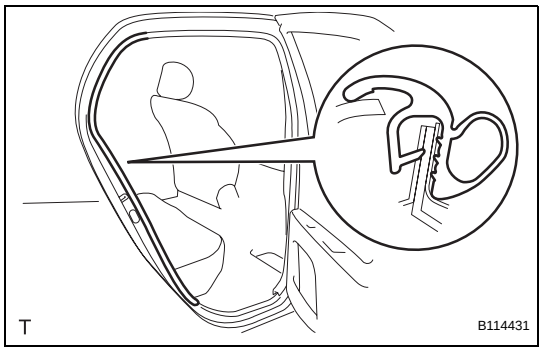
REMOVAL

CAUTION:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

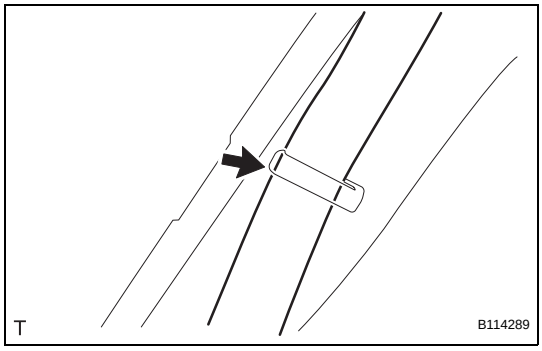
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for LH Side)**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
      (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
      HINT:
      Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
      (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
10. **REMOVE REAR DOOR SCUFF PLATE (See page IR-51)**



11. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP

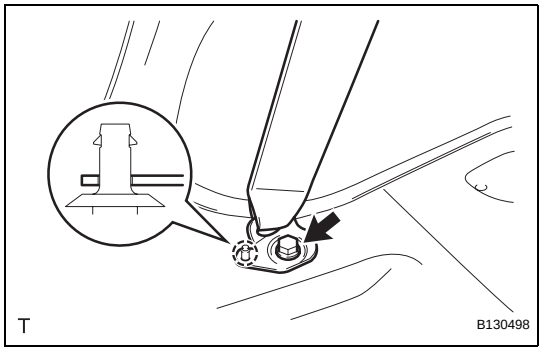
(a) Remove the rear door opening trim weatherstrip to the extent that the deck trim side panel and roof side inner garnish can be removed.

12. REMOVE REAR DECK TRIM COVER (See page IR-49)



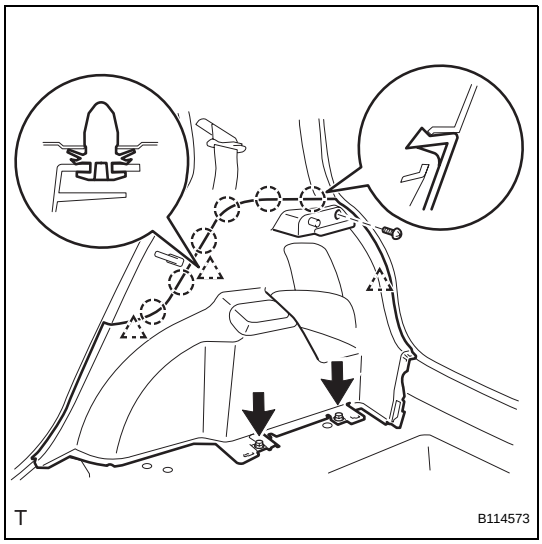
13. REMOVE DECK TRIM SIDE PANEL ASSEMBLY

(a) Remove the belt of the rear seat outer belt from the rear seat shoulder belt hanger.



(b) Remove the bolt.

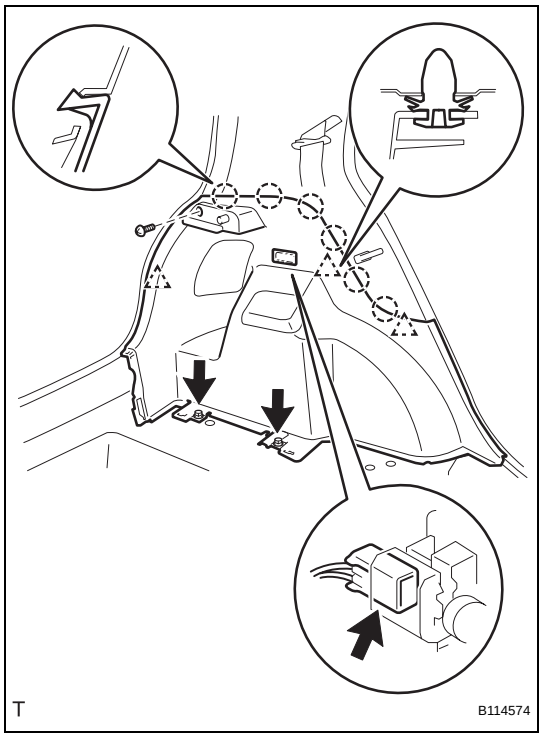
(c) Disengage the clip and remove the anchor plate of the rear seat outer belt.



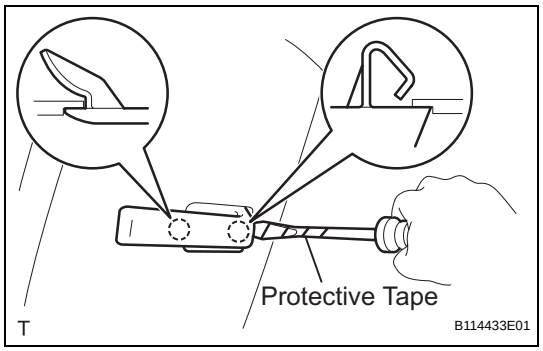
(d) for RH side:

(1) Remove the 3 screws.

(2) Disengage the 3 clips and the 6 claws and remove the deck trim side panel.

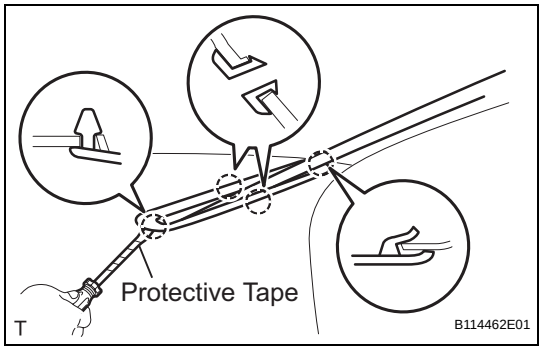


(e) for LH side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 6 claws.
(3) Disconnect the luggage compartment room light connector and remove the deck trim side panel.



14. REMOVE REAR SEAT SHOULDER BELT HANGER

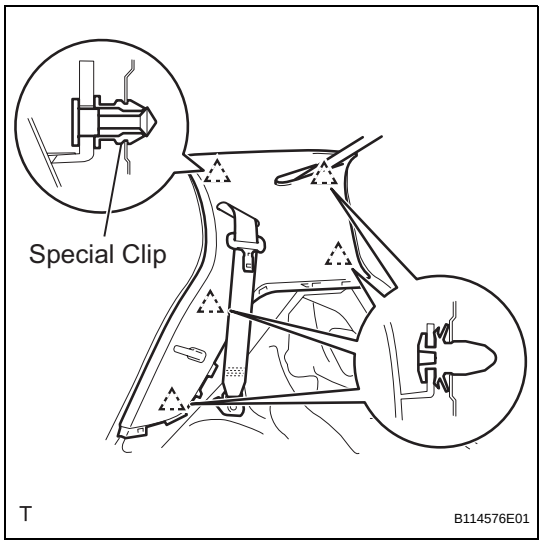
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat shoulder belt hanger.



15. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the center belt guide.

SB



16. REMOVE ROOF SIDE INNER GARNISH

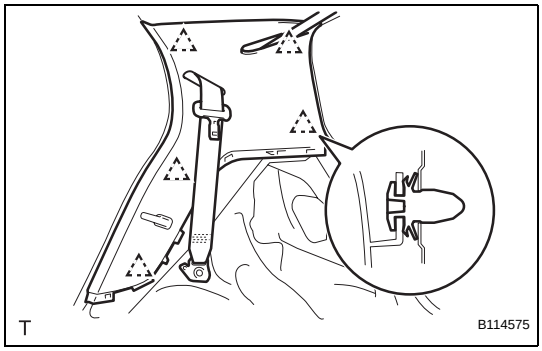
(a) for RH Side (w/ Curtain Shield Airbag):

NOTICE:

Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

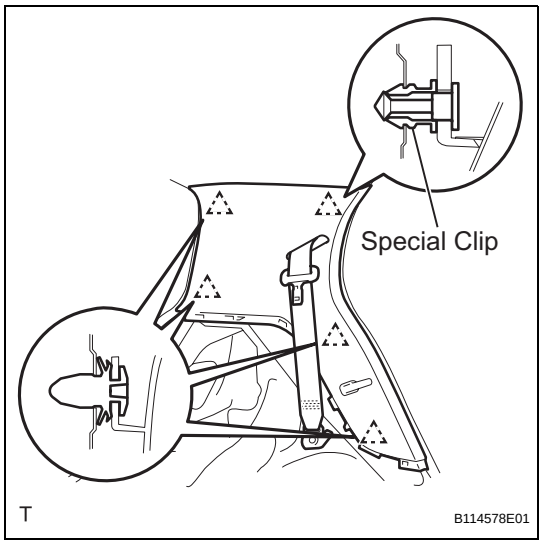
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



(b) for RH Side (w/o Curtain Shield Airbag):

(1) Disengage the 5 clips.

(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



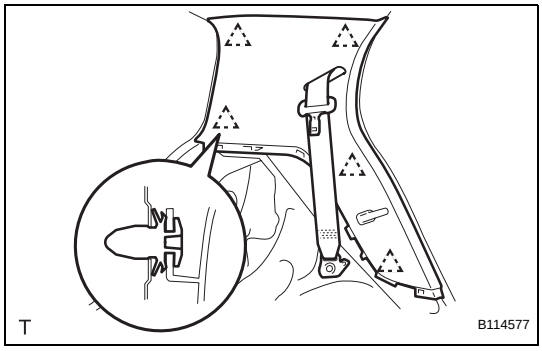
(c) for LH Side (w/ Curtain Shield Airbag):

NOTICE:

Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

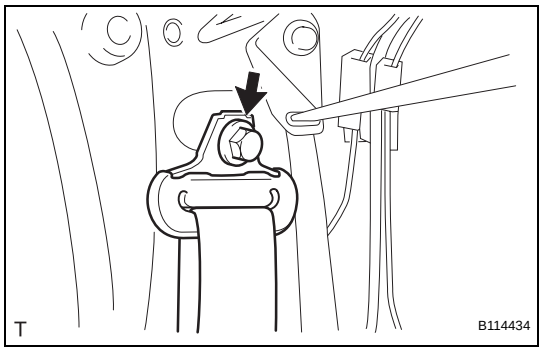
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



(d) for LH Side (w/o Curtain Shield Airbag):

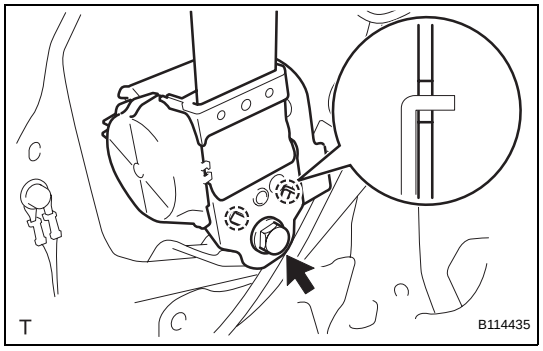
(1) Disengage the 5 clips.

(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

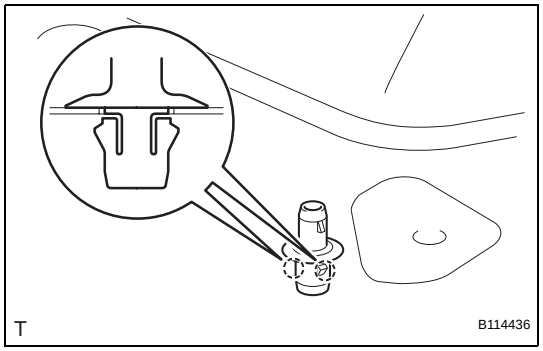


17. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the bolt and the through anchor.



(b) Remove the bolt, the 2 hooks and the retractor.



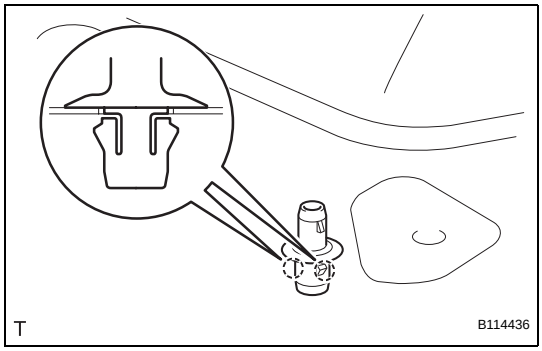
18. REMOVE SEAT BELT HOLE SEAL

(a) Disengage the 2 claws and remove the seat belt hole seal.

SB

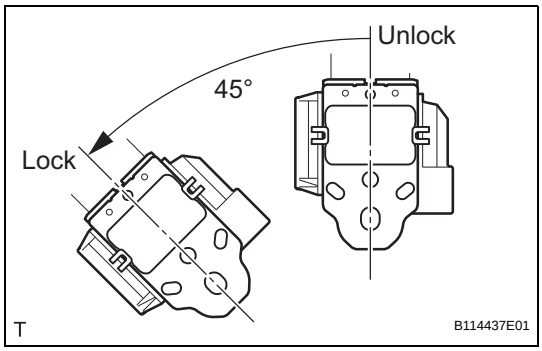
INSTALLATION

CAUTION:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL SEAT BELT HOLE SEAL

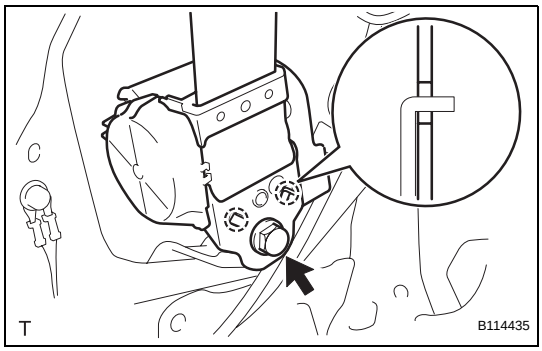
(a) Engage the 2 claws and install the seat belt hole seal.



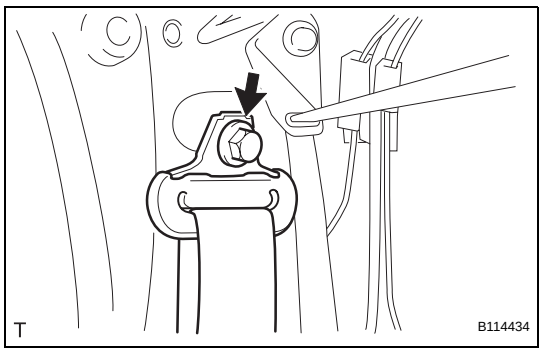
2. INSTALL REAR SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.



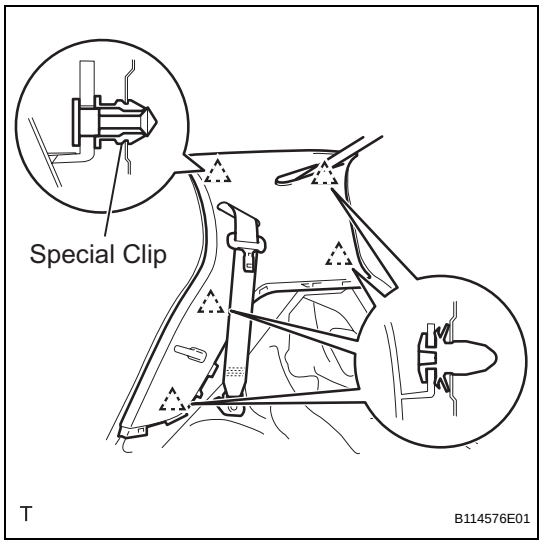
(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

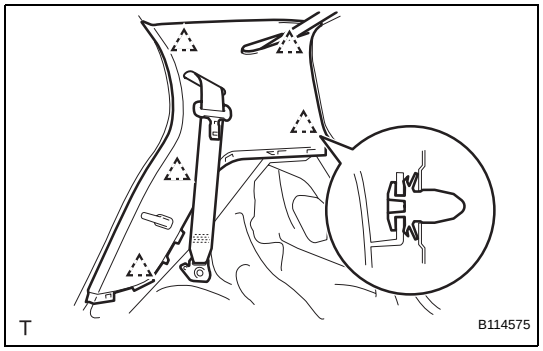
(d) Check that the ELR locks.
NOTICE:
Perform the check with the rear seat outer belt installed.

(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

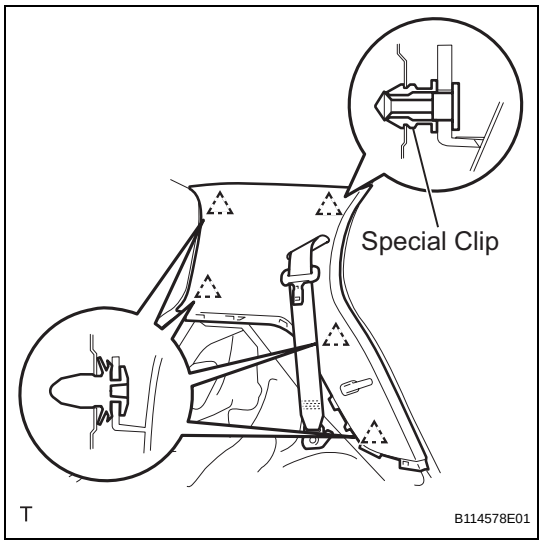


3. INSTALL ROOF SIDE INNER GARNISH

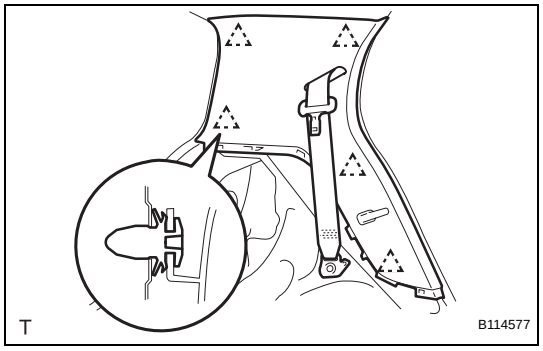
(a) for RH Side (w/ Curtain Shield Airbag):
  (1) Install a new special clip.
  (2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
  (3) Engage the 5 clips and install the roof side inner garnish.



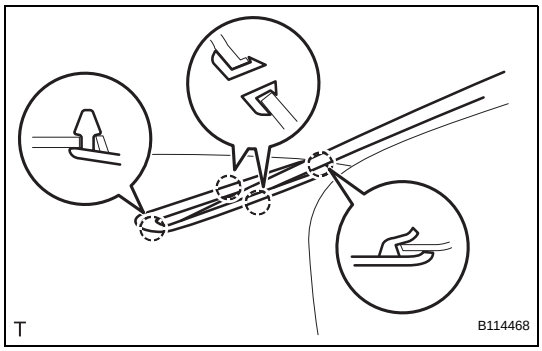
(b) for RH Side (w/o Curtain Shield Airbag):
  (1) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
  (2) Engage the 5 clips and install the roof side inner garnish.



(c) for LH Side (w/ Curtain Shield Airbag):
  (1) Install a new special clip.
  (2) Pass the rear seat outer belt through the slit in the roof side inner garnish.
  (3) Engage the 5 clips and install the roof side inner garnish.

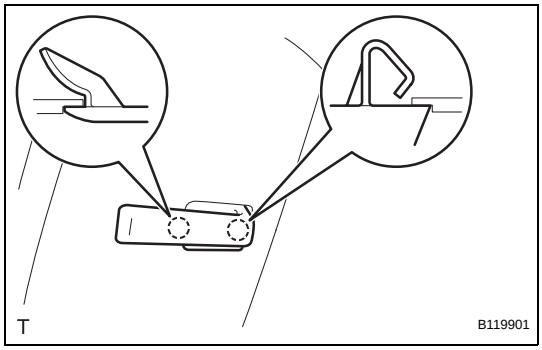


(d) for LH Side (w/o Curtain Shield Airbag):
  (1) Pass the rear seat outer belt through the slit in the roof side inner garnish.
  (2) Engage the 5 clips and install the roof side inner garnish.



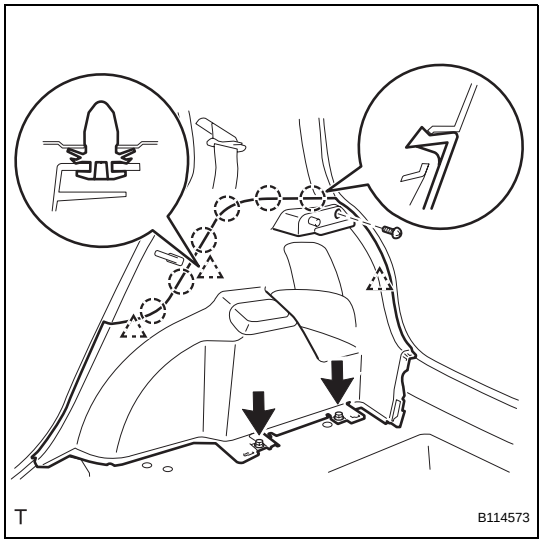
4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Engage the 4 claws and install the center belt guide.



5. INSTALL REAR SEAT SHOULDER BELT HANGER

(a) Engage the 2 claws and install the rear seat shoulder belt hanger.

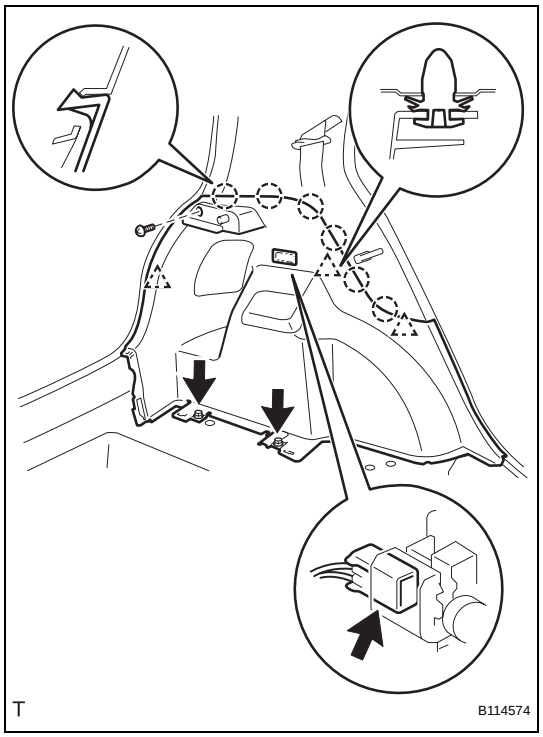


6. INSTALL DECK TRIM SIDE PANEL ASSEMBLY

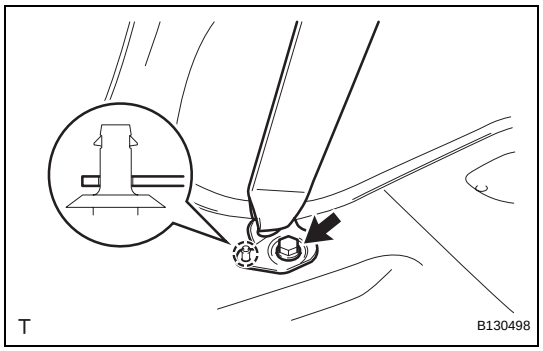
(a) for RH Side:

(1) Engage the 3 clips and the 6 claws and install the deck trim side panel.

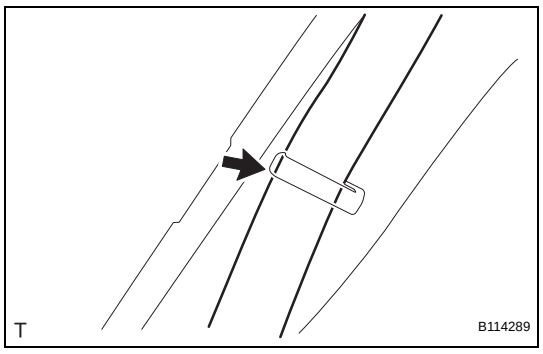
(2) Tighten the 3 screws.



(b) for LH Side:
(1) Connect the luggage compartment room light connector.
(2) Engage the 3 clips and the 6 claws and install the deck trim side panel.
(3) Tighten the 3 screws.

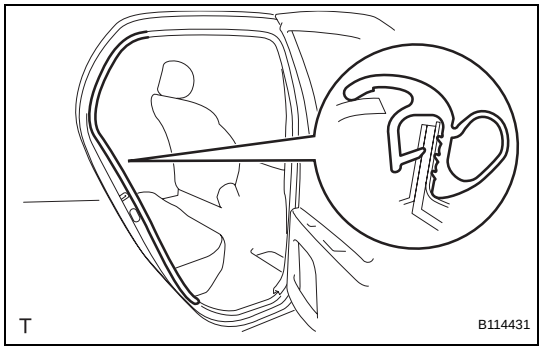


(c) Engage the clip and install the anchor plate of the rear seat outer belt.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(e) Install the belt of the rear seat outer belt into the rear seat shoulder belt hanger.

7. INSTALL REAR DECK TRIM COVER (See page IR-82)



8. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP
(a) Install the rear door opening trim weatherstrip.

9. INSTALL REAR DOOR SCUFF PLATE (See page IR-80)

10. INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)
(a) for RH Side:
(1) Install the rear seat assembly (See page SE-102).

(b) for LH Side:
(1) Install the rear seat assembly (See page SE-84).

11. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)

12. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)
(a) for RH Side:
(1) Install the No. 1 rear seat leg cover (See page SE-103).
(b) for LH Side:
(1) Install the No. 1 rear seat leg cover (See page SE-85).

13. INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)

14. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

15. INSTALL DECK FLOOR BOX
(a) for RH Side:
(1) Install the deck floor box (See page IR-83).
(b) for LH Side:
HINT:
Use the same procedure as for the RH side.

16. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

17. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for LH Side)
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

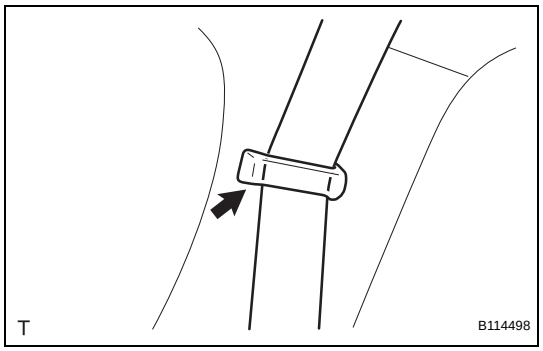
REMOVAL

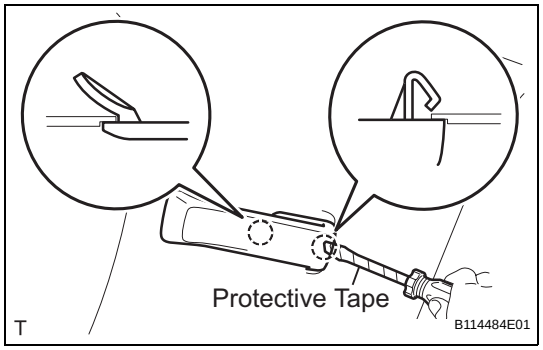
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for LH Side)**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
      (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
      HINT:
      Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
      (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
10. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-97)**
11. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-76)**

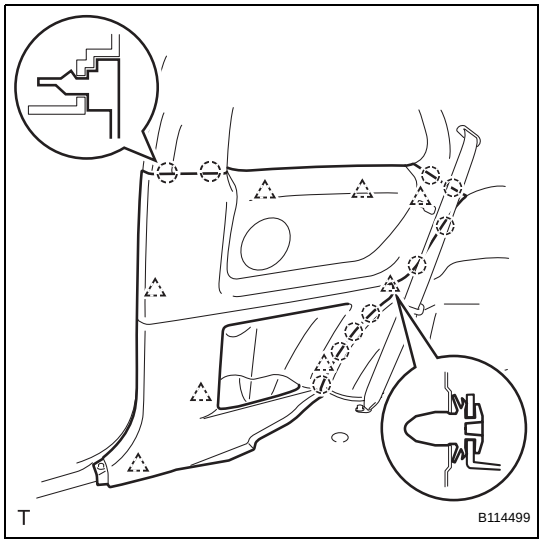


12. REMOVE REAR SEAT SHOULDER BELT HANGER

(a) Remove the belt of the rear seat outer belt.



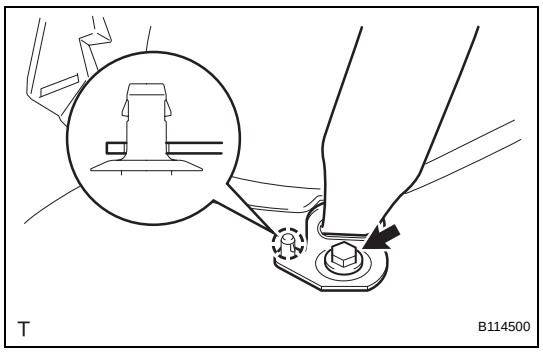
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat shoulder belt hanger.



13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.

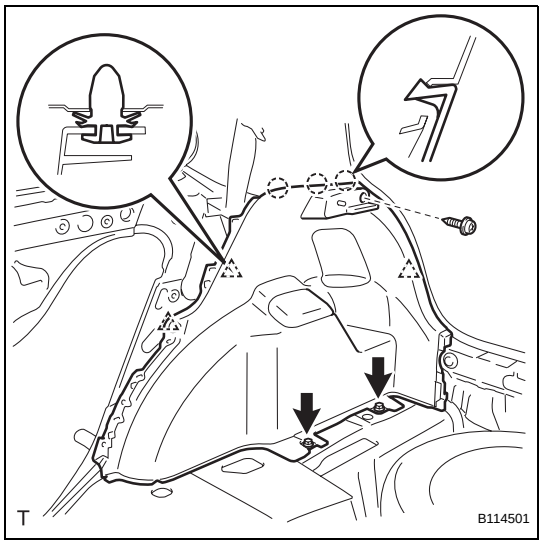
14. REMOVE REAR DECK TRIM COVER (See page IR-49)



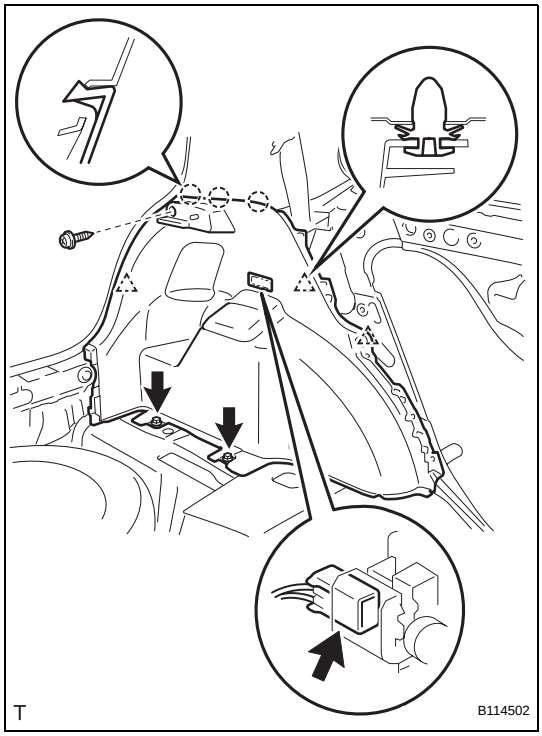
15. REMOVE DECK TRIM SIDE PANEL ASSEMBLY

(a) Remove the bolt.

(b) Disengage the clip and the anchor plate of the rear seat outer belt.

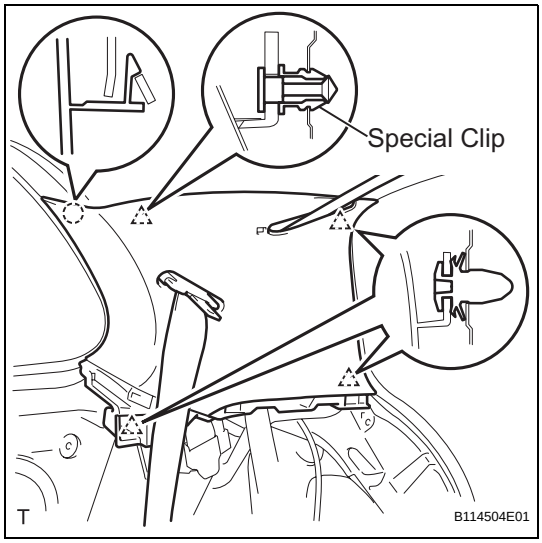


(c) for RH Side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 3 claws and remove the deck trim side panel.



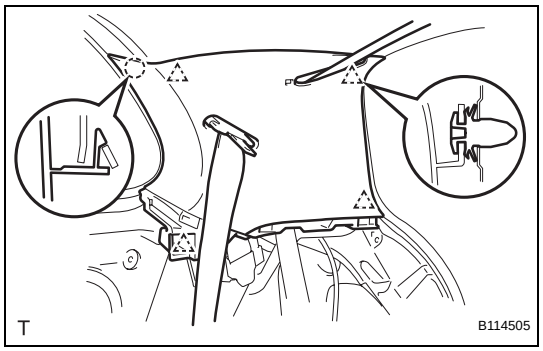
(d) for LH Side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 3 claws.
(3) Disconnect the luggage compartment room light connector and remove the deck trim side panel.

16. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-113)

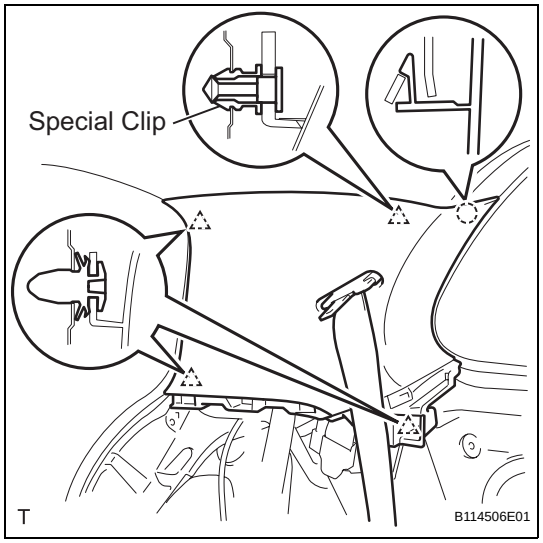


17. REMOVE ROOF SIDE INNER GARNISH

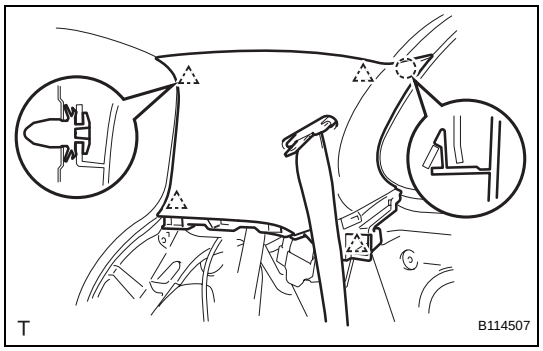
(a) for RH Side (w/ Curtain Shield Airbag):
NOTICE:
Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



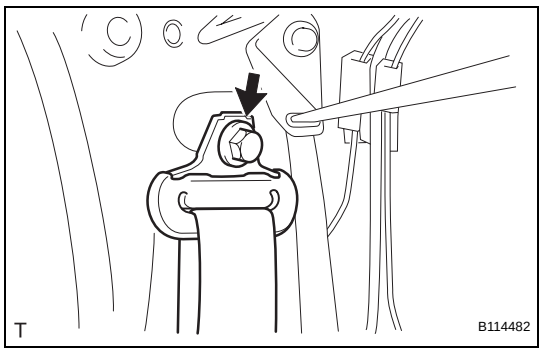
(b) for RH Side (w/o Curtain Shield Airbag):
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



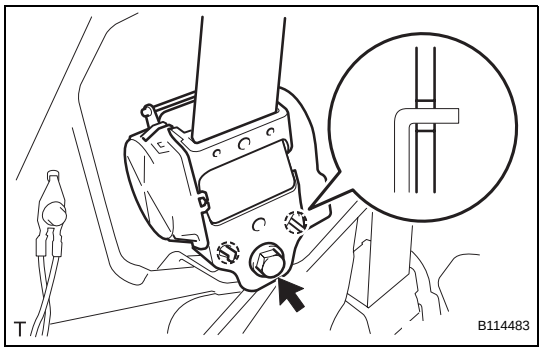
(c) for LH Side (w/ Curtain Shield Airbag):
NOTICE:
Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



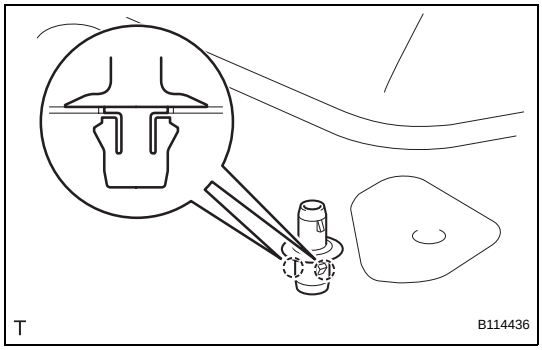
(d) for LH Side (w/o Curtain Shield Airbag):
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



18. REMOVE REAR SEAT OUTER BELT ASSEMBLY
(a) Remove the bolt and the through anchor.



(b) Remove the bolt, the 2 hooks and the retractor.

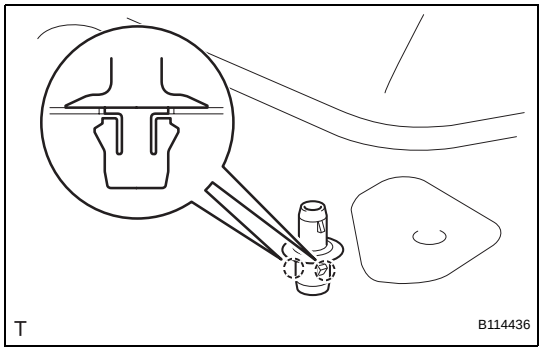


19. REMOVE SEAT BELT HOLE SEAL

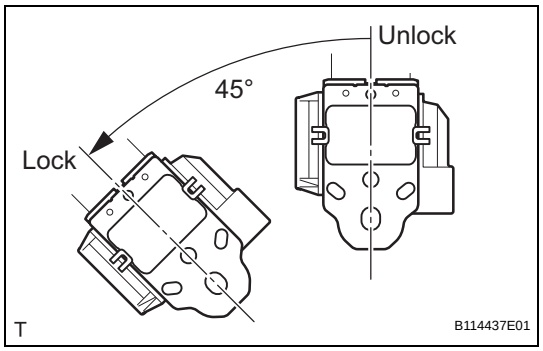
(a) Disengage the 2 claws and remove the seat belt hole seal.

INSTALLATION

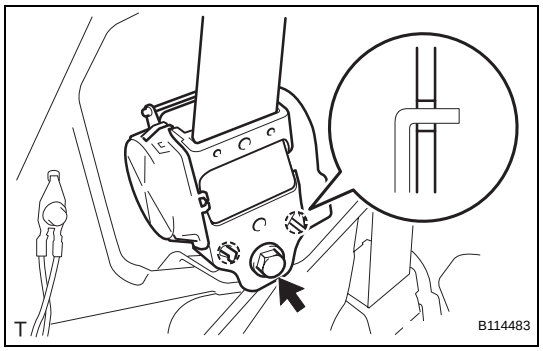
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



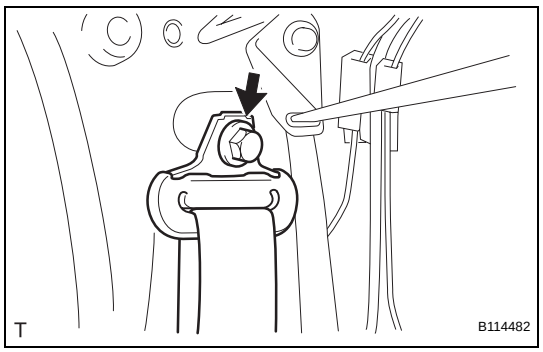
1. INSTALL SEAT BELT HOLE SEAL
(a) Engage the 2 claws and install the seat belt hole seal.



2. INSTALL REAR SEAT OUTER BELT ASSEMBLY
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.

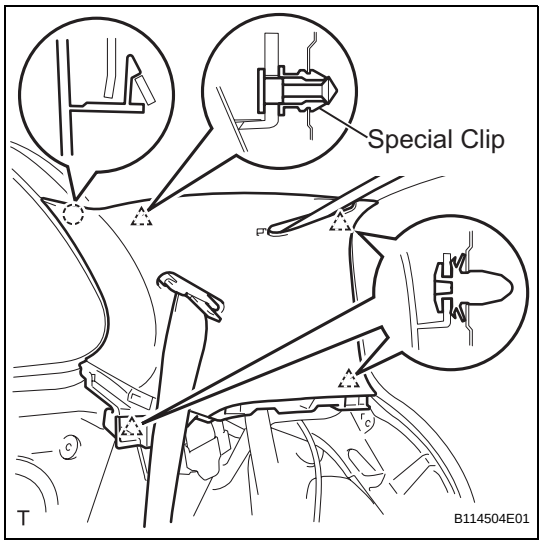


(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



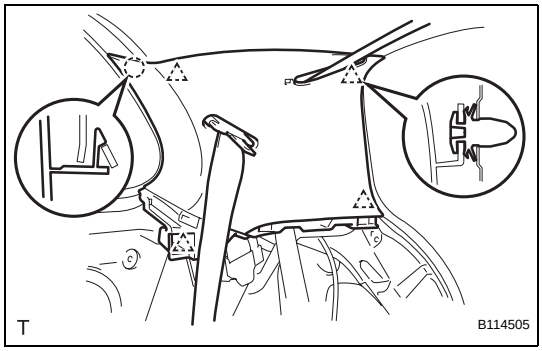
(c) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(d) Check that the ELR locks.
NOTICE:
Perform the check with the rear seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

SB

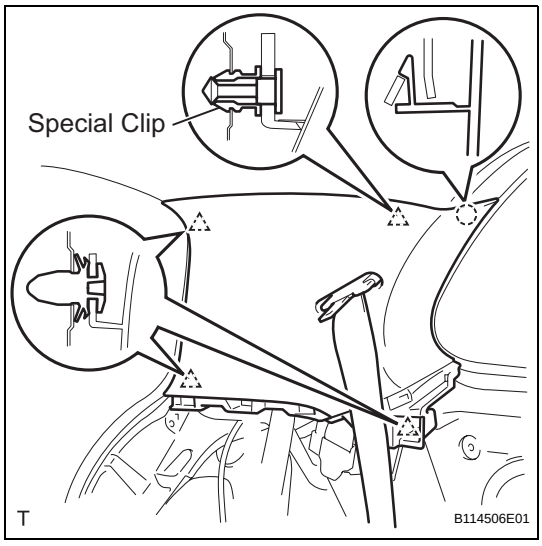


3. INSTALL ROOF SIDE INNER GARNISH

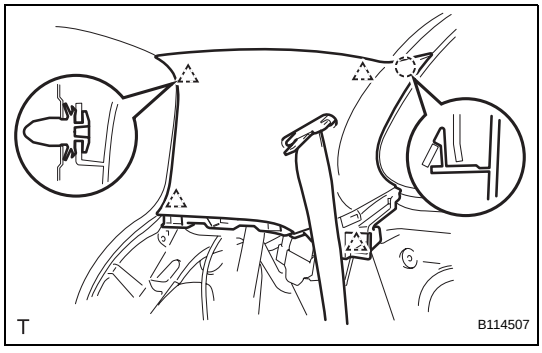
(a) for RH Side (w/ Curtain Shield Airbag):
- (1) Install a new special clip.
- (2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
- (3) Engage the 4 clips and the claw and install the roof side inner garnish.



(b) for RH Side (w/o Curtain Shield Airbag):
- (1) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
- (2) Engage the 4 clips and the claw and install the roof side inner garnish.

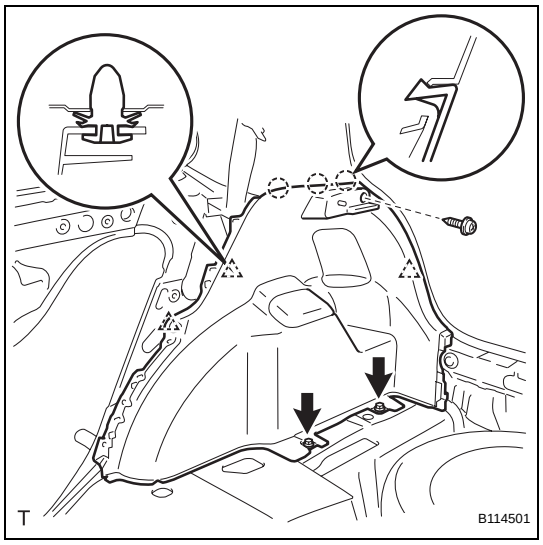


(c) for LH Side (w/ Curtain Shield Airbag):
- (1) Install a new special clip.
- (2) Pass the rear seat outer belt through the slit in the roof side inner garnish.
- (3) Engage the 4 clips and the claw and install the roof side inner garnish.



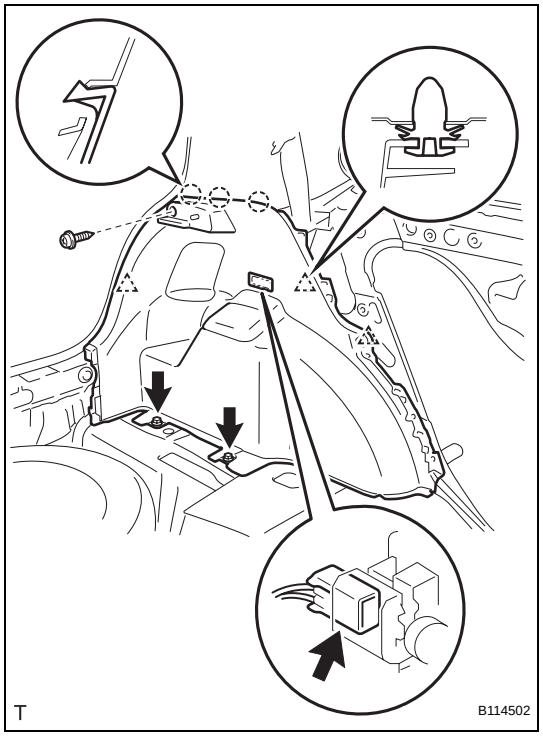
(d) for LH Side (w/o Curtain Shield Airbag):
- (1) Pass the rear seat outer belt through the slit in the roof side inner garnish.
- (2) Engage the 4 clips and the claw and install the roof side inner garnish.

4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-117)

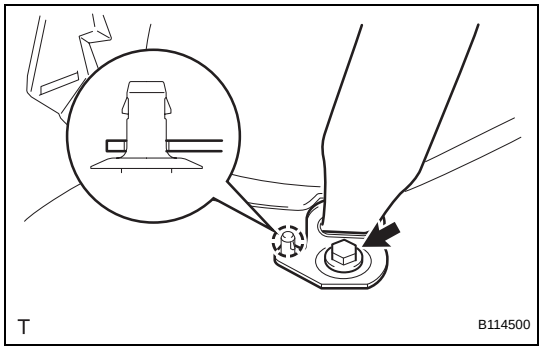


5. INSTALL DECK TRIM SIDE PANEL ASSEMBLY

(a) for RH Side:
  (1) Engage the 3 clips and the 3 claws and install the deck trim side panel.
  (2) Tighten the 3 screws.



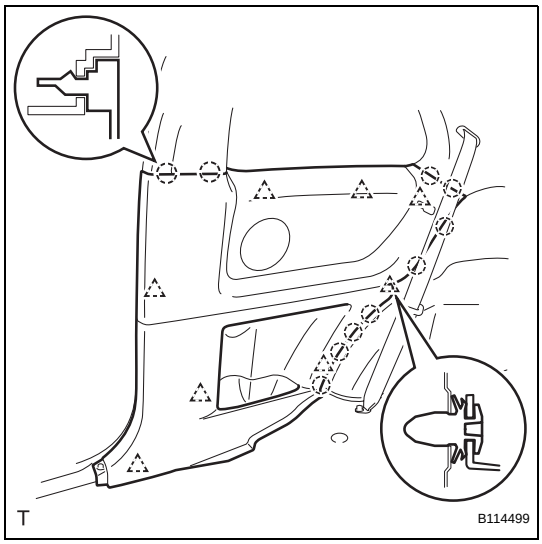
(b) for LH Side:
  (1) Connect the luggage compartment room light connector.
  (2) Engage the 3 clips and the 3 claws and install the deck trim side panel.
  (3) Tighten the 3 screws.



(c) Engage the clip and install the anchor plate of the rear seat outer belt.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

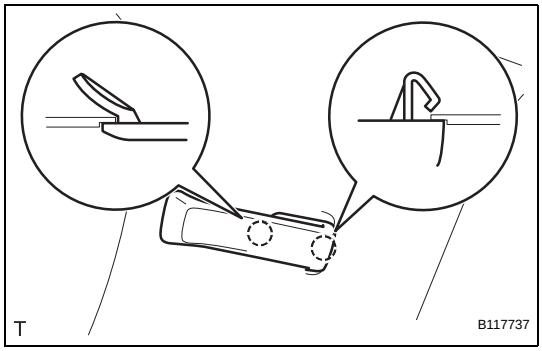
6. INSTALL REAR DECK TRIM COVER (See page IR-82)

SB



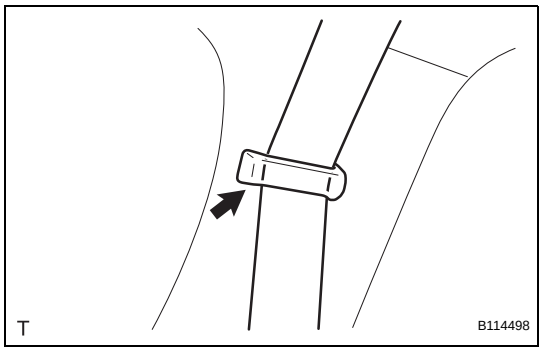
7. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Engage the 8 clips, the retainer and the 10 claws and install the front quarter trim panel.



8. INSTALL REAR SEAT SHOULDER BELT HANGER

(a) Engage the 2 claws and install the rear seat shoulder belt hanger.



(b) Install the belt of the rear seat outer belt.

9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-80)

10. INSTALL FRONT DOOR SCUFF PLATE (See page IR-119)

11. INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)

(a) for RH Side:

(1) Install the rear seat assembly (See page SE-102).

(b) for LH Side:

(1) Install the rear seat assembly (See page SE-84).

12. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)

13. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)

(a) for RH Side:

(1) Install the No. 1 rear seat leg cover (See pageSE-103).

(b) for LH Side:

(1) Install the No. 1 rear seat leg cover (See page SE-85).

14. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

15. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**

16. **INSTALL DECK FLOOR BOX**
    (a) for RH Side:
        (1) Install the deck floor box (See page IR-83).
    (b) for LH Side:
        HINT:
        Use the same procedure as for the RH side.

17. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

18. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for LH Side)**

REMOVAL

1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-46).

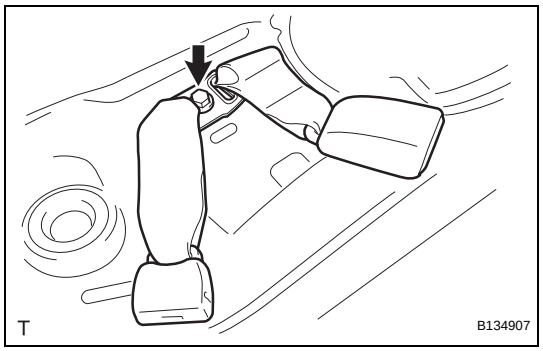
(b) for Fixed Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-106).

2. REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY

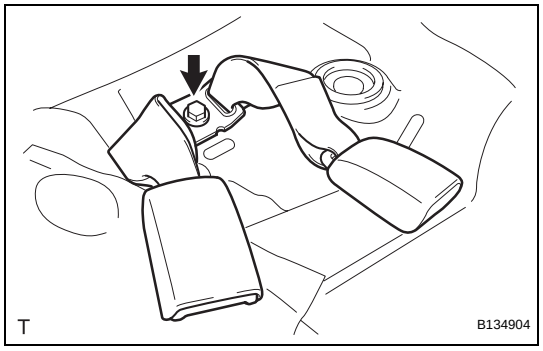
(a) for RH Side (for 60/40 Split Seat Type):

(1) Remove the bolt and the rear center seat inner belt.



(b) for LH Side:

(1) Remove the bolt and the rear center seat inner belt.



INSTALLATION

1. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY

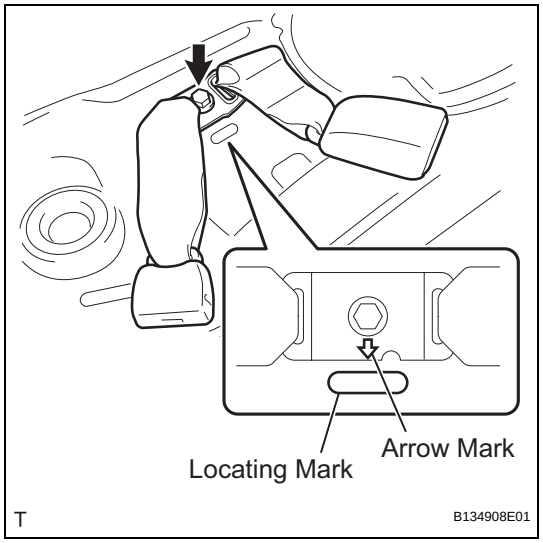
(a) for RH Side (for 60/40 Split Seat Type):

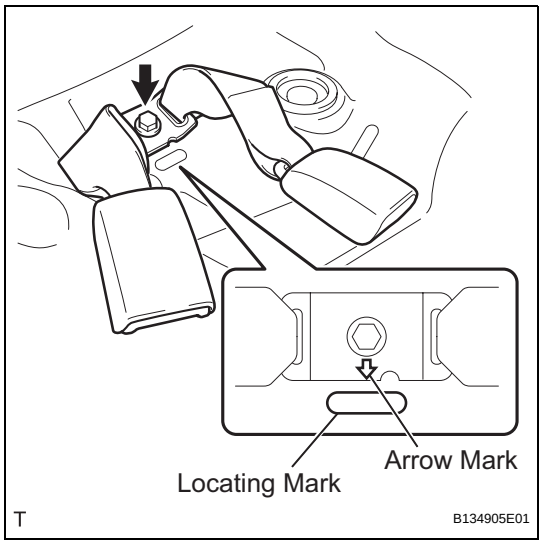
(1) Install the rear center seat inner belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**





(b) for LH Side:

(1) Install the rear center seat inner belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**

2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Install the rear seat cushion cover pad (See page SE-53).

(b) for Fixed Seat Type:

(1) Install the rear seat cushion cover pad (See page SE-109).

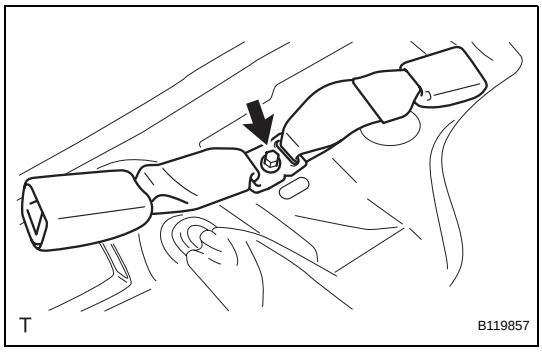
REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
2. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
3. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
4. **REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Using "Torx" socket wrench E10, remove the 3 bolts and pull up the rear seat cushion.

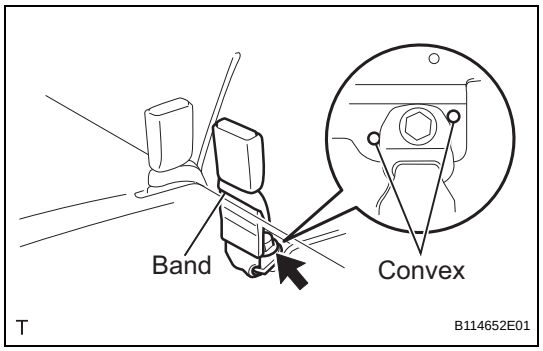
      (2) Remove the belt from the band.
      (3) Remove the bolt and the rear center seat inner belt.

   (b) for Hold Down Seat Type:
      (1) Remove the bolt and the rear center seat inner belt.



INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.



1. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY

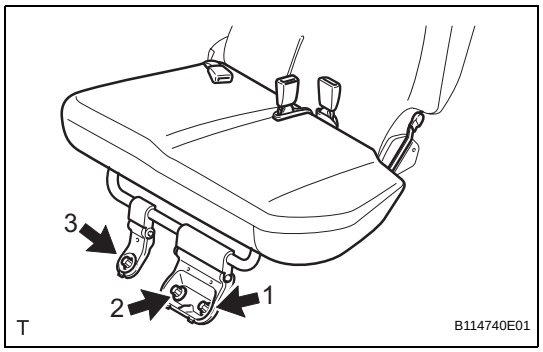
(a) for 60/40 Split Seat Type

(1) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex areas of the rear seat back frame.

(2) Install the belt into the band.

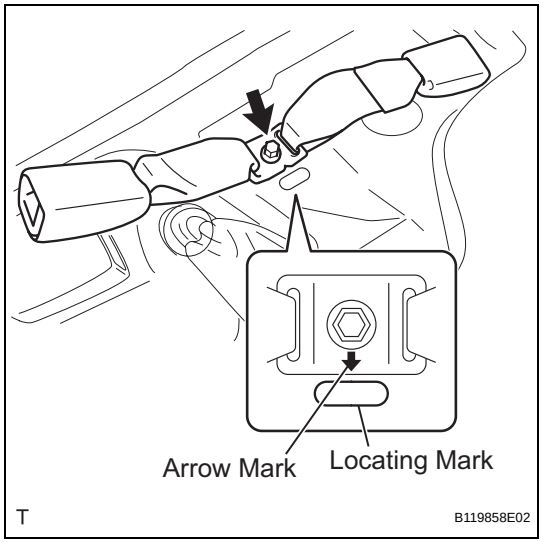
(3) Install the rear seat cushion.

(4) Using "Torx" socket wrench E10, tighten the 3 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



(b) for Hold Down Seat Type:

(1) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**



2. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

3. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

4. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

REMOVAL

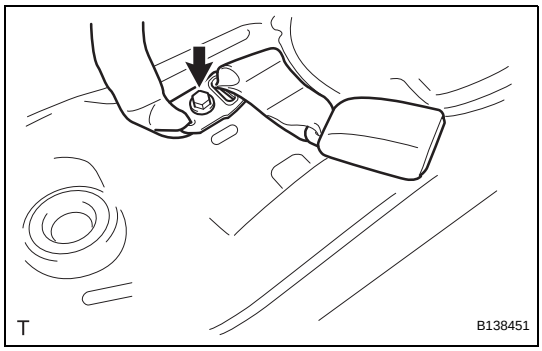
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/o Rear Spoiler)**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-46).
   (b) for Fixed Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-106).
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
4. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-46)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
6. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
7. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
8. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
9. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
10. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-15)**
11. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-173)**
12. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-173)**
13. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
14. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
15. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**
16. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)**
17. **REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)**
18. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-173)**

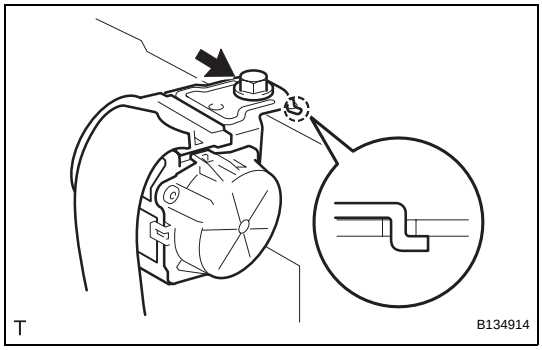
SB



19. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY

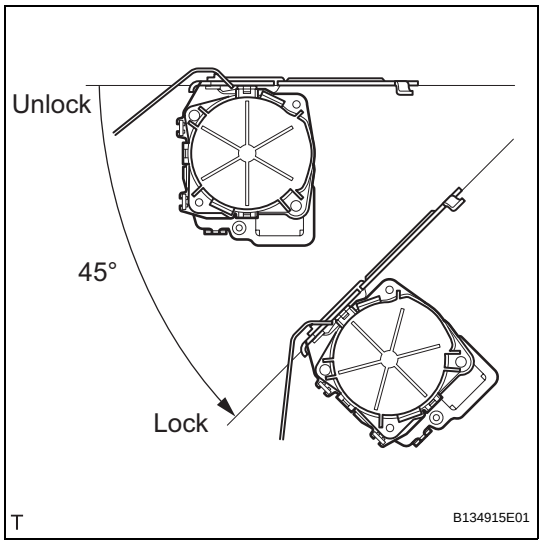
(a) for Fixed Seat Type:

(1) Remove the bolt and the anchor plate.



(b) Remove the bolt, the hook and the retractor.

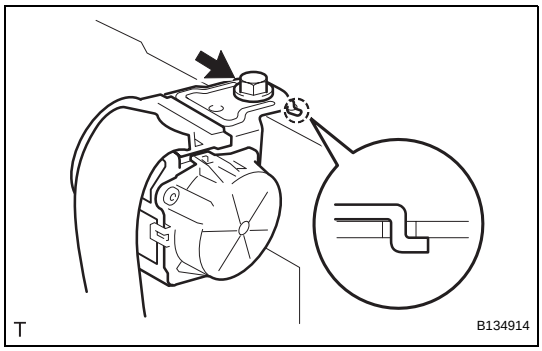
INSTALLATION



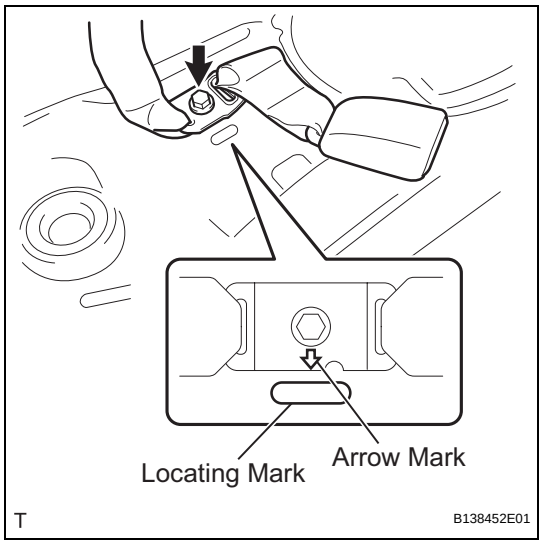
1. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear center seat outer belt.



(b) Insert the hook into the body hole and install the retractor with the bolt.



(c) for Fixed Seat Type:

(1) Install the anchor plate with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**

(d) Check that the ELR locks.

NOTICE:

- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

(1) With the belt installed, check that the belt locks when it is pulled out quickly.

If the operation is not as specified, replace the rear center seat outer belt.

2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-174)**
3. **INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)**
4. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)**
5. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)**
6. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
7. **INSTALL REAR SEAT SIDE COVER LH (See page IR-33)**
8. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-175)**
9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-175)**
10. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
11. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**
12. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
13. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
14. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**
15. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**

16. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**

17. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**

18. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
    (a) for 60/40 Split Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-53).
    (b) for Fixed Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-109).

19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/o Rear Spoiler)**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REMOVAL

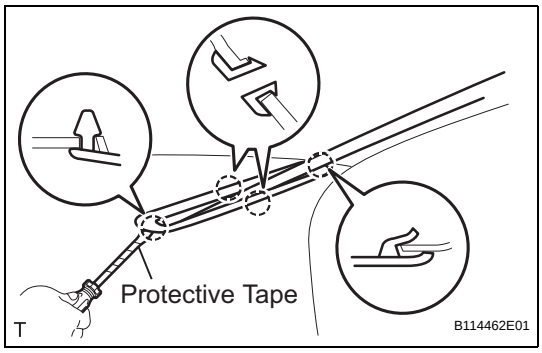
CAUTION:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-51)**
13. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-51)**
14. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-112)**
15. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
16. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
17. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-51)**
18. **REMOVE REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-51)**

SB

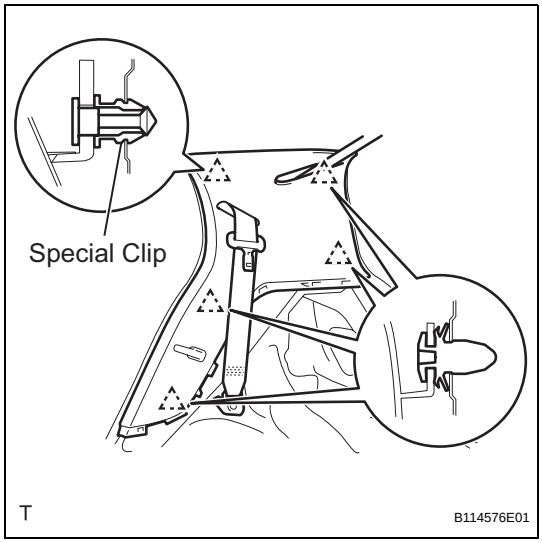
19. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-52)

20. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-52)



21. REMOVE ROOF SIDE INNER GARNISH RH

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the center belt guide.



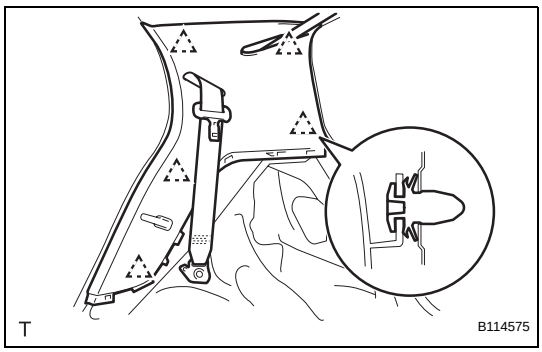
(b) w/ Curtain Shield Airbag:

NOTICE:

Replace the special clip with a new one when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

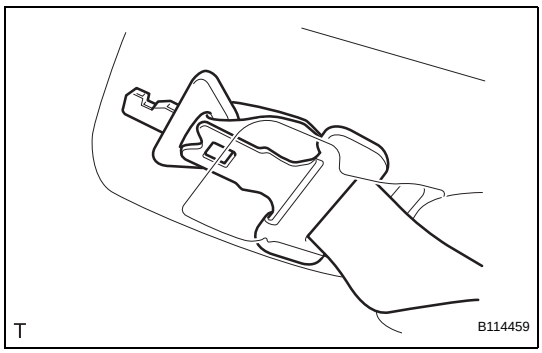


(c) w/o Curtain Shield Airbag:

(1) Disengage the 5 clips.

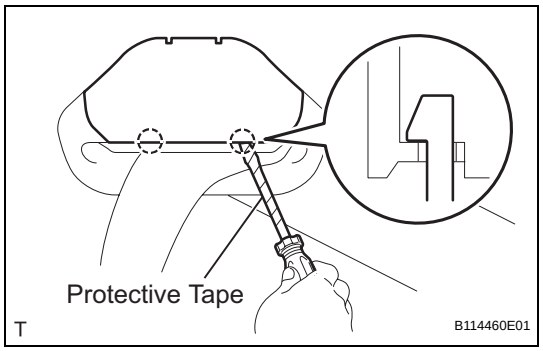
(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

22. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-54)

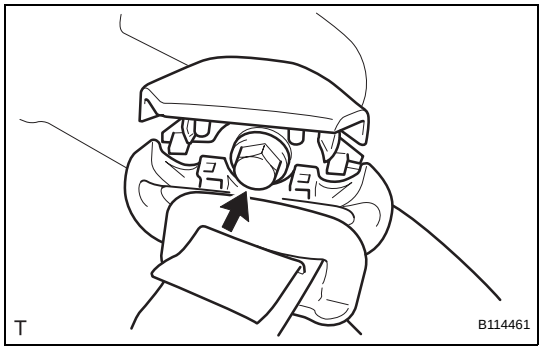


23. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY

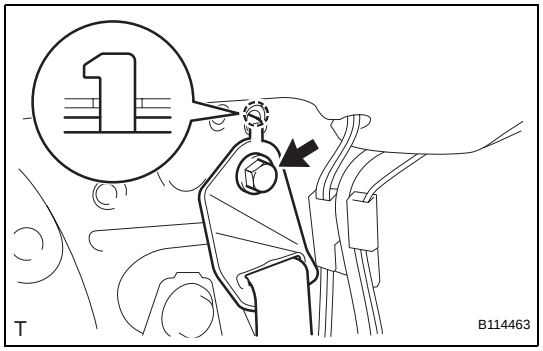
(a) Remove the 2 tongue plates.



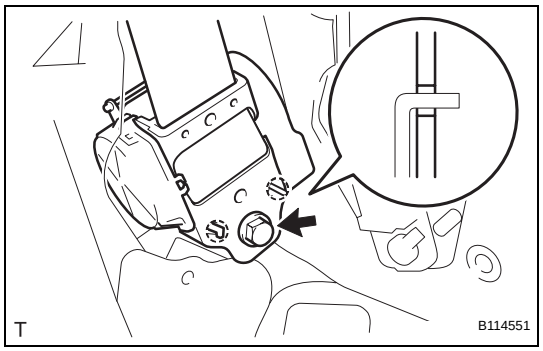
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and open the slip joint cover.



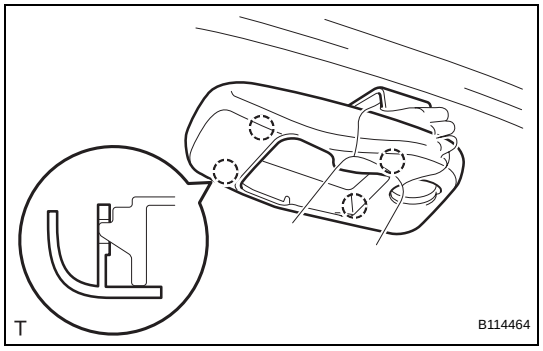
(c) Remove the bolt and the through anchor.



(d) Remove the bolt, the hook and the bracket.

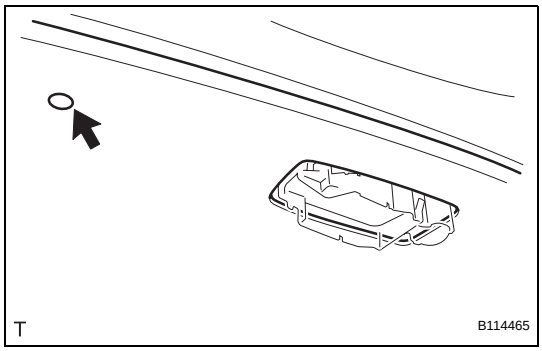


(e) Remove the bolt, the 2 hooks and the retractor.



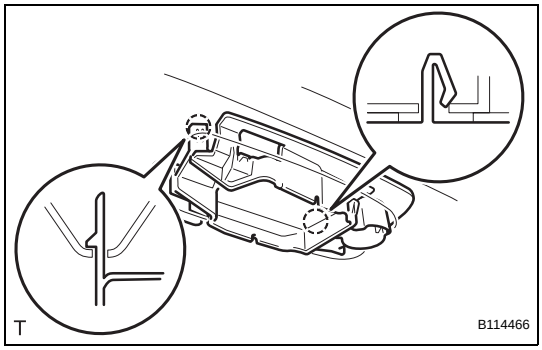
24. REMOVE SEAT BELT ANCHOR COVER

(a) Using a moulding remover, disengage the 4 claws and remove the seat belt anchor cover.



25. REMOVE ROOF HEADLINING ASSEMBLY

(a) Using a clip remover, remove the clip and the roof headlining.

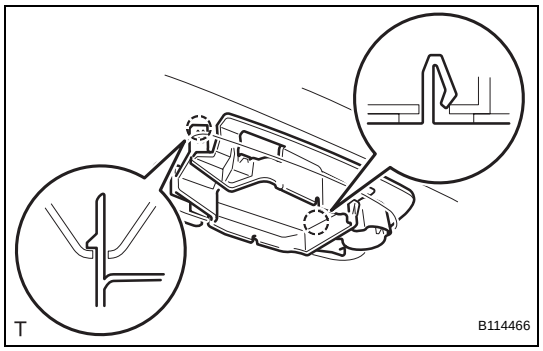


26. REMOVE REAR SEAT SHOULDER BELT COVER

(a) Disengage the 2 claws and remove the rear seat shoulder belt cover.

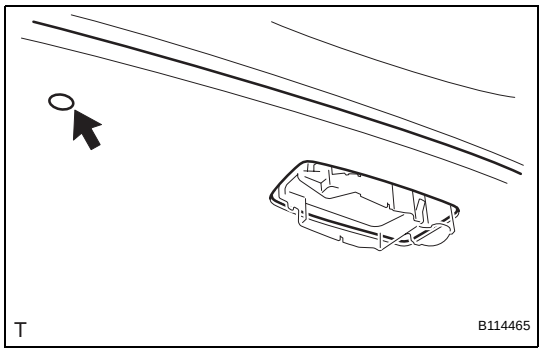
INSTALLATION

CAUTION:
Always use "Torx" socket wrench E10 when installing the rear seat.



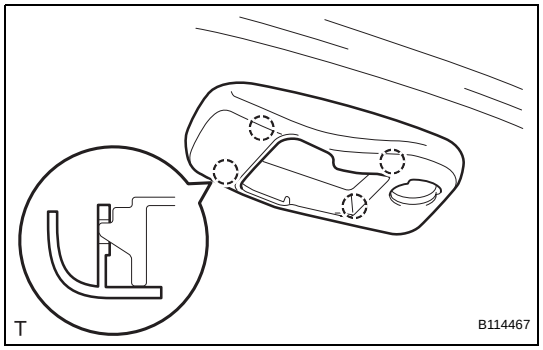
1. INSTALL REAR SEAT SHOULDER BELT COVER

(a) Engage the 2 claws and install the rear seat shoulder belt cover.



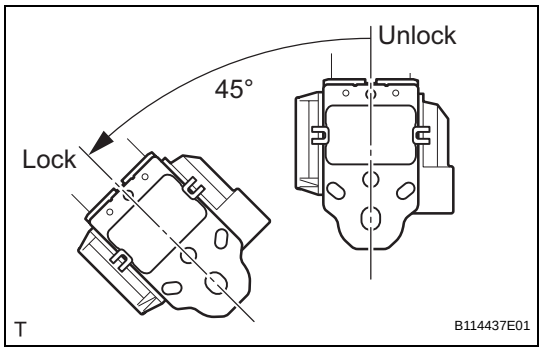
2. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining with the clip.



3. INSTALL SEAT BELT ANCHOR COVER

(a) Engage the 4 claws and install the seat belt anchor cover.



4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.

NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.

SB

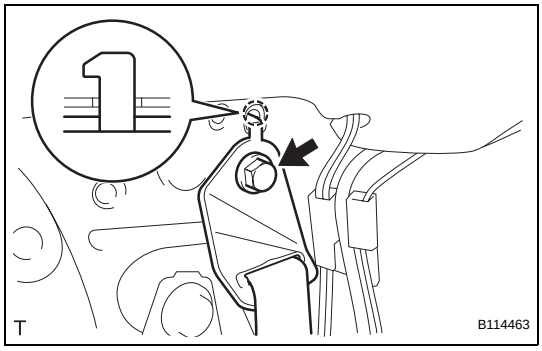
(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Insert the hook into the body hole and install the bracket with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

(d) Check that the ELR locks.
NOTICE:
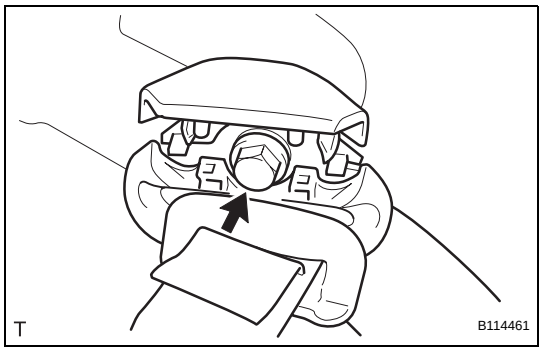
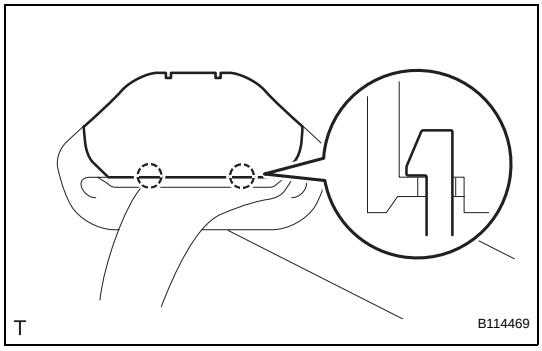
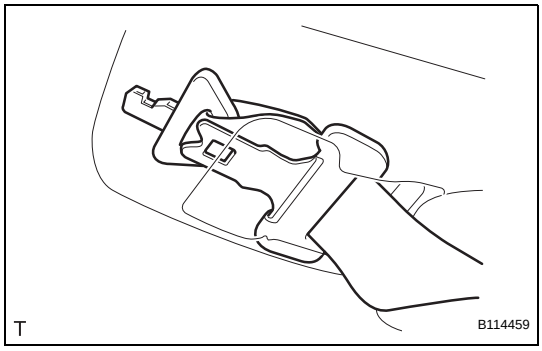
Perform the check with the rear center seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear center seat outer belt.



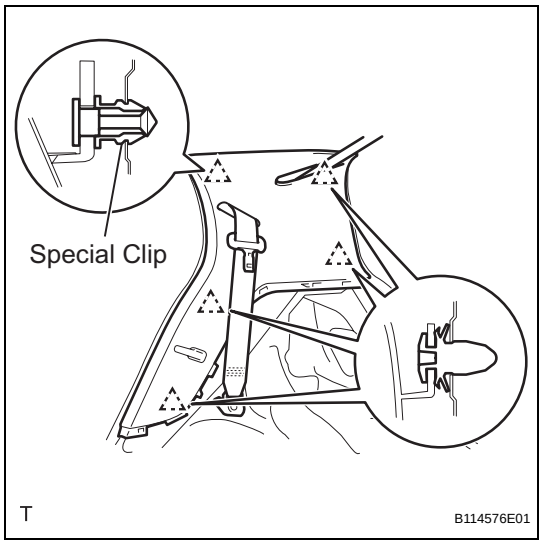
(e) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(f) Engage the 2 claws and close the slip joint cover.



(g) Install the 2 tongue plates.



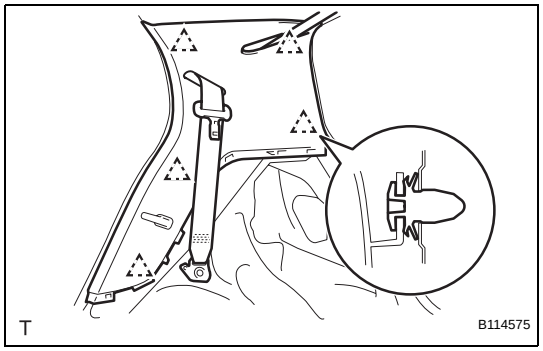
5. INSTALL ROOF SIDE INNER GARNISH RH

(a) w/ Curtain Shield Airbag:

(1) Install a new special clip.

(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.

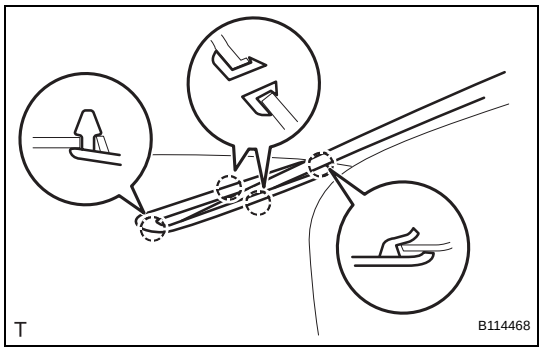
(3) Engage the 5 clips and install the roof side inner garnish.



(b) w/o Curtain Shield Airbag:

(1) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.

(2) Engage the 5 clips and install the roof side inner garnish.



(c) Engage the 4 claws and install the center belt guide.

6. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-77)

7. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-79)

8. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-79)

9. INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-79)

10. INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-80)

11. INSTALL REAR DECK TRIM COVER (See page IR-82)

12. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-119)

13. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

HINT:

Use the same procedure as for the RH side.

14. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)

15. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-80)

SB

16. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**

17. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**

18. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**

19. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
    (a) for RH Side:
        (1) Install the No. 1 rear seat leg cover (See page SE-103).
    (b) for LH Side:
        (1) Install the No. 1 rear seat leg cover (See page SE-85).

20. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

21. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**

22. **INSTALL DECK FLOOR BOX RH (See page IR-83)**

23. **INSTALL DECK FLOOR BOX LH (See page IR-83)**

24. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

25. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

26. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-97)**
13. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-97)**
14. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-76)**
15. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
16. **REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-97)**
17. **REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH (See page IR-97)**
18. **REMOVE REAR DECK TRIM COVER (See page IR-49)**

19. REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-98)

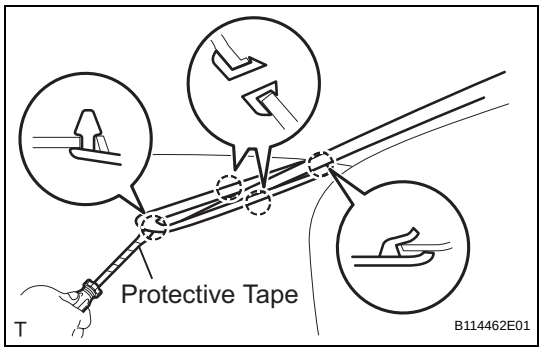
20. REMOVE REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-98)

21. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-98)

22. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-98)

23. REMOVE ROOF SIDE INNER GARNISH RH

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the center belt guide.



(b) w/ Curtain shield Airbag:

NOTICE:

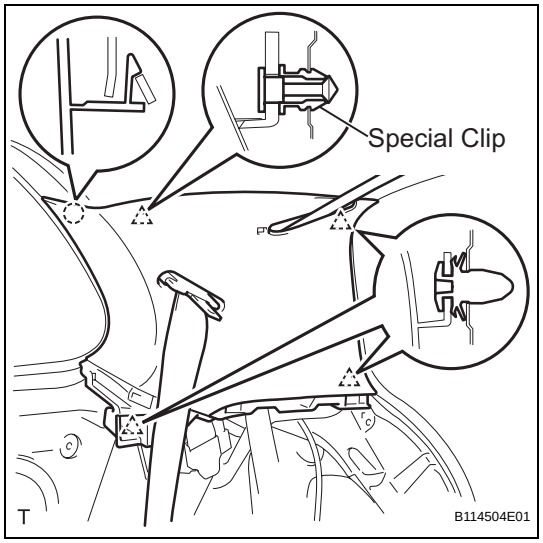
Replace the special clip with a new one when the roof side inner garnish is removed.

(1) Disengage the 4 clips and the claw.

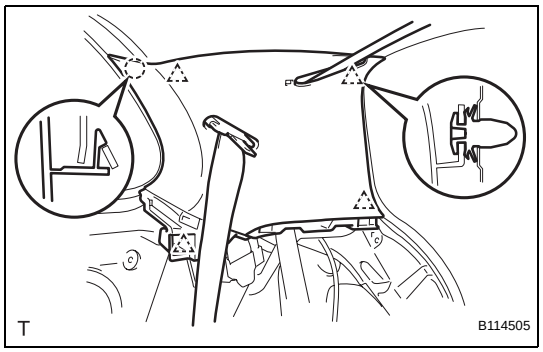
(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



(c) w/o Curtain Shield Airbag:

(1) Disengage the 4 clips and the claw.

(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



24. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-100)

25. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (See page SB-158)

26. REMOVE SEAT BELT ANCHOR COVER (See page SB-159)

27. REMOVE ROOF HEADLINING ASSEMBLY (See page SB-160)

28. REMOVE REAR SEAT SHOULDER BELT COVER
(See page SB-160)

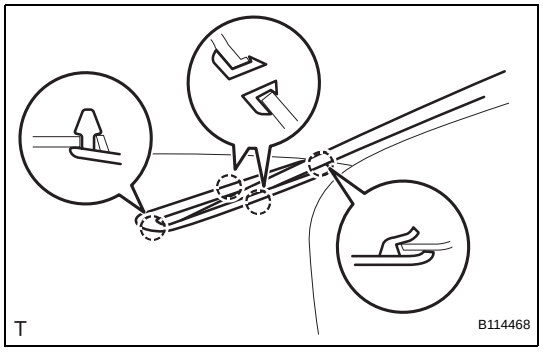
INSTALLATION

CAUTION:
Always use "Torx" socket wrench E10 when installing the rear seat.

1. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-160)**
2. **INSTALL ROOF HEADLINING ASSEMBLY (See page SB-160)**
3. **INSTALL SEAT BELT ANCHOR COVER (See page SB-160)**
4. **INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (See page SB-161)**
5. **INSTALL ROOF SIDE INNER GARNISH RH**
   (a) w/ Curtain Shield Airbag:
      (1) Install a new special clip onto the roof side inner garnish.
      (2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.
      (3) Engage the 4 clips and the claw and install the roof side inner garnish.

   (b) w/o Curtain Shield Airbag:
      (1) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.
      (2) Engage the 4 clips and the claw and install the roof side inner garnish.

   (c) Engage the 4 claws and install the center belt guide.



6. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-116)**
7. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-117)**
8. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-118)**
9. **INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-118)**

10. **INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-118)**
11. **INSTALL REAR DECK TRIM COVER (See page IR-82)**
12. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-118)**
13. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH (See page IR-119)**
14. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-80)**
15. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
16. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-119)**
17. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-119)**
18. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**
19. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**
20. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
21. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
    (a) for RH Side:
        (1) Install the No. 1 rear seat leg cover (See page SE-103).
    (b) for LH Side:
        (1) Install the No. 1 rear seat leg cover (See page SE-85).
22. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**
23. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
24. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
25. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
26. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

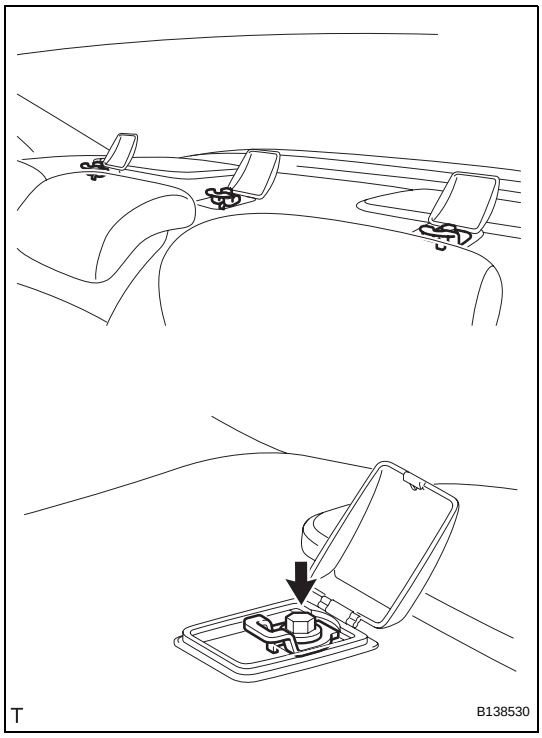
REMOVAL

1. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

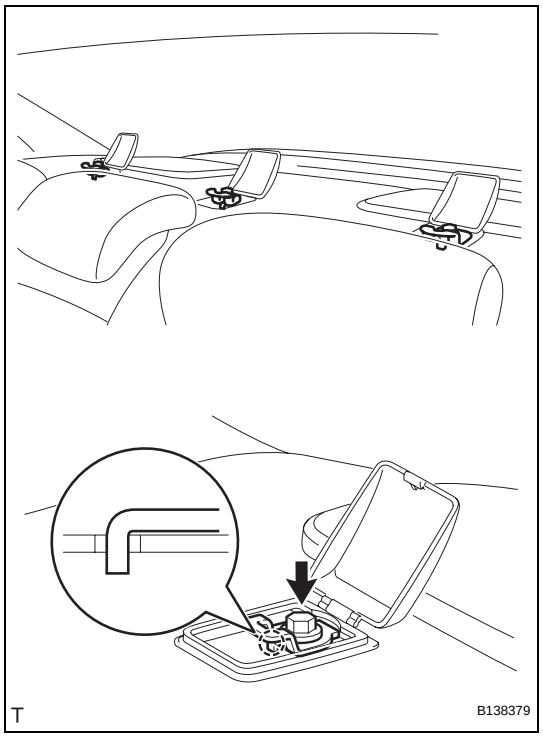
HINT:

Use the same procedure to remove all the child restraint seat tether anchor brackets.

(a) Disengage the claw and open the package tray trim cover.



(b) Remove the bolt and the child restraint seat tether anchor bracket.



INSTALLATION

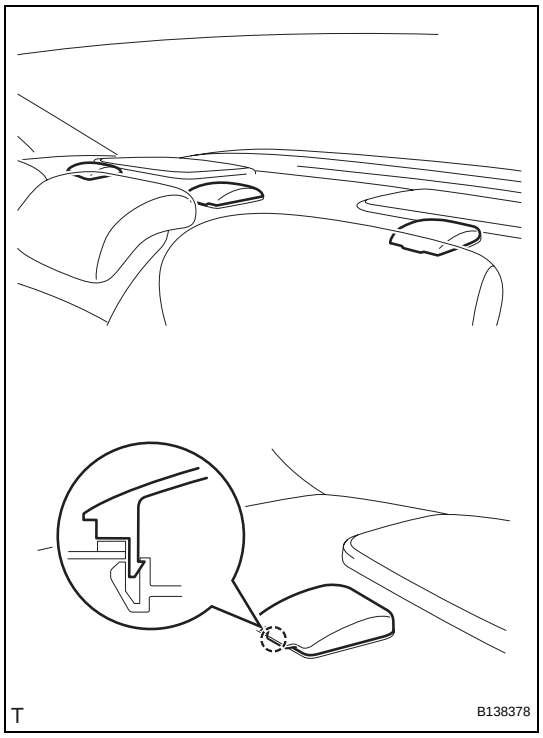
1. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

HINT:

Use the same procedure to install all the child restraint seat tether anchor brackets.

(a) Insert the hook into the body hole and install the child restraint seat tether anchor bracket with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(b) Engage the claw and close the package tray rim cover.

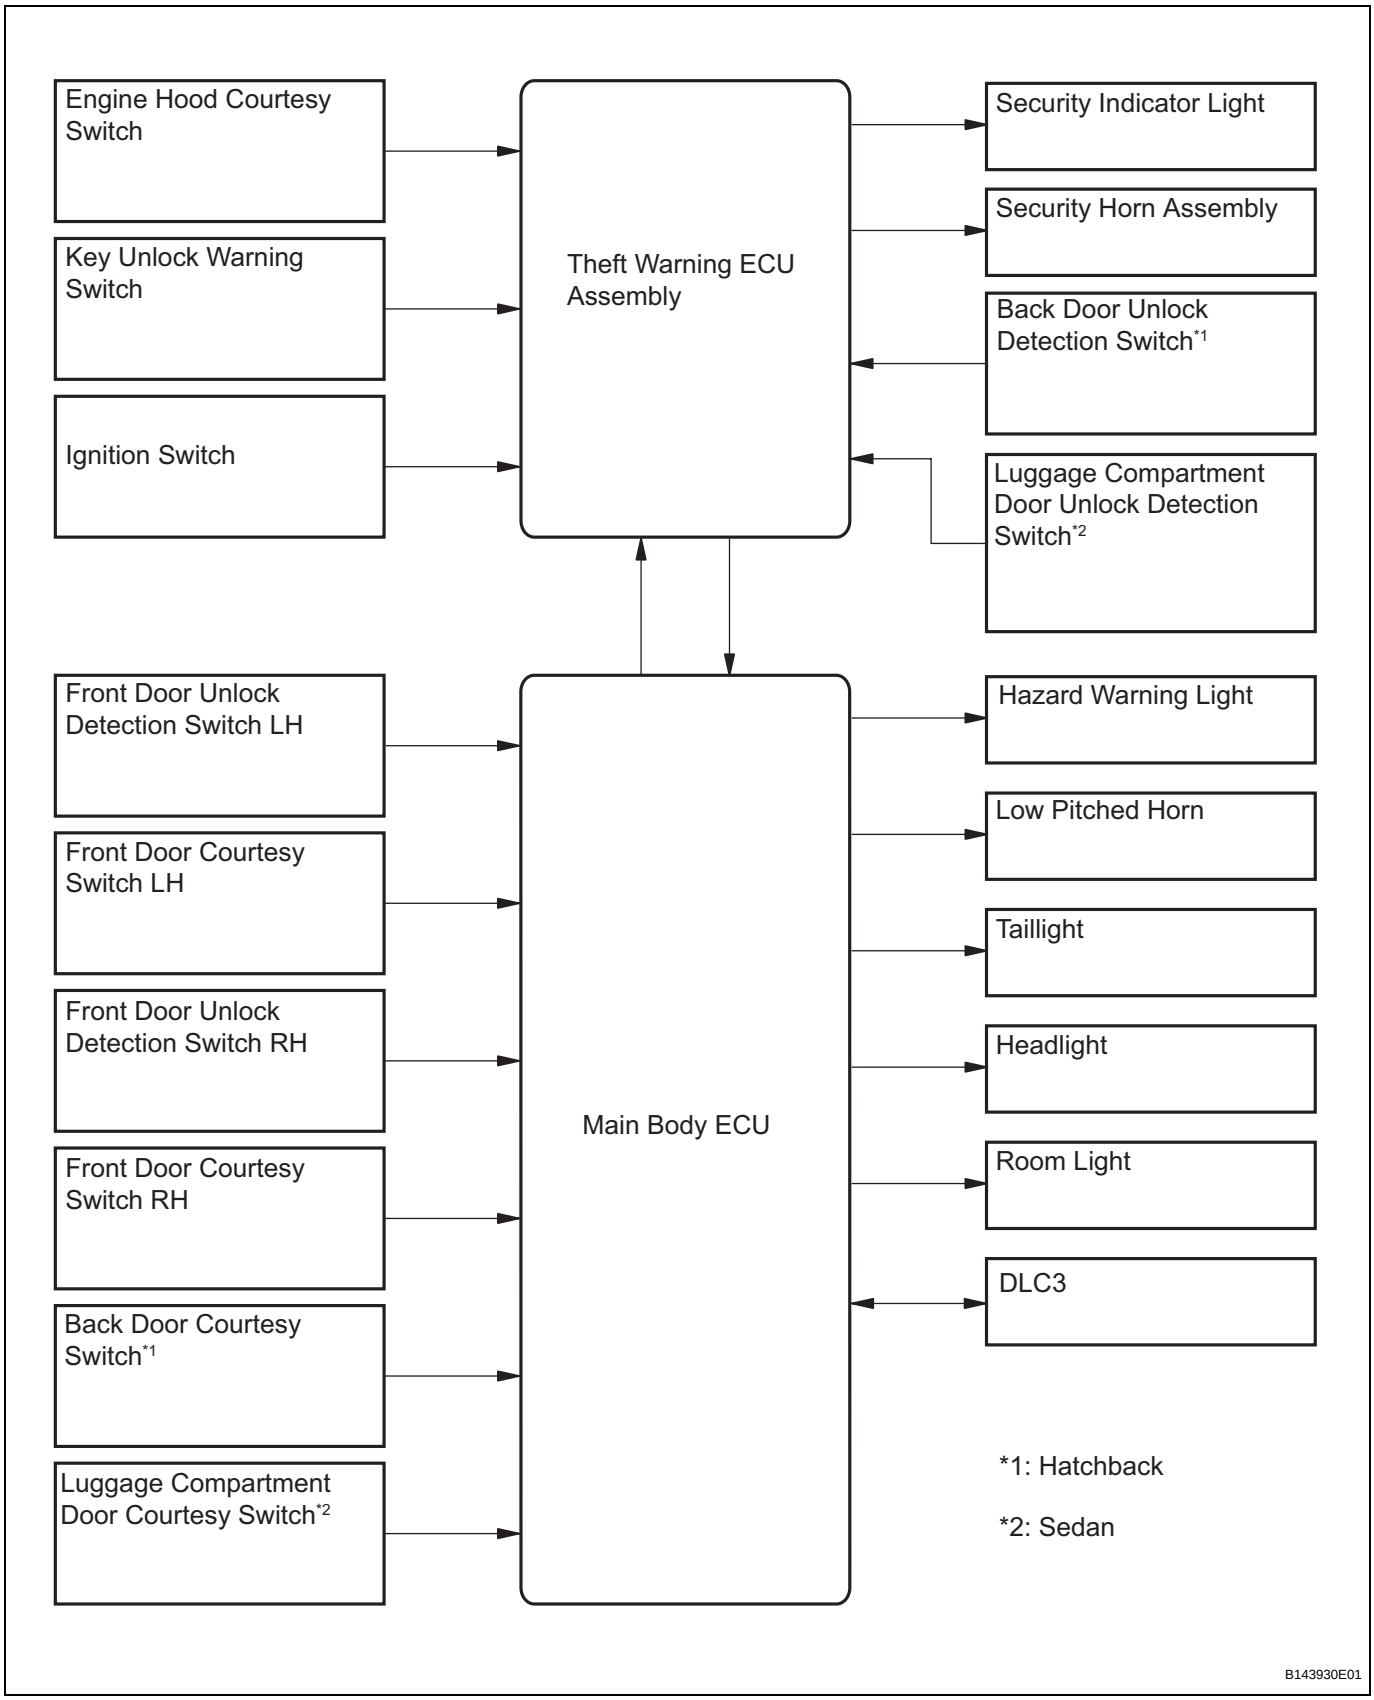
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. OUTLINE OF THEFT DETERRENT SYSTEM

(a) When any attempt is made to forcibly enter the vehicle, open the engine hood or unlock any door without using a key, or when the battery terminals are disconnected and then reconnected, this system causes the vehicle horn and security horn to sound, the interior light to light up, and the hazard warning lights, taillights and headlights to flash, in order to deter break-in and theft.

(b) The theft deterrent system has two arming modes; Active and Passive. Active arming mode allows the theft deterrent system to activate normally. Passive arming mode is used for the servicing. The intelligent tester allows the theft deterrent system to switch between Active and Passive.
(See pageTD-16)

(c) Each mode has 4 states; a disarmed state, an arming preparation state, an armed state and an alarm sounding state.

(1) Disarmed state:
- The alarm function is not operating.
- The theft deterrent system is not operating.

(2) Arming preparation state:
- The state before the system goes into the armed state.
- The theft deterrent system is not operating.

(3) Armed state:
- The theft deterrent system is operating.

(4) Alarm sounding state:
- The alarm function is operating.

Alarm time:
Approximately 57 seconds.

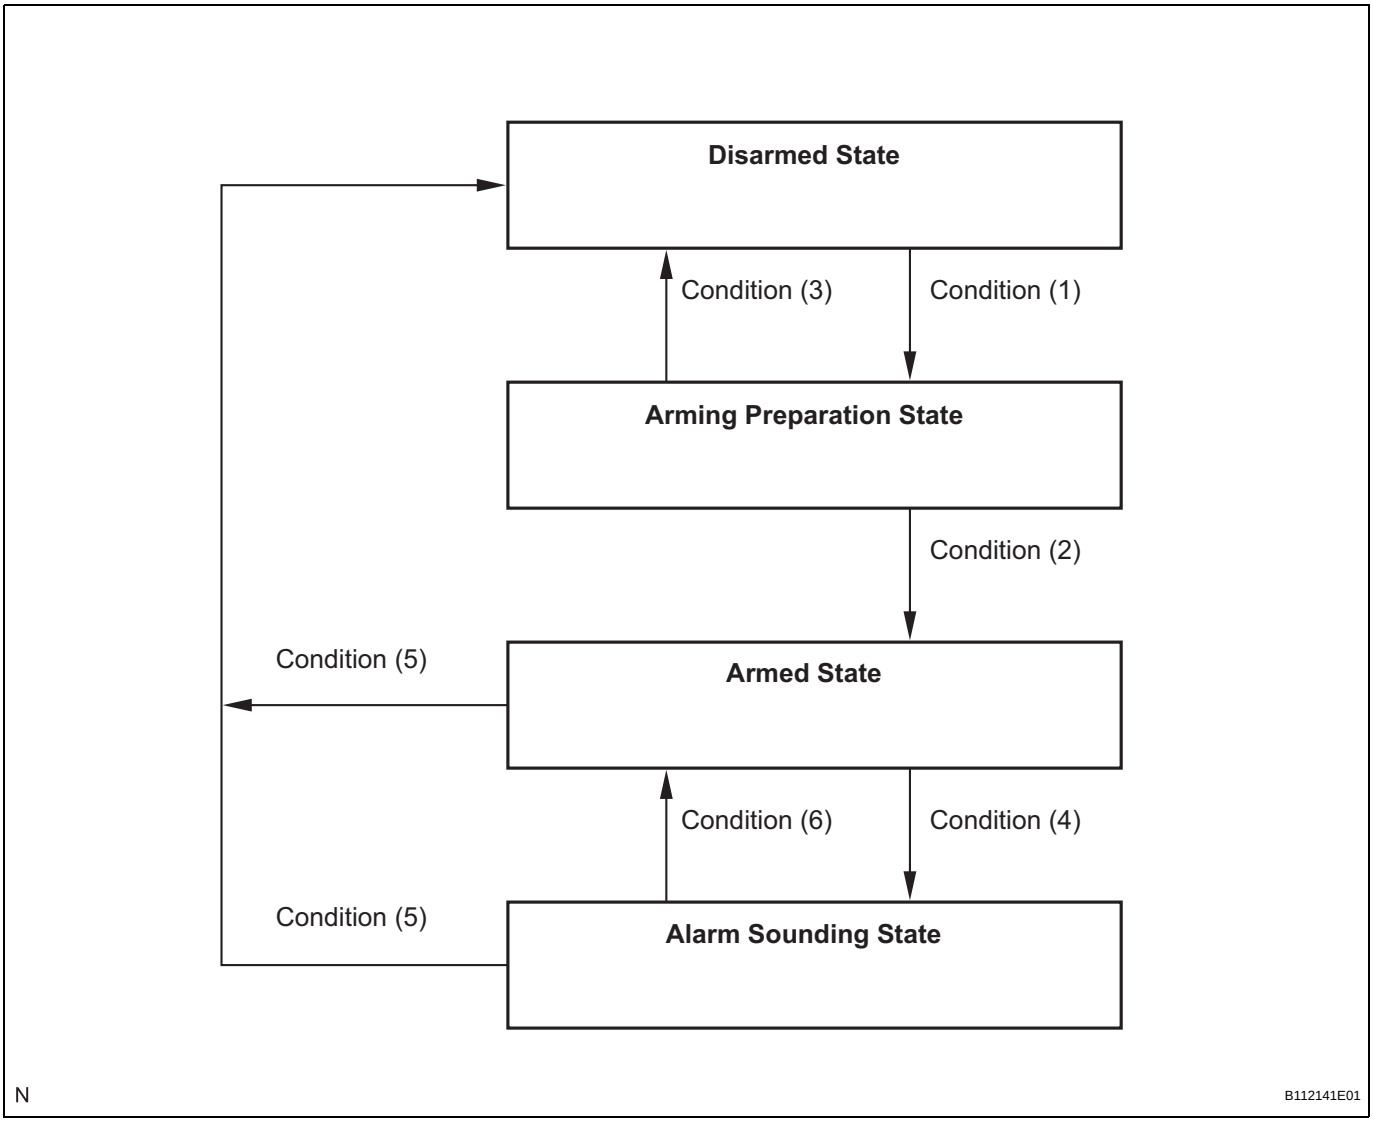
Alarm form manifestation and duration:

Alarm Form	Headlight	Blinks (approximately 0.4 seconds cycles)
	Taillight	Blinks (approximately 0.4 seconds cycles)
	Hazard Warning Light	Blinks (Cycle of flasher relay)
	Interior Light	Illuminates
	Vehicle Horn	Sounds (approximately 0.4 seconds cycles)
	Security Horn	Sounds (approximately 0.4 seconds cycles)
Alarm Duration	Approximately 57 seconds	

2. ACTIVE ARMING MODE

HINT:
- Active arming mode starts the alarm control immediately after the doors are locked.
- This system activates as described in the diagram below when one item for each condition is met.

(a) Active arming mode



Hatchback:

Condition	Item
Condition (1)	(No key in ignition key cylinder) 1. All doors locked using key* when all doors and engine hood closed. 2. Any open door closed and locked when all other doors locked and engine hood closed.
Condition (2)	1. After condition (1) met, 30 seconds allowed to enter armed state.
Condition (3)	One of following operations performed within 30 seconds of entering arming preparation state: 1. Any door unlocked. 2. Any door opened. 3. Engine hood opened. 4. Key inserted into ignition key cylinder. 5. Battery reconnected.
Condition (4)	One of following operations performed in armed state: 1. Any door opened. 2. Engine hood opened. 3. Battery reconnected. 4. Any door unlocked without using key.
Condition (5)	One of following operations performed in alarm sounding state or armed state: 1. Any door unlocked using key. 2. Key inserted into ignition key cylinder and 2 seconds elapse since engine start.
Condition (6)	1. After approximately 57 seconds, alarm stops sounding and system returns to armed state.

HINT:
*: When the driver door or passenger door key cylinder is turned to the lock position using a key with all the doors locked and the engine hood closed, the system enters the arming preparation state. However, the system does not enter the arming preparation state when the back door lock key cylinder is turned to the lock position.

Sedan:

Condition	Item
Condition (1)	(No key in ignition key cylinder) 1. All doors locked using key when all doors, engine hood and luggage compartment door closed. 2. Any open door closed and locked when all other doors locked, and engine hood and luggage compartment door closed. 3. All doors locked by using transmitter LOCK switch*.
Condition (2)	1. After condition (1) met, 30 seconds allowed to enter armed state.
Condition (3)	One of following operations performed within 30 seconds of entering arming preparation state: 1. Any door unlocked. 2. Any door opened. 3. Engine hood opened. 4. Luggage compartment door opened. 5. Key inserted into ignition key cylinder. 6. Battery reconnected.
Condition (4)	One of following operations performed in armed state: 1. Any door opened. 2. Any door unlocked without using key or transmitter*. 3. Engine hood opened. 4. Luggage compartment door opened without using key. 5. Battery reconnected. 6. Ignition switch turned on without using key.
Condition (5)	One of following operations performed in alarm sounding state or armed state: 1. Any door unlocked or luggage compartment door opened using key. 2. Key inserted into ignition key cylinder and 2 seconds elapse since engine start. 3. All doors unlocked by wireless operation*.
Condition (6)	1. After approximately 57 seconds, alarm stops sounding and system returns to armed state.

*: Only for vehicles with transmitter.

3. PASSIVE ARMING MODE

Passive arming mode can be switched ON and OFF using the specified method. The theft deterrent system is initially set to active arming mode when vehicles are shipped from factories.

HINT:

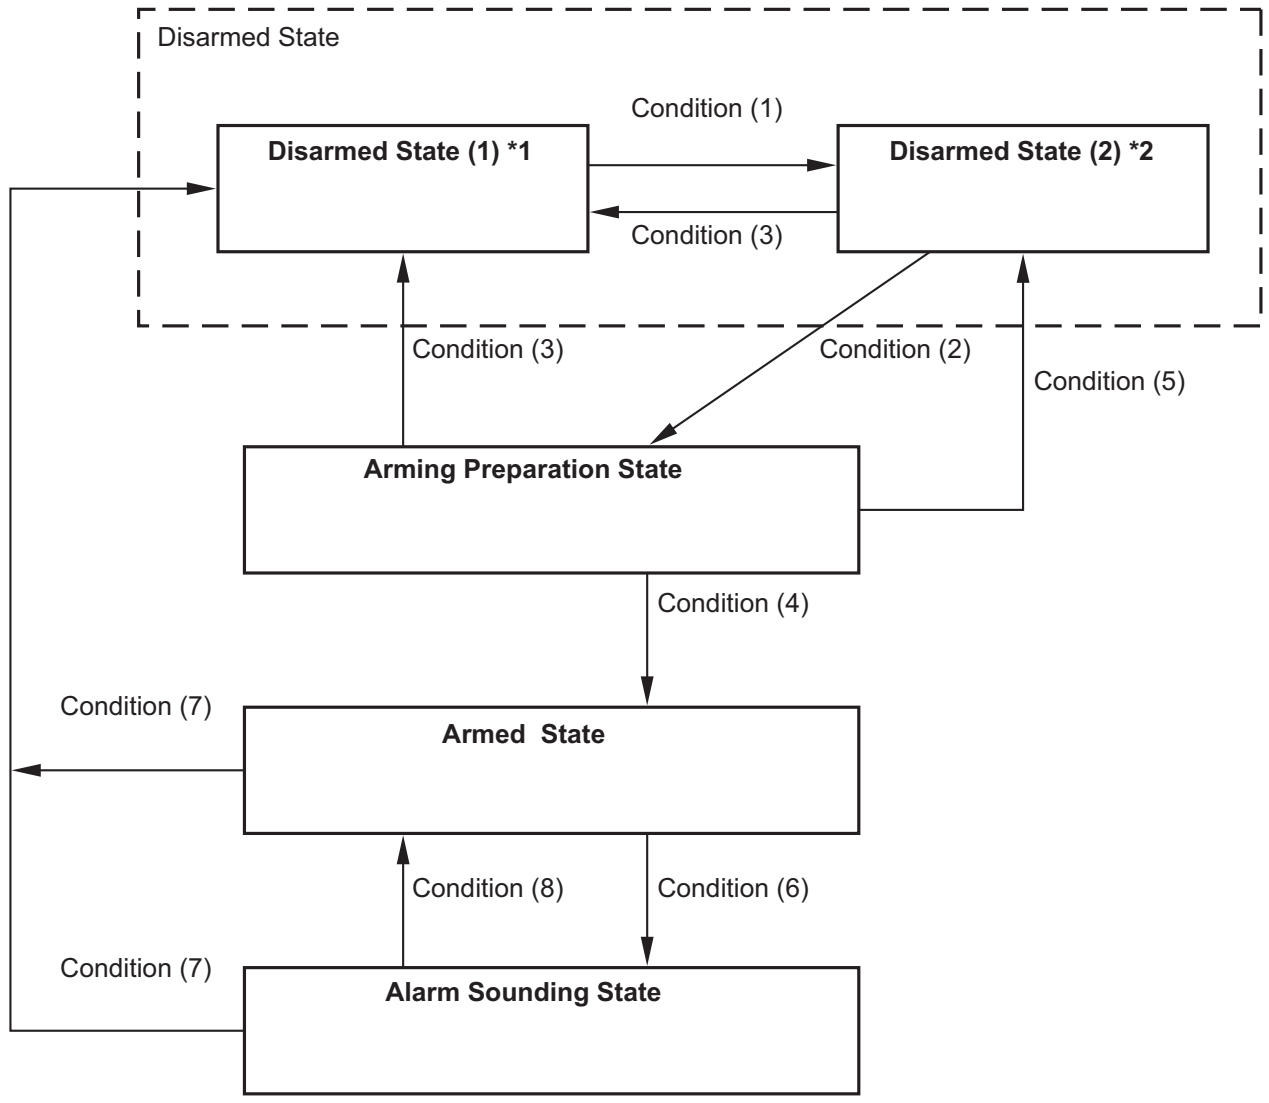
- Passive arming mode starts the alarm control after the key is removed from the ignition key cylinder and the doors are closed.
- During passive arming mode, the theft deterrent system goes into the armed state even if the doors are not locked.
- Even if the theft deterrent system detects that a door is opened during passive arming mode, the system does not go into the alarm sounding state immediately because an entry delay time is set.
- If either of the following conditions is met during passive arming mode, the theft deterrent system switches to active arming mode.
  - With all the doors and the engine hood closed, all the doors are locked by the key operation.

– With the engine hood closed and all the doors locked with any door still open, the open door is closed.

- This system activates as described in the diagram below when one item for each condition is met.

(a) Passive arming mode

HATCHBACK:



- *1: Disarmed state (1) is the normal disarmed state.
- *2: Disarmed state (2) is set from either the disarmed state (1) or the arming preparation state.

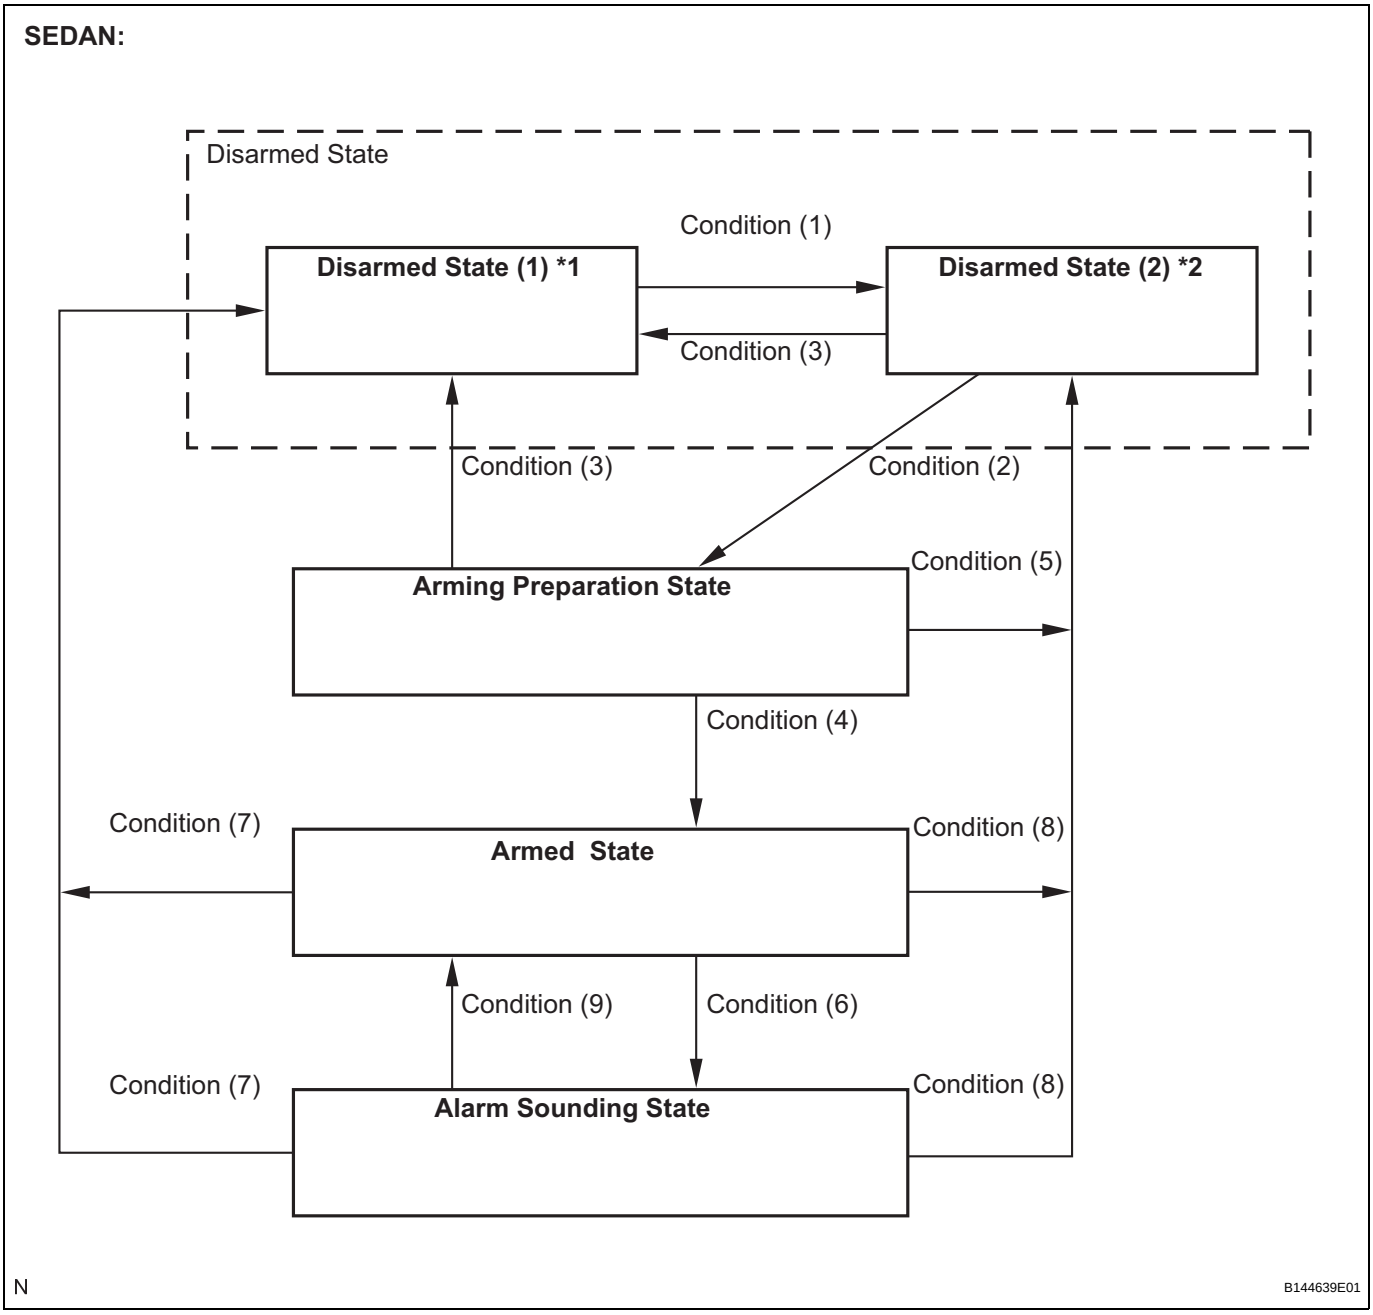
HINT:
The terms "all doors", "any door" and "door" below include the back door.

Hatchback:

Condition	Item
Condition (1)	1. With ignition switch OFF, any door opened and key removed from ignition key cylinder.
Condition (2)	1. Engine hood and all doors closed.
Condition (3)	One of following operations performed in arming preparation state or disarmed state (2): 1. Key inserted into ignition key cylinder. 2. Battery reconnected. 3. Any door unlocked using key.
Condition (4)	1. Approximately 30 seconds allowed to elapse in arming preparation state.
Condition (5)	1. Any door or engine hood opened.
Condition (6)	One of following operations performed in armed state: 1. Any door opened and entry delay time (see Entry Delay Function) allowed to elapse. 2. Engine hood opened. 3. Battery reconnected. 4. Ignition switch turned on without using key.
Condition (7)	One of following operations performed in armed state or alarm sounding state: 1. Driver door or passenger door unlocked using key*. 2. Key inserted into ignition key cylinder and 2 seconds elapse since engine start.
Condition (8)	1. After approximately 57 seconds, alarm stops sounding and system returns to armed state.

HINT:
*: System does not return to disarmed state if the back door key cylinder is turned to the unlock position using a key.

SEDAN:



- *1: Disarmed state (1) is the normal disarmed state.
- *2: Disarmed state (2) is set from either the disarmed state (1) or the arming preparation state.

SEDAN:

Condition	Item
Condition (1)	1. With ignition switch OFF, any door opened and key removed from ignition key cylinder.
Condition (2)	1. Engine hood, all doors and luggage compartment door closed.
Condition (3)	One of following operations performed in arming preparation state or disarmed state (2): 1. Key inserted into ignition key cylinder. 2. Battery reconnected. 3. Any door unlocked using key. 4. All doors unlocked using transmitter UNLOCK switch*1.
Condition (4)	1. Approximately 30 seconds allowed to elapse in arming preparation state.
Condition (5)	1. Any door, engine hood or luggage compartment door opened.

Condition	Item
Condition (6)	One of following operations performed in armed state: 1. Any door opened and entry delay time (see Entry Delay Function) allowed to elapse. 2. Engine hood opened. 3. Luggage compartment door opened without using key. 4. Battery reconnected. 5. Ignition switch turned on without using key.
Condition (7)	One of following operations performed in armed state or alarm sounding state: 1. All doors unlocked using transmitter UNLOCK switch*1. 2. Driver door or passenger door unlocked using key*2. 3. Key inserted into ignition key cylinder and 2 seconds elapse since engine start.
Condition (8)	1. Luggage compartment door opened using key.
Condition (9)	1. After approximately 57 seconds, alarm stops sounding and system returns to armed state.

*1: Only for vehicles with transmitter.

*2: System does not return to disarmed state if the luggage compartment door key cylinder is turned to the unlock position using a key.

4. ALARM MEMORY FUNCTION

(a) If the alarm is set off (tampering is detected) while the theft deterrent system is armed, the alarm memory function records it. Whenever the theft deterrent system is canceled, the alarm memory function causes the taillights to light up for 2 seconds in order to indicate that the alarm has been set off.

(1) Conditions of the alarm memory function that cause the taillights to light up:
When the theft deterrent system has entered the alarm sounding state (tampering has been detected), the taillights light up for 2 seconds if either of the following conditions is met.
- Switched to the disarmed state from the armed state during active arming mode.
- Switched to the disarmed state (1) from the armed state during passive arming mode.

HINT:
Active arming mode: See ACTIVE ARMING MODE.
Passive arming mode: See PASSIVE ARMING MODE.

5. SECURITY INDICATOR OUTPUT

(a) The theft warning ECU outputs a signal to light up the security indicator, according to the state of the theft deterrent system. However, some of the actual lighting conditions of the security indicator are different from the output signals of the theft warning ECU.

Output:

Theft Deterrent System Condition*	Security Indicator	
	Output Signals from Theft Warning ECU	Actual Lighting Condition
Disarmed state (1), (2)	OFF	OFF (immobiliser system unset) BLINKING (immobiliser system set)
Arming preparation state	ON	ON
Armed state (During entry delay time)	BLINKING (ON)	BLINKING (ON)

Alarm sounding state	ON	ON

Blinking cycle:

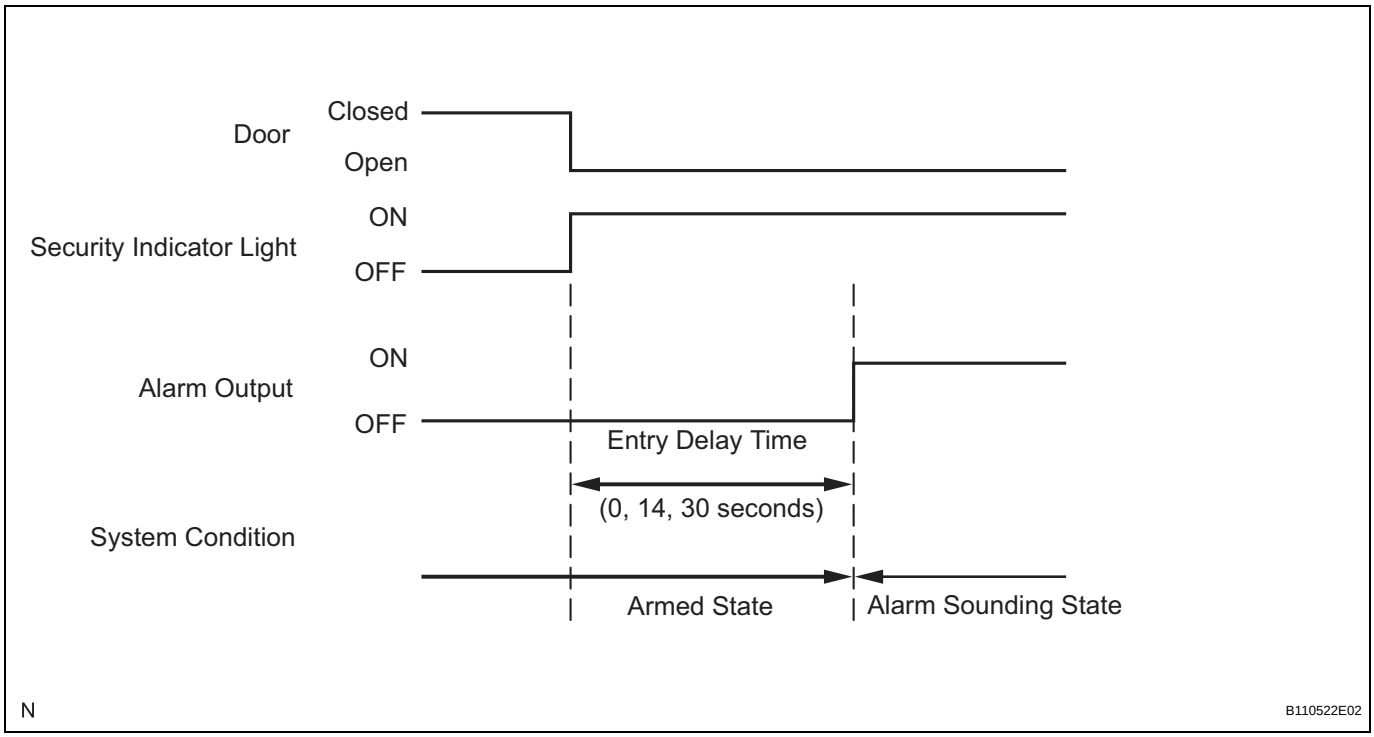
Time	Security Indicator
0.2 seconds	ON
1.8 seconds	OFF

HINT:

- *: The above condition is common to both active arming mode and passive arming mode.
- When the immobiliser system is set, the security indicator blinks in both the disarmed state and the armed state, due to the output signals from the immobiliser system.

6. ENTRY DELAY FUNCTION

(a) When any door is opened while all the doors are closed during passive arming mode, the entry delay time starts. If the switch condition (7) or (8) (see PASSIVE ARMING MODE) is met during the entry delay time, the theft deterrent system will not set off the alarm. However, if the switch condition (7) or (8) is not met, the theft deterrent system will recognize it as a theft and set off the alarm.



HINT:

The entry delay time can be selected from among 0, 14, 30 seconds by customizing the setting.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use this procedure to troubleshoot the theft deterrent system.
- The intelligent tester should be used in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

HINT:

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 CHECK FOR DTC

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTCs.
(c) Check whether the same DTCs recur by simulating the conditions indicated by the DTCs noted in step (a) above.
  (1) If no DTCs recur, proceed to A.
  (2) If the same DTCs recur, proceed to B.

B → **Go to step 6**

A

4 PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → **Go to step 6**

A

5 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Data list/Active test (See page TD-20)
(b) Terminals of ECU (See page TD-17)
(c) System Description (See page TD-7)

END

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.**
- **Be sure to record the current settings before customization.**
- **When troubleshooting, make sure that the item in question is not set to OFF due to customization. (For example, when the problem is that the wireless function is inoperative, first check whether the wireless function has been set to OFF before troubleshooting.)**

Theft Deterrent System:

Display (Item)	Default	Function	Setting
PASSIVE MODE (Passive Arming Mode)	OFF	In passive arming mode, theft deterrent system switched from arming preparation state to armed state 30 seconds after both of following operations performed. – Key removed from ignition key cylinder – All doors closed (not locked) In passive arming mode, if following operations are not performed within 14 seconds of door being opened while in armed state, theft deterrent system determines that condition as theft and switches to alarm sounding state. – Battery reconnected – Key inserted into ignition key cylinder and ignition switch turned from OFF to ON – Any door unlocked using key	ON/OFF
WARNING (HORN) (Warning horn)	ON	Allows vehicle horn and security horn to be used as warning devices	ON/OFF
ENTRY DELAY (Entry delay time)	14 seconds	Changes entry delay time (time before warning starts) for passive arming mode	0 /14 /30 (seconds)

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Theft Deterrent System

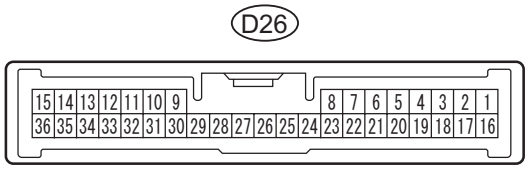
Symptom	Suspected area	See page
Theft deterrent system cannot be set.	Engine hood courtesy switch circuit	TD-25
	Security indicator light circuit	TD-35
	ECU power source circuit	TD-44
	Unlock warning switch circuit	TD-46
	Back door UNLOCK detection switch circuit*1	TD-38
	Luggage compartment door key cylinder switch circuit*2	-
	Theft warning ECU assembly	-
Security indicator light does not blink when theft deterrent system is set.	Security indicator light circuit	TD-35
	Theft warning ECU assembly	-
Theft deterrent system can be set, but does not operate when engine hood is opened.	Engine hood courtesy switch circuit	TD-25
	Theft warning ECU assembly	-
Theft deterrent system can be set, but is not canceled when ignition switch is turned to ACC or ON position.	Ignition switch circuit	TD-32
	Theft warning ECU assembly	-
Theft deterrent system can be set, but still operates when back door is opened with key.	Back door UNLOCK detection switch circuit	TD-38
	Theft warning ECU assembly	-
Theft deterrent system can be set, but still operates when luggage compartment door is opened with key*2.	Luggage compartment door key cylinder switch circuit	TD-41
	Theft warning ECU assembly	-
While theft deterrent system is in warning operation, horns do not sound.	Security horn circuit	TD-28
	Theft warning ECU assembly	-
Horns sound even when theft deterrent system is not set.	Security horn circuit	TD-28
	Theft warning ECU assembly	-

*1: Hatchback
*2: Sedan

TERMINALS OF ECU

1. CHECK THEFT WARNING ECU ASSEMBLY (THEFT DETERRENT ECU)

Theft Warning ECU (Theft Deterrent ECU):



B121323E01

(a) Disconnect the D26 ECU connector.
(b) Check the voltage or resistance of each terminal of the wire harness side connector.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B1 (D26-11) - Body ground	B - Body ground	Battery	Always	11 to 14 V
+B2 (D26-13) - Body ground	L*1 - Body ground	Battery	Always	11 to 14 V
	BR*2 - Body ground			
IG (D26-9) - E (D26-16)	GR - W-B	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
LSR (D26-6)*1 - Body ground	O - Body ground	Back door unlock detection switch signal	Back door LOCK → UNLOCK	10 kΩ or higher → Below 1 Ω
LUG (D26-6)*2 - Body ground	P - Body ground	Luggage compartment door unlock detection switch signal	Luggage compartment door LOCK → UNLOCK	10 kΩ or higher → Below 1 Ω
E (D26-16) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

*1: Hatchback
*2: Sedan
If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the D26 ECU connector.
(d) Check the voltages of each terminal of the connector.

Standard voltage:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BRK+ (D26-24) - Body ground	P - Body ground	Alarm BERKES Communication	Theft deterrent system is in alarm sounding state.	Pulse generation (1.5 V ← → Below 1.2 V)
BRK- (D26-25) - Body ground	O - Body ground	Alarm BERKES Communication	All doors are locked using key (Theft deterrent system is in arming preparation state).	Pulse generation (1.5 V ← → Below 1.2 V)
SH- (D26-15) - Body ground	O - Body ground	Security horn	Security horn is sounding (Theft deterrent system is in alarm sounding state).	Pulse generation (11 to 14 V ← → Below 1 V)
+B1 (D26-11) - E (D26-16)	B - W-B	+B power supply	Always	11 to 14 V
KSW (D26-7) - E (D26-16)	Y - W-B	Key unlock warning switch input	Key unlock warning switch ON (Key inserted) → OFF (Key removed from ignition key cylinder)	Below 1 V → 11 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IND (D26-29) - E (D26-16)	LG*1 - W-B G*2 - W-B	Security indicator	Security indicator lights up (illuminates for 30 seconds in alarm sounding state, flashes when immobiliser system is operating).	5 V or more
DSWH (D26-4) - E (D26-16)	W - W-B	Engine hood courtesy switch input	Engine hood courtesy switch OFF (Closed) → ON (Open)	11 to 14 V → Below 1 V

*1: Hatchback
*2: Sedan
If the result is not as specified, the theft warning ECU assembly may be malfunctioning.

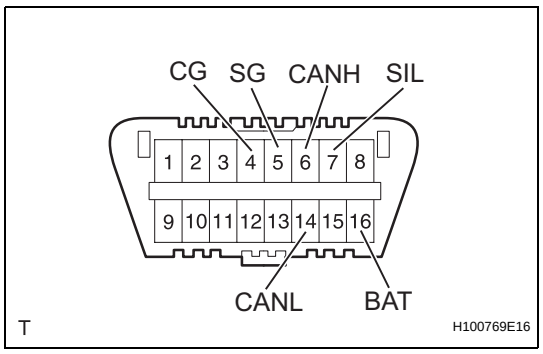
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The theft warning ECU controls the functions of the theft deterrent system on the vehicle. Theft deterrent system data can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

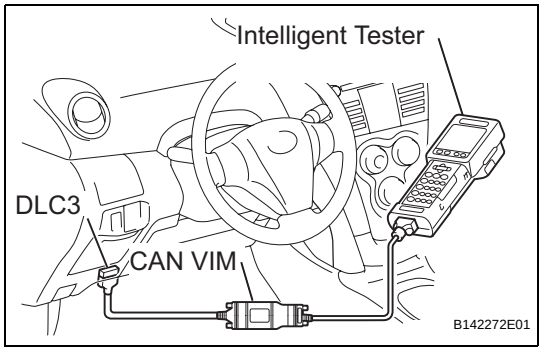


Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Intelligent tester

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

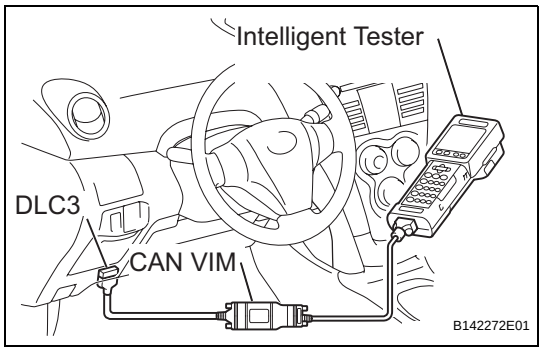
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.



DTC CHECK / CLEAR

1. DTC CHECK

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DTCs by following the prompts on the tester's screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

2. DTC CLEAR

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Erase the DTCs by following the prompts on the tester's screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST according to the display on the tester.

Theft Warning ECU:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
TRUNK KEY UNLK*2	Luggage compartment door unlock detection switch signal/ON or OFF	ON: Luggage compartment door is unlocked OFF: Luggage compartment door is locked	-
HOOD COURTSY SW	Engine hood courtesy switch signal/ON or OFF	ON: Engine hood is open OFF: Engine hood is closed	-

*1: Hatchback
*2: Sedan

2. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows a relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to shorten the labor time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST according to the instructions on the tester.

Theft Warning ECU:

Item	Test Detail	Diagnostic Note
SECURITY INDIC	Security indicator ON/OFF	-
SECURITY HORN	Security horn ON/OFF	-

Main Body ECU:

Item	Test Detail	Diagnostic Note
HAZARD	Hazard warning light ON/OFF	-
VEHICLE HORN	Vehicle horn ON/OFF	-
TAIL LIGHT	Taillight relay ON/OFF	-
HEAD LIGHT	Headlight relay ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

If a malfunction code is displayed during the DTC check, check the circuit listed for that code in the table below and then proceed to the page given for that circuit.

MAIN BODY ECU DIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
B1269	Theft Deterrent ECU Communication Stop	1. Wire harness and connector 2. Theft warning ECU assembly	TD-23

DTC	B1269	Theft Deterrent ECU Communication Stop

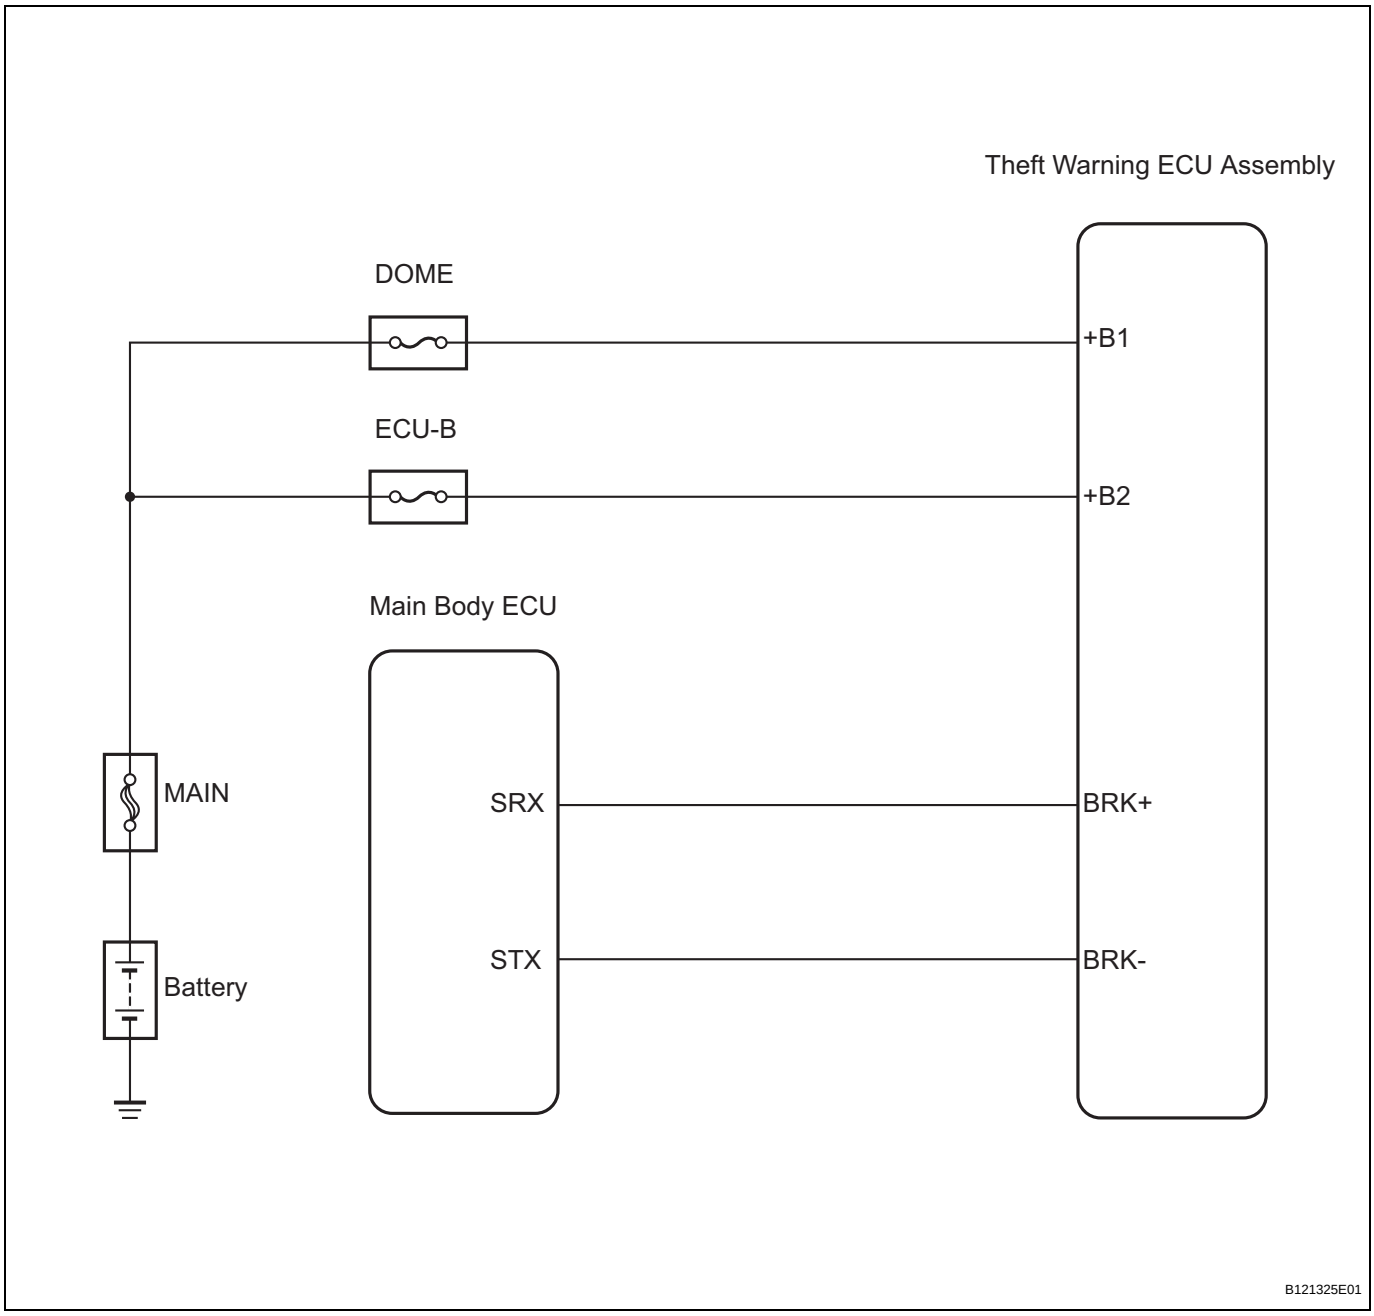
DESCRIPTION

DTC B1269 is output when the communication between the theft warning ECU (theft deterrent ECU) and the main body ECU stops for more than 10 seconds.

DTC No.	DTC Detection Condition	Trouble Area
B1269	No communication from theft warning ECU for more than 10 seconds.	• Theft warning ECU assembly • Wire harness and connector

TD

WIRING DIAGRAM

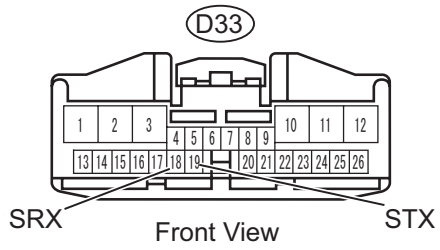


INSPECTION PROCEDURE

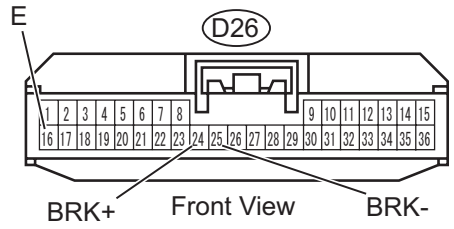
1 CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

Main Body ECU Connector



Theft Warning ECU Assembly Connector



B121326E01

(a) Disconnect the D26 theft warning ECU and D33 main body ECU connectors.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D26-24 (BRK+) - D33-18 (SRX)	Below 1 Ω
D26-25 (BRK-) - D33-19 (STX)	Below 1 Ω
D26-24 (BRK+) or D33-18 (SRX) - Body ground	10 kΩ or higher
D26-25 (BRK-) or D33-19 (STX) - Body ground	10 kΩ or higher
D26-16 (E) - Body ground	Below 1 Ω

(c) Reconnect the theft warning ECU and main body ECU connectors.

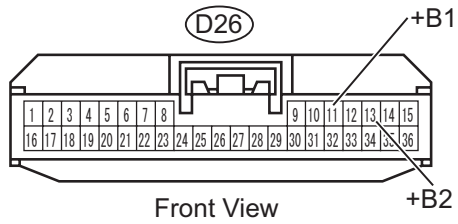
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (BATTERY VOLTAGE)

Wire Harness Side:

Theft Warning ECU Assembly Connector



B121327E01

(a) Disconnect the D26 theft warning ECU connector.
(b) Check the voltage between the wire harness side connector and body ground.

Standard voltage

Tester Connection	Specified Condition
D26-11 (+B1) - Body ground	11 to 14 V
D26-13 (+B2) - Body ground	11 to 14 V

(c) Reconnect the theft warning ECU connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

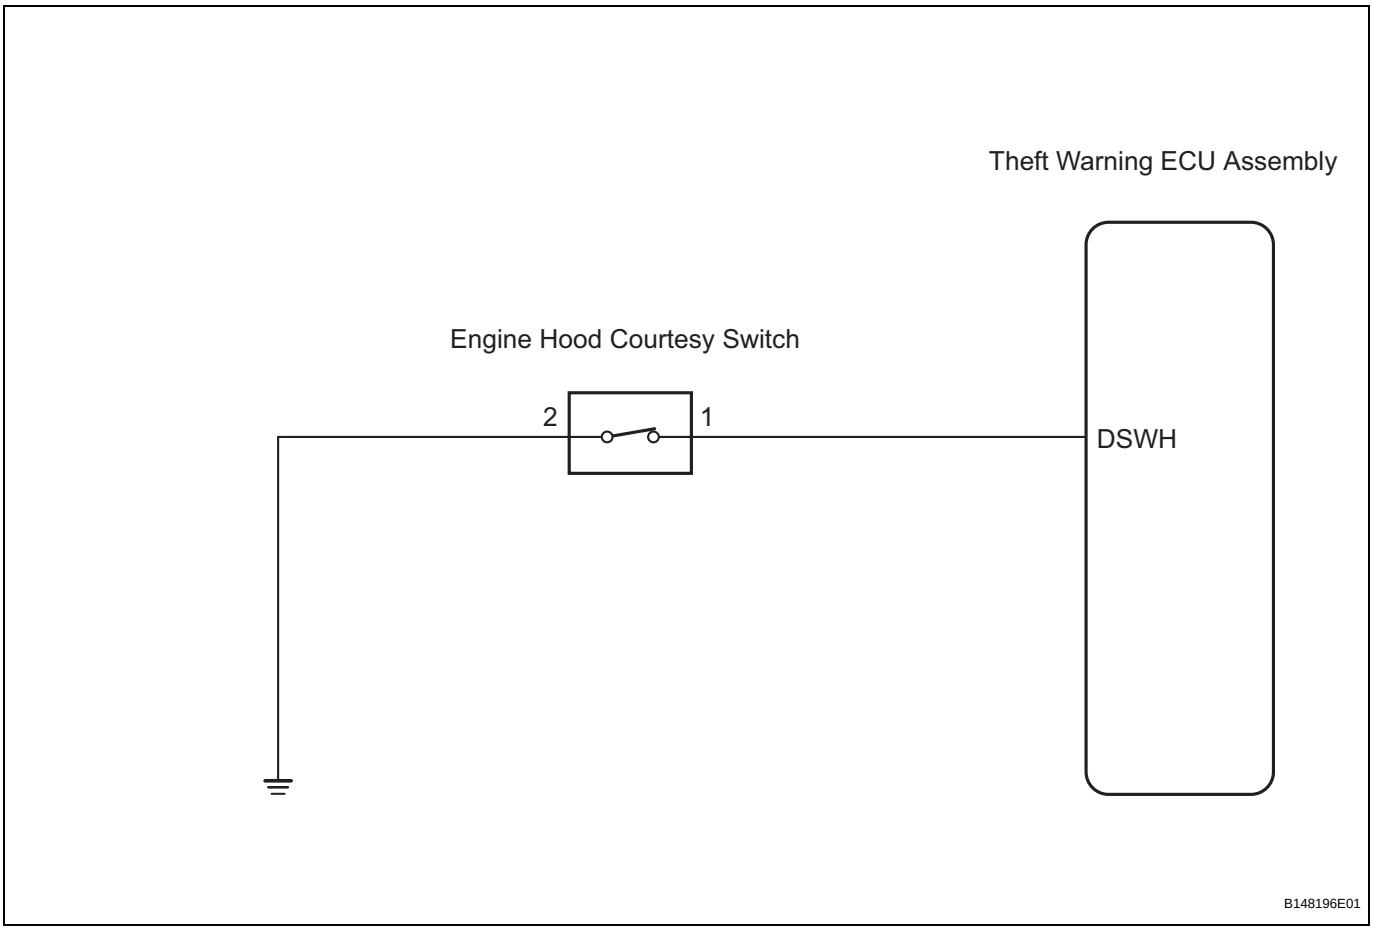
REPLACE THEFT WARNING ECU ASSEMBLY

Engine Hood Courtesy Switch Circuit

DESCRIPTION

The engine hood courtesy switch is built into the engine hood lock assembly. The switch turns on when the engine hood is opened and turns off when the engine hood is closed.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE USING INTELLIGENT TESTER (ENGINE HOOD COURTESY SWITCH)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch ON.
(d) Select the item below in the DATA LIST and read the display on the tester.

Theft Warning ECU

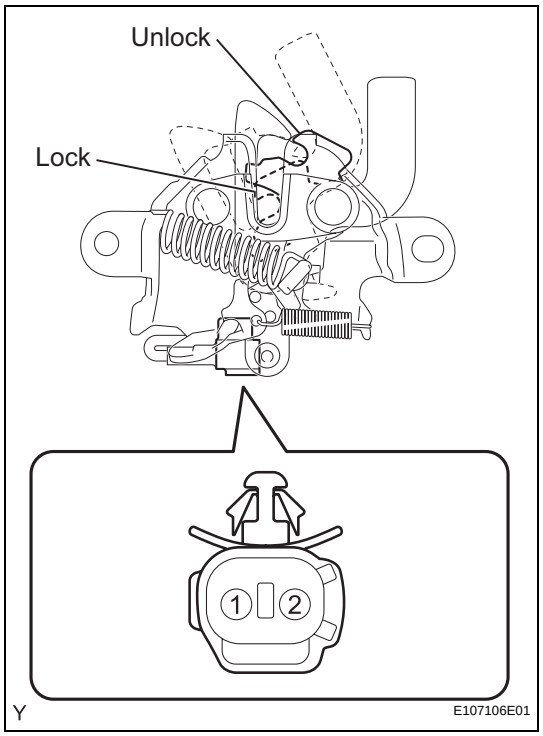
Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
HOOD COURTSY SW	Engine hood courtesy switch signal/ON or OFF	ON: Engine hood is OPEN OFF: Engine hood is CLOSED	-

NG	Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT HOOD LOCK ASSEMBLY (ENGINE HOOD COURTESY SWITCH)



(a) Disconnect the A18 courtesy switch connector.
(b) Check the resistance of the engine hood courtesy switch.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Lock (OFF)	10 kΩ or higher
1 - 2	Unlock (ON)	Below 1 Ω

(c) Reconnect the courtesy switch connector.

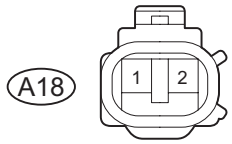
NG → **REPLACE HOOD LOCK ASSEMBLY**

OK

3	CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - ENGINE HOOD COURTESY SWITCH)

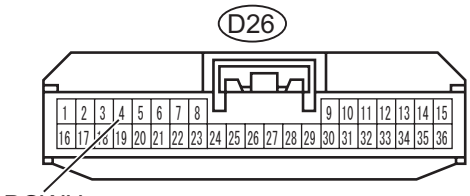
Wire Harness Side:

Engine Hood Courtesy Switch Connector



Front View

Theft Warning ECU Assembly Connector



Front View

B121330E01

(a) Disconnect the D26 theft warning ECU and A18 engine hood courtesy switch connectors.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D26-4 (DSWH) - A18-1	Below 1 Ω
D26-4 (DSWH) - Body ground	10 kΩ or higher

(c) Reconnect the theft warning ECU and engine hood courtesy switch connectors.

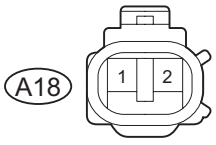
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (ENGINE HOOD COURTESY SWITCH - BODY GROUND)

Wire Harness Side:

Engine Hood Courtesy Switch Connector



Front View

B121331E01

(a) Disconnect the A18 engine hood courtesy switch connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
A18-2 - Body ground	Below 1 Ω

(c) Reconnect the engine hood courtesy switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

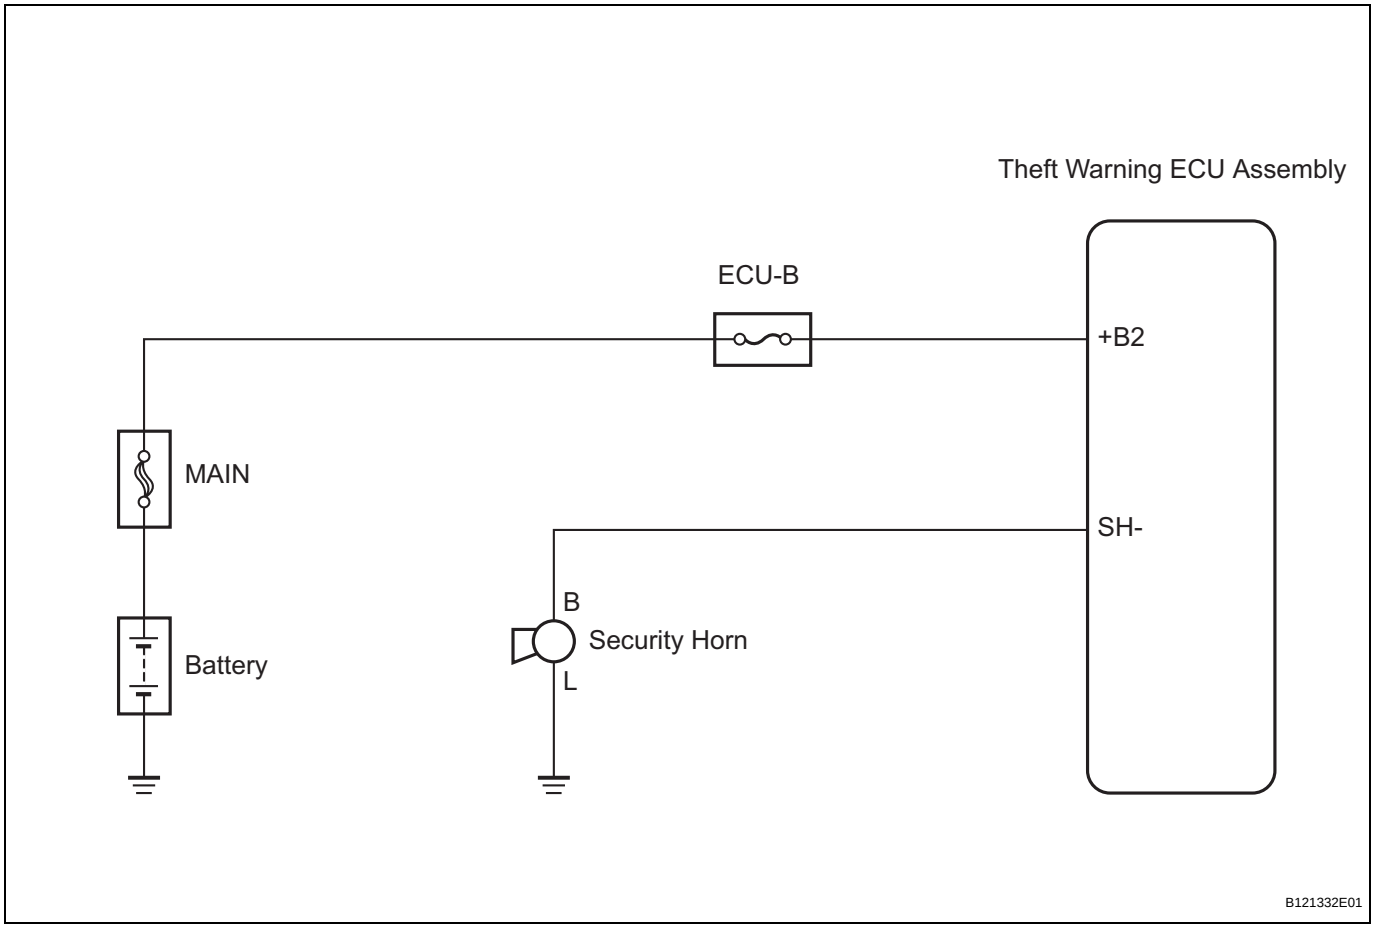
REPLACE THEFT WARNING ECU ASSEMBLY

Security Horn Circuit

DESCRIPTION

When the theft deterrent system is changed from the armed state to the alarm sounding state, the theft warning ECU can sound the security horn. The horn cycles between ON and OFF at intervals of approximately 0.4 seconds.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SECURITY HORN)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch ON.
(d) Select the item below in the ACTIVE TEST and then check that the horn operates.

Theft Warning ECU

Item	Test Details	Diagnostic Note
SECURITY HORN	Security horn ON/OFF	-

OK:

Security horn operates normally.

NG → Go to step 2

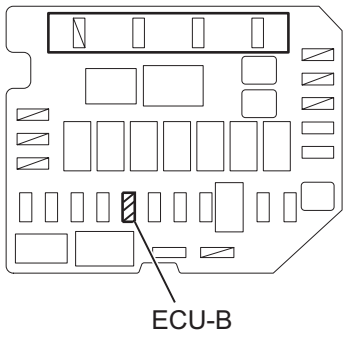
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TD

2 INSPECT FUSE (ECU-B)

Engine Room R/B:



B122728E01

(a) Remove the ECU-B fuse from the engine room R/B.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ECU-B fuse.

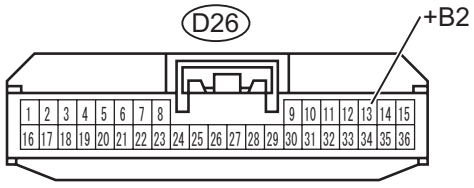
NG → **REPLACE FUSE**

OK

3 CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY- BODY GROUND)

Wire Harness Side:

Theft Warning ECU Assembly Connector



Front View

B121327E10

(a) Disconnect the D26 theft warning ECU connector.
(b) Measure the voltage.
Standard voltage

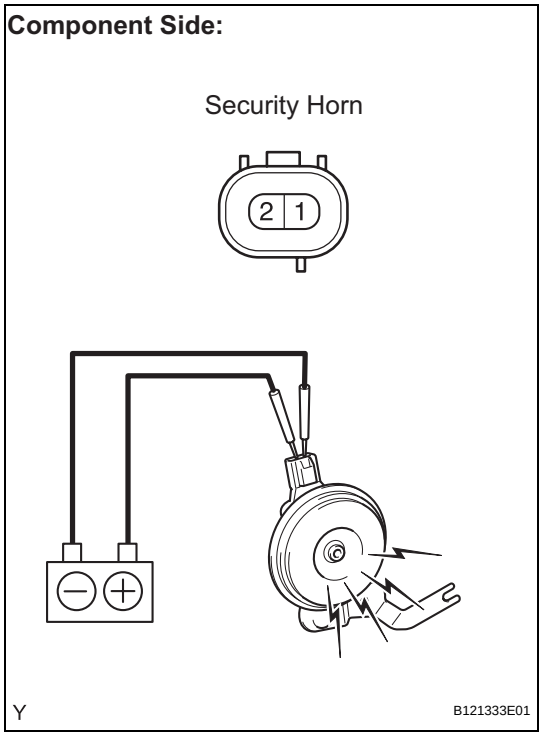
Tester Connection	Specified Condition
D26-13 (+B2) - Body ground	11 to 14 V

(c) Reconnect the theft warning ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT SECURITY HORN ASSEMBLY



(a) Disconnect the A23 security horn connector.
(b) Check the operation of the security horn.
Standard

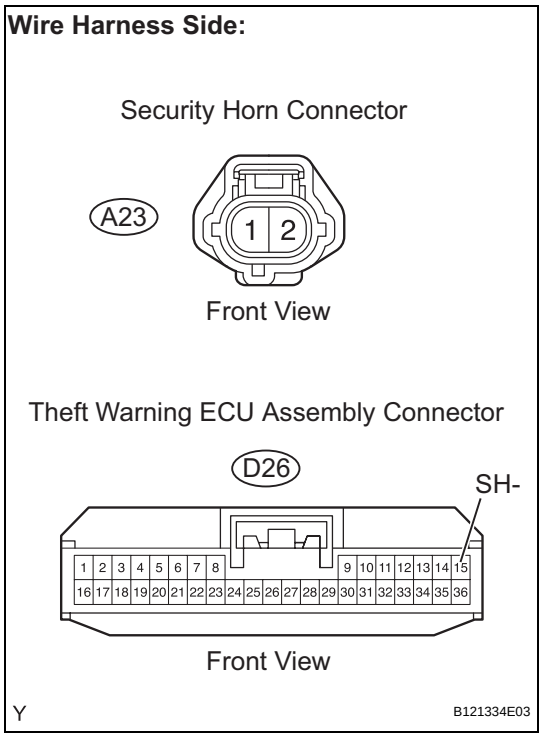
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Security horn sounds

(c) Reconnect the security horn connector.

NG → **REPLACE SECURITY HORN ASSEMBLY**

OK

5 CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - SECURITY HORN ASSEMBLY)



(a) Disconnect the D26 theft warning ECU and the A23 security horn connectors.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D26-15 (SH-) - A23-1	Below 1 Ω
A23-2 - Body ground	Below 1 Ω
D26-15 (SH-) or (A23-1) - Body ground	10 kΩ or higher

(c) Reconnect the theft warning ECU and the security horn connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

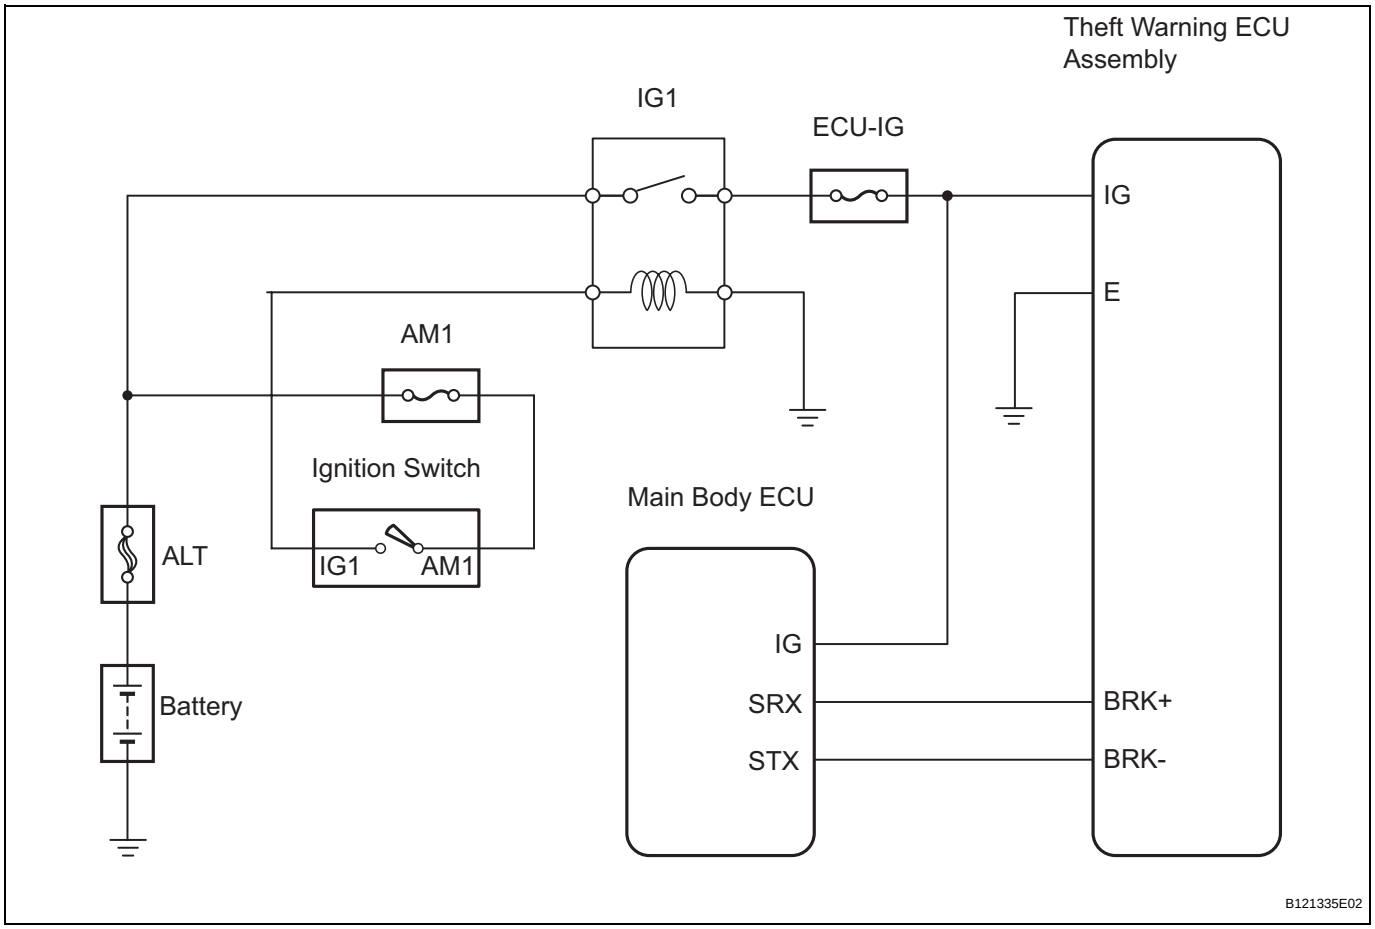
REPLACE THEFT WARNING ECU ASSEMBLY

Ignition Switch Circuit

DESCRIPTION

When the ignition switch is turned to the ON position, the battery positive voltage is applied to terminal IG of the theft warning ECU. When the battery positive voltage is applied to terminal IG of the ECU while the theft deterrent system is operating, the warning stops. Furthermore, the power supplied from terminal IG of the ECU is used as the power for the door courtesy switch and position switch, etc.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTC

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Clear the DTCs.
(d) Check whether DTC B1269 recurs 10 seconds or more after the ignition switch is turned on.
OK:
No DTC is output.

NG	GO TO DTC CHART

OK

2	READ VALUE USING INTELLIGENT TESTER (IGNITION SWITCH)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch ON.
(d) Select the item below in the DATA LIST and read the display on the tester.

TD

Theft Warning ECU

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
IG SW	Ignition switch signal ON/OFF	ON: Key is in ON or START position OFF: Key is in LOCK or ACC position	-

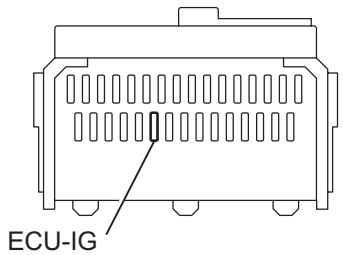
NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3	INSPECT FUSE (ECU-IG)

Main Body ECU:



(a) Remove the ECU-IG fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ECU-IG fuse.

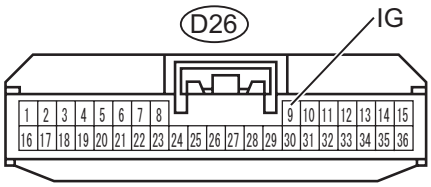
NG → **REPLACE FUSE**

OK

4	CHECK HARNESS OR CONNECTOR (IG POWER SOURCE)

Wire Harness Side:

Theft Warning ECU Assembly Connector



Front View

B121327E03

(a) Disconnect the D26 theft warning ECU connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage.

Standard voltage

Tester Connection	Specified Condition
D26-9 (IG) - Body ground	11 to 14 V

(d) Reconnect the theft warning ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE THEFT WARNING ECU ASSEMBLY

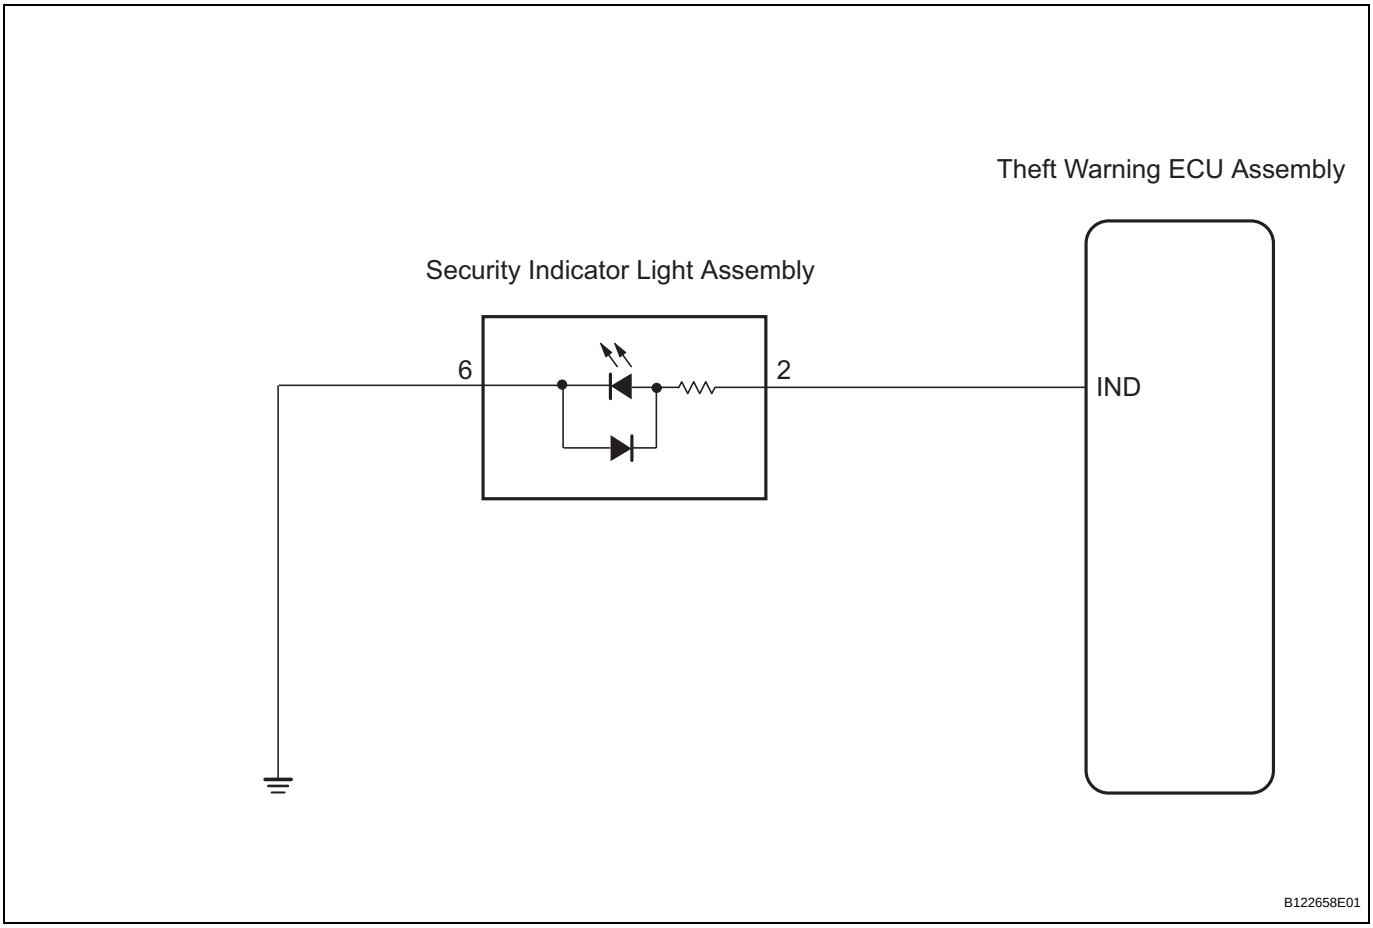
TD

Security Indicator Light Circuit

DESCRIPTION

While the theft deterrent system is preparing itself to be set, this circuit lights up the security indicator light. When the system is set, it continuously turns the indicator light on for 0.2 seconds and then turns it off for 1.8 seconds, thus the indicator light blinks.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SECURITY INDICATOR LIGHT)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch ON.
(d) Select the item below in the ACTIVE TEST and then check that the security indicator operates.

Theft Warning ECU

Item	Test Details	Diagnostic Note
SECURITY INDIC	Security indicator light ON/OFF	-

OK:
The security indicator light turns on and off correctly when it is operated through the intelligent tester.

NG → **Go to step 2**

OK

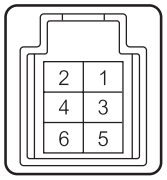
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TD

2 CHECK SECURITY INDICATOR LIGHT ASSEMBLY

Component Side:

Security Indicator Light Assembly



E108193E04

(a) Disconnect the D25 security indicator light connector.
(b) Apply battery voltage to the terminals of the security indicator and check the lighting condition.
Standard

Measurement Condition	Specified Operation
Battery positive (+) - Terminal 2 Battery negative (-) - Terminal 6	Indicator light comes on.

(c) Reconnect the indicator light connector.

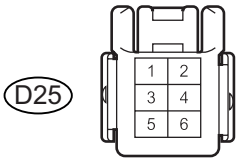
NG → **REPLACE SECURITY INDICATOR LIGHT ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU - SECURITY INDICATOR LIGHT ASSEMBLY)

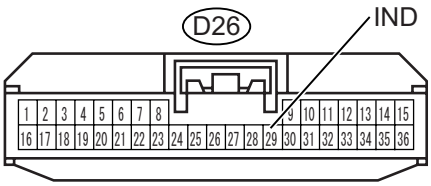
Wire Harness Side:

Security Indicator Light Assembly Connector



Front View

Theft Warning ECU Assembly Connector



Front View

B122659E01

(a) Disconnect the D26 theft warning ECU and the D25 security indicator light connectors.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D26-29 (IND) - D25-2	Below 1 Ω
D26-29 (IND) - Body ground	10 kΩ or higher

(c) Reconnect the theft warning ECU and the security indicator light connectors.

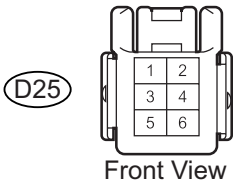
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (SECURITY INDICATOR LIGHT ASSEMBLY - BODY GROUND)

Wire Harness Side:

Security Indicator Light Assembly Connector



B122660E01

(a) Disconnect the D25 security indicator light connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D25-6 - Body ground	Below 1 Ω

(c) Reconnect the security indicator light connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

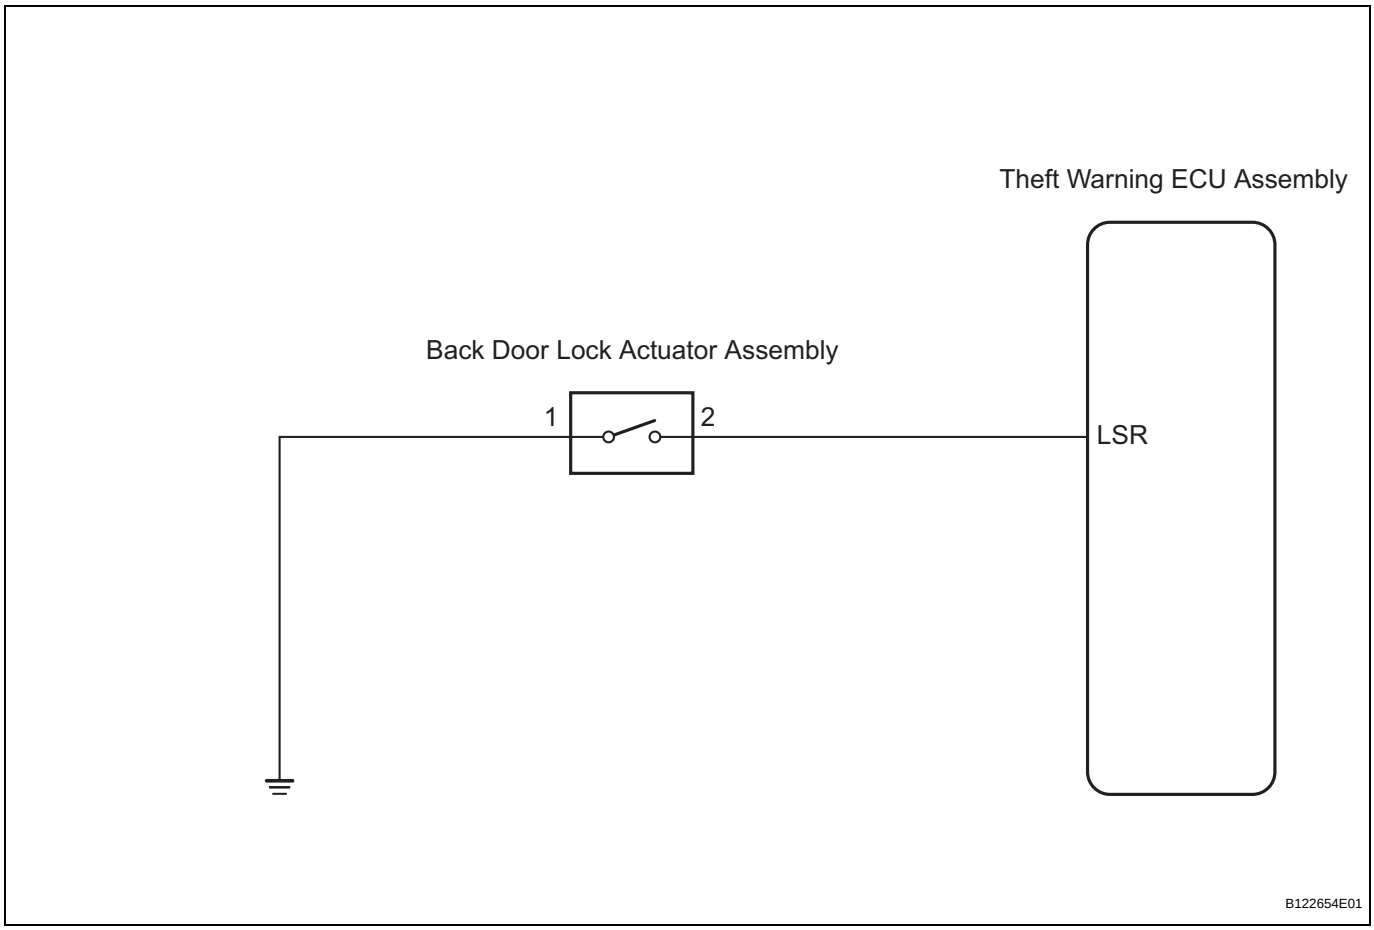
REPLACE THEFT WARNING ECU ASSEMBLY

Back Door UNLOCK Detection Switch Circuit

DESCRIPTION

The back door unlock detection switch comes on when the back door key cylinder is turned to the unlock position with the key.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE USING INTELLIGENT TESTER (BACK DOOR UNLOCK DETECTION SWITCH)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch on.
(d) Select the item below in the DATA LIST and then read the display on the tester.

Theft Warning ECU

Item	Test Details	Diagnostic Note
BACK DOOR LOCK	Back door unlock detection switch signal OFF	-

OK:

When the back door is locked, "ON" appears on the screen.

Theft Warning ECU

Item	Test Details	Diagnostic Note
BACK DOOR UNLOCK	Back door unlock detection switch signal ON	-

OK:

When the back door is unlocked, "ON" appears on the screen.

HINT:

The theft warning ECU detects the back door lock condition using signals from the back door unlock detection switch. The condition can be displayed as BACK DOOR LOCK or BACK DOOR UNLOCK on an intelligent tester by the theft warning ECU.

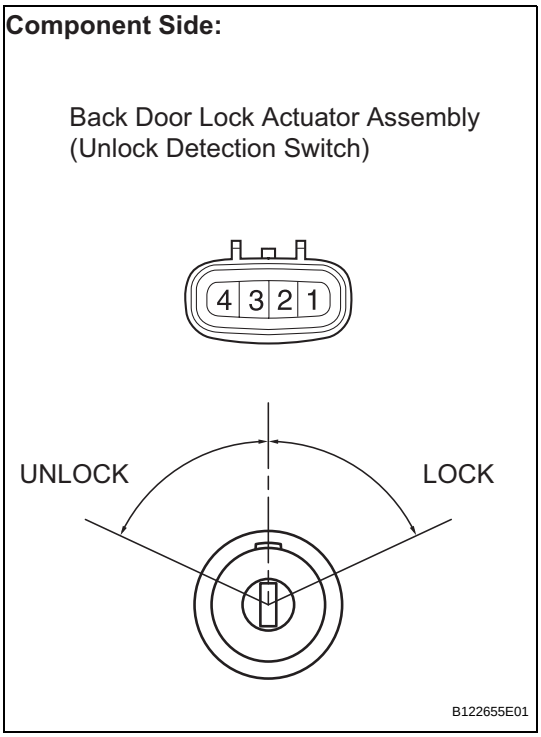
NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT BACK DOOR LOCK ACTUATOR ASSEMBLY (UNLOCK DETECTION SWITCH)

Component Side:



(a) Disconnect the N4 unlock detection switch connector.

(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	The back door is locked	10 kΩ or higher
1 - 2	The back door is unlocked	Below 1 Ω

(c) Reconnect the unlock detection switch connector.

NG → **REPLACE BACK DOOR LOCK ACTUATOR ASSEMBLY**

OK

REPLACE THEFT WARNING ECU ASSEMBLY

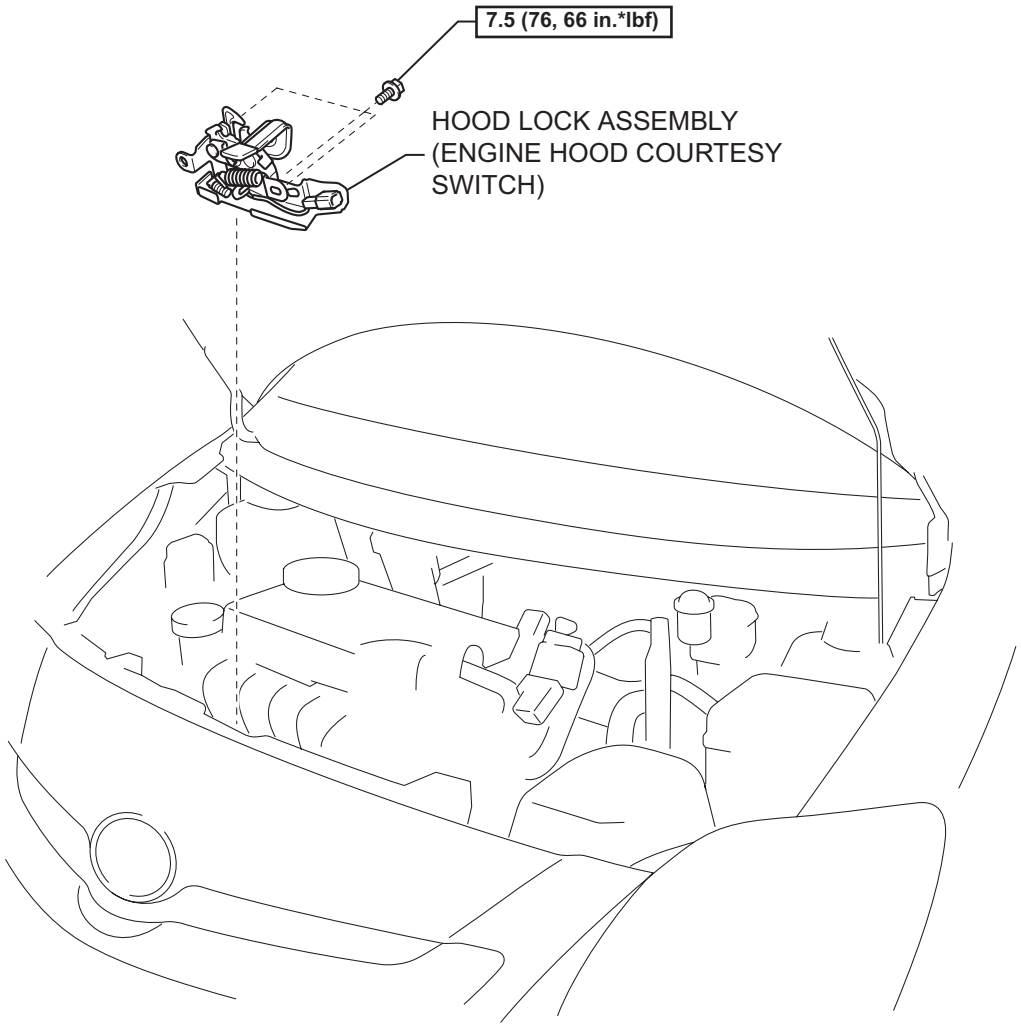
ENGINE HOOD COURTESY SWITCH (for Sedan)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

Y

B141931E01

TD

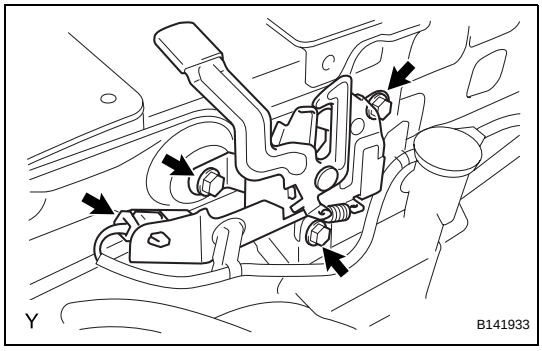
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

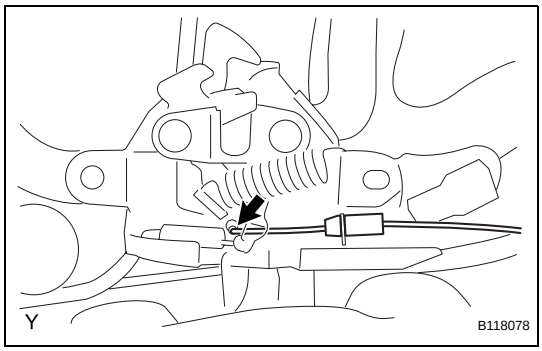
2. REMOVE HOOD LOCK ASSEMBLY

(a) Disconnect the connector and the harness clamp.

(b) Remove the 3 bolts.



(c) Disconnect the hood lock control cable, then remove the hood lock.



INSPECTION

1. INSPECT HOOD LOCK ASSEMBLY

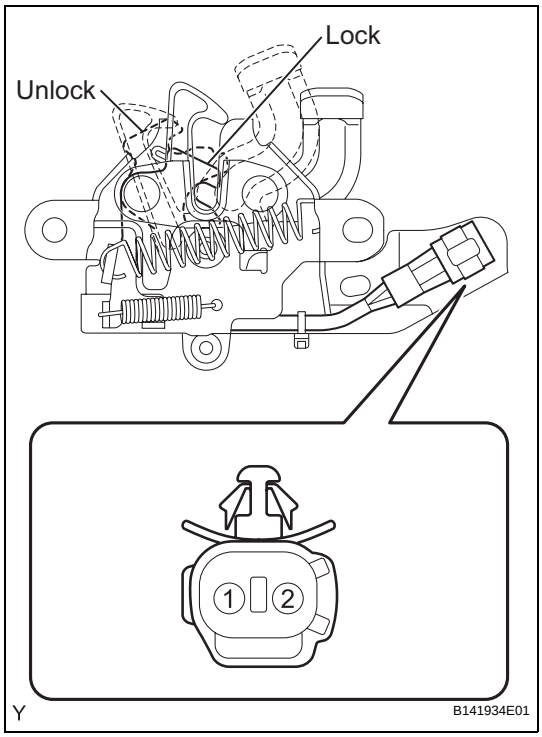
(a) Check the resistance of the engine hood courtesy switch.

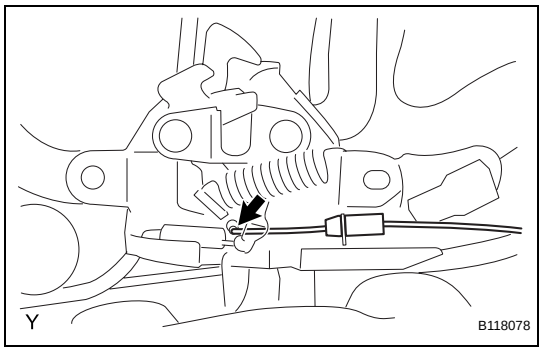
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Lock	10 kΩ or higher
1 - 2	Unlock	Below 1 Ω

If the results is not as specified, replace the hood lock.

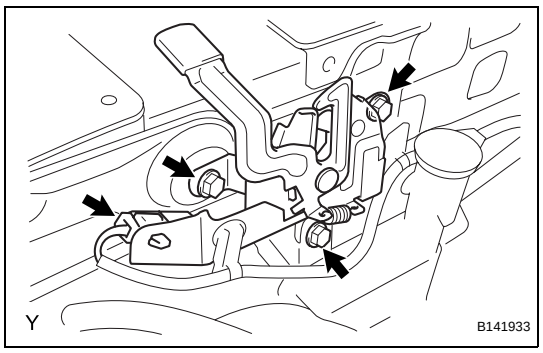




INSTALLATION

1. INSTALL HOOD LOCK ASSEMBLY

(a) Connect the hood lock control cable.



(b) Install the hood lock with the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

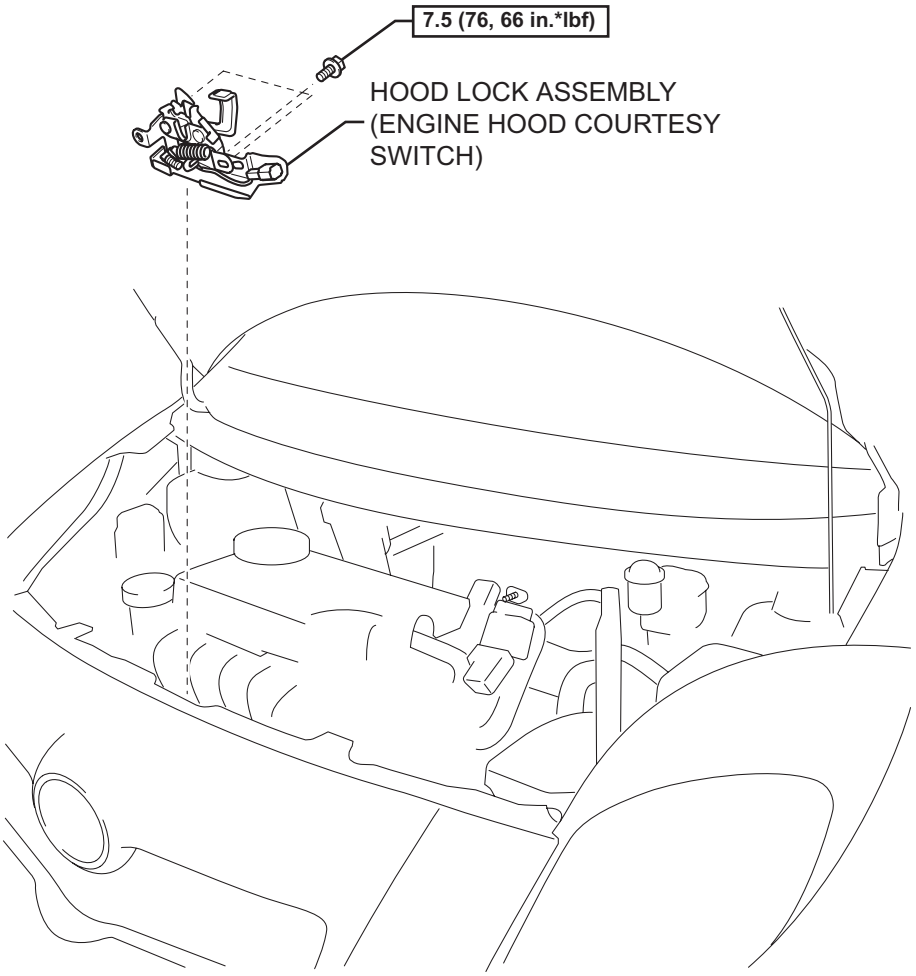
(c) Connect the connector and the harness clamp.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ENGINE HOOD COURTESY SWITCH (for Hatchback)

COMPONENTS

TD



N*m (kgf*cm, ft*lbf) : Specified torque

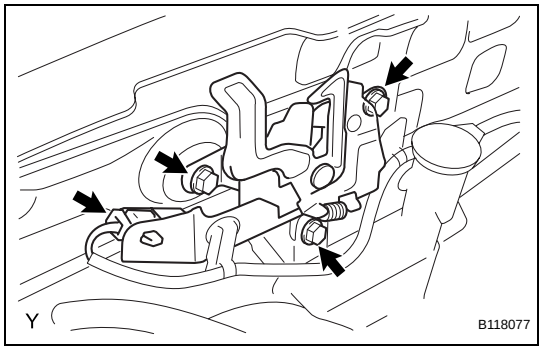
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

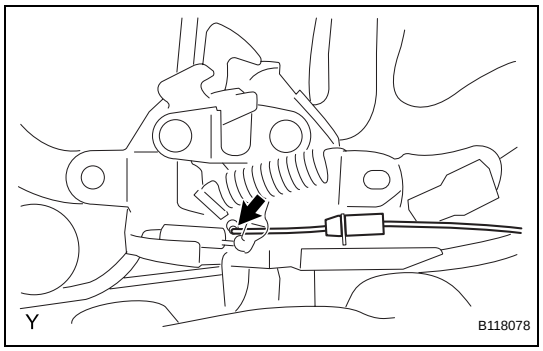
2. REMOVE HOOD LOCK ASSEMBLY

(a) Disconnect the connector and the harness clamp.

(b) Remove the 3 bolts.



(c) Disconnect the hood lock control cable, then remove the hood lock.



INSPECTION

1. INSPECT HOOD LOCK ASSEMBLY

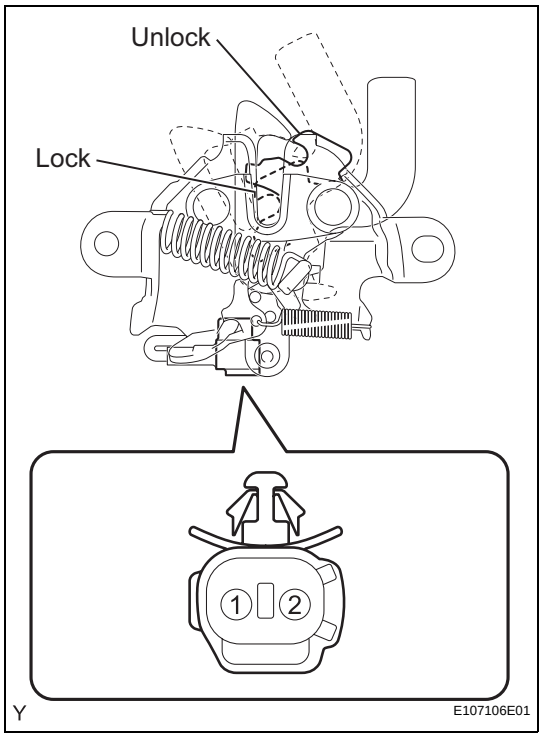
(a) Check the resistance of the engine hood courtesy switch.

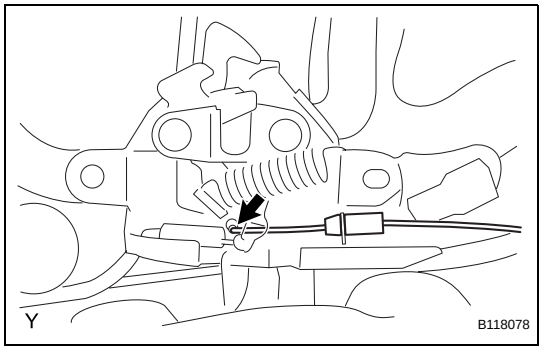
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

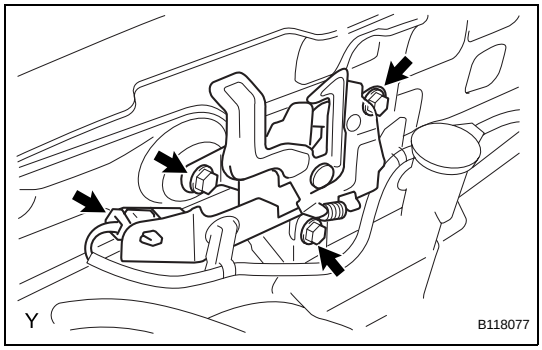
Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Lock	10 kΩ or higher
1 - 2	Unlock	Below 1 Ω

If the results is not as specified, replace the hood lock.







INSTALLATION

1. INSTALL HOOD LOCK ASSEMBLY

(a) Connect the hood lock control cable.

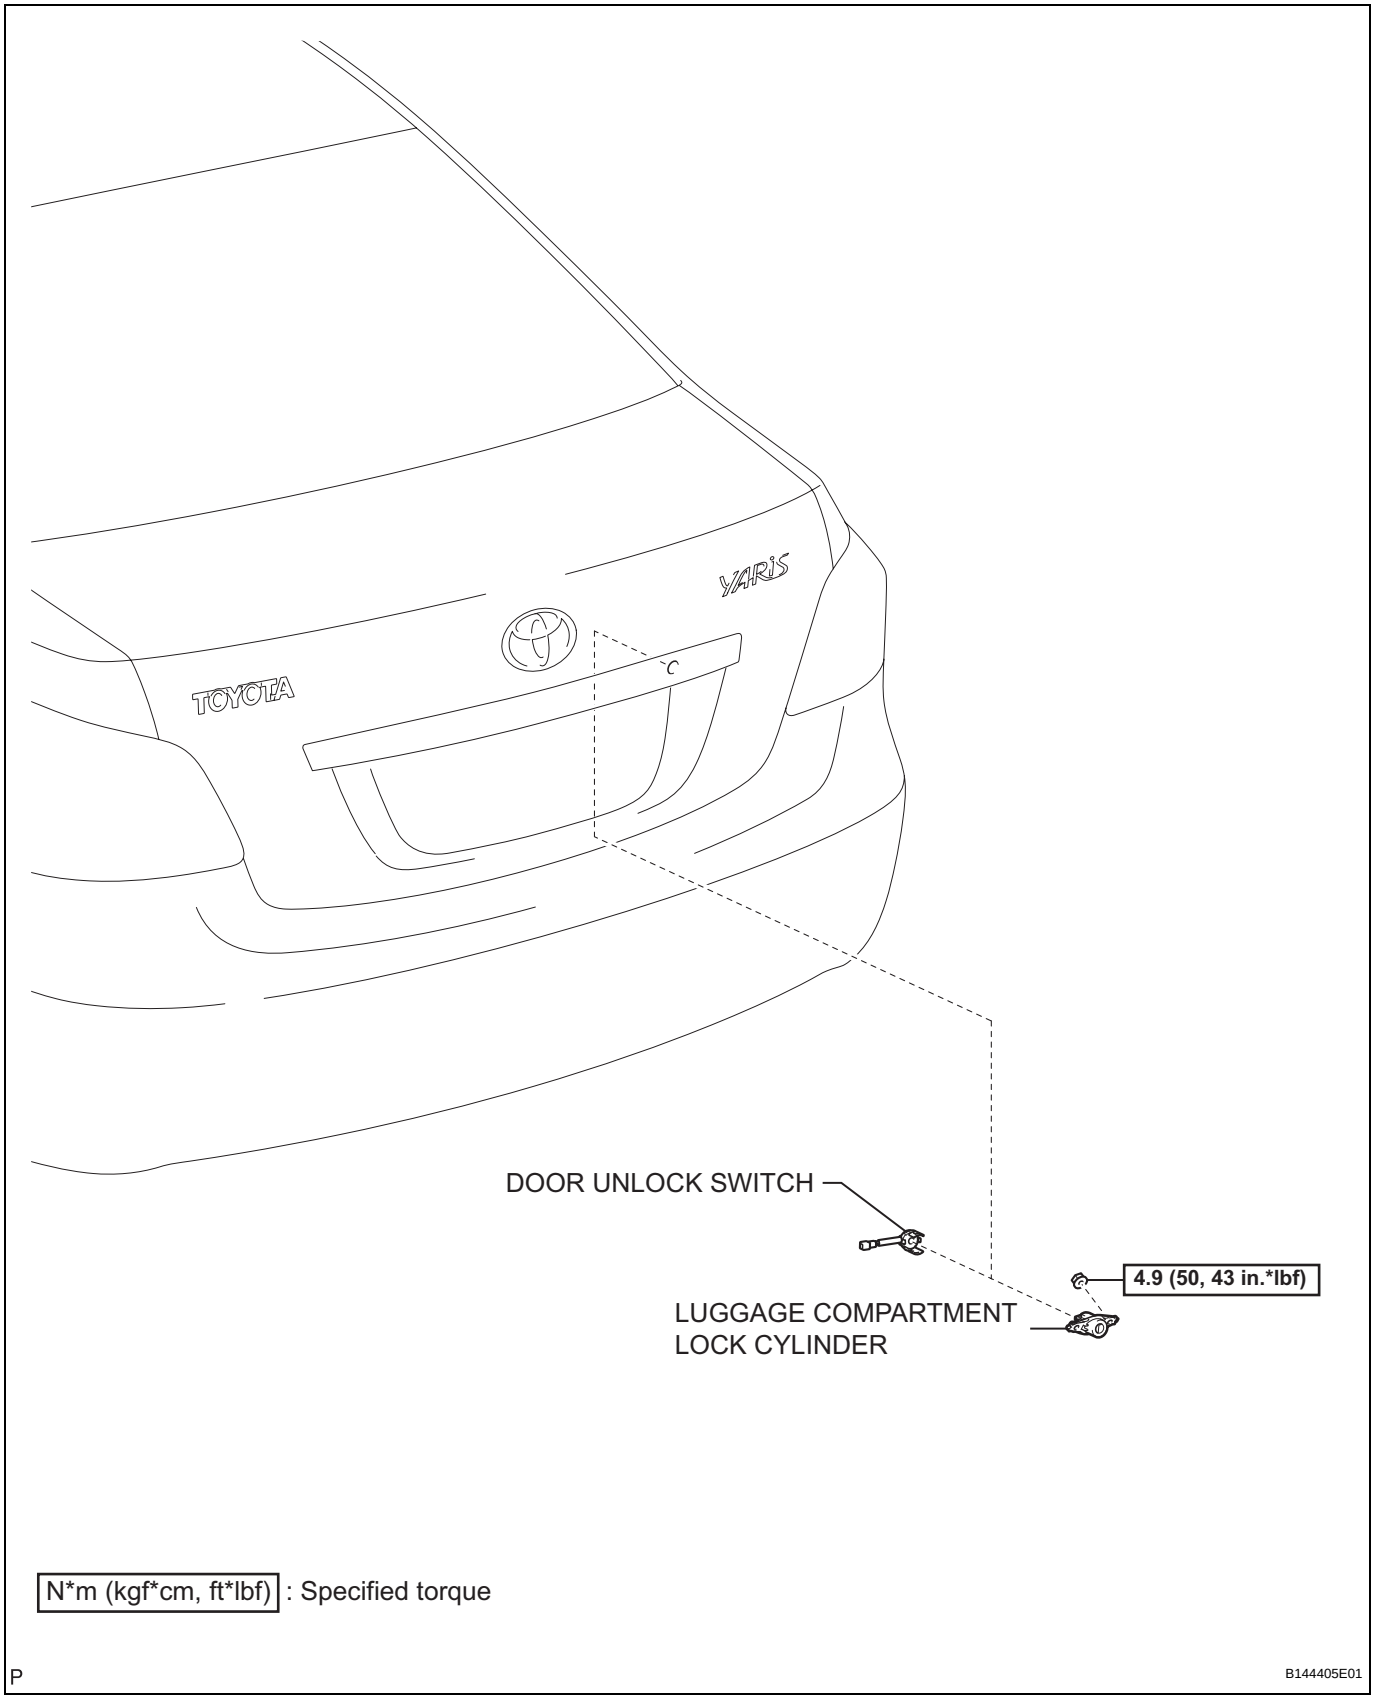
(b) Install the hood lock with the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

(c) Connect the connector and the harness clamp.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

DOOR UNLOCK SWITCH (for Sedan)

COMPONENTS



TD

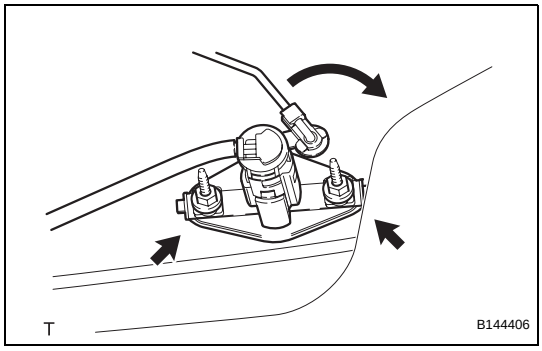
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LUGGAGE COMPARTMENT LOCK CYLINDER

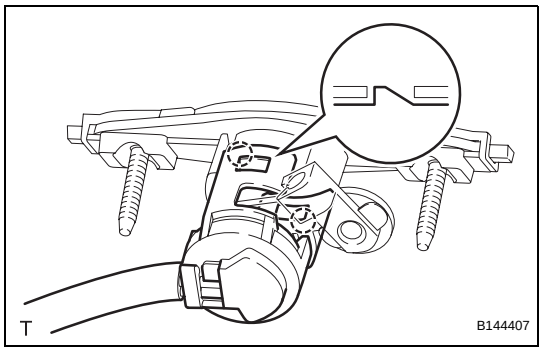
(a) Disconnect the connector.

(b) Disconnect the luggage compartment door lock link, remove the 2 nuts and remove the luggage compartment lock cylinder.



3. REMOVE DOOR UNLOCK SWITCH

(a) Disengage the 2 claws and remove the door unlock switch.



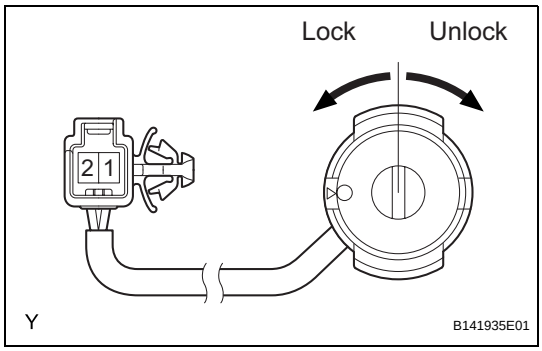
INSPECTION

1. INSPECT DOOR UNLOCK SWITCH

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance



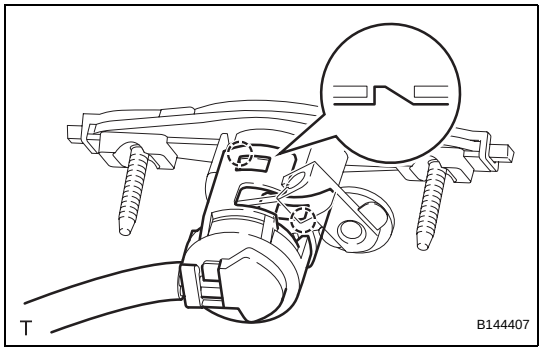
Tester Connection	Condition	Specified Condition
1 - 2	Locked	10 kΩ or higher
1 - 2	Unlocked	Below 1 Ω

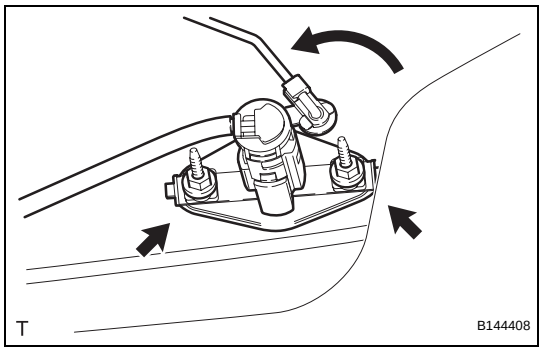
If the result is not as specified, replace the door unlock switch.

INSTALLATION

1. INSTALL DOOR UNLOCK SWITCH

(a) Engage the 2 claws and install the door unlock switch.





2. INSTALL LUGGAGE COMPARTMENT LOCK CYLINDER

(a) Install the luggage compartment lock cylinder with the 2 nuts.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)

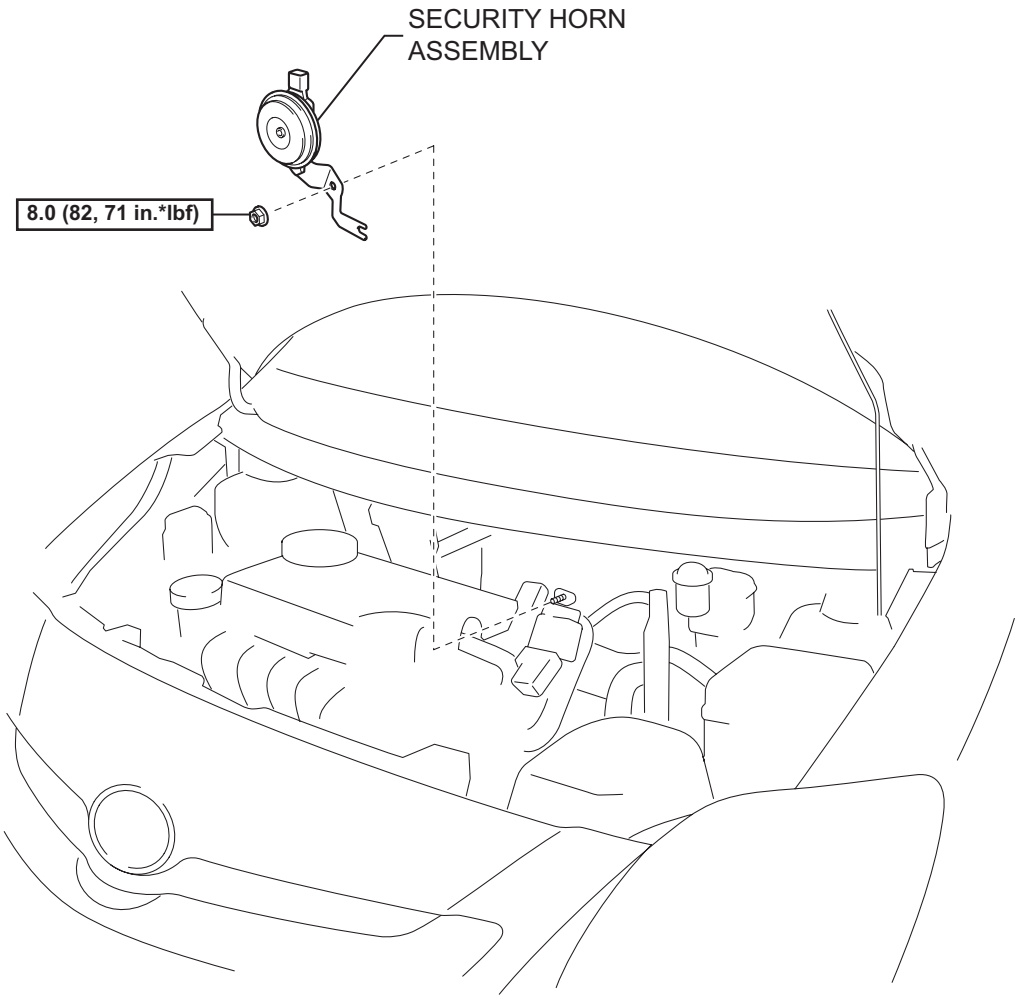
(b) Connect the luggage compartment door lock link and connector.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

SECURITY HORN ASSEMBLY (for Sedan)

COMPONENTS

TD



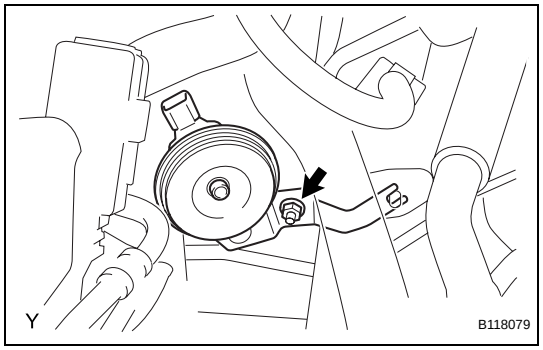
N*m (kgf*cm, ft*lbf) : Specified torque

Y

B141932E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE SECURITY HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the nut and the security horn.



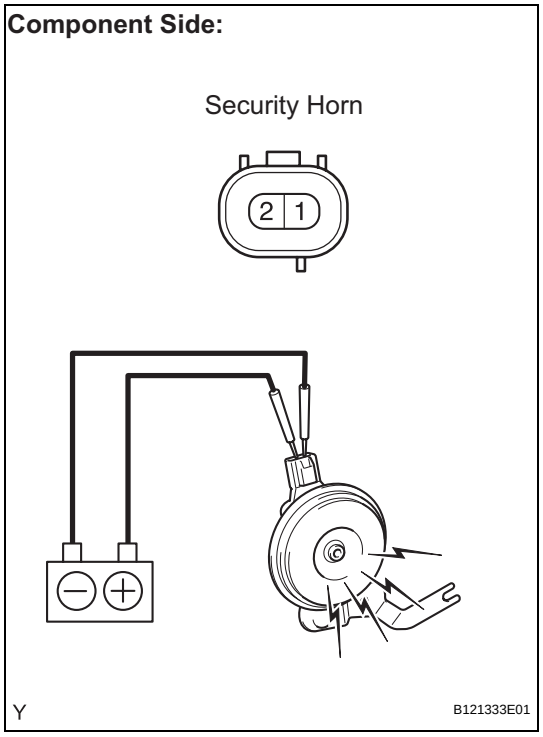
INSPECTION

1. **INSPECT SECURITY HORN ASSEMBLY**
   (a) Check the operation.
      (1) Apply battery voltage and check the horn.
      Standard

Condition	Specified Operation
Battery positive (+) - Terminal 1 Battery negative (-) - Terminal 2	Horn sounds

If the result is not as specified, replace the horn.

Component Side:



INSTALLATION

1. **INSTALL SECURITY HORN ASSEMBLY**
   (a) Install the security horn with the nut.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (b) Connect the connector.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

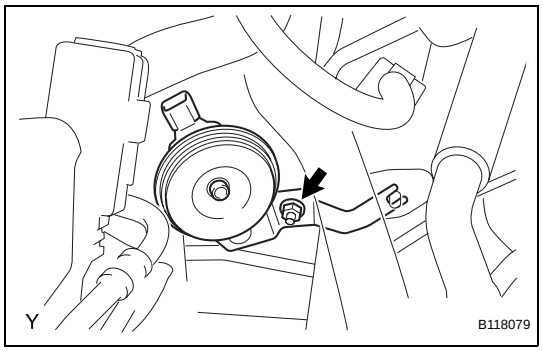
INSTALLATION

1. **INSTALL SECURITY HORN ASSEMBLY**
   (a) Install the security horn with the nut.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (b) Connect the connector.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



ENGINE IMMOBILISER SYSTEM

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Use this procedure to troubleshoot the engine immobiliser system.
The intelligent tester should be used in steps 4, 5 and 7.

1	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2	**CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK**

NEXT

3	**CRANK ENGINE FOR MORE THAN 10 SECONDS**

NEXT

4	**CHECK FOR DTCS**

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTC.
(c) Recheck for DTCs. Based on the DTC output in (a), try to force output of the same SFI system DTC or engine immobiliser system DTC by simulating the original activity indicated by the DTC.
  (1) If the DTC does not reoccur, proceed to A.
  (2) If the SFI system DTC reoccurs, proceed to B.
  (3) If the engine immobiliser system DTC reoccurs, proceed to C.

B	**Go to SFI SYSTEM**
C	**Go to step 8**

A

5	**READ VALUE OF INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and push the intelligent tester main switch ON.

(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST/IMMOBILISER/KEY SW. Read the values.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ ON or OFF	OFF: No key is in ignition key cylinder ON: Key is in ignition key cylinder	-

OK:
"ON" (key is in ignition key cylinder) appears on the screen.

NG → **Go to DTC B2780**

OK

6 PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → **Go to step 8**

A

7 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) DATA LIST/ACTIVE TEST (See page EI-21)

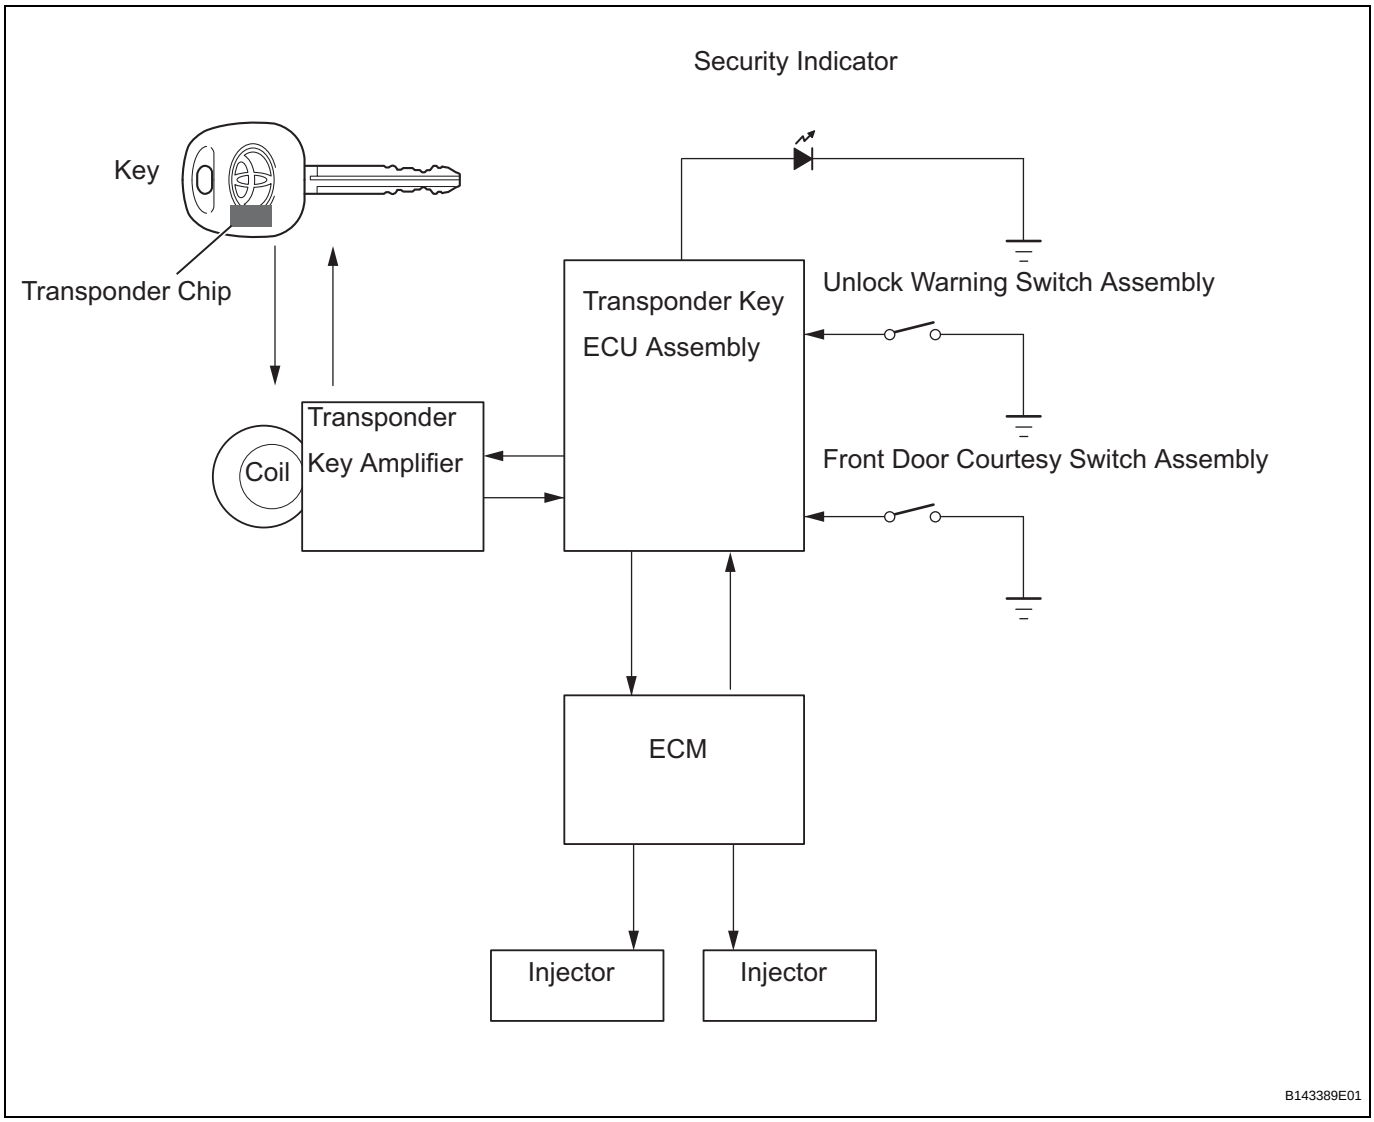
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The engine immobiliser system is designed to prevent the vehicle from being stolen. This system uses a transponder key ECU that stores the key codes of authorized ignition keys. If an attempt is made to start the engine using an unauthorized key, the ECU sends a signal to the ECM to prohibit fuel delivery and ignition, effectively disabling the engine.

2. FUNCTIONS OF MAIN COMPONENTS

Component	Outline
Transponder key coil/amplifier	When key is inserted in ignition key cylinder, key coil receives key code. Then amplifier amplifies ID code and outputs it to transponder key ECU assembly.
Unlock warning switch assembly	Detects if key is in ignition key cylinder and outputs results to transponder key ECU assembly.
ECM	Through SFI communication, ECM receives ID verification results from transponder key ECU assembly. ECM also verifies ECUs. Then judges whether or not to enter immobiliser engine mode.
Security indicator light	Depending on operation of transponder key ECU, interior security indicator light comes on or starts blinking.

3. SYSTEM FUNCTION

- When the transponder key ECU assembly detects that the unlock warning switch is ON, the ECU provides current to the transponder key coil and produces a faint electric wave. A transponder chip in the key grip receives the faint electric wave. Upon receiving the faint electric wave, the transponder chip outputs a key ID code signal. The transponder key coil receives this signal, the transponder key amplifier amplifies it, and then the signal is transmitted to the ECU. The ECU compares the key's ID code with the vehicle's ID code, which was previously registered in the ECU and then communicates the results to the ECM using the SFI communication.
- After the identification results show that the key's ID code matches the vehicle's ID code and the ECU has confirmed that they match: 1) the immobiliser system is canceled and the engine starting controls (fuel injection control and ignition control) enter standby mode; and 2) the ECU transmits a security indicator signal that communicates "indicator OFF" to the transponder key ECU. Then, the transponder key ECU turns OFF the security indicator light.

REGISTRATION

HINT:
The key has 2 codes: the key code (immobiliser code) and the wireless code (recognition code). Both of these codes need to be registered. Refer to the following pages for the key code registration procedures and refer to page for the wireless code registration procedures.

1. DESCRIPTION OF CODE REGISTRATION

(a) When adding master keys and sub-keys (additional registration).
(1) Register the key codes in the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "A"

(b) After replacing the transponder key ECU (new key code registration).
(1) Register the key codes (immobiliser codes) in the new transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "B"

(2) Register the ECM COMMUNICATION ID for communication between the ECM and the new transponder key ECU.

Target ECU	See Procedure
ECM	Procedure "C"

(c) After replacing the ECM.
(1) Register the ECU COMMUNICATION ID for communication between the new ECM and the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

(d) After replacing the transponder key ECU and ECM.
(1) Register the ECU COMMUNICATION ID for communication between the new ECM and the new transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

(e) Erasure of key codes.
(1) Erase the key code(s) of the lost key(s).

Target ECU	See Procedure
Transponder key ECU	Procedure "D"

2. NEW KEY CODE REGISTRATION (PROCEDURE "B")

(a) New key code registration (When using intelligent tester).
Condition:
No key codes are registered in the transponder key ECU.

HINT:

- In this mode, a maximum of 3 key codes for 2 master keys and 1 sub-key can be registered. The master keys and sub-key can be registered in any order because the transponder key ECU can distinguish between different types of key.
- New key codes must be registered with the battery connected. The ignition switch can be either ON or OFF.
- When a new transponder key ECU is installed, key codes must be registered in the transponder key ECU.

EI

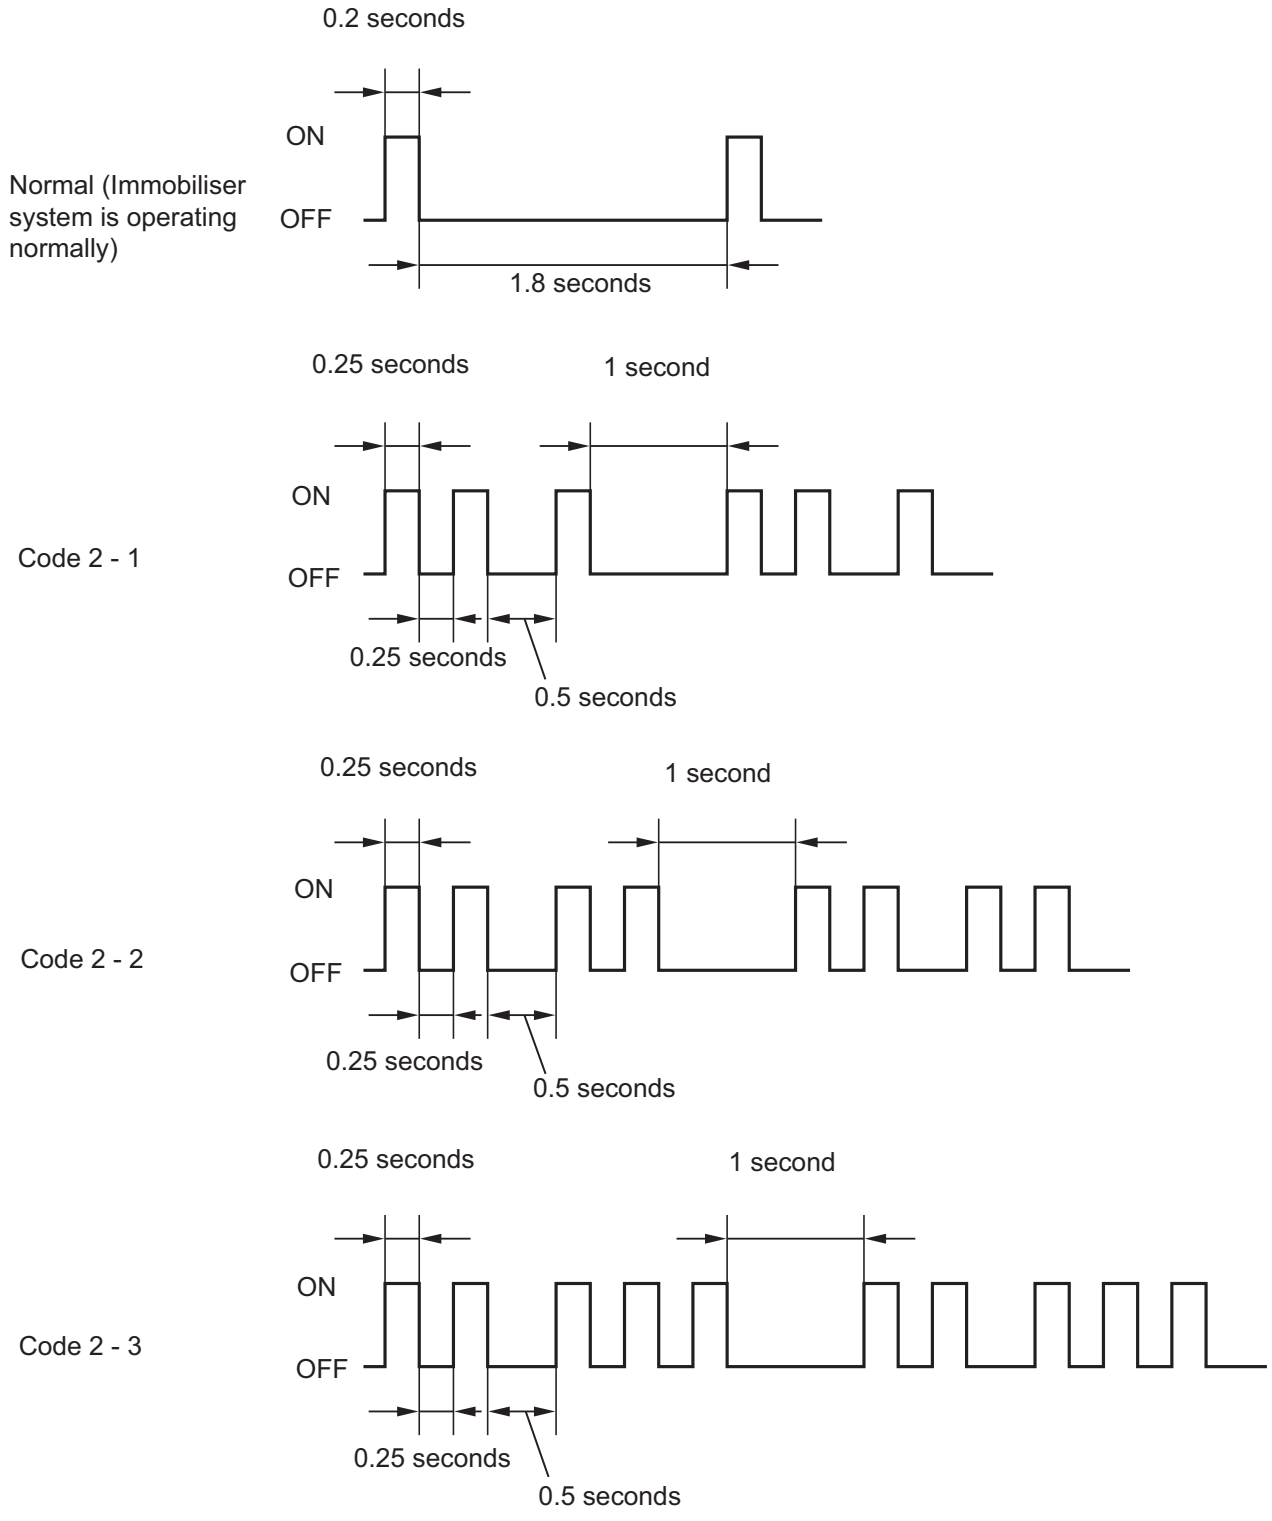
Procedure	Security Indicator Condition
1. START	- HINT: Until the first key is inserted.
2. Insert the key into the ignition key cylinder.	BLINKING
3. Select the following items on the tester: (1) Select IMMOBILISER (2) Select ID UTILITY (3) Select IMMOB CODE REG HINT: After the above operation, proceed to the next step in accordance with the prompts on the tester screen.	ON HINT: Within 2 minutes.
	OFF for 1 second and then ON
4. Remove the key and then push the NEXT button on the tester.	ON
5. Insert a master key or sub-key to be registered.	OFF for 1 second and then ON
6. Remove the key and then push the NEXT button on the tester.	ON
7. Insert a master key or sub-key to be registered.	OFF for 1 second and then ON
	OFF HINT: 0.5 seconds after turning ON
8. Remove the key.	BLINKING
9. END	

HINT:

- The new key code registration mode can be deliberately ended by following procedure A or B below when the battery is connected, and at least 1 key code for the master key has been registered.
  A (Without using intelligent tester)
  (a) Insert the key into the ignition key cylinder.
  (b) Turn the ignition switch from ON to OFF 5 times within 10 seconds.
  (c) New key code registration mode ends.
  B (When using intelligent tester)
  (a) Insert the key into the ignition key cylinder and turn the intelligent tester on.
  (b) Follow the instructions on the intelligent tester screen to end new key code registration mode.
  (c) New key code registration mode ends.
- When the immobiliser system is operating normally and the key is removed, the security indicator blinks continuously.

- If the new key code registration fails, code 2-1 is output by the security indicator. Trying to re-register an already registered key causes code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 is output by the security indicator. The output details are shown below.

Security Indicator:



(b) New key code registration (Without using intelligent tester)

Conditions:

- No key codes are registered in the transponder key ECU.

- All doors are closed, the ignition switch is OFF, and no key is inserted into the ignition key cylinder for 5 seconds or more.

Procedure	Time (Operation completion time)	Security Indicator Condition
1. START	-	- HINT: Until the first key is inserted.
2. Insert a previously registered key into the ignition key cylinder. Remove and insert it again. Repeat this 4 times.	Within 35 seconds	BLINKING
3. Open and close the driver door 6 times.		
4. Remove the key.		ON
5. Insert the master key to be registered into the ignition key cylinder.	Within 10 seconds	BLINKING
6. After 60 seconds, the key is registered. HINT: Security indicator goes off.	-	
7. Remove the key.		BLINKING
8. END		

HINT:

- Only the master key can be registered.
- Unless the key is inserted into the ignition key cylinder within 10 seconds in step 5, the ECU cancels registration mode.
- Follow the additional key code registration procedure to register 2 or more keys.
- If the new key code registration has failed, the security indicator blinks as follows.
  (a) Code 2-1 is output when the transponder key ECU fails to receive a key ID code.
  (b) Code 2-3 is output when a sub-key is inserted.

3. REGISTRATION OF ADDITIONAL KEY (PROCEDURE "A")

HINT:

- A maximum of 5 master key codes and 3 sub-key codes can be registered.
- Additional key code registration mode ends if any step is not completed within the specified time.
- When proceeding to the next step while the timer is running, the timer is reset and begins the countdown for the next step.
- When the ignition cylinder or the key cylinder set is replaced, remove the transmitter module from the original master key. Then install this transmitter module to a new key and use the new key as the master key. If necessary, use this new master key to register other keys.

NOTICE:
When the ignition key cylinder has been replaced, locking and unlocking doors is possible with the new master key once the transmitter module from the original master key has been transferred to it. However, the new master key will not be able to lock and unlock doors through the door key cylinder. Keep the original master key. If the new master key transmitter module battery fails, the original master key can be used to lock and unlock doors through the door key cylinder.

(a) Additional key code registration
Condition:
At least one key code must be registered in the transponder key ECU

Procedure	Time (Operation completion time)	Security Indicator Condition
1. START	-	BLINKING HINT: Until the first key is inserted.
2. Insert a previously registered master key into the ignition key cylinder, turn the ignition switch to the ON position, and turn the intelligent tester on.	-	OFF
3. Select the following items on the tester: (1) IMMOBILISER (2) ID UTILITY (3) IMMOB CODE REG		ON
4. Remove the master key and then push the NEXT button on the tester. Immediately after above operation insert a previously registered master key into the ignition key cylinder, turn the ignition switch to the ON position, and then push the NEXT button on the tester.	Within 120 seconds	BLINKING→ON
5. Remove the master key and then push the NEXT button on the tester.	Within 20 seconds HINT: After the tester instruction.	ON
6. Insert the key to be registered into the ignition key cylinder.	Within 10 seconds.	BLINKING
7. After 60 seconds, the key is registered. HINT: The security indicator goes off.	-	OFF
8. Remove the key and then push the NEXT button on the tester.		BLINKING
9. The tester screen displays the number of registered keys.		
10. END		

HINT:
- If the key is removed within 60 seconds in step 6, additional key code registration mode is canceled.
- A brief outline of the procedures for key code registration is shown above. For more detailed information, please refer to the intelligent tester screen's instructions.
- When the immobiliser system is operating normally and the key is removed, the security indicator blinks continuously.

- If the additional key code registration fails, code 2-1 is output by the security indicator. Trying to re-register a previously registered key causes code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 is output by the security indicator. The output details are shown in procedure "B".

4. ERASURE OF KEY CODE (PROCEDURE "D")

HINT:
All key codes are erased except for the master key, which is used for erasing the key codes. In order to use a key whose code has been erased, the key code must be re-registered.

(a) Erasure of key code

Condition:
At least two key codes must be registered in the transponder key ECU.

Procedure	Time (Operation completion time)	Security Indicator Condition
1. START	-	BLINKING HINT: Until the first key is inserted.
2. Insert a previously registered master key into the ignition key cylinder, turn the ignition switch to the ON position, and turn the intelligent tester on.	-	OFF
3. Select the following items on the tester: (1) IMMOBILISER (2) ID UTILITY (3) IMMOB CODE ERS		OFF
4. Remove the key and then push the NEXT button on the tester. Immediately after the above operation insert a previously registered master key into the ignition key cylinder, turn the ignition switch to the ON position, and then push the NEXT button on the tester.	Within 120 seconds	BLINKING→ ON for 1 second then OFF.
5. Remove the master key.	Within 10 seconds HINT: After the tester instruction.	BLINKING
6. END		

HINT:

- To cancel erasure mode after the erasure request is sent from the tester to the ECU, leave the master key inserted until the timer times out.
- A brief outline of the procedures for key code erasure is shown above. For more detailed information, please refer to the intelligent tester screen's instructions.
- When the immobiliser system is operating normally and the key is removed, the security indicator blinks continuously.

5. ECU - ECM COMMUNICATION ID REGISTRATION (PROCEDURE "C")

NOTICE:

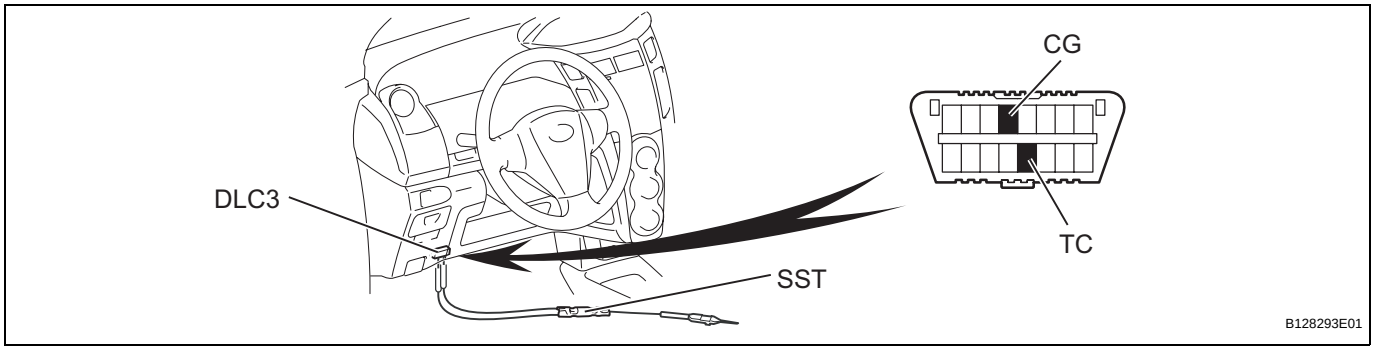
- **The ECU communication ID should be registered when the transponder key ECU and/or the ECM is replaced in order to match the ECM communication ID.**
- **The engine cannot be started unless the ECM communication IDs match.**
- **Do not disconnect the battery while the ECU - ECM communication ID is being set.**
- **Do not turn the ignition switch from ON to OFF 20 times or more before setting the ECU - ECM communication ID. If this operation is likely to be performed 20 times or more, disconnect the negative battery terminal cable in order to avoid engine start disablement. Failure to do so will result in the engine not starting unless the transponder key ECU is replaced with a new one.**

(a) After replacing the transponder key ECU

(1) Register the key code(s) by following the new key code registration procedure. (Procedure "B")

(2) Using SST, connect the TC and CG terminals of the DLC3 before inserting the key into the key cylinder.

SST 09843-18040



(3) Insert a previously registered key into the ignition key cylinder, turn the ignition switch ON (do not start the engine), and leave it as is for 30 minutes.

(4) Turn the ignition switch OFF and disconnect terminals TC and CG.

(5) Start the engine.

(6) Check that the engine starts and stays on for more then 3 seconds. The registration is complete.

(b) After replacing the ECM.
(1) Register the ECU - ECM communication ID

Procedure	Security Indicator Condition
1. Insert a previously registered key into the ignition key cylinder.	OFF
2. Start the engine.	
3. Check that the engine starts and stays on for more than 3 seconds. The registration is complete.	

(c) After replacing the transponder key ECU and ECM
(1) Register the key code(s) by following the new key code registration procedure. (Procedure "B")
(2) Register the ECU - ECM communication ID

Procedure	Security Indicator Condition
1. Insert a previously registered key into the ignition key cylinder.	OFF
2. Start the engine.	
3. Check that the engine starts and stays on for more than 3 seconds. The registration is complete.	

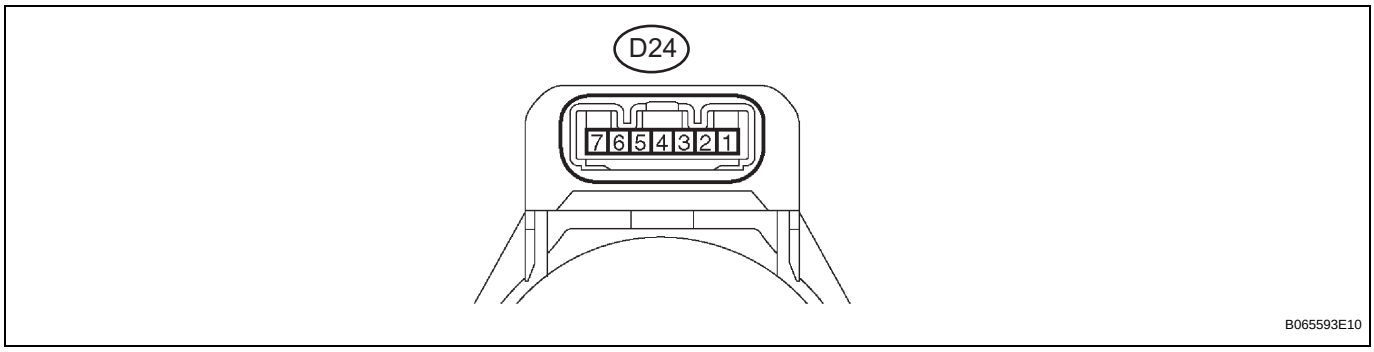
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Symptom	Suspected area	See page
Engine does not start	1. ECU power source circuit	EI-44
	2. Transponder key ECU assembly	EI-15
	3. SFI system	ES-24

TERMINALS OF ECU

1. CHECK TRANSPONDER KEY AMPLIFIER



(a) Disconnect the D24 transponder key amplifier connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (D24-7) - Body ground	GR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

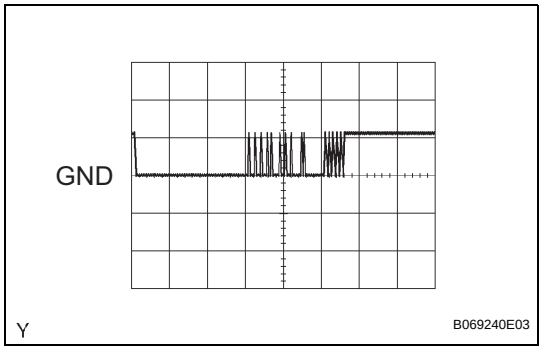
(c) Reconnect the D24 transponder key amplifier connector.
(d) Measure the resistance and voltage of the connector.

Standard

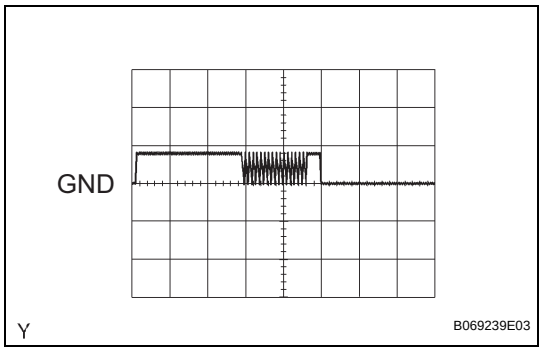
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
VC5 (D24-1) - AGND (D24-7)	P- GR	Power source	1: No key in ignition key cylinder → 2: Key inserted	1: 0 V → 2: 4.6 to 5.4 V
CODE (D24-4) - AGND (D24-7)	G- GR	Demodulated signal of key code data	No key in ignition key cylinder → Key inserted	Pulse generation (see waveform 1)
TXCT (D24-5) - AGND (D24-7)	V- GR	Key code output signal	1: No key in ignition key cylinder → 2: Key inserted	Pulse generation (see waveform 2)
AGND (D24-7) - Body ground	GR- Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the amplifier.

(e) Inspect using an oscilloscope.
(1) Waveform 1



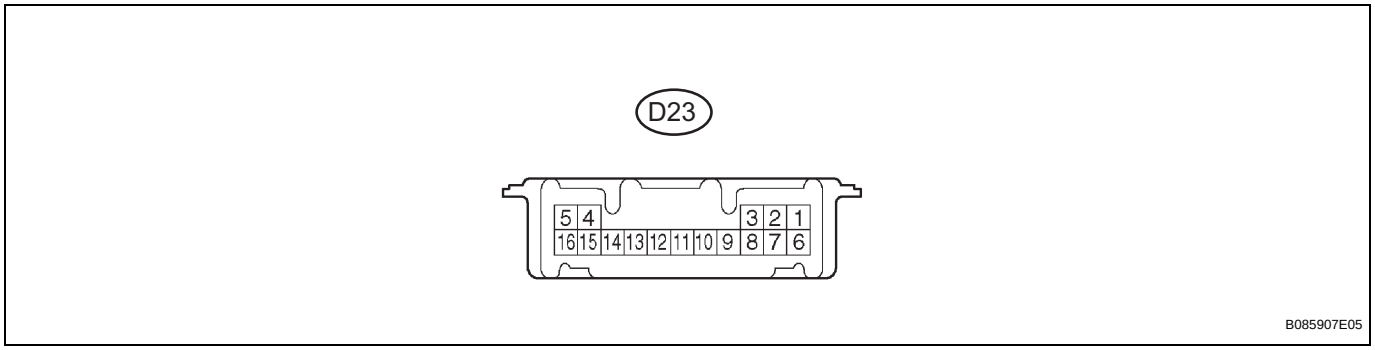
Terminal	CODE (D24-4) - AGND (D24-7)
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	No key in ignition key cylinder → Key inserted



(2) Waveform 2

Terminal	TXCT (D24-5) - AGND (D24-7)
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	No key in ignition key cylinder → Key inserted

2. CHECK TRANSPONDER KEY ECU ASSEMBLY



(a) Disconnect the D23 transponder key ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (D23-16) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (D23-1) - GND (D23-16)	L - W-B	Battery	Always	11 to 14 V
IG (D23-2) - GND (D23-16)	R - W-B	Ignition switch	Ignition switch 1: OFF → 2: Key inserted	1: 0 V → 2: 11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the D23 transponder key ECU connector.
(d) Measure the voltage of the connector.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (D23-3) - AGND (D23-5)	O - GR	Unlock warning switch	1: No key in ignition key cylinder → 2: Key inserted	1: 11 to 14 V→ 2: Below 1 V
VC5 (D23-14) - AGND (D23-5)	P - GR	Power source	1: No key in ignition key cylinder → 2: Key inserted	1: 0 V → 2: 4.6 to 5.4 V
TXCT (D23-4) - AGND (D23-5)	V - GR	Transponder key amplifier communication signal	1: No key in ignition key cylinder → 2: Key inserted	Pulse generation (see waveform 1)
CODE (D23-15) - AGND (D23-5)	G - GR	Transponder key amplifier communication signal	1: No key in ignition key cylinder → 2: Key inserted	Pulse generation (see waveform 2)
EFIO (D23-13) - EGND (D23-11)	W - BR	ECM output signal	Ignition switch OFF → ON	Pulse generation (see waveform 3)

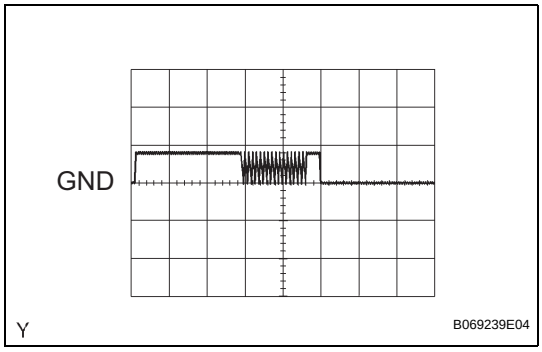
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFII (D23-12) - EGND (D23-11)	O - BR	ECM input signal	Ignition switch OFF → ON	Pulse generation (see waveform 4)
CTY (D23-7) - GND (D23-16)	B - W-B	Courtesy signal	1: Driver side door open → 2: closed	1: 11 to 14 V → 2: Below 1 V
IND (D23-8) - GND (D23-16)	LG - W-B	Security indicator signal	Engine immobiliser system 1: SET → 2: UNSET	1: 3 to 5 V → 2: Below 1 V
D (D23-9) - GND (D23-16)	W - W-B	Diagnosis tester communication	Ignition switch ON	Pulse generation

EI

If the result is not as specified, there may be a malfunction in the ECU.

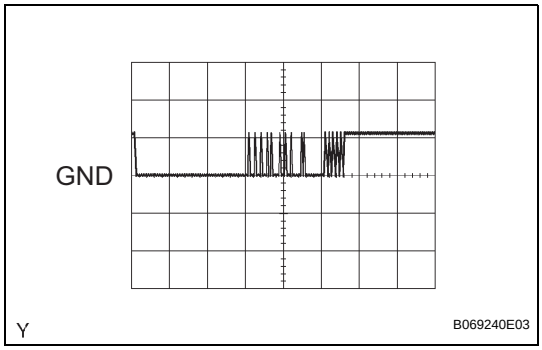
(e) Inspect using an oscilloscope.

(1) Waveform 1



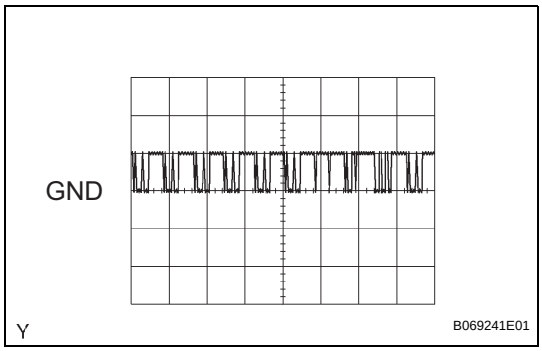
Terminal	TXCT (D23-4) - AGND (D23-5)
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Ignition switch 1: No key in ignition key cylinder → 2: Key inserted

(2) Waveform 2

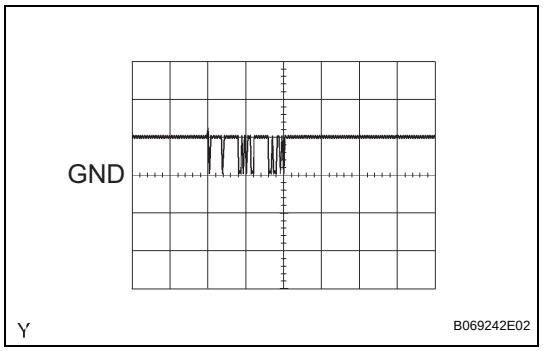


Terminal	CODE (D23-15) - AGND (D23-5)
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Ignition switch 1: No key in ignition key cylinder → 2: Key inserted

(3) Waveform 3



Terminal	EFIO (D23-13) - EGND (D23-1)
Tool Setting	10 V/DIV., 500 ms/DIV.
Condition	Ignition switch OFF → ON



(4) Waveform 4

Terminal	EFII (D23-12) - EGND (D23-11)
Tool Setting	10 V/DIV., 500 ms/DIV.
Condition	Ignition switch OFF → ON

(f) Measure the resistance between each pair of connector terminal.

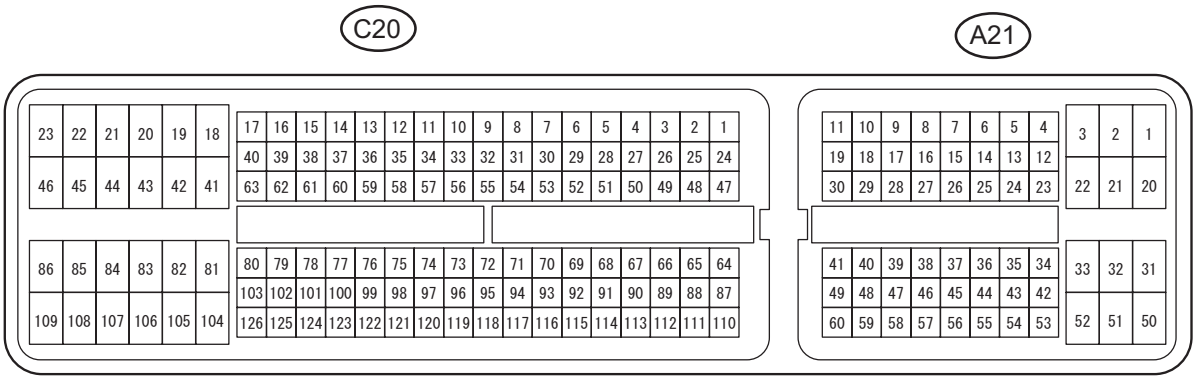
Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (D23-5) - GND (D23-16)	GR - W-B	Amplifier ground circuit	Always	Below 1 Ω
EGND (D23-11) - GND (D23-16)	BR - W-B	ECM ground circuit	Always	Below 1 Ω

EI

3. CHECK ECM

1NZ-FE, 2NZ-FE:

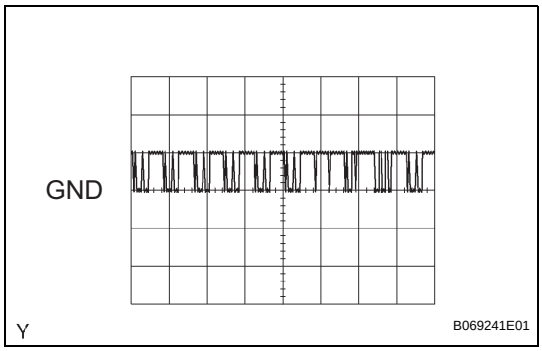


(a) Disconnect the A21 ECM connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard

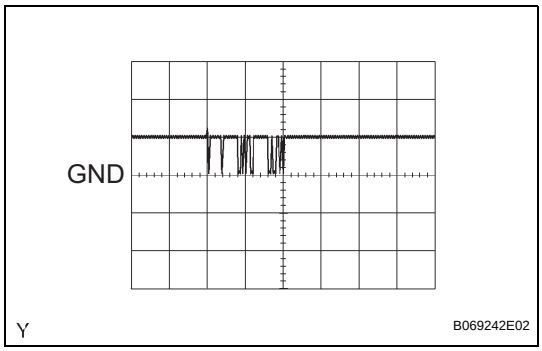
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IMI (A21-11) - EOM (A21-9)	W - BR	Transponder key ECU input signal	No key in ignition key cylinder → Key inserted	Pulse generation (see waveform 1)
IMO (A21-10) - EOM (A21-9)	O - BR	Transponder key ECU output signal	1: No key in ignition key cylinder → 2: Key inserted	Pulse generation (see waveform 2)
EOM (A21-9) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the A21 ECU connector.



(d) Inspect using an oscilloscope.
(1) Waveform 1

Terminal	IMI (A21-11) - EOM (A21-9)
Tool Setting	10 V/DIV., 500 ms/DIV.
Condition	No key in ignition key cylinder → Key inserted



(2) Waveform 2

Terminal	IMO (A21-10) - EOM (A21-9)
Tool Setting	10 V/DIV., 500 ms/DIV.
Condition	No key in ignition key cylinder → Key inserted

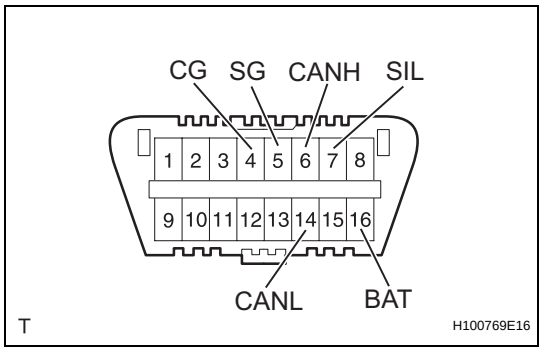
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The ECM controls the vehicle's immobiliser system functions. Immobiliser system data and the DTCs can be read through the vehicle's DLC3.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

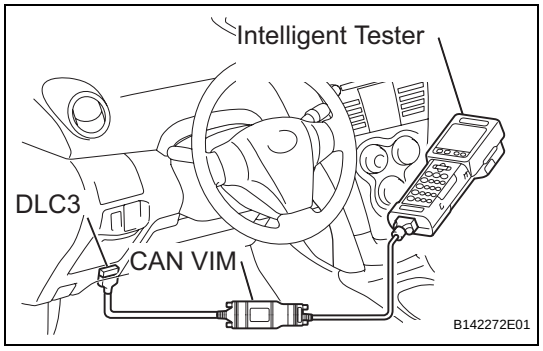


Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

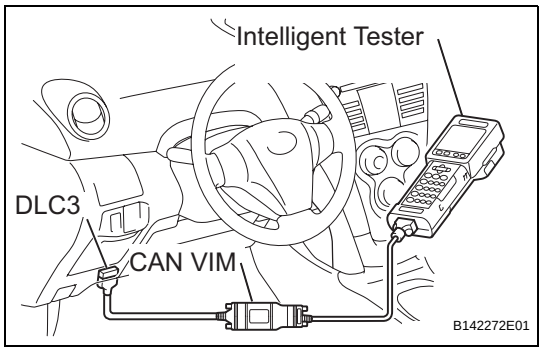


(b) Intelligent tester

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. **INSPECT BATTERY VOLTAGE**
   Standard voltage:
   11 to 14 V
   If the voltage is below 11 V, recharge or replace the battery before proceeding.

DTC CHECK / CLEAR

1. **CHECK DTC**
   (a) Connect the intelligent tester with CAN VIM to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Turn the tester ON.
   (d) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DTC INFO / CURRENT CODES.
   (e) Check the DTC(s) and then write them down.
   (f) See page EI-22 to check the details of the DTC(s).
2. **CLEAR DTC**
   (a) Connect the intelligent tester to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Turn the tester ON.
   (d) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DTC INFO / CLEAR CODES.
   (e) Press the YES button.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch ON and push the intelligent tester main switch ON.

(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ ON or OFF	OFF: No key is in ignition key cylinder ON: Key is in ignition key cylinder	-
IG SW	Ignition switch signal/ ON or OFF	OFF: Ignition switch OFF or ACC ON: Ignition switch ON	-
IMMOBILISER	Immobiliser system status/ SET or UNSET	UNSET: Ignition switch ON SET: Without key	-
PERMIT (START)	Start control system starting control / OK or NG	OK: Start control system starting is permitted NG: Start control system starting is not permitted	-
RESPONSE	Transponder chip data/ NG or OK	NG: Data error OK: Data OK	-
FRAME ERROR	Transponder chip data/ NG or OK	NG: Data error OK: Data OK	-
SERIAL NUMBER	Transponder chip data/ NG or OK	NG: Data error OK: Data OK	-
ENCRYPT CODE	Transponder chip data/ NG or OK	NG: Data error OK: Data OK	-
STATUS	Transponder chip data/ NG or OK	NG: Data error OK: Data OK	-
BCC	Transponder chip signal/ NG or OK	NG: Incorrect data sending OK: Correct data sending	-
SUB KEY	Sub-key code signal/ NOMATCH or MATCH	NOMATCH: Unmatched sub-key code is sent MATCH: Matched sub-key code is sent	-
MASTER KEY	Master key code signal/ NOMATCH or MATCH	NOMATCH: Unmatched master key code is sent MATCH: Matched master key code is sent	-
REGIST SUB CODE	Number of registered sub-keys/ min. 0, max. 15	Number of registered sub-keys	-
REGIST MAS CODE	Number of registered master keys/ min. 0, max. 15	Number of registered master keys	-
REG CODE SPACE	Memory space for key code registration/ NOT FUL or FULL	NOT FUL: Possible to register more key codes FULL: Cannot register any more key codes	-
+B	+B judgment / NORMAL or BREAK	NORMAL: Battery supply is normal BREAK: Battery supply is malfunctioning	-
ANTENNA COIL	Antenna coil condition/ NORMAL or FAIL	NORMAL: Antenna coil is normal FAIL: Antenna coil is malfunctioning	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and push the intelligent tester main switch ON.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/ACTIVE TEST.

Transponder key ECU assembly

Item	Normal Condition	Diagnostic Note
SECURITY INDIC	Turn security indicator ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

TRANSPONDER KEY ECU DIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
B2780	Push Switch / Key Unlock Warning Switch Malfunction	1. Unlock warning switch assembly 2. Wire harness 3. Transponder key ECU assembly	EI-24
B2784	Antenna Coil Open / Short	1. Wire harness 2. Transponder key amplifier 3. Transponder key ECU assembly	EI-27

ECM DAIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
B2799	Engine Immobiliser System	1. Wire harness 2. ECM	EI-38

NOTICE:
The DTCs for the immobiliser system are specified above. If the other codes are output, check the DTC(s) chart for the engine control system.

EI

DTC	B2780	Push Switch / Key Unlock Warning Switch Malfunction

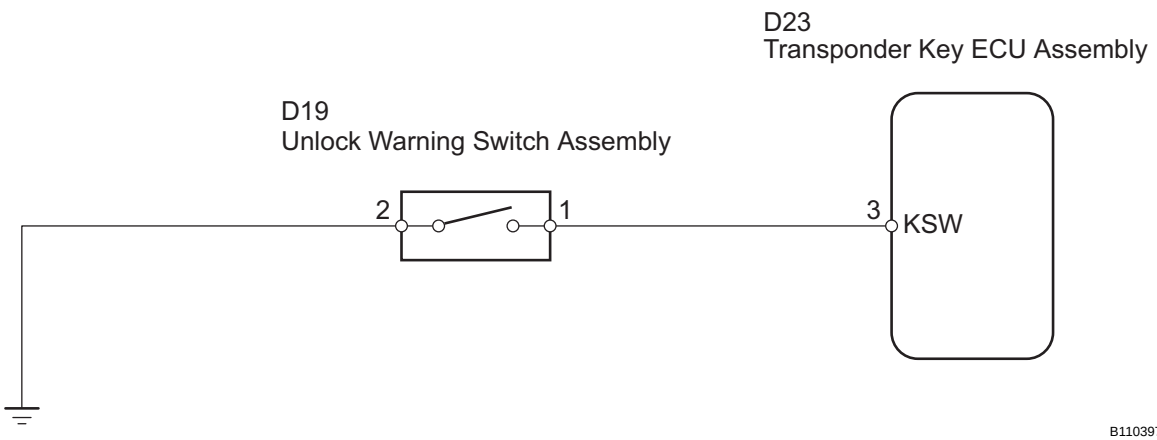
DESCRIPTION

This DTC will be output if the transponder key ECU does not detect that the unlock warning switch is ON even when the ignition switch is ON. Under normal conditions, the unlock warning switch is ON when the ignition switch is ON.

DTC No.	DTC Detection Condition	Trouble Area
B2780	Unlock warning switch ON is not detected when ignition switch is ON	• Unlock warning switch assembly • Wire harness • Transponder key ECU assembly

EI

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON with the key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST/IMMOBILISER/KEY SW. Read the values.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ ON or OFF	OFF: No key is in ignition key cylinder ON: Key is in ignition key cylinder	-

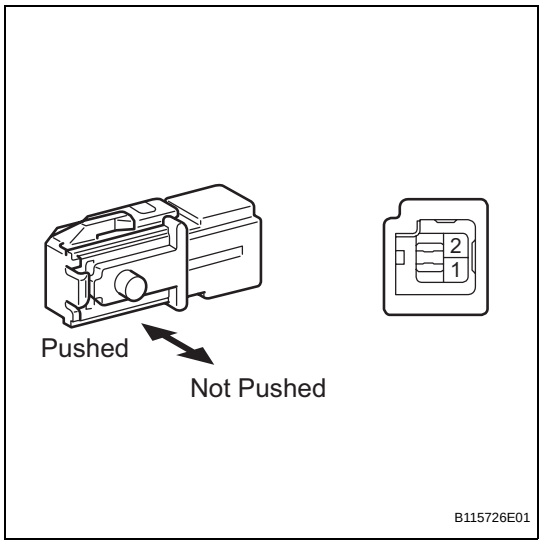
OK:
"ON" (key is in ignition key cylinder) appears on the screen.

