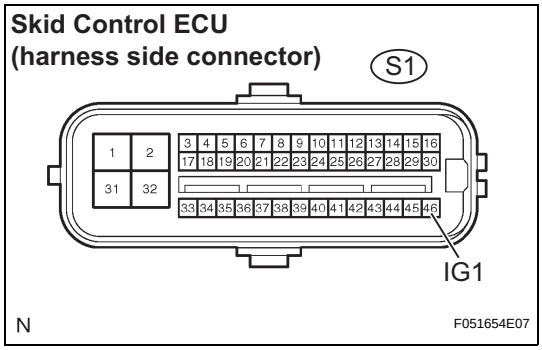
BC

(1) Connect the intelligent tester to the DLC3.
(2) Start the engine.
(3) Turn the intelligent tester ON.
(4) Select the DATA LIST mode on the intelligent tester.
(5) Measure the voltage output from the ECU displayed on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
IG VOLTAGE	ECU power supply voltage / TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 to 14V TOO LOW: Below 9.5 V	-

OK:

"Normal" is displayed.



(b) When not using intelligent tester:
(1) Disconnect the skid control ECU connector.
(2) Turn the ignition switch to the ON position.
(3) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
A9-46 (IG1) - Body ground	11 to 14 V

(4) Turn the ignition switch to OFF.
(5) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ↓

REPLACE BRAKE ACTUATOR

BC

ABS Warning Light does not Come ON

DESCRIPTION

If the ECU detects trouble, it lights the ABS warning light while at the same time prohibiting ABS control. At this time, the ECU records a DTC in the memory.
Connecting terminals TC and CG of the DLC3 causes the ECU to display 2-digit DTCs by flashing the ABS warning light.

WIRING DIAGRAM

See page BC-26.

1 CHECK ABS WARNING LIGHT

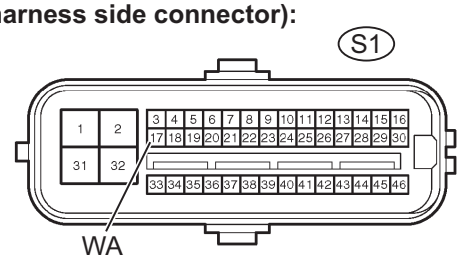
(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Check that the ABS warning light comes on.
OK:
ABS warning light comes on.
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

OK → **REPLACE BRAKE ACTUATOR**

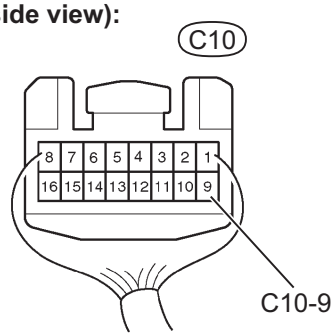
NG

2 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)

Skid Cotrol ECU (harness side connector):



Combination Meter (harness side view):



F049387E05

(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-17 (WA) - C10-9	Below 1 Ω
S1-17 (WA) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	INSPECT COMBINATION METER

(a) Check the combination meter system (See page ME-7).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER**

OK

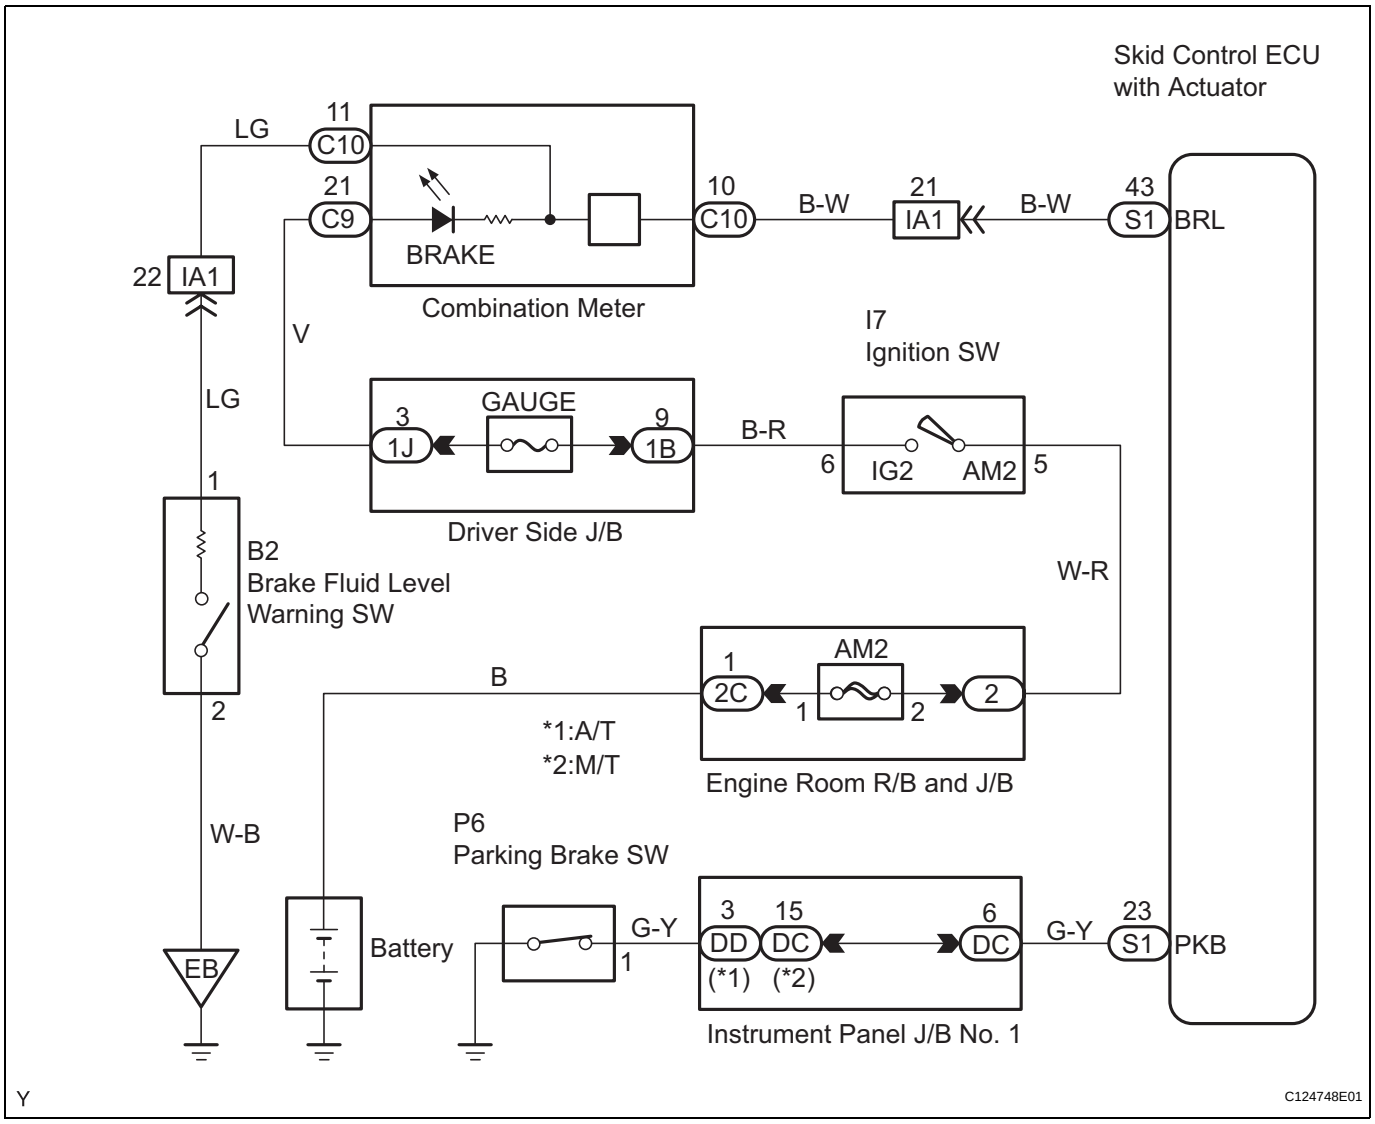
CHECK FOR INTERMITTENT PROBLEMS

Brake Warning Light Circuit

DESCRIPTION

The BRAKE warning light lights up when the brake fluid is insufficient, the parking brake is applied or the EBD is defective.

WIRING DIAGRAM



HINT:
Start the inspection from step 1 when using a intelligent tester and start from step 2 when not using a intelligent tester.

1	CHECK BRAKE FLUID LEVEL

(a) Check the amount of brake fluid in the brake reservoir.
OK:
Brake fluid level is correct.

NG	ADD BRAKE FLUID

BC

OK

2	INSPECT BRAKE WARNING LIGHT

(a) When using intelligent tester:
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the intelligent tester ON.
(4) Select the item "BRAKE WARN LIGHT" in the ACTIVE TEST and operate the BRAKE warning light on the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
BRAKE WRN LIGHT	Turns BRAKE warning light ON / OFF	Observe combination meter

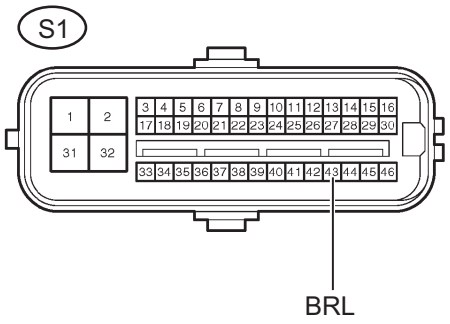
(5) Check that "ON" and "OFF" of the BRAKE warning light are indicated on the combination meter when using the intelligent tester.
OK:
The BRAKE warning light comes on or goes off according to the intelligent tester operations.

(b) When not using intelligent tester:
(1) Disconnect the skid control ECU connector.
(2) Turn the ignition switch to the ON position.
(3) Ground terminal BRL of the skid control ECU.
(4) Check the BRAKE warning light.
OK

BRL - GND Condition	Illumination Condition
Connecting	OFF
Disconnecting	ON

(5) Turn the ignition switch to OFF.
(6) Reconnect the skid control ECU connector.

Skid Control ECU
(harness side connector):



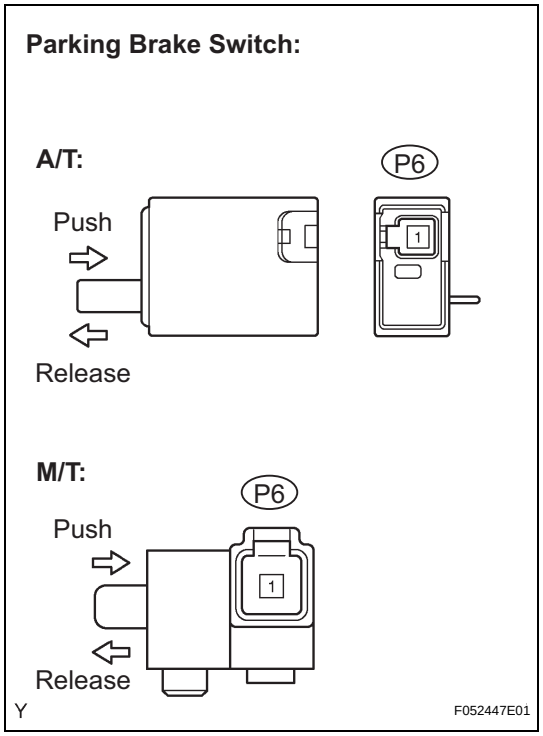
C121700E10

OK → **REPLACE BRAKE ACTUATOR**

NG

BC

3 INSPECT PARKING BRAKE SWITCH ASSEMBLY



(a) Disconnect the parking brake switch connector.
(b) Measure the resistance.
Standard Resistance

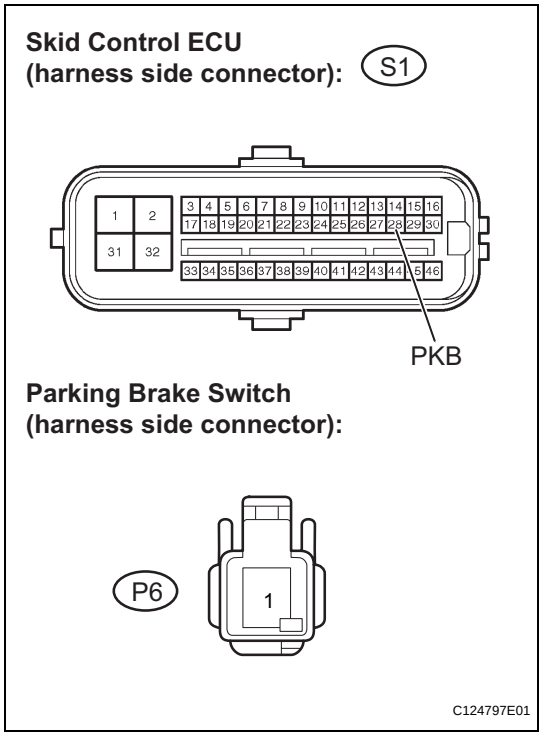
Tester Connection	Condition	Specified Condition
P6-1 Body ground	Released	Below 1 Ω
P6-1 Body ground	Pushed in	10 kΩ or higher

(c) Reconnect the parking brake switch connector.

NG → **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK

4 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - PARKING BRAKE SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-23 (PKB) - P6-1	Below 1 Ω
S1-23 (PKB) - Body ground	10 kΩ or higher

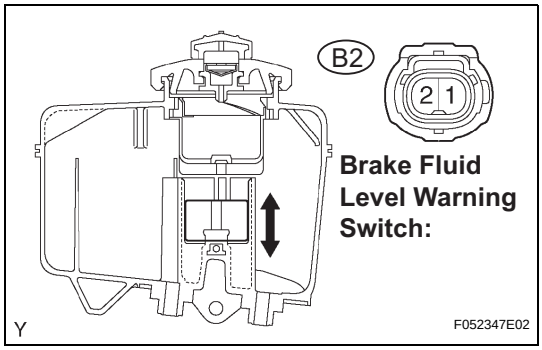
(d) Reconnect the parking brake switch connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

5	INSPECT BRAKE FLUID LEVEL WARNING SWITCH CIRCUIT



(a) Disconnect the brake fluid level warning switch connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Condition	Specified Condition
B2-1 - B2-2	Float UP	10 kΩ or higher
B2-1 - B2-2	Float DOWN	Below 1 Ω

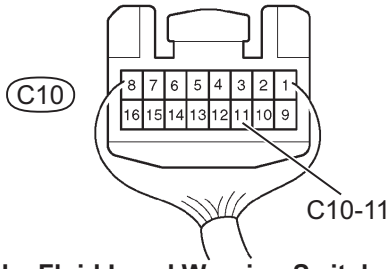
(c) Reconnect the brake fluid level warning switch connector.

NG → **REPLACE BRAKE FLUID RESERVOIR**

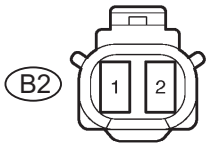
OK

6	CHECK HARNESS AND CONNECTOR (COMBINATION METER - BRAKE FLUID LEVEL WARNING SWITCH)

Combination Meter (harness side view):



Brake Fluid Level Warning Switch (harness side connector):



F052161E02

(a) Disconnect the combination meter connector.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
C10-11 - B2-1	Below 1 Ω
C10-11 - Body ground	10 kΩ or higher

(d) Reconnect the brake fluid level warning switch connector.
(e) Reconnect the combination meter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-7).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER**

OK

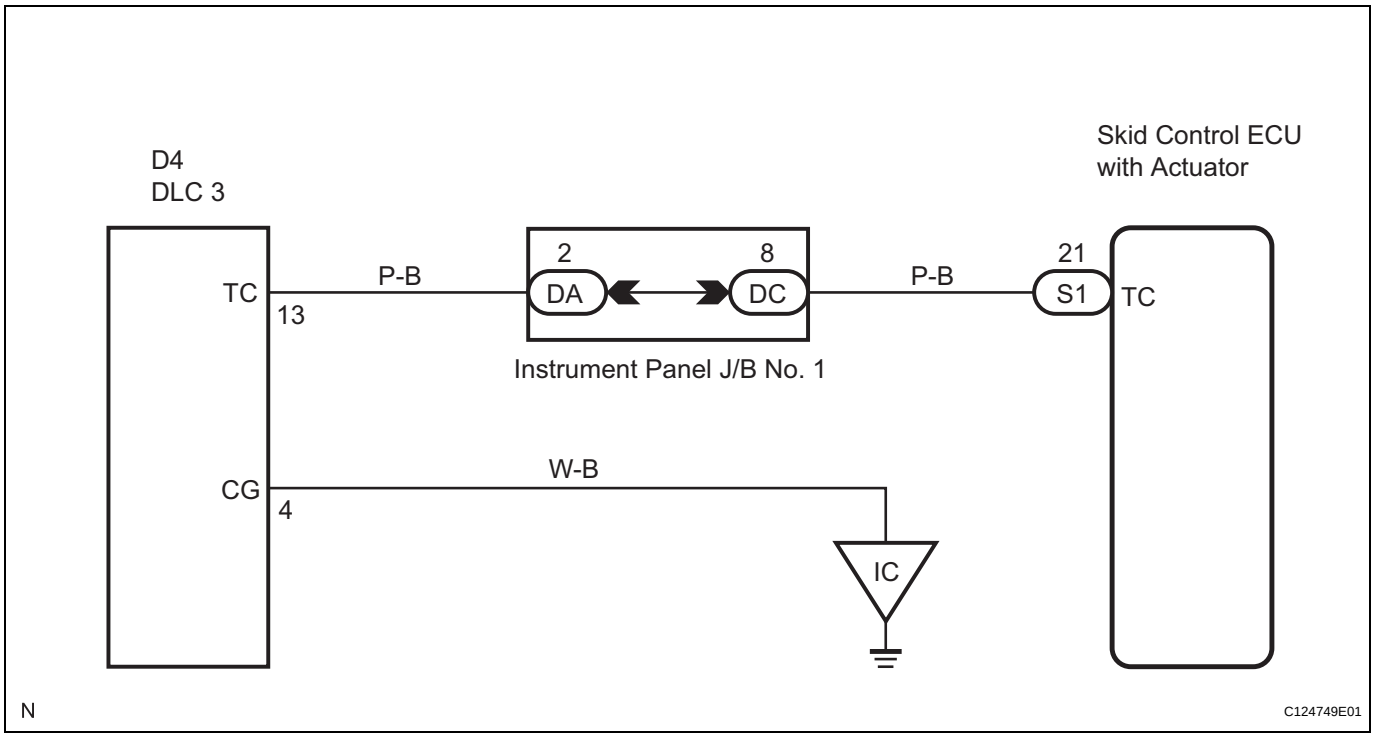
CHECK FOR INTERMITTENT PROBLEMS

TC and CG Terminal Circuit

DESCRIPTION

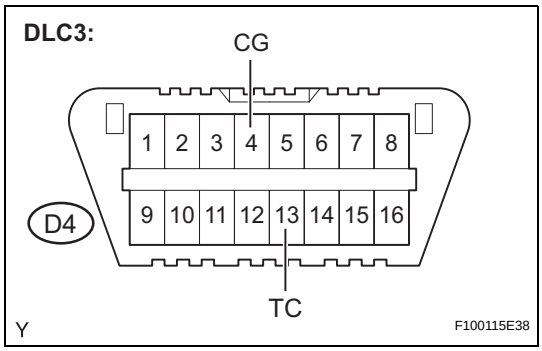
Connecting terminals TC and CG of the DLC3 causes the ECU to display 2-digit DTCs by flashing the ABS warning light.

WIRING DIAGRAM



BC

1	INSPECT DLC3 TERMINAL VOLTAGE (TC TERMINAL)



(a) Turn the ignition switch to the ON position.
(b) Measure the voltage.

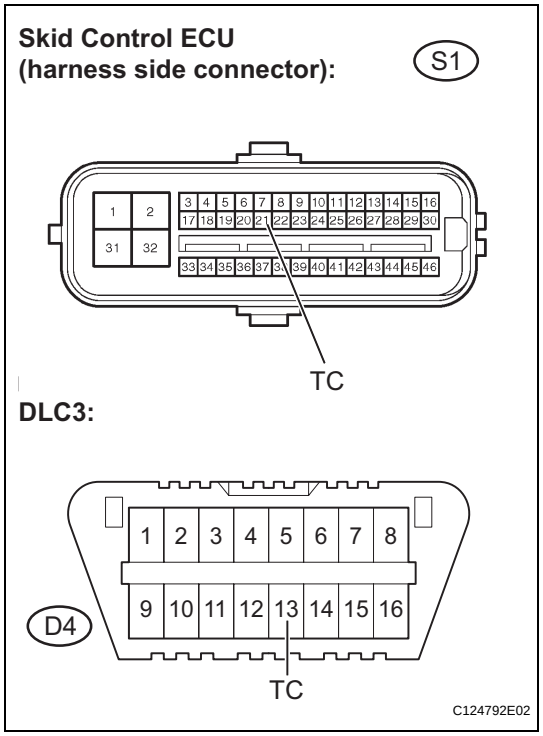
Standard Voltage

Tester Connection	Specified Condition
D4-13 (TC) - D4-4 (CG)	10 to 14 V

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-21 (TC) - D4-13 (TC)	Below 1 Ω
S1-21 (TC) - Body ground	10 kΩ or higher

(c) Reconnect the skid control ECU connector.

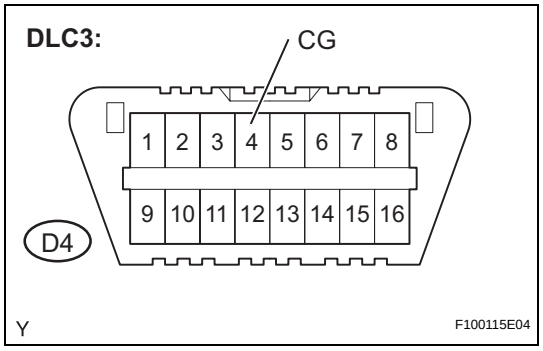
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE ACTUATOR

BC

3 CHECK HARNESS AND CONNECTOR (DLC3 - BODY GROUND)



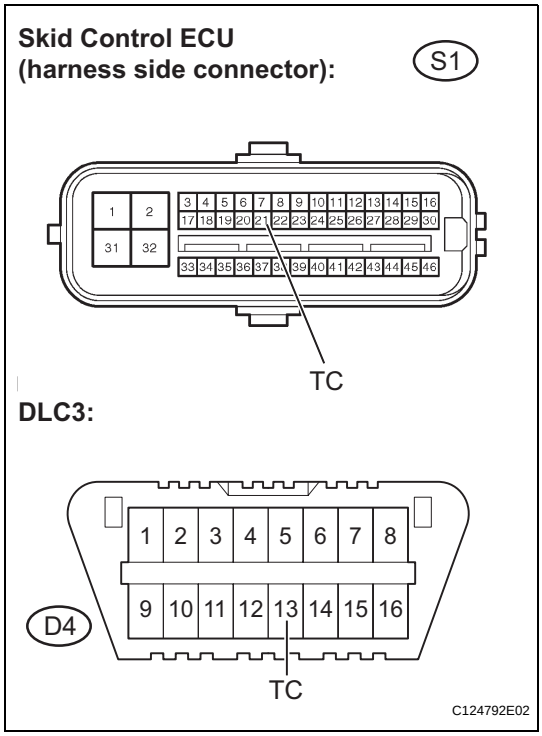
(a) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
D4-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-21 (TC) - D4-13 (TC)	Below 1 Ω
S1-21 (TC) - Body ground	10 kΩ or higher

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

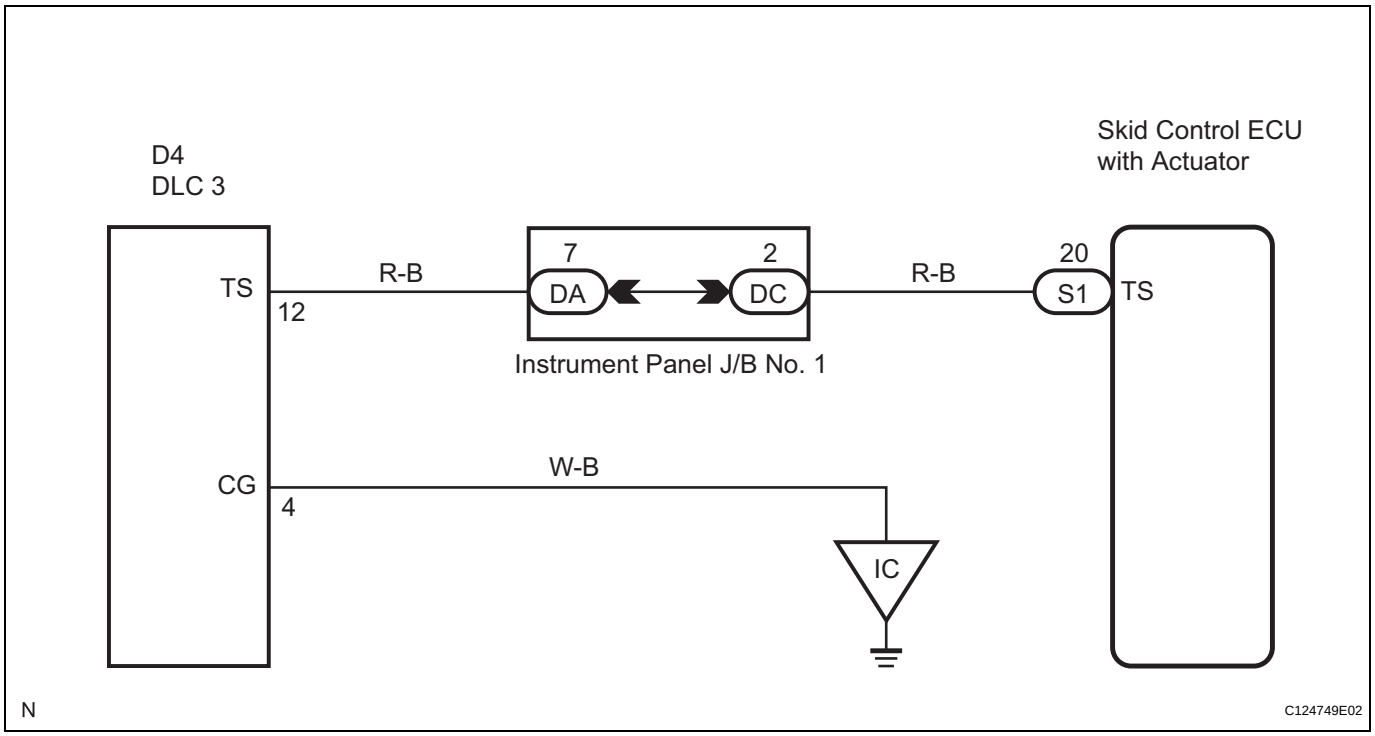
REPLACE BRAKE ACTUATOR

TS and CG Terminal Circuit

DESCRIPTION

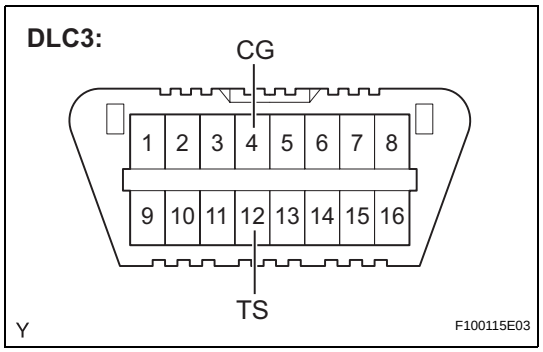
In sensor check mode, malfunctions of the speed sensor that cannot be detected when the vehicle is stopped are detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from OFF to the ON position.

WIRING DIAGRAM



BC

1	INSPECT DLC3 TERMINAL VOLTAGE (TS TERMINAL)



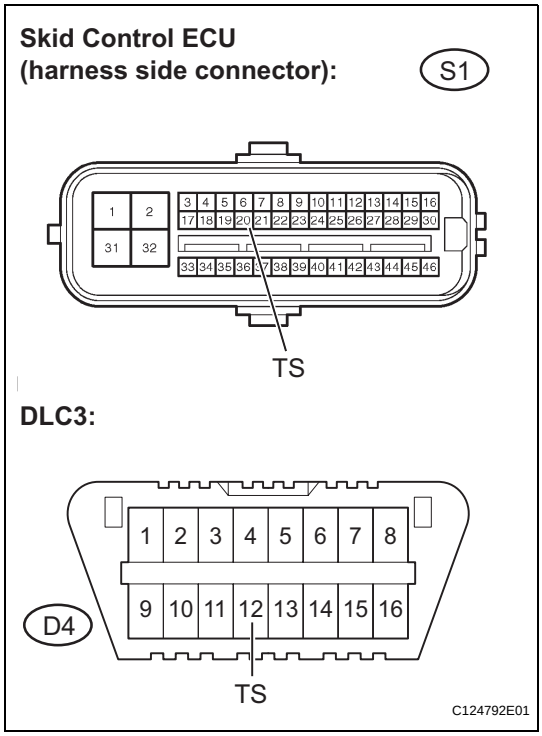
(a) Turn the ignition switch to the ON position.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
D4-12 (TS) - D4-4 (CG)	10 to 14 V

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-20 (TS) - D4-12 (TS)	Below 1 Ω
S1-20 (TS) - Body ground	10 kΩ or higher

(c) Reconnect the skid control ECU connector.

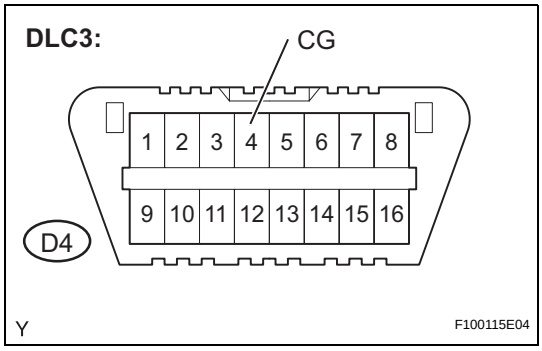
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

REPLACE BRAKE ACTUATOR

3	CHECK HARNESS AND CONNECTOR (BODY GROUND - DLC3)



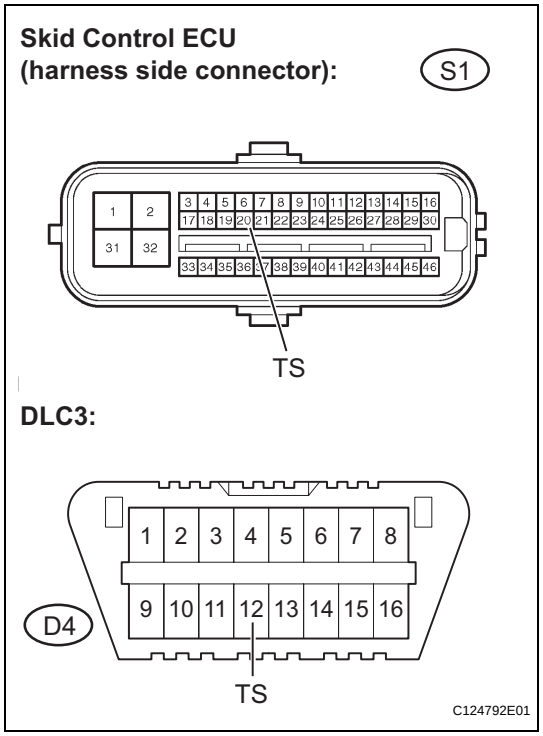
(a) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
D4-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-20 (TS) - D4-12 (TS)	Below 1 Ω
S1-20 (TS) - Body ground	10 kΩ or higher

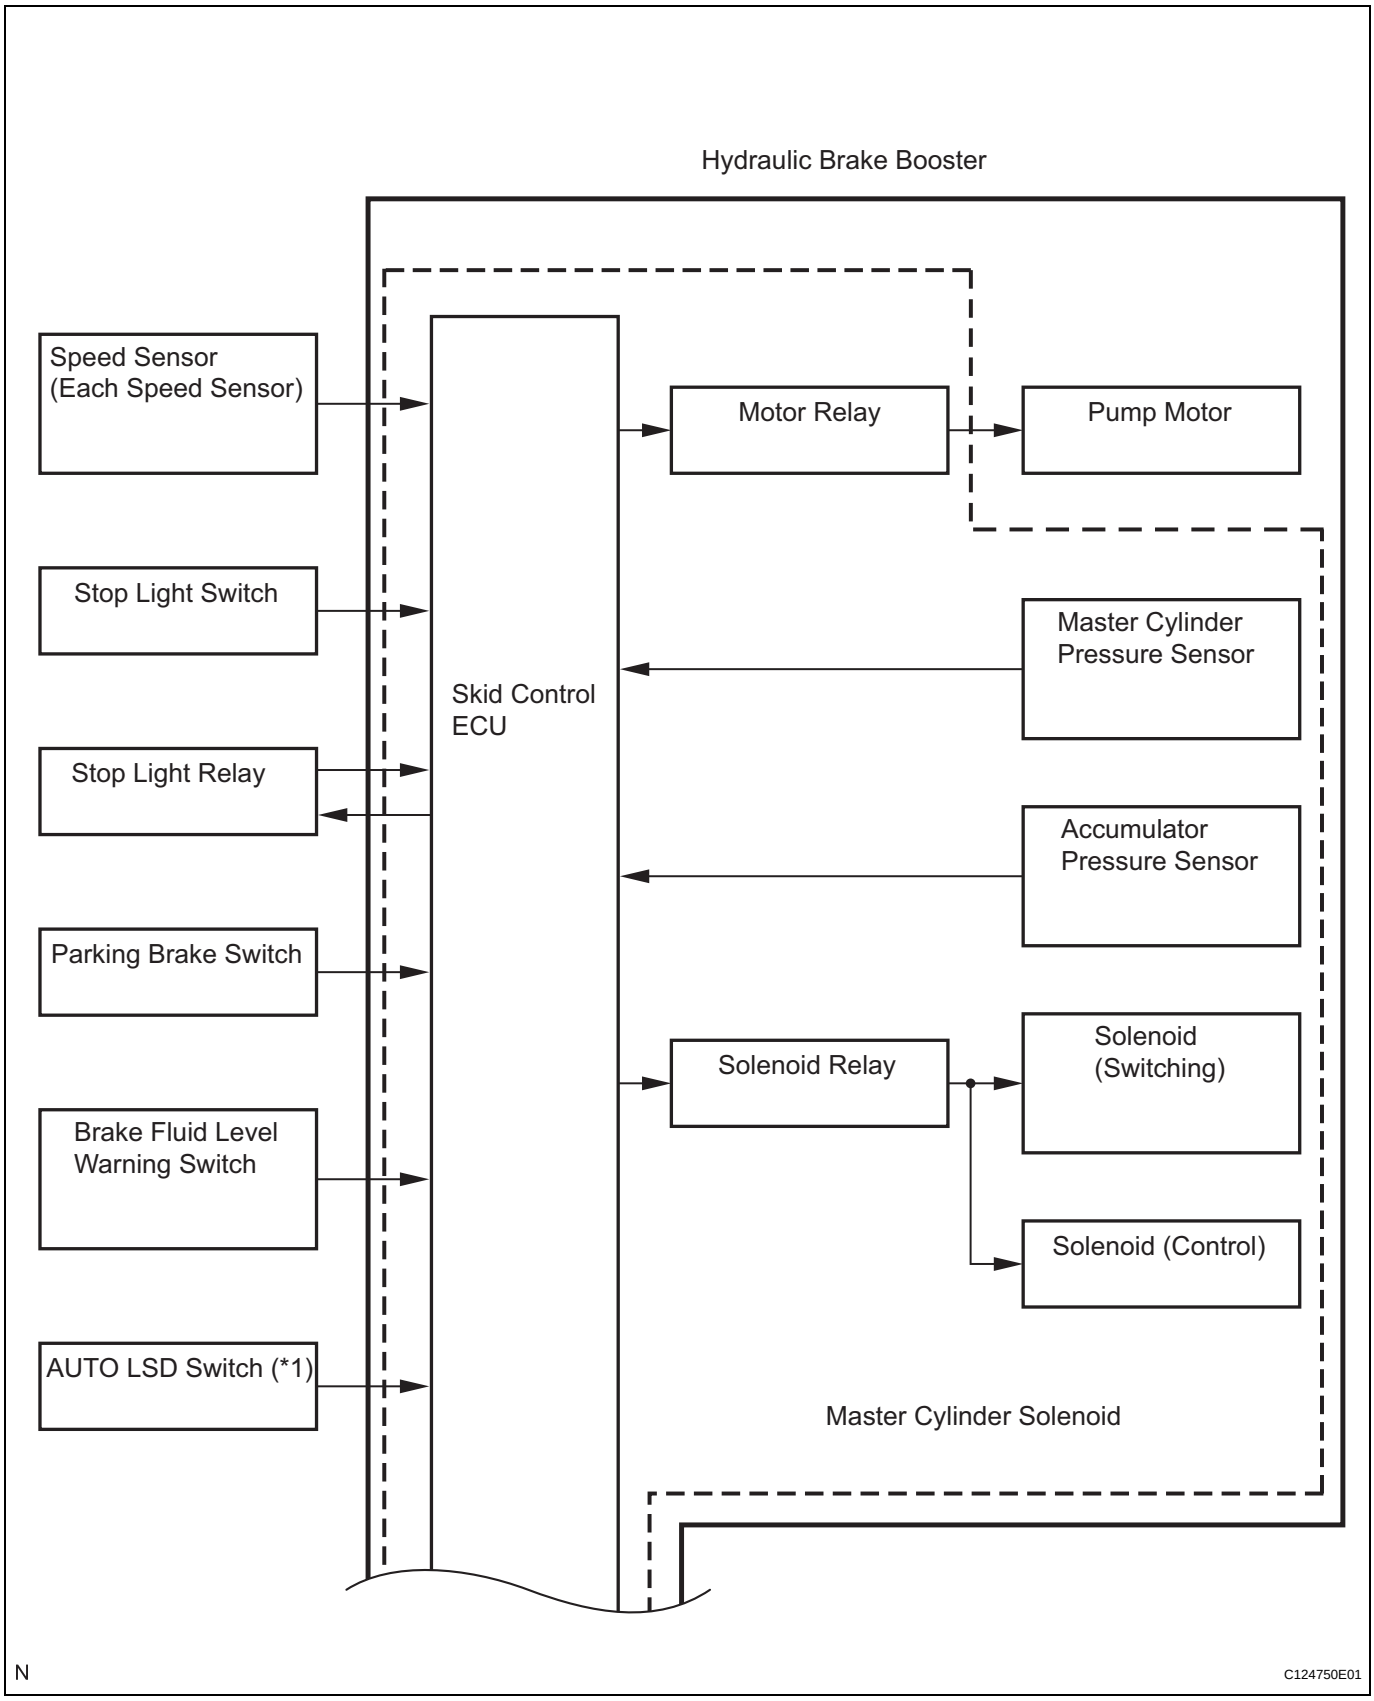
(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

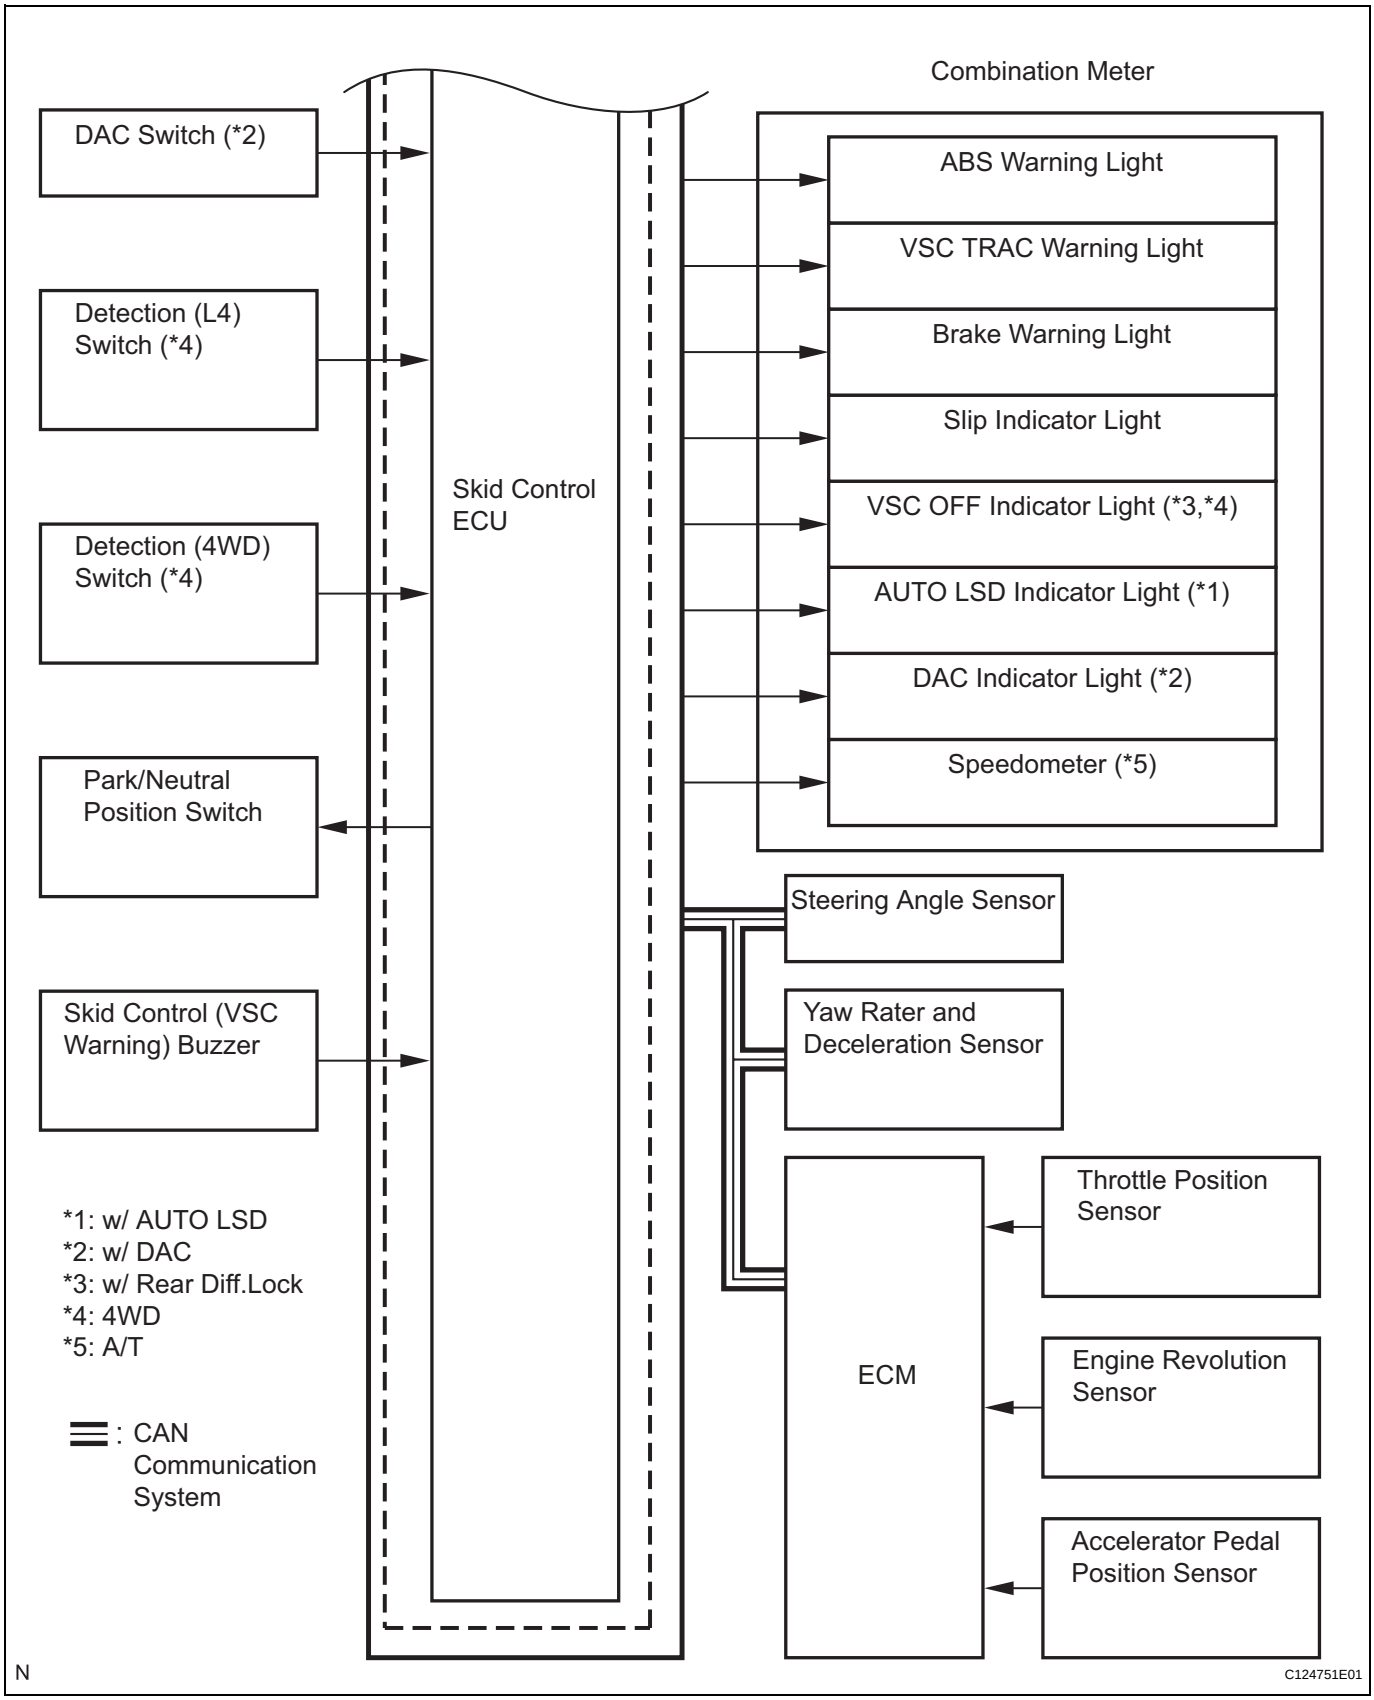
OK

REPLACE BRAKE ACTUATOR

SYSTEM DIAGRAM



BC



Transmitting ECU (Transmitter)	Receiving ECU	Signals	Communication Method
ECM	Skid control ECU	Throttle position signal	CAN communication system
ECM	Skid control ECU	Engine revolution signal	CAN communication system
ECM	Skid control ECU	Accelerator pedal position signal	CAN communication system

BC

Transmitting ECU (Transmitter)	Receiving ECU	Signals	Communication Method
ECM	Skid control ECU	Intake temperature signal	CAN communication system
Skid control ECU	ECM	Yaw rate and deceleration signal	CAN communication system
Skid control ECU	ECM	Steering angle signal	CAN communication system
Skid control ECU	ECM	Throttle opening angle request signal	CAN communication system

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

HINT:

- The skid control ECU forms a single unit with the hydraulic brake booster.
- The yaw rate sensor and deceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through CAN communication.

(a) ABS with EBD & BA & TRAC & VSC operation

(1) The skid control ECU determines the wheel slipping conditions by receiving signals from each speed sensor, the yaw rate and deceleration sensor and the steering angle sensor. The ECU controls the engine output torque using electronic throttle control, and the wheel brake pressure using the brake actuator, according to these signals.

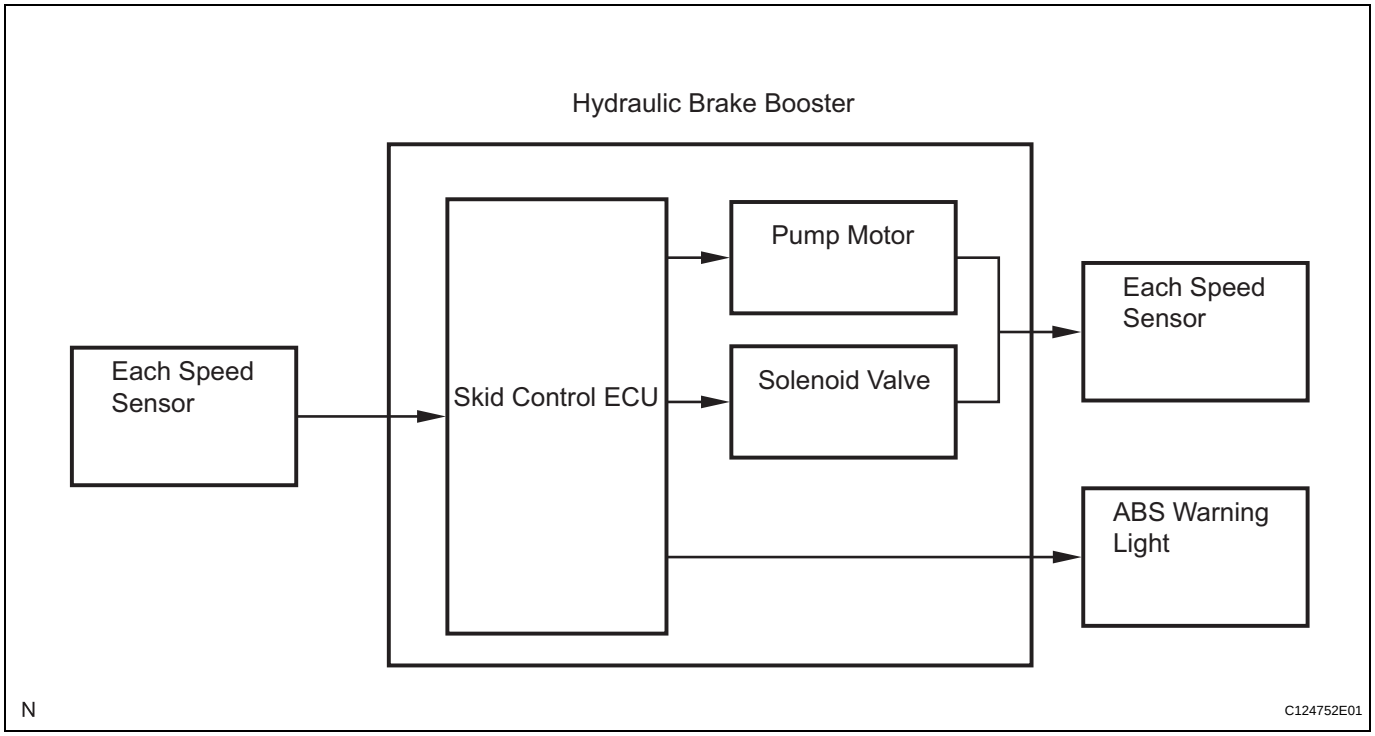
(2) The SLIP indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The SLIP indicator also blinks when TRAC is operating, and the operation being performed is displayed.

2. ACTIVE SAFETY

(a) ABS (Anti-lock Brake System)

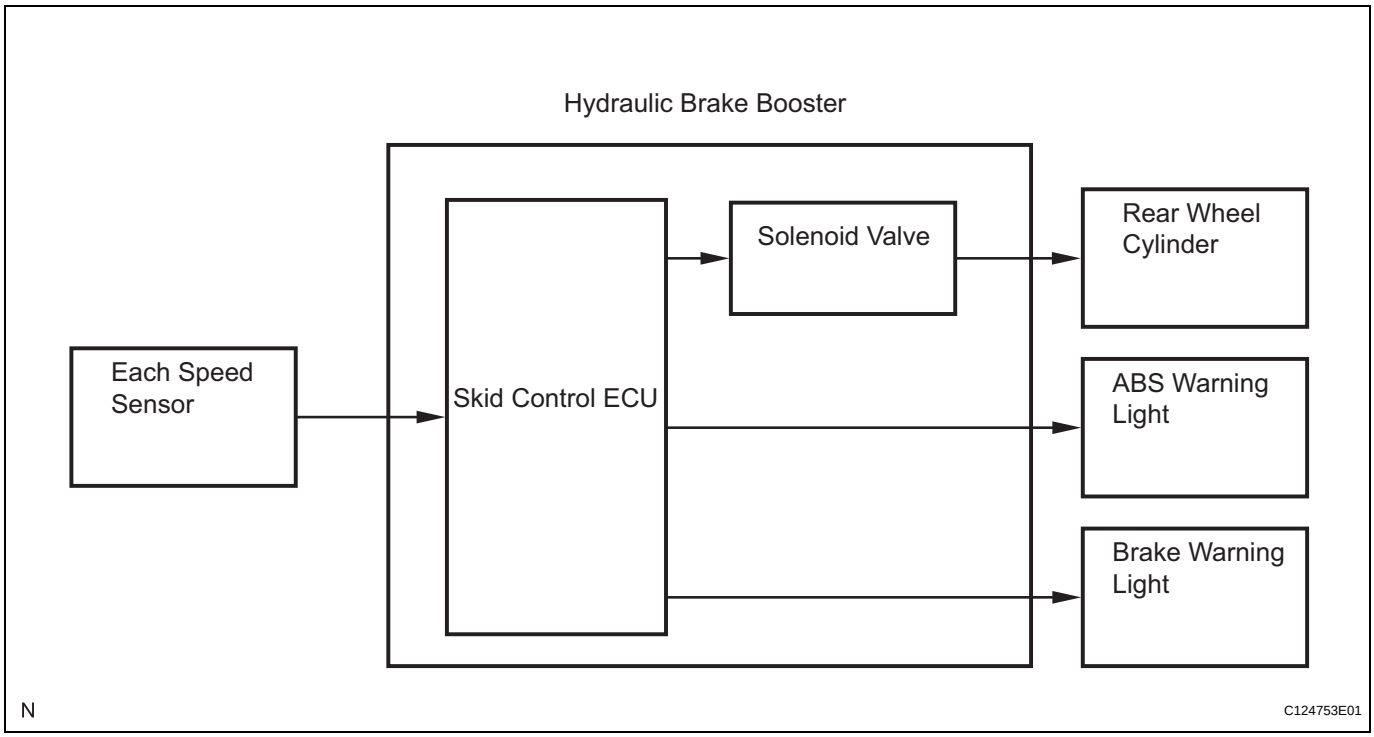
The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

BC



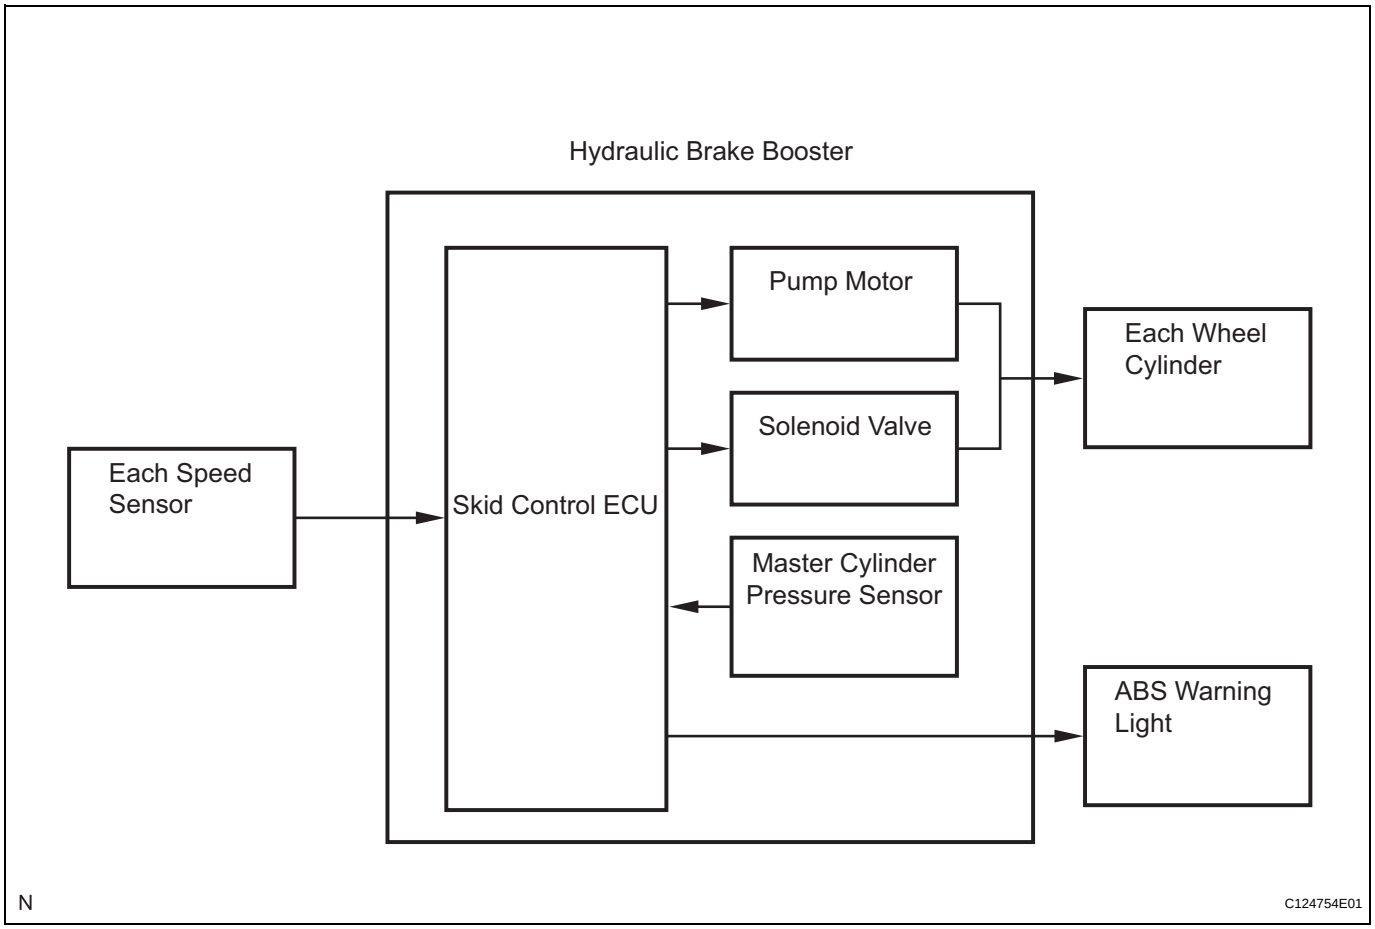
Operation description
The skid control ECU detects the wheel lock condition by receiving vehicle speed signals from each speed sensor, and sends control signals to the pump motor and solenoid valve. The pump motor and solenoid valve prevent the wheels from locking by controlling the oil pressure of each wheel cylinder.
The ABS warning light comes on when the ABS system malfunctions.

(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with the driving conditions. In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to control the vehicle behavior.



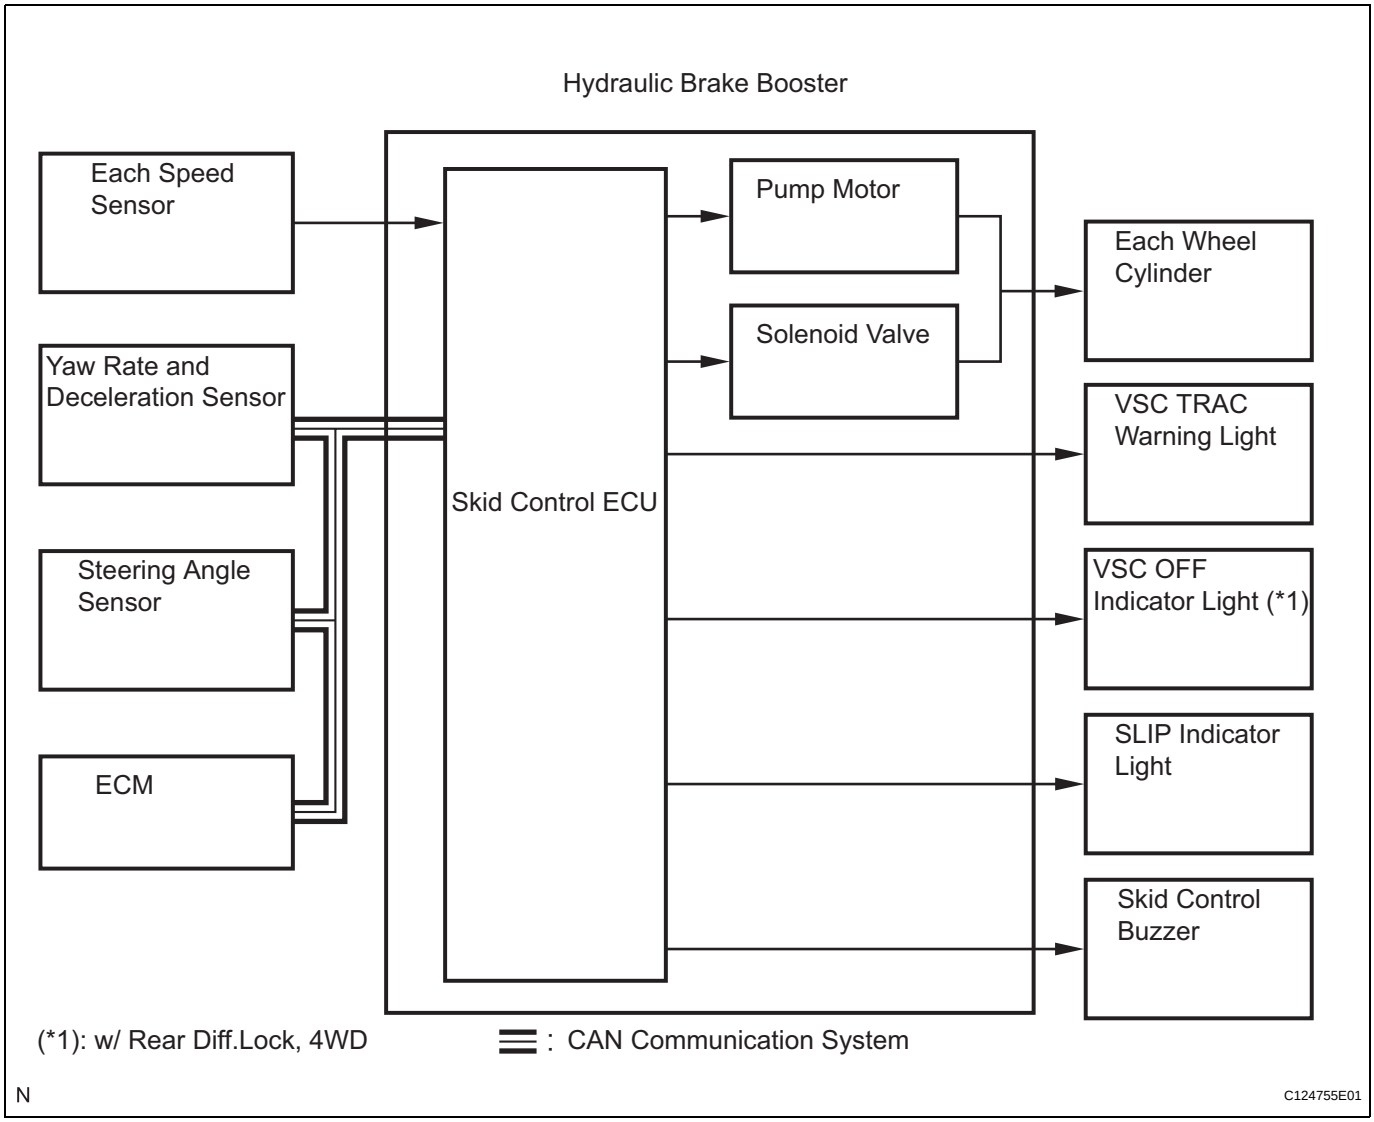
Operation description
The skid control ECU receives the speed signals from each speed sensor to detect the slip condition of the wheels and sends the control signal to the solenoid.
The solenoid valve controls the oil pressure of the rear wheel cylinder and divides the control power appropriately between the front and rear wheels and the right and left wheels.
Both of the ABS and the brake warning lights come on when the EBD system malfunctions.

(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide an auxiliary brake force to assist drivers who cannot generate a large enough brake force during emergency braking, thus helping to maximize the vehicle's brake performance.



Operation description
The skid control ECU receives the speed signal from each speed sensor and the oil pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary or not. If brake assist is necessary, the skid control ECU sends control signals to the pump motor and solenoid. The pump and the solenoid valve then control the pressure applied to each wheel cylinder. The ABS warning light comes on when the BA system malfunctions.

(d) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of strong front wheel skid or strong rear wheel skid during cornering.



Operation description
The skid control ECU determines the vehicle condition by receiving signals from the speed sensors, yaw rate and deceleration sensor and steering angle sensor. The skid control ECU controls the engine torque through the ECM via CAN communication, and the oil pressure through the pump and solenoid valve.
The SLIP indicator light blinks and the skid control buzzer sounds when the system is operating. Both the VSC TRAC warning light and the VSC OFF indicator light (w/ rear diff. lock, 4WD) come on when the VSC system malfunctions.

BC

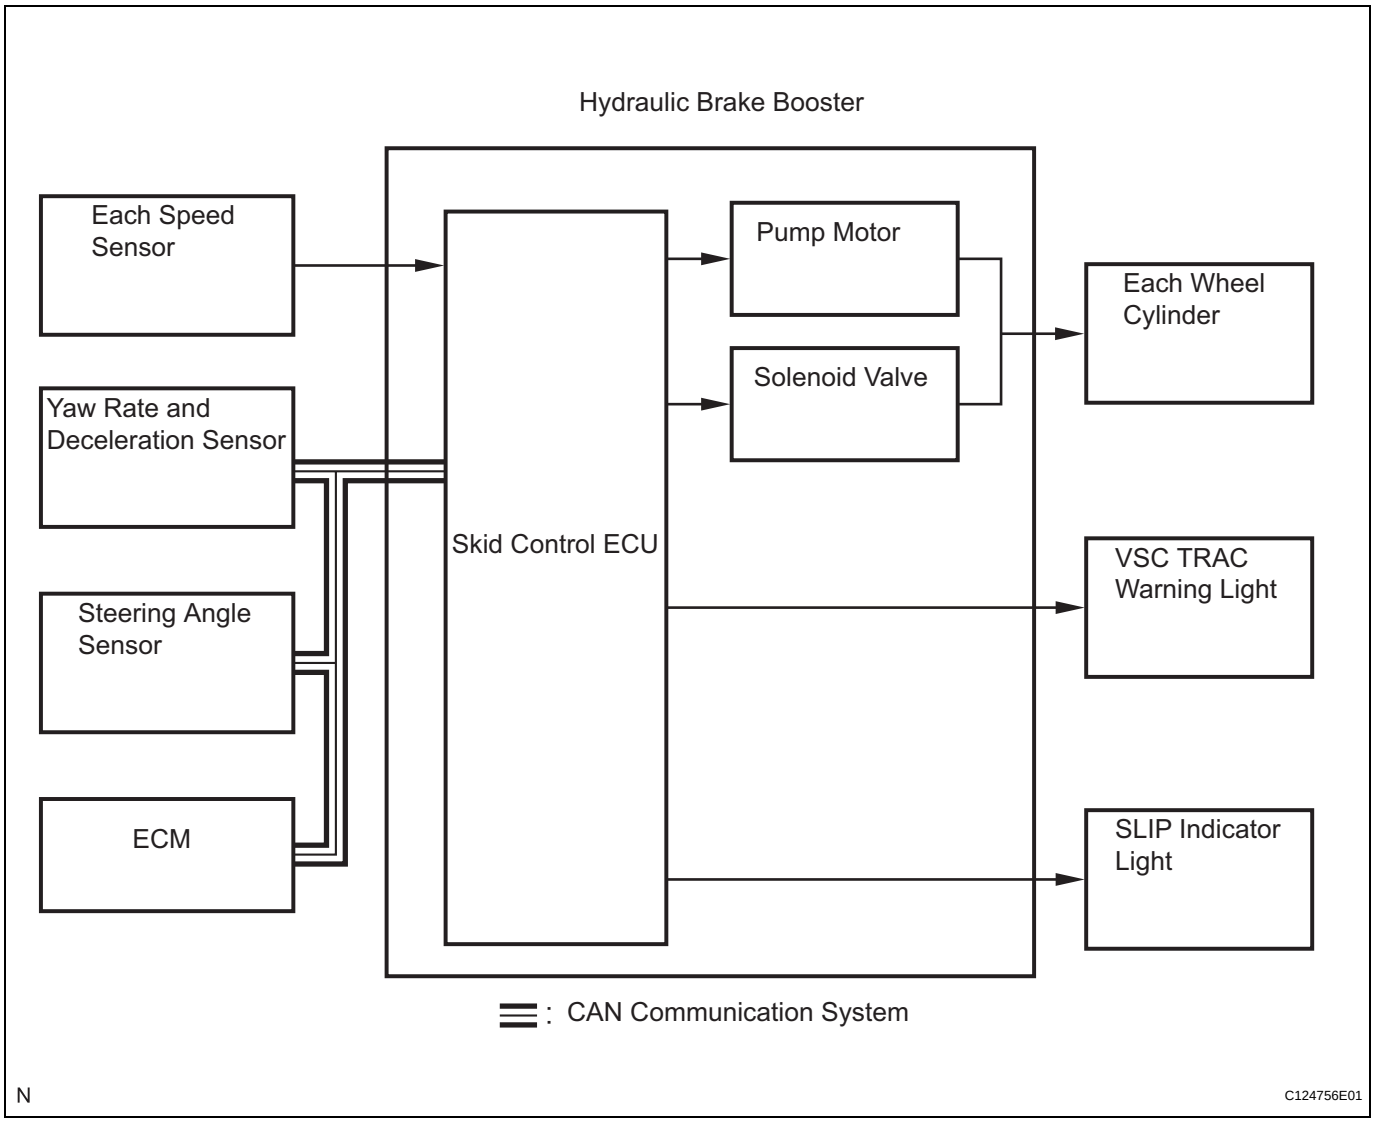
3. DRIVING PERFORMANCE

(a) TRAC (Traction Control)

The TRAC system helps prevent the drive wheels from slipping if the driver presses down on the accelerator pedal excessively when starting off or accelerating on a slippery surface.

HINT:

The TRAC system operates when 2WD mode is selected (4WD vehicles only).

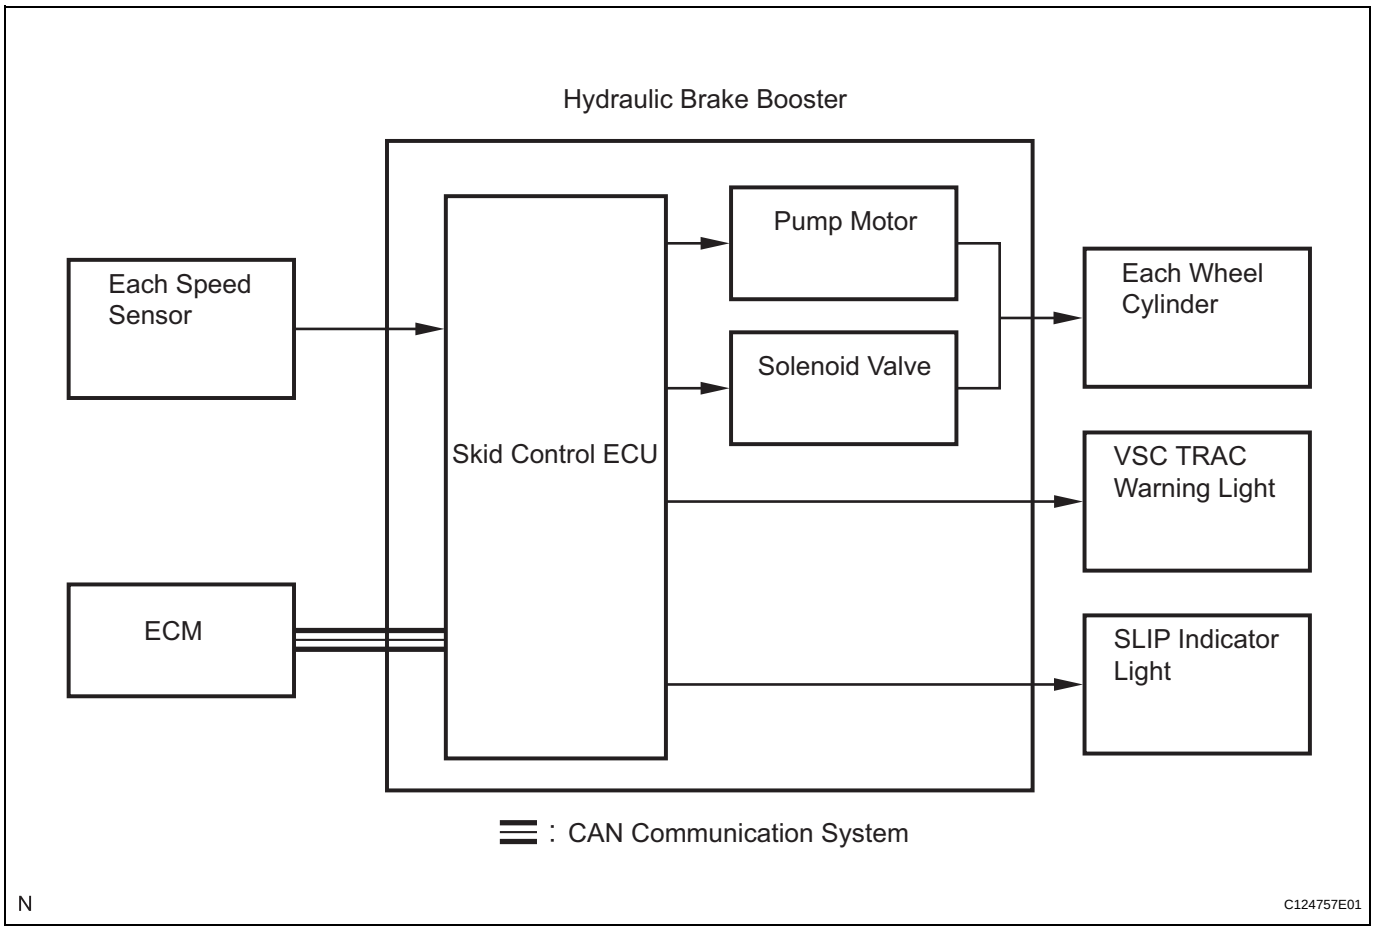


Operation description

The skid control ECU detects the vehicle's slip condition by receiving signals from the speed sensors and ECM via CAN communication. The skid control ECU controls the engine torque through the ECM via CAN communication, and the oil pressure through the pump and solenoid valve. The SLIP indicator light blinks when the system is operating. Both the VSC TRAC warning light and SLIP indicator light come on when the TRAC system malfunctions.

BC

(b) A-TRAC (Active Traction Control) (4WD)
During rugged off-road driving, this function controls the engine output and the brake fluid pressure that is applied to slipping wheels, and distributes the drive force that would have been lost through the slippage to the remaining wheels in order to achieve a LSD (Limited Slip Differential) effect. As a result, the vehicle's off-road drivability and ability to free itself from moguls have been increased.
HINT:
The A-TRAC system operates when 4WD mode is selected (4WD vehicles only).



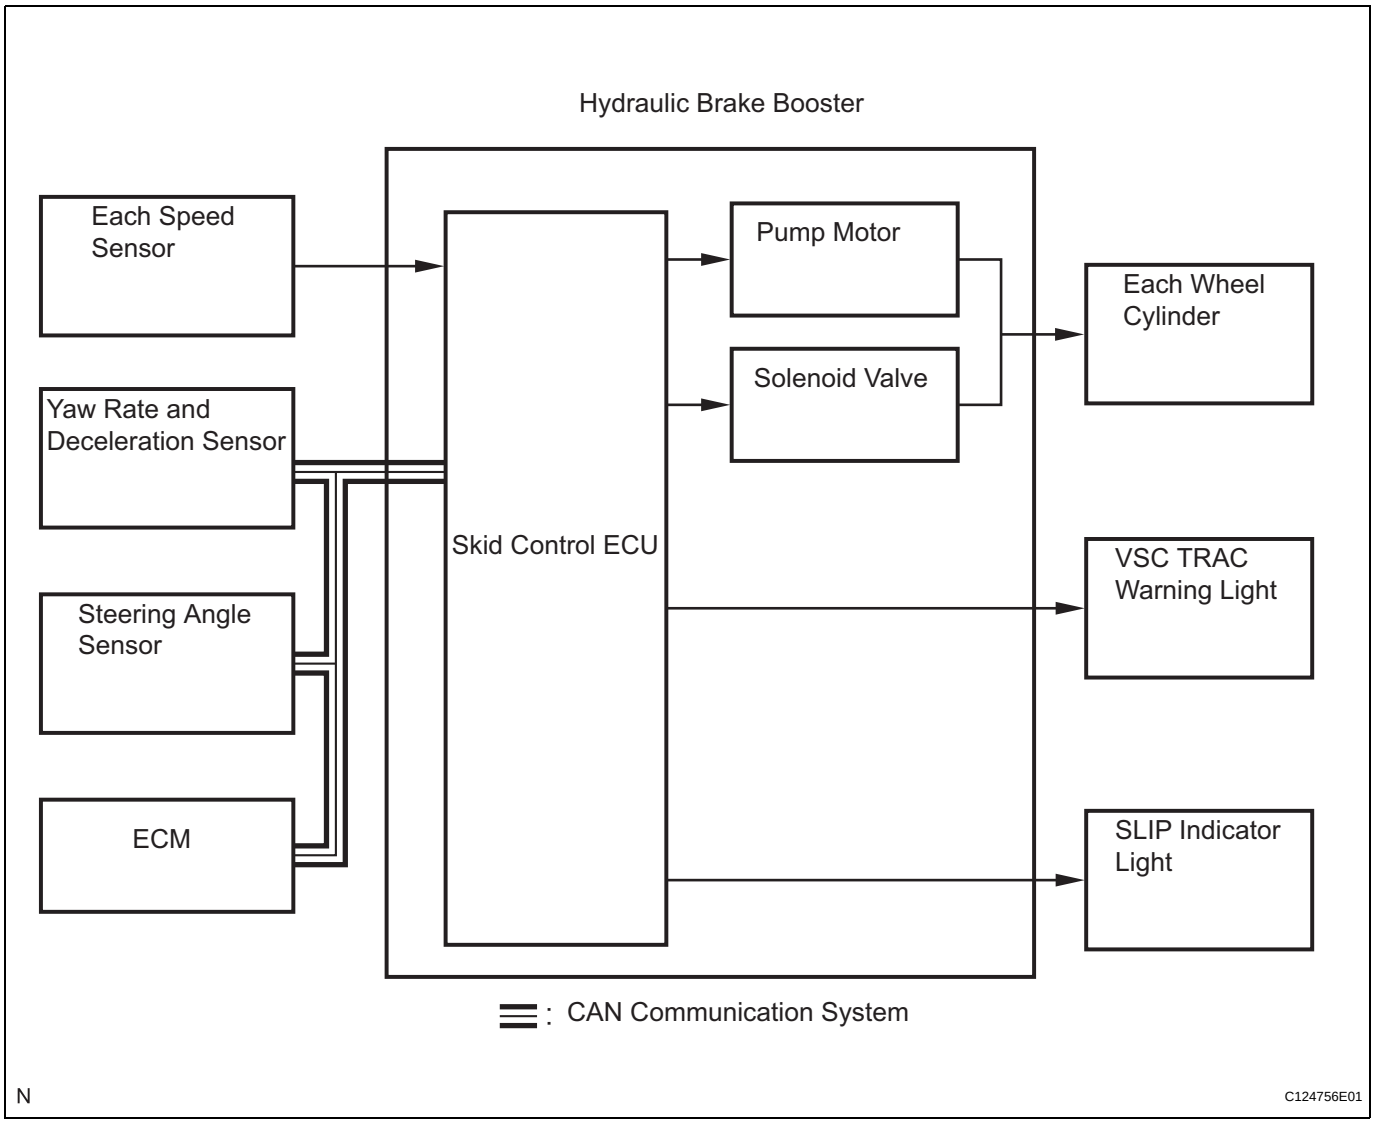
Operation description
The SLIP indicator light blinks when the system is operating. Both the VSC TRAC warning light and SLIP indicator light come on when the A-TRAC system malfunctions.

(c) AUTO-LSD (Auto Limited Slip Differential)
When the vehicle enters 2WD mode, the AUTO LSD operates with the AUTO LSD switch on and the accelerator pedal depressed.
The TRAC system restrains brake pressure and reduces differential move, thus transmitting the drive torque to the other drive wheel to ensure stability under the following conditions:
- Wheels run off the road.

BC

- Drive wheels run idle when starting on a slope with one wheel on snow/ice.

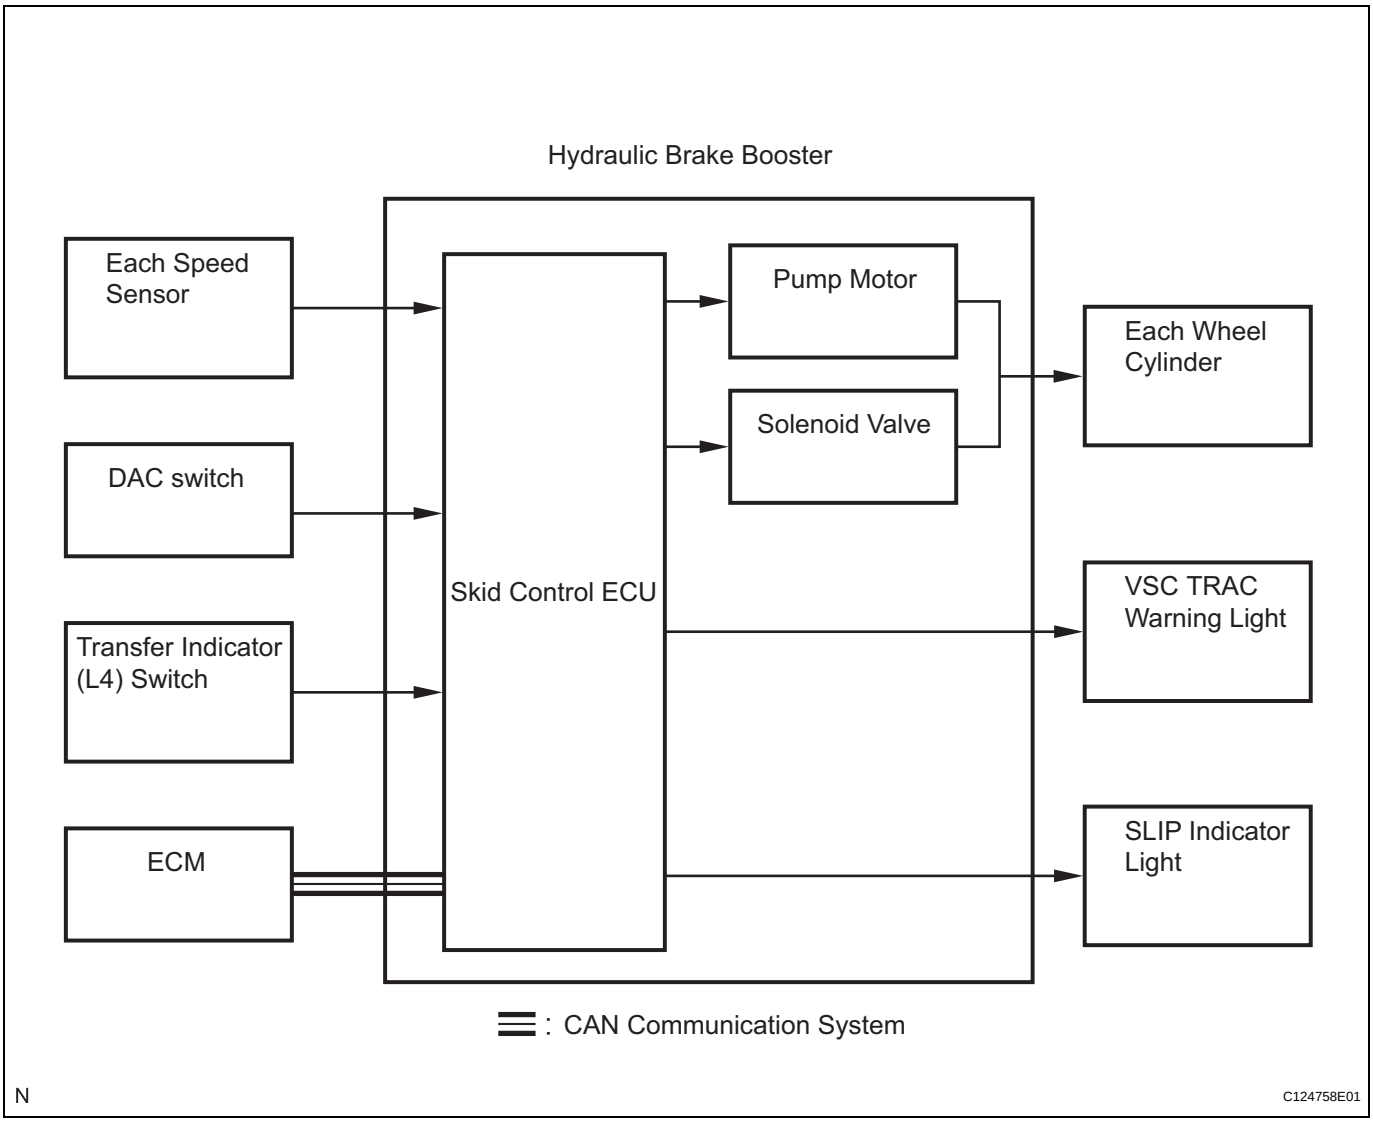
HINT:
Depressing the brake pedal cancels control of the AUTO LSD system.
The AUTO LSD system operates when 2WD mode is selected (4WD vehicles only).



Operation description
The SLIP indicator light blinks and the AUTO LSD indicator light comes on when the system is operating.
Both the VSC TRAC warning light and SLIP indicator light come on when the AUTO LSD system malfunctions.

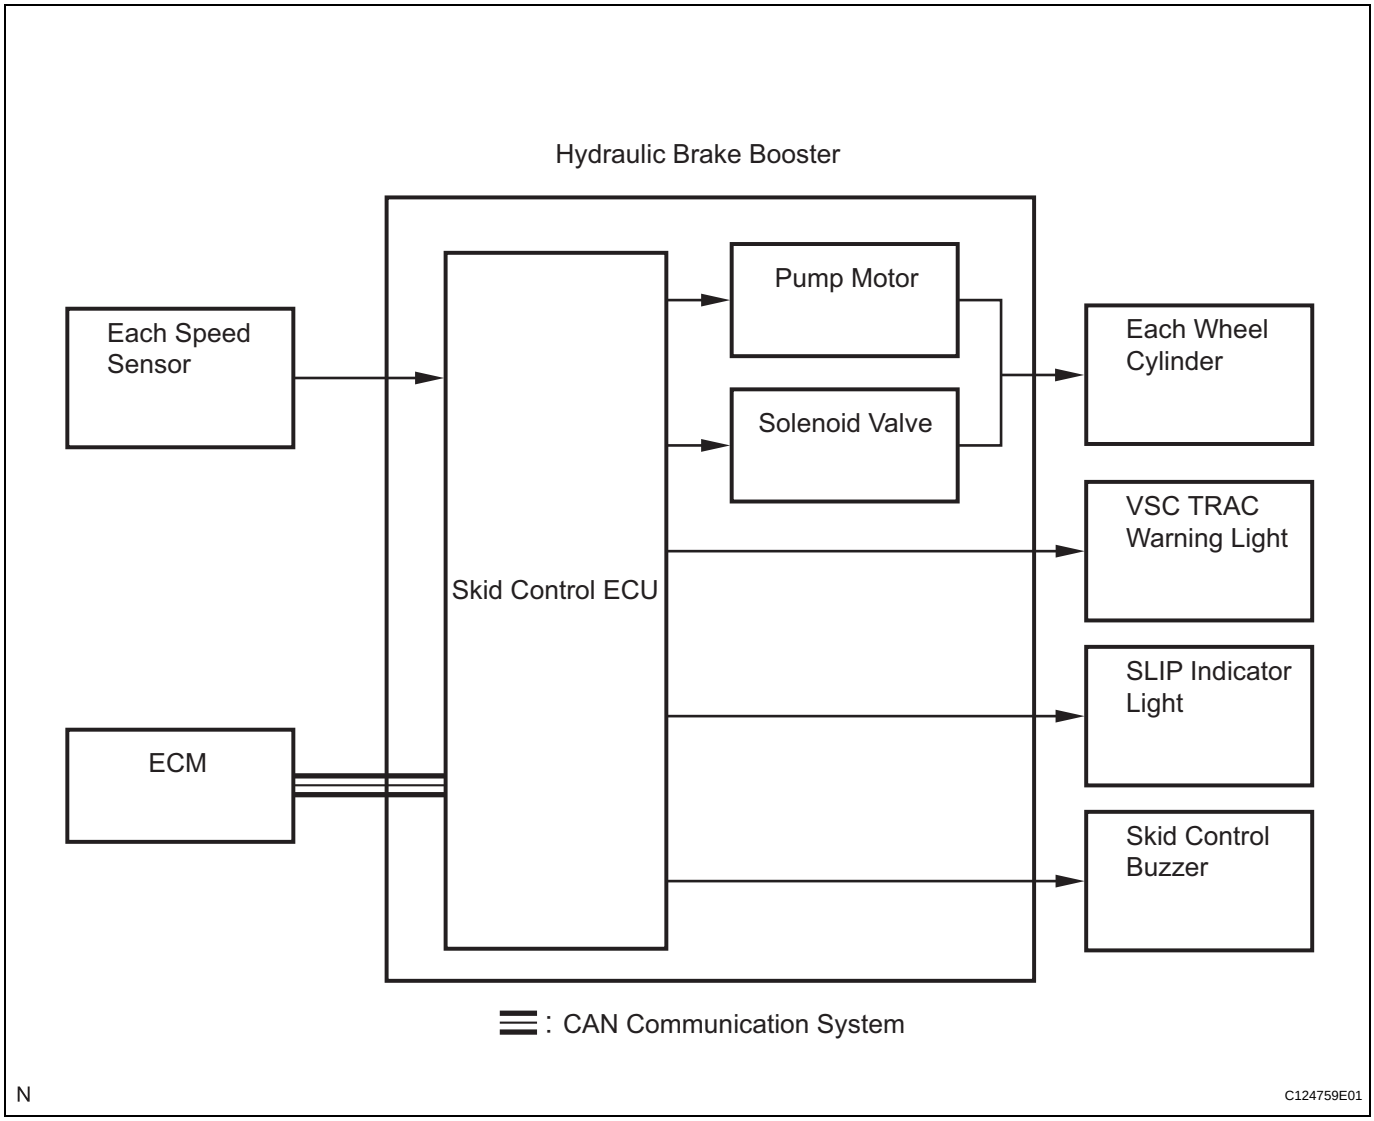
BC

(d) DAC (Downhill Assist Control) (4WD)
When the DAC switch is pressed with the transfer in low (L4) range and without the accelerator and brake pedals in operation, the DAC activates 4-wheel hydraulic pressure control, in order to maintain a constant low vehicle speed without causing the wheels to become locked. Thus, the vehicle can descend steep hills in a stable manner.
HINT:
Depressing the accelerator and brake pedals cancels control of the DAC system.
Begins operating when driving down slopes at a speed of 16 mph (25 km/h) or less with the engine brake applied.



Operation description
The SLIP indicator light blinks and the DAC indicator light and BRAKE warning light come on when the system is operating.
The VSC TRAC warning light comes on and the DAC indicator light blinks when the DAC system malfunctions.

(e) HAC (Hill-start Assist Control)
When the vehicle starts off on a steep hill, HAC detects the backward descent of the vehicle and effects 4-wheel hydraulic pressure control to reduce the speed of the vehicle.
For a Maximum of 5 seconds after the control starts, fluid pressure is gradually released and the control is complete.
HINT:
Depressing the brake pedal cancels control of the HAC system.
Does not operate when the shift lever is in the P position or N position, or when the vehicle is running/rolling back up a slope with the shift lever in the R position.



Operation description
The SLIP indicator light blinks, the BRAKE warning light comes on, and the skid control buzzer sounds when the system is operating.
The VSC TRAC warning light comes on when the HAC system malfunctions.

4. FUNCTION OF COMPONENTS

Components	Function
Speed sensor	Detects wheel speed of each wheel.
Hydraulic brake booster	Upon receiving brake control signal from skid control ECU, controls hydraulic circuit and sends hydraulic pressure to each wheel. Master cylinder solenoid (skid control ECU) removable.
Master cylinder solenoid Skid control ECU	Detects vehicle condition based on signals from sensors and sends brake control signal to hydraulic brake booster.
Motor relay	Supplies power source to pump motor.
Solenoid relay	Supplies power source to each solenoid.
ABS warning light	Illuminates to inform driver that skid control ECU has detected ABS system malfunction and terminated ABS system operation.
BRAKE warning light	Illuminates to inform driver that skid control ECU has detected BRAKE system malfunction.
VSC TRAC warning light	Illuminates to inform driver that skid control ECU has detected VSC system malfunction and terminated VSC system operation.
SLIP indicator light	Blinks to inform driver that TRAC or VSC in operation.
Yaw rate and deceleration sensor	Detects vehicle's yaw rate and deceleration and sends signal to skid control ECU.
Master cylinder pressure sensor	Built into hydraulic brake booster. Detects pressure inside master cylinder.
Steering angle sensor	Detects steering wheel's steering angle and amount of movement, then sends signal to skid control ECU.
ECM	• Sends sensor signals (throttle opening angle, engine rpm) to skid control ECU. • Engine controlled based on traction control signal from skid control ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used in steps 3, 6, 9 and 12.

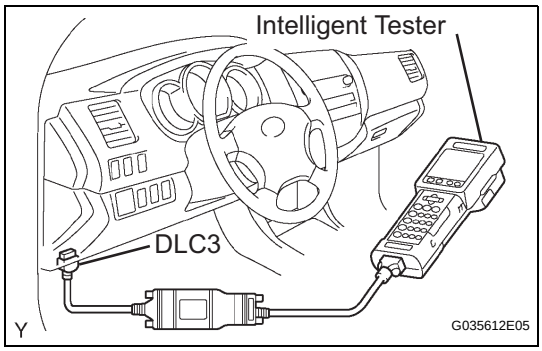
CHECK FOR INTERMITTENT PROBLEMS

1. DESCRIPTION

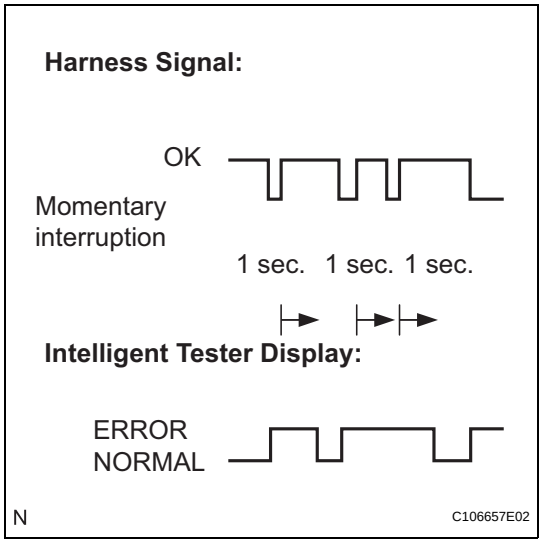
HINT:
A momentary interruption (open circuit) in the connectors and/ or wire harness between the sensors and ECUs can be detected through the ECU data monitor function of the intelligent tester.



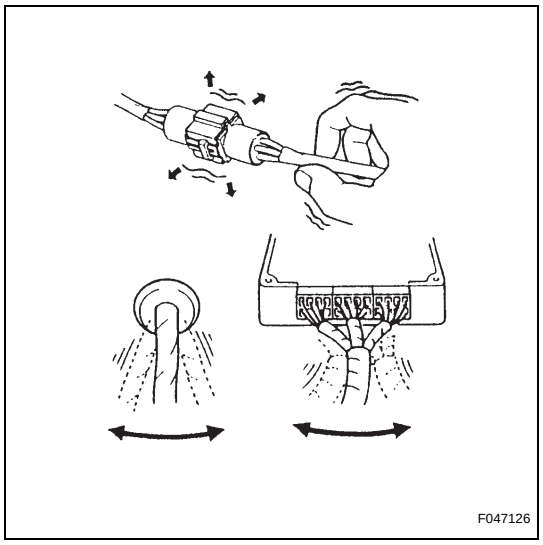
(a) Turn the ignition switch off and connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on. Follow the on-screen directions on the intelligent tester to display the DATA LIST and select areas which should be monitored for momentary interruptions.
HINT:
A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned on (initial check).

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
SPD SEN FR	FR speed sensor open detection / OPEN or NORMAL	OPEN : momentary interruption	-
SPD SEN FL	FL speed sensor open detection / OPEN or NORMAL	OPEN : momentary interruption	-
SPD SEN RR	RR speed sensor open detection / OPEN or NORMAL	OPEN : momentary interruption	-
SPD SEN RL	RL speed sensor open detection / OPEN or NORMAL	OPEN : momentary interruption	-

BC



HINT:
- If the intelligent tester status remains open, check the continuity between the ECU and the sensors, or between ECUs.
- The OPEN display on the intelligent tester remains on for 1 second after the harness signal changes from momentary interruption (open circuit) to normal condition.



(c) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.
OK:
OPEN-screen display does not change.

CALIBRATION

1. DESCRIPTION

(a) After replacing the VSC relevant components or performing "Front wheel alignment adjustment", clearing and reading the sensor calibration data are necessary.

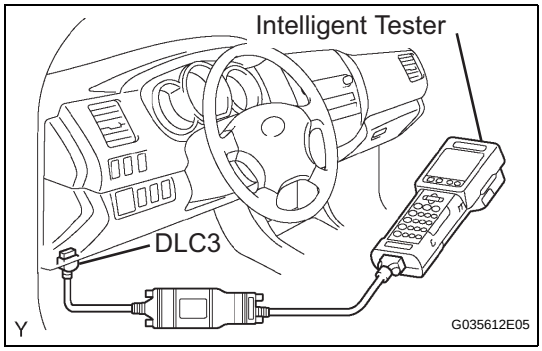
(b) Follow the chart to perform calibration.

Replacing Parts	Necessary Operations
Skid Control ECU	Yaw rate sensor and deceleration sensor zero point calibration.
Yaw Rate Sensor	1. Clearing zero point calibration data. 2. Yaw rate sensor and deceleration sensor zero point calibration.
Front Wheel Alignment	1. Clearing zero point calibration data. 2. Yaw rate sensor and deceleration sensor zero point calibration.

2. CLEAR ZERO POINT CALIBRATION (for Using a Intelligent Tester)

HINT:

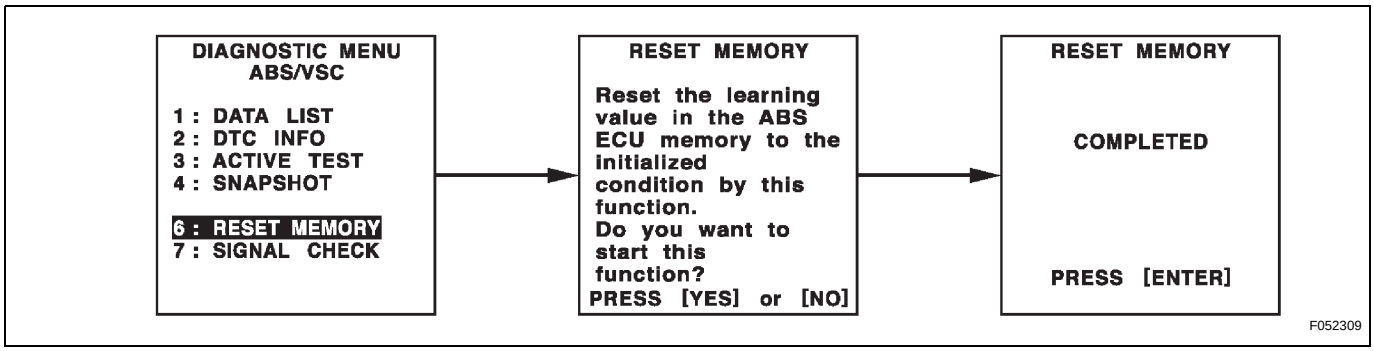
After replacing the yaw rate and deceleration sensor, be sure to clear the zero point calibration data in the skid control ECU and perform zero point calibration.



(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Operate the intelligent tester to erase the DTCs.



(d) Perform zero point calibration of the yaw rate and deceleration sensor using the intelligent tester.

3. PERFORM ZERO POINT CALIBRATION OF YAW RATE SENSOR AND DECELERATION SENSOR (for Using a Intelligent Tester)

HINT:

After replacing the yaw rate and deceleration sensor, be sure to clear the zero point calibration data in the skid control ECU and perform zero point calibration.

NOTICE:

- **While obtaining the zero point, do not vibrate the vehicle by tilting, moving or shaking it and keep it stationary. (Do not start the engine.)**
- **Be sure to do this on a level surface (with an inclination of less than 1 degree).**

(a) Procedures for test mode.

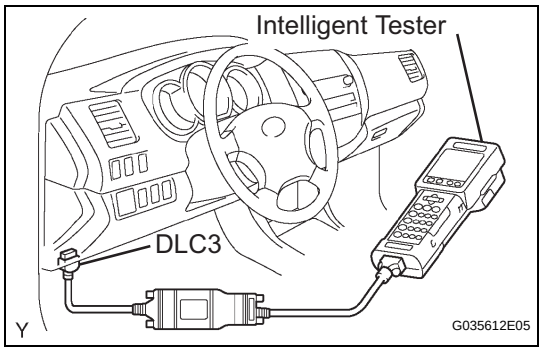
(1) Turn the ignition switch to OFF.

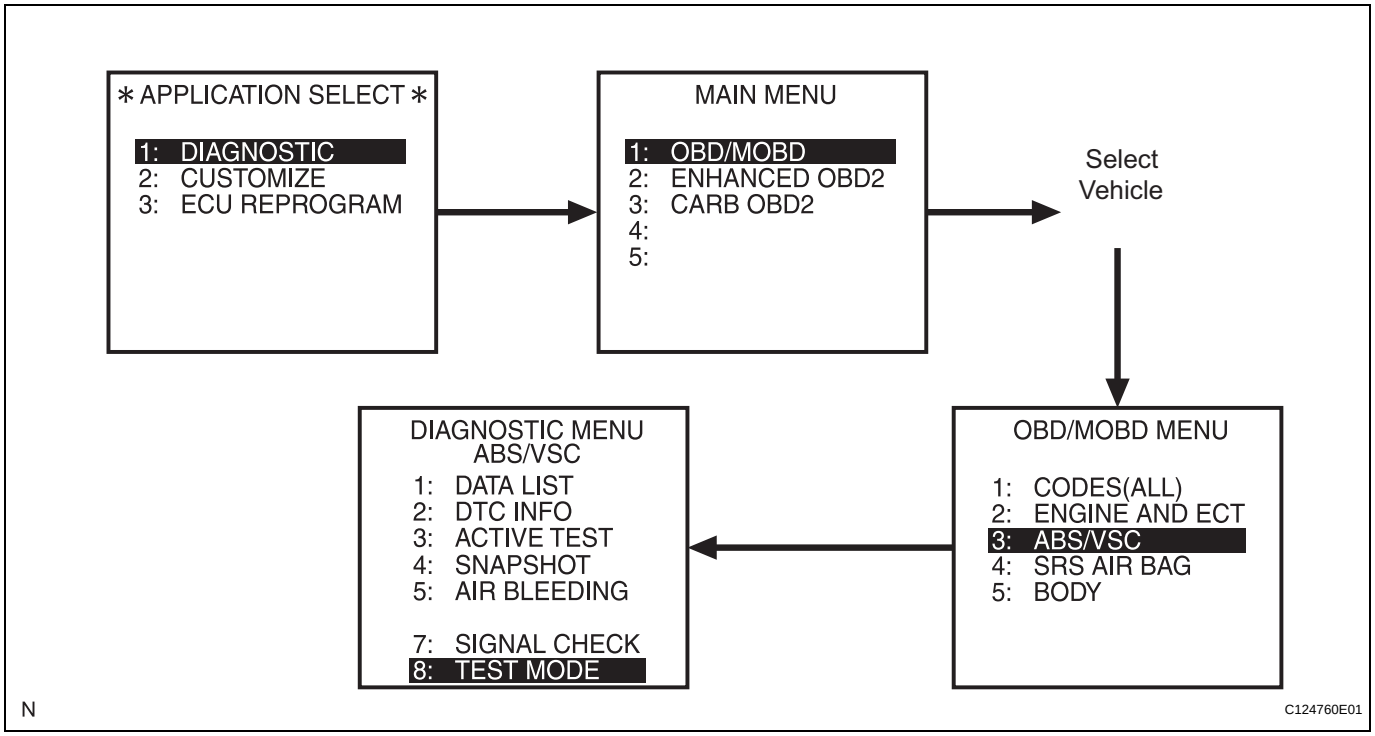
(2) Check that the steering wheel is in the straight-ahead position.

(3) A/T: Check that the shift lever is in the P position and apply the parking brake.
M/T: Check that the shift lever is in neutral and apply the parking brake.
NOTICE:
DTC C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position.

(4) Connect the intelligent tester to the DLC3.

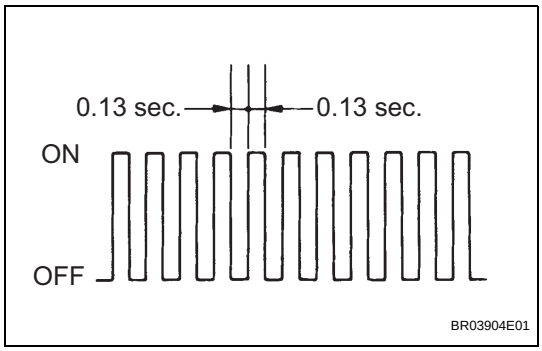
(5) Turn the ignition switch to the ON position.





Switch the ECU to test mode using the intelligent tester. Select the following menu items: DIAGNOSTIC / OBD/MOBD / select vehicle / ABS/VSC / TEST MODE.

(7) Keep the vehicle stationary on a level surface for 2 seconds or more.



(8) Check that the VSC TRAC warning light blinks as shown in the illustration.
NOTICE:
The VSC TRAC warning light (and VSC OFF indicator light (4WD, with rear differential lock)) stay ON when obtaining the zero point.
HINT:
- If the VSC TRAC warning light does not blink, perform the zero point calibration again.
- The zero point calibration is performed only once after the system enters test mode.
- Calibration cannot be performed again until the stored data is cleared once.

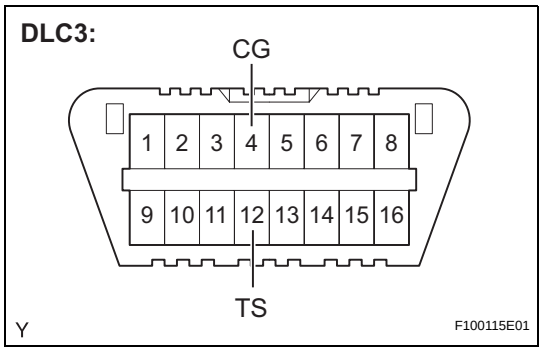
(9) Turn the ignition switch to OFF.

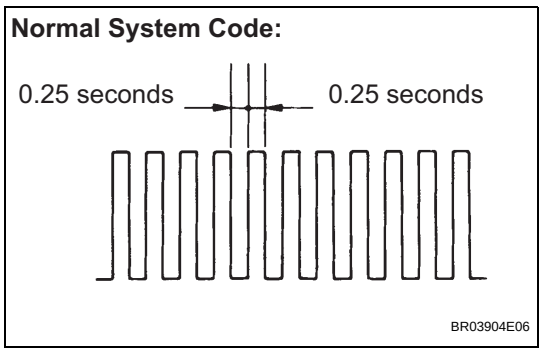
4. CLEAR ZERO POINT CALIBRATION (for Using a Intelligent Tester)

HINT:
After replacing the yaw rate and deceleration sensor, be sure to clear the zero point calibration data in the skid control ECU and perform zero point calibration.

(a) Turn the ignition switch to the ON position.

(b) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
SST 09843-18040





(c) Check that the warning light blinks in a normal system indication pattern.

(d) Remove the SST from the terminals of the DLC3.

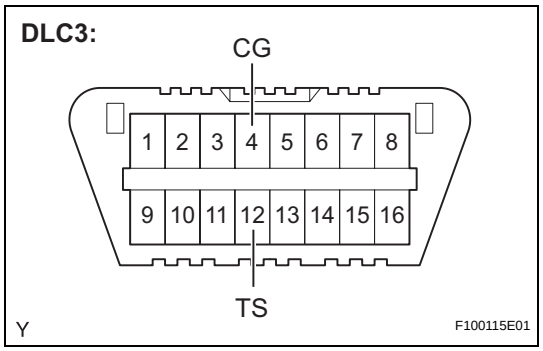
(e) Perform zero point calibration of the yaw rate and deceleration sensor using a check wire.

5. PERFORM ZERO POINT CALIBRATION OF YAW RATE SENSOR AND DECELERATION SENSOR (for Using a SST Check Wire)

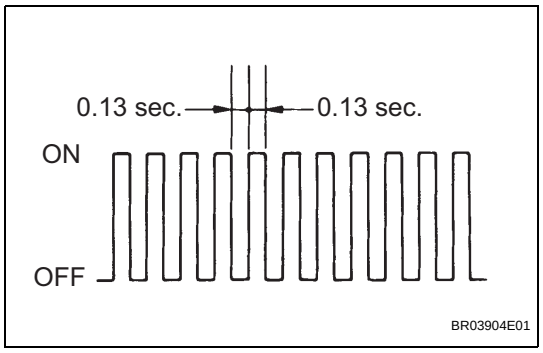
HINT:
After replacing the skid control ECU and/or yaw rate and deceleration sensor, be sure to perform yaw rate sensor and deceleration sensor zero point calibration.
NOTICE:
- **While obtaining the zero point, do not vibrate the vehicle by tilting, moving or shaking it and keep it stationary. (Do not start the engine.)**
- **Be sure to do this on a level surface (with an inclination less than 1 degree).**

(a) Procedures for test mode:
(1) Turn the ignition switch to OFF.

(2) Check that the steering wheel is in the straight-ahead position.
(3) A/T: Check that the shift lever is in the P position and apply the parking brake. M/T: Check that the shift lever is in neutral and apply the parking brake.
NOTICE:
DTC C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position.



(4) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(5) Turn the ignition switch to the ON position.
(6) Keep the vehicle stationary on a level surface for 2 seconds or more.



(7) Check that the VSC TRAC warning light blinks as shown in the illustration.
NOTICE:
The VSC TRAC warning light (and VSC OFF indicator light (4WD, with rear differential lock)) stay ON when obtaining the zero point.
HINT:
- If the VSC warning light does not blink, perform the zero point calibration again.
- The zero point calibration is performed only once after the system enters test mode.
- Calibration cannot be performed again until the stored data is cleared once.

TEST MODE PROCEDURE

1. TEST MODE PROCEDURE (for Using a Intelligent Tester)

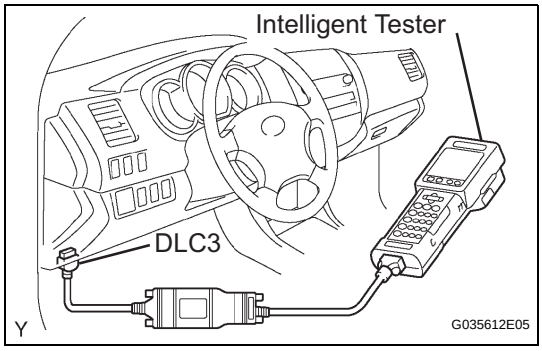
HINT:

- If the ignition switch is turned from the ON to the ACC or LOCK position during test mode, DTCs related to the signal check function will be erased.
- During test mode, the skid control ECU records all DTCs related to the signal check function. By performing the signal check, the codes are erased if normality is confirmed. The codes left over are the codes where an abnormality was found.

(a) Turn the ignition switch to OFF.

(b) Check that the steering wheel is in the straight-ahead position.

(c) A/T: Check that the shift lever is in the P position and apply the parking brake.
M/T: Check that the shift lever is in neutral and apply the parking brake.

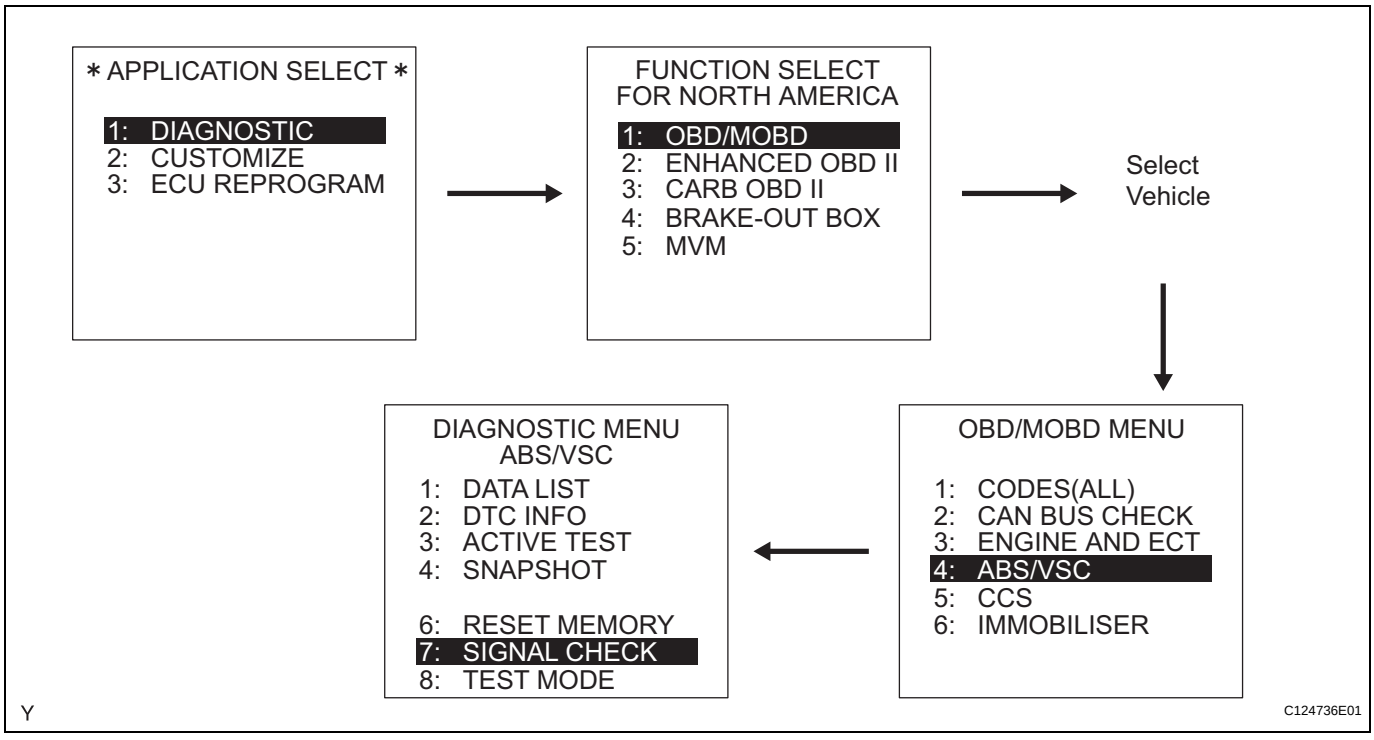


(d) Connect the intelligent tester to the DLC3.

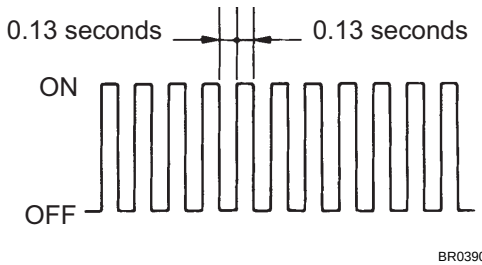
(e) Turn the ignition switch to the ON position.

(f) Switch the ECU to test mode using the intelligent tester. Select the following menu items: DIAGNOSIS / OBD/MOBD /select vehicle / ABS/ VSC / SIGNAL CHECK.

BC



Blinking pattern in TEST MODE:



(g) Check that the ABS and VSC TRAC warning lights blink as shown in the illustration.
HINT:
If the ABS warning light and VSC TRAC warning light do not blink, inspect the TS and CG terminal circuit, the ABS warning light circuit and VSC TRAC warning light circuit.

Trouble area	See page
ABS warning light circuit	BC-233 BC-239
VSC TRAC warning light circuit	BC-241 BC-246
TS and CG terminal circuit	BC-296

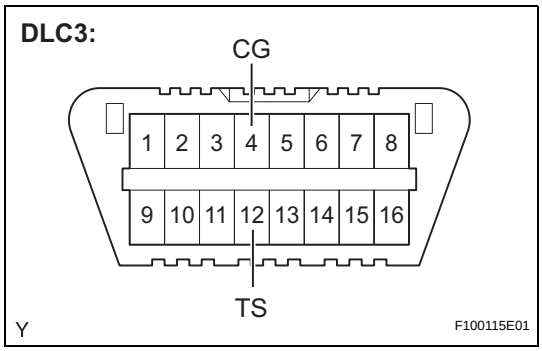
(h) Start the engine.
(i) Activate the ABS sensor (deceleration sensor, master cylinder pressure sensor, 4WD detection switch, L4 detection switch and speed sensor) and VSC sensor (yaw rate and deceleration sensor) in test mode (SIGNAL CHECK) using a intelligent tester.

2. TEST MODE PROCEDURE (for Using a SST Check Wire)

HINT:

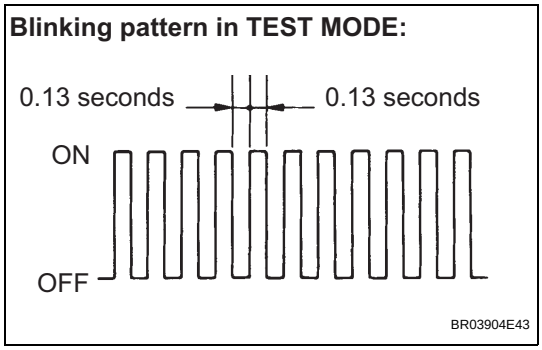
- After replacing the yaw rate and deceleration sensor, be sure to clear the zero point calibration data in the skid control ECU and perform zero point calibration.
- If the ignition switch is turned from the ON to the ACC or LOCK position during test mode, DTCs relating to the signal check function will be erased.
- During test mode, the skid control ECU records all DTCs relating to the signal check function. By performing the signal check, the codes are erased if normality is confirmed. The remaining codes are those indicating where an abnormality was found.

(a) Turn the ignition switch to OFF.
(b) Check that the steering wheel is in the straight-ahead position.
(c) A/T: Check that the shift lever is in the P position and apply the parking brake.
M/T: Check that the shift lever is in neutral and apply the parking brake.



(d) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(e) Turn the ignition switch to the ON position.



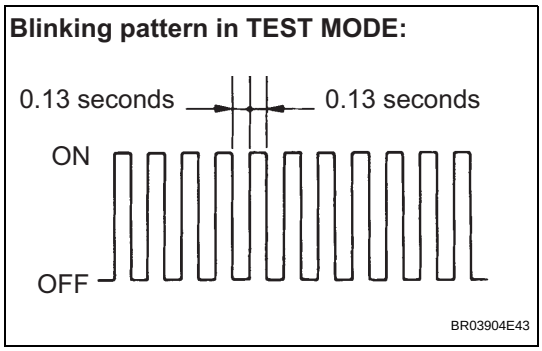
(f) Check that the ABS and VSC TRAC warning lights blink as shown in the illustration.
HINT:
If the ABS warning light and VSC TRAC warning light do not blink, inspect the TS and CG terminal circuit, the ABS warning light circuit and VSC TRAC warning light circuit.

Trouble area	See page
ABS warning light circuit	BC-233 BC-239
VSC TRAC warning light circuit	BC-241 BC-246
TS and CG terminal circuit	BC-296

BC

(g) Start the engine.

(h) Activate the ABS sensor (deceleration sensor, master cylinder pressure sensor, 4WD detection switch, L4 detection switch and speed sensor) and VSC sensor (yaw rate and deceleration sensor) in test mode (SIGNAL CHECK) using a check wire.

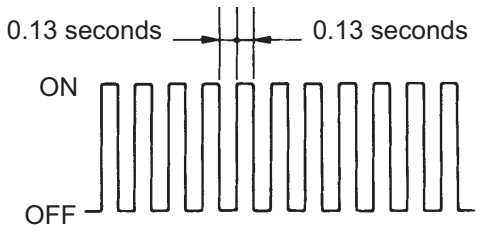


3. DECELERATION SENSOR SIGNAL CHECK

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Keep the vehicle stationary on a level surface for 1 second or more.

Blinking pattern in TEST MODE:



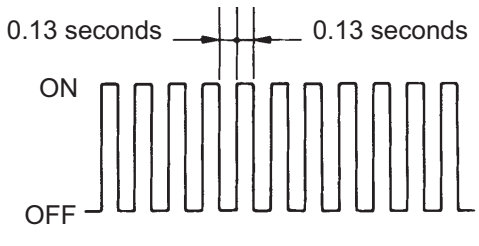
4. MASTER CYLINDER PRESSURE SENSOR CHECK

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Keep the vehicle stationary and release the brake pedal for 1 second or more, and quickly depress the brake pedal with a force of 98 N (10 kgf) or more for 1 second or more.

- Keep the vehicle stationary and release the brake pedal for 1 second or more, and quickly depress the brake pedal with a force of 98 N (10 kgf) or more for 1 second or more.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf) or more.
- The ABS warning light comes on for 3 seconds every time the above brake pedal operation is performed.

Blinking pattern in TEST MODE:



5. 4WD DETECTION SWITCH SIGNAL CHECK (for 4WD)

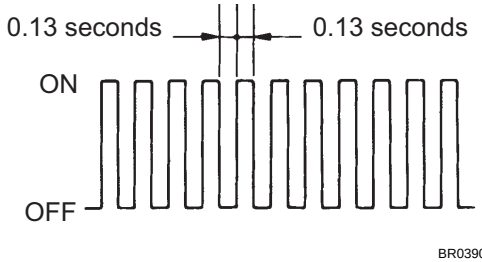
(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Check the transfer indicator switch (4WD position).

(1) Push the 4 wheel drive control switch on to put the vehicle in 4WD mode.

(2) Push the 4 wheel drive control switch off to put the vehicle in 2WD mode.

Blinking pattern in TEST MODE:



6. L4 DETECTION SWITCH SIGNAL CHECK (for 4WD)

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Check the transfer indicator switch (L4 position).

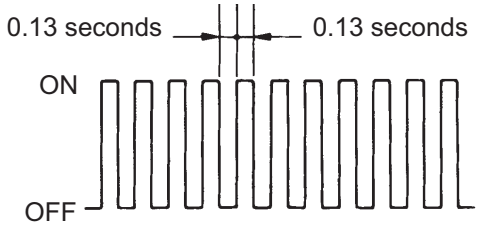
(1) Turn the 4 wheel drive control switch to the L position to put the vehicle in L4 mode.

(2) Turn the 4 wheel drive control switch to the H position to put the vehicle in H4 mode.

HINT:

Move the vehicle either a little forward or a little backward to engage the L4 position.

Blinking pattern in TEST MODE:



7. SPEED SENSOR CHECK

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Check the speed sensor signal

(1) Drive the vehicle straight forward at a speed of 56 mph (90 km/h) or more.

(2) Drive the vehicle straight rearward at a speed of 1.9 mph (3 km/h) or more for 1 second or more.

(3) Check that the ABS warning light goes off.

HINT:

The sensor check may not be completed if the vehicle has its wheels spun or its steering wheel turned during this check.

BC

(4) Stop the vehicle.

NOTICE:

- **Before performing the speed sensor signal check, complete the deceleration sensor, master cylinder pressure sensor, 4WD detection switch and L4 detection switch signal checks.**
- **The speed sensor signal check may not be completed if the speed sensor signal check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off, if the vehicle speed exceeds 28 mph (45 km/h), a signal check code will be stored again. Decelerate or stop the vehicle before the speed reaches 28 mph (45 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:

When the signal check has been completed, the ABS warning light goes off while driving and blinks in test mode while stationary.

8. READ DTC OF ABS SENSOR (for Using a Intelligent Tester)

(a) Read the DTC(s) by following the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

9. READ DTC OF ABS SENSOR (for Using a SST Check Wire)

(a) Using SST, connect terminals TC and CG of the DLC3.

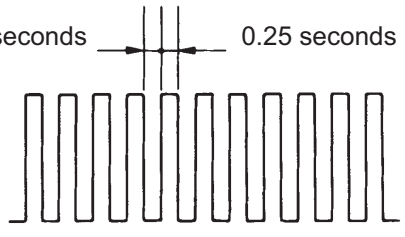
SST 09843-18040

(b) Turn the ignition switch to the ON position.

(c) Read the number of blinks of the ABS warning light.

- If every sensor is normal, the normal code is displayed (A cycle of 0.25 seconds ON and 0.25 seconds OFF is repeated).

Normal System Code:

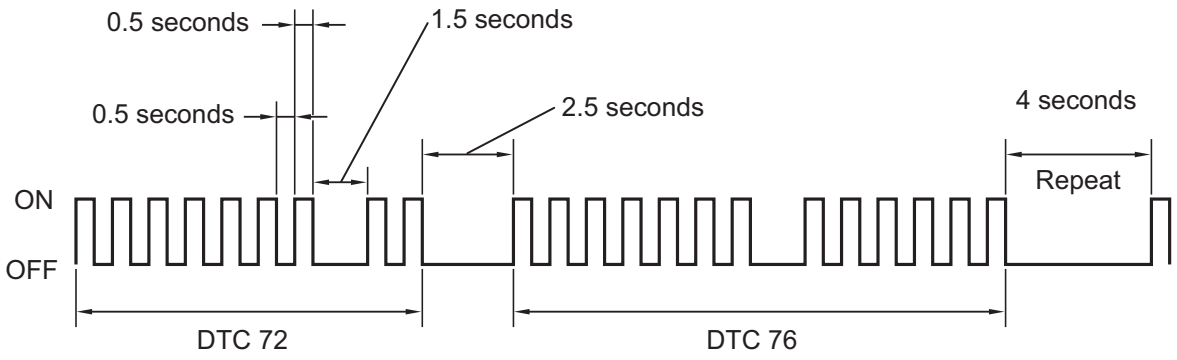


BR03904E06

BC

- If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.

Example: Indication of DTCs 72 and 76

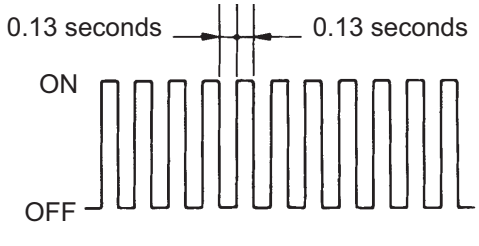


N

C124737E01

(d) After the check, disconnect the SST from terminals TC and CG of the DLC3.
(e) Turn the ignition switch to OFF.

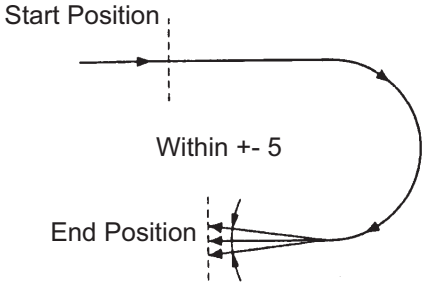
Blinking pattern in TEST MODE:



BR03904E43

10. YAW RATE SENSOR CHECK

(a) Check that the VSC TRAC warning light is blinking as shown in the illustration.
(b) Keep the vehicle stationary on a level surface for 1 second or more.



F002135E02

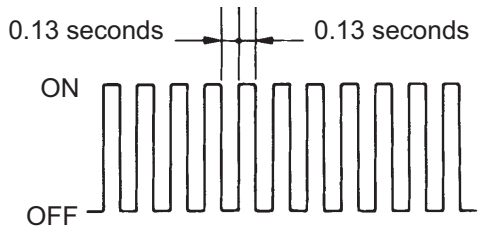
(c) Shift the shift lever to the D position (A/T) and drive the vehicle at a speed of approximately 3 mph (5 km/h), turn the steering wheel either to the left or right 90°or more, and turn the vehicle through 180 degrees.
(d) A/T: Stop the vehicle, check that the shift lever is in the P position, and then apply the parking brake.
M/T: Stop the vehicle, check that the shift lever is in neutral, and then apply the parking brake.
(e) Check that the skid control (VSC warning) buzzer sounds for 3 seconds.
HINT:

- If the skid control (VSC warning) buzzer sounds, the signal check has been completed normally.

BC

- If the skid control (VSC warning) buzzer does not sound, check the skid control buzzer circuit (See page BC-288), then perform the signal check again.
- If the skid control (VSC warning) buzzer still doesn't sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Drive the vehicle in a 180° semi circle. At the end of the turn, the direction of the vehicle should be within 180+-5° of its start position.
- The vehicle turn should be completed within 20 seconds.
- Do not spin the wheels.

Blinking pattern in TEST MODE:



11. DAC OPERATION SWITCH SIGNAL CHECK (for 4WD)

(a) Check that the VSC TRAC warning light is blinking as shown in the illustration.

(b) Check the DAC switch.
(1) Push the DAC switch on.
(2) Push the DAC switch off.

12. READ DTC OF VSC SENSOR (for Using a Intelligent Tester)

(a) Read the DTC(s) by following the tester screen.
- Refer to the intelligent tester operator's manual for further details.

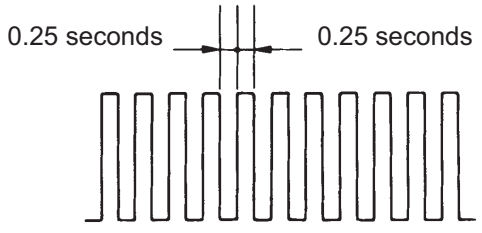
13. READ DTC OF VSC SENSOR (for Using a SST Check Wire)

(a) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(b) Turn the ignition switch to the ON position.

(c) Read the number of blinks of the VSC TRAC warning light.
- If every sensor is normal, the normal code is displayed (A cycle of 0.25 seconds ON and 0.25 seconds OFF is repeated).

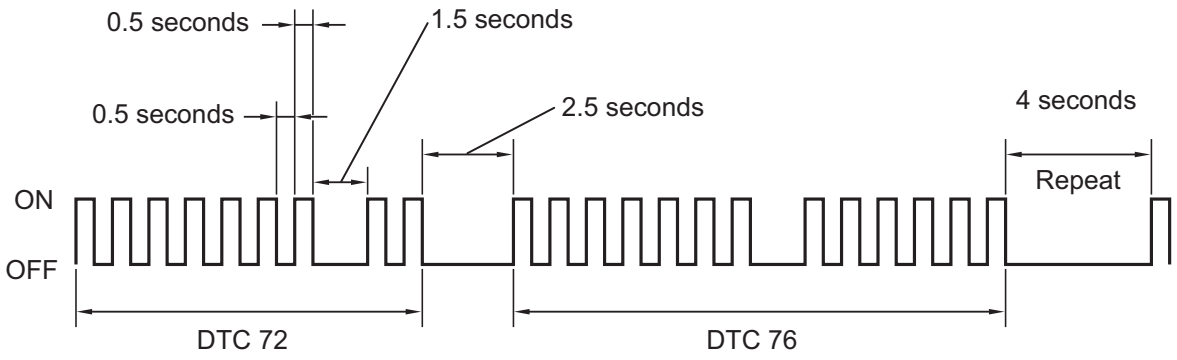
Normal System Code:



BC

- If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.

Example: Indication of DTCs 72 and 76



N

C124737E01

(d) After the check, disconnect the SST from terminals TC and CG of the DLC3.

(e) Turn the ignition switch to OFF.

14. DTC OF SIGNAL CHECK FUNCTION

BC

ABS sensor

DTC No.	Diagnosis	Trouble Areas
C1271/71	Low output voltage of right front speed sensor	• Right front speed sensor • Sensor installation • Speed sensor rotor
C1272/72	Low output voltage of left front speed sensor	• Left front speed sensor • Sensor installation • Speed sensor rotor
C1273/73	Low output voltage of right rear speed sensor	• Right rear speed sensor • Sensor installation • Speed sensor rotor
C1274/74	Low output voltage of left rear speed sensor	• Left rear speed sensor • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output voltage of right front speed sensor	Right front speed sensor rotor
C1276/76	Abnormal change in output voltage of left front speed sensor	Left front speed sensor rotor
C1277/77	Abnormal change in output voltage of right rear speed sensor	Right rear speed sensor rotor
C1278/78	Abnormal change in output voltage of left rear speed sensor	Left rear speed sensor rotor
C1279/79 (*1), (*2)	Deceleration sensor faulty	• Deceleration sensor • Sensor installation
C1282/82 (*2)	Center differential lock position switch malfunction	Transfer indicator switch (4WD position)

DTC No.	Diagnosis	Trouble Areas
C1283/83 (*2)	L4 detection switch malfunction	Transfer indicator switch (L4 position)

HINT:
(*1): 4WD

VSC sensor

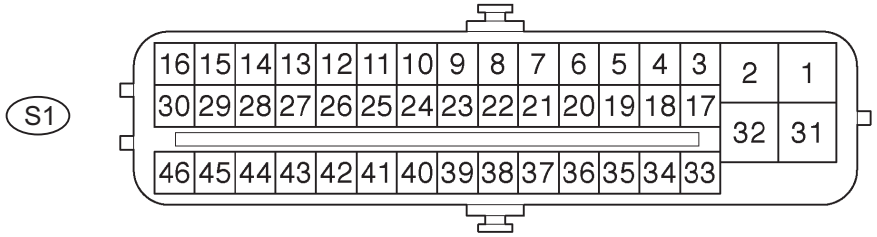
DTC No.	Diagnosis	Trouble Areas
C0371/71	Yaw rate sensor output signal malfunction	Yaw rate and deceleration sensor
C1379/74	Malfunction in DAC operation switch	DAC switch

HINT:
The codes in this table are output only in test mode (signal check).

TERMINALS OF ECU

1. TERMINALS OF ECU

Skid control ECU:



N

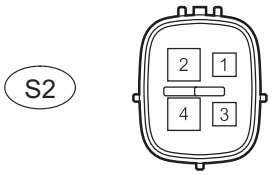
C110610E02

Symbols (Terminal No.)	Terminal Description
GND (1)	Skid control ECU ground
+BM1 (2)	Power supply for motor
FR+ (3)	Front RH wheel speed sensor power supply
FL- (4)	Front LH wheel speed signal input
RR+ (5)	Rear RH wheel speed sensor power supply
RL- (6)	Rear LH wheel speed signal input
STP (7)	Stop light switch input
CANH (11)	CAN communication line H
SP1 (12)	Speed signal output for combination meter
D/G (13)	Diagnosis tester communication line
P/R (14)	Shift position indicator P signal input
INFR (15) (*1)	AUTO LSD indicator light output
STPO (16)	Stop light operated relay output
FR- (17)	Front RH wheel speed sensor input
FL+ (18)	Front LH wheel speed sensor power supply output
RR- (19)	Rear RH wheel speed sensor input
RL+ (20)	Rear LH wheel speed sensor power supply output
EXI4 (21) (*2)	Detection (L4) switch input
TS (24)	Sensor test terminal (Sensor check switch) input
CANL (25)	CAN communication line L
EXI3 (26)	Rear differential lock detection switch input
EXI (27)	4WD switch input
PKB (28)	Parking brake switch input
WA (29)	ABS warning light input
BZ (30)	Buzzer output
+BS (31)	Power supply for solenoid
GND2 (32)	Skid control ECU ground
HDCW (33) (*3)	DAC operation indicator light output
IND (34)	SLIP indicator light output
WT (35)	VSC OFF indicator light output
VSCW (36)	VSC TRAC warning light output
LBL (41)	Brake fluid level warning switch input
WFSE (42)	Write flash enable input
CSW (43) (*3)	AUTO LSD switch input
HDCS (44) (*3)	DAC operation switch input
STP2 (45)	Stop light switch input

BC

Symbols (Terminal No.)	Terminal Description
IG1 (46)	IG1 power supply

Skid Control ECU:



H

C124763E01

Symbols (Terminal No.)	Terminal Description
IG2 (1)	IG2 Power supply
+BM2 (2)	Power supply for motor
BRL (3)	BRAKE warning light output
GND3 (4)	Skid control ECU ground

(*1): with AUTO LSD

(*2): 4WD

(*3): with Downhill assist control

2. TERMINAL INSPECTION

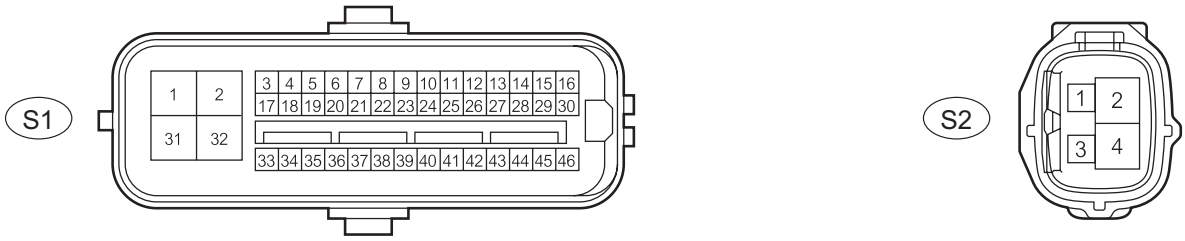
Disconnect the connector and measure the voltage or resistance on the wire harness side.

HINT:

Voltage cannot be measured with the connector connected to the skid control ECU as the connector is water resistant.

BC

Skid Control ECU (Wire Harness Side)
Connector Front View:



H

C124764E01

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+BM1 (S1-2) - GND (S1-1, 32)	B - W-B	Power supply for motor From battery	Always	10 to 14 V
IG1 (S1-46) - GND (S1-1, 32)	LG - W-B	IG1 power supply	IG switch OFF	Below 1 V
IG1 (S1-46) - GND (S1-1, 32)	LG- B-W	IG1 power supply	IG switch ON	10 to 14 V
STP (S1-7) - GND (S1-1, 32)	G-W - W-B	Stop light switch input	Stop light switch OFF (Brake pedal released)	Below 1.5 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STP (S1-7) - GND (S1-1, 32)	G-W - W-B	Stop light switch input	Stop light switch ON (Brake pedal released)	8 to 14 V
P/R (S1-14) - GND (S1-1, 32) (*1)	BR-W - W-B	Shift position indicator P signal input	IG switch ON, shift P position	8 to 14 V
P/R (S1-14) - GND (S1-1, 32) (*1)	BR-W - W-B	Shift position indicator P signal input	IG switch ON, any shift position except P	Below 1 V
PKB (S1-28) - GND (S1-1, 32)	G-Y - W-B	Parking brake switch input	IG switch ON, parking brake switch ON	Below 1.5 V
PKB (S1-28) - GND (S1-1, 32)	G-Y - W-B	Parking brake switch input	IG switch ON, parking brake switch OFF	10 to 14 V
+BS (S1-31) - GND (S1-1, 32)	R - W-B	Power supply for solenoid Form battery	Always	10 to 14 V
LBL (S1-41) - GND (S1-1, 32)	V-W - W-B	Brake fluid level warning switch input	Brake fluid level min. -5mm	Below 1 Ω
LBL (S1-41) - GND (S1-1, 32)	V-W - W-B	Brake fluid level warning switch input	Brake fluid level max.	1.9 to 2.1 Ω
STP2 (S1-45) - GND (S1-1, 32)	L - W-B	Stop light switch input	Stop light switch OFF (Brake pedal released)	Below 1.5 V
STP2 (S1-45) - GND (S1-1, 32)	L - W-B	Stop light switch input	Stop light switch ON (Brake pedal released)	8 to 14 V
IG2 (S2-1) - GND (S2-4)	O - W-B	IG2 power supply	IG switch OFF	Below 1 V
IG2 (S2-1) - GND (S2-4)	O - W-B	IG2 power supply	IG switch ON	10 to 14 V
+BM2 (S2-2) - GND (S2-4)	B - W-B	Power supply for motor From battery	Always	10 to 14 V

(*1): A/T

FREEZE FRAME DATA

HINT:

- Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) state as freeze frame data.
- The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to the ON position since the last time ABS was activated. However, if the vehicle was stopped or at low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will not count the number after that.
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates the data whenever the ABS system operates. When the ECU stores data at the time a DTC is detected, the data stored when the ABS operated is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester ON.
(d) From the display on the tester, select the FREEZE FRAME DATA.

Intelligent Tester	Measurement Item	Reference Value
TROUBLE CODE	Freeze DTC	min.: 0, max.: 65535
STOP LIGHT SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
VSC/TRC OFF SW	VSC OFF switch signal	VSC OFF SW ON: ON, OFF: OFF
SHIFT POSITION	Shift lever position	FAIL P,N R D 4 3 2 L
SYSTEM	System status	ABS activated: ABS VSC/TRAC activated: VSC/TRAC BA activated: BA Fail safe mode activated: FAIL SF No system activated: NO SYS
# IG ON	Number of operations turning ignition switch to ON after strong freeze frame data	0 to 31
VEHICLE SPD	Wheel speed sensor reading	Speed indicated on speedometer
STEERING ANG	Steering sensor reading	Left turn: Increase Right turn: Drop (Deceleration
YAW RATE	Yaw rate angle sensor reading	-128 to 127
MAS CYL PRESS	Master cylinder pressure sensor reading	Brake pedal release: 0.3 to 0.9 V Brake pedal depress: 0.8 to 4.5 V
MAS PRESS GRADE	Master cylinder pressure sensor change	-30 to 225 MPa/s
G (RIGHT & LEFT)	Right and left G (Yaw Rate)	-1.869 to 1.869
G (BACK & FORTH)	Back and forth G (Deceleration)	-1.869 to 1.869
WHEEL DIR FR	Front right wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD

Intelligent Tester	Measurement Item	Reference Value
WHEEL DIR FL	Front left wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD
WHEEL DIR RR	Rear right wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD
WHEEL DIR RL	Rear left wheel direction	Wheel direction BACK: BACK Wheel direction FORWARD: FORWARD
BUZZER	VSC buzzer signal	VSC buzzer ON: ON, OFF: OFF
RESERVOIR SW	Reservoir level warning switch signal	Reservoir level warning Switch ON: ON, OFF: OFF
PKB SW	Parking brake switch signal	Parking brake Switch ON: ON, OFF: OFF

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with any sensor signals or hydraulic brake booster systems, the skid control ECU prohibits the power supply to the actuator in the hydraulic brake booster and informs the ECM of VSC system failure.
  The hydraulic brake booster turns off each solenoid and the ECM shuts off the VSC control (traction control signal) from the skid control ECU accordingly, which turns out to be as if the ABS, TRAC and VSC systems were not installed.
  The ABS control is prohibited, but EBD control continues as far as possible. If EBD control is impossible, the BRAKE warning light comes on to warn the driver (See page BC-116).
- If system components have any malfunctions before starting control, immediately stop the operation.
  If system components have any malfunctions during control, gradually stop the control so as not to trigger a sudden change in vehicle conditions.
  If it is impossible to control the systems, the warning light comes on to inform the driver of the termination of the systems (See page BC-116).

HINT:

- If the ABS, BA, TRAC, A-TRAC, VSC and AUTO LSD systems malfunction, the brake system will operate normally without ABS, BA, TRAC, VSC and AUTO LSD controls.
- If the hydraulic brake booster malfunctions, gradual loss of brake performance is expected, and ABS, BA, TRAC, A-TRAC, VSC and AUTO LSD system controls are prohibited.

(a) ABS & EBD & BA system:
HINT:
If the ABS, BA or EBD system malfunctions, the following controls are prohibited as shown in the table below.

Malfunction Area	Control Method
ABS system	Prohibit ABS, BA, TRAC, A-TRAC, VSC and AUTO LSD control
BA system	Prohibit ABS, BA, TRAC, A-TRAC, VSC and AUTO LSD control
EBD system	Prohibit ABS, BA, EBD, TRAC, A-TRAC, VSC and EBD control

(b) TRAC & A-TRAC & VSC & AUTO LSD system:
HINT:
If TRAC, A-TRAC, VSC and/or AUTO LSD malfunction, the following controls are prohibited as shown in the table below.

Malfunction Area	Control Method
Engine control system (TRAC, A-TRAC and VSC systems)	Before control: Disables control During control: Uses only brakes to effect control
Brake control system (VSC system)	Before control Disables control During control Uses only brakes to effect control

Malfunction Area	Control Method
Brake control system (TRAC, A-TRAC and AUTO LSD system)	Brake control: Disables control During control: Disables control (by gradually ending control)

2. SYSTEM TEMPERATURE PROTECTION OPERATION

If TRAC, A-TRAC, AUTO LSD, or HAC system has been used constantly for a long time, the temperature of the hydraulic brake booster, may increase excessively. If the temperature increases excessively, the skid control (VSC warning) buzzer sounds intermittently. If the temperature increases more, the skid control (VSC warning) buzzer sounds for 3 seconds repeatedly and the indicator light either comes on or blinks.

System	Indicator Condition
TRAC or A-TRAC system	SLIP indicator light comes on
AUTO LSD system	SLIP indicator light comes on AUTO LSD indicator light stays on

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the ignition switch in the ON position, the ABS, TRAC and VSC data list can be displayed. Follow the prompts on the tester screen to access the DATA LIST.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
HB MOT RELAY	HB motor relay / ON or OFF	ON : Motor relay ON OFF : Motor relay OFF	-
ABS MOT RELAY	ABS motor relay / ON or OFF	ON : Motor relay ON OFF : Motor relay OFF	-
SOL RELAY	Solenoid relay / ON or OFF	ON : Solenoid relay ON OFF : Solenoid relay OFF	-
VSC/TRAC OFF SW	TRAC control switch / ON or OFF	ON : TRAC control switch ON	-
IDLE SW	Main idle switch / ON or OFF	ON : Accelerator pedal released OFF : Accelerator pedal depressed	-
STOP LIGHT SW	Stop lamp switch / ON or OFF	ON : Brake pedal depressed OFF : Brake pedal released	-
PKB SW	Parking brake switch / ON or OFF	ON : Parking brake applied OFF : Parking brake released	-
RESERVOIR SW	Reservoir level warning switch / ON or OFF	ON : Switch ON OFF : Switch OFF	-
ABS OPERT FR	ABS operation (FR) / BEFORE or OPERATE	BEFORE : No ABS operation (FR) OPERATE : During ABS operation (FR)	-
ABS OPERT FL	ABS operation (FL) / BEFORE or OPERATE	BEFORE : No ABS operation (FL) OPERATE : During ABS operation (FL))	-
ABS OPERT RR	ABS operation (RR) / BEFORE or OPERATE	BEFORE : No ABS operation (RR) OPERATE : During ABS operation (RR)	-
ABS OPERT RL	ABS operation (RL) / BEFORE or OPERATE	BEFORE : No ABS operation (RL) OPERATE : During ABS operation (RL)	-
WHEEL SPD FR	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD FL	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RR	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RL	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
DECELERAT SEN	Deceleration sensor 1 reading / min.: -1.869 G, max.: 1.869 G	Approximately 0 +- 0.13G is still condition	Reading changes when vehicle bounced
DECELERAT SEN2	Deceleration sensor 2 reading / min.: -1.869 G, max.: 1.869 G	Approximately 0 +- 0.13G is still condition	Reading changes when vehicle bounced
IG VOLTAGE	ECU power supply voltage / TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 V or 14V TOO LOW: Below 9.5 V	-

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
SFRR	ABS solenoid (SFRR) / ON or OFF	ON: Operates OFF: Does not operate	-
SFRH	ABS solenoid (SFRH) / ON or OFF	ON: Operates OFF: Does not operate	-
SFLR	ABS solenoid (SFLR) / ON or OFF	ON: Operates OFF: Does not operate	-
SFLH	ABS solenoid (SFLH) / ON or OFF	ON: Operates OFF: Does not operate	-
SRRR (SRR)	ABS solenoid (SRRR [SRR]) / ON or OFF	ON: Operates OFF: Does not operate	-
SRRH (SRH)	ABS solenoid (SRRH [SRH]) / ON or OFF	ON: Operates OFF: Does not operate	-
SRLR	ABS solenoid (SRLR) / ON or OFF	ON: Operates OFF: Does not operate	-
SRLH	ABS solenoid (SRLH) / ON or OFF	ON: Operates OFF: Does not operate	-
SRCF (SA1)	TRAC solenoid (SRCF [SMCF]) / ON or OFF	ON: Operates OFF: Does not operate	-
SRCR (SA2)	TRAC solenoid (SRCR [SREA]) / ON or OFF	ON: Operates OFF: Does not operate	-
SRMF (SMCF, SA3)	TRAC solenoid (SRMF [SREC]) / ON or OFF	ON: Operates OFF: Does not operate	-
SRMR (SMCR, STR)	TRAC solenoid (SRMR [SMCR, STR]) / ON or OFF	ON: Operates OFF: Does not operate	-
ENGINE SPD	Engine Speed/ Min.: 0 rpm, Max.: 6000 rpm	Actual engine speed	-
VEHICLE SPD	Maximum wheel speed sensor reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual engine speed	Speed indicated on speedometer
YAW RATE	Yaw rate sensor/ Min.: -128 deg/s, Max.: 127 deg/s	Min: -128 deg/s Max: 127 deg/s	-
YAW ZERO VALUE	Memorized zero value/ Min.: -128 deg/s, Max.: 127 deg/s	Min: -128 deg/s Max: 127 deg/s	-
STEERING ANG	Steering sensor/ Min.: -1152 deg, Max.: 1150.875 deg	Left turn: Increase Right turn: Decrease	-
MAS CYL PRS 1	Master cylinder pressure sensor 1 reading / min.: 0V, max.: 5V	When brake pedal is released : 0.3 V to 0.9 V	Reading increases when brake pedal depressed
ACC PRESS SENS	Accumulator pressure sensor reading / min.: 0V, max.: 5V	min.: 3V max.: 5V	If value constant regardless of pump operation, accumulator pressure sensor malfunction suspected.
WHEEL DIR FR	Front right wheel direction	wheel direction BACK: BACK, FORWARD: FORWARD	-
WHEEL DIR FL	Front left wheel direction	wheel direction BACK: BACK, FORWARD: FORWARD	-
WHEEL DIR RR	Rear right wheel direction	wheel direction BACK: BACK, FORWARD: FORWARD	-
WHEEL DIR RL	Rear left wheel direction	wheel direction BACK: BACK, FORWARD: FORWARD	-
SPD SEN FR	FR speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN FL	FL speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN RR	RR speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN RL	RL speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ACCELERATOR %	Different % of present accelerator	min.: 0 max.: 128	-
TORQUE	Real output torque	min.: -1024 max.: 1016	-
TEST MODE	Test mode / Normal or TEST	NORMAL: Normal mode TEST: During test mode	-
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0V, max.: 5V	When brake pedal released: 0.3 to 0.9V	Reading increases when brake pedal depressed
#CODES	Number of DTC recorded / min.: 0, max.: 255	min.: 0 max.: 255	-

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows relays and actuators to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening diagnostic time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester ON.
(d) According to the display on the tester, perform the ACTIVE TEST.

HINT:

The ignition switch must be turned to the ON position to proceed to the Active Test using the intelligent tester.

BC

Item	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operation of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operation of solenoid (clicking sound) can be heard
SFLR	Turns ABS solenoid (SFLR) ON / OFF	Operation of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON / OFF	Operation of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SrRR) ON / OFF	Operation of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON / OFF	Operation of solenoid (clicking sound) can be heard

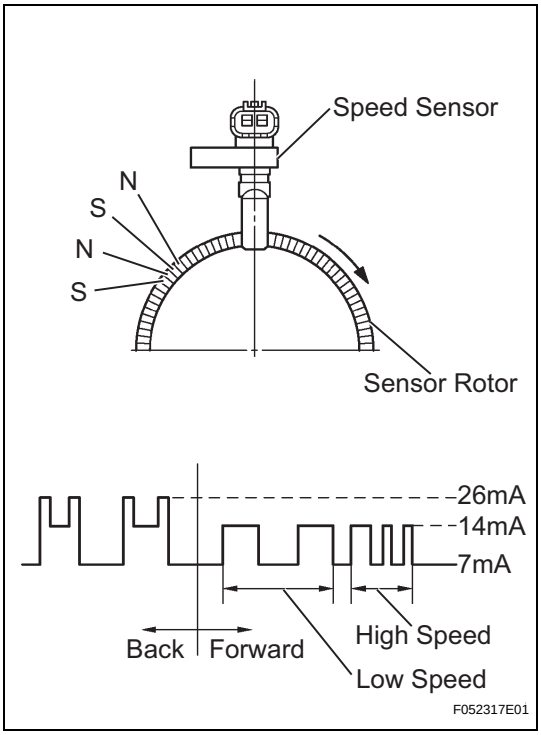
DTC	C0200/31	Right Front Wheel Speed Sensor Signal Malfunction
DTC	C0205/32	Left Front Wheel Speed Sensor Signal Malfunction
DTC	C0210/33	Right Rear Wheel Speed Sensor Signal Malfunction
DTC	C0215/34	Left Rear Wheel Speed Sensor Signal Malfunction

DESCRIPTION

The speed sensor detects the wheel speeds and sends the appropriate signals to the skid control ECU. Speed sensor rotors have rows of alternating N and S magnetic poles, and their magnetic fields change when the rotors turn.

Each speed sensor detects that magnetic change and sends a pulse signal to the skid control ECU. The ECU monitors the wheel speeds according to the speed signals to control the ABS, BA, TRAC, A-TRAC, VSC, AUTO LSD, DAC and HAC systems.

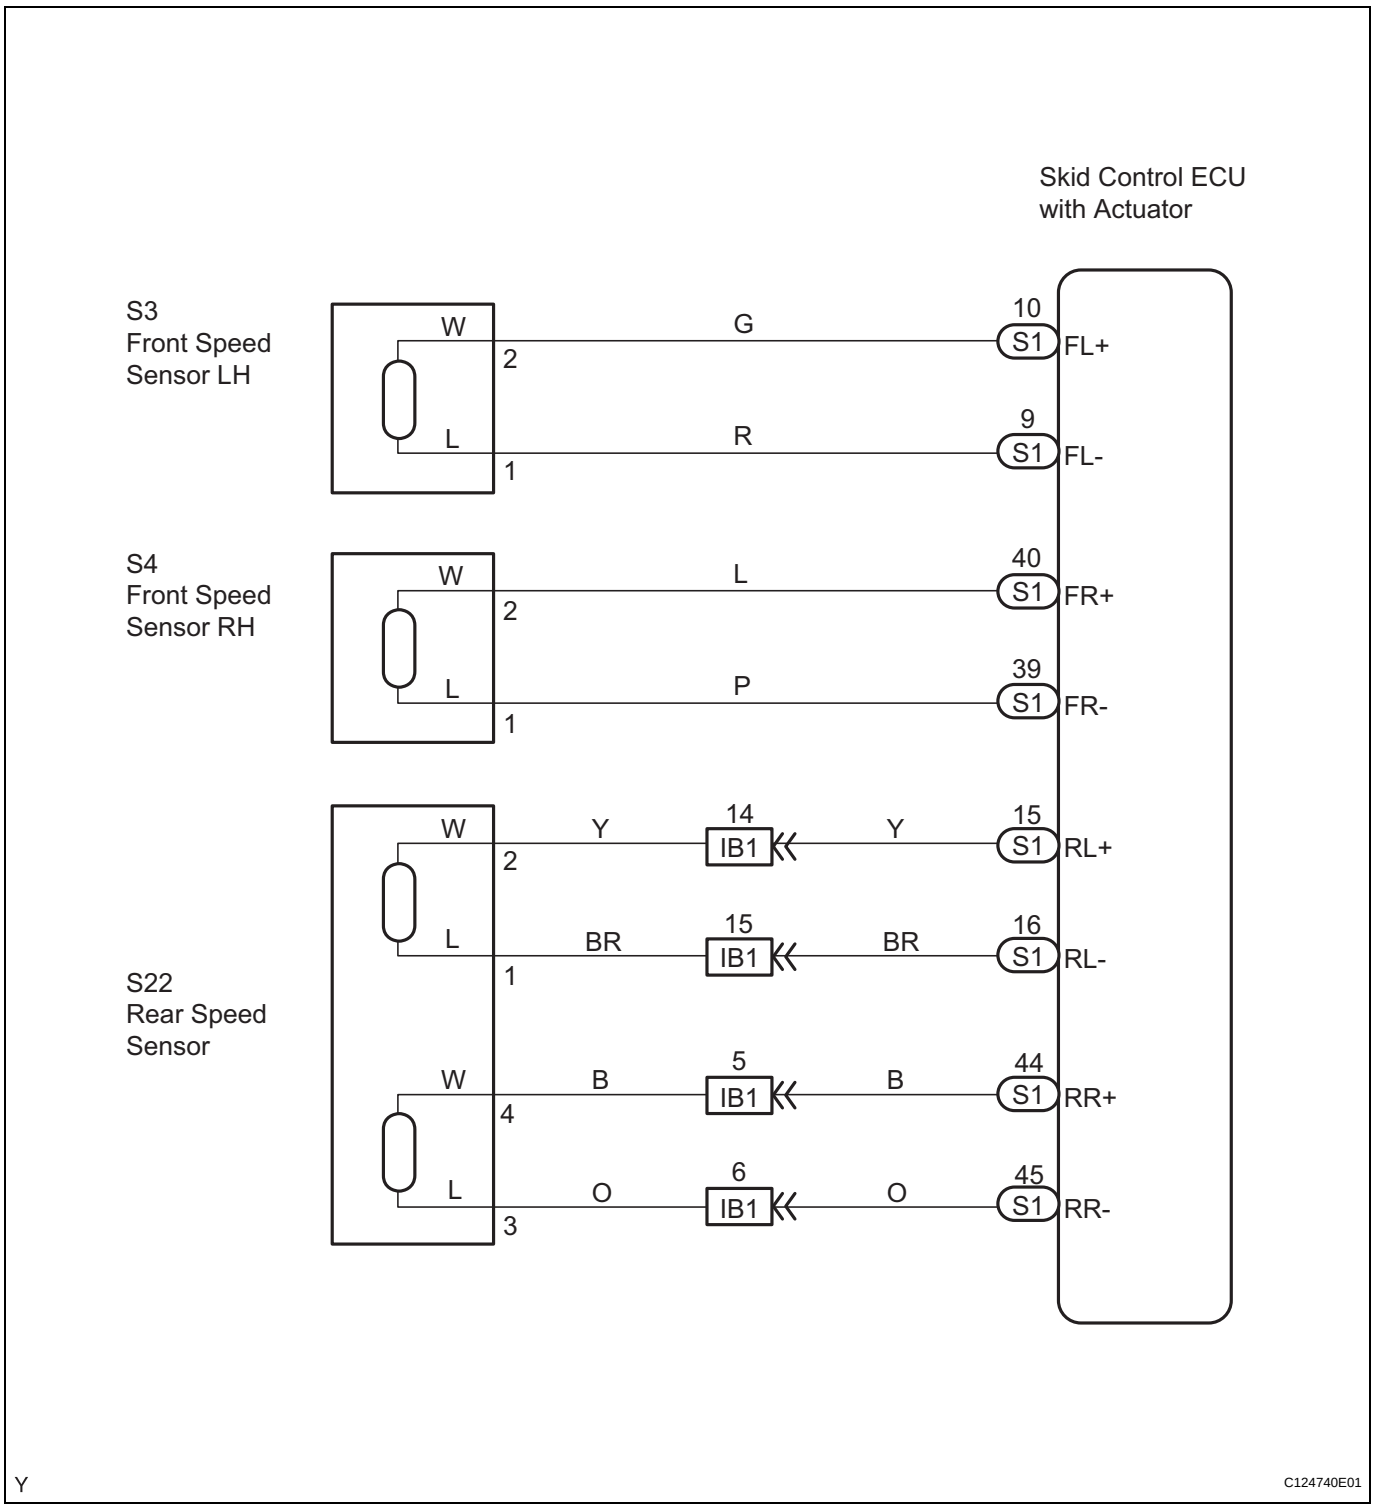


BC

DTC No.	DTC Detecting Conditions	Trouble Areas
C0200/31 C0205/32 C0210/33 C0215/34	When any one of following conditions met: 1. At vehicle speed of 6 mph (10 km/h) or more, speed sensor signal circuit open or short for 1 second or more. 2. Speed sensor signal open circuit occurs at least 255 times. 3. Speed sensor signal circuit open for 0.5 seconds or more. 4. With ignition switch ON and vehicle speed at 2 mph (3km/h) or more, 3 wheels output reverse rotation signal and 1 wheel outputs high-frequency pulse 75 times. 5. At vehicle speed of 6 mph (10 km/h) or more, speed sensor output halves for 5 seconds. 6. At vehicle speed of 6 mph (10 km/h) or more, changing of normal rotation signal and reverse rotation signal occur 7 times within 0.006 seconds while ignition switch ON. 7. Signal output of any one wheel different from signals of other 3 wheels for 1 second, at vehicle speed of 18 mph (30 km/h) or more. 8. Reverse rotation signal produced for 1 second or more at vehicle speed of 62 mph (100 km/h) or more. 9. At vehicle speed of 18 mph (30 km/h) or more, one speed sensor malfunctions and differs in signal direction from other 3 wheels. 10. When voltage at IG1 terminal 9.5 V or more, voltage of sensor power supply decreases for 0.5 seconds or more.	• Speed sensor • Speed sensor circuit • Master cylinder solenoid (skid control ECU)

HINT:
DTC C0200/31 relates to the front right speed sensor.
DTC C0205/32 relates to the front left speed sensor.
DTC C0210/33 relates to the rear right speed sensor.
DTC C0215/34 relates to the rear left speed sensor.

WIRING DIAGRAM



HINT:
Start the inspection from step 1 when using a intelligent tester and start from step 3 when not using a intelligent tester.

1 CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using a intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-98).

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
SPD SEN FR	FR speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN FL	FL speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN RR	RR speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-
SPD SEN RL	RL speed sensor open detection / OPEN or NORMAL	OPEN: momentary interruption	-

OK:
There are no momentary interruptions.

NG → **Go to step 7**

OK

2 READ VALUE OF DATA LIST (SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the DATA LIST mode on the intelligent tester.

BC

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
WHEEL SPD FR	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD FL	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RR	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer
WHEEL SPD RL	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed	Similar speed to that indicated on speedometer

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
There is almost no difference with the displayed speed value.
HINT:
There is tolerance of +-10% in the speedometer indication.

NG → **Go to step 5**

OK

3 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode DTCs are detected (See page BC-103).

Result	Proceed to
Test mode DTC output	A
Test mode DTC not output	B

NG → **Go to step 5**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

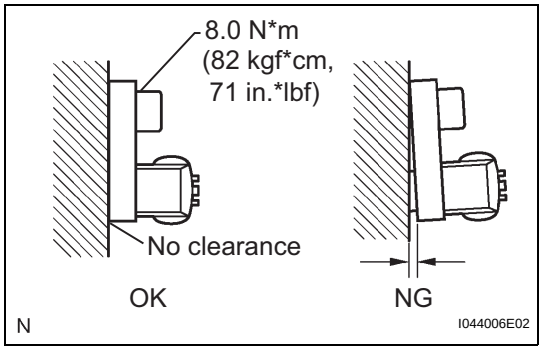
Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

BC

5 CHECK SPEED SENSOR INSTALLATION



(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and front steering knuckle.
Torque:
8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **TIGHTEN BOLT PROPERLY**

OK

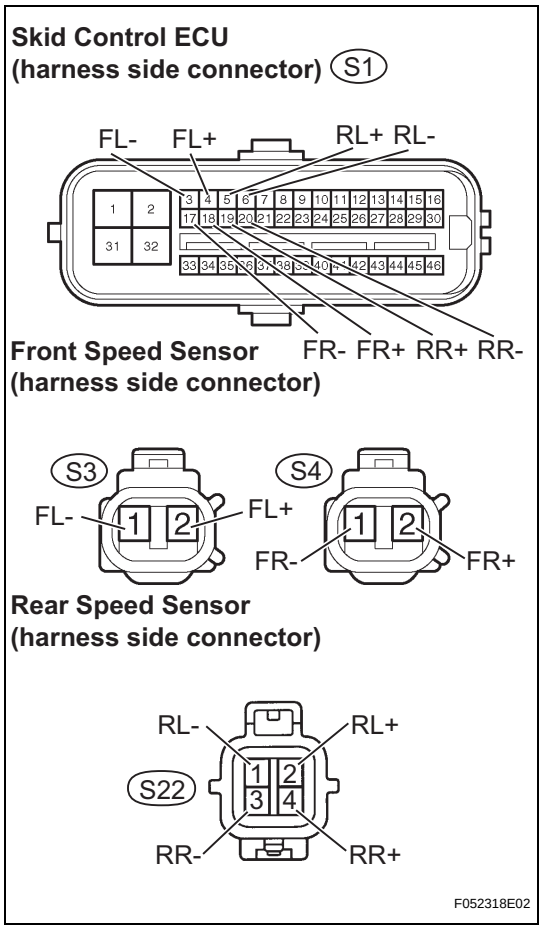
6 CHECK SPEED SENSOR

(a) Remove the speed sensor (See page BC-303 or BC-304).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

7	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SPEED SENSOR)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the speed sensor connectors.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-18 (FL+) - S3-2 (FL+)	Below 1 Ω
S1-4 (FL-) - S3-1 (FL-)	Below 1 Ω
S1-3 (FR+) - S4-2 (FR+)	Below 1 Ω
S1-17 (FR-) - S4-1 (FR-)	Below 1 Ω
S1-20 (RL+) - S22-2 (RL+)	Below 1 Ω
S1-6 (RL-) - S22-1 (RL-)	Below 1 Ω
S1-5 (RR+) - S22-4 (RR+)	Below 1 Ω
S1-19 (RR-) - S22-3 (RR-)	Below 1 Ω

(d) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-18 (FL+) - Body ground	10 kΩ or higher
S1-4 (FL-) - Body ground	10 kΩ or higher
S1-3 (FR+) - Body ground	10 kΩ or higher
S1-17 (FR-) - Body ground	10 kΩ or higher
S1-20 (RL+) - Body ground	10 kΩ or higher
S1-6 (RL-) - Body ground	10 kΩ or higher
S1-5 (RR+) - Body ground	10 kΩ or higher
S1-19 (RR-) - Body ground	10 kΩ or higher

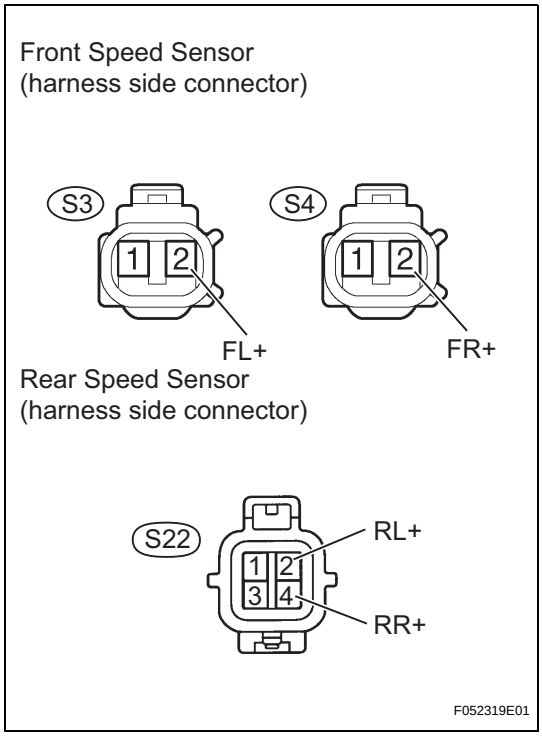
(e) Reconnect the speed sensor connectors.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

8 INSPECT MASTER CYLINDER SOLENOID (TERMINAL VOLTAGE)



(a) Disconnect the speed sensor connectors.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
S3-2 (FL+) - Body ground	7.5 to 12 V
S4-2(FR+) - Body ground	7.5 to 12 V
S22-2 (RL+) - Body ground	7.5 to 12 V
S22-4 (RR+) - Body ground	7.5 to 12 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the speed sensor connectors.

NG → **REPLACE MASTER CYLINDER SOLENOID**

OK

BC

9 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

REPLACE MASTER CYLINDER SOLENOID

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

DTC	C1225/25	SMC Solenoid Circuit

DTC	C1226/26	SPC Solenoid Circuit

DTC	C1227/27	SRC Solenoid Circuit

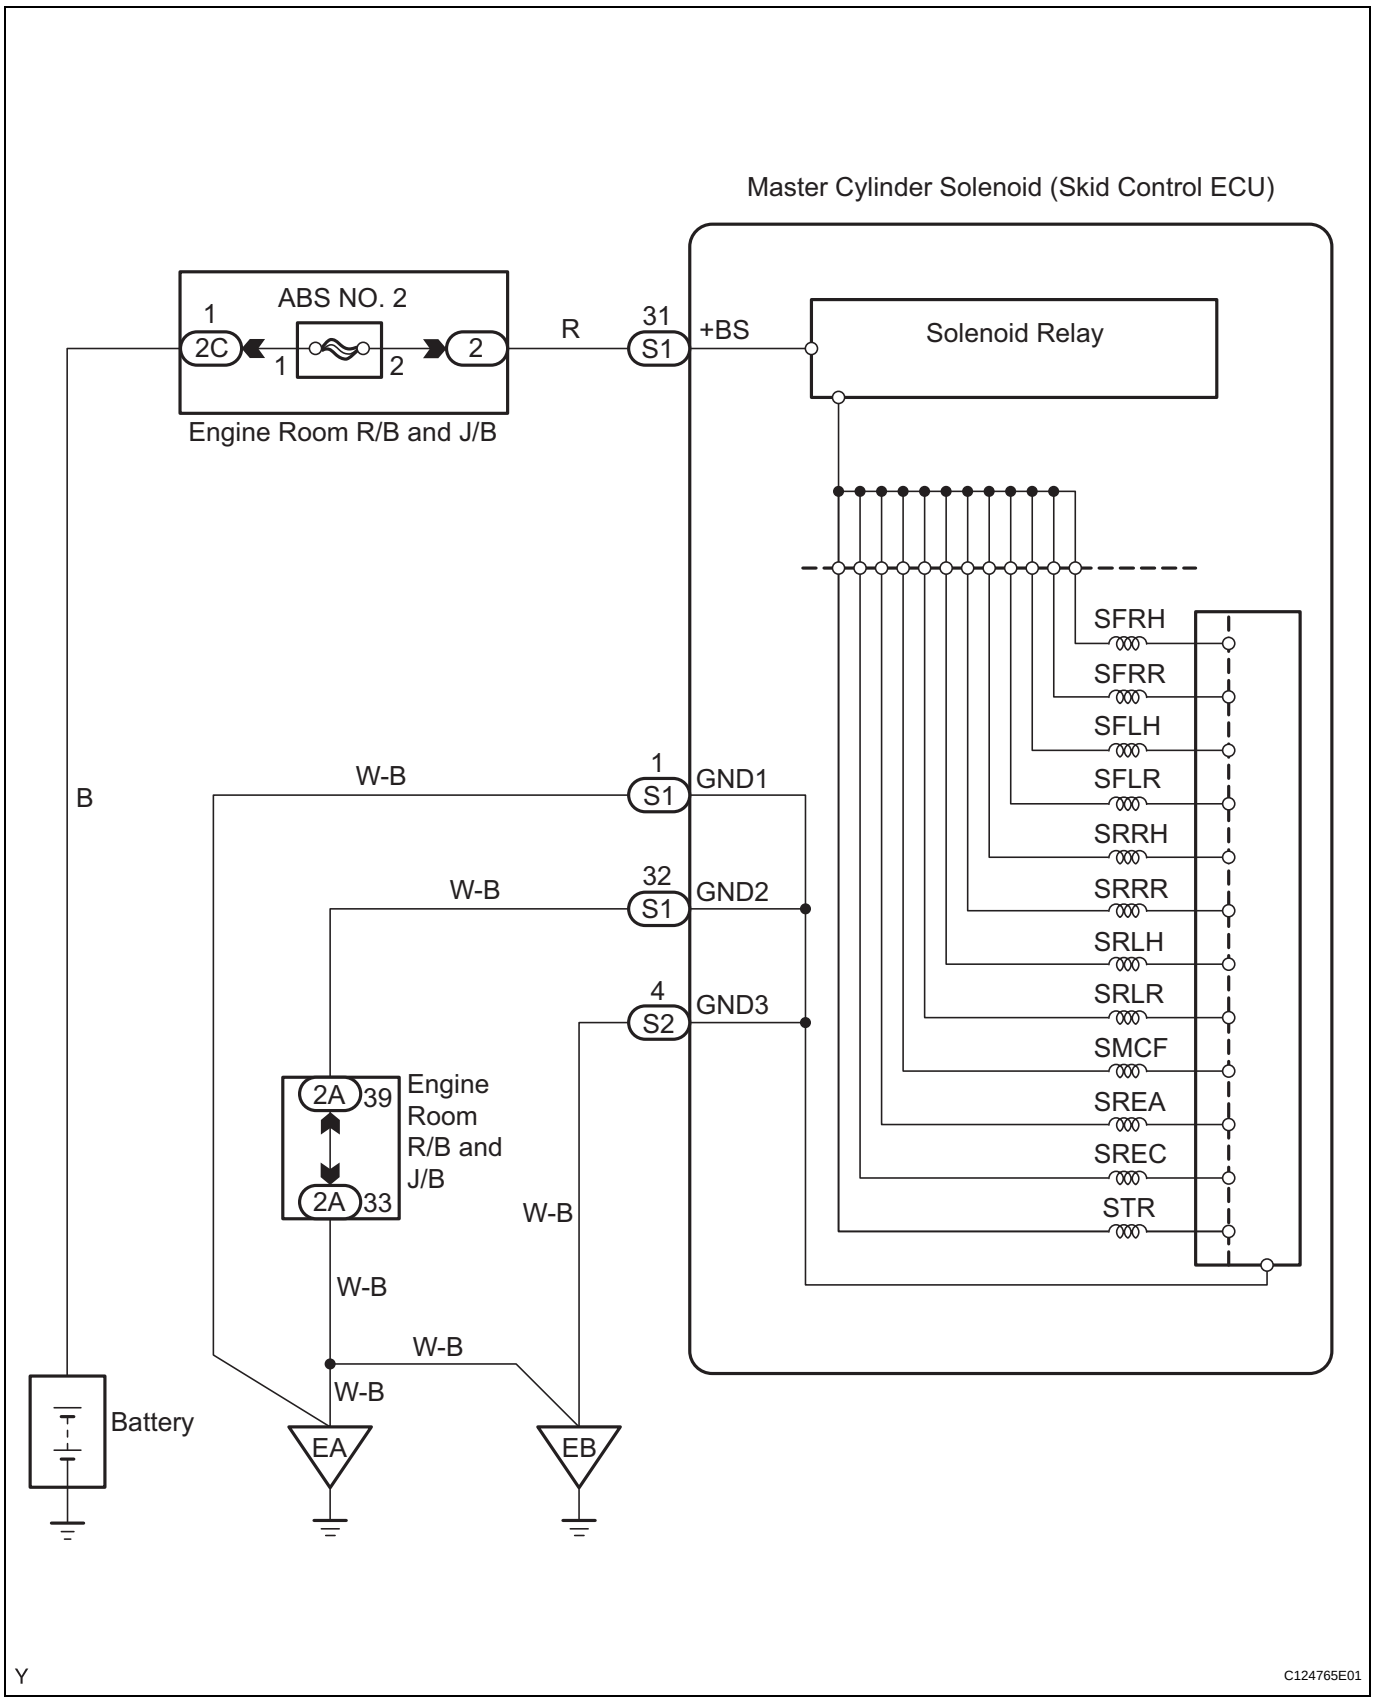
DTC	C1228/28	STR Solenoid Circuit

DESCRIPTION

The solenoid goes on when signals are received from the skid control ECU and controls the pressure action on the wheel cylinders thus controlling the braking force.

DTC No.	DTC Detecting Conditions	Trouble Areas
C0226/21	Open or short in SFRH or SFRR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SFRH or SFRR circuit
C0226/21	Open or short in SFLH or SFLR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SFLH or SFLR circuit
C0226/21	Open or short in SRRH or SRRR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SRRH or SRRR circuit
C0226/21	Open or short in SRLH or SRLR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SRLH or SRLR circuit
C0226/21	Open or short in SMCR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SMCR circuit
C0226/21	Open or short in SREA circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SREA circuit
C0226/21	Open or short in SREC circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • SREC circuit
C0226/21	Open or short in STR circuit continues for 0.05 seconds or more.	• Master cylinder solenoid (skid control ECU) • STR circuit

WIRING DIAGRAM



BC

1	**RECONFIRM DTC**

HINT:
This DTCs are set when a problem is identified in the master cylinder solenoid (skid control ECU).
The solenoid circuit is in the master cylinder solenoid. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTCs are output before replacing the master cylinder solenoid.

(a) Clear the DTC (See page BC-118).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

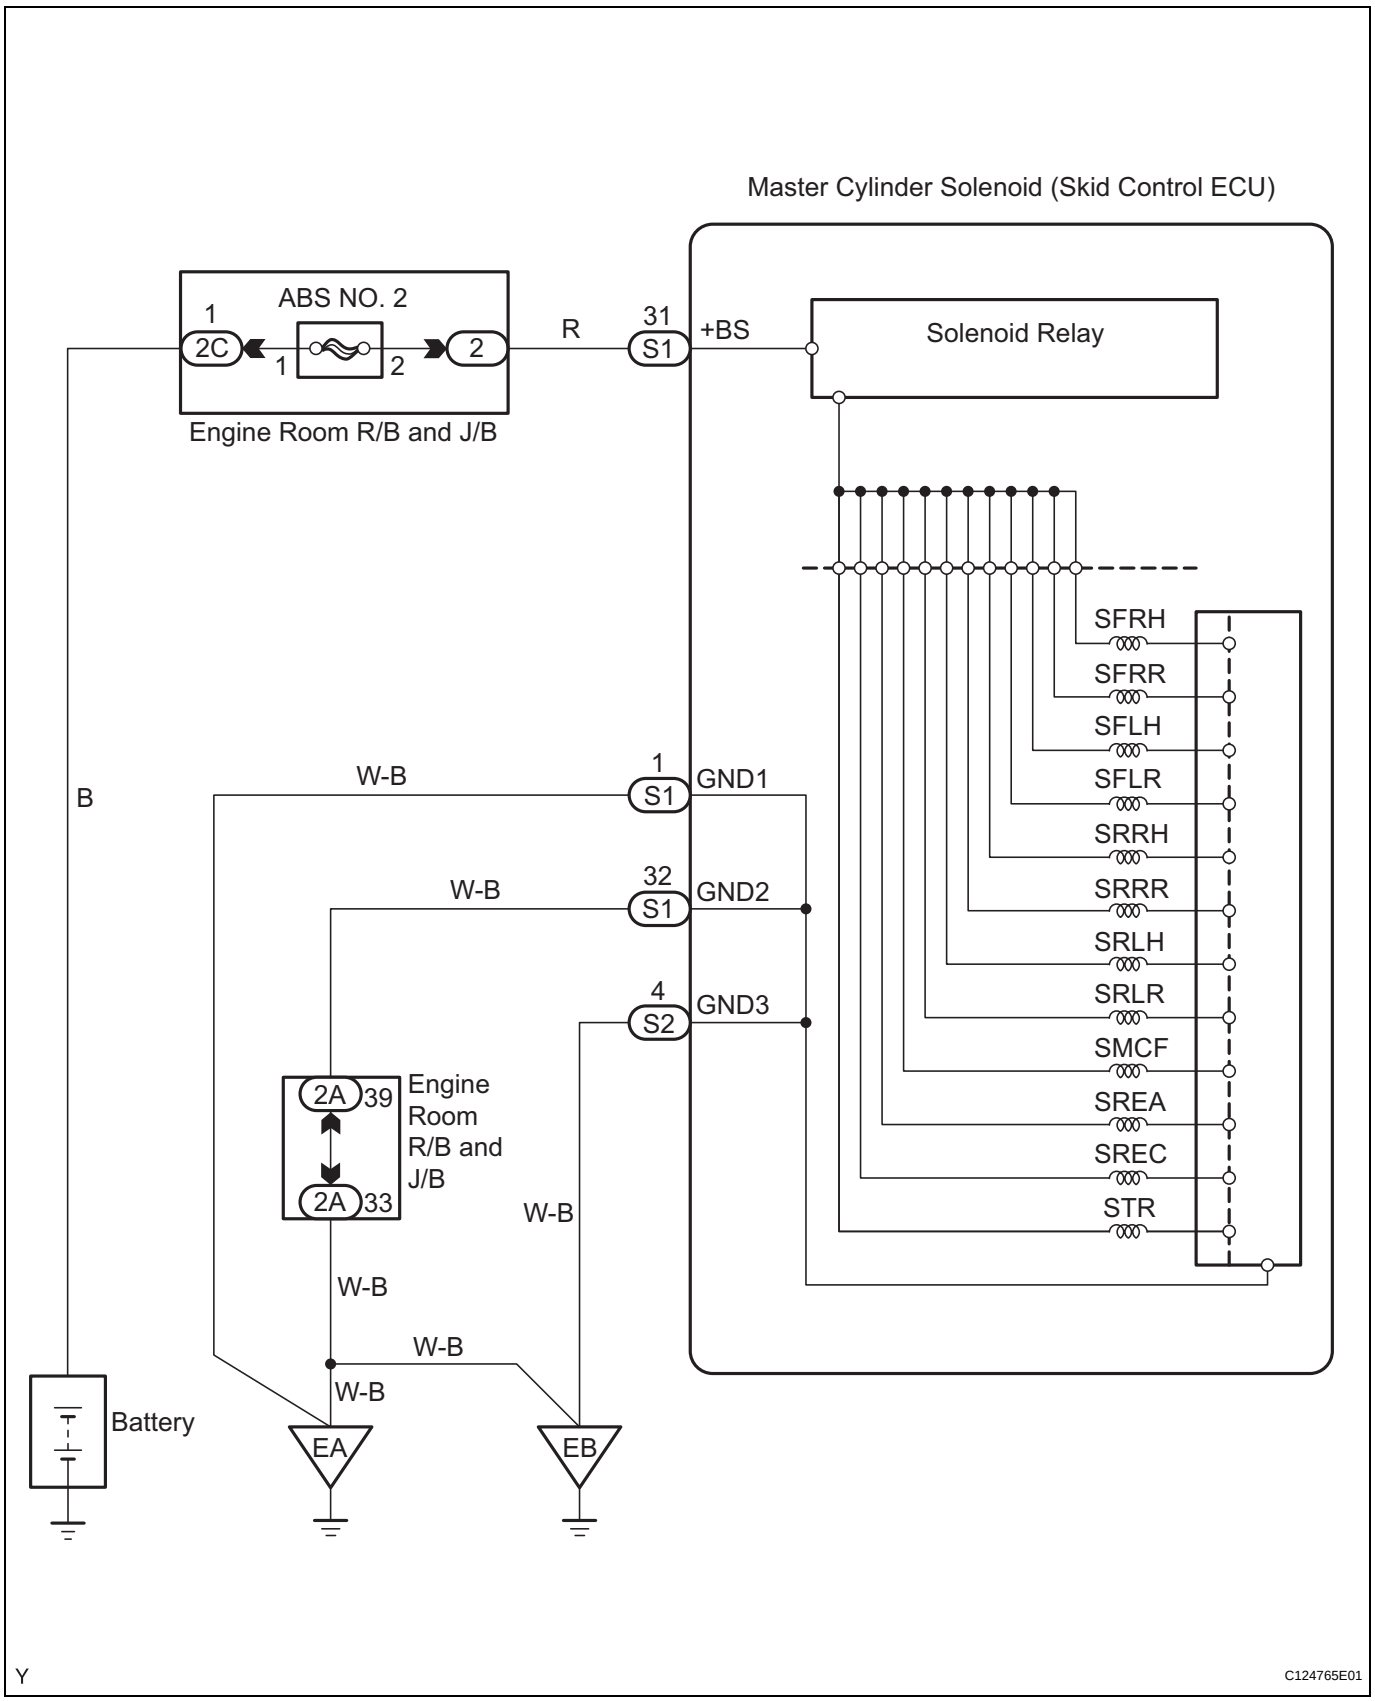
DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

DESCRIPTION

The ABS solenoid relay is built into the master cylinder solenoid.
This relay supplies power to each ABS solenoid. After the ignition switch is turned ON, if the initial check is OK, the relay turns on.

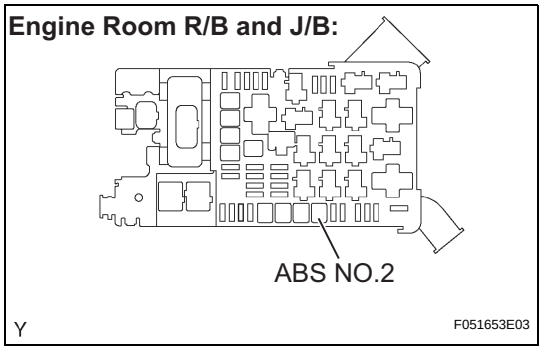
DTC No.	DTC Detecting Conditions	Trouble Areas
C0278/11	When either of following condition detected: 1. Both of following conditions continue for at least 0.2 seconds. (a) IG voltage between 9.5 V and 17 V. (b) Relay contact open when relay ON 2. Both of the following conditions continue for at least 0.2 seconds. (a) IG voltage 9.5 V or less when relay ON. (b) Relay contact remains open.	• ABS NO. 2 fuse • ABS solenoid relay • ABS solenoid relay circuit • Master cylinder solenoid (skid control ECU)
C0279/12	The following condition continues for at least 0.2 seconds. • Relay contact closed immediately after turning IG switch to the ON position when the relay OFF.	• ABS NO. 2 fuse • ABS solenoid relay • ABS solenoid relay circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



BC

1	INSPECT FUSE (ABS NO. 2)

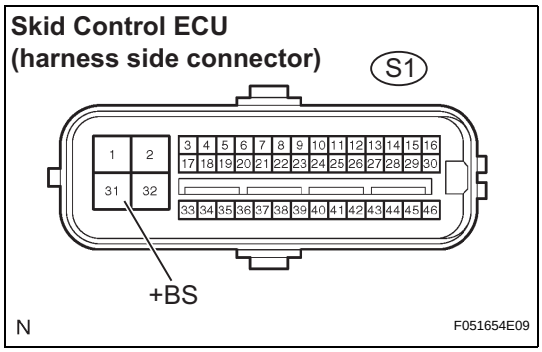


(a) Remove the ABS NO. 2 fuse from the engine room R/B and J/B.
(b) Measure the resistance of the ABS NO. 2 fuse.
Standard Resistance:
Below 1 Ω
(c) Reinstall the ABS NO. 2 fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

2	INSPECT SKID CONTROL ECU CONNECTOR (+BS TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
S1-31 (+BS) - Body ground	10 to 14 V

(c) Reconnect the skid control ECU connector.

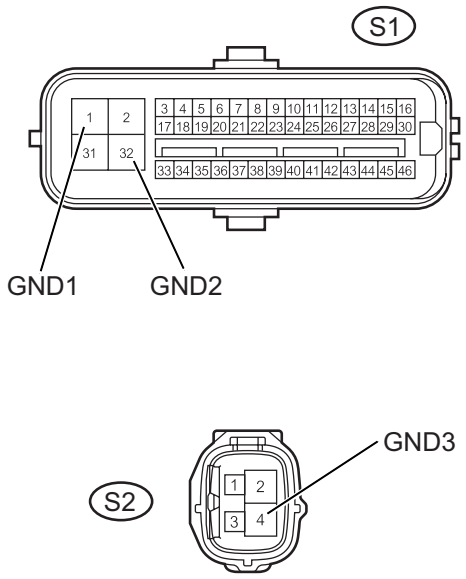
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	CHECK HARNESS OR CONNECTOR (GND - BODY GROUND)

Skid Control ECU
(harness side connector):



(a) Disconnect the skid control connectors.
(b) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-1, 32 (GND1, GND2) - Body ground	Below 1 Ω
S2-4 (GND3) - Body ground	Below 1 Ω

(c) Reconnect the skid control connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

BC

DTC	C1201/51	Engine Control System Malfunction

DESCRIPTION

If trouble occurs in the engine control system, the skid control ECU disables TRAC, A-TRAC and VSC controls.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1201/51	Malfunction signal received from ECM	Engine control system

1	CHECK DTC (ENGINE CONTROL SYSTEM)

(a) Check if any DTC is recorded for the engine control system (See page ES-40 or ES-38).

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR ENGINE CONTROL SYSTEM

A

REPLACE ECM

DTC	C1202/52	Brake Fluid Level Low / Open Circuit in Brake Fluid Level Warning Switch Circuit

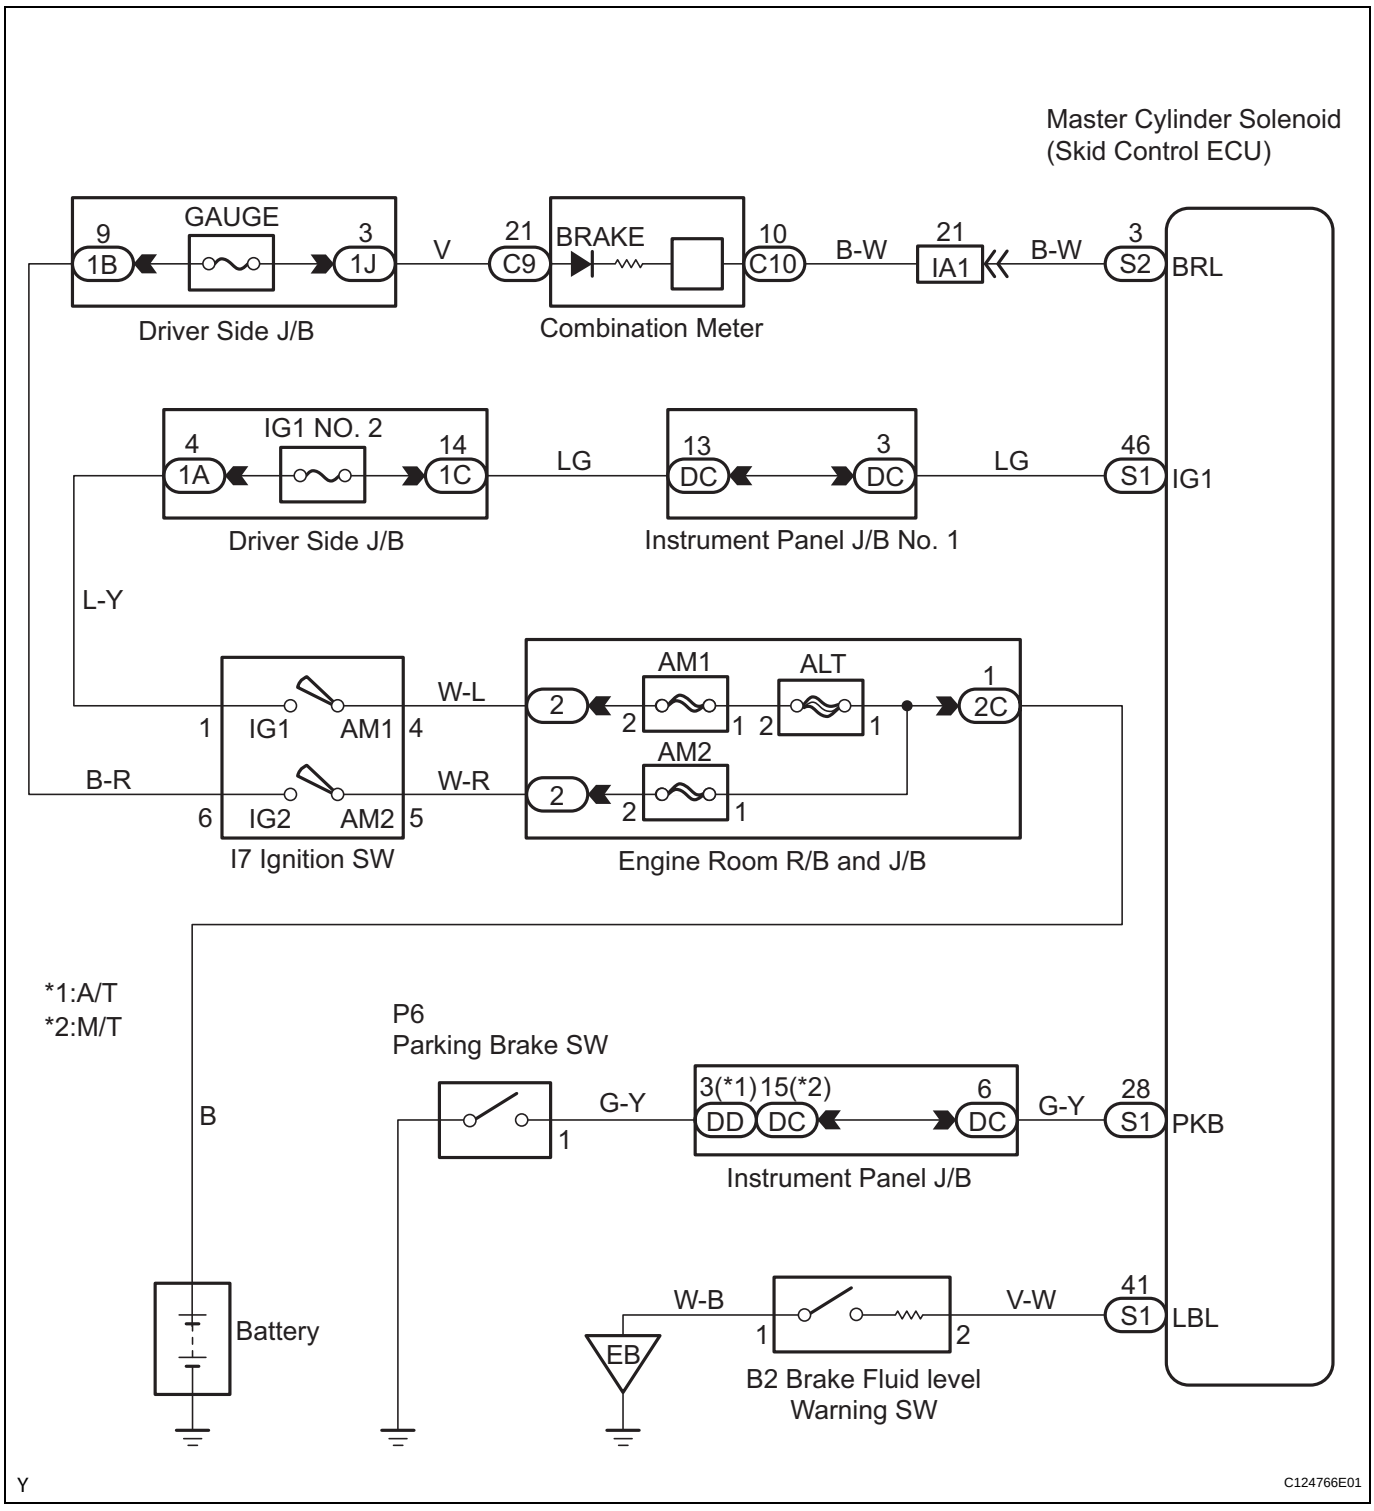
DTC	C1202/58	Brake Fluid Level Low / Open Circuit in Brake Fluid Level Warning Switch Circuit

DESCRIPTION

The brake fluid level warning switch sends the appropriate signal to the skid control ECU when the brake fluid level drops.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1202/52 C1202/58	When any of the following conditions detected: 1. Fluid level of brake master cylinder reservoir tank stays low for 30 seconds or more when vehicle stops, or for 60 seconds or more when driving. 2. With ECU terminal IG1 voltage 9.5 V to 17.2 V, an open circuit for brake fluid level warning switch circuit continues for 2 seconds or more. 3. Fluid level of master cylinder reservoir tank LOW for 4 seconds or 40 seconds after ignition switch turned ON, of for 7 seconds during pump motor operation.	• Brake fluid level • Brake fluid level warning switch • Brake fluid level warning switch circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



HINT:
When C1241/41 is output together with C1202/52 or C1202/58, inspect and repair the trouble areas indicated by C1241/41 first.

1	CHECK BRAKE FLUID LEVEL

(a) Turn the ignition switch to OFF.

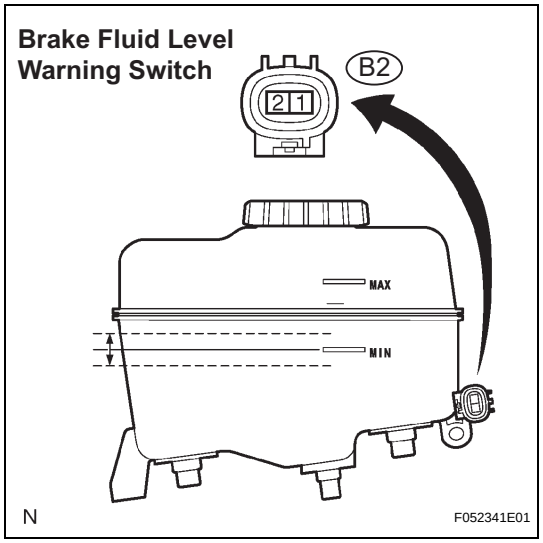
(b) Depress the brake pedal 20 times or more (until the pedal reaction feels light and pedal stroke becomes longer).

(c) Check the amount of fluid in the brake reservoir.
HINT:
When the ignition switch is turned to the ON position, brake fluid is sent to the accumulator and the fluid level decreases by approximately 5 mm from the level when the ignition switch is off (normal).
NOTICE:
Do not move the wheels with the ignition switch off.
OK:
Brake fluid level is correct.

NG → **CHECK FOR LEAKAGE AND REPAIR**

OK

2 INSPECT BRAKE FLUID LEVEL WARNING SWITCH



(a) Disconnect the brake fluid level warning switch connector.

(b) Measure the resistance.
Standard Resistance

Tester Connection	Condition	Specified Condition
B2-1 - B2-2	Float UP (Switch OFF)	1.9 to 2.1 kΩ
B2-1 - B2-2	Float DOWN (Switch ON)	Below 1 Ω

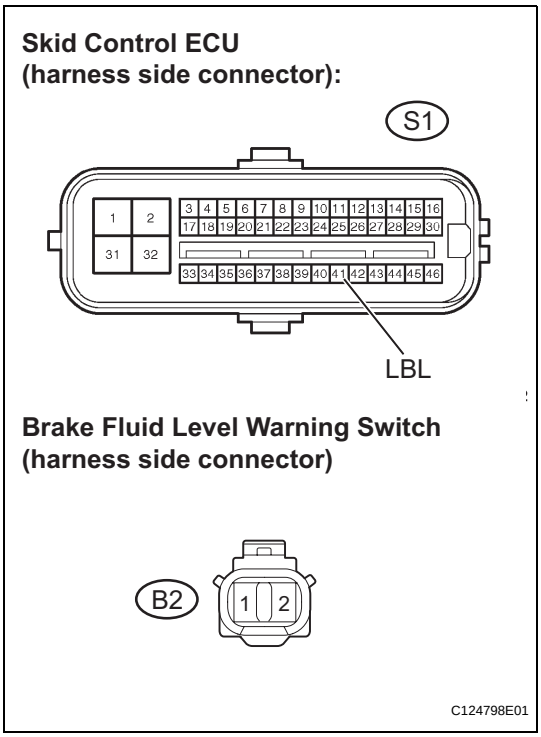
(c) Reconnect the brake fluid level warning switch connector.
HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the maximum level.

NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**

OK

BC

3	CHECK HARNESS AND CONNECTOR (BRAKE FLUID LEVEL WARNING SWITCH - SKID CONTROL ECU)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-41 (LBL) - B2-2	Below 1 Ω

(d) Reconnect the brake fluid level warning switch connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

4	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

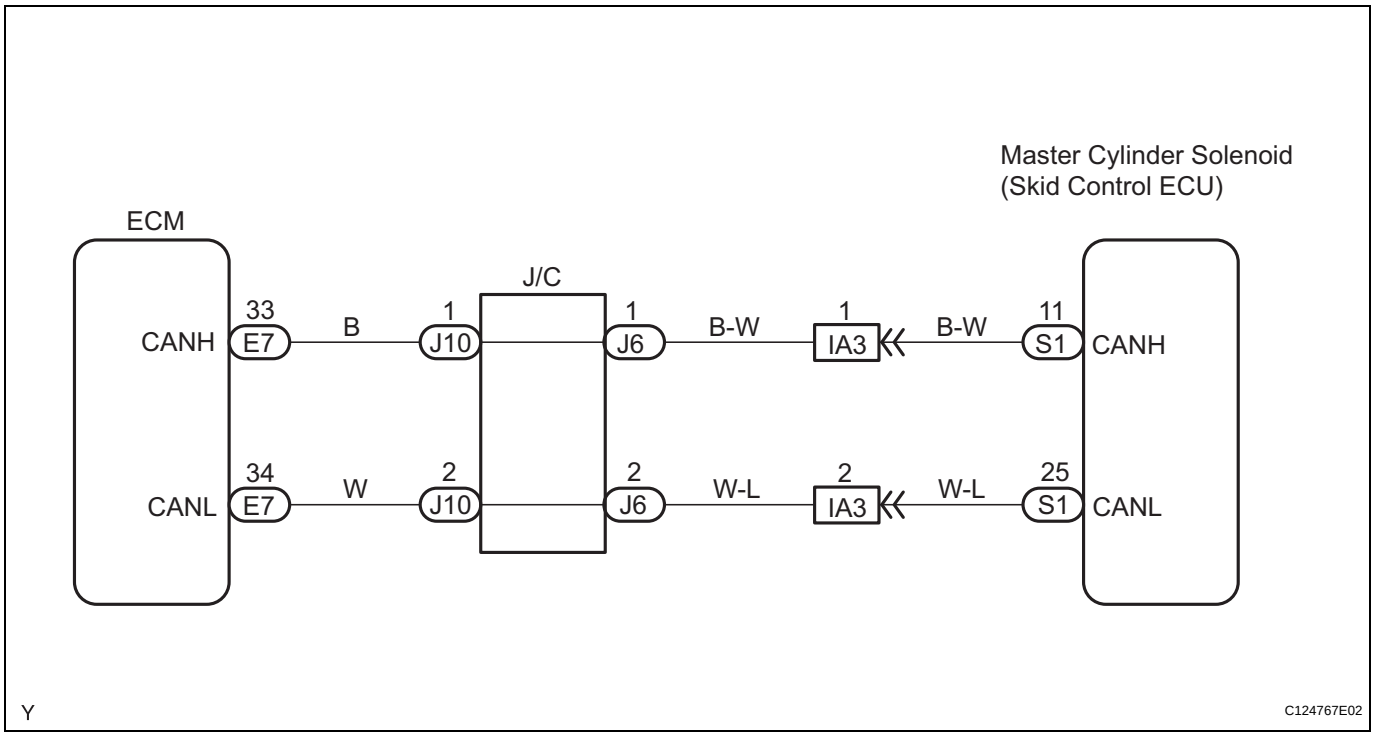
DTC	C1203/53	ECM Communication Circuit Malfunction

DESCRIPTION

The circuit sends TRAC, A-TRAC and VSC control information from the skid control ECU to the ECM, and engine control information from the ECM to the skid control ECU via the CAN communication system.

DTC No.	DTC Detecting Condition	Trouble Areas
C1203/53	Information relating to engine drive source or destination stored in ECM does not match that stored in skid control ECU.	• CAN communication system • ECM

WIRING DIAGRAM



BC

1	CHECK DTC (ENGINE CONTROL SYSTEM)

(a) Check if any DTC is recorded for the engine control system (See page ES-40 or ES-38).

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR ENGINE CONTROL SYSTEM

A

REPLACE ECM

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone

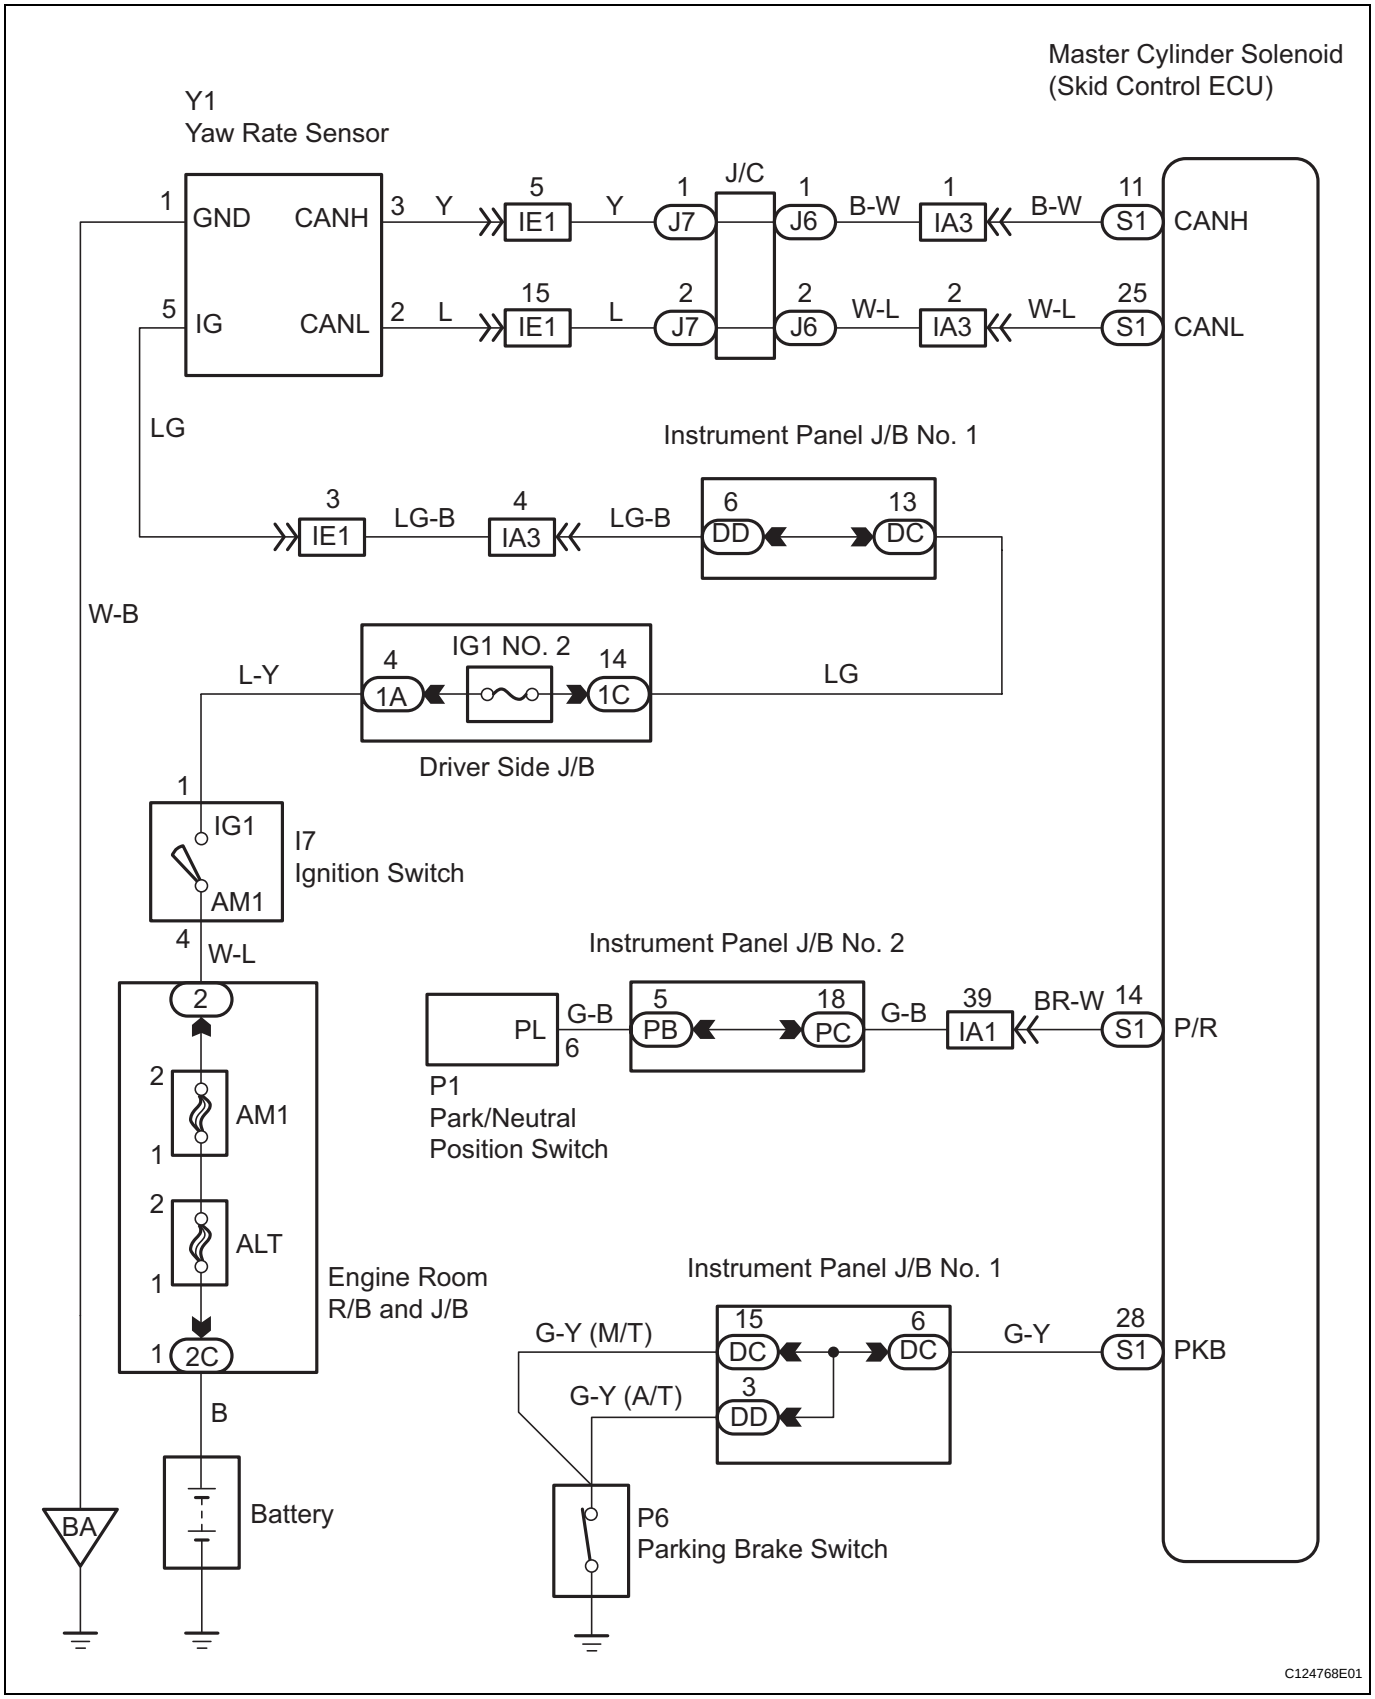
DTC	C1336/39	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

Skid control ECU receives signals from the yaw rate sensor and deceleration sensor via the CAN communication system.
The deceleration sensor is built into the yaw rate sensor.
If there is trouble in the bus lines between the yaw rate sensor and deceleration sensor and the CAN communication system, the DTCs U0123/62 (yaw rate sensor communication trouble) and U0124/95 (deceleration sensor communication trouble) are output.
These DTCs are also output when the calibration has not been completed.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1210/36	When either of following 1 or 2 detected: 1. When battery terminal connected, shift lever moved to non-P position (A/T), parking brake OFF (M/T) within 15 seconds of ECU terminal IG1 initially turned ON. 2. Yaw rate sensor zero point recorded in ECU deleted.	• Yaw rate sensor and deceleration sensor • Zero point calibration not complete • PNP switch circuit (P position) (A/T) • Parking brake switch circuit (M/T)
C1336/39	When either of following 1 or 2 detected: 1. In TEST mode, shift lever shifted to non-P position (A/T), parking brake OFF (M/T) 2 seconds after ECU terminal IG1 initially turned ON. 2. Deceleration sensor zero point recorded in ECU deleted.	• Yaw rate sensor and deceleration sensor • Zero point calibration not complete • PNP switch circuit (P position) (A/T) • Parking brake switch circuit (M/T)

WIRING DIAGRAM



BC

HINT:
When U0073/94, U0100/65, U0123/62, U0124/95 or U0126/63 are output accompanied by C1210/36 or C1336/39, inspect and repair the trouble areas indicated by U0073/94, U0100/65,U0123/62, U0124/95 or U0126/63 first.

1	PERFORM YAW RATE AND DECELERATION SENSOR ZERO POINT CALIBRATION

(a) Perform the zero point calibration of the yaw rate sensor and deceleration sensor (See page BC-99).

NEXT

2	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

3	CHECK YAW RATE AND DECELERATION SENSOR INSTALLATION

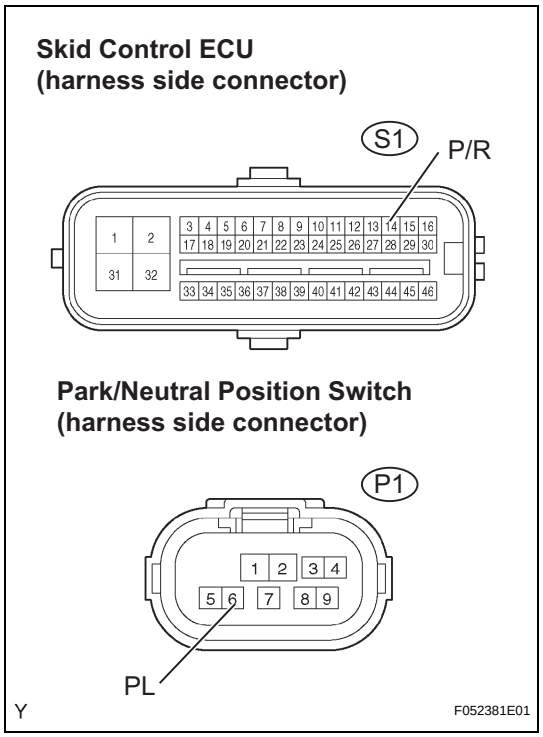
BC

(a) Check that the yaw rate and deceleration sensor has been installed properly (See page BC-309).
OK:
The sensor is tightened to the specified torque.
The sensor is not tilted.

NG → INSTALL YAW RATE SENSOR CORRECTLY

OK

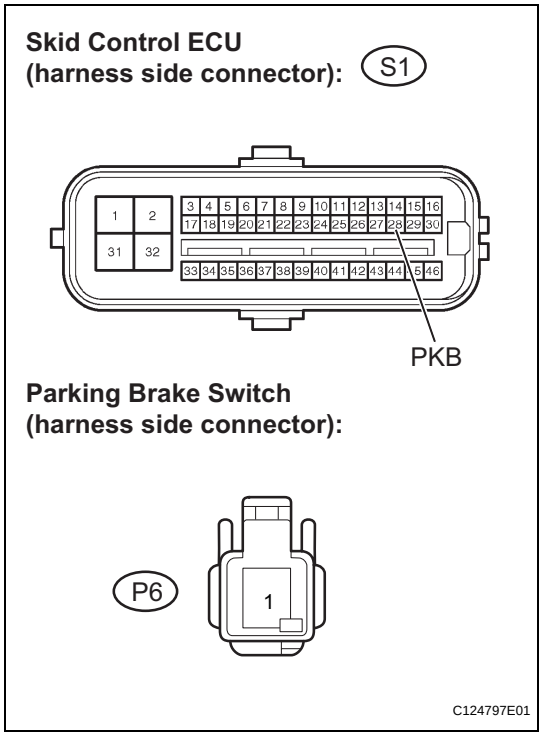
4	CHECK HARNESS AND CONNECTOR (ECU - PARK/NEUTRAL POSITION SWITCH OR PARKING BRAKE SWITCH)



(a) A/T
(1) Disconnect the skid control ECU connector.
(2) Disconnect the Park/Neutral position switch connector.
(3) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-14 (P/R) - P1-6 (RL)	Below 1 Ω

(4) Reconnect the Park/Neutral position switch connector.
(5) Reconnect the skid control ECU connector.



(b) M/T:
(1) Disconnect the skid control ECU connector.
(2) Disconnect the parking brake switch connector.
(3) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-28 (PKB) - P6-1	Below 1 Ω

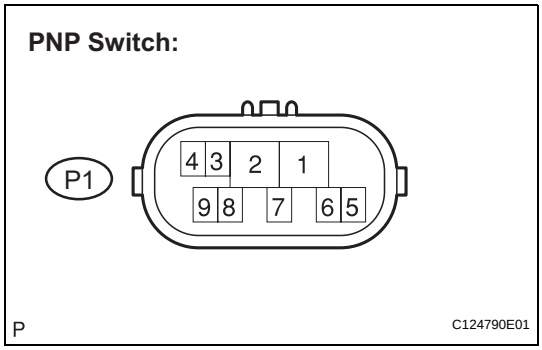
(4) Reconnect the parking brake switch connector.
(5) Reconnect the skid control ECU connector.

BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

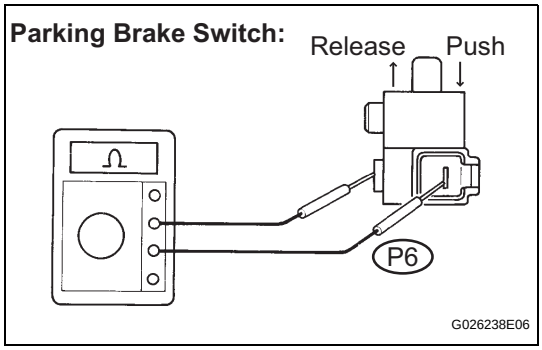
5	INSPECT PARK/NEUTRAL POSITION SWITCH OR PARKING BRAKE SWITCH



(a) Inspect the Park/Neutral Position (PNP) switch (for A/T models).
(1) Disconnect the P1 PNP switch connector.
(2) Check the resistance when the transmission gear selector lever is moved to each position.
Standard Resistance

Gear Selector Lever Positions	Tester Connections	Specified Conditions
P	2 - 6, 4 - 5	Below 1 Ω
R	1 - 2	Below 1 Ω
N	2 - 9, 4 - 5	Below 1 Ω
D	2 - 7	Below 1 Ω
2	2 - 3	Below 1 Ω
L	2 - 8	Below 1 Ω

(3) Reconnect the PNP switch connector.



(b) Inspect the parking brake switch (for M/T models).
(1) Disconnect the parking brake switch connector.
(2) Measure the resistance.
Standard Resistance

Tester Connection	Condition	Specified Condition
P6-1 Ground part	Released	Below 1 Ω
P6-1 Ground part	Pushed in	Below 1 Ω

(3) Reconnect the parking brake switch connector.

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH OR PARKING BRAKE SWITCH**

OK

6	REPLACE YAW RATE AND DECELERATION SENSOR

(a) Replace the yaw rate and deceleration sensor (See page BC-308).

NEXT

7	PERFORM YAW RATE AND DECELERATION SENSOR ZERO POINT CALIBRATION

(a) Perform the zero point calibration of the yaw rate sensor and deceleration sensor (See page BC-99).

NEXT

8	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).

BC

(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

DTC	C1223/43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS system. When DTC C1223/43 is stored, there is no malfunction in the skid control ECU.

DTC No.	DTC Detecting Condition	Trouble Areas
C1223/43	ABS control system abnormal	ABS control system

1	CHECK DTC (ABS)

(a) Clear the DTC (See page BC-118).
(b) Check if the same DTC is recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

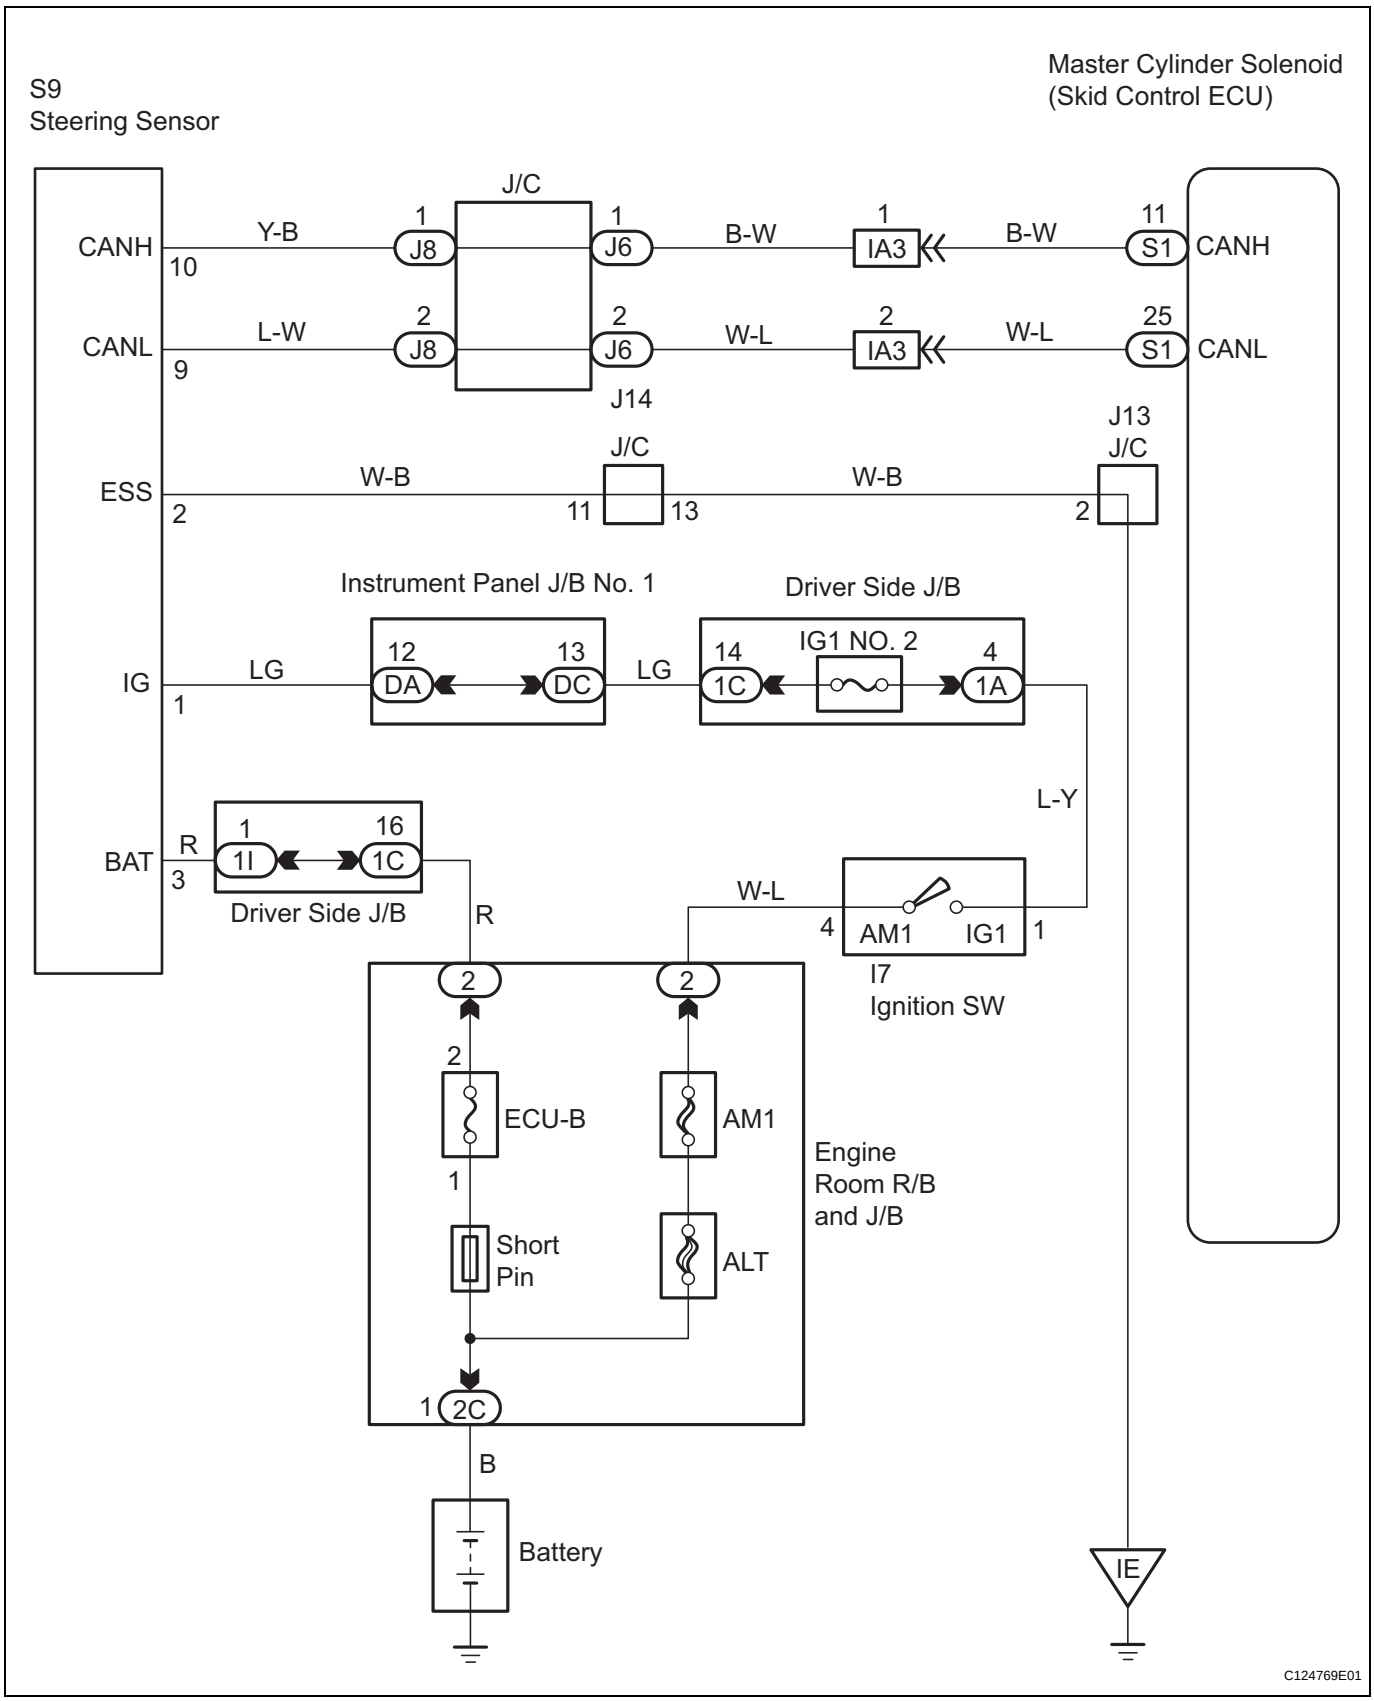
DTC	C1290/66	Steering Angle Sensor Zero Point Malfunction

DESCRIPTION

The steering angle sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the communication system, the DTC will be detected by the diagnosis function.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1231/31	When ECU IG1 terminal voltage 9.5 V or more, steering angle sensor malfunction signal received.	• Master cylinder solenoid (skid control ECU) • Steering angle sensor • Steering angle sensor circuit • CAN communication system
C1290/66	Steering angle sensor zero point calibration position significantly differs from recorded value.	Steering angle sensor

WIRING DIAGRAM



HINT:

- When U0073/94, U0123/62, U0124/95 or U0126/63 are output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0123/62, U0124/95 or U0126/63 first.

- When the speed sensor or the yaw rate sensor has trouble, DTCs relating to the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs relating to the speed sensor (C0200/31, C0205/32, C0210/33, C0215/34, C1235/35, C1236/36, C1238/38, C1239/39) or yaw rate (deceleration) sensor (C1232/32, C1234/34, C1243/43, C1244/44, C1245/45, C1381/97) are output together with other DTCs relating to the steering angle sensor, inspect and repair the speed sensor and yaw rate (deceleration) sensor first, and then inspect and repair the steering angle sensor.

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check CAN communication system DTC (See page CA-7).

Result	Proceed to
DTC not output	A
DTC output	B

NG → **REPAIR CAN COMMUNICATION SYSTEM**

OK

2 READ VALUE OF DATA LIST (STEERING ANGLE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester ON.
(d) Select "DATA LIST" mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
STEERING ANG	Steering sensor/ Min.: -1152 deg, Max.: 1150.875 deg	Left turn: Increase Right turn: Decrease	-

(e) Check that the steering angle sensor value displayed on the intelligent tester changes when turning the steering wheel.
OK:
Steering angle sensor value changes.

OK (When troubleshooting in accordance with DTC CHART)	A
OK (When troubleshooting in accordance with PROBLEM SYMPTOMS TABLE)	B
NG	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

C → **Go to step 4**

A

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).

BC

(b) Check if the same DTCs are recorded.

DTC output	A
DTC not output	B

B → END

A

REPLACE MASTER CYLINDER SOLENOID

4 CHECK TERMINAL VOLTAGE (STEERING ANGLE SENSOR)

(a) Remove the steering wheel and the column lower cover.
(b) Disconnect the steering angle sensor connector.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
S9-1 (IG1) - S9-2 (ESS)	10 to 14 V
S9-3 (BAT) - S9-2 (ESS)	10 to 14 V

(e) Turn the ignition switch to OFF.
(f) Reconnect the steering angle sensor connector.
(g) Reinstall the steering wheel and the column lower cover.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 REPLACE STEERING ANGLE SENSOR

(a) Replace the steering angle sensor (See page BC-311).

NEXT

6 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPLACE MASTER CYLINDER SOLENOID

DTC	C1232/32	Stuck in Deceleration Sensor

DTC	C1234/34	Yaw Rate Sensor Malfunction

DTC	C1243/43	Acceleration Sensor Stuck Malfunction

DTC	C1244/44	Open or Short in Deceleration Sensor Circuit

DTC	C1245/45	Acceleration Sensor Output Malfunction

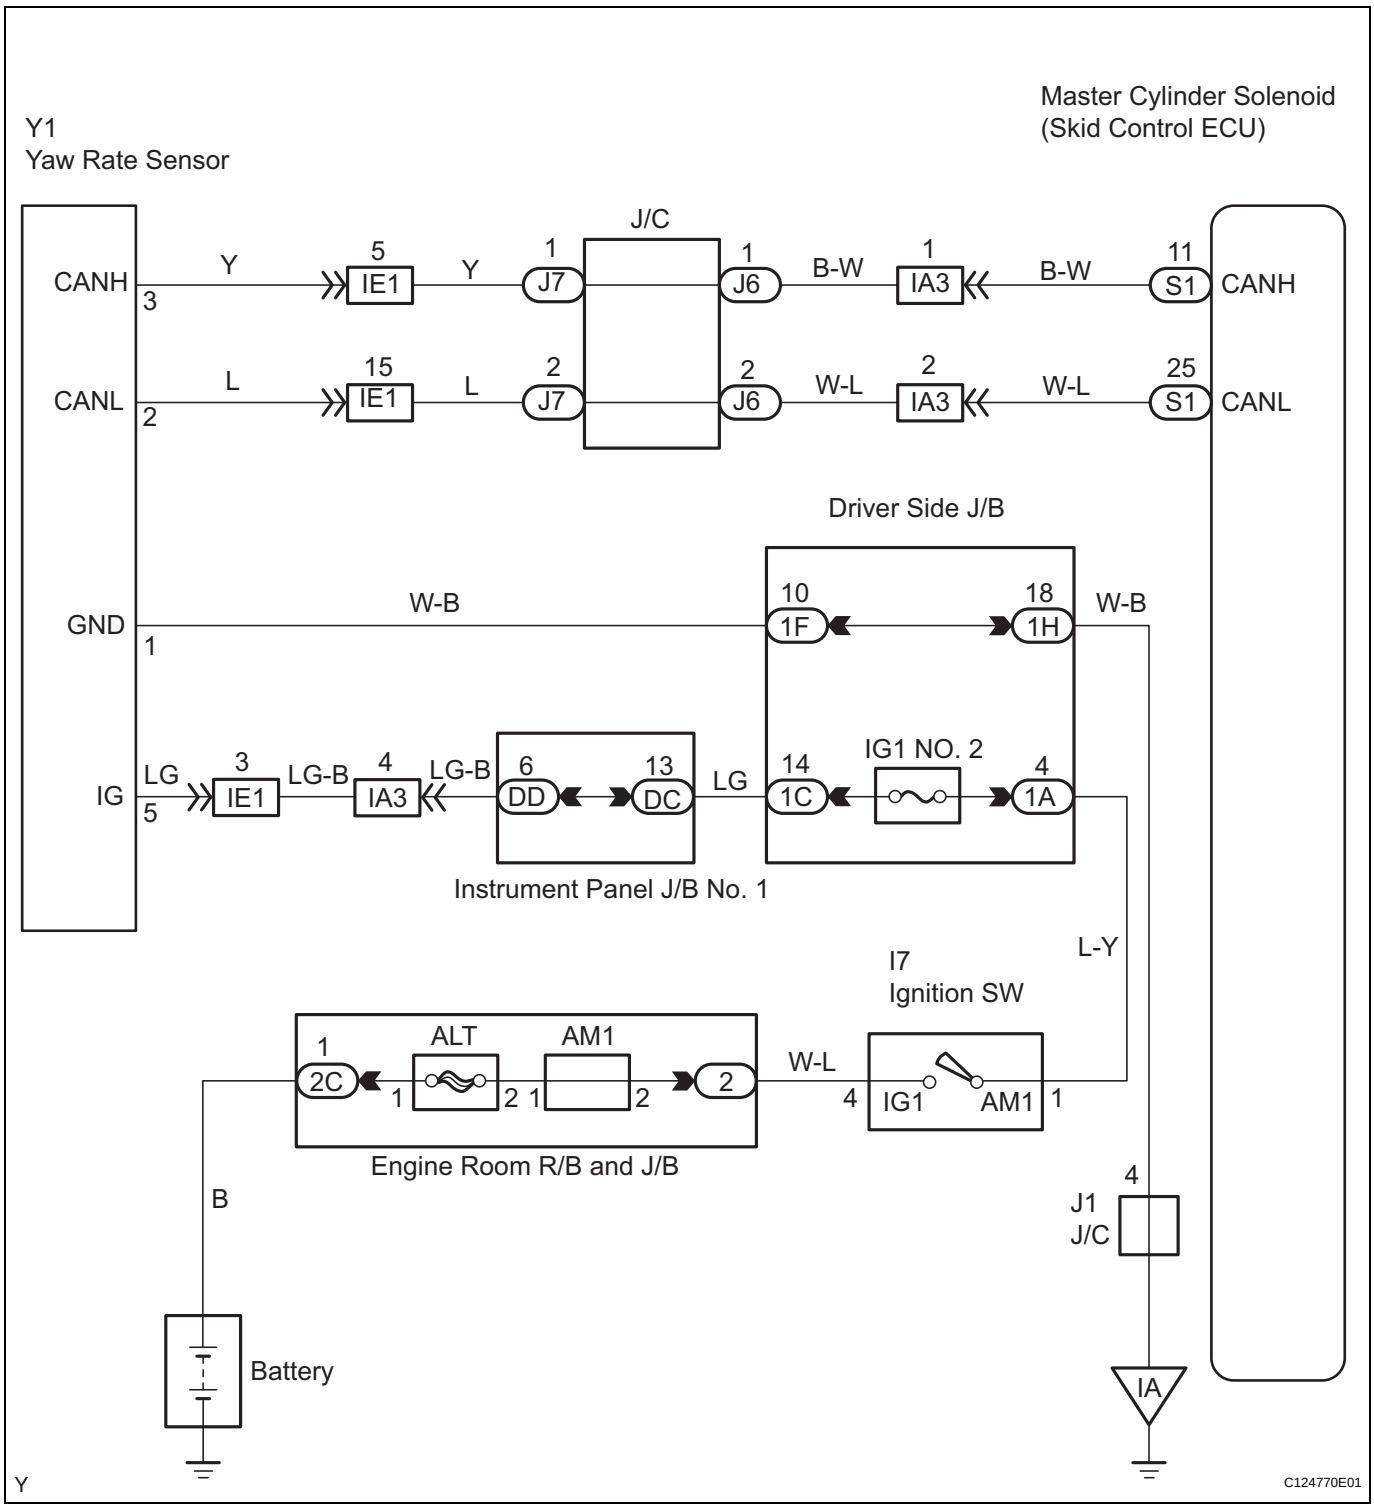
DTC	C1381/97	Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction

DESCRIPTION

The skid control ECU receives signals from the yaw rate sensor and deceleration sensor via CAN communication system.
The deceleration sensor is built into the yaw rate sensor.
If there is trouble in the bus lines between the yaw rate sensor and deceleration sensor and the CAN communication system, DTC U0123/62 (yaw rate sensor communication trouble) and U0124/95 (G sensor communication trouble) are output.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1232/32	At vehicle speed of 6 mph (10 km/h) or more, signal from either GL1 or GL2 does not change for 30 seconds or more.	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit
C1234/34	Sensor malfunction signal received from yaw rater sensor.	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit
C1243/43	Following condition repeats 16 times. • GL1 and GL2 do not change by more than 2LSB when vehicle decelerates from 19 mph (30 km/h) to 0 mph (0 km/h).	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit
C1244/44	When either of following (1 or 2) detected: 1. Both of following conditions continue for at least 60 seconds. • Vehicle stopped. • Difference between GL1 and GL2 does not drop below 0.4 G once it reaches 0.6 G or more. 2. Data malfunction signal received from deceleration sensor.	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit
C1245/45	Following condition continues for at least 60 seconds. • Difference between values calculated from deceleration sensor value and vehicle speed exceeds 0.35 G.	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit
C1381/97	Deceleration sensor power source malfunction signal received for at least 10 seconds at a speed of more than 2 mph (3 km/h).	• Yaw rate and deceleration sensor • Yaw rate and deceleration sensor circuit

WIRING DIAGRAM



HINT:
When U0073/94, U0123/62, U0124/95 or U0126/63 are output together with C1232/32 or C1234/34, inspect and repair the trouble areas indicated by U0073/94, U0123/62, U0124/95 or U0126/63 first.

1	CHECK DTC

(a) Clear the DTCs (See page BC-118).

(b) Check if the DTCs U073/94, U0123/62, C1210/36 and/or C1336/39 are detected.

Result	Proceed to
DTC U073/94, U0123/62, U1210/36 and/or C1336/39 not output	A

DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**

DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**

DTC	**C1238/38**	**Foreign Object is Attached on Tip of Rear Speed Sensor RH**

DTC	**C1239/39**	**Foreign Object is Attached on Tip of Rear Speed Sensor LH**

DESCRIPTION

The Skid Control ECU sets this DTC if, according to abnormal signals input by the sensor, it detects that foreign material is adhering to the speed sensor tip or the sensor rotor, or the rotor has any missing teeth. This DTC may be set if parts such as the speed sensor circuit connector or wire harness are malfunctioning.

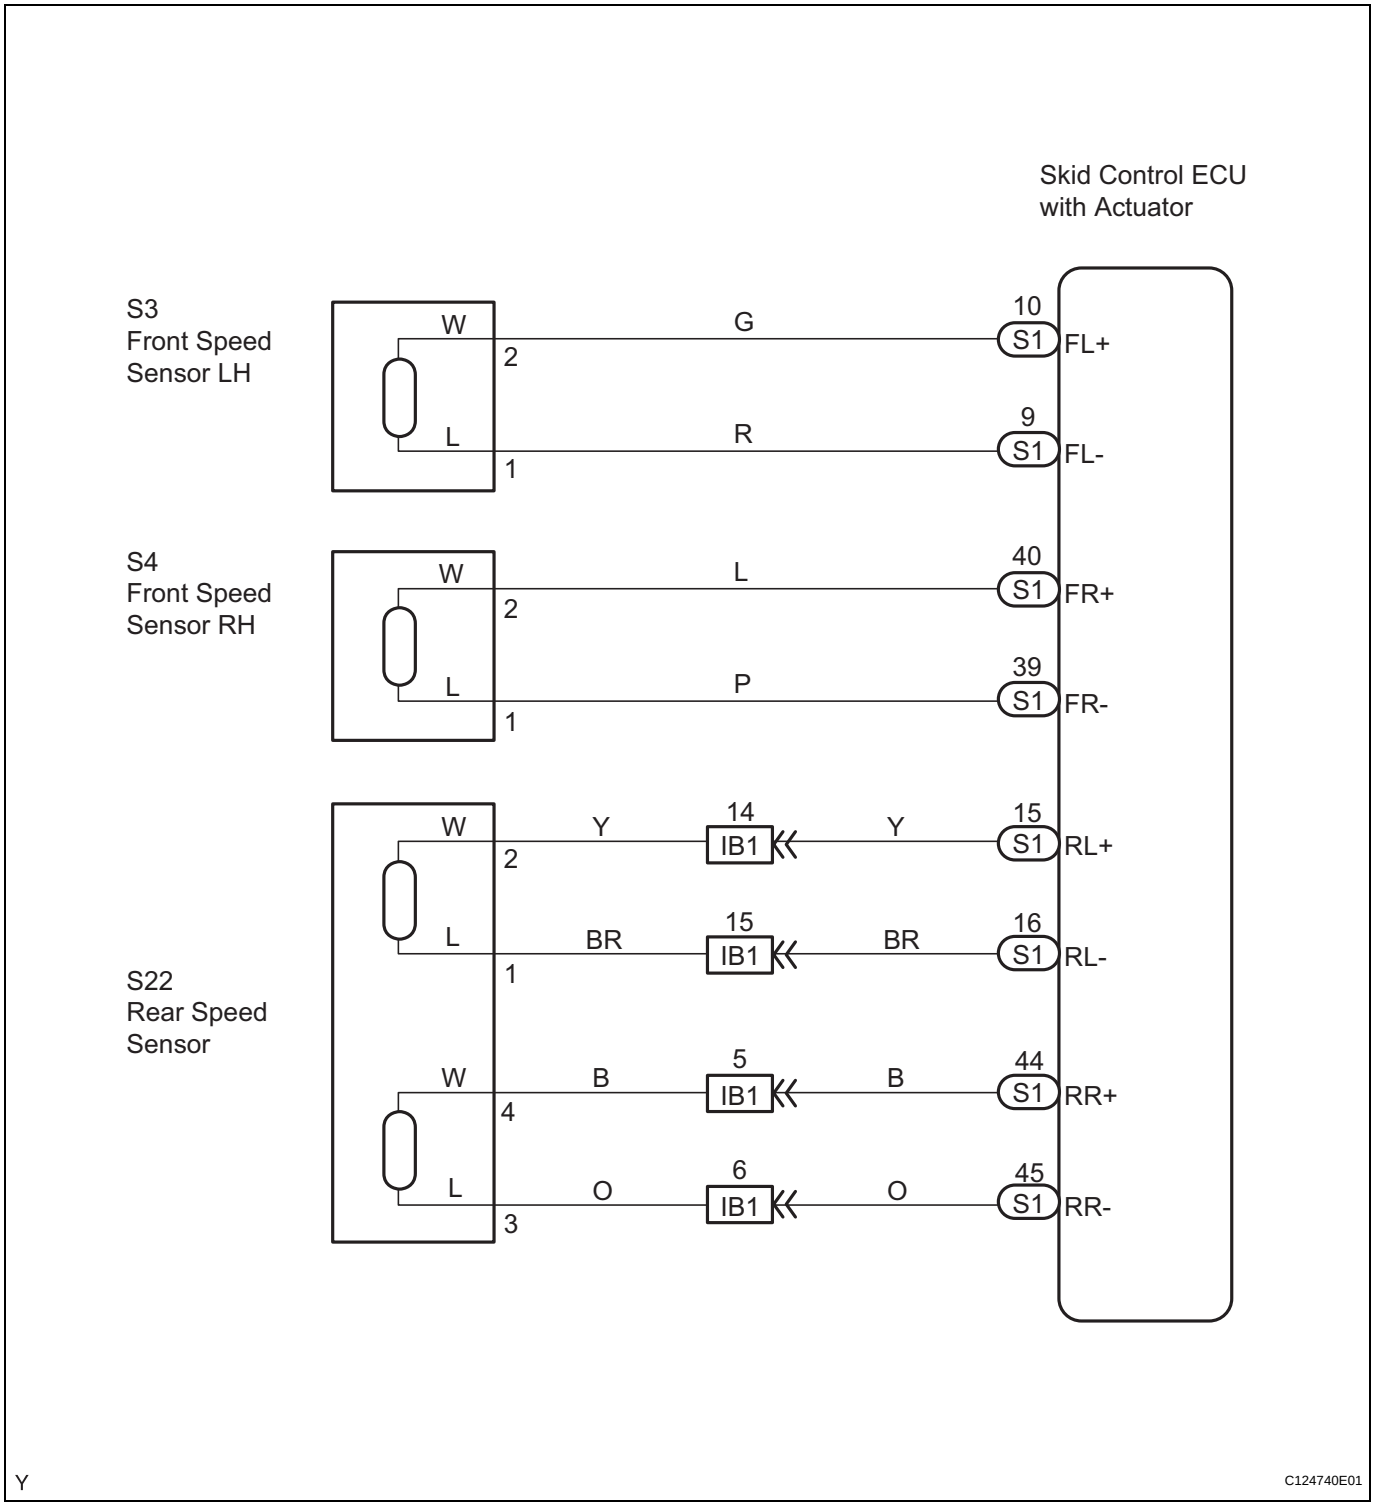
DTC No.	DTC Detecting Conditions	Trouble Areas
C1235/35 C1236/36 C1238/38 C1239/39	• At vehicle speed of 12 mph (20 km/h) or more, noise in speed sensor signal continues for 5 seconds or more. • At vehicle speed of 6 mph (10 km/h) or more, noise detected as rotor turns, for 15 seconds or more.	• Master cylinder solenoid (skid control ECU) • Speed sensor • Speed sensor rotor

HINT:

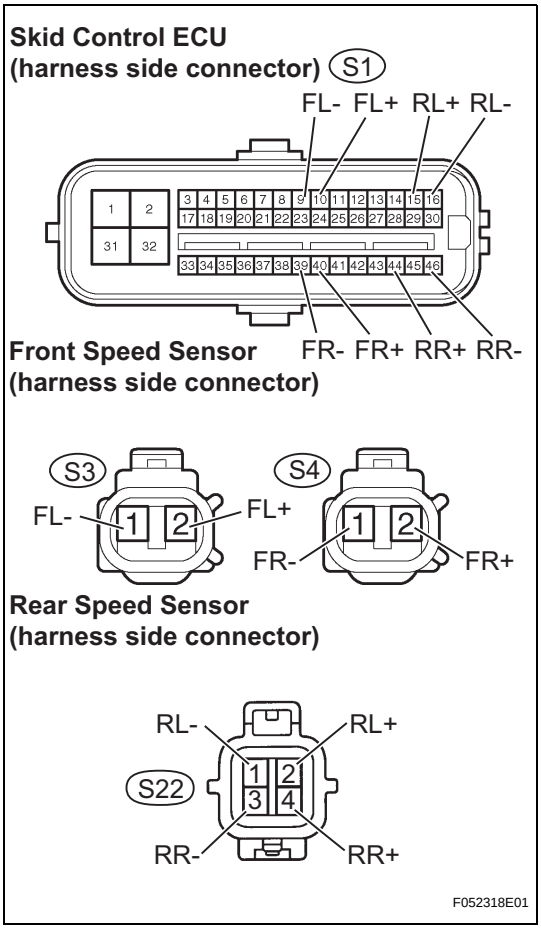
BC

DTC C1235/35 relates to the front right speed sensor.
DTC C1236/36 relates to the front left speed sensor.
DTC C1238/38 relates to the rear right speed sensor.
DTC C1239/39 relates to the rear left speed sensor.

WIRING DIAGRAM



1	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SPEED SENSOR)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the speed sensor connectors.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - S3-2 (FL+)	Below 1 Ω
S1-9 (FL-) - S3-1 (FL-)	Below 1 Ω
S1-40 (FR+) - S4-2 (FR+)	Below 1 Ω
S1-39 (FR-) - S4-1 (FR-)	Below 1 Ω
S1-15 (RL+) - S22-2 (RL+)	Below 1 Ω
S1-16 (RL-) - S22-1 (RL-)	Below 1 Ω
S1-44 (RR+) - S22-4 (RR+)	Below 1 Ω
S1-45 (RR-) - S22-3 (RR-)	Below 1 Ω

(d) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-10 (FL+) - Body ground	10 kΩ or higher
S1-9 (FL-) - Body ground	10 kΩ or higher
S1-40 (FR+) - Body ground	10 kΩ or higher
S1-39 (FR-) - Body ground	10 kΩ or higher
S1-15 (RL+) - Body ground	10 kΩ or higher
S1-16 (RL-) - Body ground	10 kΩ or higher
S1-44 (RR+) - Body ground	10 kΩ or higher
S1-45 (RR-) - Body ground	10 kΩ or higher

(e) Reconnect the speed sensor connectors.
(f) Reconnect the skid control ECU connector.

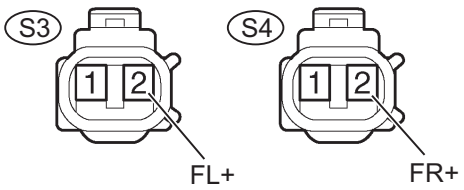
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

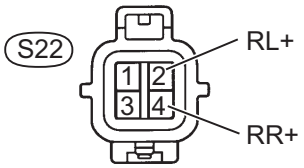
BC

2 INSPECT MASTER CYLINDER SOLENOID (TERMINAL VOLTAGE)

Front Speed Sensor (harness side connector):



Rear Speed Sensor (harness side connector):



F052319E02

(a) Disconnect the speed sensor connectors.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
S3-2 (FL+) - Body ground	7.5 to 12 V
S4-2 (FR+) - Body ground	7.5 to 12 V
S22-2 (RL+) - Body ground	7.5 to 12 V
S22-4 (RR+) - Body ground	7.5 to 12 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the speed sensor connectors.

NG → **REPLACE MASTER CYLINDER SOLENOID**

OK

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

A

4 INSPECT SPEED SENSOR

(a) Remove the speed sensor (See page BC-303 or BC-304).
(b) Check the sensor tip.

OK:

No scratches or foreign matter on the sensor tip.

NG → **CLEAN OR REPLACE SPEED SENSOR**

BC

OK

CLEAN OR REPLACE SPEED SENSOR

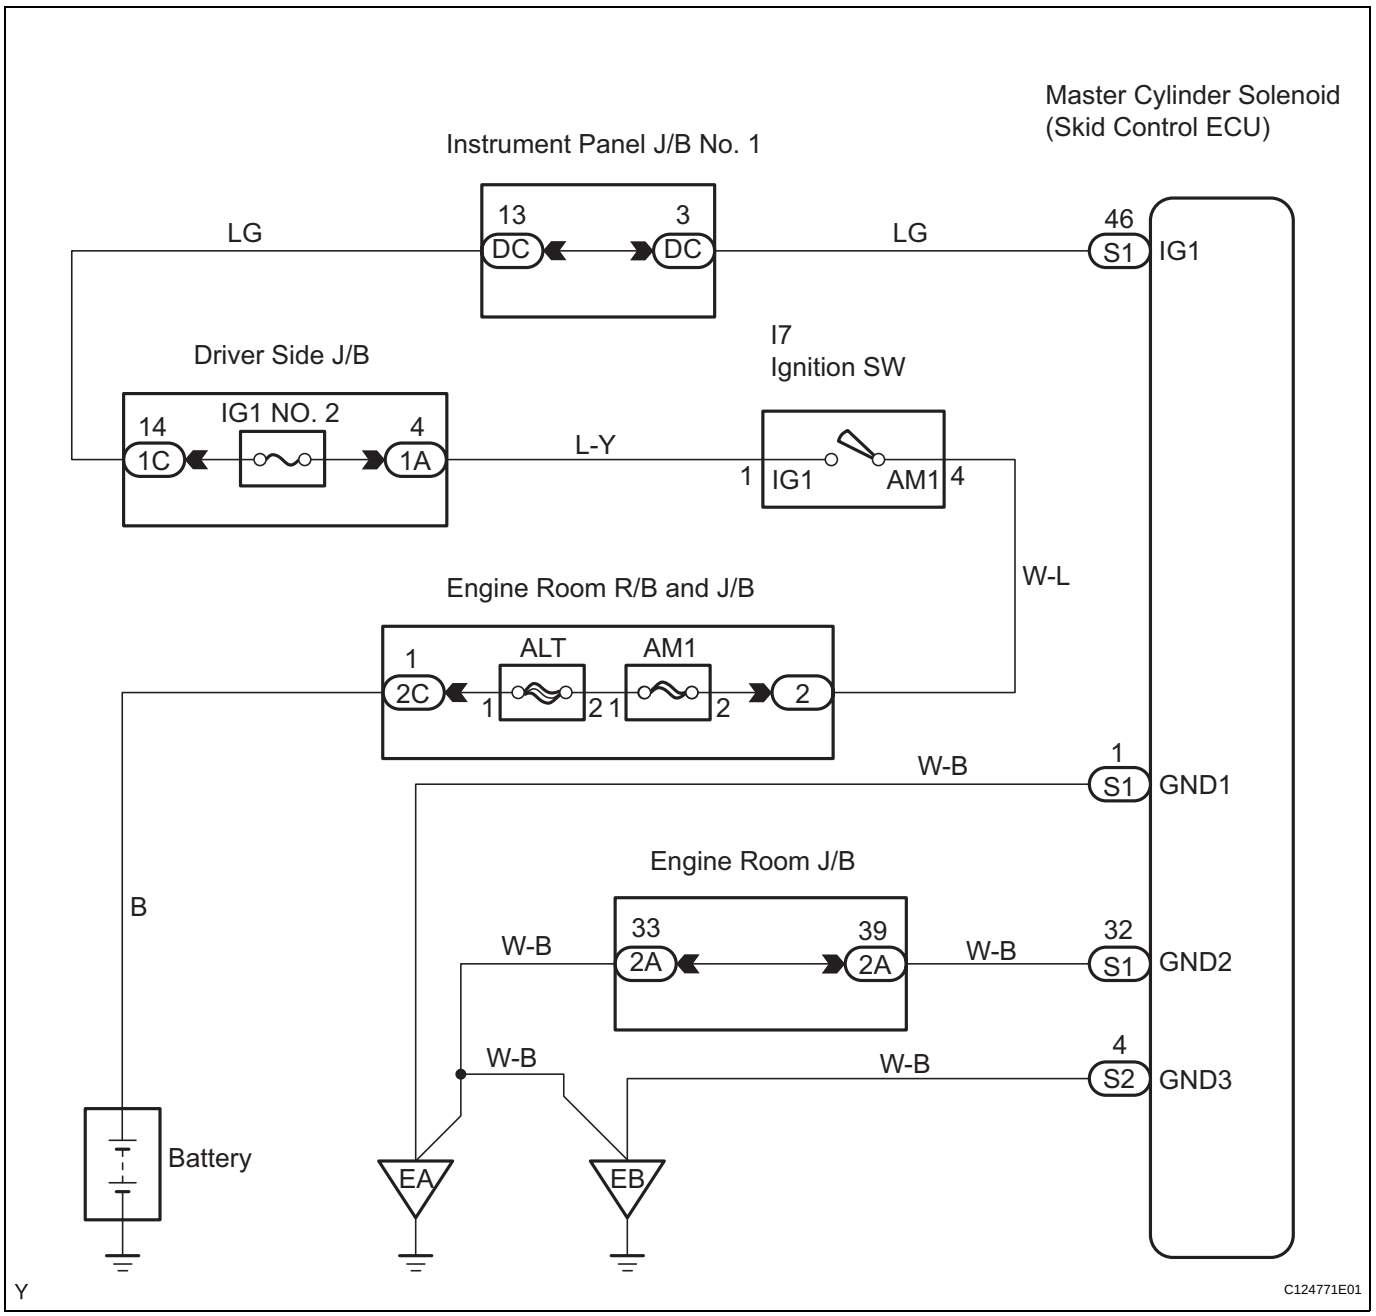
DTC	C1241/41	Low Battery Positive Voltage

DESCRIPTION

If the voltage supplied to the IG1 terminal is not within the DTC detection threshold due to malfunctions in parts such as the battery and alternator circuit, this DTC is stored.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1241/41	When either of following conditions detected: 1. Both of following conditions continue for at least 10 seconds. • Vehicle speed more than 2 mph (3 km/m). • IG1 terminal voltage less than 9.5 V. 2. All of following conditions continue for at least 0.2 seconds. • Solenoid relay remains ON. • IG1 terminal voltage less than 9.5 V. • Relay contact open.	• Battery • IG1 NO. 2 fuse • Charging system • Power source circuit

WIRING DIAGRAM



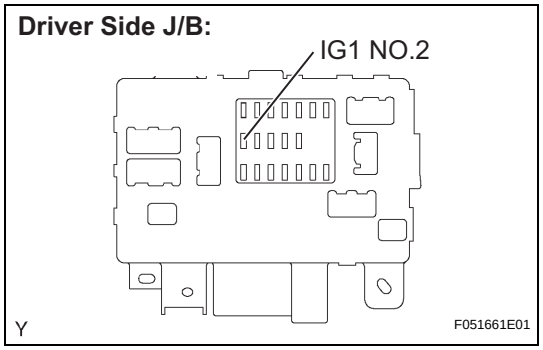
1	INSPECT BATTERY

(a) Check the battery voltage.
Standard Voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

2	**INSPECT FUSE (IG1 NO. 2)**



(a) Remove the IG1 NO. 2 fuse from the driver side J/B.
(b) Measure the resistance of the IG1 NO. 2 fuse.
Standard Resistance:
Below 1 Ω
(c) Reinstall the IG1 NO. 2 fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

3	**READ VALUE OF DATA LIST (IG VOLTAGE)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) Select "DATA LIST" mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
IG VOLTAGE	ECU power supply voltage / TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 V or 14V TOO LOW: Below 9.5 V	-

(e) Measure the voltage output from the ECU displayed on the intelligent tester.
OK:
"Normal" is displayed.

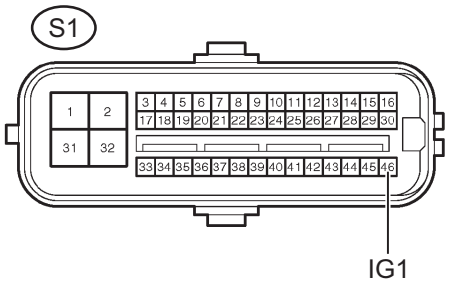
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

Skid Control ECU (harness side connector):



C121700E13

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
S1-46 (IG1) - Body ground	10 to 14 V

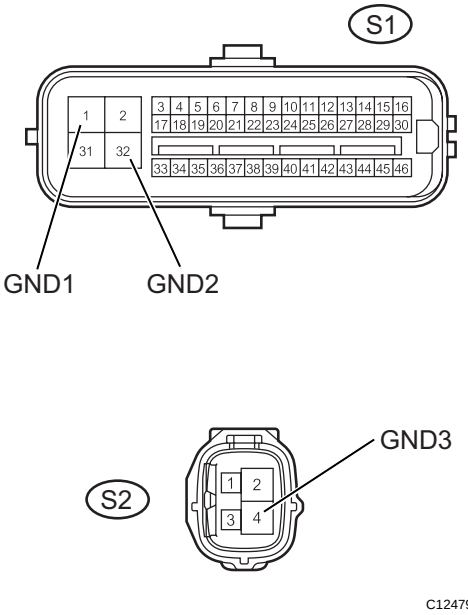
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (harness side connector):



C124799E01

(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω
S1-4 (GND3) - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Drive the vehicle at a speed of 1.9 mph (3 km/h) or more for 10 seconds or more.

(c) Check if the same DTCs are detected.
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its previous condition, before rechecking for DTCs.

Result	Proceed to
DTC output	A
DTC not output (When troubleshooting in accordance with DTC CHART)	B
DTC not output (When troubleshooting in accordance with PROBLEM SYMPTOMS TABLE)	C

B → **END**

C → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A

REPLACE MASTER CYLINDER SOLENOID

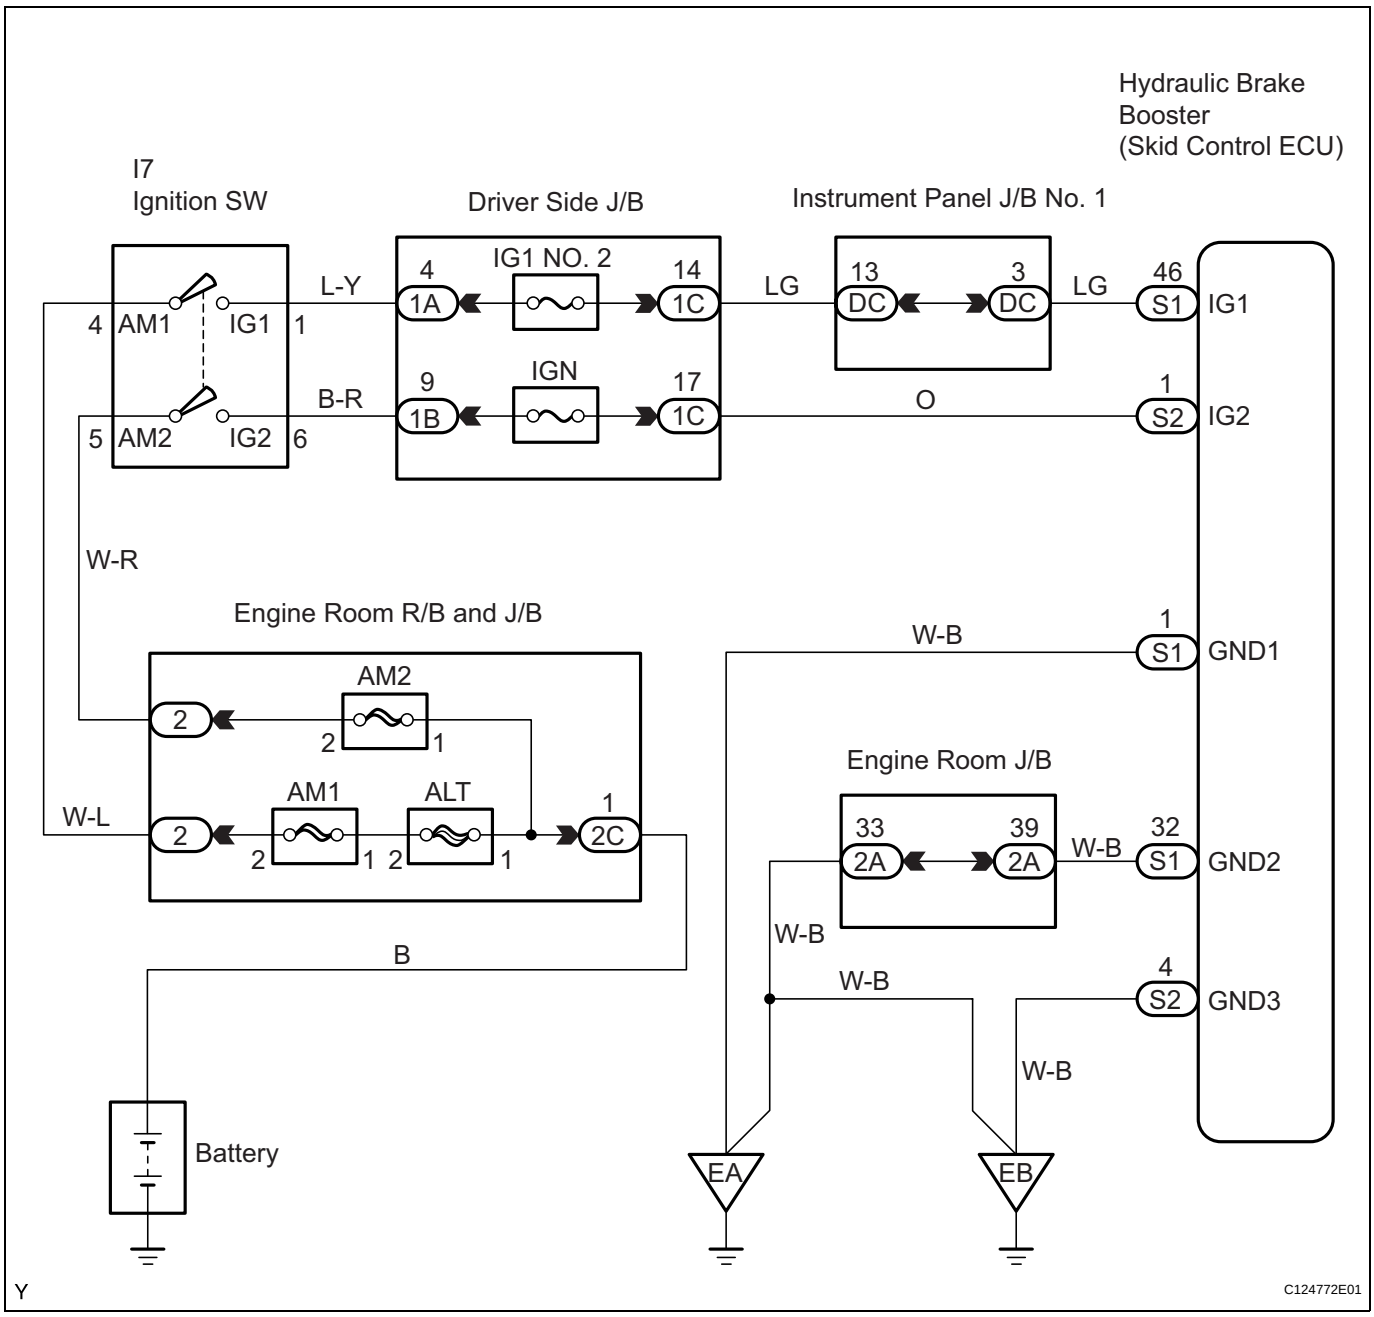
DTC	C1242/42	IG2 Power Source Circuit

DESCRIPTION

If there is a problem with the master cylinder solenoid (skid control ECU) power supply circuit, the skid control ECU outputs the DTC and prohibits operation under the fail safe function.
If the voltage supplied to terminal IG1 and/or IG2 is not within the DTC detection threshold due to malfunctions in parts such as the battery or alternator circuit, this DTC is stored.

DTC No.	DTC Detecting Condition	Trouble Areas
C1242/42	Vehicle speed 1.9 mph (3 km/h) or more and voltage of skid control ECU terminal IG1 and/or IG2 remains at below 6.5 V for more than 7 seconds.	• Battery • IC regulator • Power source circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



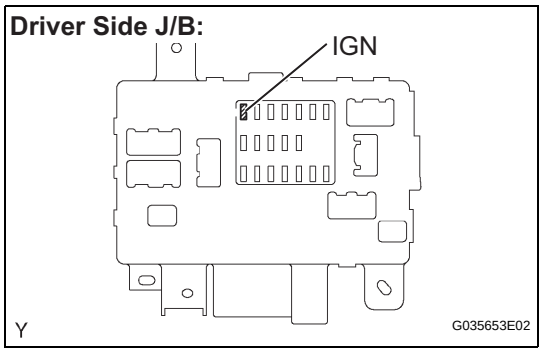
1	INSPECT BATTERY

(a) Check the battery voltage.
Standard Voltage:
10 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

2	INSPECT FUSE (IGN FUSE)

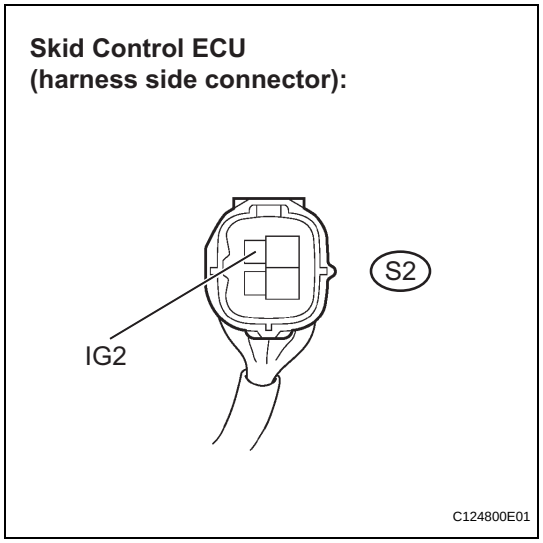


(a) Remove the IGN fuse from the driver side J/B.
(b) Measure the resistance of the IGN fuse.
Standard Voltage:
Below 1 Ω
(c) Reinstall the IGN fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

3	INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (IG2 TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
S2-1 (IG2) - Body ground	10 to 14 V

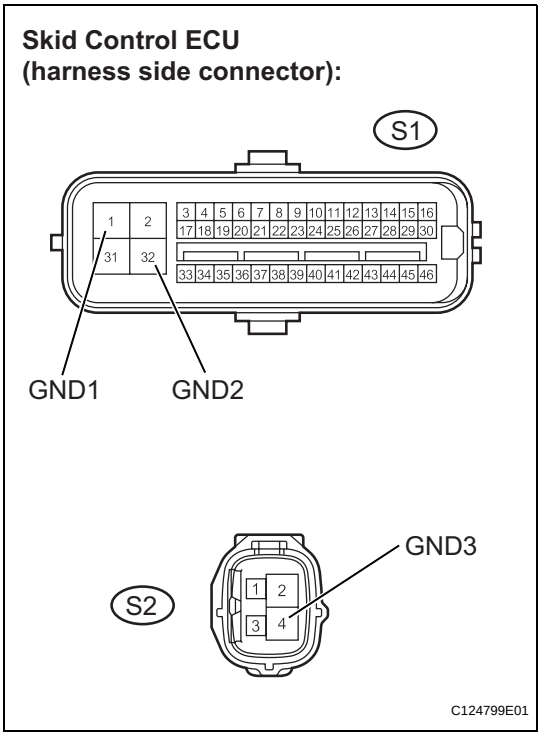
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

4 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL)



(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω
S2-4 (GND3) - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Drive the vehicle at a speed of 1.9 mph (3 km/h) or more for 7 seconds or more.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

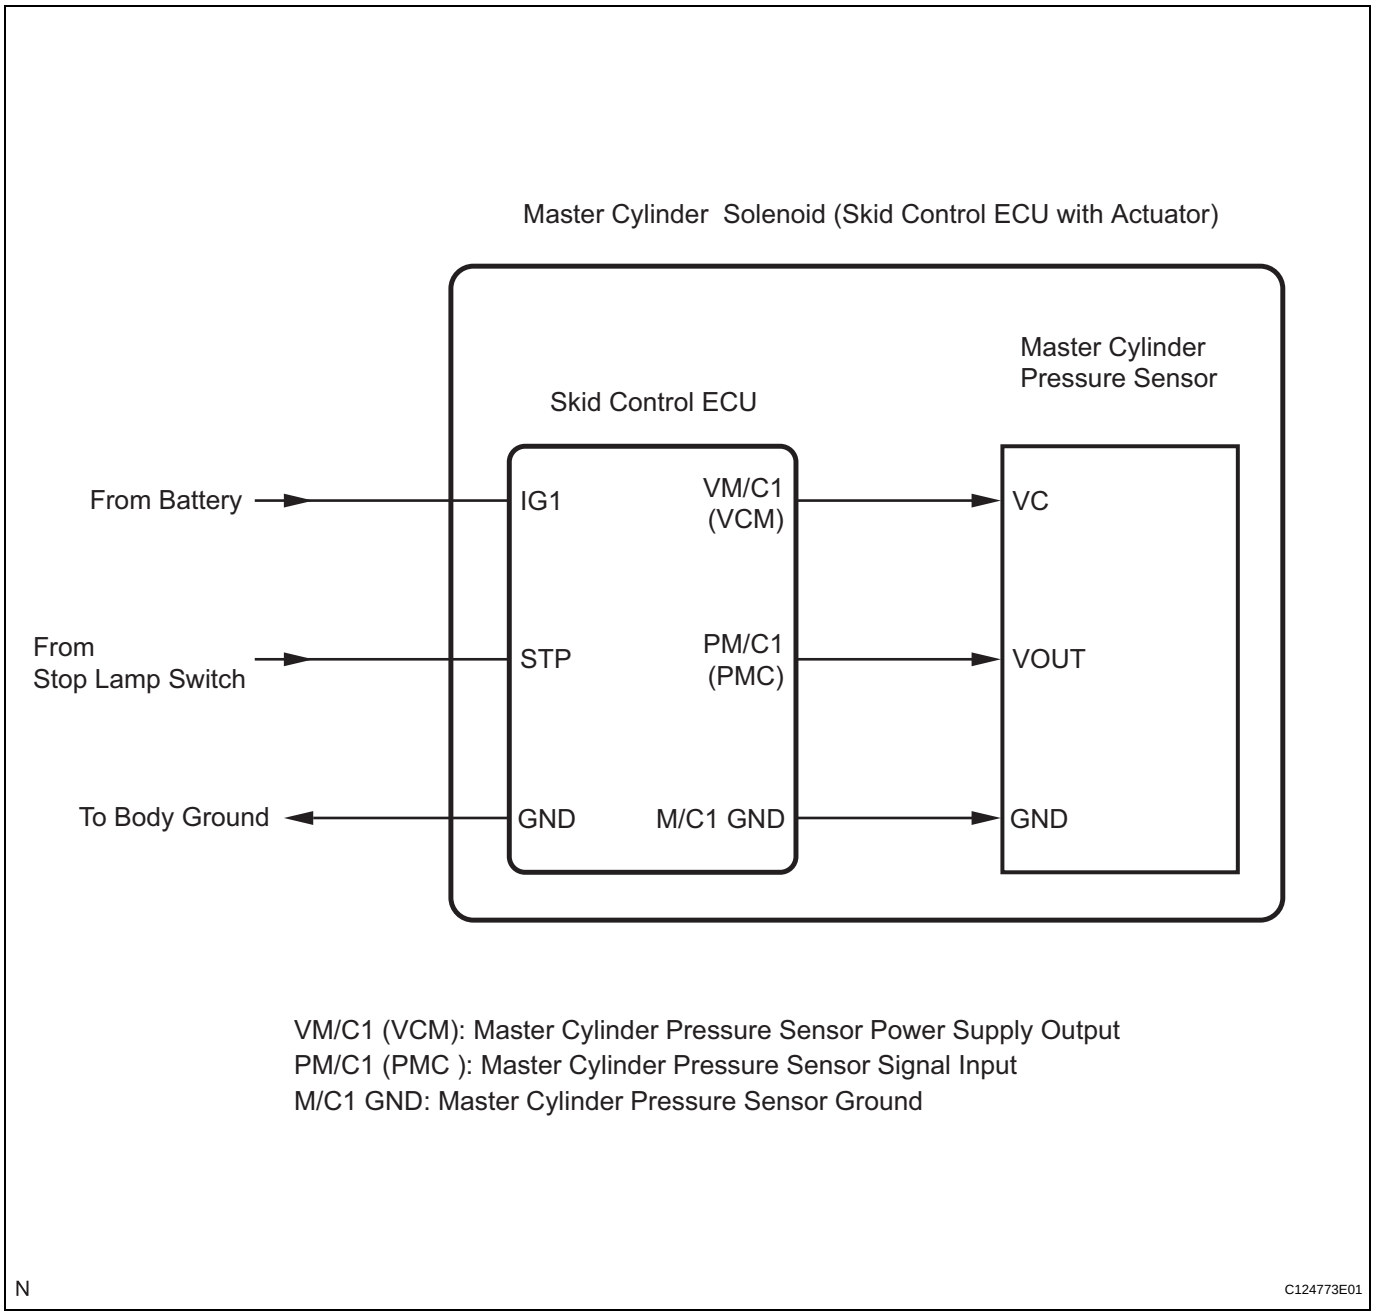
A

REPLACE MASTER CYLINDER SOLENOID

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the master cylinder solenoid.



VM/C1 (VCM): Master Cylinder Pressure Sensor Power Supply Output
PM/C1 (PMC): Master Cylinder Pressure Sensor Signal Input

M/C1 GND: Master Cylinder Pressure Sensor Ground

DTC No.	DTC Detecting Conditions	Trouble Areas
C1246/46	When either of following conditions detected: 1. All of the following conditions continue for at least 30 seconds. • Vehicle speed more than 4 mph (7 km/h). • PM/C1 terminal voltage does not change by more than 0.005 V once it exceeds 0.86 V. 2. PM/C1 terminal receives noise at least 7 times within 5 seconds. 3. All of following conditions continue for at least 5 seconds. • Stop switch OFF. • PM/C1 terminal voltage more than 0.86 V or less than 0.3 V. 4. All of following conditions continue for at least 1.2 seconds. • IG1 terminal voltage between 9.5 V and 17.0 V. • VM/C1 terminal voltage not within 4.4 V and 5.6 V. 5. All of following conditions continue for at least 1.2 seconds. • VM/C1 terminal voltage between 4.4 V and 5.6 V. • PM/C1 terminal voltage not within 0.14 V and 4.85 V.	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Master cylinder solenoid (skid control ECU) • Stop light circuit

HINT:
Start the inspection from step 1 when using a intelligent tester and start from step 3 when not using a intelligent tester.

1 READ VALUE OF DATA LIST (MASTER CYLINDER PRESSURE SENSOR)

BC

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the intelligent tester ON.
(d) Select the DATA LIST mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
MAS CYL PRS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	•When brake pedal released: 0.3 to 0.9 V •When stop lamps turned on: 0.3 to 0.9 V	Reading increases when brake pedal depressed

(e) Check that the master pressure value of the master cylinder pressure sensor displayed on the intelligent tester changes when the brake pedal is depressed.

Result	Proceed to
Master cylinder pressure sensor value becomes normal	A
Master cylinder pressure sensor value changes but not normal	B
Master cylinder pressure sensor value does not change	C

B → **Go to step 3**

C → **REPLACE MASTER CYLINDER SOLENOID**

A

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

3 CHECK BRAKE PEDAL HEIGHT

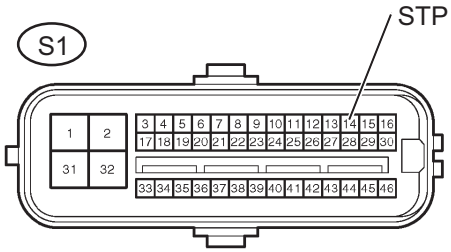
(a) Check the brake pedal height.
(b) Check the stop lamp switch installation.
OK:
The brake pedal and stop lamp switch are normal.

NG → **ADJUST BRAKE PEDAL HEIGHT**

OK

4 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (STP TERMINAL)

Skid Control ECU (harness side connector):



C121700E07

(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
S1-7 (STP) - Body ground	Brake pedal depressed	8 to 16 V
S1-7 (STP) - Body ground	Brake pedal released	Below 1.5 V

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).

(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

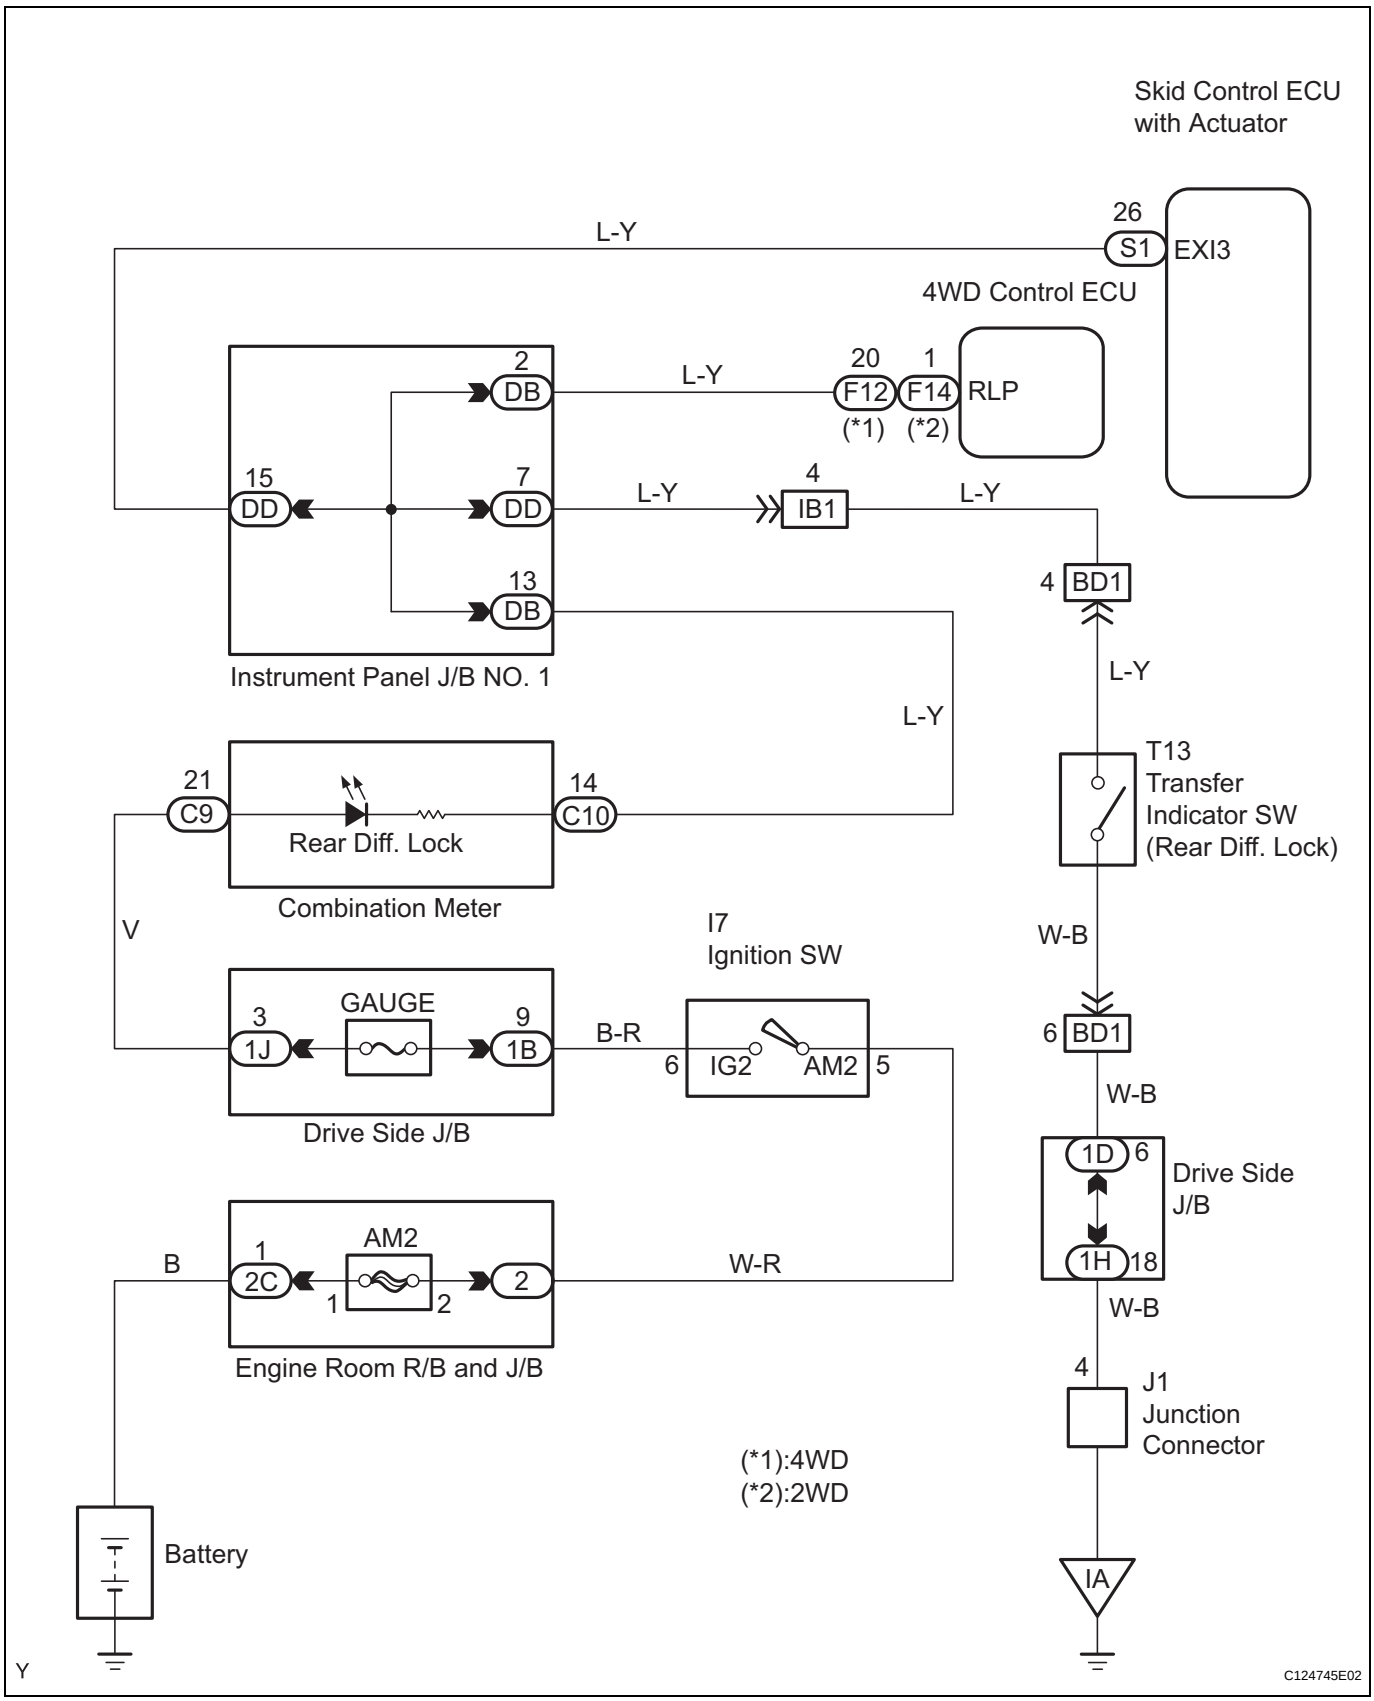
DTC	C1248/48	Open Circuit in Rear Differential Lock

DESCRIPTION

The 4WD control ECU stimulates the actuator to lock the rear differential in accordance with the rear diff. lock switch. The skid control ECU monitors the transfer indicator switch (rear diff. lock) and if the rear differential is locked, at which time the rear diff. lock indicator light is illuminated, prohibits ABS, TRAC and VSC controls. At the same time, the skid control ECU illuminates the ABS warning light and VSC TRAC warning light.

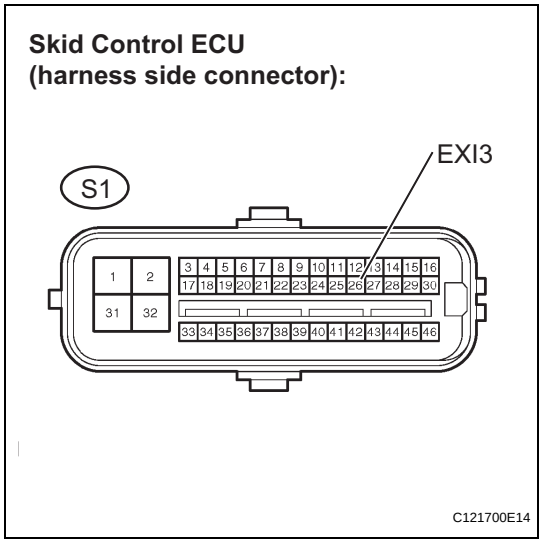
DTC No.	DTC Detecting Condition	Trouble Areas
C1248/48	At vehicle speed of 31 mph (50 km/h) or more, 3 seconds or more elapse after rear differential changes from free to lock.	• Transfer indicator switch (rear diff. lock) • Rear differential lock circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



BC

1 INSPECT SKID CONTROL ECU (EXI3 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Vehicle Condition	Specified Condition	Rear Diff. Lock Indicator Light
S1-26 (EXI3) - Body ground	Rear Differential free	8 to 14 V	OFF
S1-26 (EXI3) - Body ground	Rear Differential locked	1.5 V	ON

(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → Go to step 3

OK

2 RECONFIRM DTC

(a) Clear the DTC (See page BC-118).
(b) Drive the vehicle at 31 mph (50 km/h) or more for 3 seconds or more with the rear differential free.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

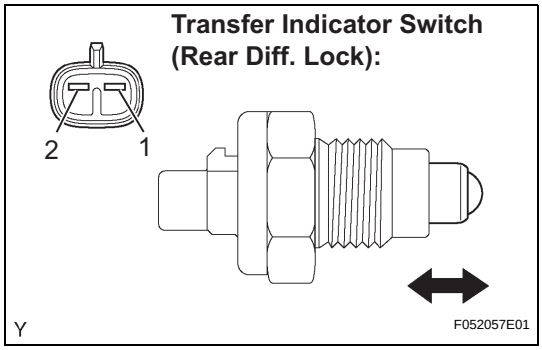
B → END

A

REPLACE MASTER CYLINDER SOLENOID

BC

3 INSPECT TRANSFER INDICATOR SWITCH (REAR DIFF. LOCK)



(a) Disconnect the transfer indicator switch connector.
(b) Remove the transfer indicator switch.
(c) Measure the resistance.

Standard Resistance

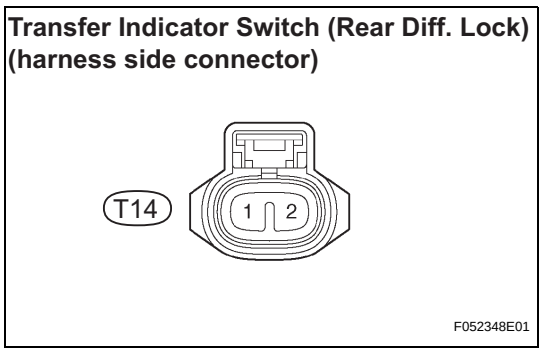
Tester Connection	Condition	Specified Condition
1 - 2	Pushed	Below 1 Ω
1 - 2	Free	10 kΩ or higher

(d) Reinstall the transfer indicator switch.
(e) Reconnect the transfer indicator switch connector.

NG → **REPLACE TRANSFER INDICATOR SWITCH (REAR DIFF. LOCK)**

OK

4 CHECK HARNESS AND CONNECTOR



(a) Disconnect the skid control ECU connector.
(b) Disconnect the 4WD control ECU connector.
(c) Disconnect the transfer indicator switch connector.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard Voltage

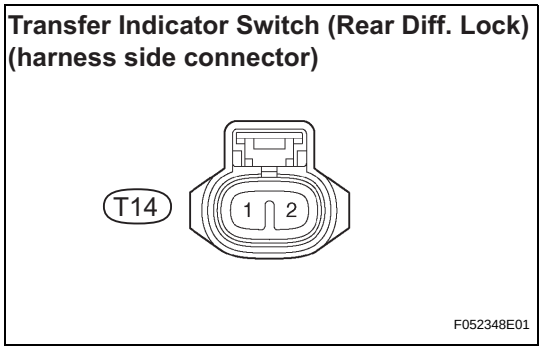
Tester Connection	Specified Condition
T14-2 - Body ground	8 to 14 V

(f) Turn the ignition switch to OFF.
(g) Reconnect the transfer indicator switch connector.
(h) Reconnect the 4WD control ECU connector.
(i) Reconnect the skid control ECU connector.

OK → **REPLACE 4WD CONTROL ECU**

NG

5 CHECK HARNESS AND CONNECTOR



(a) Disconnect the skid control ECU connector.
(b) Disconnect the 4WD control ECU connector.
(c) Disconnect the transfer indicator switch connector.
(d) Disconnect the combination meter connector.
(e) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
T14-2 - Body ground	10 kΩ or higher

(f) Reconnect the combination meter connector.
(g) Reconnect the transfer indicator switch connector.
(h) Reconnect the 4WD control ECU connector.
(i) Reconnect the skid control ECU connector.

BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

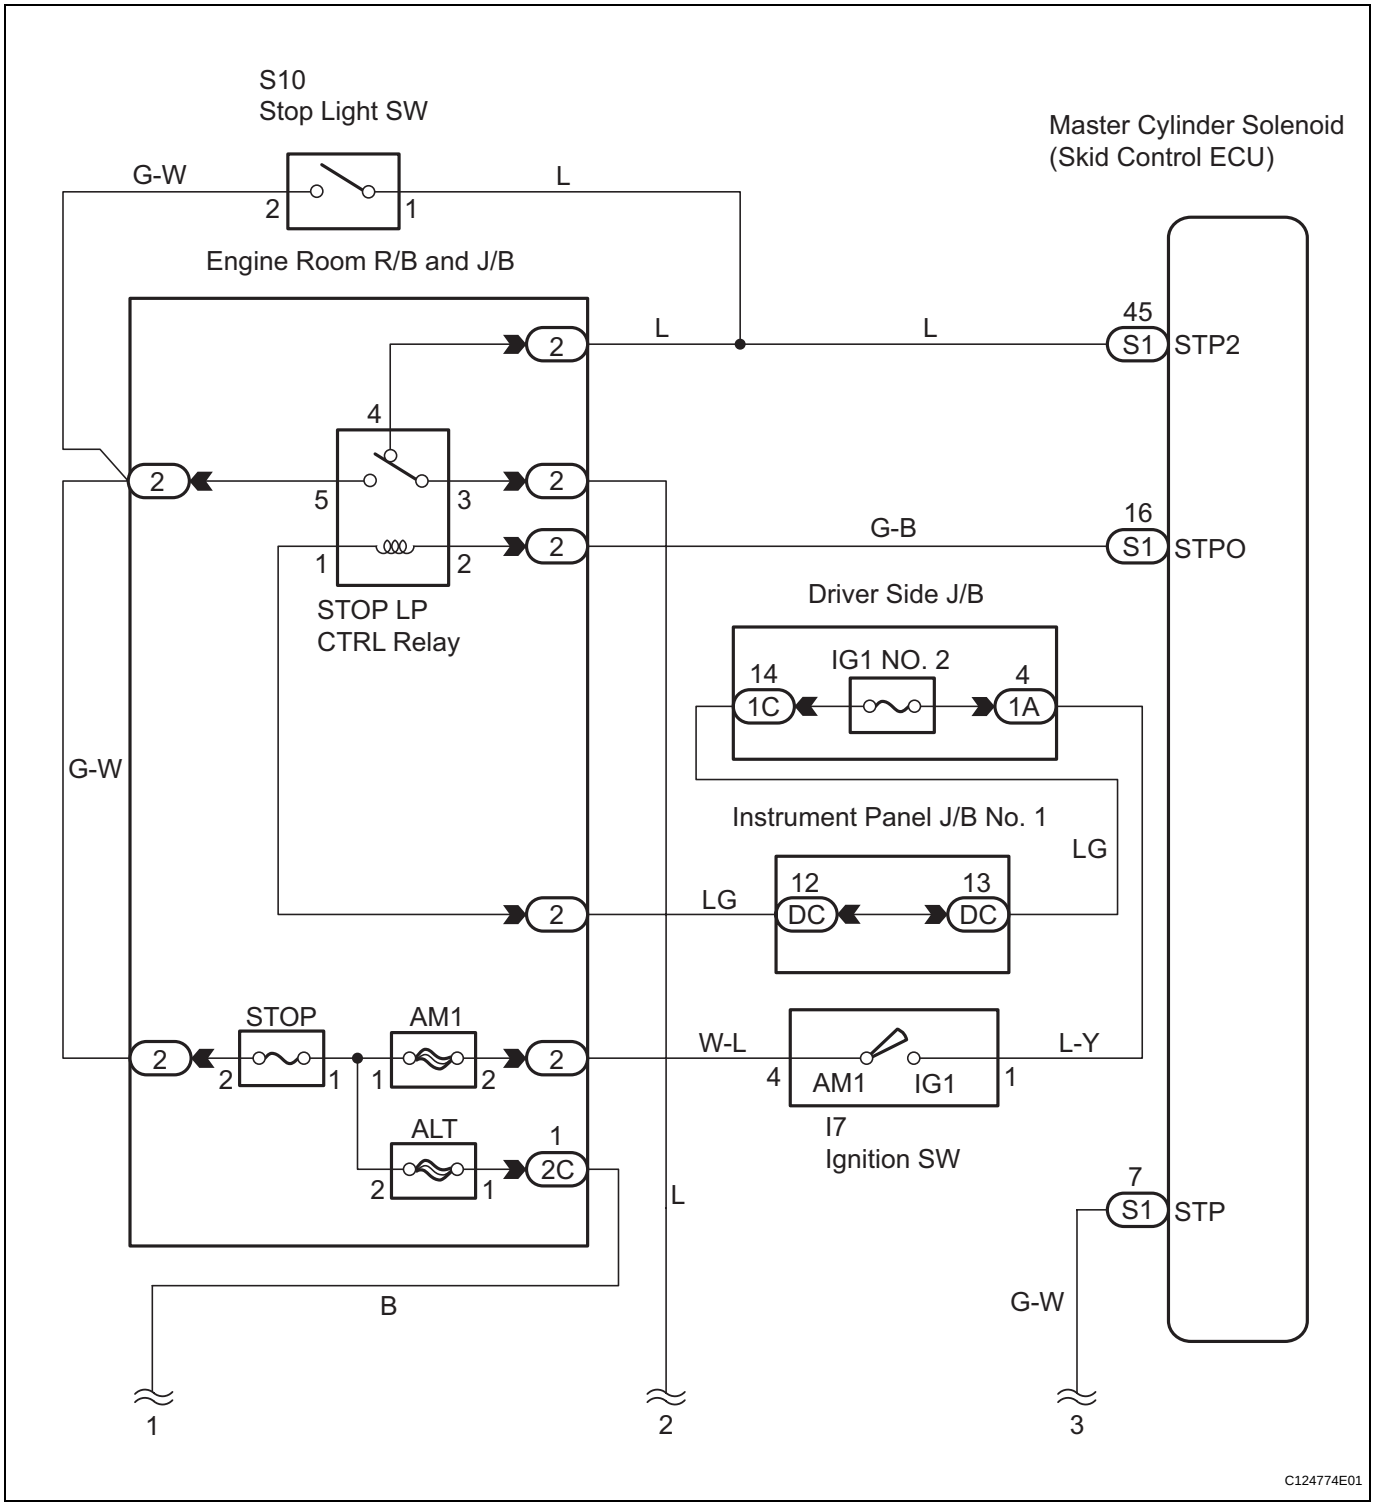
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

The skid control ECU inputs the stop light switch signal and detects the status of the brake operation.

DTC No.	DTC Detecting Condition	Trouble Areas
C1249/49	ECU terminal IG1 voltage 9.5 V to 17.0 V and ABS non-operational, open in stop light switch circuit continues for 0.3 seconds or more.	• Stop light assembly • Stop light switch circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



BC

A

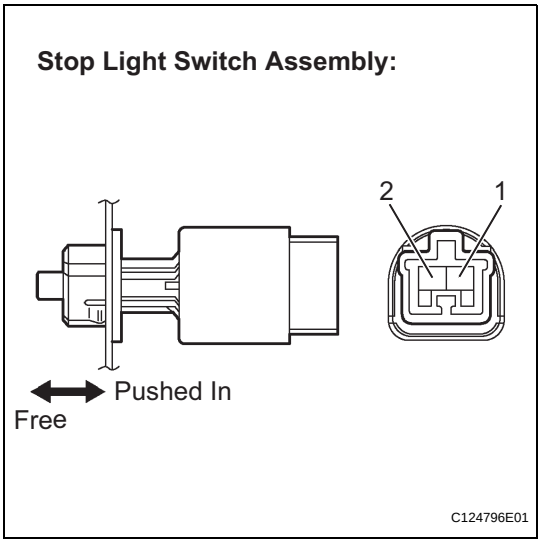
REPLACE MASTER CYLINDER SOLENOID

BC

4	INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Disconnect the stop light switch connector.
(b) Measure the resistance.
Standard Resistance

Switch Connection	Tester Condition	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher

(c) Reconnect the stop light switch connector.

NG → REPLACE STOP LIGHT SWITCH ASSEMBLY

OK

5	INSPECT STOP LIGHT CONTROL RELAY

(a) Remove the STOP LP CTRL relay from the engine room R/B and J/B.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher

(c) Apply the battery voltage between terminals 1 (+) and 2 (-).
(d) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
3 - 4	10 kΩ or higher
3 - 5	Below 1 Ω

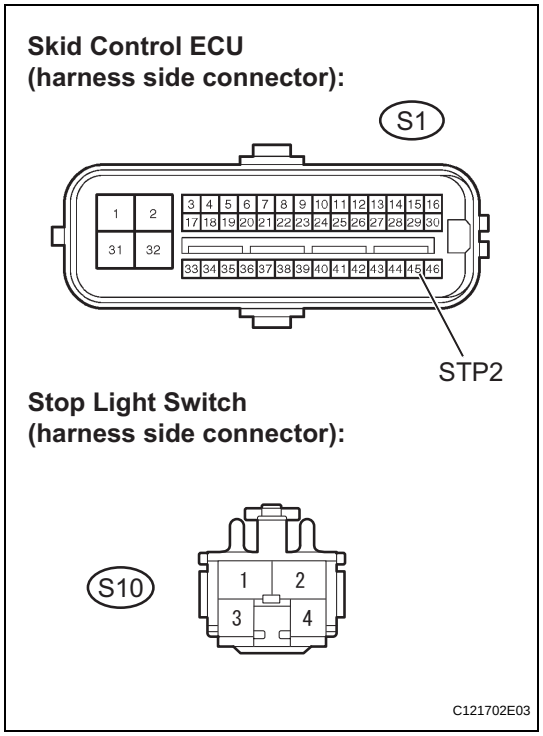
(e) Reinstall the STOP LP CTRL relay.

NG → REPLACE STOP LIGHT CONTROL RELAY

OK

BC

6 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the stop light switch connector.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
S1-45 (STP2) - S10-1 (STP)	Below 1 Ω

(d) Reconnect the stop light switch connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

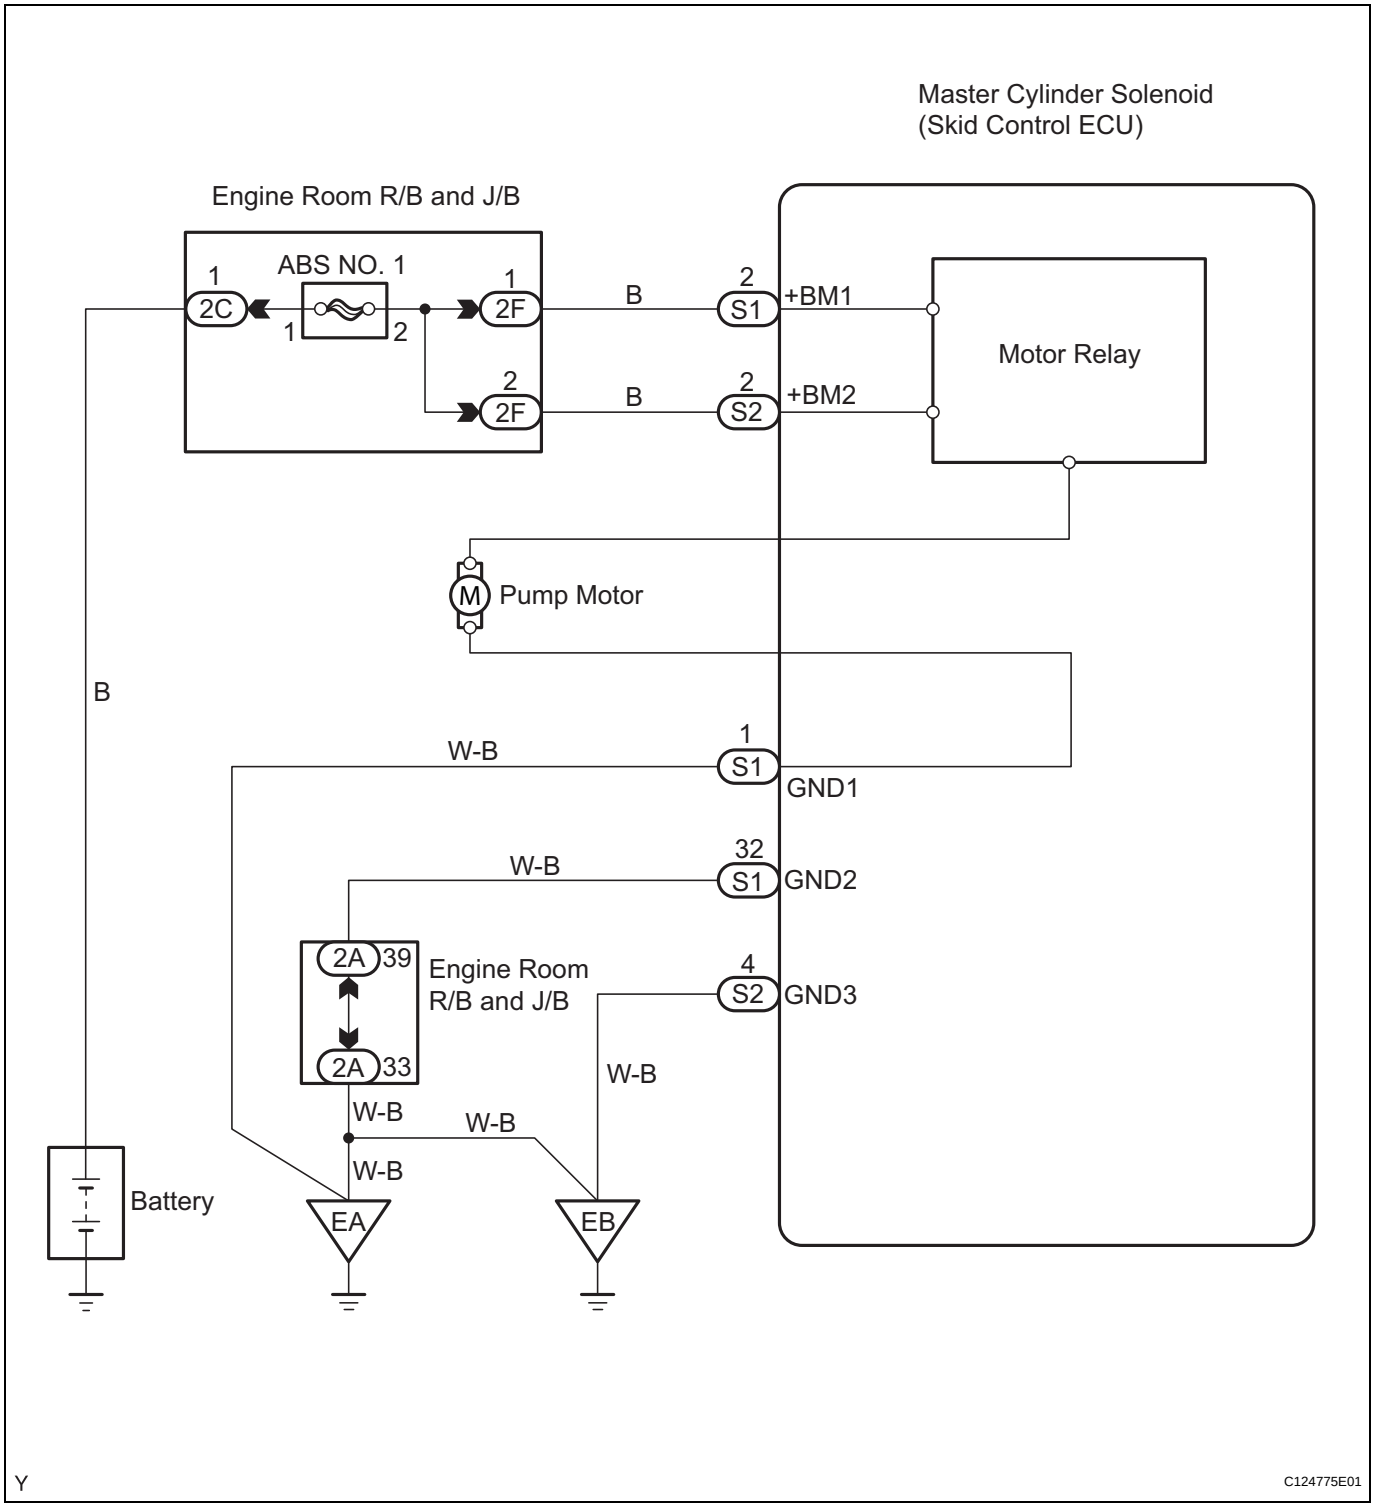
DTC	C1251/51	Open in Pump Motor Circuit

DESCRIPTION

The motor relay (semiconductor relay) is built into the master cylinder solenoid and drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detecting Condition	Trouble Areas
C1251/51	Open in motor system circuit (motor input circuit)	Hydraulic brake booster pump motor circuit

WIRING DIAGRAM



HINT:
Remove the hydraulic brake booster before the inspection (See page BR-42).

1	CHECK BRAKE PUMP MOTOR WIRE HARNESS CONNECTION (MT+ / MT-)

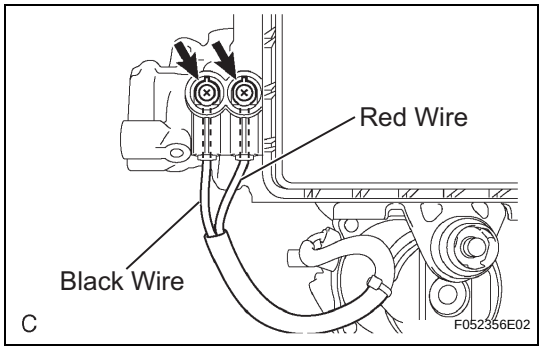
(a) Using a screwdriver, remove the 2 plugs from the hydraulic brake booster (See page BR-45).
(b) Check the tightening torque of 2 screws which fasten the wire harness connecting hydraulic brake booster and brake booster pump (See page BR-49).

Torque: 2.9 N*m (30 kgf*cm, 26 in.*lbf)

NG → **RETIGHTEN SCREWS**

OK

2	CHECK RESISTANCE OF PUMP MOTOR WIRE HARNESS (MT+/MT-)



(a) Using a screwdriver, remove the 2 screws and pull the wire harness from the hydraulic brake booster.
(b) Measure the resistance between the red wire (MT+) and black wire (MT-).

Resistance:
2 Ω

NG → **REPLACE HYDRAULIC BRAKE BOOSTER**

OK

3	RECONFIRM DTC

(a) Reassemble the hydraulic brake booster, then reinstall the hydraulic brake booster.
(b) Clear the DTCs (See page BC-118).
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

BC

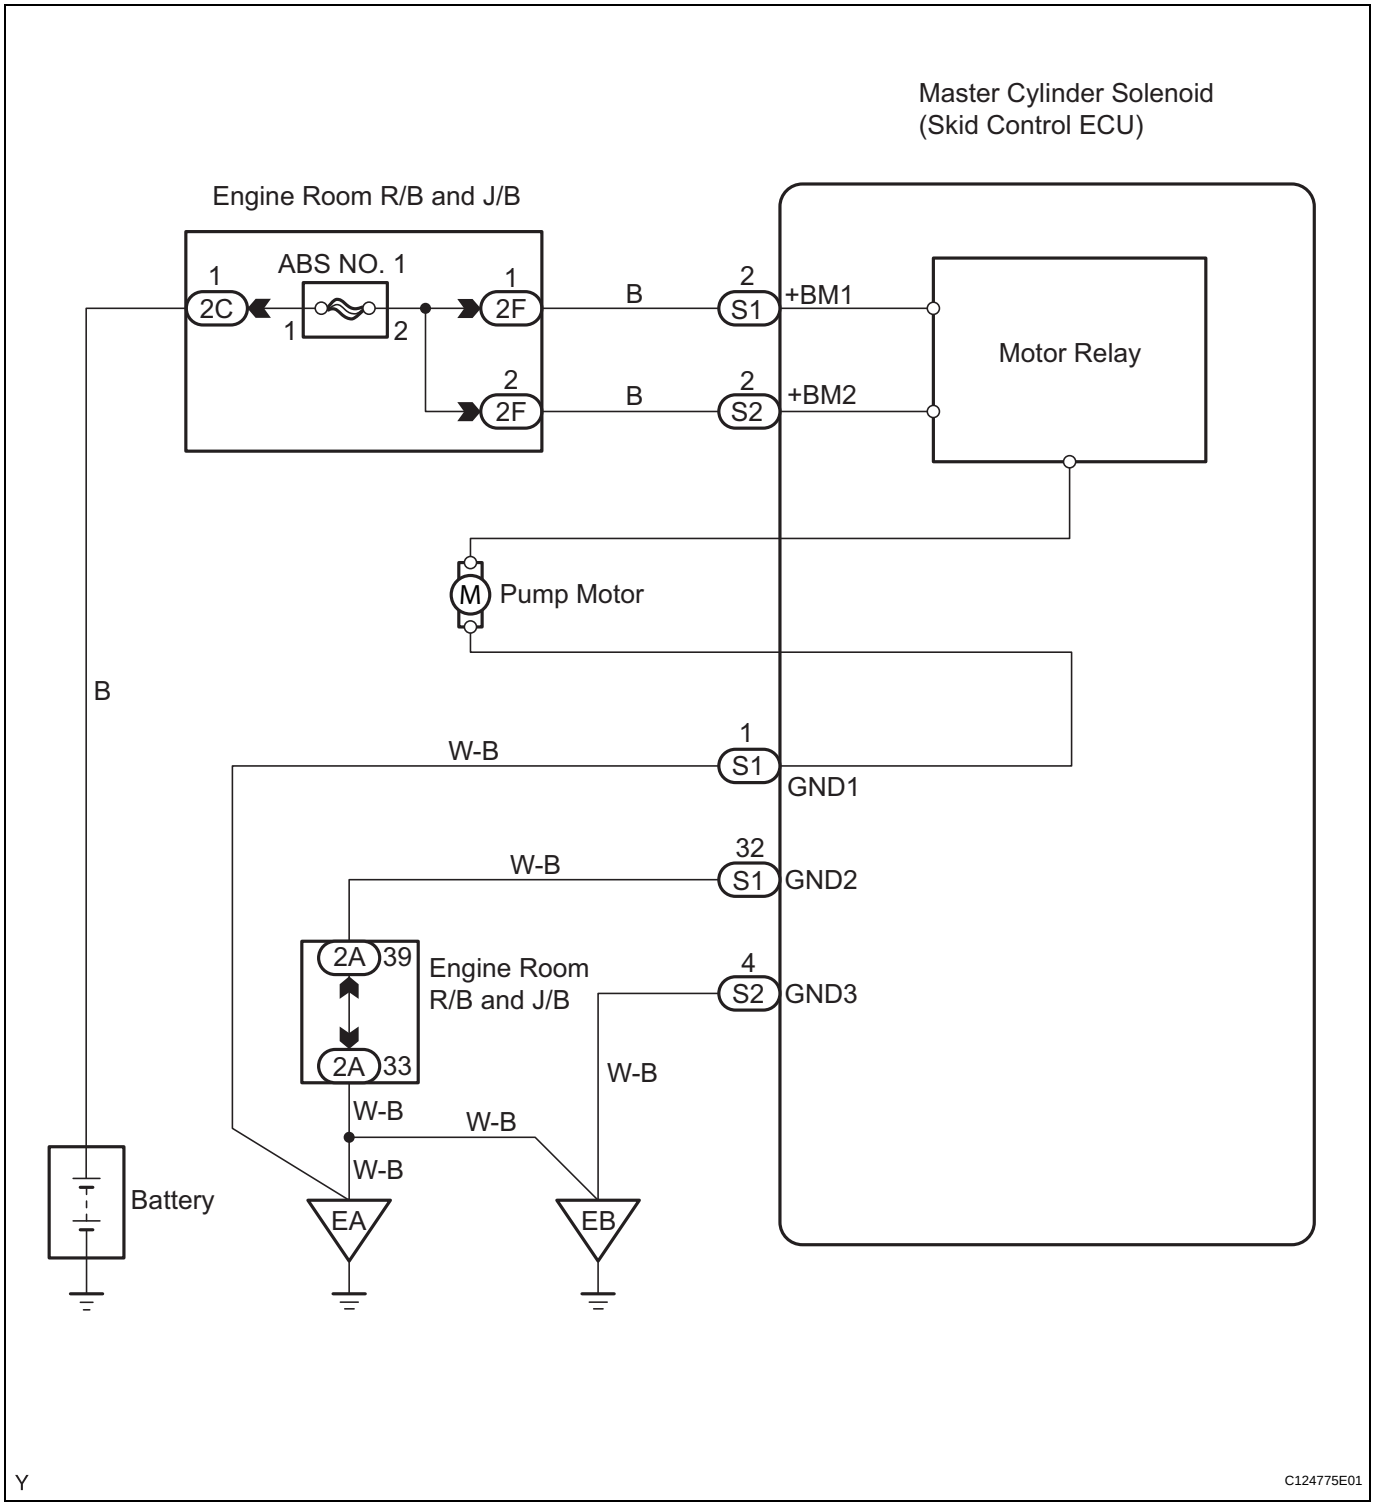
DTC	C1252/52	Brake Booster Pump Motor on Time Abnormally Long

DESCRIPTION

The motor relay (semiconductor relay) is built into the master cylinder solenoid and drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detecting Condition	Trouble Areas
C1252/52	Motor operates for 5 minutes or more.	• Hydraulic brake booster pump motor • Hydraulic brake booster pump motor circuit • Accumulator pressure

WIRING DIAGRAM



HINT:
When C1253/53, C1254/54 or C1256/56 is output together with C1252/52, inspect and repair the trouble areas indicated by C1253/53, C1254/54 or C1256/56 first.

1	CHECK HYDRAULIC BRAKE BOOSTER PUMP MOTOR OPERATION

(a) Turn the ignition switch to OFF.
(b) Depress the brake pedal more than 20 times.

BC

(c) Turn the ignition switch to the ON position.
(d) Check how the hydraulic brake booster pump motor operates.

Result	Proceed to
Pump motor does not operate	A
Pump motor operates continuously (Does not stop)	B
Pump motor operates intermittently	C
Pump motor operates, then stops	D

B → **REPLACE HYDRAULIC BRAKE BOOSTER**

C → **Go to step 4**

D → **Go to step 5**

A

2 CHECK BRAKE PUMP MOTOR WIRE HARNESS CONNECTION (MT+ / MT-)

(a) Using a screwdriver, remove the 2 plugs from the hydraulic brake booster (See page BR-45).
(b) Check the tightening torque of 2 screws which fasten the wire harness connecting hydraulic brake booster and brake booster pump (See page BR-49).

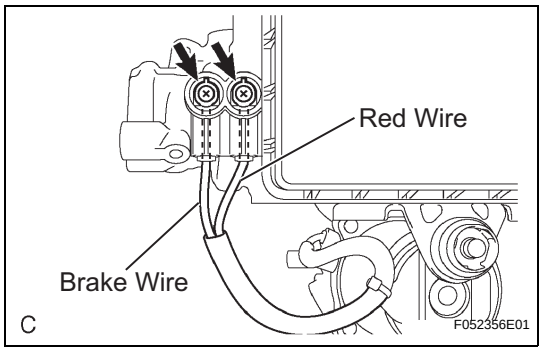
Torque: 2.9 N*m (30 kgf*cm, 26 in.*lbf)

NG → **RETIGHTEN SCREWS**

BC

OK

3 CHECK RESISTANCE OF PUMP MOTOR WIRE HARNESS (MT+/MT-)



(a) Using a screwdriver, remove the 2 screws and pull the wire harness from the hydraulic brake booster assembly.
(b) Measure the resistance between the red wire (MT+) and black wire (MT-).

Resistance:
2 Ω

NG → **REPLACE HYDRAULIC BRAKE BOOSTER**

OK

4 READ VALUE OF DATA LIST (ACCUMULATOR PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.

(d) Select the DATA LIST mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ACC PRESS SENS	Accumulator pressure sensor reading / min.: 0 V, max.: 5 V	3.58 to 5 V	If value constant regardless of pump operation, accumulator pressure sensor malfunction suspected.

(e) Check that the accumulator pressure sensor output is normal.

Result	Proceed to
Output value varies within "Normal Condition" range	A
Output value does not reach "Normal Condition" range	B
Output value constant regardless of pump motor operation	C

B → **REPLACE MASTER CYLINDER SOLENOID**

C → **REPLACE HYDRAULIC BRAKE BOOSTER**

A

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Turn the ignition switch to OFF.
(c) Turn the ignition switch to the ON position.
(d) Wait for more than 5 minutes.
(e) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **REPLACE HYDRAULIC BRAKE BOOSTER**

A

REPLACE MASTER CYLINDER SOLENOID

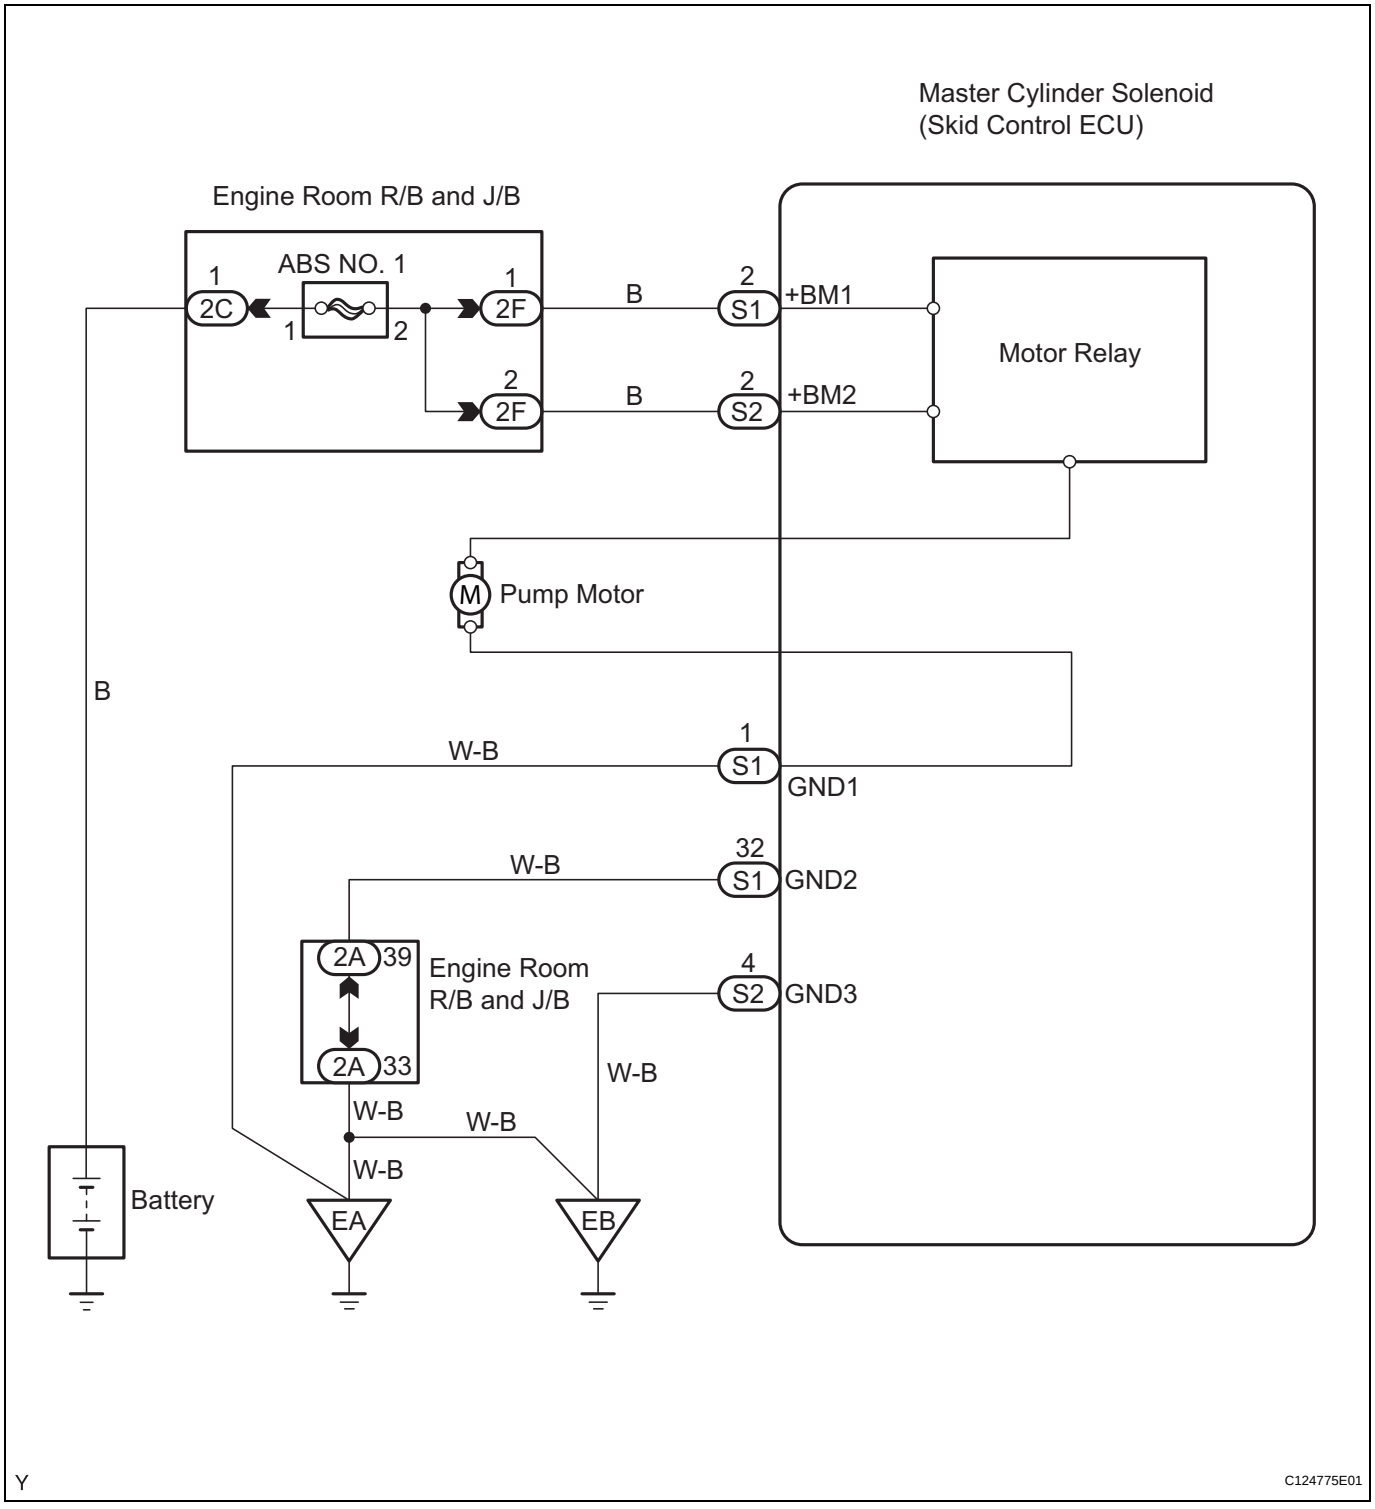
DTC	C1253/53	Hydro Booster Pump Motor Relay Malfunction

DESCRIPTION

The motor relay (semiconductor relay) is built into the master cylinder solenoid and drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detecting Condition	Trouble Areas
C1253/53	Open in motor system circuit (motor input circuit)	• Hydraulic brake booster pump motor • Hydraulic brake booster pump motor circuit

WIRING DIAGRAM



HINT:
Start the inspection from step 1 when using a intelligent tester and start from step 3 when not using a intelligent tester.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (H/B MOTOR RELAY)

(a) Connect a intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.

(c) Turn the intelligent tester ON.
(d) Select the ACTIVE TEST mode on the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
H/B MOT RELAY	Turns H/B motor relay ON / OFF	Operation of motor can be heard

(e) Check for operation sound of the H/B motor when it is operated with the intelligent tester.
OK:
The operation sound of the H/B motor can be heard.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Turn the ignition switch to OFF.
(c) Depress the brake pedal more than 20 times.
(d) Turn the ignition switch to the ON position.
(e) Wait until the pump motor stops.
(f) Depress the brake pedal several times until the pump motor is turned on.
(g) Wait until the pump stops.
(h) Repeat (f) and (g) three times.
(i) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

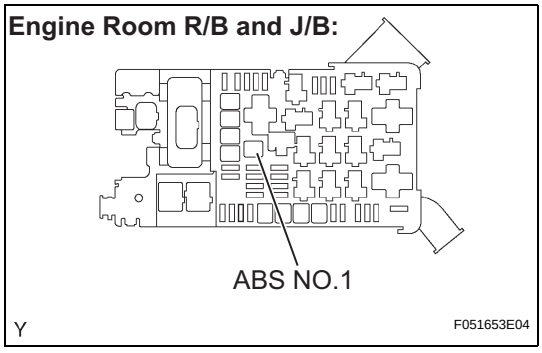
BC

B → **END**

A

REPLACE HYDRAULIC BRAKE BOOSTER

3 INSPECT FUSE (ABS NO. 1)



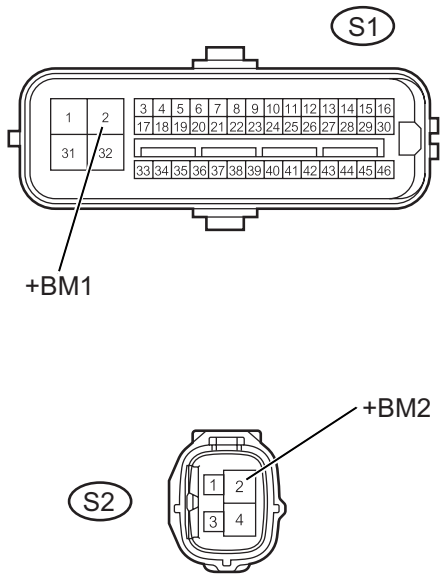
(a) Remove the ABS NO. 1 fuse from the engine room R/B and J/B.
(b) Measure the resistance of the ABS NO. 1 fuse.
Standard:
Below 1 Ω
(c) Reinstall the ABS NO. 1.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

4 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (+BM, +BM2 TERMINAL)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connectors.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Specified Condition
S1-2 (+BM1) - Body ground	10 to 14 V
S2-2 (+BM2) - Body ground	10 to 14 V

(c) Reconnect the skid control ECU connectors.

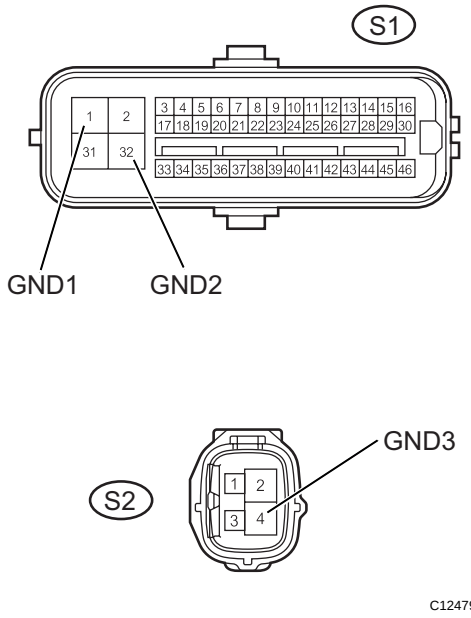
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BM1 AND +BM2 CIRCUIT)**

OK

5 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BODY GROUND)

BC

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω
S2-4 (GND3) - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Turn the ignition switch to OFF.
(c) Depress the brake pedal more than 20 times.
(d) Turn the ignition switch to the ON position.
(e) Wait until the pump motor stops.
(f) Depress the brake pedal several times until the pump motor is turned on.
(g) Wait until the pump stops.
(h) Repeat (f) and (g) three times.
(i) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

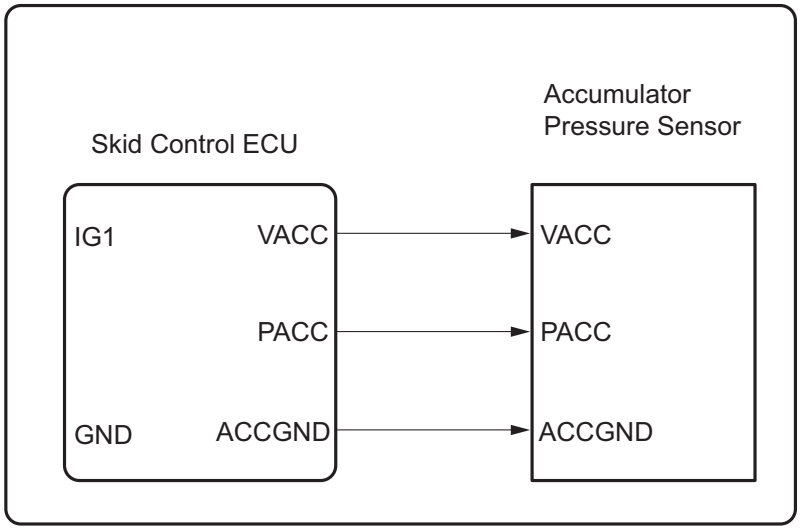
B → END

A → REPLACE HYDRAULIC BRAKE BOOSTER

DTC	C1254/54	Pressure Switch Circuit

DESCRIPTION

The accumulator pressure sensor is connected to the skid control ECU in the master cylinder solenoid.



VACC: Accumulator Pressure Sensor Power Supply Output

PACC: Accumulator Pressure Sensor Signal Input

ACCGND: Accumulator Pressure Sensor Ground

Y C124776E01

DTC No.	DTC Detecting Condition	Trouble Areas
C1254/54	Accumulator pressure sensor fault (Fluid pressure does not change when it should e.g. pump operates, brake pedal depressed/released).	• Hydraulic brake booster • Accumulator pressure sensor • Master cylinder pressure sensor

1	READ VALUE OF DATA LIST (ACCUMULATOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to OFF.

BC

(c) Depress the brake pedal more than 20 times.
(d) Turn the ignition switch to the ON position.
(e) Select the DATA LIST mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ACC PRESS SENS	Accumulator pressure sensor reading / min.: 0 V, max.: 5 V	3.58 to 5 V	-

(f) Confirm whether the accumulator output voltage is normal.

Result	Proceed to
Output value normal	A
Output value not normal	B

B → **REPLACE MASTER CYLINDER SOLENOID**

A

2 READ VALUE OF DATA LIST (MASTER CYLINDER PRESSURE SENSOR)

(a) Turn the ignition switch to OFF.
(b) Depress the brake pedal more than 20 times.
(c) Install a brake pedal effort gauge (SST), and bleed air.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the ignition switch to the ON position.
(f) Select the DATA LIST mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
MAS CYL PRS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	0.3 to 1.9 V With pedal pressure of 49 N (5 kgf, 11 lbf)	Front brake pressure: 770 to 1280 kpa (7.9 to 13.1 kgf/cm2, 112 to 186 psi)

BC

(g) Check that the master cylinder output value is in the Normal Condition range.
OK:
Master cylinder pressure sensor value is in the Normal Condition.

NG → **REPLACE MASTER CYLINDER SOLENOID**

OK

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Turn the ignition switch to OFF.
(c) Depress the brake pedal more than 20 times.
(d) Turn the ignition switch to the ON position.
(e) Wait until the pump motor stops.
(f) Depress the brake pedal and release it.
(g) Wait for 25 minutes.
(h) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A

Result	Proceed to
DTC not output	B

B → **END**

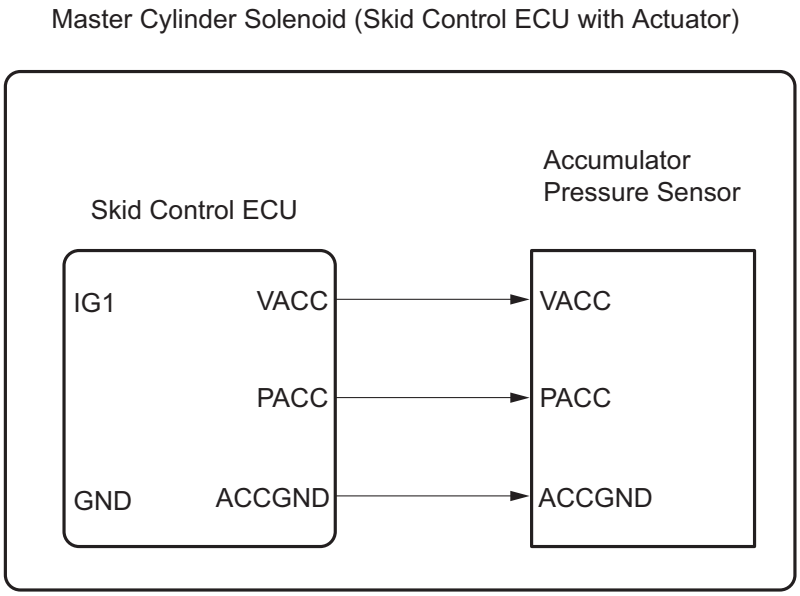
A

REPLACE MASTER CYLINDER SOLENOID

DTC	C1256/56	Accumulator Low Pressure

DESCRIPTION

The accumulator pressure sensor is connected to the skid control ECU in the master cylinder solenoid.



VACC: Accumulator Pressure Sensor Power Supply Output

PACC: Accumulator Pressure Sensor Signal Input

ACCGND: Accumulator Pressure Sensor Ground

Y C124776E01

DTC No.	DTC Detecting Condition	Trouble Areas
C1256/56	Fluid pressure inside the accumulator drops below the specification value.	• Hydraulic brake booster • Hydraulic brake booster pump motor • Hydraulic brake booster pump motor circuit • Accumulator pressure sensor

1	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).

(b) Turn the ignition switch to OFF.
(c) Depress the brake pedal more than 20 times.
(d) Turn the ignition switch to the ON position.
(e) Wait for 99 seconds.
(f) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

2 CHECK HYDRAULIC CIRCUIT

(a) Perform hydraulic brake booster on-vehicle inspection (See page BR-32).
OK:
Hydraulic circuit is normal (No leakage).

NG → **CHECK AND REPLACE HYDRAULIC CIRCUIT**

OK

3 READ VALUE OF DATA LIST (MASTER CYLINDER PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) Select the "DATA LIST" mode on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ACC PRESS SENS	Accumulator pressure sensor reading / min.: 0 V, max.: 5 V	3.58 to 5 V	If value constant regardless of pump operation, accumulator pressure sensor malfunction suspected.

(e) Check that the accumulator's output value is in the Normal Condition range.
OK:
Accumulator pressure sensor value is in the Normal Condition.

NG → **REPLACE MASTER CYLINDER SOLENOID**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A

BC

Result	Proceed to
DTC not output	B

B → END

A

REPLACE MASTER CYLINDER SOLENOID

DTC	C1257/57	IG Power Source

DESCRIPTION

The motor relay (semiconductor relay) is built into the hydraulic brake booster and drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detecting Condition	Trouble Areas
C1257/57	Open in pump motor input circuit	Hydraulic brake booster pump motor circuit

1 CHECK HYDRAULIC BRAKE BOOSTER PUMP MOTOR OPERATION

(a) Turn the ignition switch to OFF.
(b) Disconnect the actuator connector (S1).
(c) Depress the brake pedal more than 20 times.
(d) Check the hydraulic brake booster pump motor operation.
OK:
Hydraulic brake booster pump operates.

NG → **REPLACE MASTER CYLINDER SOLENOID**

OK ↓

2 RECONFIRM DTC

(a) Turn the ignition switch to OFF.
(b) Reconnect the actuator connector (S1).
(c) Turn the ignition switch to the ON position.
(d) Clear the DTCs (See page BC-118).
(e) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A ↓

REPLACE MASTER CYLINDER SOLENOID

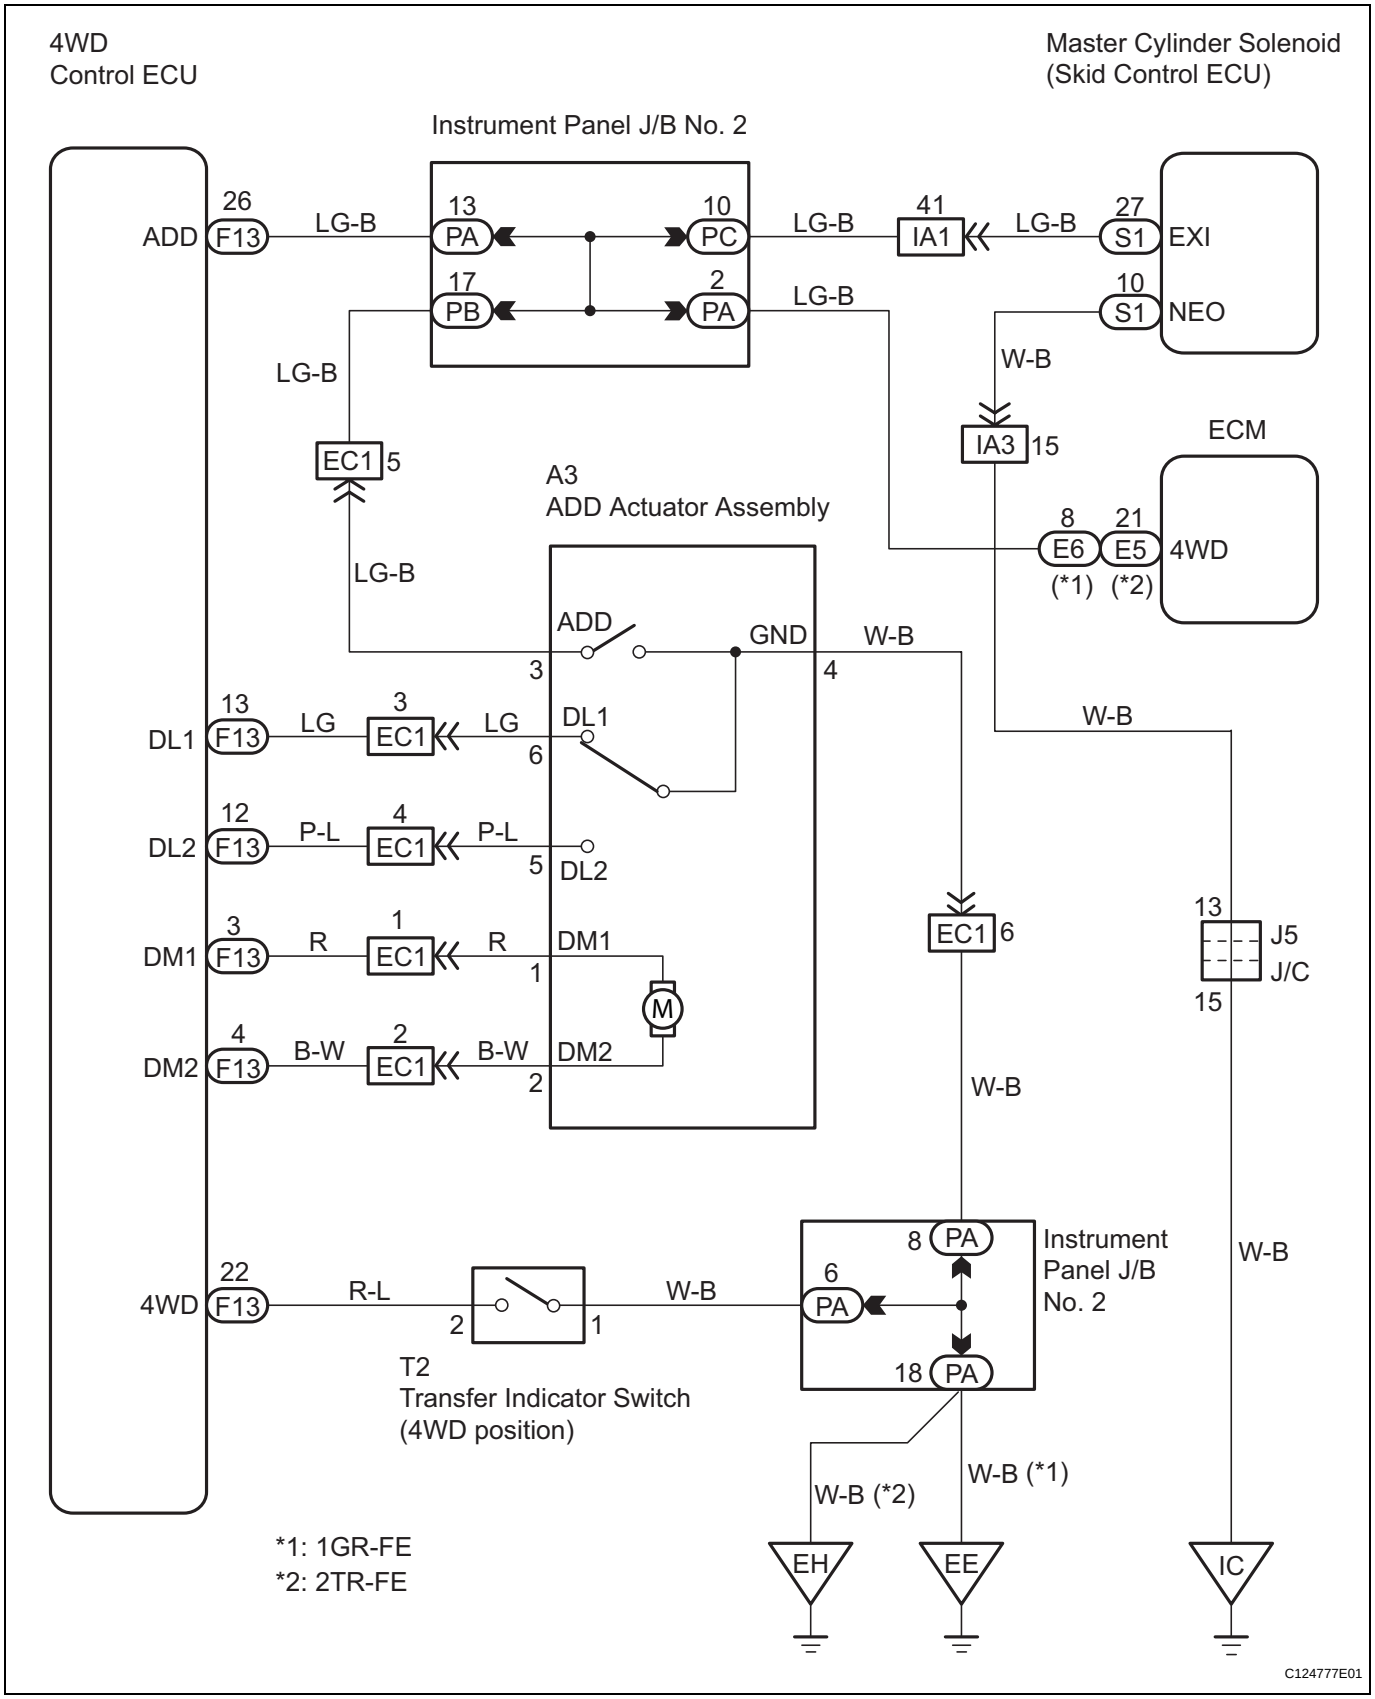
DTC	C1258/58	Transfer 4WD Position Switch Circuit

DESCRIPTION

This circuit monitors whether the transfer is in 2WD or 4WD mode and inputs the signal to the skid control ECU. In 2WD mode, TRAC is activated.
In 4WD mode, A-TRAC is activated.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1258/58	• 4WD: Open in 4WD detecting circuit • 2WD: Terminal NEO ground short, or abnormal signals transmitted to terminal EXI	• Transfer indicator switch (4WD position) • Transfer indicator switch (4WD position) circuit • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CONFIRM VEHICLE TYPE

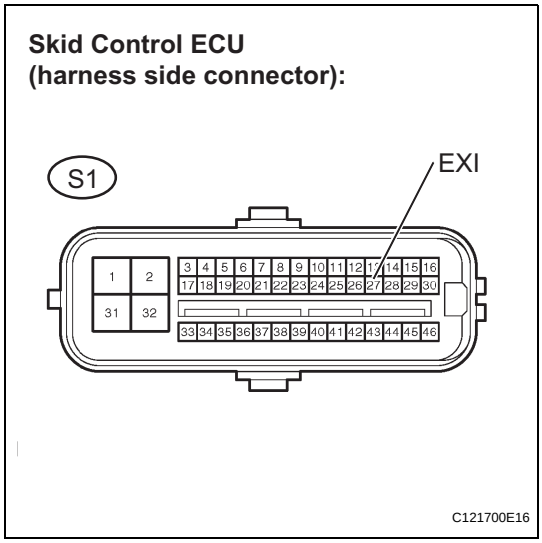
(a) Confirm the vehicle drive train.

Drive Train	Proceed to
4WD	A
2WD, Pre-Runner	B

B → Go to step 7

A

2	INSPECT SKID CONTROL ECU (EXI TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard

Tester Connection	Transfer Condition	Specified Condition
S1-27 (EXI) - Body ground	2WD	8 to 16 V
S1-27 (EXI) - Body ground	4WD	Below 1.5 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → Go to step 4

BC

OK

3	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

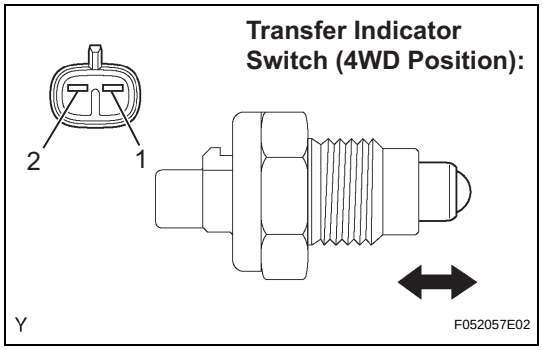
Result	Proceed to
DTC output	A
DTC not output	B

NG → END

A

REPLACE MASTER CYLINDER SOLENOID

4	INSPECT TRANSFER INDICATOR SWITCH (4WD POSITION)



(a) Disconnect the transfer indicator switch (4WD position) connector.
(b) Remove the transfer indicator switch (4WD position).
(c) Measure the voltage.

Standard

Tester Connection	Switch Position	Specified Condition
1 - 2	Pushed	Below 1 Ω
1 - 2	Free	10 kΩ or higher

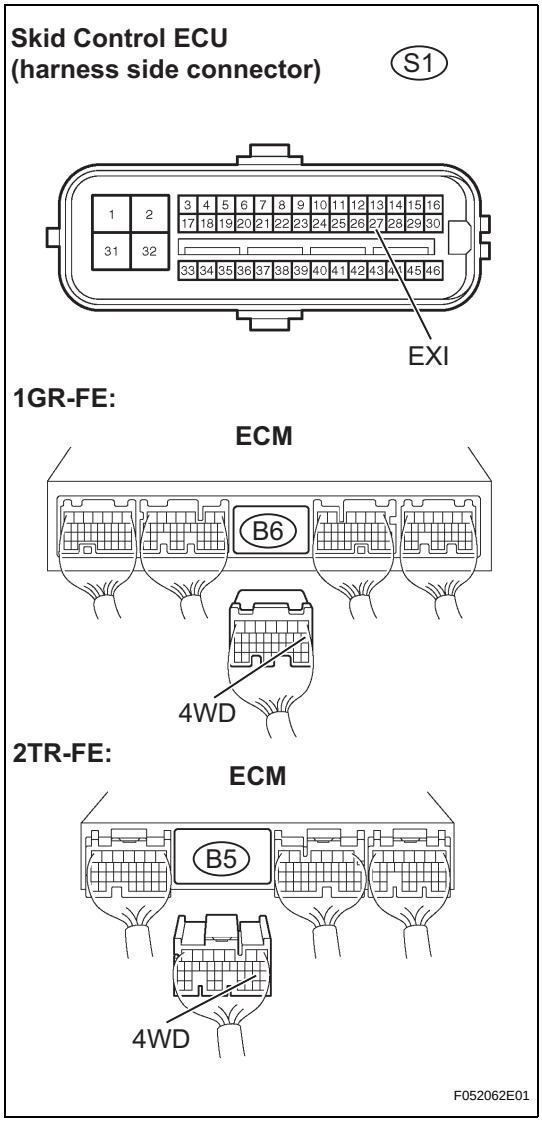
(d) Reinstall the transfer indicator switch (4WD position).
(e) Reconnect the transfer indicator switch (4WD position) connector.

NG → **REPLACE TRANSFER INDICATOR SWITCH (4WD POSITION)**

OK

BC

5	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - ECM)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.

Standard (1GR-FE)

Tester Connection	Specified Condition
S1-27 (EXI) - B6-8 (4WD)	Below 1 Ω

Standard (2TR-FE)

Tester Connection	Specified Condition
S1-27 (EXI) - B5-21 (4WD)	Below 1 Ω

(d) Reconnect the ECM connector.
(e) Reconnect the skid control ECU connector.

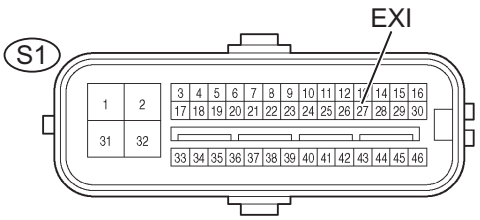
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

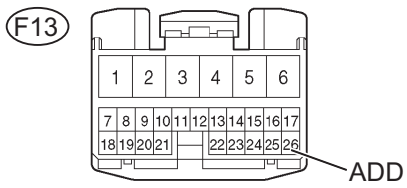
BC

6 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - 4WD CONTROL ECU)

Skid Control ECU
(harness side connector)



4WD Control ECU
(herness side connector)



F052382E01

(a) Disconnect the skid control ECU connector.
(b) Disconnect the 4WD control ECU connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-27 (EXI) - F13-26 (ADD)	Below 1 Ω

(d) Reconnect the 4WD control ECU connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

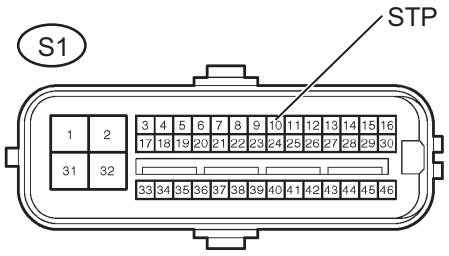
OK

END

BC

7 CHECK HARNESS AND CONNECTOR (NEO TERMINAL - BODY GROUND)

Skid Control ECU
(harness side connector):



C121700E17

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.

Standard

Tester Connection	Vehicle Drive Train	Specified Condition
S1-10 (NEO) - Body ground	2WD, Pre-runner	10 kΩ or higher
S1-10 (NEO) - Body ground	4WD	Below 1 Ω

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPLACE MASTER CYLINDER SOLENOID

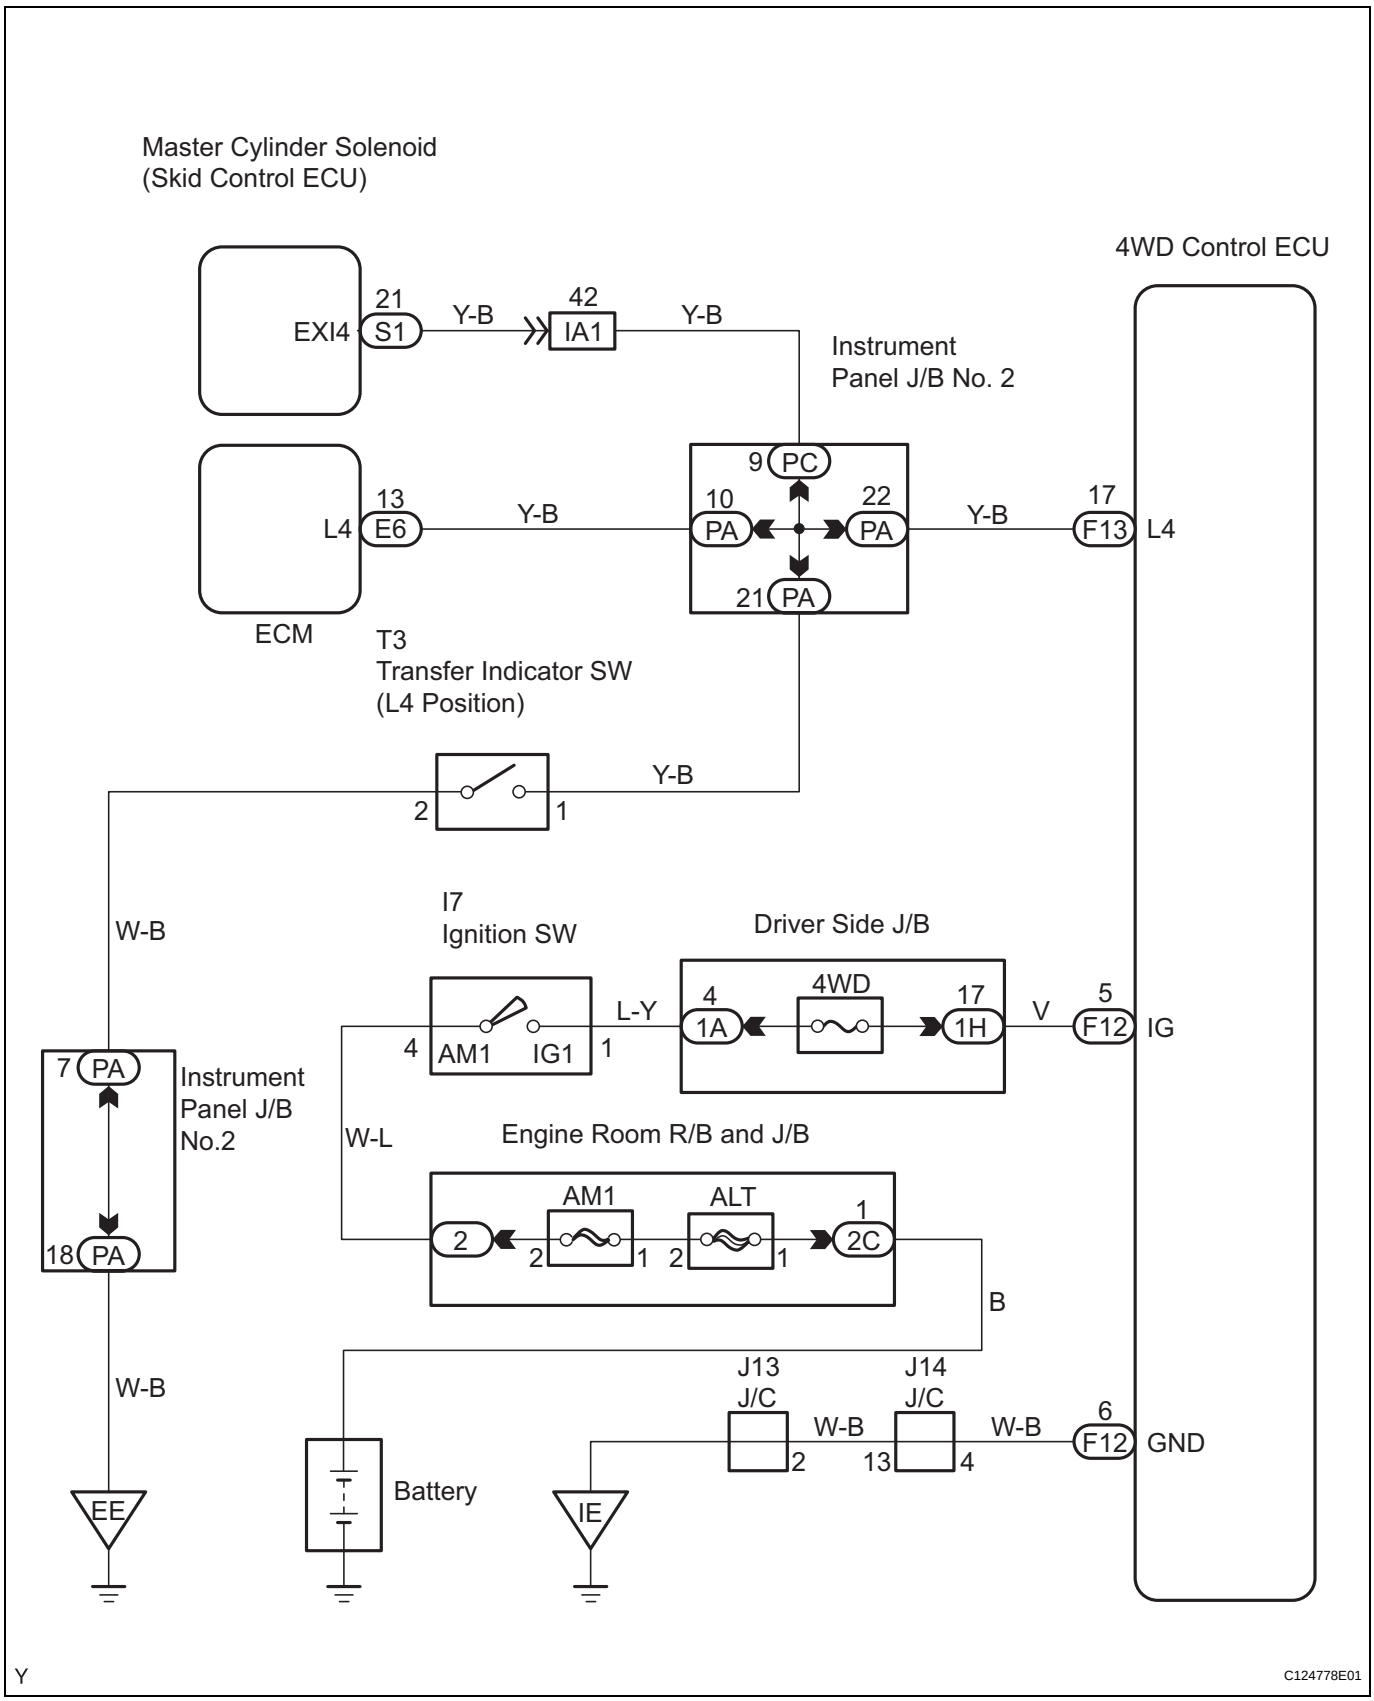
DTC	C1268/68	Transfer "L4" Position Switch Circuit

DESCRIPTION

A-TRAC is activated if wheel skid is detected while the transfer is in the L4 position.

DTC No.	DTC Detecting Condition	Trouble Areas
C1268/68	L4 switch signal input to skid control ECU does not match L4 switch signal output from ECM.	• Transfer indicator switch (L4 position) • Transfer indicator switch (L4 position) circuit • Master cylinder solenoid (skid control ECU)

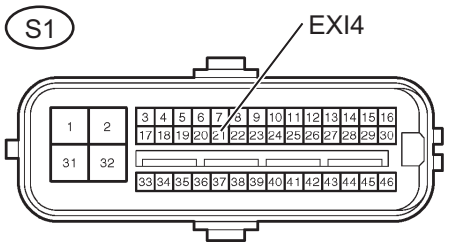
WIRING DIAGRAM



NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1 INSPECT SKID CONTROL ECU (EXI4 TERMINAL VOLTAGE)

Skid Control ECU (harness side connector):



C121700E18

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard

Tester Connection	Transfer Condition	Specified Condition
S1-21 (EXI4) - Body ground	L4	Below 1.5 V
S1-21 (EXI4) - Body ground	Other than above	8 to 14 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → **Go to step 4**

OK

2 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if the test mode DTC (C1283/83) is detected.

Result	Proceed to
Test mode DTC (C1283/83) not output	A
Test mode DTC (C1283/83) output	B

B → **REPAIR TRANSFER INDICATOR SWITCH CIRCUIT (L4 POSITION)**

A

3 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

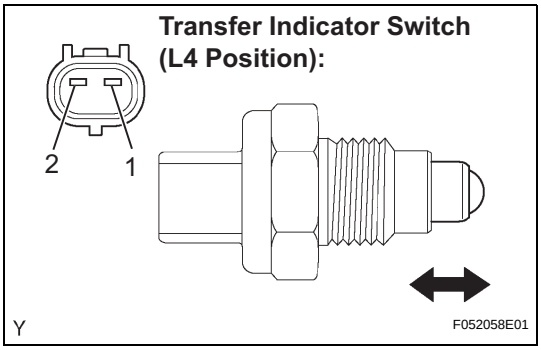
B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

BC

4	INSPECT TRANSFER INDICATOR SWITCH (L4 POSITION)



(a) Disconnect the transfer indicator switch (L4 position) connector.
(b) Remove the transfer indicator switch (L4 position).
(c) Measure the voltage.

Standard

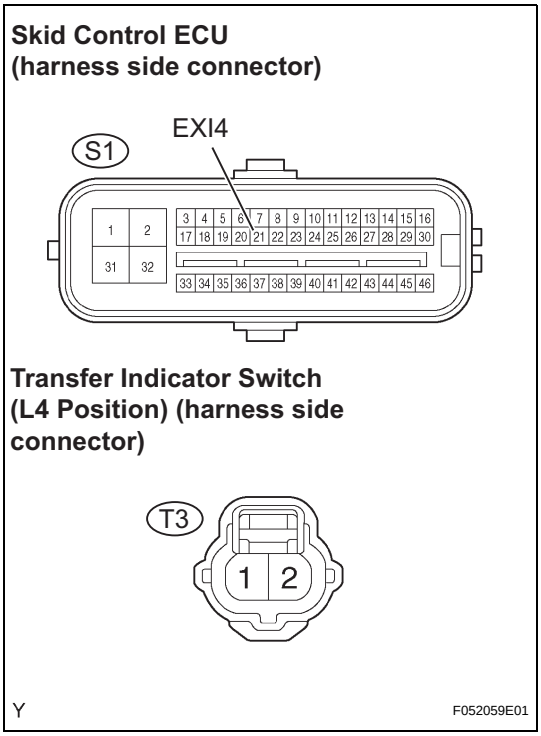
Tester Connection	Switch Position	Specified Condition
1 - 2	Pushed	Below 1 Ω
1 - 2	Free	10 kΩ or higher

(d) Reinstall the transfer indicator switch (L4 position).
(e) Reconnect the transfer indicator switch (L4 position) connector.

NG → **REPLACE TRANSFER INDICATOR SWITCH**

OK

5	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - TRANSFER INDICATOR SWITCH (L4 POSITION))



(a) Disconnect the skid control ECU connector.
(b) Disconnect the transfer indicator switch (L4 position) connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-21 (EXI4) - T3-1	Below 1 Ω
S1-21 (EXI4) - Body ground	10 kΩ or higher

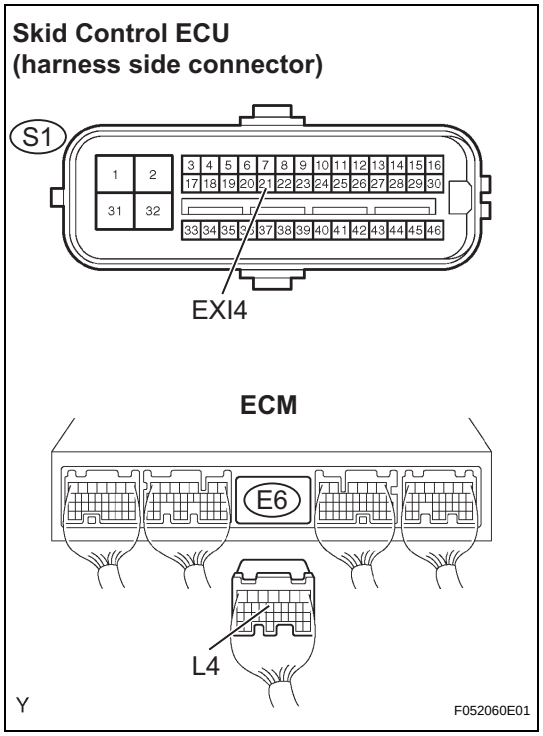
(d) Reconnect the transfer indicator switch (L4 position) connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

6	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - ECM)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-21 (EXI4) - E6-13 (L4)	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-21 (EXI4) - Body ground	10 kΩ or higher
E6-13 (L4) - Body ground	10 kΩ or higher

(e) Reconnect the ECM connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MASTER CYLINDER SOLENOID

BC

DTC	C1337/37	Different Diameter Tire Malfunction

DESCRIPTION

The skid control ECU measures the speed of each wheel by receiving signals from the speed sensors. These signals are used for recognizing whether all 4 wheels are operating properly. Therefore, all wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Areas
C1337/37	When either one of following condition detected: • Diameters different of 2 front wheels and 2 rear wheels. • Wheel speed sensor fault	• Speed sensor • Speed sensor rotor • Speed sensor circuit • Tire sizes

NOTICE:
Check the speed sensor signal after replacement (See page BC-103).

1	CHECK TIRE SIZE

(a) Check tire size and condition of all 4 wheels.
OK:
All 4 wheels are the same size and in the same condition.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE SAME IN SIZE**

OK ↓

BC

2	CHECK SPEED SENSOR ROTOR

BC-130

(a) Remove the drive shaft, and check around the speed sensor rotor.
OK:
No scratches or foreign matter on the sensor tip.

NG → **REPLACE SPEED SENSOR ROTOR**

OK ↓

3	CHECK SPEED SENSOR

(a) Check the speed sensor circuit (See page BC-130).

NG → **REPLACE SPEED SENSOR**

OK ↓

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - EACH SPEED SENSOR)

(a) Check the speed sensor circuit (See page BC-130).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	**RECONFIRM DTC**

(a) Clear the DTCs (See page BC-118).
(b) Drive the vehicle at more than 13 mph (20 km/h) for more than 60 seconds.
(c) Check if the same DTCs are detected.

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

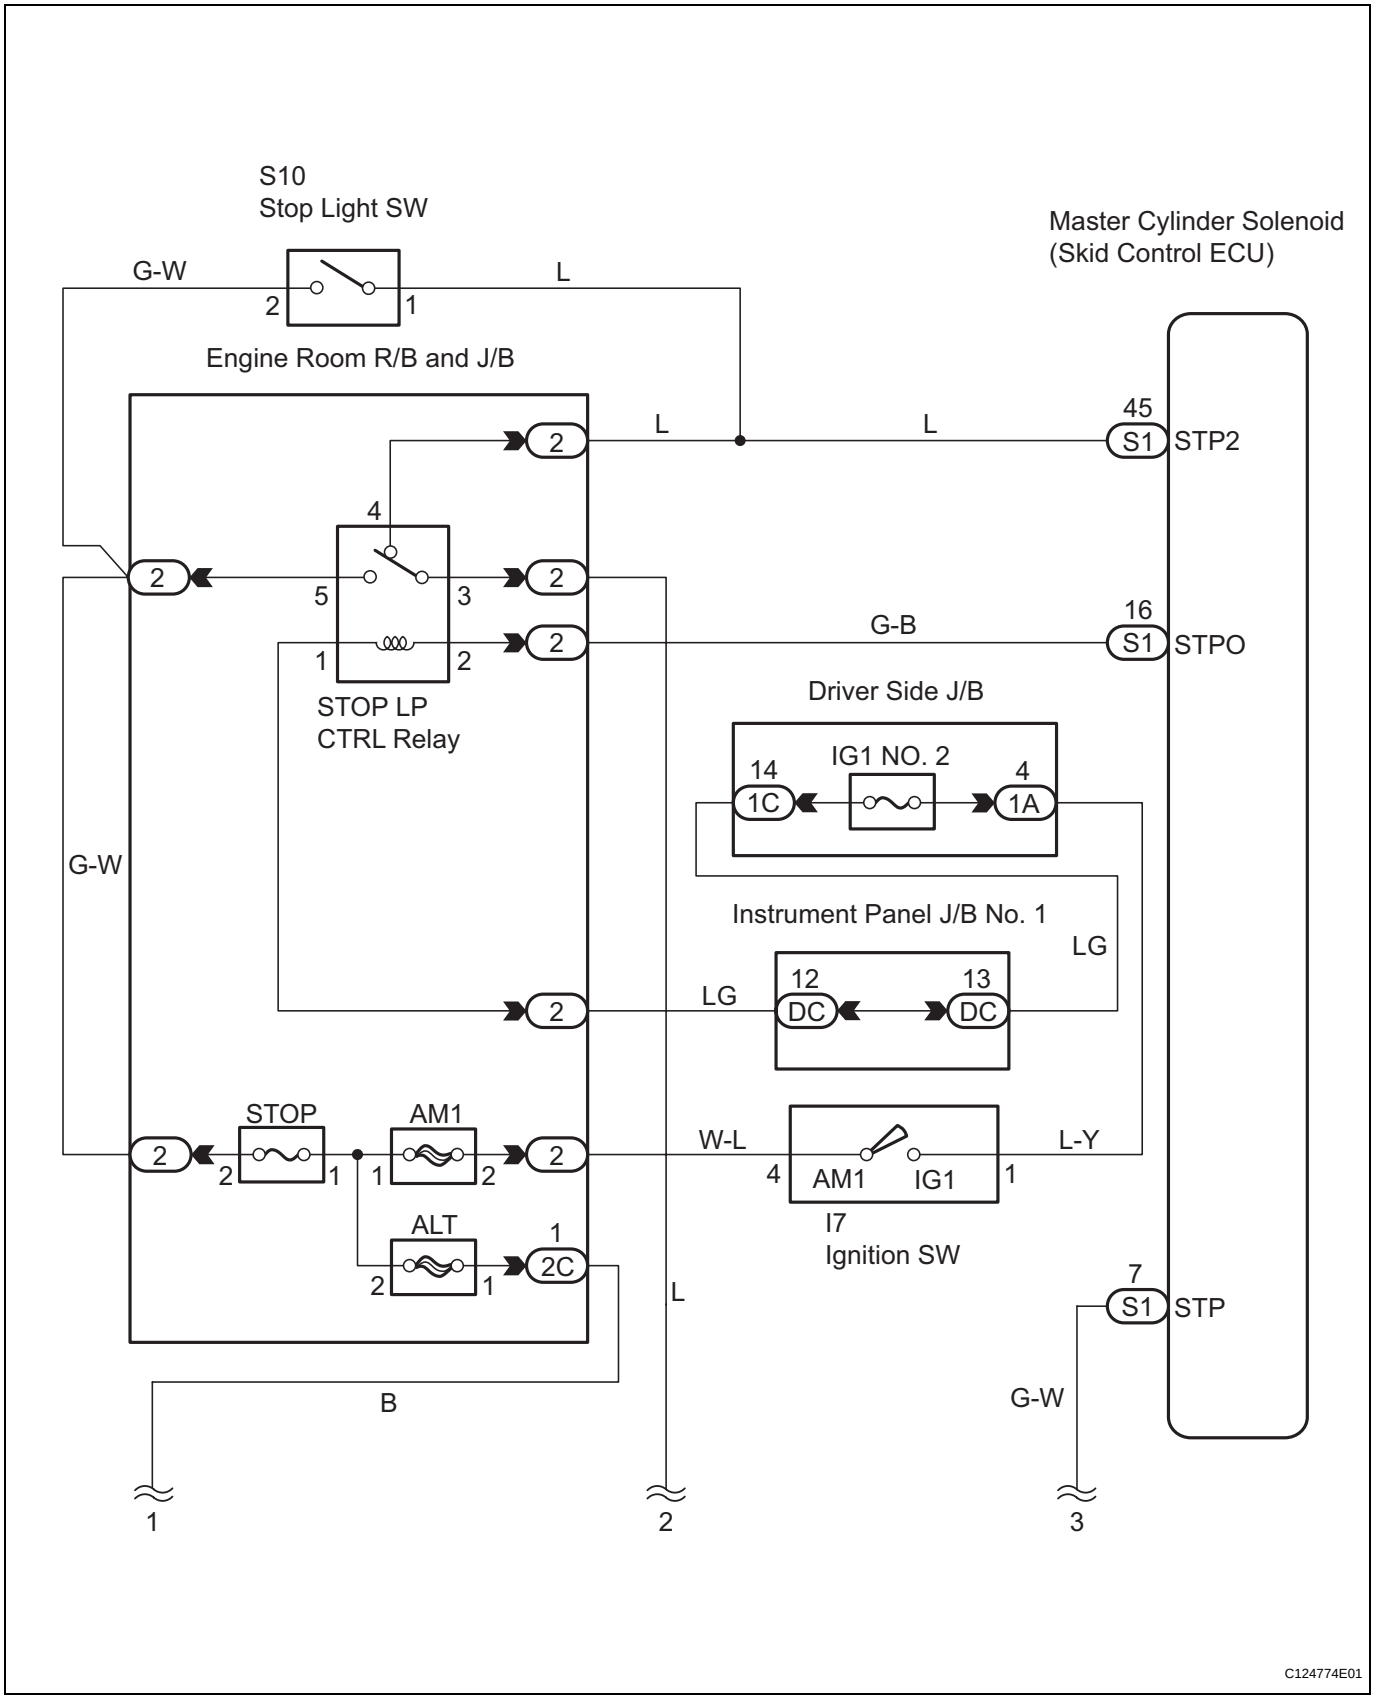
DTC	C1380/64	Stop Light Control Relay Malfunction

DESCRIPTION

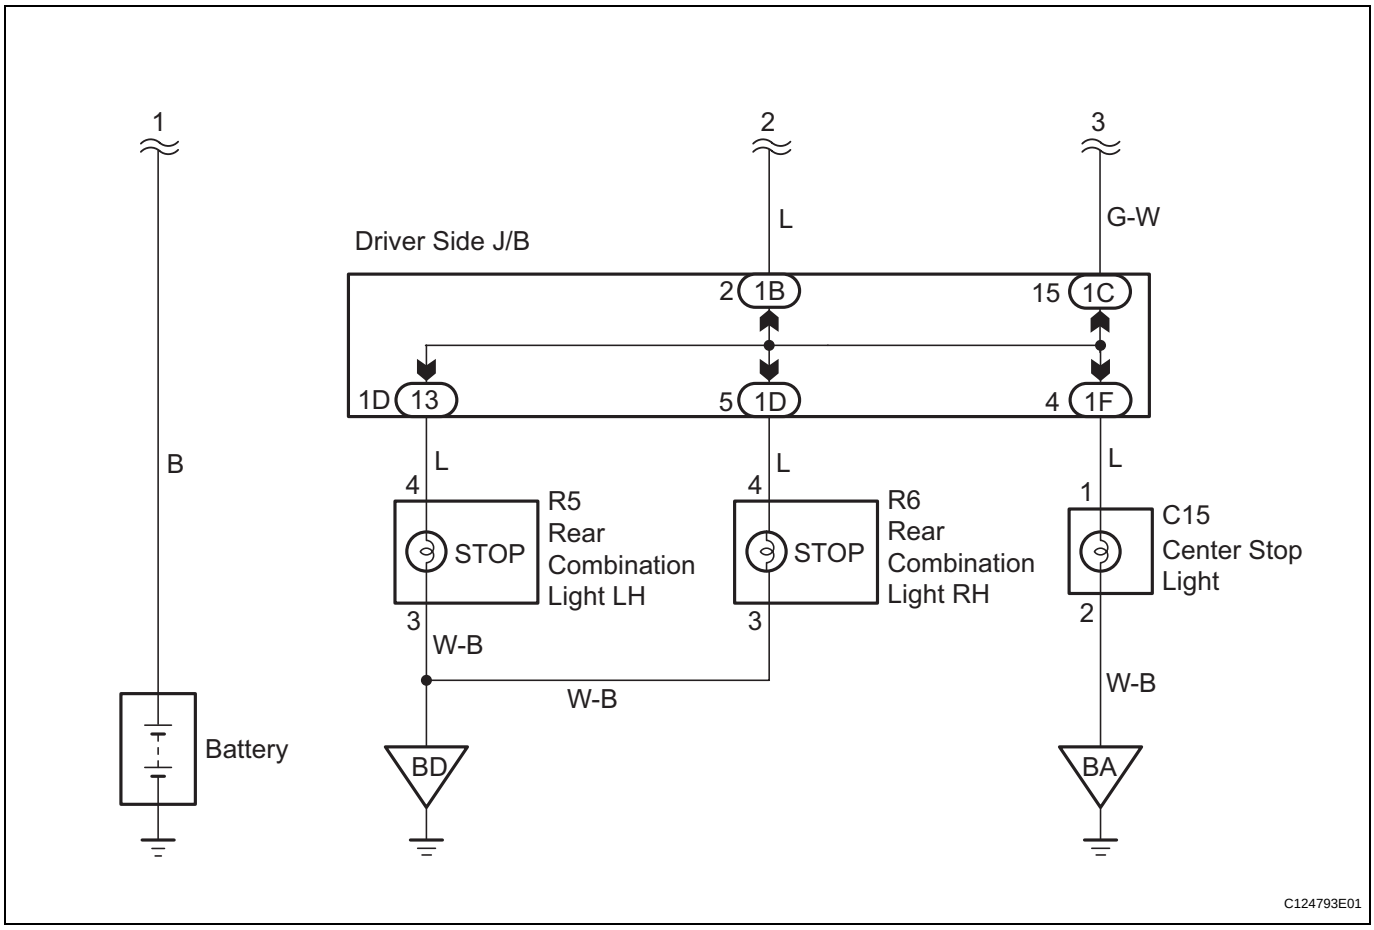
The skid control ECU inputs the stop light switch signal and detects the status of the brake operation.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1380/64	Either of following conditions met when IG1 terminal voltage between 10 V and 14 V: • Despite STPO (stop light driving output) being on, no signal input to STP terminal for 5 seconds or more • Despite STPO being off, input signals of STP and STP2 do not match	• Stop light switch • Stop light switch circuit • STOP LP CTRL relay • Master cylinder solenoid (skid control ECU)

WIRING DIAGRAM



BC



BC

NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CHECK STOP LIGHT SWITCH OPERATION

(a) Check that the stop lights come on when the brake pedal is depressed and go off when the brake pedal is released.