NG → **Go to step 2**

OK

REPLACE TRANSPONDER KEY ECU ASSEMBLY

2 INSPECT UNLOCK WARNING SWITCH ASSEMBLY



(a) Remove the unlock warning switch assembly.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Pushed	Below 1 Ω
1 - 2	Not pushed	10 kΩ or higher

(c) Reinstall the unlock warning switch assembly.

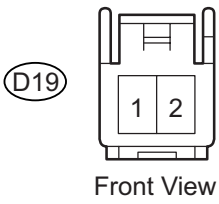
NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - BODY GROUND)

Wire Harness Side:

Unlock Warning Switch Assembly Connector



(a) Disconnect the D19 Unlock warning switch assembly connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

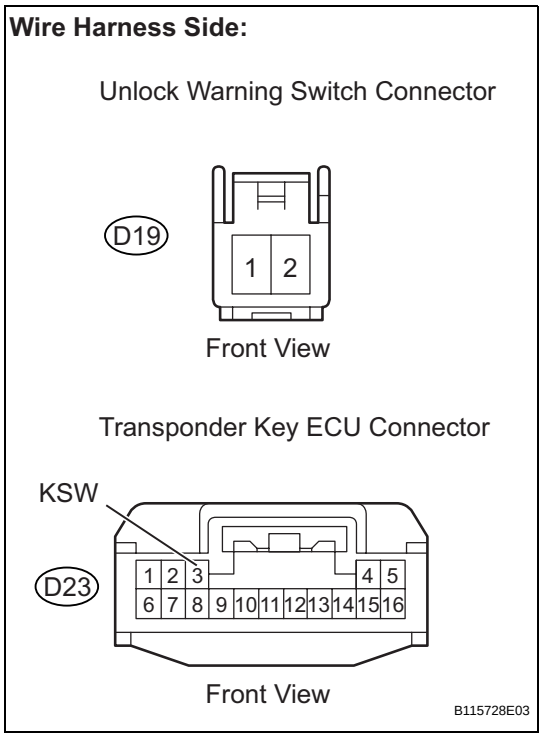
Tester Connection	Specified Condition
D19-2 - Body ground	Below 1 Ω

(c) Reconnect the D19 unlock warning switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - UNLOCK WARNING SWITCH ASSEMBLY)



(a) Disconnect the D23 transponder key ECU connector.
(b) Disconnect the D19 unlock warning switch assembly connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D23-3 (KSW) - D19-1	Below 1 Ω

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the D19 unlock warning switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TRANSPONDER KEY ECU ASSEMBLY

DTC	B2784	Antenna Coil Open / Short

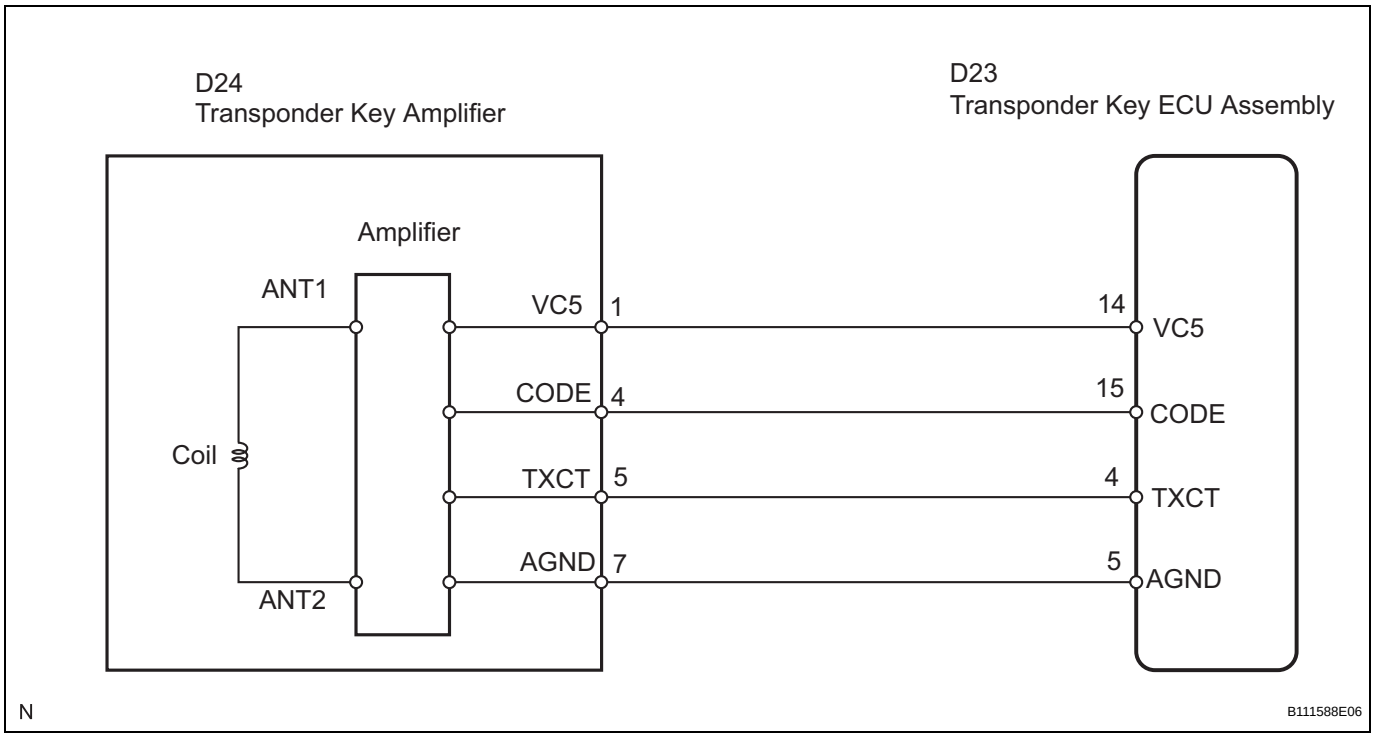
DESCRIPTION

The transponder key coil receives key code signals from the key's transponder chip. The coil is built into the transponder key amplifier, which amplifies the key code signals and outputs the signals to the transponder key ECU.

DTC No.	DTC Detection Condition	Trouble Area
B2784	Antenna coil is open/short	• Wire harness • Transponder key amplifier • Transponder key ECU assembly

EI

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON with the key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST/IMMOBILISER/ ANTENNA COIL. Read the values.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
ANTENNA COIL	Antenna coil condition/ NORMAL or FAIL	NORMAL: Antenna coil is normal FAIL: Antenna coil is malfunctioning	-

OK:
"NORMAL" (antenna coil is normal) appears on the screen.

NG → **Go to step 2**

OK

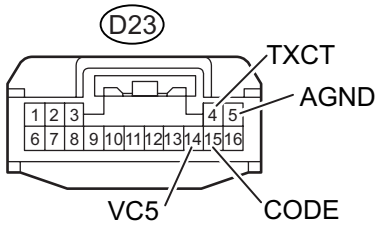
REPLACE TRANSPONDER KEY ECU ASSEMBLY

EI

2 CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

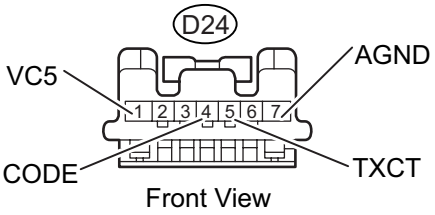
Wire Harness Side:

Transponder Key ECU Connector



Front View

Transponder Key Amplifier Connector



Front View

B110403E15

(a) Disconnect the D23 transponder key ECU connector.
(b) Disconnect the D24 transponder key amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D23-14 (VC5) - D24-1 (VC5)	Below 1 Ω
D23-15 (CODE) - D24-4 (CODE)	Below 1 Ω
D23-4 (TXCT) - D24-5 (TXCT)	Below 1 Ω
D23-5 (AGND) - D24-7 (AGND)	Below 1 Ω
D23-14 (VC5) or D24-1 (VC5) - Body ground	10 kΩ or higher
D23-15 (CODE) or D24-4 (CODE) - Body ground	10 kΩ or higher
D23-4 (TXCT) or D24-5 (TXCT) - Body ground	10 kΩ or higher
D23-5 (AGND) or D24-7 (AGND) - Body ground	10 kΩ or higher

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the D24 transponder key amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TRANSPONDER KEY AMPLIFIER

DTC	B2793	Transponder Chip Malfunction

DESCRIPTION

This DTC is output when: 1) during key code registration, a key malfunction occurs; or 2) the key code was unable to be registered properly. Follow the inspection procedure below.

DTC No.	DTC Detection Condition	Trouble Area
B2793	Transponder chip malfunction	Key

INSPECTION PROCEDURE

1	RE-REGISTER KEY

(a) Delete the DTC (See page EI-22).
(b) Re-register the key (See page EI-7), and check that the engine starts with the key.
OK:
Engine starts.

NG → **REPLACE KEY**

OK ↓

END (INSPECTION FINISHED)

DTC	B2794	Unmatched Encryption Code

DESCRIPTION

This DTC is output when a key with an incomplete key code is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2794	Key with incomplete key code is inserted	Key

INSPECTION PROCEDURE

1	**REPLACE KEY**

NEXT

END

DTC	B2795	Unmatched Key Code

DESCRIPTION

This DTC is output when a key with a key code that has not been registered in the ECU is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2795	Key with unregistered key code is inserted	Key

INSPECTION PROCEDURE

1	DELETE DTC AND INSERT ALL PRESENTLY AVAILABLE KEYS TO CHECK WHETHER ENGINE STARTS OR NOT

(a) Delete the DTC and insert all presently available keys to check whether engine starts or not.
OK:
Engine starts.

NG → **REPLACE KEY THAT CANNOT START ENGINE**

OK

END (BECAUSE OF KEY RE-REGISTRATION)

DTC	B2796	No Communication in Immobiliser System

DTC	B2798	Communication Malfunction No. 2

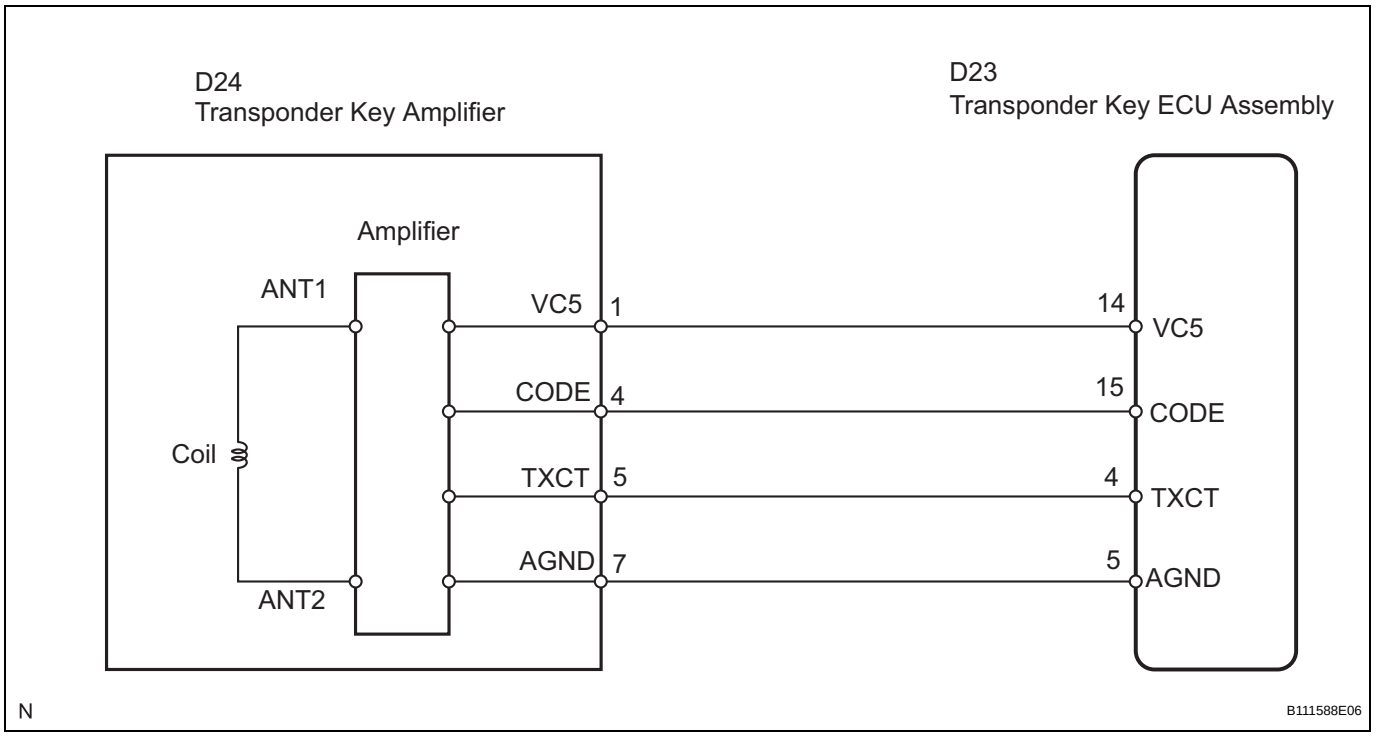
DESCRIPTION

This DTC is output when a key that does not have a transponder chip is inserted into the ignition key cylinder or if communication between the key and transponder key ECU is not possible.

DTC No.	DTC Detection Condition	Trouble Area
B2796	No communication	• Key • Wire harness • Transponder key amplifier • Transponder key ECU assembly
B2798	Communication error	Key

EI

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON with the key that cannot start the engine.

(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST/IMMOBILISER/ IMMOBILISER. Read the values.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
IMMOBILISER	Immobiliser system status/ SET or UNSET	UNSET: Ignition switch ON SET: Without key	-

OK:

"UNSET" (ignition switch ON) appears on the screen.

NG → **Go to step 2**

OK

REPLACE TRANSPONDER KEY ECU ASSEMBLY

2 CHECK WHETHER ENGINE STARTS WITH OTHER KEYS

(a) Check whether the engine starts with the vehicle's other keys.

OK:

Engine starts.

NG → **Go to step 3**

OK

RE-REGISTER OR REPLACE KEY THAT CANNOT START ENGINE

3 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON with the key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS/OBD MOBD/DATA LIST/IMMOBILISER/ ANTENNA COIL. Read the values.

Transponder key ECU assembly

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
ANTENNA COIL	Antenna coil condition/ NORMAL or FAIL	NORMAL: Antenna coil is normal FAIL: Antenna coil is malfunctioning	-

OK:

"NORMAL" (antenna coil is normal) appears on the screen.

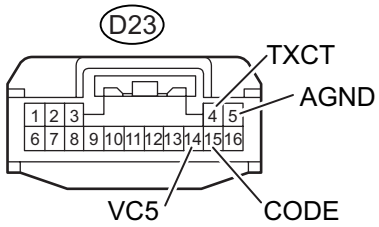
NG → **REPLACE TRANSPONDER KEY AMPLIFIER**

OK

4	CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

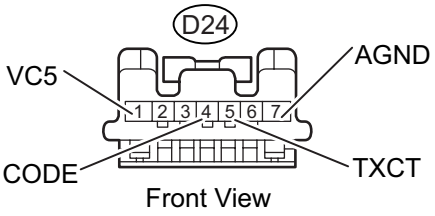
Wire Harness Side:

Transponder Key ECU Connector



Front View

Transponder Key Amplifier Connector



Front View

B110403E15

(a) Disconnect the D23 transponder key ECU connector.
(b) Disconnect the D24 transponder key amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D23-14 (VC5) - D24-1 (VC5)	Below 1 Ω
D23-15 (CODE) - D24-4 (CODE)	Below 1 Ω
D23-4 (TXCT) - D24-5 (TXCT)	Below 1 Ω
D23-5 (AGND) - D24-7 (AGND)	Below 1 Ω
D23-14 (VC5) or D24-1 (VC5) - Body ground	10 kΩ or higher
D23-15 (CODE) or D24-4 (CODE) - Body ground	10 kΩ or higher
D23-4 (TXCT) or D24-5 (TXCT) - Body ground	10 kΩ or higher
D23-5 (AGND) or D24-7 (AGND) - Body ground	10 kΩ or higher

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the D24 transponder key amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	REPLACE TRANSPONDER KEY AMPLIFIER

(a) After replacing the transponder key amplifier with a normally functioning amplifier, check that the engine starts.

OK:

Engine starts.

NG → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK

END (TRANSPONDER KEY AMPLIFIER DEFECTIVE)

DTC	B2797	Communication Malfunction No. 1

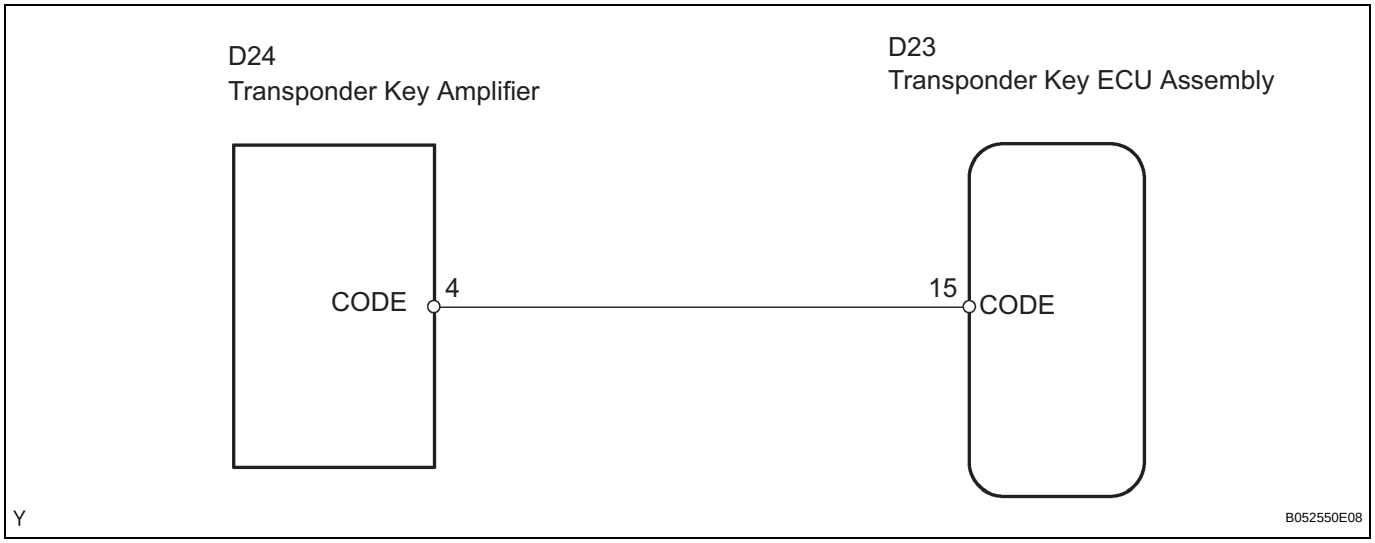
DESCRIPTION

This DTC is output when a communication error occurs between the transponder key amplifier and transponder key ECU. Some possible reasons for the communication error are: 1) 2 or more ignition keys are positioned too close together, or 2) noise is occurring in the communication line.

DTC No.	DTC Detection Condition	Trouble Area
B2797	Keys are positioned too close to each other, or noise occurred in communication line	• Key • Wire harness • Transponder key amplifier • Transponder key ECU assembly

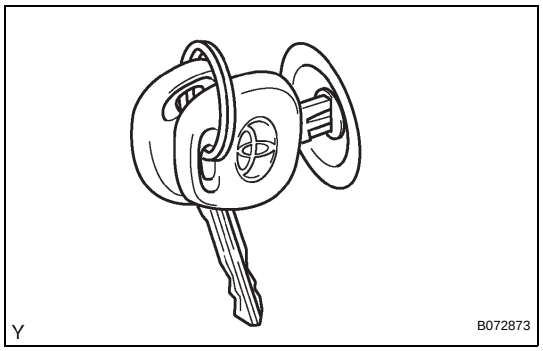
EI

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK KEYS



(a) Check if the ignition key being used is near other ignition keys, as shown in the illustration. Also, check if the key ring is in contact with the key grip.

Result

Result	Proceed to
The key is near other keys and/or the key ring is in contact with the key grip.	**A**
The key is not near other keys and/or the key ring is not in contact with the key grip.	**B**

B → **Go to step 3**

A

2	CHECK DTC

(a) Separate the keys from each other and/or remove the key ring.
(b) Delete the DTC (See page EI-22).
(c) Insert a key into the ignition cylinder. Remove it. Repeat for all the other keys.
(d) Check that no code is output.
OK:
No code is output.

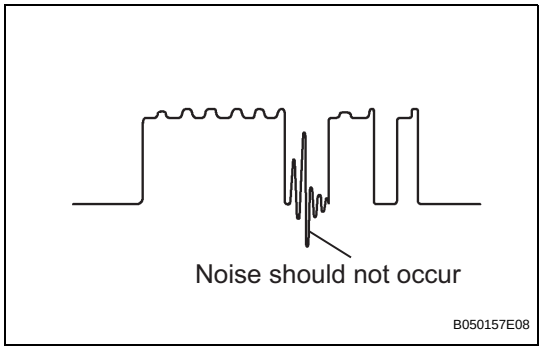
EI

NG → **Go to step 3**

OK →

END (INSPECTION FINISHED)

3	CHECK TRANSPONDER KEY ECU ASSEMBLY



(a) Using an oscilloscope or the intelligent tester, check for noise in the waveform between the terminals of the D24 transponder key amplifier connector and D23 transponder key ECU connector.
Result

Tester Connection	Specified Condition
D23-15 (CODE) - D24-4 (CODE)	No noise is occur

Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Ignition switch OFF → ON

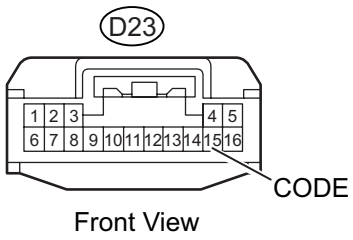
NG → **FIND CAUSE OF NOISE AND REMOVE IT**

OK →

4	CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

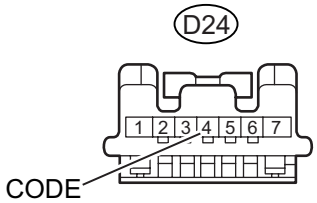
Wire Harness Side:

Transponder Key ECU Connector



Front View

Transponder Key Amplifier Connector



Front View

B110403E16

(a) Disconnect the D23 transponder key ECU connector.
(b) Disconnect the D24 transponder key amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D23-15 (CODE) - D24-4 (CODE)	Below 1 Ω

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the D24 transponder amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	REPLACE TRANSPONDER KEY AMPLIFIER

(a) After replacing the transponder key amplifier with a normally functioning amplifier, check that the engine starts.

OK:

Engine starts.

NG → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK

END (TRANSPONDER KEY AMPLIFIER DEFECTIVE)

DTC	B2799	Engine Immobiliser System Malfunction

DESCRIPTION

This DTC is output when: 1) the ECM detects errors in its own communication with the transponder key ECU; 2) the ECM detects errors in the communication lines; and 3) the ECU - ECM communication IDs between the transponder key ECU and the ECM are different and an engine start is attempted.
Before troubleshooting for this DTC, make sure no transponder key ECU DTCs are present. If present, troubleshoot the transponder key ECU DTCs first.

DTC No.	DTC Detection Condition	Trouble Area
B2799	• Error in communication between ECM and transponder key ECU, or in communication line • Communication ID in transponder key ECU is different	• Wire harness • ECM

Standard resistance

Tester Connection	Specified Condition
D23-13 (EFIO) - A21-11 (IMI)	Below 1 Ω
D23-12 (EFII) - A21-10 (IMO)	Below 1 Ω
D23-11 (EGND) - A21-9 (EOM)	Below 1 Ω
D23-13 (EFIO) or A21-11 (IMI) - Body ground	10 kΩ or higher
D23-12 (EFII) or A21-10 (IMO) - Body ground	10 kΩ or higher

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the A21 ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

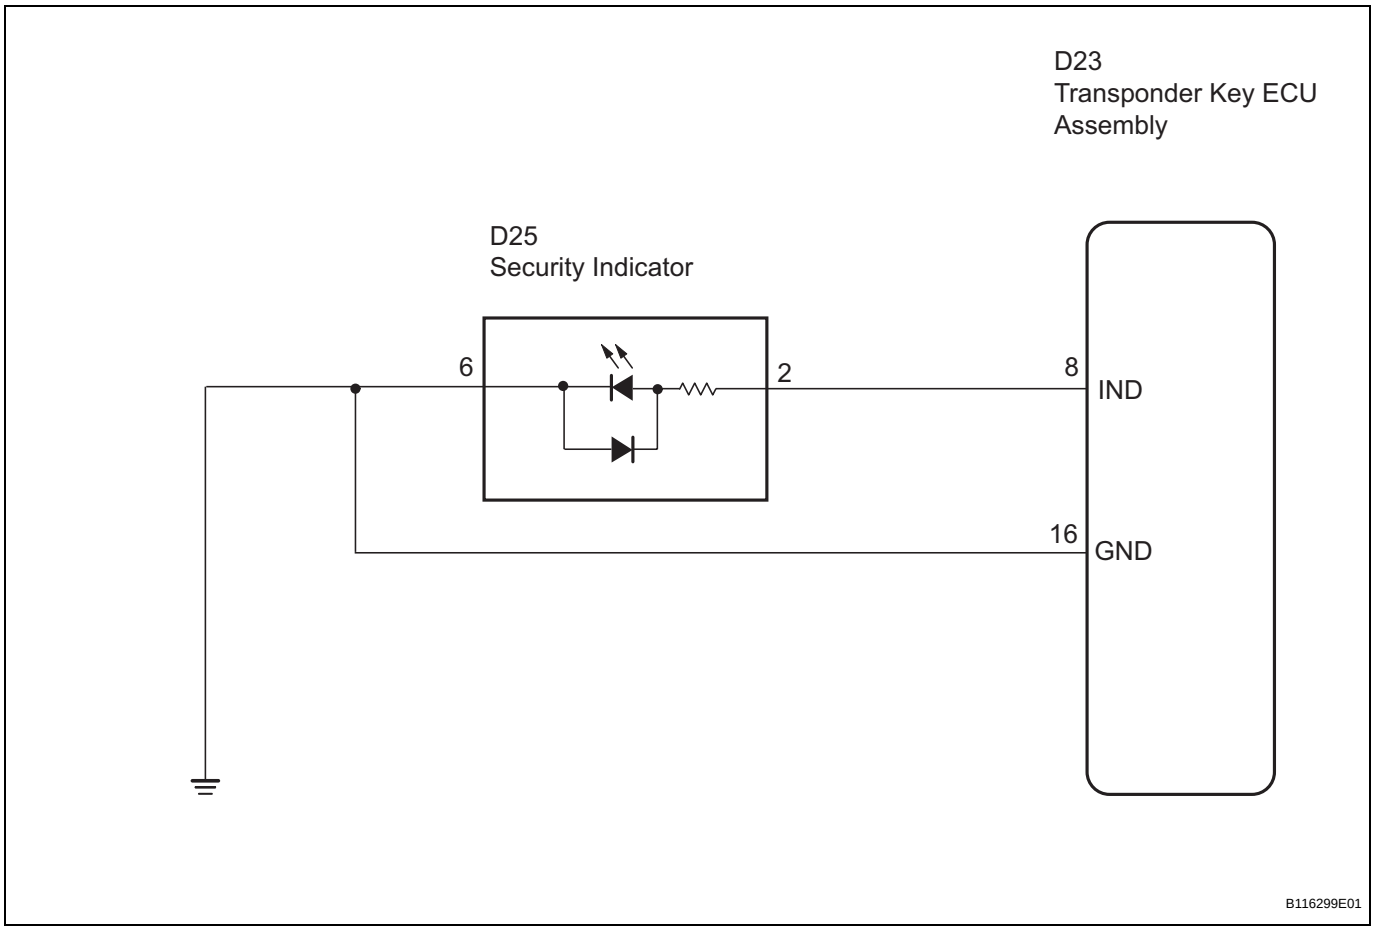
EI

Security Indicator Light Circuit

DESCRIPTION

When the transponder key is registered, the transponder key ECU assembly outputs the key registration condition by lighting up, blinking or turning off the security indicator.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Perform the ACTIVE TEST according to the display on the tester.

Transponder Key ECU

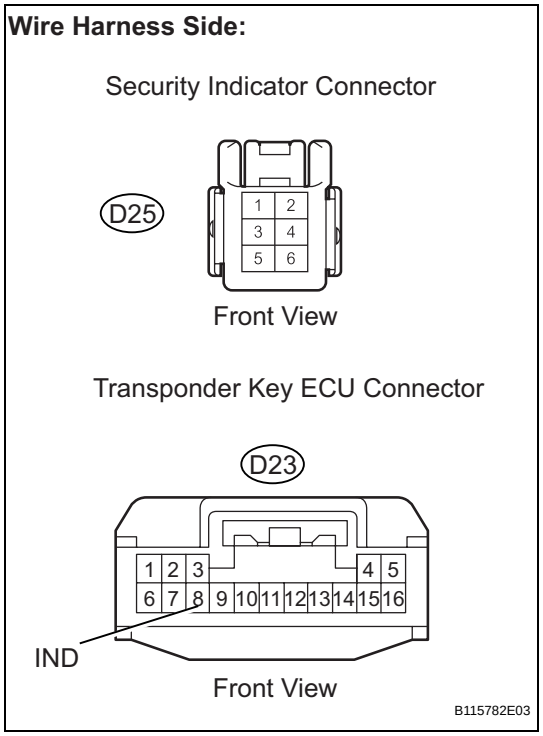
Item	Tester Details	Diagnostic Note
SECURITY INDIC	Turn security indicator ON/OFF	-

OK:
Security indicator turns ON and OFF

OK	Go to step 3

NG

2 CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - SECURITY INDICATOR LIGHT)



(a) Disconnect the D23 transponder key ECU connector.
(b) Disconnect the D25 security indicator connector.
(c) Measure the resistance.

Standard resistance

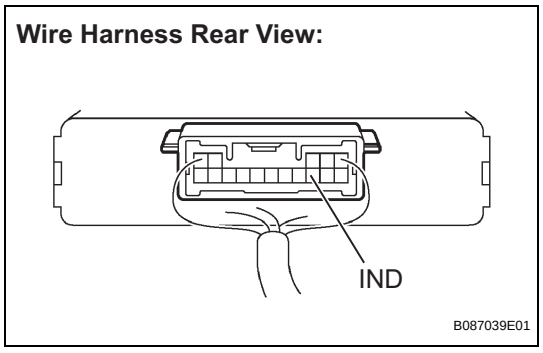
Tester Condition	Specified Condition
D23-8 (IND) - D25-2	Below 1Ω
D23-8 (IND) - Body ground	10 kΩor higher

(d) Reconnect the D23 transponder key ECU connector.
(e) Reconnect the D25 security indicator connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT TRANSPONDER KEY ECU ASSEMBLY



(a) Measure the voltage.

Standard voltage

Tester Condition	Condition	Specified Condition
D23-8 (IND) - Body ground	Immobiliser set	11 to 14 V and below 1 V output alternately

NG → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK

REPLACE SECURITY INDICATOR LIGHT

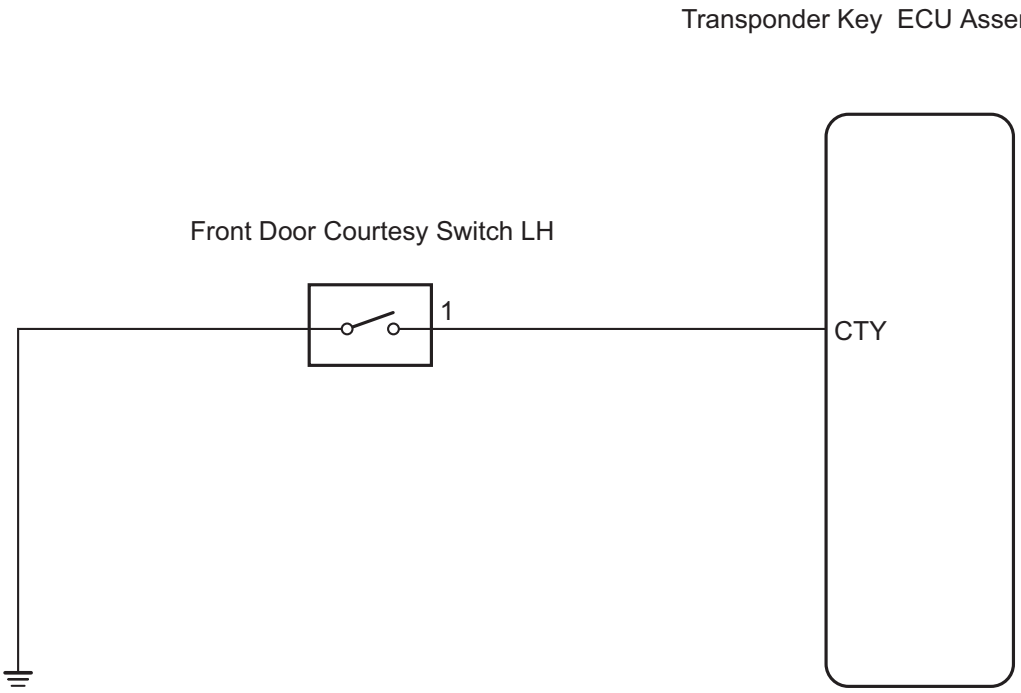
EI

Door Courtesy Switch Circuit

DESCRIPTION

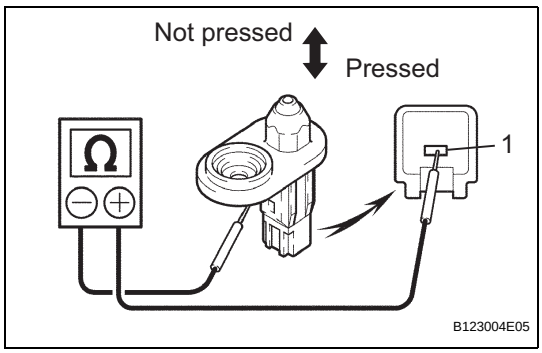
When an additional transponder key is registered, the transponder key ECU assembly detects the front door courtesy light switch open/closed condition to register the key.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FRONT DOOR COURTESY SWITCH ASSEMBLY



(a) Remove the driver side front door courtesy switch.
(b) Measure the resistance.

Standard resistance

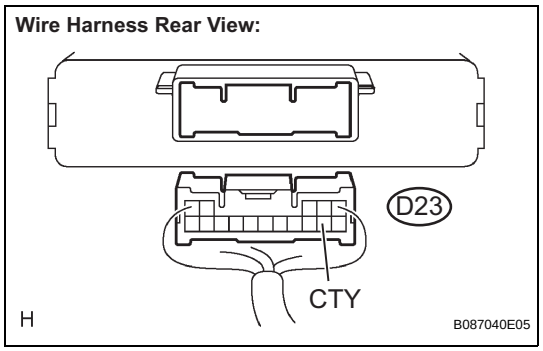
Tester Connection	Condition	Specified Condition
1 - Switch body	Switch pressed	10 kΩ or higher
1 - Switch body	Switch free	Below 1 Ω

(c) Reinstall the driver side front door courtesy switch.

NG → **REPLACE FRONT DOOR COURTESY SWITCH ASSEMBLY**

OK

2	CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY SWITCH CIRCUIT)



(a) Disconnect the D23 ECU connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D23-7 (CTY) - Body ground	Courtesy switch pushed	10 kΩ or higher
D23-7 (CTY) - Body ground	Courtesy switch free	Below 1 Ω

(c) Reconnect the ECU connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

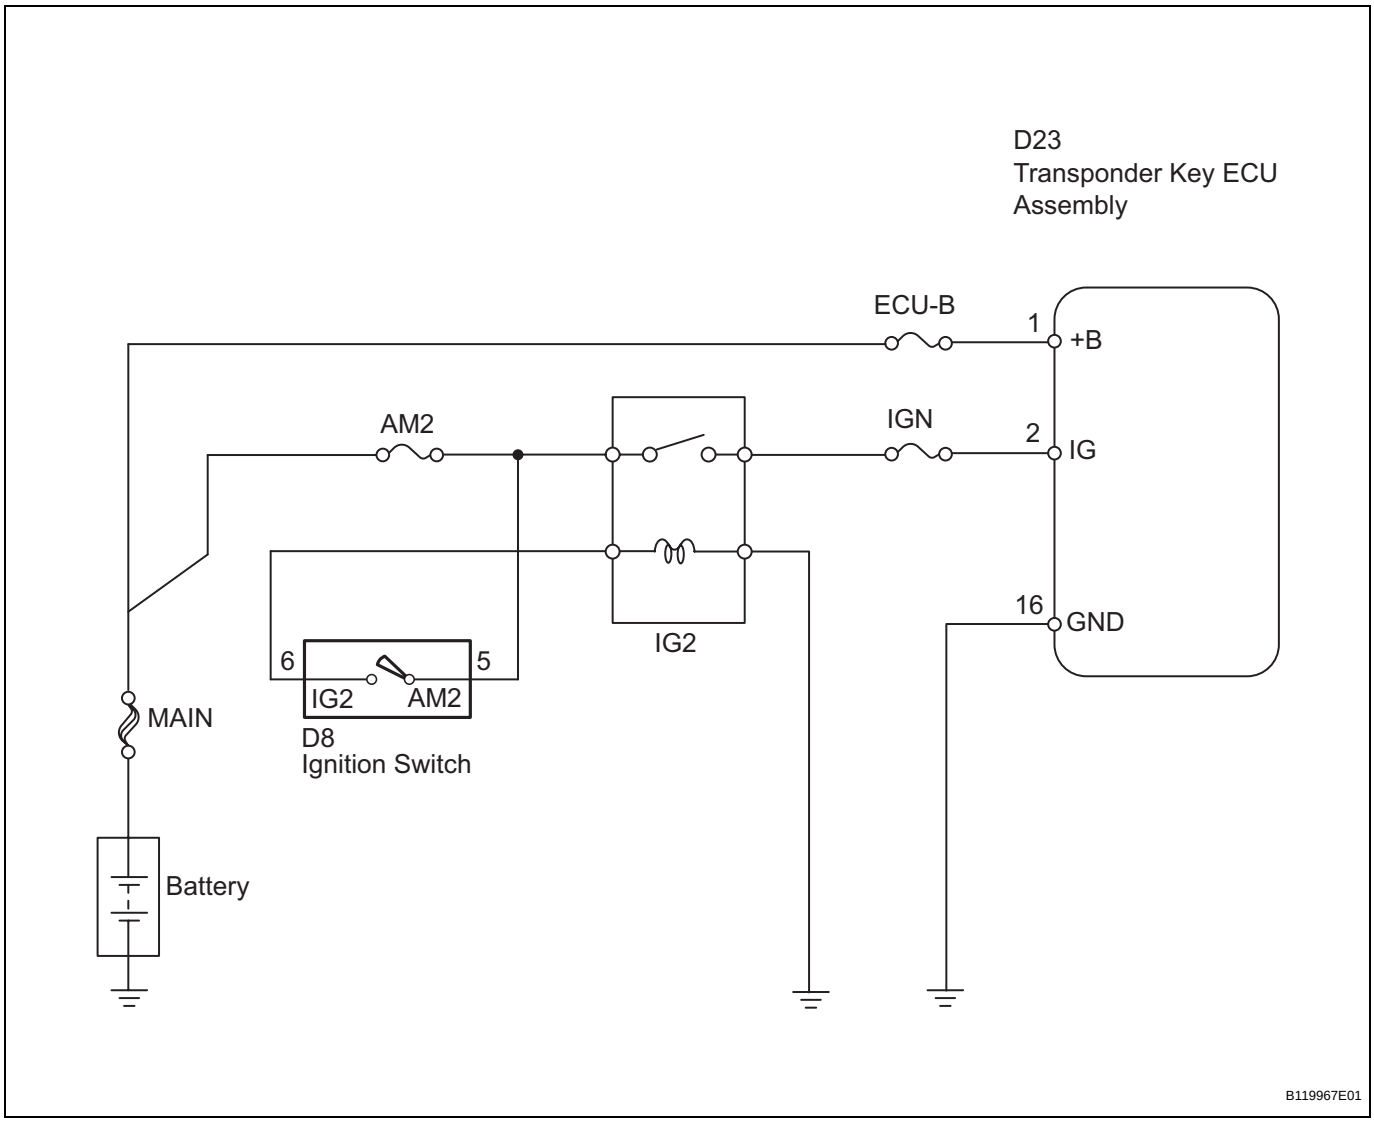
EI

ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the transponder key ECU assembly.

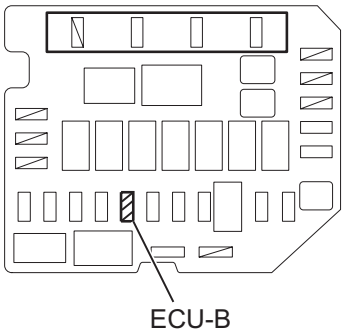
WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT FUSE (ECU-B)**

Engine Room R/B:



B122728E01

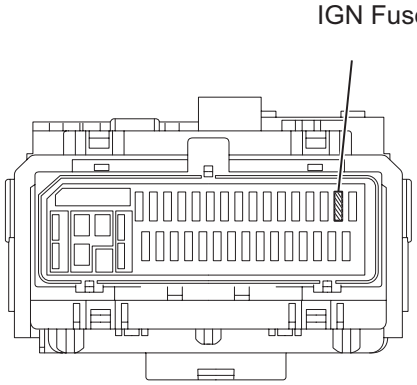
(a) Remove the ECU-B fuse from the engine room R/B and J/B.
(b) Measure the ECU-B fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ECU-B fuse.

NG → **REPLACE FUSE**

OK

2	**INSPECT FUSE (IGN)**

Main Body ECU:



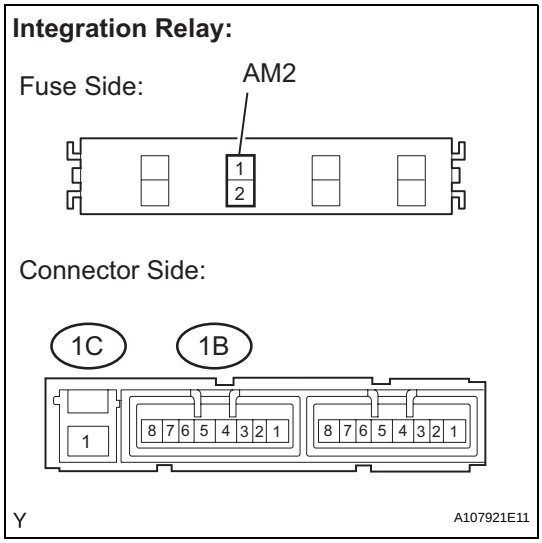
A107935E06

(a) Remove the IGN fuse from the main body ECU.
(b) Measure the IGN fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the IGN fuse.

NG → **REPLACE FUSE**

OK

3 INSPECT INTEGRATION RELAY (IG2 RELAY AND AM2 FUSE)



(a) Remove the integration relay from the engine room R/B and J/B.
(b) Inspect the AM2 fuse.
  (1) Remove the AM2 fuse from the integration relay.
  (2) Measure the resistance of the AM2 fuse.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the AM2 fuse.
(c) Inspect the IG2 relay.
  (1) Measure the resistance between the terminals shown below.
    Standard resistance

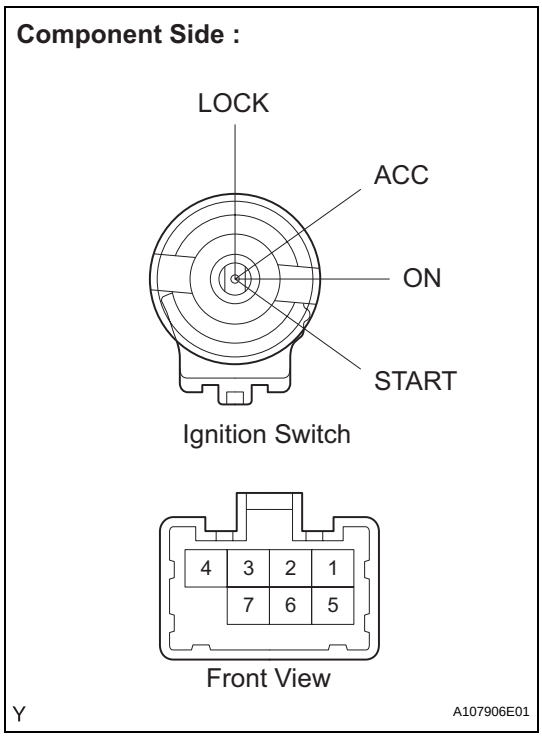
Tester Connections	Specified Conditions
1C-1-1B-4	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1B-2 and 1B-3)
1C-1-1B-1	Below 1 Ω

  (2) Reinstall the integration relay.

NG → REPLACE INTEGRATION RELAY

OK

4 INSPECT IGNITION SWITCH ASSEMBLY



(a) Disconnect the D8 ignition switch connector.
(b) Measure the resistance between the terminals shown below.
  Standard resistance

Key Position	Tester Connection	Specified Condition
LOCK	-	10 kΩor higher
ACC	2-4	Below 1 Ω
ON	1-2-4	Below 1 Ω
	5-6	Below 1 Ω
START	1-3-4	Below 1 Ω
	5-6-7	Below 1 Ω

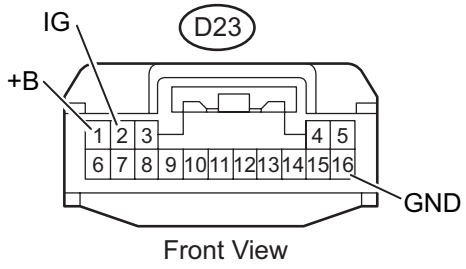
(c) Reconnect the D8 ignition switch connector.

NG → REPLACE IGNITION SWITCH ASSEMBLY

OK

5	CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - BATTERY AND BODY GROUND)

Wire Harness Side:



B110782E07

(a) Disconnect the D23 transponder key ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
D23-1 (+B) - Body ground	Always	11 to 14 V
D23-2 (IG) - Body ground	Ignition switch OFF	Below 1 V
	Ignition switch ON	11 to 14 V

(c) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
D23-16 (GND) - Body ground	Below 1 Ω

(d) Reconnect the D23 transponder key ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ↓

REPLACE TRANSPONDER KEY ECU ASSEMBLY

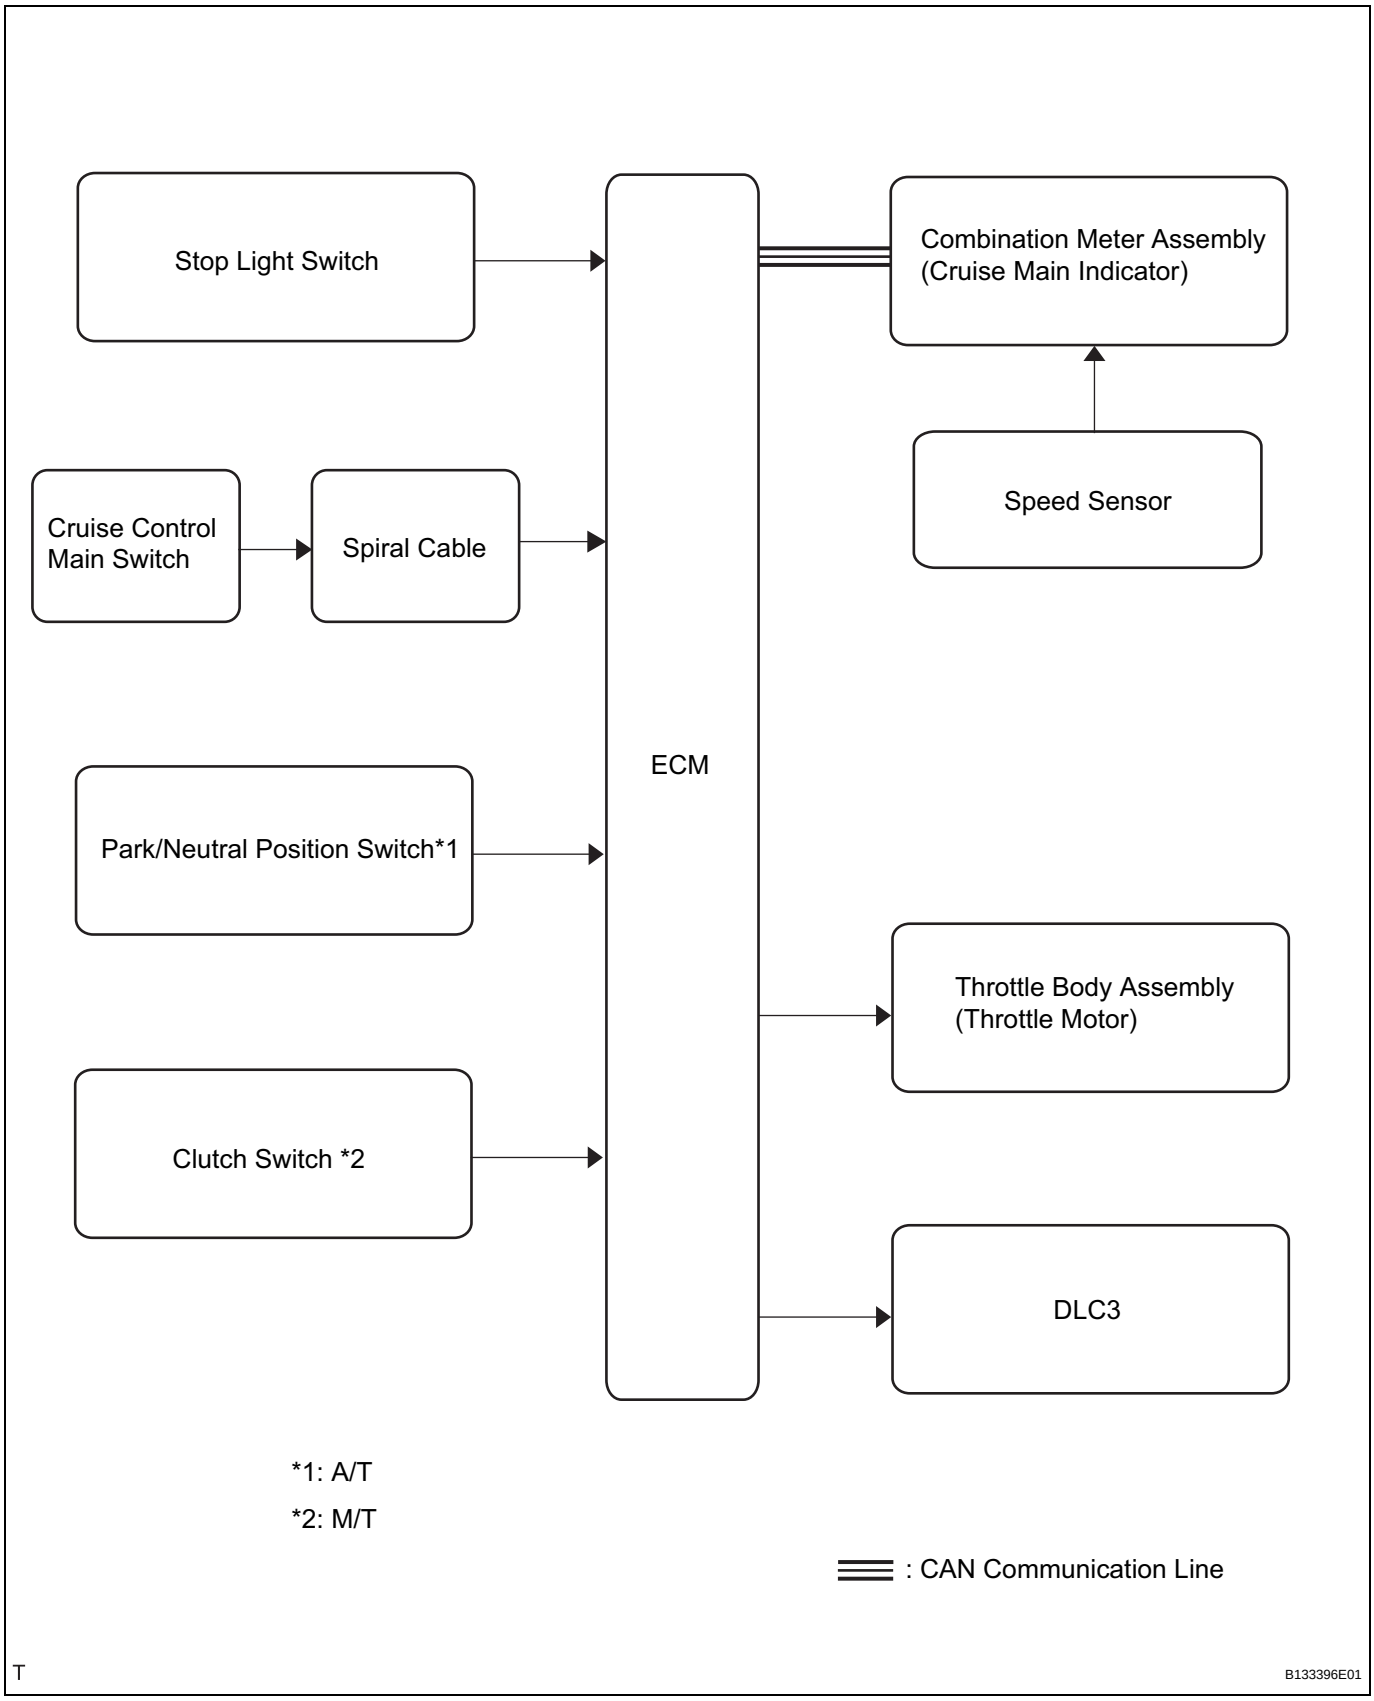
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

The cruise control system makes it possible to drive at a desired speed without using the accelerator pedal. The ECM controls the throttle opening angle based on signals from switches and sensors.

The microcomputer which controls the cruise control system is built into the ECM, and uses is the throttle position sensor and motor as the actuator.

Constant speed control gets ready when the cruise control main switch ON-OFF button is pushed (the CRUISE MAIN indicator light comes on).

By operating the cruise control main switch, the driver can control the following functions.

HINT:

- The cruise control main switch is an automatic return type switch which operates only while it is pushed in each allow direction and turns off when it is released.
- "SET" and "-", "RES" and "+", "ON" and "OFF" operations are all controlled by using the same switch.

(a) 'SET' function

When the cruise control main switch is pushed down to "-/SET", the ECM stores the set speed and compares it with the actual vehicle speed. If the actual driving speed is greater than the set speed, the ECM sends a signal to the throttle position sensor and motor to close the throttle valve. If lower, it opens the throttle valve. The cruise control operative speed range is between the low and high speed limits.

(b) '+' function

The cruise set speed increases while the cruise control main switch lever is pushed up to "+/RES". The vehicle begins to cruise at the newly set speed when the cruise control main switch lever is released.

(c) Tap-up function

When the cruise control main switch lever is tapped up to "+/RES" (approximately 0.6 seconds), the ECM increases the stored set speed by 1 mph (1.6 km/h) at a time. However, when the difference between the driving and the stored vehicle speeds is more than 3.1 mph (approximately 5 km/h), the stored vehicle speed will not change.

(d) '-' function

The cruise set speed decreases while the cruise control main switch lever is pushed down to "-/SET". The vehicle begins to cruise at the newly set speed when the cruise control main switch lever is released.

(e) Tap-down function
When the cruise control main switch lever is tapped down to "-/SET" (approximately 0.6 seconds), the ECM decreases the stored set speed by 1 mph (1.6 km/h) at a time. However, when the difference between the driving and the stored vehicle speeds is more than 3.1 mph (approximately 5 km/h), the vehicle speed, when the cruise control main switch lever is released from "-/SET", will be stored and constant speed control is maintained.

(f) Low speed limit
The lowest possible limit of the speed setting range is approximately 25 mph (40 km/h). The cruise control system cannot be set when the vehicle speed is below that low speed limit. Cruise control operation is automatically canceled when the vehicle speed decreases to below the low speed limit while the cruise control is in operation.

(g) High speed limit
The highest possible limit of the speed setting range is approximately 125 mph (200 km/h). The cruise control system cannot be set when the vehicle speed is over the high speed limit. The speed cannot be increased using "+/RES" with the cruise control main switch assembly to beyond the high speed limit.

(h) 'RES' function
If the cruise control operation was canceled under the manual cancel condition (other than by turning cruise control main switch ON-OFF button off), and if the driving speed is within the limit range, pushing the cruise control main switch to "+/RES" restores the vehicle speed stored at the time of cancellation, and maintains constant speed control. Even when cruise control is canceled automatically due to the vehicle speed decreasing below the low speed limit, cruise control can be resumed when the vehicle speed returns to over the low speed limit, since the stored vehicle speed remains in the memory.

(i) MANUAL CANCEL function
The ECM cancels the cruise control while driving under the following conditions:
- The cruise control main switch is pulled to "CANCEL".
- The brake pedal is depressed.
- The clutch pedal is depressed (M/T only).
- The cruise control main switch ON-OFF button is pushed off.
- The D position circuit in the neutral start switch is turned from ON to OFF. The gear is shifted from the D or 3rd position to any of the N, 2nd or 1st positions (A/T only).

(j) AUTO CANCEL function

(1) When any of the following malfunctions occurs, the ECM clears the set vehicle speed and deactivates the cruise control.
In this case, the power indicator continues blinking until the cruise control main switch is turned OFF and the ECM allows the cruise control to be reactivated when the main switch is next turned ON again.
- Open or short malfunctions in the stop light switch.
- Abnormalities in the vehicle speed signal.
- Malfunctions in the throttle body.

(2) When any of the following malfunctions occurs, the ECM clears the set vehicle speed and deactivates the cruise control.
In this case, the power indicator continues blinking until the cruise control main switch is turned OFF and the ECM allows the cruise control to be reactivated when the ignition switch is next turned ON again.
- Malfunctions in the stop light switch input circuit.
- Malfunctions in the cancel circuit.

(3) When the vehicle is in one of the following conditions, the ECM deactivates the cruise control (the cruise control can be reset).
- Actual vehicle speed is below the lower vehicle speed limit (the set vehicle speed is retained).
- Actual vehicle speed decreases by 10 mph (16 km/h) from the set vehicle speed (the set vehicle speed is cleared).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the cruise control system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

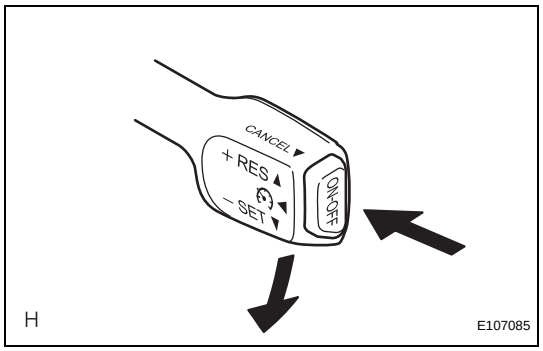
ROAD TEST

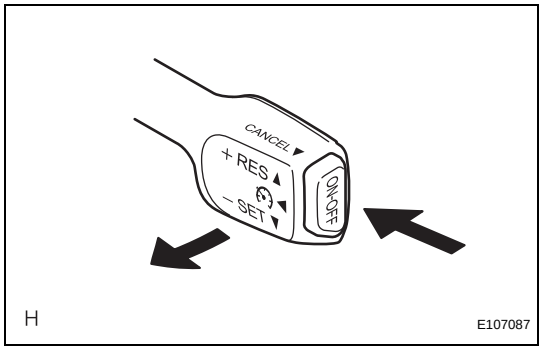
1. PROBLEM SYMPTOM CONFIRMATION

(a) Inspect the SET function.
  (1) Turn the cruise control main switch on.
  (2) Drive at the required speed between 25 mph (40 km/h) and 125 mph (200 km/h).
  (3) Push the cruise control main switch to - (COAST)/SET.
  (4) After releasing the switch, check that the vehicle cruises at the set speed.

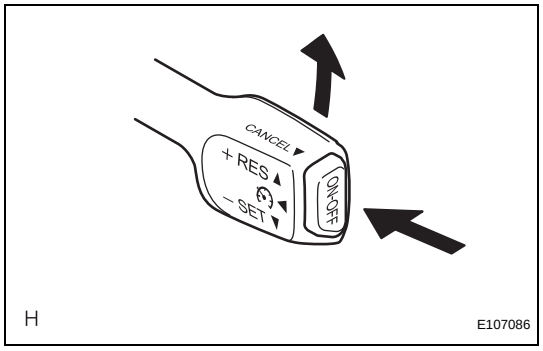
(b) Inspect the ACCELERATION function.
  (1) Turn the cruise control main switch on.
  (2) Drive at the required speed between 25 mph (40 km/h) and 125 mph (200 km/h).
  (3) Push the cruise control main switch to - (COAST)/SET.
  (4) Check that the vehicle speed increases while the cruise control main switch is pushed to + (ACCEL)/RES (RESUME), and that the vehicle cruises at the newly set speed when the switch is released.
  (5) Push the cruise control main switch to + (ACCEL)/RES (RESUME) and then release it immediately. Check that the vehicle speed increases by approximately 1.0 mph (1.6 km/h) (tap-up control).



(c) Inspect the - (COAST) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 25 mph (40 km/h) and 125 mph (200 km/h).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Check that the vehicle speed decreases while the cruise control main switch is pushed to - (COAST)/SET, and the vehicle cruises at the newly set speed when the switch is released.
(5) Push the cruise control main switch to - (COAST)/SET, and then release it immediately. Check that the vehicle speed decreases by approximately 1.0 mph (1.6 km/h) (tap-down control).



(d) Inspect the CANCEL function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 25 mph (40 km/h) and 125 mph (200 km/h).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) When performing any one of the following, check that the cruise control system is canceled and that the normal driving mode is reset.
- Depressing the brake pedal
- Depressing the clutch pedal (M/T only)
- The shift lever is moved from the D or 3rd position to any of the N, 2nd , or L positions (A/T only)
- Turning the cruise control main switch off
- Pulling the cruise control main switch to CANCEL



(e) Inspect the RES (RESUME) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 25 mph (40 km/h) and 125 mph (200 km/h).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Cancel the cruise control system by performing any of the above operations (other than turning the main switch off).
(5) After pushing the cruise control main switch to + (ACCEL)/RES (RESUME) at a driving speed of more than 25 mph (40 km/h), check that the vehicle resumes the speed set prior to the cancellation.

CC

PROBLEM SYMPTOMS TABLE

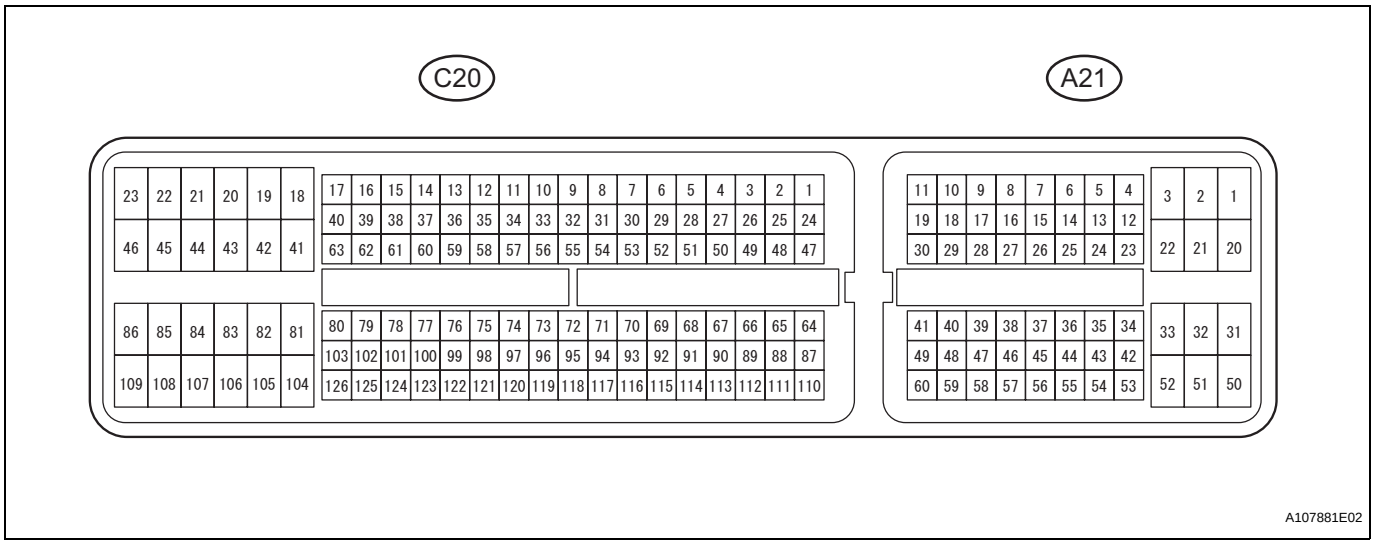
HINT:
Use the table below to help determine the causes of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Cruise Control System

Symptom	Suspected area	See page
Main switch cannot be turned ON (Indicator light on the combination meter does not come on)	Cruise control switch circuit	CC-26
	CRUISE MAIN indicator light circuit	CC-31
	ECM	-
Desired speed cannot be set (Indicator light on the combination meter comes on when the main switch is turned ON, but goes off when operating the "SET" function)	Cruise control switch circuit	CC-26
	ECM	-
Desired speed cannot be set (Indicator light on the combination comes on when the main switch is turned ON and it remains ON, while operating the "SET" function)	Cruise control switch circuit	CC-26
	Stop light switch circuit	CC-19
	Clutch switch circuit (M/T)	CC-23
	Park/neutral position switch circuit (A/T)	AX-6
	Combination meter system	ME-8
	Vehicle speed sensor circuit	CC-18
	ECM	-
While cruise control driving, the set speed is canceled (Indicator light remains ON)	Cruise control switch circuit	CC-26
	Vehicle speed sensor circuit	CC-18
	Stop light switch circuit	CC-19
	Combination meter system	ME-8
	Clutch switch circuit (M/T)	CC-23
	Park/neutral position switch circuit (A/T)	AX-6
	ECM	-
Hunting occurs (Speed is not constant)	Vehicle speed sensor circuit	CC-18
	ECM	-
Speed setting cannot be canceled ("CANCEL" function failure only)	Cruise control switch circuit	CC-26
	ECM	-
DTC is not output, or is output when should not be	DLC3 circuit	CC-32
	ECM	-
Cruise control cannot be canceled when vehicle speed decreases to below low speed limit	Vehicle speed sensor circuit	CC-18
	ECM	-
Cruise control cannot be canceled when brake pedal is depressed	Stop light switch circuit	CC-19
	ECM	-
Cruise control cannot be canceled when shift lever is operated (A/T)	Park/neutral position switch circuit (A/T)	AX-6
	ECM	-
Cruise control cannot be canceled when clutch pedal is depressed (M/T)	Clutch switch circuit (M/T)	CC-23
	ECM	-

TERMINALS OF ECM

1. CHECK ECM



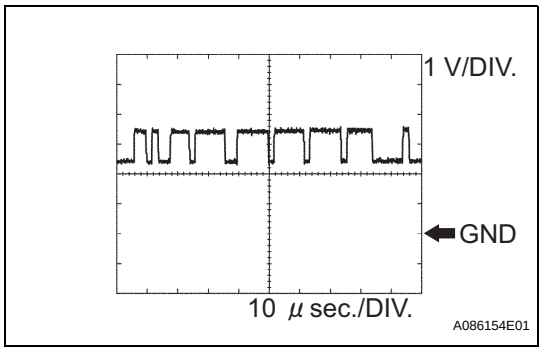
(a) Measure the voltages of the wire harness side connectors.

Standard voltage:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TC (A21-27) - E1 (C20-104)	P - W	DTC output signal	Ignition switch ON	10 to 14 V
TC (A21-27) - E1 (C20-104)	P - W	DTC output signal	Ignition switch ON Connect terminals TC and CG of DLC3	Below 2 V
ST1- (A21-35) - E1 (C20-104)	Y - W	Cruise cancel input signal	Ignition switch ON Depress brake pedal	Below 1 V
ST1- (A21-35) - E1 (C20-104)	Y - W	Cruise cancel input signal	Ignition switch ON Release brake pedal	10 to 14 V
STP (A21-36) - E1 (C20-104)	G - W	Stop light switch input signal	Ignition switch ON Depress brake pedal	10 to 14 V
STP (A21-36) - E1 (C20-104)	G - W	Stop light switch input signal	Ignition switch ON Release brake pedal	Below 1 V
CCS (A21-40) - E1 (C20-104)	L - W	Cruise control main switch output signal	Ignition switch ON	10 to 14 V
CCS (A21-40) - E1 (C20-104)	L - W	Cruise control main switch output signal	Ignition switch ON CANCEL switch held ON	6.6 to 10.1 V
CCS (A21-40) - E1 (C20-104)	L - W	Cruise control main switch output signal	Ignition switch ON -/SET switch held ON	4.5 to 7.1 V
CCS (A21-40) - E1 (C20-104)	L - W	Cruise control main switch output signal	Ignition switch ON +/RES switch held ON	2.3 to 4.5 V
CCS (A21-40) - E1 (C20-104)	L - W	Cruise control main switch output signal	Ignition switch ON MAIN switch held ON	Below 1 V
E1 (C20-104) - Body ground	W - Body ground	Ground	Always	Below 1 V
D (C20-56) - E1 (C20-104)	L - W	Clutch switch input signal	Ignition switch ON Depress clutch pedal	Below 1 V
D (C20-56) - E1 (C20-104)	L - W	Clutch switch input signal	Ignition switch ON Release clutch pedal	10 to 14 V
CANH (A21-41) - E1 (C20-104)	L - W	CAN communication line	Ignition switch ON	Pulse generation (see waveform 1)
CANL (A21-49) - E1 (C20-104)	W - W	CAN communication line	Ignition switch ON	Pulse generation (see waveform 2)

CC

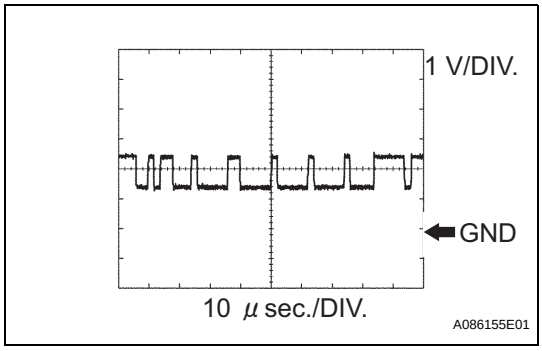
If the result is not as specified, there may be a malfunction on the wire harness side.



2. WAVEFORM 1(Reference)
CAN communication signal

ECM Terminal Names	Between CANH and E1
Tester Ranges	1 V/DIV, 10 μs/DIV
Conditions	Engine stops and ignition switch ON

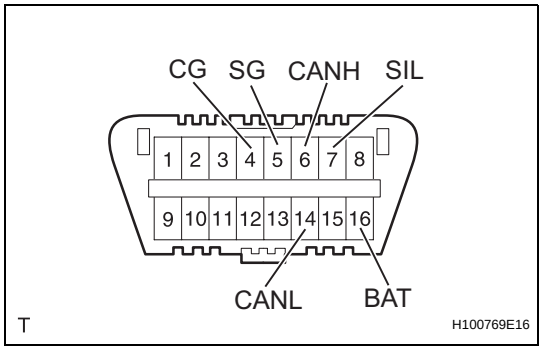
HINT:
The waveform varies depending on the CAN communication signal.



3. WAVEFORM 2(Reference)
CAN communication signal

ECM Terminal Names	Between CANL and E1
Tester Ranges	1 V/DIV, 10 μs/DIV
Conditions	Engine stops and ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.



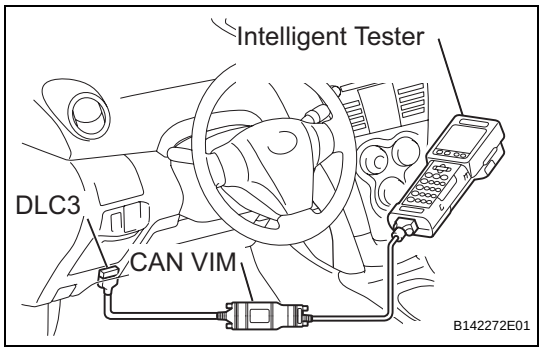
DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

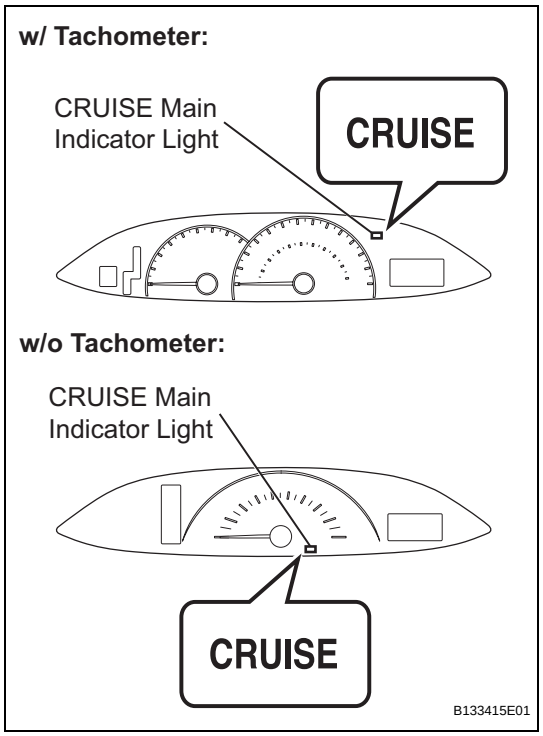


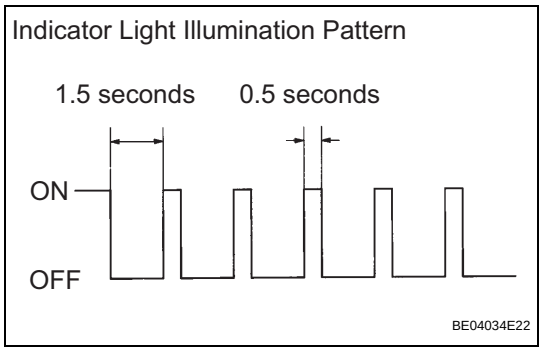
HINT:
Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

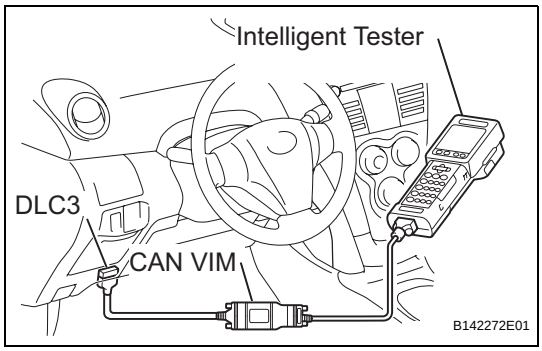
2. CHECK INDICATOR

(a) Turn the ignition switch to the ON position.





(b) Check that the CRUISE MAIN indicator light comes on when the cruise control main switch ON-OFF button is pushed on, and that the indicator light goes off when the ON-OFF button is pushed off.
HINT:
If there is a problem with the ON/OFF illumination of the indicator light, inspect the cruise main indicator light circuit (See page CC-31).
HINT:
If a malfunction occurs in the vehicle speed sensor, stop light switch assembly or other related parts during cruise control driving, the ECM actuates AUTO CANCEL of the cruise control. Then the CRUISE MAIN indicator light starts to blink, to inform the driver of the malfunction. At the same time, data of the malfunction is stored as a diagnostic trouble code (DTC).



DTC CHECK / CLEAR

1. DTC CHECK

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DTCs by following the prompts on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. DTC CLEAR

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Erase the DTCs by following the prompts on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

FAIL-SAFE CHART

HINT:
If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the ECM and cancels the cruise control operation.

Vehicle Condition	Auto Cancel Condition	Re-operation Condition
CRUISE main indicator light blinks	• There is open or short in stop light switch circuit • There is problem with vehicle speed signal • There is problem with throttle position sensor and motor	Turn cruise control main switch on again
CRUISE main indicator light blinks	• There is problem with input circuit of stop light switch circuit • There is problem with cancel circuit	• Turn cruise control main switch on again • Turn engine switch off then on again
CRUISE main indicator light remains on (Cruise control is canceled)	• Vehicle speed is lower than low speed limit (approximately 25 km/h (40 mph)) while running with cruise control on	Push cruise control main switch to + (ACCEL)/RES (RESUME)
	• Vehicle speed is lower than stored speed by approximately 10 km/h (16 mph) or more	Push cruise control main switch to - (COAST)/ SET

DATA LIST / ACTIVE TEST

1. READ DATA LIST

(a) While the intelligent tester is connected to the DLC3 with the ignition switch in the ON position, the CRUISE CONTROL data list can be displayed. Follow the prompts on the tester screen to access the data list.

ECM (Cruise Control System)

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
VEHICLE SPD	Vehicle speed / min.: 0 km/h (0 mph) max.: 255 km/h (158 mph)	Actual vehicle speed	-
MEMORY SPD	Vehicle speed / min.: 0 km/h (0 mph) max.: 255 km/h (158 mph)	Actual vehicle speed stored in memory	-
THROTTLE	Throttle operating angle / min.: 0 deg. max.: 125 deg.	Actual demanded throttle angle	-
CCS OPER STATUS	Cruise control / ON or OFF	ON: Cruise control is SET OFF: Cruise control is UNSET	-
CRUISE CONTROL	Cruise control / ON or OFF	ON: Cruise control is SET OFF: Cruise control is UNSET	-
CCS INDICATOR M	Switch indicator (Main CPU) / ON or OFF	ON: Switch indicator (Main CPU) is SET OFF: Switch indicator (Main CPU) is UNSET	-
CCS INDICATOR S	Switch indicator (Sub CPU) / ON or OFF	ON: Switch indicator (Sub CPU) is SET OFF: Switch indicator (Sub CPU) is UNSET	-
CCS READY M	Switch ready (Main CPU) / ON or OFF	ON: Switch ready (Main CPU) is SET OFF: Switch ready (Main CPU) is UNSET	-
CCS READY S	Switch ready (Sub CPU) / ON or OFF	ON: Switch ready (Sub CPU) is SET OFF: Switch ready (Sub CPU) is UNSET	-

RES/ACC SW	+ / RES switch / ON or OFF	ON: + / RES switch is SET OFF: + / RES switch is UNSET	-
STP LIGHT SW M	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S1	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S2	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
SHIFT D POS	Shift D position / ON or OFF (A/T)	ON: Shift is D or 3 position OFF: Shift is except D or 3 position	-
	Clutch switch/ ON or OFF (M/T)	ON: Clutch pedal released OFF: Clutch pedal depressed	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is indicated while checking DTCs, inspect the circuit listed for that code in the table below, and proceed to the applicable page.

Cruise Control System

DTC No.	Detection Item	Trouble Area	See page
P0500	Vehicle Speed Sensor Circuit Malfunction	- Combination meter assembly - Vehicle speed sensor - Vehicle speed sensor signal circuit - ECM	CC-18
P0503	Vehicle Speed Sensor Circuit Malfunction	- Combination meter assembly - Veicle speed sensor - Vehicle speed sensor signal circuit - ECM	CC-18
P0571	Stop Light Switch Circuit Malfunction	- Stop light switch assembly - Stop light switch assembly circuit - ECM	CC-19
P0607	Input Signal Circuit Malfunction	- ECM	CC-22

DTC	P0500	Vehicle Speed Sensor Circuit Malfunction

DTC	P0503	Vehicle Speed Sensor Circuit Malfunction

DESCRIPTION

Refer to DTC P0500 (see page ES-213).

DTC No.	DTC Detection Conditions	Trouble Areas
P0500	This trouble code is output when the vehicle speed signal from the vehicle speed sensor is cut for 0.14 seconds or more while the cruise control is in operation.	• Combination meter assembly • Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM
P0503	Momentary interruption and noise are detected when a rapid change of vehicle speed occurs while the cruise control is in operation.	• Combination meter assembly • Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM

CC

WIRING DIAGRAM

Refer to DTC P0500 (see page ES-215).

INSPECTION PROCEDURE

Refer to DTC P0500 (see page ES-215).

DTC	P0571	Stop Light Switch Circuit Malfunction

DESCRIPTION

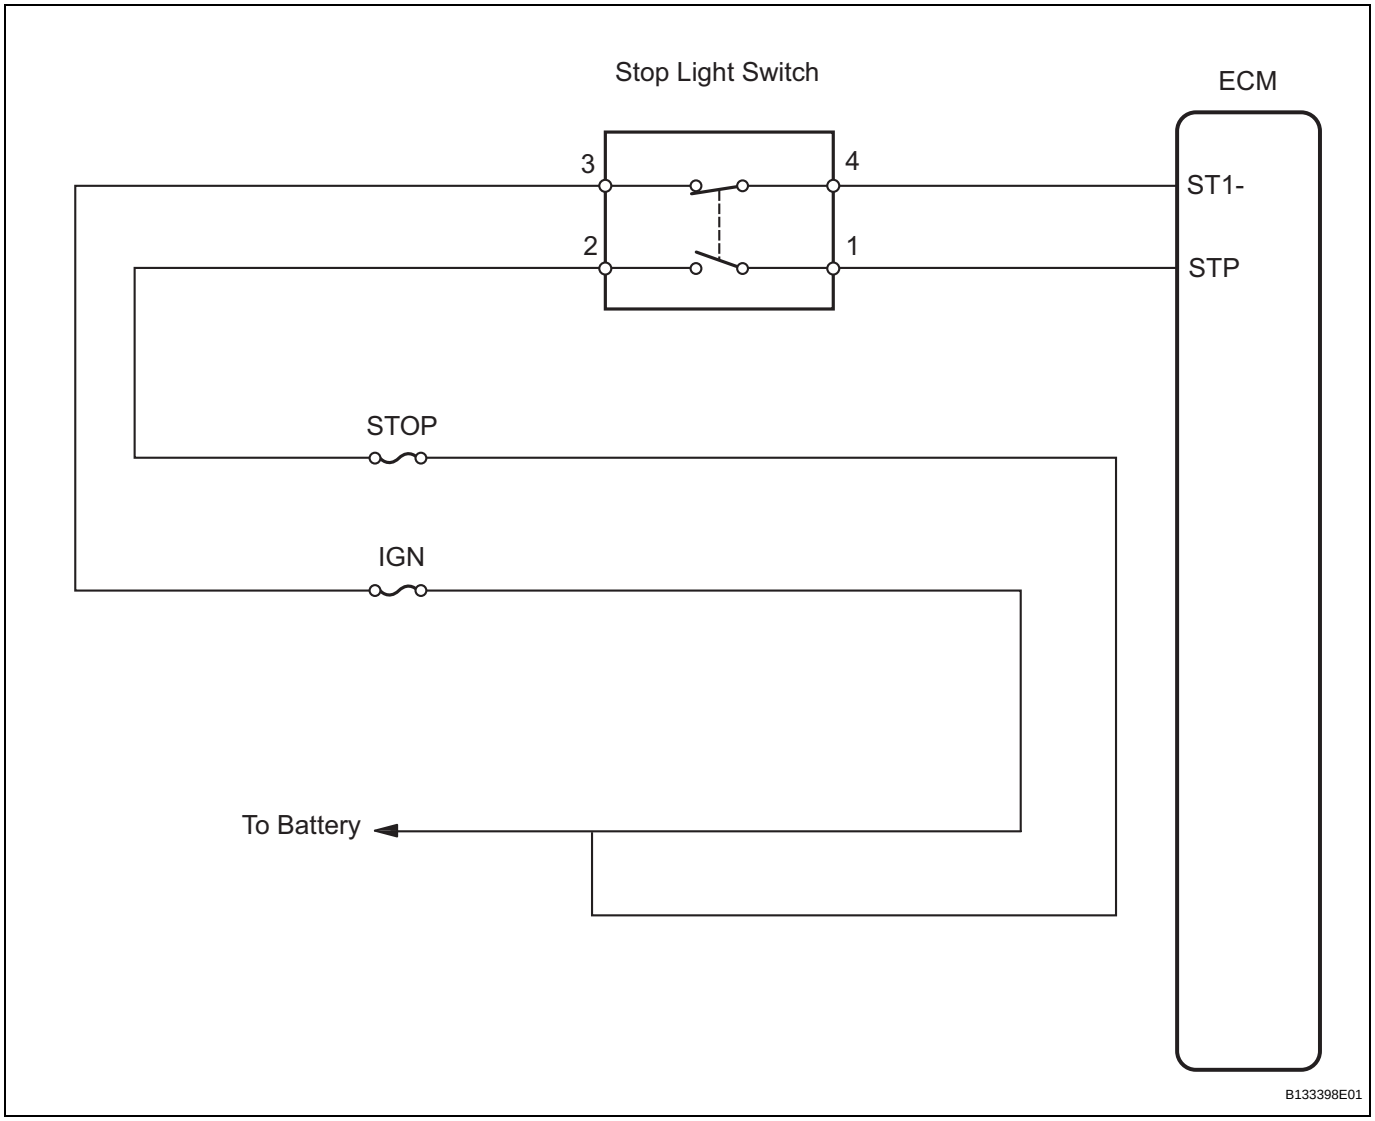
The cruise control system cancels cruising when the ECM detects that the brake pedal is depressed during cruise control driving. The stop light switch assembly sends signals to the ECM according to the brake pedal conditions. When the brake pedal is released, terminal ST1- is the positive (+) battery voltage, and terminal STP voltage is below 1 V. While the brake pedal is depressed, terminal ST1- is below 1 V, and STP is positive (+) battery voltage. During braking, the ECM cancels cruise control as one of the manual cancel functions.

The ECM outputs this trouble code when the voltage of terminals ST1- and STP are both below 1 V for 0.5 seconds or more at the same time.

The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit.

DTC No.	DTC Detected Conditions	Trouble Areas
P0571	ECM detects a malfunction of the stop light switch circuit under both of the following conditions. • Voltage of terminal STP is below 1 V for 0.5 seconds or more. • Voltage of terminal ST1- is below 1 V for 0.5 seconds or more.	• Stop light switch assembly • Stop light switch assembly circuit • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT STOP LIGHT SWITCH OPERATION

(a) Check that the stop lights come on while the brake pedal is depressed, and go off when the brake pedal is released.

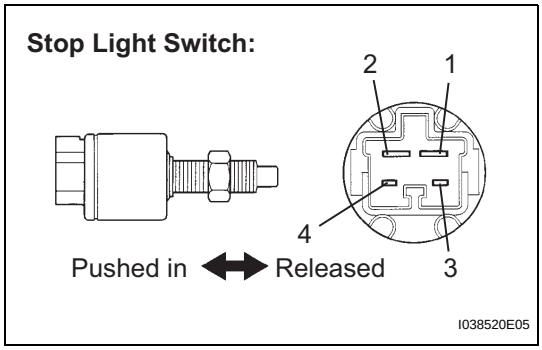
OK

Brake Pedal Condition	Stop Light Condition
Depressed	ON
Released	OFF

NG → **INSPECT STOP LIGHT SWITCH CIRCUIT**

OK

2 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Disconnect the stop light switch assembly connector.
(b) Measure the resistance.

Standard resistance

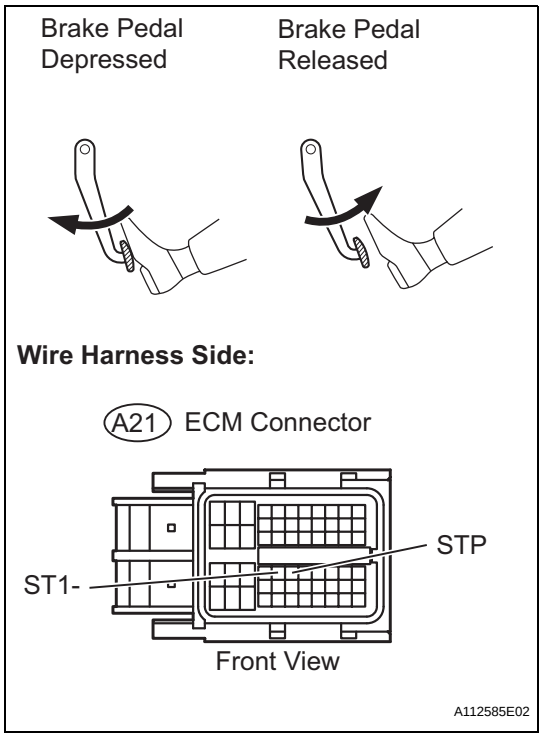
Tester Connection	Switch Condition	Stop Light Condition
1 - 2	Switch pin free (Brake pedal depressed)	Below 1Ω
3 - 4	Switch pin free (Brake pedal depressed)	10 kΩ or higher
1 - 2	Switch pin pushed in (Brake pedal released)	10 kΩ or higher
3 - 4	Switch pin pushed in (Brake pedal released)	Below 1Ω

(c) Reconnect the stop light switch assembly connector.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

3 INSPECT ECM (STP SIGNAL)



(a) Disconnect the A21 ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

Tester Connection	Brake Pedal Condition	Specified Condition
STP (A21-36) - Body ground	Depressed	10 to 14 V
STP (A21-36) - Body ground	Released	Below 1V
ST1- (A21-35) - Body ground	Depressed	Below 1V
ST1- (A21-35) - Body ground	Released	10 to 14 V

(d) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - ECM)**

OK

REPLACE ECM

DTC	P0607	Input Signal Circuit Malfunction

DESCRIPTION

This DTC indicates the internal abnormalities of the ECM.

DTC No.	DTC Detection condition	Trouble Area
P0607	The ECM has a supervisory CPU and a control ECU inside. • When each input STP signal is different for 0.15 seconds or more, this trouble code is output. • This trouble code is output after 0.4 seconds has passed from the time the cruise cancel input signal (STP input) is input into the ECM.	ECM

HINT:
When a trouble code is detected, fail-safe continues until the ignition switch is turned off.

INSPECTION PROCEDURE

1	REPLACE ECM

NEXT

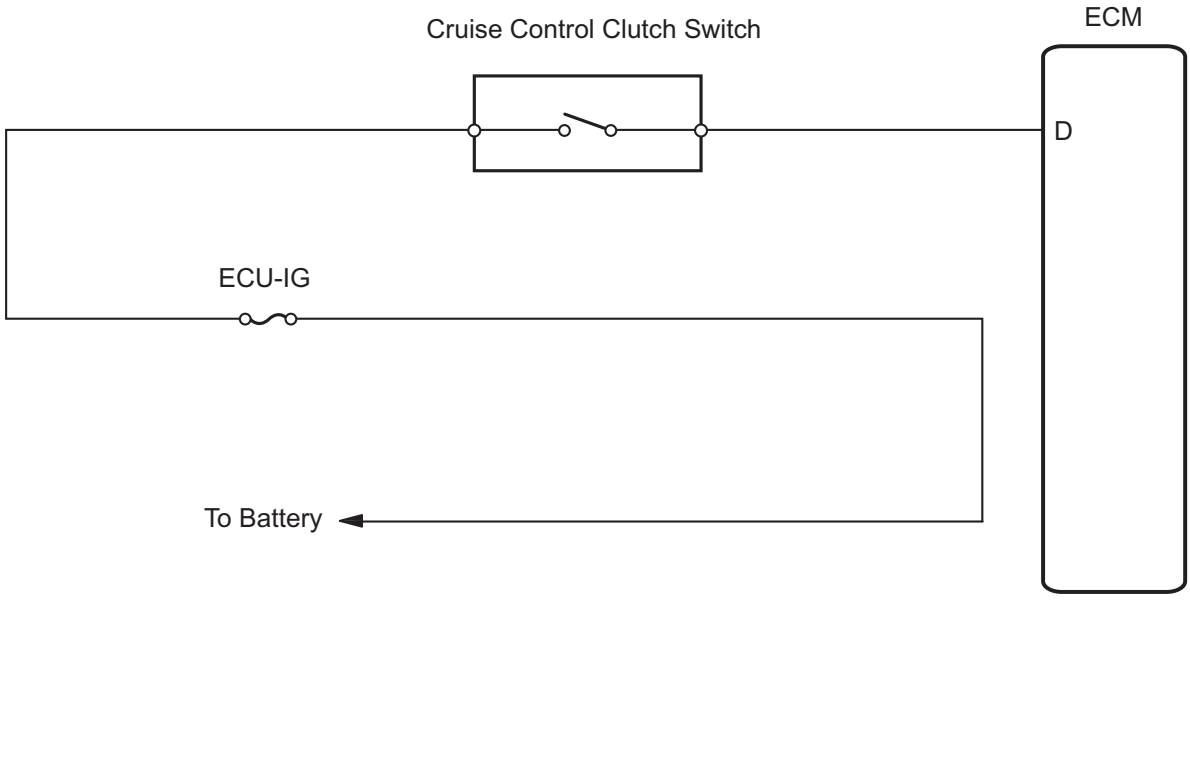
END

Clutch Switch Circuit

DESCRIPTION

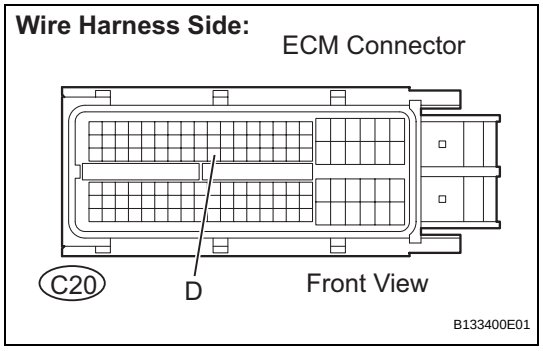
Clutch switch circuit inspection is necessary for M/T vehicles.
When the clutch pedal is released, the ECM receives the positive (+) battery voltage through the ECU-IG fuse and ignition switch. While the clutch pedal is depressed, the clutch switch assembly sends a signal to terminal D of the ECM. The ECM cancels cruise control when terminal D receives the signal (voltage of below 1 V).

WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (ECM - BATTERY)



(a) Disconnect the C20 ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage.

Standard voltage

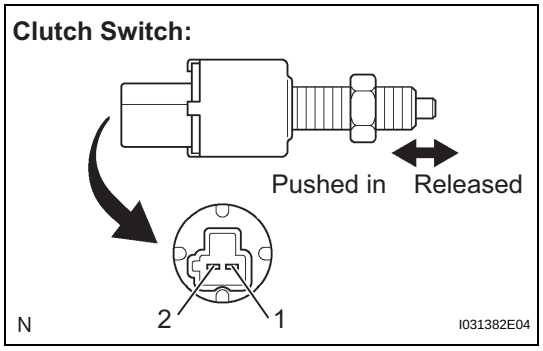
Tester Connection	Clutch Pedal Condition	Specified Condition
D (C20-56) - Body ground	Depressed	Below 1 V
D (C20-56) - Body ground	Released	10 to 14 V

(d) Reconnect the ECM connector.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT CLUTCH SWITCH ASSEMBLY



(a) Disconnect the clutch switch connector.
(b) Measure the resistance.

Standard resistance

Tester Connection	Clutch Pedal Condition	Specified Condition
1 - 2	Switch pin free (Clutch pedal depressed)	10 kΩ or higher
1 - 2	Switch pin pushed in (Clutch pedal released)	Below 1 Ω

(c) Reconnect the clutch switch connector.

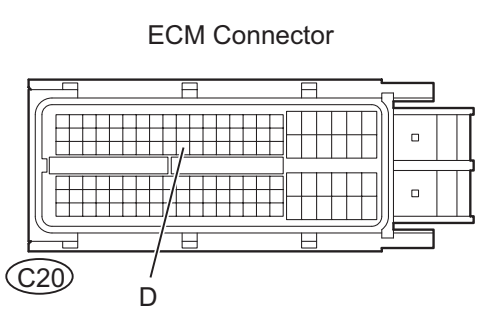
NG → **REPLACE CLUTCH SWITCH ASSEMBLY**

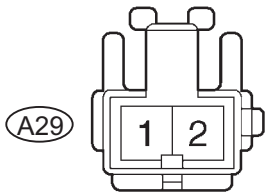
OK

CC

3	CHECK HARNESS AND CONNECTOR (CLUTCH SWITCH ASSEMBLY - ECM)

Wire Harness Side:





B133401E01

(a) Disconnect the C20 ECM connector.
(b) Disconnect the A29 clutch switch connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
A29-2 - D (C20-56)	Below 1 Ω
A29-2 - D (C20-56) - Body ground	10 kΩ or higher

(d) Reconnect the clutch switch connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CLUTCH SWITCH ASSEMBLY - ECM)**

OK

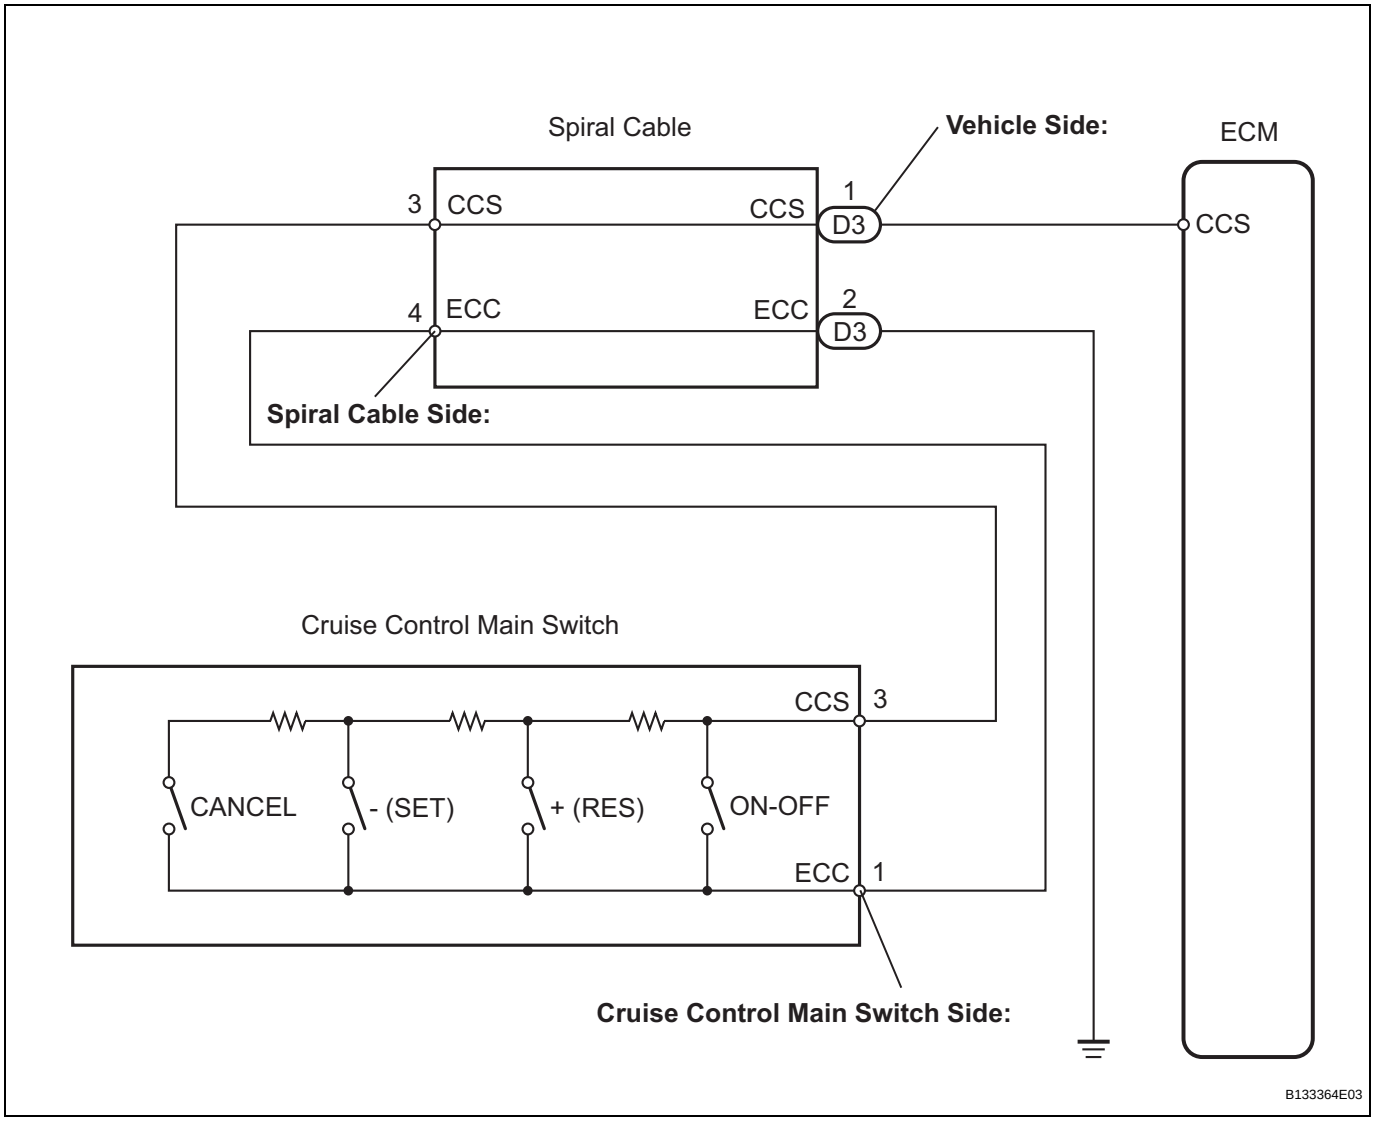
REPAIR OR REPLACE HARNESS OR CONNECTOR (CLUTCH SWITCH ASSEMBLY - BATTERY)

Cruise Control Switch Circuit

DESCRIPTION

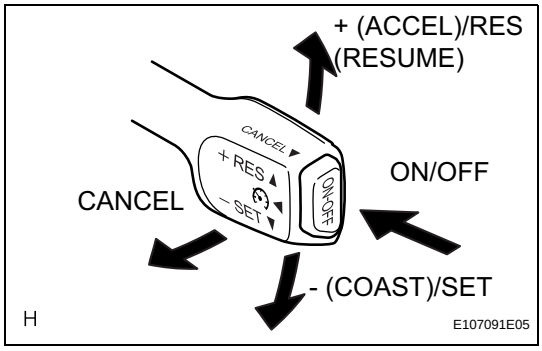
The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operated in the directions of the arrows and turns off when it is released. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the voltage value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the cruise control main switch.

CC

ECM (Cruise Control System)

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
MAIN SW (MAIN)	Main switch (Main CPU) / ON or OFF	ON: Main switch (Main CPU) is ON OFF: Main switch (Main CPU) is OFF	-
MAIN SW (SUB)	Main switch (Sub CPU) / ON or OFF	ON: Main switch (Sub CPU) is ON OFF: Main switch (Sub CPU) is OFF	-
CANCEL SW	CANCEL switch / ON or OFF	ON: CANCEL switch is ON OFF: CANCEL switch is OFF	-
SET/COAST SW	- / SET switch / ON or OFF	ON: - / SET switch is ON OFF: - / SET switch is OFF	-
RES/ACC SW	+ / RES switch / ON or OFF	ON: + / RES switch is ON OFF: + / RES switch is OFF	-

OK:
When the cruise control main switch is operated, the display changes as shown above.

Result:

Result	Proceed to
OK	A
NG (All items are defective)	B
NG (1 to 5 items are defective)	C

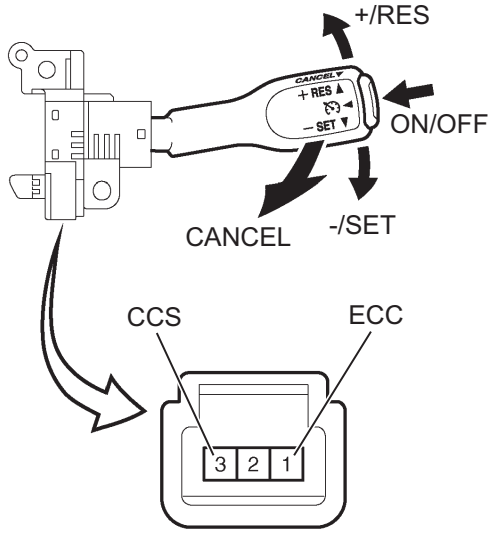
A → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

C → **REPLACE CRUISE CONTROL MAIN SWITCH**

B

2 INSPECT CRUISE CONTROL MAIN SWITCH

Cruise Control Main Switch:



(a) Remove the cruise control main switch.
(b) Measure the resistance.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 3	cruise control switch neutral	10 kΩ or higher
	cruise control switch ON	Below 1 Ω
	cruise control switch OFF	10 kΩ or higher
	+/RES	216 to 264 Ω
	-/SET	567 to 693 Ω
	CANCEL	1,386 to 1,694 Ω

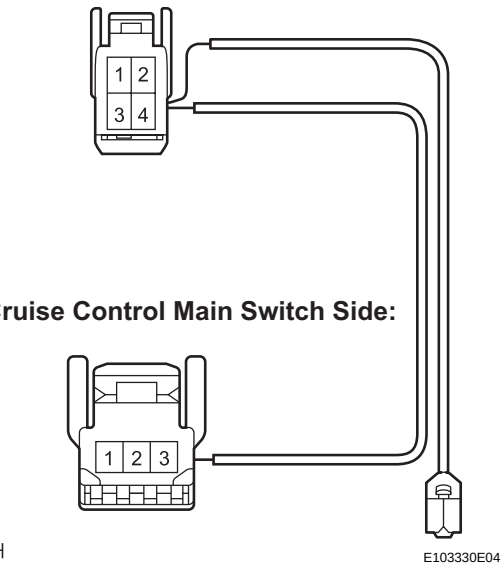
(c) Reinstall the cruise control main switch.

NG → **REPLACE CRUISE CONTROL MAIN SWITCH**

OK

3 CHECK HARNESS AND CONNECTOR (CRUISE CONTROL MAIN SWITCH - SPIRAL CABLE)

Spiral Cable Side:



(a) Disconnect the spiral cable side connector.
(b) Disconnect the cruise control main switch side connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
Terminal 1 (ECC) main switch side - Terminal 4 (ECC) spiral cable side	Below 1 Ω
Terminal 3 (CCS) main switch side - Terminal 3 (CCS) spiral cable side	Below 1 Ω

(d) Reconnect the spiral cable side connector.
(e) Reconnect the cruise control main switch side connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

CC

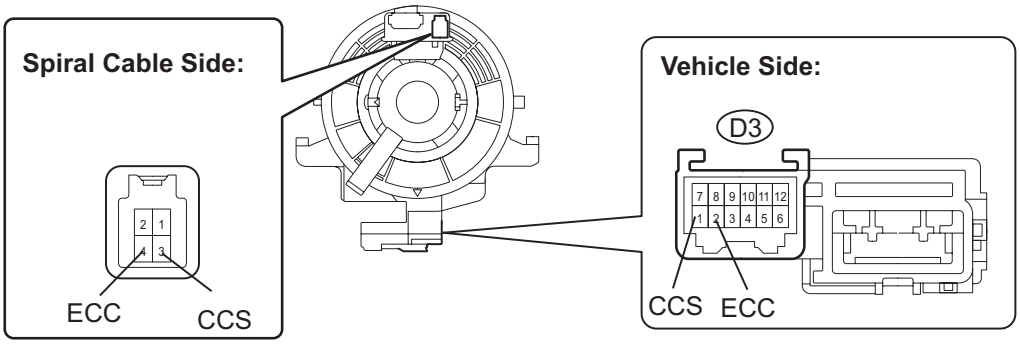
OK

4	CHECK SPIRAL CABLE

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets. (See page RS-1)

(a) Remove the spiral cable.

CC



E124662E05

(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
Terminal 3 (CCS) main switch side - CCS (D3-1)	Below 1 Ω
Terminal 4 (ECC) main switch side - ECC (D3-2)	Below 1 Ω

HINT:
The spiral cable makes a maximum of approximately 5 rotations.

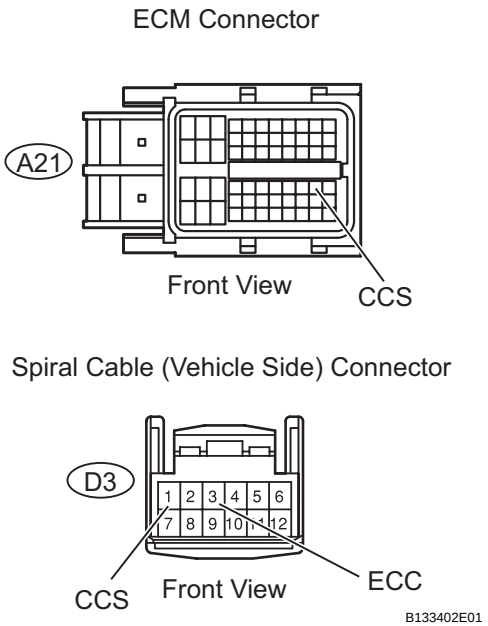
(c) Reinstall the spiral cable.

NG → REPLACE SPIRAL CABLE

OK

5	CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - ECM AND BODY GROUND)

Wire Harness Side:



(a) Disconnect the A21 ECM connector.
(b) Disconnect the D3 spiral cable (vehicle side) connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
A21-40 (CCS) - D3-1 (CCS)	Below 1 Ω
A21-40 (CCS) or D3-1 (CCS) - Body ground	10 kΩ or higher
D3-2 (ECC) - Body ground	Below 1 Ω

(d) Reconnect the ECM connector.
(e) Reconnect the spiral cable (vehicle side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

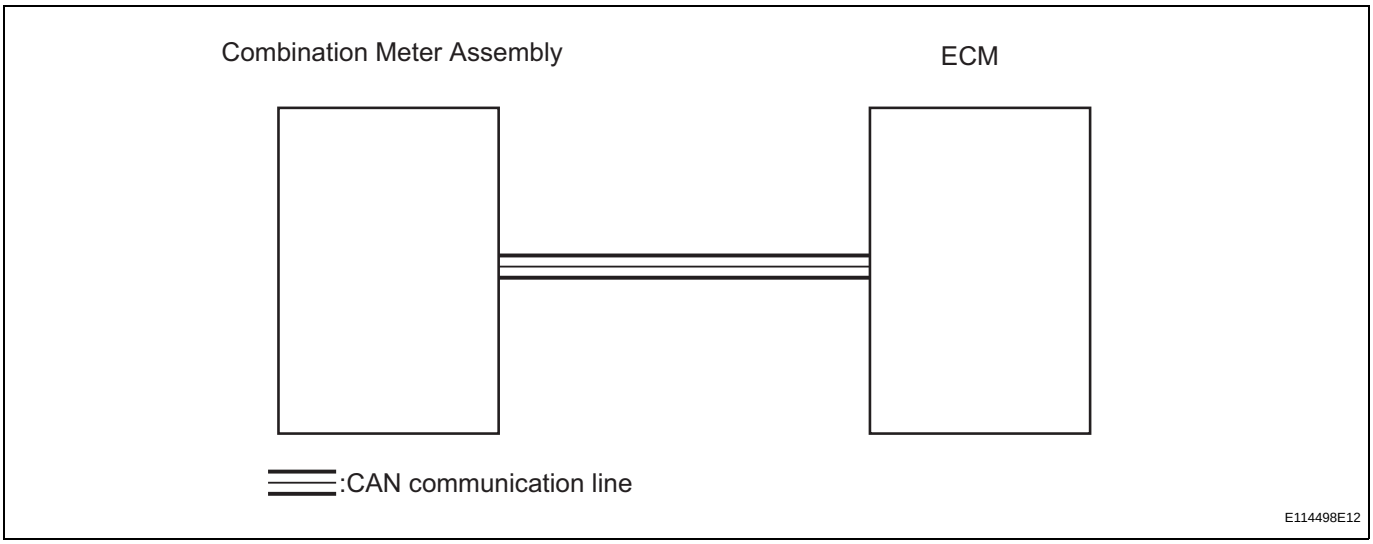
CC

Cruise Main Indicator Light Circuit

DESCRIPTION

When the cruise control main switch is turned off, cruise control does not operate.

WIRING DIAGRAM



INSPECTION PROCEDURE

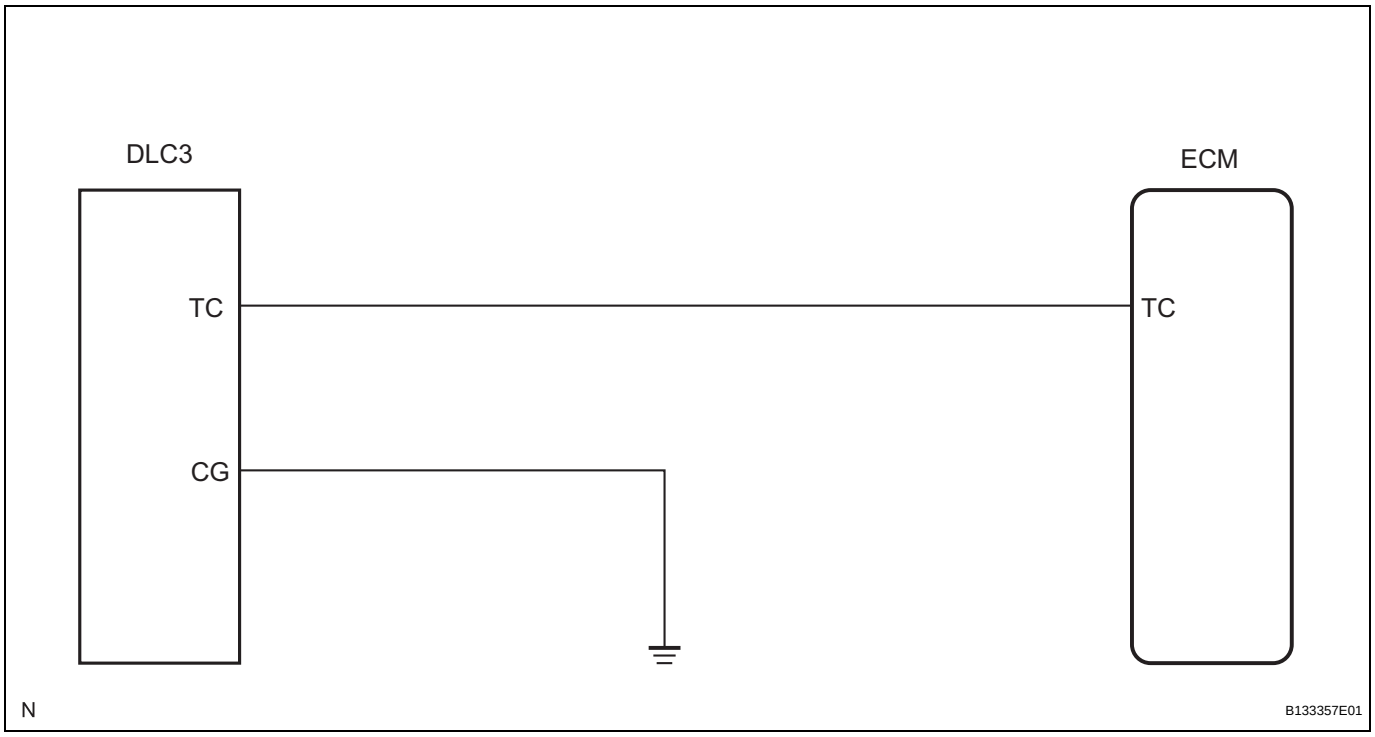
Refer to HOW TO PROCEED WITH TROUBLESHOOTING (see page ME-72).
HINT:
If DTC U0100 has been stored, troubleshoot the CAN communication system first.

TC and CG Terminal Circuit

DESCRIPTION

The DLC3 circuit enables reading of Diagnostic Trouble Codes (DTCs) without using intelligent testers by connecting terminals TC and CG of the DLC3 connector.
Stored DTCs are displayed in blinking patterns of the CRUISE MAIN indicator light located on the combination meter.

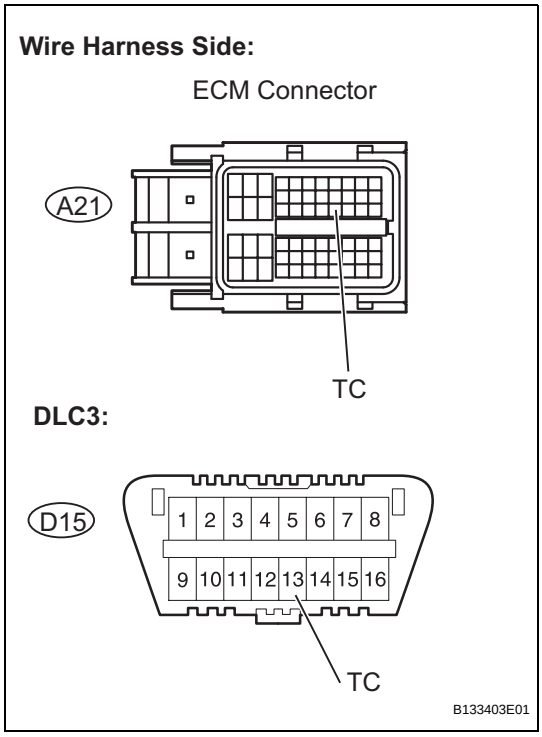
WIRING DIAGRAM



HINT:
When a particular warning light blinks continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is suspected.

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (TC of DLC3 - ECM)



(a) Disconnect the A21 connector of the ECM.
(b) Measure the resistance.
Standard resistance

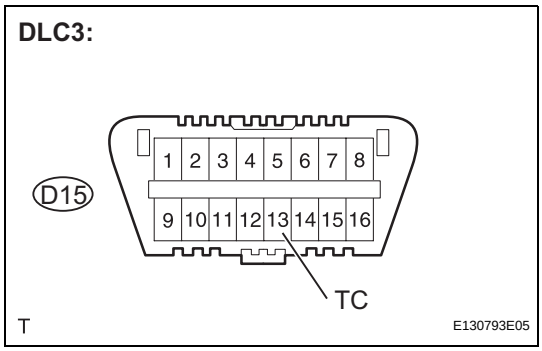
Tester Connection	Specified Condition
TC (D15-13) - TC (A21-27)	Below 1 Ω

(c) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC of DLC3 - ECM)**

OK

2	CHECK HARNESS AND CONNECTOR (TC of DLC3 - BODY GROUND)



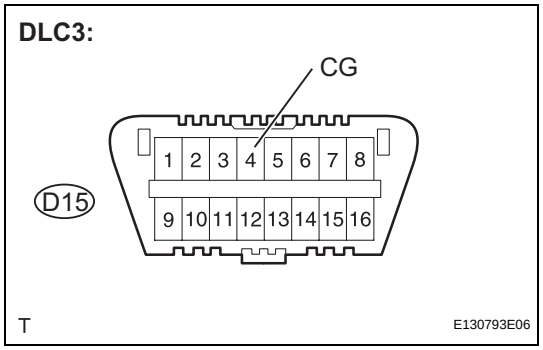
(a) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
TC (D15-13) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC CIRCUIT)**

OK

3	CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)



(a) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
CG (D15-4) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG of DLC3 - BODY GROUND)**

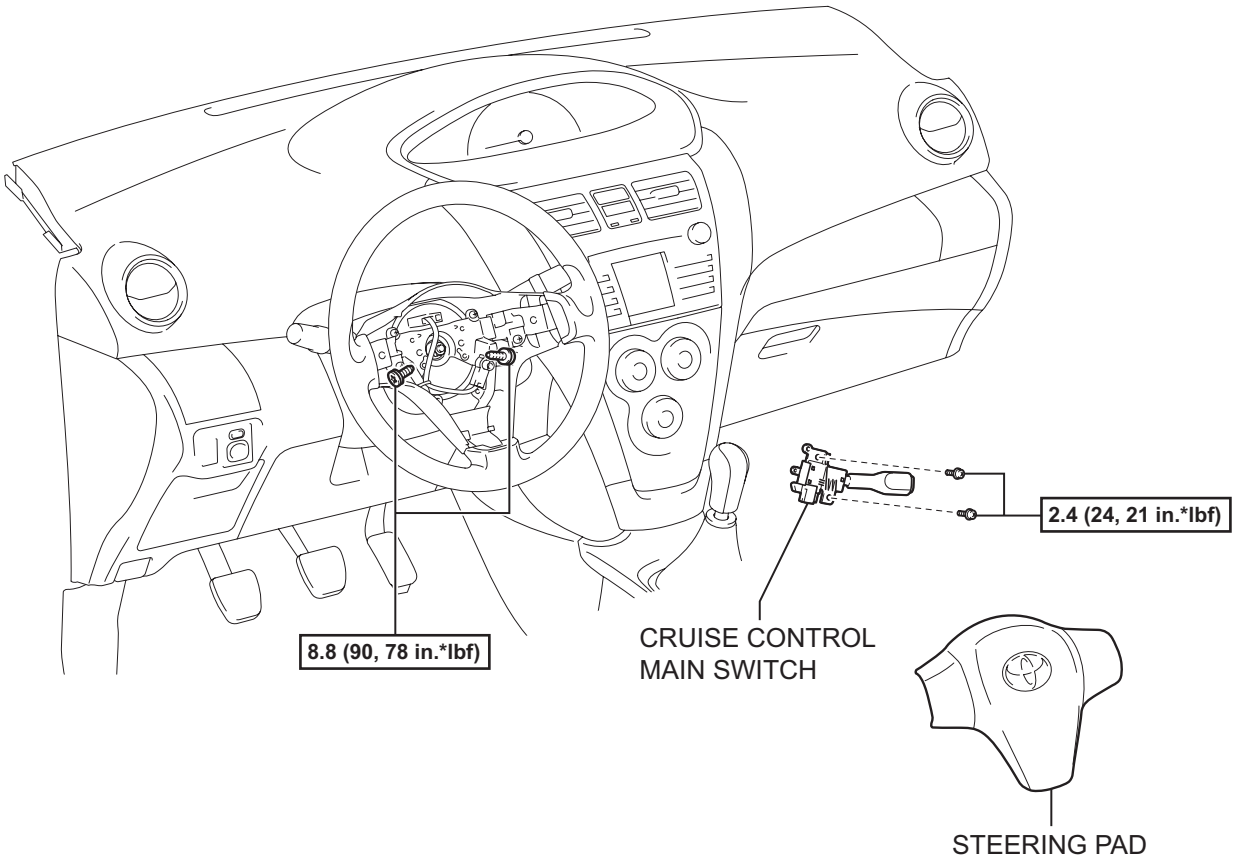
OK

REPLACE ECM

CC

CRUISE CONTROL MAIN SWITCH

COMPONENTS



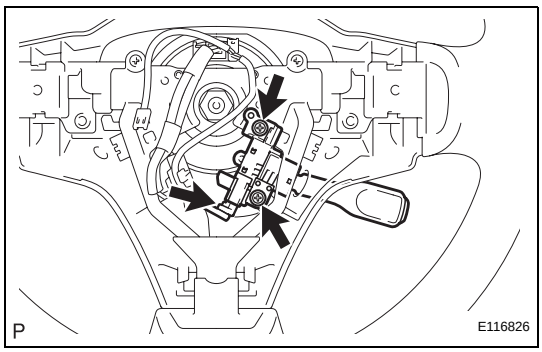
N*m (kgf*cm, ft*lbf) : Specified torque

P

E116825E01

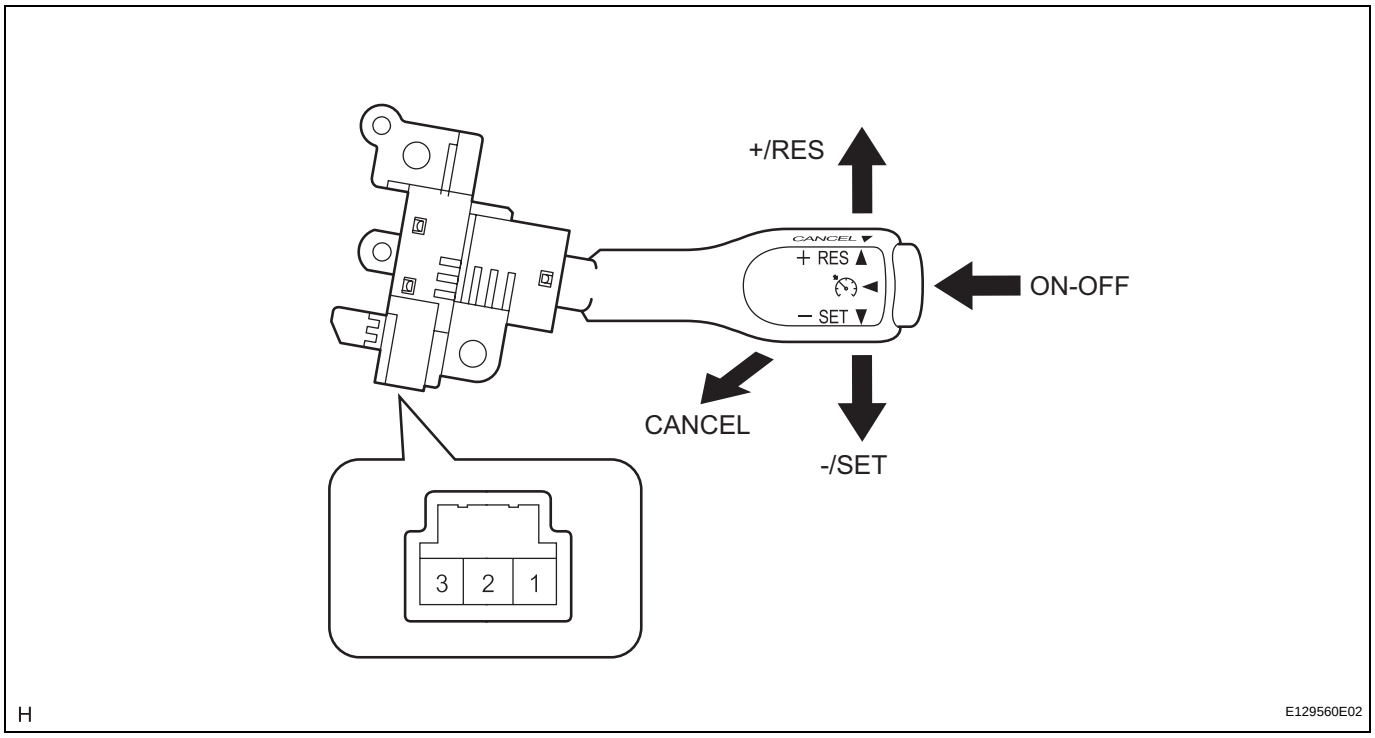
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE STEERING PAD (See page RS-309)**
3. **REMOVE CRUISE CONTROL MAIN SWITCH**
   (a) Disconnect the connector.
   (b) Remove the 2 screws and remove the cruise control main switch.



INSPECTION

1. INSPECT CRUISE CONTROL MAIN SWITCH

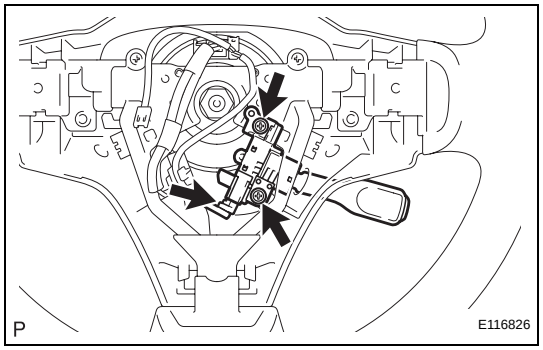


(a) Measure the resistance and check the results in accordance the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1(ECC) - 3(CCS)	Neutral	10 kΩ or higher
1(ECC) - 3(CCS)	+ /RES	216 to 264Ω
1(ECC) - 3(CCS)	- /SET	567 to 693Ω
1(ECC) - 3(CCS)	CANCEL	1,386 to 1,694Ω
1(ECC) - 3(CCS)	Main Switch off	10kΩ or higher
1(ECC) - 3(CCS)	Main Switch on	Below 1Ω

If the result is not as specified, replace the cruise control main switch.



INSTALLATION

1. INSTALL CRUISE CONTROL MAIN SWITCH

(a) Install the cruise control main switch with the 2 screws.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)

(b) Connect the connector.

2. INSTALL STEERING PAD (See page RS-310)

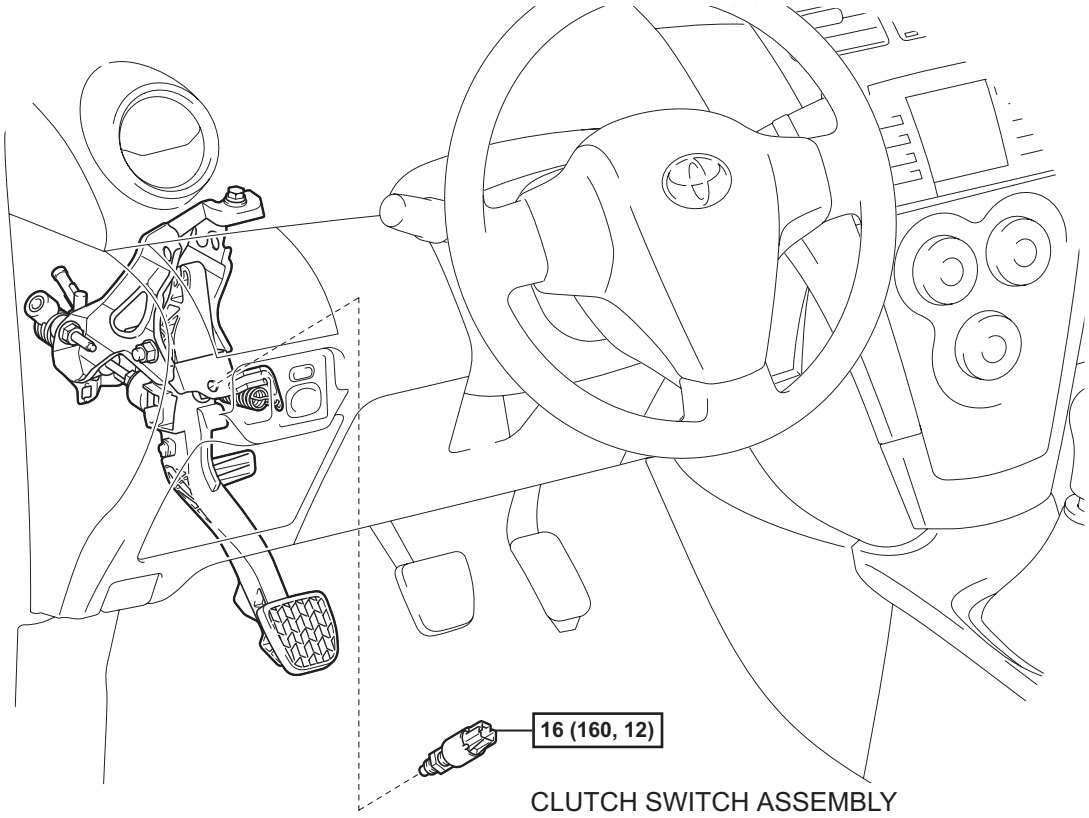
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

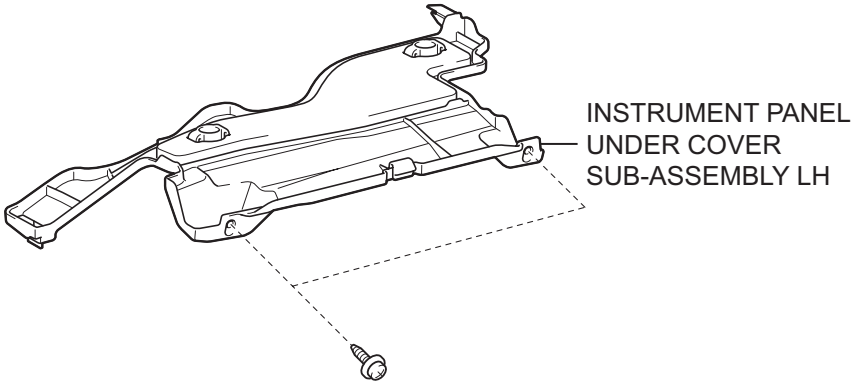
4. INSPECT SRS WARNING LIGHT
(See page RS-31)

CLUTCH SWITCH

COMPONENTS

CC





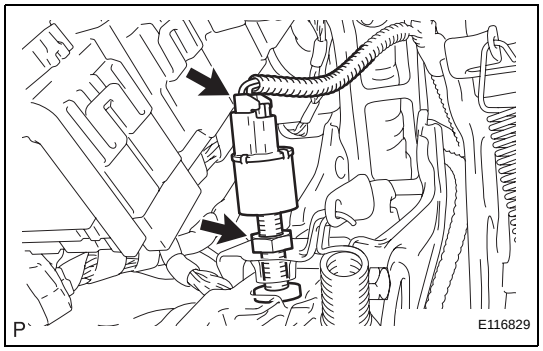
N*m (kgf*cm, ft*lbf) : Specified torque

P

E116827E01

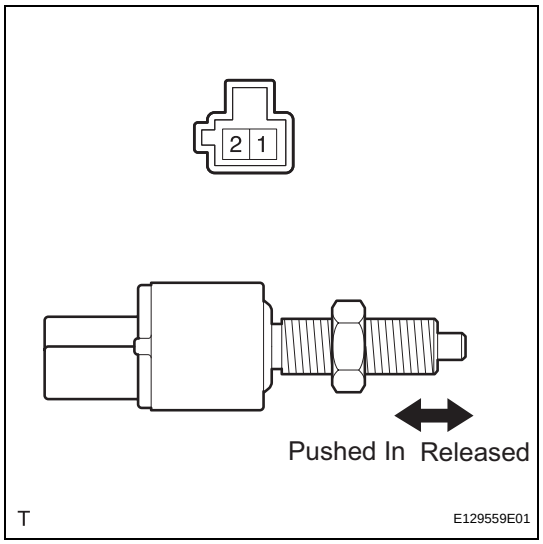
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)**
3. **REMOVE CLUTCH SWITCH ASSEMBLY**
   (a) Disconnect the connector.
   (b) Loosen the nut and remove the clutch switch assembly.



INSPECTION

1. **INSPECT CLUTCH SWITCH ASSEMBLY**
   (a) Remove the clutch switch.
   (b) Measure the resistance and check that the results in accordance with the value(s) in the table below.
   Standard resistance

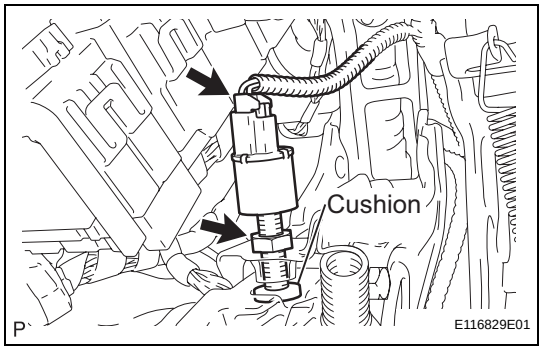


Tester Connection	Condition	Specified Condition
1 - 2	Switch pin released (Clutch pedal depressed)	10 kΩ or higher
1 - 2	Switch pin pushed in (Clutch pedal released)	Below 1Ω

If the result is not as specified, replace the clutch switch.

INSTALLATION

1. **INSTALL CLUTCH SWITCH ASSEMBLY**
   (a) Fully loosen the lock nut of the clutch switch assembly.
   (b) Adjust the clutch switch until the threaded portion comes into contact with the cushion. Tighten the lock nut and ensure that the threaded portion is in contact with the cushion.
   Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)
   (c) Connect the connector.



2. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

SYSTEM DESCRIPTION

1. LIGHTING SYSTEM

(a) Illumination control system (Illuminated entry system):
When the doors are unlocked through a key or transmitter operation, or when a door is opened or closed, the illuminated entry system turns on the room light assembly.
(1) The main body ECU receives the following signal (A).
- Door courtesy switch signal
- Door detection switch signal
- Ignition switch signal

(2) The main body ECU controls the following signal based on the signals listed in A.
- Illumination operation signal

(3) The main body ECU controls the on/off and fade-in/fade-out operation of the following parts.
- Room light assembly

(b) Battery saver system:
When the ignition switch is turned off and the any of the doors is open continuously for 20 minutes, the main body ECU turns the illumination operation signal off. As a result, the room light assembly, taillights, and the headlights turn off.
(1) The main body ECU receives the following signals (B).
- Door courtesy switch signal
- Ignition switch signal

(2) The main body ECU controls the following signal based on the signals listed in B (C).
- Illumination operation signal

(3) The main body ECU controls the illumination period of the following parts based on the signals listed in C.
- Room light assembly
- Headlight (Low)
- Position light (Front and Rear)

(c) Manual light control system:
This system functions when lights such as the headlights and taillights are illuminated through manual operation of the light control switch.
(1) The main body ECU receives the following signals (D).
- Light control switch signal
- Headlight dimmer switch signal
- Front fog light switch signal

(2) The main body ECU controls the following signals based on the signals listed in D (E).
- H-LP/AMT relay operation signal
- T-LP relay operation signal
- Running light relay assembly operation signal
- Front fog light relay operation signal

(3) The main body ECU controls the on/off operation of the following parts based on the signals listed in E.
- Headlight (Low)
- Headlight (Hi)
- Position light (Front and Rear)
- Front fog light

(d) Light auto turn off system:
When the headlights and taillights are illuminated through the operation of the automatic light control switch, if the ignition switch is turned off and all doors are closed, this system continues illuminating the headlights and taillights for approximately 30 seconds, and then turns off the lights. However, when all the doors locked manually, using the door lock button or using the key or pressing the LOCK on the wireless remote turns the headlights and taillights off immediately.

(1) The main body ECU receives the following signals (F).
- Door courtesy switch signal
- Ignition switch signal

(2) The main body ECU controls the following signals based on the signals listed in F (G).
- H-LP/AMT relay operation signal
- T-LP relay operation signal
- Running light relay assembly operation signal
- Front fog light relay operation signal

(3) The main body ECU controls the illumination period of the following parts based on the signals listed in G.
- Headlight (Low)
- Headlight (Hi)
- Position light (Front and Rear)
- Front fog light

(e) Daytime running light system:
This system is directly connected to the low-beam headlights and is designed to automatically activate the daytime running lights in order to increase the visibility of the vehicle.

(1) The main body ECU receives the following signals (I).
- Ignition switch signal
- Generator signal
- Parking brake switch signal
- Light control switch signal

(2) The main body ECU controls the following signal based on the signals listed in I.
- Running light relay assembly operation signal

(3) The main body ECU controls the on/off operation of the following part.
- Headlight (Low)

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use these procedures to troubleshoot the lighting system.
- Use an intelligent tester in step 4.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests modification of items, first make sure that the functions can be customized.**
- **Make a note of the current settings before customization.**
- **When troubleshooting items, first make sure that the functions are set to their default settings.**

ILLUMINATED ENTRY:

Display (Item)	Default	Contents	Setting
LIGHTING TIME (Lighting Time)	15 seconds	Changes illumination duration after door closure. (It will quickly fade out when turning the ignition switch ON.)	7.5/ 15/ 30 (seconds)
I/L ON / ACC OFF (Room light illuminates when ignition switch turned off)	ON	Illuminates light when ignition switch turned from ACC to LOCK. (Room light illuminated when room light switch in DOOR position)	ON/OFF
I/L ON / UNLOCK (Room light illuminates when door key unlocked)	ON	Function to light up the room light, when unlocking with the door key cylinder. (Room light illuminated when room light switch in DOOR position)	ON/OFF

HINT:
Sensitivity adjustments are difficult to confirm. Check by driving the customer's vehicle.

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

HEADLIGHT AND TAILLIGHT SYSTEM:

Symptom	Suspected area	See page
Neither headlight comes on. (w/o Daytime running light system)	Harness or connector	LI-28
	Headlight relay circuit	LI-28
Neither headlight comes on. (w/ Daytime running light system)	Harness or connector	LI-33
	DRL Relay circuit	LI-33
	Headlight signal circuit	LI-78
	Headlight relay circuit	LI-28
Only one headlight comes on.	Bulb	LI-28
	Harness or connector	LI-28
	Headlight signal circuit	LI-78
	Headlight relay circuit	LI-28
LO-Beam lights do not come on.	Bulb	LI-28

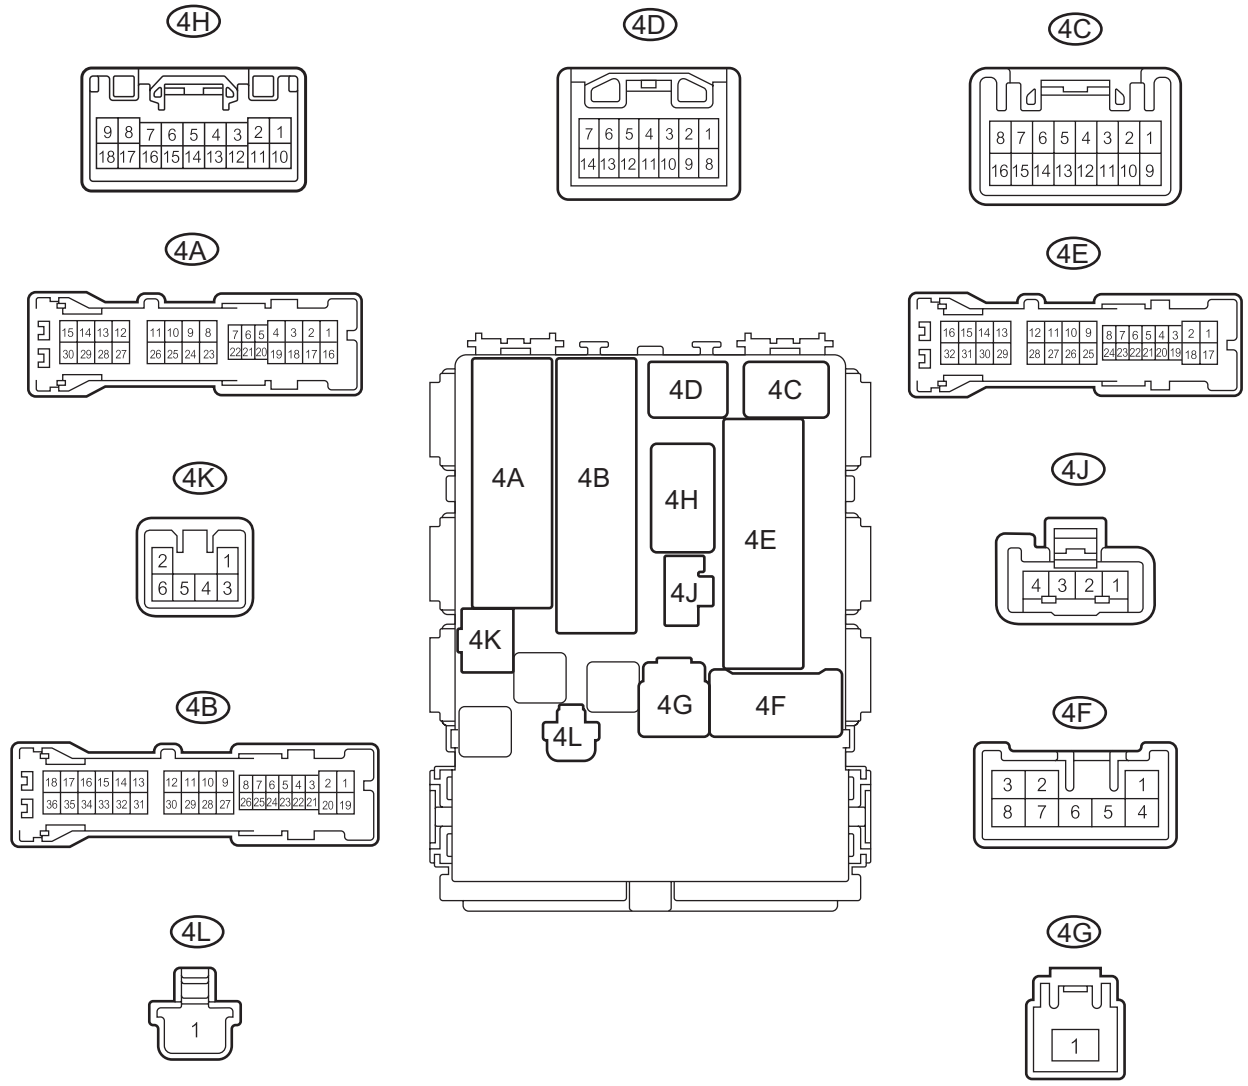
TERMINALS OF ECU

1. CHECK MAIN BODY ECU

Main Body ECU (Rear View):

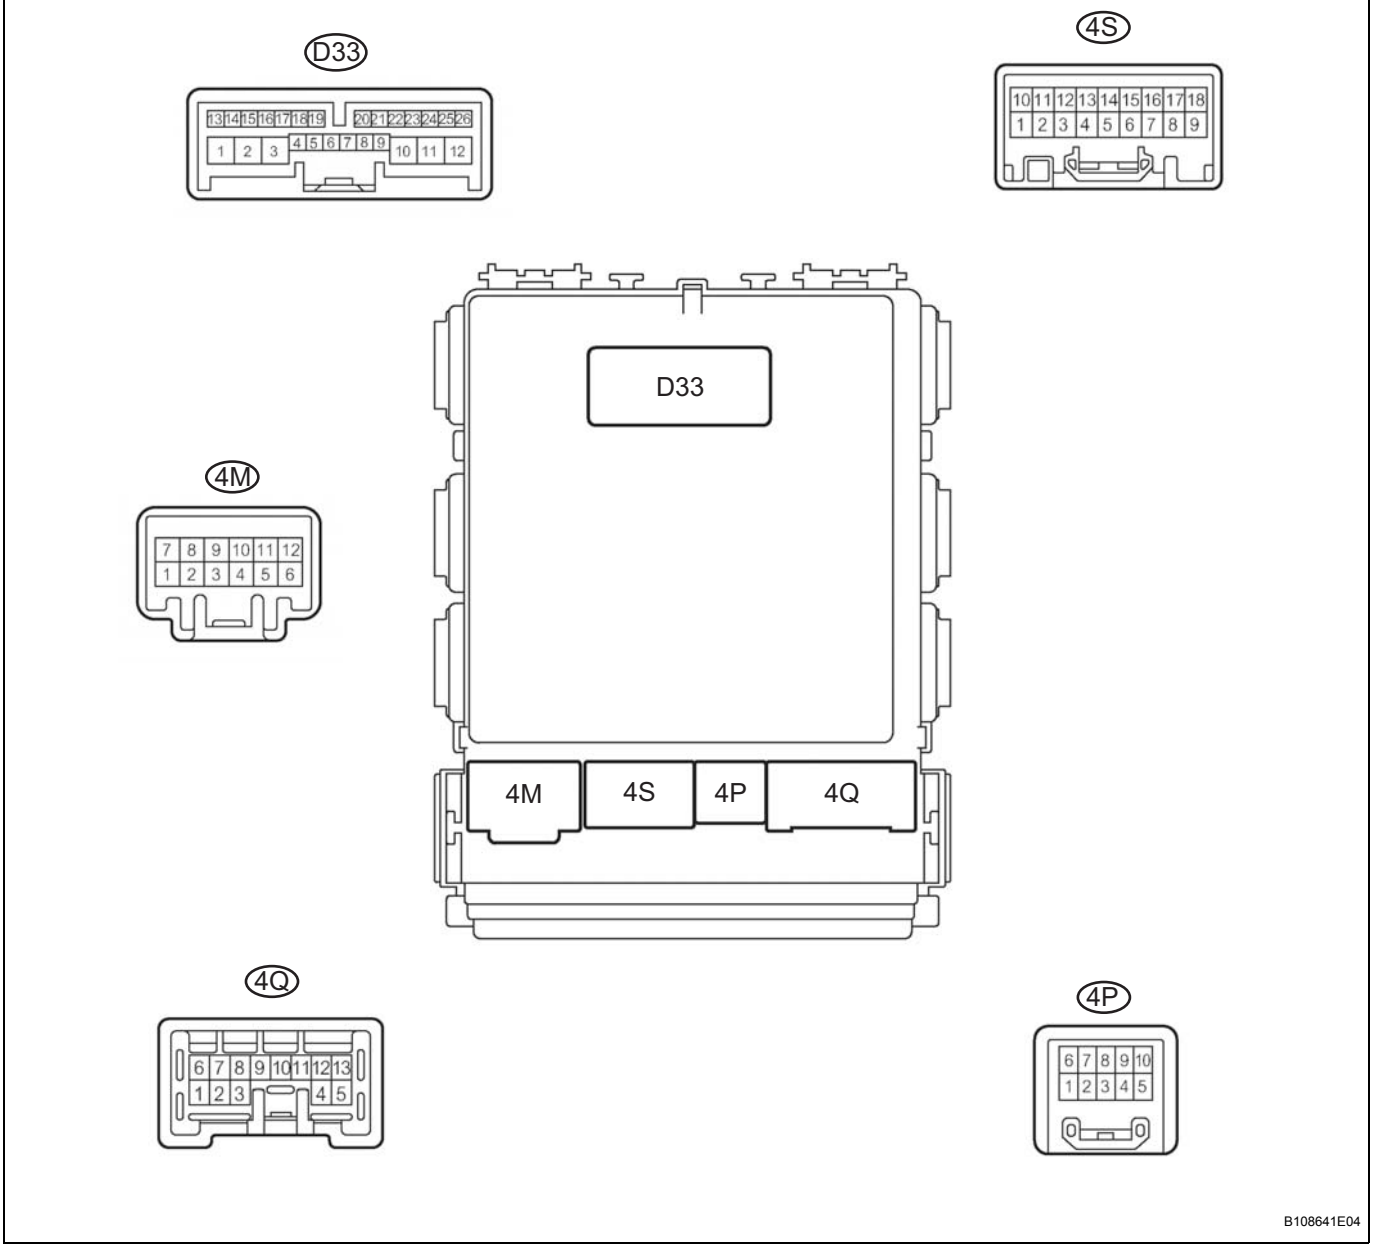


H

E114510E06

LI

Main Body ECU (Front View):



(a) Disconnect the 4B and 4E main body ECU (vehicle rear side) connectors.
(b) Measure the voltages of the wire harness side connectors.

Standard voltage:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BECU (4B-30) - GND1 (4E-17)	L - W-B	Battery (Power supply)	Always	11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 V

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the main body ECU (vehicle rear side) connectors.

(d) Measure the voltages of the wire harness side connectors.

Standard voltage:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DCTY (4A-21) - Body ground	R - Body ground	Driver door courtesy switch input	Driver door closed	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver door courtesy switch input	Driver door open	Below 1 V
PCTY (4A-24) - Body ground	L - Body ground	Front passenger door courtesy switch input	Front passenger door closed	11 to 14 V
PCTY (4A-24) - Body ground	L - Body ground	Front passenger side door courtesy switch input	Front passenger door open	Below 1 V
RRCY (4A-20)*3 - Body ground	L - Body ground	Rear RH door courtesy switch input	Rear RH door closed	11 to 14 V
RRCY (4A-20)*3 - Body ground	L - Body ground	Rear RH door courtesy switch input	Rear RH door open	Below 1 V
RRCY (4A-5)*3 - Body ground	G - Body ground	Rear LH door courtesy switch input	Rear LH door closed	11 to 14 V
RRCY (4A-5)*3 - Body ground	G - Body ground	Rear LH door courtesy switch input	Rear LH door open	Below 1 V
RRCY (4A-5)*4 - Body ground	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH and RH door closed	11 to 14 V
RRCY (4A-5)*4 - Body ground	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH or RH door open	Below 1 V
BCTY (4A-7)*1 - Body ground	SB - Body ground	Back door courtesy switch input	Back door closed	11 to 14 V
BCTY (4A-7)*1 - Body ground	SB - Body ground	Back door courtesy switch input	Back door open	Below 1 V
LCTY (4A-7)*2 - Body ground	SB - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door closed	11 to 14 V
LCTY (4A-7)*2 - Body ground	SB - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door open	Below 1 V
PKB (4C-2) - Body ground	Y - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 V
PKB (4C-2) - Body ground	Y - Body ground	Parking brake switch input	Parking brake switch OFF	11 to 14 V
ILE (4K-2) - Body ground	P - Body ground	Illumination signal (To room light assembly)	Room light switch in DOOR position and room light assembly comes on	11 to 14 V
ILE (4K-2) - Body ground	P - Body ground	Illumination signal (To room light assembly)	Room light switch in OFF position and room light assembly comes off	Below 1 V

*1: Hatchback
*2: Sedan
*3: Hatchback, Sedan except *5
*4: Sedan *5
*5: Cold area specification, w/ Engine immobilizer system, w/ ABS, w/ Rear window defogger, w/ Power door lock system, w/ Daytime running light, w/ Remote control mirror, w/ Air conditioning
If the result is not as specified, there may be a malfunction in the wire harness.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DATA LIST according to the prompts displayed on the tester.

MAIN BODY ECU:

Item	Measurement Item/Dispay (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	D Door Courtesy SW/ON or OFF	ON :Driver door open OFF: Driver door closed	-
P DOR CTY SW	P Door Courtesy SW/ON or OFF	ON: Front passenger door open OFF: Front passenger door closed	-
RR DOR CTY SW	RR Door Courtesy SW/ON or OFF	ON: Rear right side door open OFF: Rear right side door closed	-
RL DOR CTY SW	RL Door Courtesy SW/ON or OFF	ON: Rear left side door open OFF: Rear left side door closed	-
BACK DOR CTY SW*1	Back Door Courtesy SW/ON or OFF	ON: Back door open OFF: Back door closed	-
LUGG COURTSY SW*2	Luggage Courtesy SW/ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-

*1: Hatchback
*2: Sedan

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST according to the prompts displayed on the tester.

ACTIVE TEST:

Item	Test Details/ Display (Range)	Diagnostic Note
ILLUMI OUTPUT	Illuminated Entry System ON/OFF	-
HAZARD	Hazard ON/OFF	-
TAIL LIGHT	Taillight Relay ON/OFF	-
HEAD LIGHT	Headlight Relay ON/OFF	-

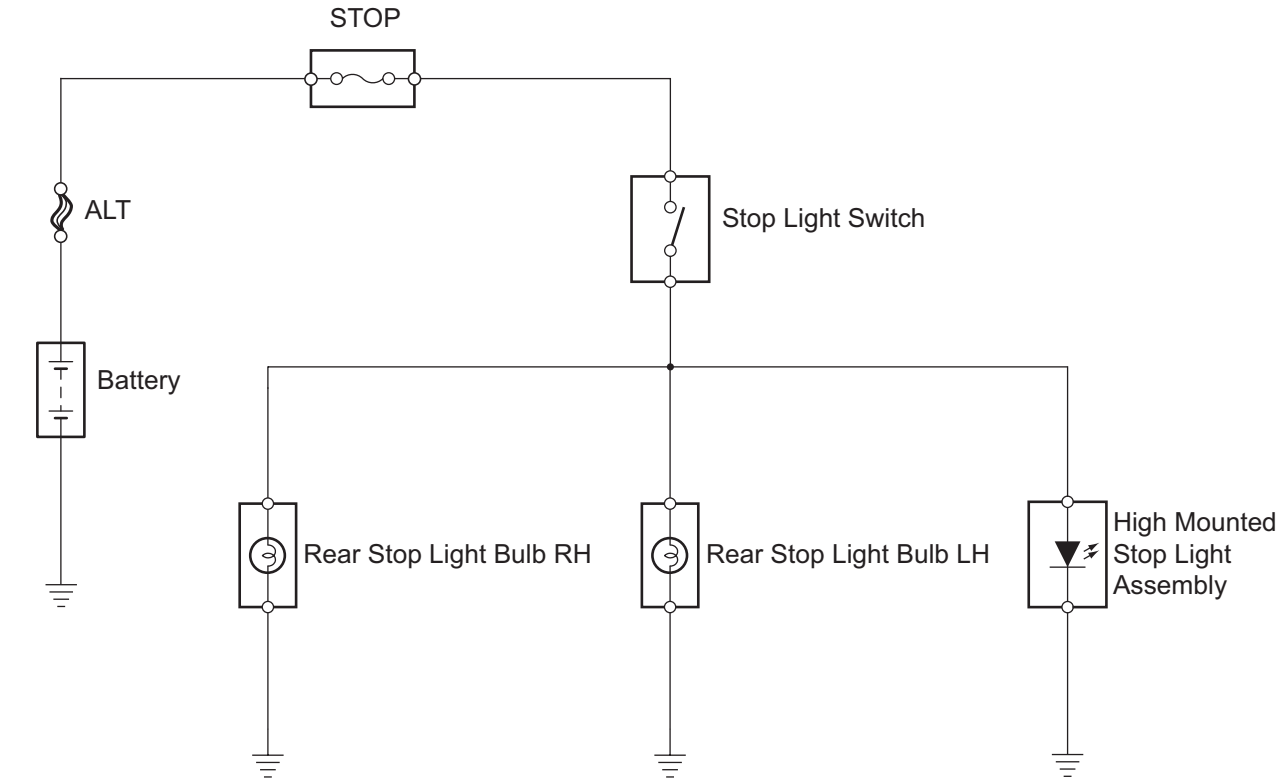
Stop Light Switch Circuit

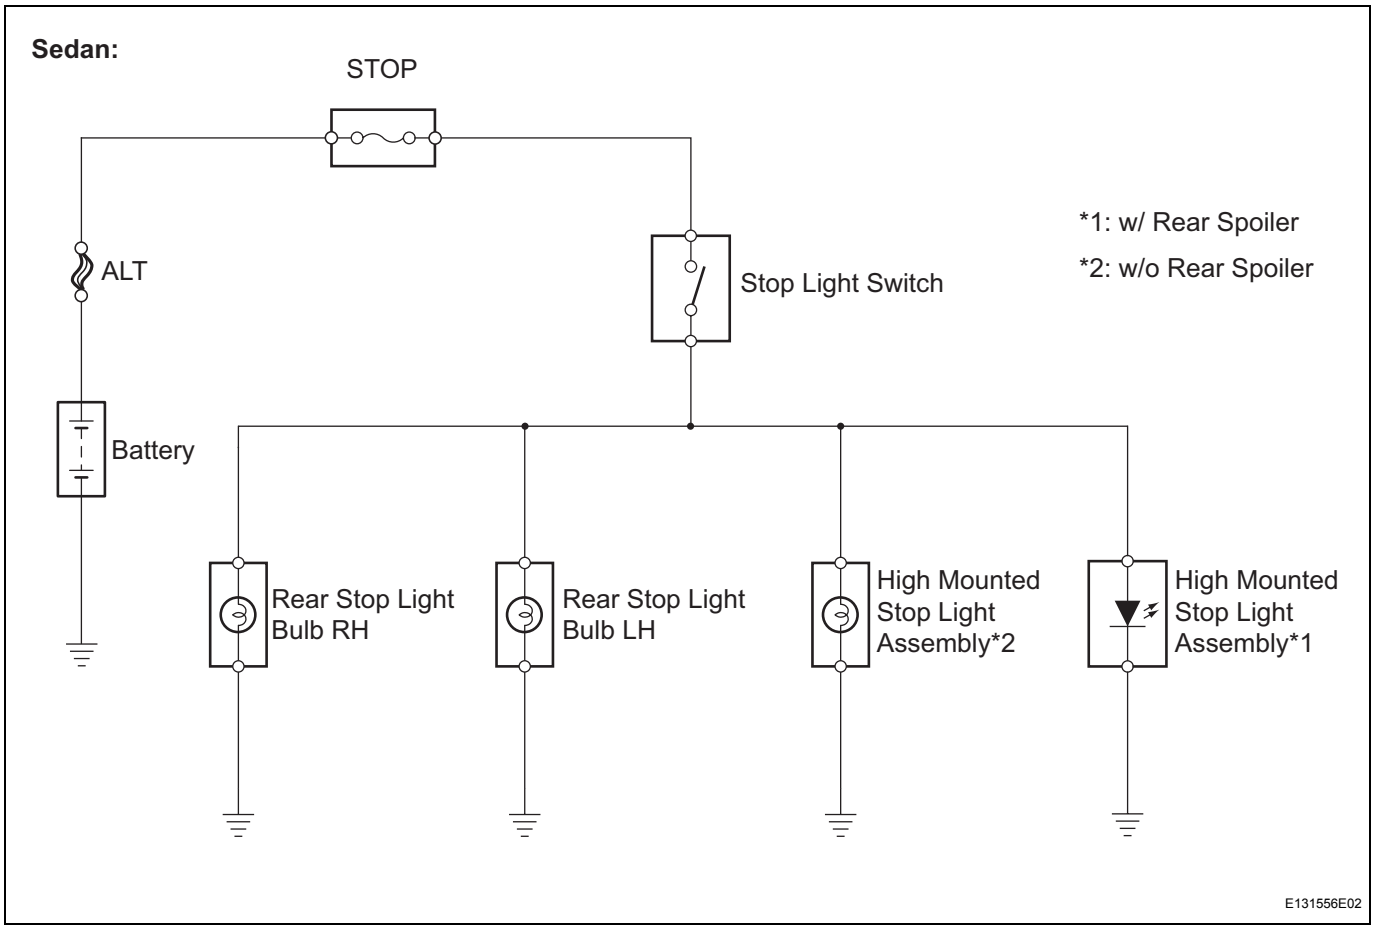
DESCRIPTION

When the stop light switch is turned on, the current flows to the stop lights to illuminate.

WIRING DIAGRAM

Hatchback:





INSPECTION PROCEDURE

1	**INSPECT FUSE (STOP)**

(a) Remove the STOP fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the STOP fuse.

NG → **REPLACE FUSE**

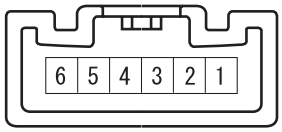
OK

2	**INSPECT BULB (REAR STOP LIGHT BULB)**

Component Side:

High Mounted Stop Light Assembly

Rear Combination Light Assembly*



*: LH or RH

B129902E02

(a) Hatchback:
(1) Remove the high mounted stop light assembly.
(2) Remove the rear combination light assembly.
(3) Apply battery voltage to the terminals and check that the rear stop light and high mounted stop light illuminates.

Standard:

High Mounted Stop Light

Measurement Condition	Standard
Positive battery - Terminal 1 Negative battery - Terminal 2	High mounted stop light illuminates

Rear Stop Light

Measurement Condition	Standard
Positive battery - Terminal 5 Negative battery - Terminal 6	Rear stop light illuminates

(4) Reinstall the high mounted stop light assembly.
(5) Reinstall the rear combination light assembly.

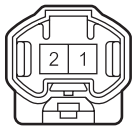
Component Side:

w/ Rear Spoiler:

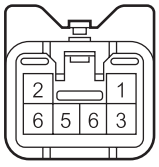
High Mounted Stop Light Assembly

w/o Rear Spoiler:

High Mounted Stop Light Assembly



Rear Combination Light Assembly*



*: LH or RH

B142262E01

(b) Sedan:
(1) Remove the high mounted stop light assembly.
(2) Remove the rear combination light assembly.
(3) Apply battery voltage to the terminals and check that the rear stop light and high mounted stop light illuminates.

Standard:

High Mounted Stop Light (w/ Rear Spoiler)

Measurement Condition	Standard
Positive battery - Terminal 2 Negative battery - Terminal 1	High mounted stop light illuminates

High Mounted Stop Light (w/o Rear Spoiler)

Measurement Condition	Standard
Positive battery - Terminal 1 Negative battery - Terminal 2	High mounted stop light illuminates

Rear Stop Light

Measurement Condition	Standard
Positive battery - Terminal 1 Negative battery - Terminal 6	Rear stop light illuminates

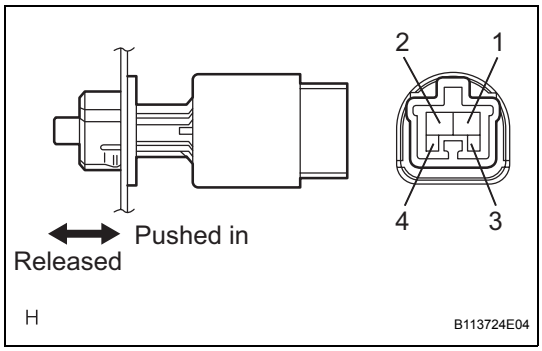
(4) Reinstall the high mounted stop light assembly.
(5) Reinstall the rear combination light assembly.

NG	**REPLACE BULB**

LI

OK

3	INSPECT STOP LIGHT SWITCH



(a) Remove the stop light switch.
(b) Measure the resistance.
Standard resistance

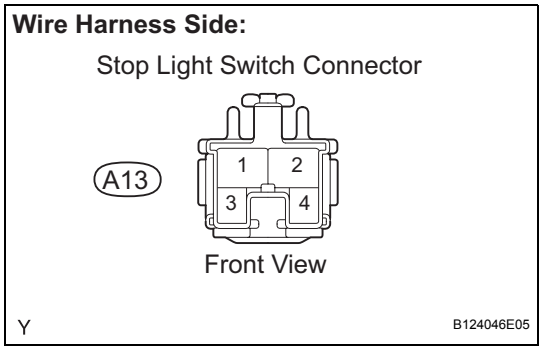
Tester Connection	Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
3 - 4	Switch pin pushed in	10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin released	Below 1 Ω

(c) Reinstall the stop light switch.

NG → **REPLACE STOP LIGHT SWITCH**

OK

4	CHECK HARNESS AND CONNECTOR (FUSE - STOP LIGHT SWITCH)



(a) Disconnect the A13 stop light switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
A13-2 - Body ground	Always	11 to 14 V

(c) Reconnect the stop light switch connector.

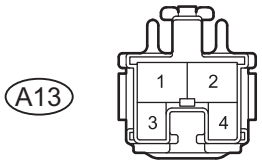
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - REAR STOP LIGHT)

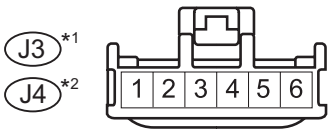
Wire Harness Side:

Stop Light Switch Connector



Front View

Rear Combination Light Assembly Connector

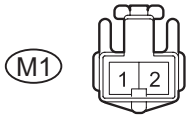


Front View

*1: RH

*2: LH

High Mounted Stop Light Assembly Connector



Front View

E120438E04

(a) Hatchback:
  (1) Disconnect the A13 stop light switch connector.
  (2) Disconnect the J3 and J4 rear combination light assembly connectors.
  (3) Disconnect the M1 high mounted stop light assembly connector.
  (4) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
A13-1 - J3-5	Below 1 Ω
A13-1 - J4-5	Below 1 Ω
A13-1 - M1-1	Below 1 Ω
A13-1 or J3-5 - Body ground	10 kΩ or higher
A13-1 or J4-5 - Body ground	10 kΩ or higher
A13-1 or M1-1 - Body ground	10 kΩ or higher

  (5) Reconnect the stop light switch connector.
  (6) Reconnect the rear combination light assembly connectors.
  (7) Reconnect the high mounted stop light assembly connector.

LI

Wire Harness Side:

Stop Light Switch Connector

(b) Sedan:

(1) Disconnect the A13 stop light switch connector.
(2) Disconnect the J34 and J35 rear combination light assembly connectors.
(3) Remove the high mounted stop light assembly. (With rear spoiler)
(4) Disconnect the J40 high mounted stop light assembly connector. (Without rear spoiler)
(5) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
A13-1 - J34-1	Below 1 Ω
A13-1 - J35-1	Below 1 Ω
A13-1 - High mounted stop light connector-2*1	Below 1 Ω
A13-1 - J40-1*2	Below 1 Ω
A13-1 or J34-1 - Body ground	10 kΩ or higher
A13-1 or J35-1 - Body ground	10 kΩ or higher
A13-1 or High mounted stop light connector-2*1 - Body ground	10 kΩ or higher
A13-1 or J40-1*2 - Body ground	10 kΩ or higher

*1: w/ Rear spoiler
*2: w/o Rear spoiler

(6) Reconnect the stop light switch connector.
(7) Reconnect the rear combination light assembly connectors.
(8) Reinstall the high mounted stop light assembly connector. (With rear spoiler)
(9) Reconnect the high mounted stop light assembly connector. (Without rear spoiler)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

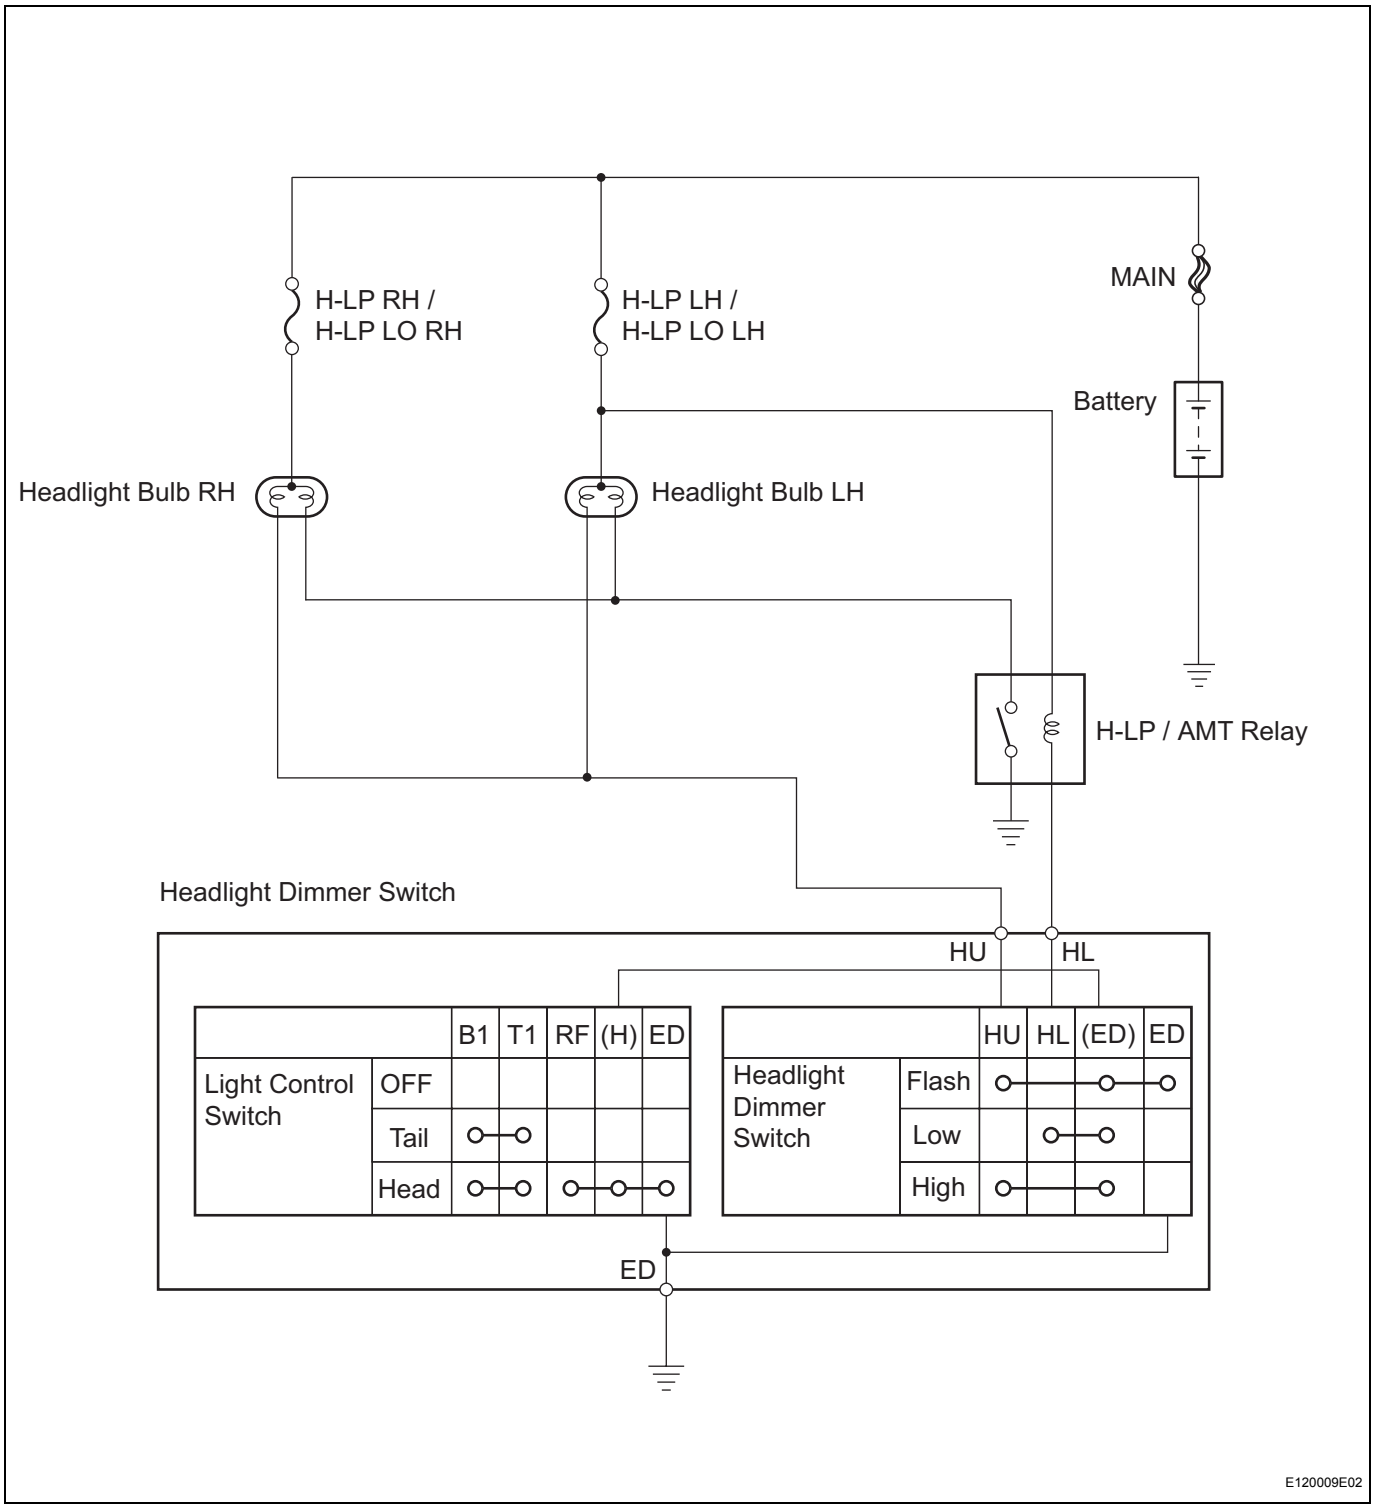
REPAIR OR REPLACE HARNESS OR CONNECTOR (REAR STOP LIGHT - BODY GROUND)

Headlight Relay Circuit

DESCRIPTION

When the light control switch, located on the headlight dimmer switch, is turned to the HEAD position, the H-LP/AMT relay illuminates the headlights.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (HEAD LIGHT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

Main Body ECU

Item	Test Details: Display (Range)	Diagnostic Note
HEAD LIGHT	Headlight Relay ON/OFF	-

OK:
Headlights come on

OK → **Go to step 7**

NG

2	INSPECT FUSE (H-LP RH/H-LP LO RH, H-LP LH/H-LP LO LH)

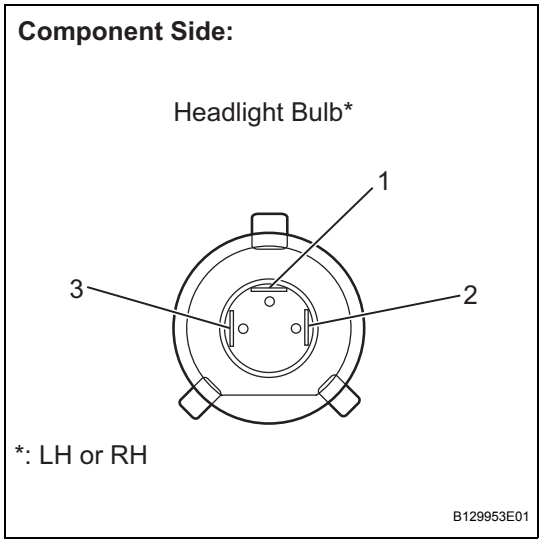
(a) Remove the H-LP RH/H-LP LO RH and H-LP LH/H-LP LO LH fuses from the engine room relay block.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the H-LP RH/H-LP LO RH and H-LP LH/H-LP LO LH fuses

NG → **REPLACE FUSE**

OK

3	INSPECT BULB (HEADLIGHT BULB)

Component Side:



(a) Disconnect the B4 and B6 headlight connectors.
(b) Apply battery voltage to the terminals and check that the headlight illuminates.
Standard

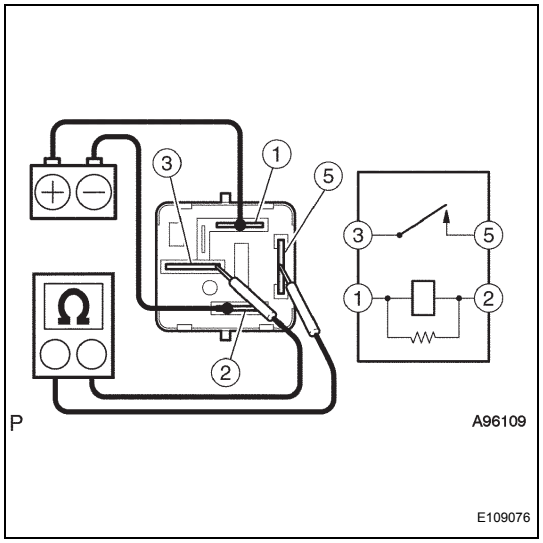
Measurement Condition	Standard
Positive battery - Terminal 1 Negative battery - Terminal 3	Headlight illuminates (HI-Beam)
Positive battery - Terminal 2 Negative battery - Terminal 3	Headlight illuminates (LO-Beam)

(c) Reconnect the headlight connectors.

NG → **REPLACE BULB**

OK

4 INSPECT H-LP/AMT RELAY



(a) Remove the H-LP/AMT relay from the engine room relay block No. 2.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

(c) Reinstall the H-LP/AMT relay.

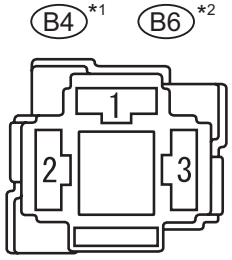
NG → **REPLACE H-LP/AMT RELAY**

OK

5 CHECK HARNESS AND CONNECTOR (FUSE - HEADLIGHT BULB)

Wire Harness Side:

Headlight Bulb Connector



*1: RH
*2: LH

B125793E04

(a) Disconnect the B4 and B6 headlight bulb connectors.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
B4-3 - Body ground	Always	11 to 14 V
B6-3 - Body ground	Always	11 to 14 V

(c) Reconnect the headlight bulb connectors.

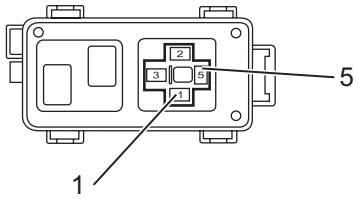
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK HARNESS AND CONNECTOR (HEADLIGHT - H-LP/AMT RELAY)

Component Side:

Engine Room Relay Block No, 2



B125794E01

(a) Remove the H-LP/AMT relay from the engine room relay block No. 2.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
1 - Body ground	Always	11 to 14 V
5 - Body ground	Always	11 to 14 V

(c) Reinstall the H-LP/AMT relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

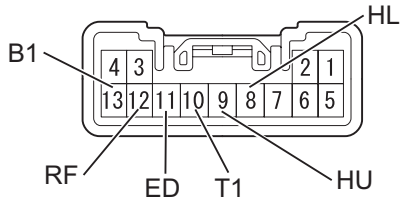
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT - HEADLIGHT DIMMER SWITCH)

7 INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E02

(a) Remove the headlight dimmer switch.
(b) Inspect the light control switch.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
10 (T1) - 13 (B1)	TAIL	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
10 (T1) - 13 (B1)	HEAD	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
11 (ED) - 12 (RF)	HEAD	Below 1 Ω
11 (ED) - 12 (RF)	OFF	10 kΩ or higher

(d) Inspect the headlight dimmer switch.
(e) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
9 (HU) - 11 (ED)	FLASH	Below 1 Ω
8 (HL) - 11 (ED)	LOW BEAM	Below 1 Ω
9 (HU) - 11 (ED)	HI BEAM	Below 1 Ω

(f) Reinstall the headlight dimmer switch.

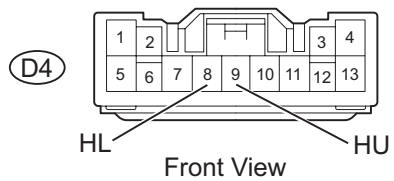
NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

8	CHECK HARNESS AND CONNECTOR (H-LP/AMT RELAY - HEADLIGHT DIMMER SWITCH)

Wire Harness Side:

Headlight Dimmer Switch Connector



Y

B124050E07

(a) Disconnect the D4 headlight dimmer switch connector.

(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D4-8 (HL) - Body ground	Always	11 to 14 V
D4-9 (HU) - Body ground	Always	11 to 14 V

(c) Reconnect the headlight dimmer switch connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

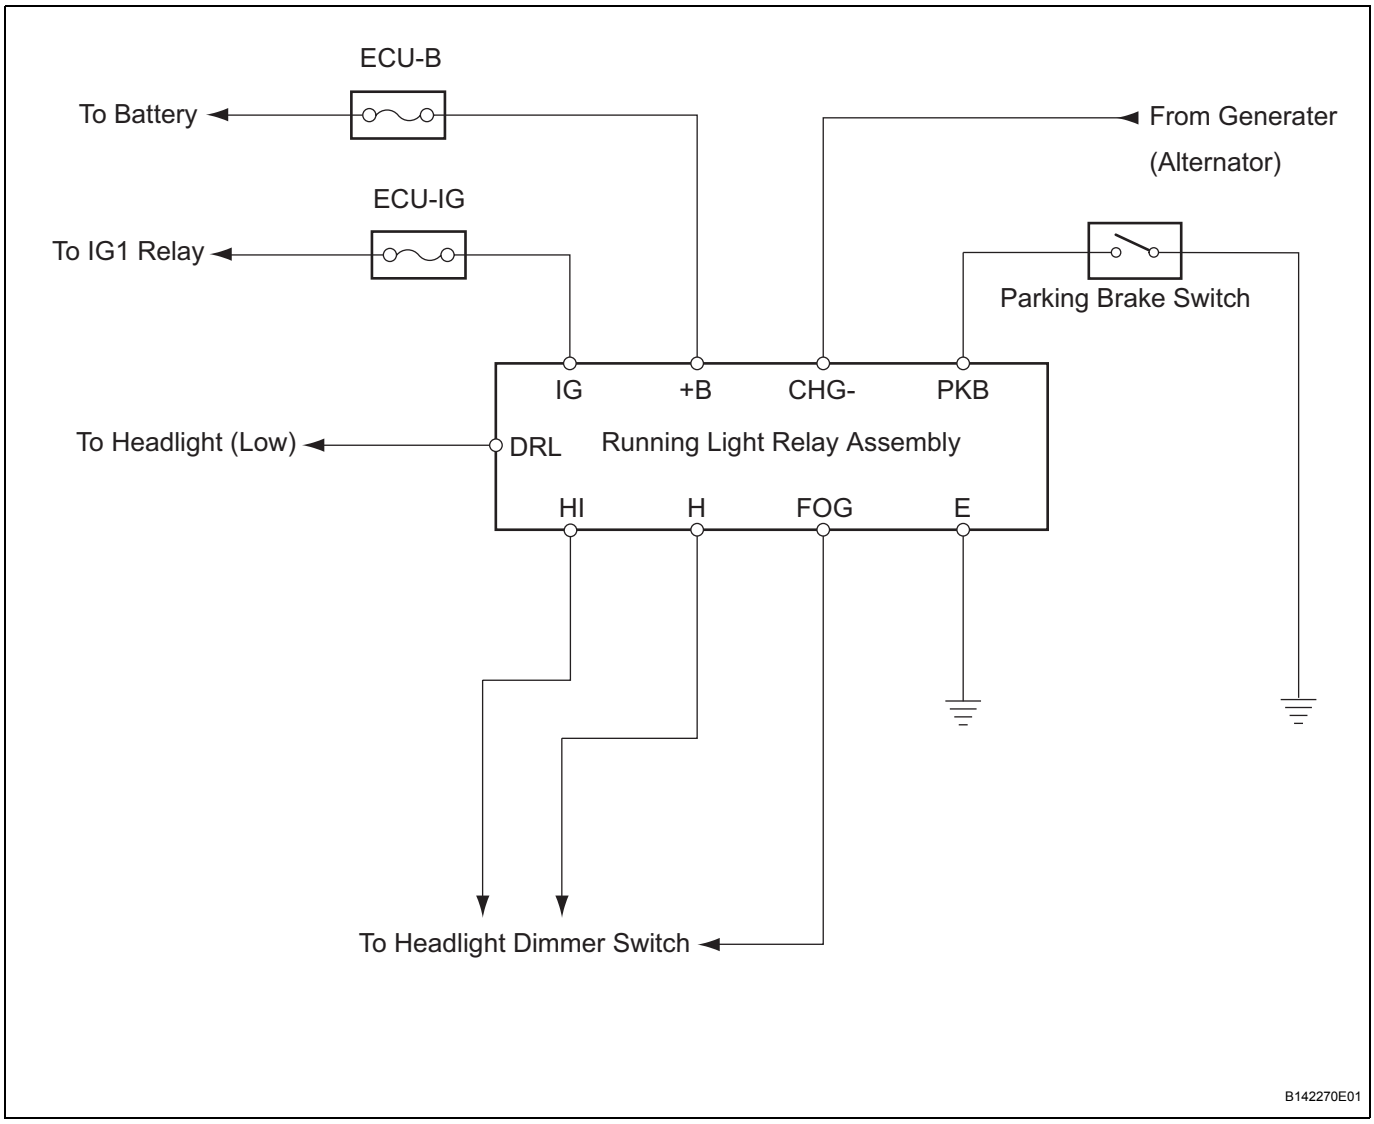
LI

DRL Relay Circuit

DESCRIPTION

When the engine is started, signals are transmitted from the generator to the running light relay assembly, causing the headlights to illuminate.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (ECU-B, ECU-IG)

(a) Remove the ECU-B fuse from the engine room relay block.
(b) Remove the ECU-IG fuse from the main body ECU.
(c) Measure the resistance.
Standard resistance:
Below 1 Ω
(d) Reinstall the ECU-B and ECU-IG fuses.

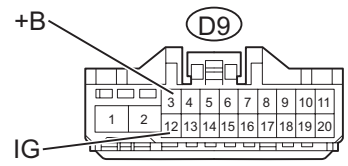
NG → REPLACE FUSE

OK

2 CHECK HARNESS AND CONNECTOR (FUSE - RUNNING LIGHT RELAY ASSEMBLY)

Wire Harness Side:

Running Light Relay Assembly Connector



B142269E01

(a) Disconnect the D9 running light relay assembly connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D9-3 (+B) - Body ground	Always	11 to 14 V
D9-12 (IG) - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the running light relay assembly connector.

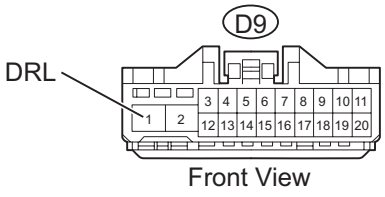
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK HARNESS AND CONNECTOR (RUNNING LIGHT RELAY ASSEMBLY - HEAD LIGHT)

Wire Harness Side:

Running Light Relay Assembly Connector



B142269E02

(a) Disconnect the D9 running light relay assembly connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D9-1 (DRL) - Body ground	Always	11 to 14 V

(c) Reconnect the running light relay assembly connector.

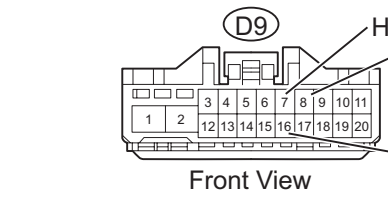
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4 CHECK HARNESS AND CONNECTOR (RUNNING LIGHT RELAY ASSEMBLY - HEAD LIGHT DIMMER SWITCH)

Wire Harness Side:

Running Light Relay Assembly Connector



B142269E03

(a) Disconnect the D9 running light relay assembly connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D9-7 (H) - Body ground	Always	11 to 14 V
D9-16 (FOG) - Body ground	Fog light switch ON	11 to 14 V
D9-8 (HI) - Body ground	Light control switch OFF	11 to 14 V

LI

(c) Reconnect the running light relay assembly connector.

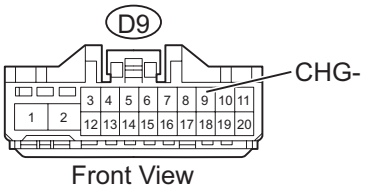
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR (GENERATER - RUNNING LIGHT RELAY ASSEMBLY)

Wire Harness Side:

Running Light Relay Assembly Connector



(a) Disconnect the D9 running light relay assembly connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D9-9 (CHG-) - Body ground	Confirm that vehicle is stopped and engine is idling	11 to 14 V

(c) Reconnect the running light relay assembly connector.

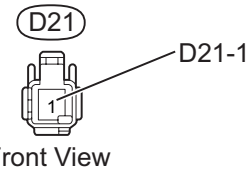
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

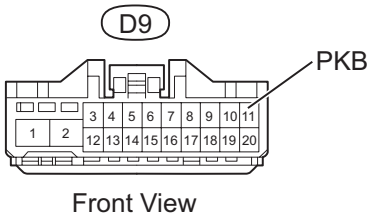
6 CHECK HARNESS AND CONNECTOR (RUNNING LIGHT RELAY ASSEMBLY - PARKING BRAKE SWITCH)

Wire Harness Side:

Parking Brake Switch Connector



Running Light Relay Assembly Connector



(a) Disconnect the D9 running light relay assembly connector.
(b) Disconnect the D21 parking brake switch connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D9-11 (PKB) - D21-1	Below 1 Ω

(d) Reconnect the parking brake switch connector.
(e) Reconnect the running light relay assembly connector.

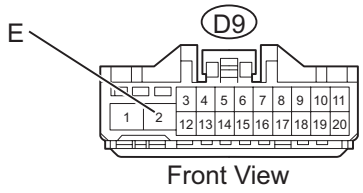
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	CHECK HARNESS AND CONNECTOR (RUNNING LIGHT RELAY - BODY GROUND)

Wire Harness Side:

Running Light Relay Assembly Connector



(a) Disconnect the D9 running light relay assembly connector.

(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
D9-2 (E) - Body ground	Below 1 Ω

(c) Reconnect the running light relay assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE RUNNING LIGHT RELAY ASSEMBLY

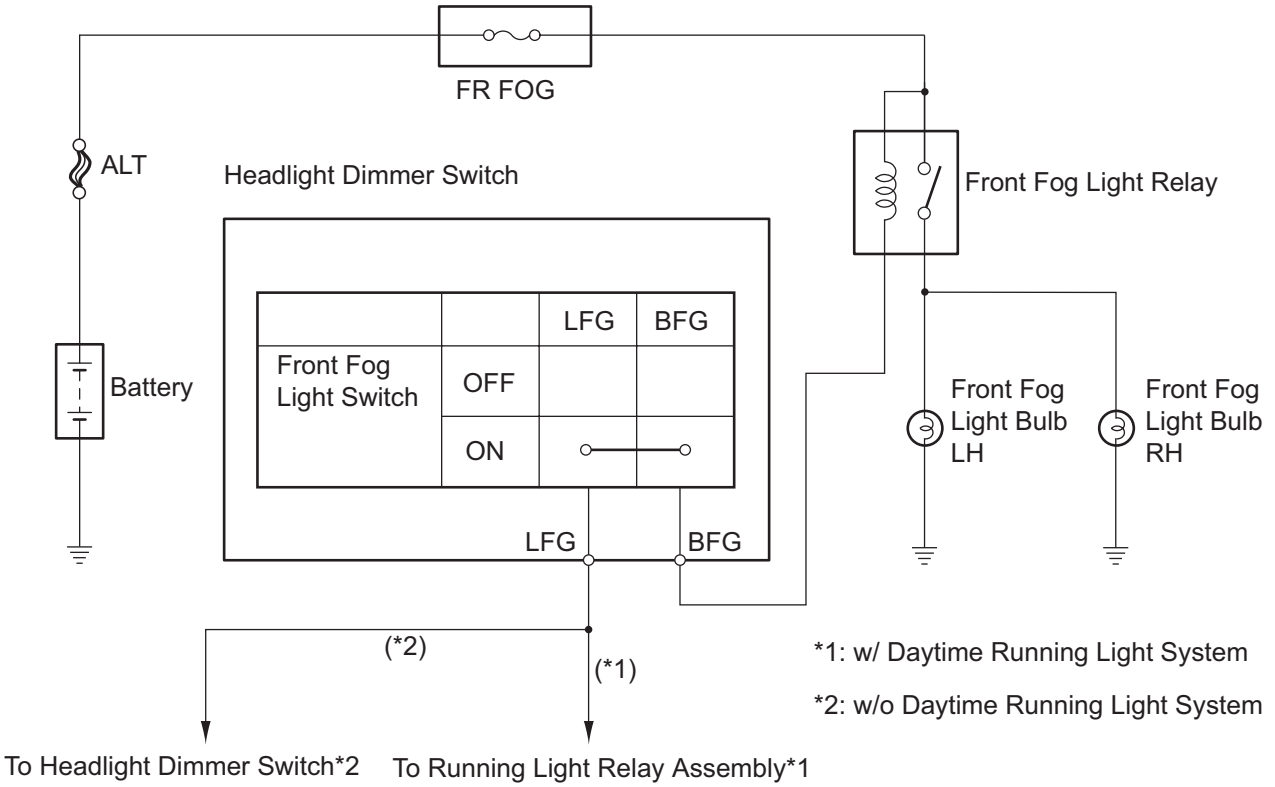
LI

Front Fog Light Circuit

DESCRIPTION

When the front fog light switch is turned on, the front fog light relay illuminates the front fog lights.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK WHETHER FRONT FOG LIGHTS ILLUMINATE

(a) Check whether the front fog lights illuminate.
Result

Condition	Proceed to
Neither left nor right fog light illuminates	A
Either left or right fog light illuminates	B

B → Go to step 7

A

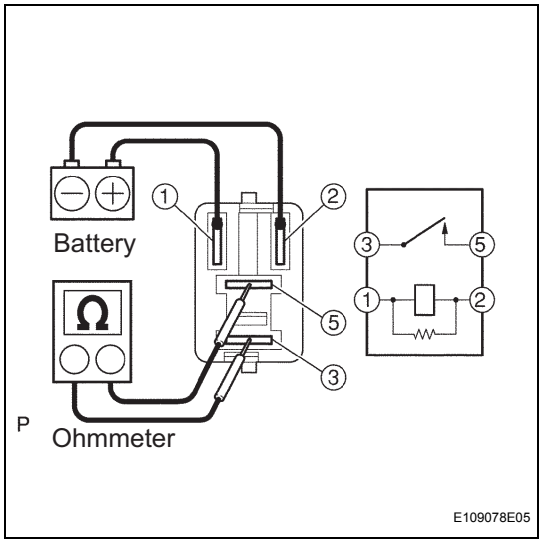
2	INSPECT FUSE (FR FOG)

(a) Remove the FR FOG fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the FR FOG fuse.

NG → **REPLACE FUSE**

OK

3	INSPECT FRONT FOG LIGHT RELAY



(a) Remove the front fog light relay.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

(c) Reinstall the front fog light relay.

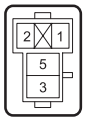
NG → **REPLACE FRONT FOG LIGHT RELAY**

OK

4	CHECK HARNESS AND CONNECTOR (FUSE - FRONT FOG LIGHT RELAY)

Component Side:

Front Fog Light Relay



B125720E01

(a) Remove the front fog light relay.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
2 - Body ground	Always	11 to 14 V
5 - Body ground	Always	11 to 14 V

(c) Reinstall the front fog light relay.

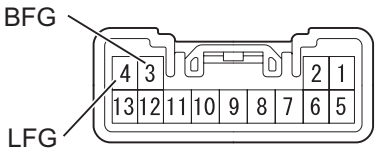
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E14

(a) Remove the headlight dimmer switch.
(b) Inspect the front fog light switch.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
3 (BFG) - 4 (LFG)	Front fog light switch OFF	10 kΩ or higher
3 (BFG) - 4 (LFG)	Front fog light switch ON	Below 1 Ω

(d) Reinstall the headlight dimmer switch.

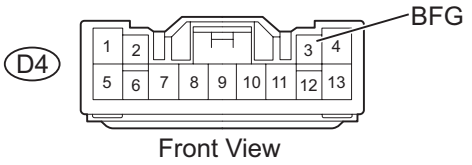
NG → REPLACE HEADLIGHT DIMMER SWITCH

OK

6 CHECK HARNESS AND CONNECTOR (FRONT FOG LIGHT RELAY - HEADLIGHT DIMMER SWITCH)

Wire Harness Side:

Headlight Dimmer Switch Connector



Front View

Y

B124050E08

(a) Disconnect the D4 headlight dimmer switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D4-3 (BFG) - Body ground	Always	11 to 14 V

(c) Reconnect the headlight dimmer switch connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

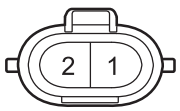
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

7 INSPECT BULB (FRONT FOG LIGHT BULB)

Component Side:

Front Fog Light Assembly*



*: LH or RH

B129855E01

(a) Remove the front fog light assembly.
(b) Apply battery voltage to the terminals and check that the front fog light illuminates.
Standard

Measurement Condition	Standard
Positive battery - Terminal 2 Negative battery - Terminal 1	Front fog light illuminates

(c) Reinstall the front fog light assembly.

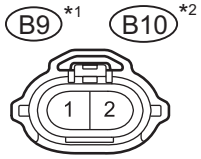
NG → REPLACE BULB

OK

8	CHECK HARNESS AND CONNECTOR (FRONT FOG LIGHT RELAY - FRONT FOG LIGHT ASSEMBLY)

Wire Harness Side:

Front Fog Light Assembly Connector



Front View

*1: RH

*2: LH

B125795E04

(a) Disconnect the B9 and B10 front fog light assembly connectors.

(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
B9-2 - Body ground	Front fog light switch ON	11 to 14 V
B10-2 - Body ground	Front fog light switch ON	11 to 14 V

(c) Reconnect the front fog light assembly connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT FOG LIGHT ASSEMBLY - BODY GROUND)

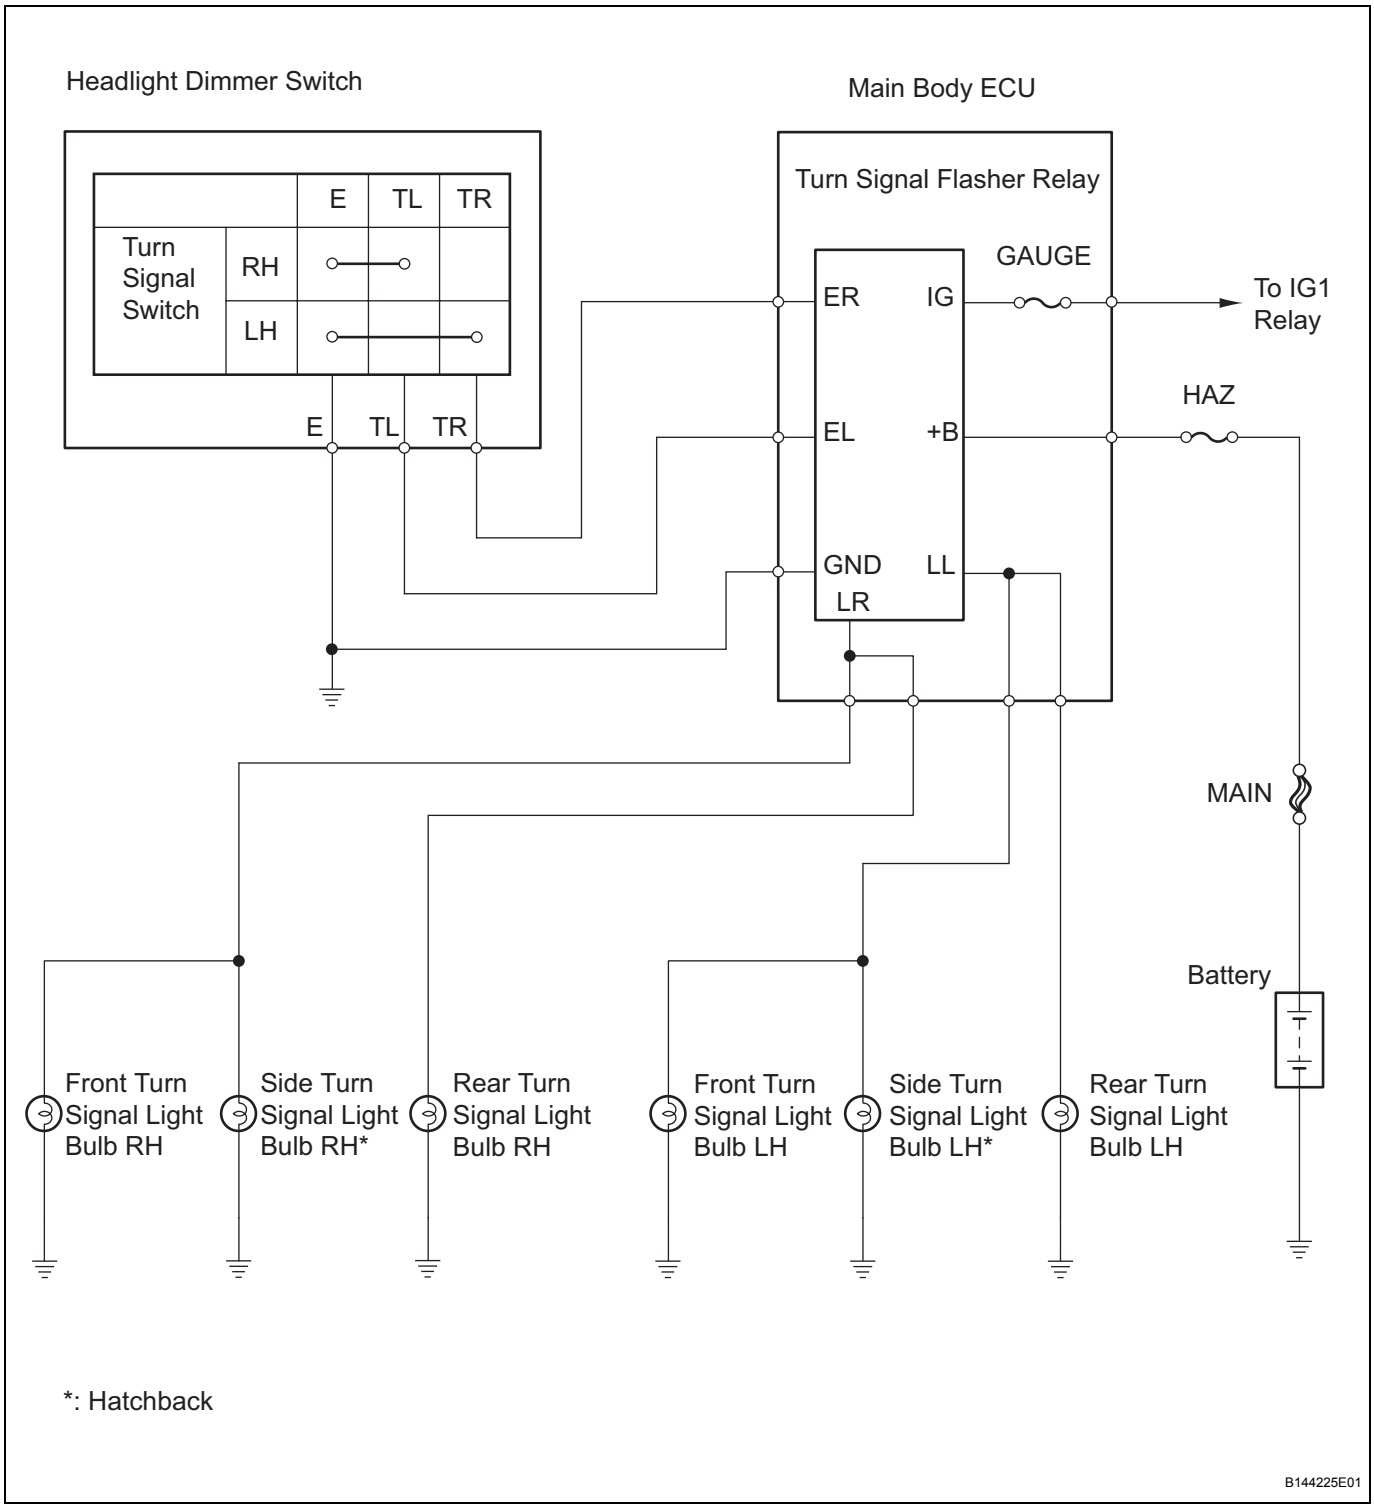
LI

Turn Signal Light Circuit

DESCRIPTION

The turn signal flasher relay in the main body ECU turns on when it receives signals from the headlight dimmer switch integrated with the turn signal switch, causing the turn signal lights to flash.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK OPERATION OF TURN SIGNAL LIGHT

(a) When the turn signal light switch is operated, check that the appropriate turn signal light flashes.

Result

Condition	Proceed To
No lights flash	A
Front turn signal light (LH or RH) does not flash	B
Side turn signal light (LH or RH) does not flash (Hatchback)	C
Rear turn signal light (LH or RH) does not flash	D

B → Go to step 6

C → Go to step 8

D → Go to step 10

A

2	INSPECT FUSE (GAUGE, HAZ)

(a) Remove the GAUGE fuse from the main body ECU.
(b) Remove the HAZ fuse from the engine room relay block.
(c) Measure the resistance.
Standard resistance:
Below 1 Ω
(d) Reinstall the GAUGE and HAZ fuses.

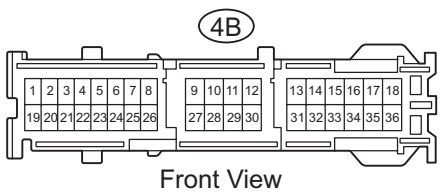
NG → REPLACE FUSE

OK

3	CHECK HARNESS AND CONNECTOR (FUSE - MAIN BODY ECU)

Wire Harness Side:

Main Body ECU Connector



(a) Disconnect the 4B main body ECU connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
4B-32 - Body ground	Always	11 to 14 V

(c) Reconnect the main body ECU connector.

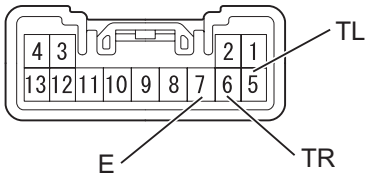
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4 INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E04

(a) Remove the headlight dimmer switch.
(b) Inspect the turn signal switch.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
6 (TR) - 7 (E)	Right	Below 1 Ω

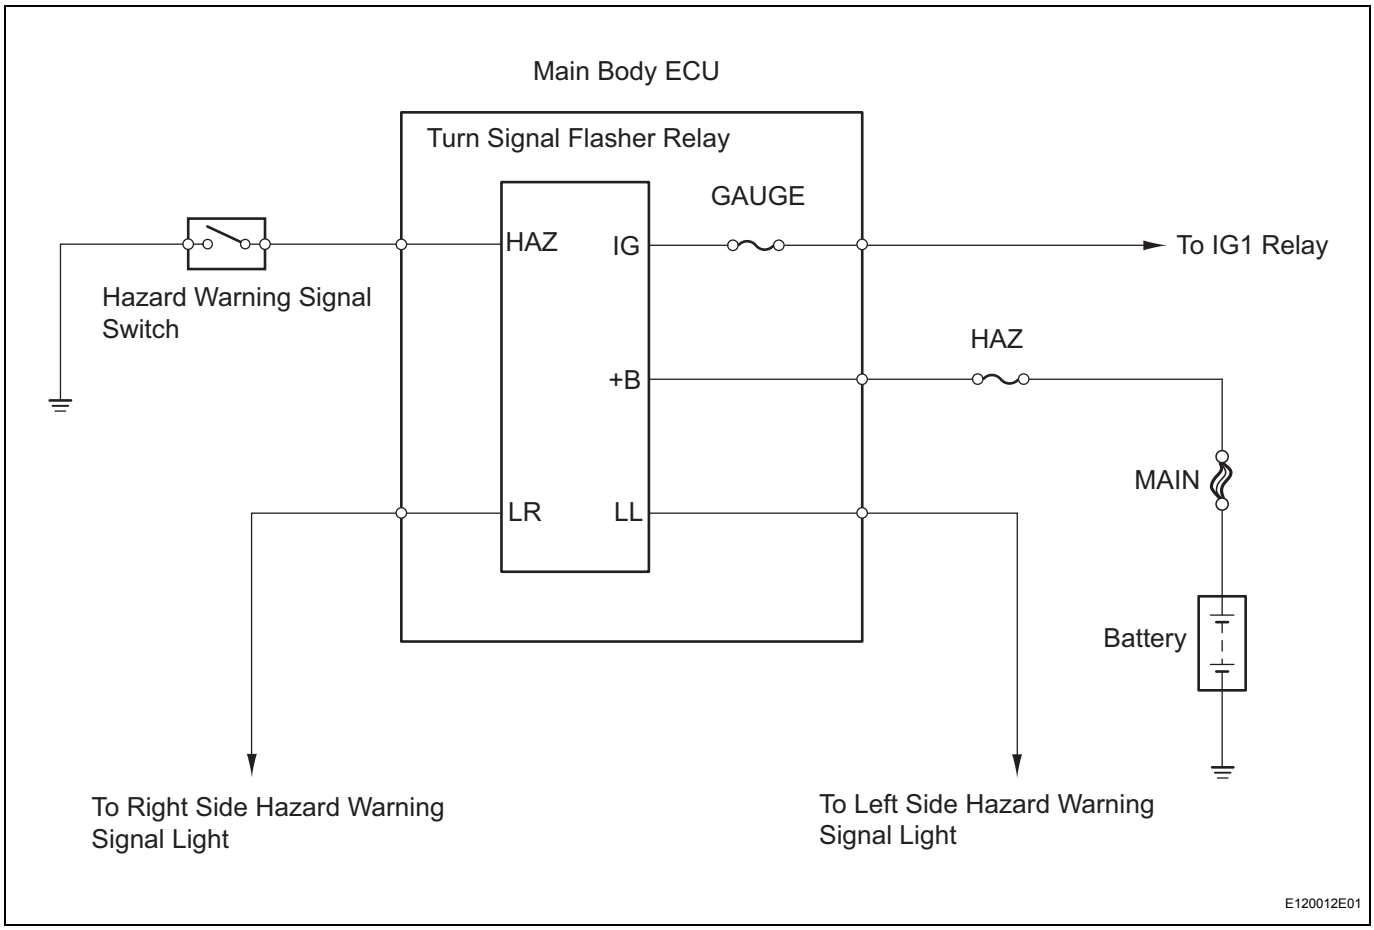
Hazard Warning Switch Circuit

DESCRIPTION

When the hazard warning signal switch is turned on, the turn signal flasher relay in the main body ECU turns on to flash the hazard warning signal lights.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

ACTIVE TEST

Item	Test Details/Display (Range)	Diagnostic Note
HAZARD	HAZARD ON/OFF	-

OK:
All hazard warning signal lights flash.

OK	Go to step 4

NG

2	INSPECT FUSE (GAUGE, HAZ)

(a) Remove the GAUGE fuse from the main body ECU.
(b) Remove the HAZ fuse from the engine room relay block.
(c) Measure the resistance.
Standard resistance:
Below 1 Ω
(d) Reinstall the GAUGE and HAZ fuses.

NG → **REPLACE FUSE**

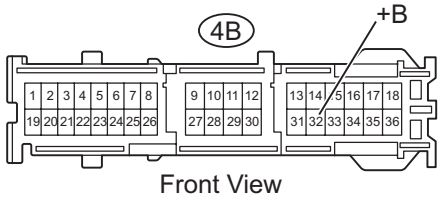
OK

LI

3	CHECK HARNESS AND CONNECTOR (FUSE - MAIN BODY ECU)

Wire Harness Side:

Main Body ECU Connector



Front View

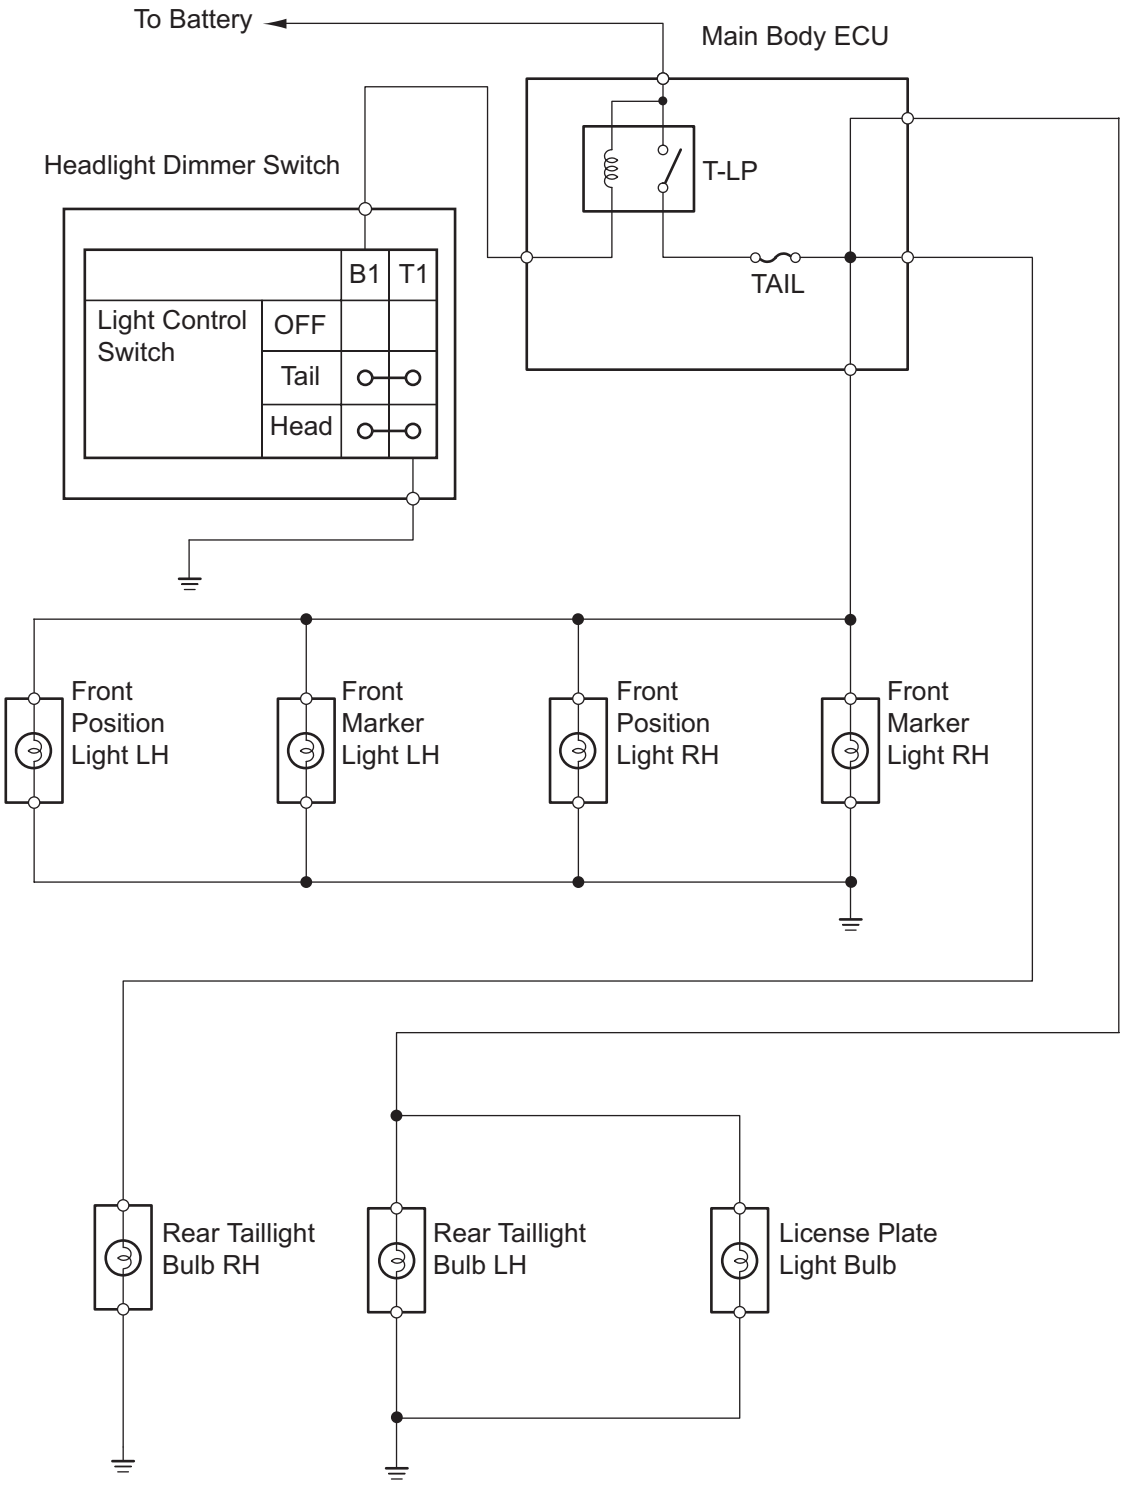
Taillight Circuit

DESCRIPTION

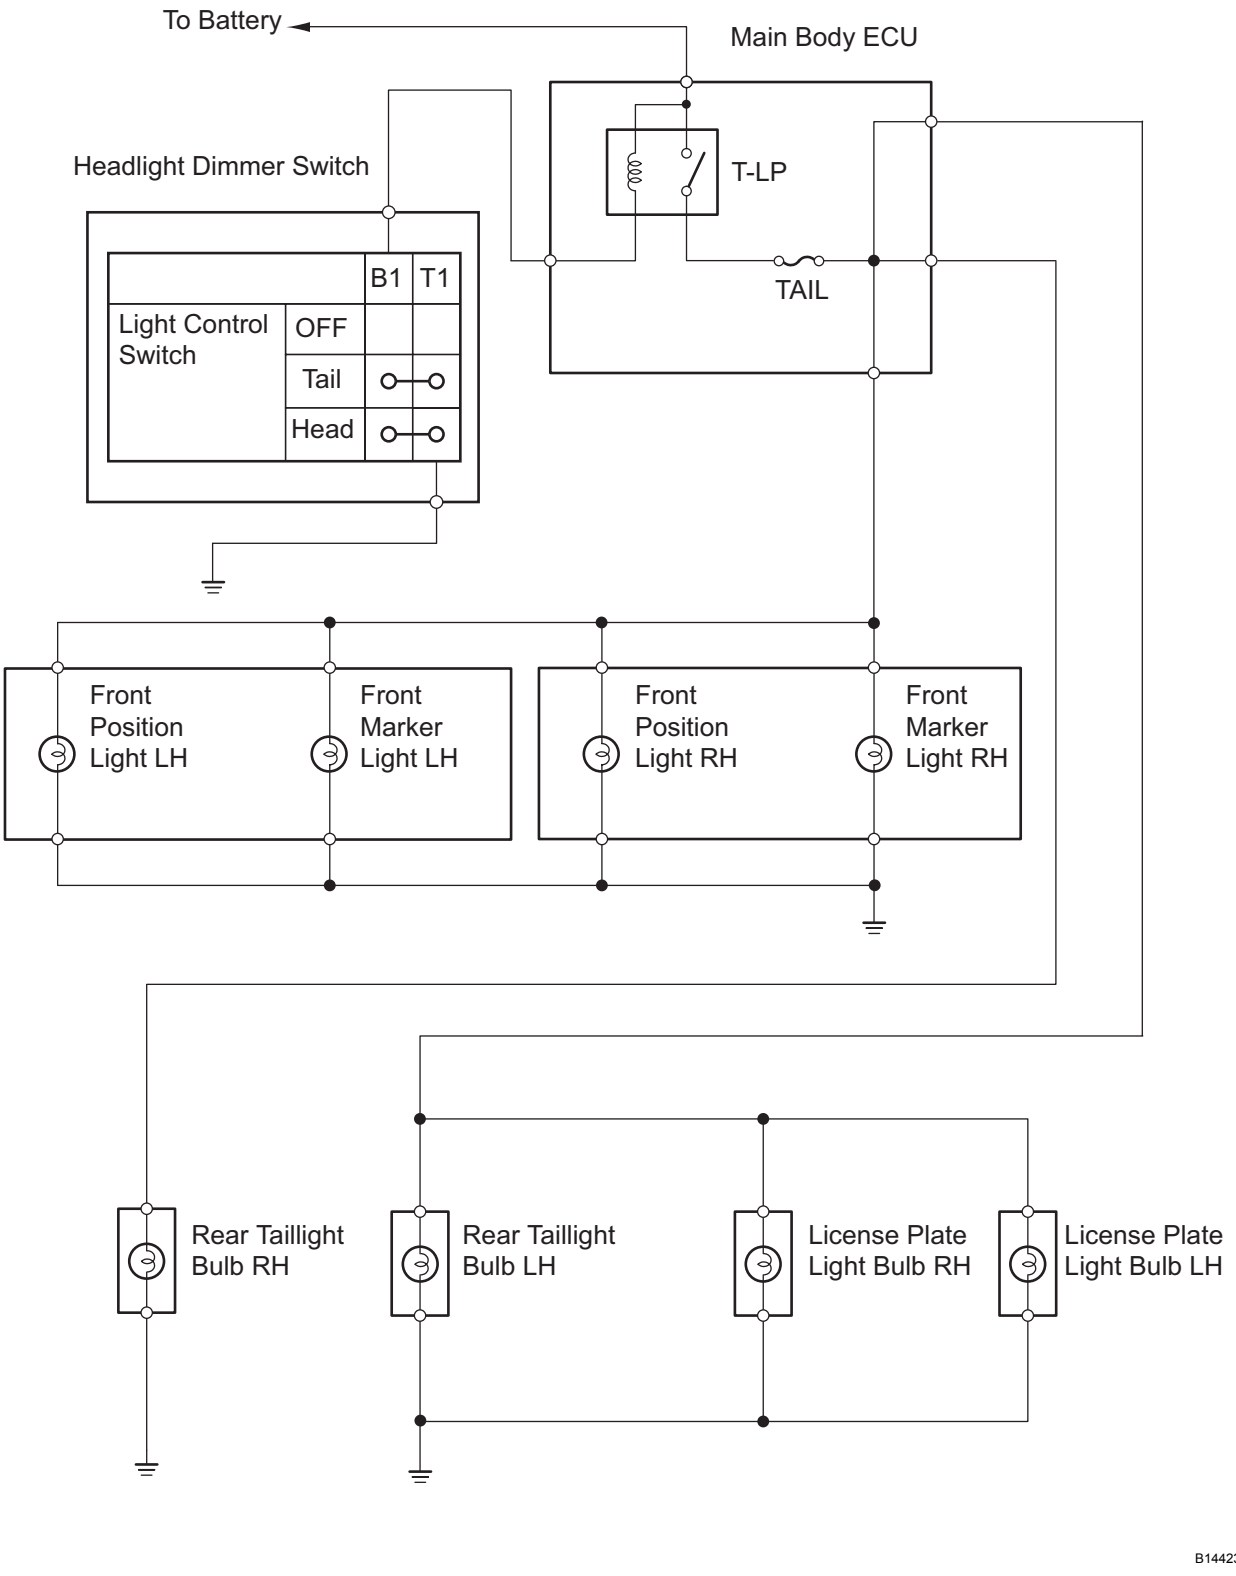
When the light control switch, located on the headlight dimmer switch, is turned to the TAIL position, the front position lights, front marker lights, rear taillights and license plate light(s) illuminate.

WIRING DIAGRAM

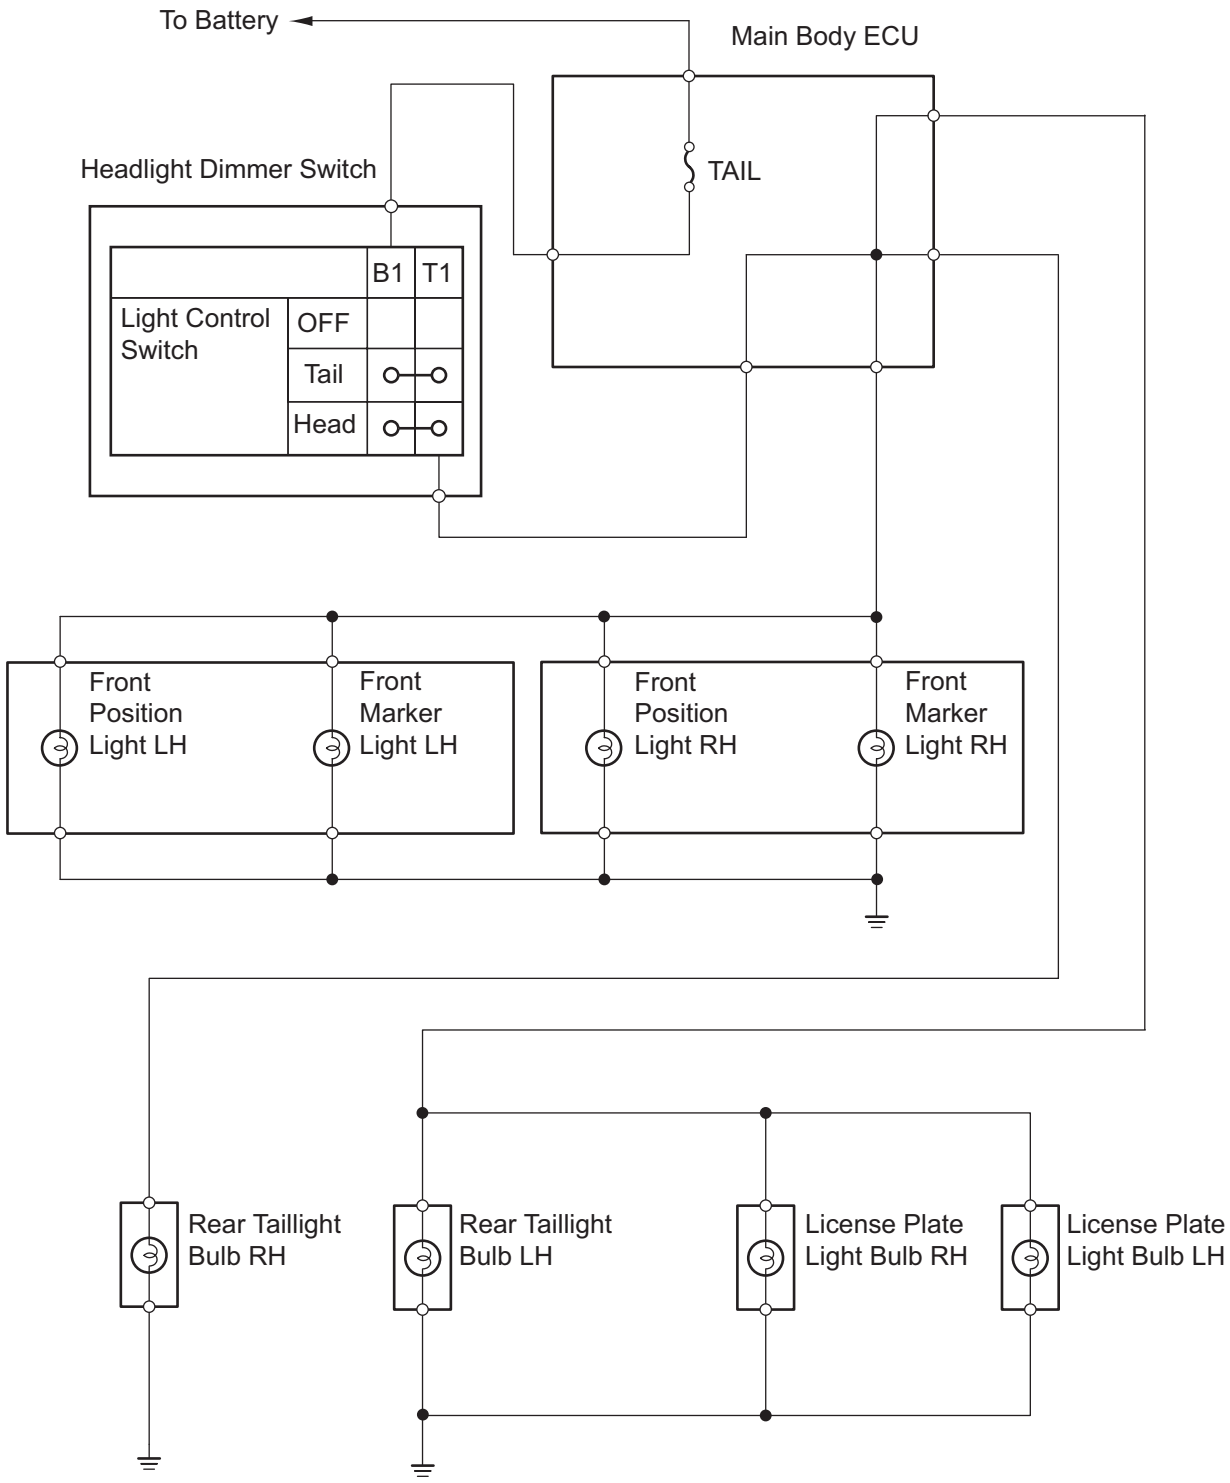
Hatchback:



Sedan (w/ Front Fog Light):



Sedan (w/o Front Fog Light):



INSPECTION PROCEDURE

1	CHECK WHETHER LIGHTS ILLUMINATE

(a) Check whether the following lights illuminate: Front position lights, Rear taillights and License plate light.

Result

Illumination Condition	Proceed To
All lights do not illuminate	A
Front position lights do not illuminate	B
Front marker lights do not illuminate	C
Rear taillights do not illuminate	D
License plate light does not illuminate	E

B → **Go to step 10**

C → **Go to step 12**

D → **Go to step 14**

E → **Go to step 16**

A

2	CHECK VEHICLE SPECIFICATIONS

(a) Check the vehicle type.
Result

Vehicle Type	Proceed To
Hatchback, Sedan with front fog light (w/ T-LP relay)	A
Sedan without front fog light (w/o T-LP relay)	B

B → **Go to step 7**

A

3	INSPECT FUSE (TAIL)

(a) Remove the TAIL fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reconnect the TAIL fuse.

NG → **REPLACE FUSE**

OK

4	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (TAIL LIGHT)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester main switch ON.
(d) Select the item below in the ACTIVE TEST and then check the relay operation.

Main Body ECU

Item	Test Details	Diagnostic Note
TAIL LIGHT	Taillight relay ON/OFF	-

OK:
Taillight comes on.

LI

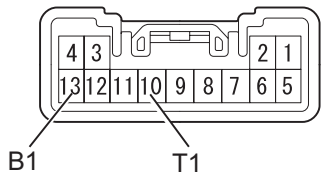
NG → **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

5	INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E17

(a) Remove the headlight dimmer switch.
(b) Inspect the light control switch.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
10 (T1) - 13 (B1)	TAIL	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
10 (T1) - 13 (B1)	HEAD	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher

(d) Reinstall the headlight dimmer switch.

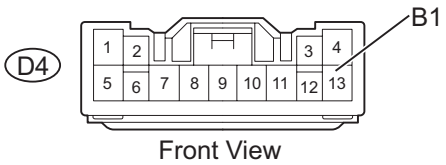
NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

6	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - HEADLIGHT DIMMER SWITCH)

Wire Harness Side:

Headlight Dimmer Switch Connector



Front View

Y

B124050E09

(a) Disconnect the D4 headlight dimmer switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
D4-13 (B1) - Body Ground	11 to 14 V

(c) Reconnect the headlight dimmer switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

7	INSPECT FUSE (TAIL)

(a) Remove the TAIL fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reconnect the TAIL fuse.

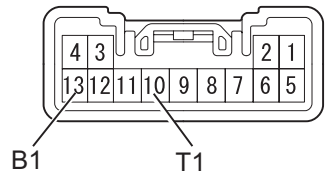
NG → **REPLACE FUSE**

OK

8	INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E17

(a) Remove the headlight dimmer switch.
(b) Inspect the light control switch.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
10 (T1) - 13 (B1)	TAIL	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
10 (T1) - 13 (B1)	HEAD	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher

(d) Reinstall the headlight dimmer switch.

NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

(b) Sedan:
(1) Remove the rear combination light assembly.
(2) Apply battery voltage to the terminals and check that the back-up light illuminates.
Standard

Measurement Condition	Standard
Positive battery - Terminal 5 Negative battery - Terminal 6	Back-up light illuminates

(c) Reinstall the back-up light bulbs.

NG → **REPLACE BULB**

OK

3	CHECK TRANSAXLE TYPE

(a) Check the vehicle's transaxle type.
Result

Transaxle Type	Proceed To
A/T	A
M/T	B

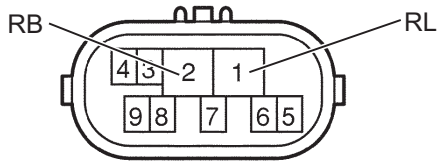
B → **Go to step 7**

A

4 INSPECT PARK / NEUTRAL POSITION SWITCH

Component Side:

Park / Neutral Position Switch



C110340E19

(a) Disconnect the C27 park / neutral position switch connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Shift Position	Specified Connection
2 (RB) - 1 (RL)	R	Below 1 Ω
2 (RB) - 1 (RL)	Except R	10 kΩ or higher

(c) Reconnect the park / neutral position switch connector.

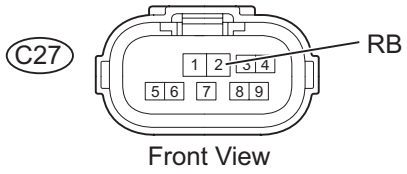
NG → **REPLACE PARK / NEUTRAL POSITION SWITCH**

OK

5 CHECK HARNESS AND CONNECTOR (FUSE - PARK / NEUTRAL POSITION SWITCH)

Wire Harness Side:

Park / Neutral Position Switch Connector



Front View

Y

B124048E09

(a) Disconnect the C27 park / neutral position switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
C27-2 (RB) - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the park / neutral position switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

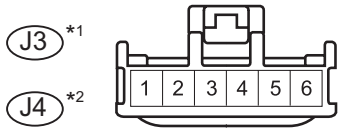
OK

LI

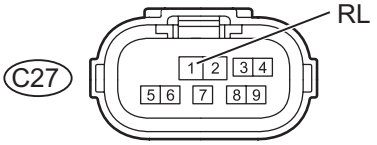
6	**CHECK HARNESS AND CONNECTOR (PARK / NEUTRAL POSITION SWITCH - REAR BACK-UP LIGHT)**

Wire Harness Side:

Rear Combination Light Assembly Connector



Park / Neutral Position Switch Connector



B125723E06

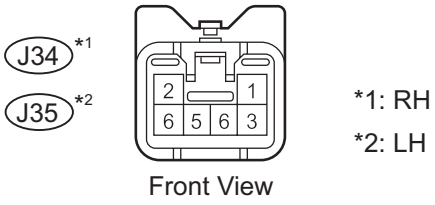
(a) Hatchback:
(1) Disconnect the C27 park / neutral position switch connector.
(2) Disconnect the J3 and J4 rear combination light assembly connectors.
(3) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
C27-1 (RL) - J3-1	Below 1 Ω
C27-1 (RL) - J4-1	Below 1 Ω
C27-1 (RL) or J3-1 - Body ground	10 kΩ or higher
C27-1 (RL) or J4-1 - Body ground	10 kΩ or higher

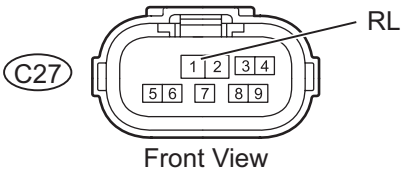
(4) Reconnect the park / neutral position switch connector.
(5) Reconnect the rear combination light assembly connectors.

Wire Harness Side:

Rear Combination Light Assembly Connector



Park / Neutral Position Switch Connector



E131560E02

(b) Sedan:
(1) Disconnect the C27 park / neutral position switch connector.
(2) Disconnect the J34 and J35 rear combination light assembly connectors.
(3) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
C27-1 (RL) - J34-1	Below 1 Ω
C27-1 (RL) - J35-1	Below 1 Ω
C27-1 (RL) or J34-1 - Body ground	10 kΩ or higher
C27-1 (RL) or J35-1 - Body ground	10 kΩ or higher

(4) Reconnect the park / neutral position switch connector.
(5) Reconnect the rear combination light assembly connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

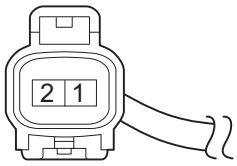
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (BACK-UP LIGHT - BODY GROUND)

7 INSPECT BACK-UP LIGHT SWITCH

Component Side:

Back-up Light Switch



Y B133141E02

(a) Disconnect the back-up light switch connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Shift Position	Specified Connection
1 - 2	R	Below 1 Ω
1 - 2	Except R	10 kΩ or higher

(c) Reconnect the back-up light switch connector.

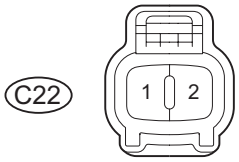
NG → **REPLACE BACK-UP LIGHT SWITCH**

OK

8 CHECK HARNESS AND CONNECTOR (FUSE - BACK-UP LIGHT SWITCH)

Wire Harness Side:

Back-up Light Switch Connector



Front View

Y B124047E07

(a) Disconnect the C22 back-up light switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
C22-2 - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the back-up light switch connector.

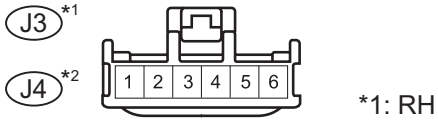
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

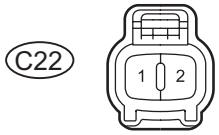
9	CHECK HARNESS AND CONNECTOR (BACK-UP LIGHT SWITCH - BACK-UP LIGHT)

Wire Harness Side:

Rear Combination Light Assembly Connector



Back-up Light Switch Connector



B125724E06

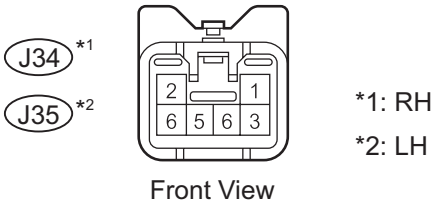
(a) Hatchback:
(1) Disconnect the C22 back-up light switch connector.
(2) Disconnect the J3 and J4 rear combination light assembly connectors.
(3) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
C22-1 - J3-1	Below 1 Ω
C22-1 - J4-1	Below 1 Ω
C22-1 or J3-1 - Body ground	10 kΩ or higher
C22-1 or J4-1 - Body ground	10 kΩ or higher

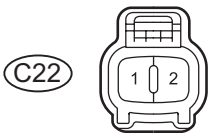
(4) Reconnect the back-up light switch connector.
(5) Reconnect the rear combination light assembly connectors.

Wire Harness Side:

Rear Combination Light Assembly Connector



Park / Neutral Position Switch Connector



E131561E02

(b) Sedan:
(1) Disconnect the C22 back-up light switch connector.
(2) Disconnect the J34 and J35 rear combination light assembly connectors.
(3) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
C22-1 - J34-1	Below 1 Ω
C22-1 - J35-1	Below 1 Ω
C22-1 or J34-1 - Body ground	10 kΩ or higher
C22-1 or J35-1 - Body ground	10 kΩ or higher

(4) Reconnect the back-up light switch connector.
(5) Reconnect the rear combination light assembly connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

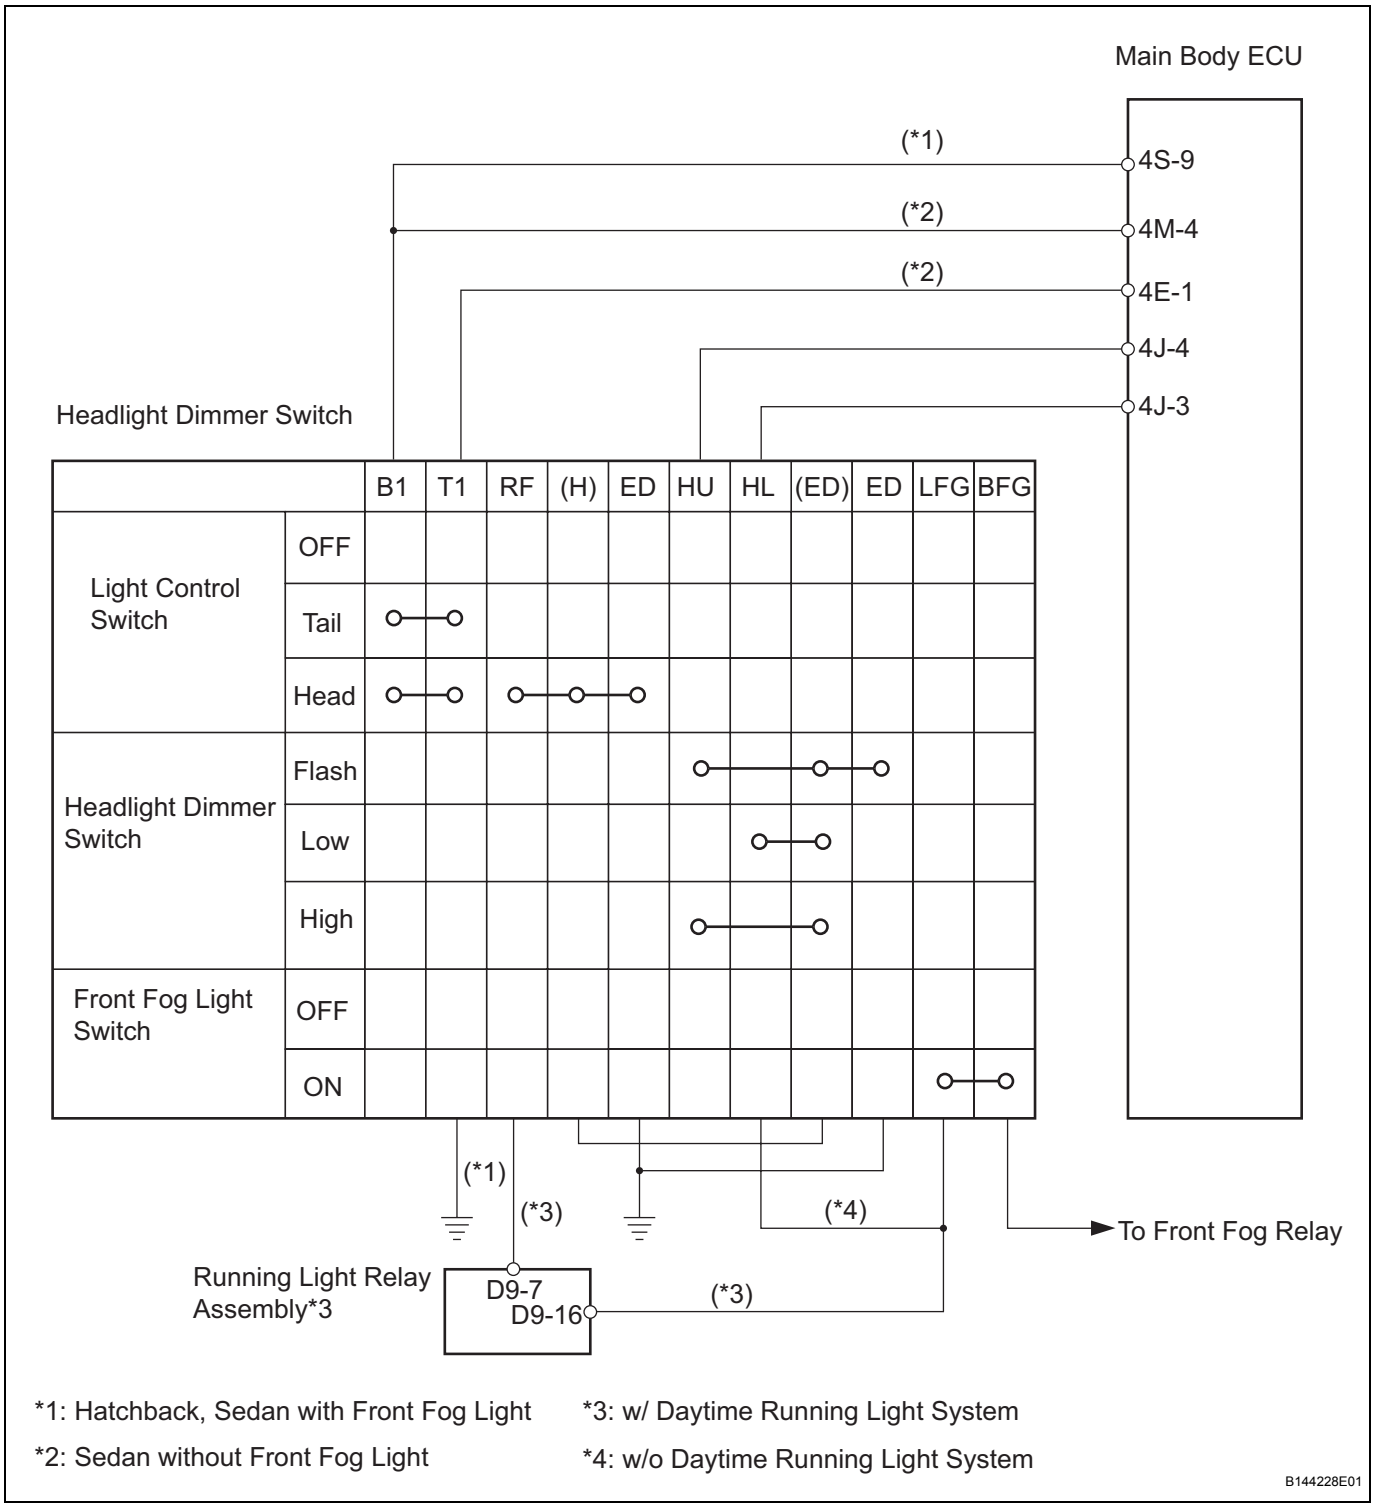
REPAIR OR REPLACE HARNESS OR CONNECTOR (BACK-UP LIGHT - BODY GROUND)

Light Control Switch Circuit

DESCRIPTION

This circuit detects the state of the headlight dimmer switch.

WIRING DIAGRAM



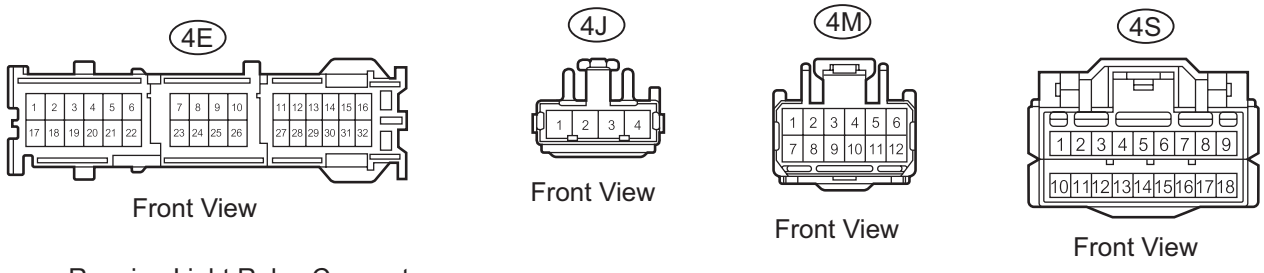
LI

INSPECTION PROCEDURE

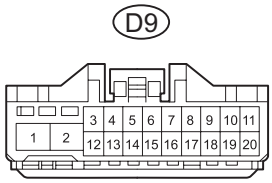
1	CHECK HARNESS AND CONNECTOR (HEADLIGHT DIMMER SWITCH - MAIN BODY ECU, RUNNING LIGHT RELAY)

Wire Harness Side:

Main Body ECU Connector



Running Light Relay Connector



B144229E01

(a) Disconnect the 4J and 4S main body ECU connectors.*1
(b) Disconnect the 4J , 4E and 4M main body ECU connectors.*2
(c) Disconnect the D9 running light relay assembly connector.*3
HINT:
*1: Hatchback, Sedan with front fog light
*2: Sedan without front fog light
*3: w/ Daytime running light system
(d) Measure the resistance.

Standard resistance

Tester connection	Condition	Specified Condition
4J-3 - Body ground	Light control switch OFF → HEAD Headlight dimmer switch LOW position	10 kΩ or higher → Below 1 Ω
4J-4 - Body ground	Light control switch OFF → HEAD Headlight dimmer switch HIGH position	10 kΩ or higher → Below 1 Ω
4J-4 - Body ground	Light control switch HIGH position	10 kΩ or higher → Below 1 Ω
4S-9 - Body ground*1	Light control switch OFF → TAIL	10 kΩ or higher → Below 1 Ω
4S-9 - Body ground*1	Light control switch OFF → HEAD	10 kΩ or higher → Below 1 Ω
4E-10 - 4M-4*2	Light control switch OFF → TAIL	10 kΩ or higher → Below 1 Ω
4E-10 - 4M-4*2	Light control switch OFF → HEAD	10 kΩ or higher → Below 1 Ω
4M-9 - Body ground*2	Front fog light switch OFF → ON	10 kΩ or higher → Below 1 Ω
D9-7 - Body ground*3	Light control switch OFF → HEAD	10 kΩ or higher → Below 1 Ω

HINT:
*1: Hatchback, Sedan with front fog light
*2: Sedan without front fog light

*3: w/ Daytime running light system

(e) Reconnect the main body ECU connectors.

(f) Reconnect the running light relay assembly connector*.

HINT:

*: w/ Daytime running light system

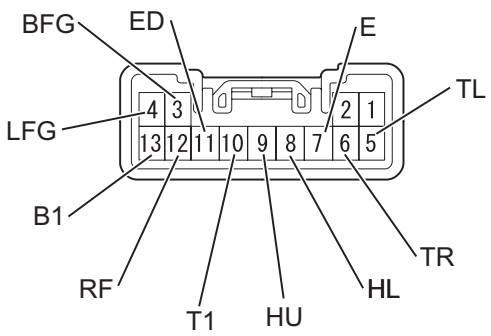
NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT HEADLIGHT DIMMER SWITCH

Component Side:



(a) Inspect the light control switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
10 (T1) - 13 (B1)	TAIL	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
10 (T1) - 13 (B1)	HEAD	Below 1 Ω
10 (T1)- 13 (B1)	OFF	10 kΩ or higher
11 (ED)- 12 (RF)	HEAD	Below 1 Ω
11 (ED)- 12 (RF)	OFF	10 kΩ or higher

(b) Inspect the headlight dimmer switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
9 (HU) - 11 (ED)	FLASH	Below 1 Ω
8 (HL) - 11 (ED)	LOW BEAM	Below 1 Ω
9 (HU) - 11 (ED)	HI BEAM	Below 1 Ω

(c) Inspect the turn signal switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
6 (TR) - 7 (E)	Right	Below 1 Ω
6 (TR) - 7 (E)	Neutral	10 kΩ or higher
5 (TL) - 7 (E)	Left	Below 1 Ω
5 (TL) - 7 (E)	Neutral	10 kΩ or higher

(d) Inspect the front fog light switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
3 (BFG) - 4 (LFG)	Front fog light switch ON	Below 1 Ω
3 (BFG)- 4 (LFG)	Front fog light switch OFF	10 kΩ or higher

LI

NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

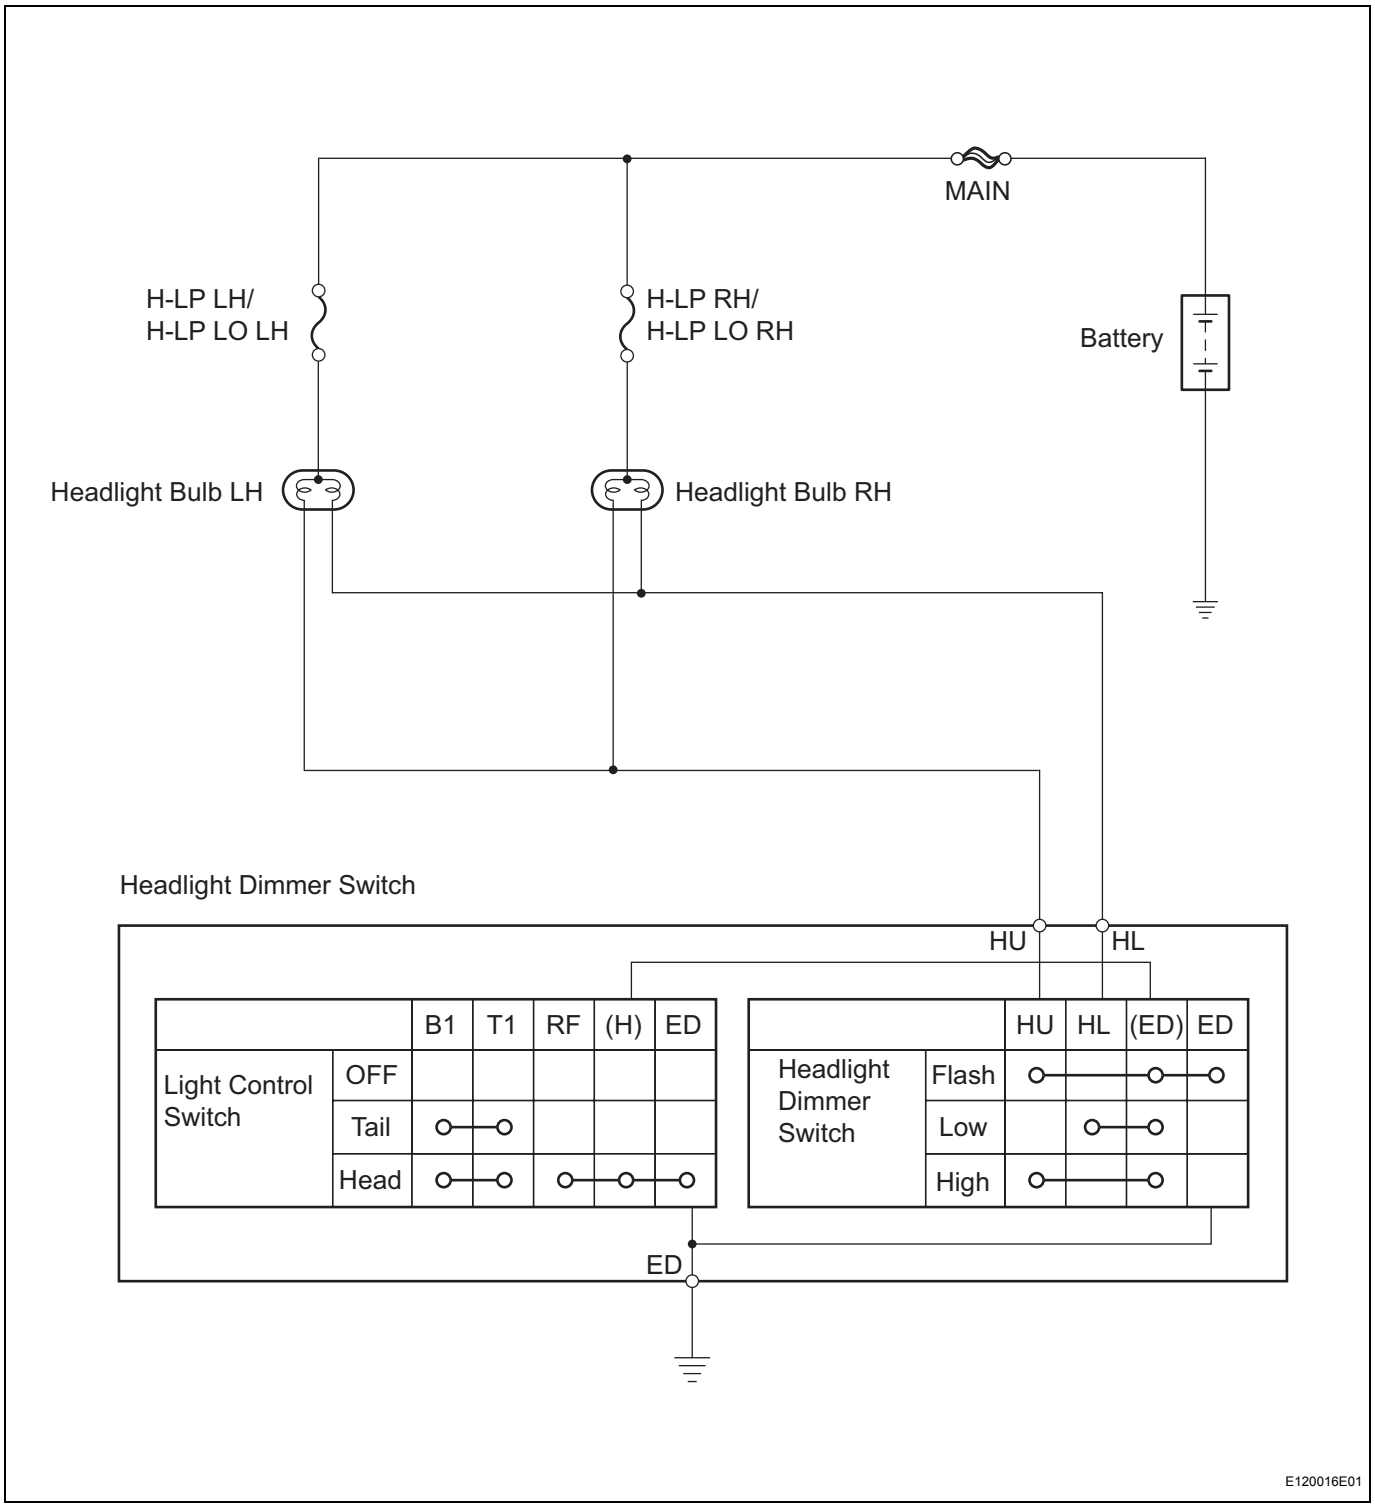
REPAIR OR REPLACE HARNESS OR CONNECTOR

Headlight Signal Circuit

DESCRIPTION

The headlights are illuminated when the light control switch, located on the headlight dimmer switch, is turned to the HEAD position.
For models with the H-LP/AMT relay (sedan models equipped with the daytime running light system and all hatchback models), refer to Headlight Relay Circuit (See page LI-28).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (H-LP RH/H-LP LO RH, H-LP LH/H-LP LO LH)

(a) Remove the H-LP RH/H-LP LO RH and H-LP LH/H-LP LO LH fuses from the engine room relay block.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the H-LP RH/H-LP LO RH and H-LP LH/H-LP LO LH fuses.

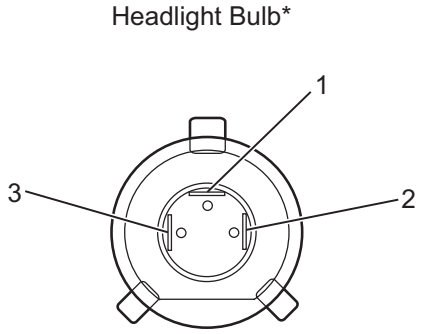
NG → **REPLACE FUSE**

LI

OK

2	INSPECT BULB (HEADLIGHT BULB)

Component Side:



*: LH or RH

B129953E01

(a) Disconnect the B4 and B6 headlight connectors.
(b) Apply battery voltage to the terminals and check that the headlight illuminates.
Standard

Measurement Condition	Standard
Positive battery - Terminal 1 Negative battery - Terminal 3	Headlight illuminates (HI-Beam)
Positive battery - Terminal 2 Negative battery - Terminal 3	Headlight illuminates (LO-Beam)

(c) Reconnect the headlight connectors.

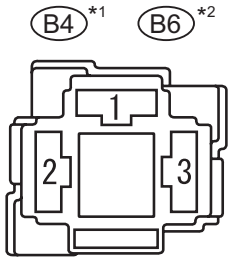
NG → **REPLACE BULB**

OK

3 CHECK HARNESS AND CONNECTOR (FUSE - HEADLIGHT)

Wire Harness Side:

Headlight Bulb Connector



*1: RH

*2: LH

B125793E04

(a) Disconnect the B4 and B6 headlight bulb connectors.

(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
B4-3 - Body ground	Always	11 to 14 V
B6-3 - Body ground	Always	11 to 14 V

(c) Reconnect the headlight bulb connectors.

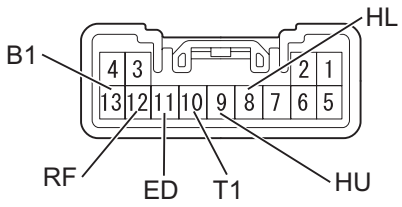
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT HEADLIGHT DIMMER SWITCH

Component Side:

Headlight Dimmer Switch



E123010E02

(a) Remove the headlight dimmer switch.

(b) Inspect the light control switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
10 (T1) - 13 (B1)	TAIL	Below 1 Ω
10 (T1) - 13 (B1)	HEAD	Below 1 Ω
10 (T1) - 13 (B1)	OFF	10 kΩ or higher
11 (ED) - 12 (RF)	HEAD	Below 1 Ω
11 (ED) - 12 (RF)	OFF	10 kΩ or higher

(c) Inspect the headlight dimmer switch.

(1) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
9 (HU) - 11 (ED)	FLASH	Below 1 Ω
8 (HL) - 11 (ED)	LOW BEAM	Below 1 Ω
9 (HU) - 11 (ED)	HI BEAM	Below 1 Ω

(d) Reinstall the headlight dimmer switch.