OK

Pedal Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

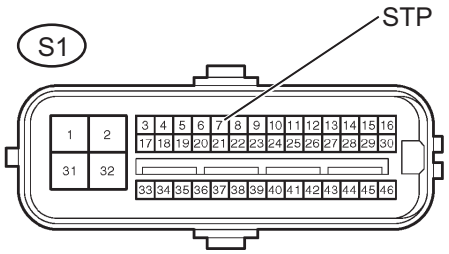
HINT:
Check the stop light bulbs as they may have burnt out.

NG → **Go to step 10**

OK

2 INSPECT SKID CONTROL ECU (STP TERMINAL VOLTAGE)

Skid Control ECU (harness side connector):



C121700E15

(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard Voltage

Tester Connection	Switch condition	Specified Condition
S1-7 (STP) - Body ground	Brake pedal depressed	8 to 16 V
S1-7 (STP) - Body ground	Brake pedal released	Below 1.5 V

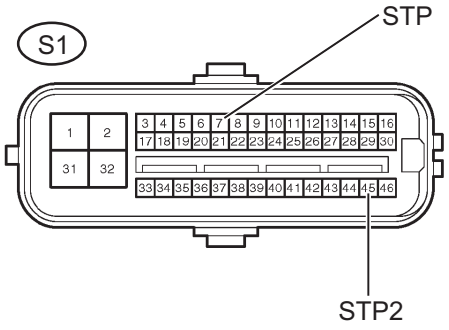
(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (STP2 TERMINAL VOLTAGE)

Skid Control ECU (harness side connector):



C121700E19

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
S1-7 (STP) - S1-45 (STP2)	Below 1 Ω

(c) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP2 CIRCUIT)**

OK

BC

4 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (STOP LIGHT RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the intelligent tester ON.
(d) Select the ACTIVE TEST mode on the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic Note
STP LIGHT RELAY	Turns stop light relay ON / OFF	Observe stop lights

(e) Check that the stop lights turn on and off on the rear combination light when using the intelligent tester.

OK:

The stop lights turn on and off according to the intelligent tester operations.

NG → **Go to step 6**

OK

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

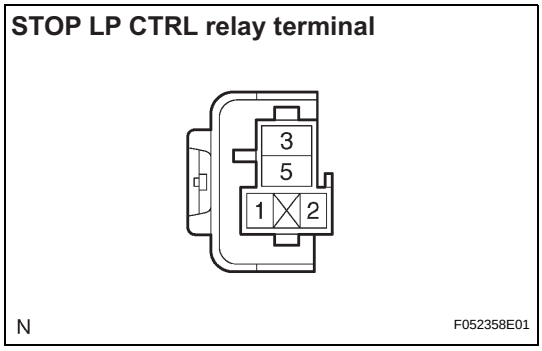
B → **END**

A

REPLACE MASTER CYLINDER SOLENOID

6 CHECK STOP LIGHT CONTROL RELAY

BC



(a) Disconnect the STOP LP CTRL relay.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

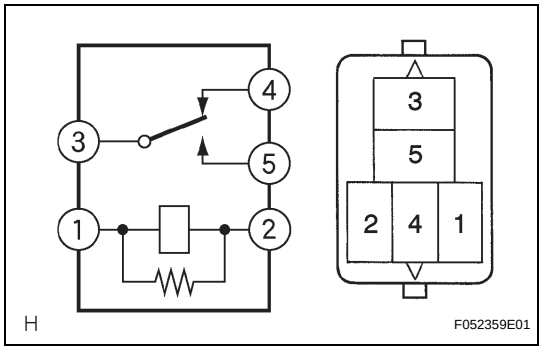
Tester Connection	Condition	Specified Condition
Terminal 5 - Body ground	Always	8 to 16 V
Terminal 1 - Body ground	Always	8 to 16 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the STOP LP CTRL relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LP CTRL RELAY)**

OK

7 INSPECT STOP LIGHT CONTROL RELAY



(a) Remove the STOP LP CTRL relay from the engine room R/B and J/B.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher

(c) Apply the battery voltage between terminals 1 (+) and 2 (-).
(d) Measure the resistance.
Standard Resistance

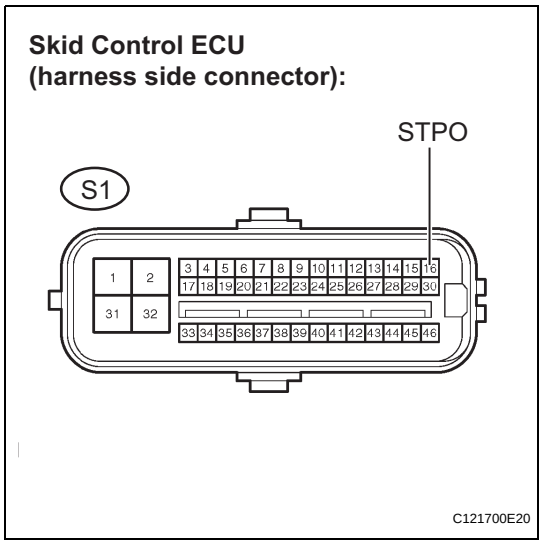
Tester Connection	Specified Condition
3 - 4	10 kΩ or higher
3 - 5	Below 1 Ω

(e) Reinstall the STOP LP CTRL relay.

NG → **REPLACE STOP LIGHT CONTROL RELAY**

OK

8 INSPECT MASTER CYLINDER SOLENOID (STPO TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
S1-16 (STPO) - Body ground	Brake pedal depressed	10 to 14 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP CIRCUIT)**

OK

9 RECONFIRM DTC

(a) Clear the DTCs (See page BC-118).
(b) Check if the same DTCs are recorded.

Result	Proceed to
DTC output	A
DTC not output	B

BC

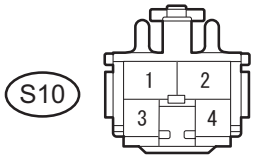
B → END

A

REPLACE MASTER CYLINDER SOLENOID

10 CHECK STOP LIGHT SWITCH ASSEMBLY (STOP LIGHT SWITCH POWER SOURCE TERMINAL VOLTAGE)

Stop Light Switch (harness side connector):



C124801E01

(a) Disconnect the stop light switch connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Specified Condition
S10-2 Body ground	10 to 14 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the stop light switch connector.

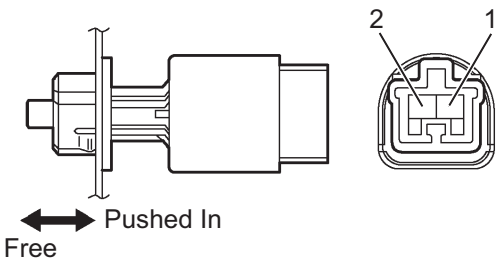
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT POWER SOURCE CIRCUIT)**

OK

11 INSPECT STOP LIGHT SWITCH ASSEMBLY

BC

Stop Light Switch Assembly:



C124796E01

(a) Disconnect the stop light switch connector.
(b) Measure the resistance.

Standard Resistance

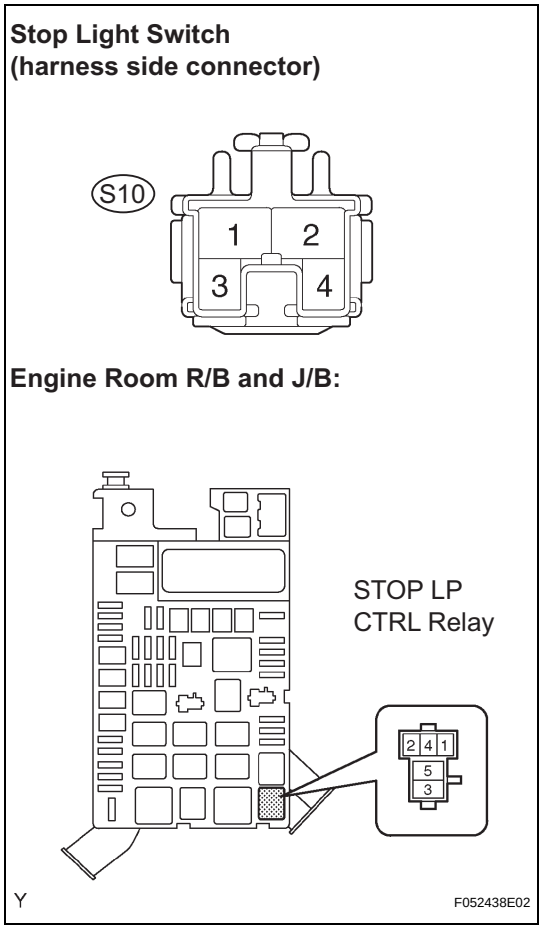
Switch condition	Tester connection	Specified condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher

(c) Reconnect the stop light switch connector.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

12 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - STOP LP CTRL RELAY)



(a) Remove the STOP LP CTRL relay.
(b) Measure the resistance.
Standard Resistance

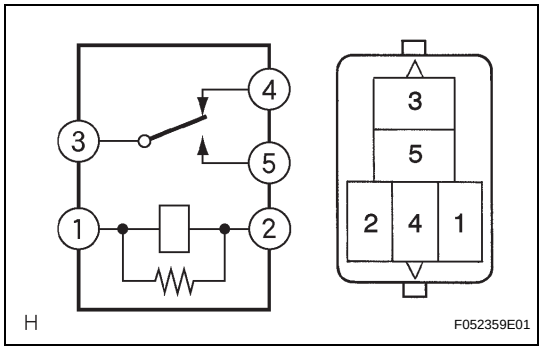
Tester Connection	Specified Condition
S10-2 - STOP LP CTRL relay (5)	Below 1 Ω
S10-2 - Body ground	10 kΩ or higher

(c) Reinstall the STOP LP CTRL relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

13 INSPECT STOP LIGHT CONTROL RELAY



(a) Remove the STOP LP CTRL relay from the engine room R/B and J/B.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher

(c) Apply the battery voltage between terminals 1 (+) and 2 (-).
(d) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
3 - 4	10 kΩ or higher
3 - 5	Below 1 Ω

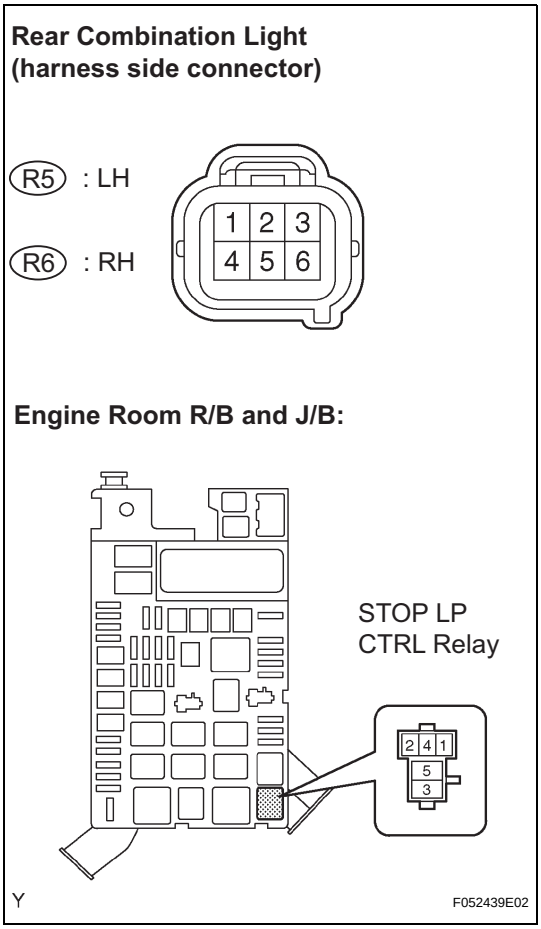
(e) Reinstall the STOP LP CTRL relay.

BC

NG → REPLACE STOP LIGHT CONTROL RELAY

OK

14 CHECK HARNESS AND CONNECTOR (REAR COMBINATION LIGHT - STOP LP CTRL RELAY)



(a) Disconnect the rear combination light connector.
(b) Remove the STOP LP CTRL relay.
(c) Measure the resistance.

Standard Resistance (LH)

Tester Connection	Specified Condition
R5-1 - STOP LP CTRL (4)	Below 1 Ω
R5-1 - Body ground	10 kΩ or higher
R5-6 - Body ground	Below 1 Ω

Standard Resistance (RH)

Tester Connection	Specified Condition
R6-1 - STOP LP CTRL (4)	Below 1 Ω
R6-1 - Body ground	10 kΩ or higher
R6-6 - Body ground	Below 1 Ω

(d) Reinstall the STOP LP CTRL relay.
(e) Reconnect the rear combination light connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE

BC

ABS Warning Light Remains ON

DESCRIPTION

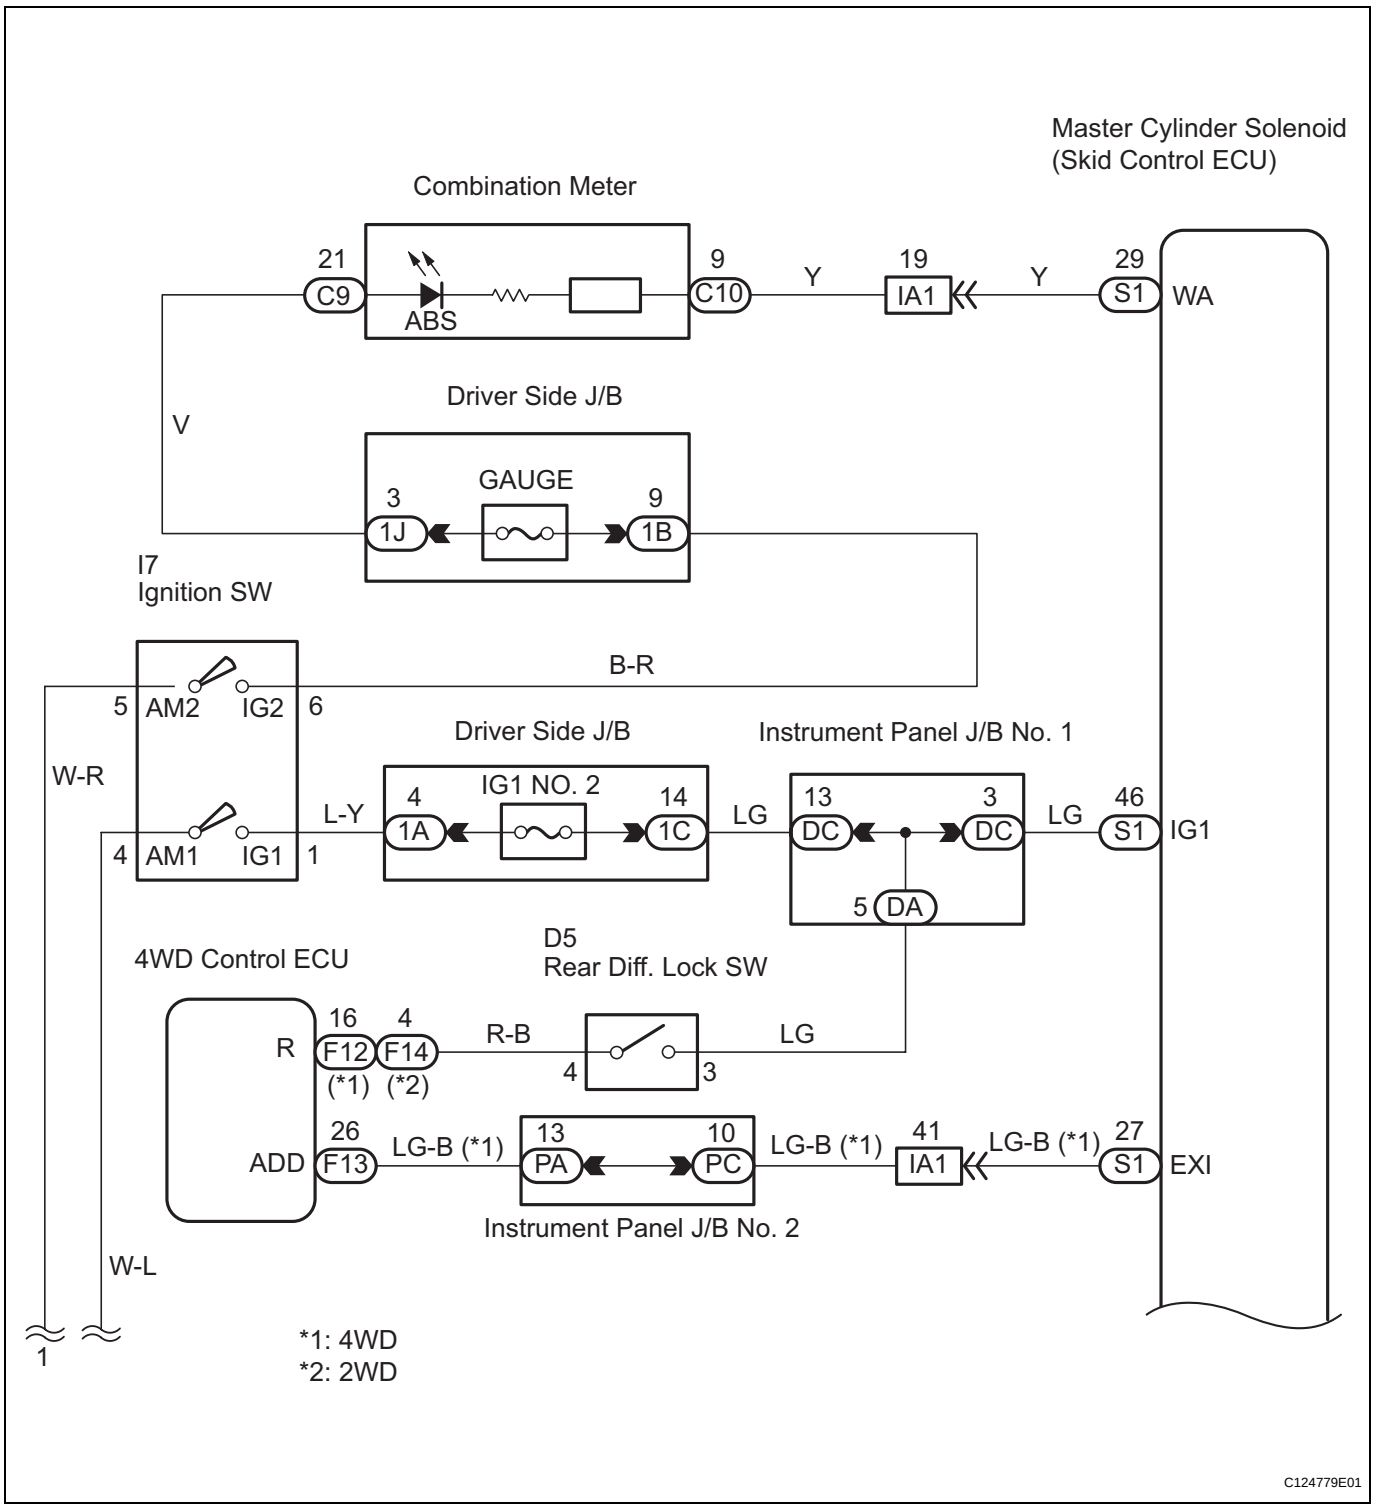
If any of the following is detected, the ABS warning light remains ON.

1. The skid control ECU connectors are disconnected from the skid control ECU.
2. There is a malfunction in the skid control ECU internal circuit.
3. There is an open in the harness between the combination meter and skid control ECU.

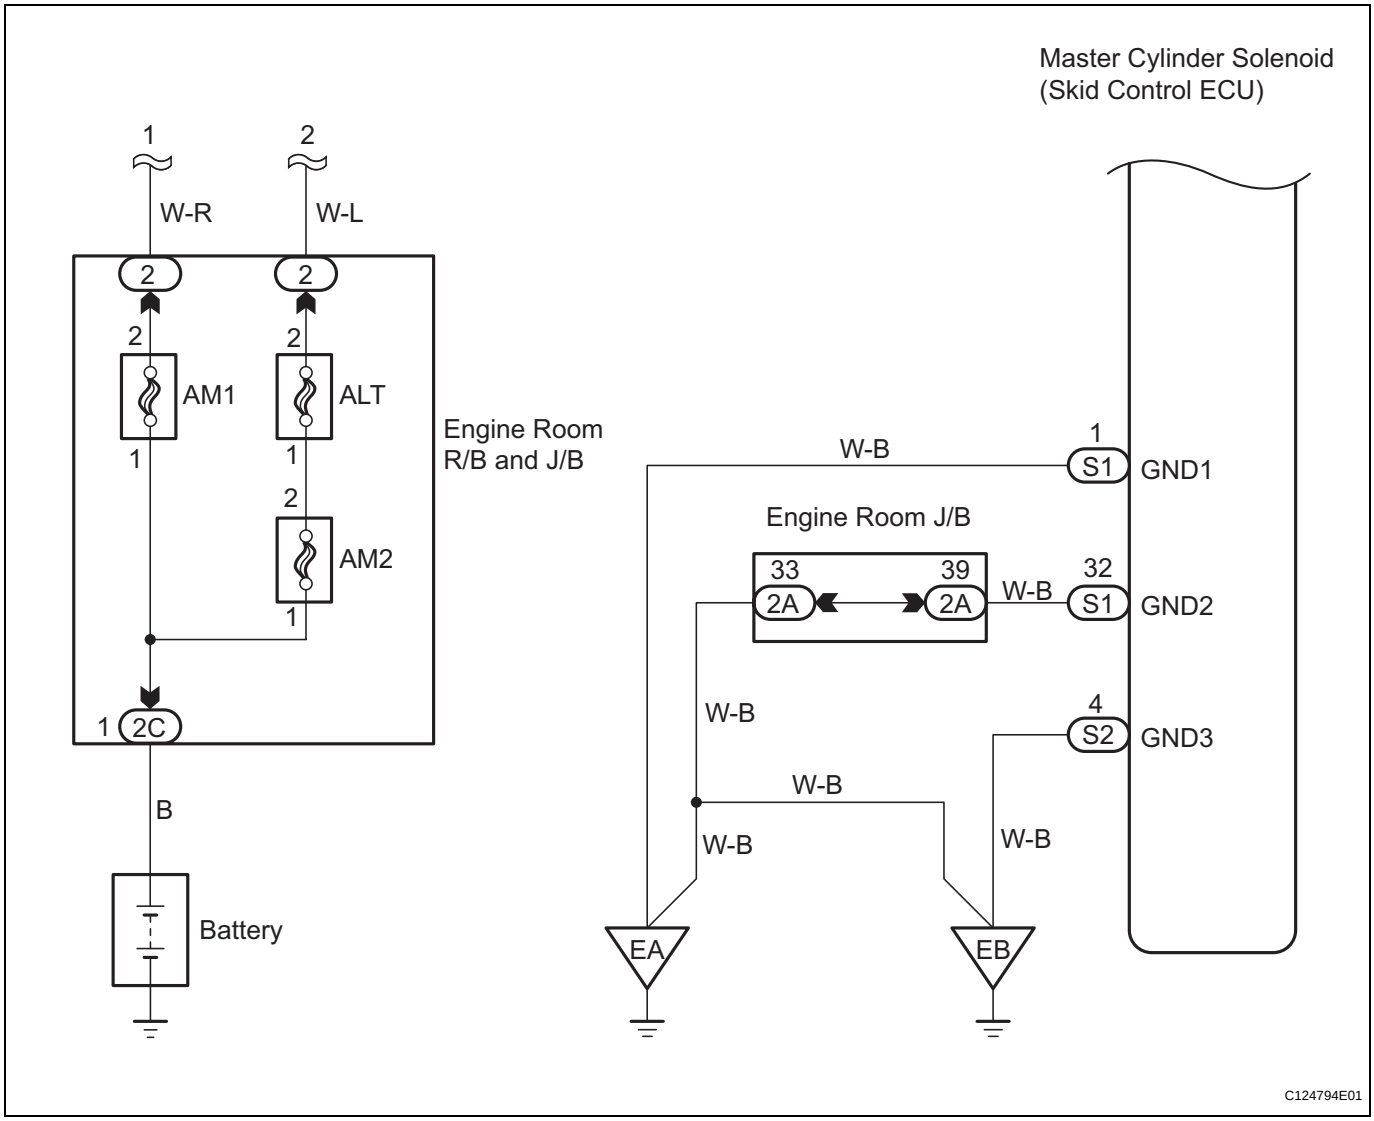
HINT:

Use of the intelligent tester may not be possible when there is a malfunction in the skid control ECU.

WIRING DIAGRAM



BC



BC

NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CHECK DTC

(a) Check if DTCs for ABS are recorded.

Result	Proceed to
DTC not output	A
DTC output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2	INSPECT SKID CONTROL ECU CONNECTOR

(a) Check that the ECU connector is securely connected.

OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR CORRECTLY**

OK

3 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the intelligent tester ON.
(d) Select the DATA LIST mode on the intelligent tester.
(e) Measure the voltage output from the ECU displayed on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
IG VOLTAGE	ECU power supply voltage / TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 to 14V TOO LOW: Below 9.5 V	-

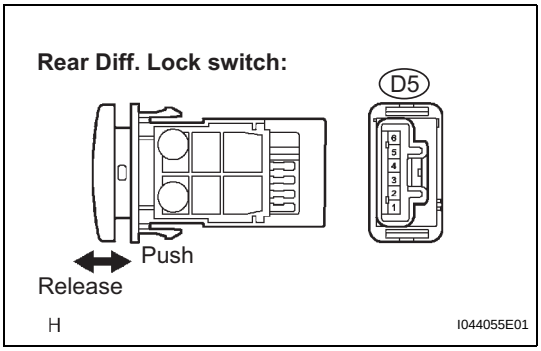
B → **Go to step 6**

C → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A

BC

4 INSPECT REAR DIFFERENTIAL LOCK SWITCH



(a) Remove the rear diff. lock switch.
(b) Disconnect the rear diff. lock switch connector.
(c) Measure the resistance.
Standard

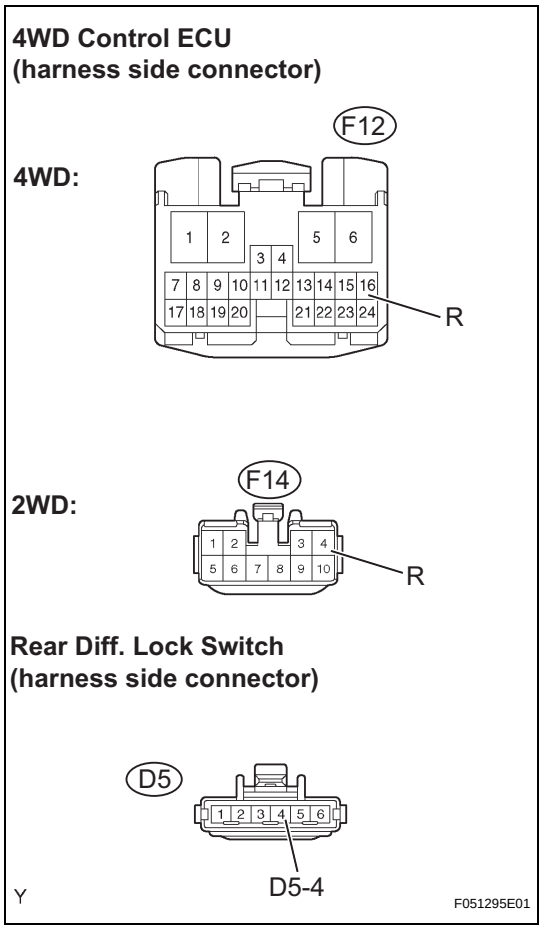
Tester Connection	Switch Condition	Specified Condition
D5-3 - D5-4	Released	10 kΩ or higher
D5-3 - D5-4	Pushed in	Below 1 Ω

(d) Reinstall the rear diff. lock switch.
(e) Reconnect the rear diff. lock switch connector.

NG → **REPLACE REAR DIFFERENTIAL LOCK SWITCH**

OK

5	CHECK HARNESS AND CONNECTOR (4WD CONTROL ECU - REAR DIFFERENTIAL LOCK SWITCH)



(a) Disconnect the 4WD control ECU connector.
(b) Disconnect the rear diff. lock connector.
(c) Measure the resistance.

Standard (4WD)

Tester Connection	Specified Condition
F12-16 (R) - D5-4	Below 1 Ω
F12-16 (R) - Body ground	10 kΩ or higher

Standard (2WD)

Tester Connection	Specified Condition
F14-4 (R) - D5-4	Below 1 Ω
F14-4 (R) - Body ground	10 kΩ or higher

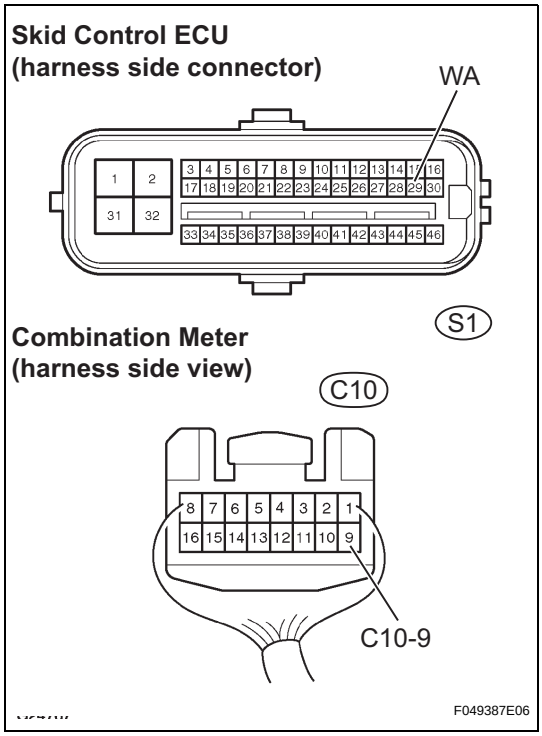
(d) Reconnect the rear diff. lock connector.
(e) Reconnect the 4WD control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

6 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-29 (WA) - C10-9	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-29 (WA) - Body ground	10 kΩ or higher

(e) Reconnect the combination meter connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

7 INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).

OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE MASTER CYLINDER SOLENOID

ABS Warning Light does not Come ON

DESCRIPTION

If the ECU detects trouble, it illuminates the ABS warning light while at the same time prohibiting ABS control.
At this time, the ECU records a DTC in its memory.
Connecting terminals TC and CG of the DLC3 causes the ECU to display 2-digit DTCs by blinking the ABS warning light.

WIRING DIAGRAM

See page BC-234.

NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CHECK ABS WARNING LIGHT

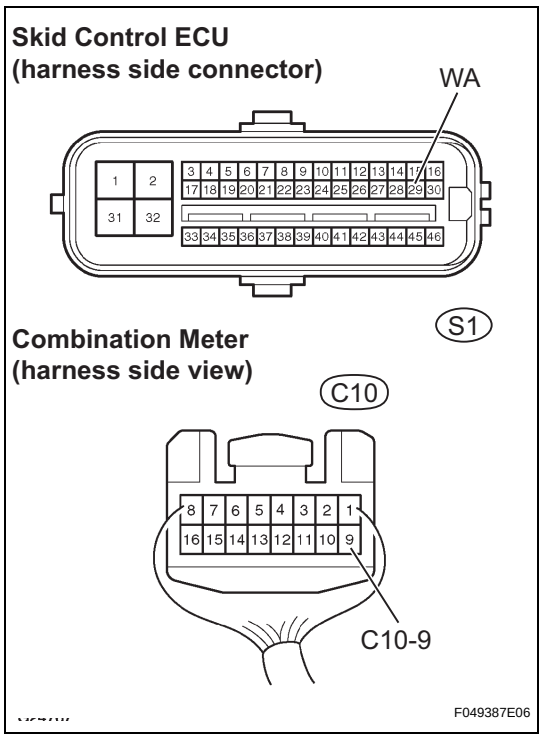
(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Check that the ABS warning light comes on.
OK:
ABS warning light comes on.
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

BC

2	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-29 (WA) - C10-9	Below 1 Ω
S1-29 (WA) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

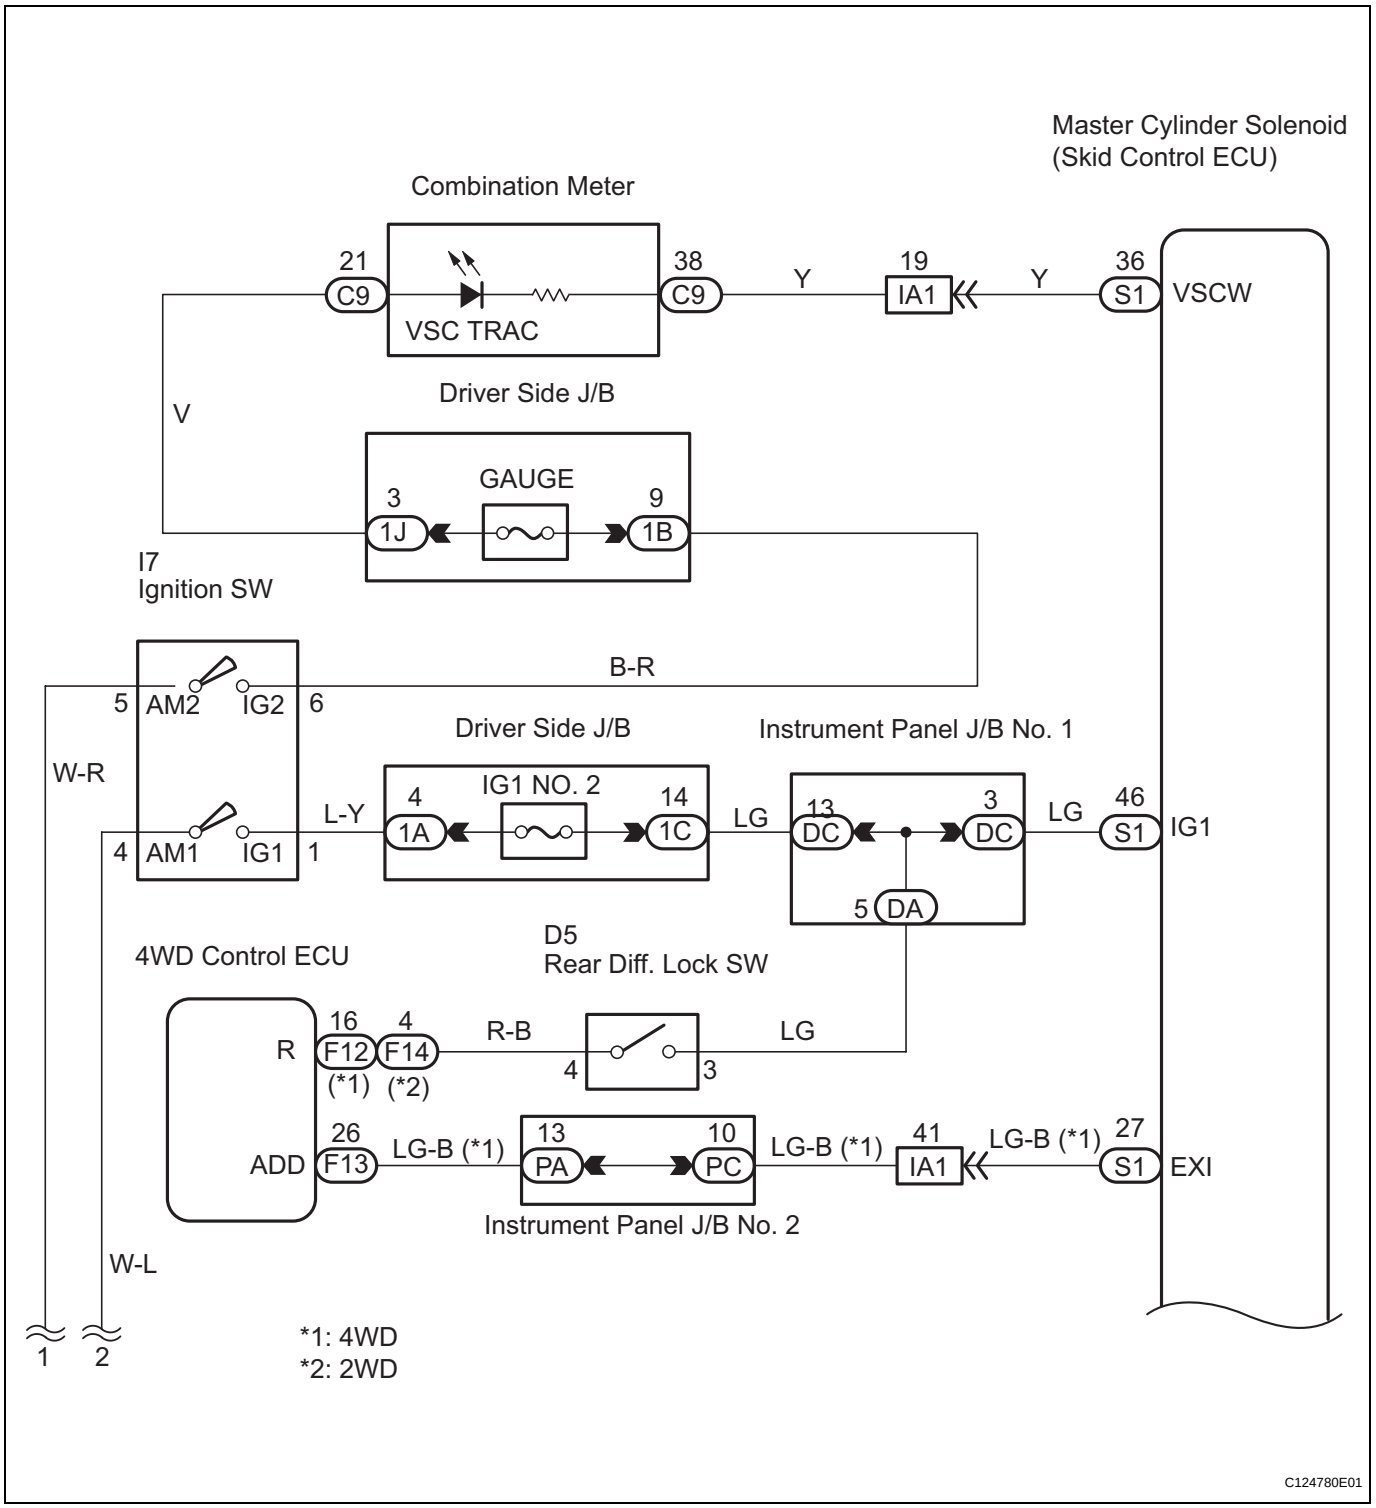
CHECK FOR INTERMITTENT PROBLEMS

VSC TRAC Warning Light Remains ON

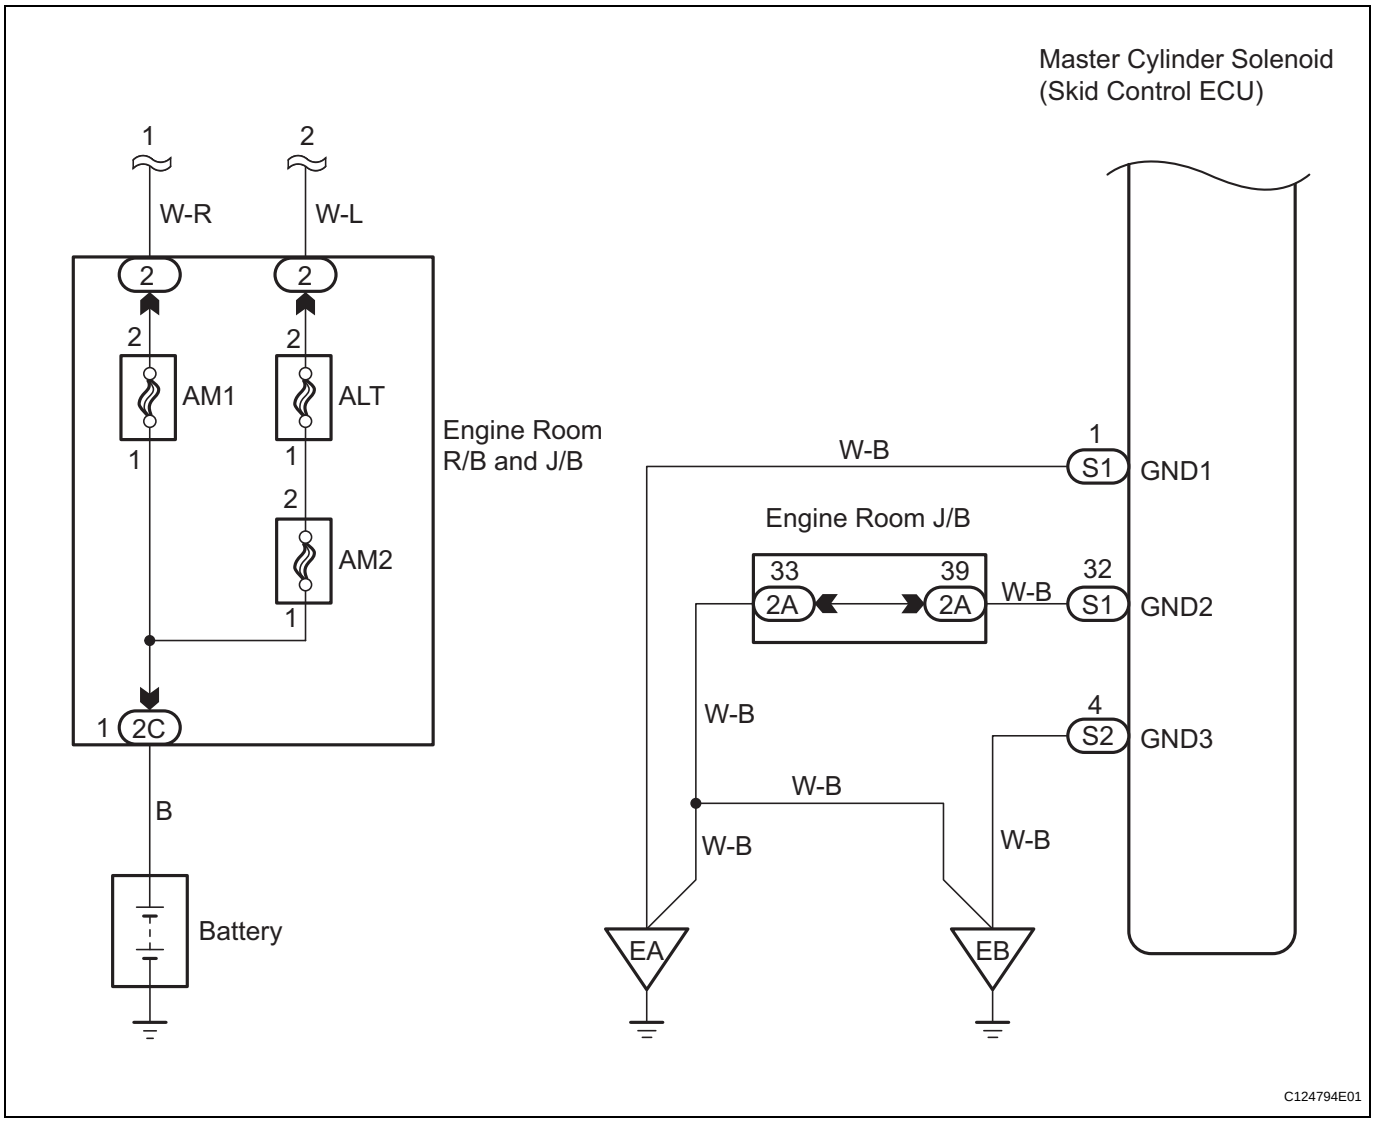
DESCRIPTION

When the skid control ECU stores DTCs, the VSC and TRAC functions are deactivated, the VSC TRAC warning light comes on in the combination meter.

WIRING DIAGRAM



BC



NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CHECK DTC

(a) Check if DTCs for VSC are recorded.

Result	Proceed to
DTC not output	A
DTC output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2	INSPECT SKID CONTROL ECU CONNECTOR

(a) Check that the ECU connector is securely connected.

BC

OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR CORRECTLY**

OK

3 INSPECT SKID CONTROL ECU TERMINAL VOLTAGE (IG1 TERMINAL)

(a) When using intelligent tester:
(1) Connect the intelligent tester to the DLC3.
(2) Start the engine.
(3) Select the DATA LIST mode on the intelligent tester.
(4) Measure the voltage output from the ECU displayed on the intelligent tester.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
IG VOLTAGE	ECU power supply voltage: TOO LOW / NORMAL / TOO HIGH	TOO HIGH: 14 V or more NORMAL: 9.5 to 14V TOO LOW: Below 9.5 V	-

OK:
"Normal" is displayed.

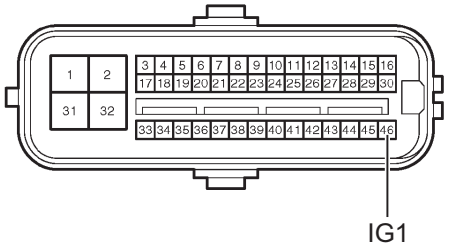
(b) When not using intelligent tester:
(1) Disconnect the skid control ECU connector.
(2) Turn the ignition switch to the ON position.
(3) Measure the voltage.

Standard

Tester Connection	Specified Condition
S1-46 (IG1) - Body ground	10 to 14 V

(4) Turn the ignition switch to OFF.
(5) Reconnect the skid control ECU connector.

Skid Control ECU (harness side connector):



C121700E02

Result	Proceed to
OK (models with rear diff. lock)	A
OK (models without rear diff. lock)	B
NG	C

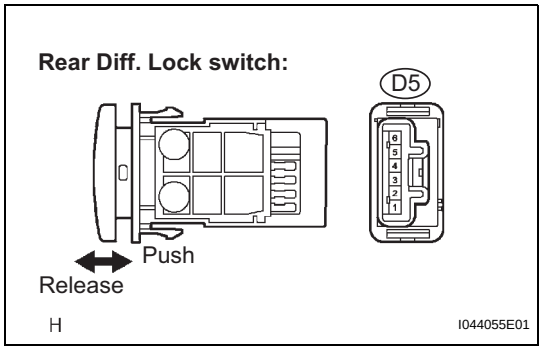
B → **Go to step 6**

C → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A

BC

4 INSPECT REAR DIFFERENTIAL LOCK SWITCH



(a) Remove the rear diff. lock switch.
(b) Disconnect the rear diff. lock switch connector.
(c) Measure the resistance.

Standard

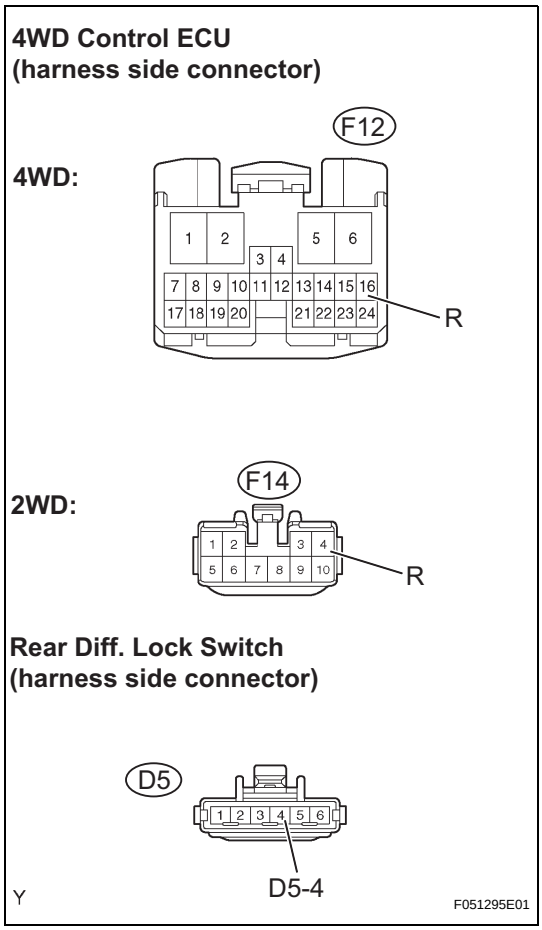
Tester Connection	Switch Condition	Specified Condition
D5-3 - D5-4	Released	10 kΩ or higher
D5-3 - D5-4	Pushed in	Below 1 Ω

(d) Reconnect the rear diff. lock switch connector.
(e) Reinstall the rear diff. lock switch.

NG → **REPLACE REAR DIFFERENTIAL LOCK SWITCH**

OK

5 CHECK HARNESS AND CONNECTOR (4WD CONTROL ECU - REAR DIFFERENTIAL LOCK SWITCH)



(a) Disconnect the 4WD control ECU connector.
(b) Disconnect the rear diff. lock connector
(c) Measure the resistance.

Standard (4WD)

Tester Connection	Specified Condition
F12-16 (R) - D5-4	Below 1 Ω
F12-16 (R) - Body ground	10 kΩ or higher

Standard (2WD)

Tester Connection	Specified Condition
F14-4 (R) - D5-4	Below 1 Ω
F14-4 (R) - Body ground	10 kΩ or higher

(d) Reconnect the rear diff. lock connector.
(e) Reconnect the 4WD control ECU connector.

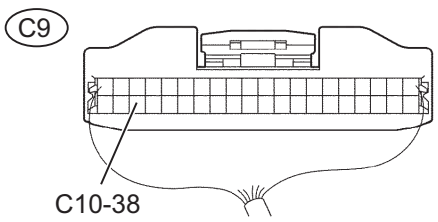
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

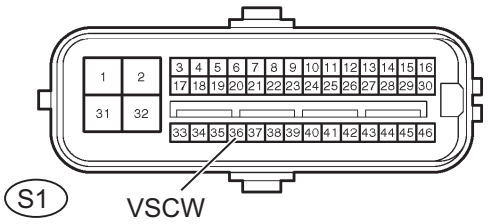
BC

6	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)

Combination Meter (harness side view)



Skid Control ECU (harness side connector)



F049577E03

(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
C9-38 - S1-36 (VSCW)	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-36 (VSCW) - Body ground	10 kΩ or higher

(e) Reconnect the combination meter connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE MASTER CYLINDER SOLENOID

BC

VSC TRAC Warning Light does not Come ON

DESCRIPTION

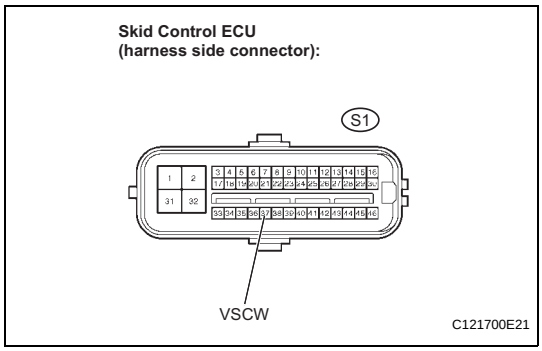
When the ECU stores DTC, the VSC warning light illuminates on the combination meter.

WIRING DIAGRAM

See page BC-241.

NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1 CHECK VSC TRAC WARNING LIGHT



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Ground terminal VSCW of the skid control ECU.
(d) Check VSC TRAC warning light.
OK

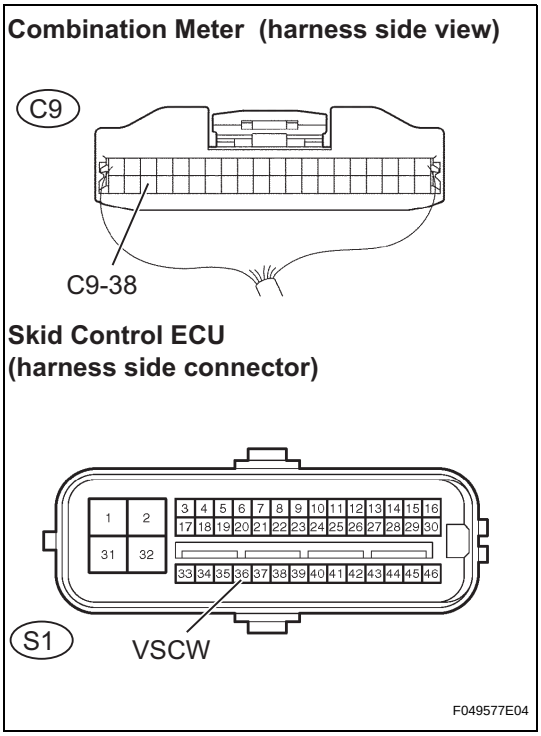
VSCW -GND Condition	Illumination Condition
Connecting	OFF
Disconnecting	ON

(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

2 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
C9-38 - S1-36 (VSCW)	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-36 (VSCW) - Body ground	10 kΩ or higher

(e) Reconnect the combination meter connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

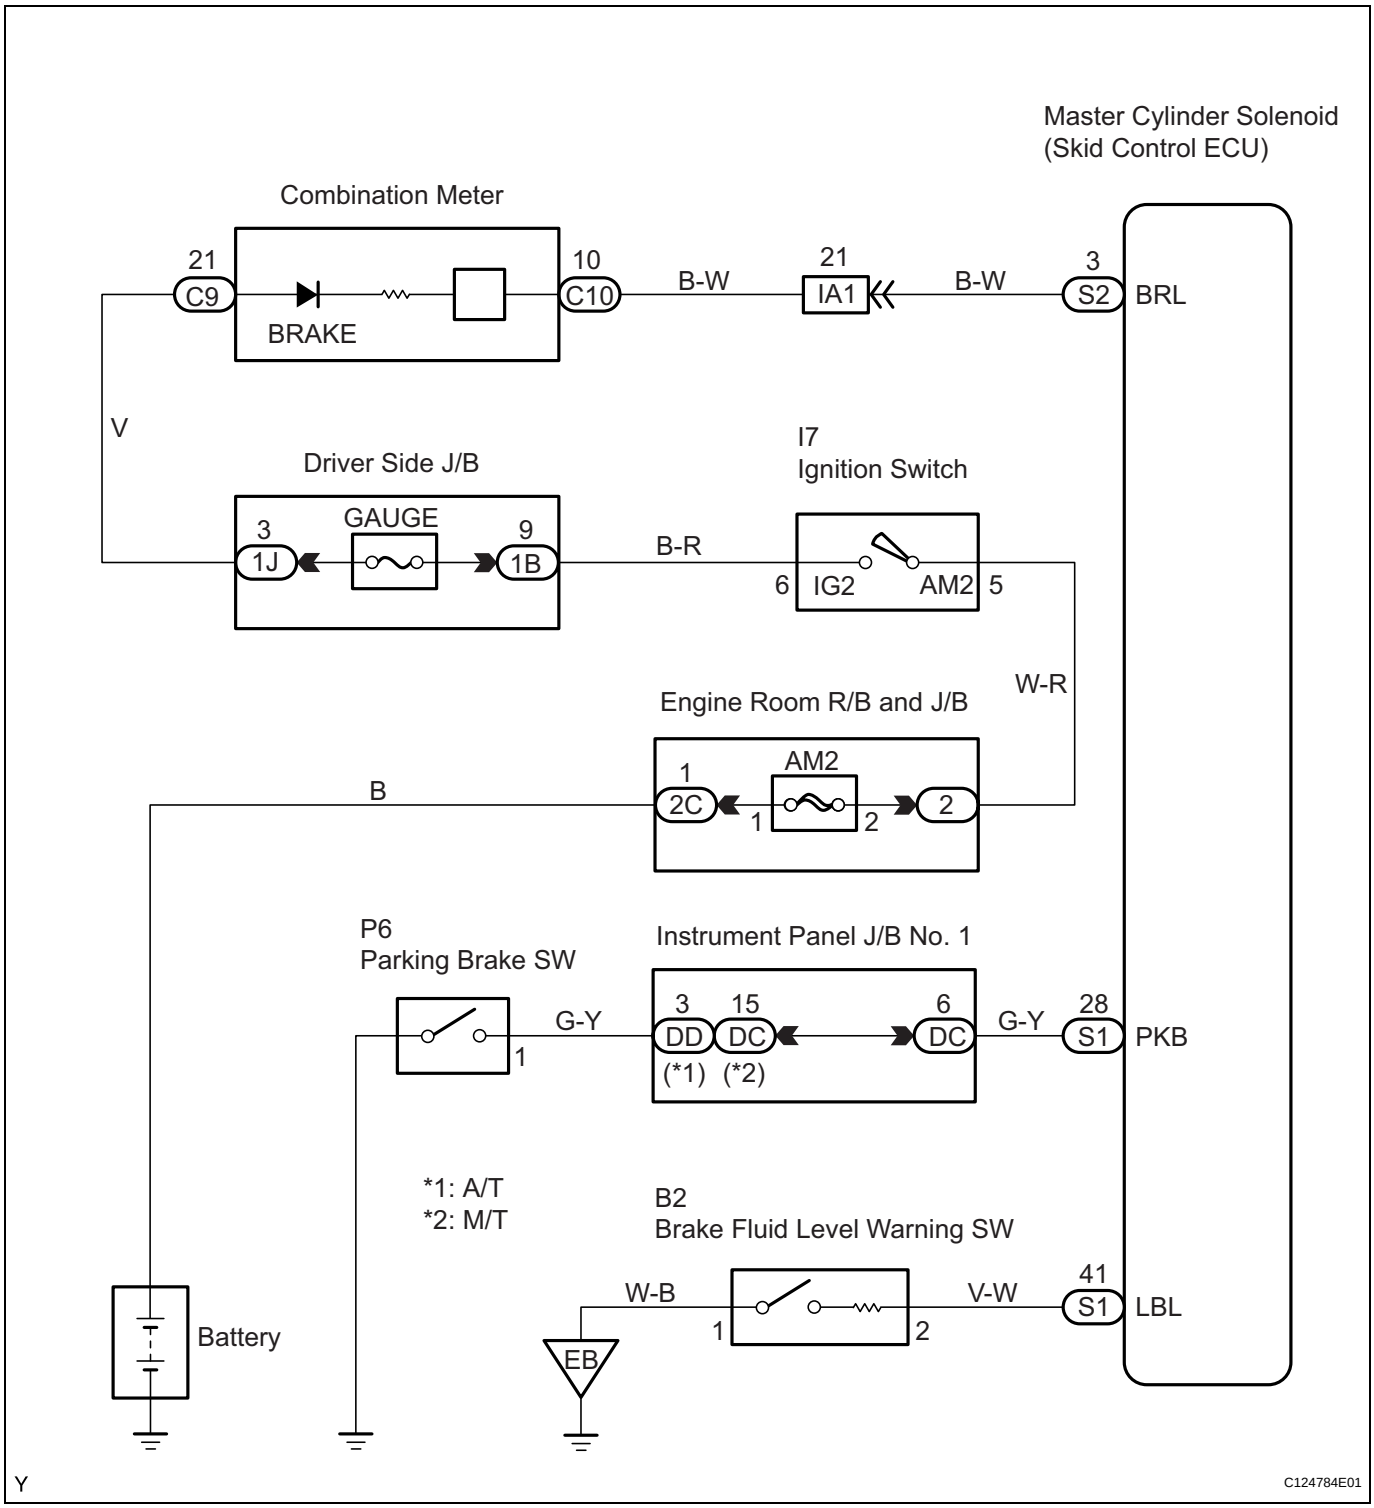
CHECK FOR INTERMITTENT PROBLEMS

Brake Warning Light Remains ON

DESCRIPTION

The BRAKE warning light lights up when the brake fluid is insufficient, the parking brake is applied or the EBD is defective.

WIRING DIAGRAM



NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1 CHECK DTC

(a) Check the DTCs (See page BC-118).

Result	Proceed to
DTC not output	A
DTC output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2 CHECK BRAKE FLUID LEVEL

(a) Check the amount of brake fluid in the brake reservoir.
OK:
Brake fluid level is correct.

NG → **ADD BRAKE FLUID**

OK

3 CHECK SKID CONTROL ECU CONNECTOR

(a) Check whether skid control ECU connector is connected securely.
OK:
The skid control ECU connector is connected securely.

NG → **CONNECT CONNECTOR CORRECTLY**

OK

4 INSPECT BATTERY

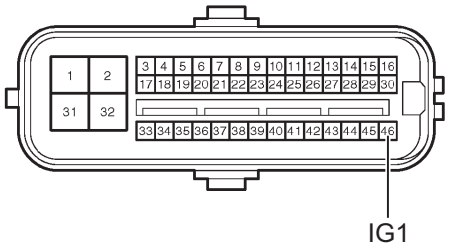
(a) Check the battery voltage.
Standard:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

5 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

Skid Control ECU (harness side connector):



C121700E02

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard

Tester Connection	Specified Condition
S1-46 (IG1) - Body ground	10 to 14 V

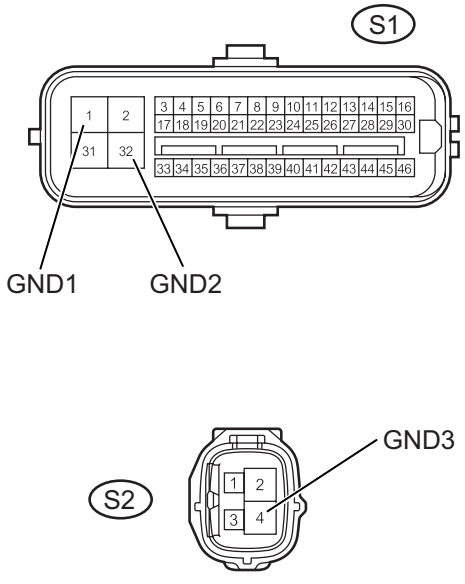
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

6 CHECK HARNESS AND CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (harness side connector):



C124799E01

(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-1 (GND1) - Body ground	Below 1 Ω
S1-32 (GND2) - Body ground	Below 1 Ω
S2-4 (GND3) - Body ground	Below 1 Ω

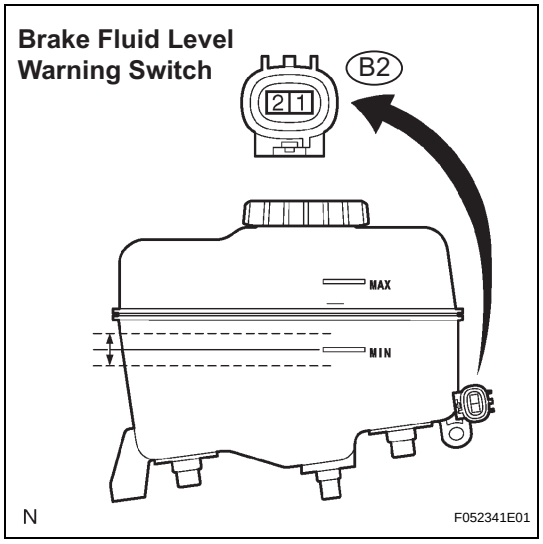
(c) Reconnect the skid control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

7 INSPECT BRAKE FLUID LEVEL WARNING SWITCH



(a) Disconnect the brake fluid level warning switch connector.
(b) Measure the resistance.
Standard

Tester Connection	Condition	Specified Condition
B2-1 - B2-2	Float UP	10 kΩ or higher
B2-1 - B2-2	Float DOWN	Below 1 Ω

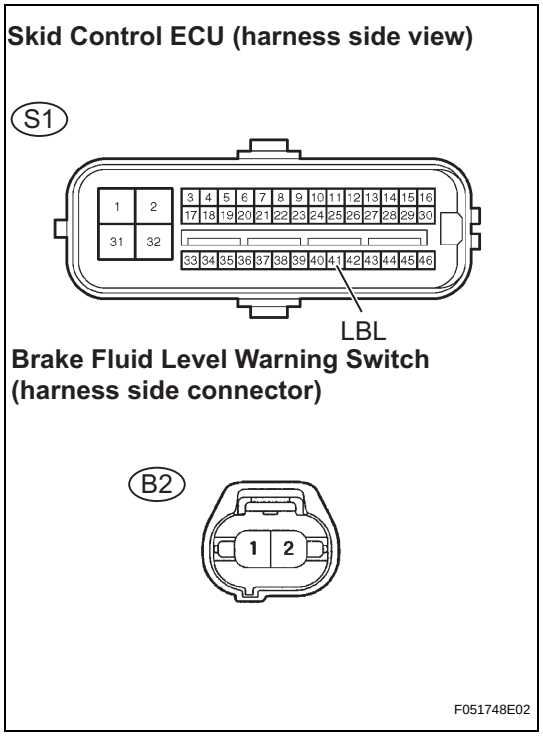
(c) Reconnect the brake fluid level warning switch connector.

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the maximum level.

NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**

OK

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE FLUID LEVEL WARNING SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-41 (LBL) - B2-2	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-41 - Body ground	10 kΩ or higher

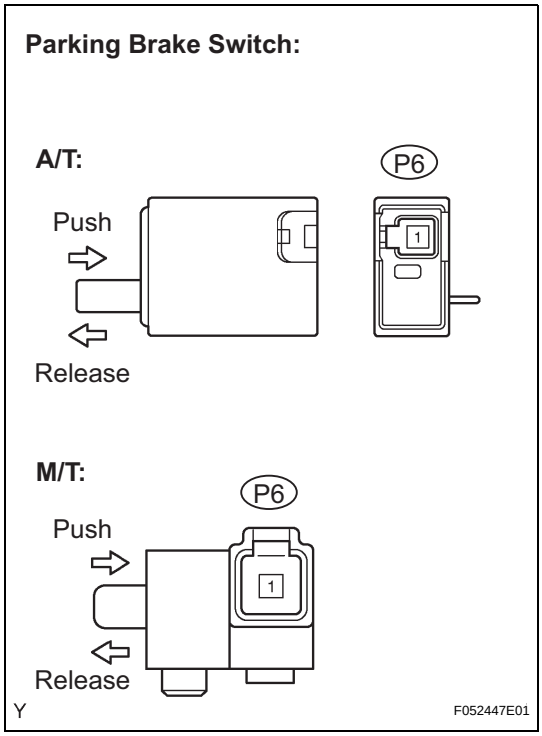
(e) Reconnect the brake fluid level warning switch connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

9 INSPECT PARKING BRAKE SWITCH ASSEMBLY



(a) Disconnect the parking brake switch connector.
(b) Measure the resistance.
Standard

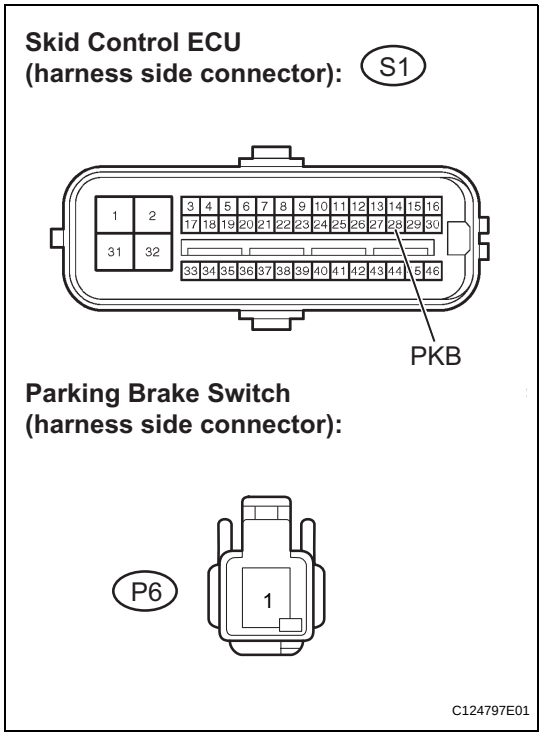
Tester Connection	Switch Condition	Specified Condition
P6-1 - Body ground	Released	Below 1 Ω
P6-1 - Body ground	Pushed in	10 kΩ or higher

(c) Reconnect the parking brake switch connector.

NG → **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK

10 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - PARKING BRAKE SWITCH)



(a) Disconnect the skid control ECU.
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance.
Standard

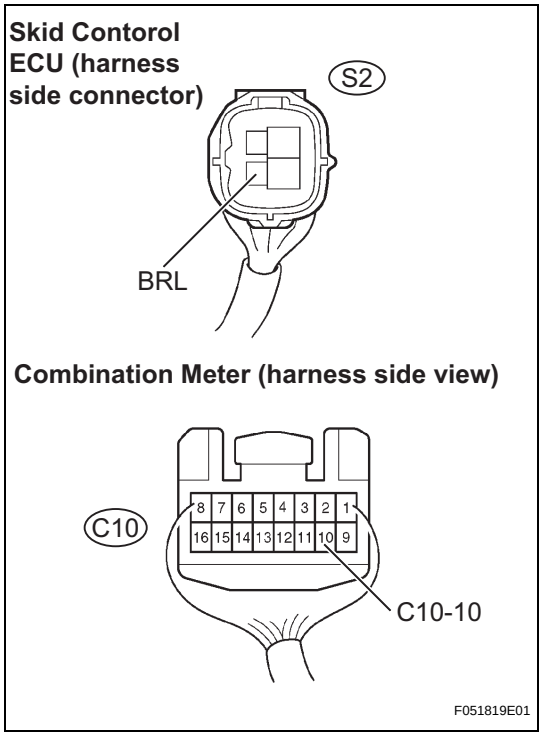
Tester Connection	Specified Condition
S1-28 (PKB) - P6-1	Below 1 Ω
S1-28 (PKB) - Body ground	10 kΩ or higher

(d) Reconnect the parking brake switch connector.
(e) Reconnect the skid control ECU.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S2-3 (BRL) - C10-10	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S2-3 (BRL) - Body ground	10 kΩ or higher

(e) Reconnect the combination meter connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE MASTER CYLINDER SOLENOID

BC

Brake Warning Light does not Come ON

WIRING DIAGRAM

See page BC-248.

NOTICE:
When replacing the master cylinder solenoid, perform zero point calibration (See page BC-99).

1	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Check that the BRAKE warning light comes on.
OK:
BRAKE warning light comes on.
(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

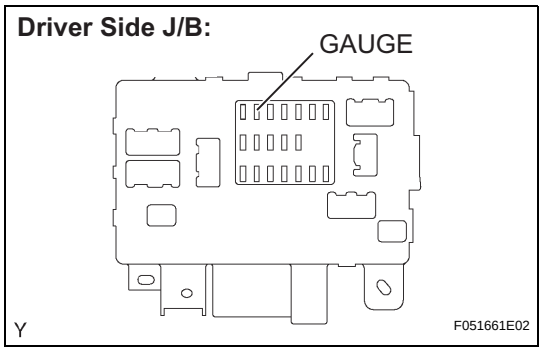
2	INSPECT BATTERY

(a) Check the battery voltage.
Standard:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

3	INSPECT FUSE (GAUGE)

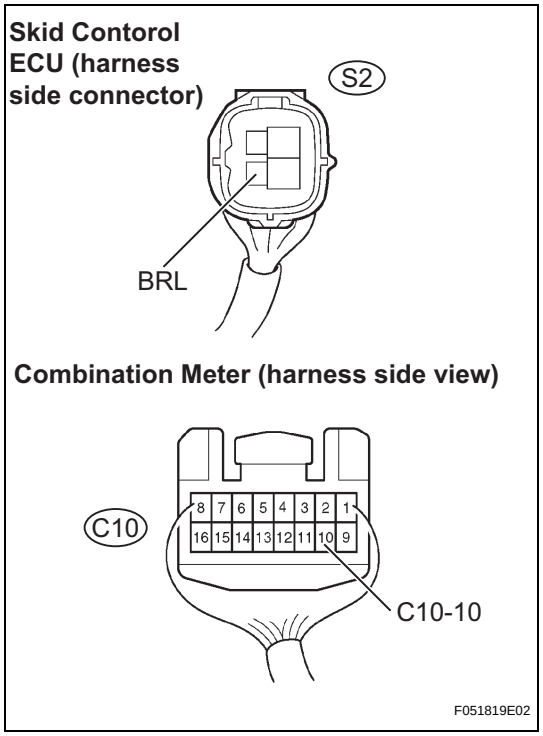


(a) Remove the GAUGE fuse from the driver side J/B.
(b) Measure the resistance of the GAUGE fuse.
Standard:
Below 1 Ω
(c) Reinstall the GAUGE fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S2-3 (BRL) - C10-10	Below 1 Ω

(d) Measure the resistance.
Standard

Tester Connection	Specified Condition
S2-3 (BRL) - Body ground	10 kΩ or higher

(e) Reconnect the combination meter connector.
(f) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

CHECK FOR INTERMITTENT PROBLEMS

BC

VSC OFF Indicator Light Remains ON

DESCRIPTION

When the rear differential is locked or during the 4WD mode, VSC control turns off and the VSC OFF indicator illuminates. Also, the VSC OFF indicator light is ON when the VSC system is in fail-safe control.

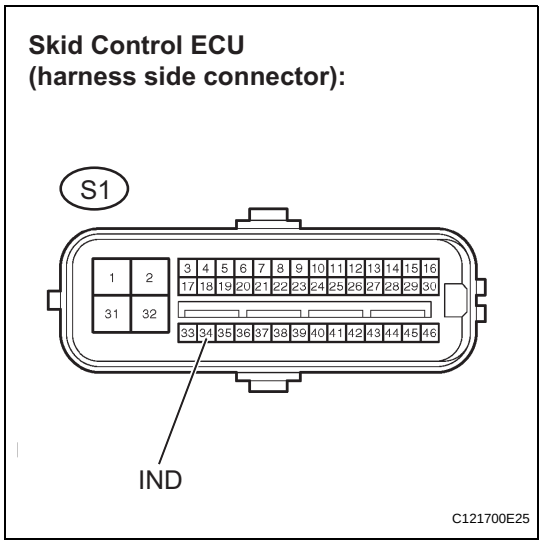
See page BC-118

1 CHECK SLIP INDICATOR LIGHT



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Ground terminal IND of the skid control ECU.
(d) Check the SLIP indicator light.

OK

IND - GND Condition	Illumination Condition
Connecting	ON
Disconnecting	OFF

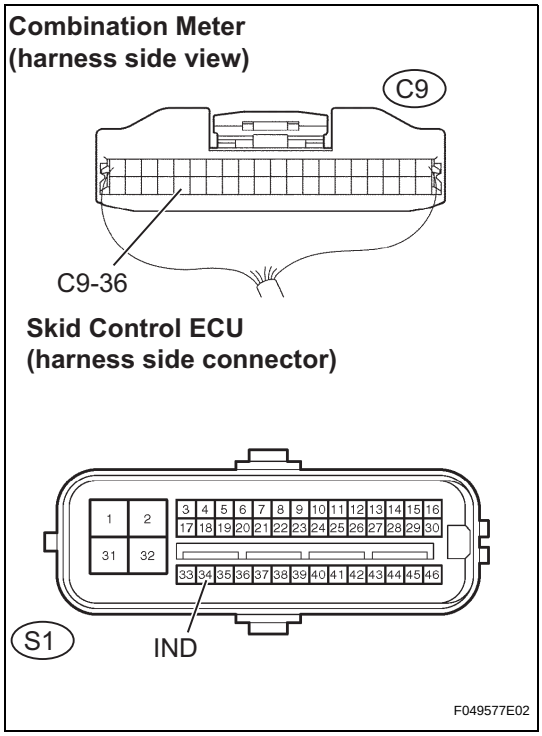
(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

BC

2 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-34 (IND) - C9-36	Below 1 Ω
S1-34 (IND) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

CHECK FOR INTERMITTENT PROBLEMS

DAC Indicator Light Remains ON

DESCRIPTION

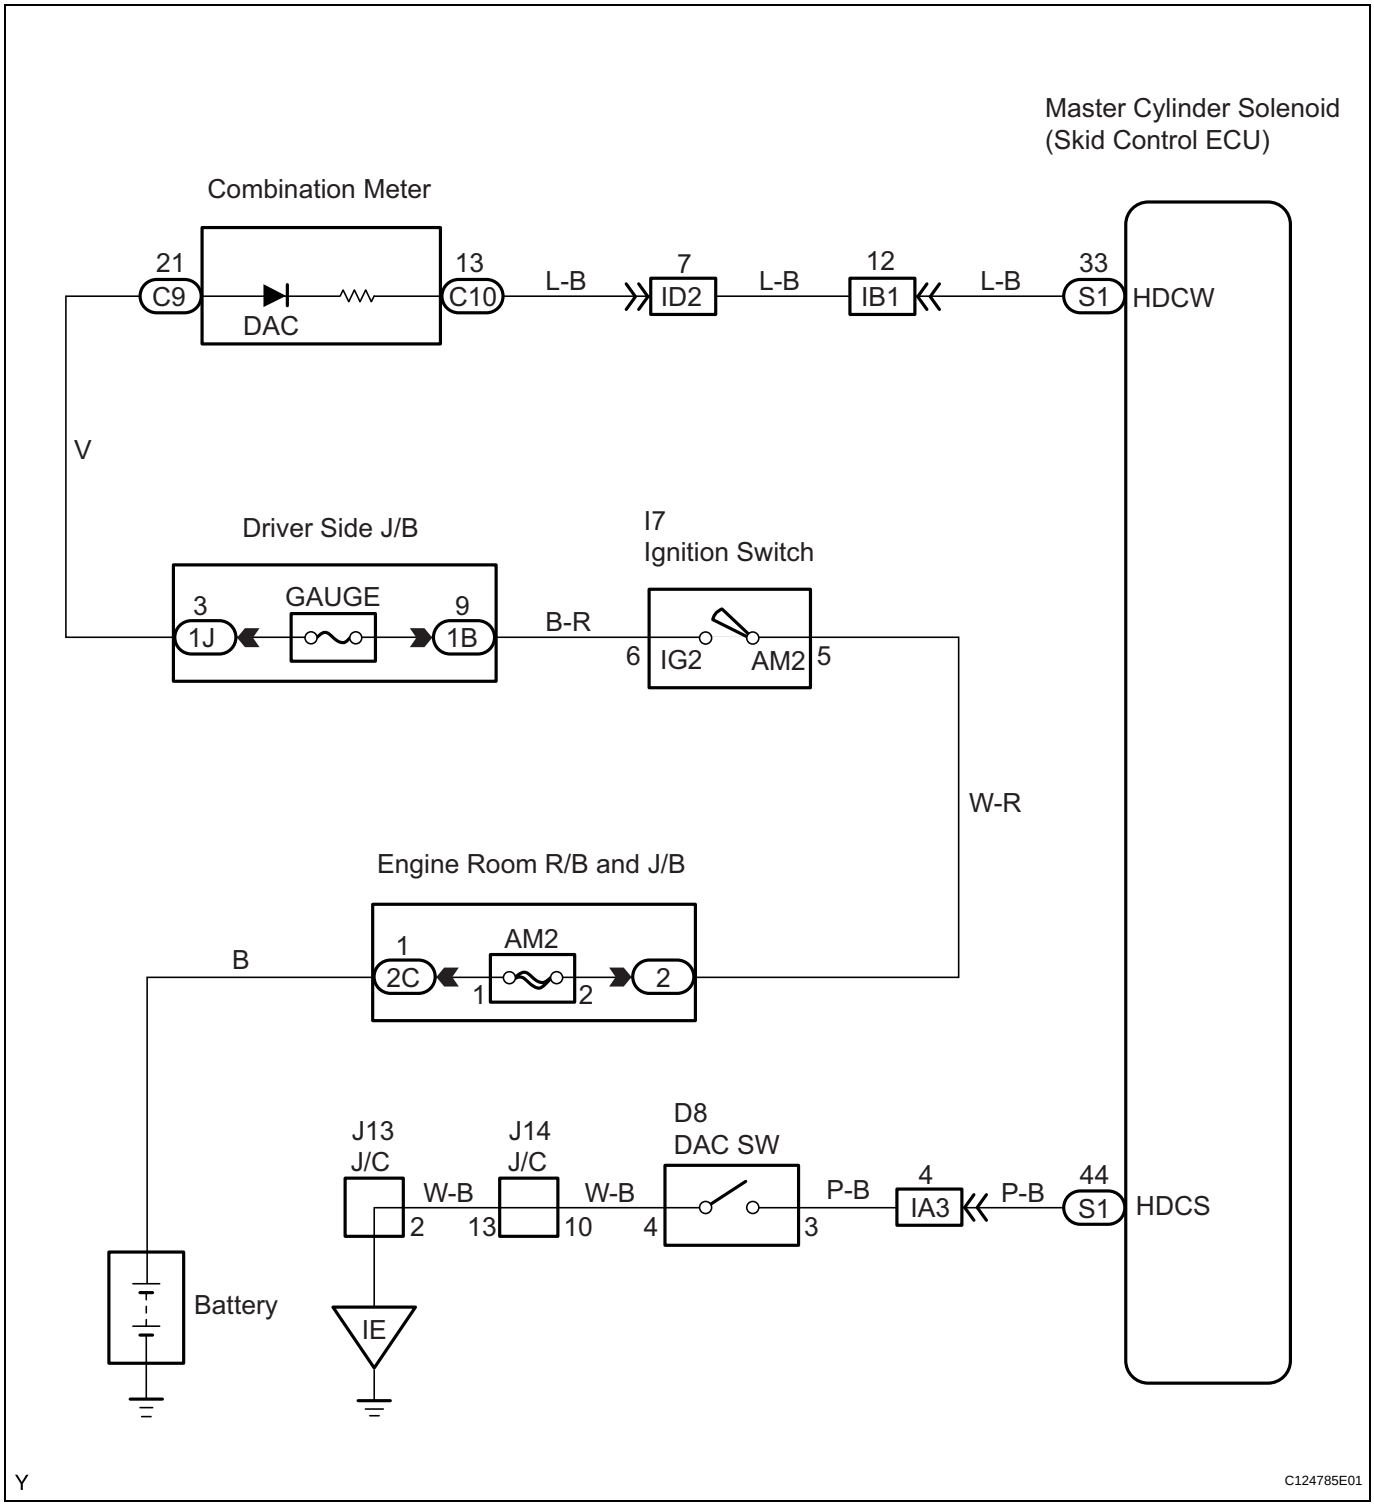
When the Downhill Assist Control (DAC) switch is pushed on, the DAC function is available and the DAC indicator light illuminates.

HINT:

Even if the DAC switch is pressed, the DAC indicator light blinks and DAC does not activate under the following conditions:

- Transfer is in 2WD or H4 mode.
- ABS system is malfunctioning.
- Temperature of the hydraulic brake booster increases and DAC is temporarily canceled.

WIRING DIAGRAM



1	CHECK SKID CONTROL ECU CONNECTOR

(a) Check the ECU connecting condition.
OK:
The connector is securely connected.

NG	CONNECT CONNECTOR CORRECTLY

BC

OK

2	INSPECT BATTERY

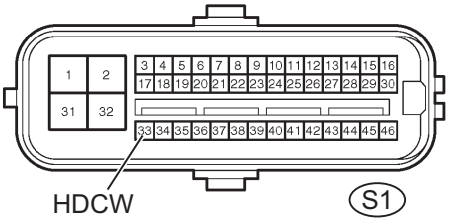
(a) Check the battery voltage.
Standard:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

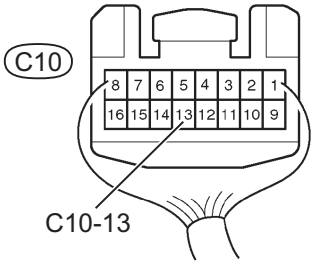
OK

3	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)

Skid Control ECU
(harness side connector)



Combination Meter
(harness side view)



F049387E07

(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-33 (HDCW) - C10-13	Below 1 Ω
S1-33 (HDCW) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

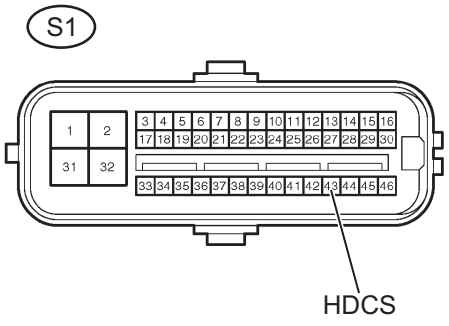
NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

BC

5 INSPECT SKID CONTROL ECU (HDCS TERMINAL)

Skid Control ECU (harness side connector):



C121700E23

(a) Disconnect the skid control ECU connector.
(b) Ground terminal HDCS of the skid control ECU.
Standard

Tester Connection	Condition	Specified Condition
S1-44 (HDCS) - Body ground	DAC switch not pushed in	10 kΩ or higher

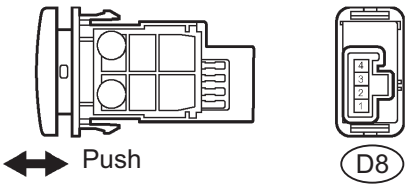
(c) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

6 INSPECT DAC SWITCH

DAC Switch:



H

I044044E02

(a) Remove the DAC switch.
(b) Disconnect the DAC switch connector.
(c) Measure the resistance.
Standard

Tester Connection	Switch Condition	Specified Condition
D8-3 - D8-4	Released	10 kΩ or higher
D8-3 - D8-4	Pushed in	Below 1 Ω

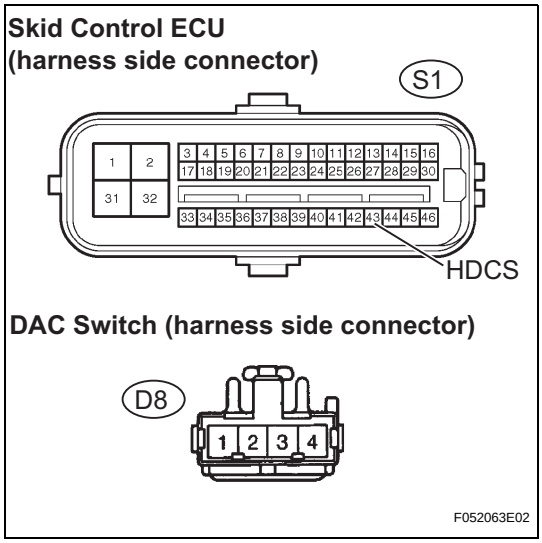
(d) Reconnect the DAC switch connector.
(e) Reinstall the DAC switch connector.

NG → **REPLACE DAC SWITCH**

OK

BC

7	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DAC SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the DAC Switch connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-44 (HDCS) - D8-3	Below 1 Ω
S1-44 (HDCS) - Body ground	10 kΩ or higher
D8-4 - Body ground	Below 1 Ω

(d) Reconnect the DAC switch connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

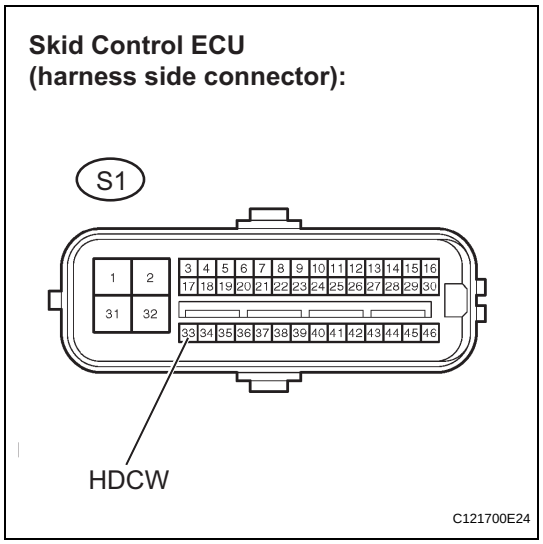
REPLACE MASTER CYLINDER SOLENOID

DAC Indicator Light does not Come ON

WIRING DIAGRAM

See page BC-271.

1 CHECK DAC INDICATOR LIGHT



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Ground terminal HDCW of the skid control ECU.
(d) Check DAC indicator light.

OK

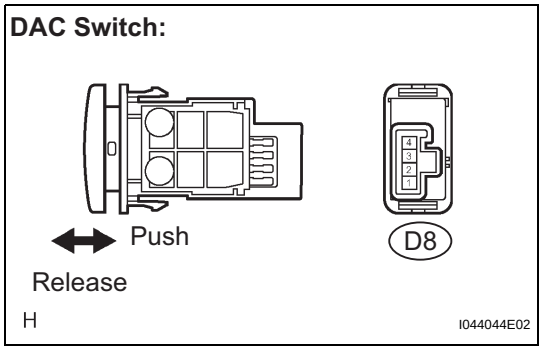
HDCW - GND Condition	Illumination Condition
Connecting	OFF
Disconnecting	ON

(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

NG → **Go to step 3**

OK

2 INSPECT DAC SWITCH



(a) Remove the DAC switch.
(b) Disconnect the DAC switch connector.
(c) Measure the resistance.

Standard

Tester Connection	Switch Condition	Specified Condition
D8-3 - D8-4	Released	10 kΩ or higher
D8-3 - D8-4	Pushed in	Below 1 Ω

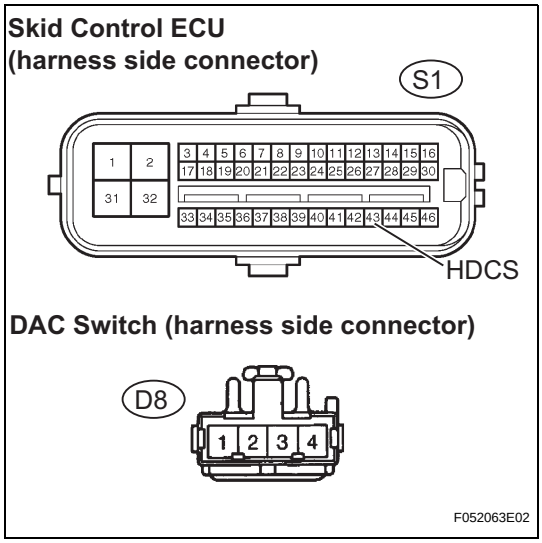
(d) Reconnect the DAC switch connector.
(e) Reinstall the DAC switch connector.

NG → **REPLACE DAC SWITCH**

OK

BC

3	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DAC SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the DAC switch connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-44 (HDCS) - D8-3	Below 1 Ω
S1-44 (HDCS) - Body ground	10 kΩ or higher
D8-4 - Body ground	Below 1 Ω

(d) Reconnect the DAC switch connector.
(e) Reconnect the skid control ECU connector.

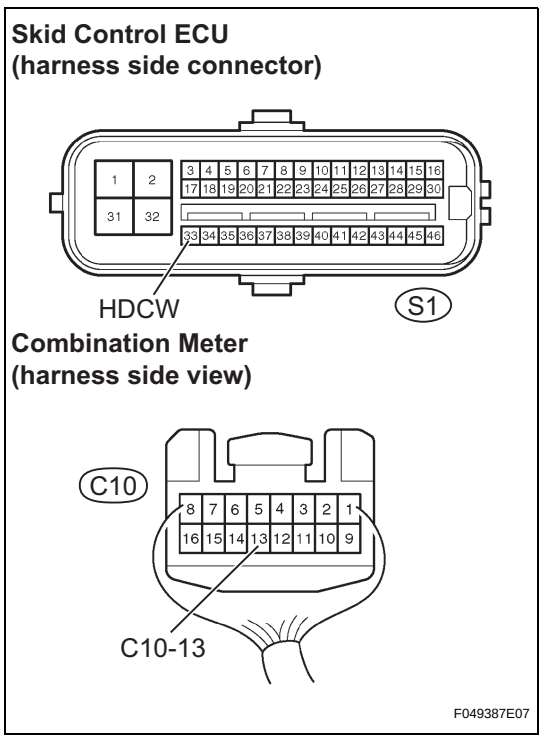
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MASTER CYLINDER SOLENOID

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)

BC



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-33 (HDCW) - C10-13	Below 1 Ω
S1-33 (HDCW) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK ↓

CHECK FOR INTERMITTENT PROBLEMS

AUTO LSD Indicator Light Remains ON

DESCRIPTION

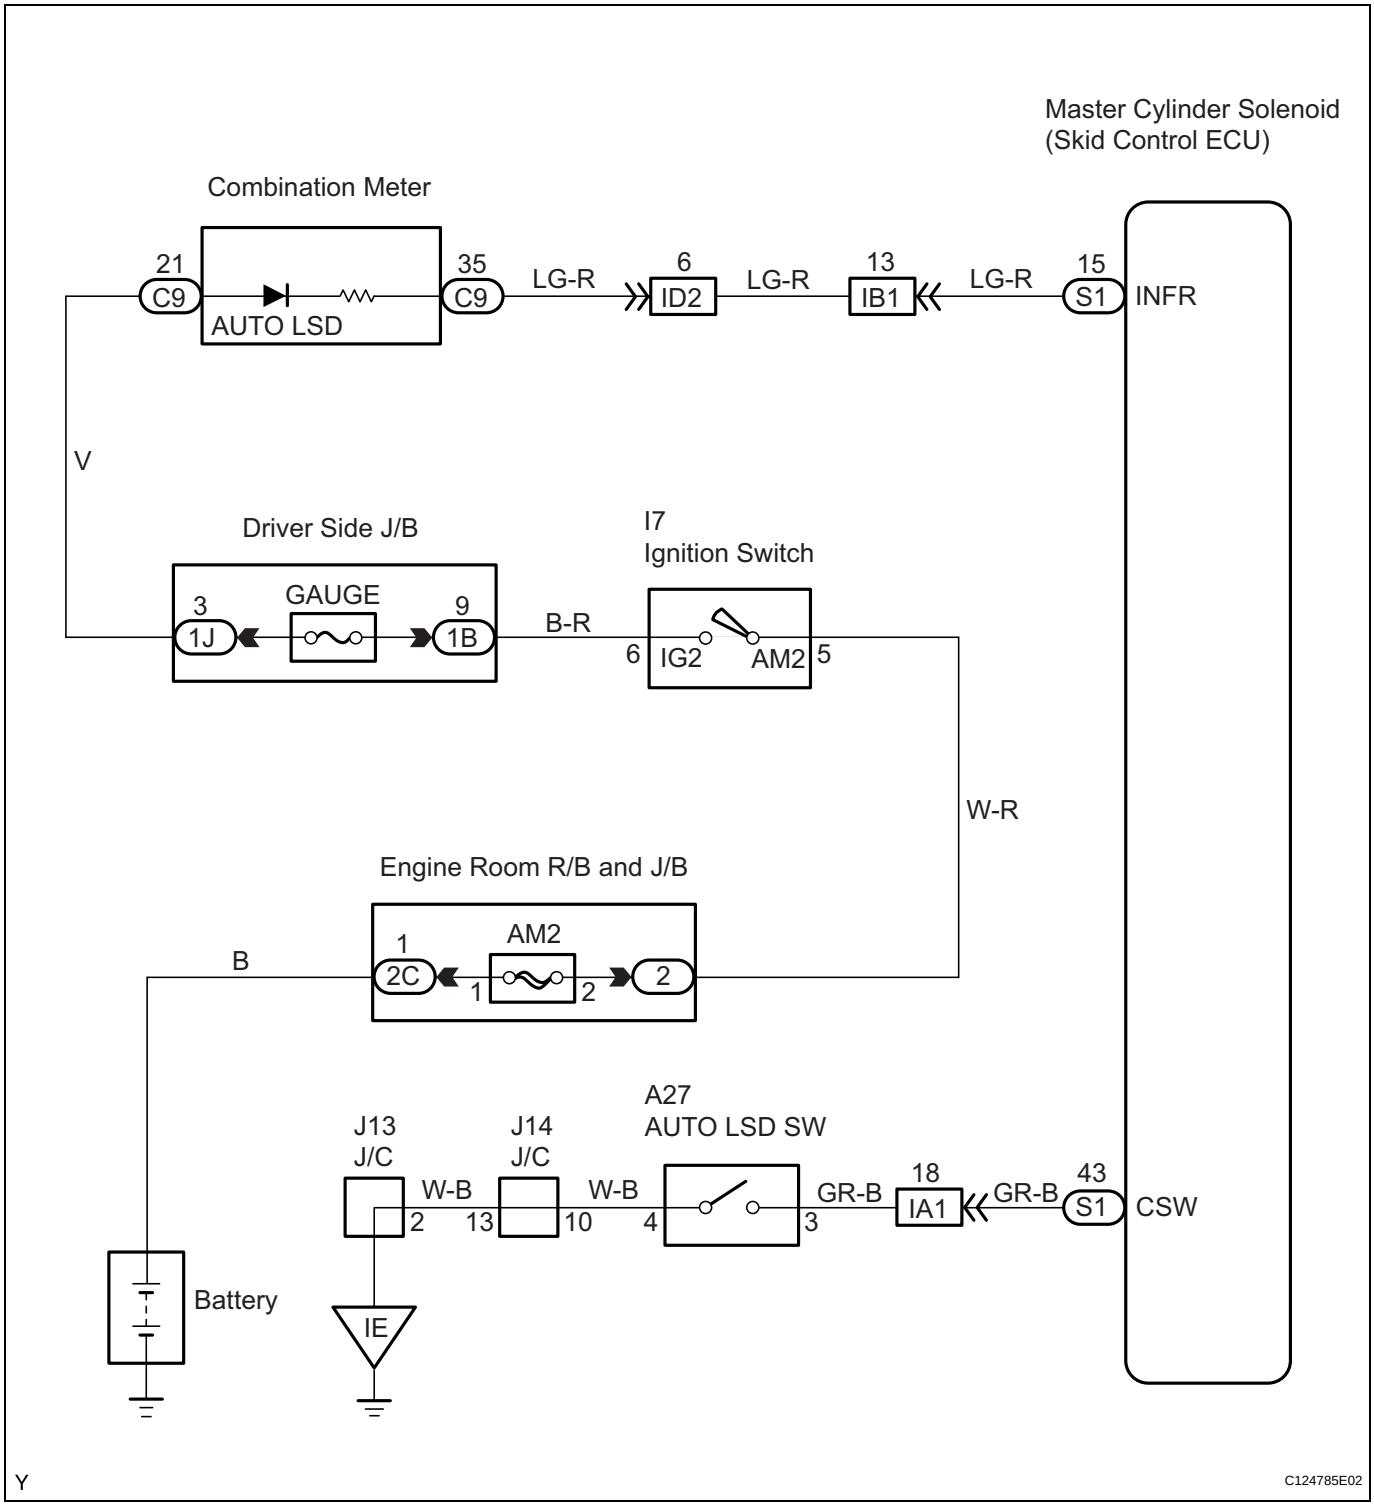
This is the AUTO LSD main switch. When the AUTO LSD switch is pushed on, the AUTO LSD function is available and the AUTO LSD indicator light illuminates.

HINT:

The AUTO LSD does not operate even if the AUTO LSD switch is pressed under the following conditions:

- TRAC or VSV system is faulty.
- Temperature inside the hydraulic brake booster increases and the AUTO LSD operation is suspended.

WIRING DIAGRAM



1	CHECK SKID CONTROL ECU CONNECTOR

(a) Check the ECU Connector's connecting condition.
OK:
The connector is securely connected.

NG	CONNECT CONNECTOR CORRECTLY

BC

OK

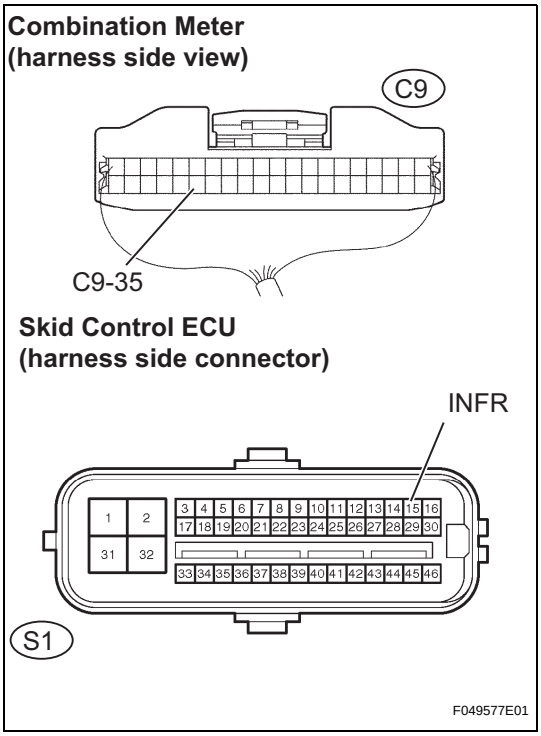
2	INSPECT BATTERY

(a) Check the battery voltage.
Standard:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

3	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-15 (INFR) - C9-35	Below 1 Ω
S1-15 (INFR) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).
OK:
Combination meter is normal.

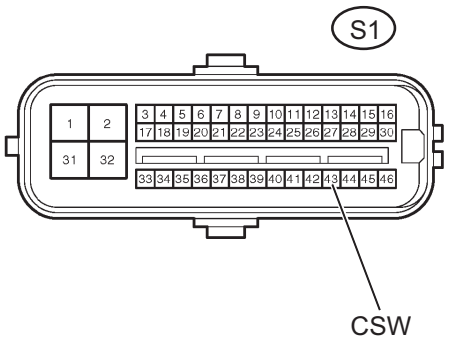
NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

BC

5 INSPECT SKID CONTROL ECU (CSW TERMINAL)

Skid Control ECU (harness side connector):



C121700E26

(a) Disconnect the skid control ECU connector.
(b) Ground terminal CSW of the skid control ECU.
Standard

Tester Connection	Condition	Specified Condition
S1-43 (CSW) - Body ground	AUTO LSD switch not pushed in	10 kΩ or higher

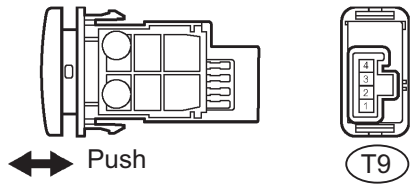
(c) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

6 INSPECT AUTO LSD SWITCH

AUTO LSD Switch:



H

I044044E01

(a) Remove the AUTO LSD switch.
(b) Disconnect the AUTO LSD switch connector.
(c) Measure the resistance.
Standard

Tester Connection	Switch Condition	Specified Condition
T9-3 - T9-4	Released	10 kΩ or higher
T9-3 - T9-4	Released	Below 1 Ω

(d) Reconnect the AUTO LSD switch connector.
(e) Reinstall the AUTO LSD switch.

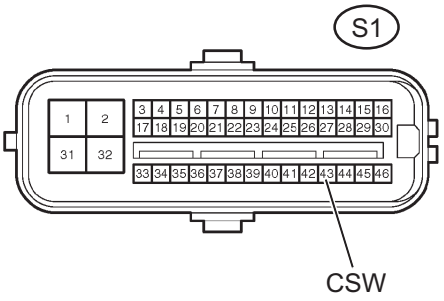
NG → **REPLACE AUTO LSD SWITCH**

OK

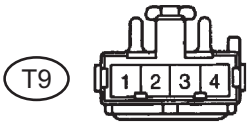
BC

7	CHECK HARNESS AND CONNECTOR (AUTO LSD SWITCH CIRCUIT)

Skid Control ECU (harness side connector):



AUTO LSD switch (harness side connector):



C124802E01

(a) Disconnect the skid control ECU connector.
(b) Disconnect the AUTO LSD connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-43 (CSW) - T9-3	Below 1 Ω
S1-43 (CSW) - Body ground	10 kΩ or higher
T9-3 - Body ground	Below 1 Ω

(d) Reconnect the AUTO LSD connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

REPLACE MASTER CYLINDER SOLENOID

AUTO LSD Indicator Light does not Come ON

DESCRIPTION

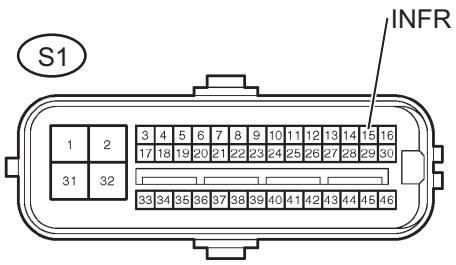
See page BC-278.

WIRING DIAGRAM

See page BC-279.

1	CHECK AUTO LSD INDICATOR LIGHT

Skid Control ECU (harness side connector):



C121700E27

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch to the ON position.
(c) Ground terminal INFR of the skid control ECU.
(d) Check the AUTO LSD indicator light.

OK

INFR - GND Condition	Illumination Condition
Connecting	OFF
Disconnecting	ON

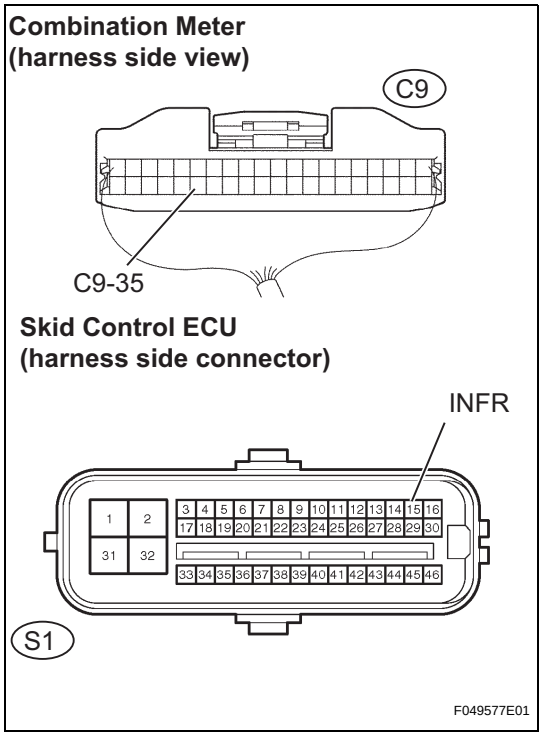
(e) Turn the ignition switch to OFF.
(f) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

BC

2	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-15 (INFR) - C9?35	Below 1 Ω
S1-15 (INFR) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

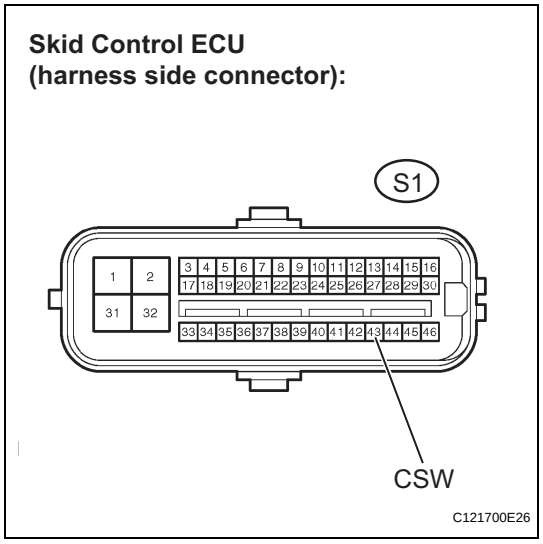
3	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (see page 05-1917).
OK:
Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

4 INSPECT SKID CONTROL ECU (CSW TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Ground terminal CSW of the skid control ECU.
Standard

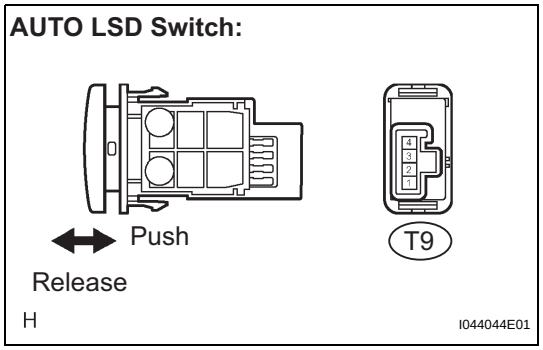
Tester connection	Condition	Specified Condition
S1-43 (CSW) - Body ground	Auto LSd switch not pushed in	10 kΩ or higher

(c) Reconnect the skid control ECU connector.

OK → **REPLACE MASTER CYLINDER SOLENOID**

NG

5 INSPECT AUTO LSD SWITCH



(a) Remove the AUTO LSD switch.
(b) Disconnect the AUTO LSD switch connector.
(c) Measure resistance.
Standard

Tester Connection	Switch Condition	Specified Condition
T9-3 - T9-4	Released	10 kΩ or higher
T9-3 - T9-4	Pushed in	Below 1 Ω

(d) Reconnect the AUTO LSD switch connector.
(e) Reinstall the AUTO LSD switch.

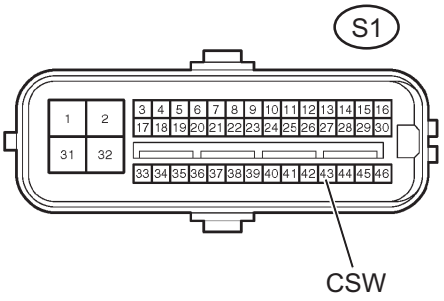
NG → **REPLACE AUTO LSD SWITCH**

OK

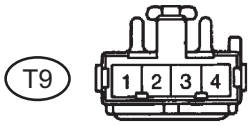
BC

6	CHECK HARNESS AND CONNECTOR (AUTO LSD SWITCH CIRCUIT)

Skid Control ECU (harness side connector):



AUTO LSD switch (harness side connector):



C124802E01

(a) Disconnect the skid control ECU connector and the AUTO LSD switch connector.

(b) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-43 (CSW) - T9-3	Below 1 Ω
S1-43 (CSW) - Body ground	10 kΩ or higher
T9-4 - Body ground	Below 1 Ω

(c) Reconnect the skid control ECU connector and the AUTO LSD switch connector.

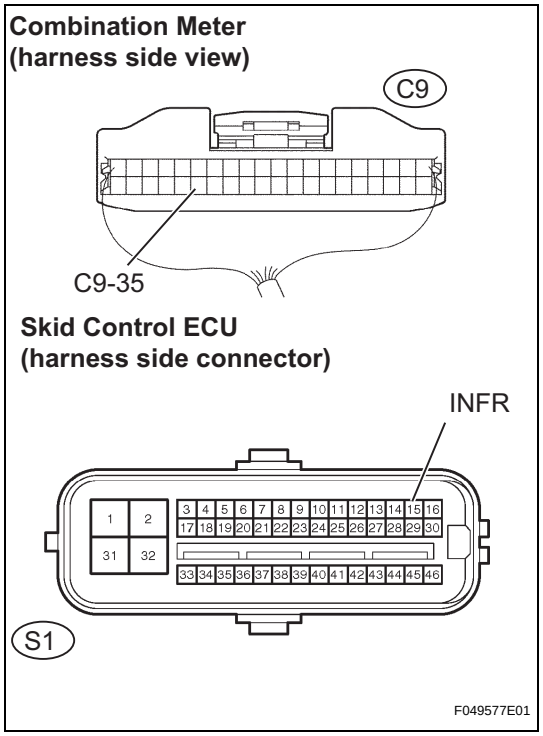
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

REPLACE MASTER CYLINDER SOLENOID

7	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - COMBINATION METER)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the combination meter connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-15 (INFR) - C9-35	Below 1 Ω
S1-15 (INFR) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	INSPECT COMBINATION METER ASSEMBLY

(a) Check the combination meter system (See page ME-8).

OK:

Combination meter is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

CHECK FOR INTERMITTENT PROBLEMS

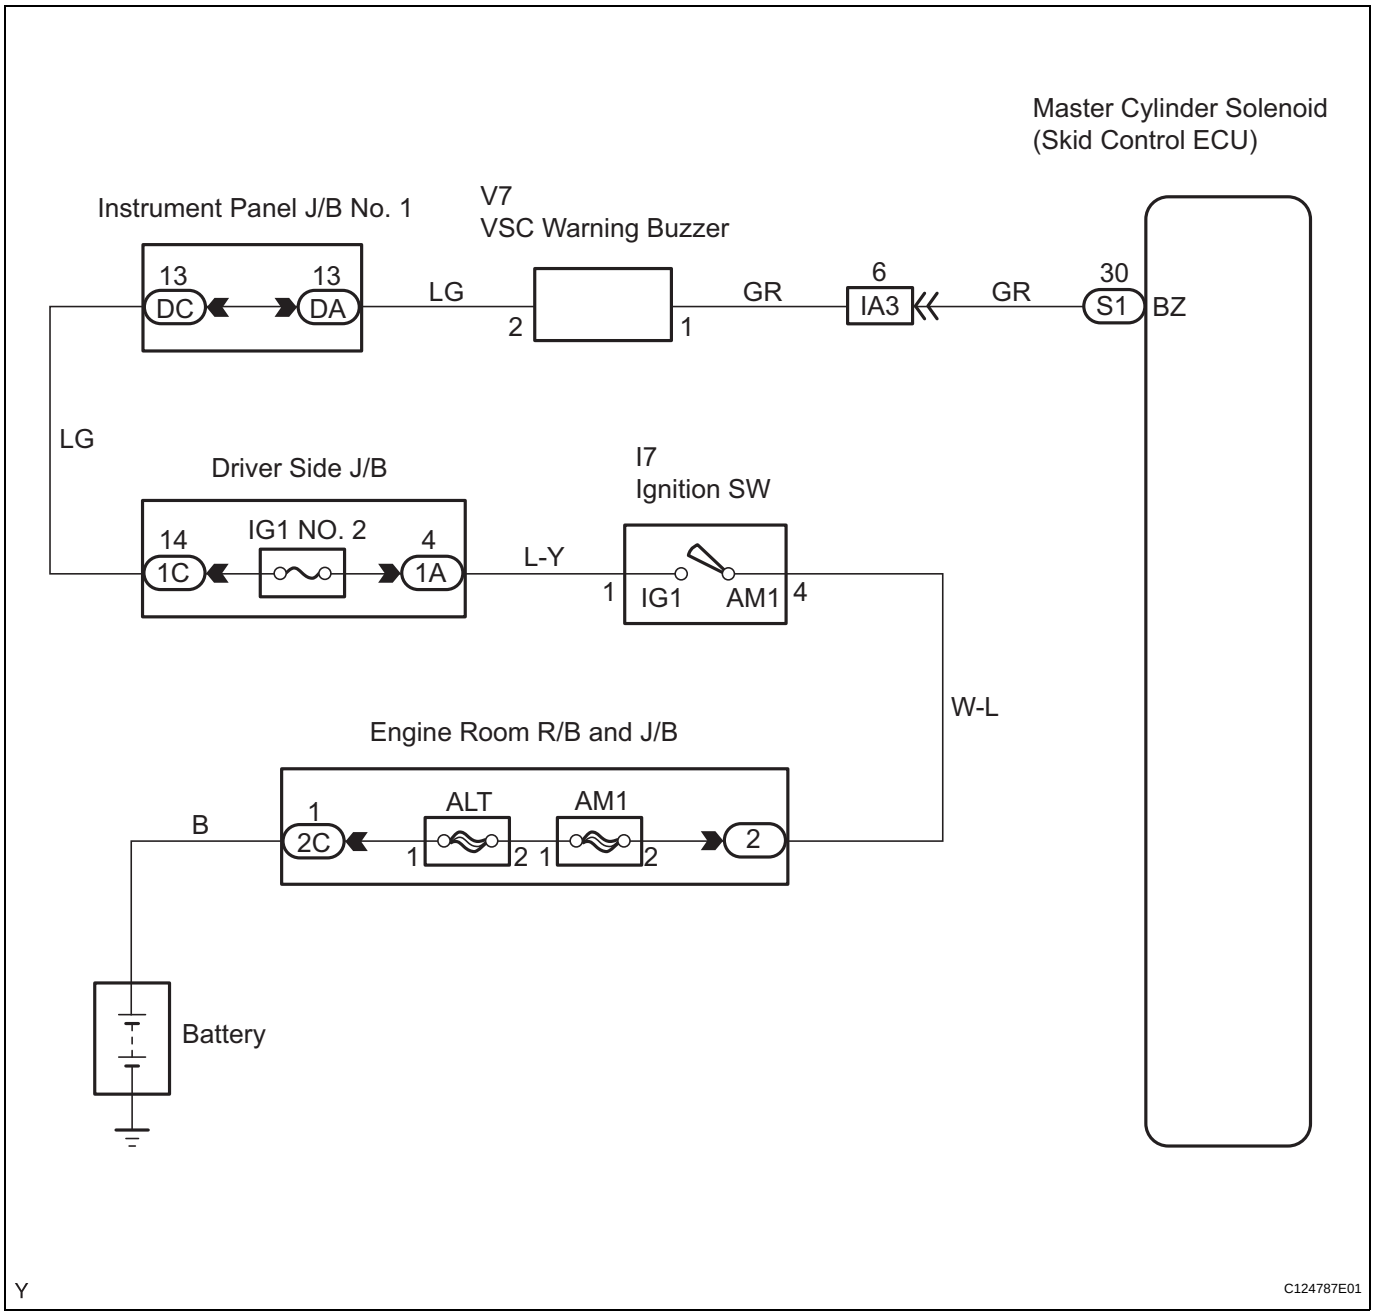
BC

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds when the VSV or Hill-start Assist Control (HAC) operates.

WIRING DIAGRAM



HINT:
Start the inspection from step 1 when using a intelligent tester and start from step2 when not using a intelligent tester.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.

(b) Start the engine.
(c) Select the item "VSC/BR WARN BUZ" in the ACTIVE TEST and operate the skid control buzzer on the intelligent tester.

Item	Vehicle Condition / Test Details	Diagnostic note
VSV / BR WARN BUZ	Turns VSV / BRAKE warning buzzer ON /OFF	Buzzer can be heard

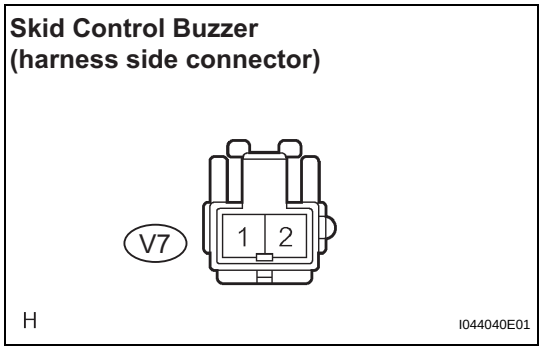
(d) Check that the buzzer sounds/stops when the skid control buzzer is turned on/off by using the intelligent tester.

Result	Proceed to
Buzzer sounds/stops	A
Buzzer does not sound or sounds constantly	B

A → **CHECK FOR INTERMITTENT PROBLEMS**

B

2 INSPECT SKID CONTROL BUZZER (POWER SOURCE CIRCUIT)



(a) Disconnect the skid control buzzer connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard

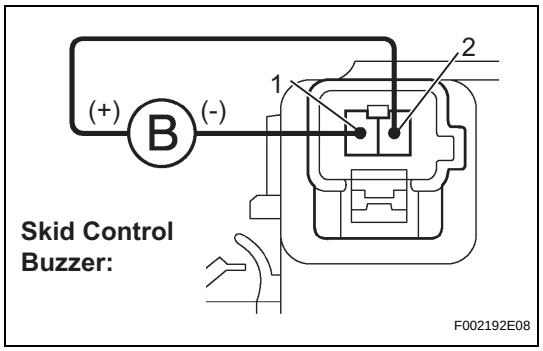
Tester Connection	Specified Condition
V7-2 - Body ground	10 to 14 V

(d) Turn the ignition switch to OFF.
(e) Reconnect the skid control buzzer connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3 INSPECT SKID CONTROL BUZZER ASSEMBLY



(a) Disconnect the skid control buzzer connector.
(b) Apply battery voltage to terminals 1 and 2 of the skid control buzzer connector, and check that the buzzer sounds.
OK:
The skid control buzzer sound should be heard.
(c) Reconnect the skid control buzzer connector.

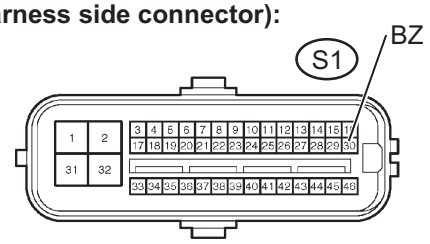
NG → **REPLACE SKID CONTROL BUZZER ASSEMBLY**

OK

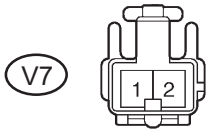
BC

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL BUZZER - SKID CONTROL ECU)

Skid Control ECU (harness side connector):



Skid Control Buzzer (harness side connector):



C124803E01

(a) Disconnect the skid control ECU connector.
(b) Disconnect the skid control buzzer connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
S1-30 (BZ) - V7-1	Below 1 Ω
S1-30 (BZ) - Body ground	10 kΩ or higher

(d) Reconnect the skid control buzzer connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

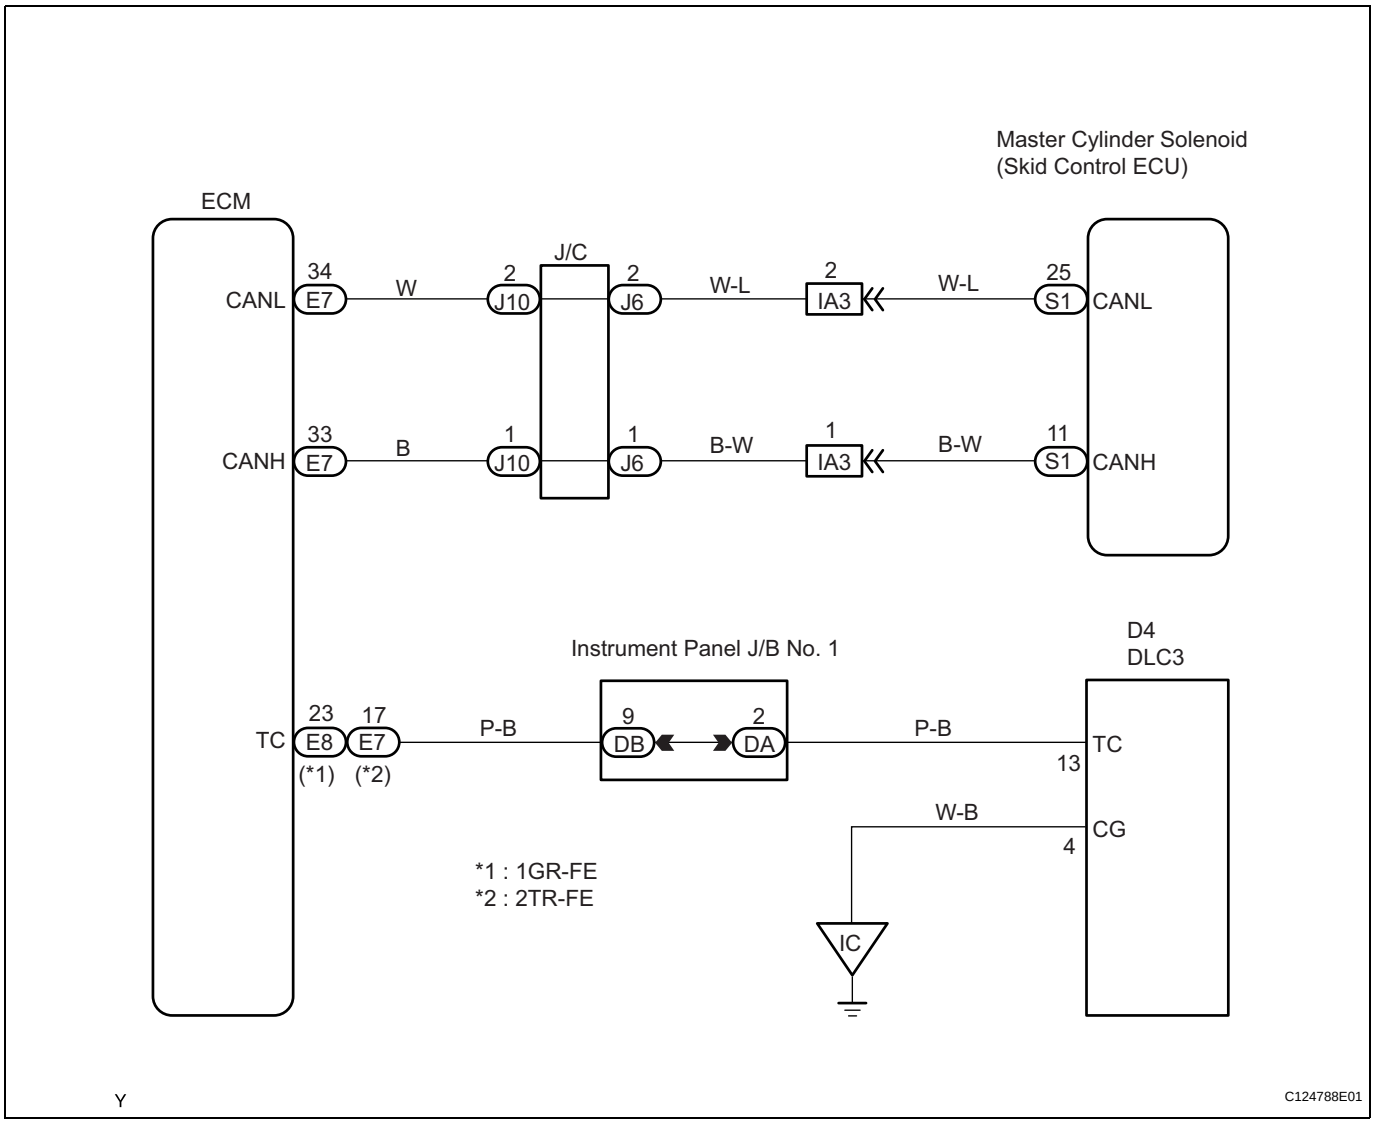
BC → **REPLACE MASTER CYLINDER SOLENOID**

TC and CG Terminal Circuit

DESCRIPTION

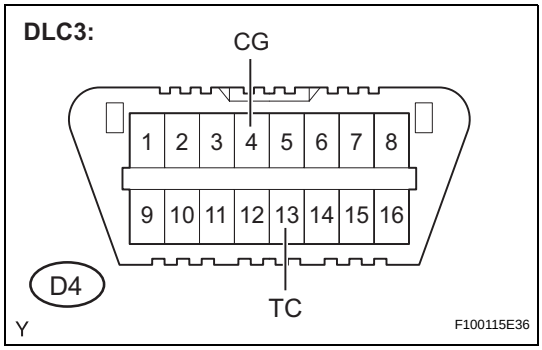
Connecting terminals TC and CG of the DLC3 causes the ECU to display 2-digit DTCs by blinking the ABS and VSC TRAC warning lights.

WIRING DIAGRAM



BC

1	INSPECT DLC3 (TC TERMINAL VOLTAGE)



(a) Turn the ignition switch to the ON position.
(b) Measure the voltage.
Standard

Tester Connection	Specified Condition
D4-13 (TC) - D4-4 (CG)	10 to 14 V

(c) Turn the ignition switch to OFF.

NG → **Go to step 3**

OK

2	CHECK CAN COMMUNICATION SYSTEM

(a) Check whether CAN system DTCs are recorded (See page CA-14).

Result	Proceed to
DTC not output	A
DTC output	B

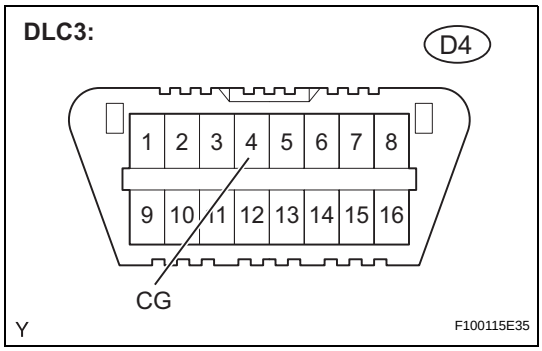
B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

BC

A

REPLACE MASTER CYLINDER SOLENOID

3	CHECK HARNESS AND CONNECTOR (DLC3 - BODY GROUND)



(a) Measure the resistance.
Standard

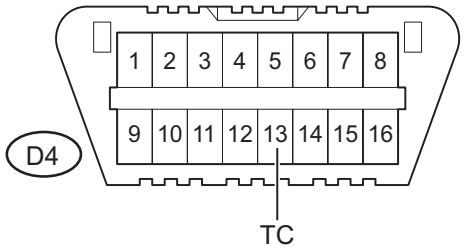
Tester Connection	Specified Condition
D4-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

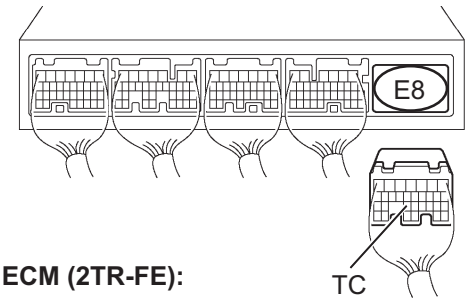
OK

4	CHECK HARNESS AND CONNECTOR (ECM - DLC3)

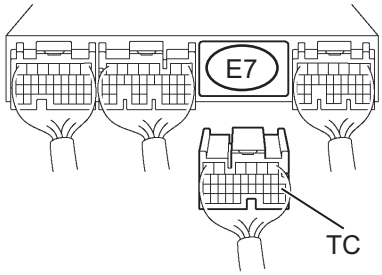
DLC3:



ECM (1GR-FE):



ECM (2TR-FE):



C124791E01

OK

(a) Disconnect the ECM connector.

(b) Measure the resistance.

Standard (1GR-FE)

Tester Connection	Specified Condition
D4-13 (TC) - E8-23 (TC)	Below 1 Ω

Standard (2TR-FE)

Tester Connection	Specified Condition
D4-13 (TC) - E7-17 (TC)	Below 1 Ω

(c) Measure the resistance.

Standard

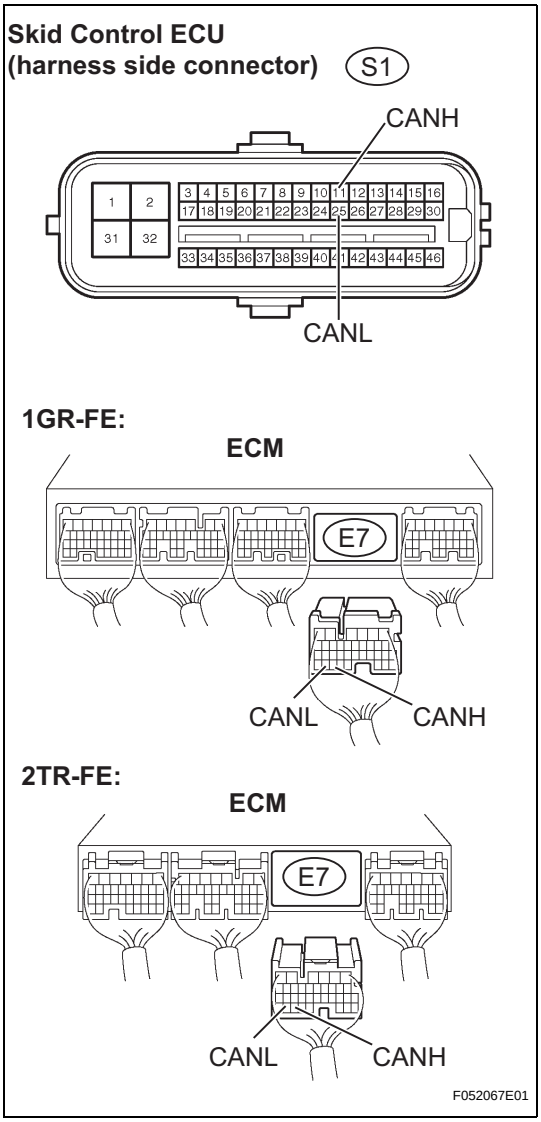
Tester Connection	Specified Condition
D4-13 (TC) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

5 CHECK HARNESS AND CONNECTOR (ECM - SKID CONTROL ECU)



(a) Disconnect the skid control ECU connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.

Standard

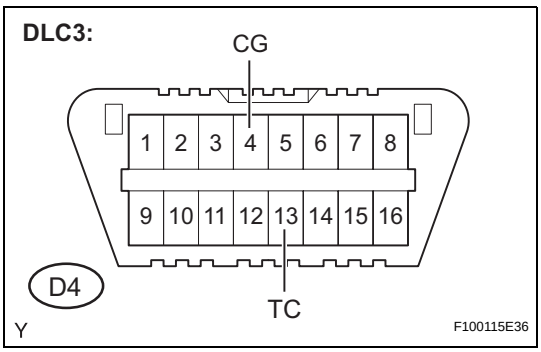
Tester Connection	Specified Condition
S1-25 (CANL) - E7-33 (CANL)	Below 1 Ω
S1-11 (CANH) - E7-34 (CANH)	Below 1 Ω

(d) Reconnect the ECM connector.
(e) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK ECM (DLC3 (TC) INPUT)



(a) Connect terminals TC and CG of DLC3.
(b) Turn the ignition switch to the ON position.
(c) Check if the ECM warning light is blinking.

OK:

ECM warning light is blinking.

(d) Turn the ignition switch to OFF.
(e) Disconnect the TC and CG terminals of DLC3.

NG → **REPLACE ECM**

BC

OK

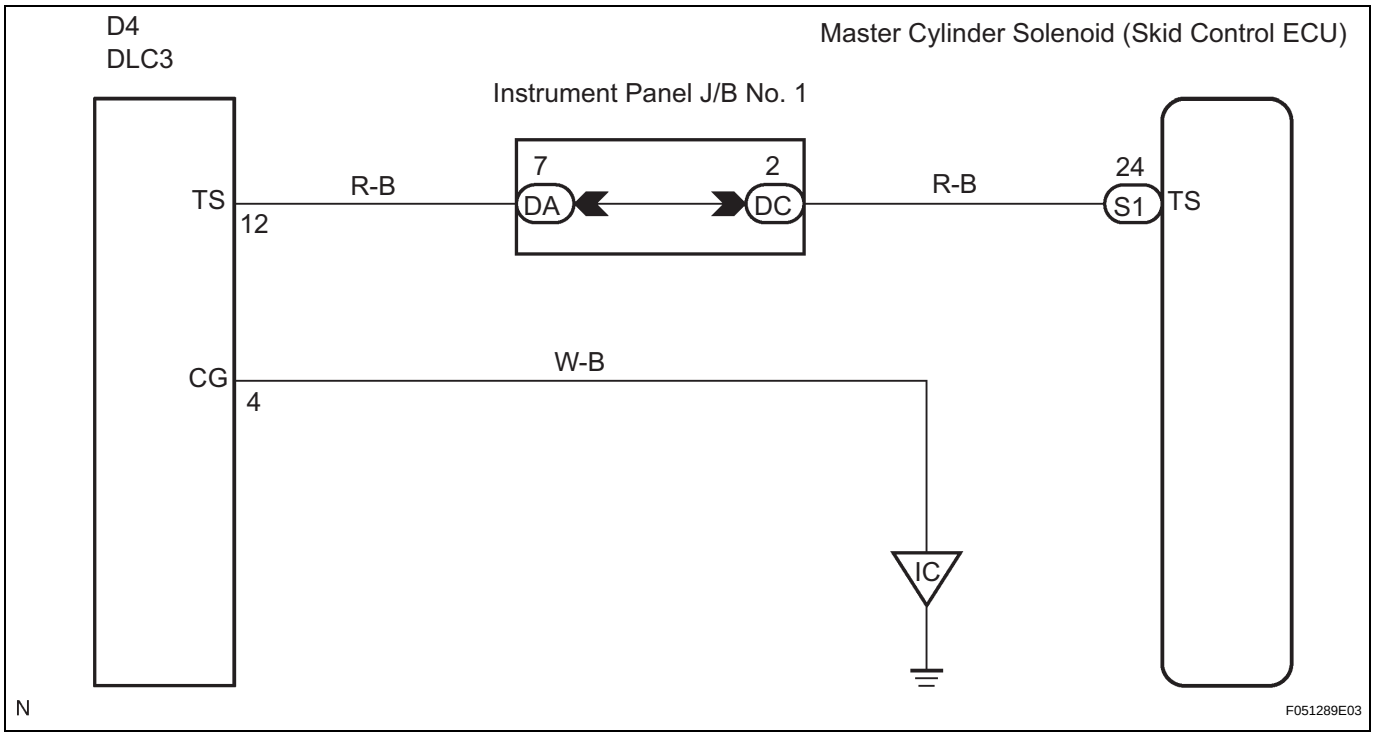
REPLACE MASTER CYLINDER SOLENOID

TS and CG Terminal Circuit

DESCRIPTION

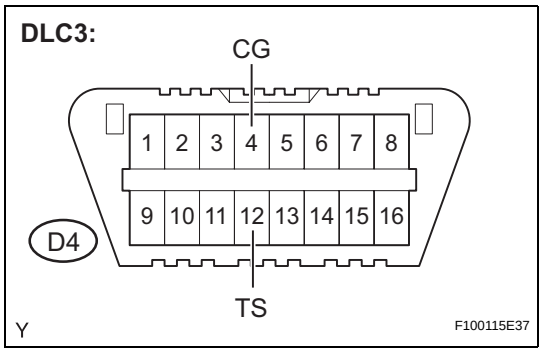
In sensor check mode, malfunctions of the speed sensor that cannot be detected when the vehicle is stopped are detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from OFF to the ON position.

WIRING DIAGRAM



BC

1	INSPECT DLC3 (TS TERMINAL VOLTAGE)



(a) Turn the ignition switch to the ON position.
(b) Measure the voltage.
Standard

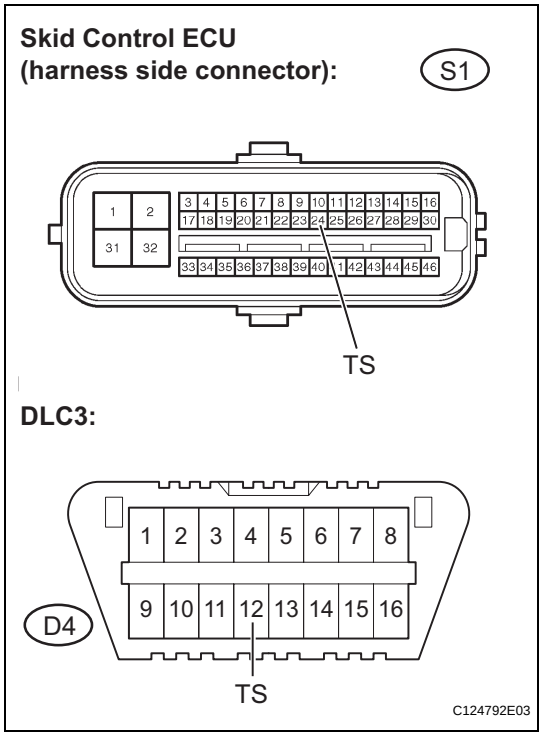
Tester Connection	Specified Condition
D4-12 (TS) - D4-4 (CG)	10 to 14 V

(c) Turn the ignition switch to OFF.

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard

Tester Connection	Specified condition
S1-24 (TS) - D4-12 (TS)	Below 1 Ω

(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-24 (TS) - Body ground	10 kΩ or higher

(d) Reconnect the skid control ECU connector.

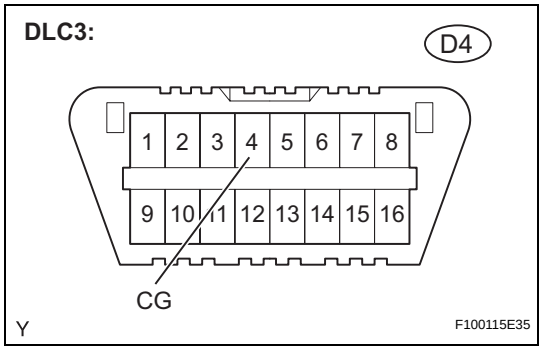
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MASTER CYLINDER SOLENOID

BC

3 CHECK HARNESS AND CONNECTOR (BODY GROUND - DLC3)



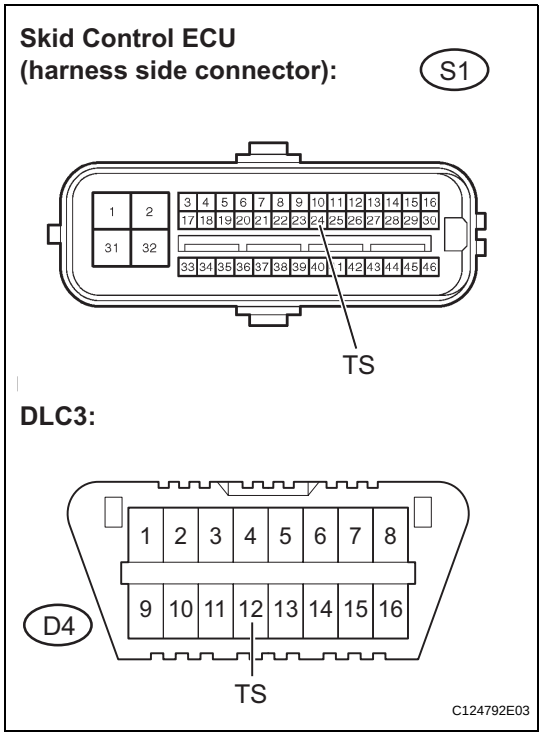
(a) Measure the resistance.
Standard

Tester Connection	Specified condition
D4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard

Tester Connection	Specified condition
S1-24 (TS) - D4-12 (TS)	Below 1 Ω

(c) Measure the resistance.
Standard

Tester Connection	Specified Condition
S1-24 (TS) - Body ground	10 kΩ or higher

(d) Reconnect the skid control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

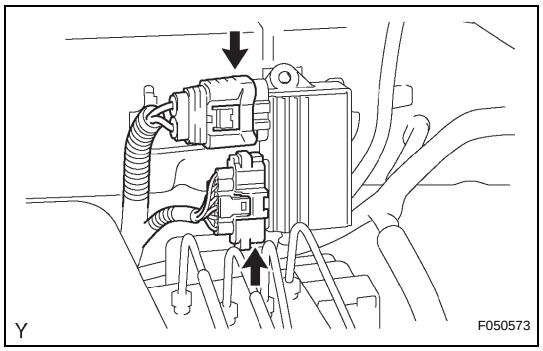
REPLACE MASTER CYLINDER SOLENOID

REMOVAL

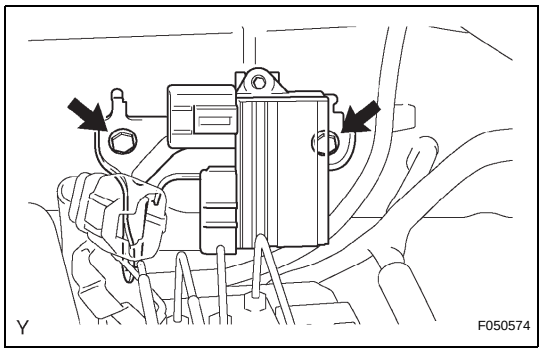
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. DRAIN BRAKE FLUID
NOTICE:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.

3. REMOVE AIR INJECTION CONTROL DRIVER (for 2TR-FE)

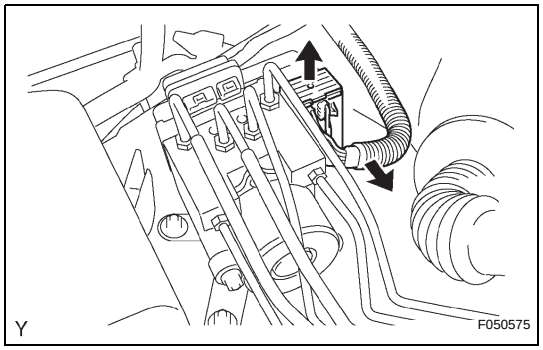


(a) Disconnect the 2 connectors.

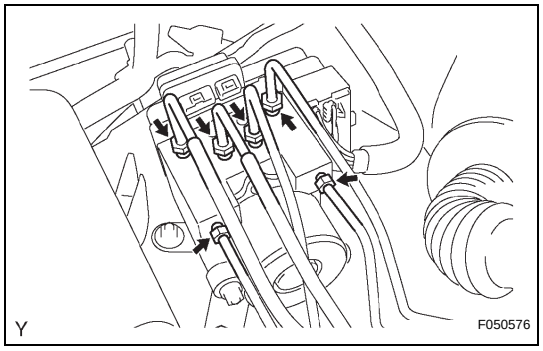


(b) Remove the 2 bolts and air injection control driver.

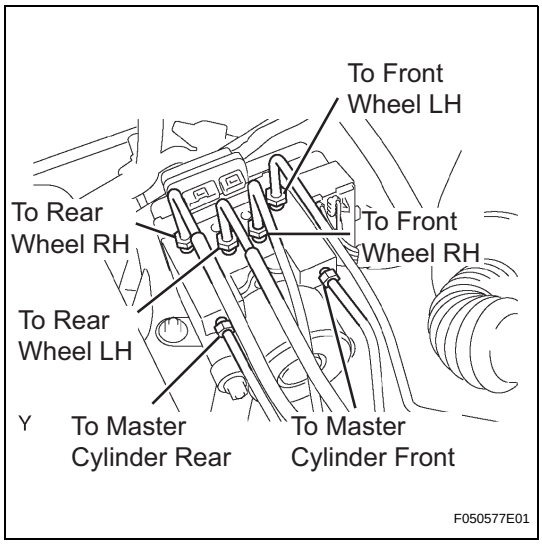
4. REMOVE BRAKE ACTUATOR



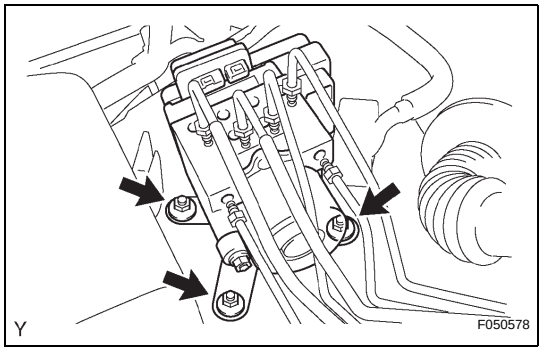
(a) Release the connector lock lever.
(b) Disconnect the brake actuator connector.



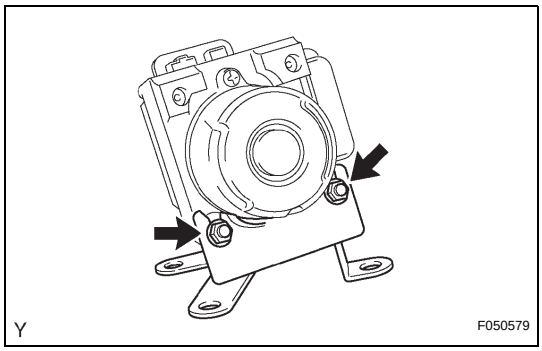
(c) Using SST, disconnect the brake tubes from the brake actuator.
SST 09023-00101



(d) Use tags or labels to identify the place to reconnect each line.



(e) Remove the 3 nuts and brake actuator with bracket.



5. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

(a) Remove the 2 nuts and bracket.

BC

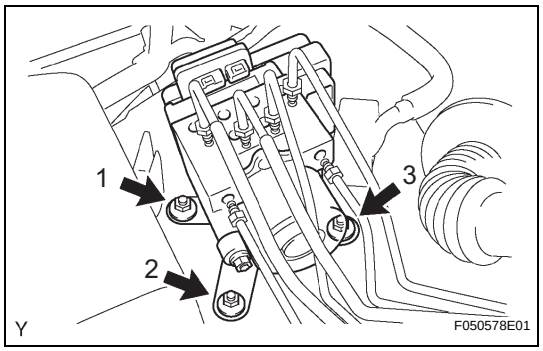
INSTALLATION

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

(a) Install the bracket with the 2 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

2. INSTALL BRAKE ACTUATOR

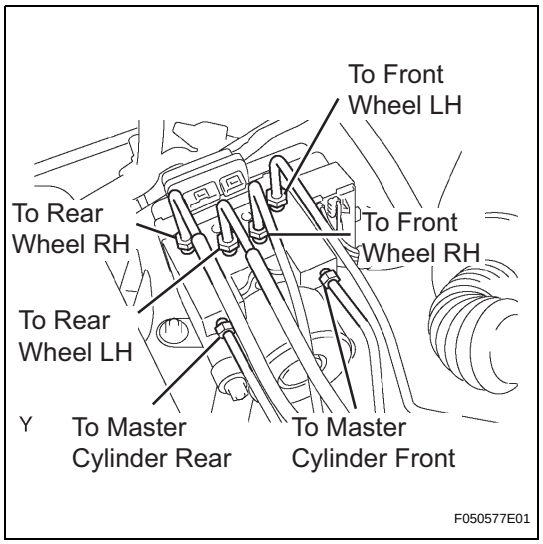
(a) Install the actuator with bracket with the 3 nuts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
NOTICE:
- **Be careful not to damage the brake tubes and wire harness.**
- **Tighten the bolts in order, from 1 to 3 as shown.**



(b) Using SST, connect each brake line to the correct position of the brake actuator, as shown in the illustration.
SST 09023-00101
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf)

(c) Connect the brake actuator connector.

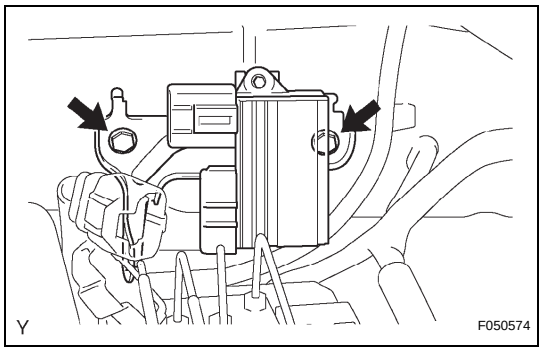
(d) Lock the connector lock lever.
NOTICE:
Make sure that the lever is locked securely.



3. INSTALL AIR INJECTION CONTROL DRIVER (for 2TR-FE)

(a) Install the air injection control driver with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(b) Connect the 2 connectors.



4. FILL RESERVOIR WITH BRAKE FLUID (See page BR-7)

5. BLEED MASTER CYLINDER (See page BR-7)

6. BLEED BRAKE LINE (See page BR-7)

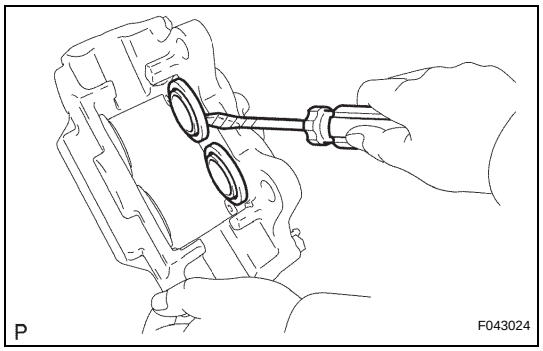
7. CHECK FLUID LEVEL IN RESERVOIR (See page BR-8)

8. CHECK FOR BRAKE FLUID LEAKAGE

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
(See page IN-5)

10. CHECK BRAKE ACTUATOR WITH INTELLIGENT TESTER
(See page BC-299)

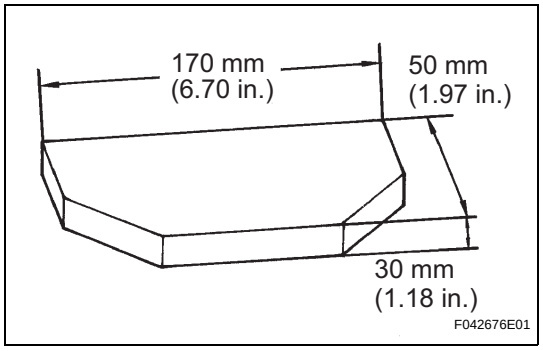
BC



DISASSEMBLY

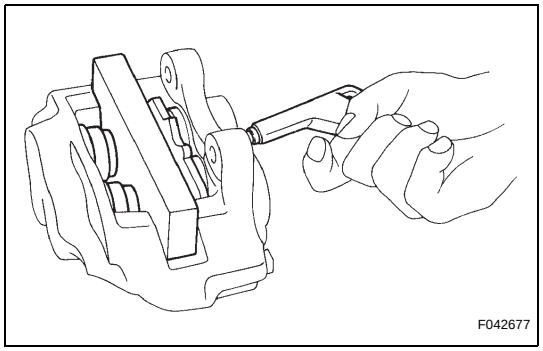
1. REMOVE CYLINDER BOOT

(a) Using a screwdriver, remove the 4 cylinder boots from the caliper.



2. REMOVE FRONT DISC BRAKE PISTON

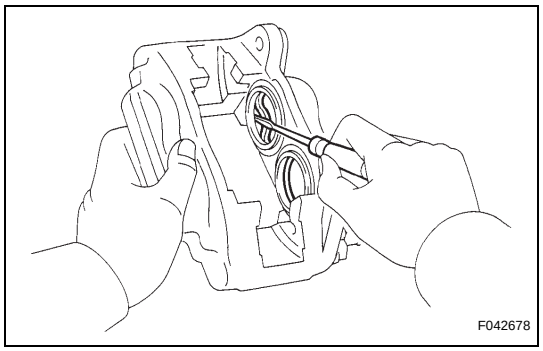
(a) Prepare a wooden plate to hold the pistons.



(b) Place the plate between the pistons and insert a pad into one side.

(c) Use compressed air and remove the pistons one side at a time from the cylinder.

CAUTION:
Do not place your fingers in front of the pistons when using compressed air.



3. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the 4 piston seals from the cylinder.

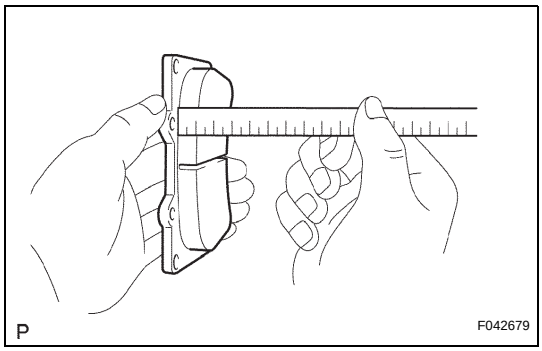
4. REMOVE FRONT DISC BRAKE BLEEDER PLUG

(a) Remove the bleeder plug cap and bleeder plug from the disc brake cylinder.

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring.



2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
11.5 mm (0.453 in.)
Minimum thickness:
1.0 mm (0.039 in.)

REASSEMBLY

1. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG

(a) Provisionally tighten the bleeder plug to the disc brake cylinder.

(b) Install the bleeder plug cap onto the bleeder plug.

2. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to 4 new piston seals.

(b) Install the 4 piston seals onto the disc brake cylinder.

3. INSTALL FRONT DISC BRAKE PISTON

(a) Apply lithium soap base glycol grease to the 4 disc brake pistons.

(b) Install the 4 disc brake pistons onto the disc brake cylinder.

NOTICE:

Do not install the disc brake piston into the disc brake cylinder forcibly.

4. INSTALL CYLINDER BOOT

(a) Apply lithium soap grease glycol grease to 4 new cylinder boots.

(b) Install the 4 cylinder boots onto the disc brake cylinder.

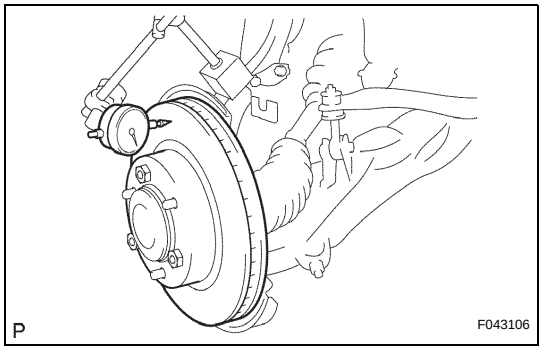
HINT:

Install the cylinder boot securely onto the grooves of the disc brake cylinder and piston.

INSTALLATION

1. INSTALL FRONT DISC

(a) Aligning the matchmarks, install the front disc.
HINT:
When replacing the disc with a new one, select the installation position where the disc has the minimum runout.

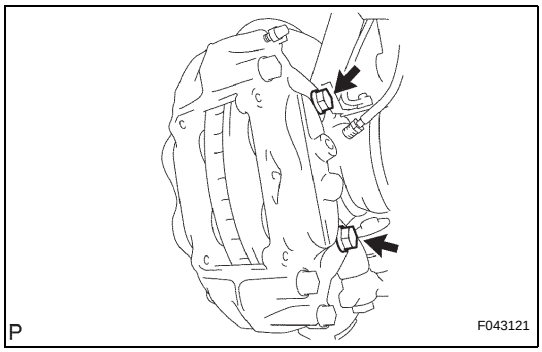


2. INSPECT DISC RUNOUT

(a) Provisionally fasten the disc with the hub nuts.
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

(b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the disc.
Maximum disc runout:
0.05 mm (0.0020 in.)

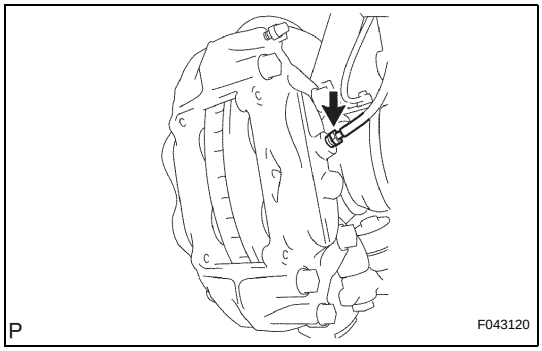
(c) If the disc runout is the maximum value or greater, check the bearing play in the axial direction and check the axle hub runout (see page AH-1). If the bearing play and axle hub runout are normal, adjust the disc runout or grind it on an on-car brake lathe.



3. INSTALL DISC BRAKE CYLINDER ASSEMBLY

(a) Install the disc brake cylinder assembly with the 2 bolts.
Torque: 123 N*m (1,254 kgf*cm, 91 ft.*lbf)

(b) Using SST, connect the brake tube to the disc brake cylinder.
SST 09023-00101
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf)

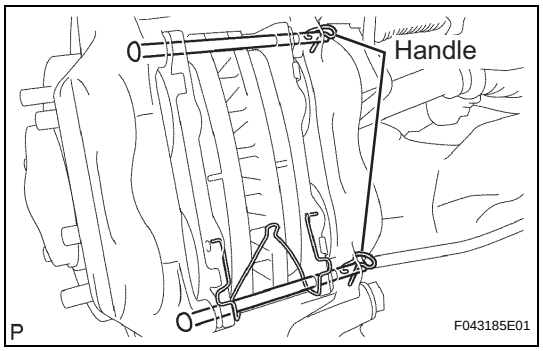


4. INSTALL ANTI SQUEAL SHIM KIT FRONT
NOTICE:
If necessary, replace the anti-squeal shim kit when replacing the brake pad.

(a) Install the anti-squeal shims on to each brake pad.

5. INSTALL DISC BRAKE PAD KIT FRONT (PAD ONLY)

(a) Install the 2 disc brake pads with anti-squeal shim onto the disc brake cylinder.
NOTICE:
There should be no oil or grease on the friction surfaces of the brake pads and the front disc.



6. **INSTALL FRONT DISC BRAKE ANTI RATTLE WITH HOLE PIN**
   (a) Install the 2 anti rattle w/ hole pins and anti-rattle spring onto the disc brake cylinder.
   HINT:
   The anti-rattle spring is installed onto the lower anti-rattle w/ hole pin.
   (b) Install the 2 new pin hold clips with the anti-rattle w/ hole pin.
   NOTICE:
   Be sure to install the pin hold clip with the handle facing to the vehicle center.
7. **FILL RESERVOIR WITH BRAKE FLUID (w/ VSC) (See page BR-4)**
8. **FILL RESERVOIR WITH BRAKE FLUID (w/o VSC) (See page BR-7)**
9. **BLEED MASTER CYLINDER (w/o VSC) (See page BR-7)**
10. **BLEED BRAKE LINE (w/ VSC) (See page BR-4)**
11. **BLEED BRAKE LINE (w/o VSC) (See page BR-7)**
12. **CHECK FLUID LEVEL IN RESERVOIR (w/ VSC) (See page BR-6)**
13. **CHECK FLUID LEVEL IN RESERVOIR (w/o VSC) (See page BR-8)**
14. **CHECK FOR BRAKE FLUID LEAKAGE**
15. **INSTALL FRONT WHEEL**
    Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)

DTC	B1651/33	Manual Cut off Switch Trouble

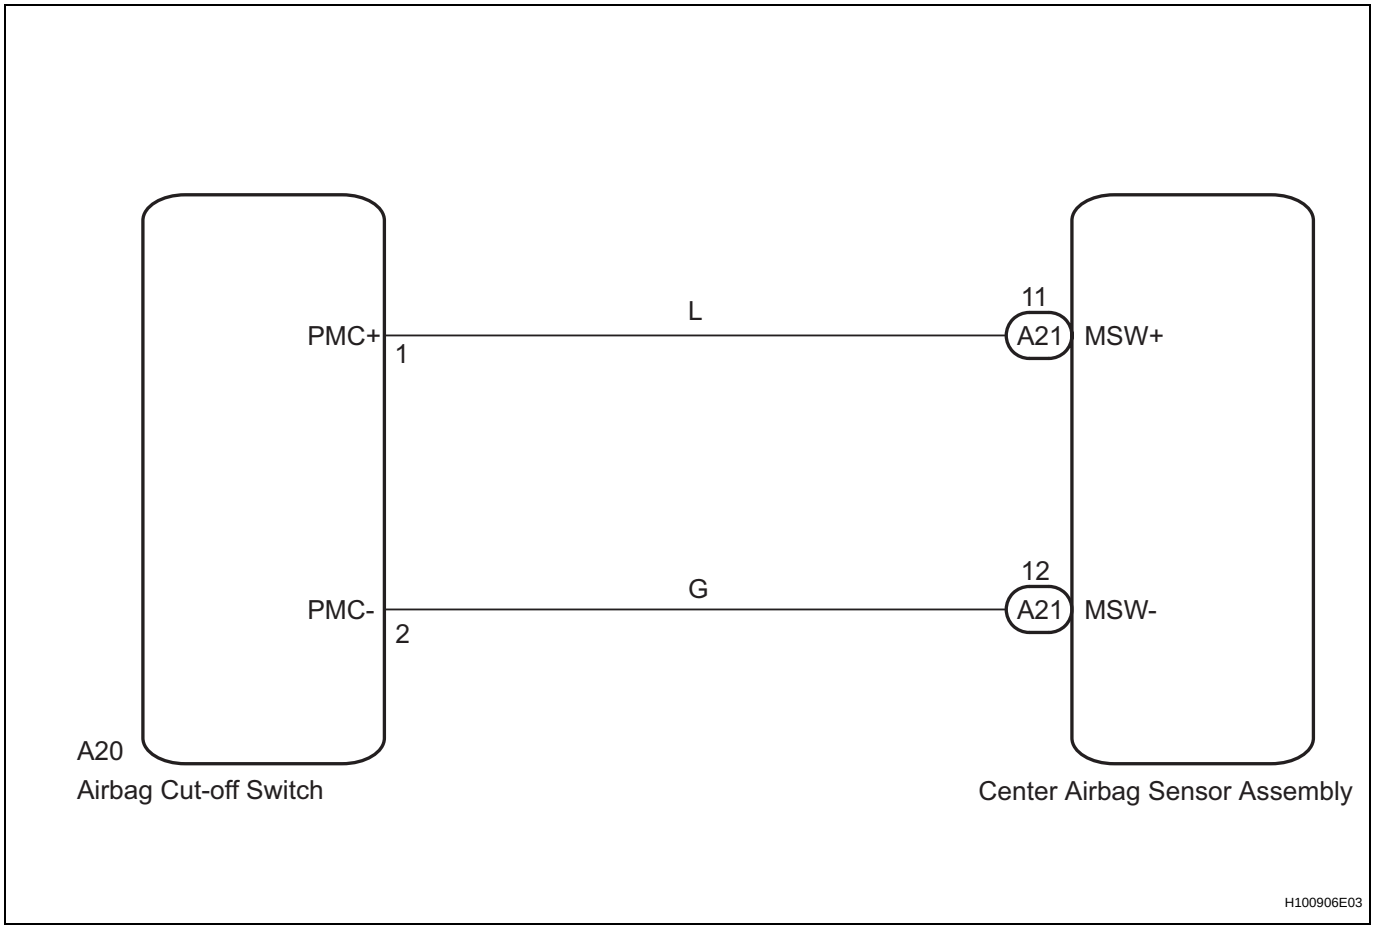
DESCRIPTION

The airbag cut-off switch circuit consists of the center airbag sensor assembly and the airbag cut off switch.

DTC B1651/33 is set when a malfunction is detected in the airbag cut off switch circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1651/31	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the airbag cut off switch circuit for 2 seconds • Airbag cut off switch malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Airbag cut-off switch • Center airbag sensor assembly

WIRING DIAGRAM



RS

CAUTION:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

(a) Turn the ignition switch to the LOCK position.

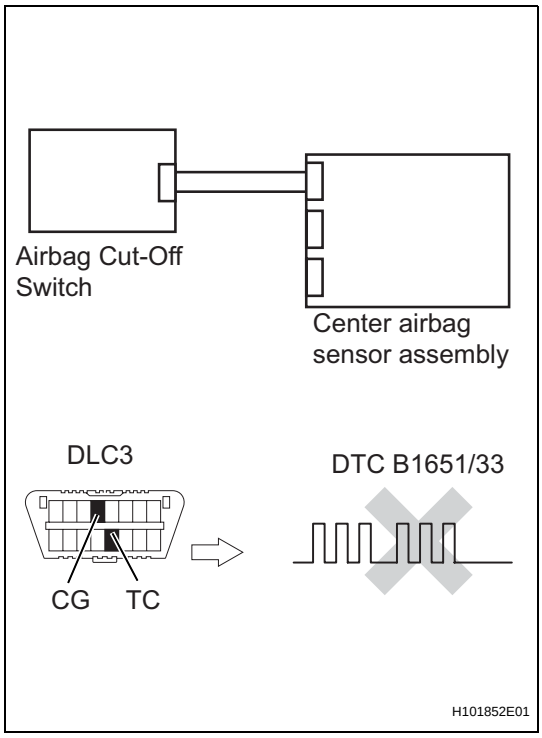
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the connectors from the center airbag sensor assembly.

(d) Disconnect the connectors from the steering pad.

(e) Disconnect the connector from the front passenger airbag assembly.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC



(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-34).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position and wait for at least 60 seconds.
(e) Check for DTCs (See page RS-34).
OK:
DTC B1651/33 is not output.
HINT:
DTCs other than B1651/33 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the airbag cut off switch.
OK:
The connectors are properly connected.

NG → **CONNECTION OF CONNECTORS**

OK

RS

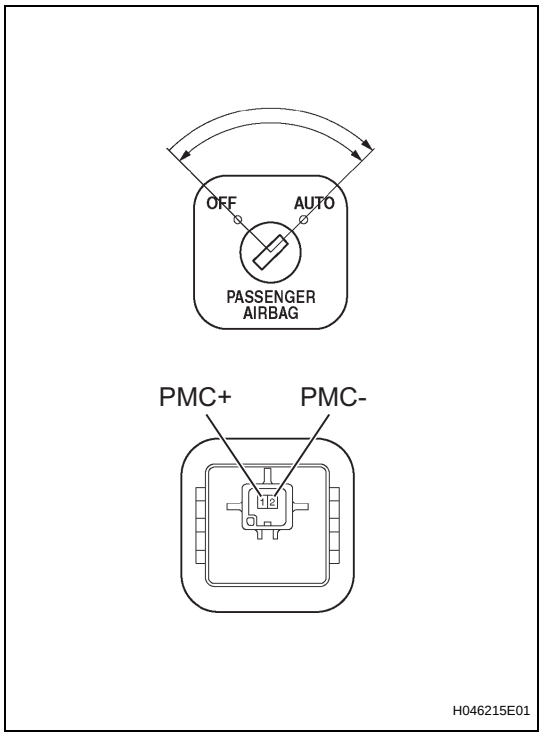
3	CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and airbag cut-off switch side) are not damaged (See page IN-34).

NG → REPAIR OR REPLACE WIRE HARNESS

OK

4	INSPECT AIRBAG CUT-OFF SWITCH



(a) Disconnect the A20 airbag cut-off switch connector.
(b) Measure the resistance.

Standard resistance

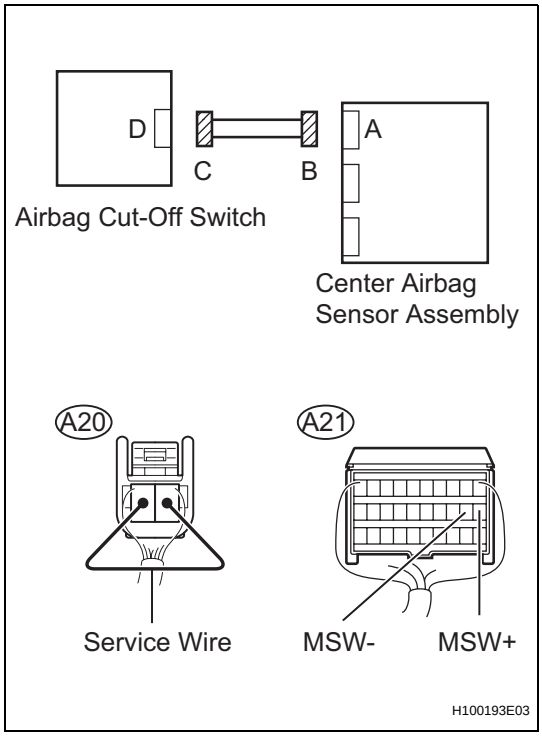
Switch Condition	Tester Condition	Specified Condition
OFF	1(PMC+) - 2(PMC-)	80 to 120 Ω
AUTO	1(PMC+) - 2(PMC-)	320 to 480 Ω

NG → REPLACE AIRBAG CUT-OFF SWITCH

OK

RS

5 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Disconnect the instrument panel wire connector from the airbag cut off switch.
(b) Using a service wire, connect A20-1 (PMC+) and A20-2 (PMC-) of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

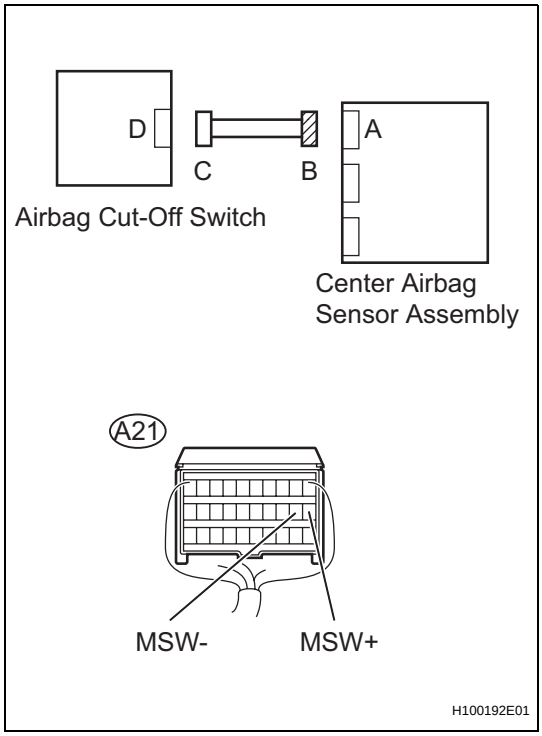
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	Below 1Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

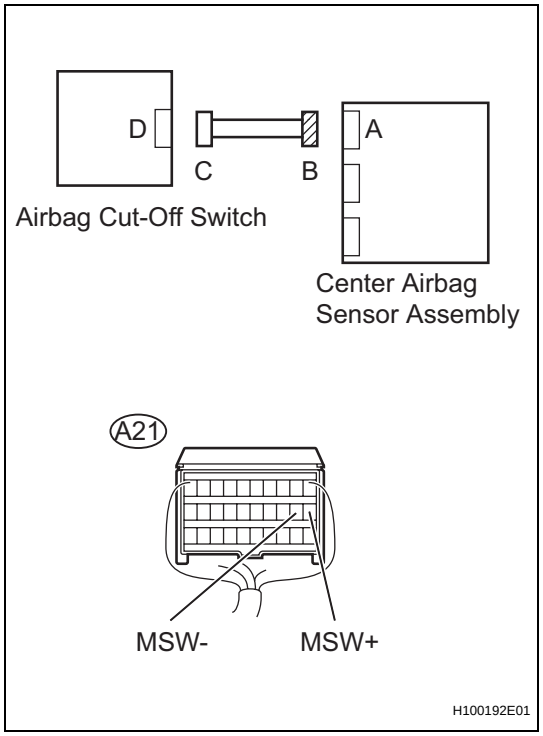
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

7 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

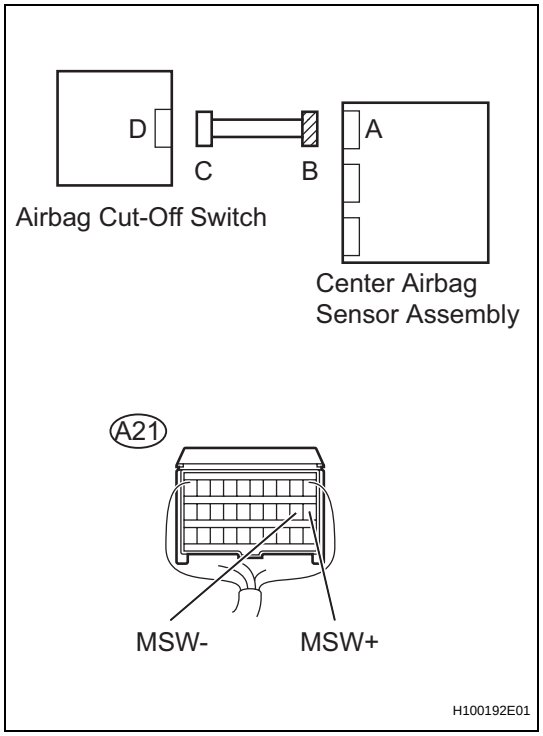
Standard voltage

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Ignition switch ON	Below 1 V
A21-12 (MSW-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

8 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

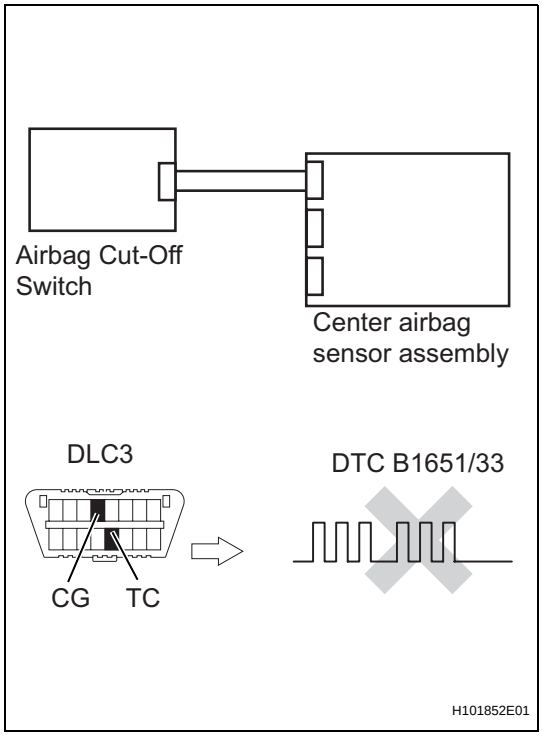
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Always	1 MΩ or Higher
A21-12 (MSW-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

9	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the center airbag sensor assembly and airbag cut off switch.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).

OK:

DTC B1651/33 is not output.

HINT:

DTCs other than B1651/33 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1653/35	Seat Position Airbag Sensor Circuit Malfunction

DESCRIPTION

The seat position sensor circuit consists of the center airbag sensor assembly and the seat position sensor.

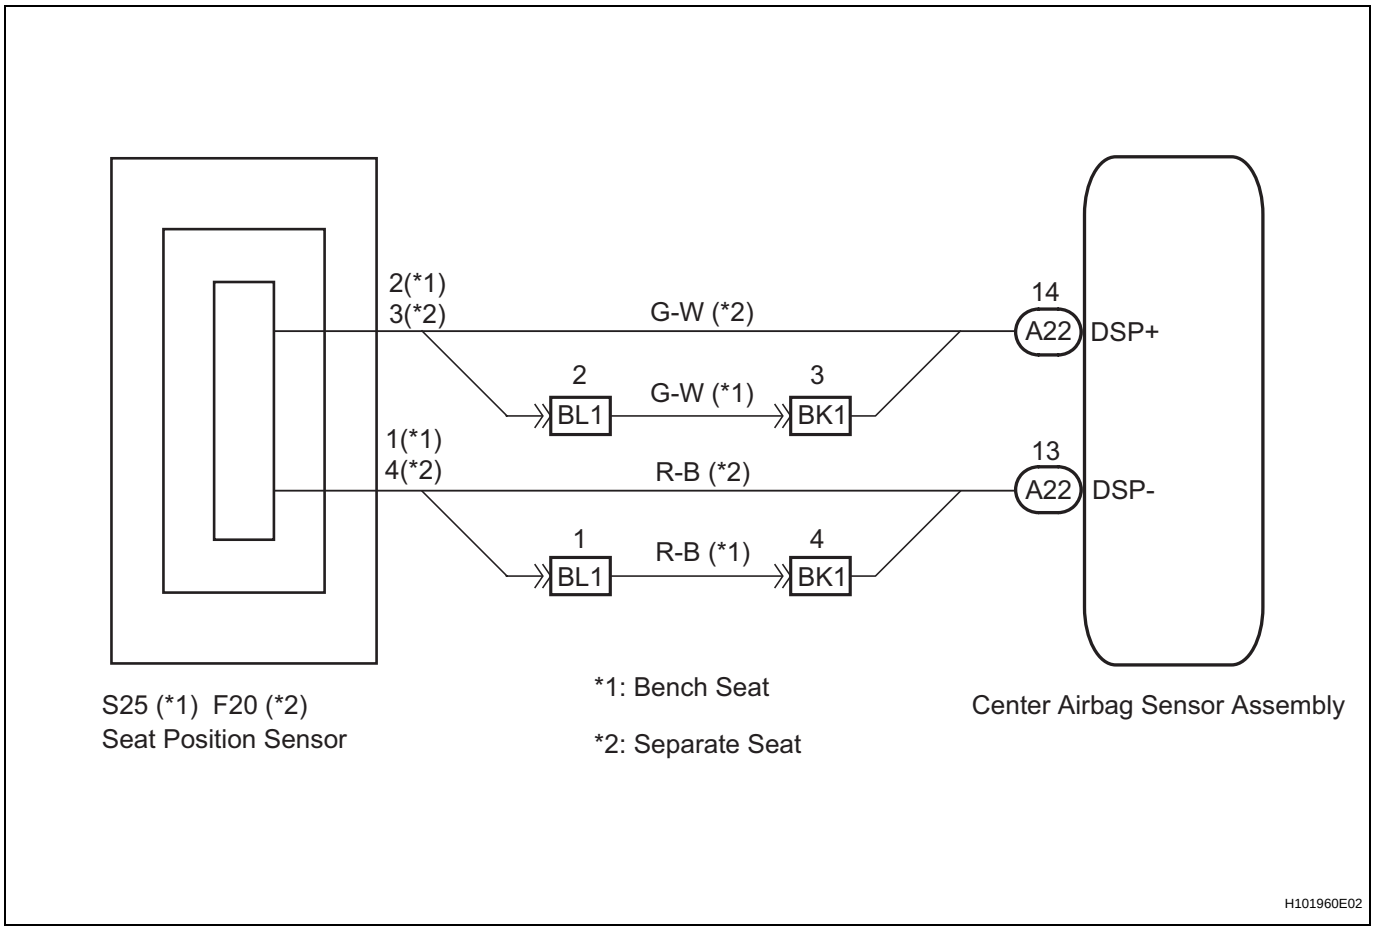
DTC B1653/35 is set when a malfunction is detected in the seat position sensor assembly circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1653/35	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat position sensor assembly circuit for 2 seconds. • Seat position sensor malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • No. 1 seat wire (*1) • No. 2 seat wire (*1) • Front seat belt inner assembly LH (*2) • Seat position sensor • Center airbag sensor assembly

*1: Bench seat

*2: Separate seat

WIRING DIAGRAM



RS

CAUTION:

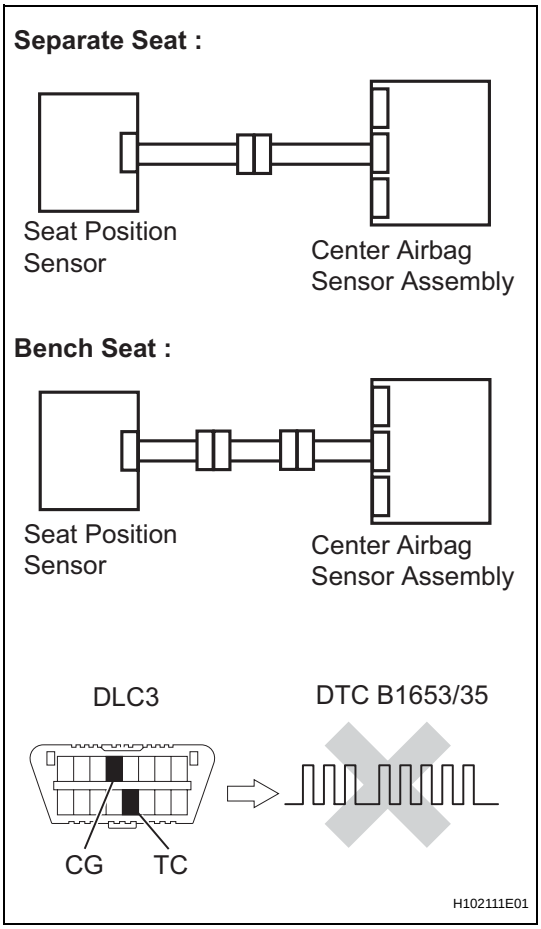
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

(a) Turn the ignition switch to the LOCK position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat outer belt assembly LH.
(g) Disconnect the connector from the front seat outer belt assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the front seat airbag assembly LH.
(i) Disconnect the connector from the front seat airbag assembly RH.
(j) Disconnect the connector from the curtain shield airbag assembly LH.
(k) Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC



(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-34).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position and wait for at least 60 seconds.
(e) Check for DTCs (See page RS-34).
OK:
DTC B1653/35 is not output.
HINT:
DTCs other than B1653/35 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the seat position sensor.

RS

OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and seat position sensor side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

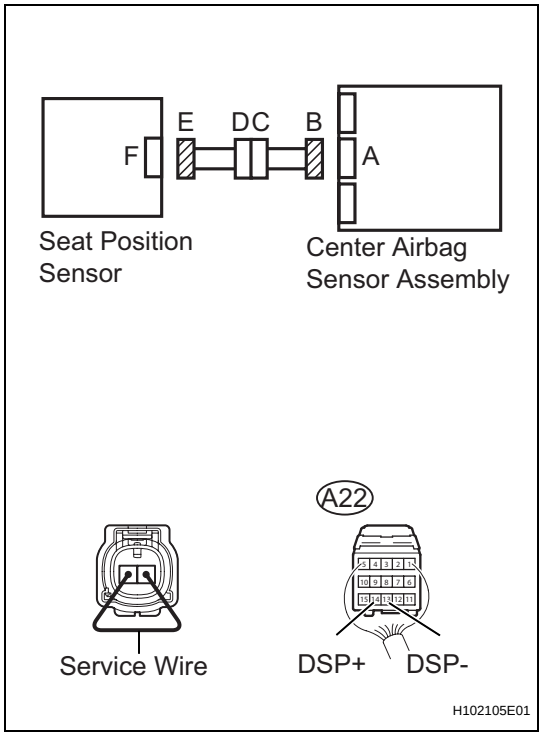
Condition	Proceed to
Normal (separate seat)	A
Normal (bench seat)	B
Abnormal	C

B → **Go to step 13**

C → **REPAIR OR REPLACE WIRE HARNESS**

A

4 CHECK SEAT POSITION SENSOR CIRCUIT (FOR OPEN)



(a) Disconnect the connectors from the center airbag sensor assembly and the seat position sensor.
(b) Using a service wire, connect 1 and 2 of connector E.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
HINT:
The connector is not allocated an ID number due to being part of the front seat inner belt assembly LH wire harness.
(c) Measure the resistance.
Standard resistance

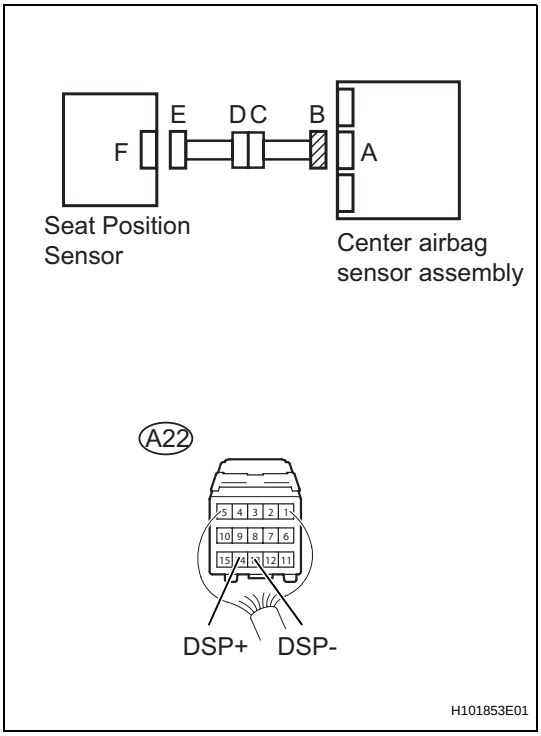
Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - A22-13 (DSP-)	Always	Below 1 Ω

NG → **Go to step 9**

OK

RS

5 CHECK SEAT POSITION SENSOR CIRCUIT (FOR SHORT)



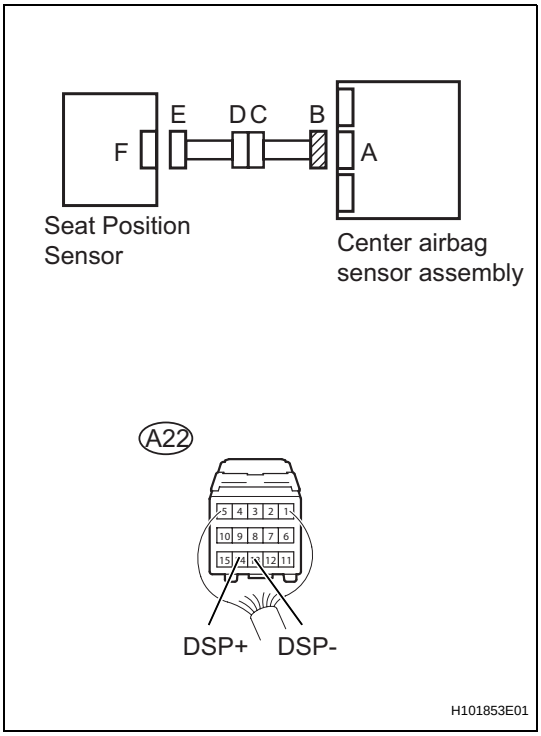
(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - A22-13 (DSP-)	Always	1 MΩ or Higher

NG → **Go to step 10**

OK

6 CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

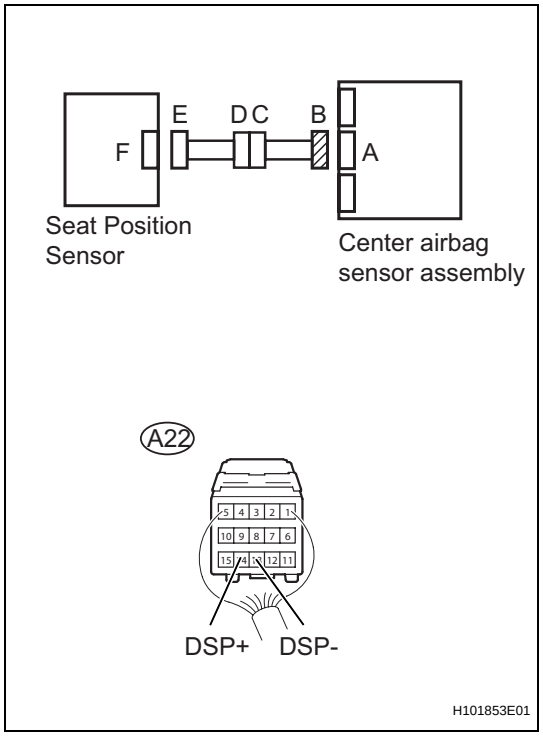
Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - Body ground	Ignition switch ON	Below 1 V
A22-13 (DSP-) - Body ground	Ignition switch ON	Below 1 V

NG → **Go to step 11**

OK

RS

7 CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

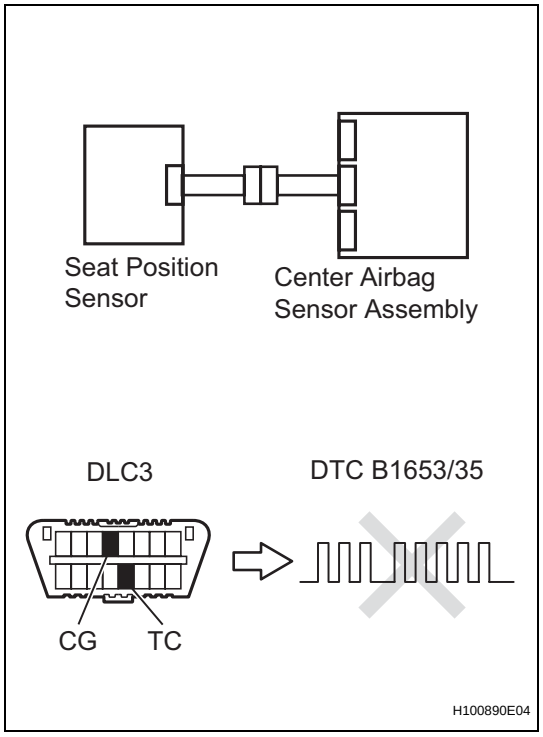
Standard resistance

Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - Body ground	Always	1 MΩ or Higher
A22-13 (DSP-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 12**

OK

8 CHECK SEAT POSITION SENSOR



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the connector to the seat position sensor.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC B1653/35 is not output.

HINT:
DTCs other than B1653/35 may be output at this time, but they are not related to this check.

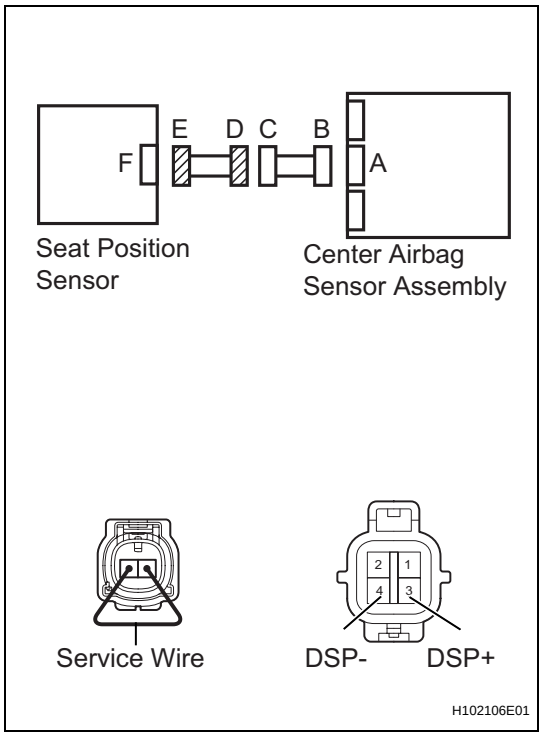
NG → **Go to step 26**

RS

OK

USE SIMULATION METHOD TO CHECK

9	CHECK SEAT POSITION SENSOR CIRCUIT (FOR OPEN)



(a) Disconnect the front seat inner belt assembly connector from the instrument panel wire.