NG → **REPLACE HEADLIGHT DIMMER SWITCH**

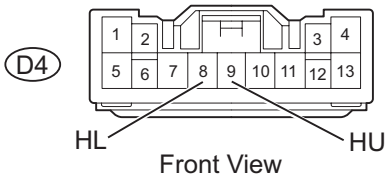
OK

LI

5	CHECK HARNESS AND CONNECTOR (HEADLIGHT - HEADLIGHT DIMMER SWITCH)

Wire Harness Side:

Headlight Dimmer Switch Connector



Y

B124050E07

(a) Disconnect the D4 headlight dimmer switch connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D4-8 (HL) - Body ground	Always	11 to 14 V
D4-9 (HU) - Body ground	Always	11 to 14 V

(c) Reconnect the headlight dimmer switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

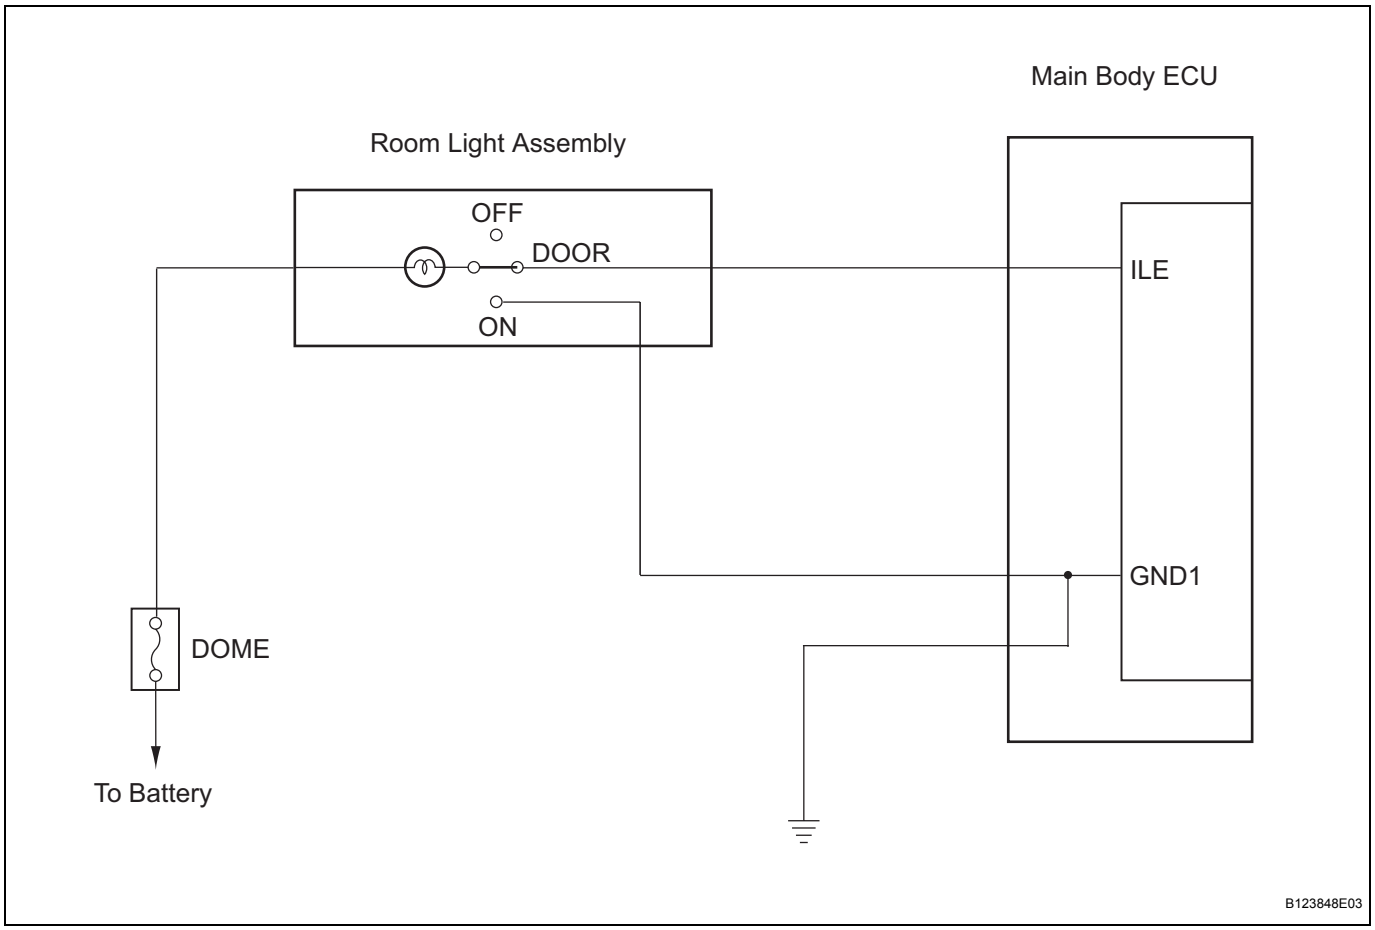
REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

Illumination Circuit

DESCRIPTION

The main body ECU receives information regarding the door courtesy switch and door lock position switch, and turns on the room light assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

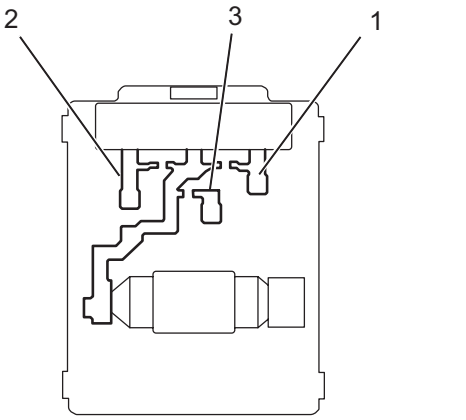
1	INSPECT FUSE (DOME)

(a) Remove the DOME fuse from the engine room relay block.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the DOME fuse.

NG → **REPLACE FUSE**

OK

2	INSPECT ROOM LIGHT ASSEMBLY



(a) Inspect the room light assembly.
(1) Remove the room light assembly.
(2) Measure the resistance.
Standard resistance

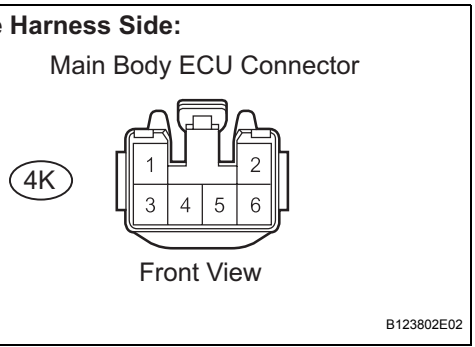
Tester Connection	Switch Operation	Specified Condition
1 - 2 1 - 3	OFF	10 kΩor higher
1 - 2	DOOR	Below 1Ω
1 - 3	ON	Below 1Ω

(3) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, then check that the light comes on when the switch is in the DOOR position.
OK:
Light comes on.
(4) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 3, then check that the light comes on when the switch is in the ON position.
OK:
Light comes on.
(5) Reinstall the room light assembly.

NG → **REPLACE ROOM LIGHT ASSEMBLY**

OK

3	CHECK HARNESS AND CONNECTOR (BATTERY - ROOM LIGHT ASSEMBLY AND MAIN BODY ECU)



(a) Disconnect the 4K main body ECU connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
4K-2 (ILE) - Body ground	Room light switch in DOOR position	11 to 14 V
4K-1 (GND1)- Body ground	Room light switch in ON position	11 to 14 V

(c) Reconnect the main body ECU connector.

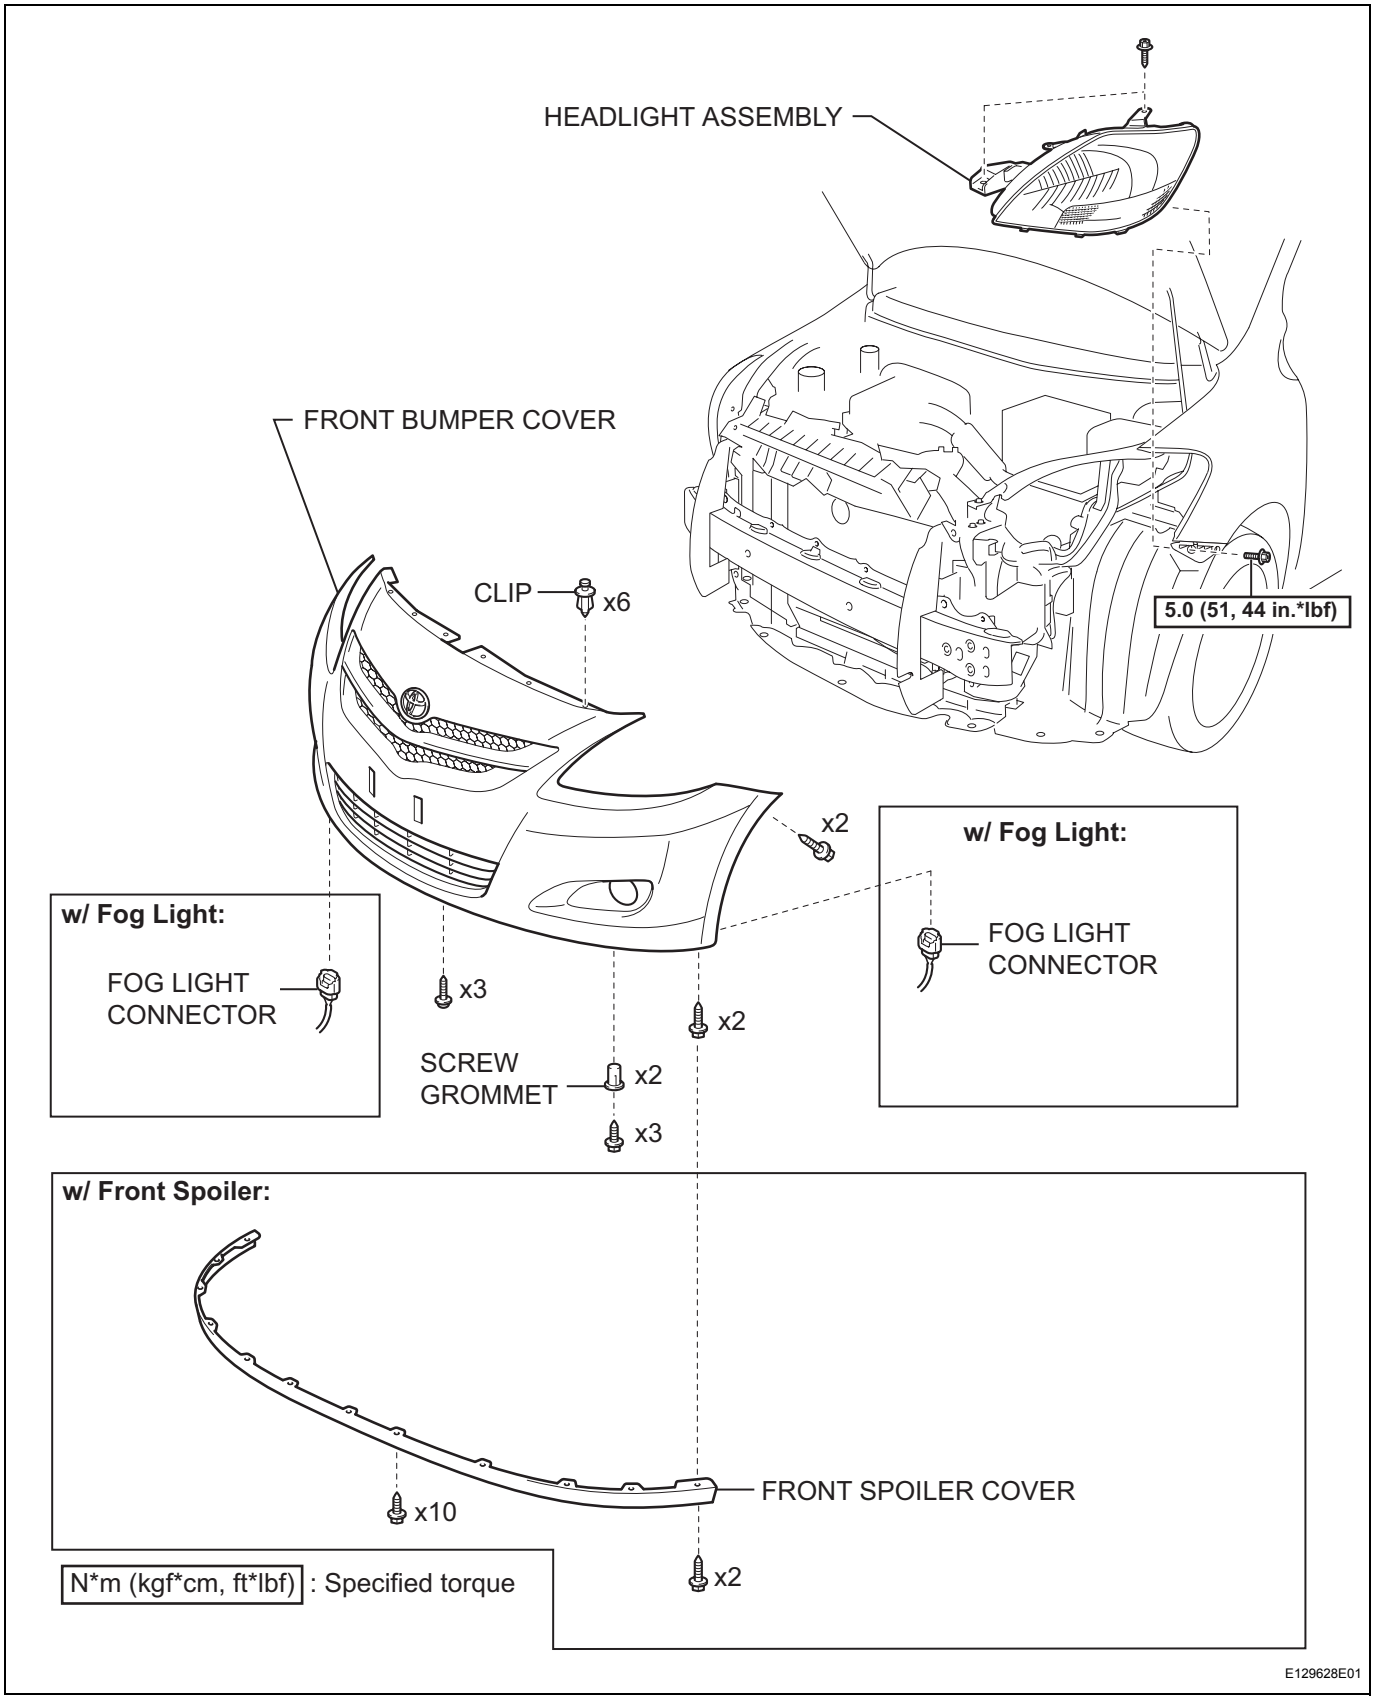
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

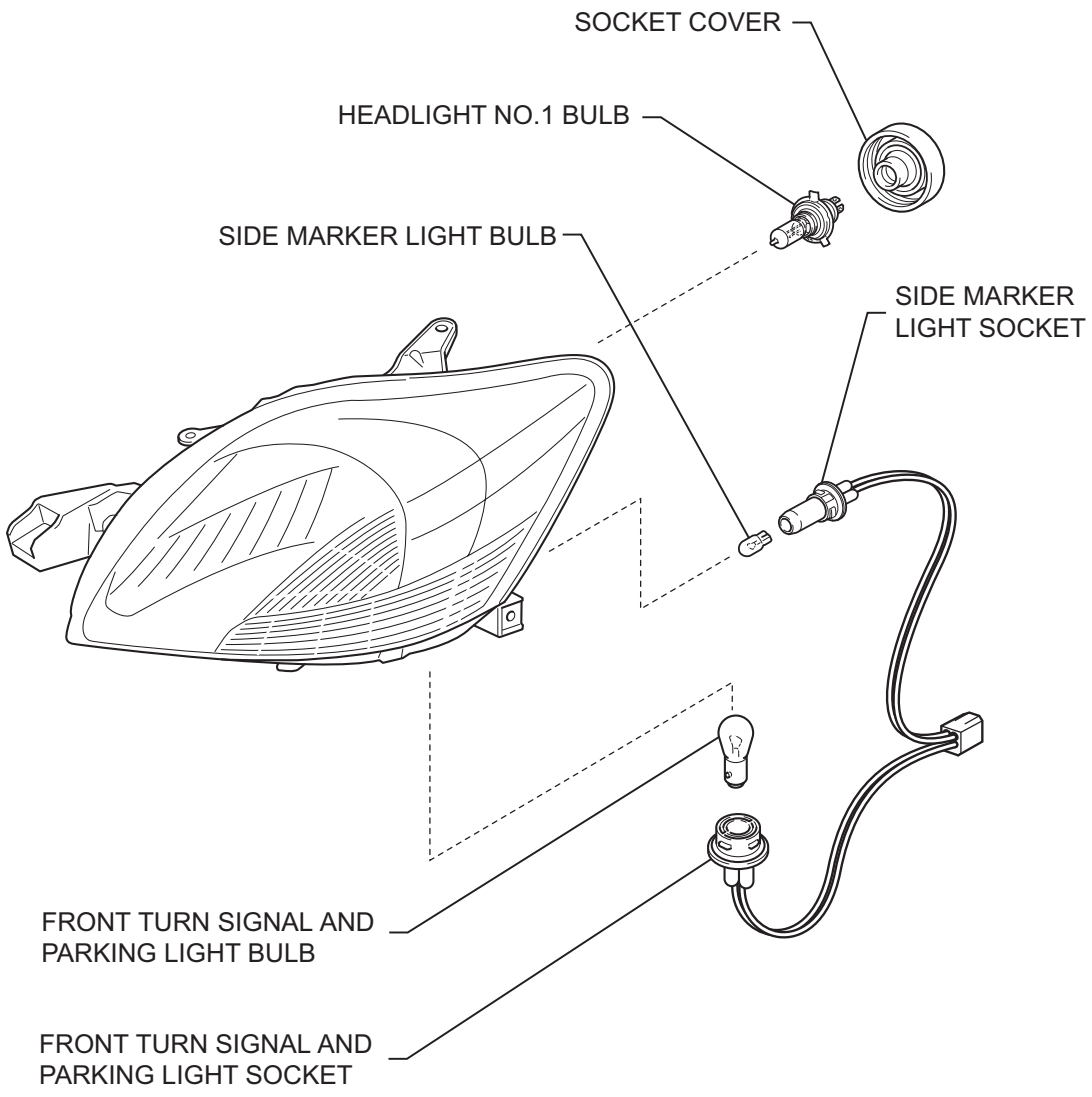
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

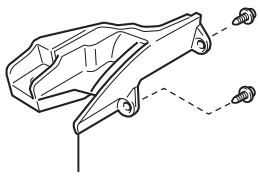
HEADLIGHT ASSEMBLY (for Sedan)

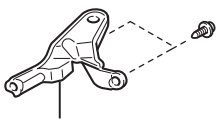
COMPONENTS





BRACKET FOR REPAIR:





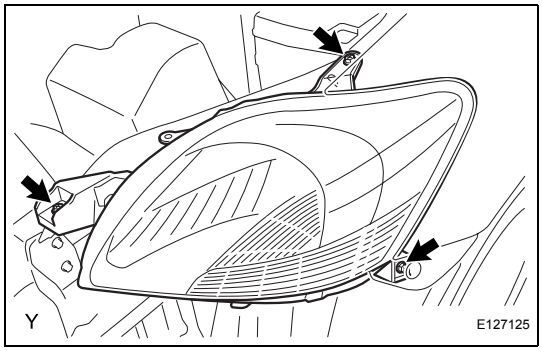
Y

E129629E01

REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.
- Set the headlight leveling switch to 0 (zero) before conducting the procedure.

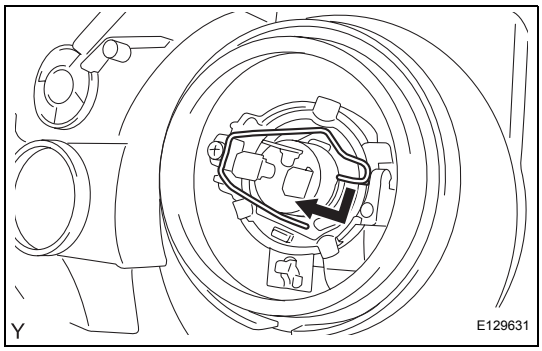
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-6)**
3. **REMOVE FRONT BUMPER COVER (See page ET-6)**
4. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the 2 screws and the bolt.
   (b) Disconnect the 2 connectors, then remove the headlight.

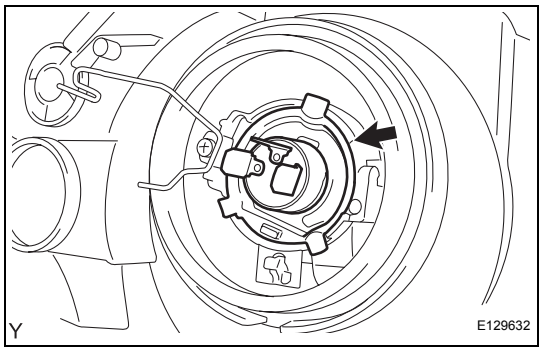


DISASSEMBLY

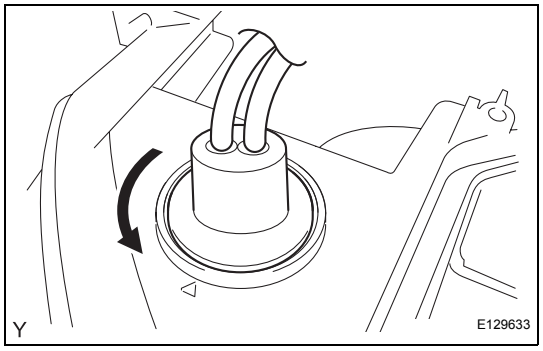
1. **REMOVE HEADLIGHT NO.1 BULB**
   (a) Remove the socket cover.

   (b) Push the set spring, and pull it in the directions indicated by the arrow in the illustration, to disengage it.



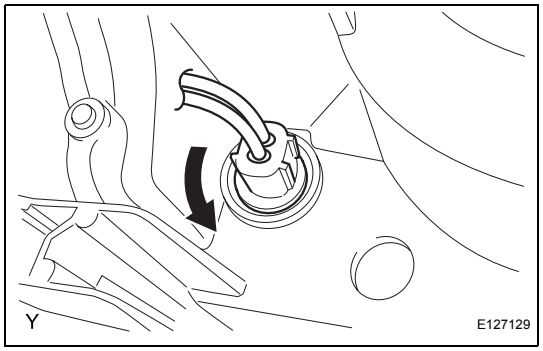


(c) Remove the headlight No. 1 bulb.
NOTICE:
Do not touch the bulb glass with your fingers.



2. REMOVE FRONT TURN SIGNAL AND PARKING LIGHT BULB

(a) Turn the front turn signal and parking light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.
(b) Remove the front turn signal and parking light bulb from the light socket.



3. REMOVE SIDE MARKER LIGHT BULB

(a) Turn the side marker light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.
(b) Remove the side marker light bulb from the light socket.

ADJUSTMENT

1. PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT

(a) Prepare the vehicle:
- Ensure that there is no damage or deformation of the body around the headlights.
- Fill the fuel tank.
- Fill the oil to the specified level.
- Fill the coolant to the specified level.
- Inflate the tires to the appropriate pressure.
- Place the spare tire, tools and jack in their original positions.
- Unload the trunk.
- Sit a person of average weight (68 kg, 150 lb) in the driver seat.

2. PREPARE FOR HEADLIGHT AIMING (for Using a Tester)

(a) Prepare the vehicle for headlight aim check.

(b) Adjust in accordance with headlight tester instructions.

3. PREPARE FOR HEADLIGHT AIMING (for Using a Screen)

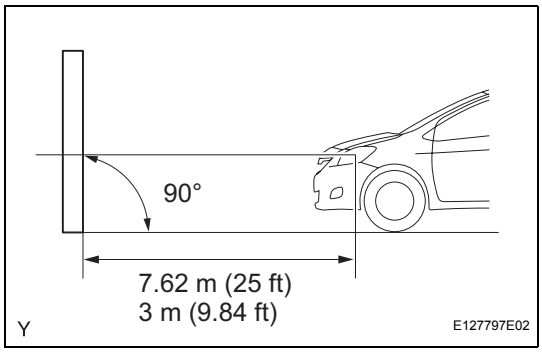
(a) Prepare the following vehicle conditions:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Keep a 7.62 m (25 ft) distance between the center of the headlight bulb and the wall.
- Place the vehicle on a level surface.
- Bounce the vehicle up and down to settle the suspension.

NOTICE:

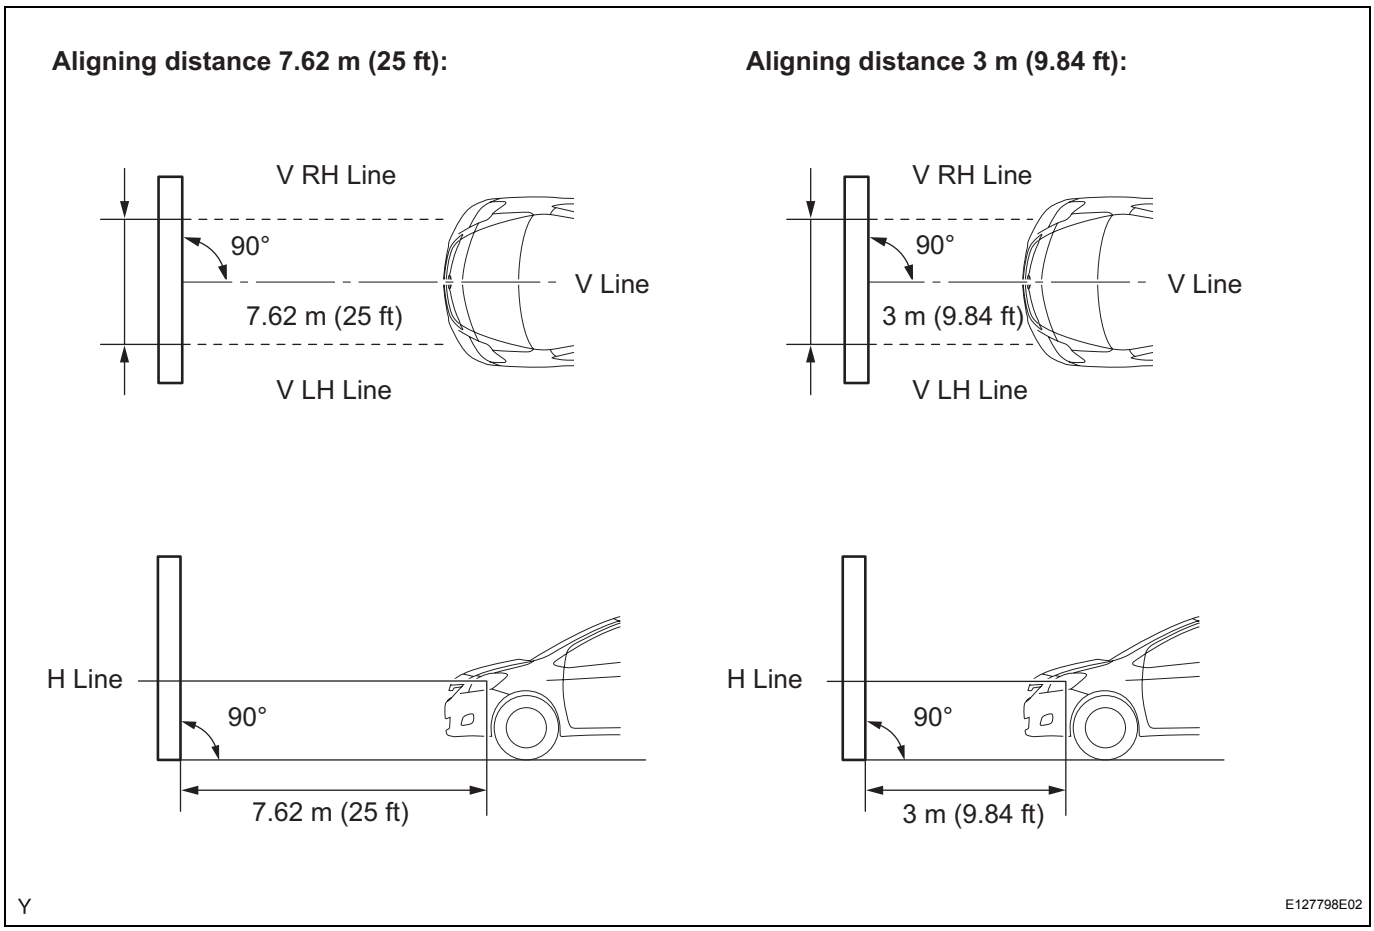
A distance of 7.62 m (25 ft) between the vehicle (the center of the headlight bulb) and the wall is necessary for proper aim adjustment. If unable to secure a distance of 7.62 m (25 ft), set a distance of exactly 3 m (9.84 ft) to check and adjust the headlight aim. (Since the target zone changes depending on the distance, follow the instructions shown in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) high x 4 m (13.1 ft) wide) to use as a screen.

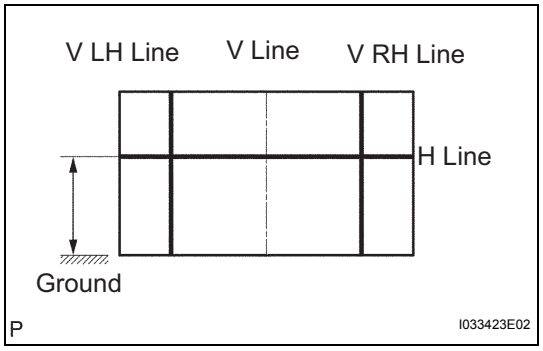
(c) Draw a vertical line down the center of the screen (V line).



(d) Set the screen, as shown in the illustration.



HINT:
- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



(e) Draw base lines (H line, V LH and V RH lines) on the screen, as shown in the illustration.
HINT:
- The base lines differ for "low-beam inspection" and "high-beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb.

(1) H Line (Headlight height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low-beam headlights.

(2) V LH Line and V RH Line (Center mark positions of left-hand (LH) and right-hand (RH) headlights):
Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low-beam headlight bulbs).

4. INSPECT HEADLIGHT AIMING

(a) Cover the headlight on the opposite side or disconnect its connector, to prevent light from the headlight not being inspected from affecting the headlight aiming inspection.

NOTICE:

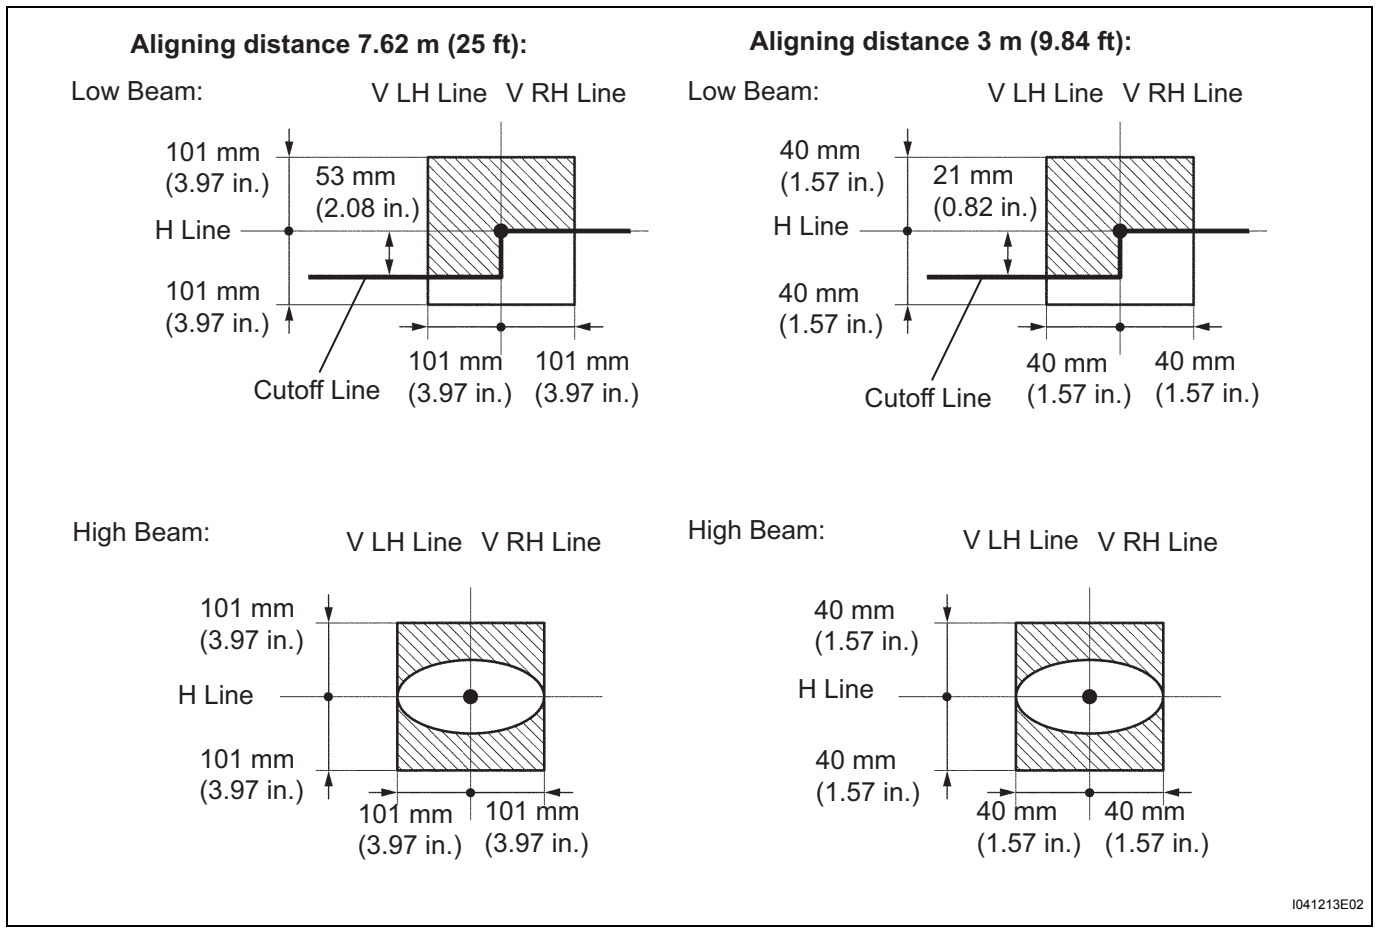
Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, and may easily melt or be damaged due to heat.

(b) Start the engine.

NOTICE:

Engine rpm must be 1,500 or more.

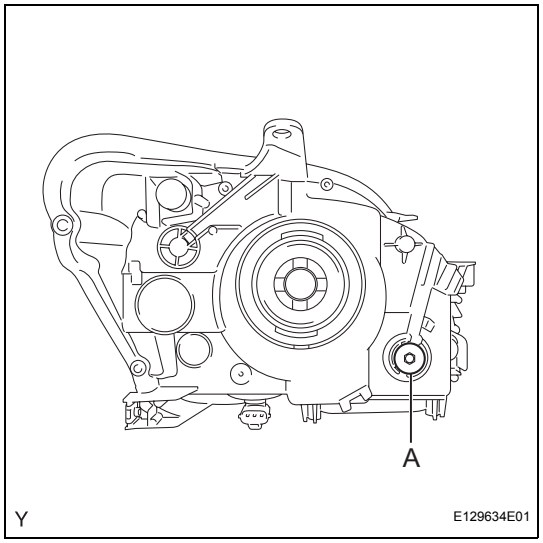
(c) Turn on the headlight and make sure that the cutoff line falls within the specified area, as shown in the illustration.



HINT:

- Since the low-beam light and the high-beam light are a unit, if the aim on one is correct, the other should also be correct. However, check both beams just to make sure.
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 101 mm (3.97 in.) above and below the H line as well as to the left and right of the V line with low-beam (SAE J599).

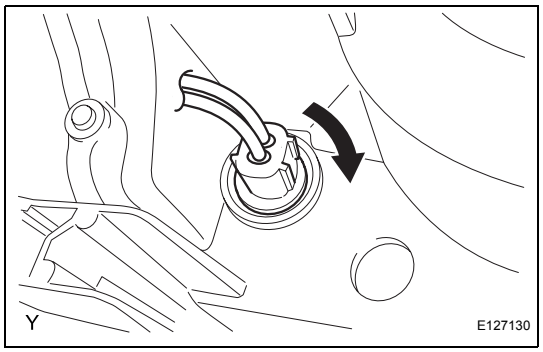
- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 40 mm (1.57 in.) above and below the H line as well as to the left and right of the V line with low-beam (SAE J599).
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 101 mm (3.97 in.) above and below the H line as well as to the left and right of the V line with high-beam (SAE J599).
- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 40 mm (1.57 in.) above and below the H line as well as to the left and right of the V line with high-beam (SAE J599).
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 53 mm (2.08 in.) below the H line with low-beam.
- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 21 mm (0.82 in.) below the H line with low-beam.



5. ADJUST HEADLIGHT AIMING

(a) Adjust the aiming vertically:
Adjust the headlight aim to within the specified range by turning aiming screw A with a screwdriver.
NOTICE:
The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

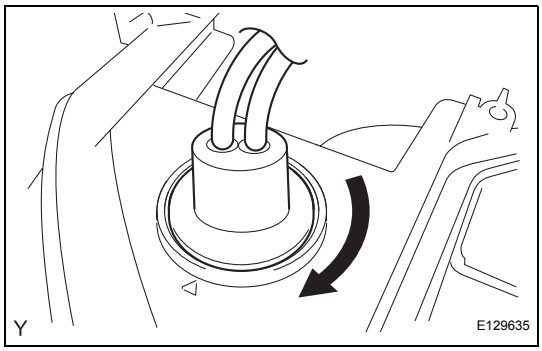
(b) Perform low-beam aim adjustment.
HINT:
The headlight aim moves down when the aiming screw is turned clockwise, and moves up when the aiming screw is turned counterclockwise.



REASSEMBLY

1. INSTALL SIDE MARKER LIGHT BULB

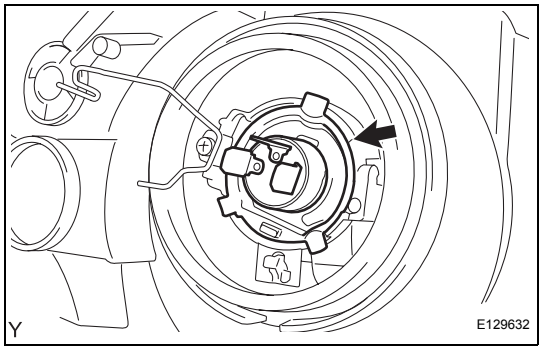
(a) Install the side marker light bulb into the light socket.
(b) Turn the side marker light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.



2. INSTALL FRONT TURN SIGNAL AND PARKING LIGHT BULB

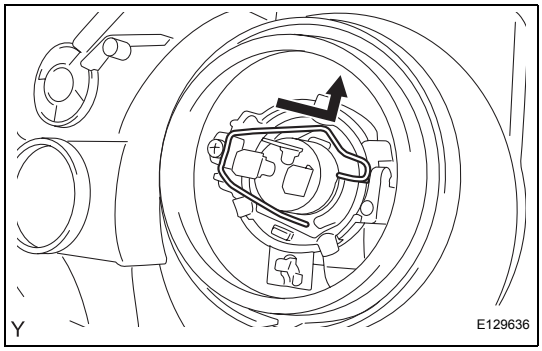
(a) Install the front turn signal and parking light bulb into the light socket.

(b) Turn the front turn signal and parking light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.

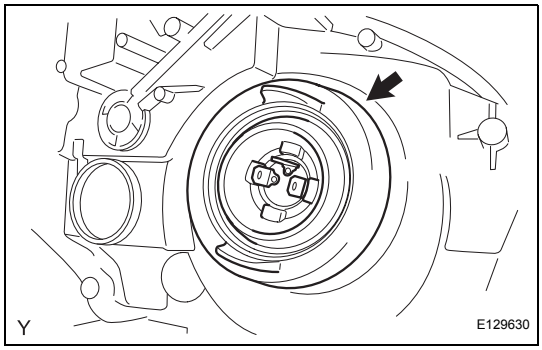


3. INSTALL HEADLIGHT NO.1 BULB

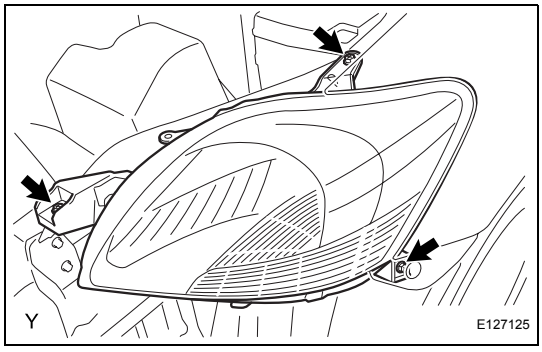
(a) Install the headlight No. 1 bulb.



(b) Lock the set spring by moving it in the directions indicated by the arrow in the illustration.



(c) Install the socket cover.



INSTALLATION

1. INSTALL HEADLIGHT ASSEMBLY

(a) Connect the 2 connectors.

(b) Install the headlight with the 2 screws and the bolt.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(for bolt)

2. INSTALL FRONT BUMPER COVER (See page ET-16)

3. INSTALL FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-19)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
5. PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT (See page LI-87)
6. PREPARE FOR HEADLIGHT AIMING (for Using a Screen) (See page LI-88)
7. INSPECT HEADLIGHT AIMING (See page LI-90)
8. ADJUST HEADLIGHT AIMING (See page LI-91)

REPAIR

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.
- If only the installation area of the headlight is damaged, the repairs described below can be performed inexpensively by using bracket for the repair. This may only be done if other areas of the headlight are not damaged.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-6)

3. REMOVE FRONT BUMPER COVER (See page ET-6)

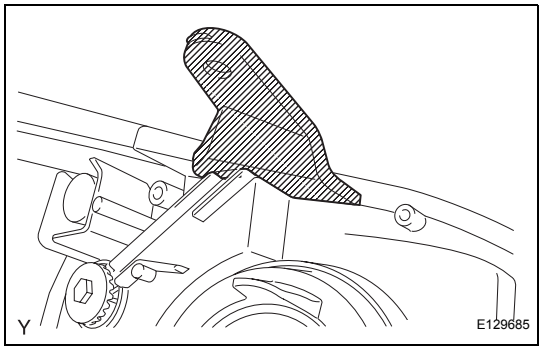
4. REMOVE HEADLIGHT ASSEMBLY (See page LI-86)

5. INSTALL HEADLIGHT PROTECTOR RETAINER UPPER

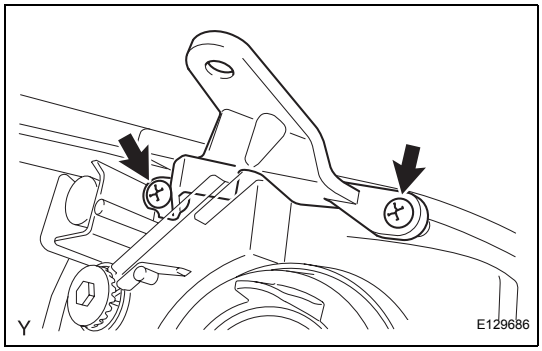
HINT:
- If only the installation area of the headlight is damaged, use a bracket for a low-cost repair.
- Ensure that other areas of the headlight are not damaged.

(a) Cut off the portion indicated by the hatched lines in the illustration and smooth the surface with sandpaper.

NOTICE:
After cutting off the shaded portion, place the headlight protector retainer upper against the bosses and gradually file away the shaded portion until installation is possible.

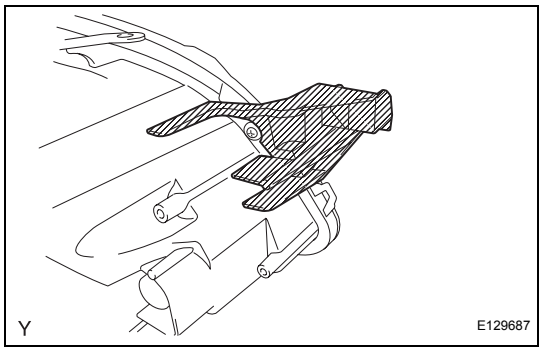


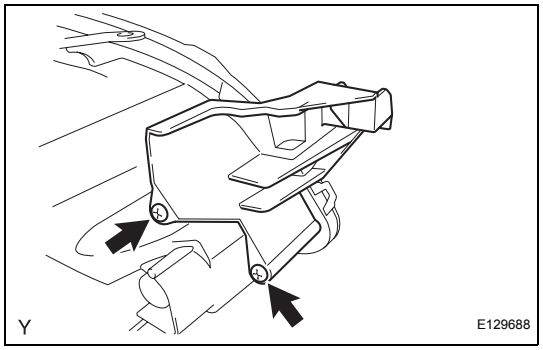
(b) Install the headlight protector retainer upper with the 2 screws.



6. INSTALL HEADLIGHT PROTECTOR RETAINER LOWER

HINT:
- If only the installation area of the headlight is damaged, use a bracket for a low-cost repair.
- Ensure that other areas of the headlight are not damaged.





(a) Cut off the portion indicated by the hatched lines in the illustration and smooth the surface with sandpaper.
NOTICE:
After cutting off the shaded portion, place the headlight protector retainer lower against the bosses and gradually file away the shaded portion until installation is possible.

(b) Install the headlight protector retainer lower with the 2 screws.

7. **INSTALL HEADLIGHT ASSEMBLY (See page LI-92)**
8. **INSTALL FRONT BUMPER COVER (See page ET-16)**
9. **INSTALL FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-19)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
11. **PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT (See page LI-87)**
12. **PREPARE FOR HEADLIGHT AIMING (for Using a Tester) (See page LI-87)**
13. **PREPARE FOR HEADLIGHT AIMING (for Using a Screen) (See page LI-88)**
14. **INSPECT HEADLIGHT AIMING (See page LI-90)**
15. **ADJUST HEADLIGHT AIMING (See page LI-91)**

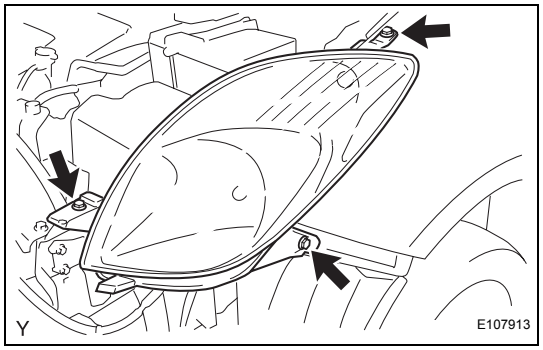
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT BUMPER COVER (See page ET-24)**
3. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the 3 screws.
   (b) Disconnect the 3 connectors, then remove the headlight.

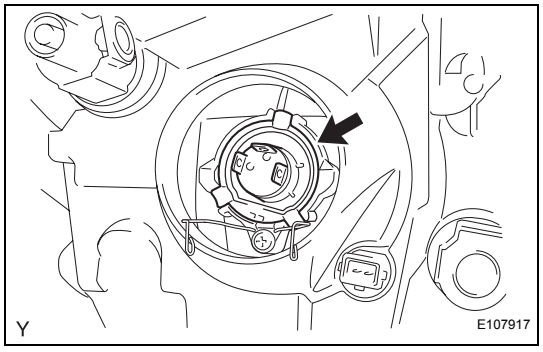


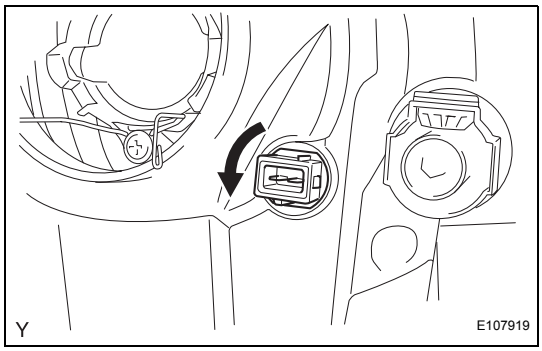
DISASSEMBLY

1. **REMOVE HEADLIGHT BULB**
   (a) Remove the socket cover.

   (b) Push the set spring, and pull it in the direction indicated by the arrows in the illustration, to disengage it.

   (c) Remove the headlight bulb.
   NOTICE:
   Do not touch the bulb glass with your fingers.

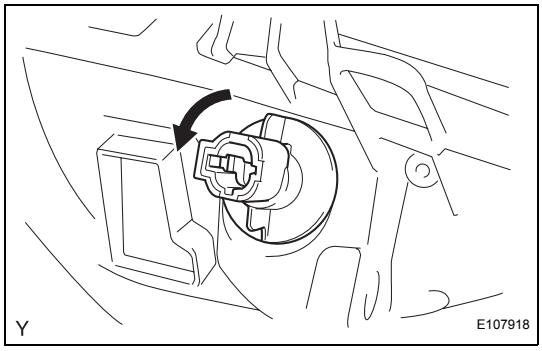




2. REMOVE CLEARANCE LIGHT BULB

(a) Turn the clearance light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

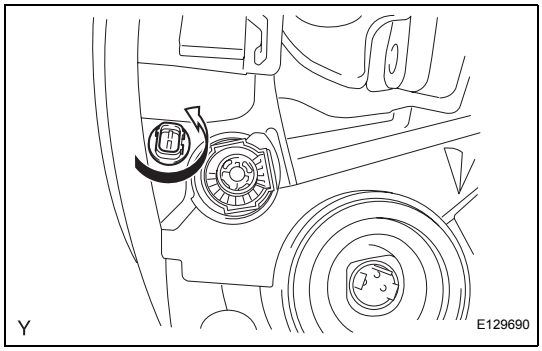
(b) Remove the clearance light bulb from the light socket.



3. REMOVE FRONT TURN SIGNAL LIGHT BULB

(a) Turn the front turn signal light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(b) Remove the front turn signal light bulb from the light socket.



4. REMOVE PARKING LIGHT BULB

(a) Turn the parking light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(b) Remove the parking light bulb from the light socket.

ADJUSTMENT

1. PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT

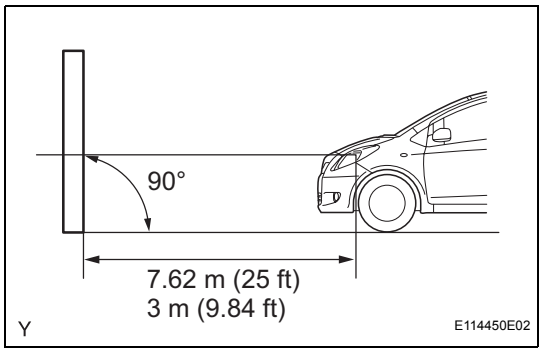
(a) Prepare the vehicle:
- Ensure that there is no damage or deformation of the body around the headlights.
- Fill the fuel tank.
- Fill the oil to the specified level.
- Fill the coolant to the specified level.
- Inflate the tires to the appropriate pressure.
- Place the spare tire, tools and jack in their original positions.
- Unload the trunk.
- Sit a person of average weight (68 kg, 150 lb) in the driver seat.

2. PREPARE FOR HEADLIGHT AIMING (for Using a Tester)

(a) Prepare the vehicle for headlight aim check.

(b) Adjust in accordance with headlight tester instructions.

3. PREPARE FOR HEADLIGHT AIMING (for Using a Screen)



(a) Prepare the vehicle in accordance with the following conditions:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Keep a 7.62 m (25 ft) distance between the center of the headlight bulb and the wall.
- Place the vehicle on a level surface.
- Bounce the vehicle up and down to settle the suspension.

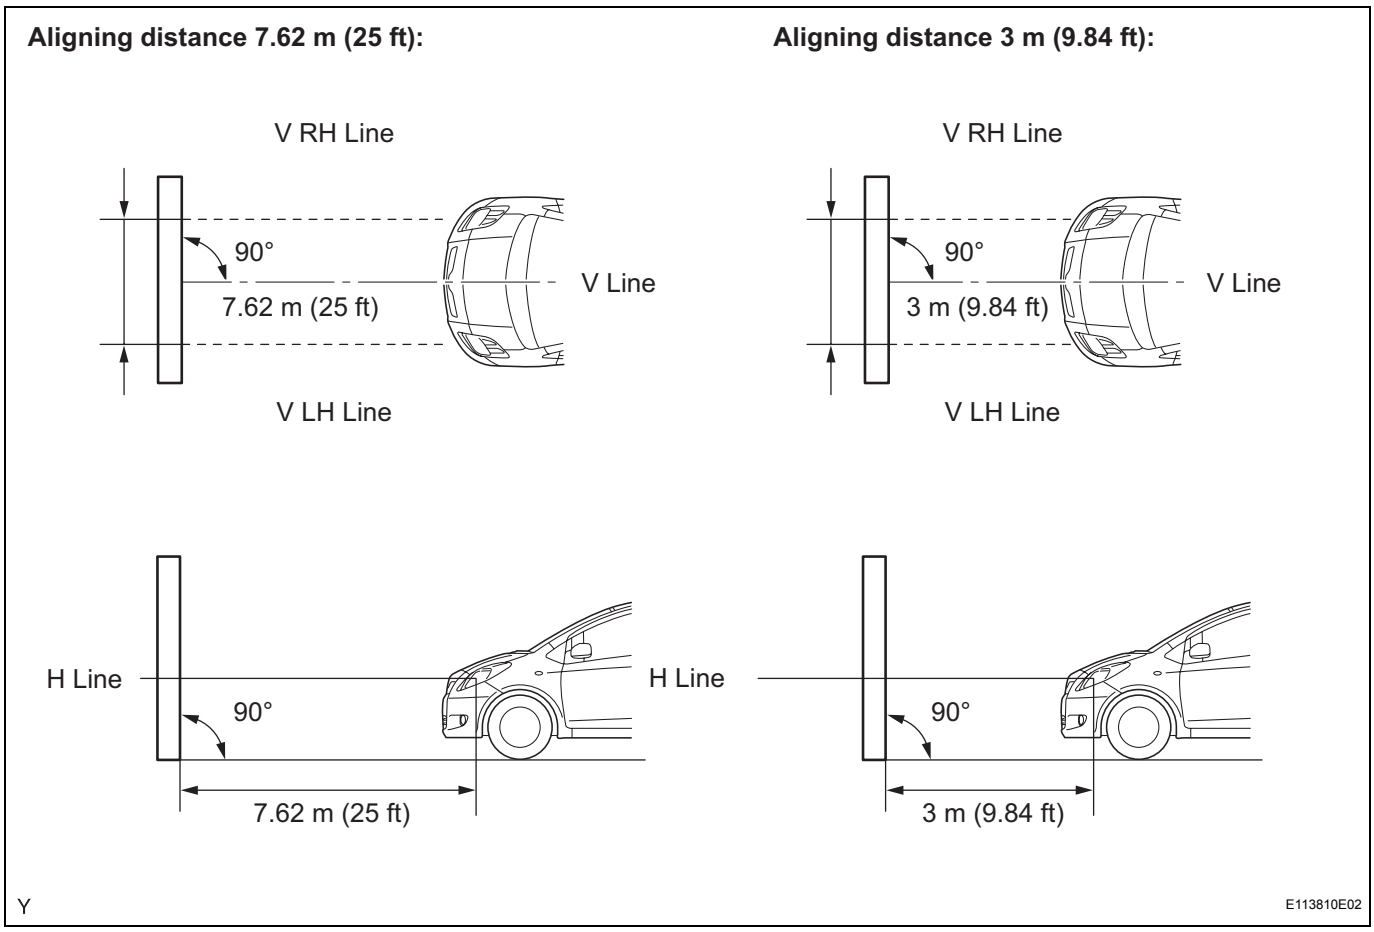
NOTICE:

A distance of 7.62 m (25 ft) between the vehicle (the center of the headlight bulb) and the wall is necessary for proper aim adjustment. If unable to secure a distance of 7.62 m (25 ft), set a distance of exactly 3 m (9.84 ft) to check and adjust the headlight aim. (Since the target zone changes depending on the distance, follow the instructions shown in the illustration.)

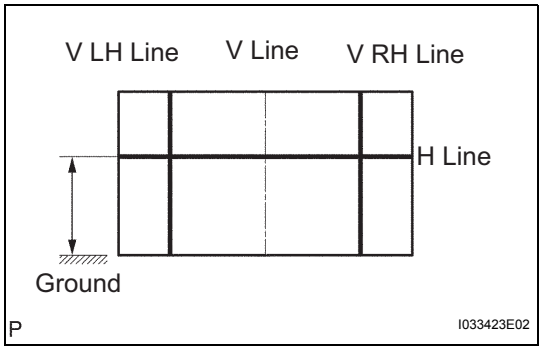
(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) high x 4 m (13.1 ft) wide) to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen, as shown in the illustration.



HINT:
- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



(e) Draw base lines (H line, V LH and V RH lines) on the screen, as shown in the illustration.
HINT:
- The base lines differ for "low-beam inspection" and "high-beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb.

(1) H Line (Headlight height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low-beam headlights.

(2) V LH Line and V RH Line (Center mark positions of left-hand (LH) and right-hand (RH) headlights):
Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low-beam headlight bulbs).

4. INSPECT HEADLIGHT AIMING

(a) Cover the headlight on the opposite side or disconnect its connector, to prevent light from the headlight not being inspected from affecting the headlight aiming inspection.

NOTICE:

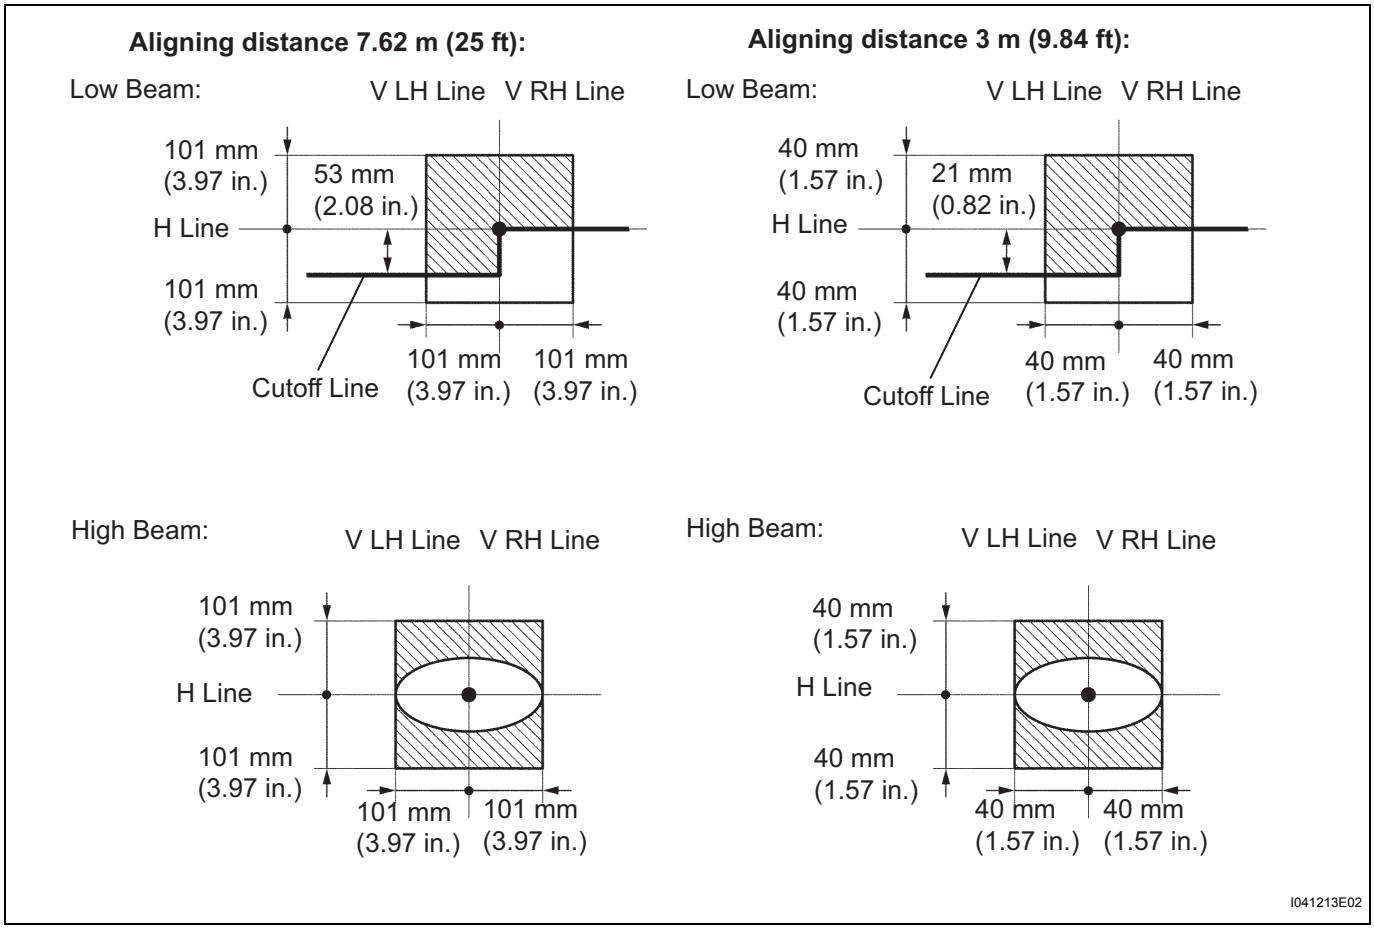
Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, and may easily melt or be damaged due to heat.

(b) Start the engine.

NOTICE:

Engine rpm must be 1,500 or more.

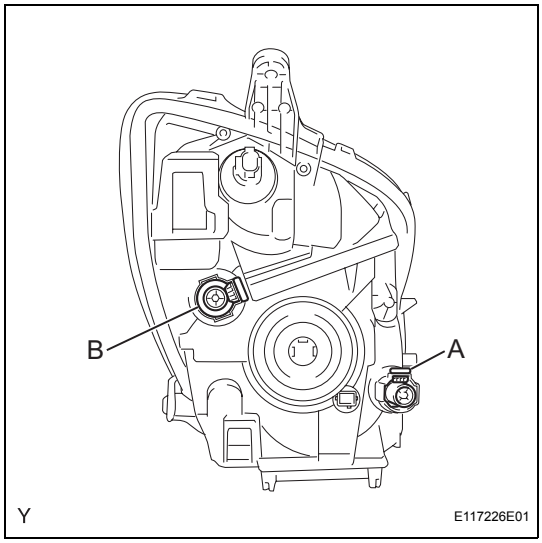
(c) Turn on the headlight and make sure that the cutoff line falls within the specified area, as shown in the illustration.



HINT:

- Since the low-beam light and the high-beam light are a unit, if the aim on one is correct, the other should also be correct. However, check both beams just to make sure.
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 101 mm (3.97 in.) above and below the H line as well as to the left and right of the V line with low-beam (SAE J599).

- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 40 mm (1.57 in.) above and below the H line as well as to the left and right of the V line with low-beam (SAE J599).
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 101 mm (3.97 in.) above and below the H line as well as to the left and right of the V line with high-beam (SAE J599).
- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 40 mm (1.57 in.) above and below the H line as well as to the left and right of the V line with high-beam (SAE J599).
- Alignment distance is 7.62 m (25 ft):
  The cutoff line is 53 mm (2.08 in.) below the H line with low-beam.
- Alignment distance is 3 m (9.84 ft):
  The cutoff line is 21 mm (0.82 in.) below the H line with low-beam.



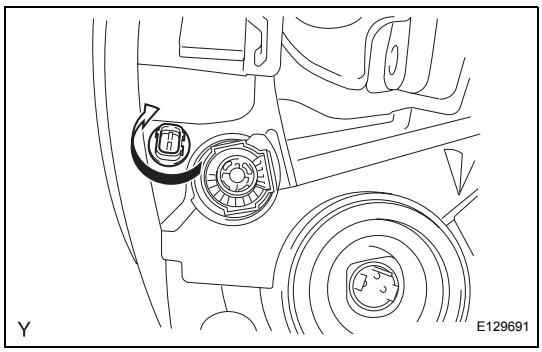
5. ADJUST HEADLIGHT AIMING

(a) Adjust the aiming vertically:
Adjust the headlight aim to within the specified range by turning aiming screw A with a screwdriver.
NOTICE:
The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

(b) Perform low-beam aim adjustment.
HINT:
The headlight aim moves down when the aiming screw is turned clockwise, and moves up when the aiming screw is turned counterclockwise.

(c) Adjust the aim horizontally:
Adjust the headlight aim to within the specified range by turning aiming screw B with a screwdriver.
NOTICE:
The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

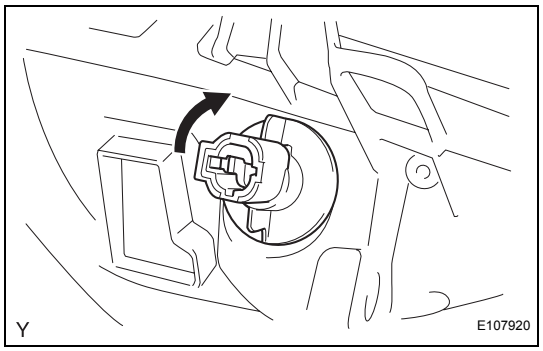
REASSEMBLY



1. INSTALL PARKING LIGHT BULB

(a) Install the parking light bulb into the light socket.

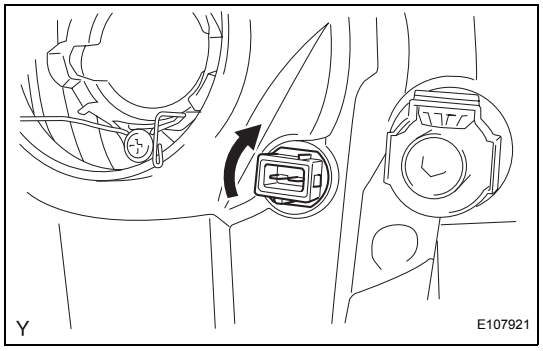
(b) Turn the parking light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.



2. INSTALL FRONT TURN SIGNAL LIGHT BULB

(a) Install the front turn signal light bulb into the light socket.

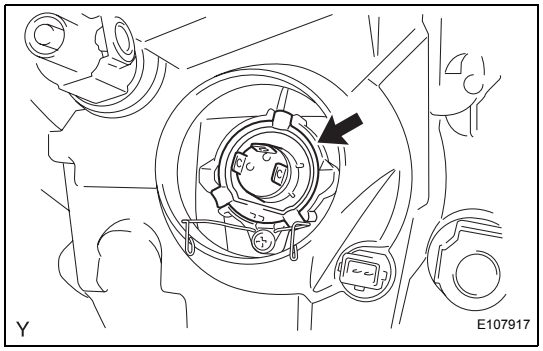
(b) Turn the front turn signal light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.



3. INSTALL CLEARANCE LIGHT BULB

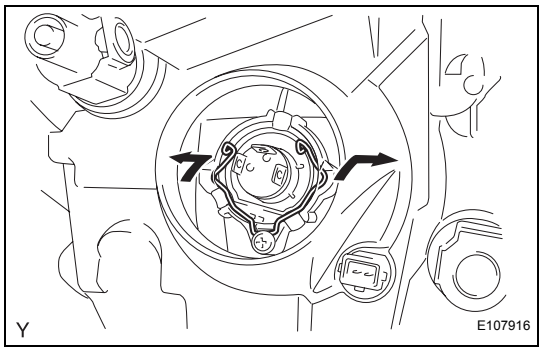
(a) Install the clearance light bulb into the light socket.

(b) Turn the clearance light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.

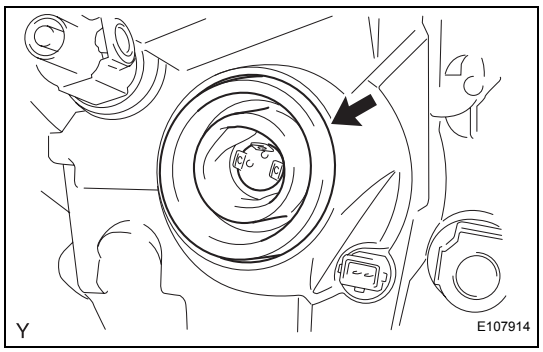


4. INSTALL HEADLIGHT BULB

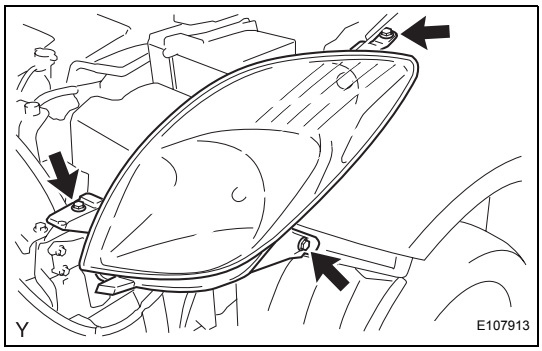
(a) Install the headlight bulb.



(b) Lock the set spring by moving it in the directions indicated by the arrows in the illustration.



(c) Install the socket cover.



INSTALLATION

1. **INSTALL HEADLIGHT ASSEMBLY**
   (a) Connect the 3 connectors.
   (b) Install the headlight with the 3 screws.
2. **INSTALL FRONT BUMPER COVER (See page ET-33)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
4. **PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT (See page LI-98)**
5. **PREPARE FOR HEADLIGHT AIMING (for Using a Tester) (See page LI-98)**
6. **PREPARE FOR HEADLIGHT AIMING (for Using a Screen) (See page LI-99)**
7. **INSPECT HEADLIGHT AIMING (See page LI-101)**
8. **ADJUST HEADLIGHT AIMING (See page LI-102)**

REPAIR

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.
- If only the installation area of the headlight is damaged, the repairs described below can be performed inexpensively by using brackets for the repair. This may only be done if the other areas of the headlight are not damaged.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT BUMPER COVER (See page ET-24)

3. REMOVE HEADLIGHT ASSEMBLY (See page LI-97)

4. INSTALL HEADLIGHT PROTECTOR RETAINER UPPER

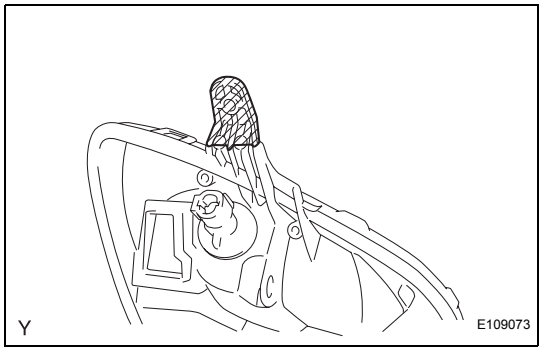
HINT:

- If only the installation area of the headlight is damaged, use a bracket for a low-cost repair.
- Ensure that other areas of the headlight are not damaged.

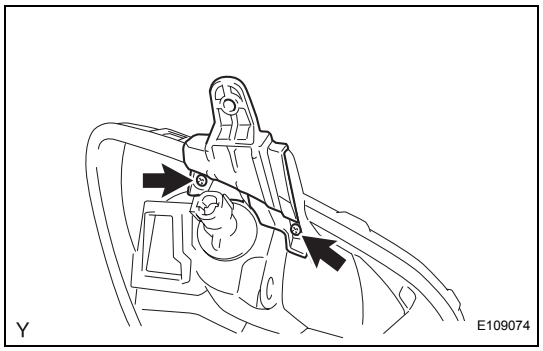
(a) Cut off the portion indicated by the hatched lines in the illustration and smooth the surface with sandpaper.

NOTICE:

After cutting off the shaded portion, place the headlight protector retainer upper against the bosses and gradually file away the shaded portion until installation is possible.



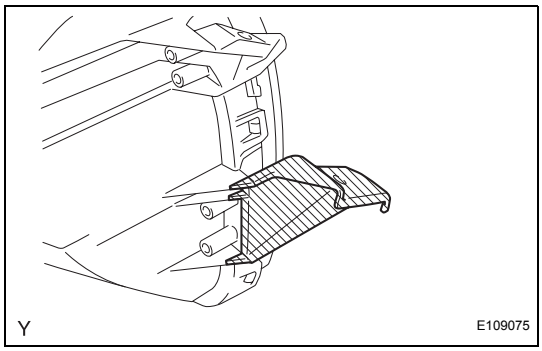
(b) Install the headlight protector retainer upper with the 2 screws.



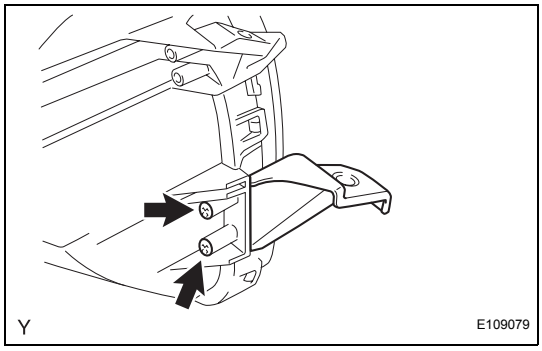
5. INSTALL HEADLIGHT PROTECTOR RETAINER LOWER

HINT:

- If only the installation area of the headlight is damaged, use a bracket for a low-cost repair.
- Ensure that other areas of the headlight are not damaged.



(a) Cut off the portion indicated by the hatched lines in the illustration and smooth the surface with sandpaper.
NOTICE:
After cutting off the shaded portion, place the headlight protector retainer lower against the bosses and gradually file away the shaded portion until installation is possible.

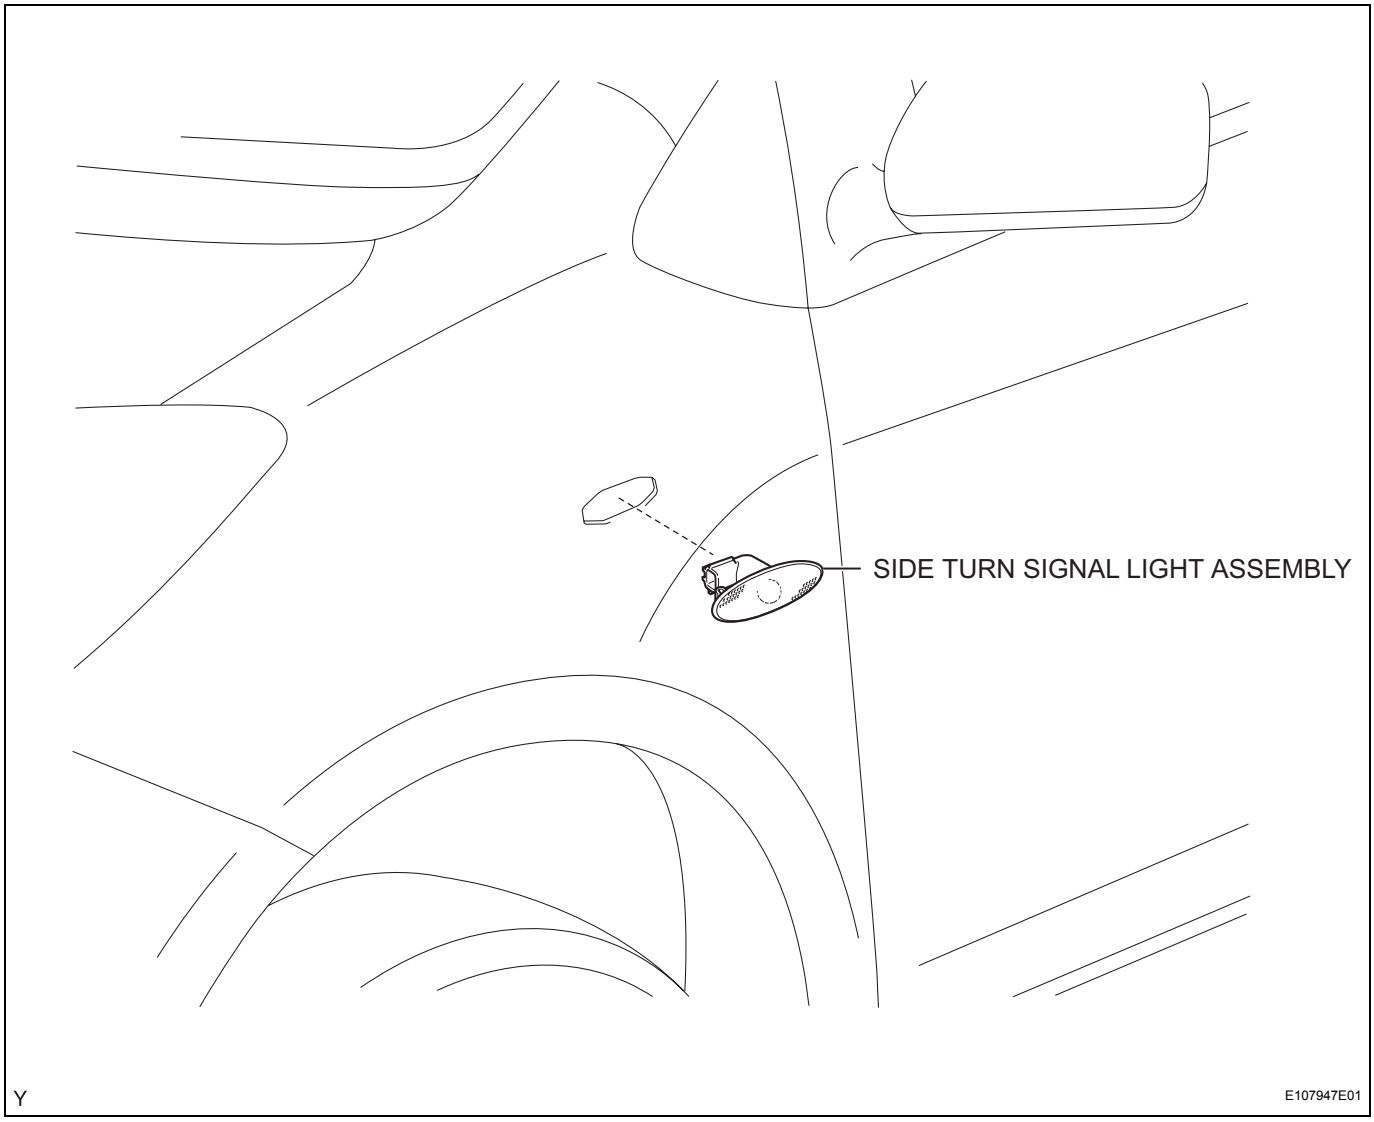


(b) Install the headlight protector retainer lower with the 2 screws.

6. **INSTALL HEADLIGHT ASSEMBLY (See page LI-104)**
7. **INSTALL FRONT BUMPER COVER (See page ET-33)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
9. **PREPARE VEHICLE FOR HEADLIGHT AIMING ADJUSTMENT (See page LI-98)**
10. **PREPARE FOR HEADLIGHT AIMING (for Using a Tester) (See page LI-98)**
11. **PREPARE FOR HEADLIGHT AIMING (for Using a Screen) (See page LI-99)**
12. **INSPECT HEADLIGHT AIMING (See page LI-101)**
13. **ADJUST HEADLIGHT AIMING (See page LI-102)**

SIDE TURN SIGNAL LIGHT ASSEMBLY (for Hatchback)

COMPONENTS

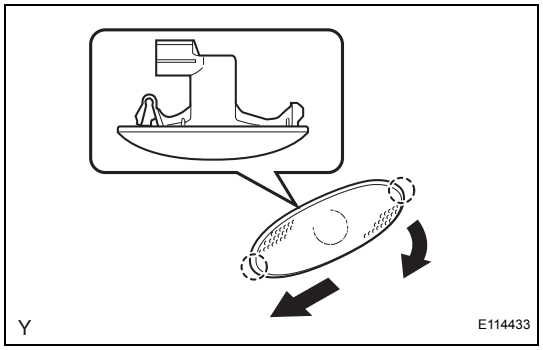


REMOVAL

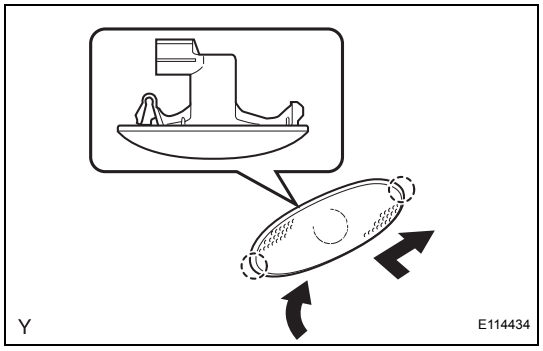
HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE SIDE TURN SIGNAL LIGHT ASSEMBLY
(a) Disengage the 2 claws and disconnect the side turn signal light.
(b) Disconnect the connector and remove the side turn signal light.



INSTALLATION

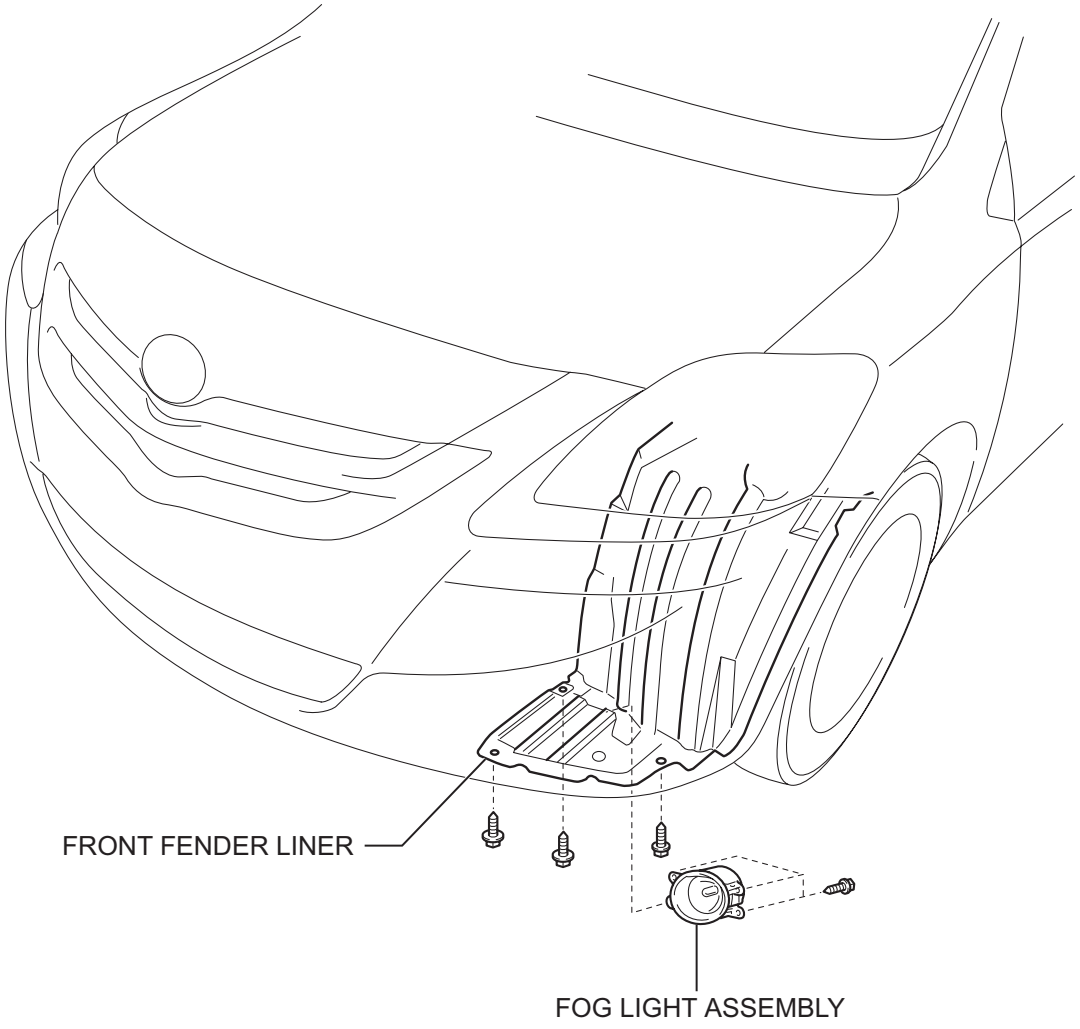


1. INSTALL SIDE TURN SIGNAL LIGHT ASSEMBLY
(a) Connect the connector.
(b) Engage the 2 claws and install the side turn signal light assembly, as shown in the illustration.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FOG LIGHT ASSEMBLY (for Sedan)

COMPONENTS



Y

E127801E01

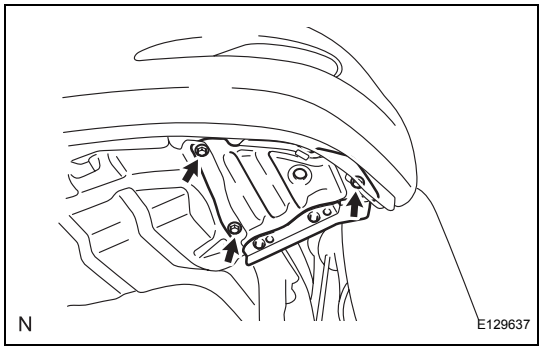
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT FENDER LINER

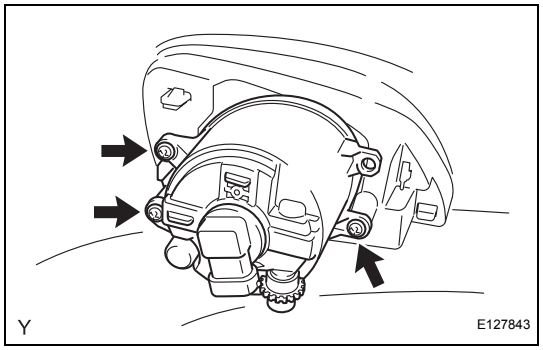
(a) Remove the 3 screws and remove the front side of the front fender liner.



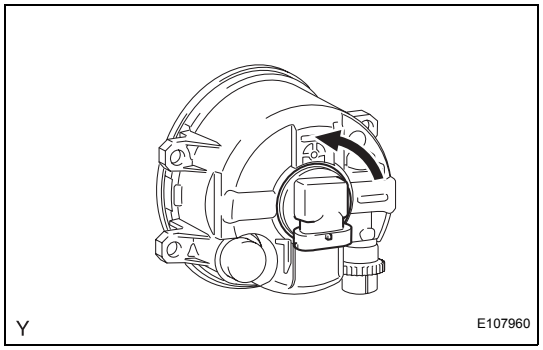
3. REMOVE FOG LIGHT ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 3 screws, then remove the fog light.



(c) Turn the fog light bulb, in the direction indicated by the arrow in the illustration, to remove it.

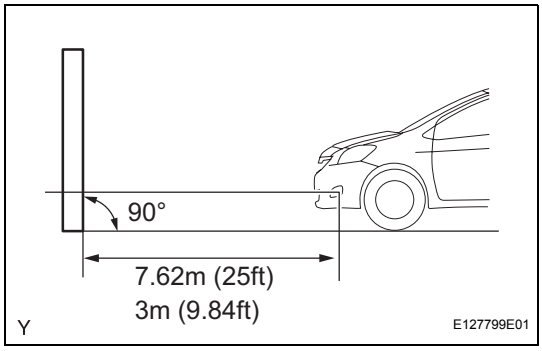


LI

ADJUSTMENT

1. PREPARE VEHICLE FOR FOG LIGHT AIMING ADJUSTMENT

(a) Prepare the vehicle:
- Ensure that there is no damage or deformation of the body around the fog lights.
- Fill the fuel tank.
- Fill the oil to the specified level.
- Fill the coolant to the specified level.
- Inflate the tires to the appropriate pressure.
- Place the spare tire, tools and jack in their original positions.
- Unload the trunk.
- Sit a person of average weight (75 kg, 165 lb) in the driver seat.



2. PREPARE FOR FOG LIGHT AIMING

(a) Prepare the vehicle in accordance with the following conditions:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the fog lights can be observed and above which it cannot.
- Place the vehicle at a 90°angle to the wall.
- Keep a 7.62 m (25 ft) distance between the center of the fog light bulb and the wall.
- Place the vehicle on a level surface.
- Bounce the vehicle up and down to settle the suspension.

NOTICE:

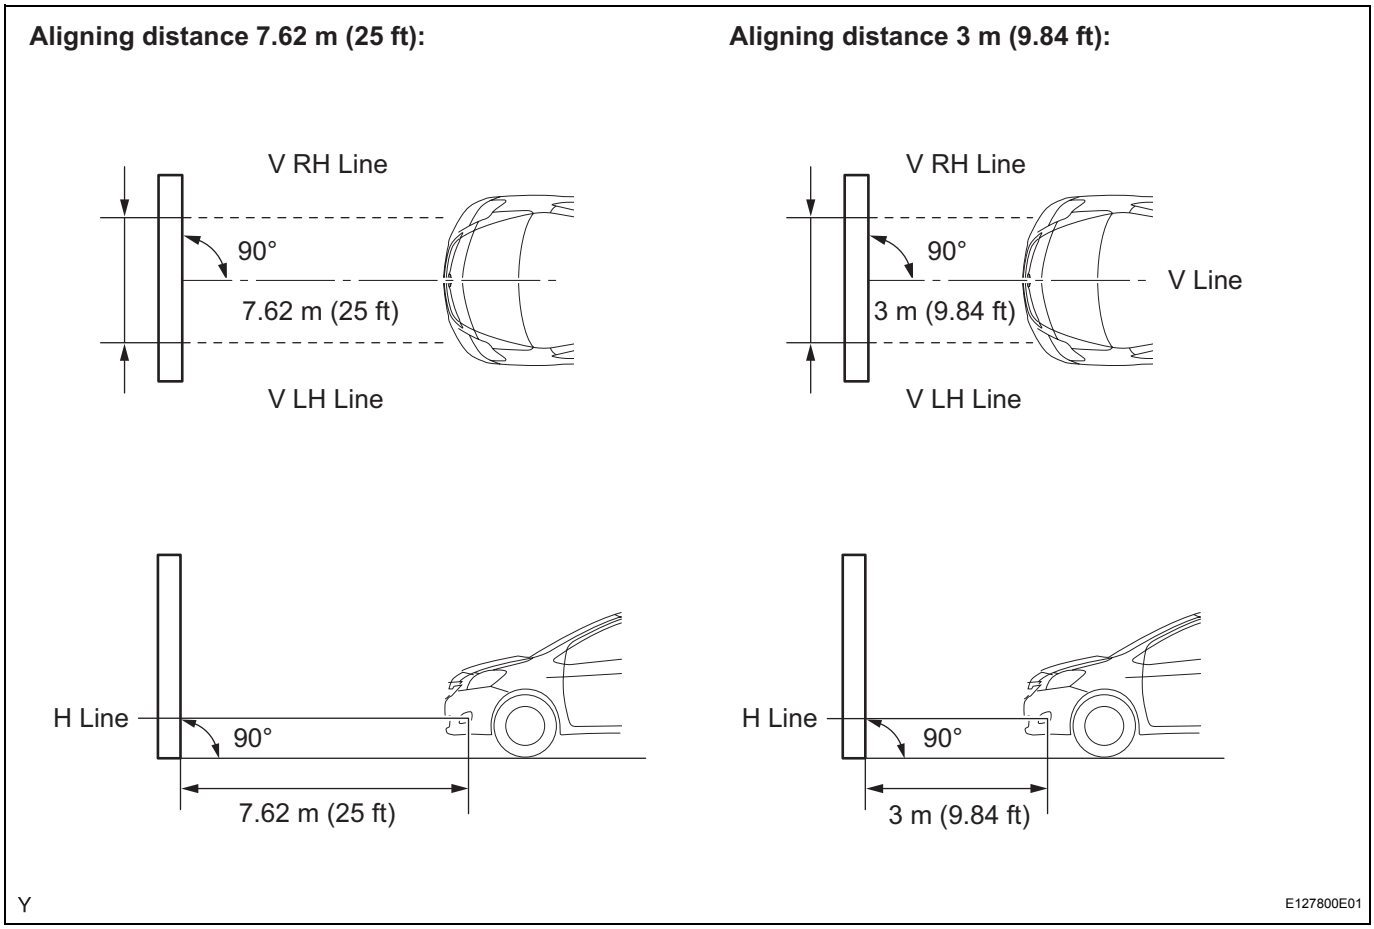
A distance of 7.62 m (25 ft) between the vehicle (center of the fog light bulb) and the wall is necessary for proper aim adjustment. If unable to secure a distance of 7.62 m (25 ft), secure a distance of exactly 3 m (9.84 ft) to check and adjust the fog light aim. (Since the target zone will change with the distance, follow the instructions shown in the illustration.)

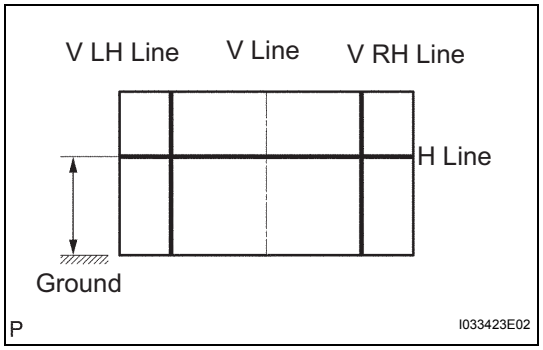
(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) (high) x 4 m (13.1 ft) (wide)) to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.

HINT:
- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



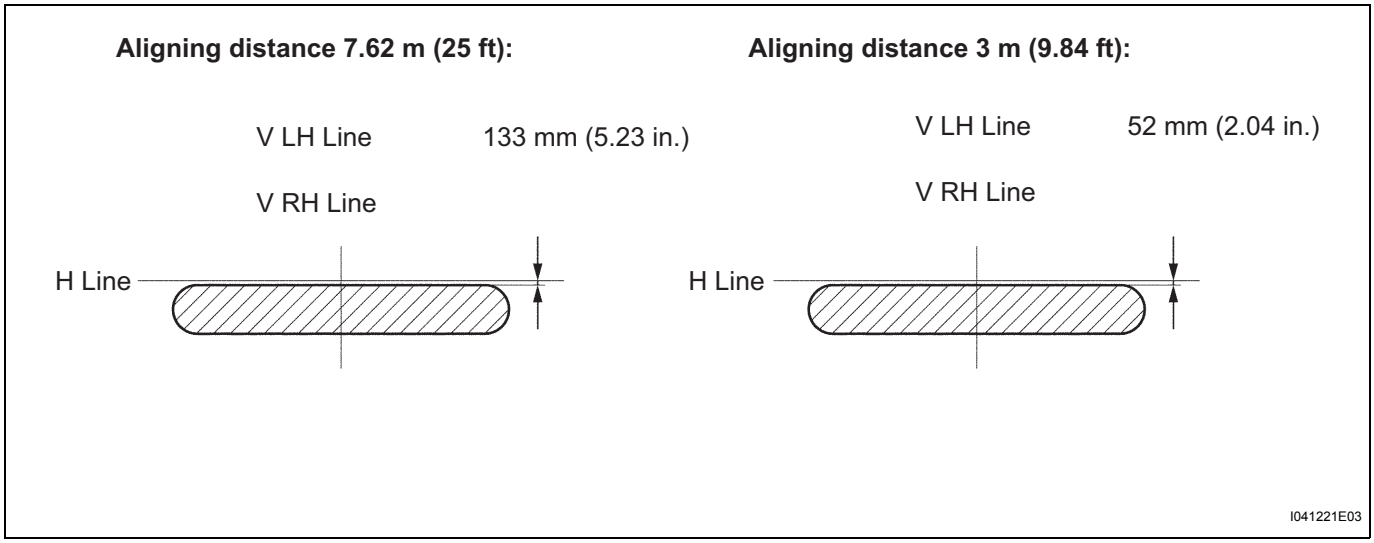


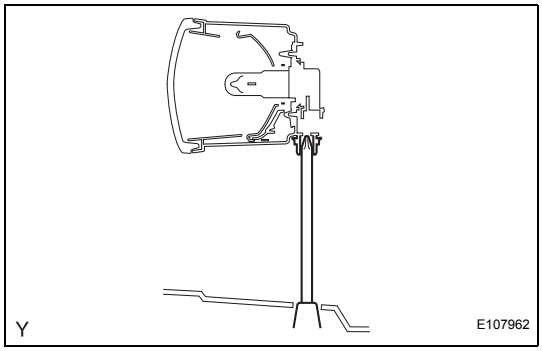
(e) Draw base lines (H line, V LH, V RH lines) on the screen as shown in the illustration.
HINT:
Mark the fog light bulb center marks on the screen. If the center mark cannot be observed on the fog light, use the center of the fog light bulb or the manufacturer's name marked on the fog light as the center mark.
(1) H Line (Fog light height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the fog light bulb center marks of the low-beam fog lights.
(2) V LH Line and V RH Line (Center mark positions of left-hand (LH) and right-hand (RH) fog lights):
Draw two vertical lines so that they intersect the H line at each center mark.

3. INSPECT FOG LIGHT AIMING

(a) Cover the fog light or disconnect the connector of the fog light on the opposite side to prevent light from the fog light not being inspected from affecting fog light aiming inspection.
(b) Start the engine.
NOTICE:
Engine rpm must be 1,500 or more.

(c) Turn on the fog light and make sure that the cutoff line falls within the specified area, as shown in the illustration.





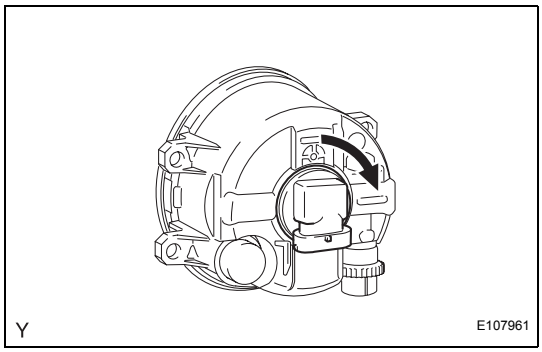
4. ADJUST FOG LIGHT AIMING

(a) Adjust the fog light aim to within the specified range by turning the aiming screw with a screwdriver.

NOTICE:

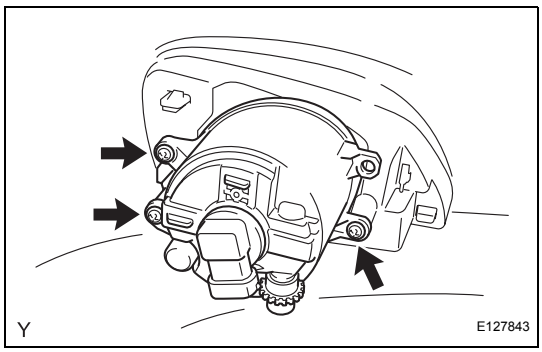
The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

INSTALLATION



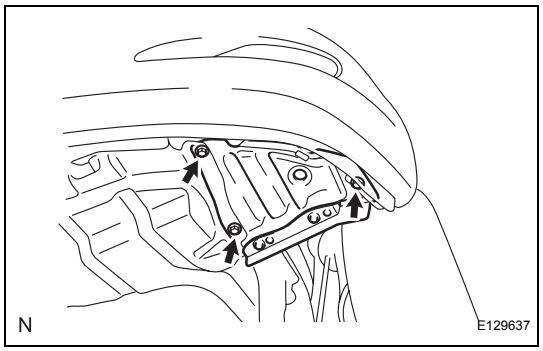
1. INSTALL FOG LIGHT ASSEMBLY

(a) Turn the fog light bulb, in the direction indicated by the arrow in the illustration, to install it.



(b) Install the fog light with the 3 screws.

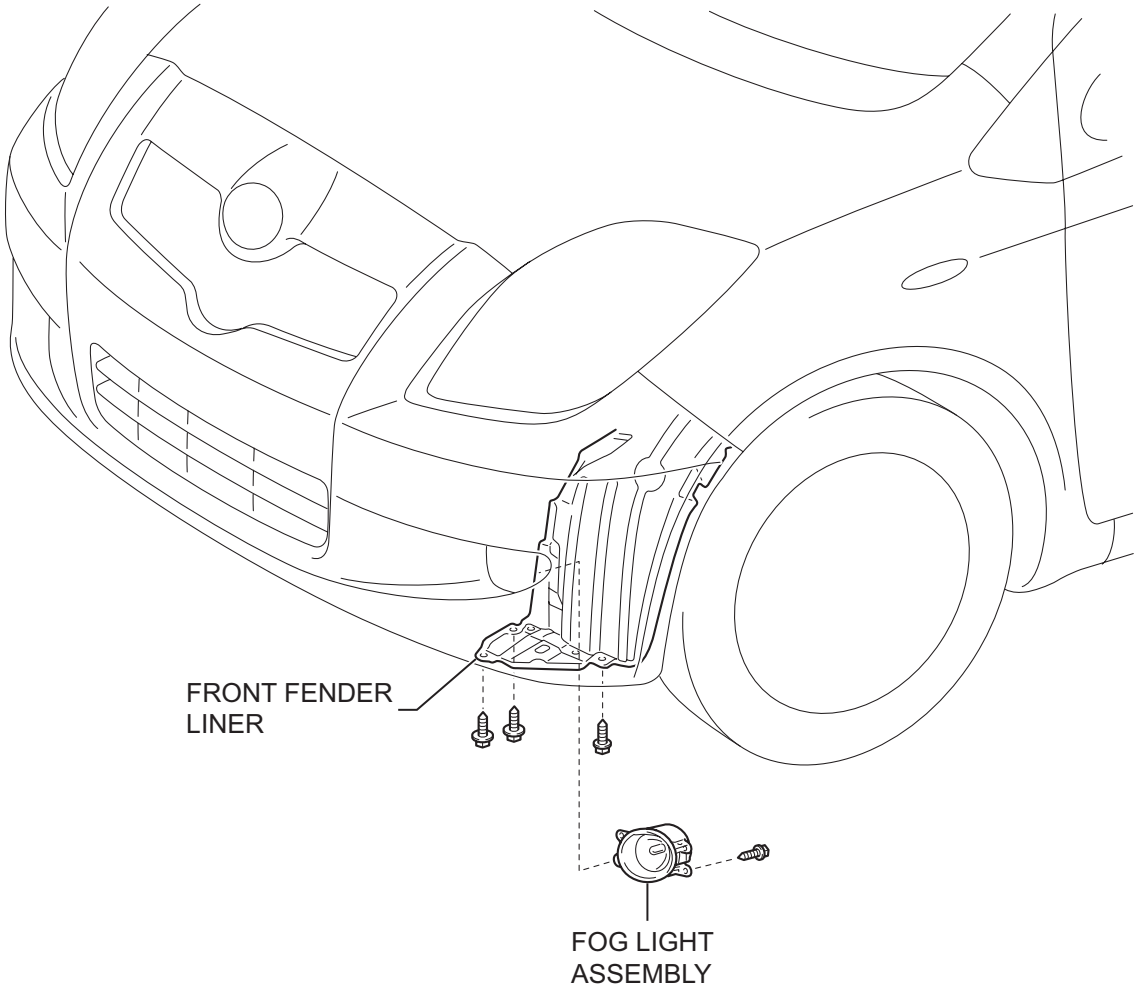
(c) Connect the connector.



2. **INSTALL FRONT FENDER LINER**
   (a) Install the 3 screws.
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
4. **PREPARE VEHICLE FOR FOG LIGHT AIMING ADJUSTMENT (See page LI-109)**
5. **PREPARE FOR FOG LIGHT AIMING (See page LI-110)**
6. **INSPECT FOG LIGHT AIMING (See page LI-111)**
7. **ADJUST FOG LIGHT AIMING (See page LI-112)**

FOG LIGHT ASSEMBLY (for Hatchback)

COMPONENTS



Y

E114475E01

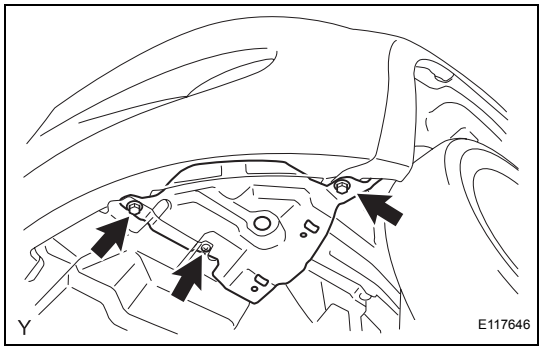
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT FENDER LINER

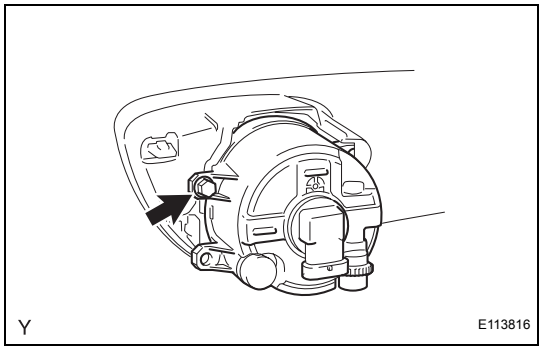
(a) Remove the 3 screws and remove the front side of the front fender liner.



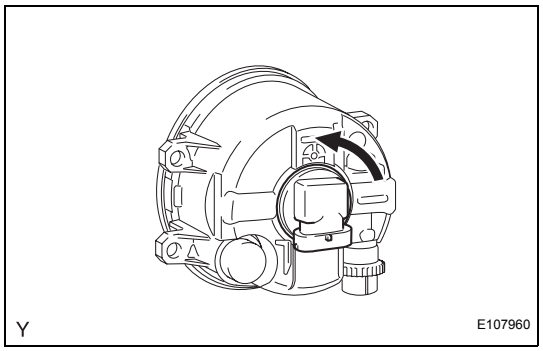
3. REMOVE FOG LIGHT ASSEMBLY

(a) Disconnect the connector.

(b) Remove the screw, then remove the fog light.



(c) Turn the fog light bulb, in the direction indicated by the arrow in the illustration, to remove it.



LI

ADJUSTMENT

1. PREPARE VEHICLE FOR FOG LIGHT AIMING ADJUSTMENT

(a) Prepare the vehicle:
- Ensure that there is no damage or deformation of the body around the fog lights.
- Fill the fuel tank.

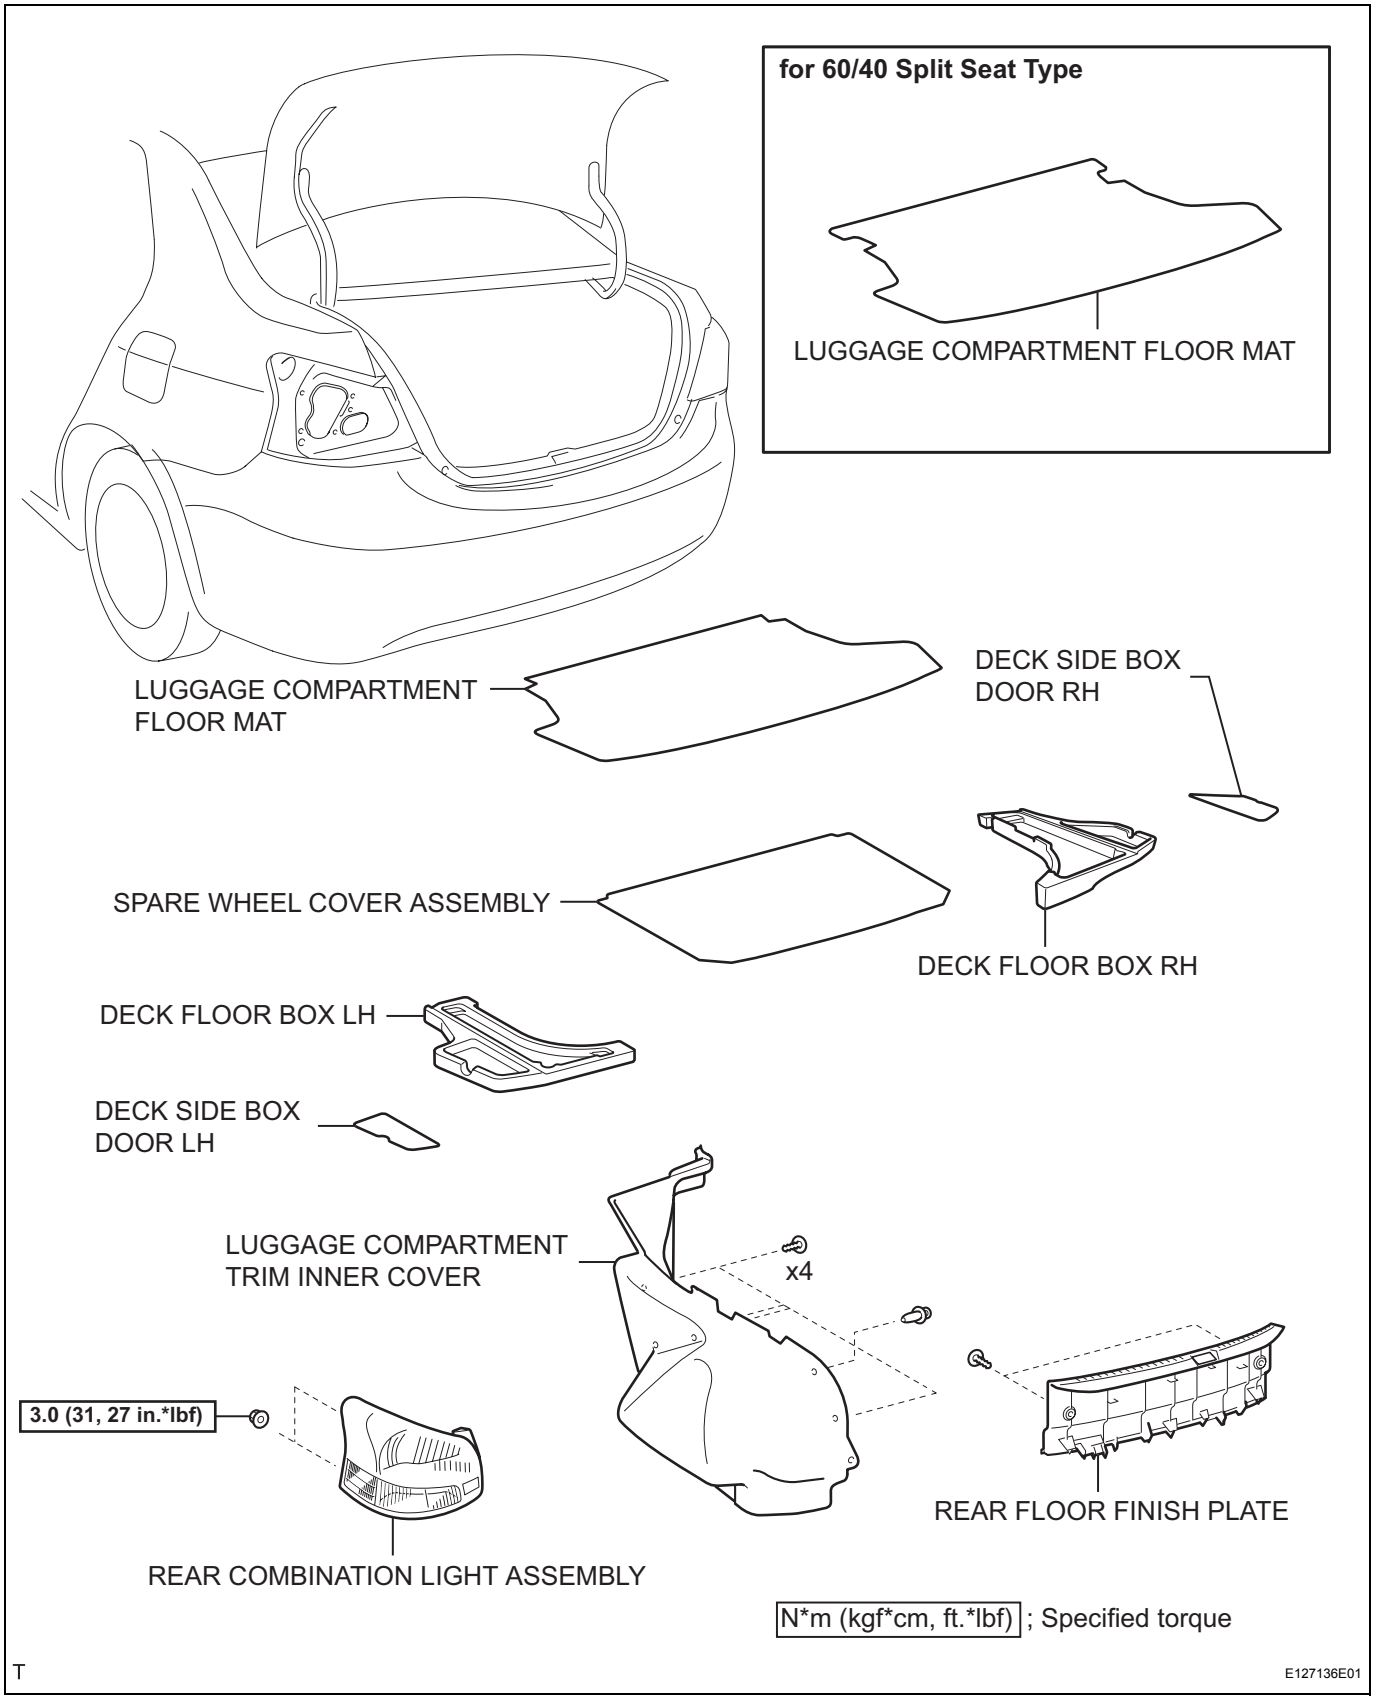
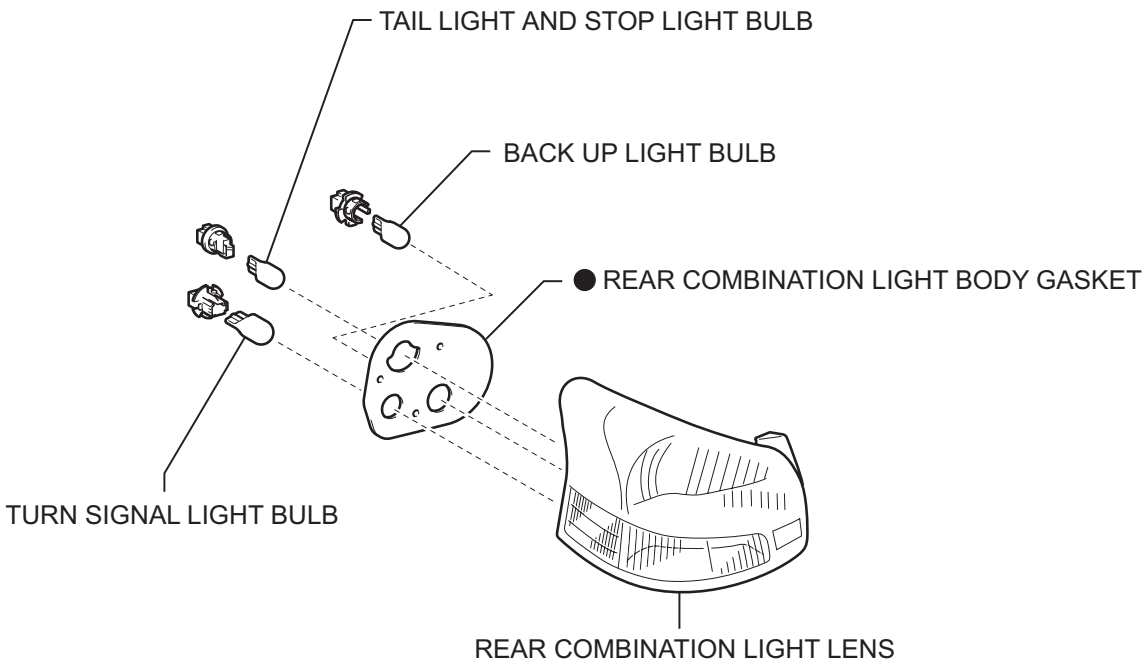
REAR COMBINATION LIGHT ASSEMBLY (for Sedan)

COMPONENTS





● Non-reusable part

T

E127137E01

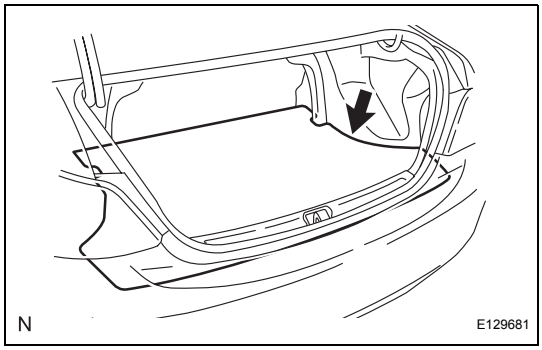
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

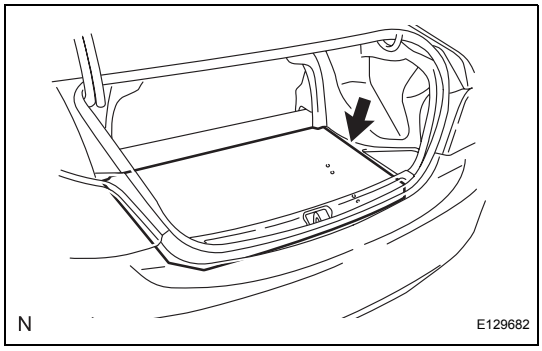
2. REMOVE LUGGAGE COMPARTMENT FLOOR MAT

(a) Remove the luggage compartment floor mat.



3. REMOVE SPARE WHEEL COVER ASSEMBLY

(a) Remove the spare wheel cover assembly.

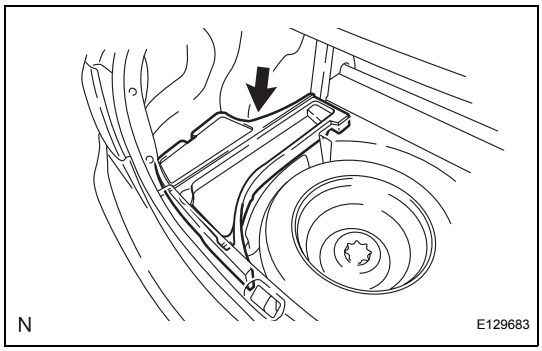


4. REMOVE DECK FLOOR BOX LH

(a) Remove the deck floor box with the deck side box door.

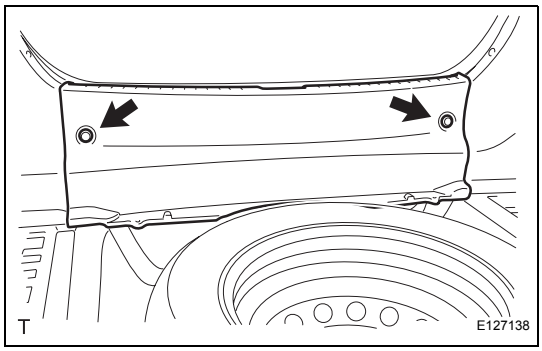
5. REMOVE DECK FLOOR BOX RH

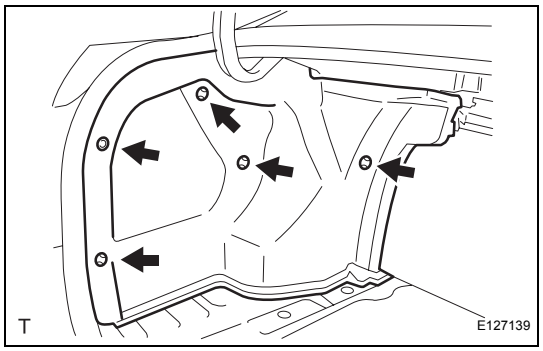
HINT:
Use the same procedure as for the LH side.



6. REMOVE REAR FLOOR FINISH PLATE

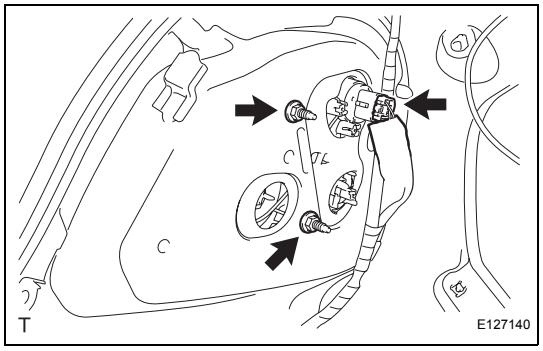
(a) Disengage the 2 clips and the rear floor finish plate.





7. REMOVE LUGGAGE COMPARTMENT TRIM INNER COVER

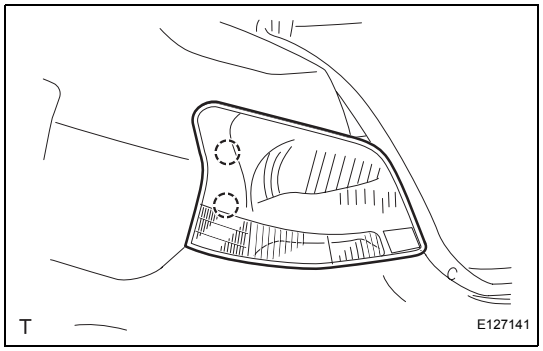
(a) Disengage the 5 clips and remove the luggage compartment trim inner cover.



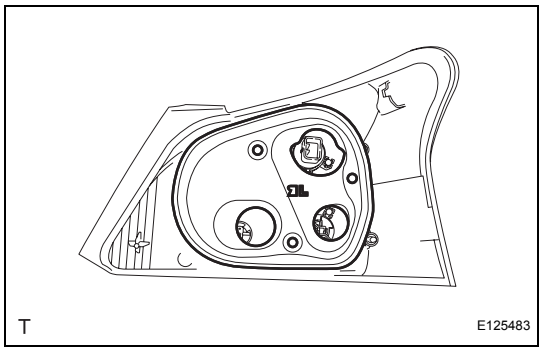
8. REMOVE REAR COMBINATION LIGHT ASSEMBLY

(a) Remove the 2 nuts.

(b) Disconnect the connector.

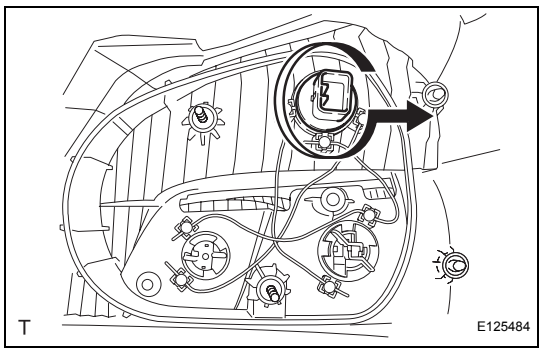


(c) Slide the rear combination light assembly toward the rear of the vehicle.



9. REMOVE REAR COMBINATION LIGHT BODY GASKET

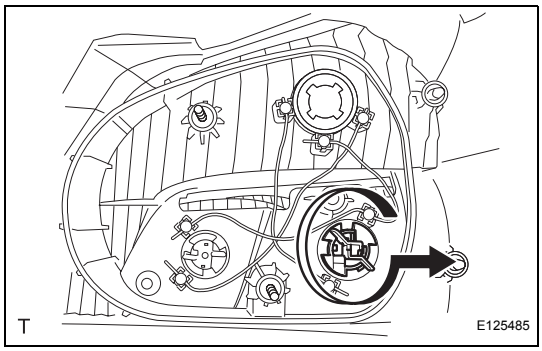
(a) Remove the rear combination light body gasket.
NOTICE:
- **Detach the gasket if it adheres to the body.**
- **Do not reuse a removed gasket. Replace it with a new one to prevent water from entering.**



10. REMOVE TAIL LIGHT AND STOP LIGHT BULB

(a) Turn the tail light and stop light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

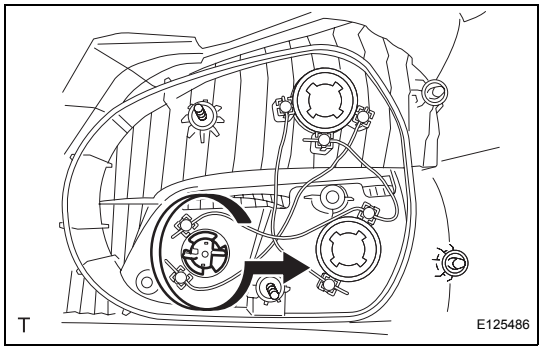
(b) Remove the tail light and stop light bulb from the light socket.



11. REMOVE TURN SIGNAL LIGHT BULB

(a) Turn the turn signal light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(b) Remove the turn signal light bulb from the light socket.



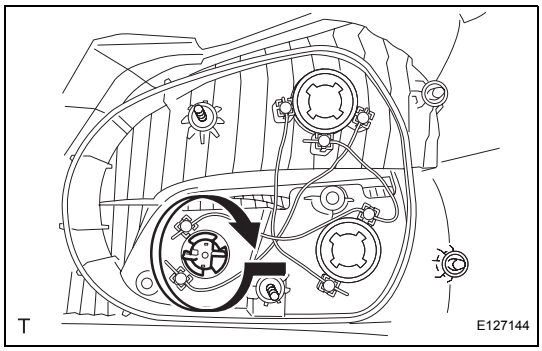
12. REMOVE BACK UP LIGHT BULB

(a) Turn the back up light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(b) Remove the back up light bulb from the light socket.

LI

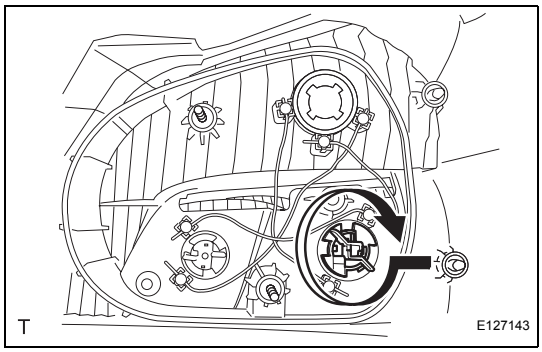
INSTALLATION



1. INSTALL BACK UP LIGHT BULB

(a) Install the back up light bulb into the socket.

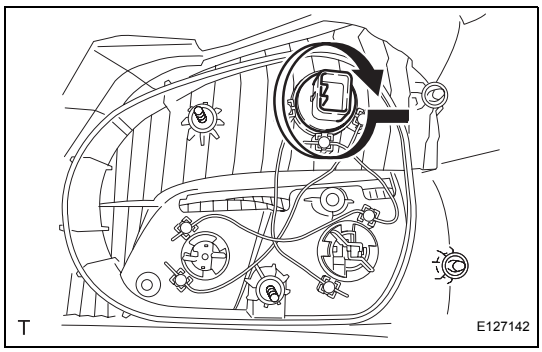
(b) Turn the back up light socket, in the direction indicated by the arrow in the illustration, to install them.



2. INSTALL TURN SIGNAL LIGHT BULB

(a) Install the turn signal light bulb into the socket.

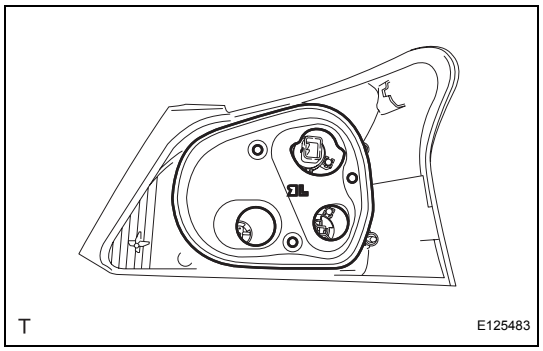
(b) Turn the turn signal light socket, in the direction indicated by the arrow in the illustration, to install them.



3. INSTALL TAIL LIGHT AND STOP LIGHT BULB

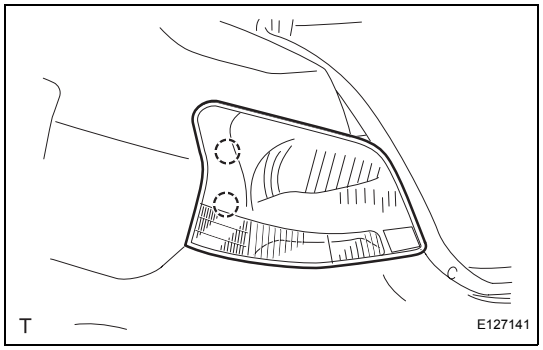
(a) Install the tail light and stop light bulb into the socket.

(b) Turn the tail light and stop light bulb socket, in the direction indicated by the arrow in the illustration, to install them.



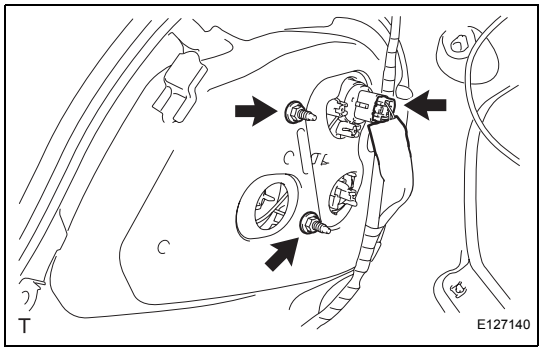
4. INSTALL REAR COMBINATION LIGHT BODY GASKET

(a) Install a new rear combination light body gasket.



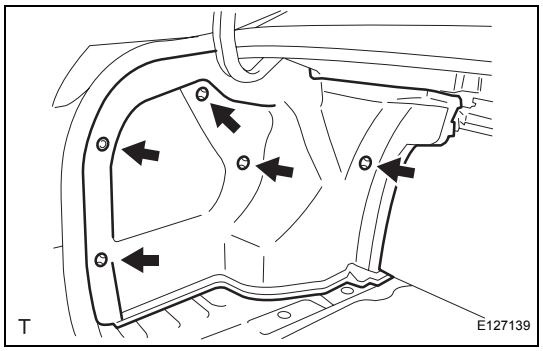
5. INSTALL REAR COMBINATION LIGHT ASSEMBLY

(a) Install the rear combination light assembly onto the vehicle.



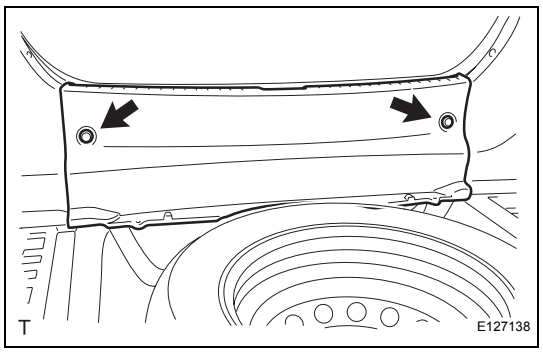
(b) Connect the connector.

(c) Install the 2 nuts.
Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf)



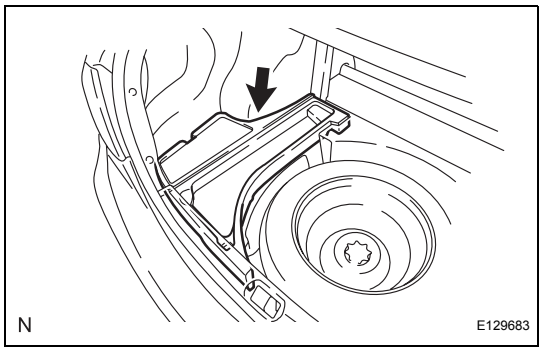
6. INSTALL LUGGAGE COMPARTMENT TRIM INNER COVER

(a) Engage the 5 clips and install the luggage compartment trim inner cover.



7. INSTALL REAR FLOOR FINISH PLATE

(a) Engage the 2 clips and install the rear floor finish plate.



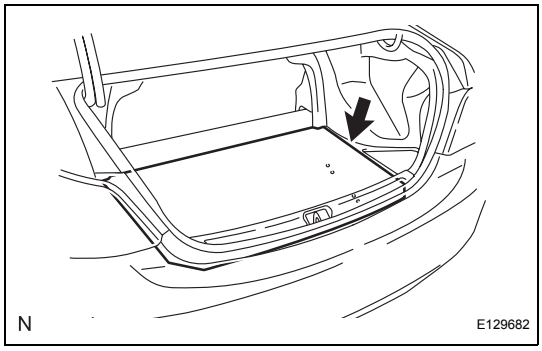
8. INSTALL DECK FLOOR BOX LH

(a) Install the deck floor box and the deck side box door.

9. INSTALL DECK FLOOR BOX RH

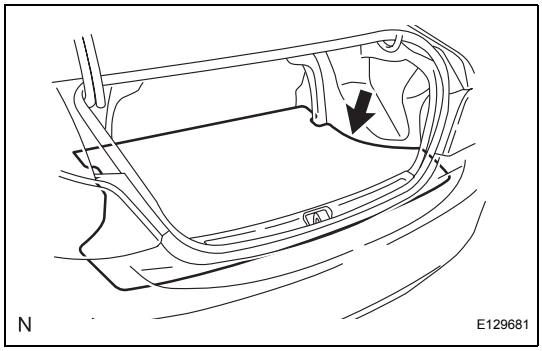
HINT:

Use the same procedure as for the LH side.



10. INSTALL SPARE WHEEL COVER ASSEMBLY

(a) Install the spare wheel cover assembly.



11. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

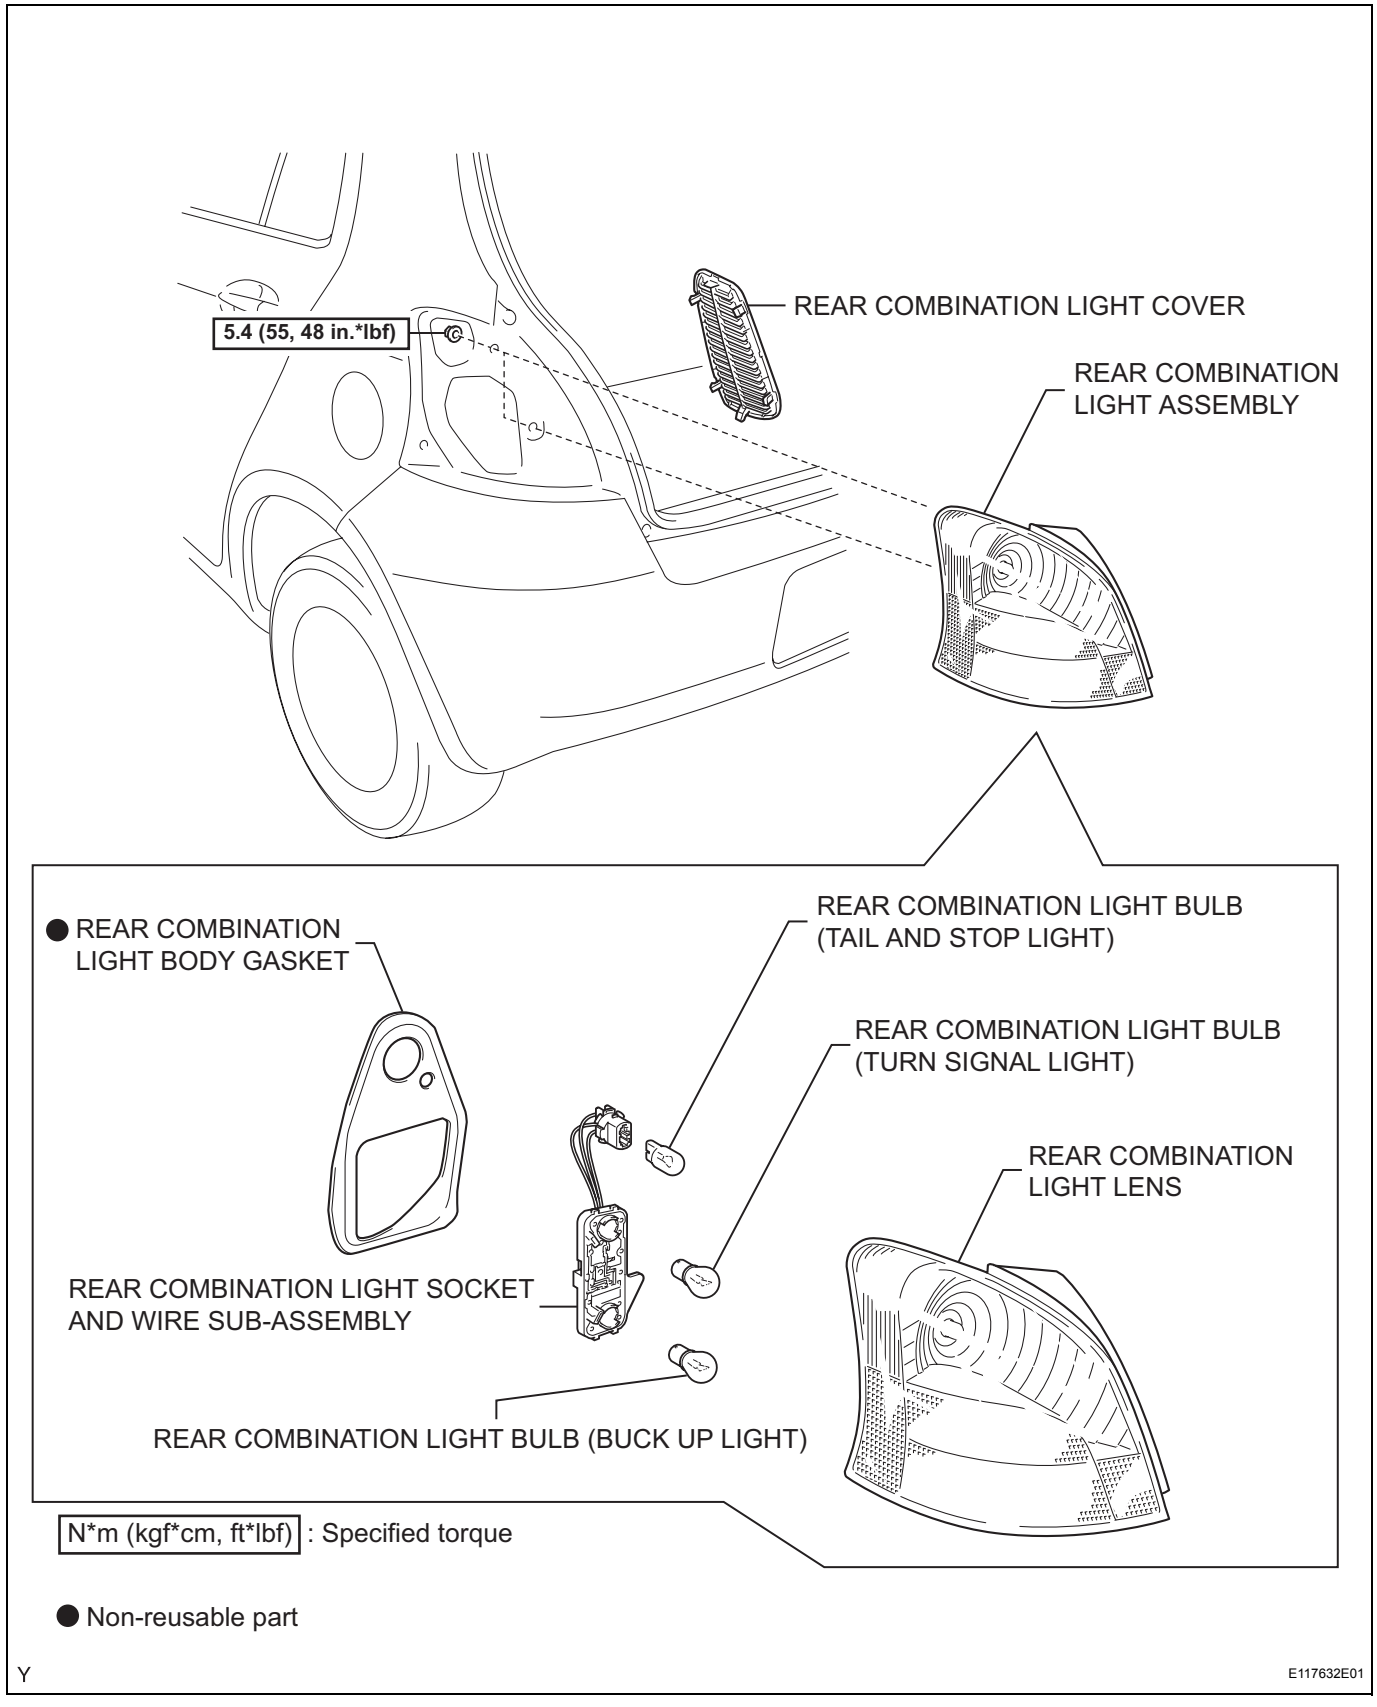
(a) Install the luggage compartment floor mat.

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REAR COMBINATION LIGHT ASSEMBLY (for Hatchback)

COMPONENTS



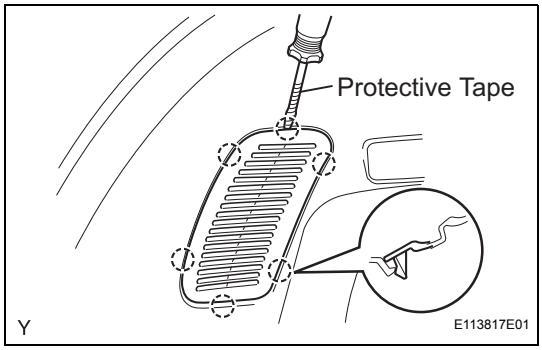
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE REAR COMBINATION LIGHT COVER

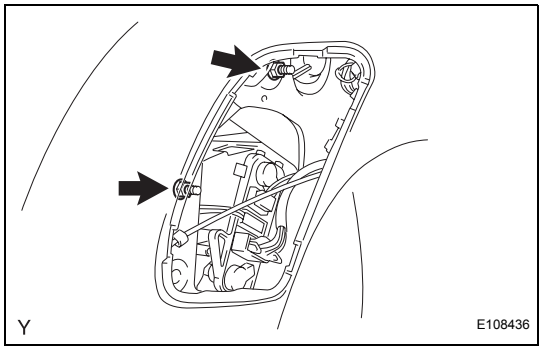
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 6 claws and remove the rear combination light cover.



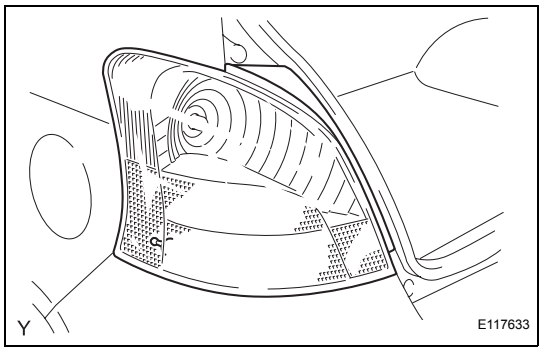
3. REMOVE REAR COMBINATION LIGHT ASSEMBLY

(a) Remove the 2 nuts.

(b) Disconnect the connector.



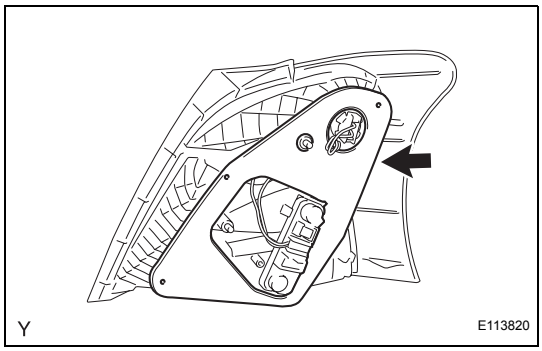
(c) Slide the tail light (rear combination light) toward the rear of the vehicle.

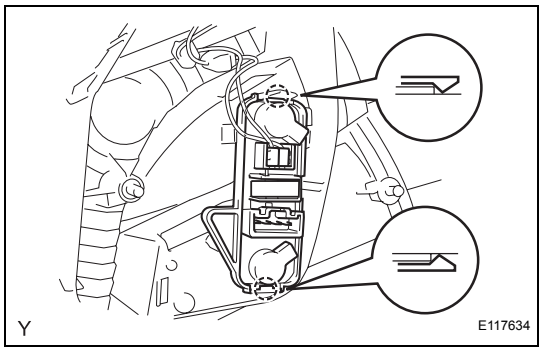


4. REMOVE REAR COMBINATION LIGHT BODY GASKET

(a) Remove the rear combination light body gasket.

NOTICE:
- **Detach the gasket if it adheres to the body.**
- **Do not reuse a removed gasket. Replace it with a new one to prevent water from entering.**

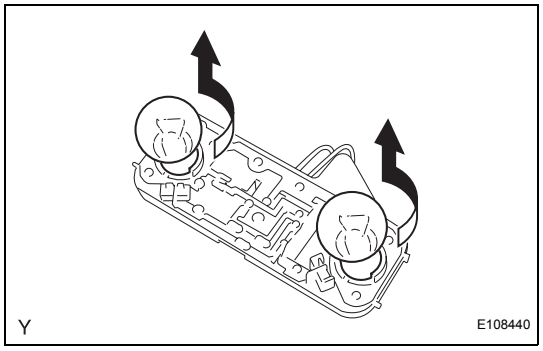




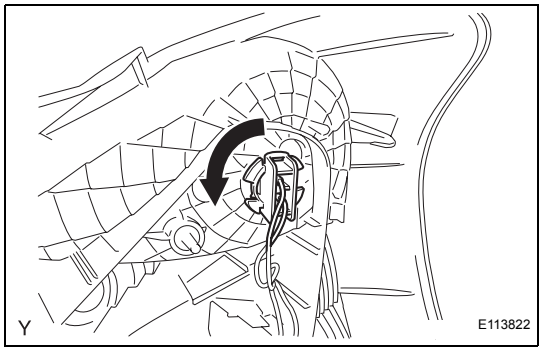
5. REMOVE REAR COMBINATION LIGHT BULB

(a) Disengage the fitting of the rib.

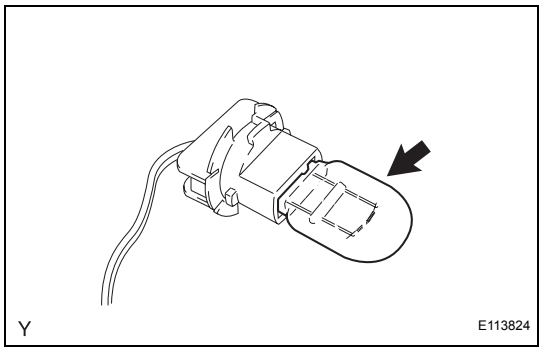
(b) Disengage the claw on the upper side, then on the lower side.



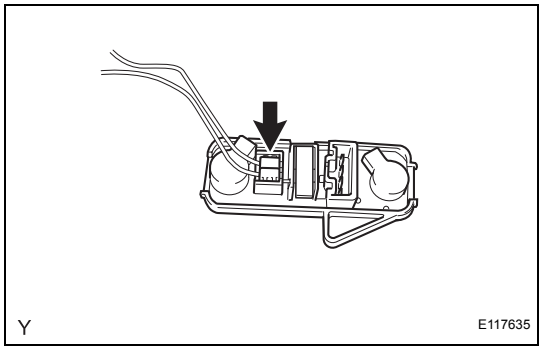
(c) Turn the 2 rear combination light bulbs, in the direction indicated by the arrows in the illustration, to remove them.



(d) Turn the rear combination light socket and wire, in the direction indicated by the arrow in the illustration, to remove it.



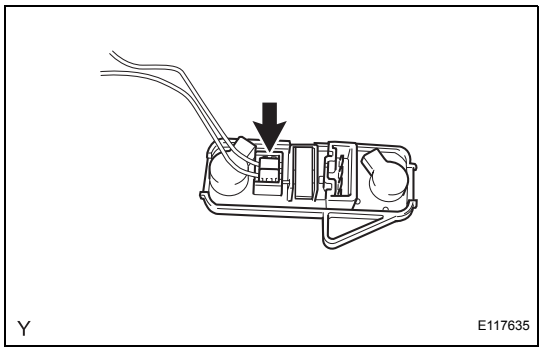
(e) Remove the rear combination light bulb from the socket and wire.



6. REMOVE REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Disconnect the connector and remove the rear combination light socket and wire.

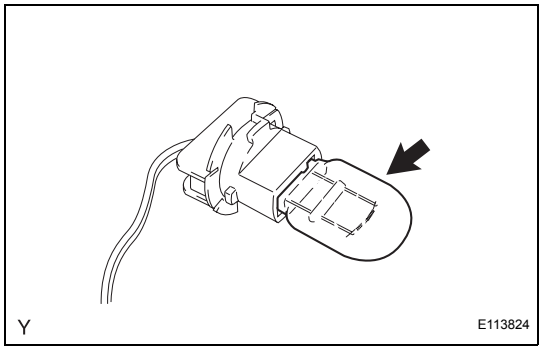
LI



INSTALLATION

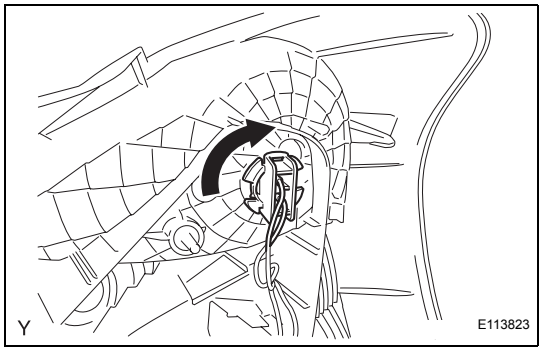
1. INSTALL REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Connect the connector and install the rear combination light socket and wire.

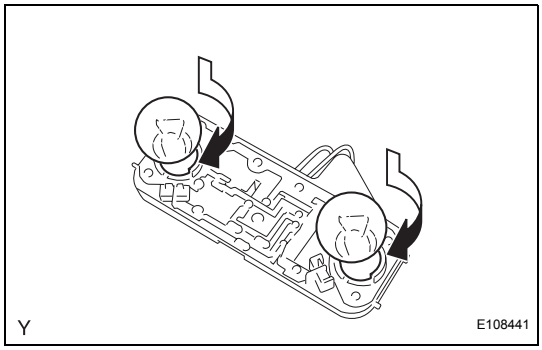


2. INSTALL REAR COMBINATION LIGHT BULB

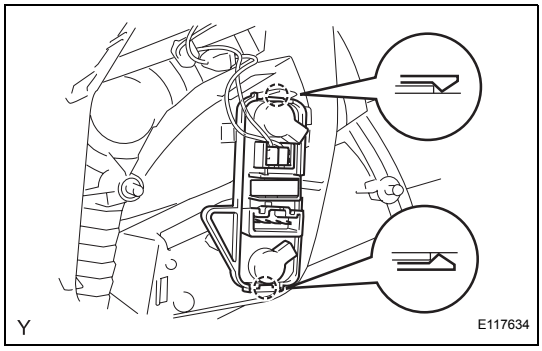
(a) Install the rear combination light bulb into the light socket.



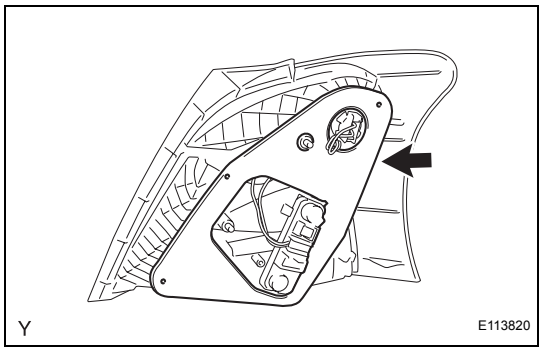
(b) Turn the rear combination light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.



(c) Turn the 2 rear combination light bulbs, in the direction indicated by the arrows in the illustration, to install them.

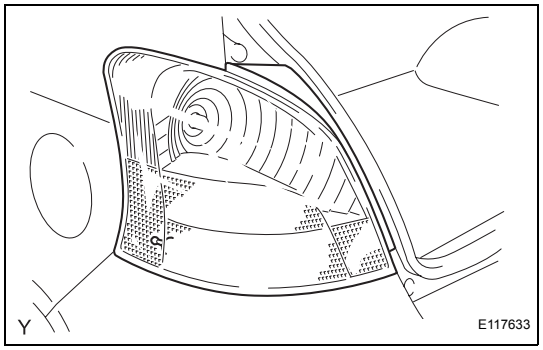


(d) Engage the 2 claws and install the rear combination light socket and wire.



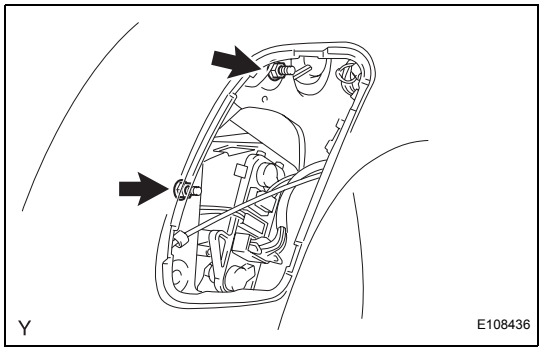
3. INSTALL REAR COMBINATION LIGHT BODY GASKET

(a) Install a new rear combination light body gasket.



4. INSTALL REAR COMBINATION LIGHT ASSEMBLY

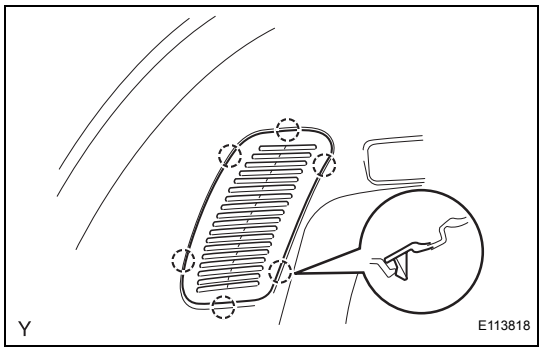
(a) Install the rear combination light assembly onto the vehicle.



(b) Connect the connector.

(c) Install the 2 nuts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



5. INSTALL REAR COMBINATION LIGHT COVER

(a) Engage the 6 claws and install the rear combination light cover.

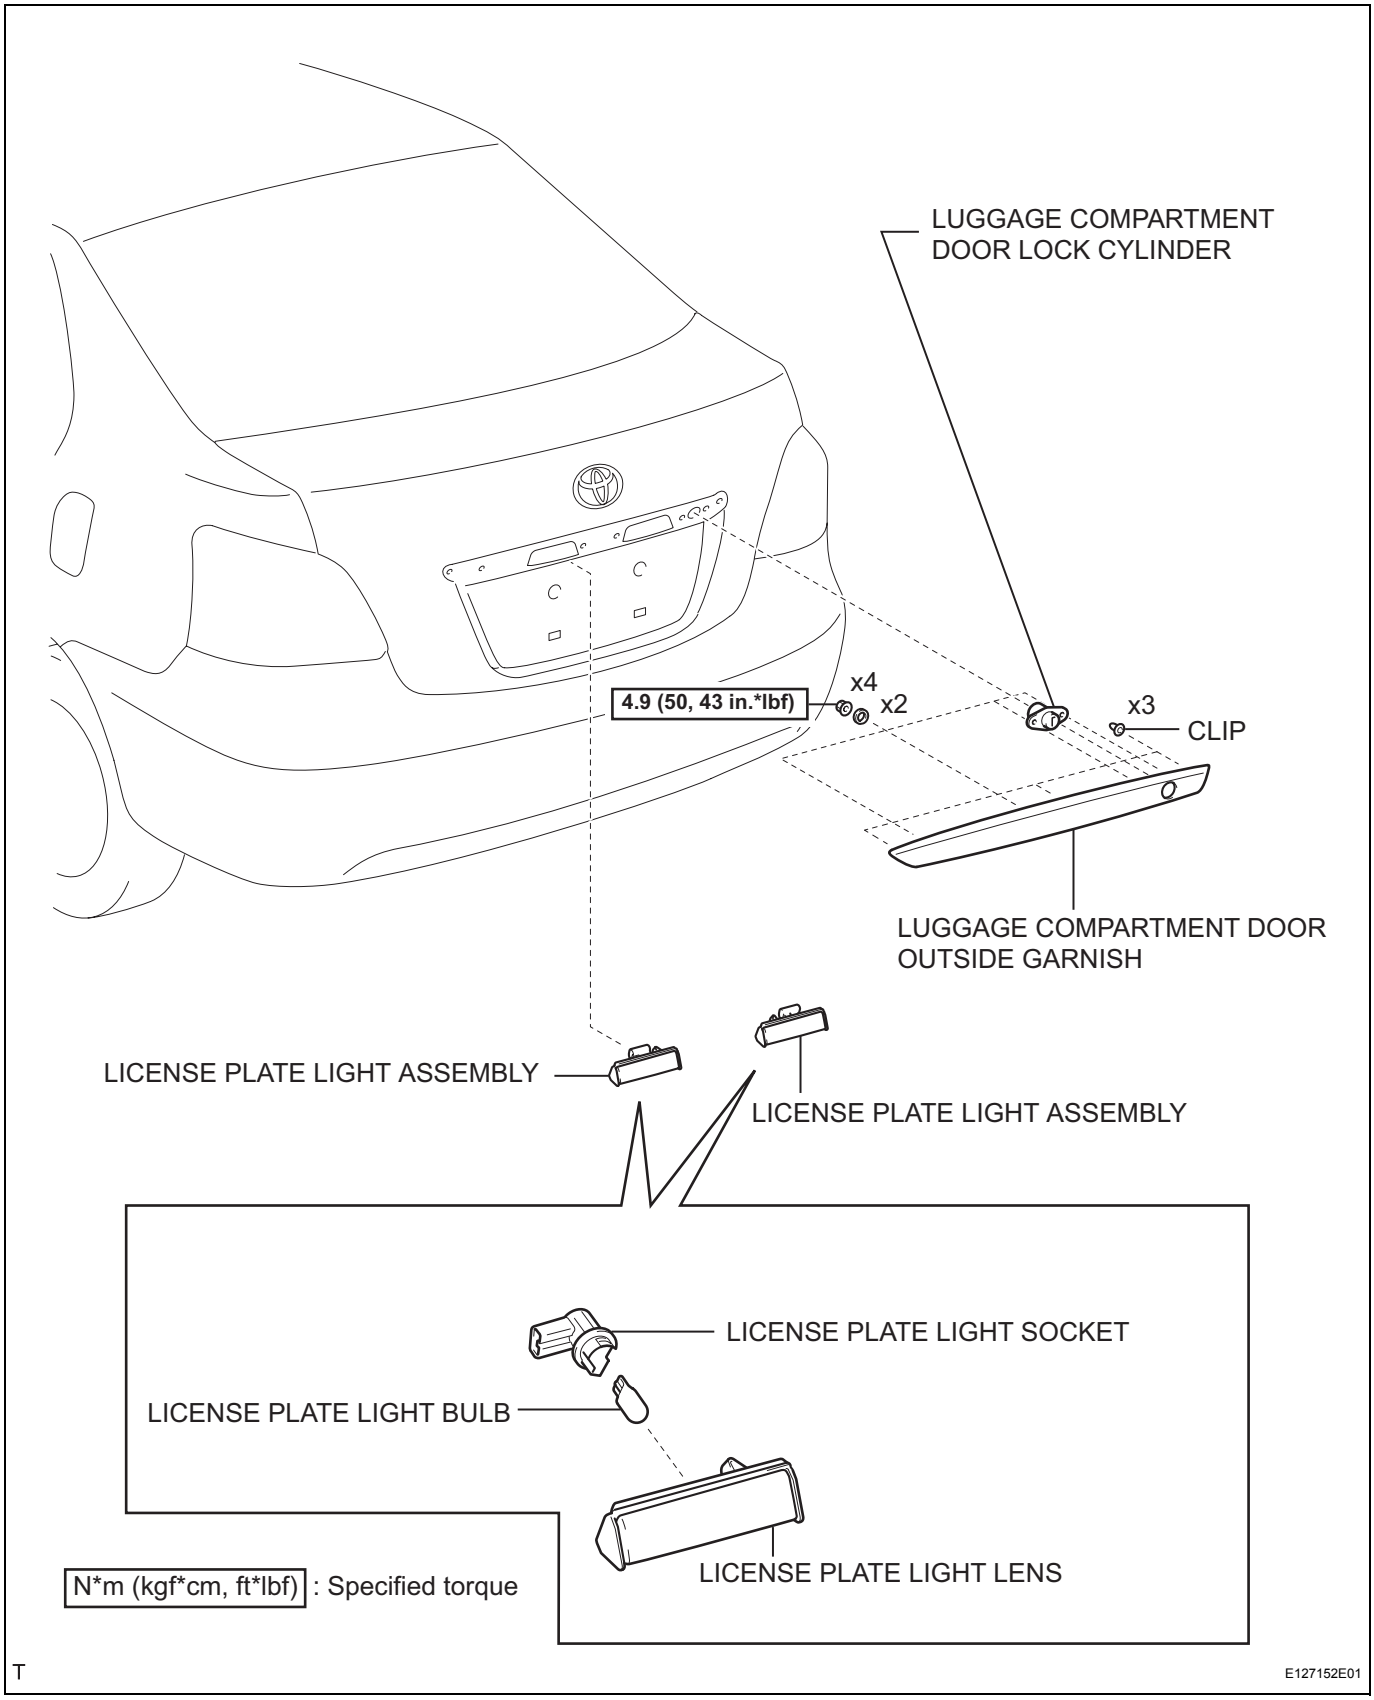
6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

LI

LICENSE PLATE LIGHT ASSEMBLY (for Sedan)

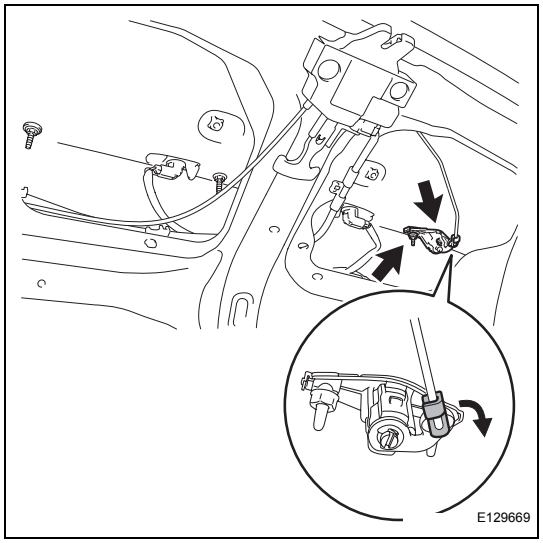
COMPONENTS



REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

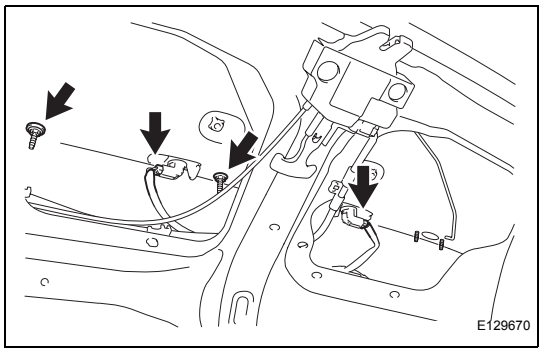
2. REMOVE LUGGAGE COMPARTMENT DOOR LOCK CYLINDER



(a) Remove the snap ring in the direction indicated by the arrow and remove the luggage compartment door lock link.

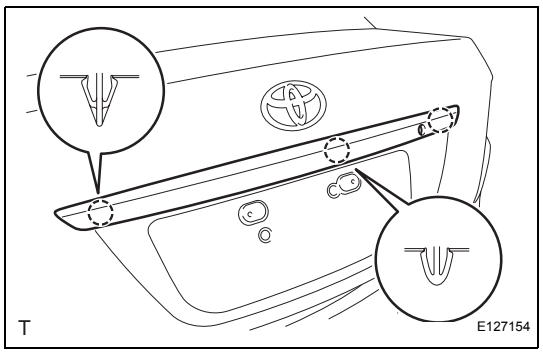
(b) Remove the 2 nuts and the luggage compartment door lock cylinder.

3. REMOVE LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH



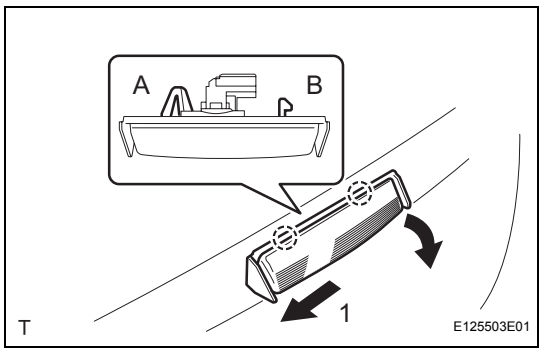
(a) Disconnect the 2 connectors.

(b) Remove the 2 nuts.

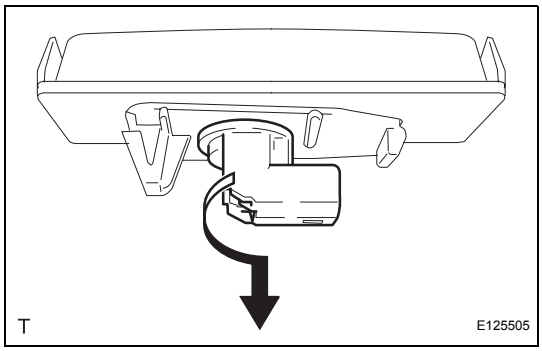


(c) Disengage the 3 claws and remove the luggage compartment door outside garnish.

4. REMOVE LICENSE PLATE LIGHT ASSEMBLY



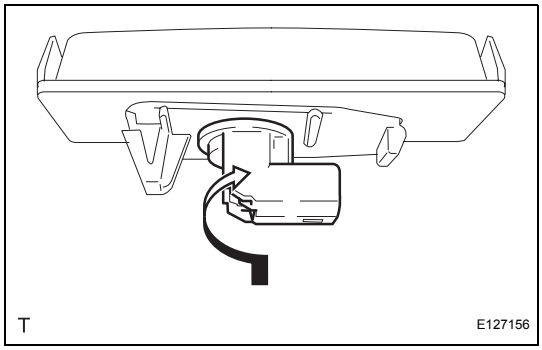
(a) Pull the license plate light assembly in the direction indicated by arrow 1, shown in the illustration. Disengage claw B by pulling claw A toward you while flexing it and remove the license plate light assembly.



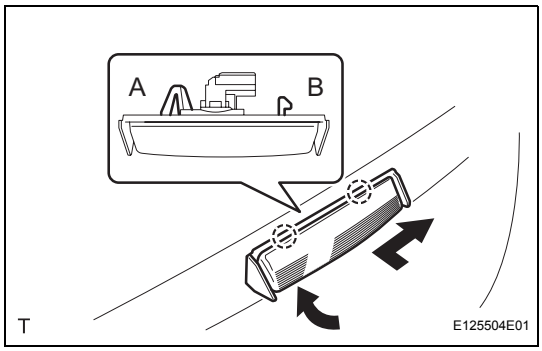
(b) Turn the license plate light socket and bulb, in the directions indicated by the arrow in the illustration, to remove them.
(c) Remove the license plate light bulb from the light socket.

INSTALLATION

1. INSTALL LICENSE PLATE LIGHT ASSEMBLY

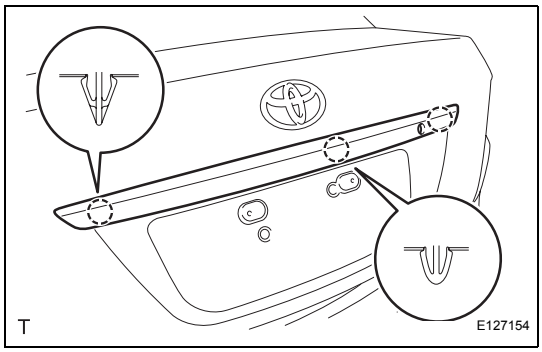


(a) Install the license plate light bulb into the light socket.
(b) Turn the license plate light bulb socket and bulb, in the directions indicated by the arrow in the illustration, to install them.

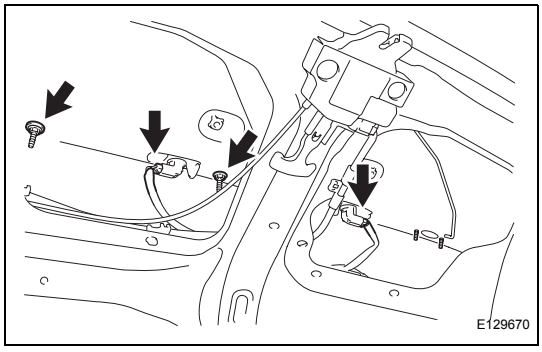


(c) Engage claw A and claw B, and install the license plate light assembly.

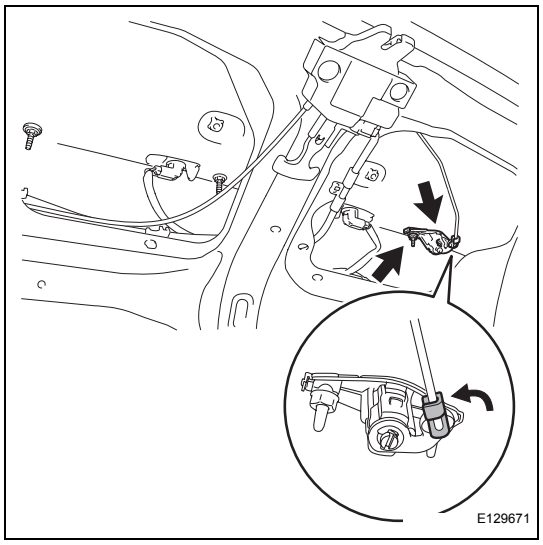
2. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH



(a) Engage the 3 claws and install the luggage compartment door outside garnish.



(b) Connect the 2 connectors.
(c) Install the luggage compartment door outside garnish with the 2 nuts.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)



3. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER

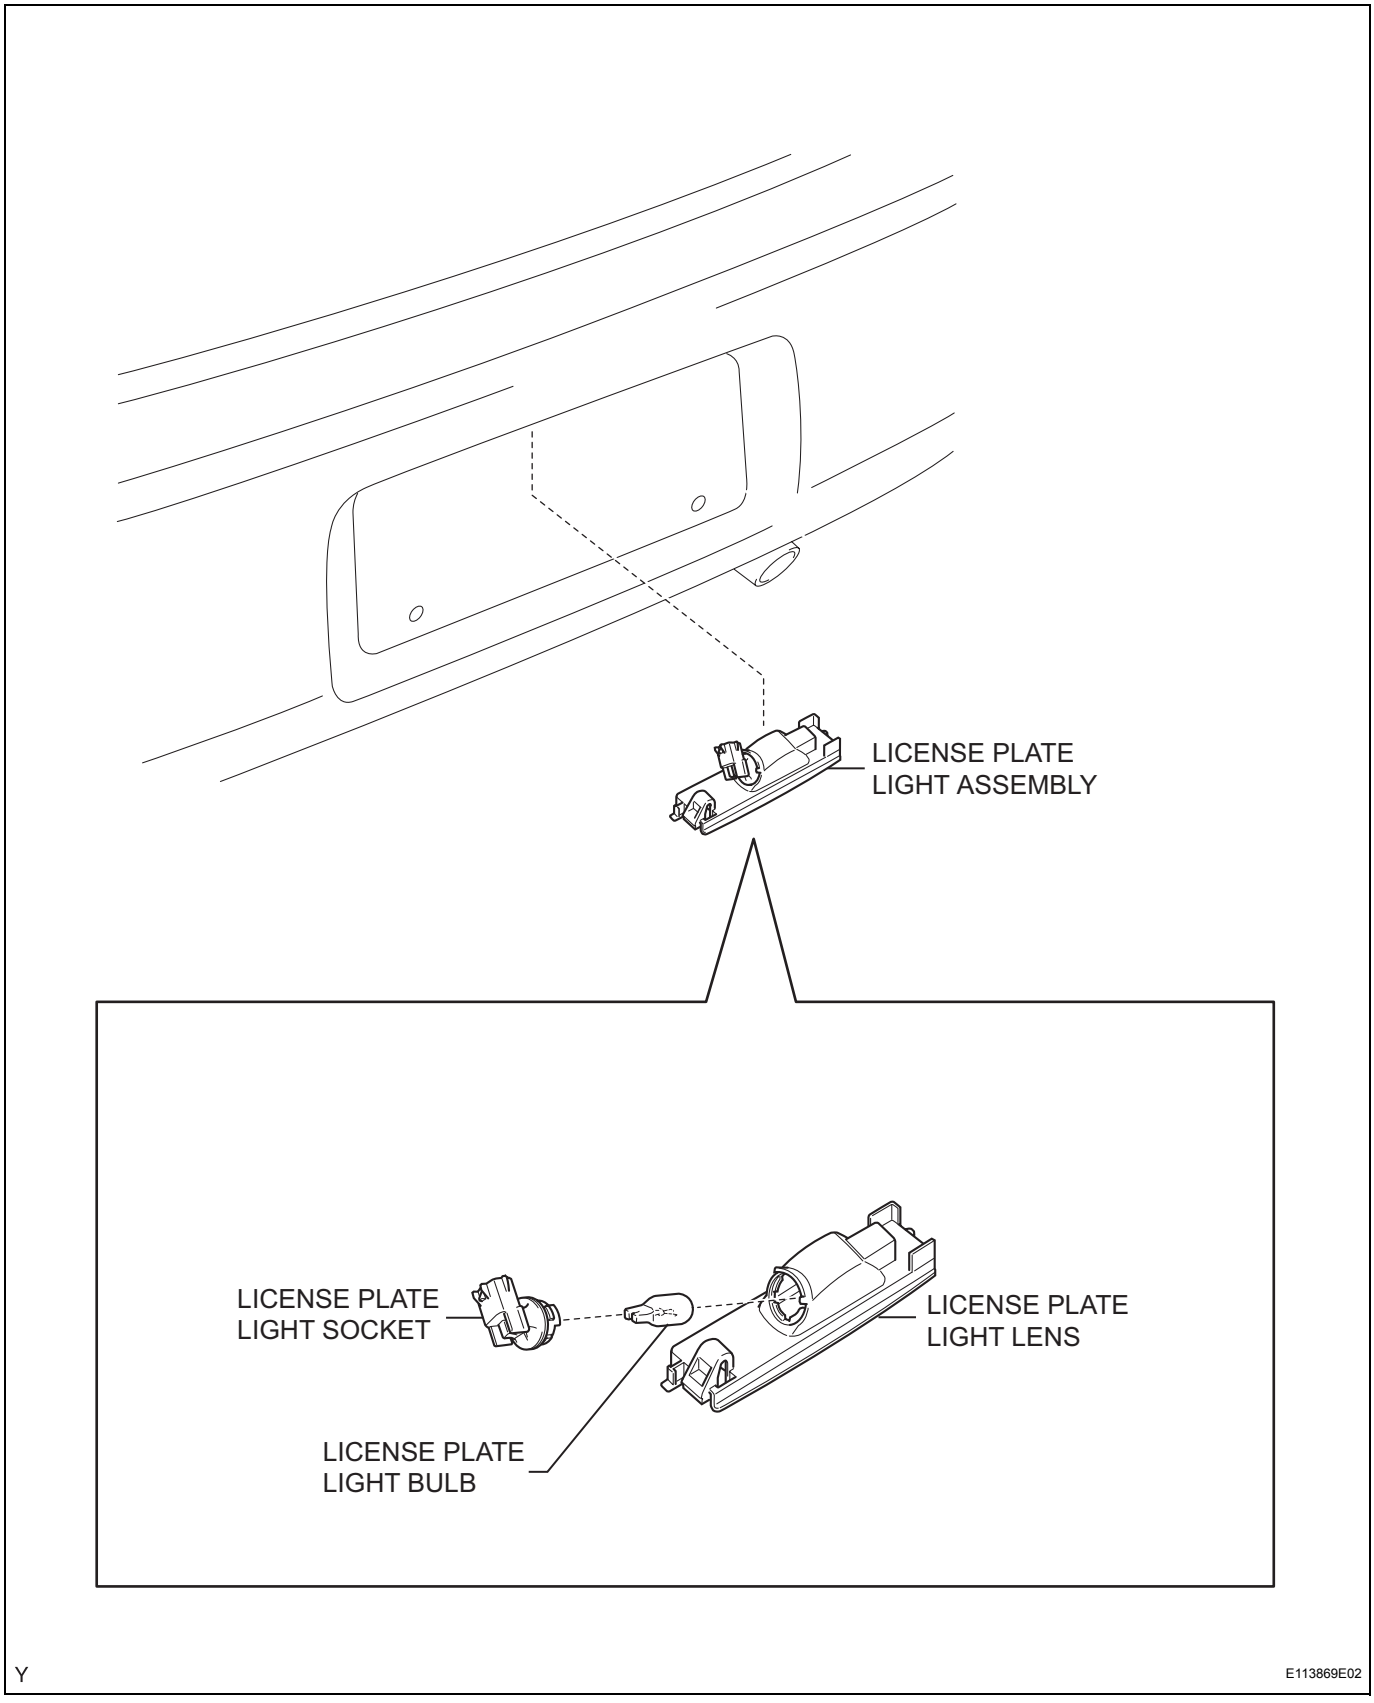
(a) Install the luggage compartment door lock cylinder with the 2 nuts.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)

(b) Install the luggage compartment door lock link.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

LICENSE PLATE LIGHT ASSEMBLY (for Hatchback)

COMPONENTS



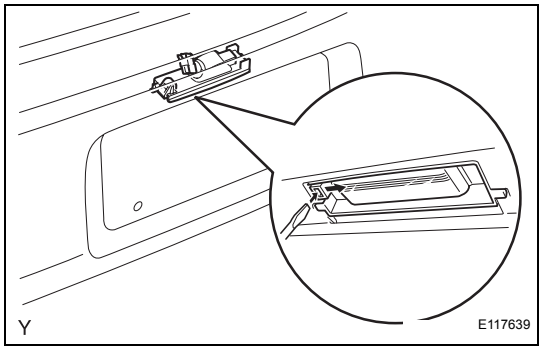
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LICENSE PLATE LIGHT ASSEMBLY

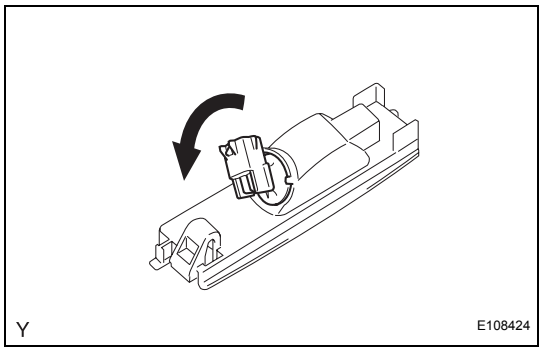
(a) Insert a screwdriver in the position shown in the illustration and move the license plate light in the direction shown in the illustration to disengage the claw.

(b) Disconnect the connector, then remove the license plate light.



(c) Turn the license plate light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(d) Remove the license plate light bulb from the light socket.



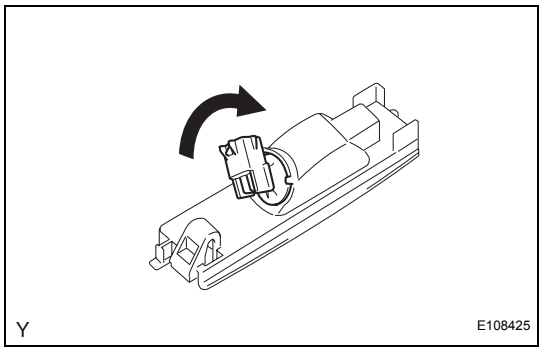
INSTALLATION

1. INSTALL LICENSE PLATE LIGHT ASSEMBLY

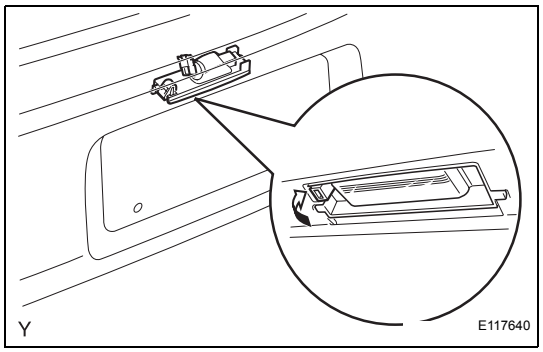
(a) Install the license plate light bulb into the light socket.

(b) Turn the license plate light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.

(c) Connect the connector.



(d) Engage the claw and install the license plate light.

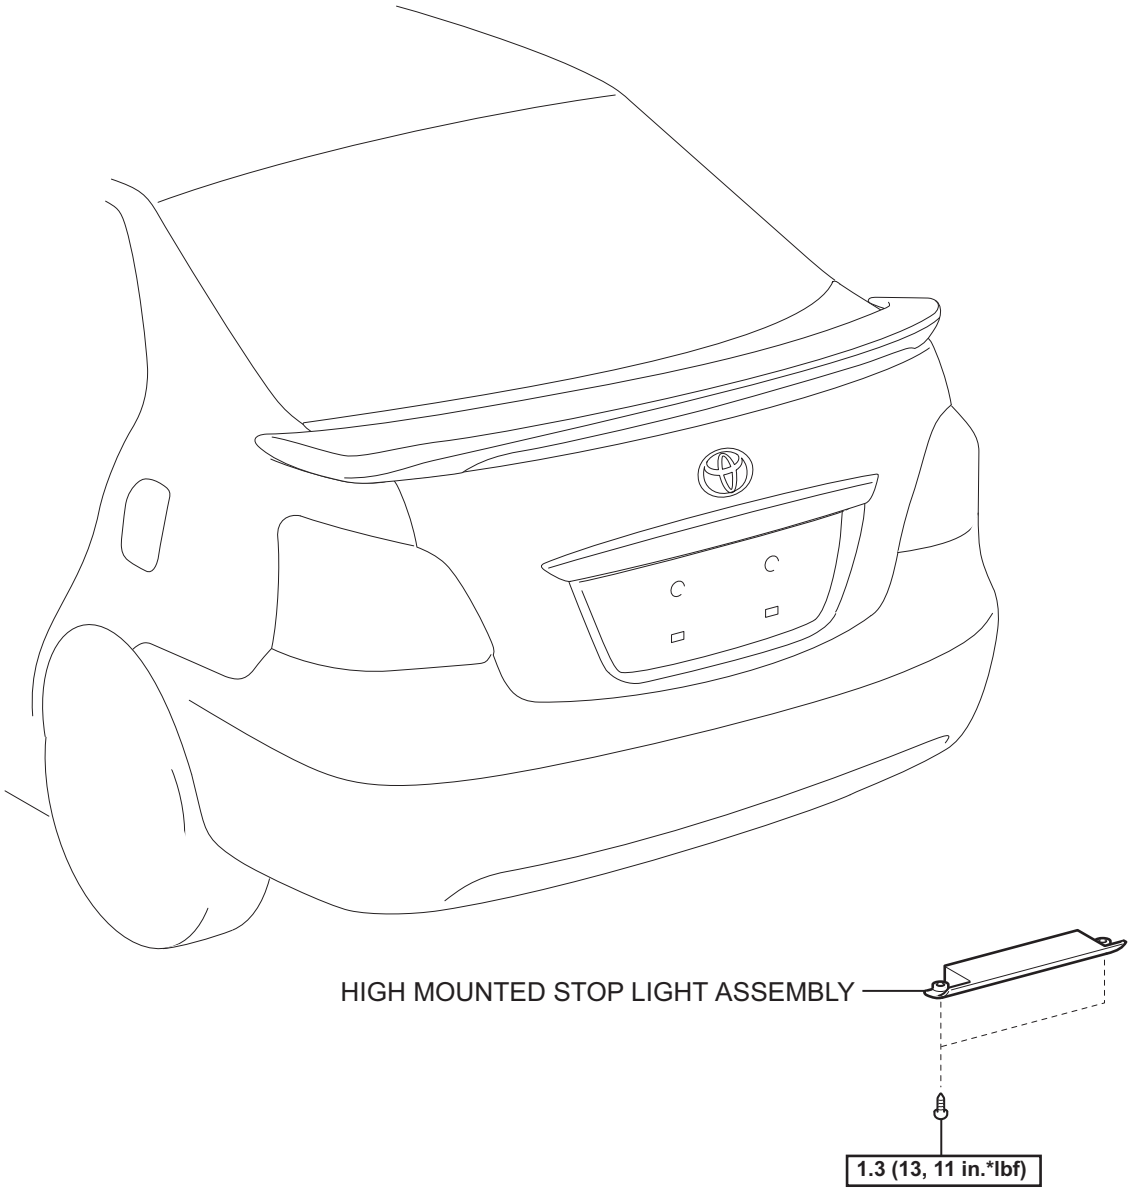


2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HIGH MOUNTED STOP LIGHT ASSEMBLY (for Sedan with Rear Spoiler)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

T

E125511E01

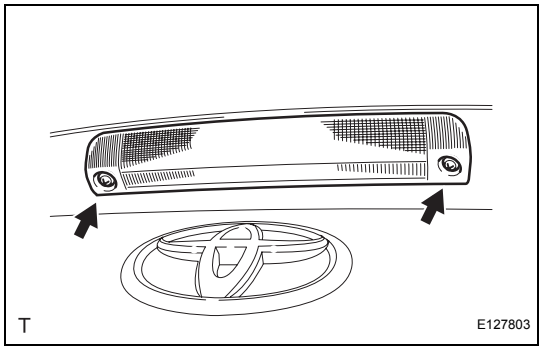
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Remove the 2 bolts and the high mounted stop light.

(b) Disconnect the connector.



INSTALLATION

1. INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Connect the connector.

(b) Install the high mounted stop light with the 2 bolts.
Torque: 1.3 N*m (13 kgf*cm, 11 in.*lbf)

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

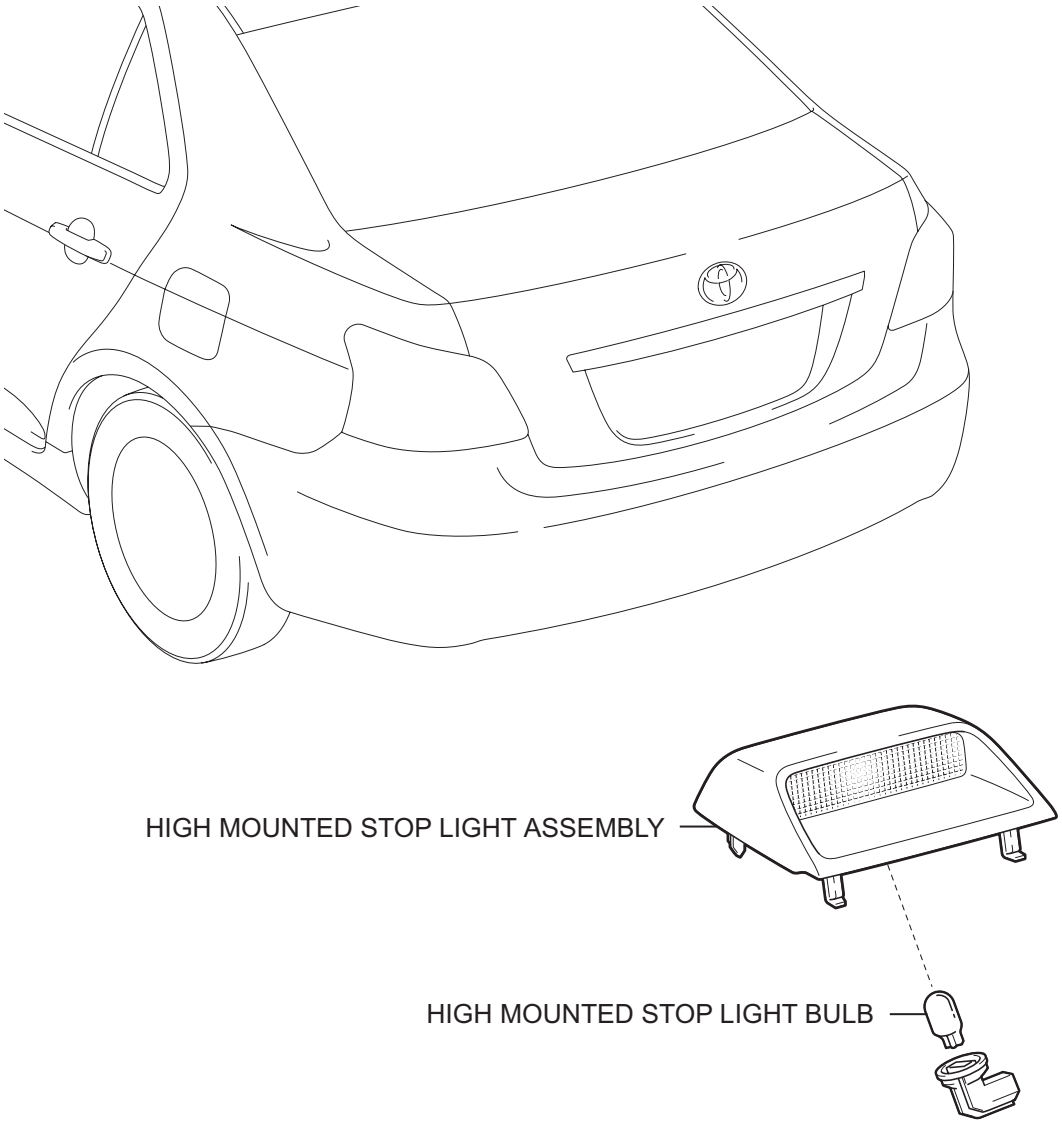
HIGH MOUNTED STOP LIGHT ASSEMBLY (for Sedan without Rear Spoiler)

COMPONENTS



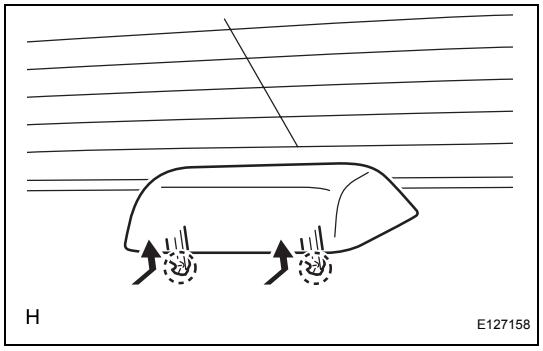
E127157E01

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

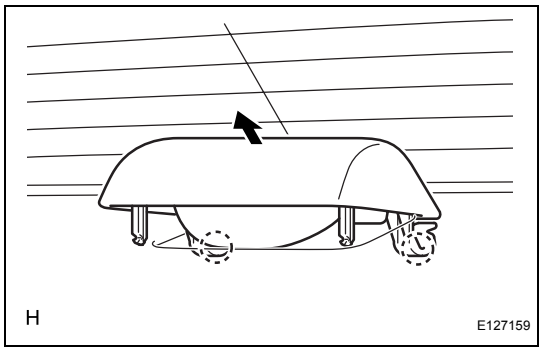
2. REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Disengage the 2 claws.



(b) Disengage the 2 claws.

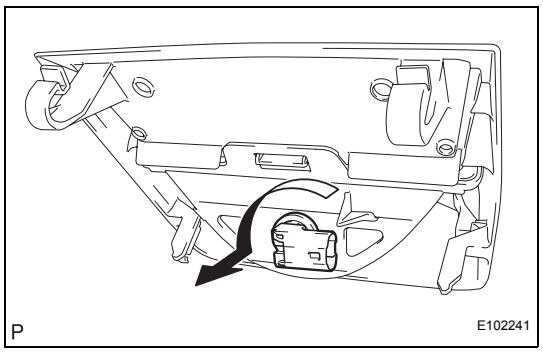
(c) Disconnect the connector and remove the high mounted stop light assembly.



3. REMOVE HIGH MOUNTED STOP LIGHT BULB

(a) Turn the high mounted stop light socket and bulb, in the direction indicated by the arrow in the illustration, to remove them.

(b) Remove the high mounted stop light bulb from the light socket.

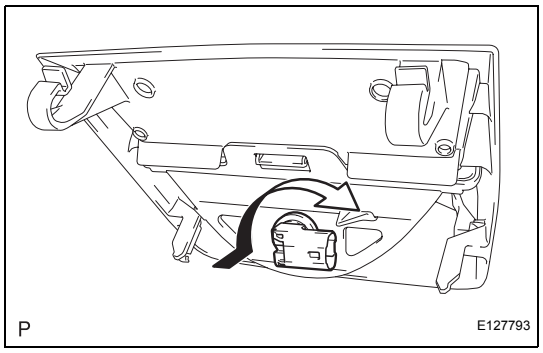


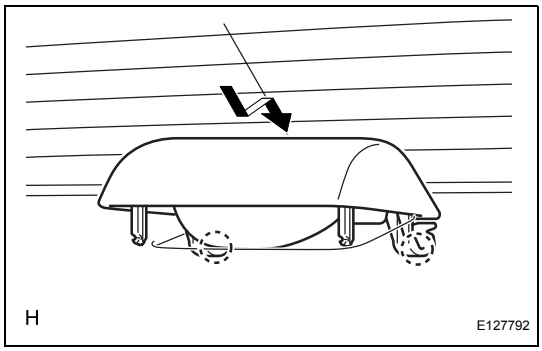
INSTALLATION

1. INSTALL HIGH MOUNTED STOP LIGHT BULB

(a) Install the high mounted stop light bulb into the light socket.

(b) Turn the high mounted stop light bulb socket and bulb, in the direction indicated by the arrow in the illustration, to install them.





2. INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Connect the connector.

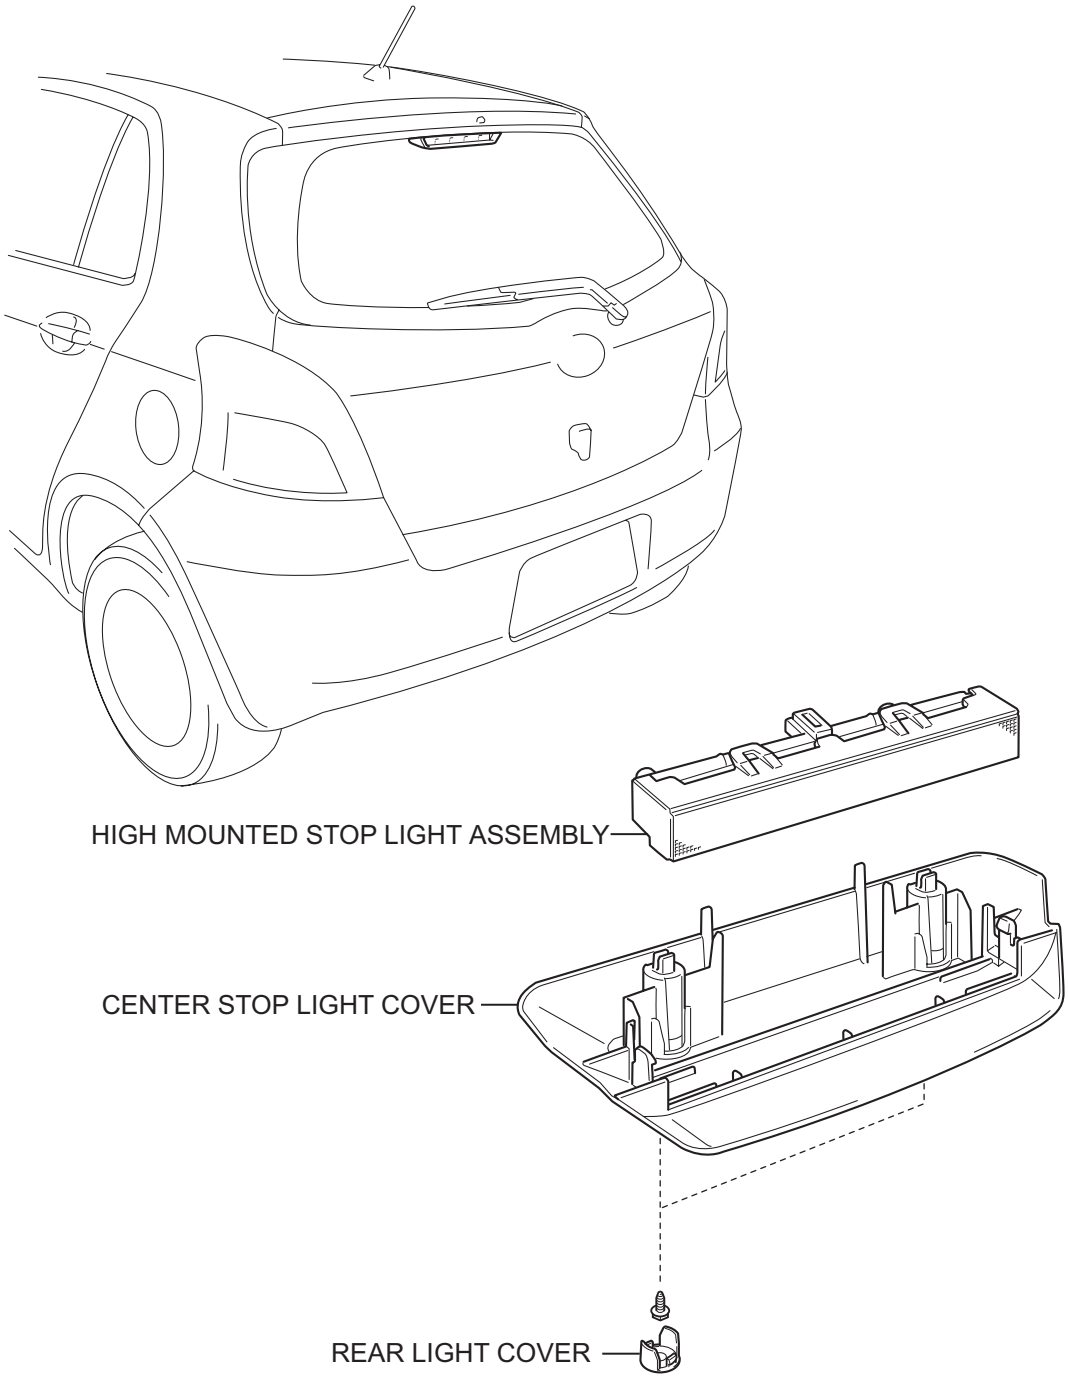
(b) Engage the 4 claws and install the high mounted stop light assembly.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HIGH MOUNTED STOP LIGHT ASSEMBLY (for Hatchback)

COMPONENTS



Y

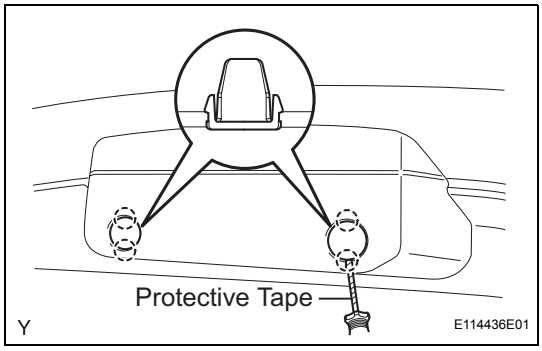
E107948E01

REMOVAL

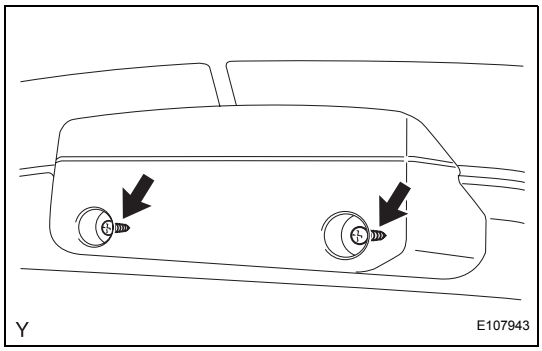
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CENTER STOP LIGHT COVER

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the 2 rear light covers.

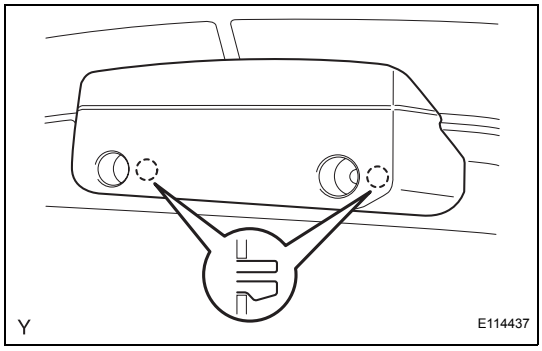


(b) Remove the 2 screws.



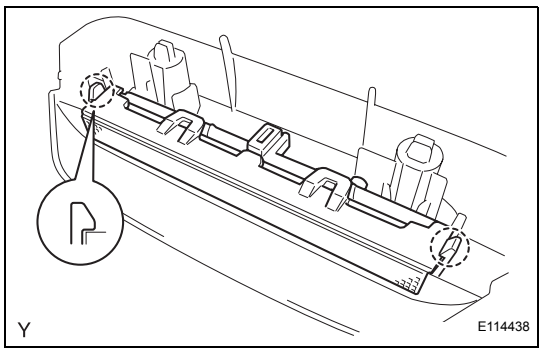
(c) Disengage the 2 claws.

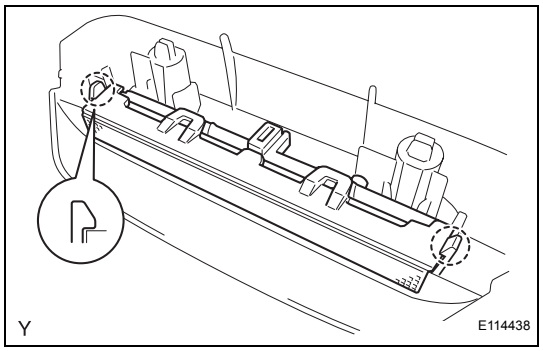
(d) Disconnect the connector and remove the center stop light cover.



3. REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Disengage the 2 claws and remove the high mounted stop light.

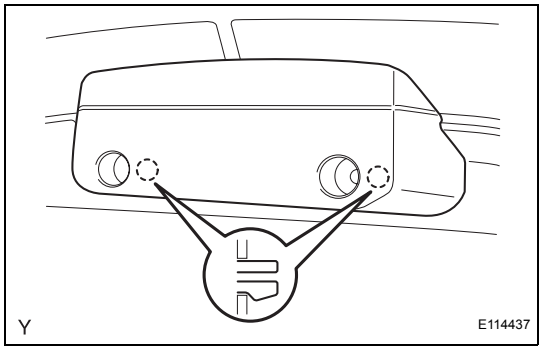




INSTALLATION

1. INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY

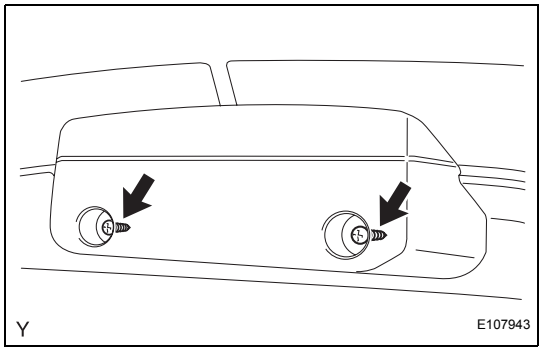
(a) Engage the 2 claws and install the high mounted stop light.



2. INSTALL CENTER STOP LIGHT COVER

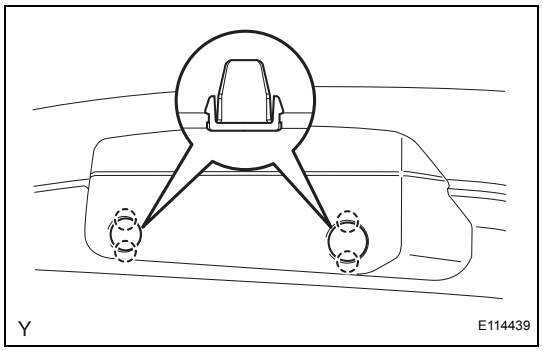
(a) Connect the connector.

(b) Engage the 2 claws.



(c) Install the center stop light cover with the 2 screws.

NOTICE:
When reusing the center stop light cover, replace the screws with 90159-60303 screws to avoid insecure installation.



(d) Engage the 4 claws and install the rear light cover.

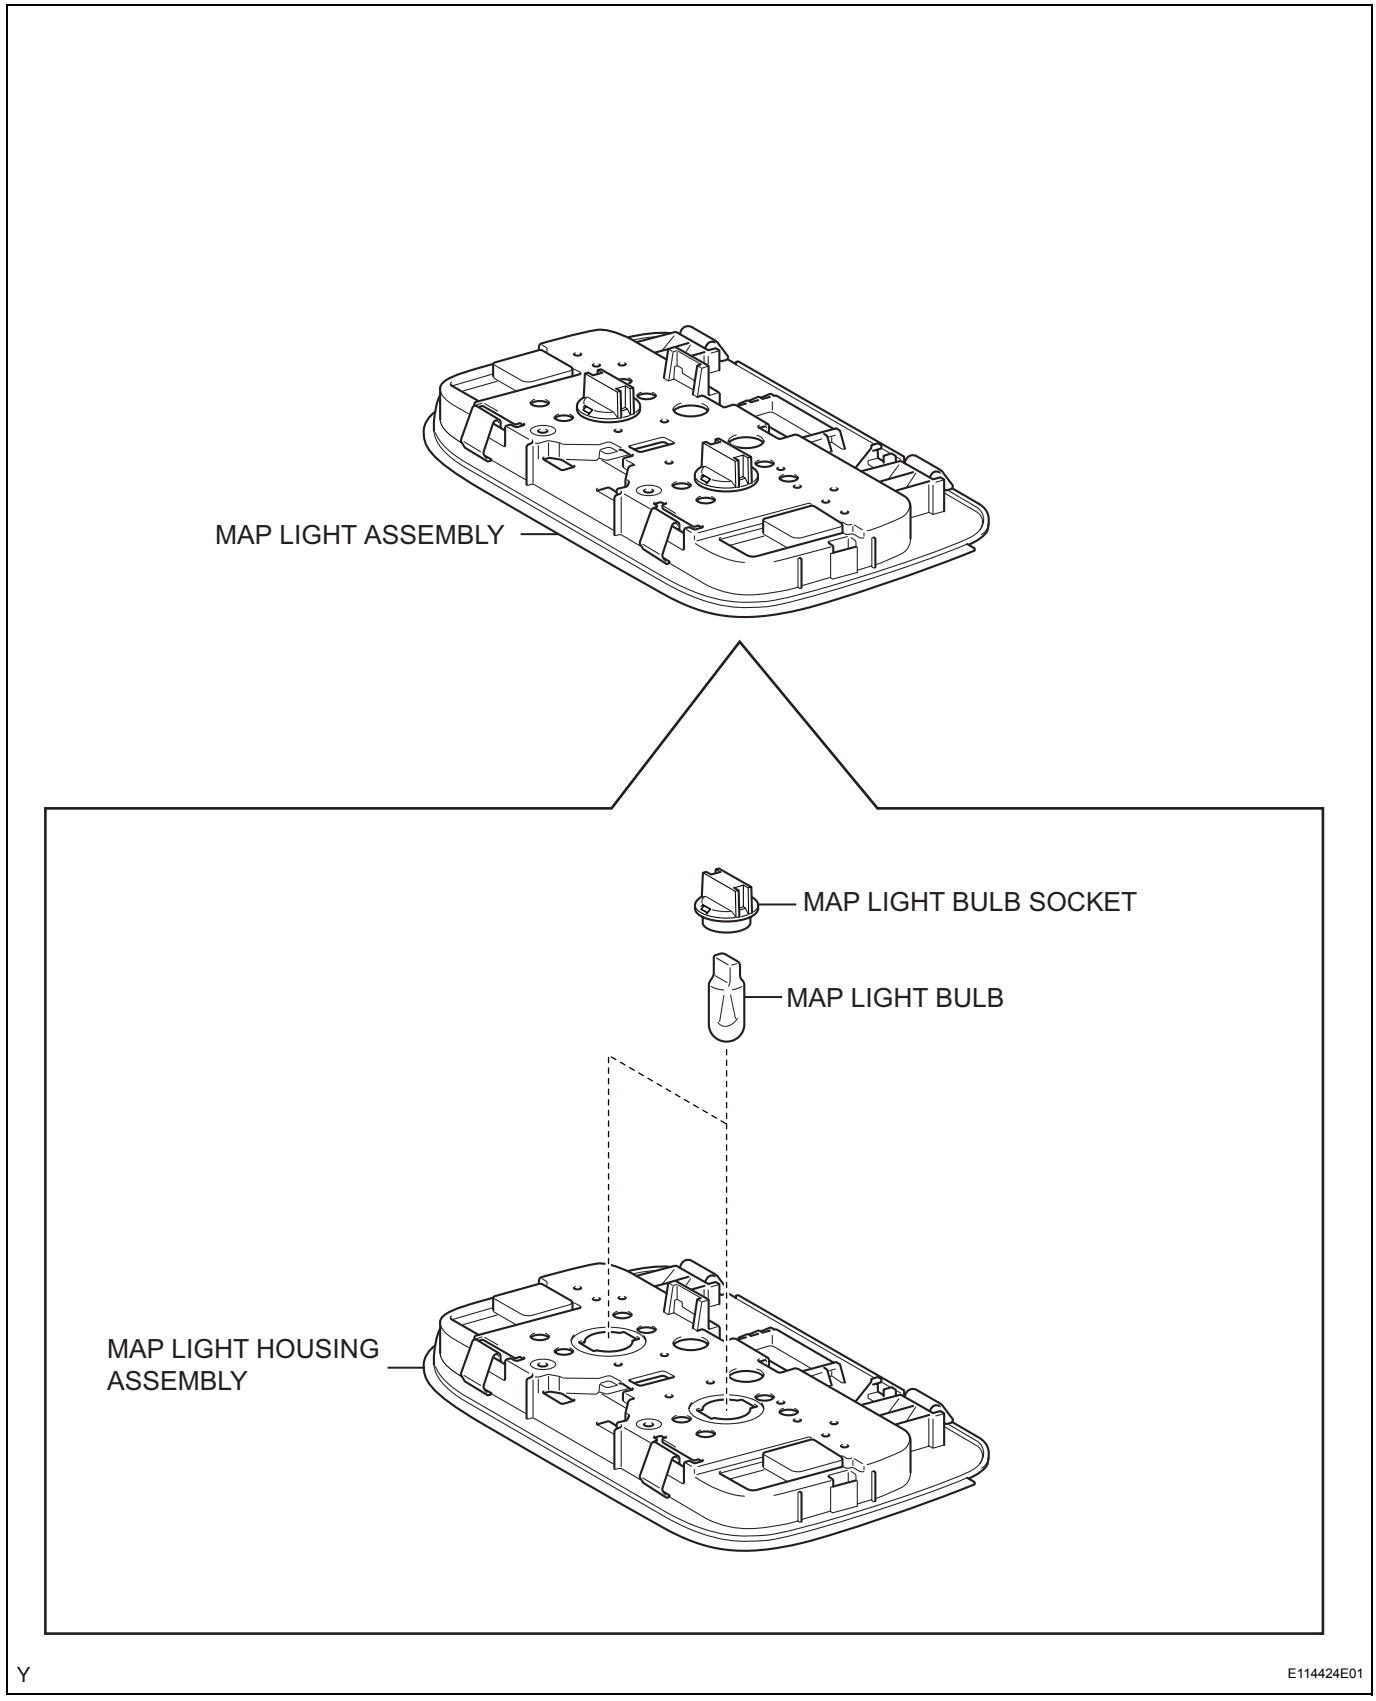
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

LI

MAP LIGHT ASSEMBLY

COMPONENTS



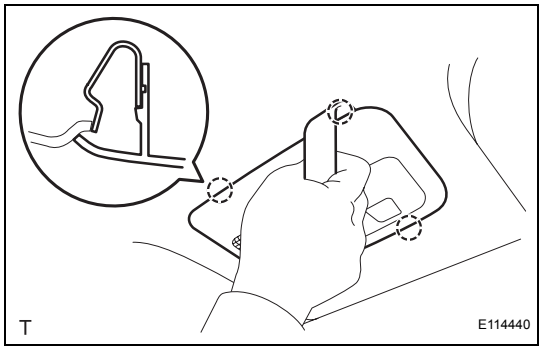
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE MAP LIGHT ASSEMBLY

(a) Using a roof moulding remover, disengage the 4 claws.

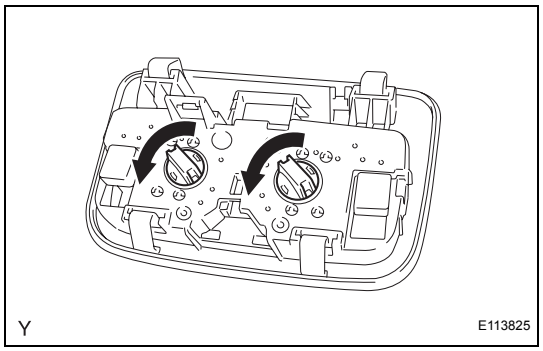
(b) Disconnect the connector, and remove the map light.



3. REMOVE MAP LIGHT BULB

(a) Turn the 2 map light sockets and bulbs, in the direction indicated by the arrows in the illustration, to remove them.

(b) Remove the 2 map light bulbs from the light socket.



INSPECTION

1. INSPECT MAP LIGHT ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	OFF	10 kΩ or higher
1 - 2	Drivers switch ON	Below 1 Ω
1 - 2	Passengers switch OFF	Below 1 Ω

If the result is not as specified, replace the map light.

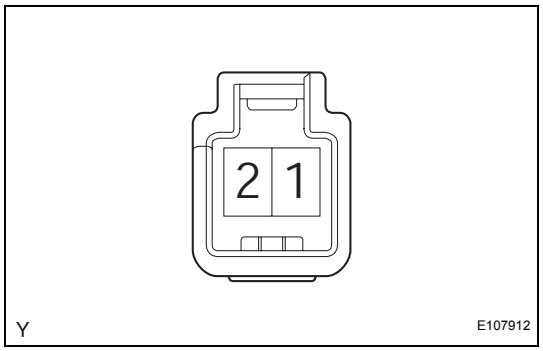
(b) Check the light operation.

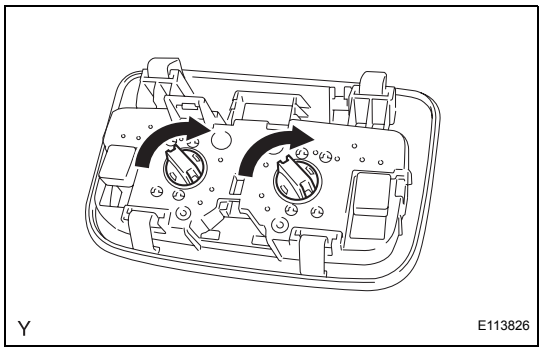
(1) Connect the positive (+) battery lead to terminal 1 and the negative (-) battery lead to terminal 2, then check that the light illuminates.

standard:

Light illuminates.

If the light does not illuminate, replace the bulb.



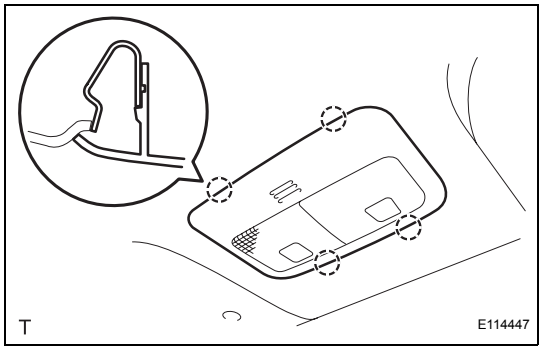


INSTALLATION

1. INSTALL MAP LIGHT BULB

(a) Install the map light bulb into the light socket.

(b) Turn the map light bulb socket and bulb, in the direction indicated by the arrows in the illustration.



2. INSTALL MAP LIGHT ASSEMBLY

(a) Connect the connector.

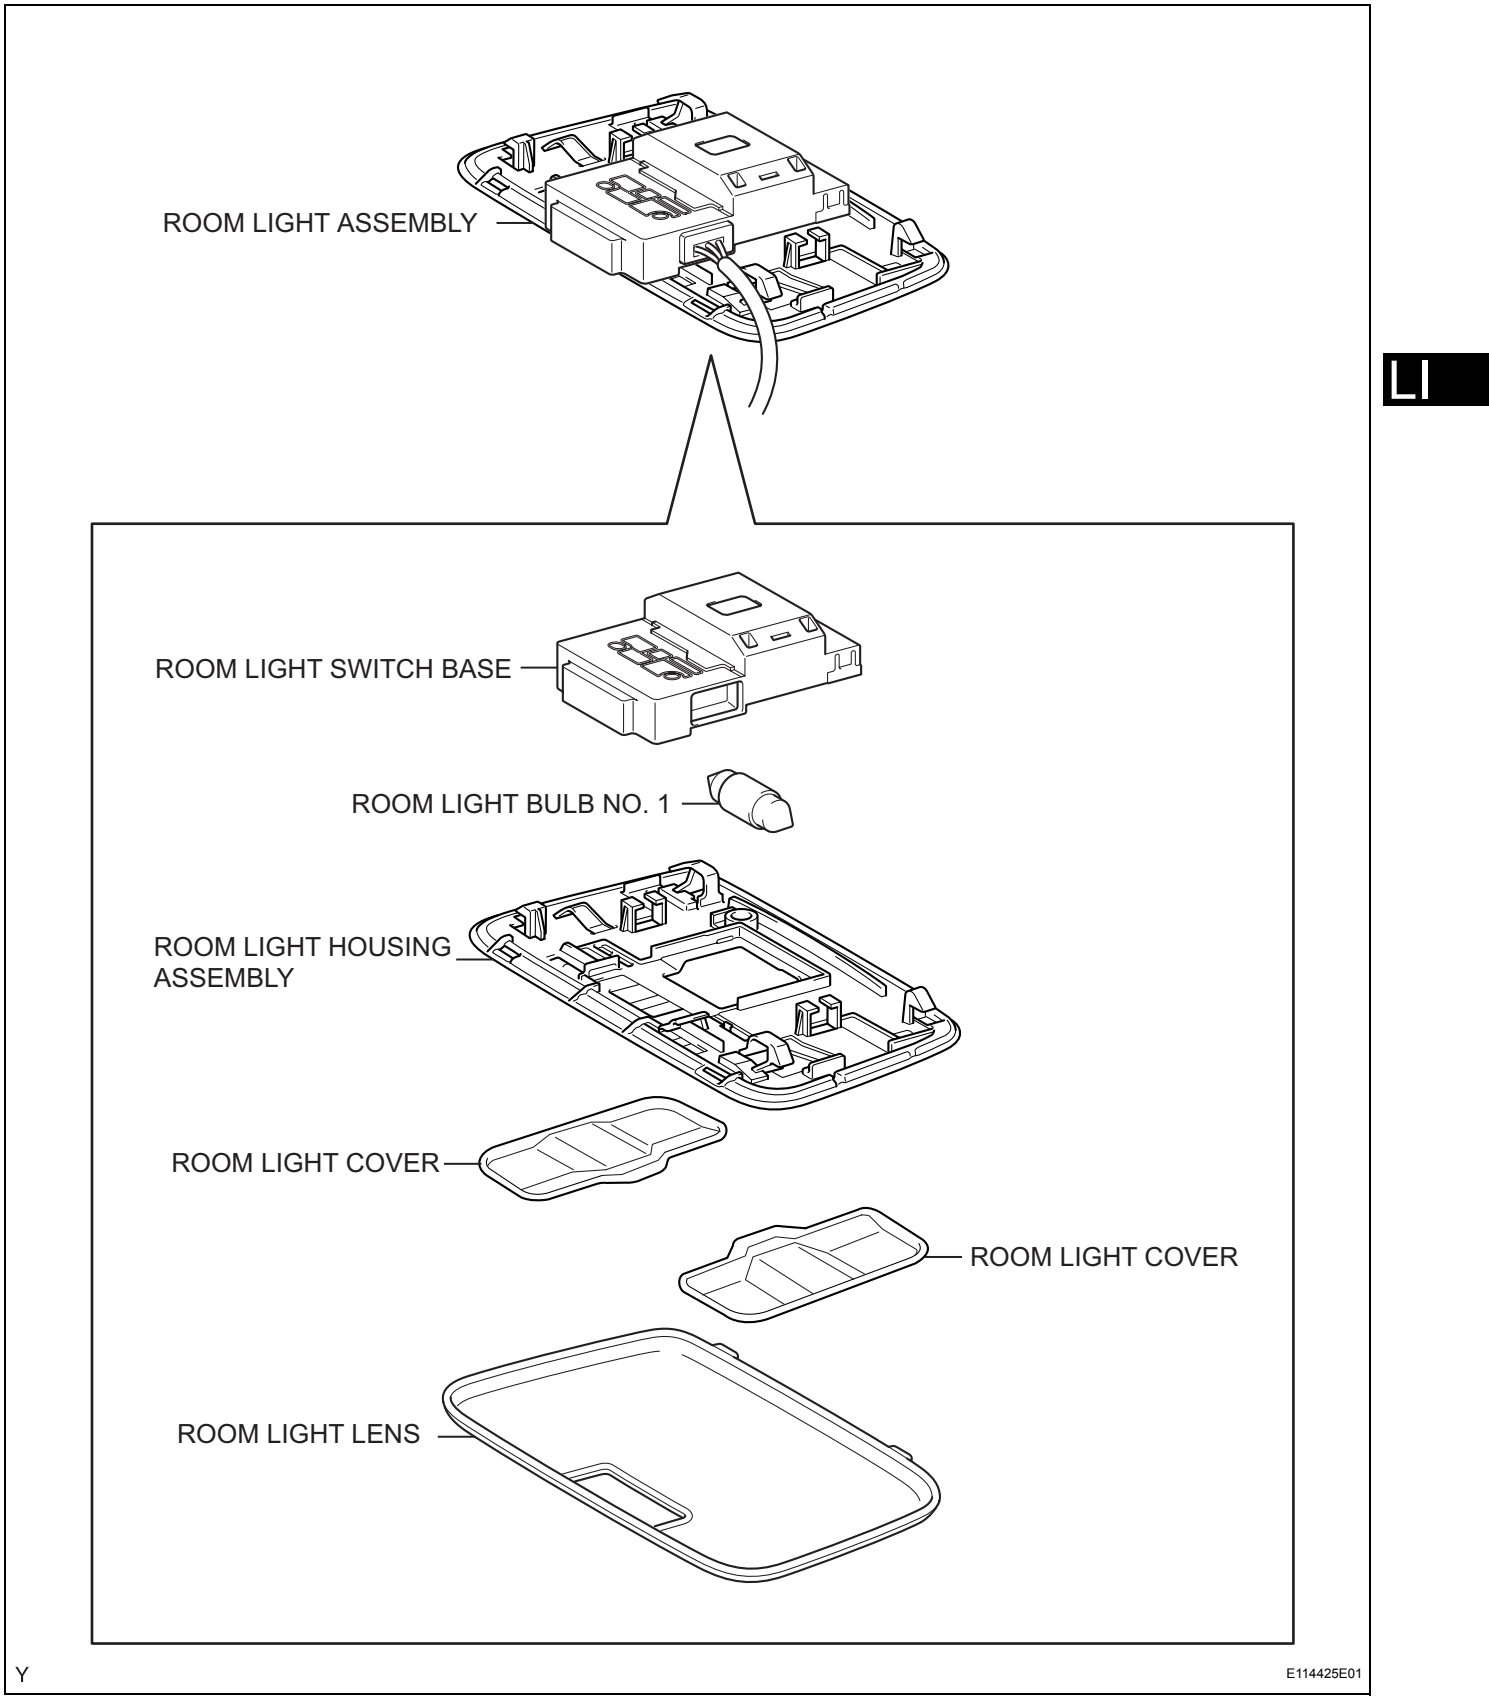
(b) Engage the 4 claws and install the map light.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ROOM LIGHT ASSEMBLY

COMPONENTS

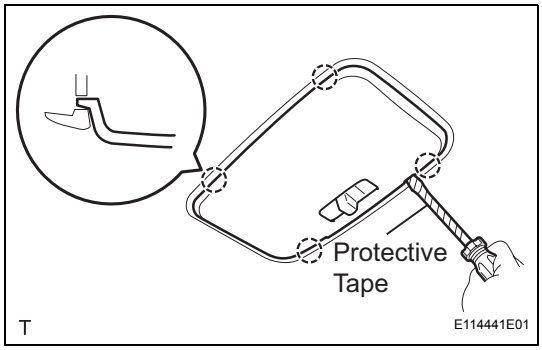


REMOVAL

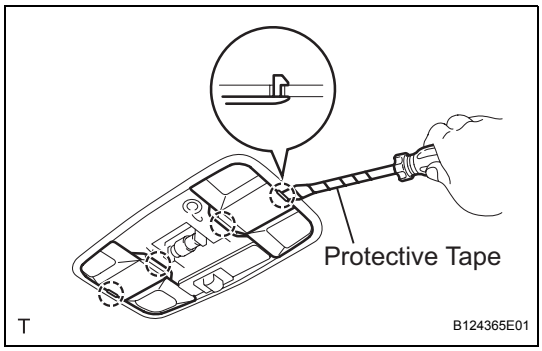
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE ROOM LIGHT ASSEMBLY

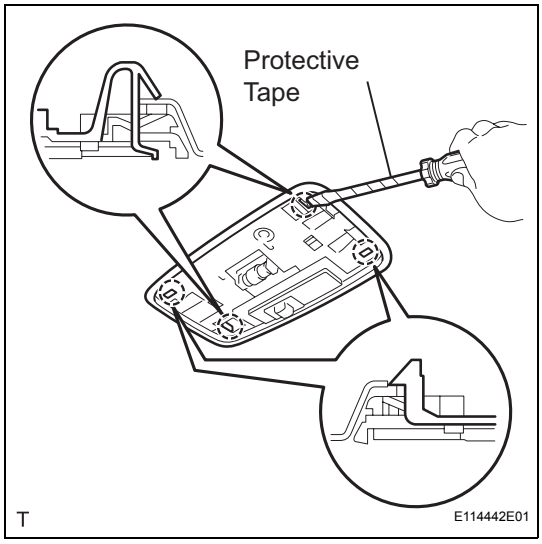
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the room light lens.



(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the 2 covers.



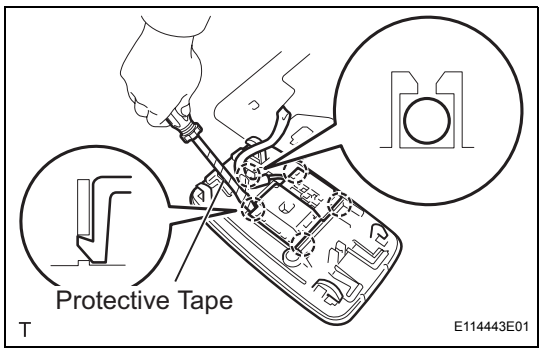
(c) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws.

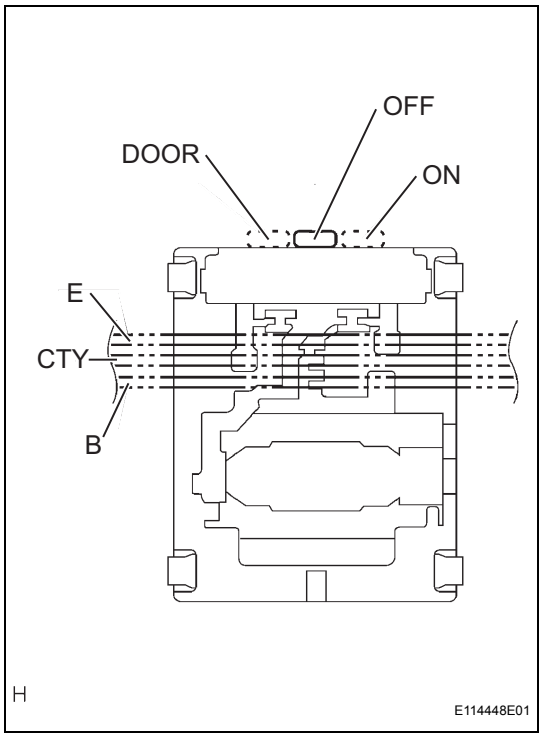


(d) Disengage the roof wire from the claw of the room light.

(e) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the room light switch base.

(f) Remove room light bulb No. 1.





INSPECTION

1. INSPECT ROOM LIGHT ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
CTY - B - E	OFF	10 kΩ or higher
CTY - B	DOOR	Below 1 Ω
B - E	ON	Below 1 Ω

If the result is not as specified, replace the room light.

(b) Check the light operation.

(1) Connect the positive (+) battery lead to terminal B and the negative (-) battery lead to terminal CTY, then check that the light illuminates when the switch is in the DOOR position.

Standard:

Light illuminates.

If the light does not come on, replace the bulb.

(2) Connect the positive (+) battery lead to terminal B and the negative (-) battery lead to terminal E, then check that the light illuminates when the switch is in the ON position.

Standard:

Light illuminates.

If the light does not illuminate, replace the bulb.

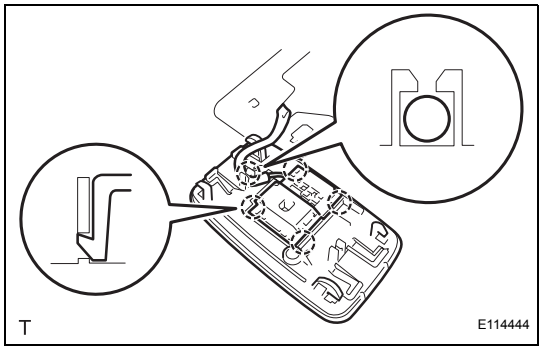
INSTALLATION

1. INSTALL ROOM LIGHT ASSEMBLY

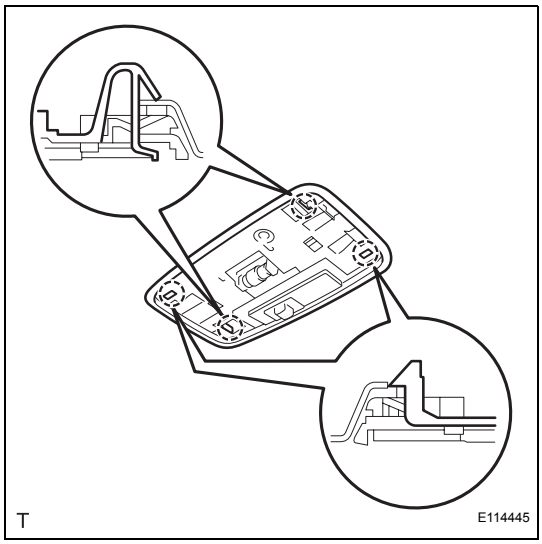
(a) Install room light bulb No. 1.

(b) Engage the 4 claws and install the room light switch base.

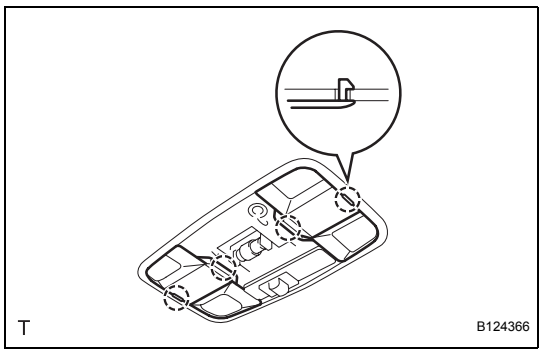
(c) Install the roof wire into the claw of the room light.



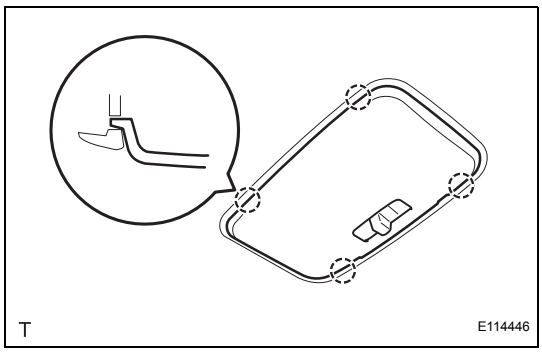
(d) Engage the 4 claws and install the room light.



(e) Engage the 4 claws and install the 2 covers.



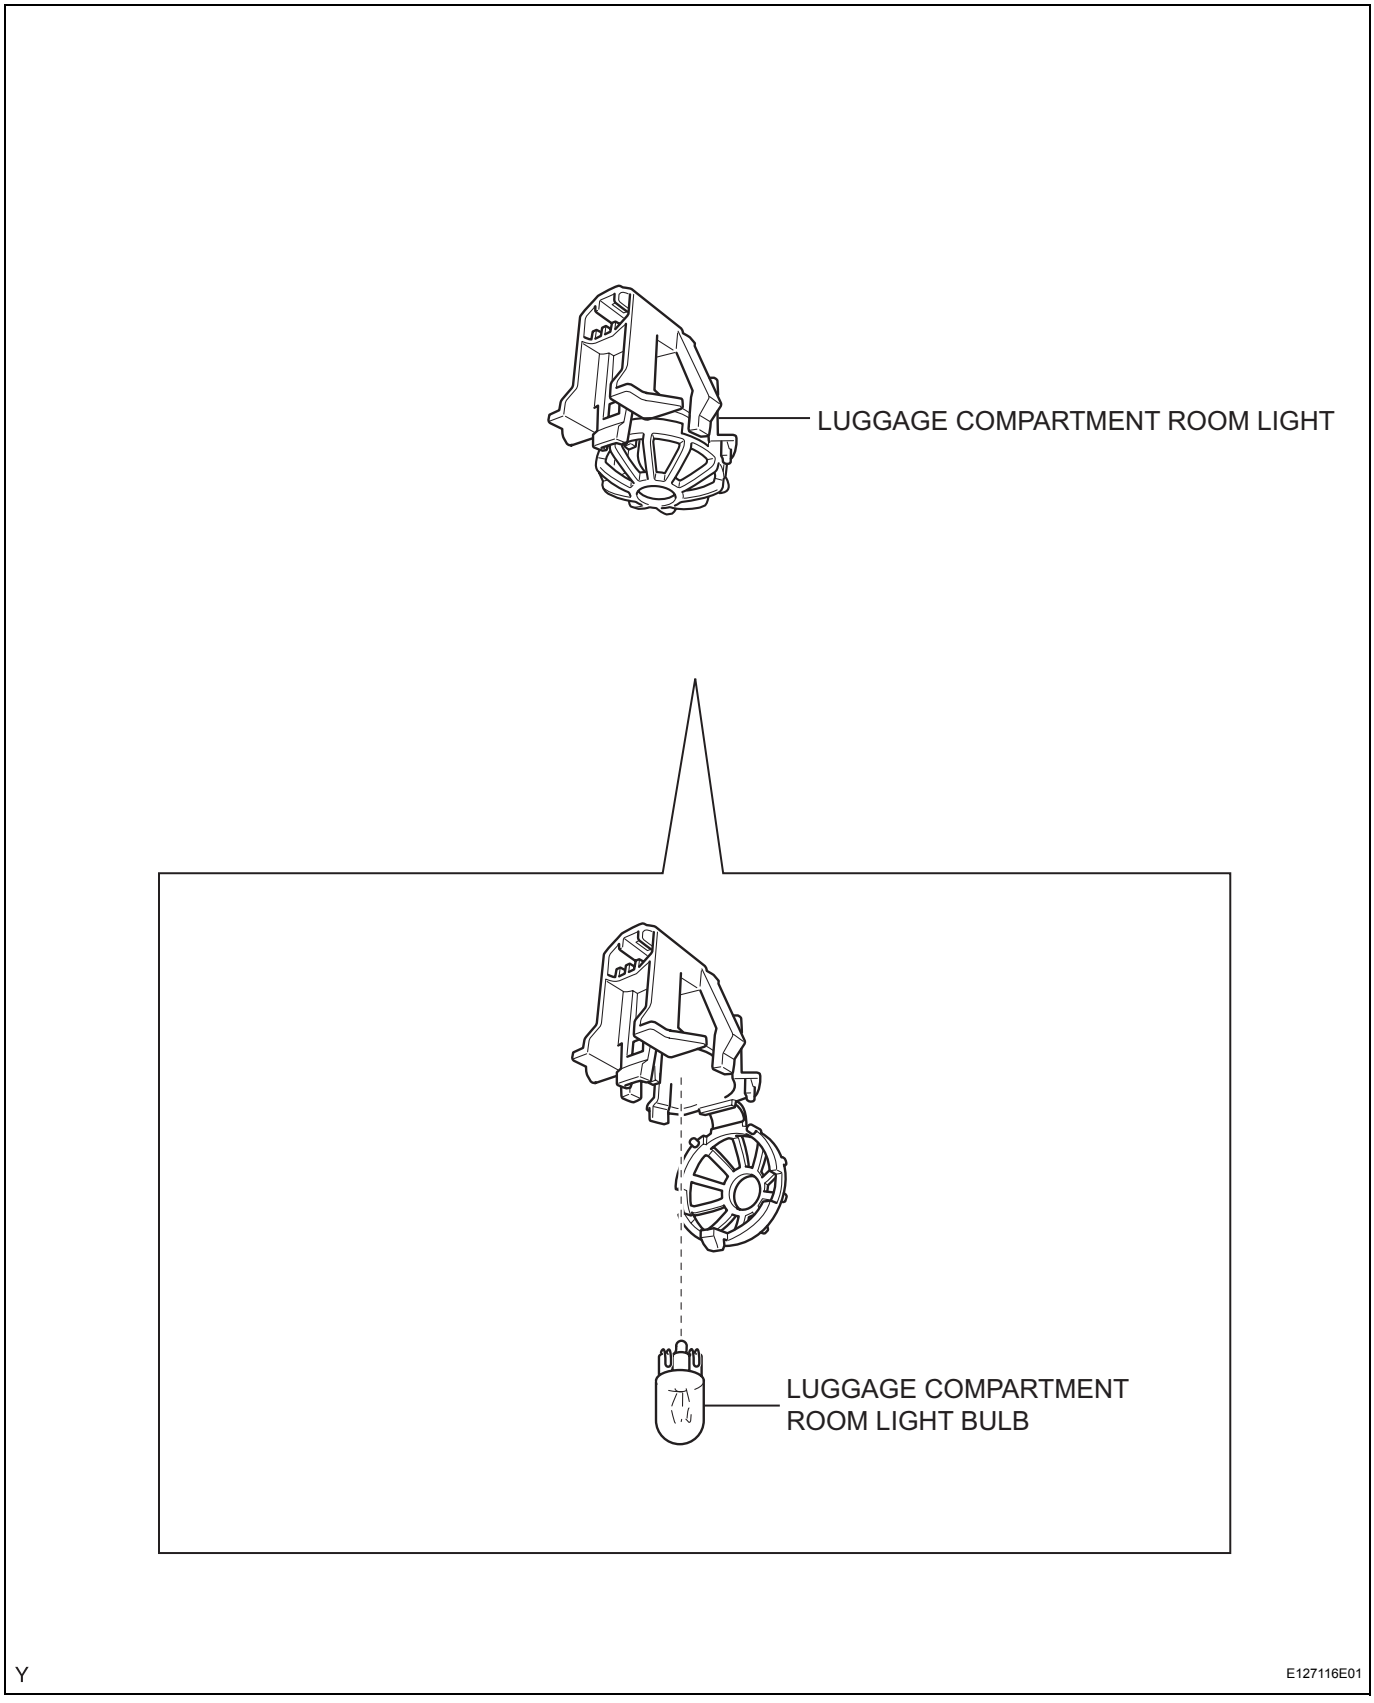
(f) Engage the 4 claws and install the room light lens.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

LUGGAGE COMPARTMENT ROOM LIGHT (for Sedan)

COMPONENTS

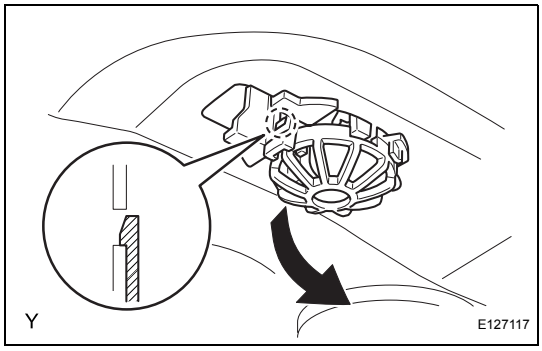


REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

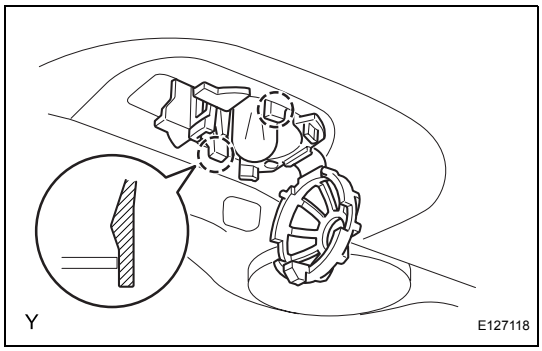
2. REMOVE LUGGAGE COMPARTMENT ROOM LIGHT

(a) Disengage the claw and pull up the luggage compartment room light in the direction indicated by the arrow.



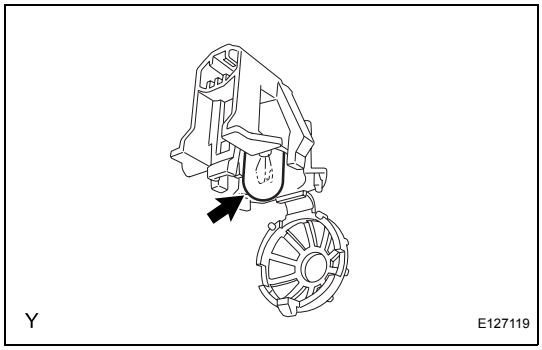
(b) Disengage the 2 claws and remove the luggage compartment room light.

(c) Disconnect the connector.



3. REMOVE LUGGAGE COMPARTMENT ROOM LIGHT BULB

(a) Remove the luggage compartment room light bulb.



INSPECTION

1. INSPECT LUGGAGE COMPARTMENT ROOM LIGHT

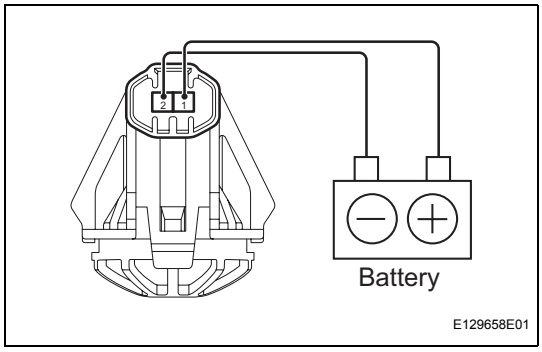
(a) Check the light operation.

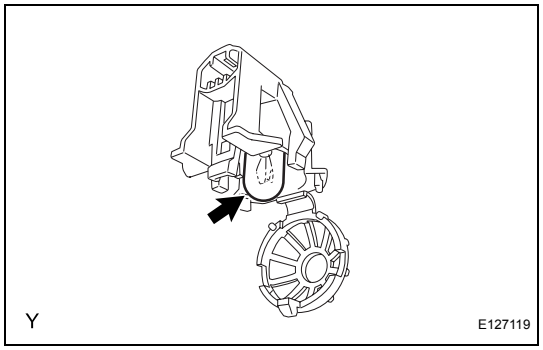
(1) Connect the positive (+) battery lead to terminal 1 and the negative (-) battery lead to terminal 2, then check that the light illuminates.

Standard:

Light illuminates.

If the light does not illuminate, replace the bulb.

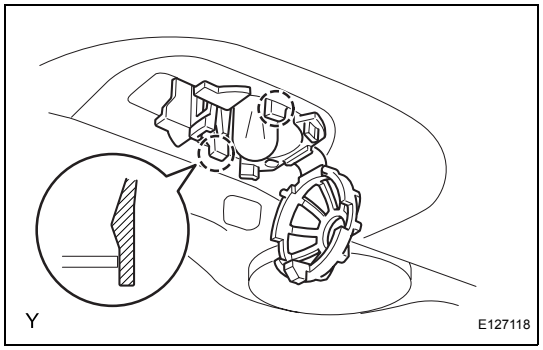




INSTALLATION

1. INSTALL LUGGAGE COMPARTMENT ROOM LIGHT BULB

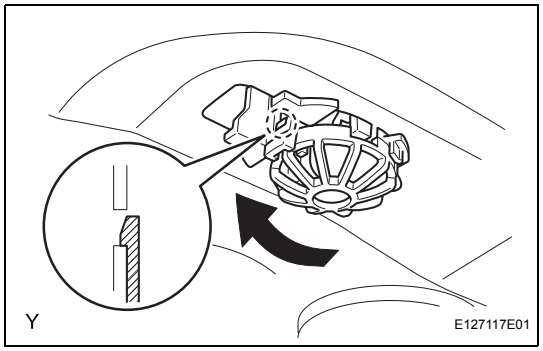
(a) Install the luggage compartment room light bulb.



2. INSTALL LUGGAGE COMPARTMENT ROOM LIGHT

(a) Connect the connector.

(b) Engage the 2 claws and install the luggage compartment room light.



(c) Tilt the luggage compartment room light in the direction shown in the illustration and lock it.

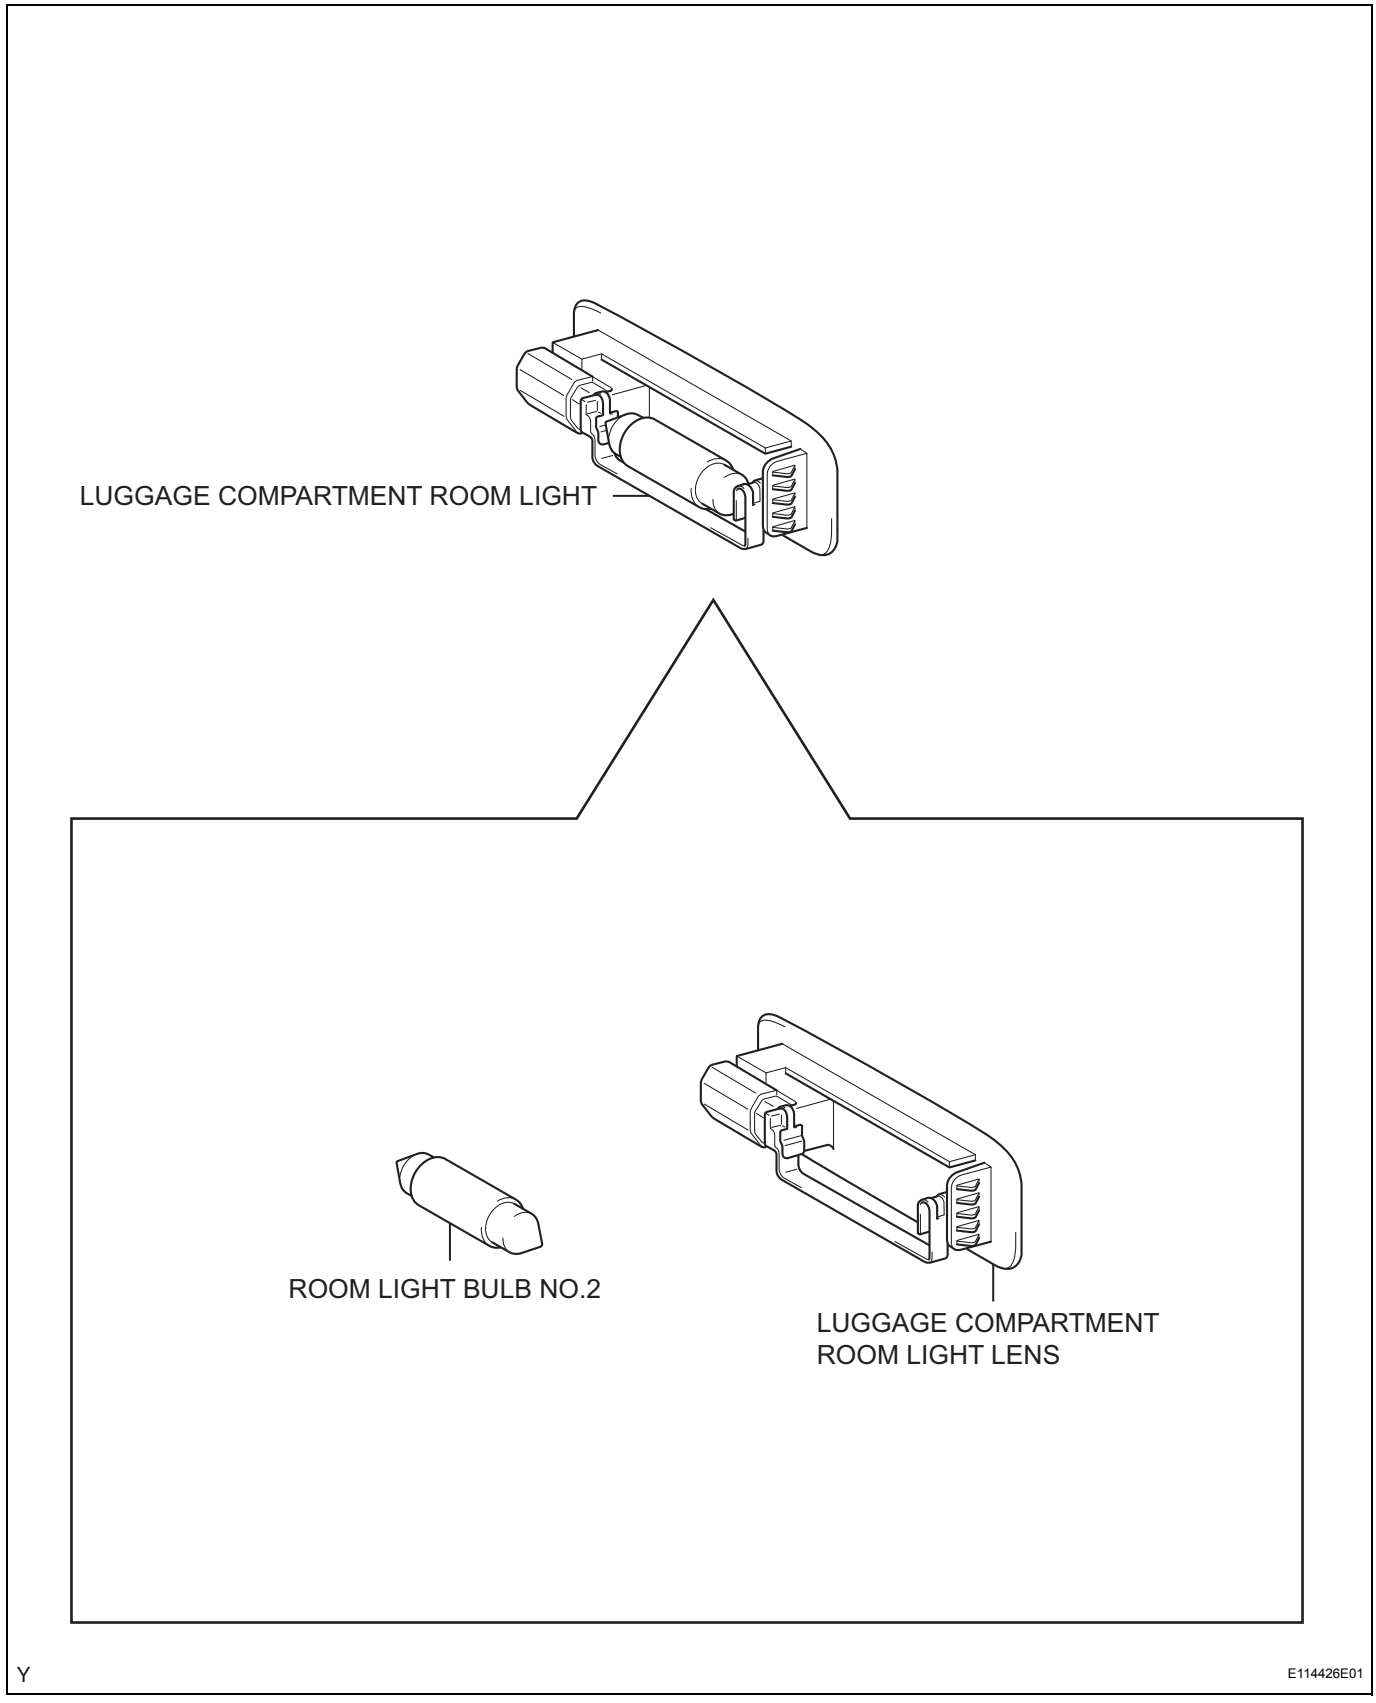
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

LI

LUGGAGE COMPARTMENT ROOM LIGHT (for Hatchback)

COMPONENTS



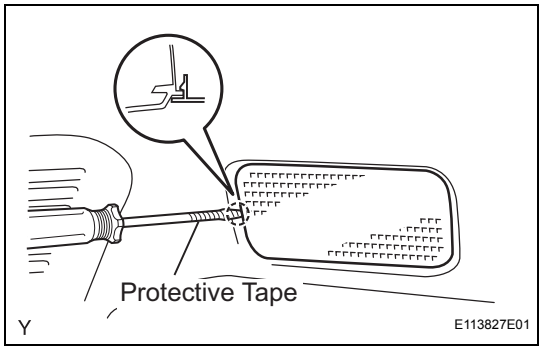
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LUGGAGE COMPARTMENT ROOM LIGHT

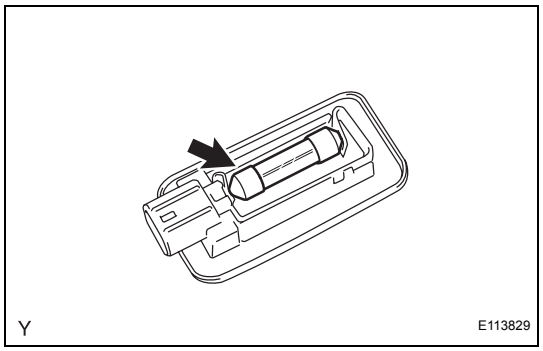
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the luggage compartment room light.

(b) Disconnect the connector.



3. REMOVE ROOM LIGHT BULB NO.2

(a) Remove room light bulb No. 2.



LI

INSPECTION

1. INSPECT LUGGAGE COMPARTMENT ROOM LIGHT

(a) Check the light operation.

(1) Connect the positive (+) battery lead to terminal 2 and the negative (-) battery lead to terminal 1, then check that the light illuminates.

Standard:

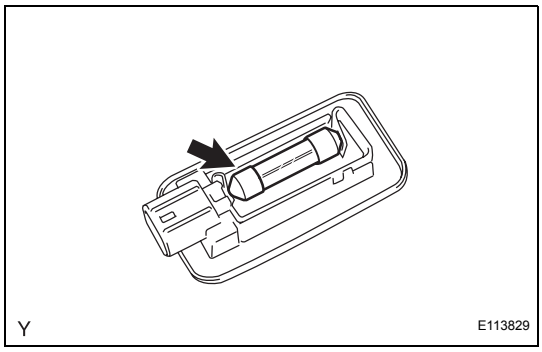
Light illuminates.

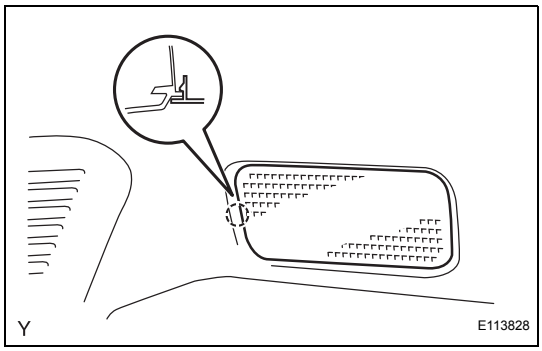
If the light does not illuminate, replace the bulb.

INSTALLATION

1. INSTALL ROOM LIGHT BULB NO.2

(a) Install room light bulb No. 2.





2. INSTALL LUGGAGE COMPARTMENT ROOM LIGHT

(a) Connect the connector.

(b) Engage the claw and install the luggage compartment room light.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HEADLIGHT DIMMER SWITCH

COMPONENTS

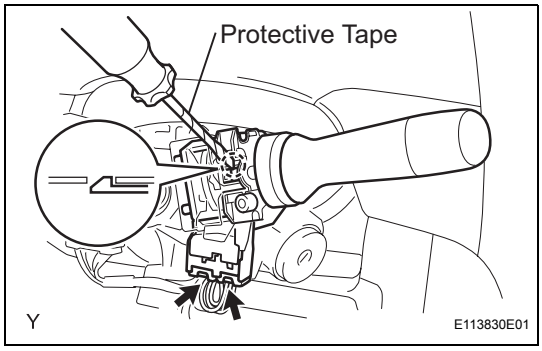
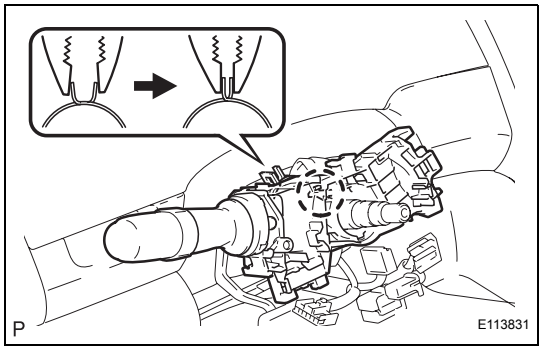
REMOVAL

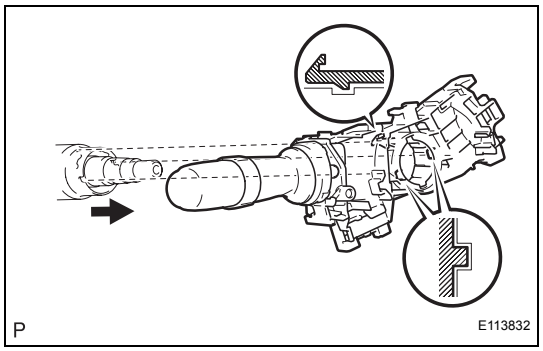
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE STEERING PAD (See page RS-309)**
4. **REMOVE STEERING WHEEL ASSEMBLY (for Hatchback) (See page SR-30)**
5. **REMOVE STEERING WHEEL ASSEMBLY (for Sedan) (See page SR-12)**
6. **REMOVE STEERING COLUMN COVER (for Hatchback) (See page SR-30)**
7. **REMOVE STEERING COLUMN COVER (for Sedan) (See page SR-12)**
8. **REMOVE SPIRAL CABLE (See page RS-321)**
9. **REMOVE WIPER SWITCH**
   (a) Disconnect the 2 connectors.
   (b) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the wiper switch.
   NOTICE:
   Do not press the claw too hard, as it may be damaged.

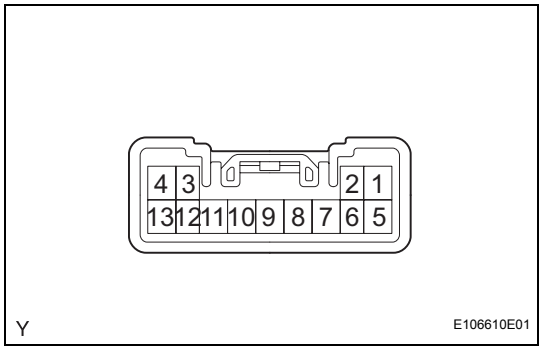


10. **REMOVE HEADLIGHT DIMMER SWITCH**
    (a) Disconnect the connector.
    (b) Remove the headlight dimmer switch, as shown in the illustration.





(c) Disengage the 2 claws and remove the headlight dimmer switch.



INSPECTION

1. INSPECT HEADLIGHT DIMMER SWITCH

(a) Check the resistance of the light control switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
10 - 11 - 12 - 13	OFF	10 kΩ or higher
10 - 13	TAIL	Below 1 Ω
10 - 13	HEAD	Below 1 Ω
11 - 12	HEAD	Below 1 Ω

If the result is not as specified, replace the headlight dimmer switch.

(b) Check the resistance of the headlight dimmer switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
9 - 11	FLASH	Below 1 Ω
8 - 11	LOW BEAM	Below 1 Ω
9 - 11	HI BEAM	Below 1 Ω

If the result is not as specified, replace the headlight dimmer switch.

(c) Check the resistance of the turn signal switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
6 - 7	Right turn	Below 1 Ω
5 - 6 - 7	Neutral	10 kΩ or higher
5 - 7	Left turn	Below 1 Ω

If the result is not as specified, replace the headlight dimmer switch.

(d) w/ Front fog light:

Check the resistance of the front fog light switch.

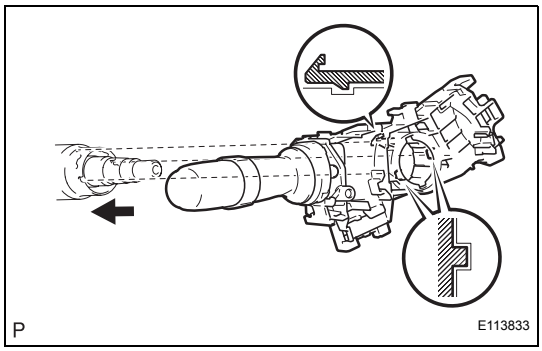
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
3 - 4	OFF	10 kΩ or higher
3 - 4	Front fog light switch ON	Below 1 Ω

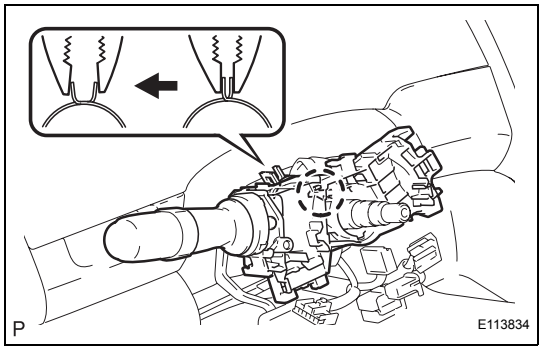
If the result is not as specified, replace the headlight dimmer switch.

INSTALLATION



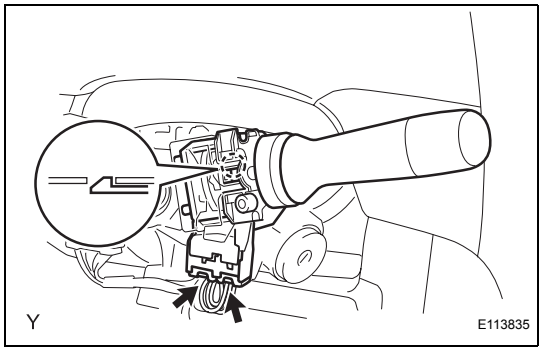
1. INSTALL HEADLIGHT DIMMER SWITCH

(a) Engage the 2 claws and install the headlight dimmer switch, as shown in the illustration.



(b) Install the headlight dimmer switch with the clamp.

(c) Connect the connector.



2. INSTALL WIPER SWITCH

(a) Engage the claw and install the windshield wiper switch.

(b) Connect the 2 connectors.

3. INSTALL SPIRAL CABLE (See page RS-322)

4. INSTALL STEERING COLUMN COVER (for Hatchback) (See page SR-40)

5. INSTALL STEERING COLUMN COVER (for Sedan) (See page SR-22)

6. ADJUST SPIRAL CABLE (See page RS-323)

7. INSTALL STEERING WHEEL ASSEMBLY (for Hatchback) (See page SR-41)

8. INSTALL STEERING WHEEL ASSEMBLY (for Sedan) (See page SR-22)

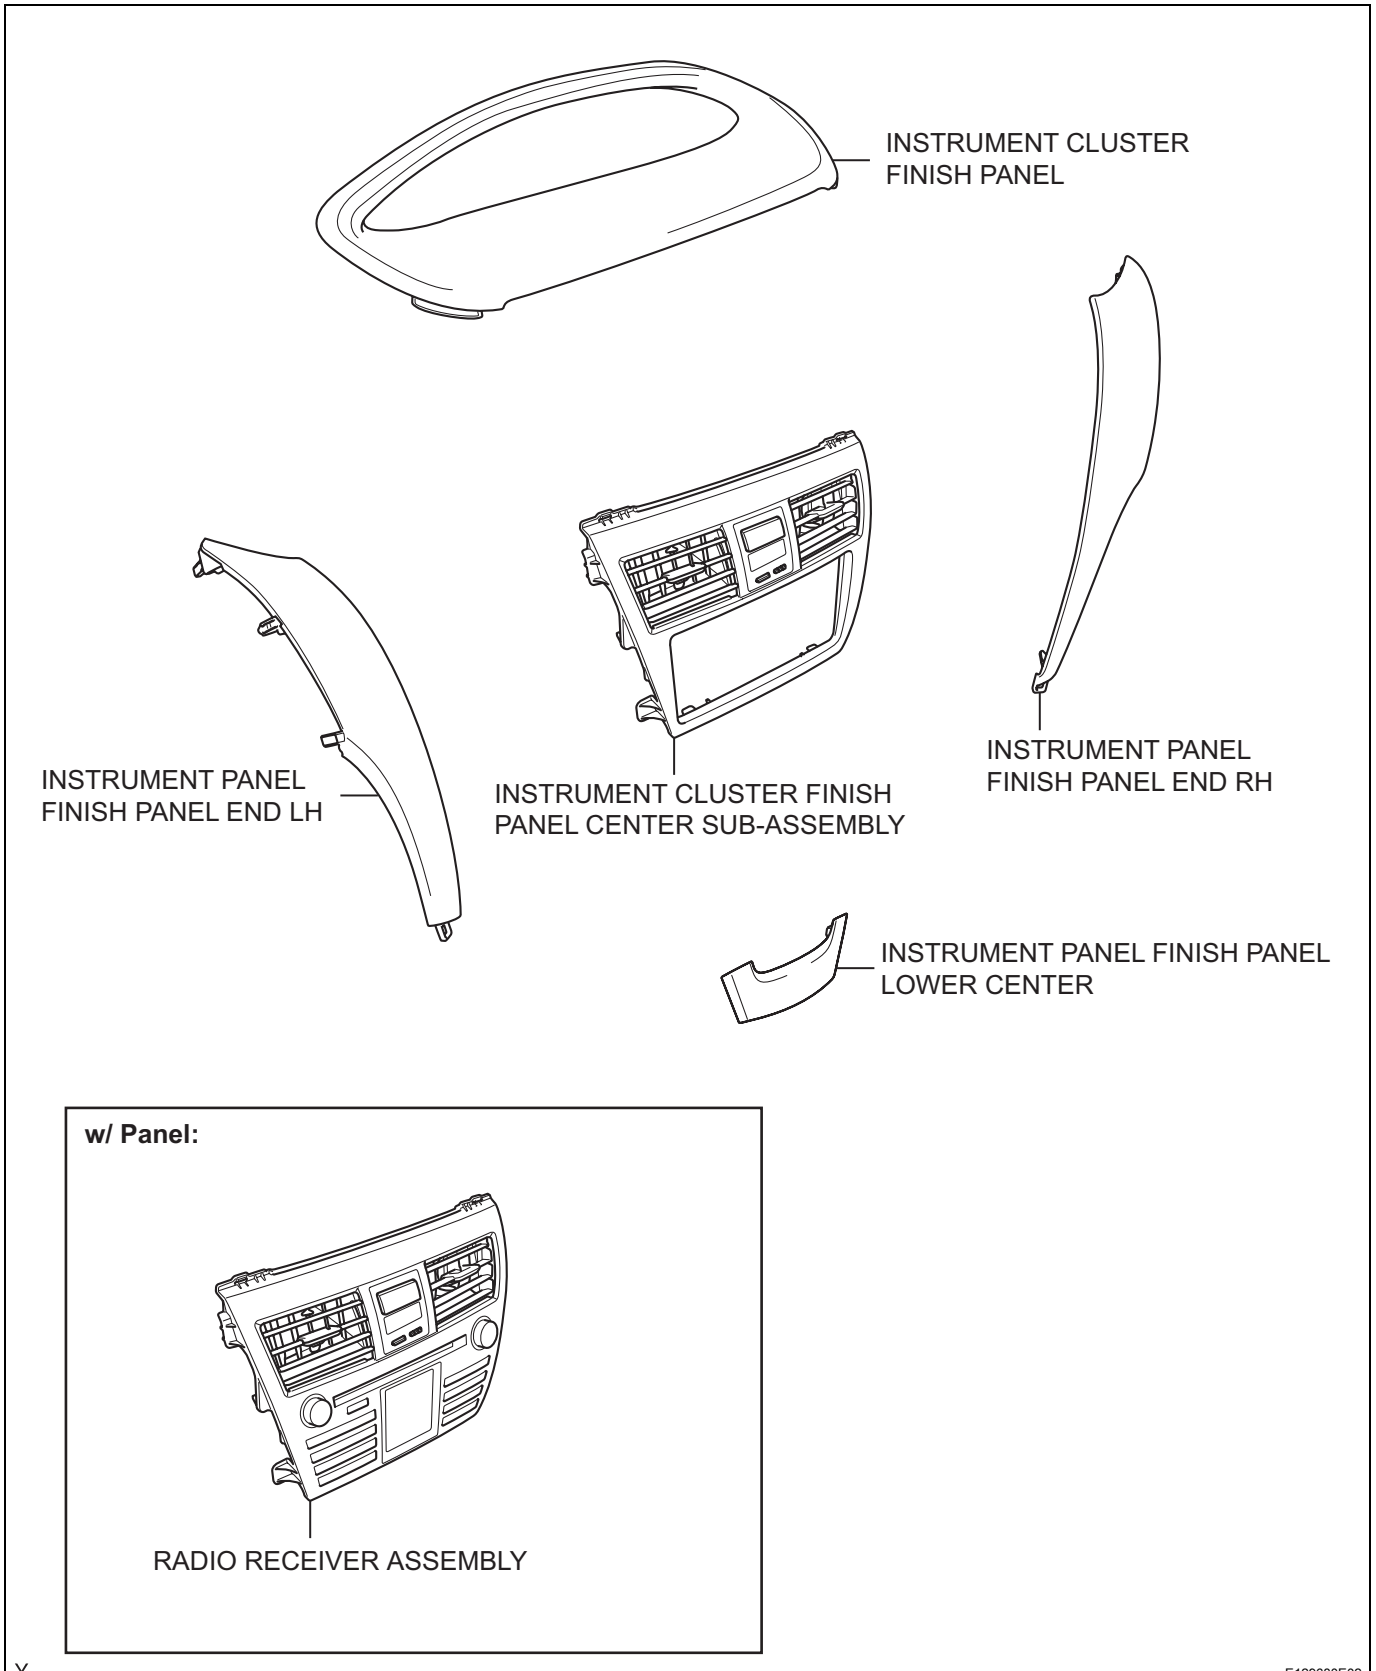
9. INSTALL STEERING PAD (See page RS-310)

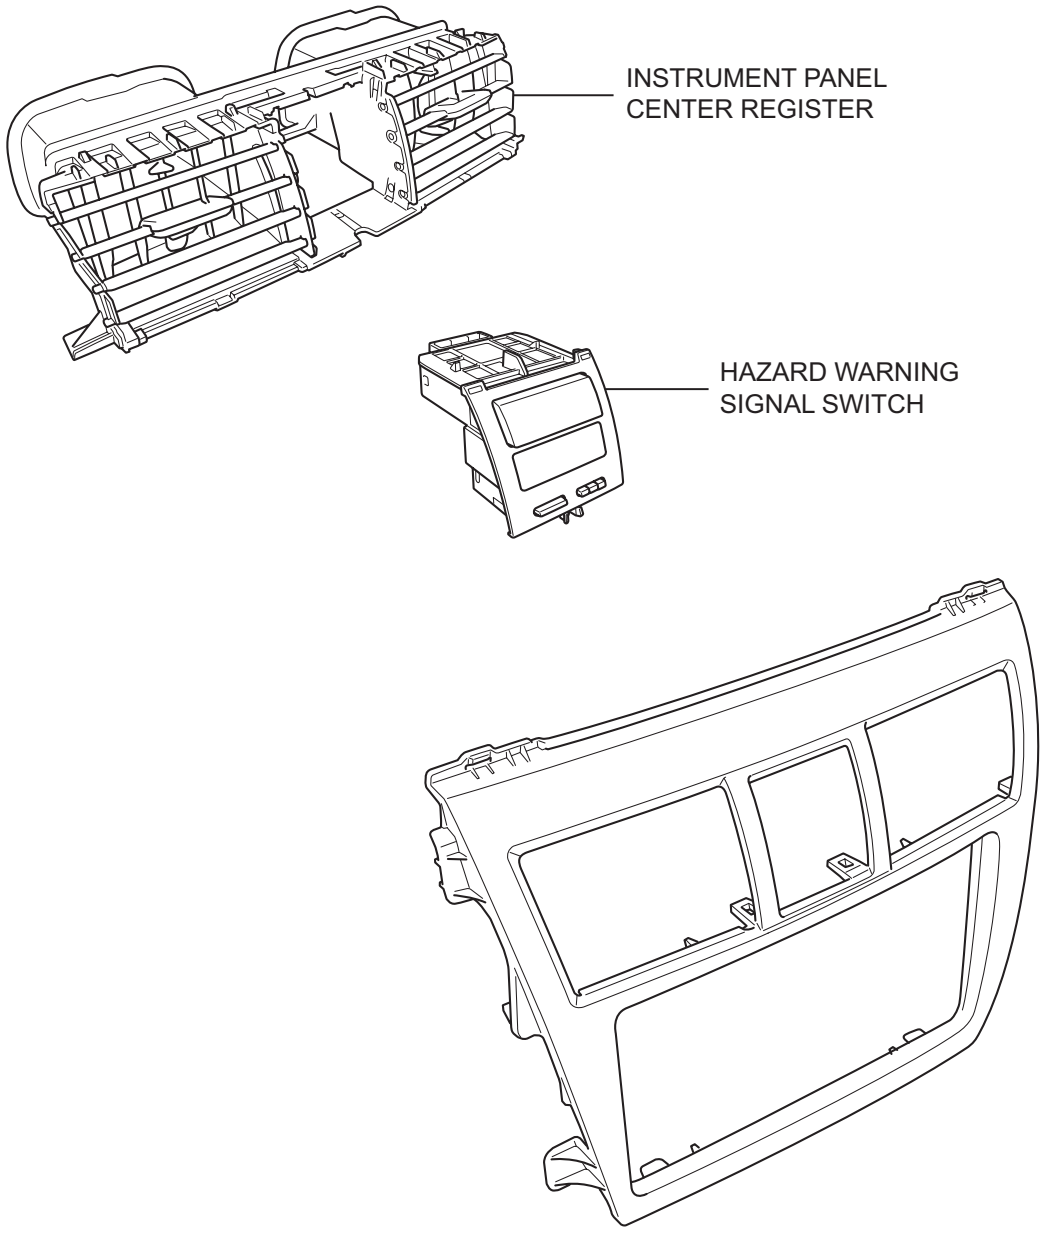
10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

11. INSPECT SRS WARNING LIGHT
(See page RS-310).

HAZARD WARNING SWITCH (for Sedan)

COMPONENTS



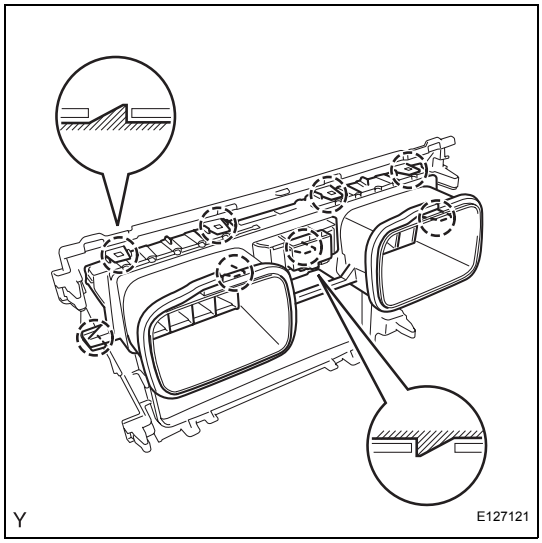


Y

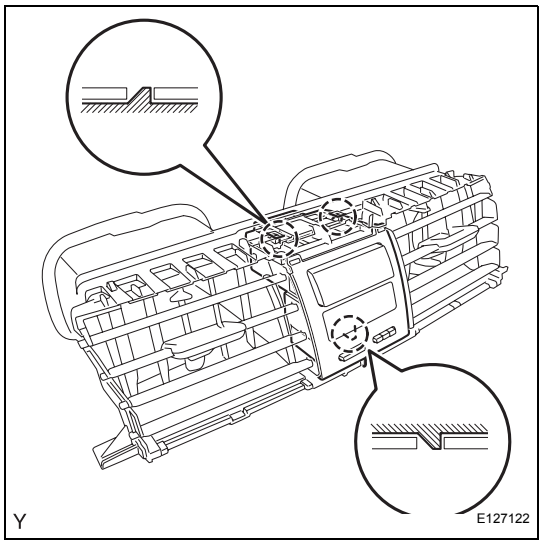
E127120E01

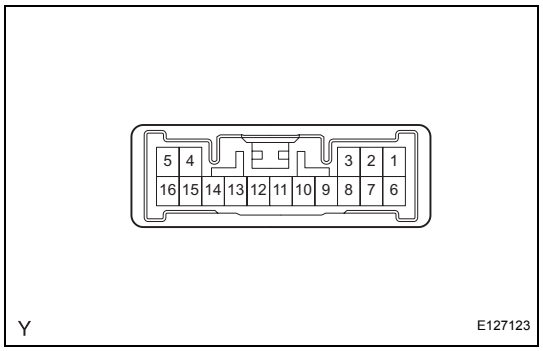
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
5. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
6. **REMOVE INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (w/o Radio Receiver) (See page IP-43)**
7. **REMOVE RADIO RECEIVER ASSEMBLY (w/ Radio Receiver) (See page AV-38)**
8. **REMOVE INSTRUMENT PANEL CENTER REGISTER**
   (a) Disengage the 8 claws and remove the instrument panel center register.



9. **REMOVE HAZARD WARNING SIGNAL SWITCH**
   (a) Disengage the 3 claws and remove the hazard warning signal switch.





INSPECTION

1. INSPECT HAZARD WARNING SIGNAL SWITCH

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
4 - 15	OFF	10 kΩ or higher
4 - 15	ON	Below 1 Ω
3 - 13	Illumination circuit	Below 1 Ω

If the result is not as specified, replace the hazard warning signal switch.

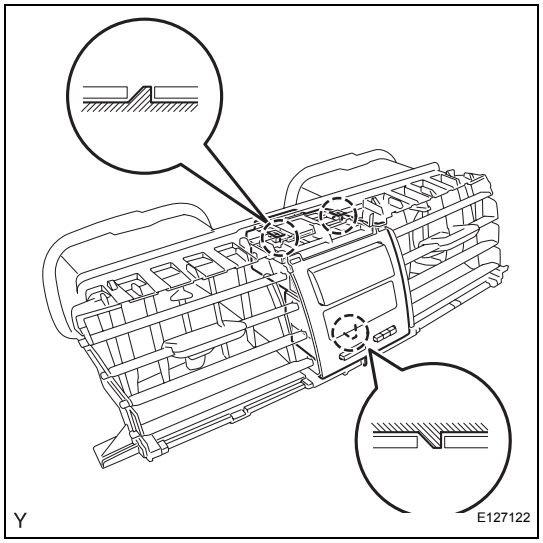
(b) Check the illumination operation.

(1) Connect the positive (+) battery lead to terminal 13 and the negative (-) battery lead to terminal 3, then check that the illumination illuminates.

Standard:

Illumination illuminates.

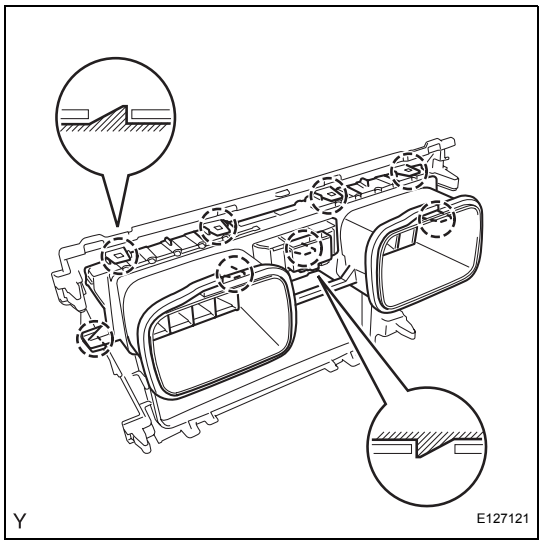
If the illumination does not illuminate, replace the hazard warning signal switch.



INSTALLATION

1. INSTALL HAZARD WARNING SIGNAL SWITCH

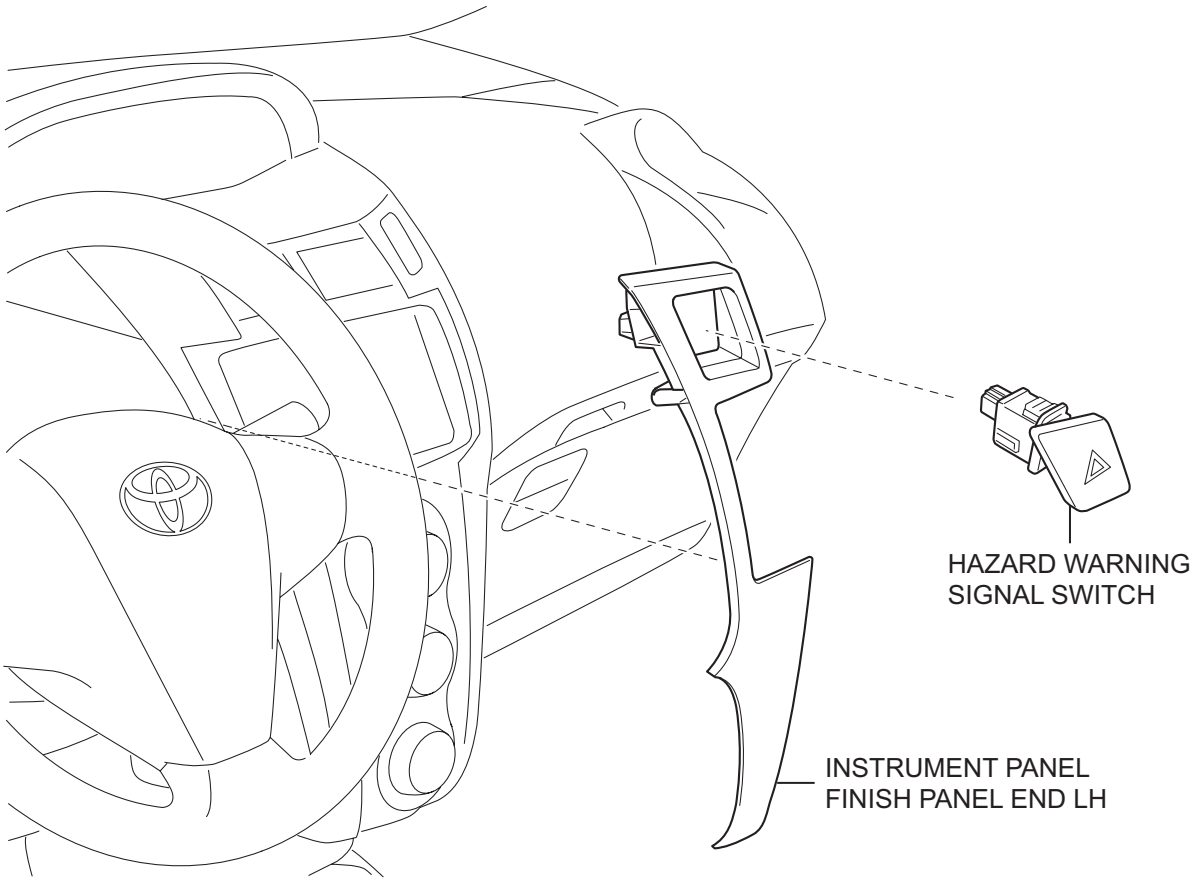
(a) Engage the 3 claws and remove the hazard warning signal switch.



2. **INSTALL INSTRUMENT PANEL CENTER REGISTER**
   (a) Engage the 8 claws and the instrument panel center register.
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (w/o Radio Receiver) (See page IP-56)**
4. **REMOVE RADIO RECEIVER ASSEMBLY (w/ Radio Receiver) (See page AV-40)**
5. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
6. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
7. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HAZARD WARNING SWITCH (for Hatchback)

COMPONENTS

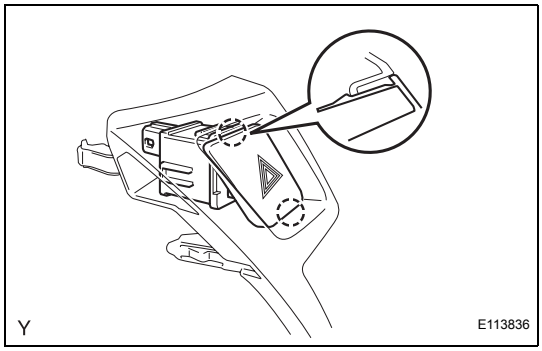


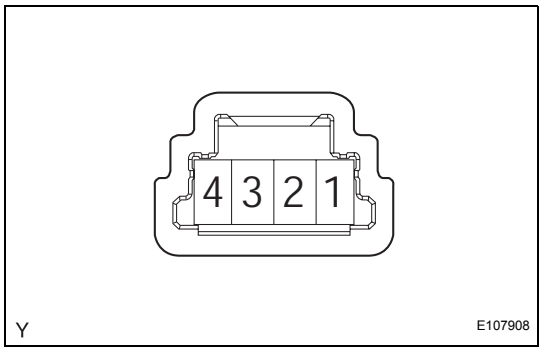
Y

E117229E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
3. **REMOVE HAZARD WARNING SIGNAL SWITCH**
   (a) Disengage the 2 claws and remove the hazard warning signal switch.





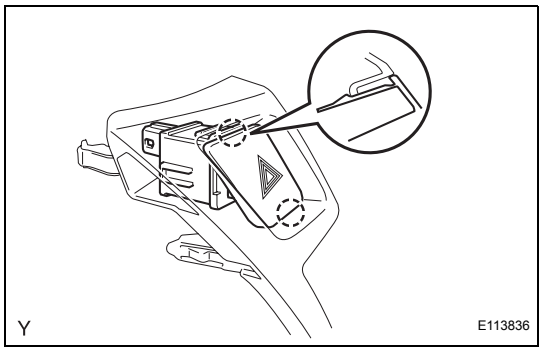
INSPECTION

1. **INSPECT HAZARD WARNING SIGNAL SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 4	OFF	10 kΩ or higher
1 - 4	ON	Below 1 Ω
2 - 3	Illumination circuit	Below 1 Ω

      If the result is not as specified, replace the hazard warning signal switch.
   (b) Check the illumination operation.
      (1) Connect the positive (+) battery lead to terminal 3 and the negative (-) battery lead to terminal 2, then check that the illumination illuminates.
      Standard:
      Illumination illuminates.
      If the illumination does not illuminate, replace the hazard warning signal switch.

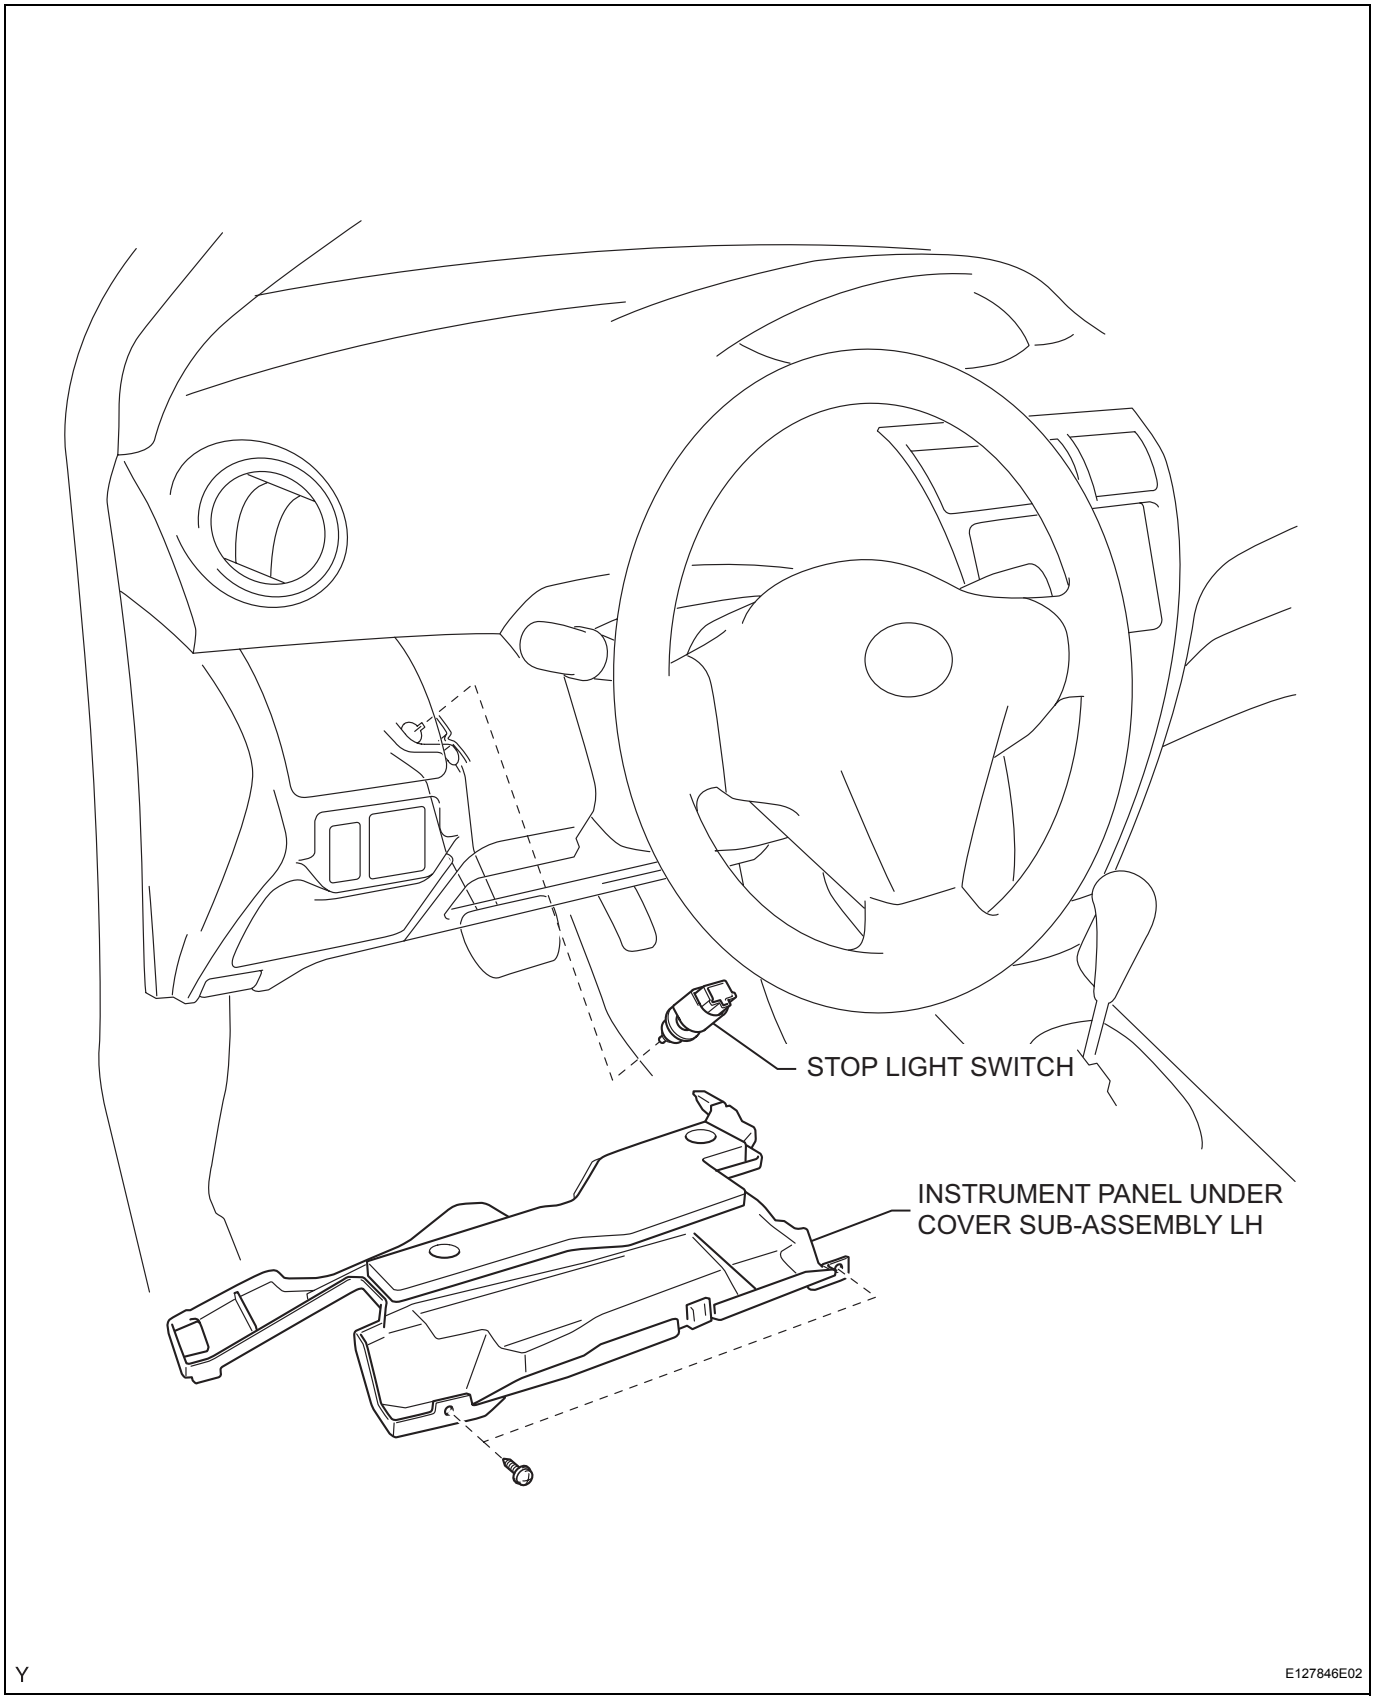
INSTALLATION



1. **INSTALL HAZARD WARNING SIGNAL SWITCH**
   (a) Engage the 2 claws and install the hazard warning signal switch.
2. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

STOP LIGHT SWITCH (for Sedan)

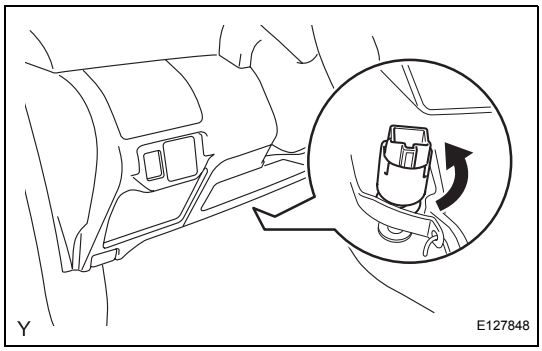
COMPONENTS



REMOVAL

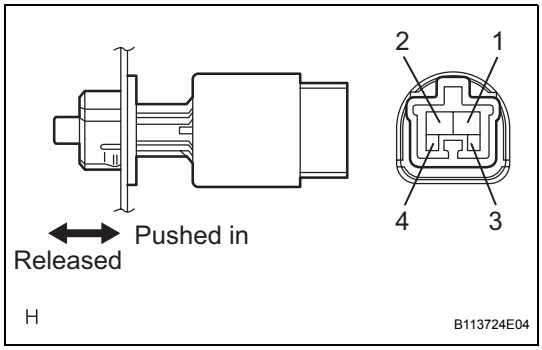
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)**
3. **REMOVE STOP LIGHT SWITCH**
   (a) Remove the stop light switch connector from the stop light switch.

   (b) Turn the stop light switch counterclockwise and remove it.



INSPECTION

1. **INSPECT STOP LIGHT SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

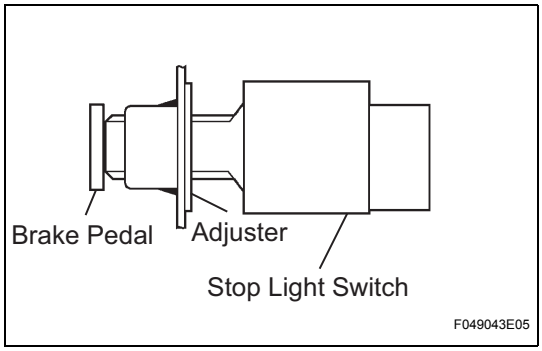


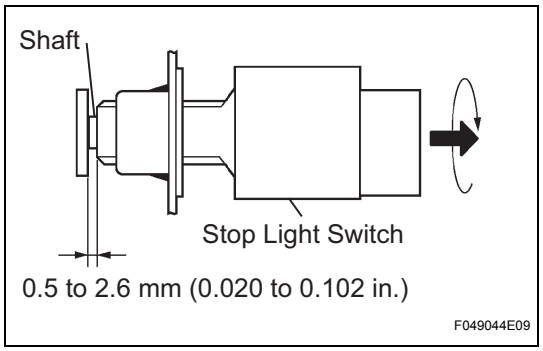
Tester Connection	Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
3 - 4		10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4		Below 1 Ω

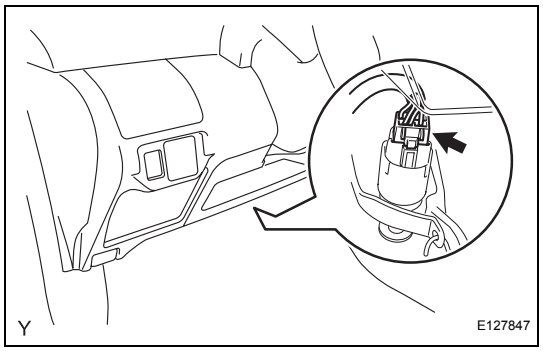
      If the result is not as specified, replace the stop light switch.

INSTALLATION

1. **INSTALL STOP LIGHT SWITCH**
   (a) Install the stop light switch into the adjuster until it slightly touches the brake pedal.
   NOTICE:
   Do not depress the brake pedal.







(1) Make a quarter turn clockwise to install the stop light switch.
NOTICE:
Do not depress the brake pedal.
HINT:
The turning torque for installing the stop light switch is as below.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less

(b) Check the stop light switch clearance.
Stop light switch clearance:
0.5 to 2.6 mm (0.020 to 0.102 in.)

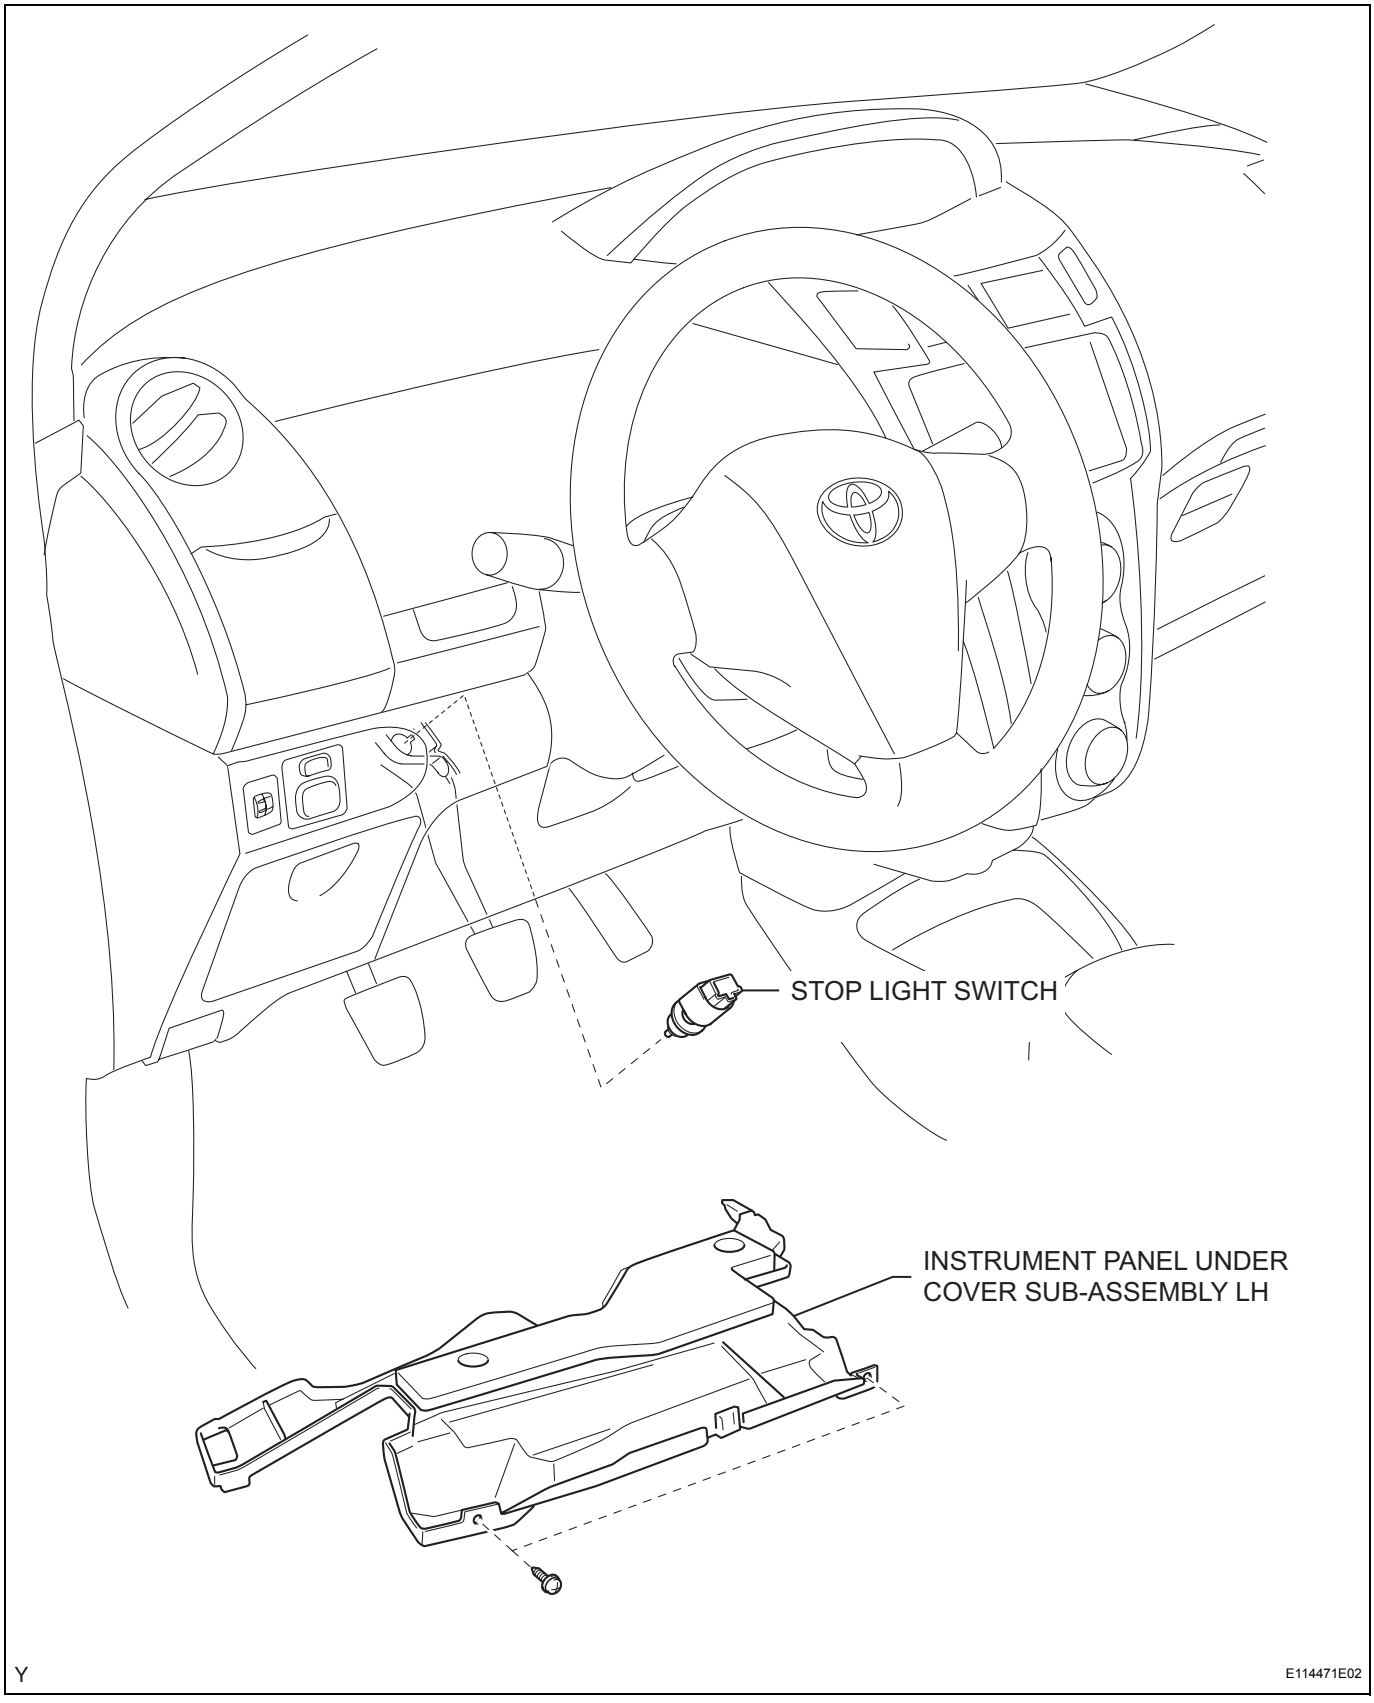
(c) Connect the stop light switch connector to the stop light switch.

2. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

STOP LIGHT SWITCH (for Hatchback)

COMPONENTS



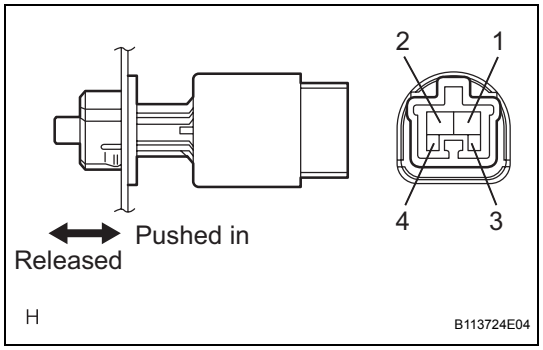
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)**
3. **REMOVE STOP LIGHT SWITCH**
   (a) Remove the stop light switch connector from the stop light switch.

   (b) Turn the stop light switch counterclockwise and remove it.

INSPECTION

1. **INSPECT STOP LIGHT SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

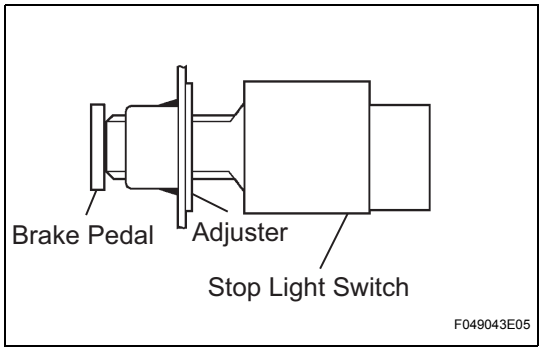


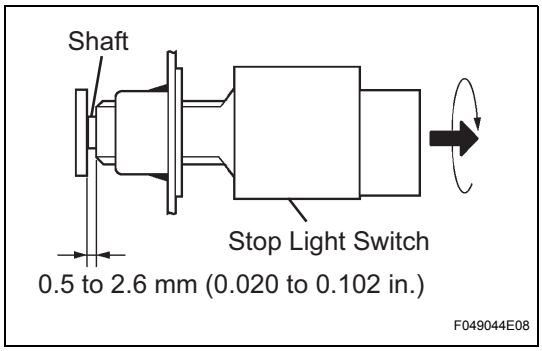
Tester Connection	Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
3 - 4	Switch pin released	10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin pushed in	Below 1 Ω

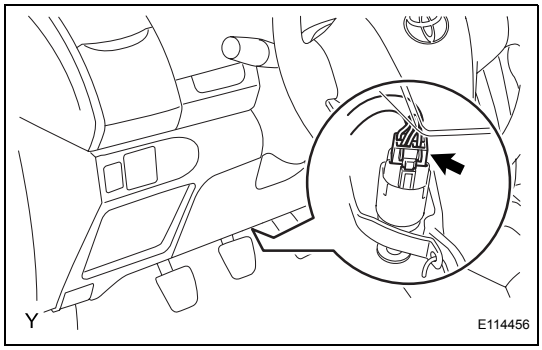
      If the result is not as specified, replace the stop light switch.

INSTALLATION

1. **INSTALL STOP LIGHT SWITCH**
   (a) Install the stop light switch into the adjuster until it slightly touches the brake pedal.
   NOTICE:
   Do not depress the brake pedal.







(1) Make a quarter turn clockwise to install the stop light switch.
NOTICE:
Do not depress the brake pedal.
HINT:
The turning torque for installing the stop light switch is as below.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less

(b) Check the stop light switch clearance.
Stop light switch clearance:
0.5 to 2.6 mm (0.020 to 0.102 in.)

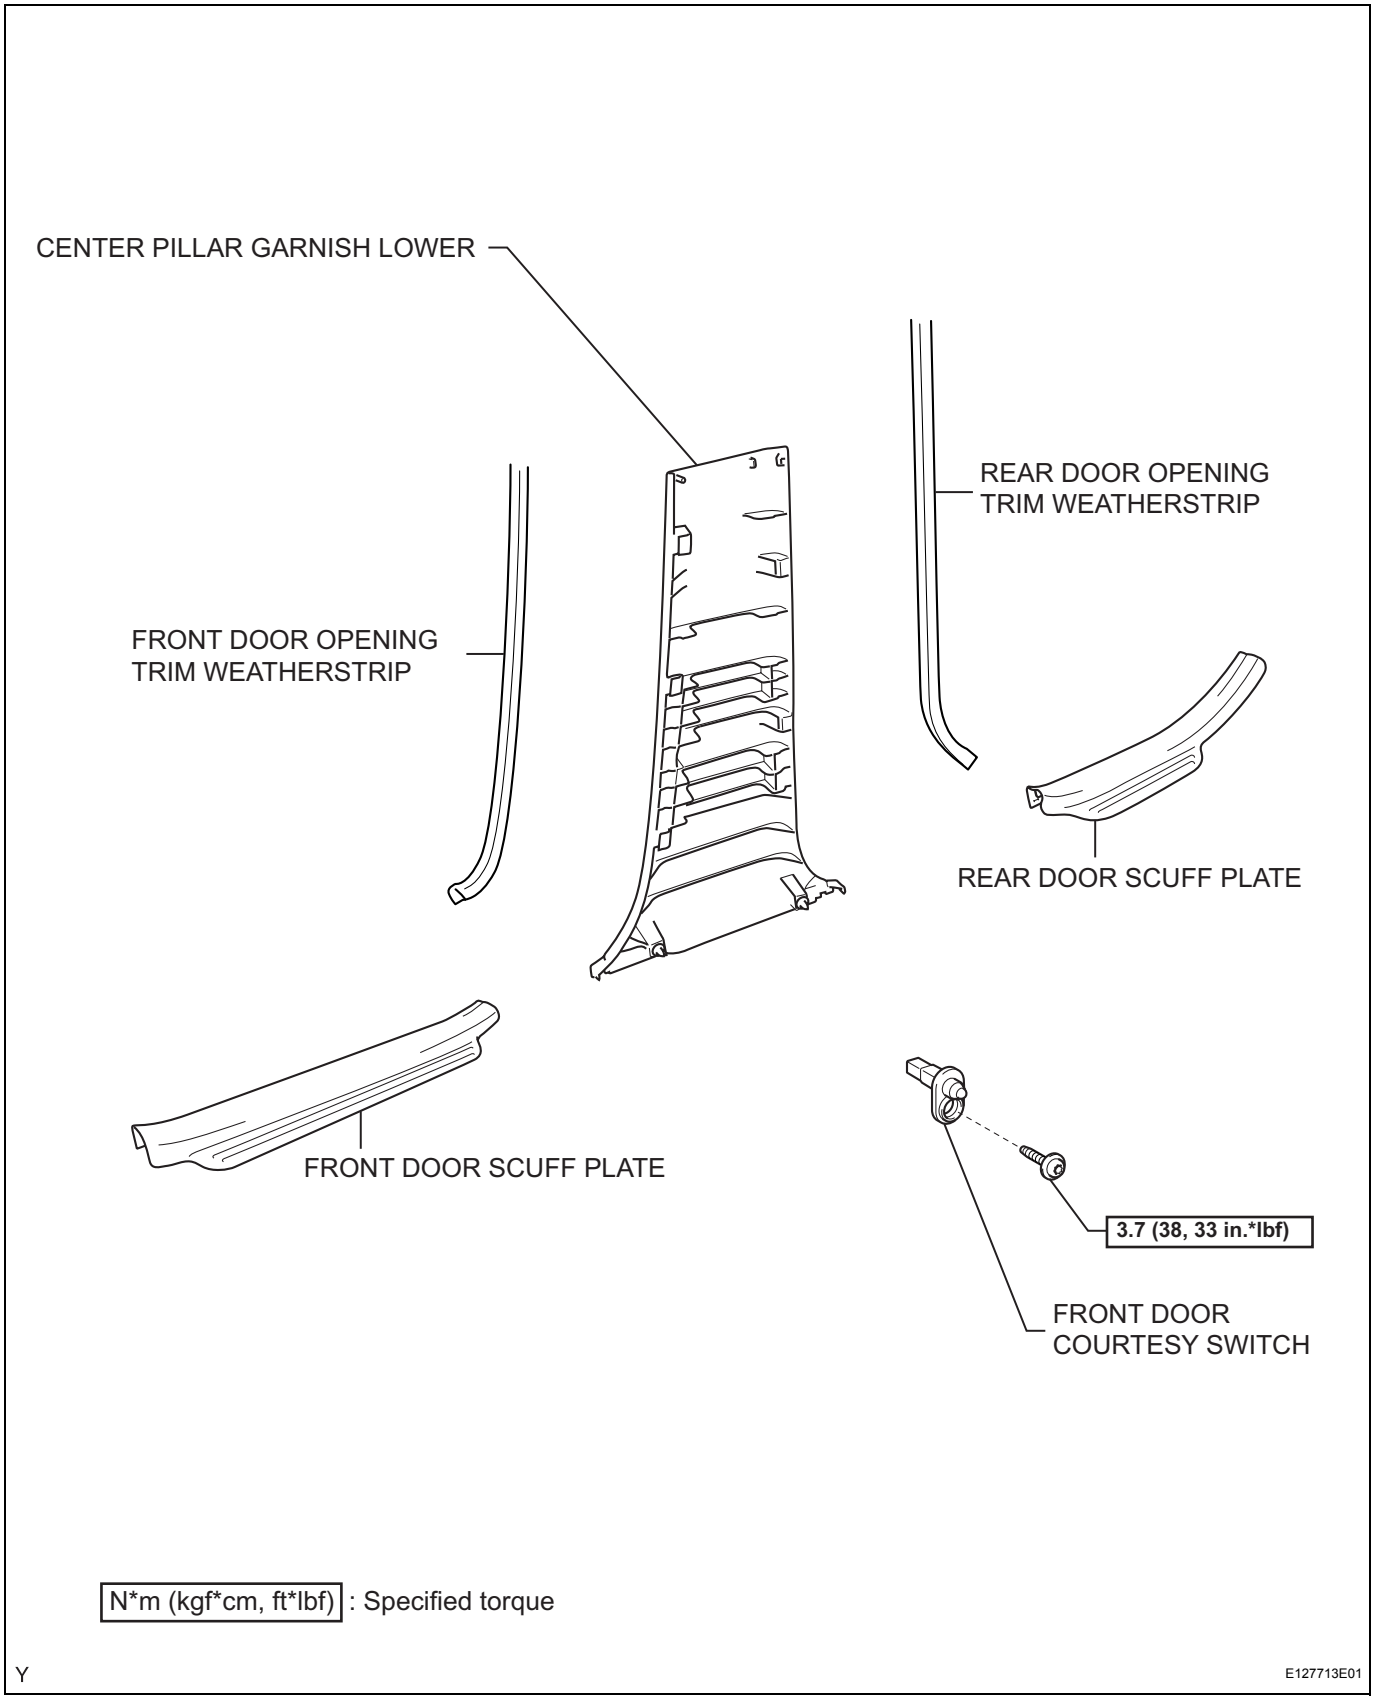
(c) Connect the stop light switch connector to the stop light switch.

2. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT DOOR COURTESY SWITCH (for Sedan)

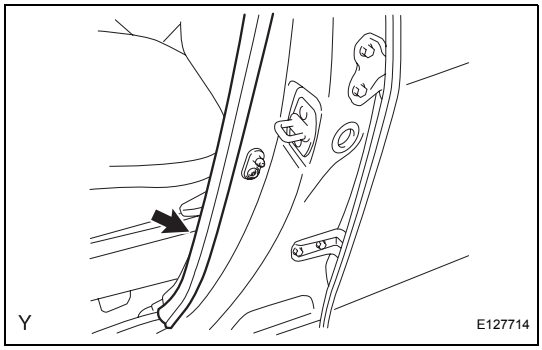
COMPONENTS



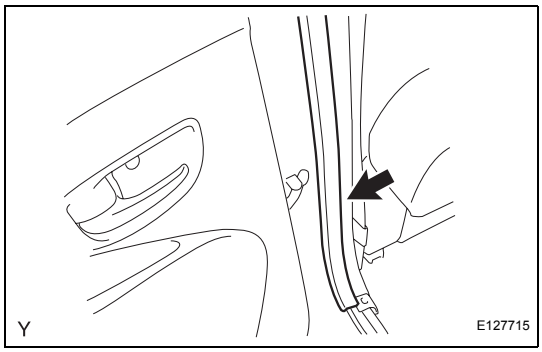
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

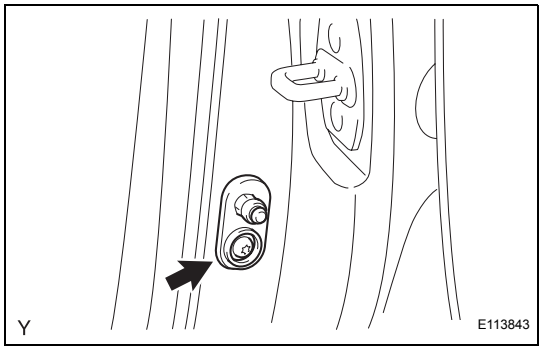
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-14)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-15)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip.

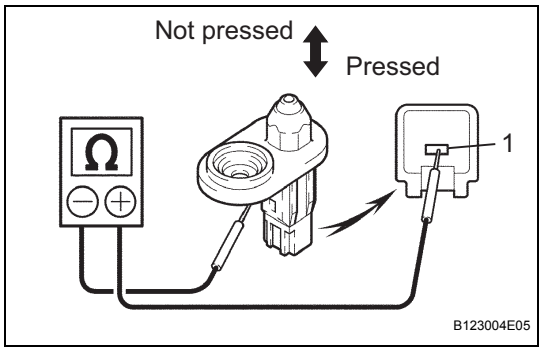


5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the rear door opening trim weatherstrip.
6. **REMOVE CENTER PILLAR GARNISH LOWER (See page IR-16)**



7. **REMOVE FRONT DOOR COURTESY SWITCH**
   (a) Using "Torx" socket wrench T30, remove the screw.
   (b) Disconnect the connector and remove the front door courtesy switch.



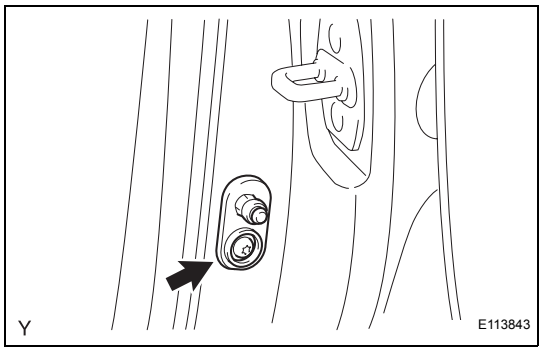


INSPECTION

1. **INSPECT FRONT DOOR COURTESY SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	ON (Shaft not pressed)	Below 1 Ω
1 - Switch body	OFF (Shaft pressed)	10 kΩ or higher

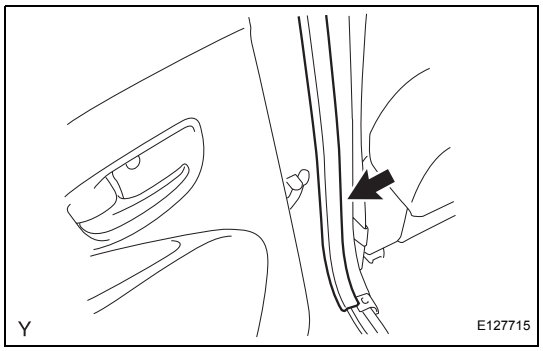
If the result is not as specified, replace the front door courtesy switch.



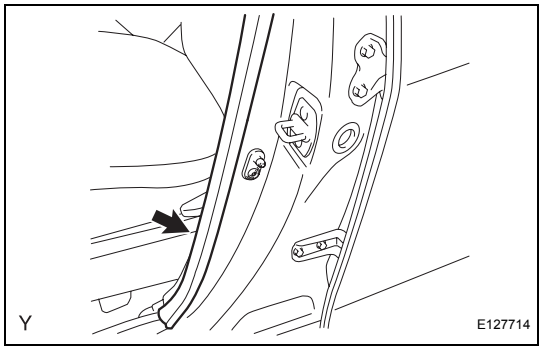
INSTALLATION

1. **INSTALL FRONT DOOR COURTESY SWITCH**
   (a) Connect the connector.
   (b) Using "Torx" socket wrench T30, install the front door courtesy switch with the screw.
   Torque: 3.7 N*m (38 kgf*cm, 33 in.*lbf)

2. **INSTALL CENTER PILLAR GARNISH LOWER (See page IR-32)**



3. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the rear door opening trim weatherstrip.



4. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.

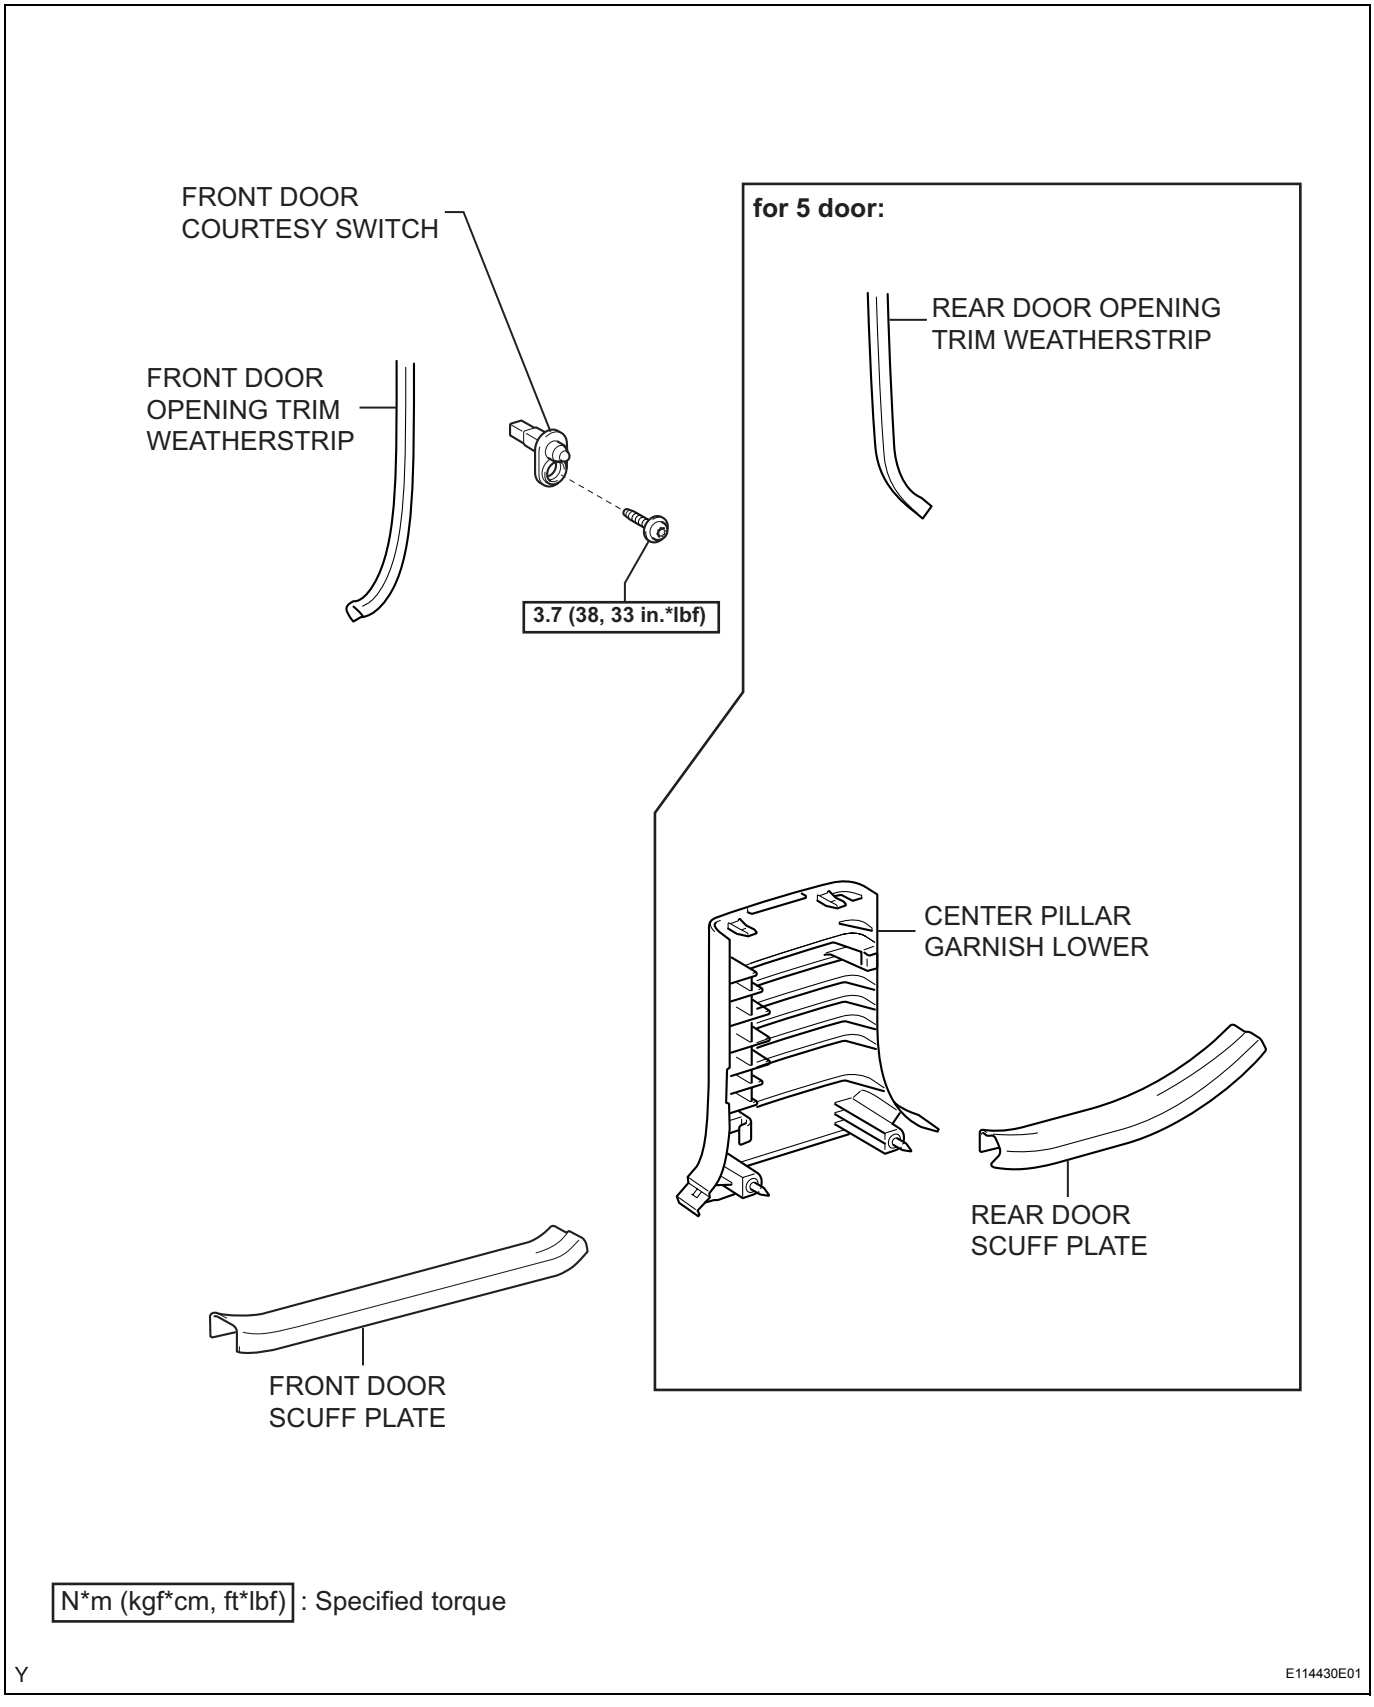
5. **INSTALL REAR DOOR SCUFF PLATE (See page IR-34)**

6. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-35)**

7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT DOOR COURTESY SWITCH (for Hatchback)

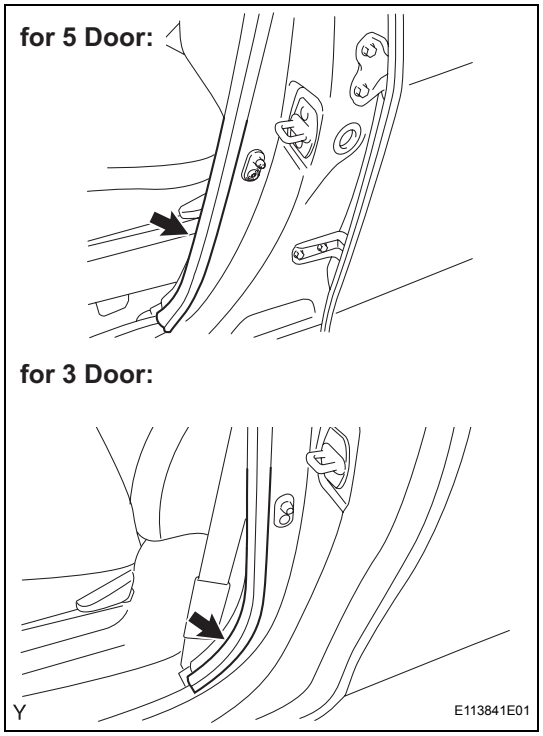
COMPONENTS

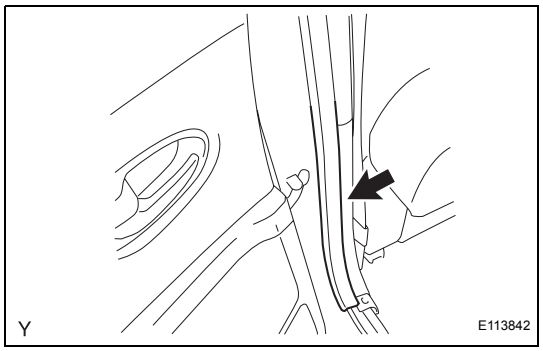


REMOVAL

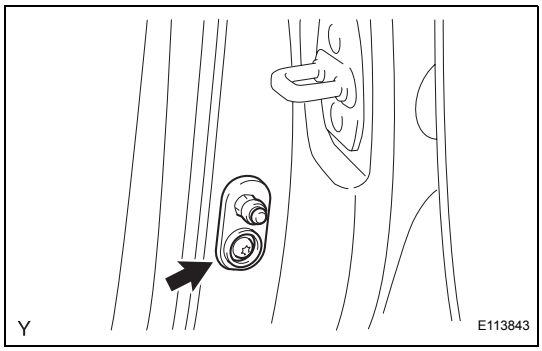
HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE (for 5 Door) (See page IR-49)**
3. **REMOVE FRONT DOOR SCUFF PLATE (for 3 Door) (See page IR-97)**
4. **REMOVE REAR DOOR SCUFF PLATE (for 5 Door) (See page IR-51)**
5. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip.

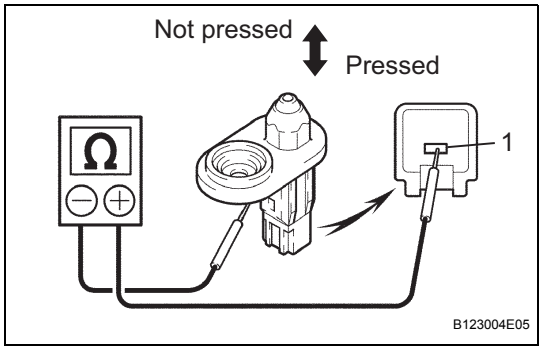




6. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP (for 5 Door)**
   (a) Remove the rear door opening trim weatherstrip.
7. **REMOVE CENTER PILLAR GARNISH LOWER (for 5 Door) (See page IR-55)**



8. **REMOVE FRONT DOOR COURTESY SWITCH**
   (a) Using "Torx" socket wrench T30, remove the screw.
   (b) Disconnect the connector and remove the front door courtesy switch.

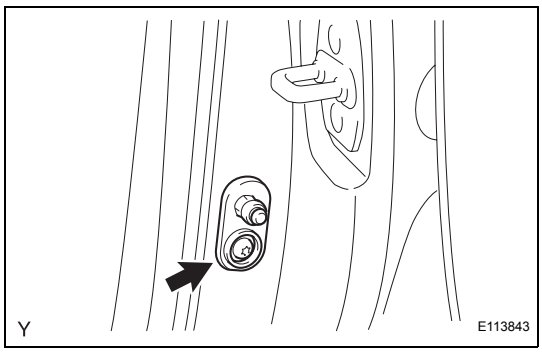


INSPECTION

1. **INSPECT FRONT DOOR COURTESY SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	ON (Shaft not pressed)	Below 1 Ω
1 - Switch body	OFF (Shaft pressed)	10 kΩ or higher

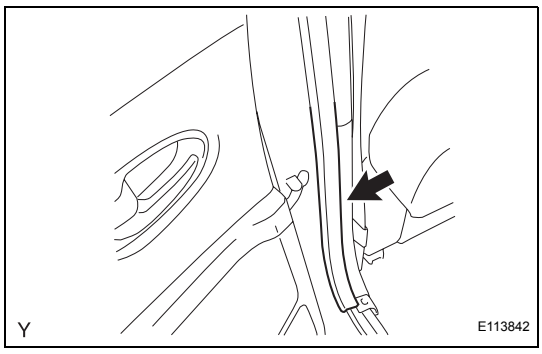
If the result is not as specified, replace the front door courtesy switch.



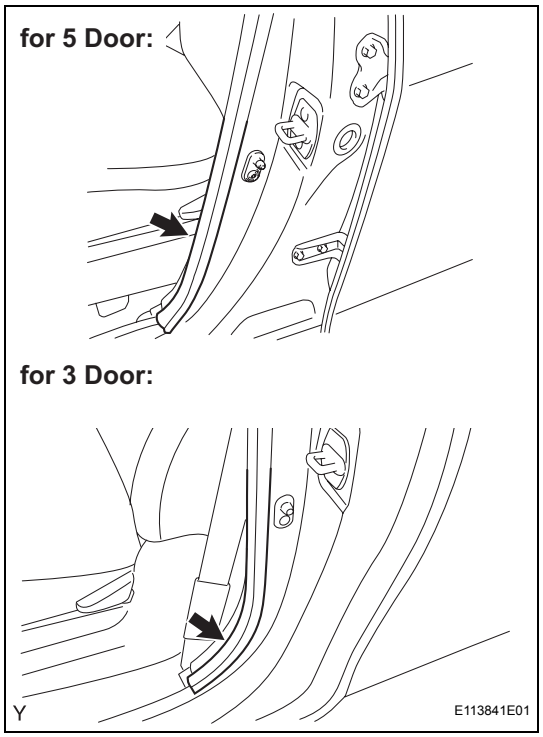
INSTALLATION

1. **INSTALL FRONT DOOR COURTESY SWITCH**
   (a) Connect the connector.
   (b) Using "Torx" socket wrench T30, install the front door courtesy switch with the screw.
   Torque: 3.7 N*m (38 kgf*cm, 33 in.*lbf)

2. **INSTALL CENTER PILLAR GARNISH LOWER (for 5 Door) (See page IR-76)**



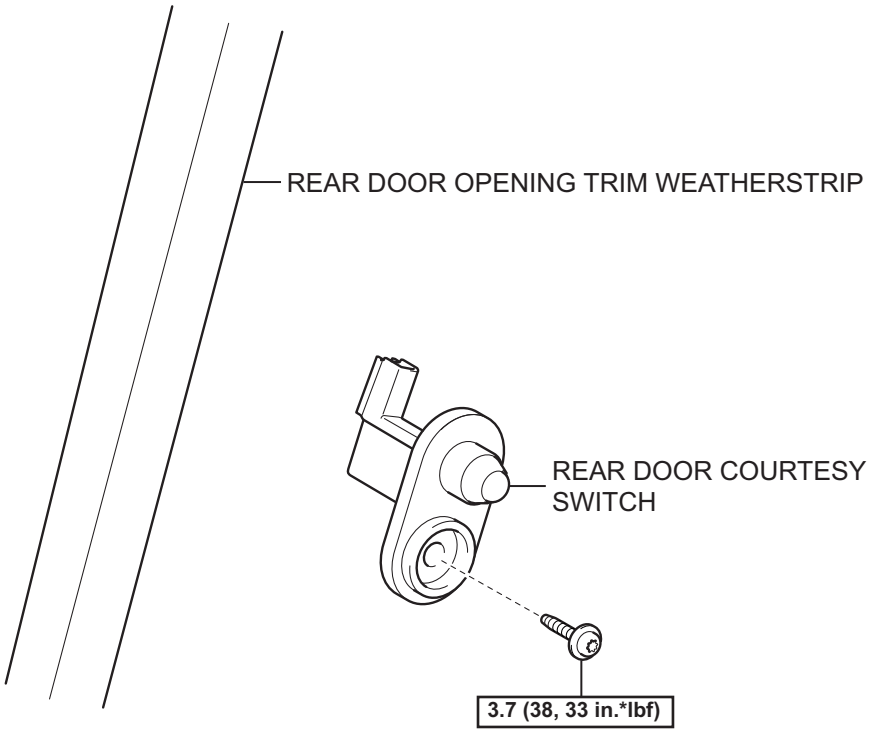
3. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP (for 5 Door)**
   (a) Install the rear door opening trim weatherstrip.



4. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.
5. **INSTALL REAR DOOR SCUFF PLATE (for 5 Door) (See page IR-80)**
6. **INSTALL FRONT DOOR SCUFF PLATE (for 5 Door) (See page IR-82)**
7. **INSTALL FRONT DOOR SCUFF PLATE (for 3 Door) (See page IR-119)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REAR DOOR COURTESY SWITCH

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

Y

E114431E04

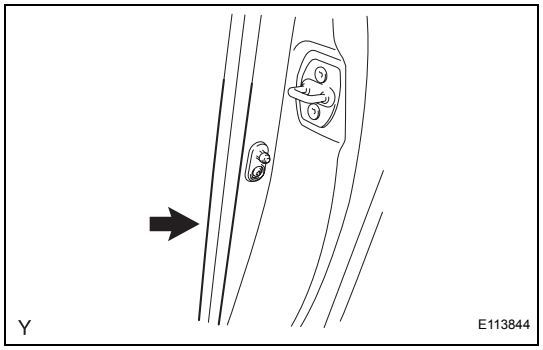
REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP

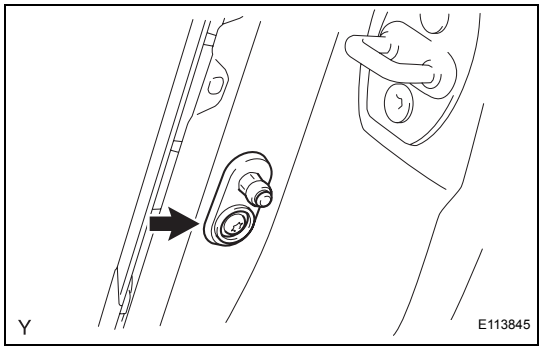
(a) Remove the rear door opening trim weatherstrip.



3. REMOVE REAR DOOR COURTESY SWITCH

(a) Disconnect the connector.

(b) Using "Torx" socket wrench T30, remove the screw and the rear door courtesy switch.



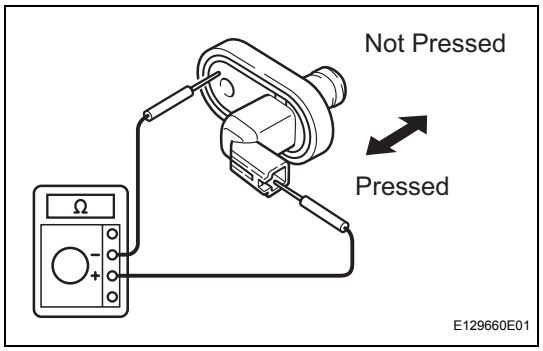
INSPECTION

1. INSPECT REAR DOOR COURTESY SWITCH

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance



Tester Connection	Condition	Specified Condition
1 - Switch body	ON (Shaft not pressed)	Below 1 Ω
1 - Switch body	OFF (Shaft pressed)	10 kΩ or higher

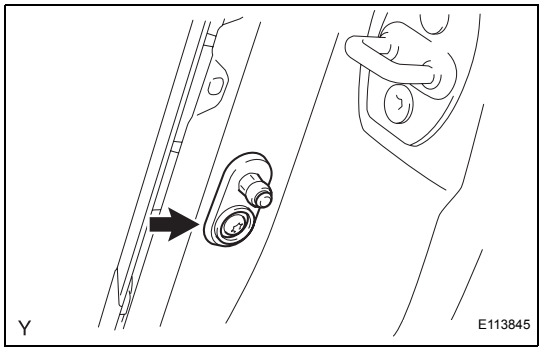
If the result is not as specified, replace the rear door courtesy switch.

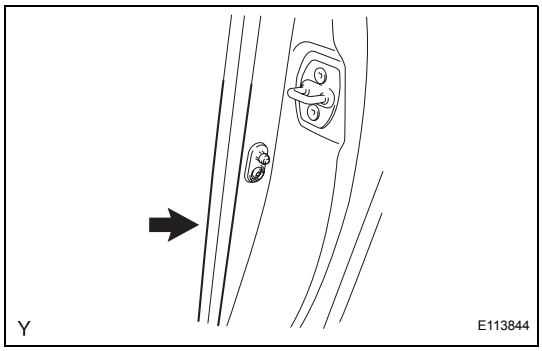
INSTALLATION

1. INSTALL REAR DOOR COURTESY SWITCH

(a) Using "Torx" socket wrench T30, install the rear door courtesy switch with the screw.

Torque: 3.7 N*m (38 kgf*cm, 33 in.*lbf)





2. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP

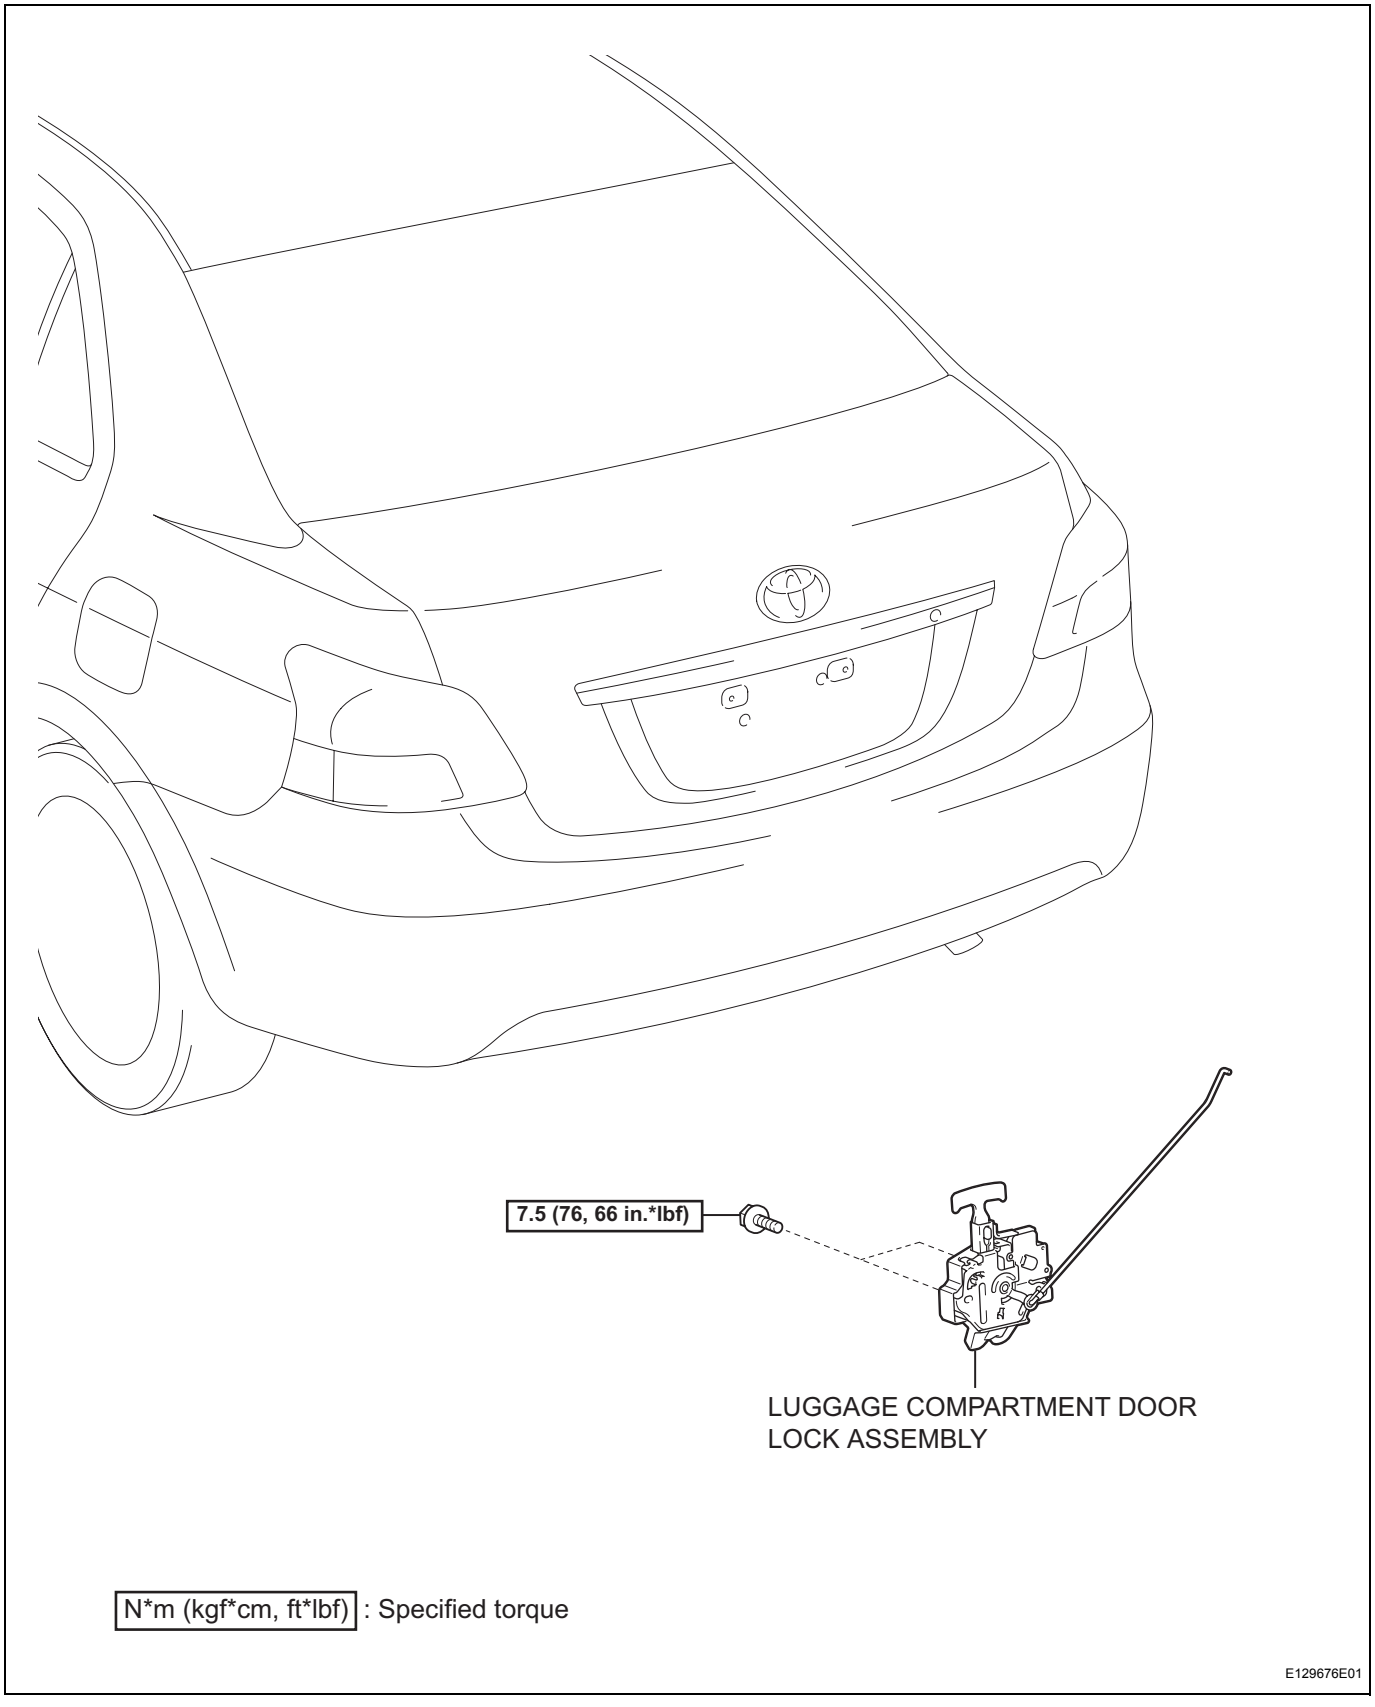
(a) Install the rear door opening trim weatherstrip.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

BACK DOOR COURTESY SWITCH (for Sedan)

COMPONENTS

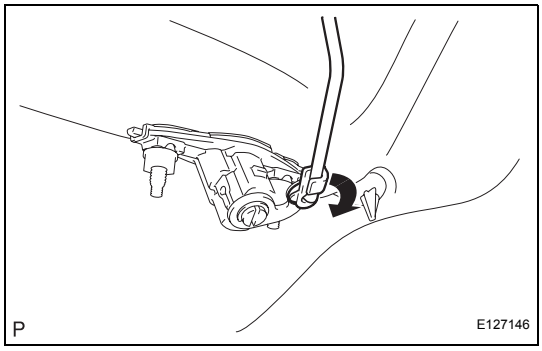


REMOVAL

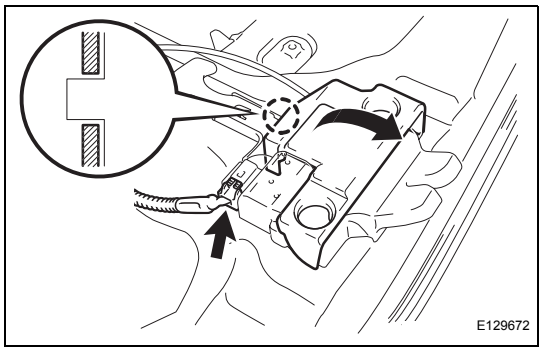
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

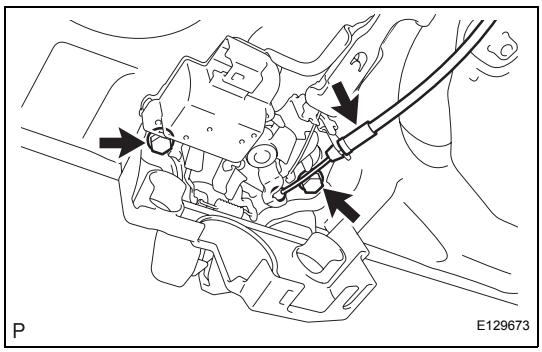
(a) Remove the snap ring in the direction indicated by the arrow and remove the luggage compartment door lock link.

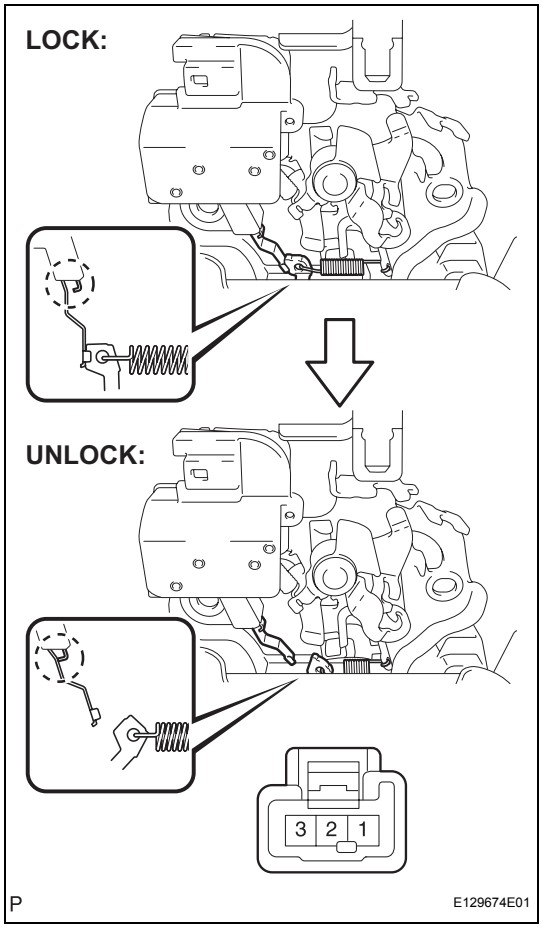


(b) Disconnect the connector.
(c) Disengage the claw and pull up the protector lid in the direction indicated by the arrow.



(d) Remove the luggage door lock control cable.
(e) Remove the 2 bolts and the luggage compartment door lock assembly.





INSPECTION

1. INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

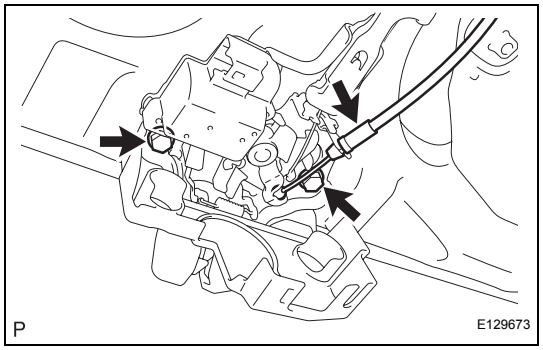
(a) Check the resistance of the back door courtesy switch.

(1) Using an ohmmeter, measure the resistance between the terminals when the latch is operated with a screwdriver.

Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Unlocked	Below 1 Ω
1 - 2	Locked	10 kΩ or higher

If the result is not as specified, replace the luggage compartment door lock assembly.



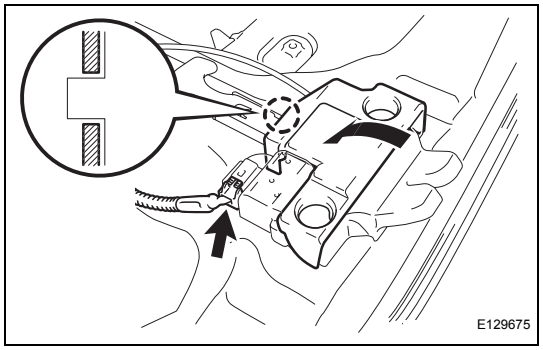
INSTALLATION

1. INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Install the luggage door lock control cable.

(b) Install the luggage compartment door lock assembly with the 2 bolts.

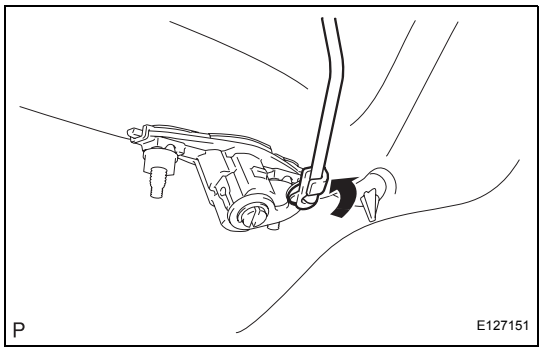
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



(c) Connect the connector.

(d) Install the protector lid.

LI

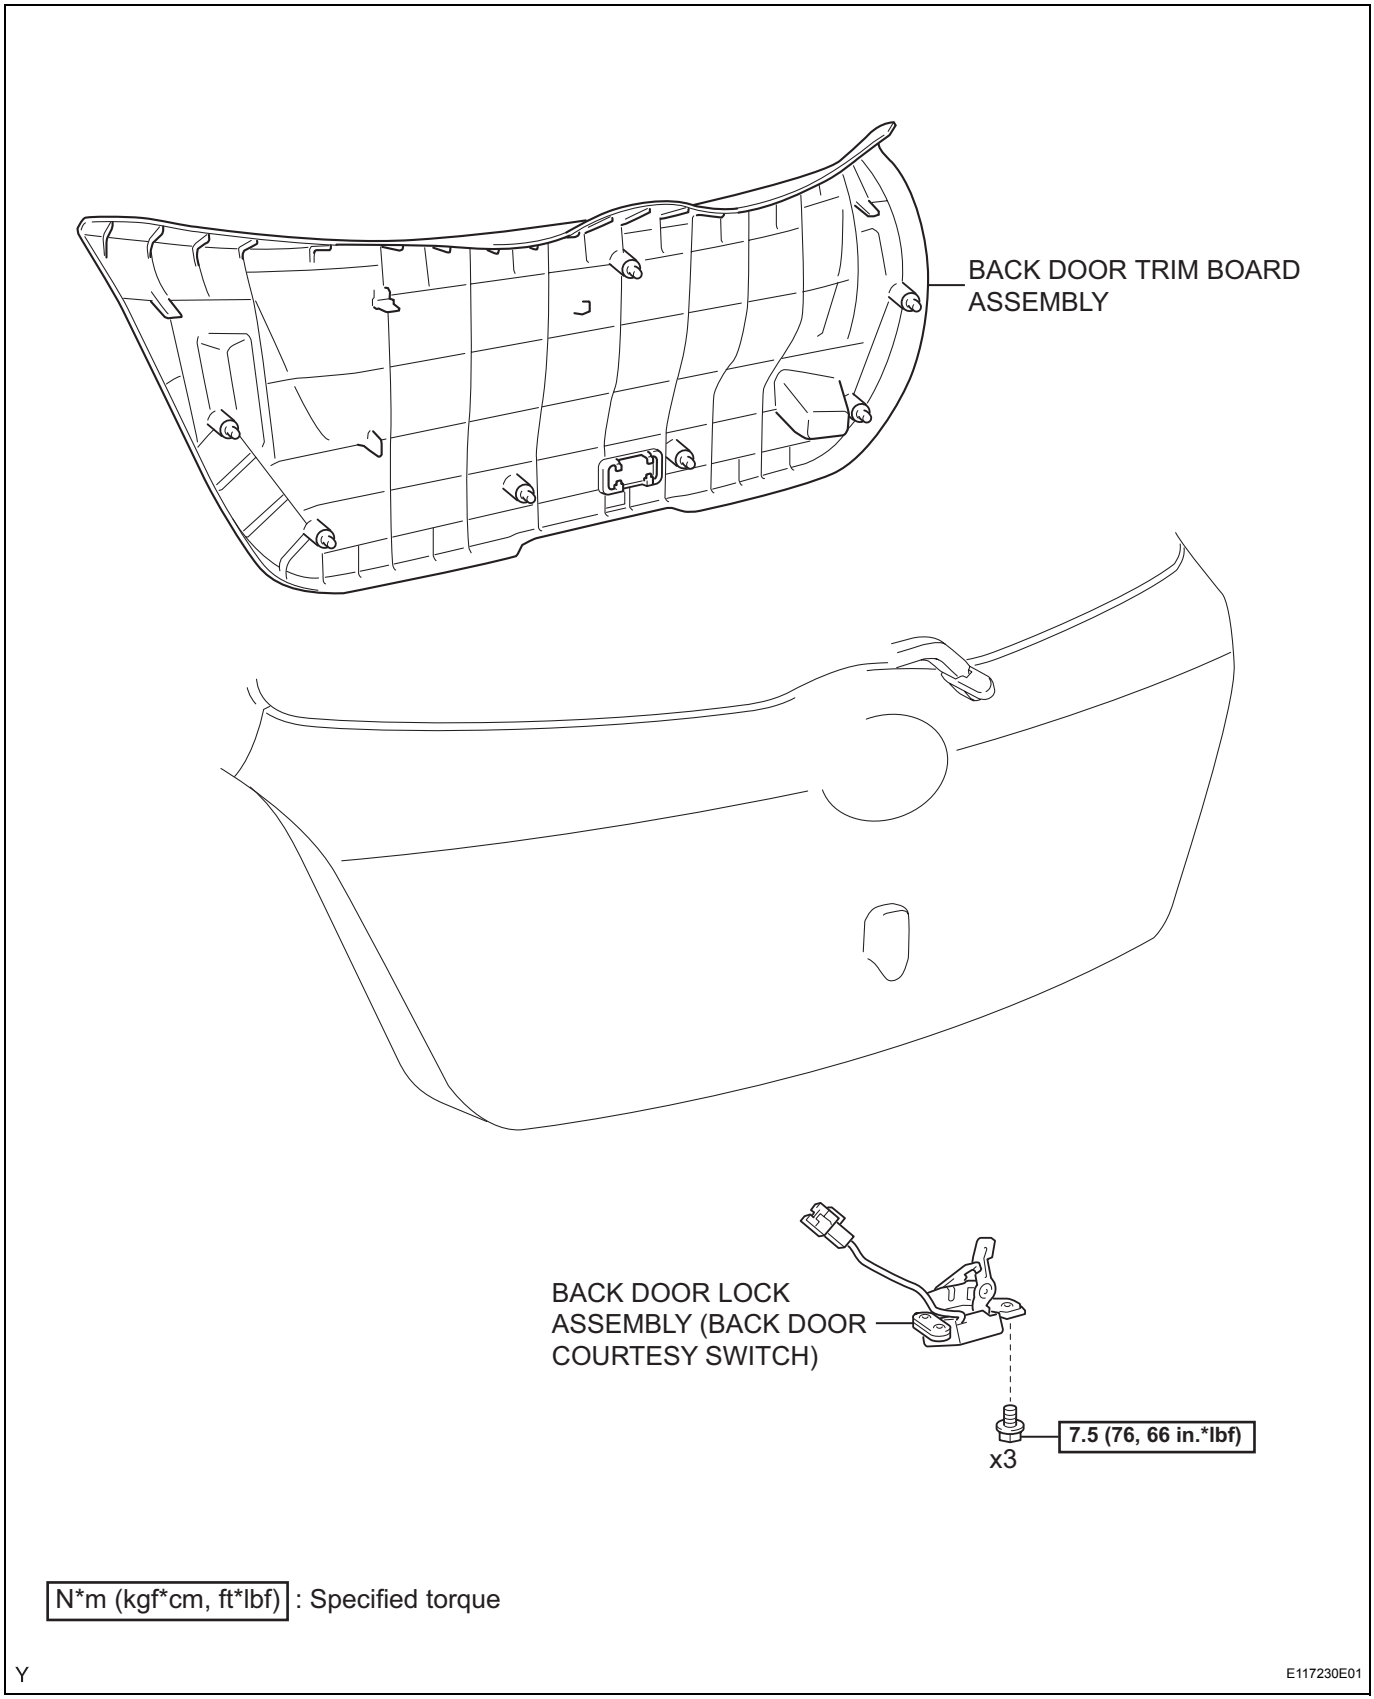


(e) Install the luggage compartment door lock link.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

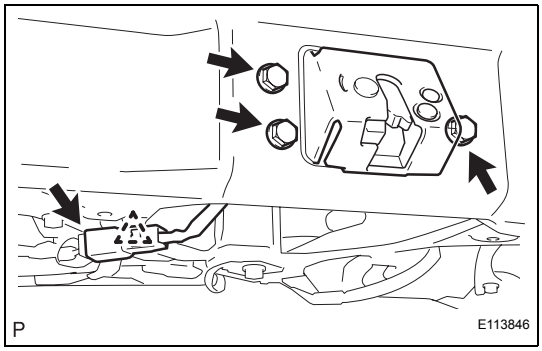
BACK DOOR COURTESY SWITCH (for Hatchback)

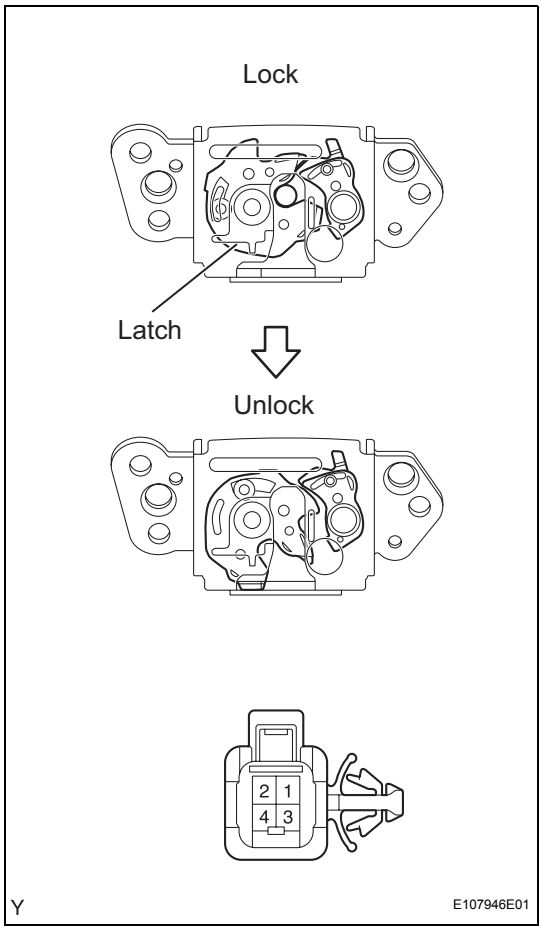
COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE BACK DOOR TRIM BOARD ASSEMBLY (See page ED-142)**
3. **REMOVE BACK DOOR LOCK ASSEMBLY**
   (a) Disconnect the connector and clamp.
   (b) Remove the 3 bolts and the back door lock.



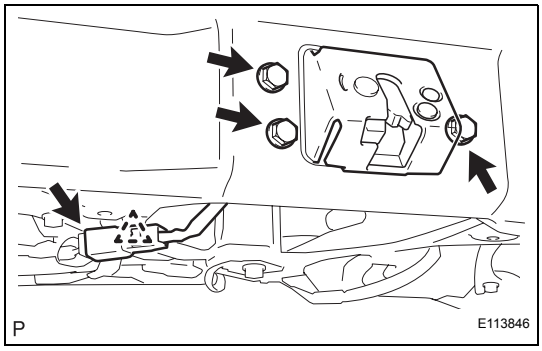


INSPECTION

1. **INSPECT BACK DOOR LOCK ASSEMBLY**
   (a) Check the resistance of the back door courtesy switch.
      (1) Using an ohmmeter, measure the resistance between the terminals when the latch is operated with a screwdriver.
      Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Unlocked	Below 1 Ω
1 - 2	Locked	10 kΩ or higher

If the result is not as specified, replace the back door lock.



INSTALLATION

1. **INSTALL BACK DOOR LOCK ASSEMBLY**
   (a) Install the back door lock with the 3 bolts.
   Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
   (b) Connect the connector and clamp.
2. **INSTALL BACK DOOR TRIM BOARD ASSEMBLY (See page ED-146)**

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

TURN SIGNAL FLASHER ASSEMBLY

ON-VEHICLE INSPECTION

1. INSPECT TURN SIGNAL FLASHER CIRCUIT

(a) Check the power source circuit and ground circuit.
  (1) Remove the turn signal flasher relay from the main body ECU.
  (2) Measure the voltage and check the results in accordance with the value(s) in the table below.
  Standard Voltage

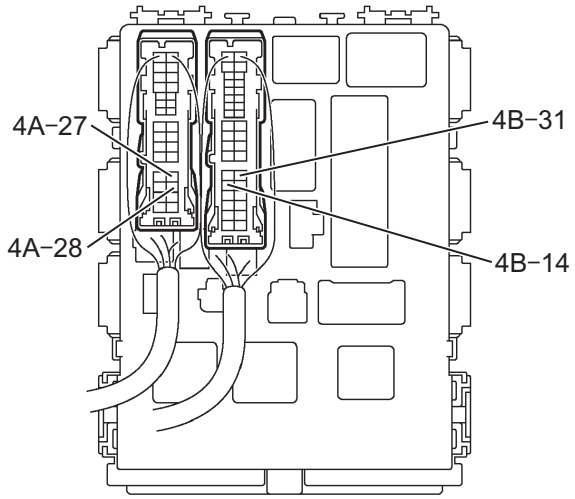
Tester Connection	Condition	Specified Condition
1 - Body ground	Ignition switch OFF	0 V
1 - Body ground	Ignition switch ON	11 to 14 V
4 - Body ground	Always	11 to 14 V

  (3) Measure the resistance and check the result in accordance with the value(s) in the table below.
  Standard Resistance

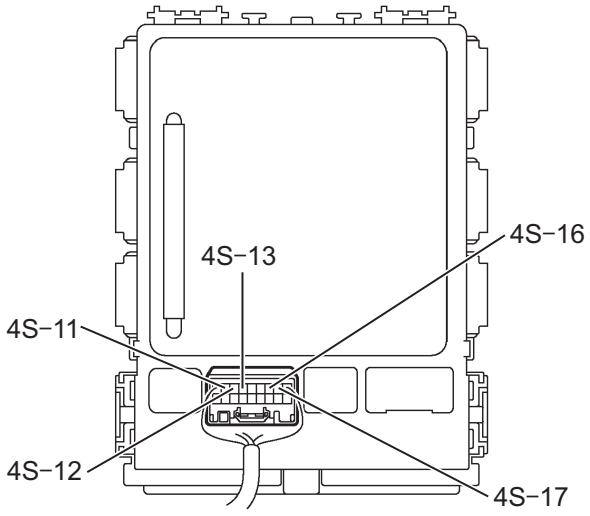
Tester Connection	Condition	Specified Condition
7 - Body ground	Always	Below 1 Ω

(b) Check the output operation signal.
  (1) Install the turn signal flasher relay onto the main body ECU.

Main Body ECU
(Front Side) Wire Harness View:



(Rear Side) Wire Harness View:



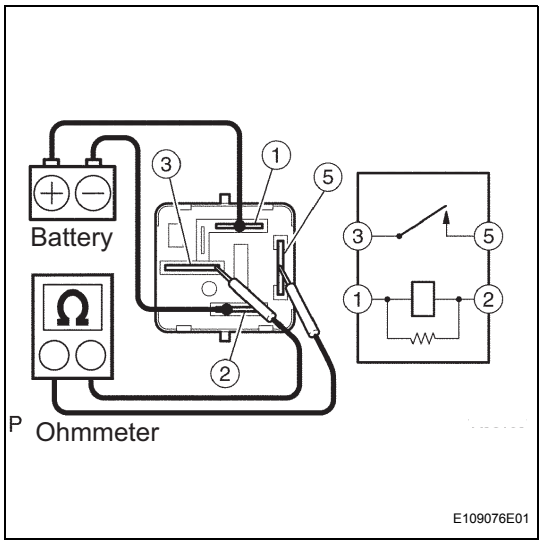
H

I042806E02

(2) Measure the voltage and check the results in accordance with the values in the table below.

Standard

Tester Connection	Condition	Specified Condition
4A-27 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4A-27 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4A-28 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4A-28 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4B-14 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4B-14 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4B-31 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4B-31 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4S-11 - Body ground	Turn signal switch (left turn) OFF → ON	11 to 14 V → 0 V
4S-12 - Body ground	Turn signal switch (right turn) OFF → ON	11 to 14 V → 0 V
4S-13 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4S-13 - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4S-16 - Body ground	Hazard warning switch OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4S-16 - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 11 to 14 V (60 to 120 times per minute)
4S-17 - Body ground	Hazard warning switch OFF → ON	11 to 14 V → 0 V



HEADLIGHT RELAY

ON-VEHICLE INSPECTION

1. INSPECT HEADLIGHT RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

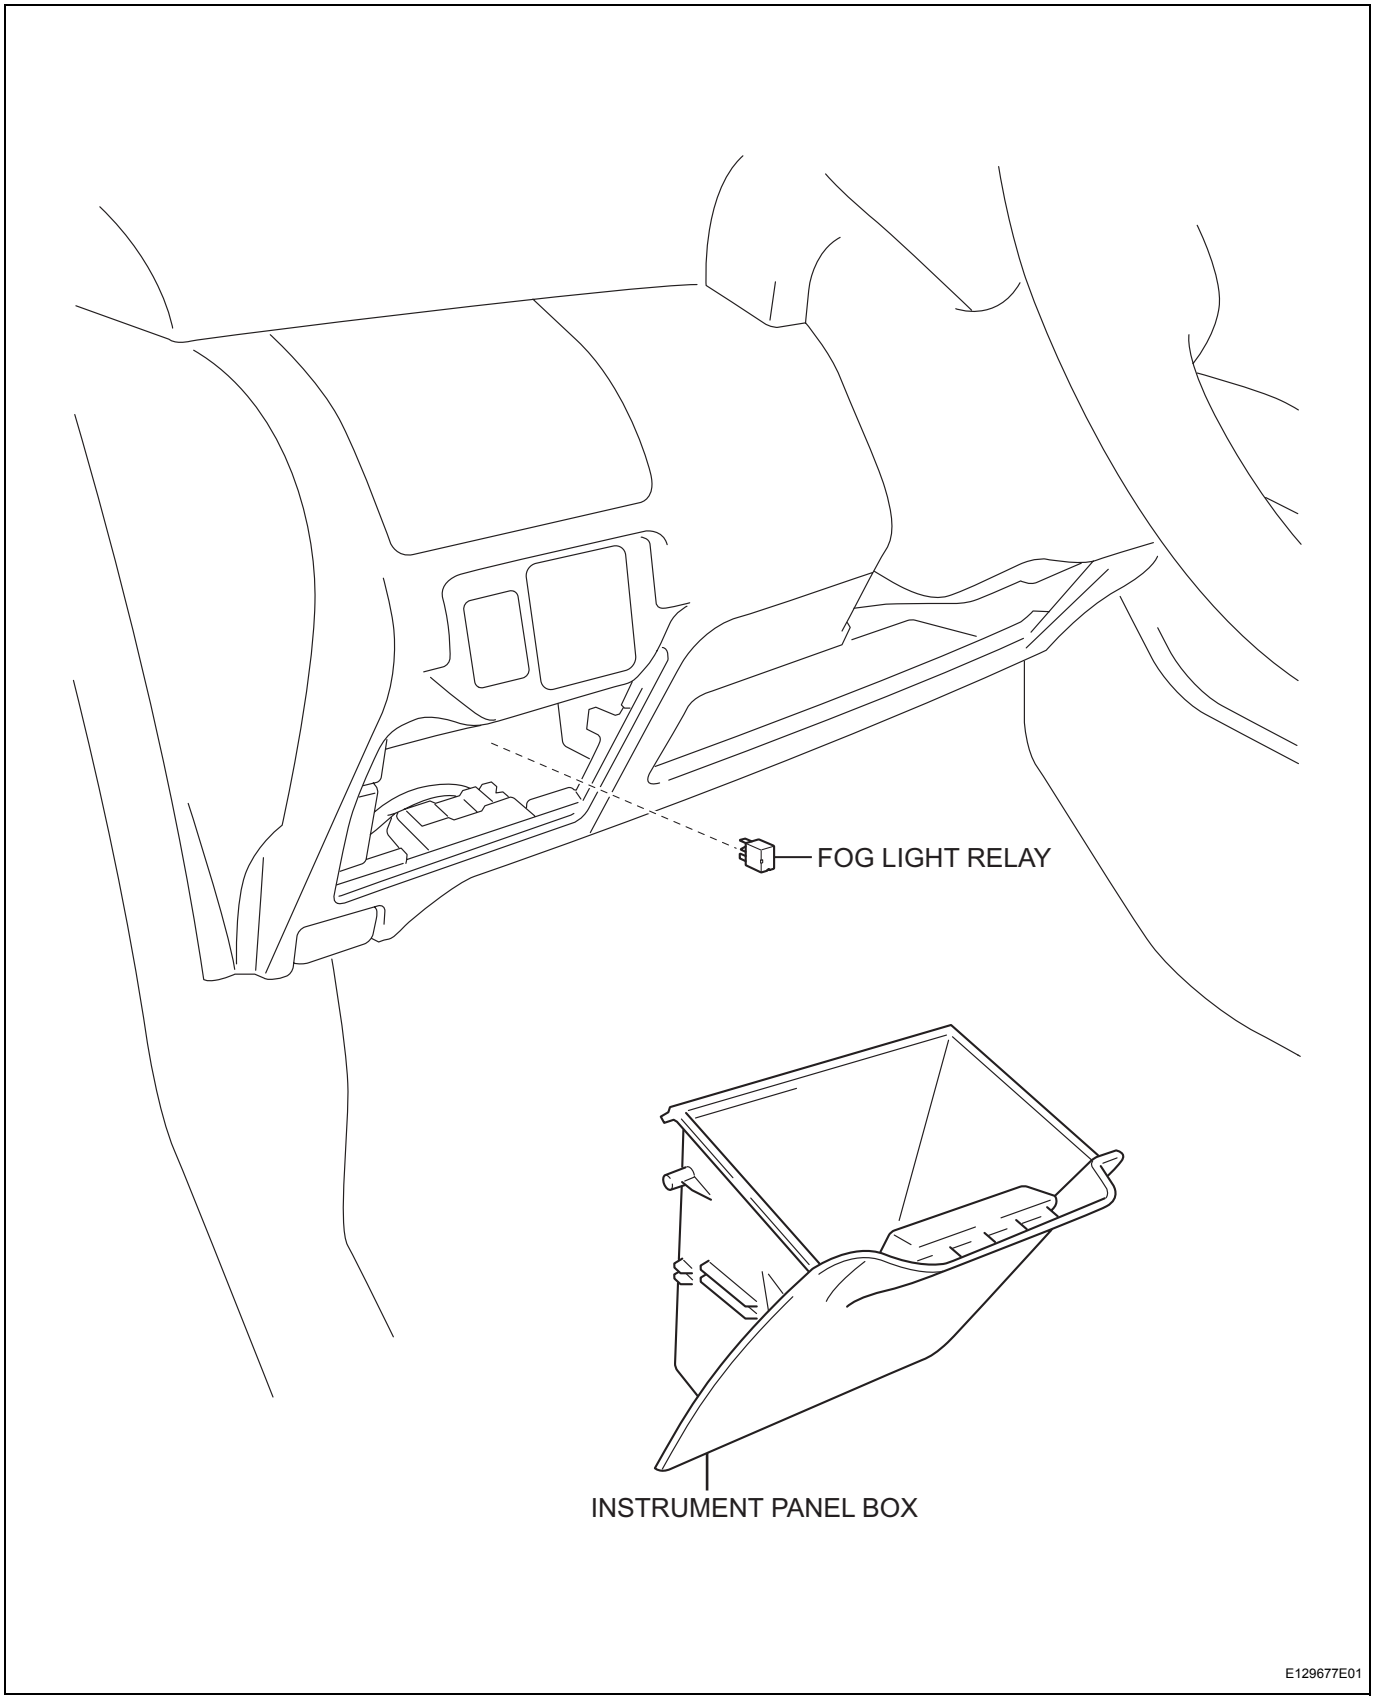
Standard Resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the headlight relay.

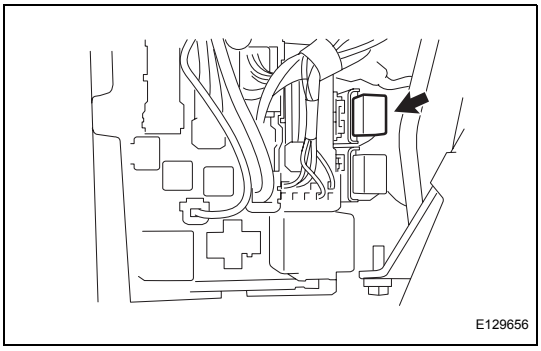
FOG LIGHT RELAY (for Sedan)

COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-45)**
3. **REMOVE FOG LIGHT RELAY**
   (a) Remove the fog light relay.

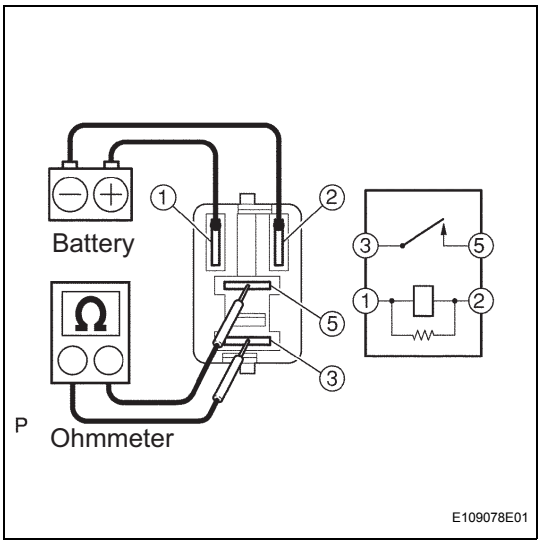


INSPECTION

1. **INSPECT FOG LIGHT RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard Resistance

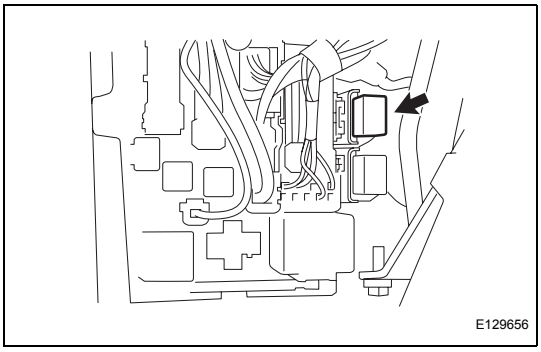
Tester Connection	Specified Condition
3 - 5	10 kΩor higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the fog light relay.



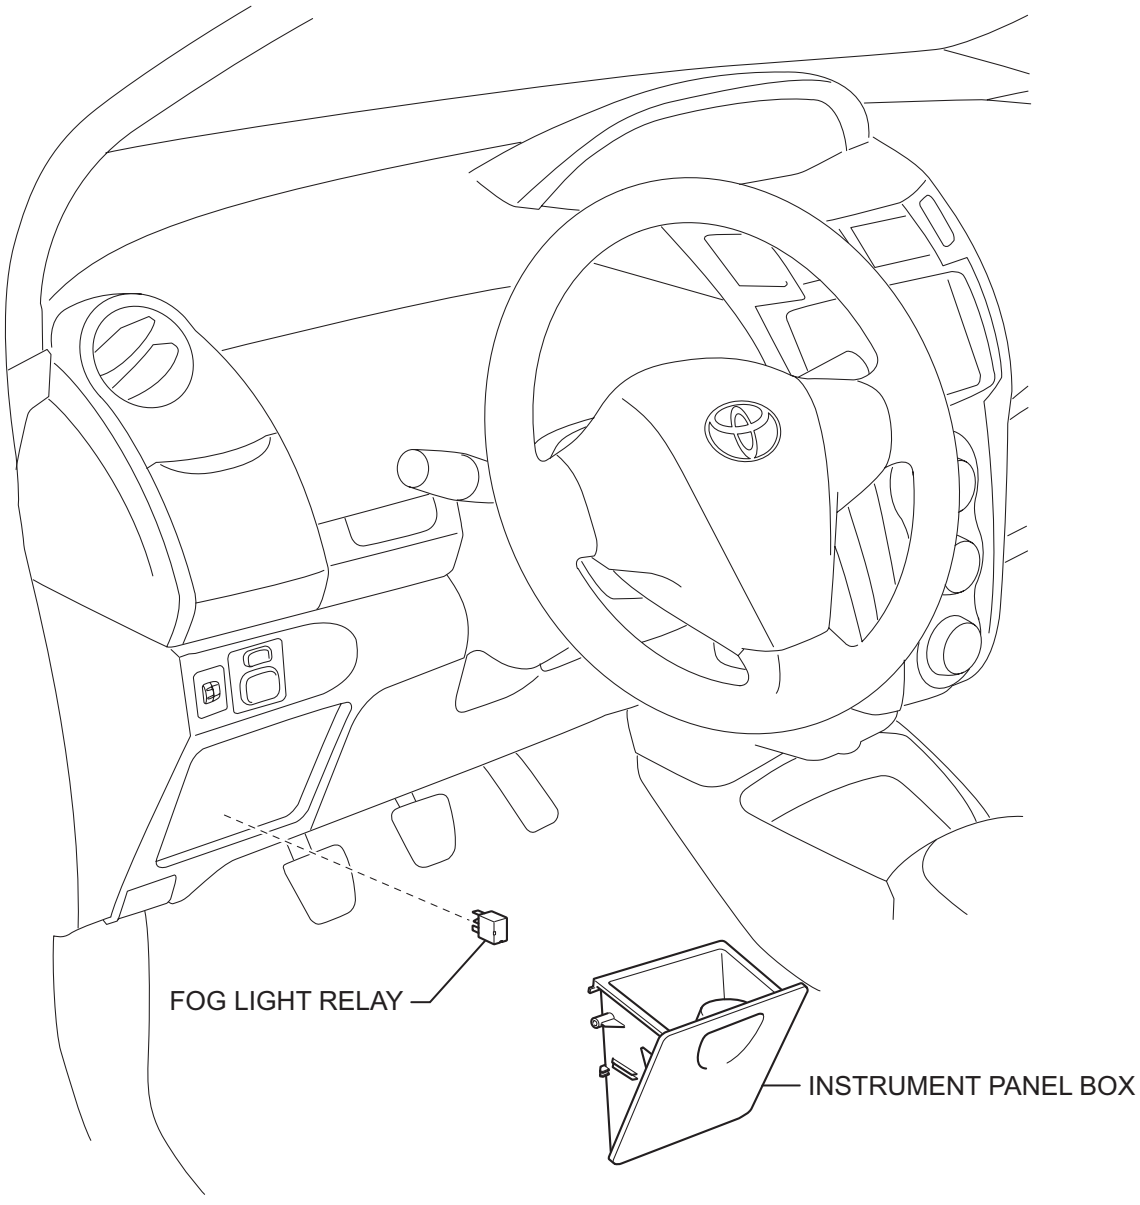
INSTALLATION

1. **INSTALL FOG LIGHT RELAY**
   (a) Install the fog light relay.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-53)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



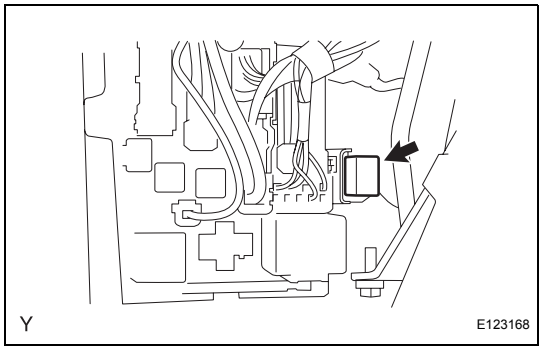
FOG LIGHT RELAY (for Hatchback)

COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
3. **REMOVE FOG LIGHT RELAY**
   (a) Remove the fog light relay.

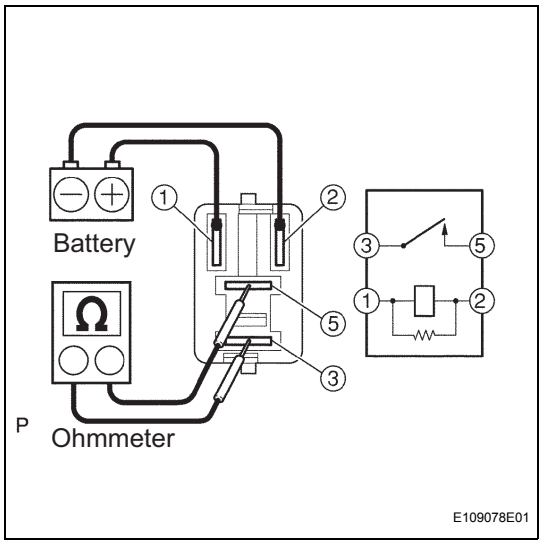


INSPECTION

1. **INSPECT FOG LIGHT RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard Resistance

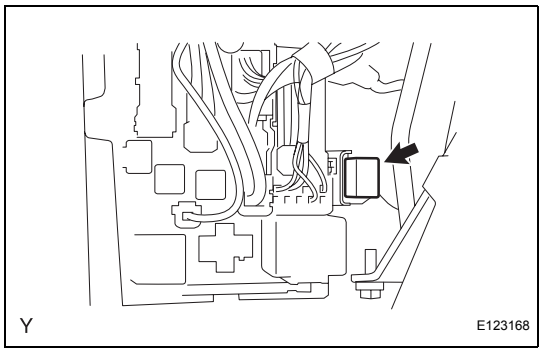
Tester Connection	Specified Condition
3 - 5	10 kΩor higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the fog light relay.



INSTALLATION

1. **INSTALL FOG LIGHT RELAY**
   (a) Install the fog light relay.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



WIPER AND WASHER SYSTEM

PRECAUTION

1. WASHER NOZZLE ADJUSTMENT PRECAUTION

(a) Do not clean or adjust the washer nozzle using objects such as needles or safety pins, because;
  (1) The washer nozzle tip is made of resin and could be damaged.
  (2) Adjustment is not necessary as the washer nozzle is a spray type.

(b) If the washer nozzle is clogged with substances such as car wax, remove it and clean the nozzle hole with a soft resin brush or similar tool.

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

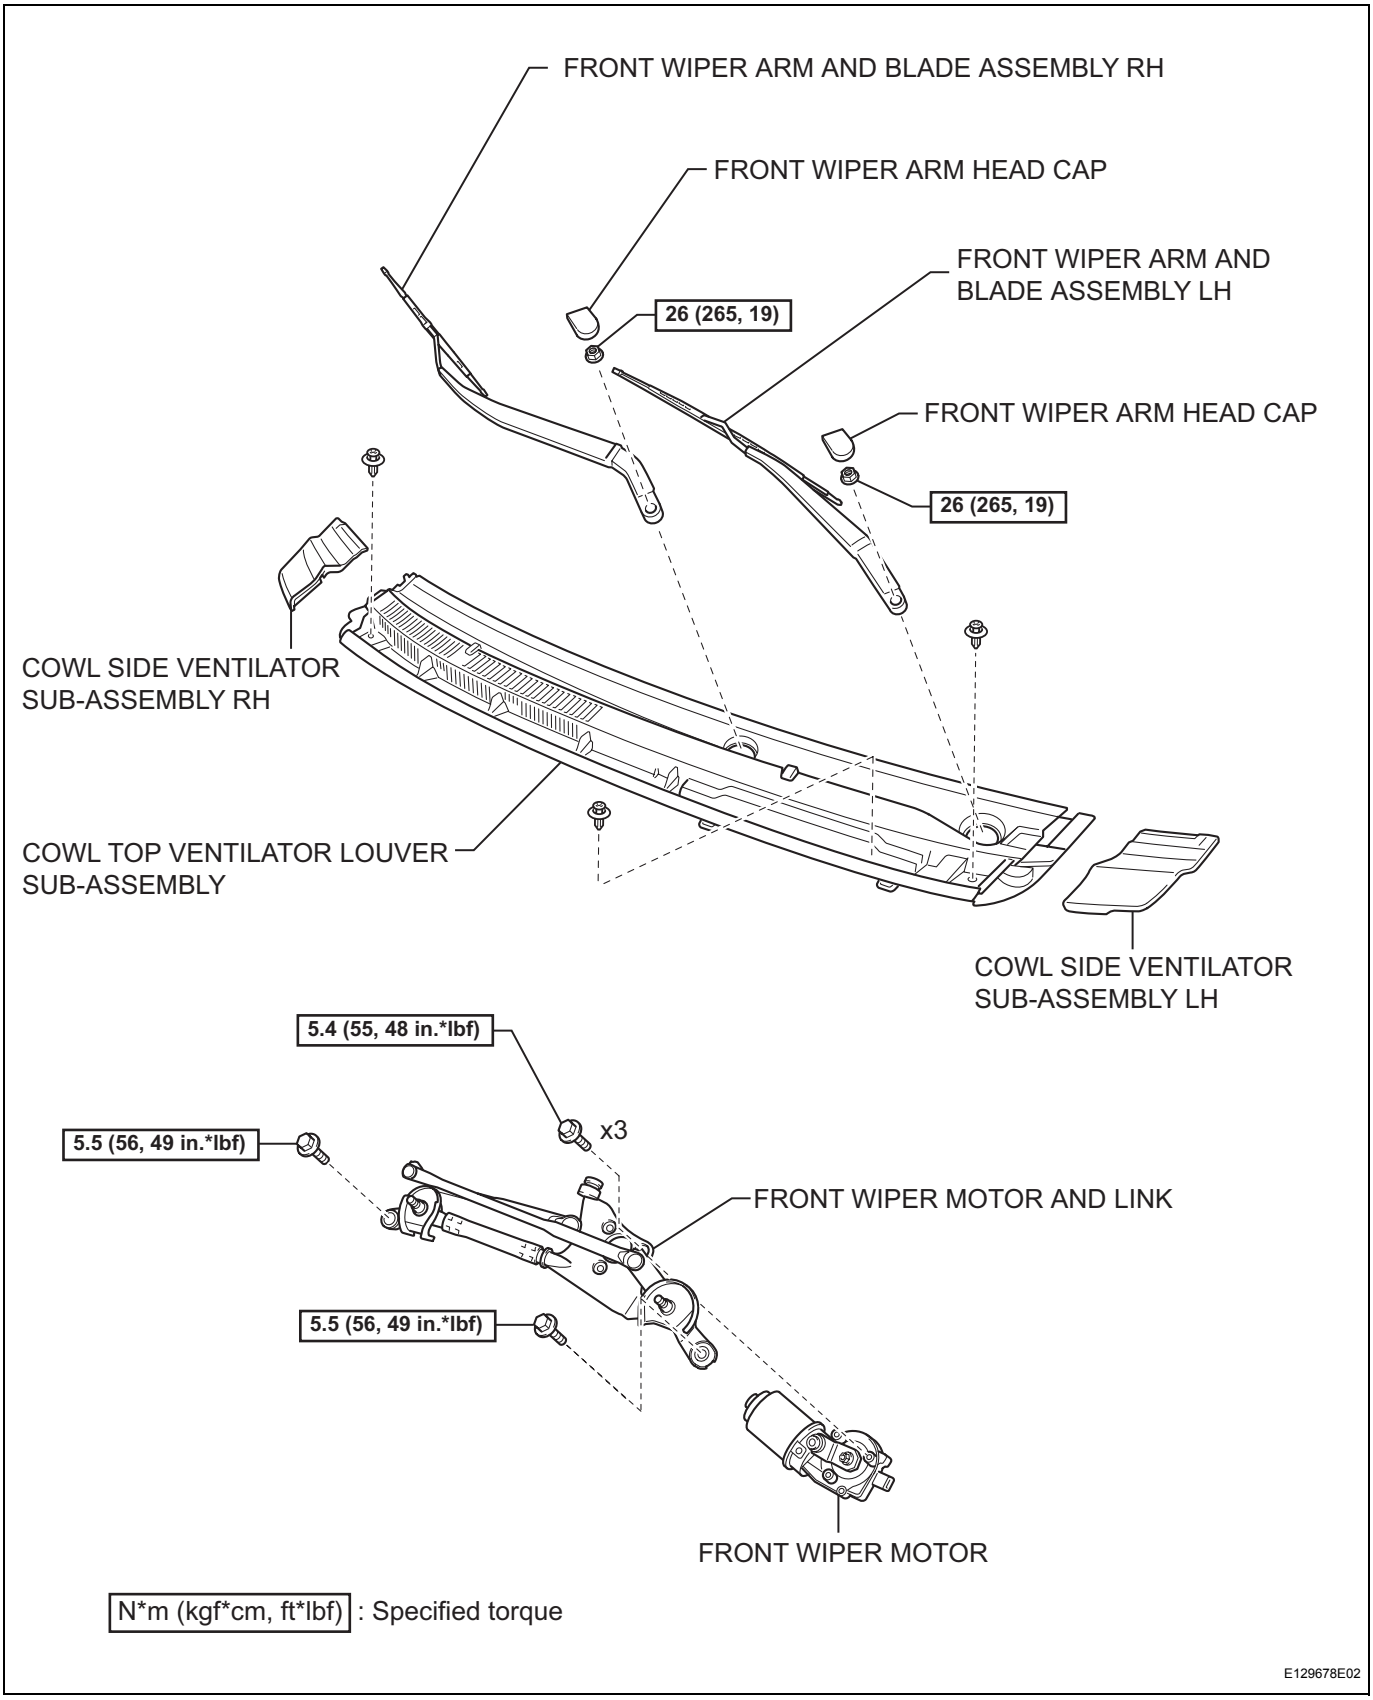
Wiper and washer system

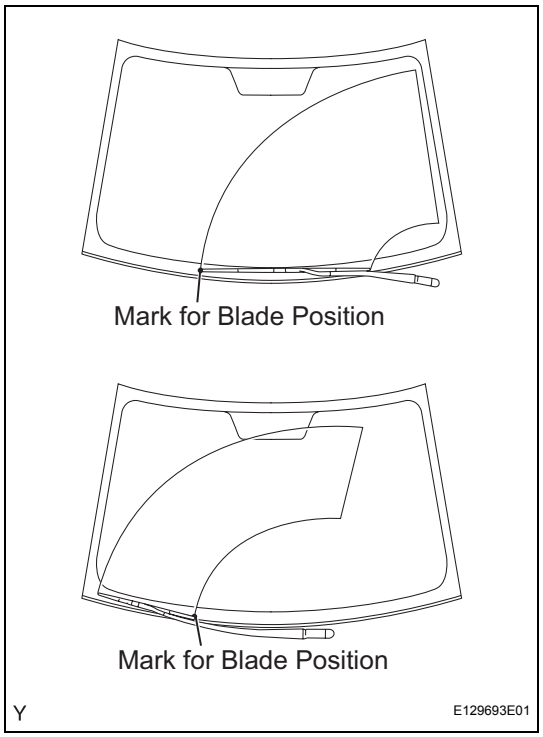
Symptom	Suspected area	See page
Front wipers and washer system do not operate	WIP fuse	WW-2
	WSH fuse	WW-2
	Windshield wiper switch assembly (for hatchback)	WW-39
	Windshield wiper switch assembly (for sedan)	WW-35
	Wire harness	-
Front wipers do not operate in LO or HI	WIP fuse	WW-2
	Windshield wiper switch assembly (for hatchback)	WW-39
	Windshield wiper switch assembly (for sedan)	WW-35
	Front wiper motor (for hatchback)	WW-19
	Front wiper motor (for sedan)	WW-11
	Wire harness	-
Front wipers do not operate in INT	WIP fuse	WW-2
	Windshield wiper switch assembly (for hatchback)	WW-39
	Windshield wiper switch assembly (for sedan)	WW-35
	Front wiper motor (for hatchback)	WW-19
	Front wiper motor (for sedan)	WW-11
	Wire harness	-
Front washer motor does not operate	WSH fuse	WW-2
	Windshield wiper switch assembly (for hatchback)	WW-39
	Windshield wiper switch assembly (for sedan)	WW-35
	Front washer motor (for hatchback)	WW-51
	Front washer motor (for sedan)	WW-45
	Wire harness	-
Front wipers do not operate when washer switch on	WIP fuse	WW-2
	Windshield wiper switch assembly (for hatchback)	WW-39
	Windshield wiper switch assembly (for sedan)	WW-35
	Front wiper motor (for hatchback)	WW-19
	Front wiper motor (for sedan)	WW-11
	Wire harness	-
Front wiper arms do not return to their original positions when wiper switch turned off	Front wiper motor (for hatchback)	WW-19
	Front wiper motor (for sedan)	WW-11
	Wire harness	-
Rear wiper and washer system do not operate	RR WIP fuse	WW-2
	WSH fuse	WW-2
	Windshield wiper switch assembly	WW-39
	Wire harness	-
Rear wiper motor does not operate	RR WIP fuse	WW-2
	Windshield wiper switch assembly	WW-39
	Rear wiper motor	WW-29
	Wire harness	-

Symptom	Suspected area	See page
Rear washer motor does not operate	WSH fuse	WW-2
	Windshield wiper switch assembly	WW-39
	Rear washer motor	WW-51
	Wire harness	-
Rear wiper arm does not return to its original position when rear wiper switch turned off	Rear wiper motor	WW-29
	Wire harness	-

FRONT WIPER MOTOR (for Sedan)

COMPONENTS





ON-VEHICLE INSPECTION

1. INSPECT FRONT WIPER MOTOR

(a) Check the automatic stop position.

(1) Operate the front wiper motor, then stop the operation.

(2) Check the automatic stop position when the front wiper motor operation has stopped.

Standard:

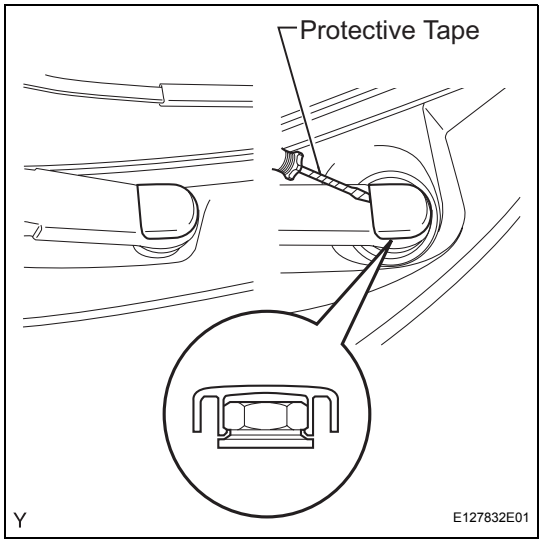
Front wiper arm stops in the position shown in the illustration.

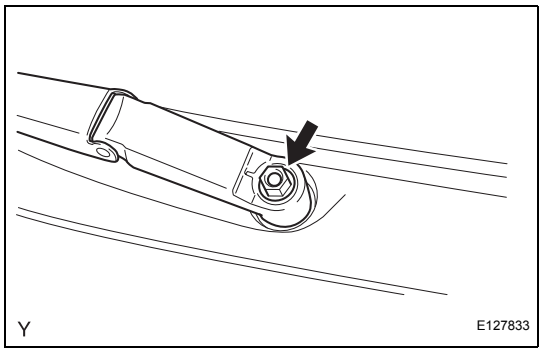
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT WIPER ARM HEAD CAP

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the 2 front wiper arm head caps.





3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH

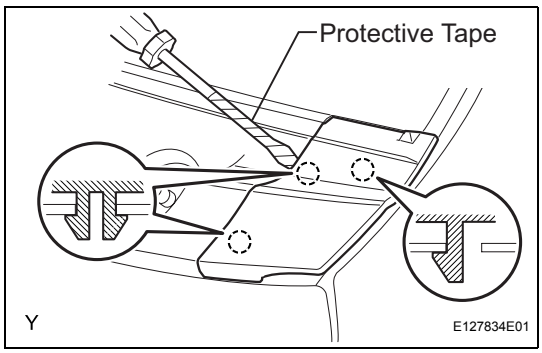
(a) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.

(b) Remove the nut and front wiper arm.

4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.



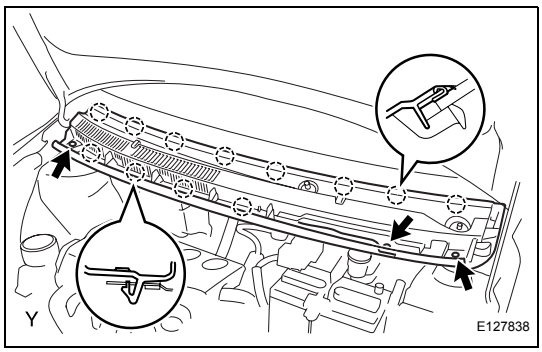
5. REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 3 claws and remove the cowl side ventilator sub-assembly LH.

6. REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH

HINT:

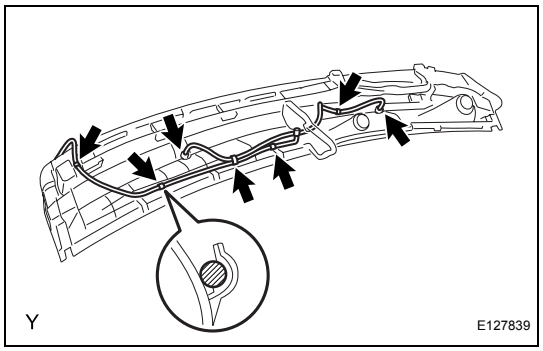
Use the same procedure as for the LH side.



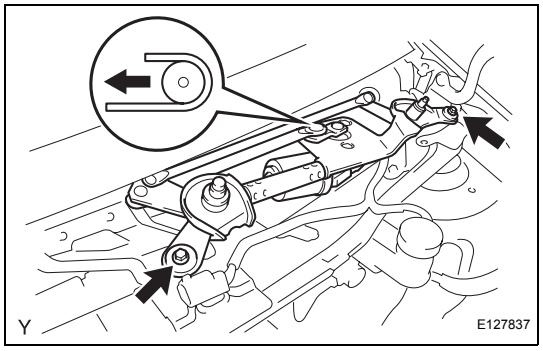
7. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(a) Disengage the 3 clips, the 4 claws and the 8 hooks.

(b) Remove the cowl top ventilator louver sub-assembly.

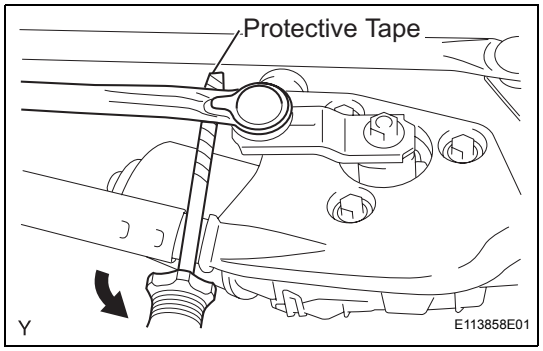


(c) Disconnect the washer hoses.
(d) Disengage the 5 hooks.



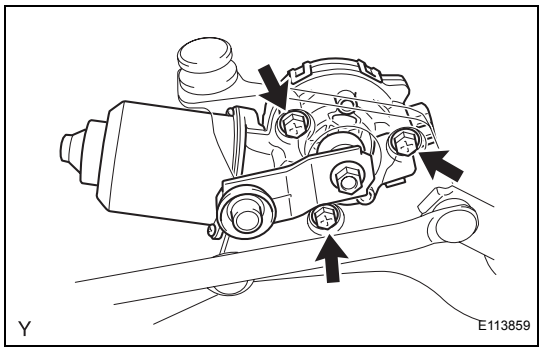
8. REMOVE FRONT WIPER MOTOR AND LINK

(a) Remove the 2 bolts.
(b) Slide the wiper link. Disengage the meshing of the rubber pin, then disconnect the connector and remove the front wiper motor and link.



9. REMOVE FRONT WIPER MOTOR

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the meshing of the rod at the crank arm pivot of the front wiper motor.

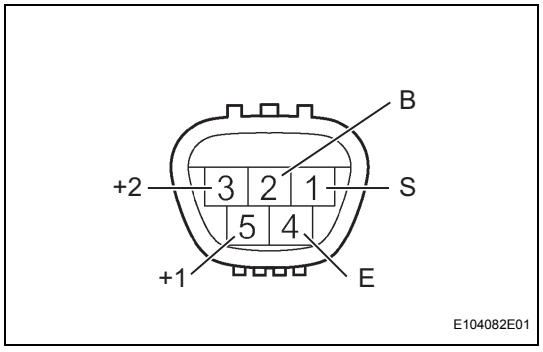


(b) Remove the 3 bolts and the front wiper motor.

INSPECTION

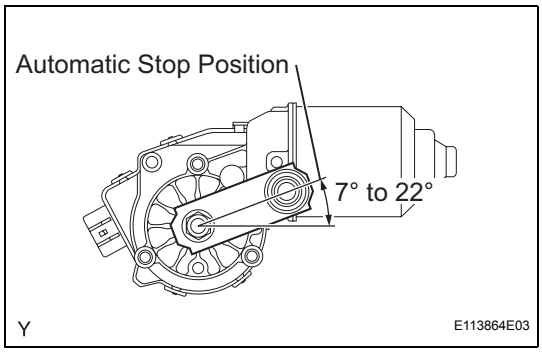
1. INSPECT FRONT WIPER MOTOR

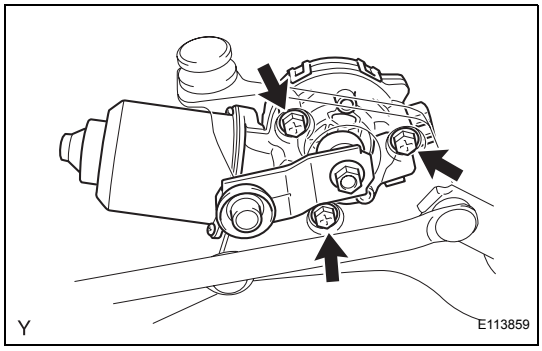
(a) Check the LO operation.
(1) Connect the positive (+) battery lead to terminal 5 (+1) of the connector and the negative (-) battery lead to terminal 4 (E), then check that the motor operates at low speed (LO).
Standard:
Motor operates at low speed (LO).
If the result is not as specified, replace the motor.

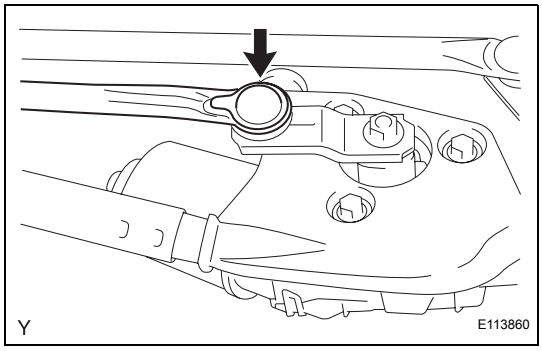


(b) Check the HI operation.
(1) Connect the positive (+) battery lead to terminal 3 (+2) of the connector and the negative (-) battery lead to terminal 4 (E), then check that the motor operates at high speed (HI).
Standard:
Motor operates at high speed (HI).
If the result is not as specified, replace the motor.

(c) Check the automatic stop operation.
(1) Connect the positive (+) battery lead to terminal 5 (+1) of the connector and the negative (-) battery lead to terminal 4 (E). With the motor operating at low speed (LO), disconnect terminal 5 (+1) to stop the wiper motor operation at any position other than the automatic stop position.
(2) Using SST, connect terminals 1 (S) and 5 (+1). Connect the positive (+) battery lead to terminal 2 (B) of the connector to restart the motor operation at low speed (LO).
SST 09843-18040
(3) Check that the motor stops automatically in the automatic stop position.
Standard:
Refer to the illustration.
If the result is not as specified, replace the motor assembly.







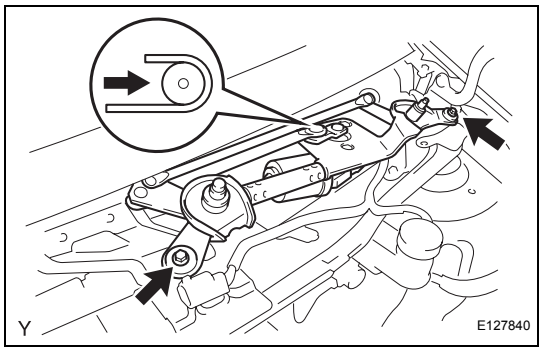
INSTALLATION

1. INSTALL FRONT WIPER MOTOR

(a) Install the front wiper motor with the 3 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(b) Apply DENSO No. 50 grease to the crank arm pivot of the front wiper motor.

(c) Install the rod onto the crank arm pivot of the front wiper motor.

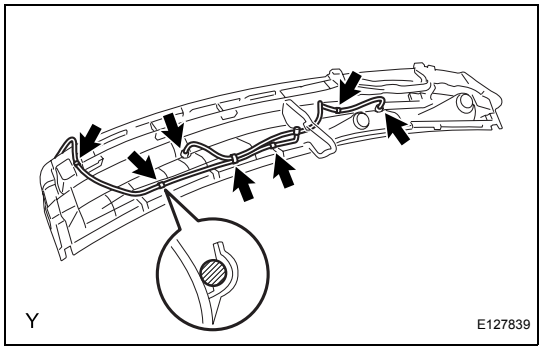


2. INSTALL FRONT WIPER MOTOR AND LINK

(a) Connect the connector.

(b) Slide the wiper link as shown in the illustration and engage the rubber pin with the body.

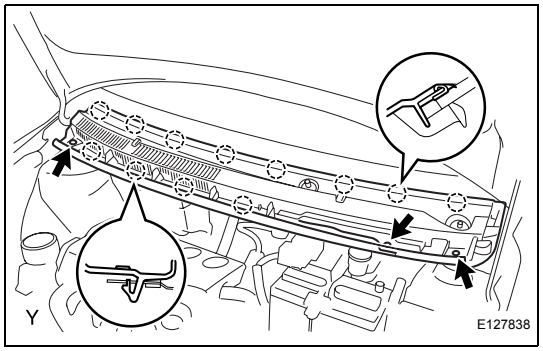
(c) Install the front wiper motor and link with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



3. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

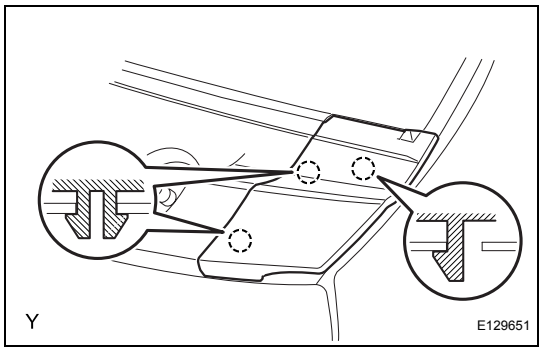
(a) Connect the washer hoses.

(b) Engage the 5 hooks.



(c) Engage the 8 hooks and the 4 claws.

(d) Install the cowl top ventilator louver sub-assembly with the 3 clips.



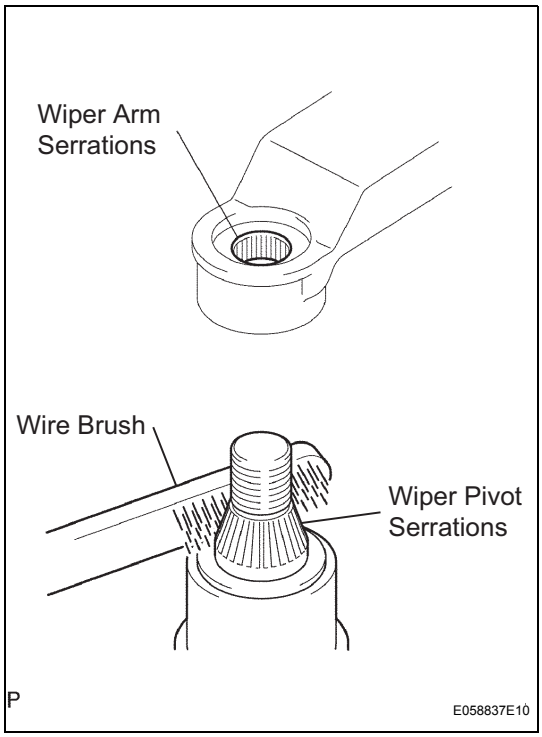
4. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH

(a) Engage the 3 claws and install the cowl side ventilator sub-assembly LH.

5. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH

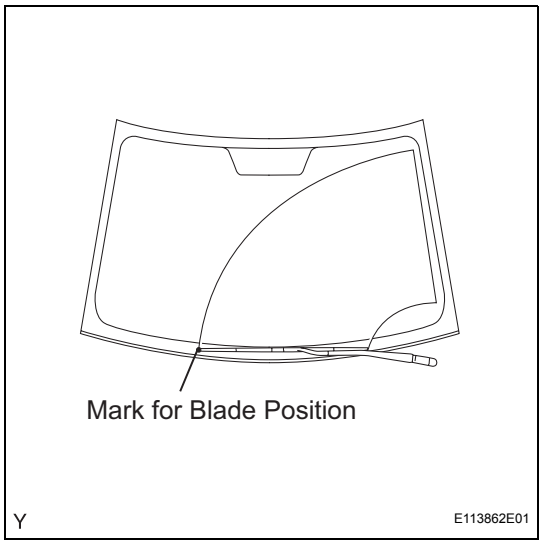
HINT:

Use the same procedure as for the LH side.

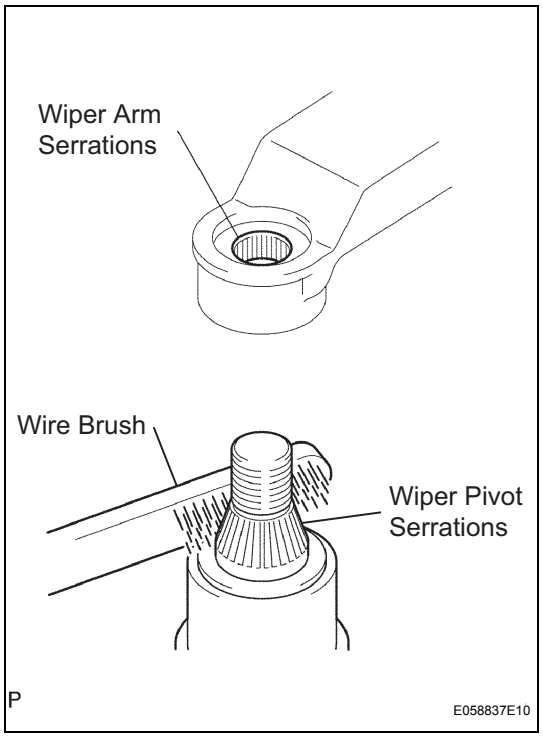


6. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH

(a) Scrape any metal powder off the serrated part of the wiper arm with a round file or the equivalent (when reinstalling).
(b) Clean the wiper pivot serrations with a wire brush.
(c) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.

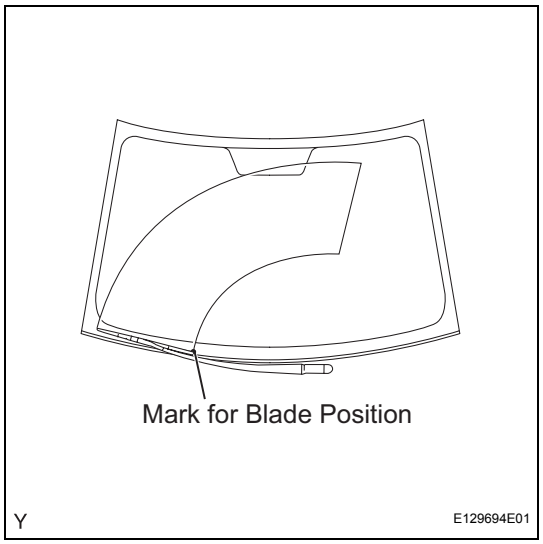


(d) Align the blade tip with the mark on the windshield glass, as shown in the illustration.
(e) Tighten the nut of the front wiper arm.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

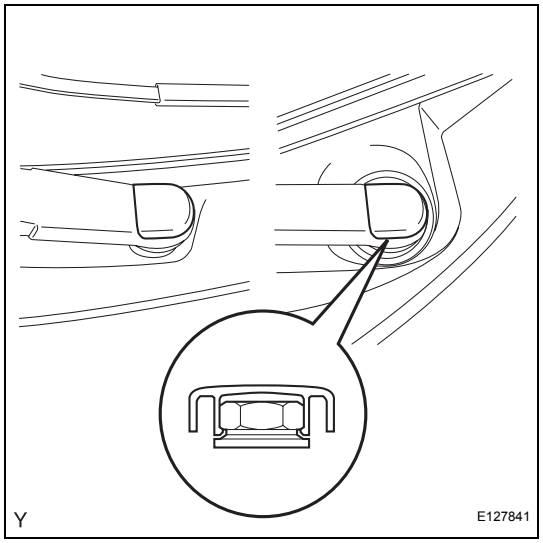


7. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Scrape any metal powder off the serrated part of the wiper arm with a round file or the equivalent (when reinstalling).
(b) Clean the wiper pivot serrations with a wire brush.
(c) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.



(d) Align the blade tip with the mark on the windshield glass, as shown in the illustration.
(e) Tighten the nut of the front wiper arm.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



8. INSTALL FRONT WIPER ARM HEAD CAP

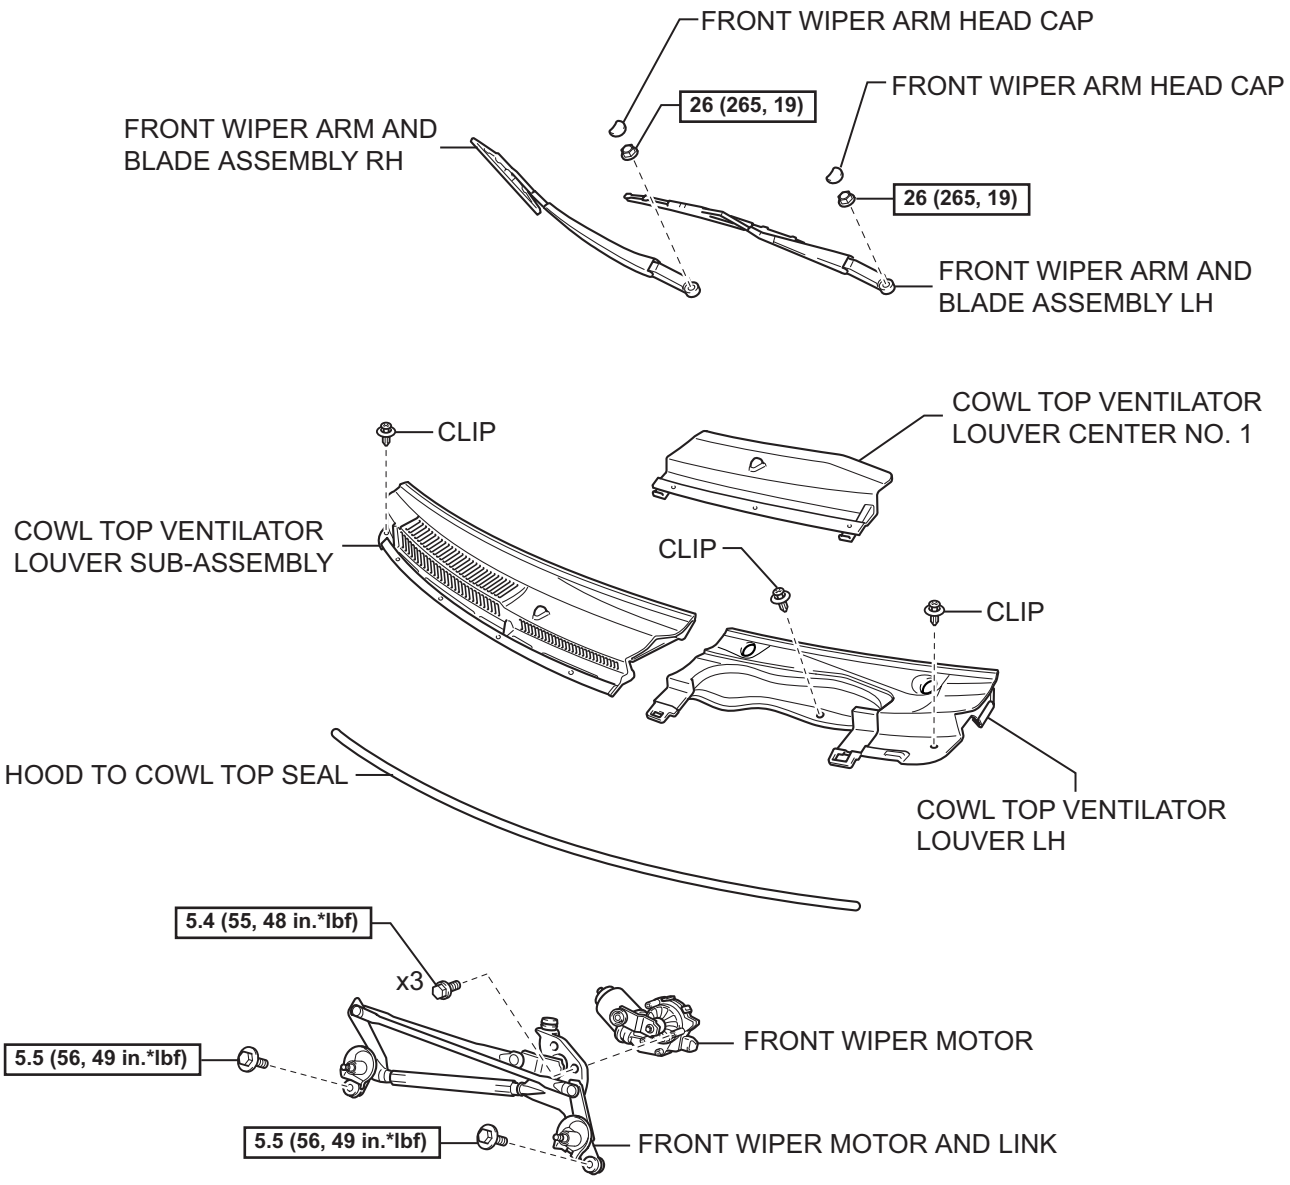
(a) Engage the claw and install the 2 front wiper arm head caps.

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WW

FRONT WIPER MOTOR (for Hatchback)

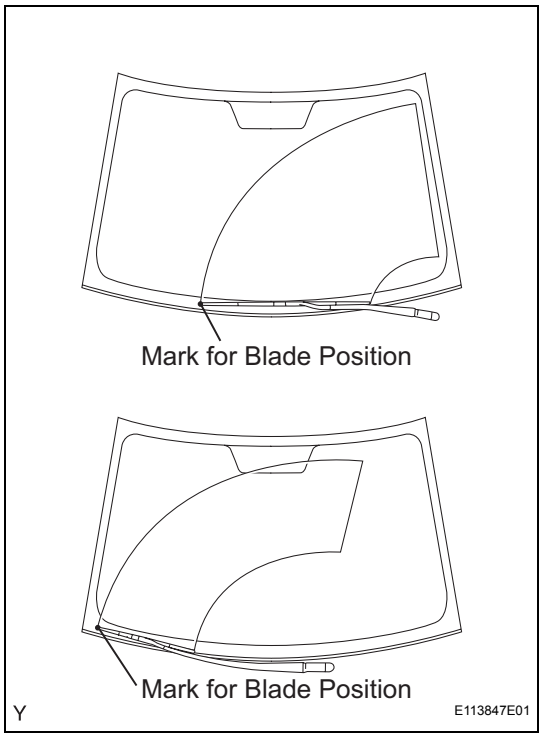
COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

Y

E117222E02



ON-VEHICLE INSPECTION

1. INSPECT FRONT WIPER MOTOR

(a) Check the automatic stop position.

(1) Operate the front wiper motor, then stop the operation.

(2) Check the automatic stop position when the front wiper motor operation has stopped.

Standard:

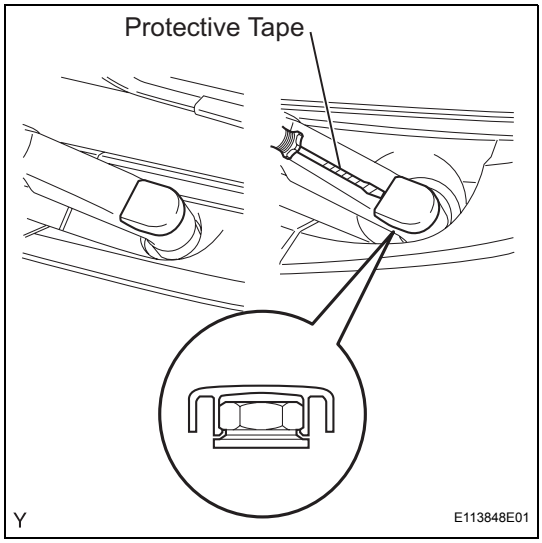
Front wiper arm stops in the position shown in the illustration.

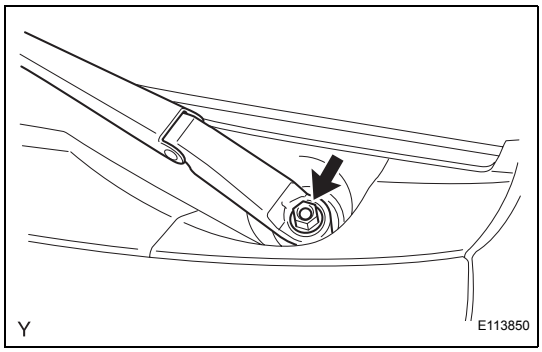
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT WIPER ARM HEAD CAP

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the 2 front wiper arm head caps.





3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH

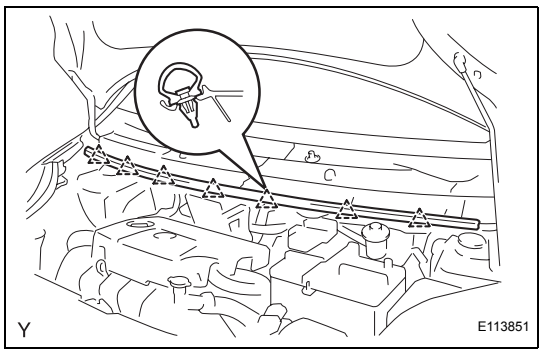
(a) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.

(b) Remove the nut and front wiper arm.

4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH

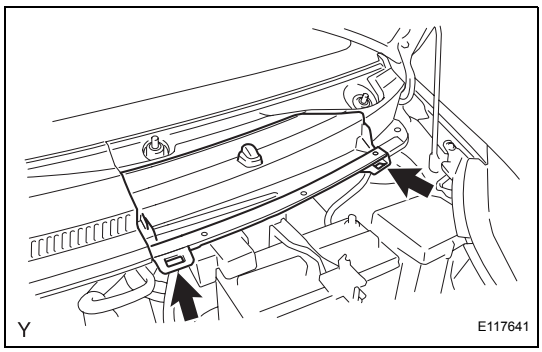
HINT:

Use the same procedure as for the LH side.



5. REMOVE HOOD TO COWL TOP SEAL

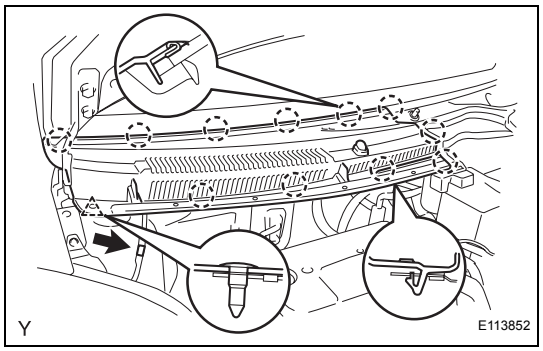
(a) Disengage the 7 clips and remove the hood to cowl top seal.



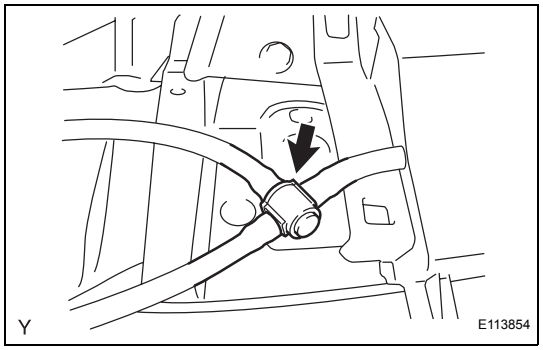
6. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(a) Disengage the 2 hooks and remove cowl top ventilator louver center No. 1.

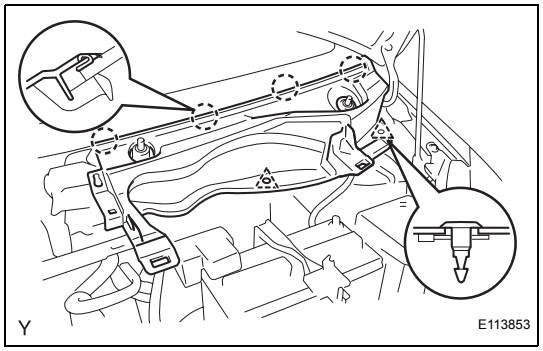
(b) Disconnect the washer hose.



(c) Disengage the 11 claws and clip.

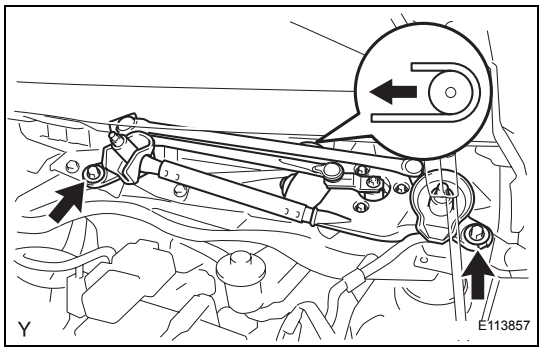


(d) Disconnect the washer hose and remove the cowl top ventilator louver sub-assembly.



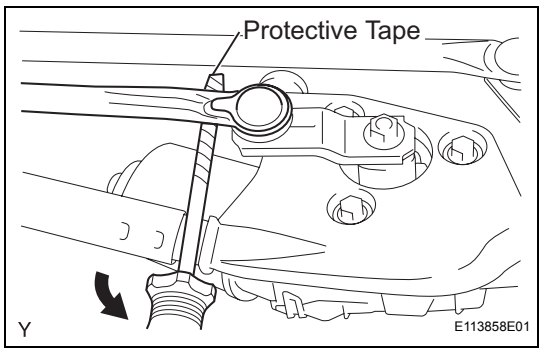
7. REMOVE COWL TOP VENTILATOR LOUVER LH

(a) Remove the 2 clips.
(b) Disengage the 4 claws and remove the cowl top ventilator louver LH.



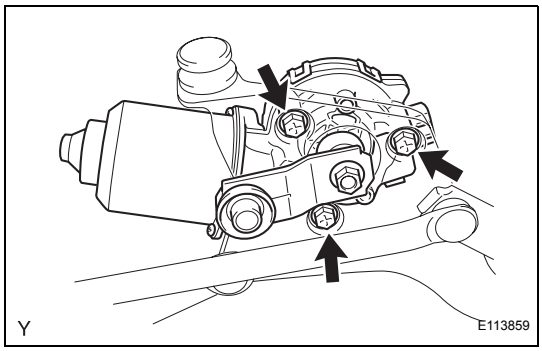
8. REMOVE FRONT WIPER MOTOR AND LINK

(a) Remove the 2 bolts.
(b) Slide the wiper link. Disengage the meshing of the rubber pin, then disconnect the connector and remove the front wiper motor and link.

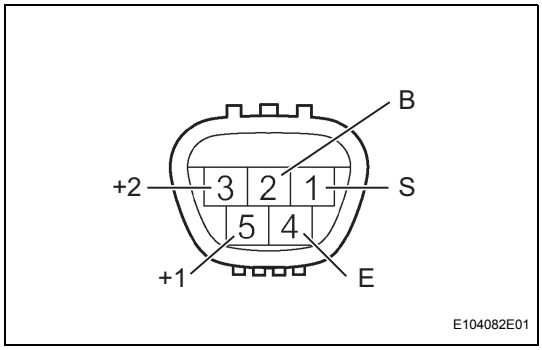


9. REMOVE FRONT WIPER MOTOR

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the meshing of the rod at the crank arm pivot of the front wiper motor.



(b) Remove the 3 bolts and the front wiper motor.



INSPECTION

1. INSPECT FRONT WIPER MOTOR

(a) Check the LO operation.

(1) Connect the positive (+) battery lead to terminal 5 (+1) of the connector and the negative (-) battery lead to terminal 4 (E), then check that the motor operates at low speed (LO).

Standard:

Motor operates at low speed (LO).

If the result is not as specified, replace the motor.

(b) Check the HI operation.

(1) Connect the positive (+) battery lead to terminal 3 (+2) of the connector and the negative (-) battery lead to terminal 4 (E), then check that the motor operates at high speed (HI).

Standard:

Motor operates at high speed (HI).

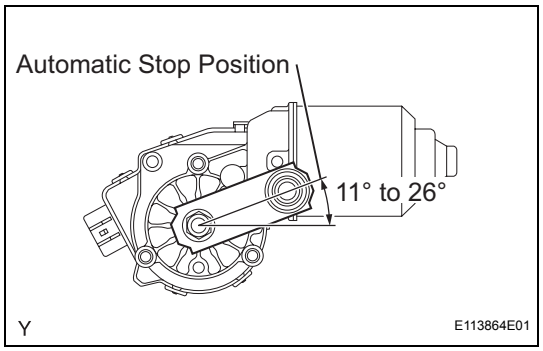
If the result is not as specified, replace the motor.

(c) Check the automatic stop operation.

(1) Connect the positive (+) battery lead to terminal 5 (+1) of the connector and the negative (-) battery lead to terminal 4 (E). With the motor operating at low speed (LO), disconnect terminal 5 (+1) to stop the wiper motor operation at any position other than the automatic stop position.

(2) Using SST, connect terminals 1 (S) and 5 (+1). Connect the positive (+) battery lead to terminal 2 (B) of the connector to restart the motor operation at low speed (LO).

SST 09843-18040



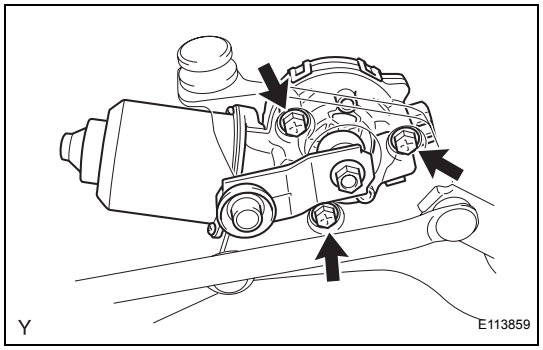
(3) Check that the motor stops automatically in the automatic stop position.
Standard:
Refer to the illustration.
If the result is not as specified, replace the motor assembly.

INSTALLATION

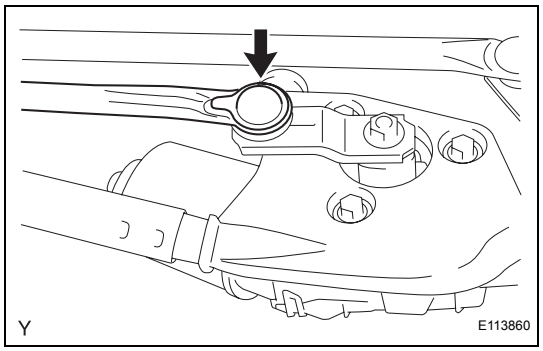
1. INSTALL FRONT WIPER MOTOR

(a) Install the front wiper motor with the 3 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(b) Apply DENSO No. 50 grease to the crank arm pivot of the front wiper motor.



(c) Install the rod onto the crank arm pivot of the front wiper motor.

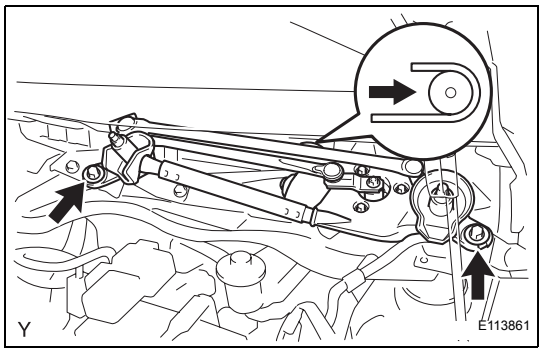


2. INSTALL FRONT WIPER MOTOR AND LINK

(a) Connect the connector.

(b) Slide the wiper link as shown in the illustration and engage the rubber pin with the body.

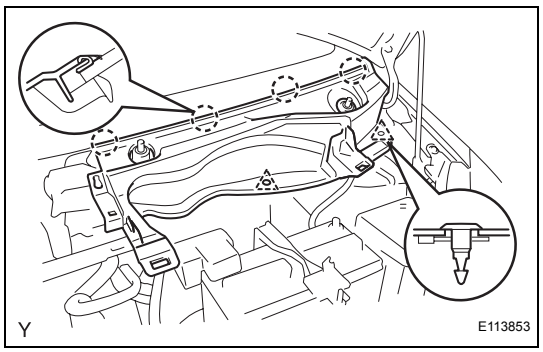
(c) Install the front wiper motor and link with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



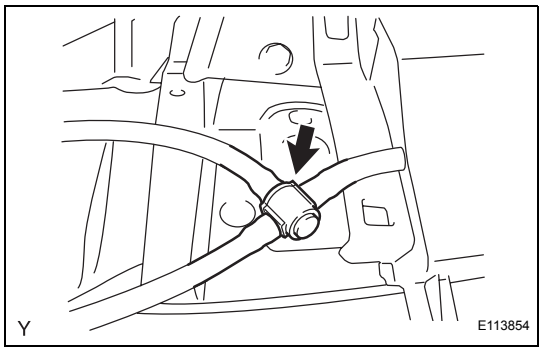
3. INSTALL COWL TOP VENTILATOR LOUVER LH

(a) Engage the 4 claws and install the cowl top ventilator louver LH.

(b) Install the 2 clips.

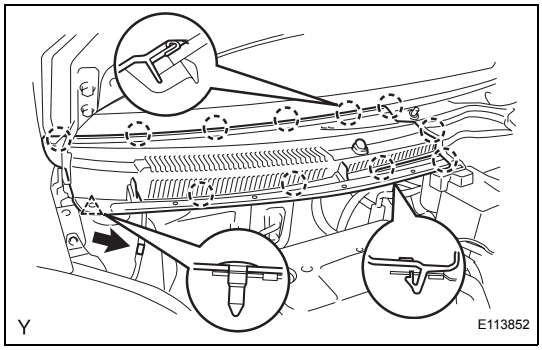


WW



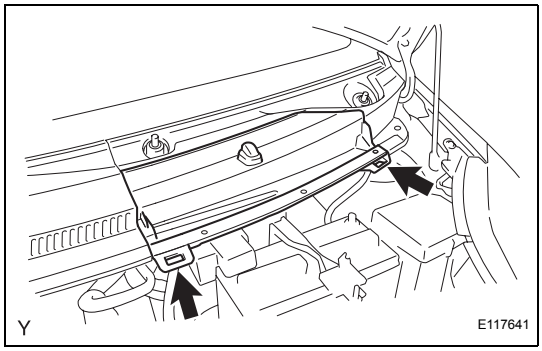
4. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(a) Connect the washer hose.



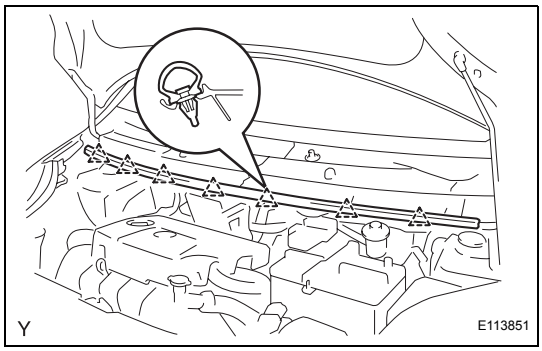
(b) Engage the 11 claws and install the cowl top ventilator louver sub-assembly.

(c) Install the clip.



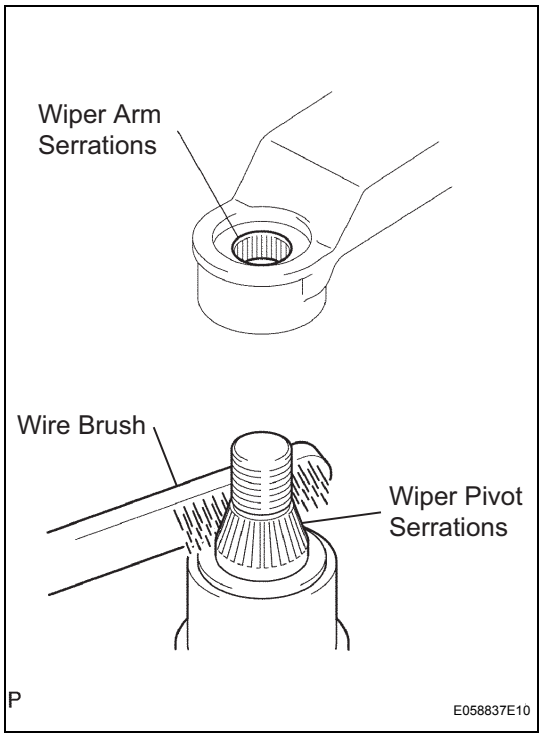
(d) Connect the washer hose.

(e) Engage the 2 hooks and install cowl top ventilator louver center No. 1.



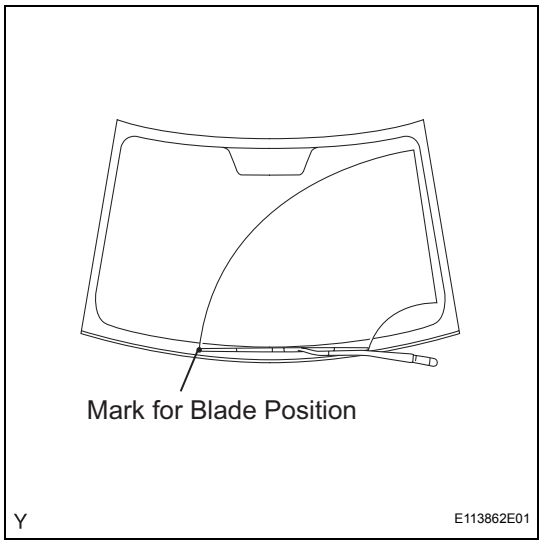
5. INSTALL HOOD TO COWL TOP SEAL

(a) Engage the 7 clips and install the hood to cowl top seal.



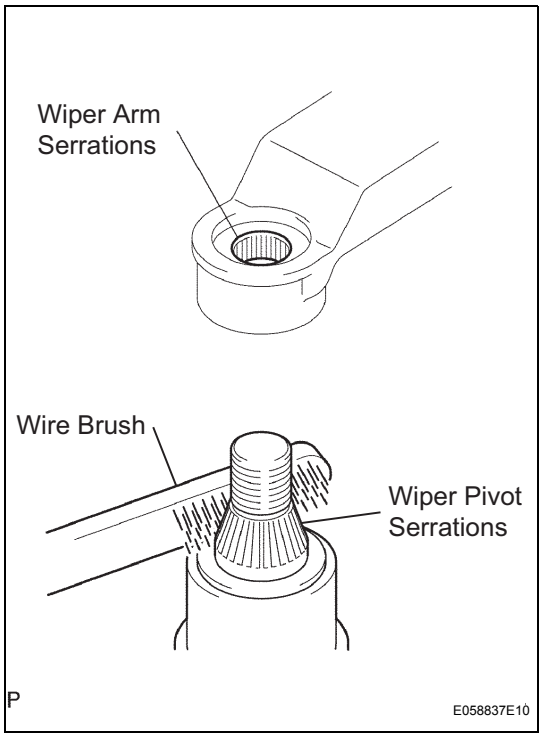
6. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH

(a) Scrape any metal powder off the serrated part of the wiper arm with a round file or the equivalent (when reinstalling).
(b) Clean the wiper pivot serrations with a wire brush.
(c) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.



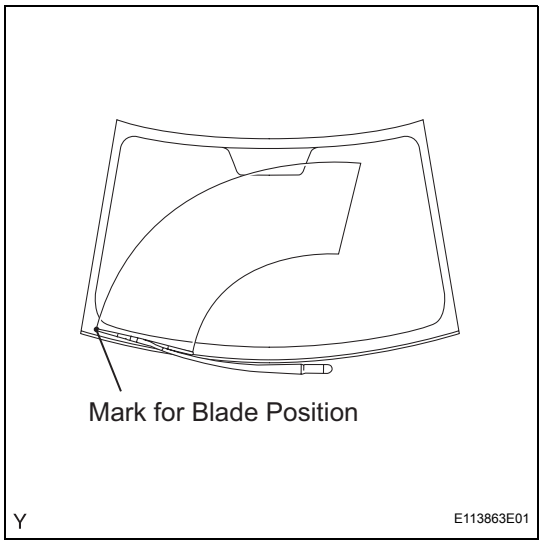
(d) Align the blade tip with the mark on the windshield glass, as shown in the illustration.
(e) Tighten the nut of the front wiper arm.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

WW

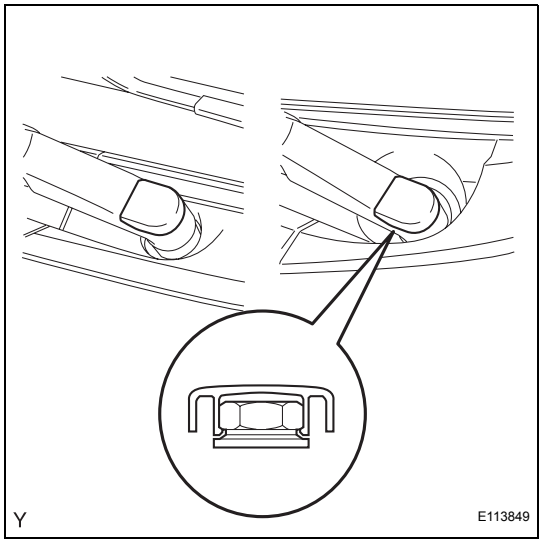


7. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Scrape any metal powder off the serrated part of the wiper arm with a round file or the equivalent (when reinstalling).
(b) Clean the wiper pivot serrations with a wire brush.
(c) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.



(d) Align the blade tip with the mark on the windshield glass, as shown in the illustration.
(e) Tighten the nut of the front wiper arm.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



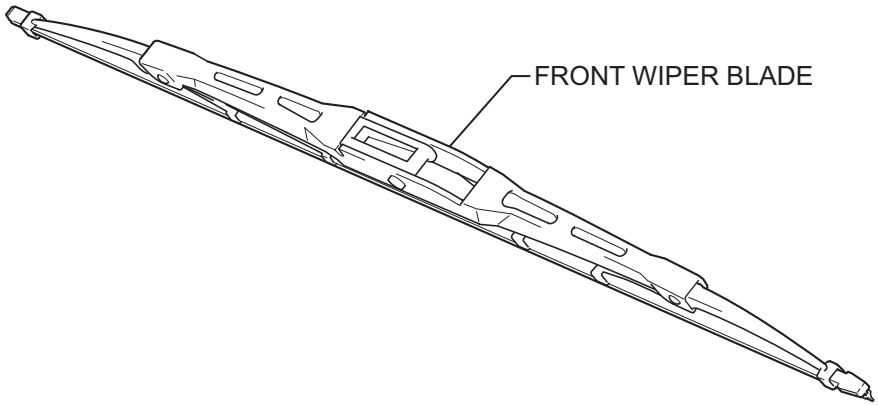
8. INSTALL FRONT WIPER ARM HEAD CAP

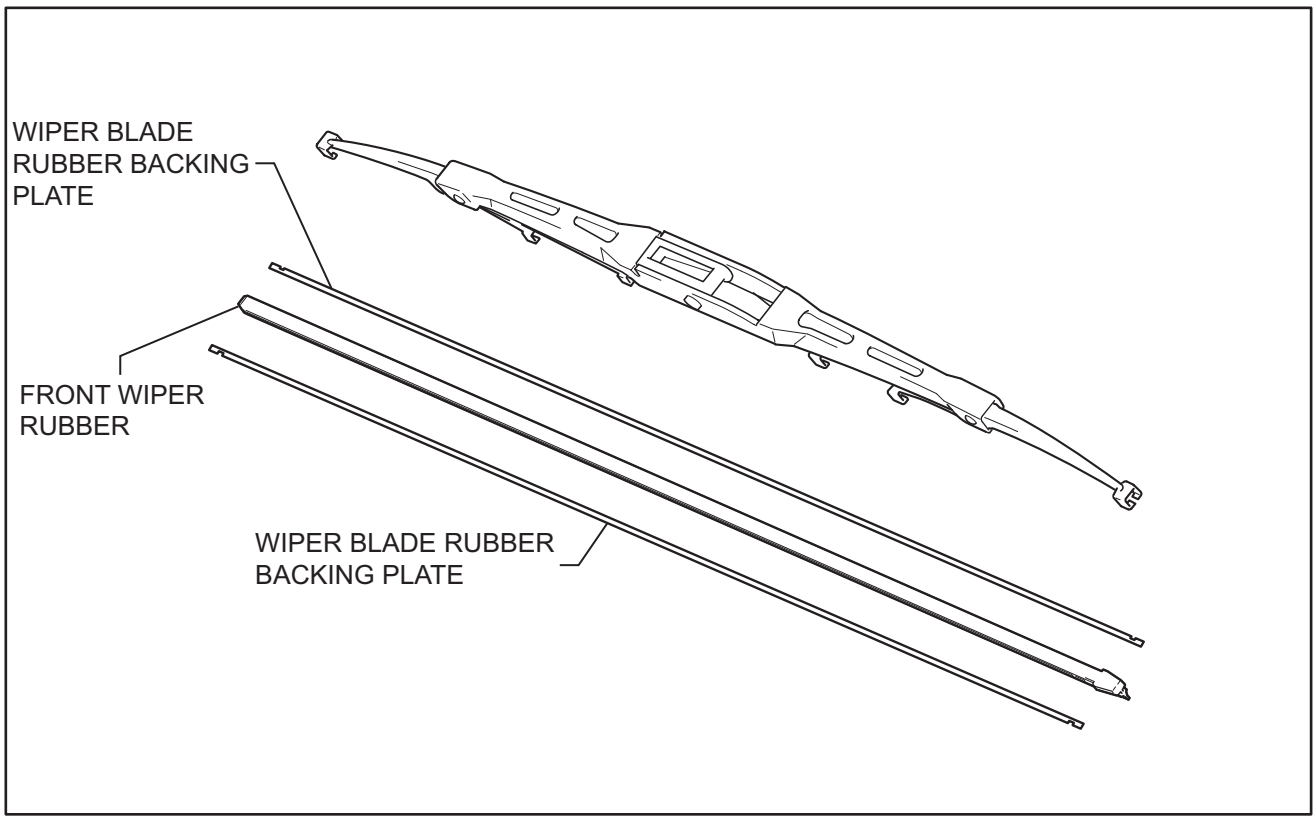
(a) Engage the claw and install the 2 front wiper arm head caps.

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT WIPER RUBBER

COMPONENTS



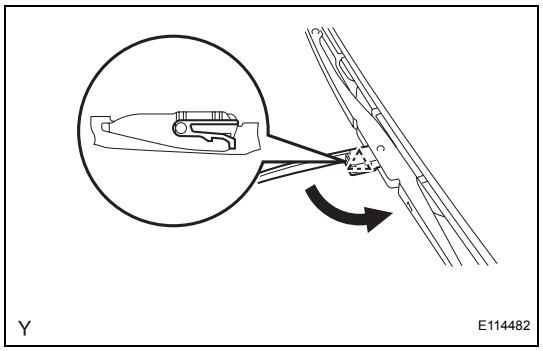


P

E103823E01

REMOVAL

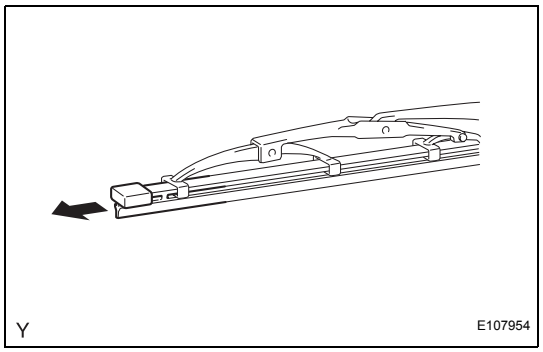
HINT:
- Use the same procedures for both the RH and LH sides.
- The procedure described below is for the LH side.



1. REMOVE FRONT WIPER BLADE

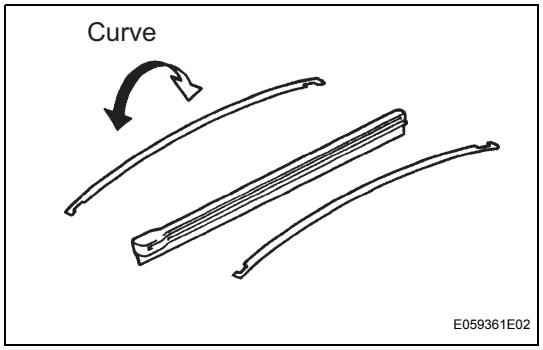
(a) Disengage the claw as shown in the illustration.

NOTICE:
Do not fold the wiper arm with the wiper blade removed. The arm tip may damage the windshield surface.



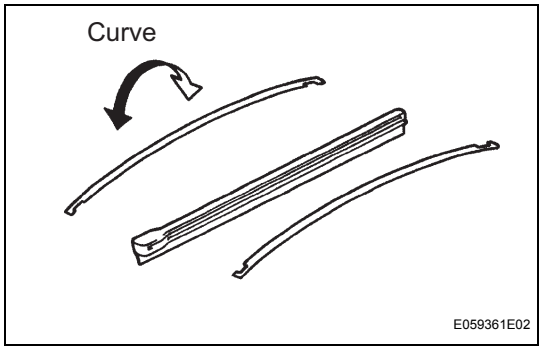
2. REMOVE FRONT WIPER RUBBER

(a) Remove the wiper rubber from the wiper blade.



(b) Remove the 2 wiper rubber backing plates from the wiper rubber.

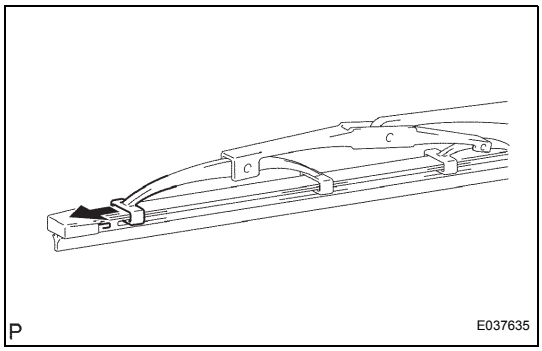
INSTALLATION



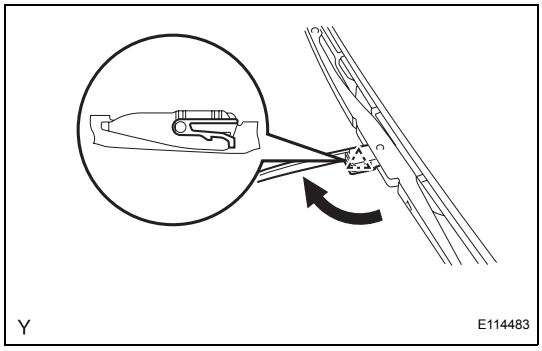
1. INSTALL FRONT WIPER RUBBER

(a) Install the 2 wiper rubber backing plates onto the wiper rubber.

NOTICE:
Install the backing plates facing the correct direction.



(b) Install the wiper rubber with its head portion (swelled portion) facing the arm bearing.
NOTICE:
Push the wiper blade into the grooves of the wiper rubber to attach it completely.

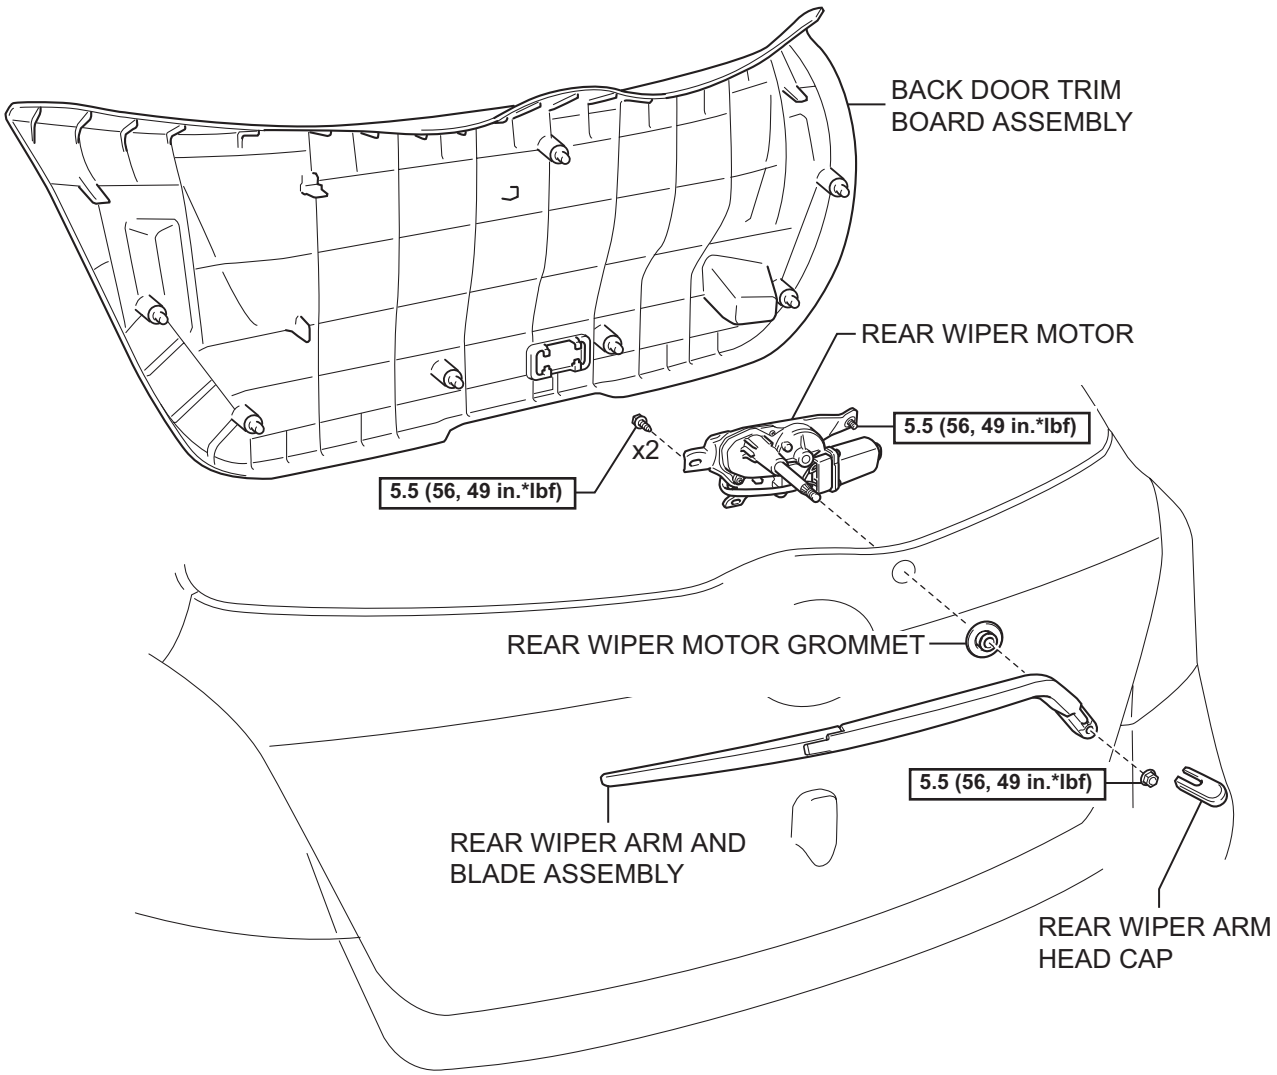


2. INSTALL FRONT WIPER BLADE

(a) Engage the claw and install the wiper blade.

REAR WIPER MOTOR (for Hatchback)

COMPONENTS

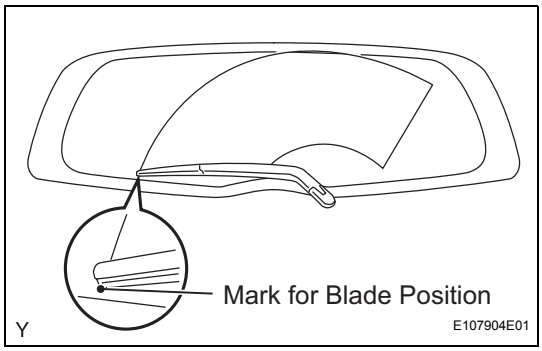


N*m (kgf*cm, ft*lbf) : Specified torque

Y

E117636E01

WW



ON-VEHICLE INSPECTION

1. INSPECT REAR WIPER MOTOR

(a) Check the automatic stop position.

(1) Operate the rear wiper motor, then stop the operation.

(2) Check the automatic stop position when the rear wiper motor operation has stopped.

Standard:

Rear wiper arm stops in the position shown in the illustration.

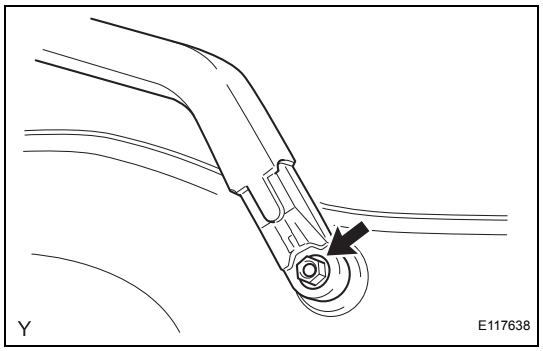
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

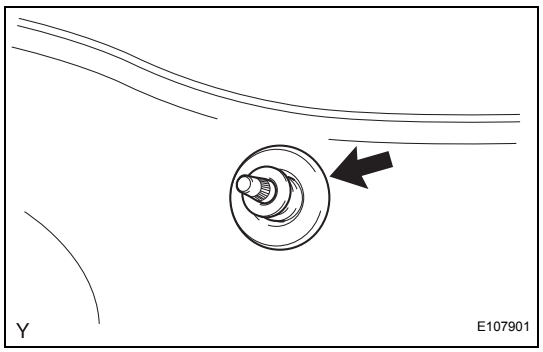
2. **REMOVE BACK DOOR TRIM BOARD ASSEMBLY (See page ED-142)**

3. **REMOVE REAR WIPER ARM AND BLADE ASSEMBLY**
   (a) Remove the rear wiper arm head cap.

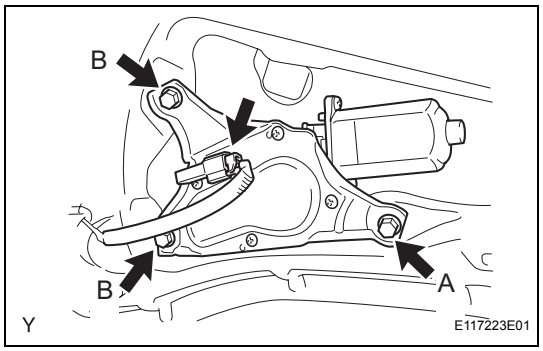
   (b) Remove the nut and rear wiper arm and blade.



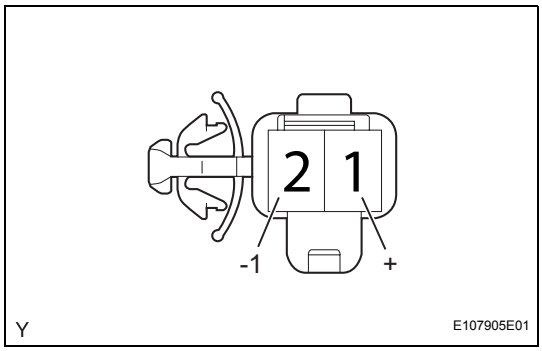
4. **REMOVE REAR WIPER MOTOR GROMMET**
   (a) Remove the rear wiper motor grommet.



5. **REMOVE REAR WIPER MOTOR**
   (a) Disconnect the connector.
   (b) Loosen bolt A.
   NOTICE:
   Do not try to remove the bolt since it is integrated with the motor.
   (c) Remove bolt B and the rear wiper motor.



WW



INSPECTION

1. INSPECT REAR WIPER MOTOR

(a) Check the operation.

(1) Connect the positive (+) battery lead to terminal 1 (+) and the negative (-) battery lead to terminal 2 (-1), and check that the rear wiper motor operates.

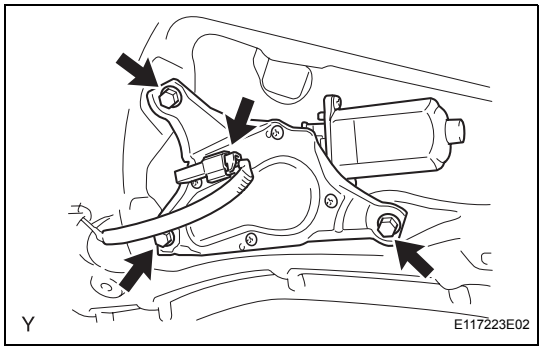
Standard:

The rear wiper motor operates.

NOTICE:

Check that the body ground is connected.

If the result is not as specified, replace the motor.



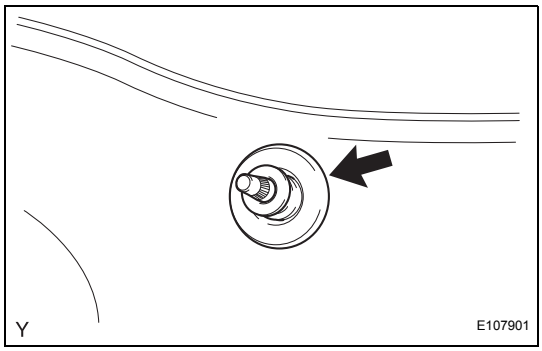
INSTALLATION

1. INSTALL REAR WIPER MOTOR

(a) Install the rear wiper motor with the 3 bolts.

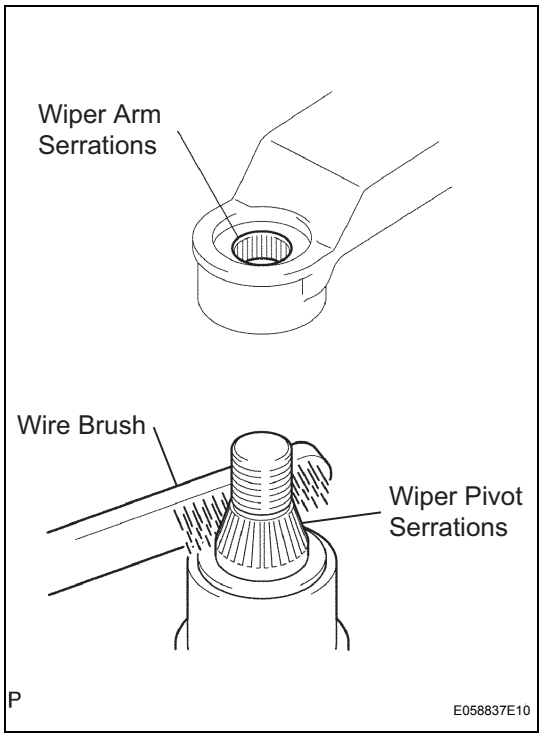
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(b) Connect the connector.



2. INSTALL REAR WIPER MOTOR GROMMET

(a) Install the rear wiper motor grommet.



3. **INSTALL REAR WIPER ARM AND BLADE ASSEMBLY**
   (a) Scrape any metal powder off the serrated part of the wiper arm with a round file or the equivalent (when reinstalling).
   (b) Clean the wiper pivot serrations with a wire brush.
   (c) Operate the wiper, then stop the windshield wiper motor in the automatic stop position.

   (d) Install the rear wiper arm into the position shown in the illustration with the nut.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
   HINT:
   Hold the arm hinge down by hand while tightening the nut.

   (e) Install the rear wiper arm head cap.

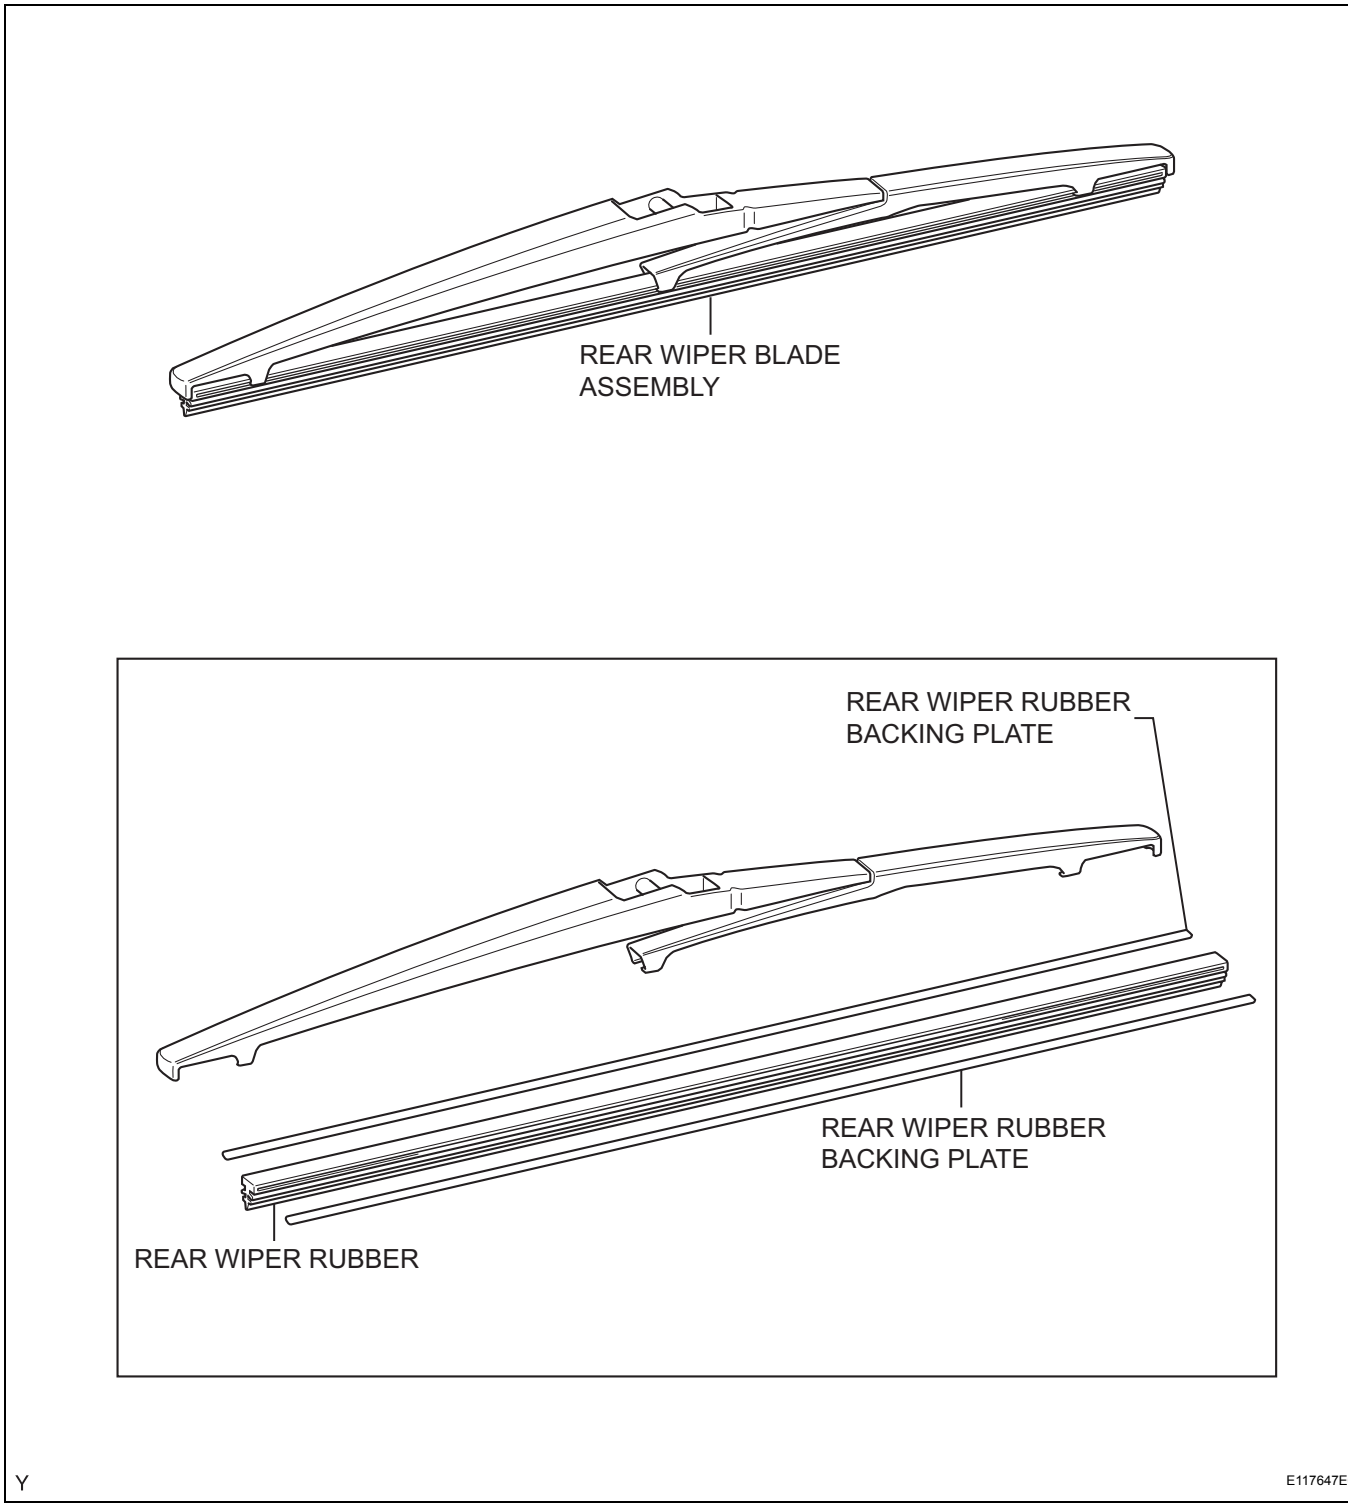
4. **REMOVE BACK DOOR TRIM BOARD ASSEMBLY (See page ED-146)**

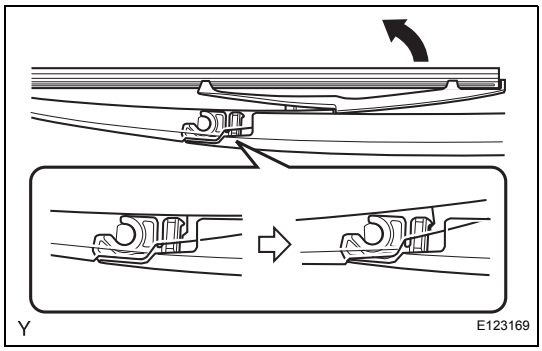
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WW

REAR WIPER RUBBER (for Hatchback)

COMPONENTS

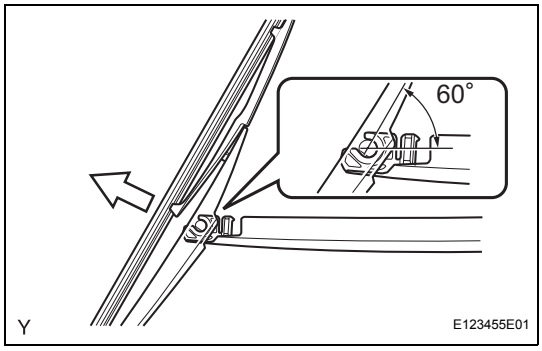




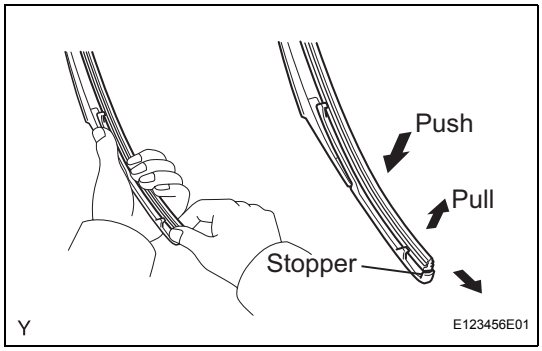
REMOVAL

1. REMOVE REAR WIPER BLADE ASSEMBLY

(a) Raise the rear wiper blade to the position shown in the illustration, where the meshing of the claw disengages making a clicking sound.
NOTICE:
Do not break the claw.



(b) Pull the rear wiper blade straight away from the wiper arm toward the left side of the vehicle.
NOTICE:
Do not bend the rear wiper arm with the rear wiper blade removed, as the arm tip could damage the windshield surface.

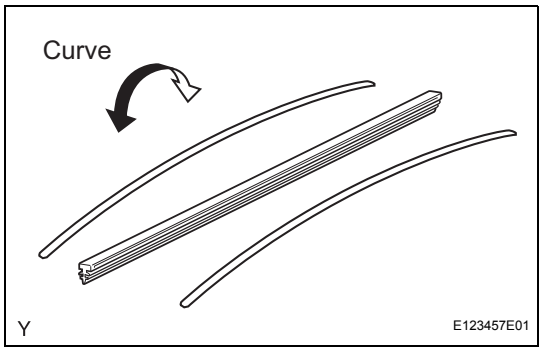


2. REMOVE REAR WIPER RUBBER

(a) Pull the end of the wiper rubber protruding from the blade stopper as shown in the illustration.
NOTICE:
Do not pull out the wiper rubber forcibly. Otherwise, the backing plates will be deformed or the blade claw will be damaged.
HINT:
Pushing the rubber from the end toward the middle of the rear wiper blade allows it to be removed more easily.

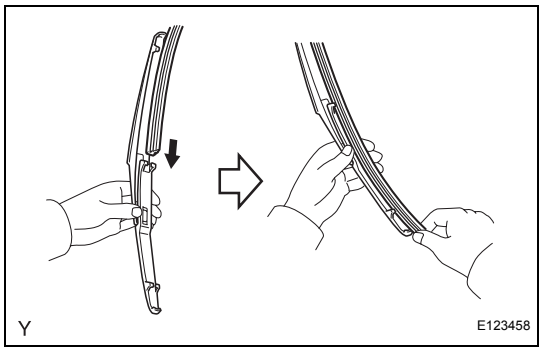
(b) Remove the 2 wiper rubber backing plates from the wiper rubber.

INSTALLATION

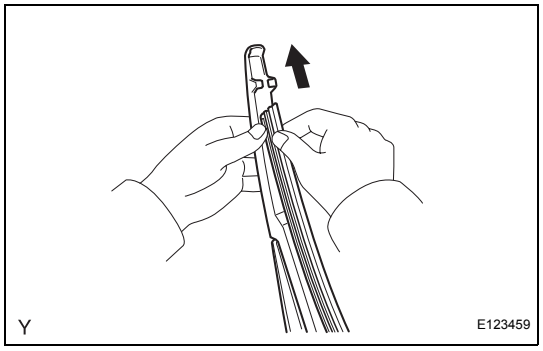


1. INSTALL REAR WIPER RUBBER

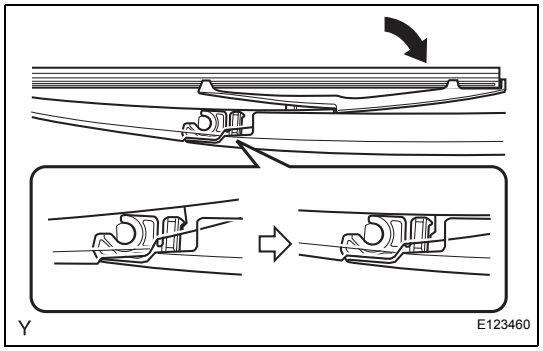
(a) Install the 2 wiper rubber backing plates onto the wiper rubber.
NOTICE:
Install the backing plates facing the correct direction.



(b) Insert the rear wiper rubber from the claw position of the middle of the rear wiper blade to the end.



(c) After passing the rear wiper rubber through the rear end side claw, allow it to protrude from the rear end stopper and slide it through the front tip side claw.



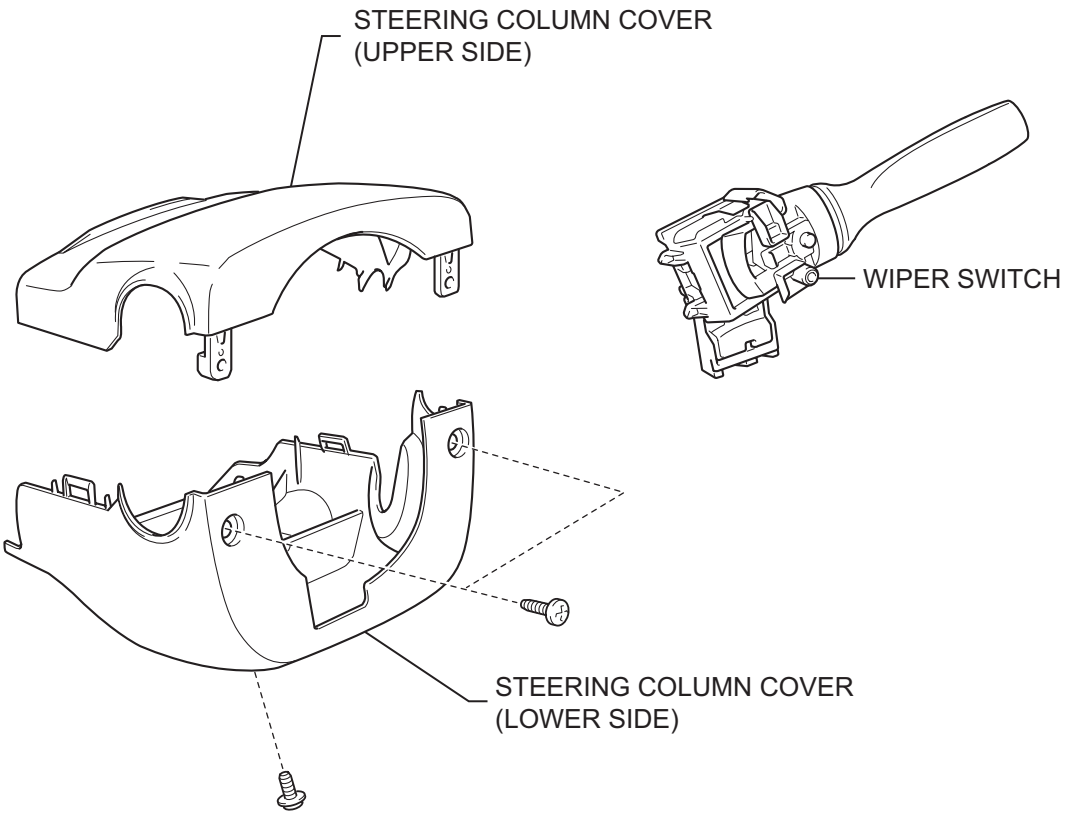
2. INSTALL REAR WIPER BLADE ASSEMBLY

(a) Engage the claw and install the wiper blade.

WIPER SWITCH (for Sedan)

COMPONENTS

WW

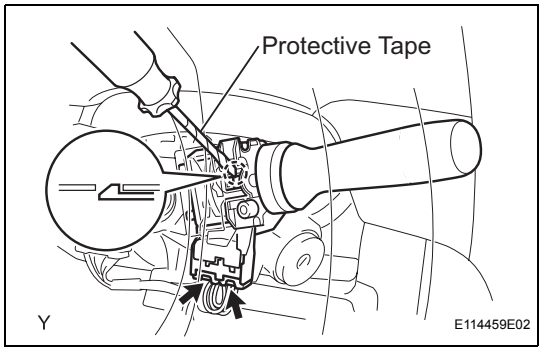


Y

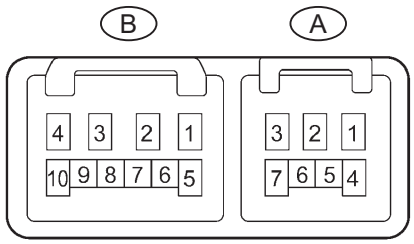
E127794E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE STEERING COLUMN COVER (See page SR-12)**
3. **REMOVE WIPER SWITCH**
   (a) Disconnect the 2 connectors.
   (b) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the wiper switch.
   NOTICE:
   Do not press the claw too hard, as it may be damaged.



Windshield Wiper Switch Assembly Connector Front View:



H

E109077E01

INSPECTION

1. **INSPECT WIPER SWITCH**
   (a) Check the resistance.
   (1) Measure the resistance and check the results in accordance with the value(s) in the tables below.
   Standard Resistance

Tester Connection	Condition	Specified Condition
+B (B-2) - +1 (B-3)	MIST	Below 1 Ω
+S (B-1) - +1 (B-3)	OFF	Below 1 Ω
+S (B-1) - +1 (B-3)	INT	Below 1 Ω
+B (B-2) - +1 (B-3)	LO	Below 1 Ω
+B (B-2) - +2 (B-4)	HI	Below 1 Ω

If the result is not as specified, replace the wiper switch.

Standard Resistance

Tester Connection	Condition	Specified Condition
EW (A-2) - WF (A-3)	OFF	10 kΩ or higher
EW (A-2) - WF (A-3)	ON	Below 1 Ω

If the result is not as specified, replace the wiper switch.
If the result is not as specified, replace the wiper switch.

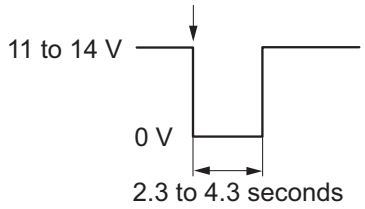
(b) Check the intermittent operation.
(1) Connect the positive (+) voltmeter terminal to terminal 3 (+1) of the B connector and the negative (-) voltmeter terminal to terminal 2 (EW) of the A connector.
(2) Connect the positive (+) battery lead to terminal 2 (+B) of the B connector and the negative (-) battery lead to terminals 2 (EW) of the A connector and 1 (+S) of the B connector.
(3) Turn the wiper switch to the INT position.

WW

(4) Connect the positive (+) battery lead to terminal 1 (+S) of the B connector for 5 seconds.
(5) Connect the negative (-) battery lead to terminal 1 (+S) of the B connector. Operate the intermittent wiper relay and check the voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector.
Standard:
Refer to the illustration below.

Connect the negative (-) battery terminal cable to terminal 1 (+S) of the B connector

Voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector



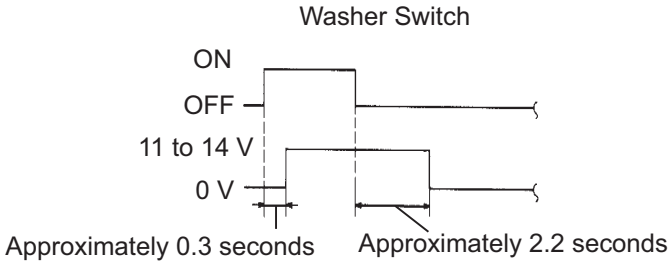
Y

E129662E01

If the result is not as specified, replace the windshield wiper switch.

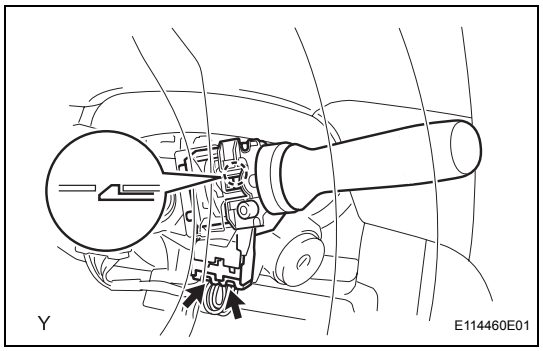
(c) Check the operation (front washer).
(1) Turn the wiper switch off.
(2) Connect the positive (+) battery lead to terminal 2 (+B) of the B connector and the negative (-) battery lead to terminals 1 (+S) of the B connector and 2 (EW) of the A connector.
(3) Connect the positive (+) voltmeter terminal to terminal 3 (+1) of the B connector and the negative (-) voltmeter terminal to terminal 2 (EW) of the A connector. Turn the washer switch on and off, and check the voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector.

Voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector



E129663E01

If the result is not as specified, replace the windshield wiper switch.



INSTALLATION

1. **INSTALL WIPER SWITCH**
   (a) Engage the claw and install the windshield wiper switch.
   (b) Connect the 2 connectors.
2. **INSTALL STEERING COLUMN COVER (See page SR-22)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WIPER SWITCH (for Hatchback)

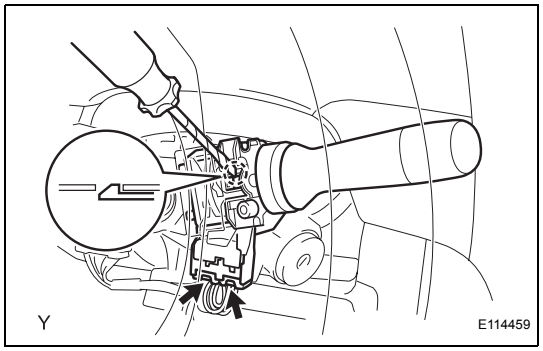
Y

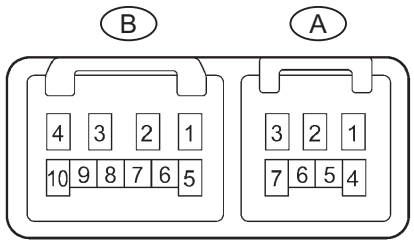
E117224E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE STEERING COLUMN COVER (See page SR-30)**
3. **REMOVE WIPER SWITCH**
   (a) Disconnect the 2 connectors.
   (b) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the wiper switch.
   NOTICE:
   Do not press the claw too hard, as it may be damaged.



Windshield Wiper Switch Assembly Connector Front View:



INSPECTION

1. **INSPECT WIPER SWITCH**
   (a) Check the resistance.
   (1) Measure the resistance and check the results in accordance with the value(s) in the tables below.
   Standard Resistance:
   Front Wiper Switch

Tester Connection	Condition	Specified Condition
+B (B-2) - +1 (B-3)	MIST	Below 1 Ω
+S (B-1) - +1 (B-3)	OFF	Below 1 Ω
+S (B-1) - +1 (B-3)	INT	Below 1 Ω
+B (B-2) - +1 (B-3)	LO	Below 1 Ω
+B (B-2) - +2 (B-4)	HI	Below 1 Ω

If the result is not as specified, replace the wiper switch.
Standard Resistance:
Front Washer Switch

Tester Connection	Condition	Specified Condition
EW (A-2) - WF (A-3)	OFF	10 kΩ or higher
EW (A-2) - WF (A-3)	ON	Below 1 Ω

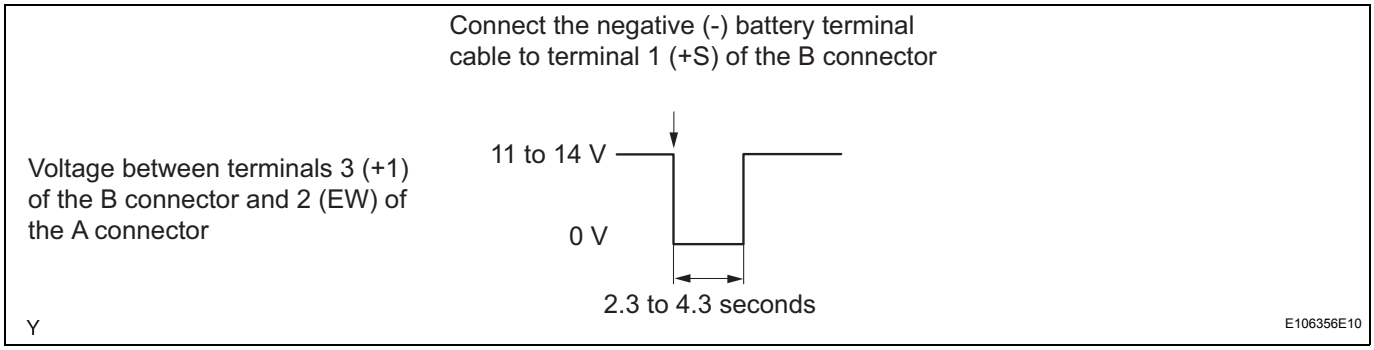
If the result is not as specified, replace the wiper switch.
Standard Resistance:
Rear Wiper and Washer Switch

Tester Connection	Condition	Specified Condition
EW (A-2) - WR (B-5)	WASH (Rear wiper switch OFF)	Below 1 Ω
EW (A-2) - WR (B-5) EW (A-2) - +1R (A-7)	OFF	10 kΩ or higher
EW (A-2) - +1R (A-7)	ON	Below 1 Ω
EW (A-2) - WR (B-5) EW (A-2) - +1R (A-7) +1R (A-7) - WR (B-5)	WASH (Rear wiper switch ON)	Below 1 Ω

WW

If the result is not as specified, replace the wiper switch.

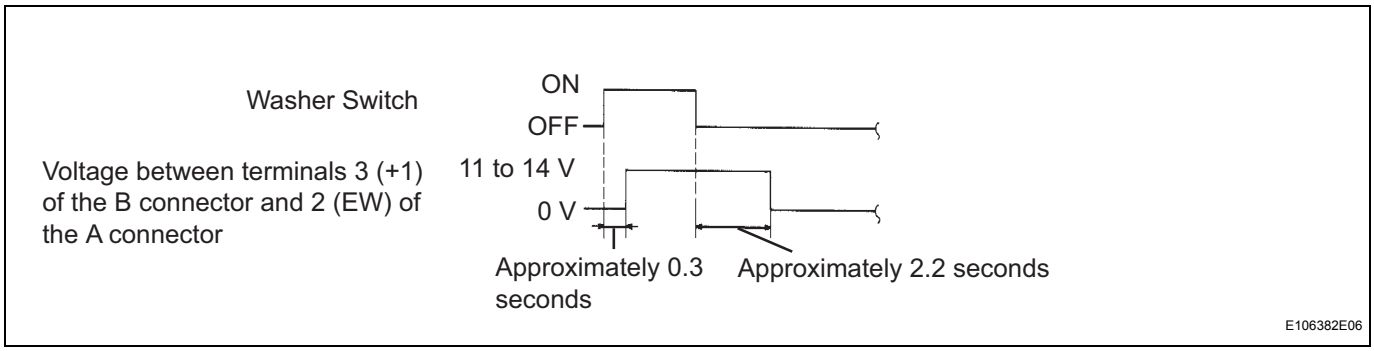
(b) Check the intermittent operation.
(1) Connect the positive (+) voltmeter terminal to terminal 3 (+1) of the B connector and the negative (-) voltmeter terminal to terminal 2 (EW) of the A connector.
(2) Connect the positive (+) battery lead to terminal 2 (+B) of the B connector and the negative (-) battery lead to terminals 2 (EW) of the A connector and 1 (+S) of the B connector.
(3) Turn the wiper switch to the INT position.
(4) Connect the positive (+) battery lead to terminal 1 (+S) of the B connector for 5 seconds.
(5) Connect the negative (-) battery lead to terminal 1 (+S) of the B connector. Operate the intermittent wiper relay and check the voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector.
Standard:
Refer to the illustration below.



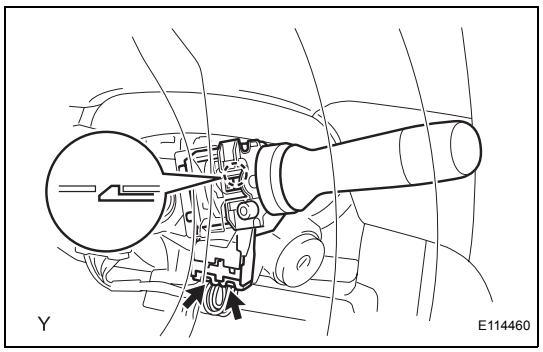
If the result is not as specified, replace the windshield wiper switch.

(c) Check the operation (front washer).
(1) Turn the wiper switch off.
(2) Connect the positive (+) battery lead to terminal 2 (+B) of the B connector and the negative (-) battery lead to terminals 1 (+S) of the B connector and 2 (EW) of the A connector.

(3) Connect the positive (+) voltmeter terminal to terminal 3 (+1) of the B connector and the negative (-) voltmeter terminal to terminal 2 (EW) of the A connector. Turn the washer switch on and off, and check the voltage between terminals 3 (+1) of the B connector and 2 (EW) of the A connector.



If the result is not as specified, replace the windshield wiper switch.



INSTALLATION

1. **INSTALL WIPER SWITCH**
   (a) Engage the claw and install the windshield wiper switch.
   (b) Connect the 2 connectors.
2. **INSTALL STEERING COLUMN COVER (See page SR-40)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WASHER MOTOR (for Sedan)

ON-VEHICLE INSPECTION

1. INSPECT WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY

(a) Check the operation of the windshield washer motor and pump.

(1) Fill the washer jar with washer fluid.

HINT:

The operation should be performed with the windshield washer motor and pump installed on the washer jar.

(2) Connect the positive (+) battery lead to terminal 1 of the windshield washer motor and pump, and the negative (-) battery lead to terminal 2. Check that washer fluid flows from the washer jar.

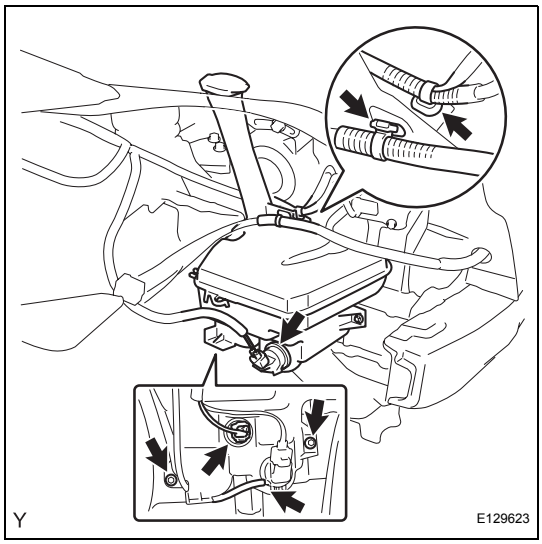
Standard:

Washer fluid flows from the washer jar.

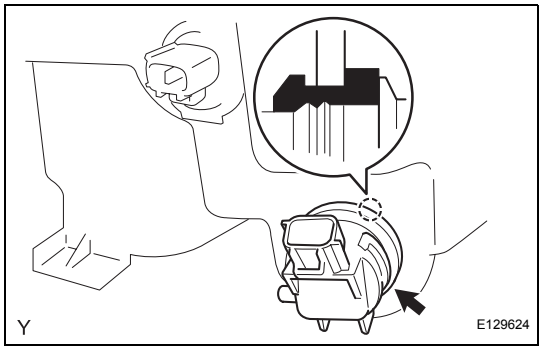
If the result is not as specified, replace the windshield washer motor and pump.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-6)**
3. **REMOVE FRONT BUMPER COVER (See page ET-6)**
4. **REMOVE HEADLIGHT ASSEMBLY RH (See page LI-86)**
5. **DRAIN WASHER FLUID**
   (a) Disconnect the washer hose from the windshield washer motor and pump, and drain the washer fluid.
6. **REMOVE WINDSHIELD WASHER JAR ASSEMBLY**
   (a) w/ Washer Level Warning Switch
      (1) Disconnect the 2 harness clamps.
      (2) Disconnect the 2 connectors.
      (3) Remove the 2 bolts.
      (4) Remove the windshield washer jar.
   (b) w/o Washer Level Warning Switch
      (1) Disconnect the 2 harness clamps.
      (2) Disconnect the connector.
      (3) Remove the 2 bolts.
      (4) Remove the windshield washer jar.

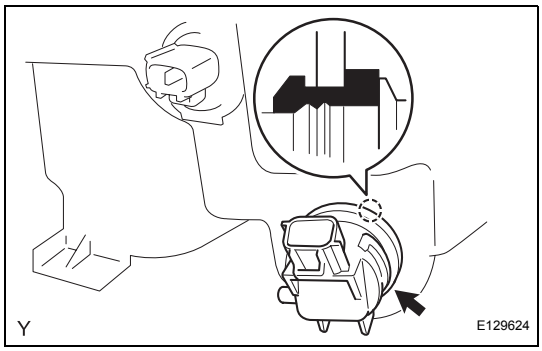


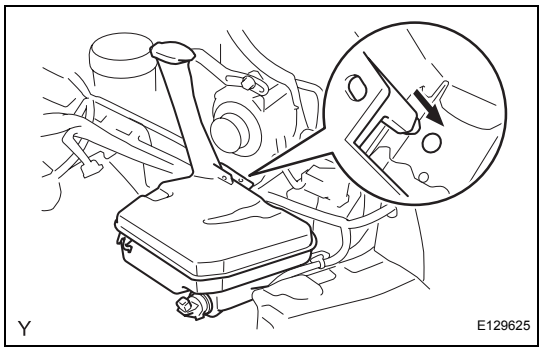
7. **REMOVE WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY**
   (a) Pull the washer motor and pump out of the packing of the washer jar.



INSTALLATION

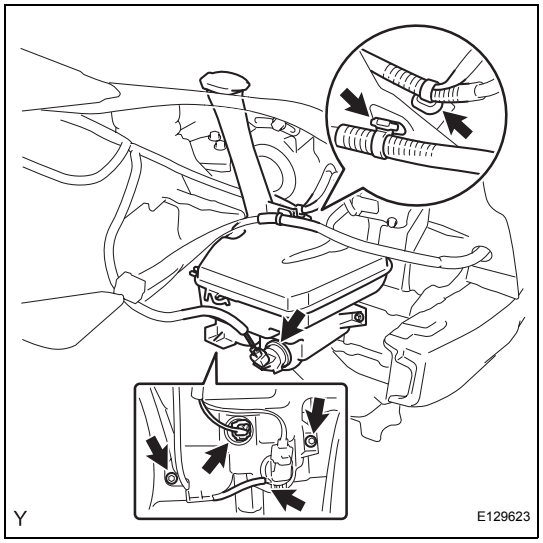
1. **INSTALL WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY**
   (a) Install the windshield washer motor and pump onto the packing of the washer jar.





2. INSTALL WINDSHIELD WASHER JAR ASSEMBLY

(a) Install the windshield washer jar.



(b) w/ Washer Level Warning Switch
  (1) Install the 2 bolts.
    Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
  (2) Connect the 2 connectors.
  (3) Connect the 2 harness clamps.

(c) w/o Washer level warning switch
  (1) Install the 2 bolts.
    Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
  (2) Connect the connector.
  (3) Connect the 2 harness clamps.

3. FILL UP WASHER JAR AND PUMP ASSEMBLY WITH WASHER FLUID

(a) Connect the washer hose to the washer motor and pump, and fill the washer jar with washer fluid.

4. INSTALL HEADLIGHT ASSEMBLY RH (See page LI-92)

5. INSTALL FRONT BUMPER COVER (See page ET-16)

6. INSTALL FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-19)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

ON-VEHICLE INSPECTION

1. INSPECT WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY (for Front Side)

(a) Check the operation of the windshield washer motor and pump front side.

(1) Fill the washer jar with washer fluid.

HINT:

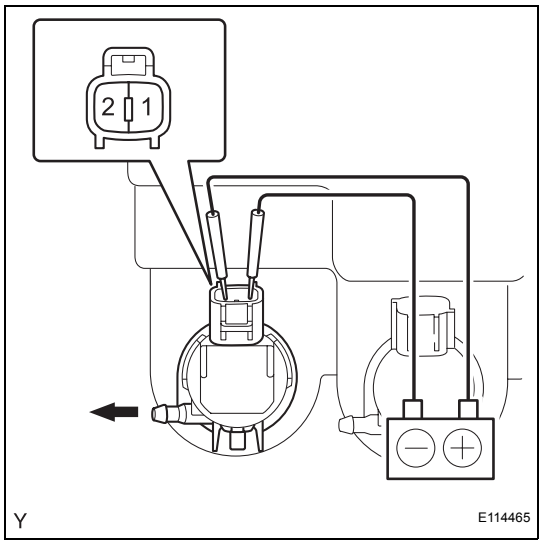
The operation should be performed with the windshield washer motor and pump installed on the washer jar.

(2) Connect the positive (+) battery lead to terminal 1 of the windshield washer motor and pump, and the negative (-) battery lead to terminal 2. Check that washer fluid flows from the washer jar.

Standard:

Washer fluid flows from the washer jar.

If the result is not as specified, replace the windshield washer motor and pump.



2. INSPECT REAR WASHER MOTOR AND PUMP ASSEMBLY (for Rear Side)

(a) Check the operation of the windshield washer motor and pump rear side.

(1) Fill the washer jar with washer fluid.

HINT:

The operation should be performed with the windshield washer motor and pump installed onto the washer jar.

(2) Connect the positive (+) battery lead to terminal 1 of the windshield washer motor and pump, and the negative (-) battery lead to terminal 2. Check that washer fluid flows from the washer jar.

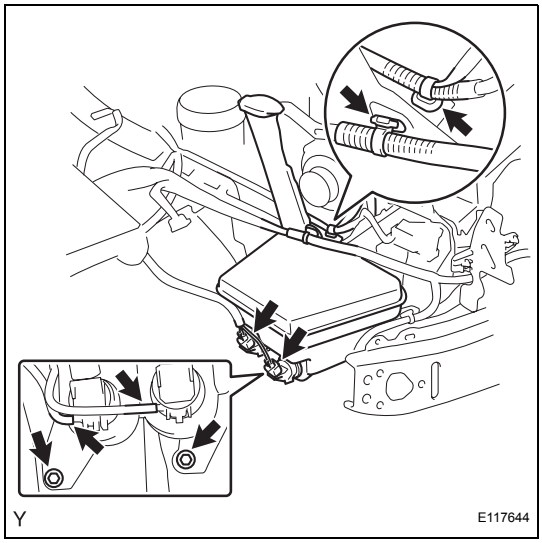
Standard:

Washer fluid flows from the washer jar.

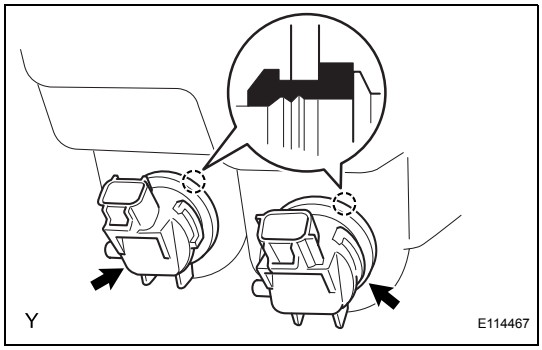
If the result is not as specified, replace the rear washer motor and pump.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT BUMPER COVER (See page ET-24)**
3. **REMOVE RH HEADLIGHT ASSEMBLY (See page LI-97)**
4. **DRAIN WASHER FLUID**
   (a) Disconnect the 2 washer hoses from the windshield washer motor and pump, and drain the washer fluid.
5. **REMOVE WINDSHIELD WASHER JAR ASSEMBLY**
   (a) Disconnect the 2 harness clamps.
   (b) Disconnect the 2 connectors.
   (c) Remove the 2 bolts.
   (d) Remove the windshield washer jar.

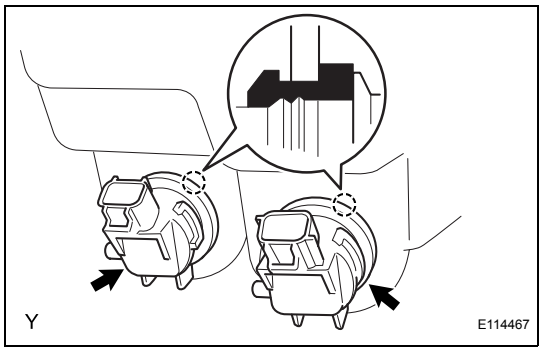


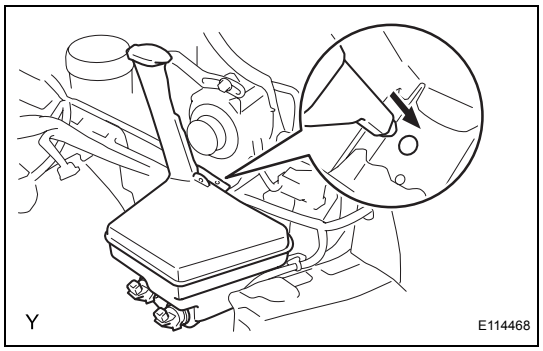
6. **REMOVE WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY**
   (a) Pull the washer motor and pump out of the packing of the washer jar.



INSTALLATION

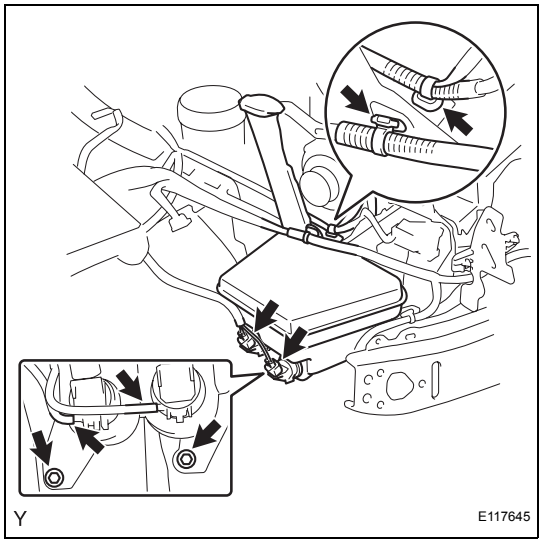
1. **INSTALL WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY**
   (a) Install the windshield washer motor and pump onto the packing of the washer jar.





2. INSTALL WINDSHIELD WASHER JAR ASSEMBLY

(a) Install the windshield washer jar.



(b) Install the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Connect the 2 connectors.

(d) Connect the 2 harness clamps.

3. FILL UP WASHER JAR AND PUMP ASSEMBLY WITH WASHER FLUID

(a) Connect the washer hose to the washer motor and pump, and fill the washer jar with washer fluid.

4. INSTALL RH HEADLIGHT ASSEMBLY (See page LI-104)

5. INSTALL FRONT BUMPER COVER (See page ET-33)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WW

WASHER NOZZLE (for Sedan)

ON-VEHICLE INSPECTION

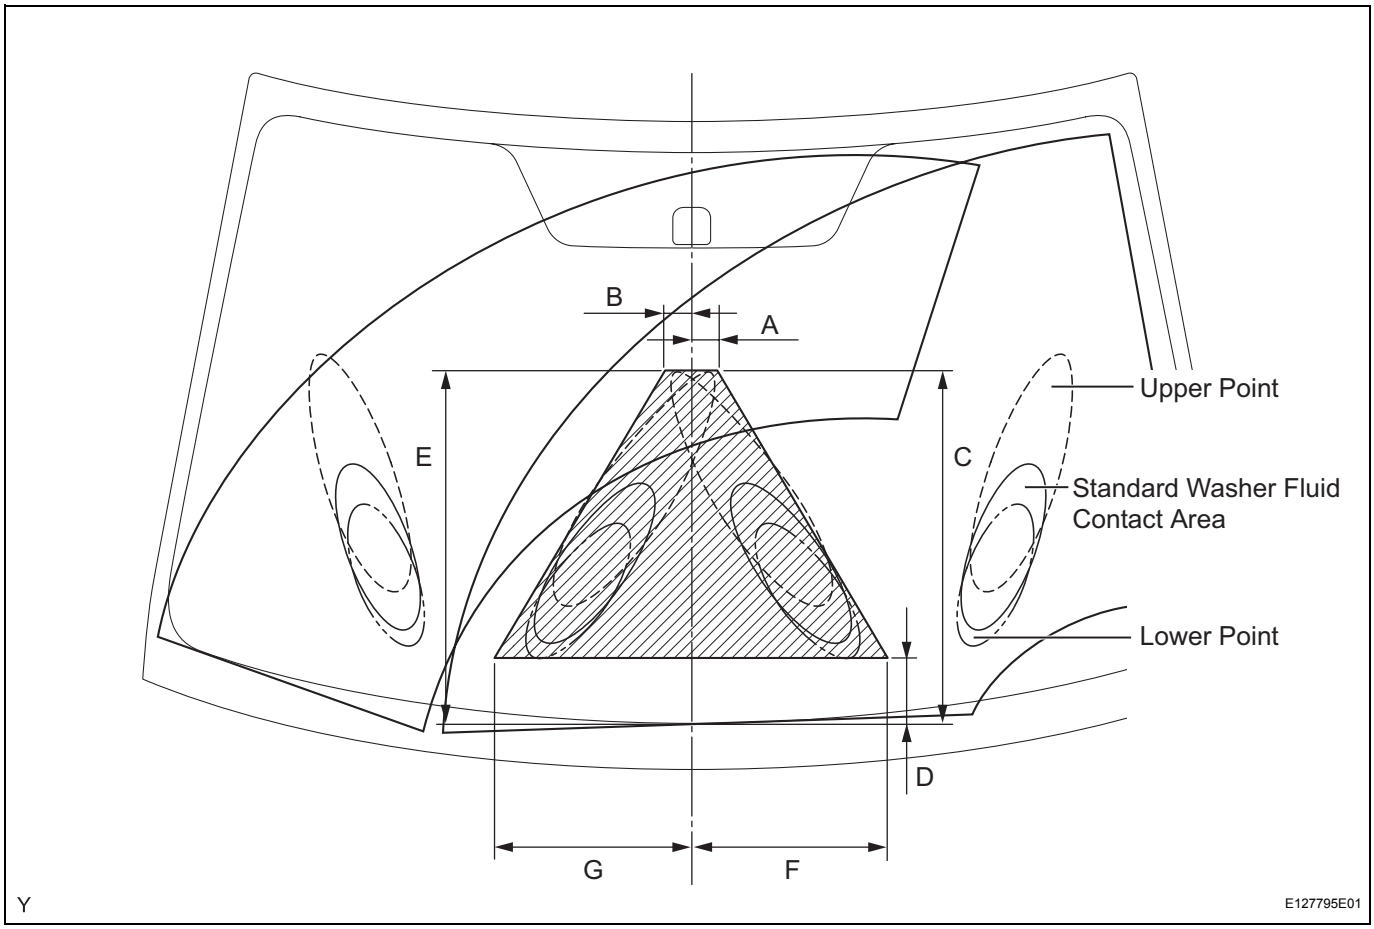
1. INSPECT WASHER NOZZLE

(a) Start the engine.

(b) Check where the washer fluid hits the windshield.

Standard:

Washer fluid hits the windshield in the areas shown in the illustration.

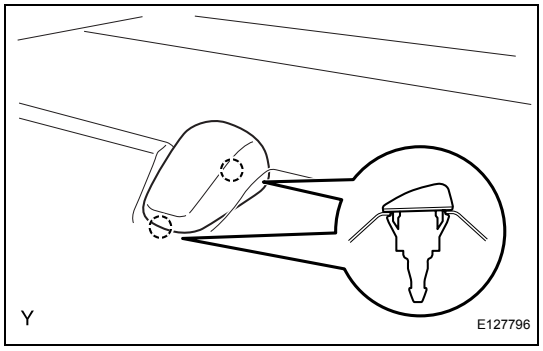


Specification

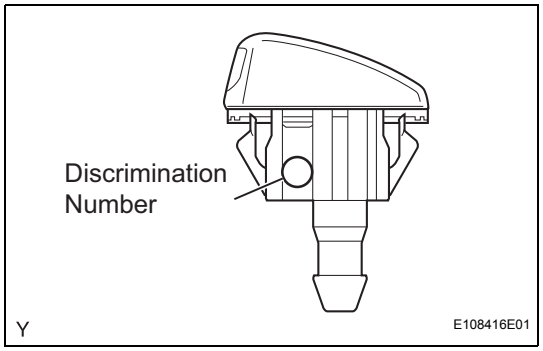
Area	Measurement
A	29.2 mm (1.15 in.)
B	26.6 mm (1.05 in.)
C	427.8 mm (16.84 in.)
D	79.9 mm (3.15 in.)
E	426.2 mm (16.78 in.)
F	234.8 mm (9.24 in.)
G	234.5 mm (9.23 in.)

ADJUSTMENT

1. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-9)**
2. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
4. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (See page WW-10)**
5. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (See page WW-10)**
6. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
7. **REMOVE WASHER NOZZLE**
   (a) Disconnect the washer hose.
   (b) Disengage the 2 claws and remove the front washer nozzle.
   NOTICE:
   Do not reuse the washer nozzle.



8. **ADJUST WASHER NOZZLE**
   (a) Select a washer nozzle from the table so as to make the washer fluid hit within the specified area.
   Available Washer Nozzle



Part Number	Discrimination Number	Washer Fluid Injection Angle
85381-52250	12	0°
85381-52280	13	+ 1°
85381-52290	11	- 1°
85381-52300	14	+ 2°
85381-52310	10	- 2°

9. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-12)**
10. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (See page WW-13)**
11. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (See page WW-13)**
12. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-13)**
13. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-14)**
14. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-15)**

WASHER NOZZLE (for Hatchback)

ON-VEHICLE INSPECTION

1. INSPECT WASHER NOZZLE

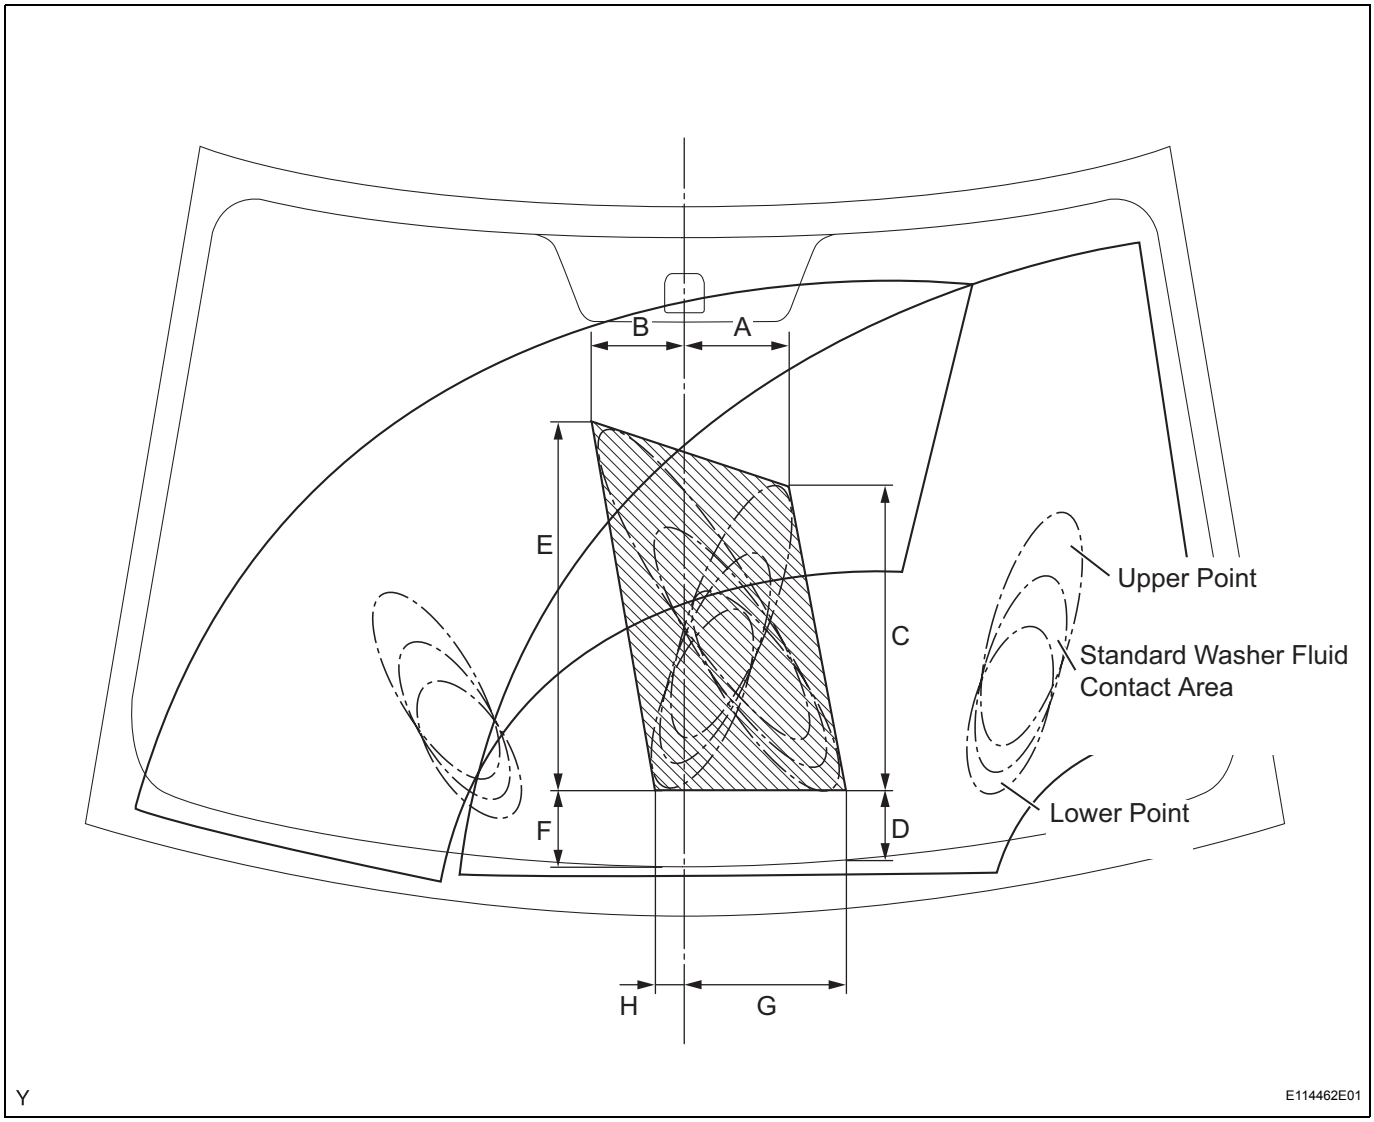
(a) Start the engine.

(b) Check where the washer fluid hits the windshield.

Standard:

Washer fluid hits the windshield in the areas shown in the illustration.