HINT:

- The service wire has already been inserted into connector E.
- The connector is not allocated an ID number due to being part of the front seat inner belt assembly LH wire harness.

(b) Measure the resistance.

Standard resistance

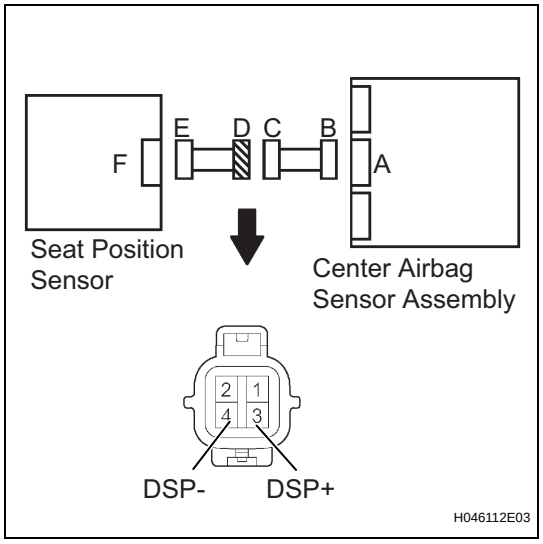
Tester Connection	Condition	Specified Condition
3 (DSP+) - 4 (DSP-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

10 CHECK SEAT POSITION SENSOR CIRCUIT (FOR SHORT)



(a) Disconnect the front seat inner belt assembly connector from the instrument panel wire.

HINT:
The connector is not allocated an ID number due to being part of the front seat inner belt assembly LH wire harness.

(b) Disconnect the service wire from connector E.
(c) Measure the resistance.

Standard resistance

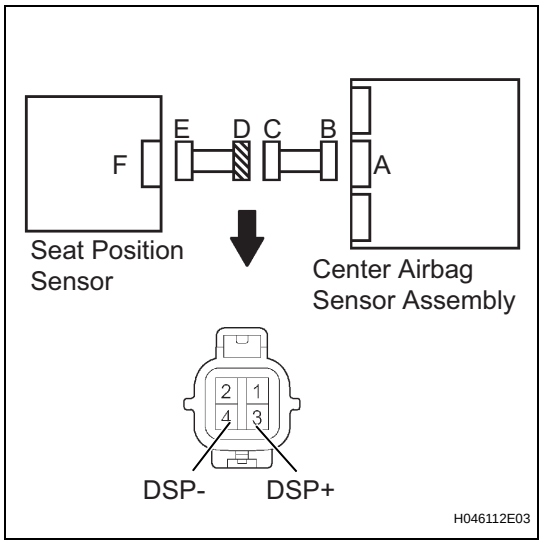
Tester Connection	Condition	Specified Condition
3 (DSP+) - 4 (DSP-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

11 CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the seat inner belt assembly LH connector from the instrument panel wire.

HINT:
The connector is not allocated an ID number due to being part of the front seat inner belt assembly LH wire harness.

(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.

Standard Voltage

Tester Connection	Condition	Specified Condition
3 (DSP+) - Body ground	Ignition switch ON	Below 1 V
4 (DSP-) - Body ground	Ignition switch ON	Below 1 V

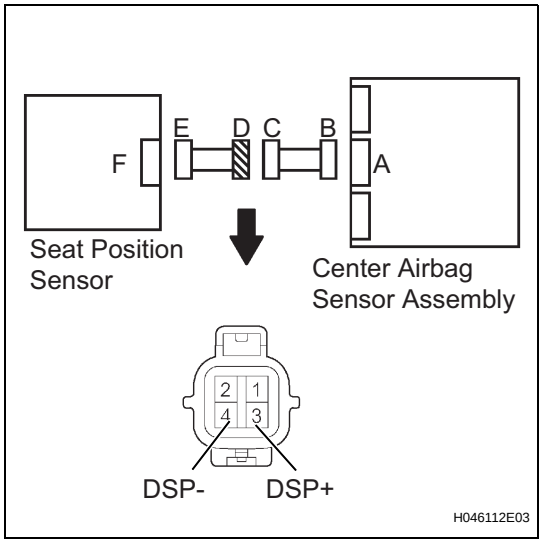
NG → **REPAIR OR REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

RS

12 CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)



(a) Disconnect the front seat inner belt assembly connector from the instrument panel wire.

HINT:
The connector is not allocated an ID number due to being part of the front seat inner belt assembly LH wire harness.

(b) Measure the resistance.

Standard resistance

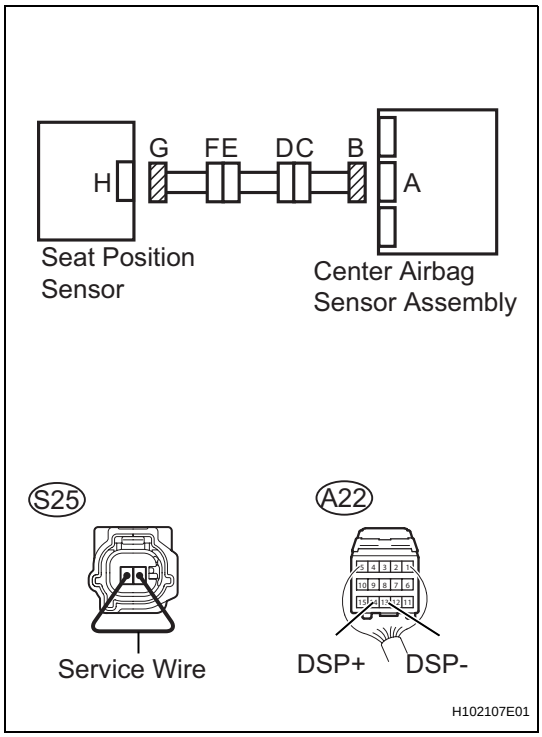
Tester Connection	Condition	Specified Condition
3 (DSP+) - Body ground	Always	1 MΩ or Higher
4 (DSP-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

13 CHECK SEAT POSITION SENSOR CIRCUIT (FOR OPEN)



(a) Disconnect the connectors from the center airbag sensor assembly and the seat position sensor.

(b) Using a service wire, connect S25-1 and S25-2 of connector G.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(c) Measure the resistance.

Standard resistance

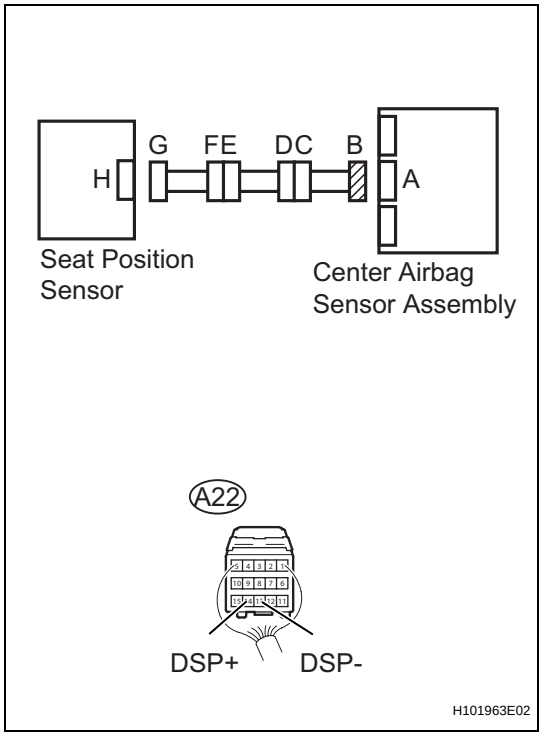
Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - A22-13 (DSP-)	Always	Below 1 Ω

NG → **Go to step 18**

OK

RS

14 CHECK SEAT POSITION SENSOR CIRCUIT (FOR SHORT)



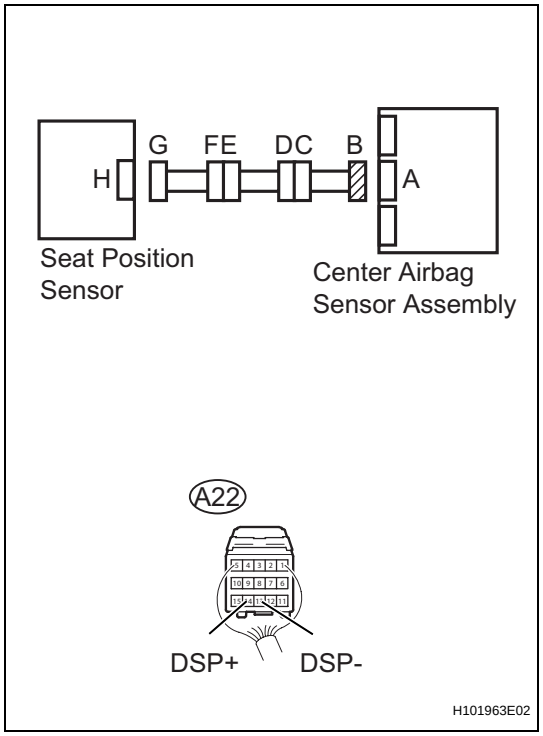
(a) Disconnect the service wire from connector G.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - A22-13 (DSP-)	Always	1 MΩ or Higher

NG → **Go to step 19**

OK

15 CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

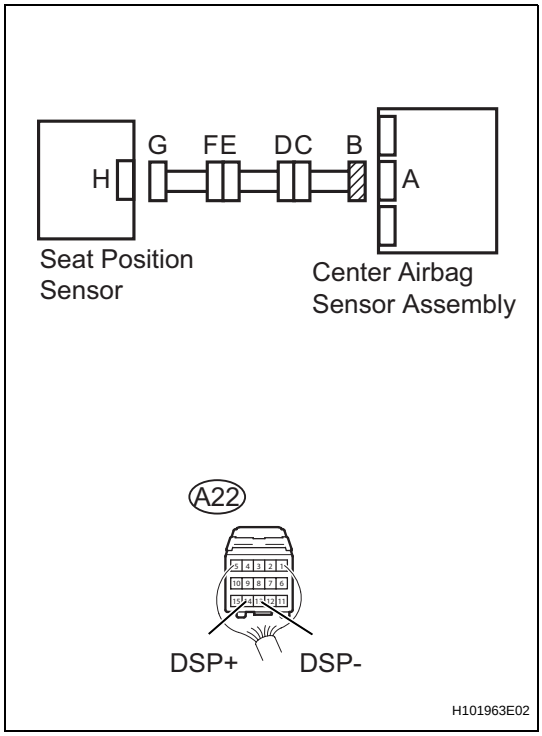
Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - Body ground	Ignition switch ON	Below 1 V
A22-13 (DSP-) - Body ground	Ignition switch ON	Below 1 V

NG → **Go to step 20**

OK

RS

16 CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

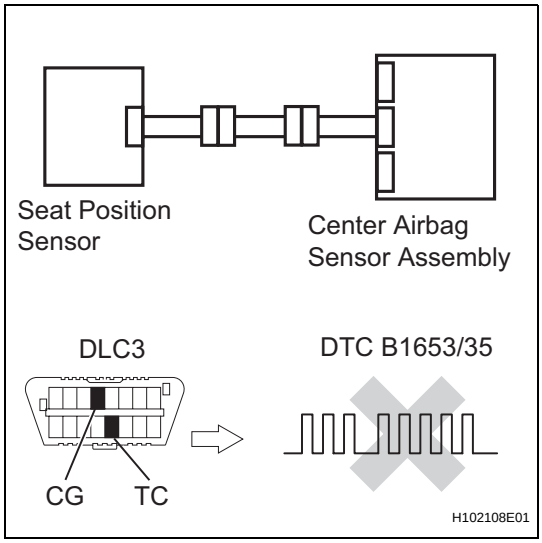
Standard resistance

Tester Connection	Condition	Specified Condition
A22-14 (DSP+) - Body ground	Always	1 MΩ or Higher
A22-13 (DSP-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 21**

OK

17 CHECK SEAT POSITION SENSOR



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the connector to the seat position sensor.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC B1653/35 is not output.

HINT:
DTCs other than B1653/35 may be output at this time, but they are not related to this check.

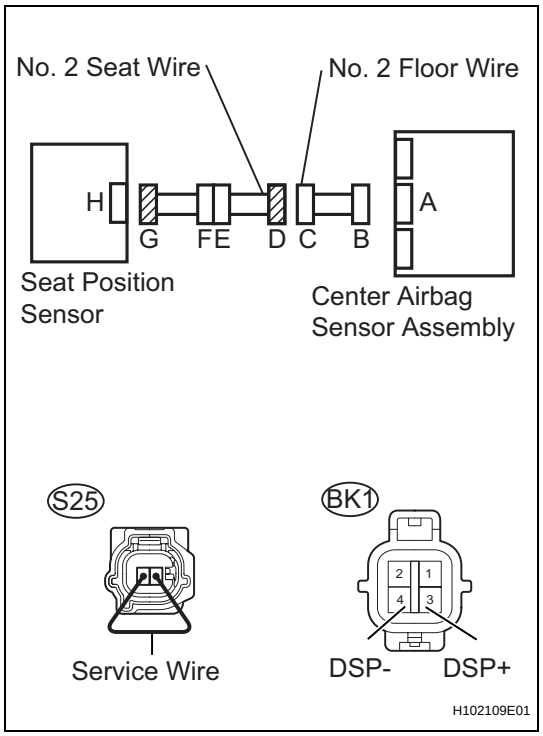
NG → **Go to step 26**

RS

OK

USE SIMULATION METHOD TO CHECK

18 CHECK SEAT POSITION SENSOR CIRCUIT (FOR OPEN)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.

HINT:

The service wire has already been inserted into connector G.

(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
BK1-3 (DSP+) - BK1-4 (DSP-)	Always	Below 1 Ω

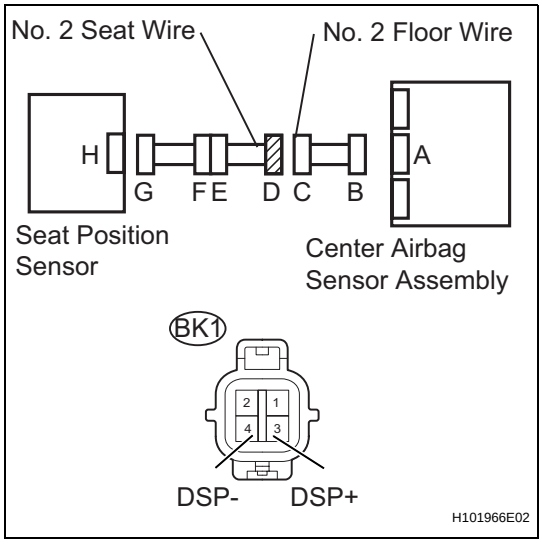
NG → **Go to step 22**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

RS

19 CHECK SEAT POSITION SENSOR CIRCUIT (FOR SHORT)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(b) Measure the resistance.
Standard resistance

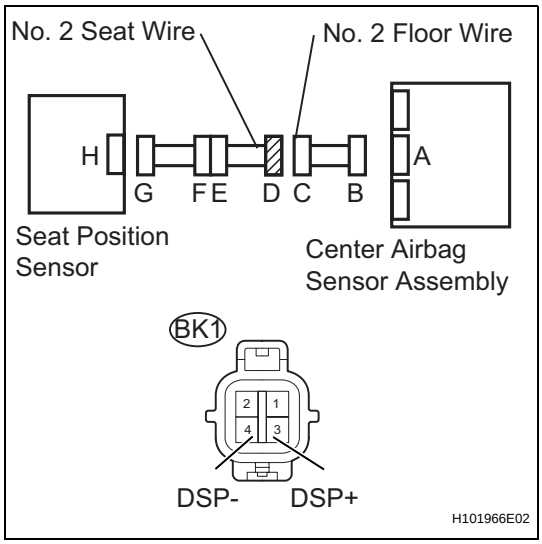
Tester Connection	Condition	Specified Condition
BK1-3 (DSP+) - BK1-4 (DSP-)	Always	1 MΩ or Higher

NG → **Go to step 23**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

20 CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
BK1-3 (DSP+) - Body ground	Ignition switch ON	Below 1 V
BK1-4 (DSP-) - Body ground	Ignition switch ON	Below 1 V

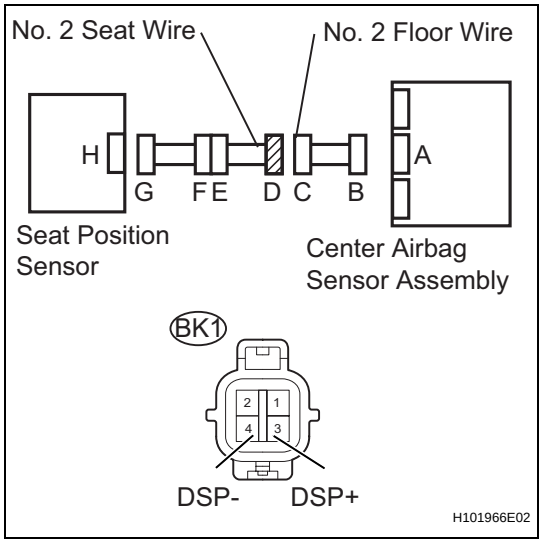
NG → **Go to step 24**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

RS

21 CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(b) Measure the resistance.
Standard resistance

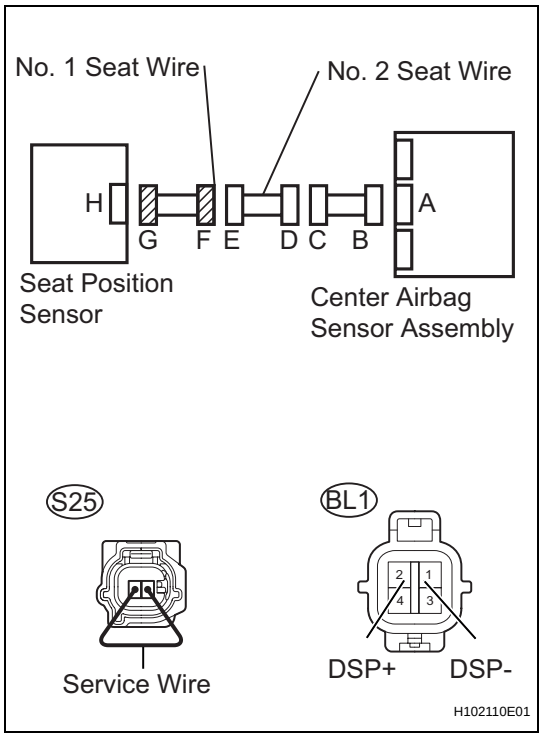
Tester Connection	Condition	Specified Condition
BK1-3 (DSP+) - Body ground	Always	1 MΩ or Higher
BK1-4 (DSP-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 25**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

22 CHECK NO.1 SEAT WIRE (FOR OPEN)



(a) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
HINT:
The service wire has already been inserted into connector G.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
BL1-2 (DSP+) - BL1-1 (DSP-)	Always	Below 1 Ω

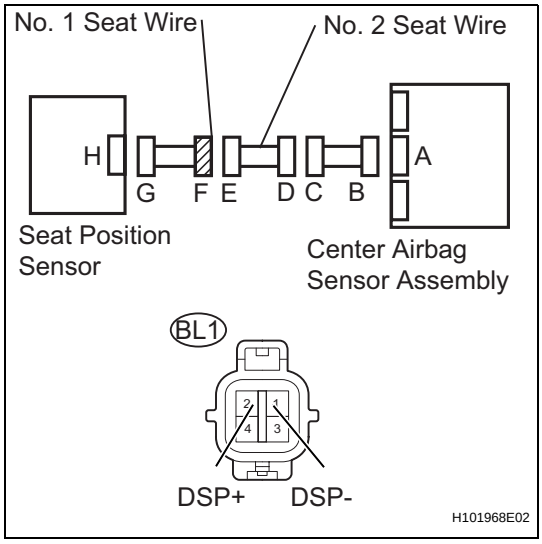
NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

RS

23 CHECK NO.1 SEAT WIRE (FOR SHORT)



(a) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(b) Measure the resistance.
Standard resistance

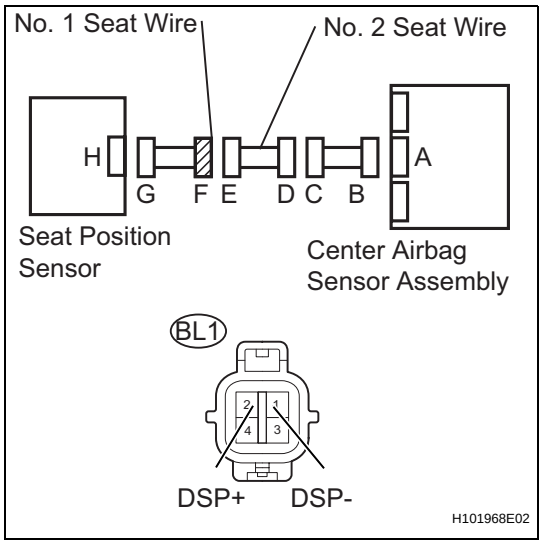
Tester Connection	Condition	Specified Condition
BL1-2 (DSP+) - BL1-1 (DSP-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

24 CHECK NO.1 SEAT WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.
Standard Voltage

Tester Connection	Condition	Specified Condition
BL1-2 (DSP+) - Body ground	Ignition switch ON	Below 1 V
BL1-1 (DSP-) - Body ground	Ignition switch ON	Below 1 V

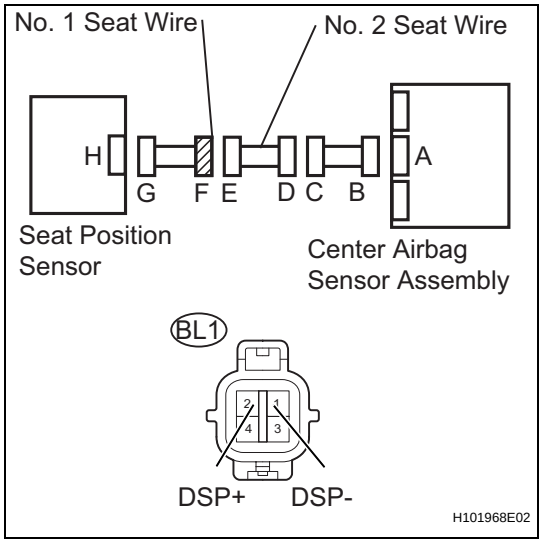
NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

RS

25 CHECK NO.1 SEAT WIRE (TO GROUND)



(a) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
BL1-2 (DSP+) - Body ground	Always	1 MΩ or Higher
BL1-1 (DSP-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

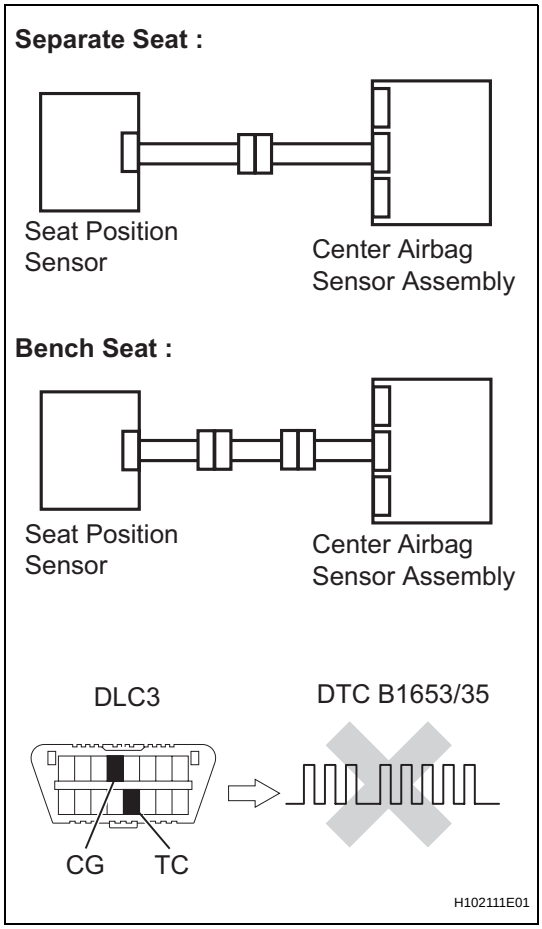
26 REPLACE SEAT POSITION SENSOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the seat position sensor (See page RS-620 or RS-617).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

27	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(c) Clear any DTCs stored in the memory (See page RS-34).
(d) Turn the ignition switch to the LOCK position.
(e) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(f) Check for DTCs (See page RS-34).

OK:

DTC B1653/35 is not output.

HINT:
DTCs other than B1653/35 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

DTC	B1655/37	Driver Side Seat Belt Buckle Switch Circuit Malfunction

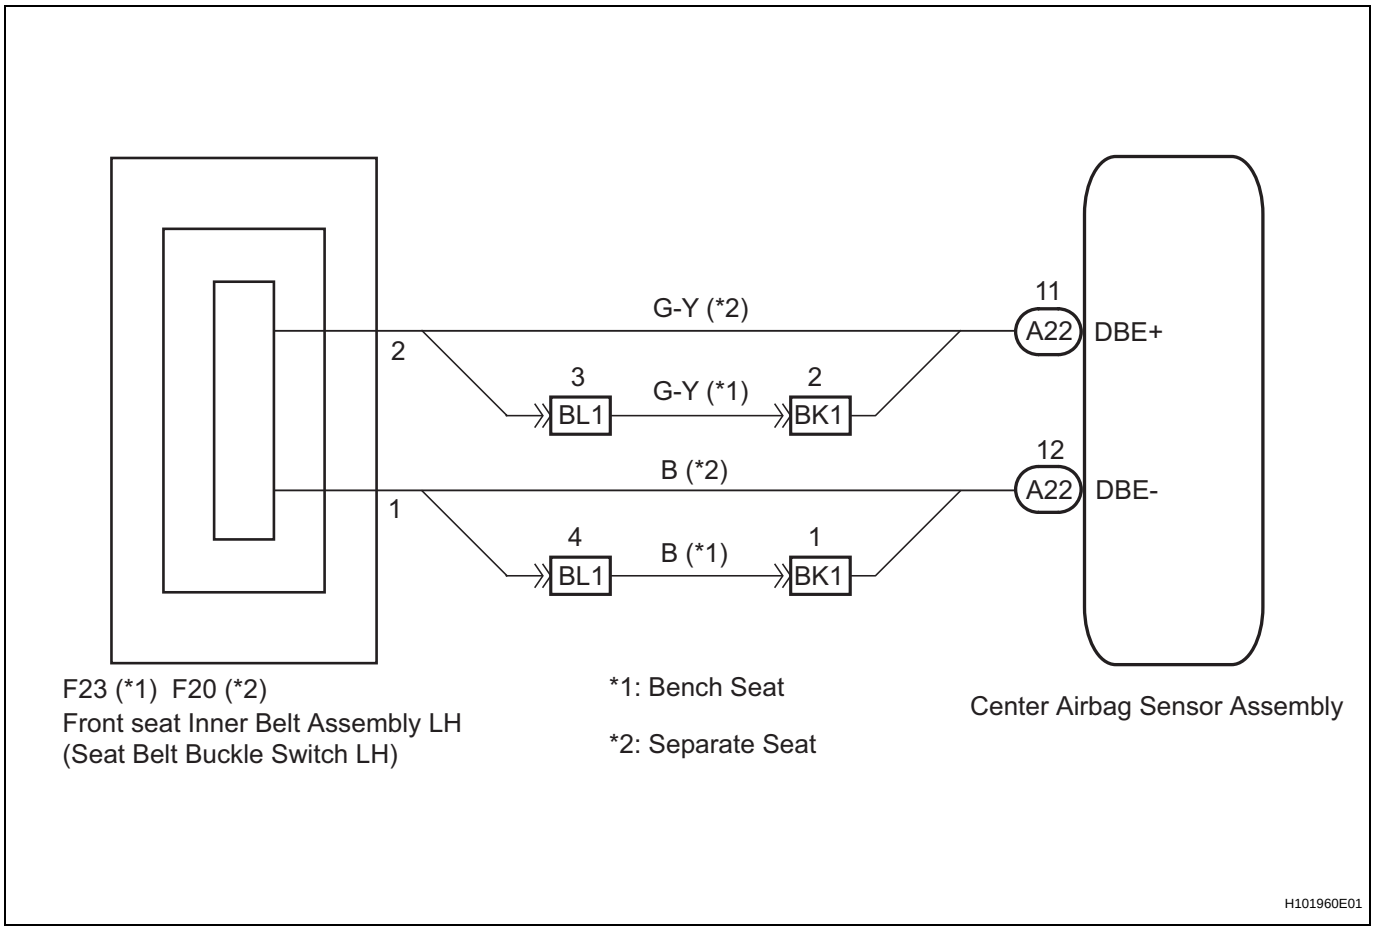
DESCRIPTION

The seat belt buckle switch LH circuit consists of the center airbag sensor assembly and the front seat inner belt assembly LH (seat belt buckle switch LH).
DTC B1655/37 is set when a malfunction is detected in the seat belt buckle switch (driver seat side) circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1655/37	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat belt buckle switch (Driver seat side) circuit for 2 seconds • Front seat inner belt assembly LH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • No. 1 seat wire (*1) • No. 2 seat wire (*1) • Front seat inner belt assembly LH (Seat belt buckle switch LH) • Center airbag sensor assembly

*1: Bench seat

WIRING DIAGRAM

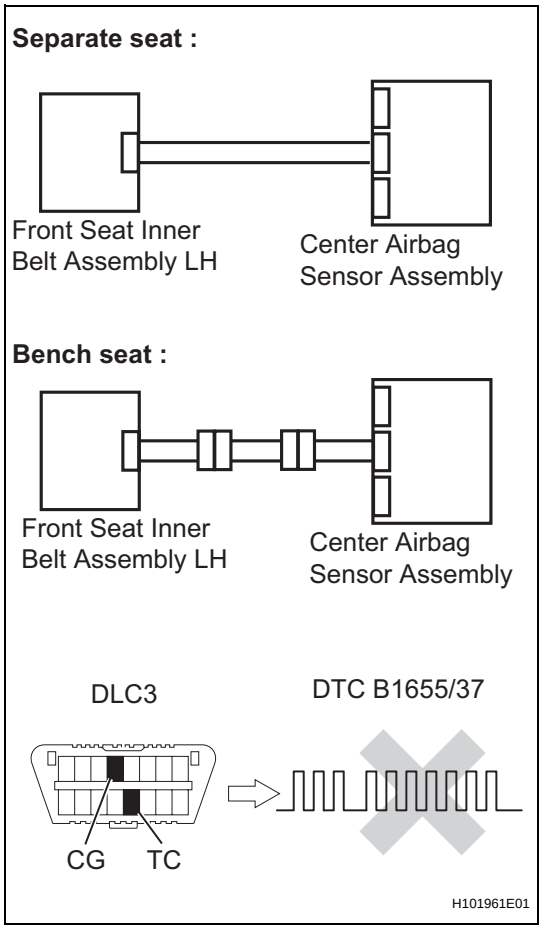


RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC



(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-34).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position and wait for at least 60 seconds.
(e) Check for DTCs (See page RS-34).
OK:
DTC B1655/37 is not output.
HINT:
DTCs other than B1655/37 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front seat inner belt assembly LH.

RS

NG → CONNECT CONNECTORS

OK

3 CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and front seat inner belt assembly LH side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

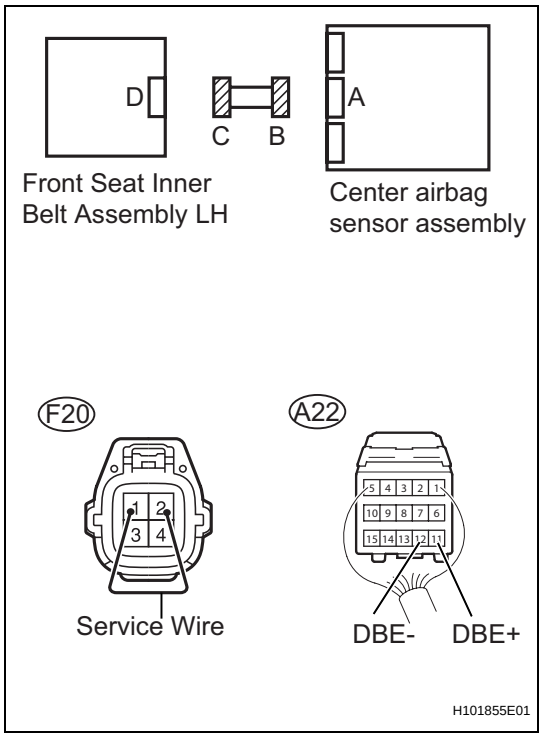
Condition	Proceed to
Normal (separate seat)	A
Normal (bench seat)	B
Abnormal	C

B → Go to step 9

C → REPAIR OR REPLACE WIRE HARNESS

A

4 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR OPEN)



(a) Disconnect the connectors from the center airbag sensor assembly and the front seat inner belt assembly LH.
(b) Using a service wire, connect F20-2 and F20-1 of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(c) Measure the resistance.
Standard resistance

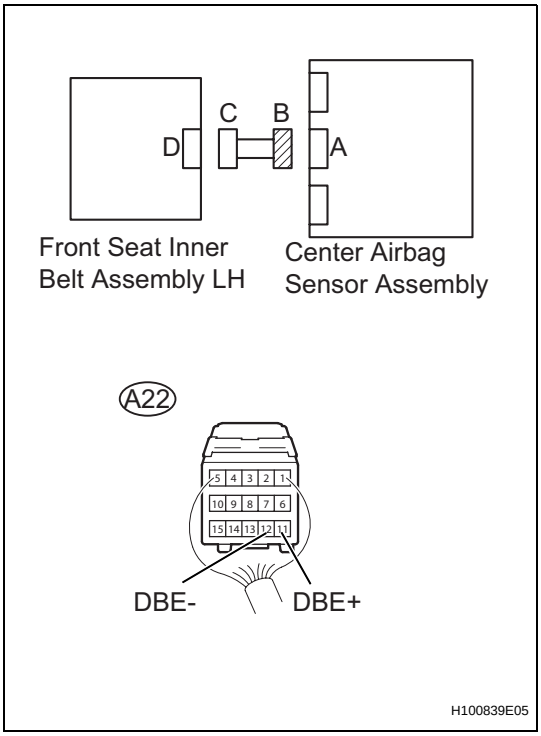
Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - A22-12 (DBE-)	Always	Below 1 Ω

NG → REPAIR OR REPLACE NO. 2 FLOOR WIRE

OK

RS

5 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR SHORT)



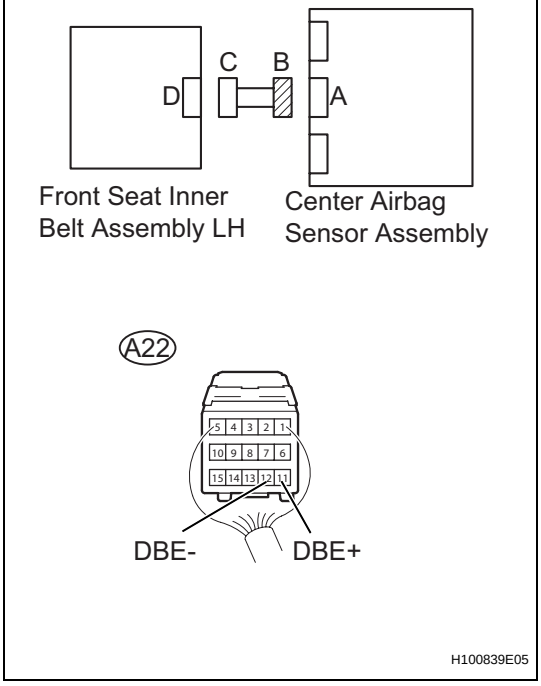
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - A22-12 (DBE-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

6 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

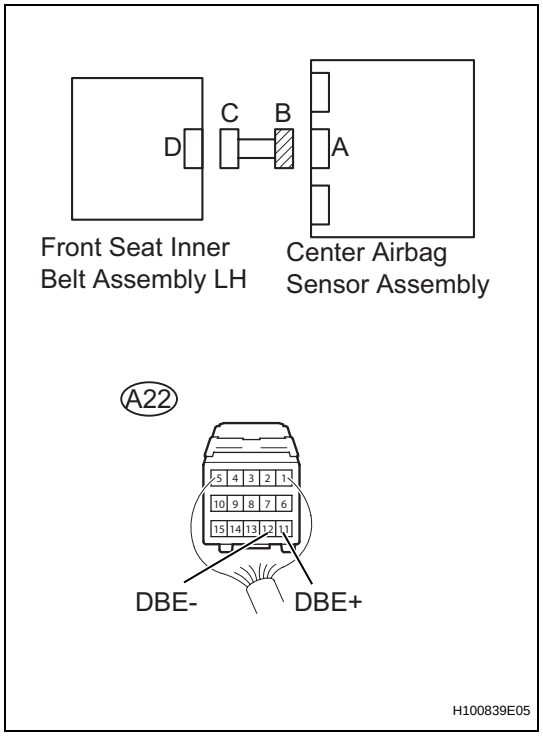
Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - Body ground	Ignition switch ON	Below 1 V
A22-12 (DBE-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

RS

7 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

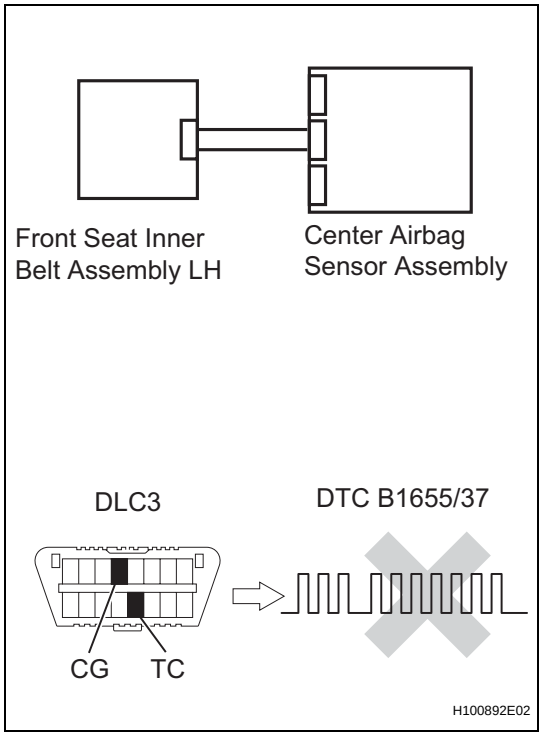
Standard resistance

Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - Body ground	Always	1 MΩ or Higher
A22-12 (DBE-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

8 CHECK FRONT SEAT INNER BELT ASSEMBLY LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the connector to the front seat inner belt assembly LH.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC B1655/37 is not output.

HINT:
DTCs other than B1655/37 may be output at this time, but they are not related to this check.

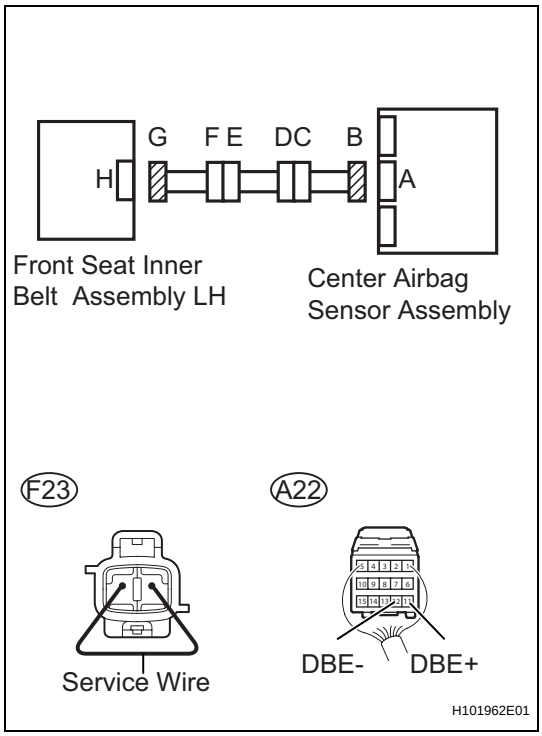
NG → **Go to step 22**

RS

OK

USE SIMULATION METHOD TO CHECK

9	CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR OPEN)



(a) Disconnect the connectors from the center airbag sensor assembly and the seat inner belt assembly LH.
(b) Using a service wire, connect F23-1 and F23-2 of connector G.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(c) Measure the resistance.
Standard resistance

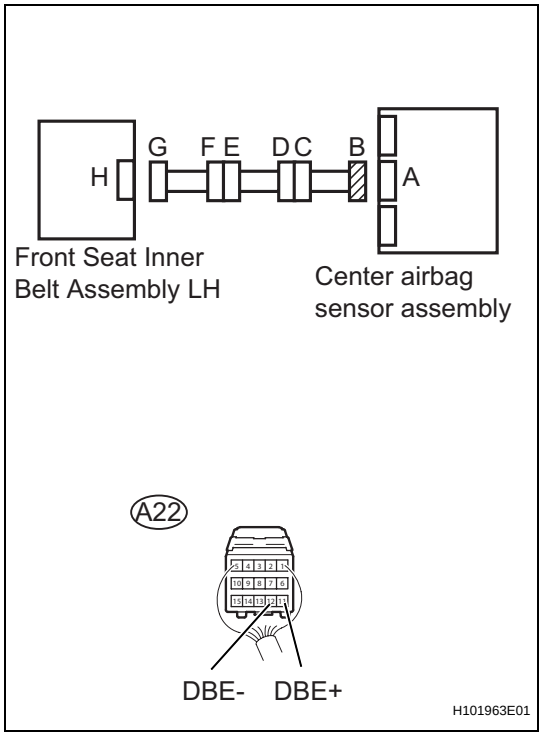
Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - A22-12 (DBE-)	Always	Below 1 Ω

NG → **Go to step 14**

OK

RS

10 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR SHORT)



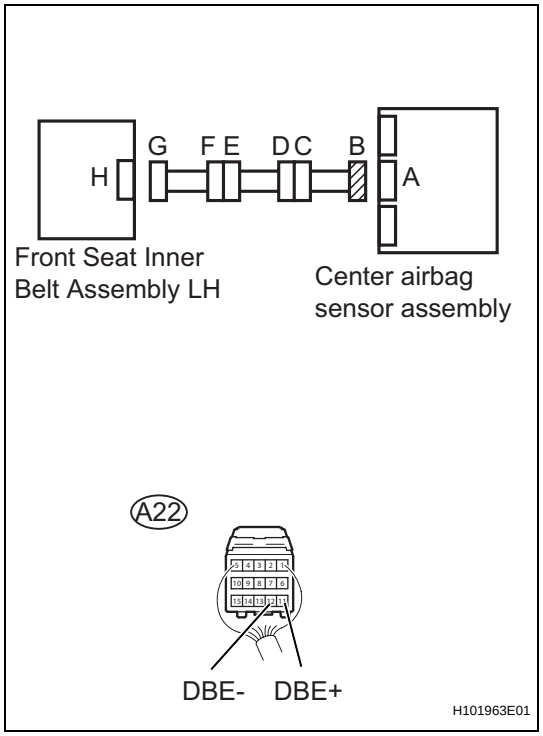
(a) Disconnect the service wire from connector G.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - A22-12 (DBE-)	Always	1 MΩ or Higher

NG → **Go to step 15**

OK

11 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

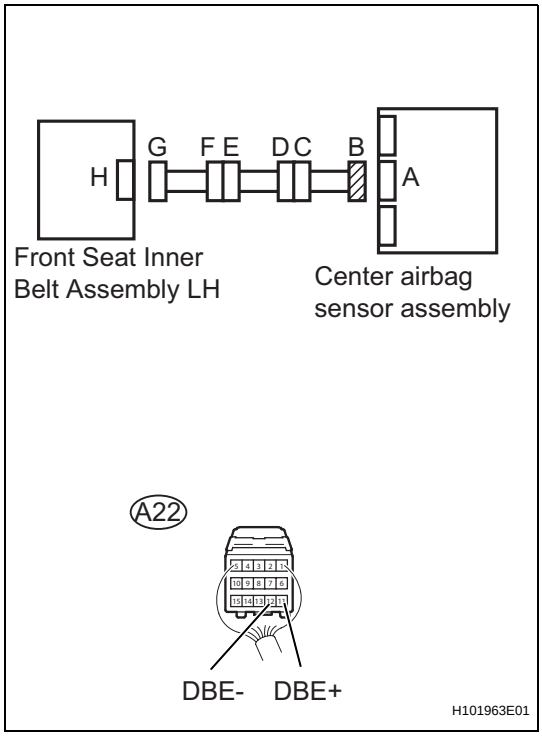
Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - Body ground	Ignition switch ON	Below 1 V
A22-12 (DBE-) - Body ground	Ignition switch ON	Below 1 V

NG → **Go to step 16**

OK

RS

12 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

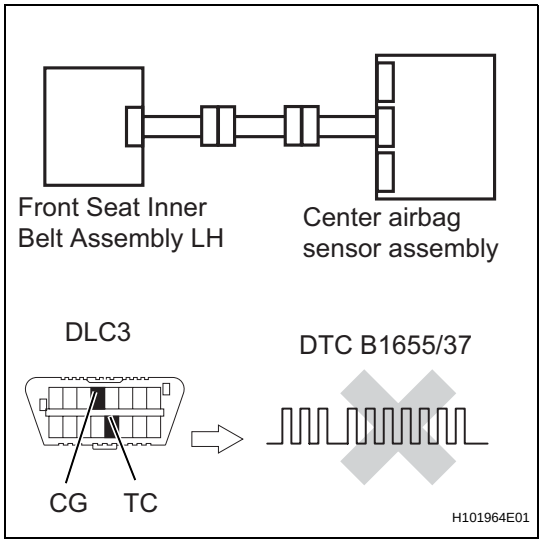
Standard resistance

Tester Connection	Condition	Specified Condition
A22-11 (DBE+) - Body ground	Always	1 MΩ or Higher
A22-12 (DBE-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 17**

OK

13 CHECK FRONT SEAT INNER BELT ASSEMBLY LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the connectors to the front seat inner belt assembly LH.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC B1655/37 is not output.

HINT:
DTCs other than B1653/35 may be output at this time, but they are not related to this check.

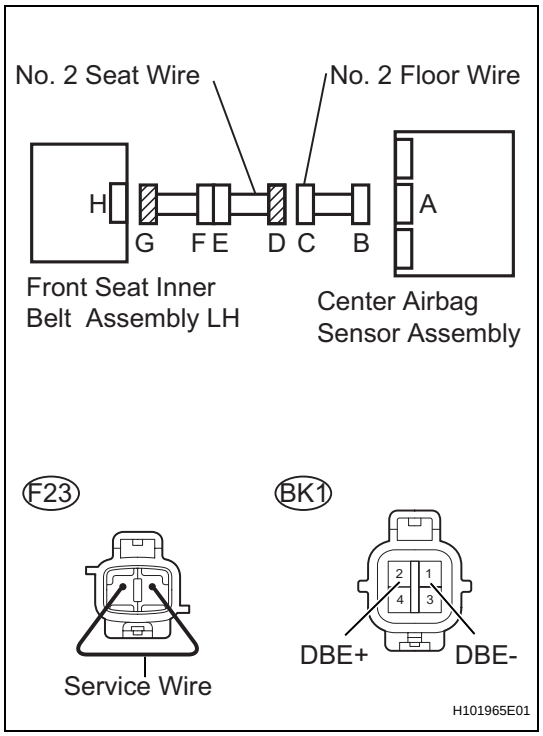
NG → **Go to step 22**

RS

OK

USE SIMULATION METHOD TO CHECK

14 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR OPEN)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.

HINT:

The service wire has already been inserted into connector G.

(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
BK1-2 (DBE+) - BK1-1 (DBE-)	Always	Below 1 Ω

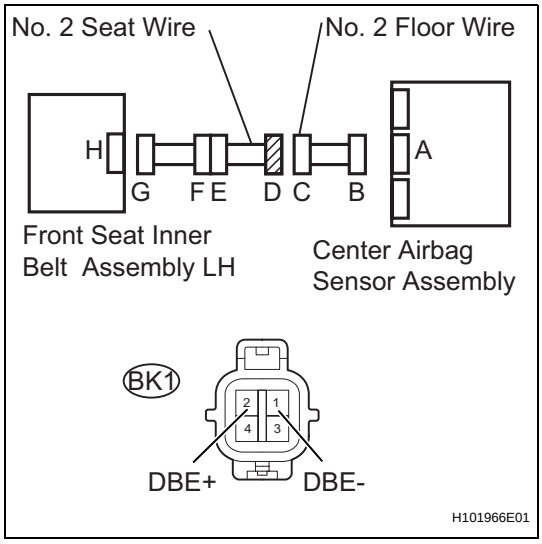
NG → **Go to step 18**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

RS

15 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (FOR SHORT)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(b) Measure the resistance.
Standard resistance

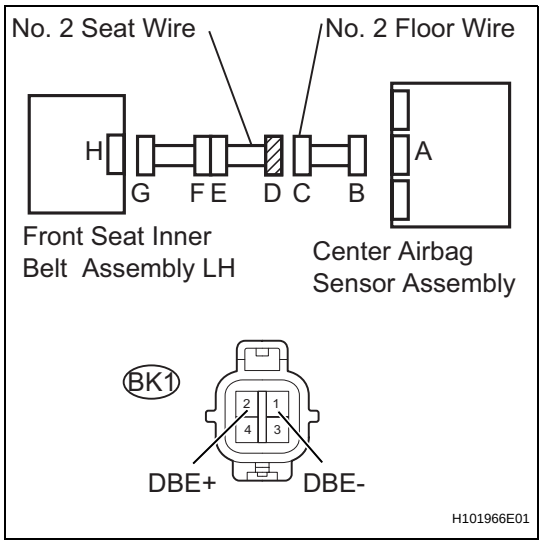
Tester Connection	Condition	Specified Condition
BK1-2 (DBE+) - BK1-1 (DBE-)	Always	1 MΩ or Higher

NG → **Go to step 19**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

16 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
BK1-2 (DBE+) - Body ground	Ignition switch ON	Below 1 V
BK1-1 (DBE-) - Body ground	Ignition switch ON	Below 1 V

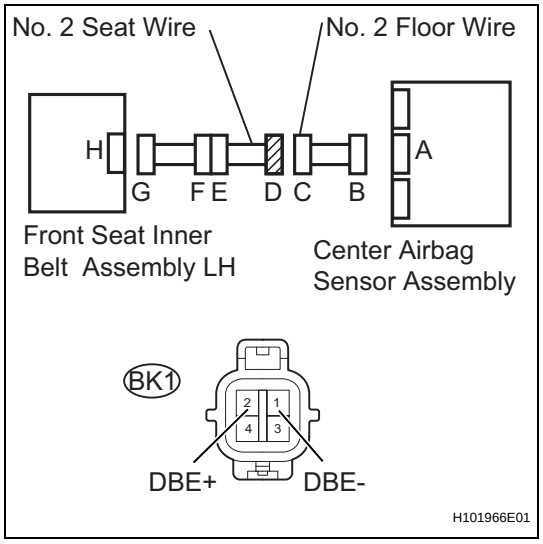
NG → **Go to step 20**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

RS

17 CHECK DRIVER SIDE SEAT BELT BUCKLE SWITCH CIRCUIT (TO GROUND)



(a) Disconnect the No. 2 seat wire connector from the No. 2 floor wire.
(b) Measure the resistance.
Standard resistance

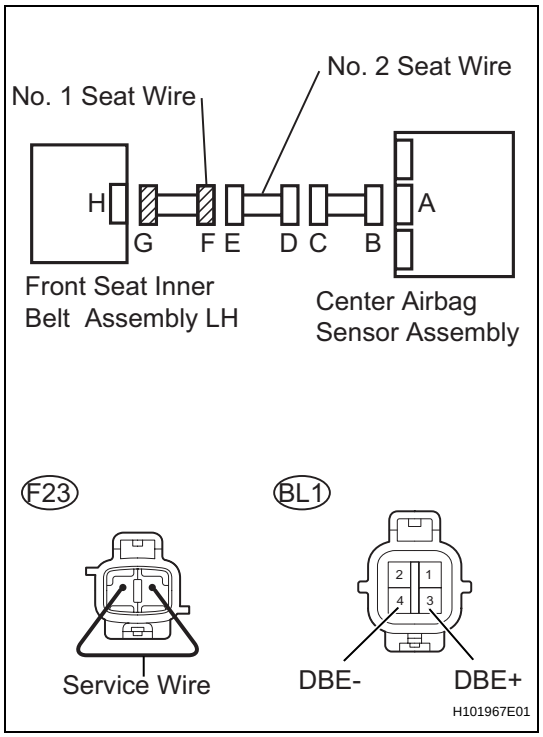
Tester Connection	Condition	Specified Condition
BK1-2 (DBE+) - Body ground	Always	1 MΩ or Higher
BK1-1 (DBE-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 21**

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

18 CHECK NO. 1 SEAT WIRE (FRO OPEN)



(a) Disconnect the No. 2 seat wire connector from the No. 2 seat wire.

HINT:
The service wire has already been inserted into connector G.

(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
BL1-3 (DBE+) - BL1-4 (DBE-)	Always	Below 1 Ω

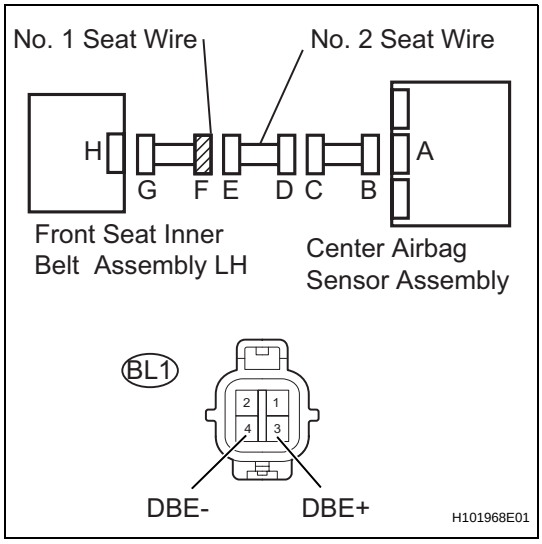
NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

RS

19 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(b) Measure the resistance.
Standard resistance

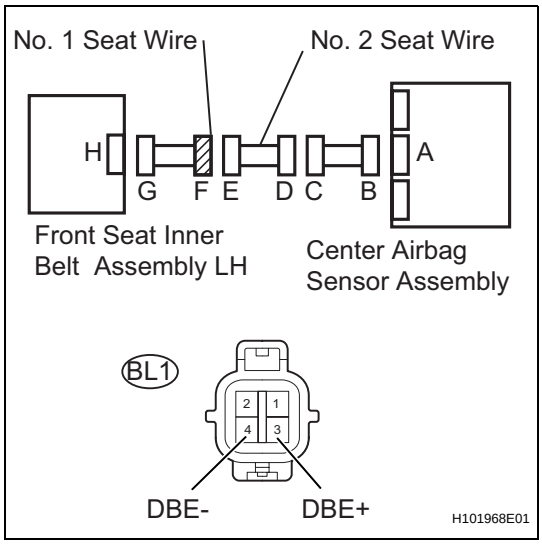
Tester Connection	Condition	Specified Condition
BL1-3 (DBE+) - BL1-4 (DBE-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

20 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
BL1-3 (DBE+) - Body ground	Ignition switch ON	Below 1 V
BL1-4 (DBE-) - Body ground	Ignition switch ON	Below 1 V

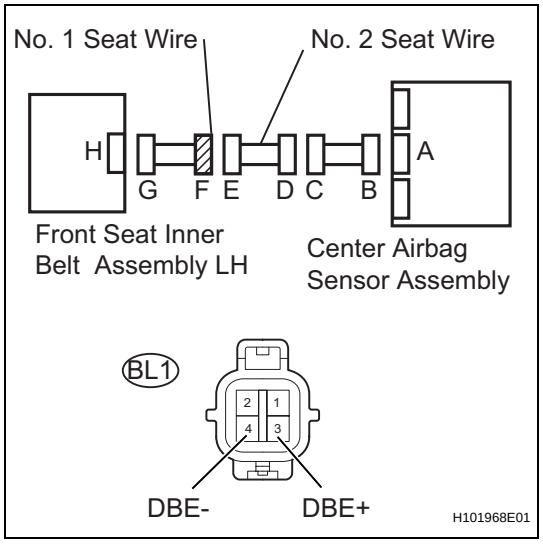
NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

RS

21 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Disconnect the No. 1 seat wire connector from the No. 2 seat wire.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
BL1-3 (DBE+) - Body ground	Always	1 MΩ or Higher
BL1-4 (DBE-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE NO. 2 SEAT WIRE

22 REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

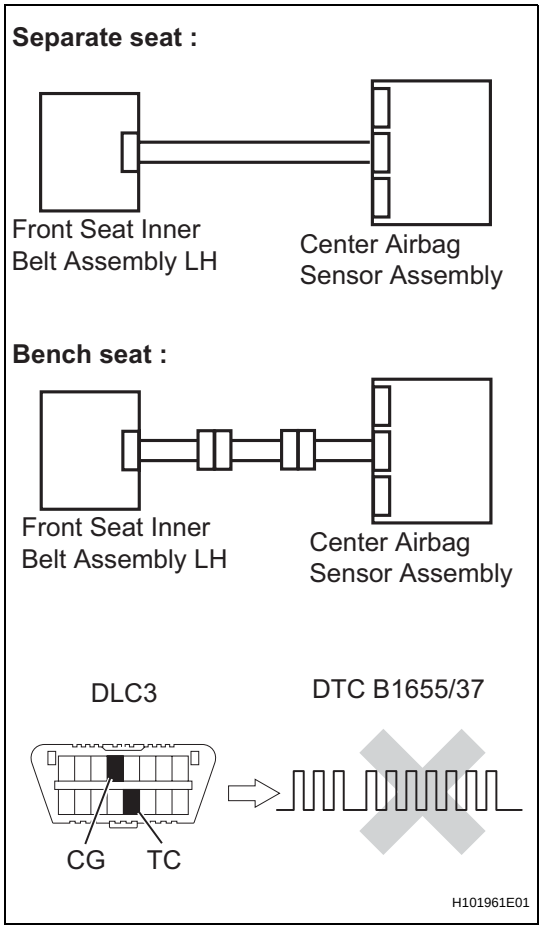
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly LH (See page SB-12 or SB-8).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

RS

23	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(c) Clear any DTCs stored in the memory (See page RS-34).
(d) Turn the ignition switch to the LOCK position.
(e) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(f) Check for DTCs (See page RS-34).

OK:

DTC B1655/37 is not output.

HINT:
DTCs other than B1655/37 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

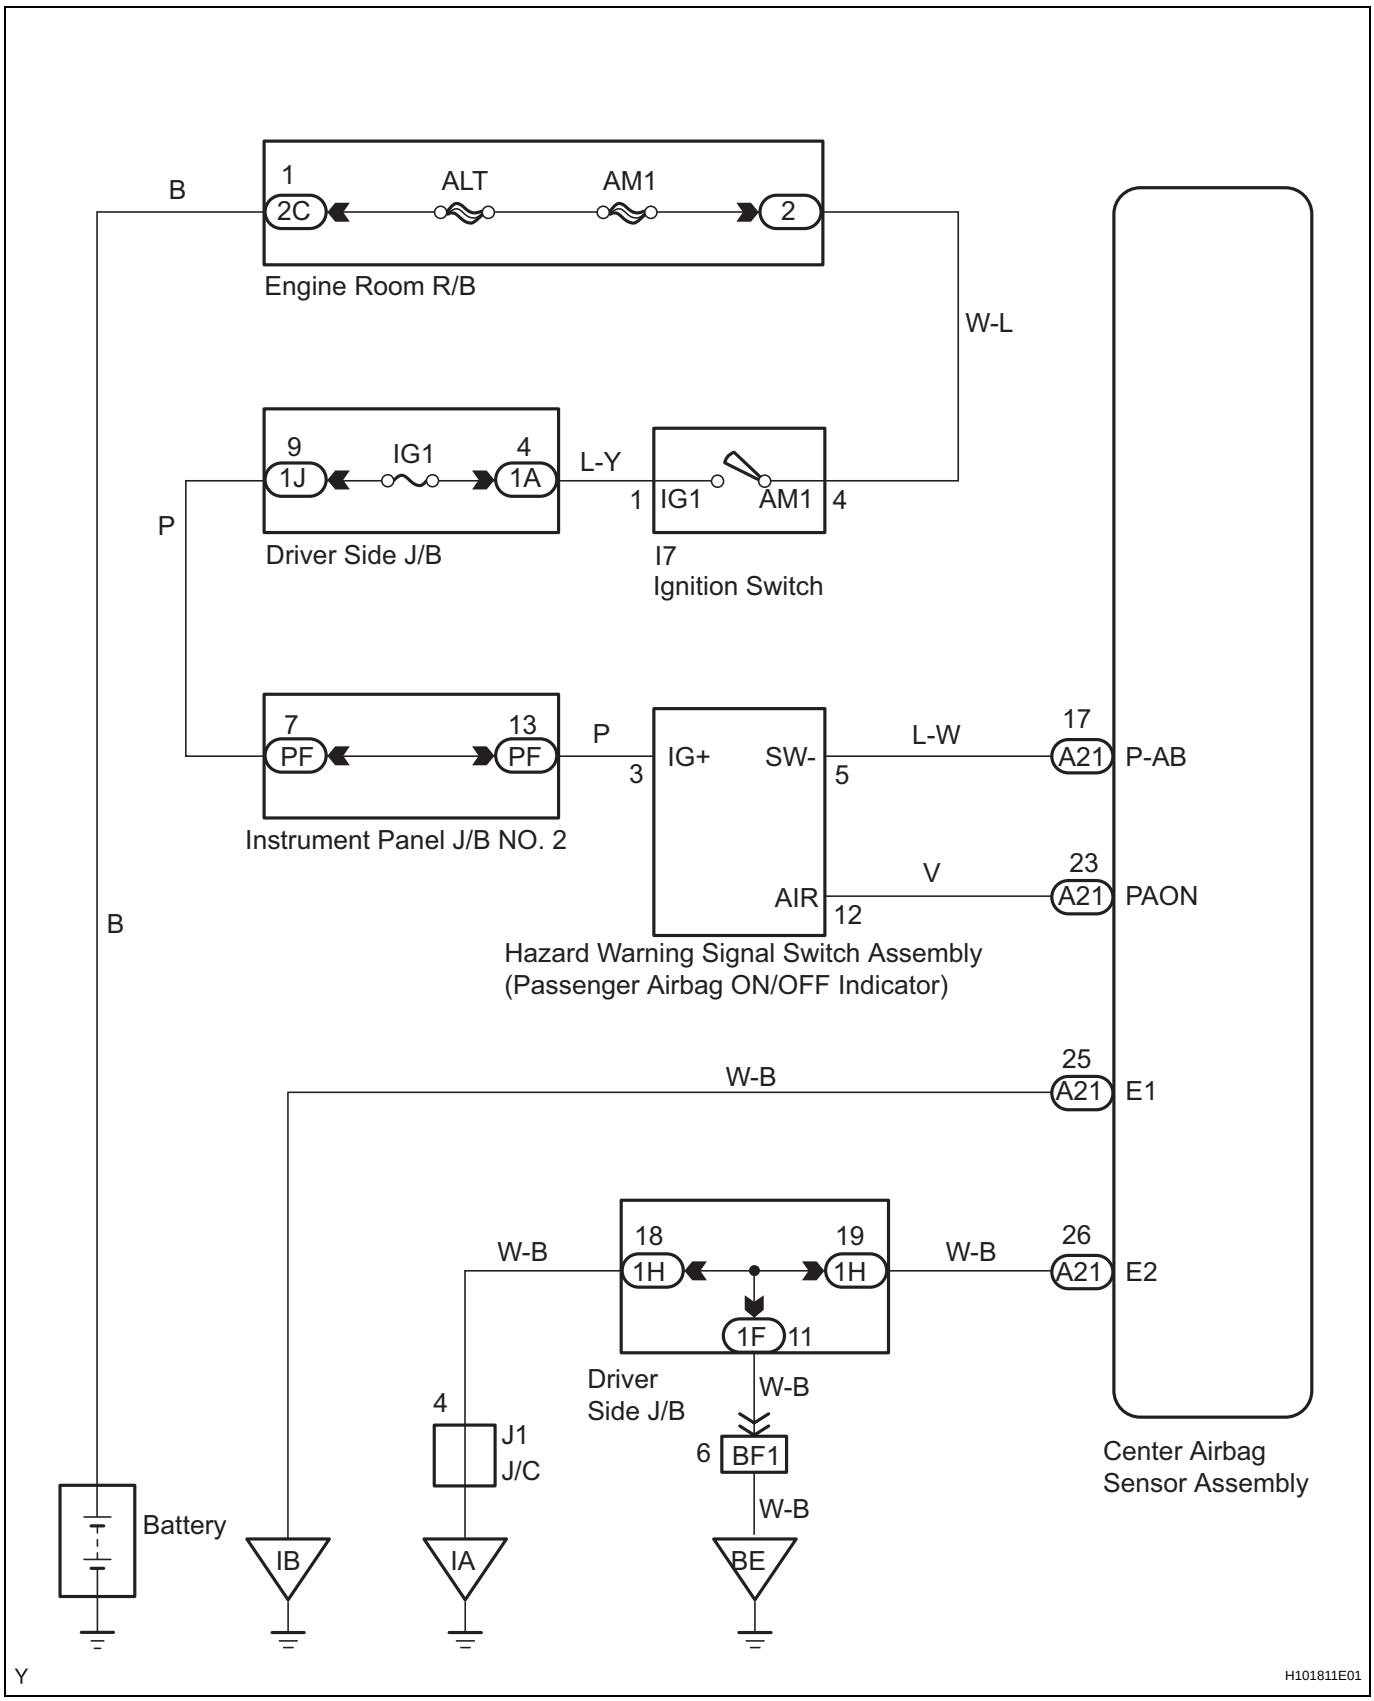
DTC	B1660/43	Passenger Airbag ON / OFF Indicator Circuit Malfunction

DESCRIPTION

The passenger airbag ON/OFF indicator light circuit consists of the center airbag sensor assembly and the passenger seat belt warning light assembly.
This circuit indicates the operation condition of the front passenger airbag assembly, the front seat airbag assembly RH and passenger side seat belt pretensioner.
DTC B1660/43 is set when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1660/43	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds • Passenger seat belt warning lamp assembly malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Hazard warning signal switch assembly (Passenger airbag ON/OFF indicator) • Center airbag sensor assembly

WIRING DIAGRAM

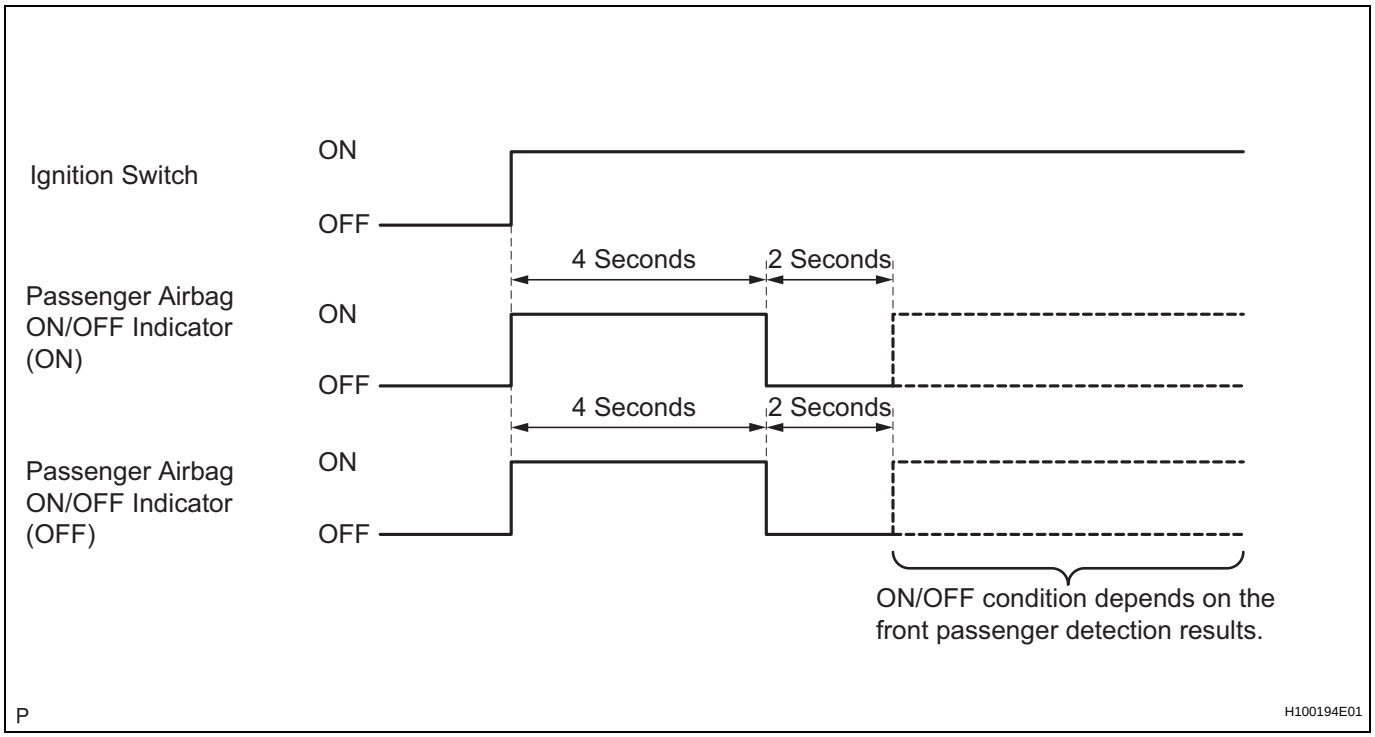


RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) Check the passenger airbag ON/OFF indicator operation.
HINT:
Refer to the normal condition of the passenger airbag ON/OFF indicator (See page RS-484 or RS-362).



Result

ON/OFF Indicator Illumination	Proceed to
Always ON	A
OFF	B

RS

B → Go to step 9

A

2 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the hazard warning signal switch assembly.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and passenger seat belt warning light assembly side) are not damaged (See page IN-34).

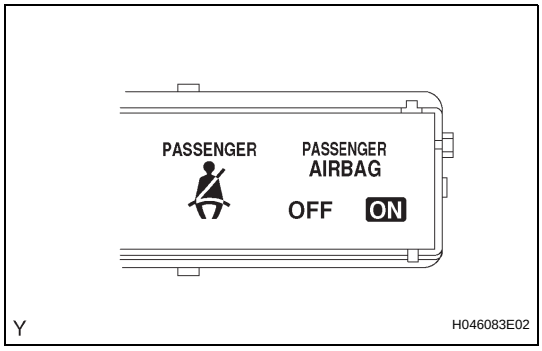
OK:

The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4 CHECK HAZARD WARNING SIGNAL SWITCH ASSEMBLY (PASSENGER AIRBAG ON/OFF INDICATOR)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Check the passenger airbag ON/OFF indicator operation.

OK:

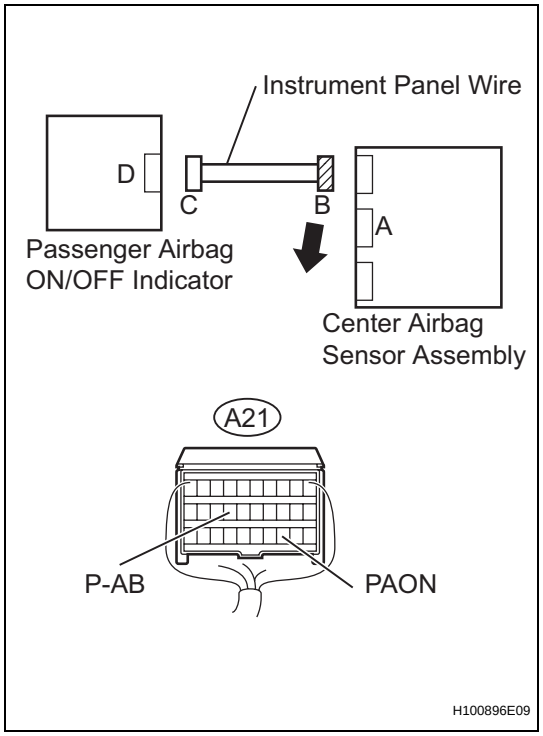
Neither ON nor OFF passenger airbag ON/OFF indicator comes on.

OK → **Go to step 17**

NG

RS

5 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the passenger seat belt warning light assembly.
(d) Measure the resistance.

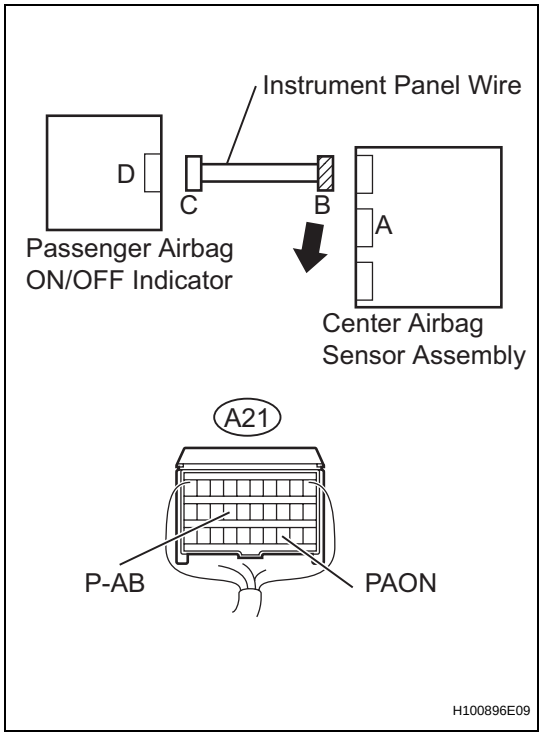
Standard resistance

Tester Connection	Condition	Specified Condition
A21-17 (P-AB) - Body ground	Always	1 MΩ or Higher
A21-23 (PAON) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



(a) Measure the resistance.

Standard resistance

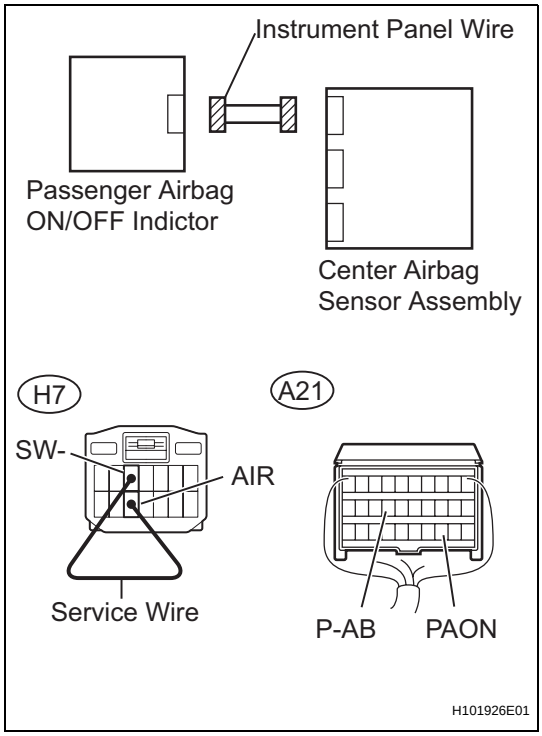
Tester Connection	Condition	Specified Condition
A21-17 (P-AB) - A21-23 (PAON)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

7 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Using a service wire, connect H7-5 (SW-) and H7-12 (AIR) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting.

(b) Measure the resistance.

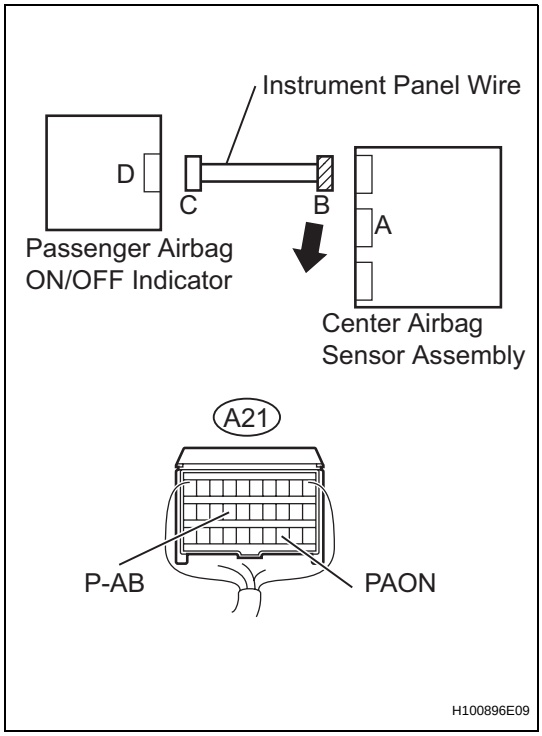
Standard resistance

Tester Connection	Condition	Specified Condition
A21-23 (PAON) - A21-17 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

8 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Disconnect the service wire from connector C.

(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(c) Turn the ignition switch to the ON position.

(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A21-23 (PAON) - Body ground	Ignition switch ON	Below 1 V
A21-17 (P-AB) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

RS

OK

INSPECT HAZARD WARNING SIGNAL SWITCH ASSEMBLY

9	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the hazard warning signal switch assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

10	CHECK CONNECTORS

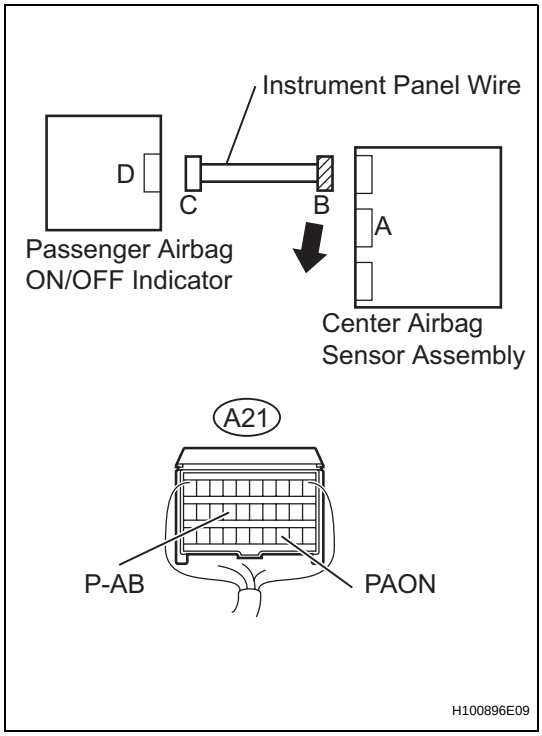
(a) Check that the connectors (on the center airbag sensor assembly side and passenger seat belt warning light assembly side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

11 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



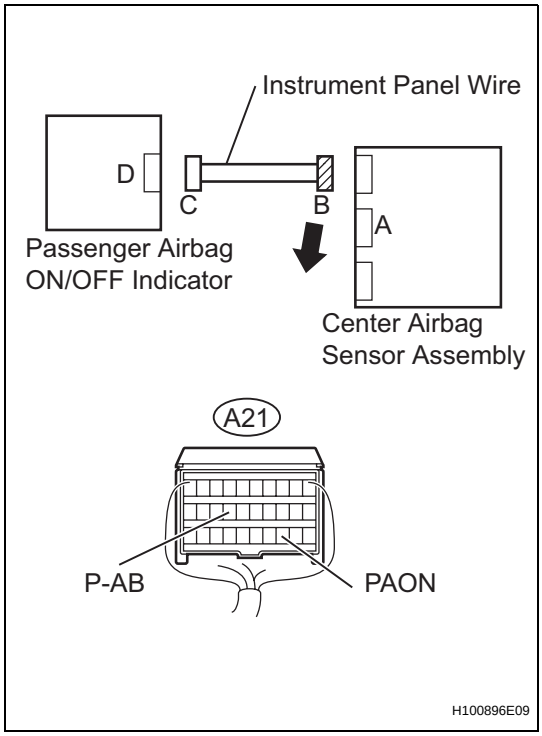
(a) Disconnect the connector from the passenger seat belt warning light assembly.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-17 (P-AB) - Body ground	Always	1 MΩ or Higher
A21-23 (PAON) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

12 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

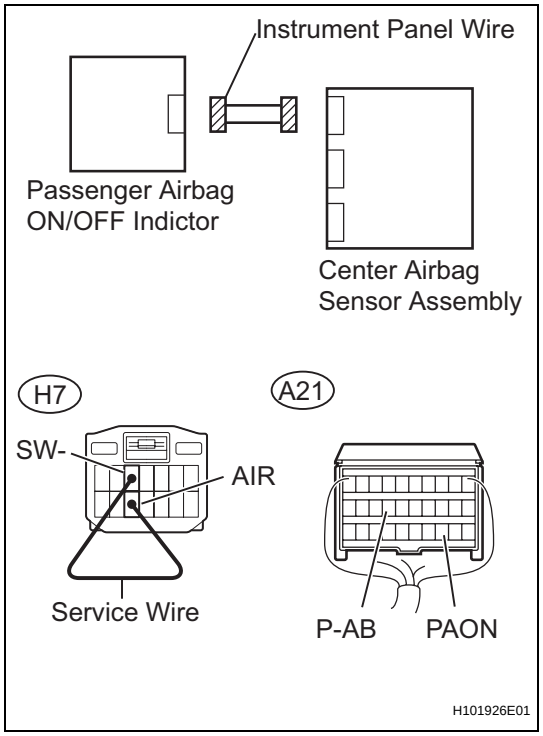
Tester Connection	Condition	Specified Condition
A21-17 (P-AB) - A21-23 (PAON)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

13 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Using a service wire, connect H7-5 (SW-) and H7-12 (AIR) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting.

(b) Measure the resistance.

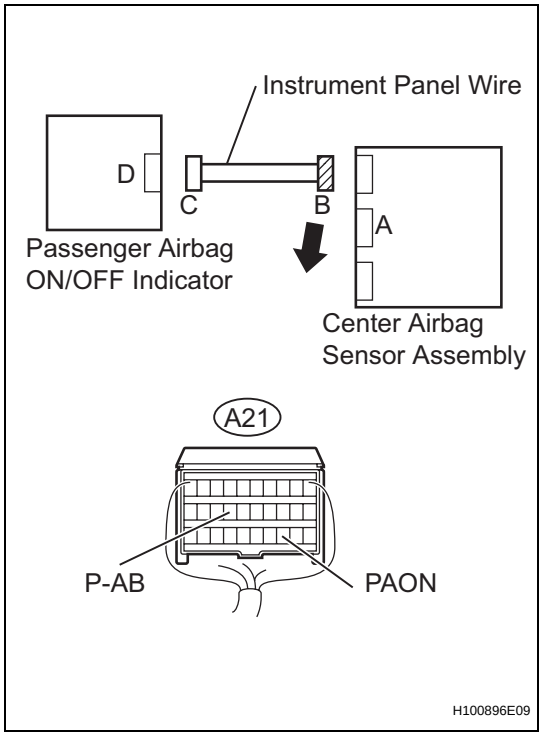
Standard resistance

Tester Connection	Condition	Specified Condition
A21-23 (PAON) - A21-17 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

14 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Disconnect the service wire from connector C.

(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(c) Turn the ignition switch to the ON position.

(d) Measure the voltage.

Standard voltage

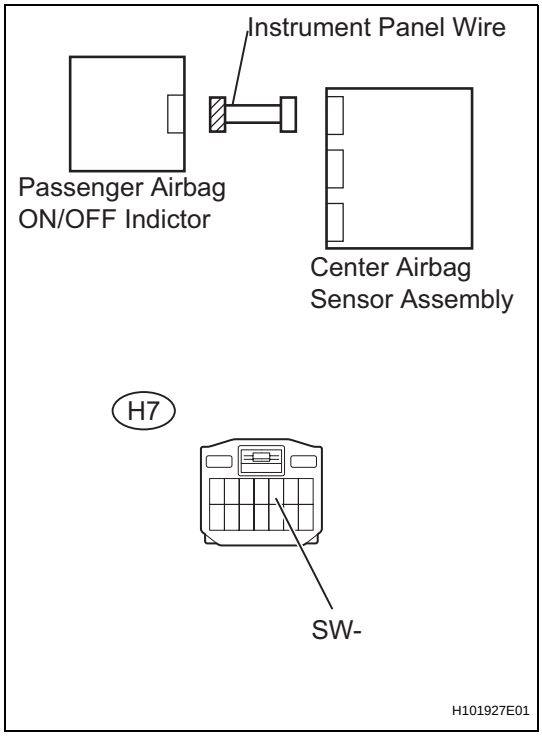
Tester Connection	Condition	Specified Condition
A21-23 (PAON) - Body ground	Ignition switch ON	Below 1 V
A21-17 (P-AB) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

15 CHECK WIRE HARNESS (POWER SOURCE)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

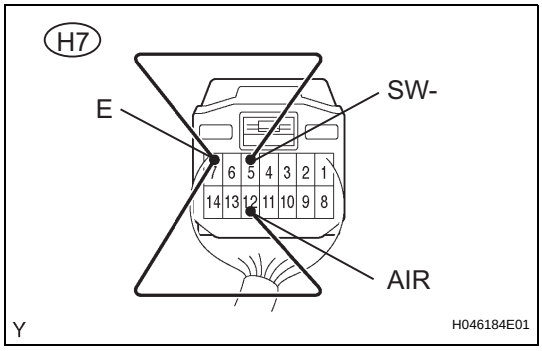
Standard voltage

Tester Connection	Condition	Specified Condition
H7-3 (IG+) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE POWER SOURCE CIRCUIT**

OK

16 CHECK HAZARD WARNING SIGNAL SWITCH ASSEMBLY



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the hazard warning signal switch.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Using a service wire, connect H7-5 (SW-) and H7-7 (E) of hazard warning signal switch assembly connector.
(f) Using a service wire, connect H7-12 (AIR) and H7-7 (E) of hazard warning signal switch assembly connector.
(g) Turn the ignition switch to the ON position.
(h) Check the passenger airbag ON/OFF indicator operation.

OK:

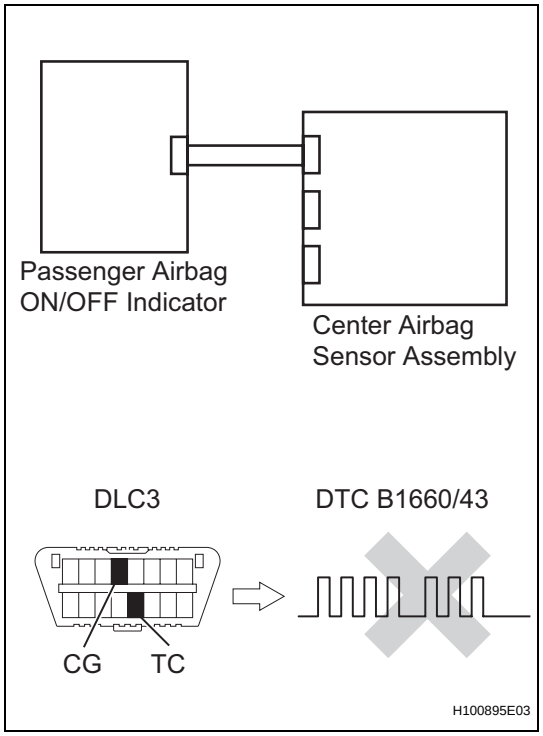
Passenger airbag ON/OFF indicator comes on

NG → **INSPECT HAZARD WARNING SIGNAL SWITCH ASSEMBLY**

OK

RS

17	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Connect the connector to the passenger seat belt warning light assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1660/43 is not output.

HINT:
DTCs other than B1660/43 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

RS

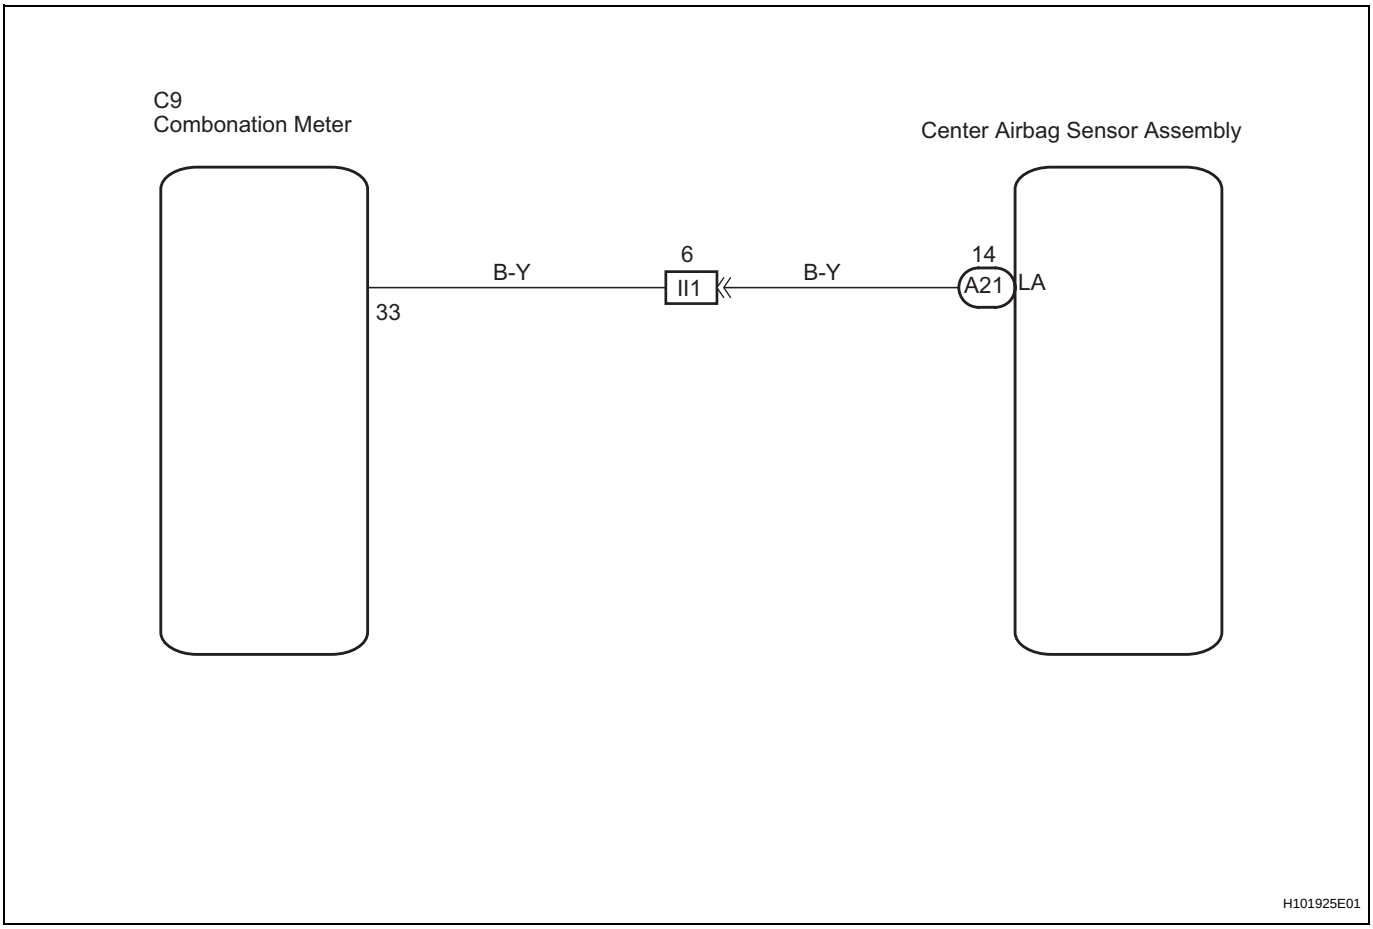
DTC	B1662/45	Indicator Light Circuit Malfunction

DESCRIPTION

The indicator lamp circuit consists of the center airbag sensor assembly and the combination meter.
DTC B1662/45 is set when a malfunction is detected in the indicator light circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1622/45	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the indicator light circuit for 2 seconds • Indicator light circuit malfunction • Center airbag sensor assembly malfunction	• Combination meter • Center airbag sensor assembly • Instrument panel wire

WIRING DIAGRAM

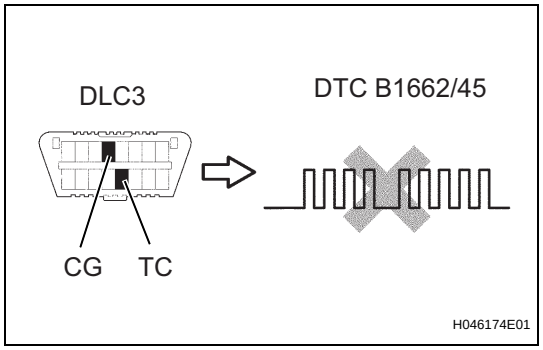


RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat outer belt assembly LH.

(g) Disconnect the connector from the front seat outer belt assembly RH.
HINT:
Skip steps (f) to (i) if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the front seat airbag assembly LH.
(i) Disconnect the connector from the front seat airbag assembly RH.
(j) Disconnect the connector from the curtain shield airbag assembly LH.
(k) Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC



(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-34).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-34).
OK:
DTC B1662/45 is not output.
HINT:
DTCs other than B1662/45 may be output at this time, but they are not related to this check.

OK → **OTHERS USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the combination meter assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

3	CHECK CONNECTORS

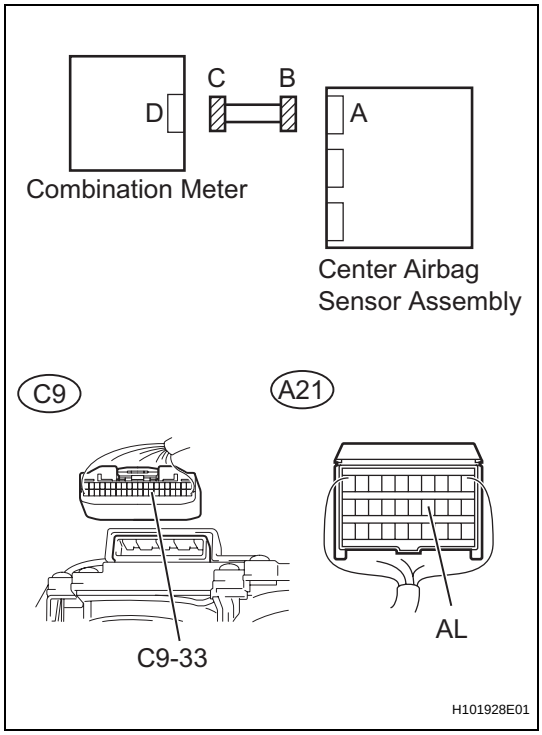
(a) Check that the connectors (on the center airbag sensor assembly side and combination meter side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

RS

OK

4 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



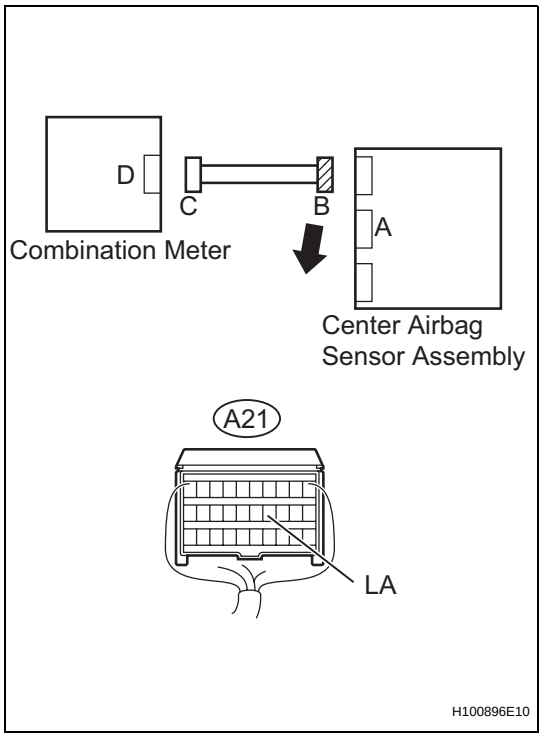
(a) Disconnect the connectors from the center airbag sensor assembly and the combination meter.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-14 (LA) - C9-33	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

5 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-14 (LA) - Body ground	Always	1 MΩ or Higher

DTC	B1800/51	Short in Driver Side Squib Circuit

DTC	B1801/51	Open in Driver Side Squib Circuit

DTC	B1802/51	Short to GND in Driver Side Squib Circuit

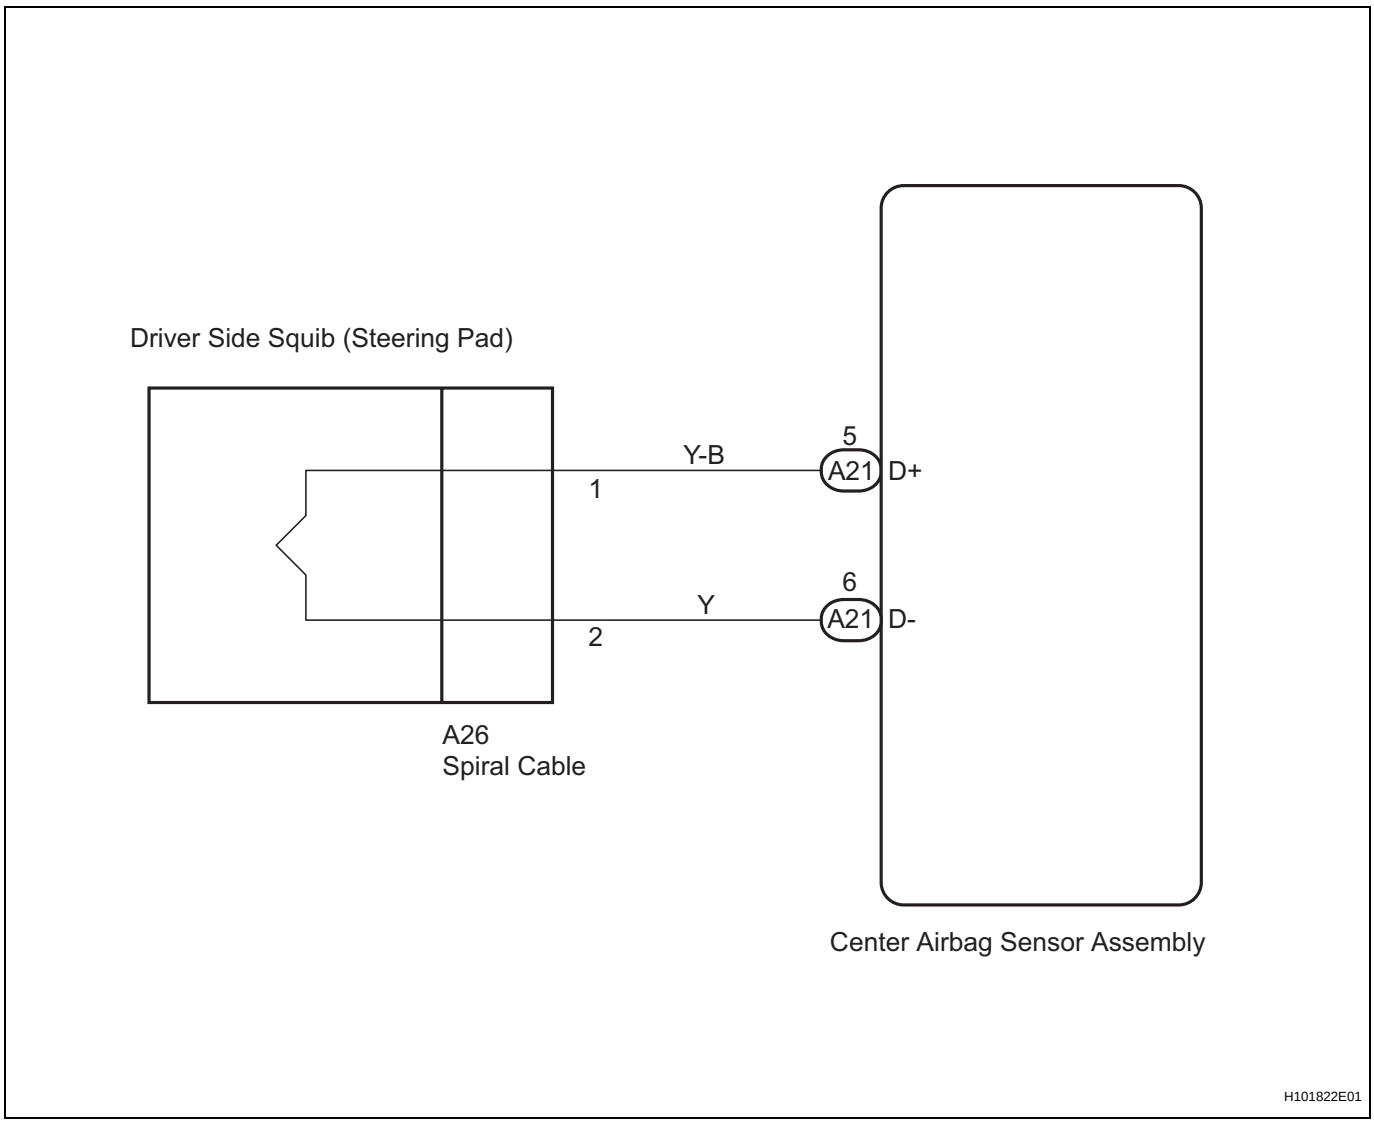
DTC	B1803/51	Short to B+ in Driver Side Squib Circuit

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.
The circuit signals the SRS to deploy when deployment conditions are met.
These DTCs are set when a malfunction is detected in the driver side squib circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1800/51	• The center airbag sensor assembly receives a line short circuit signal in the driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	• The center airbag sensor assembly receives a line short circuit signal in the driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1802/51	• The center airbag sensor assembly receives a line short circuit to ground signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	• The center airbag sensor assembly receives a line short circuit to B+ signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.
(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).

Result

Result	Proceed to
DTC B1800 is output.	A
DTC B1801 is output.	B
DTC B1802 is output.	C
DTC B1803 is output.	D

(2) If not using the intelligent tester (read the 2-digit DTCs):
Check for DTCs (See page RS-34).

Result

Result	Proceed to
DTC 51 is output.	E

B → Go to step 7

C → Go to step 11

D → Go to step 15

E → Go to step 21

A

2	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE

OK

3	CHECK CONNECTION OF CONNECTORS

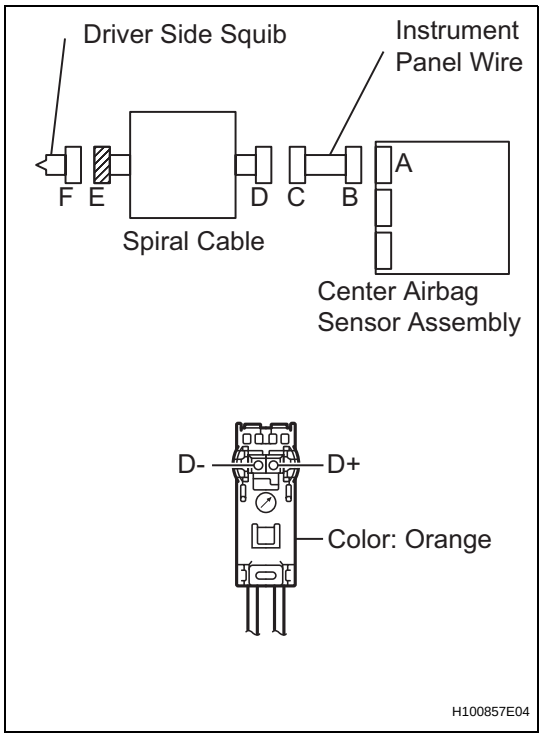
(a) Check that the connectors are properly connected to the center airbag sensor assembly and the spiral cable.
OK:
The connectors are properly connected.

RS

NG → CONNECT CONNECTORS

OK

4 CHECK SPIRAL CABLE (FOR SHORT)



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Release the activation prevention mechanism built into connector D (See page RS-28).
(c) Measure the resistance.

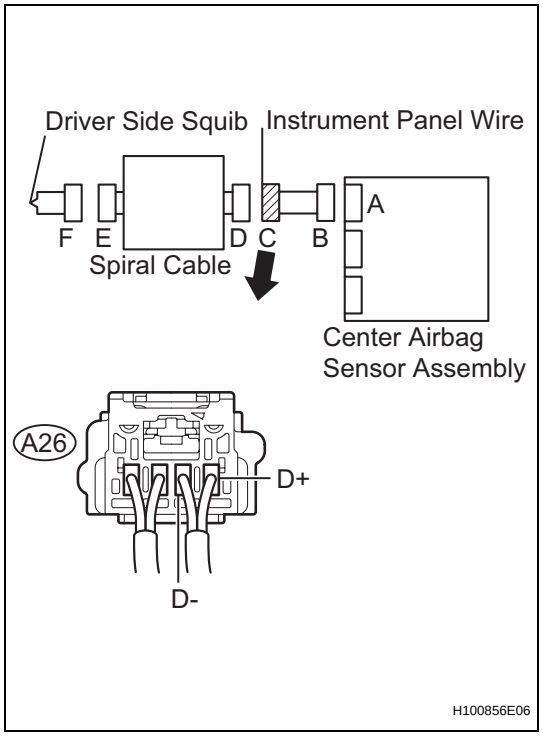
Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or Higher

NG → REPLACE SPIRAL CABLE

OK

5 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



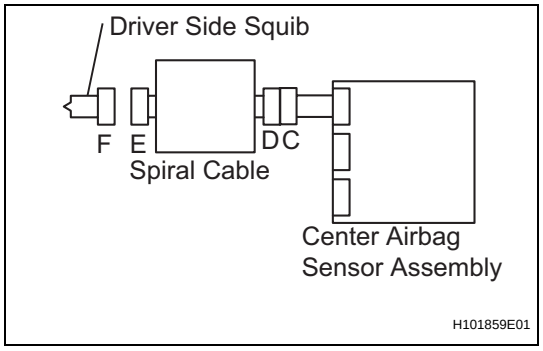
(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Release the activation prevention mechanism built into connector B (See page RS-28).
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A26-1 (D+) - A26-2 (D-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the instrument panel wire connectors to the center airbag sensor assembly and spiral cable.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).
OK:
DTC B1800 is not output.

HINT:
DTCs other than B1800 may be output at this time, but they are not related to this check.

OK → **Go to step 20**

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

RS

7	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

OK → **Go to step 19**

NG

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

RS

15 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK

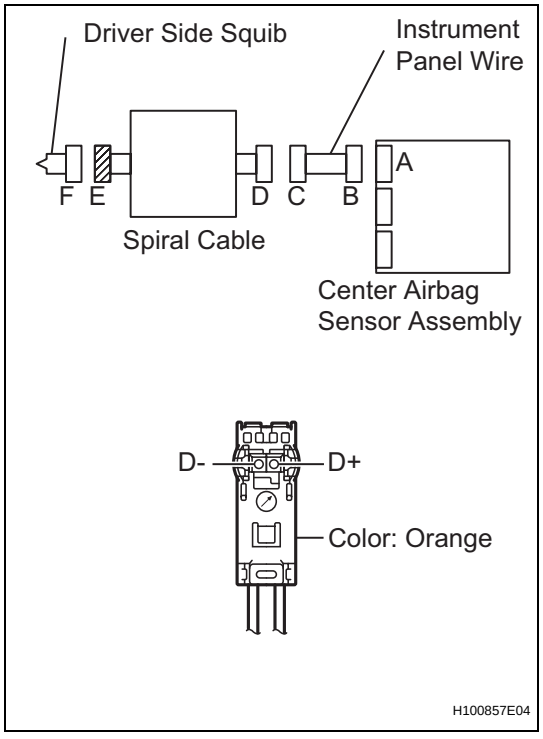
16 CHECK CONNECTION OF CONNECTORS

(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

17 CHECK SPIRAL CABLE (TO B+)



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage
Standard voltage

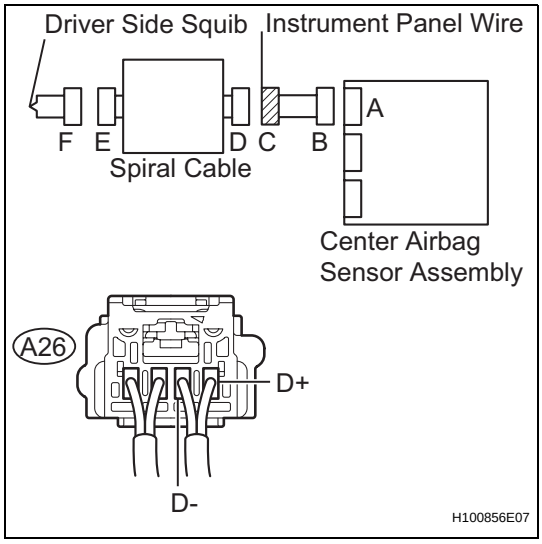
Tester Connection	Condition	Specified Condition
D+ - Body ground	Ignition switch ON	Below 1 V
D- - Body ground	Ignition switch ON	Below 1 V

NG → **REPLACE SPIRAL CABLE**

OK

RS

18 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.

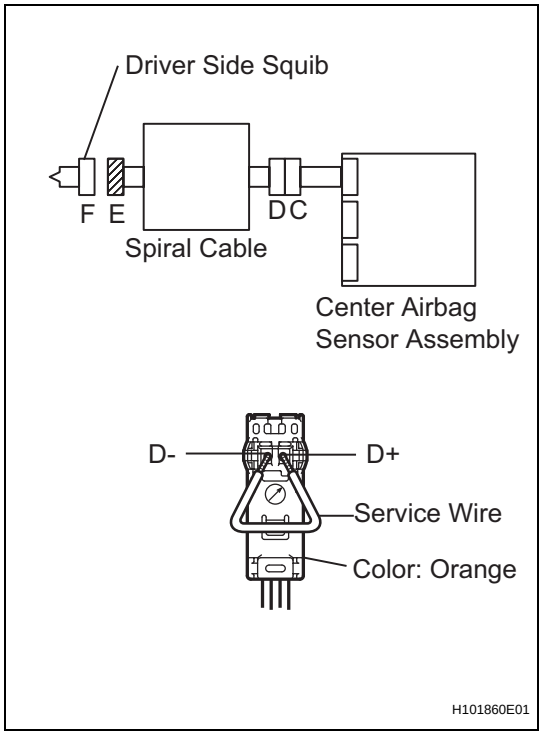
Standard voltage

Tester Connection	Condition	Specified Condition
A26-1 (D+) - Body ground	Ignition switch ON	Below 1 V
A26-2 (D-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 18, begin from (a). If continuing from any other step, begin from (c).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the instrument panel wire connectors to the center airbag sensor assembly.
(d) Using a service wire, connect D+ and D- of connector E.

NOTICE:

- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTCs B1801, B1802 and B1803 are not output.

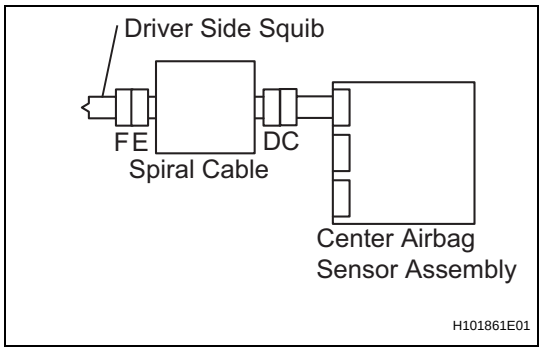
RS

HINT:
DTCs other than B1801, B1802 or B1803 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

20	REPLACE STEERING PAD (DRIVE SIDE SQUIB)



HINT:
If continuing from step 19, begin from (c). If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector E.
(d) Connect the connectors to the steering pad.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:
DTCs B1800, B1801, B1802 and B1803 are not output.

HINT:
DTCs other than B1800, B1801, B1802 or B1803 may be output at this time, but they are not related to this check.

NG → **REPLACE STEERING PAD**

OK

OTHERS USE SIMULATION METHOD TO CHECK

21	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

RS

NG → REPLACE SPIRAL CABLE

OK

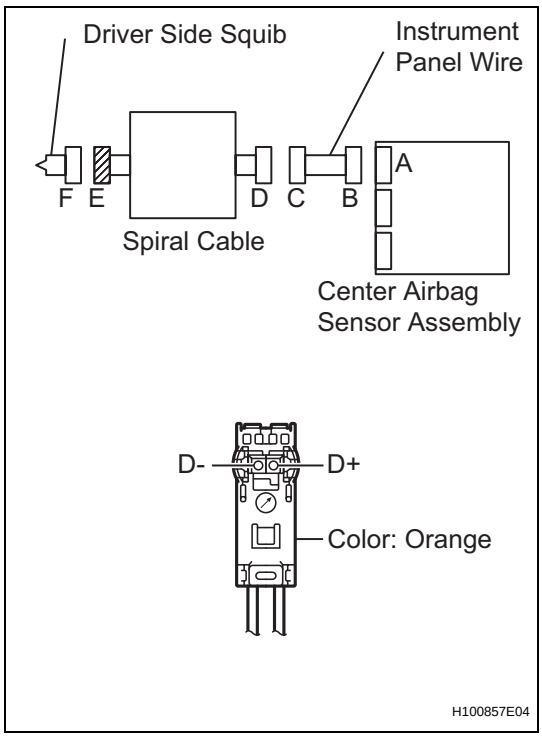
22 CHECK CONNECTORS

(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS

OK

23 CHECK SPIRAL CABLE



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D+ - Body ground	Ignition switch ON	Below 1 V
D- - Body ground	Ignition switch ON	Below 1 V

(e) Turn the ignition switch to the LOCK position.
(f) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(g) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	Below 1 Ω
D+ - Body ground	Always	1 MΩ or Higher
D- - Body ground	Always	1 MΩ or Higher

(h) Release the activation prevention mechanism built into connector D (See page RS-28).
(i) Measure the resistance.
Standard resistance

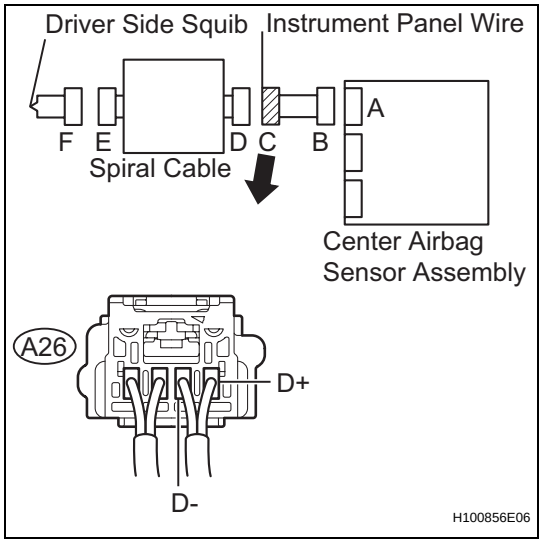
Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or Higher

NG → REPLACE SPIRAL CABLE

OK

RS

24 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A26-1 (D+) - Body ground	Ignition switch ON	Below 1 V
A26-2 (D-) - Body ground	Ignition switch ON	Below 1 V

(f) Turn the ignition switch to the LOCK position.
(g) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(h) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-1 (D+) - A26-2 (D-)	Always	Below 1 Ω
A26-1 (D+) - Body ground	Always	1 MΩ or Higher
A26-2 (D-) - Body ground	Always	1 MΩ or Higher

(i) Release the activation prevention mechanism built into connector B (See page RS-28).
(j) Measure the resistance.

Standard resistance

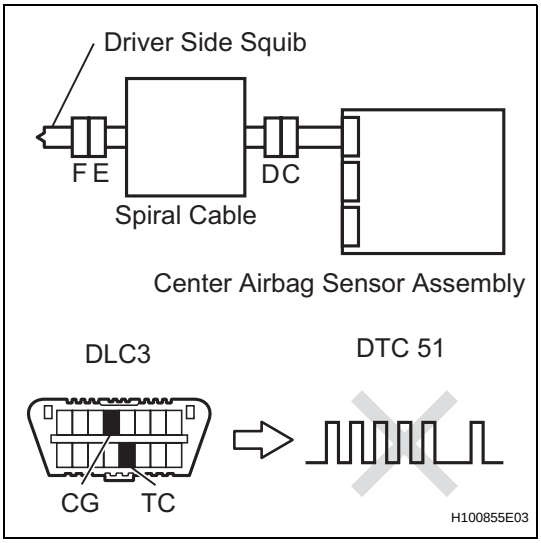
Tester Connection	Condition	Specified Condition
A26-1 (D+) - A26-2 (D-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

25	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Replace the steering pad (See page RS-557).

HINT:

Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the instrument panel wire to the airbag sensor assembly center and spiral cable.

(c) Connect the connectors to the center airbag sensor assembly.

(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(e) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(f) Clear any DTCs stored in the memory (See page RS-34).

(g) Turn the ignition switch to the LOCK position.

(h) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(i) Check for DTCs (See page RS-34).

OK:

DTC 51 is not output.

HINT:

DTCs other than 51 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

DTC	B1805/52	Short in Front Passenger Side Squib Circuit

DTC	B1806/52	Open in Front Passenger Side Squib Circuit

DTC	B1807/52	Short to GND in Front Passenger Side Squib Circuit

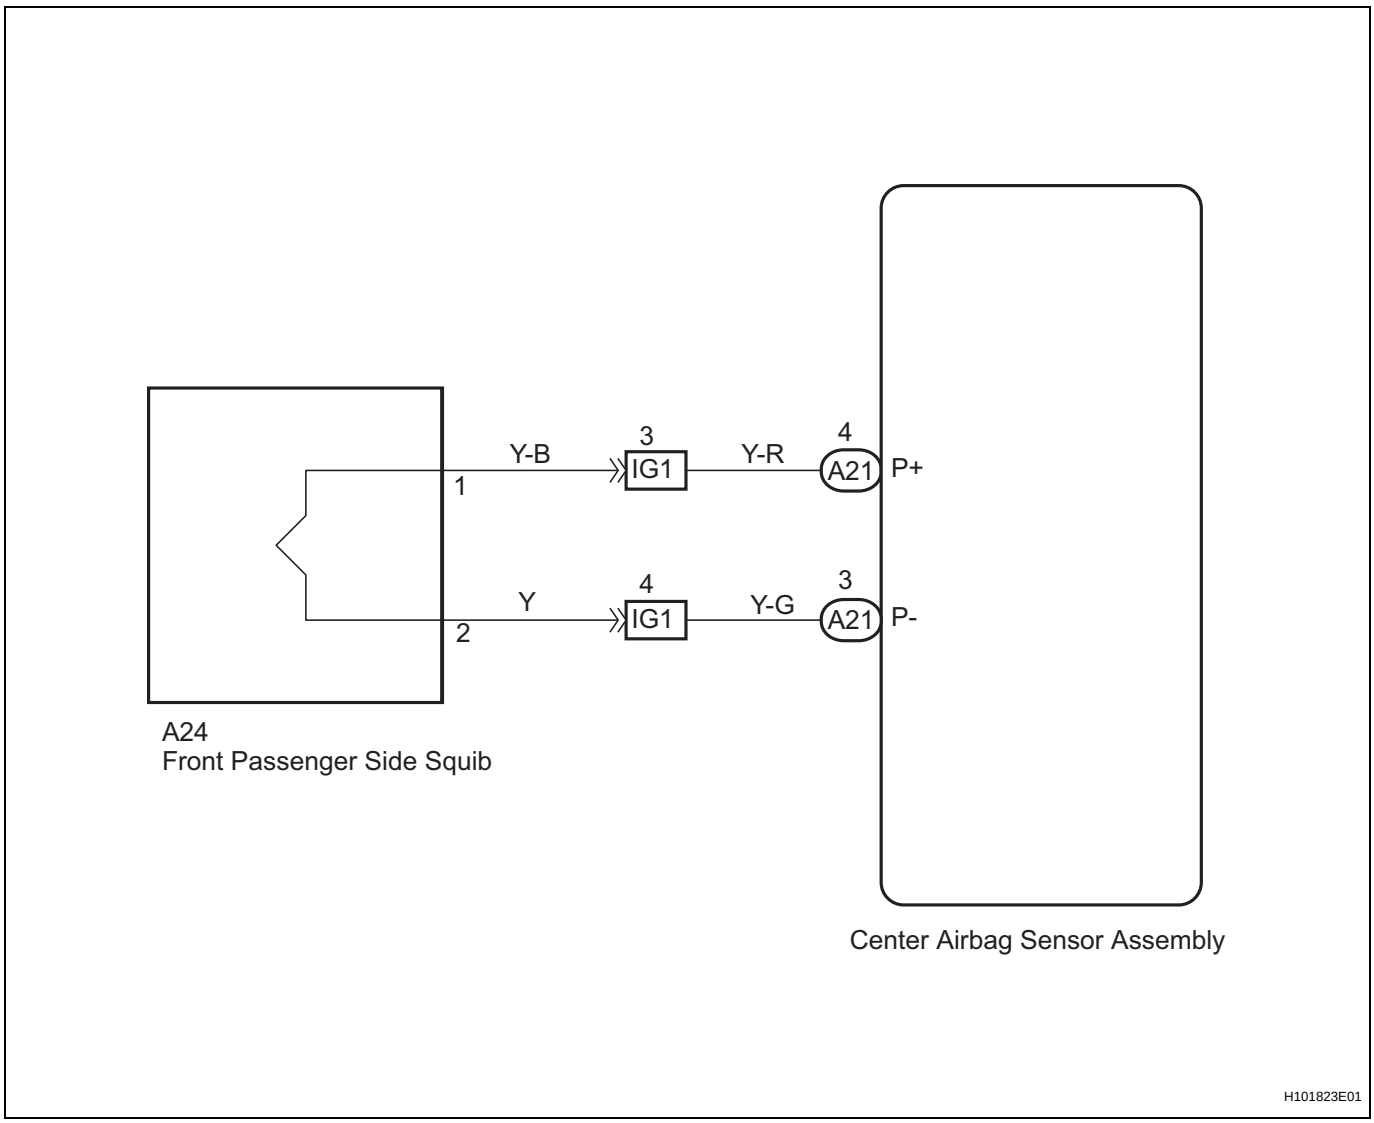
DTC	B1808/52	Short to B+ in Front Passenger Side Squib Circuit

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1805/52	• The center airbag sensor assembly receives a line short circuit in the front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.
(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC B1805 is output.	A
DTC B1806 is output.	B
DTC B1807 is output.	C
DTC B1808 is output.	D

(2) If not using the intelligent tester (read the 2-digit DTCs): Check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC 52 is output.	E

B → Go to step 7
C → Go to step 11
D → Go to step 15
E → Go to step 21

A

2	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK

RS

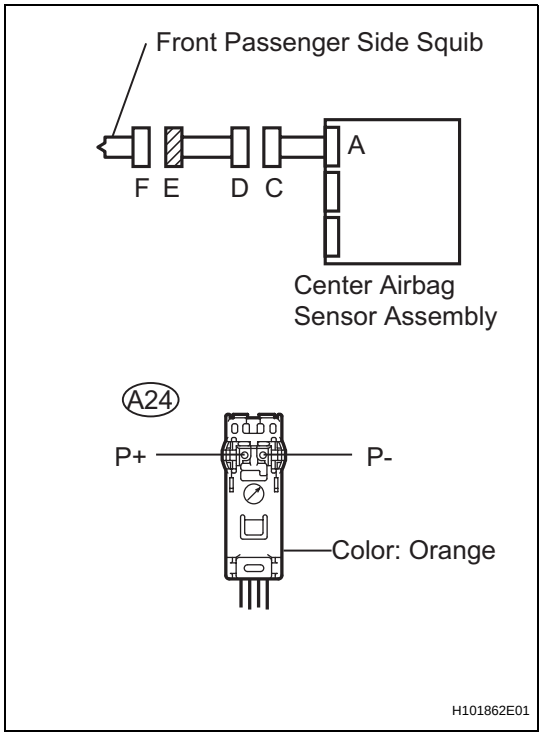
3	CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

4	CHECK INSTRUMENT PANEL WIRE ASSEMBLY (FOR SHORT)



(a) Disconnect the instrument panel wire assembly connectors from the instrument panel wire and front passenger airbag assembly.
(b) Release the activation prevention mechanism built into connector D (See page RS-28).
(c) Measure the resistance.
Standard resistance

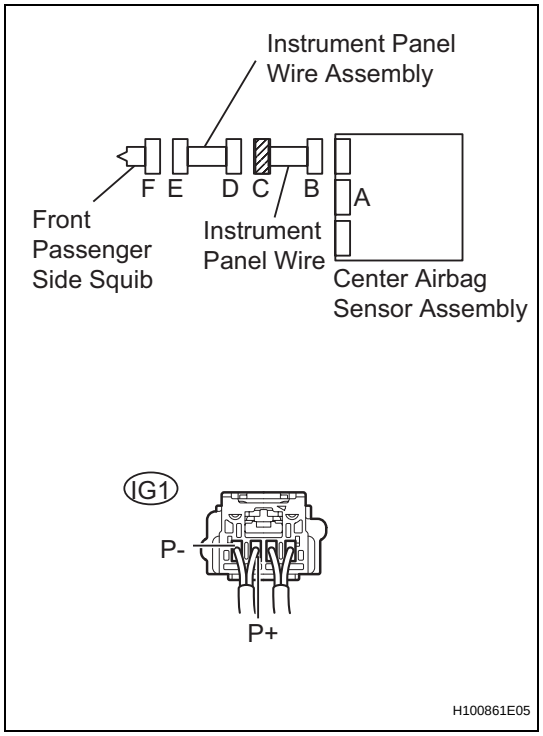
Tester Connection	Condition	Specified Condition
A24-1 (P+) - A24-2 (P-)	Always	1 MΩ or Higher

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

RS

5 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



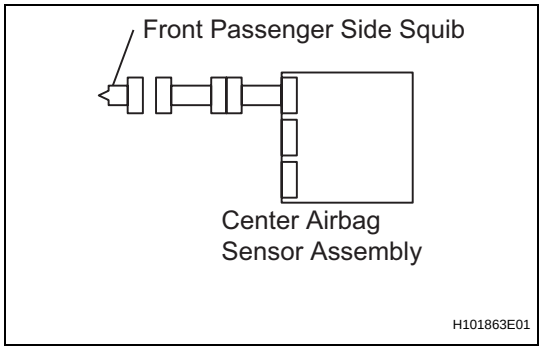
(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Release the activation prevention mechanism built into connector B (See page RS-28).
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
IG1-3 (P+) - IG1-4 (P-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the instrument panel wire connectors to the center airbag sensor assembly and instrument panel wire assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).
OK:
DTC B1805 is not output.

HINT:
DTCs other than B1805 may be output at this time, but they are not related to this check.

OK → **Go to step 20**

RS

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

7	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

8	CHECK CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.

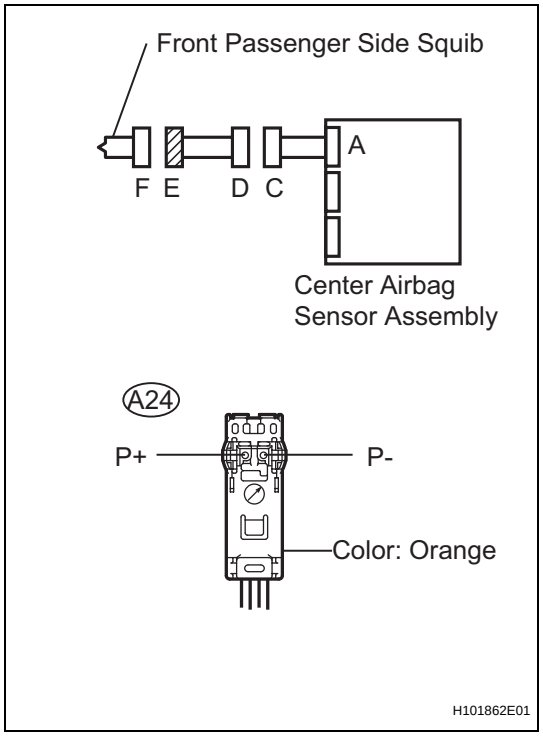
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

9 CHECK INSTRUMENT PANEL WIRE ASSEMBLY (FOR OPEN)



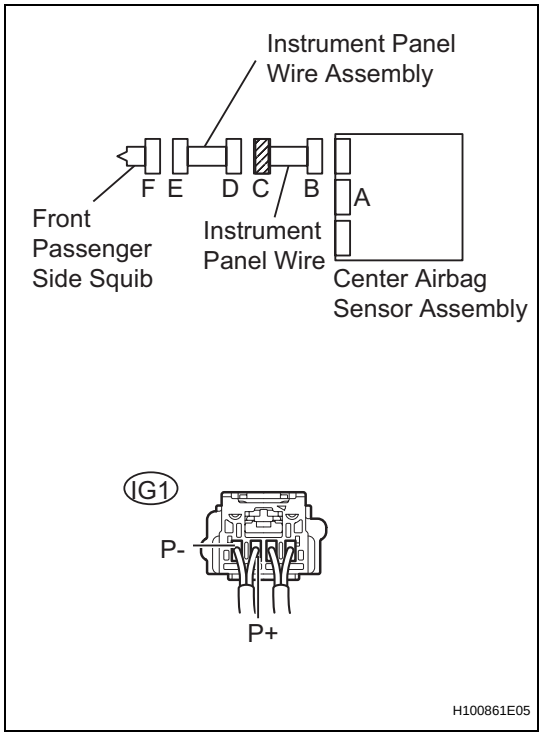
(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A24-1 (P+) - A24-2(P-)	Always	Below 1 Ω

MG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

10 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.

RS

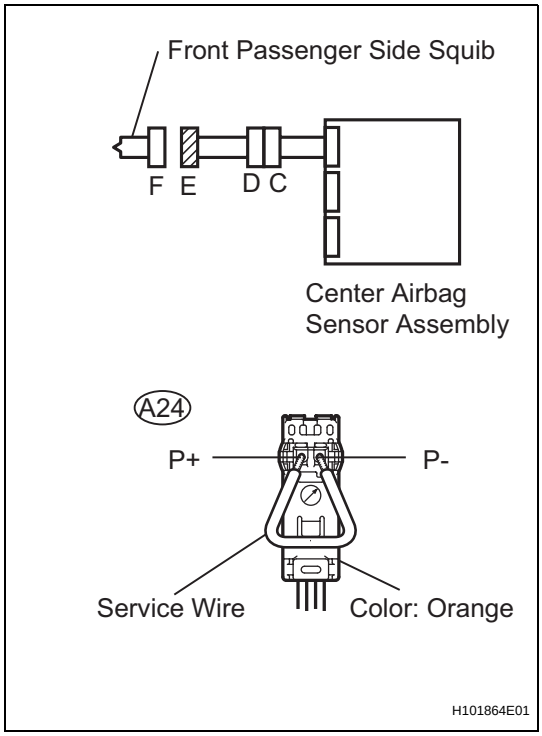
19 CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 18, begin from (a). If continuing from any other step, begin from (c).
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect A24-1 (P+) and A24-2 (P-) of connector E.

NOTICE:
- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).
OK:
DTC B1806, B1807 and B1808 are not output.

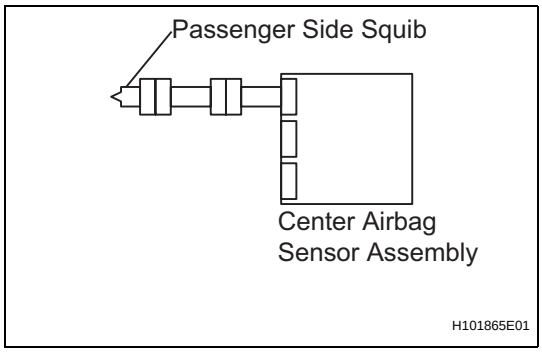
HINT:
DTCs other than B1806, B1807 or B1808 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

RS

20 CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB)



HINT:
If continuing from step 19, begin from (c). If continuing from any other step, being from (a).
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds
(c) Disconnect the SST from connector C.
(d) Connect the connectors to the front passenger airbag assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).
OK:
DTCs B1805, B1806, B1807 and B1808 are not output.

HINT:
DTCs other than B1805, B1806, B1807 or B1808 may be output at this time, but they are not related to this check.

RS

DTC	B1810/53	Short in Driver Side Squib 2nd Step Circuit

DTC	B1811/53	Open in Driver Side Squib 2nd Step Circuit

DTC	B1812/53	Short to GND in Driver Side Squib 2nd Step Circuit

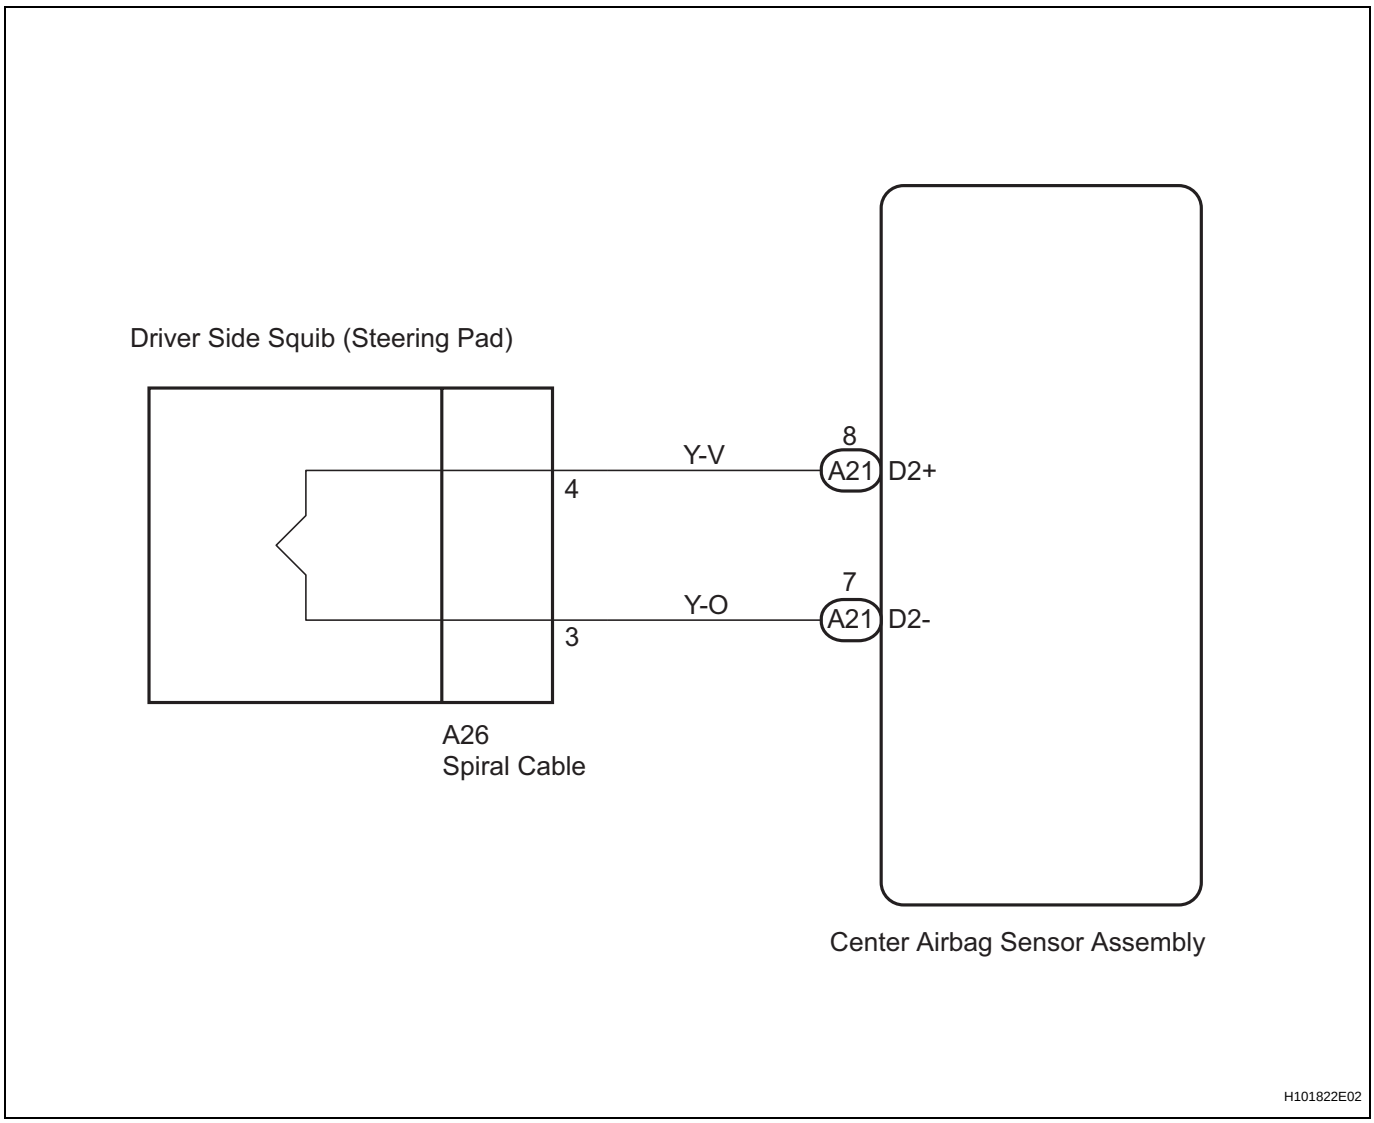
DTC	B1813/53	Short to B+ in Driver Side Squib 2nd Step Circuit

DESCRIPTION

The driver side squib (Dual stage -2nd step) circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad assembly.
The circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the driver side squib (Dual stage - 2nd step) circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1810/53	• The center airbag sensor assembly receives a line short circuit signal in the driver side squib (Dual stage - 2nd step) circuit for 2 seconds • Driver side squib (Dual stage - 2nd step) malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1811/53	• The center airbag sensor assembly receives an open circuit signal in the driver side squib (Dual stage - 2nd step) circuit for 2 seconds malfunction • Driver side squib (Dual stage - 2nd step) • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1812/53	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side squib (Dual stage - 2nd step) circuit for 0.5 seconds • Driver side squib (Dual stage - 2nd step) malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1813/53	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side squib (Dual stage - 2nd step) circuit for 0.5 seconds • Driver side squib (Dual stage - 2nd step) malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib, Dual stage - 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

Result

Result	Proceed to
DTC 53 is output.	E

B → Go to step 7
C → Go to step 11
D → Go to step 15
E → Go to step 21

A

2	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the horn button assembly side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE

OK

3	CHECK CONNECTION OF CONNECTORS

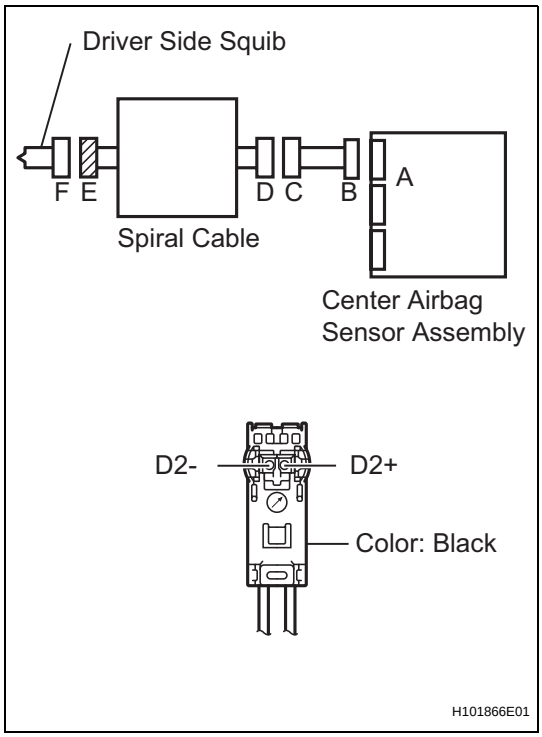
(a) Check that the connectors are properly connected to the center airbag sensor assembly and the spiral cable.
OK:
The connectors are properly connected.

RS

NG → CONNECT CONNECTORS

OK

4 CHECK SPIRAL CABLE (FOR SHORT)



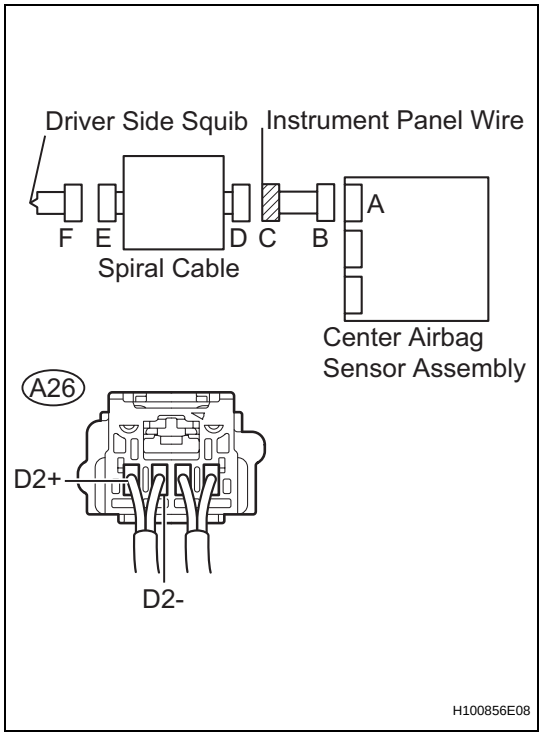
(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Release the activation prevention mechanism built into connector D (See page RS-28).
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or Higher

NG → REPLACE SPIRAL CABLE

OK

5 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



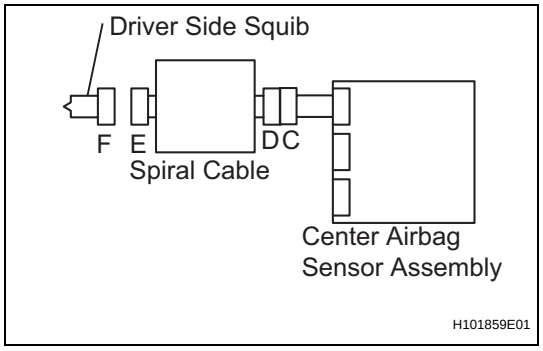
(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Release the activation prevention mechanism built into connector B (See page RS-28).
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - A26-3 (D2-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the instrument panel wire connectors to the center airbag sensor assembly and spiral cable.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).
OK:
DTC B1810 is not output.

HINT:
DTCs other than B1810 may be output at this time, but they are not related to this check.

OK → **Go to step 20**

NG

REPLACE CENTER AIRBAG ASSEMBLY

RS

7	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK

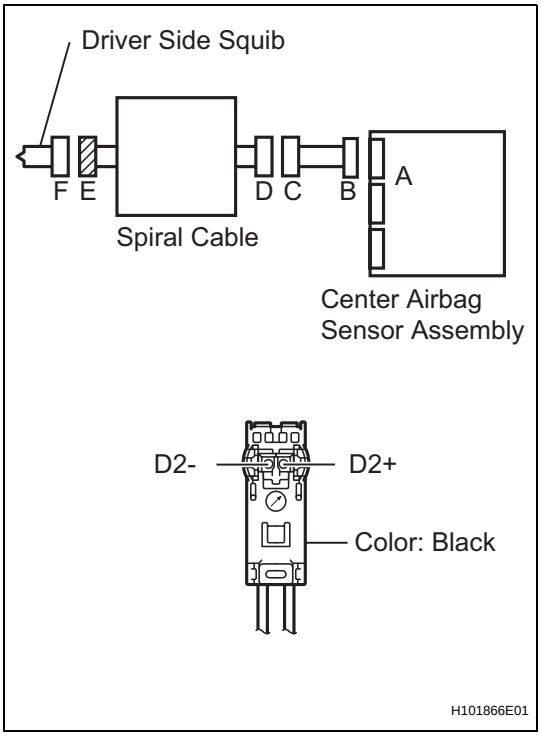
8	CHECK CONNECTION OF CONNECTORS

(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

9	CHECK SPIRAL CABLE (FOR OPEN)



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Measure the resistance.
Standard resistance

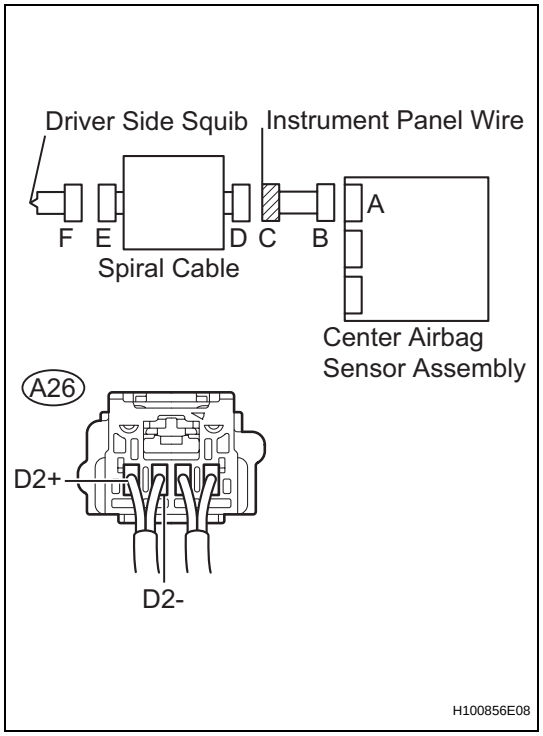
Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω

NG → **REPLACE SPIRAL CABLE**

OK

RS

10 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - A26-3 (D2-)	Always	Below 1 Ω

OK → **Go to step 19**

NG

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

11 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK

12 CHECK CONNECTION OF CONNECTORS

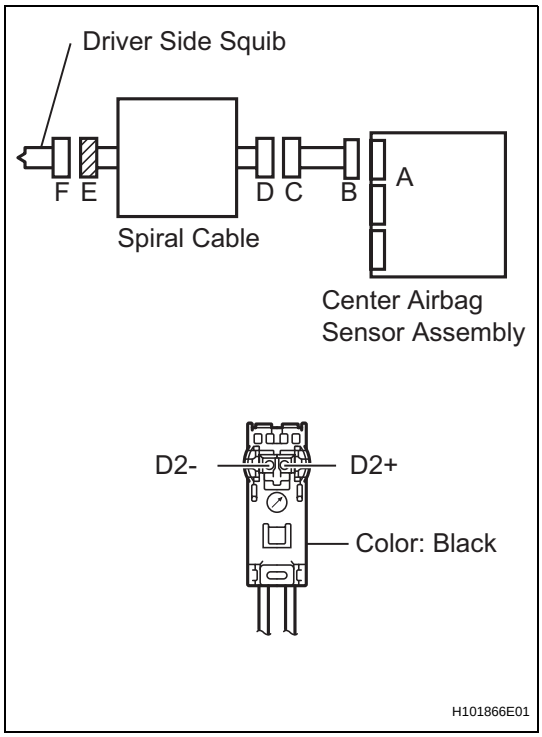
(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.
OK:
The connectors are properly connected.

RS

NG → CONNECT CONNECTORS

OK

13 CHECK SPIRAL CABLE (TO GROUND)



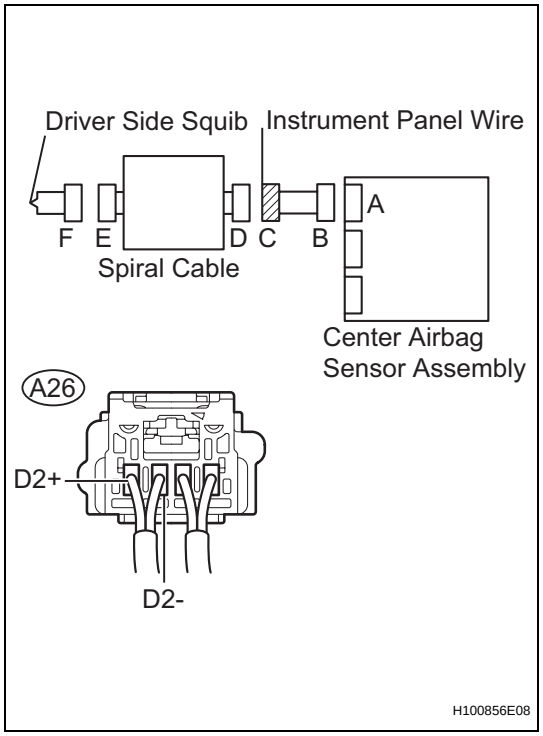
(a) Disconnect the spiral cable connector from the instrument panel wire and steering pad.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Always	1 MΩ or Higher
D2- - Body ground	Always	1 MΩ or Higher

NG → REPLACE SPIRAL CABLE

OK

14 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - Body ground	Always	1 MΩ or Higher
A26-3 (D2-) - Body ground	Always	1 MΩ or Higher

OK → **Go to step 19**

NG

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

15 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK

16 CHECK CONNECTION OF CONNECTORS

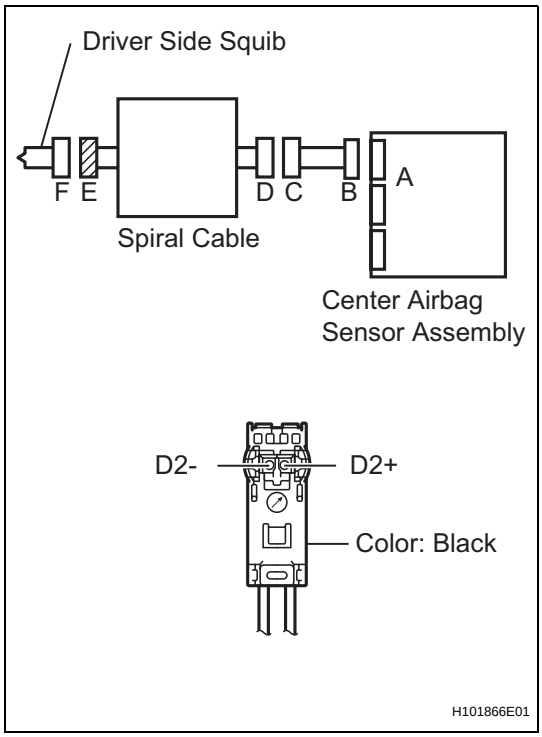
(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.
OK:
The connectors are properly connected.

RS

NG → CONNECT CONNECTORS

OK

17 CHECK SPIRAL CABLE (TO B+)



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

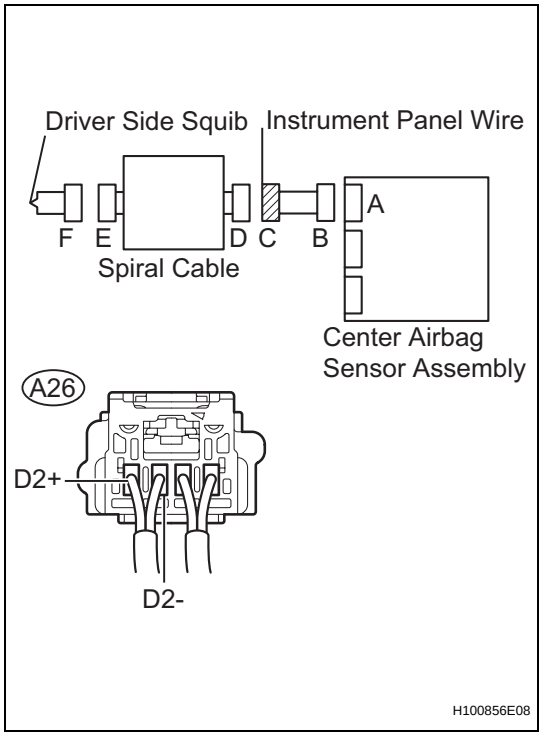
Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Ignition switch ON	Below 1 V
D2- - Body ground	Ignition switch ON	Below 1 V

NG → REPLACE SPIRAL CABLE

OK

18 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - Body ground	Ignition switch ON	Below 1 V
A26-3 (D2-) - Body ground	Ignition switch ON	Below 1 V

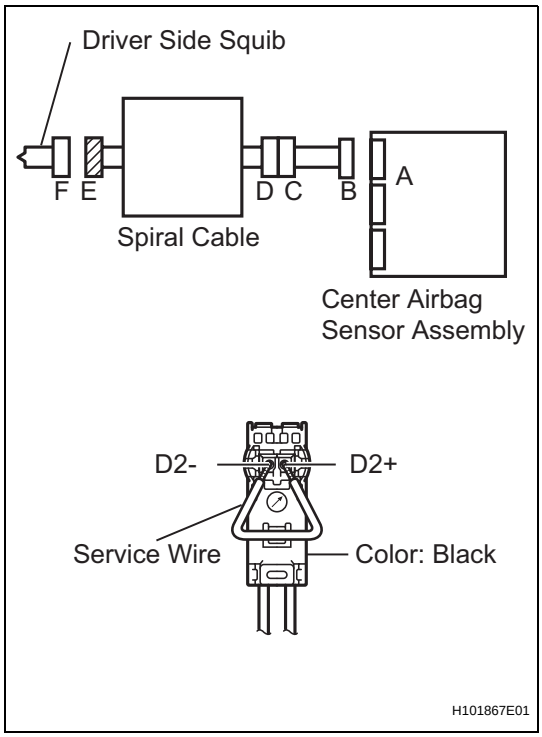
NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

19 REPLACE CENTER AIRBAG SENSOR ASSEMBLY

HINT:
If continuing from step 18, begin from (a). If continuing from any other step, begin from (c).

RS



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect D2+ and D2- of connector E.

NOTICE:

- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

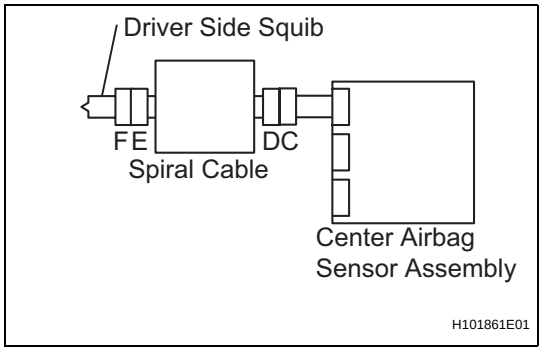
DTCs B1811, B1812 and B1813 are not output.

HINT:
DTCs other than B1811, B1812 or B1813 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG ASSEMBLY**

OK

20	CHECK STEERING PAD (DRIVER SIDE SQUIB)



HINT:
If continuing from step 19, begin from (c). If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector E.
(d) Connect the connectors to the steering pad.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

RS

OK:

DTCs B1810, B1811, B1812 and B1813 are not output.

HINT:

DTCs other than B1810, B1811, B1812 or B1813 may be output at this time, but they are not related to this check.

NG → **REPLACE STEERING PAD**

USE SIMULATION METHOD TO CHECK

21	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK ↓

22	CHECK CONNECTION OF CONNECTORS

(a) Check that the spiral cable connectors (on the steering pad side) are properly connected.

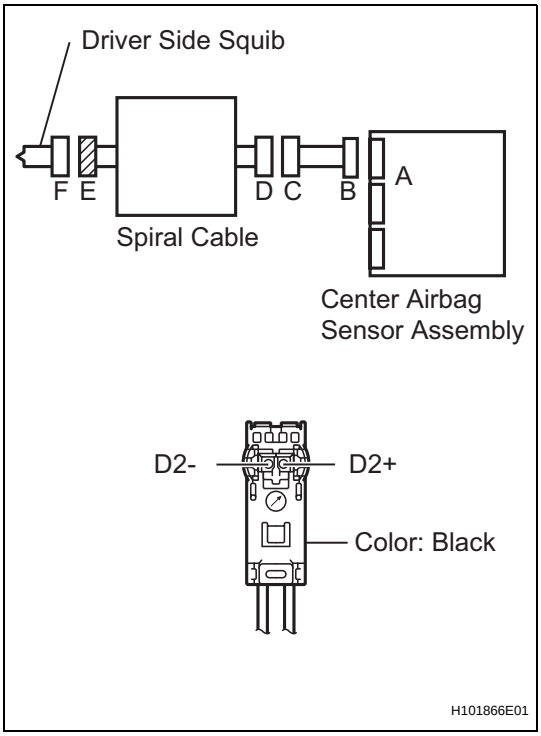
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK ↓

23 CHECK SPIRAL CABLE



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Connect the negative (-) terminal cable from the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Ignition switch ON	Below 1 V
D2- - Body ground	Ignition switch ON	Below 1 V

(e) Turn the ignition switch to the LOCK position.
(f) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(g) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω
D2+ - Body ground	Always	1 MΩ or Higher
D2- - Body ground	Always	1 MΩ or Higher

(h) Release the activation prevention mechanism built into connector D (See page RS-28).
(i) Measure the resistance.

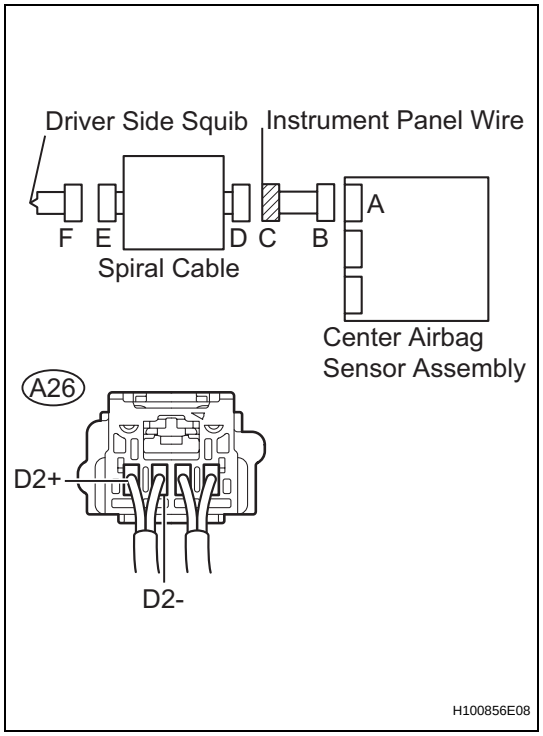
Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or Higher

NG → **REPLACE SPIRAL CABLE**

OK

24 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - Body ground	Ignition switch ON	Below 1 V
A26-3 (D2-) - Body ground	Ignition switch ON	Below 1 V

(f) Turn the ignition switch to the LOCK position.
(g) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(h) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-4 (D2+) - A26-3 (D2-)	Always	Below 1 Ω
A26-4 (D2+) - Body ground	Always	1 MΩ or Higher
A26-3 (D2-) - Body ground	Always	1 MΩ or Higher

(i) Release the activation prevention mechanism built into connector B (See page RS-28).
(j) Measure the resistance.

Standard resistance

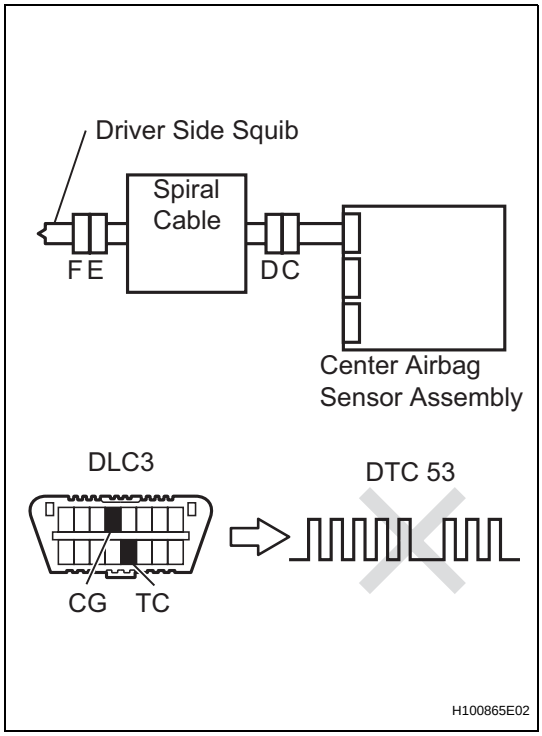
Tester Connection	Condition	Specified Condition
A26-4 (D2+) - A26-3 (D2-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

25	CHECK CENTER AIRBAG ASSEMBLY



(a) Replace the steering pad (See page RS-557).

HINT:

Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the instrument panel wire to the center airbag sensor assembly and spiral cable.

(c) Connect the connectors to the center airbag sensor assembly.

(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(e) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(f) Clear any DTCs stored in the memory (See page RS-34).

(g) Turn the ignition switch to the LOCK position.

(h) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(i) Check for DTCs (See page RS-34).

OK:

DTC 53 is not output.

HINT:

DTCs other than 53 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

RS

DTC	B1815/54	Short in Front Passenger Side Squib 2nd Step Circuit

DTC	B1816/54	Open in Front Passenger Side Squib 2nd Step Circuit

DTC	B1817/54	Short to GND in Front Passenger Side Squib 2nd Step Circuit

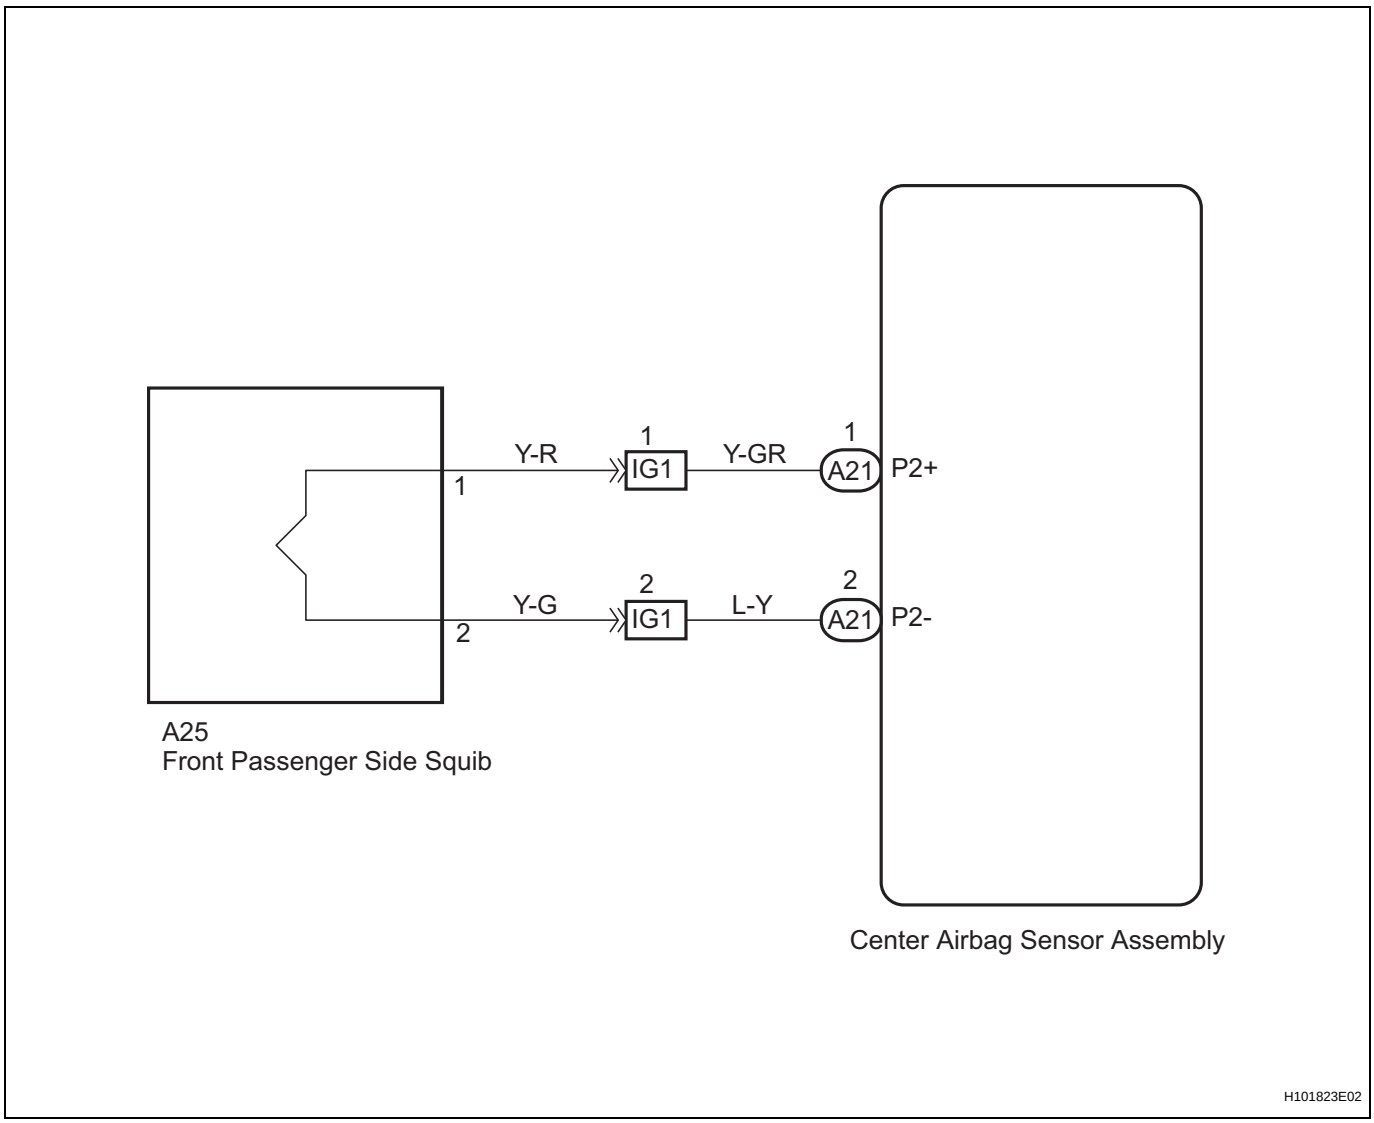
DTC	B1818/54	Short to B+ in Front Passenger Side Squib 2nd Step Circuit

DESCRIPTION

The front passenger side squib (Dual stage -2nd step) circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the front passenger side squib (Dual stage - 2nd step) circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1815/54	• The center airbag sensor assembly receives a line short circuit signal in the front passenger side squib (Dual stage - 2nd step) circuit for 2 seconds • Front passenger side squib (Dual stage - 2nd step) malfunction • Center airbag sensor assembly center malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1816/54	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib (Dual stage - 2nd step) circuit for 2 seconds • Front passenger side squib (Dual stage - 2nd step) malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1817/54	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib (Dual stage - 2nd step) circuit for 0.5 seconds • Front passenger side squib (Dual stage - 2nd step) malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib, Dual stage - 2nd step) • Center airbag sensor assembly
B1818/54	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib (Dual stage - 2nd step) circuit for 0.5 seconds • Front passenger side squib (Dual stage - 2nd step) malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib, Dual stage - 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC OUTPUT

(a) Proceed to the appropriate step according to the DTC readings.
(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC B1815 is output.	A
DTC B1816 is output.	B
DTC B1817 is output.	C
DTC B1818 is output.	D

(2) If not using the intelligent tester (read the 2-digit DTCs): Check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC 54 is output.	E

B → Go to step 7

C → Go to step 11

D → Go to step 15

E → Go to step 21

A

2	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK

RS

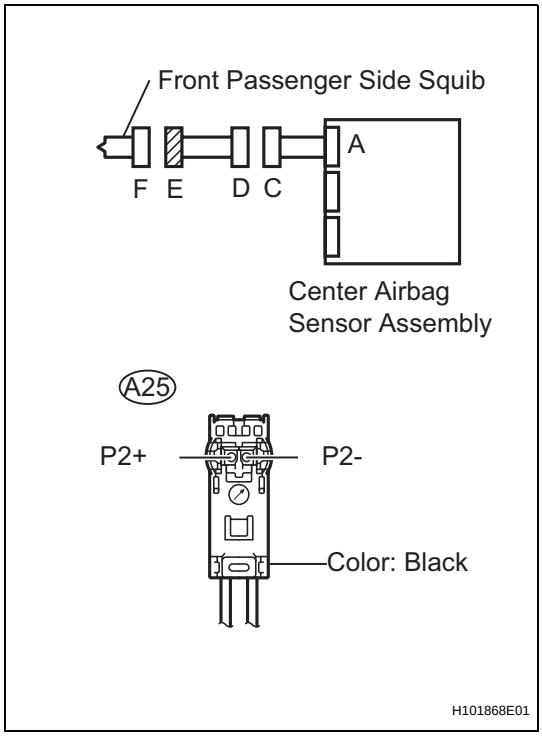
3	CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

4	CHECK INSTRUMENT PANEL WIRE ASSEMBLY (FOR SHORT)



(a) Disconnect the instrument panel wire assembly connectors from the instrument panel wire and front passenger airbag assembly.
(b) Release the activation prevention mechanism built into connector D (See page RS-28).
(c) Measure the resistance.
Standard resistance

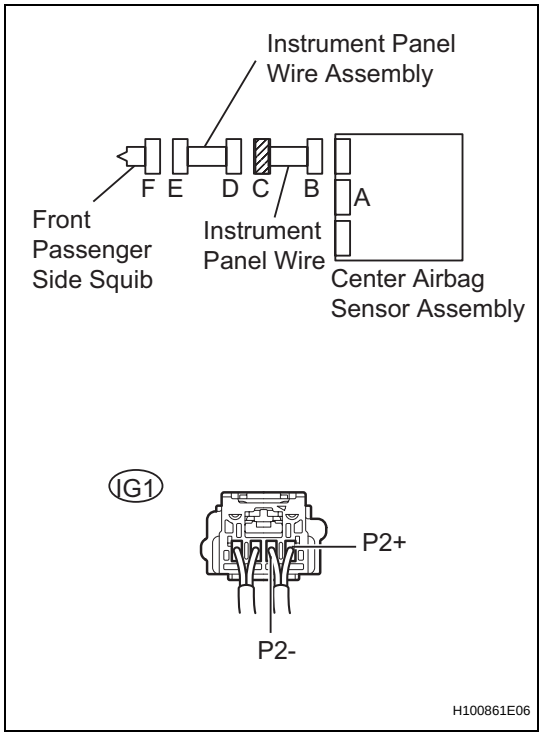
Tester Connection	Condition	Specified Condition
A25-1 (P2+) - A25-2 (P2-)	Always	1 MΩ or Higher

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

RS

5 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



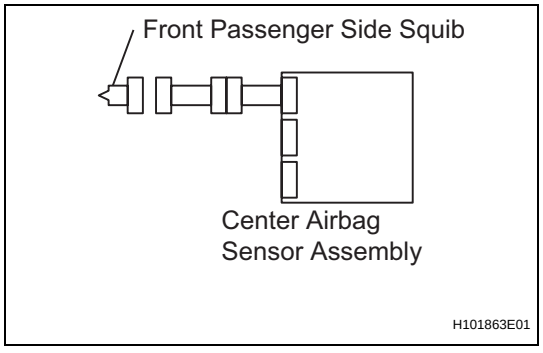
(a) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(b) Release the activation prevention mechanism built into connector B (See page RS-28).
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - IG1-2 (P2-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the instrument panel wire connectors to the center airbag sensor assembly and instrument panel wire assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).
OK:
DTC B1815 is not output.

HINT:
DTCs other than B1815 may be output at this time, but they are not related to this check.

OK → **Go to step 20**

RS

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

7	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

8	CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.

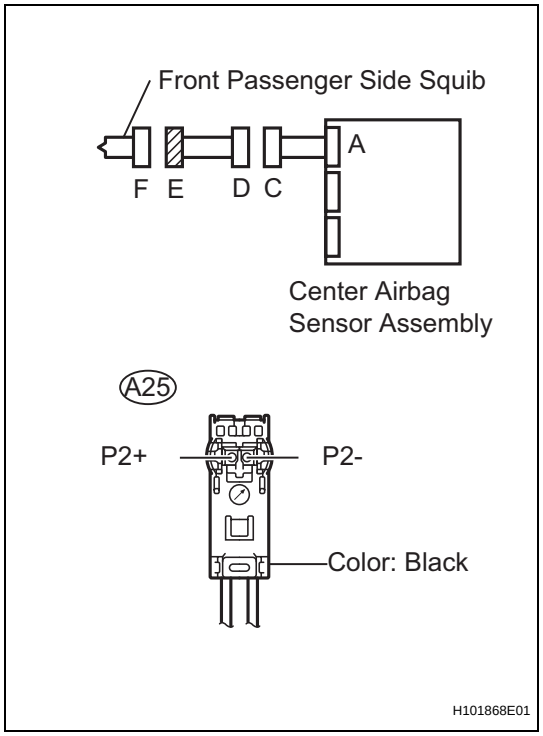
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

9 CHECK INSTRUMENT PANEL WIRE ASSEMBLY (FOR OPEN)



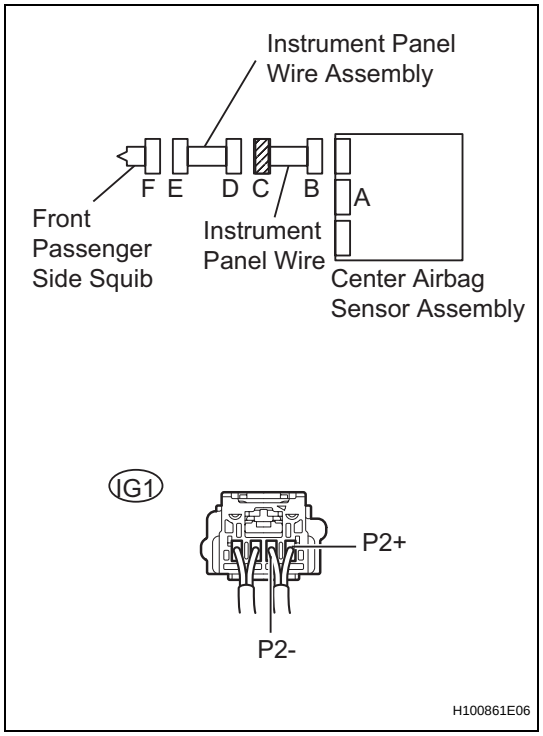
(a) Disconnect the instrument panel wire assembly connectors from the instrument panel wire and steering pad.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A25-1 (P2+) - A25-2 (P2-)	Always	Below 1 Ω

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

10 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Disconnect the instrument panel wire connector assembly from the center airbag sensor assembly.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - IG1-2 (P2-)	Always	Below 1 Ω

OK → **Go to step 19**

RS

NG

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

11	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

12	CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.

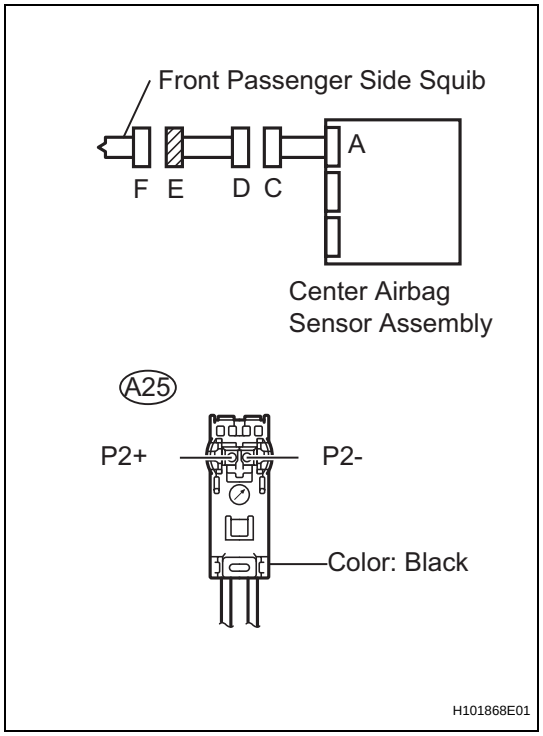
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

13 CHECK INSTRUMENT PANEL WIRE ASSEMBLY (TO GROUND)



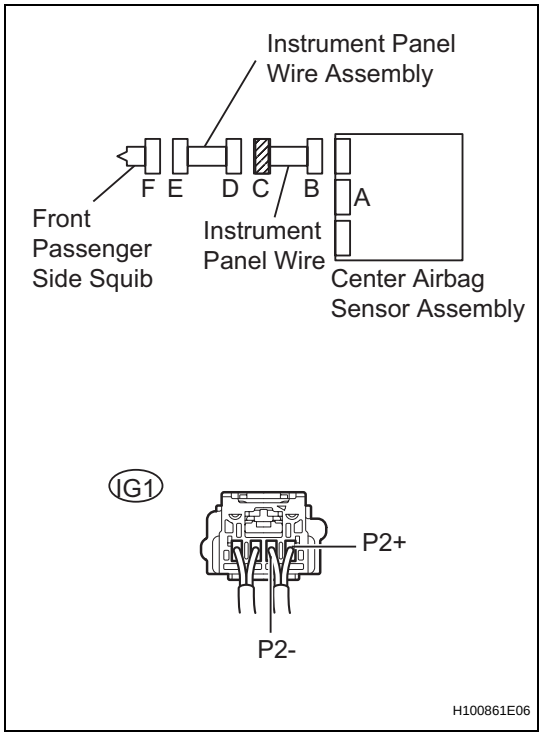
(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A25-1 (P2+) - Body ground	Always	1 MΩ or Higher
A25-2 (P2-) - Body ground	Always	1 MΩ or Higher

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

14 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Disconnect the instrument panel wire connector from the airbag sensor assembly center.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - Body ground	Always	1 MΩ or Higher
IG1-2 (P2-) - Body ground	Always	1 MΩ or Higher

OK → **Go to step 19**

RS

NG

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

15 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

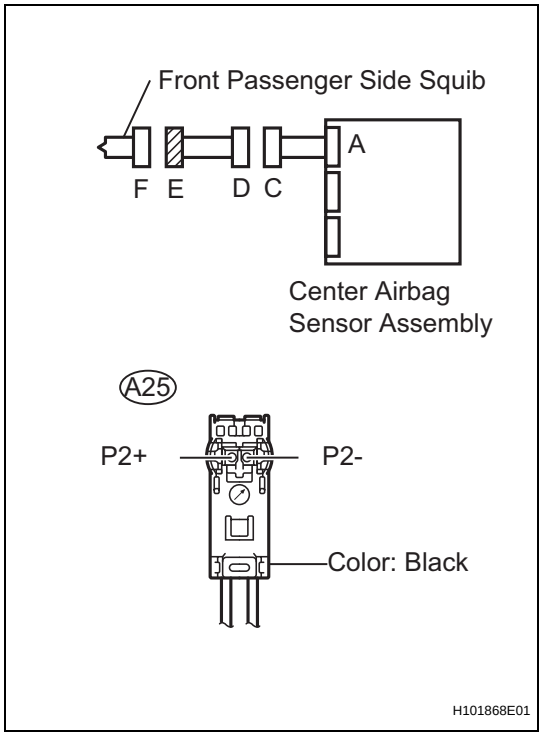
16 CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

17 CHECK INSTRUMENT PANEL WIRE ASSEMBLY (TO B+)



(a) Disconnect the spiral cable connectors from the instrument panel wire and steering pad.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A25-1 (P2+) - Body ground	Ignition switch ON	Below 1 V
A25-2 (P2-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

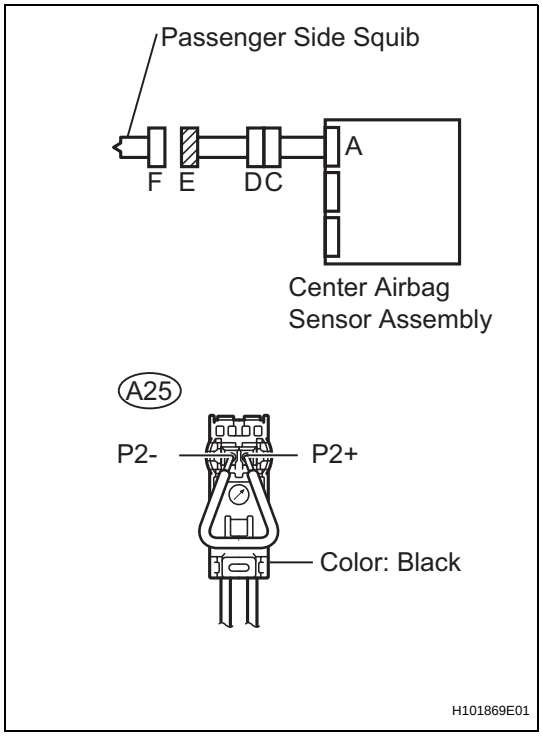
RS

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 14, begin from (a). If continuing from any other step, begin from (c).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect A25-1 (P2+) and A25-2 (P2-) of connector E.

NOTICE:
- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

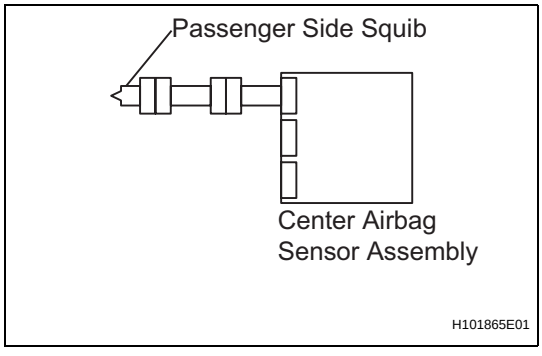
OK:
DTCs B1816, B1817 and B1818 are not output.

HINT:
DTCs other than B1816, B1817 or B1818 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

20 CHECK FRONT PASSENGER AIRBAG ASSEMBLY (PASSENGER SIDE SQUIB)



HINT:
If continuing from step 19, begin from (c) .If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Connect the connectors to the front passenger airbag assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

RS

(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).
OK:
DTC B1815, B1816, B1817 and B1818 are not output.

HINT:
DTCs other than B1815, B1816, B1817 or B1818 may be output at this time, but they are not related to this check.

NG → **REPLACE INSTR PNL PASS L/DOOR AIRBAG ASSEMBLY**

OK

OTHERS USE SIMULATION METHOD TO CHECK

21 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position..
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds
(c) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

22 CHECK CONNECTION OF CONNECTORS

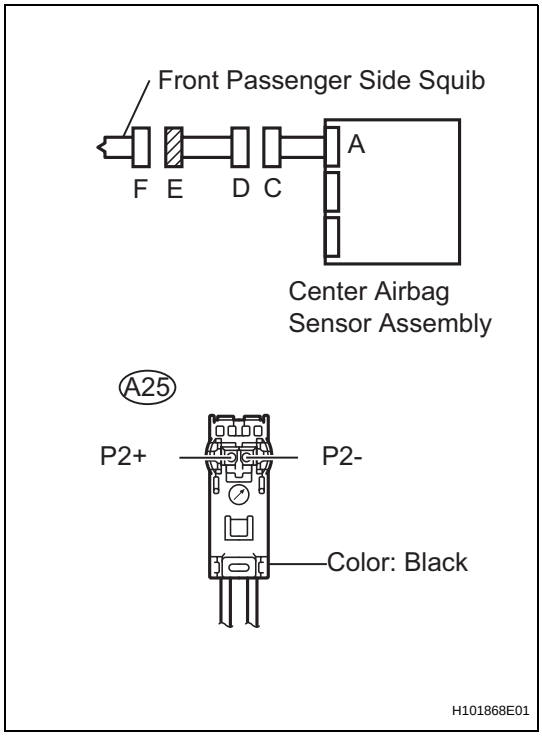
RS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the instrument panel wire assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

23 CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Disconnect the instrument panel wire assembly connector from the instrument panel wire and front passenger airbag assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
A25-1 (P2+) - Body ground	Ignition switch ON	Below 1 V
A25-2 (P2-) - Body ground	Ignition switch ON	Below 1 V

(e) Turn the ignition switch to the LOCK position.
(f) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(g) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
A25-1 (P2+) - A25-2 (P2-)	Always	Below 1 Ω
A25-1 (P2+) - Body ground	Always	1 MΩ or Higher
A25-2 (P2-) - Body ground	Always	1 MΩ or Higher

(h) Release the activation prevention mechanism built into connector D (See page RS-28).
(i) Measure the resistance.

Standard resistance

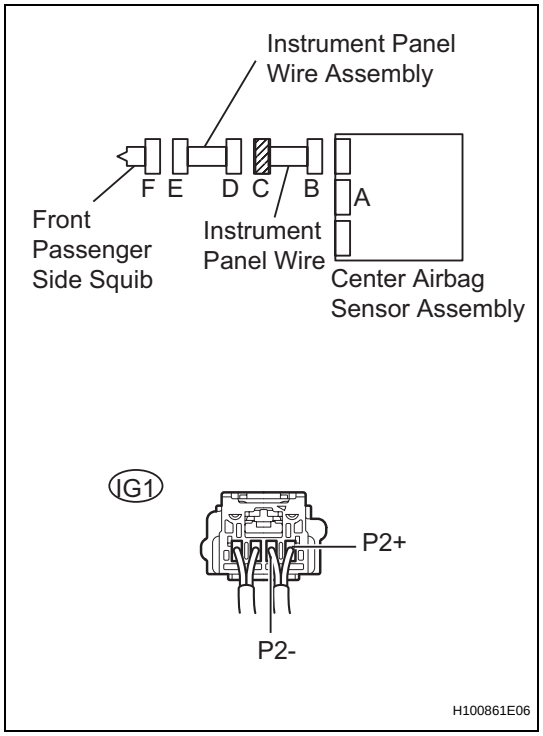
Tester Connection	Condition	Specified Condition
A25-1 (P2+) - A25-2 (P2-)	Always	1 MΩ or Higher

NG → **REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

RS

24 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - Body ground	Ignition switch ON	Below 1 V
IG1-2 (P2-) - Body ground	Ignition switch ON	Below 1 V

(f) Turn the ignition switch to the LOCK position.
(g) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(h) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - IG1-2 (P2-)	Always	Below 1 Ω
IG1-1 (P2+) - Body ground	Always	1 MΩ or Higher
IG1-2 (P2-) - Body ground	Always	1 MΩ or Higher

(i) Release the activation prevention mechanism built into connector B (See page RS-28).
(j) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
IG1-1 (P2+) - IG1-2 (P2-)	Always	1 MΩ or Higher

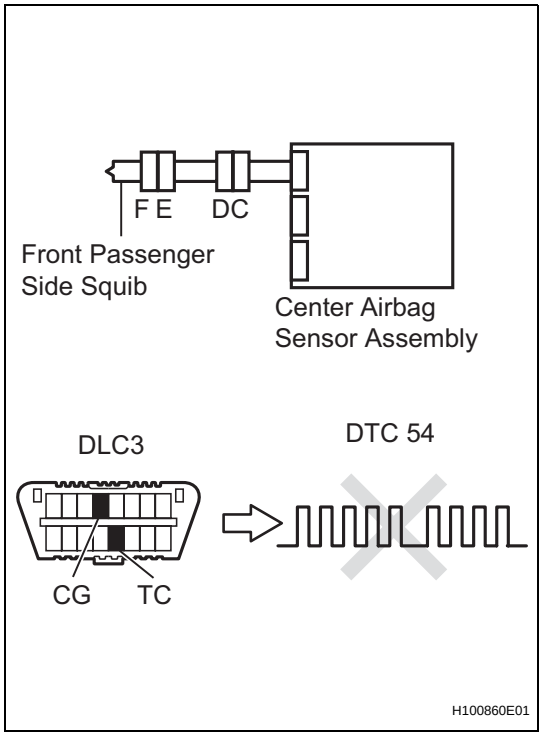
25	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Replace the front passenger airbag (See page RS-574).

HINT:

Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the instrument panel wire to the center airbag sensor assembly and spiral cable.

(c) Connect the connectors to the center airbag sensor assembly.

(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(e) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(f) Clear any DTCs stored in the memory (See page RS-34).

(g) Turn the ignition switch to the LOCK position.

(h) Turn the ignition switch to the ON position, and wait for at least 60 seconds.

(i) Check for DTCs (See page RS-34).

OK:

DTC 54 is not output.

HINT:

DTCs other than 54 may be output at this time, but they are not related to this check.