(1) Front:

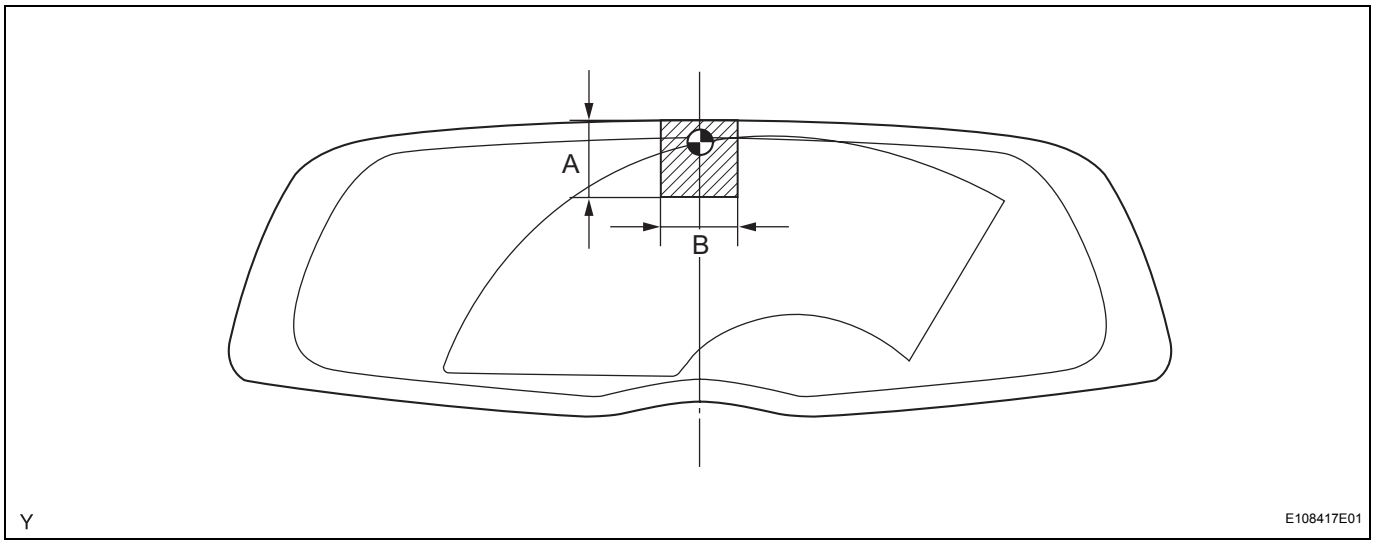


Specification

Area	Measurement
A	115 mm (4.53 in.)
B	100 mm (3.94 in.)
C	375 mm (14.76 in.)
D	85 mm (3.35 in.)
E	454 mm (17.87 in.)
F	88 mm (3.46 in.)
G	178 mm (7.01 in.)

Area	Measurement
H	31 mm (1.22 in.)

(2) Rear:



Specification

Area	Measurement
A	100 mm (3.94 in.)

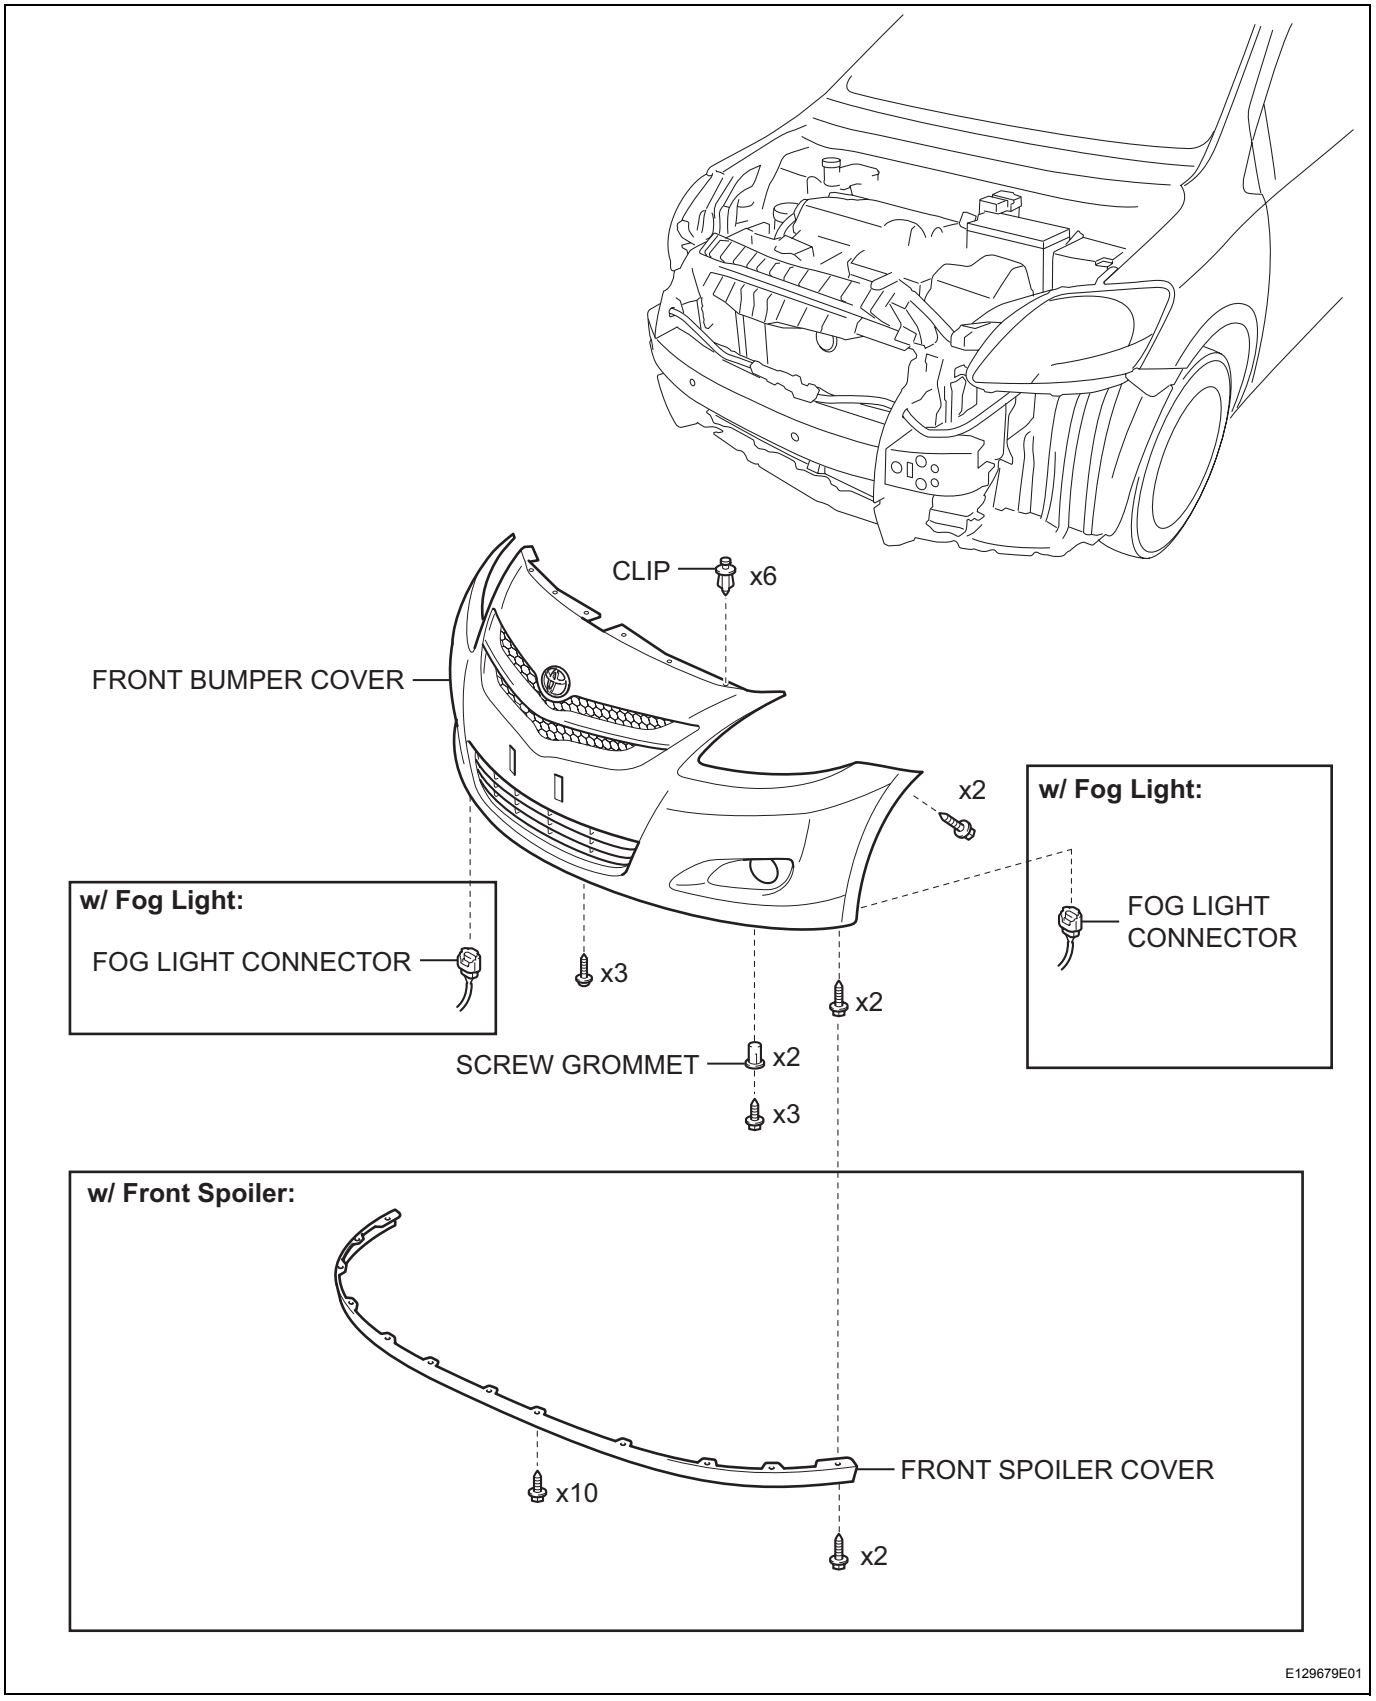
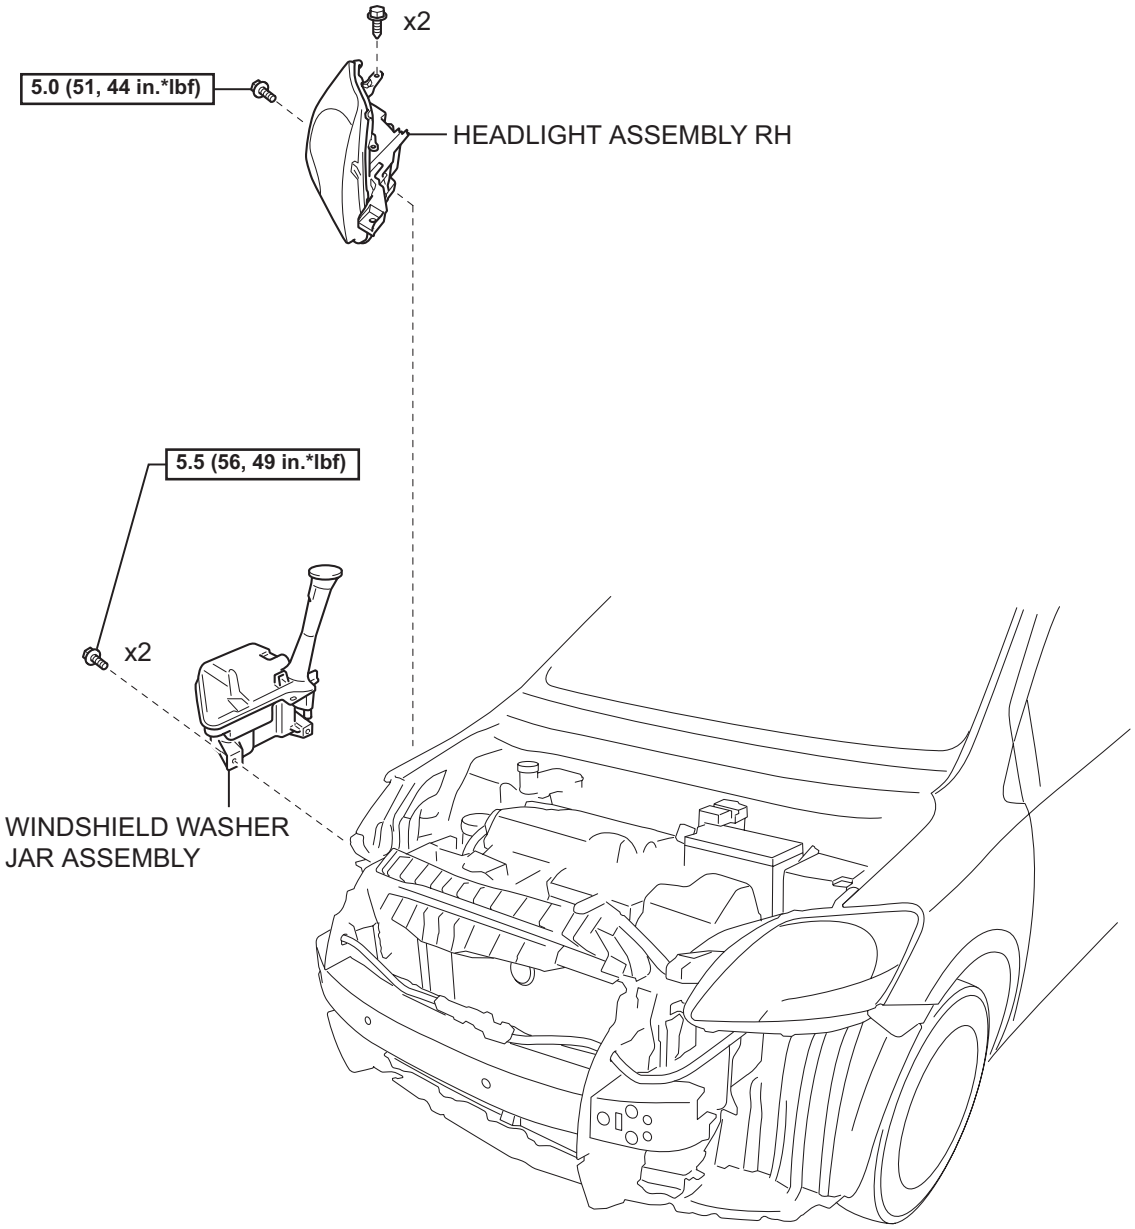
85381-52280	13	+ 1°
85381-52290	11	- 1°
85381-52300	14	+ 2°
85381-52310	10	- 2°

9. **INSTALL COWL TOP VENTILATOR LOUVER LH (See page WW-21)**
10. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-21)**
11. **INSTALL HOOD TO COWL TOP SEAL (See page WW-22)**
12. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-22)**
13. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-23)**
14. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**

WASHER LEVEL WARNING SWITCH (for Sedan)

COMPONENTS

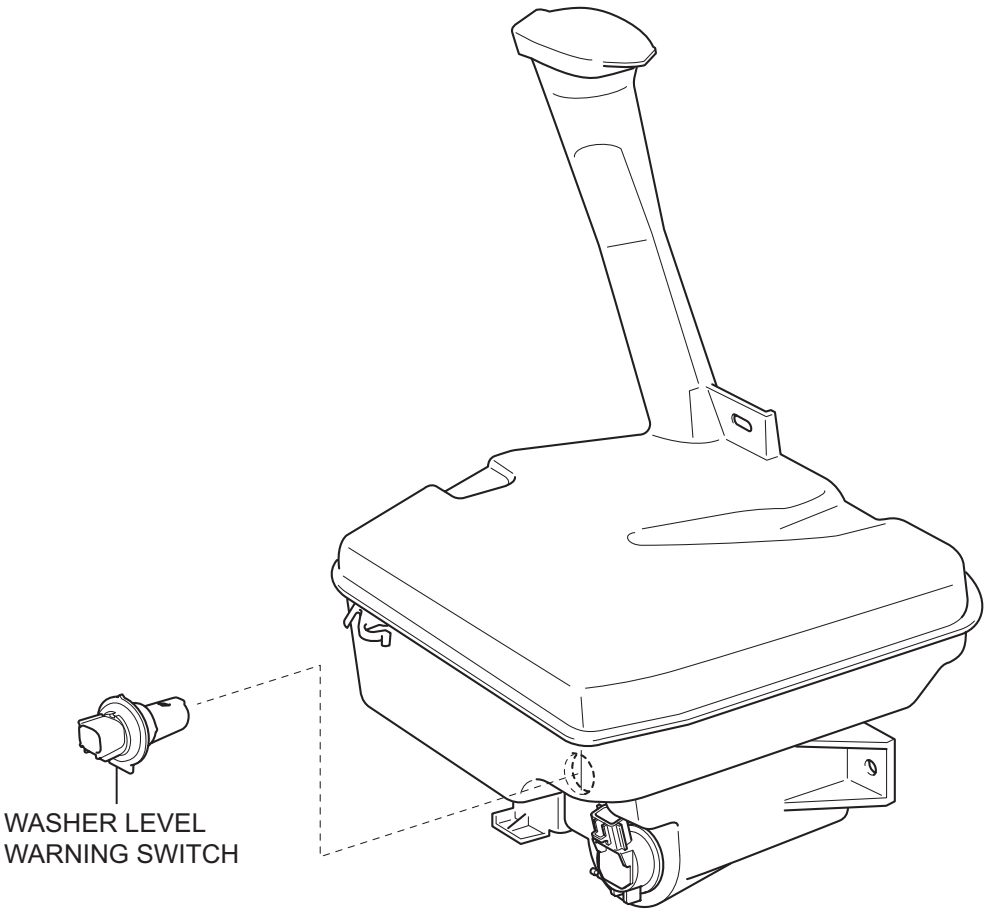




N*m (kgf*cm, ft*lbf) : Specified torque

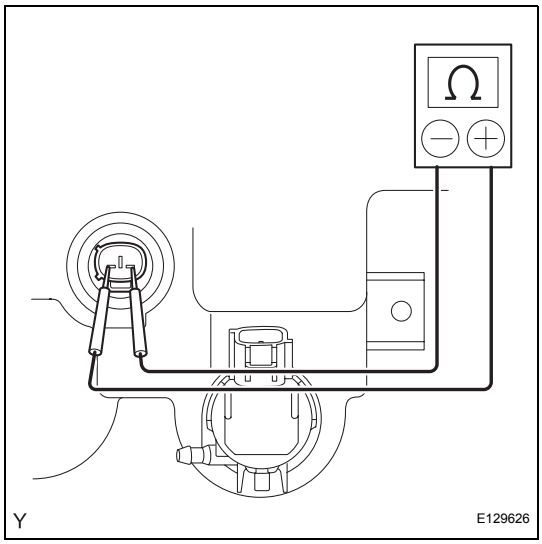
Y

E129620E01



Y

E129684E01



ON-VEHICLE INSPECTION

1. INSPECT WASHER LEVEL WARNING SWITCH

(a) Check the operation of the washer level warning switch.

(1) Fill the washer jar with washer fluid.

HINT:

The operation should be performed with the washer level warning switch installed on the washer jar.

(2) Connect the positive (+) battery lead to terminal 1 of the washer level warning switch, and the negative (-) battery lead to terminal 2.

(3) Check the resistance.

HINT:

Pull out the washer hose connected to the washer motor. Perform the inspection while draining the washer fluid off.

Standard Resistance

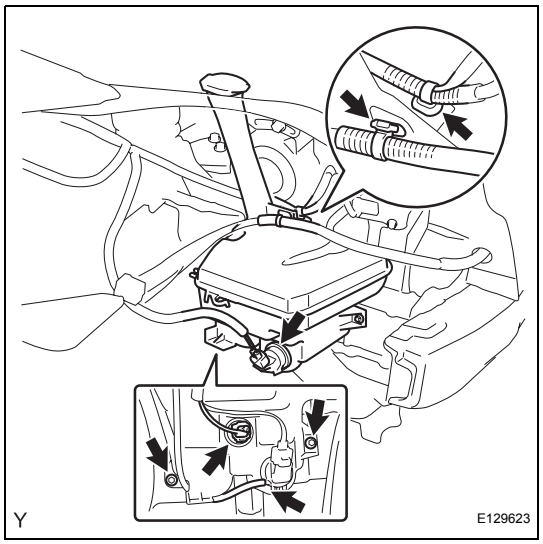
Amount of remaining washer fluid	Specified Condition
600 to 800 ml or more	10 kΩ or higher
600 to 800 ml or less	Below 1Ω

If the result is not as specified, replace the washer jar .

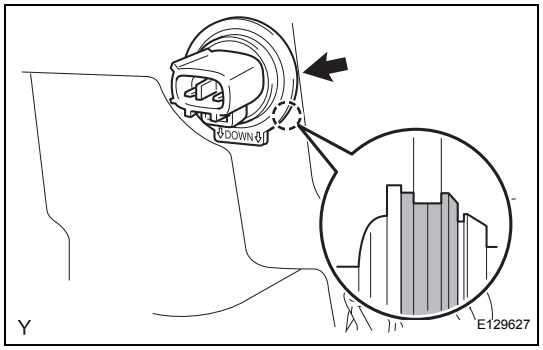
WW

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-6)**
3. **REMOVE FRONT BUMPER COVER (See page ET-6)**
4. **REMOVE HEADLIGHT ASSEMBLY RH (See page LI-86)**
5. **DRAIN WASHER FLUID**
   (a) Disconnect the 2 washer hoses from the windshield washer motor and pump, and drain the washer fluid.
6. **REMOVE WINDSHIELD WASHER JAR ASSEMBLY**
   (a) Disconnect the 2 harness clamps.
   (b) Disconnect the 2 connectors.
   (c) Remove the 2 bolts.
   (d) Remove the windshield washer jar.

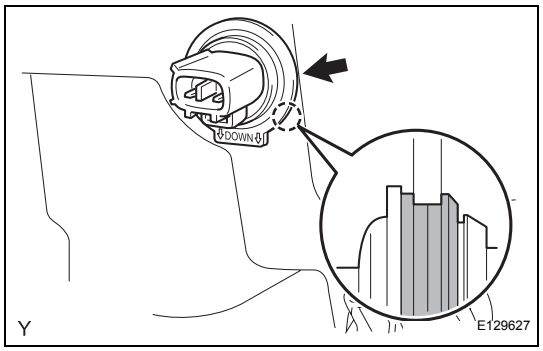


7. **REMOVE WASHER LEVEL WARNING SWITCH**
   (a) Pull the washer motor and pump out of the packing of the washer jar.

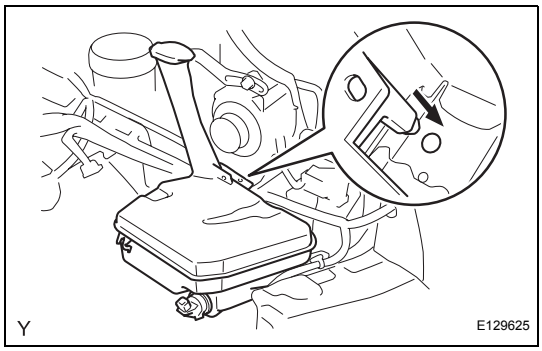


INSTALLATION

1. **INSTALL WASHER LEVEL WARNING SWITCH**
   (a) Install the washer level warning switch onto the packing of the washer jar.

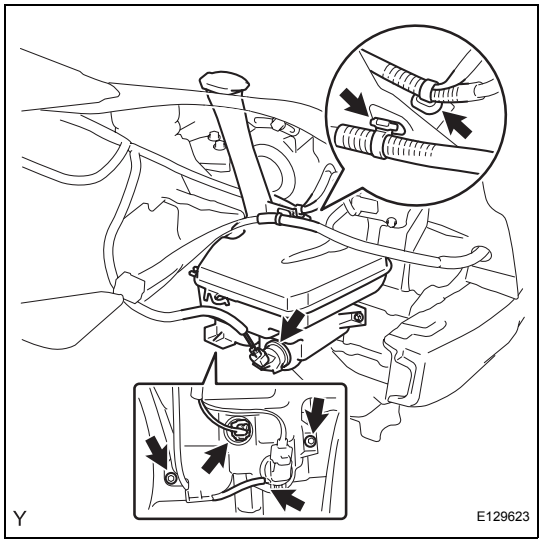


WW



2. INSTALL WINDSHIELD WASHER JAR ASSEMBLY

(a) Install the windshield washer jar.



(b) Install the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Connect the 2 connectors.

(d) Connect the 2 harness clamps.

3. FILL UP WASHER JAR AND PUMP ASSEMBLY WITH WASHER FLUID

(a) Connect the washer hose to the washer motor and pump, and fill the washer jar with washer fluid.

4. INSTALL HEADLIGHT ASSEMBLY RH (See page LI-92)

5. INSTALL FRONT BUMPER COVER (See page ET-16)

6. INSTALL FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-19)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

The power door lock system locks / unlocks all the doors simultaneously.

The door control switch sends lock / unlock request signals to the main body ECU. Then, the main body ECU sends these requests to lock motors in each door to lock / unlock all the doors simultaneously. Operating the driver or front passenger side door lock using a key sends lock / unlock request signals to the main body ECU.

2. FUNCTION OF MAIN COMPONENT

Component	Function
Master switch	Door control switch (for front driver door side) on master switch locks / unlocks all doors
Door courtesy switch	• One for each door • Detects door status (open or closed) and outputs data to integration relay • Turns on when door is open and off when door is closed
Driver door lock	• Built-in motor locks / unlocks door • Built-in door control switch (key-linked) detects door lock status (locked or unlocked) and outputs data to integration relay
Passenger door, rear LH door, rear RH door and back door locks	Built-in motor locks / unlocks doors

3. DESCRIPTION

This system is controlled by the main body ECU. The main body ECU outputs signals to each door lock motor. The door lock control system in the vehicle has the following functions:

Function	Outline
Manual lock and unlock function	Locks / unlocks all doors by door control switch lock operation (manual operation)
Key-linked lock and unlock function	• Linked with driver door key cylinder • Locks / unlocks all doors when lock / unlock operation is possible • Driver side door key-linked lock / unlock function does not operate when seat belt is fastened
Key-linked 2-step unlock	This function is provided to unlock driver's door by turning key cylinder first step and to unlock all doors by turning it second step. However, second step must be performed within three seconds.
All doors lock with transmitter*	Pressing transmitter's LOCK switch locks all doors
All doors unlock with transmitter*	Pressing transmitter's UNLOCK switch unlocks all doors

HINT:

*: Only for models with wireless door lock system

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Use these procedures to troubleshoot the power door lock control system.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following item can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Power door lock control system:

Display (Item)	Default	Function	Setting
UNLK/KEY TWICE	ON	Unlocks only driver side door when driver side door key cylinder turned to unlock once, and unlocks all doors when turned to unlock twice. For OFF setting, turning it once unlocks all doors	ON/OFF

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Power door lock control system

Symptom	Suspected area	See page
All Doors LOCK / UNLOCK Functions do not Operate Via Master Switch, Driver	Door control switch (for front driver door side)	DL-19
	Front door lock assembly LH	DL-19
	Wire harness	DL-19
	Main body ECU	DL-19
Only driver door lock/unlock functions do not operate	Front door lock assembly LH	DL-30
	Wire harness	DL-30

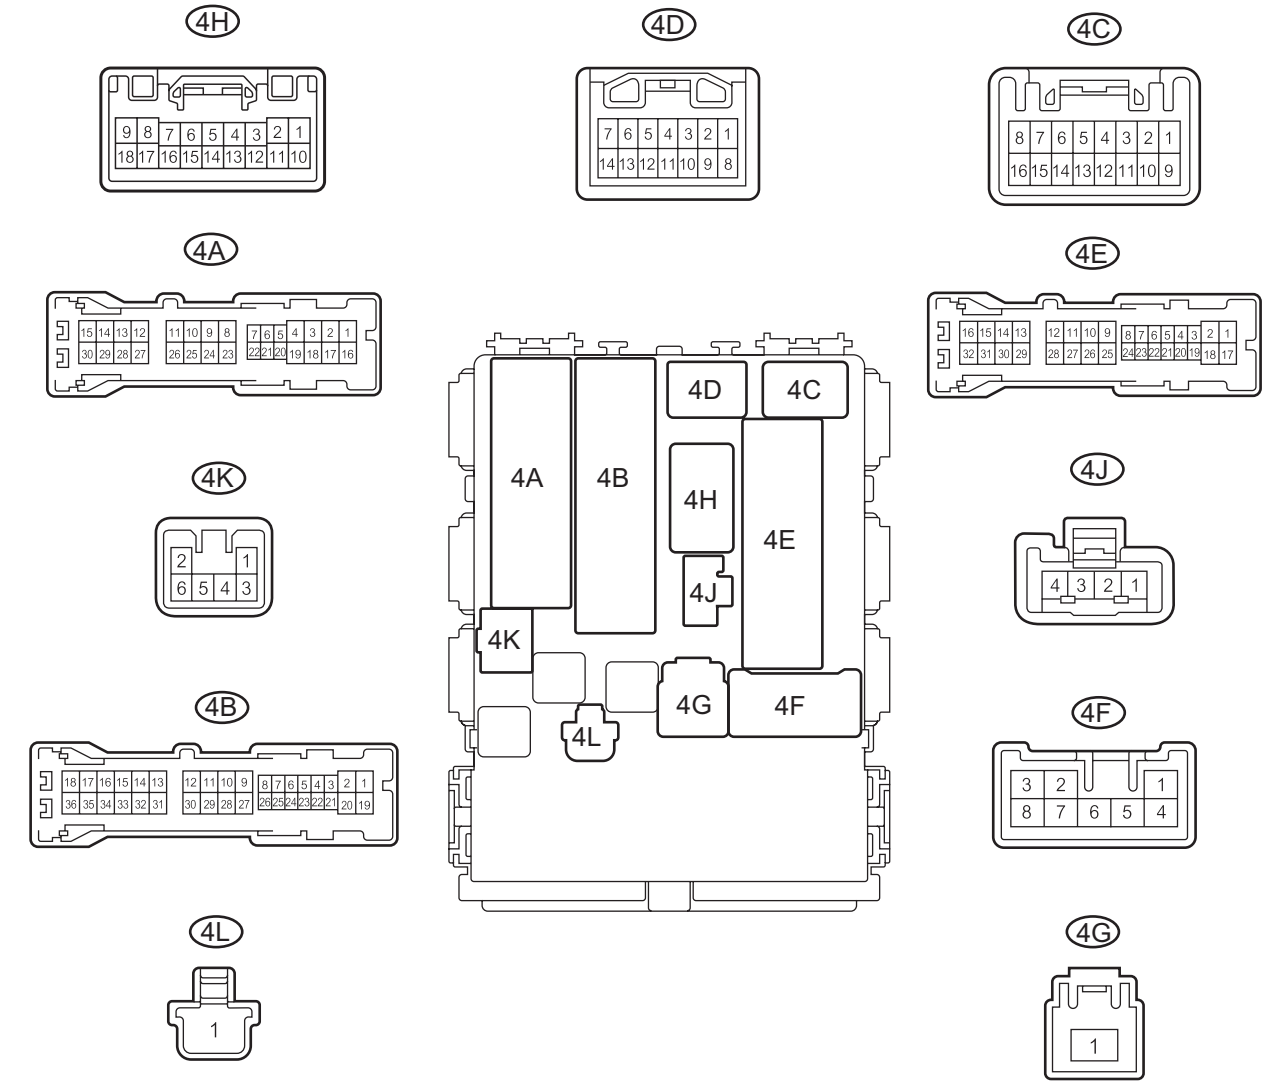
	Main body ECU	DL-40

TERMINALS OF ECU

1. CHECK MAIN BODY ECU

Main Body ECU (Rear View):

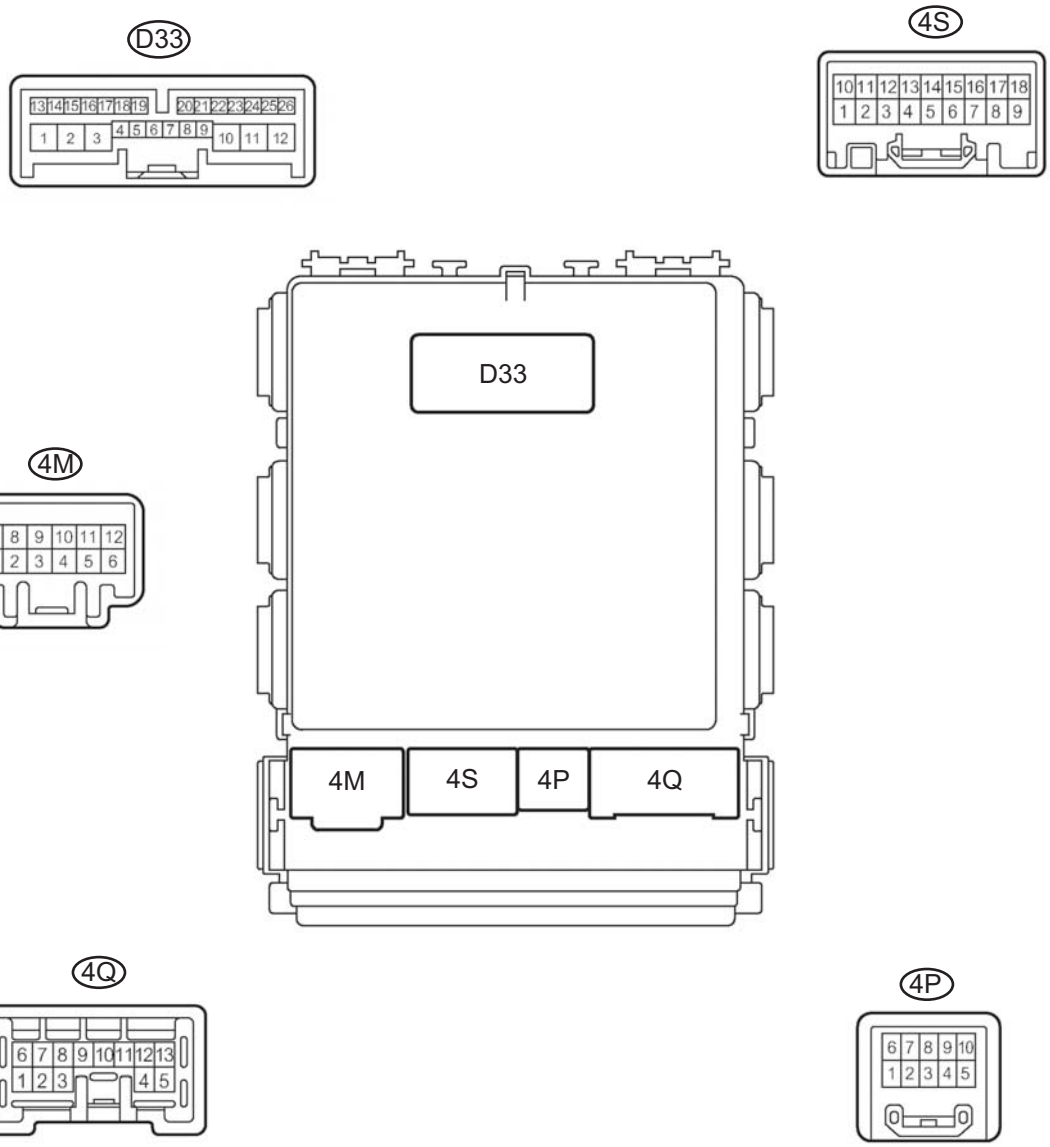


H

E114510E06

DL

Main Body ECU (Front View):



(a) Disconnect the 4B and 4E main body ECU (vehicle rear side) connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BECU (4B-30) - GND1 (4E-17)	L - W-B	Battery (power supply)	Always	11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the main body ECU (vehicle rear side) connectors.

(d) Measure the voltage of the wire harness side connectors.

Standard voltage:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock warning switch input	Key inserted	0 V
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock warning switch input	No key in ignition key cylinder	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver side door courtesy switch input	Driver side door closed	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver side door courtesy switch input	Driver side door open	0 V
PCTY (4A-24) - Body ground	L - Body ground	Passenger side door courtesy switch input	Passenger side door closed	11 to 14 V
PCTY (4A-24) - Body ground	L - Body ground	Passenger side door courtesy switch input	Passenger side door open	0 V
RRCY (4A-20) - Body ground*3	L - Body ground	Rear RH door courtesy switch input	Rear RH door closed	11 to 14 V
RRCY (4A-20) - Body ground*3	L - Body ground	Rear RH door courtesy switch input	Rear RH door open	0 V
RRCY (4A-5) - Body ground*3	G - Body ground	Rear LH door courtesy switch input	Rear LH door closed	11 to 14 V
RRCY (4A-5) - Body ground*3	G - Body ground	Rear LH door courtesy switch input	Rear LH door open	0 V
RRCY (4A-5) - Body ground*4	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH and RH door closed	11 to 14 V
RRCY (4A-5) - Body ground*4	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH and RH door open	0 V
BCTY (4A-7) - Body ground*1	SB- Body ground	Back door courtesy switch input	Back side door closed	11 to 14 V
BCTY (4A-7) - Body ground*1	SB- Body ground	Back door courtesy switch input	Back side door open	0 V
LGCY (4A-7) - Body ground*2	SB- Body ground	Luggage room courtesy switch input	Luggage room closed	11 to 14 V
LGCY (4A-7) - Body ground*2	SB- Body ground	Luggage room courtesy switch input	Luggage room open	0 V
L1 (4H-4) - Body ground	LG - Body ground	Door control switch lock input	Door control switch OFF	11 to 14 V
L1 (4H-4) - Body ground	LG - Body ground	Door control switch lock input	Door control switch ON (LOCK)	0 V
UL1 (4H-5) - Body ground	O - Body ground	Door control switch unlock input	Door control switch OFF	11 to 14 V
UL1 (4H-5) - Body ground	O - Body ground	Door control switch unlock input	Door control switch ON (UNLOCK)	0 V
ACTD (D33-2) - Body ground	SB - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder OFF	0 V
ACTD (D33-2) - Body ground	SB - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder ON (UNLOCK)	11 to 14 V → 0 V
ACT+ (4H-8) - Body ground	O - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder OFF	0 V
ACT+ (4H-8) - Body ground	O - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder ON (LOCK)	11 to 14 V → 0 V
ACT+ (4A-3) - Body ground	GR - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder OFF	0 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT+ (4A-3) - Body ground	GR - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder ON (LOCK)	11 to 14 V → 0 V
ACT+ (4H-17) - Body ground	W - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder OFF	0 V
ACT+ (4H-17) - Body ground	W - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder ON (LOCK)	11 to 14 V → 0 V
ACT- (4H-18) - Body ground	P - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder OFF	0 V
ACT- (4H-18) - Body ground	P - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder ON (UNLOCK)	11 to 14 V → 0 V
ACT- (4A-4) - Body ground	P - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder OFF	0 V
ACT- (4A-4) - Body ground	P - Body ground	Door lock motor UNLOCK drive output	Door control switch or driver side door key cylinder ON (UNLOCK)	11 to 14 V → 0 V
LSWD (D33-21) - Body ground	L - Body ground	Driver side door lock position switch input	Driver side door UNLOCK	0 V

L2 (4H-16) - Body ground	O - Body ground	Door lock motor LOCK drive output	Door control switch or driver side door key cylinder ON (LOCK)	11 to 14 V

*1: Hatchback
*2: Sedan
*3: Hatchback, Sedan except *5
*4: Sedan *5
*5: Cold area specification, w/ Engine immobilizer system, w/ ABS, w/ Rear window defogger, w/ Power door lock system, w/ Daytime running light, w/ Remote control mirror, w/ Air conditioning
If the result is not as specified, there may be a malfunction in the wire harness.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DATA LIST in accordance with the display on the tester.

Main body ECU:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy switch signal/ ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
D LOCK POS SW	Driver side door lock position switch signal/ ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
D/L SW-LOCK	Door manual lock switch signal/ ON or OFF	ON: Door control switch (for front driver door side) is turned to lock position OFF: Door control switch (for front driver door side) is turned to unlock position	-
D/L SW-UNLOCK	Door manual unlock switch signal/ ON or OFF	ON: Door control switch (for front driver door side) is turned to unlock position OFF: Door control switch (for front driver door side) is turned to lock position	-
DOR KEY SW-LOCK	Door key linked lock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-
DOR KEY SW-UNLOCK	Door key linked unlock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
D DOR KEY SW-UL	Driver side door key linked unlock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
P DOR CTY SW	Passenger side door courtesy switch signal/ ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
P LOCK POS SW	Passenger side door lock position switch signal/ ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RR DOR CTY SW	Rear door RH courtesy switch signal/ ON or OFF	ON: Rear door RH is open OFF: Rear door RH is closed	-
RL DOR CTY SW	Rear door LH courtesy switch signal/ ON or OFF	ON: Rear door LHis open OFF: Rear door LH is closed	-
BACK DOR CTY SW	Back door courtesy switch signal/ ON or OFF	ON: Back door is open OFF: Back door is closed	-
BACK LOCK POS SW	Back door lock position switch signal/ ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal/ ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST in accordance with the display on the tester.

Main body ECU:

Item	Test Details	Diagnostic Note
DOOR LOCK	Operate door lock motor LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor unlock side ON/OFF	-

ON-VEHICLE INSPECTION

1. CHECK DOOR LOCK FAIL-SAFE

(a) When a malfunction in the door control switch or driver side door key cylinder is detected, the door lock/unlock operation is disabled.

2. CHECK ELECTRICAL DOOR LOCK OPERATION

(a) Check that all doors are locked and unlocked in accordance with the door control switch operation.

(b) Check that only the driver side door unlocks when the driver side door lock key cylinder is turned to UNLOCK and all doors unlock when turned to UNLOCK once again within 3 seconds using the key (2-step unlocking function).
HINT:
Doors cannot be locked or unlocked using the key when the ignition switch is on and the driver seat belt is fastened.

(c) Check the key lock-in prevention function.
NOTICE:
Perform this operation with the driver door window open to prevent the key from being locked inside the vehicle.
(1) Insert the ignition key into the ignition key cylinder.
(2) Check that all doors are immediately unlocked when the driver side door lock knob is turned to the lock position with the driver door open.
(3) Check that all doors are immediately unlocked when the door control switch is turned to the lock position with the driver door open.
(4) Check that all doors are unlocked when the driver door is closed after the driver door lock knob is held in the lock position for 2 seconds with the driver door open.

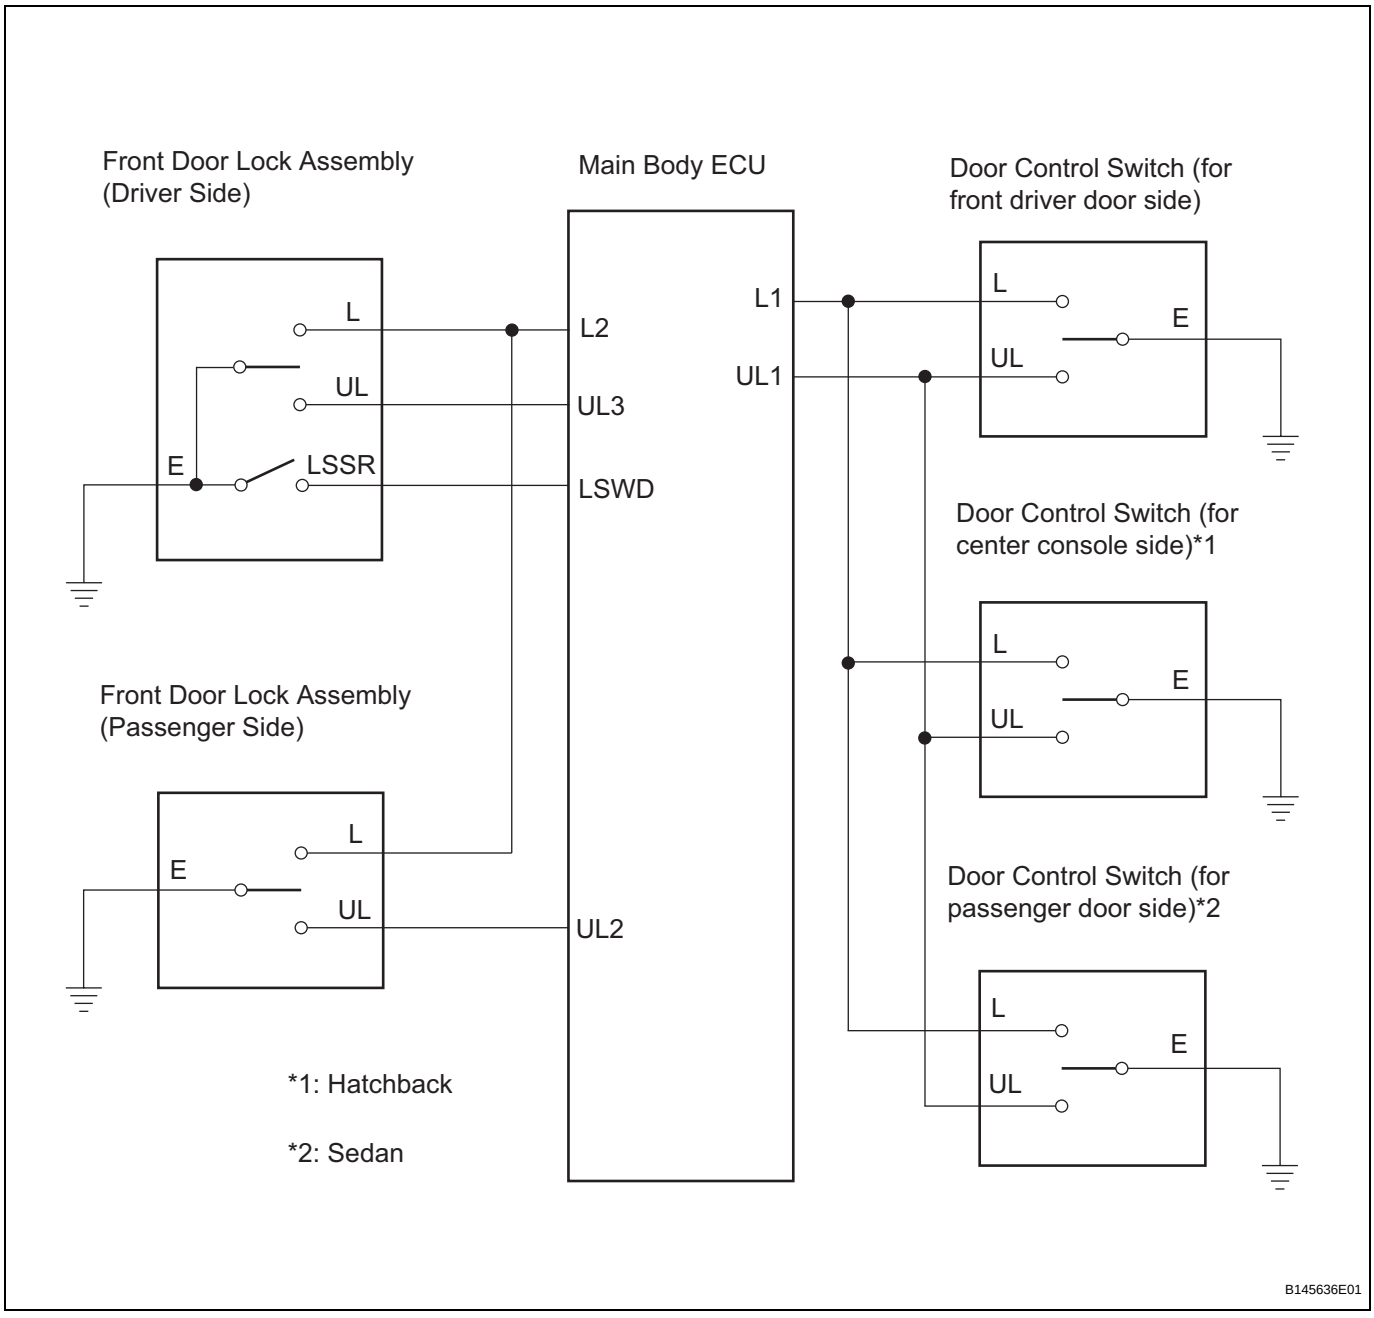
(d) Check the key-linked lock and unlock function.
(1) Check that doors cannot be locked or unlocked using the key from outside the vehicle when the ignition switch is on and the driver seat belt is fastened.

All Doors cannot be Locked / Unlocked Simultaneously

DESCRIPTION

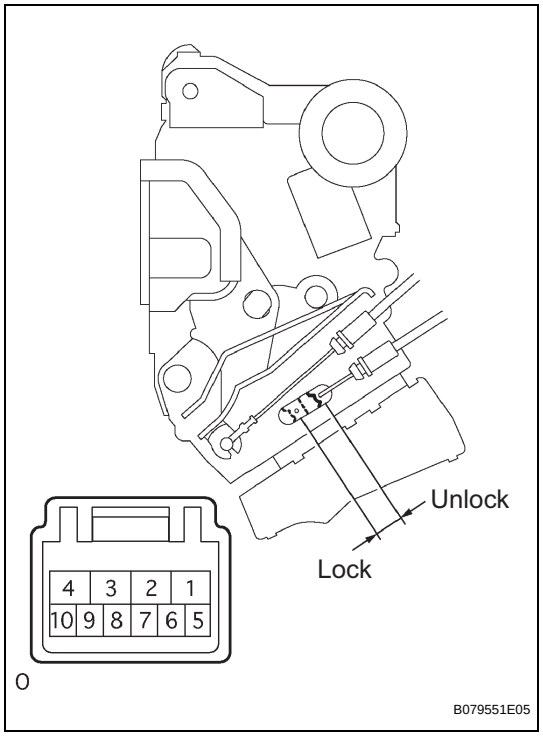
The main body ECU receives switch signals from the door control switch and driver side door key cylinder, and activates the door lock motor on each door accordingly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT FRONT DOOR LOCK ASSEMBLY LH



(a) Apply the battery voltage to the door lock motor and measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
8 (LSSR) - 7 (E)	Battery positive (+) → Terminal 1 Battery negative(-) → Terminal 4	Below 1 Ω
8 (LSSR) - 7 (E)	Battery positive (+) → Terminal 4 Battery negative(-) → Terminal 1	10 kΩ or higher

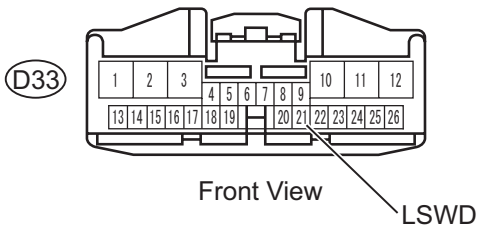
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY LH**

OK

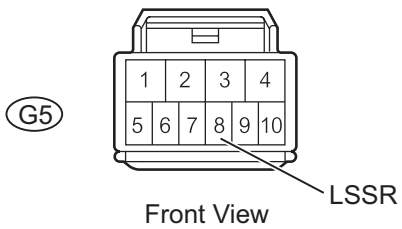
2 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - FRONT DOOR LOCK ASSEMBLY LH)

Wire Harness Side:

Main Body ECU Connector



Front Door Lock Assembly LH Connector



B145640E01

(a) Disconnect the D33main body ECU connector.
(b) Disconnect the G5 door lock connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
D33-21 (LSWD) - G5-8 (LSSR)	Below 1 Ω
D33-21 (LSWD) or G5-8 (LSSR) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the door lock connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

3 CHECK DOOR LOCK OPERATION

(a) Proceed to the next step according to the symptom listed in the table below.

Result

Symptom	Proceed to
Doors cannot be locked using door control switch (for front driver door side)	A
Doors cannot be locked using driver side door key cylinder	B
Hatchback only: Doors cannot be locked using door control switch (for center console side)	C
Doors cannot be locked using front passenger side door key cylinder	D
Sedan only: Doors cannot be locked using door control switch (for passenger side)	E

B → Go to step 6

C → Go to step 8

D → Go to step 10

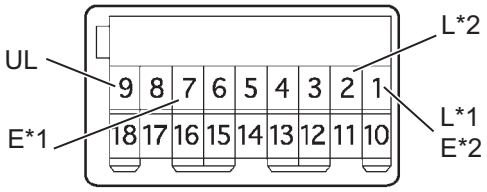
E → Go to step 12

A

4 INSPECT DOOR CONTROL SWITCH (for Front Driver Door Side)

Component Side:

Door Control Switch (for front driver door side)



*1: 3 door

*2: 5 door

B108644E01

(a) 3 Door, 5 Door, Sedan w/ Power window:

(1) Disconnect the G1 door control switch (for front driver door side) connector.

(2) Measure the resistance of the switch.

Standard resistance (3 Door)

Tester Connection	Switch Condition	Specified Condition
1 (L) - 7 (E)	Lock	Below 1 Ω
9 (UL) - 7 (E)	Unlock	Below 1 Ω
1 (L) - 7 (E)	OFF	10 kΩ or higher
9 (UL) - 7 (E)	OFF	10 kΩ or higher

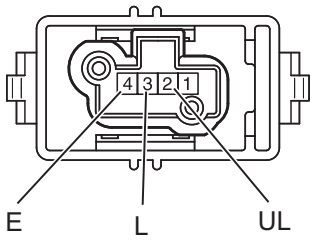
Standard resistance (5 Door, Sedan w/ Power window)

Tester Connection	Switch Condition	Specified Condition
2 (L) - 1 (E)	Lock	Below 1 Ω
9 (UL) - 1 (E)	Unlock	Below 1 Ω
2 (L) - 1 (E)	OFF	10 kΩ or higher
9 (UL) - 1 (E)	OFF	10 kΩ or higher

(3) Reconnect the door control switch (for front driver door side) connector.

Component Side:

Door Control Switch (for front driver door side)



B145638E01

(b) Sedan w/o Power window:
(1) Disconnect the G7 door control switch (for front driver door side) connector.
(2) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
3 (L) - 4 (E)	Lock	Below 1 Ω
2 (UL) - 4 (E)	Unlock	Below 1 Ω
3 (L) - 4 (E)	OFF	10 kΩ or higher
2 (UL) - 4 (E)	OFF	10 kΩ or higher

(3) Reconnect the door control switch (for front driver door side) connector.

NG → **REPLACE DOOR CONTROL SWITCH (for Front Driver Door Side)**

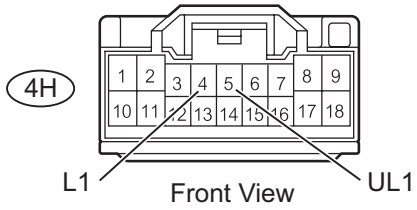
OK

DL

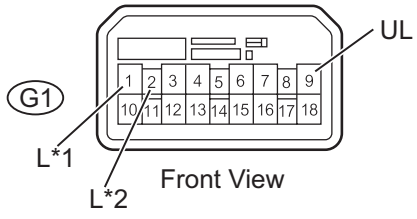
5 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL SWITCH (Front Driver Door Side))

Wire Harness Side:

Main Body ECU Connector



Door Control Switch (for front driver door side) Connector



*1: 3 door

*2: 5 door

B123822E01

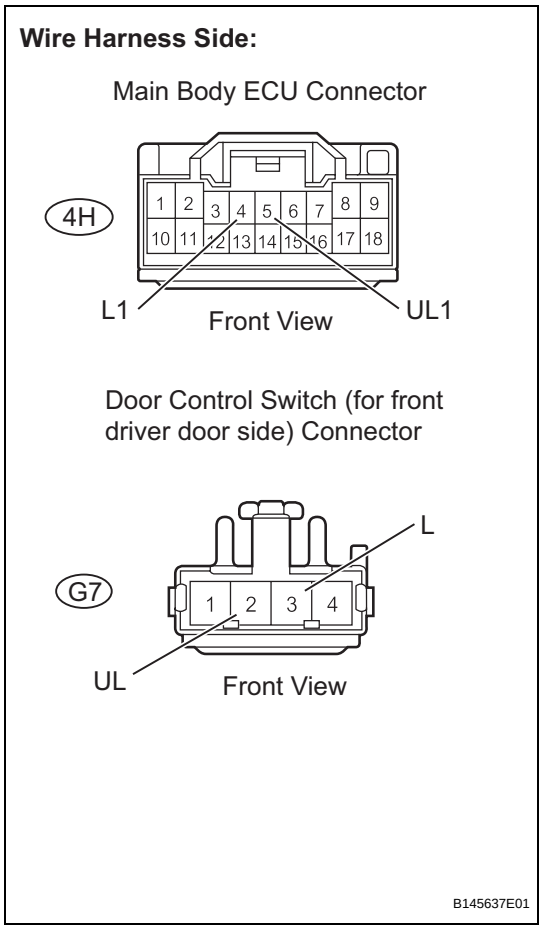
(a) 3 Door, 5 Door, Sedan w/ Power window:
(1) Disconnect the 4H main body ECU connector.
(2) Disconnect the G1 door control switch (for front driver door side) connector.
(3) Measure the resistance.
Standard resistance (3 Door)

Tester Connection	Specified Condition
4H-5 (UL1) - G1-9 (UL)	Below 1 Ω
4H-4 (L1) - G1-1 (L)	Below 1 Ω
4H-5 (UL1) or G1-9 (UL) - Body ground	10 kΩ or higher
4H-4 (L1) or G1-1 (L) - Body ground	10 kΩ or higher

Standard resistance (5 Door, Sedan w/ Power window)

Tester Connection	Specified Condition
4H-5(UL1) - G1-9(UL)	Below 1 Ω
4H-4(L1) - G1-2(L)	Below 1 Ω
4H-5(UL1) or G1-9(UL) - Body ground	10 kΩ or higher
4H-4(L1) or G1-2(L) - Body ground	10 kΩ or higher

(4) Reconnect the main body ECU connector.
(5) Reconnect the door control switch (for front driver door side) connector.



(b) Sedan w/o Power window:
(1) Disconnect the 4H main body ECU connector.
(2) Disconnect the G7 door control switch (for front driver door side) connector.
(3) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
4H-5 (UL1) - G7-2 (UL)	Below 1 Ω
4H-4 (L1) - G7-3 (L)	Below 1 Ω
4H-5 (UL1) or G7-2 (UL) - Body ground	10 kΩ or higher
4H-4 (L1) or G7-3 (L) - Body ground	10 kΩ or higher

(4) Reconnect the main body ECU connector.
(5) Reconnect the door control switch (for front driver door side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

REPLACE MAIN BODY ECU

6 READ VALUE OF INTELLIGENT TESTER (DOR KEY SW-LOCK)

(a) Check the DATA LIST to ensure the proper operation of the door lock and unlock switch.

Main Body ECU

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
Dor Key SW-Lock	Door key-linked lock switch signal/ ON or OFF	ON: Door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-

Main Body ECU

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
Dor Key SW-ULock	Door key-linked lock switch signal/ ON or OFF	ON: Door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-

OK:
ON (driver side door key cylinder is turned to lock/ unlock position) appears on tester screen.

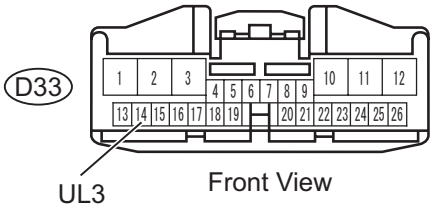
OK → **REPLACE MAIN BODY ECU**

NG

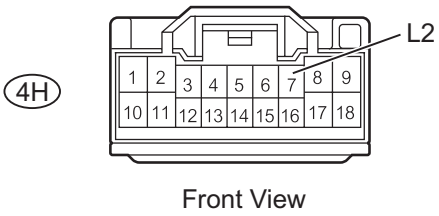
7 CHECK HARNESS AND CONNECTOR (DRIVER SIDE DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

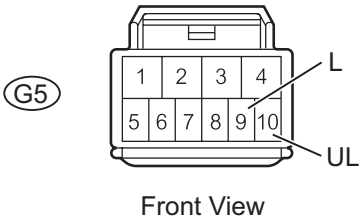
Main Body ECU Connector



Main Body ECU Connector



Front Door Lock Assembly LH Connector



B123825E01

(a) Disconnect the D33 and 4H main body ECU connectors.
(b) Disconnect the G5 door lock connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
D33-14 (UL3) - G5-10 (UL)	Below 1 Ω
4H-7 (L2) - G5-9 (L)	Below 1 Ω
D33-14 (UL3) or G5-10 (UL) - Body ground	10 kΩ or higher
4H-7 (L2) or G5-9 (L) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connectors.
(e) Reconnect the door lock connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

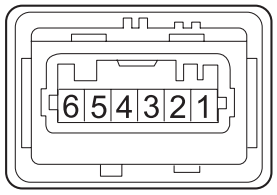
REPLACE MAIN BODY ECU

DL

8	**INSPECT DOOR CONTROL SWITCH (for Center Console Side)**

Component Side:

Door Control Switch (for center console side)



B145639E02

(a) Disconnect the D30 door control switch (for center console side) connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
5 - 6	Lock	Below 1 Ω
4 - 6	Unlock	Below 1 Ω
5 - 6	OFF	Below 1 Ω
4 - 6	OFF	Below 1 Ω

(c) Reconnect the door control switch (for center console side) connector.

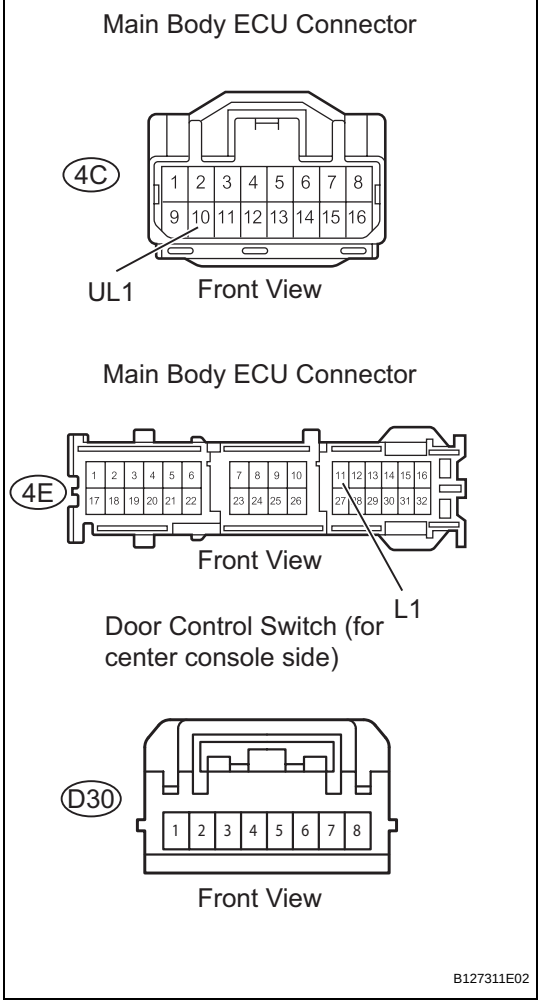
NG → **REPLACE DOOR CONTROL SWITCH (for Center Console Side)**

OK

DL

9	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL SWITCH (Center Console Side))**

Wire Harness Side:



(a) Disconnect the 4C and 4E main body ECU connectors.
(b) Disconnect the D30 door control switch (for center console side) connector.
(c) Measure the resistance of the fuses.
Standard resistance

Tester Connection	Specified Condition
4C-10(UL1) - D30-4	Below 1 Ω
4E-11(L1) - D30-5	Below 1 Ω
4C-10(UL1) or D30-4 - Body ground	10 kΩ or higher
4E-11(L1) or D30-5 - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the door control switch (for center console side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

10	**READ VALUE OF INTELLIGENT TESTER (DOR KEY SW-LOCK, DOR KEY SW-ULCK)**

(a) Check the DATA LIST to ensure the proper operation of the door lock and unlock switch.

DL

Main Body ECU

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
Dor Key SW-Lock	Door key-linked lock switch signal/ ON or OFF	ON: Door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-

Main Body ECU

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
Dor Key SW-ULck	Door key-linked unlock switch signal/ ON or OFF	ON: Door key cylinder is turned to unlock position OFF: Door key cylinder is turned to lock position	-

OK:

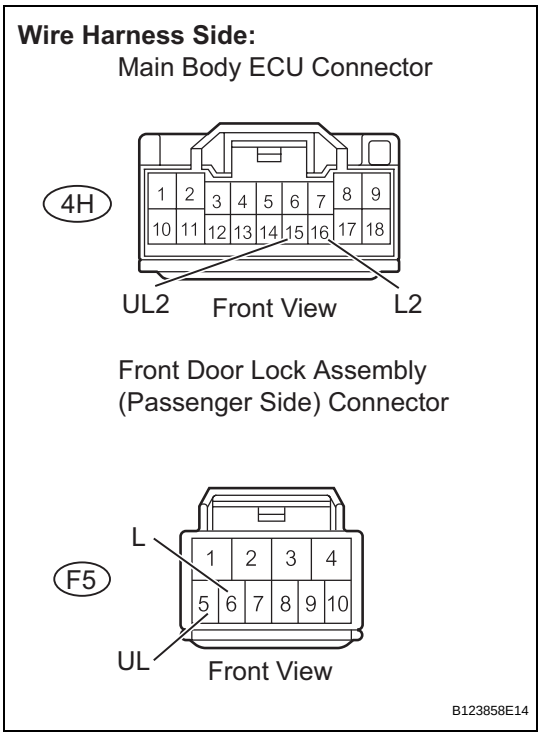
ON (driver side door key cylinder is turned to lock/ unlock position) appears on screen.

DL

OK → **REPLACE MAIN BODY ECU**

NG

11	CHECK HARNESS AND CONNECTOR (PASSENGER SIDE DOOR LOCK ASSEMBLY - MAIN BODY ECU)



(a) Disconnect the 4H main body ECU connector.
(b) Disconnect the F5 front door lock assembly connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
4H-15(UL2) - F5-5(UL)	Below 1 Ω
4H-16(L2) - F5-6(L)	Below 1 Ω
4H-15(UL2) or F5-5(UL) - Body ground	10 kΩ or higher
4H-16(L2) or F5-6(L) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the front door lock assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

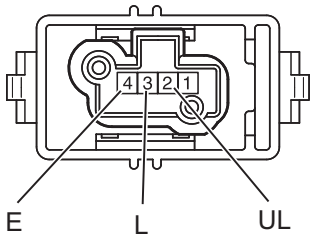
OK

REPLACE MAIN BODY ECU

12 INSPECT DOOR CONTROL SWITCH (for Front Passenger Door Side)

Component Side:

Door Control Switch (for front passenger door side)



B145638E02

(a) Disconnect the F7 door control switch (for front passenger door side) connector.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
3 (L) - 4 (E)	Lock	Below 1 Ω
2 (UL) - 4 (E)	Unlock	Below 1 Ω
3 (L) - 4 (E)	OFF	10 kΩ or higher
2 (UL) - 4 (E)	OFF	10 kΩ or higher

(c) Reconnect the door control switch (for front passenger door side) connector.

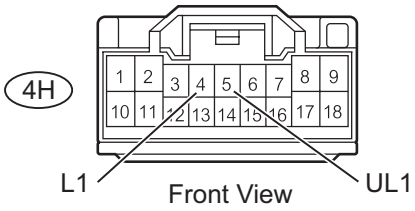
NG → **REPLACE DOOR CONTROL SWITCH (for Front Passenger Door Side)**

OK

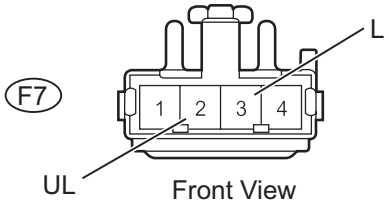
13 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL SWITCH (Passenger Door Side))

Wire Harness Side:

Main Body ECU Connector



Door Control Switch (for front passenger door side) Connector



B145637E02

(a) Disconnect the 4H main body ECU connector.
(b) Disconnect the F7 door control switch (for front passenger door side) connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
4H-5 (UL1) - F7-2 (UL)	Below 1 Ω
4H-4 (L1) - F7-3 (L)	Below 1 Ω
4H-5 (UL1) or F7-2 (UL) - Body ground	10 kΩ or higher
4H-4 (L1) or F7-3 (L) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the door control switch (for front passenger door side) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

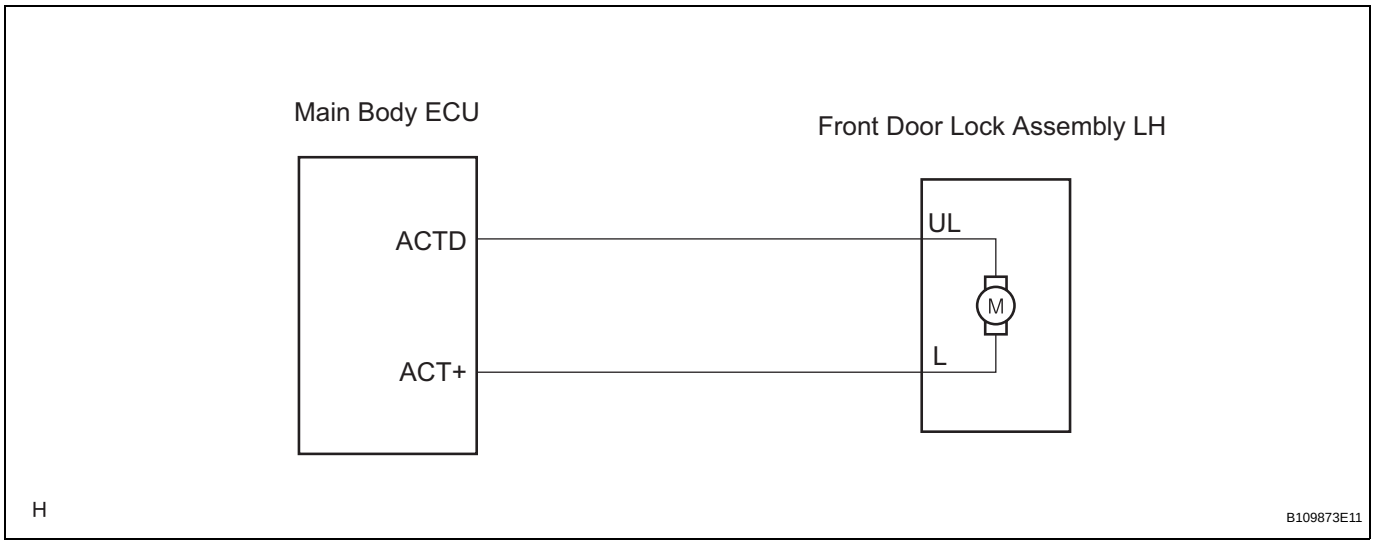
REPLACE MAIN BODY ECU

Only Driver Door LOCK / UNLOCK Functions do not Operate

DESCRIPTION

The main body ECU receives lock/unlock switch signals and activates the door lock motor accordingly.

WIRING DIAGRAM



INSPECTION PROCEDURE

Wire Harness Side:

Main Body ECU Connector

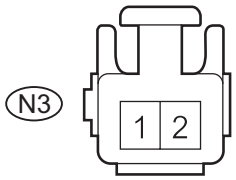
Back Door Look Assembly Connector



B123826E01

(a) Disconnect the 4A main body ECU connector.
(b) Disconnect the N3 door lock connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
4A-3 (ACT+) - N3-1	Below 1 Ω
4A-4 (ACT-) - N3-2	Below 1 Ω

(d) Reconnect the main body ECU connector.
(e) Reconnect the door lock connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

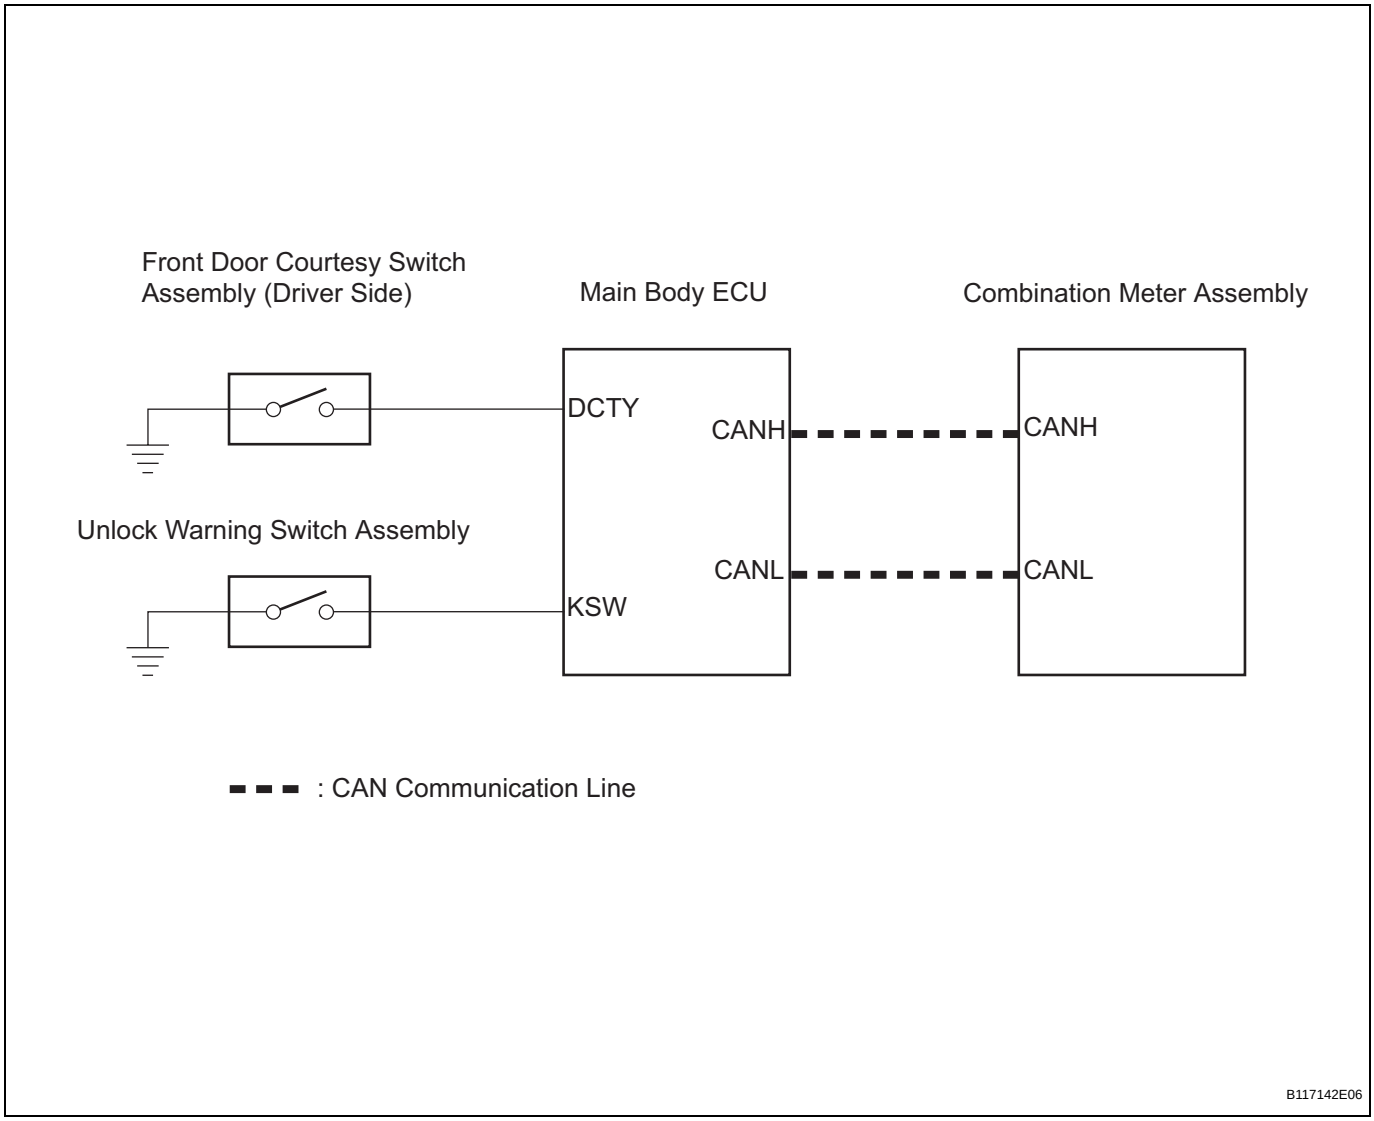
DL

Key Lock-in Prevention Function does not Work Properly

DESCRIPTION

When the key is in the ignition key cylinder or the door courtesy light ON signal is output to the main body ECU, performing the door lock operation with the lock switch does not lock the doors.
HINT:
Since the key reminder warning system has functions that use CAN communication, firstly confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with How to Proceed with Troubleshooting. Then, conduct the following troubleshooting procedure.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Use the DATA LIST to check the operation of the front door courtesy light switch.

Main Body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

OK:

The display is as specified in the normal condition.

NG → **Go to step 5**

OK

2	READ VALUE OF INTELLIGENT TESTER

(a) Use the DATA LIST to check the operation of the door unlock warning switch.

Main Body ECU

DL

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:

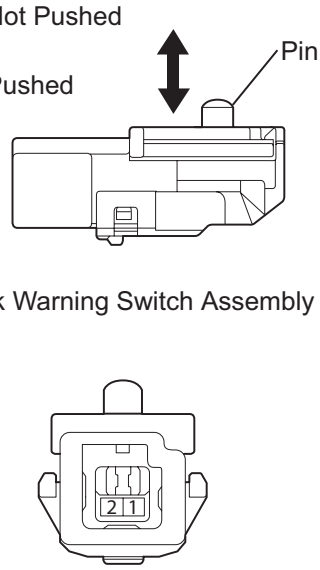
The display is as specified in the normal condition.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

3 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

Component side:



(a) Remove the unlock warning switch assembly.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Not pushed	10 kΩor higher
1 - 2	Pushed	Below 1 Ω

NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

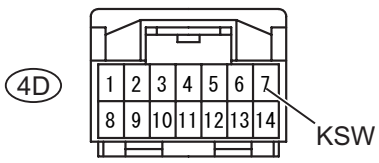
4 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

Unlock Warning Switch Assembly Connector

Front View

Main Body ECU Connector



Front View

B121085E01

(a) Disconnect the D19 unlock warning switch connector.
(b) Disconnect the 4D main body ECU connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D19-1 - 4D-7 (KSW)	Below 1 Ω
D19-2 - Body ground	Below 1 Ω

(d) Reconnect the unlock warning switch connector.
(e) Reconnect the main body ECU connector.

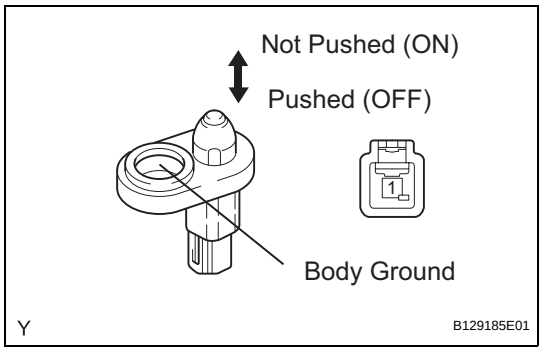
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

REPLACE MAIN BODY ECU

5 INSPECT FRONT DOOR COURTESY SWITCH ASSEMBLY (DRIVER SIDE)



(a) Remove the door courtesy switch.
(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Not pushed (ON)	Below 1 Ω
1 - Body ground	Pushed (OFF)	10 kΩor higher

(c) Reinstall the courtesy switch.

NG → **REPLACE FRONT DOOR COURTESY SWITCH ASSEMBLY (DRIVER SIDE)**

DL

OK

SYSTEM DESCRIPTION

1. WIRELESS DOOR CONTROL SYSTEM DESCRIPTION

(a) This system locks and unlocks the vehicle's doors remotely. The wireless control system has the following features:

- The door control receiver performs the code identification procedure and the main body ECU operates the door lock control. A serial data link is provided for communication between the receiver and main body ECU.
- A key-integrated type transmitter is used and it contains the following 2 switches: the door lock switch and door unlock switch.
- An LED is built into the transmitter so that the battery status can be checked.

2. FUNCTION OF MAIN COMPONENTS

Components	Functions
Door control transmitter	• Contains LOCK and UNLOCK switches • Transmits faint electric waves (recognition codes and function codes) to door control receiver • Illuminates indicator light (LED) during transmission
Door control receiver	Receives weak electric waves (recognition codes and function codes) from door control transmitter, and changes waves to code data
Door lock position switch	Transmits door lock conditions of each door to main body ECU
Unlock warning switch assembly	Detects if key is in ignition key cylinder
Front door courtesy light switch assembly Rear door courtesy light switch assembly Back door courtesy light switch assembly	Turns ON when door is open and turns OFF when door is closed. Outputs door status (open or closed) to main body ECU.

3. SYSTEM FUNCTION

(a) Door lock / unlock function:

With no key in the ignition key cylinder (unlock warning switch is OFF) and all door courtesy light switches OFF, pressing the door control transmitter's LOCK / UNLOCK switch causes the transmitter to output faint electric waves. The transmitter sends the faint electrical wave to the door control receiver. The high frequency circuit built into the door control receiver demodulates the wave into code data, computes the data, and compares the data with previously registered ID codes. If the data is verified, a door lock / unlock request signal is output to the main body ECU. When the request signal is received, the main body ECU outputs a door lock / unlock control signal to each door lock assembly. Each door lock assembly then locks / unlocks its respective door and turns ON / OFF its door lock position switch in accordance with the signal.

(b) Answer-back function:
The main body ECU receives the door unlock detection switch's ON / OFF signals and uses these signals to confirm if the door control operation has been completed. The main body ECU then outputs the hazard warning light control signals to flash the hazard warning lights as an answer-back indication.

(c) The wireless door lock control system has the following functions.

Function	Outline
All door lock function	Pressing LOCK switch locks all doors
All door unlock function	Pressing UNLOCK switch unlocks all doors
Answer-back function	Hazard warning lights flash once when doors are locked, and flash twice when doors are unlocked to indicate that operation has been completed
Automatic locking function	If no doors are opened within 30 seconds after being unlocked by wireless transmitter, all doors are locked again automatically
Illuminated entry function	If locked doors are unlocked through wireless operation, ignition key cylinder light and dome light illuminate. If one of following situations occurs, lights fade out: • Within 15 seconds, doors are not opened and doors are locked through wireless operation • Within 15 seconds, key is inserted into ignition key cylinder and ignition switch is turned ON • No operations or actions are performed within 15 seconds
Panic alarm function	Pressing PANIC switch for more than 1 second sounds horn
Security function	Sends signal as rolling code
Transmitter recognition code registration function	Enables 4 modes for registering (writing and storing) transmitter recognition codes in EEPROM, built into door control receiver

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock system is operating normally. Check the power door lock system first before troubleshooting the wireless door lock control system.
- Use these procedures to troubleshoot the wireless door lock control system.
- *: Use the intelligent tester.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Wireless door lock control system

Display (Item)	Default	Contents	Setting
HAZARD ANS BACK	ON	When wireless lock switch on transmitter pressed, illuminates all hazard warning lights once. When unlock switch pressed, all hazard warning lights illuminate twice	ON / OFF
WIRELESS OPER	ON	ON /OFF of wireless door lock function	ON / OFF
ALARM FUNCTION	ON	Operates security alarm when panic switch on transmitter continuously pressed for 1 second	ON / OFF
UNLOCK/2 OPER	ON	Function that unlocks driver side door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. if setting is OFF, pressing unlock switch once makes all doors unlock.	ON / OFF
AUTO LOCK DELAY	30 seconds	Time until relocking after unlocking with wireless door lock function	60 seconds / 30 seconds

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

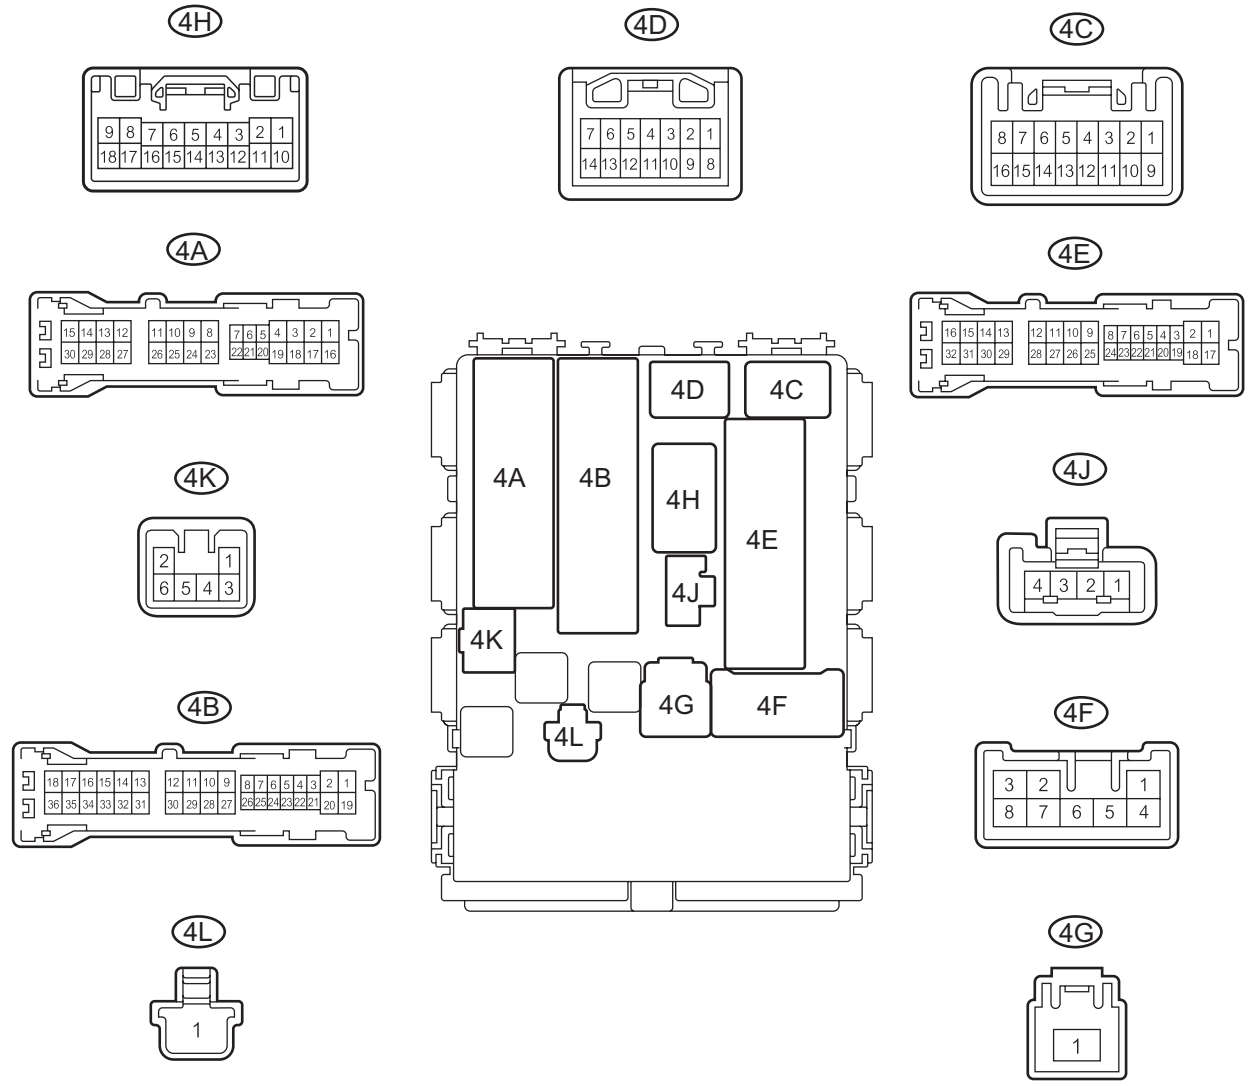
Wireless door lock control

Symptom	Suspected area	See page
Only wireless control function inoperative	Transmitter battery	DL-71
	Door control transmitter	DL-71
	Door control receiver	DL-71
	Wire harness	DL-71
	Main body ECU	DL-71
No answer-back	Lighting system	DL-79
	Wire harness	DL-79
	Main body ECU	DL-79

TERMINALS OF ECU

1. CHECK MAIN BODY ECU

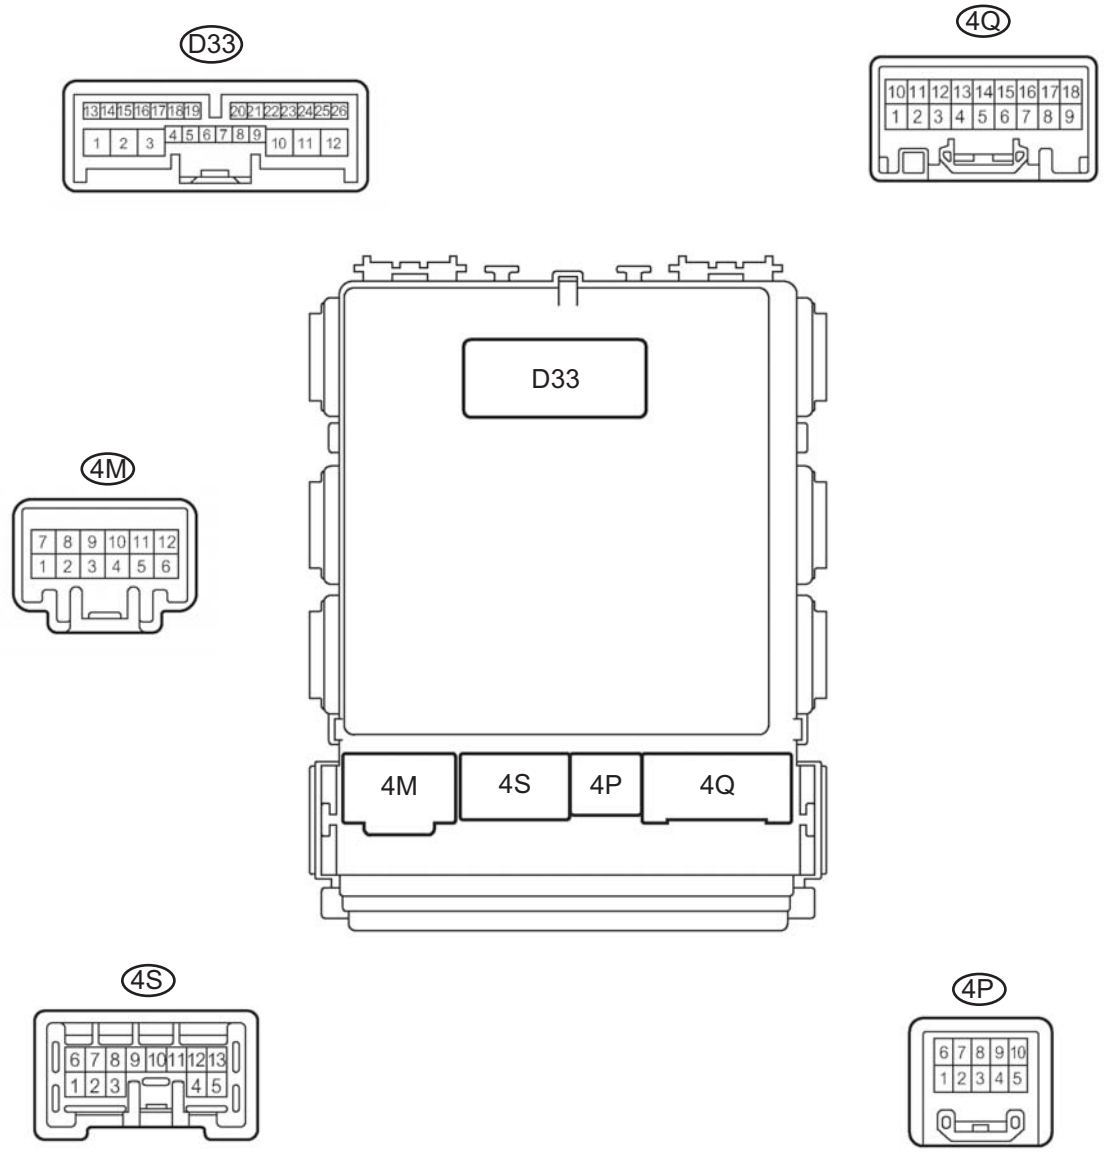
Main Body ECU (Rear View):



H

E114510E06

Main Body ECU (Front View):



(a) Disconnect the 4B and 4E main body ECU (vehicle rear side) connectors.

(b) Measure the voltage and resistance of the wire harness side connectors.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BECU (4B-30) - GND1 (4E-17)	L - W-B	Battery (power supply)	Always	11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the main body ECU (vehicle rear side) connectors.

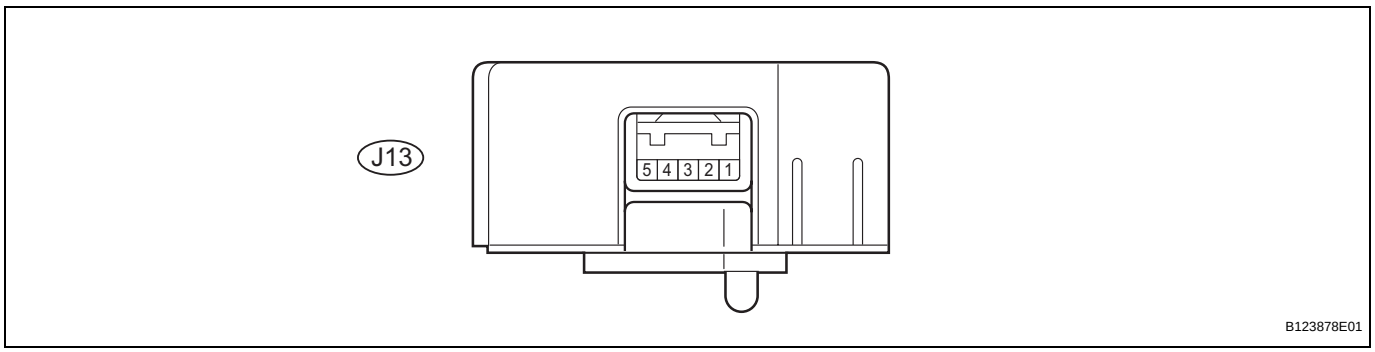
(d) Measure the voltage of the wire harness side connectors.

Standard voltage:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock warning switch input	Key inserted	0 V
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock warning switch input	No key in ignition key cylinder	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver side door courtesy switch input	Driver side door closed	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver side door courtesy switch input	Driver side door open	0 V
PCTY (4A-24) - Body ground	L - Body ground	Passenger side door courtesy switch input	Passenger side door closed	11 to 14 V
PCTY (4A-24) - Body ground	L - Body ground	Passenger side door courtesy switch input	Passenger side door open	0 V
RRCY (4A-20) - Body ground*3	L - Body ground	Rear RH door courtesy switch input	Rear RH door closed	11 to 14 V
RRCY (4A-20) - Body ground*3	L - Body ground	Rear RH door courtesy switch input	Rear RH door open	0 V
RRCY (4A-5) - Body ground*3	G - Body ground	Rear LH door courtesy switch input	Rear LH door closed	11 to 14 V
RRCY (4A-5) - Body ground*3	G - Body ground	Rear LH door courtesy switch input	Rear LH door open	0 V
RRCY (4A-5) - Body ground*4	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH and RH door closed	11 to 14 V
RRCY (4A-5) - Body ground*4	Y - Body ground	Rear LH and RH door courtesy switch input	Rear LH and RH door open	0 V
BCTY (4A-7) - Body ground*1	SB- Body ground	Back door courtesy switch input	Back side door closed	11 to 14 V
BCTY (4A-7) - Body ground*1	SB- Body ground	Back door courtesy switch input	Back side door open	0 V
LGCY (4A-7) - Body ground*2	SB- Body ground	Luggage room courtesy switch input	Luggage room closed	11 to 14 V
LGCY (4A-7) - Body ground*2	SB- Body ground	Luggage room courtesy switch input	Luggage room open	0 V
PRG (D33-17) - Body ground	W - Body ground	Door control receiver output	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	6 to 7 V → Below 1 V → 6 to 7 V
RDA (D33-16) - Body ground	R - Body ground	Door control receiver input	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	Below 1 V → 6 to 7 V → Below 1 V
HAZ (4S-17) - Body ground	B- Body ground	Hazard warning light signal	Answer-back ON	Pulse generation
HAZ (4S-17) - Body ground	B- Body ground	Hazard warning light signal	Answer-back OFF	11 to 14 V

*1: Hatchback
*2: Sedan
*3: Hatchback, Sedan except *5
*4: Sedan *5
*5: Cold area specification, w/ Engine immobilizer system, w/ ABS, w/ Rear window defogger, w/ Power door lock system, w/ Daytime running light, w/ Remote control mirror, w/ Air conditioning
If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK DOOR CONTROL RECEIVER



(a) Disconnect the door control receiver connector.
(b) Measure the voltage and resistance of the wire harness side connectors.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (J13-5) - GND (J13-1)	L - W-B	Battery (power supply)	Always	11 to 14 V
GND (J13-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the door control receiver connector.
(d) Measure the voltage of the wire harness side connectors.

Standard voltage:

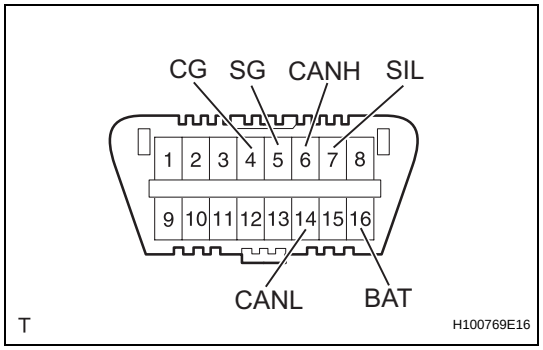
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PRG (J13-3) - Body ground	W - Body ground	Door control receiver output	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	6 to 7 V → Below 1 V → 6 to 7 V
RDA (J13-2) - Body ground	R - Body ground	Door control receiver input	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	Below 1 V → 6 to 7 V → Below 1 V

If the result is not as specified, there may be a malfunction in the wire harness.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω

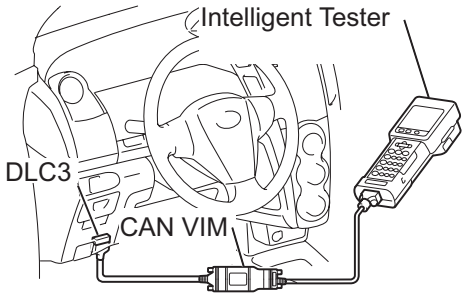
Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

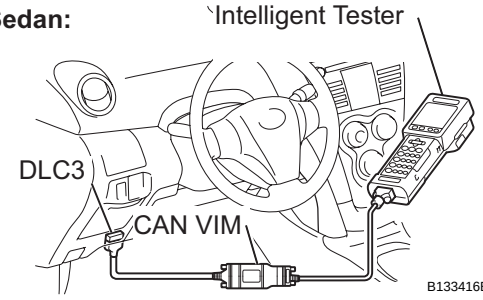
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Hatchback:



Sedan:

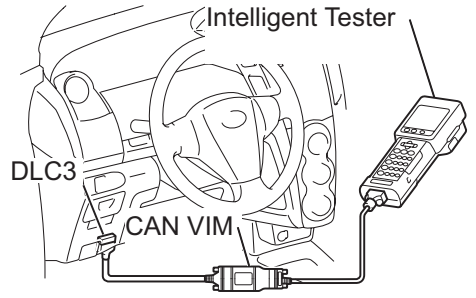


HINT:

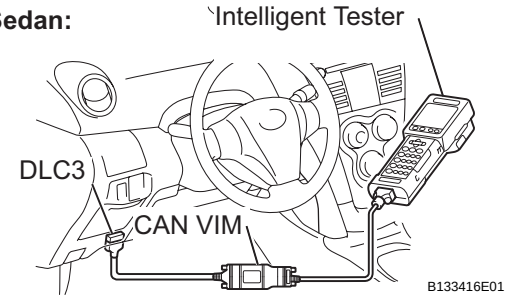
Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Hatchback:



Sedan:



DTC CHECK / CLEAR

1. DTC CHECK

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DTCs by following the prompts on the tester's screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

2. DTC CLEAR

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Erase the DTCs by following the prompts on the tester's screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

3. SELF-DIAGNOSTIC MODE (OPERATING IGNITION KEY CYLINDER)

(a) Switch to self-diagnostic mode.

(1) Establish the vehicle's initial condition.

(2) Insert the key into the ignition key cylinder and remove it.

(3) Within 5 seconds of removing the key, insert it into the ignition key cylinder again.

(4) Turn the ignition switch ON and then OFF.

(5) Within 30 seconds of turning the ignition switch OFF, perform the following operation 9 more times: Turn the ignition switch ON and then OFF.

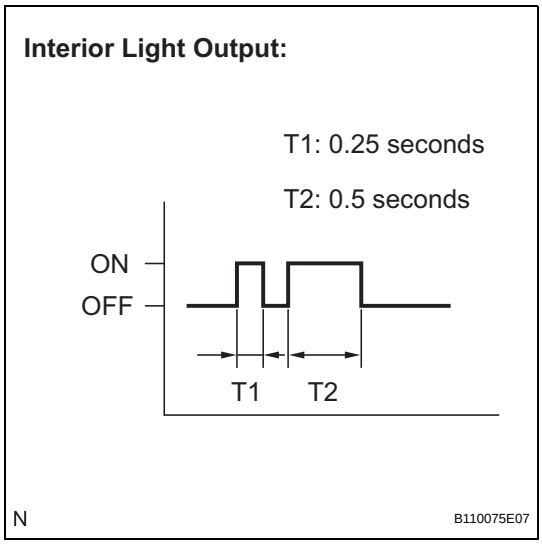
HINT:

- Turning the ignition switch ON after the procedure above has been completed ends self-diagnostic mode.
- Do not lock or unlock doors while in self-diagnostic mode.

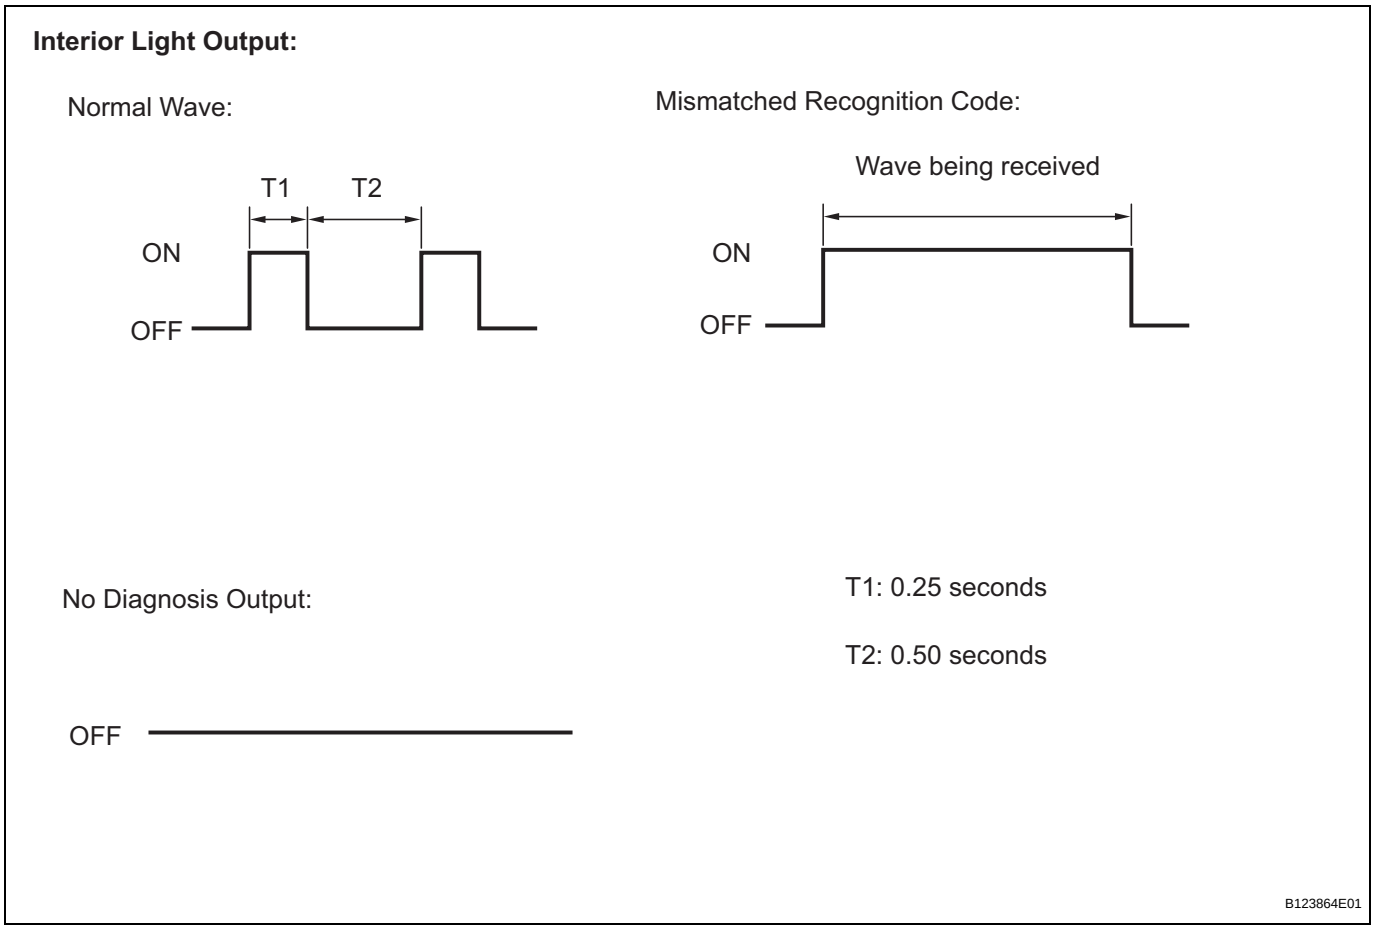
NOTICE:

If the system cannot enter self-diagnostic mode, the system returns to normal mode.

DL



(b) Check that the system has switched to self-diagnostic mode by checking the flash pattern of the interior light.
(c) Check the diagnostic outputs when the door control transmitter switch is held down. The diagnostic outputs can be checked by the flash patterns of the interior light.



4. SELF-DIAGNOSTIC MODE (USING INTELLIGENT TESTER)

(a) Switch to self-diagnostic mode.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch ON and turn the intelligent tester main switch on.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DATA LIST in accordance with the display on the tester.

Main body ECU:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal/ ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
D LOCK POS SW	Driver side door lock position switch signal/ ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
D/L SW-LOCK	Door manual lock switch signal/ ON or OFF	ON: Door control switch (for front driver door side) is turned to lock position OFF: Door control switch (for front driver door side) is turned to unlock position	-
D/L SW-UNLOCK	Door manual unlock switch signal/ ON or OFF	ON: Door control switch (for front driver door side) is turned to unlock position OFF: Door control switch (for front driver door side) is turned to lock position	-
DOR KEY SW-LOCK	Door key linked lock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-
DOR KEY SW-UNLOCK	Door key linked unlock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
D DOR KEY SW-UL	Driver side door key linked unlock switch signal/ ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
P DOR CTY SW	Passenger side door courtesy light switch signal/ ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
RR DOR CTY SW*1	Rear door RH courtesy light switch signal/ ON or OFF	ON: Rear door RH is open OFF: Rear door RH is closed	-
RL DOR CTY SW*1	Rear door LH courtesy light switch signal/ ON or OFF	ON: Rear door LH is open OFF: Rear door LH is closed	-
BACK DOR CTY SW*2	BACK DOR CTY SW	ON: Back door is open OFF: Back door is closed	-
KEY UNLK WRN SW	Unlock warning switch / ON or OFF	ON: Ignition key is inserted OFF: Ignition key is not inserted	-

*1: 5 Door, Sedan
*2: Hatchback

DL

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST in accordance with the display on the tester.

Main body ECU:

Item	Test Details	Diagnostic Note
DOOR LOCK	Operate door lock motor LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor unlock side ON/OFF	-
HAZARD	Turns turn signal flasher relay ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- If a trouble code is displayed during the DTC check, inspect the suspected areas listed for that code. For details of the code, refer to the "See page" in the DTC chart.
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.

Wirelass Door Lock Control

DTC No.	Detection Item	Suspected Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Wire harness 2. Door control receiver 3. Main body ECU	DL-67

ON-VEHICLE INSPECTION

1. NOTICES WHEN CHECKING

(a) Wireless door LOCK / UNLOCK function:
This function operates only when the vehicle is in its initial condition (the following 3 conditions are met).
(1) No key is inserted into the ignition key cylinder.
(2) All the doors are closed.
(3) The power door lock system is functioning normally.
HINT:
- The UNLOCK function operates even when one of the doors is open.
- The UNLOCK function operates even when the key is inserted into the ignition key cylinder. However, the ignition switch must be OFF.

(b) The operating range differs depending on the situation.
(1) The operating range differs depending on the user, the way the transmitter is held and the location.
(2) In certain areas, the operating range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
(3) The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operating range may be reduced or the transmitter may not function.
(4) When the battery weakens, the operating range is reduced or the transmitter may not function.
HINT:
If the transmitter has had prolonged exposure to direct sunlight, such as being left on the instrument panel, the battery may weaken or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:
- The switches described below transmit signals and are built into the door control transmitter.
- The transmitter's operating range must be taken into account while checks are being made.

(a) Make sure the vehicle is in a condition in which the wireless control functions can be operated (see above).
(b) Check the basic functions.
(1) Check that the transmitter's LED illuminates 3 times when each switch is pressed 3 times.
HINT:
If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.

(c) Check the chattering prevention function.
  (1) When a switch is pressed, check that the corresponding operation occurs only once. When the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. Lastly, when the switch is pressed at 1 second intervals, check that the corresponding operation activates once for each press of the switch.

(d) Check the automatic locking function.
  (1) When all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within 30 seconds, check that the doors are relocked automatically.

(e) Check the switch operation fail-safe function.
  (1) If the key is in the ignition key cylinder, check that the doors cannot be locked by the LOCK switch. However, this does not apply when the system is in recognition code registration mode.

(f) Check the answer-back function.
  (1) When the LOCK switch is pressed, check that the hazard warning lights flash once and all doors are locked.
  (2) When the UNLOCK switch is pressed, check that the hazard warning lights flash twice and all doors are unlocked.

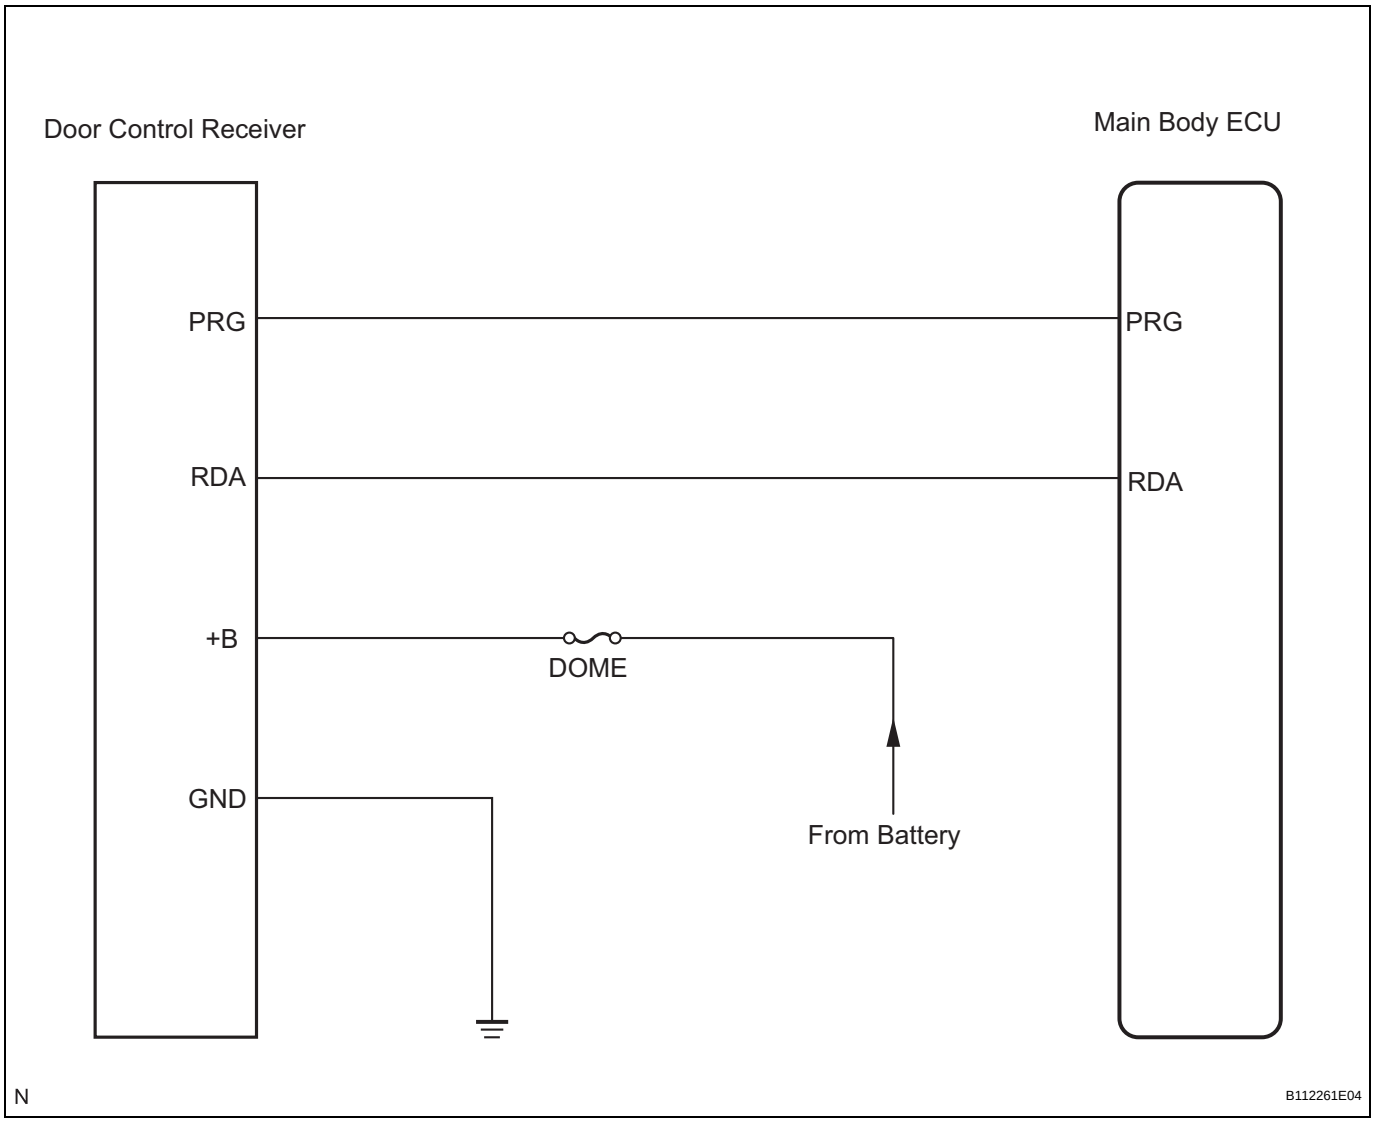
DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU.

DTC No.	DTC Detection Condition	Suspected Area
B1242	In diagnostic mode, applicable RDA signal cannot be received within 1 second of PRG signal being output from main body ECU.	• Wire harness • Door control receiver • Main body ECU

WIRING DIAGRAM

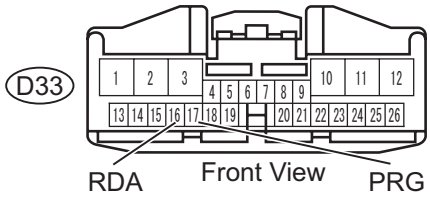


INSPECTION PROCEDURE

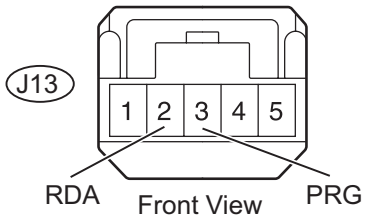
1 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL RECEIVER)

Wire Harness Side:

Main Body ECU Connector



Door Control Receiver Connector



B123827E01

(a) Disconnect the D33 main body ECU connector.
(b) Disconnect the J13 door control receiver connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
D33-16 (RDA) - J13-2 (RDA)	Below 1 Ω
D33-16 (RDA) or J13-2 (RDA) - Body ground	10 kΩ or higher
D33-17 (PRG) - J13-3 (PRG)	Below 1 Ω
D33-17 (PRG) or J13-3 (PRG) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the door control receiver connector.

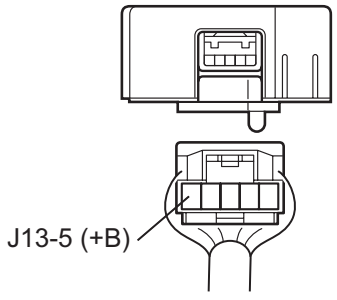
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT DOOR CONTROL RECEIVER (+B TERMINAL)

Wire Harness View:

Door Control Receiver



N

B110096E04

(a) Disconnect the J13 door control receiver connector.
(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
J13-5 (+B) - Body ground	Always	11 to 14 V

(c) Reconnect the door control receiver connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+B CIRCUIT)**

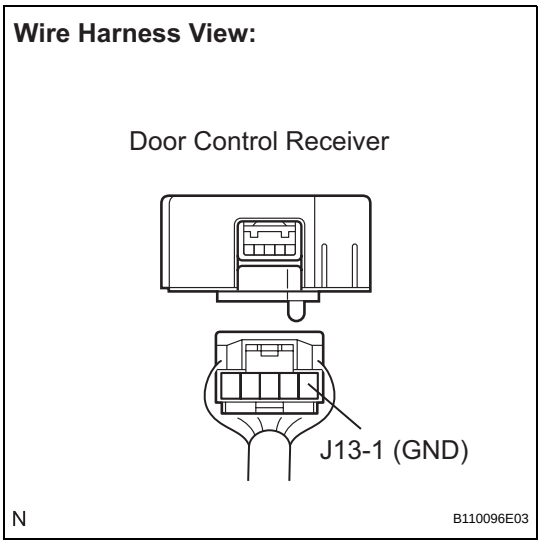
OK

3 INSPECT DOOR CONTROL RECEIVER (GND TERMINAL)

(a) Disconnect the J13 door control receiver connector.

DL

Wire Harness View:



(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
J13-1 (GND) - Body ground	Below 1 Ω

(c) Reconnect the door control receiver connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (E CIRCUIT)**

OK

DL

4 REPLACE DOOR CONTROL RECEIVER

(a) Replace the door control receiver.
(b) Perform the REGISTRATION procedures (See page DL-97).
HINT:
If a new or normal functioning door control receiver is available, connect it and check if the wireless door lock function is normal or the DTC is output. If the alternative receiver functions normally, replace the original door control receiver.

NEXT

5 RECHECK DTC

(a) Clear the DTC.
(b) Check if the same DTC is detected.
HINT:
Reinstall the parts, such as sensors and connectors, and restore the vehicle to its previous conditions before rechecking for DTCs.

Result:

Condition	Proceed to
DTC (B1242) is output	A
DTC (B1242) is not output (When troubleshooting in accordance with DTC CHART)	B
DTC (B1242) is not output (When troubleshooting in accordance with PROBLEM SYMPTOMS TABLE)	C

B → **END**

C → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A

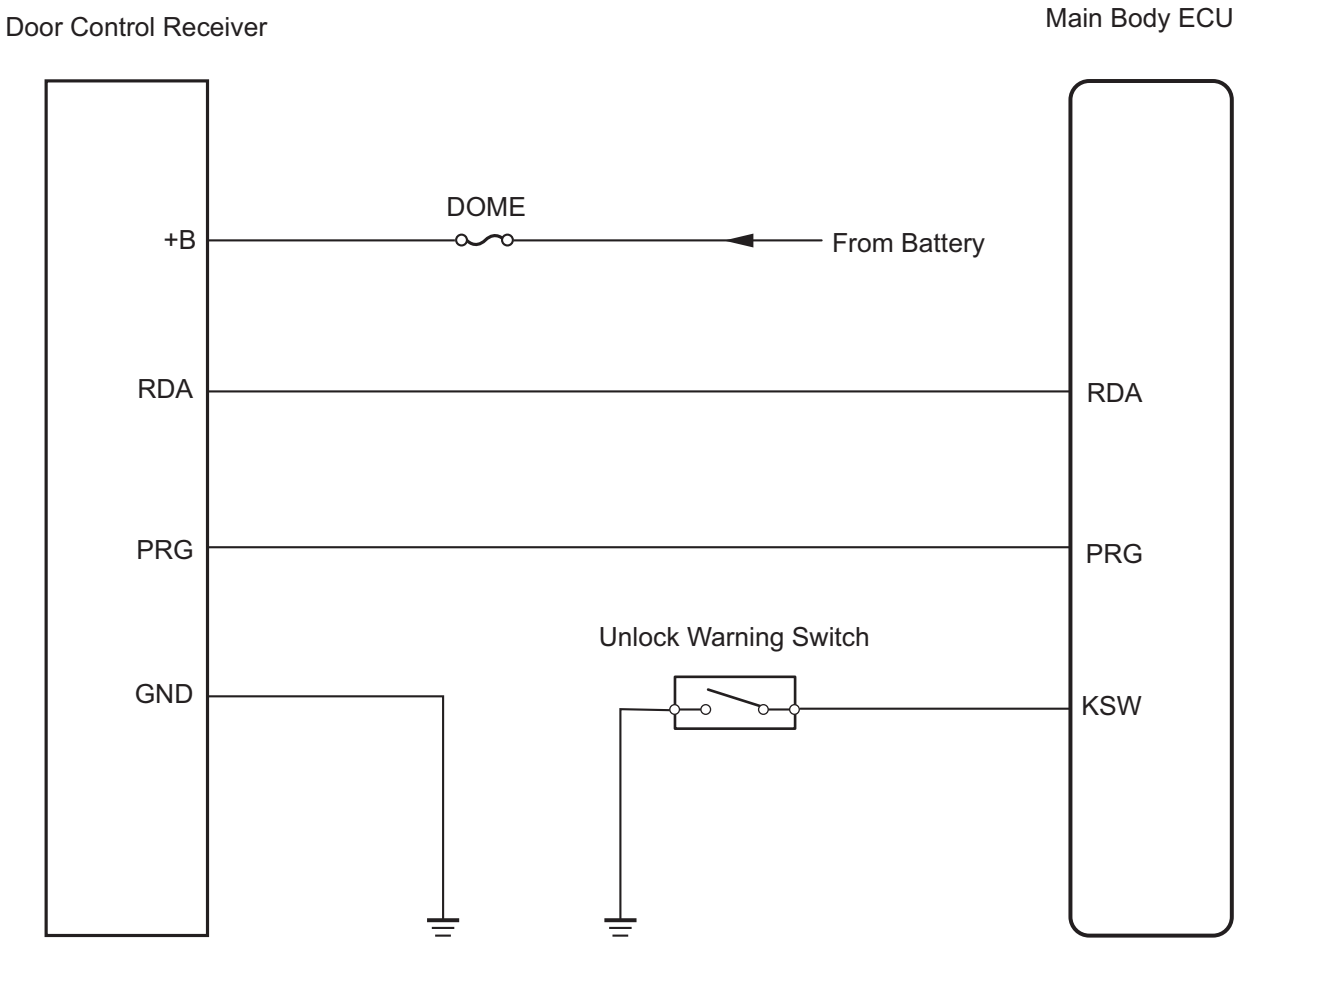
REPLACE MAIN BODY ECU

Only Wireless Control Function is Inoperative

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU. The main body ECU then controls all doors by sending lock / unlock signals to each door, and sends hazard flasher relay signals to the turn signal flasher relay (hazard warning lights).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS**

OK:

Each function of wireless door lock control system operates normally using transmitter switches (see page DL-64).

OK	**END**

NG

2	CHECK TRANSMITTER LED ILLUMINATION

(a) Check that the transmitter's LED illuminates 3 times when the switch is pressed 3 times.

OK:

Transmitter's LED illuminates 3 times when switch is pressed 3 times.

NG → **Go to step 4**

OK

3	CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS (STANDARD OPERATION FUNCTION)

HINT:

Use the following standard test procedure to check the transmitter again.

(a) Hold the transmitter approximately 1 m (3.28 ft.) from the driver side door outside handle. The transmitter must be held parallel to the ground and perpendicular to the side of the vehicle.

(b) Press and hold either the LOCK or UNLOCK transmitter switch for 1 second, and check that the doors are locked or unlocked, accordingly.

OK:

Doors can be locked and unlocked with transmitter switches.

NG → **Go to step 5**

OK

REPLACE DOOR CONTROL TRANSMITTER MODULE

4	REPLACE TRANSMITTER BATTERY

(a) After replacing the transmitter battery, check that the doors can be locked and unlocked using the transmitter switches.

OK:

Doors can be locked and unlocked with transmitter.

NG → **REPLACE DOOR CONTROL TRANSMITTER MODULE**

OK

END (TRANSMITTER BATTERY DEFECTIVE)

5	CHECK NO. 1 ROOM LIGHT ASSEMBLY

(a) Check that the No. 1 room light illumination operates normally.
OK:
No. 1 room light illumination operates normally.

NG → **GO TO LIGHTING SYSTEM**

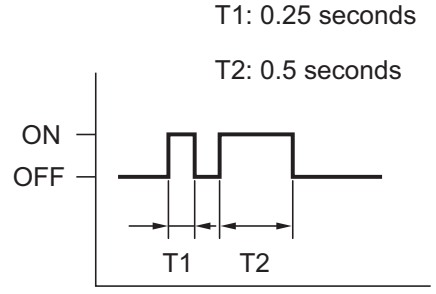
OK

DL

6	SWITCH TO SELF DIAGNOSTIC MODE

(a) Switch to self-diagnostic mode by operating the ignition key cylinder.
(1) Make sure the vehicle is in its initial condition. Then insert the key into the ignition key cylinder and remove it.
(2) Within 5 seconds of removing the key, insert the key into the ignition key cylinder (ignition switch OFF). Then turn the ignition switch ON and OFF.
(3) Within 30 seconds of turning the ignition switch OFF, perform the following operation 9 times: turn the ignition switch ON and OFF.
NOTICE:
If the system cannot enter self-diagnostic mode, the system returns to normal mode.
HINT:
- Turning the ignition switch ON after the above operations have been completed ends self-diagnostic mode.
- Do not lock or unlock doors during self-diagnostic mode.

Interior Light Output:



N B110075E07

(b) Check that the system has switched to self-diagnostic mode by checking the No. 1 room light assembly flash pattern.
OK:
Flash pattern is same as illustration on left.

NG → **Go to step 11**

OK

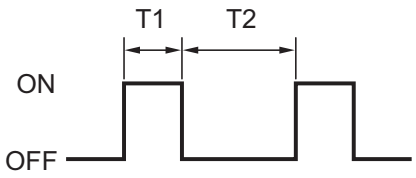
DL

7 CHECK BY SELF DIAGNOSTIC MODE

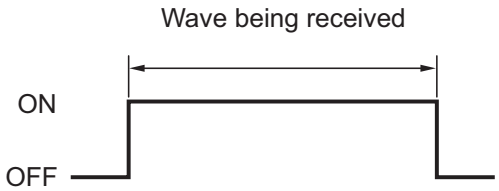
(a) Inspect the diagnosis outputs when the door control transmitter switch is held down. The diagnosis outputs can be checked by the flash patterns of the No. 1 room light assembly.

Interior Light Output:

Normal Wave:



Mismatched Recognition Code:



No Diagnosis Output:

T1: 0.25 seconds

T2: 0.50 seconds

B123864E01

Result

Result	Proceed to
Unmatching recognition code is output	A
Normal waves (light flash patterns) for LOCK and UNLOCK switches are output	B
No diagnosis outputs	C

B → REPLACE MAIN BODY ECU

C → Go to step 9

A

8 REGISTER RECOGNITION CODE

(a) Check that the system can be switched to rewrite mode or add mode, and that a recognition code can be registered.
OK:
Recognition code can be registered.

NG → Go to step 15

OK

END

9 CHECK RESPONSE OF DOOR CONTROL RECEIVER

(a) When a new or normally functioning door lock control transmitter switch for the same type vehicle is held down, check that an unmatching recognition code is output.
OK:
Unmatching recognition code is output.

OK → REPLACE DOOR CONTROL TRANSMITTER MODULE

NG

10 REPLACE DOOR CONTROL RECEIVER

(a) After replacing the door control receiver, check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.
OK:
Doors can be locked and unlocked with transmitter.

NG → REPLACE MAIN BODY ECU

OK

END

11 CONFIRM PROCEDURES TO ENTER SELF DIAGNOSTIC MODE

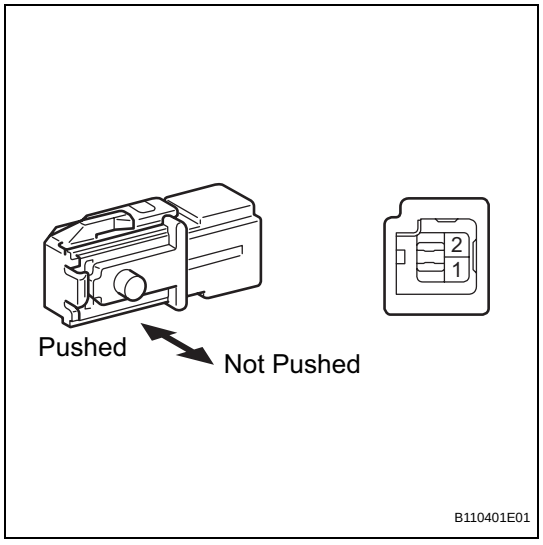
Result:

Result	Proceed to
Self-diagnostic mode entry successful	A
Self-diagnostic mode entry unsuccessful	B

B → Go to step 6

A

12 INSPECT UNLOCK WARNING SWITCH ASSEMBLY



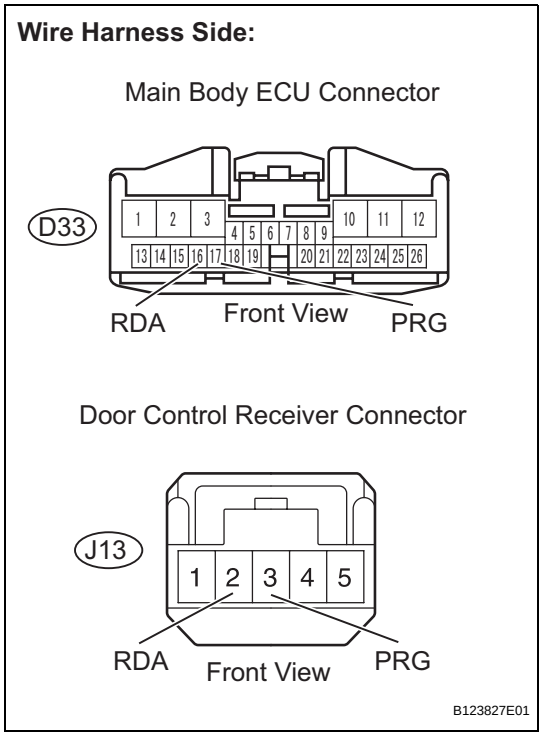
(a) Remove the unlock warning switch.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Not pushed	10 kΩ or higher
	Pushed	Below 1 Ω

NG → REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK

13 CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - MAIN BODY ECU)



(a) Disconnect the D33 main body ECU connector.
(b) Disconnect the J13 door control receiver connector.
(c) Measure the resistance.
Standard resistance

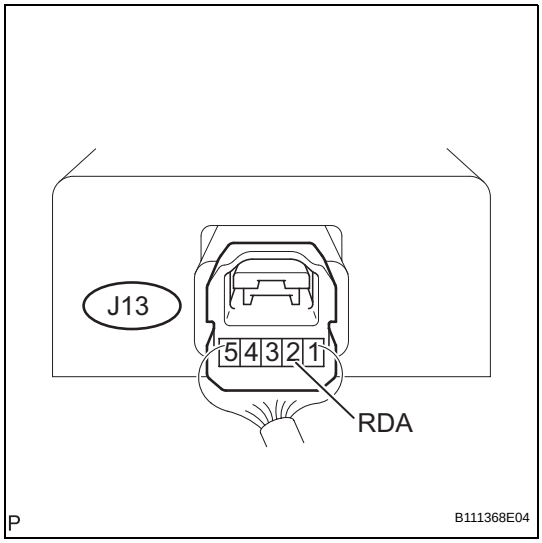
Tester Connection	Specified Condition
D33-16 (RDA) - J13-2 (RDA)	Below 1 Ω
D33-16 (RDA) - Body ground	10 kΩ or higher
D33-17 (PRG) - J13-3 (PRG)	Below 1 Ω
D33-17 (PRG) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the door control receiver connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14 CHECK DOOR CONTROL RECEIVER (OUTPUT)



(a) Measure the voltage of the connector.
Standard voltage

Tester Connection	Condition	Specified Condition
J13-2 (RDA) - Body ground	Transmitter switch ON→OFF (No key in ignition key cylinder, all doors closed)	Below 1 V→ 6 to 7 V→ Below 1 V

OK → **REPLACE MAIN BODY ECU**

NG

15 REPLACE DOOR CONTROL TRANSMITTER MODULE

(a) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

OK:
Doors can be locked and unlocked with transmitter.

NG → **REPLACE DOOR CONTROL RECEIVER**

OK

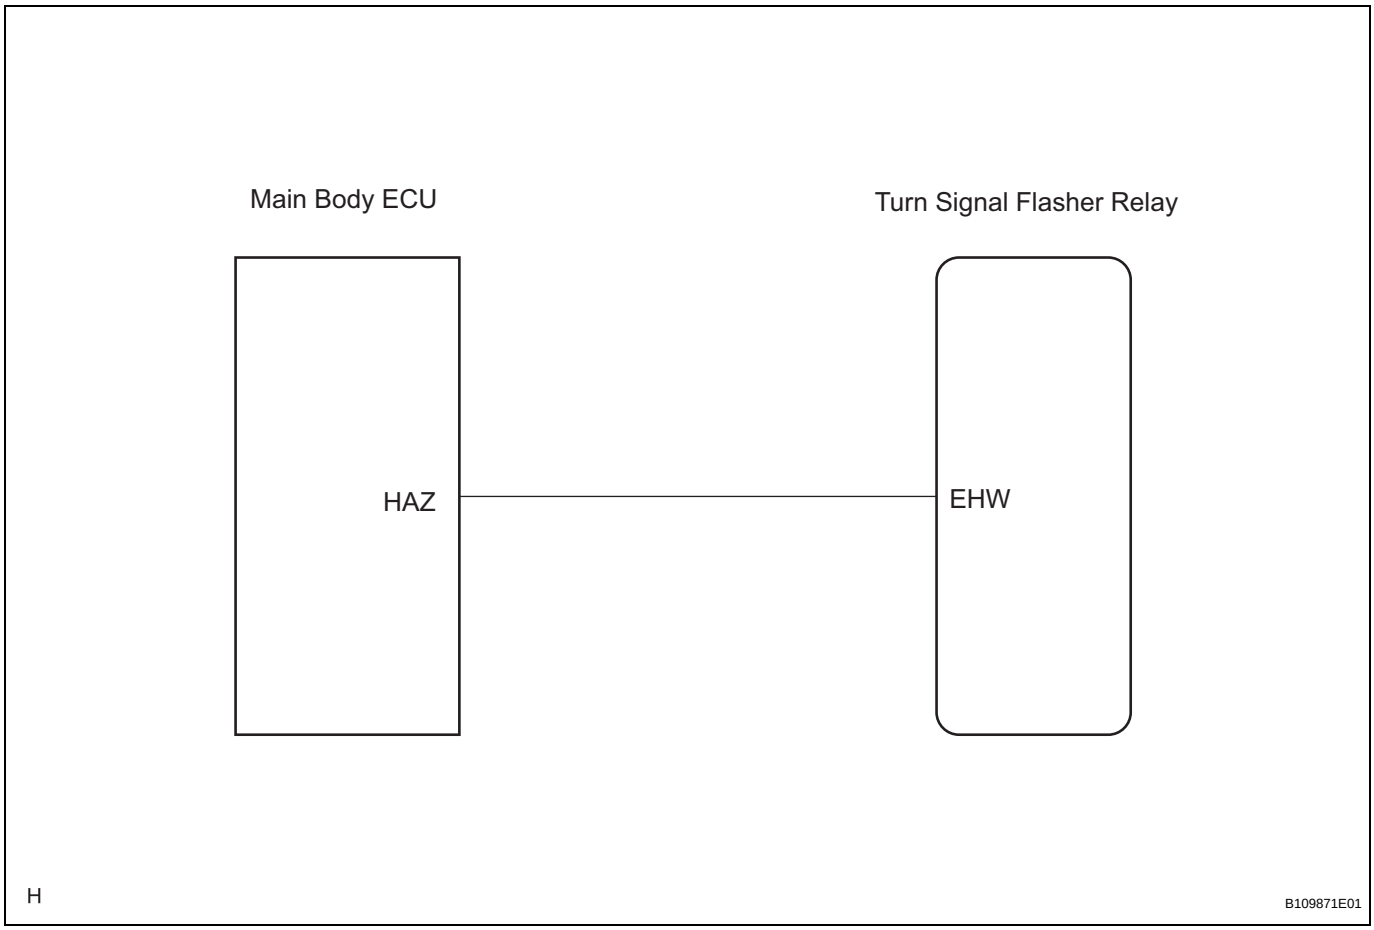
END (DOOR CONTROL TRANSMITTER MODULE DEFECTIVE)

No Answer-Back

DESCRIPTION

In this case, wireless control functions are normal but the hazard warning light answer-back function does not operate (main body ECU turn signal flasher relay output may be malfunctioning).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

(a) Check the wireless door lock functions by operating the transmitter switches.

Result

Result	Proceed to
Wireless door lock functions are normal but hazard warning light answer-back does not occur	A
Wireless door lock functions are abnormal	B

B → GO TO PROBLEM SYMPTOMS TABLE

A

2	**CHECK HAZARD WARNING LIGHTS**

(a) Check that the hazard warning lights flash when the hazard warning signal switch is pressed.
OK:
Hazard warning lights flash when hazard warning signal switch is pressed.

NG → **GO TO LIGHTING SYSTEM**

OK

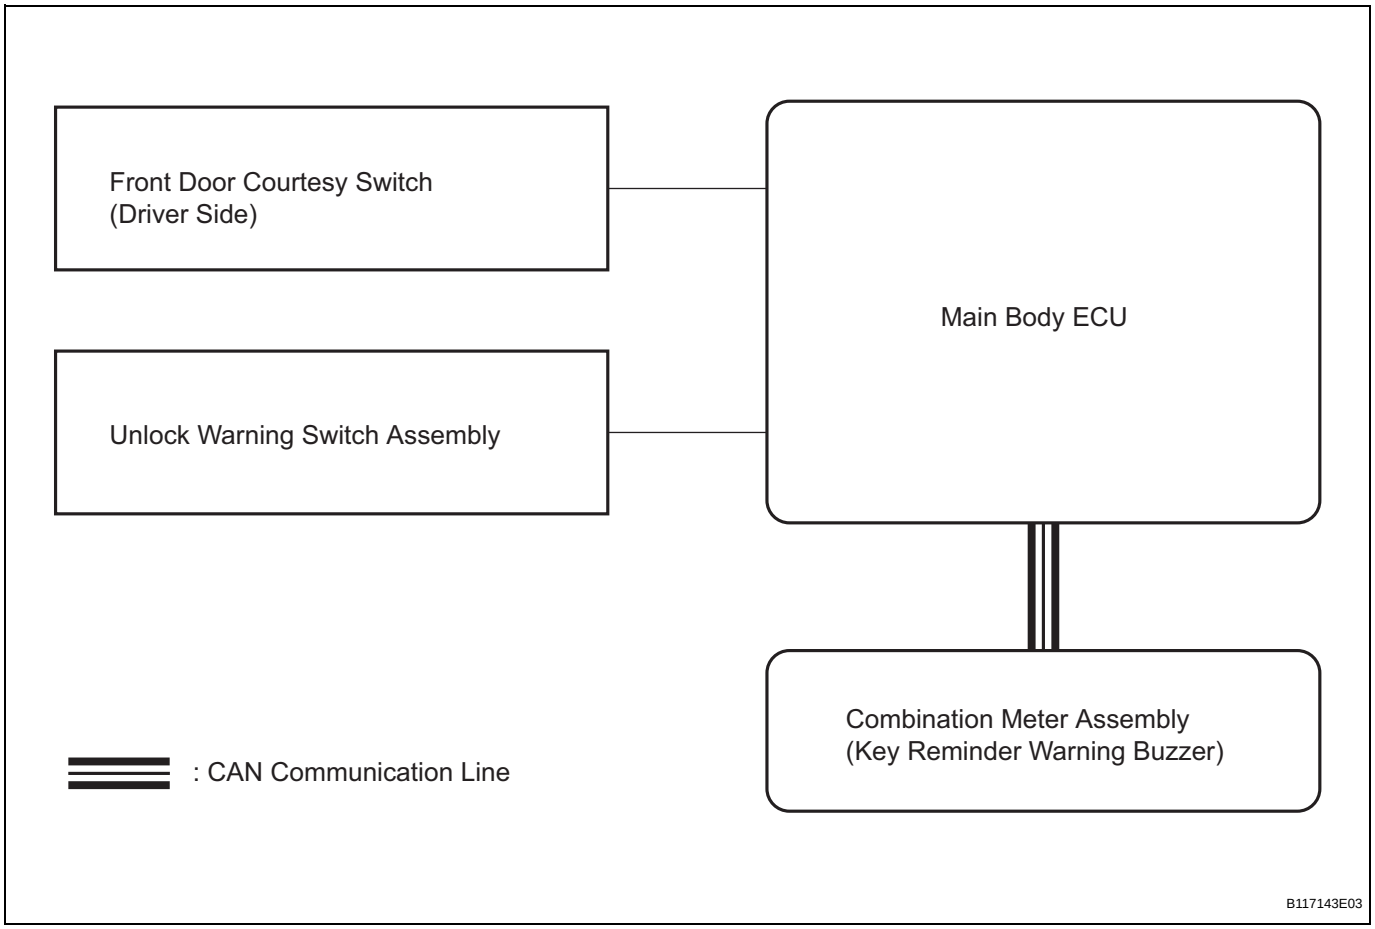
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. KEY REMINDER WARNING SYSTEM DESCRIPTION

(a) When the driver side door is opened with the ignition key in the ACC or LOCK position, this system causes the key reminder warning buzzer to sound in order to warn the driver that the ignition key has not been removed.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the key reminder warning system.
- The intelligent tester should be used in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

HINT:

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester with CAN VIM to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

OPERATION CHECK

1. REMOVE CHECK FUNCTION

(a) Check that the key reminder warning buzzer sounds.

(1) With the driver side door closed, insert the key into the ignition key cylinder and then turn the key to LOCK or ACC.

(2) Check that the buzzer sounds intermittently when the driver side door is open.

(b) Check that the key reminder warning buzzer stops.

(1) Check that the buzzer stops sounding if any of the following operations is performed while the buzzer is sounding:

- Close the driver side door (front door courtesy switch is off).
- Turn the ignition switch ON.
- Remove the key from the ignition key cylinder.

CUSTOMIZE PARAMETERS

HINT:
The following item can be customized.

Meter ECU:

Display (Item)	Default	Function	Setting
KEY REMND SOUND	NORMAL	Changes key reminder warning buzzer interval	FAST /NORMAL / SLOW

NOTICE:

- **When the customer requests the modification of an item, first make sure that the function can be customized.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Key reminder warning system

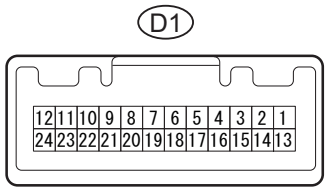
Symptom	Suspected area	See page
Key reminder buzzer does not sound	Unlock warning switch assembly	DL-116
	Front door courtesy switch (Driver side) for hatchback	LI-182
	Front door courtesy switch (Driver side) for sedan	LI-182
	Combination meter assembly (Key reminder warning buzzer)	DL-86
	Main body ECU	DL-86
	CAN communication system	CA-38
	Wire harness	-

TERMINALS OF ECU

1. CHECK COMBINATION METER ASSEMBLY

(a) Using the tester probes, touch the terminals from the back of the vehicle wire harness connectors, and measure the voltages and resistances of each terminal.

Combination Meter Assembly:



B142255E01

DL

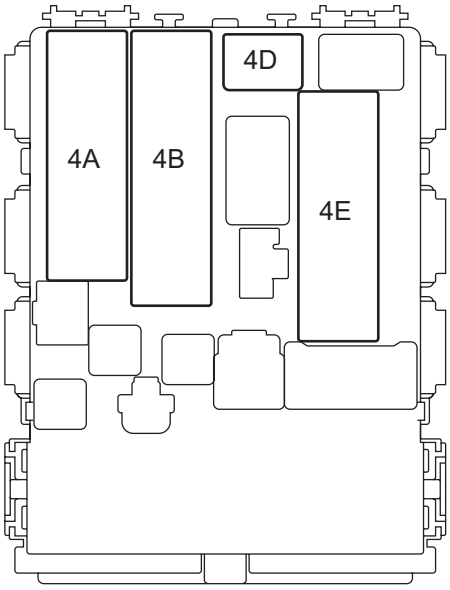
Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG2 (D1-1) - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
ECUB (D1-2) - Body ground	L - Body ground	Battery	Always	11 to 14 V
CANH (D1-20) - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANL (D1-21) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
ET (D1-24) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

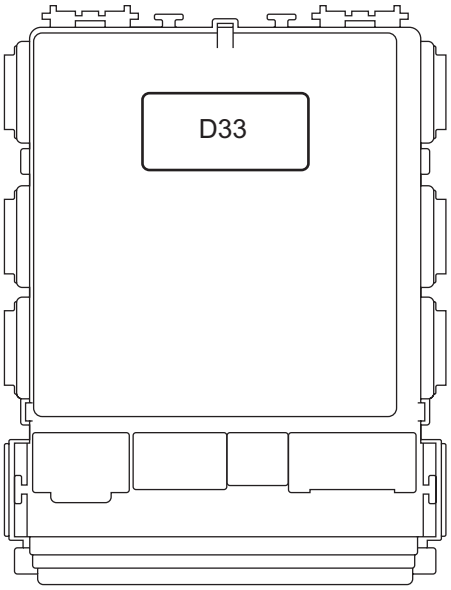
2. CHECK MAIN BODY ECU

(a) Using the tester probes, touch the terminals from the back of the vehicle wire harness connectors, and measure the voltages and resistances of each terminal.

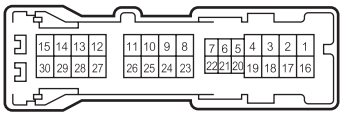
Vehicle Rear Side:



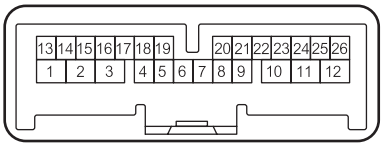
Vehicle Front Side:



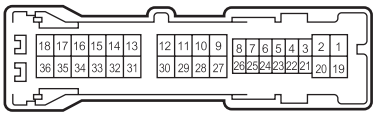
4A



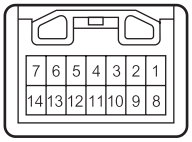
D33



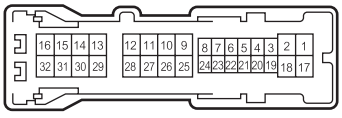
4B



4D



4E



B117140E02

DL

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (4D-7) - Body ground	Y - Body ground	Key unlock warning switch input	Key inserted → Key removed from ignition key cylinder	Below 1 V → 11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
BECU (4B-30) - Body ground	L - Body ground	Battery	Always	11 to 14 V
DCTY (4A-21) - Body ground	R - Body ground	Driver door courtesy switch input	Driver door closed → open	11 to 14 V → Below 1 V
CANL (D33-22) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANH (D33-23) - Body ground	R - Body ground	CAN communication line	Ignition switch ON	Pulse generation

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester with CAN VIM to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST.

Main Body ECU:

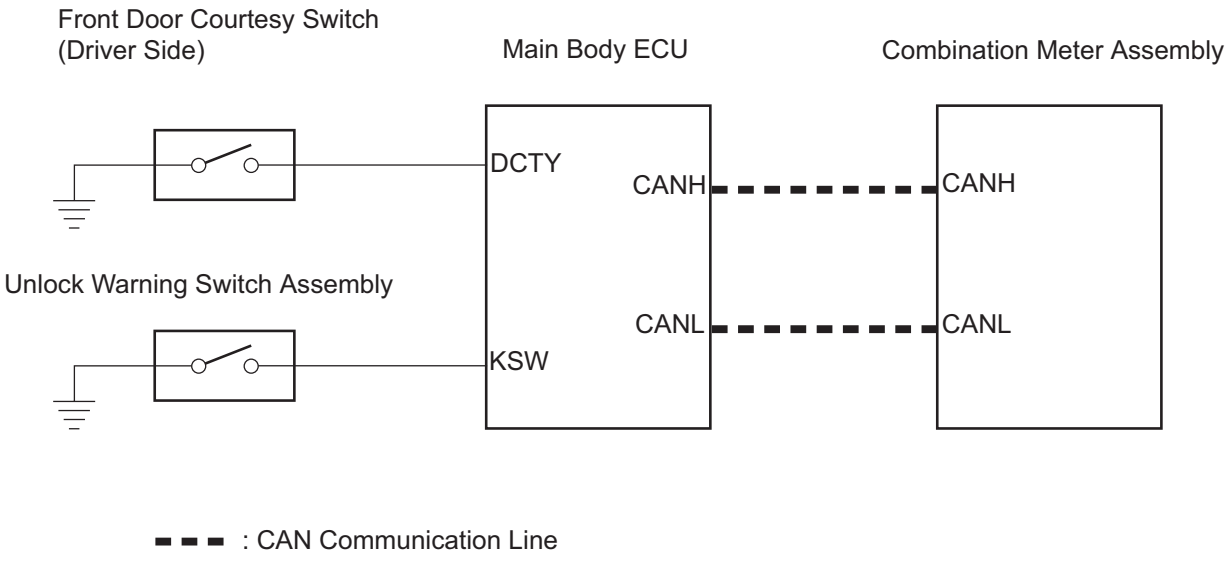
Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal /ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D DOR CTY SW	Driver side door courtesy switch signal /ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

Key Reminder Buzzer does not Sound

DESCRIPTION

The key reminder warning buzzer sounds when the driver side door is opened while the ignition switch is in the LOCK or ACC positions. The key reminder warning buzzer is activated when the main body ECU sends a key switch signal and driver side courtesy switch signal to the combination meter.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Since the key reminder warning system has functions that use CAN communication, firstly confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with How to Proceed with Troubleshooting. Then, conduct the following troubleshooting procedure.

1	READ VALUE USING INTELLIGENT TESTER (KEY UNLOCK WARNING SW)

(a) Check the DATA LIST to ensure proper operation of the door unlock warning switch.

Main Body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:

The display is as specified in the normal condition column.

NG → Go to step 4

OK

2 READ VALUE USING INTELLIGENT TESTER (D DOOR COURTESY SW)

(a) Check the DATA LIST to ensure proper operation of the front door courtesy light switch.

Main Body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

OK:

The display is as specified in the normal condition column.

NG → Go to step 6

OK

3 CHECK COMBINATION METER ASSEMBLY (WARNING BUZZER)

(a) Temporarily replace the combination meter assembly with a new or normally functioning one.

(b) Check the key reminder warning system function. (See page DL-85)

OK:

The key reminder warning system functions properly.

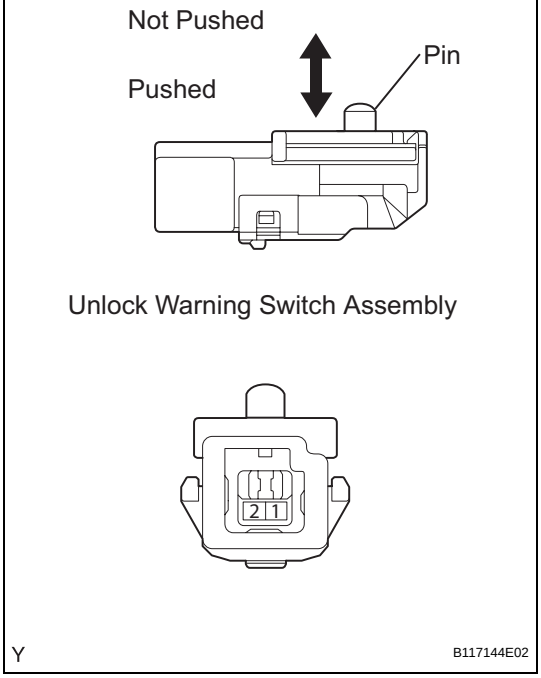
NG → REPLACE MAIN BODY ECU

OK

END (COMBINATION METER ASSEMBLY IS FAULTY)

4	INSPECT UNLOCK WARNING SWITCH ASSEMBLY

Component side:



(a) Remove the unlock warning switch assembly.
(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Not pushed	10 kΩor higher
1 - 2	Pushed	Below 1 Ω

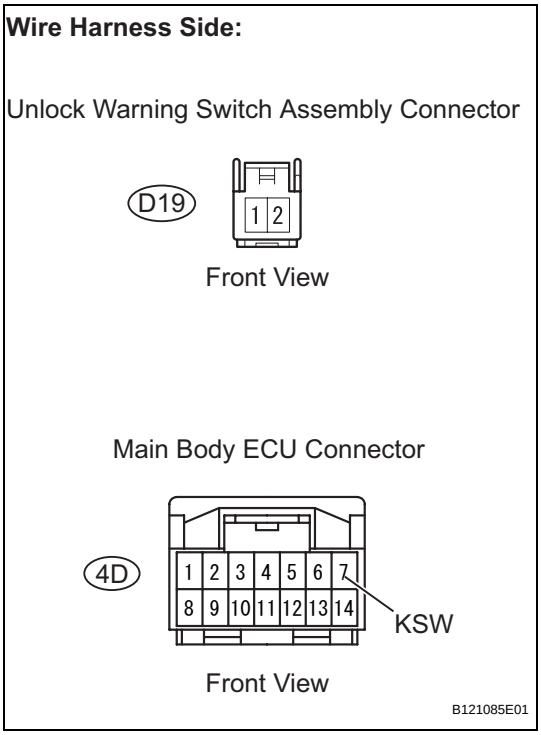
(c) Reinstall the unlock warning switch assembly.

NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

5	CHECK WIRE HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:



(a) Disconnect the D19 unlock warning switch connector.
(b) Disconnect the 4D main body ECU connector.
(c) Measure the resistance between the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
D19-1 - 4D-7 (KSW)	Below 1 Ω
D19-1 or 4D-7 (KSW) - Body ground	10 kΩor higher
D19-2 - Body ground	Below 1 Ω

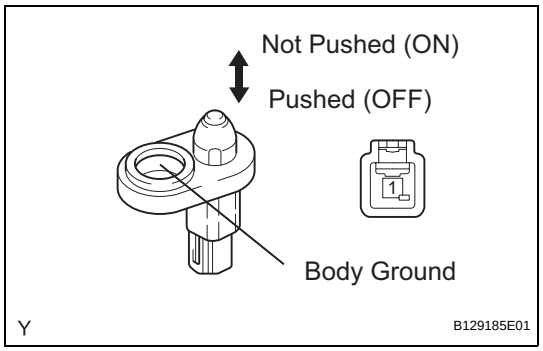
(d) Reconnect the unlock warning switch and the main body ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

6 **INSPECT FRONT DOOR COURTESY SWITCH (DRIVER SIDE)**



(a) Remove the front door courtesy switch (driver side).
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Not pushed (ON)	Below 1 Ω
1 - Body ground	Pushed (OFF)	10 kΩor higher

(c) Reinstall the front door courtesy switch.

NG → **REPLACE FRONT DOOR COURTESY SWITCH (DRIVER SIDE)**

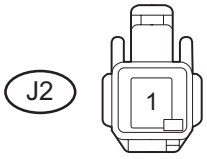
OK

DL

7	CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY SWITCH - MAIN BODY ECU)

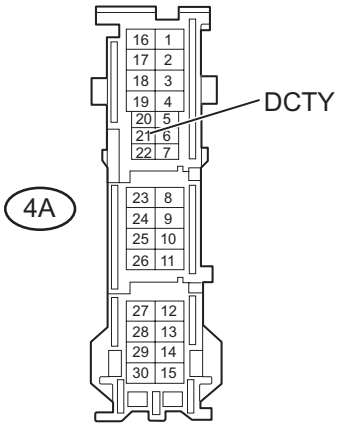
Wire Harness Side:

Front Door Courtesy Light Switch Connector (Driver Side)



Front View

Main Body ECU Connector



Front View

Y

B112021E02

(a) Disconnect the J2 front door courtesy switch connector.
(b) Disconnect the 4A main body ECU connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
J2-1 - 4A-21 (DCTY)	Below 1 Ω
J2-1 or 4A-21 (DCTY) - Body ground	10 kΩor higher

(d) Reconnect the front door courtesy switch and main body ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

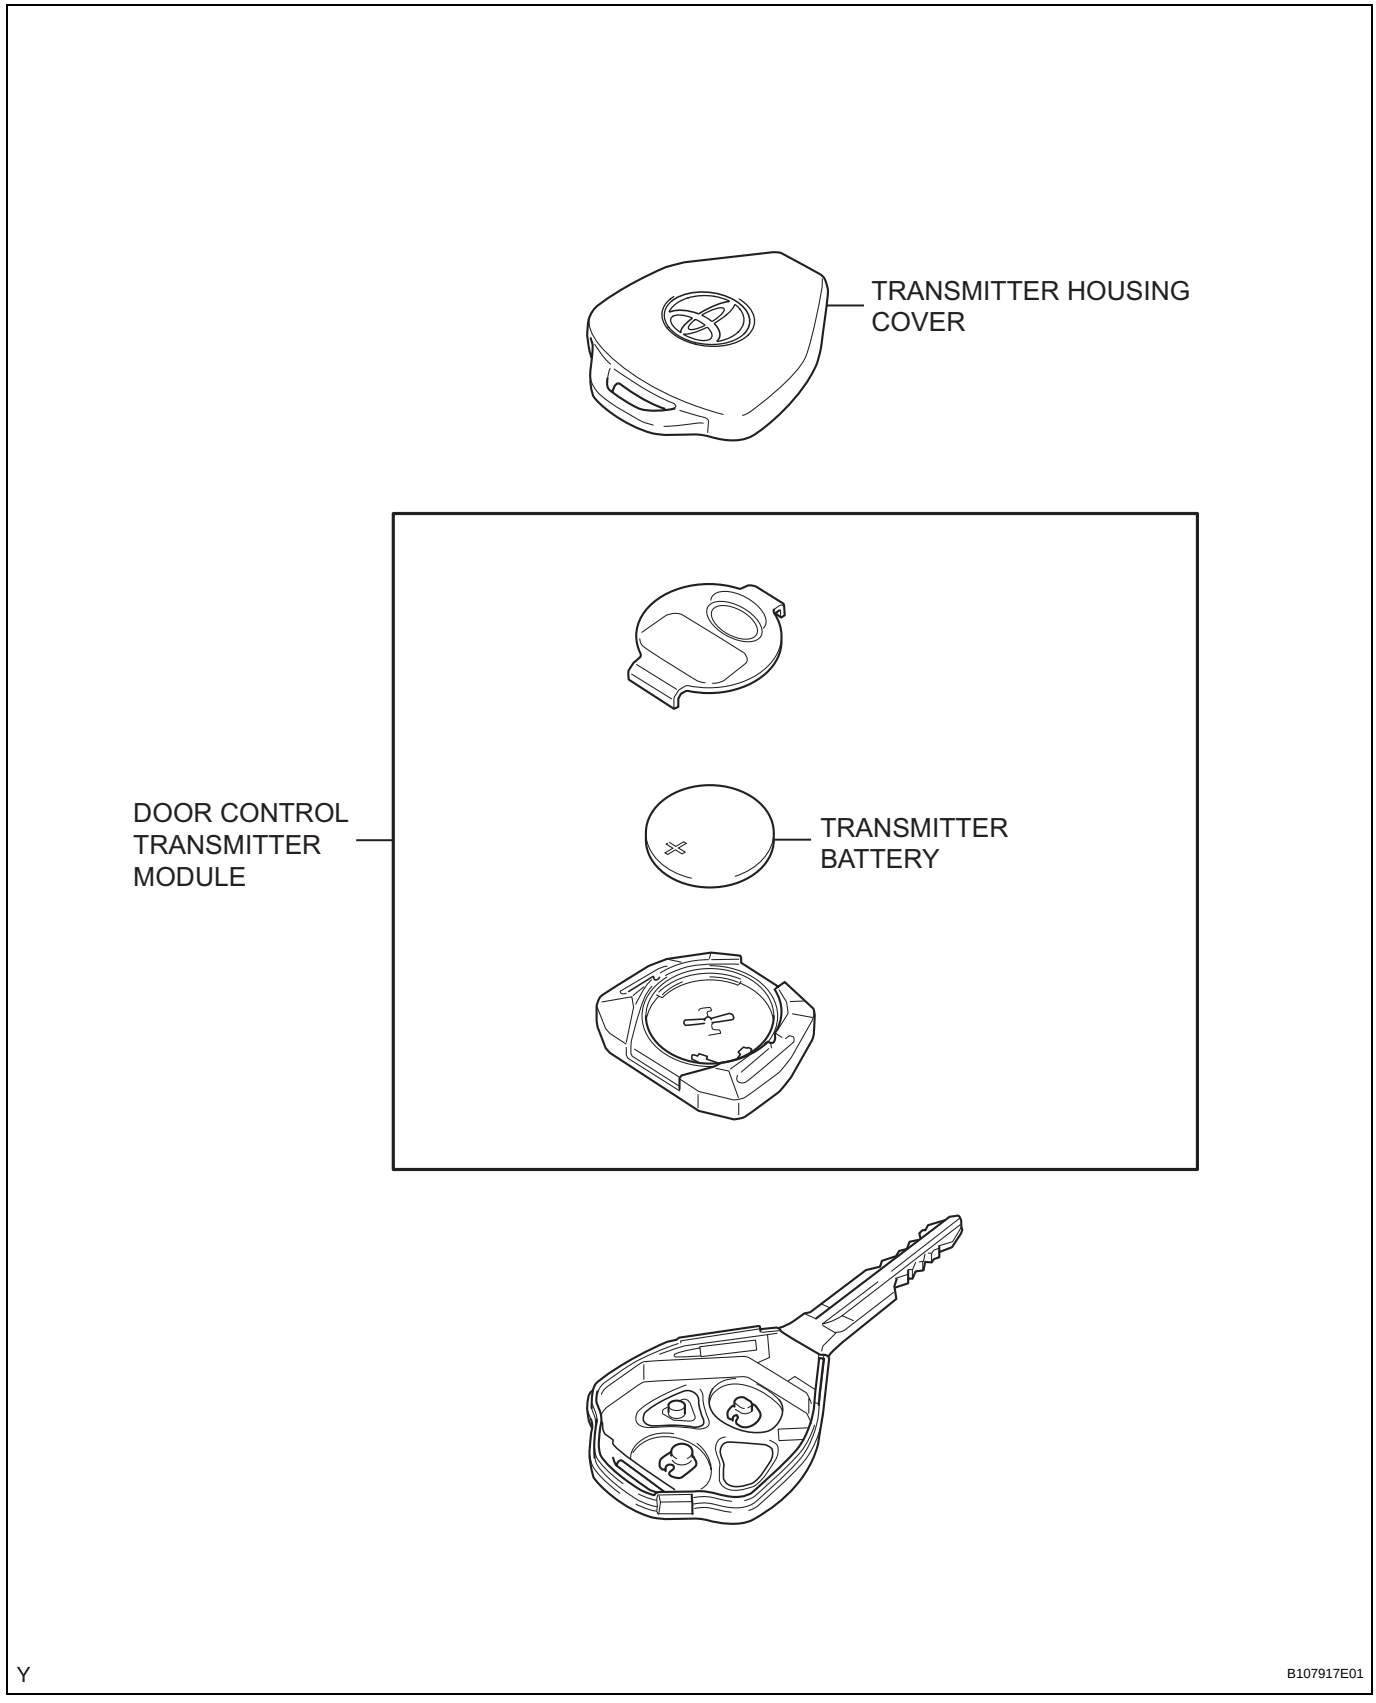
OK

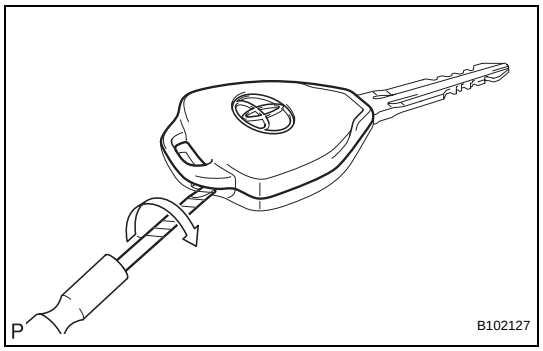
REPLACE MAIN BODY ECU

DL

TRANSMITTER BATTERY

COMPONENTS





REMOVAL

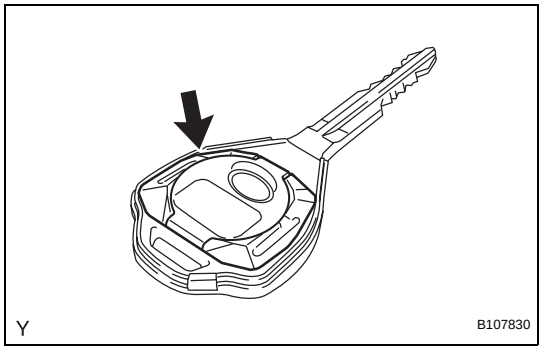
1. REMOVE TRANSMITTER BATTERY

(a) Remove the transmitter battery.

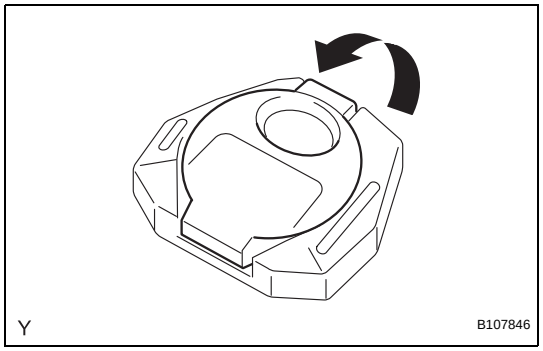
(1) Using a screwdriver with its tip wrapped in protective tape, pry apart the transmitter housing cover.

NOTICE:

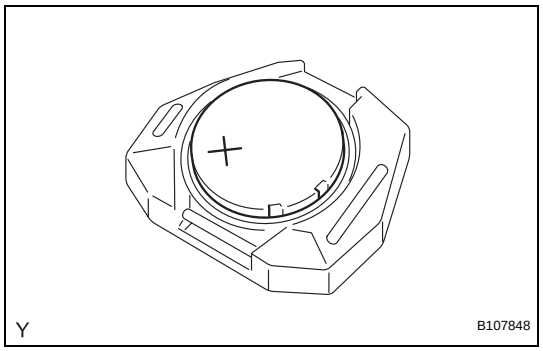
Do not use excessive force when prying apart the housing cover.



(2) Remove the door control transmitter module from the transmitter housing case.



(3) Disengage the hook and remove the transmitter battery cover.

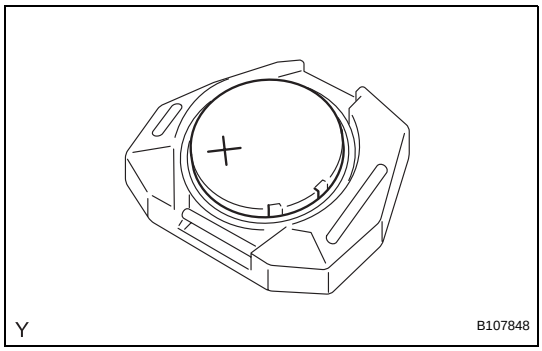


(4) Remove the battery (lithium battery: CR2016).

NOTICE:

- **Do not push the terminals with your finger.**
- **Do not use excessive force when prying up the battery (lithium battery: CR2016) as this may damage the terminals.**
- **Do not touch the battery with wet hands. Water may cause rust.**
- **Do not touch or move any components inside the transmitter as this may interfere with its proper operation.**

DL



INSTALLATION

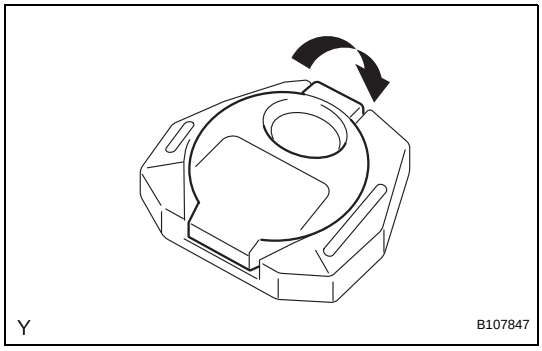
1. INSTALL TRANSMITTER BATTERY

(a) Install the transmitter battery.

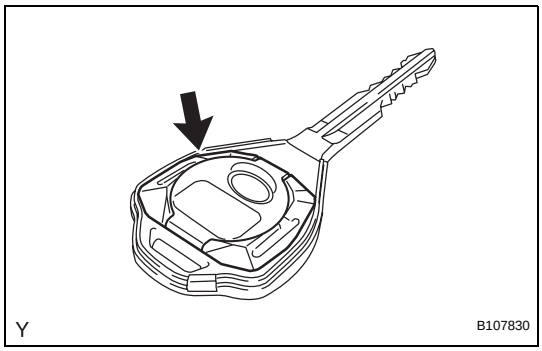
(1) Install a battery (lithium battery: CR2016) with the positive (+) side up, as shown in the illustration.

NOTICE:

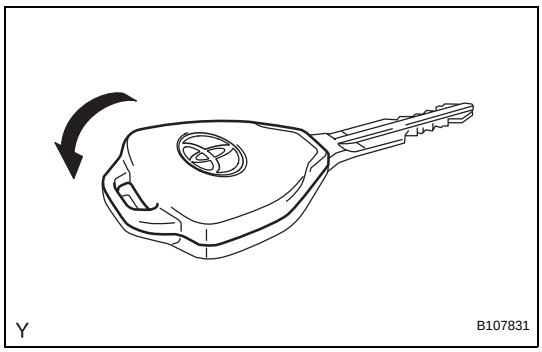
- **Make sure that the positive (+) side and the negative (-) side of the transmitter battery are correctly matched up with the transmitter terminals.**
- **Do not bend the transmitter battery electrode during insertion.**
- **Keep the transmitter cover interior free of dust and oil.**



(2) Install the cover securely.



(3) Install the door control transmitter module into the transmitter housing case.

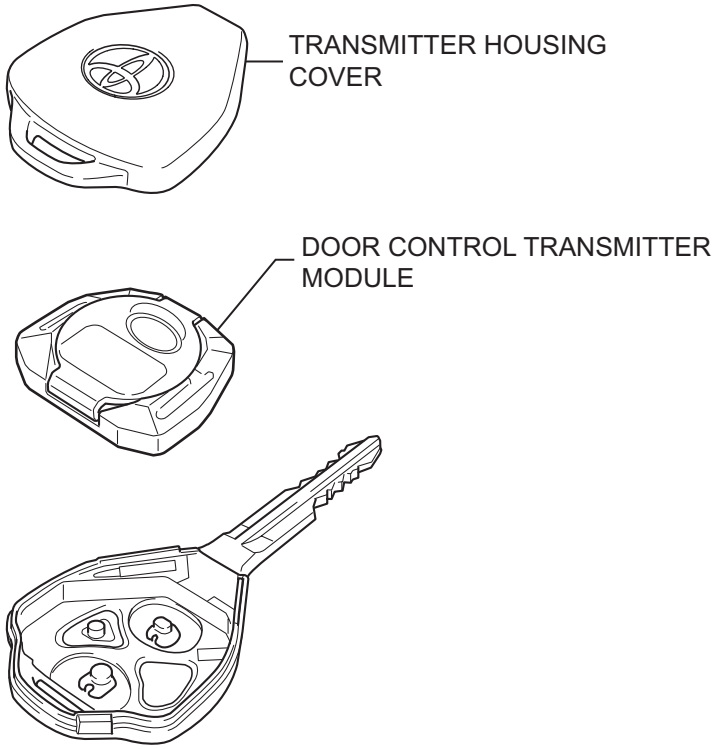


(4) Install the transmitter housing cover onto the transmitter housing case securely.

(5) After installation, press any of the transmitter switches. Check that the LED illuminates.

DOOR CONTROL TRANSMITTER MODULE

COMPONENTS



Y

B107918E01

REGISTRATION

1. REGISTER RECOGNITION CODES

HINT:

- Recognition code registration is necessary when the door control transmitter or the door control receiver is replaced with a new one.
- Add Mode is used to register new recognition codes while retaining the previously registered codes. This mode is used when new transmitters are added. If the number of registered codes exceeds 4, the previously registered codes will be erased in order, starting from the first registered code.
- Rewrite Mode is used to erase all the previously registered recognition codes in order to register new recognition codes. This mode is used when the transmitter or the door control receiver is replaced with a new one.
- Confirmation Mode is used to confirm how many recognition codes have already been registered before any additional recognition codes are registered.
- Prohibition Mode is used to erase all the registered codes and disable the wireless door lock function. This mode is used when the transmitters are lost.
- The registration procedure described on the following pages must be performed in order.

(a) Check that the following conditions are met.
- No key in the ignition key cylinder.
- Only driver side door is open.

(b) Insert the key into the ignition key cylinder, and remove it twice within 5 seconds.

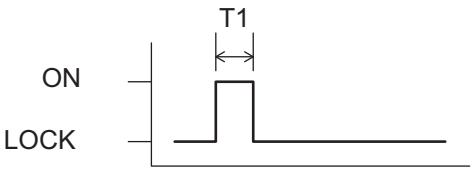
(c) Perform the following operations within 40 seconds.
(1) Close and open the driver side door twice.
(2) Insert the key into the ignition key cylinder, then remove it.

(d) Perform the following operations within 40 seconds.
(1) Close and open the driver side door twice.
(2) Insert the key into the ignition key cylinder and close all doors.

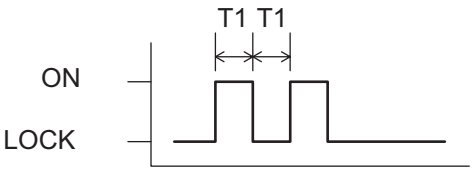
(e) Perform the following operations within 40 seconds.
(1) Turn the ignition switch from LOCK to ON and back to LOCK 1 to 5 times at approximately 1 second intervals to select a mode (see the table below).

Number of ON-LOCK operations of ignition switch:

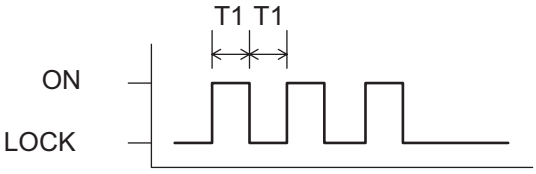
Add Mode ON-LOCK operation: Once



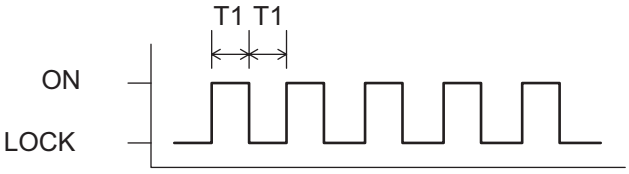
Rewrite Mode ON-LOCK operation: Twice



Confirmation Mode ON-LOCK operation: 3 times



Prohibition Mode ON-LOCK operation: 5 times



T1: Approximately 1 second

B111914E03

HINT:
If the number of ignition switch ON-LOCK operations is 0, 4, 6 or more, there will be no response (power DOOR LOCK and UNLOCK operation) to show which mode has been selected.

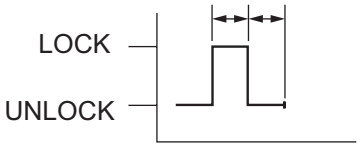
(2) Remove the key from the ignition key cylinder.

DL

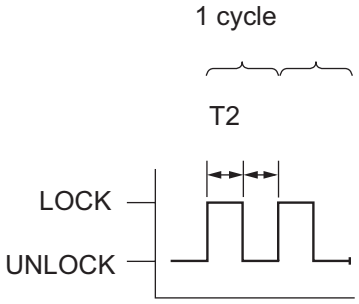
(f) The main body ECU automatically performs power door LOCK-UNLOCK operations to indicate which mode has been selected.

Response to mode selection (Power door lock operation):

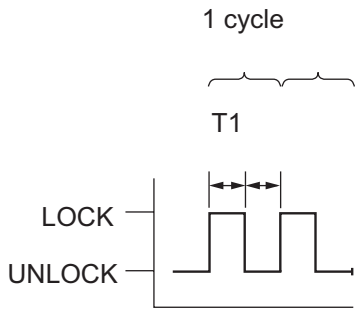
Add Mode LOCK-UNLOCK operation: Once



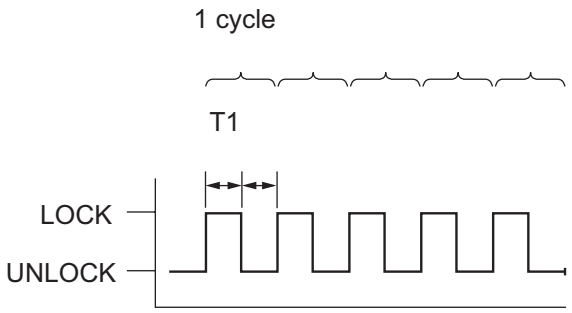
Confirmation Mode LOCK-UNLOCK operation: The number of registered codes (1 to 5 times)



Rewrite Mode LOCK-UNLOCK operation: Twice



Prohibition Mode LOCK-UNLOCK operation: 5 times



T1: Approximately 1 second T2: Approximately 2 seconds

Y

B106703E01

HINT:

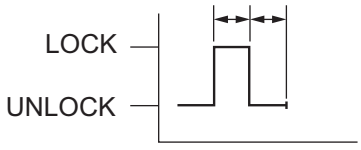
- In Confirmation Mode, LOCK-UNLOCK operation will occur once for each recognition code that has been registered. For example, if 2 recognition codes have been registered, the LOCK-UNLOCK operation will occur twice.
- In Confirmation Mode, if no recognition codes have been registered, LOCK-UNLOCK operation will occur 11 times.
- If Confirmation Mode or Prohibition Mode is selected, the operation ends after the response to the selected mode is completed.

(g) Register a new recognition code (Add Mode or Rewrite Mode) in accordance with the following procedure.
  (1) Within 45 seconds of Add Mode or Rewrite Mode being selected, press the LOCK and UNLOCK switches on the transmitter switch of the key simultaneously for 1.0 to 1.5 seconds. Within 3 seconds of moving your finger away from the switches, press either switch of the key for more than 1.0 second.
  (2) Within 5 seconds of the transmitter switch being released, the LOCK-UNLOCK operation will be automatically performed once if the registration of the recognition code is correctly completed. If the LOCK-UNLOCK operation is performed twice, the registration of the recognition code has failed, so perform the registration procedure from the beginning once again.

Response to registration completion:

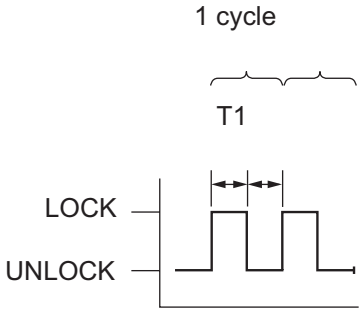
LOCK-UNLOCK Occurs Once

Registration of recognition code has been completed.



LOCK-UNLOCK Occurs Twice

Registration of recognition code has failed.



T1: Approximately 1 second

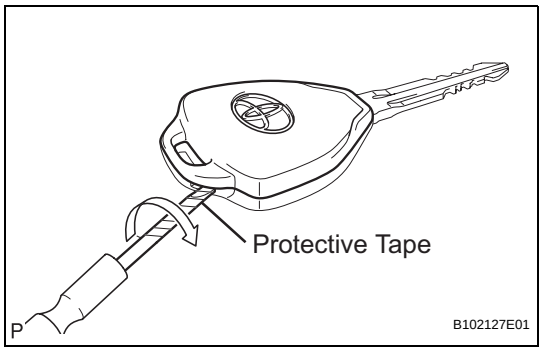
Y

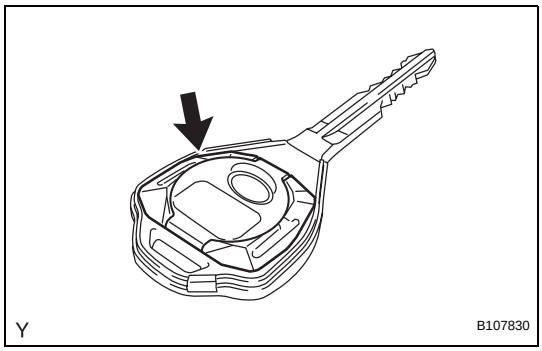
B106704E01

(h) If multiple transmitters need to be registered, repeat the registration of a new recognition code procedure within 45 seconds of the previous registration.
(i) If any of the following conditions is met, the registration mode will end.
  (1) The key is inserted into the ignition key cylinder.
  (2) Any doors are opened.

(3) 45 seconds or more elapse after code registration.

(j) Registration of the recognition codes (Add Mode and Rewrite Mode) is completed.





REMOVAL

1. REMOVE DOOR CONTROL TRANSMITTER MODULE

(a) Remove the door control transmitter module.

(1) Using a screwdriver with its tip wrapped in protective tape, pry apart the transmitter housing cover.

NOTICE:
Do not use excessive force when prying apart the housing cover.

(2) Remove the door control transmitter module from the transmitter housing case.

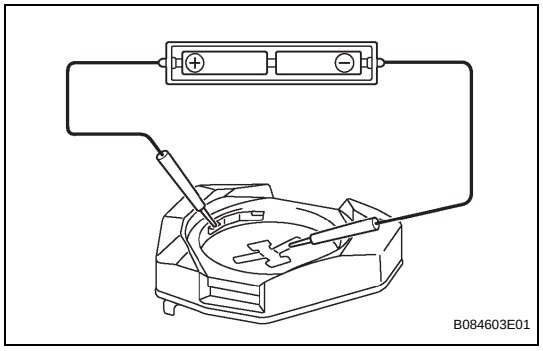
INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER MODULE

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter.

(2) Install a new or normal battery (lithium battery).



(3) If a new or normal battery is not available, connect 2 new 1.5 V batteries in series. Connect the positive (+) battery electrode to the battery receptacle side terminal, and the negative (-) battery electrode to the bottom terminal, and apply a voltage of 3 V to the transmitter.

(4) In a location that is approximately 1 m (3.28ft.) away from the driver side outside door handle, point the key plate of the transmitter at the vehicle and check operation of the transmitter by pressing the transmitter switches on the transmitter body.

Standard:

The door lock/unlock can be operated via remote control.

The LED illuminates when each switch is pressed.

HINT:

- The minimum operational distance differs depending on the way the transmitter is held and the location.
- Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or a strong electric wave occurs in the area where the frequency is used.

(5) Install the battery (lithium battery).

(b) Inspect the battery capacity.

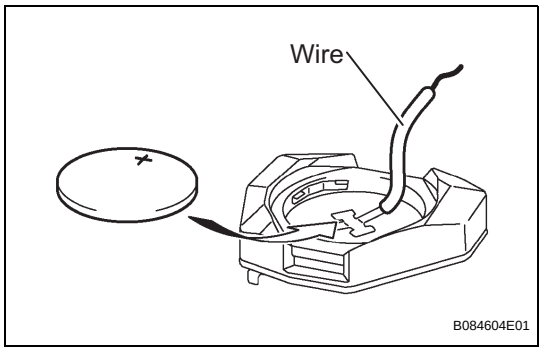
HINT:

- The capacity of the battery can be checked only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed without the battery installed in the transmitter. Therefore, it is necessary to measure the voltage with the battery installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery) to check the amount of energy left in the battery.
- If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.

(1) Remove the battery (lithium battery) from the transmitter.

(2) Connect the lead to the negative (-) terminal of the transmitter and install the battery.

DL



(3) Connect the positive (+) tester probe to the positive (+) side of the battery (lithium battery) and the negative (-) tester probe to the lead respectively.
(4) Press one of the transmitter switches on the transmitter for approximately 1 second.
(5) Press the same or another transmitter switch again and check the voltage.
Standard Voltage:
2.2 V or higher
HINT:
- If the temperature of the battery is low, the inspection cannot be performed correctly. If the result of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- The automatic power-off function causes the battery voltage to be 2.5 V or more (a voltage with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, read the voltage immediately after the switch is pressed.

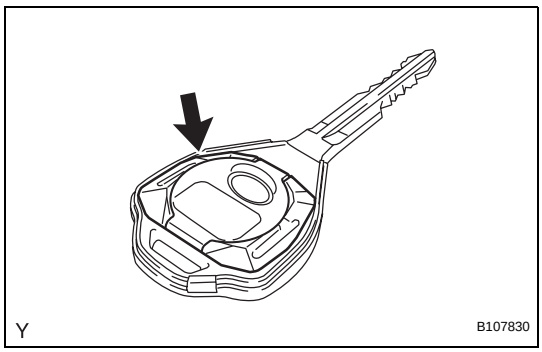
(6) Remove the lead.
(7) Set the battery (lithium battery) in the transmitter.

DL

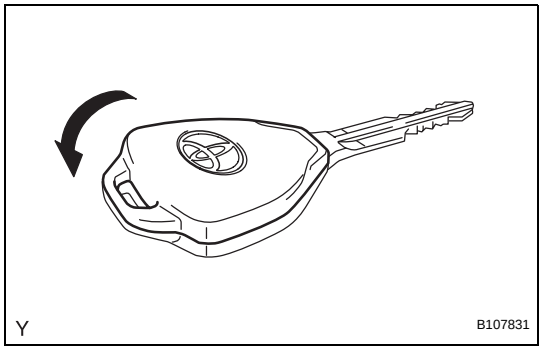
INSTALLATION

1. INSTALL DOOR CONTROL TRANSMITTER MODULE

(a) Install the door control transmitter module.
(1) Install the door control transmitter module into the transmitter housing case.



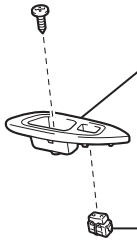
(2) Install the transmitter housing cover onto the transmitter housing case securely.



DOOR CONTROL SWITCH (for Sedan)

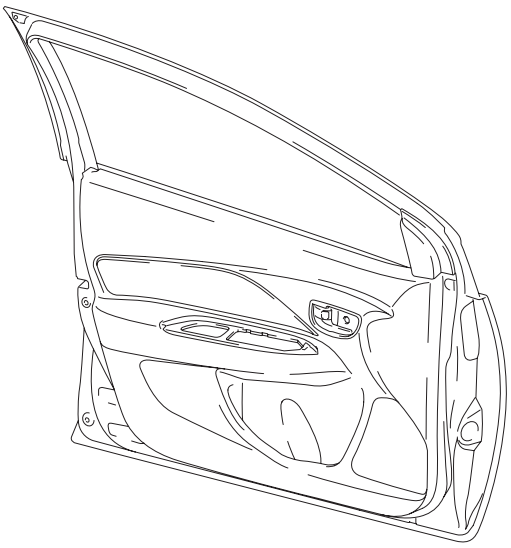
COMPONENTS

w/o Power Window:

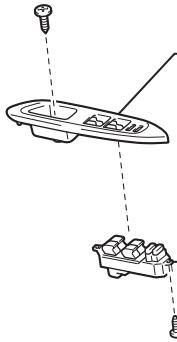


FRONT ARMREST BASE UPPER PANEL

DOOR CONTROL SWITCH



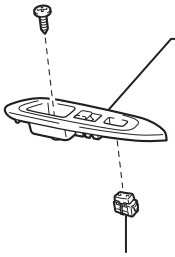
for Driver Side with Power Window:



FRONT ARMREST BASE UPPER PANEL

POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

for Front Passenger Side with Power Window:



FRONT ARMREST BASE UPPER PANEL

DOOR CONTROL SWITCH

B144409E01

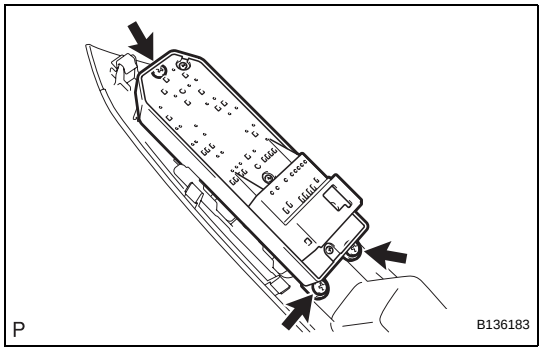
DL

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

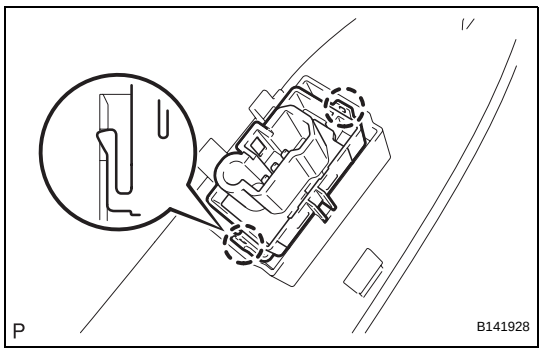
2. **REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)**

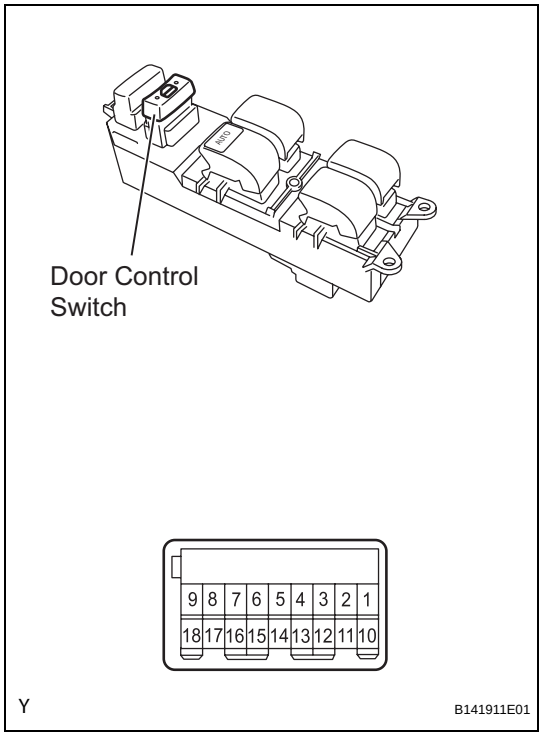
3. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Window)**
   (a) Remove the 3 screws and the power window regulator master switch.



4. **REMOVE DOOR CONTROL SWITCH**
   (a) for Front passenger side with power window:
   Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the door control switch.

   (b) w/o Power window:
   Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the door control switch.





INSPECTION

1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

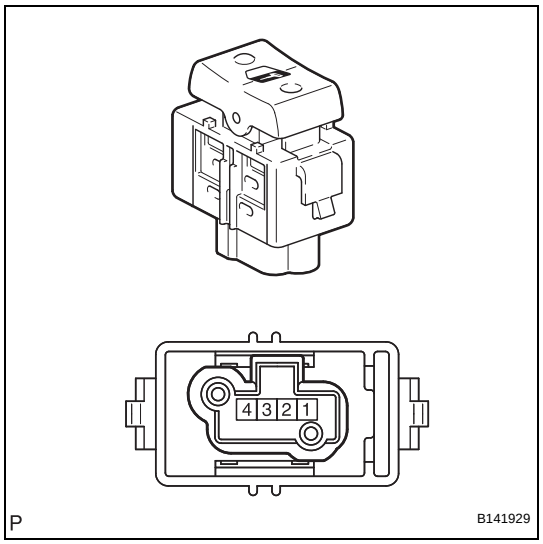
(a) Check the resistance of the door control switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	LOCK	Below 1 Ω
1 - 2	OFF	10 kΩ or higher
1 - 9	OFF	10 kΩ or higher
1 - 9	UNLOCK	Below 1 Ω

If the result is not as specified, replace the power window regulator master switch.



2. INSPECT DOOR CONTROL SWITCH

(a) Check the resistance of the door control switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

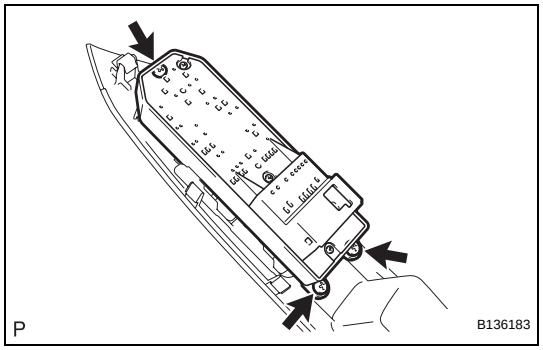
Tester Connection	Switch Condition	Specified Condition
3 - 4	LOCK	Below 1 Ω
3 - 4	OFF	10 kΩ or higher
2 - 4	OFF	10 kΩ or higher
2 - 4	UNLOCK	Below 1 Ω

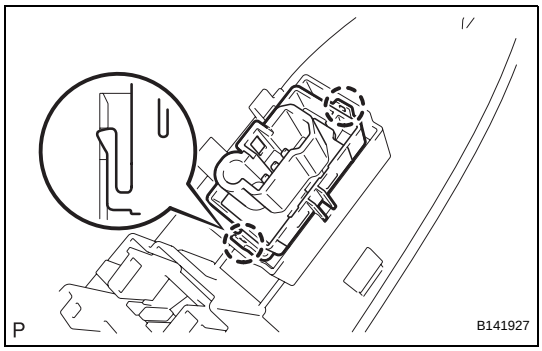
If the result is not as specified, replace the door control switch.

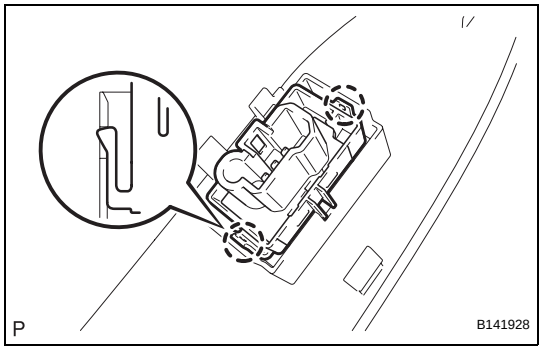
INSTALLATION

1. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Window)

(a) Install the power window regulator master switch with the 3 screws.







2. INSTALL DOOR CONTROL SWITCH

(a) for Front passenger side with power window:
Engage the 2 claws and install the door control switch.

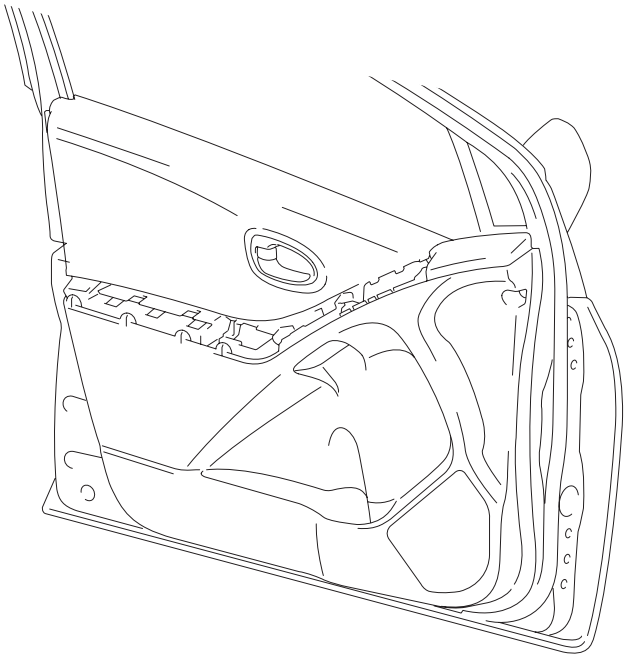
(b) w/o Power window:
Engage the 2 claws and install the door control switch.

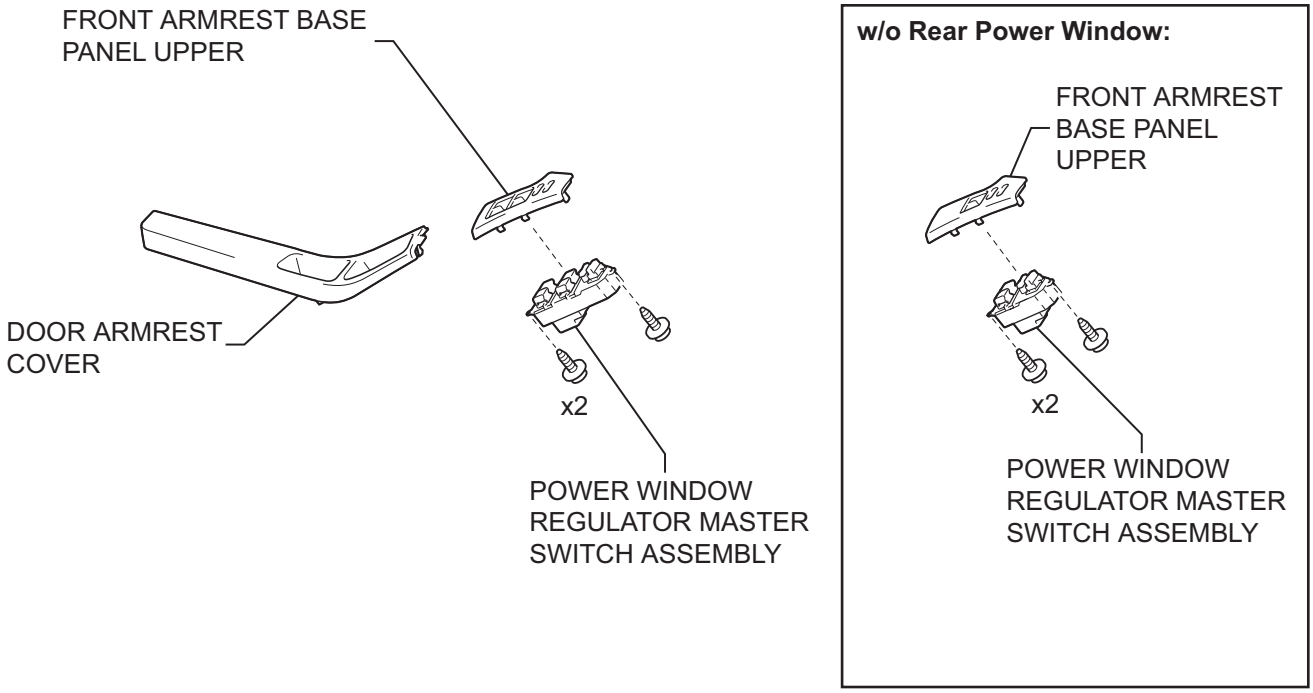
3. INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-28)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

DOOR CONTROL SWITCH (for Hatchback Driver Door Side)

COMPONENTS





P

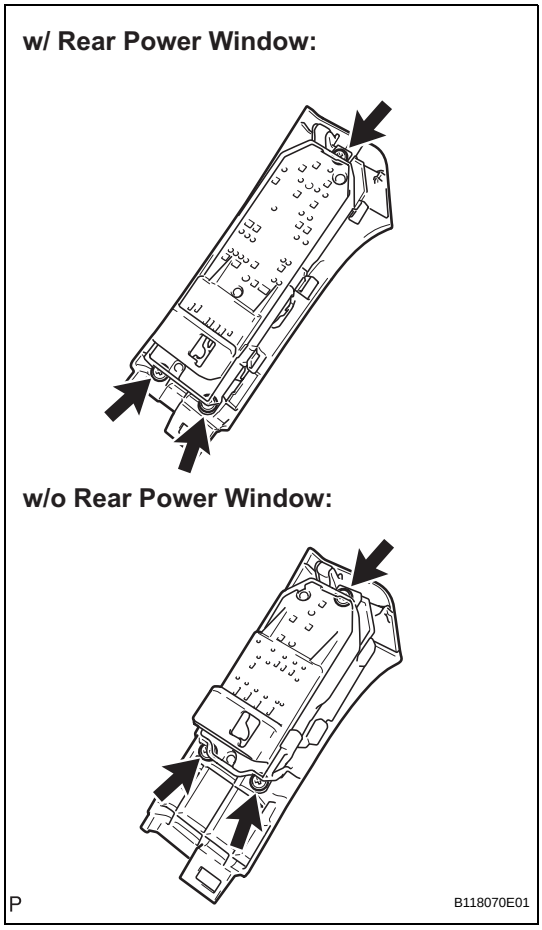
B121528E01

REMOVAL

HINT:

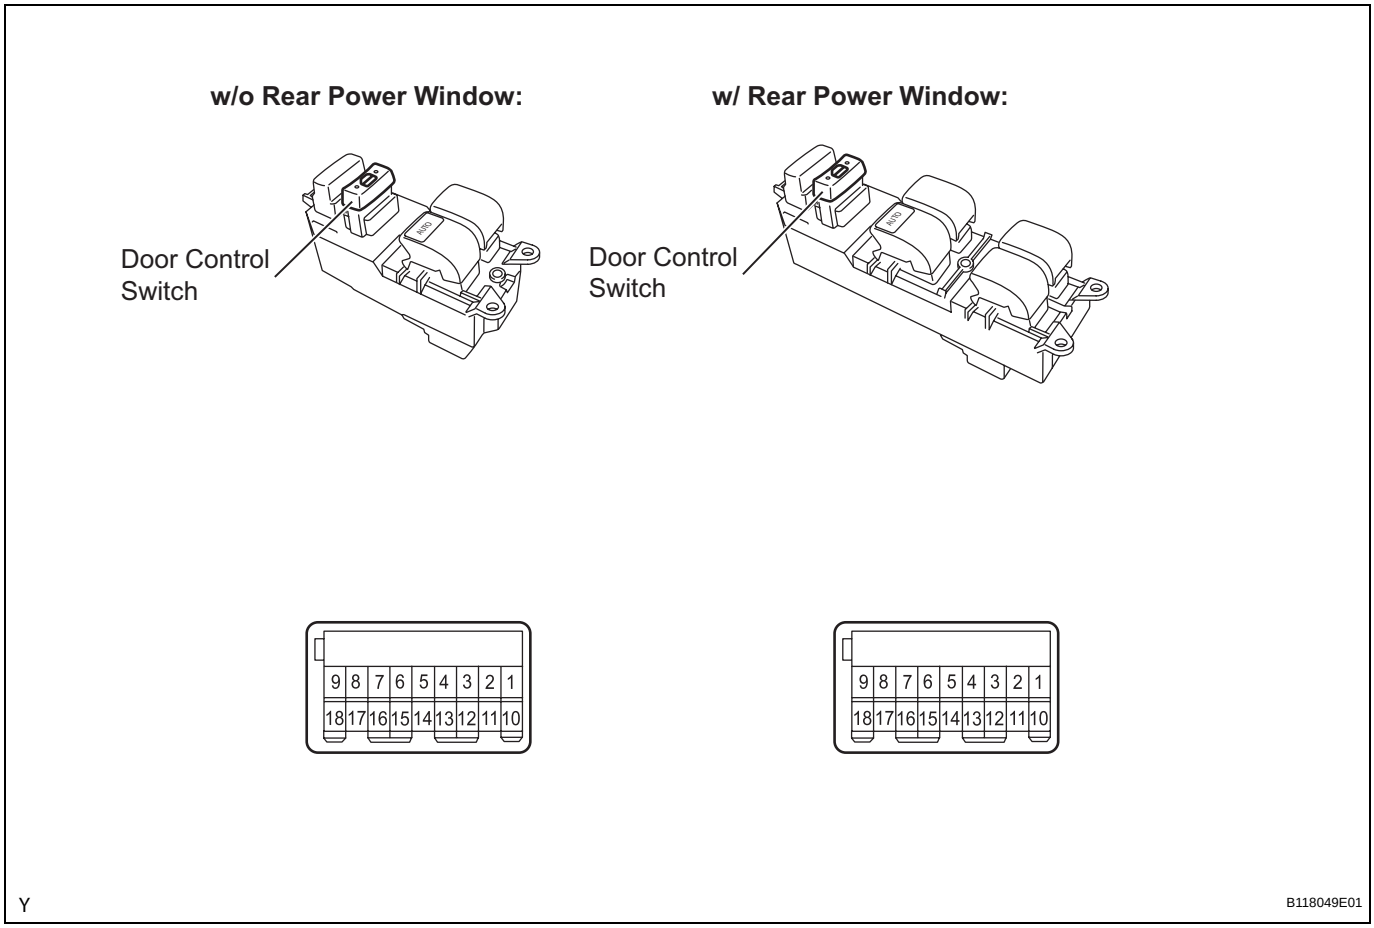
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE DOOR ARMREST COVER (See page ED-33)**
3. **REMOVE FRONT ARMREST BASE PANEL UPPER (See page ED-33)**
4. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Remove the 3 screws and the power window regulator master switch.



INSPECTION

1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY



(a) Check the resistance of the door lock switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance:
w/ Rear power window

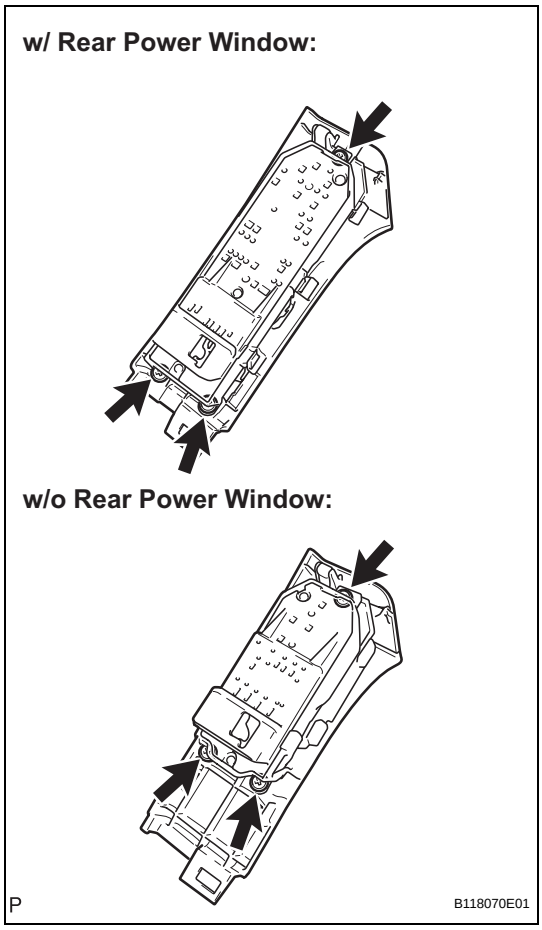
Tester Connection	Switch Condition	Specified Condition
1 - 2	Locked	Below 1 Ω
-	OFF	10 kΩ or higher
1 - 9	Unlocked	Below 1 Ω

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:
w/o Rear power window

Tester Connection	Switch Condition	Specified Condition
1 - 7	Locked	Below 1 Ω
-	OFF	10 kΩ or higher
7 - 9	Unlocked	Below 1 Ω

If the result is not as specified, replace the power window regulator master switch.

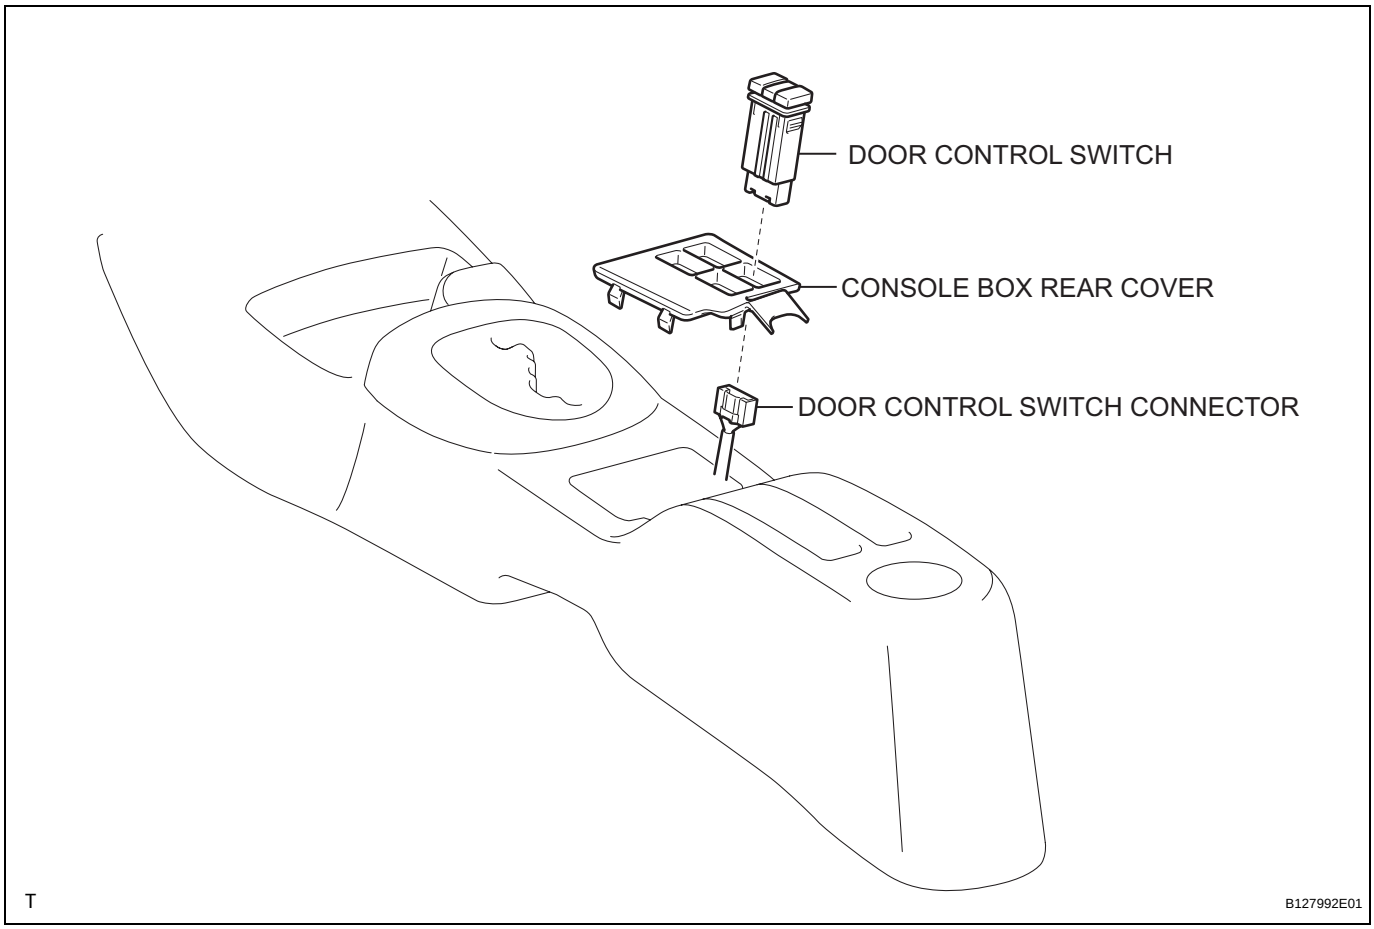


INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Install the power window regulator master switch with the 3 screws.
2. **INSTALL FRONT ARMREST BASE PANEL UPPER (See page ED-53)**
3. **INSTALL DOOR ARMREST COVER (See page ED-53)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

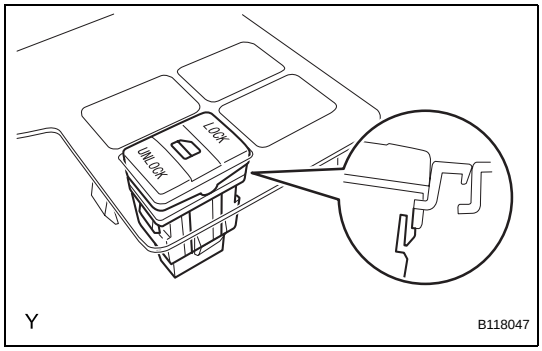
DOOR CONTROL SWITCH (for Hatchback Center Consol Side)

COMPONENTS



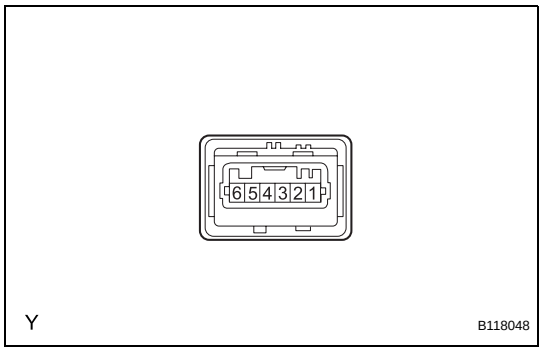
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CONSOLE BOX REAR COVER (See page IP-68)**
3. **REMOVE DOOR CONTROL SWITCH**
   (a) Disengage the 2 claws and remove the door control switch.



INSPECTION

1. **INSPECT DOOR CONTROL SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

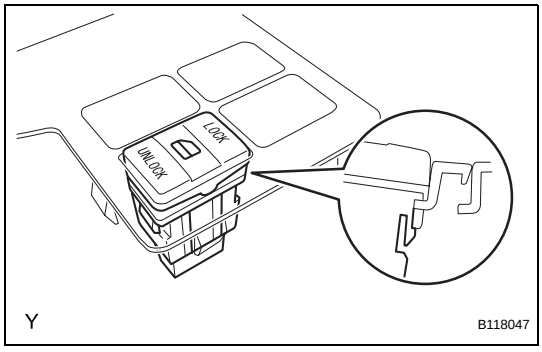


Tester Connection	Condition	Specified Condition
3 - 5	Locked	10 kΩ or higher
3 - 5	Unlocked	Below 1 Ω
4 - 5	Locked	Below 1 Ω
4 - 5	Unlocked	10 kΩ or higher
1 - 6	Illumination Circuit	Below 1 Ω

      If the result is not as specified, replace the door control switch.
   (b) Check the illumination operation.
      (1) Connect the positive (+) battery lead to terminal 6 and the negative (-) battery lead to terminal 1, then check that the illumination comes on.
      Standard:
      Illumination comes on.
      If the illumination does not come on, replace the door control switch.

INSTALLATION

1. **INSTALL DOOR CONTROL SWITCH**
   (a) Engage the 2 claws and install the door control switch.
2. **INSTALL CONSOLE BOX REAR COVER (See page IP-79)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



UNLOCK WARNING SWITCH

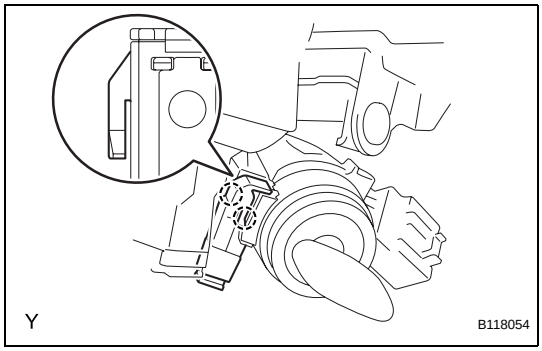
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE STEERING COLUMN COVER (See page ST-40)**
3. **REMOVE UN-LOCK WARNING SWITCH ASSEMBLY**
   (a) Insert the key into the ignition key cylinder.
   (b) Disconnect the connector.
   (c) Using a screwdriver with its tip wrapped with protective tape, disengage the 2 claws and remove the unlock warning switch.

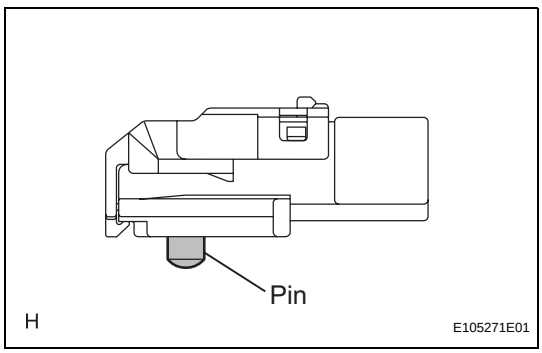


INSPECTION

1. **INSPECT UN-LOCK WARNING SWITCH ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Condition	Specified Condition
1 - 2	Pin released	10 kΩ or higher
1 - 2	Pin pushed in	Below 1 Ω

If the result is not as specified, replace the unlock warning switch.



INSTALLATION

1. **INSTALL UN-LOCK WARNING SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the unlock warning switch.
   (b) Connect the connector.
2. **INSTALL STEERING COLUMN COVER (See page ST-42)**

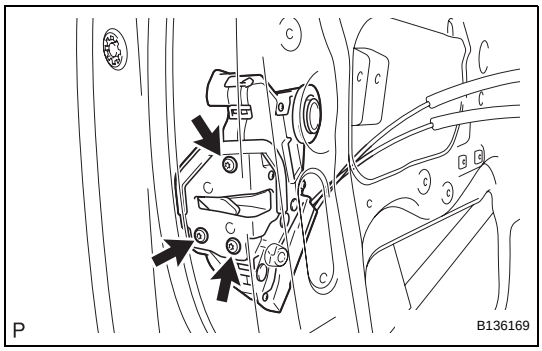
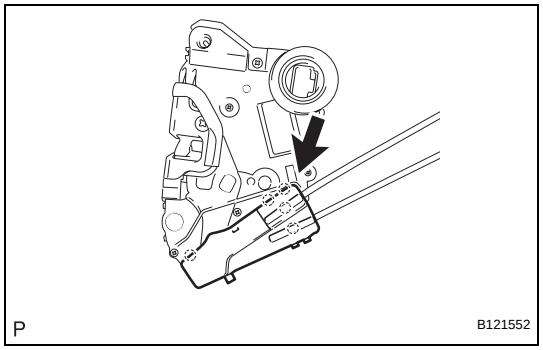
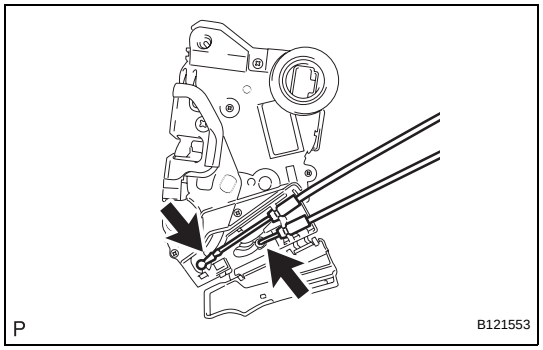
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-11)**
6. **REMOVE OUTER REAR VIEW MIRROR (See page MI-8)**
7. **REMOVE FRONT DOOR BELT MOULDING (See page ET-85)**
8. **REMOVE FRONT DOOR TRIM BRACKET (See page ED-12)**
9. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-12)**
10. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-12)**
11. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-13)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-14)**
13. **REMOVE FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER (See page ED-14)**
14. **REMOVE FRONT DOOR OUTSIDE HANDLE COVER (See page ED-15)**
15. **REMOVE FRONT DOOR LOCK**
    (a) Using "Torx" socket wrench T30, loosen the 3 screws.
    NOTICE:
    Do not drop or damage the front door lock when removing the screws.
    (b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.
    HINT:
    Remove the front door lock through the service hole.

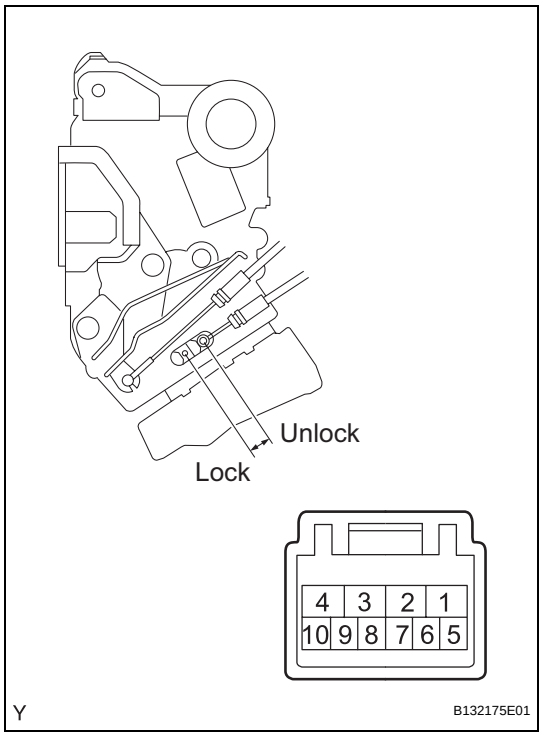




(c) Open the cover.



(d) Disconnect the front door lock remote control cable and the front door inside locking cable.
(e) Remove the door lock wire harness seal.



INSPECTION

1. INSPECT FRONT DOOR LOCK ASSEMBLY LH

(a) w/ Power door lock:
Check the operation.
(1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Locks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlocks

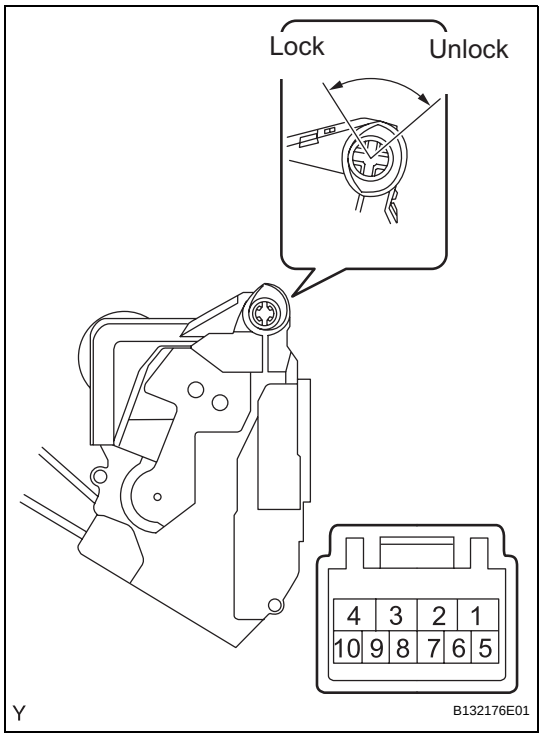
If the result is not as specified, replace the front door lock.

(b) Check the resistance of the unlock detection switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 8	Locked	10 kΩ or higher
7 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.

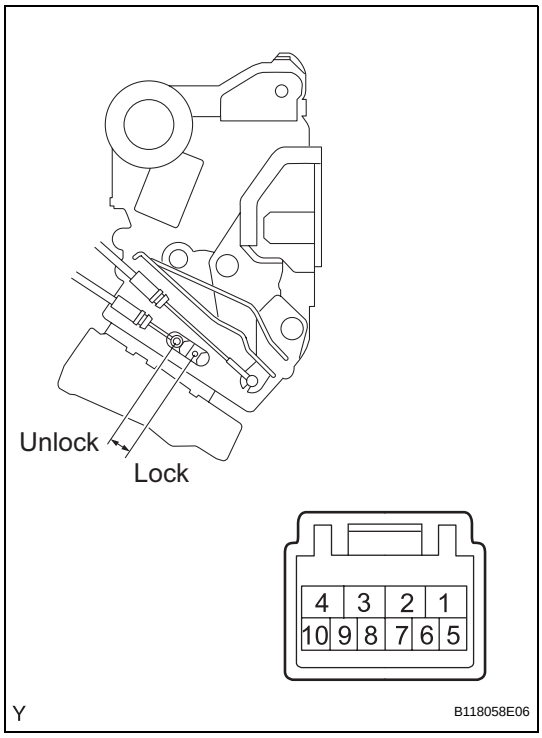
DL



(c) Check the resistance of the door lock and unlock switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 9	Locked	Below 1 Ω
7 - 9	Unlocked	10 kΩ or higher
7 - 10	Locked	10 kΩ or higher
7 - 10	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



2. INSPECT FRONT DOOR LOCK ASSEMBLY RH

(a) w/ Power door lock:
Check the operation.
(1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.
Standard

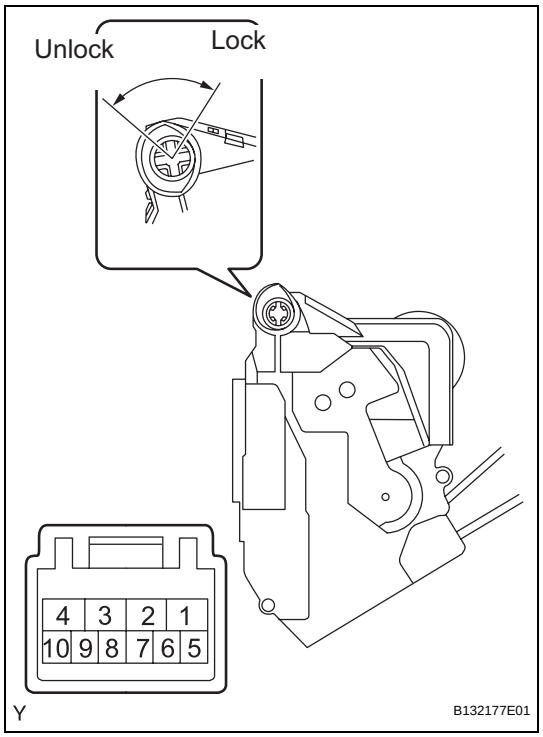
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Locks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlocks

If the result is not as specified, replace the front door lock.

(b) Check the resistance of the unlock detection switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 8	Locked	10 kΩ or higher
7 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



(c) Check the resistance of door lock and unlock switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
6 - 8	Locked	Below 1 Ω
6 - 8	Unlocked	10 kΩ or higher
5 - 8	Locked	10 kΩ or higher
5 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.

DL

INSTALLATION

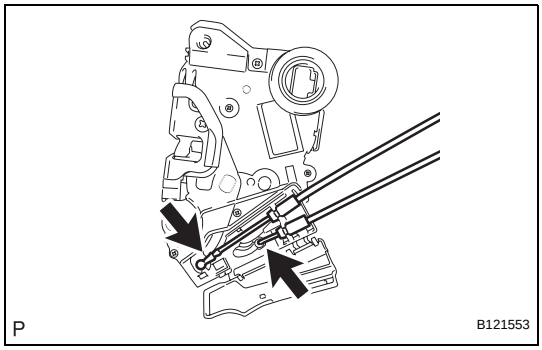
1. INSTALL FRONT DOOR LOCK

NOTICE:

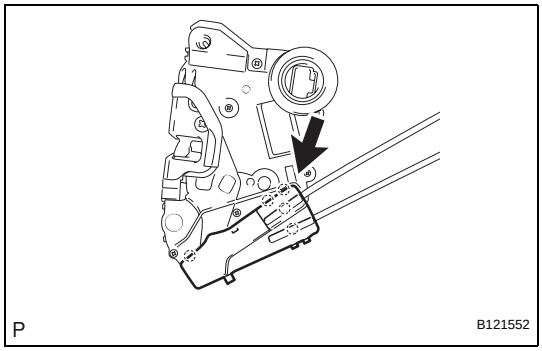
- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**
- **Make sure that no grease or dirt adheres to the packing surface in the connecting part.**

(a) Apply MP grease to the sliding and rotating areas of the front door lock.

(b) Connect the front door lock remote control cable and the front door inside locking cable.



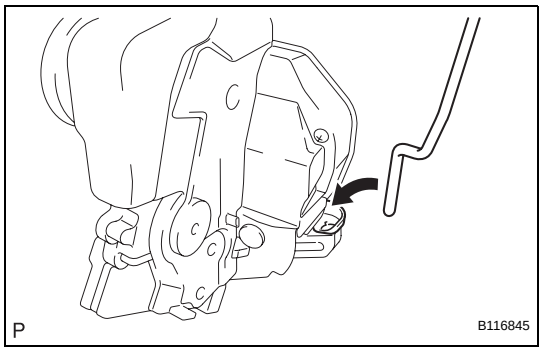
(c) Close the cover.



(d) Insert the door lock open rod into the front door lock, then set it to the door panel.

NOTICE:

Make sure that the outside handle link is securely engaged with the door lock.



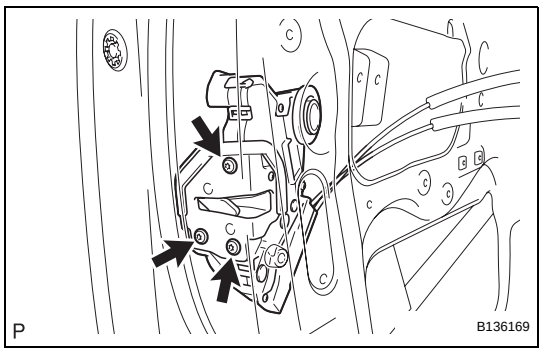
(e) Apply adhesive to the threads of the screws.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

(f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.

Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



2. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (See page ED-23)

3. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER (See page ED-23)
4. INSTALL FRONT DOOR GLASS RUN (See page ED-23)
5. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-24)
6. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-24)
7. INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-25)
8. INSTALL FRONT DOOR TRIM BRACKET (See page ED-25)
9. INSTALL FRONT DOOR BELT MOULDING (See page ET-86)
10. INSTALL OUTER REAR VIEW MIRROR (See page MI-11)
11. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-26)
12. INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-28)
13. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-28)
14. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-29)
15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT DOOR LOCK (for Hatchback)

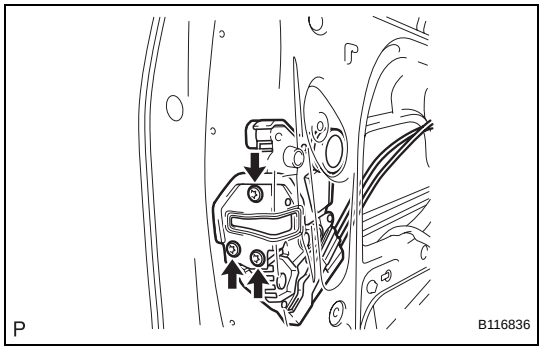
REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure listed below is for the LH side.

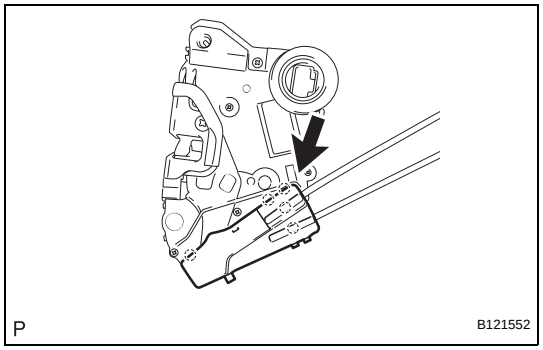
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-57)**
3. **REMOVE DOOR ARMREST COVER (See page ED-33)**
4. **REMOVE FRONT ARMREST BASE PANEL UPPER (See page ED-33)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-114)**
7. **REMOVE FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)**
8. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)**
9. **REMOVE FRONT DOOR BELT MOULDING (See page ET-91)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-36)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-36)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-37)**
13. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window) (See page ED-37)**
14. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/o Power Window) (See page ED-60)**
15. **REMOVE FRONT DOOR CHECK ASSEMBLY (See page ED-37)**
16. **REMOVE FRONT DOOR WEATHERSTRIP (See page ED-38)**
17. **REMOVE FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER (See page ED-38)**
18. **REMOVE FRONT DOOR OUTSIDE HANDLE COVER (See page ED-39)**



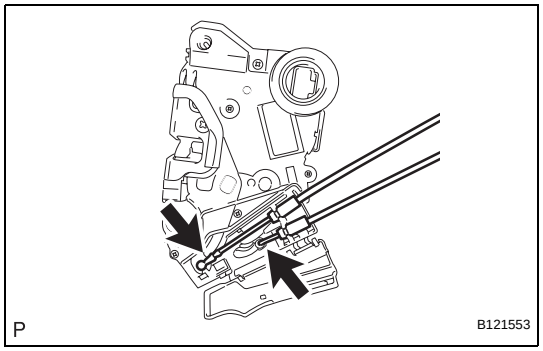
19. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Using "Torx" socket wrench T30, loosen the 3 screws.

(b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.

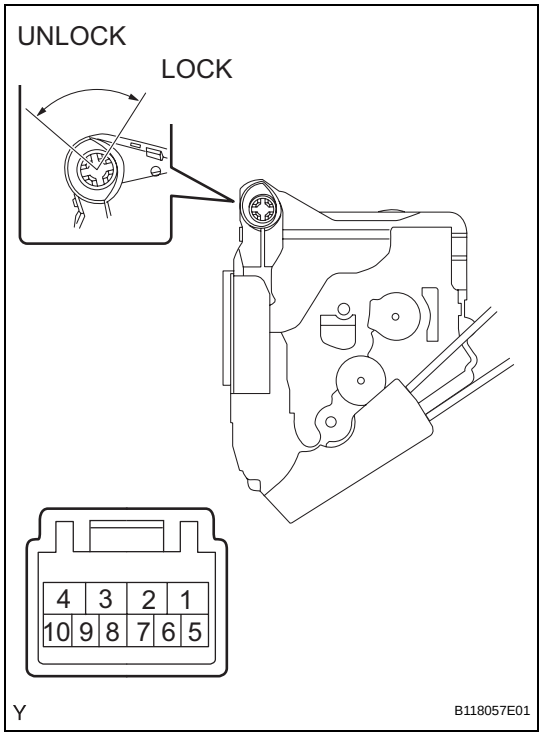


(c) Disengage the 5 claws and open the cover.



(d) Disconnect the front door lock remote control cable and the front door inside locking cable.

(e) Remove the door lock wire harness seal.



INSPECTION

1. INSPECT FRONT DOOR LOCK ASSEMBLY LH (w/ Theft Deterrent System)

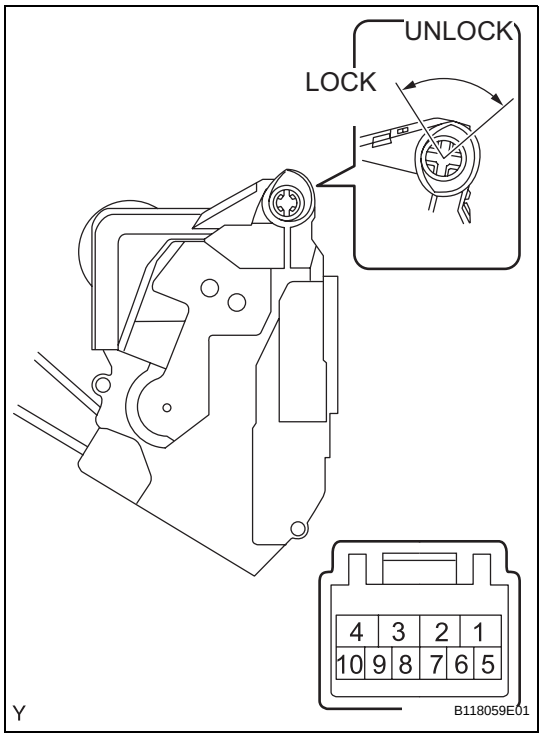
(a) Check the resistance of the unlock detection switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 8	Locked	10 kΩ or higher
7 - 8	Unlocked	Below 1 Ω

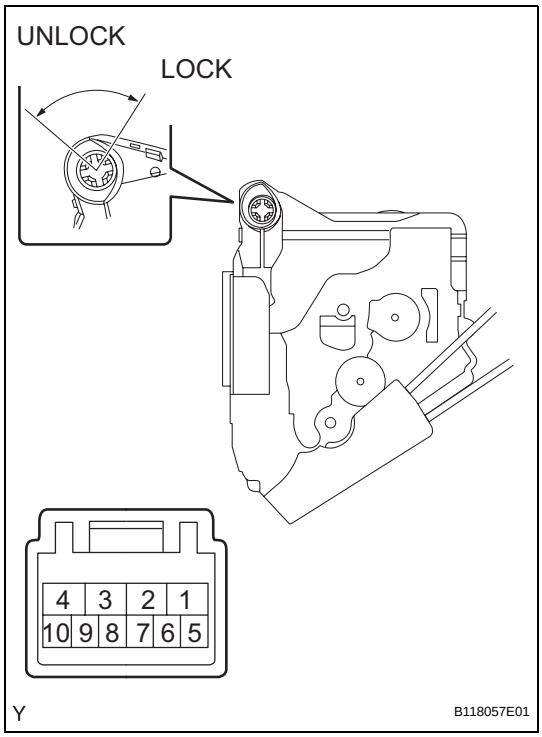
If the result is not as specified, replace the front door lock.



(b) Check the resistance of the door lock and unlock switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 9	Locked	Below 1 Ω
7 - 9	Unlocked	10 kΩ or higher
7 - 10	Locked	10 kΩ or higher
7 - 10	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



2. INSPECT FRONT DOOR LOCK ASSEMBLY LH (w/o Theft Deterrent System)
(a) Check the operation.
(1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.
Standard

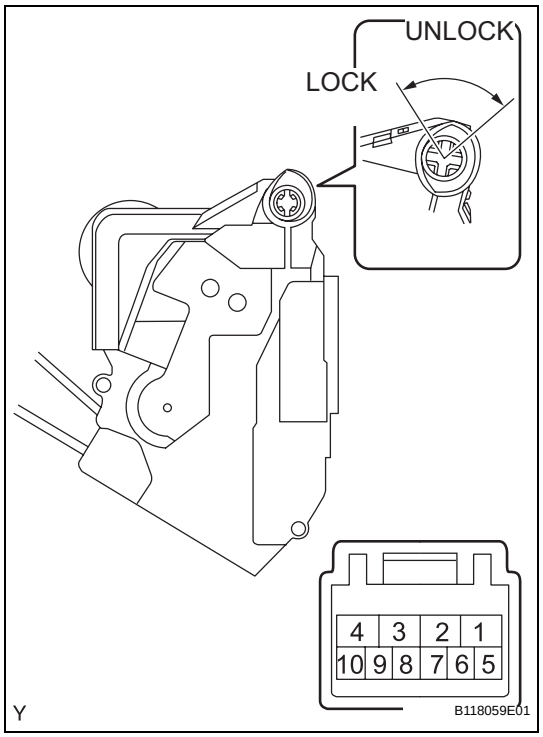
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 2	Locks
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 4	Unlocks

If the result is not as specified, replace the front door lock.

(b) Check the resistance of the unlock detection switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 8	Locked	10 kΩ or higher
7 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



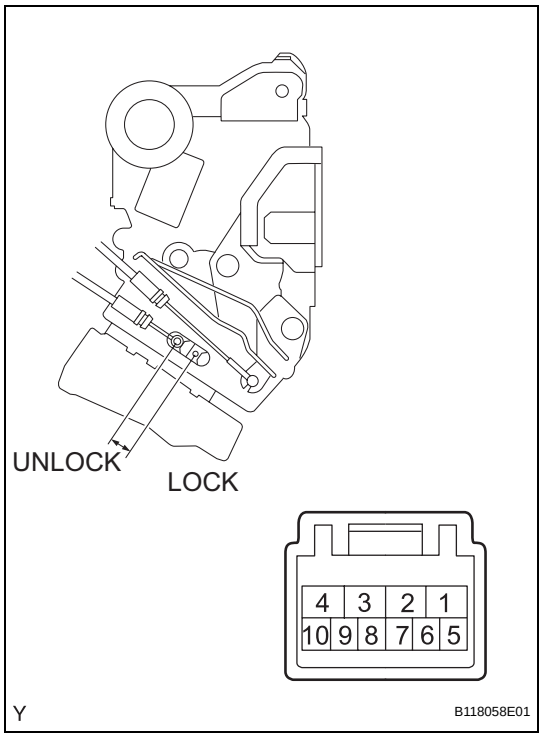
(c) Check the resistance of the door lock and unlock switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 9	Locked	Below 1 Ω
7 - 9	Unlocked	10 kΩ or higher
7 - 10	Locked	10 kΩ or higher
7 - 10	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



3. INSPECT FRONT DOOR LOCK ASSEMBLY RH (w/ Theft Deterrent System)

(a) Check the resistance of the unlock detection switch.

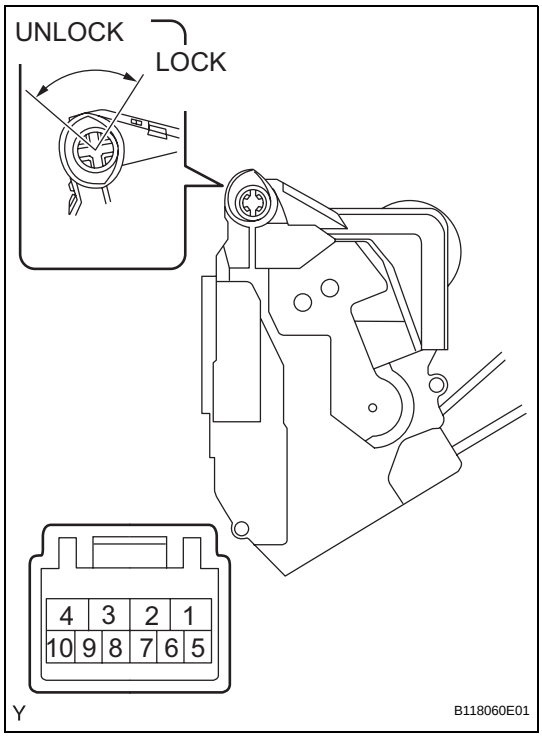
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
7 - 8	Locked	10 kΩ or higher
7 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.

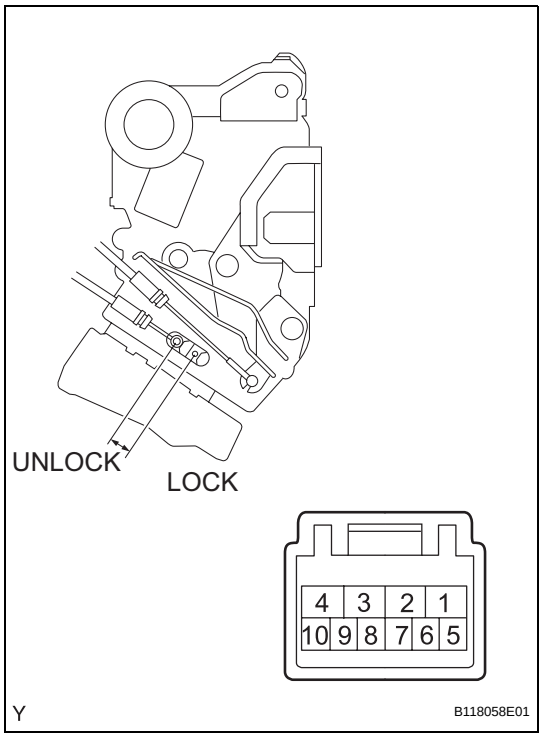
DL



(b) Check the resistance of the door lock and unlock switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
6 - 8	Locked	Below 1 Ω
6 - 8	Unlocked	10 kΩ or higher
5 - 8	Locked	10 kΩ or higher
5 - 8	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



4. INSPECT FRONT DOOR LOCK ASSEMBLY RH (w/o Theft Deterrent System)
(a) Check the operation.
(1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.
Standard

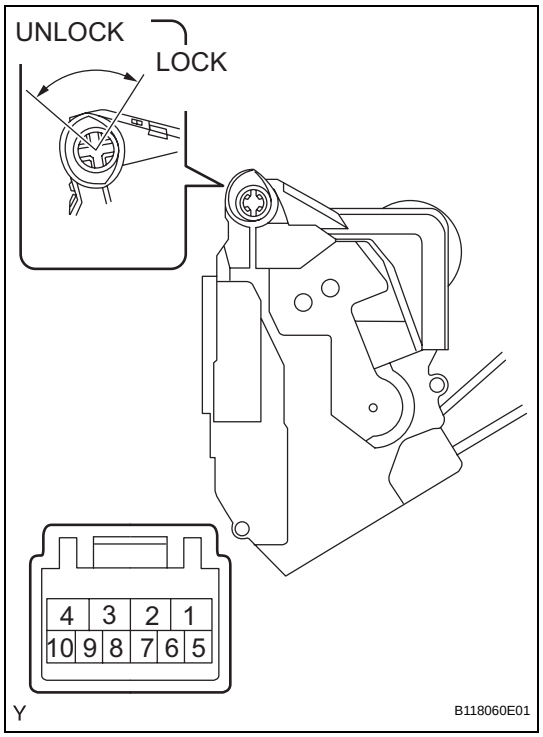
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 Battery negative (-) → Terminal 1	Locks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 3	Unlocks

If the result is not as specified, replace the front door lock.

(b) Check the resistance of the unlock detection switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
6 - 7	Locked	10 kΩ or higher
6 - 7	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.



(c) Check the resistance of door lock and unlock switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Door Lock Position	Specified Condition
5 - 7	Locked	Below 1 Ω
5 - 7	Unlocked	10 kΩ or higher
4 - 7	Locked	10 kΩ or higher
4 - 7	Unlocked	Below 1 Ω

If the result is not as specified, replace the front door lock.

DL

INSTALLATION

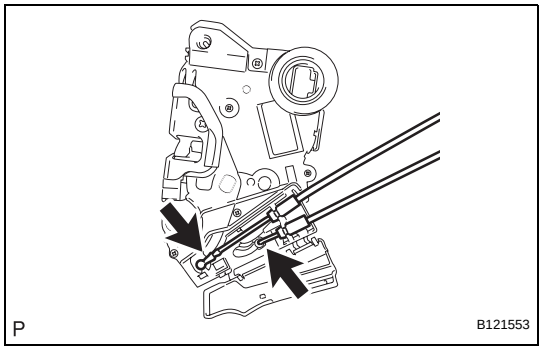
1. INSTALL FRONT DOOR LOCK ASSEMBLY

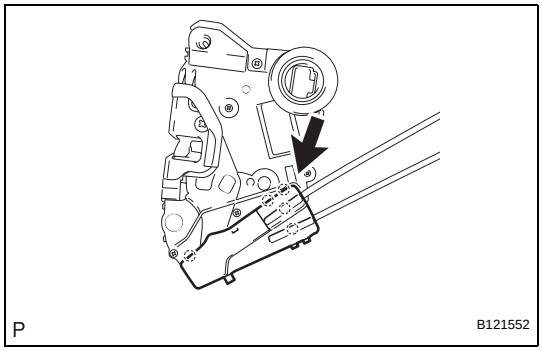
NOTICE:

- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**
- **Make sure that no grease and dirt adheres to the packing surface in the connecting part.**

(a) Apply MP grease to the sliding and rotating areas of the front door lock.

(b) Connect the front door lock remote control cable and the front door inside locking cable.



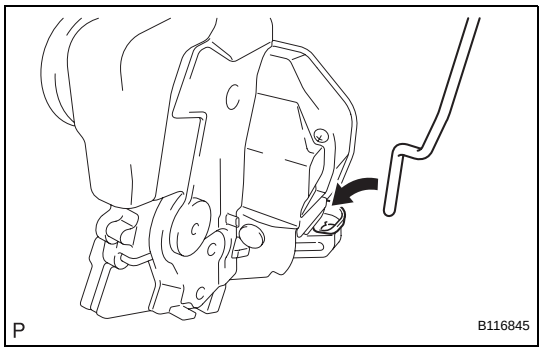


(c) Engage the 5 claws and close the cover.

(d) Insert the door lock open rod into the front door lock, then set it to the door panel.

NOTICE:

Make sure that the outside handle link is securely engaged with the door lock.



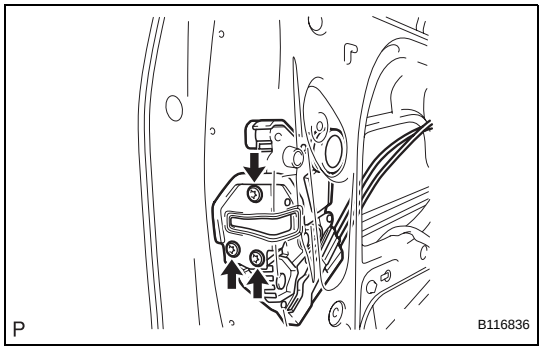
(e) Apply adhesive to the threads of the screws.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or the equivalent

(f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.

Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



2. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (See page ED-46)

3. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER (See page ED-47)
4. INSTALL FRONT DOOR WEATHERSTRIP (See page ED-47)
5. INSTALL FRONT DOOR CHECK ASSEMBLY (See page ED-48)
6. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window) (See page ED-48)

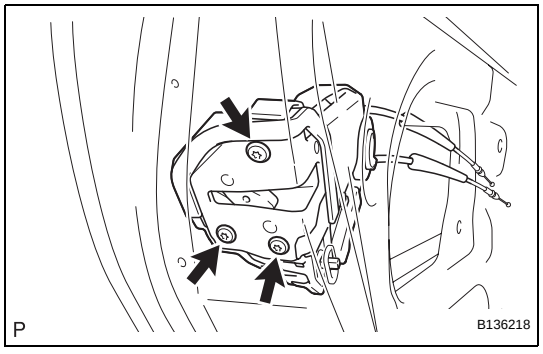
REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-79)**
3. **REMOVE REAR DOOR ARMREST BASE UPPER PANEL (See page ED-79)**
4. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-79)**
5. **REMOVE REAR DOOR TRIM BRACKET (See page ED-80)**
6. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-80)**
7. **REMOVE REAR DOOR CHECK ASSEMBLY (See page ED-81)**
8. **REMOVE REAR DOOR WEATHERSTRIP (See page ED-81)**
9. **REMOVE REAR DOOR BELT MOULDING (See page ET-95)**
10. **REMOVE REAR DOOR GLASS RUN (See page ED-81)**
11. **REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-81)**
12. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-82)**
13. **REMOVE REAR DOOR LOCK**



(a) Using "Torx" socket wrench T30, remove the 3 screws.

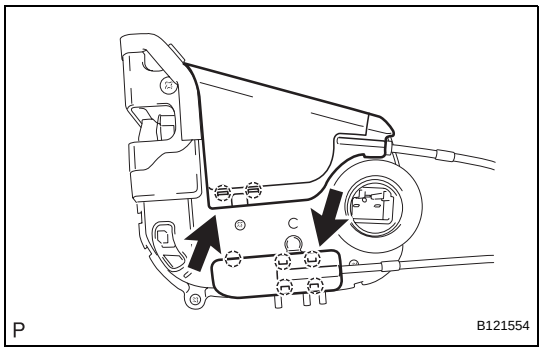
NOTICE:

Do not drop or damage the rear door lock when removing the screws.

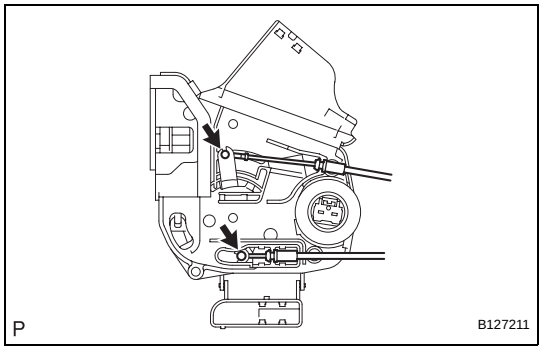
(b) Move the rear door lock downward, remove the outside handle frame release plate and remove the rear door lock.

HINT:

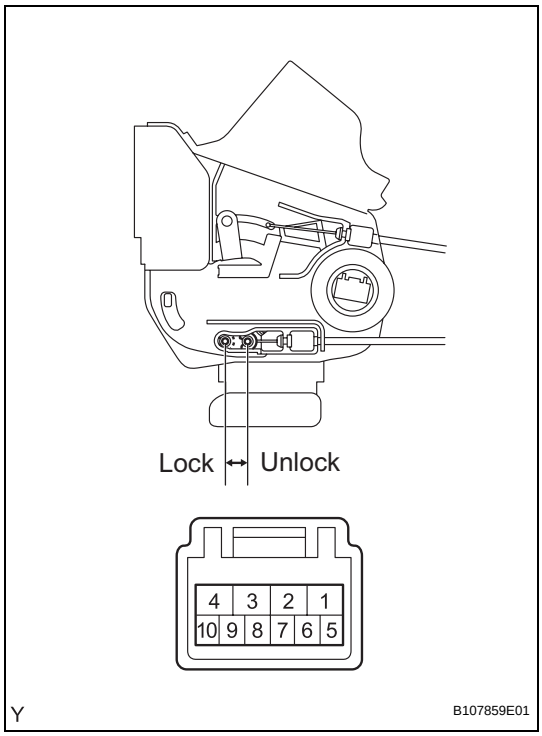
Remove the rear door lock through the service hole.



(c) Open the 2 covers.



(d) Disconnect the rear door lock remote control cable and rear door inside locking cable.
(e) Remove the door lock wire harness seal.



INSPECTION

1. INSPECT REAR DOOR LOCK ASSEMBLY LH

(a) w/ Power door lock:
Check the operation.
(1) Apply battery voltage to the rear door lock and check the operation of the door lock motor.
Standard

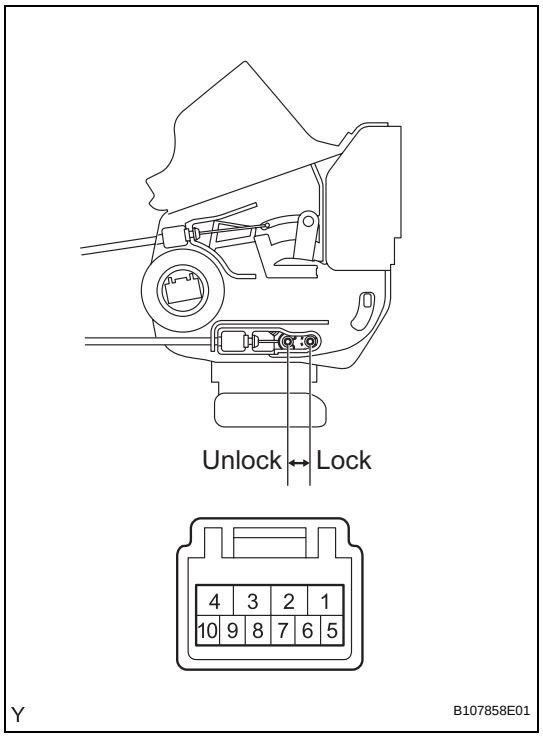
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Locks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlocks

If the result is not as specified, replace the rear door lock.

(b) Check the resistance of the unlock detection switch.
(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
6 - 9	Locked	10 kΩ or higher
6 - 9	Unlocked	Below 1 Ω

If the result is not as specified, replace the rear door lock.



2. INSPECT REAR DOOR LOCK ASSEMBLY RH

(a) w/ Power door lock:
Check the operation.

(1) Apply battery voltage to the rear door lock and check the operation of the door lock motor.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Locks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlocks

If the result is not as specified, replace the rear door lock.

(b) Check the resistance of the unlock detection switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
6 - 9	Locked	10 kΩ or higher
6 - 9	Unlocked	Below 1 Ω

If the result is not as specified, replace the rear door lock.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
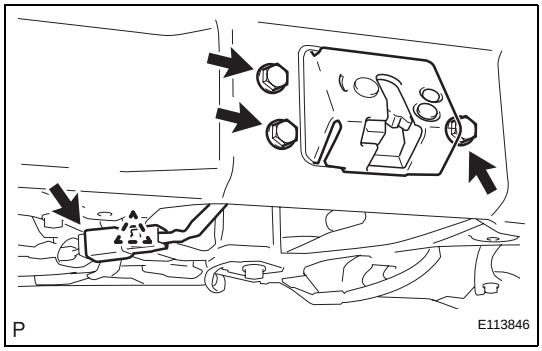
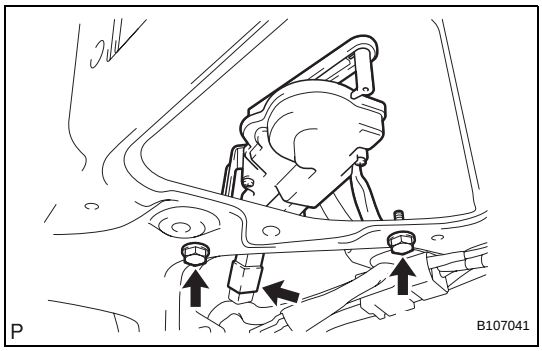
2. **REMOVE BACK DOOR TRIM BOARD ASSEMBLY (See page ED-142)**
3. **REMOVE BACK DOOR LOCK ASSEMBLY**
   (a) Disconnect the connector and the clamp.
   (b) Remove the 3 bolts and the back door lock.



4. **REMOVE BACK DOOR LOCK ACTUATOR ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 2 bolts and the back door lock actuator.

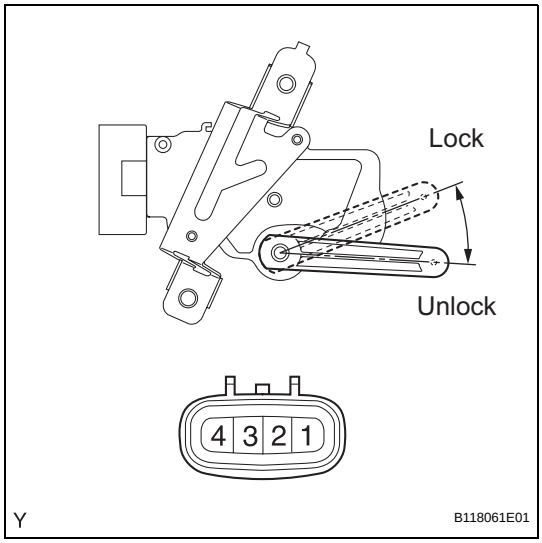


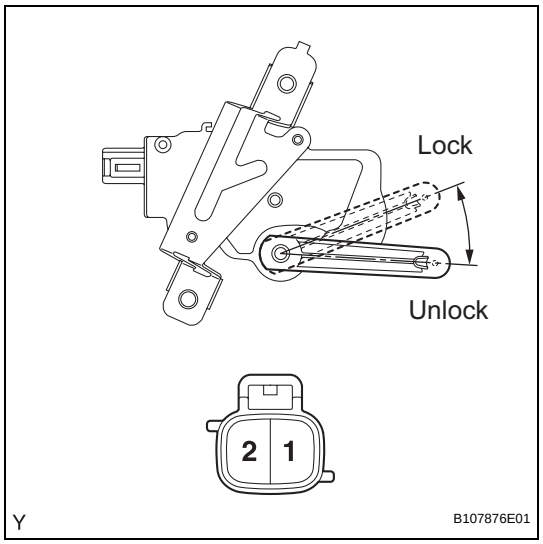
INSPECTION

1. **INSPECT BACK DOOR LOCK ACTUATOR ASSEMBLY (w/ Theft Deterrent System)**
   (a) Check the resistance of the unlock detection switch.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the tables below.
      Standard Resistance

Tester Connection	Door Lock Condition	Specified Condition
1 - 2	Unlocked	Below 1 Ω
1 - 2	Locked	10 kΩ or higher

If the result is not as specified, replace the back door lock actuator.





2. INSPECT BACK DOOR LOCK ACTUATOR ASSEMBLY (w/o Theft Deterrent System)

(a) Check the operation.

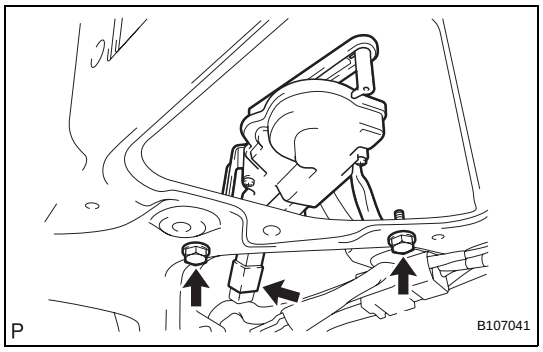
(1) Apply battery voltage to the back door lock actuator and check the operation of the back door lock motor.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Unlocks
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Locks

If the result is not as specified, replace the back door lock actuator.

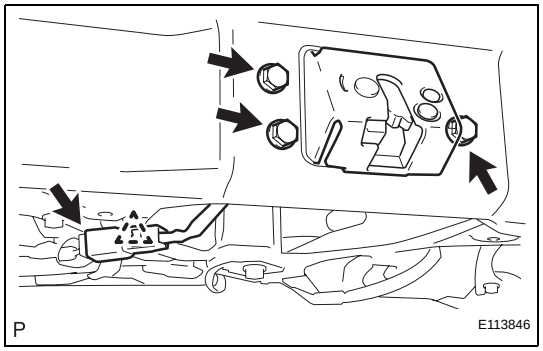
INSTALLATION



1. INSTALL BACK DOOR LOCK ACTUATOR ASSEMBLY

(a) Install the back door lock actuator with the 2 bolts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

(b) Connect the connector.



2. INSTALL BACK DOOR LOCK ASSEMBLY

(a) Install the back door lock with the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

(b) Connect the connector and clamp.

3. INSTALL BACK DOOR TRIM BOARD ASSEMBLY (See page ED-146)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

SYSTEM DESCRIPTION

1. METER GAUGE AND WARNING INDICATOR

GAUGE

Item	Signal Description
Speedometer	w/ ABS: Indicates vehicle speed based on signals received from brake actuator assembly (CAN) w/o ABS: Indicates vehicle speed based on signals received from speedometer sensor (Direct line)
Tachometer*	Indicates engine speed based on signals from ECM (CAN)
ODO / TRIP meter	Calculates accumulated total vehicle travel distance and vehicle travel distance since trip meter knob pressed
Fuel Gauge	Indicates fuel level in accordance with signals received from fuel sender gauge (Direct line)

*: w/ Tachometer

WARNING / INDICATOR

Item	Signal Description
TURN SIGNAL	Receives turn signal from flasher relay (Direct line)
BEAM	Receives beam signal from headlight dimmer switch (Direct line)
FRONT FOG LIGHT*5	Receives front fog light signal from fog light relay (Direct line)
CHARGE	Receives malfunction signal from generator (alternator) (Direct line and CAN)
MIL	Receives malfunction check signal from ECM (Direct line)
Engine coolant temperature warning	Receives engine coolant temperature based on signal from ECM (CAN)
Engine coolant temperature indicator (COOL)	Receives engine coolant temperature based on signal from ECM (CAN)
WASHER*4	Receives washer level malfunction signal from washer level warning switch (Direct line)
DOOR	Illuminates when receiving signal from main body ECU (CAN)
D BELT	Receives driver seat belt signal (unfastened) from center airbag sensor assembly (CAN)
BRAKE	Receives parking brake switch signal from main body ECU (CAN) and fluid level warning signal from brake level switch (Direct line)
OIL PRESSURE	Receives malfunction signal from oil pressure switch (Direct line)
MAINT REQD*1	Blinks when vehicle driven about 4,500 miles after oil exchange. Illuminates when vehicle driven about 5,000 miles after oil exchange.
AIR BAG	Receives malfunction signal from center airbag sensor assembly (CAN)
ABS*3	Receives malfunction signal from skid control ECU (CAN)
HEAD*1	Receives headlight signal from DRL relay (Direct line)
TAIL*2	Receives taillight signal from headlight dimmer switch assembly (Direct line)
P/S	Receives malfunction signal from power steering ECU (CAN)
CRUISE*6	RReceives malfunction check signal from ECM (CAN)

Buzzer

Item	Signal Description
Key Reminder	Buzzer ON when ignition switch OFF, key inserted and driver door open.
Light Reminder	Buzzer ON when ignition switch OFF, light control switch in TAIL or HEAD position and driver door open.
Seat Belt Warning	Buzzer ON when vehicle speed exceeds 12.4mph (20km/h) and seat belt unfastened.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the combination meter.
- Use an intelligent tester in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 CHECK CAN COMMUNICATION SYSTEM

(a) Use an intelligent tester to check if the CAN communication system is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4 PROBLEM SYMPTOMS TABLE

HINT:

Refer to the Problem Symptoms Table (See page ME-10).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **Go to step 6**

A

5	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page ME-12)
(b) Data List/Active Test (See page ME-22)
(c) On-vehicle Inspection (See page ME-24)

NEXT

6	ADJUST, REPAIR OR REPLACE

NEXT

7	CONFIRMATION TEST

NEXT

ME

END

CUSTOMIZE PARAMETERS

1. CUSTOMIZE PARAMETERS (Using the intelligent tester)

HINT:

The following items can be customized.

NOTICE:

- **Record the current settings before custmization.**

Display (Item)	Default	Contents	Setting
KEY REMIND SOUND	SLOW	Changes key reminder buzzer intervals	FAST / NORMAL / SLOW
LIGHT REMIND	ON	Turns light reminder buzzer ON and OFF	ON / OFF
SEAT BELT WARN	D/P ON	Turns seat belt warning buzzer ON and OFF	D/P ON / D ON / P ON / D/P OFF
UNITS BY REGION	Different for every region	Changes drive monitor display units	KM/L JP / KM/L / ML/G US / ML/G UK / KM/G

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected area in the order they are listed. Replace parts as necessary.

MALFUNCTION SYSTEM

Symptom	Suspected area	See page
Entire combination meter does not operate	Refer to troubleshooting	ME-33
Operating light control rheostat does not change light brightness	Combination meter assembly	ME-60
	Wire harness or connector	ME-60

METER GAUGES

Symptom	Suspected area	See page
Speedometer malfunction	Refer to troubleshooting	ME-36
Tachometer malfunction*	Refer to troubleshooting	ME-40
Fuel gauge malfunction	Refer to troubleshooting	ME-42
Malfunction in water temperature warning light	Refer to troubleshooting	ME-46
Clock malfunction	Clock assembly	-

*: w/ tachometer

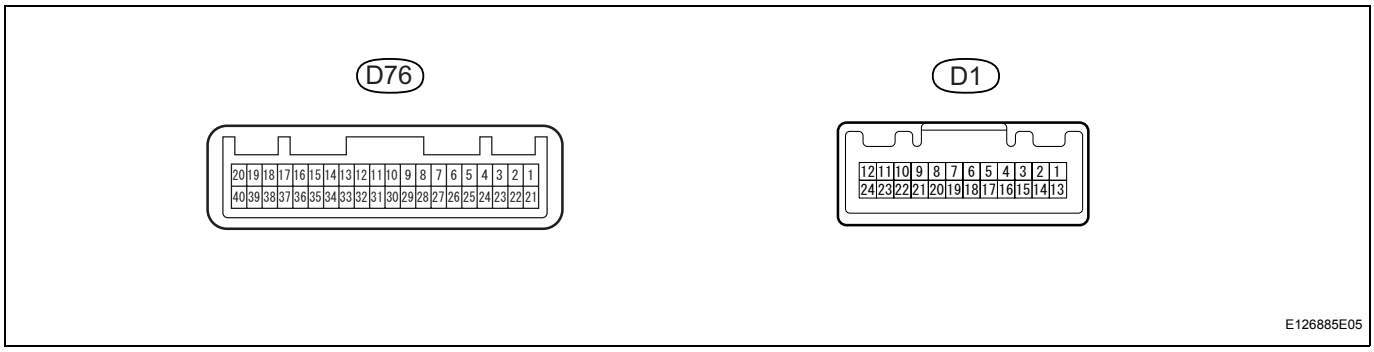
TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY



(a) Disconnect the D1 combination meter assembly connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG2 (D1-1) - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
ECUB (D1-2) - Body ground	L - Body ground	Battery	Always	11 to 14 V
ET (D1-24) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

ME

HINT:
If the result is not as specified, there may be a malfunction in the wire harness.

(c) Disconnect the D76 combination meter assembly connector.
(d) Measure the voltage of the wire harness side connector.

Standard voltage:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
FUEL (D1-3) - Body ground	V - Body ground	Fuel level signal	Ignition switch ON	11 to 14 V
ILL- (D1-7) - Body ground	GR - Body ground	Light control rheostat signal	Ignition switch OFF → ON	Pulse generation (See waveform 1)
ILL+ (D1-14) - Body ground	G - Body ground	Illumination signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V
TC (D1-15) - Body ground	Y - Body ground	Tail cancel switch signal	Tail cancel switch OFF → ON	Below 1 V → 11 to 14 V
+S (D1-16) - Body ground	SB - Body ground	Vehicle speed signal (Output)	Driving at approx. 12 mph (20 km/h)	Pulse generation (See waveform 2)
SI (D1-17) - Body ground	P - Body ground	Vehicle Speed signal (Input)	Driving at approx.12 mph (20 km/h)	Pulse generation (See waveform 2)
CANH (D1-20) - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANL (D1-21) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CHG- (D76-1) - Body ground	SB *3 or L *4 - Body ground	Charge warning light signal	Ignition switch ON Engine start Charge warning light OFF → ON	11 to 14 V → Below 1 V
SW (D76-2) - Body ground	V - Body ground	Brake fluid level warning light signal	Ignition switch ON Brake fluid level warning light ON → OFF	Below 1 V → 11 to 14 V

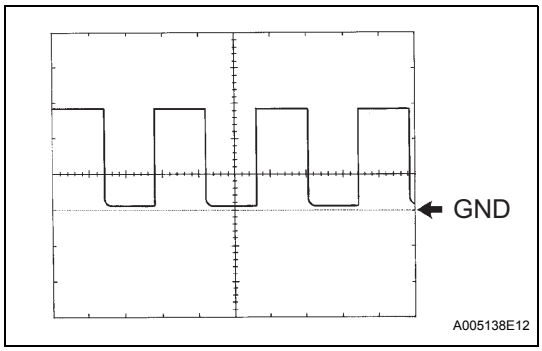
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFI (D76-4) - Body ground	B - Body ground	MIL signal	Ignition switch ON MIL ON → OFF	Below 1 V → 11 to 14 V
FOG (D76-7)*5 - Body ground	R - Body ground	Front FOG signal	Ignition switch ON Front fog light switch OFF → ON	Below 1 V → 11 to 14 V
B (D76-8) - Body ground	LG - Body ground	Turn signal LH signal	Ignition switch ON Turn signal LH indicator light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
PBLT (D76-9) - Body ground	O - Body ground	Seat belt warning light signal (Passenger side)	Ignition switch ON Front passenger seat belt warning light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
WLVL (D76-10)*6 - Body ground	W - Body ground	Washer level warning signal	Ignition switch ON Washer level warning light ON → OFF	Below 1 V → 11 to 14 V
BEAM- (D76-11) - Body ground	P - Body ground	HI-BEAM indicator signal (-)	Headlight dimmer switch (Hi-BEAM) Hi → Lo	Below 1 V → 11 to 14 V
S (D76-12) - Body ground	Y - Body ground	Oil pressure signal	OIL / P warning light ON → OFF	Below 1 V → 11 to 14 V
HEAD (D76-13)*1 - Body ground	L - Body ground	HEAD light indicator signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V
BEAM+ (D76-14) - Body ground	GR - Body ground	HI-BEAM indicator signal (+)	BEAM indicator light OFF → ON	Below 1 V → 11 to 14 V
B (D76-15) - Body ground	BR - Body ground	Turn signal RH signal	Turn signal RH indicator light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
IND (D76-16)*2 - Body ground	G - Body ground	Taillight indicator signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V
RLCY (D76-20) - Body ground	G - Body ground	Rear door courtesy switch signal (LH)	Rear door (LH) CLOSED→ OPEN	11 to 14 V→Below 1 V
RRCY (D76-21) - Body ground	L - Body ground	Rear door courtesy switch signal (RH)	Rear door (RH) CLOSED→ OPEN	11 to 14 V→Below 1 V
JB ECU (D76-22) - Body ground	Y - Body ground	Rear door courtesy switch signal (LH or RH)	Rear door (LH or RH) CLOSED→ OPEN	11 to 14 V→Below 1 V

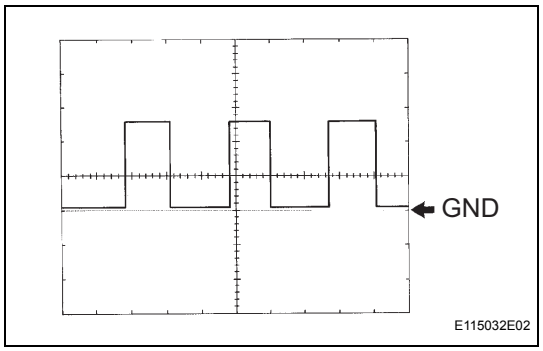
ME

HINT:
If the result is not as specified, the combination meter assembly may be malfunctioning
*1: U.S.A. only
*2: Canada only
*3: w/ Daytime running light
*4: w/o Daytime running light
*5: w/ Front fog light
*6: w/ Washer level warning light

(1) Waveform 1: Using an oscilloscope

Terminal Connections	ILL- (D1-7) - Body Ground
Tool Setting	5V / DIV, 50 ms / DIV
Condition	Ignition switch ON





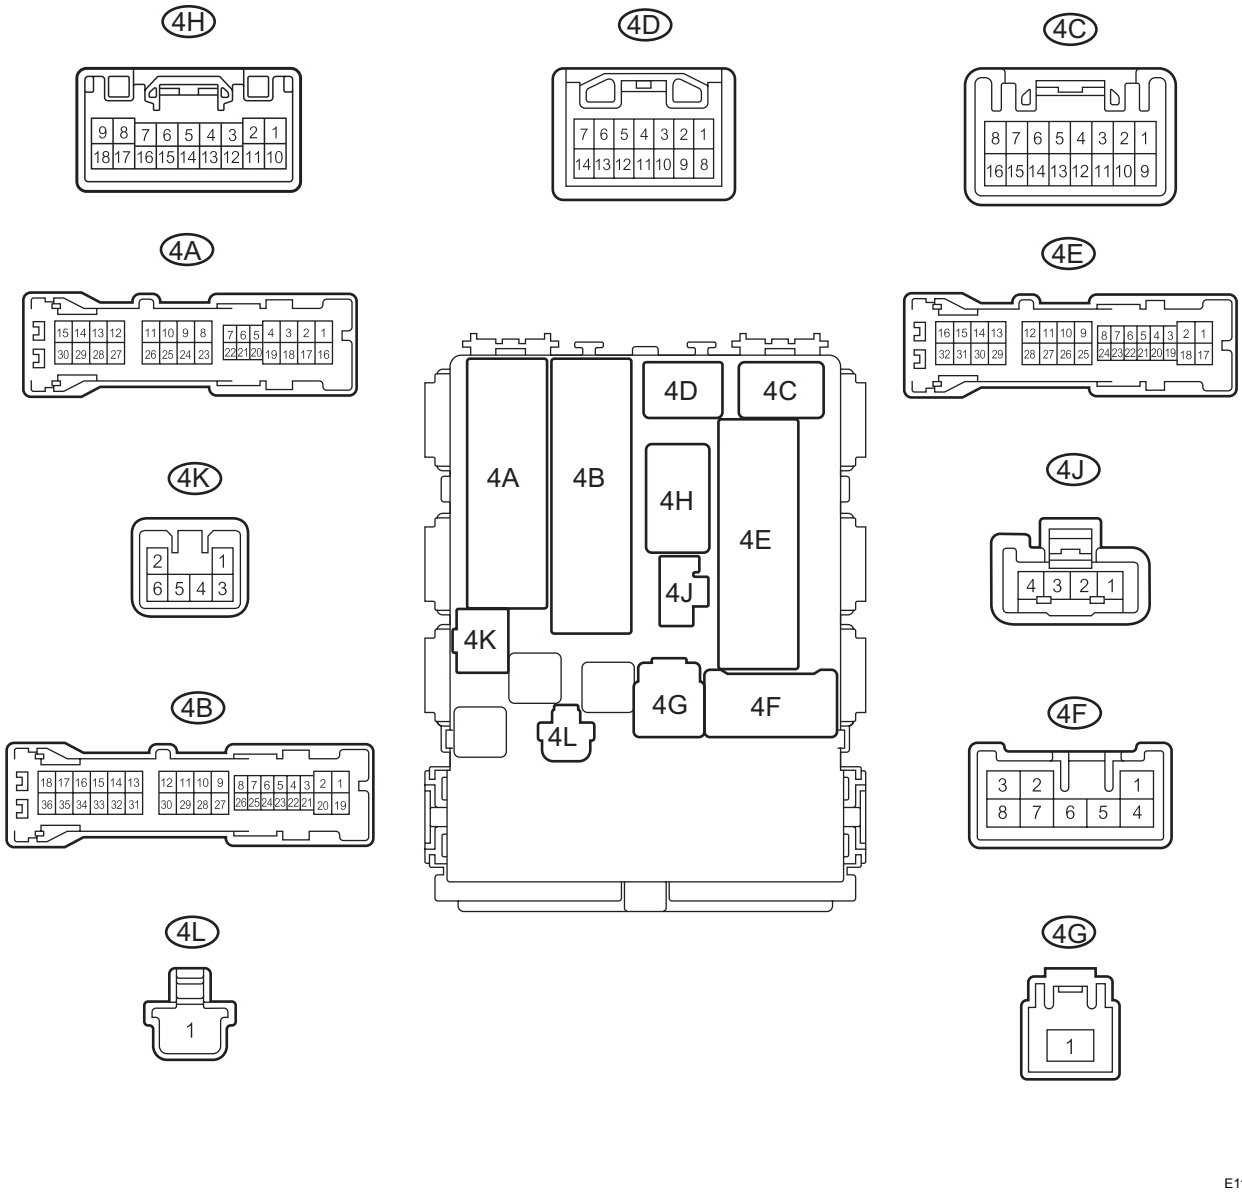
(2) Waveform 2: Using an oscilloscope

Terminal Connections	+S (D1-16) - Body Ground SI (D1-17) - Body Ground
Tool Setting	5V / DIV, 20ms / DIV
Condition	Driving at approximately 12mph (20km/h)

HINT:
As the vehicle speed increases, the cycle of the signal waveform narrows.

2. CHECK MAIN BODY ECU

Main Body ECU (Rear View):

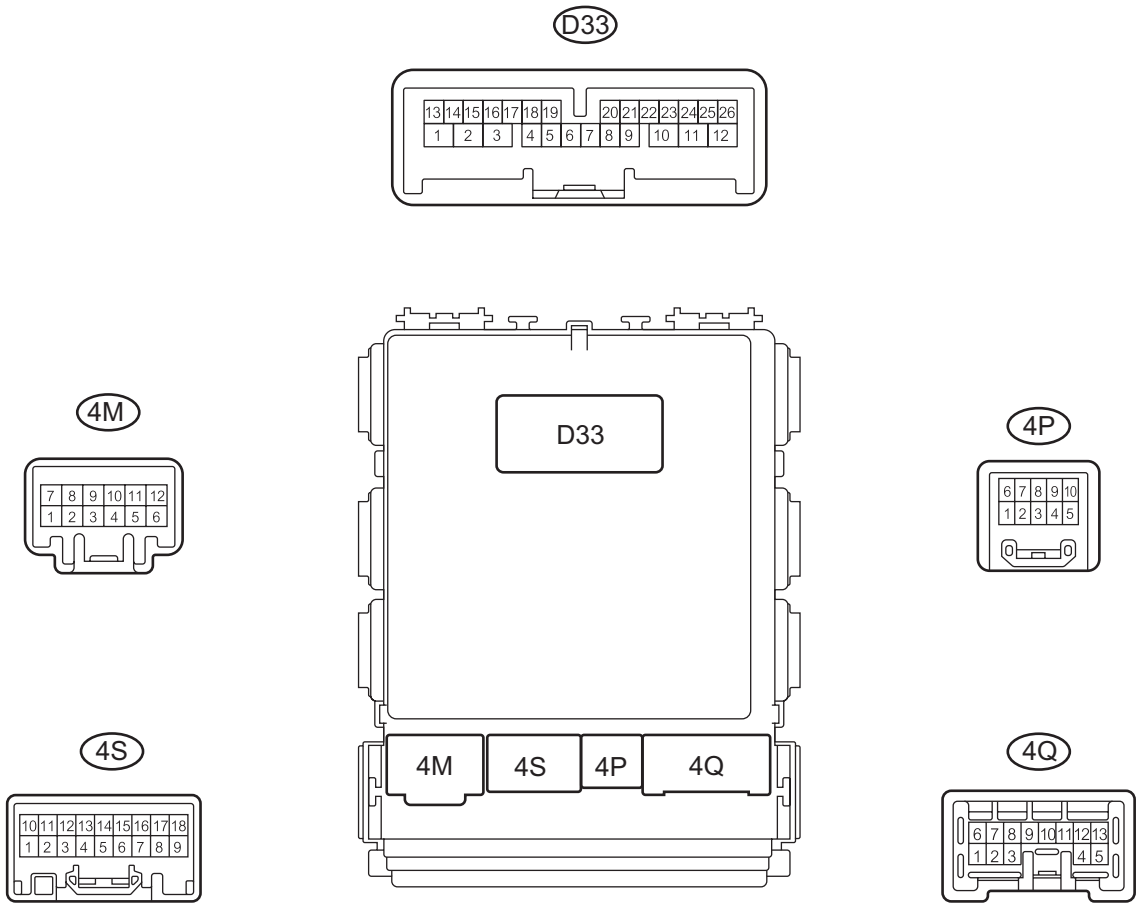


Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RRCY (4A-5) - GND1 (4E-17)	G - W-B	Rear door courtesy switch signal (LH)	Rear door (Driver side) CLOSED → OPEN	11 to 14 V → Below 1 V

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
LGCY (4A-7) - GND1 (4E-17)	SB - W-B	Back door courtesy switch signal	Back door CLOSED → OPEN	11 to 14 V → Below 1 V
RRCY (4A-20) - GND1 (4E-17)	L - W-B	Rear door courtesy switch signal (RH)	Rear door (Front passenger side) CLOSED → OPEN	11 to 14 V → Below 1 V
DCTY (4A-21) - GND1 (4E-17)	R - W-B	Front door courtesy switch signal (Driver side)	Driver door CLOSED → OPEN	11 to 14 V → Below 1 V
PCTY (4A-24) - GND1 (4E-17)	L - W-B	Front door courtesy switch signal (Passenger side)	Front passenger door CLOSED → OPEN	11 to 14 V → Below 1 V
PKB (4C-2) - GND1 (4E-17)	Y - W-B	Parking brake signal	Parking brake warning light ON → OFF	Below 1 V → 11 to 14 V
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock switch condition signal	Key inserted → Removed	Below 1 V → 11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Main Body ECU (Front View):



E114511E01

Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANL (D33-22) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANH (D33-23) - Body ground	R - Body ground	CAN communication line	Ignition switch ON	Pulse generation

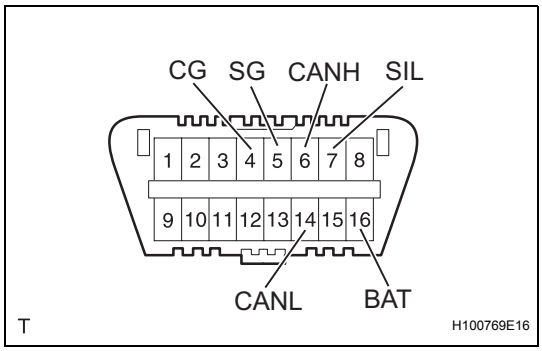
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Meter and gauge system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use an intelligent tester with the CAN VIM to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



ME

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

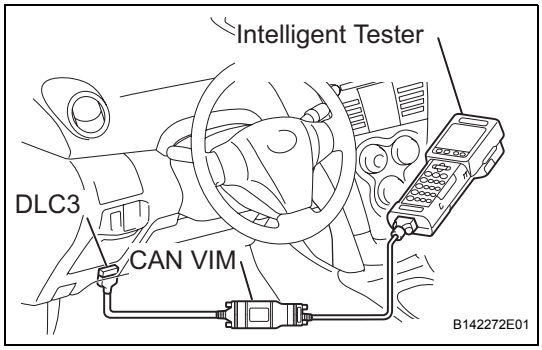
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

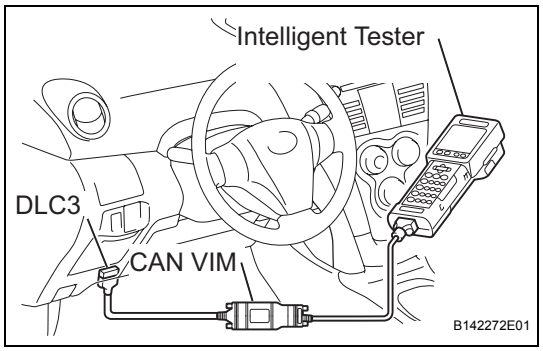
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.





DTC CHECK / CLEAR

1. DTC CHECK

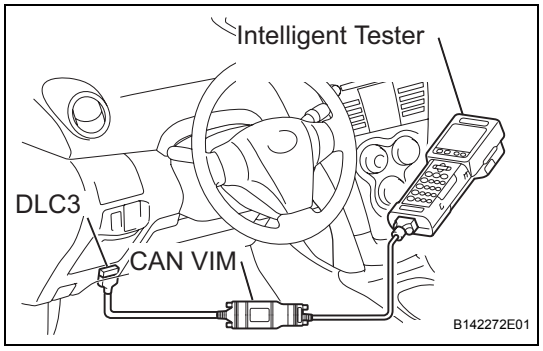
(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CURRENT CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) See page ME-23 to check the details of the DTC(s).

2. CLEAR DTC (Using an intelligent tester)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CLEAR CODES.
(e) Press the YES button to clear the DTC(s).

3. CLEAR THE DTC (Without using an intelligent tester)

(a) Perform either one of the following operations.
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the ECU-B fuse from the engine room relay block located inside the engine compartment for more than 1 minute.



DATA LIST / ACTIVE TEST

1. READ DATA LIST

(a) Connect the intelligent tester with CAN VIM to the DLC3.
HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
(b) Turn the ignition switch ON.
(c) Read the Data List according to the prompts displayed on the tester.

METER

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
+B VOLTAGE	Battery voltage Min=0, Max=255, 1LSB=1	10V: 119 / 10.5V: 126 / 11V: 132 / 12V: 145 / 13V: 157 / 14V: 170	-

2. PERFORM ACTIVE TEST

HINT:
Performing the intelligent tester's Active Test allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the Active Test according to the prompts displayed on the tester.

U0129	Lost Communication with Skid Control ECU	ME-31

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester, inspect the speedometer and confirm that the speedometer readings are within the acceptable range. Also check the odometer operation.

Reference:

km/h (Canada)

Standard Indication	Acceptable Range
20 km/h	17.5 to 21.5 km/h
40 km/h	38 to 42 km/h
60 km/h	58 to 63 km/h
80 km/h	78 to 84 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119 to 125 km/h
140 km/h	139 to 146 km/h
160 km/h	159 to 167 km/h
180 km/h	179 to 188 km/h
200 km/h	199 to 209 km/h

mph (U.S.A.)

Standard Indication	Acceptable Range
20 mph	18 to 21 mph
40 mph	38.5 to 42 mph
60 mph	59 to 63 mph
80 mph	79.5 to 84 mph
100 mph	100 to 105 mph
120 mph	121 to 126.5 mph

NOTICE:

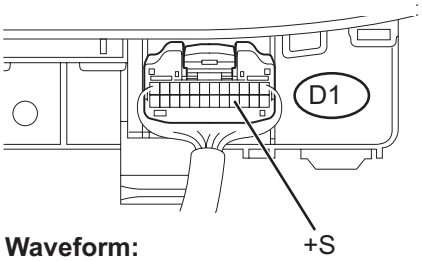
Tire wear and excessively high or low tire pressure affect speedometer indications.

(2) Check the deflection of the speedometer indicator.

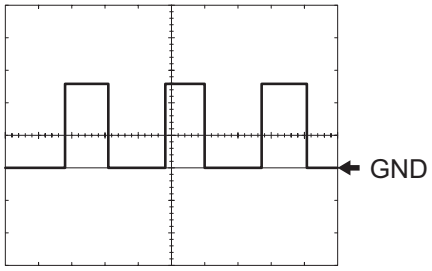
Reference:

Below 0.3 mph (0.5 km/h)

Combination Meter Assembly Connector:



Waveform:



E117125E05

2. INSPECT SPEEDOMETER SENSOR

(a) Check the output signal waveform.

(1) Remove the combination meter assembly, but do not disconnect the connector.

(2) Connect an oscilloscope to terminals D1 - 16 and to the body ground.

(3) Start the engine.

(4) Check the signal waveform according to the condition(s) in the table below.

Item	Contents
Terminal Connection	+S (D1-16) and Body Ground
Tool Setting	5V / DIV, 20ms / DIV
Condition	Driving at approximately 12mph (20km / h)

OK:

As shown in the illustration.

NOTICE:

Waveform is indicated as the vehicle speed increases, the cycle of the signal waveform narrows.

(5) Reinstall the combination meter assembly.

3. INSPECT TACHOMETER (w/ Tachometer)

(a) Check the operation.

(1) Connect the intelligent tester with CAN VIM to the DLC3.

(2) Turn the ignition switch ON and turn the tester ON.

(3) Select the item below from the Data List and read the value displayed on the intelligent tester.

METER

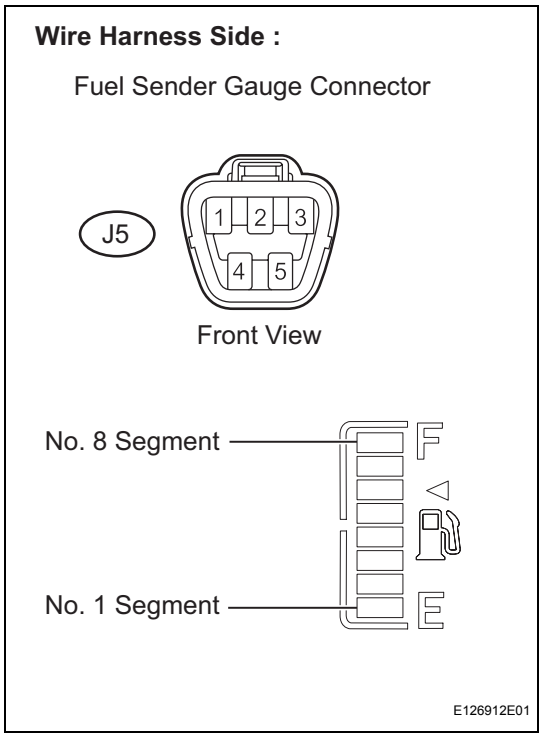
Item	Measurement Item/ Range(Display)	Normal Condition	Diagnostic Note
TACHO METER	Engine speed/Min.: 0 rpm, Max.:12,750 rpm	Approximately same as actual engine speed (When engine is running)	-

(4) Compare the engine speed displayed on the tester with the tachometer reading.

Reference

Standard Indication (r/min)	Acceptable Range [Data in ( ) are for reference]
700 r/min	630 to 770 r/min
1,000 r/min	(900 to 1,100 r/min)
2,000 r/min	(1,850 to 2,150 r/min)
3,000 r/min	2,800 to 3,200 r/min
4,000 r/min	(3,800 to 4,200 r/min)
5,000 r/min	4,800 to 5,200 r/min
6,000 r/min	(5,750 to 6,250 r/min)
7,000 r/min	(6,700 to 7,300 r/min)

ME



4. INSPECT FUEL RECEIVER GAUGE

(a) Disconnect the J5 fuel sender gauge connector.

(b) Check the fuel receiver gauge operation when the ignition switch is turned to the ON position.

OK:

No. 1 segment flashes.

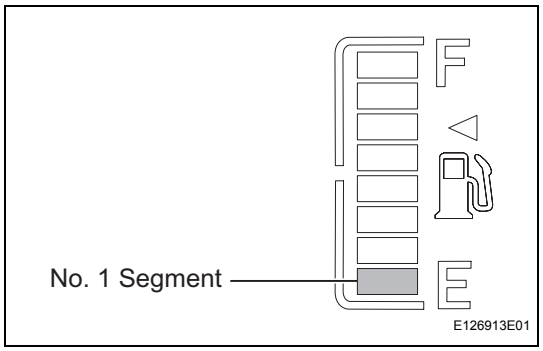
(c) Connect terminals 2 and 3 on the wire harness side connector of the fuel sender gauge.

(d) Check the fuel receiver gauge operation when the ignition switch is turned from OFF to ON.

OK:

All segments, from No. 1 to No. 8, illuminate.

(e) Reconnect the fuel sender gauge connector.



5. INSPECT FUEL LEVEL WARNING LIGHT

(a) Turn the ignition switch to the ON position, and check that the receiver gauge No. 1 segment flashes when the fuel volume is less than 6.3 liters (less than 15 % of the total fuel tank capacity).

OK

Fuel Volume	Flashing Speed (Interval)
1.6 gal (6.3 liters) (Less than 15 % of total fuel tank capacity)	Flashes slowly (1.2 seconds)
1.1 gal (4.2 liters) (Less than 10 % of total fuel tank capacity)	Flashes quickly (0.6 seconds)

6. INSPECT ENGINE OIL PRESSURE WARNING LIGHT

(a) Disconnect the engine oil pressure switch connector.

(b) Turn the ignition switch to the ON position.

(c) Ground the terminal of the wire harness side connector, then check the engine oil pressure warning light.

OK:

Engine oil pressure warning light illuminates.

(d) Reconnect the engine oil pressure switch connector.

7. INSPECT BRAKE WARNING LIGHT

(a) Inspect the parking brake warning light.

(1) Disconnect the parking brake switch connector.

(2) Turn the ignition switch to the ON position.

ME

(3) Ground the terminal of the wire harness side connector, then check the parking brake warning light.
OK:
Brake warning light illuminates.
(4) Reconnect the parking brake switch connector.

(b) Inspect the brake fluid level warning light.
(1) Disconnect the brake fluid level warning switch connector.
(2) Turn the ignition switch to the ON position.
(3) Connect a terminal to the other terminal of the wire harness side connector, then check the brake fluid level warning switch.
OK:
Brake warning light illuminates.
(4) Reconnect the brake fluid level warning switch connector.

8. INSPECT BRAKE FLUID LEVEL WARNING SWITCH

(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance between the terminals.
Standard resistance:
Float inside reservoir tank is in high position (switch OFF): 10 k Ω or higher
(d) Use a syphon or a similar tool to drain fluid out of the reservoir tank.
(e) Measure the resistance between the terminals.
Standard resistance:
Float inside reservoir tank is in low position (switch ON): Below 1 Ω
(f) Pour the fluid back into the reservoir tank.
(g) Reconnect the brake fluid level warning switch connector.
(h) Reinstall the reservoir tank cap and strainer.

9. INSPECT WINDOW WASHER FLUID WARNING LIGHT

(a) Disconnect the connector from the washer level warning switch.
(b) Turn the ignition switch to the ON position.
(c) Ground the terminal of the wire harness side connector, then check the washer level warning light.
OK:
Washer level warning light comes on.

10. INSPECT ENGINE COOLANT TEMPERATURE WARNING LIGHT

(a) Disconnect the engine coolant temperature sensor connector.
(b) Turn the ignition switch to the ON position.

(c) Connect a terminal to the other terminal of the wire harness side connector, then check the engine coolant temperature warning light.
OK:
Engine coolant temperature warning light illuminates.

(d) Reconnect the engine coolant temperature sensor connector.
NOTICE:
DTCs may have been set. Check for DTCs and clear any that have been set.

11. OIL MAINTENANCE INDICATOR RESETTING PROCEDURE (U.S.A. only)

Oil Maintenance Indicator	Condition	Specified State
Blinks	Vehicle has run 4,500 miles since previous setting	Indicator blinks for 15 seconds after ignition switch is turned ON (including 3 seconds for a valve check)
Illuminates	Vehicle has run 5,000 miles since previous setting	Indicator illuminates after ignition switch is turned ON.

(a) Set the window display located inside the combination meter to the Trip A indication.
(b) Turn the ignition switch OFF.
(c) While pressing the ODO/TRIP display change switch (reset switch) (for at least 5 seconds), turn the ignition switch ON.
(d) When the reset procedure has been completed successfully, the MAINT REQD indicator light turns off and the ODO/TRIP meter indicates 0 (zero) and then returns to its regular display.
HINT:
If the reset fails, the MAINT REQD indicator light remains illuminated. Perform the procedure again.

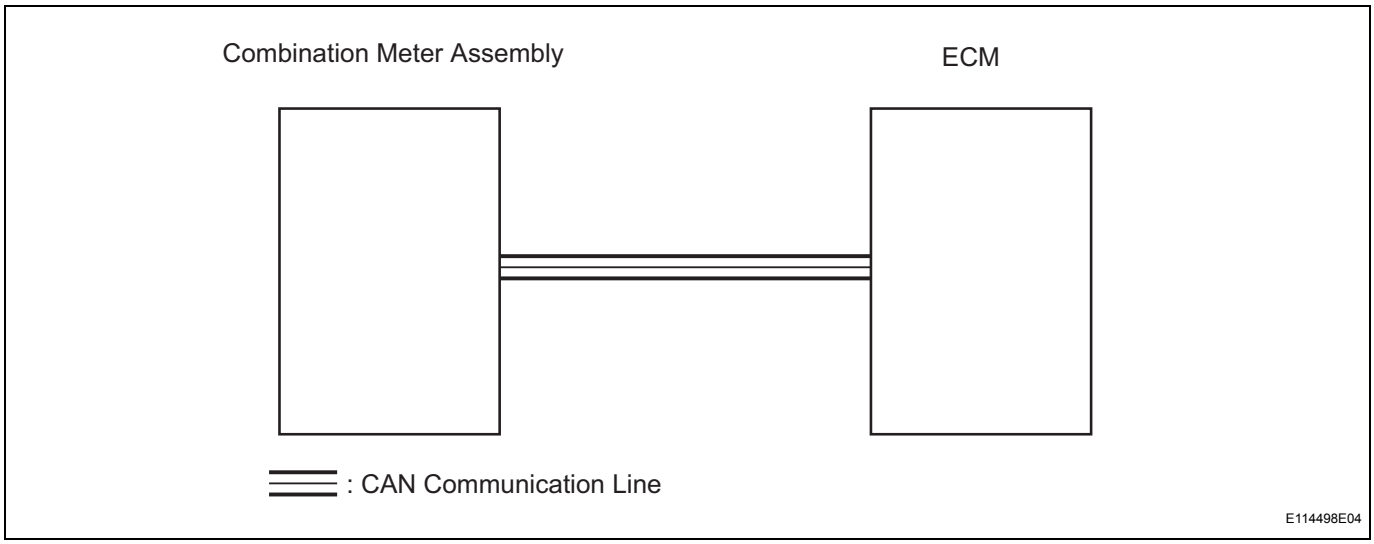
DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly and the ECM exchange signals through the CAN communication system.

DTC No.	DTC Detecting Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 3.1 mph (5 km/h) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (Communication with neither ECM nor skid control ECU for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS/ OBD/MOBD/ METER/ DTC INFO /CLEAR CODES.
(d) Drive the vehicle at more than 3.1 mph (5 km/h) for at least 60 seconds.
(e) Stop the vehicle.
(f) Check for DTCs.

Result

Result	Proceed to
DTC output	A
DTC not output	B

A

GO TO CAN COMMUNICATION SYSTEM

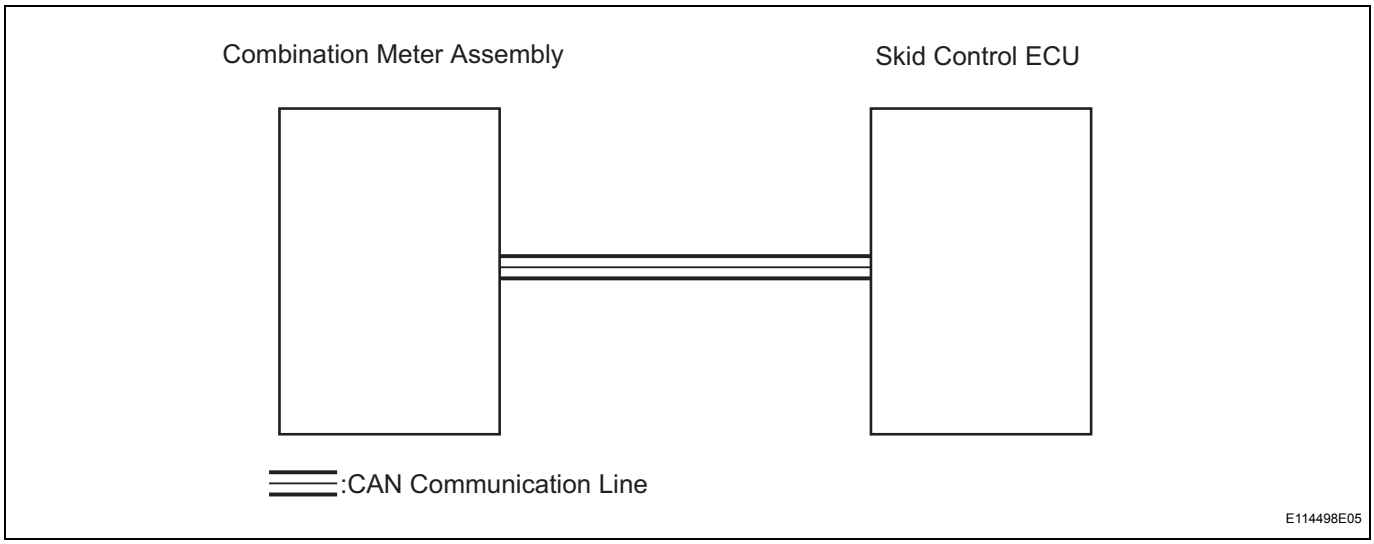
DTC	U0129	Lost Communication with Skid Control ECU

DESCRIPTION

The combination meter assembly receives signals from the skid control ECU through the CAN communication system.

DTC No.	DTC Detecting Conditions	Trouble Areas
U0129	When either of following conditions detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with skid control ECU continues for 3 seconds or more (Communication with neither ECM nor skid control ECU for 60 seconds or more)	• Skid control ECU • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS/ OBD/MOBD/ METER/ DTC INFO /CLEAR CODES.
(d) Start the engine and wait for at least 60 seconds.
(e) Check for DTCs.

Result

Result	Proceed to
DTC output	A
DTC not output	B

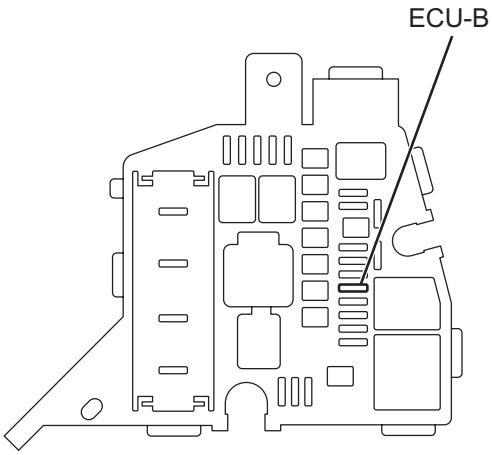
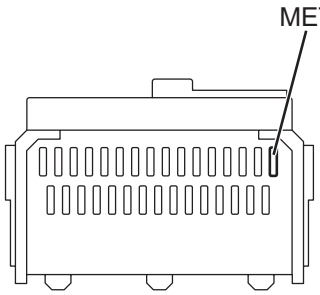
INSPECTION PROCEDURE

1	CHECK FUSE (ECU-B, MET)

Engine Room R/B:



Main Body ECU:



O

E117120E01

(a) Remove the ECU-B fuse from the engine room relay block.
(b) Remove the MET fuse from the main body ECU.
(c) Measure the resistance.
Standard Resistance:
Below 1Ω
(d) Reinstall the fuse.

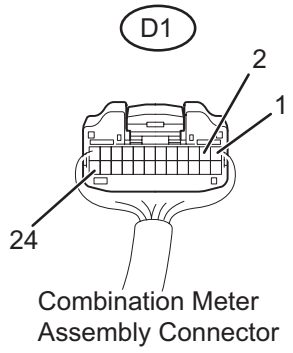
NG → **CHECK SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

ME

2	INSPECT COMBINATION METER ASSEMBLY

Wire Harness Side:



E114496E06

(a) Disconnect the D1 combination meter connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
ET (D1-24) - Body ground	Always	Below 1 Ω

(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
IG2 (D1-1) - Body ground	Ignition switch ON	11 to 14V
ECU-B (D1-2) - Body ground	Always	11 to 14V

(d) Reconnect the combination meter connector.

ME

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

Speedometer Malfunction

DESCRIPTION

w/o ABS:

The combination meter assembly controls the speedometer in accordance with vehicle speed signals from the speedometer sensor.

w/ ABS:

The combination meter assembly controls the speedometer in accordance with vehicle speed signals from the brake actuator through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
If DTC U0129 has been stored, troubleshoot the CAN communication system first.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SPEED METER)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus : DIAGNOSIS / METER / ACTIVE TEST.

METER

Item	Test Details	Diagnostic Note
SPEED METER	0 / 40(24) / 80(48) / 120(72) / 160(96) / 200(120) / 240(144) km/h (mph)	-

OK:
Vehicle speed displayed on the tester is approximately the same as that of the speedometer reading.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2	CHECK BRAKE CONTROL SYSTEM

(a) Check the brake control system.
Result

Brake Control System	Proceed to
w/ ABS	A
w/o ABS	B

B → **Go to step 4**

A

3	READ VALUE OF INTELLIGENT TESTER (SPEED METER)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and the tester ON.
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item / Range(Display)	Normal Condition	Diagnostic Note
SPEED METER	Vehicle speed / Min.: 0 km/h (0mph), Max.: 255 km/h(158mph)	Approximately same as actual vehicle speed (When vehicle is driven)	-

OK:
Vehicle speed displayed on the tester is approximately the same as the actual vehicle speed.

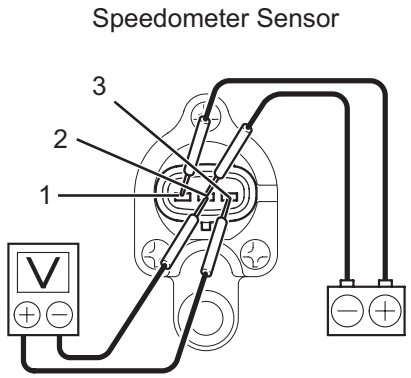
NG → **GO TO BRAKE CONTROL SYSTEM**

OK

REPLACE COMBINATION METER ASSEMBLY

4	INSPECT SPEEDOMETER SENSOR

Component Side:



(a) Remove the speedometer sensor.
(b) Connect the positive (+) lead from the battery to terminal 1 and the negative(-) lead to terminal 2.
(c) Connect the positive (+) lead from the tester to terminal 3 and the negative (-) lead to terminal 2.
(d) Rotate the shaft.
(e) Check that the voltage output between terminals 2 and 3 varies between 0V and 11V.
(f) Reinstall the speedometer sensor.

NG → **REPLACE SPEEDOMETER SENSOR**

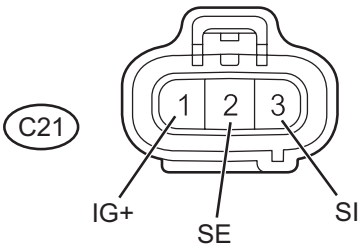
OK

ME

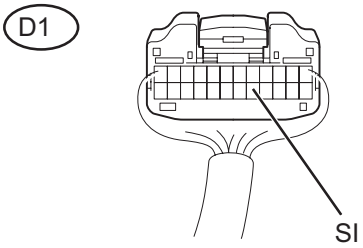
5	CHECK HARNESS AND CONNECTOR (SPEEDOMETER SENSOR - COMBINATION METER ASSEMBLY)

Wire Harness Side:

Speedometer Sensor Connector



Combination Meter Assembly Connector



E117013E02

(a) Disconnect the D1 combination meter assembly connector.
(b) Disconnect the C21 speedometer sensor connector.
(c) Measure the resistance
Standard resistance

Tester Connection	Specified Condition
D1-17 (SI) - C21-3 (SI)	Below 1 Ω
C21-2 (SE) - Body ground	Below 1 Ω

(d) Reconnect the combination meter assembly connector.
(e) Measure the voltage
Standard voltage

Tester Connection	Condition	Specified Condition
C21-1 (IG+) - Body ground	Ignition switch ON	11 to 14V

(f) Reconnect the combination meter assembly and speedometer sensor connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

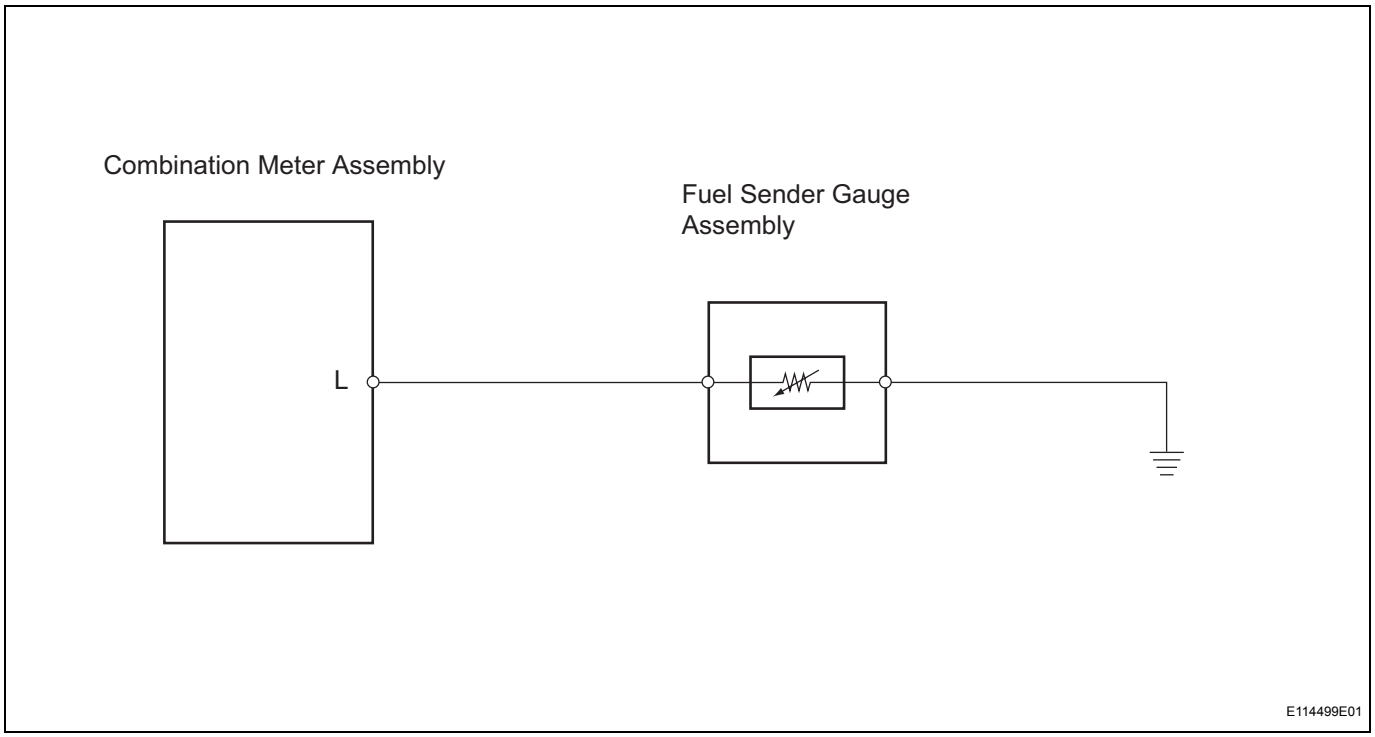
ME

Fuel Gauge Malfunction

DESCRIPTION

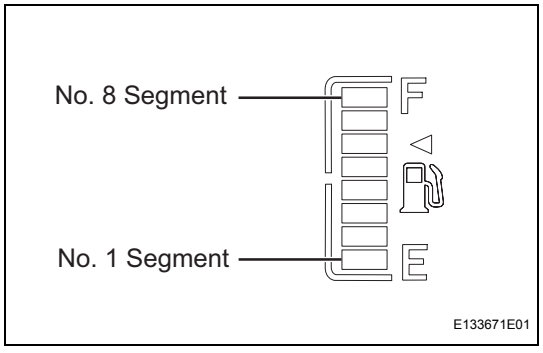
The combination meter assembly controls the fuel receiver gauge in accordance with the resistance of the fuel sender gauge that varies depending on the fuel remaining amount in the fuel tank.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (FUEL GAUGE)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / METER / ACTIVE TEST.

METER

Item	Test Details	Diagnostic Note
FUEL GAUGE	EMPTY: Segment No.1 flashes 1/2: Segments No.1 to 4 illuminate FULL: Segments No.1 to 8 illuminate	-

OK:

Fuel receiver gauge segments are illuminated in accordance with the tester instructions.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2 READ VALUE OF INTELLIGENT TESTER (FUEL GAUGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

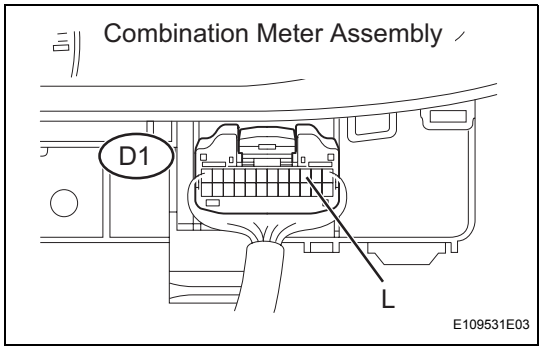
Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
FUEL GAUGE (A/D)	Fuel input signal / Min.: 0, Max.: 255	Fuel receiver gauge segments No.1 to No.8 illuminate: 14 to 34 No.1 to No.6 (No7) illuminate: 77 to 109 No.1 to No.4 (No,5) illuminate: 135 to 172 No.1 and No.2 illuminate: 175 to 188 No.1 flashes: 194 to 200	-

OK:
Fuel input signal displayed on the tester is approximately the same as indication.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK COMBINATION METER ASSEMBLY



(a) Disconnect the J5 fuel sender gauge assembly connector.
(b) Remove the combination meter assembly with its connectors connected.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D1-3 (L) - Body ground	Ignition switch ON	11 to 14V

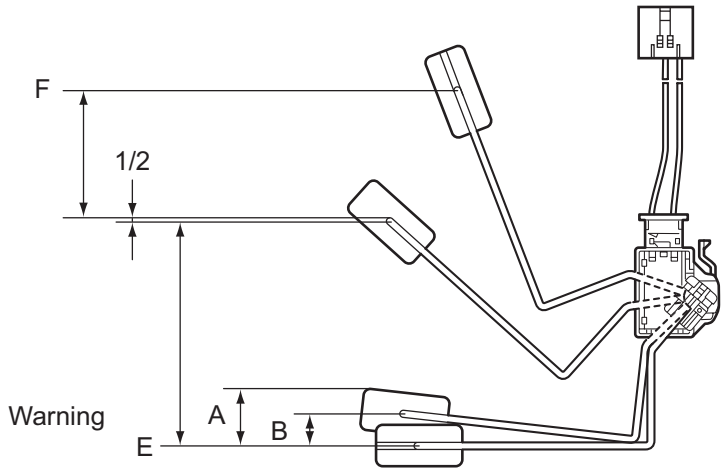
(d) Reconnect the fuel sender gauge assembly connector.
(e) Reinstall the combination meter assembly.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT FUEL SENDER GAUGE ASSEMBLY

(a) Remove the fuel sender gauge assembly.



H

E114508E02

(b) Check that the float position is between E and F.

(c) Measure the resistance between terminals 2 and 1 of the fuel sender gauge connector.

Standard resistance

Float Level	Float Positioin (mm (in.))	Specified Condition
F	77.3 (3.04) to 79.3 (3.12)	12.0 Ω to 18.0 Ω
1/2	1.6 (0.05)	208.3 Ω
Warning A	34.8 (1.37)	365.2 Ω
Warning B	25.3 (1.00)	388.2 Ω
E	75.0 (2.95) to 77.0 (3.03)	405.0 Ω to 415.0 Ω

(d) Reinstall the fuel sender gauge assembly.

NG → **REPLACE FUEL SENDER GAUGE ASSEMBLY**

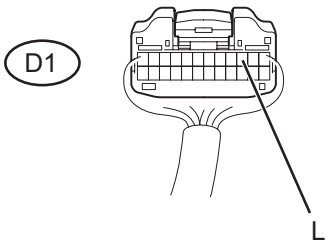
OK

ME

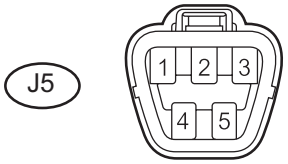
5	CHECK WIRE HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - FUEL SENDER GAUGE ASSEMBLY)

Wire Harness Side:

Combination Meter Assembly Connector



Fuel Sender Gauge Assembly Connector



Front View

E117128E06

(a) Disconnect the D1combination meter assembly connector.
(b) Disconnect the J5 fuel sender gauge assembly connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D1-3 (L) - J5-2	Below 1Ω
J5-3 - Body ground	Below 1Ω

(d) Reconnect the combination meter assembly and fuel sender gauge assembly connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

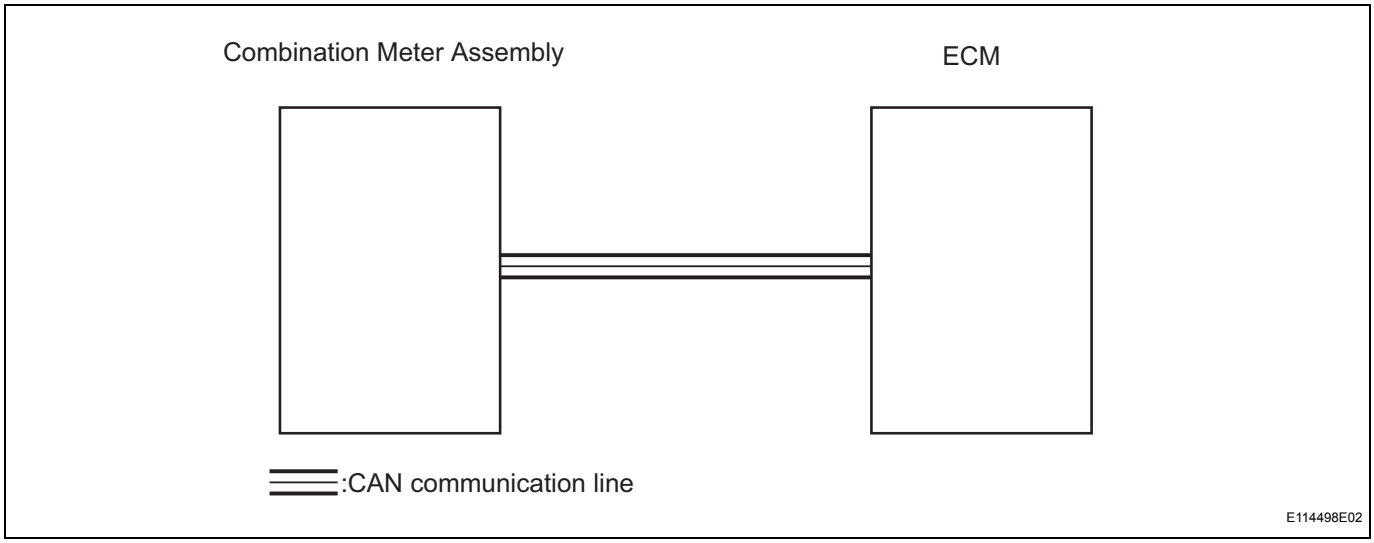
ME

Malfunction in Water Temperature Warning Light

DESCRIPTION

The combination meter assembly controls both the engine coolant temperature warning light and indicator light in accordance with engine coolant temperature signals from the ECM.
The engine coolant temperature indicator light turns off when the engine coolant temperature exceeds 55°C (131°F) and illuminates when the temperature decreases to below 45°C (113°F).
The engine coolant temperature warning light flashes when the engine coolant temperature reaches 117°C (242.6°F) and illuminates when the temperature exceeds 120°C (248°F). When the temperature decreases to 119.5°C (247.1°F) while the warning light is illuminated, the warning light begins to flashing. In addition, when the temperature decreases to below 116.5°C(241.7°F) the warning light turns off.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
- If DTC U0100 has been stored, troubleshoot the CAN communication system first.
- If there is an open or short in the engine coolant temperature sensor circuit, an SFI system DTC is output. If output, perform troubleshooting on the SFI system.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (COOLANT HOT)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS/ METER/ ACTIVE TEST

METER

Item	Test Details	Diagnostic Note
COOLANT HOT	ON: Engine coolant temperature warning light flashes OFF: Engine coolant temperature warning light turns off	-
COOLANT COOL	ON: Engine coolant temperature indicator light flashes OFF: Engine coolant temperature indicator light turns off	-

Item	Test Details	Diagnostic Note
COOLANT TEMP	HIGH: Engine coolant temperature warning light flashes NORMAL: Engine coolant temperature warning light and indicator light turn off LOW: Engine coolant temperature indicator light illuminates	-

OK:

Both the engine coolant temperature warning light and indicator light are operated in accordance with the tester instructions.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2	READ VALUE OF INTELLIGENT TESTER (COOLANT TEMP)

ME

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
COOLANT TEMP	Engine coolant temperature / Min.: 0°C,Max.: 127.5°C	After warming up: 75 to 105°C (167 to 221°F)	-

HINT:

- If the value is 0°C (32°F), the sensor circuit is open.
- If the value is 127.5°C (262°F), the sensor circuit is shorted.

OK:

Coolant temperature displayed on the tester is between 75°C (167°F) and 105°C (221°F) after warming up.

NG → **GO TO SFI SYSTEM**

OK

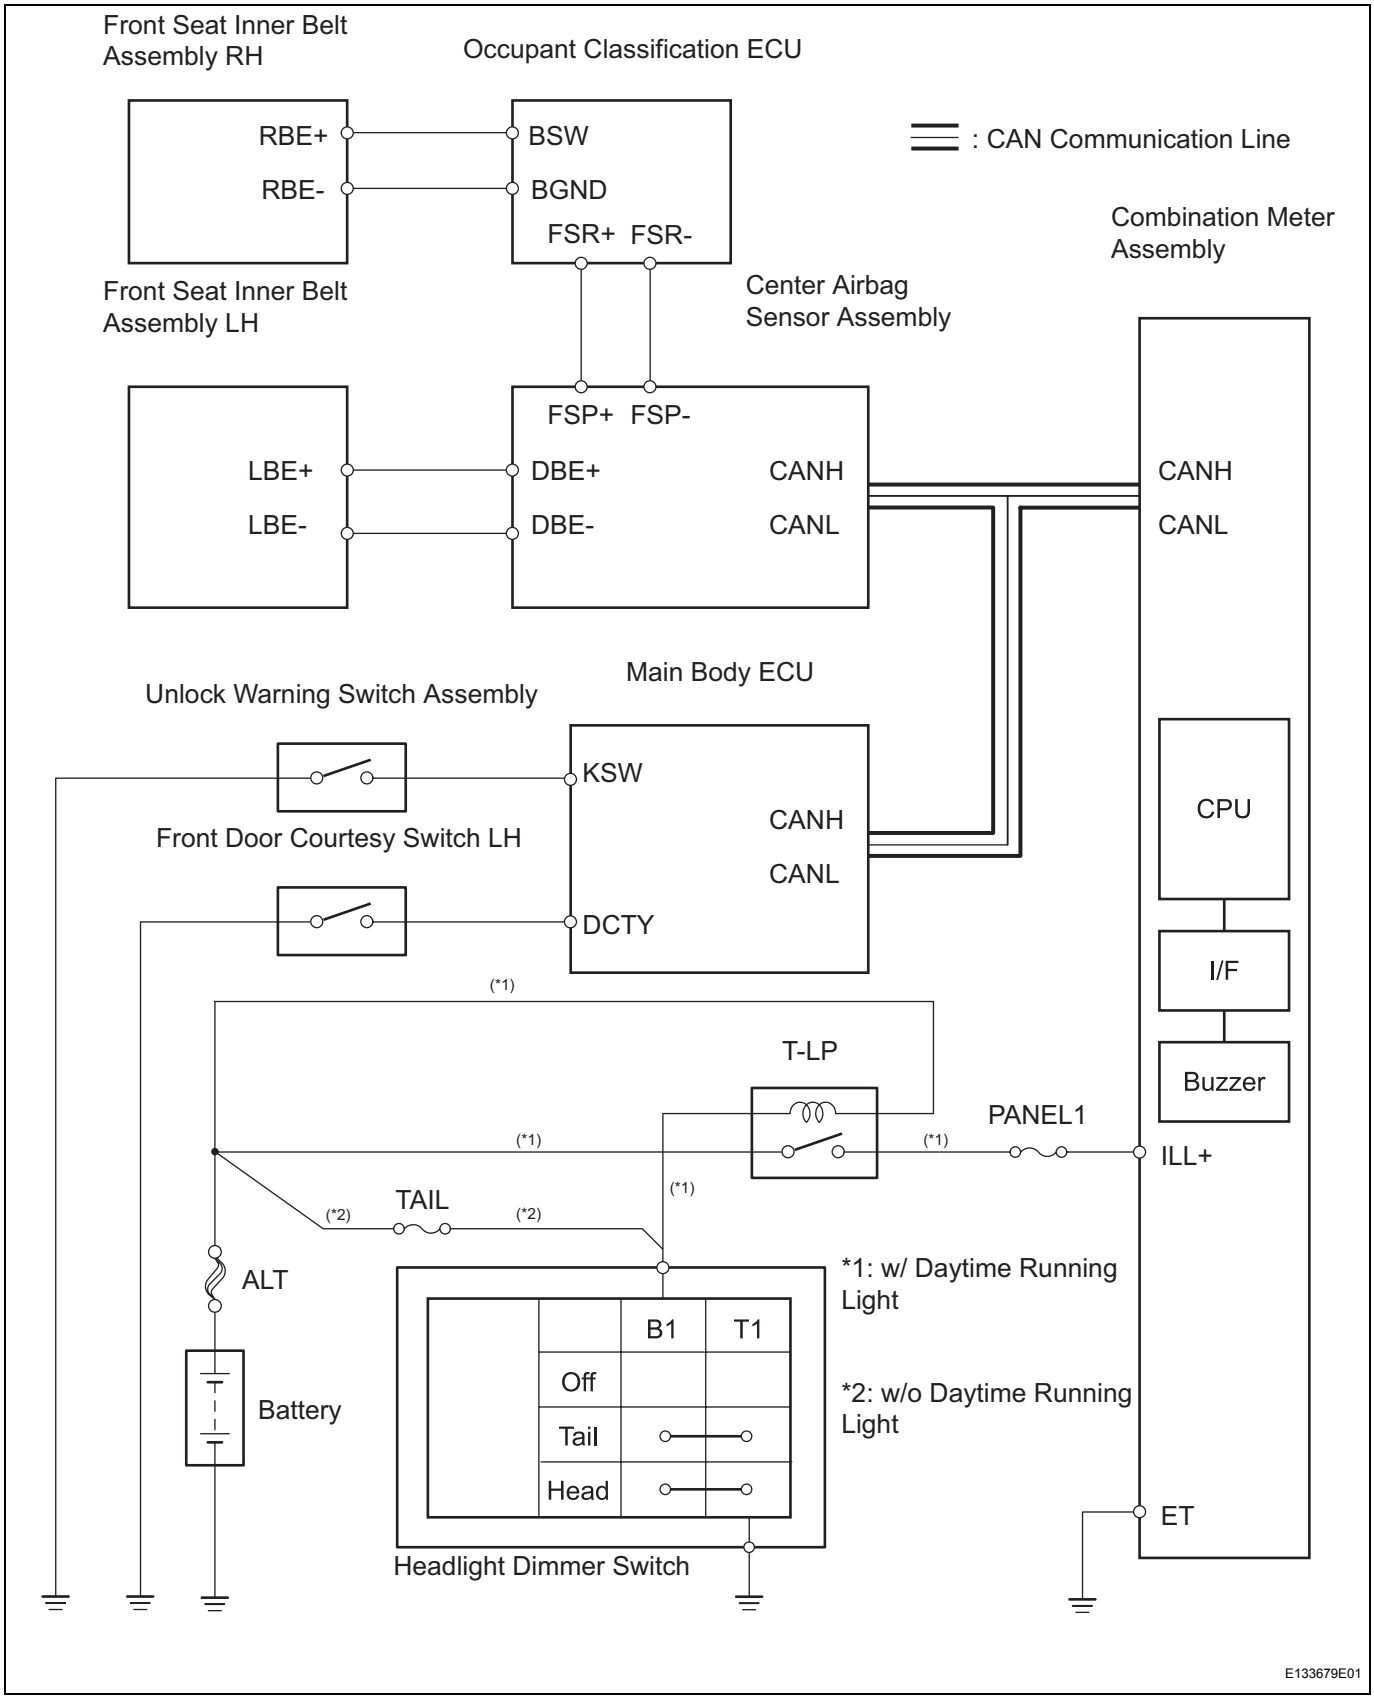
REPLACE COMBINATION METER ASSEMBLY

Warning Buzzer does not Sound

DESCRIPTION

The combination meter assembly controls the buzzers in accordance with signals from the center airbag sensor assembly, the main body ECU and the taillight relay.
HINT:
The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK BUZZER (SEAT BELT, KEY REMINDER, TAILLIGHT REMINDER)

(a) Check that the seat belt, key reminder and taillight reminder warning buzzers sound.

Result

Result	Proceed to
Seat belt warning buzzer does not sound (where equipped with seat belt warning system)	A
Key reminder warning buzzer does not sound (where equipped with key reminder warning system)	B
Taillight reminder warning buzzer does not sound (Meter illuminations normal)	C
No warning buzzers sound	D

HINT:

- Seat belt warning buzzer on: Ignition switch is ON, driver or front passenger seat belt is unfastened, and vehicle speed is 12.4mph (20 km/h) or more.
- Key reminder warning buzzer on: Ignition switch is OFF, key is in ignition key cylinder, and driver side door is open.
- Taillight reminder warning buzzer on: Ignition switch is OFF, taillight relay switch is ON, and driver side door is open.

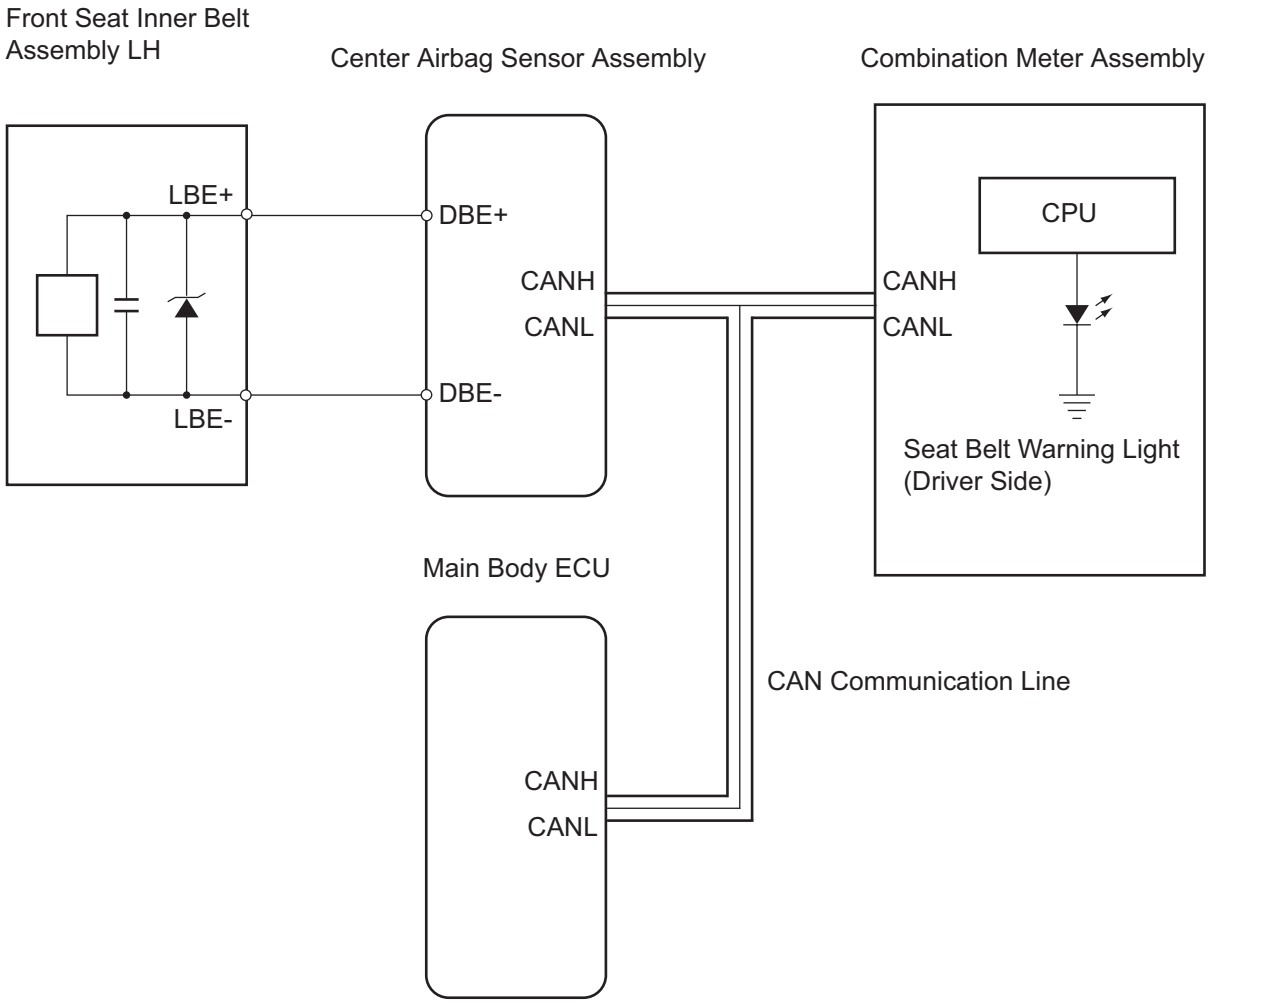
Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is ON, the center airbag sensor assembly communicates the status of the front seat inner belt assembly LH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the driver seat belt warning light in the combination meter assembly. When the seat belt is fastened, the combination meter assembly stops flashing the front driver seat belt warning light.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK SUPPLEMENTAL RESTRAINT SYSTEM

(a) Connect the intelligent tester with the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.

(c) Enter the following menus: DIAGNOSIS / SRS AIRBAG/ DTC INFO

Result

Result	Proceed to
No SRS DTCs are output	A
SRS DTCs are output	B

B → **GO TO SUPPLEMENTAL RESTRAINT SYSTEM**

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (D-BELT REMIND)

(a) Connect the intelligent tester with the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / METER / ACTIVE TEST

Combination Meter Assembly

Item	Test Details	Diagnostic Note
D-BELT REMIND	Front driver seat belt warning light / OFF or ON	Confirm that vehicle is stopped and engine is idling

OK:

Front driver seat belt warning light comes on.

OK → **REPLACE MAIN BODY ECU**

NG

REPLACE COMBINATION METER ASSEMBLY

ME

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

Refer to seat belt warning system (See page SB-24).

WIRING DIAGRAM

Refer to seat belt warning system (See page SB-25).

INSPECTION PROCEDURE

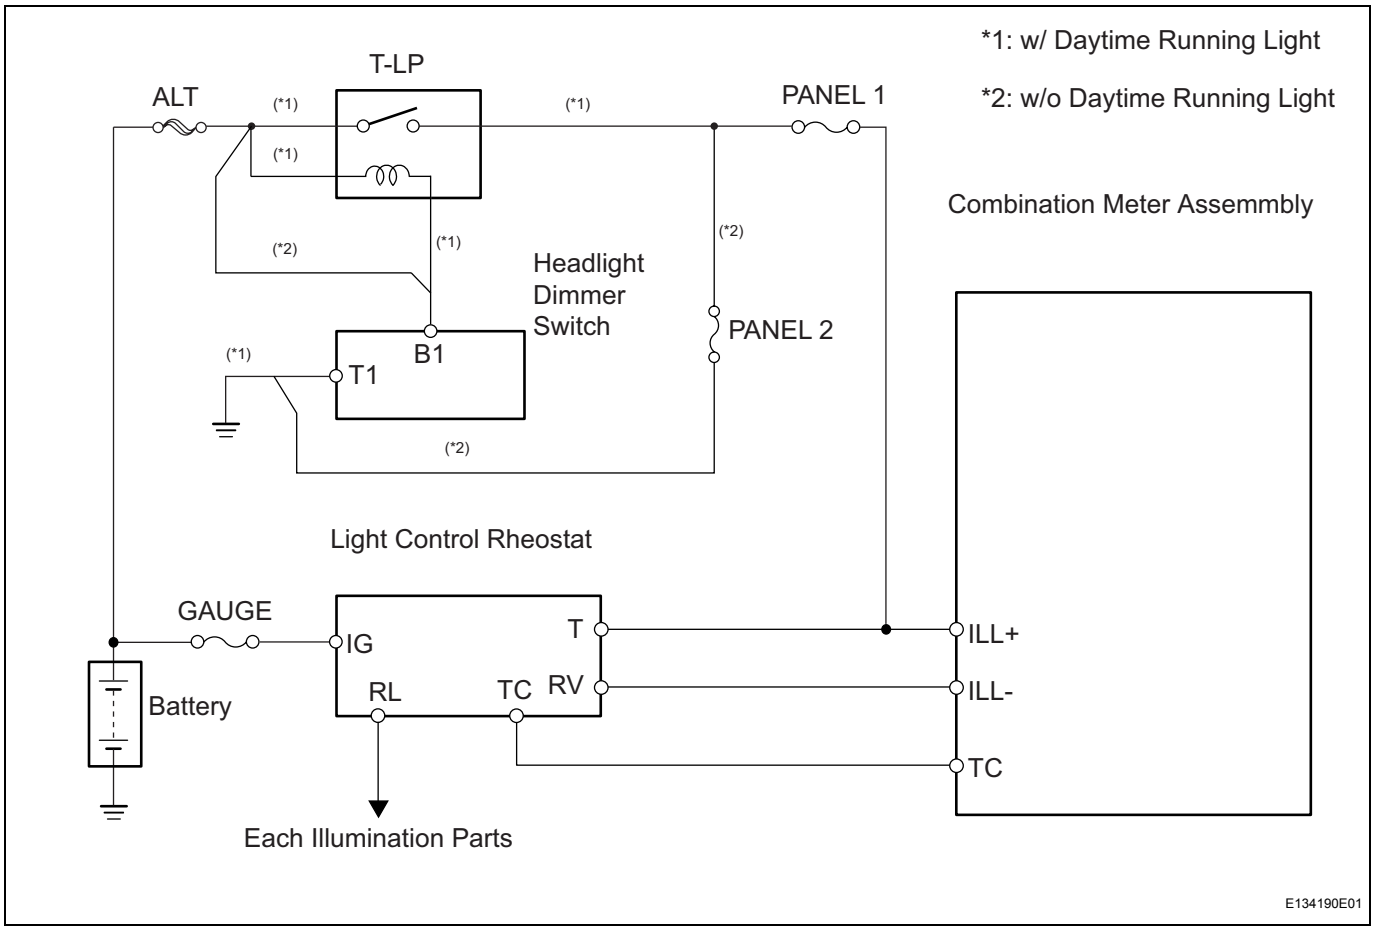
Refer to seat belt warning system (See page SB-25).

Operating Light Control Rheostat does not Change Light Brightness

DESCRIPTION

The combination meter assembly controls the combination meter illumination in accordance with the light control signals from the light control rheostat.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (RHEOSTAT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below in the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
RHEOSTAT (A/D)	Light control rheostat switch / Min.: 0, Max.: 255	Light brightness changes within specified range: Dark (0) to bright (255)	-

OK:
Light brightness can be changed within the specified range by actual operation.

NG → **Go to step 2**

OK

REPLACE COMBINATION METER ASSEMBLY

2 INSPECT FUSE (GAUGE)

(a) Remove the GAUGE fuse from the main body ECU.
(b) Measure the resistance.
OK:
Below 1 Ω
(c) Reinstall the GAUGE fuse.

NG → **REPLACE FUSE**

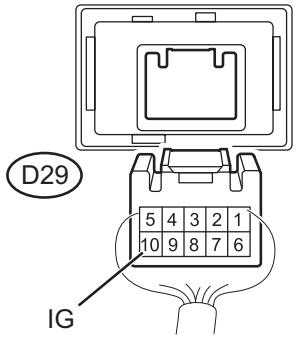
ME

OK

3 CHECK HARNESS AND CONNECTOR (FUSE (GAUGE) - LIGHT CONTROL RHEOSTAT)

Wire Harness Side:

Light Control Rheostat Connector



(a) Disconnect the D29 light control rheostat connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D29-10 - Body ground	Ignition switch ON	11 to 14V

(c) Reconnect the light control rheostat connector.

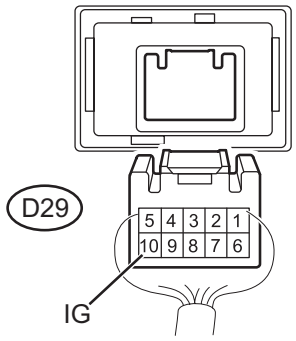
OK → **Go to step 5**

NG

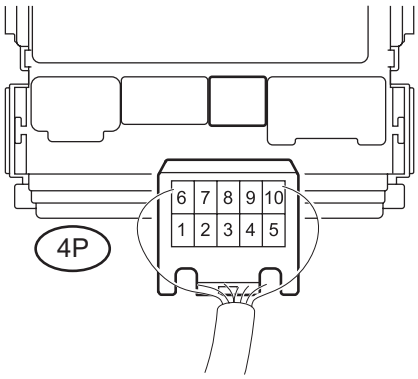
4	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - LIGHT CONTROL RHEOSTAT)

Wire Harness Side:

Light Control Rheostat Connector



Main Body ECU Connector



E118619E01

(a) Disconnect the D29 light control rheostat connector.
(b) Disconnect the 4P main body ECU connector.
(c) Measure the resistance.

Standard resistance

Tester	Condition	Specified Condition
D29-10 (IG)- 4P-1	Always	Below 1 Ω

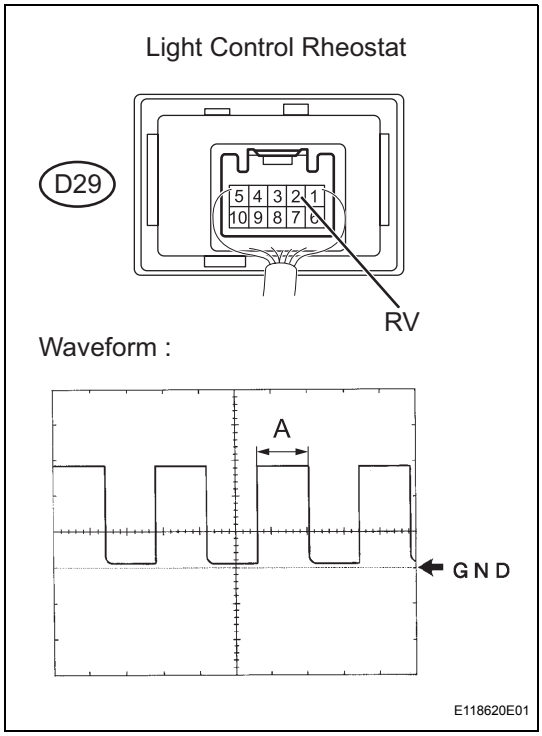
(d) Reconnect the light control rheostat connector.
(e) Reconnect the main body ECU connector.

NG → **REPLACE MAIN BODY ECU**

OK

ME

5	INSPECT LIGHT CONTROL RHEOSTAT



(a) Remove the light control rheostat but without disconnecting the connector.
(b) Turn the ignition switch ON.
(c) Using an oscilloscope, check the signal waveform of the light control rheostat.

Item	Contents
Terminal connection	D29-2 (RV) - Body ground
Tool setting	5V / DIV, 50ms / DIV
Vehicle condition	Ignition switch ON

OK:
Waveform is as shown in the illustration.
HINT:
Duty ratio changes as the illumination dims. (A becomes longer)

(d) Reinstall the light control rheostat.

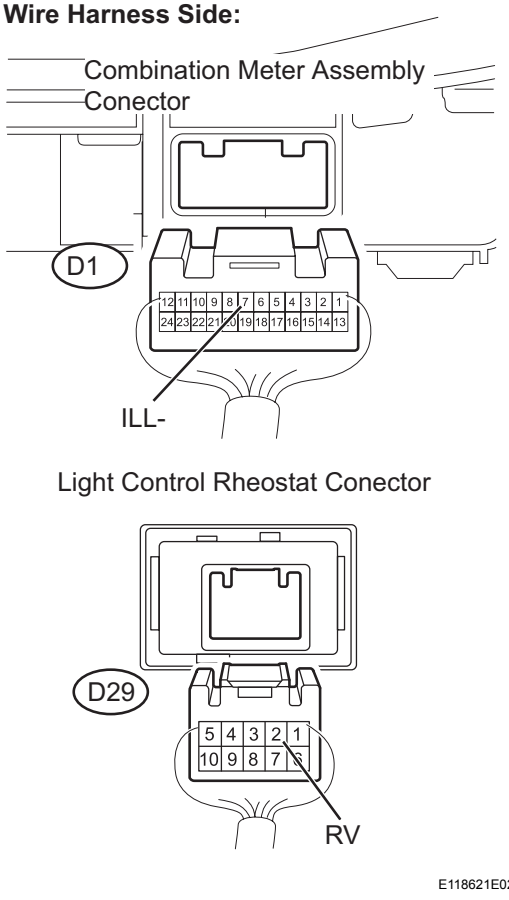
NG → **REPLACE LIGHT CONTROL RHEOSTAT**

OK

ME

6	**CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY -Å@LIGHT CONTROL RHEOSTAT)**

Wire Harness Side:



(a) Disconnect the D1 combination meter assembly connector.
(b) Disconnect the D29 light control rheostat connector connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D1-7 (ILL-) - D29-2 (RV)	Below 1 Ω

(d) Reconnect the combination meter assembly.
(e) Reconnect the light control rheostat connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

SYSTEM DESCRIPTION

1. METER GAUGE AND WARNING INDICATOR

GAUGE

ITEM	Signal Description
Speedometer	Indicates vehicle speed based on signals received from speedometer sensor (Direct line)
Tachometer	Indicates engine speed based on signals from ECM (CAN)
ODO / TRIP meter	Calculates accumulated total vehicle travel distance and vehicle travel distance since strip meter knob pressed
Fuel Gauge	Indicates fuel level in accordance with signals received from fuel sender gauge (Direct line)

WARNING / INDICATOR

ITEM	Signal Description
TURN SIGNAL	Receives turn signal from flasher relay (Direct line)
BEAM	Receives beam signal from headlight dimmer switch (Direct line)
FOG LIGHT	Receives fog light signal from fog light relay (Direct line)
CHARGE	Receives malfunction signal from generator (Direct line and CAN)
MIL	Receives malfunction check signal from ECM (Direct line)
Engine coolant temperature warning	Receives engine coolant temperature based on signal from ECM (CAN)
Engine coolant temperature indicator (COOL)	Receives engine coolant temperature based on signal from ECM (CAN)
WASHER	Receives washer level malfunction signal from washer level warning switch (Direct line)
DOOR	Illuminates when receiving signal from main body ECU (CAN)
D BELT	Receives driver seat belt signal (unfastened) from center airbag sensor assembly (CAN)
BRAKE	Receives parking brake switch signal from main body ECU (CAN) and fluid level warning signal from brake level switch (Direct line)
OIL PRESSURE	Receives malfunction signal from oil pressure switch (Direct line)
MAINT REQD*1	Blinks when vehicle driven about 4,500 miles after oil exchange. Illuminates when vehicle driven about 5,000 miles after oil exchange.
AIR BAG	Receives malfunction signal from center airbag sensor assembly (CAN)
ABS*3	Receives malfunction signal from skid control ECU (CAN)
HEAD*1	Receives headlight signal from DRL relay (Direct line)
TAIL*2	Receives taillight signal from headlight dimmer switch assembly (Direct line)
P/S	Receives malfunction signal from power steering ECU (CAN)
P BELT	Blinks when front passenger seat belt switch ON (unfastened)

*1: U.S.A. only
*2: Canada only
*3: w/ ABS

Buzzer

Item	Signal Description
Key Reminder	Buzzer ON when ignition switch OFF, key inserted and driver door open.
Light Reminder	Buzzer ON when ignition switch OFF, light control switch in TAIL or HEAD position and driver door open.
Seat Belt Warning	Buzzer ON when vehicle speed exceeds 12.4mph (20km/h) and seat belt unfastened.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the combination meter.
- Use an intelligent tester in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 CHECK CAN COMMUNICATION SYSTEM

(a) Use an intelligent tester to check if the CAN communication system is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4 PROBLEM SYMPTOMS TABLE

HINT:
Refer to the Problem Symptoms Table (See page ME-73).
Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **Go to step 6**

A

5	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page ME-76)
(b) Data List/Active Test (See page ME-86)
(c) On-vehicle Inspection (See page ME-88)

NEXT

6	ADJUST, REPAIR OR REPLACE

NEXT

7	CONFIRMATION TEST

NEXT

END

CUSTOMIZE PARAMETERS

1. CUSTOMIZE PARAMETERS (Using the intelligent tester)

HINT:

The following items can be customized.

NOTICE:

- **Record the current settings before custmization.**

Display (Item)	Default	Contents	Setting
KEY REMIND SOUND	SLOW	Changes key reminder buzzer intervals	FAST / NORMAL / SLOW
LIGHT REMIND	ON	Turns light reminder buzzer ON and OFF	ON / OFF
SEAT BELT WARN	D/P ON	Turns seat belt warning buzzer ON and OFF	D/P ON / D ON / P ON / D/P OFF
UNITS BY REGION	Different for every region	Changes drive monitor display units	KM/L JP / KM/L / ML/G US / ML/G UK / KM/G

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected area in the order they are listed. Replace parts as necessary.

MALFUNCTION SYSTEM

Symptom	Suspected area	See page
Entire combination meter assembly does not operate	Refer to troubleshooting	ME-97
Operating light control rheostat does not change light brightness	Refer to troubleshooting	ME-131

METER GAUGES

Symptom	Suspected area	See page
Speedometer malfunction	Refer to troubleshooting	ME-100
Tachometer malfunction	Refer to troubleshooting	ME-103
Fuel gauge malfunction	Refer to troubleshooting	ME-105
Malfunction in engine coolant temperature warning light	Refer to troubleshooting	ME-110

	Combination meter assembly	ME-112
	CAN communication system	CA-9

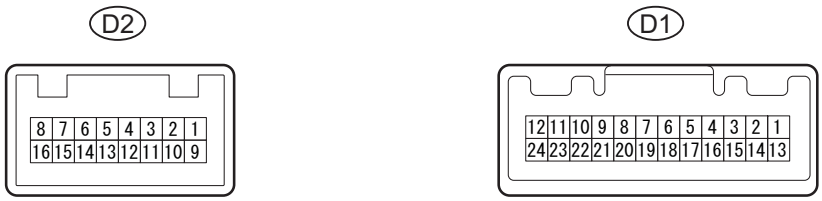
TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY

Combination Meter Assembly:



E106913E09

(a) Disconnect the D1 combination meter assembly connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG2 (D1-1) - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
ECUB (D1-2) - Body ground	L - Body ground	Battery	Always	11 to 14 V
ET (D1-24) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

HINT:
If the result is not as specified, there may be a malfunction in the wire harness.

(c) Disconnect the D2 combination meter assembly connector.
(d) Measure the voltage of the wire harness side connector.

Standard voltage:

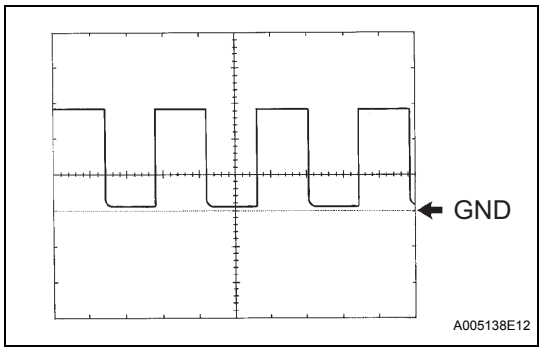
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
FUEL (D1-3) - Body ground	V - Body ground	Fuel level signal	Ignition switch ON	11 to 14 V
ILL- (D1-7) - Body ground	GR - Body ground	Light control rheostat signal	Ignition switch OFF → ON	Pulse generation (See waveform 1)
ILL+ (D1-14) - Body ground	G - Body ground	Illumination signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V
TC (D1-15) - Body ground	Y - Body ground	Tail cancel switch signal	Tail cancel switch OFF → ON	Below 1 V → 11 to 14 V
+S (D1-16) - Body ground	SB - Body ground	Vehicle speed signal (Output)	Driving at approx. 12 mph (20 km/h)	Pulse generation (See waveform 2)
SI (D1-17) - Body ground	P - Body ground	Vehicle Speed signal (Input)	Driving at approx.12 mph (20 km/h)	Pulse generation (See waveform 2)
CANH (D1-20) - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANL (D1-21) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CHG- (D2-1) - Body ground	SB *3 or L *4 - Body ground	Charge warning light signal	Ignition switch ON Engine start Charge warning light OFF → ON	Below 1 V → 11 to 14 V
SW (D2-2) - Body ground	V - Body ground	Brake fluid level warning light signal	Ignition switch ON Brake fluid level warning light ON → OFF	Below 1 V → 11 to 14 V

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFI (D2-4) - Body ground	B - Body ground	MIL signal	Ignition switch ON MIL ON → OFF	Below 1 V → 11 to 14 V
FOG (D2-7) - Body ground	R - Body ground	Front FOG signal	Ignition switch ON Front fog light switch OFF → ON	Below 1 V → 11 to 14 V
B (D2-8) - Body ground	LG - Body ground	Turn signal LH signal	Ignition switch ON Turn signal LH indicator light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
PBLT (D2-9) - Body ground	O - Body ground	Seat belt warning light signal (Passenger side)	Ignition switch ON Front passenger seat belt warning light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
WLVL (D2-10) - Body ground	W - Body ground	Washer level warning signal	Ignition switch ON Washer level warning light ON → OFF	Below 1 V → 11 to 14 V
BEAM- (D2-11) - Body ground	P - Body ground	HI-BEAM indicator signal (-)	Headlight dimmer switch (Hi-BEAM) Hi → Lo	Below 1 V → 11 to 14 V
S (D2-12) - Body ground	Y - Body ground	Oil pressure signal	OIL / P warning light ON → OFF	Below 1 V → 11 to 14 V
HEAD (D2-13)*1 - Body ground	L - Body ground	HEAD light indicator signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V
BEAM+ (D2-14) - Body ground	GR - Body ground	HI-BEAM indicator signal (+)	BEAM indicator light OFF → ON	Below 1 V → 11 to 14 V
B (D2-15) - Body ground	BR - Body ground	Turn signal RH signal	Turn signal RH indicator light OFF → ON → OFF	Below 1 V → 11 to 14 V → Below 1 V
IND (D2-16)*2 - Body ground	G - Body ground	Taillight indicator signal	Light control switch OFF → ON	Below 1 V → 11 to 14 V

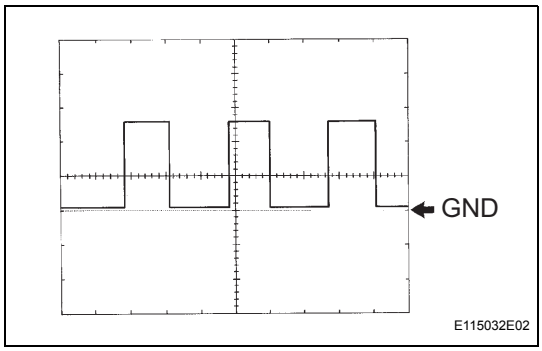
HINT:
If the result is not as specified, the combination meter assembly may be malfunctioning
*1: U.S.A. only
*2: Canada only
*3: w/ Daytime running light
*4: w/o Daytime running light

(1) Waveform 1: Using an oscilloscope

Terminal Connections	ILL- (D1-7) - Body Ground
Tool Setting	5V / DIV, 50 ms / DIV
Condition	Ignition switch ON



ME



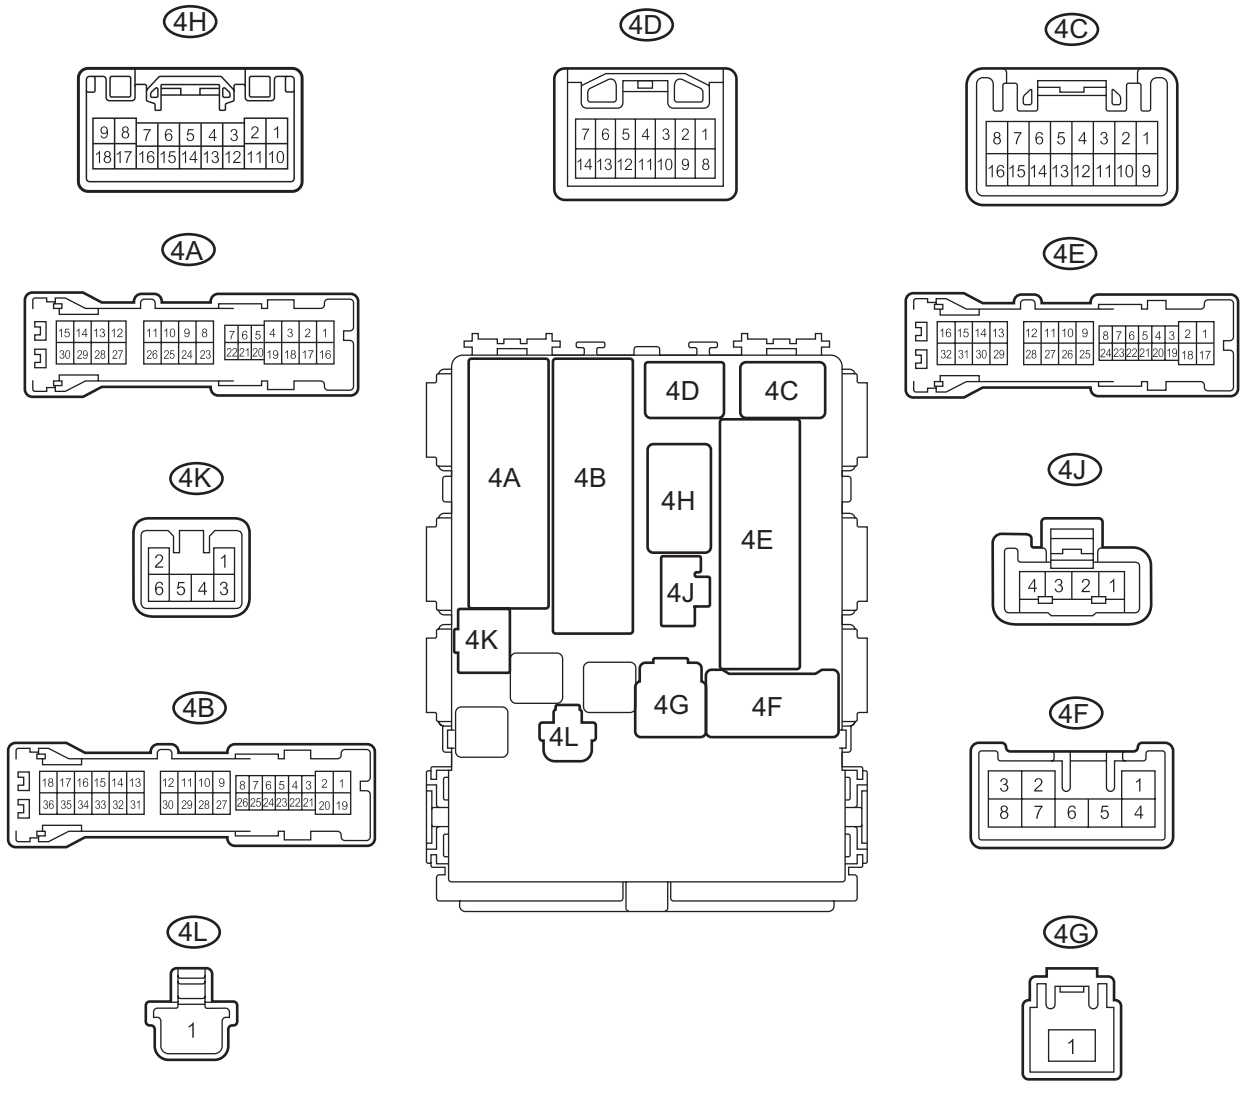
(2) Waveform 2: Using an oscilloscope

Terminal Connections	+S (D1-16) - Body Ground SI (D1-17) - Body Ground
Tool Setting	5V / DIV, 20ms / DIV
Condition	Driving at approximately 12mph (20km/h)

HINT:
As the vehicle speed increases, the cycle of the signal waveform narrows.

2. CHECK MAIN BODY ECU

Main Body ECU (Rear View):

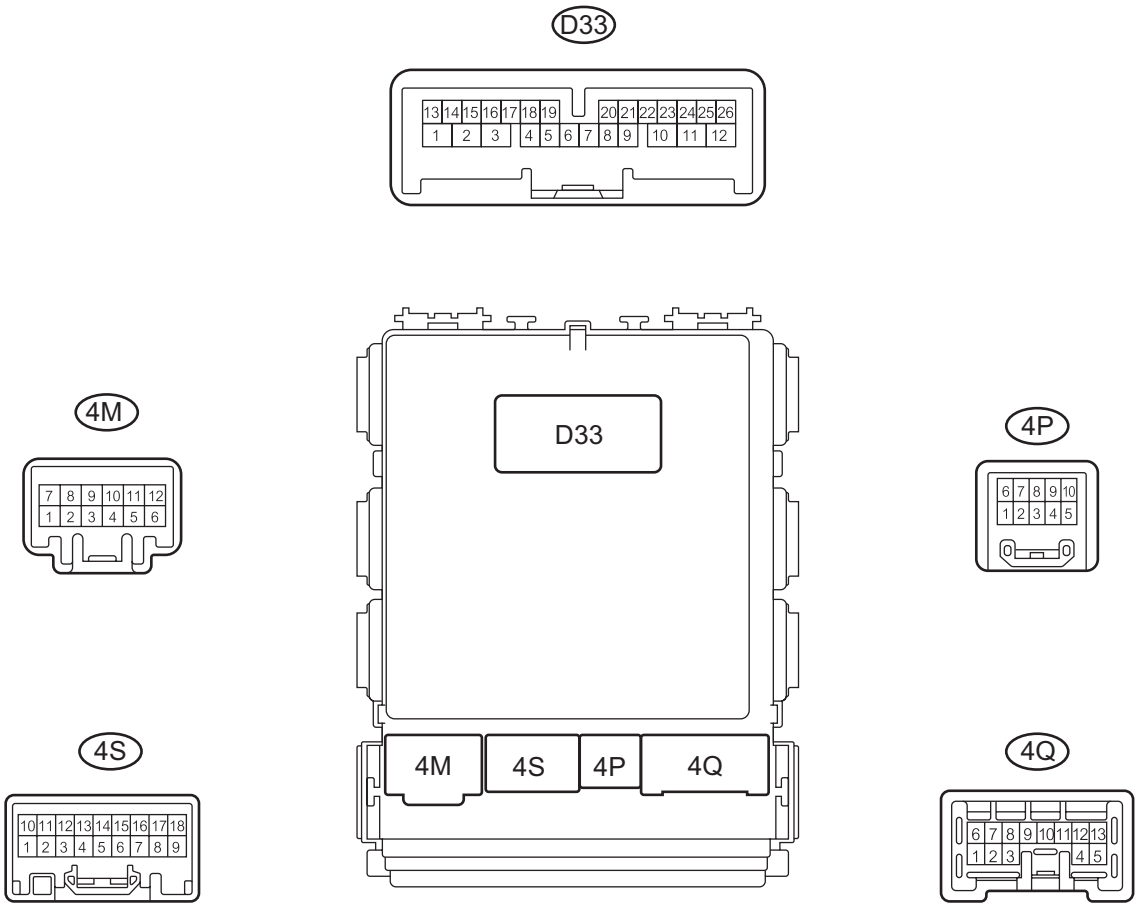


Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RRCY (4A-5) - GND1 (4E-17)	G - W-B	Rear door courtesy switch signal (LH)	Rear door (Driver side) CLOSED → OPEN	11 to 14 V → Below 1 V

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BCTY (4A-7) - GND1 (4E-17)	SB - W-B	Back door courtesy switch signal	Back door CLOSED → OPEN	11 to 14 V → Below 1 V
RRCY (4A-20) - GND1 (4E-17)	L - W-B	Rear door courtesy switch signal (RH)	Rear door (Front passenger side) CLOSED → OPEN	11 to 14 V → Below 1 V
DCTY (4A-21) - GND1 (4E-17)	R - W-B	Front door courtesy switch signal (Driver side)	Driver door CLOSED → OPEN	11 to 14 V → Below 1 V
PCTY (4A-24) - GND1 (4E-17)	L - W-B	Front door courtesy switch signal (Passenger side)	Front passenger door CLOSED → OPEN	11 to 14 V → Below 1 V
PKB (4C-2) - GND1 (4E-17)	Y - W-B	Parking brake signal	Parking brake warning light ON → OFF	Below 1 V → 11 to 14 V
KSW (4D-7) - GND1 (4E-17)	Y - W-B	Key unlock switch condition signal	Key inserted → Removed	Below 1 V → 11 to 14 V
GND1 (4E-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Main Body ECU (Front View):



E114511E01

Standard:

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANL (D33-22) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANH (D33-23) - Body ground	R - Body ground	CAN communication line	Ignition switch ON	Pulse generation

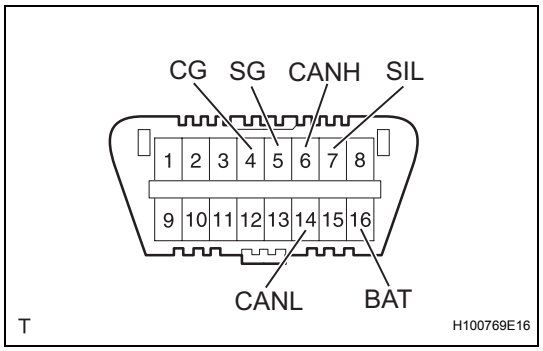
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Meter and gauge system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use an intelligent tester with the CAN VIM to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

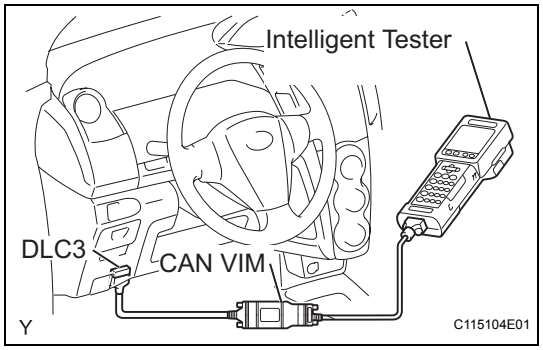
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

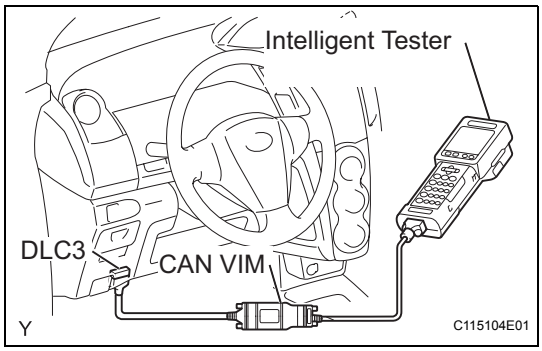
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.





DTC CHECK / CLEAR

1. DTC CHECK

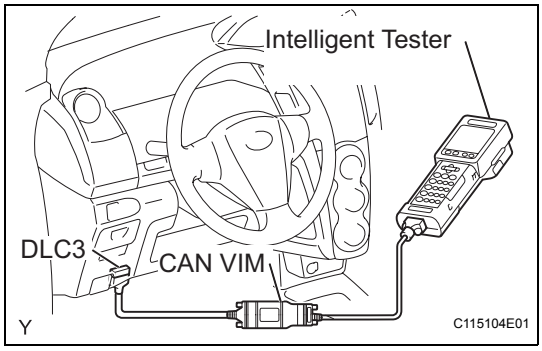
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester ON.
(d) Select the following menu items: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CURRENT CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) See page ME-87 to check the details of the DTC(s).

2. CLEAR DTC (Using an intelligent tester)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CLEAR CODES.
(e) Press the YES button to clear the DTC(s).

3. CLEAR THE DTC (Without using an intelligent tester)

(a) Perform either one of the following operations.
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the ECU-B fuse from the engine room relay block located inside the engine compartment for more than 1 minute.



DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the Data List according to the prompts displayed on the tester.

METER

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
+B VOLTAGE	Battery voltage Min=0, Max=255, 1LSB=1	10V: 119 / 10.5V: 126 / 11V: 132 / 12V: 145 / 13V: 157 / 14V: 170	-

FUEL GAUGE (A/D)	Fuel input signal / Min.: 0, Max.: 255	Fuel receiver gauge segments No.1 to No.8 illuminate: 14 to 34 No.1 to No.6 (No.7) illuminate: 77 to 109 No.1 to No.4 (No,5) illuminate: 135 to 172 No.1 and No.2 illuminate: 175 to 188 No.1 flashes: 194 to 200	-
OIL MAINTENANCE(*1)	Integrated value for Oil Maintenance / Min.: 0 mile, Max.: 25500 mile	Total accumulated vehicle travel distance for oil maintenance since last reset	-
RHEOSTAT (A/D)	Rheostat value / Min.: 0, Max.: 255	Light control rheostat switch is Dark(0)→Bright(255)	-

*1: U.S.A. only

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's Active Test allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the Active Test according to the prompts displayed on the tester.

METER

Item	Test Details	Diagnostic Note
SPEED METER	0 / 40 / 80 / 120 mph 0 / 40 / 80 / 120 / 160 / 200 km/h	-
TACHOMETER	0rpm / 1,000rpm / 2,000rpm / 3,000rpm / 4,000rpm / 5,000rpm / 6,000rpm / 7,000rpm	-

DIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
U0100	Lost Communication with ECM/ PCM "A"	• ECM • CAN communication system	ME-93
U0129	Lost Communication with Skid Control ECU	• Skid Control ECU • CAN communication system	ME-95

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester, inspect the speedometer and confirm that the speedometer readings are within the acceptable range. Also check the odometer operation.

Reference:

km/h (Canada)

Standard Indication	Acceptable Range
20 km/h	17.5 to 21.5 km/h
40 km/h	38 to 42 km/h
60 km/h	58 to 63 km/h
80 km/h	78 to 84 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119 to 125 km/h
140 km/h	139 to 146 km/h
160 km/h	159 to 167 km/h
180 km/h	179 to 188 km/h
200 km/h	199 to 209 km/h

mph (U.S.A.)

Standard Indication	Acceptable Range
20 mph	18 to 21 mph
40 mph	38.5 to 42 mph
60 mph	59 to 63 mph
80 mph	79.5 to 84 mph
100 mph	100 to 105 mph
120 mph	121 to 126.5 mph

NOTICE:

Tire wear and excessively high or low tire pressure affect speedometer indications.

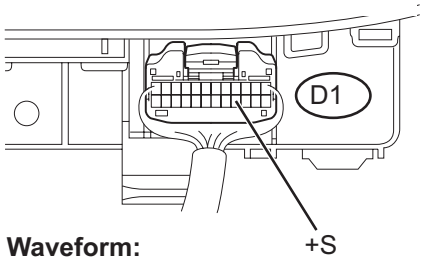
(2) Check the deflection of the speedometer indicator.

Reference:

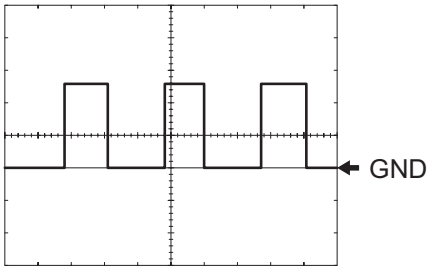
Below 0.3 mph (0.5 km/h)

ME

Combination Meter Assembly Connector:



Waveform:



E117125E05

2. INSPECT SPEEDOMETER SENSOR

(a) Check the output signal waveform.

(1) Remove the combination meter assembly, but do not disconnect the connector.

(2) Connect an oscilloscope to terminals D1 - 16 and to the body ground.

(3) Start the engine.

(4) Check the signal waveform according to the condition(s) in the table below.

Item	Contents
Terminal Connection	+S (D1-16) and Body Ground
Tool Setting	5V / DIV, 20ms / DIV
Condition	Driving at approximately 12mph (20km / h)

OK:

As shown in the illustration.

NOTICE:

Waveform is indicated as the vehicle speed increases, the cycle of the signal waveform narrows.

(5) Reinstall the combination meter assembly.

3. INSPECT TACHOMETER

(a) Check the operation.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch ON and turn the tester ON.

(3) Select the item below from the Data List and read the value displayed on the intelligent tester.

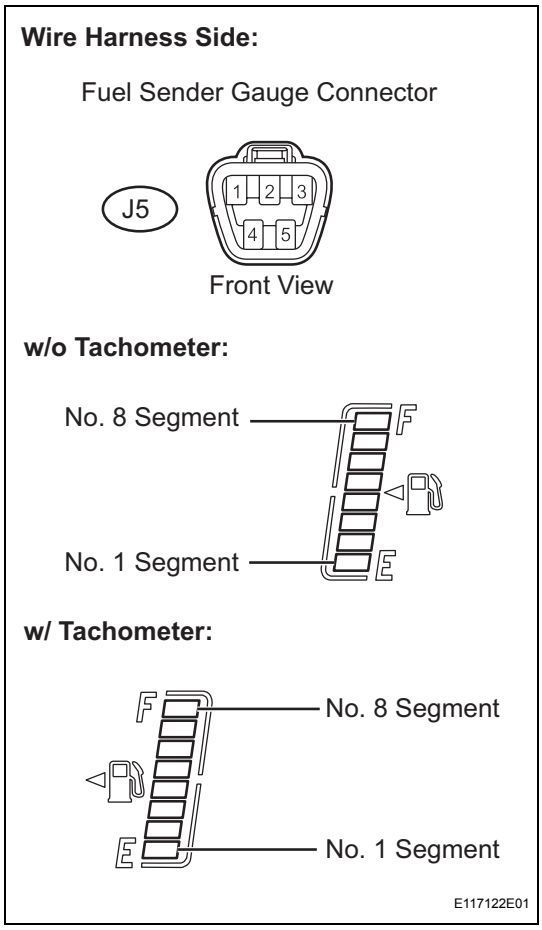
METER

Item	Measurement Item/ Range(Display)	Normal Condition	Diagnostic Note
TACHO METER	Engine speed/Min.: 0 rpm, Max.:12,750 rpm	Approximately same as actual engine speed (When engine is running)	-

(4) Compare the engine speed displayed on the tester with the tachometer reading.

Reference

Standard Indication (r/min)	Acceptable Range [Data in ( ) are for reference]
700 r/min	630 to 770 r/min
1,000 r/min	(900 to 1,100 r/min)
2,000 r/min	(1,850 to 2,150 r/min)
3,000 r/min	2,800 to 3,200 r/min
4,000 r/min	(3,800 to 4,200 r/min)
5,000 r/min	4,800 to 5,200 r/min
6,000 r/min	(5,750 to 6,250 r/min)
7,000 r/min	(6,700 to 7,300 r/min)



4. INSPECT FUEL RECEIVER GAUGE

(a) Disconnect the J5 fuel sender gauge connector.

(b) Check the fuel receiver gauge operation when the ignition switch is turned to the ON position.

OK:

No. 1 segment flashes.

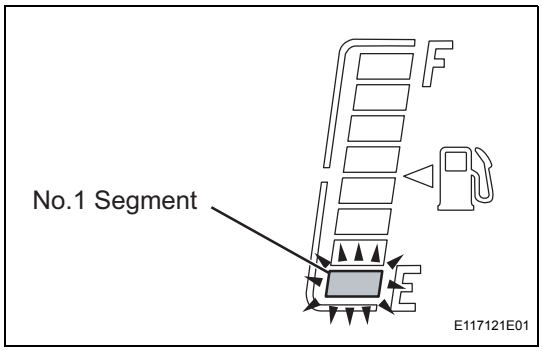
(c) Connect terminals 2 and 3 on the wire harness side connector of the fuel sender gauge.

(d) Check the fuel receiver gauge operation when the ignition switch is turned from OFF to ON.

OK:

All segments, from No. 1 to No. 8, illuminate.

(e) Reconnect the fuel sender gauge connector.



5. INSPECT FUEL LEVEL WARNING LIGHT

(a) Turn the ignition switch to the ON position, and check that the receiver gauge No. 1 segment flashes when the fuel volume is less than 6.3 liters (less than 15 % of the total fuel tank capacity).

OK

Fuel Volume	Flashing Speed (Interval)
1.6 gal (6.3 liters) (Less than 15 % of total fuel tank capacity)	Flashes slowly (1.2 seconds)
1.1 gal (4.2 liters) (Less than 10 % of total fuel tank capacity)	Flashes quickly (0.6 seconds)

6. INSPECT ENGINE OIL PRESSURE WARNING LIGHT

(a) Disconnect the engine oil pressure switch connector.

(b) Turn the ignition switch to the ON position.

(c) Ground the terminal of the wire harness side connector, then check the engine oil pressure warning light.

OK:

Engine oil pressure warning light illuminates.

(d) Reconnect the engine oil pressure switch connector.

7. INSPECT BRAKE WARNING LIGHT

(a) Inspect the parking brake warning light.
  (1) Disconnect the parking brake switch connector.
  (2) Turn the ignition switch to the ON position.
  (3) Ground the terminal of the wire harness side connector, then check the parking brake warning light.
    OK:
      Brake warning light illuminates.
  (4) Reconnect the parking brake switch connector.

(b) Inspect the brake fluid level warning light.
  (1) Disconnect the brake fluid level warning switch connector.
  (2) Turn the ignition switch to the ON position.
  (3) Connect a terminal to the other terminal of the wire harness side connector, then check the brake fluid level warning switch.
    OK:
      Brake warning light illuminates.
  (4) Reconnect the brake fluid level warning switch connector.

ME

8. INSPECT BRAKE FLUID LEVEL WARNING SWITCH

(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance between the terminals.
  Standard resistance:
    Float inside reservoir tank is in high position (switch OFF): 10 k Ω or higher
(d) Use a syphon or a similar tool to drain fluid out of the reservoir tank.
(e) Measure the resistance between the terminals.
  Standard resistance:
    Float inside reservoir tank is in low position (switch ON): Below 1 Ω
(f) Pour the fluid back into the reservoir tank.
(g) Reconnect the brake fluid level warning switch connector.
(h) Reinstall the reservoir tank cap and strainer.

9. INSPECT WINDOW WASHER FLUID WARNING LIGHT

(a) Disconnect the connector from the washer level warning switch.
(b) Turn the ignition switch to the ON position.
(c) Ground the terminal of the wire harness side connector, then check the washer level warning light.
  OK:
    Washer level warning light comes on.

10. INSPECT ENGINE COOLANT TEMPERATURE WARNING LIGHT

(a) Disconnect the engine coolant temperature sensor connector.

(b) Turn the ignition switch to the ON position.
(c) Connect a terminal to the other terminal of the wire harness side connector, then check the engine coolant temperature warning light.
OK:
Engine coolant temperature warning light illuminates.
(d) Reconnect the engine coolant temperature sensor connector.
NOTICE:
DTCs may have been set. Check for DTCs and clear any that have been set.

11. INSPECT ENGINE COOLANT TEMPERATURE WARNING LIGHT

(a) Disconnect the engine coolant temperature sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Connect a terminal to the other terminal of the wire harness side connector, then check the engine coolant temperature coolant indicator light.
OK:
Engine coolant temperature indicator light illuminates.
(d) Reconnect the engine coolant temperature sensor connector.
NOTICE:
DTCs may have been set. Check for DTCs and clear any that have been set.

12. OIL MAINTENANCE INDICATOR RESETTING PROCEDURE (U.S.A. only)

Oil Maintenance Indicator	Condition	Specified State
Blinks	Vehicle has run 4,500 miles since previous setting	Indicator blinks for 15 seconds after ignition switch is turned ON (including 3 seconds for a valve check)
Illuminates	Vehicle has run 5,000 miles since previous setting	Indicator illuminates after ignition switch is turned ON.

(a) Set the window display located inside the combination meter to the Trip A indication.
(b) Turn the ignition switch OFF.
(c) While pressing the ODO/TRIP display change switch (reset switch) (for at least 5 seconds), turn the ignition switch ON.
(d) When the reset procedure has been completed successfully, the MAINT REQD indicator light turns off and the ODO/TRIP meter indicates 0 (zero) and then returns to its regular display.
HINT:
If the reset fails, the MAINT REQD indicator light remains illuminated. Perform the procedure again.

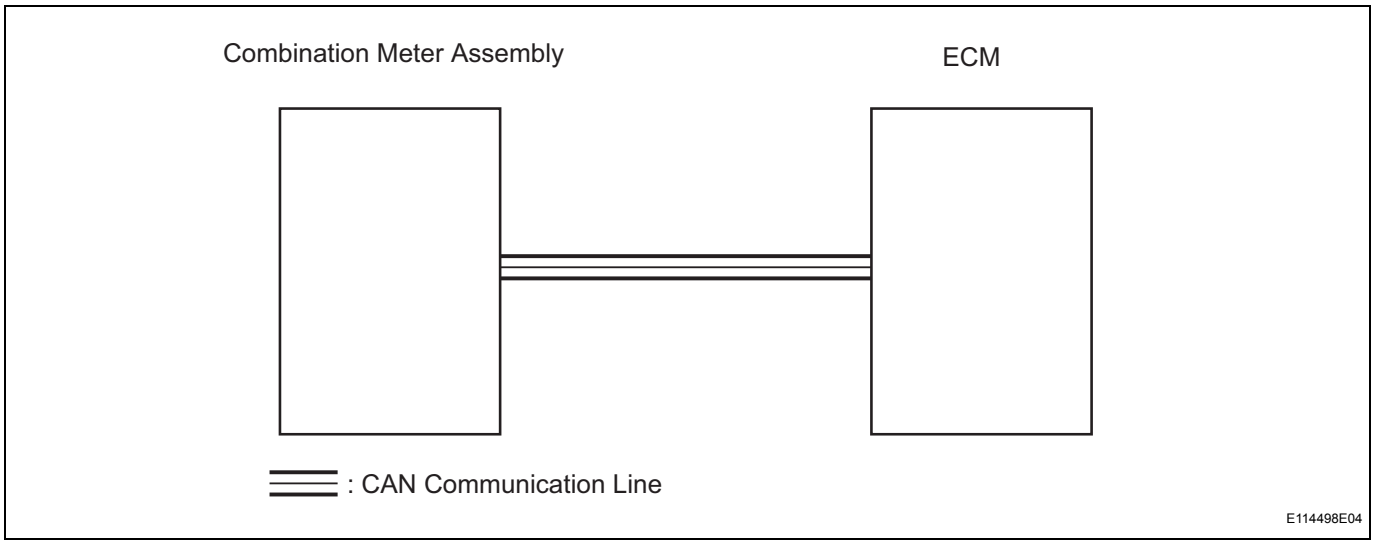
DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly and the ECM exchange signals through the CAN communication system.

DTC No.	DTC Detecting Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 3.1 mph (5 km/h) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (Communication with neither ECM nor skid control ECU for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM



ME

INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS/ OBD/MOBD/ METER/ DTC INFO /CLEAR CODES.
(d) Drive the vehicle at more than 3.1 mph (5 km/h) for at least 60 seconds.
(e) Stop the vehicle.
(f) Check for DTCs.

Result

Result	Proceed to
DTC output	A

GO TO CAN COMMUNICATION SYSTEM

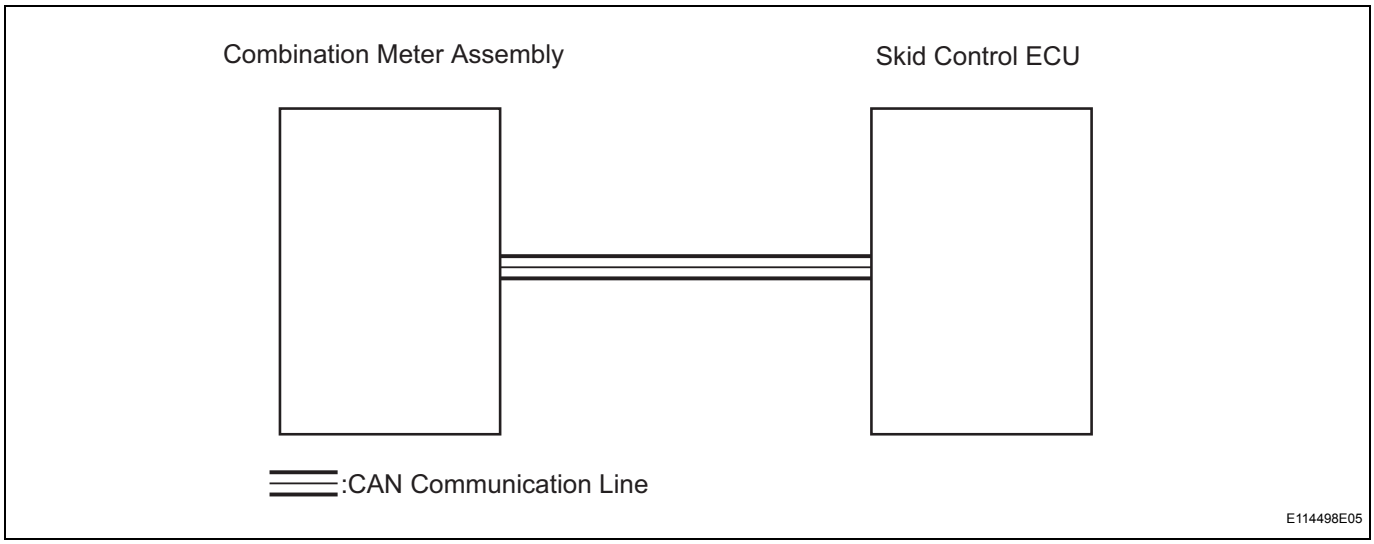
DTC	U0129	Lost Communication with Skid Control ECU

DESCRIPTION

The combination meter assembly receives signals from the skid control ECU through the CAN communication system.

DTC No.	DTC Detecting Conditions	Trouble Areas
U0129	When either of following conditions detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with skid control ECU continues for 3 seconds or more (Communication with neither ECM nor skid control ECU for 60 seconds or more)	• Skid control ECU • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS/ OBD/MOBD/ METER/ DTC INFO /CLEAR CODES.
(d) Start the engine and wait for at least 60 seconds.
(e) Check for DTCs.

Result

Result	Proceed to
DTC output	A
DTC not output	B

B	SYSTEM IS OK

A

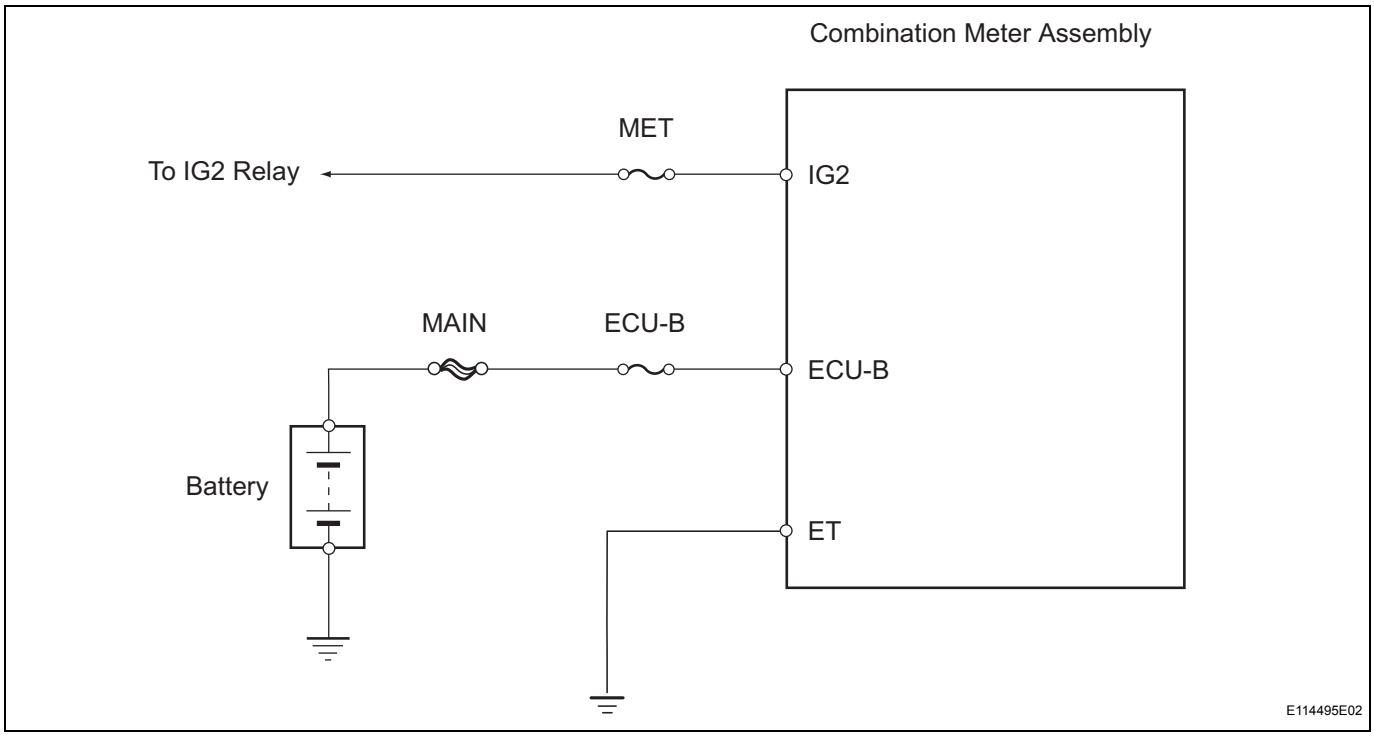
GO TO CAN COMMUNICATION SYSTEM

Entire Combination Meter does not Operate

DESCRIPTION

This circuit provides power to the combination meter assembly.

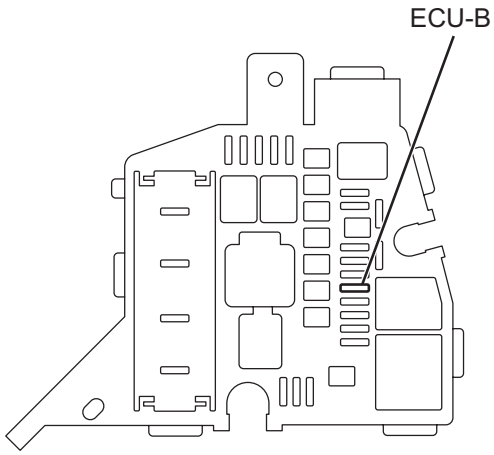
WIRING DIAGRAM



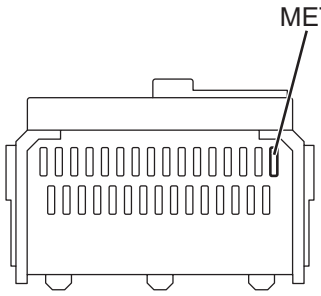
INSPECTION PROCEDURE

1	CHECK FUSE (ECU-B, MET)

Engine Room R/B:



Main Body ECU:



O

E117120E01

(a) Remove the ECU-B fuse from the engine room relay block.
(b) Remove the MET fuse from the main body ECU.
(c) Measure the resistance.
Standard resistance:
Below 1Ω
(d) Reinstall the fuse.

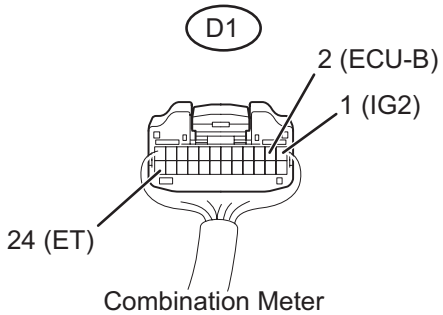
NG → **CHECK SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

ME

2	INSPECT COMBINATION METER ASSEMBLY

Wire Harness Side:



E114496E09

(a) Disconnect the D1 combination meter connector.
(b) Measure the resistance.
Standard resistance

Terminal No.	Condition	Specified Condition
ET (D1-24) - Body ground	Always	Below 1 Ω

(c) Measure the voltage.
Standard voltage

Terminal No.	Condition	Specified Condition
IG2 (D1-1) - Body ground	Ignition switch ON	11 to 14V
ECU-B (D1-2) - Body ground	Always	11 to 14V

(d) Reconnect the combination meter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

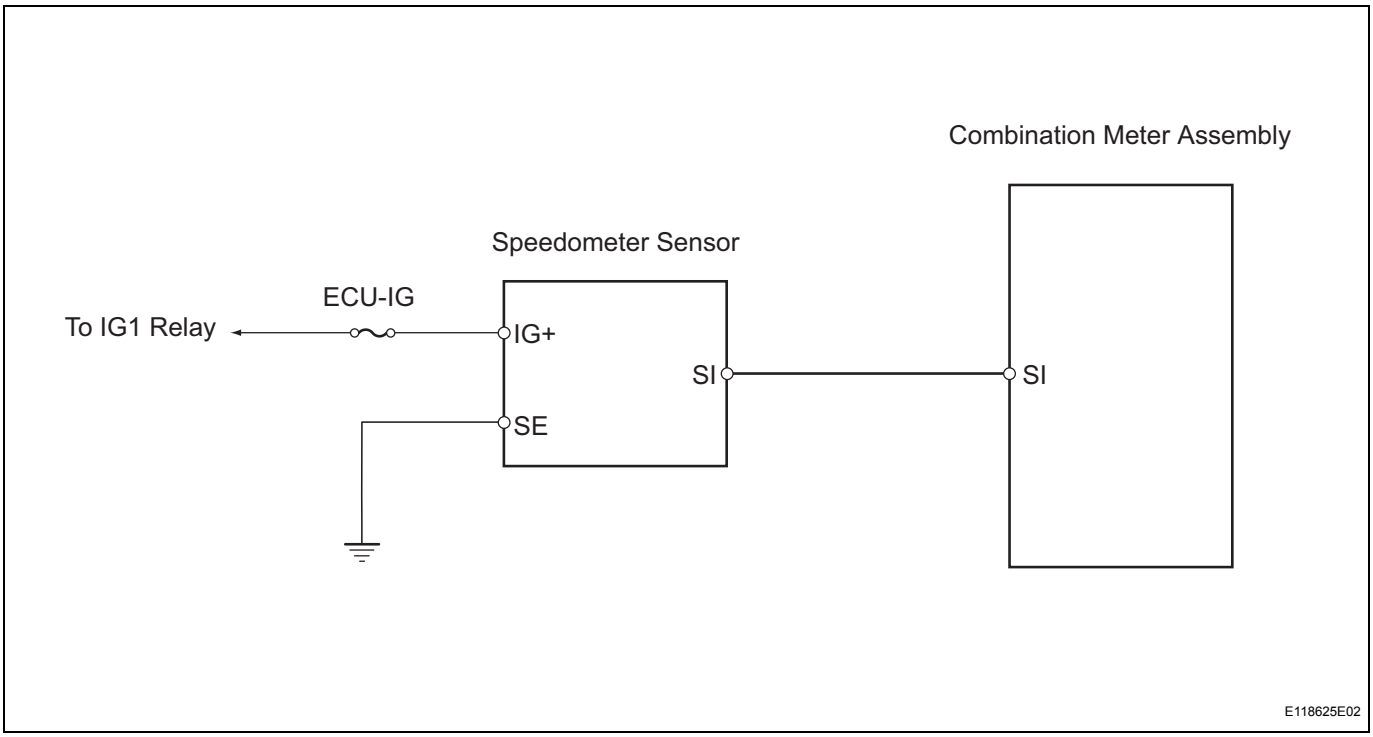
ME

Speedometer Malfunction

DESCRIPTION

The combination meter assembly controls the speedometer in accordance with vehicle speed signals from the speedometer sensor.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SPEED METER)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus : DIAGNOSIS / METER / ACTIVE TEST.

METER

Item	Test Details	Diagnostic Note
SPEED METER	0 / 40(24) / 80(48) / 120(72) / 160(96) / 200(120) / 240(144) km/h (mph)	-

OK:
Vehicle speed displayed on the tester is approximately the same as that of the speedometer reading.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2	READ VALUE OF INTELLIGENT TESTER (SPEED METER)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and the tester ON.
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item / Range(Display)	Normal Condition	Diagnostic Note
SPEED METER	Vehicle speed / Min.: 0 km/h (0mph), Max.: 255 km/h(158mph)	Approximately same as actual vehicle speed (When vehicle is driven)	-

OK:
Vehicle speed displayed on the tester is approximately the same as the actual vehicle speed.

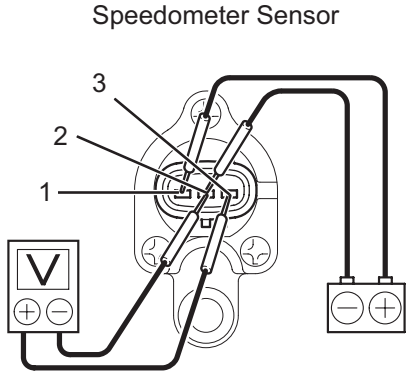
NG → **Go to step 3**

OK →

REPLACE COMBINATION METER ASSEMBLY

3	INSPECT SPEEDOMETER

Component Side:



(a) Remove the speedometer sensor.
(b) Connect the positive (+) lead from the battery to terminal 1 and the negative(-) lead to terminal 2.
(c) Connect the positive (+) lead from the tester to terminal 3 and the negative (-) lead to terminal 2.
(d) Rotate the shaft.
(e) Check that the voltage output between terminals 2 and 3 varies between 0V and 11V.
(f) Reinstall the speedometer sensor.

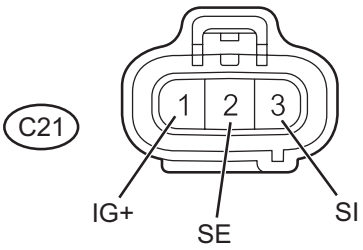
NG → **REPLACE SPEEDOMETER**

OK →

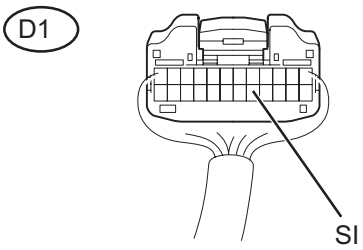
4	CHECK HARNESS AND CONNECTOR (SPEEDOMETER SENSOR - COMBINATION METER ASSEMBLY)

Wire Harness Side:

Speedometer Sensor Connector



Combination Meter Assembly Connector



E117013E02

(a) Disconnect the D1 combination meter assembly connector.
(b) Disconnect the C21 speedometer sensor connector.
(c) Measure the resistance
Standard resistance

Tester Connection	Specified Condition
D1-17 (SI) - C21-3 (SI)	Below 1 Ω
C21-2 (SE) - Body ground	Below 1 Ω

(d) Reconnect the combination meter assembly connector.
(e) Measure the voltage
Standard voltage

Tester Connection	Condition	Specified Condition
C21-1 (IG+) - Body ground	Ignition switch ON	11 to 14V

(f) Reconnect the combination meter assembly and speedometer sensor connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

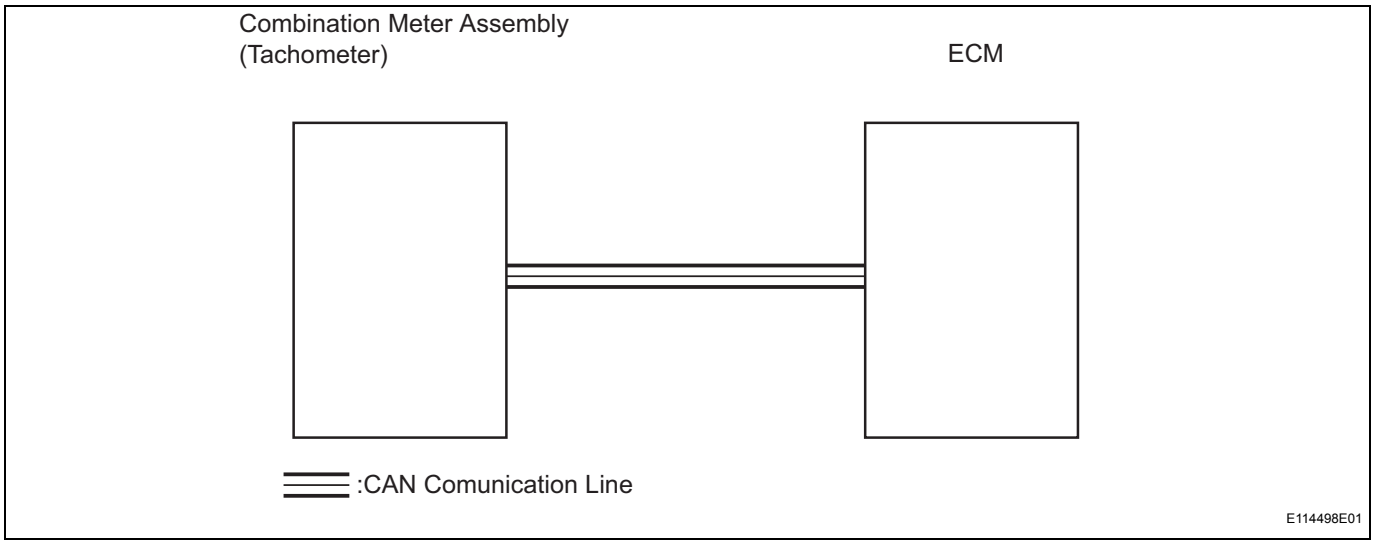
ME

Tachometer Malfunction

DESCRIPTION

The combination meter assembly controls the tachometer in accordance with engine speed signals from the ECM through the CAN communication system.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
If DTC U0100 has been stored, troubleshoot the CAN communication system first.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (TACHOMETER)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / METER / ACTIVE TEST.

METER

Item	Test Details	Diagnostic Note
TACHOMETER	0 rpm / 1,000 rpm / 2,000 rpm / 3,000 rpm / 4,000 rpm / 5,000 rpm / 6,000 rpm / 7,000 rpm	-

OK:
Engine speed displayed on the tester is approximately the same as that of the tachometer reading.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2	READ VALUE OF INTELLIGENT TESTER (TACHOMETER)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
TACHOMETER	Engine speed/Min.: 0 rpm, Max.: 12,750 rpm	Approximately same as actual engine speed (When engine is running)	-

OK:
Engine speed displayed on the tester is approximately the same as the actual engine speed.

NG → **GO TO SFI SYSTEM**

OK

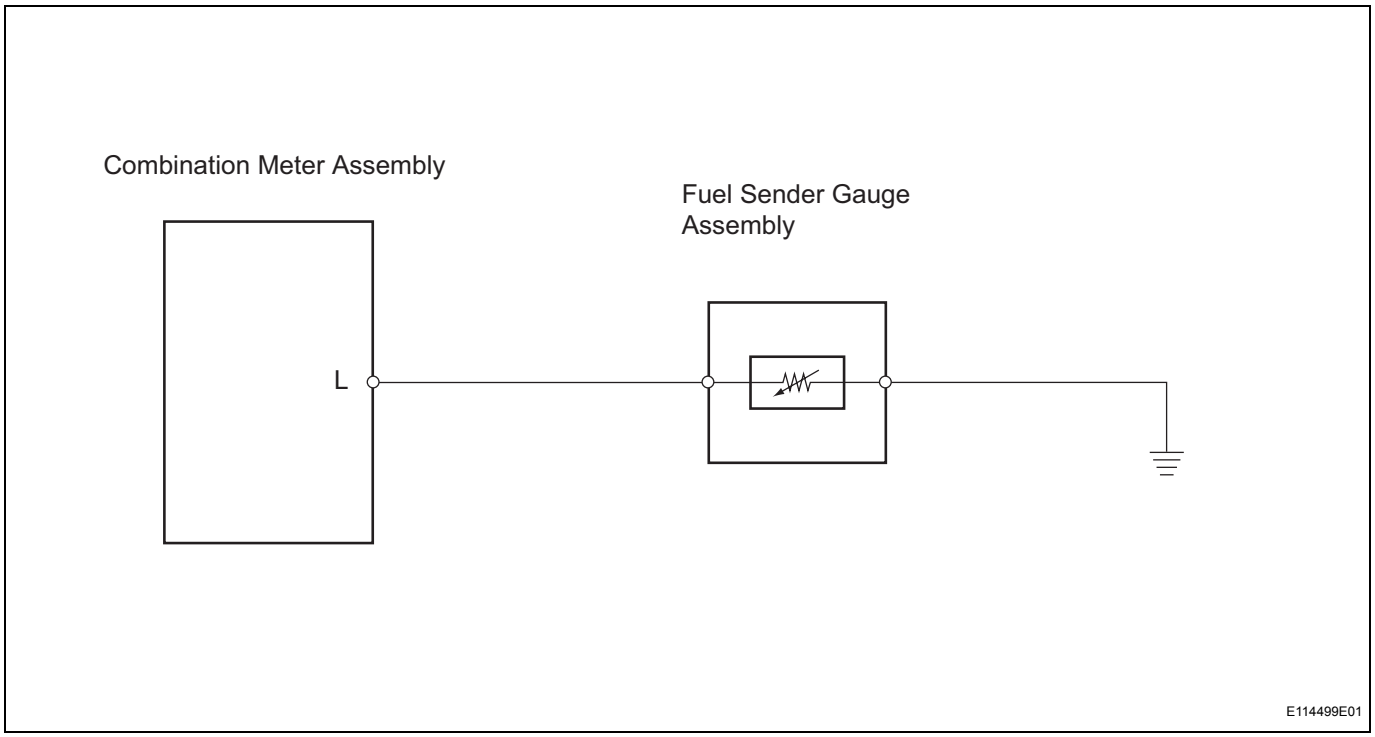
REPLACE COMBINATION METER ASSEMBLY

Fuel Gauge Malfunction

DESCRIPTION

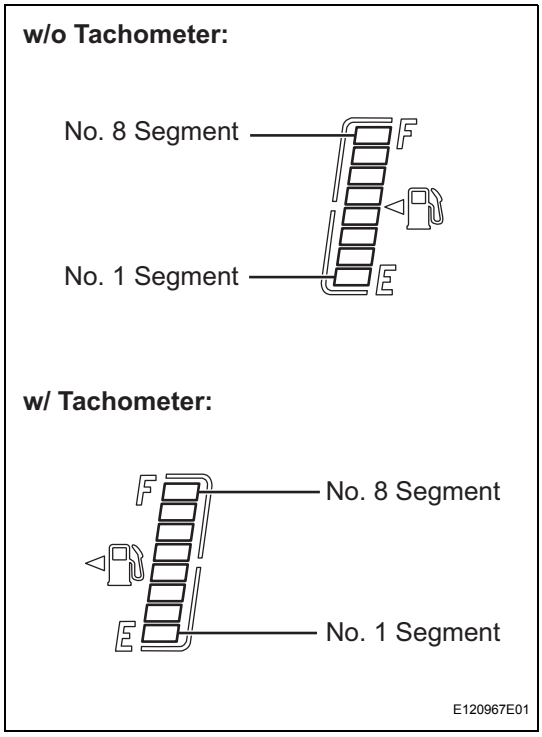
The combination meter assembly controls the fuel receiver gauge in accordance with the resistance of the fuel sender gauge that varies depending on the fuel remaining amount in the fuel tank.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (FUEL GAUGE)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / METER / ACTIVE TEST.

METER

Item	Test Details	Diagnostic Note
FUEL GAUGE	EMPTY: Segment No.1 flashes 1/2: Segments No.1 to 4 illuminate FULL: Segments No.1 to 8 illuminate	-

OK:
Fuel receiver gauge segments are illuminated in accordance with the tester instructions.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	READ VALUE OF INTELLIGENT TESTER (FUEL GAUGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

METER

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
FUEL GAUGE (A/D)	Fuel input signal / Min.: 0, Max.: 255	Fuel receiver gauge segments No.1 to No.8 illuminate: 14 to 34 No.1 to No.6 (No7) illuminate: 77 to 109 No.1 to No.4 (No,5) illuminate: 135 to 172 No.1 and No.2 illuminate: 175 to 188 No.1 flashes: 194 to 200	-

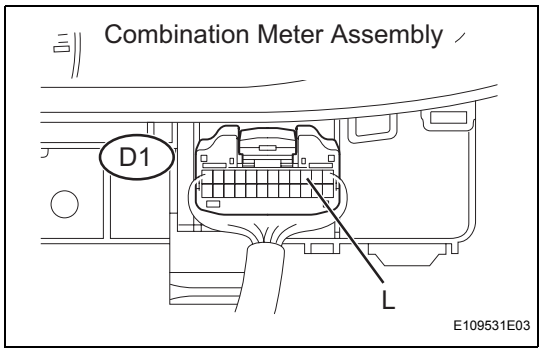
OK:
Fuel input signal displayed on the tester is approximately the same as indication.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ME

3 CHECK COMBINATION METER ASSEMBLY



(a) Disconnect the J5 fuel sender gauge assembly connector.
(b) Remove the combination meter assembly with its connectors connected.
(c) Measure the voltage.
Standard voltage

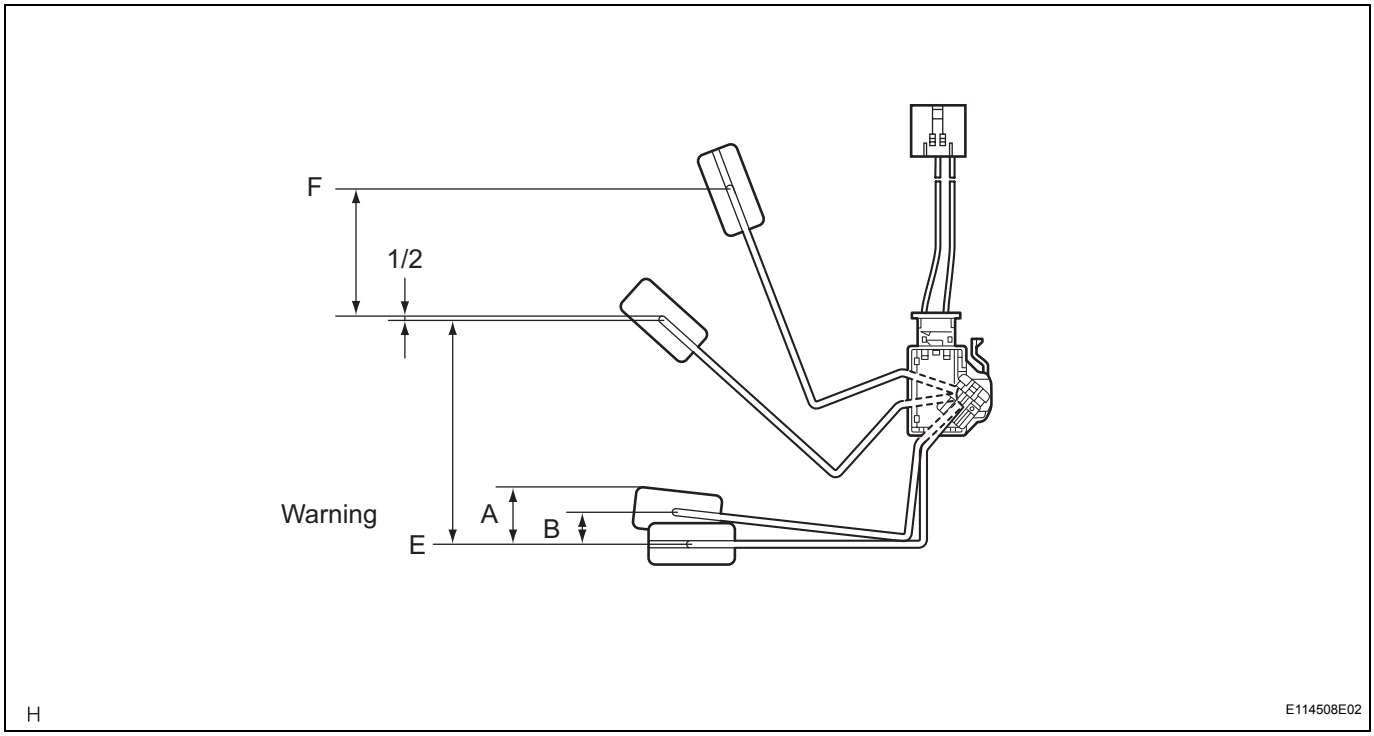
Tester Connection	Condition	Specified Condition
D1-3 (L) - Body ground	Ignition switch ON	11 to 14V

(d) Reconnect the fuel sender gauge assembly connector.
(e) Reinstall the combination meter assembly.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT FUEL SENDER GAUGE ASSEMBLY



(a) Remove the fuel sender gauge assembly.
(b) Check that the float position is between E and F.
(c) Measure the resistance between terminals 2 and 1 of the fuel sender gauge connector.

Standard resistance

Float Level	Float Positioin (mm (in.))	Specified Condition
F	77.3 (3.04) to 79.3 (3.12)	15 Ω to 18 Ω
1/2	1.6 (0.05)	208.3 Ω
Warning A	34.8 (1.37)	365.2 Ω
Warning B	25.3 (1.00)	388.2 Ω
E	75.0 (2.95) to 77.0 (3.03)	410.0 Ω to 415 Ω

(d) Reinstall the fuel sender gauge assembly.

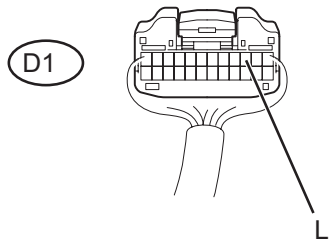
NG → **REPLACE FUEL SENDER GAUGE ASSEMBLY**

OK

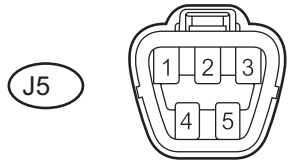
5	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - FUEL SENDER GAUGE ASSEMBLY)

Wire Harness Side:

Combination Meter Assembly Connector



Fuel Sender Gauge Assembly Connector



Front View

E117128E02

(a) Disconnect the D1combination meter assembly connector.
(b) Disconnect the J5 fuel sender gauge assembly connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D1-3 (L) - J5-2	Below 1Ω
J5-3 - Body ground	Below 1Ω

(d) Reconnect the combination meter assembly and fuel sender gauge assembly connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

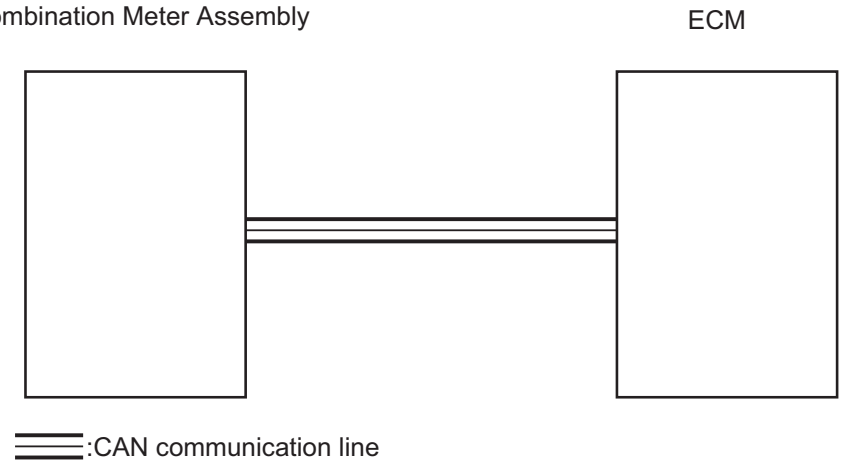
ME

Malfunction in Water Temperature Warning Light

DESCRIPTION

The combination meter assembly controls both the engine coolant temperature warning light and indicator light in accordance with engine coolant temperature signals from the ECM.
The engine coolant temperature indicator light turns off when the engine coolant temperature exceeds 55°C (131°F) and illuminates when the temperature decreases to below 45°C (113°F).
The engine coolant temperature warning light flashes when the engine coolant temperature reaches 117°C (242.6°F) and illuminates when the temperature exceeds 120°C (248°F). When the temperature decreases to 119.5°C (247.1°F) while the warning light is illuminated, the warning light begins to flashing. In addition, when the temperature decreases to below 116.5°C(241.7°F) the warning light turns off.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
- If DTC U0100 has been stored, troubleshoot the CAN communication system first.
- If there is an open or short in the engine coolant temperature sensor circuit, an SFI system DTC is output. If output, perform troubleshooting on the SFI system.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (COOLANT HOT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS/ METER/ ACTIVE TEST

METER

Item	Test Details	Diagnostic Note
COOLANT HOT	ON: Engine coolant temperature warning light flashes OFF: Engine coolant temperature warning light turns off	-
COOLANT COOL	ON: Engine coolant temperature indicator light flashes OFF: Engine coolant temperature indicator light turns off	-

Item	Test Details	Diagnostic Note
COOLANT TEMP	HIGH: Engine coolant temperature warning light flashes NORMAL: Engine coolant temperature warning light and indicator light turns off LOW: Engine coolant temperature indicator light illuminates	-

OK:

Both the engine coolant temperature warning light and indicator light are operated in accordance with the tester instructions.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2 READ VALUE OF INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below from the Data List, and read the value displayed on the intelligent tester.

ME

METER

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
COOLANT TEMP	Engine coolant temperature / Min.: 0°C,Max.: 127.5°C	After warming up: 75 to 105°C (167 to 221°F)	-

HINT:

- If the value is 0°C (32°F), the sensor circuit is open.
- If the value is 127.5°C (262°F), the sensor circuit is shorted.

OK:

Coolant temperature displayed on the tester is between 75°C (167°F) and 105°C (221°F) after warming up.

NG → **GO TO SFI SYSTEM**

OK

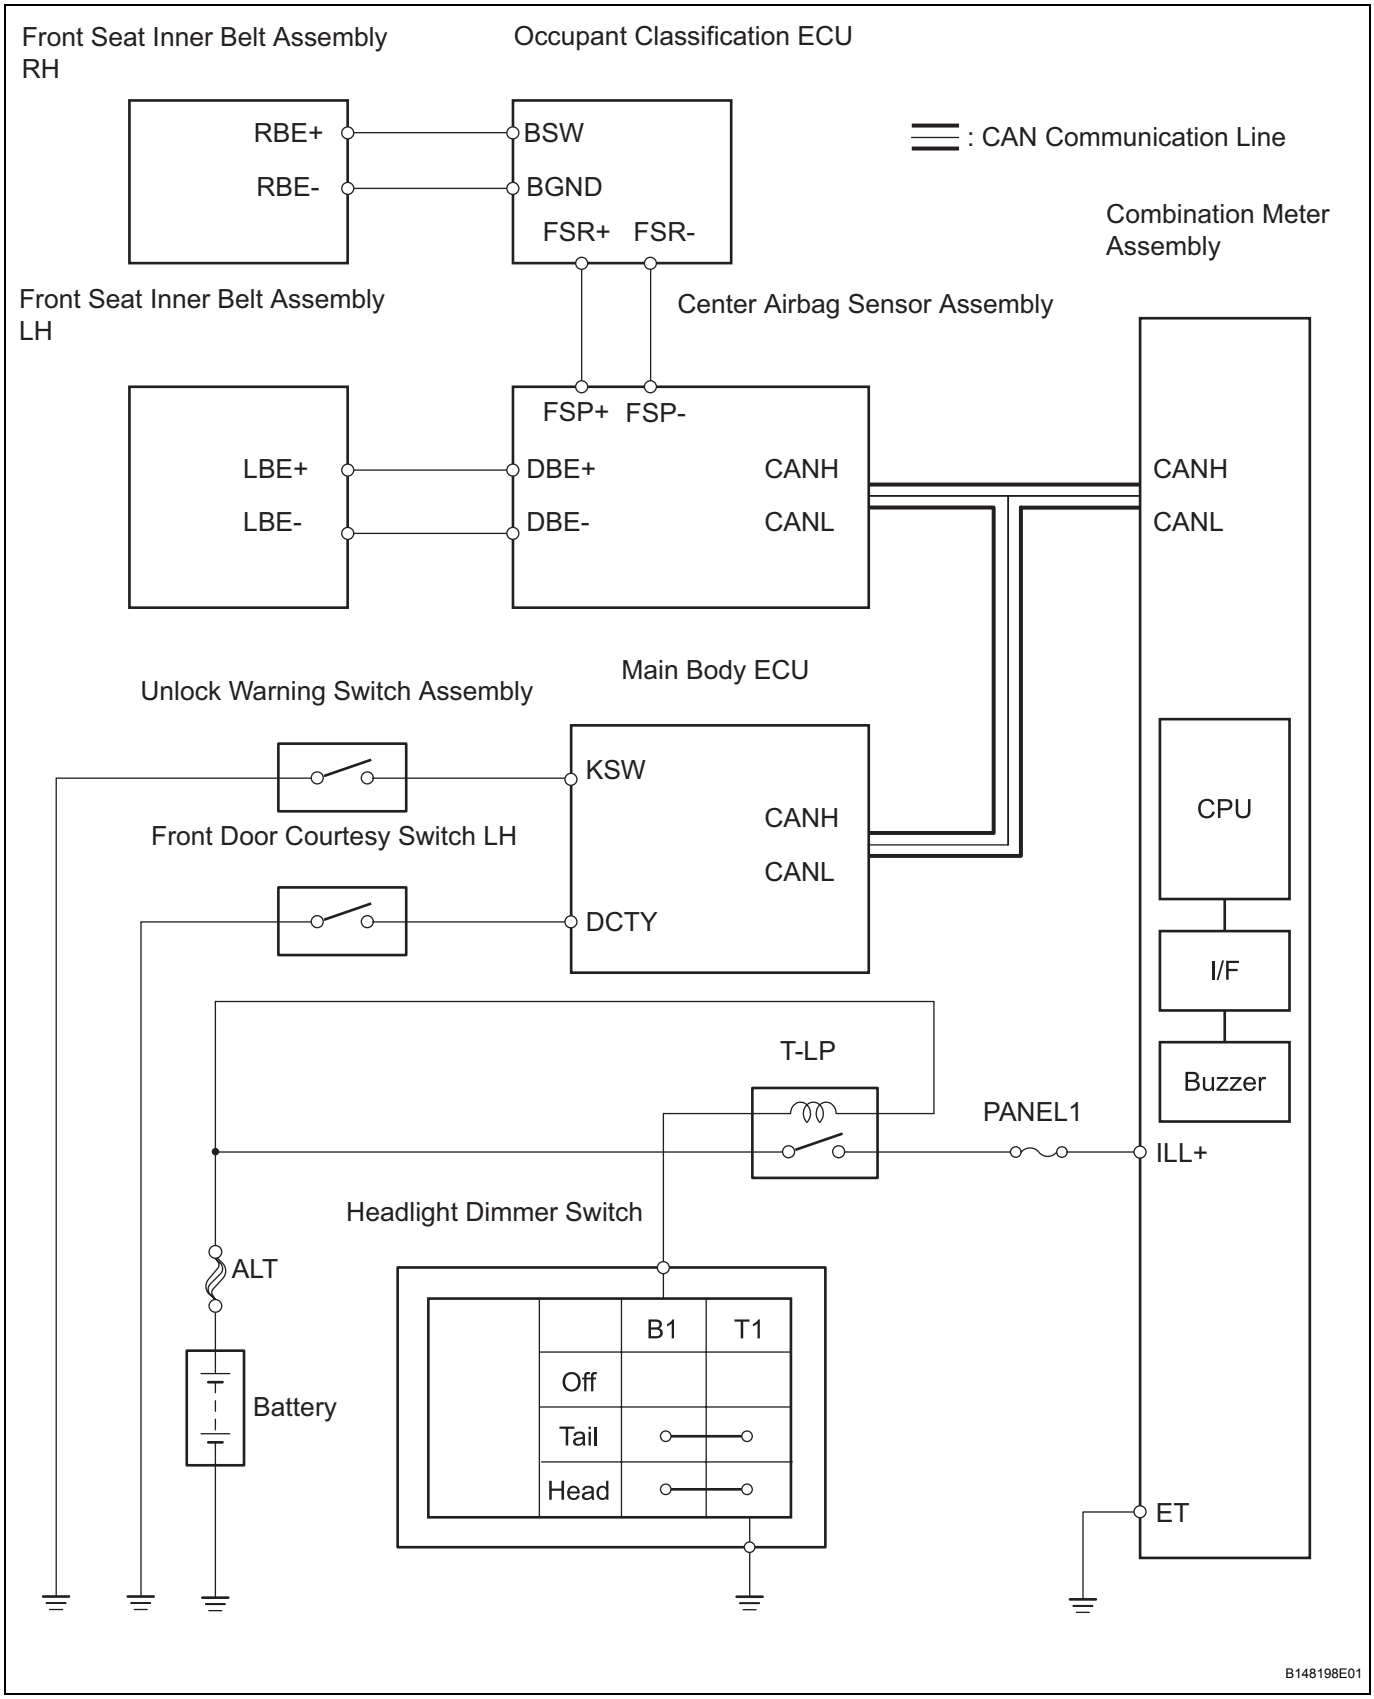
REPLACE COMBINATION METER ASSEMBLY

Warning Buzzer does not Sound

DESCRIPTION

The combination meter assembly controls the buzzers in accordance with signals from the center airbag sensor assembly, the main body ECU and the taillight relay.
HINT:
The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly.

WIRING DIAGRAM



ME

INSPECTION PROCEDURE

1	CHECK BUZZER (SEAT BELT, KEY REMINDER, TAILLIGHT REMINDER)

(a) Check that the seat belt, key reminder and taillight reminder warning buzzers sound.

Result

Result	Proceed to
Seat belt warning buzzer does not sound	A
Key reminder warning buzzer does not sound	B
Taillight reminder warning buzzer does not sound (Meter illuminations normal)	C
No warning buzzers sound	D

HINT:

- Seat belt warning buzzer on: Ignition switch is ON, driver or front passenger seat belt is unfastened, and vehicle speed is 12.4mph (20 km/h) or more.
- Key reminder warning buzzer on: Ignition switch is OFF, key is in ignition key cylinder, and driver side door is open.
- Taillight reminder warning buzzer on: Ignition switch is OFF, taillight relay switch is ON, and driver side door is open.

REPLACE MAIN BODY ECU

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is ON, the center airbag sensor assembly communicates the status of the front seat inner belt assembly LH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the driver seat belt warning light in the combination meter assembly. When the seat belt is fastened, the combination meter assembly stops flashing the front driver seat belt warning light.

REPLACE COMBINATION METER ASSEMBLY

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

When the ignition switch is ON and the front passenger seat is occupied, the center airbag sensor assembly communicates the status of the front seat inner belt assembly RH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the front passenger seat belt is unfastened, the combination meter assembly flashes the front passenger seat belt warning light on the instrument panel finish panel end RH. When the seat belt is fastened, the combination meter assembly stops flashing the front passenger seat belt warning light on the instrument panel finish panel end RH.

REMOVAL

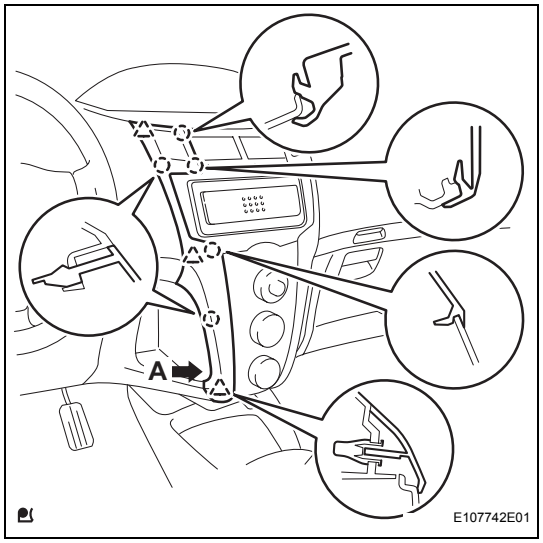
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

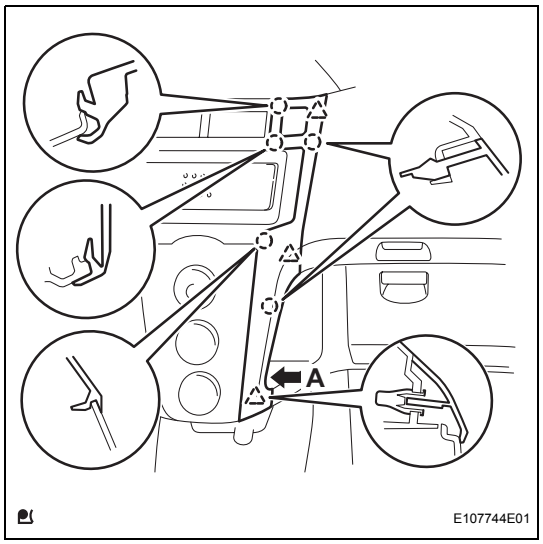
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH**



(a) Pull the instrument panel finish panel end LH rearward and disengage the 5 claws and 3 clips.
NOTICE:
To avoid damaging the instrument cluster finish panel center and the air conditioning panel, remove the instrument panel finish panel end without using any tool.
HINT:
Grip portion A of the instrument panel finish panel end and remove the instrument panel finish panel end from the lower side.

(b) Disconnect the connector and remove the instrument panel finish panel end LH.

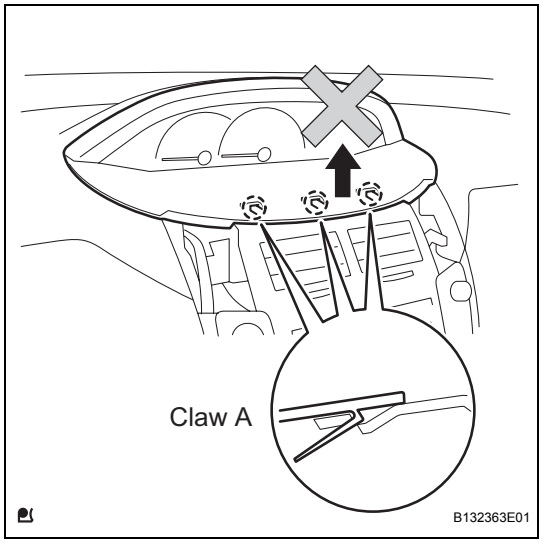
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH**



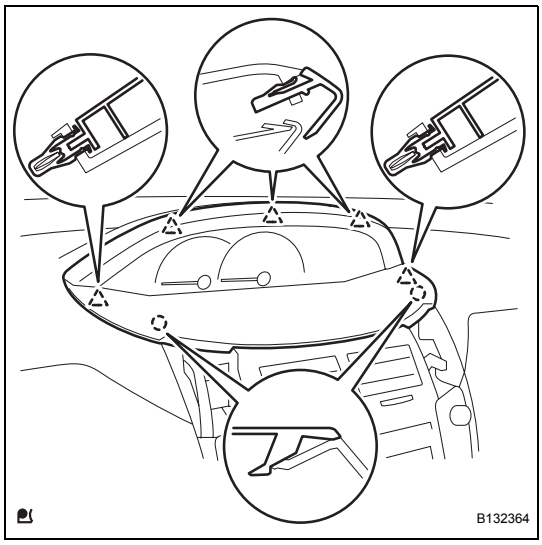
(a) Pull the instrument panel finish panel end RH rearward and disengage the 5 claws and 3 clips.
NOTICE:
To avoid damaging the instrument cluster finish panel center and the air conditioning panel, remove the instrument panel finish panel end without using any tool.
HINT:
Grip portion A of the instrument panel finish panel end and remove the instrument panel finish panel end from the lower side.

(b) Disconnect the connector and remove the instrument panel finish panel end RH.

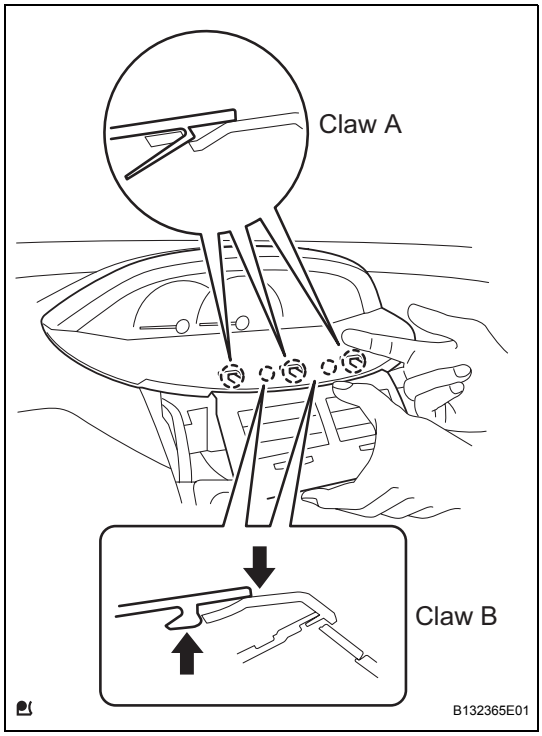
4. **REMOVE INSTRUMENT CLUSTER FINISH PANEL**
NOTICE:
Follow the procedure below to remove the instrument cluster finish panel. Claw A will break if the instrument cluster finish panel is raised carelessly.



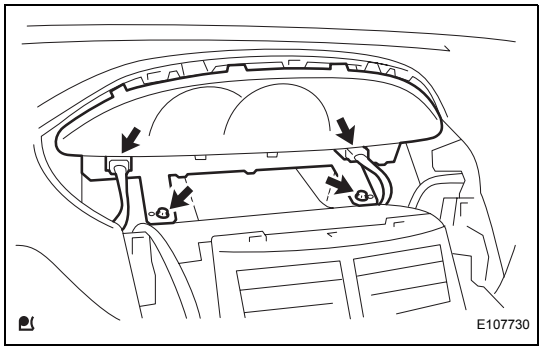
ME



(a) Disengage the 2 claws and 5 clips.

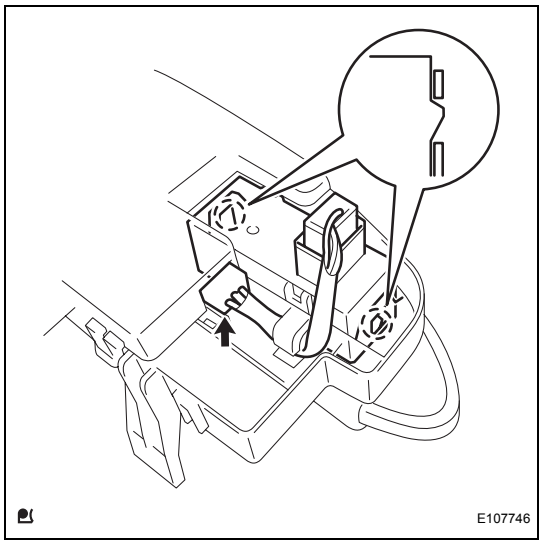


(b) After removing the instrument panel finish panel end, insert your finger into the opening as shown, push the upper portion of the instrument cluster finish panel center and the 2 B claws of the instrument cluster finish panel, and then disengage the claws B.
(c) Disengage the 3 A claws and remove the instrument cluster finish panel.



5. REMOVE COMBINATION METER ASSEMBLY

(a) Disconnect the 2 connectors.
(b) Remove the 2 screws and pull the combination meter rearward to remove it.

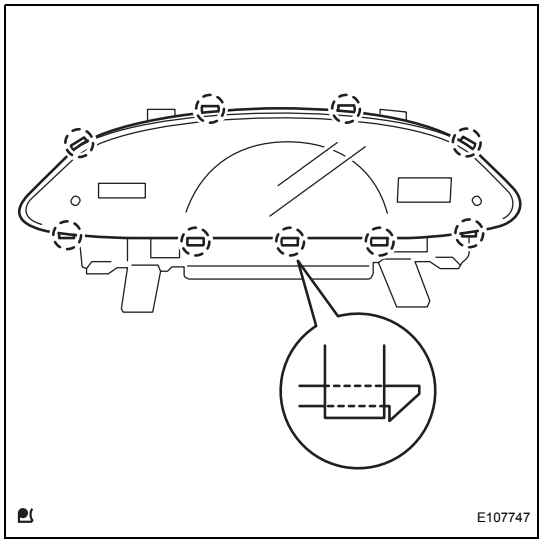


DISASSEMBLY

1. REMOVE CLOCK ASSEMBLY (w/ Tachometer)

(a) Remove the connector.

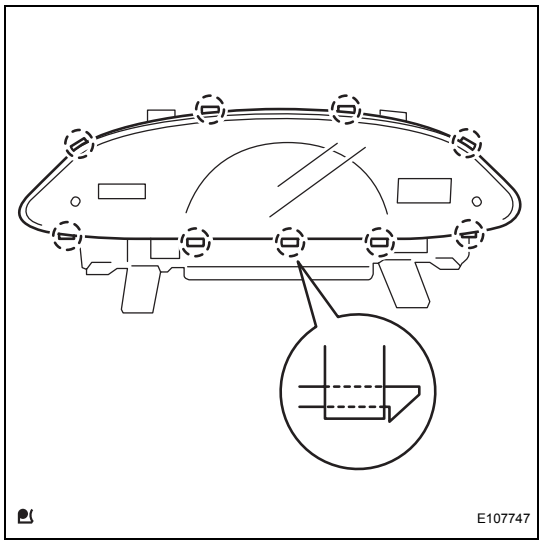
(b) Disengage the 2 claws and remove the clock assembly.



2. REMOVE COMBINATION METER GLASS

(a) Disengage the 9 claws and remove the combination meter glass.

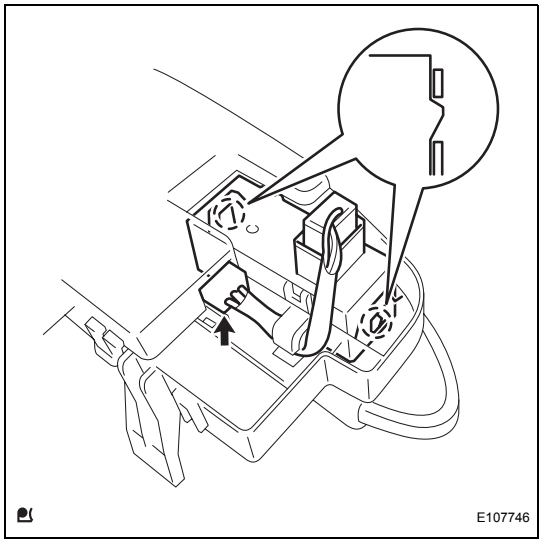
ME



REASSEMBLY

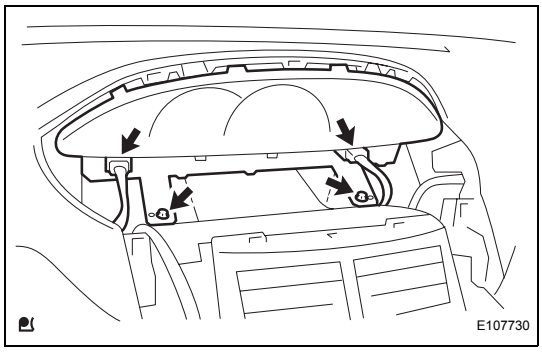
1. INSTALL COMBINATION METER GLASS

(a) Engage the 9 claws and install the combination meter glass.

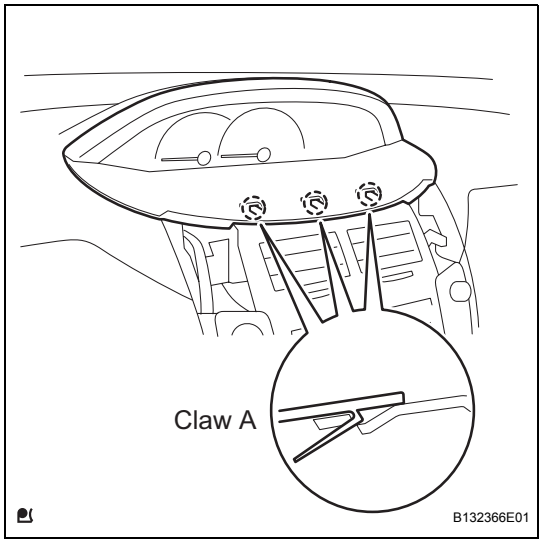


2. INSTALL CLOCK ASSEMBLY (w/ Tachometer)
(a) Engage the 2 claws and install the clock assembly.
(b) Connect the connector.

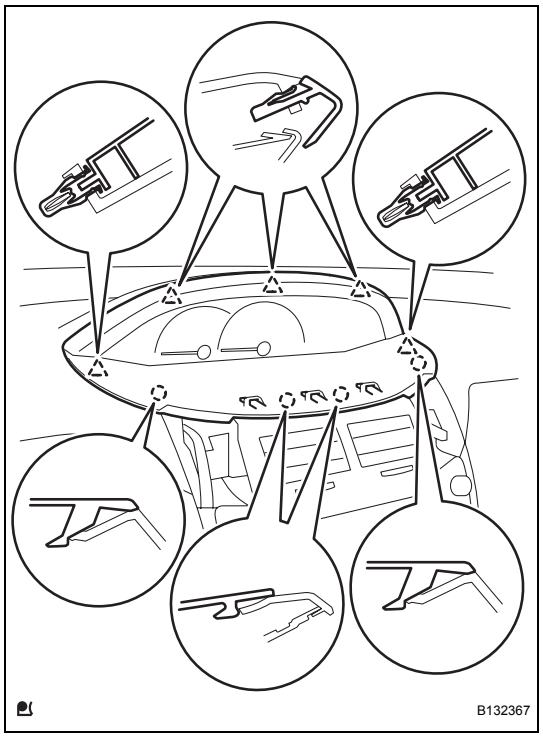
INSTALLATION



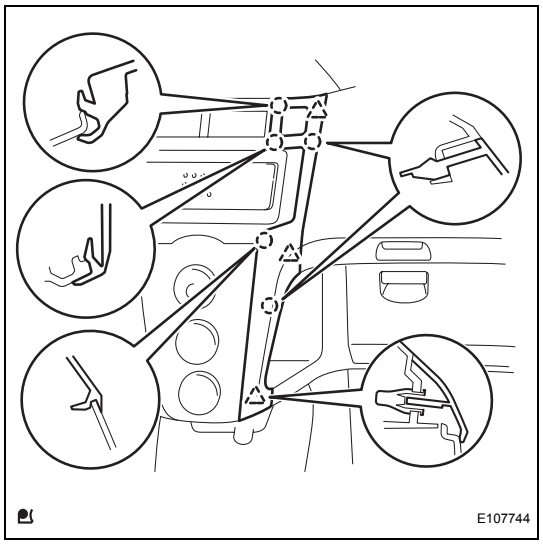
1. INSTALL COMBINATION METER ASSEMBLY
(a) Install the combination meter assembly with the 2 screws.
(b) Connect the 2 connectors.



2. INSTALL INSTRUMENT CLUSTER FINISH PANEL
(a) Fit the 3 A claws of the instrument cluster finish panel into the upper instrument cluster finish panel center.

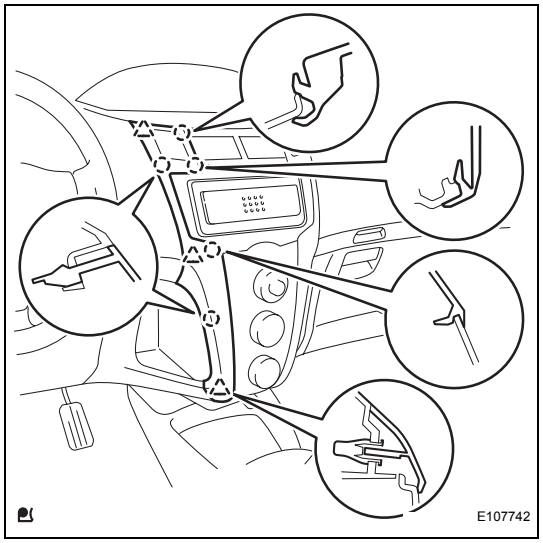


(b) Engage the 4 claws and 5 clips and install the instrument cluster finish panel.



3. INSTALL INSTRUMENT PANEL FINISH PANEL END RH

(a) Connect the connector.
(b) Engage the 5 claws and 3 clips and install the instrument panel finish panel end RH.



4. INSTALL INSTRUMENT PANEL FINISH PANEL END LH

(a) Connect the connector.
(b) Engage the 5 claws and 3 clips and install the instrument panel finish panel end LH.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

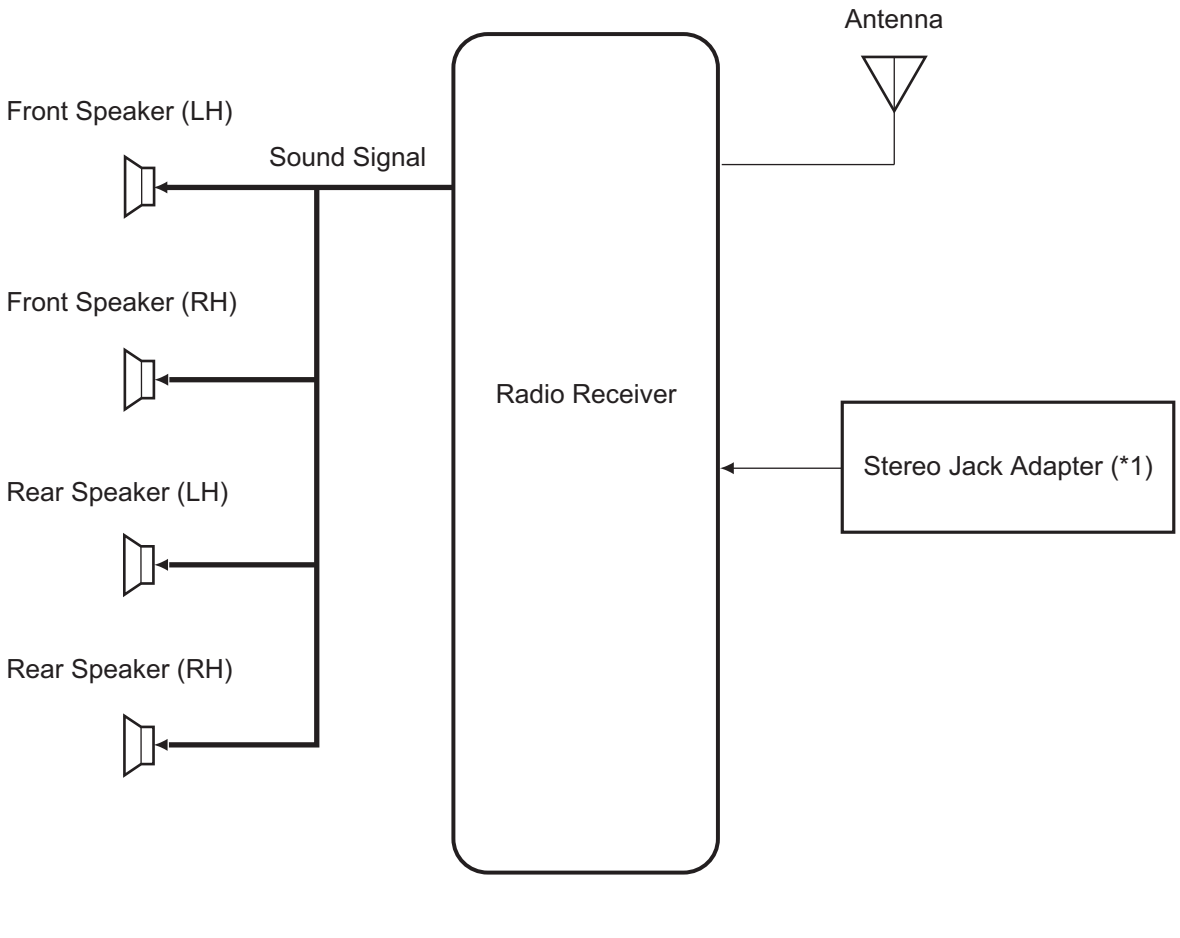
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

CAUTION:
The CD player uses an invisible laser beam which could cause hazardous radiation exposure. Be sure to operate the player as instructed.

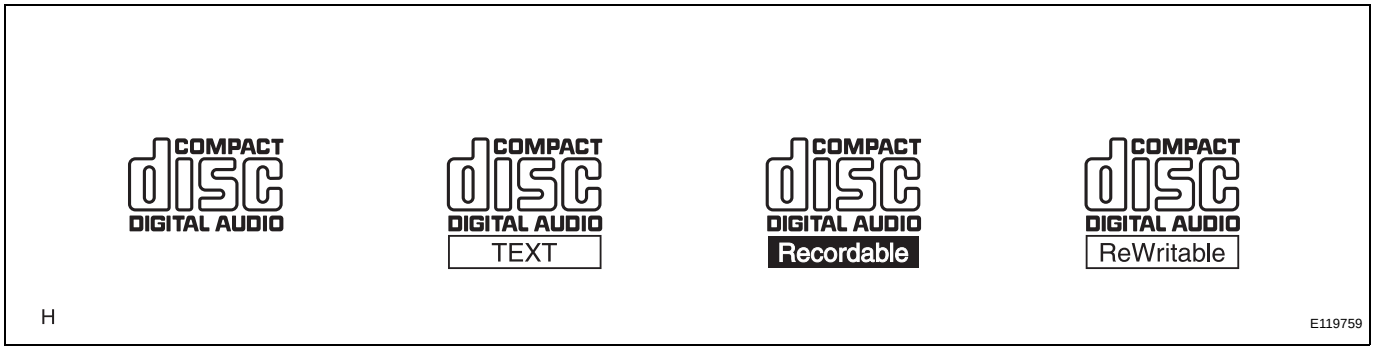
1. CD PLAYER OUTLINE

(a) A CD player uses a laser pickup to read digital signals recorded on CDs. By converting the digital signals to analog, music and other contents can be played.

CAUTION:
Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:
- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

(b) Usable CDs



(c) Precautions for use of discs

NOTICE:
- **Copy-protected CDs cannot be played.**
- **Dual discs cannot be played. Playing dual discs may cause malfunctions of the CD player.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **PAL or SECAM color television standard discs cannot be played. (Only NTSC discs can be played.)**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**

- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

HINT:

- When it is cold or it is raining, if the windows mist up, mist and also dew may form in the player. In such a case, the CD may skip or the CD may stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the center to the outside in a radial direction.

NOTICE:

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.**

2. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

(c) ID3 tags and WMA tags

(1) Additional textual information called ID3 tags can be input to MP3 files. Information such as song titles and artist names can be stored.
HINT:
This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tags can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.
NOTICE:
- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.**
- **If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.**

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form1
File format	ISO9660 Level 1 and Level 2 (Juliet and Romeo)

HINT:
- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

AV

(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
In accordance with the following procedures, troubleshoot the audio and visual system.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 BASIC INSPECTION

(a) Turn the ignition switch to ACC.
(b) Check whether the display appears on the radio receiver.

Result	Proceed to
Display appears	A
Display does not appear	B

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

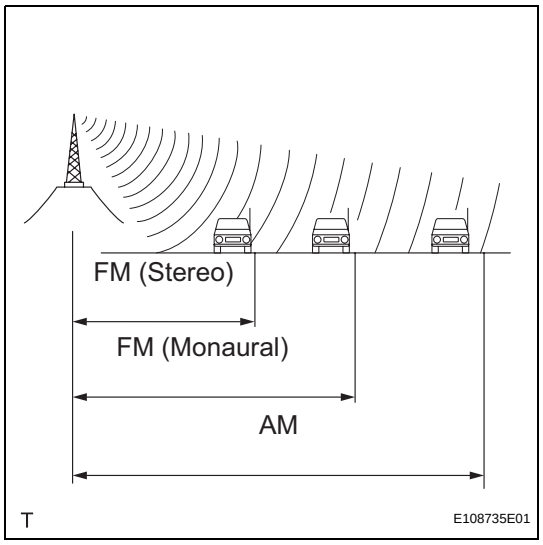
(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	3 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ⟷		FM ⟷	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low frequency MF: Medium frequency HF: High frequency VHF: Very high frequency

E108734E02



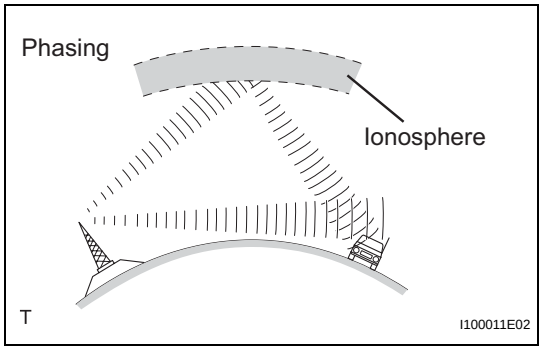
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

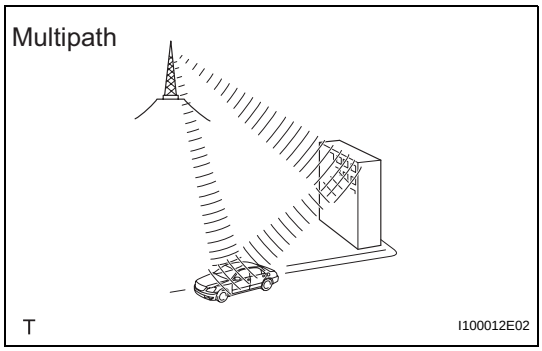
HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

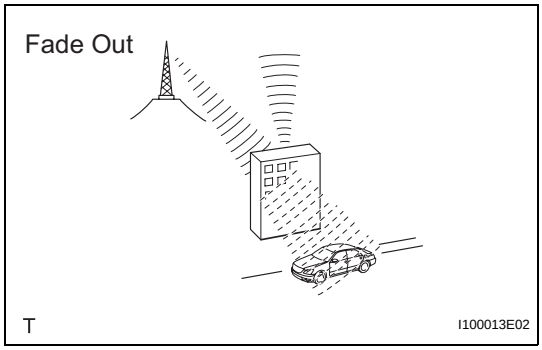


(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.



(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in specific area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

AV

PROBLEM SYMPTOMS TABLE

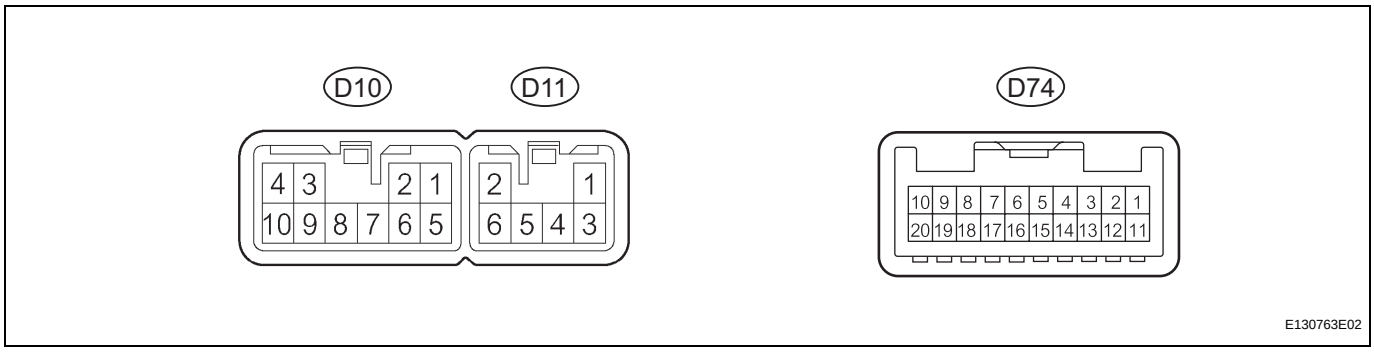
HINT:
Use the table below to determine the cause of the problem symptom. The potential causes of the symptom are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Audio Function

Symptom	Suspected area	See page
Noise occurs	1. Proceed to "Noise Occurs"	AV-16
	2. Radio Receiver	-
Pressing power switch does not turn on system	1. Proceed to "Pressing Power Switch does not Turn on System"	AV-17
	2. Proceed to "Radio Receiver Power Source Circuit"	AV-33
	3. Radio Receiver	-
No sound can be heard from speakers	1. Proceed to "No Sound can be Heard from Speakers"	AV-18
	2. Proceed to "Speaker Circuit"	AV-28
	3. Proceed to "Radio Receiver Power Source Circuit"	AV-33
	4. Radio Receiver	-
Sound quality is bad only when CD is played (volume is too low)	1. Proceed to "Sound Quality is Bad Only when CD is played (Volume is too low)"	AV-19
	2. Proceed to "Speaker Circuit"	AV-28
	3. Radio Receiver	-
CD cannot be ejected	1. Proceed to "CD cannot be ejected"	AV-20
	2. Proceed to "Radio Receiver Power Source Circuit"	AV-33
	3. Radio Receiver	-
CD cannot be inserted or CD is ejected right after insertion	1. Proceed to "CD cannot be Inserted or is Ejected Right After Insertion"	AV-21
	2. Proceed to "Radio Receiver Power Source Circuit"	AV-33
	3. Radio Receiver	-
CD sound skips	1. Proceed to "CD Sound Skips"	AV-23
	2. Radio Receiver	-
Radio broadcast cannot be received (bad reception)	1. Proceed to "Radio Broadcast cannot be Received (Bad Reception)"	AV-25
Poor sound quality in all modes (low volume)	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	AV-27
	2. Proceed to "Speaker Circuit"	AV-28
	3. Radio Receiver	-
External device sound cannot be heard or sound quality is bad (stereo jack is used)	1. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter"	AV-31
	2. Radio Receiver	-

TERMINALS OF ECU

1. CHECK RADIO RECEIVER



(a) Disconnect the D10 receiver connector.
(b) Measure the resistance and voltage of the wire harness side connector.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (D10-7) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ACC (D10-3) - GND (D10-7)	GR - W-B	ACC power supply	Ignition switch ACC	11 to 14 V
B (D10-4) - GND (D10-7)	L - W-B	Battery power supply	Always	11 to 14 V

AV

HINT:
If the results are not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the D10 receiver connector.
(d) Measure the voltage and resistance of the connector.

Standard:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
FR+ (D10-1) - GND (D10-7)	GR - W-B	Sound signals (front right)	Audio system operating	Waveform synchronized with sound output
FL+ (D10-2) - GND (D10-7)	P - W-B	Sound signals (front left)	Audio system operating	Waveform synchronized with sound output
FR- (D10-5) - GND (D10-7)	Y - W-B	Sound signals (front right)	Audio system operating	Waveform synchronized with sound output
FL- (D10-6) - GND (D10-7)	V - W-B	Sound signals (front left)	Audio system operating	Waveform synchronized with sound output
RR+ (D11-1) - GND (D10-7)	R - W-B	Sound signals (rear right)	Audio system operating	Waveform synchronized with sound output
RL+ (D11-2) - GND (D10-7)	B - W-B	Sound signals (rear left)	Audio system operating	Waveform synchronized with sound output
RR- (D11-3) - GND (D10-7)	W - W-B	Sound signals (rear right)	Audio system operating	Waveform synchronized with sound output
RL- (D11-6) - GND (D10-7)	Y - W-B	Sound signals (rear left)	Audio system operating	Waveform synchronized with sound output
ANT (D10-8) - GND (D10-7)	B - W-B	Power source of antenna	Radio switch ON (AM or FM)	11 to 14 V
ARI (D74-15) - GND (D10-7)	R - W-B	Sound signal (Right)	External device playing (When stereo jack adapter used)	Waveform synchronized with sound output
ASGN (D74-16) GND (D10-7)	(Shielded) - W-B	Ground (Shielded)	Always	Below 1 Ω

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ALI (D74-17) - GND (D10-7)	G - W-B	Sound signal (Left)	External device playing (When stereo jack adapter used)	Waveform synchronized with sound output
AUXI (D74-19) - GND (D10-7)	R - W-B	External device connection detection signal	External device connected	Below 1 Ω
SPD (D74-3)	W - W-B	Speed signal	Ignition switch ON, drive wheels turned slowly	Pulse generation

HINT:
If the results are not as specified, there may be a malfunction in the wire harness.

Noise Occurs

INSPECTION PROCEDURE

1	CHECK SPEAKER INSTALLATION

(a) Check that each speaker is securely installed.
OK:
Speakers are installed securely.

HINT:
The radio has a noise prevention function to reduce noise when listening to the radio. If severe noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

Condition in Which Noise Occurs	Noise Type
Increases when accelerator pedal is depressed, and stops immediately when engine is stopped	Generator noise
When A/C or heater is operating	Blower motor noise
• When vehicle is rapidly accelerated on unpaved road • When ignition switch is ON	Fuel pump noise
• When horn switch is pressed and released • When horn switch is pressed and held down	Horn noise
Occurs faintly when engine is running, and stops immediately when engine is stopped	Ignition noise
When turn signal is operating	Flasher noise
When window washer is operating	Washer noise
When engine is running, and continues even when engine is stopped	Engine coolant temperature noise
When wipers are operating	Wiper noise
When brake pedal is depressed	Stop light switch noise
Other than above	Static electricity on vehicle

HINT:
- Use the table above to identify the part that is causing the noise. Check the noise filter on the part.
- To save time and avoid a misdiagnosis, first make sure that the noise is not originating from outside the vehicle.
- Troubleshoot noise problems in order of loudness, starting with the loudest noise.
- Setting the radio to a frequency that receives no signal may make recognition of the noise problem easier.

NG → **INSTALL SPEAKER PROPERLY**

OK

IDENTIFY NOISE SOURCE

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

1	CHECK WHETHER RAPID TEMPERATURE CHANGE OCCURRED IN CABIN

(a) Check whether or not a rapid temperature change occurred in the cabin.
OK:
Rapid temperature change occurred.
HINT:
Rapid temperature changes create condensation inside the radio receiver, which may cause a short circuit.

NG → **REPLACE RADIO RECEIVER**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

No Sound can be Heard from Speakers

INSPECTION PROCEDURE

1	CHECK RADIO RECEIVER (VOLUME AND MUTE SWITCH)

(a) Check the radio receiver setting.
  (1) Check that the volume is not set to minimum.
  (2) Check that MUTE is OFF.
  OK:
  Malfunction disappears.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END

Sound Quality is Bad Only when CD is Played (Volume is Too Low)

INSPECTION PROCEDURE

1	OPERATION USING ANOTHER CD

(a) Replace the CD with a normal one and check if the same problem occurs again.
OK:
Malfunction disappears.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

CD IS FAULTY

CD cannot be Ejected

INSPECTION PROCEDURE

1	CHECK OPERATION

(a) Press the CD EJECT switch of the radio receiver for 2 seconds or more to check whether the CD can be ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

2	OPERATION USING ANOTHER CD

(a) Replace the CD with a normal one and check that the CD can be ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

CD IS FAULTY

CD cannot be Inserted or is Ejected Right After Insertion

INSPECTION PROCEDURE

1	CHECK CD

(a) Make sure that the CD is a normal audio CD, and that it is not deformed, flawed, stained, burred or otherwise defective.
OK:
Normal audio CD.
HINT:
Translucent or uniquely-shaped CDs cannot be played.

NG → **CD IS FAULTY**

OK

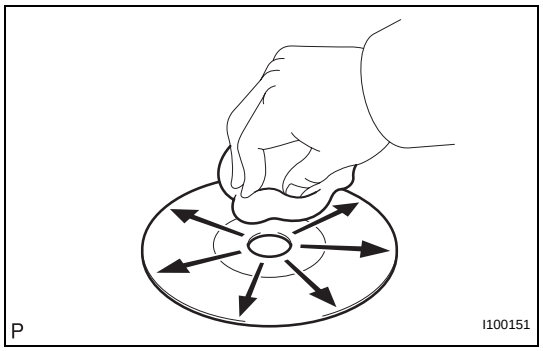
2	CHECK THAT CD HAS BEEN INSERTED PROPERLY

(a) Check whether or not the CD was inserted upside down.
OK:
CD was properly inserted.

NG → **INSERT CD PROPERLY**

OK

3	CLEAN CD



(a) Clean the disc by wiping the CD's dataside radially with a soft cloth.
OK:
Malfunction disappears.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

OK → **CD WAS DIRTY**

NG

4	REPLACE CD

(a) Replace the CD with a normal one and check if the same problem occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

AV

OK

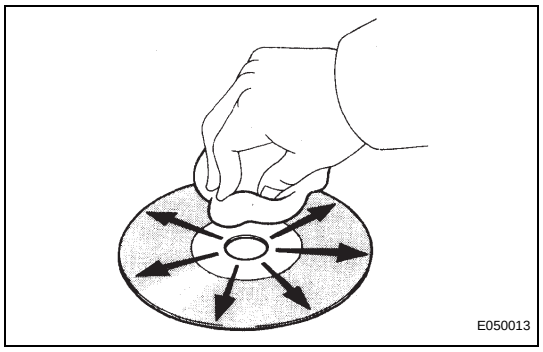
CD IS FAULTY

CD Sound Skips

INSPECTION PROCEDURE

HINT:
The sound may skip when driving on an unpaved road.

1	CLEAN CD



(a) If the disc is dirty, clean the disc by wiping the CD's dataside radially with a soft cloth.
OK:
Malfunction disappears.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

OK → **CD WAS DIRTY**

NG

2	OPERATION USING ANOTHER CD

(a) Replace the CD with a normal one and check if the same problem occurs again.
OK:
Malfunction disappears.

OK → **CD IS FAULTY**

NG

3	CHECK RADIO RECEIVER INSTALLATION

(a) Check the installation condition of the radio receiver.
OK:
Installed properly.

NG → **INSTALL RADIO RECEIVER PROPERLY**

OK

4	CHECK WHETHER RAPID TEMPERATURE CHANGE OCCURRED IN CABIN

(a) Check whether or not a rapid temperature change occurred in the cabin.
OK:
Rapid temperature change occurred.
HINT:
Rapid temperature changes create condensation inside the CD player, which may prevent CDs from being played.

AV

NG → **REPLACE RADIO RECEIVER**

OK

CONDENSATION DUE TO TEMPERATURE CHANGE (LET IT SIT FOR A WHILE BEFORE USING)

Radio Broadcast cannot be Received (Bad Reception)

INSPECTION PROCEDURE

1	CHECK WHETHER RAPID TEMPERATURE CHANGE OCCURRED IN CABIN

(a) Check whether the radio auto-search functions properly.
(1) Tune the radio using the auto-search function and check that it operates normally.
OK:
The radio auto-search functions properly.

OK → **END**

NG

2	CHECK OPTIONAL COMPONENTS

(a) Check whether any optional components, such as telephone antenna, are installed.
OK:
Optional component(s) installed.

OK → **EFFECT FROM OPTIONAL COMPONENTS**

NG

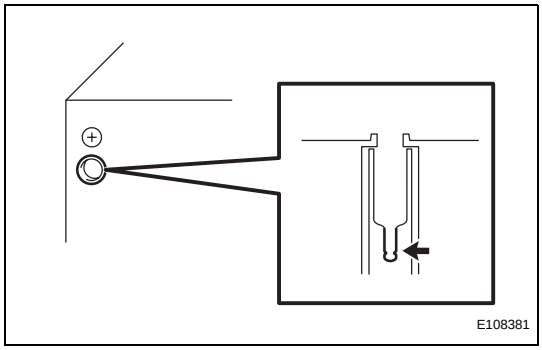
3	CHECK ANTENNA FOR NOISE PRODUCTION

(a) With the ignition switch on (ACC), turn on the radio and select the AM mode.
(b) Place the tip of a screwdriver on the antenna and check that noise is heard from the speaker.
OK:
Noise occurs.

OK → **REPLACE ROOF ANTENNA POLE SUB-ASSEMBLY**

NG

4	INSPECT RADIO RECEIVER (ANTENNA)



(a) Remove the antenna plug of the radio receiver.
(b) With the radio receiver connector connected, turn the ignition switch to ACC.
(c) Turn on the radio and select the AM mode.
(d) Place a flat-head screwdriver or piece of metal, such as a thin wire, on the antenna jack of the radio receiver. Check that noise is heard from the speakers.
OK:
Noise occurs.

NG → **REPLACE ANTENNA CORD SUB-ASSEMBLY**

OK

REPLACE RADIO RECEIVER

Poor Sound Quality in All Modes (Low Volume)

INSPECTION PROCEDURE

1	**ADJUST SOUND QUALITY**

(a) Operate the radio receiver to adjust the sound quality.
OK:
Sound quality returns to normal.

OK → **SYSTEM IS OK (POOR SOUND QUALITY)**

NG

2	**COMPARE WITH ANOTHER VEHICLE OF SAME MODEL**

(a) Compare the vehicle with another vehicle that has a normally functioning audio system. Check if there is any difference in the sound quality.
OK:
No difference is found.

OK → **SYSTEM IS OK (POOR SOUND QUALITY)**

NG

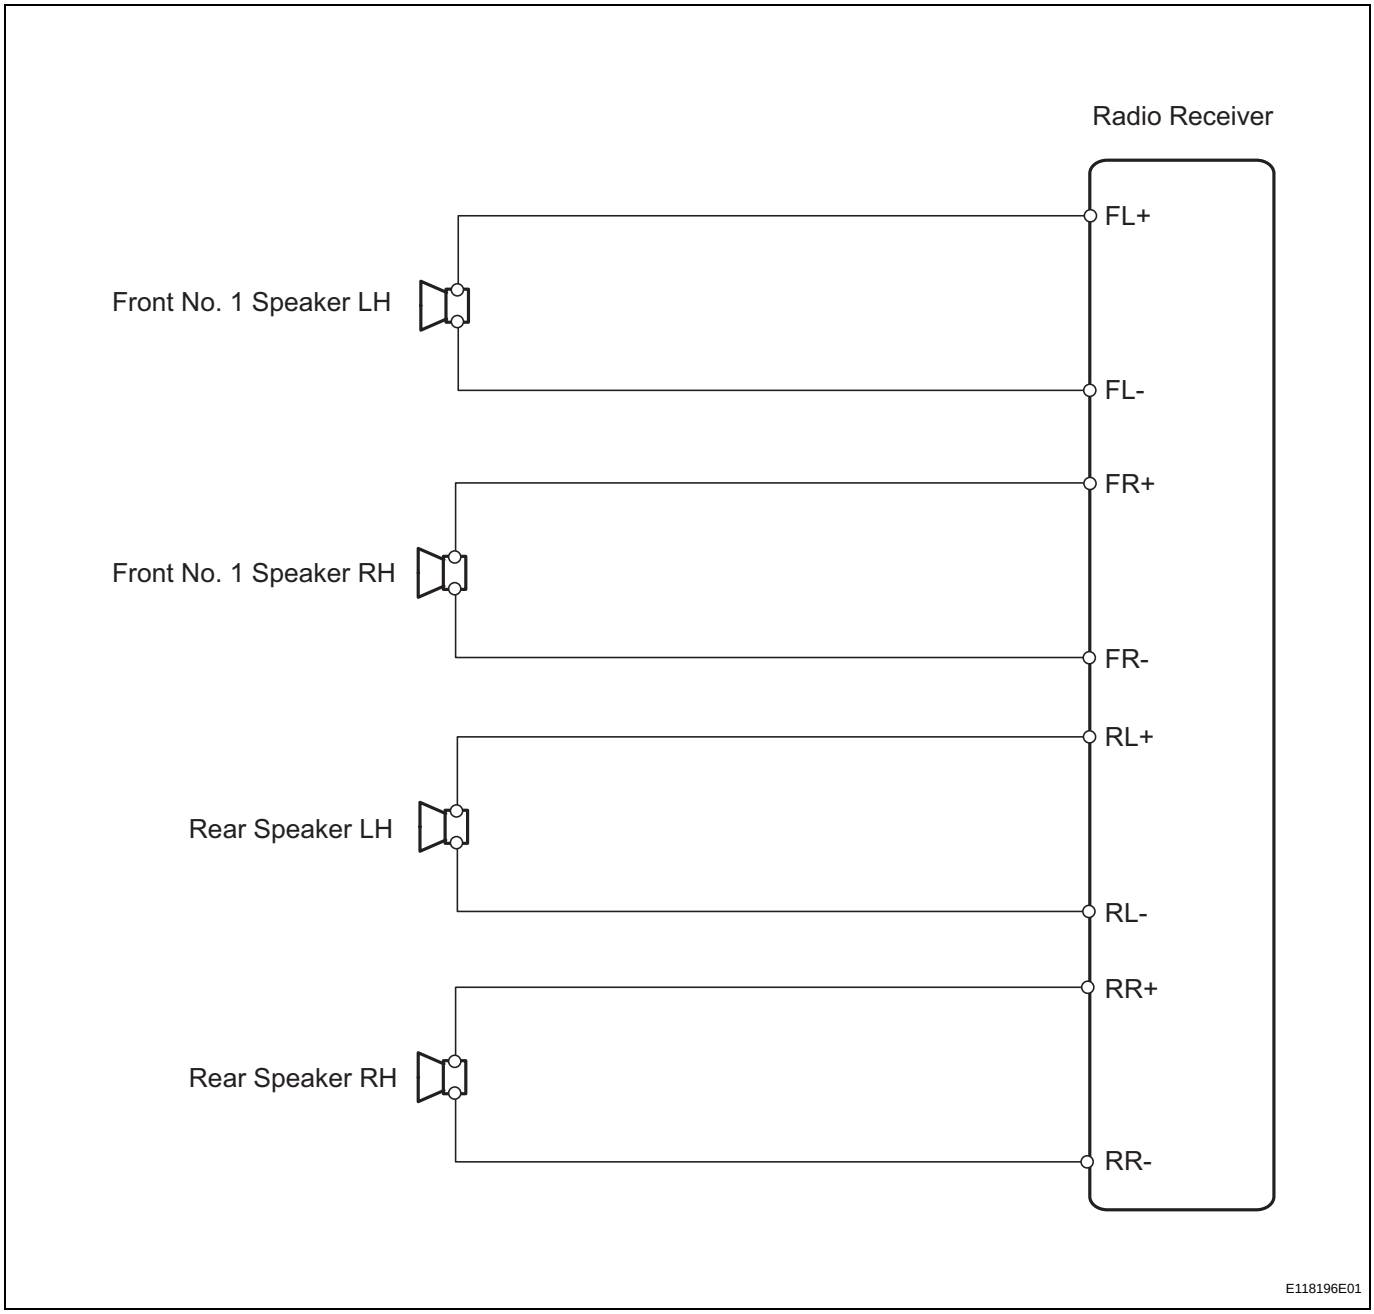
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Speaker Circuit

DESCRIPTION

Sound signals that have been amplified by the stereo component amplifier are sent to the speakers from the radio receiver through this circuit. If there is a short in this circuit, the sound cannot be heard from the speakers even though there is no malfunction in the speakers.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**CHECK SPEAKER**

(a) Check whether sound is emitted from each speaker.

Result

Result	Proceed to
Front No. 1 speakers have problems	A
Rear speakers have problems	B

B → Go to step 4

A

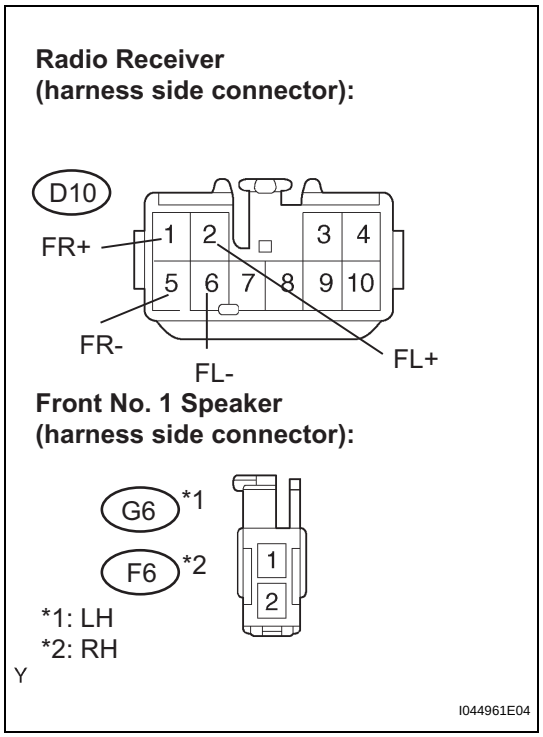
2 INSPECT FRONT NO. 1 SPEAKERS

(a) Check the left and right front No. 1 speakers (See page AV-163 or AV-159).
OK:
Front No. 1 speakers are normal.

NG → REPLACE FRONT NO. 1 SPEAKER

OK

3 CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - FRONT NO. 1 SPEAKER)



(a) Disconnect the D10 receiver connector.
(b) Disconnect the front No. 1 speaker connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D10-2 (FL+) - G6-1	Below 1 Ω
D10-6 (FL-) - G6-2	Below 1 Ω
D10-2 (FL+) - Body ground	10 kΩ or higher
D10-6(FL-) - Body ground	10 kΩ or higher
D10-1 (FR+) - F6-1	Below 1 Ω
D10-5 (FR-) - F6-2	Below 1 Ω
D10-1 (FR+) - Body ground	10 kΩ or higher
D10-1 (FR+) - Body ground	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

4	INSPECT REAR SPEAKERS

(a) Check the left and right rear speakers (See page AV-172, AV-177 or AV-183).
OK:
Rear speakers are normal.

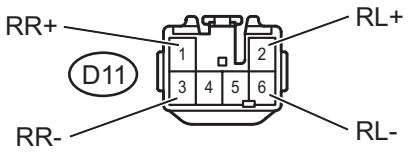
NG → **REPLACE REAR SPEAKER**

OK

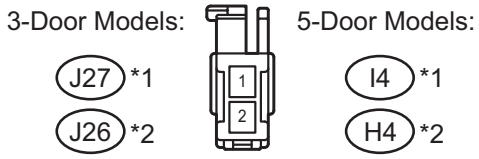
5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - REAR SPEAKER)

(a) Disconnect the D11 receiver connector.
(b) Disconnect the rear speaker connectors.
(c) Measure the resistance.

Radio Receiver (harness side connector):



Rear Speaker for Hatchback (harness side connector):



Rear Speaker for Sedan (harness side connector):

E132581E01

Standard resistance (Hatchback 3-Door Models)

Tester Connection	Specified Condition
D11-2 (RL+) - J27-1	Below 1 Ω
D11-6 (RL-) - J27-2	Below 1 Ω
D11-1 (RR+) - J26-1	Below 1 Ω
D11-3 (RR-) - J26-2	Below 1 Ω

Standard resistance (Hatchback 5-Door Models)

Tester Connection	Specified Condition
D11-2 (RL+) - I4-1	Below 1 Ω
D11-6 (RL-) - I4-2	Below 1 Ω
D11-1 (RR+) - H4-1	Below 1 Ω
D11-3 (RR-) - H4-2	Below 1 Ω

Standard resistance (Sedan)

Tester Connection	Specified Condition
D11-2 (RL+) - J39-1	Below 1 Ω
D11-6 (RL-) -J39-2	Below 1 Ω
D11-1 (RR+) - J38-1	Below 1 Ω
D11-3 (RR-) - J38-2	Below 1 Ω

Standard resistance

Tester Connection	Specified Condition
D11-2 (RL+) - Body ground	10 kΩ or higher
D11-6 (RL-) - Body ground	10 kΩ or higher
D11-1 (RR+) - Body ground	10 kΩ or higher
D11-3 (RR-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

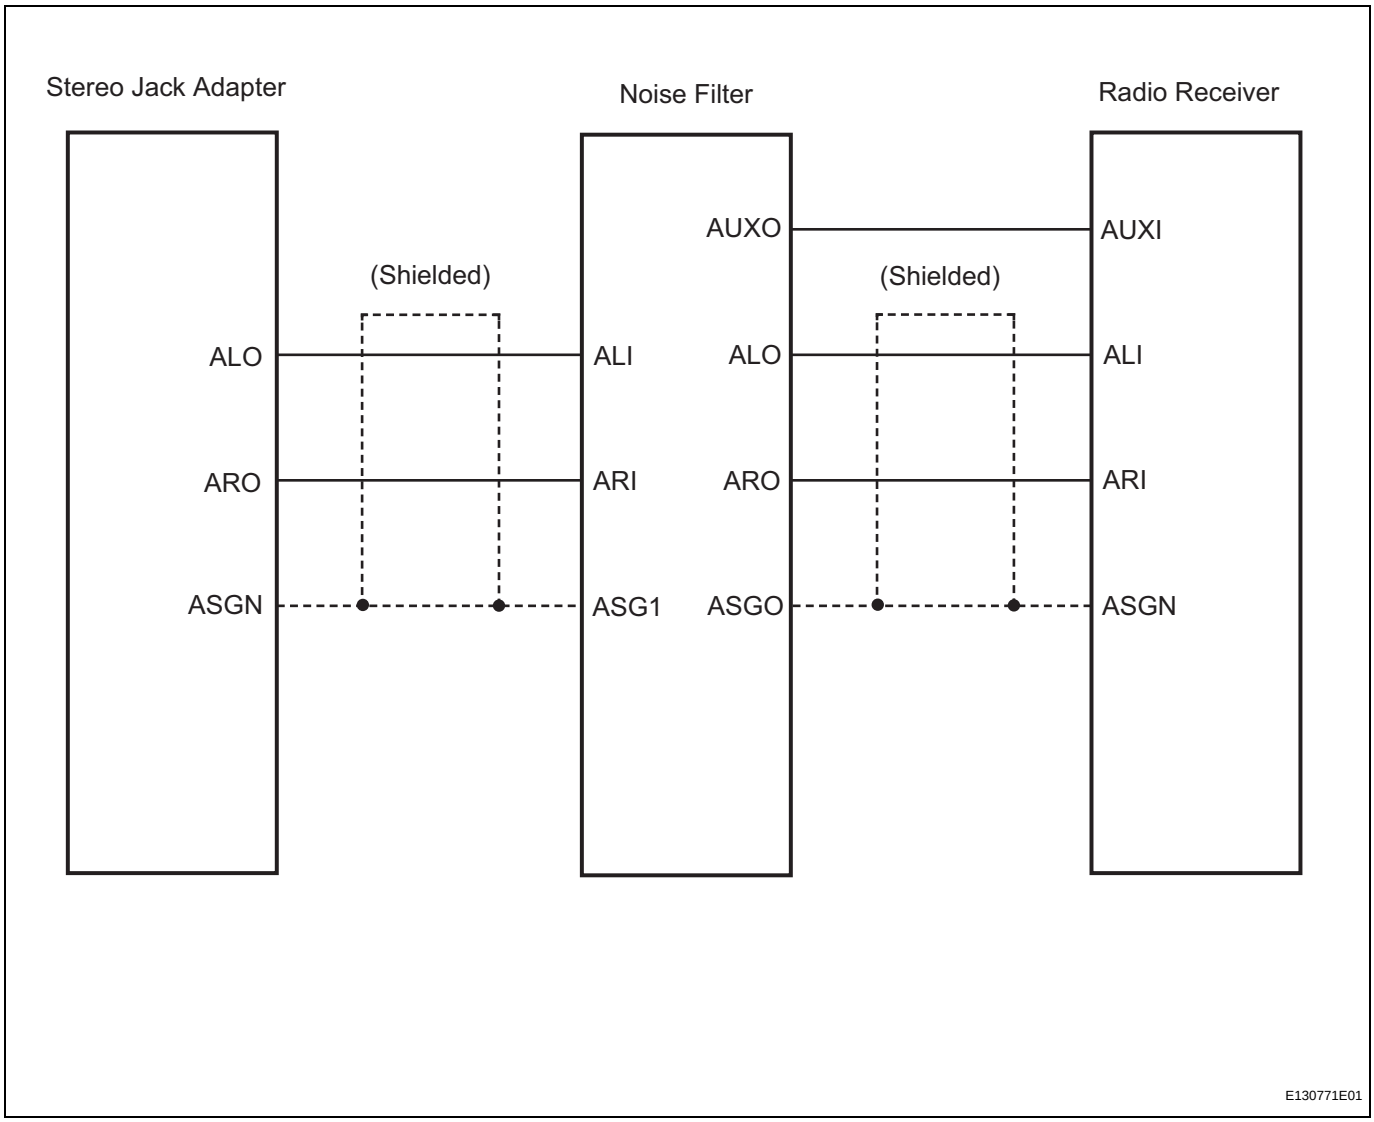
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter

DESCRIPTION

The stereo jack adapter sends an external device sound signal to the radio receiver through this circuit. The sound signal that has been sent is amplified by the stereo component amplifier, and then is sent to the speakers. If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier, radio receiver, or speakers.

WIRING DIAGRAM

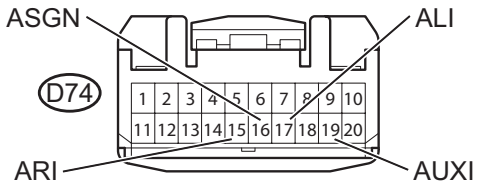


AV

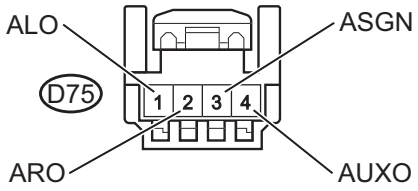
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO JACK ADAPTER)

Radio Receiver (harness side connector):



Stereo Jack Adapter (harness side connector):



E132582E01

(a) Disconnect the D74 radio receiver connector and D75 stereo jack adapter connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
AUXI (D74-19) - AUXO (D75-4)	Below 1 Ω
ALI (D74-17) - ALO (D75-1)	Below 1 Ω
ARI (D74-15) - ARO (D75-2)	Below 1 Ω
ASGN (D74-16) - ASGN (D75-3)	Below 1 Ω
AUXI (D74-19) or AUXO (D75-4) - Body ground	10 kΩ or higher
ALI (D74-17) - or ALO (D75-1) - Body ground	10 kΩ or higher
ARI (D74-15) or ARO (D75-2) - Body ground	10 kΩ or higher
ASGN (D74-16) or ASGN (D75-3) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

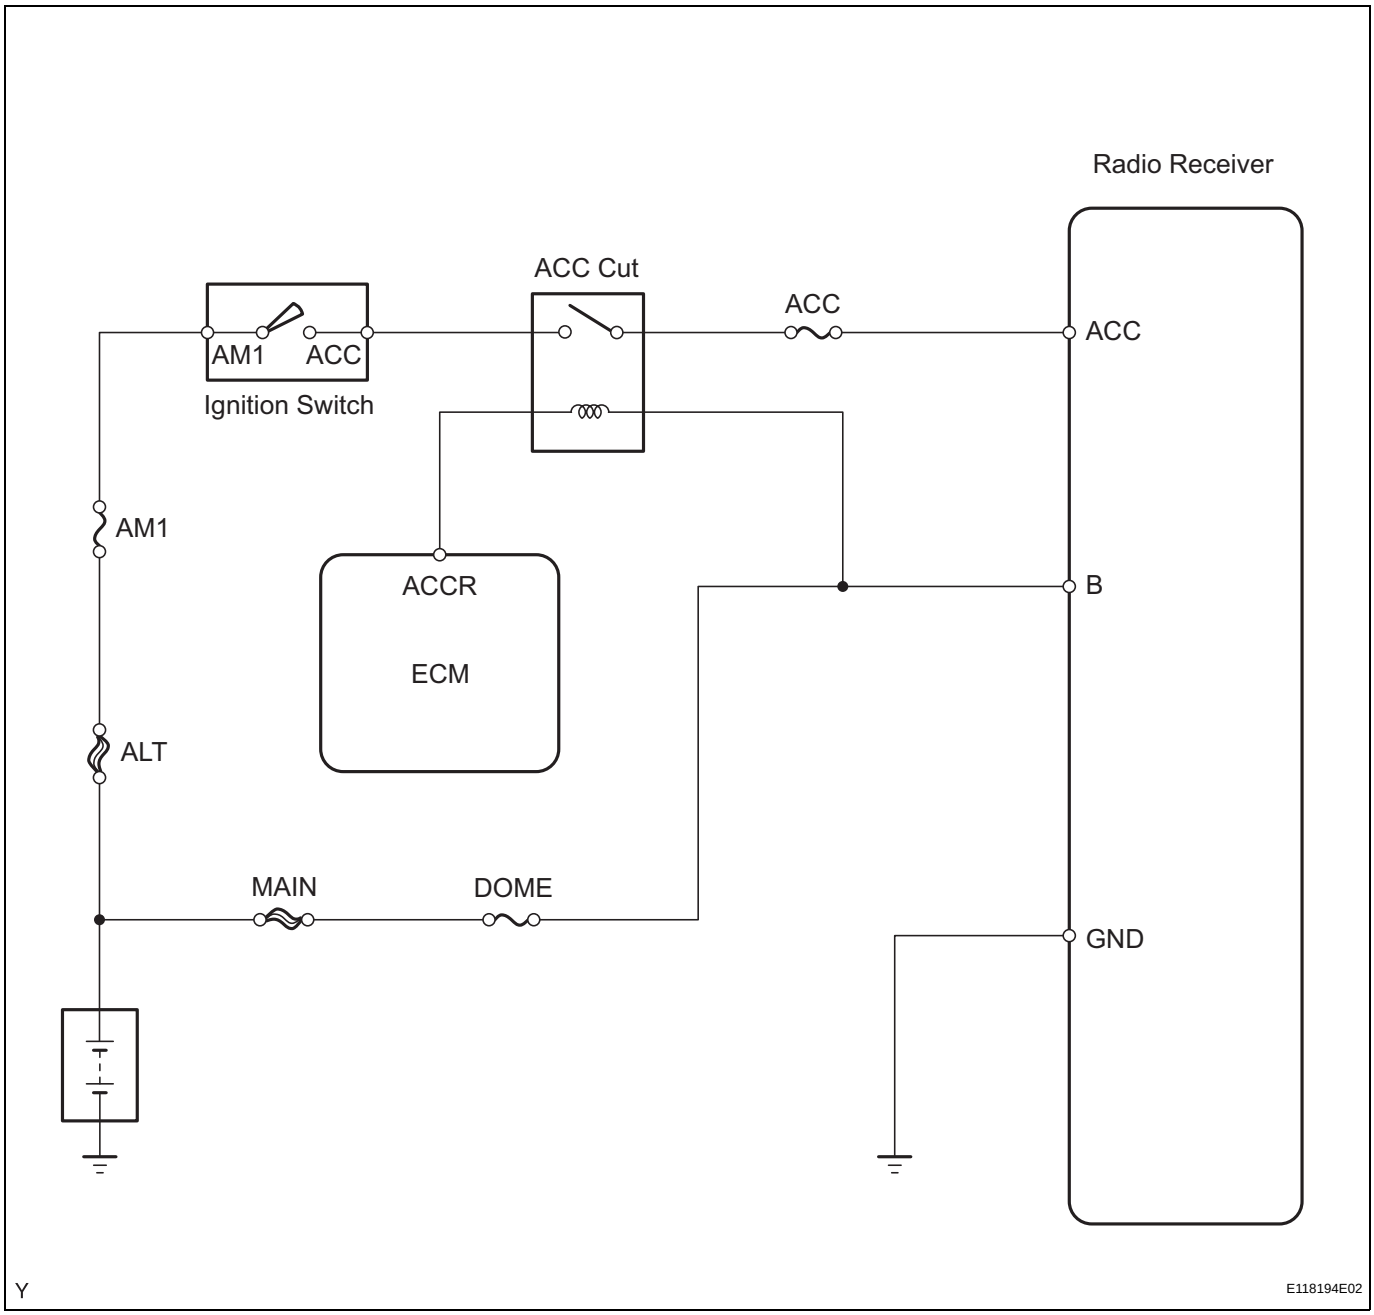
AV

Radio Receiver Power Source Circuit

DESCRIPTION

This circuit provides power to the radio receiver.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT FUSE (ACC, AM1, DOME)**

(a) Remove the ACC fuse and AM1 fuse from the main body ECU.
(b) Remove the DOME fuse from the engine room R/B.

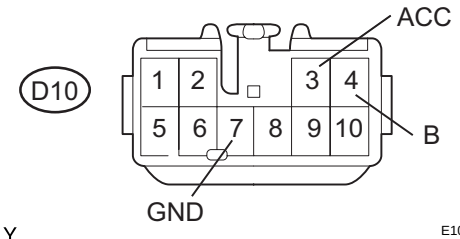
(c) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BATTERY AND BODY GROUND)

Radio Receiver
(harness side connector):



(a) Disconnect the D10 receiver connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D10-4 (B) - Body ground	Always	11 to 14 V
D10-3 (ACC) - Body ground	Ignition switch ACC	11 to 14 V

(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D10-7 (GND) - Body ground	Below 1 Ω

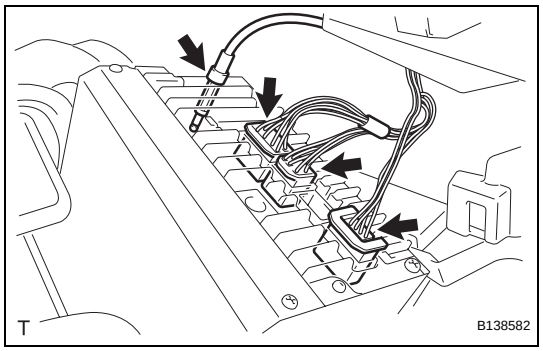
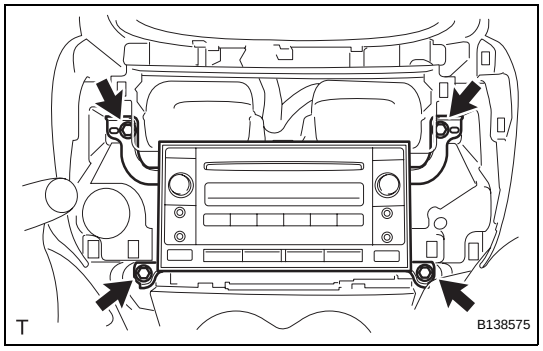
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
6. **REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (except Integrated with Panel) (See page IP-43)**
7. **REMOVE RADIO RECEIVER ASSEMBLY**
   (a) for Integrated with Panel:
      (1) Disconnect the hazard warning signal switch connector.
      (2) Remove the 4 bolts.

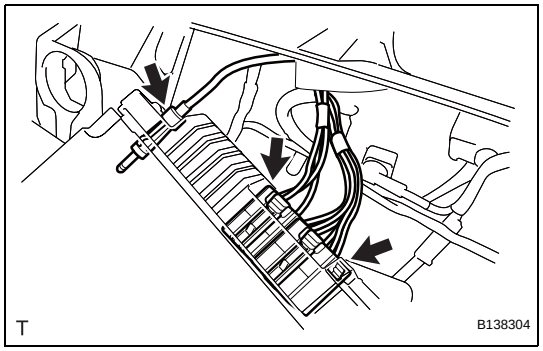
      (3) Disengage the 4 clips and the 4 claws and remove the radio receiver.



(4) Disconnect the plug.
(5) Disconnect the 3 radio connectors.



(b) except Integrated with Panel:
(1) Remove the 4 bolts and the radio receiver.



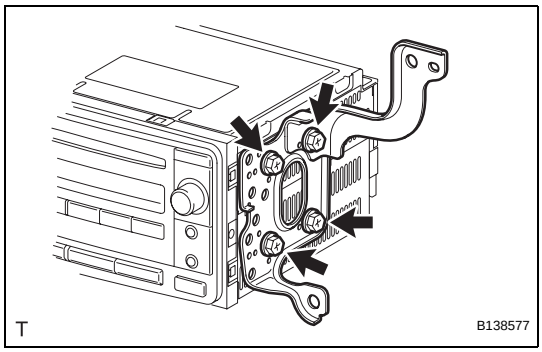
(2) Disconnect the plug.
(3) Disconnect the 2 radio connectors.

DISASSEMBLY

1. **REMOVE INSTRUMENT PANEL CENTER REGISTER ASSEMBLY (for Integrated with Panel) (See page LI-166)**

2. **REMOVE RADIO BRACKET RH**
   (a) for Integrated with Panel:
      (1) Remove the 4 screws and the radio bracket.

   (b) except Integrated with Panel:
      (1) Remove the 4 screws and the radio bracket.

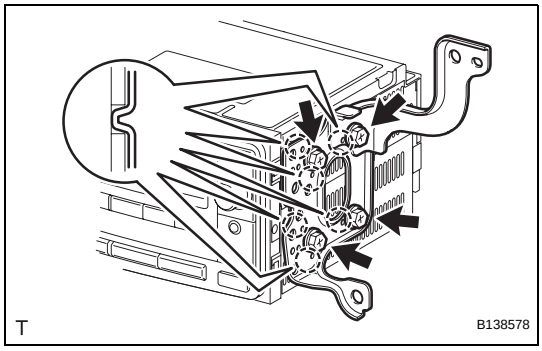


3. **REMOVE RADIO BRACKET LH**
   HINT:
   Use the same procedure as for the RH side.

REASSEMBLY

1. **INSTALL RADIO BRACKET RH**
   (a) for Integrated with Panel:
      (1) Align the 6 bosses of the radio bracket with the hole in the radio receiver and install the radio bracket with the 2 screws.

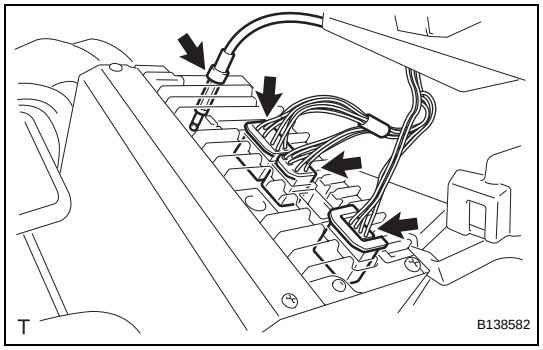
   (b) except Integrated with Panel:
      (1) Align the 6 bosses of the radio bracket with the hole in the radio receiver and install the radio bracket with the 4 screws.



2. **REMOVE RADIO BRACKET LH**
   HINT:
   Use the same procedure as for the RH side.

3. **INSTALL INSTRUMENT PANEL CENTER REGISTER ASSEMBLY (for Integrated with Panel) (See page LI-168)**

AV



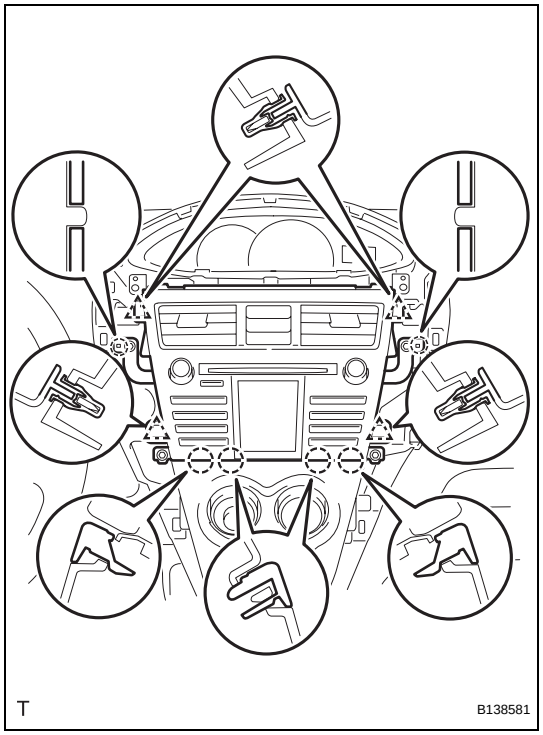
INSTALLATION

1. INSTALL RADIO RECEIVER ASSEMBLY

(a) for Integrated with Panel:

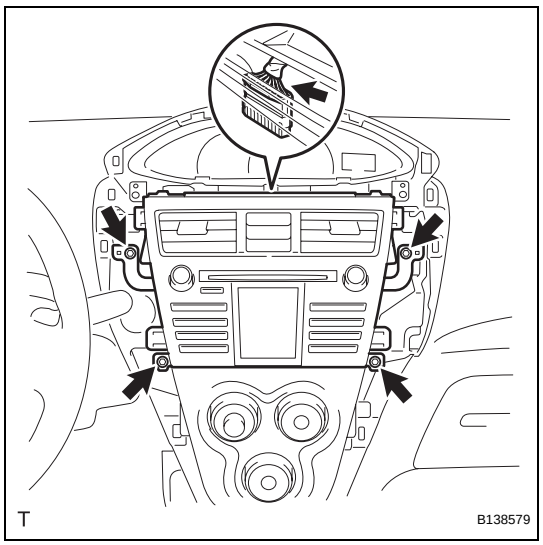
(1) Connect the plug.

(2) Connect the 3 radio connectors.



(3) Align the 2 bosses of the instrument panel with the hole in the radio bracket.

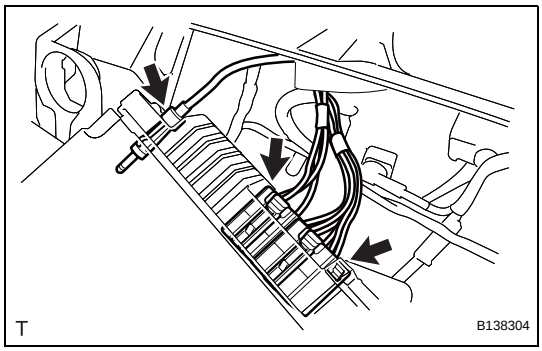
(4) Engage the 4 clips and 4 claws and install the radio receiver.



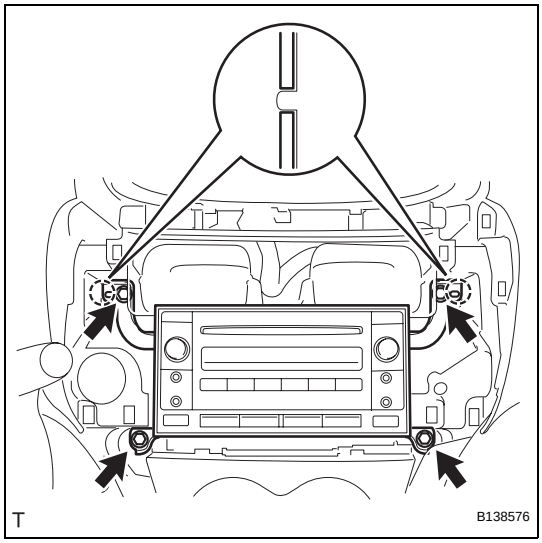
(5) Tighten the 4 bolts.

(6) Connect the hazard warning signal switch connector.

AV



(b) except Integrated with Panel:
(1) Connect the plug.
(2) Connect the 2 radio connectors.



(3) Align the 2 bosses of the instrument panel with the hole in the radio bracket.
(4) Install the radio receiver with the 4 bolts.

2. **INSTALL INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (except Integrated with Panel) (See page IP-56)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
4. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
5. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
6. **INSTALL INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-142)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

AV

RADIO RECEIVER (for Hatchback)

COMPONENTS

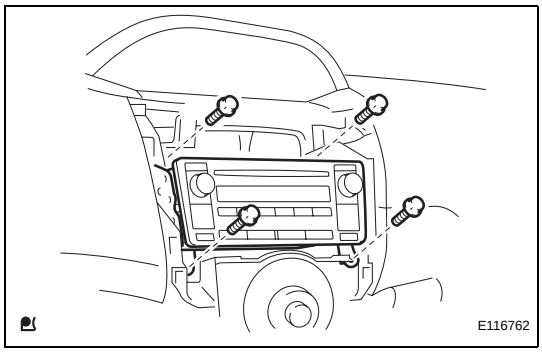
B138643E01

REMOVAL

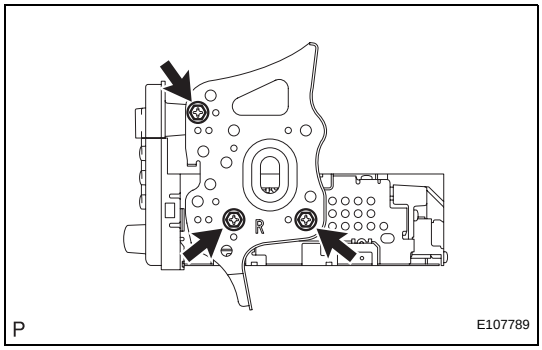
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
4. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
5. **REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page AC-250)**
6. **REMOVE RADIO RECEIVER ASSEMBLY**
   (a) Remove the 4 screws.
   (b) Disconnect the connectors and remove the radio receiver.

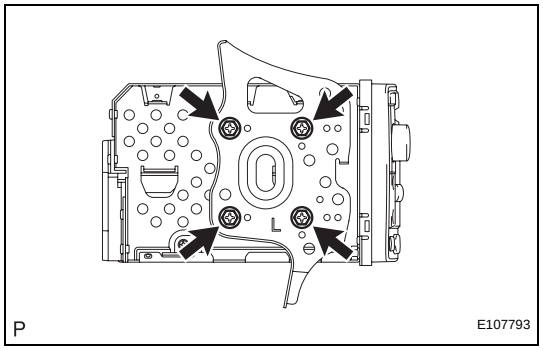


DISASSEMBLY

1. **REMOVE RADIO BRACKET RH**
   (a) w/ CD Player:
      (1) Remove the 4 screws and remove the radio bracket.

   (b) w/o CD Player:
      (1) Remove the 3 screws and remove the radio bracket.

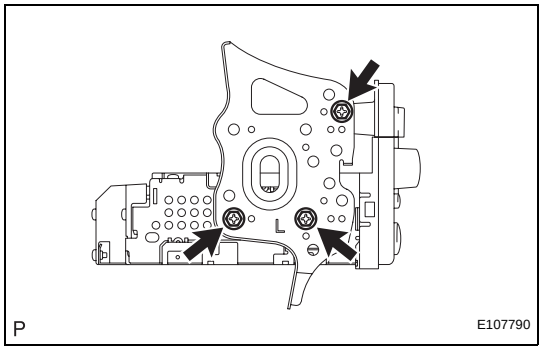




2. REMOVE RADIO BRACKET LH

(a) w/ CD Player:

(1) Remove the 4 screws and remove the radio bracket.



(b) w/o CD Player:

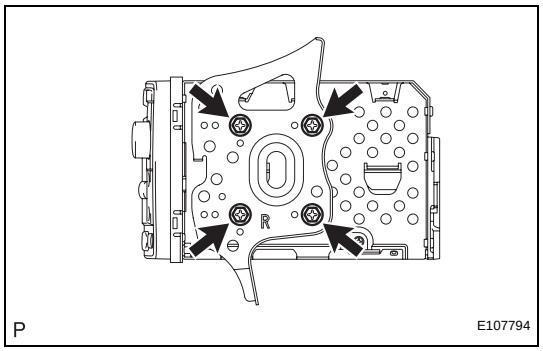
(1) Remove the 3 screws and remove the radio bracket.

REASSEMBLY

1. INSTALL RADIO BRACKET RH

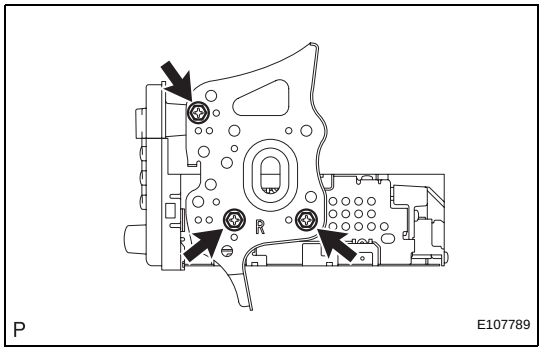
(a) w/ CD Player:

(1) Install the radio bracket with the 4 screws.



(b) w/o CD Player:

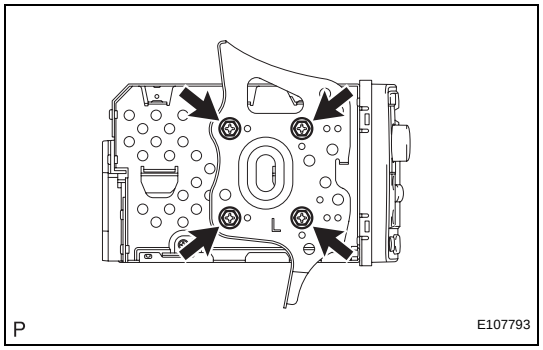
(1) Install the radio bracket with the 3 screws.

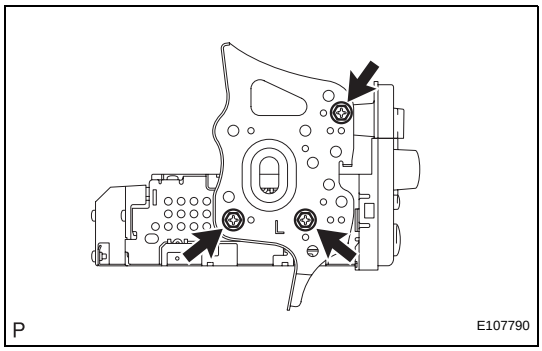


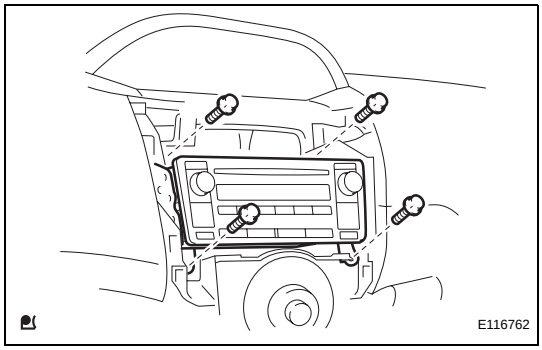
2. INSTALL RADIO BRACKET LH

(a) w/ CD Player:

(1) Install the radio bracket with the 4 screws.







(b) w/o CD Player:
(1) Install the radio bracket with the 3 screws.

INSTALLATION

1. **INSTALL RADIO RECEIVER ASSEMBLY**
   (a) Connect the connectors.
   (b) Install the radio receiver with the 4 screws.
2. **INSTALL INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (See page AC-258)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
4. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
5. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

31. **REMOVE CENTER PILLAR UPPER GARNISH LH (See page IR-17)**
32. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
33. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
34. **REMOVE INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-138)**
35. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
36. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
37. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
38. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**

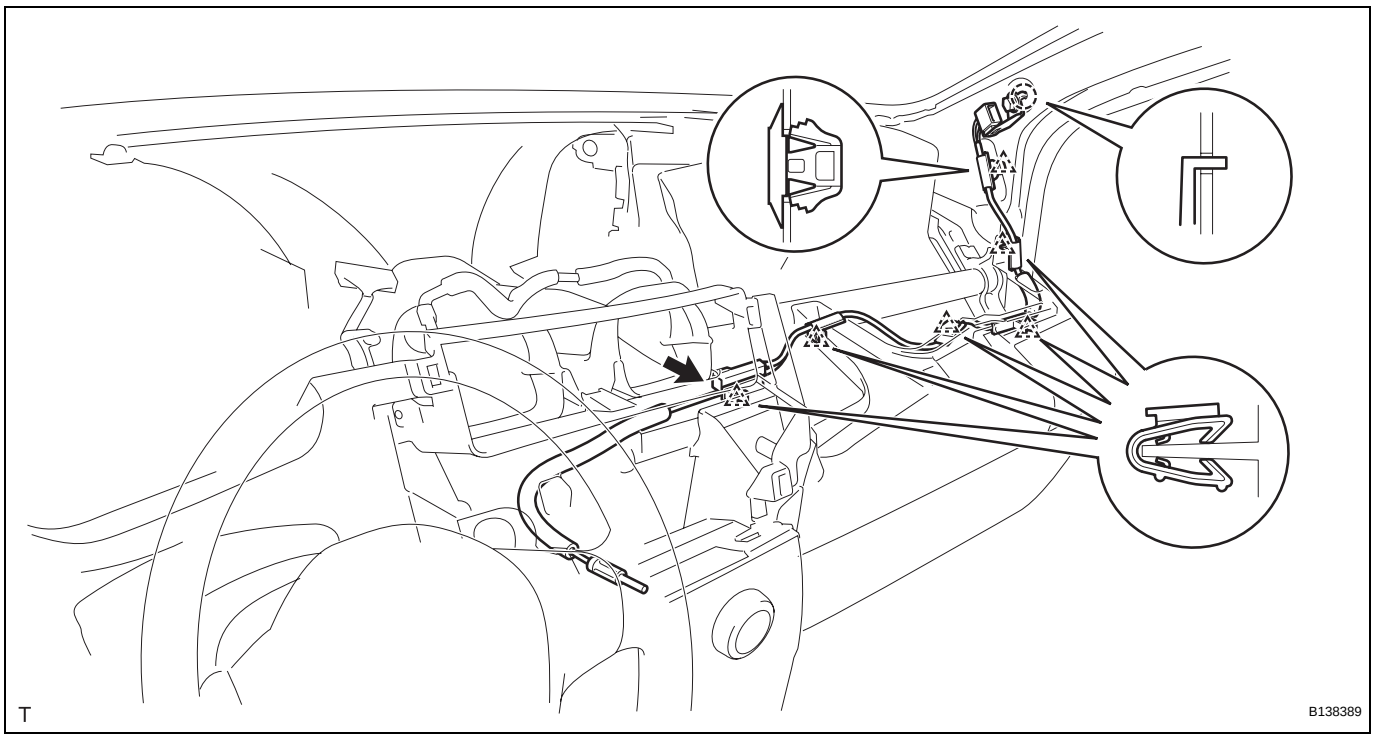
39. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**

40. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**

41. **REMOVE INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (except Integrated with Panel) (See page IP-43)**

42. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-38)**

43. **REMOVE ANTENNA CORD SUB-ASSEMBLY**
    (a) Remove the bolt, the hook and the bracket.
    (b) Using a clip remover, remove the clamp.
    (c) Disconnect the antenna amplifier connector.
    (d) Remove the 5 clamps and the antenna cord.



44. **REMOVE ASSIST GRIP COVER (See page IR-21)**

45. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-21)**

46. **REMOVE VISOR ASSEMBLY RH (See page IR-21)**

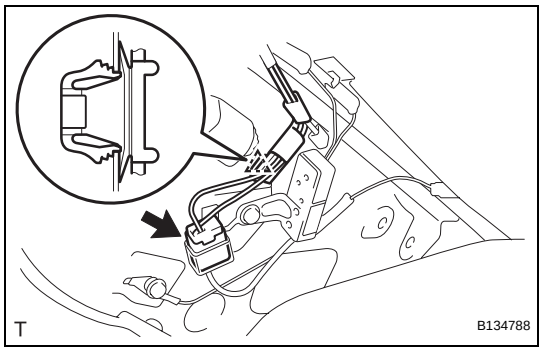
47. **REMOVE VISOR ASSEMBLY LH (See page IR-22)**

48. **REMOVE VISOR HOLDER RH (See page IR-22)**

49. **REMOVE VISOR HOLDER LH (See page IR-22)**

50. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-22)**

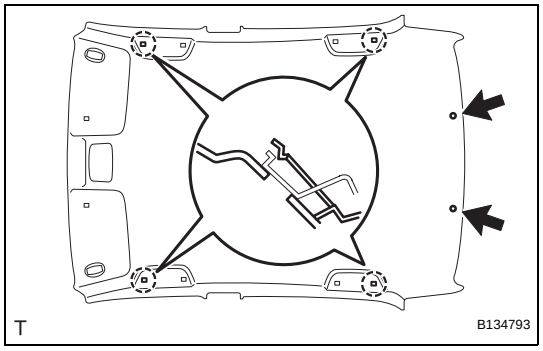
51. **REMOVE MAP LIGHT ASSEMBLY (See page IR-23)**



52. REMOVE ROOF HEADLINING ASSEMBLY

(a) Using a clip remover, remove the clamp.

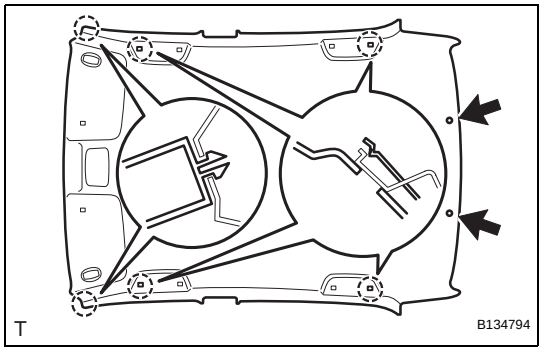
(b) Disconnect the antenna connector.



(c) w/ Curtain Shield Airbag:

(1) Using a clip remover, remove the 2 clips.

(2) Disengage the 4 hooks and remove the roof headlining.



(d) w/o Curtain Shield Airbag:

(1) Using a clip remover, remove the 2 clips.

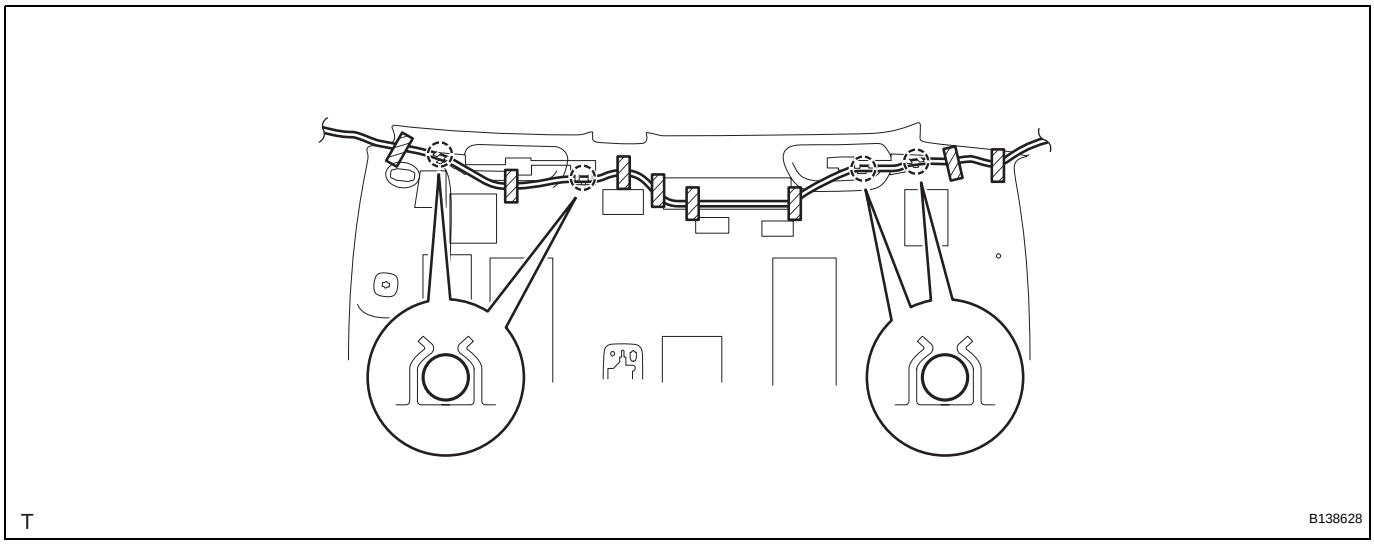
(2) Disengage the 2 claws and 4 hooks and remove the roof headlining.

53. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:

(1) Remove the 8 pieces of tape.

(2) Remove the No. 2 antenna cord from the 4 claws of the front and rear side real spacers.

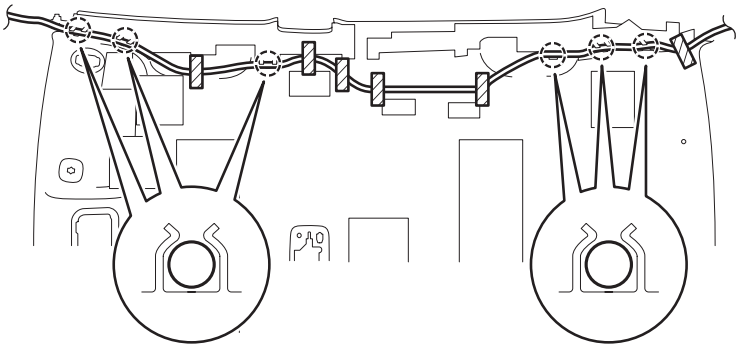


(b) w/ Curtain Shield Airbag:

(1) Remove the 6 pieces of tape.

(2) Remove the No. 2 antenna cord from the 6 claws of the front and rear side real spacers.

AV



T

B138629

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

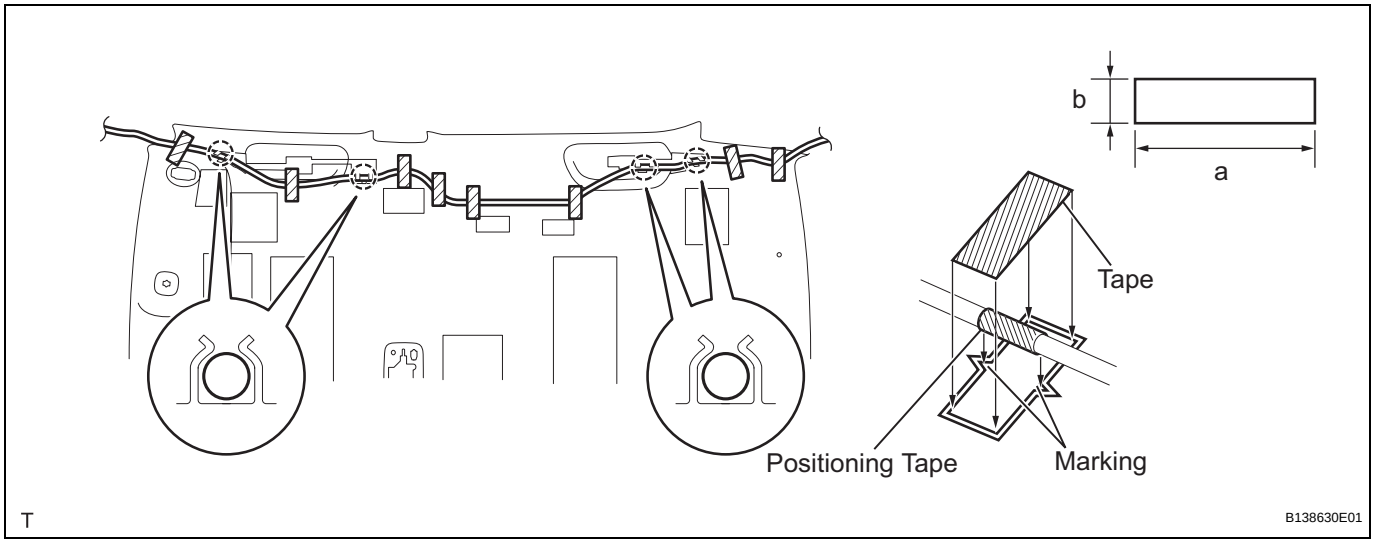
1. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:

(1) Install the antenna cord positioning tapes into the 4 claws of the front and rear side rail spacers.

(2) Align the antenna cord positioning tapes with the markings on the roof headlining.

(3) Install the antenna cord onto the roof headlining with 8 new pieces of tape.



Tape size:

Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

NOTICE:
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**

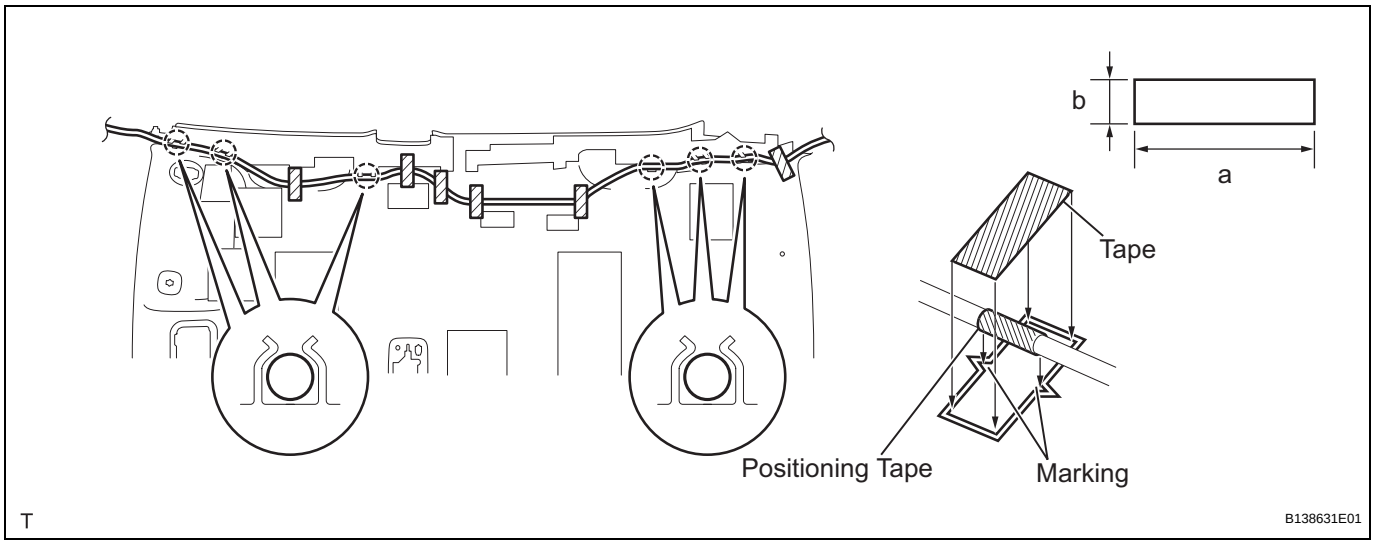
(b) w/o Curtain Shield Airbag:

(1) Install the antenna cord positioning tapes into the 6 claws of the front and rear side rail spacers.

(2) Align the antenna cord positioning tapes with the markings on the roof headlining.

AV

(3) Install the antenna cord onto the roof headlining with 6 new pieces of tape.



Tape size:

Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

NOTICE:

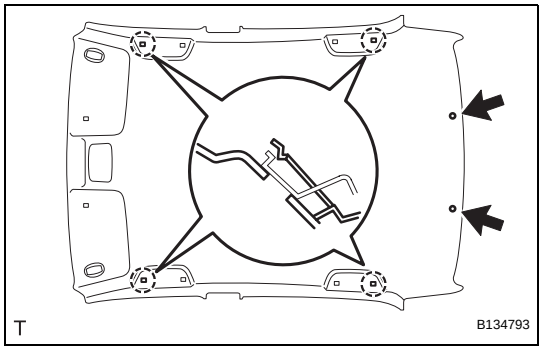
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**

2. INSTALL ROOF HEADLINING ASSEMBLY

(a) w/ Curtain Shield Airbag:

(1) Engage the 4 hooks and install the roof headlining.

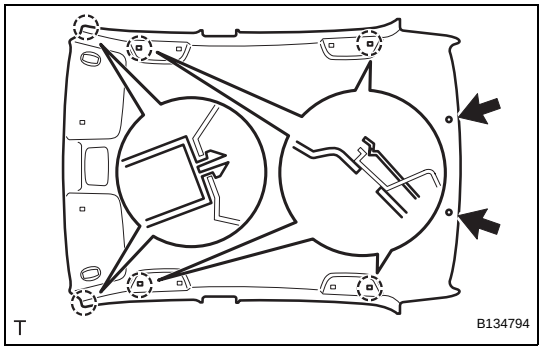
(2) Install the 2 clips.