DTC	B1820/55	Short in Driver Side - Side Squib Circuit

DTC	B1821/55	Open in Driver Side - Side Squib Circuit

DTC	B1822/55	Short to GND in Driver Side - Side Squib Circuit

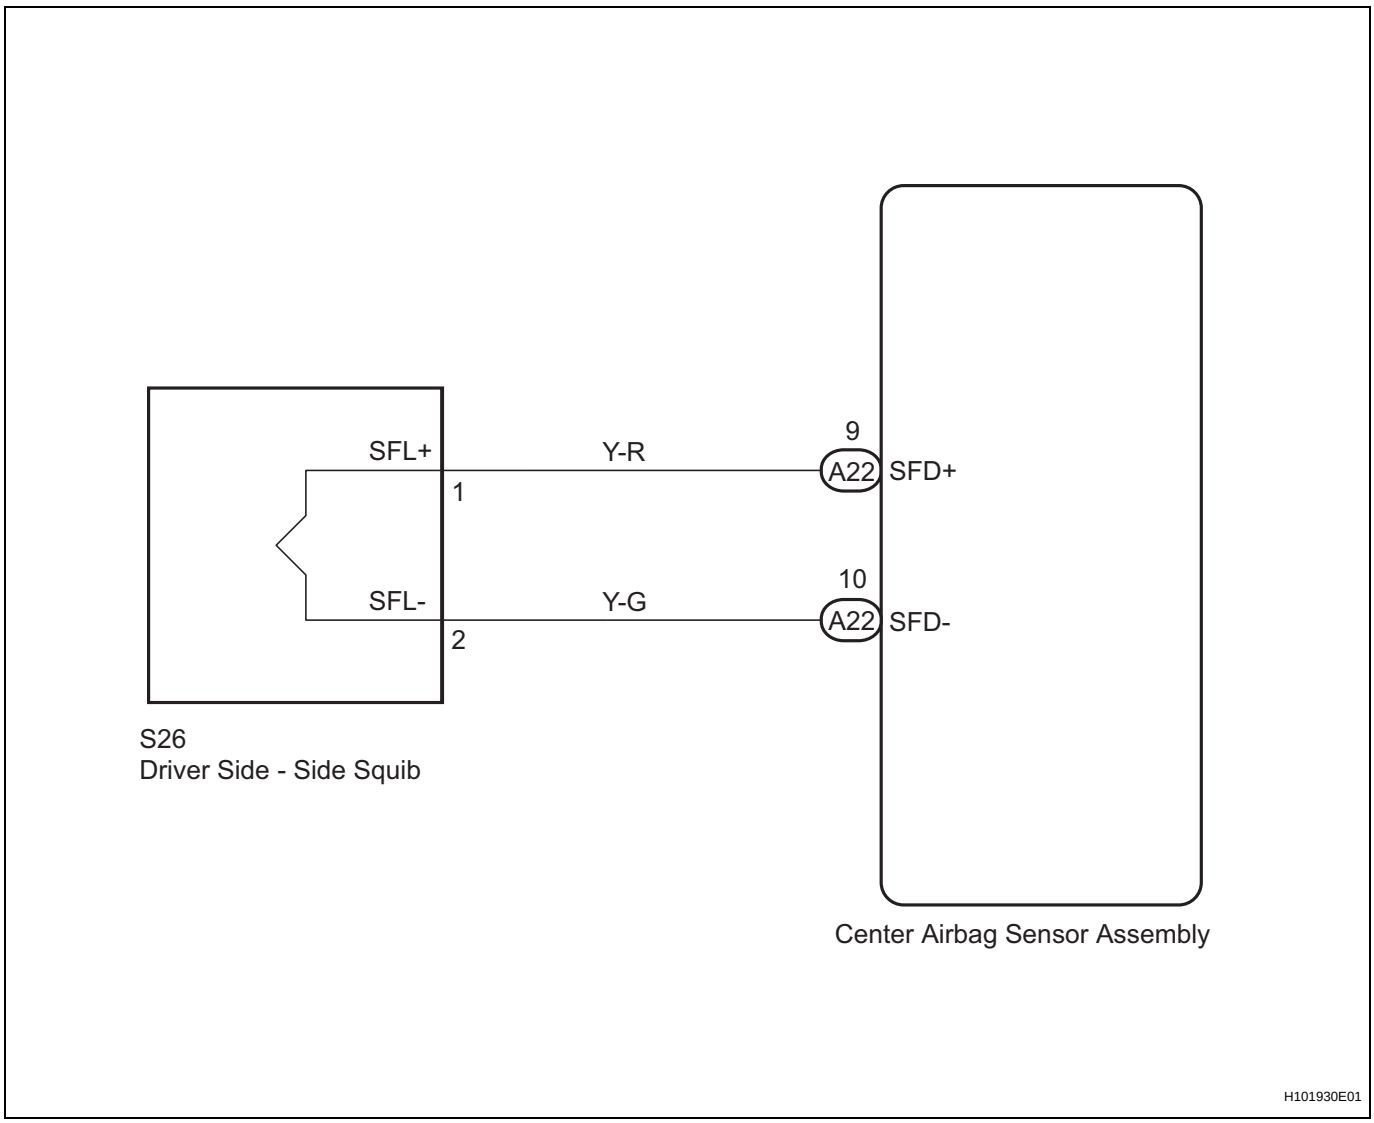
DTC	B1823/55	Short to B+ in Driver Side - Side Squib Circuit

DESCRIPTION

The side squib (driver seat side) circuit consists of the center airbag sensor assembly and the front seat with adjuster frame assembly LH.
This circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the side squib (driver seat side) circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1820/55	• The center airbag sensor assembly receives a line short circuit signal in the side squib (Driver seat side) circuit for 2 seconds • Side squib (Driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Front seat with adjuster frame assembly LH (Side squib (Driver seat side)) • Center airbag sensor assembly
B1821/55	• The center airbag sensor assembly receives an open circuit signal in the side squib (Driver seat side) circuit for 2 seconds • Side squib (Driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Front seat with adjuster frame assembly LH (Side squib (Driver seat side)) • Center airbag sensor assembly
B1822/55	• The center airbag sensor assembly receives a short circuit to ground signal in the side squib (Driver seat side) circuit for 0.5 seconds • Side squib (Driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Front seat with adjuster frame assembly LH (Side squib (Driver seat side)) • Center airbag sensor assembly
B1823/55	• The center airbag sensor assembly receives a short circuit to B+ signal in the side squib (Driver seat side) circuit for 0.5 seconds • Side squib (Driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Front seat with adjuster frame assembly LH (Side squib (Driver seat side)) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.

(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).

Result

Result	Proceed to
DTC B1820 is output.	A
DTC B1821 is output.	B

OK → **Go to step 11**

NG

REPAIR OR REPLACE NO. 2 FLOOR WIRE

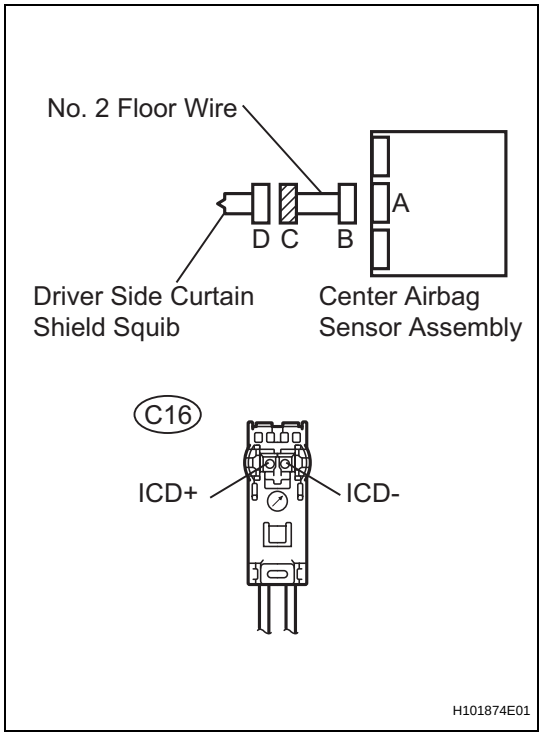
6	CHECK NO. 2 FLOOR WIRE (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
C16-1 (ICD+) - Body ground	Ignition switch ON	Below 1 V
C16-2 (ICD-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 11**

NG

REPAIR OR REPLACE NO. 2 FLOOR WIRE

7	CHECK CONNECTOR

(a) Check that the No. 2 floor wire connector (on the curtain shield airbag assembly LH side) is not damaged.

OK:

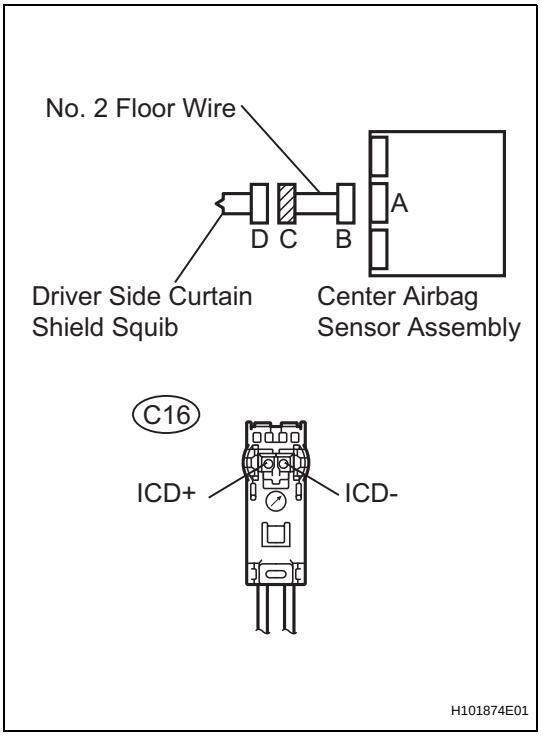
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

RS

8 CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG (D SEAT SIDE) SQUIB)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
C16-1 (ICD+) - Body ground	Ignition switch ON	Below 1 V
C16-2 (ICD-) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
C16-1 (ICD+) - C16-2 (ICD-)	Always	Below 1 Ω
C16-1 (ICD+) - Body ground	Always	1 MΩ or Higher
C16-2 (ICD-) - Body ground	Always	1 MΩ or Higher

(g) Release the activation prevention mechanism built into connector B (See page RS-28).
(h) Measure the resistance.

Standard resistance

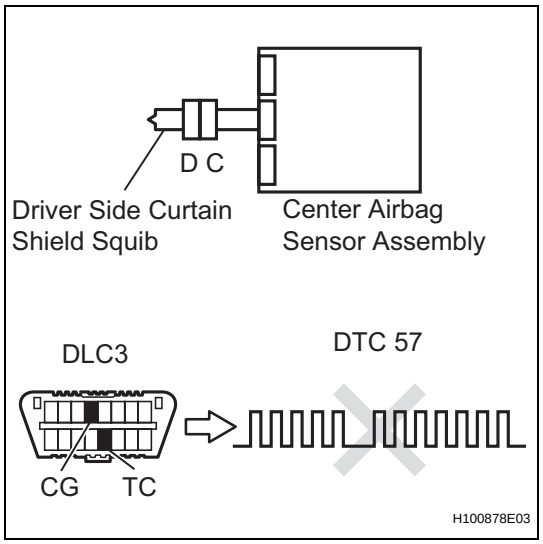
Tester Connection	Condition	Specified Condition
C16-1 (ICD+) - C16-2 (ICD-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

RS

9	REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (CURTAIN SHIELD AIRBAG (D SEAT SIDE) SQUIB)



(a) Replace the curtain shield airbag assembly LH (See page RS-587).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the connectors to the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC 57 is not output.

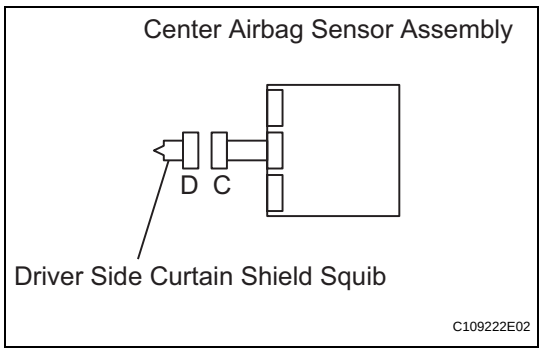
HINT:
DTCs other than 57 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).

OK:

DTC B1830 is not output.

RS

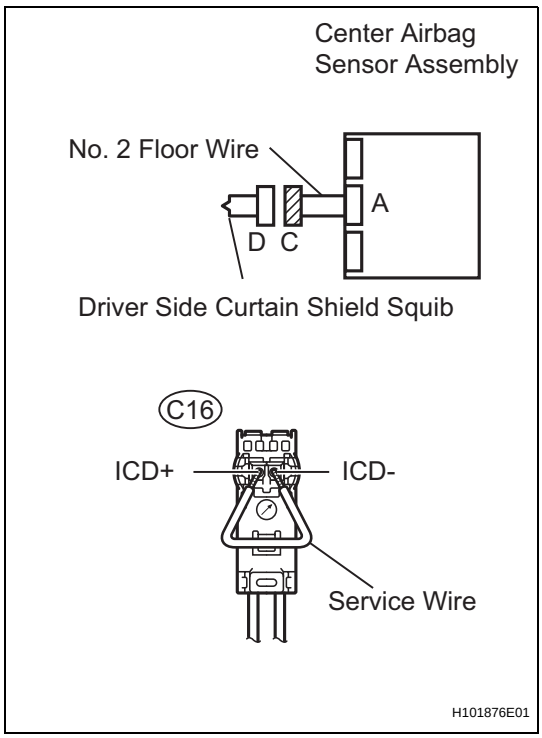
HINT:
DTCs other than B1830 may be output at this time, but they are not related to this check.

OK → Go to step 12

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

11 CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 6, begin from (a). If continuing from any other step, begin from (c).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the center airbag sensor assembly.
(d) Using a service wire, connect C16-1 (ICD+) and C16-2 (ICD-) of connector C.

NOTICE:
- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:
DTC B1831, B1832 and B1833 are not output.

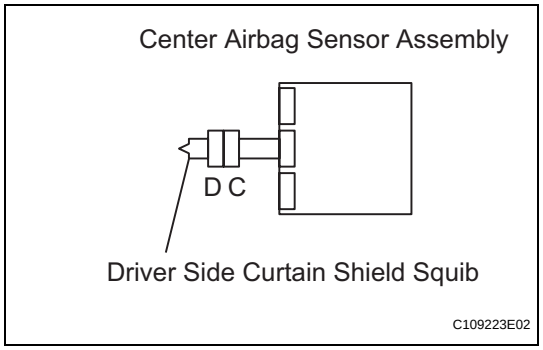
HINT:
DTCs other than B1831, B1832 or B1833 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

RS

12	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY LH (CURTAIN SHIELD AIRBAG (DRIVER SEAT SIDE) SQUIB)



HINT:
If continuing from step 11, begin from (c) .If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the curtain shield airbag assembly LH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1830, B1831, B1832 and B1833 are not output.

HINT:
DTCs other than B1830, B1831, B1832 or B1833 may be output at this time, but they are not related to this check.

NG → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH**

OK

OTHERS USE SIMULATION METHOD TO CHECK

DTC	B1835/58	Short in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1836/58	Open in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1837/58	Short to GND in Front Passenger Side Curtain Shield Squib Circuit

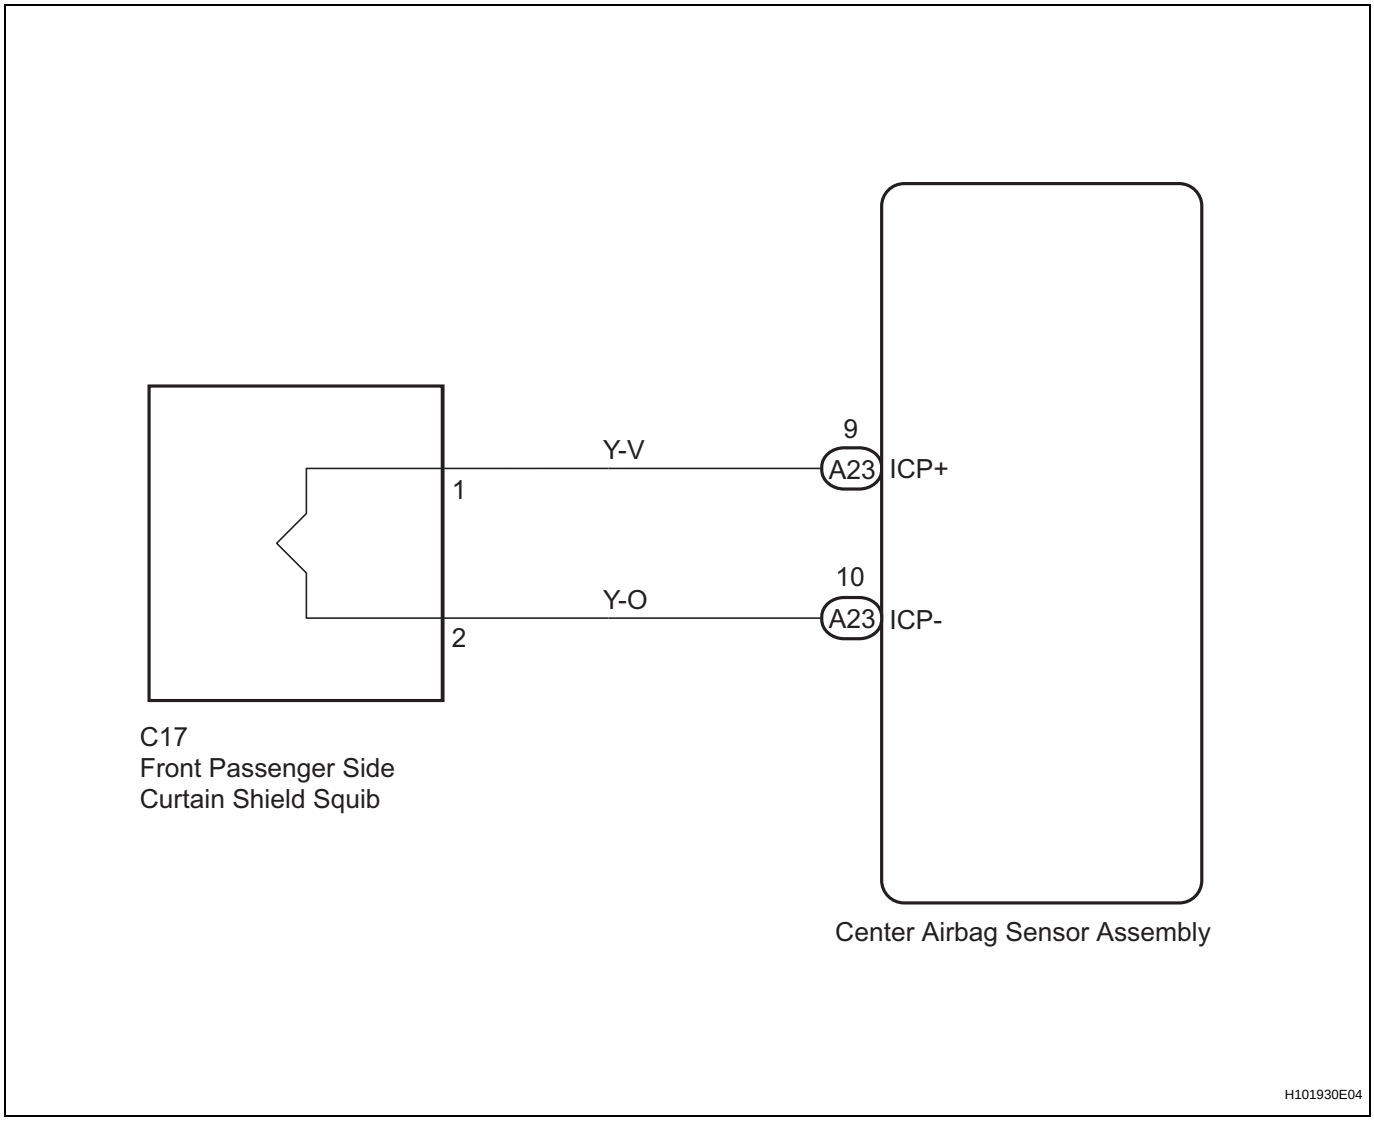
DTC	B1838/58	Short to B+ in Front Passenger Side Curtain Shield Squib Circuit

DESCRIPTION

The curtain shield airbag (front passenger seat side) squib circuit consists of the center airbag sensor assembly and the curtain shield airbag assembly RH.
The circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the curtain shield airbag (front passenger seat side) squib circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1835/58	• The center airbag sensor assembly receives a line short circuit signal in the curtain shield airbag (Front passenger seat side) squib circuit for 2 seconds • Curtain shield airbag (Front passenger seat side) squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly RH (Curtain shield airbag [Front passenger seat side] squib) • Center airbag sensor assembly
B1836/58	• The center airbag sensor assembly receives an open circuit signal in the curtain shield airbag (Front passenger seat side) squib circuit for 2 seconds • Curtain shield airbag (Front passenger seat side) squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly RH (Curtain shield airbag [Front passenger seat side] squib) • Center airbag sensor assembly
B1837/58	• The center airbag sensor assembly receives a short circuit to ground signal in the curtain shield airbag (Front passenger seat side) squib circuit for 0.5 seconds • Curtain shield airbag (Front passenger seat side) squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly RH (Curtain shield airbag [Front passenger seat side] squib) • Center airbag sensor assembly
B1838/58	• The center airbag sensor assembly receives a short circuit to B+ signal in the curtain shield airbag (Front passenger seat side) squib circuit for 0.5 seconds • Curtain shield airbag (Front passenger seat side) squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly RH (Curtain shield airbag [Front passenger seat side] squib) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.

(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).

Result

Result	Proceed to
B1835 is output.	A
B1836 is output.	B
B1837 is output.	C
B1838 is output.	D

(2) If not using the intelligent tester (read the 2-digit DTCs): Check for DTCs (See page RS-34).

Result

Result	Proceed to
DTC 58 is output.	E

B → Go to step 4

C → Go to step 5

D → Go to step 6

E → Go to step 7

A

2	CHECK CONNECTOR

(a) Check that the floor wire connector (on the curtain shield airbag assembly RH side) is not damaged.

OK:

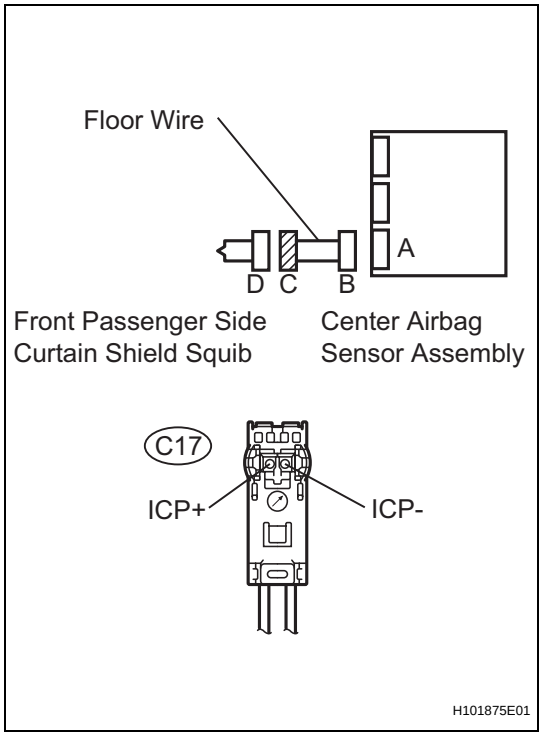
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

3	CHECK FLOOR WIRE (FOR SHORT)



(a) Release the activation prevention mechanism built into connector B (See page RS-28).

(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - C17-2 (ICP-)	Always	1 MΩ or higher

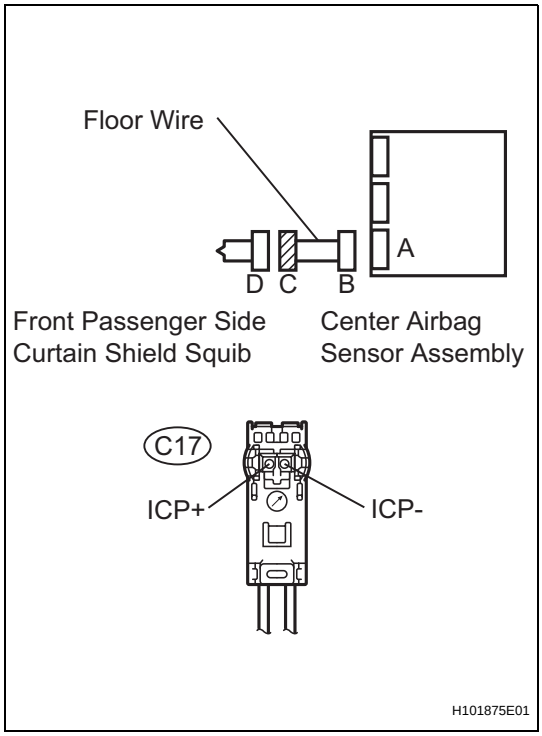
OK → **Go to step 10**

NG

REPAIR OR REPLACE FLOOR WIRE

RS

4	CHECK FLOOR WIRE (FOR OPEN)



(a) Measure the resistance.
Standard resistance

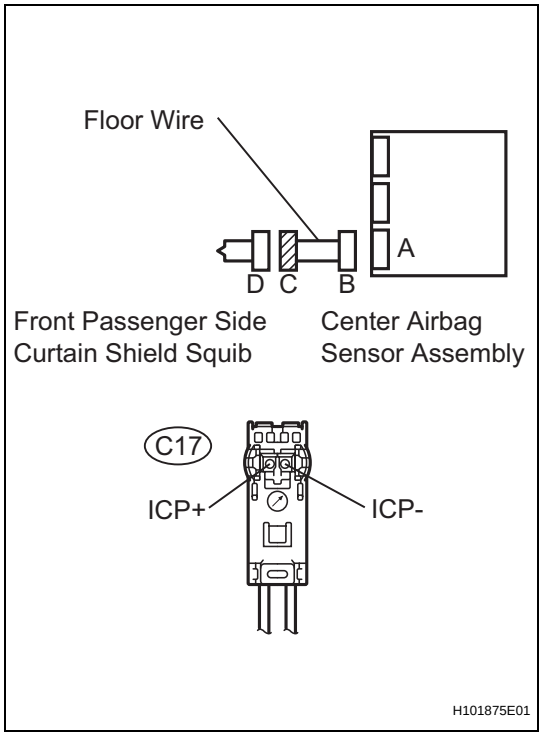
Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - C17-2 (ICP-)	Always	Below 1 Ω

OK → **Go to step 11**

NG

REPAIR OR REPLACE FLOOR WIRE

5	CHECK FLOOR WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - Body ground	Always	1 MΩ or higher
C17-2 (ICP-) - Body ground	Always	1 MΩ or higher

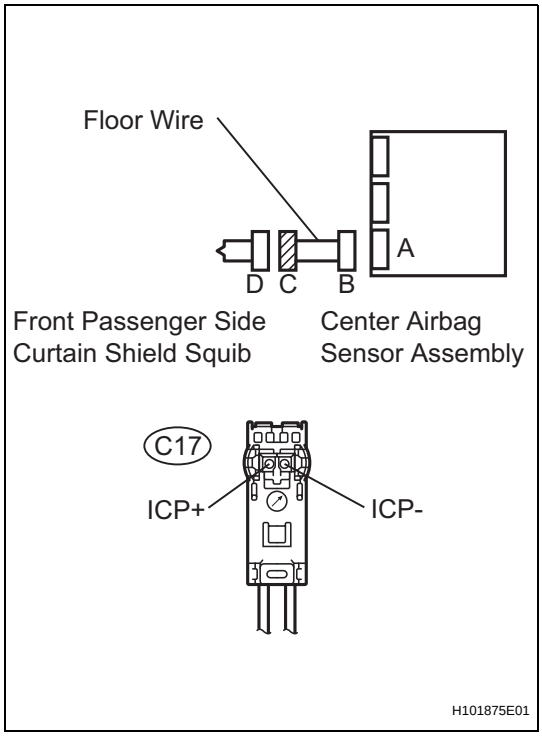
OK → **Go to step 11**

NG

REPAIR OR REPLACE FLOOR WIRE

RS

6	CHECK FLOOR WIRE (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - Body ground	Ignition switch ON	Below 1 V
C17-2 (ICP-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 11**

NG

REPAIR OR REPLACE FLOOR WIRE

7	CHECK CONNECTOR

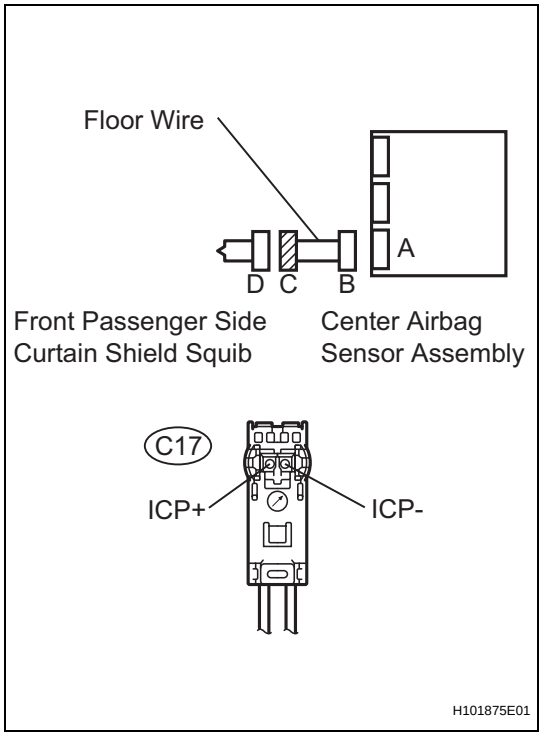
(a) Check that the floor wire connector (on the curtain shield airbag assembly RH side) is not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

8 CHECK FLOOR WIRE



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - Body ground	Ignition switch ON	Below 1 V
C17-2 (ICP-) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - C17-2 (ICP-)	Always	Below 1 Ω
C17-1 (ICP+) - Body ground	Always	1 MΩ or higher
C17-2 (ICP-) - Body ground	Always	1 MΩ or higher

(g) Release the activation prevention mechanism built into connector B (See page RS-28).
(h) Measure the resistance.

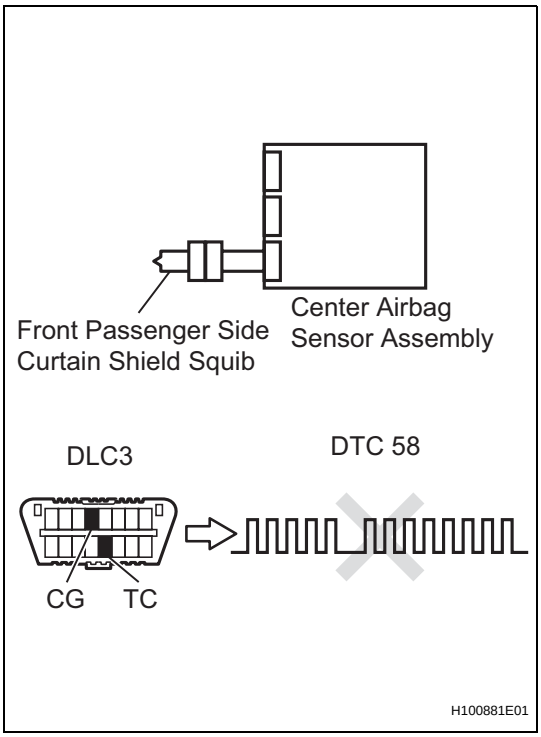
Standard resistance

Tester Connection	Condition	Specified Condition
C17-1 (ICP+) - C17-2 (ICP-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

9	REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (CURTAIN SHIELD AIRBAG (FRONT PASSENGER SEAT SIDE) SQUIB)



(a) Replace the curtain shield airbag assembly RH (See page RS-587).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the connectors to the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC 58 is not output.

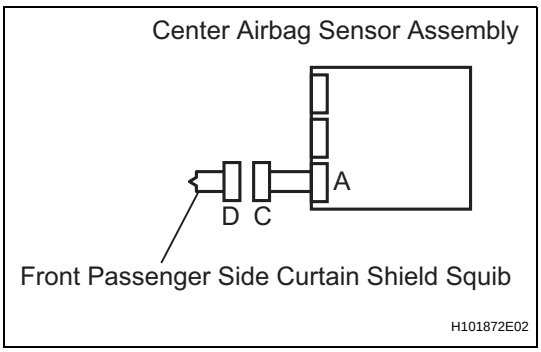
HINT:
DTCs other than 58 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).

OK:

DTC B1835 is not output.

RS

HINT:
DTCs other than B1835 may be output at this time, but they are not related to this check.

OK → Go to step 12

HINT:
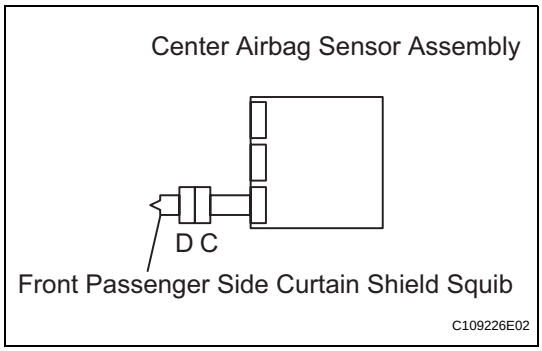
If continuing from step 11, begin from (c). If continuing from any other step, being from (a).

RS



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the curtain shield airbag assembly RH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1835, B1836, B1837 and B1838 are not output.

HINT:
DTCs other than B1835, B1836, B1837 or B1838 may be output at this time, but they are not related to this check.

NG → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1900/73	Short in Driver Side Front Pretensioner Squib Circuit

DTC	B1901/73	Open in Driver Side Front Pretensioner Squib Circuit

DTC	B1902/73	Short to GND in Driver Side Front Pretensioner Squib Circuit

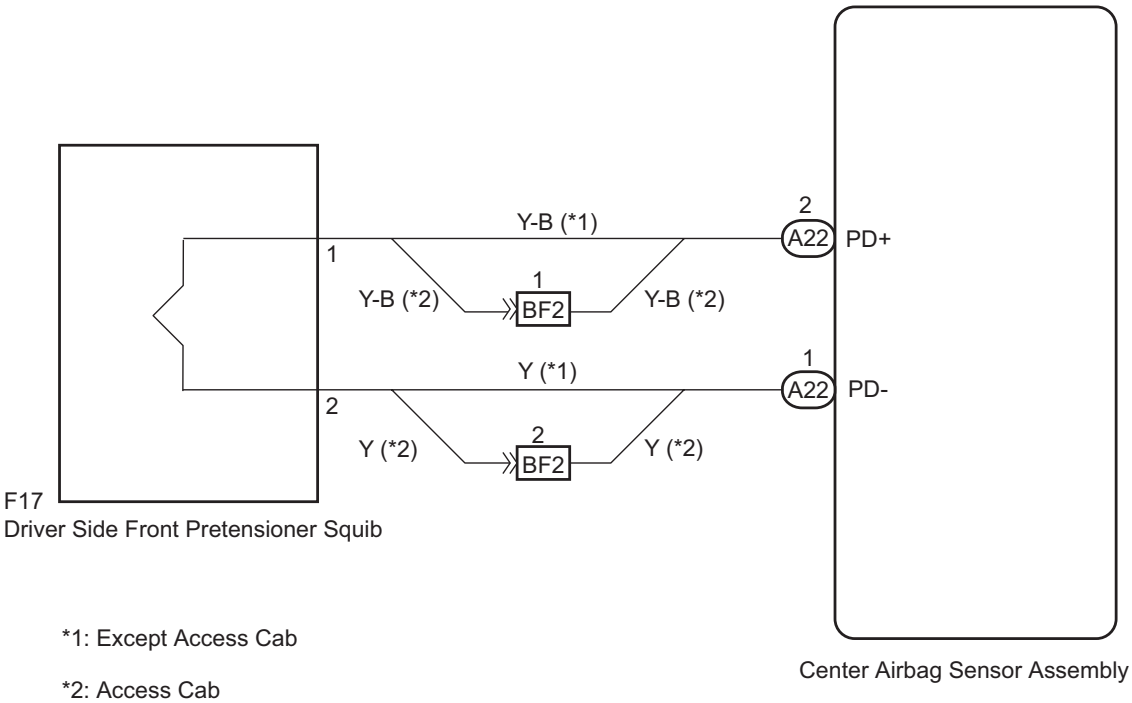
DTC	B1903/73	Short to B+ in Driver Side Front Pretensioner Squib Circuit

DESCRIPTION

The pretensioner squib (driver seat side) circuit consists of the center airbag sensor assembly and the front seat outer belt assembly LH.
This circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the pretensioner squib (driver seat side) circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1900/73	• The center airbag sensor assembly receives a line short circuit signal in the pretensioner squib (driver seat side) circuit for 2 seconds • Pretensioner squib (driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • No. 2 rear door wire (*1) • Front seat outer belt assembly LH (Pretensioner squib [driver seat side]) • Center airbag sensor assembly
B1901/73	• The center airbag sensor assembly receives an open circuit signal in the pretensioner squib (driver seat side) circuit for 2 seconds • Pretensioner squib (driver seat side) malfunction • Center airbag sensor assembly center malfunction	• No. 2 floor wire • No. 2 rear door wire (*1) • Front seat outer belt assembly LH (Pretensioner squib [driver seat side]) • Center airbag sensor assembly
B1902/73	• The center airbag sensor assembly receives a short circuit to ground signal in the pretensioner squib (driver seat side) circuit for 0.5 seconds • Pretensioner squib (driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • No. 2 rear door wire (*1) • Front seat outer belt assembly LH (Pretensioner squib [driver seat side]) • Center airbag sensor assembly
B1903/73	• The center airbag sensor assembly receives a short circuit to B+ signal in the pretensioner squib (driver seat side) circuit for 0.5 seconds • Pretensioner squib (driver seat side) malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • No. 2 rear door wire (*1) • Front seat outer belt assembly LH (Pretensioner squib [driver seat side]) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.
(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC B1900 is output.	A
DTC B1901 is output.	B
DTC B1902 is output.	C

19 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly LH side) is not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE (EXCEPT ACCESS CAB)**

NG → **REPAIR OR REPLACE NO. 2 REAR DOOR WIRE (ACCESS CAB)**

OK

20 CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH.
Result

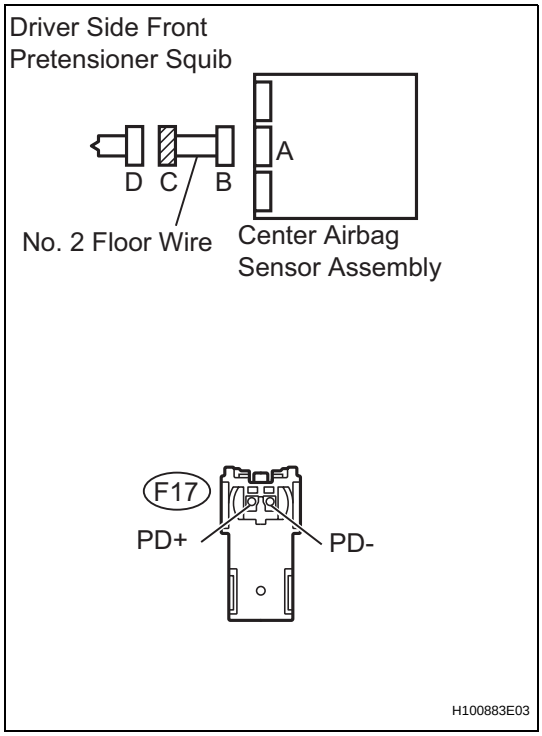
Condition	Proceed to
Normal (Expect access cab)	A
Normal (Access cab)	B
Abnormal	C

B → **Go to step 22**

C → **CONNECT CONNECTORS**

A

21	CHECK DRIVER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (TO B+)



(a) Disconnect the floor wire connectors from the center airbag sensor assembly and front seat outer belt assembly LH.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

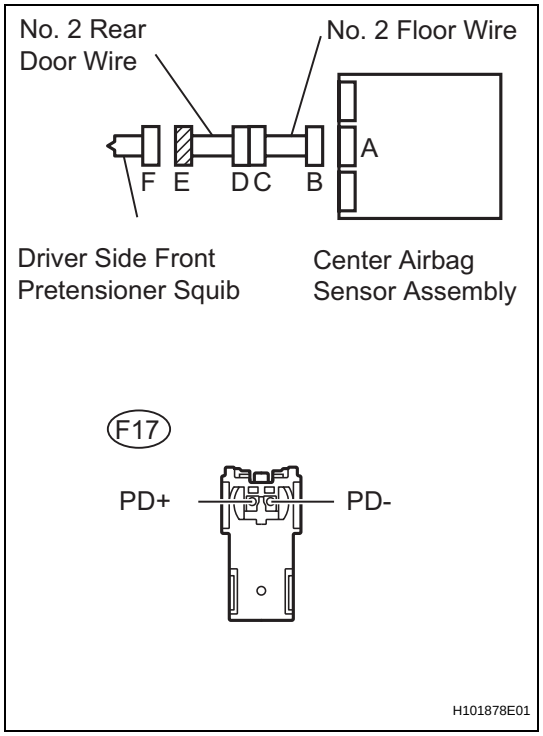
Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 24**

NG

REPAIR OR REPLACE NO. 2 FLOOR WIRE

22 CHECK DRIVER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (TO B+)



(a) Disconnect the No. 2 floor wire connector from the center airbag sensor assembly.
(b) Disconnect the No. 2 rear door wire connector from the front seat outer belt assembly LH.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the resistance.

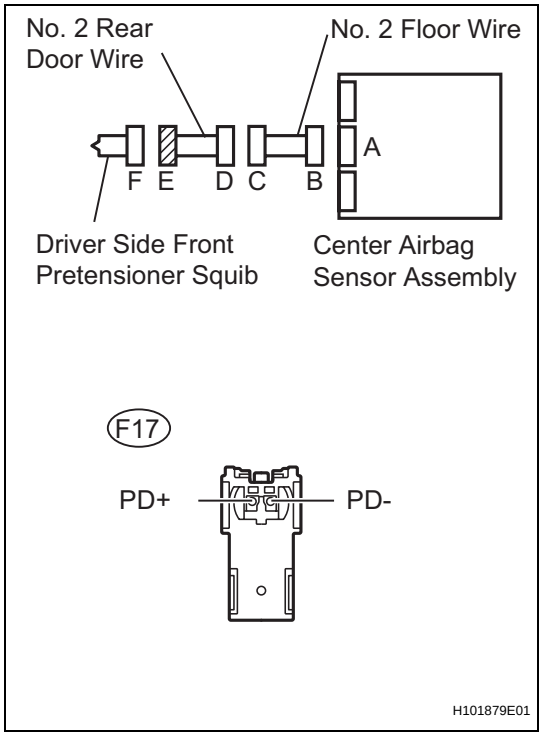
Standard voltage

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 26**

NG

23 CHECK NO. 2 REAR DOOR WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 2 floor wire connector from the No. 2 rear door wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the resistance.

Standard voltage

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

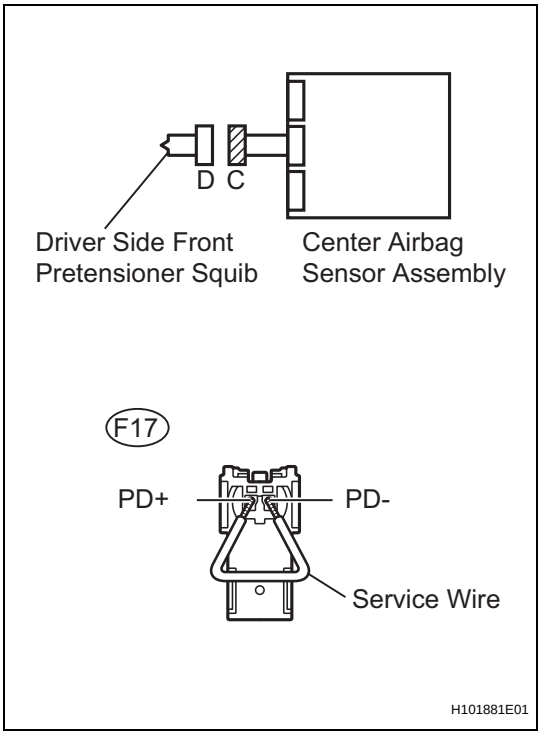
NG → **REPAIR OR REPLACE NO. 2 REAR DOOR WIRE**

RS

OK

REPAIR OR REPLACE NO. 2 FLOOR WIRE

24	CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 21, begin from (a). If continuing from any other step, begin from (c).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect F17-1 (PD+) and F17-2 (PD-) of connector C.

NOTICE:

- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1901, B1902 and B1903 are not output.

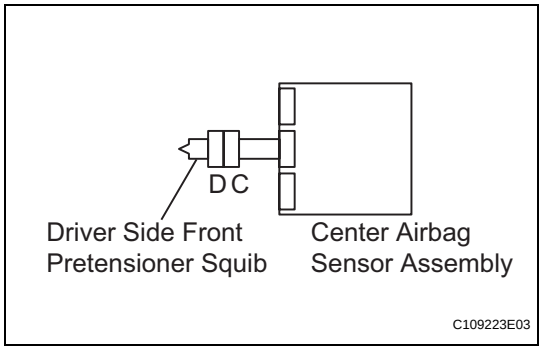
HINT:
DTCs other than B1901, B1902 or B1903 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

RS

OK

25	CHECK FRONT SEAT OUTER BELT ASSEMBLY LH



HINT:
If continuing from step 24, begin from (c). If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the front seat outer belt assembly LH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1900, B1901, B1902 and B1903 are not output.

HINT:
DTCs other than B1900, B1901, B1902 or B1903 may be output at this time, but they are not related to this check.

NG → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH**

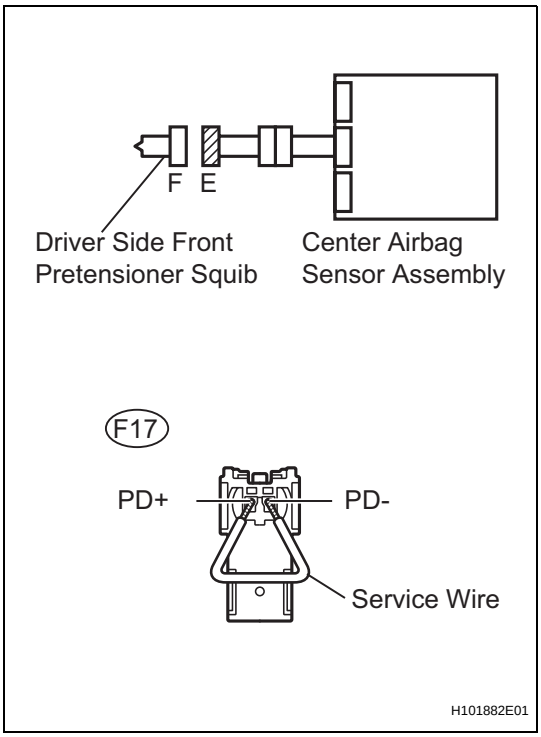
OK

USE SIMULATION METHOD TO CHECK

26	REPLACE CENTER AIRBAG SENSOR ASSEMBLY

RS

HINT:
If continuing from step 22, begin from (a). If continuing from any other step, begin from (c).



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect F17-1 (PD+) and F17-2 (PD-) of connector C.

NOTICE:

- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

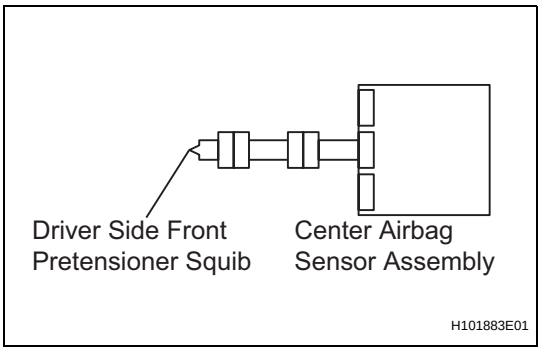
DTC B1901, B1902 and B1903 are not output.

HINT:
DTCs other than B1901, B1902 or B1903 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

27	CHECK FRONT SEAT OUTER BELT ASSEMBLY LH



HINT:
If continuing from step 26, begin from (c). If continuing from any other step, being from (a).
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the front seat outer belt assembly LH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

RS

OK:

DTC B1900, B1901, B1902 and B1903 are not output.

HINT:

DTCs other than B1900, B1901, B1902 or B1903 may be output at this time, but they are not related to this check.

NG → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH**

OK →

USE SIMULATION METHOD TO CHECK

28 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE (EXCEPT ACCESS CAB)**

NG → **REPAIR OR REPLACE NO. 2 REAR DOOR WIRE (ACCESS CAB)**

OK →

29 CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH.

Result

Condition	Proceed to
Normal (Expect access cab)	A
Normal (Access cab)	B
Abnormal	C

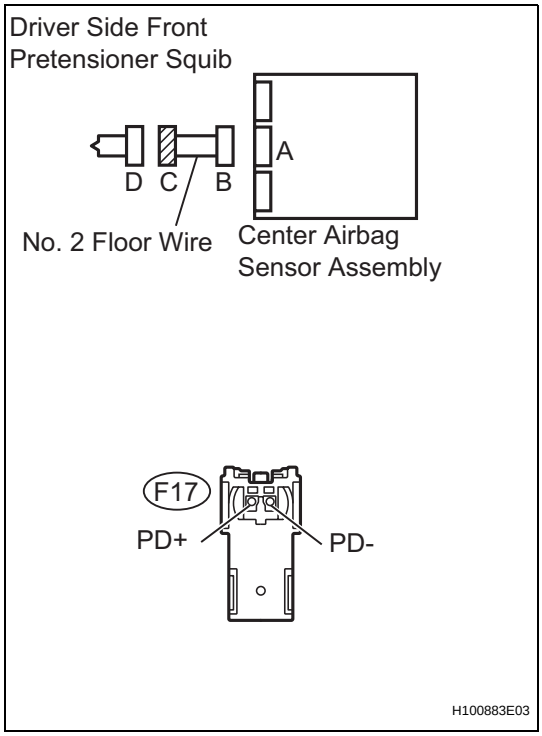
RS

30 CHECK DRIVER SIDE FRONT PRETENSIONER SQUIB CIRCUIT



(a) Disconnect the floor wire connectors from the center airbag sensor assembly and front seat outer belt assembly LH.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

(e) Turn the ignition switch to the LOCK position.
(f) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(g) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	Below 1 Ω
F17-1 (PD+) - Body ground	Always	1 MΩ or higher
F17-2 (PD-) - Body ground	Always	1 MΩ or higher

(h) Release the activation prevention mechanism built into connector B (See page RS-28).
(i) Measure the resistance.

Standard resistance

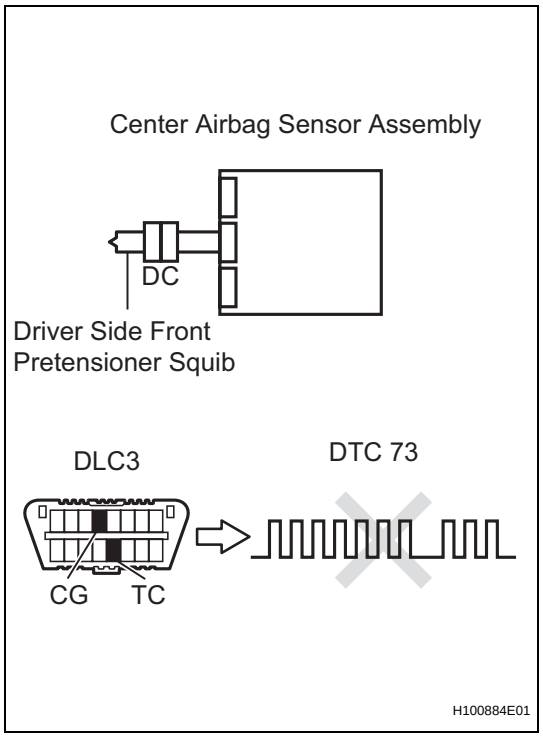
Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 2 FLOOR WIRE**

OK

RS

31	CHECK FRONT SEAT OUTER BELT ASSEMBLY LH (PRETENSIONER SQUIB (DRIVER SEAT SIDE))



(a) Replace the front seat outer belt assembly LH (See page SB-16, SB-36 or SB-27).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the connectors to the center airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC 73 is not output.

HINT:
DTCs other than 73 may be output at this time, but they are not related to this check.

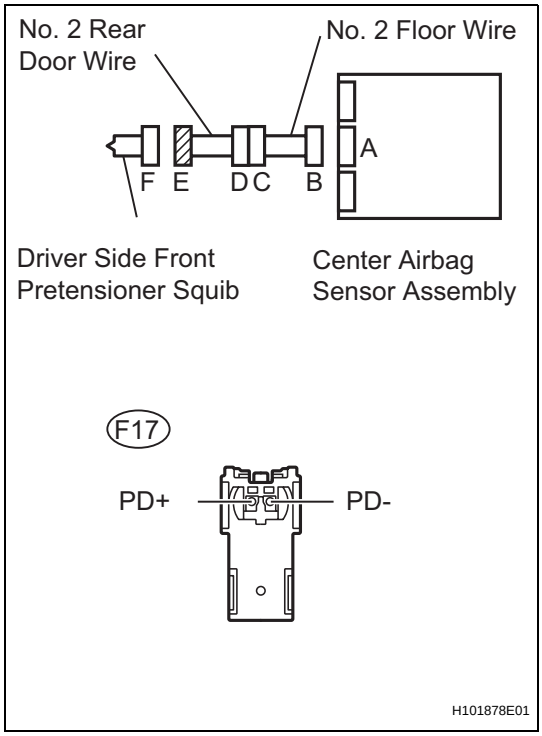
NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

RS

32 CHECK DRIVER SIDE FRONT PRETENSIONER SQUIB CIRCUIT



(a) Disconnect the No. 2 floor wire connector from the center airbag sensor assembly.
(b) Disconnect the No. 2 rear door wire connector from the front sear outer belt assembly LH.
(c) Connect the negative (-) terminal cable from the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

(f) Turn the ignition switch to the LOCK position.
(g) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(h) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	Below 1 Ω
F17-1 (PD+) - Body ground	Always	1 MΩ or higher
F17-2 (PD-) - Body ground	Always	1 MΩ or higher

(i) Release the activation prevention mechanism built into connector B (See page RS-28).
(j) Measure the resistance.

Standard resistance

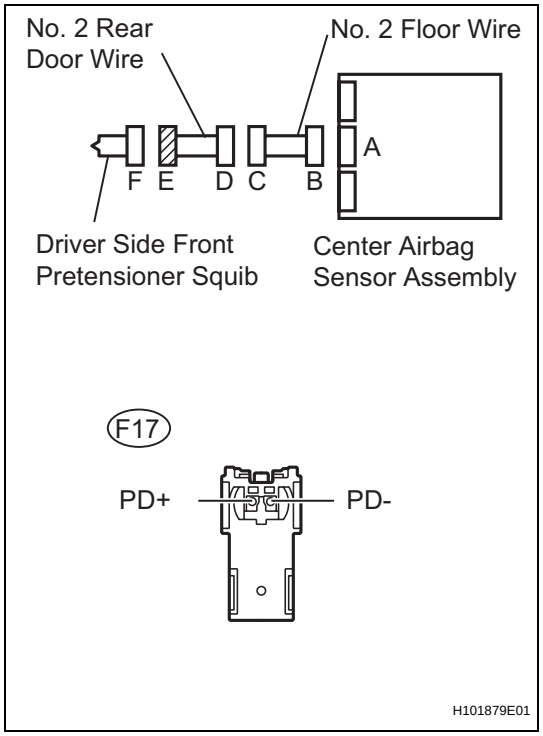
Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	1 MΩ or higher

RS

OK → **Go to step 34**

NG

33 REPAIR OR REPLACE NO. 2 REAR DOOR WIRE



(a) Disconnect the No. 2 floor wire connector from the No. 2 rear door wire.
(b) Connect the negative (-) terminal cable from the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - Body ground	Ignition switch ON	Below 1 V
F17-2 (PD-) - Body ground	Ignition switch ON	Below 1 V

(e) Turn the ignition switch to the LOCK position.
(f) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(g) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	Below 1 Ω
F17-1 (PD+) - Body ground	Always	1 MΩ or higher
F17-2 (PD-) - Body ground	Always	1 MΩ or higher

(h) Release the activation prevention mechanism built into connector B (See page RS-28).
(i) Measure the resistance.

Standard resistance

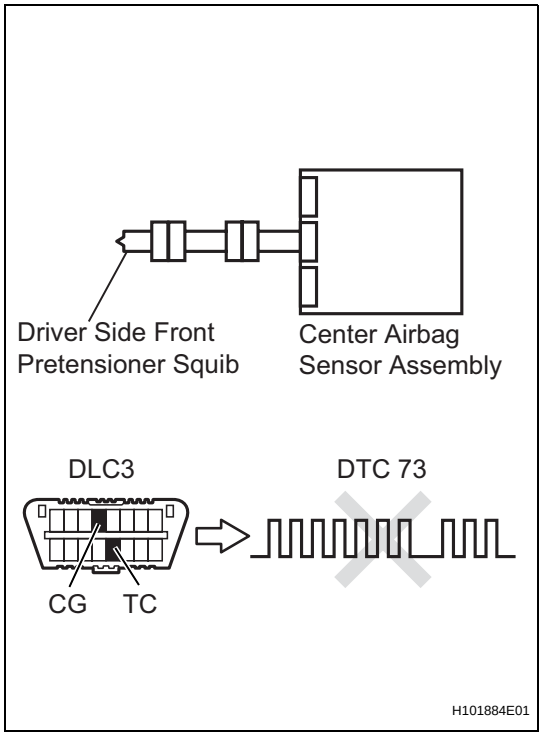
Tester Connection	Condition	Specified Condition
F17-1 (PD+) - F17-2 (PD-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 2 REAR DOOR WIRE**

OK

RS

34	REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH



(a) Replace the front seat outer belt assembly LH (See page SB-16, SB-36 or SB-27).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

(b) Connect the connectors to the center. Airbag sensor assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-34).
(f) Turn the ignition switch to the LOCK position.
(g) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-34).

OK:

DTC 73 is not output.

HINT:
DTCs other than 73 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

RS

DTC	B1905/74	Short in Front Passenger Side Front Pretensioner Squib Circuit

DTC	B1906/74	Open in Front Passenger Side Front Pretensioner Squib Circuit

DTC	B1907/74	Short to GND in Front Passenger Side Front Pretensioner Squib Circuit

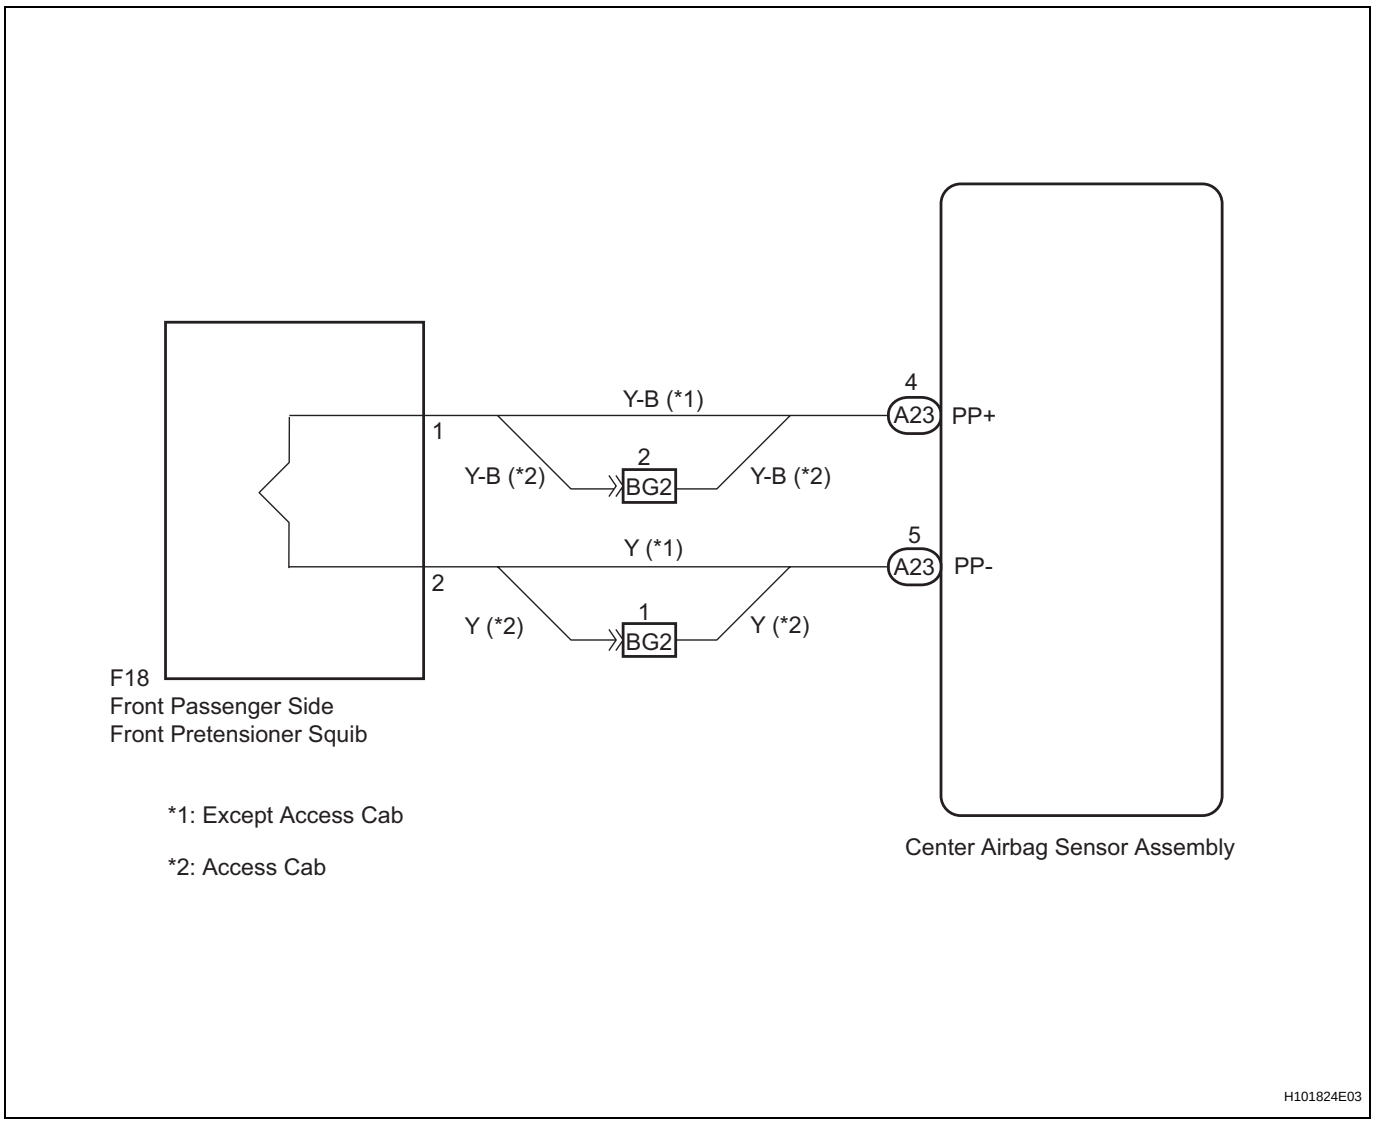
DTC	B1908/74	Short to B+ in Front Passenger Side Front Pretensioner Squib Circuit

DESCRIPTION

The pretensioner squib (front passenger seat side) circuit consists of the center airbag sensor assembly and the front seat outer belt assembly RH.
This circuit signals the SRS to deploy when airbag deployment conditions are met.
These DTCs are set when a malfunction is detected in the pretensioner squib (front passenger seat side) circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1905/74	• The center airbag sensor assembly receives a line short circuit signal in the pretensioner squib (front passenger seat side) circuit for 2 seconds • Pretensioner squib (front passenger seat side) malfunction • Center airbag sensor assembly malfunction	• Floor wire • No. 1 rear door wire (*1) • Front seat outer belt assembly RH (Pretensioner squib [front passenger seat side]) • Center airbag sensor assembly
B1906/74	• The center airbag sensor assembly receives an open circuit signal in the pretensioner squib (front passenger seat side) circuit for 2 seconds • Pretensioner squib (front passenger seat side) malfunction • Center airbag sensor assembly malfunction	• Floor wire • No. 1 rear door wire (*1) • Front seat outer belt assembly RH (Pretensioner squib [front passenger seat side]) • Center airbag sensor assembly
B1907/74	• The center airbag sensor assembly receives a short circuit to ground signal in the pretensioner squib (front passenger seat side) circuit for 0.5 seconds • Pretensioner squib (front passenger seat side) malfunction • Center airbag sensor assembly malfunction	• Floor wire • No. 1 rear door wire (*1) • Front seat outer belt assembly RH (Pretensioner squib [front passenger seat side]) • Center airbag sensor assembly
B1908/74	• The center airbag sensor assembly receives a short circuit to B+ signal in the pretensioner squib (front passenger seat side) circuit for 0.5 seconds • Pretensioner squib (front passenger seat side) malfunction • Center airbag sensor assembly malfunction	• Floor wire • No. 1 rear door wire (*1) • Front seat outer belt assembly RH (Pretensioner squib [front passenger seat side]) • Center airbag sensor assembly

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK DTC

(a) Proceed to the appropriate step according to DTC readings.
(1) If using the intelligent tester (read the 5-digit DTCs): Using the intelligent tester, check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC B1905 is output.	A
DTC B1906 is output.	B
DTC B1907 is output.	C
DTC B1908 is output.	D

(2) If not using the intelligent tester (read the 2-digit DTCs): Check for DTCs (See page RS-34).
Result

Result	Proceed to
DTC 74 is output.	E

B → Go to step 9

C → Go to step 14

D → Go to step 19

E → Go to step 28

A

2	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly RH side) is not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE (EXCEPT ACCESS CAB)

NG → REPAIR OR REPLACE NO. 1 REAR DOOR WIRE (ACCESS CAB)

OK

RS

3	CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.

Result

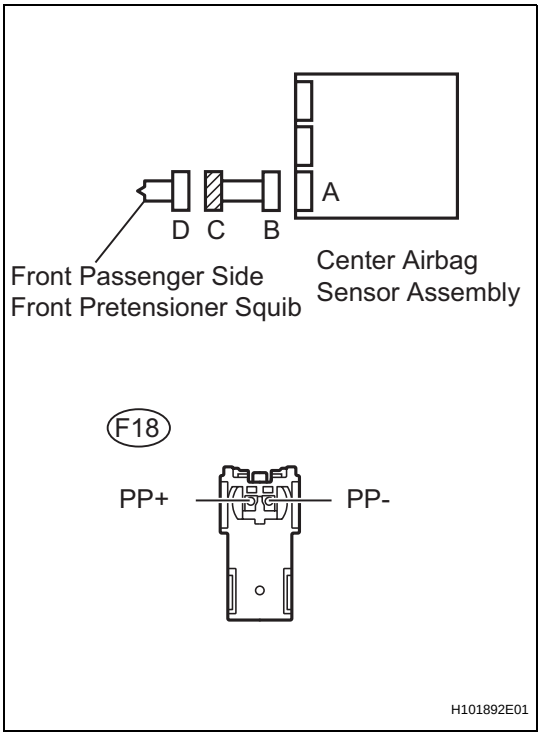
Condition	Proceed to
Normal (Except access cab)	A
Normal (Access cab)	B
Abnormal	C

B → Go to step 6

C → CONNECT CONNECTORS

A

4	CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (FOR SHORT)



(a) Disconnect the floor wire connectors from the center airbag sensor assembly and front seat outer belt assembly RH.

(b) Release the activation prevention mechanism built into connector B (See page RS-28).

(c) Measure the resistance.

Standard resistance

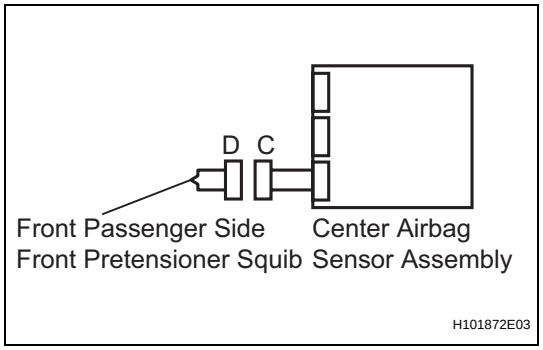
Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).
OK:
DTC B1905 is not output.

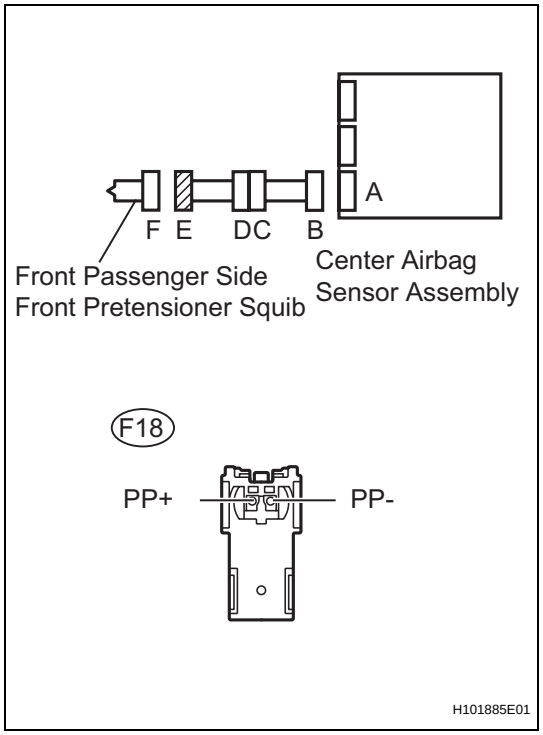
HINT:
DTCs other than B1905 may be output at this time, but they are not related to this check.

OK → **Go to step 25**

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

6	CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (FOR SHORT)



(a) Disconnect the floor wire connector from the center airbag sensor assembly.
(b) Disconnect the No. 1 rear door wire connector from the front seat outer belt assembly RH.
(c) Release the activation prevention mechanism built into connector B (See page RS-28).
(d) Measure the resistance.
Standard resistance

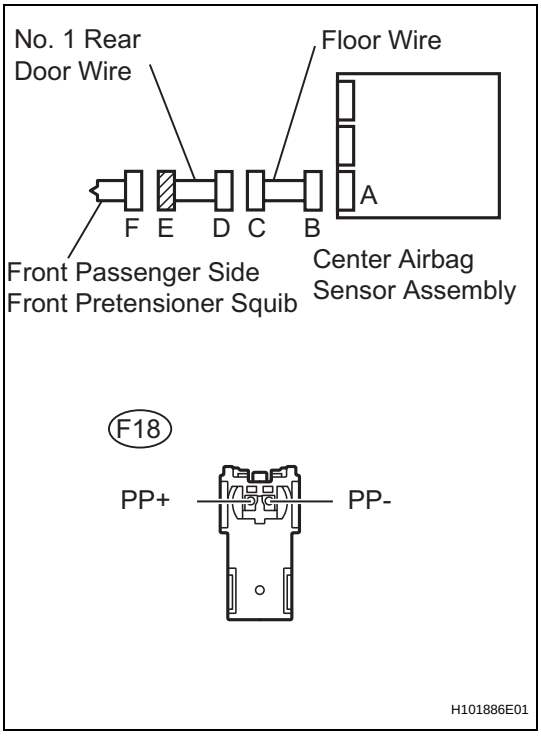
Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	1 MΩ or higher

OK → **Go to step 8**

RS

NG

7 CHECK NO. 1 REAR DOOR WIRE (FOR SHORT)



(a) Disconnect the floor wire connector from the No. 1 rear door wire.
(b) Release the activation prevention mechanism built into connector D (See page RS-28).
(c) Measure the resistance.

Standard resistance

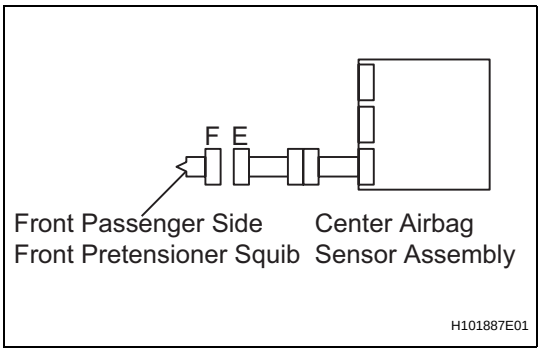
Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 REAR DOOR WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

8 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the floor wire connectors to the center airbag sensor assembly and No. 1 rear door wire.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(d) Clear any DTCs stored in the memory (See page RS-34).
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-34).

OK:

DTC B1905 is not output.

HINT:
DTCs other than B1905 may be output at this time, but they are not related to this check.

OK → **Go to step 27**

RS

NG

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

9	CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly RH side) is not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG	**REPAIR OR REPLACE FLOOR WIRE (EXCEPT ACCESS CAB)**
NG	**REPAIR OR REPLACE NO. 1 REAR DOOR WIRE (ACCESS CAB)**

OK

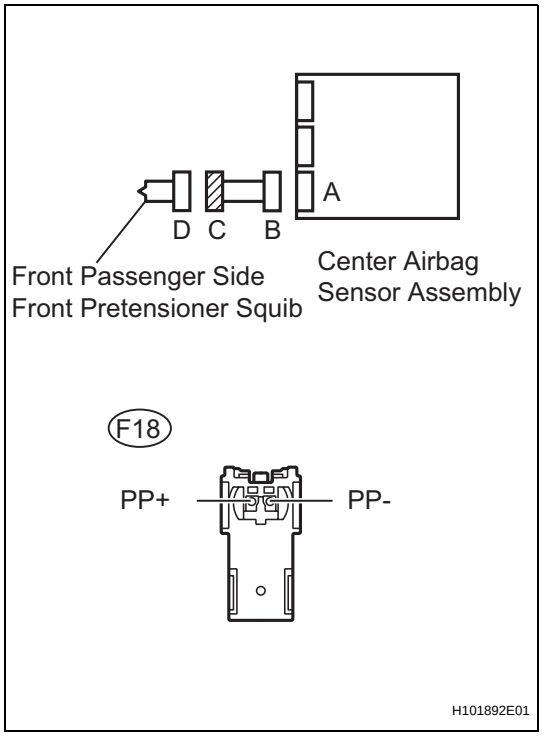
(a) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.

B	**Go to step 12**
C	**CONNECT CONNECTORS**

A

RS

11	CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (FOR OPEN)



(a) Disconnect the floor wire connectors from the center airbag sensor assembly and front seat outer belt assembly RH.
(b) Measure the resistance.

Standard resistance

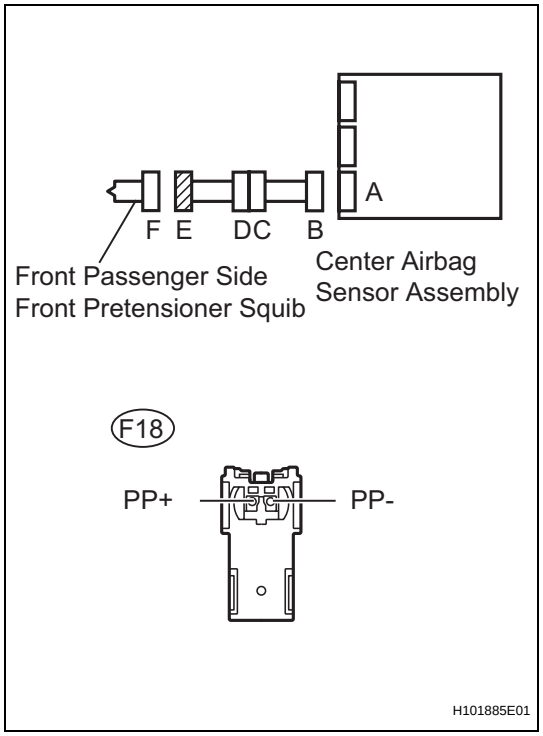
Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	Below 1 Ω

OK → **Go to step 24**

NG

REPAIR OR REPLACE FLOOR WIRE

12 CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (FOR OPEN)



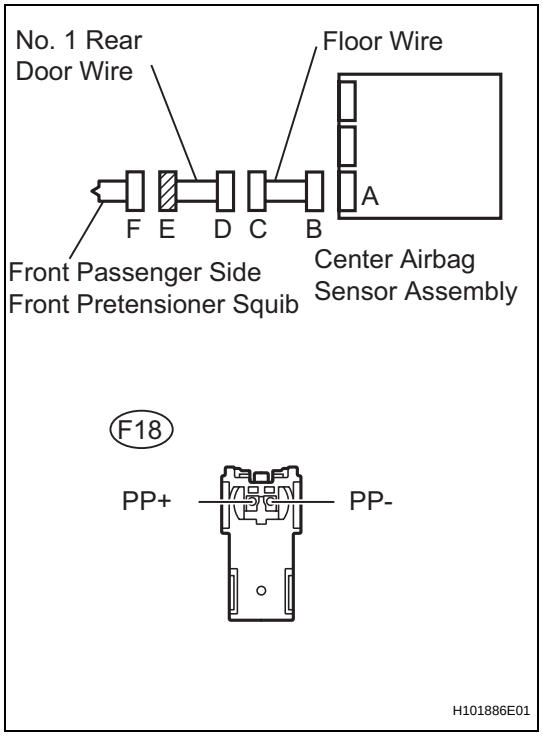
(a) Disconnect the floor wire connector from the center airbag sensor assembly.
(b) Disconnect the No. 1 rear door wire connector from the front seat outer belt assembly RH.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	Below 1 Ω

OK → **Go to step 26**

NG

13 CHECK NO. 1 REAR DOOR WIRE (FOR OPEN)



(a) Disconnect the floor wire connector from the No. 1 rear door wire.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
F18-1 (PP+) - F18-2 (PP-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 REAR DOOR WIRE**

RS

OK

REPAIR OR REPLACE FLOOR WIRE

14 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly RH side) is not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE (EXCEPT ACCESS CAB)**

NG → **REPAIR OR REPLACE NO. 1 REAR DOOR WIRE (ACCESS CAB)**

OK

15 CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the enter airbag sensor assembly and the front airbag sensor RH.
Result

A

RS

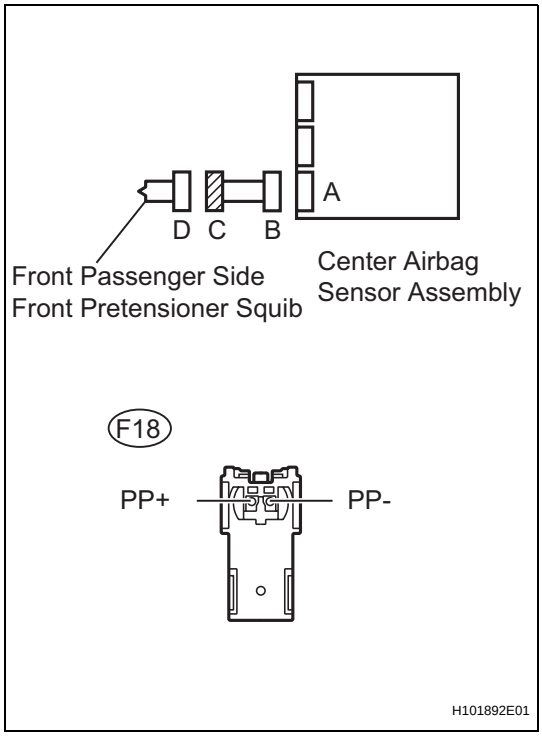
21	CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (TO B+)



(a) Disconnect the floor wire connectors from the center airbag sensor assembly and front seat outer belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

Standard voltage

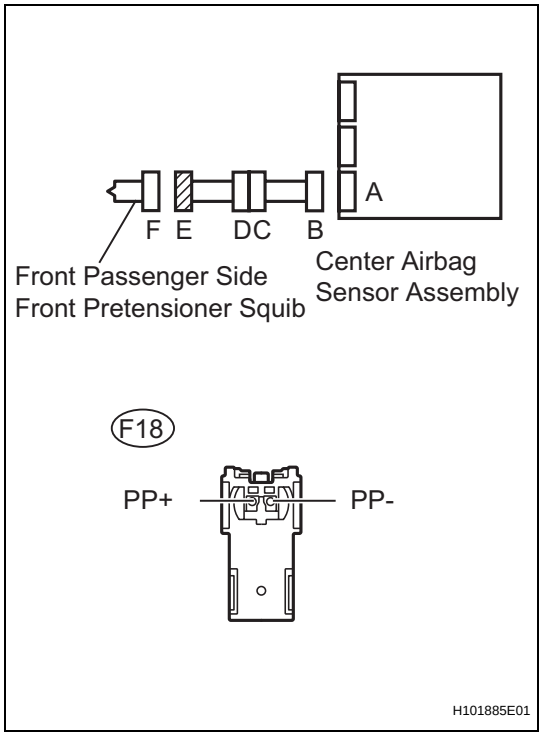
Tester Connection	Condition	Specified Condition
F18-1 (PP+) - Body ground	Ignition switch ON	Below 1 V
F18-2 (PP-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 24**

NG

REPAIR OR REPLACE FLOOR WIRE

22 CHECK FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT (TO B+)



(a) Disconnect the floor wire connector from the center airbag sensor assembly.
(b) Disconnect the No. 1 rear door wire connector from the front seat outer belt assembly RH.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the ON position.
(e) Measure the voltage.

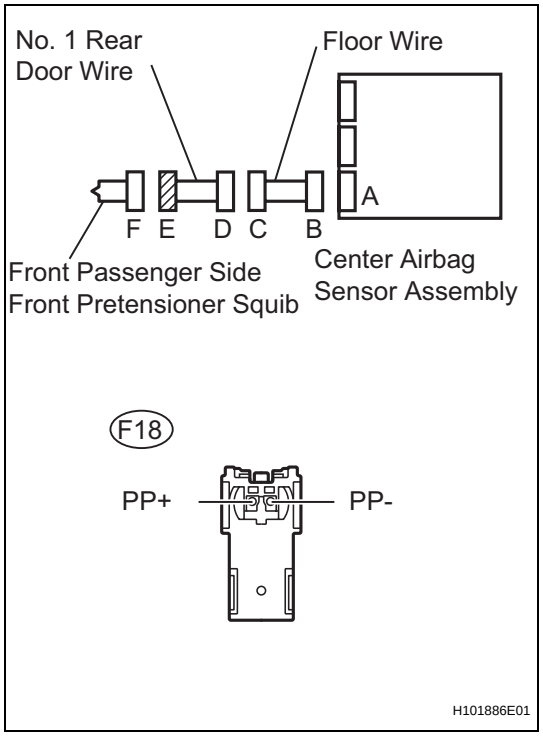
Standard voltage

Tester Connection	Condition	Specified Condition
F18-1 (PP+) - Body ground	Ignition switch ON	Below 1 V
F18-2 (PP-) - Body ground	Ignition switch ON	Below 1 V

OK → **Go to step 26**

NG

23 CHECK NO. 1 REAR DOOR WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the floor wire connector from the No. 1 rear door wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Measure the resistance.

Standard voltage

Tester Connection	Condition	Specified Condition
F18-1 (PP+) - Body ground	Ignition switch ON	Below 1 V
F18-2 (PP-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 REAR DOOR WIRE**

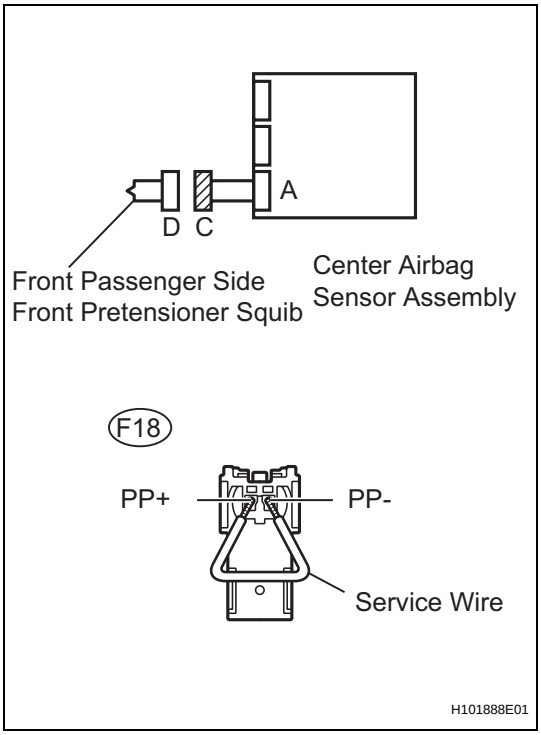
REPAIR OR REPLACE FLOOR WIRE

24 CHECK CENTER AIRBAG SENSOR ASSEMBLY



HINT:
If continuing from step 21, begin from (a). If continuing from any other step, begin from (c).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect F18-1 (PP+) and F18-2 (PP-) of connector C.

NOTICE:
- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:
DTC B1906, B1907 and B1908 are not output.

HINT:
DTCs other than B1906, B1907 or B1908 may be output at this time, but they are not related to this check.

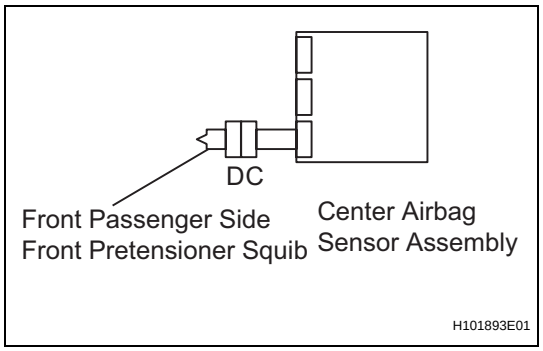
NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

RS

OK

25 CHECK FRONT SEAT OUTER BELT ASSEMBLY RH

HINT:
If continuing from step 24, begin from (c). If continuing from any other step, being from (a).



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the front seat outer belt assembly RH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

DTC B1905, B1906, B1907 and B1908 are not output.

HINT:
DTCs other than B1905, B1906, B1907 or B1908 may be output at this time, but they are not related to this check.

NG → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

OK

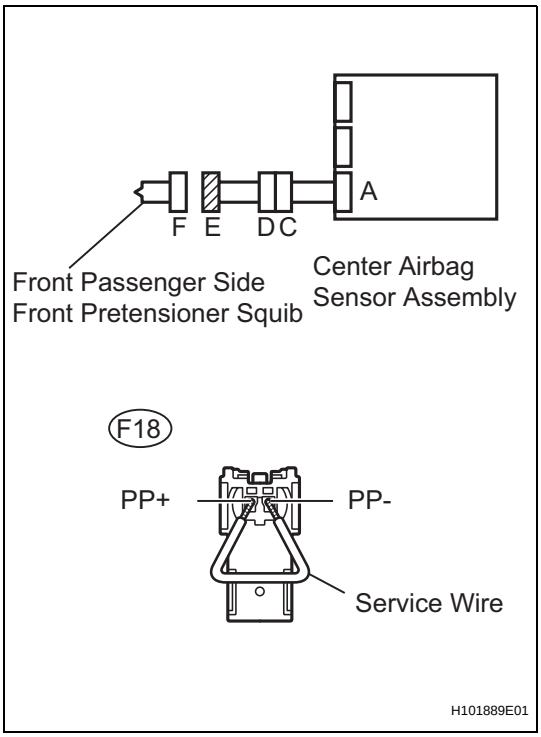
26	CHECK CENTER AIRBAG SENSOR ASSEMBLY

HINT:
If continuing from step 22, begin from (a). If continuing from any other step, begin from (c).

RS



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Using a service wire, connect F18-1 (PP+) and F18-2 (PP-) of connector E.

NOTICE:

- **Twist the end of the service wire in order to insert it into the connector.**
- **Do not forcibly insert the twisted service wire into the terminals of the connector when connecting.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

OK:

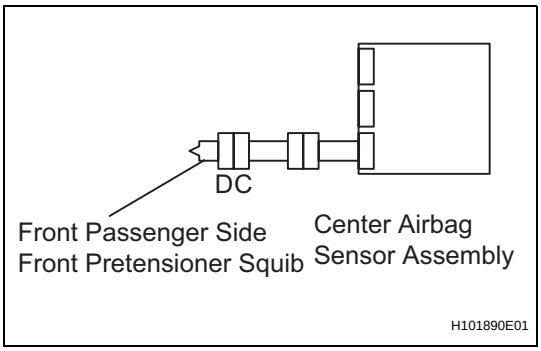
DTC B1906, B1907 and B1908 are not output.

HINT:
DTCs other than B1906, B1907 or B1908 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

27	CHECK FRONT SEAT OUTER BELT ASSEMBLY RH



HINT:
If continuing from step 26, begin from (c). If continuing from any other step, being from (a).

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the service wire from connector C.
(d) Connect the connector to the front seat outer belt assembly RH.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(g) Clear any DTCs stored in the memory (See page RS-34).
(h) Turn the ignition switch to the LOCK position.
(i) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-34).

RS

OK:

DTC B1900, B1901, B1902 and B1903 are not output.

HINT:

DTCs other than B1900, B1901, B1902 or B1903 may be output at this time, but they are not related to this check.

NG → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

OK

OTHERS USE SIMULATION METHOD TO CHECK

28 CHECK CONNECTOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector (on the front seat outer belt assembly RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE (EXCEPT ACCESS CAB)**

NG → **REPAIR OR REPLACE NO. 1 REAR DOOR WIRE (ACCESS CAB)**

OK

29 CHECK CONNECTION OF CONNECTORS

(a) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.

RS

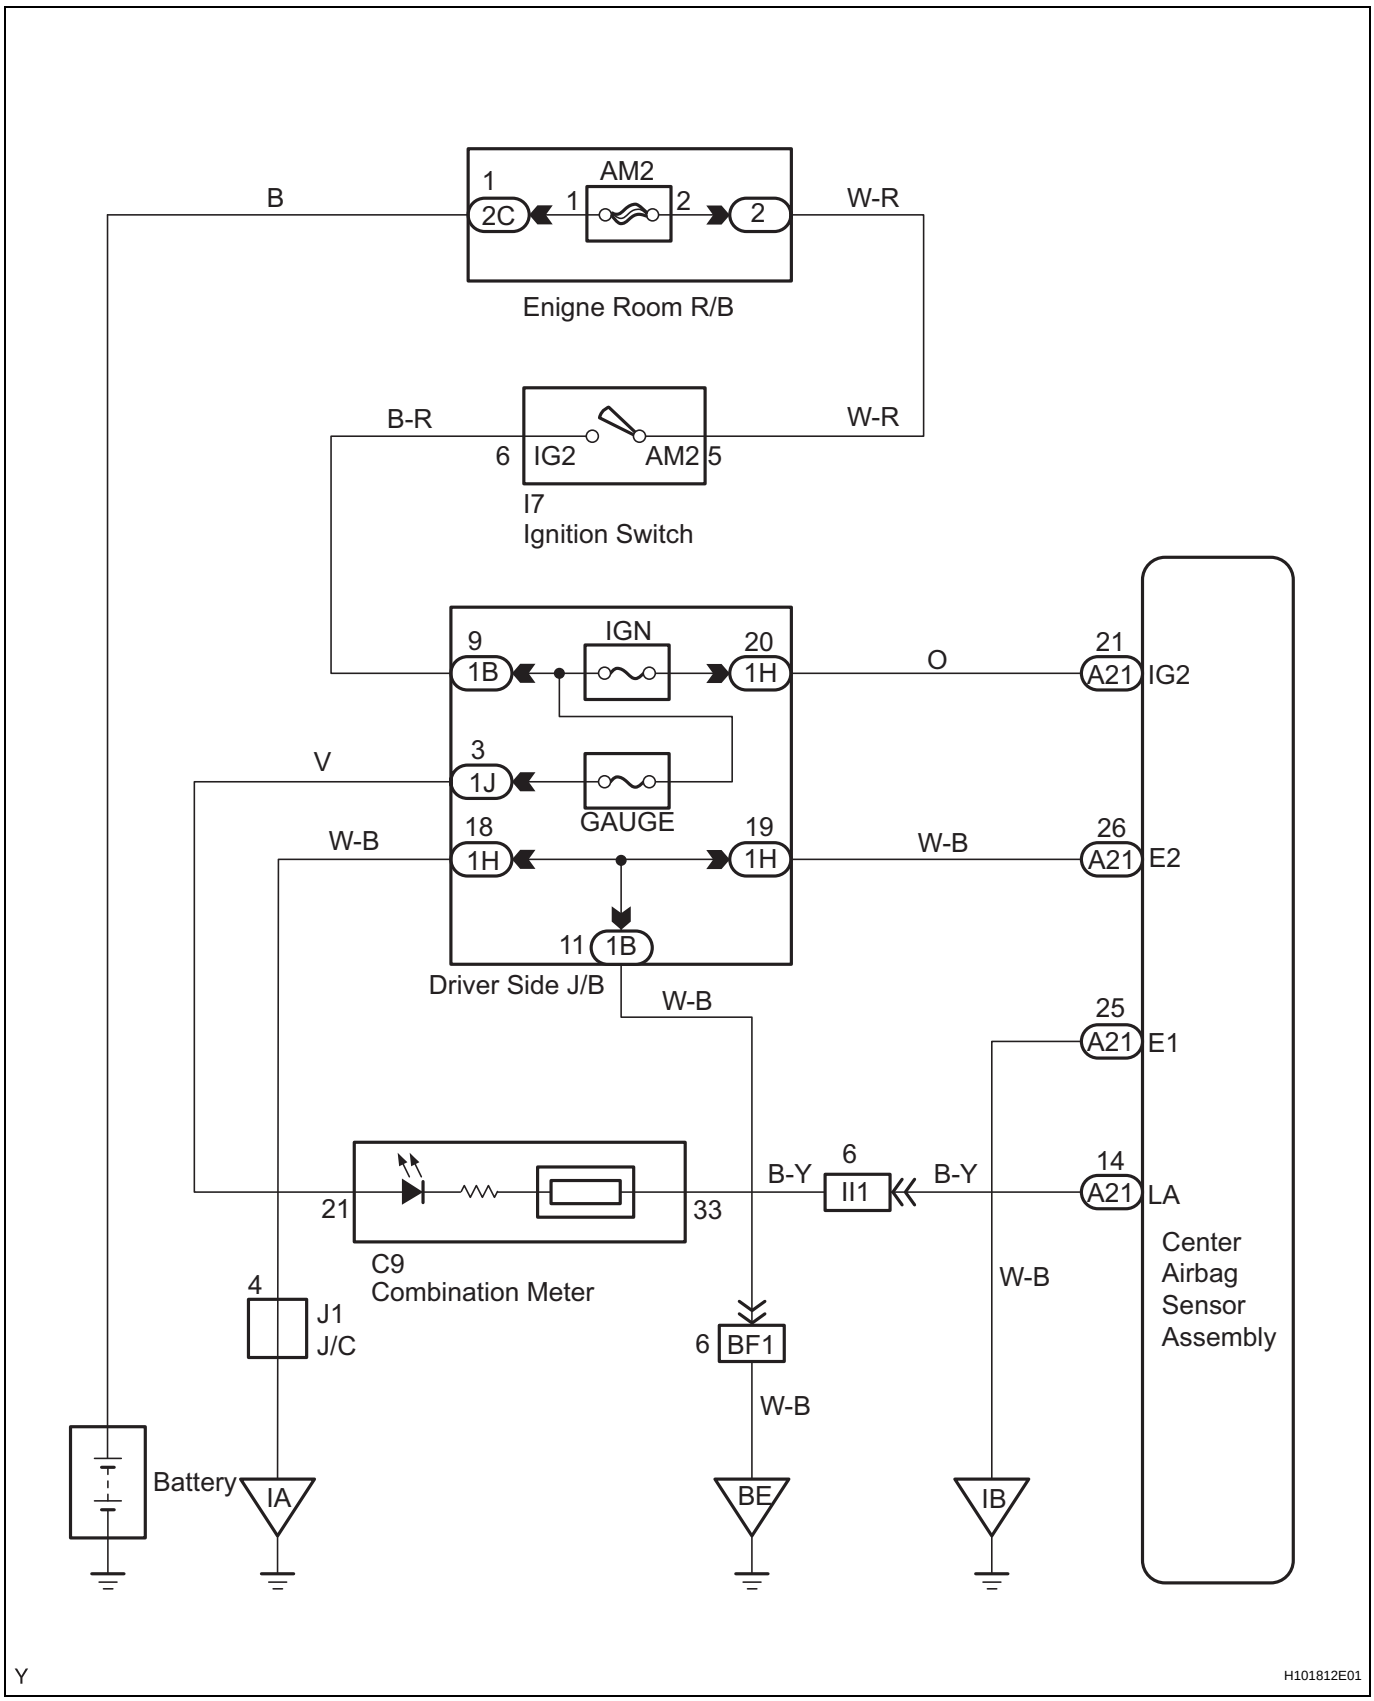
SRS Warning Light Remains ON

DESCRIPTION

The SRS warning light is located on the combination meter assembly.
When the SRS (supplemental restraint system) is functioning normally, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from the LOCK position to the ON position, and then turns off automatically. If there is a malfunction in the SRS, the SRS warning light illumination continues to inform the driver.
If the continuous illumination is caused by problems such as malfunctions in the SRS warning light circuit or a decreased source voltage in the center airbag sensor assembly, no DTCs are set.

WIRING DIAGRAM



RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Voltage:
11 to 14 V

NG → **REPAIR OR REPLACE BATTERY**

OK

2	CHECK CONNECTION OF CONNECTORS

(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Check that the connectors are properly connected to the center airbag sensor assembly and combination meter assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

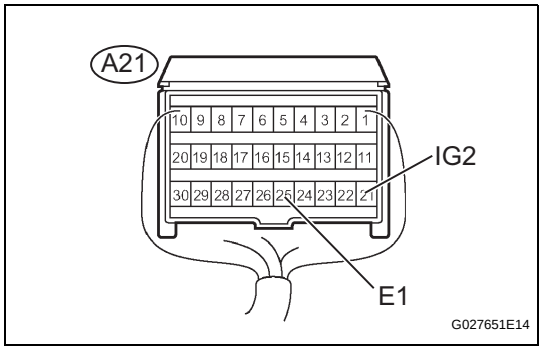
3	CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and combination meter assembly side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4 CHECK WIRE HARNESS (POWER SOURCE)



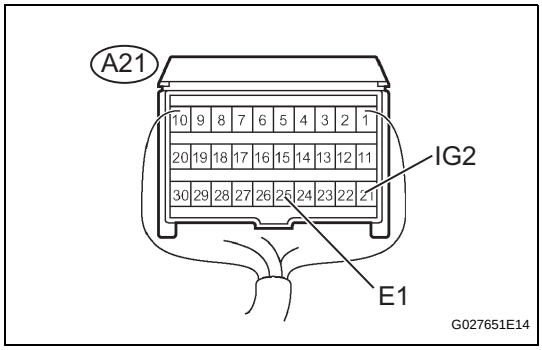
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
A21-21 (IG2) - A21-25 (E1)	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS (BATTERY - CENTER AIRBAG SENSOR ASSEMBLY)**

OK

5 CHECK POWER SOURCE AND ELECTRICAL SYSTEM COMPONENTS



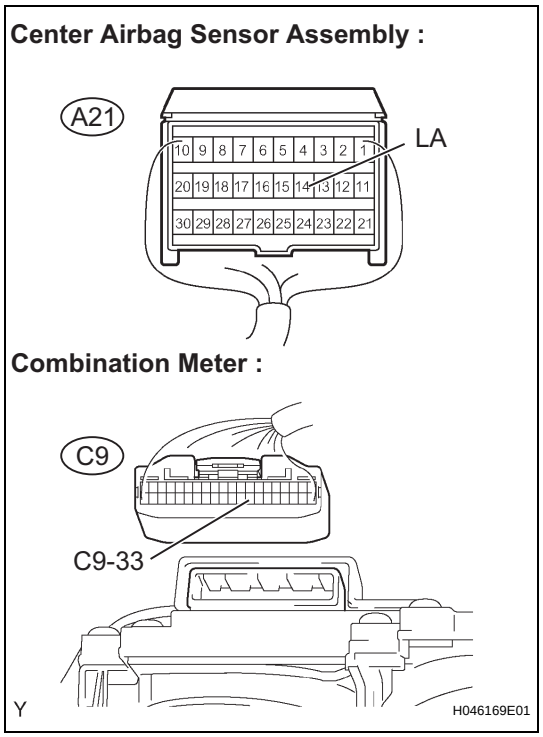
(a) Turn the ignition switch to the ON position.
(b) Turn on all electrical system components such as the defogger, wipers, head lamps and heater blower.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
A21-21 (IG2) - A21-25 (E1)	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE POWER SOURCE AND ELECTRICAL SYSTEM COMPONENTS**

OK

6	CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - COMBINATION METER ASSEMBLY)



(a) Disconnect the connector from the combination meter assembly.
(b) Measure the voltage and resistance.

Standard voltage

Tester Connection	Condition	Specified Condition
A21-14 (LA) - Body ground	Ignition switch ON	Below 1 V

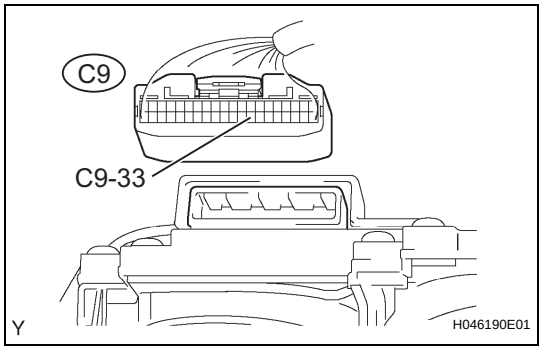
Standard resistance

Tester Connection	Condition	Specified Condition
A21-14 (LA) - C9-33	Always	Below 1 Ω
A21-14 (LA) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE WIRE HARNESS

OK

7	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the center airbag sensor assembly .
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position and wait for at least 6 seconds.
(f) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
C9-33 - Body ground	Ignition switch ON	10 to 14 V

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY

OK

REPLACE COMBINATION METER ASSEMBLY

RS

SRS Warning Light does not Come ON

DESCRIPTION

The SRS warning light is located on the combination meter assembly.
When the SRS (supplemental restraint system) is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from the LOCK position to the ON position, and then turns off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver.
When terminals TC and CG of the DLC3 are connected, the SRS warning light blinks to indicate the DTCs stored in the center airbag sensor assembly.

WIRING DIAGRAM

See page RS-341.

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK BATTERY

(a) Measure the voltage battery.
Standard Voltage:
11 to 14 V

RS

NG → **REPAIR OR REPLACE BATTERY**

OK

2	CHECK CONNECTORS

(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Check that the connectors are properly connected to the center airbag sensor assembly and combination meter assembly.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS

OK

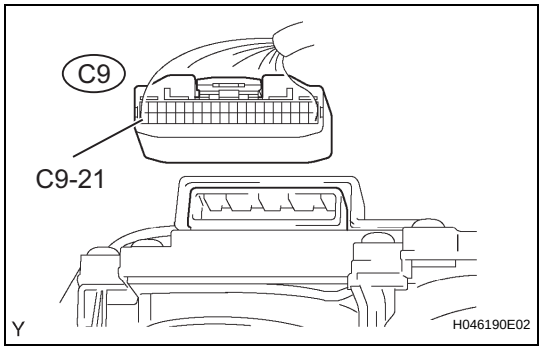
3	CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and combination meter assembly side) are not damaged (See page RS-28).
OK:
The connectors are not deformed or damaged.

NG → REPAIR OR REPLACE WIRE HARNESS

OK

4	CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BATTERY)



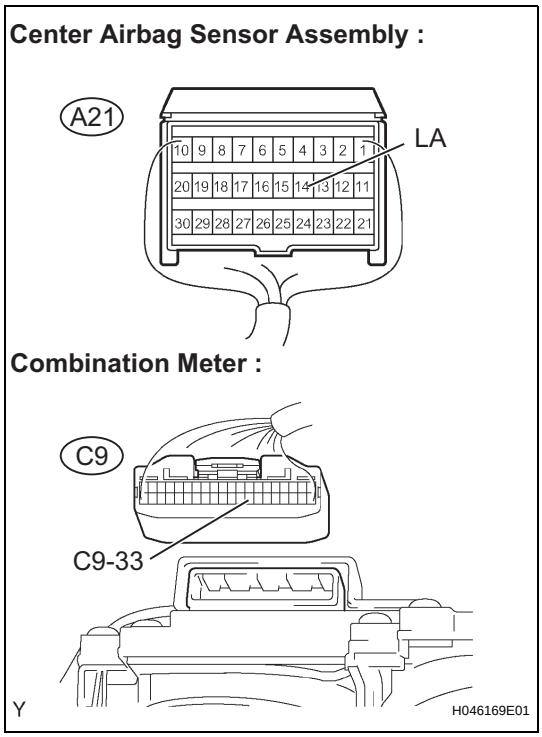
(a) Disconnect the connector from the combination meter assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch to the ON position and wait for at least 6 seconds.
(d) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
C9-21 - Body ground	Ignition switch ON	10 to 14 V

NG → REPAIR OR REPLACE WIRE HARNESS

OK

5 **CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - COMBINATION METER ASSEMBLY)**



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly .
(d) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-14 (LA) - C9-33	Always	Below 1 Ω
A21-14 (LA) - Body ground	Always	1 MΩ or higher

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
C9-33 - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

6 **CHECK COMBINATION METER**

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Check the SRS warning light operation.
OK:
The SRS warning light comes on.

NG → **REPLACE COMBINATION METER**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

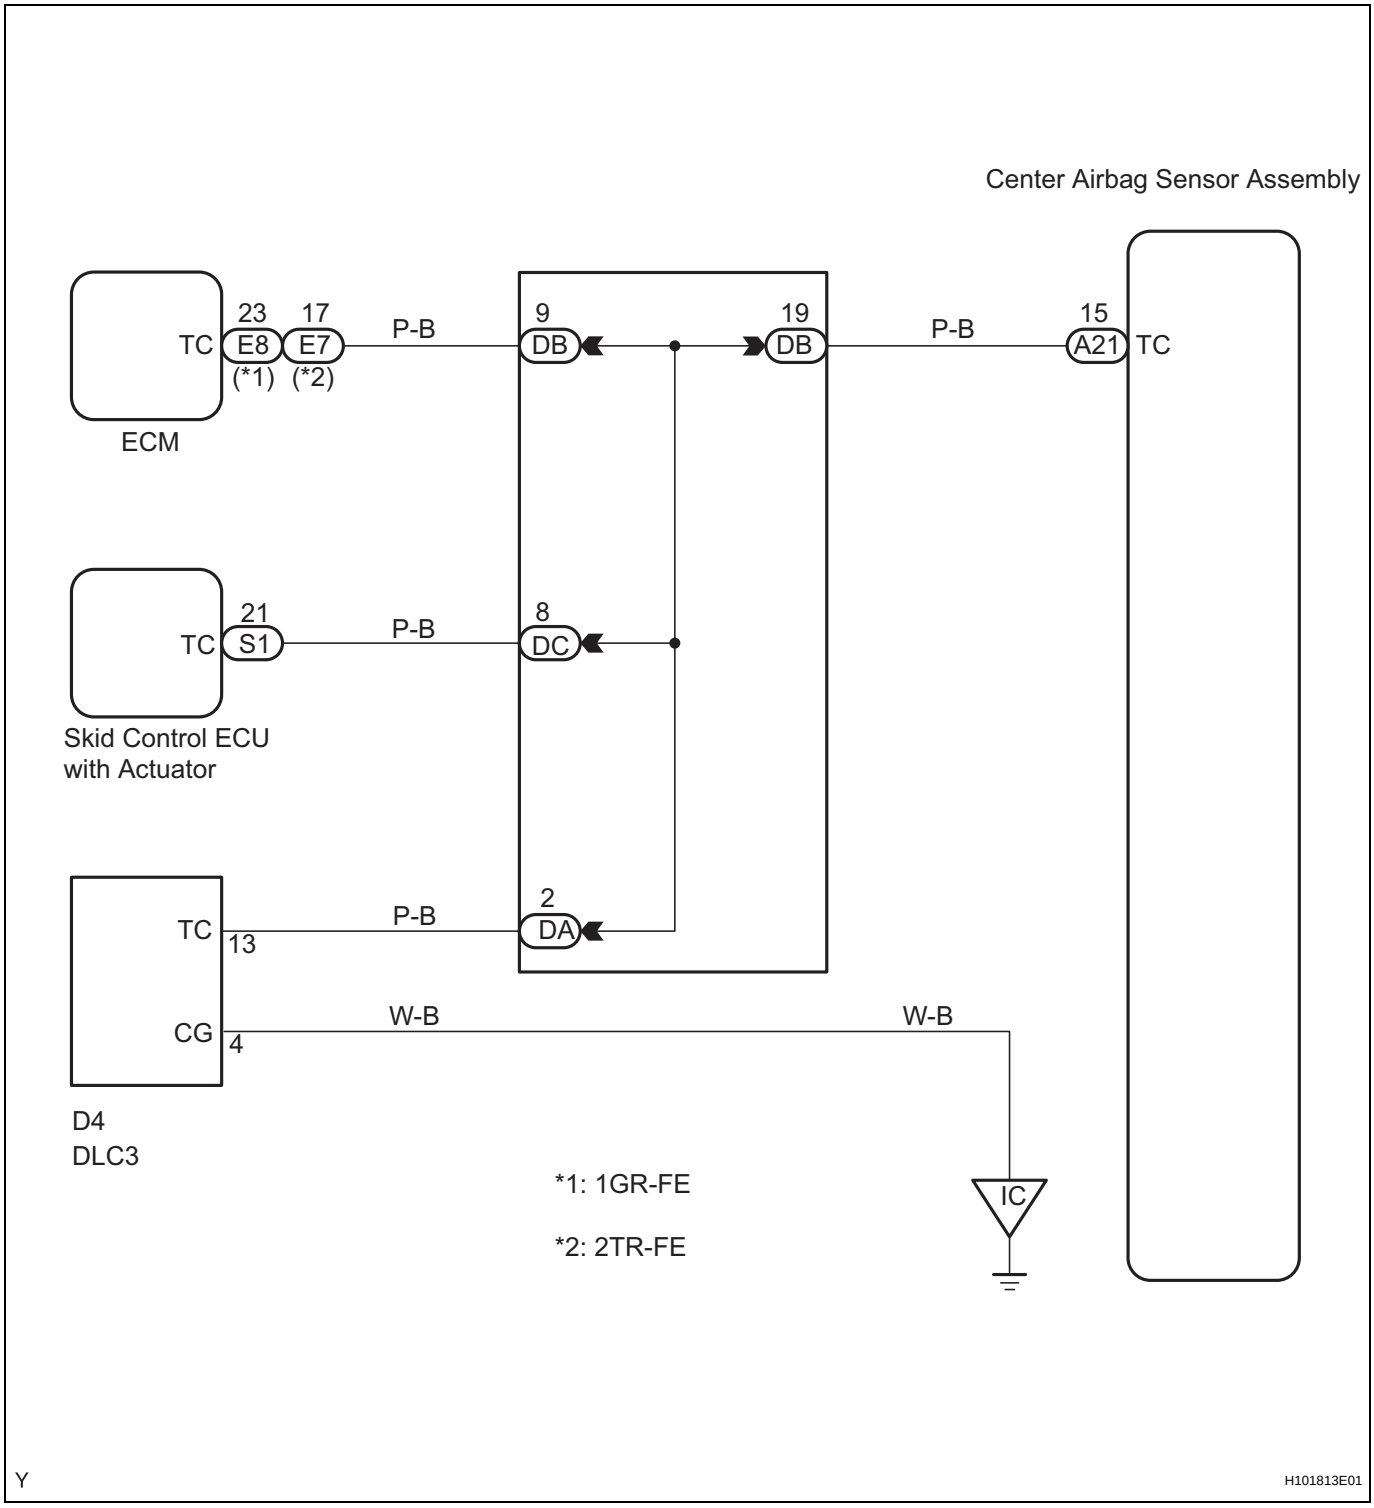
RS

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
The DTCs stored in the center airbag sensor assembly are displayed by blinking patterns of the SRS warning light.

WIRING DIAGRAM

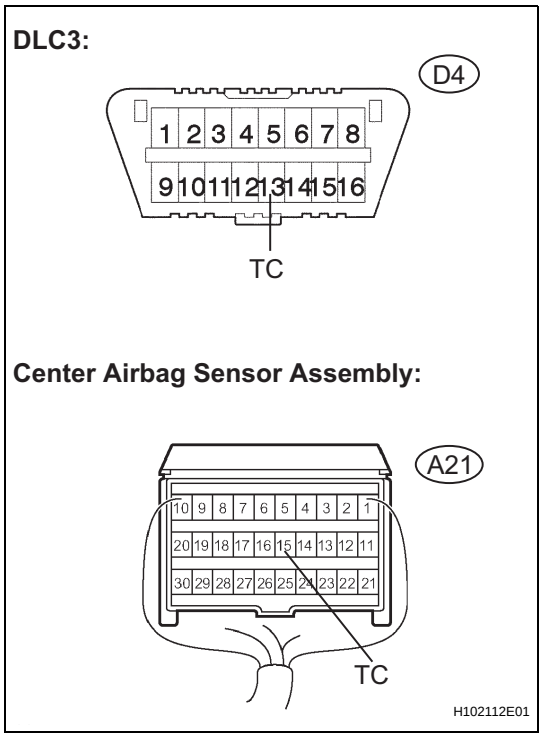


RS

HINT:
When all of the warning lights blink continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU is suspected.

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

1	CHECK WIRE HARNESS (DLC3 - CENTER AIRBAG SENSOR ASSEMBLY)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D4-13 (TC) - A21-15 (TC)	Always	Below 1 Ω

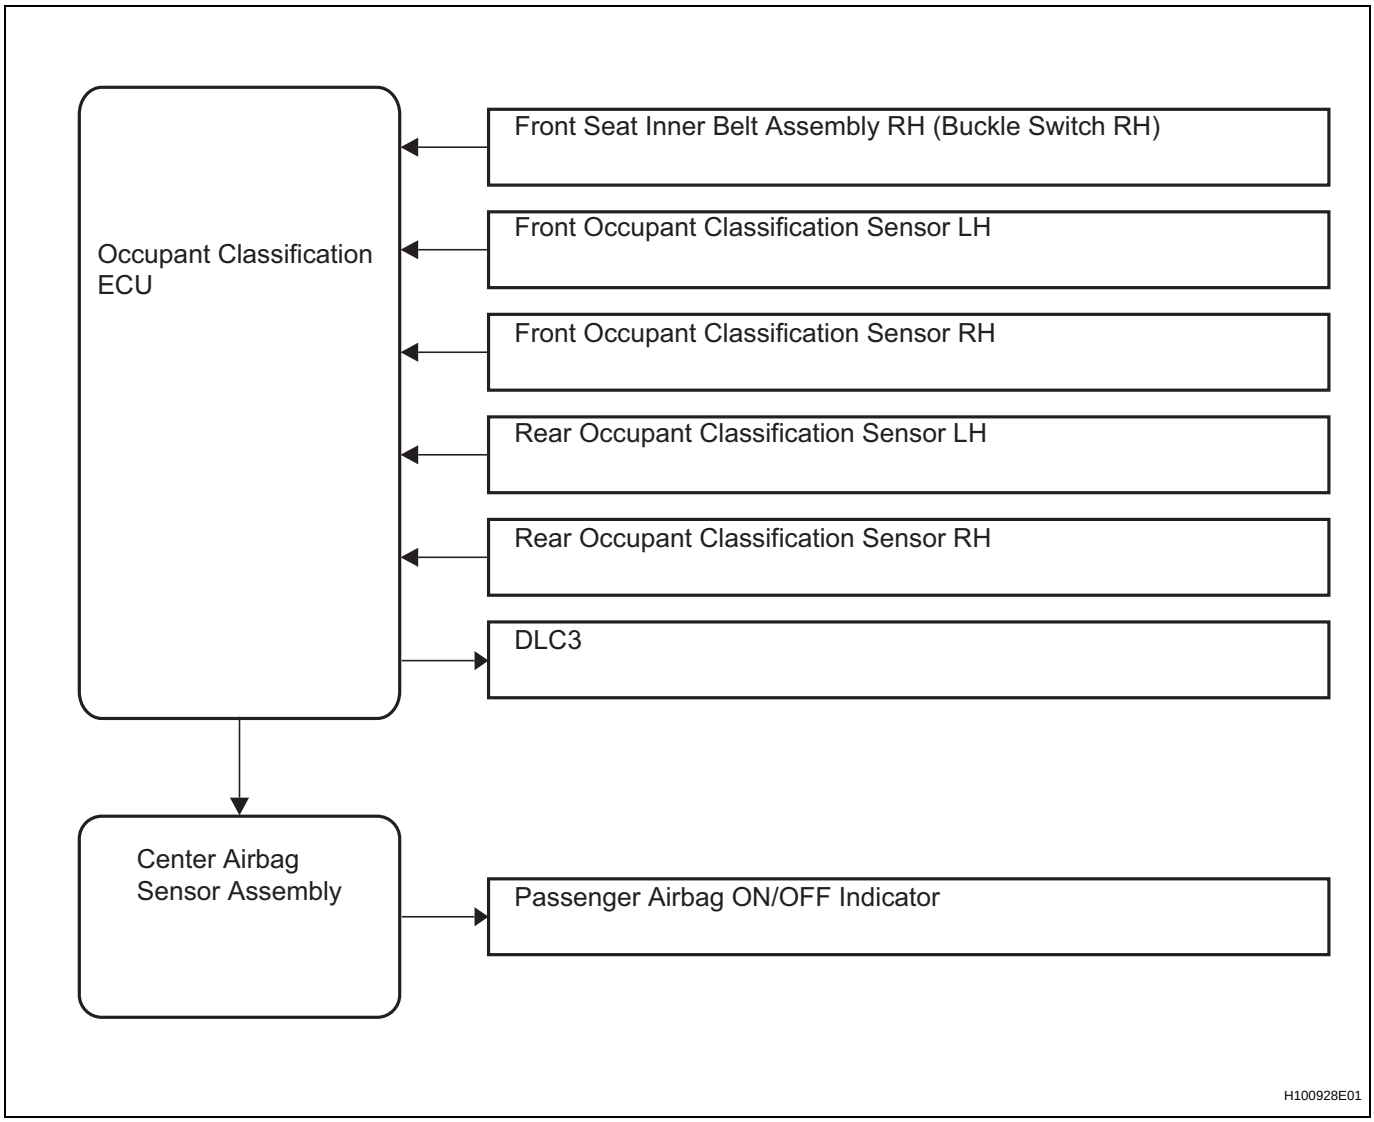
REPLACE CENTER AIRBAG SENSOR ASSEMBLY

RS

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. FRONT PASSENGER OCCUPANT CLASSIFICATION SYSTEM

(a) General Description

(1) The front passenger occupant classification system determines whether the front passenger seat is occupied by an adult or child (with child seat) or is unoccupied, based on the load that is applied to the front passenger seat and whether the seat belt is buckled. The system restricts the deployment of the front passenger airbag, front passenger side airbag, and the front passenger seat belt pretensioner in accordance with this judgement. The result is informed to the driver through the airbag ON/OFF indicator illumination.

(b) System Configuration

(1) This system consists of the occupant classification ECU, occupant classification sensors, airbag ON/OFF indicator, seat belt buckle switches, and center airbag sensor assembly.

(c) Occupant Classification ECU and Sensor

(1) The occupant classification sensors are installed on four brackets connecting the seat rail and the seat frame. The resistance values of these sensors, which vary in accordance with the load that acts on the brackets, are transmitted to the occupant classification ECU as signals. Upon receipt of the signals, the ECU determines the front passenger seat occupant conditions.

INITIALIZATION

1. ZERO POINT CALIBRATION

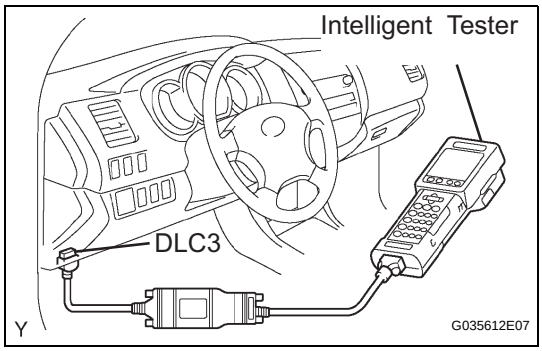
NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation.

HINT:

Perform the zero point calibration and sensitivity check if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.



(a) Zero point calibration and sensitivity check procedures

HINT:

Make sure that the zero point calibration has finished normally, and then perform the sensitivity check.

(1) Adjust the seat position in accordance with the table below.

Adjustment Item	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

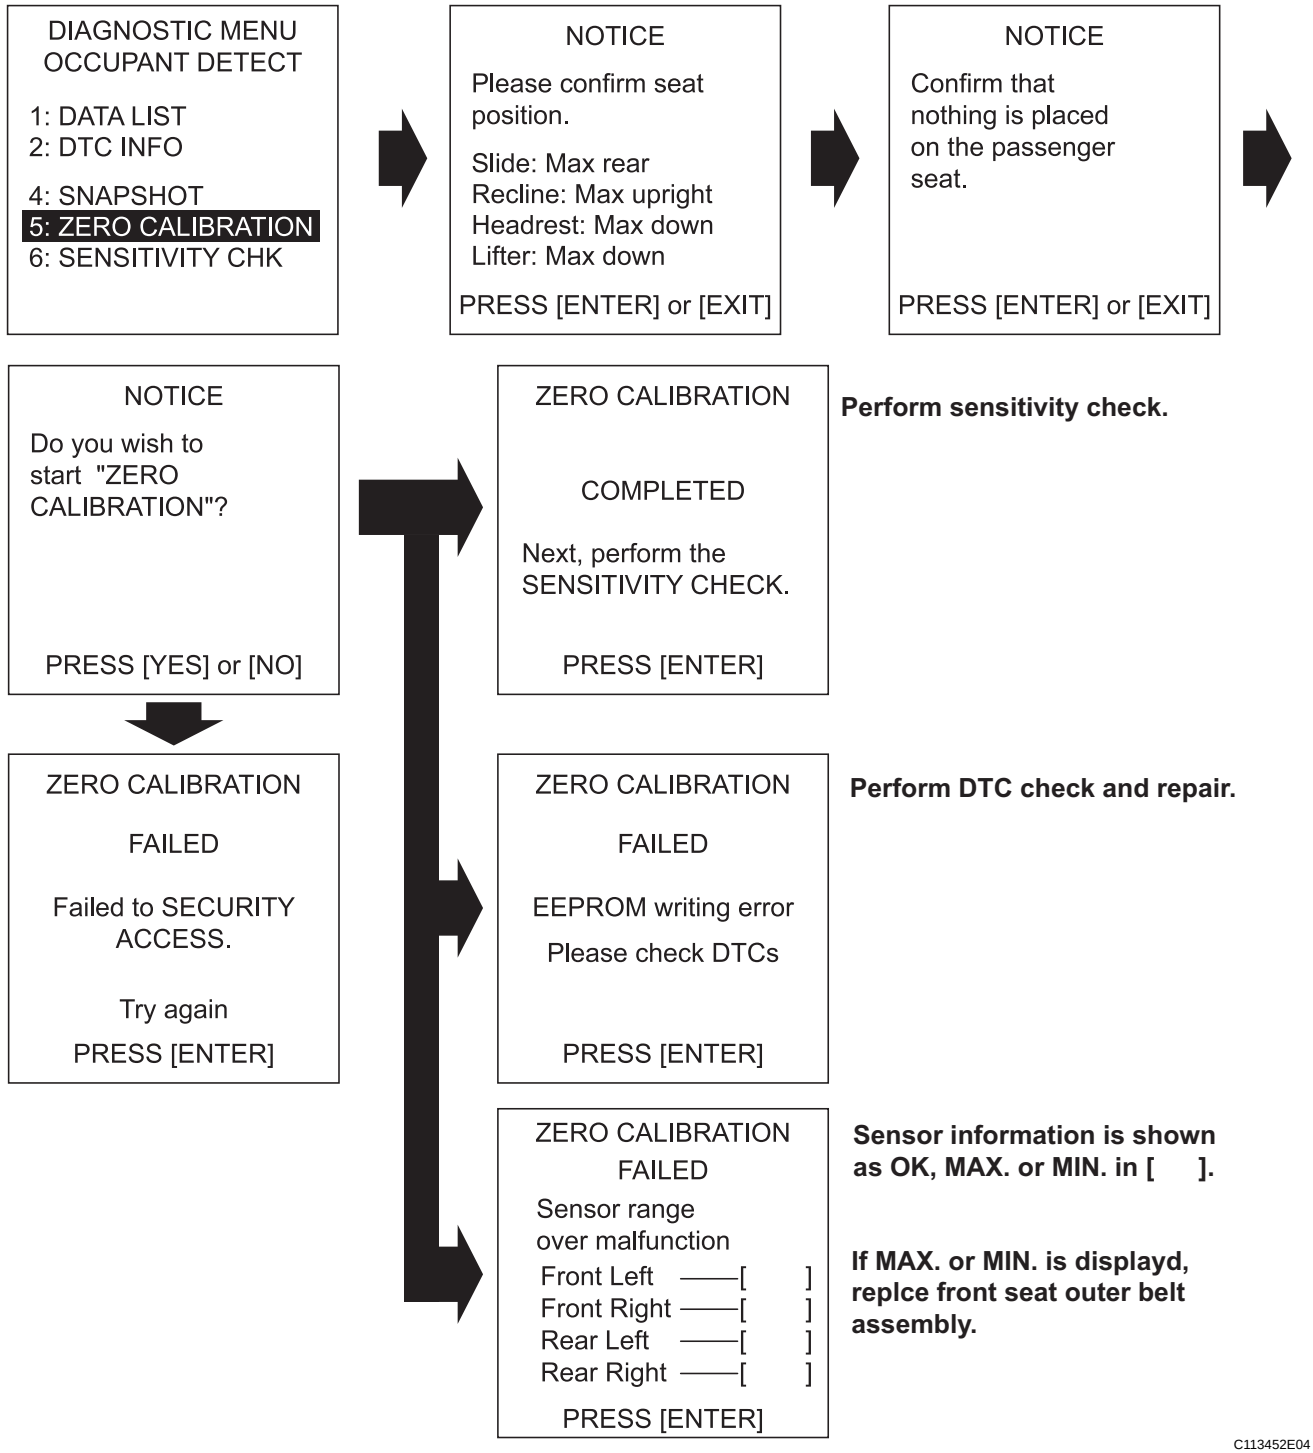
(2) Connect the intelligent tester to the DLC3.

(3) Turn the ignition switch to the ON position.

(4) Perform the zero point calibration by following the prompts on the tester screen.

ZERO POINT CALIBRATION PROCEDURE

1: DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT
Refer to the following screen flow.



HINT:
Refer to the intelligent tester operator's manual for further details.

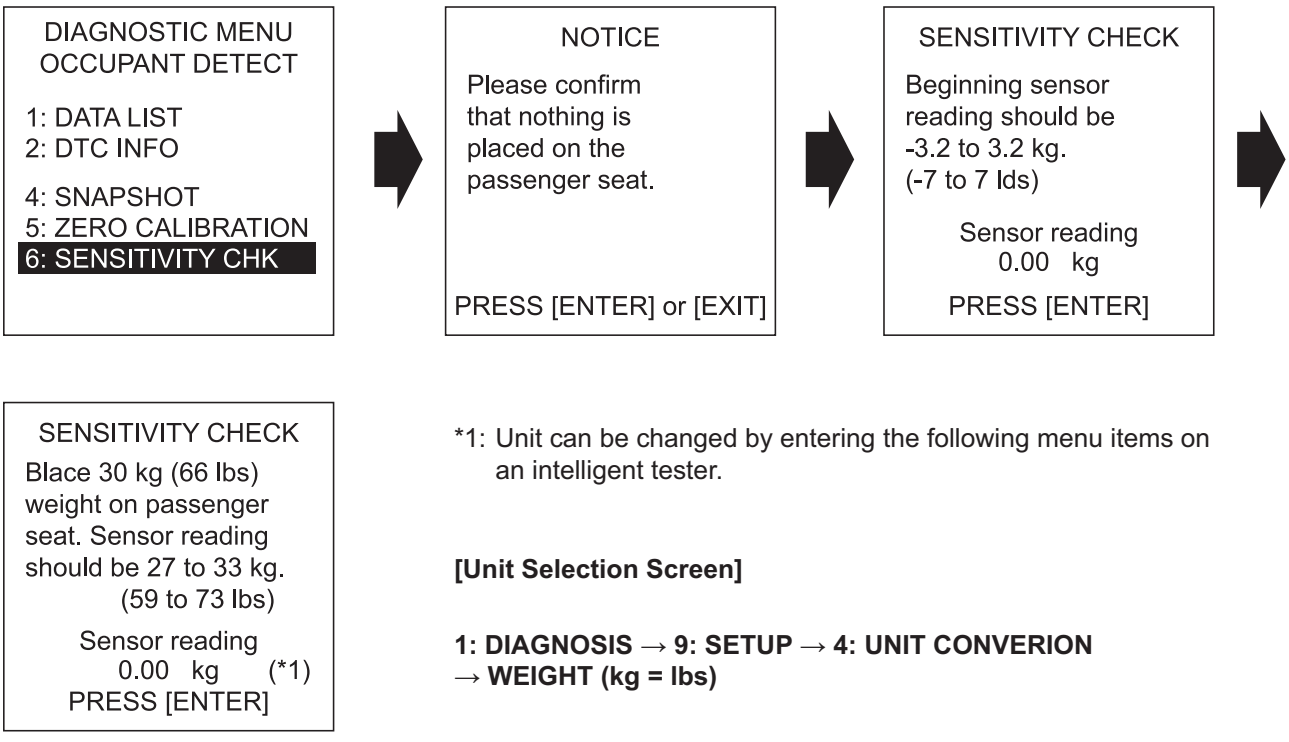
RS

OK:
COMPLETE is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard range.

SENSITIVITY CHECK PROCEDURE

1: DIAGNOSIS → 1: OBD/MOBD → MODEL YEAR → MODEL SELECTION → 9: OCCUPANT DETECT



*1: Unit can be changed by entering the following menu items on an intelligent tester.

[Unit Selection Screen]

1: DIAGNOSIS → 9: SETUP → 4: UNIT CONVERION → WEIGHT (kg = lbs)

C C113453E04

Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:

- When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

RS

- If the sensitivity deviates from the standard range, retighten the bolts of the front passenger seat taking care not to deform the seat rail. After performing this procedure, if the sensitivity is not within the standard range, replace the front seat assembly RH.
- If the zero point calibration has not finished normally, replace the front seat assembly RH.

PROBLEM SYMPTOMS TABLE

HINT:
Proceed to the troubleshooting for each circuit in the table below.

Symptom	Suspected area	See page
Selected airbag cut-off switch position (AUTO or OFF) and displayed passenger airbag ON/OFF indicator of passenger seat occupant conditions do not correspond (for except Double Cab)	Trouble in Passenger Airbag ON/OFF Indicator	RS-450
Passenger seat occupant conditions and displayed passenger airbag ON/OFF indicator do not correspond (for Double Cab)	Trouble in Passenger Airbag ON/OFF Indicator	RS-450

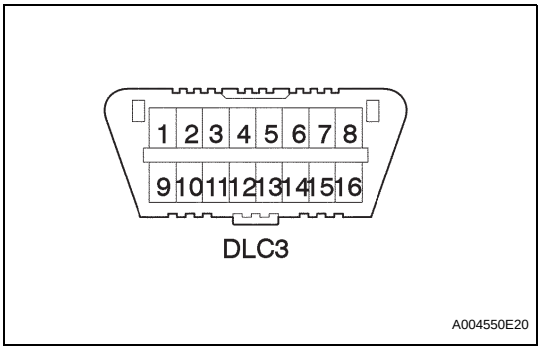
FSR+ (O5-8) - FSR- (O5-4)	G-R - G-B	Center airbag sensor assembly communication line	Ignition switch on	Pulse generation
BSW (O5-9) - BGND (O5-5)	B - P-G	Passenger side buckle switch line	Buckle switch ON Buckle switch OFF	Pulse generation
SGD1 (O4-1) - GND (O5-3)	L - W-B	Occupant classification sensor front LH ground line	Always	Below 1 Ω
SGD2 (O4-2) - GND (O5-3)	O - W-B	Occupant classification sensor front RH ground line	Always	Below 1 Ω
SGD3 (O4-3) - GND (O5-3)	P-G - W-B	Occupant classification sensor rear LH ground line	Always	Below 1 Ω
SGD4 (O4-4) - GND (O5-3)	B-R - W-B	Occupant classification sensor rear RH ground line	Always	Below 1 Ω
SVC1 (O4-11) - SGD1 (O4-1)	B-L - L	Occupant classification sensor front LH power supply line	Ignition switch on, a load is applied to occupant classification sensor front LH	4.5 to 5.1 V
SVC2 (O4-12) - SGD2 (O4-2)	LG-B - O	Occupant classification sensor front RH power supply line	Ignition switch on, a load is applied to occupant classification sensor front RH	4.5 to 5.1 V
SVC3 (O4-5) - SGD3 (O4-3)	B-O -P-G	Occupant classification sensor rear LH power supply line	Ignition switch on, a load is applied to occupant classification sensor rear LH	4.5 to 5.1 V
SVC4 (O4-6) - SGD4 (O4-4)	GR-L - B-R	Occupant classification sensor rear RH power supply line	Ignition switch on, a load is applied to occupant classification sensor rear RH	4.5 to 5.1 V
SIG1 (O4-7) - SGD1 (O4-1)	G - L	Occupant classification sensor front LH signal line	Ignition switch on, a load is applied to occupant classification sensor front LH	Pulse generation

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SIG2 (O4-8) - SGD2 (O4-2)	R-L - O	Occupant classification sensor front RH signal line	Ignition switch on, a load is applied to occupant classification sensor front RH	Pulse generation
SIG3 (O4-9) - SGD3 (O4-3)	R-B - P-G	Occupant classification sensor rear LH signal line	Ignition switch on, a load is applied to occupant classification sensor rear LH	Pulse generation
SIG4 (O4-10) - SGD4 (O4-4)	L-R - B-R	Occupant classification sensor rear RH signal line	Ignition switch on, a load is applied to occupant classification sensor rear RH	Pulse generation



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses the ISO 9141-2 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V

HINT:

If the display shows a communication error message when the intelligent tester is connected to the DLC3, the ignition switch is turned to the ON position and the intelligent tester is operated, there is a problem on the vehicle side or tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

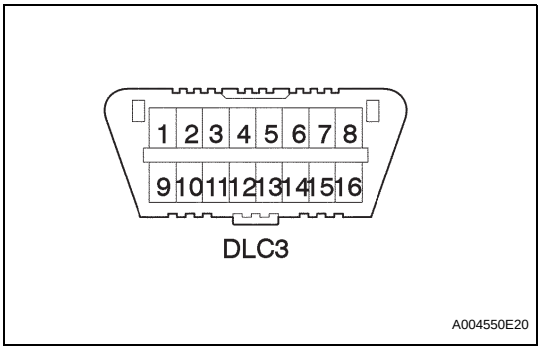
2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. Regardless of the technician's experience or skill, if troubleshooting proceeds without confirmation of the problem symptoms, something important is likely to be overlooked and incorrect guesses may be made at some points in the repair operation.

This leads to a standstill in troubleshooting.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SIG2 (O4-8) - SGD2 (O4-2)	R-L - O	Occupant classification sensor front RH signal line	Ignition switch on, a load is applied to occupant classification sensor front RH	Pulse generation
SIG3 (O4-9) - SGD3 (O4-3)	R-B - P-G	Occupant classification sensor rear LH signal line	Ignition switch on, a load is applied to occupant classification sensor rear LH	Pulse generation
SIG4 (O4-10) - SGD4 (O4-4)	L-R - B-R	Occupant classification sensor rear RH signal line	Ignition switch on, a load is applied to occupant classification sensor rear RH	Pulse generation



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses the ISO 9141-2 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V

HINT:

If the display shows a communication error message when the intelligent tester is connected to the DLC3, the ignition switch is turned to the ON position and the intelligent tester is operated, there is a problem on the vehicle side or tool side.

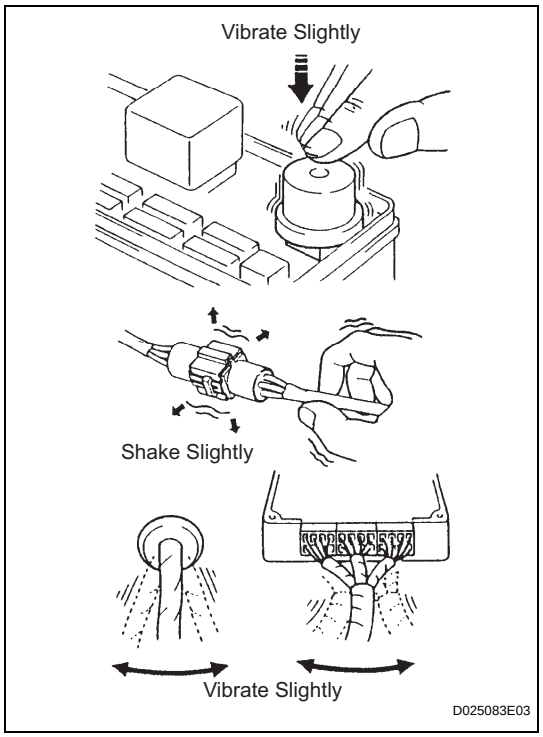
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. Regardless of the technician's experience or skill, if troubleshooting proceeds without confirmation of the problem symptoms, something important is likely to be overlooked and incorrect guesses may be made at some points in the repair operation.

This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to the on position).
(1) Slightly vibrate the part of the sensor considered to be the cause of the problem with your fingers and check whether the malfunction occurs.
HINT:
Shaking the relays too strongly may result in open relays.
(2) Slightly shake the connector vertically and horizontally.
(3) Slightly shake the wire harness vertically and horizontally.
The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

(b) Simulation method for DTC B1795: Turn the ignition switch from the lock to the on position, hold for 10 seconds, and then back to the lock position again 50 times in a row.
HINT:
DTC B1795 is output if the occupant classification ECU receives the ignition switch lock-on-lock signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system.

3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check
(1) Turn the ignition switch to the on position.
(2) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
(3) Approximately 6 seconds after the ignition switch is turned to the on position, the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

RS

Double cab

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF
Passenger occupant classification system failure	OFF	ON	ON

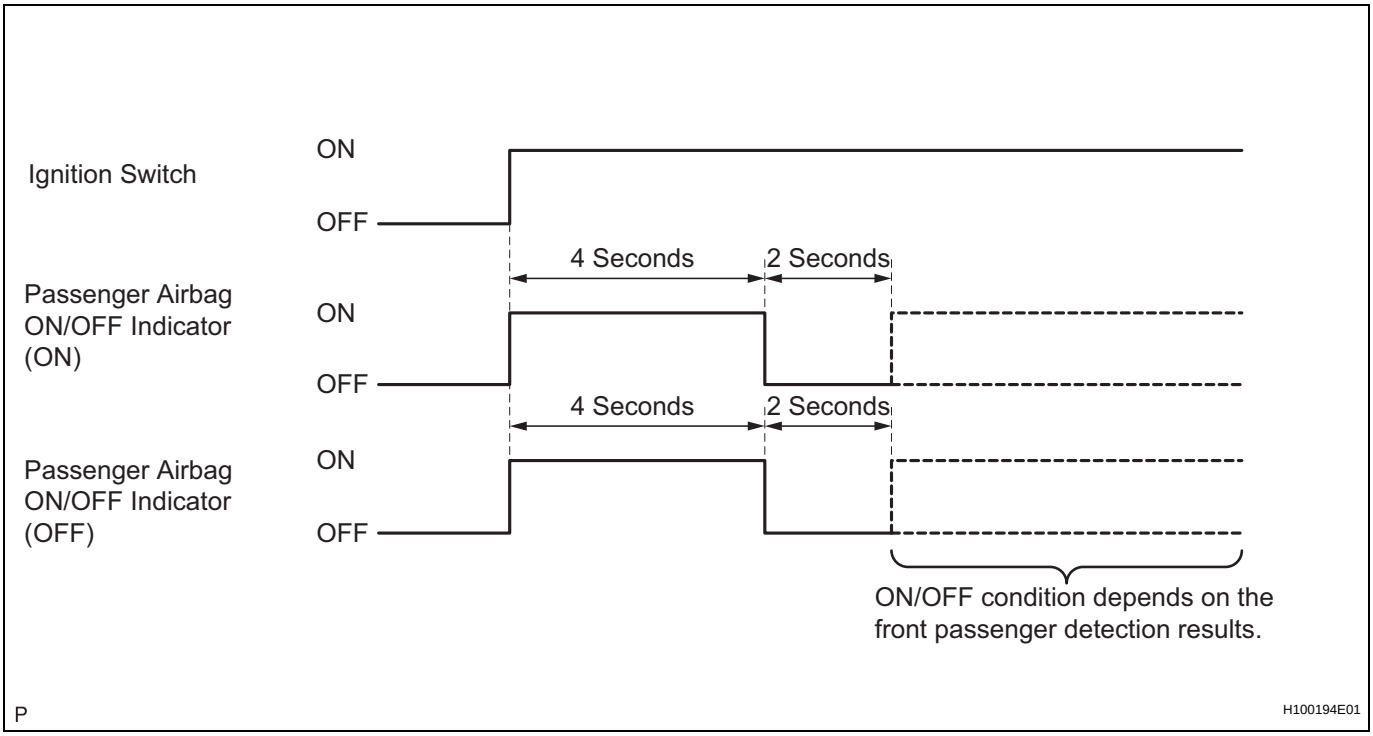
Except double cab

Front Seat Passenger	Passenger Airbag Manual ON/OFF Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	AUTO	ON	OFF	OFF
Adult seated	OFF	OFF	ON	OFF

Front Seat Passenger	Passenger Airbag Manual ON/OFF Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	Airbag cut off switch system failure	OFF	ON	ON
Child seated / Child restrain system set	AUTO	OFF	ON	OFF
Child seated / Child restrain system set	OFF	OFF	ON	OFF
Child seated / Child restrain system set	Airbag cut off switch system failure	OFF	ON	ON
Vacant	AUTO	OFF	OFF	OFF
Vacant	OFF	OFF	ON	OFF
Vacant	Airbag cut off switch system failure	OFF	ON	ON
Passenger occupant classification system failure	AUTO	OFF	ON	ON
Passenger occupant classification system failure	OFF	OFF	ON	ON
Passenger occupant classification system failure	Airbag cut off switch system failure	OFF	ON	ON

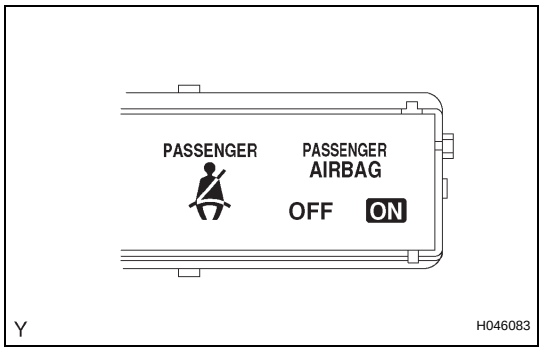
HINT:

- The passenger airbag ON/OFF indicator operates based on the timing chart below in order to check the indicator light circuit.



- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator (OFF) come on. In this case, check the DTCs in the airbag system first.

RS



4. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch to the on position.

(b) Check that the passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
HINT:
Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when approximately 6 seconds have elapsed after the ignition switch is turned to the on position.

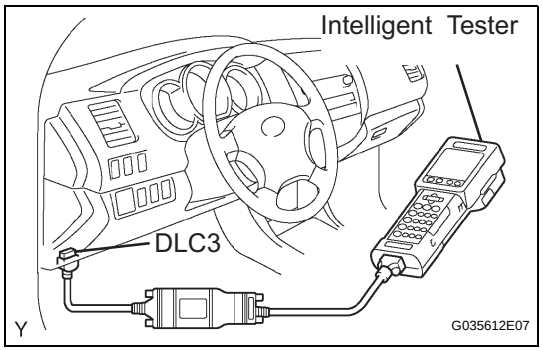
RS

DTC CHECK / CLEAR

1. DTC CHECK

HINT:

- When DTC B1650/23 is detected as a result of troubleshooting for the airbag system, troubleshoot the occupant classification system.
- Use the intelligent tester to read and clear DTCs, otherwise the DTCs cannot be read and cleared.



(a) Check for DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to the on position.

(3) Check for DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

(b) Clear the DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to the on position.

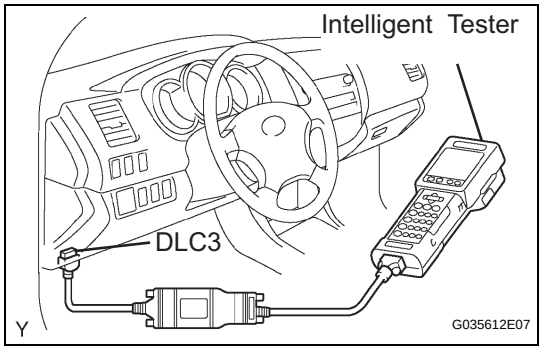
(3) Clear the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed by the intelligent tester, you can check values of switches and sensors without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method to shorten diagnostic time.



1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Following the display on the tester screen, read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (proceed to the page listed for that circuit).

1. Occupant Classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting the Supplemental Restraint System, perform troubleshooting for the occupant classification system as shown in the chart below.

DTC No.	Detection Item	Trouble Area	Passenger Airbag ON/OFF Indicator (OFF Indicator)	See page
B1771	Passenger Side Buckle Switch Circuit Malfunction	1. Front seat inner belt assembly (Buckle switch RH) 2. No. 1 seat wire 3. Floor wire 4. Occupant classification ECU	ON	RS-370
B1780	Front Occupant Classification Sensor LH Circuit Malfunction	1. Front seat with adjuster frame assembly RH (Occupant classification sensor front LH) 2. No. 1 seat wire 3. Occupant classification ECU	ON	RS-377
B1781	Front Occupant Classification Sensor RH Circuit Malfunction	1. Front seat with adjuster frame assembly RH (Occupant classification sensor front RH) 2. No. 1 seat wire 3. Occupant classification ECU	ON	RS-385
B1782	Rear Occupant Classification Sensor LH Circuit Malfunction	1. Front seat with adjuster frame assembly RH (Occupant classification sensor rear LH) 2. No. 1 seat wire 3. Occupant classification ECU	ON	RS-393
B1783	Rear Occupant Classification Sensor RH Circuit Malfunction	1. Front seat with adjuster frame assembly RH (Occupant classification sensor rear RH) 2. No. 1 seat wire 3. Occupant classification ECU	ON	RS-401
B1785	Front Occupant Classification Sensor LH Collision Detection	1. Front seat with adjuster frame assembly RH (Occupant classification sensor front LH) 2. Occupant classification ECU	ON	RS-409
B1786	Front Occupant Classification Sensor RH Collision Detection	1. Front seat with adjuster frame assembly RH (Occupant classification sensor front RH) 2. Occupant classification ECU	ON	RS-413
B1787	Rear Occupant Classification Sensor LH Collision Detection	1. Front seat with adjuster frame assembly RH (Occupant classification sensor rear LH) 2. Occupant classification ECU	ON	RS-417
B1788	Rear Occupant Classification Sensor RH Collision Detection	1. Front seat with adjuster frame assembly RH (Occupant classification sensor rear RH) 2. Occupant classification ECU	ON	RS-421
B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction	1. Floor wire 2. No. 1 seat wire 3. Occupant classification ECU 4. Center airbag sensor assembly	ON	RS-425
B1793	Occupant Classification Sensor Power Supply Circuit Malfunction	1. Front seat with adjuster frame assembly RH (Occupant classification sensors) 2. No. 1 seat wire 3. Occupant classification ECU	ON	RS-434
B1794	Open in Occupant Classification ECU Battery Positive Line	1. Wire harness 2. Occupant classification ECU	ON	RS-441
B1795	Occupant Classification ECU Malfunction	1. Occupant classification ECU	ON	RS-446

DTC No.	Detection Item	Trouble Area	Passenger Airbag ON/ OFF Indicator (OFF Indicator)	See page
B1796	Sleep Operation Failure of Occupant Classification ECU	1. Occupant classification ECU	ON	RS-448

DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.

DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.

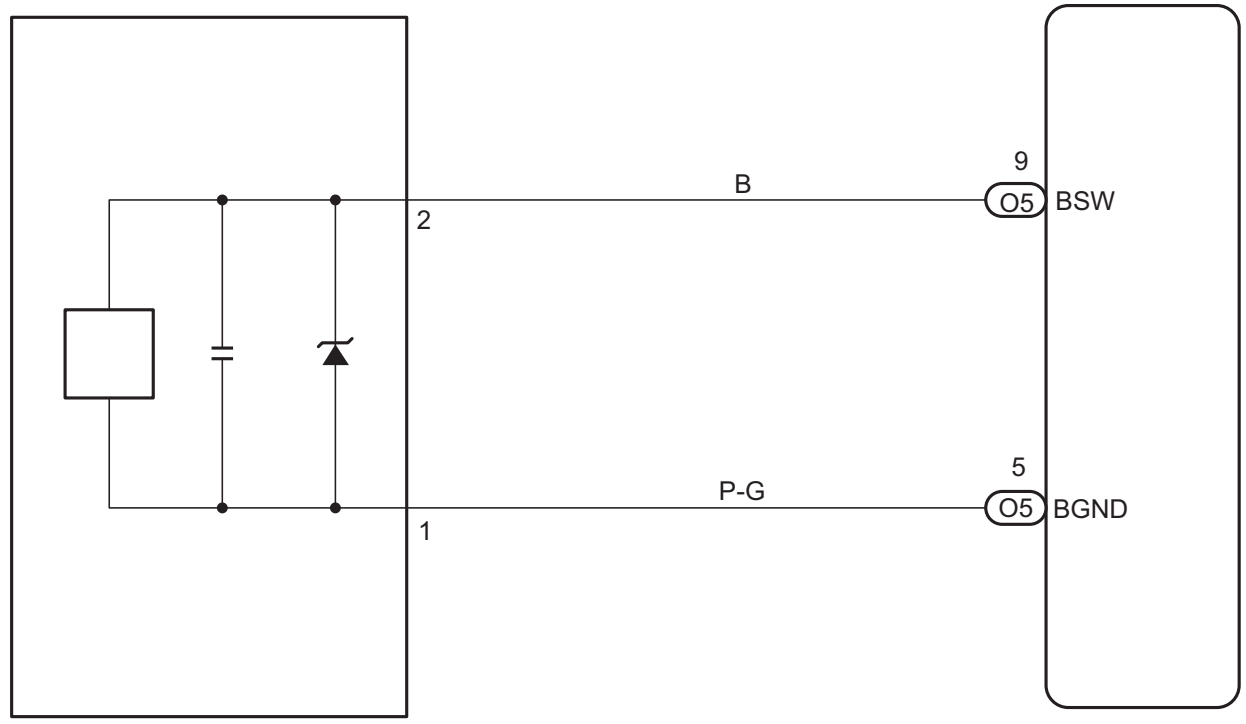
Troubleshoot DTC B1771 first when DTCs B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1771	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in the passenger side buckle switch circuit for 2 seconds • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• No .1 seat wire • Floor wire • Front seat inner belt assembly RH (Buckle switch RH) • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1771 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-365).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-365).
OK:
DTC B1771 is not output.

HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

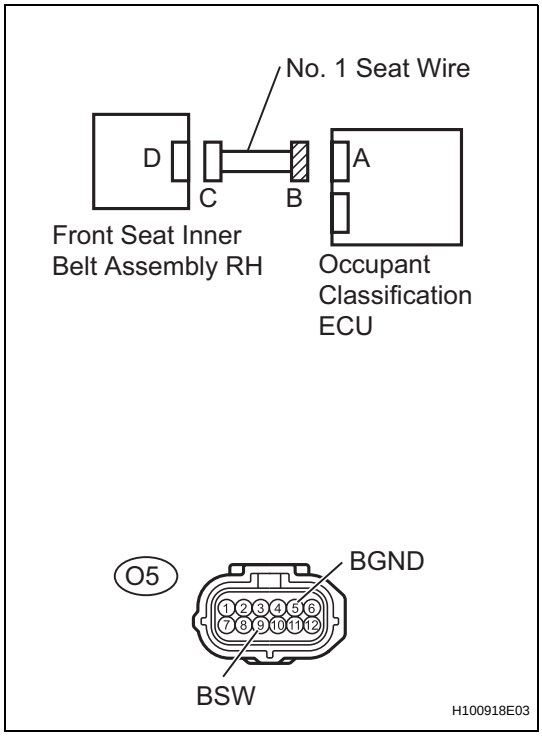
3	CHECK CONNECTORS

(a) Check that the connectors (on the occupant classification ECU side and buckle switch RH side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

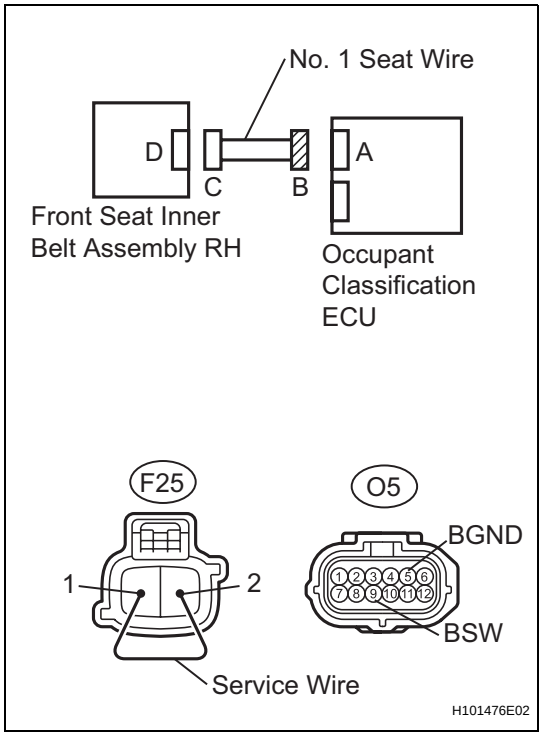
Standard voltage

Tester connection	Condition	Specified condition
O5-9 (BSW) - Body ground	Ignition switch on	Below 1 V
O5-5 (BGND) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

5 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect J11-2 and J11-1 of connector C.

NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

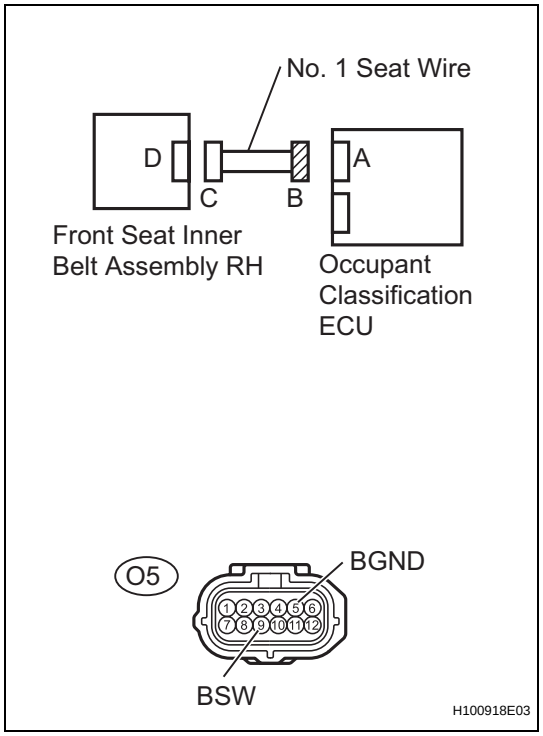
Tester connection	Condition	Specified condition
O5-9 (BSW) - O5-5 (BGND)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



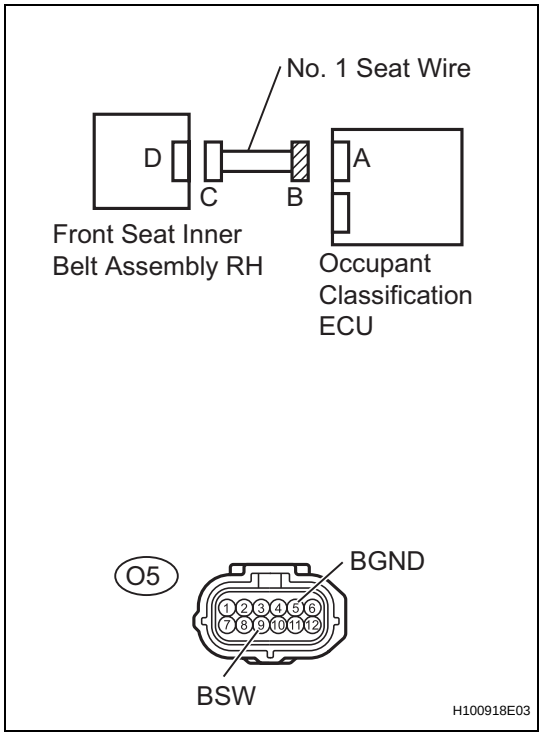
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O5-9 (BSW) - O5-5 (BGND)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

7 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O5-9 (BSW) - Body ground	Always	1 MΩ or higher
O5-5 (BGND) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-365).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-365).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

9	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly RH (See page SB-8).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the on position.
(f) Clear the DTCs stored in the memory (See page RS-365).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the lock position.
(h) Turn the ignition switch to the on position.
(i) Check the DTCs (See page RS-365).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK	END

RS

NG

10	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

NEXT

11	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

12	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard values:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1780	Front Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

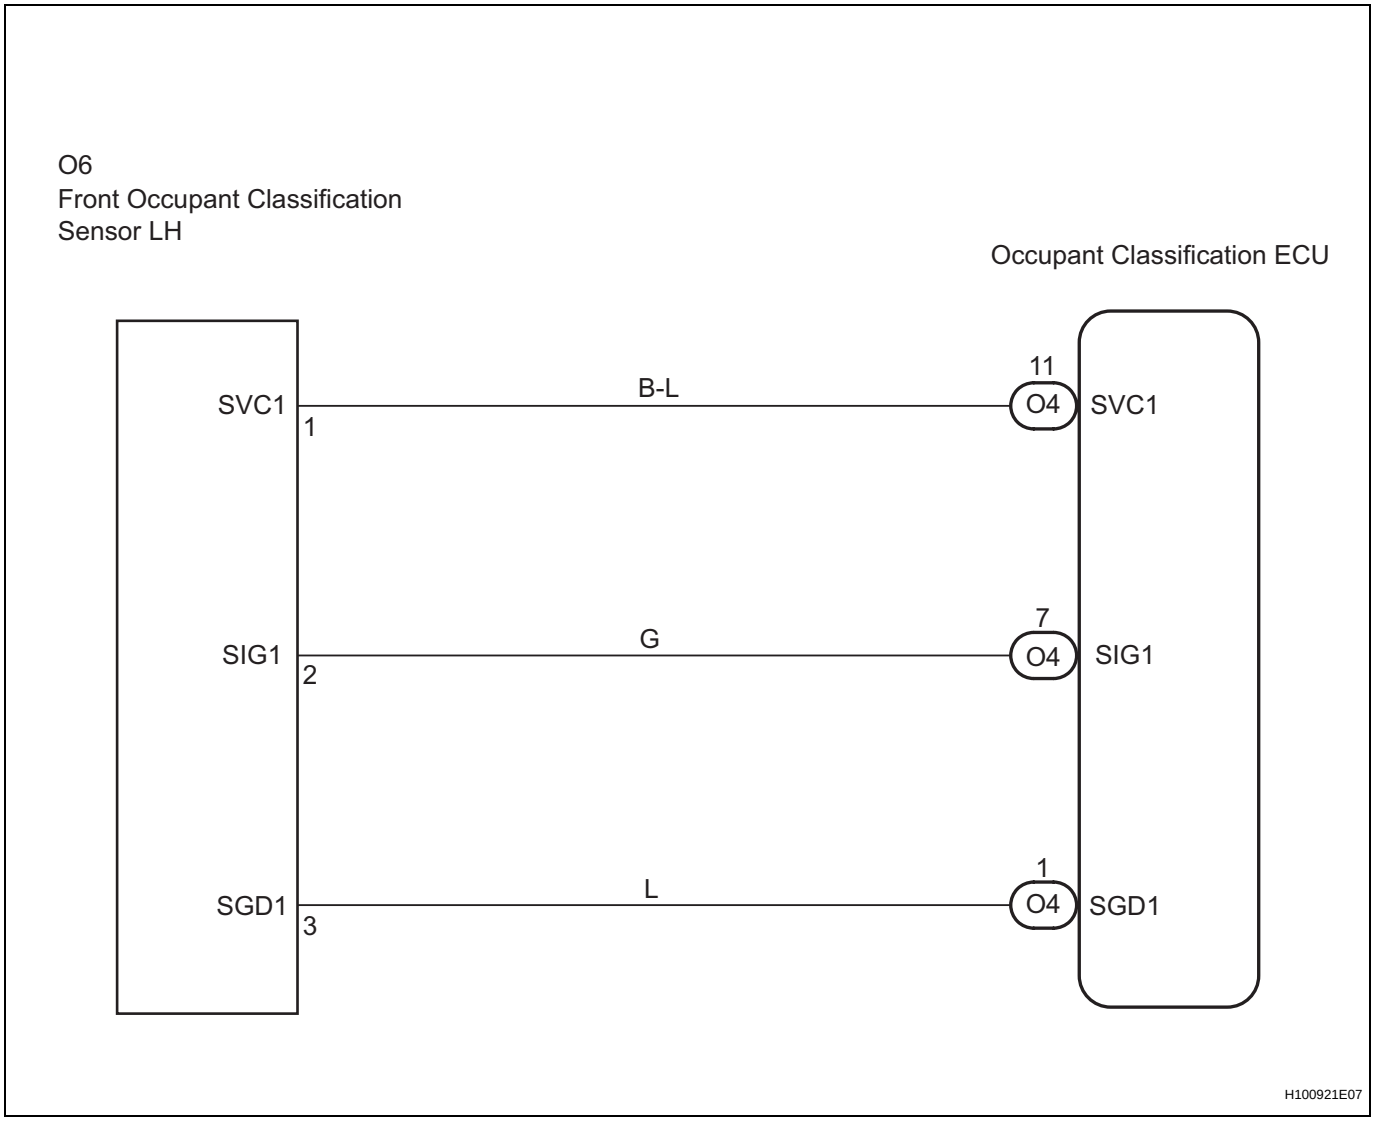
The occupant classification sensor front LH circuit consists of the occupant classification ECU and the occupant classification sensor front LH.
DTC B1780 is set when a malfunction is detected in the occupant classification sensor front LH circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1780	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification sensor front LH circuit for 2 seconds • Occupant classification sensor front LH malfunction • Occupant classification ECU malfunction	• Front seat with adjuster frame assembly RH (Occupant classification sensor front LH) • No. 1 seat wire • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1780 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.

(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1780 is not output.

HINT:
DTCs other than B1780 may be output at this time, but they are not related to this check.

OK → **PERFORM SENSITIVITY CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensor front LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

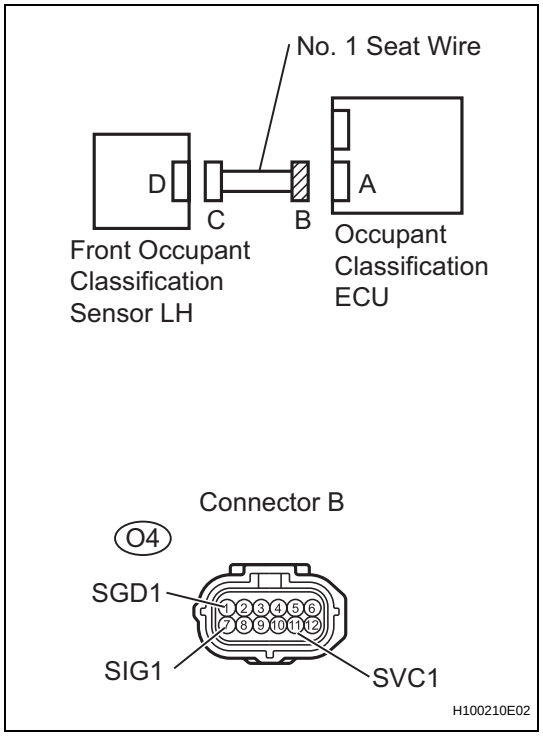
3	CHECK CONNECTORS

(a) Check that the connectors (on the occupant classification ECU side and occupant classification sensor front LH side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor front LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

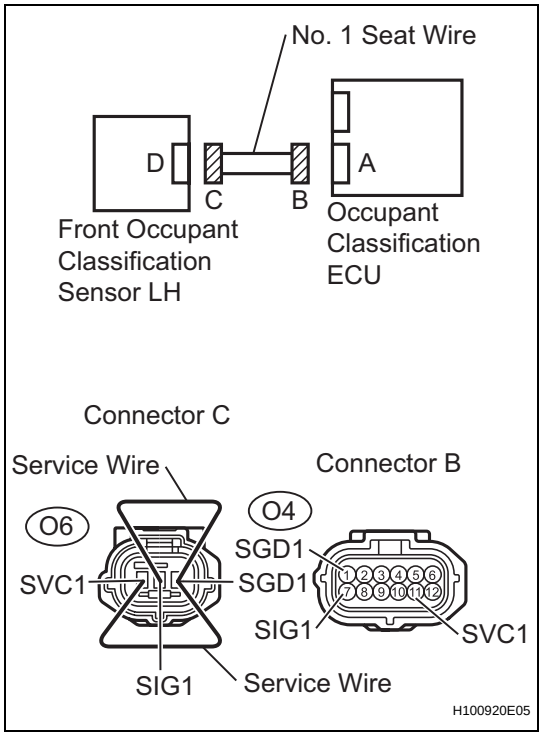
Standard voltage

Tester Connection	Condition	Specified Condition
O4-1 (SGD1) - Body ground	Ignition switch ON	Below 1 V
O4-7 (SIG1) - Body ground	Ignition switch ON	Below 1 V
O4-11 (SVC1) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

5 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using service wires, connect O6-1 (SVC1) and O6-3 (SGD1), and connect O6-2 (SIG1) and O6-3 (SGD1) of connector C.

NOTICE:
Do not forcibly insert the service wires into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

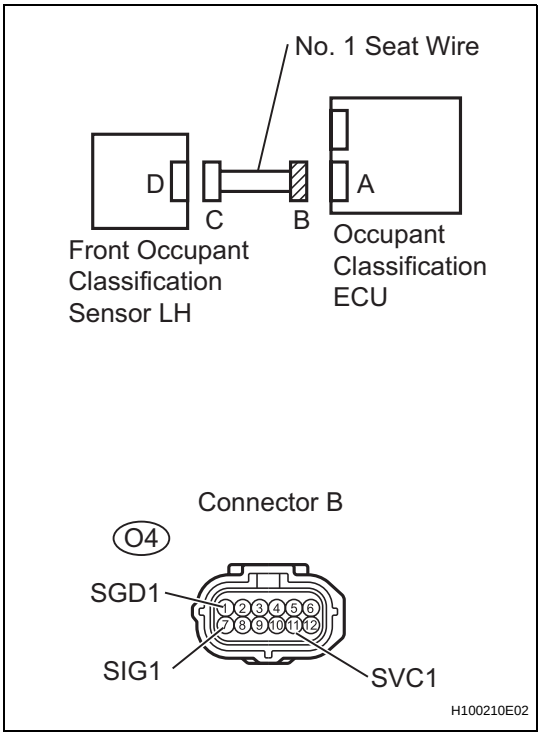
Tester Connection	Condition	Specified Condition
O4-7 (SIG1) - O4-1 (SGD1)	Always	Below 1 Ω
O4-11 (SVC1) - O4-1 (SGD1)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



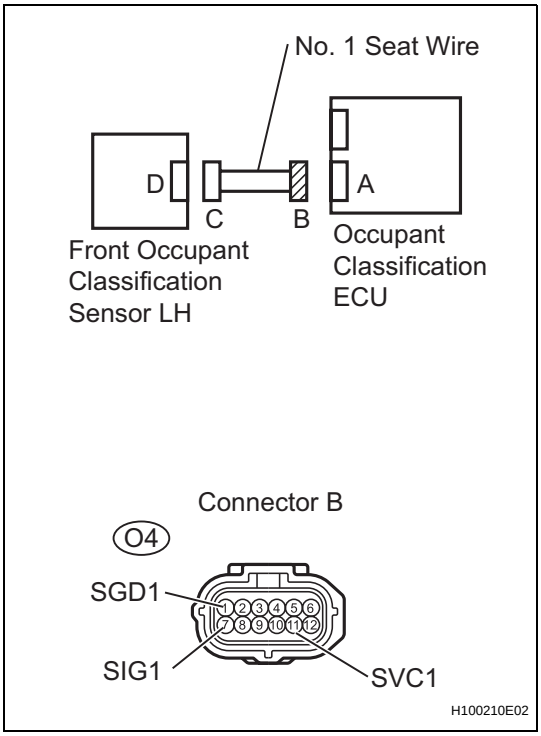
(a) Disconnect the service wires from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-7 (SIG1) - O4-1 (SGD1)	Always	1 MΩ or higher
O4-11 (SVC1) - O4-1 (SGD1)	Always	1 MΩ or higher
O4-7 (SIG1) - O4-11 (SVC1)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

7 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-1 (SGD1) - Body ground	Always	1 MΩ or higher
O4-7 (SIG1) - Body ground	Always	1 MΩ or higher

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the occupant classification sensor front LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1780 is not output.

HINT:
DTCs other than B1780 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG	Go to step 13

OK

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 13**

OK

12	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the ON position.
(c) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(d) Turn the ignition switch to the LOCK position.
(e) Turn the ignition switch to the ON position.
(f) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1780 is not output.

HINT:
DTCs other than B1780 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

RS

13	REPLACE FRONT SEAT WITH ADJUSTER FRAME ASSEMBLY RH

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat with adjuster frame assembly RH (See page SE-38).

NEXT

14	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.

(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

15	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

USE SIMULATION METHOD TO CHECK

DTC	B1781	Front Occupant Classification Sensor RH Circuit Malfunction

DESCRIPTION

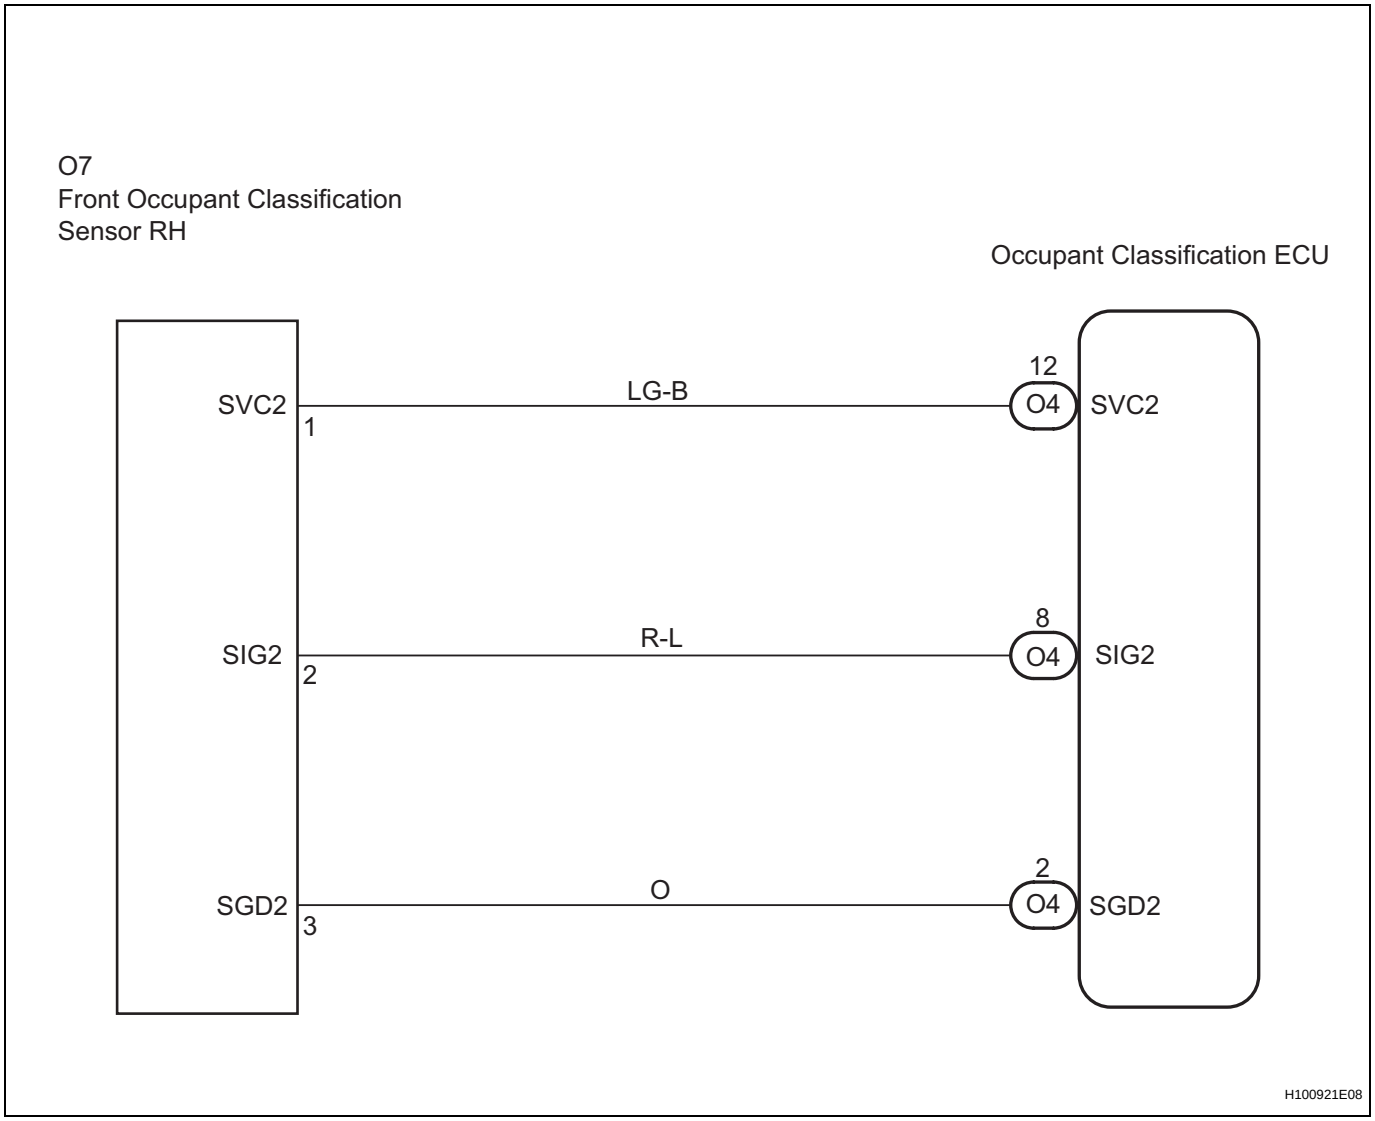
The front occupant classification sensor RH circuit consists of the occupant classification ECU and the front occupant classification sensor RH.
DTC B1781 is set when a malfunction is detected in the front occupant classification sensor RH circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1781	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front occupant classification sensor RH circuit for 2 seconds • Occupant classification sensor front RH malfunction • Occupant classification ECU malfunction	• Front seat with adjuster frame assembly RH (Front occupant classification sensor RH) • No. 1 seat wire • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1781 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.

(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1781 is not output.

HINT:
DTCs other than B1781 may be output at this time, but they are not related to this check.

OK	**USE SIMULATION METHOD TO CHECK**

NG

2	**CHECK CONNECTION OF CONNECTORS**

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor RH.
OK:
The connectors are properly connected.

NG	**OTHERS CONNECTORS**

OK

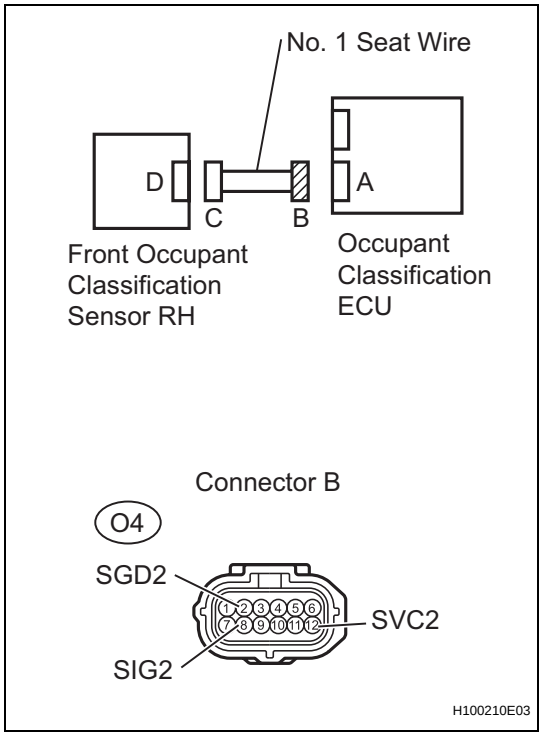
3	**CHECK CONNECTORS**

(a) Check that the connectors (on the occupant classification ECU side and front occupant classification sensor RH side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG	**REPAIR OR REPLACE WIRE HARNESS**

OK

4 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

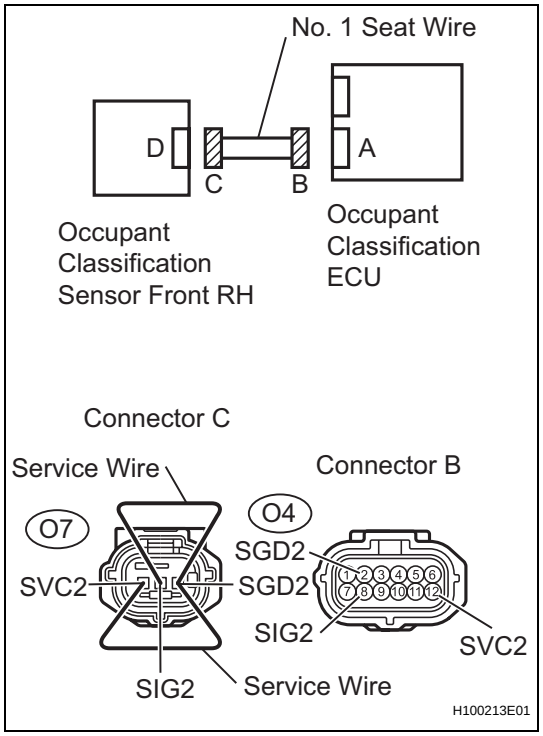
Standard voltage

Tester Connection	Condition	Specified Condition
O4-2 (SGD2) - Body ground	Ignition switch ON	Below 1 V
O4-8 (SIG2) - Body ground	Ignition switch ON	Below 1 V
O4-12 (SVC2) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

5 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using service wires, connect O7-1 (SVC2) and O7-3 (SGD2), and connect O7-2 (SIG2) and O7-3 (SGD2) of connector C.

NOTICE:
Do not forcibly insert the service wires into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

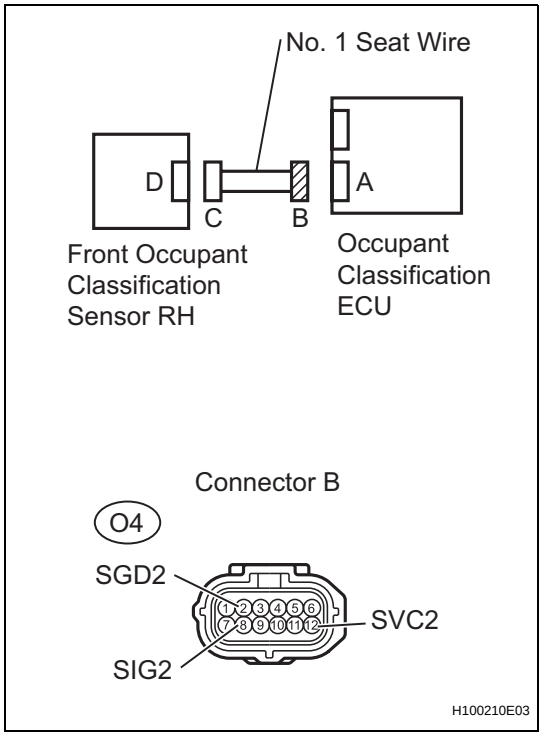
Tester Connection	Condition	Specified Condition
O4-8 (SIG2) - O4-2 (SGD2)	Always	Below 1 Ω
O4-12 (SVC2) - O4-2 (SGD2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



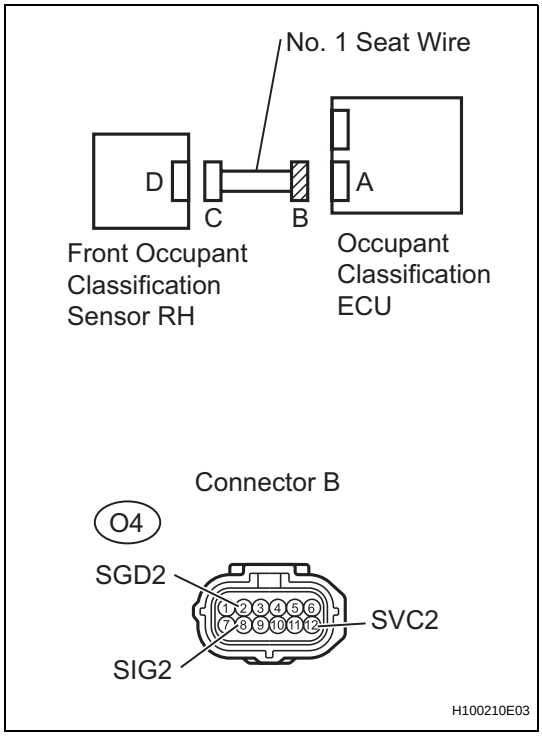
(a) Disconnect the service wires from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-8 (SIG2) - O4-2 (SGD2)	Always	1 MΩ or higher
O4-12 (SVC2) - O4-2 (SGD2)	Always	1 MΩ or higher
O4-8 (SIG2) - O4-12 (SVC2)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

7 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-2 (SGD2) - Body ground	Always	1 MΩ or higher
O4-8 (SIG2) - Body ground	Always	1 MΩ or higher
O4-12 (SVC2) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

RS

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1781 is not output.

HINT:
DTCs other than B1781 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG	Go to step 13

OK

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 13**

OK

12	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the ON position.
(c) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(d) Turn the ignition switch to the LOCK position.
(e) Turn the ignition switch to the ON position.
(f) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1781 is not output.

HINT:
DTCs other than B1781 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

USE SIMULATION METHOD TO CHECK

DTC	B1782	Rear Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The rear occupant classification sensor LH circuit consists of the occupant classification ECU and the rear occupant classification sensor LH.

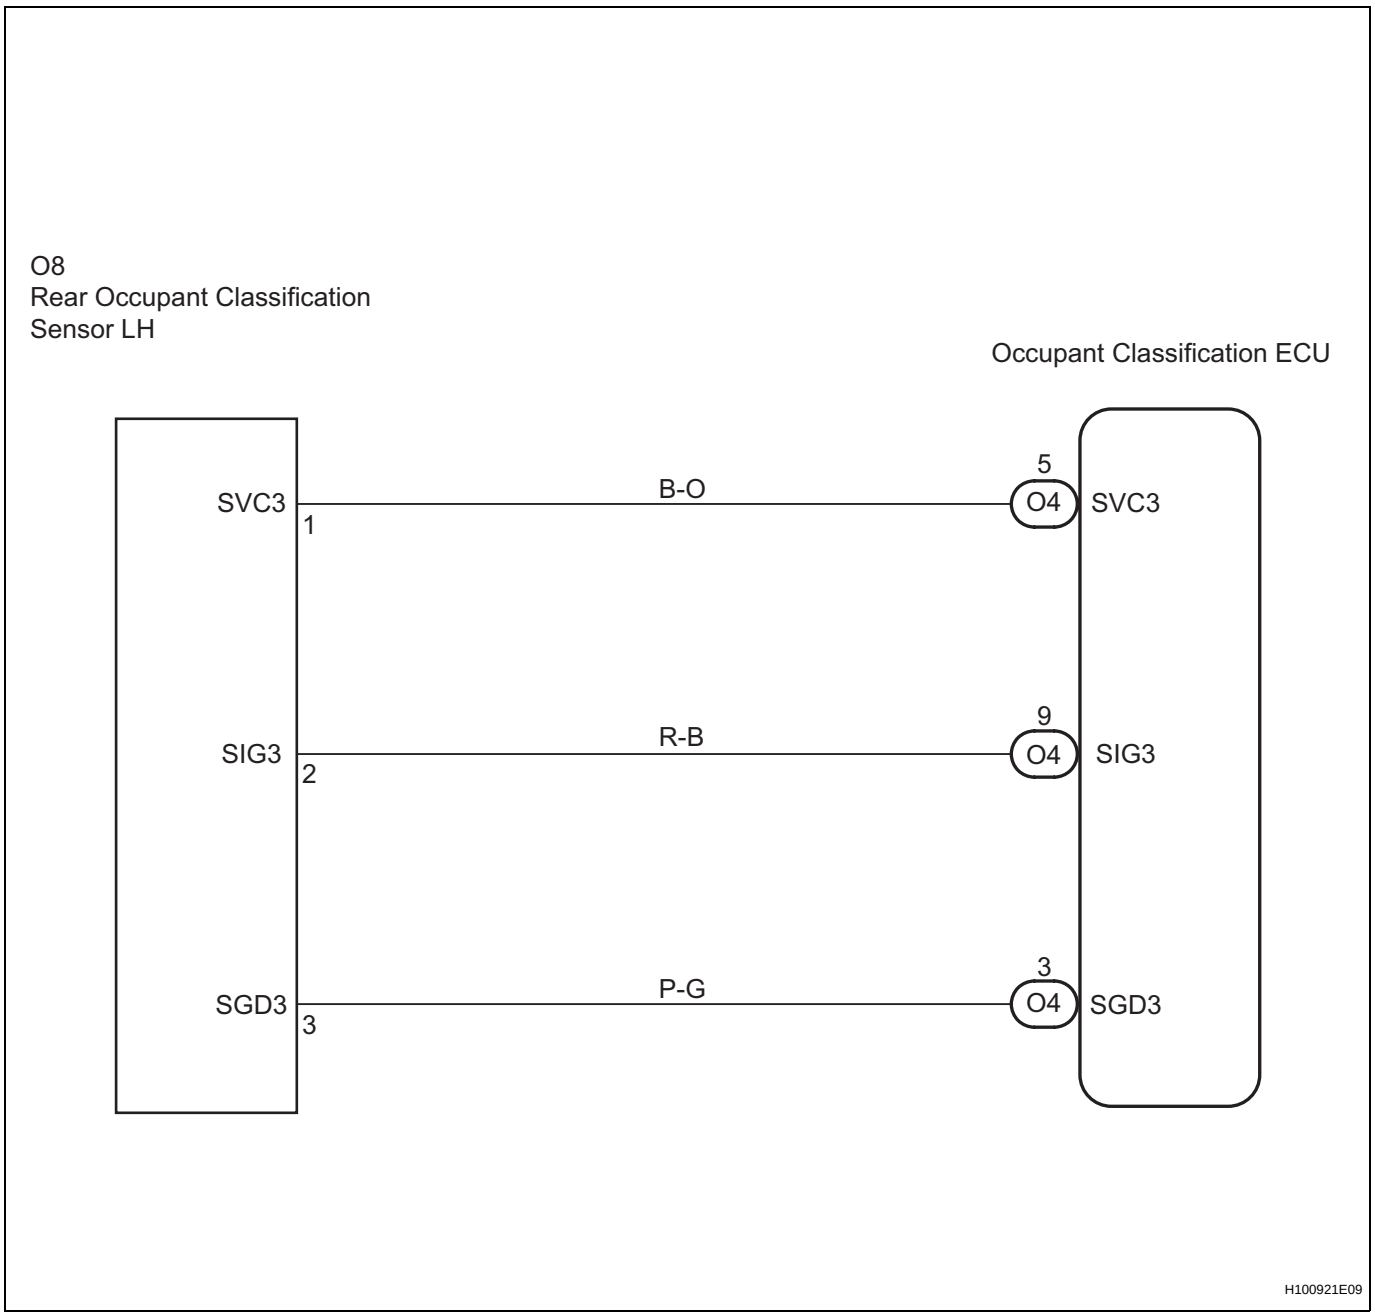
DTC B1782 is set when a malfunction is detected in the rear occupant classification sensor LH circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1782	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear occupant classification sensor LH circuit for 2 seconds • Rear occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat with adjuster frame assembly RH (Rear occupant classification sensor LH) • No. 1 seat wire • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1782 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM



RS

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	**CHECK DTC**

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1782 is not output.

HINT:
DTCs other than B1782 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 REPAIR CONNECTORS

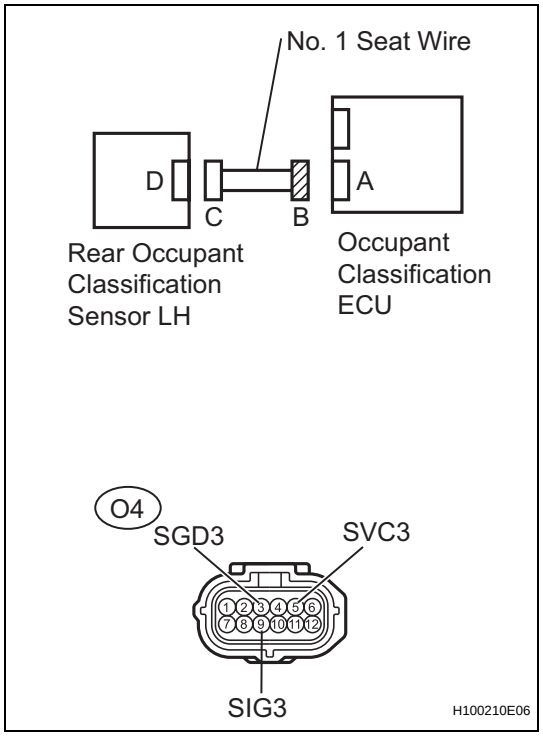
(a) Check that the connectors (on the occupant classification ECU side and rear occupant classification sensor LH side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

4 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

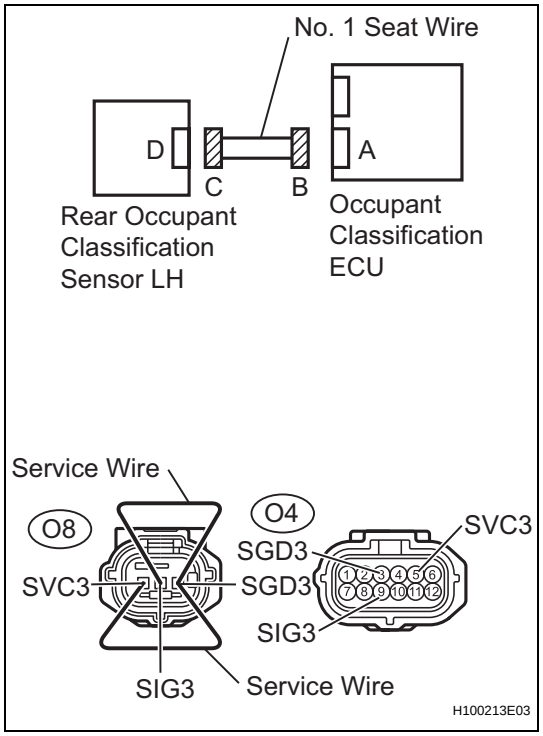
Standard voltage

Tester Connection	Condition	Specified Condition
O4-3 (SGD3) - Body ground	Ignition switch ON	Below 1 V
O4-5 (SVC3) - Body ground	Ignition switch ON	Below 1 V
O4-9 (SIG3) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

5 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using service wires, connect O8-1 (SVC3) and O8-3 (SGD3), and connect O8-2 (SIG3) and O8-3 (SGD3) of connector C.