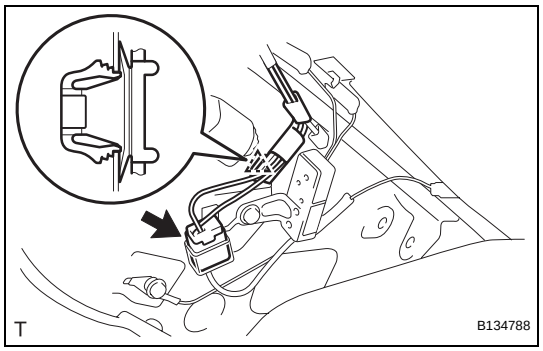


(b) w/o Curtain Shield Airbag:

(1) Engage the 2 claws and 4 hooks and install the roof headlining.

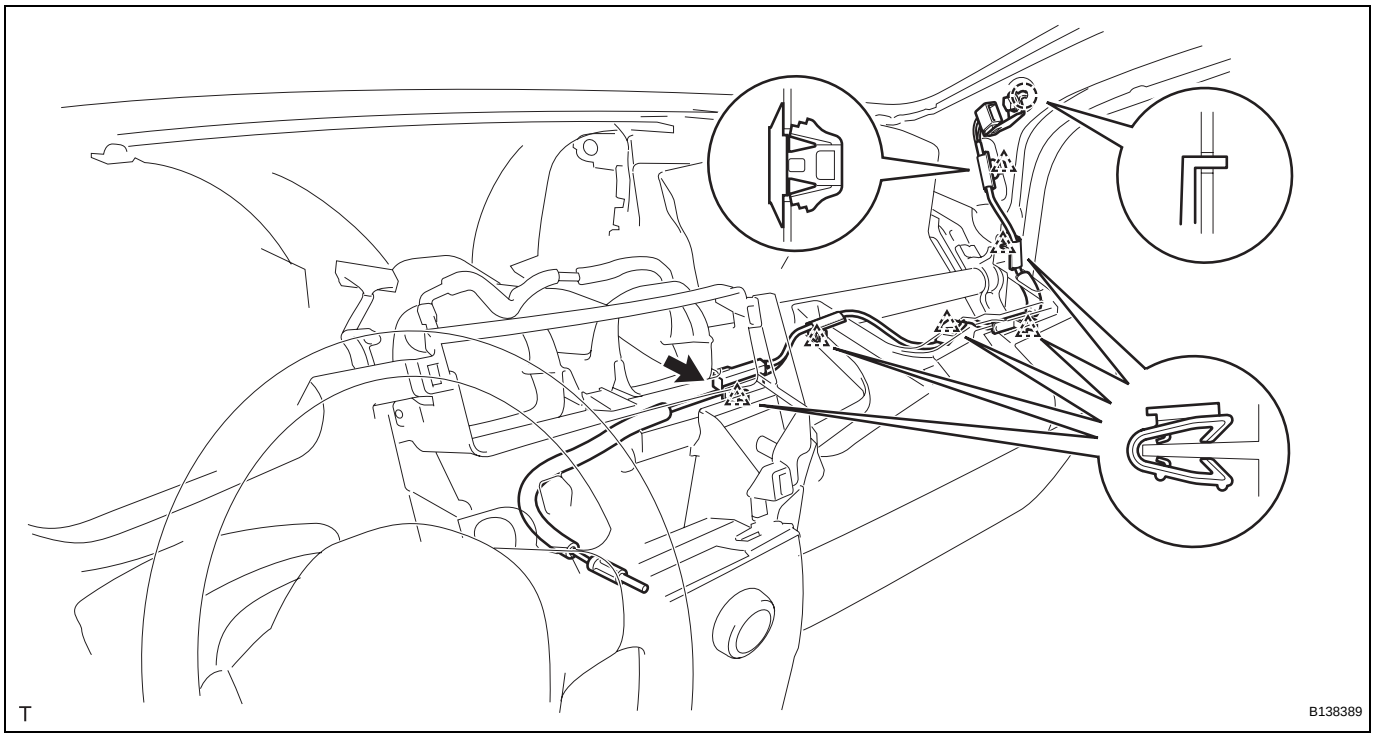
(2) Install the 2 clips.





(c) Connect the antenna connector.
(d) Install the clamp.

3. **INSTALL MAP LIGHT ASSEMBLY (See page IR-26)**
4. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-27)**
5. **INSTALL VISOR HOLDER RH (See page IR-28)**
6. **INSTALL VISOR HOLDER LH (See page IR-28)**
7. **INSTALL VISOR ASSEMBLY RH (See page IR-28)**
8. **INSTALL VISOR ASSEMBLY LH (See page IR-28)**
9. **INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-28)**
10. **INSTALL ASSIST GRIP COVER (See page IR-29)**
11. **INSTALL ANTENNA CORD SUB-ASSEMBLY**
    (a) Install the antenna cord with the 5 clamps.
    (b) Connect the antenna amplifier connector.
    (c) Insert the hook into the body hole and install the bracket with the bolt.



AV

12. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-40)**
13. **INSTALL INSTRUMENT CLUSTER CENTER FINISH PANEL SUB-ASSEMBLY (except Integrated with Panel) (See page IP-56)**

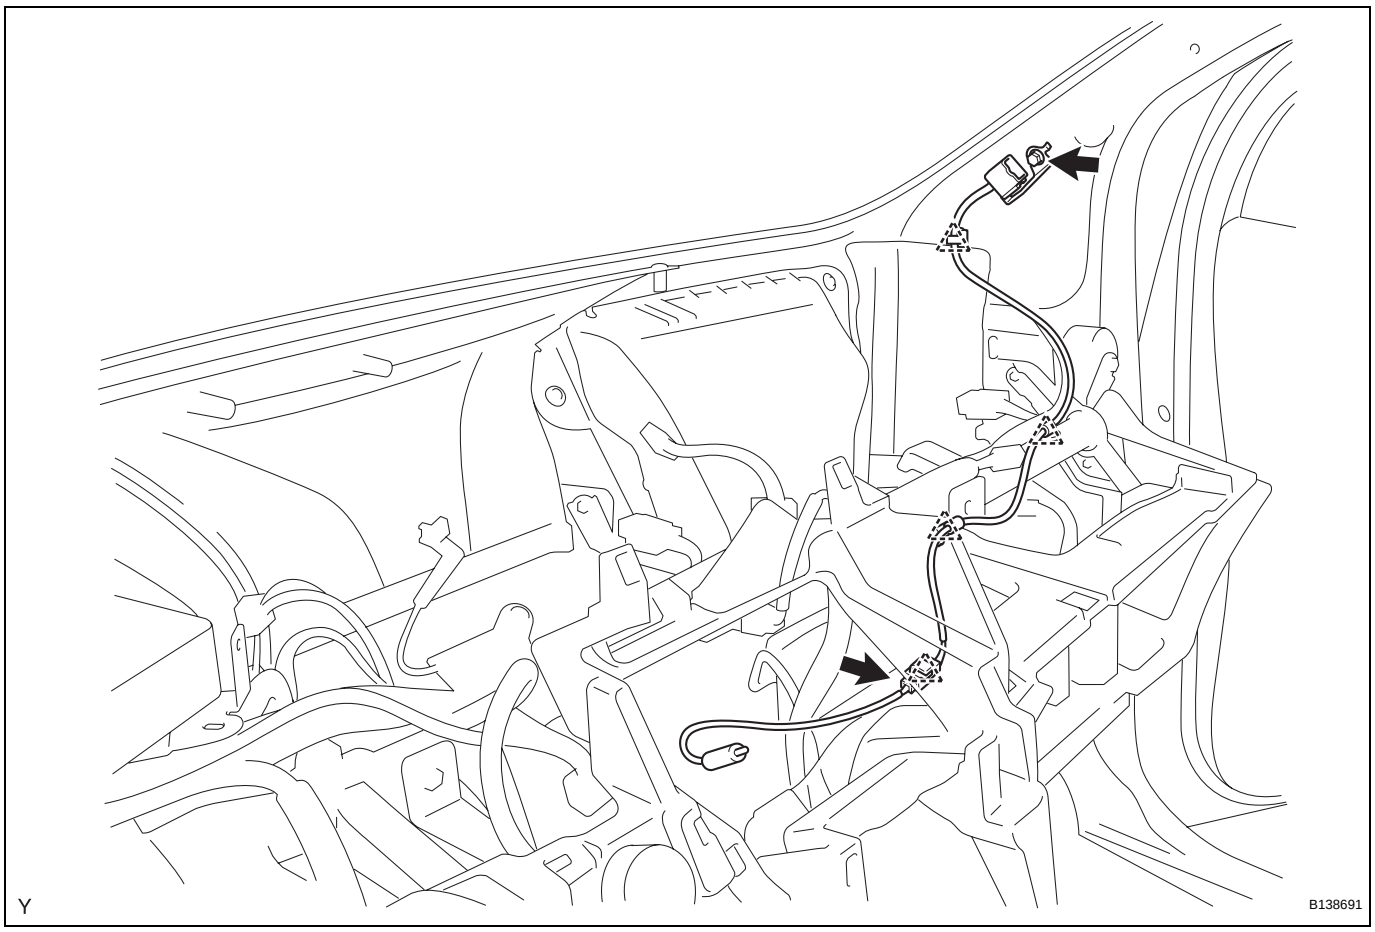
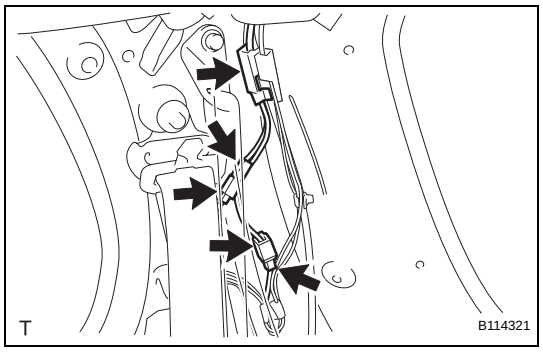
55. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)**
56. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)**
57. **REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY**
    (a) Remove the bolt and the bracket.
    (b) Disconnect the connector.
    (c) Disconnect the plug.
    (d) Using a clip remover, remove the clamp.

AV

(e) Remove the 3 clamps and the No. 2 antenna cord.

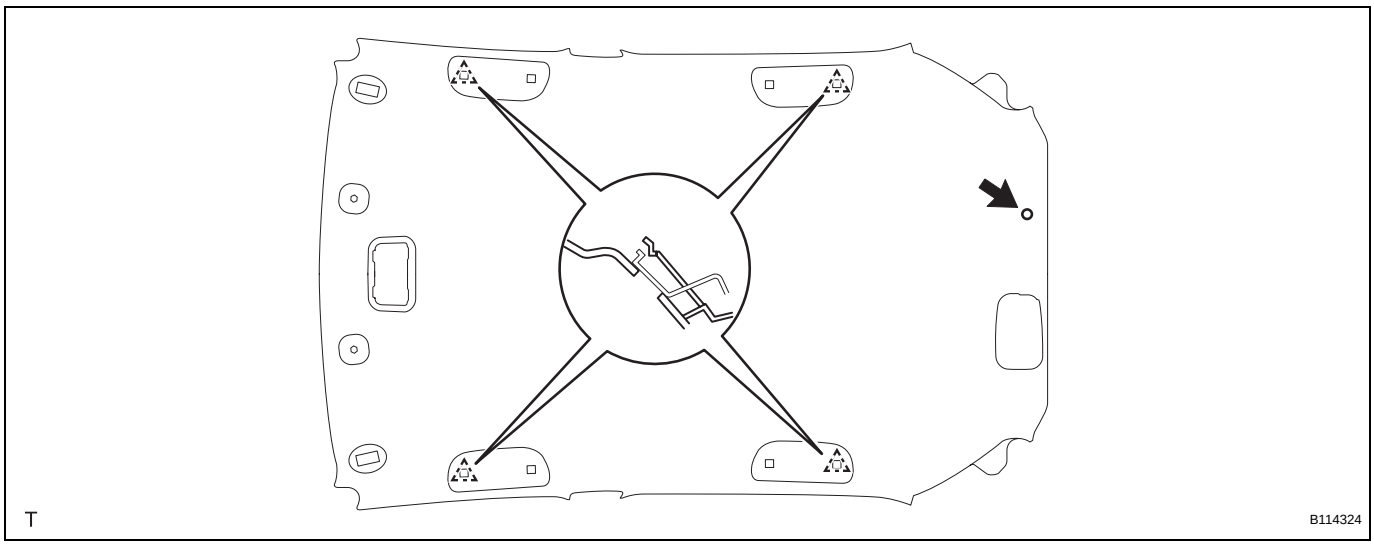




58. REMOVE ROOF HEADLINING ASSEMBLY

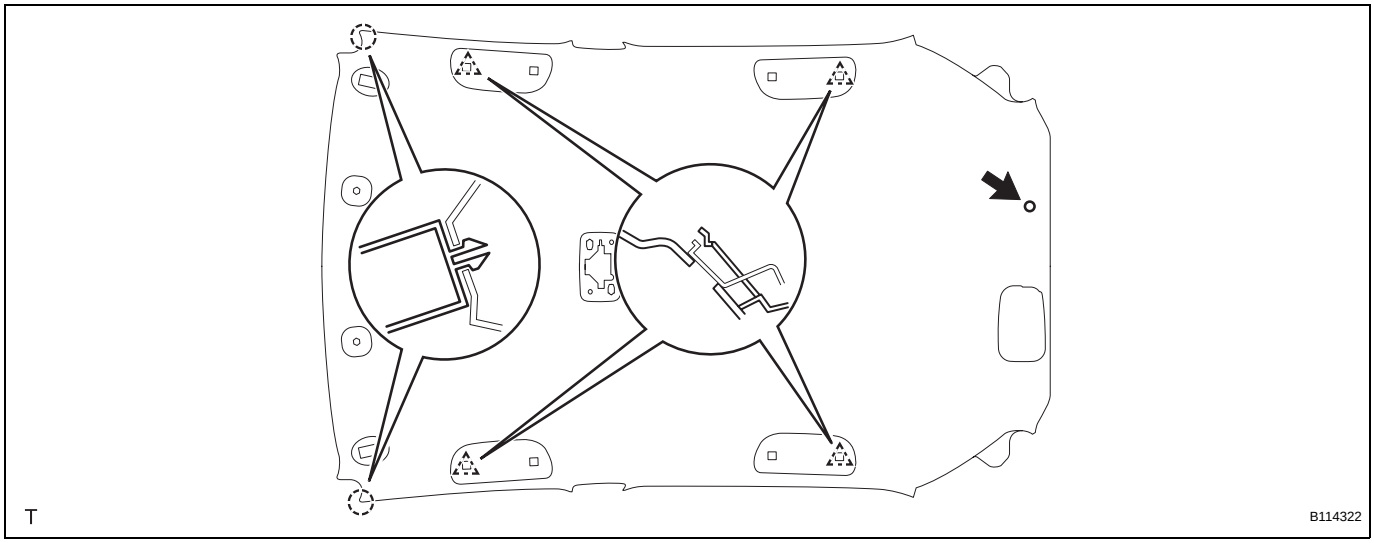
(a) Remove the antenna cord from the antenna cord clamp.
(b) Disconnect the 2 connectors.
(c) Using a clip remover, remove the 2 connectors.
(d) w/ Curtain Shield Airbag:
  (1) Using a clip remover, remove the clip.

(2) Disengage the 4 hooks.



(e) w/o Curtain Shield Airbag:
(1) Using a clip remover, remove the clip.
(2) Disengage the 2 claws and 4 hooks.

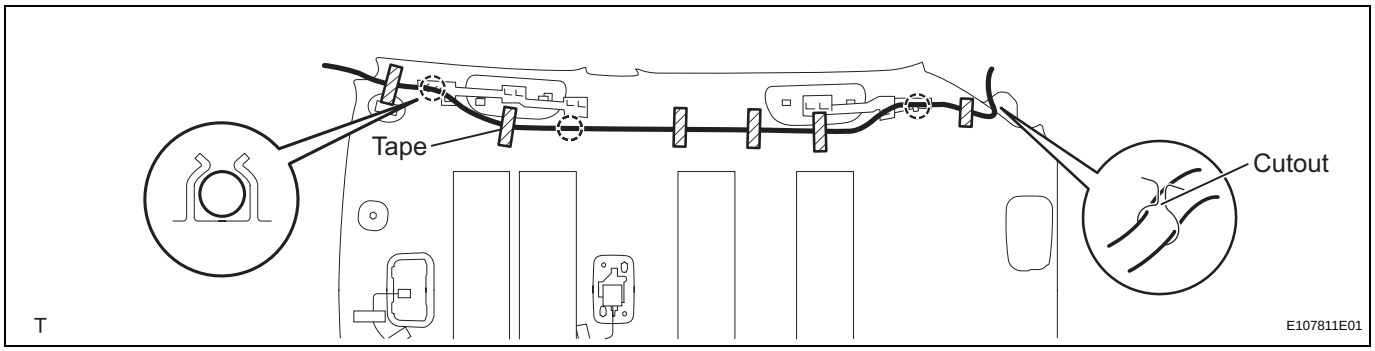
AV



59. REMOVE ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:
(1) Remove the 6 pieces of tape.
(2) Remove the antenna cord from the cutout of the roof headlining.

(3) Remove the antenna cord from the 3 claws of the front and rear side rail spacers.

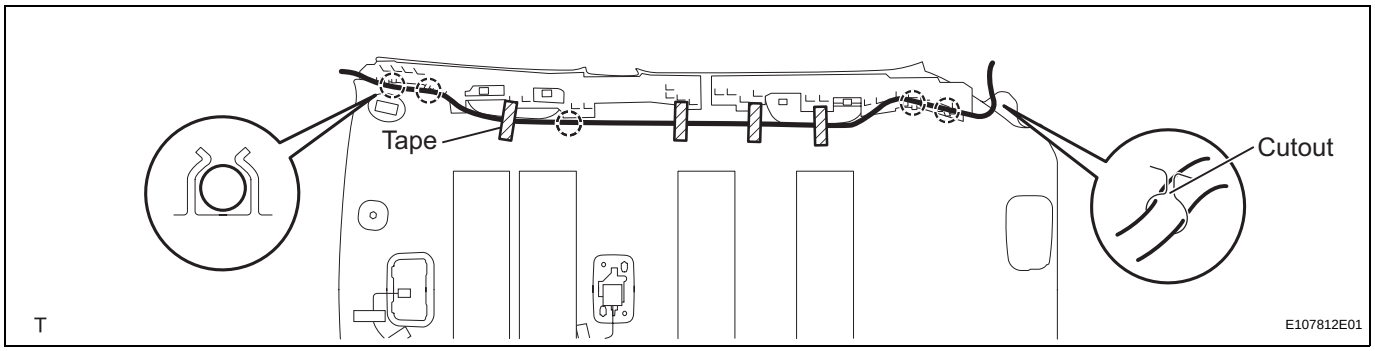


(b) w/o Curtain Shield Airbag:

(1) Remove the 4 pieces of tape.

(2) Remove the antenna cord from the cutout of the roof headlining.

(3) Remove the antenna cord from the 5 claws of the front and rear side rail spacers.



INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.

1. INSTALL ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:

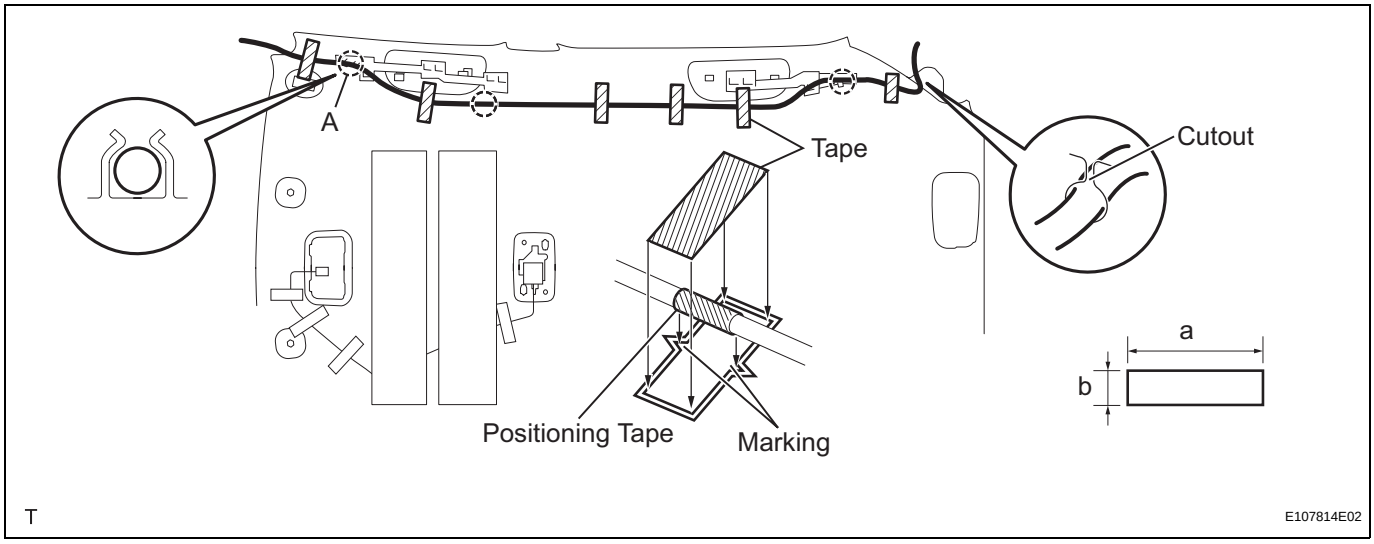
(1) Install the part of the antenna cord marked with red positioning tape into claw A of the front side rail spacer.

(2) Install the antenna cord positioning tapes into the 2 claws of the front and rear side rail spacers.

(3) Insert the antenna cord positioning tape into the cutout of the roof headlining.

(4) Align the antenna cord positioning tapes with the markings of the roof headlining.

(5) Install the antenna cord onto the roof headlining with 6 new pieces of tape.



Tape size:

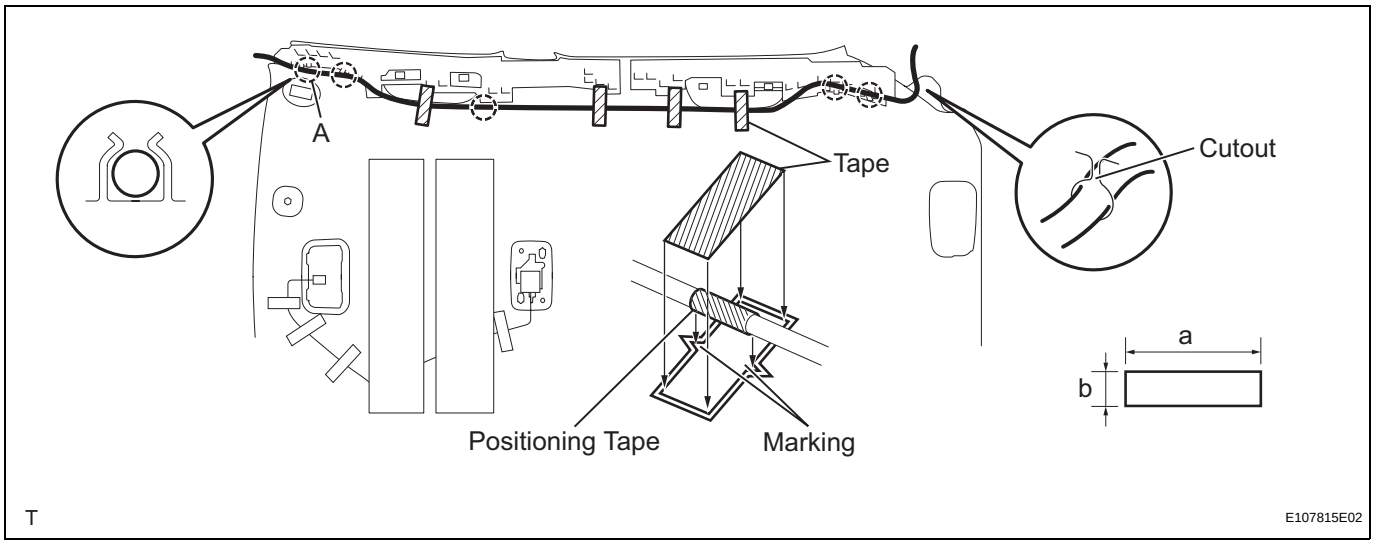
Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

NOTICE:
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**

(b) w/o Curtain Shield Airbag:

(1) Install the part of the antenna cord marked with red positioning tape into claw A of the front side rail spacer.

(2) Install the antenna cord positioning tapes into the 4 claws of the front and rear side rail spacers.
(3) Insert the antenna cord positioning tape into the cutout of the roof headlining.
(4) Align the antenna cord positioning tapes with the markings of the roof headlining.
(5) Install the antenna cord onto the roof headlining with 4 new pieces of tape.



Tape size:

Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

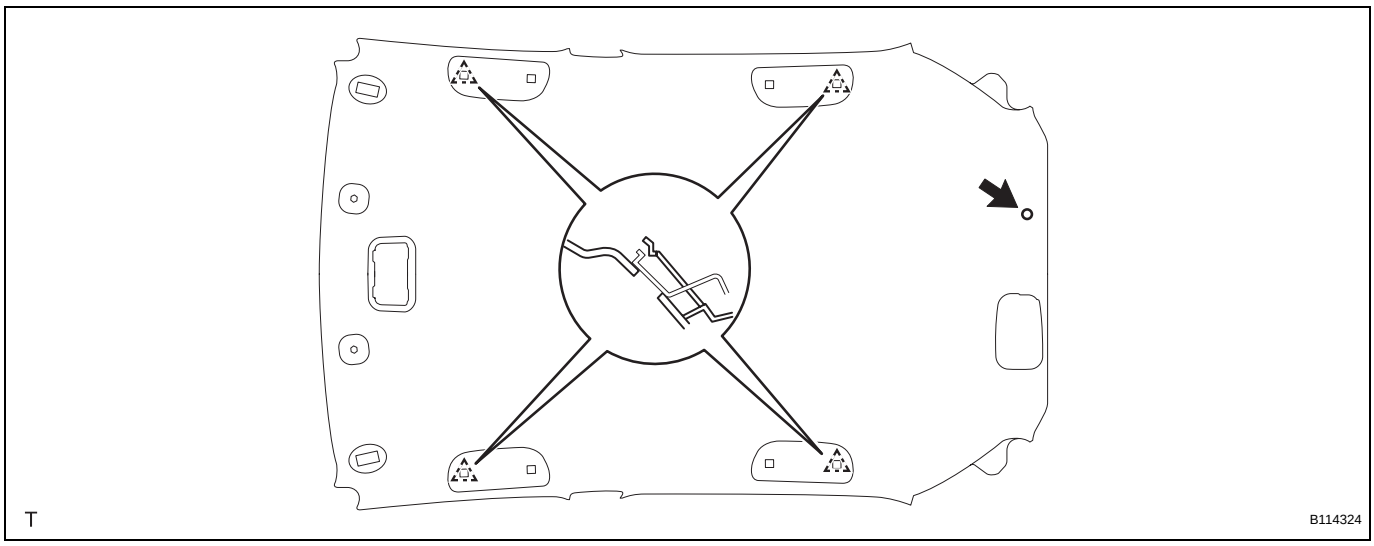
NOTICE:
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**

2. INSTALL ROOF HEADLINING ASSEMBLY

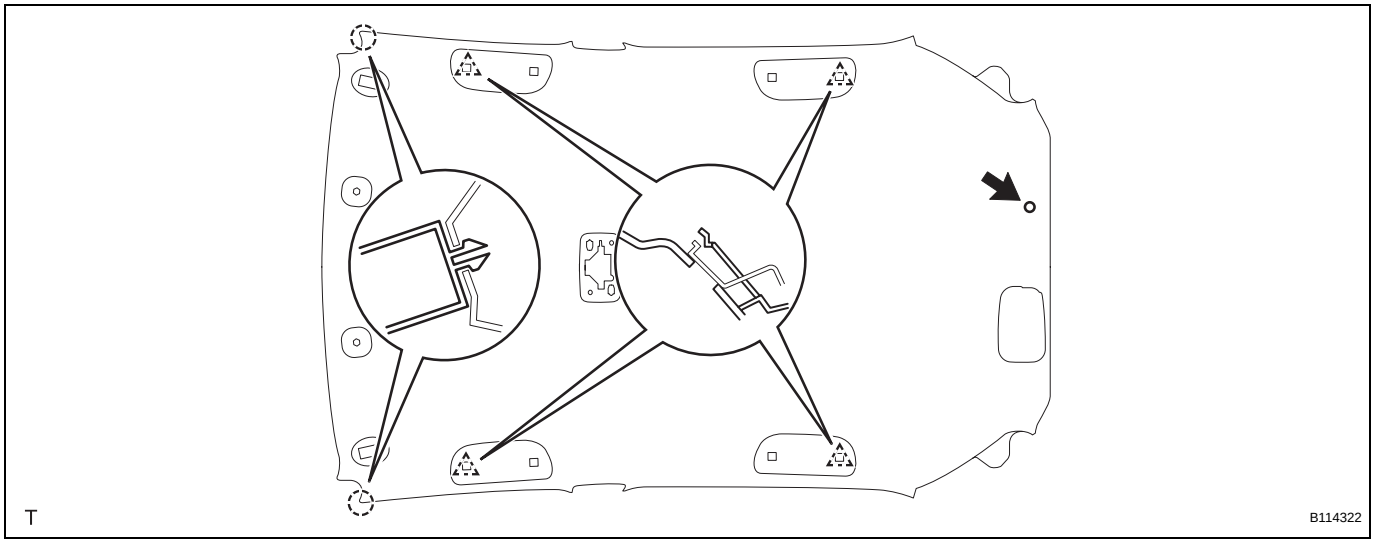
(a) w/ Curtain Shield Airbag:
(1) Engage the 4 hooks and install the roof headlining.

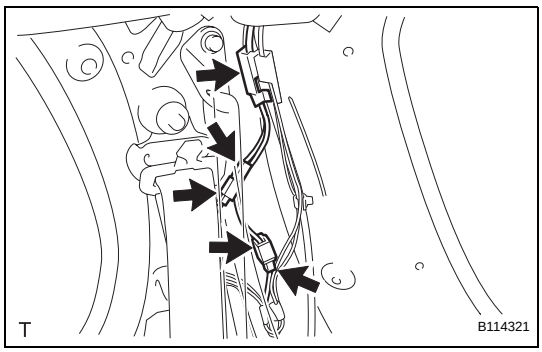
AV

(2) Install the clip.



(b) w/o Curtain Shield Airbag:
(1) Engage the 2 claws and the 4 hooks and install the roof headlining.
(2) Install the clip.

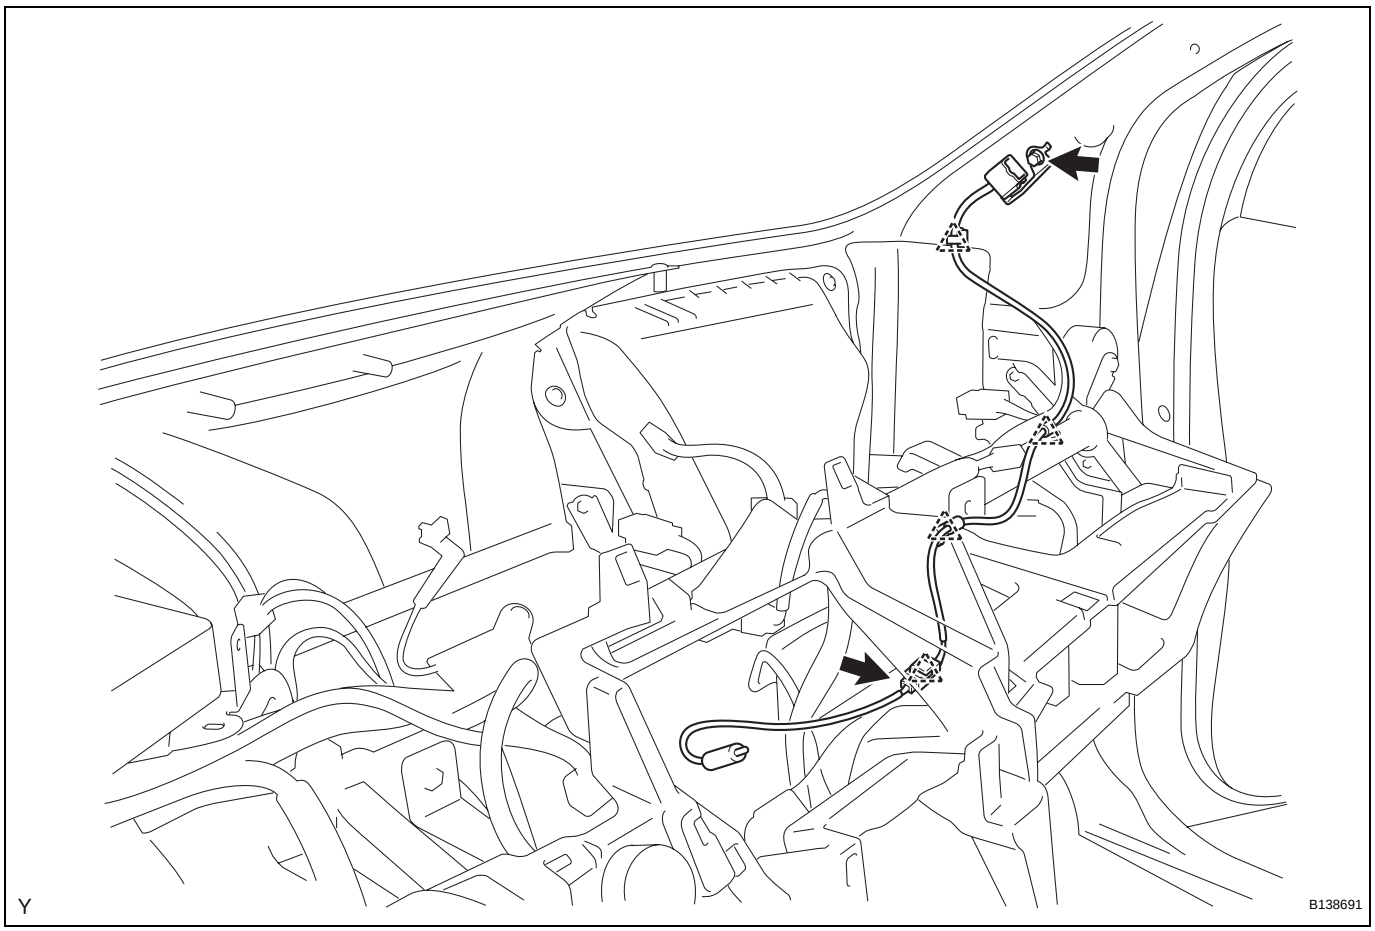




(c) Install the 2 connectors.
(d) Connect the 2 connectors.
(e) Install the antenna cord onto the antenna cord clamp.

3. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY
(a) Install the No. 2 antenna cord with the 4 clamps.
(b) Connect the plug.
(c) Connect the connector.

(d) Install the bracket with the bolt.



4. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**
5. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
6. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
7. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
8. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
11. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
12. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
13. **INSTALL MAP LIGHT ASSEMBLY (See page IR-73)**
14. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-74)**

15. INSTALL VISOR HOLDER RH (See page IR-75)
16. INSTALL VISOR HOLDER LH (See page IR-75)
17. INSTALL VISOR ASSEMBLY RH (See page IR-75)
18. INSTALL VISOR ASSEMBLY LH (See page IR-75)
19. INSTALL ROOF HEADLINING SERVICE HOLE COVER (w/o Curtain Shield Airbag) (See page IR-76)
20. INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-75)
21. INSTALL ASSIST GRIP COVER (See page IR-75)
22. INSTALL SEAT BELT ANCHOR COVER (See page SB-160)
23. INSTALL CENTER PILLAR UPPER GARNISH RH (See page IR-76)
24. INSTALL CENTER PILLAR UPPER GARNISH LH (See page IR-76)
25. INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-76)
26. INSTALL CENTER PILLAR LOWER GARNISH LH (See page IR-76)
27. INSTALL FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-76)
28. INSTALL FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-76)
29. INSTALL SEAT BELT ANCHOR COVER CAP (See page IR-76)
30. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-77)
31. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-77)
32. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-78)
33. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-79)
34. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-79)
35. INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-79)
36. INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-80)
37. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-80)
38. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-80)

39. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)**
40. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-80)**
41. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
42. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)**
43. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)**
44. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-81)**
45. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-81)**
46. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)**
47. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)**
48. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-82)**
49. **INSTALL REAR DECK TRIM COVER (See page IR-82)**
50. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**
51. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**
52. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
    (a) for RH Side:
        (1) Remove the No. 1 rear seat leg cover (See page SE-103).
    (b) for LH Side:
        (1) Remove the No. 1 rear seat leg cover (See page SE-85).
53. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
54. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**
55. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
56. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
57. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
58. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

59. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

60. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

61. **CHECK SRS WARNING LIGHT**
(See page RS-31)

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-97)**
13. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-97)**
14. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)**
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)**

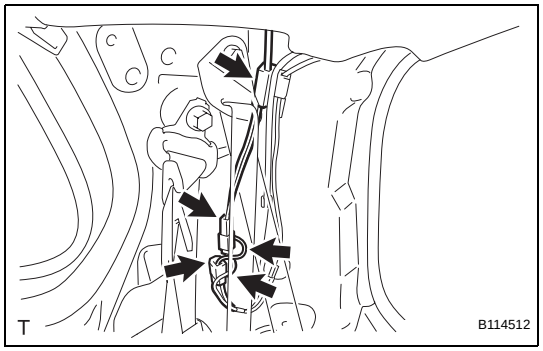
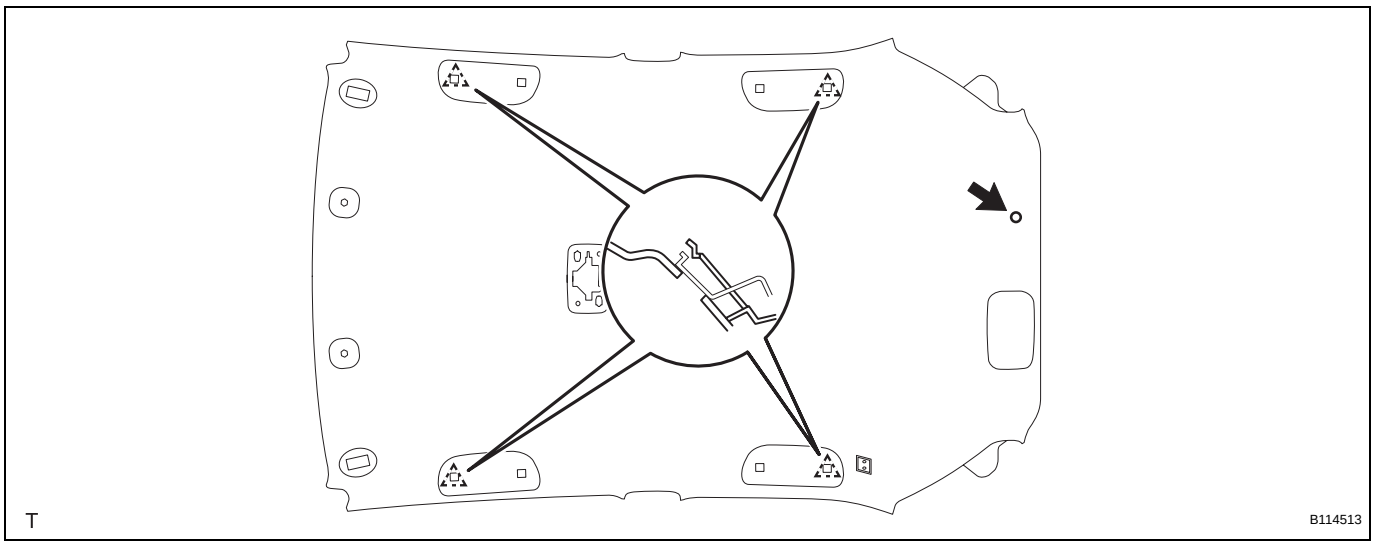
55. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)**
56. **REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-82)**
57. **REMOVE ROOF HEADLINING ASSEMBLY**
    (a) Remove the antenna cord from the antenna cord clamp.
    (b) Disconnect the 2 connectors.
    (c) Using a clip remover, remove the 2 connectors.
    (d) w/ Curtain Shield Airbag:
        (1) Using a clip remover, remove the clip.



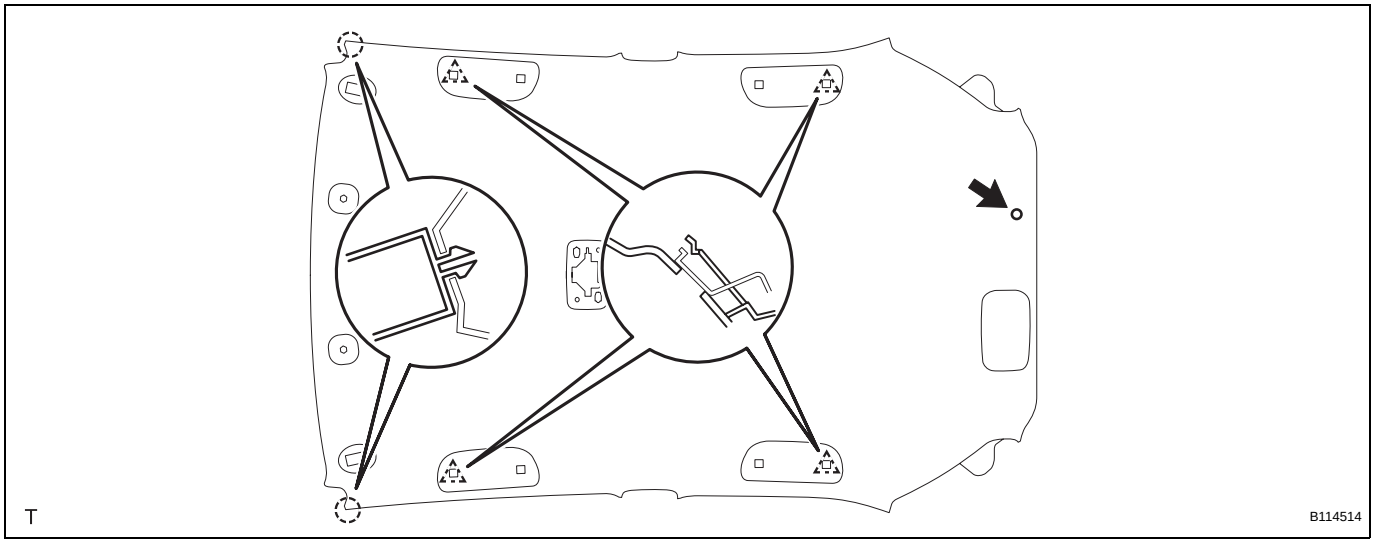
AV

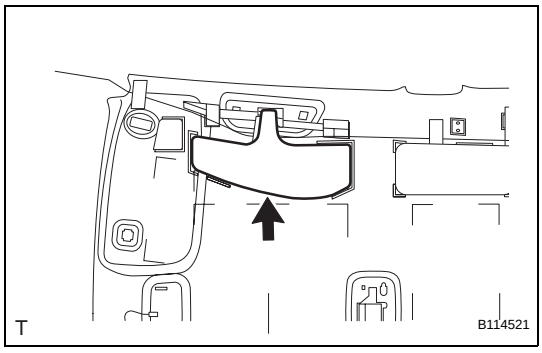
(2) Disengage the 4 hooks.



(e) w/o Curtain Shield Airbag:
(1) Using a clip remover, remove the clip.
(2) Disengage the 2 claws and the 4 hooks.

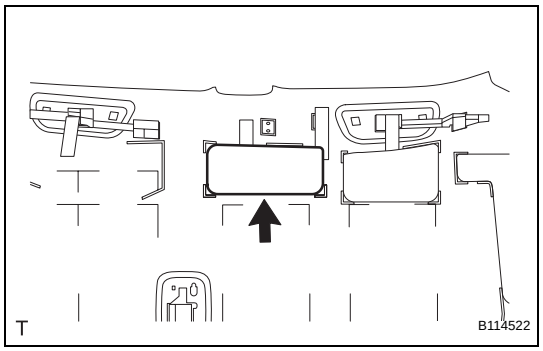
AV





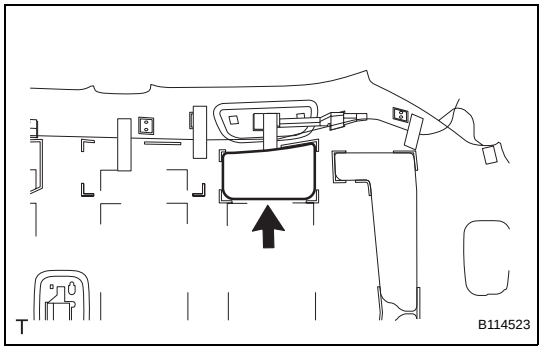
58. REMOVE NO. 2 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

(a) Remove the No. 2 roof headlining pad.



59. REMOVE NO. 3 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

(a) Remove the No. 3 roof headlining pad.



60. REMOVE NO. 4 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

(a) Remove the No. 4 roof headlining pad.

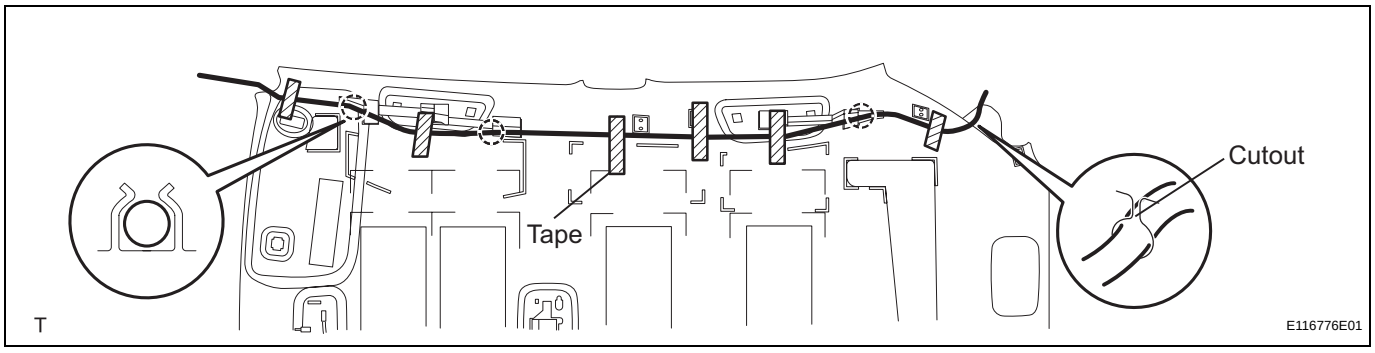
61. REMOVE ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:

(1) Remove the 6 pieces of tape.

(2) Remove the antenna cord from the cutout of the roof headlining.

(3) Remove the antenna cord from the 3 claws of the front and rear side rail spacers.

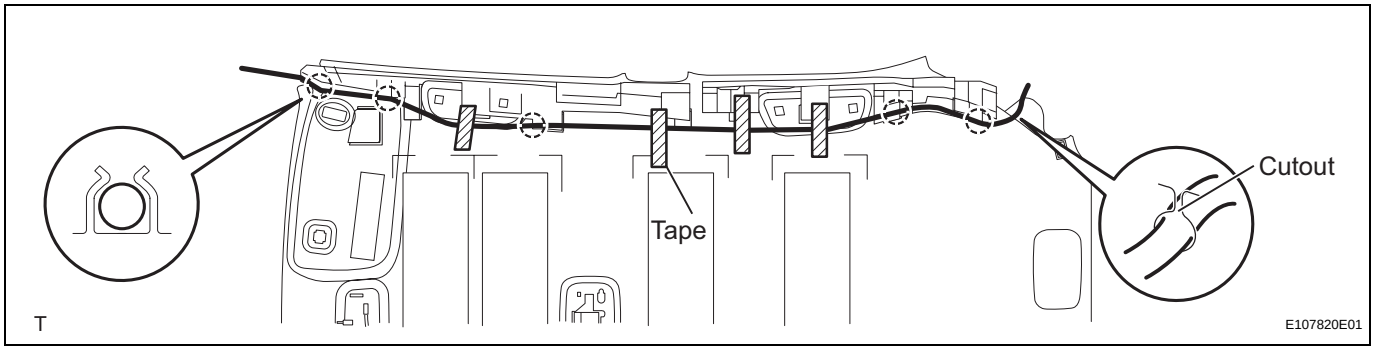


(b) w/o Curtain Shield Airbag:

(1) Remove the 4 pieces of tape.

(2) Remove the antenna cord from the cutout of the roof headlining.

(3) Remove the antenna cord from the 5 claws of the front and rear side rail spacers.



AV

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.

1. INSTALL ANTENNA CORD SUB-ASSEMBLY

(a) w/ Curtain Shield Airbag:

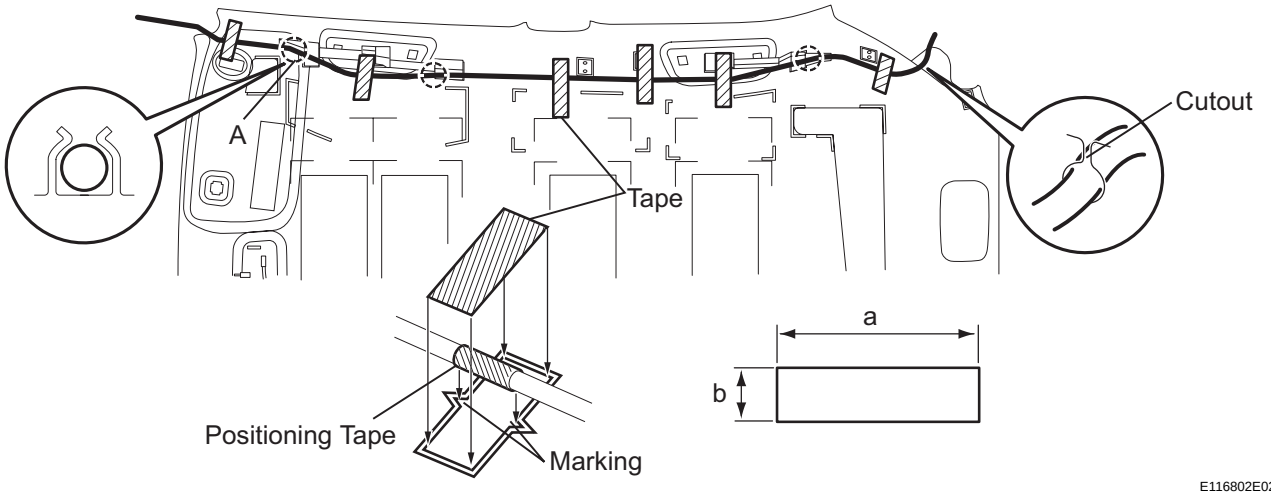
(1) Install the part of the antenna cord marked with red positioning tape into claw A of the front side rail spacer.

(2) Install the antenna cord positioning tapes into the 2 claws of the front and rear side rail spacers.

(3) Insert the antenna cord positioning tape into the cutout of the roof headlining.

(4) Align the locating tapes on the antenna cord with the markings on the roof headlining.

(5) Install the antenna cord onto the roof headlining with 6 new pieces of tape.



Tape size:

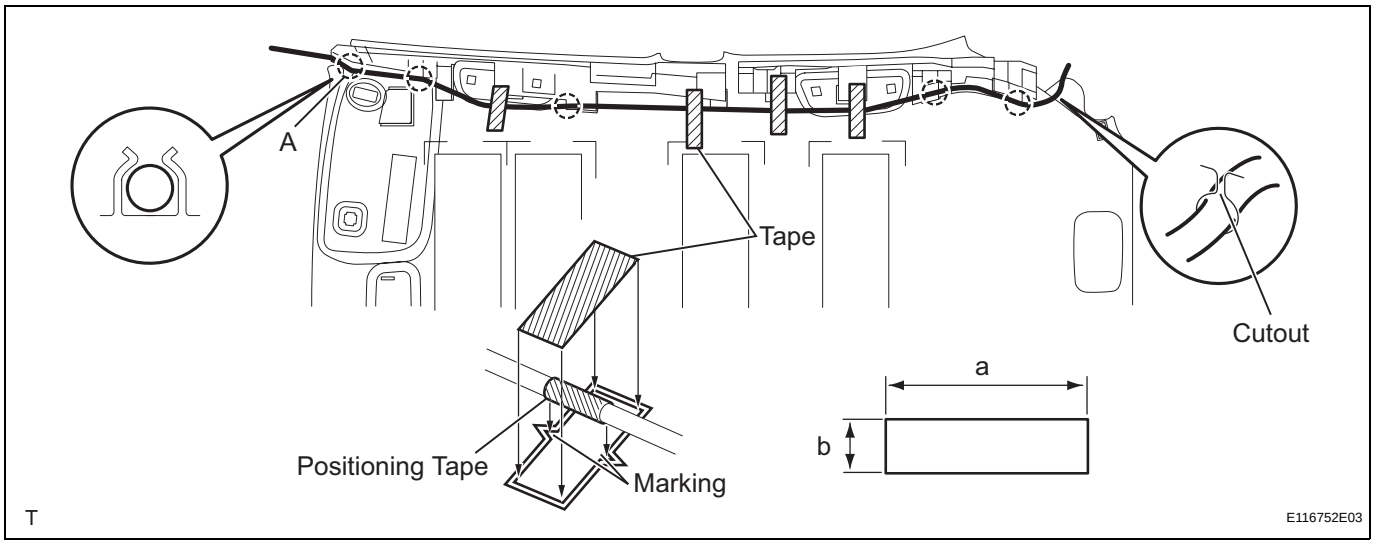
Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

NOTICE:
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**

(b) w/o Curtain Shield Airbag:

(1) Install the part of the antenna cord marked with red positioning tape into claw A of the front side rail spacer.

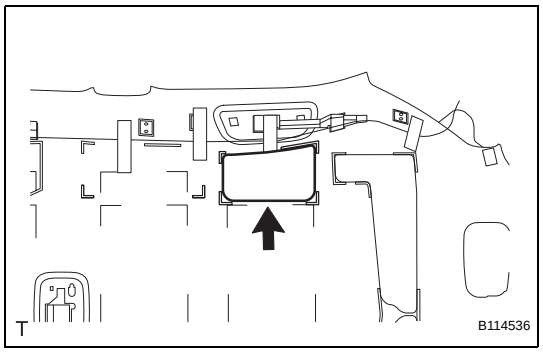
(2) Install the antenna cord positioning tapes into the 4 claws of the front and rear side rail spacers.
(3) Insert the antenna cord positioning tape into the cutout of the roof headlining.
(4) Align the locating tapes on the antenna cord with the markings on the roof headlining.
(5) Install the antenna cord onto the roof headlining with 4 new pieces of tape.



Tape size:

Mark	Measurement
a	80 mm (3.15 in.)
b	20 mm (0.787 in.)

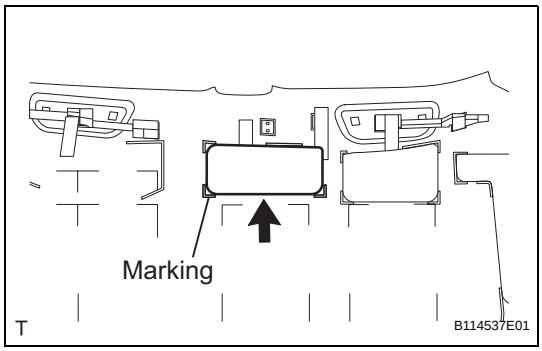
NOTICE:
- **Apply the tape securely in place.**
- **Do not touch the adhesive surface when applying the tape to prevent adhesion failure.**



2. INSTALL NO. 4 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

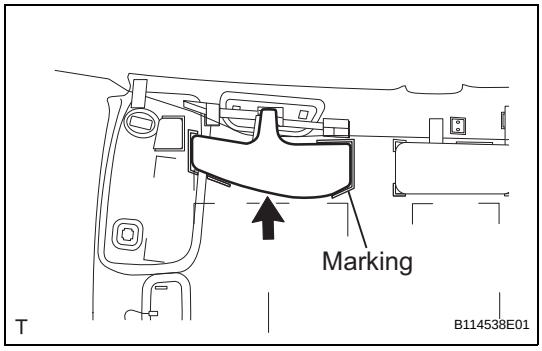
(a) Align a new No. 4 roof headlining pad with the markings of the roof headlining and install it onto the roof headlining.

AV



3. INSTALL NO. 3 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

(a) Align a new No. 3 roof headlining pad with the markings of the roof headlining and install it onto the roof headlining.



4. INSTALL NO. 2 ROOF HEADLINING PAD (w/ Curtain Shield Airbag)

(a) Align a new No. 2 roof headlining pad with the markings of the roof headlining and install it onto the roof headlining.

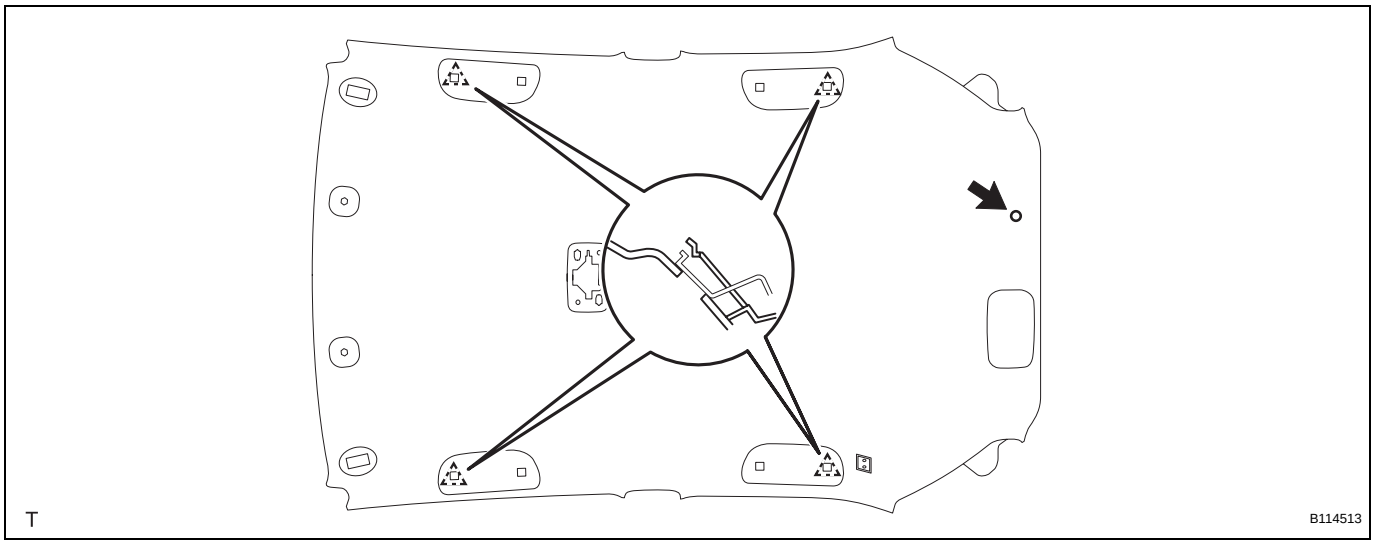
5. INSTALL ROOF HEADLINING ASSEMBLY

(a) w/ Curtain Shield Airbag:

(1) Engage the 4 hooks and install the roof headlining.

(2) Install the clip.

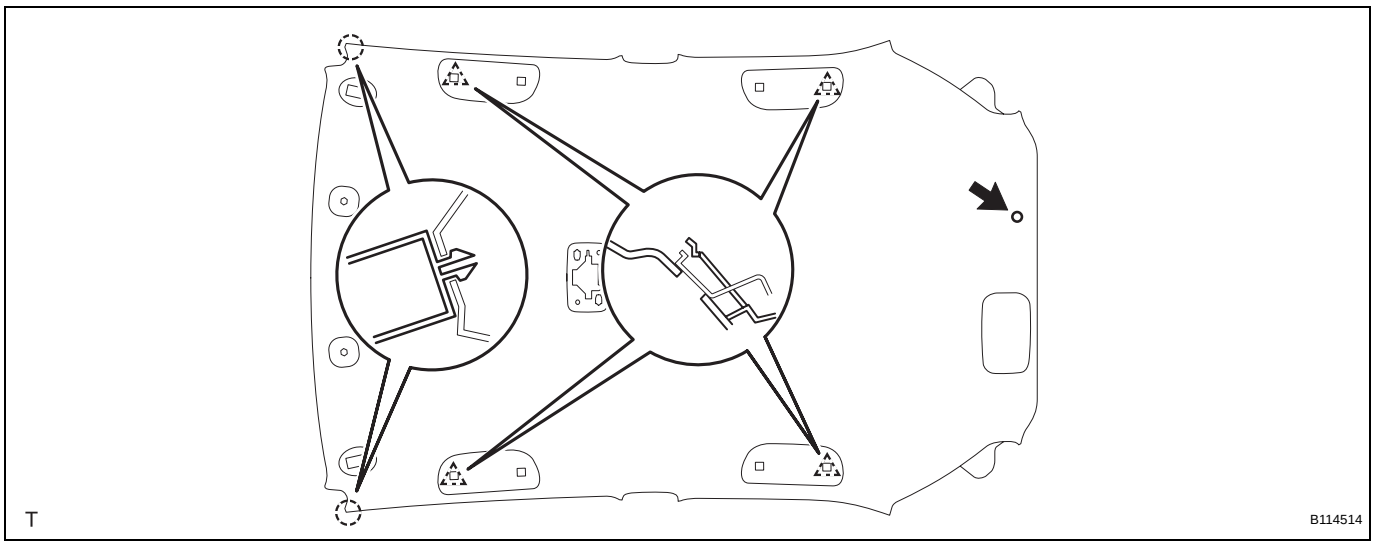
AV

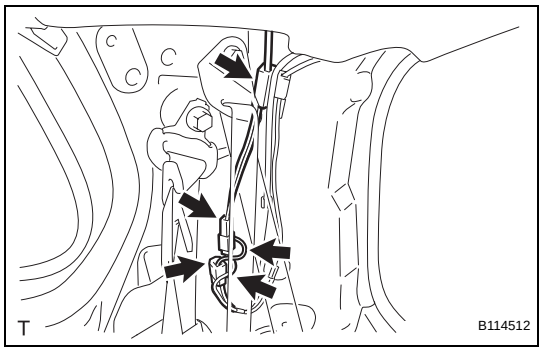


(b) w/o Curtain Shield Airbag:

(1) Engage the 2 claws and the 4 hooks and install the roof headlining.

(2) Install the clip.





(c) Install the 2 connectors.
(d) Connect the 2 connectors.
(e) Install the antenna cord onto the antenna cord clamp.

6. **INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-88)**
7. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**
8. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
9. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
10. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
11. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
13. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
14. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
15. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
16. **INSTALL MAP LIGHT ASSEMBLY (See page IR-73)**
17. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-74)**
18. **INSTALL VISOR HOLDER RH (See page IR-75)**
19. **INSTALL VISOR HOLDER LH (See page IR-75)**
20. **INSTALL VISOR ASSEMBLY RH (See page IR-75)**
21. **INSTALL VISOR ASSEMBLY LH (See page IR-75)**

22. INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-75)
23. INSTALL ASSIST GRIP COVER (See page IR-75)
24. INSTALL ROOF HEADLINING SERVICE HOLE COVER (w/o Curtain Shield Airbag) (See page IR-76)
25. INSTALL SEAT BELT ANCHOR COVER (See page SB-160)
26. INSTALL REAR ROOF SIDE RAIL GARNISH RH (See page IR-115)
27. INSTALL REAR ROOF SIDE RAIL GARNISH LH (See page IR-115)
28. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-115)
29. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-116)

REMOVAL

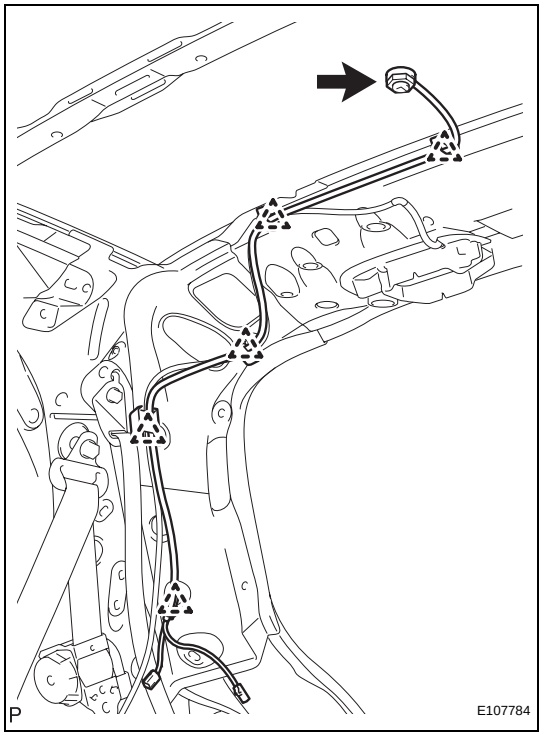
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

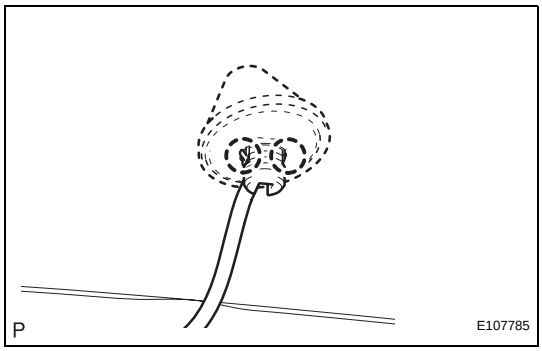
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
13. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)**
14. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-49)**
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)**
16. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)**
17. **REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)**

18. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)**
19. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
20. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)**
21. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-51)**
22. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-51)**
23. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-51)**
24. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-51)**
25. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-51)**
26. **REMOVE REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-51)**
27. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-52)**
28. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-52)**
29. **REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-52)**
30. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-53)**
31. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-54)**
32. **REMOVE SEAT BELT ANCHOR COVER CAP (See page IR-54)**
33. **REMOVE FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-55)**
34. **REMOVE FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-55)**
35. **REMOVE CENTER PILLAR LOWER GARNISH RH (See page IR-55)**
36. **REMOVE CENTER PILLAR LOWER GARNISH LH (See page IR-55)**
37. **REMOVE CENTER PILLAR UPPER GARNISH RH (See page IR-55)**
38. **REMOVE CENTER PILLAR UPPER GARNISH LH (See page IR-55)**
39. **REMOVE SEAT BELT ANCHOR COVER (See page SB-159)**

40. **REMOVE ROOF HEADLINING SERVICE HOLE COVER (w/o Curtain Shield Airbag) (See page IR-55)**
41. **REMOVE ASSIST GRIP COVER (See page IR-55)**
42. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-56)**
43. **REMOVE VISOR ASSEMBLY RH (See page IR-56)**
44. **REMOVE VISOR ASSEMBLY LH (See page IR-56)**
45. **REMOVE VISOR HOLDER RH (See page IR-56)**
46. **REMOVE VISOR HOLDER LH (See page IR-56)**
47. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-57)**
48. **REMOVE MAP LIGHT ASSEMBLY (See page IR-58)**
49. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
50. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**
51. **REMOVE ROOF HEADLINING ASSEMBLY (See page AV-83)**
52. **REMOVE ROOF ANTENNA POLE SUB-ASSEMBLY (See page AV-117)**
53. **REMOVE AMPLIFIER ANTENNA ASSEMBLY**
    (a) Disengage the 5 clamps.
    (b) Remove the antenna nut.



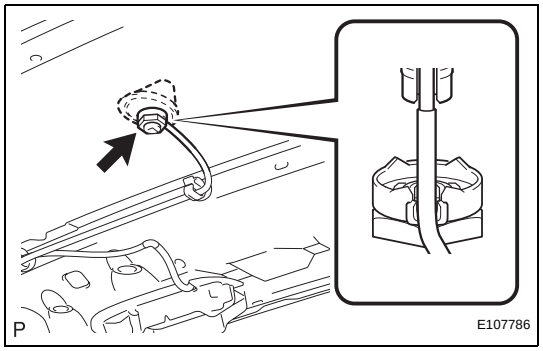
AV



(c) Disengage the 2 claws and remove the amplifier antenna.

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.



1. **INSTALL AMPLIFIER ANTENNA ASSEMBLY**
   (a) Set the amplifier antenna into the hole in the roof, and place the amplifier antenna cord in the cutout of the amplifier antenna.
   (b) Install the amplifier antenna with the antenna nut.
   Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)

   (c) Engage the 5 clamps.

2. **INSTALL ROOF ANTENNA POLE SUB-ASSEMBLY (See page AV-117)**
3. **INSTALL ROOF HEADLINING ASSEMBLY (See page AV-87)**
4. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
5. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
6. **INSTALL MAP LIGHT ASSEMBLY (See page IR-73)**
7. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-74)**
8. **INSTALL VISOR HOLDER RH (See page IR-75)**
9. **INSTALL VISOR HOLDER LH (See page IR-75)**
10. **INSTALL VISOR ASSEMBLY RH (See page IR-75)**
11. **INSTALL VISOR ASSEMBLY LH (See page IR-75)**
12. **INSTALL ROOF HEADLINING SERVICE HOLE COVER (w/o Curtain Shield Airbag) (See page IR-76)**
13. **INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-75)**
14. **INSTALL ASSIST GRIP COVER (See page IR-75)**
15. **INSTALL SEAT BELT ANCHOR COVER (See page SB-160)**
16. **INSTALL CENTER PILLAR UPPER GARNISH RH (See page IR-76)**
17. **INSTALL CENTER PILLAR UPPER GARNISH LH (See page IR-76)**

18. **INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-76)**
19. **INSTALL CENTER PILLAR LOWER GARNISH LH (See page IR-76)**
20. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-76)**
21. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-76)**
22. **INSTALL SEAT BELT ANCHOR COVER CAP (See page IR-76)**
23. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-77)**
24. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-77)**
25. **INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-78)**
26. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-79)**
27. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-79)**
28. **INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-79)**
29. **INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-80)**
30. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-80)**
31. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-80)**
32. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)**
33. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-80)**
34. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
35. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)**
36. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)**
37. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-81)**
38. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-81)**
39. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)**

40. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)**
41. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-82)**
42. **INSTALL REAR DECK TRIM COVER (See page IR-82)**
43. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**
44. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**
45. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
46. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
    (a) for RH Side:
        (1) Remove the No. 1 rear seat leg cover (See page SE-103).
    (b) for LH Side:
        (1) Remove the No. 1 rear seat leg cover (See page SE-85).
47. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**
48. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
49. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
50. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
51. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**
52. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**
53. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

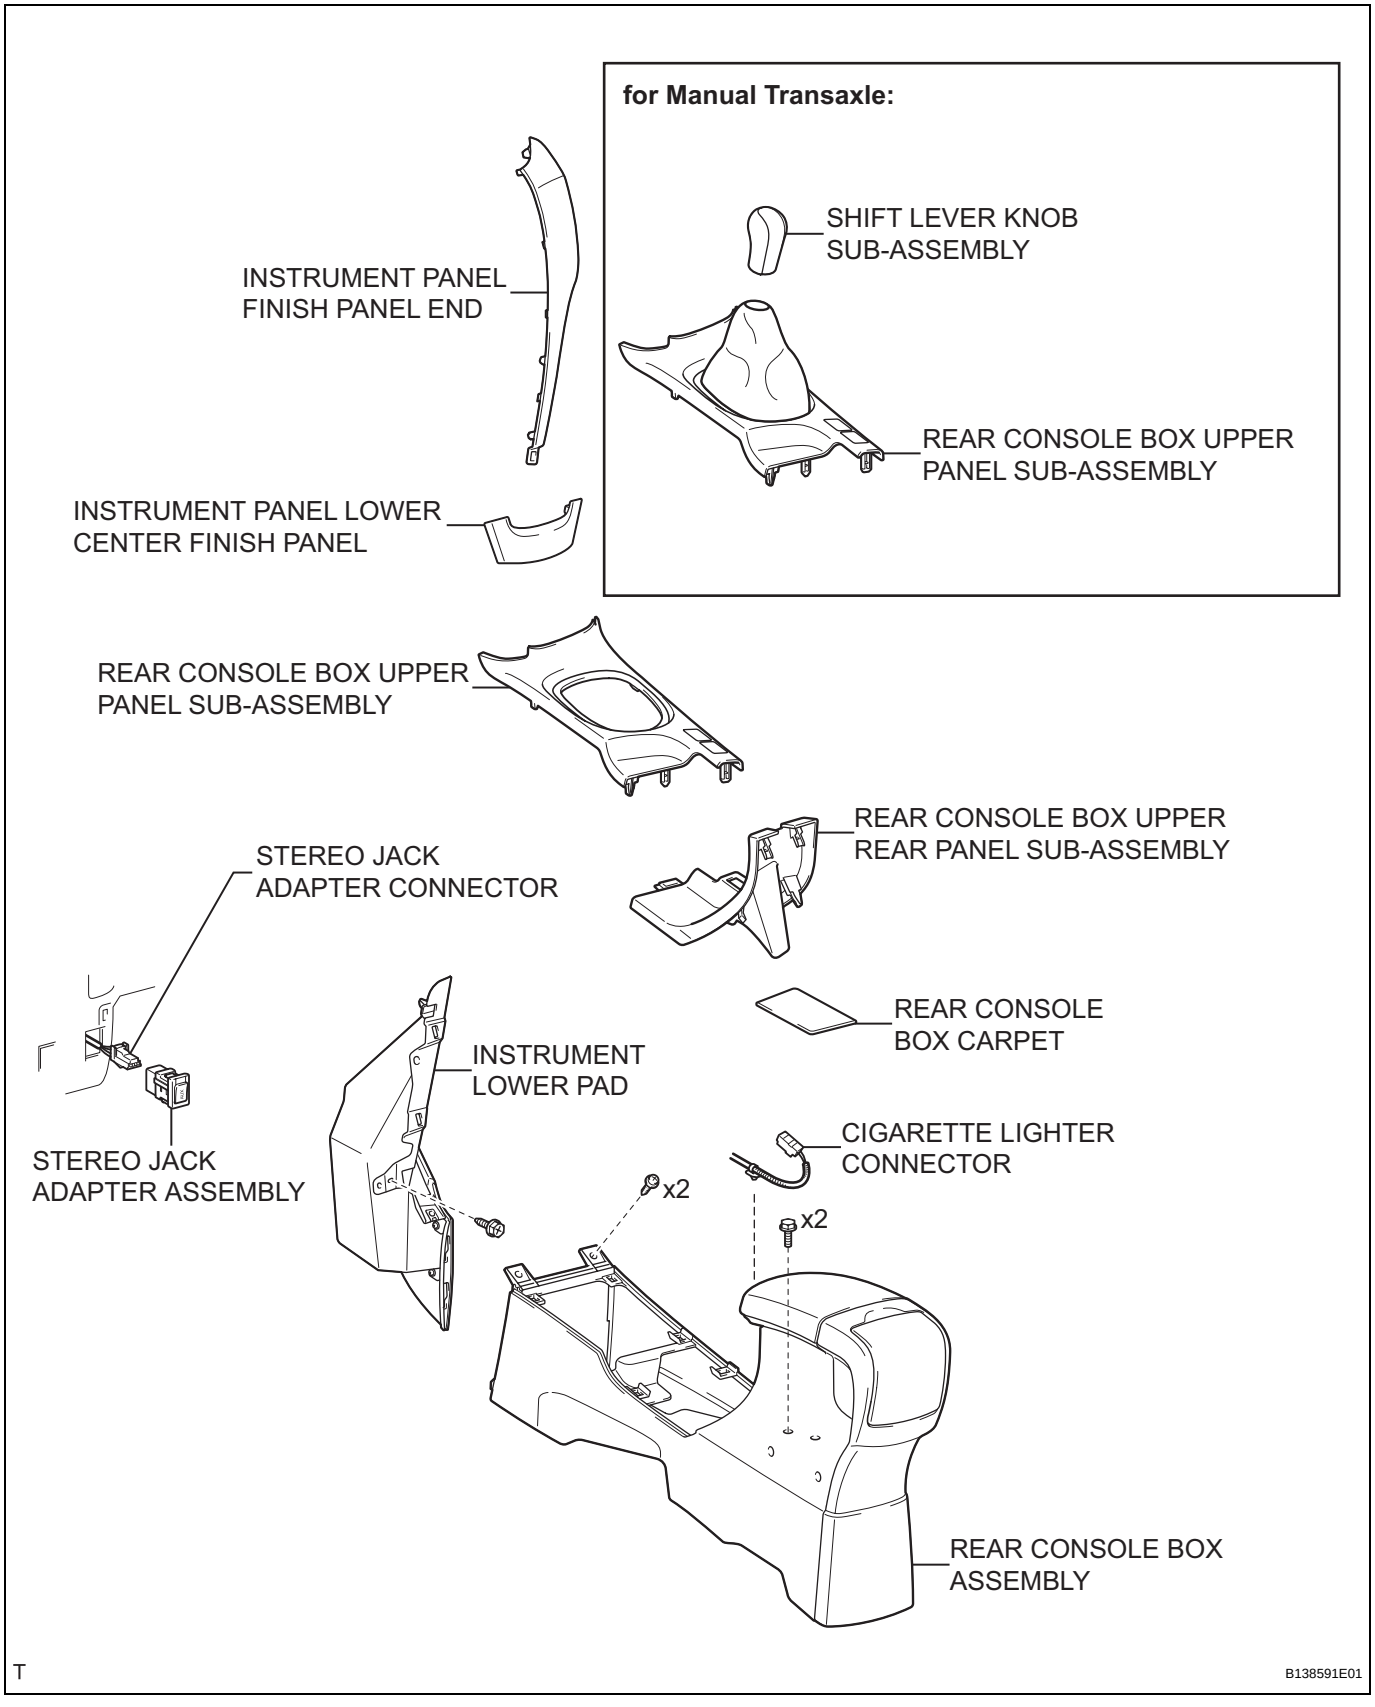
STEREO JACK ADAPTER ASSEMBLY (for Sedan)

COMPONENTS

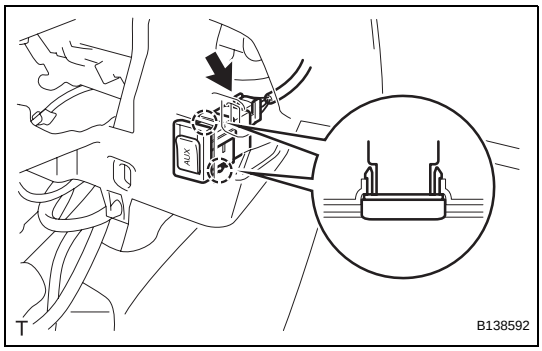


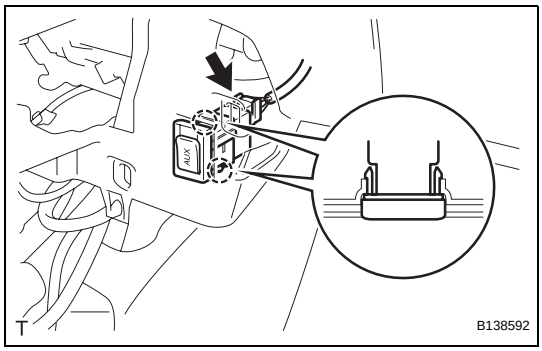
AV

AV

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-138)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)**
4. **REMOVE REAR CONSOLE BOX UPPER PANEL SUB-ASSEMBLY (See page IP-84)**
5. **REMOVE REAR CONSOLE BOX UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)**
6. **REMOVE REAR CONSOLE BOX CARPET (See page IP-85)**
7. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)**
8. **REMOVE INSTRUMENT PANEL FINISH PANEL END (See page ME-138)**
9. **REMOVE INSTRUMENT LOWER PAD (See page IP-45)**
10. **REMOVE STEREO JACK ADAPTER ASSEMBLY**
    (a) Disengage the 2 claws and remove the stereo jack adapter.
    (b) Disconnect the stereo jack adapter connector.



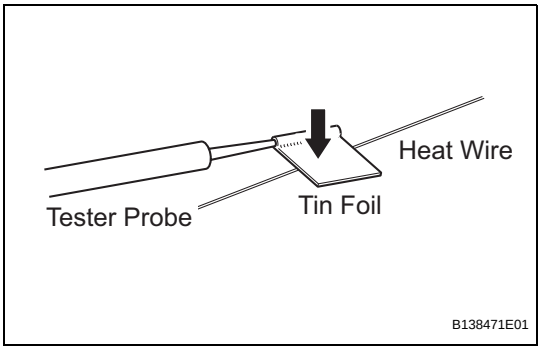


INSTALLATION

1. **INSTALL STEREO JACK ADAPTER ASSEMBLY**
    (a) Connect the stereo jack adapter connector.
    (b) Engage the 2 claws and install the stereo jack adapter.
2. **INSTALL INSTRUMENT LOWER PAD (See page IP-54)**
3. **INSTALL INSTRUMENT PANEL FINISH PANEL END (See page ME-141)**
4. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)**
5. **INSTALL REAR CONSOLE BOX CARPET (See page IP-88)**
6. **INSTALL REAR CONSOLE BOX UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)**
7. **INSTALL REAR CONSOLE BOX UPPER PANEL SUB-ASSEMBLY (See page IP-89)**

8. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-89)**
9. **INSTALL INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-142)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

WINDOW GLASS ANTENNA WIRE (for Sedan)



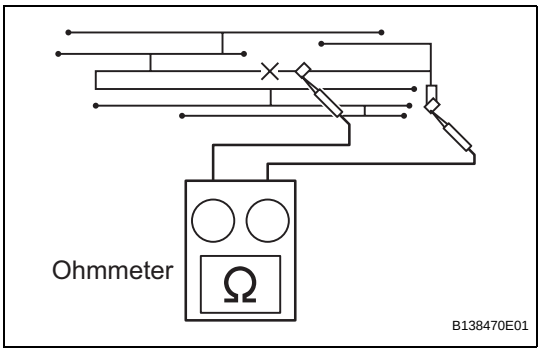
REPAIR

1. INSPECT WINDOW GLASS ANTENNA WIRE

NOTICE:

When cleaning the glass, use a soft, dry cloth, and wipe the glass in the direction of the wire. Do not to damage the wires. Do not use detergents or glass cleaners which contain any abrasive ingredients. When measuring the voltage, wind a piece of tin foil around the top of the negative probe and press the foil against wire by your finger, as shown in the illustration.

(a) Inspect the continuity, at the center of each antenna wire, as shown in the illustration.

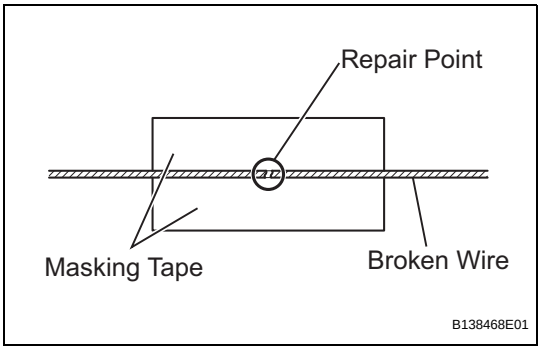


2. REPAIR WINDOW GLASS ANTENNA WIRE

(a) Clean the broken wire tips with grease, wax or silicone remover.

(b) Place the masking tape along both sides of the wire to be repaired.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817).



(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.

(f) Do not repair the defogger wire after for at least 24 hours after the removal of the masking tape.

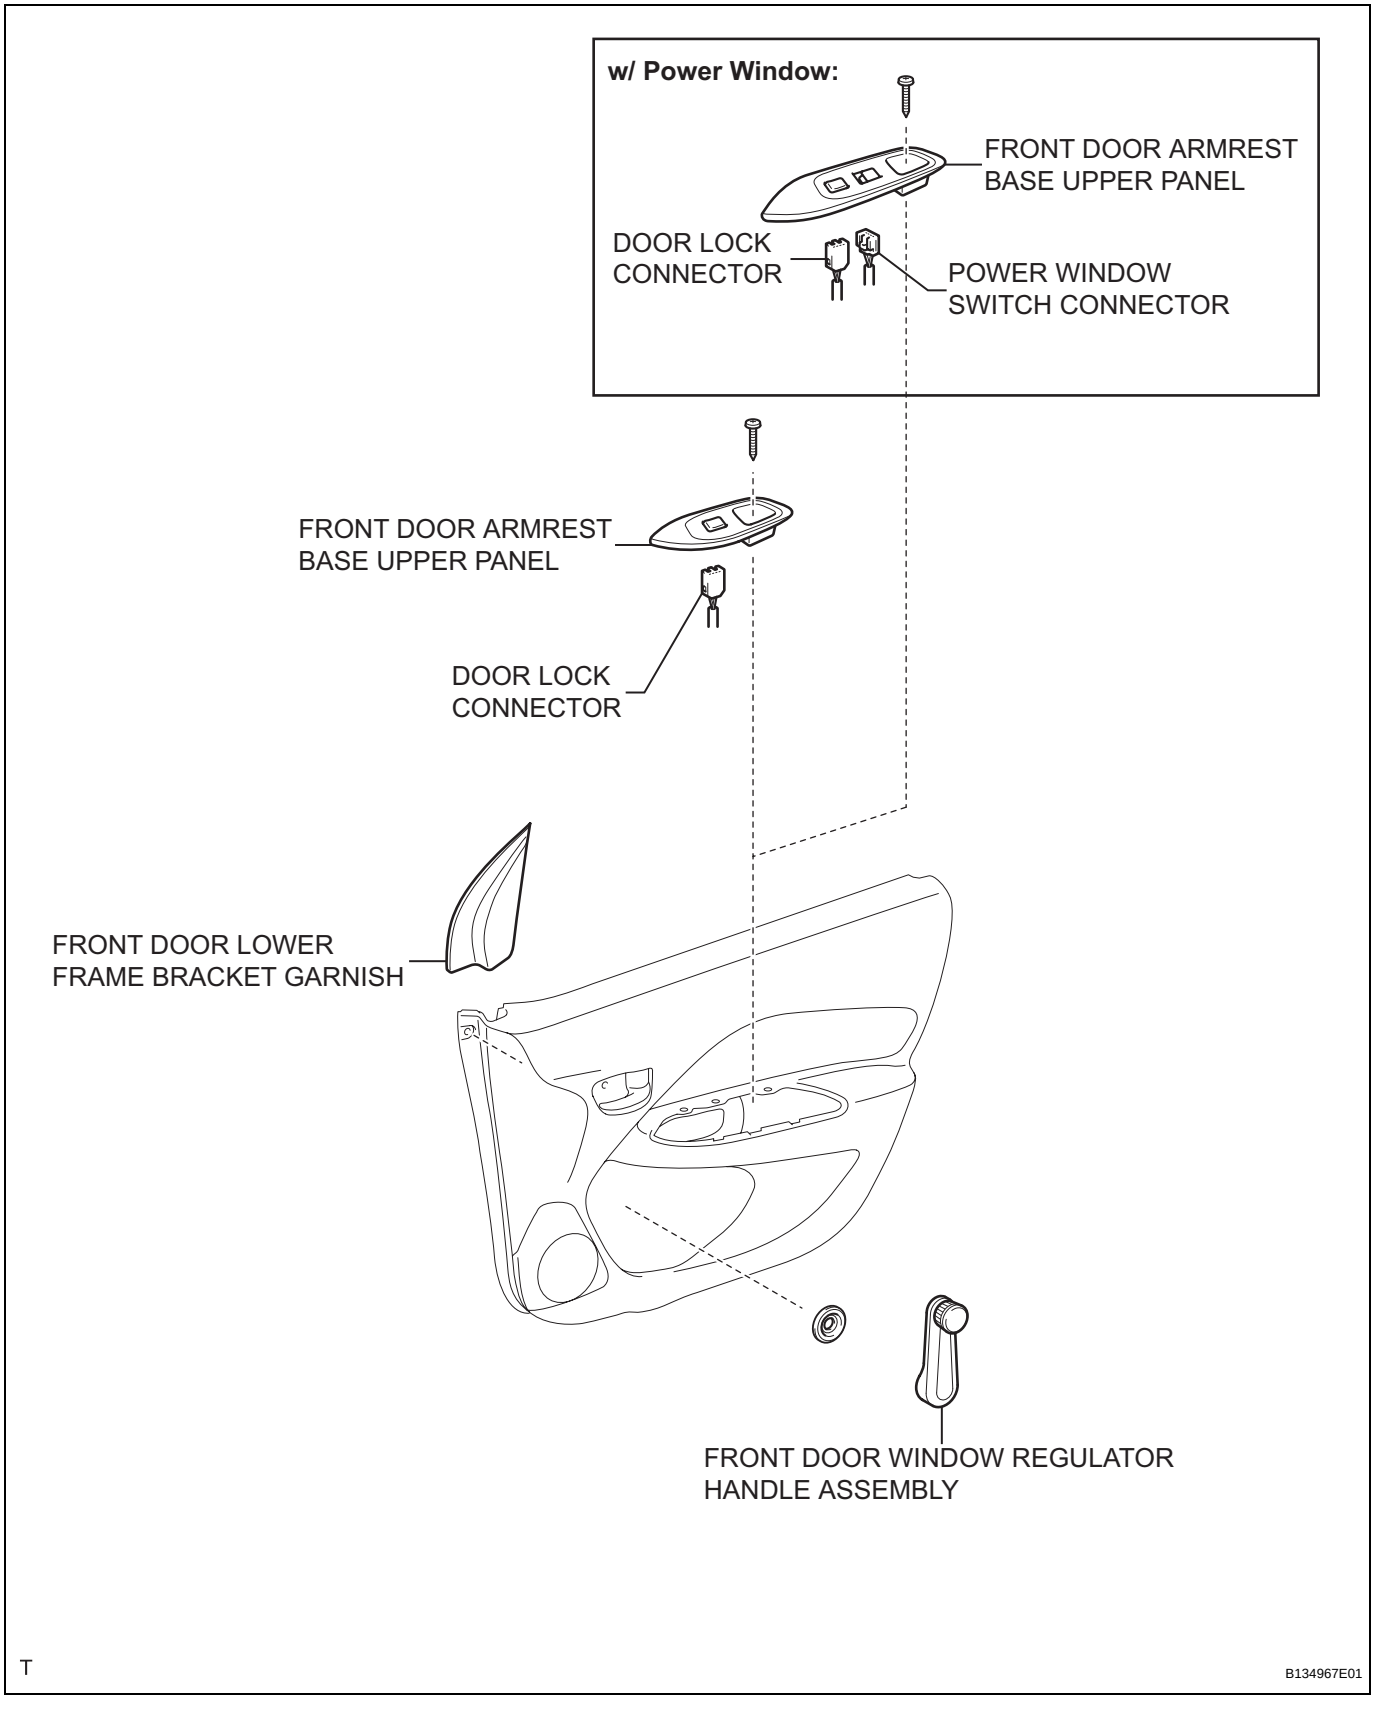
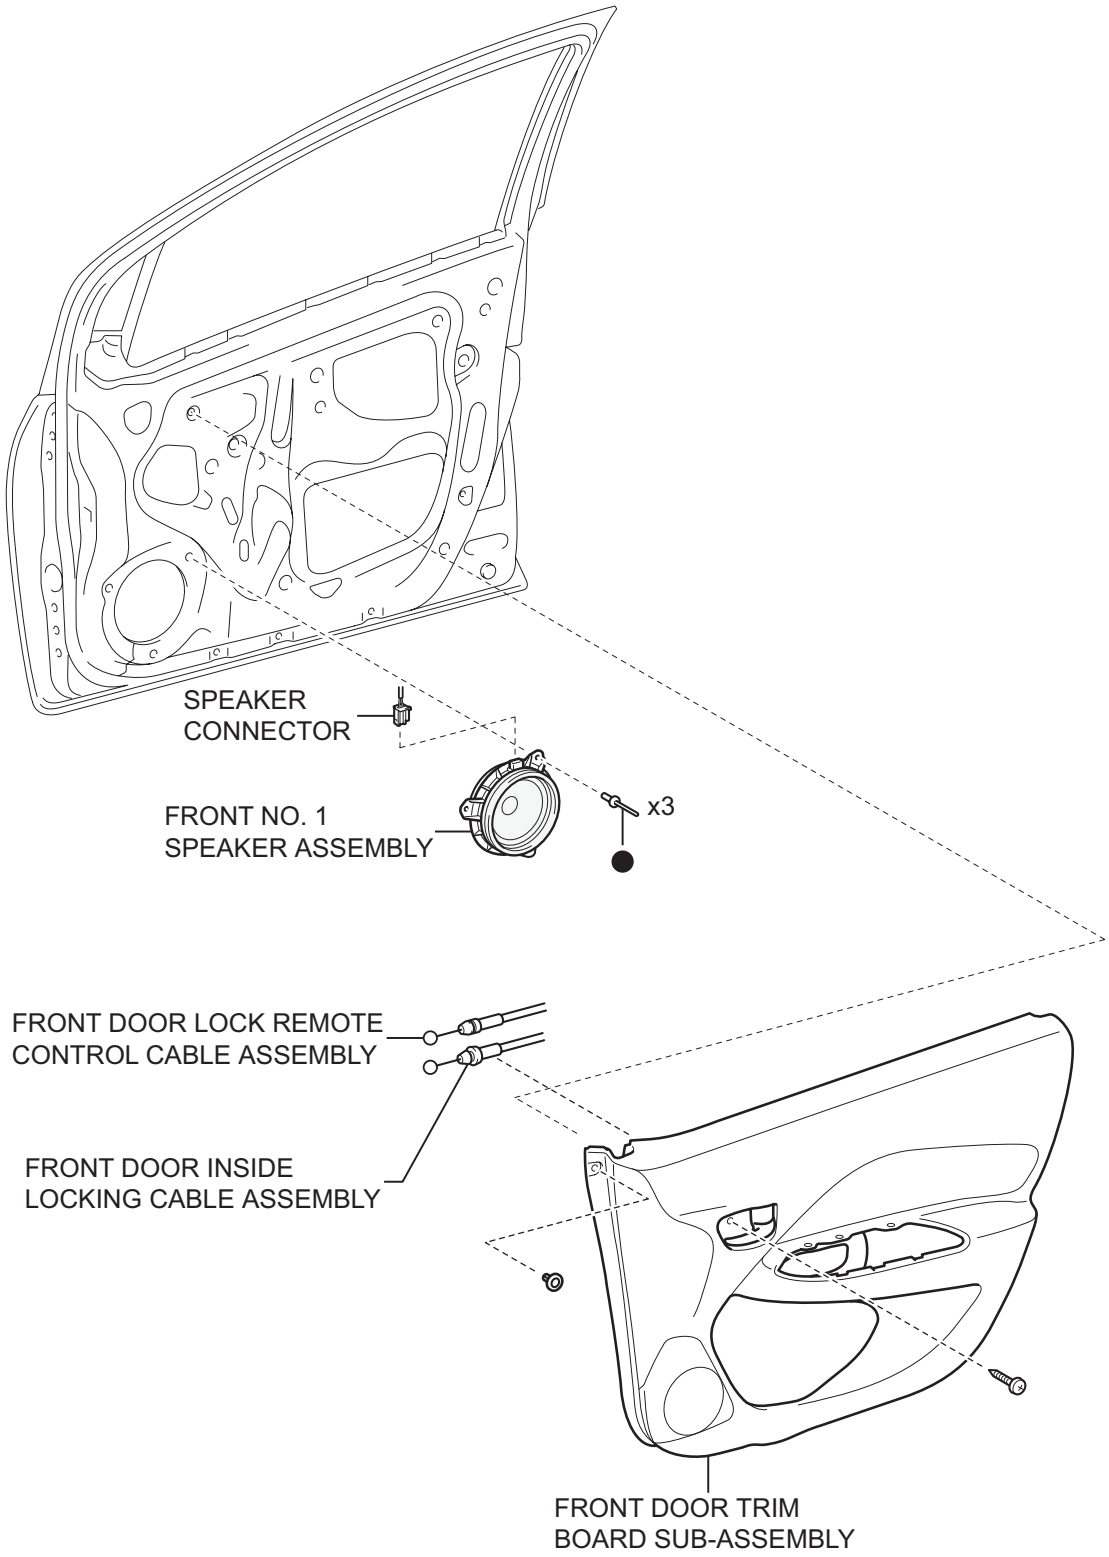
FRONT NO. 1 SPEAKER (for Sedan)

COMPONENTS



AV



● Non-reusable part

T

B134968E01

ON-VEHICLE INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

HINT:

Remove interior parts so that the front No. 1 speaker can be seen.

(a) Check the installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 1 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 1 speaker.

(c) Check the resistance.

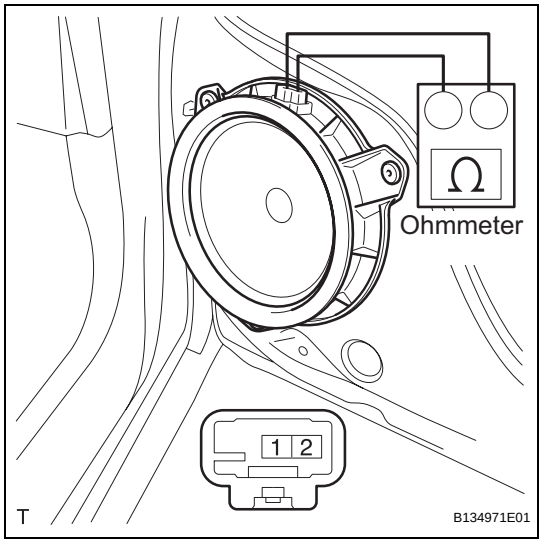
(1) Disconnect the speaker connector.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
1 - 2	Approximately 4 Ω

If the result is not as specified, replace the front No. 1 speaker.



AV

REMOVAL

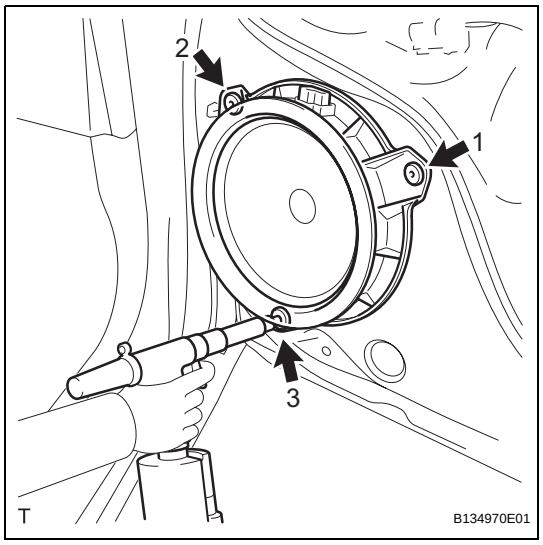
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-9)**
3. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-9)**
4. **REMOVE FRONT DOOR ARMREST BASE UPPER PANEL (See page ED-9)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-11)**
6. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Disconnect the speaker connector.

   (b) Drill out the 3 rivet heads using a drill with a bit diameter of less than 4 mm (0.16 in.), and remove the front No.1 speaker.
   (c) Operate the drill around the rivet head circumference and cut out the flange.
   CAUTION:
   Be careful. The cut rivet is very hot.
   NOTICE:
   Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill the rivet head straight out.
   (d) After drilling out the flange, continue drilling to push out the shards on the drill.
   (e) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

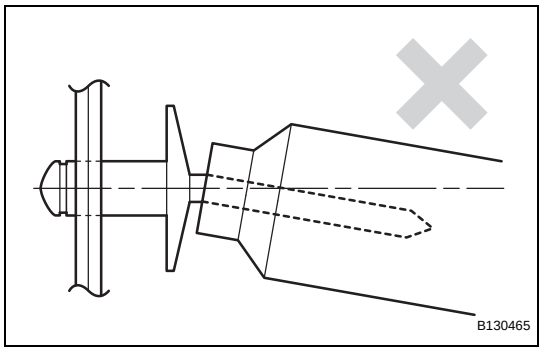
INSTALLATION

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



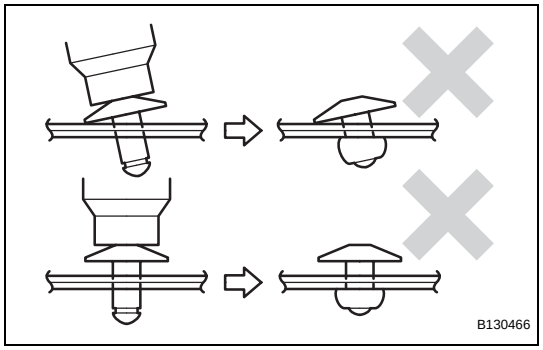
1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

(a) Using an air riveter or hand riveter, install the front No. 1 speaker with 3 new strike rivets.
HINT:
Install the new strike rivets in the order shown in the illustration.

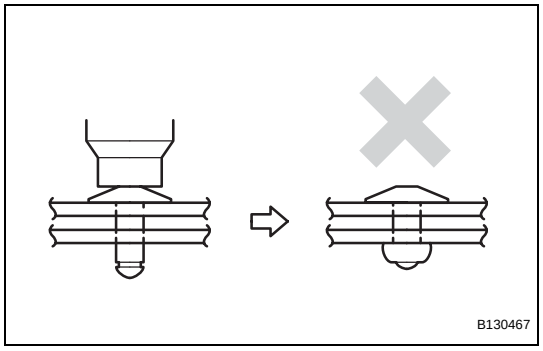


NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

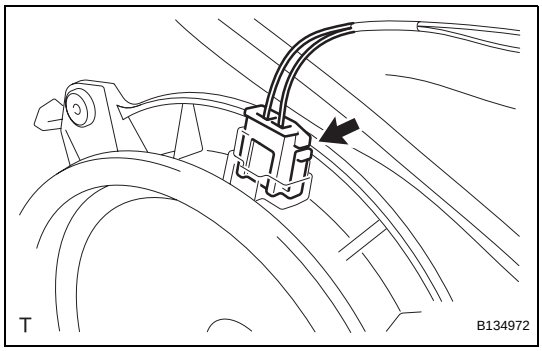


- **Confirm that the rivets are seated properly against the speaker.**
- **Do not tilt the riveter when installing the rivet onto the speaker.**
- **Do not leave any space between the rivet head and speaker.**



- **Do not leave any space between the speaker and door. Firmly hold the 2 items together while installing the rivet.**

AV

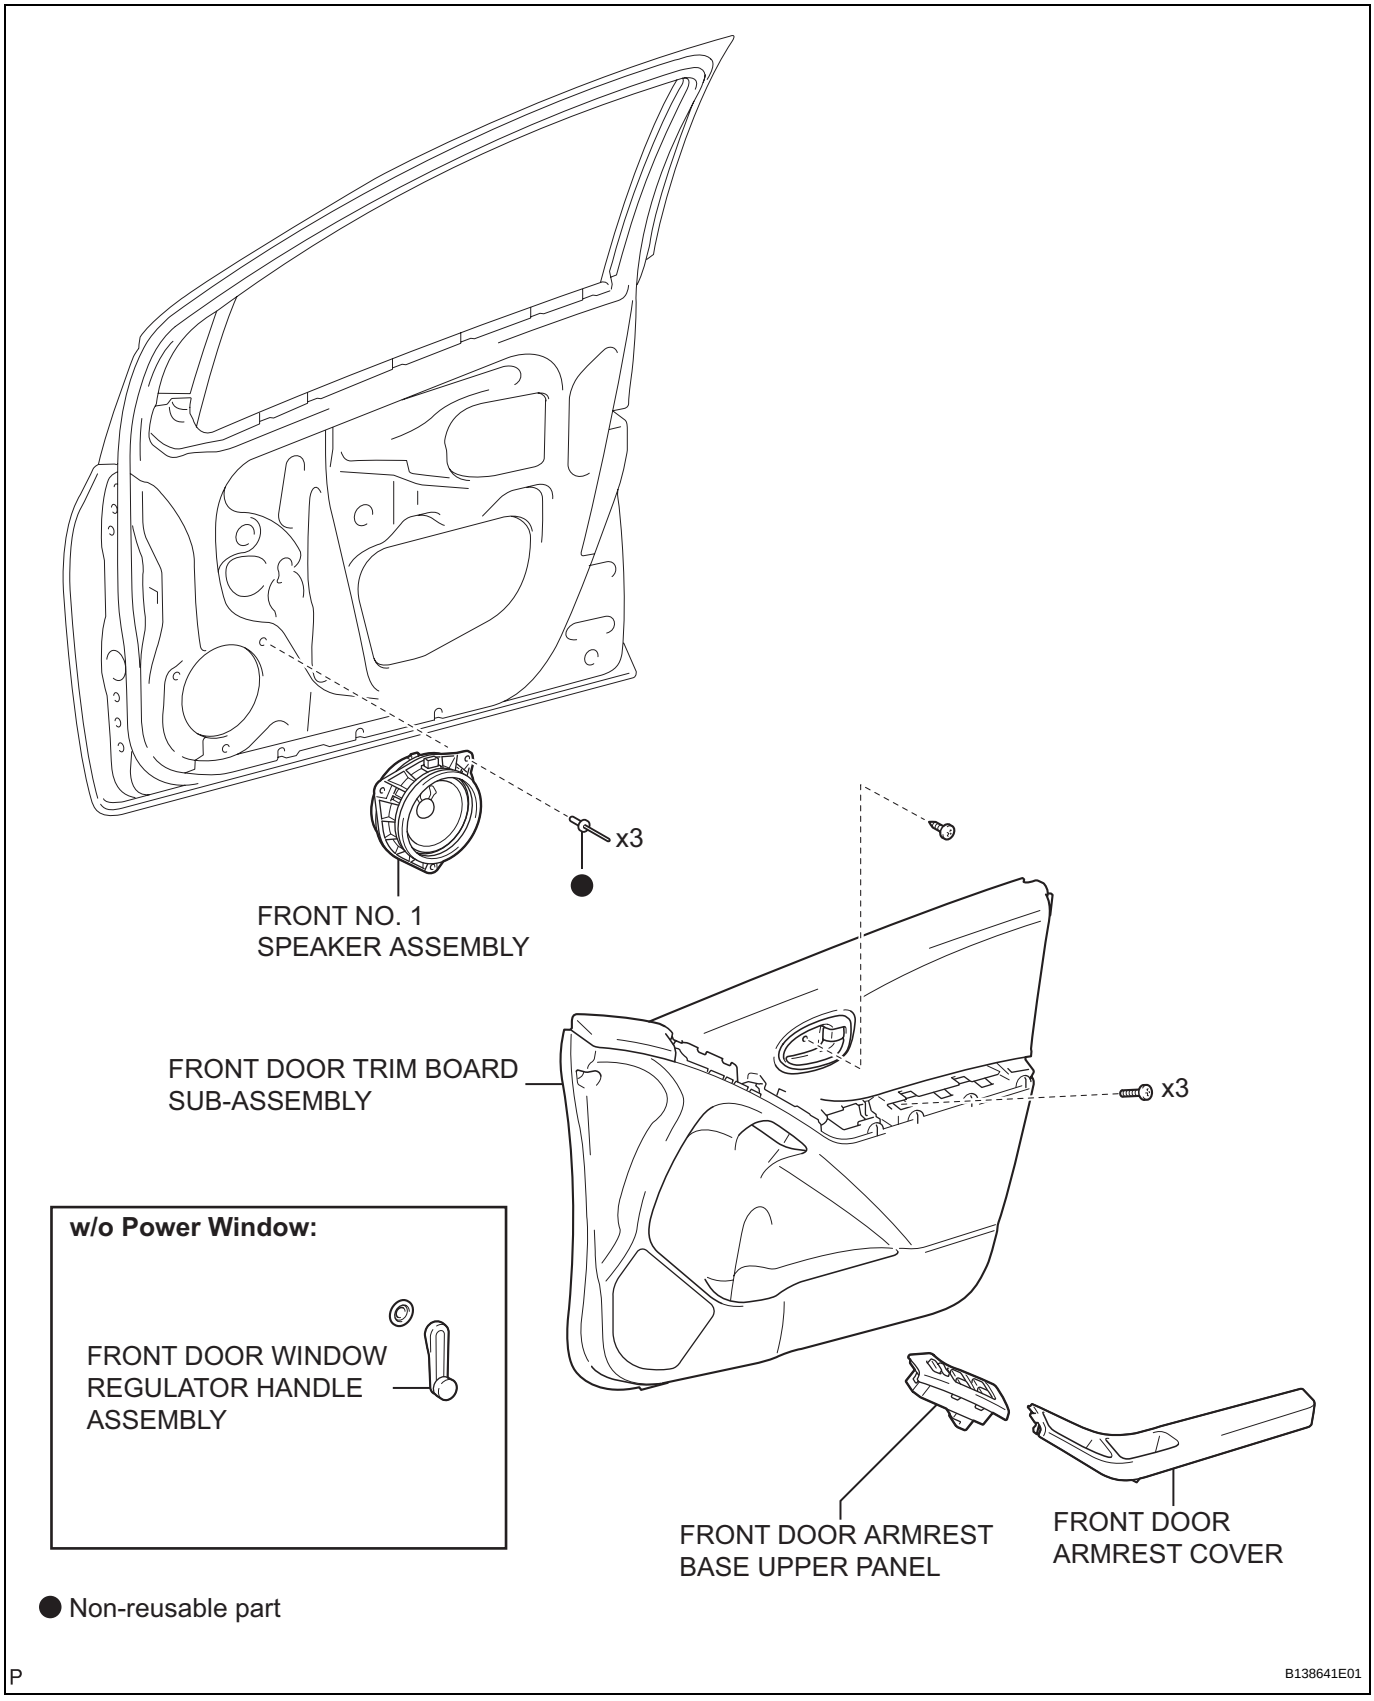


(b) Connect the speaker connector.

2. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-26)**
3. **INSTALL FRONT DOOR ARMREST BASE UPPER PANEL (See page ED-28)**
4. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-28)**
5. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-29)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT NO. 1 SPEAKER (for Hatchback)

COMPONENTS



ON-VEHICLE INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER

HINT:

Remove interior parts so that the front No. 1 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 1 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 1 speaker.

(c) Check the speaker resistance.

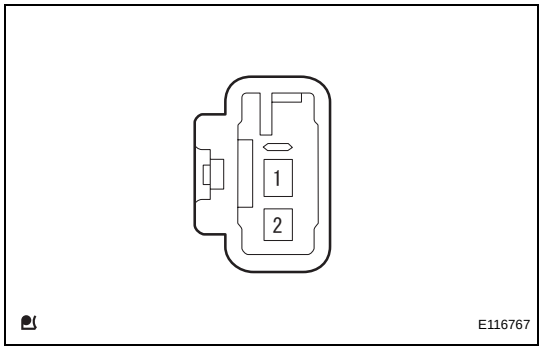
(1) Disconnect the speaker connector.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
1 - 2	Approximately 4 Ω

If the result is not as specified, replace the front No. 1 speaker.



AV

REMOVAL

HINT:
The procedure described below is for the LH sides. Use the same procedure for both the RH and LH side, unless otherwise specified.

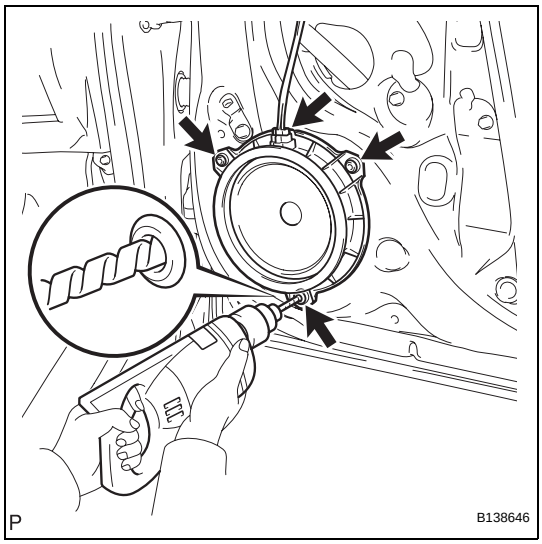
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-57)**

3. **REMOVE FRONT DOOR ARMREST COVER (See page ED-33)**

4. **REMOVE FRONT DOOR ARMREST BASE UPPER PANEL**
   (a) w/ Power Window:
      (1) Remove the front door armrest base upper panel (See page ED-33).
   (b) w/o Power Window:
      (1) Remove the front door armrest base upper panel (See page ED-57).

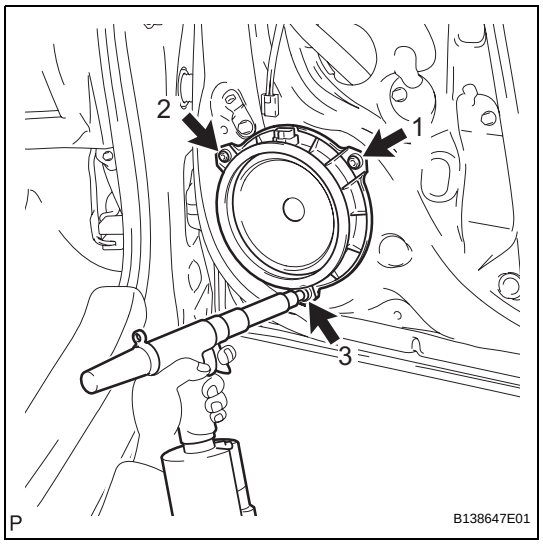
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY**
   (a) w/ Power Window:
      (1) Remove the front door trim board sub-assembly (See page ED-34).
   (b) w/o Power Window:
      (1) Remove the front door trim board sub-assembly (See page ED-58).



6. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Disconnect the speaker connector.
   (b) Drill out the 3 rivet heads using a drill with a bit diameter of less than 4 mm (0.16 in.), and remove the front No.1 speaker assembly from the front door panel.
   (c) Operate the drill around the rivet head circumference and cut out the flange.
   CAUTION:
   Be careful. The cut rivet is very hot.
   NOTICE:
   Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill the rivet head straight out.
   (d) After drilling out the flange, continue drilling to push out the shards on the drill.
   (e) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

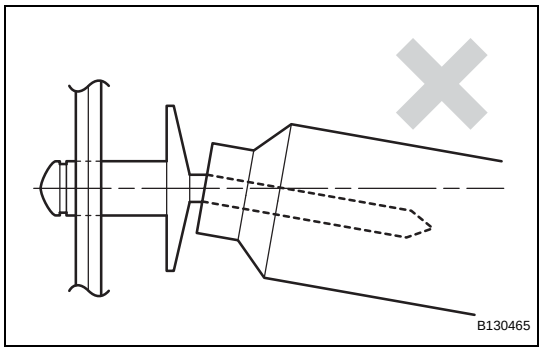
INSTALLATION

HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



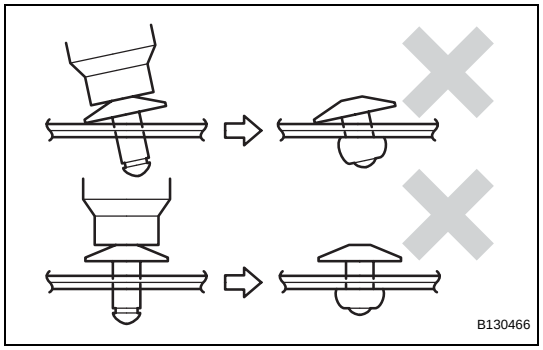
1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

(a) Using an air riveter or hand riveter, install the front No.1 speaker assembly onto the front door panel with 3 new strike rivets.
HINT:
Install the new strike rivets in the order shown in the illustration.

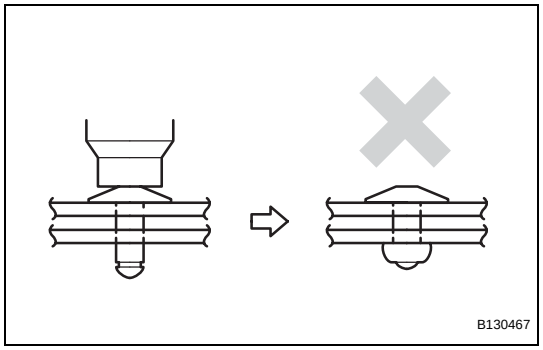


NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

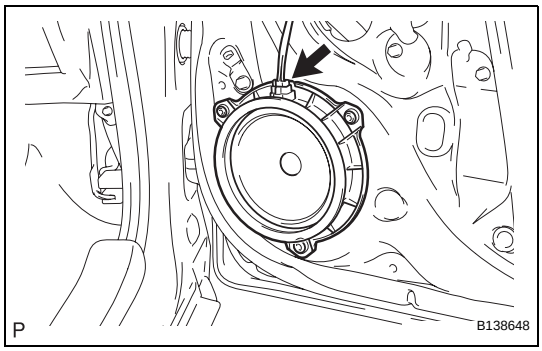


- **Confirm that the rivets are seated properly against the speaker.**
- **Do not tilt the riveter when installing the rivet onto the speaker.**
- **Do not leave any space between the rivet head and speaker.**



- **Do not leave any space between the speaker and door. Firmly hold the 2 items together while installing the rivet.**

AV



(b) Connect the speaker connector.

2. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY**
   (a) w/ Power Window:
      (1) Install the front door trim board sub-assembly (See page ED-51).
   (b) w/o Power Window:
      (1) Install the front door trim board sub-assembly (See page ED-74).

3. **INSTALL FRONT DOOR ARMREST BASE UPPER PANEL**
   (a) w/ Power Window:
      (1) Install the front door armrest base upper panel (See page ED-53).
   (b) w/o Power Window:
      (1) Install the front door armrest base upper panel (See page ED-74).

4. **INSTALL FRONT DOOR ARMREST COVER (See page ED-53)**

5. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-75)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

ON-VEHICLE INSPECTION

1. REAR SPEAKER ASSEMBLY

HINT:

Remove interior parts so that the rear speaker can be seen.

(a) Check the installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the rear speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

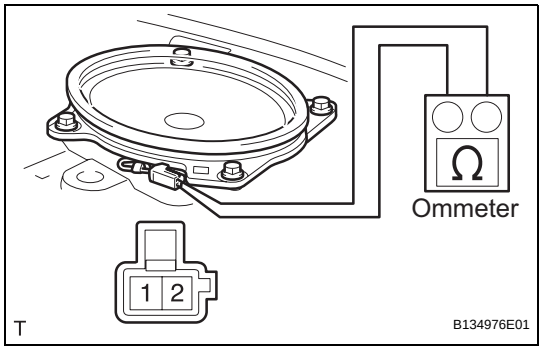
If the result is not as specified, replace the rear speaker.

(c) Check the resistance.

(1) Disconnect the speaker connector.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance



Tester Connection	Specified Condition
1 - 2	Approximately 4 Ω

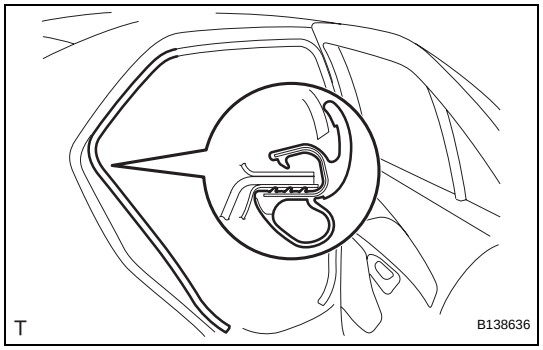
If the result is not as specified, replace the rear speaker.

AV

REMOVAL

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Remove the rear seat cushion cover pad sub-assembly (See page SE-46).
   (b) for Fixed Seat Type:
      (1) Remove the rear seat cushion cover pad sub-assembly (See page SE-106).
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
4. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-46)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
6. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
7. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
8. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
9. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
10. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-15)**
11. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Remove the rear door opening trim weatherstrip to the extent that the rear seat side cover and the roof side inner garnish.

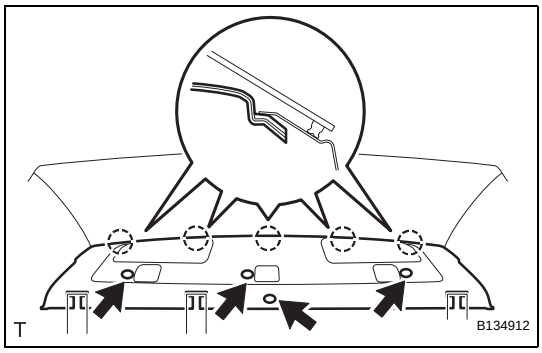


12. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
13. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
14. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
15. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**

AV

16. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)

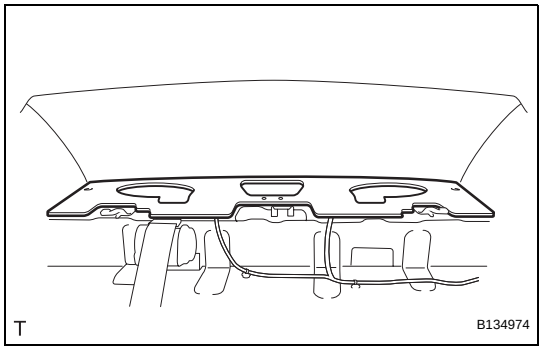
17. REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)



18. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY

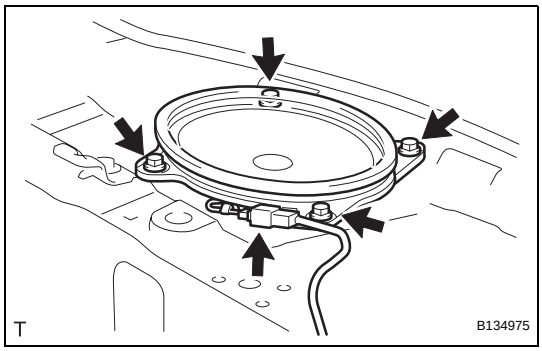
(a) Using a clip remover, remove the 4 clips.

(b) Disengage the 5 claws and remove the package tray trim panel.



19. REMOVE PACKAGE TRAY TRIM PAD

(a) Remove the pack age tray trim pad.



20. REMOVE REAR SPEAKER ASSEMBLY

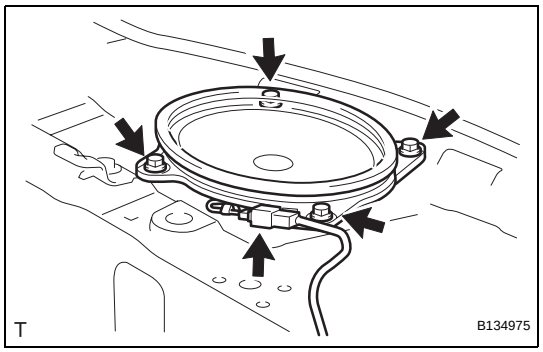
(a) Disconnect the speaker connector.

(b) Remove the 4 bolts and the rear speaker.

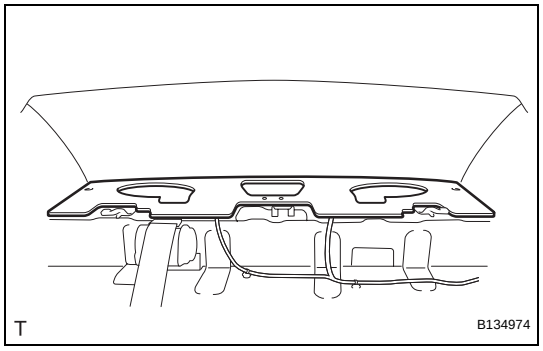
AV

INSTALLATION

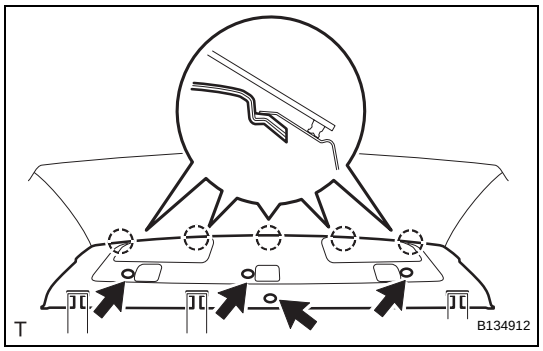
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL REAR SPEAKER ASSEMBLY
(a) Install the rear speaker with the 4 bolts.
(b) Connect the speaker connector.



2. INSTALL PACKAGE TRAY TRIM PAD
(a) Install the package tray trim pad.



3. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY
(a) Engage the 5 claws and install the package tray trim.
(b) Install the 4 clips.

4. INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)

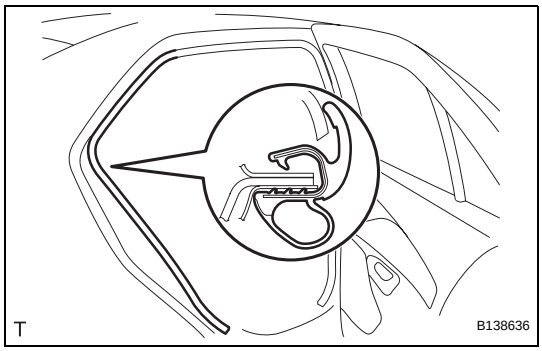
5. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)

6. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)

7. INSTALL REAR SEAT SIDE COVER RH (See page IR-33)

8. INSTALL REAR SEAT SIDE COVER LH (See page IR-33)

AV



9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
   (a) Install the rear door opening trim weatherstrip.

10. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.

11. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**

12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**

13. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**

14. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**

15. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**

16. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**

17. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**

18. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**

19. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
    (a) for 60/40 Split Seat Type:
        (1) Install the rear seat cushion cover pad sub-assembly (See page SE-53).
    (b) for Fixed Seat Type:
        (1) Install the rear seat cushion cover pad sub-assembly (See page SE-109).

20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

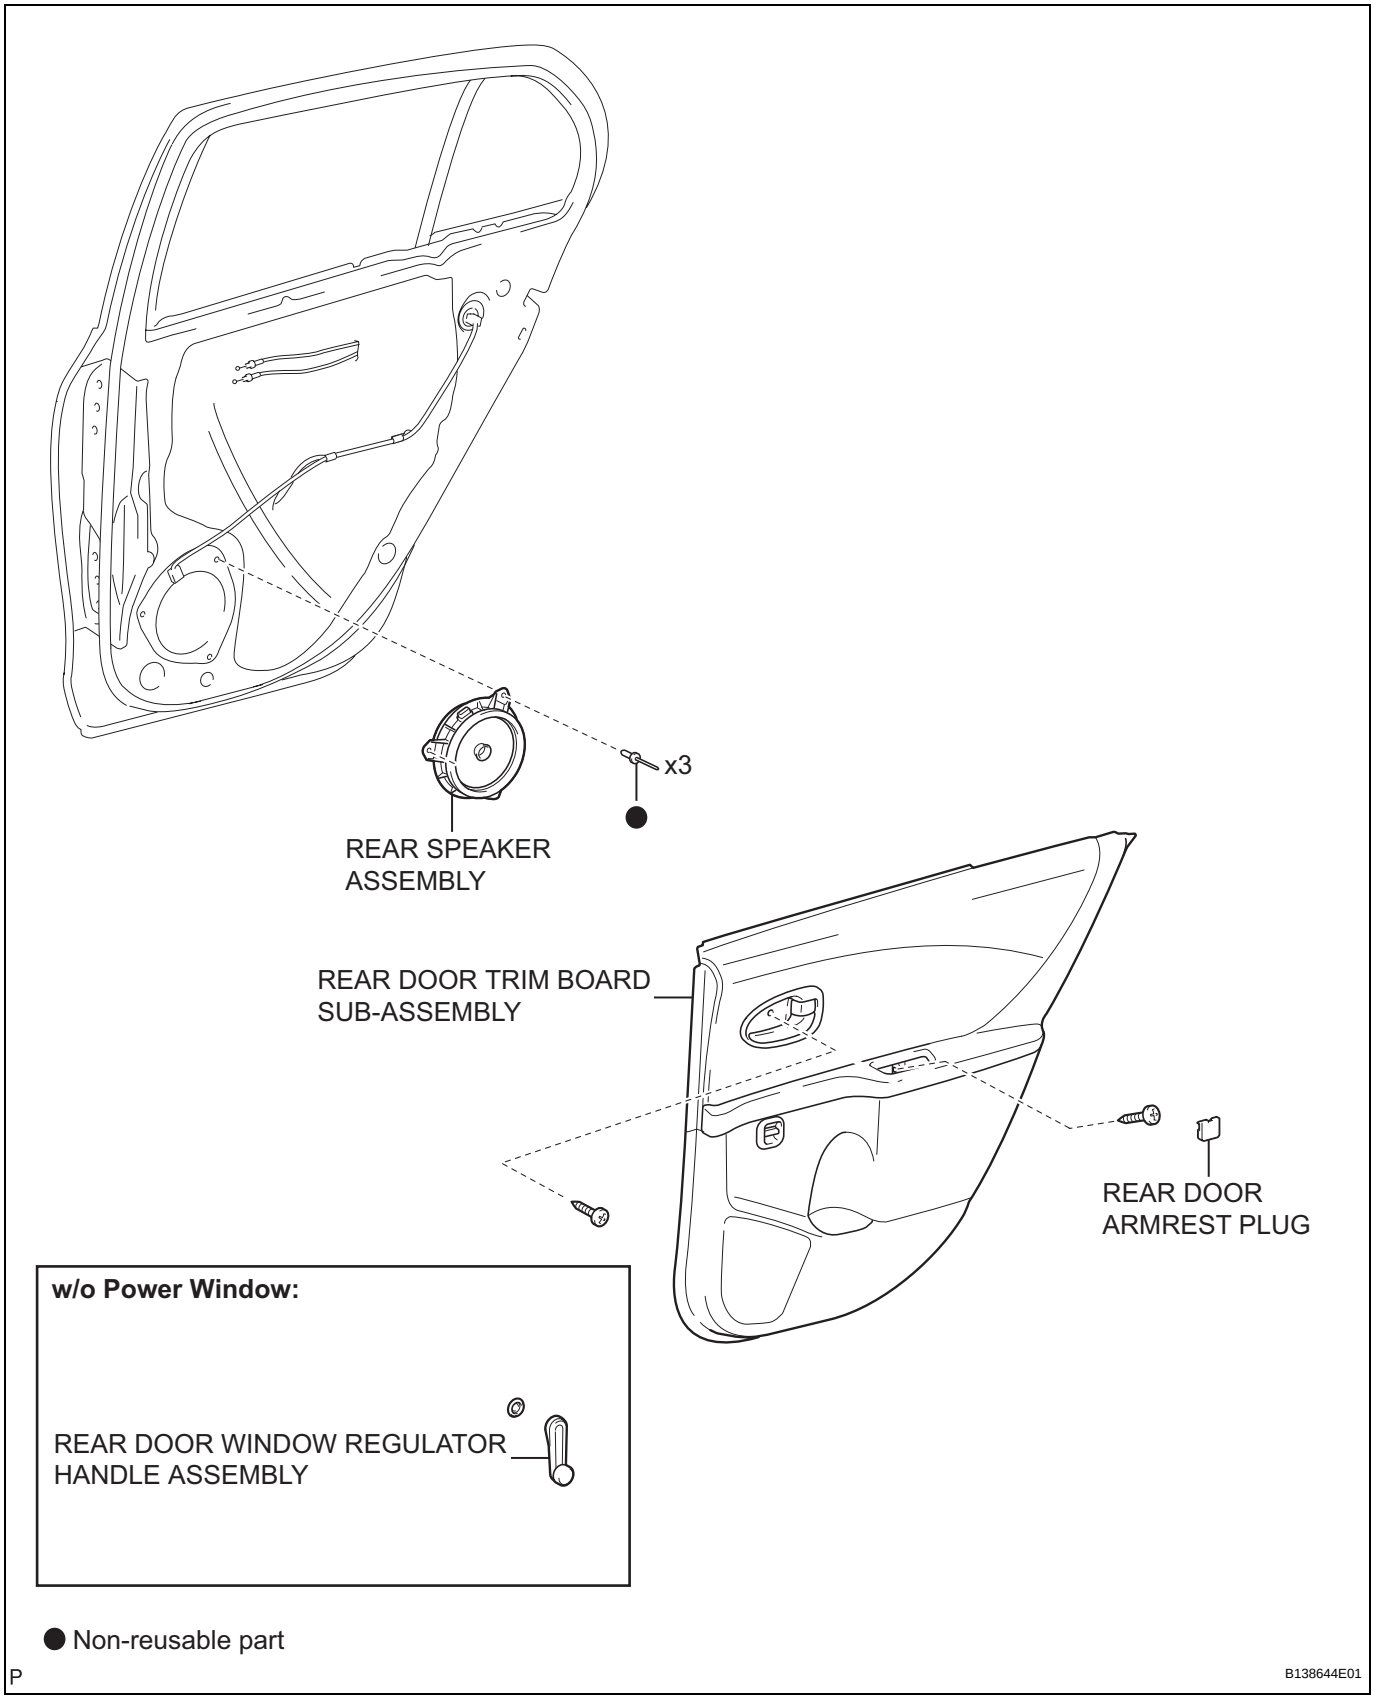
REAR SPEAKER (for Hatchback 5 Door)

COMPONENTS



ON-VEHICLE INSPECTION

1. INSPECT REAR SPEAKER ASSEMBLY

HINT:

Remove interior parts so that the rear speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the rear speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the rear speaker.

(c) Check the speaker resistance.

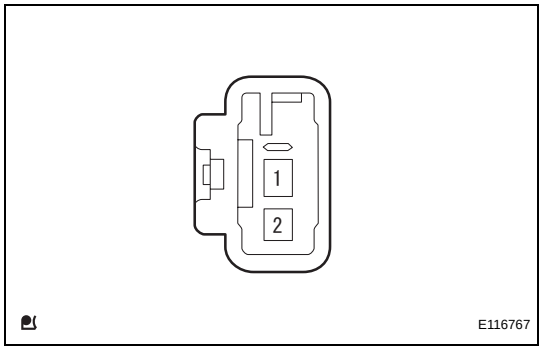
(1) Disconnect the speaker connector.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
1 - 2	Approximately 4 Ω

If the result is not as specified, replace the rear speaker.



AV

REMOVAL

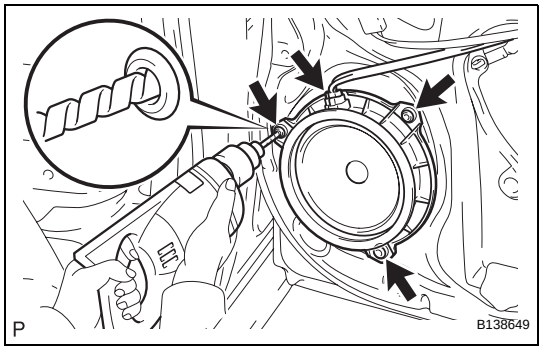
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-115)**

3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY**
   (a) w/ Power Window:
      (1) Remove the rear door trim board sub-assembly (See page ED-98).
   (b) w/o Power Window:
      (1) Remove the rear door trim board sub-assembly (See page ED-115).

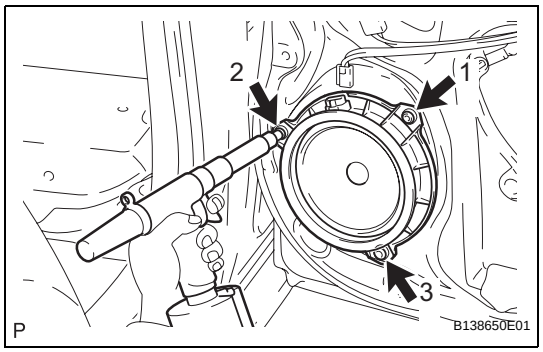
4. **REMOVE REAR SPEAKER ASSEMBLY**
   (a) Disconnect the speaker connector.
   (b) Drill out the 3 rivet heads using a drill with a bit diameter of less than 4 mm (0.16 in.), and remove the rear speaker assembly from the rear door panel.
   (c) Operate the drill around the rivet head circumference and cut out the flange.
   CAUTION:
   Be careful. The cut rivet is very hot.
   NOTICE:
   Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill the rivet head straight out.
   (d) After drilling out the flange, continue drilling to push out the shards on the drill.
   (e) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.



AV

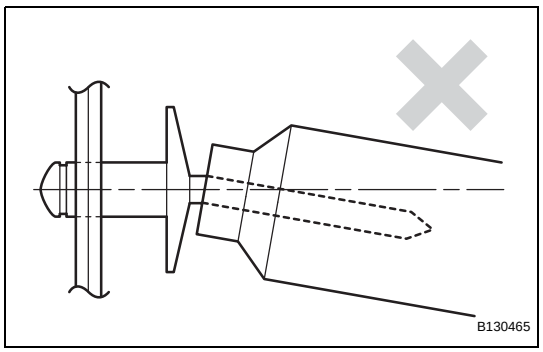
INSTALLATION

HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



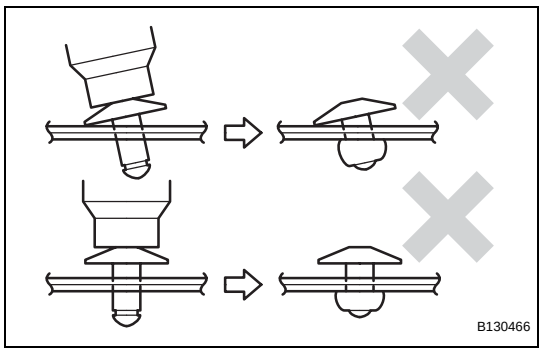
1. INSTALL REAR SPEAKER ASSEMBLY

(a) Using an air riveter or hand riveter, install the rear speaker assembly onto the front door panel with 3 new strike rivets.
HINT:
Install the new strike rivets in the order shown in the illustration.

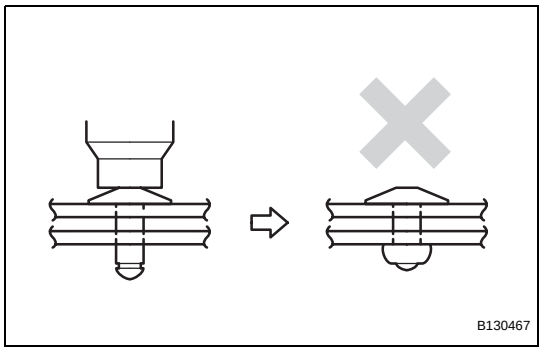


NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

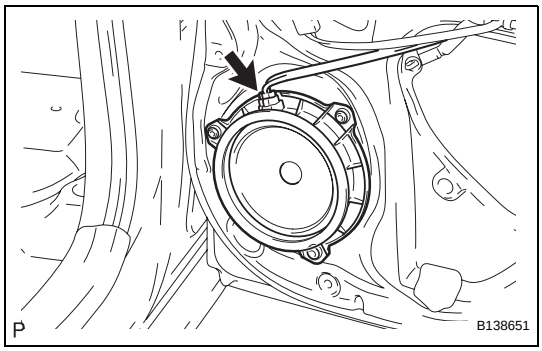


- **Confirm that the rivets are seated properly against the speaker.**
- **Do not tilt the riveter when installing the rivet onto the speaker.**
- **Do not leave any space between the rivet head and speaker.**



- **Do not leave any space between the speaker and door. Firmly hold the 2 items together while installing the rivet.**

AV



(b) Connect the speaker connector.

2. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY**
   (a) w/ Power Window:
      (1) Install the rear door trim board sub-assembly (See page ED-111).
   (b) w/o Power Window:
      (1) Install the rear door trim board sub-assembly (See page ED-127).

3. **INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-128)**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

AV

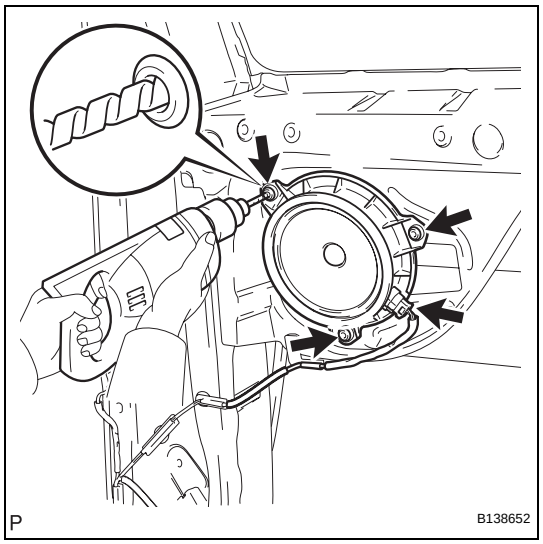
REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
      (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
      (1) Remove the deck floor box.
      HINT:
      Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See pageSE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See pageSE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the rear seat assembly (See pageSE-89)
   (b) for LH Side:
      (1) Remove the rear seat assembly (See pageSE-71)
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
10. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-97)**
11. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-76)**



12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY (See page IR-97)

13. REMOVE REAR SPEAKER ASSEMBLY

(a) Disconnect the speaker connector.

(b) Drill out the 3 rivet heads using a drill with a bit diameter of less than 4 mm (0.16 in.), and remove the rear speaker assembly from the quarter panel.

(c) Operate the drill around the rivet head circumference and cut out the flange.

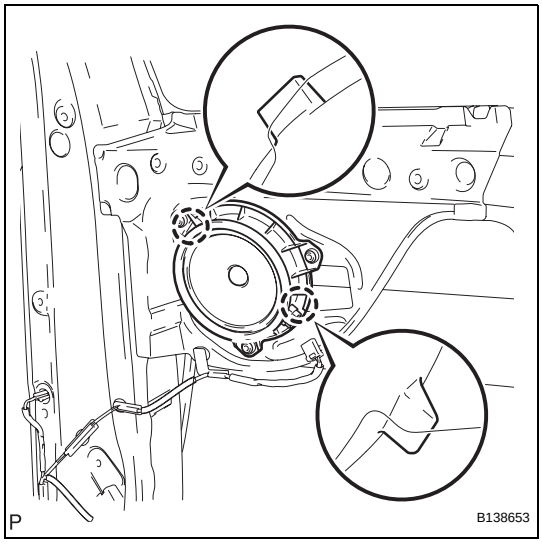
CAUTION:
Be careful. The cut rivet is very hot.
NOTICE:
Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill the rivet head straight out.

(d) After drilling out the flange, continue drilling to push out the shards on the drill.

(e) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the quarter panel.

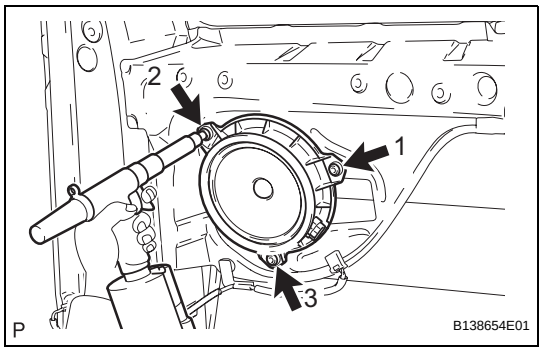
INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

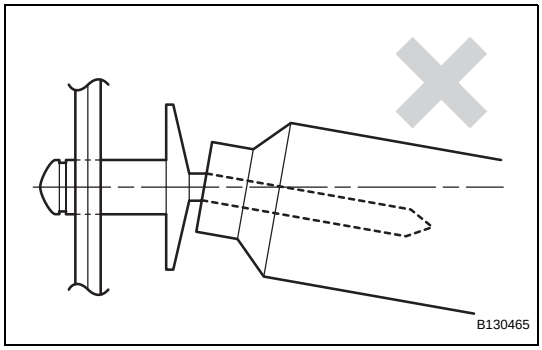


1. INSTALL REAR SPEAKER ASSEMBLY

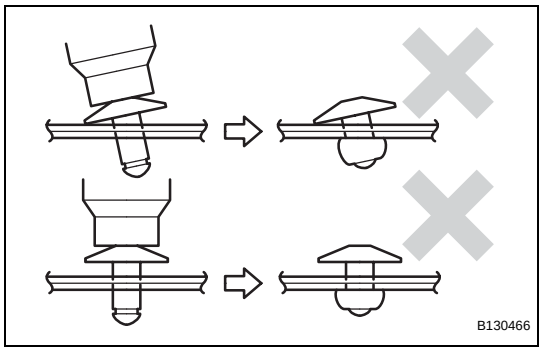
(a) Engage the 2 claws of the speaker with the body and provisionally install the speaker.



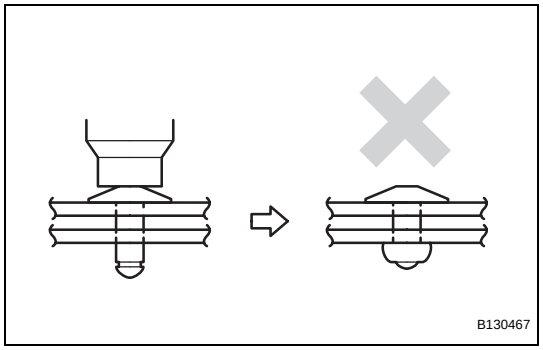
(b) Using an air riveter or hand riveter, install the rear speaker assembly onto the quarter panel with 3 new strike rivets.
HINT:
Install the new strike rivets in order as shown in the illustration.



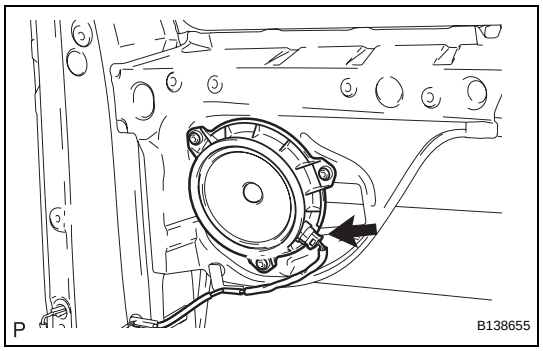
NOTICE:
- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**



- **Confirm that the rivets are seated properly against the speaker.**
- **Do not tilt the riveter when installing the rivet onto the speaker.**
- **Do not leave any space between the rivet head and speaker.**



- **Do not leave any space between the speaker and door. Firmly hold the 2 items together while installing the rivet.**



(c) Connect the speaker connector.

2. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY (See page IR-118)**
3. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-80)**
4. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-119)**
5. **INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the rear seat assembly (See page SE-102).
   (b) for LH Side:
      (1) Install the rear seat assembly (See page SE-84).
6. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
7. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-103).
   (b) for LH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-85).
8. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

AV

9. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**

10. **INSTALL DECK FLOOR BOX**
    (a) for RH Side:
        (1) Install the deck floor box (See page IR-83).
    (b) for LH Side:
        (1) Install the deck floor box.
            HINT:
            Use the same procedure as for the RH side.

11. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

12. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

PROBLEM SYMPTOMS TABLE

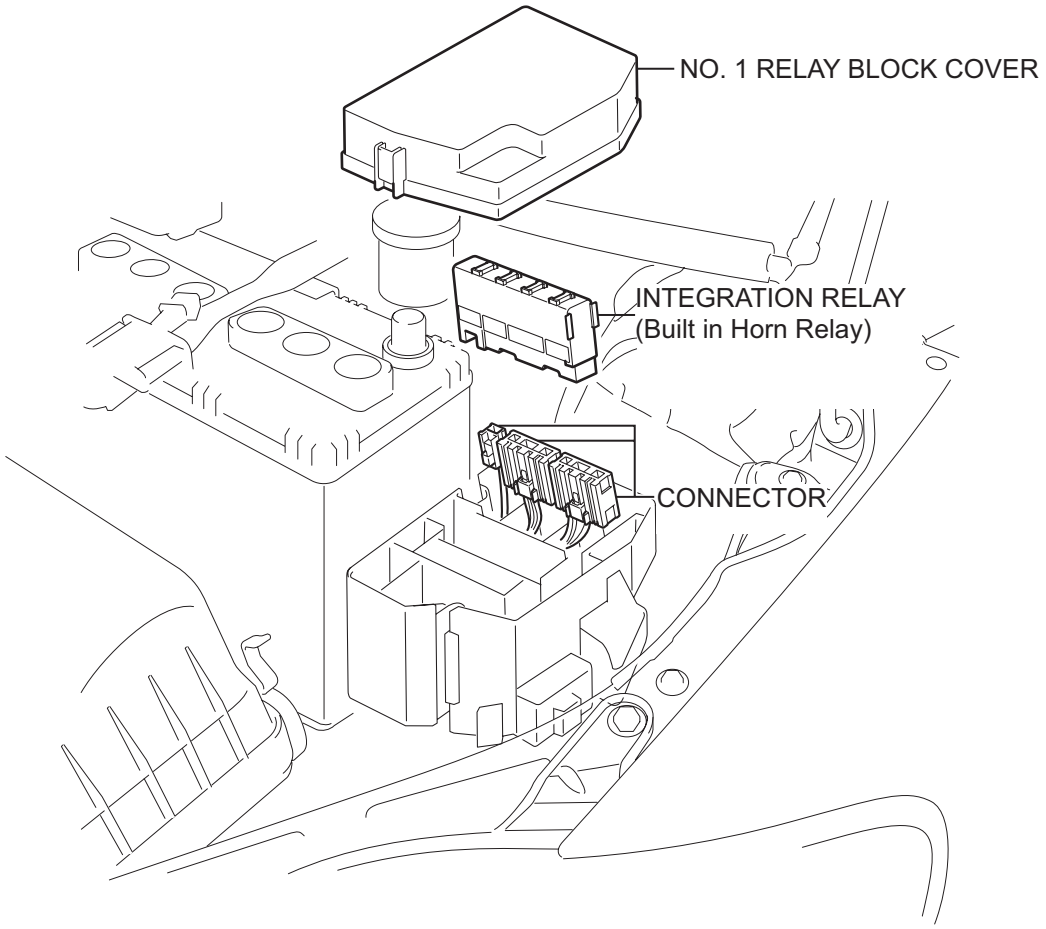
HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Horn system

Symptom	Suspected area	See page
Horn does not sound	HORN fuse	HO-1
	Horn relay (for hatchback)	HO-11
	Horn relay (for sedan)	HO-7
	Low pitched horn (for hatchback)	HO-16
	Low pitched horn (for sedan)	HO-14
	Steering pad (Horn button switch)	-
	Wire harness	-

HORN RELAY (for Sedan)

COMPONENTS



T

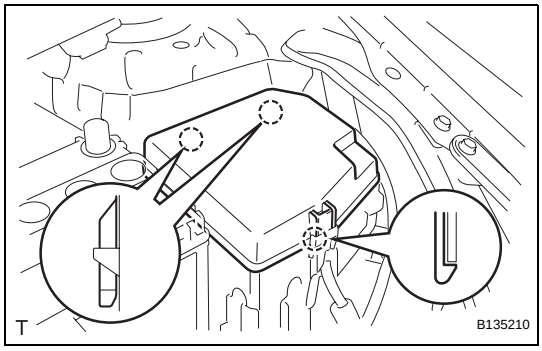
B135209E01

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

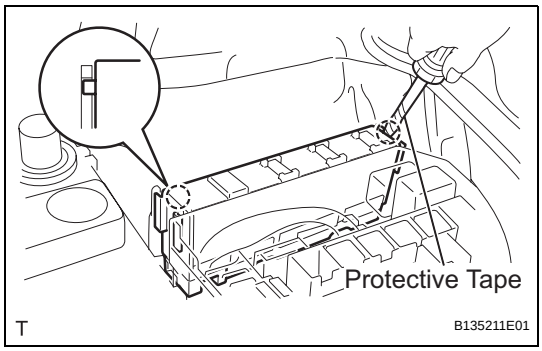
2. REMOVE NO. 1 RELAY BLOCK COVER

(a) Disengage the 3 claws and remove the No. 1 relay block cover.

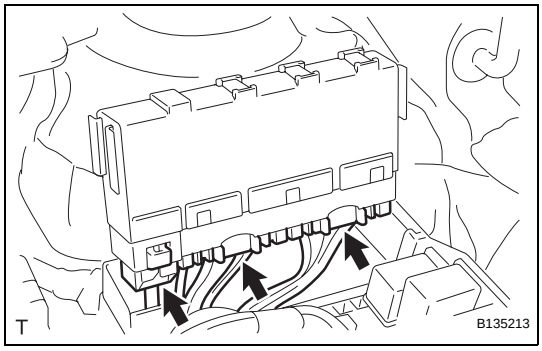


3. REMOVE INTEGRATION RELAY (Built in Horn Relay)

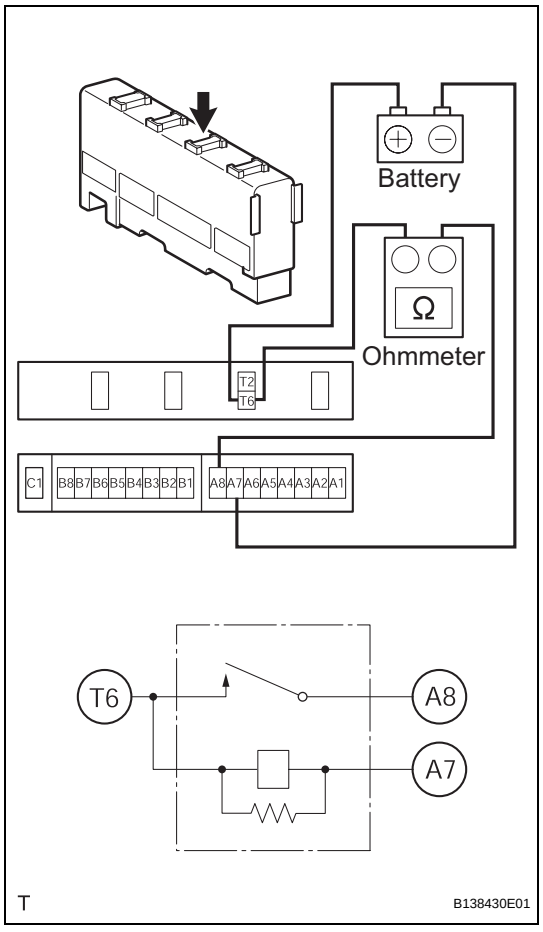
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the integration relay.



(b) Disconnect the 3 connectors.



HO



INSPECTION

1. INSPECT INTEGRATION RELAY (Built in Horn Relay)

(a) Check the resistance.

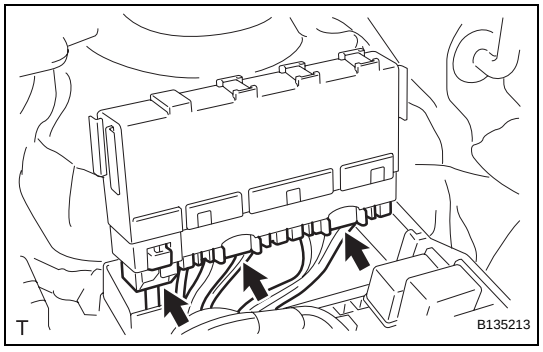
(1) Remove the horn fuse.

(2) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
A8 - T6	10 kΩ or higher
	Below 1 Ω (Battery voltage applied to terminals A7 and T6)

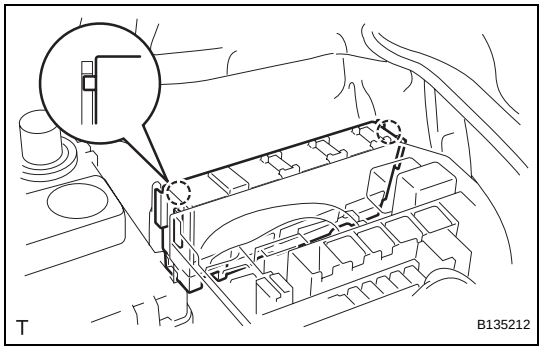
If the result is not as specified, replace the integration relay.



INSTALLATION

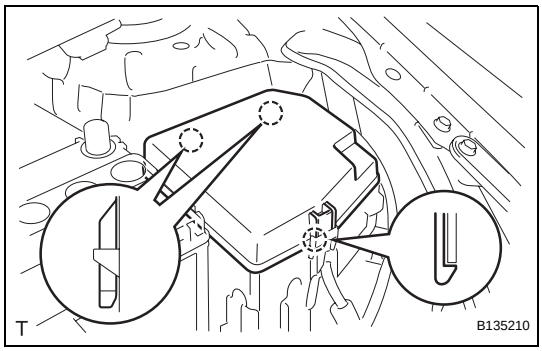
1. INSTALL INTEGRATION RELAY (Built in Horn Relay)

(a) Connect the 3 connectors.



(b) Engage the 2 claws and install the integration relay.

HO



2. INSTALL NO. 1 RELAY BLOCK COVER

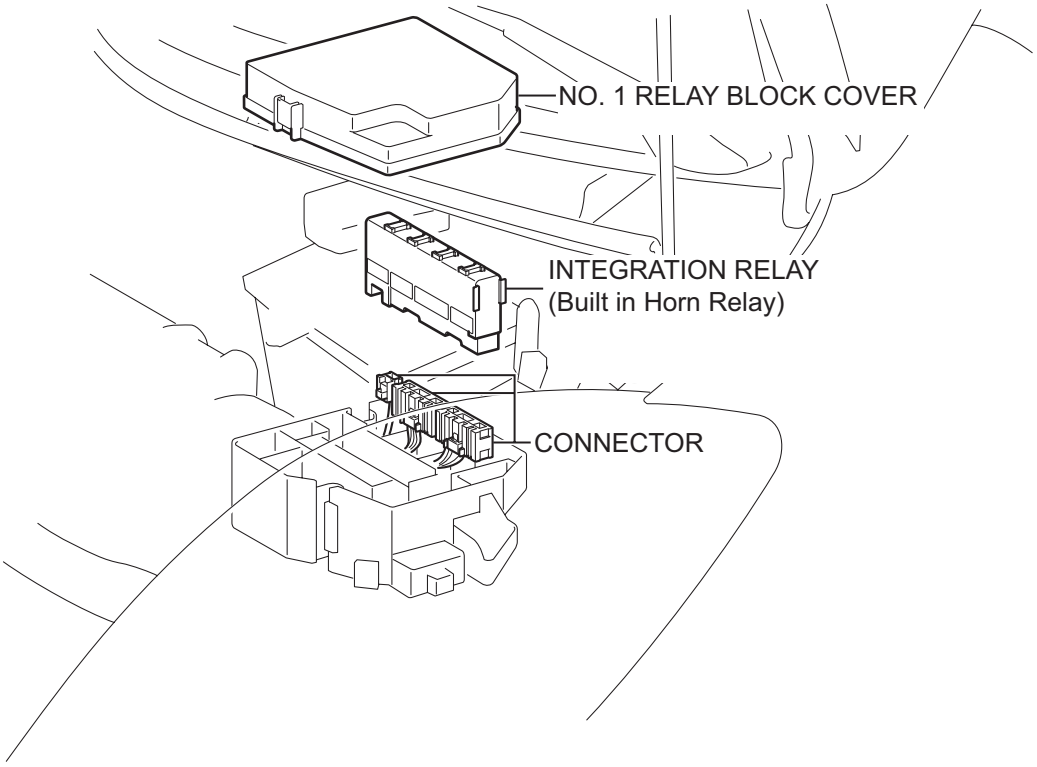
(a) Engage the 3 claws and install the No. 1 relay block cover.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HORN RELAY (for Hatchback)

COMPONENTS



T

B138539E01

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

The power window control system controls the power window UP / DOWN function using the regulator motors.
3 Door:
The main controls of this system are: the power window regulator master switch, which is built into the driver side door, and the power window regulator switch, which is built into the passenger side door. Pressing the regulator switch or either of the switches on the master switch transmits an UP / DOWN signal to the corresponding power window regulator motor.
Except 3 door:
The main controls of this system are: the power window regulator master switch, which is built into the driver side door, and the power window regulator switches, which are built into the passenger side door and rear doors. Pressing the regulator switch or any of the switches on the master switch transmits an UP / DOWN signal to the corresponding power window regulator motor.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Power Window Regulator Master Switch Assembly	• Controls window operations for all windows • When window lock switch is set to lock position, window operation is only possible with master switch
Power Window Regulator Switch Assembly	• 3 Door: Located on passenger side door • Except 3 door: Located on passenger side door and rear doors • Each regulator switch controls window operations for its respective window
Power Window Regulator Motor Assembly	• Receives switch signals and changes signals into motor activation to change window position

3. SYSTEM FUNCTION

The power window control system has the following functions.

Function	Outline
Manual UP / DOWN function	• Driver side power window: Function that raises window while power window switch is pulled up, and lowers window while pushed halfway down (window stops as soon as switch is released) • Other power windows: Function that raises window while power window switch is pulled up, and lowers window while pushed down (window stops as soon as switch is released)
AUTO DOWN function	Function that enables window of driver side door to be fully opened by one full push downward on power window switch
Remote UP / DOWN function	3 Door: Function that allows power window master switch to control manual UP / DOWN operation of passenger side power window Except 3 door: Function that allows power window master switch to control manual UP / DOWN operation of passenger side power window and rear power windows

Function	Outline
Window lock function	• 3 Door: Function where passenger side power window operation is disabled when window lock switch of master switch is pressed Passenger side power window can be operated when window lock switch is pressed again • Except 3 door: Function where passenger side power window and rear power window operation is disabled when window lock switch of master switch is pressed Passenger side power window and rear power windows can be operated when window lock switch is pressed again

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the power window control system.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to the system before inspecting the suspected areas below.

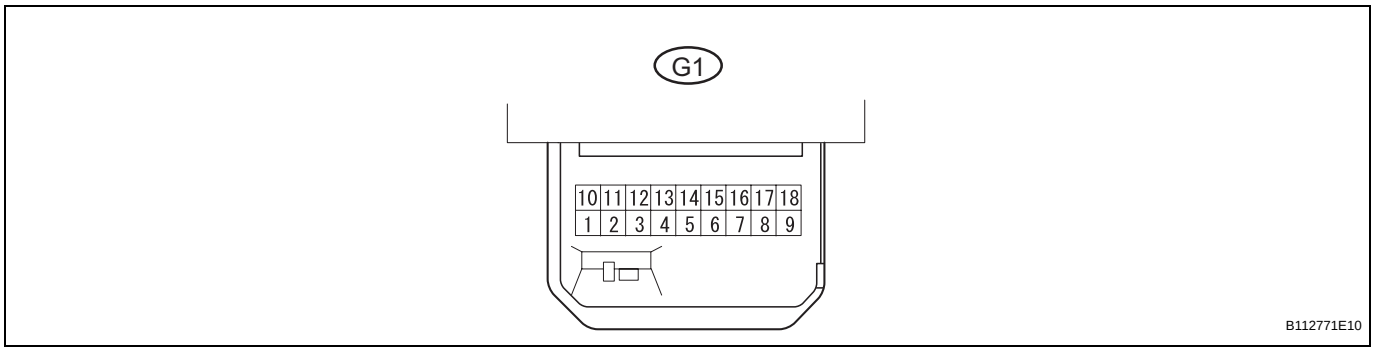
Power window control system

Symptom	Suspected area	See page
Remote Up / Down Function does not Operate	Power window regulator master switch assembly	WS-50
	Wire harness	WS-15
Driver Side Power Window does not Operate with Power Window Master Switch	Power window regulator master switch assembly	WS-50
	Power window regulator motor assembly (driver side)	WS-67
	Wire harness	WS-17
Front Passenger Side Power Window does not Operate with Front Passenger Side Power Window Switch	Power window regulator switch assembly (passenger side)	WS-57
	Power window regulator motor assembly (passenger side)	WS-67
	Wire harness	WS-22
Rear Power Window LH does not Operate with Rear Power Window Switch LH*	Power window regulator switch assembly (rear LH)*	WS-62
	Power window regulator motor assembly (rear LH)*	WS-74
	Wire harness	WS-28
Rear Power Window RH does not Operate with Rear Power Window Switch RH*	Power window regulator switch assembly (rear RH)*	WS-62
	Power window regulator motor assembly (rear RH)*	WS-74
	Wire harness	WS-34
Power Windows do not Operate at All	ECU-B & POWER fuse	-
	ECU-IG fuse	-
	Power relay	WS-43
	IG1 relay	WS-40
	Power window regulator master switch assembly	WS-50
	Wire harness	WS-40

*: Except 3 door

TERMINALS OF ECU

1. CHECK POWER WINDOW REGULATOR MASTER SWITCH (EXCEPT 3 DOOR)



(a) Disconnect the G1 power window regulator master switch connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard:

Except 3 door

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (G1-6) - Body ground	GR - Body ground	Ignition power supply	Ignition switch OFF	Below 1 V
B (G1-6) - Body ground	GR - Body ground	Ignition power supply	Ignition switch ON	11 to 14 V
E (G1-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the G1 power window regulator master switch connector.
(d) Measure the voltage of the connector.

Standard voltage:

Except 3 door

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (G1-3) - E (G1-1)	R- W-B	Power window motor UP output (driver side)	Ignition switch ON, driver side power window switch OFF → UP (manual operation)	Below 1 V → 11 to 14 V
D (G1-4) - E (G1-1)	G - W-B	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch OFF → DOWN (manual operation)	Below 1 V → 11 to 14 V
D (G1-4) - E (G1-1)	G - W-B	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window fully closed → driver side power window switch DOWN (AUTO operation) → driver side power window fully open	Below 1 V → 11 to 14 V → Below 1 V
U (G1-16) - E (G1-1)	W - W-B	Power window motor UP output (passenger side)	Ignition switch ON, passenger side power window switch OFF → UP	Below 1 V → 11 to 14 V
D (G1-15) - E (G1-1)	P - W-B	Power window motor DOWN output (passenger side)	Ignition switch ON, passenger side power window switch OFF → DOWN	Below 1 V → 11 to 14 V
U (G1-12) - E (G1-1)	Y - W-B	Power window motor UP output (rear LH)	Ignition switch ON, rear LH side power window switch OFF → UP	Below 1 V → 11 to 14 V

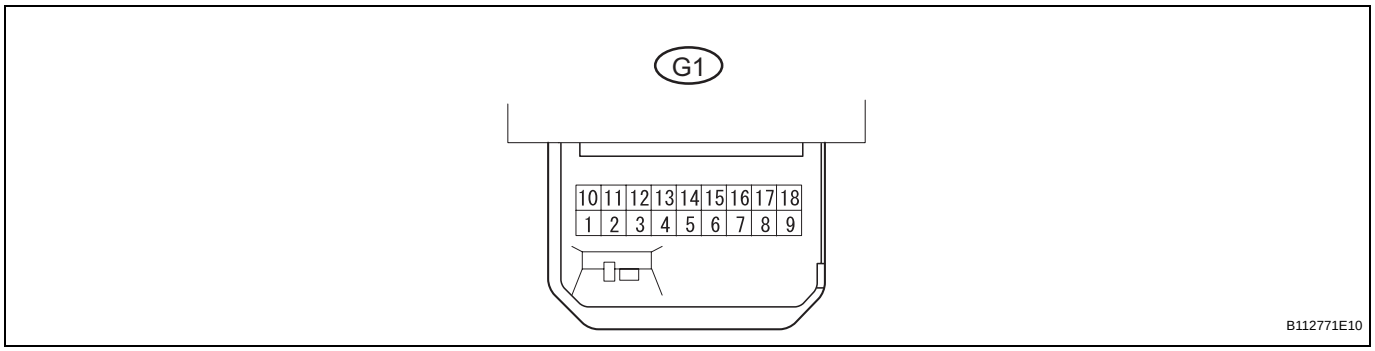
WS

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (G1-13) - E (G1-1)	B - W-B	Power window motor DOWN output (rear LH)	Ignition switch ON, rear LH side power window switch OFF → DOWN	Below 1 V → 11 to 14 V
U (G1-10) - E (G1-1)	R - W-B	Power window motor UP output (rear RH)	Ignition switch ON, rear RH side power window switch OFF → UP	Below 1 V → 11 to 14 V
D (G1-18) - E (G1-1)	G - W-B	Power window motor DOWN output (rear RH)	Ignition switch ON, rear RH side power window switch OFF → DOWN	Below 1 V → 11 to 14 V

If the result is not as specified, the master switch may have a malfunction.

(e) Check the AUTO light illumination.
   (1) After turning the ignition switch ON, check that the AUTO light illuminates (green).

2. CHECK POWER WINDOW REGULATOR MASTER SWITCH (3 DOOR)



(a) Disconnect the G1 power window regulator master switch connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard:

3 Door

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (G1-15) - Body ground	GR - Body ground	Ignition power supply	Ignition switch OFF	Below 1 V
B (G1-15) - Body ground	GR - Body ground	Ignition power supply	Ignition switch ON	11 to 14 V
E (G1-7) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the G1 power window regulator master switch connector.
(d) Measure the voltage of the connector.

Standard voltage:

3 Door

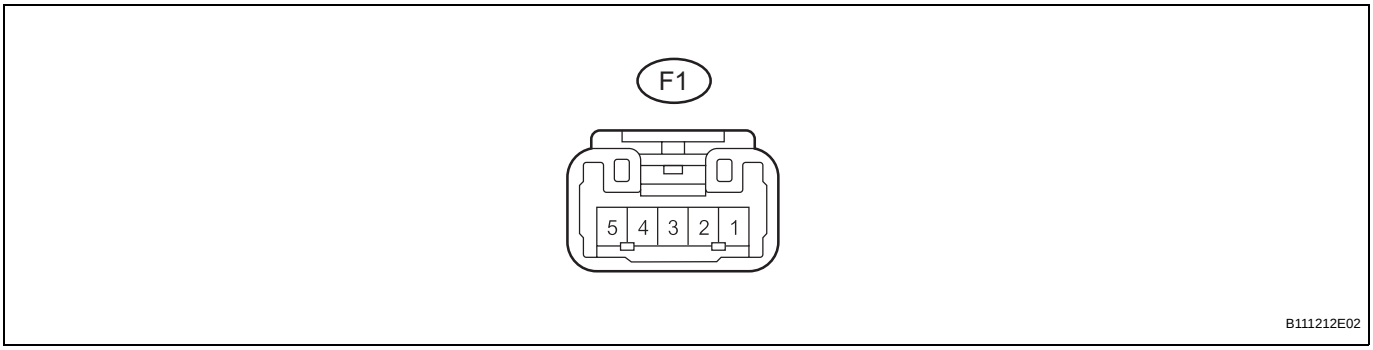
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (G1-10) - E (G1-7)	R - W-B	Power window motor UP output (driver side)	Ignition switch ON, driver side power window switch OFF → UP (manual operation)	Below 1 V → 11 to 14 V
D (G1-12) - E (G1-7)	G - W-B	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch OFF → DOWN (manual operation)	Below 1 V → 11 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (G1-12) - E (G1-7)	G - W-B	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window fully closed → driver side power window switch DOWN (AUTO operation) → driver side power window fully open	Below 1 V → 11 to 14 V → Below 1 V
U (G1-16) - E (G1-7)	W - W-B	Power window motor UP output (passenger side)	Ignition switch ON, passenger side power window switch OFF → UP	Below 1 V → 11 to 14 V
D (G1-18) - E (G1-7)	P - W-B	Power window motor DOWN output (passenger side)	Ignition switch ON, passenger side power window switch OFF → DOWN	Below 1 V → 11 to 14 V

If the result is not as specified, the master switch may have a malfunction.

(e) Check the AUTO light illumination.
   (1) After turning the ignition switch ON, check that the AUTO light illuminates (green).

3. CHECK POWER WINDOW SWITCH (PASSENGER SIDE)



(a) Disconnect the F1 power window switch connector.
(b) Measure the voltage of the wire harness side connector.

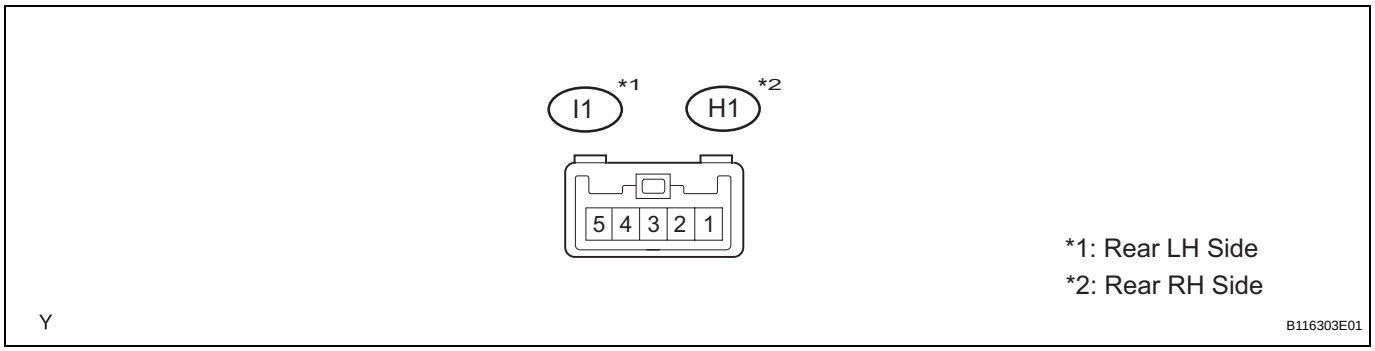
Standard voltage:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (F1-3) - Body ground	L - Body ground	Ignition power supply	Ignition switch OFF	Below 1 V
B (F1-3) - Body ground	L - Body ground	Ignition power supply	Ignition switch ON	11 to 14 V
D (F1-1) - Body ground	G - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch OFF → DOWN	Below 1 V → 11 to 14 V
SD (F1-2) - Body ground	P - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF → DOWN (Remote)	Below 1 V → 11 to 14 V
U (F1-4) - Body ground	R - Body ground	Power window motor UP output	Ignition switch ON, power window switch OFF → UP	Below 1 V → 11 to 14 V
SU (F1-5) - Body ground	W - Body ground	Power window motor UP input (Remote)	Ignition switch ON, power window master switch OFF → UP (Remote)	Below 1 V → 11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the F1 power window switch connector.

4. CHECK POWER WINDOW SWITCH (REAR DOOR SIDE)

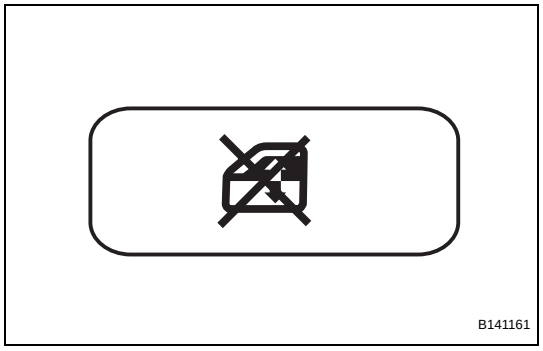


(a) Disconnect the I1 and H1 power window switch connectors.
(b) Measure the voltage of the wire harness side connector.

Standard voltage:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (3) - Body ground	SB - Body ground	Ignition power supply	Ignition switch OFF	Below 1 V
B (3) - Body ground	SB - Body ground	Ignition power supply	Ignition switch ON	11 to 14 V
U (4) - Body ground	Y - Body ground	Power window motor UP output	Ignition switch ON, power window switch OFF → UP	Below 1 V → 11 to 14 V
D (2) - Body ground	B - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch OFF → DOWN	Below 1 V → 11 to 14 V
SU (5) - Body ground	R - Body ground	Power window motor UP intput (Remote)	Ignition switch ON, power window master switch OFF → UP (Remote)	Below 1 V → 11 to 14 V
SD (1) - Body ground	G - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF → DOWN (Remote)	Below 1 V → 11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the I1 and H1 power window switch connectors.



ON-VEHICLE INSPECTION

1. CHECK POWER WINDOW REGULATOR MASTER SWITCH (WINDOW LOCK SWITCH)

(a) 3 Door:
Check that the passenger side power window cannot be operated when the window lock switch of the power window regulator master switch is pressed.
Except 3 door:
Check that the passenger side power window and rear windows cannot be operated when the window lock switch of the power window regulator master switch is pressed.
(b) 3 Door:
Check that the passenger side power window can be operated when the window lock switch is pressed again.
Except 3 door:

Check that the passenger side power window and rear windows can be operated when the window lock switch is pressed again.

2. CHECK MANUAL UP / DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

OK:

Condition	Master Switch	Switch Operation	Power Window
Ignition switch ON	Driver side	Pulled up	UP (closes)
Ignition switch ON	Driver side	Pushed halfway down	DOWN (opens)

(b) Check that the passenger side power window operates as follows:

OK:

Condition	Regulator Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Passenger side	Pushed down	DOWN (opens)

(c) Except 3 door:
Check that the rear LH power window operates as follows:

OK:

Condition	Regulator Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Rear LH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear LH	Pushed down	DOWN (opens)

(d) Except 3 door:
Check that the rear RH power window operates as follows:

OK:

Condition	Regulator Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Rear RH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear RH	Pushed down	DOWN (opens)

3. CHECK AUTO DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

OK:

Condition	Master Switch	Switch Operation	Power Window
Ignition switch ON	Driver side	Fully pushed down	AUTO DOWN (fully opens)

4. CHECK REMOTE UP / DOWN FUNCTION

(a) Check that the passenger side power window operates as follows:

OK:

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Passenger side	Pushed down	DOWN (opens)

(b) Except 3 door:
Check that the rear LH power window operates as follows:

OK:

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Rear LH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear LH	Pushed down	DOWN (opens)

(c) Except 3 door:
Check that the rear RH power window operates as follows:

OK:

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Rear RH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear RH	Pushed down	DOWN (opens)

5. CHECK PTC OPERATION

HINT:
PTC operation is a function that prevents overloading of the power window regulator by stopping the motor. PTC operation activates when the power window regulator switch is operated for a predetermined amount of time.

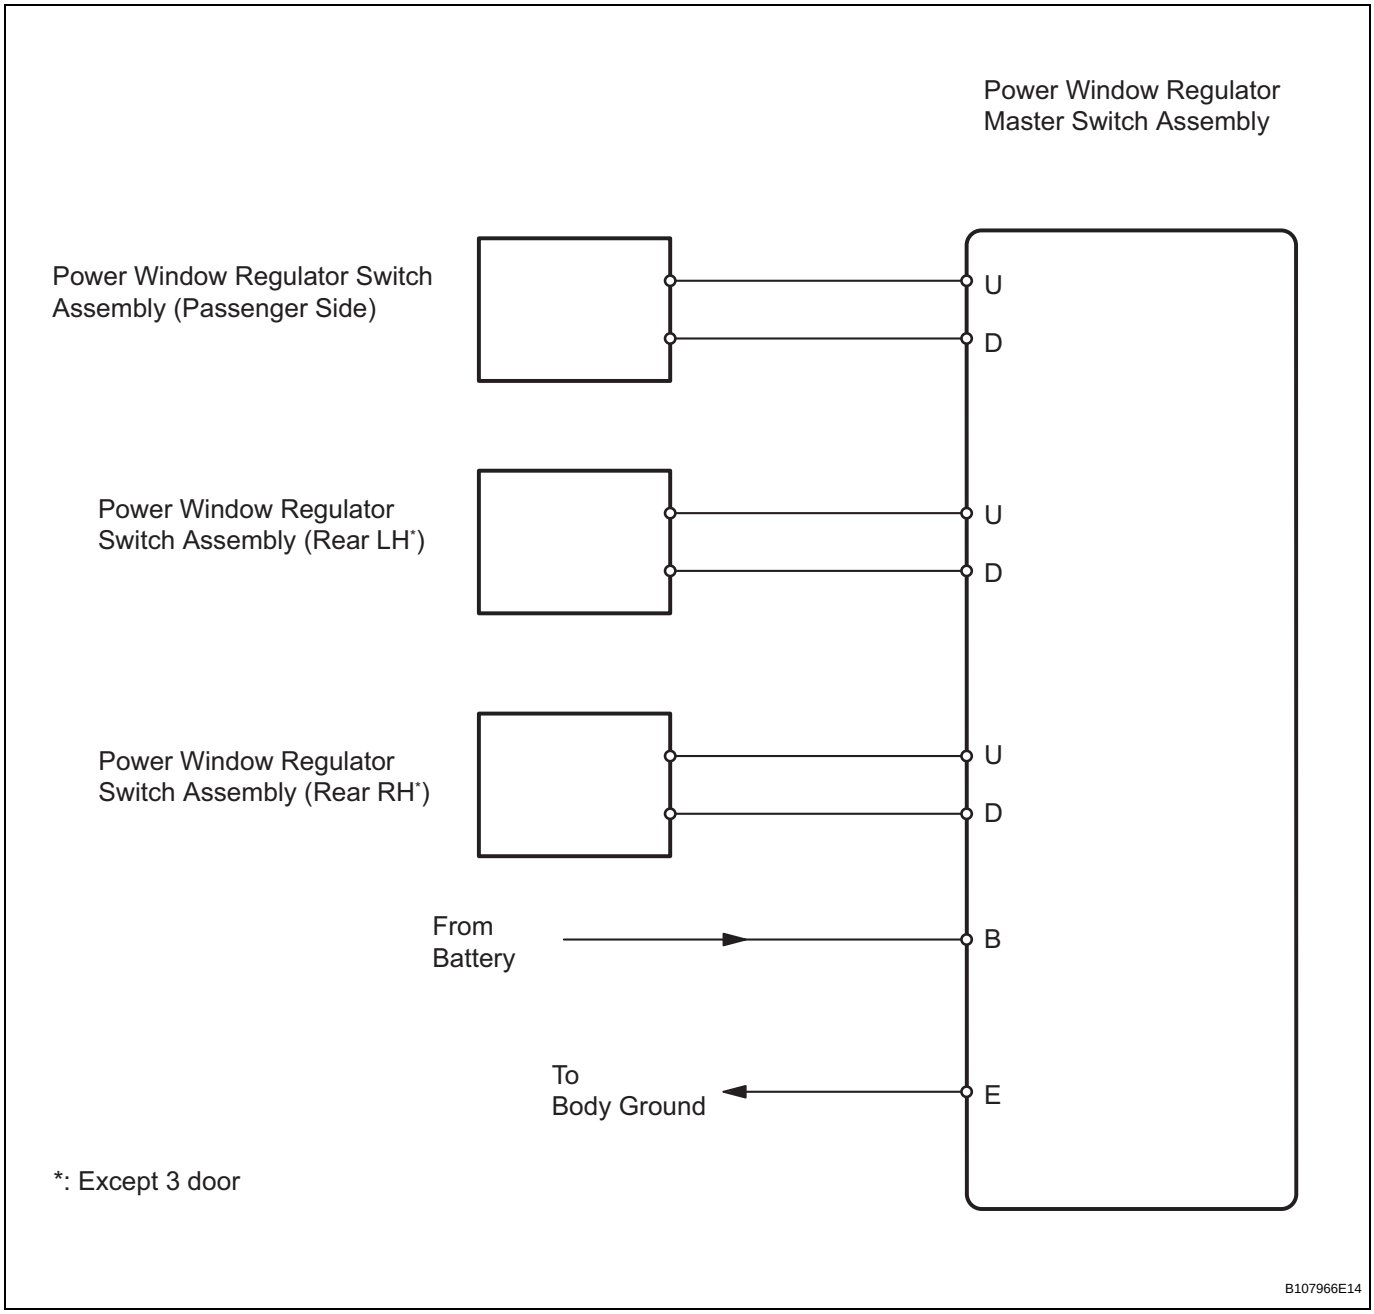
(a) Pull up and hold the power window regulator switch for more than 90 seconds. Then release the switch.
(b) Check that pressing the switch does not move the window.
(c) Wait until 60 seconds have passed since the switch was released in the first step. Check that pressing the switch results in normal window movement.

Remote Up / Down Function does not Operate

DESCRIPTION

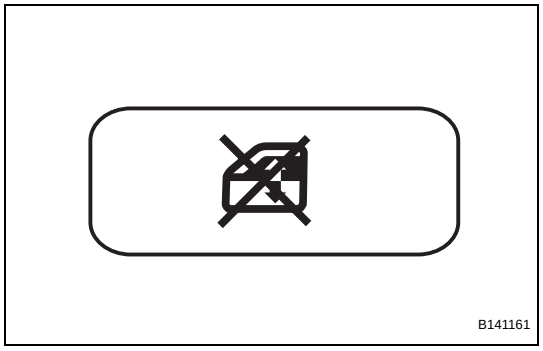
3 Door:
With the ignition switch ON, the power window regulator master switch transmits remote switch signals to the regulator switch of the passenger door power window. Then, the regulator switch drives the passenger power window regulator motor.
Except 3 door:
With the ignition switch ON, the power window regulator master switch transmits remote switch signals to the regulator switches of the passenger door power window and rear door power windows. Then, each regulator switch drives its respective power window regulator motor.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY



(a) Turn the window lock switch OFF and operate the switches on the master switch. Check that the remote UP / DOWN function operates normally.
OK:
Remote UP / DOWN function operates normally.

NG → **Go to step 2**

OK

END

2	CHECK MANUAL UP / DOWN FUNCTION

(a) 3 Door:
Check that the passenger door power window manual UP / DOWN function operates normally.
Except 3 door:
Check that the passenger door power window and rear door power window manual UP / DOWN function operates normally.
OK:
Manual UP / DOWN function operates normally.

NG → **OTHER PROBLEM**

OK

REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

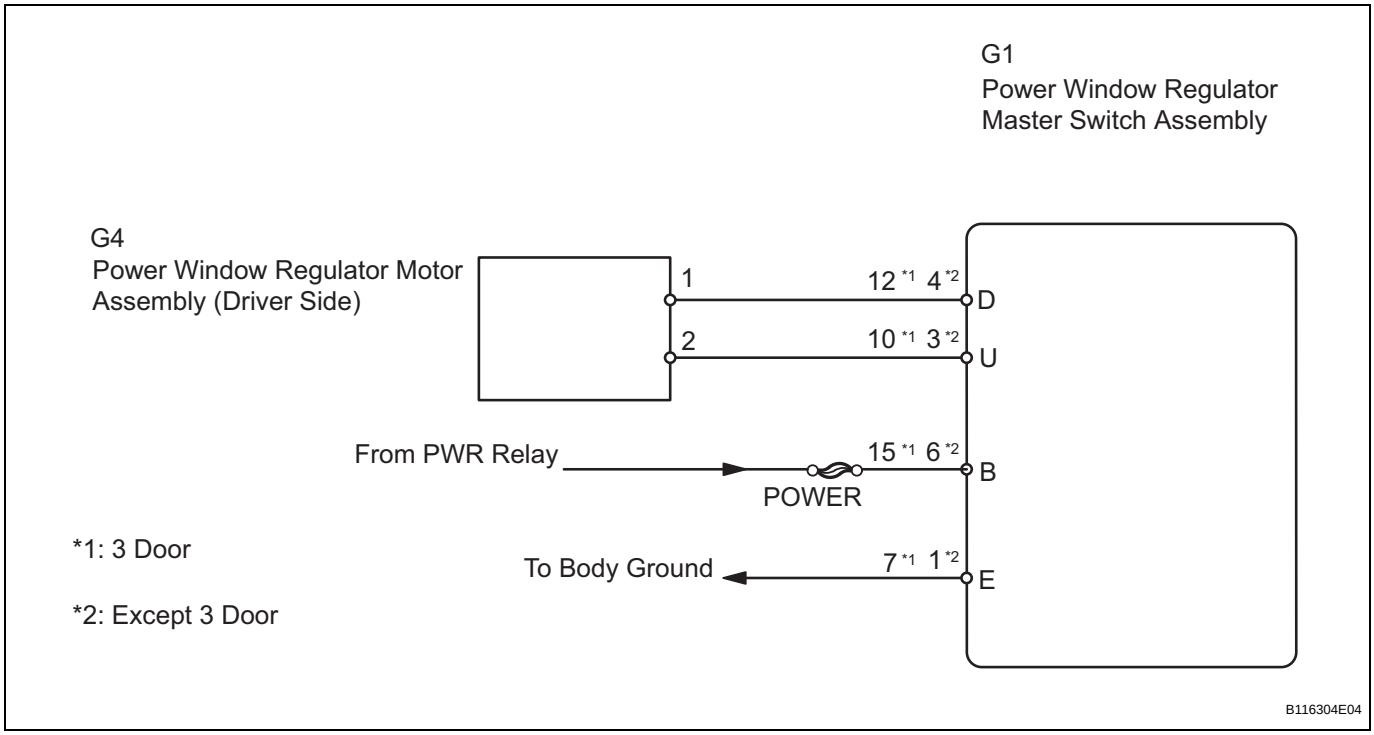
WS

Driver Side Power Window does not Operate with Power Window Master Switch

DESCRIPTION

If the manual UP / DOWN and AUTO DOWN functions do not operate, a malfunction may exist in the power window regulator master switch, power window regulator motor or wire harness.

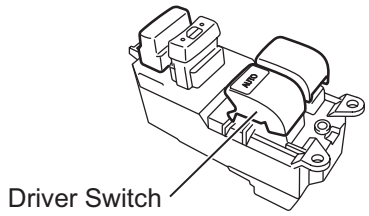
WIRING DIAGRAM

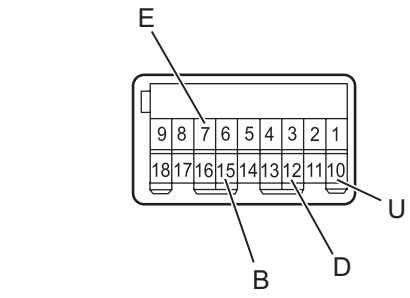


INSPECTION PROCEDURE

1	**INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (DRIVER SWITCH)**

Power Window Regulator Master Switch:





(a) 3 Door:
Inspect the driver switch.
(1) Remove the power window regulator master switch assembly.
(2) Measure the resistance of the switch when the switch is operated.

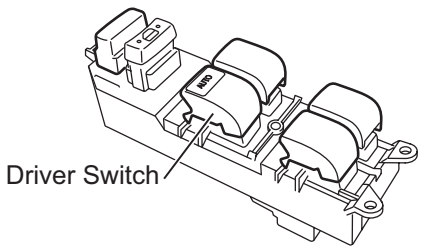
Standard resistance

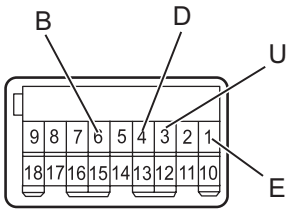
Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
Always (ON / OFF)	UP	7 (E) - 12 (D) 10 (U) - 15 (B)	Below 1 Ω
Always (ON / OFF)	OFF	7 (E) - 10 (U) 7 (E) - 12 (D)	Below 1 Ω
Always (ON / OFF)	DOWN	7 (E) - 10 (U) 12 (D) - 15 (B)	Below 1 Ω
Always (ON / OFF)	AUTO DOWN	7 (E) - 10 (U) 12 (D) - 15 (B)	Below 1 Ω

(3) Reinstall the power window regulator master switch assembly.

WS

Power Window Regulator Master Switch:





B107909E09

(b) Except 3 door:
Inspect the driver switch.
(1) Remove the power window regulator master switch assembly.
(2) Measure the resistance of the switch when the switch is operated.

WS

Standard resistance

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
Always (ON / OFF)	UP	1 (E) - 4 (D) 3 (U) - 6 (B)	Below 1 Ω
Always (ON / OFF)	OFF	1 (E) - 3 (U) 1 (E) - 4 (D)	Below 1 Ω
Always (ON / OFF)	DOWN	1 (E) - 3 (U) 6 (B) - 4 (D)	Below 1 Ω
Always (ON / OFF)	AUTO DOWN	1 (E) - 3 (U) 6 (B) - 4 (D)	Below 1 Ω

(3) Reinstall the power window regulator master switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

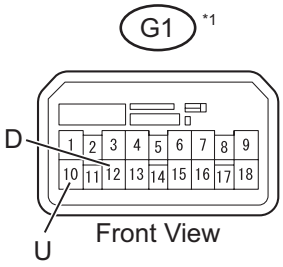
OK

2	CHECK HARNESS AND CONNECTOR (MASTER SWITCH - MOTOR (DRIVER SIDE))

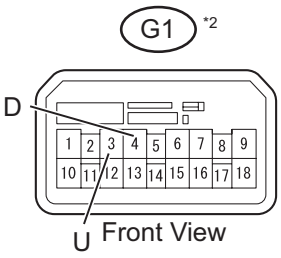
(a) Disconnect the G1 power window regulator master switch assembly connector.

Wire Harness Side:

Power Window Regulator Master Switch Assembly Connector



Power Window Regulator Master Switch Assembly Connector



*1: 3 Door

*2: Except 3 Door

Power Window Regulator Motor Assembly Connector (Driver Side)

B116226E04

(b) Disconnect the G4 power window regulator motor assembly connector.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

3 Door

Tester Connection	Specified Condition
G1-12 (D) - G4-1	Below 1 Ω
G1-10 (U) - G4-2	Below 1 Ω
G1-12 (D) or G4-1 - Body ground	10 kΩ or higher
G1-10 (U) or G4-2 - Body ground	10 kΩ or higher

Except 3 door

Tester Connection	Specified Condition
G1-4 (D) - G4-1	Below 1 Ω
G1-3 (U) - G4-2	Below 1 Ω
G1-4 (D) or G4-1 - Body ground	10 kΩ or higher
G1-3 (U) or G4-2 - Body ground	10 kΩ or higher

(d) Reconnect the G1 power window regulator master switch assembly connector.

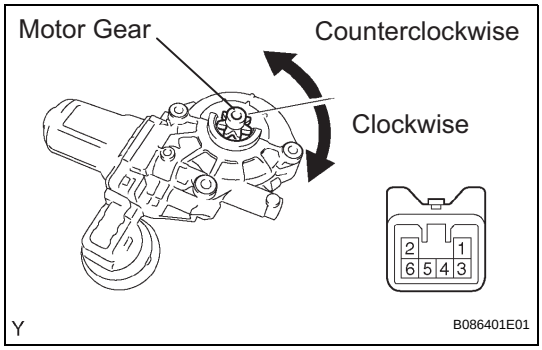
(e) Reconnect the G4 power window regulator motor assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

WS

3	INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (DRIVER SIDE)



(a) Remove the power window regulator motor assembly.
(b) Apply battery voltage to connector terminals 1 and 2.
NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
(c) Check that the motor gear rotates smoothly as follows.
OK

Measurement Condition	Specified Condition
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates counterclockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates clockwise

(d) Reinstall the power window regulator motor assembly

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (DRIVER SIDE)**

OK

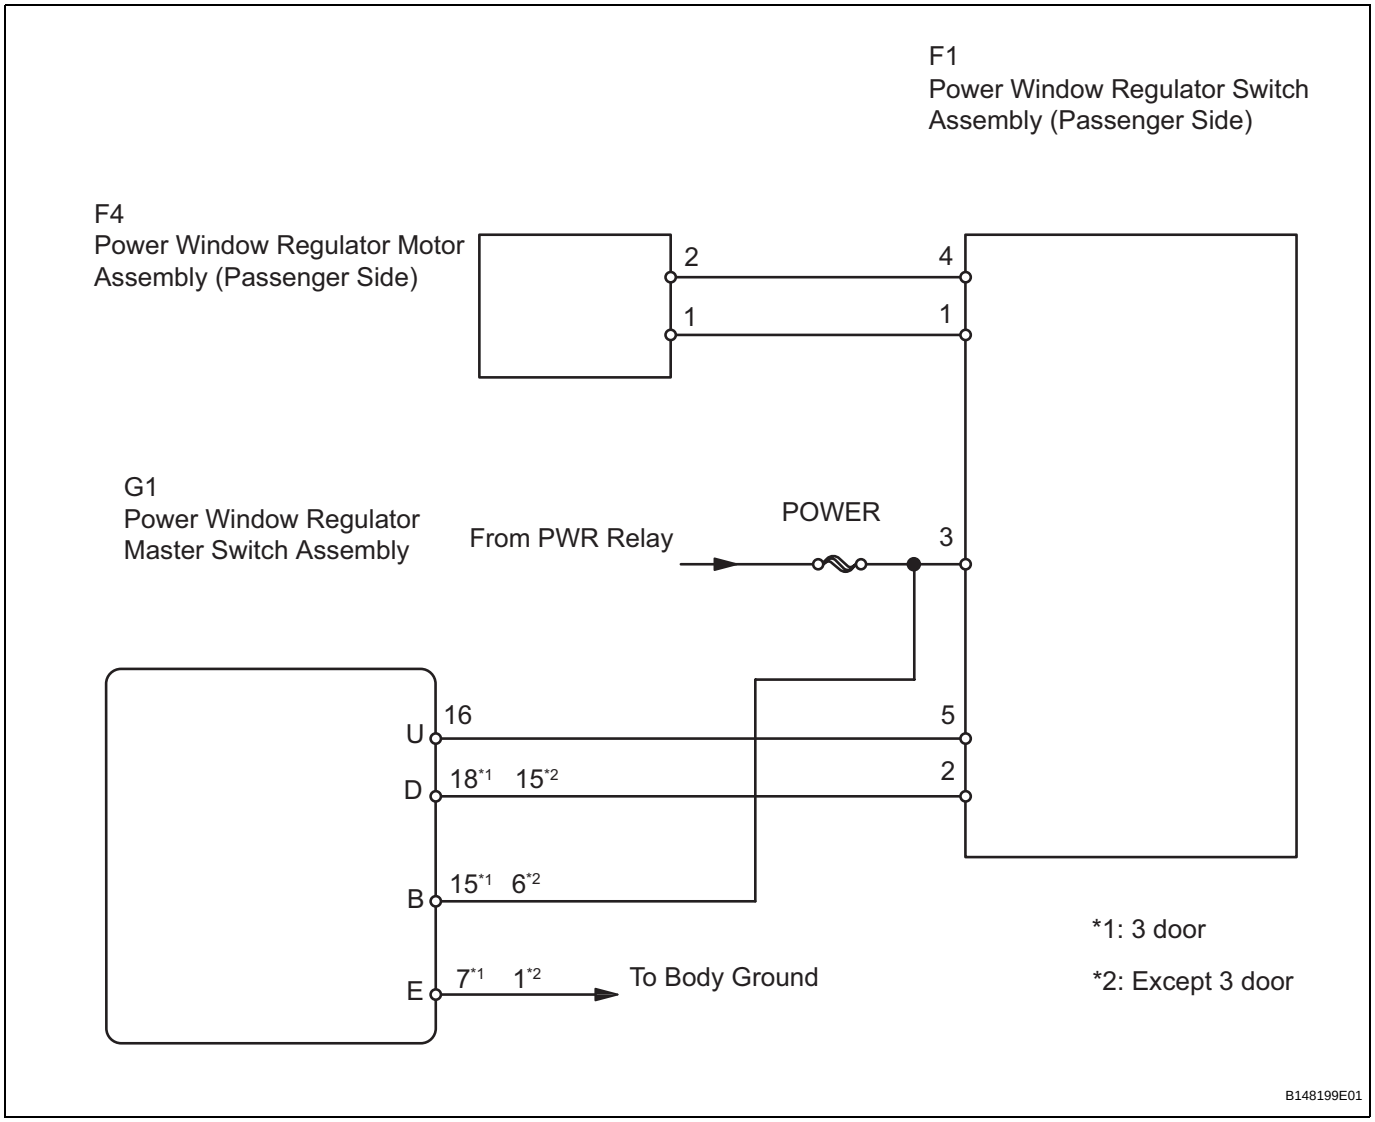
GO TO POWER WINDOWS DO NOT OPERATE AT ALL

Front Passenger Side Power Window does not Operate with Front Passenger Side Power Window Switch

DESCRIPTION

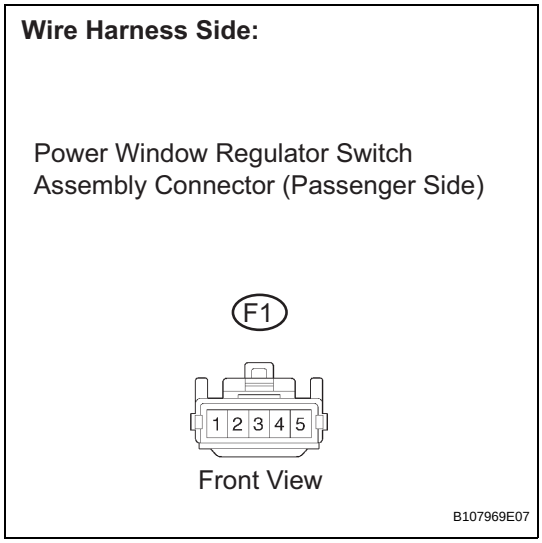
If the passenger side manual UP / DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window regulator switch, power window regulator master switch or wire harness.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (PASSENGER SIDE) (POWER SOURCE)



(a) Disconnect the F1 power window regulator switch assembly connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
F1-3 - Body ground	Ignition switch ON	11 to 14 V

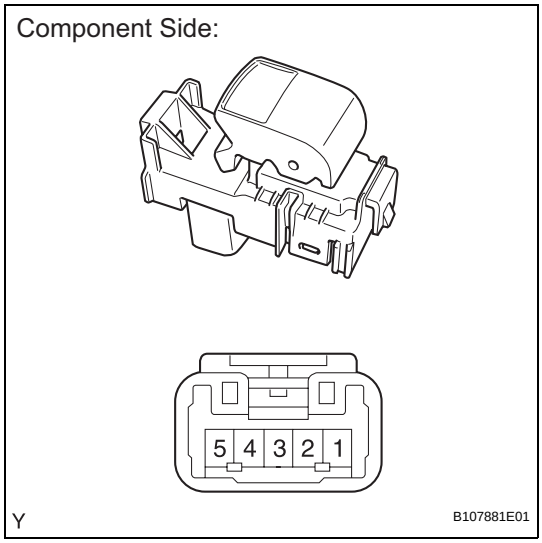
(c) Reconnect the F1 power window regulator switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY (PASSENGER SIDE)

WS



(a) Remove the power window regulator switch assembly.
(b) Measure the resistance of the switch when the switch is operated.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
3 - 4 2 - 1	UP	Below 1 Ω
5 - 4 2 - 1	OFF	Below 1 Ω
5 - 4 3 - 1	DOWN	Below 1 Ω

(c) Reinstall the power window regulator switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR SWITCH ASSEMBLY (PASSENGER SIDE)**

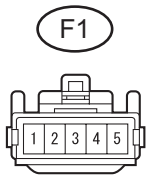
OK

3	CHECK HARNESS AND CONNECTOR (SWITCH (PASSENGER SIDE) - MOTOR (PASSENGER SIDE))

(a) Disconnect the F1 power window regulator switch assembly connector.

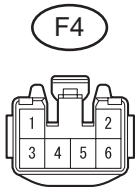
Wire Harness Side:

Power Window Regulator Switch Assembly
Connector (Passenger Side)



Front View

Power Window Regulator Motor Assembly
Connector (Passenger Side)



Front View

B111941E03

(b) Disconnect the F4 power window regulator motor assembly connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

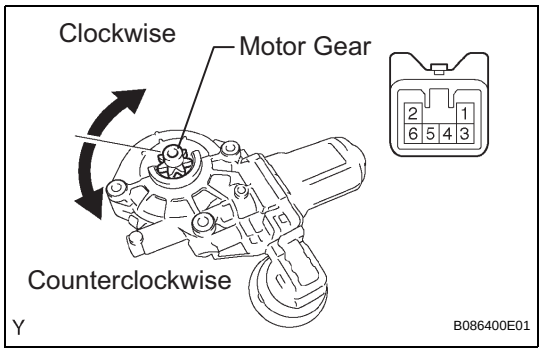
Tester Connection	Specified Condition
F1-1 - F4-1	Below 1 Ω
F1-4 - F4-2	Below 1 Ω
F1-1 or F4-1 - Body ground	10 kΩ or higher
F1-4 or F4-2 - Body ground	10 kΩ or higher

(d) Reconnect the F1 power window regulator switch assembly connector.
(e) Reconnect the F4 power window regulator motor assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (PASSENGER SIDE)



(a) Remove the power window regulator motor assembly.
(b) Apply battery voltage to connector terminals 1 and 2.

NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.

(c) Check that the motor gear rotates smoothly as follows.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates clockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates counterclockwise

(d) Reinstall the power window regulator motor assembly.

WS

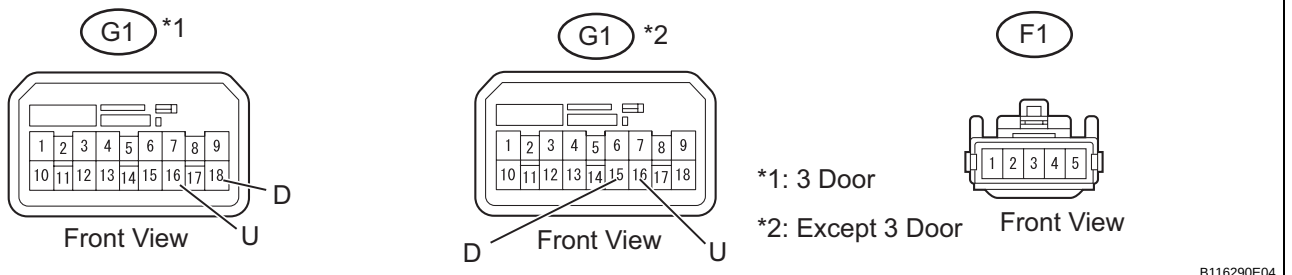
NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (PASSENGER SIDE)**

OK

5	CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (PASSENGER SIDE))

(a) Disconnect the G1 power window regulator master switch assembly connector.

Wire Harness Side:



(b) Disconnect the F1 power window regulator switch assembly connector.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

3 Door

Tester Connection	Specified Condition
G1-16 (U) - F1-5	Below 1 Ω
G1-18 (D) - F1-2	Below 1 Ω
G1-16 (U) or F1-5 - Body ground	10 kΩ or higher
G1-18 (D) or F1-2 - Body ground	10 kΩ or higher

Except 3 door

Tester Connection	Specified Condition
G1-16 (U) - F1-5	Below 1 Ω
G1-15 (D) - F1-2	Below 1 Ω
G1-16 (U) or F1-5 - Body ground	10 kΩ or higher
G1-15 (D) or F1-2 - Body ground	10 kΩ or higher

(d) Reconnect the G1 power window regulator master switch assembly connector.

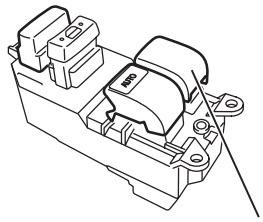
(e) Reconnect the F1 power window regulator switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

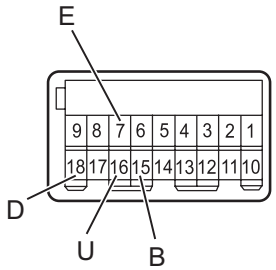
OK

6	**INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (FRONT PASSENGER SWITCH)**

Power Window Regulator Master Switch:



Front Passenger Switch



Y

B118051E04

(a) 3 Door:
Inspect the front passenger switch.
(1) Remove the power window regulator master switch.
(2) Measure the resistance of the switch when the switch is operated.

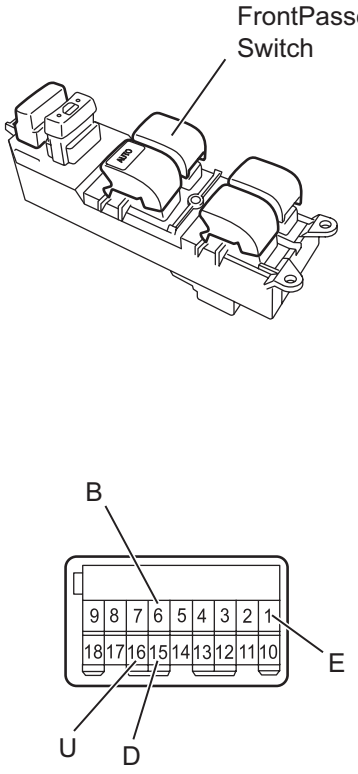
Standard resistance

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	7 (E) - 18 (D) 16 (U) - 15 (B)	Below 1 Ω
OFF	OFF	7 (E) - 16 (U) 7 (E) - 18 (D)	Below 1 Ω
OFF	DOWN	7 (E) - 16 (U) 15 (B) - 18 (D)	Below 1 Ω
ON	UP	7 (E) - 18 (D)	10 kΩ or higher
		16 (U) - 15 (B)	Below 1 Ω
ON	OFF	16 (U) - 18 (D)	Below 1 Ω
ON	DOWN	7 (E) - 16 (U)	10 kΩ or higher
		15 (B) - 18 (D)	Below 1 Ω

(3) Reinstall the power window master switch.

WS

Power Window Regulator Master Switch:



(b) Except 3 door:
Inspect the front passenger switch.
(1) Remove the power window regulator master switch.
(2) Measure the resistance of the switch when the switch is operated.

WS

Standard resistance

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	1 (E) - 15 (D) 6 (B) - 16 (U)	Below 1 Ω
OFF	OFF	1 (E) - 16 (U) 1 (E) - 15 (D)	Below 1 Ω
OFF	DOWN	1 (E) - 16 (U) 6 (B) - 15 (D)	Below 1 Ω
ON	UP	1 (E) - 15 (D)	10 kΩ or higher
		6 (B) - 16 (U)	Below 1 Ω
ON	OFF	15 (D) - 16 (U)	Below 1 Ω
ON	DOWN	1 (E) - 16 (U)	10 kΩ or higher
		6 (B) - 15 (D)	Below 1 Ω

(3) Reinstall the power window regulator master switch.

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

OK

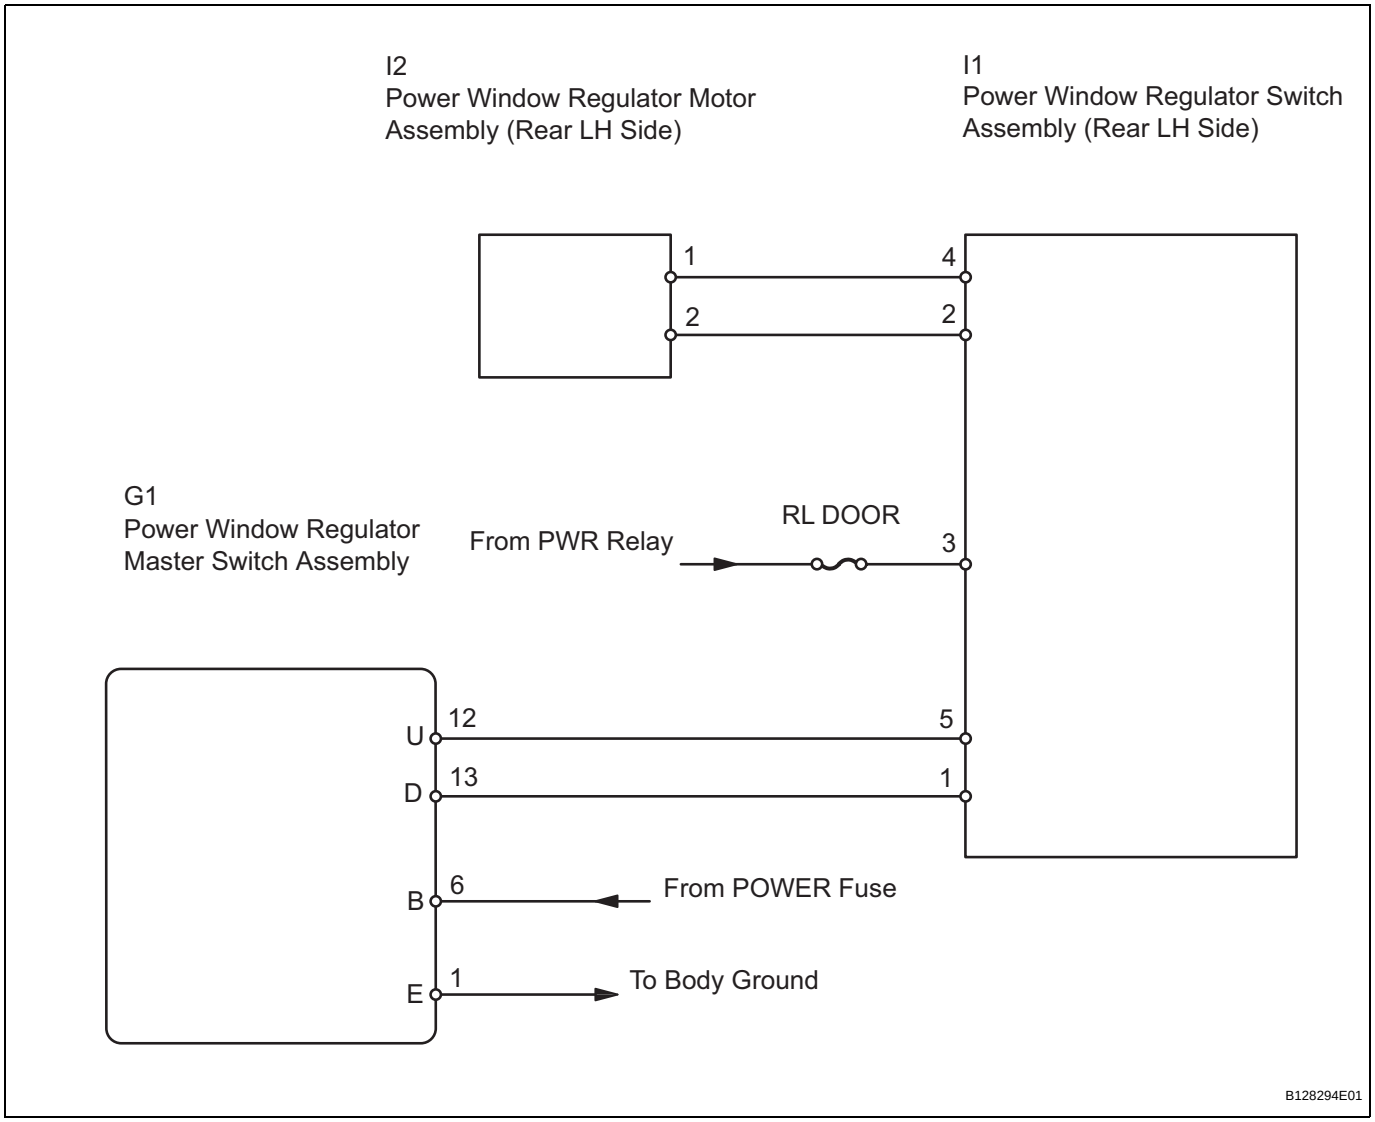
GO TO POWER WINDOWS DO NOT OPERATE AT ALL

Rear Power Window LH does not Operate with Rear Power Window Switch LH

DESCRIPTION

If the rear LH side manual UP / DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window regulator switch, power window regulator master switch or wire harness.

WIRING DIAGRAM

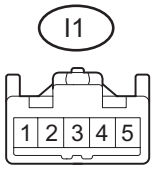


INSPECTION PROCEDURE

1	CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR LH) (POWER SOURCE)

Wire Harness Side:

Power Window Regulator Switch Assembly Connector (Rear LH)



Front View

Y

B116300E01

(a) Disconnect the I1 power window regulator switch assembly connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
I1-3 - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the I1 power window regulator switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

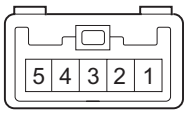
OK

2	INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR LH)

WS

Component Side:

Power Window Regulator Switch Assembly



Y

B116301E02

(a) Remove the power window regulator switch assembly.
(b) Measure the resistance of the switch when the switch is operated.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2 3 - 4	UP	Below 1 Ω
4 - 5 1 - 2	OFF	Below 1 Ω
2 - 3 4 - 5	DOWN	Below 1 Ω

(c) Reinstall the power window regulator switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR LH)**

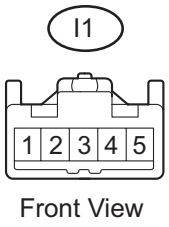
OK

3	CHECK HARNESS AND CONNECTOR (SWITCH (REAR LH) - MOTOR (REAR LH))

(a) Disconnect the I1 power window regulator switch assembly connector.

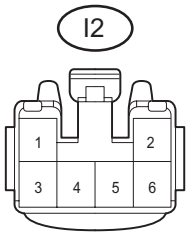
Wire Harness Side:

Power Window Regulator Switch Assembly Connector (Rear LH)



Front View

Power Window Regulator Motor Assembly Connector (Rear LH)



Front View

B116306E03

(b) Disconnect the I2 power window regulator motor assembly connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

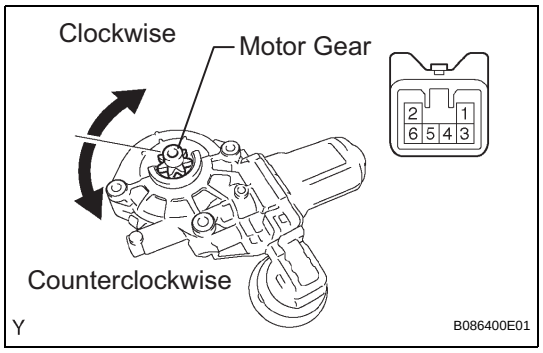
Tester Connection	Specified Condition
I1-4 - I2-1	Below 1 Ω
I1-2 - I2-2	Below 1 Ω
I1-4 or I2-1 - Body ground	10 kΩ or higher
I1-2 or I2-2 - Body ground	10 kΩ or higher

(d) Reconnect the I1 power window regulator switch assembly connector.
(e) Reconnect the I2 power window regulator motor assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR LH)



(a) Remove the power window regulator motor assembly.
(b) Apply battery voltage to connector terminals 1 and 2.
(c) Check that the motor gear rotates smoothly as follows.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates clockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates counterclockwise

(d) Reinstall the power window regulator motor assembly.

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR LH)**

WS

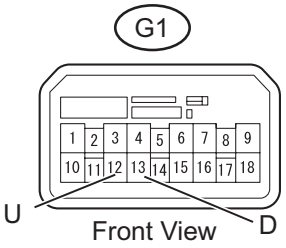
OK

5	CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (REAR LH))

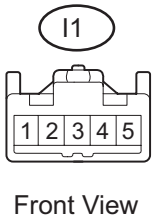
(a) Disconnect the G1 power window regulator master switch assembly connector.

Wire Harness Side:

Power Window Regulator Master Switch Assembly Connector



Power Window Regulator Switch Assembly Connector (Rear LH)



B116307E06

(b) Disconnect the I1 power widow regulator switch assembly connector.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
G1-12 (U) - I1-5	Below 1 Ω
G1-13 (D) - I1-1	Below 1 Ω
G1-12 (U) or I1-5 - Body ground	10 kΩ or higher
G1-13 (D) or I1-1 - Body ground	10 kΩ or higher

(d) Reconnect the G1 power window regulator master switch assembly connector.

(e) Reconnect the I1 power window regulator switch assembly connector.

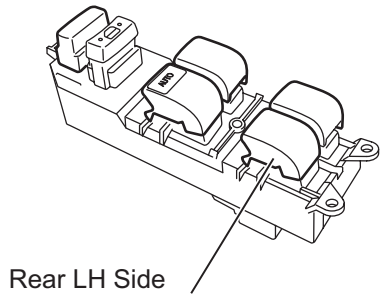
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

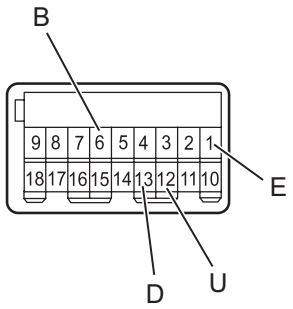
OK

WS

6	INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (REAR LH SWITCH)

Power Window Regulator Master Switch:





B107909E11

(a) Inspect the rear LH switch.
  (1) Remove the power window regulator master switch assembly.
  (2) Measure the resistance of the switch when the switch is operated.

Standard resistance

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	1 (E) - 13 (D) 6 (B) - 12 (U)	Below 1 Ω
OFF	OFF	1 (E) - 12 (U) 1 (E) - 13 (D)	Below 1 Ω
OFF	DOWN	1 (E) - 12 (U) 6 (B) - 13 (D)	Below 1 Ω
ON	UP	1 (E) - 13 (D)	10 kΩ or higher
		6 (B) - 12 (U)	Below 1 Ω
ON	OFF	12 (U) - 13 (D)	Below 1 Ω
ON	DOWN	1 (E) - 12 (U)	10 kΩ or higher
		6 (B) - 13 (D)	Below 1 Ω

(b) Reinstall the power window regulator master switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

WS

OK

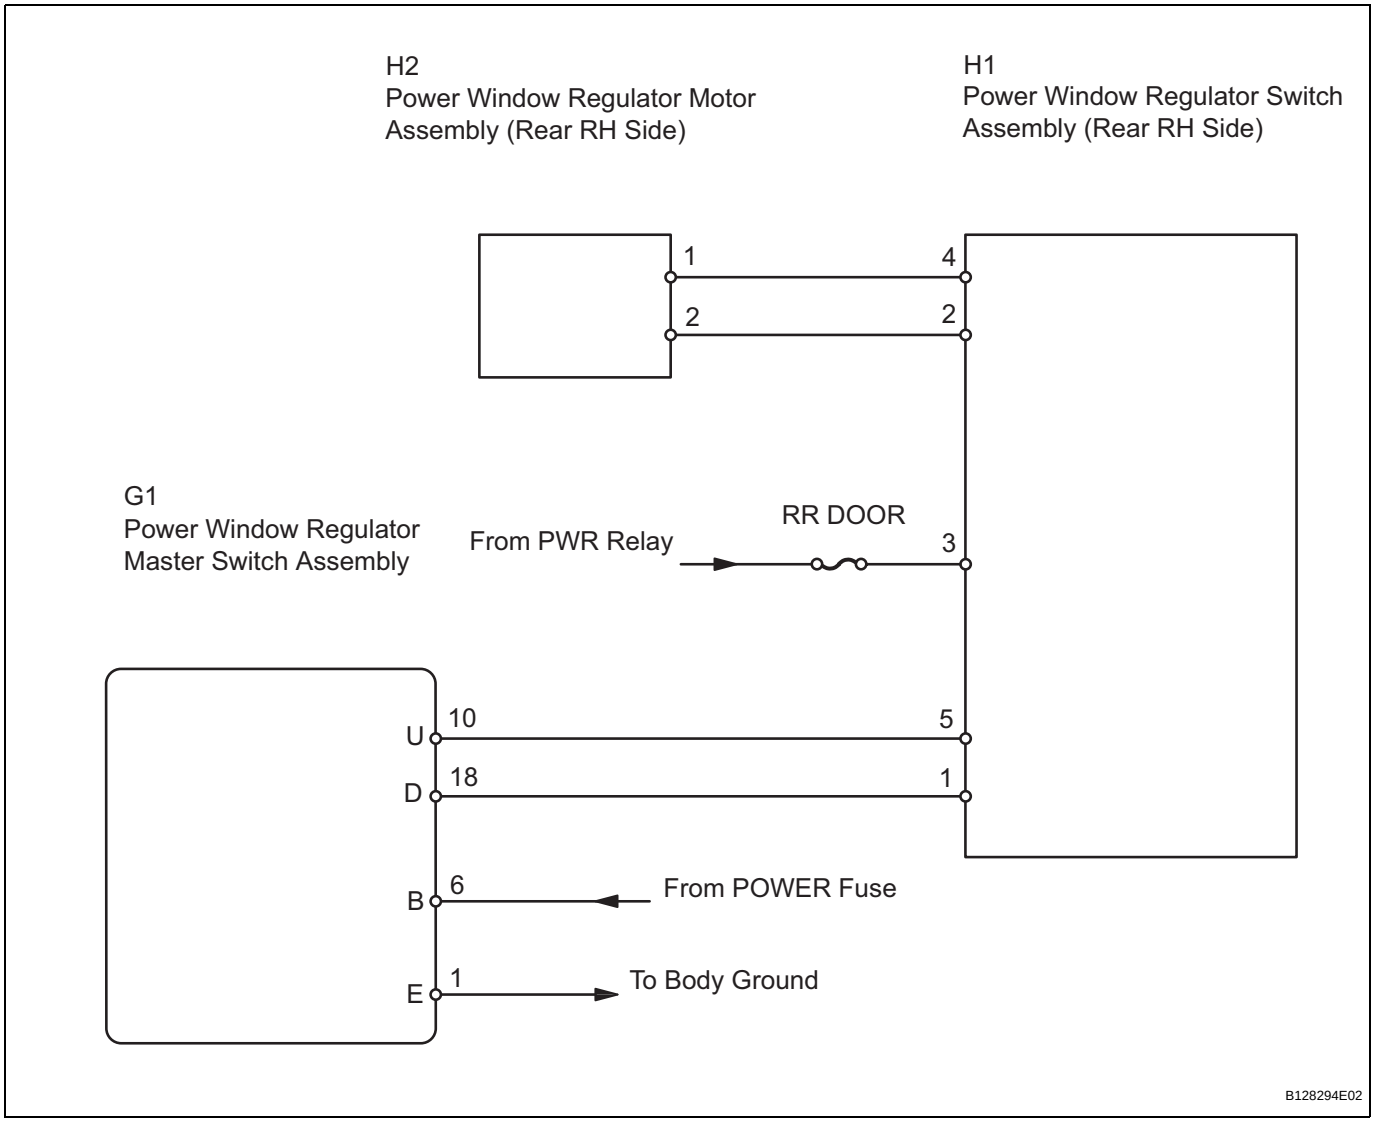
GO TO POWER WINDOWS DO NOT OPERATE AT ALL

Rear Power Window RH does not Operate with Rear Power Window Switch RH

DESCRIPTION

If the rear RH side manual UP / DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window regulator switch, power window regulator master switch or wire harness.

WIRING DIAGRAM

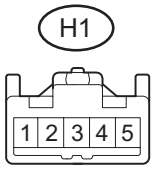


INSPECTION PROCEDURE

1	CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR RH) (POWER SOURCE)

Wire Harness Side:

Power Window Regulator Switch Assembly Connector (Rear RH)



Front View

Y

B116300E03

(a) Disconnect the H1 power window regulator switch assembly connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
H1-3 - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the H1 power window regulator switch assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

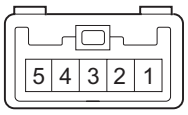
OK

2	INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR RH)

WS

Component Side:

Power Window Regulator Switch Assembly



Y

B116301E02

(a) Remove the power window regulator switch assembly.
(b) Measure the resistance of the switch when the switch is operated.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2 3 - 4	UP	Below 1 Ω
1 - 2 4 - 5	OFF	Below 1 Ω
2 - 3 4 - 5	DOWN	Below 1 Ω

(c) Reinstall the power window regulator switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR RH)**

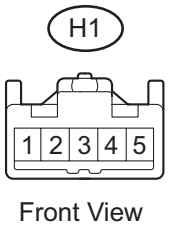
OK

3	CHECK HARNESS AND CONNECTOR (SWITCH (REAR RH) - MOTOR (REAR RH))

(a) Disconnect the H1 power window regulator switch assembly connector.

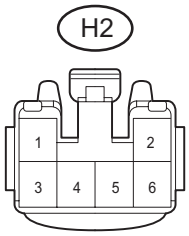
Wire Harness Side:

Power Window Regulator Switch Assembly Connector (Rear RH)



Front View

Power Window Regulator Motor Assembly Connector (Rear RH)



Front View

B116306E02

(b) Disconnect the H2 power window regulator motor assembly connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

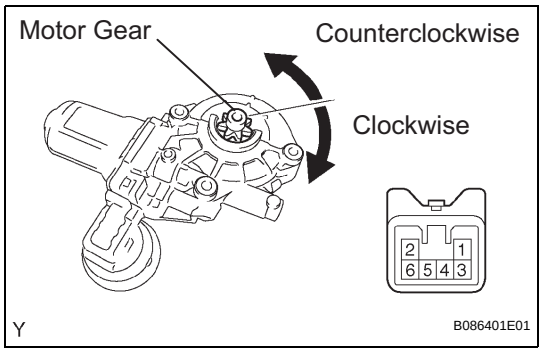
Tester Connection	Specified Condition
H1-4 - H2-1	Below 1 Ω
H1-2 - H2-2	Below 1 Ω
H1-4 or H2-1 - Body ground	10 kΩ or higher
H1-2 or H2-2 - Body ground	10 kΩ or higher

(d) Reconnect the H1 power window regulator switch assembly connector.
(e) Reconnect the H2 power window regulator motor assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR RH)



(a) Remove the power window regulator motor assembly.
(b) Apply battery voltage to connector terminals 1 and 2.
(c) Check that the motor gear rotates smoothly as follows.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates counterclockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates clockwise

(d) Reinstall the power window regulator motor assembly .

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR RH)**

WS

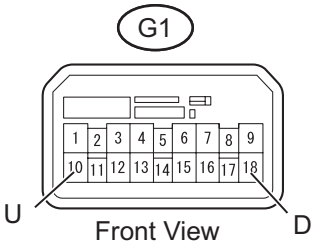
OK

5	CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (REAR RH))

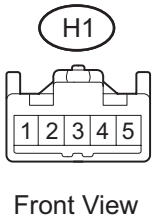
(a) Disconnect the G1 power window regulator master switch assembly connector.

Wire Harness Side:

Power Window Regulator Master Switch Assembly Connector



Power Window Regulator Switch Assembly Connector (Rear RH)



B116307E08

(b) Disconnect the H1 power window regulator switch assembly connector.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
G1-10 (U) - H1-5	Below 1 Ω
G1-18 (D) - H1-1	Below 1 Ω
G1-10 (U) or H1-5 - Body ground	10 kΩ or higher
G1-18 (D) or H1-1 - Body ground	10 kΩ or higher

(d) Reconnect the G1 power window regulator master switch assembly connector.

(e) Reconnect the H1 power window regulator switch assembly connector.

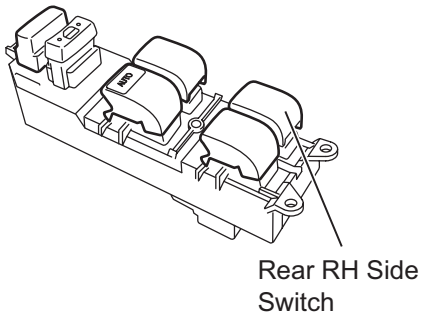
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

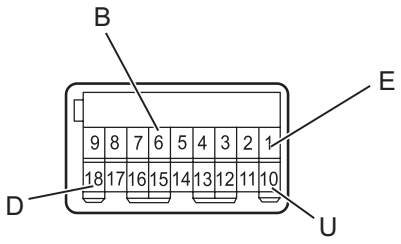
OK

WS

6	INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (REAR RH SWITCH)

Power Window Regulator Master Switch:





B107909E12

(a) Inspect the rear RH switch.
  (1) Remove the power window regulator master switch assembly.
  (2) Measure the resistance of the switch when the switch is operated.

Standard resistance

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	1 (E) - 18 (D) 6 (B) - 10 (U)	Below 1 Ω
OFF	OFF	1 (E) - 10 (U) 1 (E) - 18 (D)	Below 1 Ω
OFF	DOWN	1 (E) - 10 (U) 6 (B) - 18 (D)	Below 1 Ω
ON	UP	1 (E) - 18 (D)	10 kΩ or higher
		6 (B) - 10 (U)	Below 1 Ω
ON	OFF	10 (U) - 18 (D)	Below 1 Ω
ON	DOWN	1 (E) - 10 (U)	10 kΩ or higher
		6 (B) - 18 (D)	Below 1 Ω

(3) Reinstall the power window regulator master switch assembly.

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

OK

GO TO POWER WINDOWS DO NOT OPERATE AT ALL

Power Windows do not Operate at All

DESCRIPTION

If none of the power windows operates, the power window regulator master switch may have no power or may be malfunctioning.

WIRING DIAGRAM

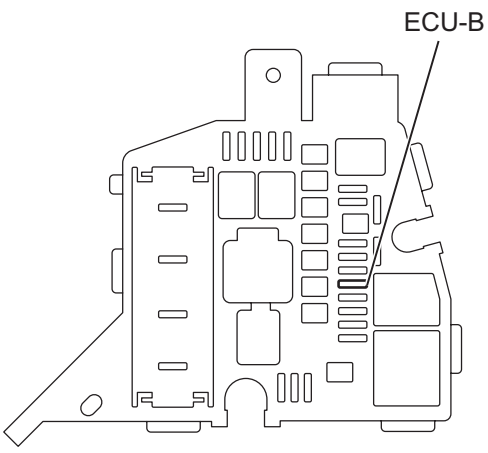
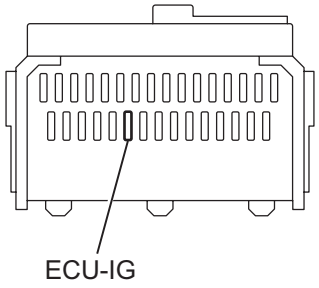
INSPECTION PROCEDURE

1	INSPECT FUSES (ECU-B, ECU-IG)

Engine Room R/B:



Main Body ECU:



0

B128295E01

(a) Remove the ECU-B fuse from the engine room relay block.
(b) Remove the ECU-IG fuse from the main body ECU.
(c) Measure the resistance.
Standard resistance:
Below 1Ω
(d) Reinstall the fuses.

NG → **REPLACE FUSE**

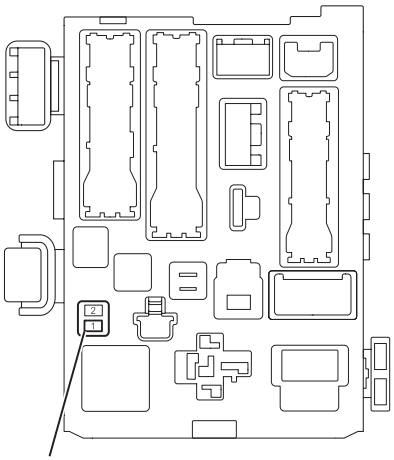
OK

WS

2 INSPECT MAIN BODY ECU (PWR RELAY)

Components Side:

Main Body ECU (Rear View)



B119965E01

(a) Remove the POWER fuse from the main body ECU.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the POWER fuse terminal of the main body ECU and body ground.

Standard voltage

Tester Connections	Ignition Switch Conditions	Specified Conditions
POWER fuse terminal (1) - Body ground	ON	11 to 14 V

(d) Reinstall the POWER fuse .

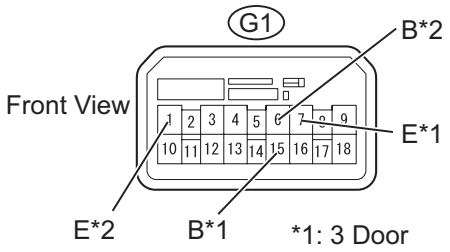
NG → **REPLACE MAIN BODY ECU (PWR RELAY)**

OK

3 CHECK HARNESS AND CONNECTOR (POWER WINDOW MASTER SWITCH - BATTERY AND BODY GROUND)

Wire Harness Side:

Power Window Regulator Master Switch



B119966E05

(a) Disconnect the G1 power window regulator master switch assembly connector.
(b) Measure the voltage of the wire harness side connector.

Standard voltage:
3 Door

Tester Connection	Condition	Specified Condition
G1-15 (B)- Body ground	Ignition switch ON	11 to 14 V

Standard voltage:
Except 3 door

Tester Connection	Condition	Specified Condition
G1-6 (B)- Body ground	Ignition switch ON	11 to 14 V

(c) Measure the resistance of the wire harness side connector.

Standard resistance:
3 Door

Tester Connection	Specified Condition
G1-7 (E)- Body ground	Below 1 Ω

Standard resistance:
Except 3 door

WS

Tester Connection	Specified Condition
G1-1 (E)- Body ground	Below 1 Ω

(d) Reconnect the G1 power window regulator master switch assembly connector.

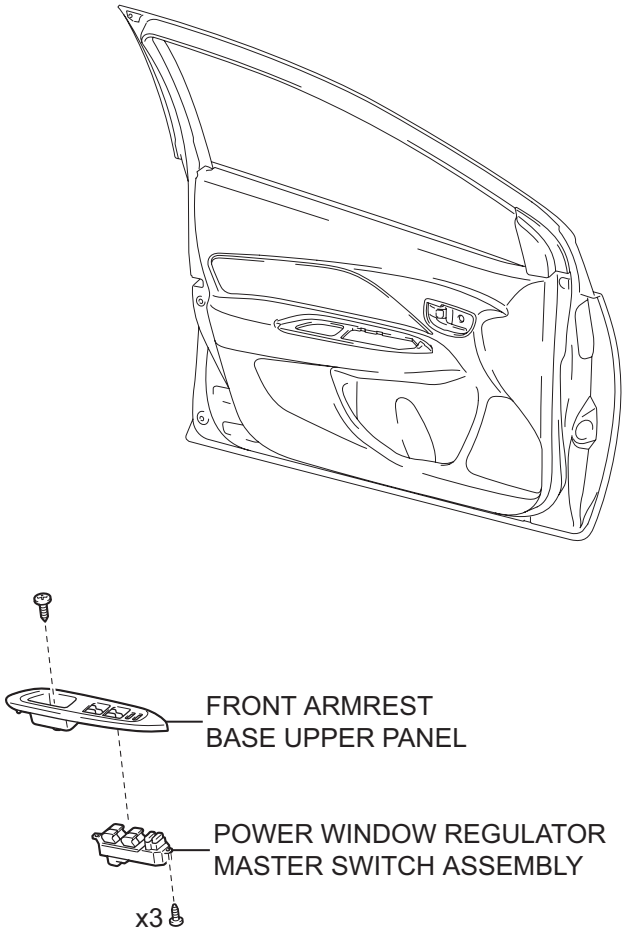
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

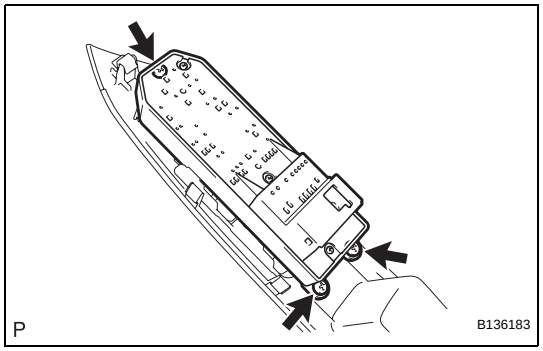
POWER WINDOW MASTER SWITCH (for Sedan)

COMPONENTS



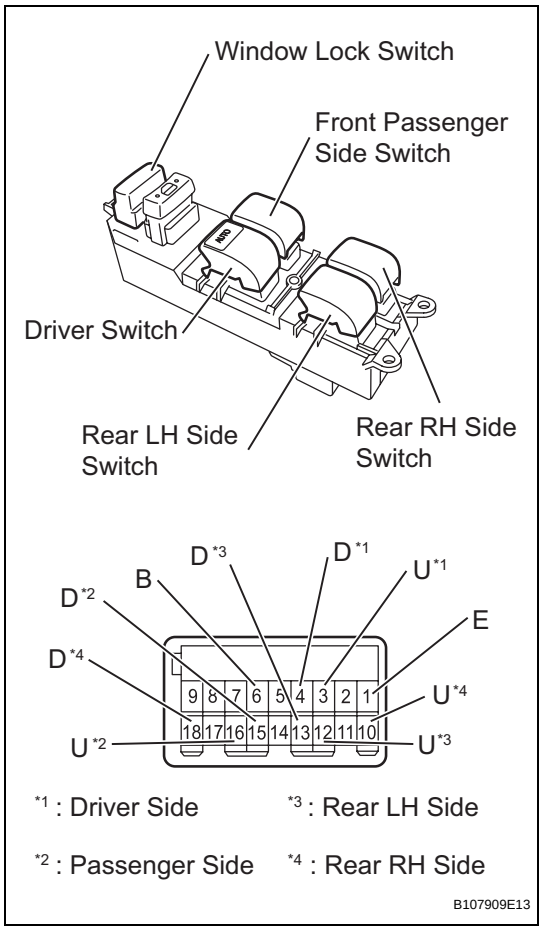
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)**
3. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Remove the 3 screws and the power window regulator master switch.



INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the tables below.
      Standard Resistance:
      Driver switch



Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
Always (ON / OFF)	UP	3 (U) - 6 (B) 1 (E) - 4 (D)	Below 1 Ω
Always (ON / OFF)	OFF	1 (E) - 3 (U) 1 (E) - 4 (D)	Below 1 Ω
Always (ON / OFF)	DOWN MANUAL	4 (D) - 6 (B) 1 (E) - 3 (U)	Below 1 Ω
Always (ON / OFF)	DOWN AUTO	1 (E) - 3 (U) 4 (D) - 6 (B)	Below 1 Ω

WS

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:

Passenger side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (B) - 16 (U) 1 (E) - 15 (D)	Below 1 Ω
OFF	OFF	1 (E) - 16 (U) 1 (E) - 15 (D)	Below 1 Ω
OFF	DOWN	6 (B) - 15 (D) 1 (E) - 16 (U)	Below 1 Ω
ON	UP	6 (B) - 16 (U)	Below 1 Ω
ON	UP	1 (E) - 15 (D)	10 kΩ or higher
ON	OFF	15 (D) - 16 (U)	Below 1 Ω
ON	DOWN	6 (B) - 15 (D)	Below 1 Ω
ON	DOWN	1 (E) - 16 (U)	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:

Rear LH side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (B) - 12 (U) 1 (E) - 13 (D)	Below 1 Ω
OFF	OFF	1 (E) - 12 (U) 1 (E) - 13 (D)	Below 1 Ω
OFF	DOWN	6 (B) - 13 (D) 1 (E) - 12 (U)	Below 1 Ω
ON	UP	6 (B) - 12 (U)	Below 1 Ω
ON	UP	1 (E) - 13 (D)	10 kΩ or higher
ON	OFF	12 (U) - 13 (D)	Below 1 Ω
ON	DOWN	6 (B) - 13 (D)	Below 1 Ω
ON	DOWN	1 (E) - 12 (U)	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:

Rear RH side switch

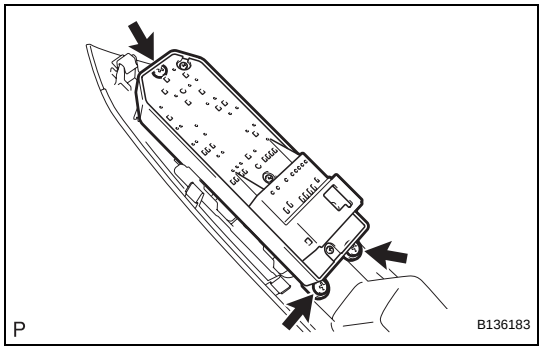
Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (B) - 10 (U) 1 (E) - 18 (D)	Below 1 Ω
OFF	OFF	1 (E) - 10 (U) 1 (E) - 18 (D)	Below 1 Ω
OFF	DOWN	6 (B) - 18 (D) 1 (E) - 10 (U)	Below 1 Ω
ON	UP	6 (B) - 10 (U)	Below 1 Ω
ON	UP	1 (E) - 18 (D)	10 kΩ or higher
ON	OFF	10 (U) - 18 (D)	Below 1 Ω
ON	DOWN	6 (B) - 18 (D)	Below 1 Ω
ON	DOWN	1 (E) - 10 (U)	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch.

(b) Check the illumination operation.
(1) Apply battery voltage to the power window regulator master switch and check that the illumination comes on.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 6 (B) Battery negative (-) → Terminal 1 (E)	Illumination comes on

If the result is not as specified, replace the power window regulator master switch.



INSTALLATION

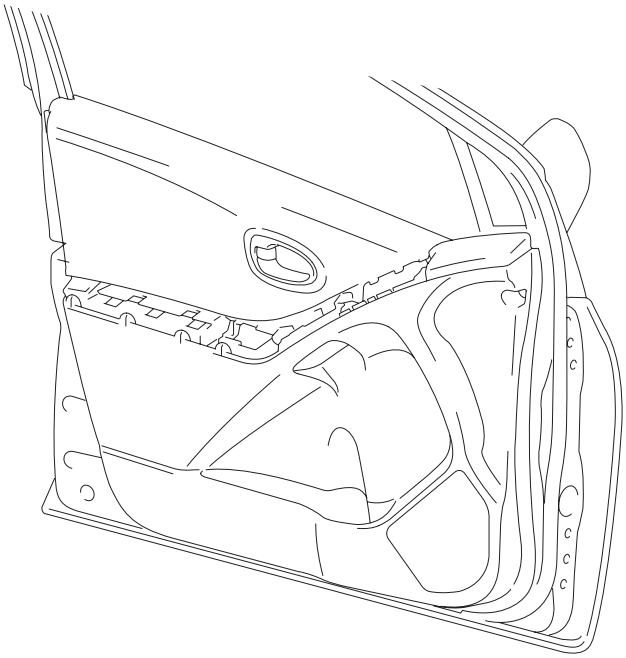
1. **INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Install the power window regulator master switch with the 3 screws.

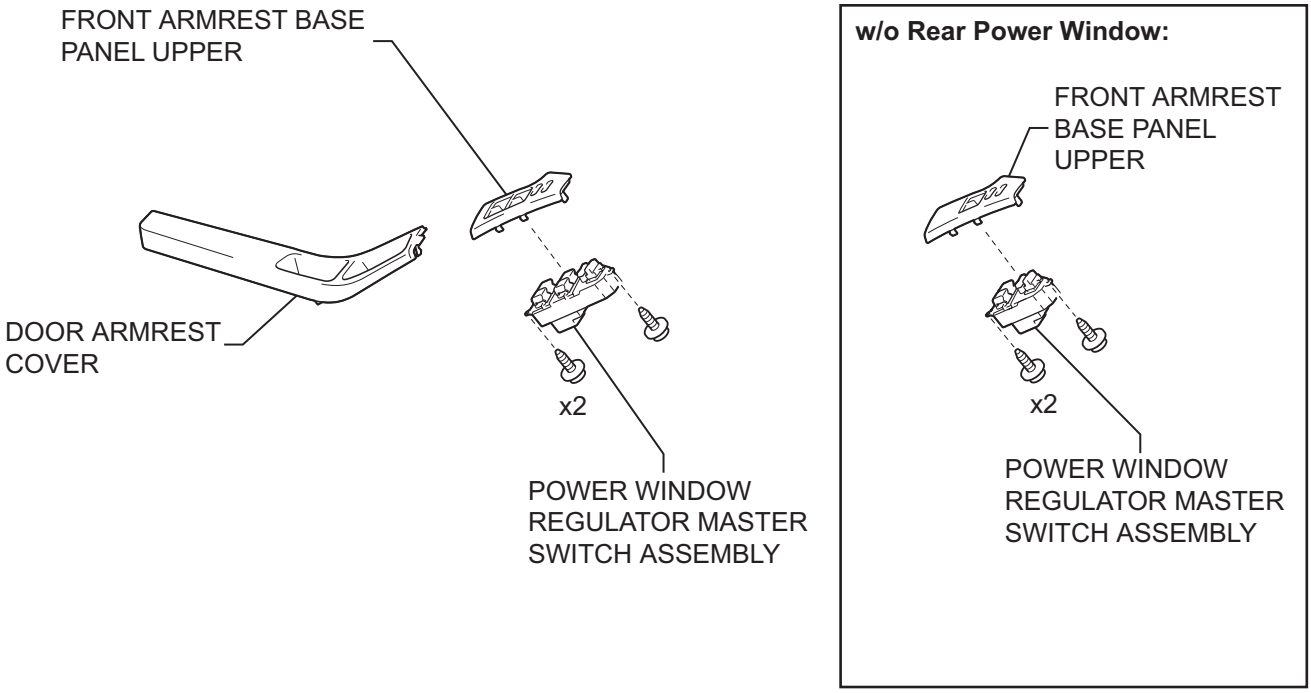
2. **INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-28)**

3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

POWER WINDOW MASTER SWITCH (for Hatchback)

COMPONENTS





P

B121528E01

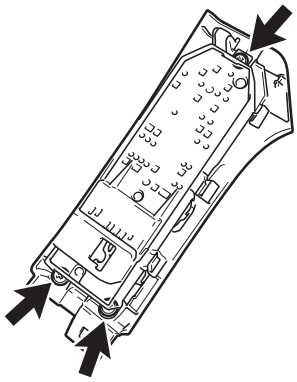
REMOVAL

HINT:

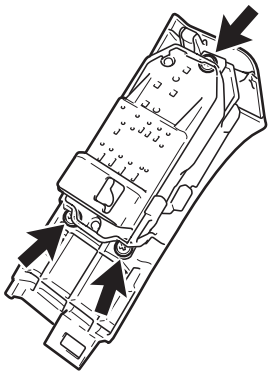
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE DOOR ARMREST COVER (See page ED-33)**
3. **REMOVE FRONT ARMREST BASE PANEL UPPER (See page ED-33)**
4. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Remove the 3 screws and the power window regulator master switch.

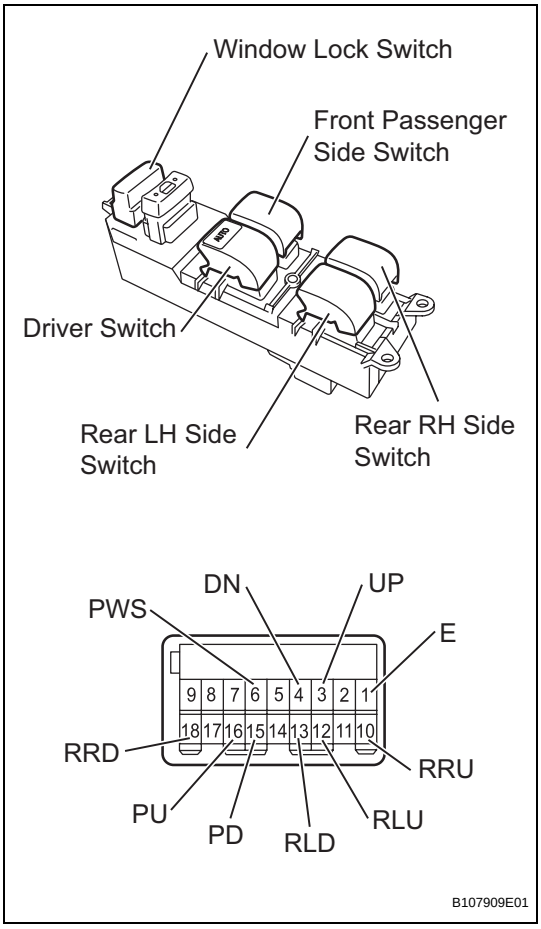
w/ Rear Power Window:



w/o Rear Power Window:



P B118070E01



INSPECTION

1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) w/ Rear power window:
Check the resistance.

(1) Using an ohmmeter, measure the resistance and check the result in accordance with the value(s) in the tables below.

Standard Resistance:
Driver switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
Always (ON / OFF)	UP	3 (UP) - 6 (PWS) 1 (E) - 4 (DN)	Below 1 Ω
Always (ON / OFF)	OFF	1 (E) - 3 (UP) 1 (E) - 4 (DN)	Below 1 Ω
Always (ON / OFF)	DOWN MANUAL	4 (DN) - 6 (PWS) 1 (E) - 3 (UP)	Below 1 Ω
Always (ON / OFF)	DOWN AUTO	1 (E) - 3 (UP) 4 (DN) - 6 (PWS)	Below 1 Ω

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:
Passenger side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (PWS) - 16 (PU) 1 (E) - 15 (PD)	Below 1 Ω
OFF	OFF	1 (E) - 16 (PU) 1 (E) - 15 (PD)	Below 1 Ω
OFF	DOWN	6 (PWS) - 15 (PD) 1 (E) - 16 (PU)	Below 1 Ω
ON	UP	6 (PWS) - 16 (PU)	Below 1 Ω
ON	UP	1 (E) - 15 (PD)	10 kΩ or higher
ON	OFF	15 (PD) - 16 (PU)	Below 1 Ω
ON	DOWN	6 (PWS) - 15 (PD)	Below 1 Ω
ON	DOWN	1 (E) - 15 (PD)	10 kΩ or higher

WS

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:

Rear LH side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (PWS) - 12 (RLU) 1 (E) - 13 (RLD)	Below 1 Ω
OFF	OFF	1 (E) - 12 (RLU) 1 (E) - 13 (RLD)	Below 1 Ω
OFF	DOWN	6 (PWS) - 13 (RLD) 1 (E) - 12 (RLU)	Below 1 Ω
ON	UP	6 (PWS) - 12 (RLU)	Below 1 Ω
ON	UP	1 (E) - 13 (RLD)	10 kΩ or higher
ON	OFF	12 (RLU) - 13 (RLD)	Below 1 Ω
ON	DOWN	6 (PWS) - 13 (RLD)	Below 1 Ω
ON	DOWN	1 (E) - 12 (RLU)	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch.

Standard Resistance:

Rear RH side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	6 (PWS) - 10 (RRU) 1 (E) - 18 (RRD)	Below 1 Ω
OFF	OFF	1 (E) - 10 (RRU) 1 (E) - 18 (RRD)	Below 1 Ω
OFF	DOWN	6 (PWS) - 18 (RRD) 1 (E) - 10 (RRU)	Below 1 Ω
ON	UP	6 (PWS) - 10 (RRU)	Below 1 Ω
ON	UP	1 (E) - 18 (RRD)	10 kΩ or higher
ON	OFF	10 (RRU) - 18 (RRD)	Below 1 Ω
ON	DOWN	6 (PWS) - 18 (RRD)	Below 1 Ω
ON	DOWN	1 (E) - 10 (RRU)	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch.

(b) w/ Rear power window:

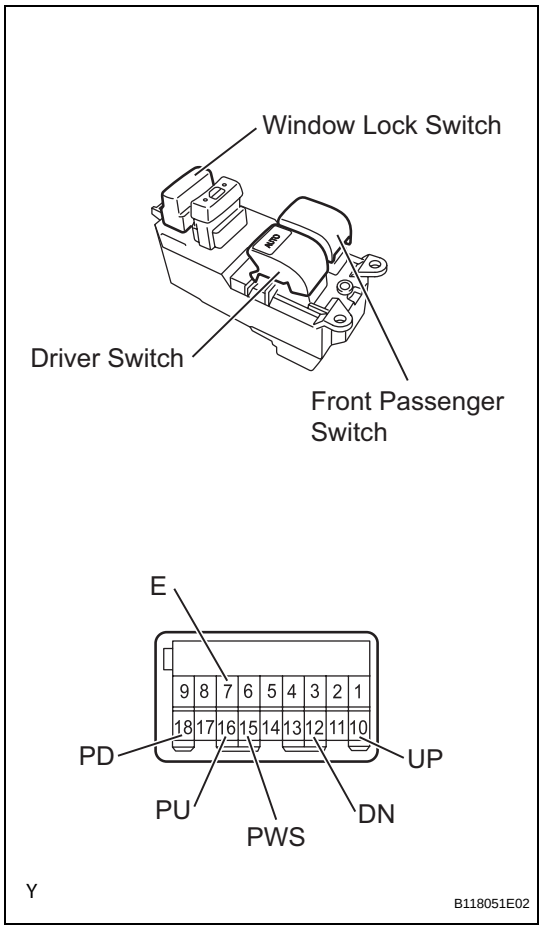
Check the illumination operation.

(1) Apply battery voltage to the power window regulator master switch and check that the illumination comes on.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 6 (PWS) Battery negative (-) → Terminal 1 (E)	Illumination comes on

If the result is not as specified, replace the power window regulator master switch.



(c) w/o Rear power window:
Check the resistance.
(1) Using an ohmmeter, measure the resistance and check the result in accordance with the value(s) in the tables below.
Standard Resistance:
Driver switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
Always (ON / OFF)	UP	15 (PWS) - 10 (UP) 7 (E) - 12 (DN)	Below 1 Ω
Always (ON / OFF)	OFF	7 (E) - 10 (UP) 7 (E) - 12 (DN)	Below 1 Ω
Always (ON / OFF)	DOWN MANUAL	12 (DN) - 15 (PWS) 7 (E) - 10 (UP)	Below 1 Ω
Always (ON / OFF)	DOWN AUTO	12 (DN) - 15 (PWS) 7 (E) - 10 (UP)	Below 1 Ω

If the result is not as specified, replace the power window regulator master switch.
Standard Resistance:
Passenger side switch

Window Lock Switch Condition	Power Window Switch Condition	Tester Connection	Specified Condition
OFF	UP	15 (PWS) - 16 (PU) 7 (E) - 18 (PD)	Below 1 Ω
OFF	OFF	7 (E) - 16 (PU) 7 (E) - 18 (PD)	Below 1 Ω
OFF	DOWN	15 (PWS) - 18 (PD) 7 (E) - 16 (PU)	Below 1 Ω
ON	UP	15 (PWS) - 16 (PU)	Below 1 Ω
ON	UP	7 (E) - 18 (PD)	10 kΩ or higher
ON	OFF	16 (PU) - 18 (PD)	Below 1 Ω
ON	DOWN	15 (PWS) - 18 (PD)	Below 1 Ω
ON	DOWN	7 (E) - 16 (PU)	10 kΩ or higher

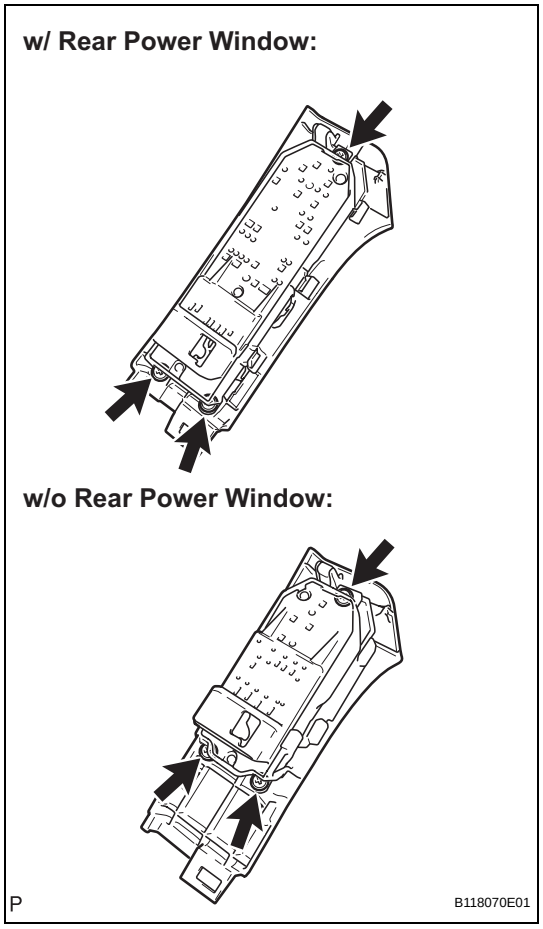
WS

If the result is not as specified, replace the power window regulator master switch.

(d) w/o Rear power window:
Check the illumination operation.
(1) Apply battery voltage to the power window regulator master switch and check that the illumination comes on.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 15 (PWS) Battery negative (-) → Terminal 7 (E)	Illumination comes on

If the result is not as specified, replace the power window regulator master switch.

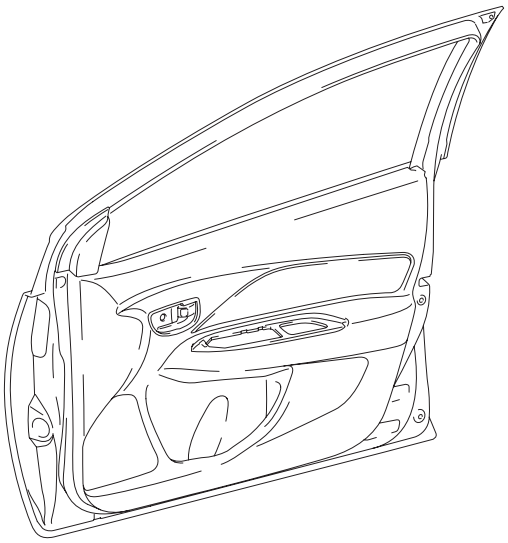


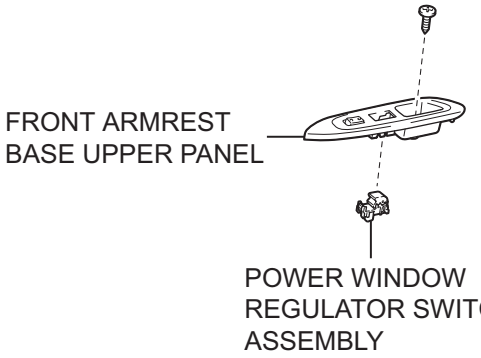
INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Install the power window regulator master switch with the 3 screws.
2. **INSTALL FRONT ARMREST BASE PANEL UPPER (See page ED-53)**
3. **INSTALL DOOR ARMREST COVER (See page ED-53)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT PASSENGER SIDE POWER WINDOW SWITCH (for Sedan)

COMPONENTS



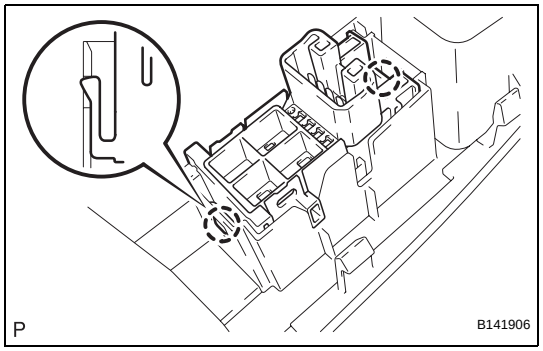


B144413E01

WS

REMOVAL

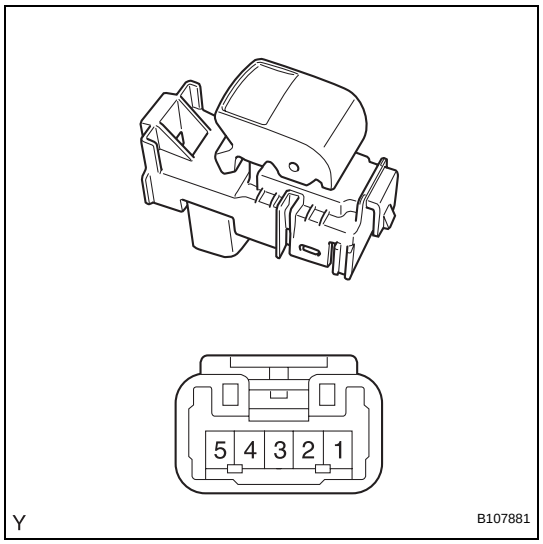
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)**
3. **REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the power window regulator switch.



INSPECTION

1. **INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

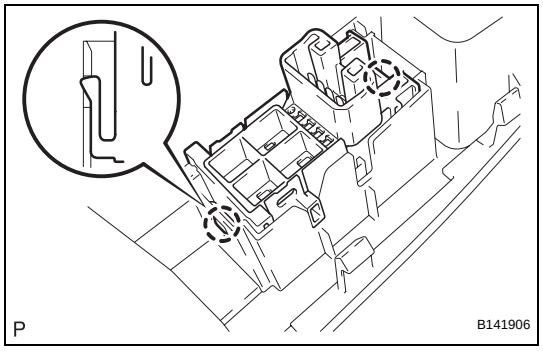
Tester Connection	Switch Connection	Specified Condition
1 - 2 3 - 4	UP	Below 1 Ω
1 - 2 4 - 5	OFF	Below 1 Ω
1 - 3 4 - 5	DOWN	Below 1 Ω



If the result is not as specified, replace the power window regulator switch.

INSTALLATION

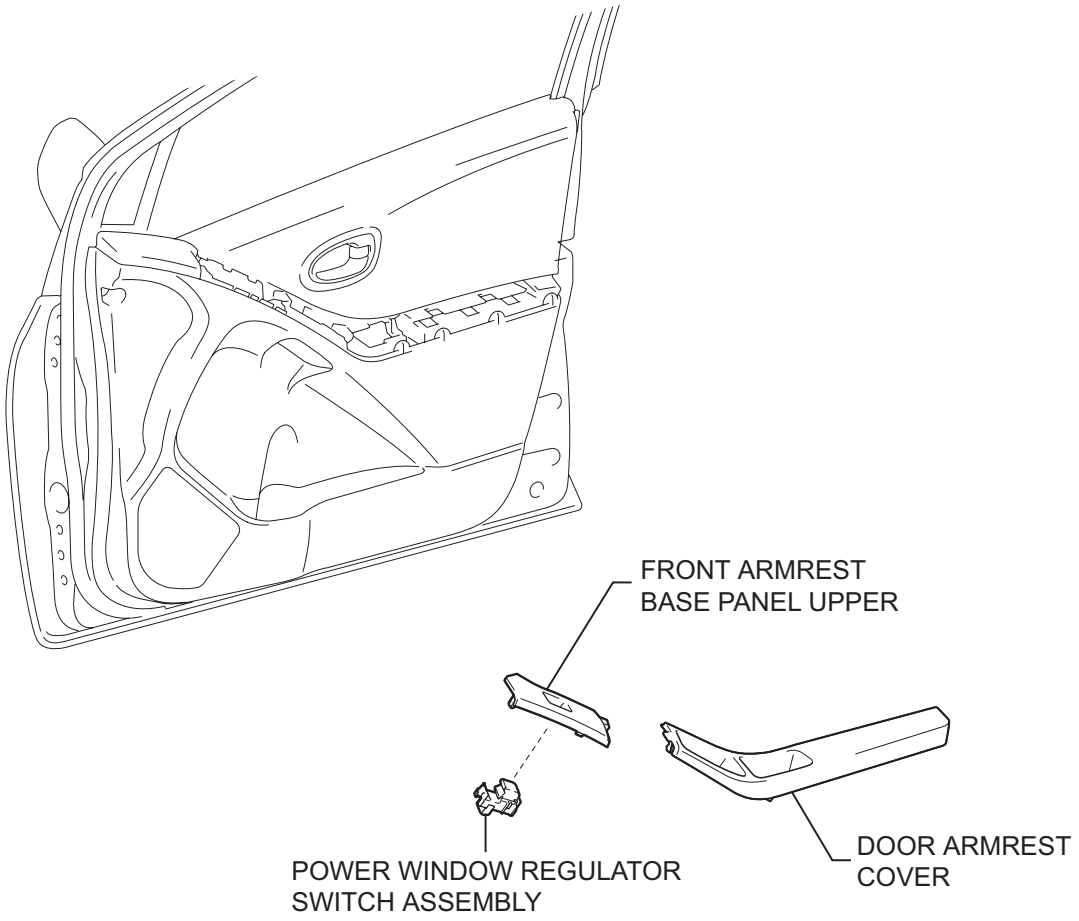
1. **INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the power window regulator switch.
2. **INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-28)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



WS

FRONT PASSENGER SIDE POWER WINDOW SWITCH (for Hatchback)

COMPONENTS



P

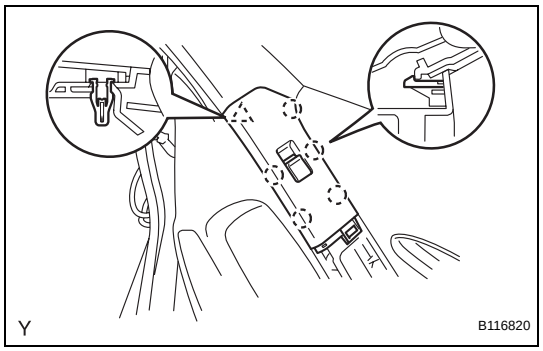
B121529E01

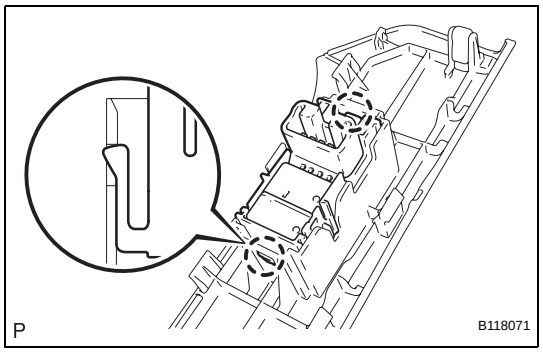
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE DOOR ARMREST COVER**
   HINT:
   Use the same procedure as for the LH side (see page ED-33).

3. **REMOVE FRONT ARMREST BASE PANEL UPPER**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws and clip and remove the front armrest base panel upper.
   (b) Disconnect the connector.



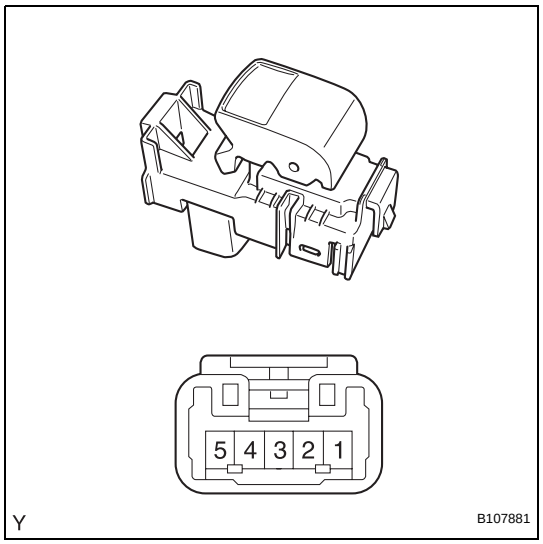


4. **REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Disengage the 2 claws and remove the power window regulator switch.

INSPECTION

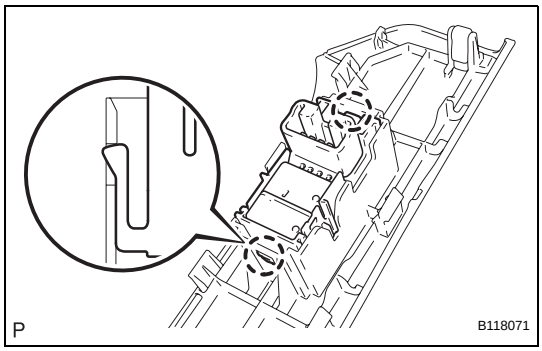
1. **INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the result in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Switch Connection	Specified Condition
1 - 2 3 - 4	UP	Below 1 Ω
1 - 2 4 - 5	OFF	Below 1 Ω
1 - 3 4 - 5	DOWN	Below 1 Ω



If the result is not as specified, replace the power window regulator switch.

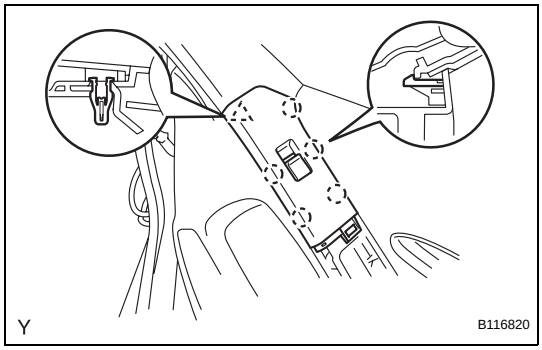
WS



INSTALLATION

1. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Engage the 2 claws and install the power window regulator switch.



2. INSTALL FRONT ARMREST BASE PANEL UPPER

(a) Connect the connector.

(b) Engage the 5 claws and clip and install the front armrest base panel upper.

3. INSTALL DOOR ARMREST COVER

HINT:

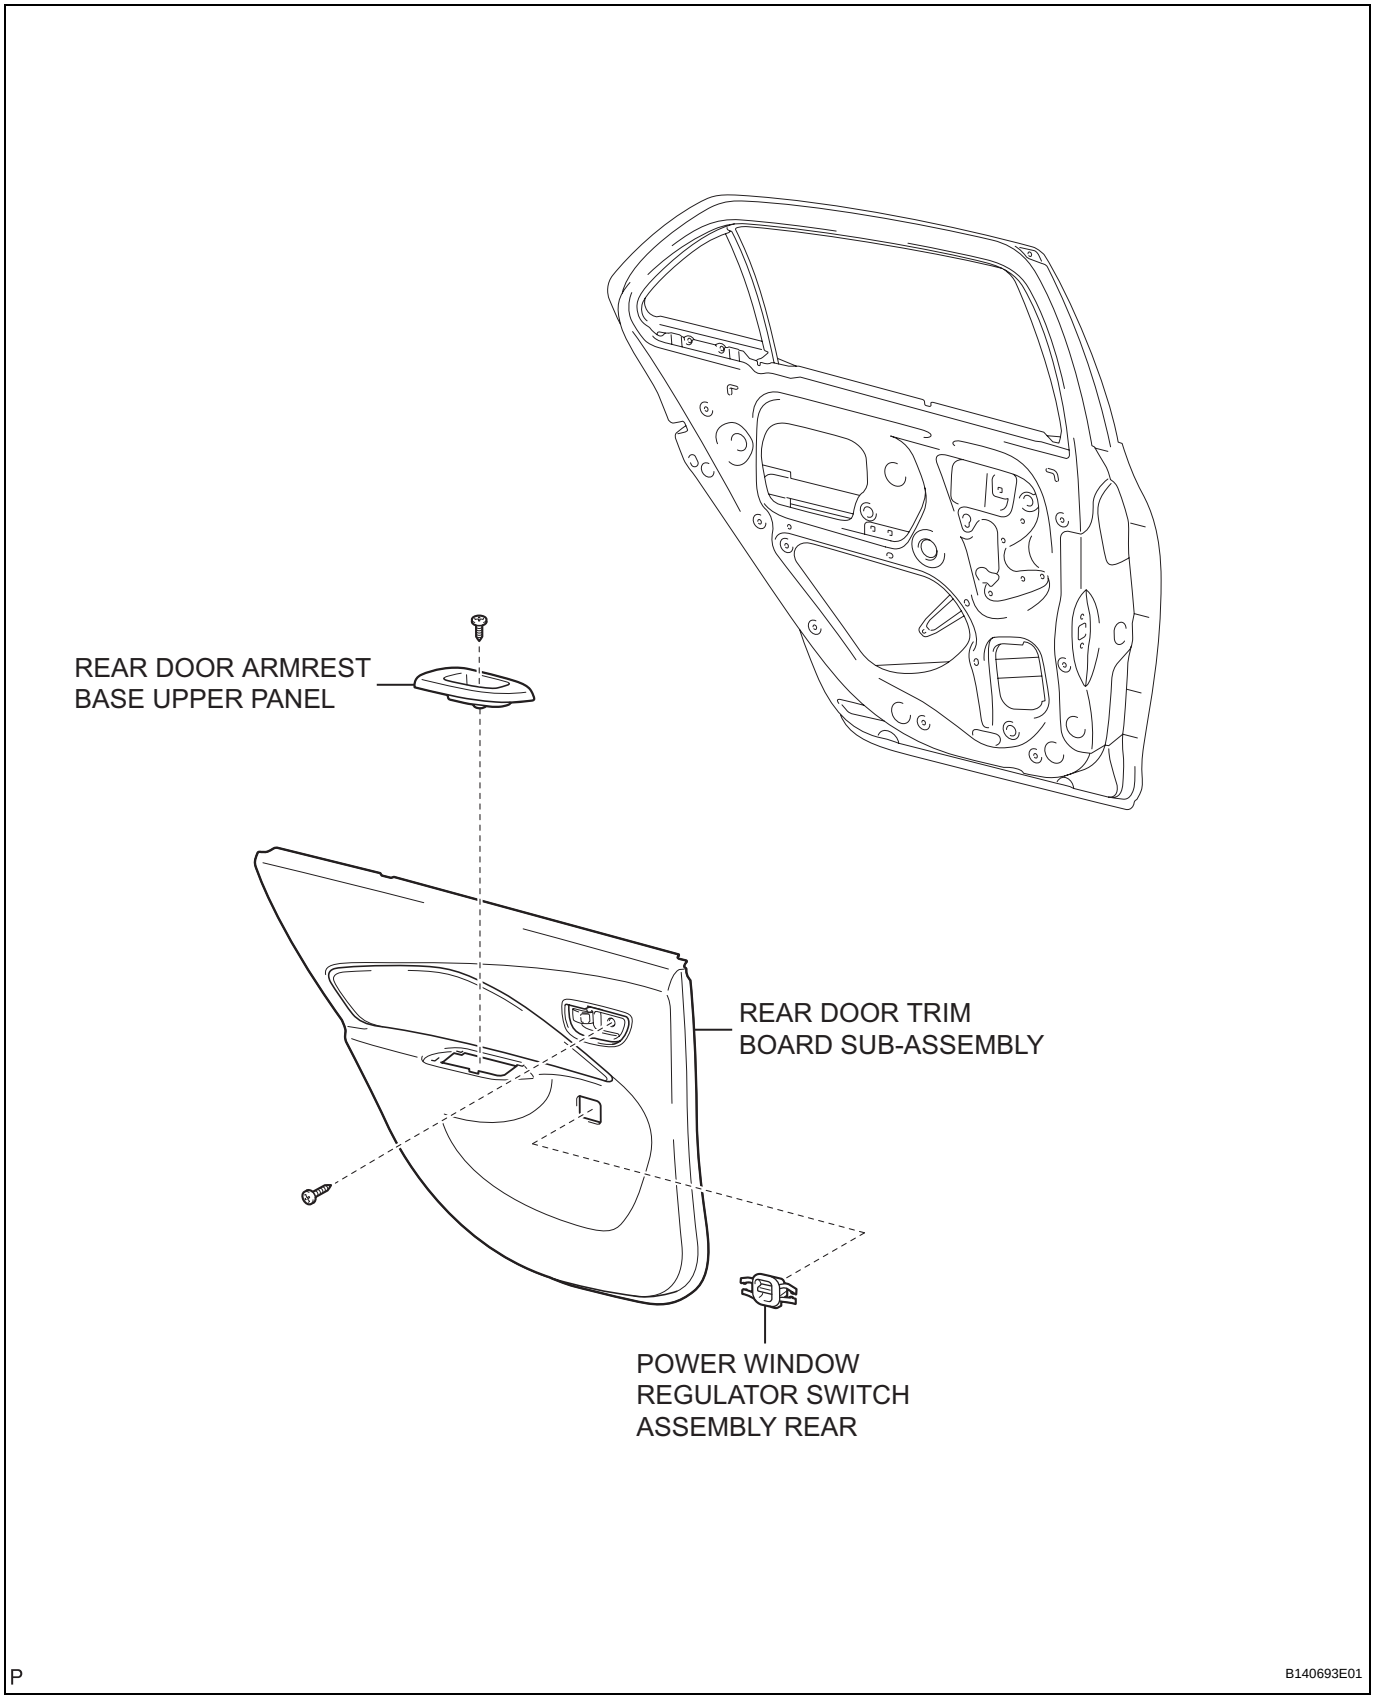
Use the same procedure as for the LH side (see page ED-53).

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

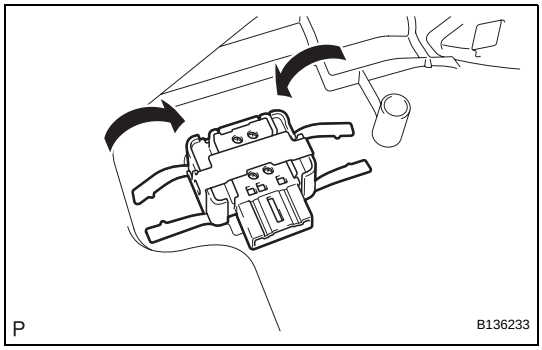
REAR POWER WINDOW SWITCH (for Sedan)

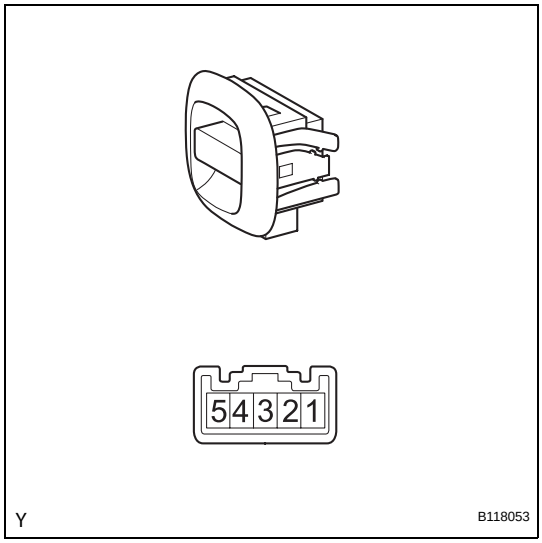
COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR DOOR ARMREST BASE UPPER PANEL (See page ED-79)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-79)**
4. **REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR**
   (a) Disengage the set plate and remove the power window regulator switch.





INSPECTION

1. **INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Switch Connection	Specified Condition
1 - 2 3 - 4	UP	Below 1 Ω
1 - 2 4 - 5	OFF	Below 1 Ω
2 - 3 4 - 5	DOWN	Below 1 Ω

If the result is not as specified, replace the power window regulator switch.

INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR**
   (a) Engage the set plate and install the power window regulator switch.
2. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-93)**
3. **INSTALL REAR DOOR ARMREST BASE UPPER PANEL (See page ED-94)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

ON-VEHICLE INSPECTION

1. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH FRONT

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

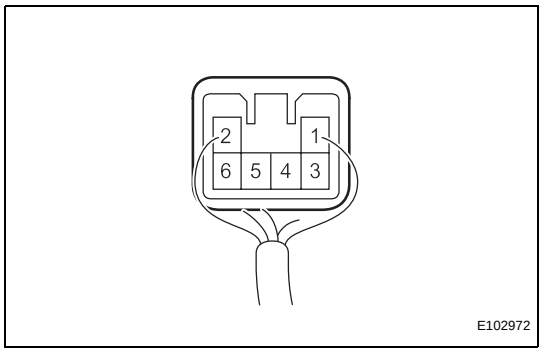
(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

(4) Check that the door glass moves downward when the power window DOWN switch is pressed.

If the result is not as specified, replace the power window regulator motor.



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH FRONT

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

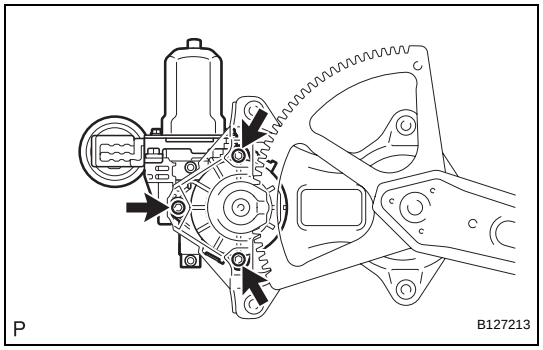
(4) Check that the door glass moves downward when the power window DOWN switch is pressed.
If the result is not as specified, replace the power window regulator motor.

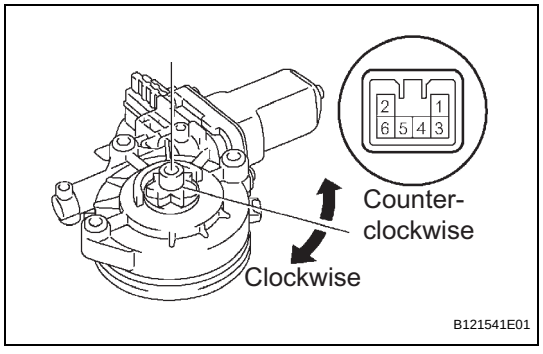
REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE DOOR ARMREST COVER (See page ED-33)**
3. **REMOVE FRONT ARMREST BASE PANEL UPPER (See page ED-33)**
4. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
5. **REMOVE FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-114)**
6. **REMOVE FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)**
7. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)**
8. **REMOVE FRONT DOOR BELT MOULDING (See page ET-91)**
9. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-36)**
10. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-36)**
11. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-37)**
12. **REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT**
    (a) Using "Torx" socket wrench T25, remove the 3 screws and the power window regulator motor.





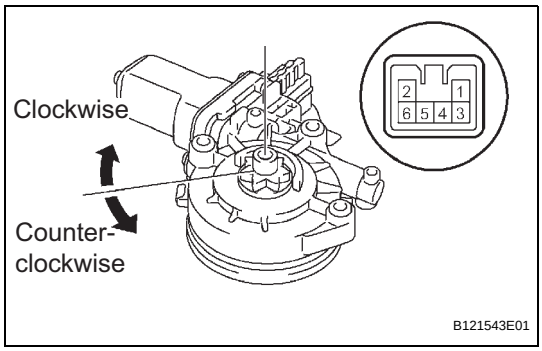
INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH FRONT**
   (a) Check the operation of the regulator motor.
      (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
      Standard

Measurement condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

WS

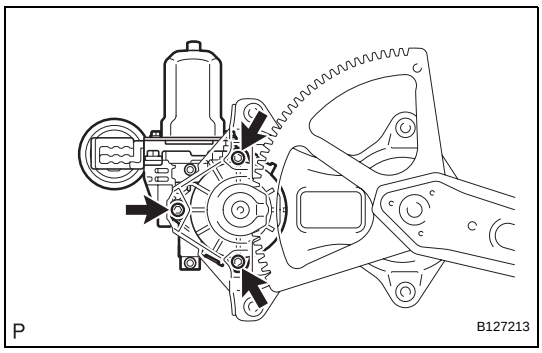
If the result is not as specified, replace the power window regulator motor.



2. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH FRONT**
   (a) Check the operation of the regulator motor.
      (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
      Standard

Measurement Condition	Specified Condition
Battery position (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery position (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT**
   (a) Apply MP grease to the sliding and rotating areas of the regulator motor.
   (b) Using "Torx" socket wrench T25, install the power window regulator motor assembly front with the 3 screws.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
2. **INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-48)**
3. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-49)**
4. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-50)**
5. **INSTALL FRONT DOOR BELT MOULDING (See page ET-92)**
6. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-16)**
7. **INSTALL FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)**
8. **INSTALL FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-115)**
9. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-51)**
10. **INSTALL FRONT ARMREST BASE PANEL UPPER (See page ED-53)**
11. **INSTALL DOOR ARMREST COVER (See page ED-53)**
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ON-VEHICLE INSPECTION

1. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH REAR

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

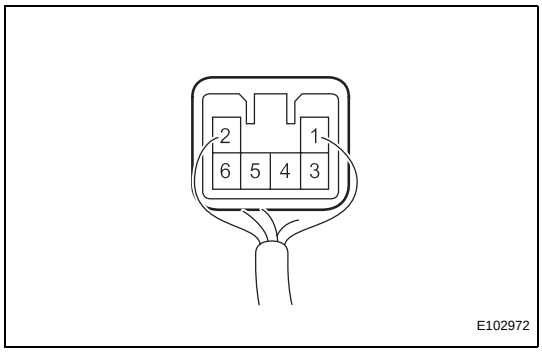
Standard:

4 to 90 seconds

(4) Check that the door glass moves downward when the power window DOWN switch is pressed.

If the result is not as specified, replace the power window regulator motor.

WS



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH FRONT

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

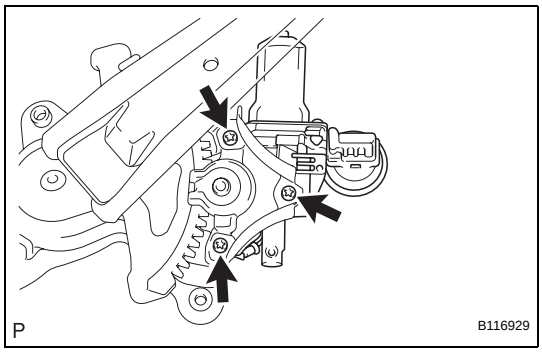
4 to 90 seconds

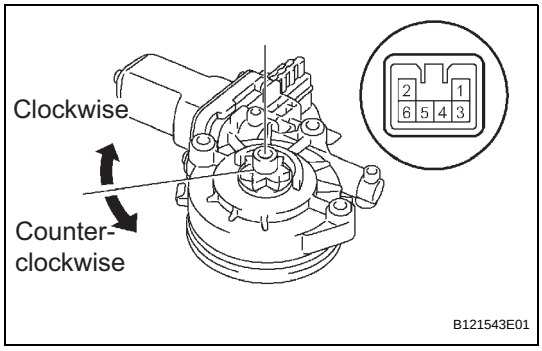
(4) Check that the door glass moves downward when the power window DOWN switch is pressed.
If the result is not as specified, replace the power window regulator motor.

REMOVAL

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-98)**
3. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-99)**
4. **REMOVE REAR DOOR CHECK ASSEMBLY (See page ED-99)**
5. **REMOVE REAR DOOR WEATHERSTRIP (See page ED-100)**
6. **REMOVE REAR DOOR BELT MOULDING (See page ET-97)**
7. **REMOVE REAR DOOR GLASS RUN (See page ED-100)**
8. **REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-100)**
9. **REMOVE REAR DOOR QUARTER WINDOW WEATHERSTRIP (See page ED-100)**
10. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-101)**
11. **REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-101)**
12. **REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR**
    (a) Using "Torx" socket wrench T25, remove the 3 screws and the power window regulator motor.





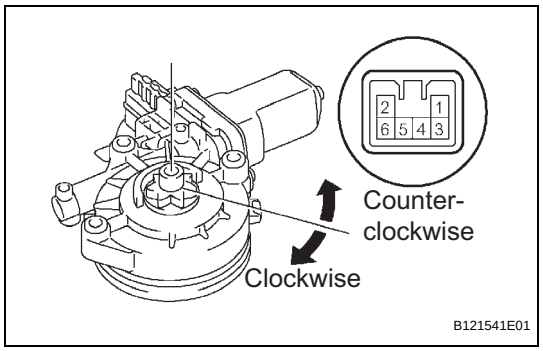
INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH REAR**
   (a) Check the operation of the regulator motor.
      (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
      Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH REAR

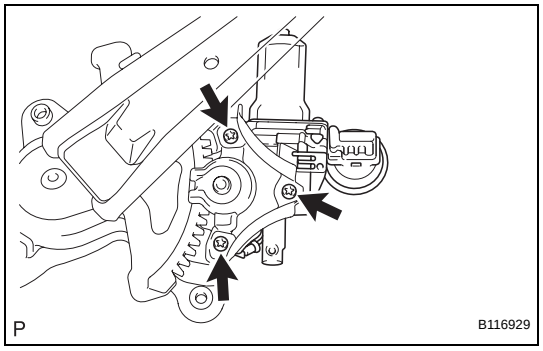
(a) Check the operation of the regulator motor.

(1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



INSTALLATION

1. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR

(a) Apply MP grease to the sliding and rotating areas of the regulator motor.

(b) Using "Torx" socket wrench T25, install the power window regulator motor with the 3 screws.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

2. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-108)

3. INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-108)

4. INSTALL REAR DOOR QUARTER WINDOW WEATHERSTRIP (See page ED-108)

5. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-108)

6. INSTALL REAR DOOR GLASS RUN (See page ED-109)

7. INSTALL REAR DOOR BELT MOULDING (See page ET-97)

8. INSTALL REAR DOOR WEATHERSTRIP (See page ED-109)

9. INSTALL REAR DOOR CHECK ASSEMBLY (See page ED-109)

10. INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-110)

11. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-111)

ON-VEHICLE INSPECTION

1. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH FRONT

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

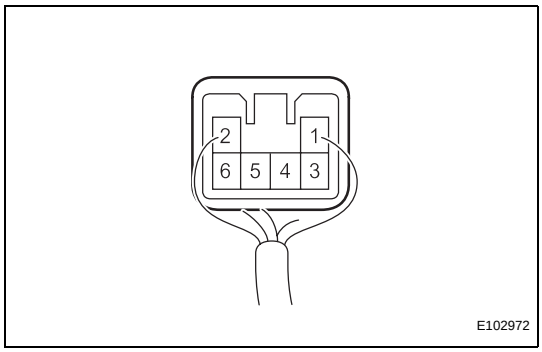
Standard:

4 to 90 seconds

(4) Check that the door glass moves downward when the power window DOWN switch is pressed.

If the result is not as specified, replace the power window regulator motor.

WS



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH FRONT

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

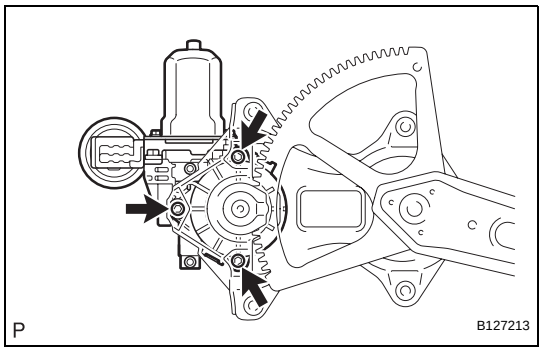
(4) Check that the door glass moves downward when the power window DOWN switch is pressed.
If the result is not as specified, replace the power window regulator motor.

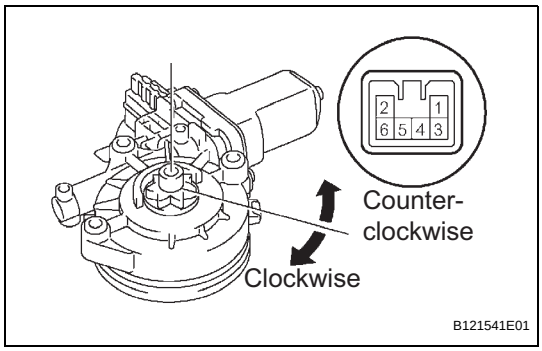
REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-9)**
3. **REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)**
4. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-11)**
5. **REMOVE OUTER REAR VIEW MIRROR (See page MI-8)**
6. **REMOVE FRONT DOOR BELT MOULDING (See page ET-85)**
7. **REMOVE FRONT DOOR TRIM BRACKET (See page ED-12)**
8. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-12)**
9. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-12)**
10. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-13)**
11. **REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT**
    (a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.



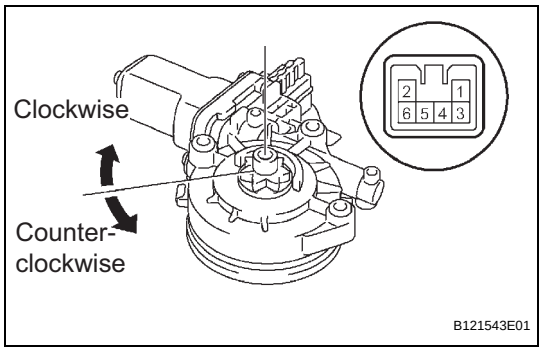


INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH FRONT**
   (a) Check the operation of the regulator motor.
      (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
      Standard

Measurement condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH FRONT

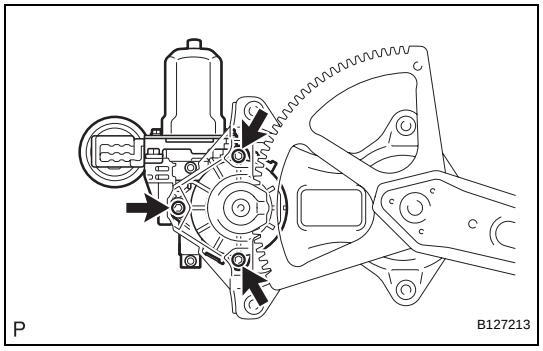
(a) Check the operation of the regulator motor.

(1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



INSTALLATION

1. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT

(a) Apply MP grease to the sliding and rotating areas of the regulator motor.

(b) Using "Torx" socket wrench T25, install the power window regulator motor assembly front with the 3 screws.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ON-VEHICLE INSPECTION

1. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH REAR

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

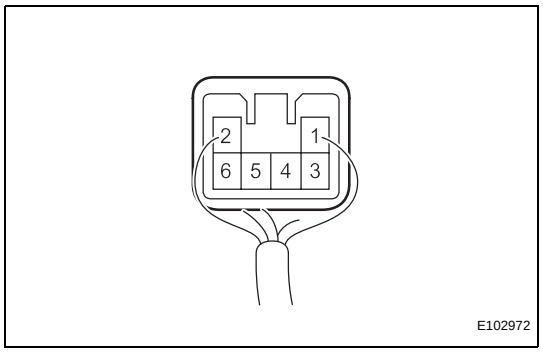
(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

(4) Check that the door glass moves downward when the power window DOWN switch is pressed.

If the result is not as specified, replace the power window regulator motor.



2. INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH REAR

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

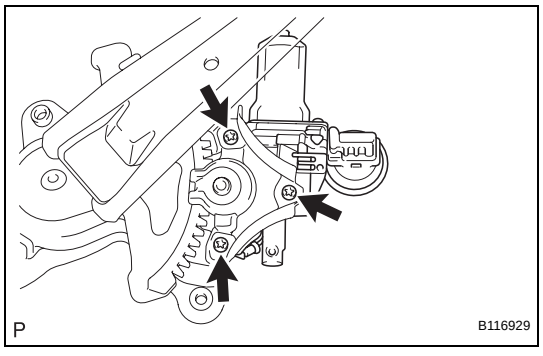
(4) Check that the door glass moves downward when the power window DOWN switch is pressed.
If the result is not as specified, replace the power window regulator motor.

REMOVAL

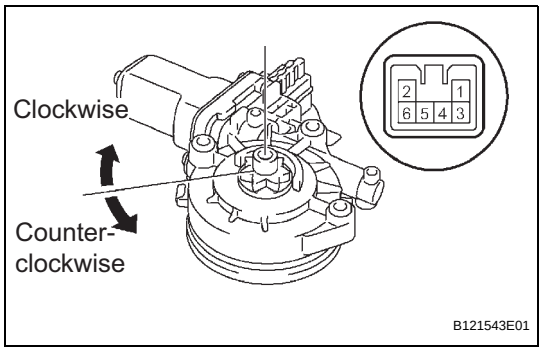
HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR DOOR ARMREST BASE UPPER PANEL (See page ED-79)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-79)**
4. **REMOVE REAR DOOR TRIM BRACKET (See page ED-80)**
5. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-80)**
6. **REMOVE REAR DOOR CHECK ASSEMBLY (See page ED-81)**
7. **REMOVE REAR DOOR WEATHERSTRIP (See page ED-81)**
8. **REMOVE REAR DOOR BELT MOULDING (See page ET-95)**
9. **REMOVE REAR DOOR GLASS RUN (See page ED-81)**
10. **REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-81)**
11. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-82)**
12. **REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-82)**
13. **REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR**
    (a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.



WS

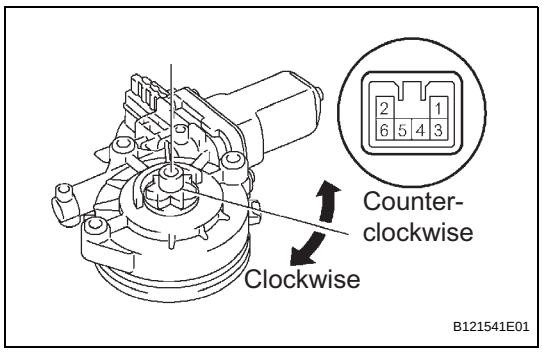


INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH REAR**
   (a) Check the operation of the regulator motor.
   (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.



2. **INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH REAR**
   (a) Check the operation of the regulator motor.
   (1) Apply battery voltage to the regulator motor and check the operation of the regulator motor.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

If the result is not as specified, replace the power window regulator motor.

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-9)**
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
5. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (See page WW-10)**
6. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (See page WW-10)**
7. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
8. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)**
9. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-14)**
10. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-14)**

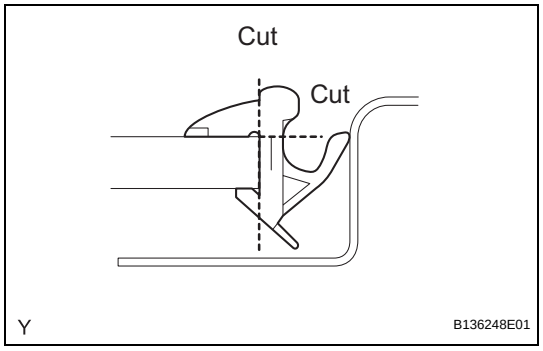
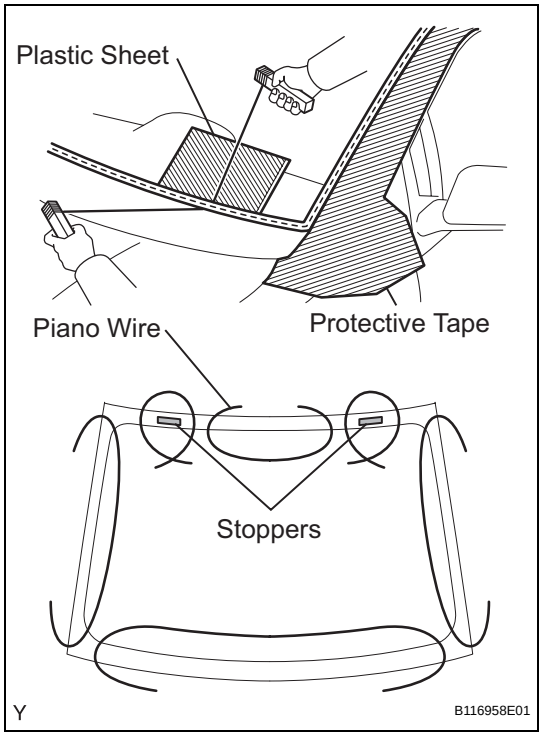
15. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-15)**
16. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
17. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
18. **REMOVE ASSIST GRIP COVER (See page IR-21)**
19. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-21)**
20. **REMOVE VISOR ASSEMBLY RH (See page IR-22)**

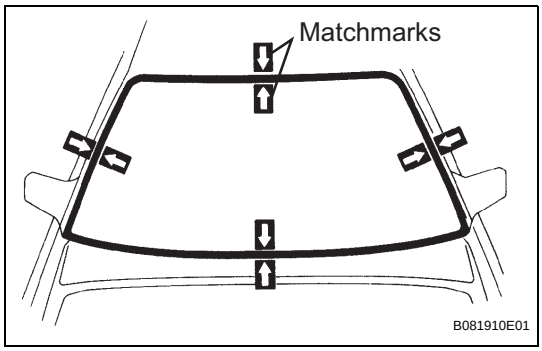
21. **REMOVE VISOR ASSEMBLY LH (See page IR-22)**
22. **REMOVE VISOR HOLDER RH (See page IR-22)**
23. **REMOVE VISOR HOLDER LH (See page IR-22)**
24. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-22)**
25. **REMOVE MAP LIGHT ASSEMBLY (See page IR-23)**
26. **REMOVE INNER REAR VIEW MIRROR (See page MI-5)**
27. **REMOVE ROOF HEADLINING ASSEMBLY**
    HINT:
    It is not necessary to remove the roof headlining completely. Slightly lower the front section of the roof headlining.



28. **REMOVE WINDSHIELD OUTSIDE MOULDING**
    (a) Using a knife, cut off the windshield outside moulding, as shown in the illustration.
    NOTICE:
    Do not damage the vehicle body with the knife.
    (b) Remove the windshield outside moulding.
    HINT:
    Make a partial cut in the windshield outside moulding. Then pull and remove it by hand.

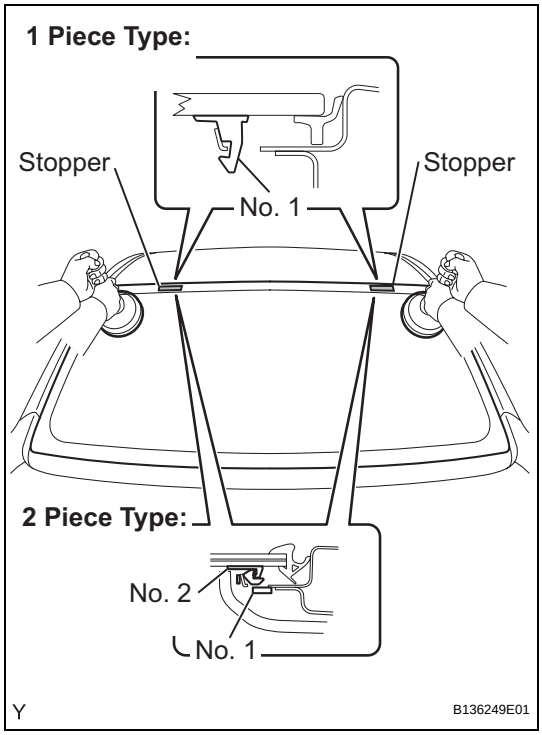


29. **REMOVE WINDSHIELD GLASS**
    (a) Apply protective tape to the outer circumference of the windshield glass, as shown in the illustration.
    (b) From the interior, insert piano wires between the vehicle body and the windshield glass, as shown in the illustration.
    (c) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.
    NOTICE:
    - **When separating the windshield glass from the vehicle, do not damage the vehicle's paintwork or exterior/interior ornaments.**
    - **To prevent the safety pad from being scratched when removing the windshield glass, place a plastic sheet between the piano wire and safety pad.**



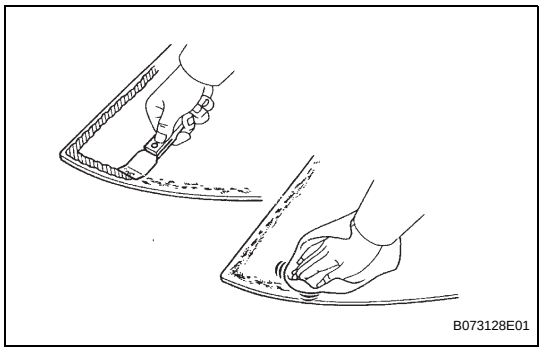
(d) Place matchmarks on the windshield glass and vehicle body in the locations indicated in the illustration.
HINT:
Matchmarks do not need to be placed unless the windshield glass is going to be reused.

(e) Cut through the adhesive by pulling the piano wire around the windshield glass.



(f) Disengage the 2 stoppers.

(g) Using suction cups, remove the windshield glass.
NOTICE:
Leave as much adhesive on the vehicle body as possible when removing the windshield glass.



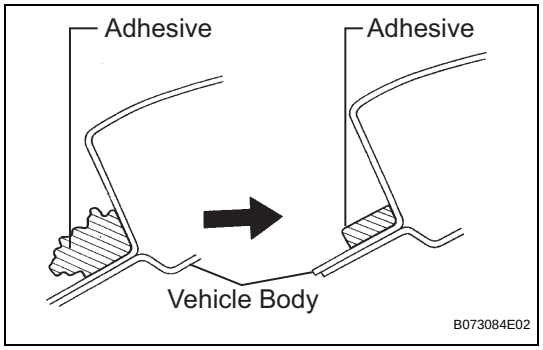
INSTALLATION

1. CLEAN WINDSHIELD GLASS

(a) Using a scraper, remove the stoppers, dam and adhesive from the windshield glass.

(b) Clean the outer circumference of the windshield glass with a non-residue solvent.
NOTICE:
- **Do not touch the windshield glass surface after cleaning it.**
- **Even if using a new windshield glass, clean the windshield glass with a non-residue solvent.**

WS



2. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:

Do not damage the vehicle body.

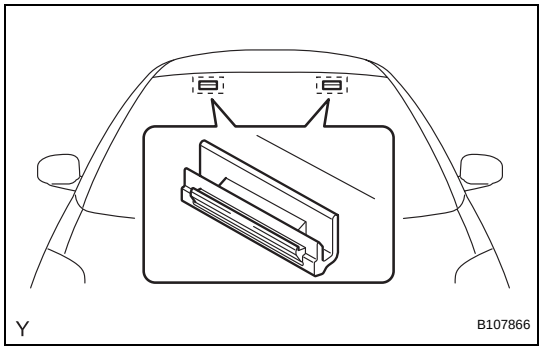
HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a shop rag or piece of cloth saturated with cleaner.

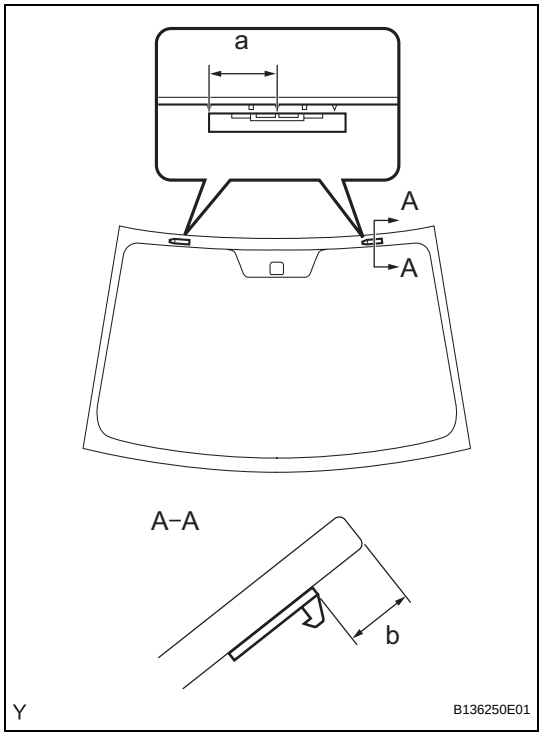
HINT:

Clean the vehicle body even if all the adhesive has been removed.



3. INSTALL WINDSHIELD GLASS STOPPER NO. 1

(a) Install 2 new stoppers onto the vehicle body, as shown in the illustration.



4. INSTALL WINDSHIELD GLASS STOPPER NO. 2

(a) Apply Primer G to the installation parts of the stoppers.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

(b) Install 2 new stoppers onto the windshield glass, as shown in the illustration.

Specification

Area	Measurement
a	40 mm (1.57 in.)
b	14.5 mm (0.571 in.)

5. INSTALL WINDOW GLASS ADHESIVE DAM

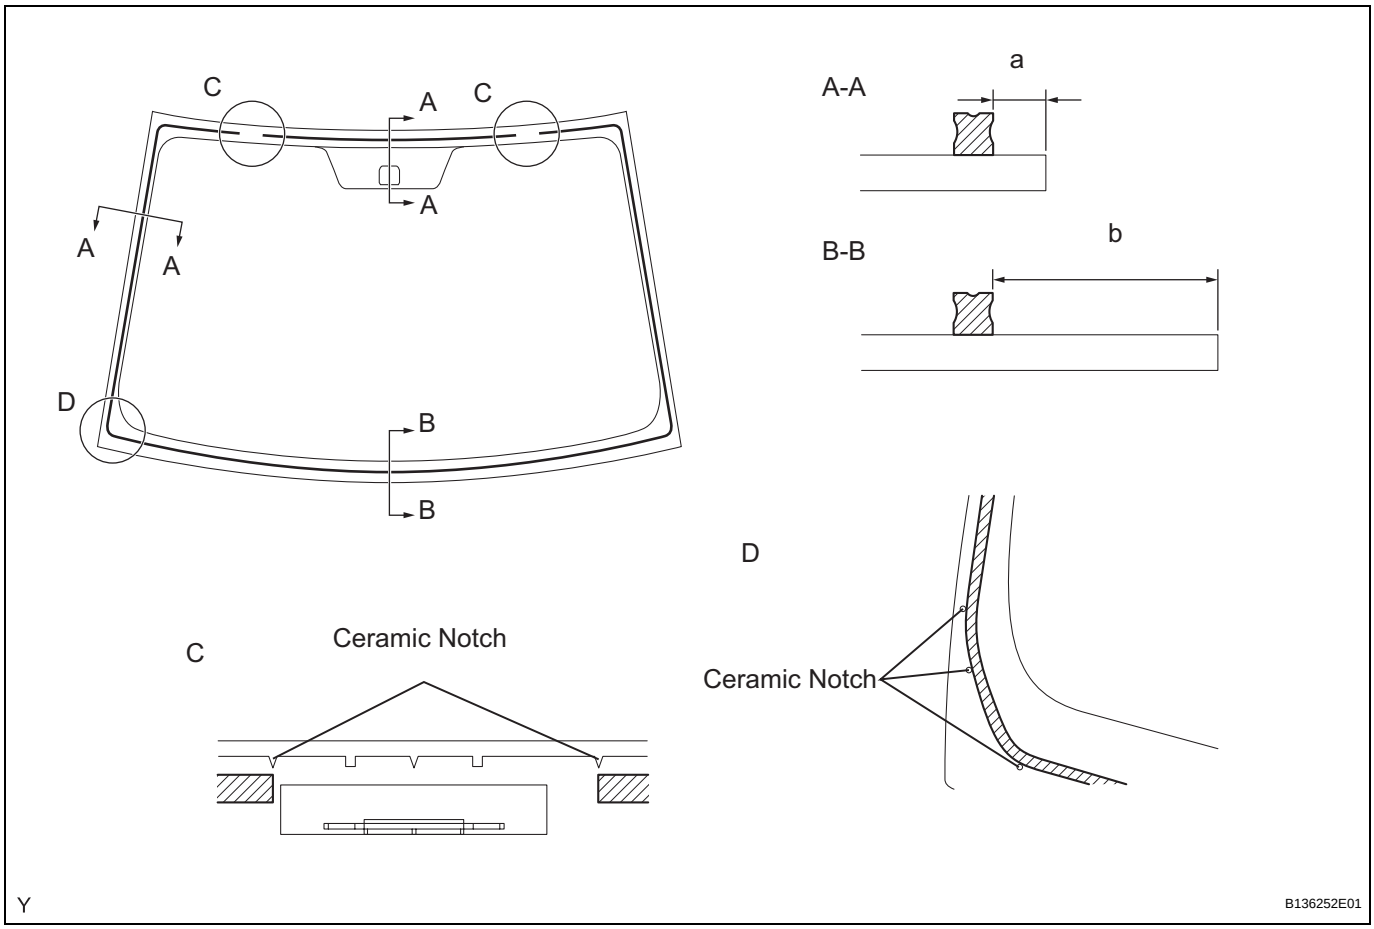
(a) Apply Primer G to the installation part of a new dam, as shown in the illustration.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

WS

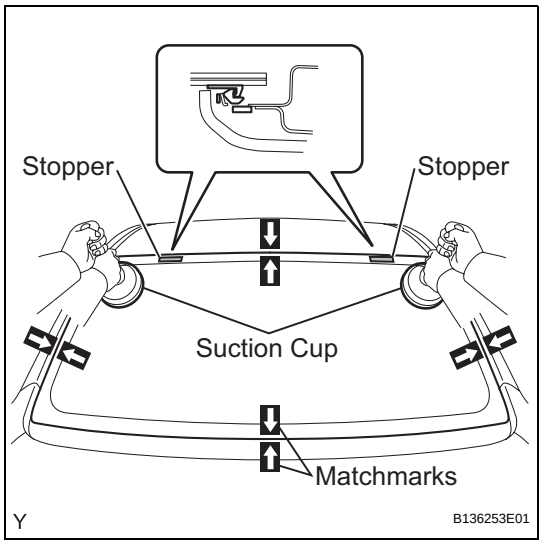
(b) Install the new dam with double-sided tape as shown in the illustration.



WS

Specification

Area	Measurement
a	7.0 mm (0.276 in.)
b	29.4 mm (1.157 in.)



6. INSTALL WINDSHIELD GLASS

(a) Position the windshield glass.

(1) Using suction cups, place the windshield glass in the correct position.

(2) Check that the entire contact surface of the windshield glass rim is perfectly even.

(3) Place matchmarks on the windshield glass and vehicle body.

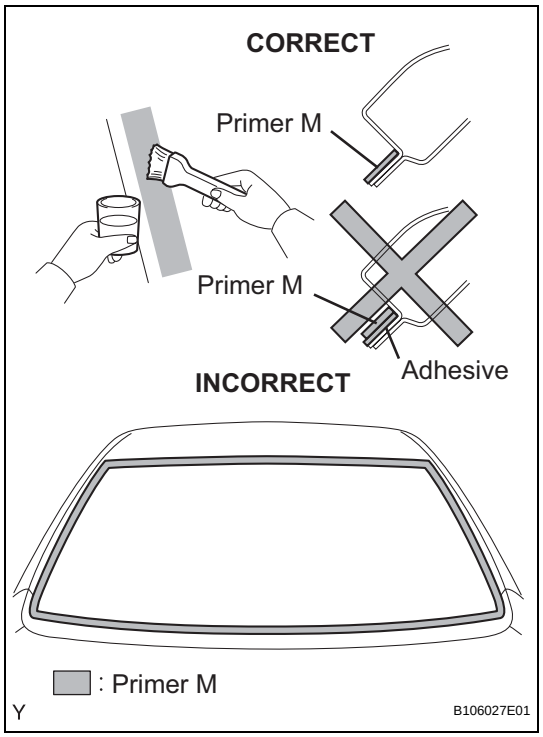
NOTICE:

Check that the stoppers are correctly attached to the vehicle body.

HINT:

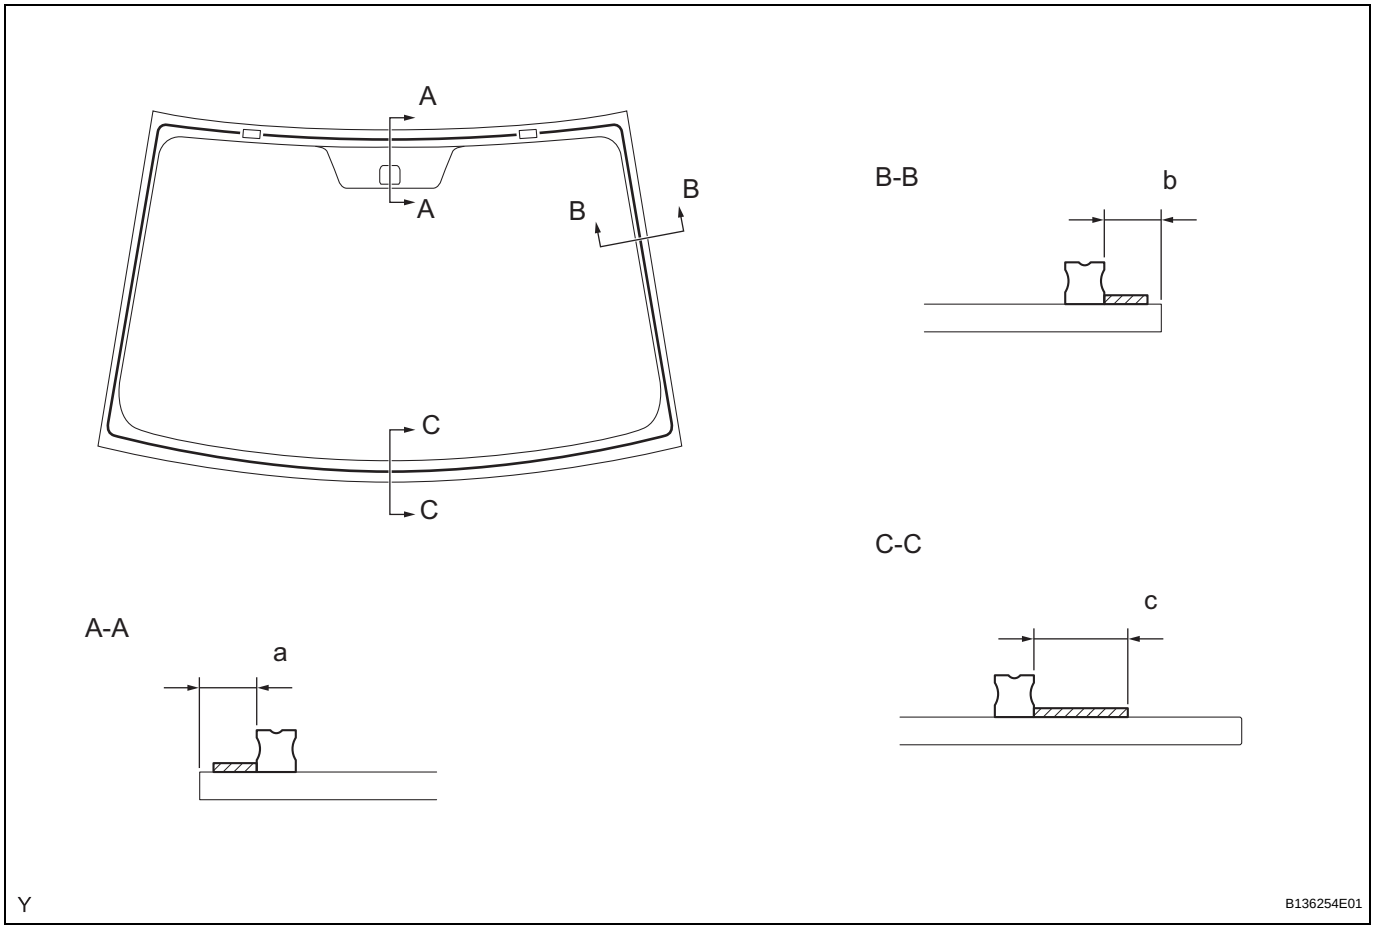
When reusing a windshield glass, check and correct the matchmark positions.

(4) Using suction cups, remove the windshield glass.



(b) Using a brush, apply Primer M to the exposed part of the vehicle body.
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

(c) Using a brush or sponge, apply Primer G to the edge of the windshield glass and the contact surface.



WS

Specification

Area	Measurement
a	7.0 mm (0.276 in.)
b	7.0 mm (0.276 in.)
c	16 mm (0.630 in.)

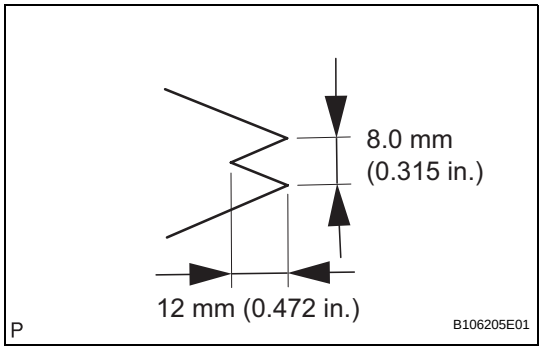
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

HINT:
If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.

(d) Apply adhesive.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or the equivalent.



(1) Cut the tip off the cartridge nozzle, as shown in the illustration.
HINT:
After cutting off the tip, use all the adhesive within the times indicated in the table below.

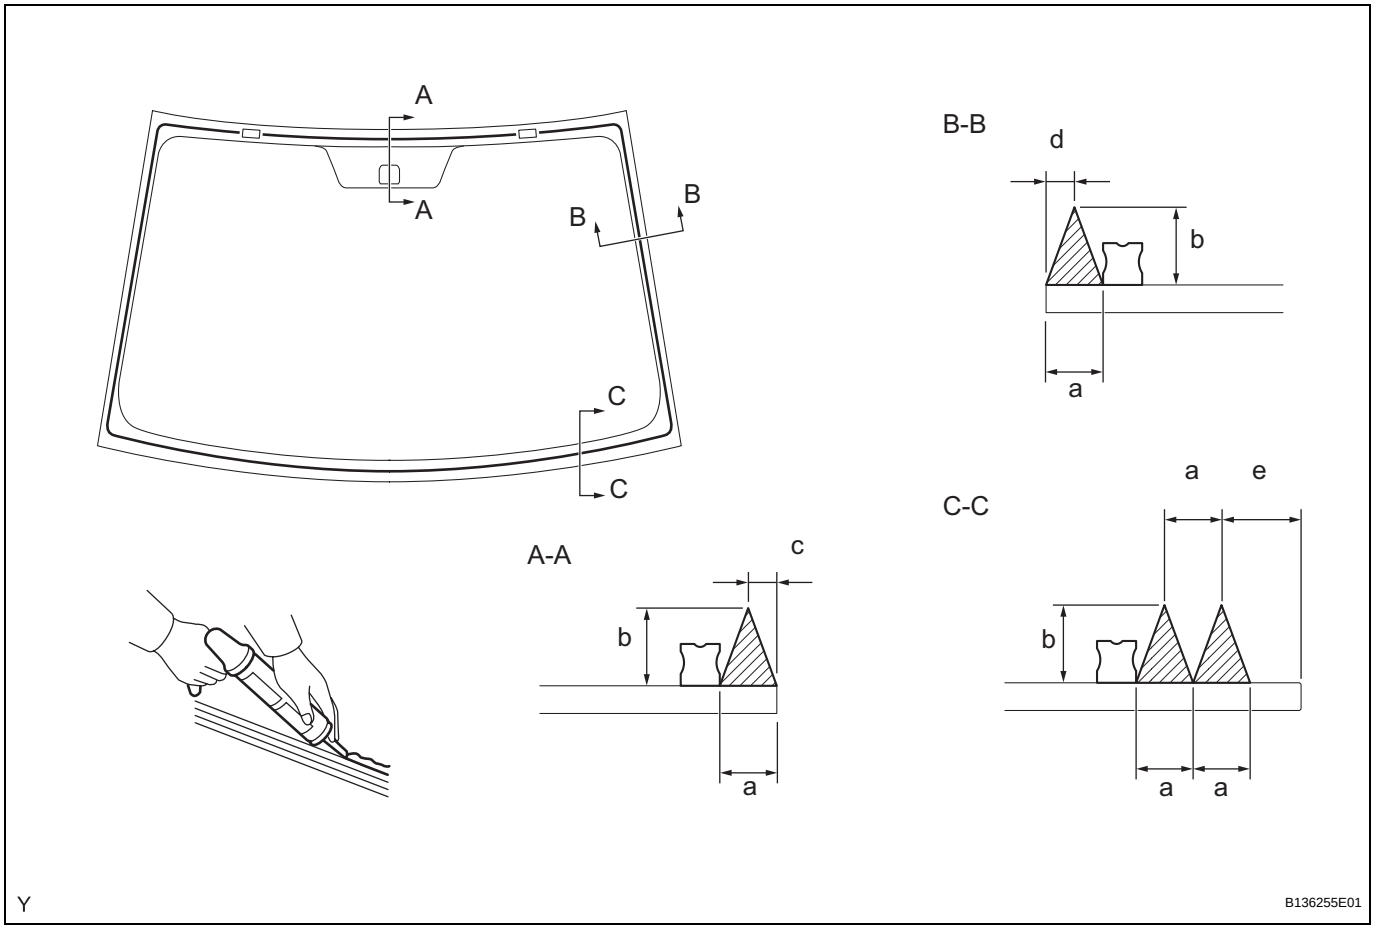
Usage time frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

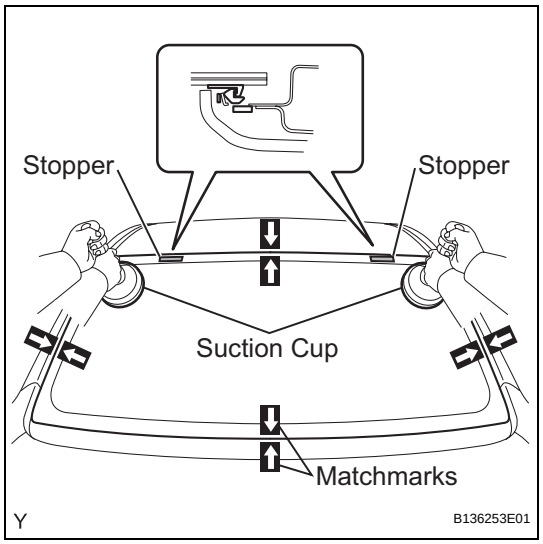
(3) Apply adhesive to the windshield glass, as shown in the illustration.

WS



Specification

Area	Measurement
a	8 mm (0.315 in.)
b	12 mm (0.472 in.)
c	3 mm (0.118 in.)
d	3 mm (0.118 in.)
e	17.4 mm (0.685 in.)



(e) Install the windshield glass onto the vehicle body.

(1) Using suction cups, position the windshield glass so that the matchmarks are aligned. Gently press it in along the rim.

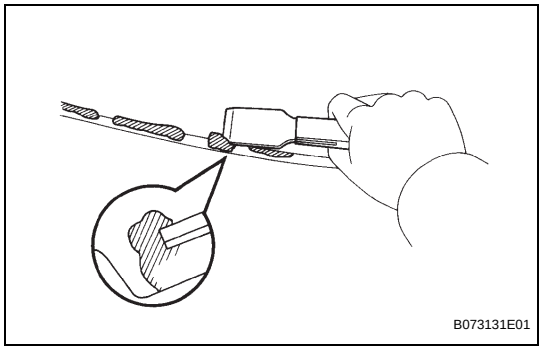
NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check that there is a small gap between the vehicle body and the windshield glass.**

(2) Gently press the front surface of the windshield glass to ensure that the windshield glass is securely fitted to the vehicle body.

NOTICE:

Open and close the door gently to prevent the window glass from becoming loose due to the air pressure when the door is closed.



(3) Using a scraper, remove any excessive or protruding adhesive.

HINT:

Apply adhesive to the windshield glass rim.

NOTICE:

Do not drive the vehicle within the time indicated in the table below.

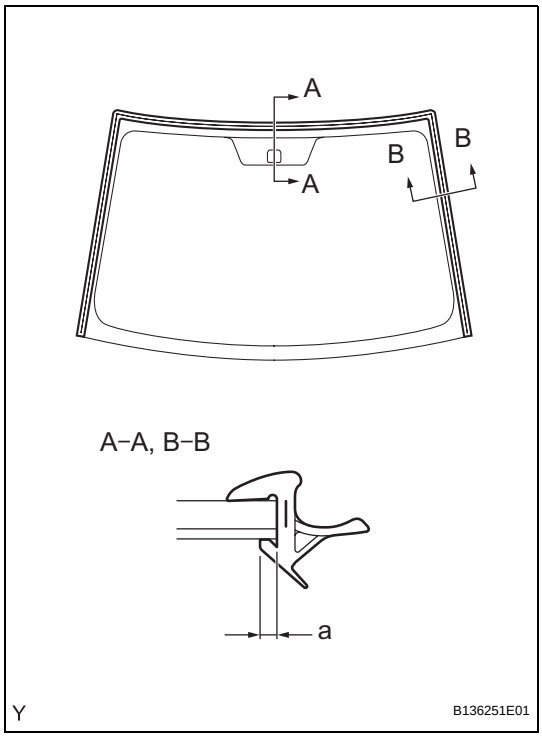
Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

7. INSTALL WINDSHIELD OUTSIDE MOULDING

NOTICE:

After the installation of the window glass, install the moulding before the adhesive hardens.



(a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer G.**
- **Throw away any leftover Primer G.**

(b) Install a new moulding onto the windshield glass, as shown in the illustration.

Specification

Area	Measurement
a	2 mm (0.0787 in.)

NOTICE:
Make sure that the moulding is securely installed.

8. CHECK FOR LEAKAGE AND REPAIR

(a) Conduct a leak test by applying water to the adhesive portions after the adhesive has completely hardened.

(b) Seal any leaks with auto glass sealer.

9. INSTALL ROOF HEADLINING ASSEMBLY

10. INSTALL INNER REAR VIEW MIRROR (See page MI-6)

11. INSTALL MAP LIGHT ASSEMBLY (See page LI-148)

12. INSTALL ROOM LIGHT ASSEMBLY (See page LI-151)

13. INSTALL VISOR HOLDER RH (See page IR-28)

14. INSTALL VISOR HOLDER LH (See page IR-28)

15. INSTALL VISOR ASSEMBLY RH (See page IR-28)

16. INSTALL VISOR ASSEMBLY LH (See page IR-28)

17. INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-28)

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (see page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-17)**
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-17)**
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-17)**
5. **REMOVE HOOD TO COWL TOP SEAL (See page WW-18)**
6. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-18)**
7. **REMOVE COWL TOP VENTILATOR LOUVER LH (See page WW-18)**
8. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)**
9. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-49)**

11. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)**
12. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
13. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)**
14. **REMOVE ROOF HEADLINING SERVICE HOLE COVER (w/o Curtain Shield Airbag) (See page IR-55)**
15. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-56)**
16. **REMOVE VISOR ASSEMBLY RH (See page IR-56)**
17. **REMOVE VISOR ASSEMBLY LH (See page IR-56)**
18. **REMOVE VISOR HOLDER RH (See page IR-56)**
19. **REMOVE VISOR HOLDER LH (See page IR-56)**
20. **REMOVE MAP LIGHT ASSEMBLY (See page LI-147)**

21. REMOVE FRONT PILLAR GARNISH RH (See page IR-58)

22. REMOVE FRONT PILLAR GARNISH LH (See page IR-59)

23. REMOVE ROOF HEADLINING

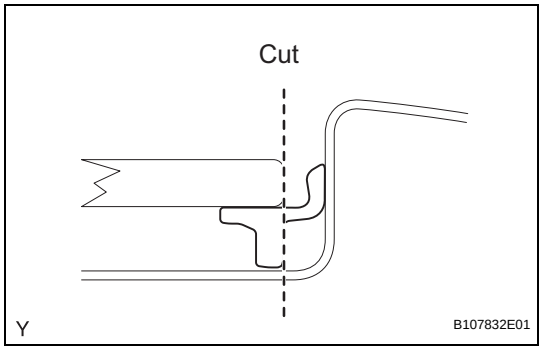
HINT:
It is not necessary to remove the roof headlining completely. Slightly lower the front section of the roof headlining.

24. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (See page MI-5)

25. REMOVE WINDSHIELD OUTSIDE MOULDING

(a) Using a knife, cut off the windshield outside moulding, as shown in the illustration.
NOTICE:
Do not damage the vehicle body with the knife.

(b) Remove the windshield outside moulding.
HINT:
Make a partial cut in the windshield outside moulding. Then pull and remove it by hand.

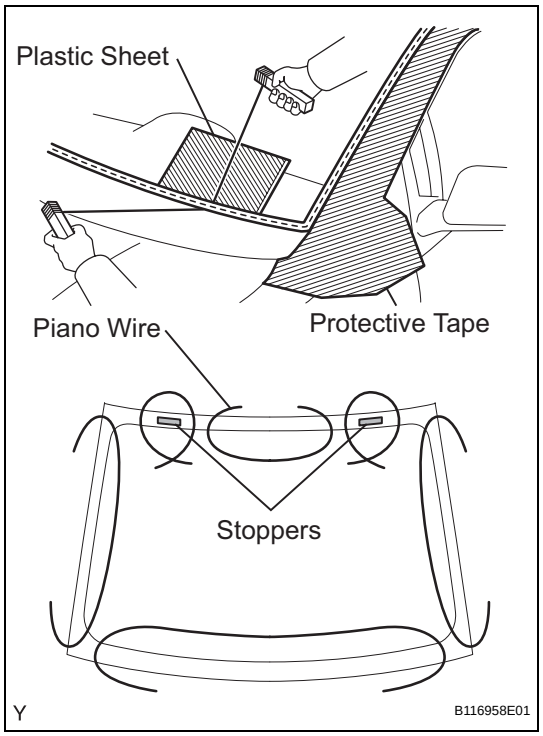


26. REMOVE WINDSHIELD GLASS

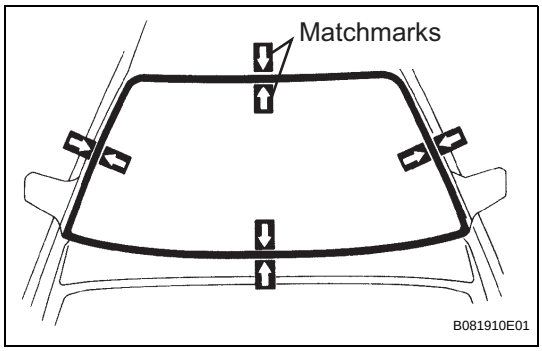
(a) Apply protective tape to the outer circumference of the windshield glass, as shown in the illustration.

(b) From the interior, insert piano wires between the vehicle body and the windshield glass, as shown in the illustration.

(c) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.
NOTICE:
- **When separating the windshield glass from the vehicle, do not damage the vehicle's paintwork or exterior/interior ornaments.**
- **To prevent the safety pad from being scratched when removing the windshield glass, place a plastic sheet between the piano wire and safety pad.**

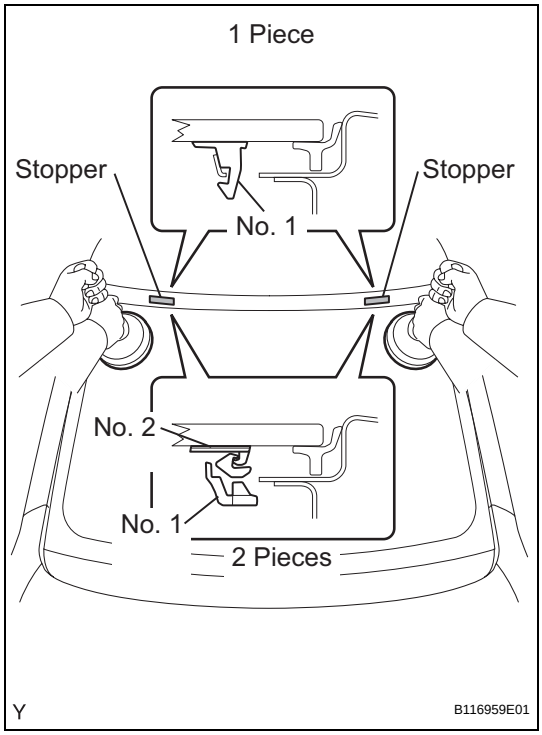


WS



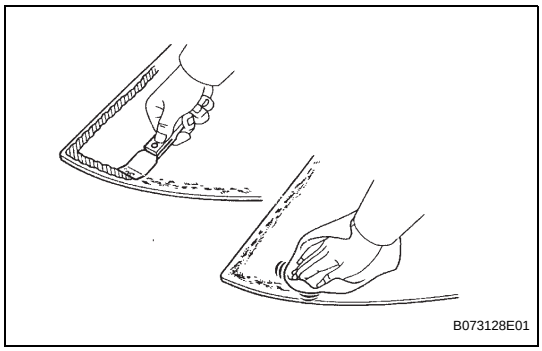
(d) Place matchmarks on the windshield glass and vehicle body in the locations indicated in the illustration.
HINT:
Matchmarks do not need to be placed unless the windshield glass is going to be reused.

(e) Cut through the adhesive by pulling the piano wire around the windshield glass.



(f) Disengage the 2 stoppers.

(g) Using suction cups, remove the windshield glass.
NOTICE:
Leave as much adhesive on the vehicle body as possible when removing the windshield glass.



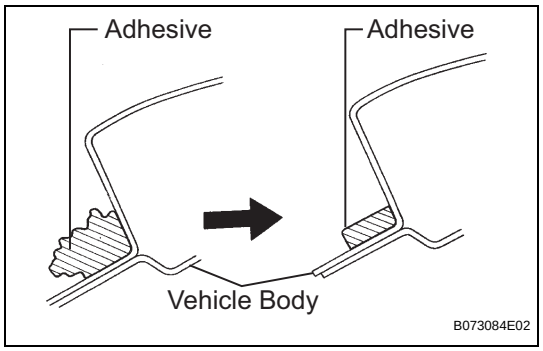
INSTALLATION

1. CLEAN WINDSHIELD GLASS

(a) Using a scraper, remove the damaged stoppers, dam and adhesive from the windshield glass.

(b) Clean the outer circumference of the windshield glass with a non-residue solvent.
NOTICE:
- **Do not touch the windshield glass surface after cleaning it.**
- **Even if using a new windshield glass, clean the windshield glass with a non-residue solvent.**

WS



2. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:

Do not damage the vehicle body.

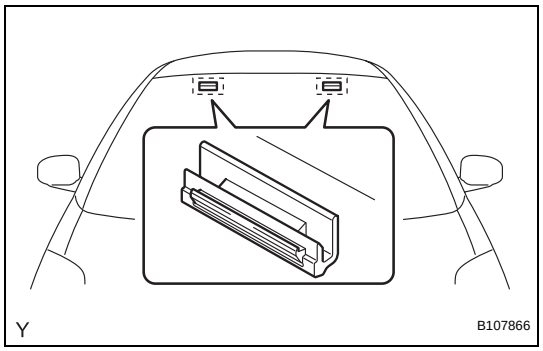
HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a shop rag or piece of cloth saturated with cleaner.

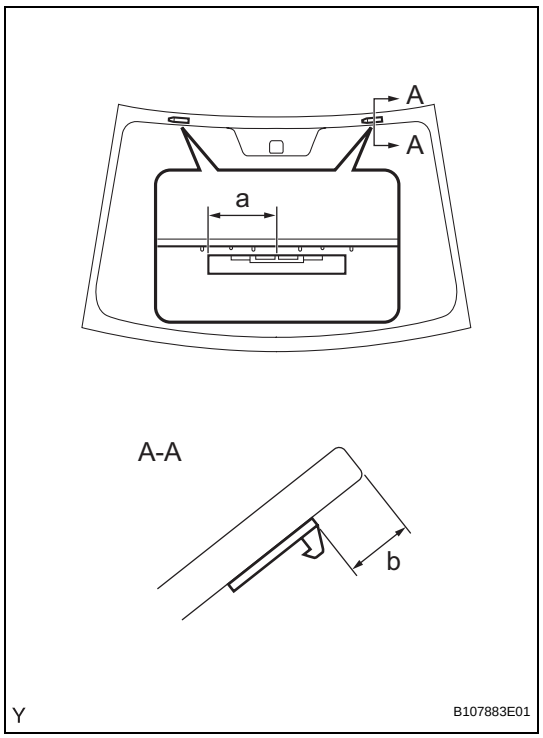
HINT:

Clean the vehicle body even if all the adhesive has been removed.



3. INSTALL WINDSHIELD GLASS STOPPER NO. 1

(a) Install 2 new stoppers onto the vehicle body, as shown in the illustration.



4. INSTALL WINDSHIELD GLASS STOPPER NO. 2

(a) Apply Primer G to the installation parts of the stoppers.

NOTICE:

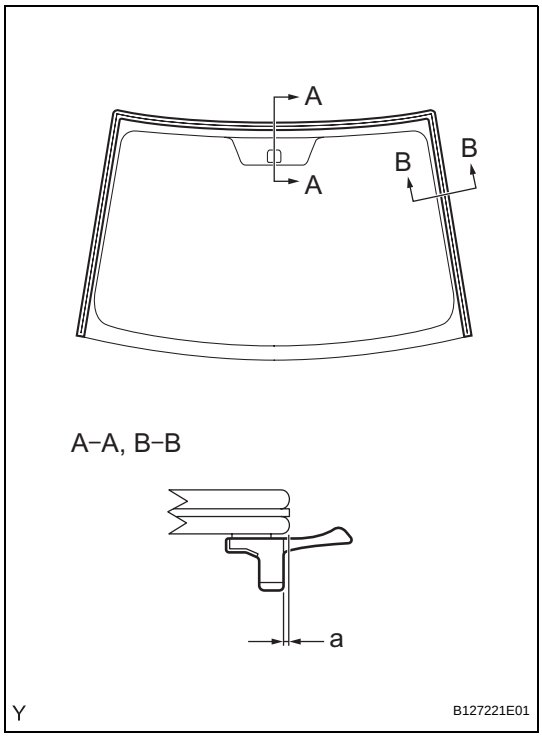
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

(b) Install 2 new stoppers onto the windshield glass, as shown in the illustration.

Specification

Area	Measurement
a	40 mm (1.57 in.)
b	14.5 mm (0.571 in.)

WS



5. INSTALL WINDSHIELD OUTSIDE MOULDING

(a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer G.**
- **Throw away any leftover Primer G.**

(b) Install the moulding onto the windshield glass, as shown in the illustration.

Specification

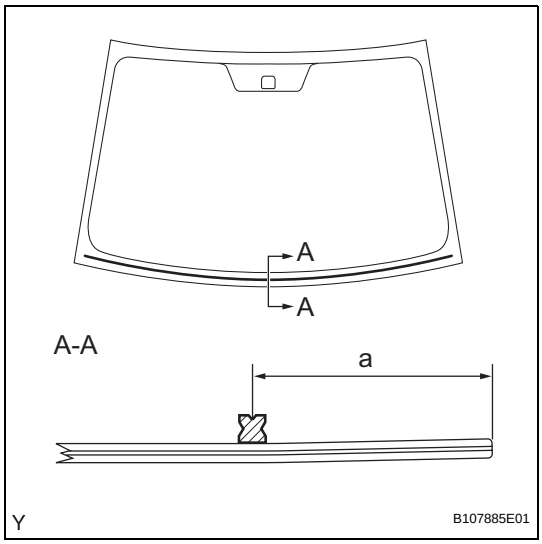
Area	Measurement
a	0.1 mm (0.004 in.)

6. INSTALL WINDOW GLASS ADHESIVE DAM

(a) Apply Primer G to the installation part of a new dam, as shown in the illustration.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

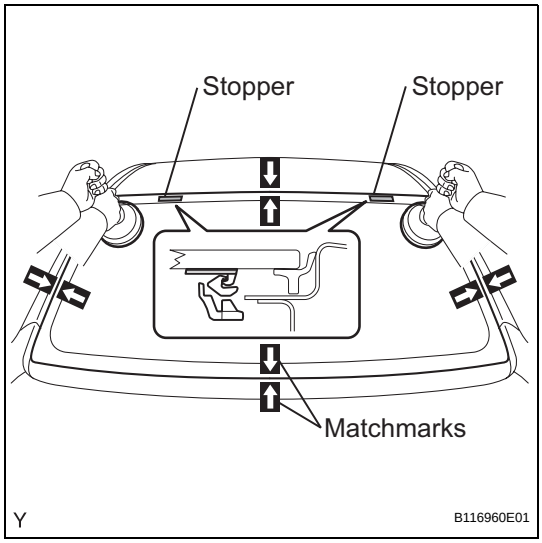


(b) Install the new dam with double-sided tape as shown in the illustration.

Specification

Area	Measurement
a	32 mm (1.26 in.)

WS



7. INSTALL WINDSHIELD GLASS

(a) Position the windshield glass.

(1) Using suction cups, place the windshield glass in the correct position.

(2) Check that the entire contact surface of the windshield glass rim is perfectly even.

(3) Place matchmarks on the windshield glass and vehicle body.

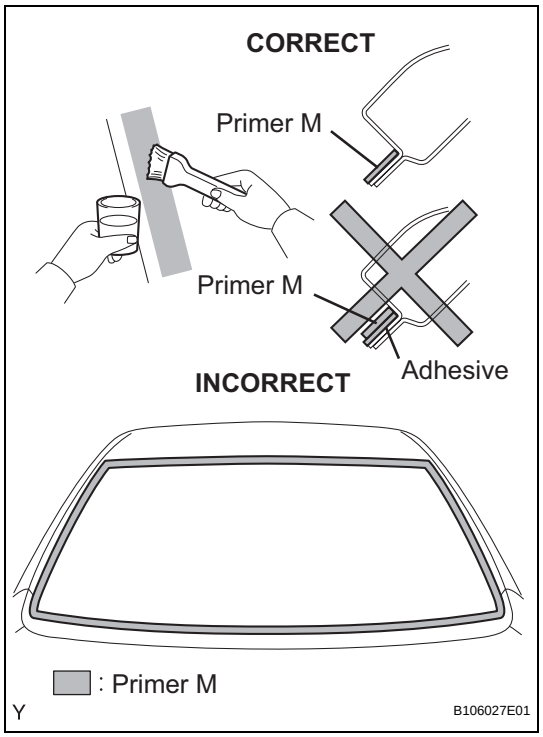
NOTICE:

Check that the stoppers are correctly attached to the vehicle body.

HINT:

When reusing a windshield glass, check and correct the matchmark positions.

(4) Using suction cups, remove the windshield glass.

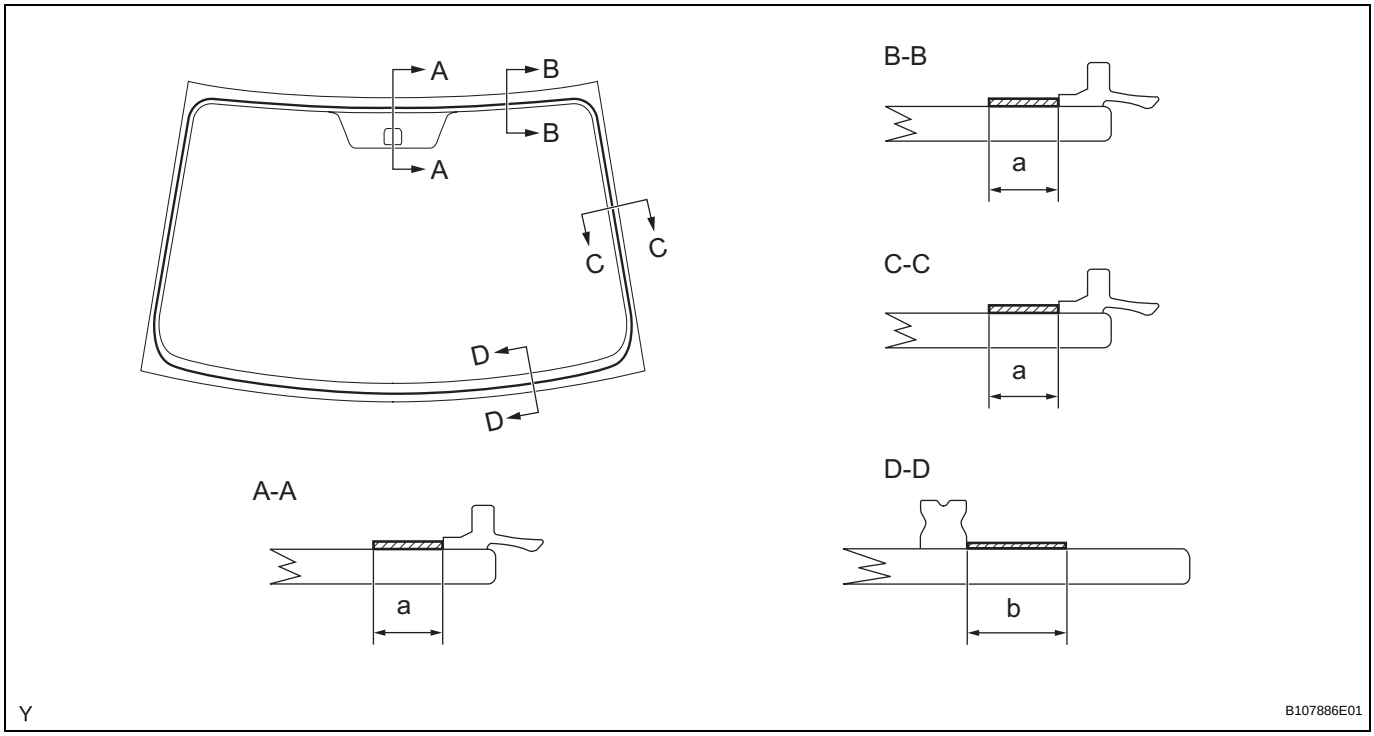


(b) Using a brush, apply Primer M to the exposed part of the vehicle body.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

(c) Using a brush or sponge, apply Primer G to the edge of the windshield glass and the contact surface.



Specification

Area	Measurement
a	8.0 mm (0.315 in.)
b	19 mm (0.748 in.)

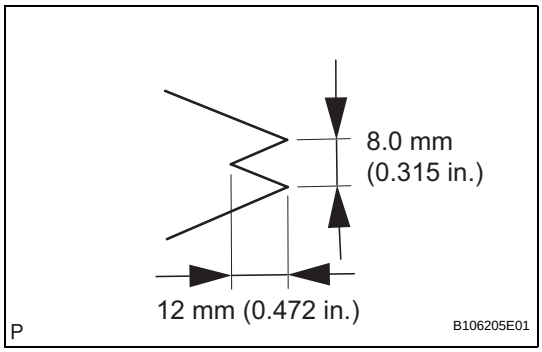
NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

WS

HINT:
If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.

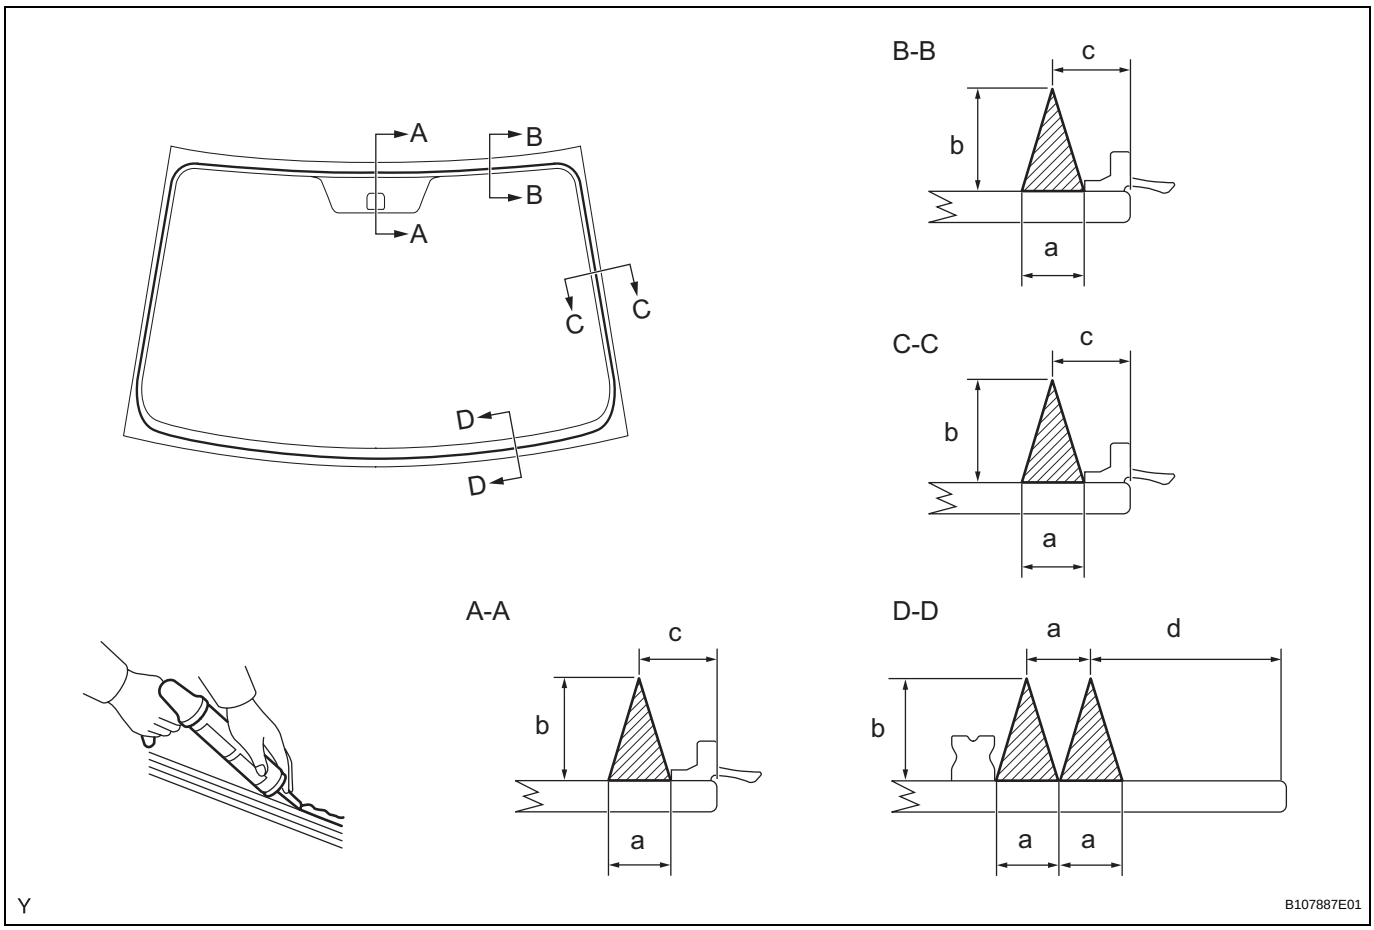
(d) Apply adhesive.
Adhesive:
Part No. 08850-00801 or the equivalent



(1) Cut the tip off the cartridge nozzle, as shown in the illustration.
HINT:
After cutting off the tip, use all adhesive within the times indicated in the table below.
Usage Time Frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.
(3) Apply adhesive to the windshield glass, as shown in the illustration.

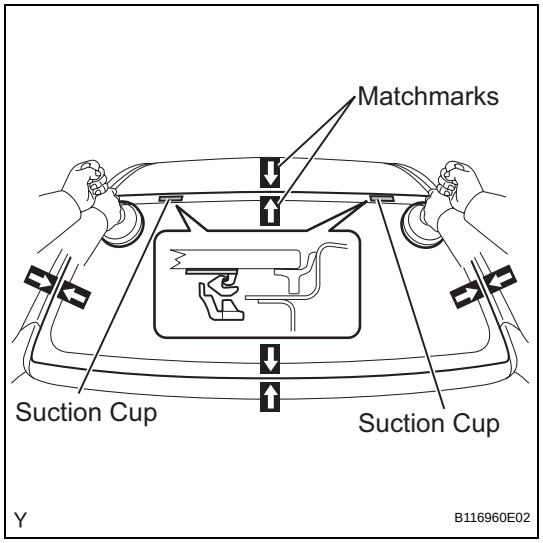


WS

Specification

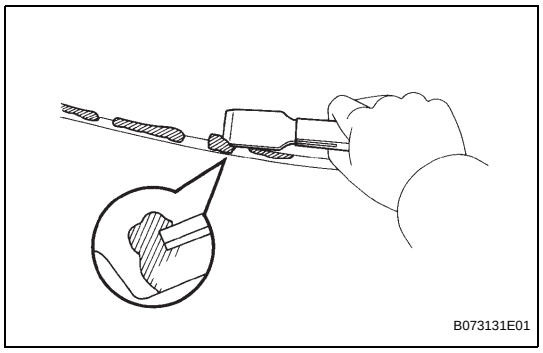
Area	Measurement
a	8 mm (0.315 in.)
b	12 mm (0.472 in.)
c	10 mm (0.394 in.)

Area	Measurement
d	17.5 mm (0.689 in.)



(e) Install the windshield glass onto the vehicle body.
(1) Using suction cups, position the windshield glass so that the matchmarks are aligned. Gently press it in along the rim.
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check that there is a small gap between the vehicle body and the windshield glass.**

(2) Gently press the front surface of the windshield glass to ensure that the windshield glass is securely fitted to the vehicle body.



(3) Using a scraper, remove any excessive or protruding adhesive.
HINT:
Apply adhesive to the windshield glass rim.
NOTICE:
Do not to drive the vehicle within the time indicated in the table below.
Minimum Time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

8. CHECK FOR LEAKAGE AND REPAIR
(a) Conduct a leak test after the adhesive has completely hardened.
(b) Seal any leaks with auto glass sealer.

9. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (See page MI-6)

10. INSTALL ROOF HEADLINING

11. INSTALL FRONT PILLAR GARNISH RH (See page IR-71)

12. INSTALL FRONT PILLAR GARNISH LH (See page IR-72)

13. INSTALL MAP LIGHT ASSEMBLY (See page LI-148)

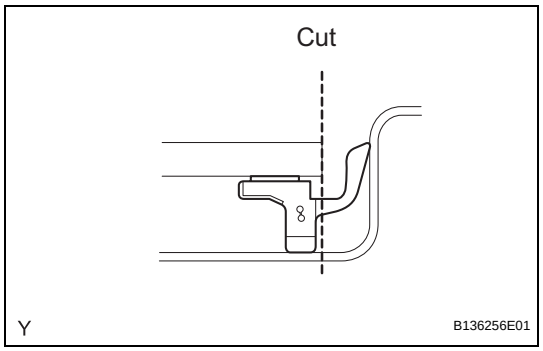
13. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
14. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
15. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**
16. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)**
17. **REMOVE ASSIST GRIP COVER (See page IR-21)**
18. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-21)**

19. REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)

20. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-173)

21. REMOVE ROOF HEADLINING ASSEMBLY

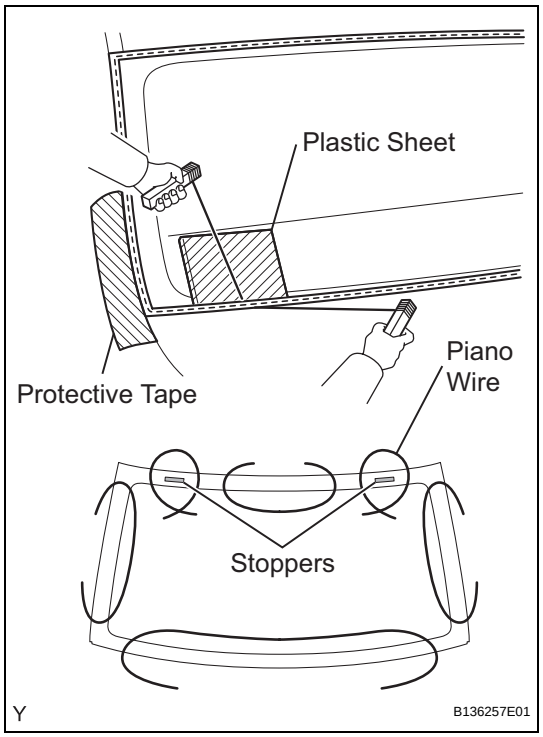
HINT:
It is not necessary to remove the roof headlining completely. Slightly lower the rear section of the roof headlining.



22. REMOVE BACK WINDOW OUTSIDE MOULDING

(a) Using a knife, cut off the back window outside moulding, as shown in the illustration.
NOTICE:
Do not damage the vehicle body with the knife.

(b) Remove the back window outside moulding.
HINT:
Make a partial cut in the back window outside moulding. Then pull and remove it by hand.

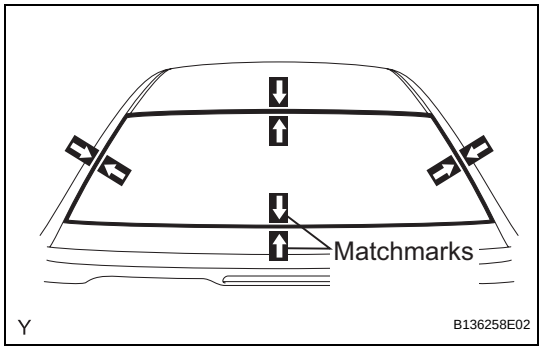


23. REMOVE BACK WINDOW GLASS

(a) Apply protective tape to the outer circumference of the back window glass, as shown in the illustration.

(b) From the interior, insert piano wires between the vehicle body and the back window glass, as shown in the illustration.

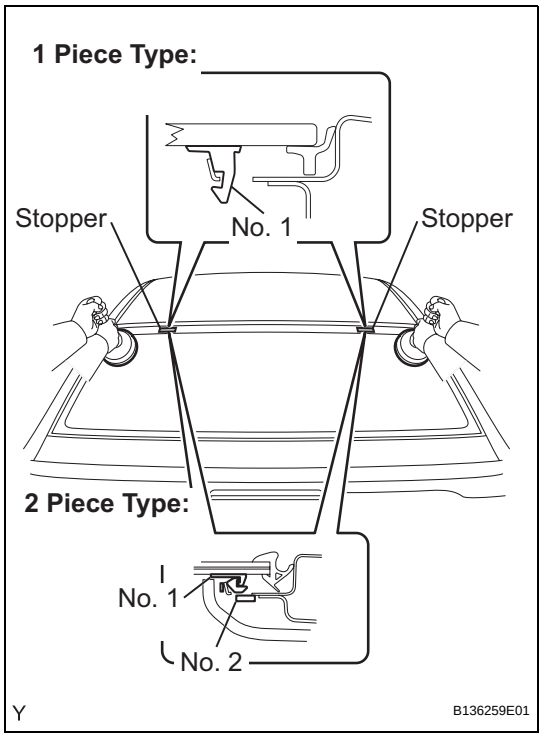
(c) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.
NOTICE:
- **When separating the back window glass from the vehicle, do not damage the vehicle's paintwork or exterior/interior ornaments.**
- **To prevent the safety pad from being scratched when removing the back window glass, place a plastic sheet between the piano wire and safety pad.**



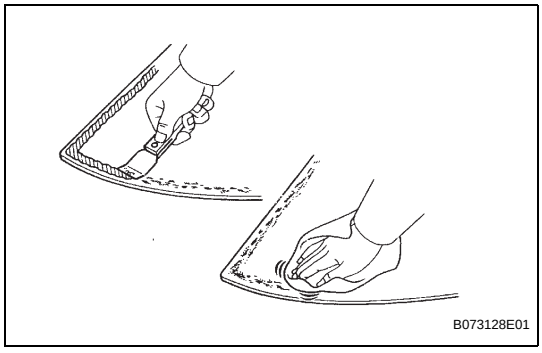
(d) Place matchmarks on the back window glass and vehicle body in the locations indicated in the illustration.
HINT:
Matchmarks do not need to be placed unless the back window glass is going to be reused.

(e) Cut through the adhesive by pulling the piano wire around the back window glass.

WS



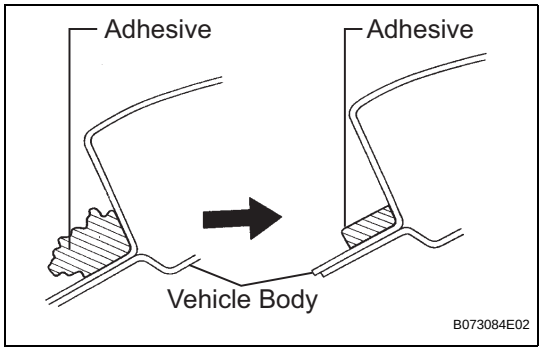
(f) Disengage the 2 stoppers.
(g) Using suction cups, remove the back window glass.
NOTICE:
Leave as much adhesive on the vehicle body as possible when removing the back window glass.



INSTALLATION

1. CLEAN BACK WINDOW GLASS

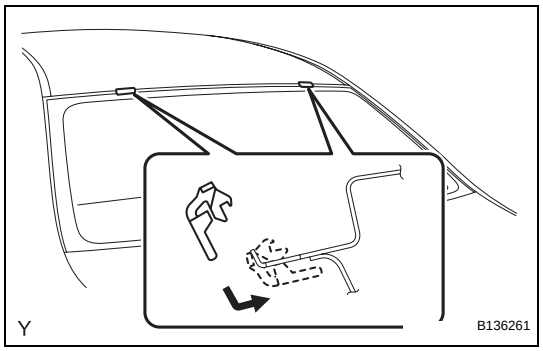
(a) Using a scraper, remove the stoppers, dam and adhesive from the back window glass.
(b) Clean the outer circumference of the back window glass with a non-residue solvent.
NOTICE:
- **Do not touch the back window glass surface after cleaning it.**
- **Even if using a new back window glass, clean the back window glass with a non-residue solvent.**



2. CLEAN VEHICLE BODY

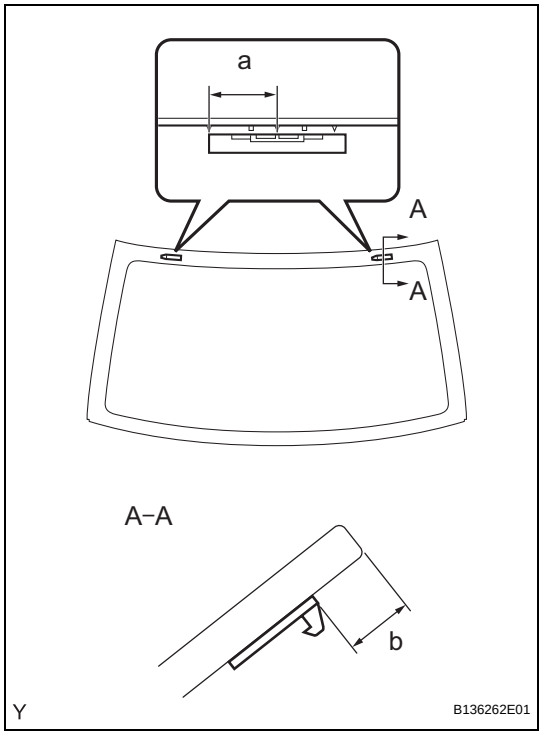
(a) Clean and shape the contact surface of the vehicle body.
(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.
NOTICE:
Do not damage the vehicle body.
HINT:
Leave as much adhesive on the vehicle body as possible.
(2) Clean the contact surface of the vehicle body with a shop rag or piece of cloth saturated with cleaner.
HINT:
Clean the vehicle body even if all the adhesive has been removed.

WS



3. INSTALL BACK WINDOW GLASS STOPPER NO. 1

(a) Install 2 new stoppers onto the vehicle body, as shown in the illustration.



4. INSTALL BACK WINDOW GLASS STOPPER NO. 2

(a) Apply Primer G to the installation parts of the stoppers.

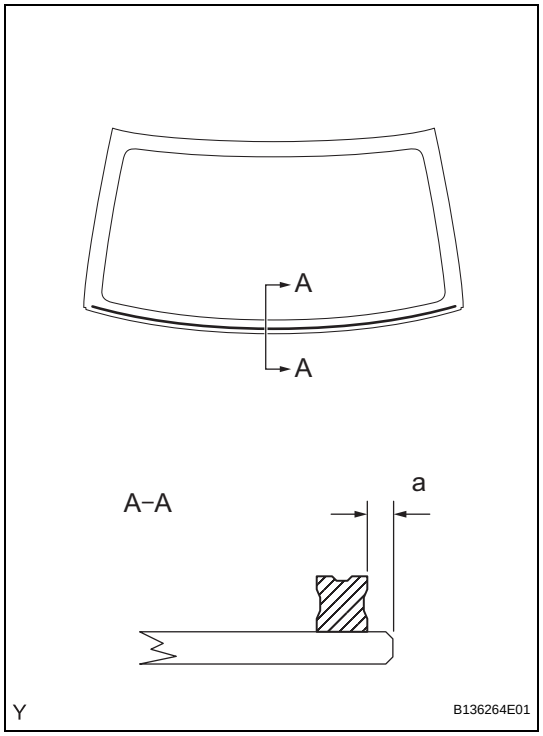
NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

(b) Install 2 new stoppers onto the windshield glass, as shown in the illustration.

Specification

Area	Measurement
a	40 mm (1.57 in.)
b	14.9 mm (0.587 in.)



5. INSTALL BACK WINDOW GLASS ADHESIVE DAM

(a) Apply Primer G to the installation part of a new dam, as shown in the illustration.

NOTICE:

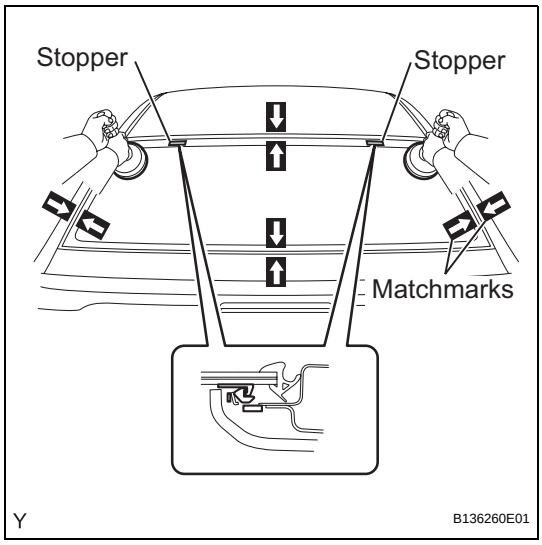
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

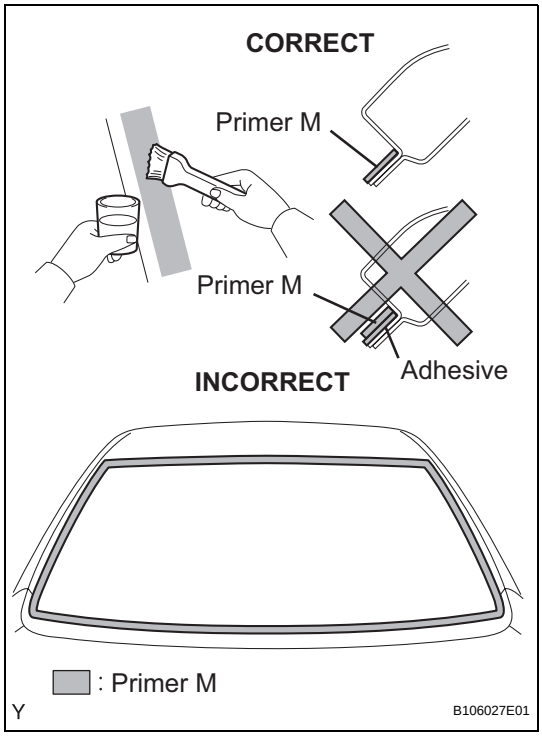
(b) Install the new dam with double-sided tape as shown in the illustration.

Specification

Area	Measurement
a	4.0 mm (0.157 in.)

WS





6. INSTALL BACK WINDOW GLASS

(a) Position the back window glass.

(1) Using suction cups, place the back window glass in the correct position.

(2) Check that the entire contact surface of the back window glass rim is perfectly even.

(3) Place matchmarks on the back window glass and vehicle body.

NOTICE:

Check that the stoppers are correctly attached to the vehicle body.

HINT:

When reusing the back window glass, check and correct the matchmark positions.

(4) Using suction cups, remove the back window glass.

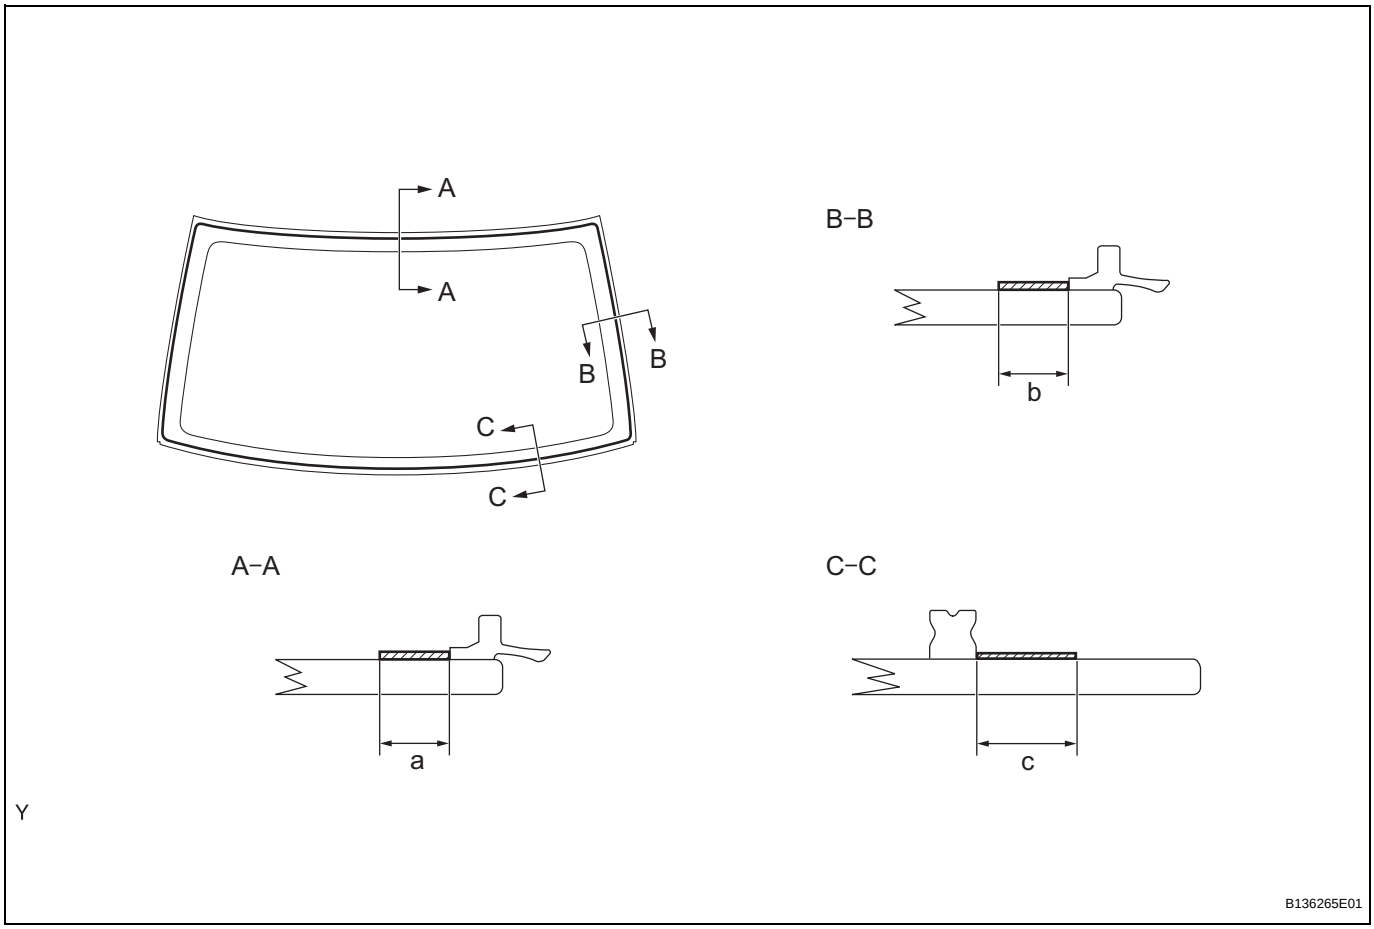
(b) Using a brush, apply Primer M to the exposed part of the vehicle body.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

WS

(c) Using a brush or sponge, apply Primer G to the edge of the back window glass and the contact surface.



Specification

Area	Measurement
a	11 mm (0.433 in.)
b	11 mm (0.433 in.)
c	11 mm (0.433 in.)

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

HINT:

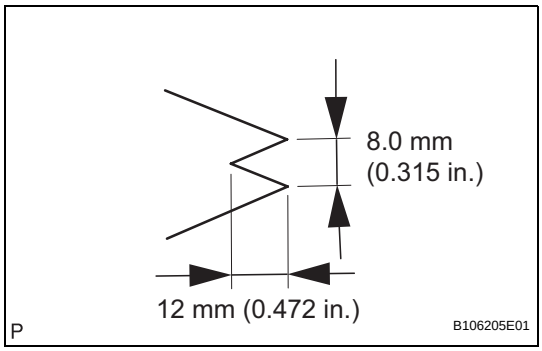
If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.

(d) Apply adhesive.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or the equivalent.

WS

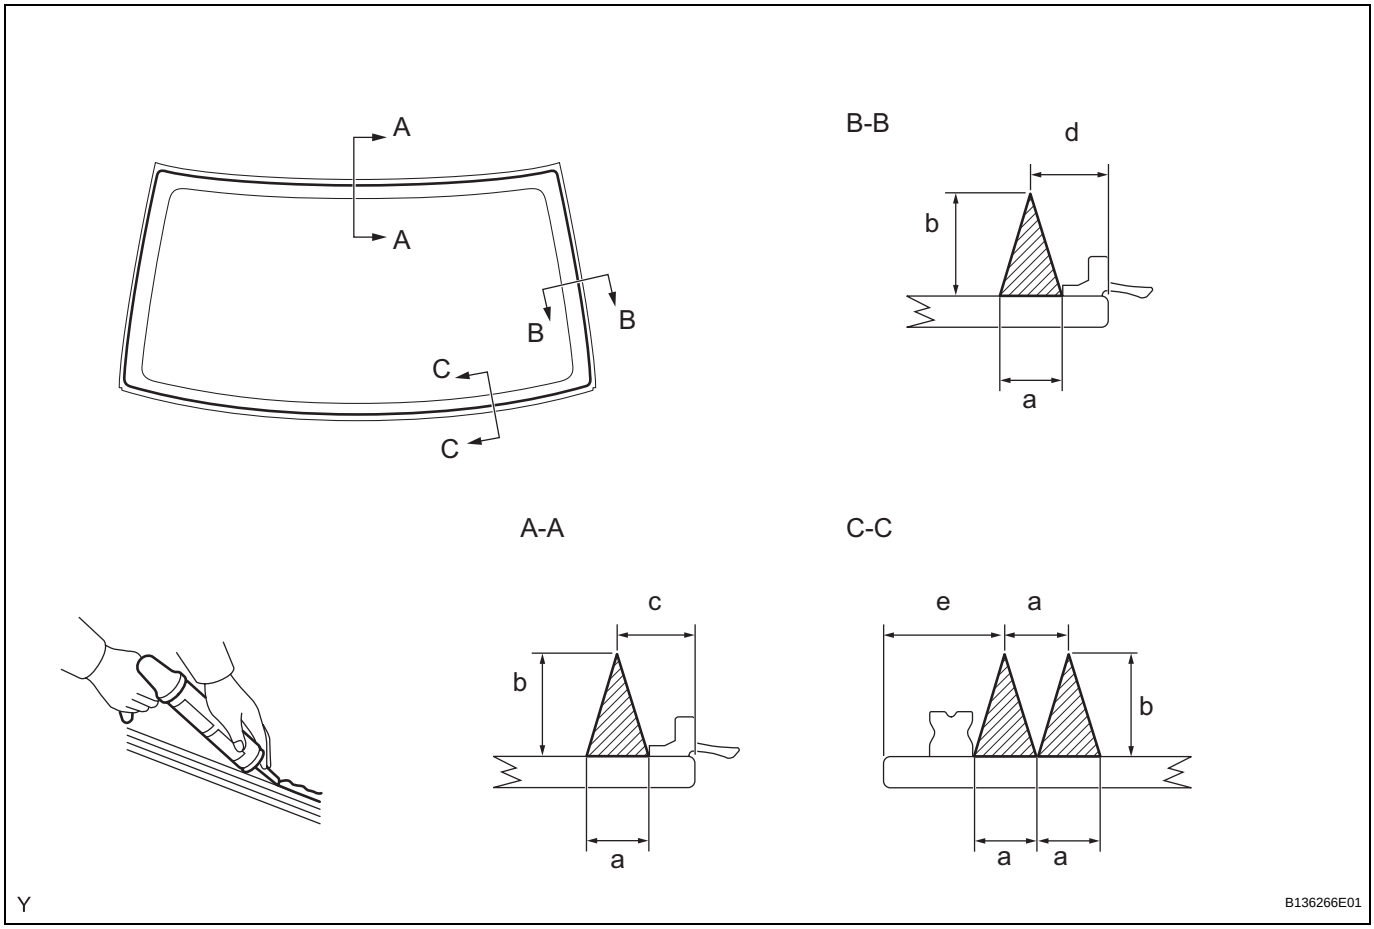


(1) Cut the tip off the cartridge nozzle, as shown in the illustration.
HINT:
After cutting off the tip, use all the adhesive within the times indicated in the table below.

Usage time frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

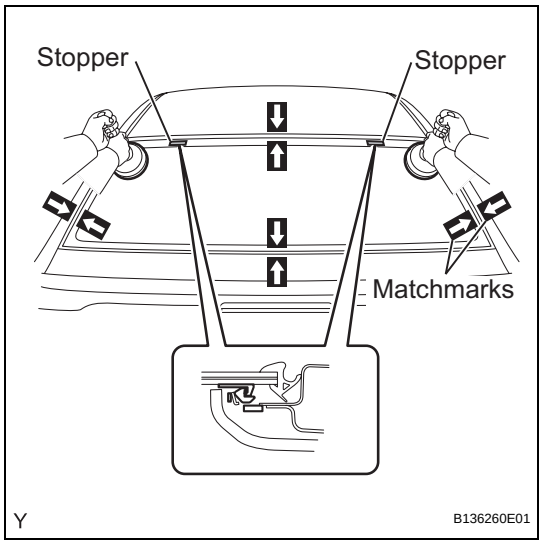
(2) Load the sealer gun with the cartridge.
(3) Apply adhesive to the back window glass, as shown in the illustration.

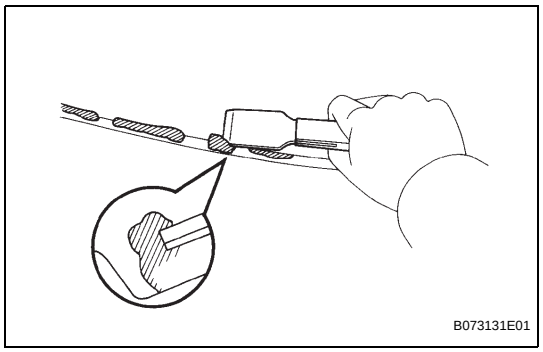


WS

Specification

Area	Measurement
a	8 mm (0.315 in.)
b	12 mm (0.472 in.)
c	9.3 mm (0.366 in.)
d	9.4 mm (0.370 in.)
e	13 mm (0.512 in.)





(e) Install the back window glass onto the vehicle body.

(1) Using suction cups, position the back window glass so that the matchmarks are aligned. Gently press it in along the rim.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check that there is a small gap between the vehicle body and the back window glass.**

(2) Gently press the front surface of the back window glass to ensure that the back window glass is securely fitted to the vehicle body.

NOTICE:

Open and close the door gently to prevent the window glass from becoming loose due to the air pressure when the door is closed.

(3) Using a scraper, remove any excessive or protruding adhesive.

HINT:

Apply adhesive to the back window glass rim.

NOTICE:

Do not to drive the vehicle within the time indicated in the table below.

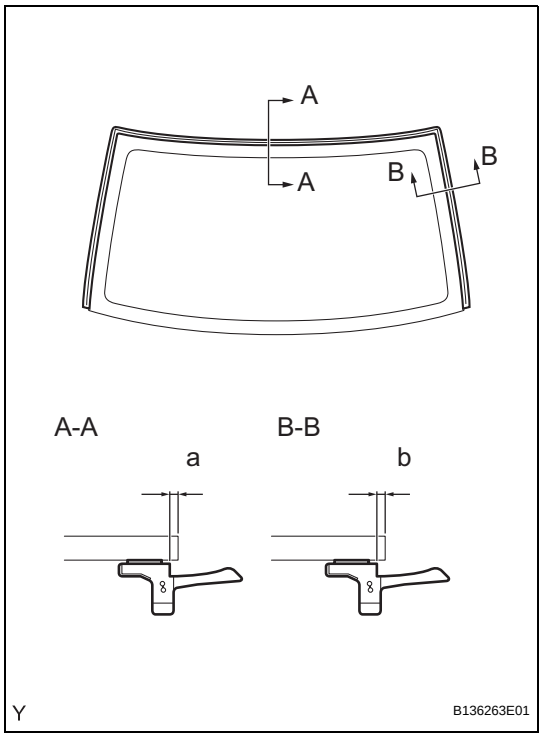
Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

7. INSTALL BACK WINDOW OUTSIDE MOULDING

NOTICE:

After the installation of the window glass, install the moulding before the adhesive hardens.



(a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer G.**
- **Throw away any leftover Primer G.**

(b) Install a new moulding onto the back window glass, as shown in the illustration.

Specification

Area	Measurement
a	1.9 mm (0.075 in.)
b	1.0 mm (0.039 in.)

NOTICE:
Make sure that the moulding is securely installed.

8. CHECK FOR LEAKAGE AND REPAIR

(a) Conduct a leak test by applying water to the adhesive portions after the adhesive has completely hardened.

(b) Seal any leaks with auto glass sealer.

9. INSTALL ROOF HEADLINING ASSEMBLY

10. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-174)

11. INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)

12. INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-28)

13. INSTALL ASSIST GRIP COVER (See page IR-29)

14. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)

15. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)

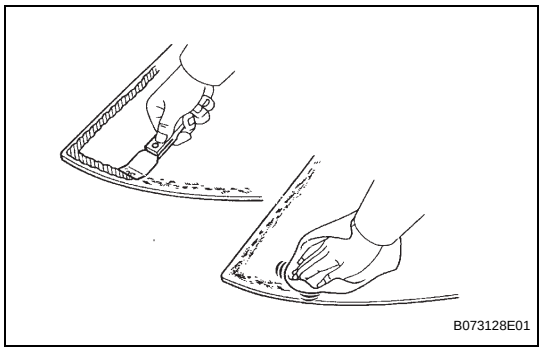
2. **REMOVE REAR SPOILER COVER LH (See page ET-81)**
3. **REMOVE REAR SPOILER COVER RH (See page ET-81)**
4. **REMOVE REAR SPOILER (See page ET-81)**
5. **REMOVE CENTER STOP LIGHT COVER (See page LI-144)**
6. **REMOVE REAR WIPER ARM AND BLADE ASSEMBLY (See page WW-28)**
7. **REMOVE BACK DOOR GLASS**
   (a) Apply protective tape to the outer circumference of the back door glass, as shown in the illustration.
   (b) From the interior, insert piano wires between the vehicle body and back door glass, as shown in the illustration.
   (c) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.
   NOTICE:
   When separating the back door glass from the vehicle, do not damage the vehicle's paint or exterior/interior ornaments.
   (d) Cut through the adhesive by pulling the piano wire around the back door glass.

   (e) Disengage the 2 clips.
   (f) Using suction cups, remove the back door glass.
   NOTICE:
   Leave as much adhesive on the vehicle body as possible when removing the back door glass.

WS



INSTALLATION

1. CLEAN BACK DOOR GLASS

(a) Using a scraper, remove the clips, dam and adhesive sticking to the back door glass.

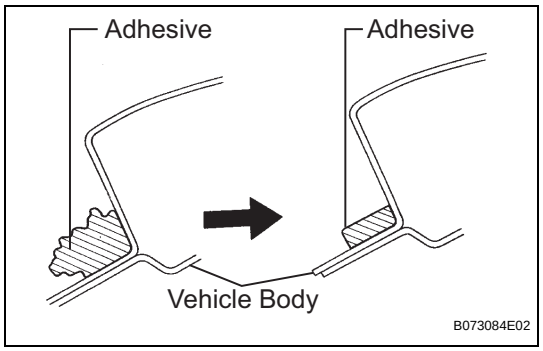
(b) Clean the outer circumference of the back door glass with a non-residue solvent.

NOTICE:

- **Do not touch the back door glass surface after cleaning it.**
- **Even if using a new back door glass, clean the back door glass with a non-residue solvent.**

HINT:

Since the pin is for positioning the glass, there is no need to replace it with a new one when reusing the glass, even if damaged.



2. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:

Do not damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a shop rag or piece of cloth saturated with cleaner.

HINT:

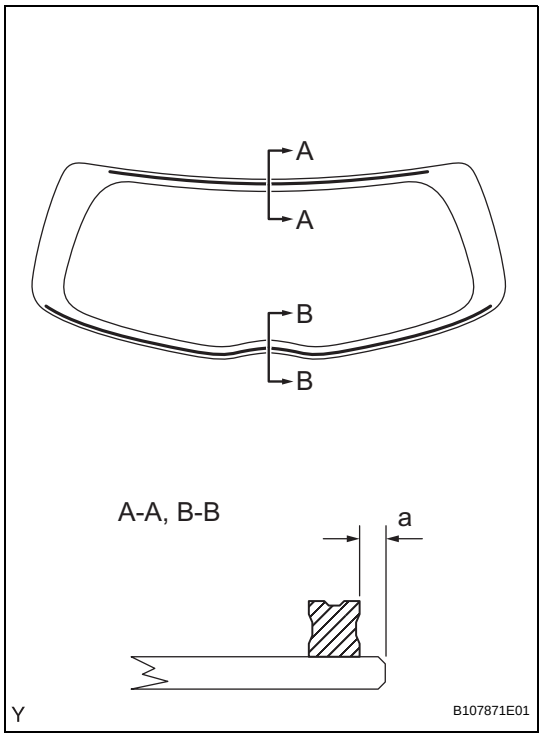
Clean the vehicle body even if all the adhesive has been removed.

3. INSTALL BACK WINDOW GLASS ADHESIVE DAM KIT

(a) Apply Primer G to the glass where the dams will be installed.

NOTICE:

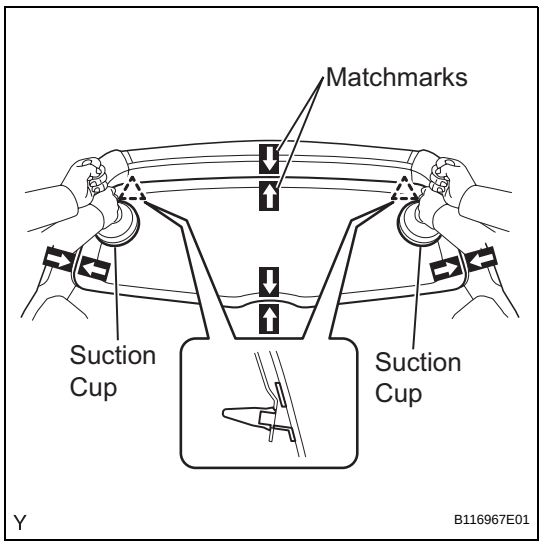
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**



(b) Install 2 new back door glass adhesive dams as shown in the illustration.

Specification

Area	Measurement
a	4.2 mm (0.165 in.)



4. INSTALL BACK DOOR GLASS

(a) Position the back door glass.

(1) Using suction cups, place the back door glass in the correct position.

(2) Check that the whole contact surface of the back door glass rim is perfectly even.

(3) Place matchmarks on the back door glass and vehicle body.

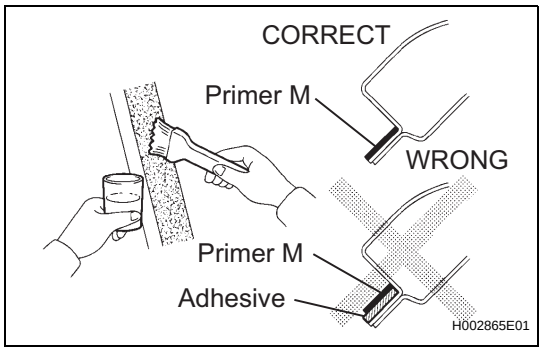
NOTICE:

Check that the stoppers are attached to the vehicle body correctly.

HINT:

When reusing the back door glass, check and correct the matchmark positions.

(4) Using suction cups, remove the back door glass.



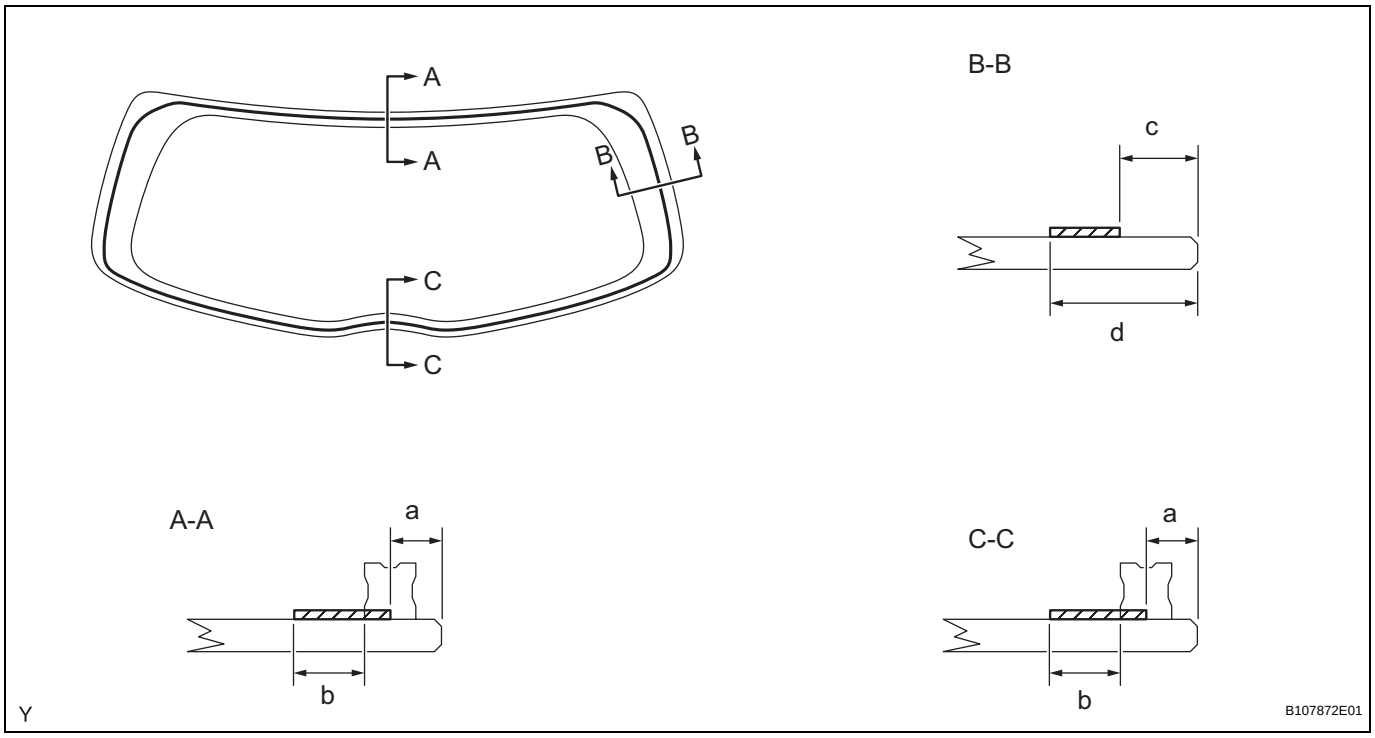
(b) Using a brush, apply Primer M to the exposed part of the vehicle body.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

WS

(c) Using a brush or sponge, apply Primer G to the edge of the back door glass and contact surface.



NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

HINT:

If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.

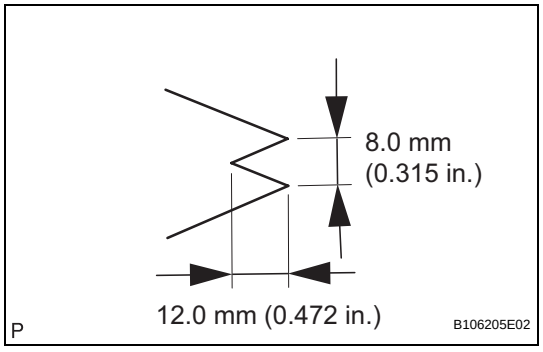
Specification

Area	Measurement
a	6.9 mm (0.272 in.)
b	11.0 mm (0.433 in.)
c	26.7 mm (1.051 in.)
d	40.7 mm (1.602 in.)

(d) Apply adhesive.

Adhesive:

Part No. 08850-00801 or the equivalent



(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time indicated in the table below.

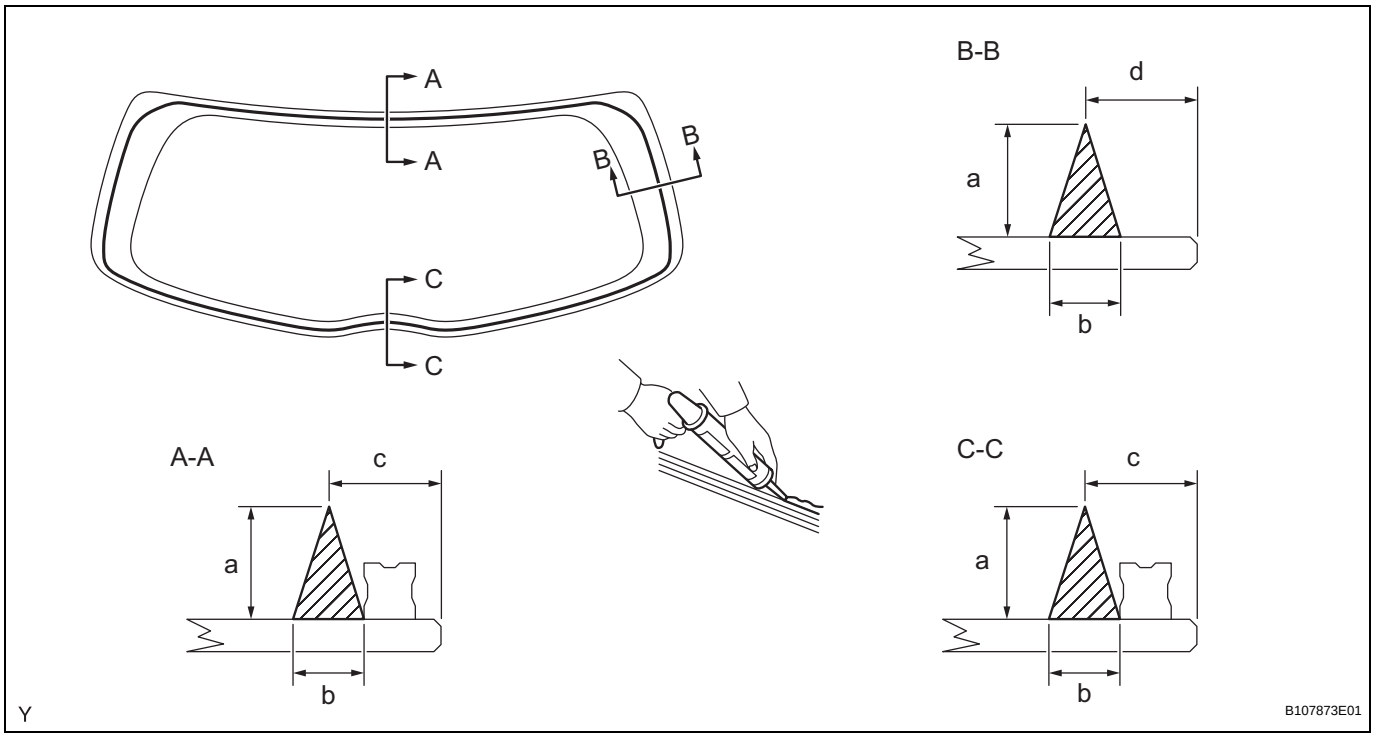
Usage time frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

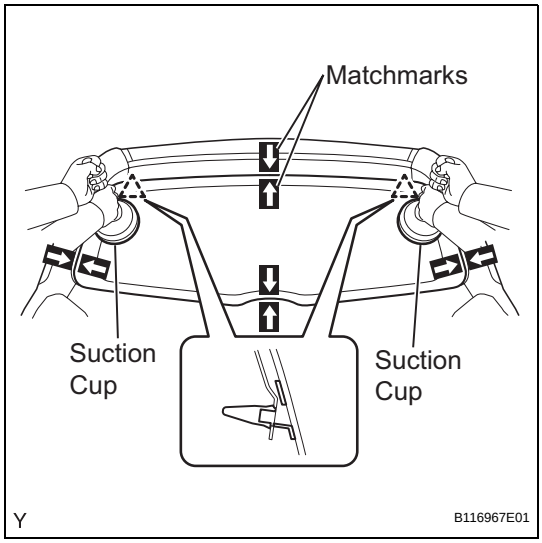
WS

(3) Apply adhesive to the back door glass, as shown in the illustration.



Specification

Area	Measurement
a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)
c	13.5 mm (0.532 in.)
d	33.7 mm (1.327 in.)



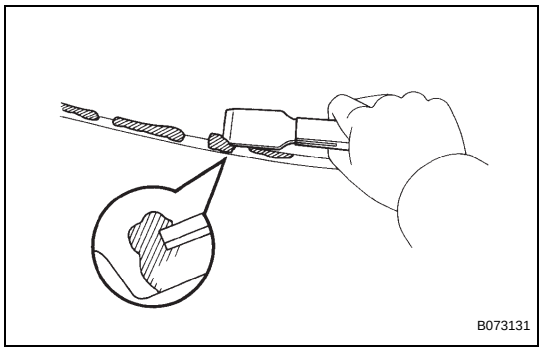
(e) Install the back door glass onto the vehicle body.

(1) Using suction cups, position the back door glass so that the matchmarks are aligned. Press it in gently along the rim.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check that the vehicle body and back door glass have a small gap between them.**

(2) Gently press the front surface of the back door glass to ensure that the back door glass is securely fitted to the vehicle body.



(3) Using a scraper, remove any excessive or protruding adhesive.
HINT:
Apply adhesive onto the back door glass rim.
NOTICE:
Do not to drive the vehicle within the time indicated in the table below.
Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

5. CHECK FOR LEAKAGE AND REPAIR
(a) Conduct a leak test after the adhesive has completely hardened.
(b) Seal any leakage with auto glass sealer.

6. INSTALL REAR WIPER ARM AND BLADE ASSEMBLY (See page WW-30)

7. INSTALL CENTER STOP LIGHT COVER (See page LI-145)

8. INSTALL REAR SPOILER (See page ET-81)

9. INSTALL REAR SPOILER COVER LH (See page ET-82)

10. INSTALL REAR SPOILER COVER RH (See page ET-82)

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

PROBLEM SYMPTOMS TABLE

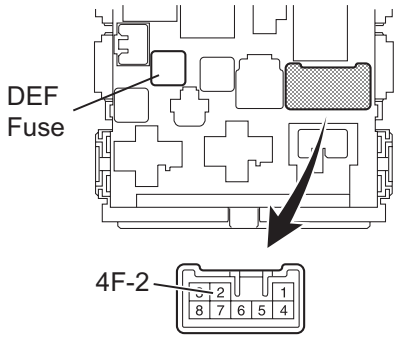
HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Window defogger system

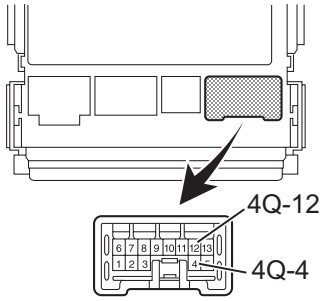
Symptom	Suspected area	See page
Rear window defogger does not operate (indicator ON)	DEF fuse	WS-142
	GAUGE fuse	WS-142
	Back door glass (defogger wire)	WS-148
	Main body ECU (DEF relay)	WS-147
	Wire harness	-
Rear window defogger does not operate (indicator OFF)	A/C fuse	WS-142
	No. 3 heater control knob (rear defogger switch)	AC-255
	Wire harness	-

Components Side:

Main Body ECU (Vehicle Front Side)



Main Body ECU (Vehicle Rear Side)



P B121544E01

DEFOGGER RELAY

ON-VEHICLE INSPECTION

1. INSPECT MAIN BODY ECU (DEFOGGER RELAY)

(a) Remove the DEF fuse.

(b) Using an ohmmeter, measure the resistance between the terminals of the DEF fuse.
Standard Resistance:
Below 1 Ω

(c) Install the DEF fuse.

(d) Using an ohmmeter, measure the resistance between terminals 4Q-12 and 4Q-4 of the main body ECU connector.
Standard Resistance:
Below 1 Ω

(e) Turn the ignition switch ON.

(f) Turn the defogger switch ON.

(g) Using a voltmeter, measure the voltage between terminal 4F-2 of the main body ECU connector and body ground.
Standard Voltage:
10 to 14 V

WINDOW DEFOGGER WIRE

ON-VEHICLE INSPECTION

1. INSPECT BACK DOOR GLASS (DEFOGGER WIRE)

(a) Turn the ignition switch ON.

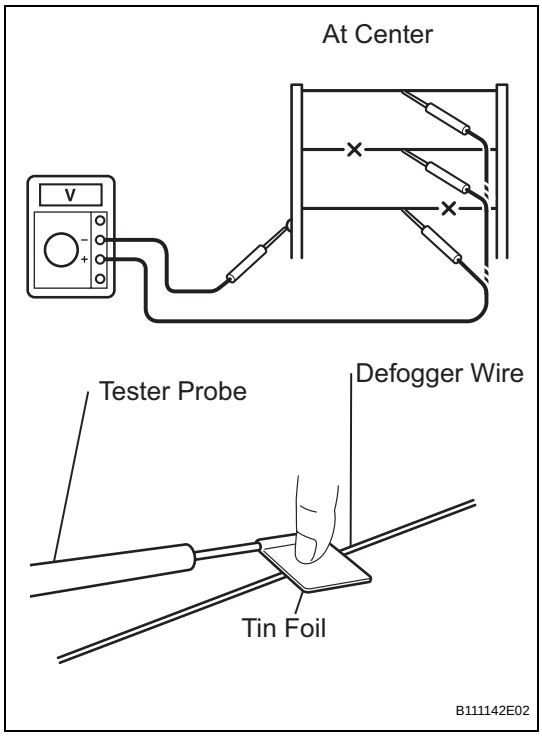
(b) Turn the defogger switch ON.

(c) Check the voltage.

(1) Using a voltmeter, measure the voltage at the center of each defogger wire as shown in the illustration.

Standard

Voltage	Condition
Approximately 5 V	Wire not broken
Approximately 10 or 0 V	Wire broken

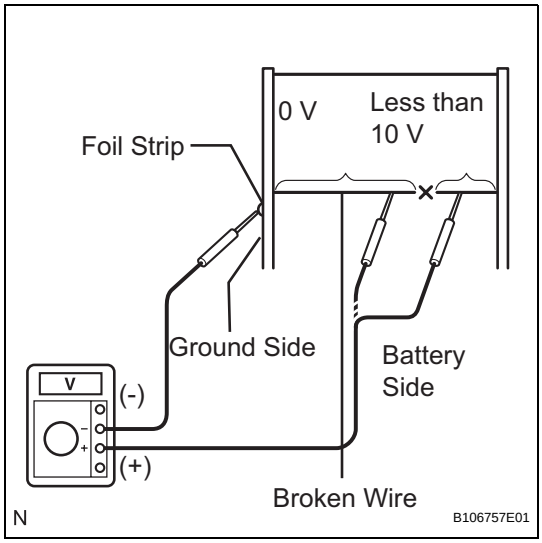


NOTICE:

When measuring the voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.

HINT:

If there is approximately 10 V, the wire may be faulty between the center of the wire and the battery. If there is no voltage, the wire may be faulty between the center of the wire and the ground.



(d) Place the positive (+) voltmeter probe against the defogger wire on the battery side.

(e) Place the foil strip on the negative (-) voltmeter probe against the wire on the ground side.

(f) Slide the positive (+) probe from the battery side to the ground side.

(g) The point where the voltage drops from approximately 10 V to 0 V is where the defogger wire is broken.

HINT:

If the defogger wire is not broken, the voltmeter should indicate 0 V at the positive (+) end of the defogger wire but the indicated voltage gradually increases to approximately 12 V as the meter probe moves toward the other end.

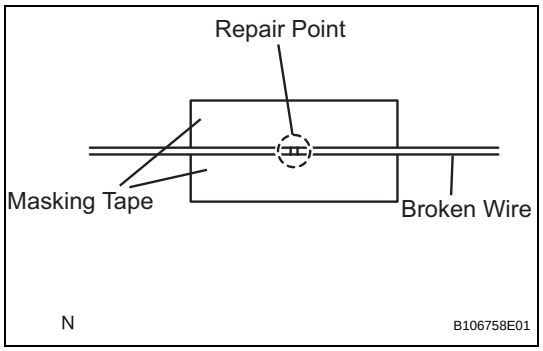
2. INSPECT REAR WINDOW DEFOGGER

(a) Check the operation.

(b) Check that the indicator illuminates and the rear window defogger becomes warm when the rear defogger switch is pressed.

(c) Check that the indicator turns off and the rear window defogger operation terminates after approximately 15 minutes.

WS

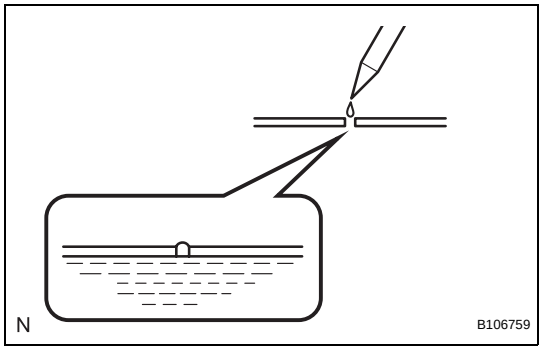


REPAIR

1. IF NECESSARY, REPAIR DEFOGGER WIRE

(a) Clean the broken wire tips with grease, wax and silicone remover.

(b) Place masking tape along both sides of the wire.



(c) Thoroughly stir the repair agent (Dupont paste No. 4817 or the equivalent).

(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.

NOTICE:

Do not repair the defogger wire again for at least 24 hours.

REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Slide Reclining Hold Down Seat Type)**
   (a) for RH Side:
   (1) Remove the No. 1 rear seat leg cover (see page SE-89).
   (b) for LH Side:
   (1) Remove the No. 1 rear seat leg cover (see page SE-70).
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Slide Reclining Hold Down Seat Type LH Side) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Slide Reclining Hold Down Seat Type)**
   (a) for RH Side:
   (1) Remove the rear seat assembly (see page SE-89).
   (b) for LH Side:
   (1) Remove the rear seat assembly (see page SE-71).
9. **REMOVE REAR SEAT CUSHION COVER PAD (for Bench Reclining Hold Down Seat Type) (See page SE-114)**
10. **REMOVE REAR SEAT BACK ASSEMBLY (for Bench Reclining Hold Down Seat Type) (See page SE-115)**
11. **REMOVE FRONT DOOR SCUFF PLATE**
    HINT:
    Use the same procedure as for the RH side (see page AV-184).

WS

12. SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP

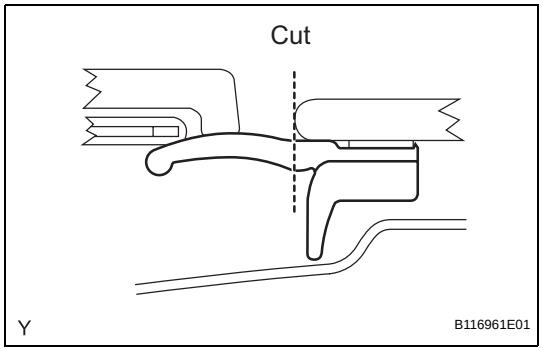
HINT:

Use the same procedure as for the RH side (see page AV-184).

13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY

HINT:

Use the same procedure as for the RH side (see page AV-184).



14. REMOVE QUARTER WINDOW MOULDING OUTSIDE FRONT

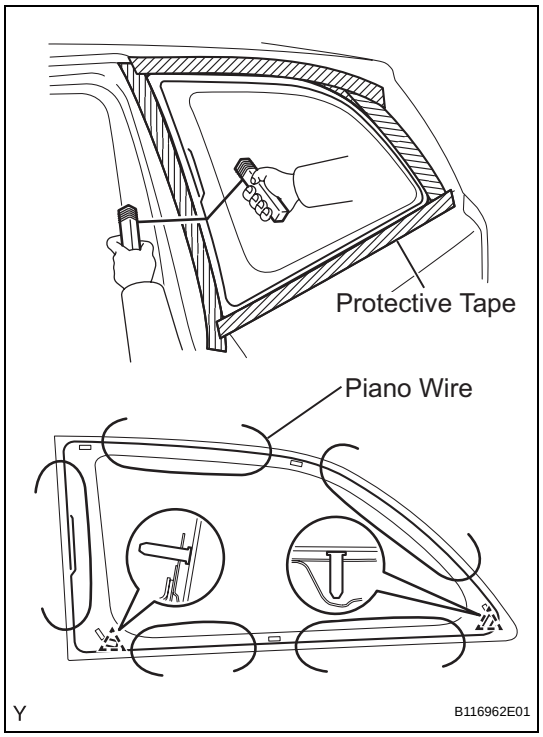
(a) Using a knife, cut off the quarter window moulding outside front.

NOTICE:

Do not damage the vehicle body with the knife.

HINT:

Make a partial cut in the quarter window moulding outside front. Then pull and remove it by hand.



15. REMOVE QUARTER WINDOW GLASS

(a) Apply protective tape to the outer circumference of the quarter window, as shown in the illustration.

(b) From the interior, insert piano wires between the vehicle body and quarter window, as shown in the illustration.

(c) Tie objects that can serve as handles (for example, wooden blocks) to all wire ends.

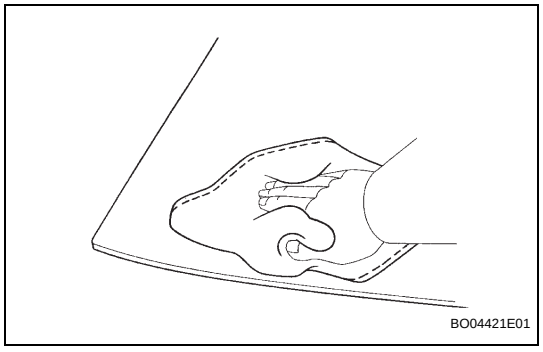
NOTICE:

When separating the quarter window from the vehicle, do not damage the vehicle's paintwork or exterior/interior ornaments.

(d) Cut through the adhesive by pulling the piano wire around the quarter window.

WS

INSTALLATION



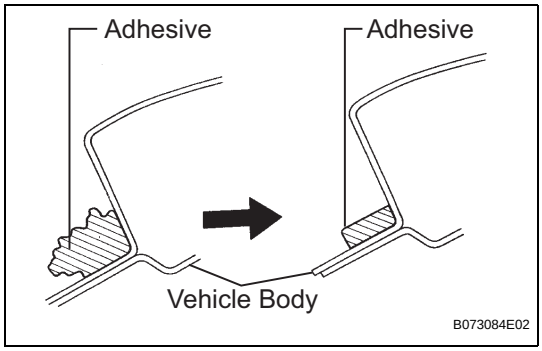
1. CLEAN QUARTER WINDOW GLASS

(a) Clean the outer circumference of the glass with a non-residue solvent.

NOTICE:

- **Do not touch the glass surface after cleaning it.**
- **Even if using a new glass, clean the glass with a non-residue solvent.**

HINT:
Since the pin is for positioning the glass, there is no need to replace it with a new one when reusing the glass, even if damaged.



2. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

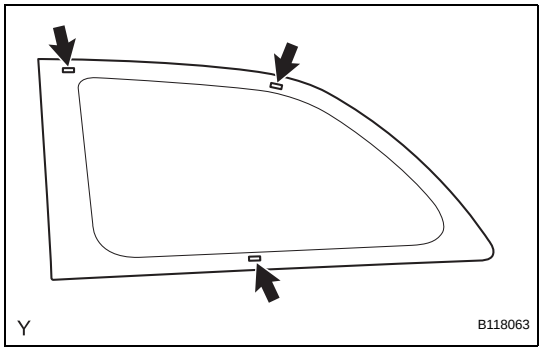
(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:
Do not damage the vehicle body.

HINT:
Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a shop rag or piece of cloth saturated with cleaner.

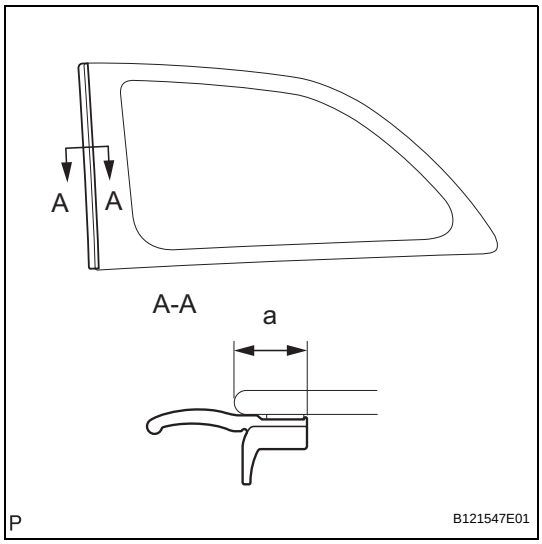
HINT:
Clean the vehicle body even if all the adhesive has been removed.



3. INSTALL QUARTER WINDOW GLASS SPACER

(a) Coat the installation parts of the spacers with Primer G.

(b) Install 3 new spacers onto the glass, as shown in the illustration.



4. INSTALL QUARTER WINDOW MOULDING OUTSIDE FRONT

(a) Using a brush or sponge, apply Primer G to the edge of the quarter window and contact surface.

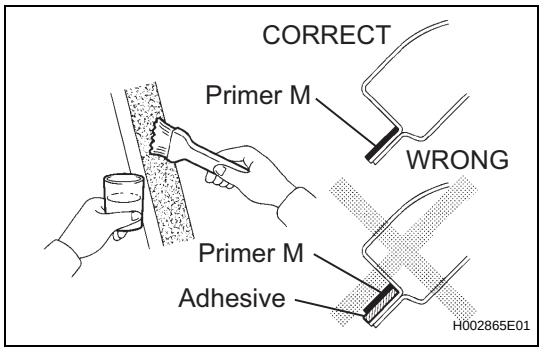
NOTICE:
- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

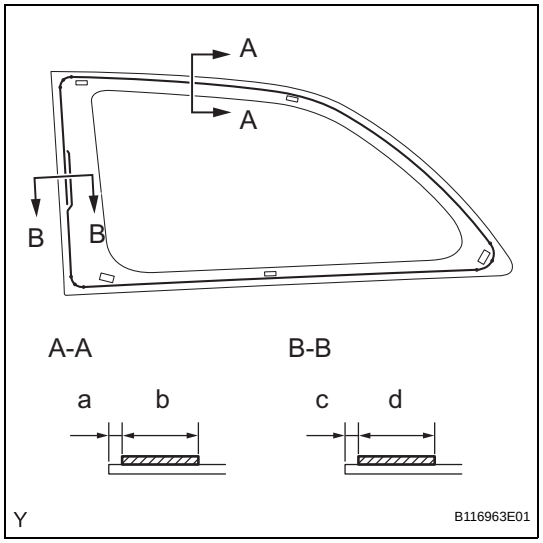
HINT:
If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.

(b) Install the quarter window moulding outside front, as shown in the illustration.

Specification

Area	Measurement
a	9.5 mm (0.374 in.)





5. INSTALL QUARTER WINDOW GLASS

(a) Using a brush, apply Primer M to the exposed part of the vehicle body.

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Do not apply Primer M to the adhesive.**
- **Throw away any leftover Primer M.**
- **Do not apply too much Primer M.**

(b) Using a brush or sponge, apply Primer G to the edge of the quarter window and contact surface.

Specification

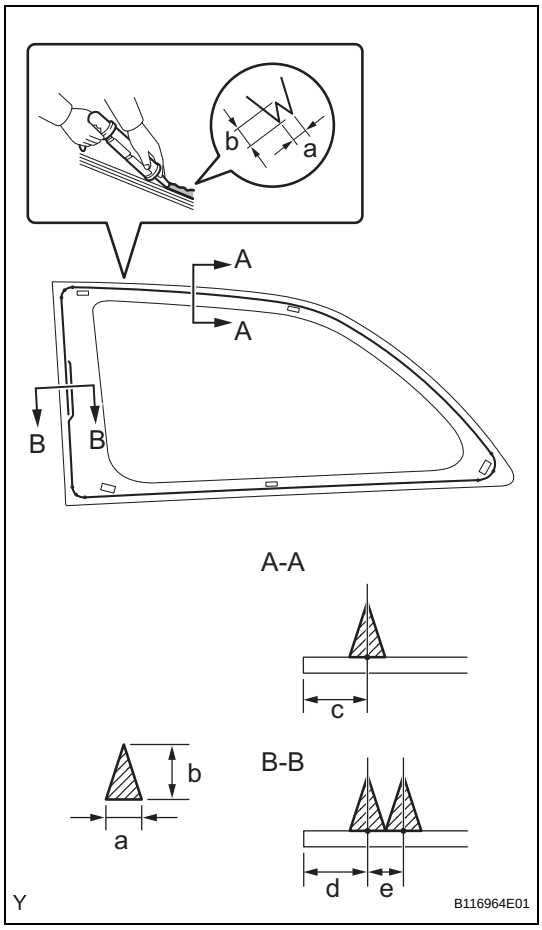
Area	Measurement
a	6.0 mm (0.236 in.)
b	14 mm (0.551 in.)
c	7.5 mm (0.295 in.)
d	22 mm (0.866 in.)

NOTICE:

- **Allow the primer to dry for 3 minutes or more.**
- **Throw away any leftover Primer G.**
- **Do not apply too much Primer G.**

HINT:

If Primer G is applied to any areas other than those specified, wipe off the primer with a clean shop rag or piece of cloth before it dries.



(c) Apply adhesive.

Adhesive:

Part No. 08850-00801 or the equivalent

(1) Cut the tip off the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time indicated in the table below.

Usage Time Frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Apply adhesive to the quarter window as shown in the illustration.

Specification

Area	Measurement
a	8 mm (0.315 in.)
b	12 mm (0.472 in.)
c	13 mm (0.512 in.)
d	14.5 mm (0.571 in.)
e	8 mm (0.315 in.)

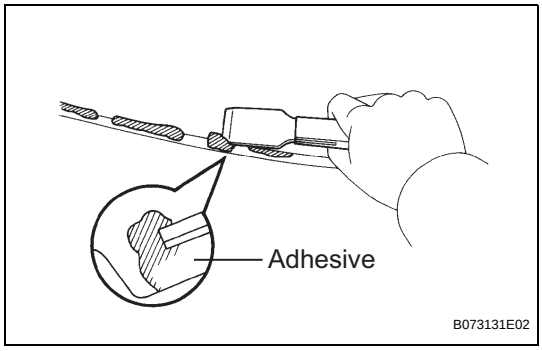
(d) Install the quarter window glass to the body.

(1) Hold the quarter window glass in place securely with protective tape or the equivalent until the adhesive hardens.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the pins are attached to the body correctly.**
- **Check the clearance between the body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.



(3) Using a scraper, remove any excessive or protruding adhesive.

HINT:

Apply adhesive to the quarter window glass rim.

NOTICE:

Do not to drive the vehicle within the time indicated in the table below.

Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

WS

6. **CHECK FOR LEAKAGE AND REPAIR**
   (a) Conduct a leak test after the adhesive has completely hardened.
   (b) Seal any leakage with auto glass sealer.

7. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY**
   HINT:
   Use the same procedure as for the RH side (see page AV-186).

8. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   HINT:
   Use the same procedure as for the RH side (see page AV-186).

9. **INSTALL FRONT DOOR SCUFF PLATE**
   HINT:
   Use the same procedure as for the RH side (see page AV-186).

10. **INSTALL REAR SEAT ASSEMBLY (for 60/40 Slide Reclining Hold Down Seat Type)**
    (a) for RH Side:
       (1) Install the rear seat assembly (see page SE-102).
    (b) for LH Side:
       (1) Install the rear seat assembly (see page SE-84).

11. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Slide Reclining Hold Down Seat Type LH Side) (See page SE-85)**

12. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Slide Reclining Hold Down Seat Type)**
    (a) for RH Side:
       (1) Install the No. 1 rear seat leg cover (see page SE-103).
    (b) for LH Side:
       (1) Install the No. 1 rear seat leg cover (see page SE-85).

13. **INSTALL REAR SEAT BACK ASSEMBLY (for Bench Reclining Hold Down Seat Type) (See page SE-122)**

14. **INSTALL REAR SEAT CUSHION COVER PAD (for Bench Reclining Hold Down Seat Type) (See page SE-123)**

15. **INSTALL DECK FLOOR BOX RH (See page IR-83)**

16. **INSTALL DECK FLOOR BOX LH (See page IR-83)**

17. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

18. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

	Wire harness	-

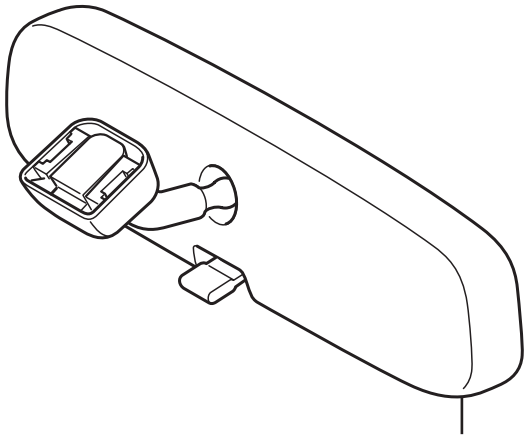
INNER REAR VIEW MIRROR

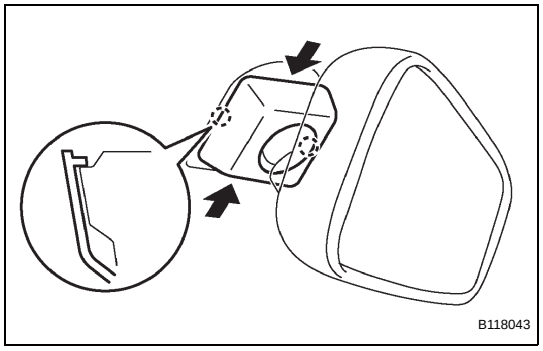
COMPONENTS



INNER REAR VIEW
MIRROR ASSEMBLY

G

B101911E01

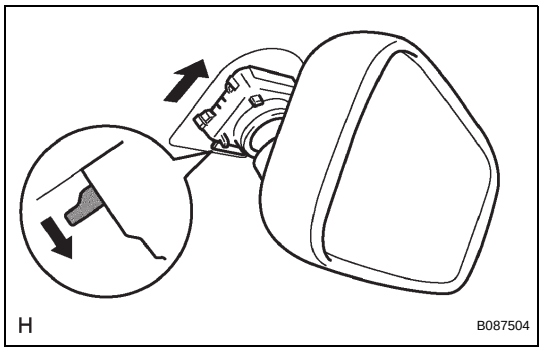


B118043

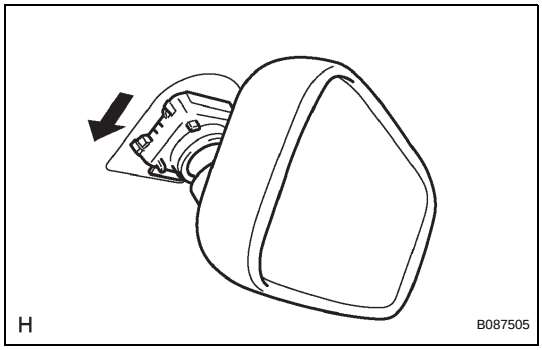
REMOVAL

1. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) Pinch the cover, disengage the 2 claws and remove the cover.



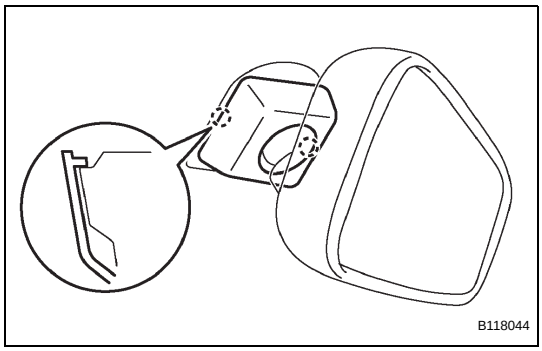
(b) Push the lever, and slide and remove the inner rear view mirror.



INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

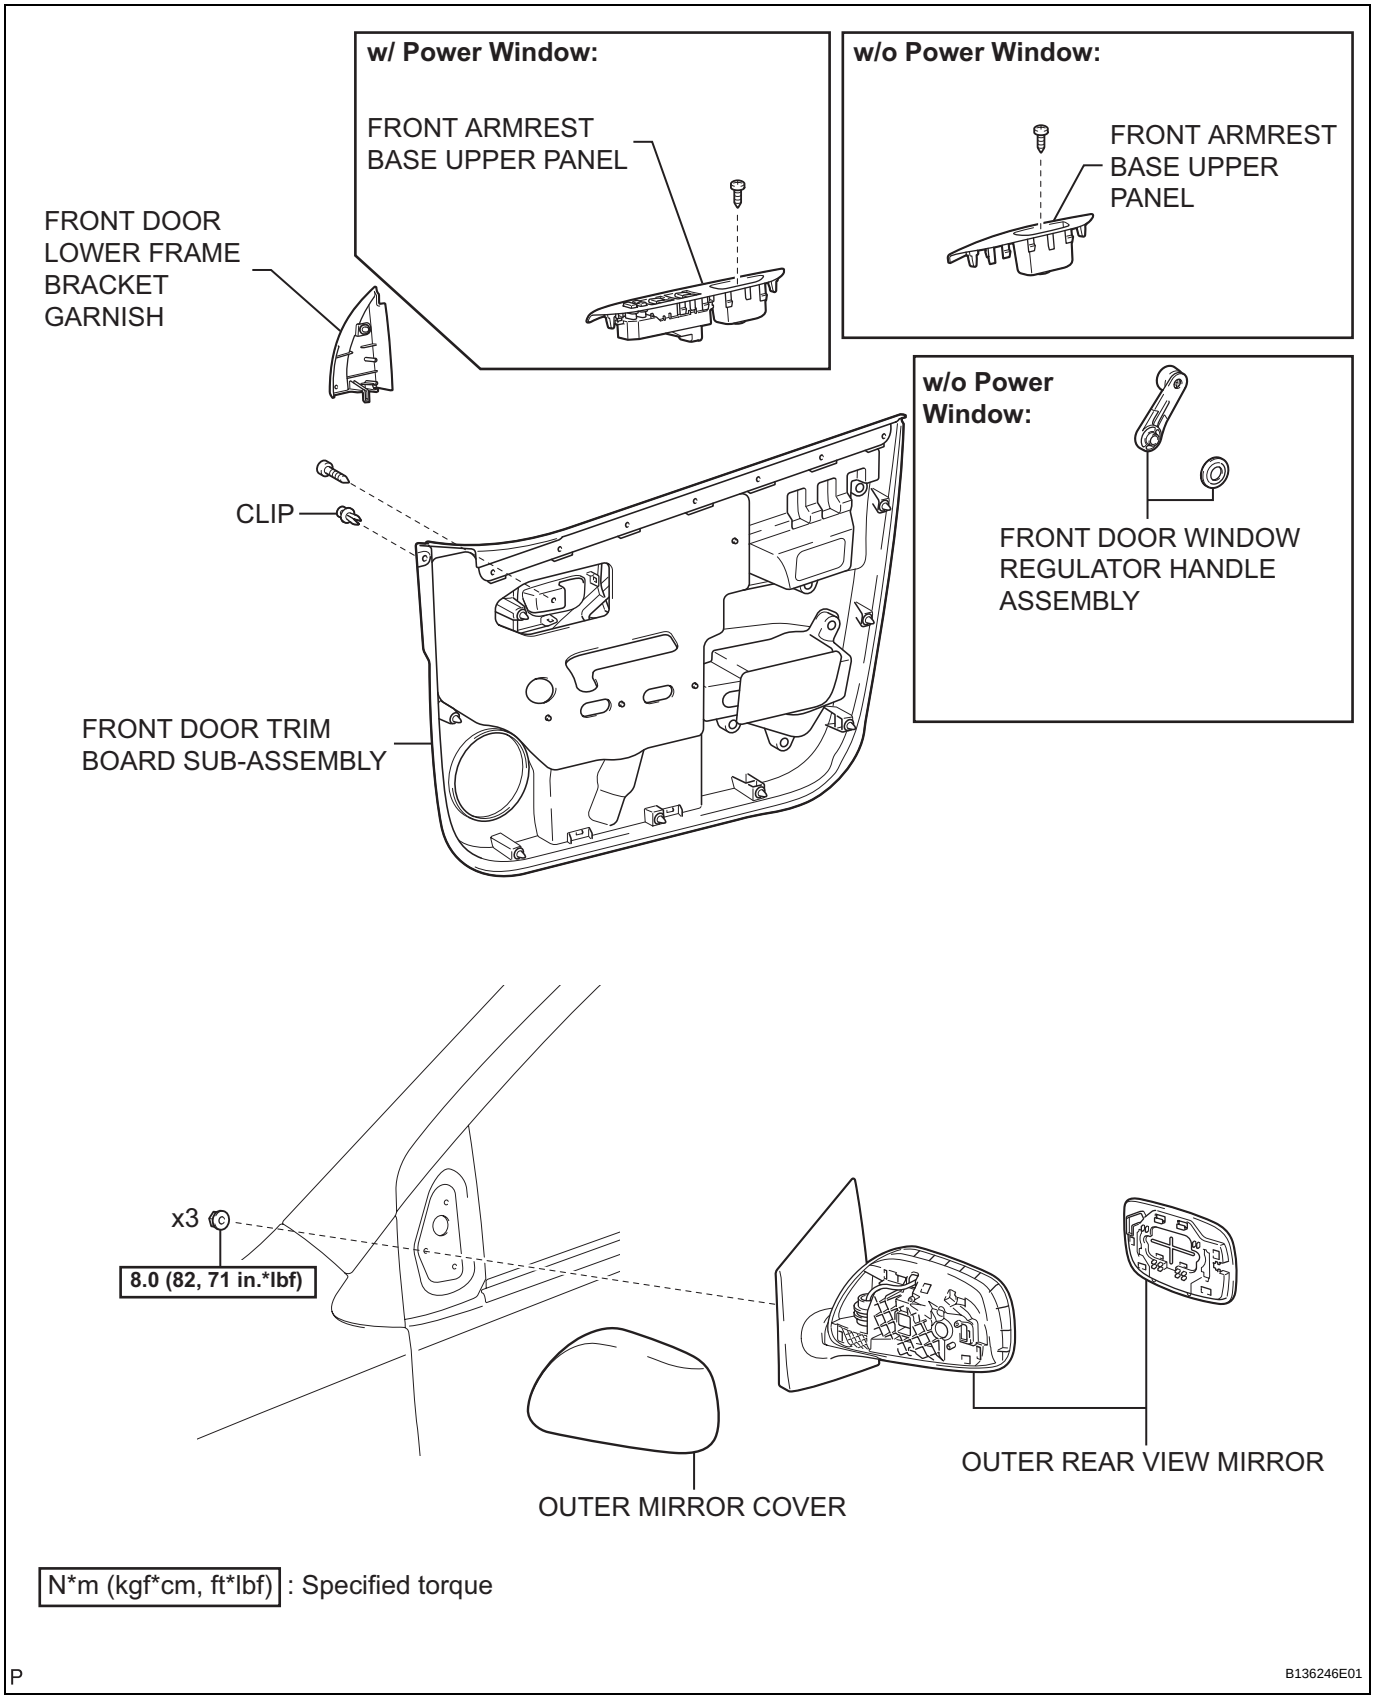
(a) Slide and install the inner rear view mirror.



(b) Engage the 2 claws and install the cover.

OUTER REAR VIEW MIRROR (for Sedan)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

P

B136246E01

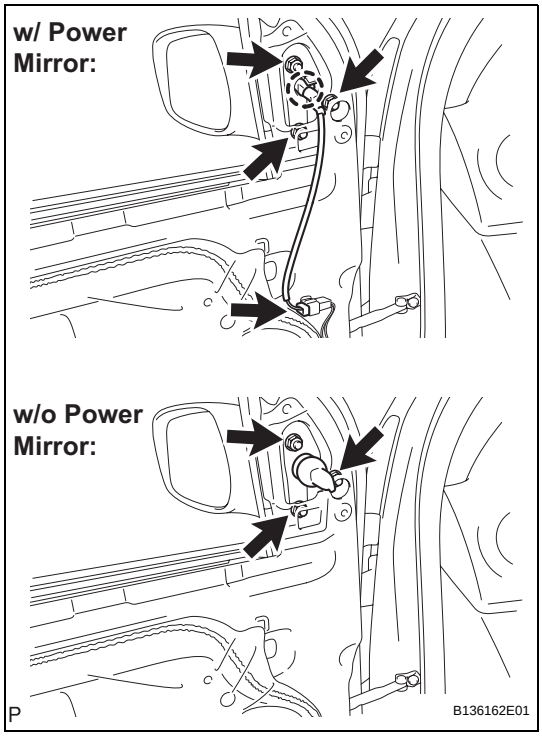
MI

REMOVAL

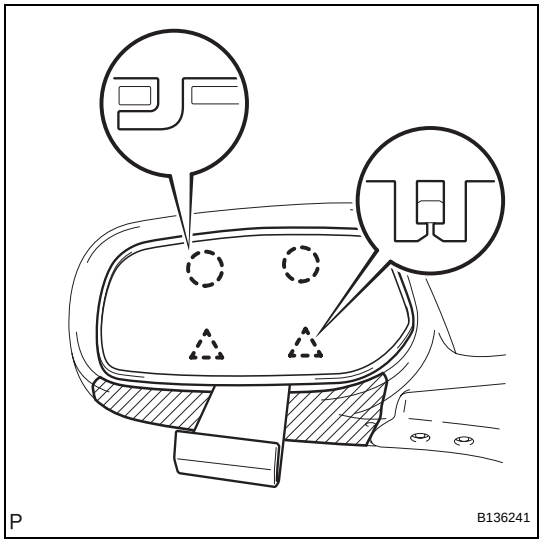
HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. **REMOVE CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-9)**
3. **REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)**
4. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-9)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-11)**
6. **REMOVE OUTER REAR VIEW MIRROR**
   (a) w/ Power mirror:
   Disconnect the connector.
   (b) Remove the 3 nuts, disengage the claw and remove the outer rear view mirror.



MI



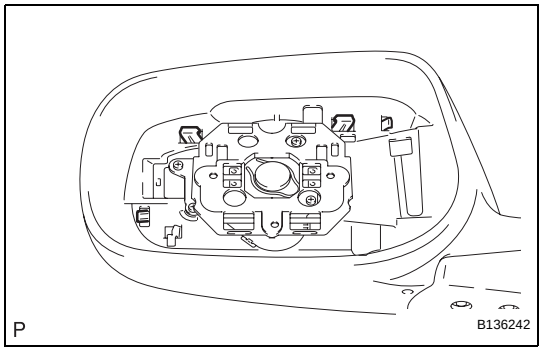
7. REMOVE OUTER MIRROR COVER

(a) Apply protective tape to the lower part of the mirror body.

(b) Press down the upper part of the mirror and tilt the mirror.

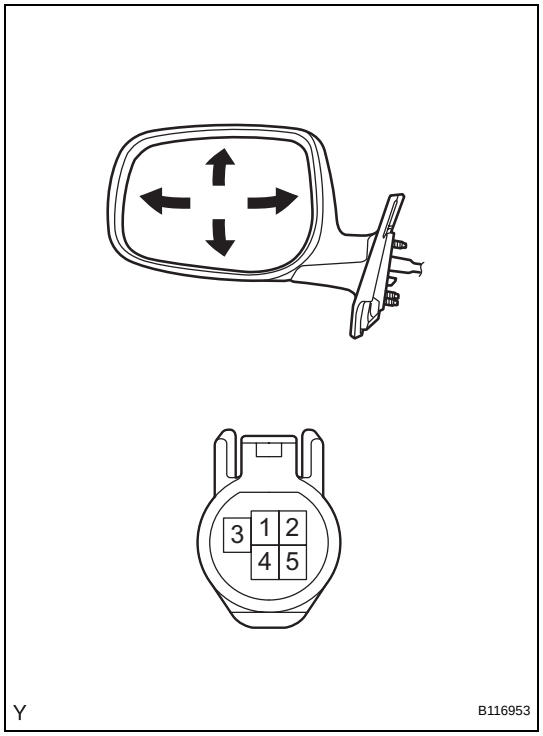
(c) Insert a moulding remover into the 2 clip installation positions on the lower part of the mirror to disengage the 2 clips.

(d) Remove the mirror by pulling it downward.



(e) Disengage the 4 claws from the inside of the mirror body.

(f) Push the upper part of the mirror cover forward to tilt it, and then disengage the claw on the lower part to remove the outer mirror cover.



INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Check the operation.

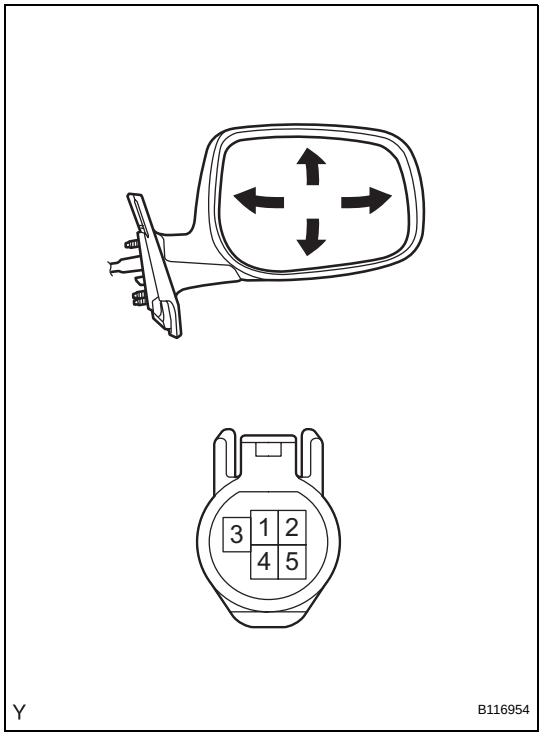
(1) Apply battery voltage to the outer rear view mirror and check the operation of the outer rear view mirror.

Standard

Measurement Condition	Mirror Assembly Operation
Battery positive (+) - Terminal 5 (MV) Battery negative (-) - Terminal 4 (COM)	Turns upward
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 5 (MV)	Turns downward
Battery positive (+) - Terminal 3 (MH) Battery negative (-) - Terminal 4 (COM)	Turns left
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 3 (MH)	Turns right

If the result is not as specified, replace the outer rear view mirror.

MI



2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

(a) Check the operation.

(1) Apply battery voltage to the outer rear view mirror and check the operation of the outer rear view mirror.

Standard

Measurement Condition	Mirror Assembly Operation
Battery positive (+) - Terminal 5 (MV) Battery negative (-) - Terminal 4 (COM)	Turns upward
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 5 (MV)	Turns downward
Battery positive (+) - Terminal 3 (MH) Battery negative (-) - Terminal 4 (COM)	Turns left
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 3 (MH)	Turns right

If the result is not as specified, replace the outer rear view mirror.

INSTALLATION

1. INSTALL OUTER MIRROR COVER

(a) Engage the claw on the lower part of the mirror cover.

(b) Engage the claw on the upper part of the mirror cover.

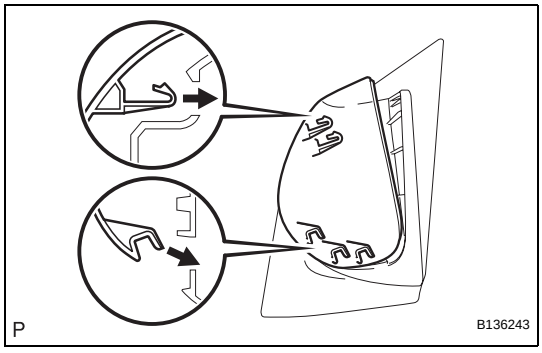
(c) After installing the outer mirror cover, check that there are no gaps between the cover and the mirror body.

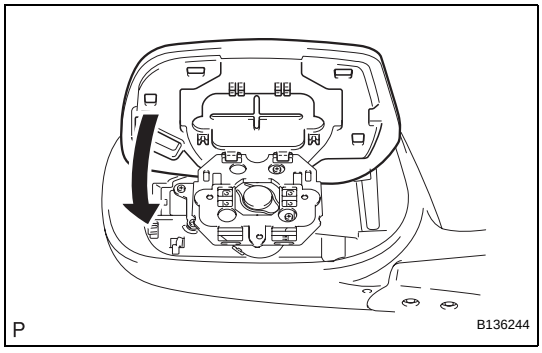
NOTICE:

If there is a gap between the cover and the mirror body, it may cause noise during driving.

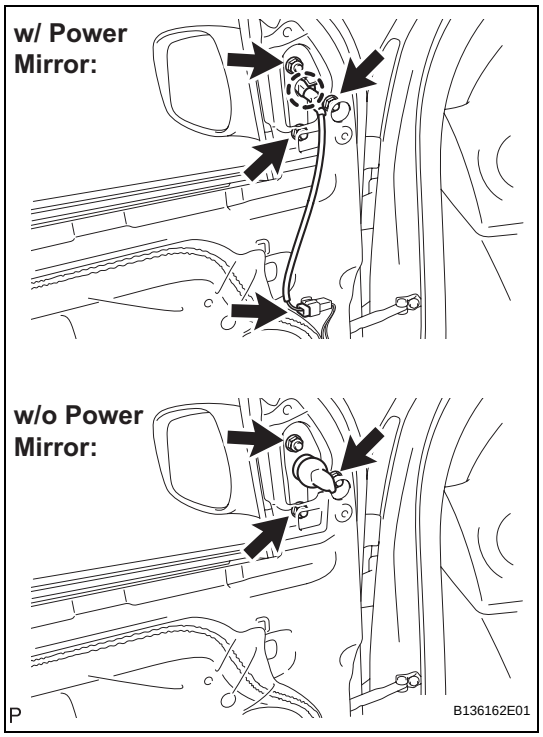
(d) Engage the 2 claws of the outer rear view mirror.

(e) Engage the 2 clips and install the mirror.





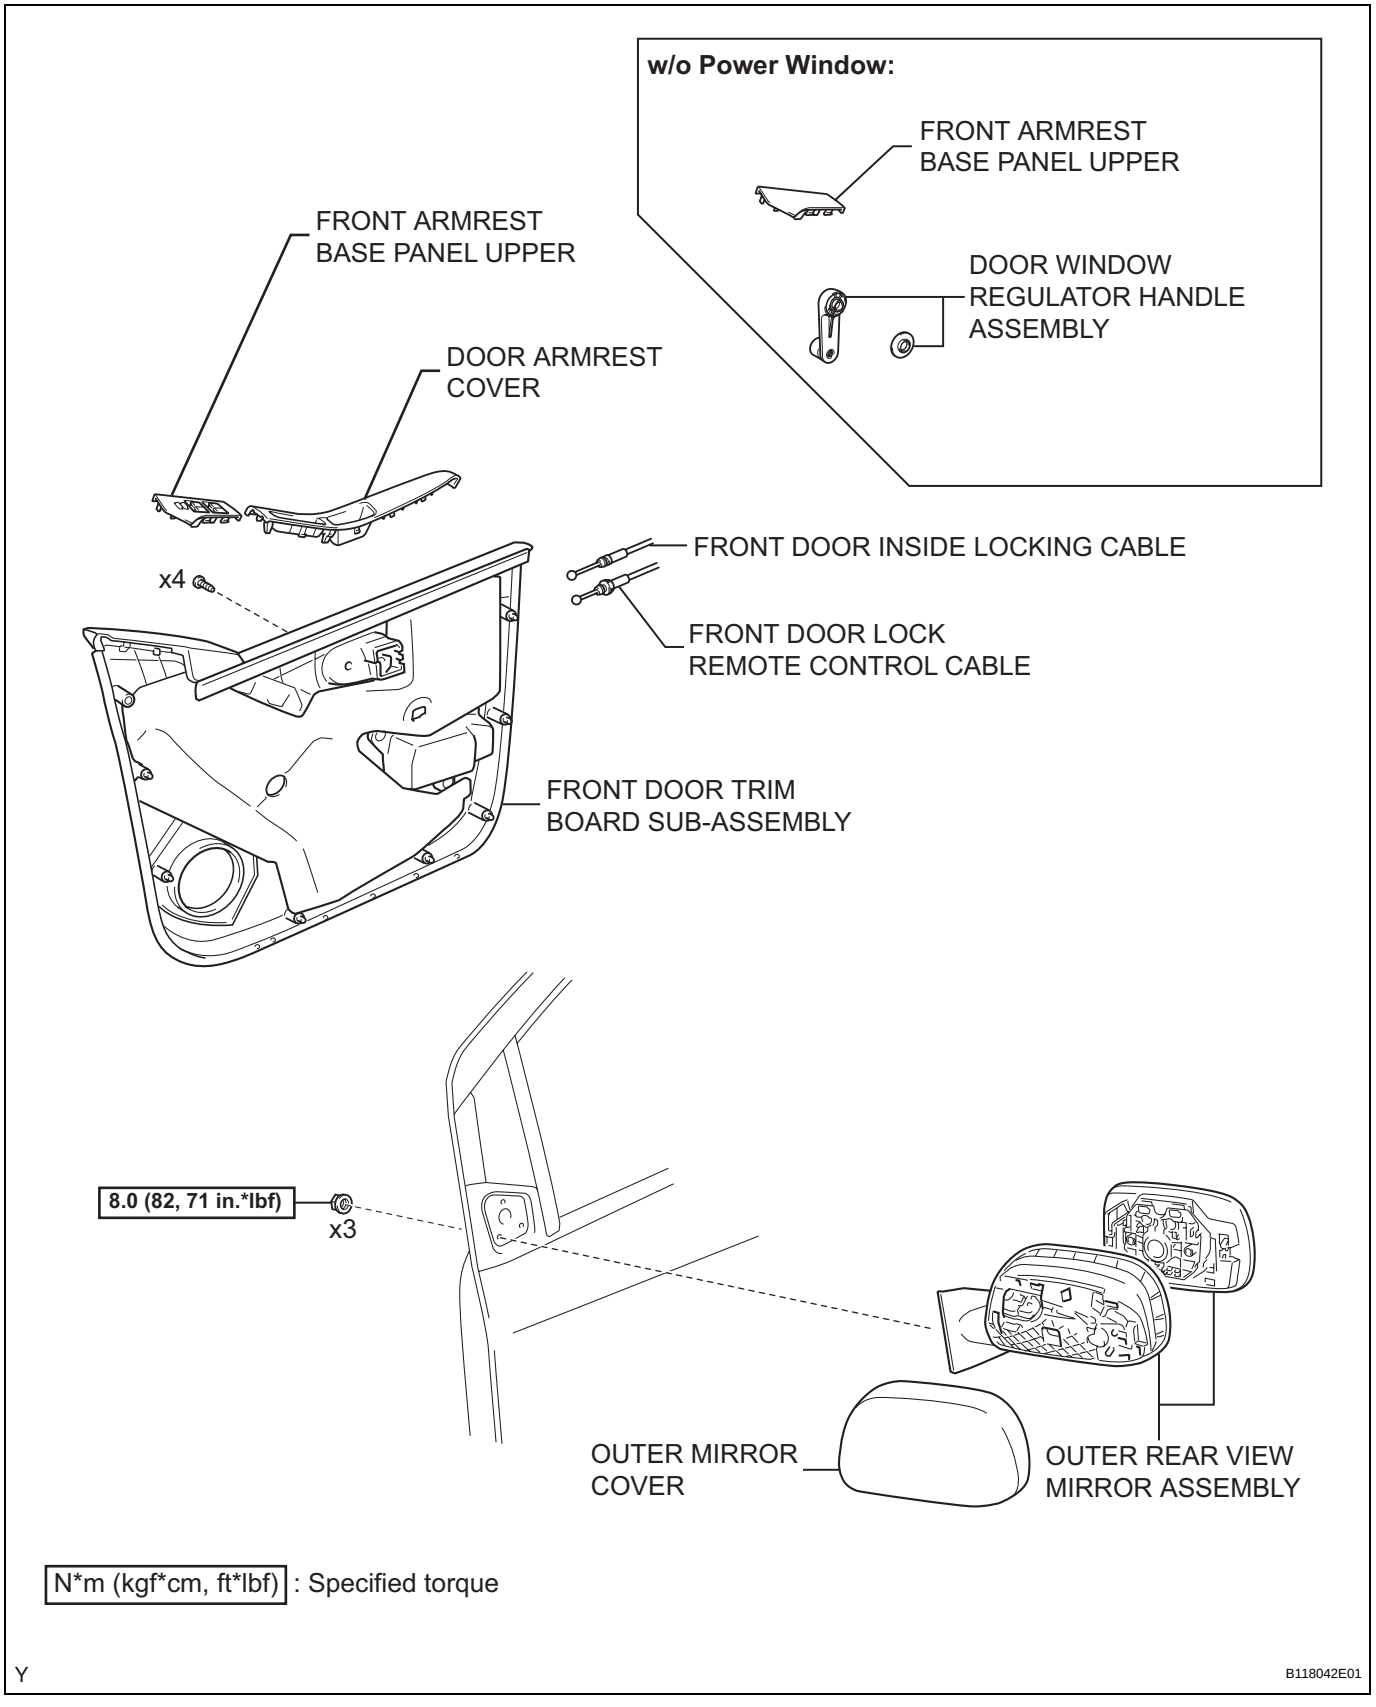
MI



2. **INSTALL OUTER REAR VIEW MIRROR**
   (a) Engage the claw and install the outer rear view mirror with the 3 nuts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (b) w/ Power mirror:
   Connect the connector.
3. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-26)**
4. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-28)**
5. **INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-28)**
6. **INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-29)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

OUTER REAR VIEW MIRROR (for Hatchback)

COMPONENTS



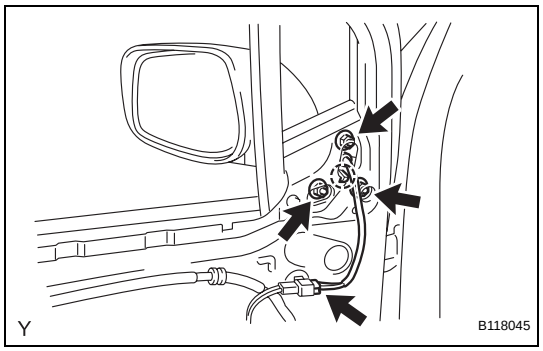
MI

REMOVAL

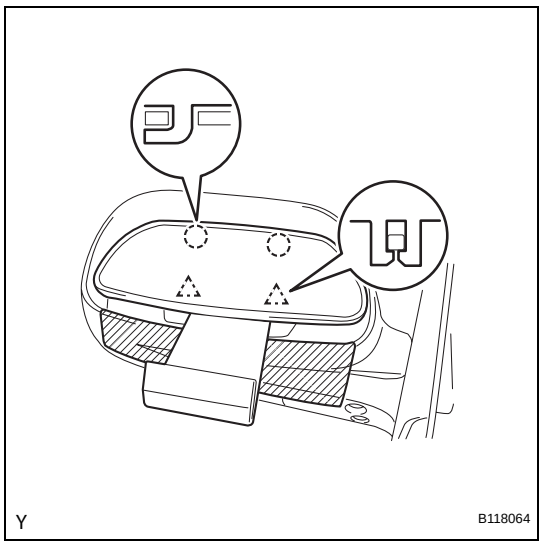
HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

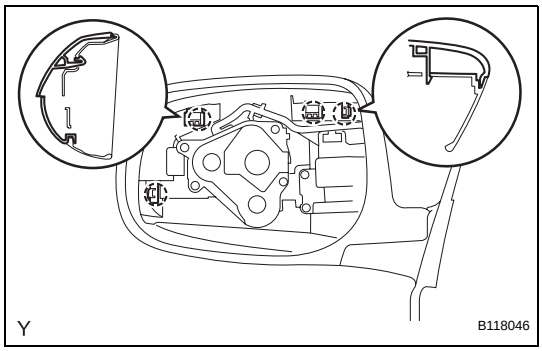
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-57)**
3. **REMOVE DOOR ARMREST COVER (See page ED-33)**
4. **REMOVE FRONT ARMREST BASE PANEL UPPER (w/ Power Window) (See page ED-33)**
5. **REMOVE FRONT ARMREST BASE PANEL UPPER (w/o Power Window) (See page ED-57)**
6. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
7. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY**
   (a) w/ Power mirror:
   Disconnect the connector.
   (b) Remove the 3 nuts, disengage the claw and remove the outer rear view mirror.



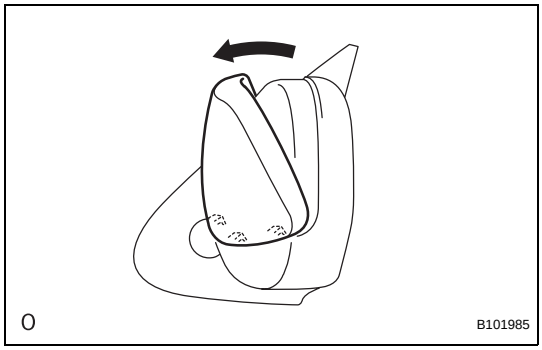
8. **REMOVE OUTER MIRROR COVER**
   (a) Apply protective tape to the lower part of the mirror body.
   (b) Press down the upper part of the mirror and tilt the mirror.
   (c) Insert a moulding remover into the 2 clip installation positions on the lower part of the mirror to disengage the 2 clips.
   (d) Remove the mirror by pulling it downward.



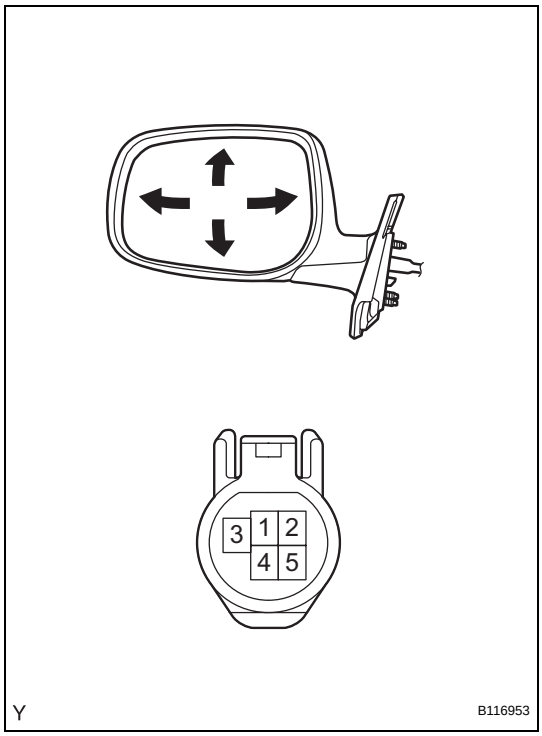
MI



(e) Disengage the 4 claws from the inside of the mirror body.



(f) Push the upper part of the mirror cover forward to tilt it, and then disengage the claw on the lower part to remove the outer mirror cover.



INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Check the operation.

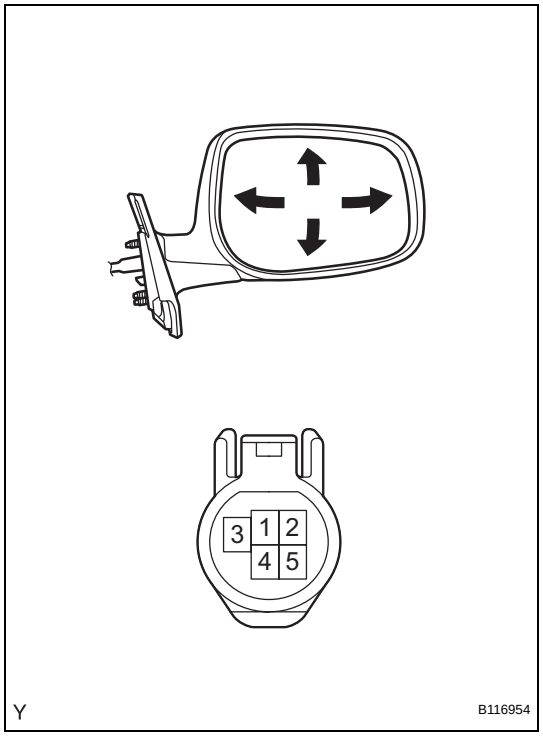
(1) Apply battery voltage to the outer rear view mirror and check the operation of the outer rear view mirror.

Standard

Measurement Condition	Mirror Assembly Operation
Battery positive (+) - Terminal 5 (MV) Battery negative (-) - Terminal 4 (COM)	Turns upward
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 5 (MV)	Turns downward
Battery positive (+) - Terminal 3 (MH) Battery negative (-) - Terminal 4 (COM)	Turns left
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 3 (MH)	Turns right

If the result is not as specified, replace the outer rear view mirror.

MI



2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

(a) Check the operation.

(1) Apply battery voltage to the outer rear view mirror and check the operation of the outer rear view mirror.

Standard

Measurement Condition	Mirror Assembly Operation
Battery positive (+) - Terminal 5 (MV) Battery negative (-) - Terminal 4 (COM)	Turns upward
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 5 (MV)	Turns downward
Battery positive (+) - Terminal 3 (MH) Battery negative (-) - Terminal 4 (COM)	Turns left
Battery positive (+) - Terminal 4 (COM) Battery negative (-) - Terminal 3 (MH)	Turns right

If the result is not as specified, replace the outer rear view mirror.

INSTALLATION

1. INSTALL OUTER MIRROR COVER

(a) Engage the claw on the lower part of the mirror cover.

(b) Engage the claw on the upper part of the mirror cover and install it.

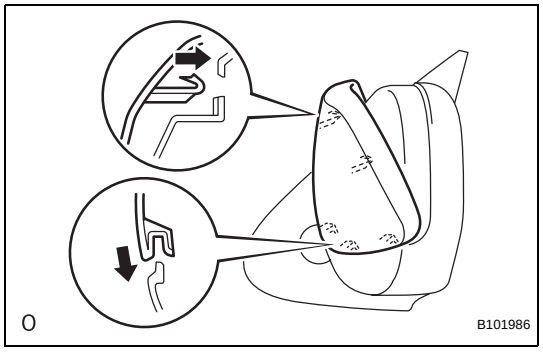
(c) After installing the outer mirror cover, check that there are no gaps between the cover and the mirror body.

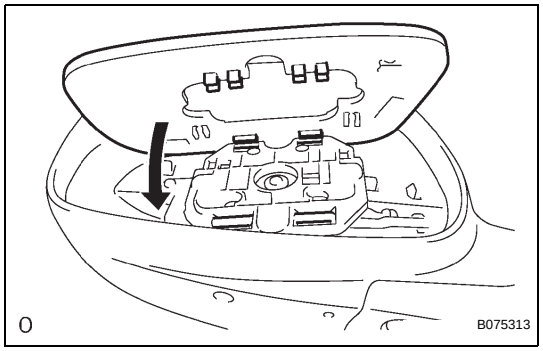
NOTICE:

If there is a gap between the cover and the mirror body, it may cause noise during driving.

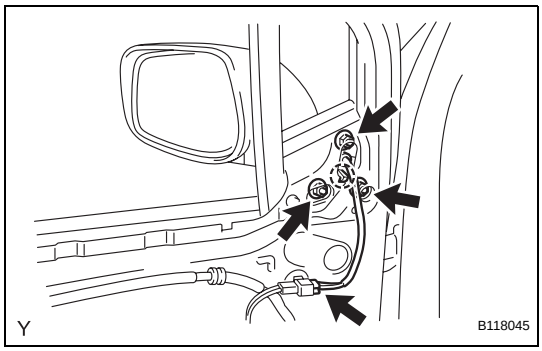
(d) Engage the 2 claws of the outer rear view mirror.

(e) Engage the 2 clips and install the mirror.





MI



2. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY

(a) Engage the claw, then install the outer rear view mirror with the 3 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(b) w/ Power mirror:
Connect the connector.

3. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-51)

4. INSTALL FRONT ARMREST BASE PANEL UPPER (w/ Power Window) (See page ED-53)

5. INSTALL FRONT ARMREST BASE PANEL UPPER (w/ o Power Window) (See page ED-74)

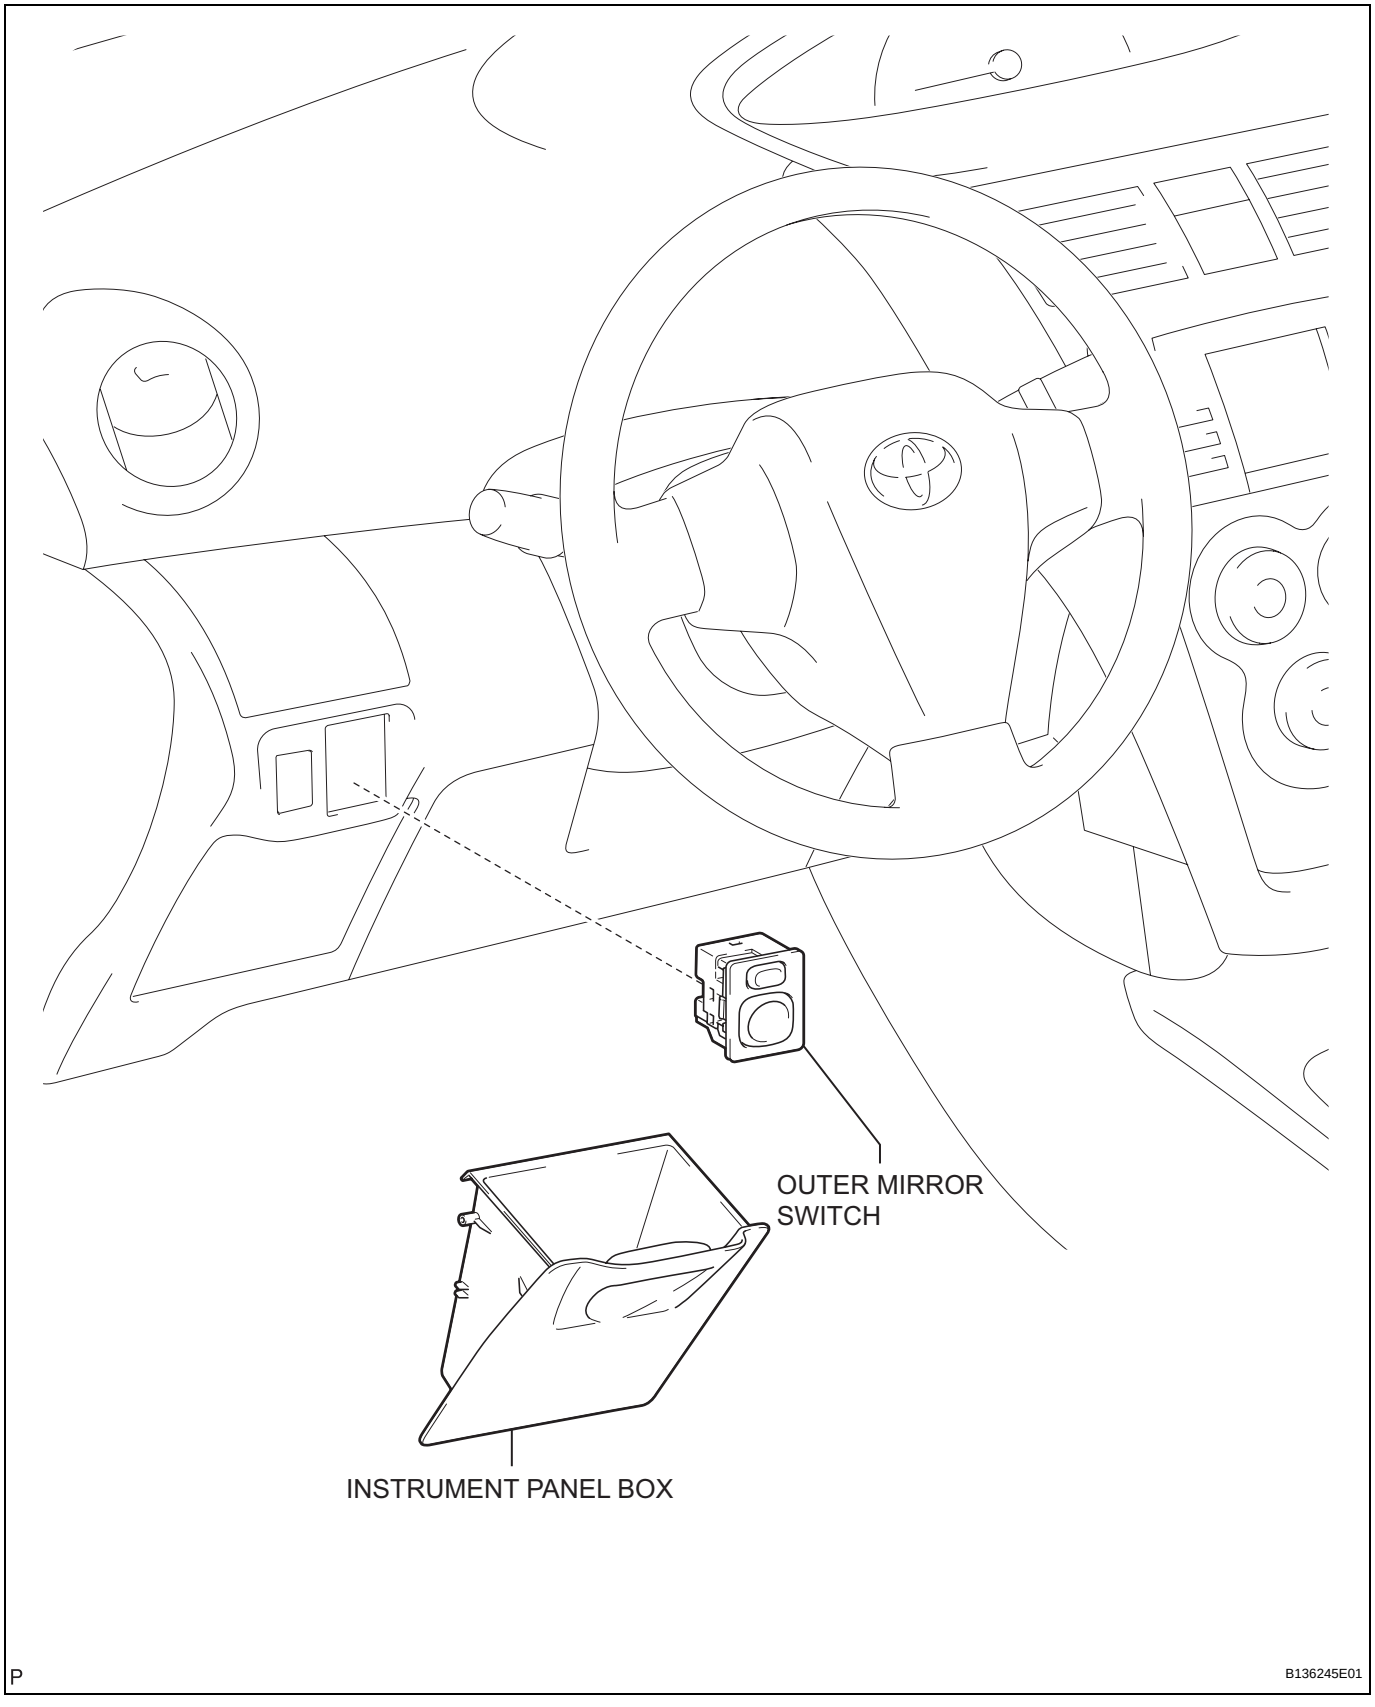
6. INSTALL DOOR ARMREST COVER (See page ED-53)

7. INSTALL DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) (See page ED-75)

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

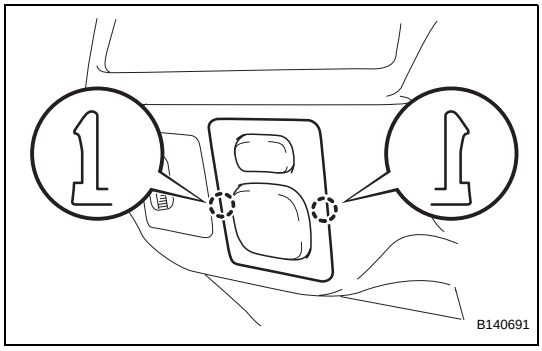
OUTER MIRROR SWITCH (for Sedan)

COMPONENTS



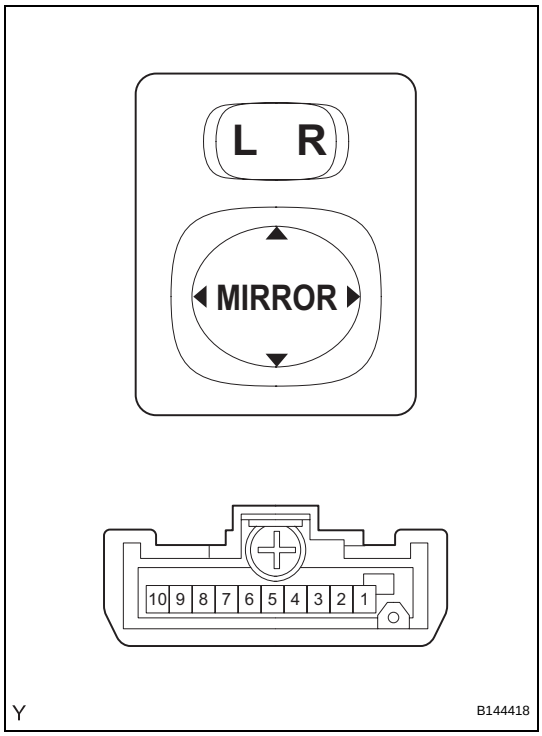
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-45)**
3. **REMOVE OUTER MIRROR SWITCH**
   (a) Disconnect the connector.
   (b) Disengage the 2 claws and remove the outer mirror switch.



INSPECTION

1. **INSPECT OUTER MIRROR SWITCH**
   (a) Check the resistance.
      (1) Select L on the left/right adjustment switch.
      (2) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance



Tester Connection	Condition	Specified Condition
-	OFF	10 kΩ or higher
4 (VL) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
4 (VL) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
5 (HL) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
5 (HL) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

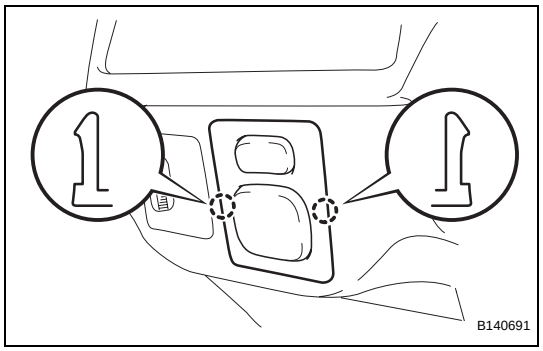
If the result is not as specified, replace the outer mirror switch.

      (3) Select R on the left/right adjustment switch.
      (4) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
      Standard Resistance

Tester Connection	Condition	Specified Condition
-	OFF	10 kΩ or higher
3 (VR) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
3 (VR) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
2 (HR) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
2 (HR) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

If the result is not as specified, replace the outer mirror switch.

MI

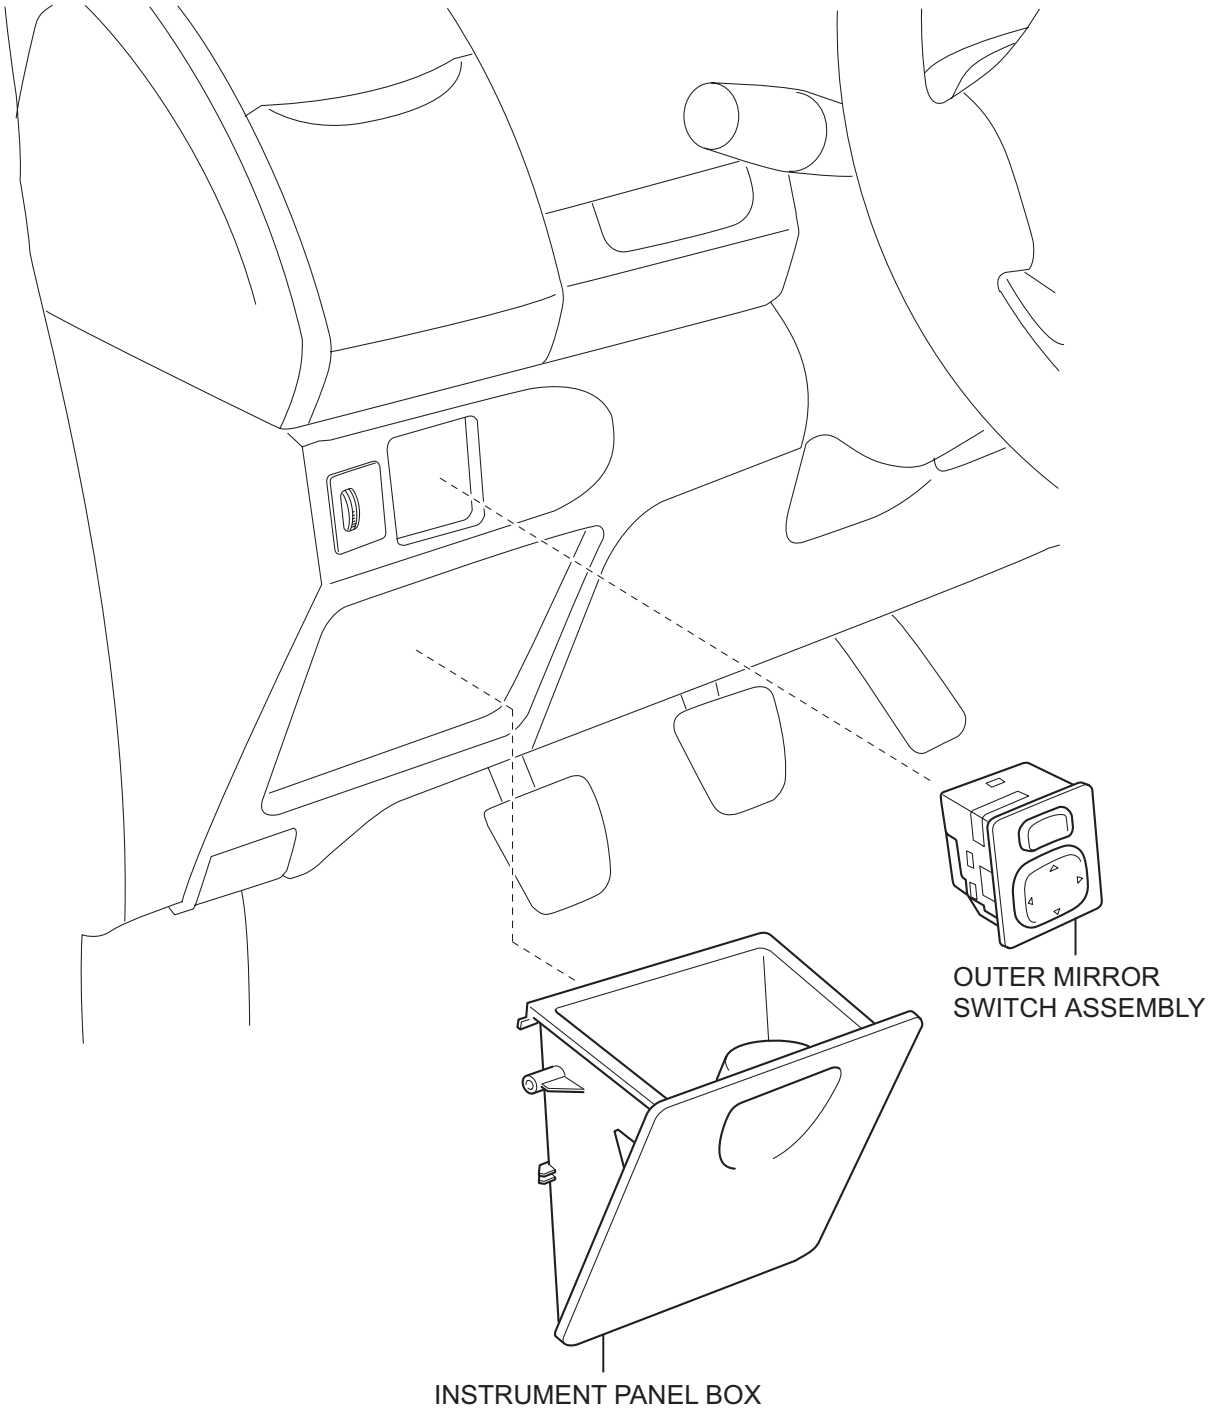


INSTALLATION

1. **INSTALL OUTER MIRROR SWITCH**
   (a) Engage the 2 claws and install the outer mirror switch.
   (b) Connect the connector.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-53)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

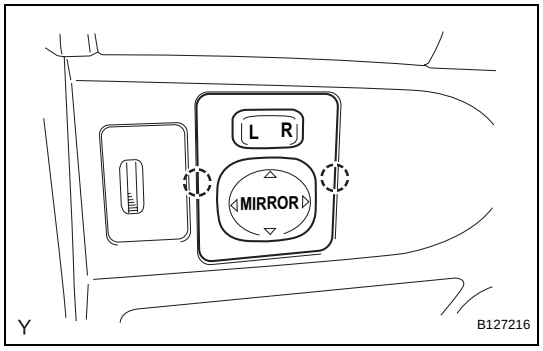
OUTER MIRROR SWITCH (for Hatchback)

COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
3. **REMOVE OUTER MIRROR SWITCH ASSEMBLY**
   (a) Disconnect the connector.
   (b) Disengage the 2 claws and remove the outer mirror switch.



INSPECTION

1. **INSPECT OUTER MIRROR SWITCH ASSEMBLY**
   (a) Check the resistance.
      (1) Select L on the left/right adjustment switch.
      (2) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
-	OFF	10 kΩ or higher
4 (VL) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
4 (VL) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
5 (HL) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
5 (HL) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

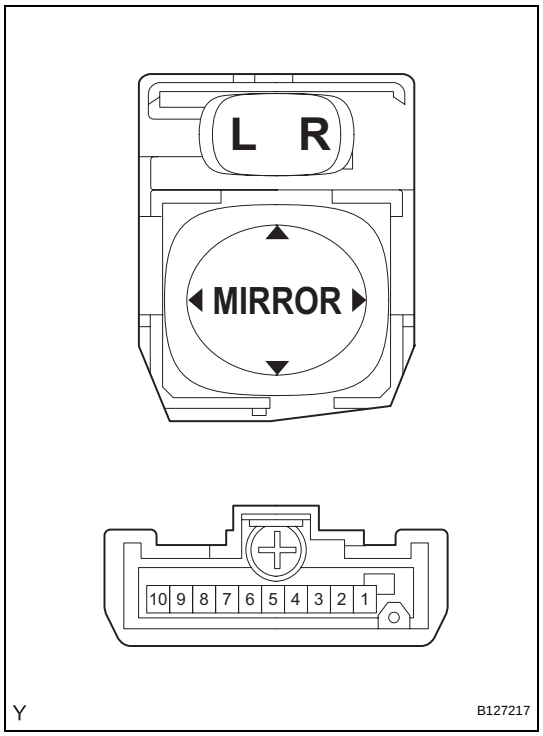
If the result is not as specified, replace the outer mirror switch.

      (3) Select R on the left/light adjustment switch.
      (4) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

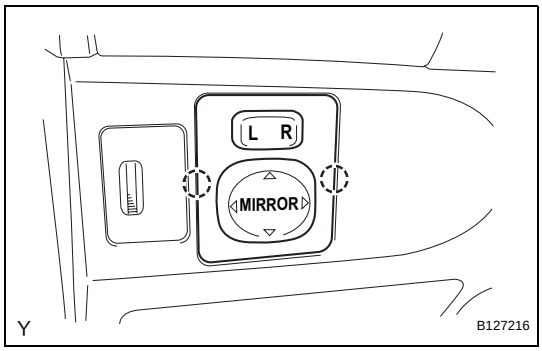
Standard Resistance

Tester Connection	Condition	Specified Condition
-	OFF	10 kΩ or higher
3 (VR) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
3 (VR) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
2 (HR) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
2 (HR) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω

If the result is not as specified, replace the outer mirror switch.



MI



INSTALLATION

1. **INSTALL OUTER MIRROR SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the outer mirror switch.
   (b) Connect the connector.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

UPPER INSTRUMENT PANEL (for Sedan)

PRECAUTION

1. PRECAUTION FOR VEHICLES WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some of these operations may affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

REMOVAL

HINT:
Use the same procedure for both the RH and LH sides.

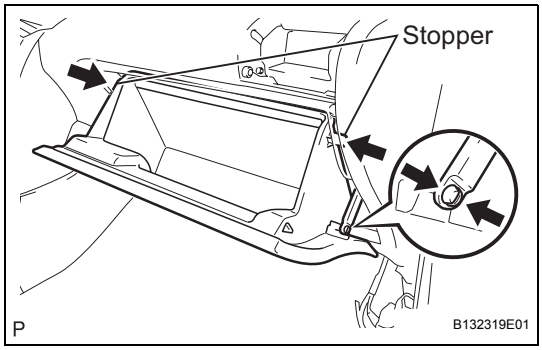
1. **BOLTS, SCREWS AND NUTS TABLE**
   HINT:
   All bolts, screws and nuts relevant to installing and removing the instrument panel are shown, along with their alphabetic codes, in the table below.

mm(in.) (L=Length)

Code	Shape	Code	Shape	Code	Shape
<A>	 φ=5 (0.20) L=14 (0.55) 93568-15014	<B>	 φ=5 (0.20) L=14 (0.55) 93568-55014	<C>	 φ=8 (0.31) L=15 (0.59) 90105-08120 91643-80820

P B118994E01

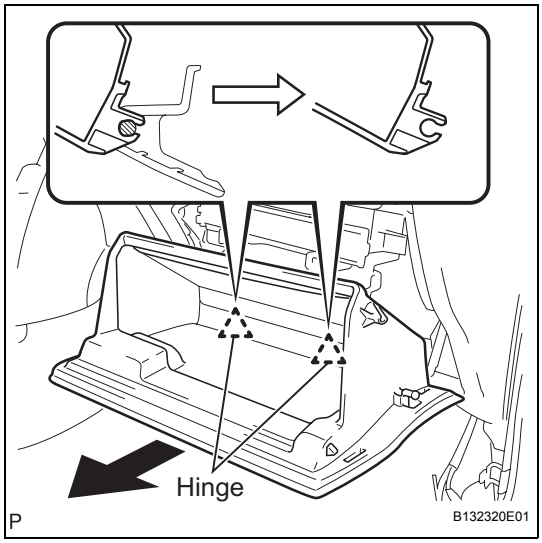
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   (a) Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
5. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
6. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
7. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
8. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
   (a) Separate the front door opening trim weatherstrip.
9. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   (a) Separate the front door opening trim weatherstrip.
10. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
11. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**



12. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Disengage the claw and separate the 2 glove compartment door stoppers from the glove compartment door.

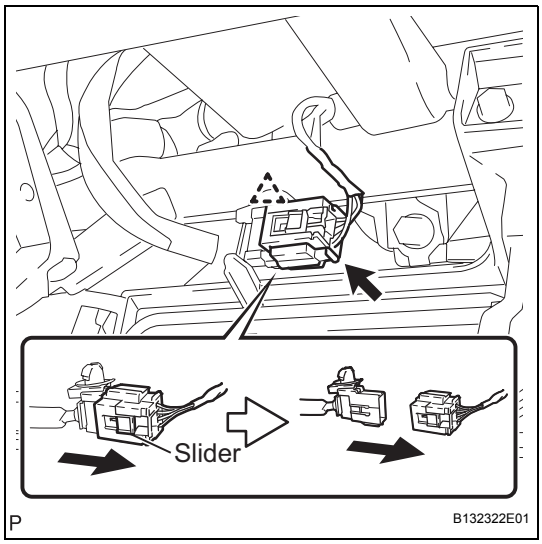
(b) Slightly flex the upper part of the glove compartment door to release the 2 stoppers and open the glove compartment door assembly until it becomes horizontal.



(c) Pull the glove compartment door assembly out horizontally to disengage the hinge portion and remove the glove compartment door.

NOTICE:

Pull the glove compartment door out horizontally, otherwise, installation failure caused by excessive play around the hinge portion will result.



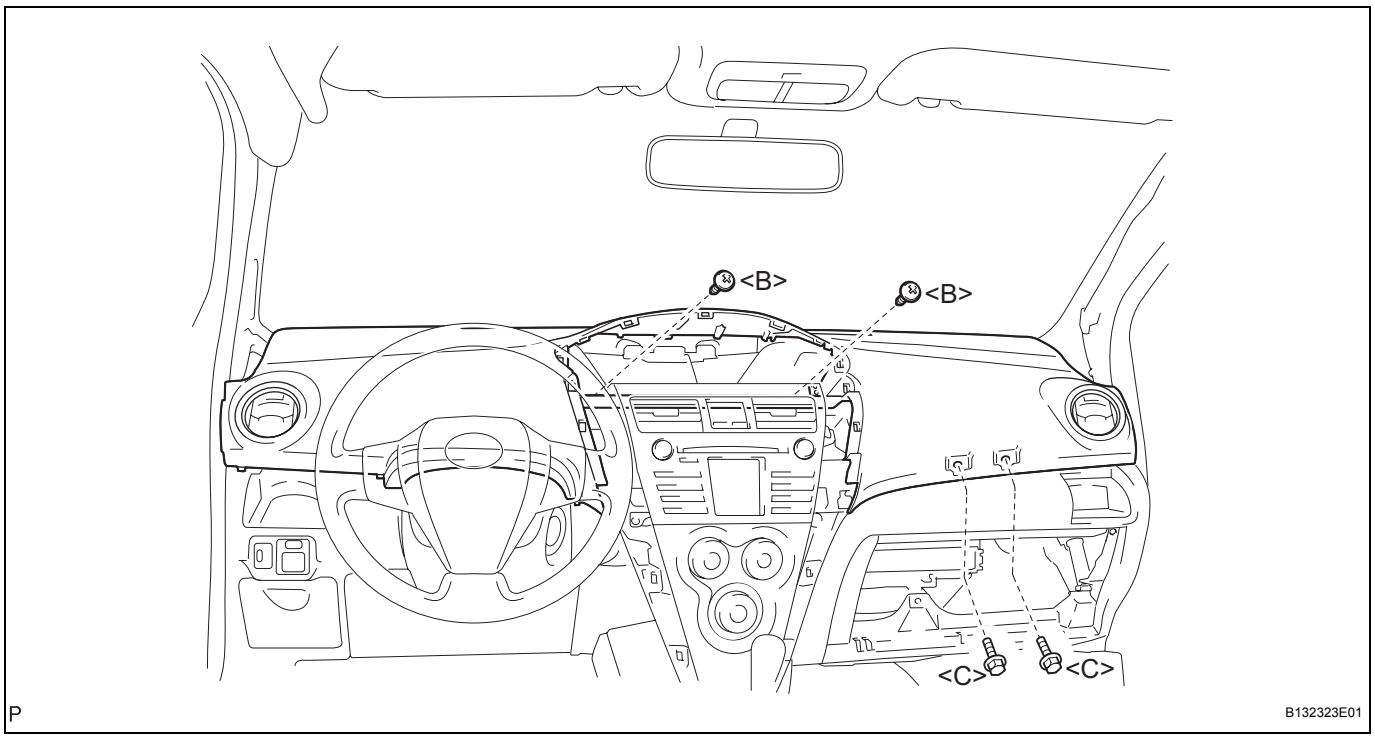
13. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Slide the slider and disconnect the passenger airbag connector.

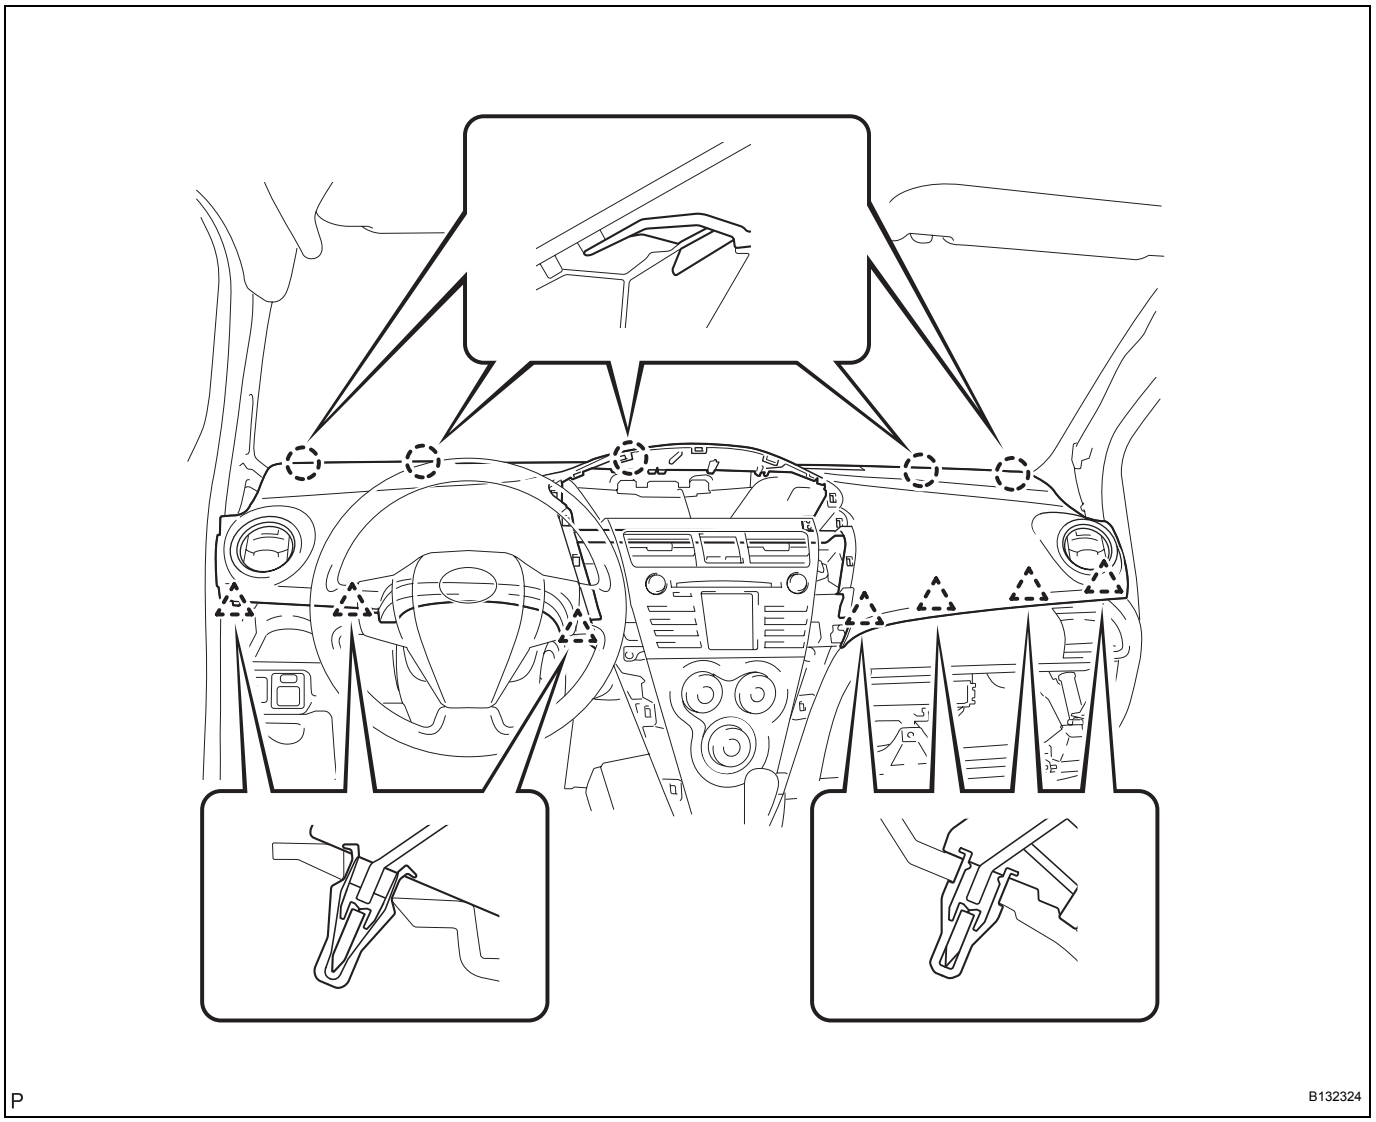
(b) Disconnect the clamp.

IP

(c) Remove the 2 <C> bolts and 2 <B> screws.



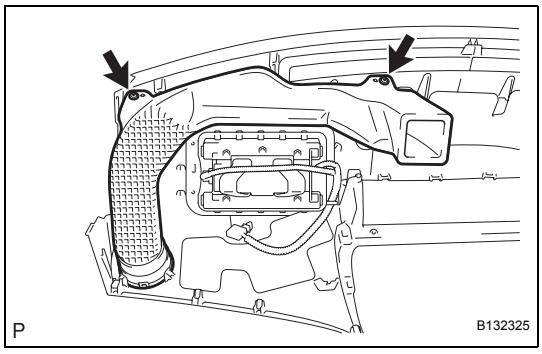
(d) Disengage the 7 clips by lifting the rear side of the instrument panel up.

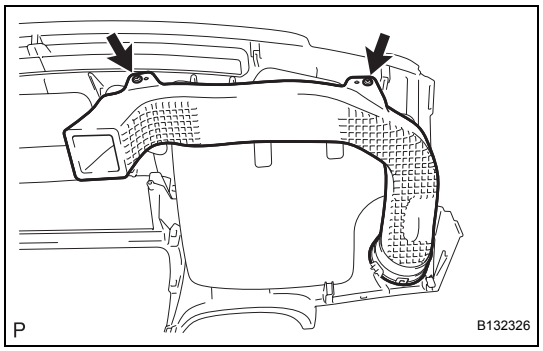


(e) While lifting the instrument panel, slide it toward the rear of the vehicle. Disengage the 5 claws from the front side of the instrument panel and remove the instrument panel.

14. REMOVE NO. 2 HEATER TO REGISTER DUCT

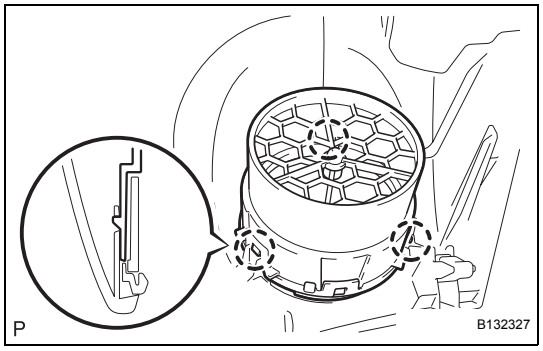
(a) Remove the 2 <A> screws and remove the register duct.





15. REMOVE NO. 1 HEATER TO REGISTER DUCT

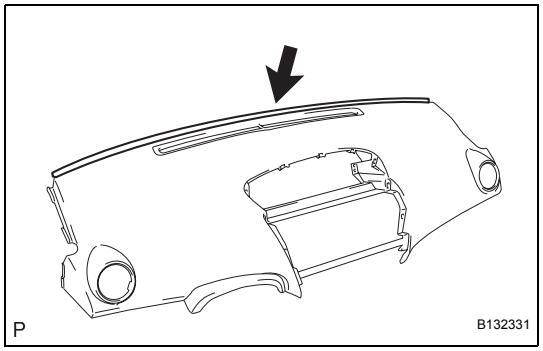
(a) Remove the 2 <A> screws and remove the register duct.



16. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

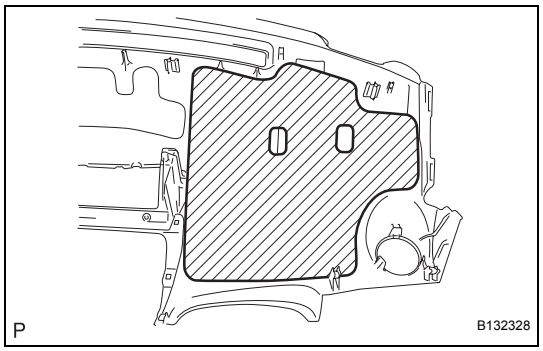
(a) Disengage the 3 claws and remove the register.
HINT:
Use the same procedure for both sides.

17. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-328)



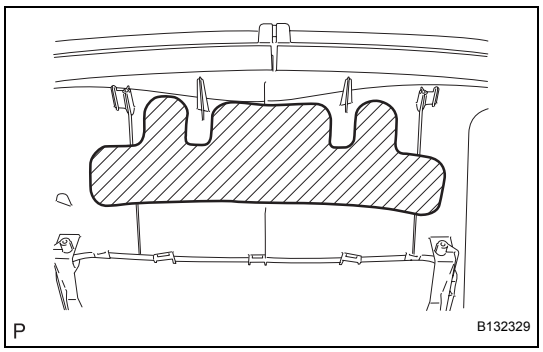
18. REMOVE INSTRUMENT PANEL CUSHION

(a) Remove the instrument panel cushion from the upper instrument panel.



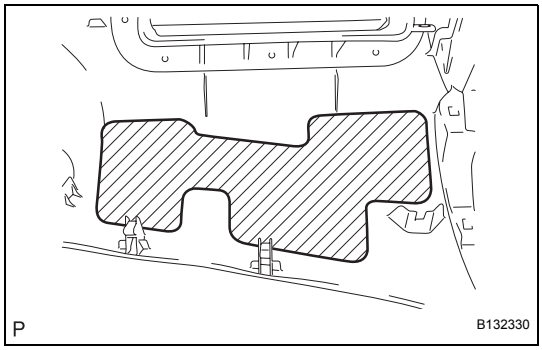
19. REMOVE NO. 1 INSTRUMENT PANEL CUSHION

(a) Remove the instrument panel cushion from the upper instrument panel.



20. REMOVE NO. 2 INSTRUMENT PANEL CUSHION

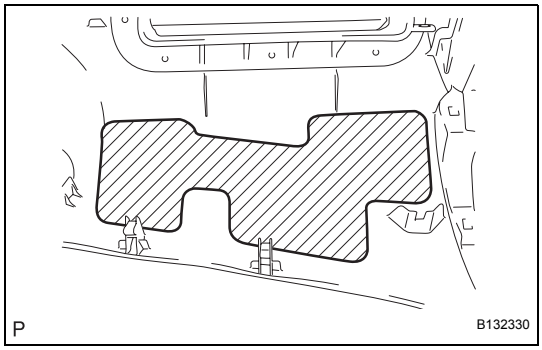
(a) Remove the instrument panel cushion from the upper instrument panel.



21. REMOVE NO. 3 INSTRUMENT PANEL CUSHION

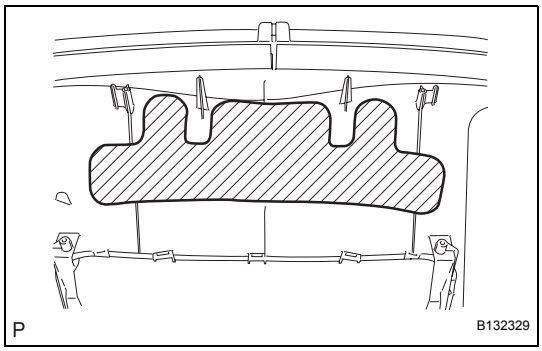
(a) Remove the instrument panel cushion from the upper instrument panel.

INSTALLATION



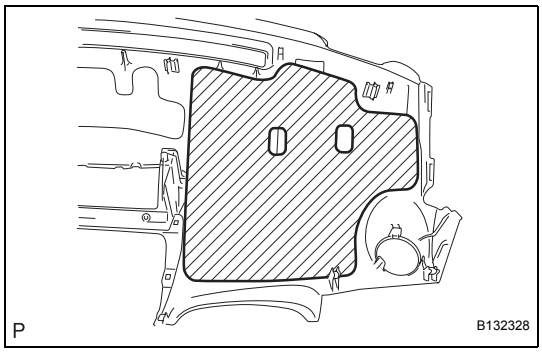
1. INSTALL NO. 3 INSTRUMENT PANEL CUSHION

(a) Install the instrument panel cushion onto the upper instrument panel.



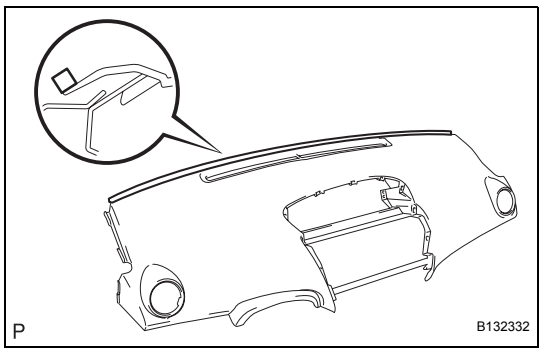
2. INSTALL NO. 2 INSTRUMENT PANEL CUSHION

(a) Install the instrument panel cushion onto the upper instrument panel.



3. INSTALL NO. 1 INSTRUMENT PANEL CUSHION

(a) Install the instrument panel cushion onto the upper instrument panel.

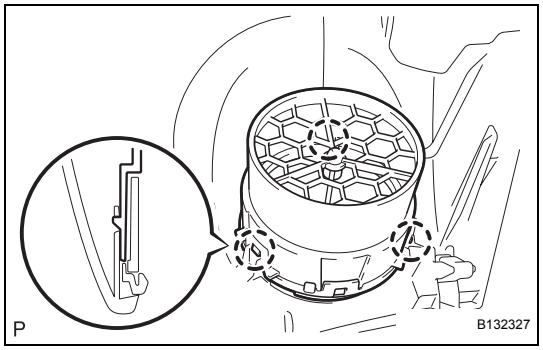


4. INSTALL INSTRUMENT PANEL CUSHION

(a) Install the instrument panel cushion onto the upper instrument panel.

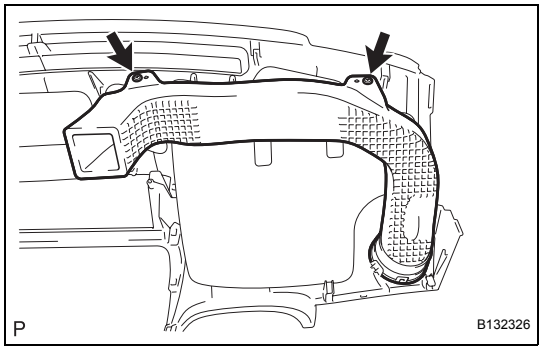
5. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-329)

IP



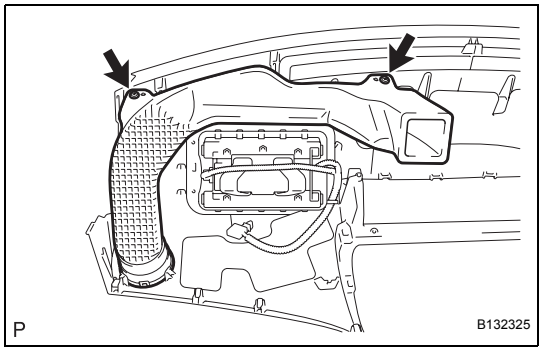
6. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Engage the 3 claws and install the register.
HINT:
Use the same procedure for both sides.



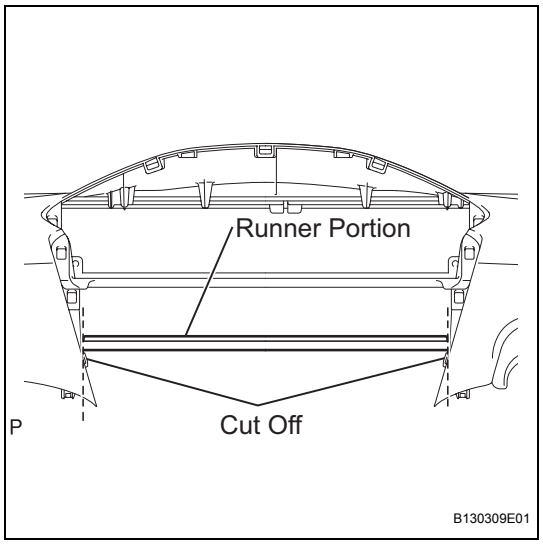
7. INSTALL NO. 1 HEATER TO REGISTER DUCT

(a) Install the register duct with the 2 <A> screws.



8. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Install the register duct with the 2 <A> screws.



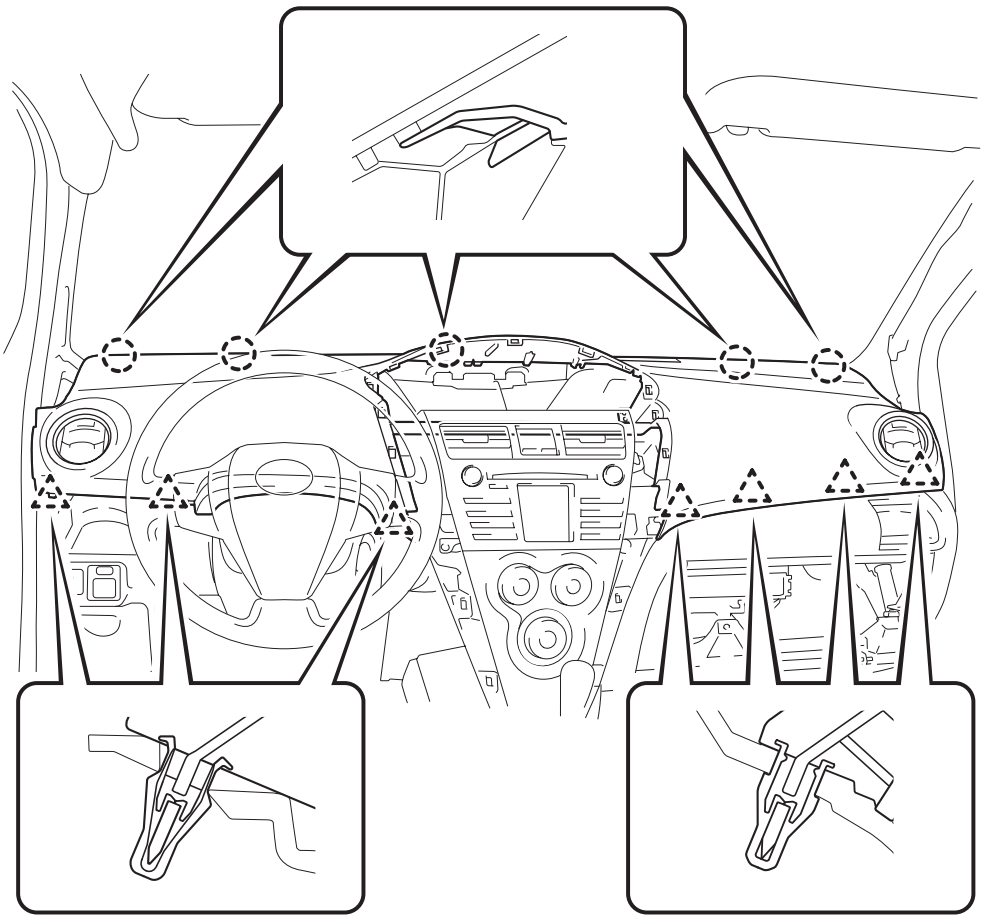
9. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Using a nipper, cut off both ends of the runner portion shown in the illustration (When installing a new one).

(b) Engage the 5 claws at the front side of the instrument panel.

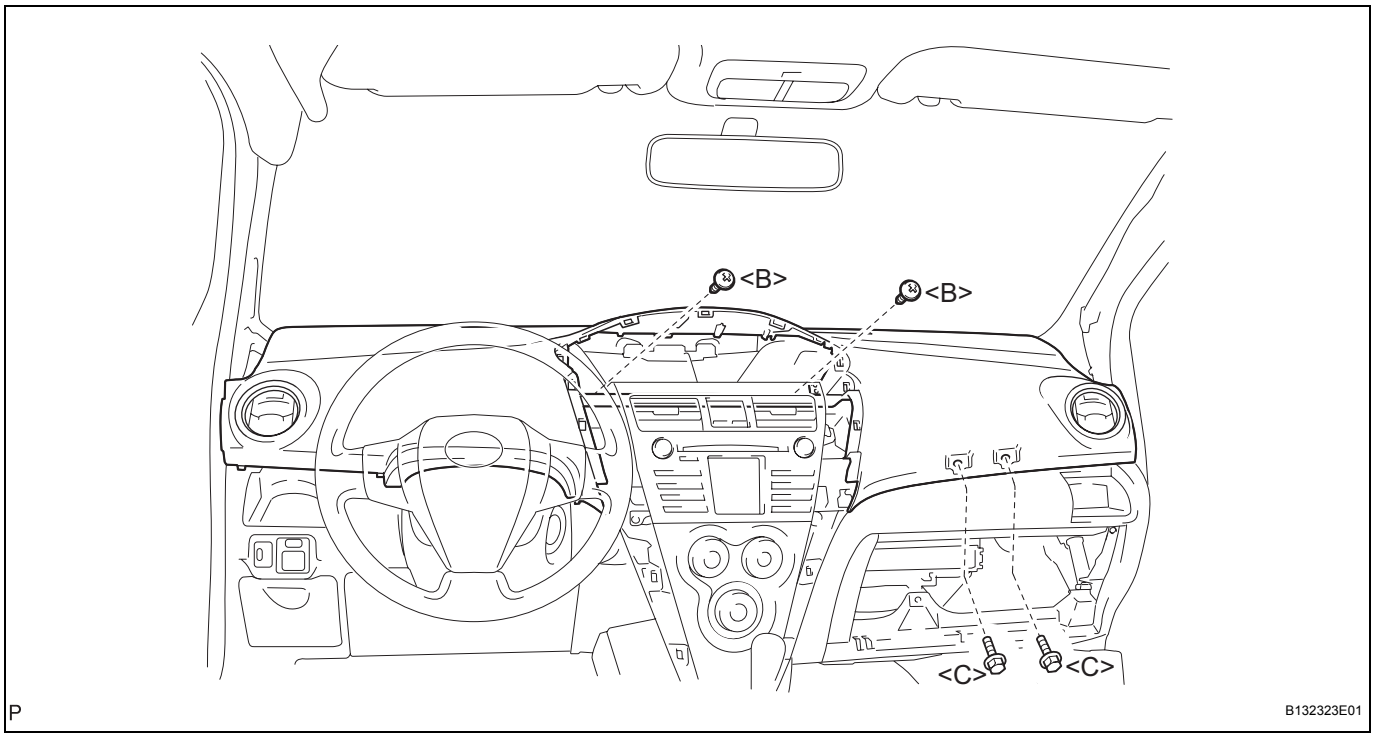
IP

(c) Engage the 7 clips at the rear side of the instrument panel.

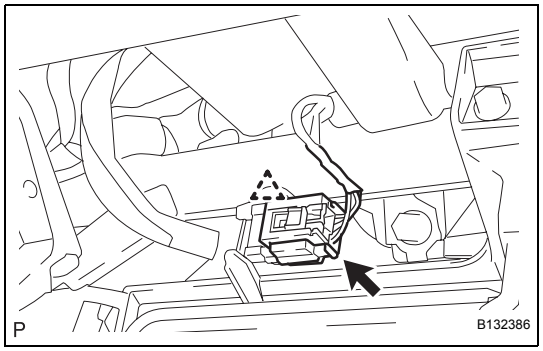


P B132324

(d) Install the upper instrument panel with the 2 <C> bolts and the 2 <B> screws.



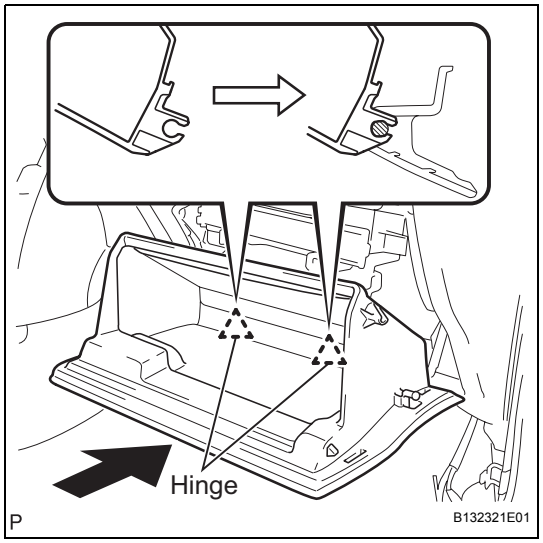
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf) for bolt <C>



(e) Connect the passenger airbag connector and clamp.

IP

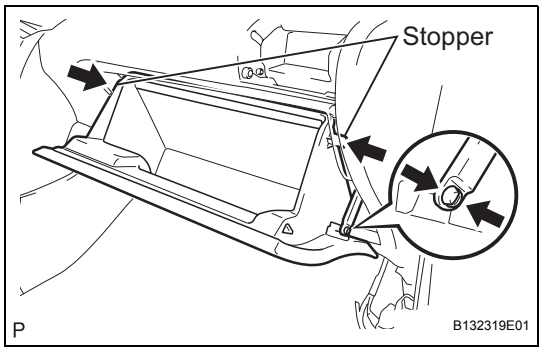
10. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY



(a) Engage the claws of the hinge portions by pushing the glove compartment door in the horizontal direction to install the glove compartment door assembly.

NOTICE:

Engage the claw by pushing it in the horizontal direction, otherwise, installation failure caused by excessive play around the hinge portion will result.



(b) Slightly flex the upper portion of the glove compartment door assembly to engage the stopper.
(c) Install the 2 glove compartment door stoppers onto the glove compartment door.

11. **INSTALL FRONT PILLAR GARNISH RH (See page IR-29)**
12. **INSTALL FRONT PILLAR GARNISH LH (See page IR-30)**
13. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Install the front door opening trim weatherstrip.
14. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
    (a) Install the front door opening trim weatherstrip.
15. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**
16. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
17. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
18. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
19. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
21. **CHECK SRS WARNING LIGHT**
    (See page RS-31)

IP

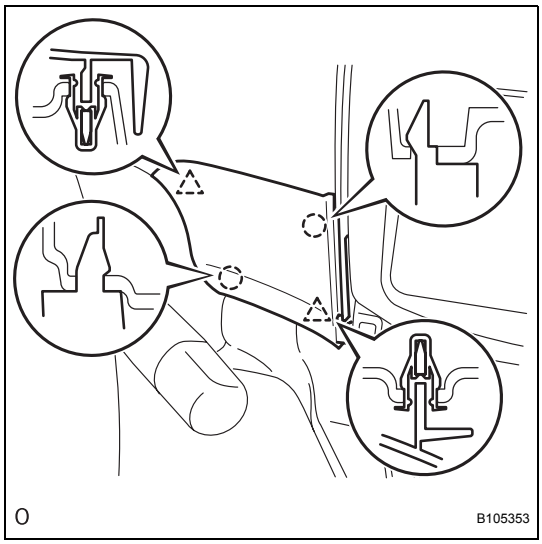
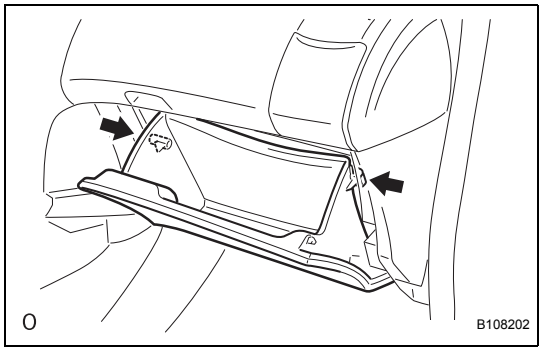
9. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
10. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**



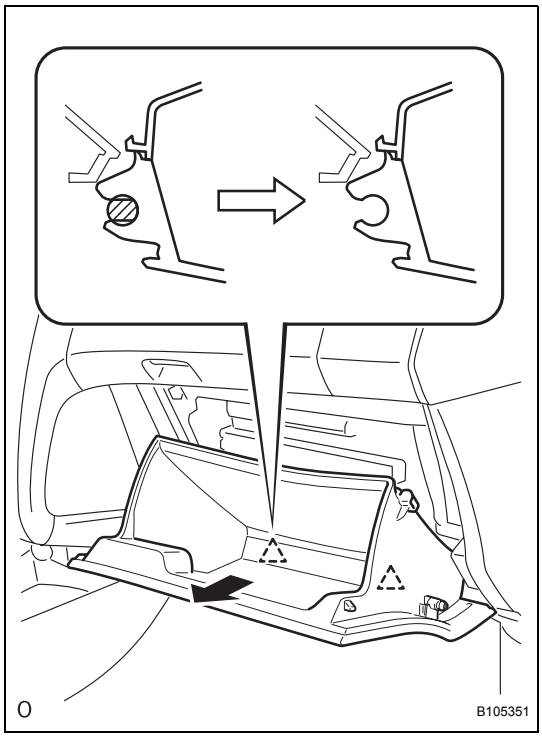
11. REMOVE NO. 1 SWITCH HOLE BASE

(a) Disengage the 2 clips and 2 claws and remove the switch hole base.



12. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Slightly deform the upper part of the glove compartment door assembly to release the 2 stoppers and open the glove compartment door assembly until it becomes horizontal.

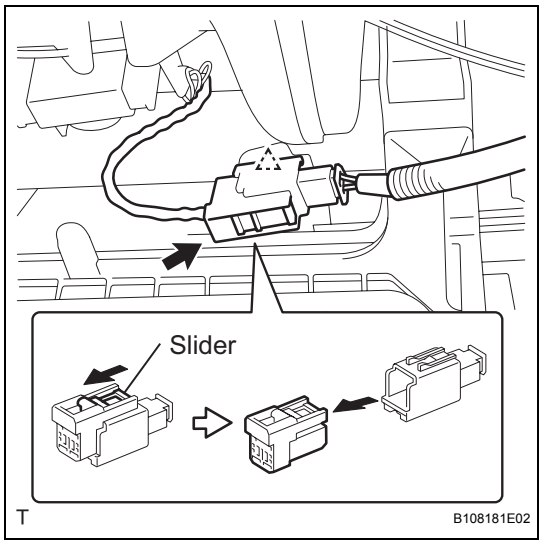


(b) Pull the glove compartment door assembly out horizontally to disengage the hinge portion and remove the glove compartment door assembly.

NOTICE:

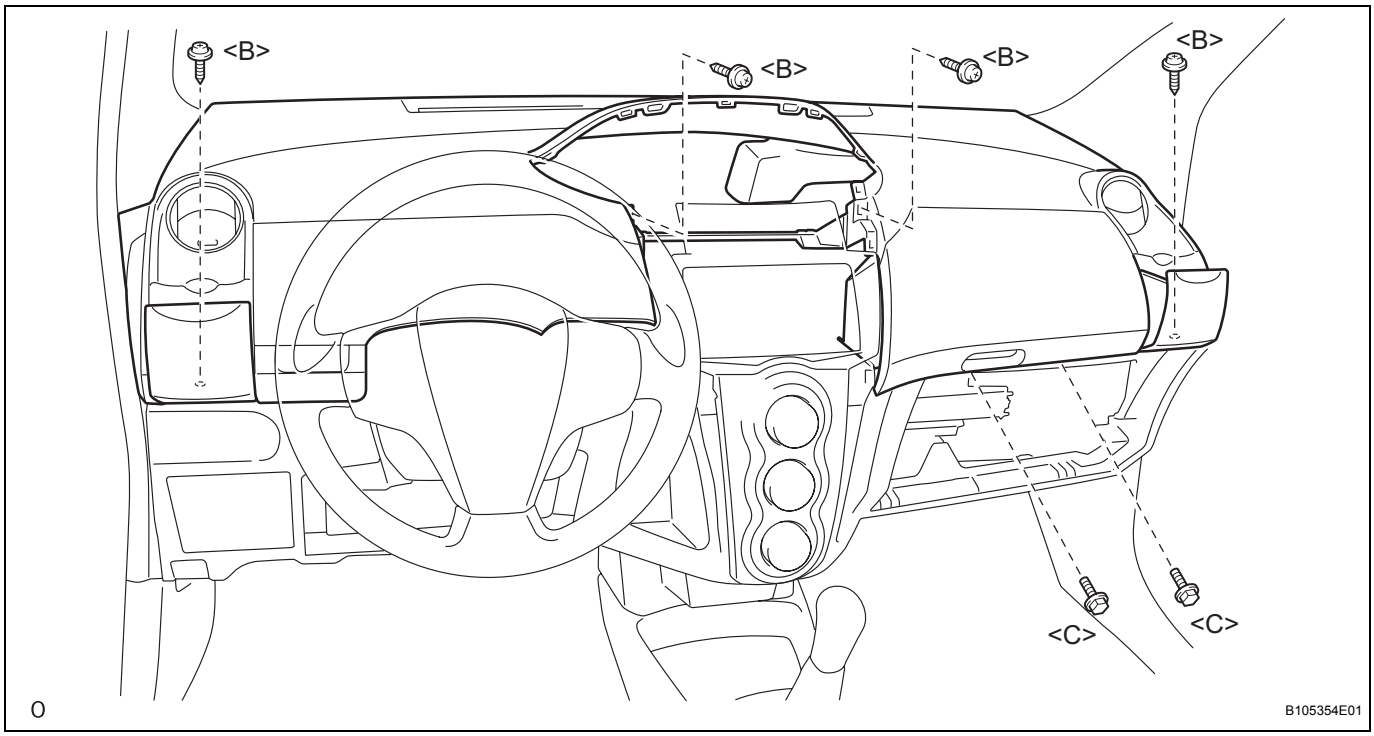
Pull the glove compartment door out horizontally, otherwise, installation failure caused by excessive play around the hinge portion will result.

IP



13. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