HINT:
Do not forcibly insert the service wires into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

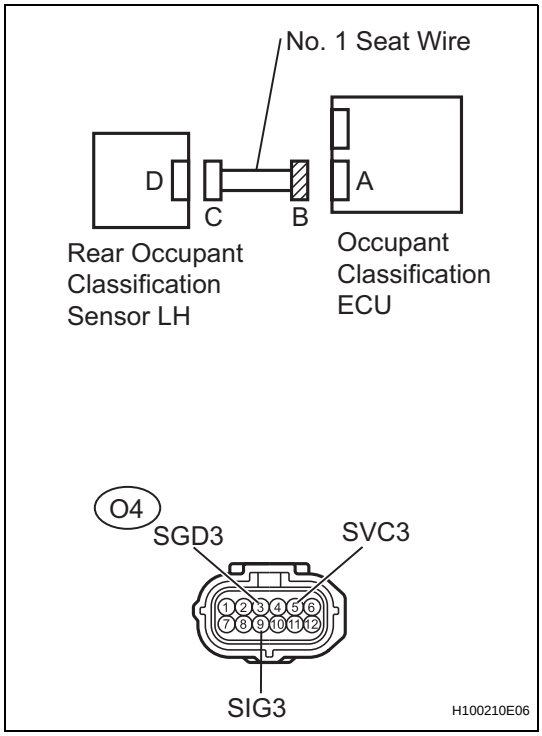
Tester Connection	Condition	Specified Condition
O4-5 (SVC3) - O4-3 (SGD3)	Always	Below 1 Ω
O4-9 (SIG3) - O4-3 (SGD3)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



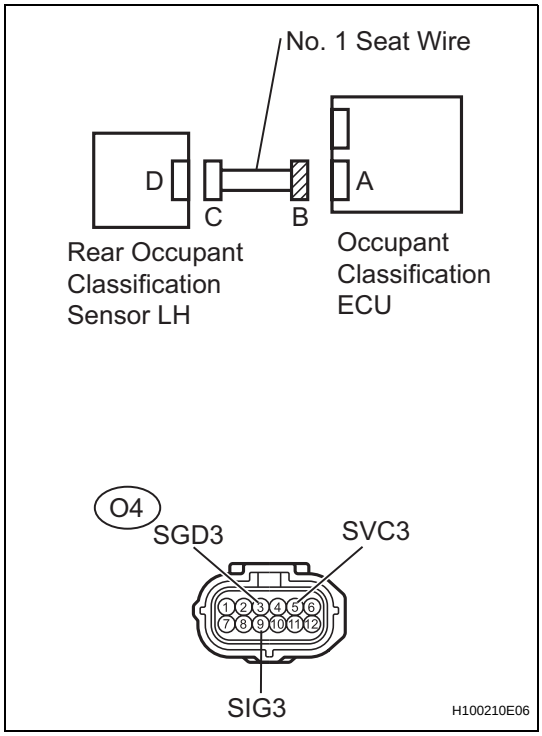
(a) Disconnect the service wires from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-5 (SVC3) - O4-3 (SGD3)	Always	1 MΩ or higher
O4-9 (SIG3) - O4-3 (SGD3)	Always	1 MΩ or higher
O4-5 (SVC3) - O4-9 (SIG3)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

7 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-3 (SGD3) - Body ground	Always	1 MΩ or higher
O4-5 (SVC3) - Body ground	Always	1 MΩ or higher
O4-9 (SIG3) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

RS

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1782 is not output.

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

USE SIMULATION METHOD TO CHECK

DTC	B1785	Front Occupant Classification Sensor LH Collision Detection

DESCRIPTION

DTC B1785 is set when the occupant classification ECU receives a collision detection signal, which is sent by the occupant classification sensor front LH when an accident occurs.
DTC B1785 is also set when the front seat with adjuster frame assembly RH is subjected to a strong impact, even if an actual accident has not occurred.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1785 can be cleared by conducting the zero point calibration and sensitivity check.
Therefore, if DTC B1785 is set, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1785	• Front seat wioth adjuster frame assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor LH senses a large load	• Front seat with adjuster frame assembly RH (Front occupant classification sensor LH) • Occupant classification ECU

HINT:
- When DTC B1650/32 is set as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1785 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM

(See page RS-377)

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the center airbag sensor assembly (See page RS-365).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1785 is not output.

HINT:
DTCs other than B1785 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.

(c) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG → **Go to step 5**

OK

3 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 5**

OK

4 CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the center airbag sensor assembly (See page RS-365).
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1785 is not output.

HINT:
DTCs other than B1785 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

5 REPLACE FRONT SEAT WITH ADJUSTER FRAME ASSEMBLY RH

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat with adjuster frame assembly RH (See page SE-38).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

RS

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG → **Go to step 9**

OK

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard :
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 9**

OK

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1785 is not output.

HINT:
DTCs other than B1785 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

RS

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard:

DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

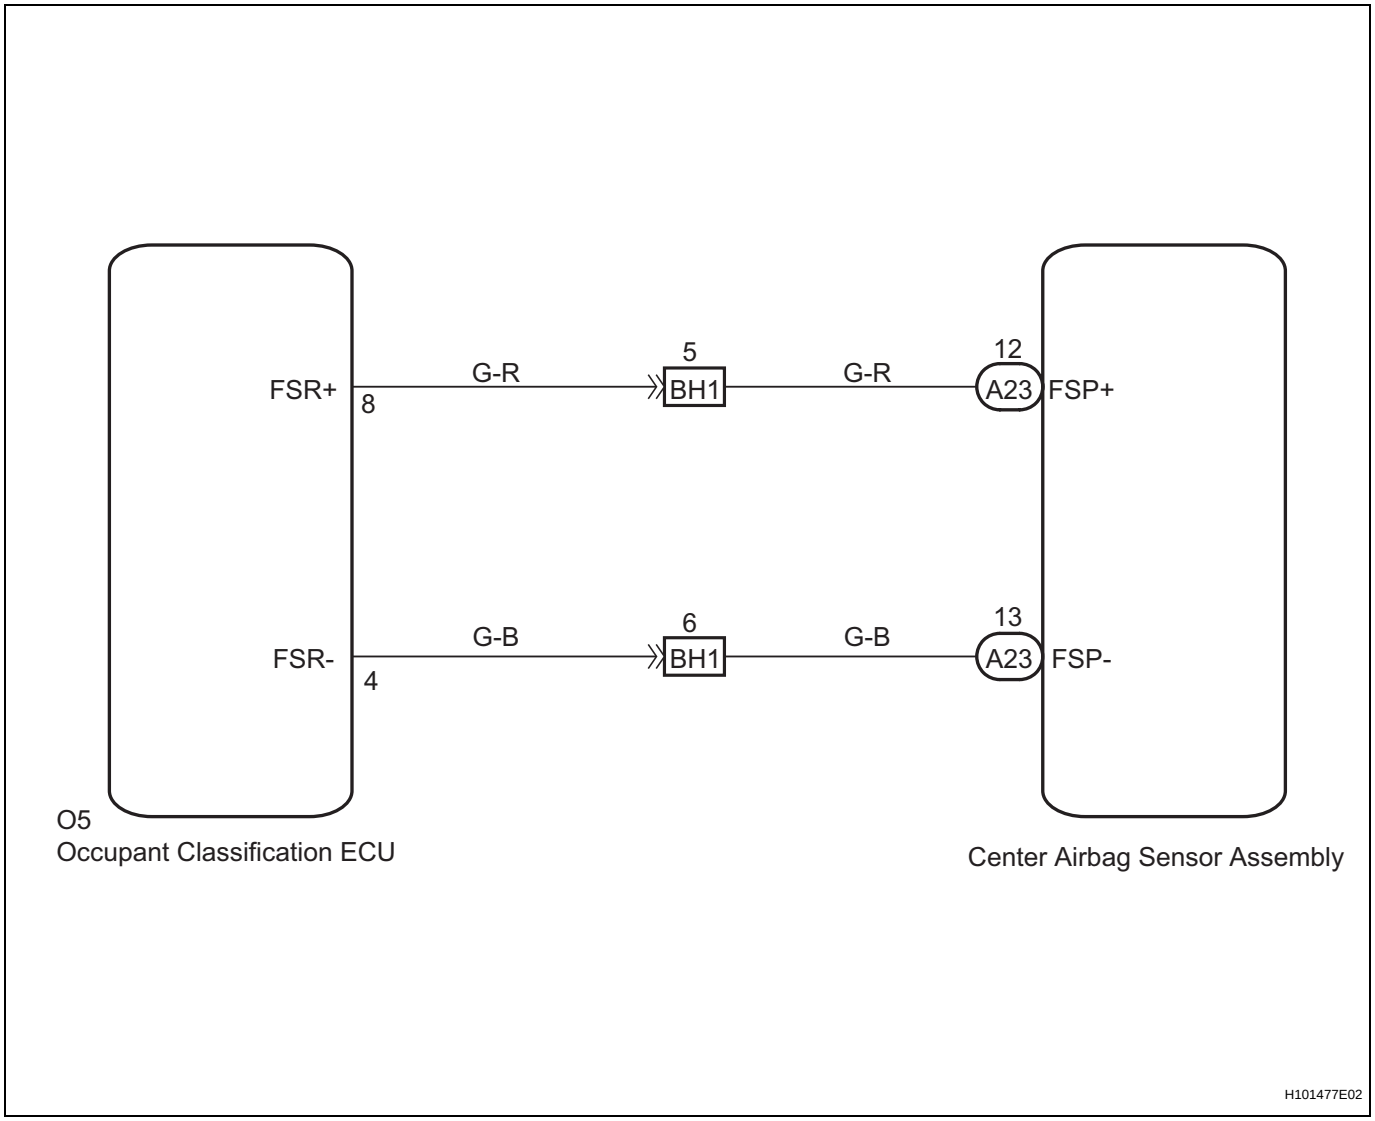
The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.
DTC B1790 is set when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC No.	DTC Detections Conditions	Trouble Areas
B1790	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the center airbag sensor assembly communication circuit for 2 seconds • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• Floor wire • No. 1 seat wire • Occupant classification ECU • Center airbag sensor assembly

HINT:

- When DTC B1630/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1790 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM



CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad assembly.
(e) Disconnect the connector from the front passenger airbag assembly.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(f) Disconnect the connector from the front seat airbag assembly LH.
(g) Disconnect the connector from the front seat airbag assembly RH.
(h) Disconnect the connector from the curtain shield airbag assembly LH.
(i) Disconnect the connector from the curtain shield airbag assembly RH.
(j) Disconnect the connector from the front seat outer belt assembly LH.
(k) Disconnect the connector from the front seat outer belt assembly RH.

HINT:
- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).

OK:

DTC B1790 is not output.

HINT:
DTCs other than B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECT CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3	CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and occupant classification ECU side) are not damaged (See page IN-34).

OK:

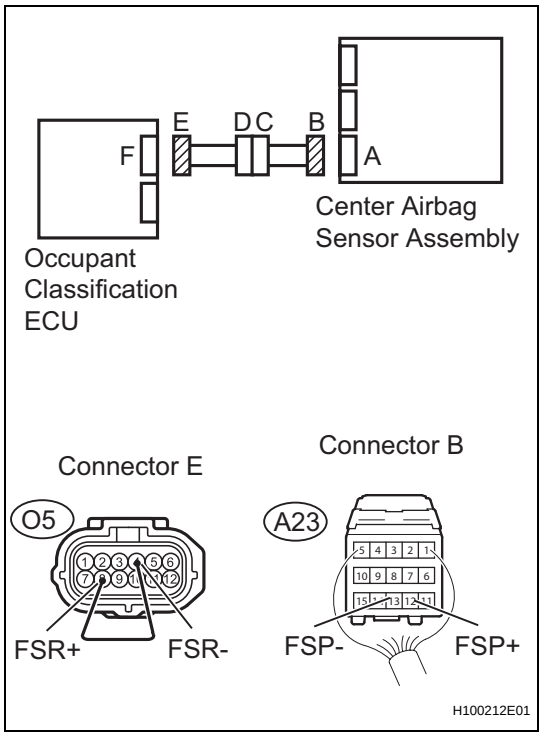
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

RS

OK

4 CHECK AIRBAG SENSOR ASSEMBLY CENTER COMMUNICATION CIRCUIT (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect O5-8 (FSR+) and O5-4 (FSR-) of connector E.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

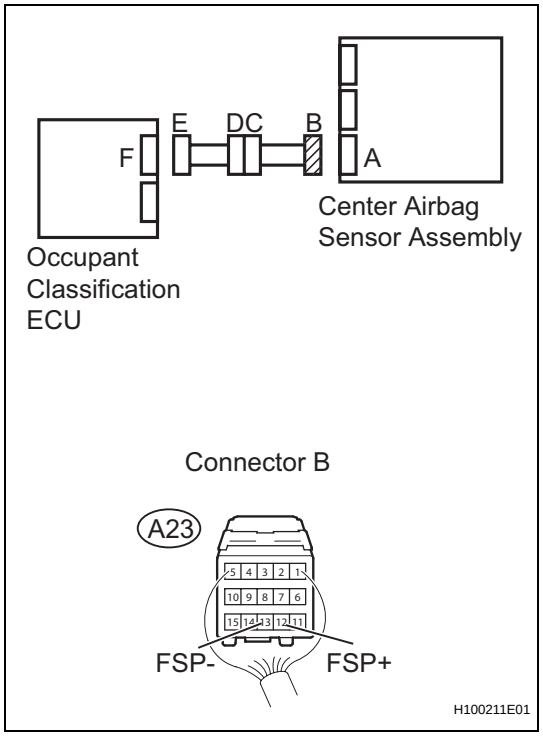
(d) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - A23-13 (FSP-)	Always	Below 1 Ω

NG → **Go to step 13**

OK

5 CHECK AIRBAG SENSOR ASSEMBLY CENTER COMMUNICATION CIRCUIT (FOR SHORT)



(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

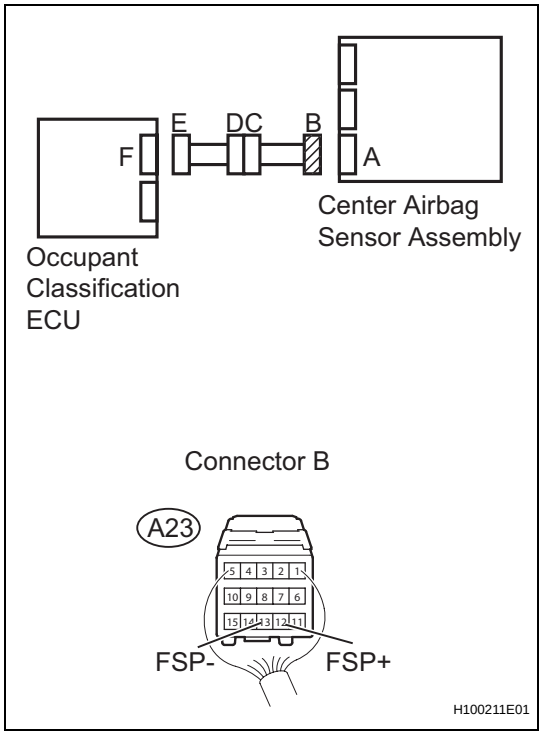
Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - A23-13 (FSP-)	Always	1 MΩ or higher

NG → **Go to step 14**

RS

OK

6	CHECK AIRBAG SENSOR ASSEMBLY CENTER COMMUNICATION CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

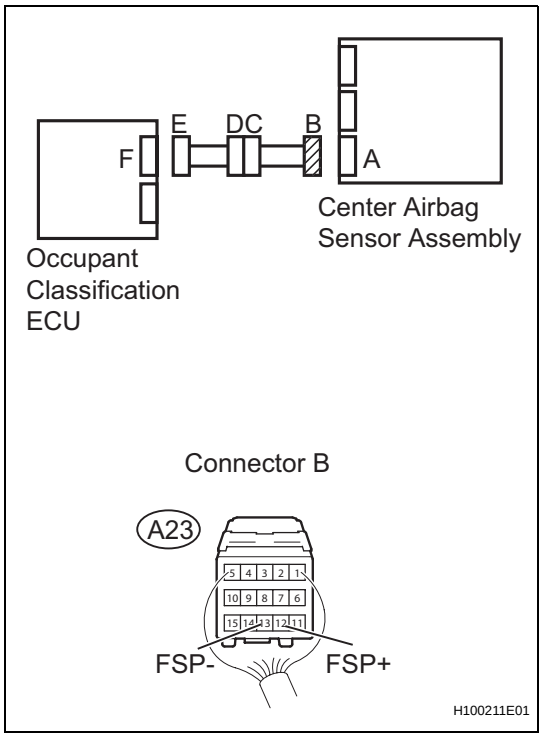
Standard voltage

Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - Body ground	Ignition switch ON	Below 1 V
A23-13 (FSP-) - Body ground	Ignition switch ON	Below 1 V

NG → **Go to step 15**

OK

7	CHECK AIRBAG SENSOR ASSEMBLY CENTER COMMUNICATION CIRCUIT (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - Body ground	Always	1 MΩ or higher
A23-13 (FSP-) - Body ground	Always	1 MΩ or higher

NG → **Go to step 16**

RS

OK

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear any DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).

OK:

DTC B1790 is not output.

HINT:

DTCs other than B1790 may be output at this time, but they are not related to this check.

NG → **USE SIMULATION METHOD TO CHECK**

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:

Perform the inspection using parts from a normal vehicle when possible.

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).

OK:

COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

12	CHECK DTC

(a) Connect the connector to the occupant classification ECU.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1790 is not output.

HINT:
DTCs other than B1790 may be output at this time, but they are not related to this check.

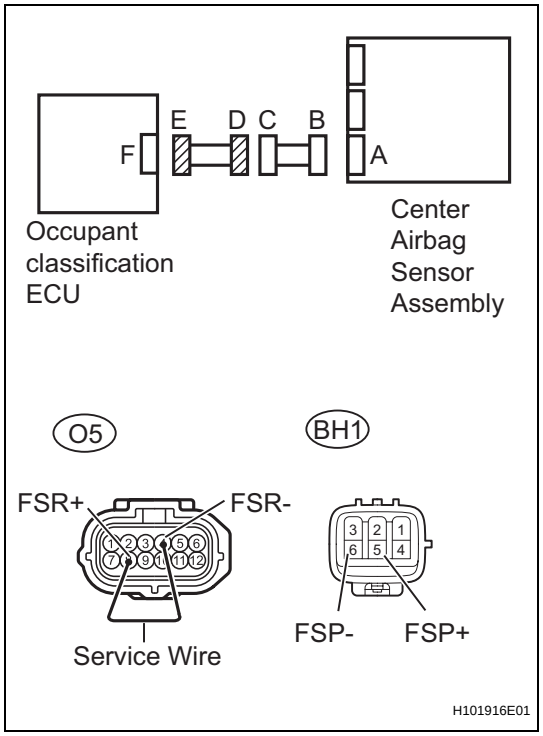
NG → **REPLACE AIRBAG SENSOR ASSEMBLY CENTER**

OK

RS

END

13 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Disconnect the No.1 seat wire connector from the occupant classification ECU.

HINT:

The service wire has already been inserted into connector E.

(b) Measure the resistance.

Standard resistance

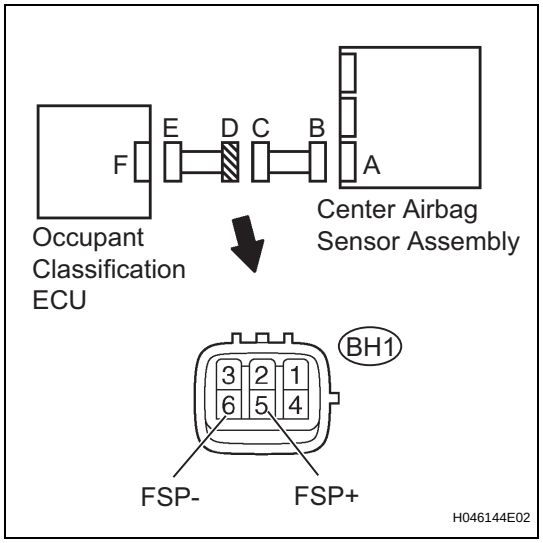
Tester Connection	Condition	Specified Condition
BH1-5 (FSP+) - BH1-6 (FSP-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

14 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Disconnect the No.1 seat wire connector from the occupant classification ECU.

(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
BH1-5 (FSP+) - BH1-6 (FSP-)	Always	1 MΩ or higher

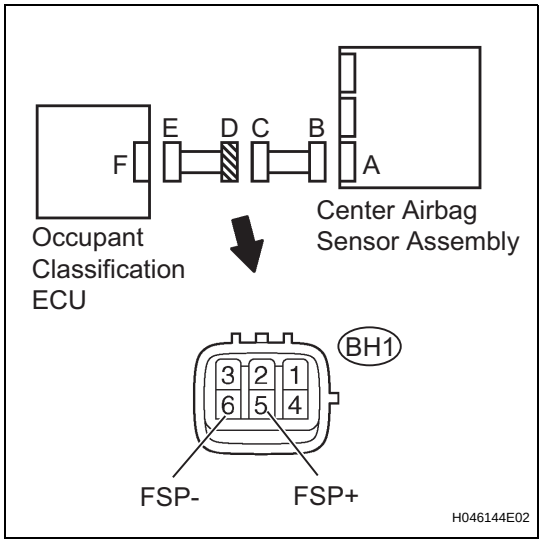
NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

RS

15 CHECK NO. 1 SEAT WIRE (TO B+)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the No. 1 seat wire connector from the occupant classification ECU.
(d) Disconnect the connector from the occupant classification ECU.
(e) Connect the negative (-) terminal cable to the battery.
(f) Turn the ignition switch to the ON position.
(g) Measure the voltage.

Standard voltage

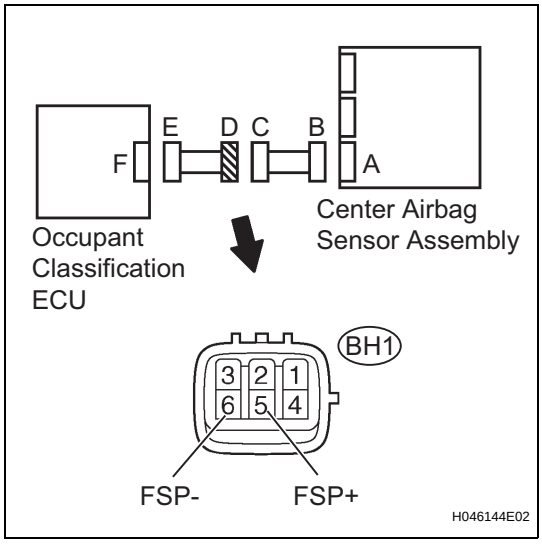
Tester Connection	Condition	Specified Condition
BH1-5 (FSP+) - Body ground	Ignition switch ON	Below 1 V
BH1-6 (FSP-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

16 CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Disconnect the No. 1 seat wire connector from the occupant classification ECU.
(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
BH1-5 (FSP+) - Body ground	Always	1 MΩ or higher
BH1-6 (FSP-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

RS

DTC	B1793	Occupant Classification Sensor Power Supply Circuit Malfunction

DESCRIPTION

The occupant classification sensor power supply circuit consists of the occupant classification ECU and the occupant classification sensors.

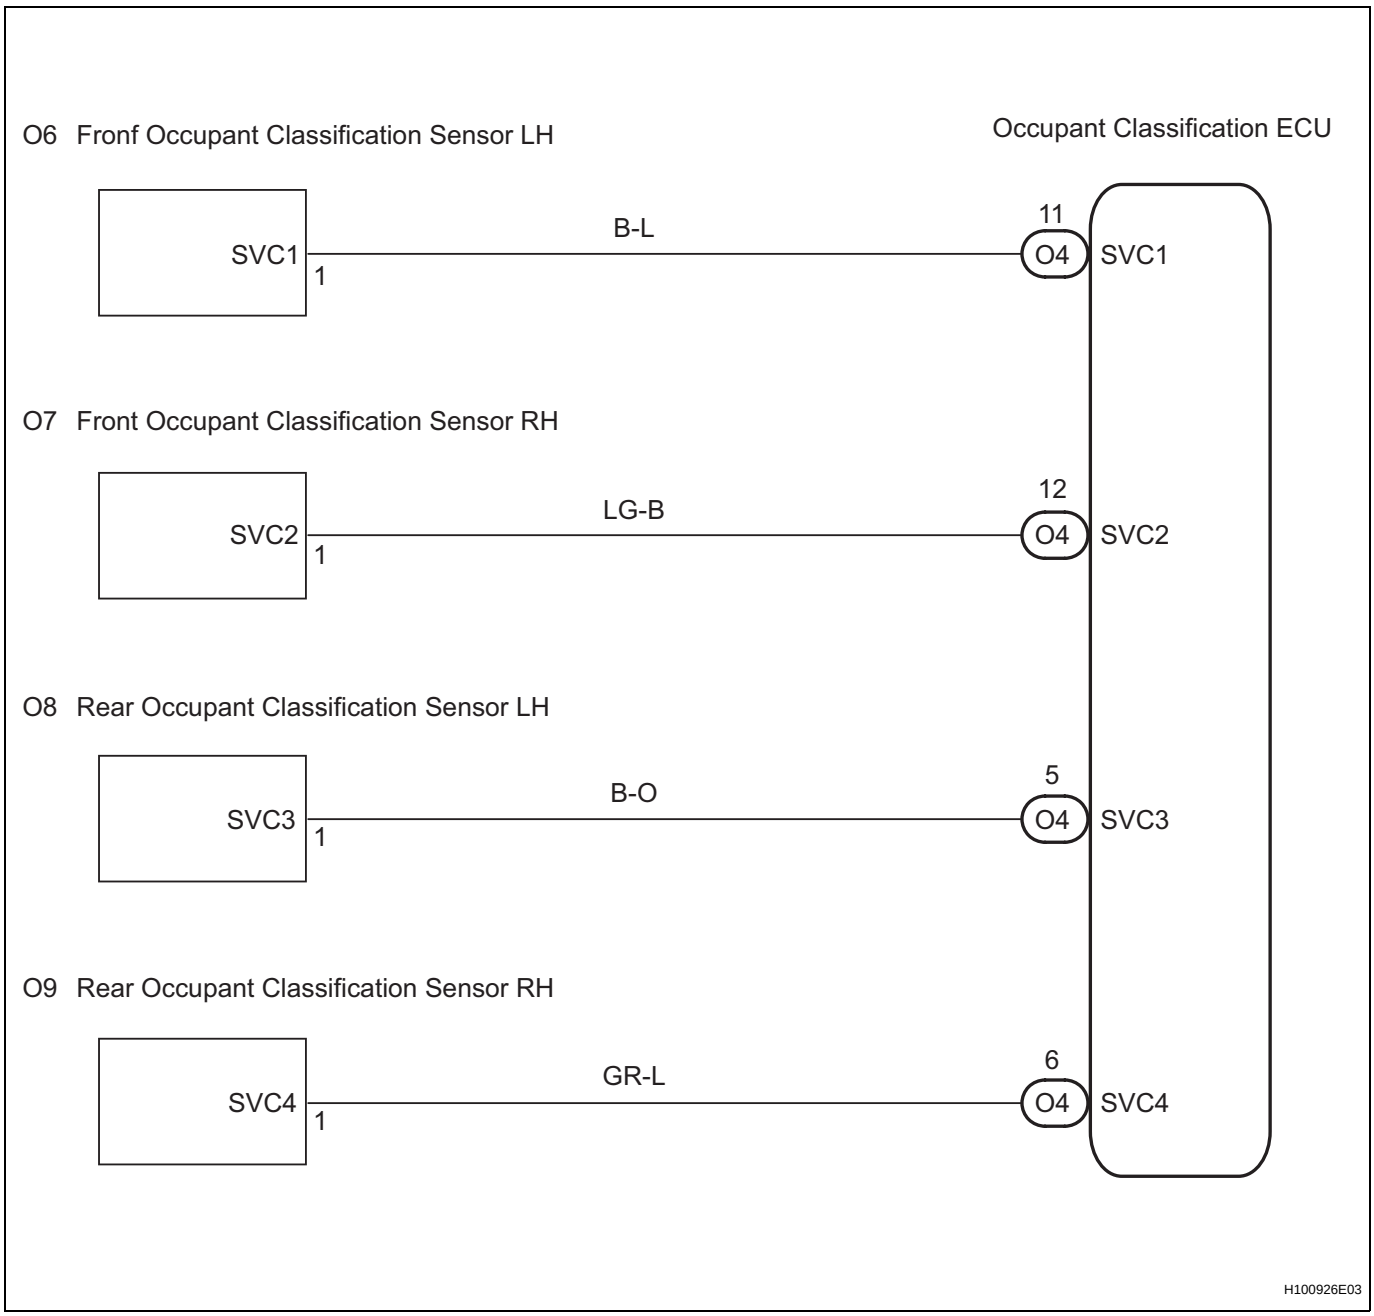
DTC B1793 is set when a malfunction is detected in the occupant classification sensor power supply circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1793	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant clarification sensor power supply circuit for 2 seconds • Open circuit in occupant classification sensor wire harness • Occupant classification ECU malfunction	• Front seat with adjuster frame assembly RH (Occupant classification sensors) • No. 1 seat wire • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1793 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM



RS

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	**CHECK DTC**

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1793 is not output.

HINT:
DTCs other than B1793 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECT CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensors.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3	CHECK CONNECTORS

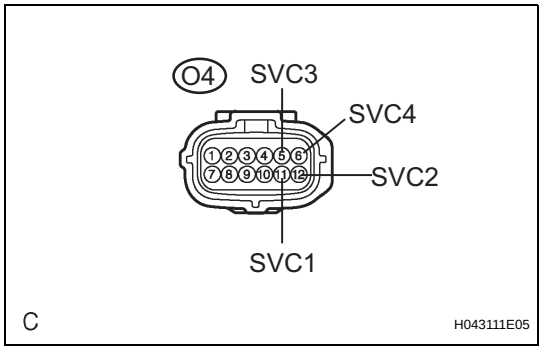
(a) Check that the connectors (on the occupant classification ECU side and the occupant classification sensors side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

4	CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

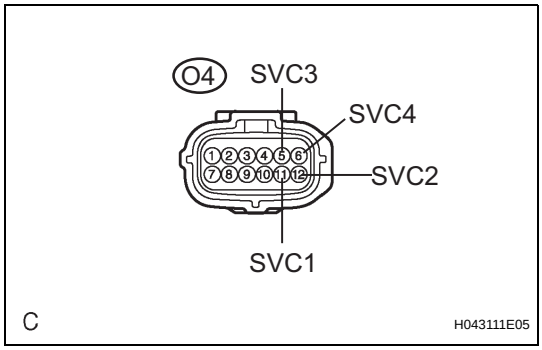
Standard voltage

Tester Connection	Condition	Specified Condition
O4-11 (SVC1) - Body ground	Ignition switch ON	Below 1 Ω
O4-12 (SVC2) - Body ground	Ignition switch ON	Below 1 Ω
O4-5 (SVC3) - Body ground	Ignition switch ON	Below 1 Ω
O4-6 (SVC4) - Body ground	Ignition switch ON	Below 1 Ω

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

5	CHECK NO. 1 SEAT WIRE (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

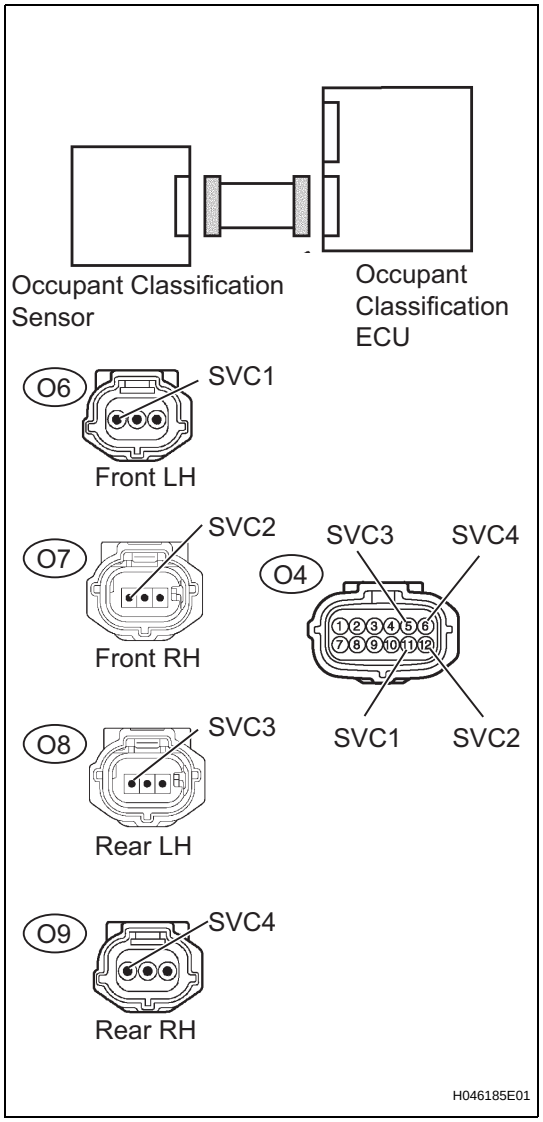
Tester Connection	Condition	Specified Condition
O4-11 (SVC1) - Body ground	Always	1 MΩ or higher
O4-12 (SVC2) - Body ground	Always	1 MΩ or higher
O4-5 (SVC3) - Body ground	Always	1 MΩ or higher
O4-6 (SVC4) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

RS

6 CHECK NO. 1 SEAT WIRE (FOR OPEN)



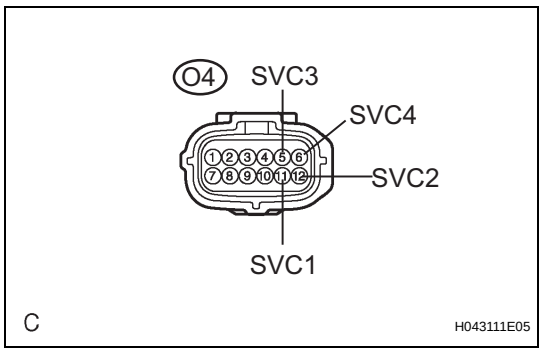
(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-11 (SVC1) - O6-1 (SVC1)	Always	Below 1 Ω
O4-12 (SVC2) - O7-1 (SVC2)	Always	Below 1 Ω
O4-5 (SVC3) - O8-1 (SVC3)	Always	Below 1 Ω
O4-6 (SVC4) - O9-1 (SVC4)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

7 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-5 (SVC3) - O4-6 (SVC4)	Always	1 MΩ or higher
O4-6 (SVC4) - O6-11 (SVC1)	Always	1 MΩ or higher
O4-11 (SVC1) - O4-12 (SVC2)	Always	1 MΩ or higher
O4-12 (SVC2) - O4-5 (SVC3)	Always	1 MΩ or higher
O4-12 (SVC2) - O4-6 (SVC4)	Always	1 MΩ or higher

RS

Tester Connection	Condition	Specified Condition
O4-11 (SVC1) - O4-5 (SVC3)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

8 CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1793 is not output.

HINT:
DTCs other than B1793 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

9 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

10 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.

RS

(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

USE SIMULATION METHOD TO CHECK

DTC	B1794	Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

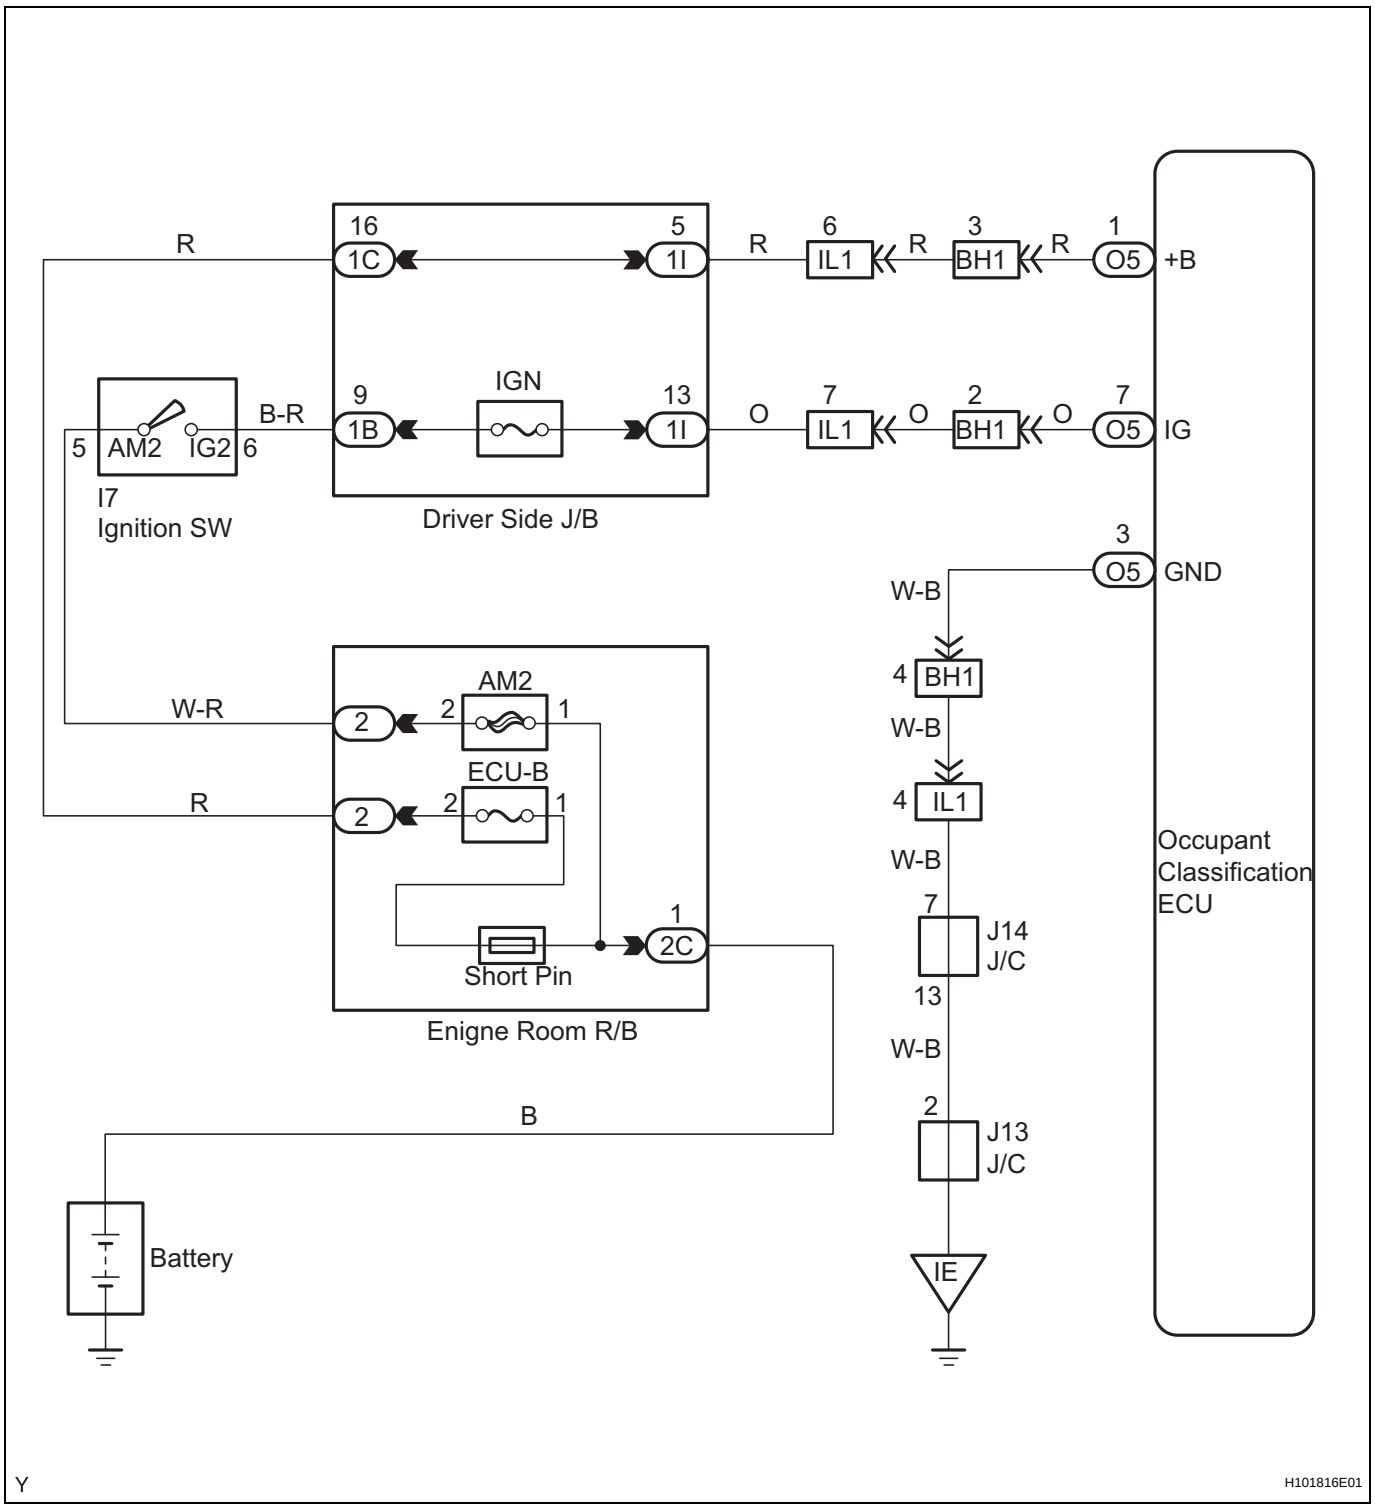
DTC B1794 is set when a malfunction is detected in the occupant classification ECU.

DTC No.	DTC Detections Conditions	Trouble Areas
B1794	• Occupant classification ECU circuit malfunction • Occupant classification ECU malfunction • The occupant classification ECU receives a short circuit to ground signal in the passenger side buckle switch circuit for 2 seconds	• Wire harness • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1794 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM



1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

RS

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position, and wait for at least 10 seconds.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1794 is not output.

HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the occupant classification ECU.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3	CHECK CONNECTORS

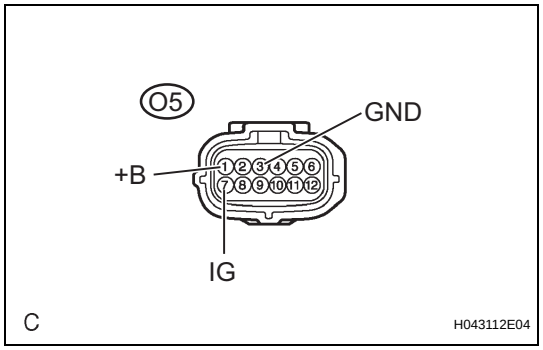
(a) Check that the connectors (on the occupant classification ECU side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

4 CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the O5 connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Measure the voltage and resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
O5-3 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
O5-1 (+B) - Body ground	Ignition switch ON	10 to 14 V
O5-7 (IG) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS OR BATTERY**

OK

5 CHECK DTC

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the ON position.
(f) Clear any DTCs stored in the memory (See page RS-365).

HINT:
- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(g) Turn the ignition switch to the LOCK position, and wait for at least 10 seconds.
(h) Turn the ignition switch to the ON position.
(i) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).

OK:
DTC B1794 is not output.

RS

HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

6	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

7	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

8	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard :
27 to 33 kg (59.52 to 72.75 lb)

RS

NEXT

END

DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is set when a malfunction is detected in the occupant classification ECU.
Troubleshoot DTC B1771 first when both DTCs B1771 and B1795 are present.

DTC No.	DTC Detections Conditions	Trouble Areas
B1795	Occupant classification ECU malfunction	Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1795 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

1 CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly .
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position, and wait for at least 10 seconds.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).

OK:

DTC B1795 is not output.

HINT:

DTCs other than B1795 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:

Perform the inspection using parts from a normal vehicle when possible.

NEXT

RS

3	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard :
Standard value: 27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1796	Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

During sleep mode, the occupant classification ECU monitors the condition of each sensor while the ignition switch is off. In this mode, if the occupant classification ECU detects an internal malfunction, DTC B1796 is set.

DTC No.	DTC Detections Conditions	Trouble Areas
B1796	Occupant classification ECU malfunction	Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, perform troubleshooting for DTC B1796 of the occupant classification system.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-365).

HINT:

- First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
- Use the intelligent tester to clear the DTCs of the occupant classification ECU, otherwise the DTCs cannot be cleared.

(c) Turn the ignition switch to the LOCK position, and wait for at least 10 seconds.
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-365).
OK:
DTC B1796 is not output.

HINT:
DTCs other than B1796 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-631).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

RS

NEXT

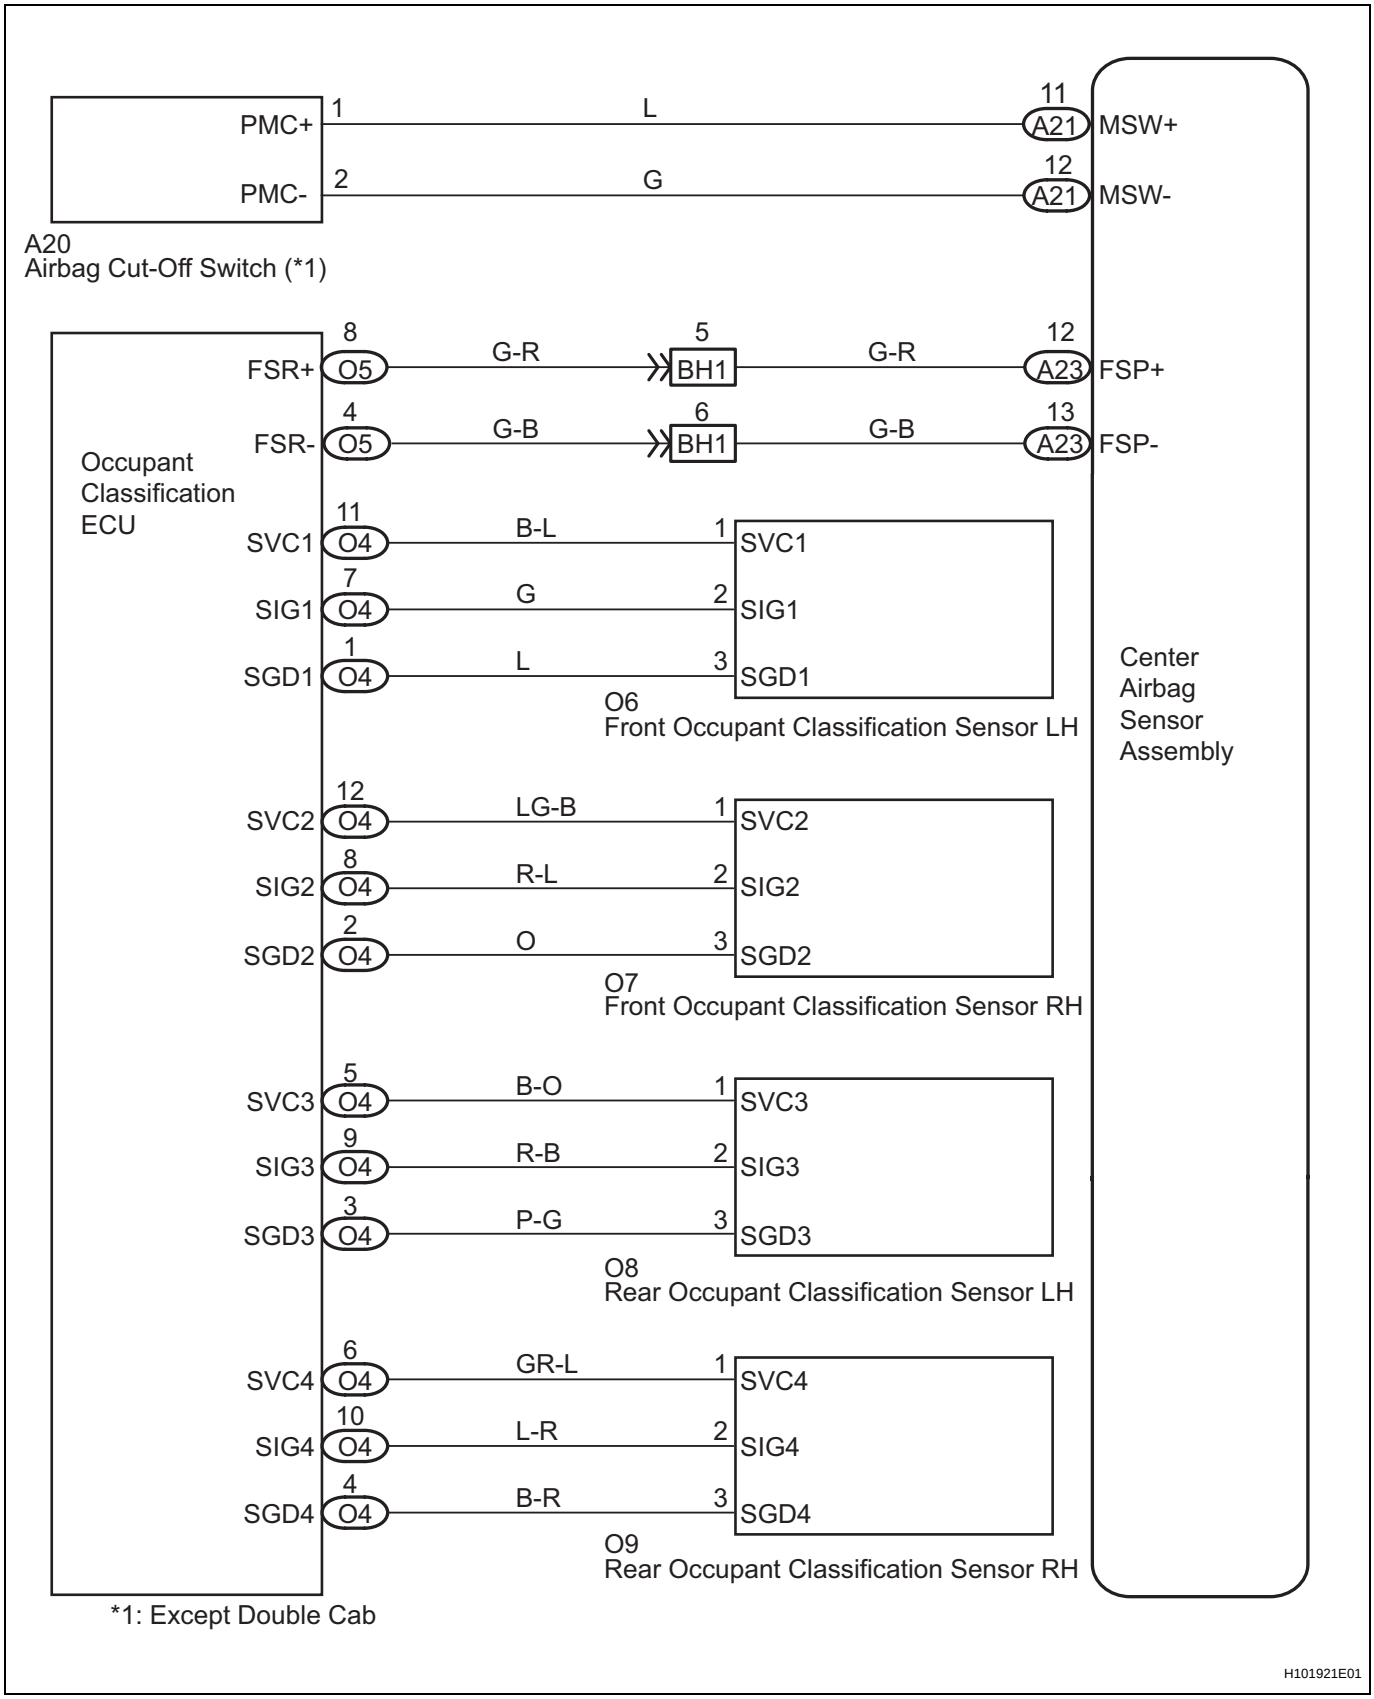
Trouble in Passenger Airbag ON / OFF Indicator

DESCRIPTION

The passenger airbag ON/OFF indicator consists of the center airbag sensor assembly, occupant classification ECU, hazard warning switch assembly, and 4 occupant classification sensors. This system controls the passenger airbag deployment according to the occupancy condition of the front passenger seat, and also displays those detected conditions.

WIRING DIAGRAM



RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad assembly.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat outer belt assembly LH.
(g) Disconnect the connector from the front seat outer belt assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the front seat airbag assembly LH.
(i) Disconnect the connector from the front seat airbag assembly RH.
(j) Disconnect the connector from the curtain shield airbag assembly LH.
(k) Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.
Result:
Double cab

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF

Except double cab

Front Seat Passenger	Airbag Cut-Off Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	AUTO	ON	OFF	OFF
Adult seated	OFF	OFF	ON	OFF
Child seated / Child restrain system set	AUTO	OFF	ON	OFF
Child seated / Child restrain system set	OFF	OFF	ON	OFF
Vacant	AUTO	OFF	OFF	OFF
Vacant	OFF	OFF	ON	OFF
Passenger occupant classification system failure	AUTO	OFF	ON	ON
Passenger occupant classification system failure	OFF	OFF	ON	ON

OK → USE SIMULATION METHOD TO CHECK

NG

2	CHECK DTC

(a) Turn the ignition switch to the ON position, and wait for at least 60 seconds.
(b) Check for DTCs (See page RS-365).
OK:
DTC is not output.

NG → GO TO DTC CHART

OK

3	CHECK VEHICLE TYPE

(a) Proceed to the appropriate step according to the seat type.

Result

Vehicle Type	Proceed to
Double cab	A
Except Double Cab	B

B → Go to step 14

A

4	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

RS

Result

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF

OK → USE SIMULATION METHOD TO CHECK

NG

5	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly, occupant classification ECU, and 4 occupant classification sensors.
OK:
The connectors are connected.

NG → **CONNECT CONNECTORS**

OK

6	CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side, occupant classification ECU side and 4 occupant classification sensors side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

7	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG → **Go to step 10**

OK

8	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 10**

OK

RS

9	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

Result

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF

OK → END

NG

10	REPAIR FRONT SEAT ASSEMBLY (PASSENGER SEAT)

(a) Loosen the 4 installation bolts fixing the front passenger seat, and then re-tighten them to the specified torque.
Torque:
37 N*m (375 kgf*cm, 27 ft.*lbf)

NEXT

11	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG → **Go to step 31**

OK

12	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

RS

NG → Go to step 31

OK

13 PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

Result

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF

NG → Go to step 31

OK

END

14 CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

RS

Result

Front Seat Passenger	Passenger Airbag Manual ON/OFF Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	AUTO	ON	OFF	OFF
Adult seated	OFF	OFF	ON	OFF
Child seated / Child restrain system set	AUTO	OFF	ON	OFF
Child seated / Child restrain system set	OFF	OFF	ON	OFF
Vacant	AUTO	OFF	OFF	OFF
Vacant	OFF	OFF	ON	OFF

OK → Go to step 22

NG

15	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

16	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

17	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

Result

Front Seat Passenger	Passenger Airbag Manual ON/OFF Switch Position	ON Indicator	OFF Indicator	SRS Warning Light

18	REPAIR FRONT SEAT ASSEMBLY (PASSENGER SEAT)

(a) Loosen the 4 installation bolts fixing the front passenger seat, and then re-tighten them to the specified torque.
Torque:
37 N*m (375 kgf*cm, 27 ft.*lbf)

NEXT

19	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NG → **Go to step 22**

OK

20	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).

NG → **Go to step 22**

OK

21	PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the ignition switch to the ON position.
(b) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(c) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.

RS

NG

22 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and airbag cut-off switch.
OK:
The connectors are connected.

NG → CONNECT CONNECTORS

OK

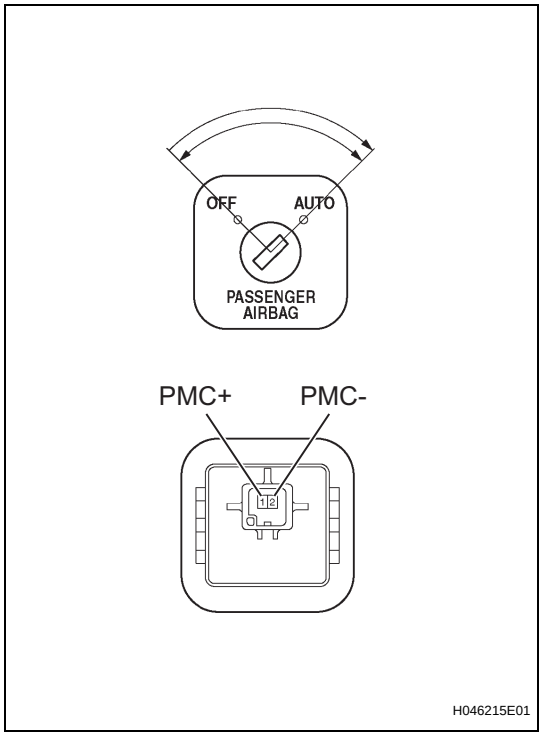
23 CHECK CONNECTORS

(a) Check that the connectors (on the center airbag sensor assembly side and airbag cut-off switch side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → REPAIR OR REPLACE WIRE HARNESS

OK

24 INSPECT AIRBAG CUT-OFF SWITCH



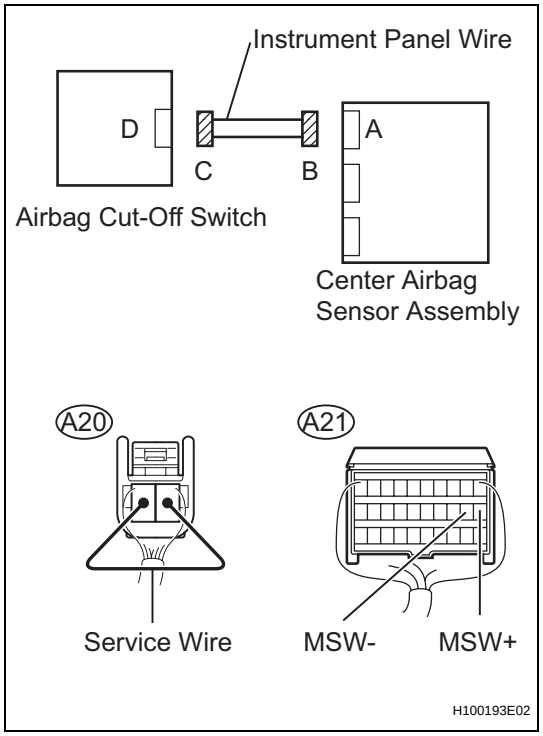
(a) Disconnect the A20 airbag cut-off switch connector.
(b) Check the resistance.
Standard resistance

Switch Connection	Tester Condition	Specified Condition
OFF	1 (PMC+) - 2 (PMC-)	80 to 120Ω
ON	1 (PMC+) - 2 (PMC-)	320 to 480Ω

NG → **REPLACE AIRBAG CUT-OFF SWITCH**

OK

25 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



(a) Disconnect the instrument panel wire connector from the airbag cut-off switch.
(b) Using a service wire, connect A20-1 (PMC+) and A20-2 (PMC-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

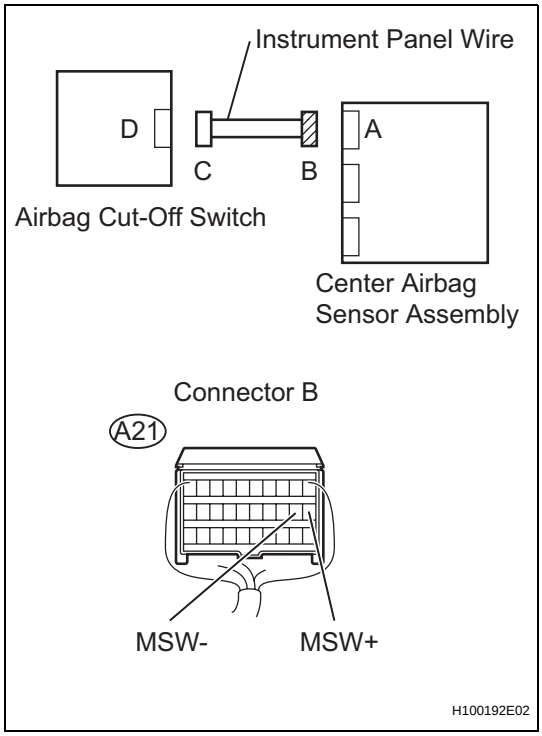
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	Below 1Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

26 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



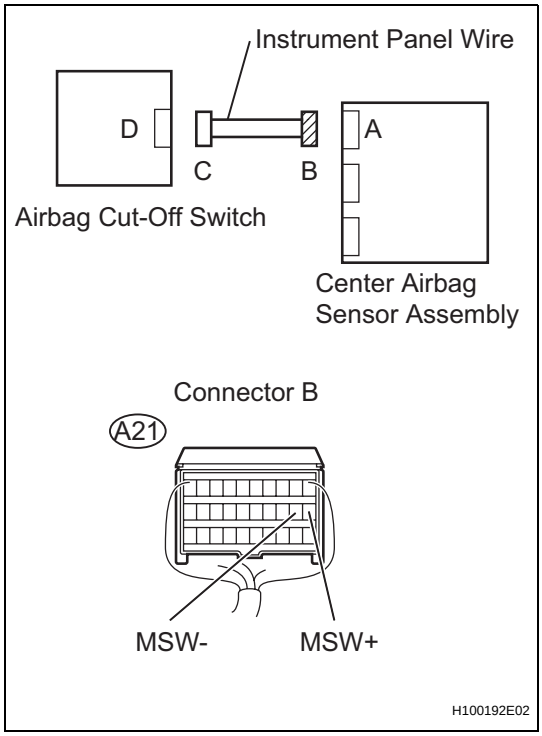
(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	1 MΩ Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

27 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.
Standard resistance

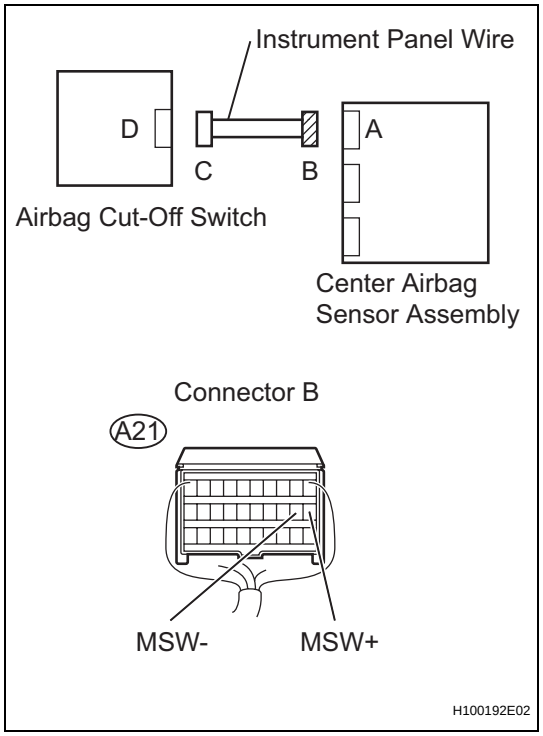
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Always	1 MΩ Higher
A21-12 (MSW-) - Body ground	Always	1 MΩ Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

28 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Ignition switch ON	Below 1 V
A21-12 (MSW-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

29 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and 4 occupant classification sensors.
OK:
The connectors are connected.

NG → **CONNECT CONNECTORS**

OK

30 CHECK CONNECTORS

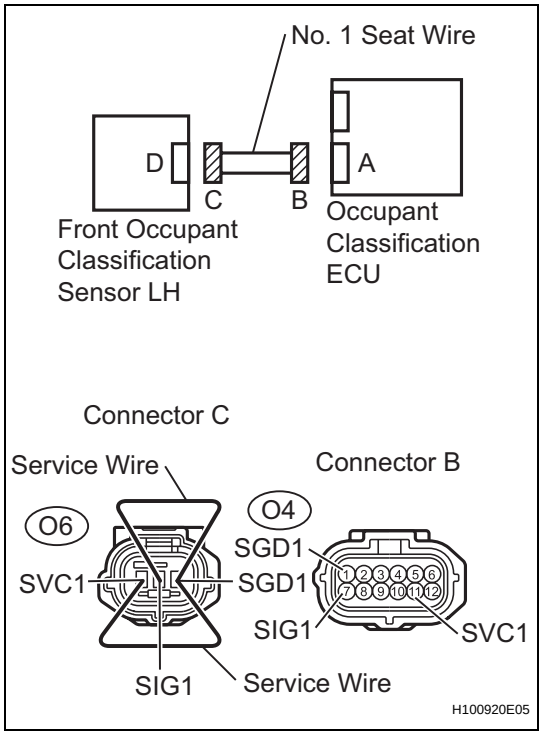
(a) Check that the connectors (on the occupant classification ECU side and 4 occupant classification sensors side) are not damaged (See page IN-34).
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

RS

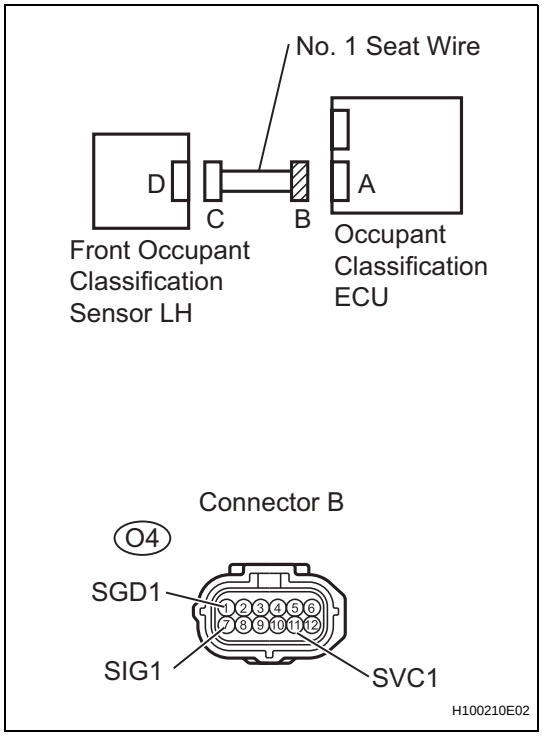
OK

31	CHECK NO. 1 SEAT WIRE (OCCUPANT CLASSIFICATION SENSOR FRONT LH CIRCUIT)



(a) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor front LH.
(b) Using service wires, connect O6-1 (SVC1) and O6-3 (SGD1), and connect O6-2 (SIG1) and O6-3 (SGD1) of connector C.
NOTICE:
Do not forcibly insert the service wires into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-7 (SIG1) - O4-1 (SGD1)	Always	Below 1 Ω
O4-11 (SVC1) - O4-1 (SGD1)	Always	Below 1 Ω



(d) Disconnect the service wires from connector C.
(e) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-7 (SIG1) - O4-1 (SGD1))	Always	1MΩ or Higher
O4-11 (SVC1) - O4-1 (SGD1)	Always	1MΩ or Higher
O4-7 (SIG1) - O4-11 (SVC1)	Always	1MΩ or Higher
O4-1 (SGD1) - Body ground	Always	1MΩ or Higher
O4-7 (SIG1) - Body ground)	Always	1MΩ or Higher
O4-11 (SVC1) - Body ground	Always	1MΩ or Higher

(f) Connect the negative (-) terminal cable to the battery.
(g) Turn the ignition switch to the ON position.
(h) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O4-1 (SGD1) - Body ground	Ignition switch ON	Below 1 V
O4-7 (SIG1) - Body ground	Ignition switch ON	Below 1 V
O4-11 (SVC1) - Body ground	Ignition switch ON	Below 1 V

RS

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

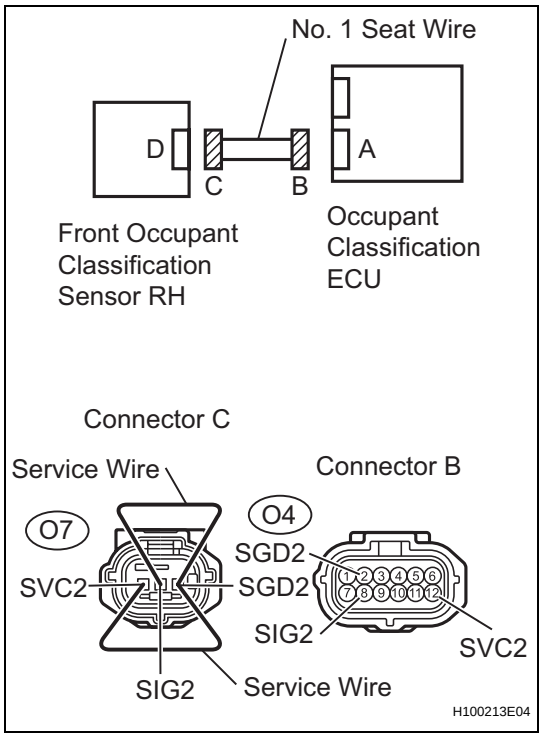
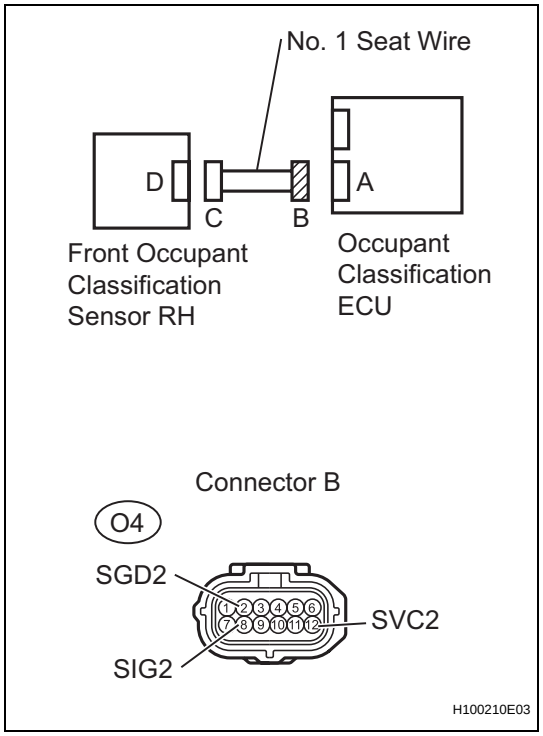
32 CHECK NO. 1 SEAT WIRE (OCCUPANT CLASSIFICATION SENSOR FRONT RH CIRCUIT)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor front RH.
(d) Using service wires, connect O7-1 (SVC2) and O7-3 (SGD2), and connect O7-2 (SIG2) and O7-3 (SGD2) of connector C.
NOTICE:
Do not forcibly insert the service wires into the terminals of the connector when connecting.
(e) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-8 (SIG2) - O4-2 (SGD2)	Always	Below 1 Ω
O4-12 (SVC2) - O4-2 (SGD2)	Always	Below 1 Ω



(f) Disconnect the service wires from connector C.
(g) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-8 (SIG2) - O4-2 (SGD2)	Always	1MΩ or Higher
O4-12 (SVC2) - O4-2 (SGD2)	Always	1MΩ or Higher
O4-8 (SIG2) - O4-12 (SVC2)	Always	1MΩ or Higher
O4-2 (SGD2) - Body ground	Always	1MΩ or Higher
O4-8 (SIG2) - Body ground	Always	1MΩ or Higher
O4-12 (SVC2) - Body ground	Always	1MΩ or Higher

(h) Connect the negative (-) terminal cable to the battery.
(i) Turn the ignition switch to the ON position.
(j) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O4-2 (SGD2) - Body ground	Ignition switch ON	Below 1 V
O4-8 (SIG2) - Body ground	Ignition switch ON	Below 1 V

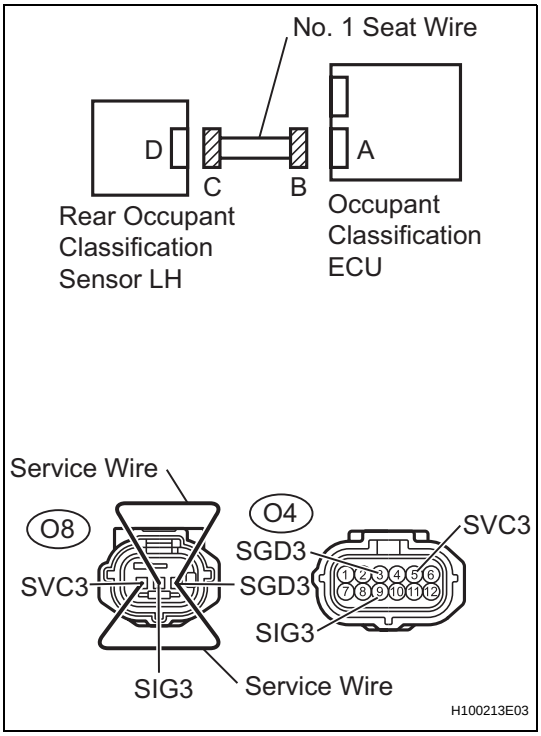
RS

Tester Connection	Condition	Specified Condition
O4-12 (SVC2) - Body ground	Ignition switch ON	Below 1 V

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

33 CHECK NO. 1 SEAT WIRE (OCCUPANT CLASSIFICATION SENSOR REAR LH CIRCUIT)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor rear LH.
(d) Using service wires, connect O8-1 (SVC3) and O8-3 (SGD3), and connect O8-2 (SIG3) and O8-3 (SGD3) of connector C.

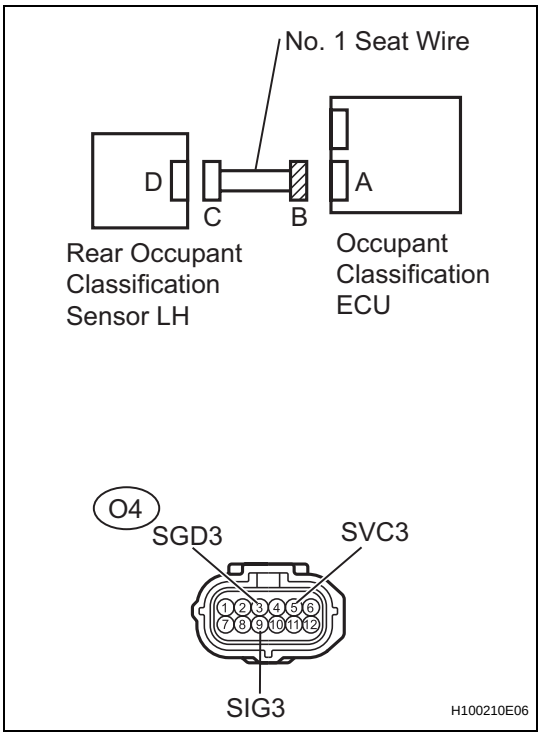
NOTICE:

Do not forcibly insert the service wires into the terminals of the connector when connecting.

(e) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
O4-5 (SVC3) - O4-3 (SGD3)	Always	Below 1 Ω
O4-9 (SIG3) - O4-3 (SGD3)	Always	Below 1 Ω



(f) Disconnect the service wires from connector C.
(g) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
O4-5 (SVC3) - O4-3 (SGD3)	Always	1MΩ or Higher
O4-9 (SIG3) - O4-3 (SGD3)	Always	1MΩ or Higher
O4-5 (SVC3) - O4-9 (SIG3)	Always	1MΩ or Higher
O4-3 (SGD3) - Body ground	Always	1MΩ or Higher
O4-5 (SVC3) - Body ground	Always	1MΩ or Higher
O4-9 (SIG3) - Body ground	Always	1MΩ or Higher

(h) Connect the negative (-) terminal cable to the battery.
(i) Turn the ignition switch to the ON position.
(j) Measure the voltage.

RS

Standard voltage

Tester Connection	Condition	Specified Condition

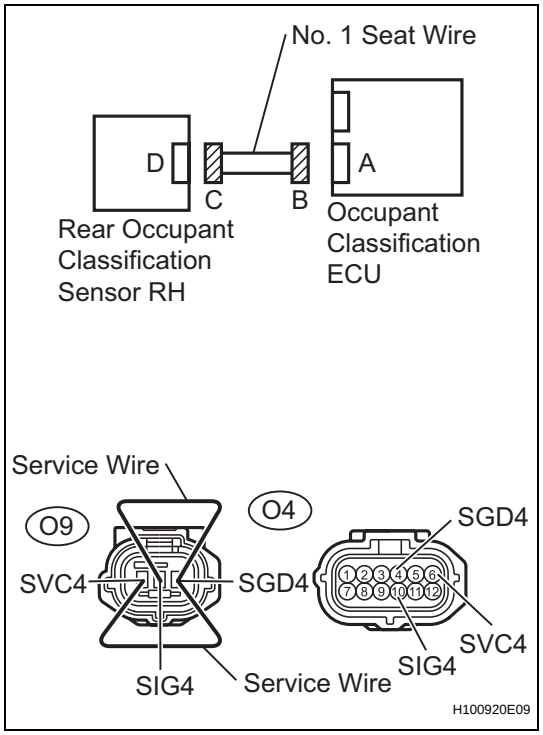
O4-5 (SVC3) - Body ground	Ignition switch ON	Below 1 V
O4-9 (SIG3) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

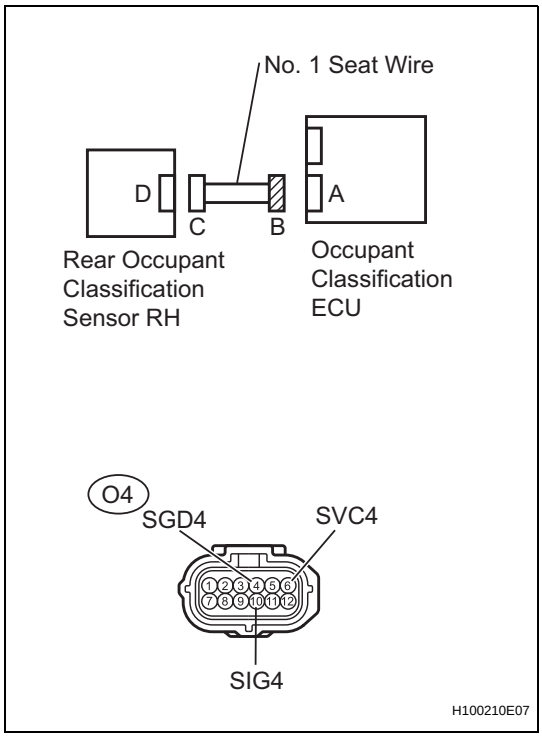
34 CHECK NO. 1 SEAT WIRE (OCCUPANT CLASSIFICATION SENSOR REAR RH CIRCUIT)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor rear LH.
(d) Using service wires, connect O9-1 (SVC4) and O9-3 (SGD4), and connect O9-2 (SIG4) and O9-3 (SGD4) of connector C.
NOTICE:
Do not forcibly insert the service wires into the terminals of the connector when connecting.
(e) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-6 (SVC4) - O4-4 (SGD4)	Always	Below 1 Ω
O4-10 (SIG4) - O4-4 (SGD4)	Always	Below 1 Ω

RS



(f) Disconnect the service wires from connector C.
(g) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O4-6 (SVC4) - O4-4 (SGD4)	Always	1MΩ or Higher
O4-10 (SIG4) - O4-4 (SGD4)	Always	1MΩ or Higher
O4-6 (SVC4) - O4-10 (SIG4)	Always	1MΩ or Higher
O4-4 (SGD4) - Body ground	Always	1MΩ or Higher
O4-6 (SVC4) - Body ground	Always	1MΩ or Higher
O4-10 (SIG4) - Body ground	Always	1MΩ or Higher

(h) Connect the negative (-) terminal cable to the battery.
(i) Turn the ignition switch to the ON position.
(j) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O4-4 (SGD4) - Body ground	Ignition switch ON	Below 1 V
O4-6 (SVC4) - Body ground	Ignition switch ON	Below 1 V
O4-10 (SIG4) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

35 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-357).
OK:
COMPLETED is displayed on the tester.

NEXT

36 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

RS

37 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the center airbag sensor assembly (See page RS-602).
HINT:
Perform the inspection using parts from a normal vehicle when possible.
(d) Connect the connectors to the center airbag sensor assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the ON position.
(g) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then turns off for approximately 2 seconds.
(h) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON/OFF according to the condition listed below.
Result:
Double cab

Front Seat Passenger	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	ON	OFF	OFF
Child seated / Child restrain system set	OFF	ON	OFF
Vacant	OFF	OFF	OFF

Except double cab

Front Seat Passenger	Airbag Cut-Off Switch	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	AUTO	ON	OFF	OFF

OK:
COMPLETED is displayed on the tester.

NEXT

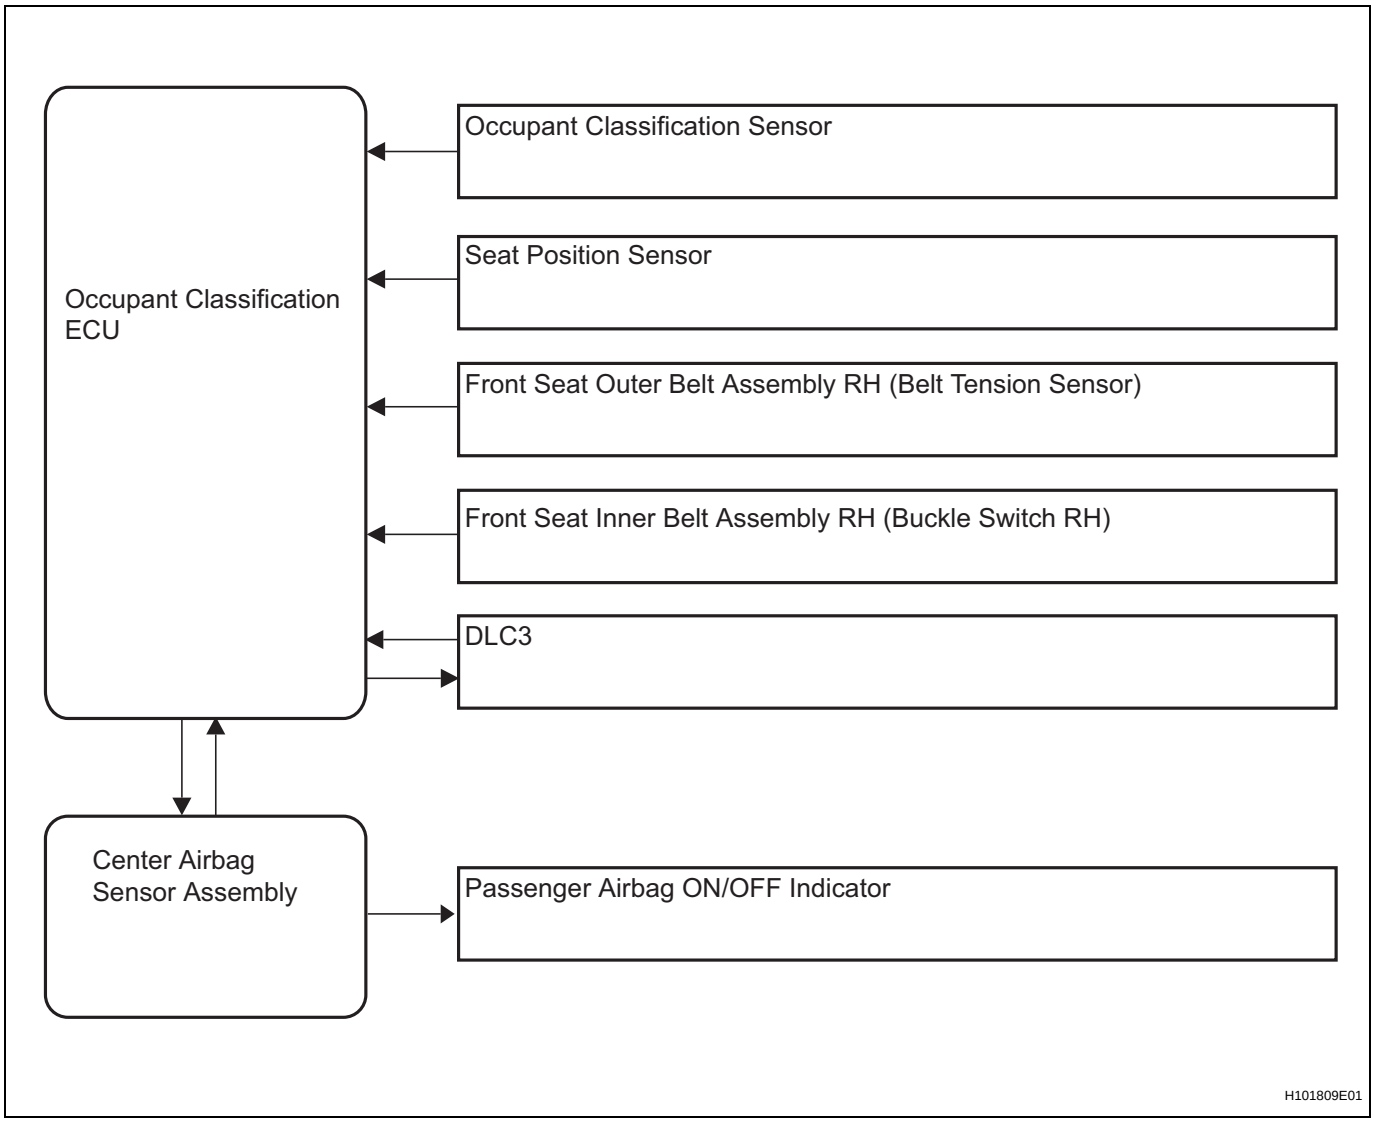
43	**PERFORM SENSITIVITY CHECK**

(a) Using the intelligent tester, perform the sensitivity check (See page RS-357).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. GENERAL DESCRIPTION

(a) In the occupant classification system, the occupant classification ECU calculates the weight of the front passenger based on a signal from the occupant classification sensor. This system judges the occupant to be a child when it detects a weight of less than 25kg (55.1 lb), and disables the front passenger side airbag and front passenger side - side airbag (*1).
HINT:
*1: For vehicles equipped with the side and curtain shield airbags.

(b) This system is mainly comprised of the occupant classification sensor that detects the load on the front passenger seat. The occupant classification ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag assembly and front passenger side - side airbag assembly (*1).
HINT:
*1: For vehicles equipped with the side and curtain shield airbags.

2. OCCUPANT CLASSIFICATION SENSOR

(a) The occupant classification sensor is installed between the seat cushion frame and seat cushion pad. The pressure sensor is installed on the seat frame.

(b) The pressure sensor detects the pressure applied to the front passenger seat by the seated passenger. The occupant classification ECU determines whether the front passenger side airbag and front passenger side - side airbag (*1) are deployed or not based on signals from the pressure sensor.
HINT:
*1: For vehicles equipped with the side and curtain shield airbags.

3. SEAT BELT TENSION SENSOR

(a) The seat belt tension sensor is installed on the front seat outer belt to detect a CRS (Child Restraint System).

4. SEAT POSITION SENSOR (FOR FRONT PASSENGER SIDE)

(a) The seat position sensor (for front passenger side) is installed on the driver seat side - side slider rail to detect the position of the front passenger side seat.

REGISTRATION

1. REGISTRATION

NOTICE:

- **If any DTCs related to the occupant classification ECU are output, troubleshoot those DTCs by referring to the DIAGNOSTIC TROUBLE CODE CHART.**
- **When ECU data saving or loading operations cannot be performed, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).**

HINT:

- When the occupant classification ECU for a bench seat type is replaced, the previous ECU data must be saved in the intelligent tester and loaded into the new ECU by following the flowchart below.
- Until the data from the previous ECU are loaded into the new occupant classification ECU, these data are not erased even when the tester is turned off.
- ECU EXCHANGE PROCEDURE (Before Exchange) describes the procedure to save the data in the intelligent tester from the occupant classification ECU which has been installed on the vehicle. ECU EXCHANGE PROCEDURE (After Exchange) describes the procedure to load the data from the previous ECU, stored in the intelligent tester, into the new ECU.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Store the occupant classification ECU data into the intelligent tester by following the prompts on the tester screen.

HINT:

If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

(d) Turn the ignition switch to the LOCK position.

(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(f) Replace the occupant classification ECU (See page RS-634).

(g) Connect the negative (-) terminal cable to the battery.

(h) Turn the ignition switch to the ON position.

(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU by following the prompts on the tester screen.

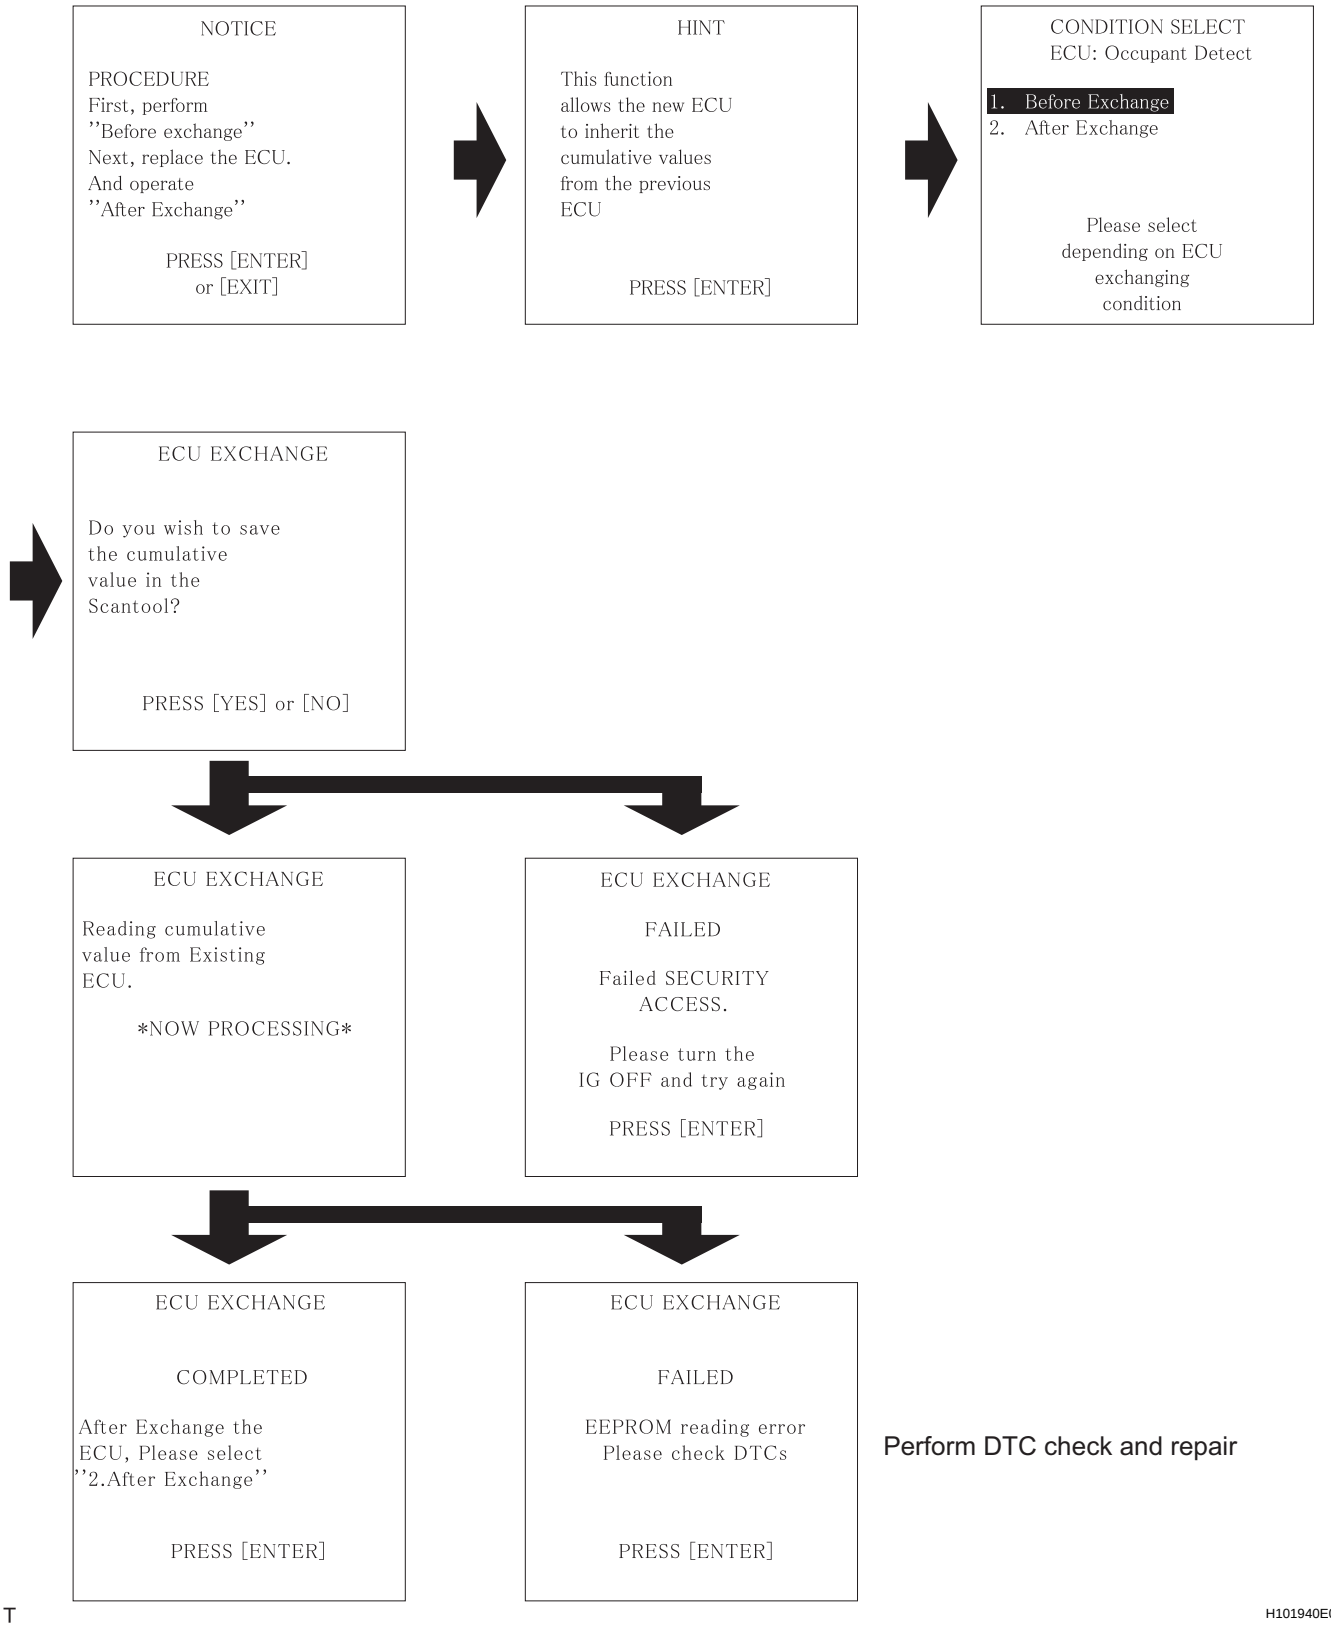
(j) Turn the ignition switch to the LOCK position.

(k) Turn the ignition switch to the ON position.

(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

ECU EXCHANGE PROCEDURE (Before Exchange):

1: DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT
Refer to the following screen flow.



Perform DTC check and repair

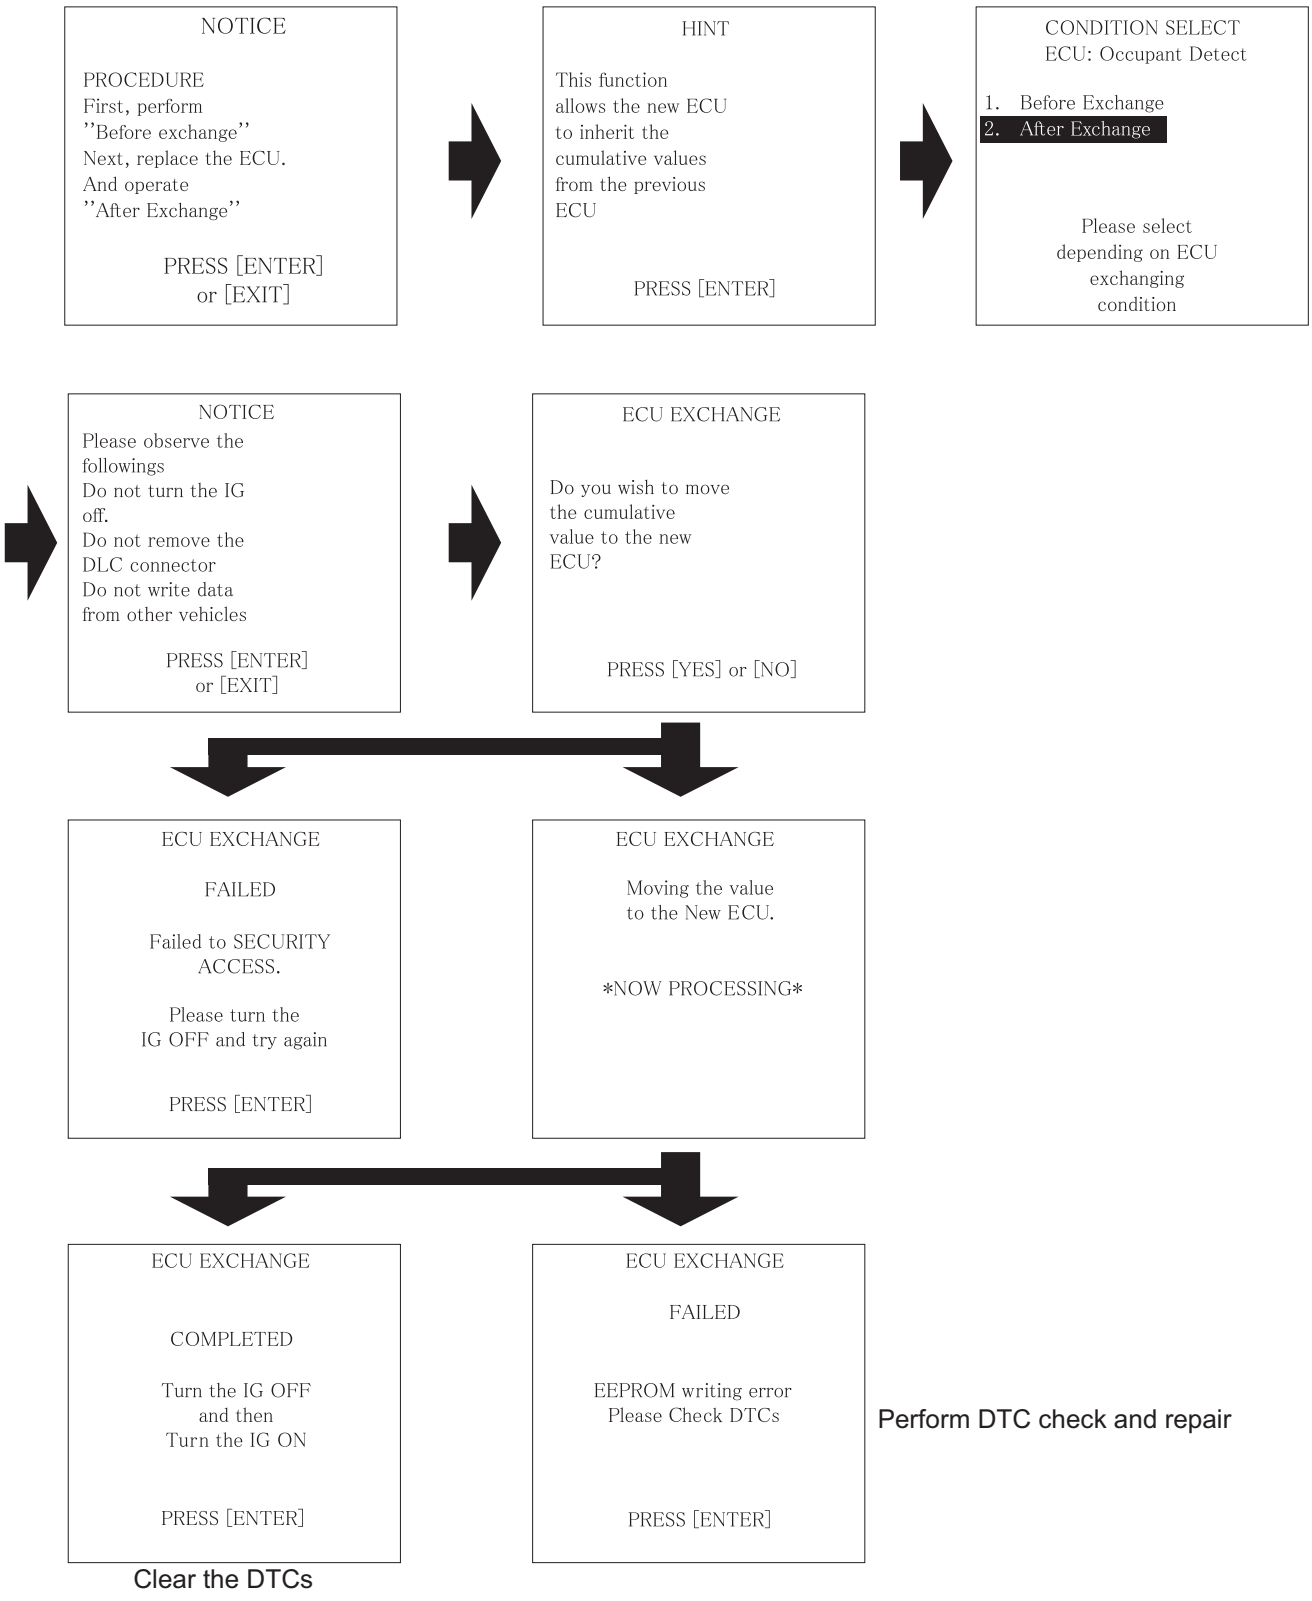
RS

T

H101940E01

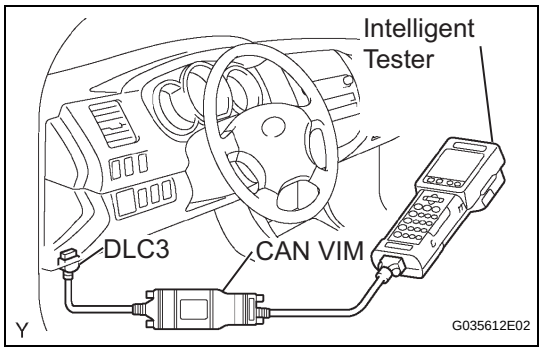
ECU EXCHANGE PROCEDURE (After Exchange):

1: DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT
Refer to the following screen flow.



T

H101939E01



INITIALIZATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation.

HINT:

Perform the zero point calibration if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator indicates OFF when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

1. ZERO POINT CALIBRATION

(a) Zero point calibration procedures

(1) Check that all of the following conditions are met:

- The vehicle is parked on a flat surface.
- No objects are placed on the front passenger seat.
- The front passenger seat belt buckle switch is OFF.

(2) Adjust the seat position according to the table below.

Adjustment Item	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

(3) Connect the intelligent tester to the DLC3.

(4) Turn the ignition switch to the ON position.

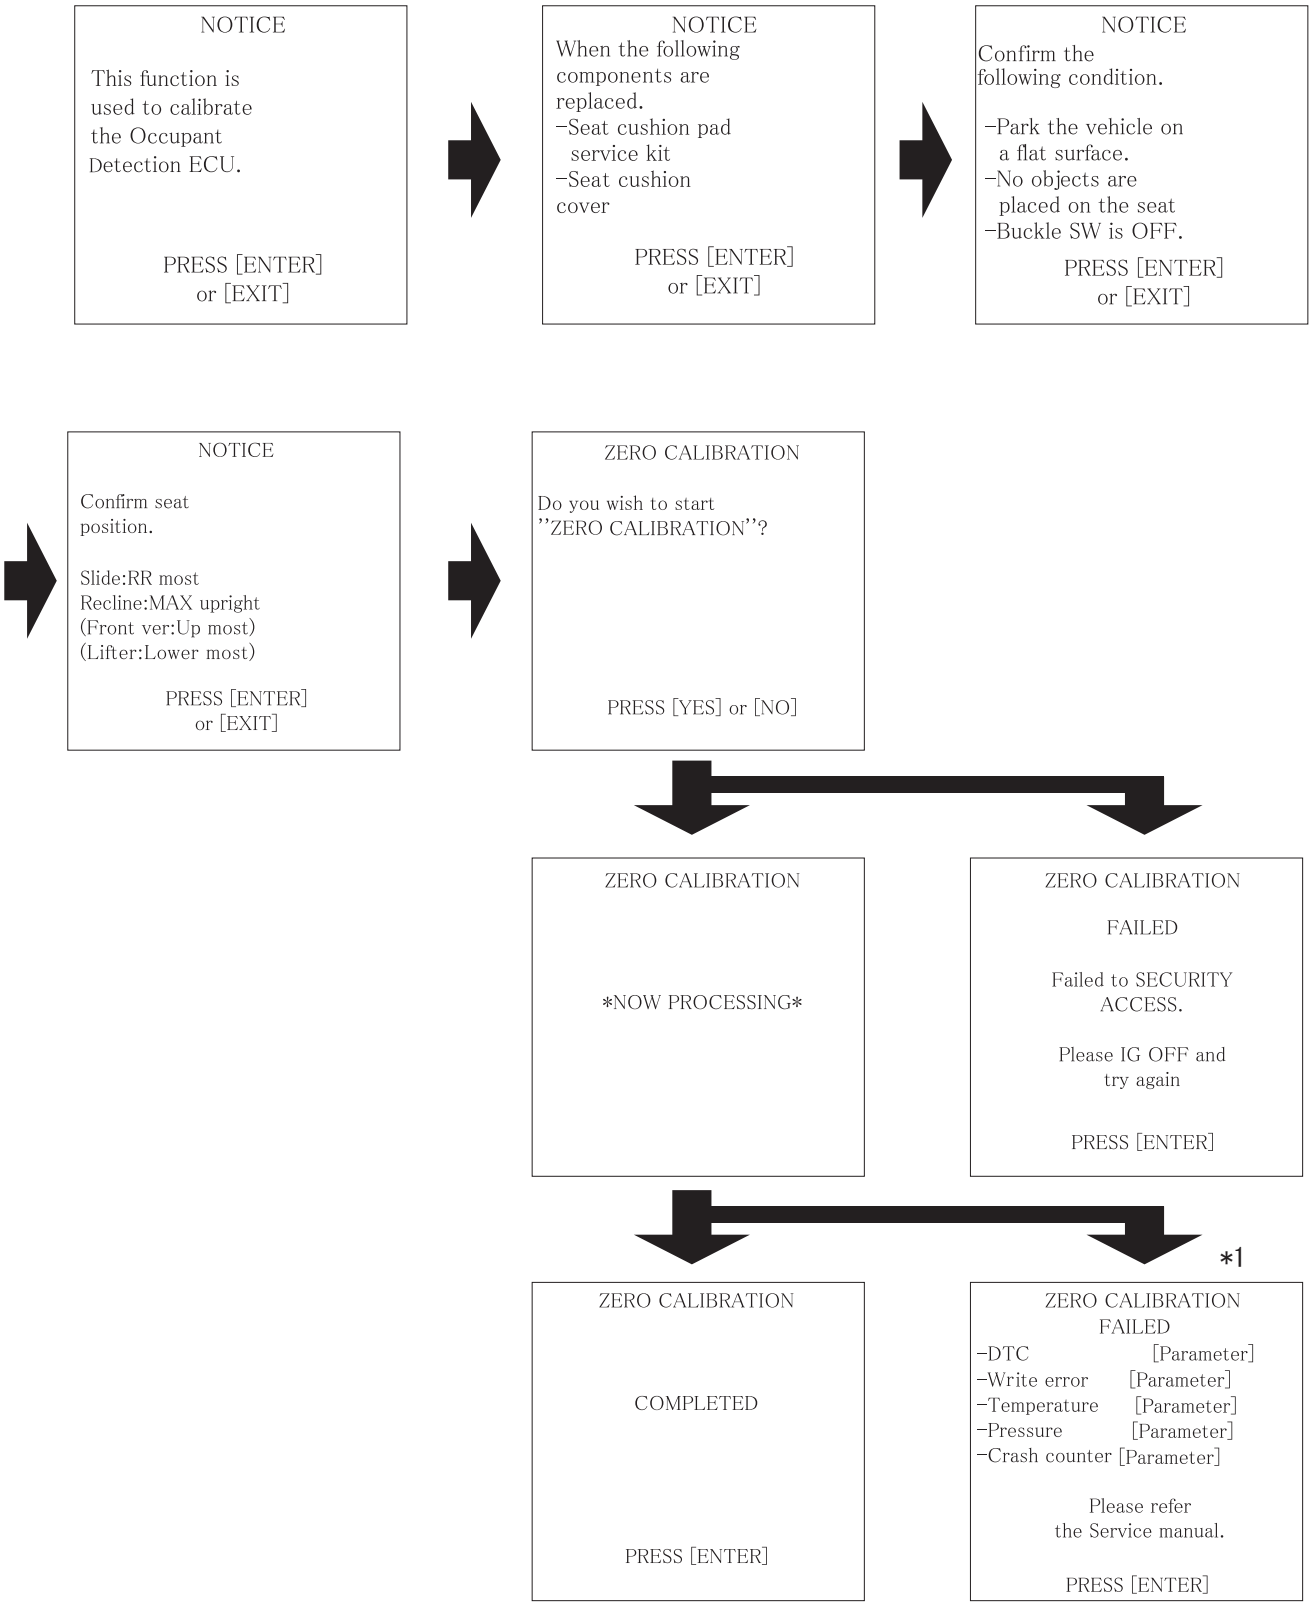
(5) Perform the zero point calibration by following the prompts on the tester screen.

HINT:

- Refer to the intelligent tester operator's manual for further details.
- If the zero point calibration is performed when the calibration conditions are not satisfied, DTC B1797 is output.
- If the zero point calibration has failed, DTC B1797 is output.

ZERO POINT CALIBRATION PROCEDURE:

1: DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT
Refer to the following screen flow.



H101942E01

RS

T

HINT:
*1: If After Exchange is selected before the previous ECU data are stored in the intelligent tester, the display screen returns to CONDITION SELECT ECU: Occupant Detect.

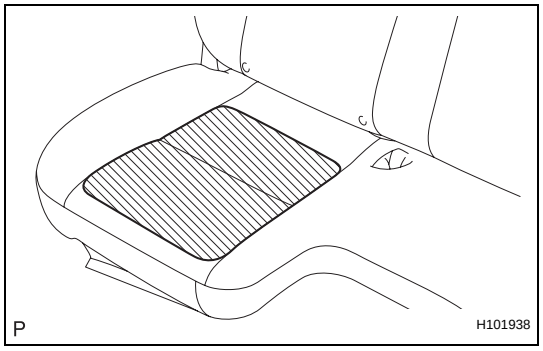
Item	Procedure
DTC	Perform DTC check and repair
Write error	Replace front seat cushion assembly (with occupant classification ECU and occupant classification sensor)
Temperature	Check value of THERMISTOR TEMP in ECU DATA LIST
Pressure	Check value of FILTERED PRESS in ECU DATA LIST
Crash counter	-

2. SENSITIVITY CHECK

(a) Sensitivity check procedures

(1) Turn the ignition switch to the LOCK position.

(2) Turn the airbag cut-off switch to the AUTO position.



(3) Place a weight of 20 kg (44.0 lb) on the front passenger seat.
NOTICE:
- **Do not let the weight come into contact with the seat back when placing it on the seat cushion.**
- **Place the weight in the area shown in the illustration.**

(4) Turn the ignition switch to the ON position, and wait for at least 6 seconds.

(5) Check that the passenger airbag ON/OFF indicator indicates OFF.
OK:
The passenger airbag ON/OFF indicator indicates OFF.

(6) Add a weight of 30kg (66.1 lb) to the front passenger seat (total 50 kg (110.2 lb)).
NOTICE:
- **Do not let the weight come into contact with the seat back when placing it on the seat cushion.**
- **Place the weight in the area shown in the illustration.**

(7) Check that the passenger airbag ON/OFF indicator indicates ON.
OK:
The passenger airbag ON/OFF indicator indicates ON.

RS

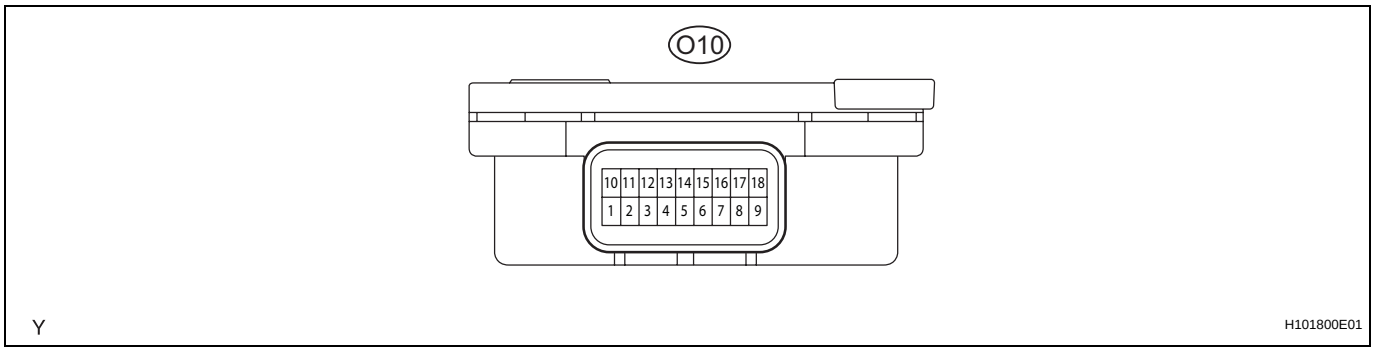
PROBLEM SYMPTOMS TABLE

HINT:
Proceed to the troubleshooting for each circuit in the table below.

Symptom	Suspected area	See page
Passenger airbag ON/OFF indicator display does not correspond to airbag cut-off switch position	Trouble in Passenger Airbag ON/OFF Indicator	RS-545

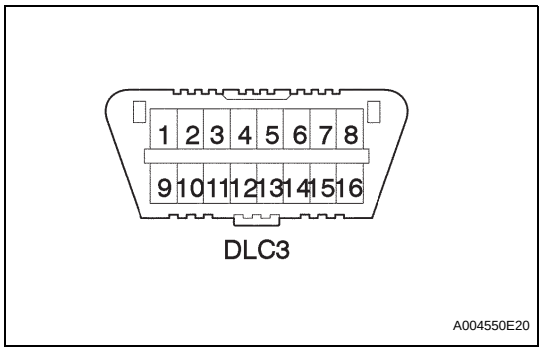
TERMINALS OF ECU

1. OCCUPANT CLASSIFICATION ECU



Standard:

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
O10-1 (GSW4) - O10-5 (GND)	P - W-B	Collision detection signal	Ignition switch ON	Pulse generation
O10-3 (GSP) - O10-5 (GND)	L - W-B	Seat position sensor (for front passenger side) ground line	Always	Below 1 V
O10-4 (SP) - O10-3 (GSP)	GR - L	Seat position sensor (for front passenger side) signal line	Ignition switch ON	Low: 4.7 to 7.3 mA Hi: 11.4 to 17.9 mA
O10-5 (GND) - Body ground	W-B - Body ground	Occupant classification ECU ground line	Always	Below 1 V
O10-6 (PS) - O10-15 (GPS)	R-B - LG-B	Pressure sensor signal line	Ignition switch ON	0.6 to 4.9 V
O10-7 (VPS) - O10-5 (GND)	L-W - W-B	Pressure sensor +B line	Ignition switch ON	4.75 to 5.25 V
O10-8 (GBT) - O10-5 (GND)	G - W-B	Belt tension sensor ground line	Always	Below 1 V
O10-9 (IG) - O10-5 (GND)	O - W-B	Occupant classification ECU +B line	Ignition switch ON	10 to 14 V
O10-10 (DIA) - O10-5 (GND)	W - W-B	Diagnosis (DLC3)	Ignition switch ON	Pulse generation
O10-11 (FSR+) - O10-12 (FSR-)	G-R - G-B	Center airbag sensor assembly communication line	Ignition switch ON	Pulse generation
O10-12 (FSR-) - O10-5 (GND)	G-B - W-B	Center airbag sensor assembly communication line (-)	Always	Below 1 V
O10-13 (BSW) - O10-14 (BGND)	B - P-G	Passenger side buckle switch line	Ignition switch ON	Low: 4 to 7 mA Hi: 12 to 18 mA
O10-14 (BGND) - O10-5 (GND)	P-G - W-B	Passenger side buckle switch ground line	Always	Below 1 V
O10-15 (GPS) - O10-5 (GND)	LG-B - W-B	Pressure sensor ground line	Always	Below 1 V
O10-16 (BT) - O10-5 (GND)	LG - W-B	Belt tension sensor signal line	Ignition switch ON	0.75 to 4.25 V
O10-17 (VBT) - O10-5 (GND)	V - W-B	Belt tension sensor +B line	Ignition switch ON	10 to 14 V



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses the ISO 9141-2 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V

HINT:

If the display shows a communication error message when the intelligent tester is connected to the DLC3, the ignition switch is turned to the ON position and the intelligent tester is operated, there is a problem on the vehicle side or tool side.

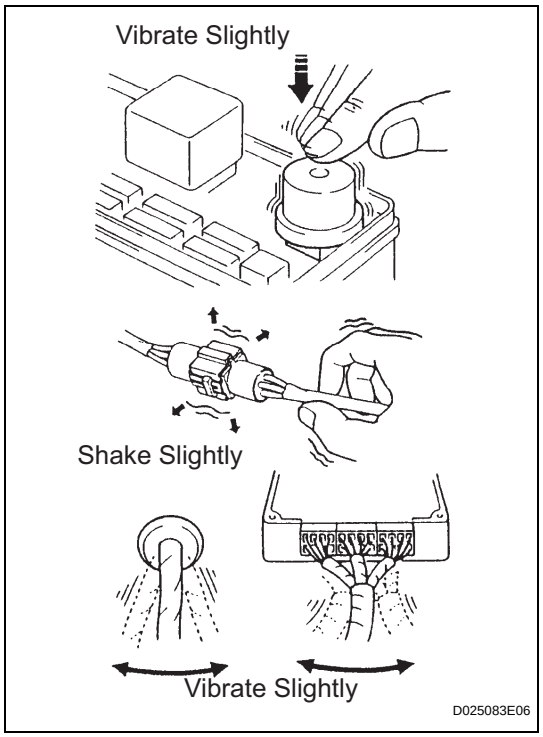
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. Regardless of the technician's experience or skill, if troubleshooting proceeds without confirmation of the problem symptoms, something important is likely to be overlooked and incorrect assumptions may be made at some points in the repair operation.

This leads to a standstill in troubleshooting.



(a) Vibration method (When vibration seems to be the major cause)
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to the ON position).
(1) Slightly vibrate the part of the sensor considered to be the cause of the problem with your fingers and check whether the malfunction occurs.
HINT:
Shaking the relays too strongly may result in open relays.
(2) Slightly shake the connector vertically and horizontally.
(3) Slightly shake the wire harness vertically and horizontally.
The connector joint and fulcrum of the vibration are the main areas that should be checked thoroughly.

3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

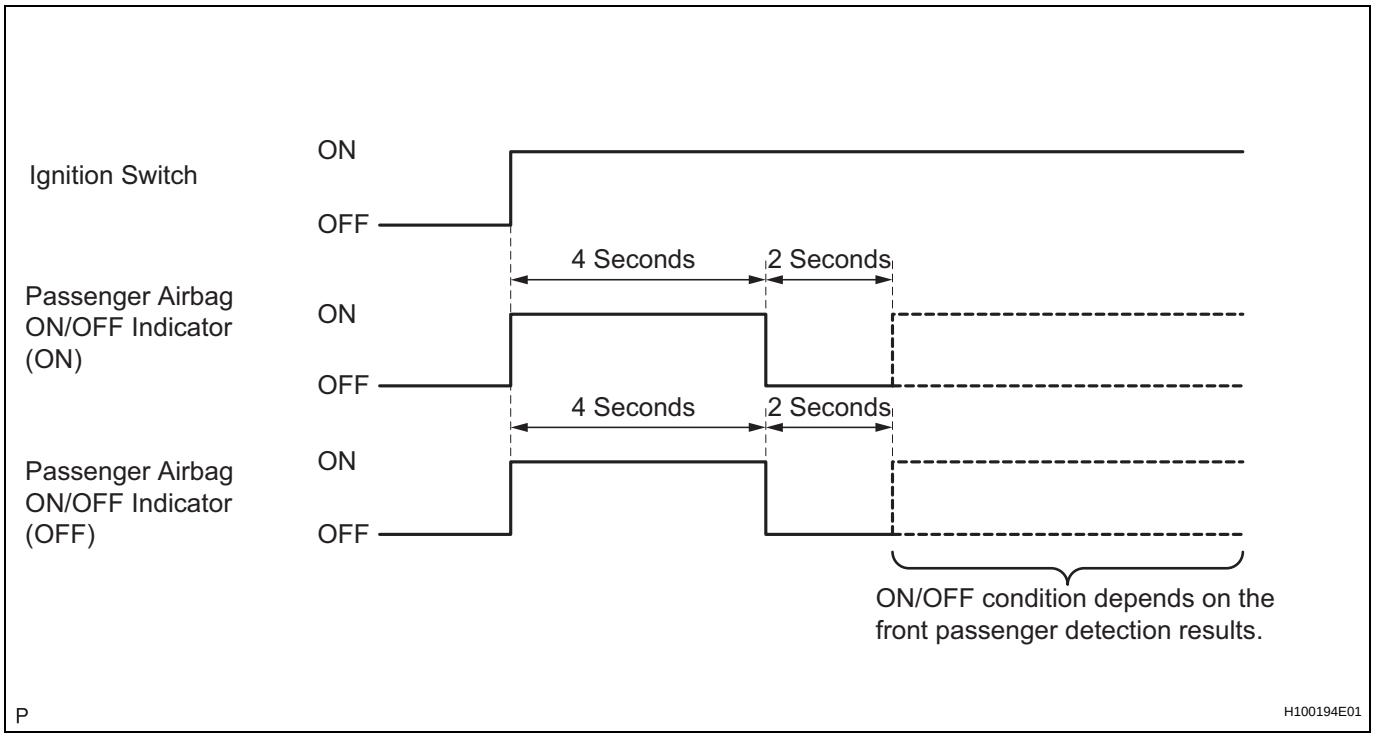
(a) Initial check
(1) Turn the ignition switch to the ON position.
(2) The passenger airbag ON/OFF indicator illuminates ON and OFF for approximately 4 seconds, and then turns them off for approximately 2 seconds.
(3) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator indicates ON or OFF depending on the conditions listed below.

Front Seat Passenger	Airbag Cut-off Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Adult seated	AUTO	ON	OFF	OFF
Adult seated	OFF	OFF	ON	OFF
Adult seated	Airbag cut off switch system failure	OFF	ON	ON
Child seated / Child restrain system set	AUTO	OFF	ON	OFF
Child seated / Child restrain system set	OFF	OFF	ON	OFF
Child seated / Child restrain system set	Airbag cut off switch system failure	OFF	ON	ON
Vacant	AUTO	OFF	OFF	OFF
Vacant	OFF	OFF	ON	OFF
Vacant	Airbag cut off switch system failure	OFF	ON	ON
Passenger occupant classification system failure	AUTO	OFF	ON	ON
Passenger occupant classification system failure	OFF	OFF	ON	ON

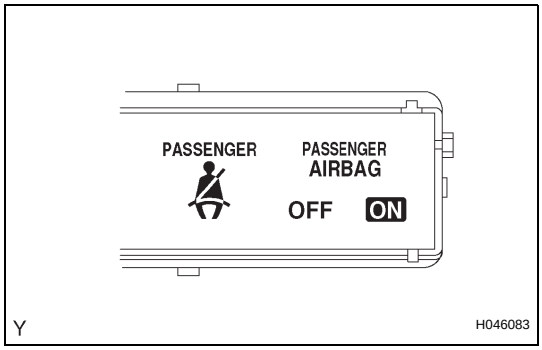
Front Seat Passenger	Airbag Cut-off Switch Position	ON Indicator	OFF Indicator	SRS Warning Light
Passenger occupant classification system failure	Airbag cut off switch system failure	OFF	ON	ON

HINT:

- The passenger airbag ON/OFF indicator operates based on the timing chart below in order to check the indicator light circuit.



- When the occupant classification system malfunctions, the SRS warning light comes on and the passenger airbag ON/OFF indicator indicates OFF. In this case, check the DTCs in the airbag system first.



4. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch to the ON position.

(b) Check that the passenger airbag ON/OFF indicator illuminates ON and OFF for approximately 4 seconds, and then turns them off for approximately 2 seconds.

HINT:

Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when approximately 6 seconds have elapsed after the ignition switch is turned to the ON position.

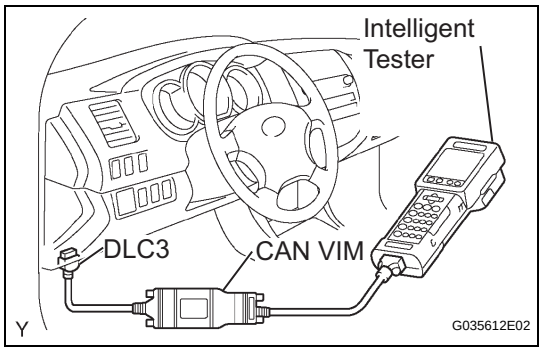
RS

DTC CHECK / CLEAR

1. DTC CHECK

HINT:

- When DTC B1650/23 is detected as a result of troubleshooting the airbag system, troubleshoot the occupant classification system.
- Use the intelligent tester to read and clear DTCs, otherwise the DTCs cannot be read and cleared.



(a) Check for DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to the ON position.

(3) Check for DTCs by following the prompts on the tester screen.

HINT:

When checking the DTCs of the occupant classification ECU, select the OCCUPANT DETECT on the tester screen.

(b) Clear the DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to the ON position.

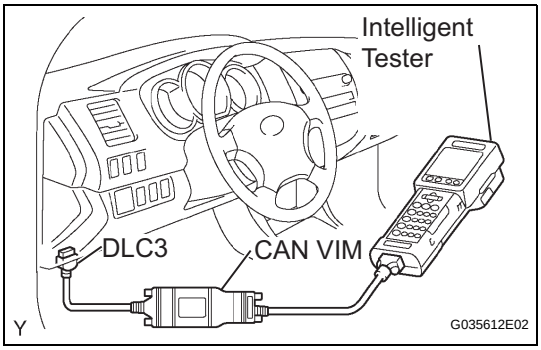
(3) Clear the DTCs by following the prompts on the tester screen.

HINT:

When clearing the DTCs of the occupant classification ECU, select the OCCUPANT DETECT on the tester screen.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed by the intelligent tester, values of switches and sensors can be checked without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method to shorten diagnostic time.



1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Following the display on the tester screen, read the DATA LIST.
HINT:
The Specified Condition for Zero Point Calibration in the table below must be satisfied when the zero point calibration is performed.

DATA LIST

Item	Measurement Item/ Range (Display)	Normal Condition	Specified Condition for Zero Point Calibration	Diagnostic Note
PASSENGER CLASS	Passenger classification/ NG: Data is not determined AM50: Adult is seated and seat is in rear position AF05: Adult is seated and seat is in front position CHILD: Child is seated OFF: Vacant	AF05/AM50/CHILD/OFF	OFF	-
P BUCKLE SW	Buckle switch (Passenger side)/ SET: Passenger side seat belt is fastened UNSET: Passenger side seat belt is unfastened NG: Data is not determined	UNSET/SET	UNSET	-
SEAT POSITION	Seat position/ ON: Seat is in front position OFF: Seat is in rear position NG: Data is not determined	ON/OFF	ON/OFF	-
RELATIVE PRESS	Pressure sensor output/ Min.: 0 Max.: 255	0 to 210	0 to 2	-
FILTERED PRESS	Filtered pressure sensor output/ Min.: 0 Max.: 255	38 to 240	38 to 75	If value outside range of Specified Condition for Zero Point Calibration, check whether any objects placed on seat cushion and that seat cushion fitted correctly.
THERMISTOR TEMP	Thermistor temperature output/ Min.: -40°C (-40°F) Max.: 90°C (194°F)	-40° to 85°C (-40° to185°F)	3° to 40°C (36° to 104°F)	If value outside range of Specified Condition for Zero Point Calibration, adjust temperature to proper range by using air conditioner, etc.

Item	Measurement Item/ Range (Display)	Normal Condition	Specified Condition for Zero Point Calibration	Diagnostic Note
WEIGHT THRESH	Weight threshold/ Min.: 0 Max.: 255	36 to 67 (reference value)	36 to 67 (reference value)	-
FILTERED TENSION	Filtered belt tension output/ Min.: 0 Max.: 255	39 to 229	39 to 64 (no load)	-
EMPTY THRESH	Empty threshold value from seat factory/ Min.: 0 Max.: 255	38 to 75	38 to 75	-
ALLOW THRESH	Threshold value for adult passenger or not from seat factory/ Min.: 0 Max.: 255	43 to 64 (reference value)	43 to 64 (reference value)	-
#PRESENT CODES	Number of present trouble codes/ Min.: 0 Max.: 255	0	0	-
#PAST CODES	Number of past trouble codes/ Min.: 0 Max.: 255	0	0	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
When DTC B1650/32 is detected as a result of troubleshooting the Supplemental Restraint System, perform troubleshooting for the occupant classification system by referring to the table below.

DTC No.	Detection Item	Trouble Area	Passenger Airbag ON/OFF Indicator (OFF Indicator)	See page
B1771	Passenger Side Buckle Switch Circuit Malfunction	1. No. 1 seat wire 2. Front seat inner belt assembly RH (Buckle switch RH) 3. Occupant classification ECU	ON	RS-490
B1772	Seat Position Sensor Circuit Malfunction	1. No. 1 seat wire 2. Seat position sensor 3. Occupant classification ECU	ON	RS-497
B1773	Belt Tension Sensor Circuit Malfunction	1. No. 1 seat wire 2. Front seat outer belt RH (Belt tension sensor) 3. Occupant classification ECU	ON	RS-504
B1774	Pressure Sensor Circuit Malfunction	1. No. 1 seat wire 2. Occupant classification sensor (Front seat cushion assembly) 3. Occupant classification ECU	ON	RS-510
B1775	Pressure Sensor Power Source Circuit Malfunction	1. No. 1 seat wire 2. Occupant classification sensor (Front seat cushion assembly) 3. Occupant classification ECU	ON	RS-510
B1776	Seat Belt Tension Sensor Power Source Circuit Malfunction	1. No. 1 seat wire 2. Front seat outer belt RH (Belt tension sensor) 3. Occupant classification ECU	ON	RS-504
B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction	1. No. 1 seat wire 2. Floor wire 3. Occupant classification ECU 4. Center airbag sensor assembly	ON	RS-517
B1791	Collision Detection Signal Line Malfunction	1. No. 1 seat wire 2. Floor wire 3. Instrument panel wire 4. Occupant classification ECU 5. Center airbag sensor assembly	ON	RS-527
B1795	Occupant Classification ECU Malfunction	1. Occupant classification ECU	ON	RS-539
B1797	Calibration Malfunction	1. There is no malfunction if this DTC does not recur after occupant classification system zero point calibration is performed. 2. Occupant classification sensor (Front seat cushion assembly)	ON	RS-541

DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.

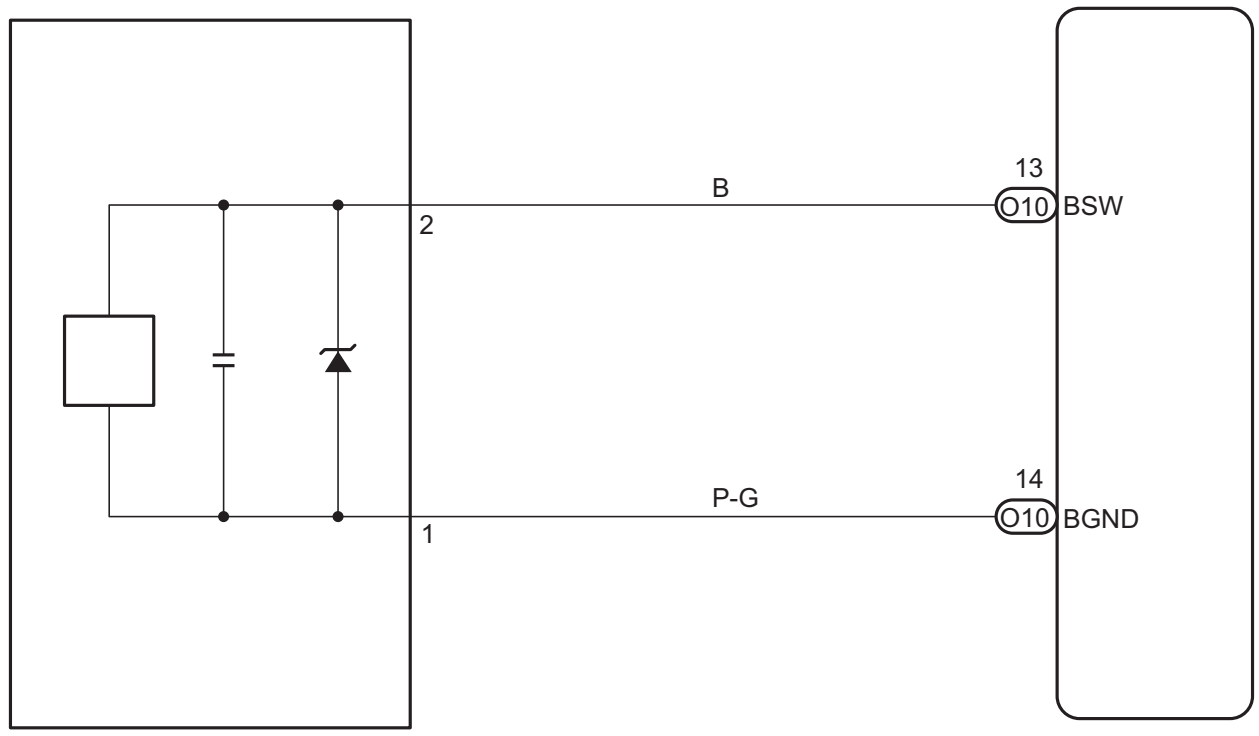
DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1771	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in passenger side buckle switch circuit for 2 seconds • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• No. 1 seat wire • Front seat inner belt assembly RH (Buckle switch RH) • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	**CHECK DTC**

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).

OK:

DTC B1771 is not output.

HINT:

DTCs other than B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTORS

(a) Turn the ignition switch to the LOCK position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.

OK:

The connectors are properly connected.

(d) Disconnect the connectors from the occupant classification ECU and front seat inner belt assembly RH.

(e) Check that the terminals of connectors are not damaged.

OK:

The terminals are not deformed or damaged.

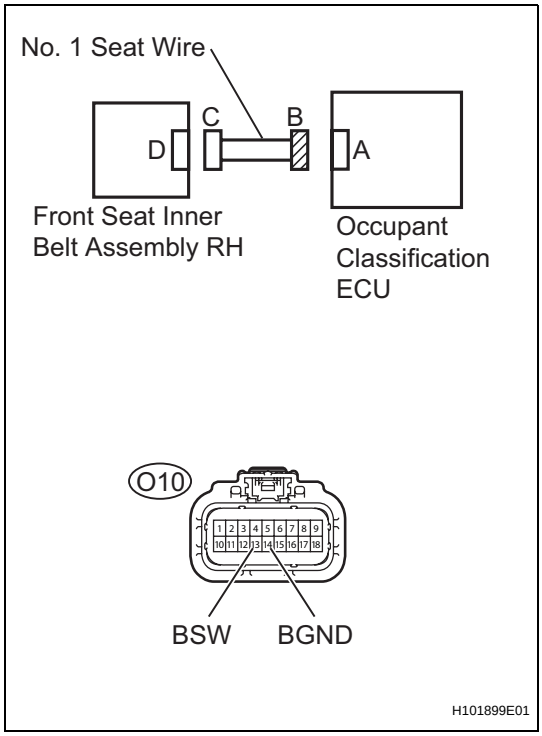
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

NG → **REPAIR OR REPLACE WIRE HARNESS OR CONNECTORS**

OK

3	CHECK NO. 1 SEAT WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.

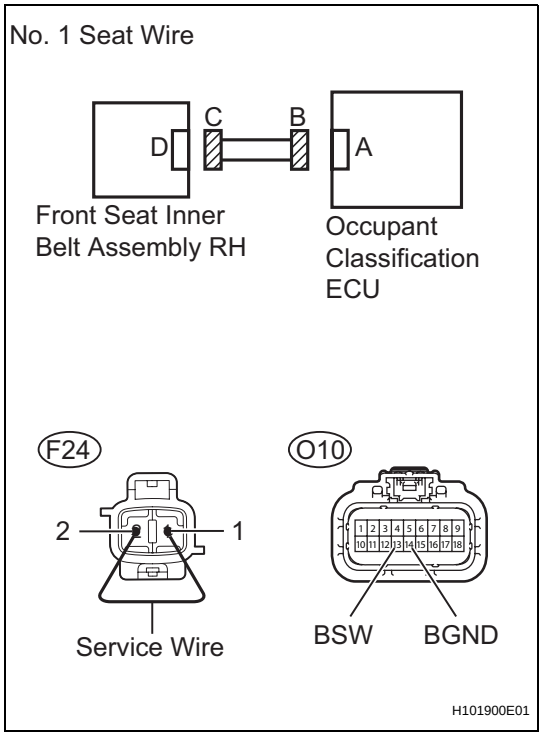
Standard voltage

Tester connection	Condition	Specified condition
O10-13 (BSW) - Body ground	Ignition switch ON	Below 1 V
O10-14 (BGND) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

4	CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect F24-1 and F24-2 of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

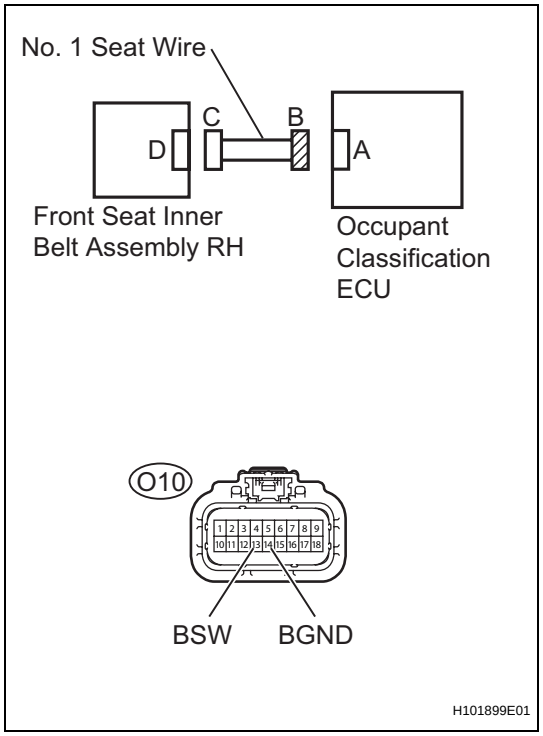
Tester connection	Condition	Specified condition
O10-13 (BSW) - O10-14 (BGND)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

5 CHECK NO. 1 SEAT WIRE (TO GROUND)



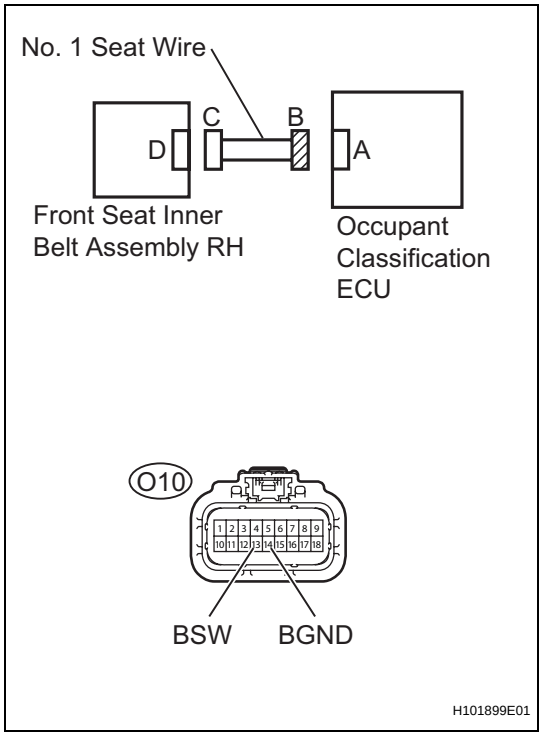
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O10-13 (BSW) - Body ground	Always	1 MΩ or higher
O10-14 (BGND) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O10-13 (BSW) - O10-14 (BGND)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Check the DTCs (See page RS-487).
OK:
DTC B1771 is not output.
HINT:
DTCs other than B1771 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE BUCKLE SWITCH RH (WITH FRONT SEAT INNER BELT ASSEMBLY RH)

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly RH (See page SB-12).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Check the DTCs (See page RS-487).
OK:
DTC B1771 is not output.
HINT:
DTCs other than B1771 may be output at this time, but they are not related to this check.

OK	END

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).
HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).
(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).
(j) Turn the ignition switch to the LOCK position.
(k) Turn the ignition switch to the ON position.
(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check (See page RS-480).

NEXT

END

DTC	B1772	Seat Position Sensor Circuit Malfunction

DESCRIPTION

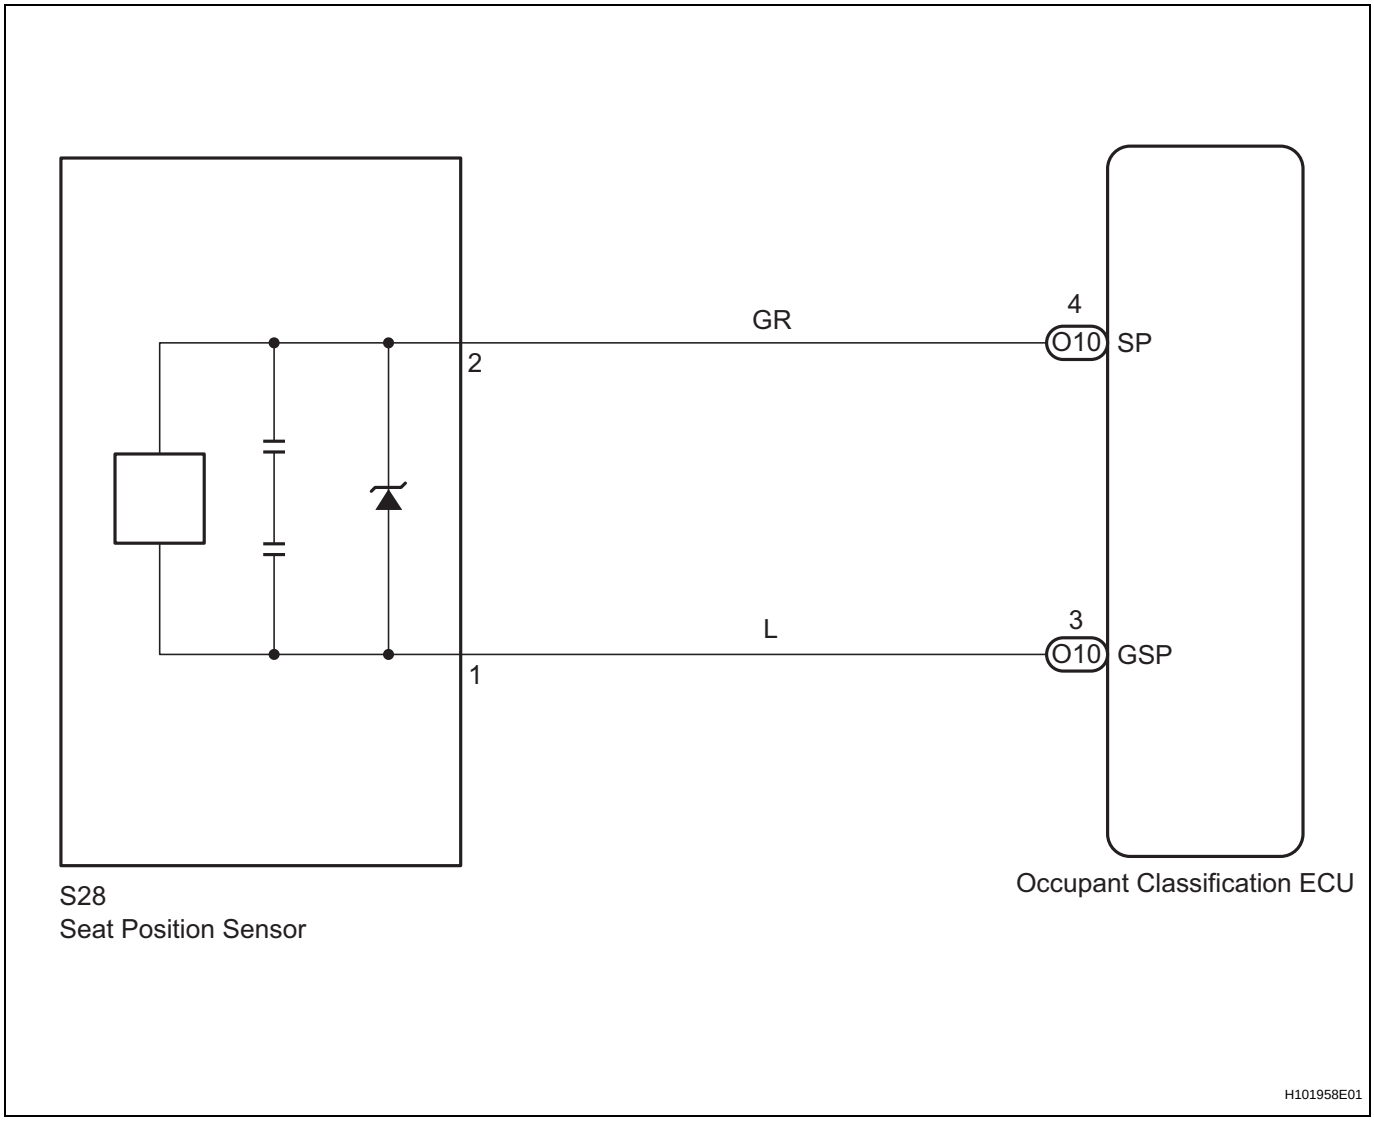
The seat position sensor circuit consists of the occupant classification ECU and the seat position sensor. The seat position sensor sends the seat position signal to the occupant classification ECU to control the dual stage deployment of the front passenger airbag assembly.
DTC B1772 is recorded when a malfunction is detected in the seat position sensor circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1772	• Occupant classification ECU receives line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in seat position sensor circuit for 2 seconds. • Seat position sensor malfunction • Occupant classification ECU malfunction	• No. 1 seat wire • Seat position sensor • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	**CHECK DTC**

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).

OK:

DTC B1772 is not output.

HINT:

DTCs other than B1772 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTORS

(a) Turn the ignition switch to the LOCK position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the occupant classification ECU and the seat position sensor.

OK:

The connectors are properly connected.

(d) Disconnect the connectors from the occupant classification ECU and the seat position sensor.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

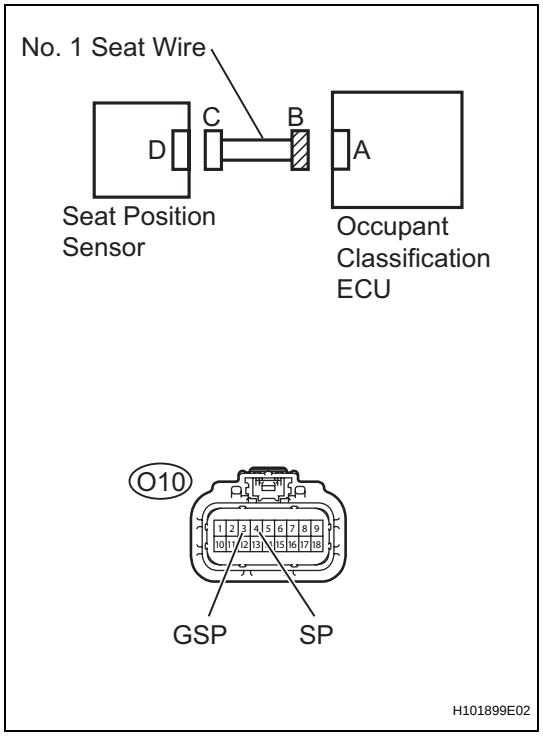
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

NG → **REPAIR OR REPLACE WIRE HARNESS OR CONNECTOR**

OK

3 CHECK NO. 1 SEAT WIRE (TO B+)



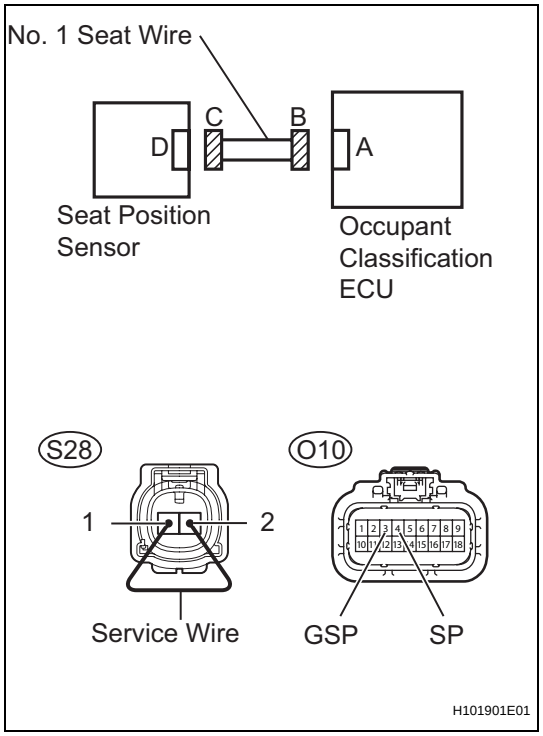
(a) Disconnect the connectors from the occupant classification ECU and the seat position sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O10-4 (SP) - Body ground	Ignition switch ON	Below 1 V
O10-3 (GSP) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

4 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect S28-2 (SP) and S28-1 (GSP) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(d) Measure the resistance.
Standard resistance

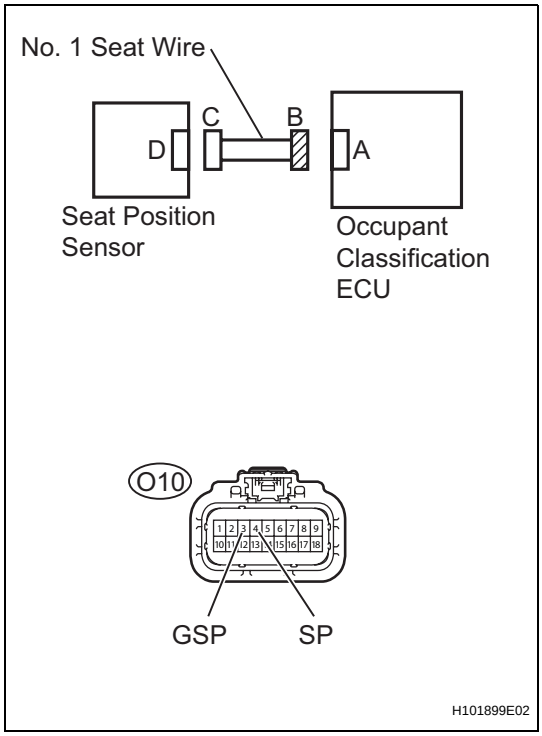
Tester Connection	Condition	Specified Condition
O10-4 (SP) - O10-3 (GSP)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

5 CHECK NO. 1 SEAT WIRE (TO GROUND)



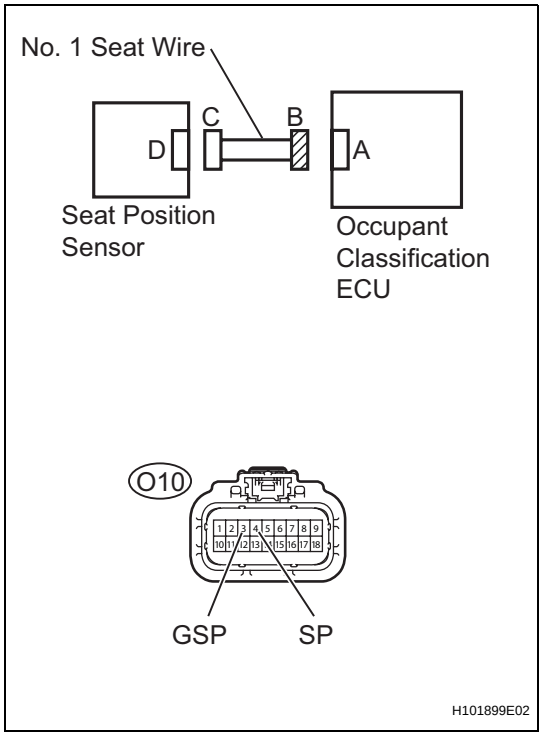
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-4 (SP) - Body ground	Always	1 MΩ or higher
O10-3 (GSP) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-4 (SP) - O10-3 (GSP)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the seat position sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Check the DTCs (See page RS-487).
OK:
DTC B1772 is not output.
HINT:
DTCs other than B1772 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE SEAT POSITION SENSOR

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the seat position sensor (See page RS-480).
HINT:
- Perform the inspection using parts from a normal vehicle if possible.
- The seat position sensor is installed on the driver side.

(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Check the DTCs (See page RS-487).
OK:
DTC B1772 is not output.
HINT:
DTCs other than B1772 may be output at this time, but they are not related to this check.

OK	END

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).
HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).
(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).
(j) Turn the ignition switch to the LOCK position.
(k) Turn the ignition switch to the ON position.
(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check (See page RS-480).

END

DTC	B1773	Belt Tension Sensor Circuit Malfunction

DTC	B1776	Seat Belt Tension Sensor Power Source Circuit Malfunction

DESCRIPTION

The belt tension sensor circuit consists of the occupant classification ECU and the belt tension sensor. The belt tension sensor sends the belt tension signal to the occupant classification ECU to control the occupant classification system.

DTCs B1773 and B1776 are recorded when a malfunction is detected in the belt tension sensor circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1773 B1776	• Occupant classification ECU receives line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in belt tension sensor circuit for 2 seconds. • Belt tension sensor malfunction • Occupant classification ECU malfunction	• No. 1 seat wire • Front seat outer belt RH (Belt tension sensor) • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

RS

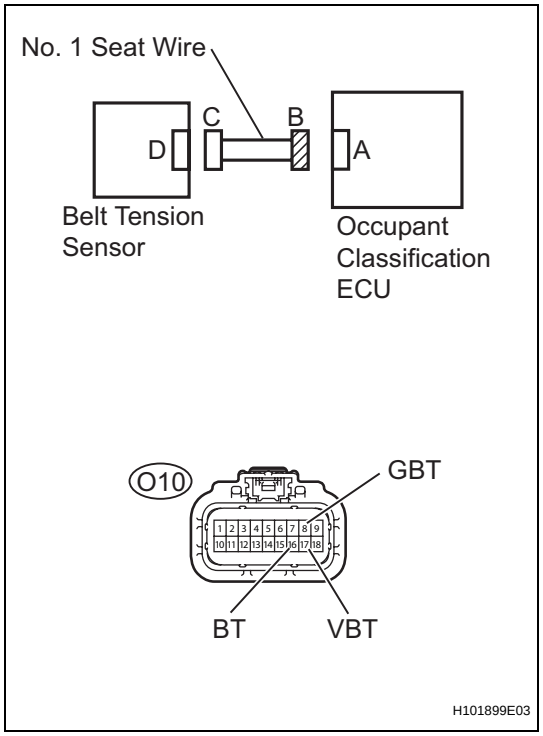
3 CHECK NO. 1 SEAT WIRE (TO B+)



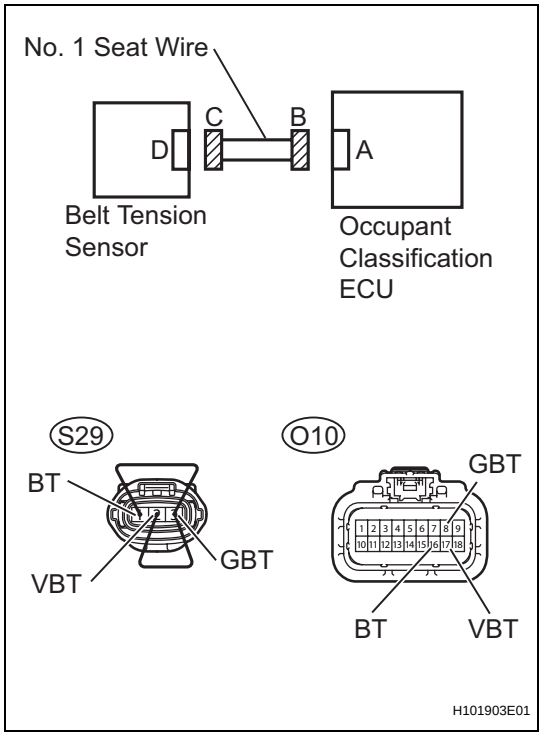
(a) Disconnect the connectors from the occupant classification ECU and belt tension sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O10-8 (GBT) - Body ground	Ignition switch ON	Below 1 V
O10-16 (BT) - Body ground	Ignition switch ON	Below 1 V
O10-17 (VBT) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

4 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect S29-1 (BT) and S29-3 (GBT), and connect S29-2 (VBT) and S29-3 (GBT) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(d) Measure the resistance.
Standard resistance

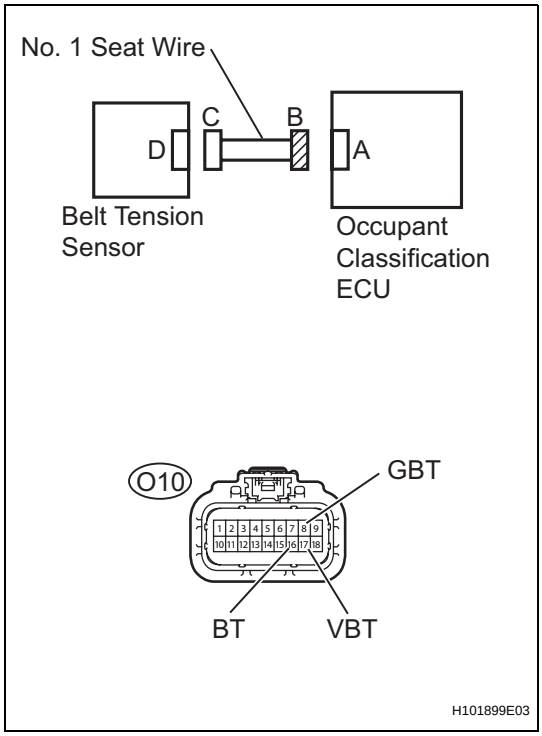
Tester Connection	Condition	Specified Condition
O10-16 (BT) - O10-8 (GBT)	Always	Below 1 Ω
O10-17 (VBT) - O10-8 (GBT)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

5 CHECK NO. 1 SEAT WIRE (TO GROUND)



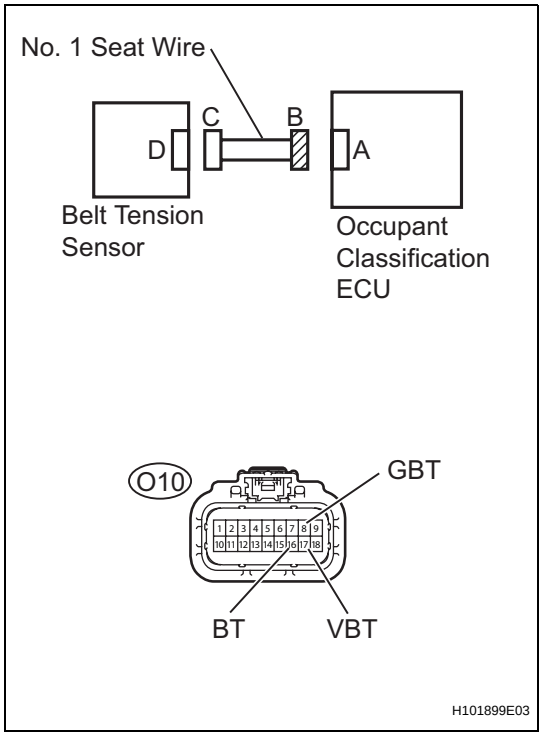
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-8 (GBT) - Body ground	Always	1 MΩ or higher
O10-16 (BT) - Body ground	Always	1 MΩ or higher
O10-17 (VBT) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-16 (BT) - O10-8 (GBT)	Always	1 MΩ or higher
O10-17 (VBT) - O10-8 (GBT)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 1 SEAT WIRE

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the belt tension sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Check the DTCs (See page RS-487).
OK:
DTCs B1773 and B1776 are not output.
HINT:
DTCs other than B1773 and B1776 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE BELT TENSION SENSOR (FRONT SEAT OUTER BELT ASSEMBLY RH)

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the belt tension sensor (See page SB-27).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Check the DTCs (See page RS-487).
OK:
DTCs B1773 and B1776 are not output.
HINT:
DTCs other than B1773 and B1776 may be output at this time, but they are not related to this check.

OK	END

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).
HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).
(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).
(j) Turn the ignition switch to the LOCK position.
(k) Turn the ignition switch to the ON position.
(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

DTC	B1774	Pressure Sensor Circuit Malfunction

DTC	B1775	Pressure Sensor Power Source Circuit Malfunction

DESCRIPTION

The pressure sensor circuit consists of the occupant classification ECU and the occupant classification sensor.

The occupant classification sensor sends the pressure signal to the occupant classification ECU to control the occupant classification system.

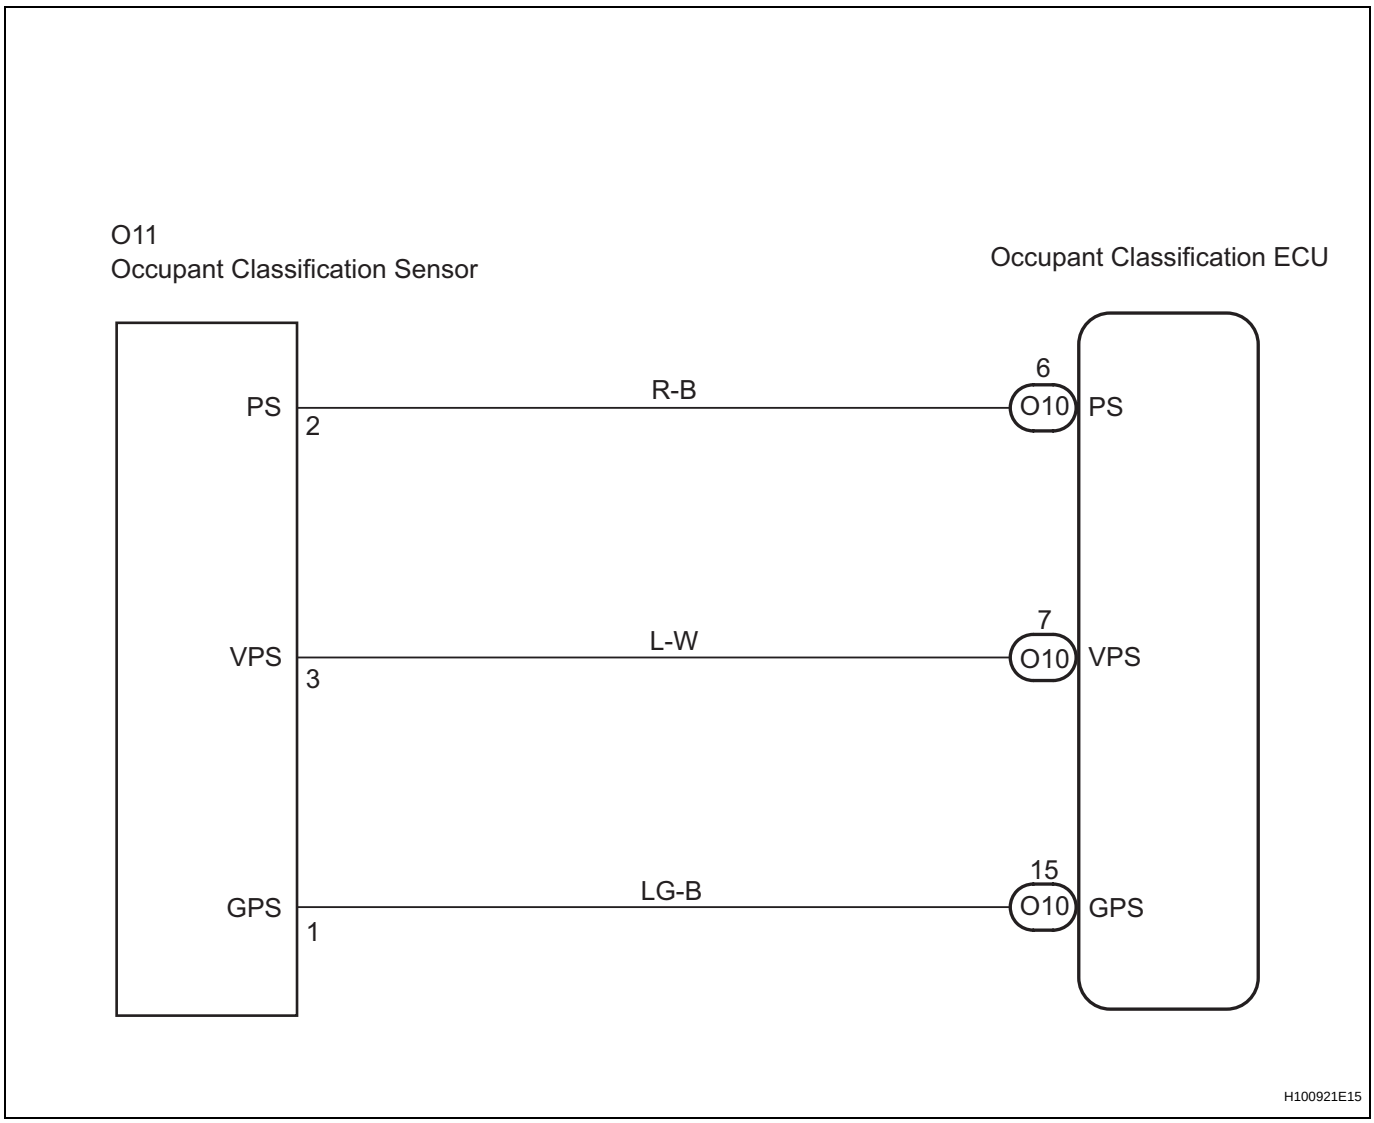
DTCs B1774 and B1775 are recorded when a malfunction is detected in the pressure sensor circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1774 B1775	• Occupant classification ECU receives line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in pressure sensor circuit for 2 seconds. • Occupant classification sensor malfunction • Occupant classification ECU malfunction	• No. 1 seat wire • Occupant classification sensor • Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

WIRING DIAGRAM



HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.
- After performing the zero point calibration, check for DTCs to confirm that the calibration is completed normally. (If it fails, DTC B1797 will be output.)

RS

1	**CHECK DTC**

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.

(e) Check the DTCs (See page RS-487).
OK:
DTCs B1774 and B1775 are not output.
HINT:
DTCs other than B1774 and B1775 may be output at this time, but they are not related to this check.

OK	**USE SIMULATION METHOD TO CHECK**

NG

2	**CHECK CONNECTORS**

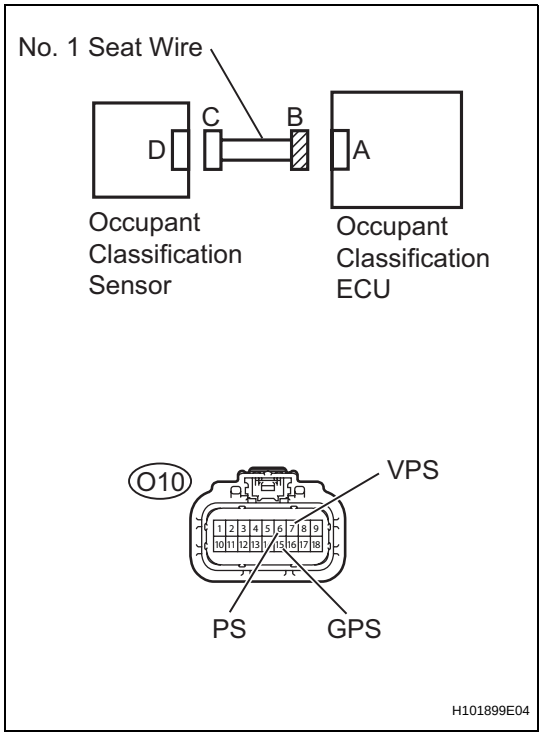
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensor.
OK:
The connectors are properly connected.
(d) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor.
(e) Check that the terminals of the connectors are not damaged.
OK:
The terminals are not deformed or damaged.
HINT:
If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

NG	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

RS

3 CHECK NO. 1 SEAT WIRE (TO B+)



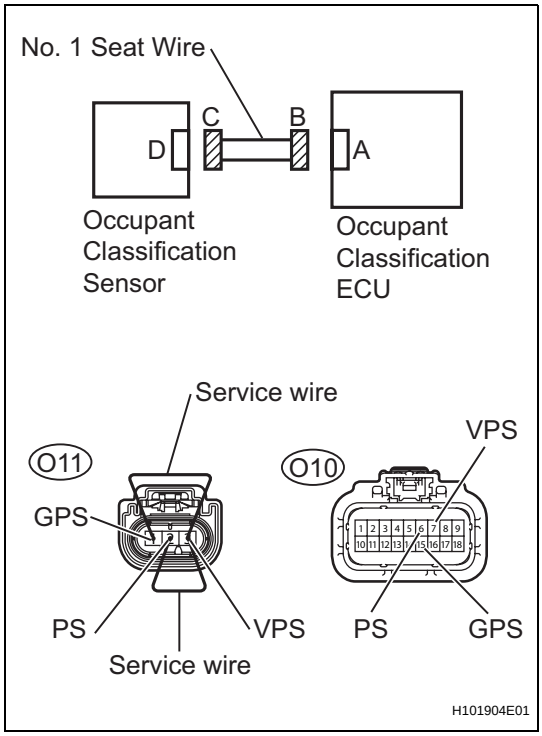
(a) Disconnect the connector from the occupant classification ECU and occupant classification sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
O10-6 (PS) - Body ground	Ignition switch ON	Below 1 V
O10-7 (VPS) - Body ground	Ignition switch ON	Below 1 V
O10-15 (GPS) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

4 CHECK NO. 1 SEAT WIRE (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect O11-2 (PS) and O11-3 (VPS), and connect O11-3 (VPS) and O11-1 (GPS) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(d) Measure the resistance.
Standard resistance

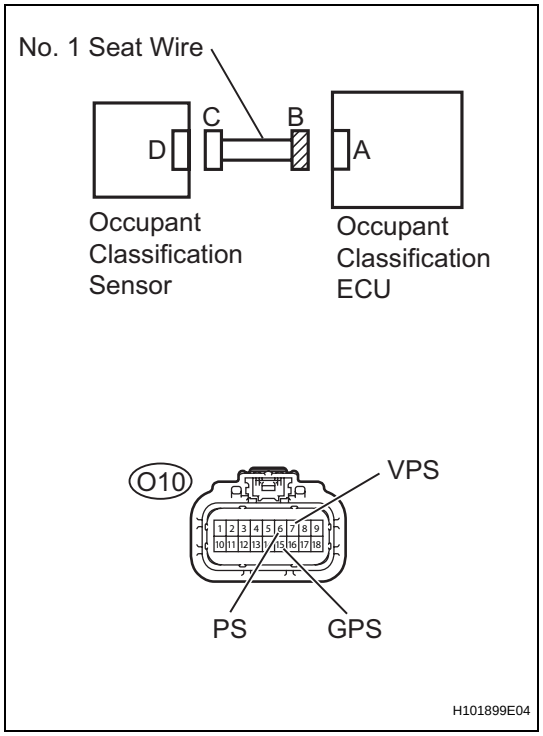
Tester Connection	Condition	Specified Condition
O10-6 (PS) - O10-7 (VPS)	Always	Below 1 Ω
O10-7 (VPS) - O10-15 (GPS)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

RS

5 CHECK NO. 1 SEAT WIRE (TO GROUND)



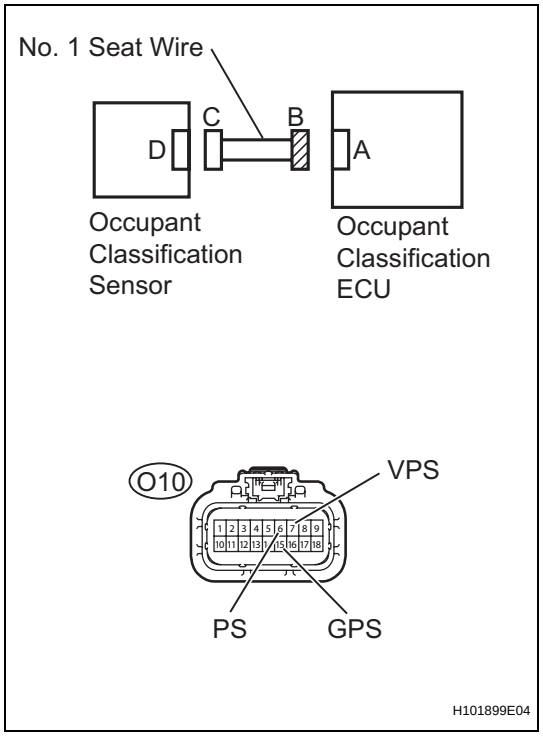
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-6 (PS) - Body ground	Always	1 MΩ or higher
O10-7 (VPS) - Body ground	Always	1 MΩ or higher
O10-15 (GPS) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

OK

6 CHECK NO. 1 SEAT WIRE (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
O10-6 (PS) - O10-15 (GPS)	Always	1 MΩ or higher
O10-7 (VPS) - O10-15 (GPS)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE NO. 1 SEAT WIRE**

RS

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the occupant classification sensor.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Check the DTCs (See page RS-487).
OK:
DTCs B1774 and B1775 are not output.
HINT:
DTCs other than B1774 and B1775 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

8	REPLACE OCCUPANT CLASSIFICATION SENSOR (FRONT SEAT CUSHION ASSEMBLY)

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor) (See page RS-626).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Check the DTCs (See page RS-487).
OK:
DTCs B1774 and B1775 are not output.
HINT:
DTCs other than B1774 and B1775 may be output at this time, but they are not related to this check.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-480).
(d) Turn the ignition switch to the LOCK position.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

10	CHECK DTC

HINT:
Check that the zero point calibration is completed normally. If either of the following conditions is met, DTC B1797 will be output (Refer to INITIALIZATION: See page RS-480):
- Zero point calibration is performed when the conditions for the calibration are not satisfied.
- Zero point calibration has failed.

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).
OK:
DTC B1797 is not output.

NG → **GO TO DTC CHART**

OK

11	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check (See page RS-480).

DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

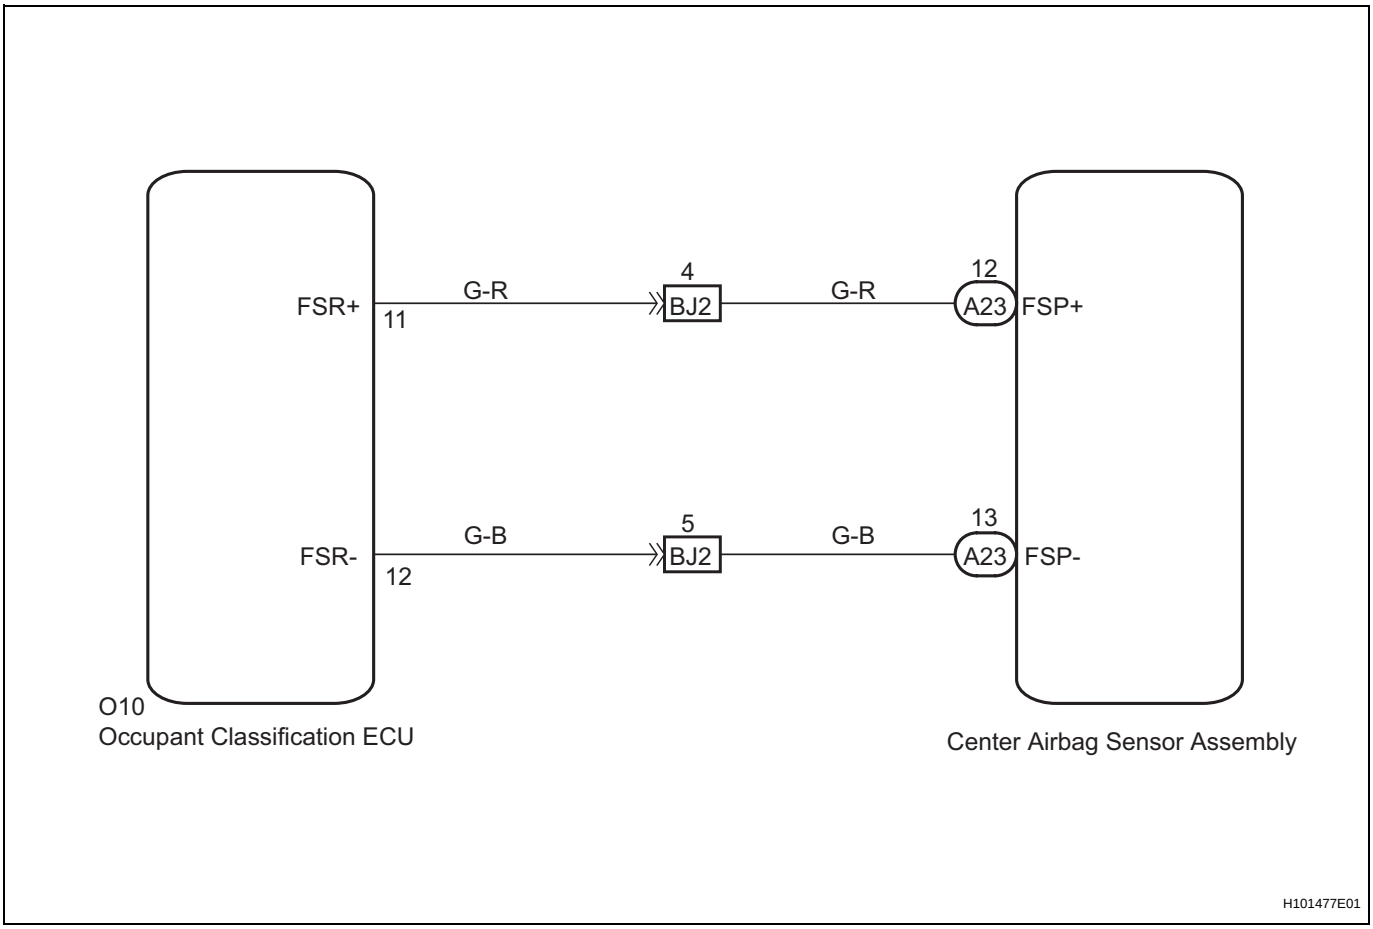
The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.
DTC B1790 is set when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1790	• Occupant classification ECU receives line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in center airbag sensor assembly communication circuit for 2 seconds • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• No. 1 seat wire • Floor wire • Occupant classification ECU • Center airbag sensor assembly

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

WIRING DIAGRAM



RS

CAUTION:
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.
(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the center airbag sensor assembly.
(d) Disconnect the connectors from the steering pad assembly.
(e) Disconnect the connector from the front passenger airbag assembly.
(f) Disconnect the connector from the front seat outer belt assembly LH.
(g) Disconnect the connector from the front seat outer belt assembly RH.
HINT:
Skip the following steps if side and curtain shield airbags are not fitted.
(h) Disconnect the connector from the front seat side airbag assembly LH.
(i) Disconnect the connector from the front seat side airbag assembly RH.
(j) Disconnect the connector from the curtain shield airbag assembly LH.
(k) Disconnect the connector from the curtain shield airbag assembly RH.
HINT:
- If troubleshooting (wire harness inspection) is difficult to perform, remove the front RH seat assembly installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).
OK:
DTC B1790 is not output.
HINT:
DTCs other than B1790 may be output at this time, but they are not related to this check.

RS

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.

OK:

The connectors are properly connected.

(d) Disconnect the connectors from the center airbag sensor assembly and occupant classification ECU.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

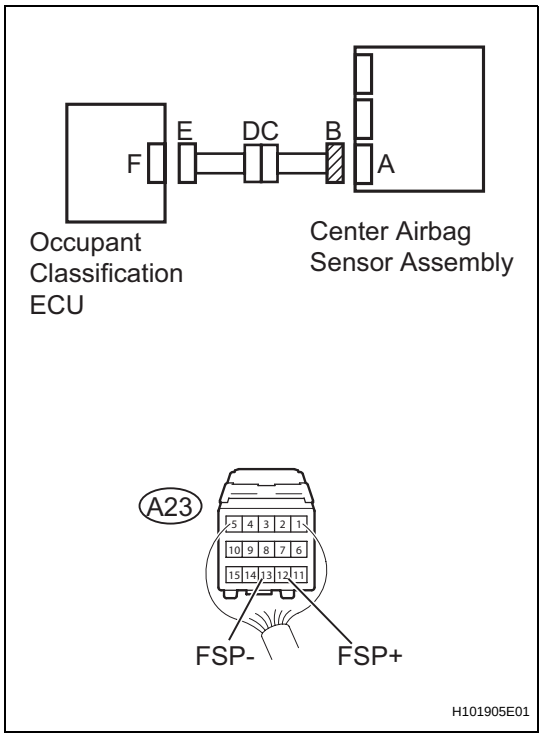
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK CENTER AIRBAG SENSOR ASSEMBLY COMMUNICATION CIRCUIT (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and center airbag sensor assembly.

(b) Connect the negative (-) terminal cable to the battery.

(c) Turn the ignition switch to the ON position.

(d) Measure the voltage.

Standard voltage

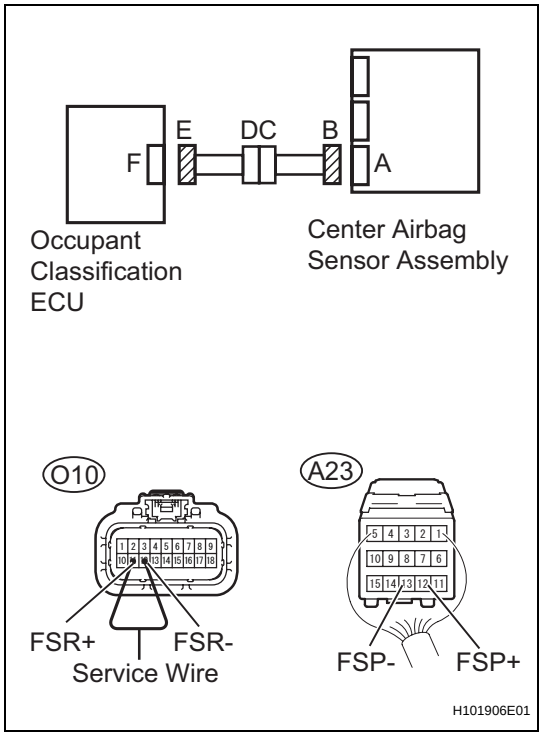
Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - Body ground	Ignition switch ON	Below 1 V
A23-13 (FSP-) - Body ground	Ignition switch ON	Below 1 V

NG → **Go to step 12**

OK

RS

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY COMMUNICATION CIRCUIT (FOR OPEN)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect O10-11 (FSR+) and O10-12 (FSR-) of connector E.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

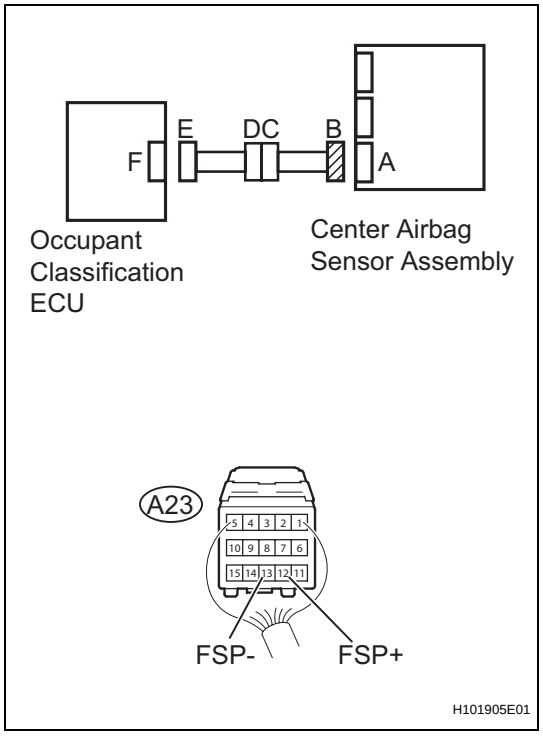
(d) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - A23-13 (FSP-)	Always	Below 1 Ω

NG → **Go to step 13**

OK

5 CHECK CENTER AIRBAG SENSOR ASSEMBLY COMMUNICATION CIRCUIT (TO GROUND)



(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

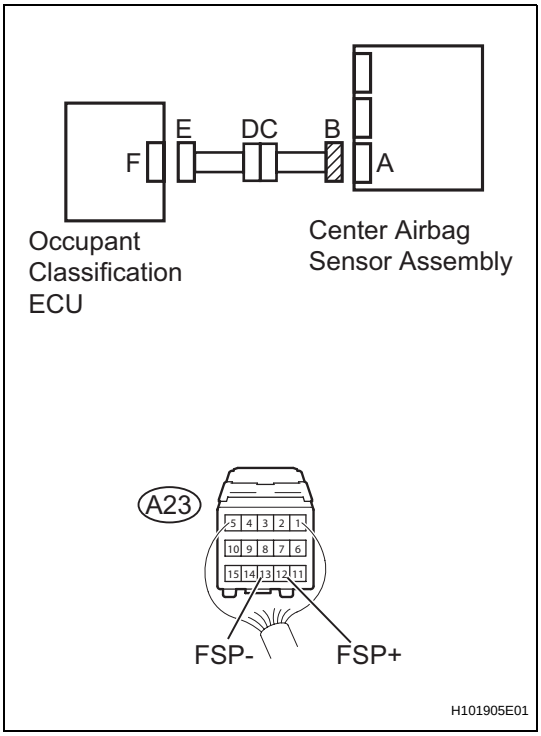
Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - Body ground	Always	1 MΩ or higher
A23-13 (FSP-) - Body ground	Always	1 MΩ or higher

NG → **Go to step 14**

RS

OK

6	CHECK CENTER AIRBAG SENSOR ASSEMBLY COMMUNICATION CIRCUIT (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A23-12 (FSP+) - A23-13 (FSP-)	Always	1 MΩ or higher

NG → **Go to step 15**

OK

7	RECHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the ON position.
(d) Clear any DTCs stored in the memory (See page RS-487).

HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.

(e) Turn the ignition switch to the LOCK position.
(f) Turn the ignition switch to the ON position.
(g) Check the DTCs (See page RS-487).
OK:
DTC B1790 is not output.

HINT:
DTCs other than B1790 may be output at this time, but they are not related to this check.

NG → **USE SIMULATION METHOD TO CHECK**

NG

RS

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).
HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).
(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).
(j) Turn the ignition switch to the LOCK position.
(k) Turn the ignition switch to the ON position.
(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

9	CHECK DTC

Tester Connection	Condition	Specified Condition
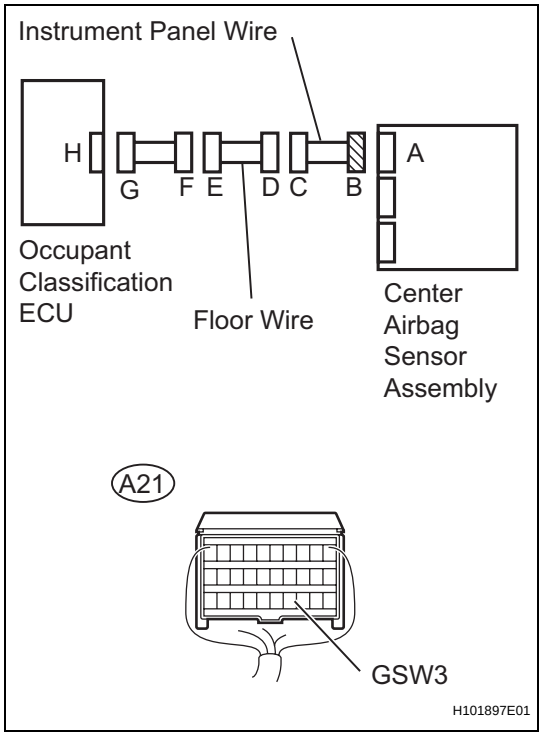
A21-24 (GSW3) - IL1-3 (GSW4)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

16	CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Disconnect the floor wire connector from the instrument panel wire.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-24 (GSW3) - Body ground	Always	1 MΩor higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE FLOOR WIRE

DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is set when a malfunction is detected in the occupant classification ECU.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1795	Occupant classification ECU malfunction	Occupant classification ECU

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting the supplemental restraint system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTCs cannot be read.

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may cause problems, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear any DTCs stored in the memory (See page RS-487).

HINT:

First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly .

(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position, and wait for at least 10 seconds.
(e) Check the DTCs (See page RS-487).

OK:

DTC B1795 is not output.

HINT:

DTCs other than B1795 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).

HINT:

If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

RS

(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See pageRS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).
(j) Turn the ignition switch to the LOCK position.
(k) Turn the ignition switch to the ON position.
(l) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

3	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check (See page RS-480).

NEXT

END

DTC	B1797	Calibration Malfunction

DESCRIPTION

DTC B1797 is output when the following condition is met:

– Zero point calibration is performed when the conditions for the calibration are not satisfied.
– Zero point calibration has failed.

Condition for the zero point calibration:

Item	Condition
DTC	Not recorded.
Front passenger seat occupant.	Vacant
Front passenger side buckle switch.	OFF (The seat belt is not fastened)
ECU temperature	0 to 46°C (32 to 114.8°F)
Filtered pressure	38 to 75 count

DTC No.	DTC Detecting Condition	Trouble Area
B1797	• Zero point calibration is performed when the conditions for the calibration are not satisfied. • Zero point calibration has failed.	• There is no malfunction if this DTC is not output again after performing occupant classification system zero point calibration. • Occupant classification sensor (front seat cushion assembly)

HINT:

- When DTC B1650/32 is detected as a result of troubleshooting for the supplemental restraint system, check the DTCs stored in the occupant classification ECU. When DTC B1797 is output, perform troubleshooting for the DTC.
- Use the intelligent tester to check for DTCs of the occupant classification ECU, otherwise the DTC cannot be read.

1	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position, and wait for at least 10 seconds.
(e) Check the DTCs (See page RS-487).
OK:
DTC B1797 is output.
HINT:
DTCs other than B1797 may be output at this time, but they are not related to this check.

NO → END

YES

2	READ VALUE OF DATA LIST (SPECIFIED CONDITION FOR ZERO POINT CALIBRATION)

(a) Connect the intelligent tester to the DLC3.

RS

(b) Turn the ignition switch ON position.
(c) Using the intelligent tester, read the DATA LIST (See page RS-487).

Item	Measurement Item/ Range (Display)	Normal Condition	Specified Condition for Zero Point Calibration
RELATIVE PRESS	Pressure sensor output/ Min.: 0 Max.: 255	0 to 210 (reference value)	0 to 2
THERMISTOR TEMP	Thermistor temperature output/ Min.: -40°C (-40°F) Max.: 90°C (194°F)	-40 to 85°C (-40 to185°F)	3 to 40°C (36 to 104°F)
#PRESENT CODES	Number of present trouble codes/ Min.: 0 Max.: 255	0	0
#PAST CODES	Number of past trouble codes/ Min.: 0 Max.: 255	0	0

RESULT

Result	Proceed to
All items correspond to the range of specified condition for zero point calibration.	**A**
THERMISTOR TEMP does not correspond to the range of specified condition for zero point calibration.	**B**

B → **Go to step 6**

A

3 CHECK DTC

HINT:
Check that the zero point calibration is completed normally. If either of the following condition is met, DTC B1797 will be output (Refer to INITIALIZATION: See page RS-480).
- Zero point calibration is performed when the the calibration conditions are not satisfied.
- Zero point calibration has failed.

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).
OK:
DTC B1797 is not output.

NEXT

4 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.

RS

(c) Using the intelligent tester, perform the zero point calibration (See page RS-480).
(d) Turn the ignition switch to the OFF position.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
If DTC is not cleared at this time, past DTC will remain.

NEXT

5	CHECK DTC

(a) Turn the ignition switch to the ON position.
(b) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the LOCK position.
(d) Turn the ignition switch to the ON position.
(e) Check the DTCs (See page RS-487).
OK:
DTC B1797 is not output.
HINT:
DTCs other than B1797 may be output at this time, but they are not related to this check.

NEXT

END

6	REPLACE FRONT SEAT CUSHION ASSEMBLY (WITH OCCUPANT CLASSIFICATION SENSOR AND SENSOR)

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat cushion assembly (with occupant classification sensor and ECU) (See page RS-626).
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-487).
OK:
DTC is not output.

END

Trouble in Passenger Airbag ON / OFF Indicator

DESCRIPTION

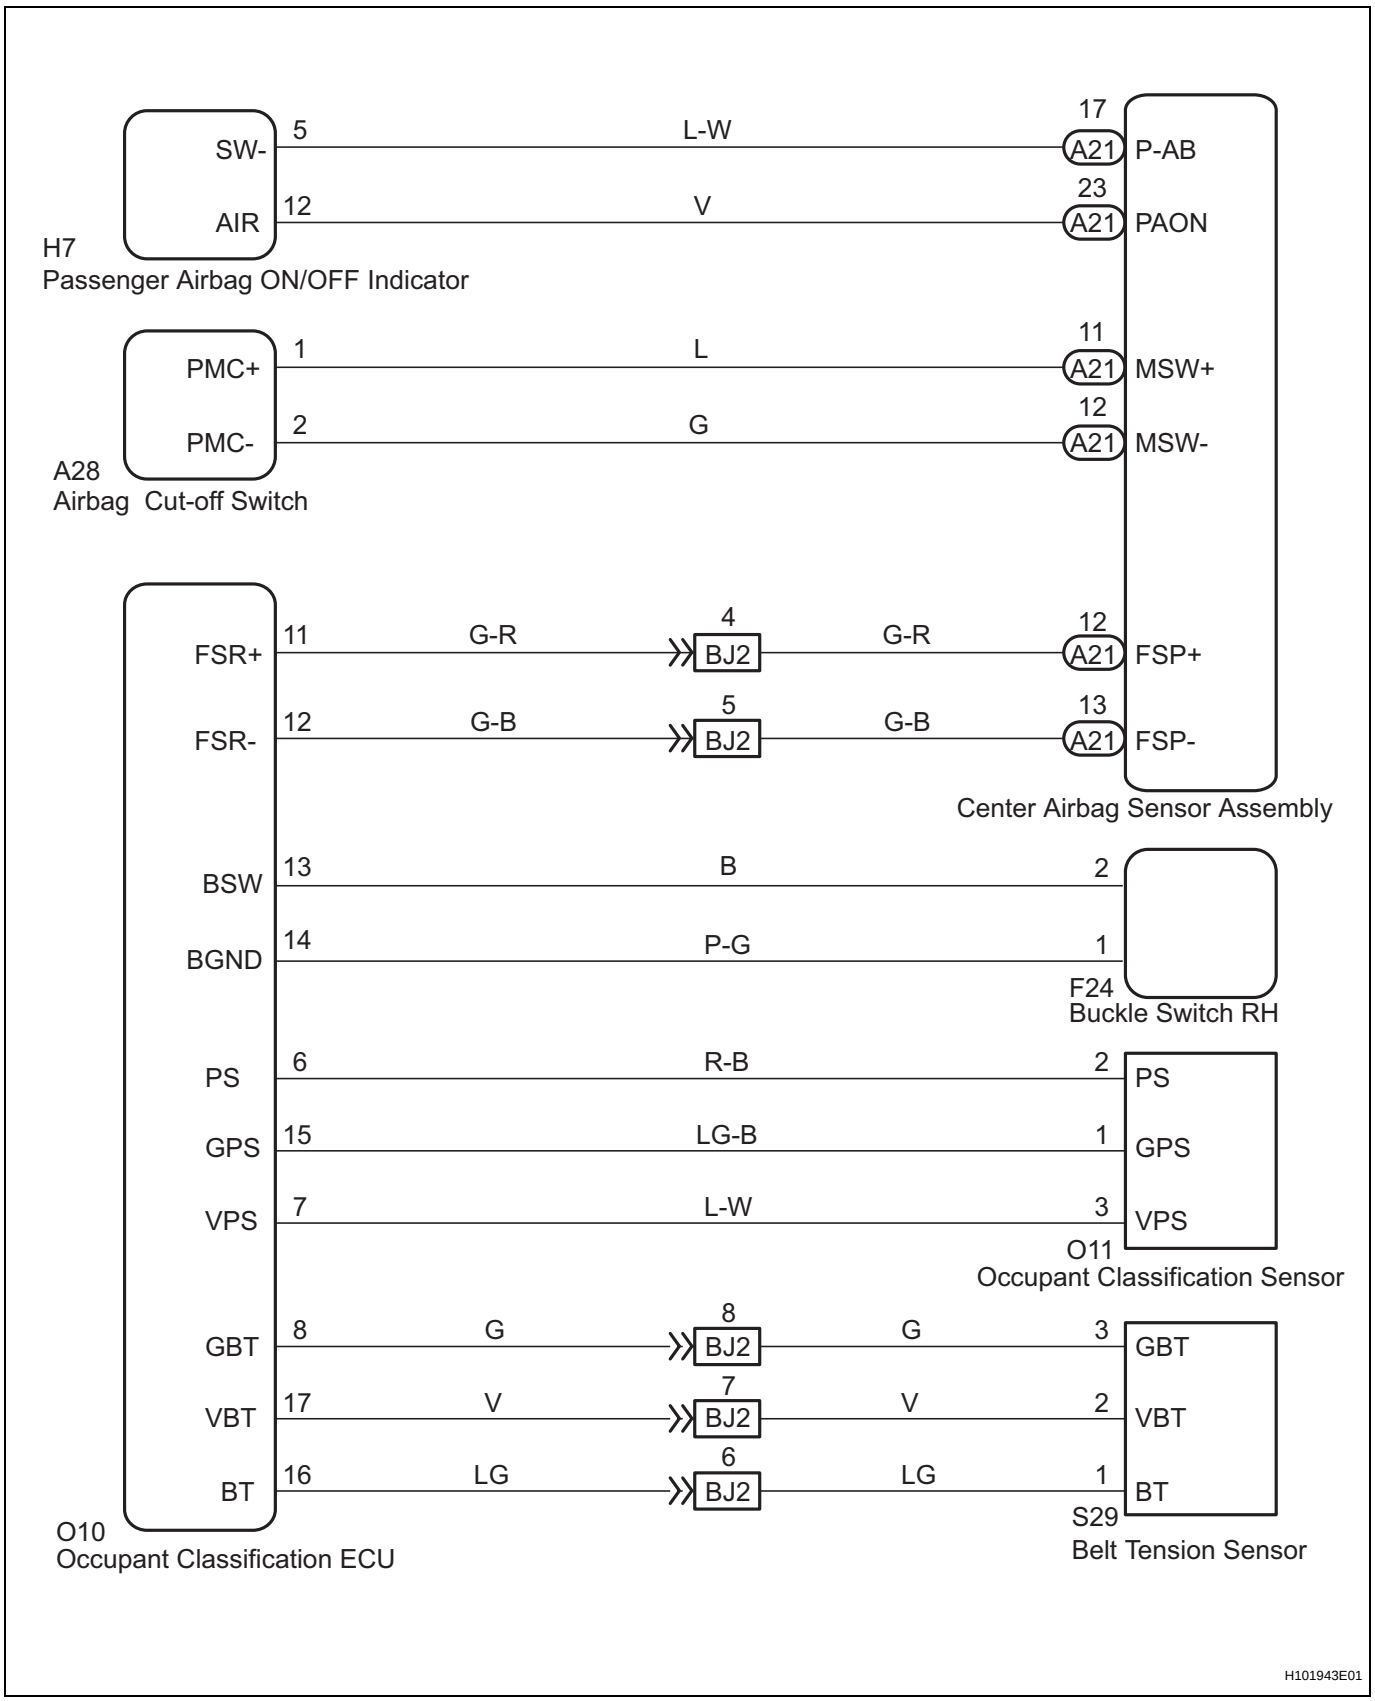
This circuit detects the airbag cut-off switch status and the passenger seat occupant classification status (detected by the occupant classification system). The passenger airbag ON/OFF indicator illuminates ON or OFF comes on to inform the passengers of the front passenger airbag assembly status (activated or deactivated).

HINT:

The table below shows the normal indication condition of the passenger airbag ON/OFF indicator and the front passenger seat condition.

Front passenger seat condition	ON Indicator	OFF Indicator
Adult is seated	ON	OFF
Child is seated	OFF	ON
Vacant	OFF	OFF
Occupant classification system failure	OFF	ON

WIRING DIAGRAM



RS

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)

(a) Perform the sensitivity check (See page RS-480).

OK → Go to step 7

NG

2	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-480).

NEXT

3	CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)

(a) Perform the sensitivity check (See page RS-480).

OK → END

NG

4	READ VALUE OF DATA LIST (PASSENGER SIDE BUCKLE SWITCH)

(a) Turn the ignition switch to the ON position.
(b) Using the intelligent tester, read the the DATA LIST.
  (1) Read the the display when the passenger side buckle switch is operated.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
P BUCKLE SW	Buckle switch (Passenger side)/ UNSET: The seat belt is not fastened SET: The seat belt is fastened NG: Data is not determined	UNSET/SET	-

OK:
The tester display changes correctly in accordance with the operation of the buckle switch.

NG → REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

OK

5	READ VALUE OF DATA LIST (SEAT BELT TENSION SENSOR)

(a) Fasten the passenger side seat belt.
(b) Turn the ignition switch to the ON position.

RS

(c) Using the intelligent tester, read the value of the DATA LIST.

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FILTERED TENSION	Filtered belt tension output/ Min.: 0 N Max.: 255 N	39 to 64 (no load)	-

OK:

When there is no tension on the belt, 39 to 64 is displayed on the tester.

NG → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

OK

6 CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)

(a) Perform the sensitivity check (See page RS-480).

OK → **END**

NG

7 CHECK CONNECTORS

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the following connectors are connected properly.
- Center airbag sensor assembly connector.
- Occupant classification ECU connector.
- Occupant classification sensor connector.
- Airbag cut-off switch connector.
- Belt tension sensor (front seat outer belt assembly RH) connector.
- Front seat inner belt assembly RH connector.
- Seat position sensor connector.

OK:

The connectors are properly connected.

(d) Disconnect the following connectors.
- Center airbag sensor assembly connector.
- Occupant classification ECU connector.
- Occupant classification sensor connector.
- Airbag cut-off switch connector.
- Belt tension sensor (front seat outer belt assembly RH) connector.
- Front seat inner belt assembly RH connector.
- Seat position sensor connector.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

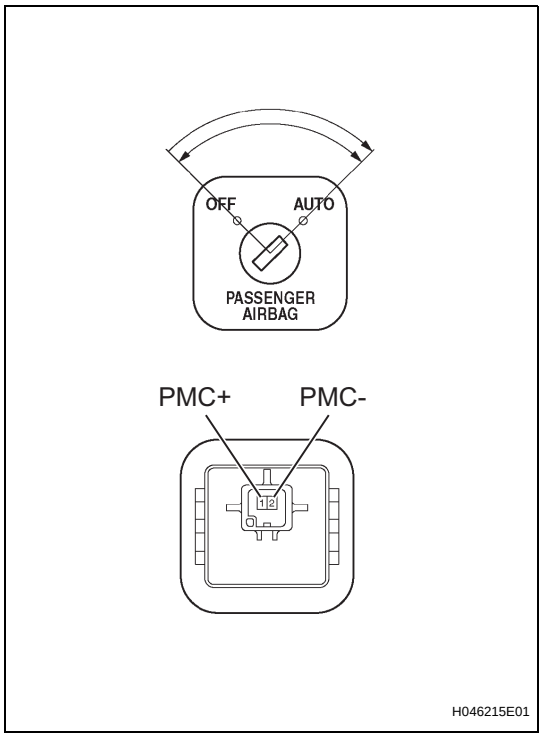
RS

NOTICE:
Perform the zero point calibration if wire harnesses or connectors are repaired or replaced (See page RS-480).
HINT:
If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

8 INSPECT AIRBAG CUT-OFF SWITCH



(a) Disconnect the A20 airbag cut-off switch connector.
(b) Measure the resistance.
Standard resistance

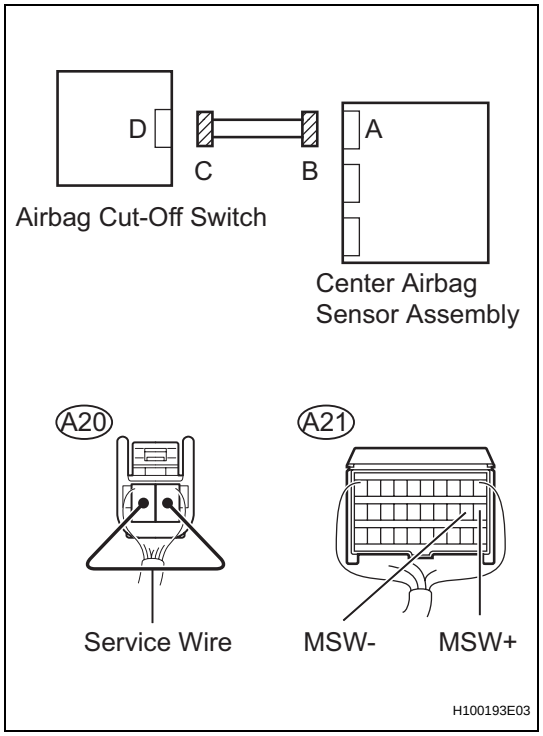
Switch Condition	Tester Condition	Specified Condition
OFF	1(PMC+) - 2(PMC-)	80 to 120 Ω
AUTO	1(PMC+) - 2(PMC-)	320 to 480 Ω

NG → **REPLACE AIRBAG CUT-OFF SWITCH**

OK

RS

9 CHECK INSTRUMENT PANEL WIRE (FOR OPEN)



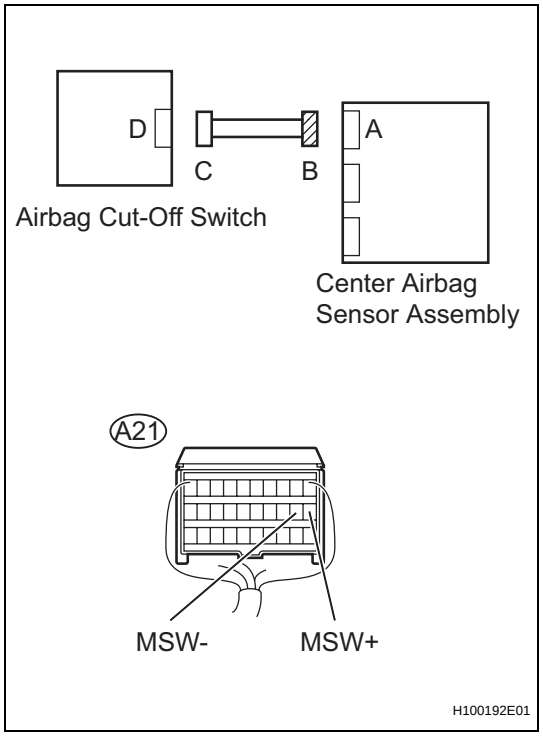
(a) Using a service wire, connect A20-1 (PMC+) and A20-2 (PMC-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	Below 1Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

10 CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

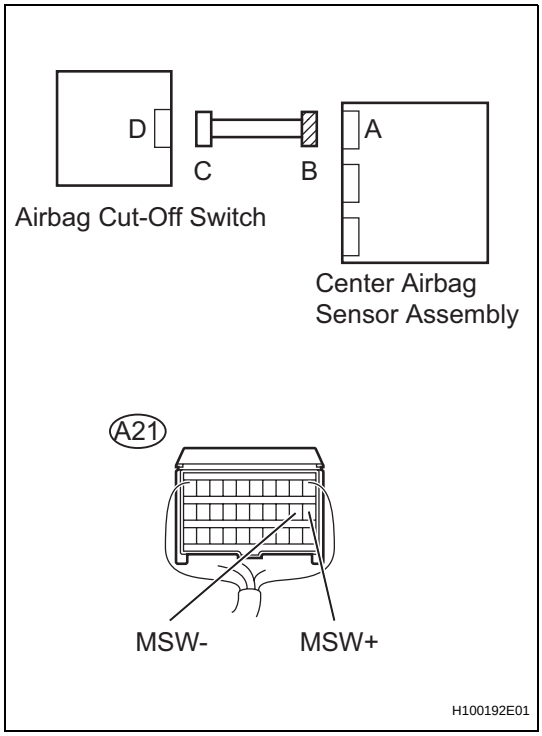
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - A21-12 (MSW-)	Always	1 MΩor Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

11 CHECK INSTRUMENT PANEL WIRE (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

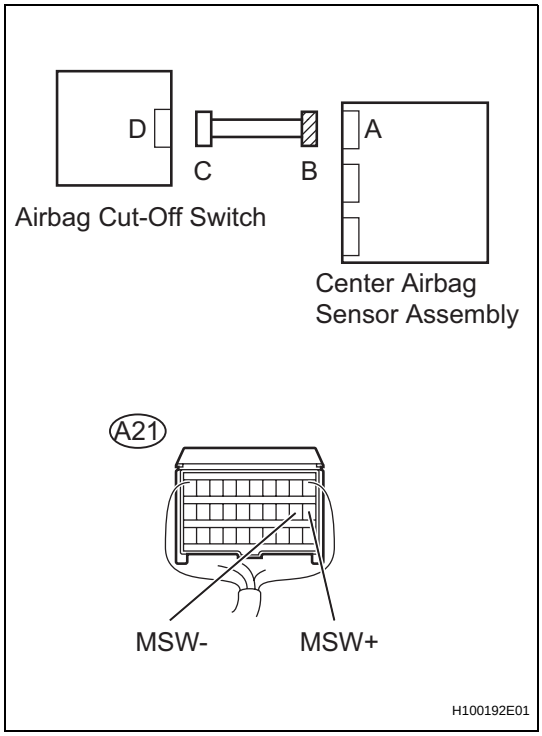
Standard voltage

Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Ignition switch ON	Below 1 V
A21-12 (MSW-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

12 CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

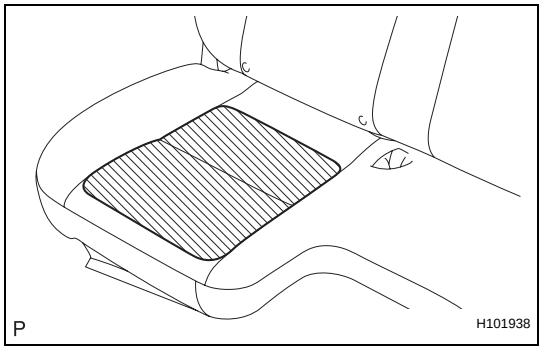
Tester Connection	Condition	Specified Condition
A21-11 (MSW+) - Body ground	Always	1 MΩor Higher
A21-12 (MSW-) - Body ground	Always	1 MΩor Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

13 READ VALUE OF DATA LIST (PASSENGER CLASS)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the LOCK position.
(c) Place a weight of 20 kg (44.0 lb) on the front passenger seat.
NOTICE:
- **Do not let the weight come into contact with the seat back when placing it on the seat cushion.**
- **Place the weight in the area shown in the illustration.**

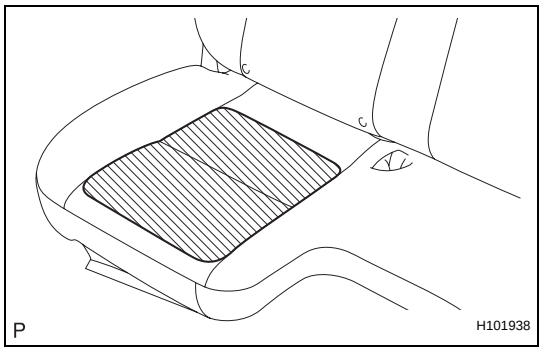
(d) Turn the ignition switch to the ON position.
(e) Using the intelligent tester, read the value of the DATA LIST (See page RS-487).

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
PASSENGER CLASS	Passenger classification/ NG: Data is not determined AM50: Adult is seated and seat is rear position AF05: Adult is seated and seat is front position CHILD: Child is seated OFF: Vacant	AF05/AM50/CHILD/OFF	-

OK:
The tester displays CHILD.

(f) Turn the ignition switch to the LOCK position.
(g) Add 30 kg (66.1 lb) weight on the front passenger seat.
NOTICE:
- **Do not let the weight come into contact with the seat back when placing it on the seat cushion.**
- **Place the weight in the area shown in the illustration.**

(h) Turn the ignition switch to the ON position.
(i) Using the intelligent tester, read the value of the DATA LIST (See page RS-487).
HINT:
AF05 appears on the tester screen display when the seat is in the front position, and AM50 appears when the seat is in the rear position.



Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
PASSENGER CLASS	Passenger classification/ NG: Data is not determined AM50: Adult is seated and seat is rear position AF05: Adult is seated and seat is front position CHILD: Child is seated OFF: Vacant	AF05/AM50/CHILD/OFF	-

OK:
The tester displays AM50 or AF50 according to the seat position.

NG	**Go to step 17**
OK	

RS

14	REPLACE CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the center airbag sensor assembly (See page RS-602).

NEXT

15	CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)

(a) Perform the sensitivity check (See page RS-480).

OK → END

NG

16	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).
HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).
(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).

RS

NEXT

END

17	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Store the occupant classification ECU data into the intelligent tester (See page RS-476).

HINT:
If the ECU data cannot be stored in the intelligent tester, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

(d) Turn the ignition switch to the LOCK position.
(e) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(f) Replace the occupant classification ECU (See page RS-634).
(g) Connect the negative (-) terminal cable to the battery.
(h) Turn the ignition switch to the ON position.
(i) Load the data from the previous ECU stored in the tester, into the newly installed ECU (See page RS-476).

NEXT

18	CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)

(a) Perform the sensitivity check (See page RS-480).

OK → END

NG

19	REPLACE FRONT SEAT CUSHION ASSEMBLY (WITH OCCUPANT CLASSIFICATION ECU AND SENSOR)

(a) Turn the ignition switch to the LOCK position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor) (See page RS-626).
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the ON position.
(f) Clear the DTCs stored in the memory (See page RS-487).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the LOCK position.
(h) Turn the ignition switch to the ON position.
(i) Check the DTCs (See page RS-487).
OK:
DTC B1774 and B1775 are not output.
HINT:
DTCs other than B1774 and B1775 may be output at this time, but they are not related to this check.

RS

NEXT

20	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the ON position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-480).

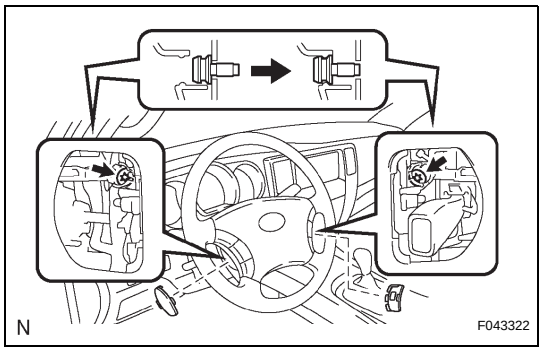
NEXT

END

REMOVAL

1. **PRECAUTION**
(See page RS-1)

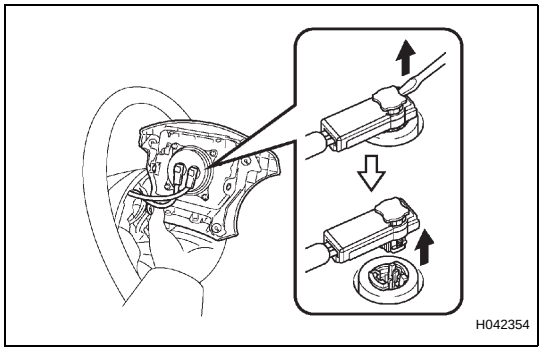
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
Wait for at least 90 seconds after disconnecting the cable to prevent the air bag from working.



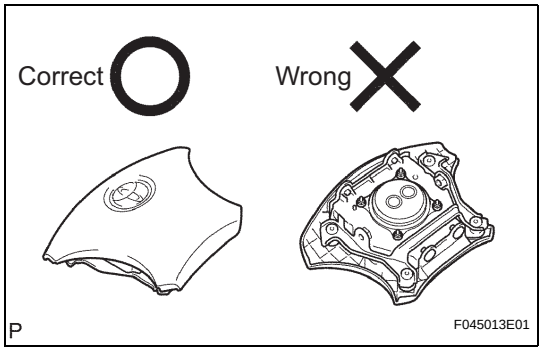
3. **REMOVE NO.2 LOWER STEERING WHEEL COVER**
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the No. 2 lower steering wheel cover.

4. **REMOVE NO.3 LOWER STEERING WHEEL COVER**
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the No. 3 lower steering wheel cover.

5. **REMOVE STEERING PAD**
(a) Using a "torx" socket wrench (T30), loosen the 2 "torx" screws until the groove along the screw circumference fits in the screw case.



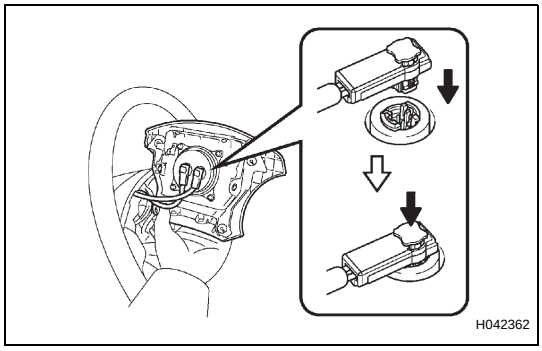
(b) Pull the steering pad out of the steering wheel assembly and support the steering pad with one hand, as shown in the illustration.
NOTICE:
When removing the steering pad, take care not to pull the airbag wire harness.
(c) Disconnect the horn ground harness from the steering pad.
(d) Using a screwdriver, disconnect the airbag connectors.



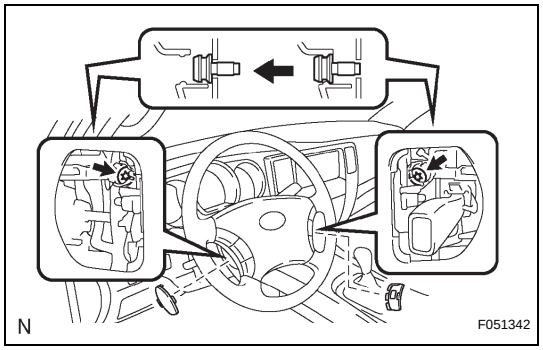
(e) Remove the steering pad.
CAUTION:
- **When placing the steering pad assembly, keep the upper surface of the steering pad facing upward.**
- **Never disassemble the steering pad.**

INSTALLATION

1. **INSTALL STEERING PAD**
NOTICE:
- **Never use airbag parts from a different vehicle. When replacing parts, replace them with new ones.**
- **Make sure the wheel pad is installed to the specified torque.**
- **If the wheel pad has been dropped, or there are cracks, dents or other defects in the case or connector, replace the wheel pad with a new one.**



RS



- **When installing the wheel pad, take care that the wiring does not interfere with other parts and is not pinched between other parts.**

(a) Support the steering pad with one hand, as shown in the illustration.
(b) Connect the 2 airbag connectors.
(c) Connect the horn ground harness to the steering pad.
(d) Confirm that the circumference groove of the "torx" screws fits in the screw case, and install the steering pad.
(e) Using a "torx" socket wrench (T30), install the 2 screws.
Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

2. INSTALL NO.3 LOWER STEERING WHEEL COVER
(a) Engage the 2 claws, install the No. 3 lower steering wheel cover to the steering wheel assembly.

3. INSTALL NO.2 LOWER STEERING WHEEL COVER
(a) Engage the 2 claws, install the No. 2 lower steering wheel cover to the steering wheel assembly.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

5. INSPECT STEERING PAD ASSEMBLY

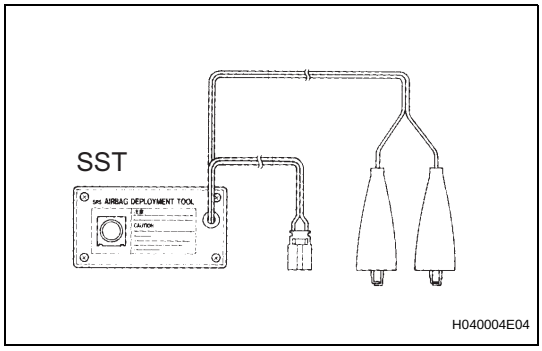
6. INSPECT SRS WARNING LIGHT
(See page RS-28)

DISPOSAL

HINT:
When scrapping a vehicle equipped with an SRS or disposing of a steering pad, always first deploy the airbag in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

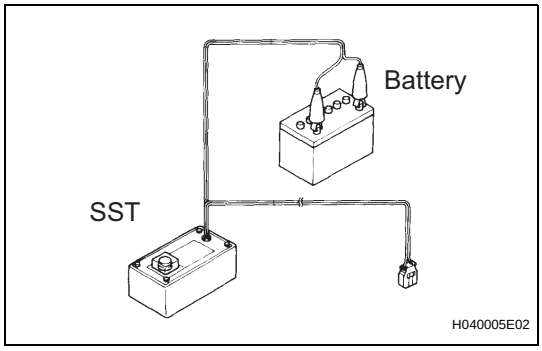
CAUTION:

- **Never dispose of a steering pad which has an undeployed airbag.**
- **The airbag produces a loud exploding sound when it deploys, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying an airbag, perform the operation at least 10 m (33 ft) away from the steering pad.**
- **The steering pad is very hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

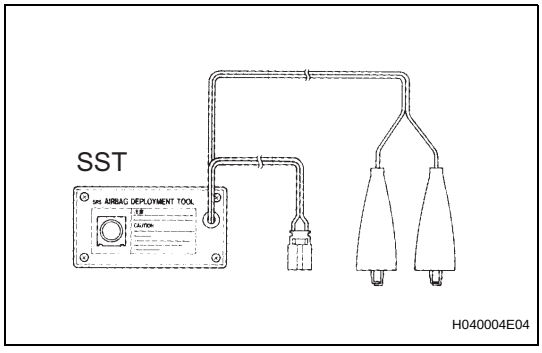


1. DISPOSE OF STEERING PAD ASSEMBLY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

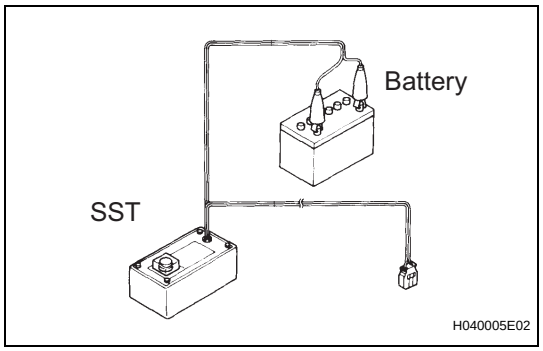
HINT:
Have a battery ready as the power source to deploy the airbag.



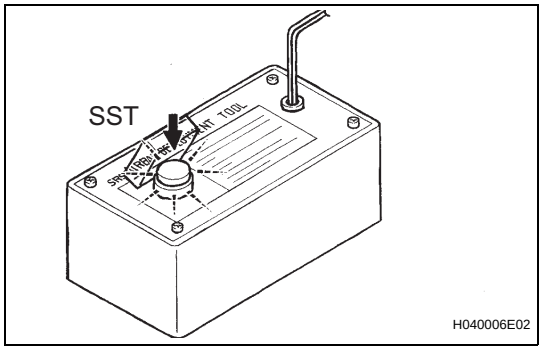
RS



(a) Check the function of the SST.
CAUTION:
When deploying the airbag, always use the specified SST: SRS Airbag Deployment Tool.
SST 09082-00700

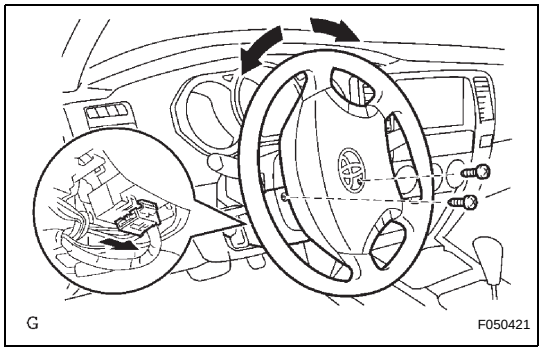


(1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
HINT:
Do not connect the yellow connector of the SST which will be connected with the supplemental restraint system.



(2) Check the SST function.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.
CAUTION:
If the LED lights up when the activation switch is not being pressed, SST malfunction is likely, so be sure not to use the SST.

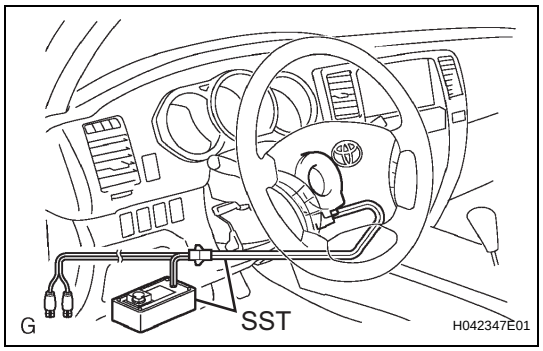
(3) Disconnect the SST from the battery.



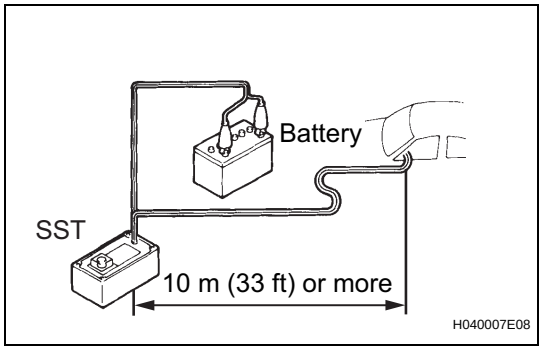
(b) Install the SST.
CAUTION:
Check that there is no slack in the steering wheel and steering pad.

(1) While turning the steering wheel right / left, remove the 2 screws and column lower cover.

(2) Disconnect the airbag connector of the spiral cable.



(3) Connect the connectors of the 2 SSTs to the airbag connector of the spiral cable.
SST 09082-00700, 09082-00780



(4) Move the SST at least 10 m (33 ft) away from the front of the vehicle.

(5) Close all the doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.

(6) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

RS

(c) Deploy the airbag.
(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) area around the vehicle.
(2) Press the activation switch of the SST and deploy the airbag.
HINT:
The airbag deploys as the LED of the SST activation switch comes on.

(d) Dispose of the steering pad.
CAUTION:
- **The steering pad is very hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **When moving a vehicle for scrapping which has a steering pad with deployed airbag, use gloves and safety glasses.**
- **Use gloves and safety glasses when handling a steering pad assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**

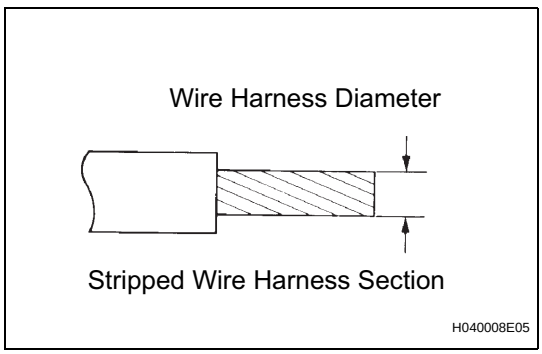
HINT:
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the steering pad still installed.

2. DISPOSE OF STEERING PAD (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)
NOTICE:
- **When disposing of the steering pad only, never use the customers vehicle to deploy the airbag.**
- **Be sure to follow the procedure given below when deploying the airbag.**

HINT:
Have a battery ready as the power source to deploy the airbag.

(a) Remove the steering pad (See page RS-557).
CAUTION:
When storing the steering pad, keep the upper surface of the pad facing upward.

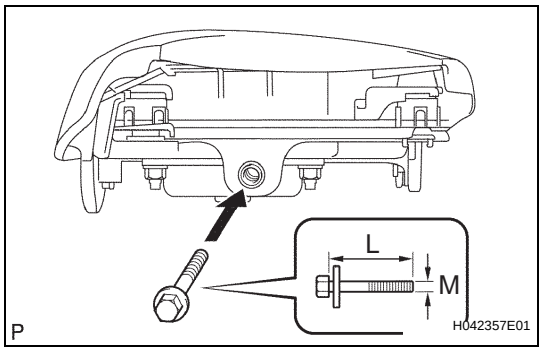
(b) Using a service-purpose wire harness for the vehicle, tie the steering pad assembly to the disc wheel.
Wire harness:
Stripped wire harness section 1.25 mm^2 or more (0.0019 in^2. or more)
CAUTION:
If a wire harness which is too thin or anything else is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Always use a wire harness for vehicle use which is at least 1.25 mm^2 (0.0019 in^2).



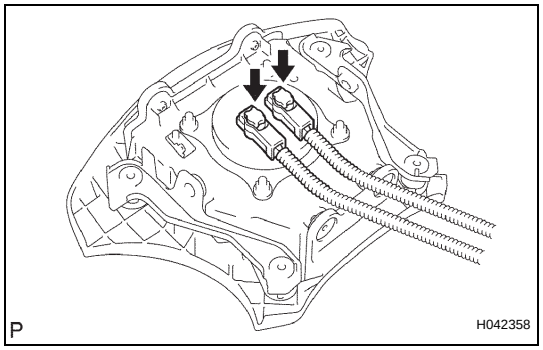
RS

HINT:
To calculate the square of the stripped wire harness section:
Square:

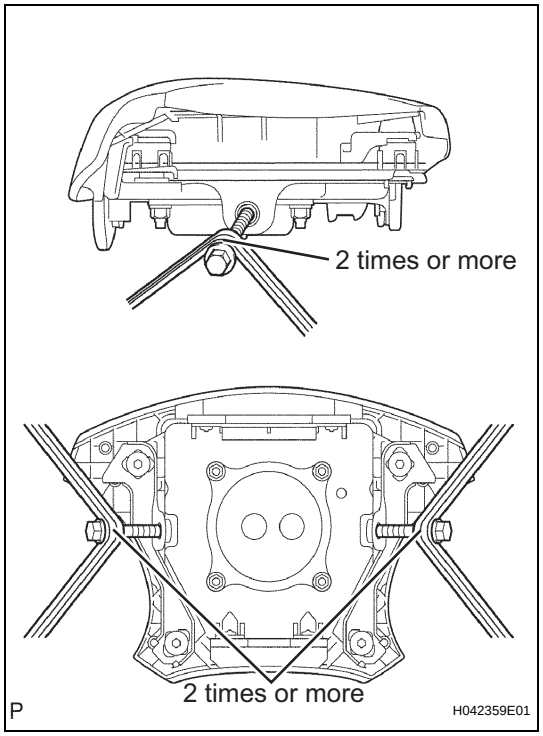
3.14 x (Diameter)^2 divided by 4



(1) Install the 2 bolts with washers in the 2 bolt holes in the steering pad.
Bolt:
L: 35.0 mm (1.387 in.)
M: 6.0 mm (0.236 in.)
Pitch: 1.0 mm (0.039 in.)
NOTICE:
- **Tighten the bolts by hand until the bolts become difficult to turn.**
- **Do not tighten the bolts excessively.**

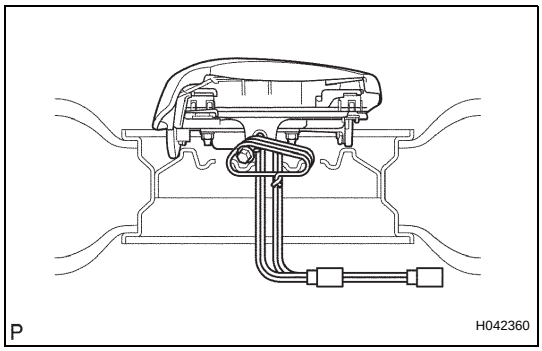


(2) After connecting the following to SST, connect them to the steering pad.
SST 09082-00802 (09082-10801, 09082-30801)



(3) Using 3 wire harnesses, wind each one at least 2 times around the bolts installed on the left and right sides of the steering pad.
CAUTION:
- **Tightly wind the wire harnesses around the bolts so that there is no slack.**
- **If there is slack in the wire harnesses, the steering pad may come loose due to the shock when the airbag is deployed. This is highly dangerous.**

RS



(4) Face the upper surface of the steering pad upward. Separately tie the left and right sides of the steering pad to the disc wheel through the hub nut holes. Position the steering pad connector so that it hangs downward through a hub hole in the disc wheel.

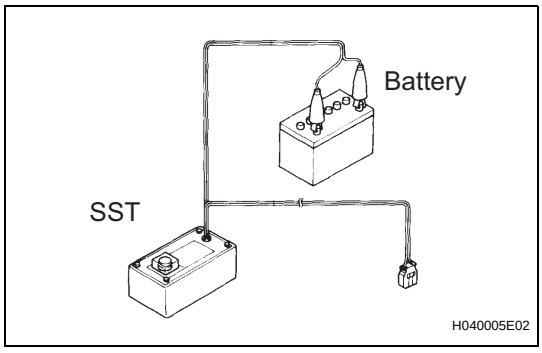
CAUTION:

- **Make sure that the wire harness is tight. It is very dangerous when slack in the wire harness results in the steering pad coming free through the shock from the airbag deploying.**
- **Always tie down the steering pad with the pad side facing upward. It is very dangerous if the steering pad is tied down with the metal surface facing upward as the wire harness will be cut by the shock caused by the airbag deployment and the steering pad will be thrown into the air.**

NOTICE:

The disc wheel will be marked by airbag deployment, so when disposing of the airbag use a redundant disc wheel.

(c) Check the function of the SST (See step 1-(a)).



(d) Install the SST.

CAUTION:

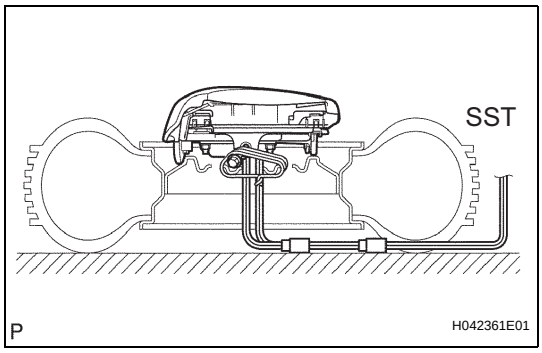
Place the disc wheel on level ground.

(1) Connect the connector of the SST.

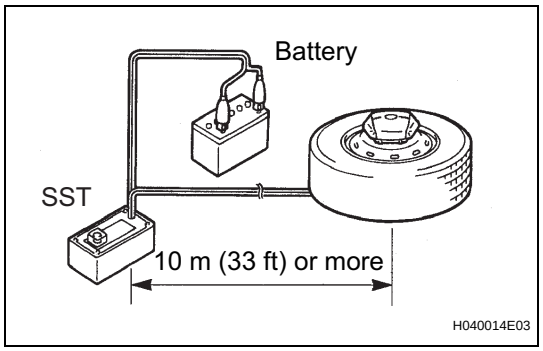
SST 09082-00700

NOTICE:

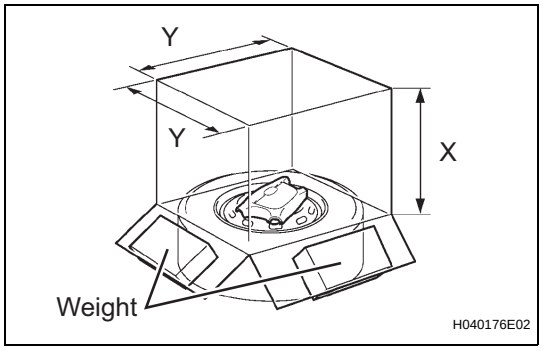
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.



RS



(2) Move the SST to at least 10 m (33 ft) away from the steering pad tied down on the disc wheel.



(e) Cover the steering pad with a cardboard box or tires.

Covering method using a cardboard box:

Cover the steering pad with the cardboard box and weigh the cardboard box down in 4 places with at least 190 N (20 kg, 44 lb).

Size of cardboard box:

Must exceed the following dimensions:

X = 460 mm (18.11 in.)

Y = 650 mm (25.59 in.)

NOTICE:

- **When dimension Y of the cardboard box exceeds the diameter of the disc wheel and tire to which the steering pad is tied, X should be the following size.**

  X = 460 mm (18.11 in.) + width of tire
- **If a cardboard box smaller than the specified size is used, the cardboard box will be broken by the shock of the airbag deployment.**

Covering method using tires:

Place at least 3 tires with no disc wheels on top of the tire and disc wheel to which the steering pad assembly is tied.

Tire size:

Must exceed the following dimensions

Width: 185 mm (7.28 in.)

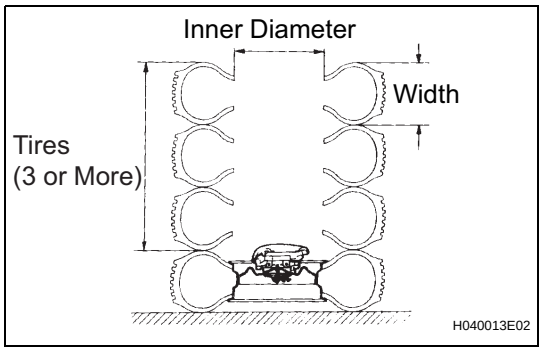
Inner diameter: 360 mm (14.17 in.)

CAUTION:

Do not use tires with disc wheels.

NOTICE:

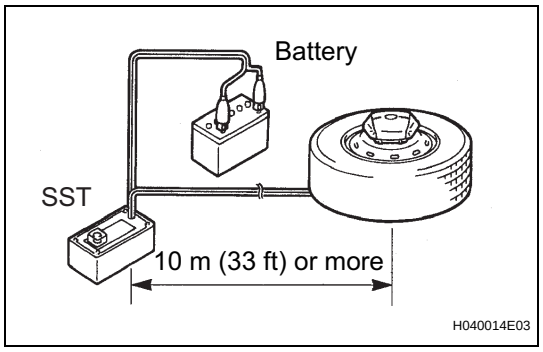
The tires may be marked by the airbag deployment, so use redundant tires.



(f) Deploy the airbag.

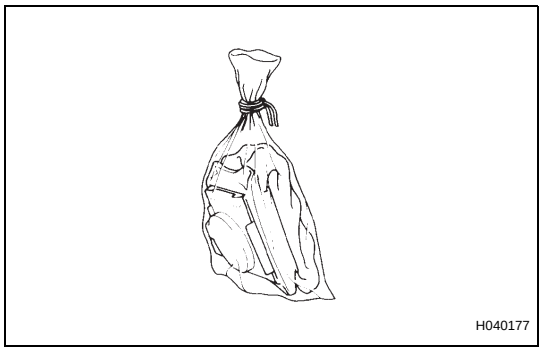
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

(2) Check that no one is within 10 m (33 ft) area around the disc wheel which the steering pad is tied to.



RS

(3) Press the activation switch of the SST and deploy the airbag.
HINT:
The airbag deploys as the LED of the SST activation switch comes on.



(g) Dispose of the steering pad.
CAUTION:
- **The steering pad is very hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the steering pad from the disc wheel.
(2) Place the steering pad in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts disposal.

INSTALLATION

1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

(a) Check that the front wheels are facing straight ahead.

2. INSTALL SPIRAL CABLE SUB-ASSEMBLY

(a) Set the turn signal switch in neutral position.
NOTICE:
Make sure of the neutral position since the pin of the turn signal switch may be snapped.

(b) Install the spiral cable sub-assembly with the 4 screws.
NOTICE:
When replacing the spiral cable sub-assembly with a new one, remove the lock pin before installing the handle.

(c) Connect the airbag connector and connector.

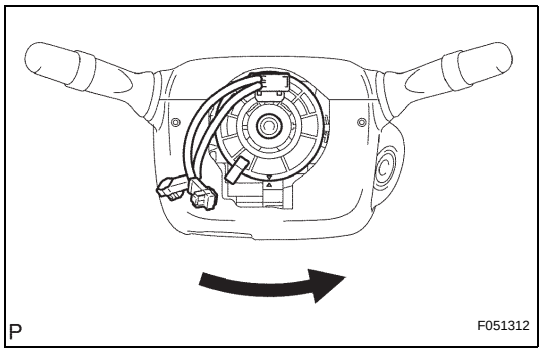
(d) Install the steering column cover with the 3 screws.

3. CENTER SPIRAL CABLE

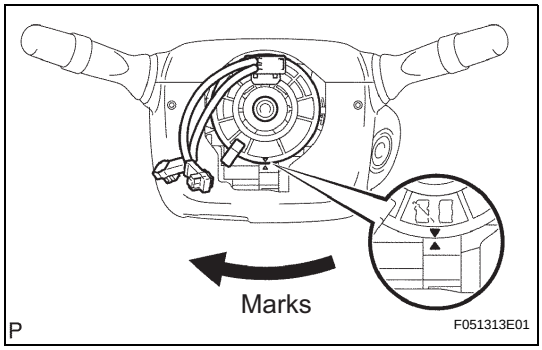
(a) Check that the ignition switch is OFF.

(b) Check that the cable is disconnected from the negative battery terminal.
NOTICE:
Do not start the operation for 90 seconds after disconnecting the cable from the negative battery terminal.

(c) Turn the cable counterclockwise by hand until it becomes harder to turn.



RS



(d) Turn the cable clockwise about 2.5 turns to align the marks.
HINT:
The cable will rotate about 2.5 turns both left and right from the center.

4. INSTALL UPPER STEERING COLUMN COVER

(a) Engage the claw, then install the upper steering column cover.

5. INSTALL LOWER STEERING COLUMN COVER

(a) Engage the 2 claws.

(b) Install the lower steering column cover with the 2 screws.

6. INSTALL STEERING WHEEL ASSEMBLY (See page SR-18)

7. **INSTALL STEERING PAD (See page RS-558)**
8. **INSTALL NO.3 LOWER STEERING WHEEL COVER (See page SR-18)**
9. **INSTALL NO.2 LOWER STEERING WHEEL COVER (See page SR-18)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
11. **INSPECT HORN BUTTON ASSEMBLY**
12. **INSPECT SRS WARNING LIGHT**
    (See page RS-28)

ON-VEHICLE INSPECTION

1. **INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-37)
   (b) With the front passenger airbag assembly installed on the vehicle, perform a visual check including the following: Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag assembly.

2. **INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (See page RS-37)
   (b) With the front passenger airbag assembly removed from the vehicle, perform a visual check including the following:
   - Cuts, minute cracks or marked discoloration on the front passenger airbag assembly.
   - Cracks or other damage to the wire harness or connector.
   - Deformation or cracks on the instrument panel or instrument panel reinforcement.

   CAUTION:
   For removal and installation procedures of the front passenger airbag assembly, see Replacement on see page RS-574, and be sure to follow the correct procedure.
   HINT:
   If the instrument panel or instrument panel reinforcement is deformed or cracked, never repair it. Always replace it with a new one.

REMOVAL

1. **PRECAUTION**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE FRONT FLOOR FOOTREST (See page IR-1)**
4. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
6. **REMOVE FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-12)**
7. **REMOVE FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-41)**
8. **REMOVE FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-61)**
9. **REMOVE FRONT DOOR SCUFF PLATE RH (for Double Cab) (See page IR-12)**
10. **REMOVE COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-40)**
11. **REMOVE COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-61)**
12. **REMOVE COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-12)**
13. **REMOVE COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-40)**
14. **REMOVE COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-61)**
15. **REMOVE COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-12)**
16. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-8)**
17. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-8)**
18. **REMOVE FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-41)**
19. **REMOVE FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-62)**
20. **REMOVE FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-13)**
21. **REMOVE FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-41)**

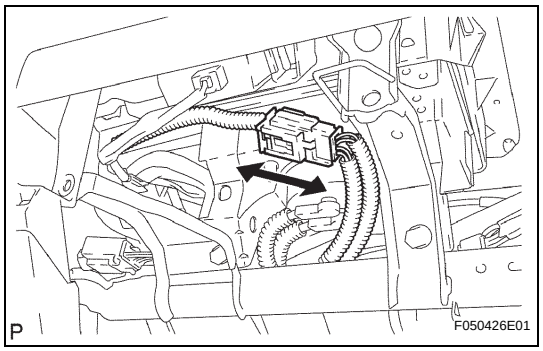
22. REMOVE FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-63)
23. REMOVE FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-14)
24. REMOVE INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-9)
25. REMOVE INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-9)
26. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)
27. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)
28. REMOVE CONSOLE BOX ASSEMBLY REAR (for Separate Seat Type) (See page IP-10)
29. REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)
30. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-10)
31. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-11)
32. REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-11)
33. REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-11)
34. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (See page IP-12)
35. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (See page AV-69)
36. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-3)
37. REMOVE NO. 1 LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)
38. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-12)
39. REMOVE COMBINATION METER ASSEMBLY (See page IP-13)
40. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-13)
41. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)

42. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY RH (See page IP-14)**

43. **REMOVE LOWER INSTRUMENT PANEL LH (See page IP-14)**

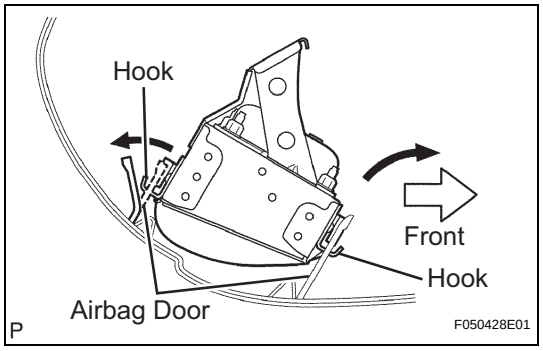
44. **REMOVE LOWER INSTRUMENT PANEL COVER SUB-ASSEMBLY (See page IP-14)**

45. **REMOVE INSTRUMENT SIDE PANEL RH (See page IP-14)**

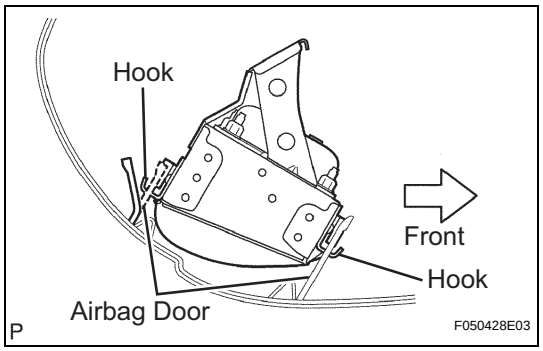


46. **DISCONNECT PASSENGER AIRBAG CONNECTOR**
    (a) Disconnect the airbag connector.

47. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY WITH PASSENGER AIRBAG ASSEMBLY (See page IP-14)**



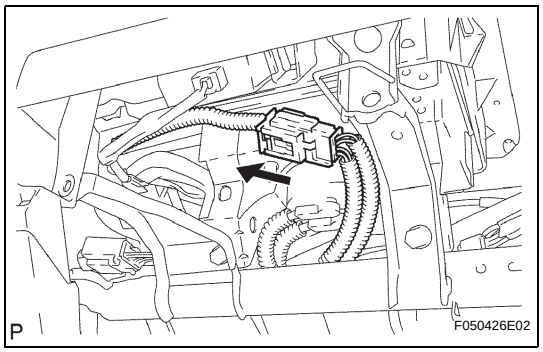
48. **REMOVE FRONT PASSENGER AIRBAG ASSEMBLY**
    (a) Disengage the 10 hooks and remove the front passenger airbag.
    (b) Release the front side wall of the airbag door from the other hook and remove the front passenger airbag assembly.



INSTALLATION

1. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY**
    (a) Engage the 10 hooks so that the connector side faces the outside of the vehicle, and install the front passenger airbag assembly.

2. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY WITH PASSENGER AIRBAG ASSEMBLY (See page IP-18)**



3. **CONNECT PASSENGER AIRBAG CONNECTOR**
    (a) Connect the passenger airbag connector and clamp.

4. **INSTALL INSTRUMENT SIDE PANEL RH (See page IP-20)**

5. **INSTALL LOWER INSTRUMENT COVER SUB-ASSEMBLY (See page IP-20)**

6. **INSTALL LOWER INSTRUMENT PANEL LH (See page IP-20)**

RS

7. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY RH (See page IP-20)
8. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)
9. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)
10. INSTALL COMBINATION METER ASSEMBLY (See page IP-21)
11. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)
12. INSTALL NO. 1 LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-22)
13. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)
14. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (See page AV-70)
15. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (See page IP-22)
16. INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)
17. INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)
18. INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)
19. INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)
20. INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)
21. INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)
22. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)
23. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)
24. INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)
25. INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)
26. INSTALL FRONT PILLAR GARNISH LH (for Regular Cab) (See page IR-51)

27. **INSTALL FRONT PILLAR GARNISH LH (for Access Cab) (See page IR-74)**
28. **INSTALL FRONT PILLAR GARNISH LH (for Double Cab) (See page IR-28)**
29. **INSTALL FRONT PILLAR GARNISH RH (for Regular Cab) (See page IR-52)**
30. **INSTALL FRONT PILLAR GARNISH RH (for Access Cab) (See page IR-74)**
31. **INSTALL FRONT PILLAR GARNISH RH (for Double Cab) (See page IR-28)**
32. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Regular Cab) (See page IR-52)**
33. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Access Cab) (See page IR-74)**
34. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Double Cab) (See page IR-29)**
35. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Regular Cab) (See page IR-52)**
36. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Access Cab) (See page IR-74)**
37. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Double Cab) (See page IR-29)**
38. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**
39. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**
40. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)**
41. **INSTALL COWL SIDE TRIM BOARD RH (for Regular Cab) (See page IR-52)**
42. **INSTALL COWL SIDE TRIM BOARD RH (for Access Cab) (See page IR-75)**
43. **INSTALL COWL SIDE TRIM BOARD RH (for Double Cab) (See page IR-29)**
44. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
45. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
46. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**

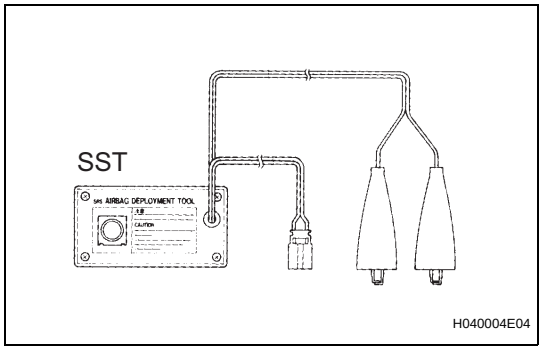
47. **INSTALL FRONT DOOR SCUFF PLATE RH (for Regular Cab) (See page IR-52)**
48. **INSTALL FRONT DOOR SCUFF PLATE RH (for Access Cab) (See page IR-75)**
49. **INSTALL FRONT DOOR SCUFF PLATE RH (for Double Cab) (See page IR-29)**
50. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
51. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
52. **INSPECT SRS WARNING LIGHT**
    (See page RS-28)

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of a front passenger airbag assembly, always deploy the airbag first in accordance with the procedures described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

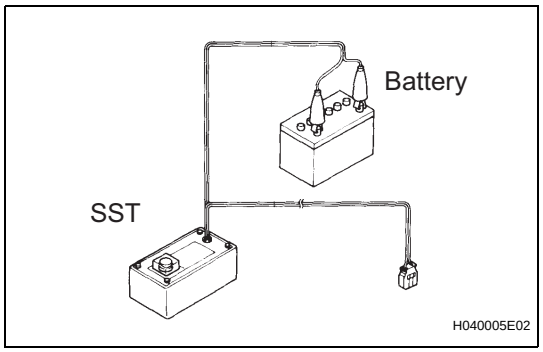
- **Never dispose of a front passenger airbag assembly which has an undeployed airbag.**
- **The airbag produces a loud exploding sound when it deploys, so perform the operation outdoors, where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying an airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag assembly.**
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

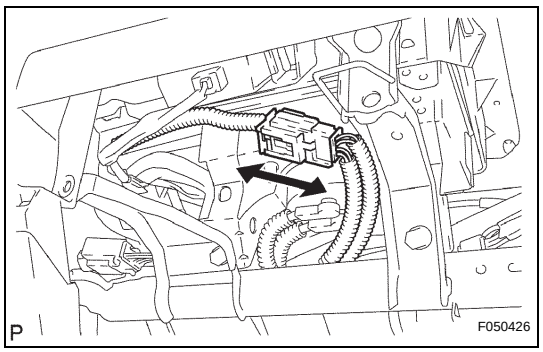


1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

HINT:
Have a battery as the power source to deploy the airbag.

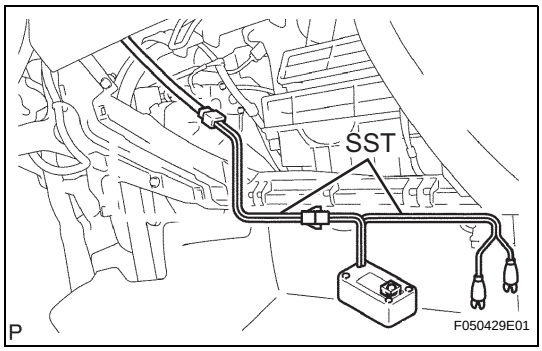
(a) Check functioning of SST (see step 1-(a) on page RS-559).

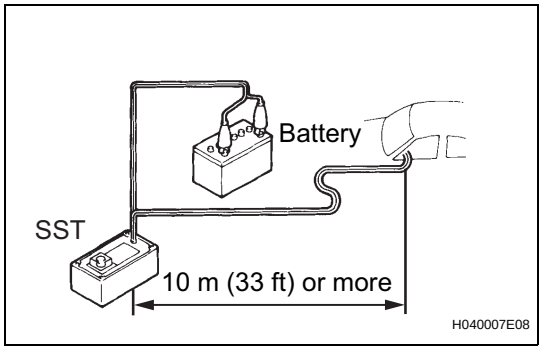




(b) Disconnect the airbag connectors.
  (1) Remove the instrument panel under cover sub-assembly No.2.
  (2) Remove the glove compartment door assembly.
  NOTICE:
  When handling the airbag connector, take care not to damage the airbag wire harness.
  (3) Disconnect the airbag connectors.

RS





(c) Install the SST.

(1) Connect the connector of SST to the front passenger airbag assembly connector.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Move SST to at least 10 m (33 ft) away from the front of the vehicle.

(3) Close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.

(4) Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the negative (-) terminal.

(d) Deploy the airbag.

(1) Check that no one is inside the vehicle, nor within a 10 m (33 ft) radius of the vehicle.

(2) Press the activation switch of SST and deploy the airbag.
HINT:
The airbag deploys as the LED of the SST activation switch comes on.

(e) Dispose of the front passenger airbag assembly.
CAUTION:
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **When moving a vehicle, which has a front passenger airbag assembly with a deployed airbag for scrapping, use gloves and safety glasses.**
- **Do not apply water, etc. to a front passenger airbag assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the front passenger airbag assembly still installed.

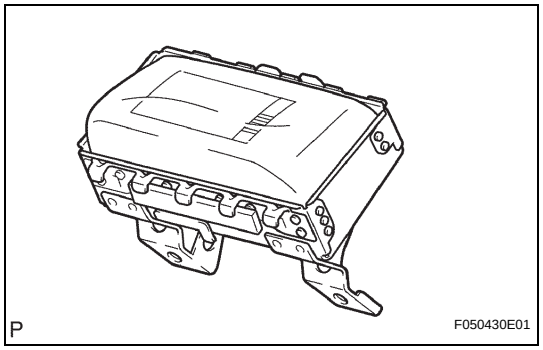
2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

NOTICE:

- **When disposing of the front passenger airbag assembly only, never use the customers vehicle to deploy the airbag.**
- **Be sure to follow the procedures given below when deploying the airbag.**

HINT:

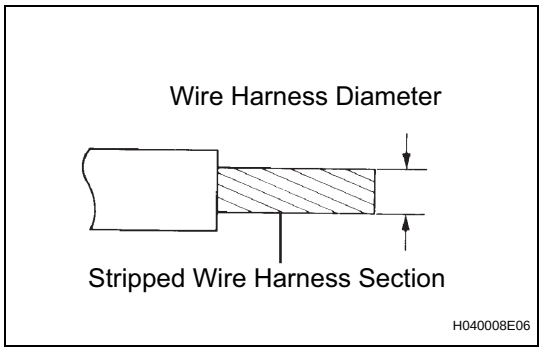
Prepare a battery as the power source to deploy the airbag.



(a) Remove the front passenger airbag assembly (see page RS-574).

CAUTION:

- **When removing the front passenger airbag assembly, work must be started 90 seconds after the ignition switch is turned to the LOCK position and the negative (-) terminal cable is disconnected from the battery.**
- **When placing the front passenger airbag assembly, keep the upper surface of the airbag deployment side facing upward.**



(b) Using a service-purpose wire harness for the vehicle, tie the front passenger airbag assembly to the tire.

Wire harness:

Stripped wire harness section 1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:

If a wire harness which is too thin or any other object is used to tie down the front passenger airbag assembly, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Always use a wire harness for vehicle use with the wire size of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:

To calculate the square of the stripped wire harness section:

Square:

3.14 x (Diameter)^2 divided by 4

Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size:

Must exceed the following dimensions:
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)

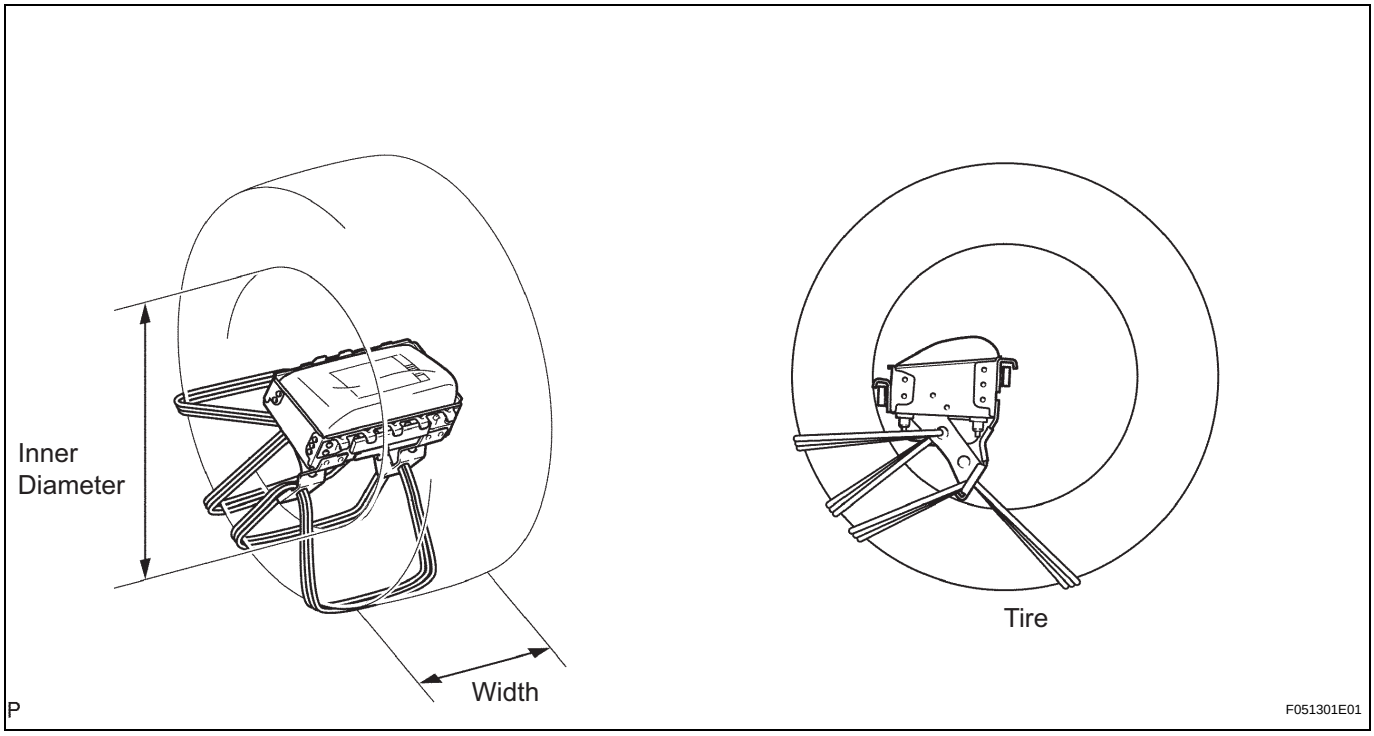
RS

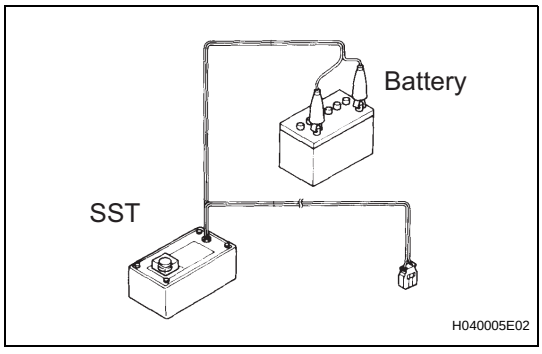
CAUTION:

- **Make sure that the wire harness is tight. It is very dangerous if it is loose, as this could cause the front passenger airbag assembly to come free due to the shock when the airbag is deployed.**
- **Always tie down the front passenger airbag assembly with the airbag deployment side facing inside.**

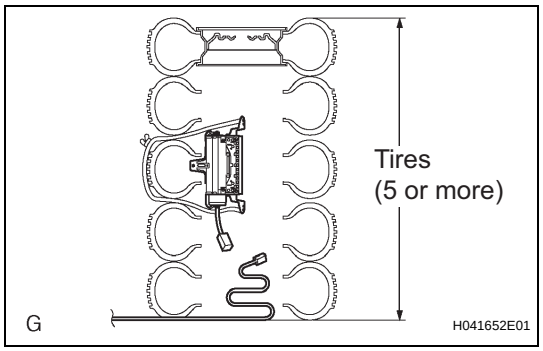
NOTICE:

The tire will be marked by the airbag deployment, so use spare tires.

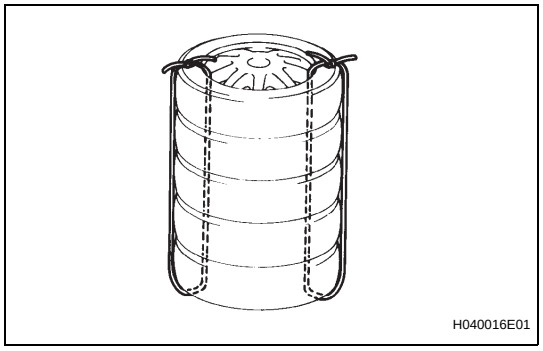




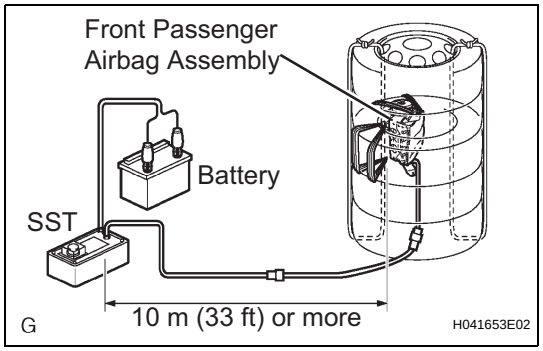
(c) Check the function of SST (see step 1-(a) on page RS-559).



(d) Place tires.
(1) Place at least 2 tires under the tire to which the front passenger airbag assembly is tied.
(2) Place at least 2 tires over the tire to which the front passenger airbag assembly is tied. The top tire should have the wheel installed.

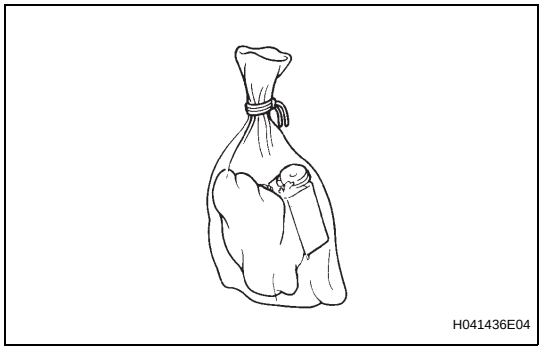


(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. It is very dangerous if it is loose, as this could cause the tires to come free due to the shock when the airbag is deployed.
HINT:
Place the SST connector and wire harness inside tires. Secure at least 1 m (3 ft) of slack for the wire harness.



(e) Install SST.
Connect the connectors of the SST to the front passenger airbag assembly connector.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(f) Deploy the airbag.
(1) Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front passenger airbag assembly is tied.
(3) Press the activation switch of SST and deploy the airbag.
HINT:
The airbag deploys as the LED of the SST activation switch comes on.



(g) Dispose of the front passenger airbag assembly.
CAUTION:
- **The front passenger airbag assembly becomes hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with the deployed airbag.**

RS

- **Always wash your hands with water after completing the operation.**

(1) Remove the front passenger airbag assembly from the tire.
(2) Place the front passenger airbag assembly in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

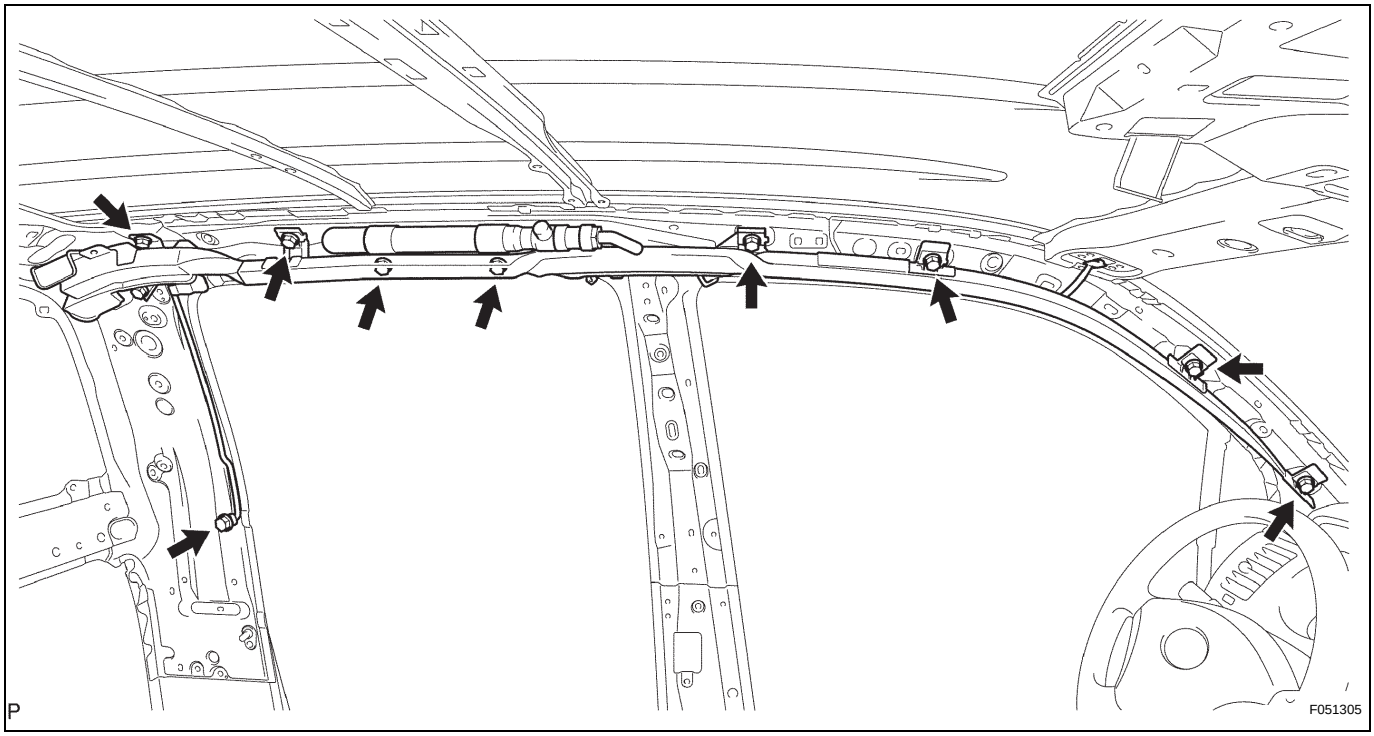
REMOVAL

1. **PRECAUTION**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

3. **REMOVE ROOF HEADLINING ASSEMBLY**
   HINT:
   Double Cab (See page IR-11).

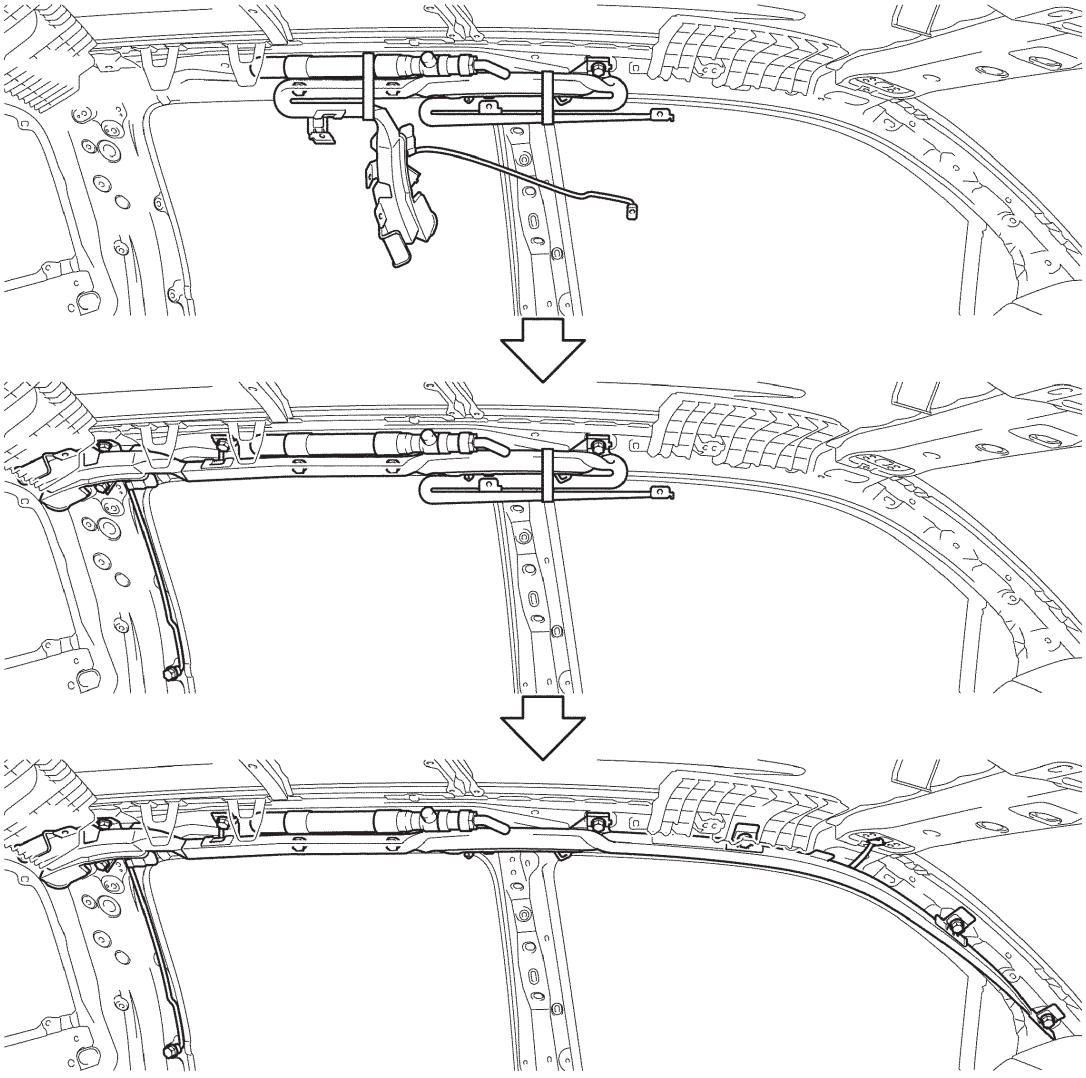
4. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY**
   (a) Disconnect the connector from the curtain shield airbag assembly .
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (b) Remove the 10 bolts, clip and the curtain shield airbag assembly in the order show in the illustration.



INSTALLATION

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Install the curtain shield assembly with the 10 bolts and clip in the order shown in the illustration.



F051334E01

Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

NOTICE:

Do not twist the curtain shield airbag assembly.

RS

(b) Connect the connector to the curtain shield airbag assembly.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

2. **INSTALL ROOF HEADLINING ASSEMBLY**
HINT:
Double Cab (See page IR-21)

3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

4. **INSPECT SRS WARNING LIGHT**
(See page RS-28)

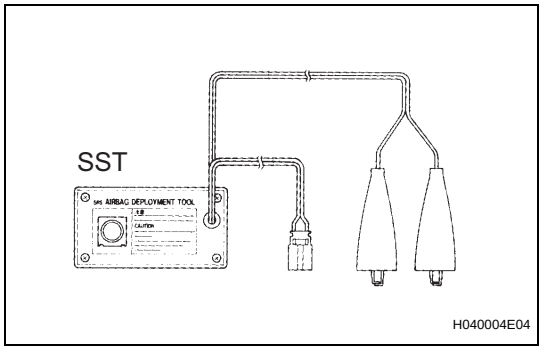
DISPOSAL

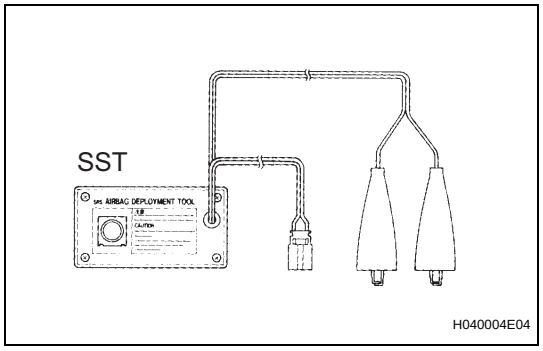
HINT:

- Use the same procedures for the RH and sides.
- When scrapping a vehicle equipped with the SRS or disposing of the front seat airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of a curtain shield airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors, where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag assembly.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**





1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Have a battery as the power source to deploy the airbag.

(a) Check the function of the SST (see step 1-(a) on page RS-559).

(b) Precaution (see page RS-1).

(c) Disconnect the cable from the battery negative terminal.

CAUTION:

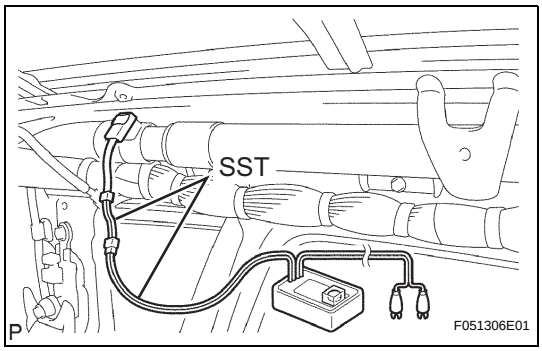
After disconnecting cable from the battery negative terminal, wait for at least 90 seconds before starting the operation.

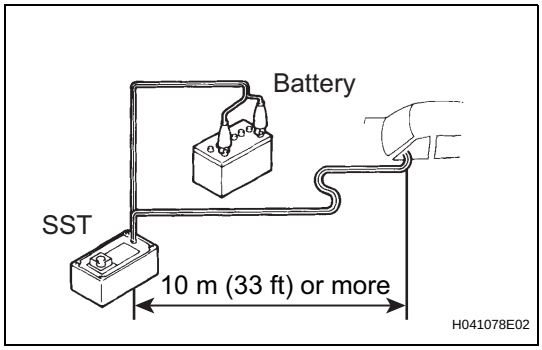
(d) Remove the roof headlining assembly.

HINT:

Double Cab (See page IR-11).

RS





(e) Install SST.

(1) Disconnect the connector from the curtain shield airbag assembly.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

(2) After connecting SSTs below to each other, connect them to the curtain shield airbag assembly.

SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft) away from the vehicle rear side window.

(4) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to negative (-) terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the activation switch of the SST and deploy the airbag.

CAUTION:

- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

RS

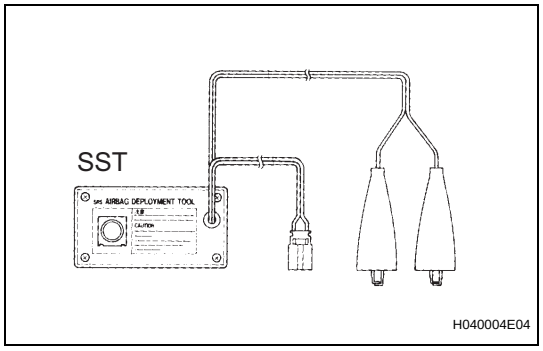
2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the curtain shield airbag assembly, never use the customers vehicle to deploy the airbag.**
- **Be sure to follow the procedures described below when deploying the airbag.**

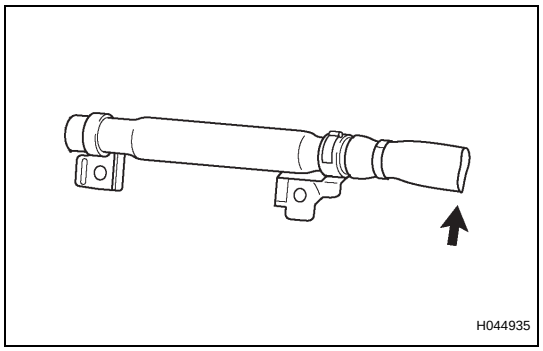
HINT:

Prepare a battery as the power source to deploy the airbag.

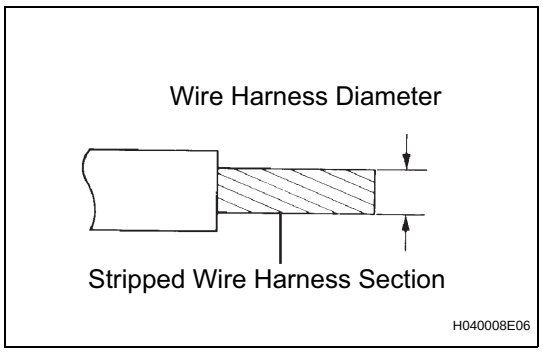


(a) Check the function of the SST (see step 1-(a) on page RS-559).

(b) Remove the curtain shield airbag assembly (see page RS-587).



(c) Cut off the deployment section of the curtain shield airbag assembly.



(d) Using a service-purpose wire harness for the vehicle, tie the curtain shield airbag assembly to the tire.

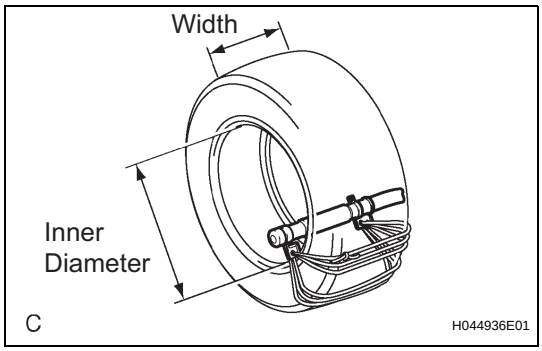
Wire harness:

Stripped wire harness section 1.25 mm^2 or more (0.0019 in^2. or more)

CAUTION:

If the wire harness is too thin or any other object is used to tie down the curtain shield airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with the wire size of at least 1.25 mm^2 (0.0019 $in.^2$).

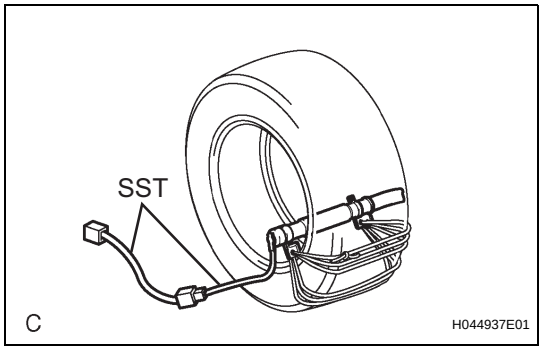
RS



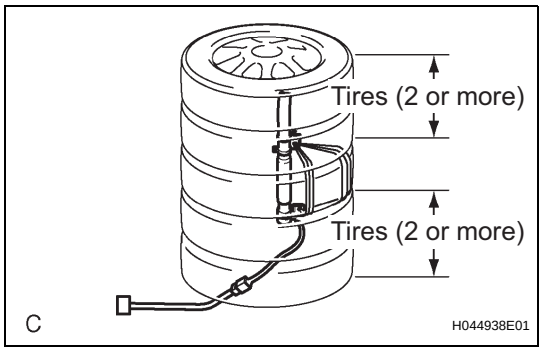
HINT:
To calculate the area of the stripped wire harness section:
Area:

3.14 x (Diameter)^2 divided by 4

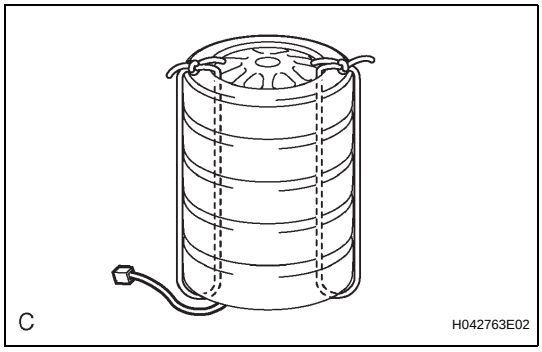
(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.
Tire size:
Must exceed the following dimensions:
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)
CAUTION:
Make sure that the wire harness is tight. If the wire harness is loose, the curtain shield airbag assembly may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airbag deployment, so use spare tires.



(e) Install SST.
(1) After connecting SST below to each other, connect them to the curtain shield airbag assembly.
SST 09082-00802 (09082-10801, 09082-20801)

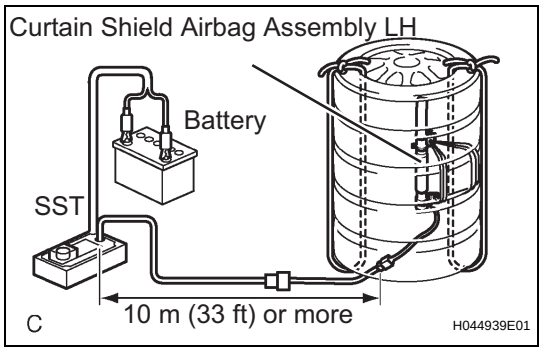


(f) Place the tires.
CAUTION:
Do not place the deployment side of the curtain shield airbag assembly facing toward the ground.
(1) Place at least 2 tires under the tire which the curtain shield airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the curtain shield airbag assembly is tied to. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.



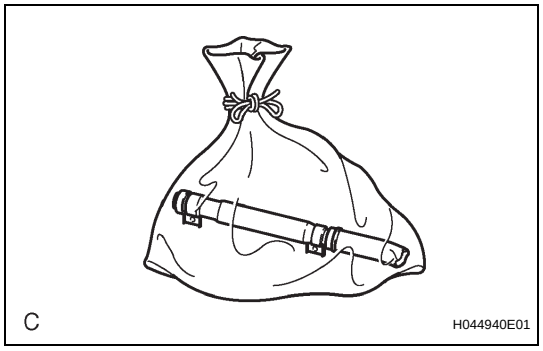
(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. A loose wire harness may cause the tires to come free due to the shock when the airbag is deployed.

RS



(g) Install the SST.
Connect the connector of SST.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(h) Deploy the airbag.
(1) Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag assembly is tied.
(3) Press the activation switch of SST and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

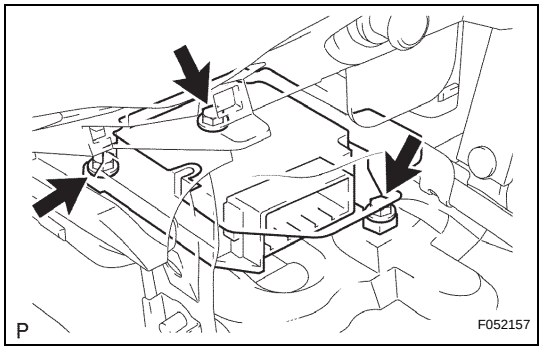


(i) Dispose of the curtain shield airbag assembly.
CAUTION:
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with the deployed airbag.**
- **Do not apply water etc. to a curtain shield airbag assembly with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the curtain shield airbag assembly from the tire.
(2) Place the curtain shield airbag assembly in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

REMOVAL

1. **PRECAUTION**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-9)**
4. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-9)**
5. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-10)**
6. **REMOVE INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-10)**
7. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-10)**
8. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-11)**
9. **REMOVE FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-11)**
10. **REMOVE FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-11)**
11. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY**
    (a) Disconnect the holder (with connectors) from the center airbag sensor assembly.
    (b) Remove the 3 bolts and the center airbag sensor assembly.



RS

INSTALLATION

1. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY**
   (a) Check that the ignition switch is turned to OFF.
   (b) Check that the cable is disconnected from the battery negative terminal.
   CAUTION:
   After removing the terminal, wait for at least 90 seconds before starting the operation.
   (c) Provisionally install the air bag sensor assembly center with the 3 bolts.
   NOTICE:
   - **If the center airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the center airbag sensor assembly, make sure that the SRS wiring dose not interfere with any other parts and that it is not pinched between other parts.**

   (d) Tighten the 3 bolts to the specified torque.
   Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
   (e) Check that there is no slack in the installation parts of the center airbag sensor assembly.
   (f) Connect the holder (with connectors) to the center airbag sensor assembly.
   (g) Check that the waterproof sheet is properly set.
2. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Bench Seat Type) (See page IP-22)**
3. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Bench Seat Type) (See page IP-23)**
4. **INSTALL FRONT CONSOLE BOX (for Manual Transmission on Separate Seat Type) (See page IP-23)**
5. **INSTALL FRONT CONSOLE BOX (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
6. **INSTALL INSTRUMENT PANEL CUP HOLDER TRAY (for Automatic Transmission on Separate Seat Type) (See page IP-24)**
7. **INSTALL REAR CONSOLE BOX ASSEMBLY (for Separate Seat Type) (See page IP-24)**
8. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Manual Transmission on Separate Seat Type) (See page IP-25)**
9. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Automatic Transmission on Separate Seat Type) (See page IP-25)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

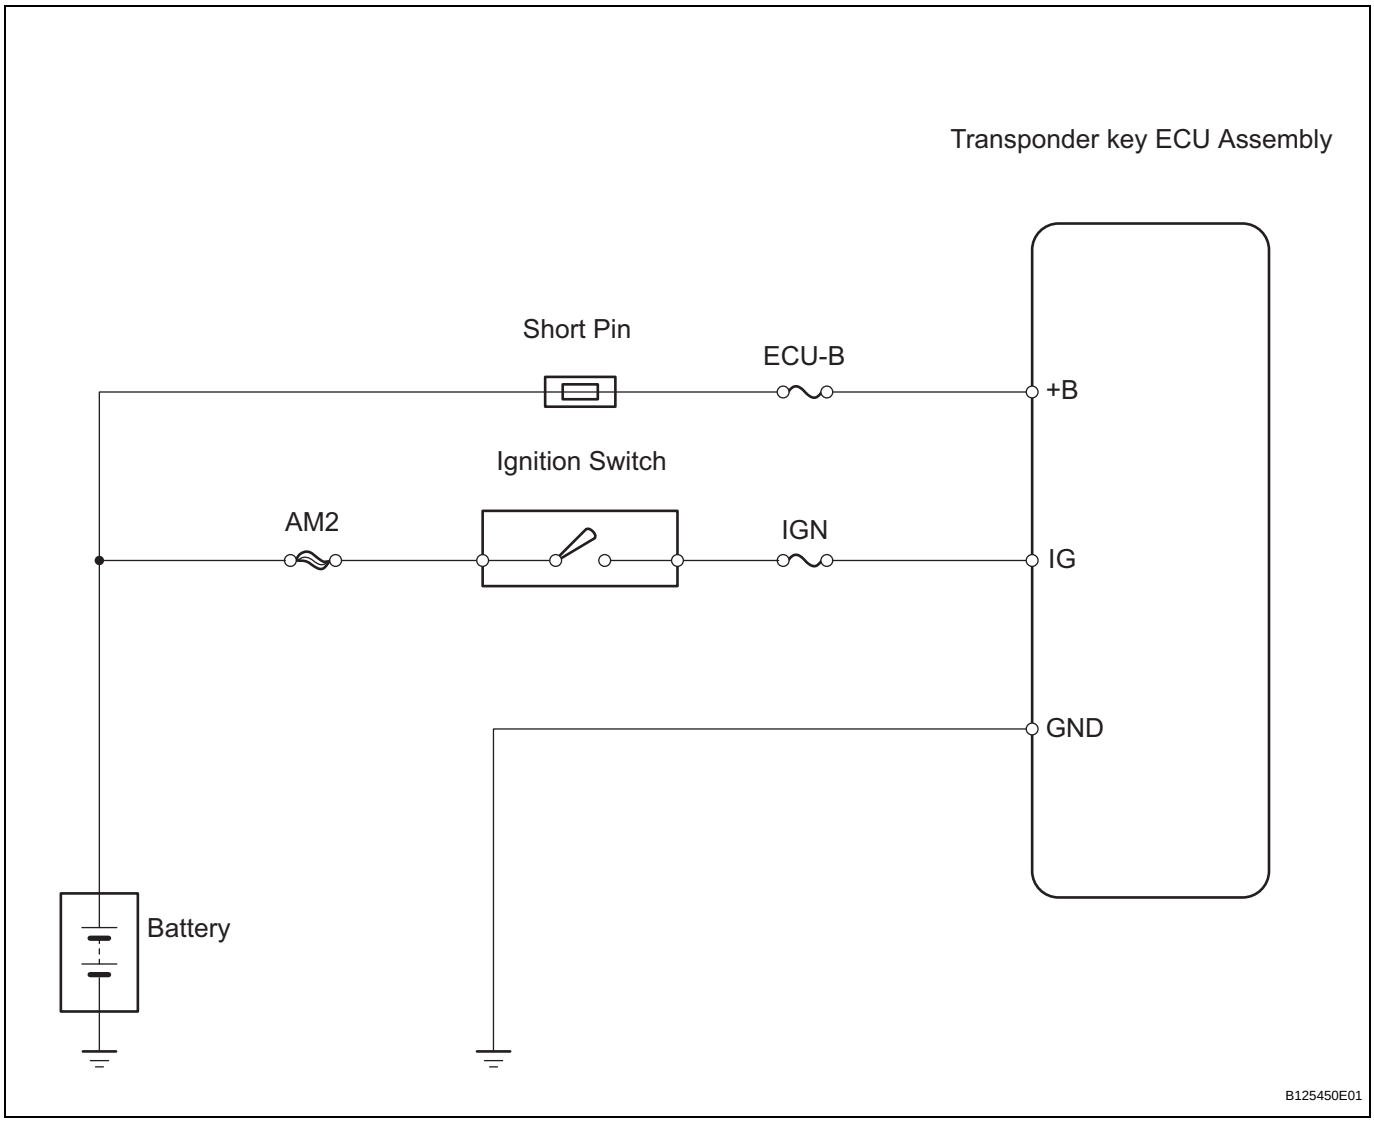
11. INSPECT SRS WARNING LIGHT
(See page RS-28)

ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the transponder key ECU assembly.

WIRING DIAGRAM



1	INSPECT FUSES (ECU-B AND IGN)

(a) Remove the ECU-B fuse from the engine room R/B and J/B.
(b) Remove the IGN fuse from the driver side J/B.
(c) Measure the resistance of the fuse.
Standard resistance:
Below 1Ω
(d) Reinstall fuses.

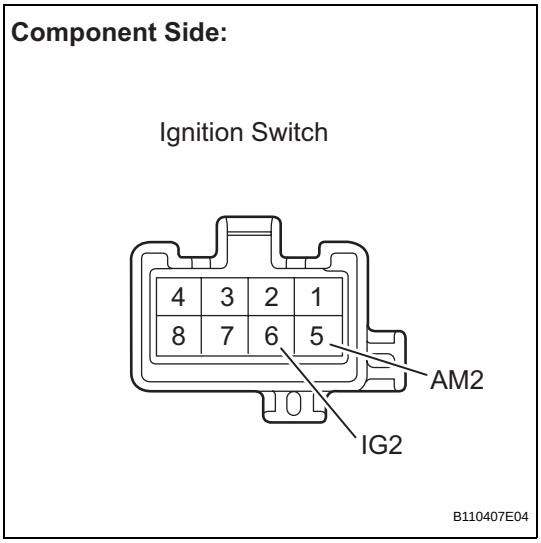
NG	REPLACE FUSE

EI

OK

2 INSPECT IGNITION SWITCH ASSEMBLY

Component Side:



(a) Remove the ignition switch.
(b) Measure the resistance of the switch.

Standard resistance

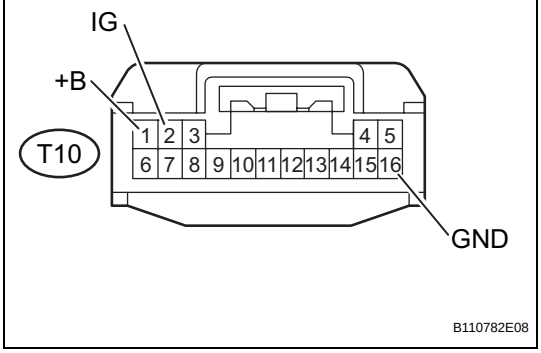
Tester Connection	Switch Condition	Specified Condition
5 (AM2) - 6 (IG2)	LOCK, ACC	10 kΩ or higher
	ON, START	Below 1 Ω

NG → REPLACE IGNITION SWITCH ASSEMBLY

OK

3 CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU ASSEMBLY - BATTERY AND BODY GROUND)

Wire Harness Side:



(a) Disconnect the T10 ECU connector.
(b) Measure the resistance and voltage of the wire harness side connector.

Standard resistance

Tester Connection	Condition	Specified Condition
T10-16 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
T10-1 (+B) - Body ground	Always	10 to 14 V
T10-2 (IG) - Body ground	Ignition switch OFF	Below 1 V
	Ignition switch ON	10 to 14 V

(c) Reconnect the ECU connector.

NG → REPAIR OR REPLACE WIRE HARNESS AND CONNECTOR

OK

REPLACE TRANSPONDER KEY ECU ASSEMBLY

EI

SFI SYSTEM

PRECAUTION

1. INITIALIZATION

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AT-17).**
- **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-14).**
- **If the ECM has been replaced or RESET MEMORY (AT initialization) has been performed, set up the function of the ATF (Automatic Transmission Fluid) temperature warning light (See page AT-17).**

HINT:

Initialization can not be completed by only removing the battery.

2. FOR USING INTELLIGENT TESTER

CAUTION:

Observe the following items for safety reasons:

- Read its instruction books before using the tester.
- Prevent the tester cable from being caught on the pedals, shift lever and steering wheel when driving with the tester connected to the vehicle.
- When driving the vehicle for testing purposes using the tester, two persons are required. One is for driving the vehicle, and the other operates the tester.

DEFINITION OF TERMS

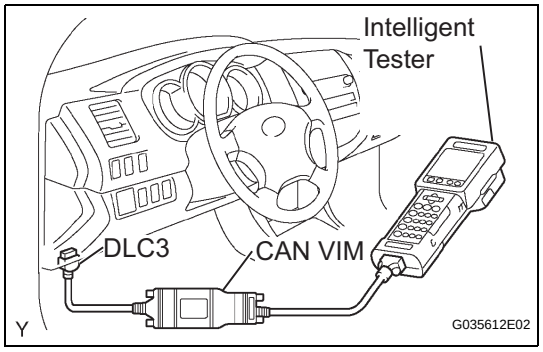
Terms	Definitions
Monitor Description	Description of what ECM monitors and how detects malfunctions (monitoring purpose and details)
Related DTCs	A group of diagnostic trouble codes that are output by ECM based on same malfunction detection logic.
Typical Enabling Conditions	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s)
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components involved in single malfunction detection process. Each sensor and component monitored in turn and not monitored until previous detection operation completed.
Required Sensors/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions met.
Malfunction Thresholds	Values, beyond which, ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after defect detected. "Immediate" means ECM illuminates MIL as soon as malfunction detected. "2 driving cycles" means ECM illuminates MIL if same malfunction detected second time during next sequential driving cycle.

MASS AIR FLOW METER

ON-VEHICLE INSPECTION

NOTICE:

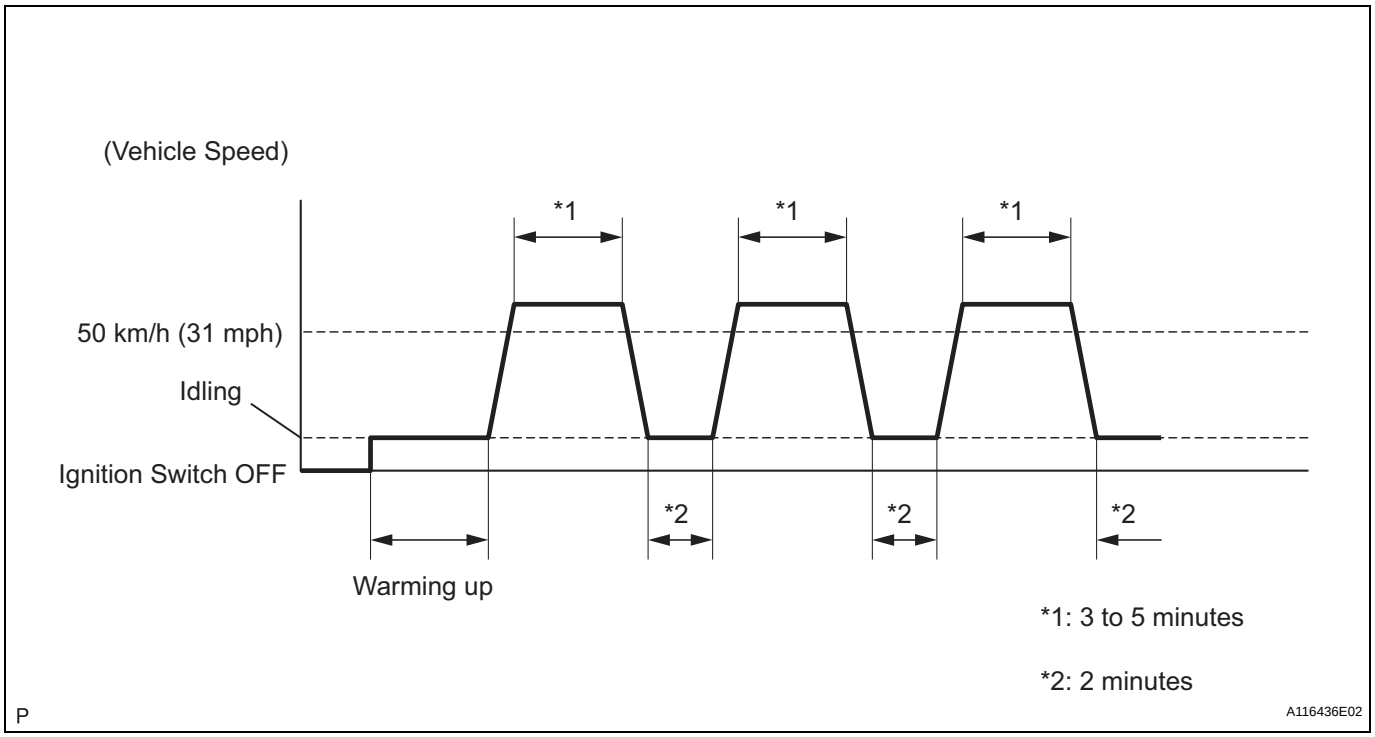
- **Perform the MAF meter inspection according to the procedures below.**
- **Only replace the MAF meter when both the LONG FT#1 value and MAF value in the DATA LIST (with the engine stopped) are not within the normal operating range.**



1. INSPECT MASS AIR FLOW METER

(a) Perform confirmation driving pattern.

(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch ON.
(3) Turn the tester ON.
(4) Clear the DTCs (see page ES-38).
(5) Start the engine and warm it up with all accessory switches OFF (until the engine coolant temperature is 75°C (167°F) or more).
(6) Drive the vehicle at 50 km/h (31 mph) or more for 3 or more *1.
(7) Let the engine idle (accelerator pedal fully released) for 2 minutes or more *2.
(8) Perform steps *1 and *2 at least 3 times.



(b) Read value using intelligent tester (LONG FT#1).

(1) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / LONG FT#1.
(2) Read the values displayed on the tester.
Standard value:
Within -15 to +15 %

If the result is not within the specified range, perform the inspection below.

(c) Read value using intelligent tester (MAF).

NOTICE:

- **Turn off the engine.**
- **Perform the inspection with the vehicle indoors and on a level surface.**
- **Perform the inspection of the MAF meter while it is installed to the air cleaner case (installed to the vehicle).**
- **During the test, do not use the exhaust air duct to perform suction on the exhaust pipe.**

(1) Turn the ignition switch to ACC.

(2) Turn the ignition switch ON (do not run the engine).

(3) Turn the tester ON.

(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.

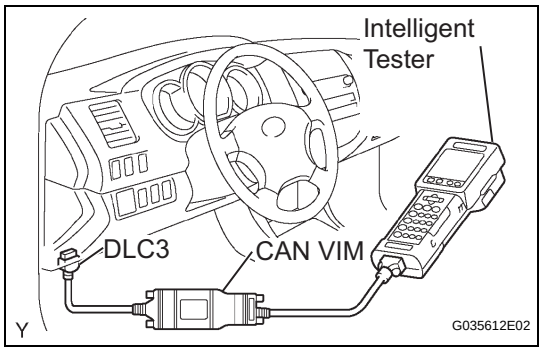
(5) Wait 30 seconds, and read the values on the intelligent tester.

Standard condition:

Less than 0.72 g/s

- If the result is not as specified, replace the MAF meter.
- If the result is within the specified range, inspect the cause of the extremely rich or lean air fuel ratio (see page ES-146).

ES



CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Check the operation.

(1) Turn the ignition switch to ON.

(2) Turn the intelligent tester ON.

(3) Start the engine and warm it up.

(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.

(5) Operate the OCV using the intelligent tester, then check the engine speed.

Standard

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Rough idling or engine stalls

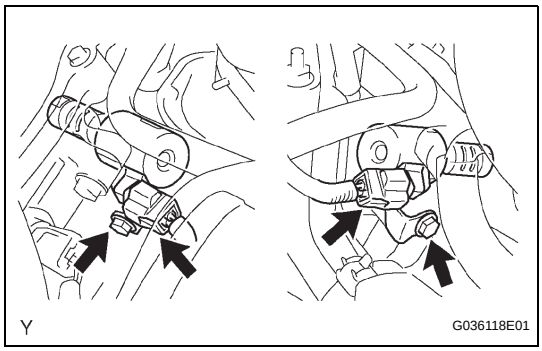
If the operation is not as specified, check the camshaft timing oil control valve, wire harness and ECM.

ES

ES

REMOVAL

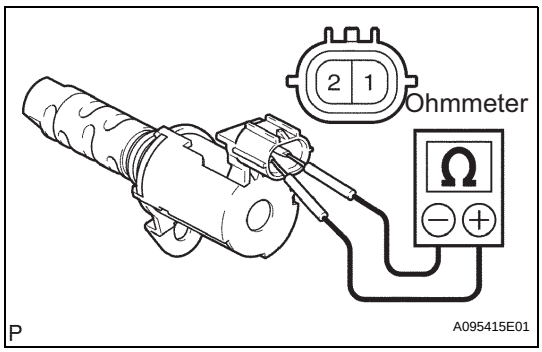
1. **DRAIN ENGINE COOLANT (See page CO-3)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE V-BANK COVER (See page ES-414)**
4. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
5. **REMOVE INTAKE AIR SURGE TANK (See page FU-11)**
6. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**
   (a) Disconnect the 2 connectors.
   (b) Remove the 2 bolts, then remove the 2 camshaft timing oil control valves.



INSPECTION

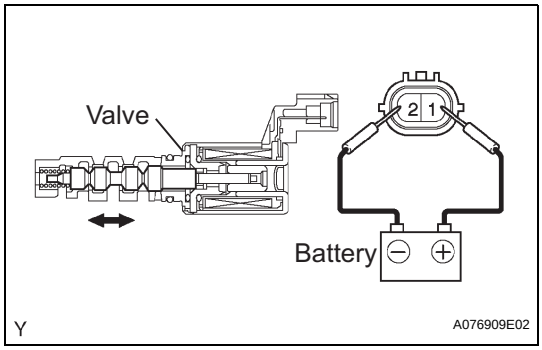
1. **INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard

Tester Connection	Specified Condition
1 (+B) - 2 (GND)	6.9 to 7.9 Ω at 20°C (68°F)



If the result is not as specified, replace the camshaft timing oil control valve.

   (b) Check the operation.
      (1) Connect the positive (+) lead from the battery to terminal 1 and negative (-) lead to terminal 2, and check that the valve operates.
      NOTICE:
      Check that the spool valve is not stuck.
      HINT:
      The spool valve may not return if foreign objects are caught in it. This may cause subtle pressure leakage to the advance side, and a DTC may, be set.



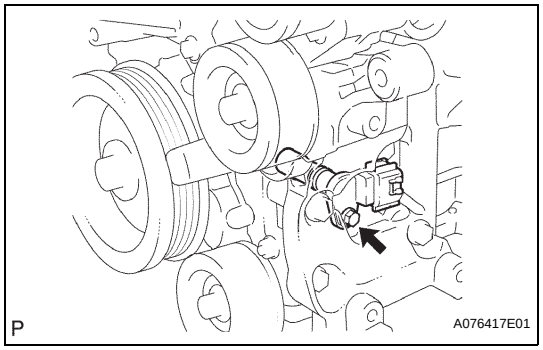
CRANKSHAFT POSITION SENSOR

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE V-BANK COVER (See page ES-414)**
3. **REMOVE FAN SHROUD (See page CO-15)**
4. **REMOVE GENERATOR ASSEMBLY (See page CH-7)**
5. **SEPARATE COOLER COMPRESSOR ASSEMBLY**
   (a) Remove the bolt, then separate the suction hose sub-assembly.

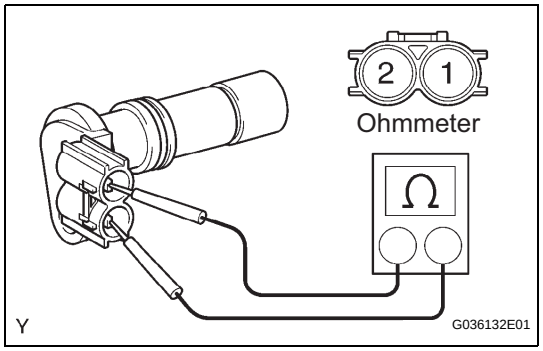
   (b) Disconnect the cooler compressor assembly connector.
   (c) Remove the 4 bolts, then separate the cooler compressor assembly from the V-ribbed belt tensioner assembly.

6. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Disconnect the crankshaft position sensor connector.
   (b) Remove the bolt, then remove the crankshaft position sensor.



INSPECTION

1. **INSPECT CRANKSHAFT POSITION SENSOR**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard:
      1850 to 2450 Ω at 20°C (68°F)
      If the result is not as specified, replace the crankshaft position sensor.



INSTALLATION

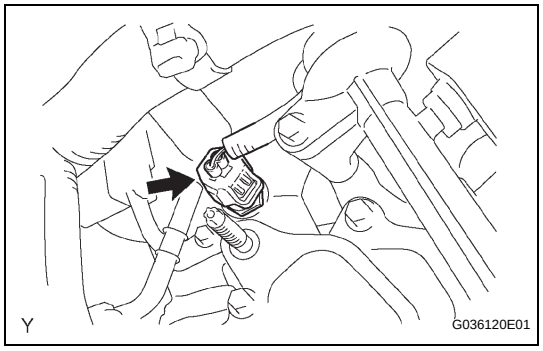
1. **INSTALL CRANKSHAFT POSITION SENSOR**
   (a) Apply a light coat of engine oil to the O-ring of the crankshaft position sensor.
   (b) Install the crankshaft position sensor with the bolt.
   Torque: 10 N*m (102 kgf*cm, 7.4 in.*lbf)
   (c) Connect the crankshaft position sensor connector.
2. **INSTALL COOLER COMPRESSOR ASSEMBLY**
   (a) Install the cooler compressor assembly with the 4 bolts.
   Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
   (b) Connect the cooler compressor assembly connector.
   (c) Install the suction hose sub-assembly with the bolt.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
3. **INSTALL GENERATOR ASSEMBLY (See page CH-13)**
4. **INSTALL FAN SHROUD (See page CO-20)**
5. **INSTALL V-BANK COVER (See page ES-416)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

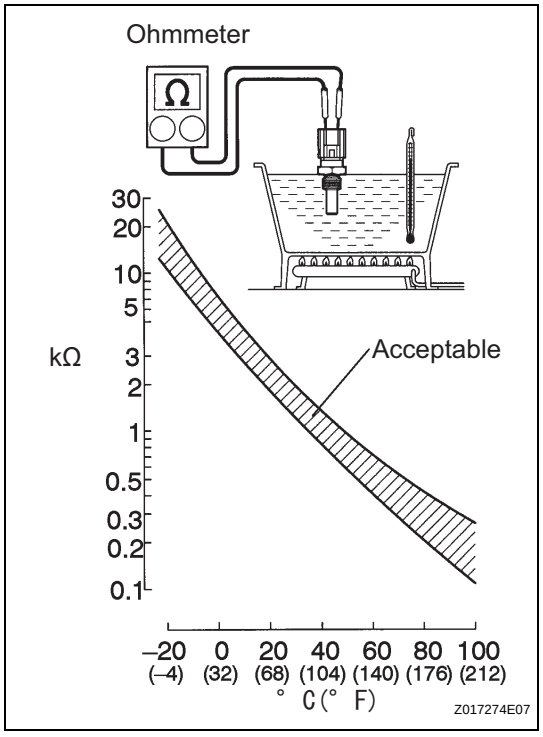
ES

ENGINE COOLANT TEMPERATURE SENSOR

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE** (See page FU-1)
2. **DRAIN ENGINE COOLANT (See page CO-3)**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
4. **REMOVE V-BANK COVER (See page ES-414)**
5. **REMOVE AIR CLEANER ASSEMBLY (See page ES-415)**
6. **REMOVE INTAKE AIR SURGE TANK (See page FU-11)**
7. **DISCONNECT FUEL PIPE SUB-ASSEMBLY NO.2 (See page FU-13)**
8. **REMOVE ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Disconnect the connector.
   (b) Using a 19 mm deep socket wrench, remove the water temperature sensor and gasket.



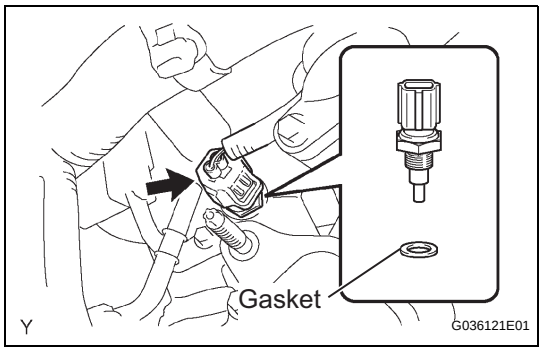


INSPECTION

1. **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Resistance

Tester Connection	Specified Condition
1 (E2) - 2 (THW)	2.32 to 2.59 kΩ at 20°C (68°F)
1 (E2) - 2 (THW)	0.310 to 0.326 kΩ at 80°C (176°F)

NOTICE:
If checking the engine coolant temperature sensor in water, be careful not to allow water to enter the terminals. After checking, wipe the water off the engine coolant temperature sensor.
If the result is not as specified, replace the engine coolant temperature sensor.

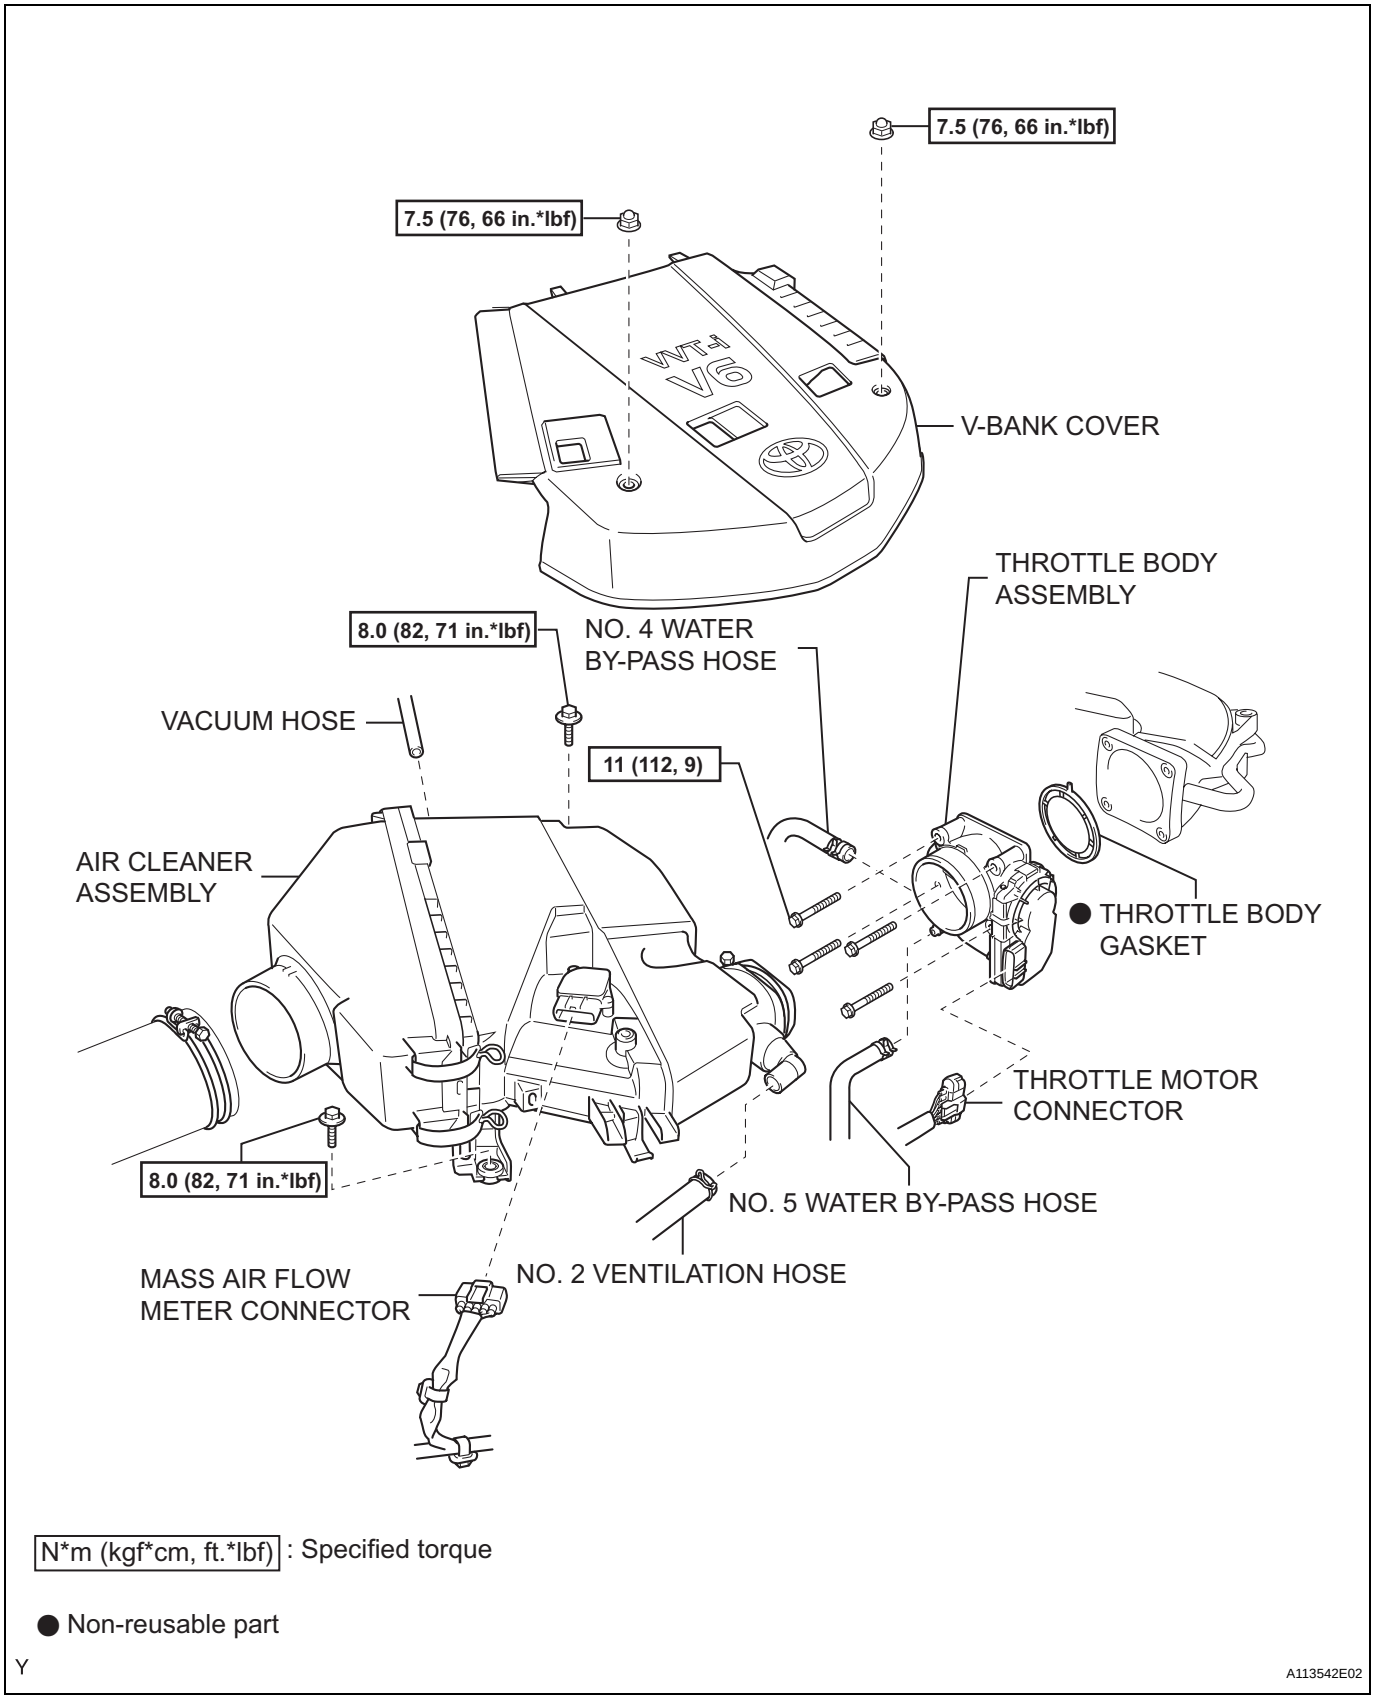


INSTALLATION

1. **INSTALL E.F.I. ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Using a 19 mm deep socket wrench, install the water temperature sensor with a new gasket.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the connector.
2. **CONNECT FUEL PIPE SUB-ASSEMBLY NO.2 (See page FU-17)**
3. **INSTALL INTAKE AIR SURGE TANK (See page FU-17)**
4. **INSTALL AIR CLEANER ASSEMBLY**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
6. **ADD ENGINE COOLANT (See page CO-3)**
7. **CHECK FOR FUEL LEAKAGE**
8. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-4)**
9. **INSTALL V-BANK COVER (See page ES-416)**

THROTTLE BODY

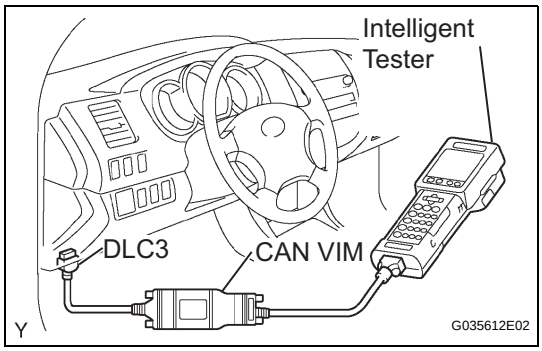
COMPONENTS



ON-VEHICLE INSPECTION

1. INSPECT THROTTLE BODY ASSEMBLY

(a) Listen to the throttle control motor operating sounds.
  (1) Turn the ignition switch to ON.
  (2) When pressing the accelerator pedal, listen to the running sound of the motor. Make sure no friction noises come from the motor.
  If friction noises exist, check the throttle body, wire harness and ECM.

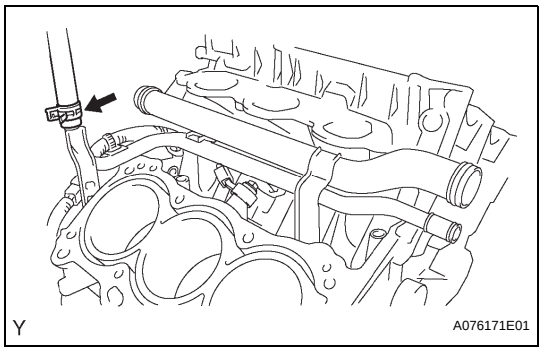


(b) Check the throttle position sensor.
  (1) Turn the ignition switch to ON.
  (2) Turn the intelligent tester ON.
  (3) Start the engine and warm it up.
  (4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / THROTTLE POS .
  (5) Depress the accelerator pedal. When the throttle valve is fully open, check that the THROTTLE POS value is within the specification.
  Standard:
  60% or more
  NOTICE:
  When checking the standard throttle valve opening percentage, the transmission should be in the neutral position.
  If the result is not as specified, check the throttle body, wire harness and ECM.

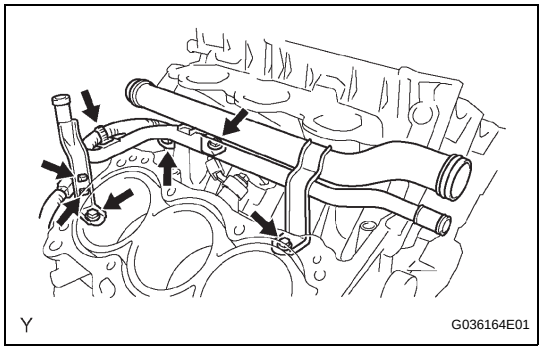
KNOCK SENSOR (for 2WD)

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE ENGINE ASSEMBLY**
   (See page EM-186)
6. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-17)
7. **REMOVE COOL AIR INLET NO.1**
   (a) Remove the 2 bolts, then remove the cool air inlet.
8. **REMOVE EXHAUST FRONT PIPE ASSEMBLY NO.2 (See page EX-3)**
9. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-3)**
10. **REMOVE MANIFOLD STAY**
    (a) Remove the 3 bolts, then remove the exhaust manifold stay.
11. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH**
    (a) Disconnect the air fuel ratio sensor connector.
    (b) Remove the 6 nuts, then remove the exhaust manifold and gasket.
12. **REMOVE INTAKE MANIFOLD (See page EM-93)**
13. **REMOVE WATER BY-PASS JOINT RR (See page EM-93)**
14. **REMOVE CHAIN VIBRATION DAMPER NO.1**
    (a) Remove the 2 bolts, then remove the chain vibration damper No. 1.
15. **REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (RH BANK) (See page EM-94)**
16. **REMOVE CHAIN TENSIONER ASSEMBLY NO.2 (See page EM-62)**
17. **REMOVE CAMSHAFTS (See page EM-94)**
18. **REMOVE CAMSHAFT BEARING NO.2**
19. **REMOVE CYLINDER HEAD SUB-ASSEMBLY (See page EM-95)**

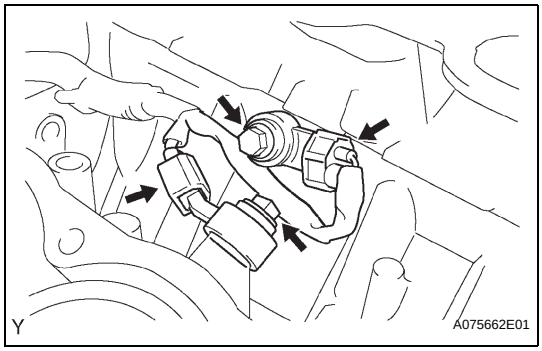


20. DISCONNECT HEATER WATER INLET HOSE



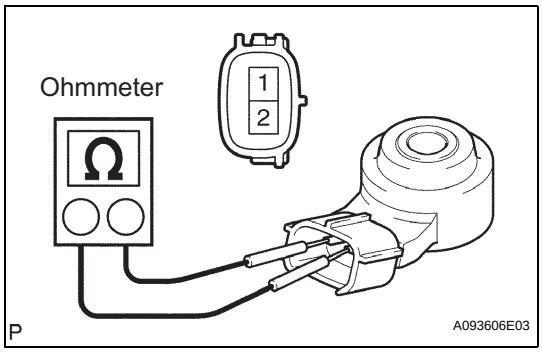
21. REMOVE WATER OUTLET PIPE NO.1

(a) Remove the 4 wire harness clamps.
(b) Remove the 3 bolts and water outlet pipe.



22. REMOVE KNOCK SENSOR

(a) Disconnect the 2 knock sensor connectors.
(b) Remove the 2 bolts and 2 knock sensors.



INSPECTION

1. INSPECT KNOCK SENSOR

(a) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance Standard

Tester Connection	Specified Condition
1 (Ground) - 2 (Output)	120 to 180 Ω at 20°C (68°F)

If the result is not as specified, replace the knock sensor.

KNOCK SENSOR (for 4WD and Pre-Runner)

REMOVAL

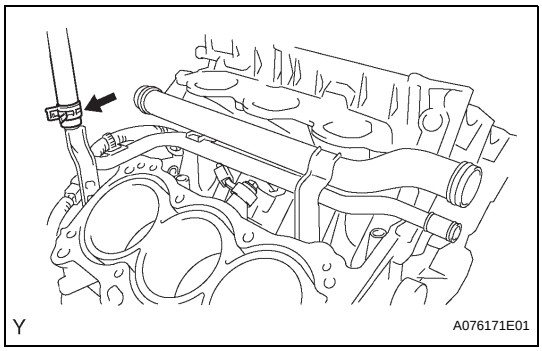
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **REMOVE BATTERY**
3. **DRAIN ENGINE COOLANT (See page CO-3)**
4. **DRAIN ENGINE OIL (See page LU-4)**
5. **REMOVE POWER STEERING LINK ASSEMBLY**
   (See page PS-53)
6. **REMOVE DIFFERENTIAL CARRIER ASSEMBLY FRONT (4WD DRIVE TYPE)**
   (See page DF-19)
7. **REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY**
   (See page LU-34)
8. **REMOVE CHAIN SUB-ASSEMBLY**
9. **REMOVE COOL AIR INLET NO.1**
   (a) Remove the 2 bolts, then remove the cool air inlet.
10. **REMOVE EXHAUST FRONT PIPE ASSEMBLY NO.2 (See page EX-3)**
11. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-3)**
12. **REMOVE MANIFOLD STAY**
    (a) Remove the 6 bolts, then remove the 2 exhaust manifold stays.
13. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH (See page EM-115)**
14. **DISCONNECT FUEL PIPE SUB-ASSEMBLY NO.1 (See page FU-13)**
15. **DISCONNECT FUEL PIPE SUB-ASSEMBLY NO.2 (See page FU-13)**
16. **REMOVE INTAKE MANIFOLD (See page EM-115)**
17. **REMOVE WATER BY-PASS JOINT RR (See page EM-115)**
18. **REMOVE CHAIN VIBRATION DAMPER NO.1 (See page EM-158)**
19. **REMOVE CAMSHAFT TIMING GEARS AND NO.2 CHAIN (RH BANK) (See page EM-116)**
20. **REMOVE CHAIN TENSIONER ASSEMBLY NO.2 (See page EM-116)**
21. **REMOVE CAMSHAFTS (See page EM-116)**

ES

22. REMOVE CAMSHAFT BEARING NO.2

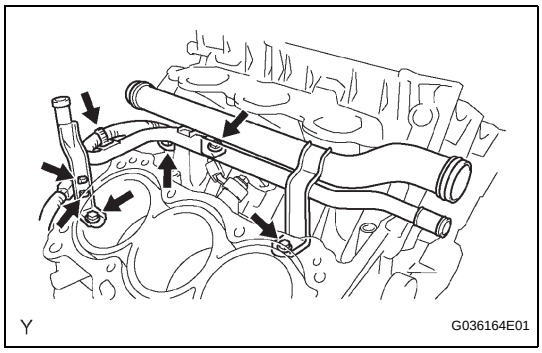
23. REMOVE CYLINDER HEAD SUB-ASSEMBLY (See page EM-117)

24. DISCONNECT HEATER WATER INLET HOSE



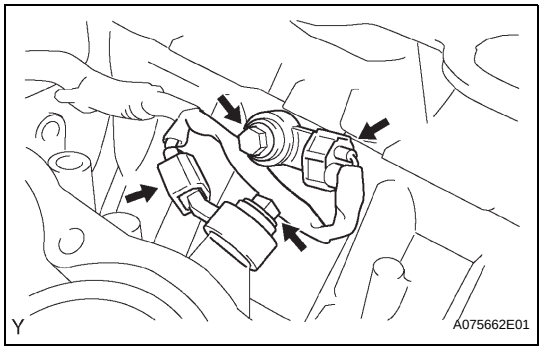
25. REMOVE WATER OUTLET PIPE NO.1

(a) Remove the 4 wire harness clamps.
(b) Remove the 3 bolts and water outlet pipe.



26. REMOVE KNOCK CONTROL SENSOR

(a) Disconnect the 2 knock sensor connectors.
(b) Remove the 2 bolts and 2 knock sensors.

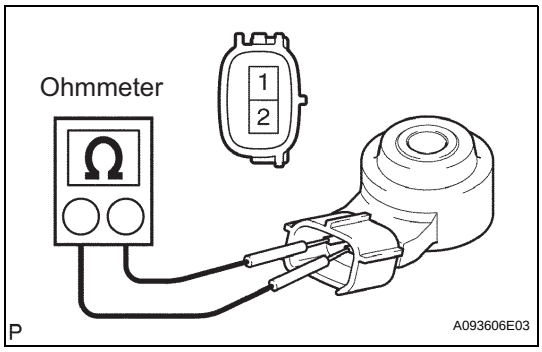


INSPECTION

1. INSPECT KNOCK SENSOR

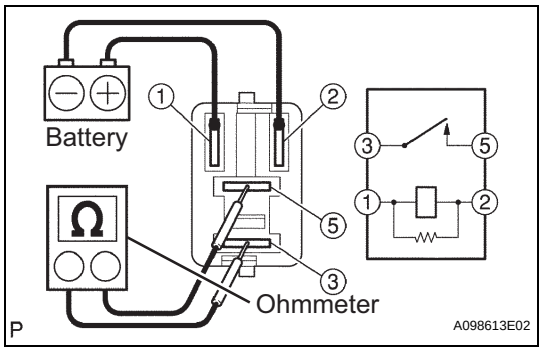
(a) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance Standard



Tester Connection	Specified Condition
1 (Ground) - 2 (Output)	120 to 180 Ω at 20°C (68°F)

If the result is not as specified, replace the knock sensor.



EFI RELAY

INSPECTION

1. INSPECT EFIRELAY

(a) Check the resistance.

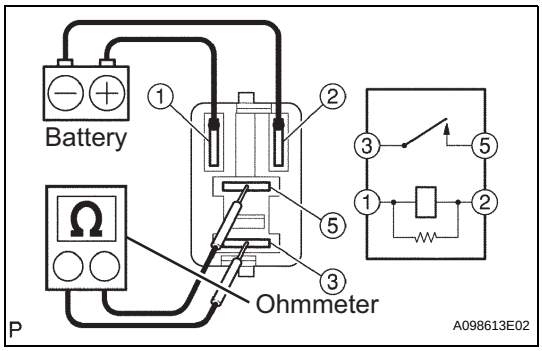
(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the EFI relay.

ES



CIRCUIT OPENING RELAY

INSPECTION

1. INSPECT CIRCUIT OPENING RELAY ASSEMBLY

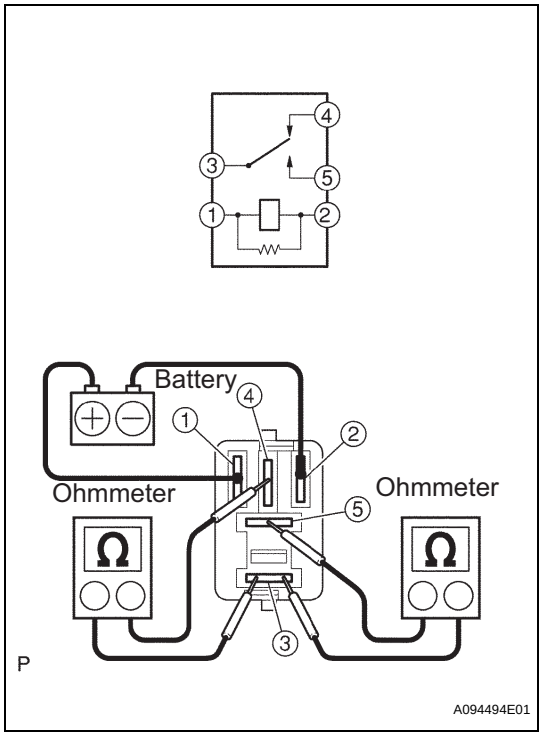
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the circuit opening relay.



FUEL PUMP RELAY

INSPECTION

1. INSPECT FUEL PUMP RELAY ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (Apply battery voltage to terminals 1 and 2)
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the fuel pump relay.

ES

ECM

REMOVAL

NOTICE:

- **Perform the RESET MEMORY (AT initialization) and when replacing the automatic transmission assembly, engine assembly or ECM (See page AT-17).**
- **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-14).**
- **If the ECM has replaced or RESET MEMORY (AT initialization) has been performed, set up the function of the ATF (Automatic Transmission Fluid) temperature warning lamp (See page AT-17).**

ES

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

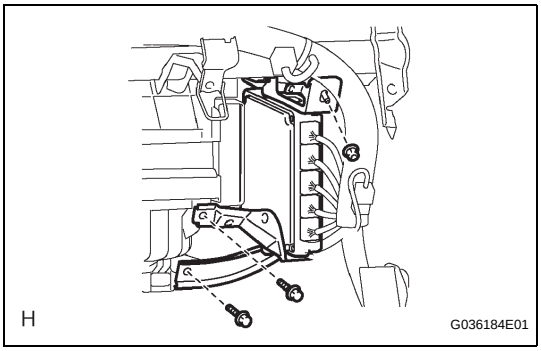
2. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)

3. REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-14)

4. REMOVE ECM

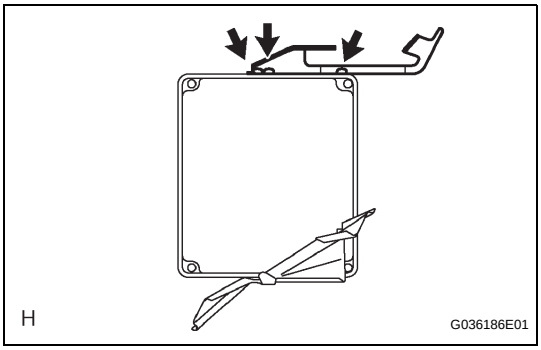
(a) Disconnect the 5 connectors.

(b) Remove the 2 bolts and nut, then remove the ECM.



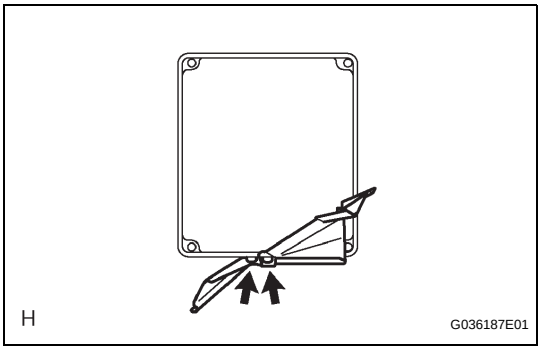
5. REMOVE ECM BRACKET

(a) Remove the 3 screws, then remove the ECM bracket.



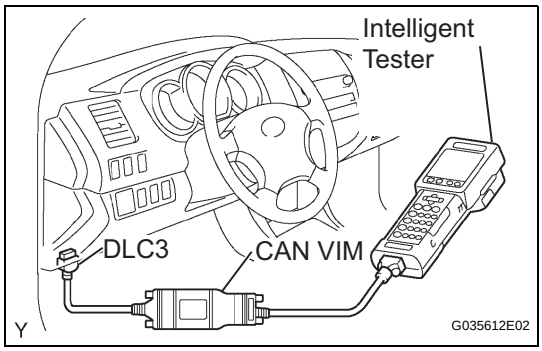
6. REMOVE ECM BRACKET NO.2

(a) Remove the 2 screws, then remove the ECM bracket No. 2.



INSTALLATION

1. **INSTALL ECM BRACKET NO.2**
   Torque: 3 N*m (32 kgf*cm, 28 in.*lbf)
2. **INSTALL ECM BRACKET**
   Torque: 3 N*m (32 kgf*cm, 28 in.*lbf)
3. **INSTALL ECM**
   Torque: 5 N*m (51 kgf*cm, 44 in.*lbf)
4. **INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-20)**
5. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



ACCELERATOR PEDAL

ON-VEHICLE INSPECTION

1. INSPECT ACCELERATOR PEDAL ROD

(a) Check the voltage.

(1) Turn the ignition switch to ON.

(2) Turn the intelligent tester ON.

(3) Start the engine and warm it up.

(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / ACCEL POS #1, ACCEL POS #2.

(5) Operate the accelerator pedal, then check that the ACCEL POS #1 and ACCEL POS #2 values are within the specifications.

Standard:

ACCELE POS #1

Accelerator Pedal Condition	Specified Condition
Released	0.5 to 1.1 V
Depressed	2.5 to 4.5 V

ACCELE POS #2

Accelerator Pedal Condition	Specified Condition
Released	1.2 to 2.0 V
Depressed	3.4 to 5.0 V

If the result is not as specified, check the accelerator pedal rod, wire harness and ECM.

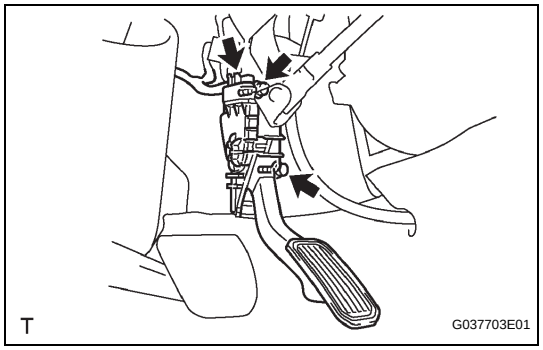
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE ACCELERATOR PEDAL ROD ASSEMBLY

(a) Disconnect the accelerator position sensor connector.

(b) Remove the 2 bolts, then remove the accelerator pedal.



INSTALLATION

1. INSTALL ACCELERATOR PEDAL ROD ASSEMBLY

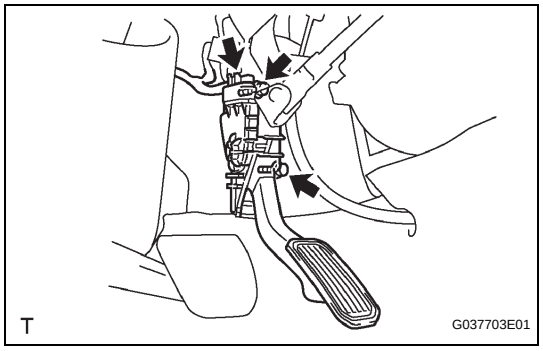
NOTICE:

- **Avoid any physical impact to the accelerator pedal assembly.**
- **Do not disassemble the accelerator pedal assembly.**

(a) Install the accelerator pedal with the 2 bolts.
Torque: 5 N*m (51 kgf*cm, 44 in.*lbf)

(b) Connect the accelerator position sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



SYSTEM DESCRIPTION

1. KEY REMAINDER WARNING SYSTEM DESCRIPTION

(a) When the driver side door is open with the ignition switch in the ACC or LOCK position, this system sounds a buzzer to warn the driver that the ignition key has not been removed.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Use this procedure to troubleshoot the key reminder warning system.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS AND SYMPTOM CHECK

NEXT

3 BATTERY VOLTAGE INSPECTION

(a) Check the battery voltage.
Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.

NEXT

4 PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed on the problem symptoms table, proceed to A.
(b) If the fault is listed on the problem symptoms table, proceed to B.

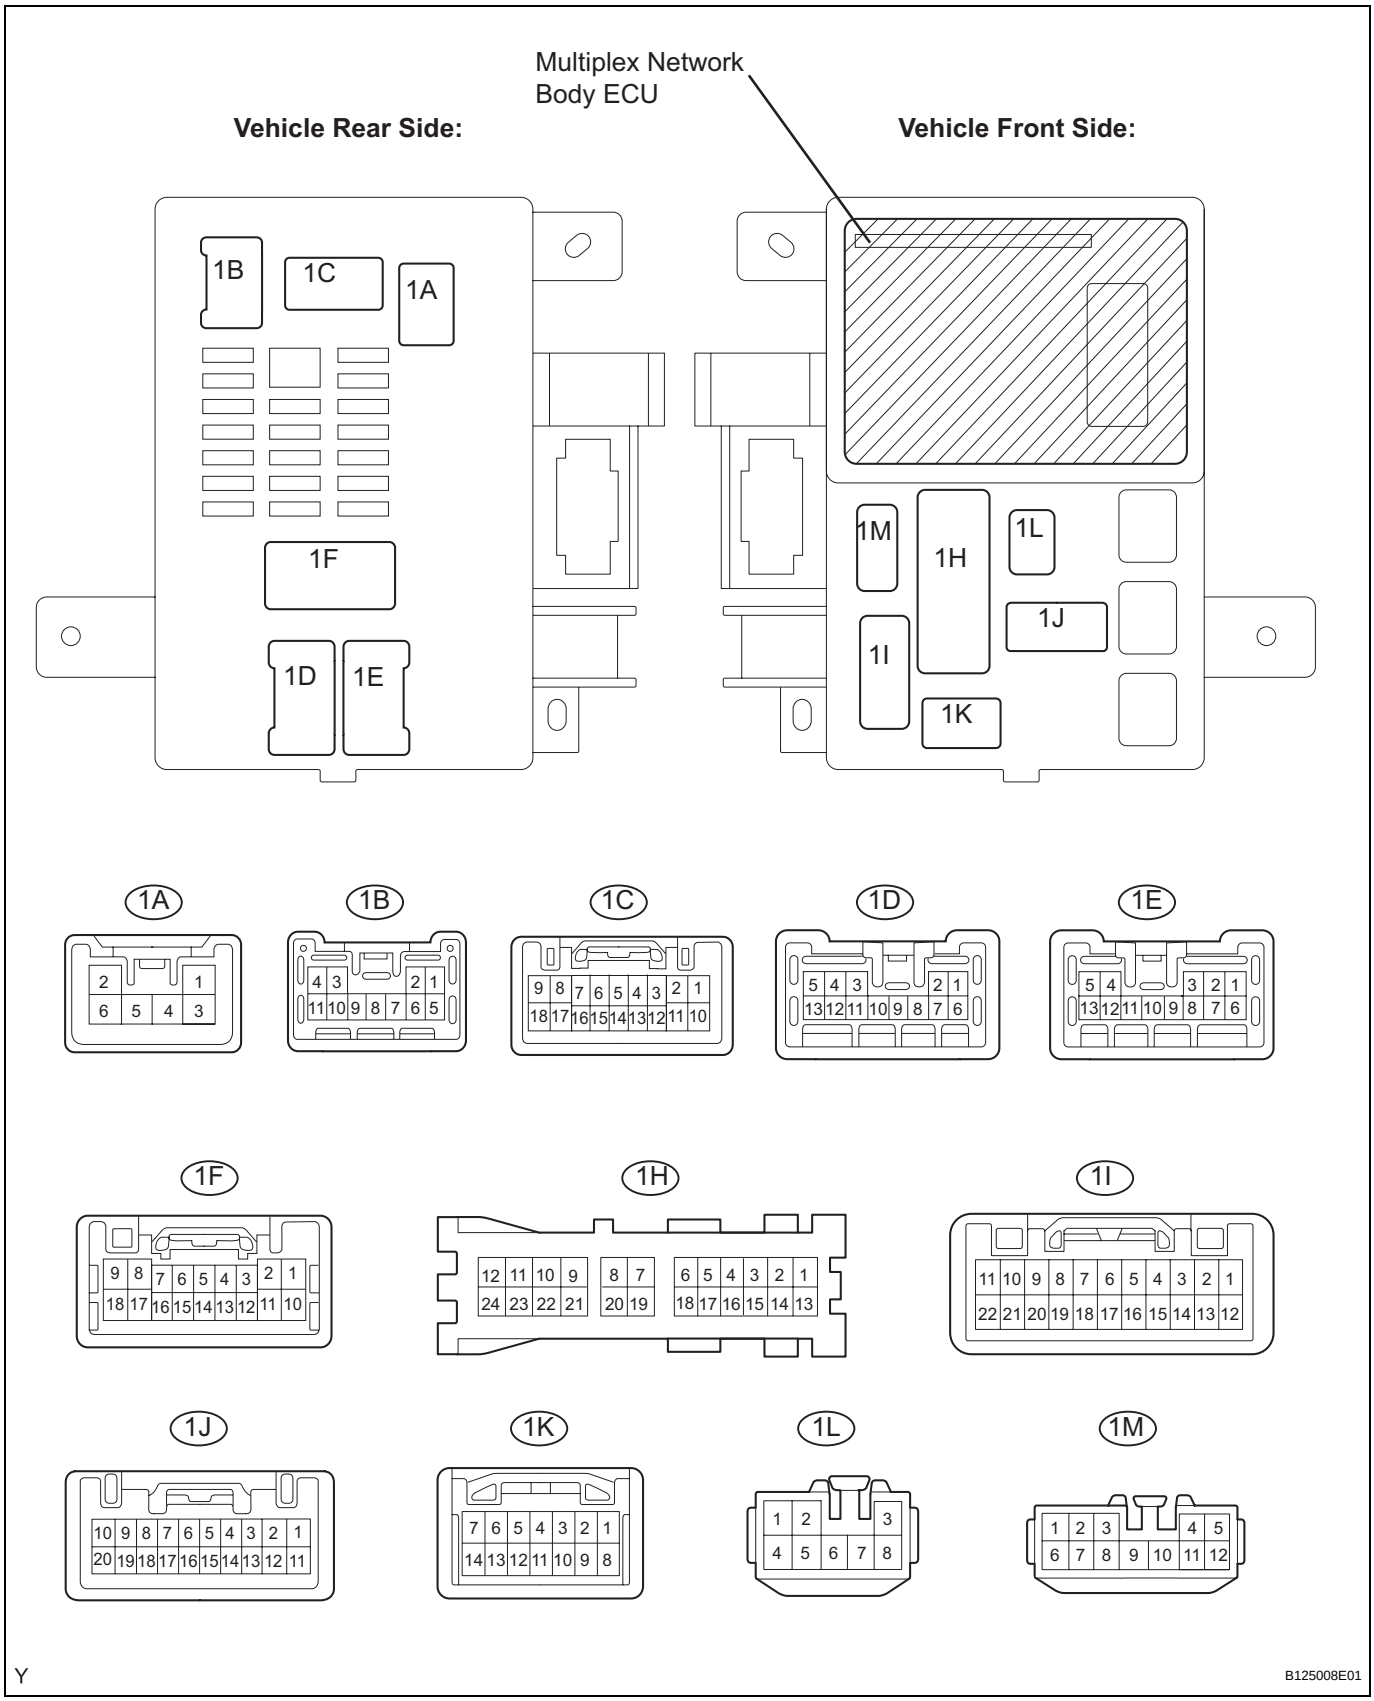
PROBLEM SYMPTOMS TABLE

Symptom	Suspected area	See page
Key reminder buzzer does not sound	Unlock warning switch assembly	DL-62
	Front door courtesy light switch assembly (driver side)	
	Instrument panel J/B assembly (multiplex network body ECU)	
	Wire harness	
	Combination meter assembly	

TERMINALS OF ECU

1. CHECK DRIVER SIDE J/B (MULTIPLEX NETWORK BODY ECU)



(a) Disconnect the 1A, 1H, 1F and 1K connectors.

(b) Measure the voltage and resistance between each terminal of the wire harness side connectors.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ALTB (1A-6) - Body ground	L-Y - Body ground	+B (power system, generator system) power supply	Always	10 to 14 V
ECUB (1H-16) - Body ground	R - Body ground	+B (ECUB) power supply	Always	10 to 14 V
GND (1H-18) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
KSW (1K-10) - Body ground	G-B - Body ground	Key unlock warning switch input	No key in ignition key cylinder	10 kΩ or higher
			Key inserted	Below 1 Ω
DCTY (1F-7) - Body ground	G-Y - Body ground	Driver side courtesy switch input	Driver side door closed	10 kΩ or higher
			Driver side door open	Below 1 Ω

HINT:
If the result is not as specified, there may be a malfunction on the wire harness side.

ON-VEHICLE INSPECTION

1. CHECK KEY REMINDER WARNING SYSTEM

(a) Check that the key reminder buzzer sounds.
  (1) With the driver side door closed, insert the key into the ignition key cylinder and then turn the key to the LOCK or ACC position.
  (2) Check that the buzzer sounds intermittently when the driver side door is open.

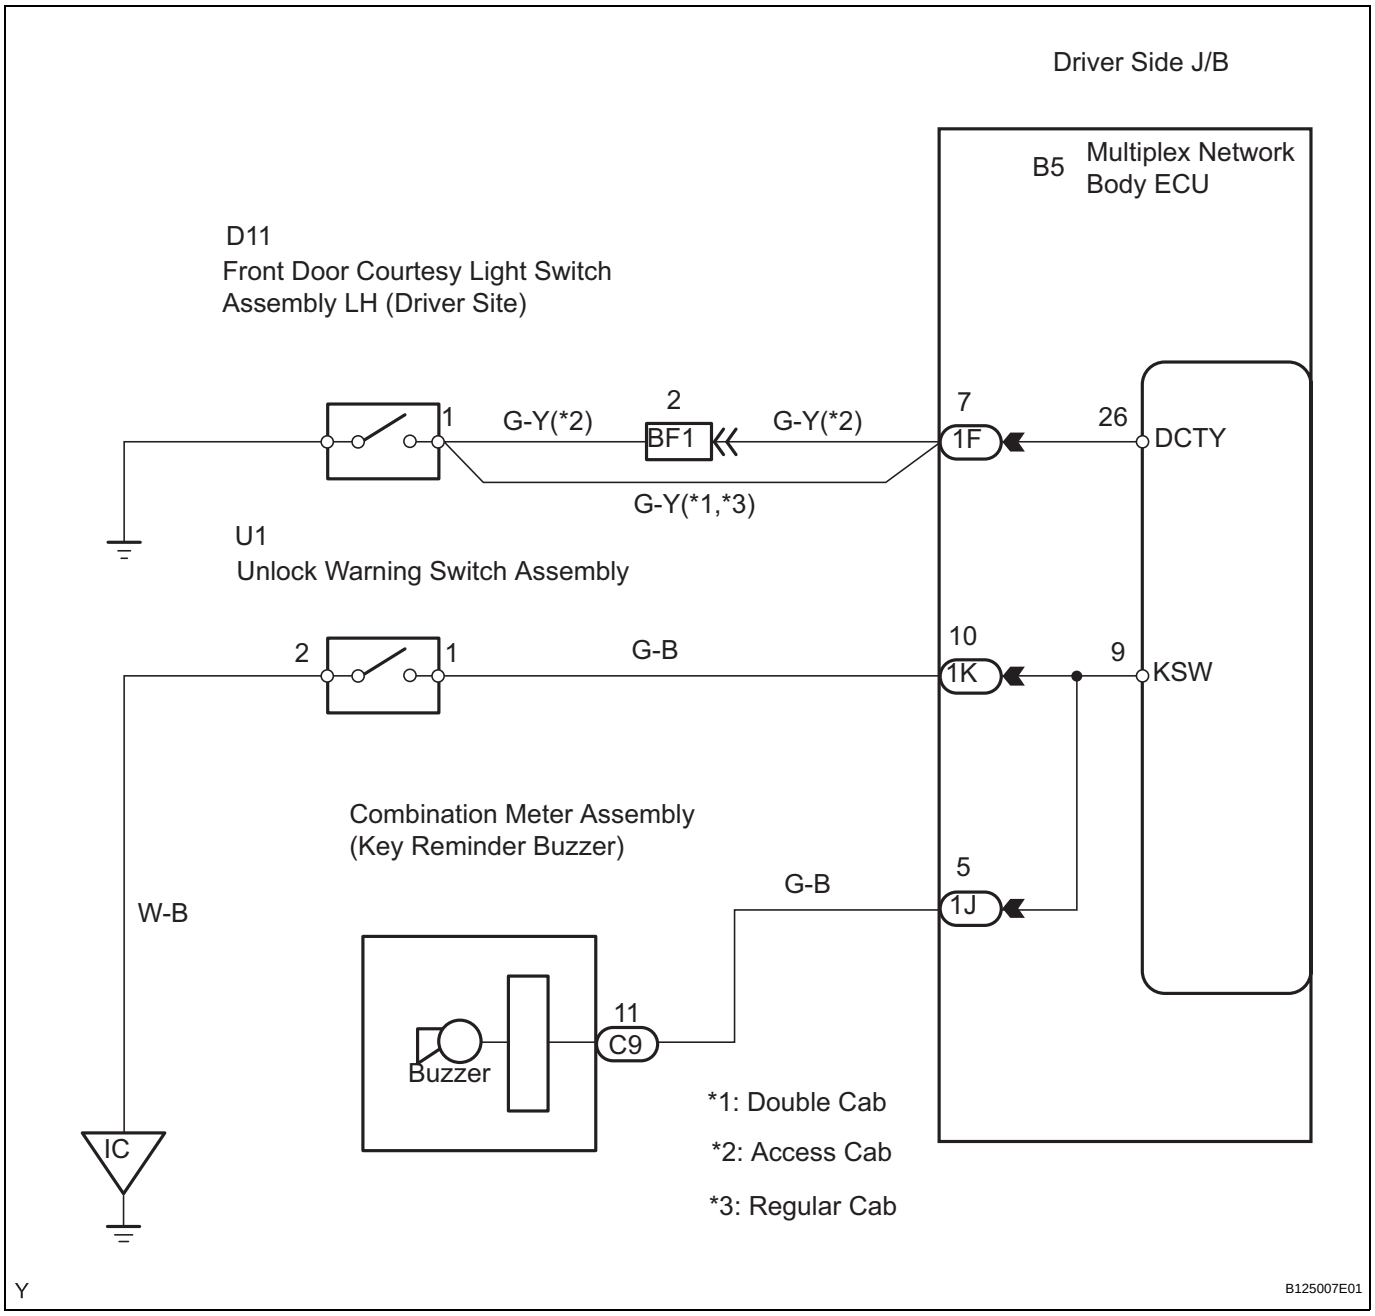
(b) Check that the key reminder buzzer stops.
  (1) Check that the buzzer stops sounding when any of the following operations is performed while the buzzer is sounding:
    - Close the driver side door (the front door courtesy light switch is off).
    - Turn the ignition switch ON.
    - Remove the key from the ignition key cylinder.

Key Reminder Buzzer does not Sound

DESCRIPTION

When the ignition switch is in the LOCK or ACC position, the key is in the ignition key cylinder and the driver side door is open, the key reminder buzzer sounds. The key reminder buzzer is activated when the multiplex network body ECU transmits a key switch signal and a driver side courtesy switch signal to the combination meter.

WIRING DIAGRAM



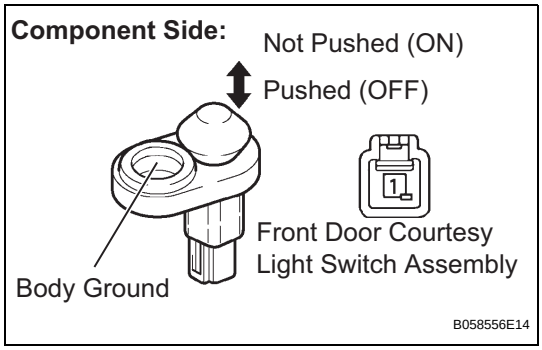
1	CHECK FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)

(a) Move the room light switch to the DOOR position and open the driver side door. Then check that the room light turns ON.
OK:
Room light turns ON.

OK → **Go to step 4**

NG

2	INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)



(a) Remove the front door courtesy light switch assembly.
(b) Measure the resistance of the switch.
Standard Resistance

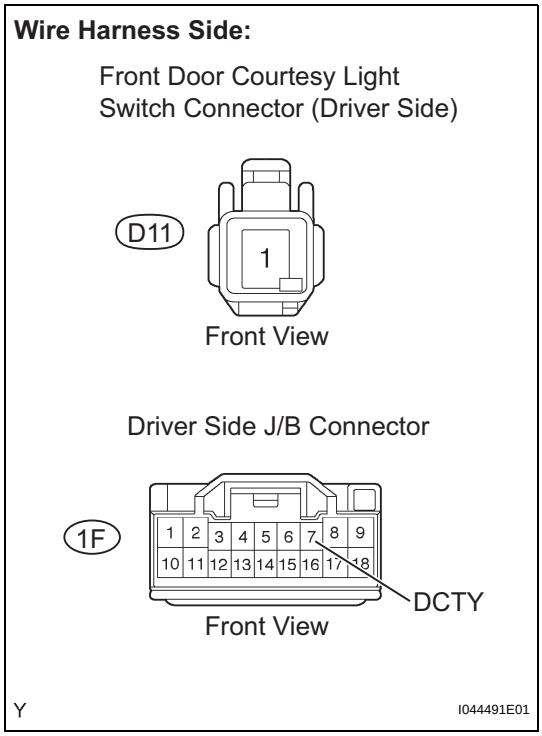
Tester Connection	Switch condition	Specified Condition
1 - Body ground	Not pushed (ON)	Below 1 Ω
1 - Body ground	Pushed (OFF)	10 kΩ or higher

(c) Reinstall the front door courtesy light switch assembly.

NG → **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)**

OK

3	CHECK WIRE HARNESS (FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY LH - BODY ECU)



(a) Disconnect the D11 front door courtesy light switch assembly connector.
(b) Disconnect the 1F driver side J/B connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
(D11-1) - DTCY (1F-7)	Below 1 Ω

(d) Reconnect the front door courtesy light switch assembly connector.
(e) Reconnect the driver side J/B connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

DL

OK

4	CHECK BUZZER (COMBINATION METER)

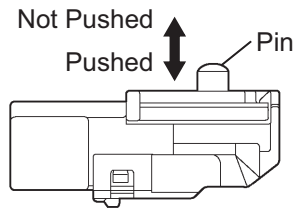
(a) Check that the buzzer built into the combination meter sounds (See page ME-21).

NG → REPLACE COMBINATION METER ASSEMBLY

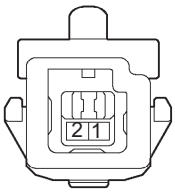
OK

5	INSPECT UNLOCK WARNING SWITCH ASSEMBLY

Component Side:



Unlock Warning Switch Assembly (Driver Side)



Y I044492E04

(a) Remove the U1 unlock warning switch assembly.
(b) Measure the resistance of the switch.

Standard Resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Not pushed	10 Ω or higher
1 - 2	Pushed	Below 1 Ω

(c) Reinstall the unlock of the switch assembly.

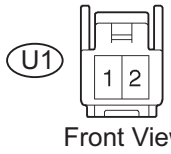
NG → REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK

6	CHECK WIRE HARNESS (SWITCH (DRIVER SIDE) - ECU AND BODY GROUND)

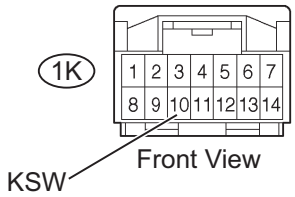
Wire Harness Side:

Unlock Warning Switch Connector (Driver Side)



Front View

Driver Side J/B Connector



Front View

Y

I044490E01

(a) Disconnect the U1 unlock warning switch assembly connector.
(b) Disconnect the 1K driver side J/B connector.
(c) Measure the resistance of the wire harness side connectors.

Standard Resistance

Tester Connection	Specified Condition
(U1-1) - KSW (1K-10)	Below 1 Ω
(U1-2) - Body ground	Below 1 Ω

(d) Reconnect the unlock warning switch assembly connector.
(e) Reconnect the driver side J/B connector.

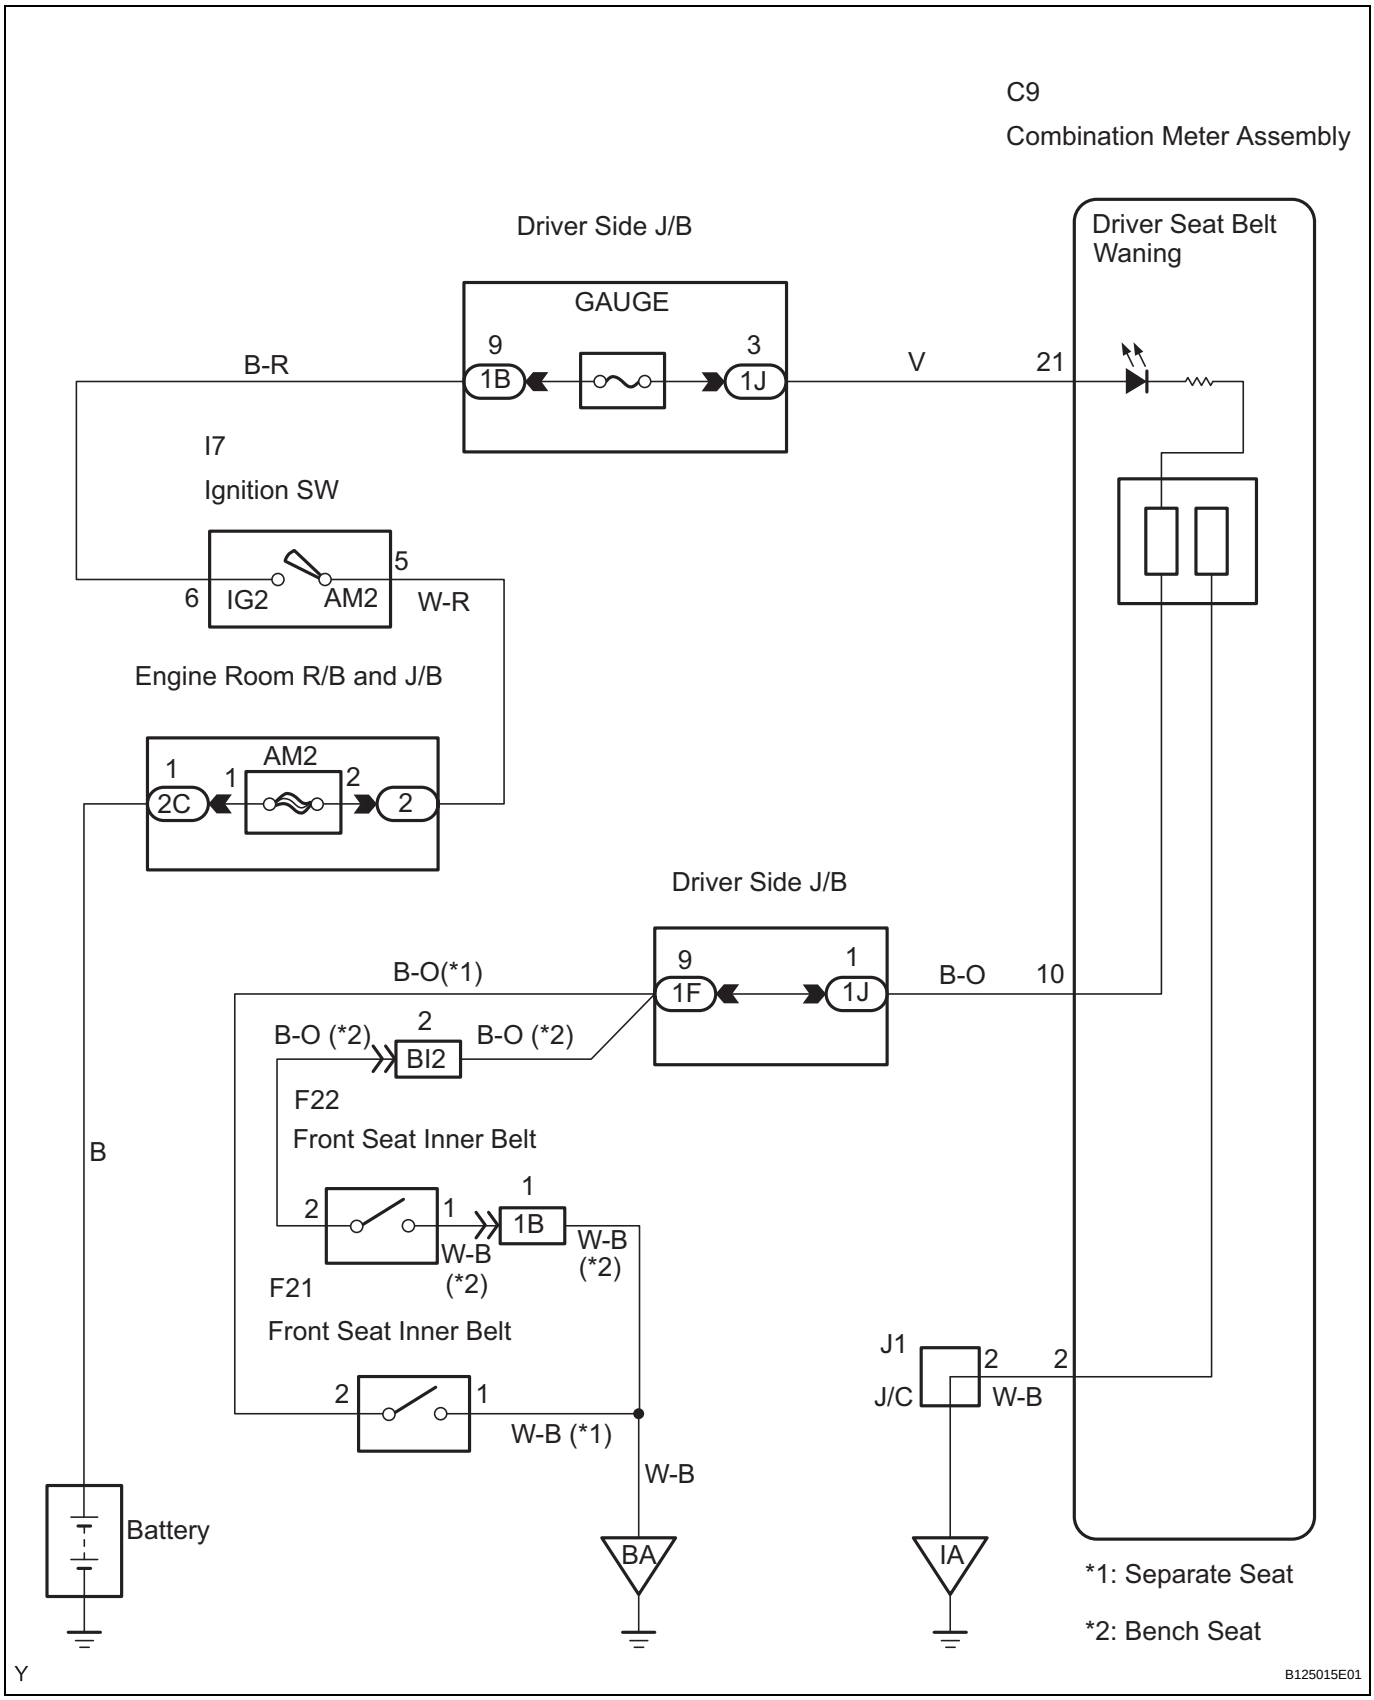
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE DRIVER SIDE JUNCTION BLOCK (MULTIPLEX NETWORK BODY ECU)

Driver Side Seat Belt Warning Light does not Operate

WIRING DIAGRAM



HINT:
Confirm that other components such as indicators and meter gauges function normally before performing the following procedure.

1	CONFIRM SEAT TYPE

(a) Confirm the seat type.

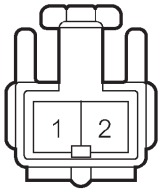
Seat Type	Proceed To
Bench seat	A
Separate seat	B

B → **Go to step 4**

A

2	INSPECT FRONT SEAT INNER BELT ASSEMBLY (DRIVER SIDE)

Component Side:



Front Seat Inner Belt Assembly (Driver Side)

I045519E01

(a) Disconnect the F22 front seat inner belt assembly (driver side) connector.
(b) Measure the resistance.
Standard Resistance

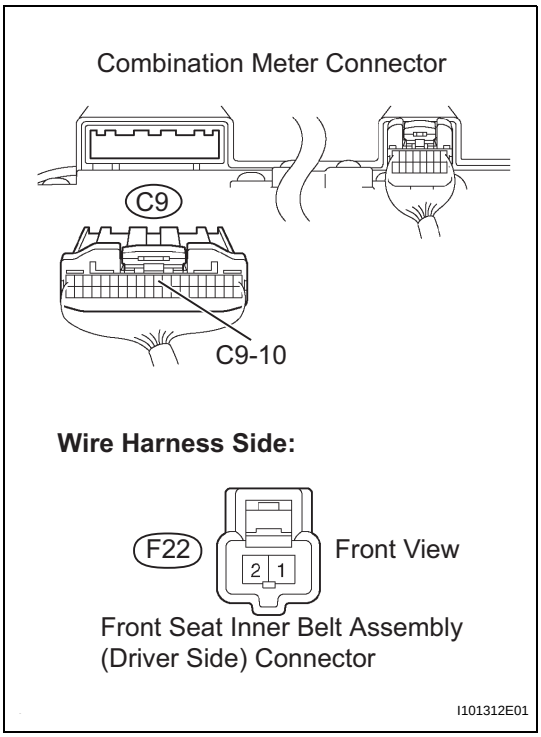
Terminal Connection	Condition	Specified Condition
1 - 2	Seat belt fastened	10 kΩ or higher
1 - 2	Seat belt unfastened	Below 1 Ω

(c) Reconnect the front seat inner belt assembly (driver side) connector.

NG → **REPLACE FRONT SEAT INNER BELT ASSEMBLY (DRIVER SIDE)**

OK

3	CHECK HARNESS AND CONNECTOR (FRONT SEAT INNER BELT (DRIVER SIDE) - COMBINATION METER)



(a) Disconnect the C9 combination meter connector.
(b) Disconnect the F22 front seat inner belt assembly (driver side) connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
C9-10 - F22-2	Below 1 Ω
C9-10 or F22-2 - Body ground	10 kΩ or higher

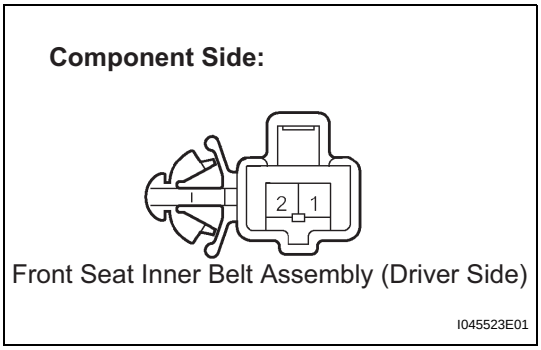
(d) Reconnect the front seat inner belt assembly (driver side) connector.
(e) Reconnect the combination meter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

4	INSPECT FRONT SEAT INNER BELT ASSEMBLY (DRIVER SIDE)



(a) Disconnect the F21 front seat inner belt assembly (driver side) connector.
(b) Measure the resistance.
Standard Resistance

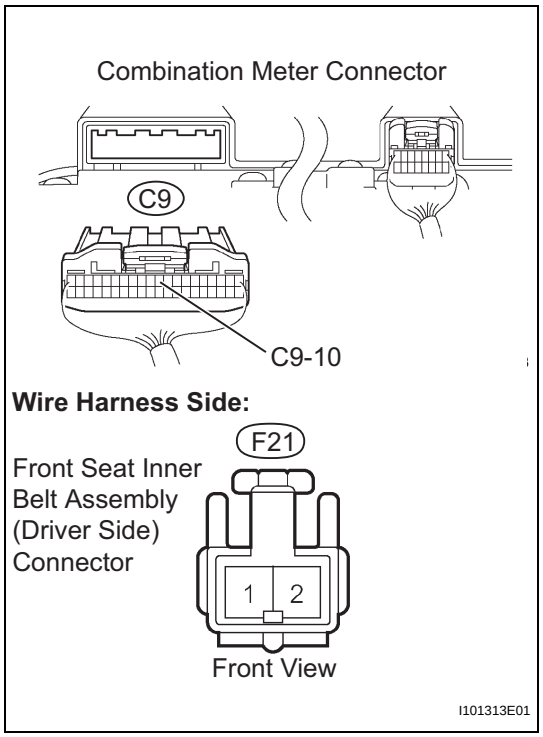
Terminal Connection	Condition	Specified Condition
1 - 2	Seat belt fastened	10 kΩ or higher
1 - 2	Seat belt unfastened	Below 1 Ω

(c) Reconnect the front seat inner belt assembly (driver side) connector.

NG → **REPLACE FRONT SEAT INNER BELT ASSEMBLY (DRIVER SIDE)**

OK

5	CHECK HARNESS AND CONNECTOR (FRONT SEAT INNER BELT (DRIVER SIDE) - COMBINATION METER)



(a) Disconnect the C9 combination meter connector.
(b) Disconnect the F21 front seat inner belt assembly (driver side) connector.
(c) Measure the resistance.

Standard Resistance

Tester Connection	Specified Condition
C9-10 - F21-2	Below 1 Ω
C9-10 or F21-2 - Body ground	10 kΩ or higher

(d) Reconnect the front seat inner belt assembly (driver side) connector.
(e) Reconnect the combination meter connector.

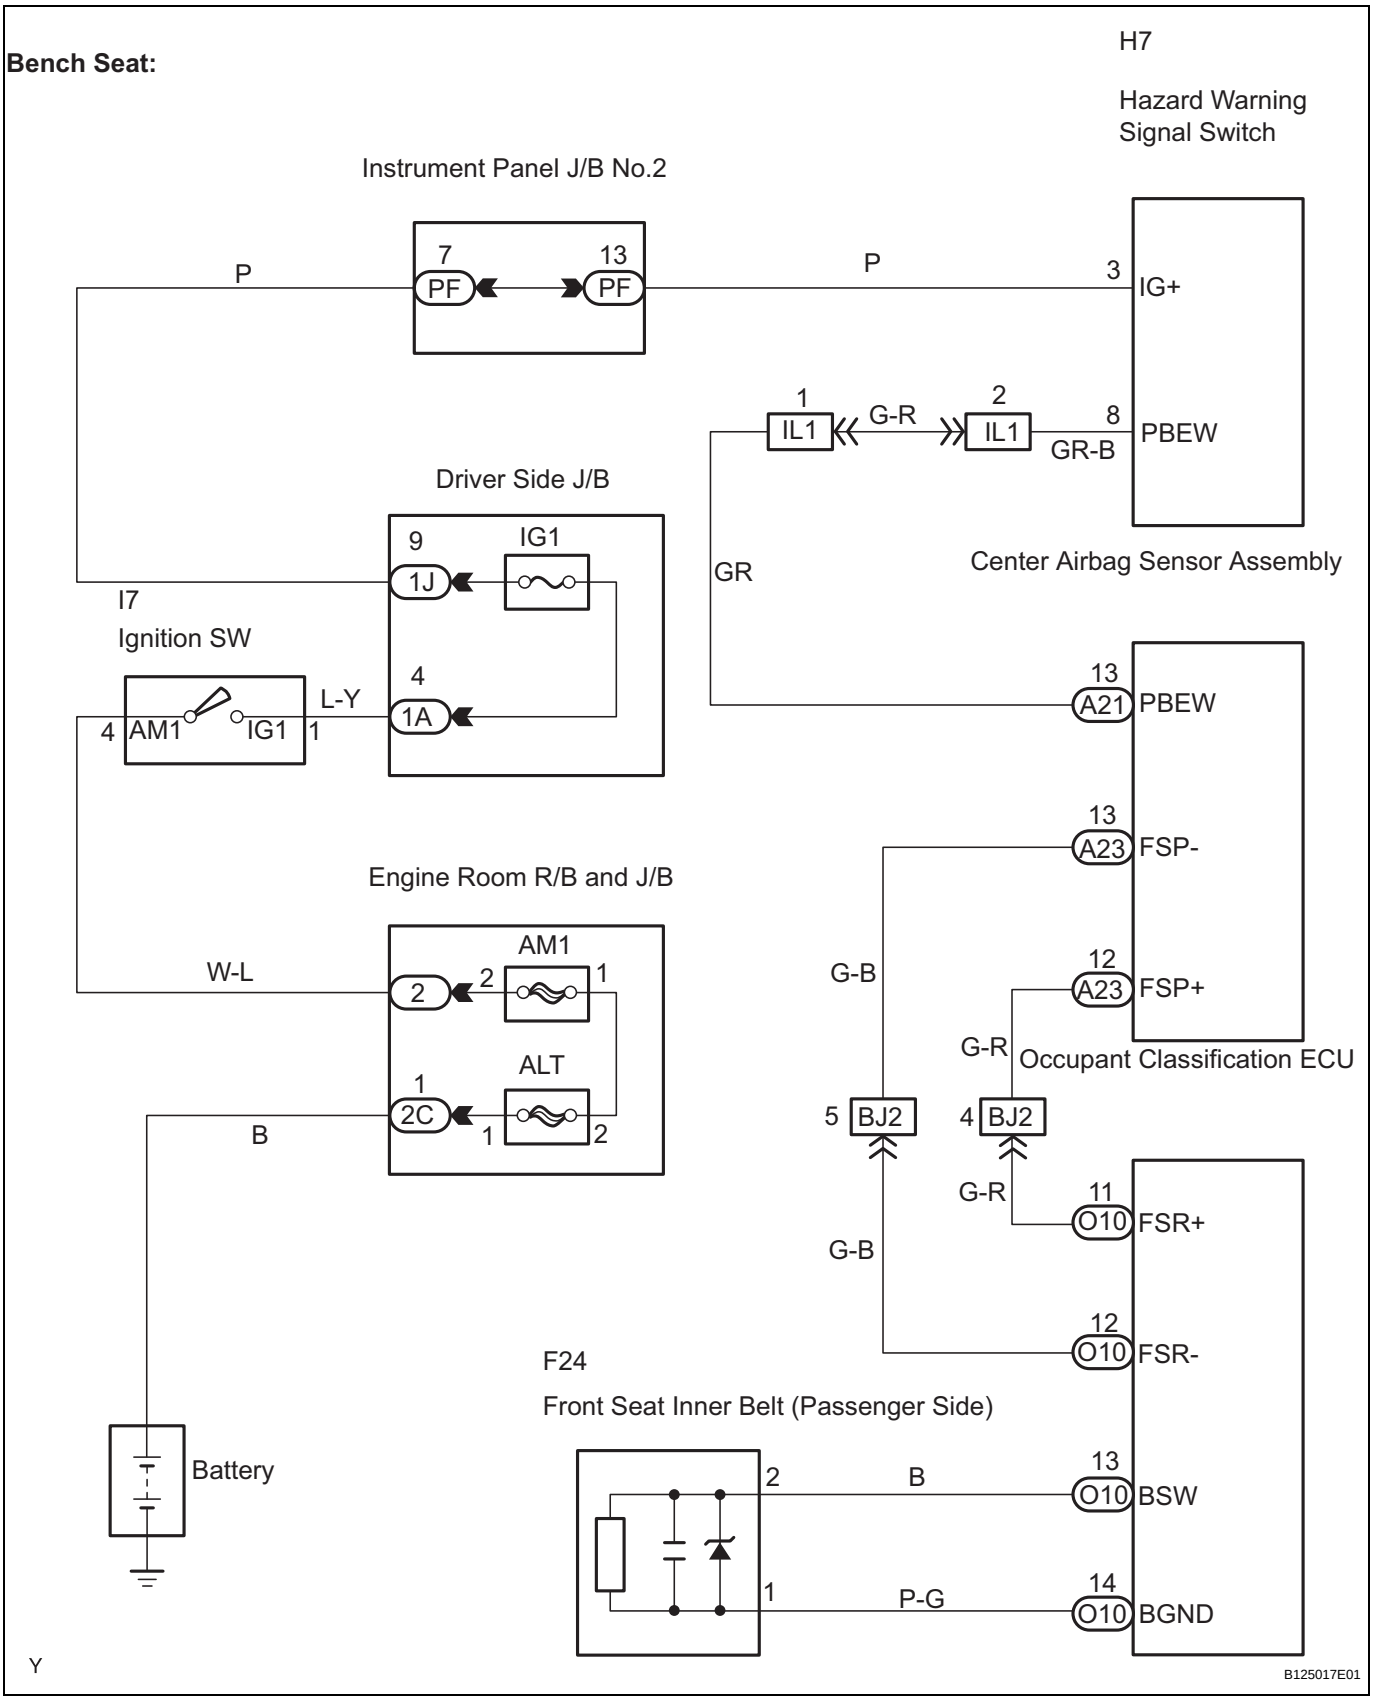
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

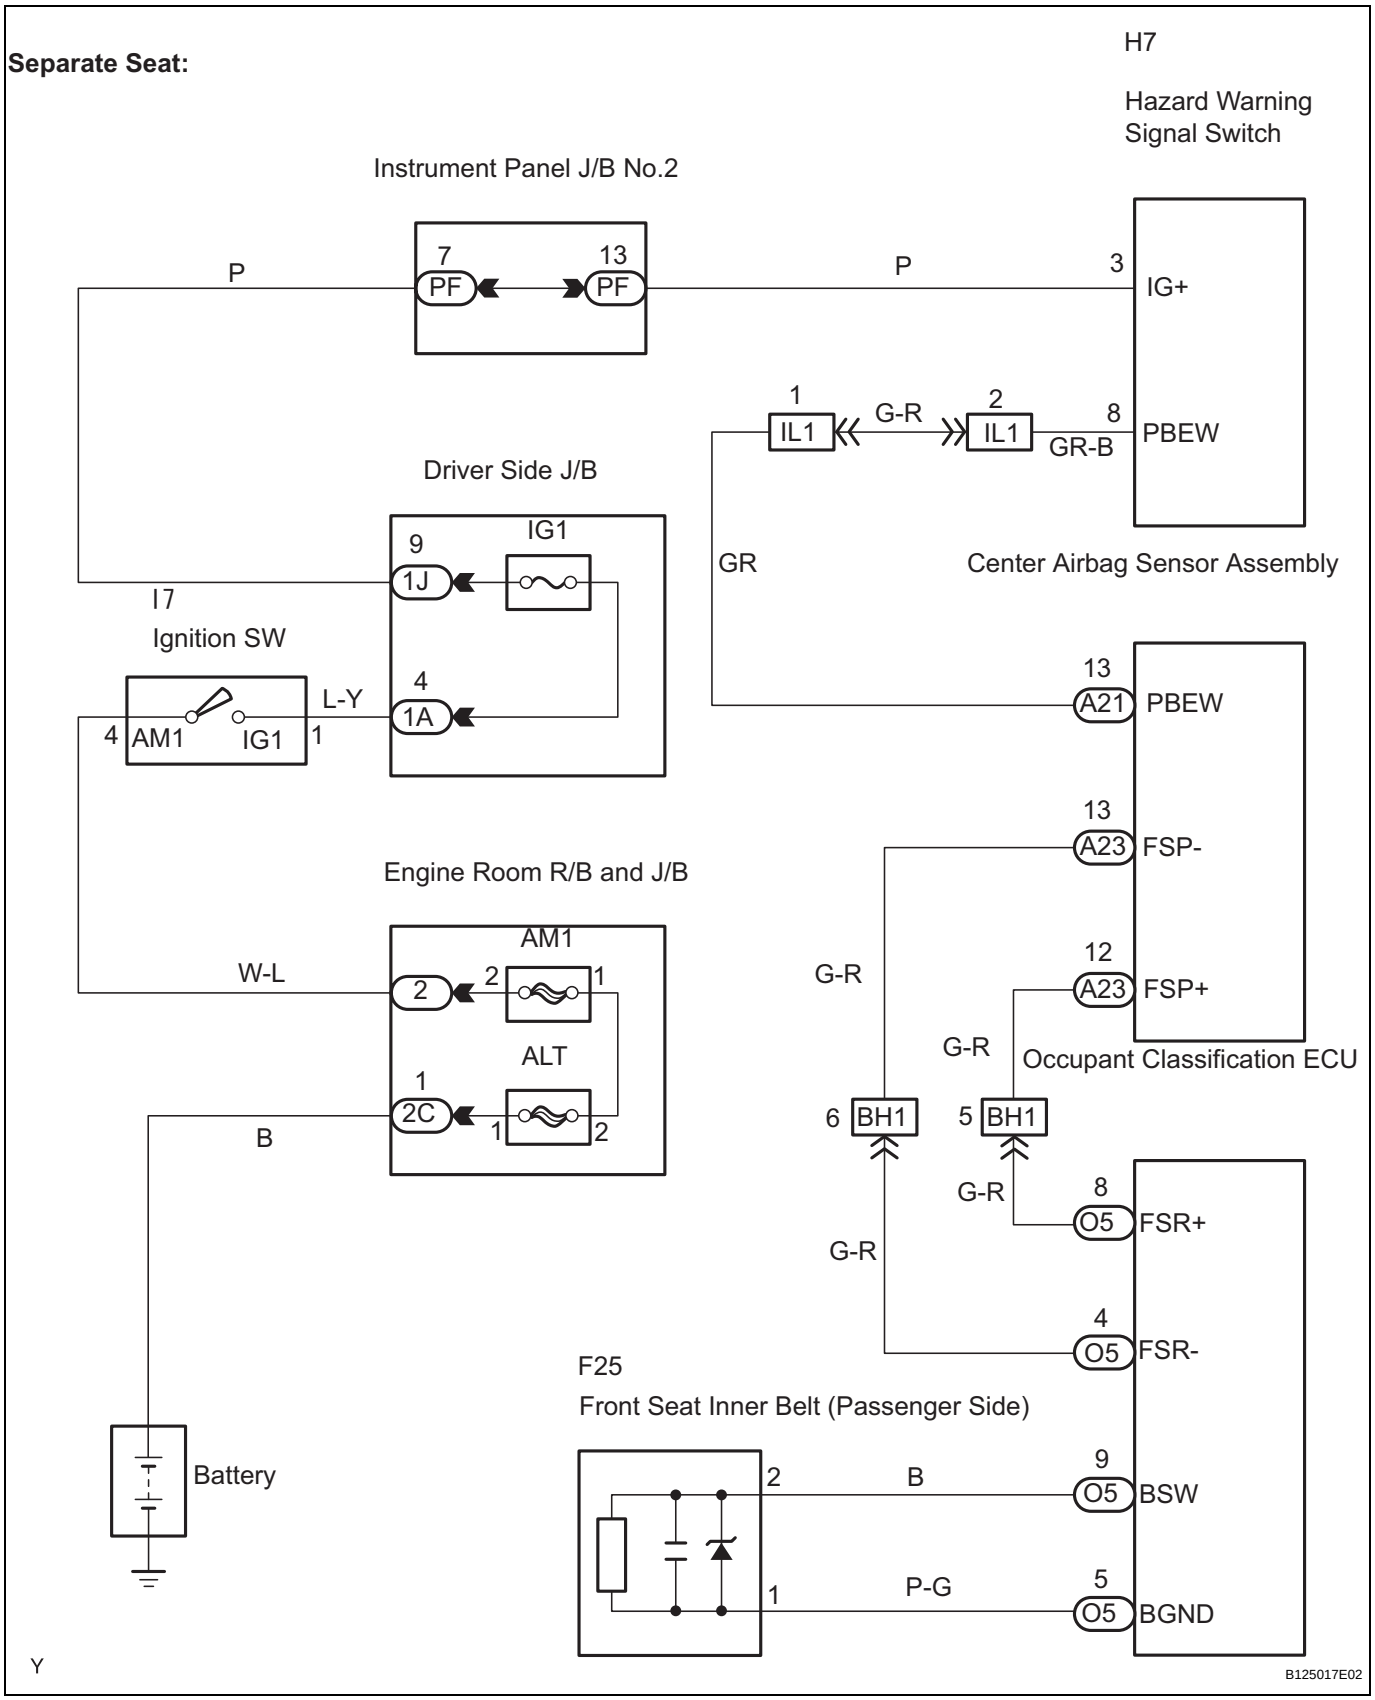
REPLACE COMBINATION METER ASSEMBLY

Seat Belt Warning Light for Passenger Seat does not Flash

WIRING DIAGRAM



Separate Seat:



HINT:
If there is an open in the ground circuit (center airbag sensor assembly), the center airbag sensor assembly outputs DTCs. Troubleshoot those DTCs by following the Supplemental Restraint System (See page RS-24).

ME

1	CONFIRM SEAT TYPE

(a) Confirm the seat type.

Seat Type	Proceed To
Bench seat	A
Separate seat	B

B → **Go to step 9**

A

2	CHECK SUPPLEMENTAL RESTRAINT SYSTEM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / SRS AIRBAG / DTC INFO

Result

Result	Proceed to
No SRS DTCs are output	A
SRS DTCs are output	B

B → **GO TO SUPPLEMENTAL RESTRAINT SYSTEM**

A

3	CHECK OCCUPANT CLASSIFICATION SYSTEM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON position and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / OCCUPANT DETECT / DTC INFO

Result

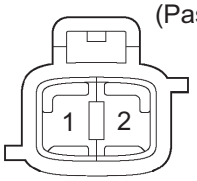
Result	Proceed to
No occupant classification system DTCs are output	A
Occupant classification system DTCs are output	B

B → **GO TO OCCUPANT CLASSIFICATION SYSTEM**

A

4 INSPECT FRONT SEAT INNER BELT ASSEMBLY (PASSENGER SIDE)

Component Side: Front Seat Inner Belt Assembly (Passenger Side)



I102255E01

(a) Disconnect the F24 front seat inner belt assembly (passenger side) connector.
(b) Measure the resistance.
Standard Resistance

Terminal Connection	Condition	Specified Condition
1 - 2	Seat belt fastened	10 kΩ or higher
1 - 2	Seat belt unfastened	Below 1 Ω

(c) Reconnect the front seat inner belt assembly (passenger side) connector.

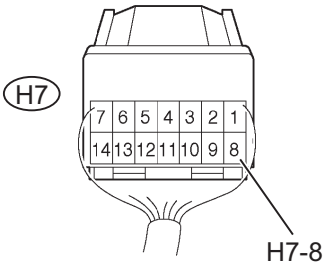
NG → **REPLACE FRONT SEAT INNER BELT ASSEMBLY (PASSENGER SIDE)**

OK

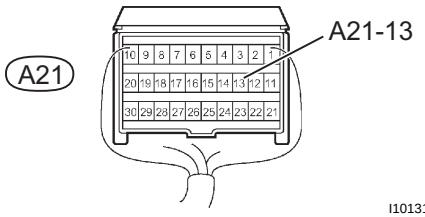
5 CHECK HARNESS AND CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY - HAZARD WARNING SIGNAL SWITCH)

Wire Harness Side:

Hazard Warning Signal Switch Connector



Center Airbag Sensor Assembly Connector



I101316E02

(a) Disconnect the H7 hazard warning signal switch connector.
(b) Disconnect the A21 center airbag sensor assembly connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
H7-8 - A21-13	Below 1 Ω
H7-8 or A21-13 - Body ground	10 kΩ or higher

(d) Reconnect the center airbag sensor assembly connector.
(e) Reconnect the hazard warning signal switch connector.

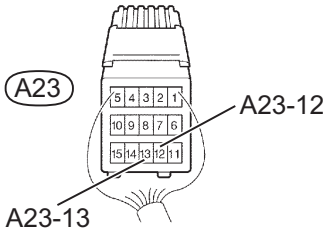
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

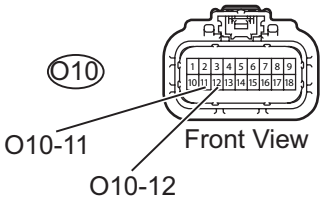
6	CHECK HARNESS AND CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY - OCCUPANT CLASSIFICATION ECU)

Wire Harness Side:

Center Airbag Sensor Assembly Connector



Occupant Classification ECU



I102251E01

(a) Disconnect the O10 occupant classification ECU connector.
(b) Disconnect the A23 center airbag sensor assembly connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
A23-13 - O10-12	Below 1 Ω
A23-12 - O10-11	Below 1 Ω
A23-13 or O10-12 - Body ground	10 kΩ or higher
A23-12 or O10-11 - Body ground	10 kΩ or higher

(d) Reconnect the center airbag sensor assembly connector.
(e) Reconnect the occupant classification ECU connector.

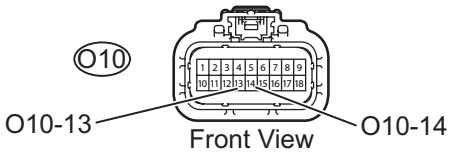
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

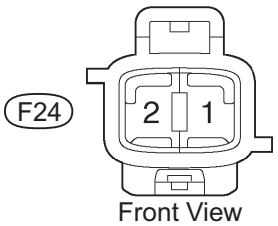
7	CHECK HARNESS AND CONNECTOR (OCCUPANT CLASSIFICATION ECU - FRONT SEAT INNER BELT ASSEMBLY)

Wire Harness Side:

Occupant Classification ECU



Front Seat Inner Belt Assembly (Passenger Side) Connector



I102252E01

(a) Disconnect the F24 front seat inner belt assembly (passenger side) connector.
(b) Disconnect the O10 occupant classification ECU connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
O10-13 - F24-2	Below 1 Ω
O10-14 - F24-1	Below 1 Ω
O10-13 or F24-2 - Body ground	10 kΩ or higher
O10-14 or F24-1 - Body ground	10 kΩ or higher

(d) Reconnect the occupant classification ECU connector.
(e) Reconnect the front seat inner belt assembly (passenger side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ME

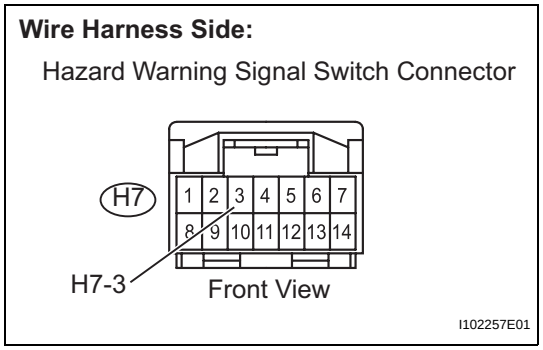
OK

8	INSPECT HAZARD WARNING SIGNAL SWITCH

(a) Remove the hazard warning signal switch.
(b) Disconnect the H7 hazard warning signal switch connector.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Condition	Specified Condition
H7-3 - Body ground	Ignition switch ON	10 to 14 V



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE HAZARD WARNING SIGNAL SWITCH

9	CHECK SUPPLEMENTAL RESTRAINT SYSTEM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / SRS AIRBAG / DTC INFO

Result

Result	Proceed to
No SRS DTCs are output	A
SRS DTCs are output	B

B → GO TO SUPPLEMENTAL RESTRAINT SYSTEM

A

10	CHECK OCCUPANT CLASSIFICATION SYSTEM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON position and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / OCCUPANT DETECT / DTC INFO

Result

Result	Proceed to
No occupant classification system DTCs are output	A

ME

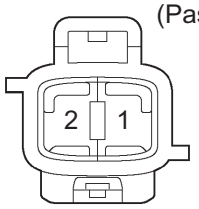
Result	Proceed to
Occupant classification system DTCs are output	B

B → **GO TO OCCUPANT CLASSIFICATION SYSTEM**

A

11 INSPECT FRONT SEAT INNER BELT ASSEMBLY (PASSENGER SIDE)

Component Side: Front Seat Inner Belt Assembly (Passenger Side)



I102254E01

(a) Disconnect the F25 front seat inner belt assembly (passenger side) connector.
(b) Measure the resistance.
Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Seat belt fastened	10 kΩ or higher
1 - 2	Seat belt unfastened	Below 1 Ω

(c) Reconnect the front seat inner belt assembly (passenger side) connector.

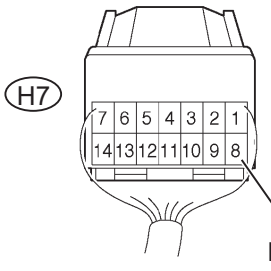
NG → **REPLACE FRONT SEAT INNER BELT ASSEMBLY (PASSENGER SIDE)**

OK

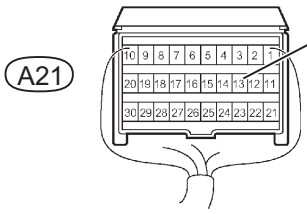
12 CHECK HARNESS AND CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY - HAZARD WARNING SIGNAL SWITCH)

Wire Harness Side:

Hazard Warning Signal Switch Connector



Center Airbag Sensor Assembly Connector



I101316E01

(a) Disconnect the H7 hazard warning signal switch connector.
(b) Disconnect the A21 center airbag sensor assembly connector.
(c) Measure the resistance.
Standard Resistance

Tester Connection	Specified Condition
H7-8 - A21-13	Below 1 Ω
H7-8 or A21-13 - Body ground	10 kΩ or higher

(d) Reconnect the center airbag sensor assembly connector.
(e) Reconnect the hazard warning signal switch connector.

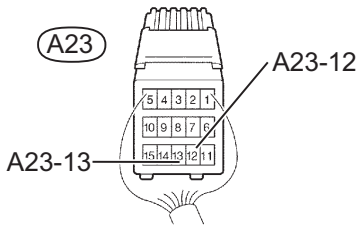
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

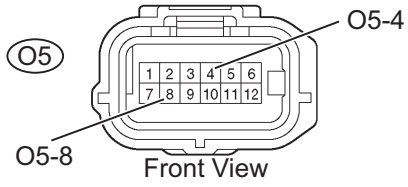
13	CHECK HARNESS AND CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY - OCCUPANT CLASSIFICATION ECU)

Wire Harness Side:

Center Airbag Sensor Assembly Connector



Occupant Classification ECU



I101317E01

(a) Disconnect the O5 occupant classification ECU connector.
(b) Disconnect the A23 center airbag sensor assembly connector.
(c) Measure the resistance.
Standard Resistance

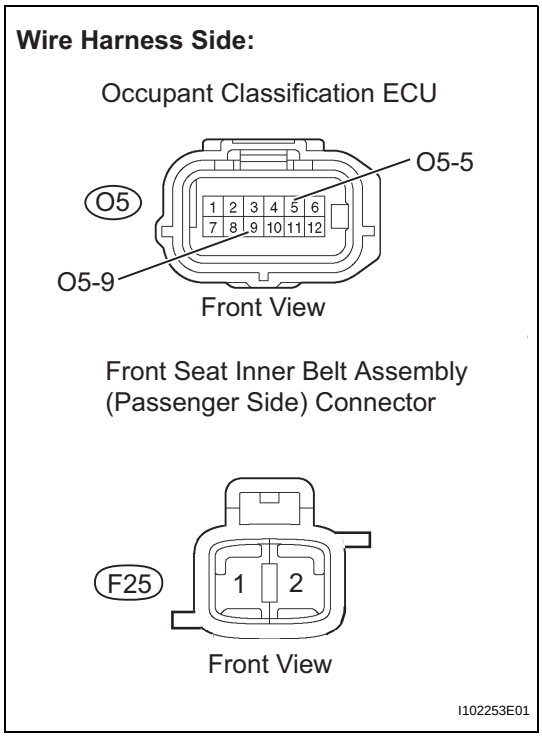
Tester Connection	Specified Condition
A23-13 - O5-4	Below 1 Ω
A23-12 - O5-8	Below 1 Ω
A23-13 or O5-4 - Body ground	10 kΩ or higher
A23-12 or O5-8 - Body ground	10 kΩ or higher

(d) Reconnect the center airbag sensor assembly connector.
(e) Reconnect the occupant classification ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14	CHECK HARNESS AND CONNECTOR (OCCUPANT CLASSIFICATION ECU - FRONT SEAT INNER BELT ASSEMBLY)



(a) Disconnect the F25 front seat inner belt assembly (passenger side) connector.
(b) Disconnect the O5 occupant classification ECU connector.
(c) Measure the resistance.

Standard Resistance

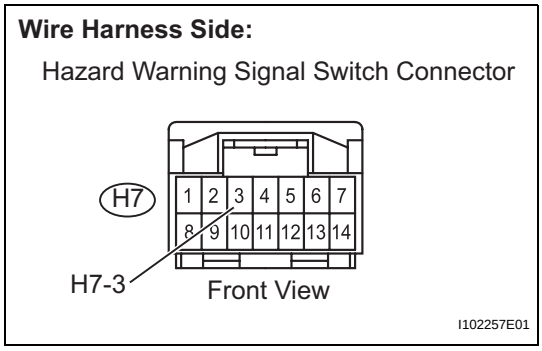
Tester Connection	Specified Condition
O5-9 - F25-2	Below 1 Ω
O5-5 - F25-1	Below 1 Ω
O5-9 or F25-2 - Body ground	10 kΩ or higher
O5-9 or F25-1 - Body ground	10 kΩ or higher

(d) Reconnect the occupant classification ECU connector.
(e) Reconnect the front seat inner belt assembly (passenger side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

15	INSPECT HAZARD WARNING SIGNAL SWITCH



(a) Remove the hazard warning signal switch.
(b) Disconnect the H7 hazard warning signal switch connector.
(c) Measure the voltage.

Standard Voltage

Tester Connection	Condition	Specified Condition
H7-3 - Body ground	Ignition switch ON	10 to 14 V

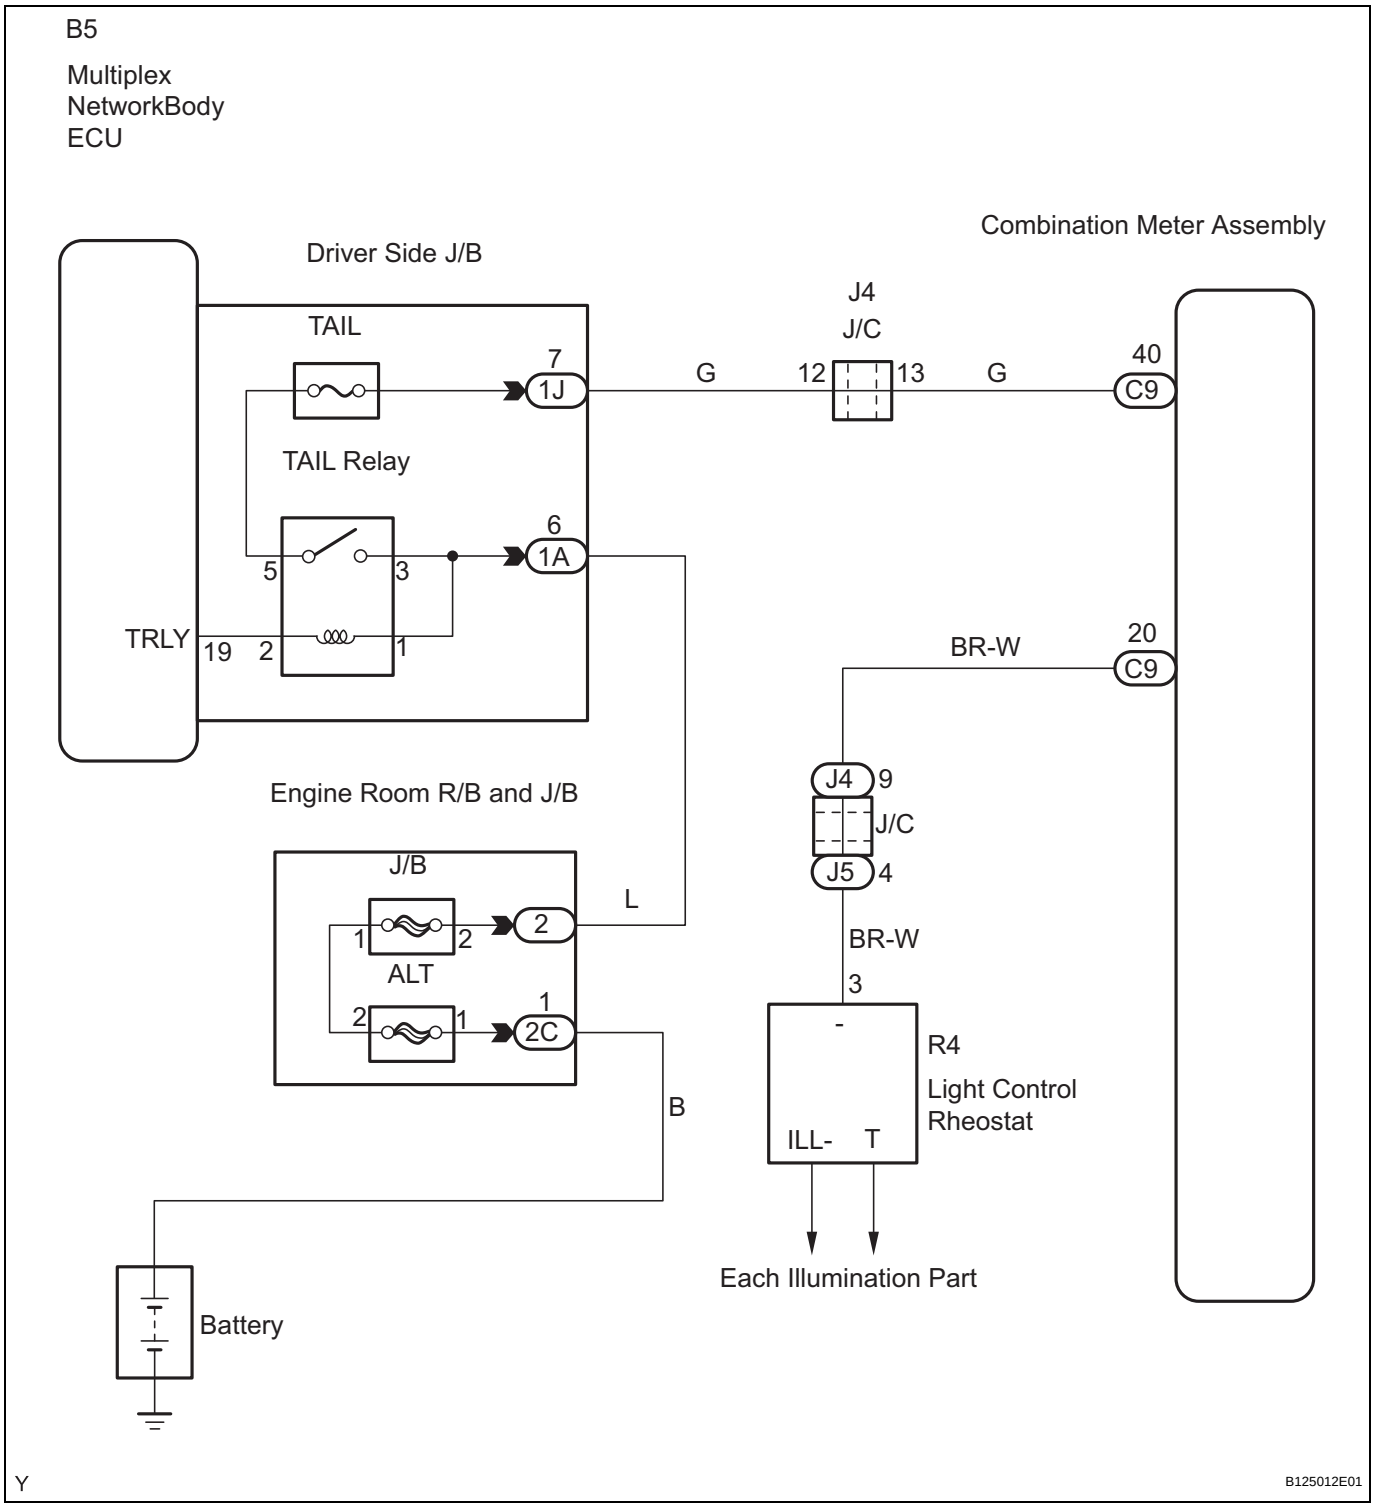
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HAZARD WARNING SIGNAL SWITCH

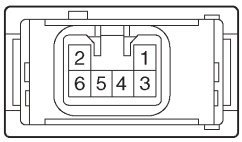
Operating Light Control Rheostat does not Change Light Brightness

WIRING DIAGRAM



1 INSPECT LIGHT CONTROL RHEOSTAT

Component Side:



Light Control Rheostat

Y I045521E01

(a) Disconnect the R4 light control rheostat connector.
(b) Check the voltage and resistance.
Standard

Tester Connection	Switch Condition	Specified Condition
4 (T) - Body ground	Ignition switch ON, Taillight switch OFF	Below 1 V
4 (T) - Body ground	Ignition switch ON, Taillight switch ON	10 to 14 V
1 (IG) - Body ground	Ignition switch ON	10 to 14 V
1 (IG) - Body ground	Ignition switch OFF	Below 1 V
3 (-) - Body ground	Always	Below 1 Ω

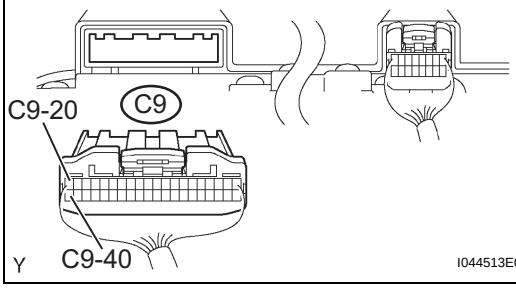
(c) Reconnect the light control rheostat connector.

NG → **REPLACE LIGHT CONTROL RHEOSTAT**

OK

2 INSPECT COMBINATION METER ASSEMBLY

Combination Meter Connector



I044513E08

(a) Disconnect the C9 combination meter connector.
(b) Measure the voltage.
Standard voltage

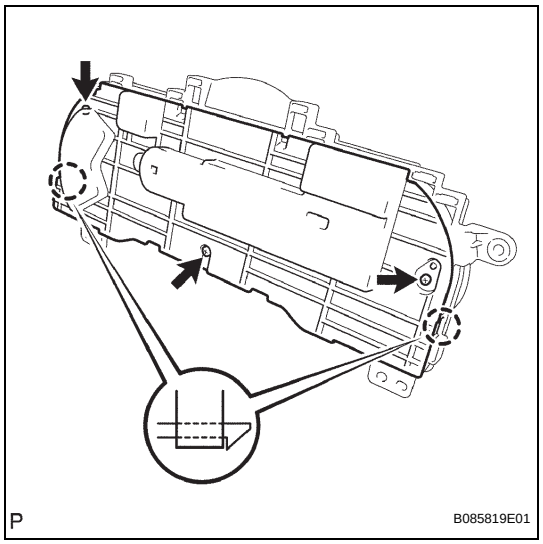
Tester Connection	Condition	Specified Condition
C9-20 - C9-40	Ignition switch ON	10 to 14 V

(c) Reconnect the combination meter connector.

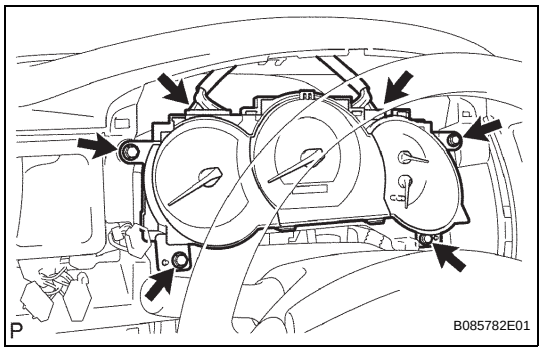
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY



2. **REMOVE BACK COVER**
   (a) Engage the 2 claws and install the back cover.
   (b) Install the 3 screws.



INSTALLATION

1. **INSTALL COMBINATION METER ASSEMBLY**
   (a) Connect the 2 connectors.
   (b) Install the combination meter assembly with the 4 screws.
   Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
2. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-21)**
3. **INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL (See page IP-22)**
4. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page ED-8)**
5. **INSTALL INSTRUMENT PANEL HOLE COVER (for Lever Type Parking Brake) (See page IP-25)**
6. **INSTALL INSTRUMENT PANEL UNDER TRAY (for Pedal Type Parking Brake) (See page IP-25)**
7. **INSTALL COWL SIDE TRIM BOARD LH (for Regular Cab) (See page IR-52)**
8. **INSTALL COWL SIDE TRIM BOARD LH (for Access Cab) (See page IR-75)**
9. **INSTALL COWL SIDE TRIM BOARD LH (for Double Cab) (See page IR-29)**
10. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**
11. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
12. **INSTALL FRONT DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**
13. **INSTALL FRONT FLOOR FOOTREST (See page IR-1)**
14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

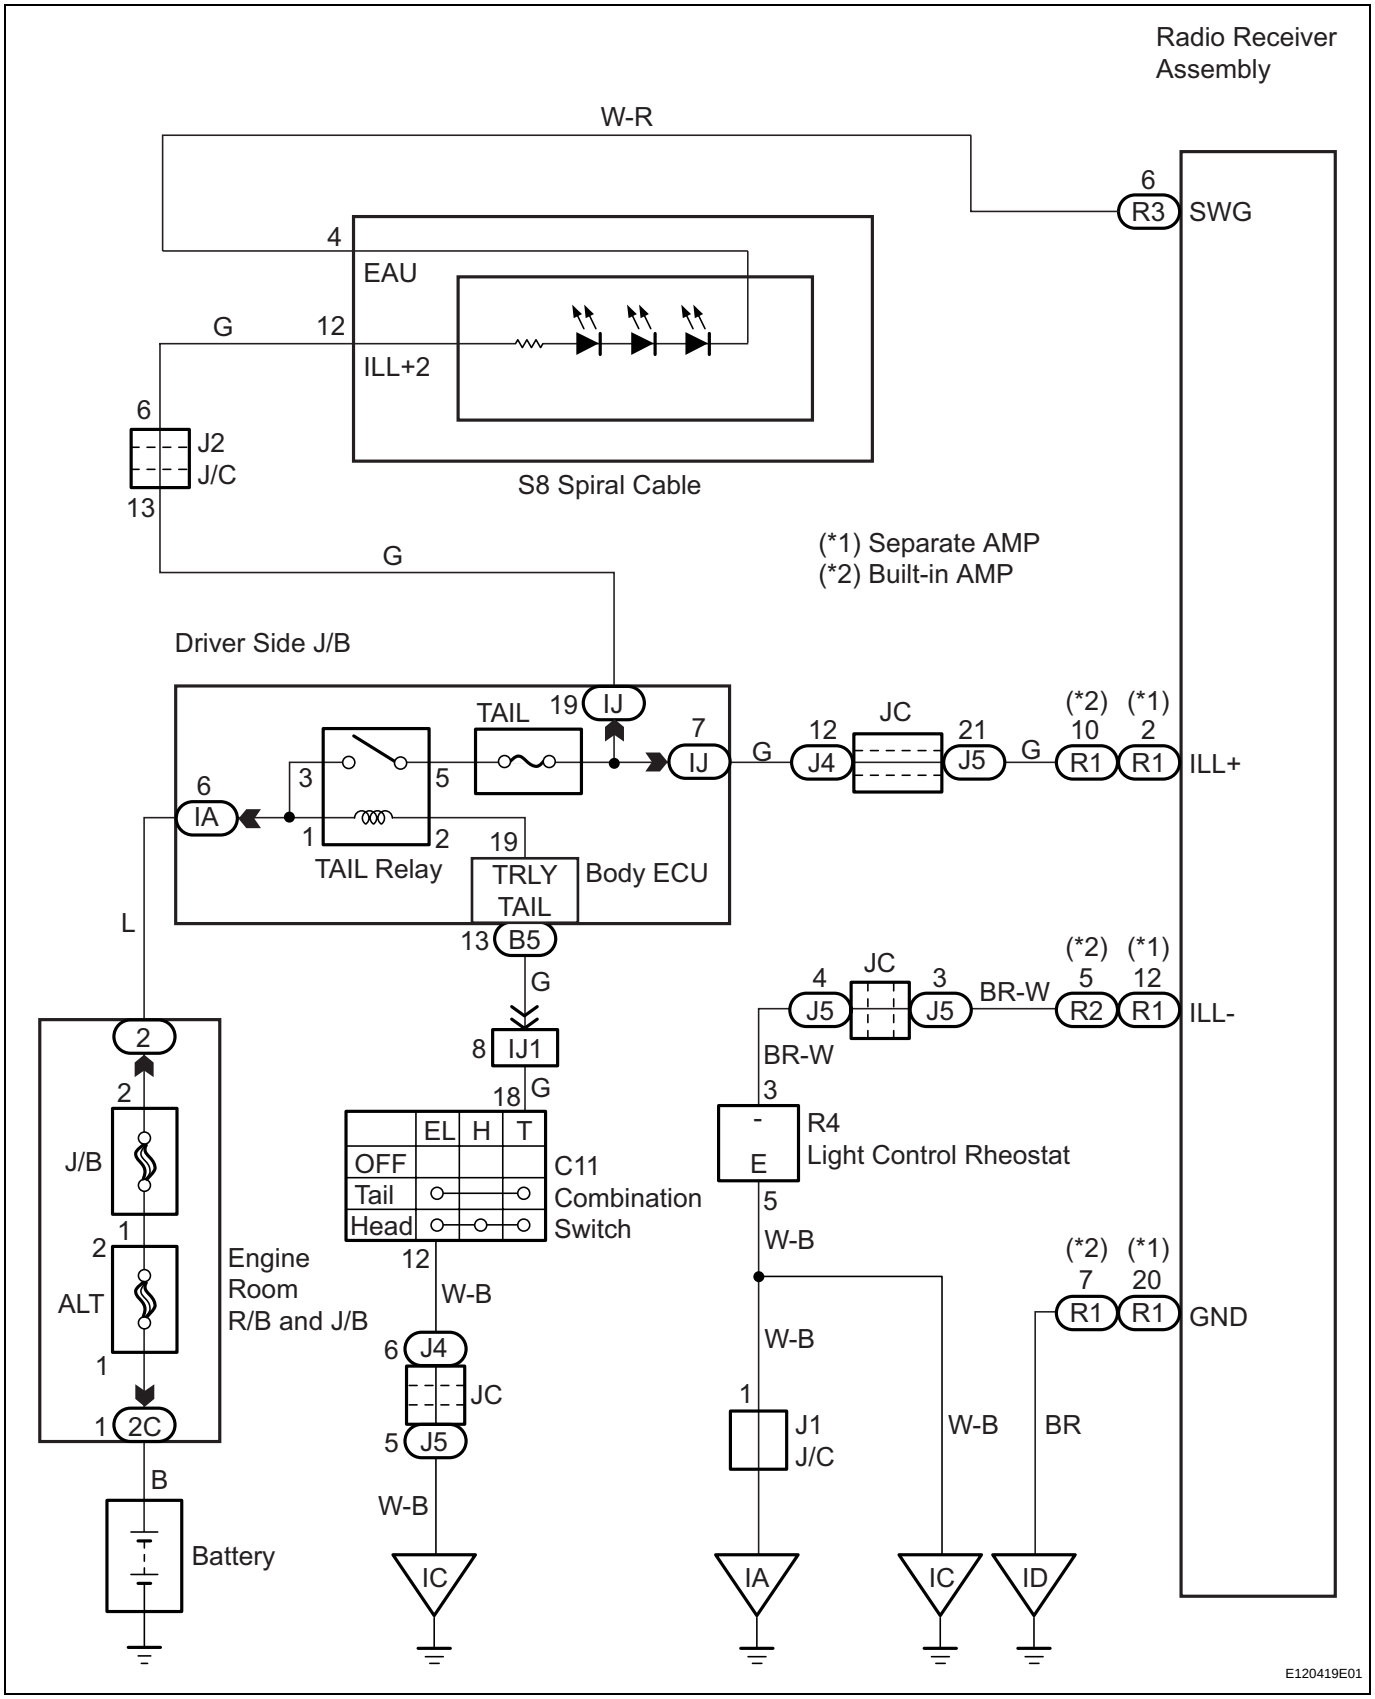
Illumination Circuit

DESCRIPTION

Power is supplied to the radio receiver and steering pad switch illumination when the light control switch is in the TAIL or HEAD position.

The intensity of the radio receiver and steering pad switch illumination can be adjusted by the light control rheostat.

WIRING DIAGRAM



AV

1	SYSTEM CHECK

(a) Turn the light control switch to the TAIL or HEAD position.
Check whether other displays and indicators such as the A/C switch indicator come on.
OK:
Other displays and indicators come on.

NG → **GO TO LIGHTING SYSTEM**

OK

2	CHECK SYMPTOMS

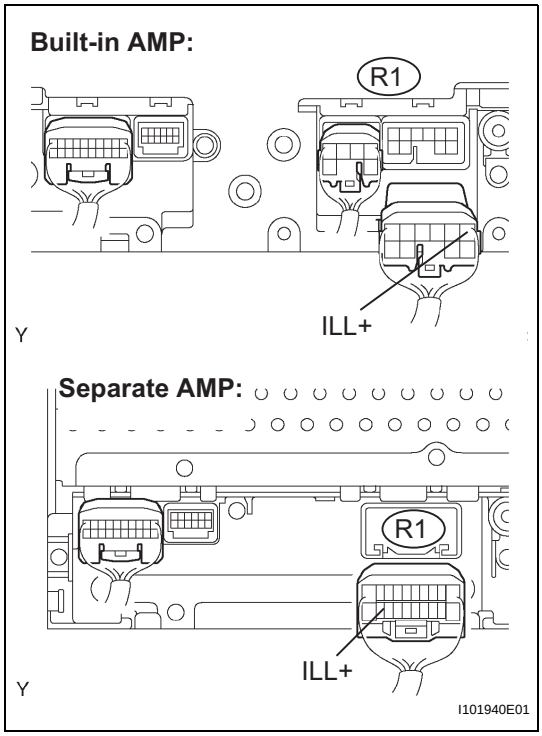
(a) Check the symptom.
(1) Check whether the illumination for the radio receiver assembly or steering pad switch comes on.

Symptom	Proceed To
Illumination for radio receiver assembly does not come on.	A
Illumination for steering pad switch does not come on.	B

B → **Go to step 5**

A

3	CHECK RADIO RECEIVER ASSEMBLY



(a) Disconnect the R1 radio receiver assembly connector.
(b) Turn the light control switch to the TAIL or HEAD position.
(c) Measure the voltage.
Standard:
Built-in AMP

Tester Connection	Light control switch TAIL	Specified Condition
ILL+ (R1-10) - Body ground	Light control switch TAIL	10 to 14 V

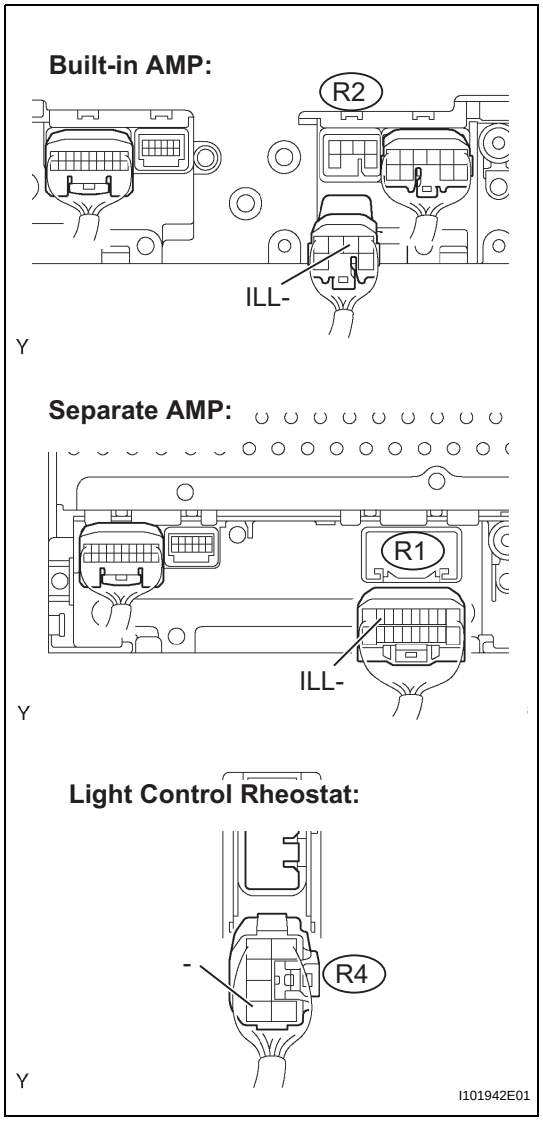
Standard:
Separate AMP

Tester Connection	Light control switch TAIL	Specified Condition
ILL+ (R1-2) - Body ground	Light control switch TAIL	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	**CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - LIGHT CONTROL RHEOSTAT)**



(a) Disconnect the R2 or R1 radio receiver assembly connector and R4 light control rheostat connector.
(b) Measure the resistance.

Standard:
Built-in AMP

Tester Connection	Specified Condition
ILL- (R2-5) - - (R4-3)	Below 1Ω
ILL- (R2-5) - Body ground	10 kΩ or higher

Standard:
Separate AMP

Tester Connection	Specified Condition
ILL- (R1-12) - - (R4-3)	Below 1Ω
ILL- (R1-2) - Body ground	10 kΩ or higher

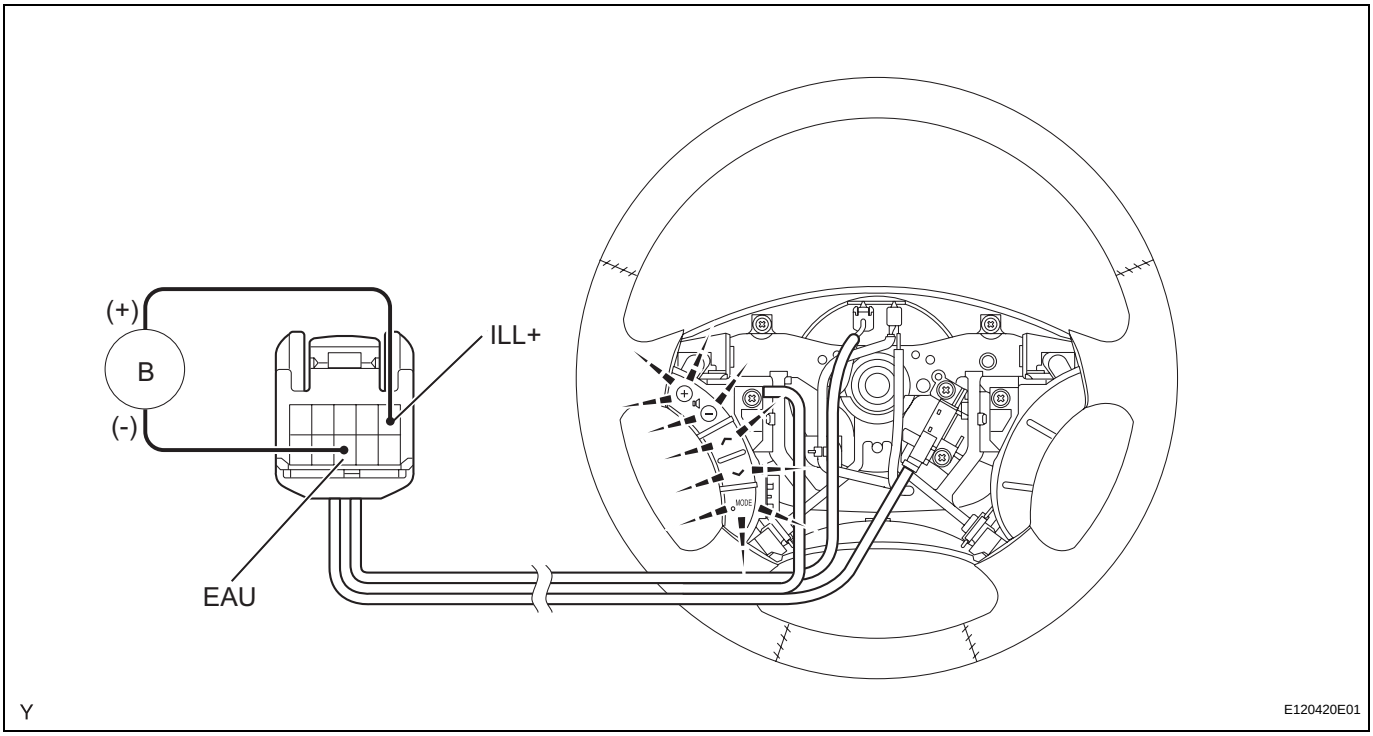
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

5	**INSPECT STEERING PAD SWITCH LH**

AV



NOTICE:
The vehicle is equipped with the SRS (Supplemental Restraint System) such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the SRS.

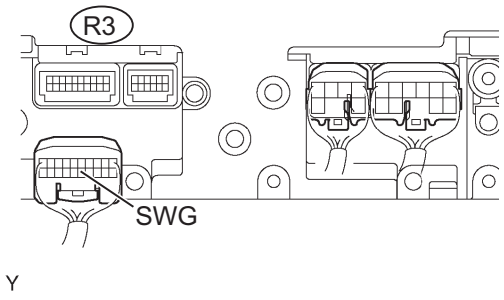
(a) Disconnect the steering pad switch assembly connector.
(b) Connect the positive (+) lead to terminal ILL+ and the negative (-) lead to terminal EAU of the steering pad switch assembly connector.
(c) Check the illumination for the steering pad switch assembly.
OK:
Illumination for the steering pad switch assembly comes on.

NG → **REPLACE STEERING PAD SWITCH LH**

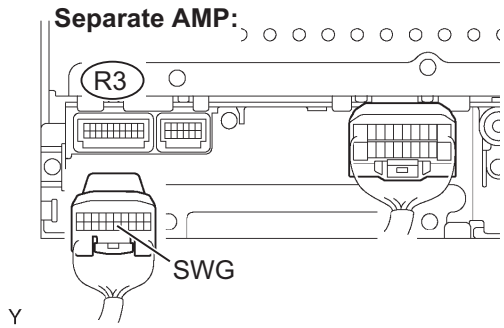
OK

6	**CHECK HARNESS AND CONNECTOR (SPIRAL CABLE SUB-ASSEMBLY - RADIO RECEIVER ASSEMBLY)**

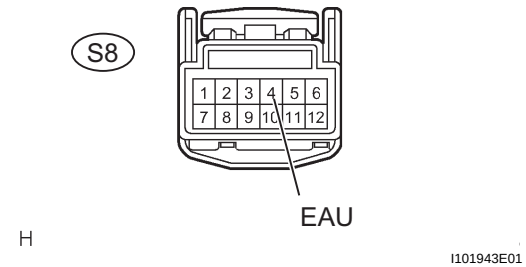
Built-in AMP:



Separate AMP:



Spiral Cable Side:



I101943E01

(a) Disconnect the R3 radio receiver assembly connector.
(b) Disconnect the S8 spiral cable sub-assembly connector.
(c) Measure the resistance.

Standard

Tester Connection	Specified Condition
SWG (R3-6) - EAU (S8-4)	Below 1 Ω

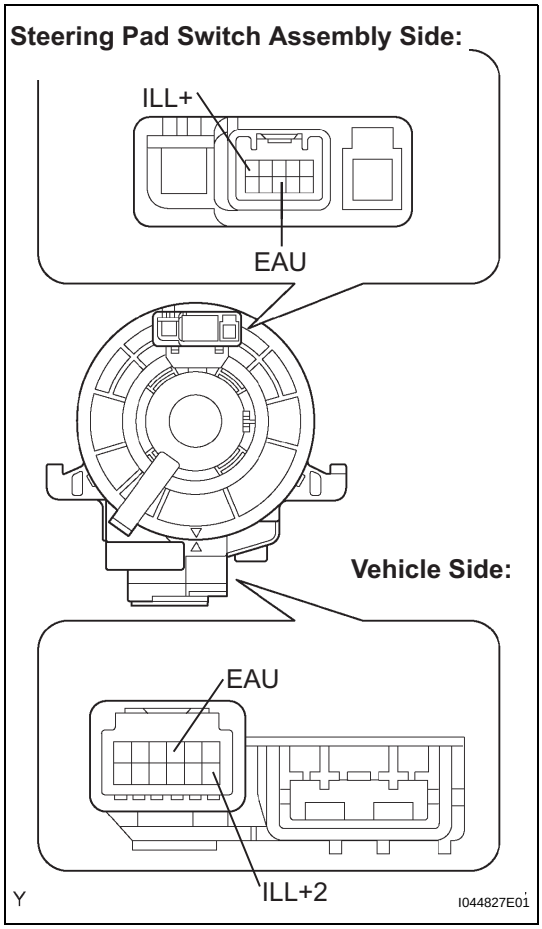
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AV

AV

7	**INSPECT SPIRAL CABLE SUB-ASSEMBLY**



(a) Disconnect the spiral cable sub-assembly connector.
(b) Check the resistance.

Standard

Tester Connection	Specified Condition
EAU - EAU	Below 1 Ω
ILL+ - ILL+2	Below 1 Ω

NG → **REPLACE SPIRAL CABLE SUB-ASSEMBLY**

OK

REPAIR OR REPLACE HARNESS AND CONNECTOR (SPIRAL CABLE SUB-ASSEMBLY - DRIVER SIDE J/B)

Speaker Circuit

DESCRIPTION

Sound signals that have been amplified by the stereo component amplifier or radio receiver assembly (built-in amp) are sent to the speakers from the stereo component amplifier assembly or radio receiver assembly through this circuit.

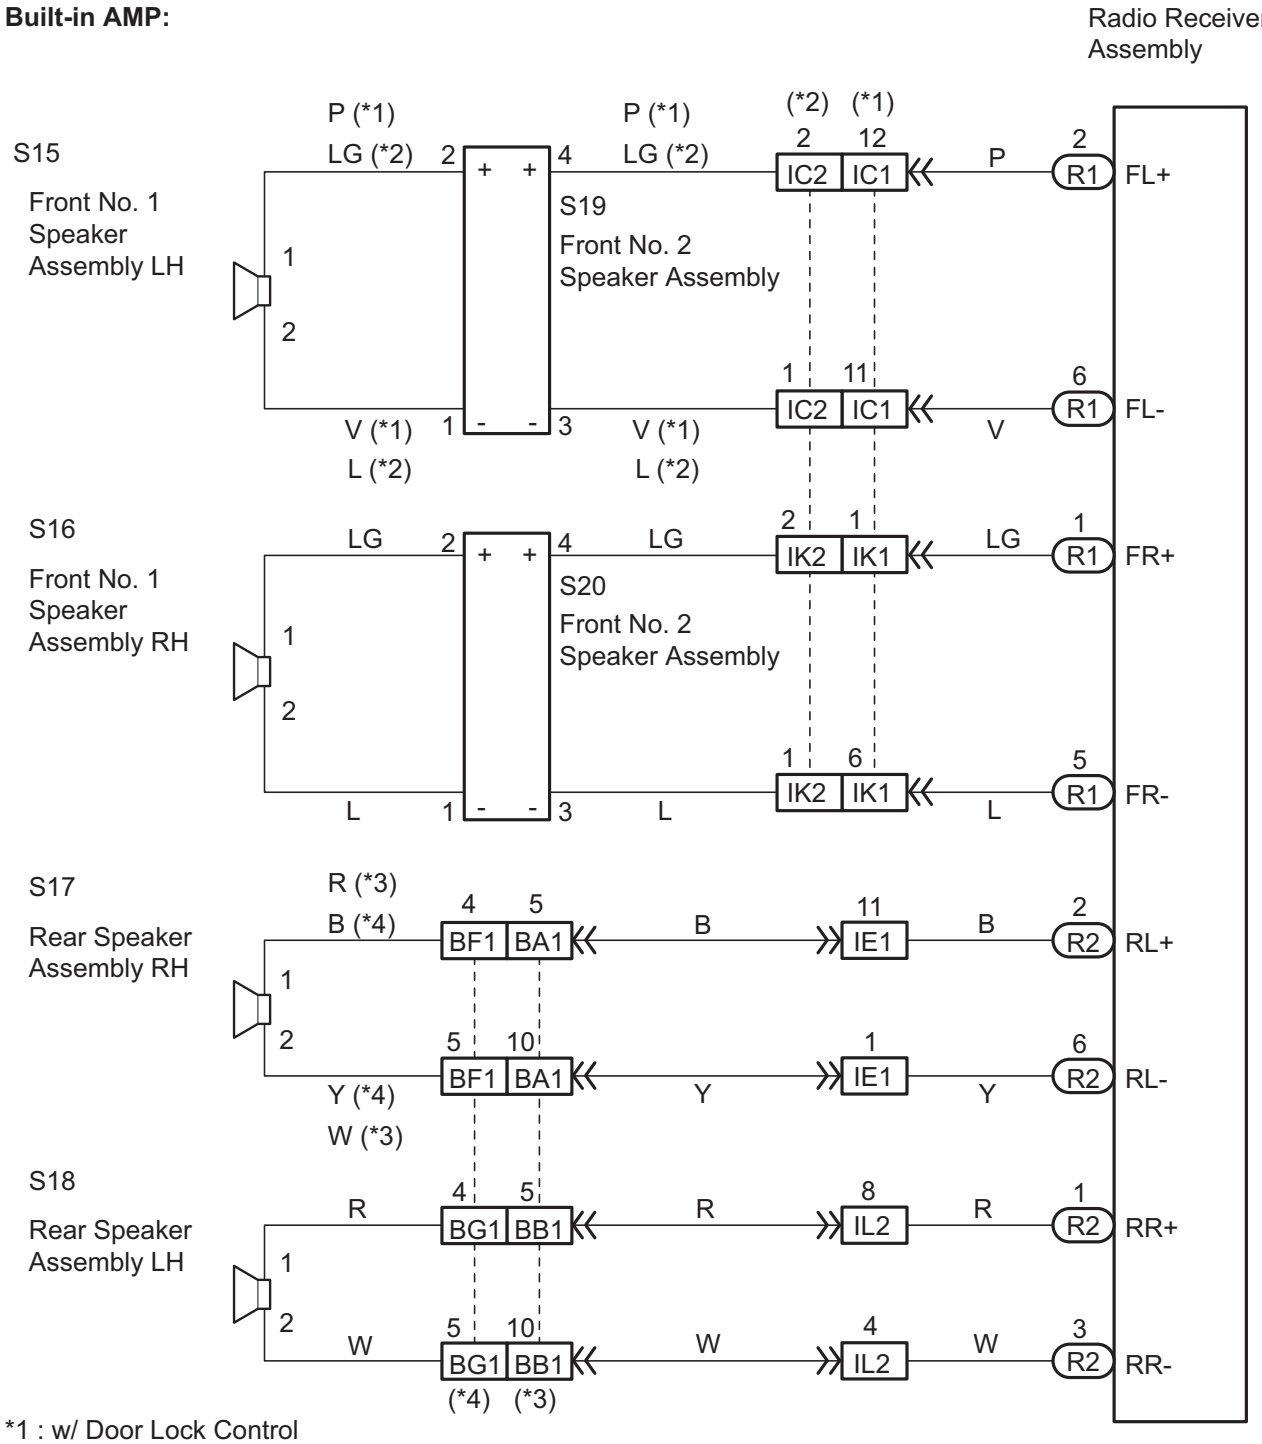
If there is a short in this circuit, the stereo component amplifier assembly detects it and stops the output to the speakers.

Thus sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly or speakers.

AV

WIRING DIAGRAM

Built-in AMP:



*1 : w/ Door Lock Control

RL- (R2-6) - Body ground	10 kΩ or higher
RR+ (R2-1) - Body ground	10 kΩ or higher
RR- (R2-3) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

(a) Measure the resistance between the terminals of the speaker.

NOTICE:
The speaker should not be removed for checking.
Standard:
Approximately 4 Ω

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY

OK

AV

4	INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

(a) Check that the malfunction disappears when another speaker in good condition is installed.
OK:
The malfunction disappears.
HINT:
- Connect all the connectors to the speakers.
- When there is a possibility that either the left or right front speaker is defective, inspect by interchanging the left one and the right one.

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY

OK

5	INSPECT REAR SPEAKER ASSEMBLY

(a) Measure the resistance between the terminals of the speaker.
NOTICE:
The speaker should not be removed for checking.
Standard:
Approximately 4 Ω

NG → REPLACE REAR SPEAKER ASSEMBLY

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

7	INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

AV

(a) Measure the resistance between the terminals of the speaker.
NOTICE:
The speaker should not be removed for checking.
Standard:
Approximately 4 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER ASSEMBLY**

OK

8	INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

(a) Check that the malfunction disappears when another speaker in good condition is installed.
OK:
The malfunction disappears.
HINT:
- Connect all the connectors to the speakers.
- When there is a possibility that either the left or right front speaker is defective, inspect by interchanging the left one and the right one.

NG → **REPLACE FRONT NO. 2 SPEAKER ASSEMBLY**

OK

9	INSPECT REAR SPEAKER ASSEMBLY

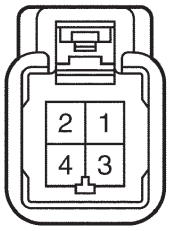
(a) Measure the resistance between the terminals of the speaker.
NOTICE:
The speaker should not be removed for checking.
Standard:
Approximately 4 Ω

NG → **REPLACE REAR SPEAKER ASSEMBLY**

OK

10	**INSPECT NO. 1 SPEAKER ASSEMBLY WITH BOX**

Woofer:



P I040660E01

(a) Measure the resistance.
NOTICE:
The speaker should not be removed for checking.
Standard

Tester Connection	Specified Condition
1 - 3	2 Ω
2 - 4	2 Ω

NG → **REPLACE NO. 1 SPEAKER ASSEMBLY WITH BOX**

OK

AV

AMP Mute Signal Circuit (from Radio Receiver Assembly)

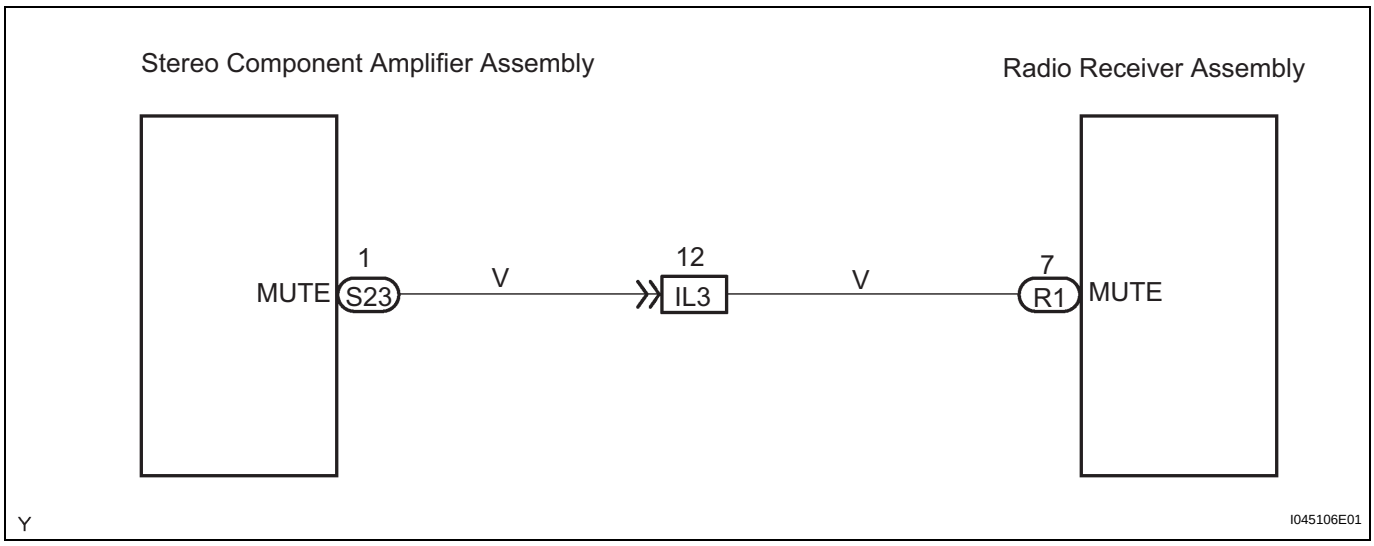
DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute the noise. Because of that, the noise produced while changing the sound source ceases.

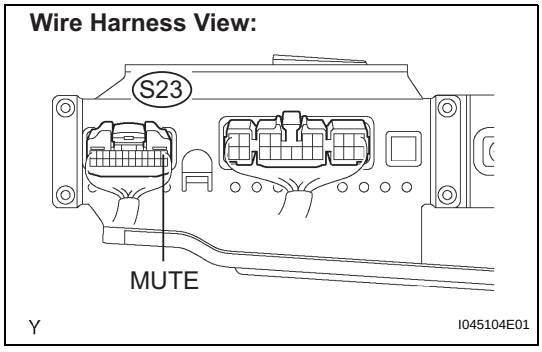
AV

If there is an open in the circuit, noise can be heard from the speaker when changing the sound source.
If there is a short in the circuit, even though the stereo component amplifier assembly is normal, no sound or only extremely quiet sound is produced.

WIRING DIAGRAM



1	INSPECT STEREO COMPONENT AMPLIFIER ASSEMBLY



(a) Measure the voltage.
Standard

Tester Connection	Condition	Specified Condition
MUTE (S23-1) - Body ground	Turn ignition switch to ACC, Audio system is playing → Changing	Above 3.5 V → Below 1 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

(a) Reconnect the R1 stereo component amplifier assembly connector.
(b) Turn the ignition switch to the ACC position.
(c) Measure the voltage.

Standard

Tester Connection	Condition	Specified Condition
MUTE (R1-7) - Body ground	Turn ignition switch to ACC	3.5 V or higher

NG → **REPAIR OR REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

OK

REPLACE RADIO RECEIVER ASSEMBLY

AMP Sound Signal Circuit

DESCRIPTION

The radio receiver assembly sends sound signals to the stereo component amplifier assembly through this circuit. Sound signals that have been sent are amplified by the stereo component amplifier assembly, and then sent to the speakers.

If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly or speakers.

AVC-LAN Circuit

DESCRIPTION

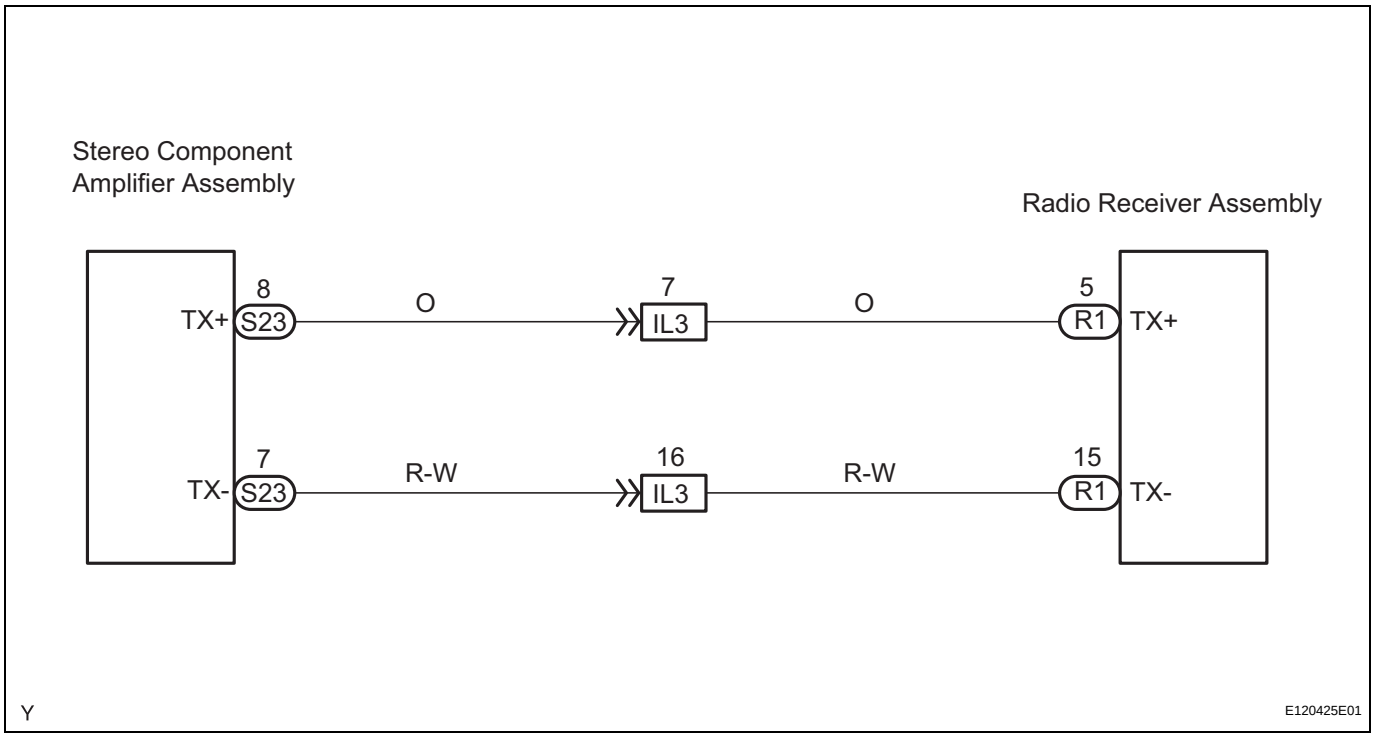
All audio system units that are connected to the AVC-LAN (communication bus) use it as the communication line by which they transmit switch signals.

AV

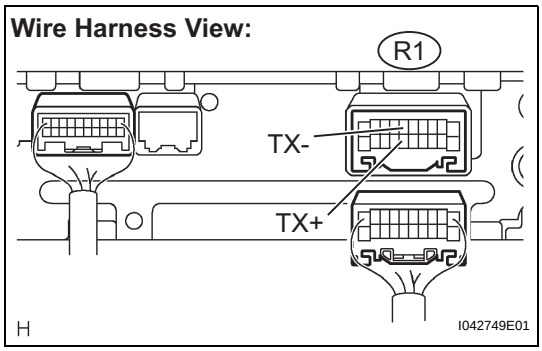
When a +B short or GND short occurs in the AVC- LAN, the audio system fails to function normally, due to the discontinuation of communication.

In the AVC-LAN, the radio receiver assembly is the main communication center and has the correct resistance necessary for transmitting communication signals.

WIRING DIAGRAM



1	INSPECT RADIO RECEIVER ASSEMBLY



(a) Disconnect the R1 radio receiver assembly connector.

(b) Measure the resistance.

Standard

Tester Connection	Condition	Specified Condition
TX+ (R1-5) - TX (R1-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER ASSEMBLY**

OK

INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

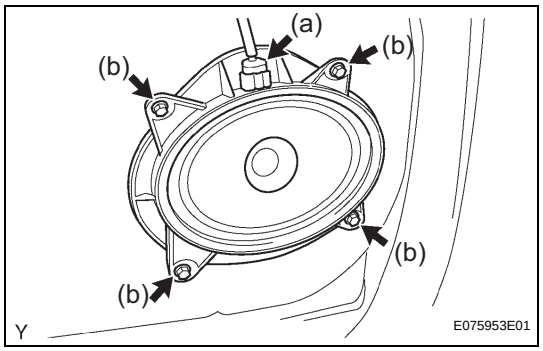
1. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Install the front No. 1 speaker assembly with the 3 screws.
   (b) Connect the connector.
2. **INSTALL FRONT DOOR TRIM PANEL ASSEMBLY LH (See page ED-48)**
3. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-49)**
4. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (See page ED-49)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

REMOVAL

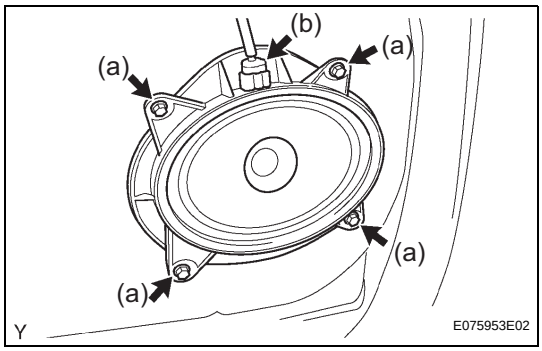
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Door Lock) (See page ED-34)**
3. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Door Lock) (See page ED-13)**
4. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM PANEL ASSEMBLY LH (See page ED-35)**
6. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 4 screws and the front No. 1 speaker assembly.



AV



INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

1. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Install the front No. 1 speaker assembly with the 4 screws.
   (b) Connect the connector.
2. **INSTALL FRONT DOOR TRIM PANEL ASSEMBLY LH (See page ED-48)**
3. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-49)**
4. **INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Door Lock) (See page ED-30)**
5. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Door Lock) (See page ED-49)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

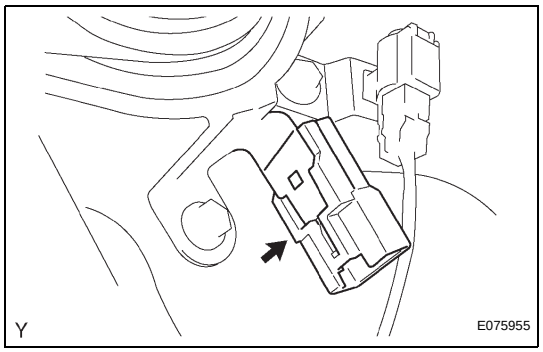
REMOVAL

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Door Lock) (See page ED-34)**
3. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Door Lock) (See page ED-13)**
4. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM PANEL ASSEMBLY LH (See page ED-35)**
6. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 2 bolts.

   (c) Disengage the claw and remove the front No. 2 speaker assembly.

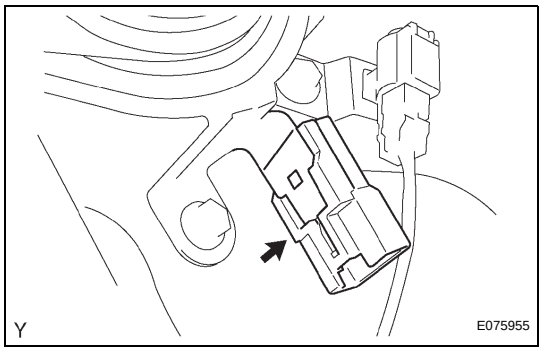


AV

INSTALLATION

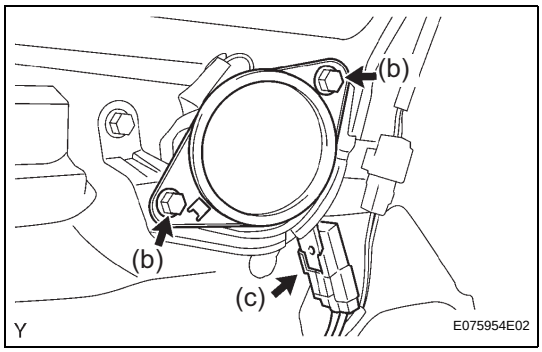
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY

(a) Engage the claw.



(b) Install the front No. 2 speaker assembly with the 2 bolts.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)

(c) Connect the connector.

2. INSTALL FRONT DOOR TRIM PANEL ASSEMBLY LH (See page ED-48)

3. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-49)

4. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Door Lock) (See page ED-30)

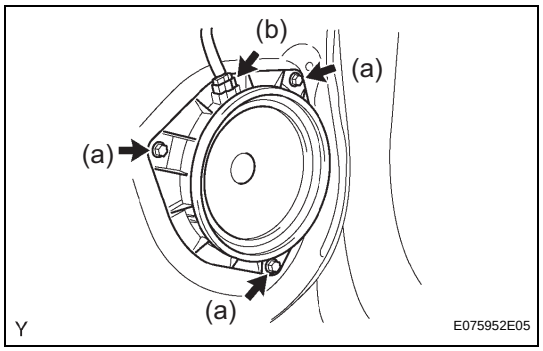
5. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Door Lock) (See page ED-49)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. **INSTALL REAR SPEAKER ASSEMBLY**
   (a) Install the rear speaker assembly with the 3 screws.
   (b) Connect the connector.
2. **INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY LH (See page ED-80)**
3. **INSTALL REAR DOOR TRIM PANEL ASSEMBLY LH (See page ED-81)**
4. **INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY (See page ED-81)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

REMOVAL

1. **REMOVE REAR SEAT BACK HINGE COVER (for Double Cab)**
   (a) for RH Side:
      (1) Remove the rear seat back hinge cover (see page SE-82).
   (b) for LH Side:
      (1) Remove the rear seat back hinge cover (see page SE-71).
2. **REMOVE REAR SEATBACK ASSEMBLY LH (for Double Cab) (See page SE-71)**
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for Double Cab) (See page SE-82)**
4. **REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY LH (for Double Cab) (See page SE-71)**
5. **REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY RH (for Double Cab) (See page SE-82)**
6. **REMOVE FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-40)**
7. **REMOVE FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
8. **REMOVE FRONT DOOR SCUFF PLATE RH (for Regular Cab)**
   HINT:
   Follow the same procedures as for the front door scuff plate LH.
9. **REMOVE FRONT DOOR SCUFF PLATE RH (for Access Cab)**
   HINT:
   Follow the same procedures as for the front door scuff plate LH.
10. **REMOVE REAR DOOR SCUFF PLATE LH (for Access Cab) (See page IR-61)**
11. **REMOVE REAR DOOR SCUFF PLATE LH (for Double Cab) (See page IR-13)**
12. **REMOVE REAR DOOR SCUFF PLATE RH (for Access Cab)**
    HINT:
    Follow the same procedures as for the rear door scuff plate LH.
13. **REMOVE REAR DOOR SCUFF PLATE RH (for Double Cab)**
    HINT:
    Follow the same procedures as for the rear door scuff plate LH.
14. **REMOVE ROOF SIDE INNER GARNISH CAP LH (for Access Cab) (See page IR-62)**

15. **REMOVE ROOF SIDE INNER GARNISH CAP RH (for Access Cab)**
HINT:
Follow the same procedures as for the roof side inner garnish LH.

16. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Regular Cab) (See page IR-40)**

17. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Access Cab) (See page IR-62)**

18. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Regular Cab)**
HINT:
Follow the same procedures as for the front door opening trim weatherstrip LH.

19. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Access Cab)**
HINT:
Follow the same procedures as for the front door opening trim weatherstrip LH.

20. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (for Double Cab) (See page IR-13)**

21. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (for Double Cab)**
HINT:
Follow the same procedures as for the rear door opening trim weatherstrip LH.

22. **REMOVE BACK PANEL TRIM COVER (for Regular Cab) (See page IR-42)**

23. **REMOVE BACK PANEL TRIM COVER (for Access Cab) (See page IR-64)**

24. **REMOVE BACK PANEL TRIM COVER (for Regular Cab on Bench Seat Type) (See page IR-42)**

25. **REMOVE BACK PANEL UPPER GARNISH (for Regular Cab) (See page IR-43)**

26. **REMOVE JACK ASSEMBLY (for Regular Cab on Separate Seat Type)**

27. **REMOVE BACK PANEL TRIM COVER (for Regular Cab on Separate Seat Type) (See page IR-43)**

28. **REMOVE BACK PANEL TRIM (for Regular Cab on Separate Seat Type) (See page IR-43)**

29. **REMOVE BACK PANEL TRIM (for Access Cab on Separate Seat Type) (See page IR-64)**

30. **REMOVE LUGGAGE COMPARTMENT SIDE TRAY (for Double Cab) (See page IR-16)**

31. **REMOVE REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY (for Double Cab) (See page SE-71)**

32. **REMOVE LUGGAGE COMPARTMENT SIDE TRAY (for Double Cab) (See page IR-16)**

33. **REMOVE QUARTER TRIM LOWER PANEL LH (for Regular Cab) (See page IR-43)**

34. **REMOVE QUARTER TRIM LOWER PANEL LH (for Access Cab) (See page IR-65)**

35. **REMOVE QUARTER TRIM LOWER PANEL LH (for Double Cab) (See page IR-17)**

36. **REMOVE QUARTER TRIM LOWER PANEL RH (for Regular Cab)**
HINT:
Follow the same procedures as for the quarter trim panel lower LH.

37. **REMOVE QUARTER TRIM LOWER PANEL RH (for Access Cab)**
HINT:
Follow the same procedures as for the quarter trim panel lower LH.

38. **REMOVE QUARTER TRIM LOWER PANEL RH (for Double Cab)**
HINT:
Follow the same procedures as for the quarter trim panel lower LH.

39. **REMOVE ROOF SIDE INNER GARNISH LH (for Access Cab) (See page IR-65)**

40. **REMOVE ROOF SIDE INNER GARNISH RH (for Access Cab)**
HINT:
Follow the same procedures as for the roof side garnish inner LH.

41. **REMOVE QUARTER INSIDE TRIM BOARD LH (for Regular Cab) (See page IR-44)**

42. **REMOVE QUARTER INSIDE TRIM BOARD LH (for Access Cab) (See page IR-65)**

43. **REMOVE QUARTER INSIDE TRIM BOARD LH (for Double Cab) (See page IR-17)**

44. **REMOVE QUARTER INSIDE TRIM BOARD RH (for Regular Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

45. **REMOVE QUARTER INSIDE TRIM BOARD RH (for Access Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

46. REMOVE QUARTER INSIDE TRIM BOARD RH (for Double Cab)

HINT:
Follow the same procedures as for the quarter inside trim board LH.

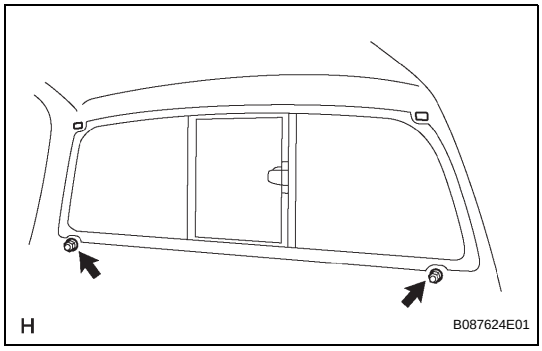
47. REMOVE COAT HOOK (for Regular Cab) (See page IR-45)

48. REMOVE COAT HOOK (for Access Cab) (See page IR-67)

49. REMOVE COAT HOOK (for Double Cab) (See page IR-20)

50. REMOVE BACK WINDOW ASSEMBLY

(a) Remove the 2 nuts.



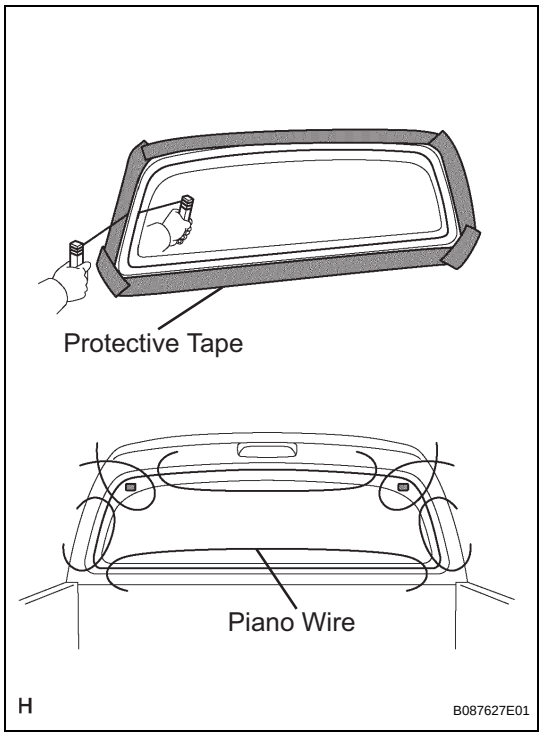
(b) Apply protective tape to the outer circumference of the back window, as shown in the illustration.

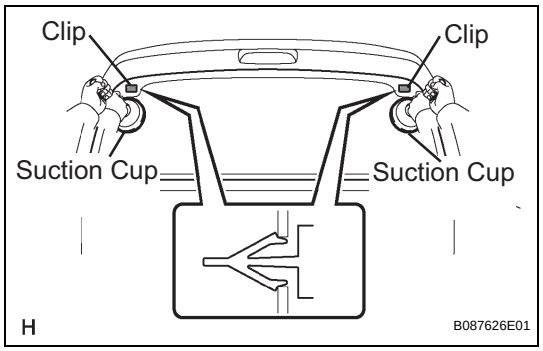
(c) From the interior, insert piano wires between the vehicle body and back window, as shown in the illustration.

(d) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.

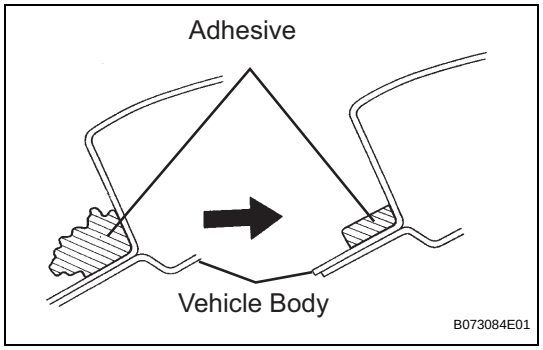
NOTICE:
When separating the back window from the vehicle, be careful not to damage the vehicle's paint or exterior/interior ornaments.

(e) Cut through the adhesive by pulling the piano wire around the back window.





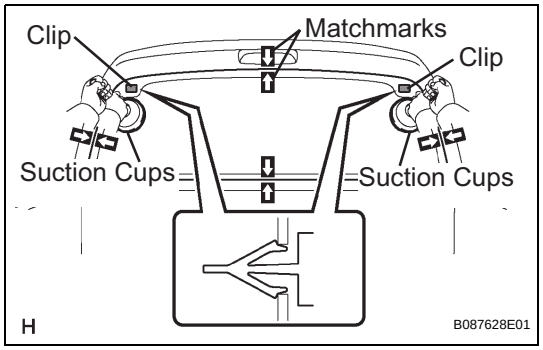
(f) Disengage the 2 clips.
(g) Using suction cups, remove the back window.
NOTICE:
Leave as much adhesive on the vehicle body as possible when removing the back window.



INSTALLATION

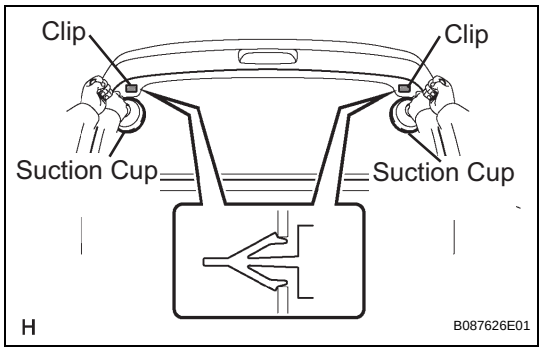
1. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.
(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.
NOTICE:
Be careful not to damage the vehicle body.
HINT:
Leave as much adhesive on the vehicle body as possible.
(2) Clean the contact surface of the vehicle body with a shop rag saturated with cleaner.
HINT:
Even if all the adhesive has been removed, clean the vehicle body.

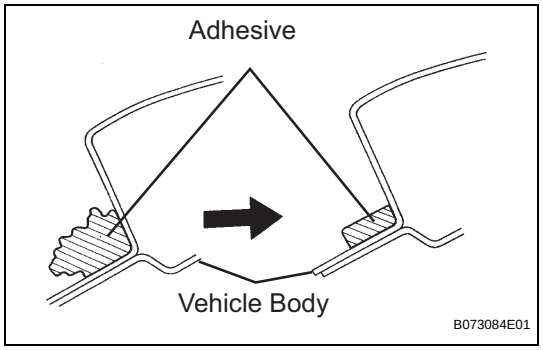


2. INSTALL BACK WINDOW ASSEMBLY

(a) Position the windshield glass.
(1) Using suction cups, place the back window in the correct position.
(2) Check that the whole contact surface of the back window rim is perfectly even.
(3) Place matchmarks over the back window and vehicle body.
NOTICE:
Check that the stoppers are attached to the vehicle body correctly.
HINT:
When reusing the back window, check and correct the matchmark positions.
(4) Using suction cups, remove the back window.



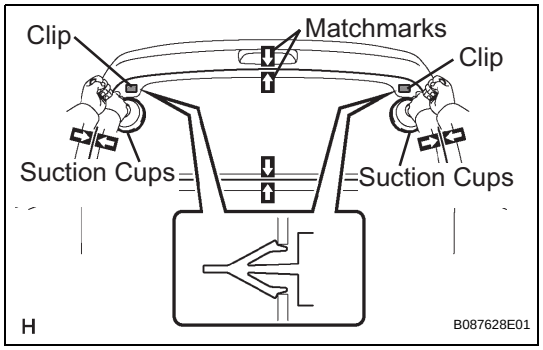
(f) Disengage the 2 clips.
(g) Using suction cups, remove the back window.
NOTICE:
Leave as much adhesive on the vehicle body as possible when removing the back window.



INSTALLATION

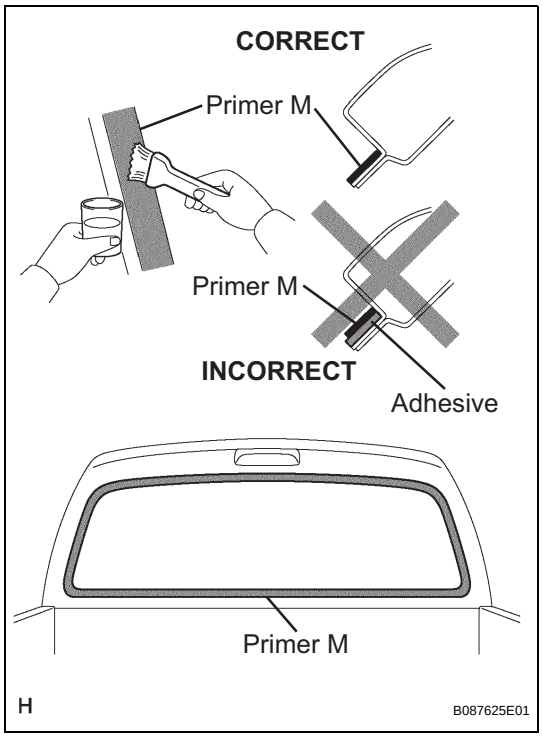
1. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.
(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.
NOTICE:
Be careful not to damage the vehicle body.
HINT:
Leave as much adhesive on the vehicle body as possible.
(2) Clean the contact surface of the vehicle body with a shop rag saturated with cleaner.
HINT:
Even if all the adhesive has been removed, clean the vehicle body.



2. INSTALL BACK WINDOW ASSEMBLY

(a) Position the windshield glass.
(1) Using suction cups, place the back window in the correct position.
(2) Check that the whole contact surface of the back window rim is perfectly even.
(3) Place matchmarks over the back window and vehicle body.
NOTICE:
Check that the stoppers are attached to the vehicle body correctly.
HINT:
When reusing the back window, check and correct the matchmark positions.
(4) Using suction cups, remove the back window.

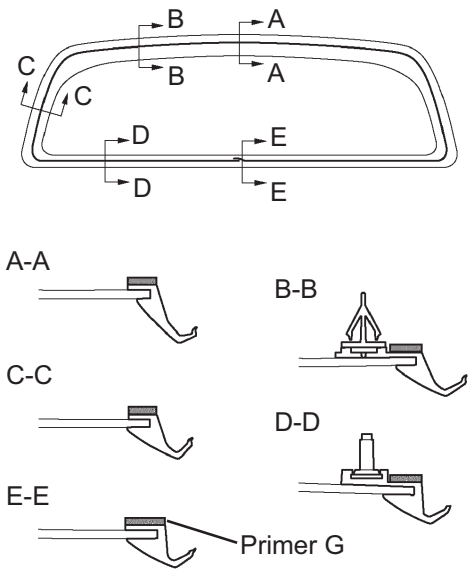


(b) Using a brush, apply Primer M to the exposed part of the vehicle body.

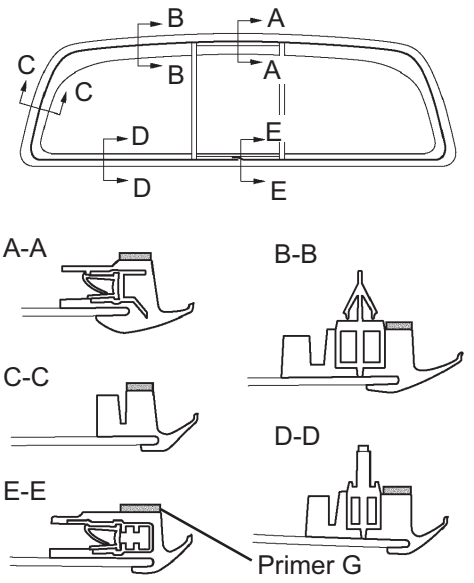
NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

Fixed Type:



Slide Type:



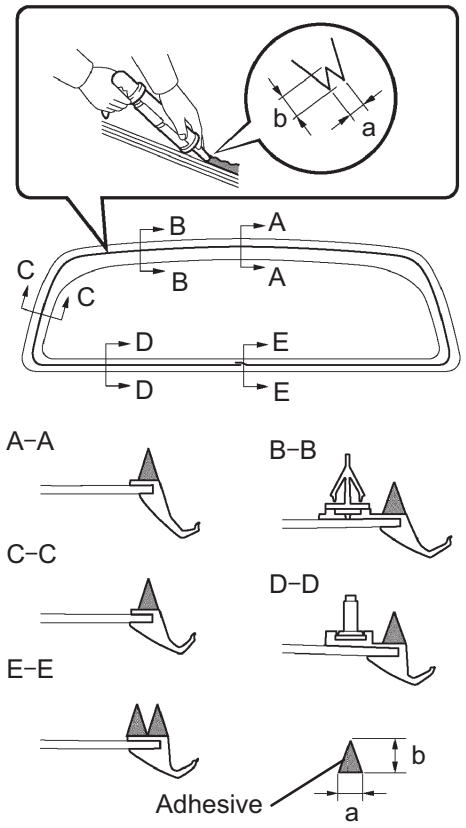
B115231E01

(c) Using a brush or sponge, apply Primer G to the edge of the back window and contact surface.
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

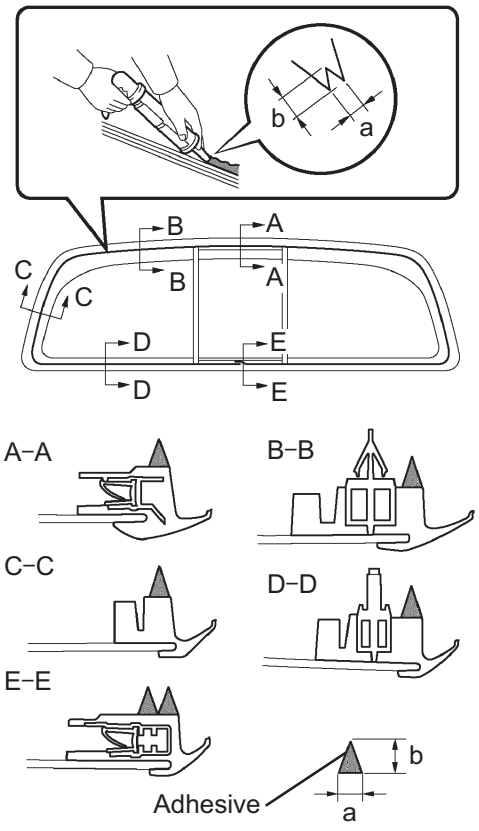
HINT:
If Primer G is applied to any areas other than that which is specified, wipe off the primer with a clean shop rag before it dries.

WS

Fixed Type:



Slide Type:



B115232E01

(d) Apply adhesive.

Adhesive:

Part No. 08850-00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time indicated in the table bellow.

Usage time frame

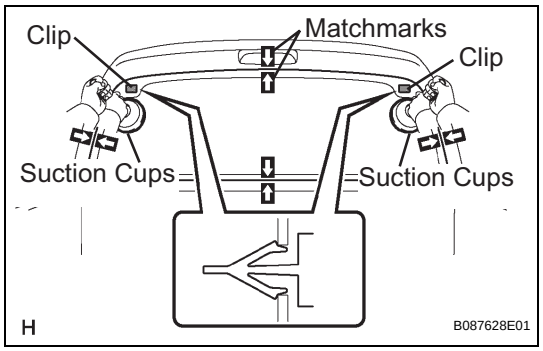
Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Apply adhesive to the back window, as shown in the illustration.

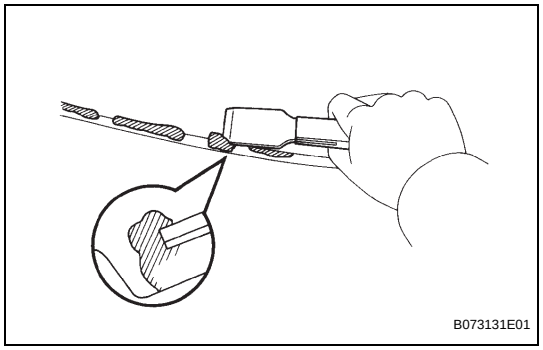
Specification

Area	Measurement
a	6 mm (0.236 in.) or 8 mm (0.315 in.)
b	8 mm (0.315 in.) or 12 mm (0.472 in.)

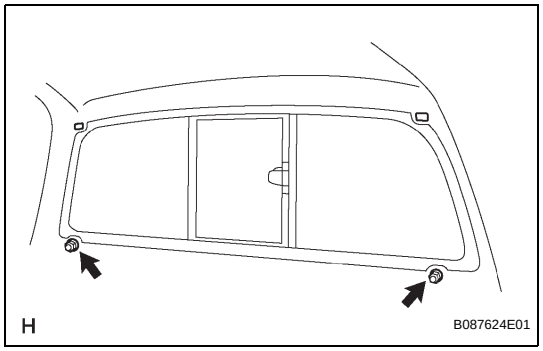


(e) Install the windshield glass onto the vehicle body.
(1) Using suction cups, position the back window so that the matchmarks are aligned. Press it in gently along the rim.
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check that the vehicle body and windshield glass have a small gap between them.**

(2) Lightly press the front surface of the windshield glass to ensure that the windshield glass is securely fitted to the vehicle body.



(3) Using a scraper, remove any excessive or protruding adhesive.
HINT:
Apply adhesive onto the windshield glass rim.



(f) Tighten the 2 nuts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

3. **CHECK FOR LEAKAGE AND REPAIR**
(a) Conduct a leak test after the adhesive has completely hardened.
(b) Seal any leakage with auto glass sealer.

4. **INSTALL COAT HOOK (for Regular Cab) (See page IR-47)**

5. **INSTALL COAT HOOK (for Access Cab) (See page IR-69)**

6. **INSTALL COAT HOOK (for Double Cab) (See page IR-22)**

7. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Regular Cab) (See page IR-48)**

8. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Access Cab) (See page IR-71)**

9. **INSTALL QUARTER INSIDE TRIM BOARD LH (for Double Cab) (See page IR-24)**

10. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Regular Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

11. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Access Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

12. **INSTALL QUARTER INSIDE TRIM BOARD RH (for Double Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

13. **INSTALL ROOF SIDE INNER GARNISH LH (for Access Cab) (See page IR-71)**

14. **INSTALL ROOF SIDE INNER GARNISH RH (for Access Cab)**
HINT:
Follow the same procedures as for the roof side garnish inner LH.

15. **INSTALL QUARTER TRIM LOWER PANEL LH (for Regular Cab) (See page IR-49)**

16. **INSTALL QUARTER TRIM LOWER PANEL LH (for Access Cab) (See page IR-72)**

17. **INSTALL QUARTER TRIM LOWER PANEL LH (for Double Cab) (See page IR-25)**

18. **INSTALL QUARTER TRIM LOWER PANEL RH (for Regular Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

19. **INSTALL QUARTER TRIM LOWER PANEL RH (for Access Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

20. **INSTALL QUARTER TRIM LOWER PANEL RH (for Double Cab)**
HINT:
Follow the same procedures as for the quarter inside trim board LH.

21. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY (for Double Cab) (See page IR-25)**

22. **INSTALL REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY (for Double Cab) (See page SE-77)**

23. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY (for Double Cab) (See page IR-26)**

24. **INSTALL BACK PANEL TRIM (for Regular Cab on Separate Seat Type) (See page IR-49)**

25. **REMOVE BACK PANEL TRIM (for Access Cab on Separate Seat Type) (See page IR-72)**

26. **INSTALL BACK PANEL TRIM COVER (for Regular Cab on Separate Seat Type) (See page IR-50)**
27. **INSTALL JACK ASSEMBLY (for Regular Cab on Separate Seat Type)**
28. **INSTALL BACK PANEL UPPER GARNISH (for Regular Cab) (See page IR-50)**
29. **INSTALL BACK PANEL TRIM COVER (for Regular Cab on Bench Seat Type) (See page IR-50)**
30. **INSTALL BACK PANEL TRIM COVER (for Regular Cab) (See page IR-50)**
31. **INSTALL BACK PANEL TRIM COVER (for Access Cab) (See page IR-73)**
32. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (for Double Cab) (See page IR-28)**
33. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (for Double Cab)**
    HINT:
    Follow the same procedures as for the rear door opening trim weatherstrip LH.
34. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Regular Cab) (See page IR-52)**
35. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (for Access Cab) (See page IR-74)**
36. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Regular Cab)**
    HINT:
    Follow the same procedures as for the front door opening trim weatherstrip LH.
37. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (for Access Cab)**
    HINT:
    Follow the same procedures as for the front door opening trim weatherstrip LH.
38. **INSTALL ROOF SIDE INNER GARNISH CAP LH (for Access Cab) (See page IR-75)**
39. **INSTALL ROOF SIDE INNER GARNISH CAP RH (for Access Cab)**
    HINT:
    Follow the same procedures as for the roof side inner garnish LH.
40. **INSTALL REAR DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**
41. **INSTALL REAR DOOR SCUFF PLATE LH (for Double Cab) (See page IR-29)**

42. **INSTALL REAR DOOR SCUFF PLATE RH (for Access Cab)**
HINT:
Follow the same procedures as for the rear door scuff plate LH.

43. **INSTALL REAR DOOR SCUFF PLATE RH (for Double Cab)**
HINT:
Follow the same procedures as for the rear door scuff plate LH.

44. **INSTALL FRONT DOOR SCUFF PLATE LH (for Regular Cab) (See page IR-52)**

45. **INSTALL FRONT DOOR SCUFF PLATE LH (for Access Cab) (See page IR-75)**

46. **INSTALL FRONT DOOR SCUFF PLATE RH (for Regular Cab)**
HINT:
Follow the same procedures as for the front door scuff plate LH.

47. **INSTALL FRONT DOOR SCUFF PLATE RH (for Access Cab)**
HINT:
Follow the same procedures as for the front door scuff plate LH.

48. **INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY LH (for Double Cab) (See page SE-77)**

49. **INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY RH (for Double Cab) (See page SE-90)**

50. **INSTALL REAR SEATBACK ASSEMBLY LH (for Double Cab) (See page SE-77)**

51. **INSTALL REAR SEATBACK ASSEMBLY RH (for Double Cab) (See page SE-90)**

52. **INSTALL REAR SEAT BACK HINGE COVER (for Double Cab)**
    (a) for RH Side:
        (1) Install the rear seat back hinge cover (see page SE-90).
    (b) for LH Side:
        (1) Install the rear seat back hinge cover (see page SE-78).

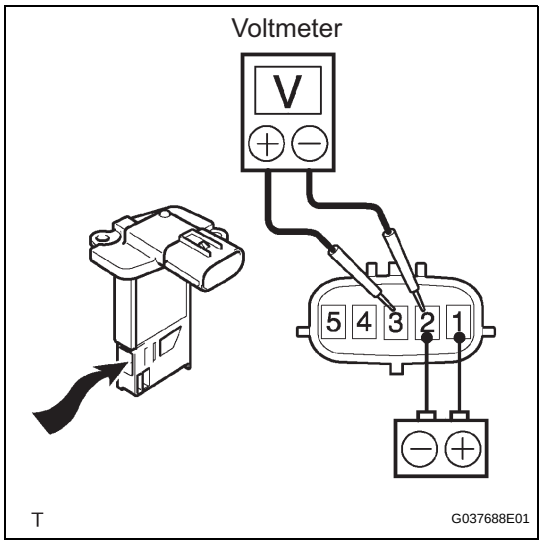
SFI SYSTEM

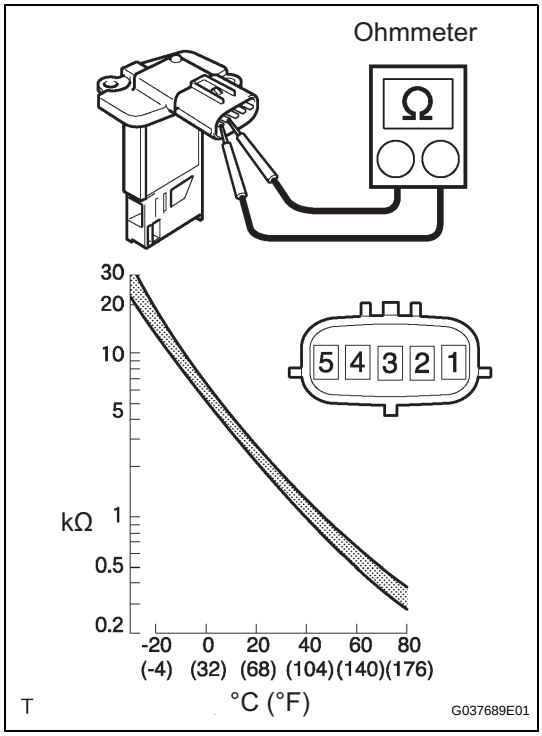
PRECAUTION

1. **INITIALIZATION**
   NOTICE:
   Perform the REGISTRATION (VIN registration) when replacing the ECM (see page ES-16).
2. **FOR USING INTELLIGENT TESTER**
   CAUTION:
   Observe the following items for safety reasons:
   - **Read its instruction books before using the tester.**
   - **Prevent the tester cable from being caught on the pedals, shift lever and steering wheel when driving with the tester connected to the vehicle.**
   - **When driving the vehicle for testing purposes using the tester, two persons are required. One is for driving the vehicle, and the other operates the tester.**

DEFINITION OF TERMS

Terms	Definitions
Monitor Description	Description of what ECM monitors and how detects malfunctions (monitoring purpose and details)
Related DTCs	A group of diagnostic trouble codes that are output by ECM based on same malfunction detection logic.
Typical Enabling Conditions	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s)
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components are involved in single malfunction detection process. Each sensor and component monitored in turn and not monitored until previous detection operation completed
Required Sensors/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction Thresholds	Value beyond which ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after defect detected. "Immediate" means ECM illuminates MIL as soon as malfunction detected. "2 driving cycles" means ECM illuminates MIL if same malfunction detected second time during next sequential driving cycle.





MASS AIR FLOW METER

INSPECTION

1. INSPECT MASS AIR FLOW METER

(a) Check the operation.

(1) Apply battery voltage across terminals 1 (+B) and 2 (E2G).

(2) Using a voltmeter, connect the positive (+) tester prove to terminal 3 (VG) and the negative (-) tester prove to terminal 2 (E2G).

(3) Blow air into the mass air flow meter and check that the voltage fluctuates.

If the voltage does not fluctuate, replace the mass air flow meter.

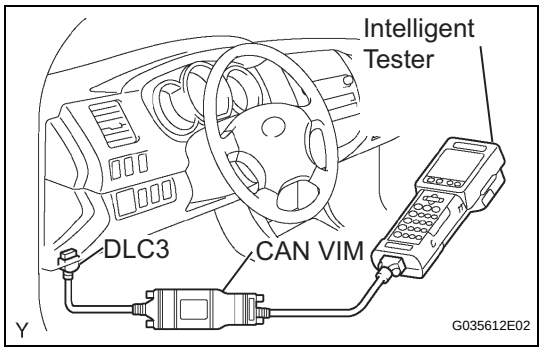
(b) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
4 (THA) - 5 (E2)	12.5 to 16.9kΩ at -20°C (-4°F)
4 (THA) - 5 (E2)	2.19 to 2.67kΩ at 20°C (68°F)
4 (THA) - 5 (E2)	0.50 to 0.68kΩ at 60°C (140°F)

If the result is not as specified, replace the mass air flow meter.



CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Check the operation.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the intelligent tester ON.

(4) Start the engine and warm it up.

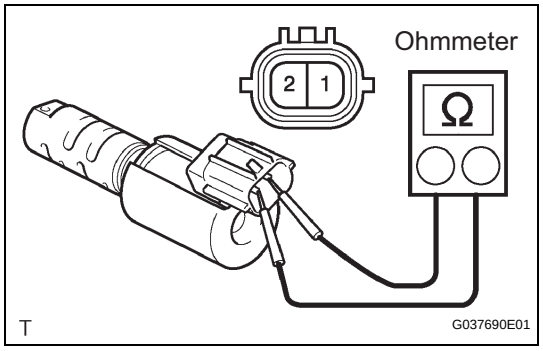
(5) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.

(6) Operate the OCV using the hand-held tester, then check the engine speed.

Standard

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Rough idling engine stalls

If the operation is not specified, check the camshaft timing oil control valve, wire harness and ECM.



INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

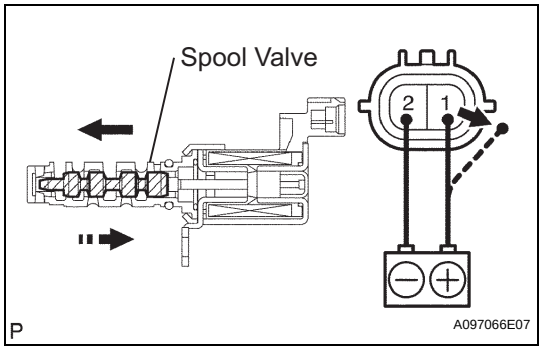
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
1 (+B) - 2 (GND)	6.9 to 7.9 kΩ at 20°C (68°F)

If the result is not as specified, replace the camshaft timing oil control valve.



(b) Check the operation.

(1) Apply battery voltage across the terminals, and check that the spool valve operates.

NOTICE:

Check that the spool valve is not stuck.

HINT:

The spool valve may not return if foreign objects are caught in it. This may cause subtle pressure leakage to the advance side, and a DTC may be set.

CAMSHAFT POSITION SENSOR

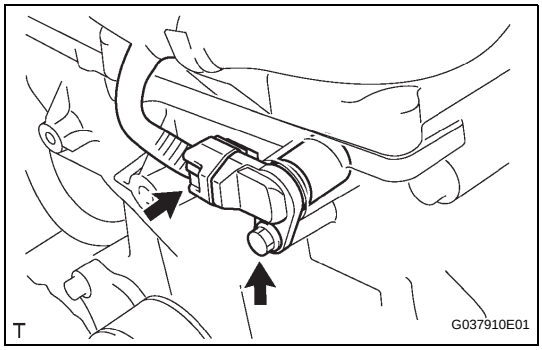
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CAMSHAFT POSITION SENSOR

(a) Disconnect the camshaft position sensor connector.

(b) Remove the bolt, then remove the camshaft position sensor.



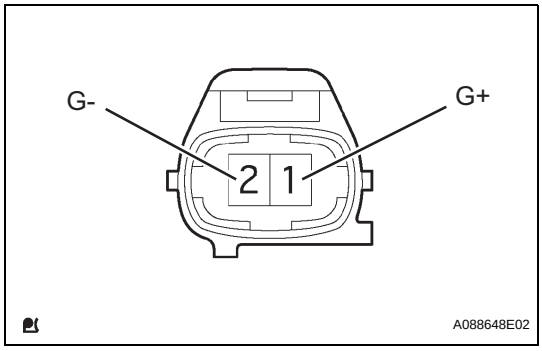
INSPECTION

1. INSPECT CAMSHAFT POSITION SENSOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard



Tester Connection	Specified Condition
1 (G+) - 2 (G-)	835 to 1,400 Ω at COLD
1 (G+) - 2 (G-)	1,060 to 1,645 Ω at HOT

HINT:

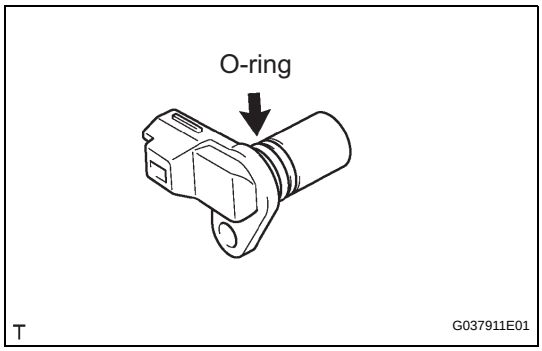
Cold and Hot mean the temperature of the coils themselves. Cold is from -10 to 50°C (14 to 122°F) and Hot is from 50 to 100°C (122 to 212°F).

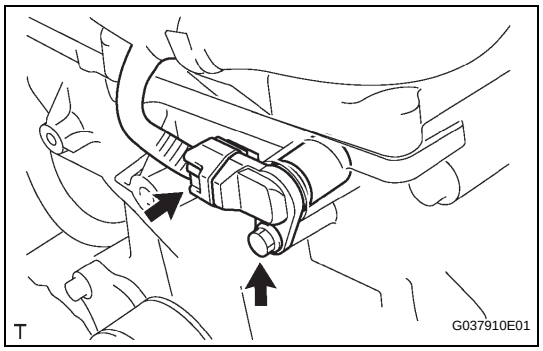
If the result is not as specified, replace the camshaft position sensor.

INSTALLATION

1. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the camshaft position sensor.





(b) Install the camshaft position sensor with the bolt.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Make sure that the O-ring is not cracked or jammed when installing.

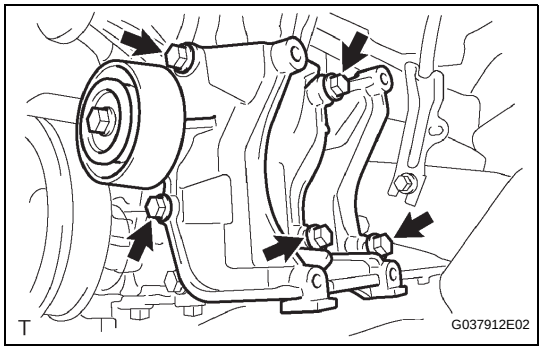
(c) Connect the camshaft position sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

CRANKSHAFT POSITION SENSOR

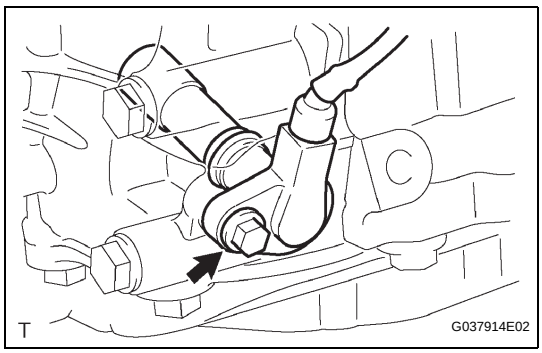
REMOVAL

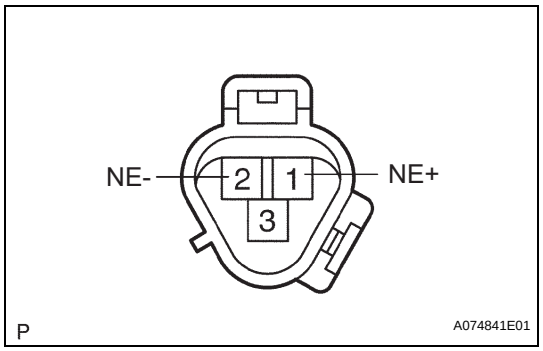
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for 4WD and Pre-Runner)**
3. **REMOVE FAN AND GENERATOR V BELT (W/ AIR CONDITIONING) (See page EM-5)**
4. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING) (See page EM-21)**
5. **REMOVE IDLE PULLEY ASSEMBLY WITH BRACKET (W/ AIR CONDITIONING)**
   (a) Remove the 5 bolts, then remove the idle pulley with bracket.



6. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Disconnect the crankshaft position sensor connector and the 2 wire harness clamps.

   (b) Remove the bolt, then remove the crankshaft position sensor.





INSPECTION

1. INSPECT CRANKSHAFT POSITION SENSOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

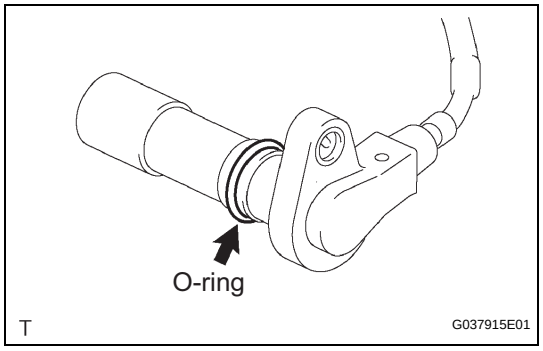
Standard

Tester Connection	Specified Condition
1 (NE+) - 2 (NE-)	1,630 to 2,740 Ω at COLD
1 (NE+) - 2 (NE-)	2,065 to 3,225 Ω at HOT

HINT:

Cold and Hot mean the temperature of the coils themselves. Cold is from -10 to 50°C (14 to 122°F) and Hot is from 50 to 100°C (122 to 212°F).

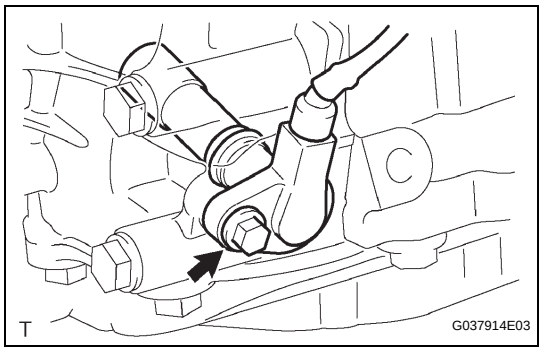
If the result is not as specified, replace the camshaft position sensor.



INSTALLATION

1. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the crankshaft position sensor.



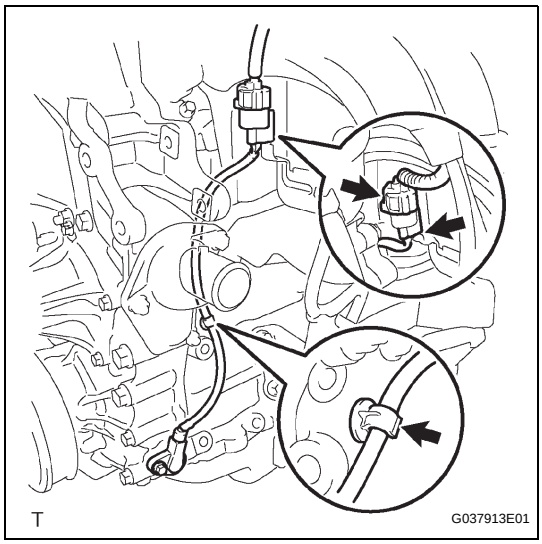
(b) Install the camshaft position sensor with the bolt.

Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

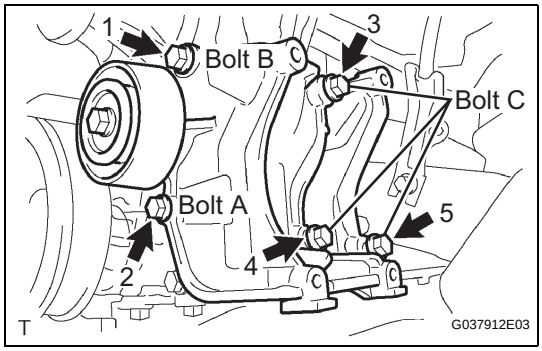
NOTICE:

Make sure that the O-ring is not cracked or jammed when installing.

ES



(c) Connect the crankshaft position sensor connector and the 2 wire harness clamps.



2. INSTALL IDLE PULLEY ASSEMBLY WITH BRACKET (W/ AIR CONDITIONING)

(a) Using several steps, uniformly install and tighten the 5 bolts in the sequence shown in the illustration.

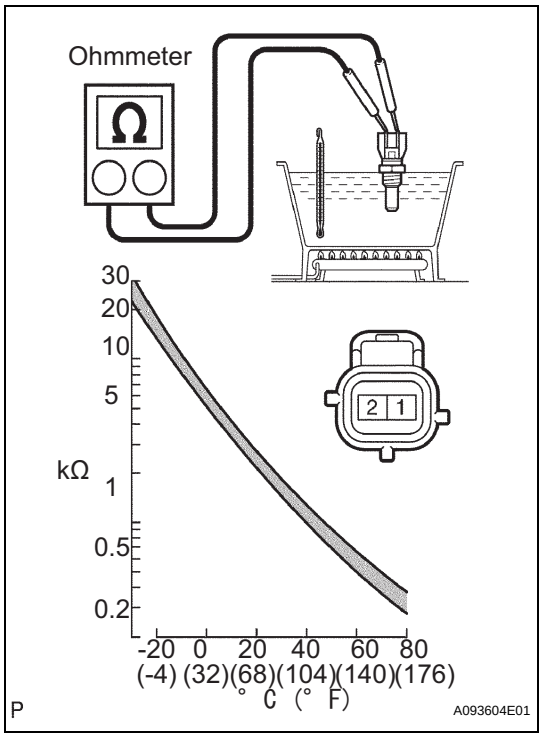
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf) for bolt A
43 N*m (438 kgf*cm, 32 ft.*lbf) for bolt B, C

3. INSTALL COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING) (See page EM-34)

4. INSTALL FAN AND GENERATOR V BELT (W/ AIR CONDITIONING) (See page EM-6)

5. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY NO.1 (for 4WD and Pre-Runner)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



ENGINE COOLANT TEMPERATURE SENSOR

INSPECTION

1. INSPECT E.F.I. ENGINE COOLANT TEMPERATURE SENSOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
1 (E2) - 2 (THW)	2.32 to 2.59 kΩ at 20°C (68°F)
1 (E2) - 2 (THW)	0.310 to 0.326 kΩ at 80°C (176°F)

ES

NOTICE:

If checking the engine coolant temperature sensor in water, be careful not to allow water to intrude into the terminals. After checking, wipe the water off the engine coolant temperature sensor.

If the result is not as specified, replace the engine coolant temperature sensor.

EFI RELAY

INSPECTION

1. INSPECT EFI RELAY

(a) Check the resistance.

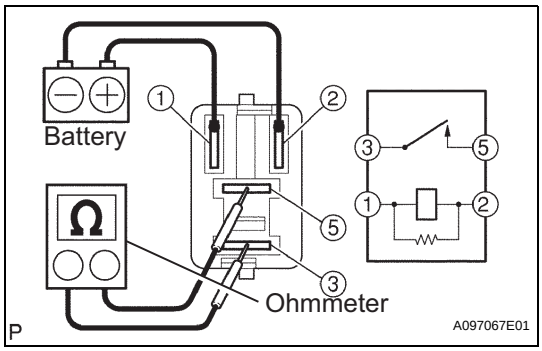
(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the E.F.I. relay.

ES



CIRCUIT OPENING RELAY

INSPECTION

1. INSPECT CIRCUIT OPENING RELAY ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

If the result is not as specified, replace the circuit opening relay assembly.

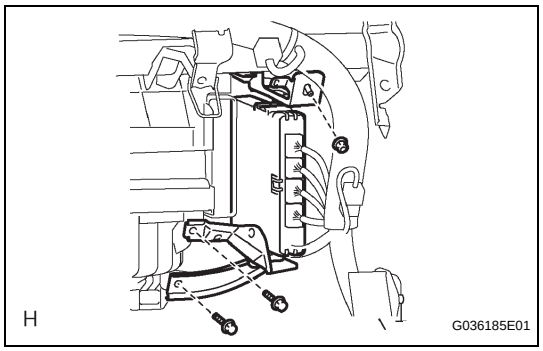
ES

ECM

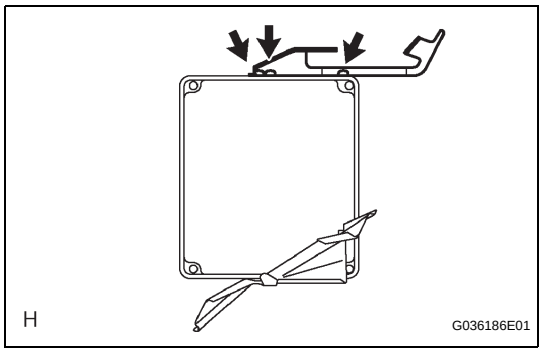
REMOVAL

NOTICE:
Perform REGISTRATION (VIN registration) when replacing the ECM (see page ES-16).

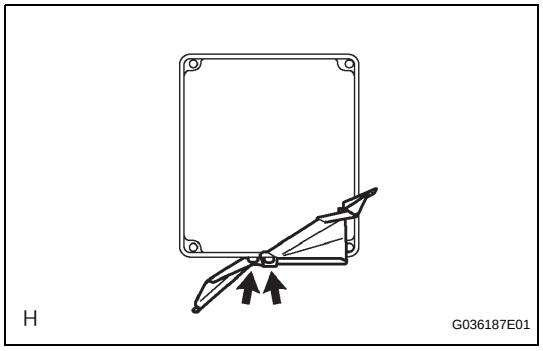
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-14)**
4. **REMOVE ECM**
   (a) Disconnect the 4 connectors.
   (b) Remove the 2 bolts and nut, then remove the ECM.



5. **REMOVE ECM BRACKET**
   (a) Remove the 3 screws, then remove the ECM bracket.

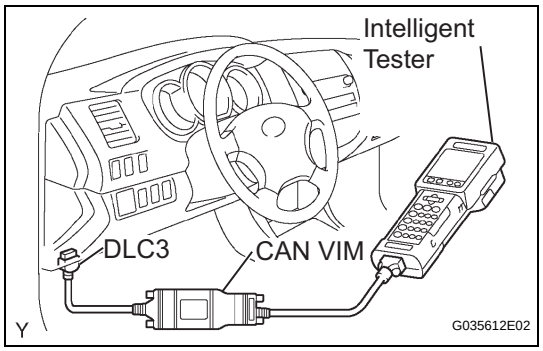


6. **REMOVE ECM BRACKET NO.2**
   (a) Remove the 2 screws, then remove the ECM bracket No. 2.



INSTALLATION

1. **INSTALL ECM BRACKET NO.2**
   Torque: 3 N*m (32 kgf*cm, 28 in.*lbf)
2. **INSTALL ECM BRACKET**
   Torque: 3 N*m (32 kgf*cm, 28 in.*lbf)
3. **INSTALL ECM**
   Torque: 5 N*m (51 kgf*cm, 44 in.*lbf)
4. **INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER RH (See page IP-20)**
5. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



ACCELERATOR PEDAL

ON-VEHICLE INSPECTION

1. INSPECT ACCELERATOR PEDAL ASSEMBLY

(a) Inspect the voltage.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the intelligent tester ON.

(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD ll / DATA LIST /ALL /ACCEL POS #1, ACCEL POS #2.

(5) Operate the accelerator pedal, then check that the ACCEL POS #1 and ACCEL POS #2 values are within the specified ranges.

ACCEL POS #1

Accelerator Pedal Condition	Specified Condition
Released	0.5 to 1.1 V
Depressed	2.6 to 4.5 V

ACCEL POS #2

Accelerator Pedal Condition	Specified Condition
Released	1.2 to 2.0 V
Depressed	3.4 to 5.0 V

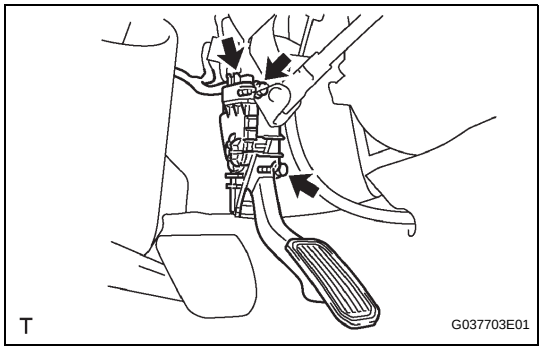
If the result is not as specified, check the accelerator pedal, wire harness and ECM.

ES

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE ACCELERATOR PEDAL ROD ASSEMBLY**
   (a) Disconnect the accelerator position sensor connector.
   (b) Remove the 2 bolts, then remove the accelerator pedal.



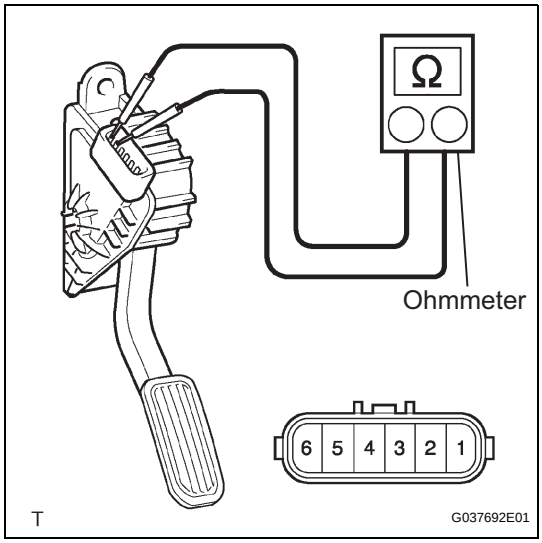
ES

INSPECTION

1. **INSPECT ACCELERATOR PEDAL ROD ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard

Tester Connection	Specified Condition
5 (EP1) - 4 (VCP1)	1M Ω or higher
2 (EP2) - 1 (VCP2)	1M Ω or higher

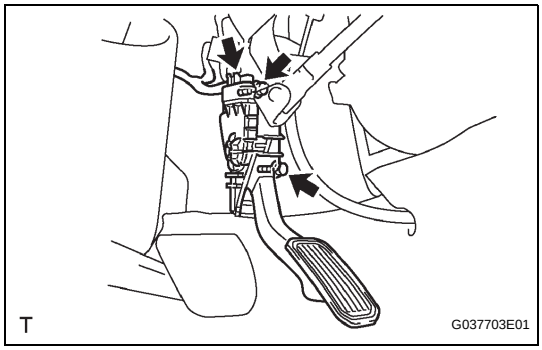
If the result is not as specified, replace the accelerator pedal.



INSTALLATION

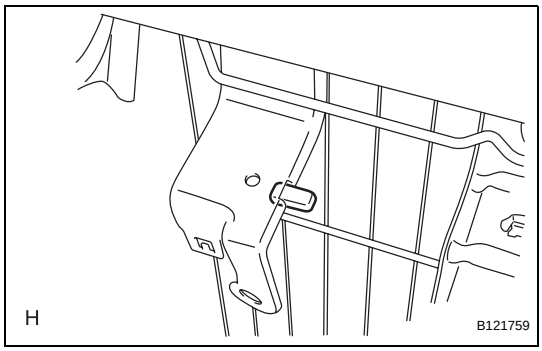
1. **INSTALL ACCELERATOR PEDAL ROD ASSEMBLY**
   NOTICE:
   - **Avoid any physical impact to the accelerator pedal assembly.**
   - **Do not disassemble the accelerator pedal assembly.**
   (a) Install the accelerator pedal with the 2 bolts.
   Torque: 5 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Connect the accelerator position sensor connector.

2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



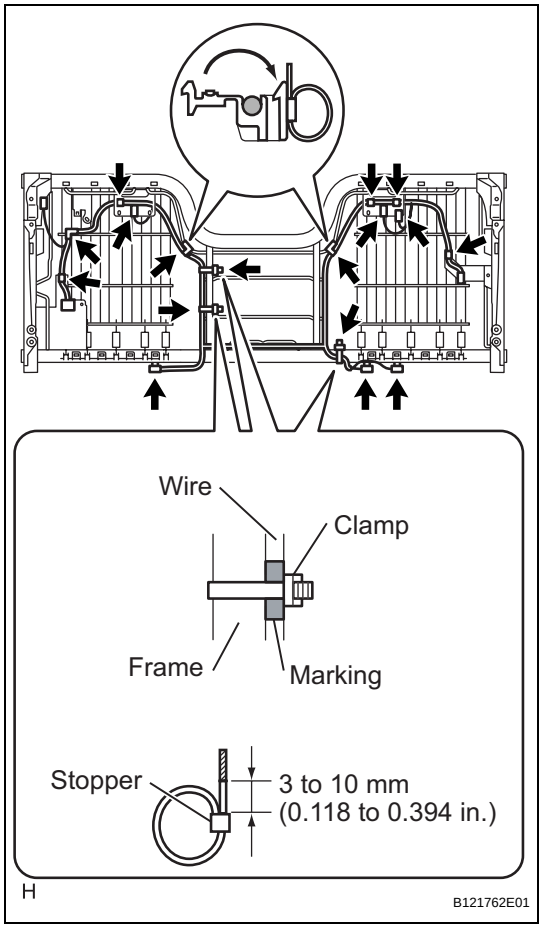
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat back spring and the front seat cushion spring could cause injuries to your hands.
NOTICE:
Remove the front seat cushion pad and the front seat cushion cover together, in order to avoid occupant classification sensor malfunctions.



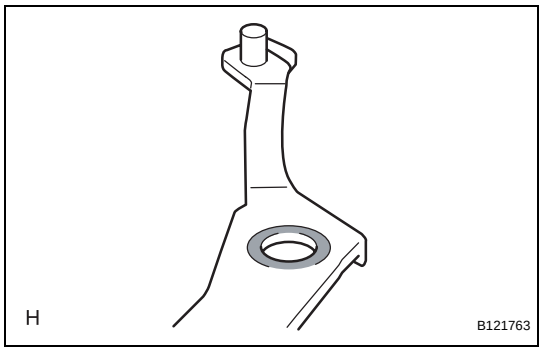
1. INSTALL FRONT SEAT CUSHION SPRING PROTECTOR

(a) Install the front seat cushion spring protector.



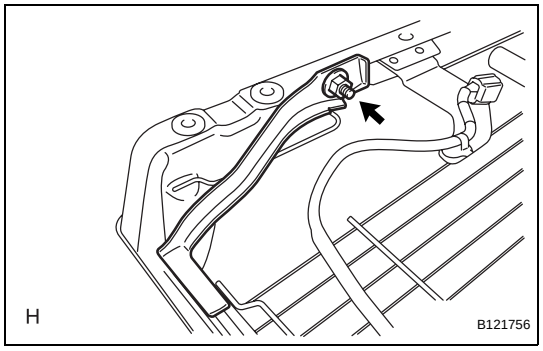
2. INSTALL SEAT WIRE

(a) Install the seat wire with the 12 wiring harness clamps.
(b) Install the 2 wiring harness clamps as shown in the illustration.
(c) Install 3 new wiring harness clamps as shown in the illustration.
(d) Cut each wiring harness clamp 3 to 10 mm (0.118 to 0.394 in.) from the stopper, as shown in the illustration.

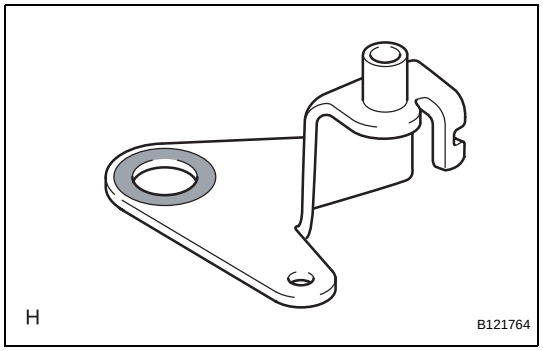


3. INSTALL SEAT TRACK HANDLE SUB-ASSEMBLY LH

(a) Apply grease to the seat track handle as shown in the illustration.

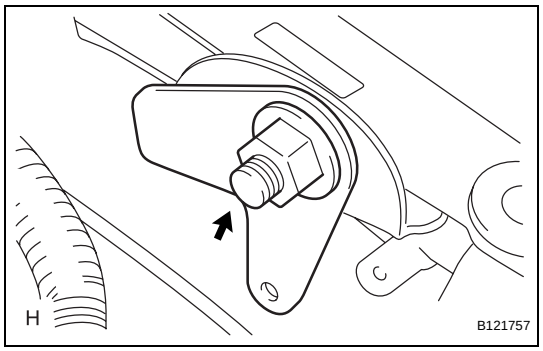


(b) Install the seat track handle with the nut.
Torque: 14 N*m (145 kgf*cm, 10 ft.*lbf)



4. INSTALL SEAT TRACK HANDLE SUB-ASSEMBLY RH

(a) Apply grease to the seat track handle as shown in the illustration.

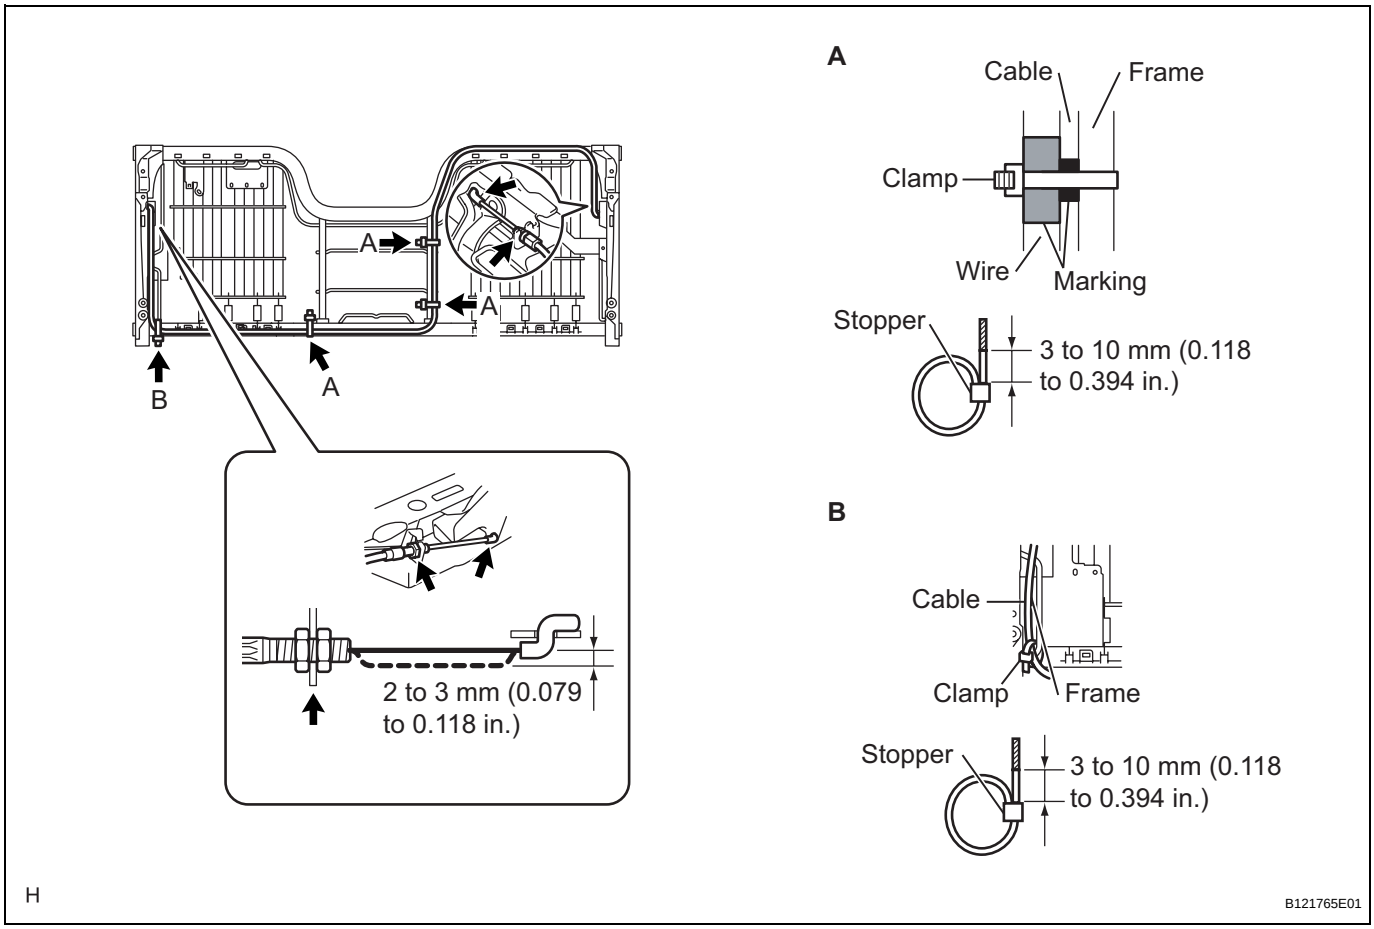


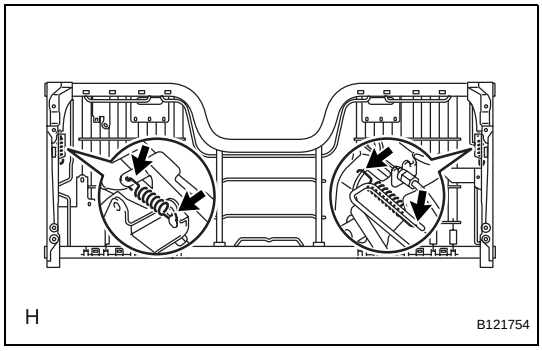
(b) Install the seat track handle with the nut.
Torque: 14 N*m (145 kgf*cm, 10 ft.*lbf)

5. INSTALL FRONT SEAT SLIDE CONTROL CABLE ASSEMBLY

(a) Install the 2 cable ends and the front seat slide control cable.
(b) Install the casing cap.
(c) Install the screw cap with the nut.
(d) Check that the cable is slack.
HINT:
If not, adjust the cable tension by loosening the nut.
(e) Install 4 new wiring harness clamps as shown in the illustration.

(f) Cut each wiring harness clamp 3 to 10 mm (0.118 to 0.394 in.) from the stopper, as shown in the illustration.

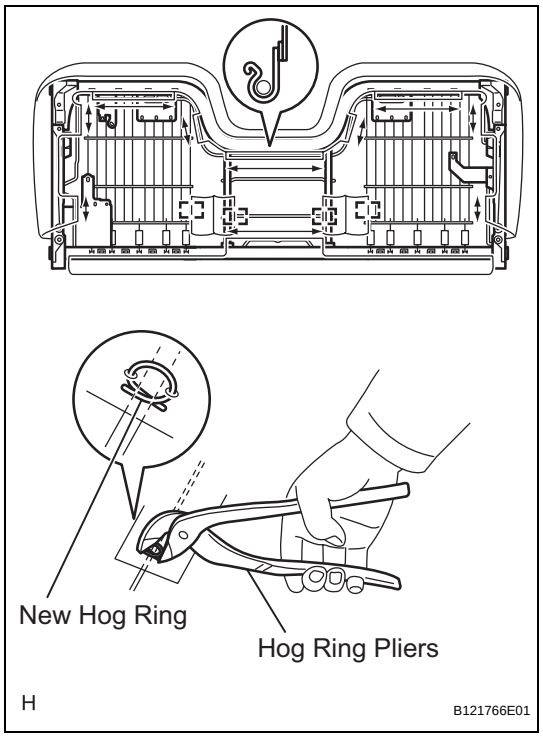




6. INSTALL SEAT TRACK SPRING

(a) Install the 2 seat track springs.

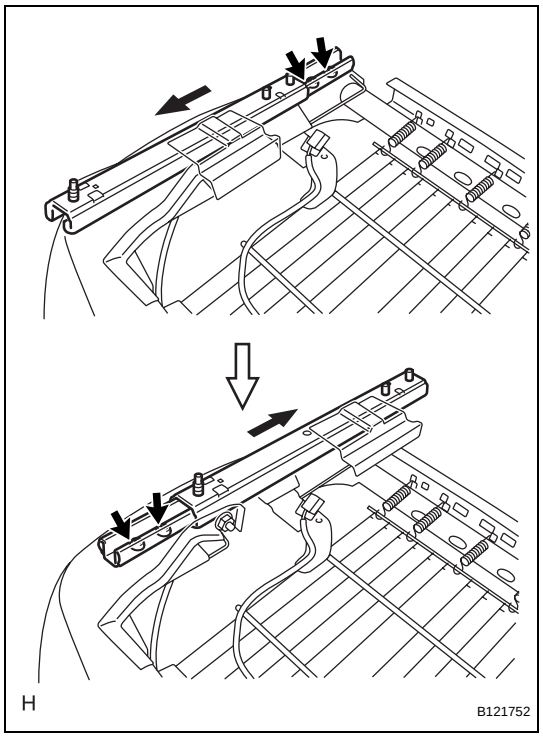
7. INSTALL OCCUPANT CLASSIFICATION SENSOR (See page RS-627)



8. INSTALL FRONT SEAT CUSHION SPRING ASSEMBLY

(a) Engage the 10 hooks and install the front seat cushion spring.

(b) Using hog ring pliers, install 4 new hog rings.



9. INSTALL FRONT SEAT TRACK OUTER ASSEMBLY LH

(a) Insert the lever as shown in the illustration.

(b) Slide the front seat track outer to the most forward position.

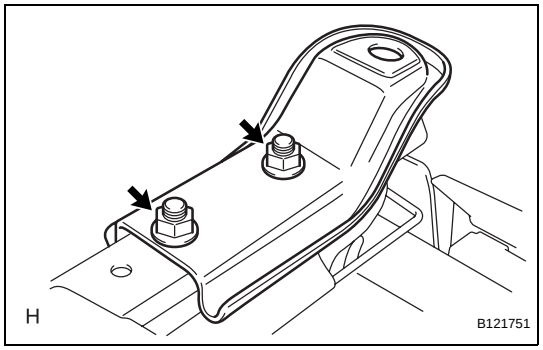
(c) Using "Torx" socket wrench T40, tighten the 2 bolts.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)

(d) Slide the front seat track outer to the most rearward position.

(e) Using "Torx" socket wrench T40, tighten the 2 bolts.

10. INSTALL FRONT SEAT TRACK OUTER ASSEMBLY RH

HINT:
Use the same procedure as for the LH side.



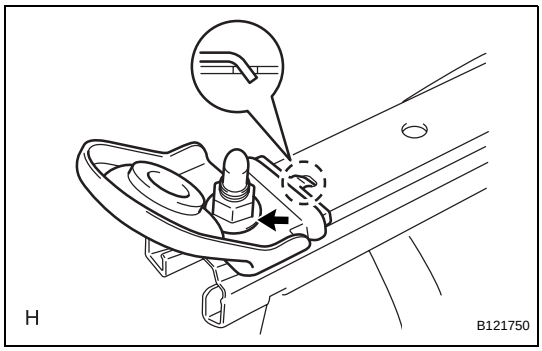
11. INSTALL FRONT SEAT TRACK REAR BRACKET LH

(a) Install the front seat track rear bracket with the 2 nuts.
Torque: 32 N*m (325 kgf*cm, 24 ft.*lbf)

12. INSTALL FRONT SEAT TRACK REAR BRACKET RH

HINT:
Use the same procedure as for the LH side.

SE



13. **INSTALL FRONT SEAT TRACK FRONT BRACKET LH**
    (a) Engage the hook and install the front seat track front bracket with the nut.
    Torque: 32 N*m (325 kgf*cm, 24 ft.*lbf)

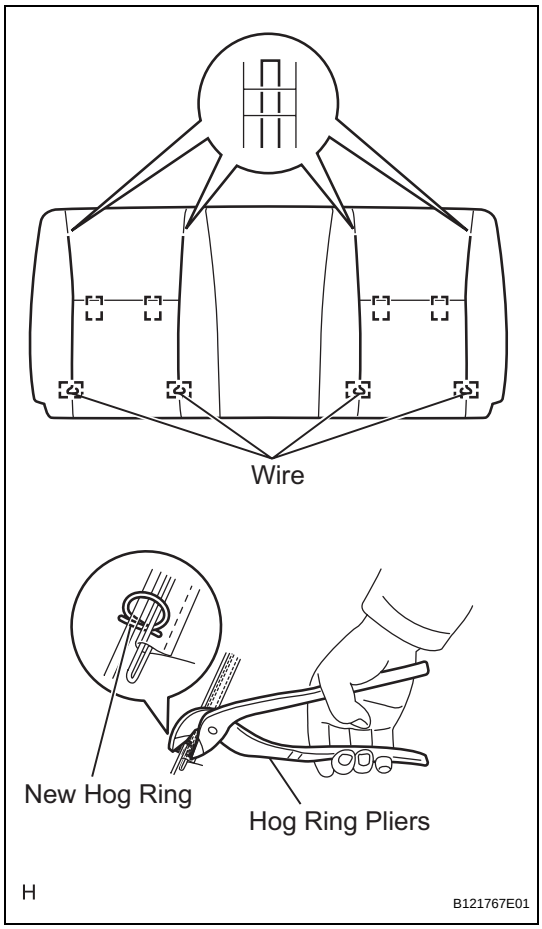
14. **INSTALL FRONT SEAT TRACK FRONT BRACKET RH**
    HINT:
    Use the same procedure as for the LH side.

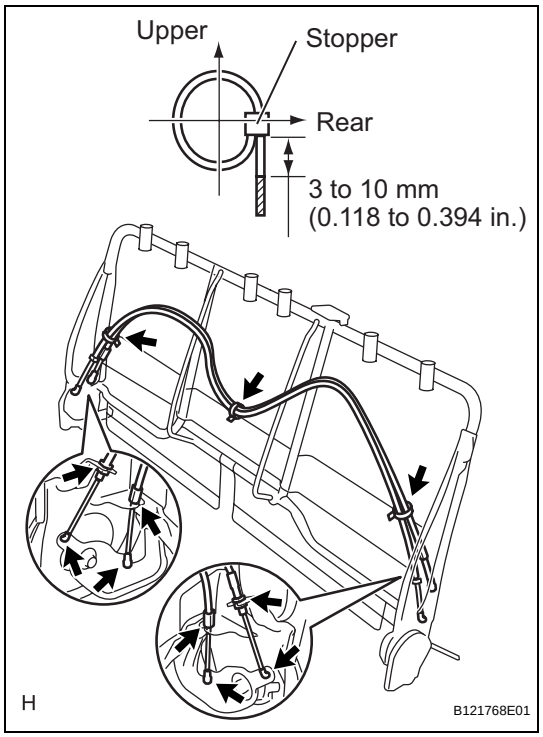
15. **INSTALL SEAT POSITION SENSOR**
    (a) for Driver Side:
        (1) Install the seat position sensor (See page RS-622).
    (b) for Front Passenger Side:
        (1) Install the seat position sensor (See page RS-621).

16. **INSTALL SEAT POSITION SENSOR PROTECTOR (See page RS-622)**

17. **INSTALL OCCUPANT CLASSIFICATION ECU (See page RS-635)**

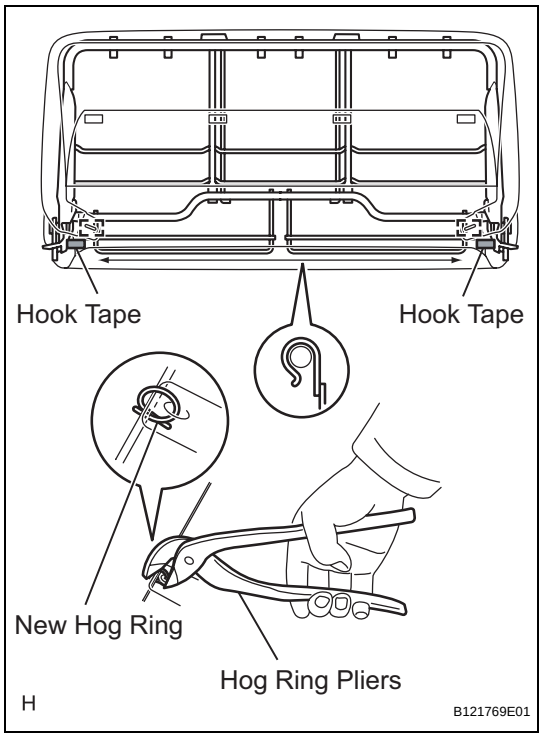
18. **INSTALL FRONT SEAT BACK COVER**
    (a) Using hog ring pliers, install the front seat back cover with 4 new hog rings.
    NOTICE:
    - **Do not contaminate or scratch the front seat cushion cover.**
    - **When installing the hog rings, minimize wrinkles as far as possible.**
    (b) Using hog ring pliers, install 4 wires with the 4 new hog rings.





19. INSTALL FRONT SEAT RECLINING CONTROL CABLE ASSEMBLY

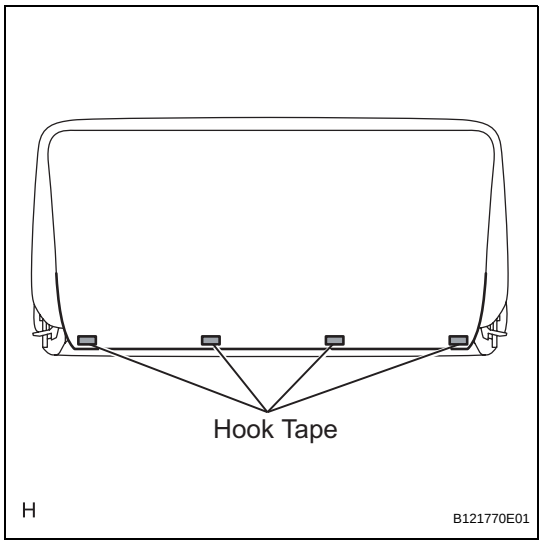
(a) Install the 4 cable ends and the 2 front seat reclining control cables.
(b) Install the 2 casing caps.
(c) Install the 2 screw caps with the 2 nuts.
(d) Install 3 new wiring harness clamps as shown in the illustration.
(e) Cut each wiring harness clamp 3 to 10 mm (0.118 to 0.394 in.) from the stopper, as shown in the illustration.



20. INSTALL FRONT SEAT BACK SPRING ASSEMBLY

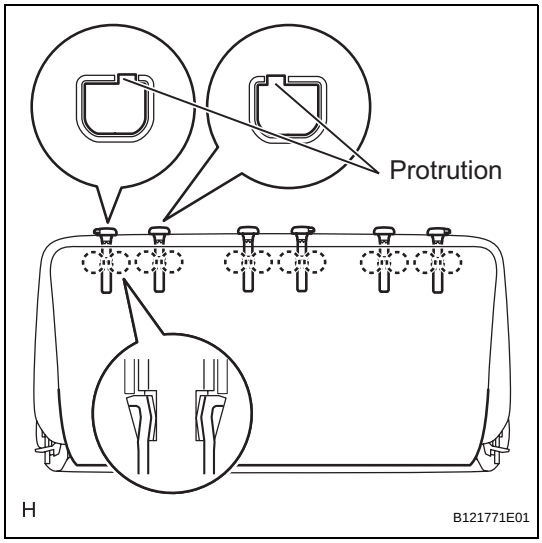
(a) Engage the 4 hooks and install the front seat back spring.
(b) Install the 2 pieces of hook tape.
(c) Using hog ring pliers, install 2 new hog rings.

SE



(d) Install the 4 pieces of hook tape.

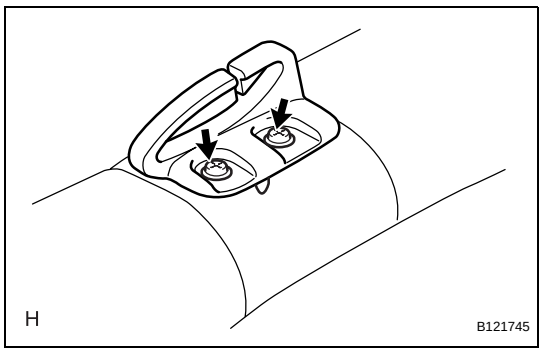
SE



21. INSTALL FRONT SEAT HEADREST SUPPORT

(a) Align the protruding portions of the front seat headrest support with the installation grooves of the front seat back spring.

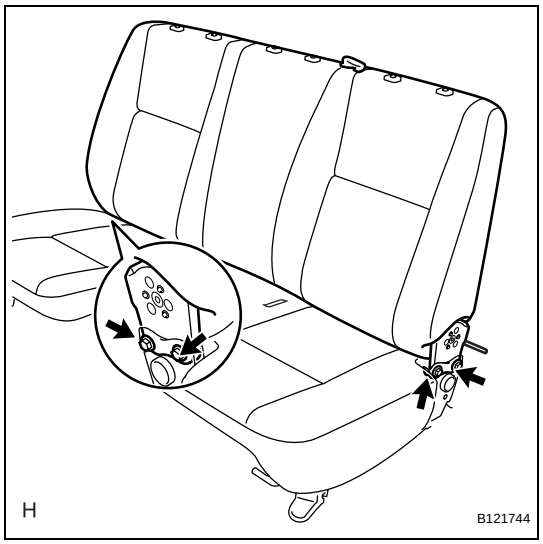
(b) Engage the 12 claws and install the 6 front seat headrest supports.



22. INSTALL FRONT CENTER SEAT OUTER BELT GUIDE

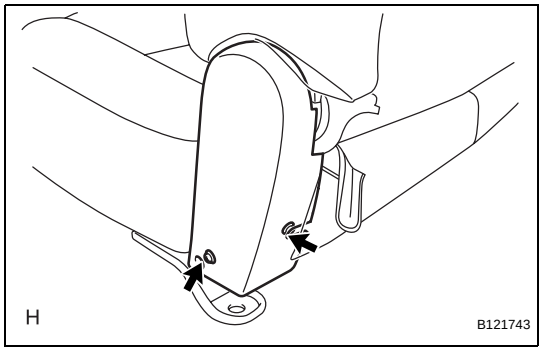
(a) Align the pin of the front center seat outer belt guide with the installation hole in the front seat back spring.

(b) Install the front center seat outer belt guide with the 2 screws.



23. INSTALL FRONT SEAT BACK ASSEMBLY

(a) Install the front seat back with the 4 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

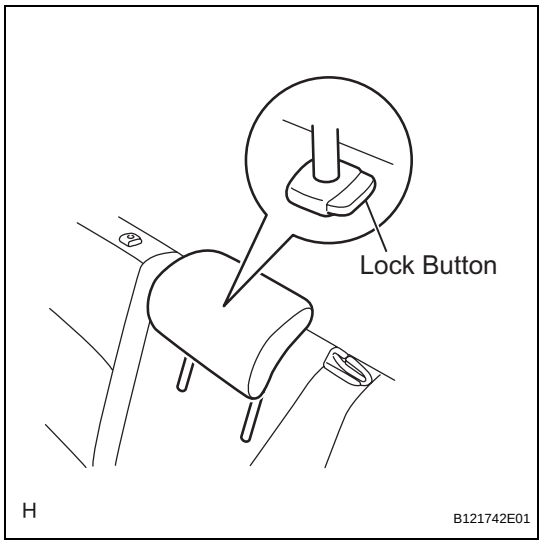


24. INSTALL FRONT SEAT HINGE COVER LH

(a) Install the front seat hinge cover with the 2 screws.

25. INSTALL FRONT SEAT HINGE COVER RH

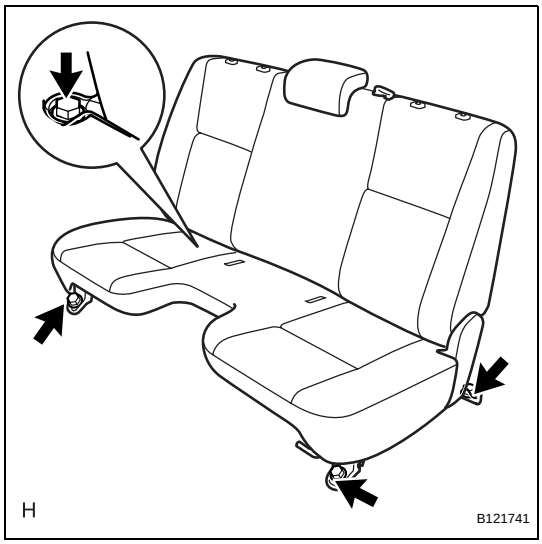
HINT:
Use the same procedure as for the LH side.



26. INSTALL FRONT CENTER SEAT HEADREST ASSEMBLY

(a) Push in the lock button of the front seat headrest support and install the front center seat headrest.

SE

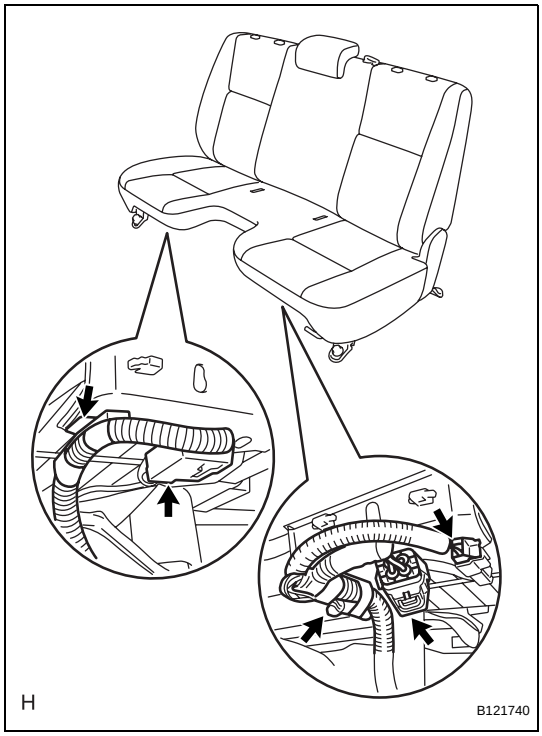


INSTALLATION

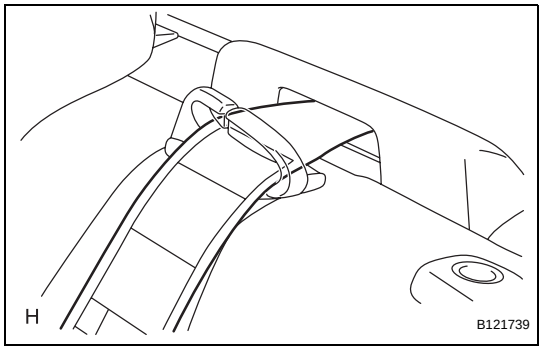
1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat in the cabin.
(b) Slide the front seat to the most rearward position.
(c) Tighten the 2 bolts on the front side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)
(d) Slide the front seat to the most forward position.
(e) Tighten the 2 bolts on the rear side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

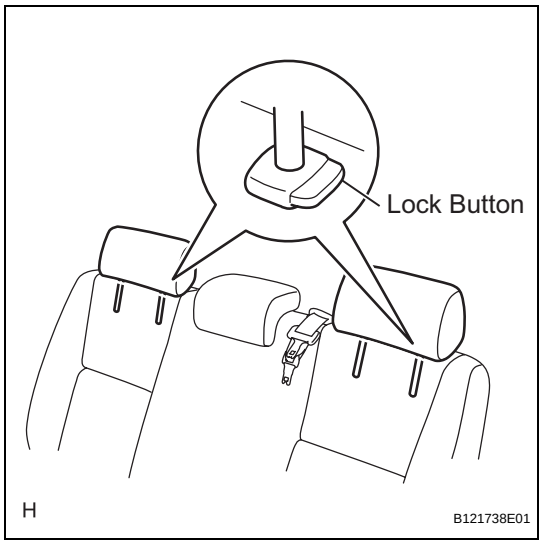
SE



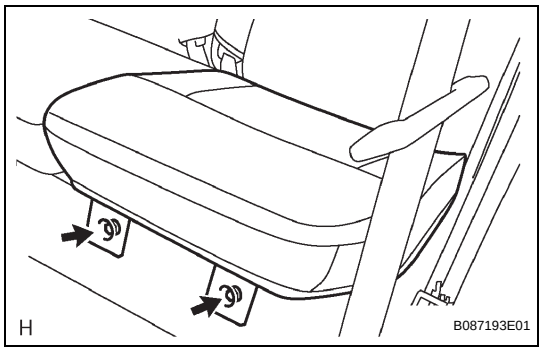
(f) Install the 2 wiring harness clamps.
(g) Connect the 3 connectors.



(h) Install the belt of the front center seat outer belt into the front center seat outer belt guide.



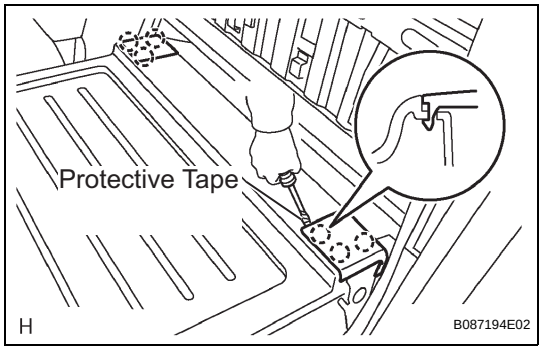
2. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
   (a) Push in the 2 lock buttons of the 2 front seat headrest supports and install the 2 front seat headrests.
3. **INSTALL FRONT SEAT INNER BELT ASSEMBLY LH (See page SB-13)**
4. **INSTALL FRONT SEAT INNER BELT ASSEMBLY RH (See page SB-14)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)



REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Remove the 2 bolts and rear seat cushion.



2. REMOVE REAR SEAT BACK HINGE COVER

(a) for LH Side:

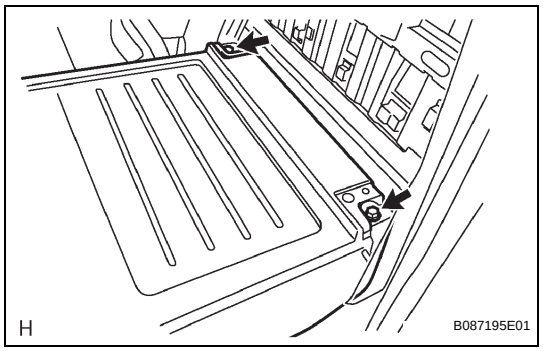
HINT:

Follow the same procedures as for the opposite side.

(1) Using a screwdriver with its tip taped in protective tape, disengage the 3 claws and remove the rear seat back hinge cover.

(b) for RH Side:

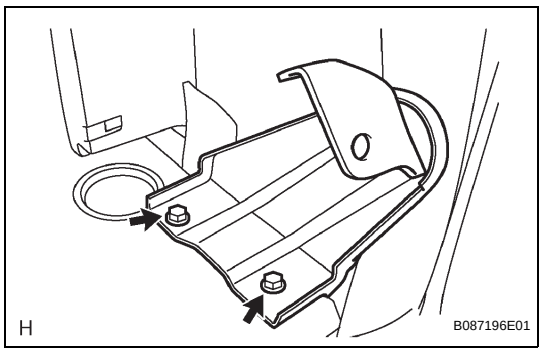
(1) Remove the rear seat back hinge cover (See page SE-82).



3. REMOVE REAR SEAT BACK ASSEMBLY LH

(a) Remove the 2 bolts and rear seat back.

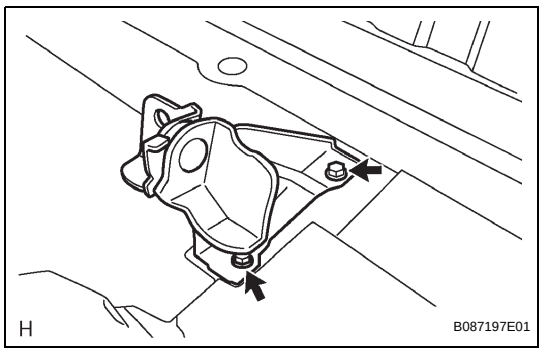
4. REMOVE REAR SEAT BACK ASSEMBLY RH (See page SE-82)



5. REMOVE REAR SEAT BACK HINGE SUB-ASSEMBLY

(a) Remove the 2 bolts and rear seat back hinge.

6. REMOVE LUGGAGE COMPARTMENT SIDE TRAY (See page IR-16)



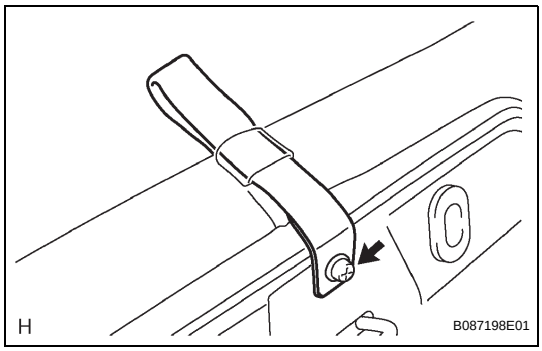
7. REMOVE REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY

(a) Remove the 2 bolts and rear seat back center hinge.

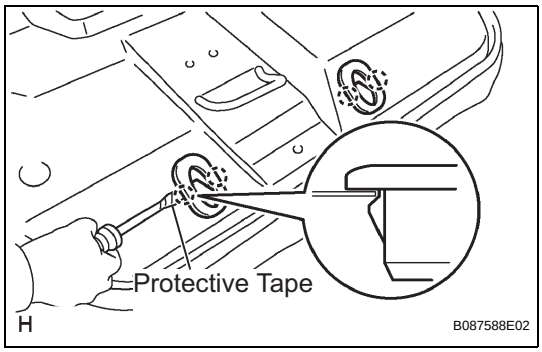
SE

DISASSEMBLY

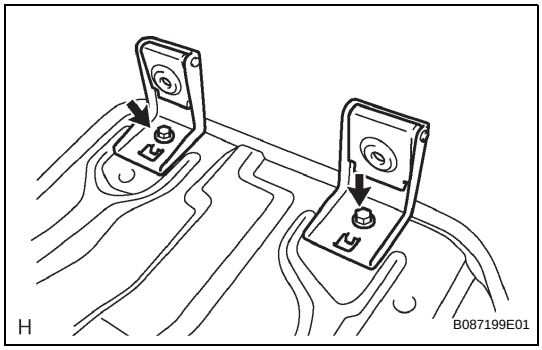
CAUTION:
Wear protective gloves. Sharp surface on the rear seat back frame could cause injuries to your hands.



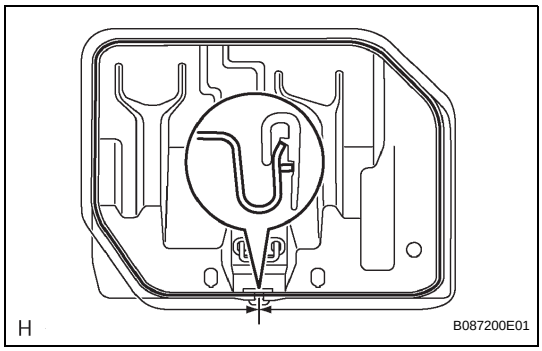
1. REMOVE REAR SEAT CUSHION BAND
(a) Remove the screw and rear seat cushion band.



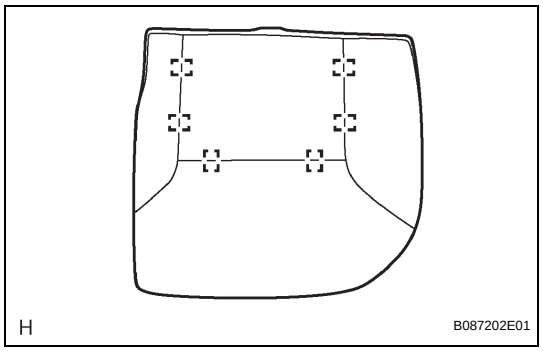
2. REMOVE REAR SEAT HEADREST HOLDER
HINT:
Follow the same procedures as for the opposite side.
(a) Using a screwdriver, disengage the 2 claws and remove the rear seat headrest holder.



3. REMOVE REAR SEAT CUSHION HINGE SUB-ASSEMBLY
HINT:
Follow the same procedures as for the opposite side.
(a) Remove the bolt and rear seat cushion hinge.

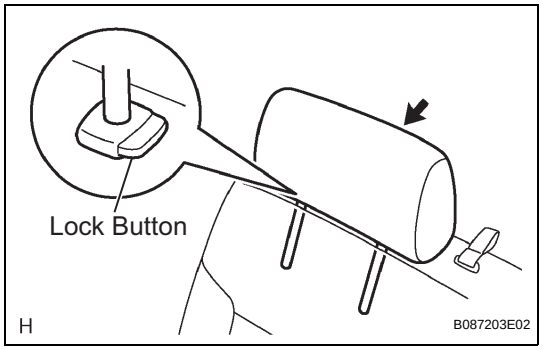


4. REMOVE REAR SEAT CUSHION FRAME SUB-ASSEMBLY
(a) Disengage the hook and remove the rear seat cushion frame.



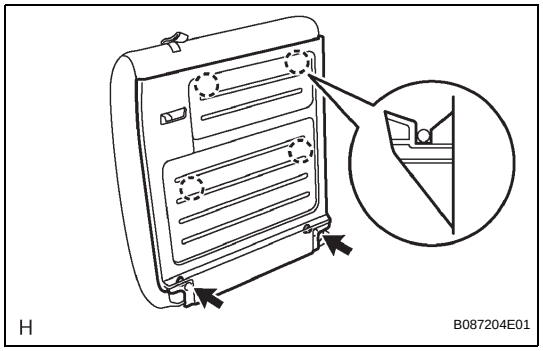
5. REMOVE REAR SEAT CUSHION COVER

(a) Remove the 6 hog rings and rear seat cushion cover.



6. REMOVE REAR SEAT HEADREST ASSEMBLY

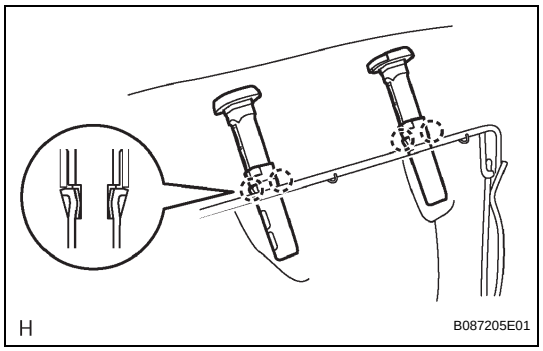
(a) Disengage the lock button of the rear seat headrest support and remove the rear seat headrest.



7. REMOVE REAR SEAT BACK BOARD SUB-ASSEMBLY

(a) Remove the 2 screws.

(b) Disengage the 4 claws and remove the rear seat back board.

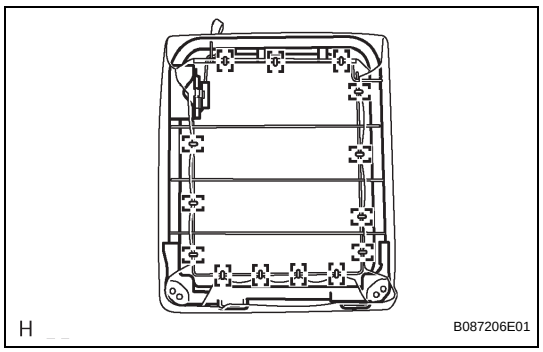


8. REMOVE REAR SEAT HEADREST SUPPORT

HINT:

Follow the same procedures as for the opposite side.

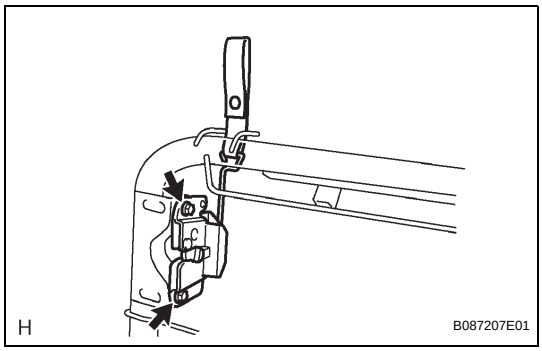
(a) Disengage the 2 claws and remove the rear seat headrest support.



9. REMOVE REAR SEAT BACK FRAME SUB-ASSEMBLY

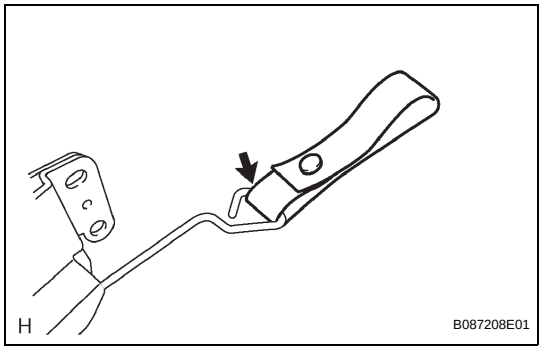
(a) Remove the 14 hog rings.

(b) Remove the rear seat back spring from the rear seat back pad.



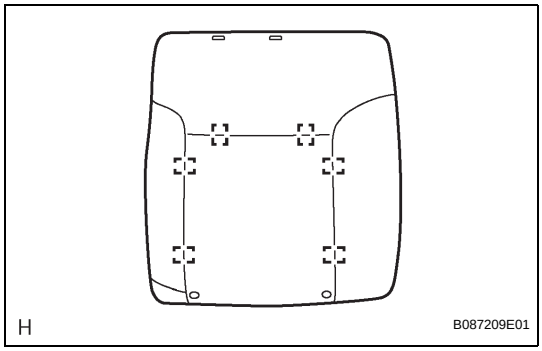
10. REMOVE REAR SEAT BACK LOCK ASSEMBLY

(a) Remove the 2 bolts and rear seat back lock.



11. REMOVE REAR SEAT LOCK HANDLE

(a) Remove the rear seat lock handle from the rear seat back lock.

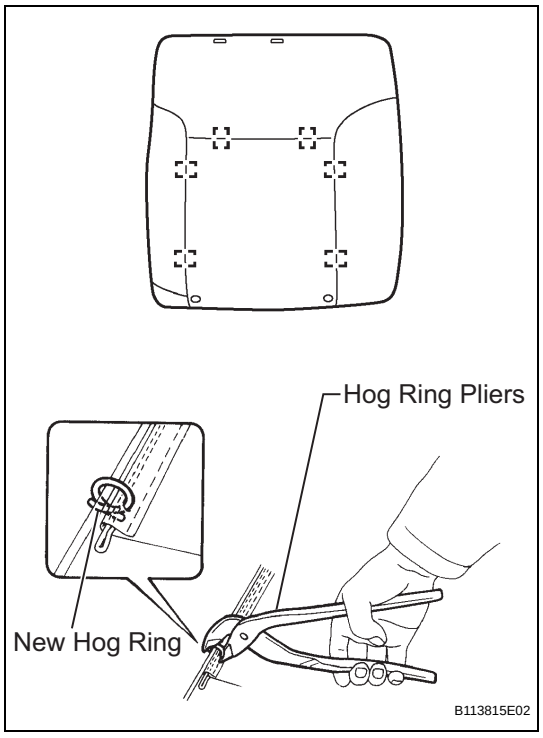


12. REMOVE REAR SEAT BACK COVER

(a) Remove the 6 hog rings and rear seat back cover.

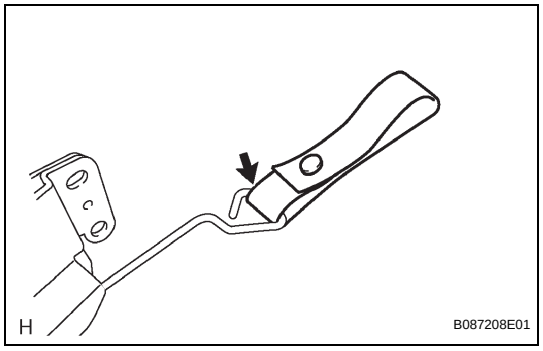
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surface on the rear seat back frame could cause injuries to your hands.



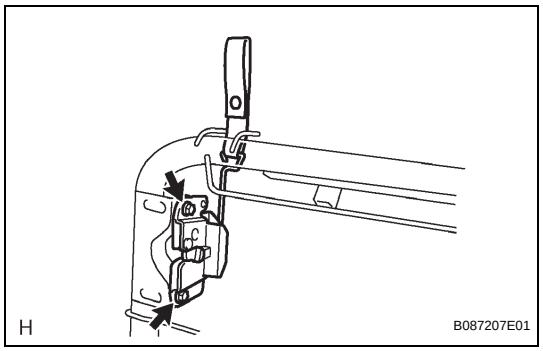
1. INSTALL REAR SEAT BACK COVER

(a) Using hog ring pliers, install the rear seat back cover with new hog rings.
NOTICE:
- **Do not contaminate or scratch the rear seat back cover.**
- **When installing the hog rings, minimize wrinkles as far as possible.**



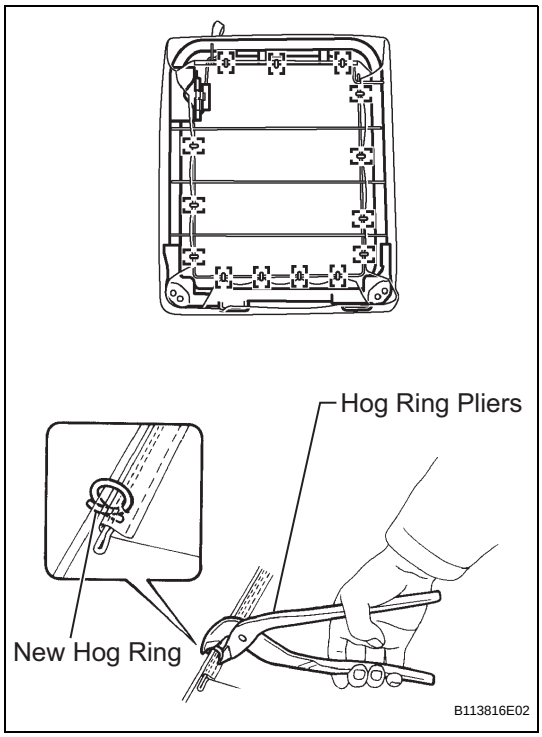
2. INSTALL REAR SEAT LOCK HANDLE

(a) Install the rear seat lock handle onto the rear seat back lock.



3. INSTALL REAR SEAT BACK LOCK ASSEMBLY

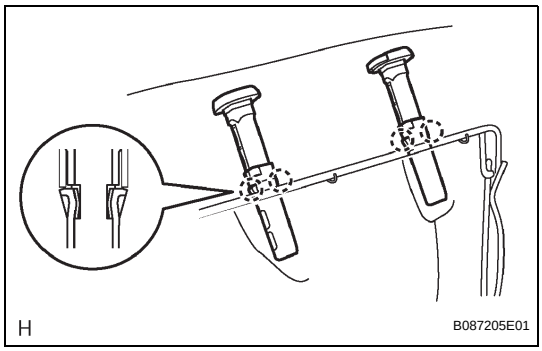
(a) Install the rear seat back lock with the 2 bolts.
Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)



4. INSTALL REAR SEAT BACK FRAME SUB-ASSEMBLY

(a) Install the rear seat back spring into the rear seat back pad.

(b) Using hog ring pliers, install new hog rings.

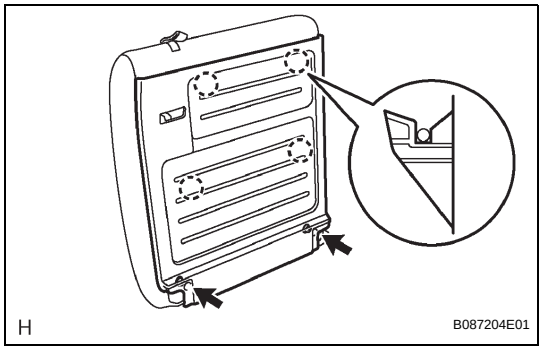


5. INSTALL REAR SEAT HEADREST SUPPORT

HINT:

Follow the same procedures as for the opposite side.

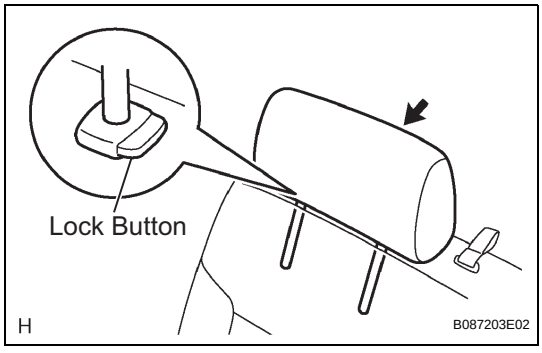
(a) Engage the 2 claws and install the front seat headrest support.



6. INSTALL REAR SEAT BACK BOARD SUB-ASSEMBLY

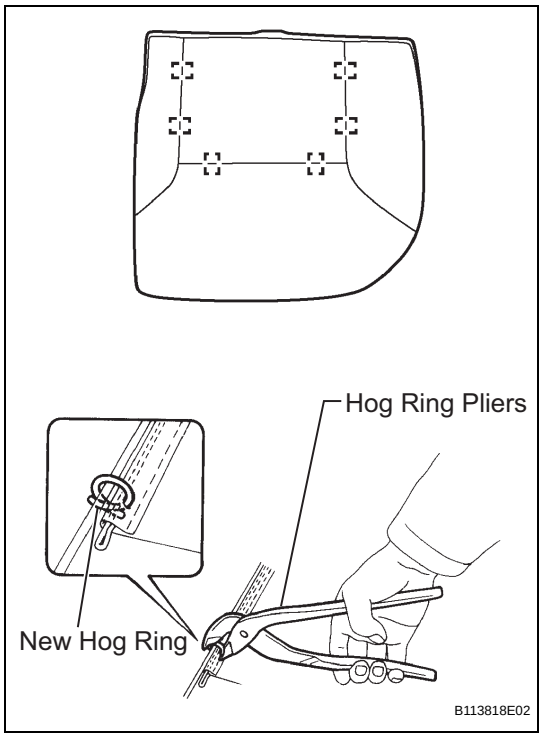
(a) Engage the 4 claws and install the rear seat back board.

(b) Tighten the 2 screws.



7. INSTALL REAR SEAT HEADREST ASSEMBLY

(a) Disengage the lock button of the rear seat headrest support and install the rear seat headrest.

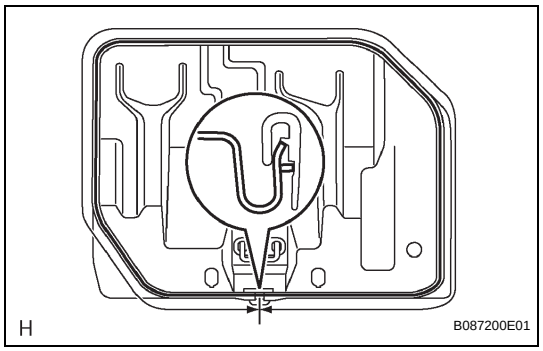


8. INSTALL REAR SEAT CUSHION COVER

(a) Using hog ring pliers, install the rear seat cushion cover with new hog rings.

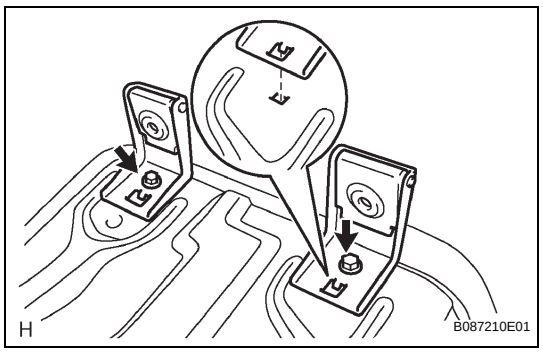
NOTICE:

- **Do not contaminate or scratch the rear seat cushion cover.**
- **When installing the hog rings, minimize wrinkles as far as possible.**



9. INSTALL REAR SEAT CUSHION FRAME SUB-ASSEMBLY

(a) Engage the hook and install the rear seat cushion frame.

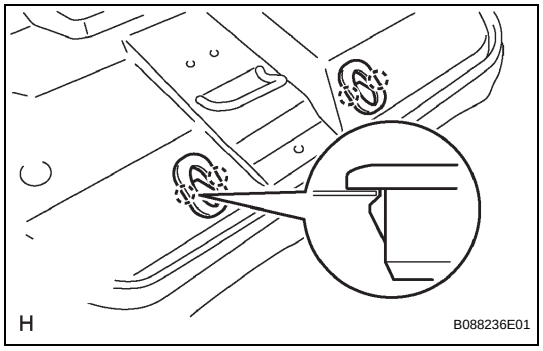


10. INSTALL REAR SEAT CUSHION HINGE SUB-ASSEMBLY

HINT:

Follow the same procedures as for the opposite side.

(a) Install the rear seat cushion hinge with the bolts.
Torque: 21 N*m (215 kgf*cm, 16 ft.*lbf)



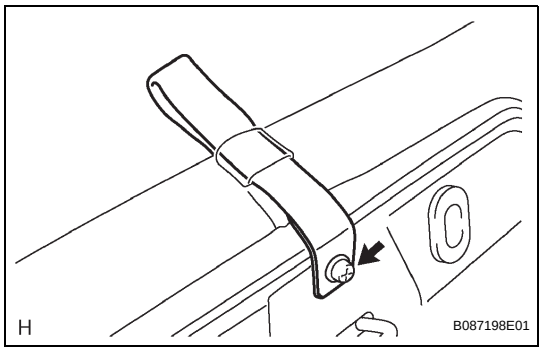
11. INSTALL REAR SEAT HEADREST HOLDER

HINT:

Follow the same procedures as for the opposite side.

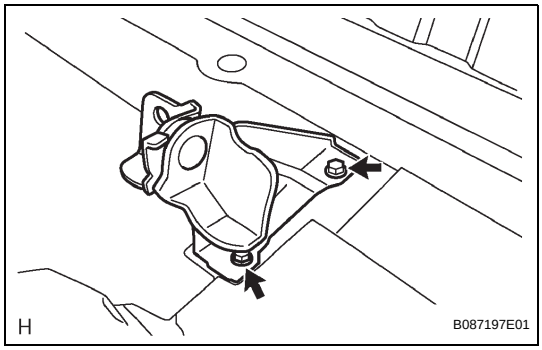
(a) Engage the 2 claws and install the rear seat headrest holder.

SE



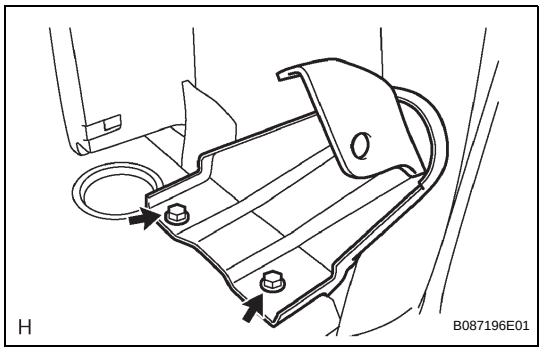
12. INSTALL REAR SEAT CUSHION BAND
(a) Install the rear seat cushion band with the screw.

INSTALLATION

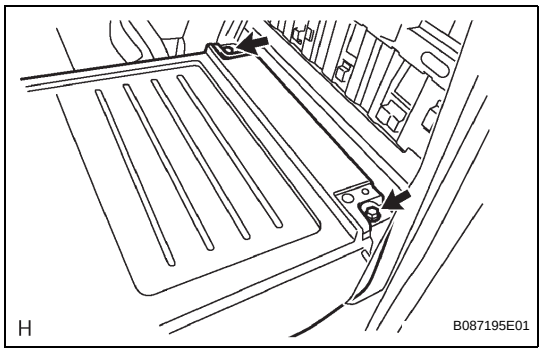


1. INSTALL REAR SEAT BACK CENTER HINGE SUB-ASSEMBLY
(a) Install the rear seat back center hinge with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 14 ft.*lbf)

2. INSTALL LUGGAGE COMPARTMENT SIDE TRAY (See page IR-26)

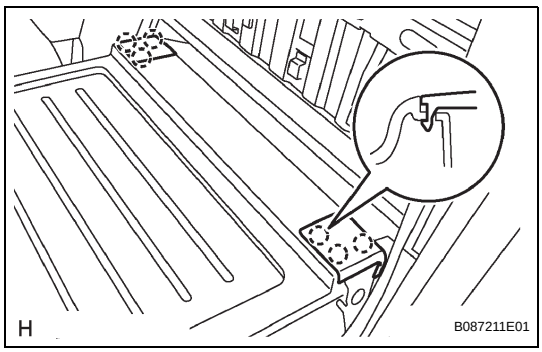


3. INSTALL REAR SEAT BACK HINGE SUB-ASSEMBLY
(a) Install the rear seat back hinge with the 2 bolts.
Torque: 18 N*m (185 kgf*cm, 14 ft.*lbf)



4. INSTALL REAR SEAT BACK ASSEMBLY LH
(a) Install the rear seat back with the 2 bolts.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

5. INSTALL REAR SEAT BACK ASSEMBLY RH (See page SE-90)



6. INSTALL REAR SEAT BACK HINGE COVER
(a) for LH Side:
HINT:
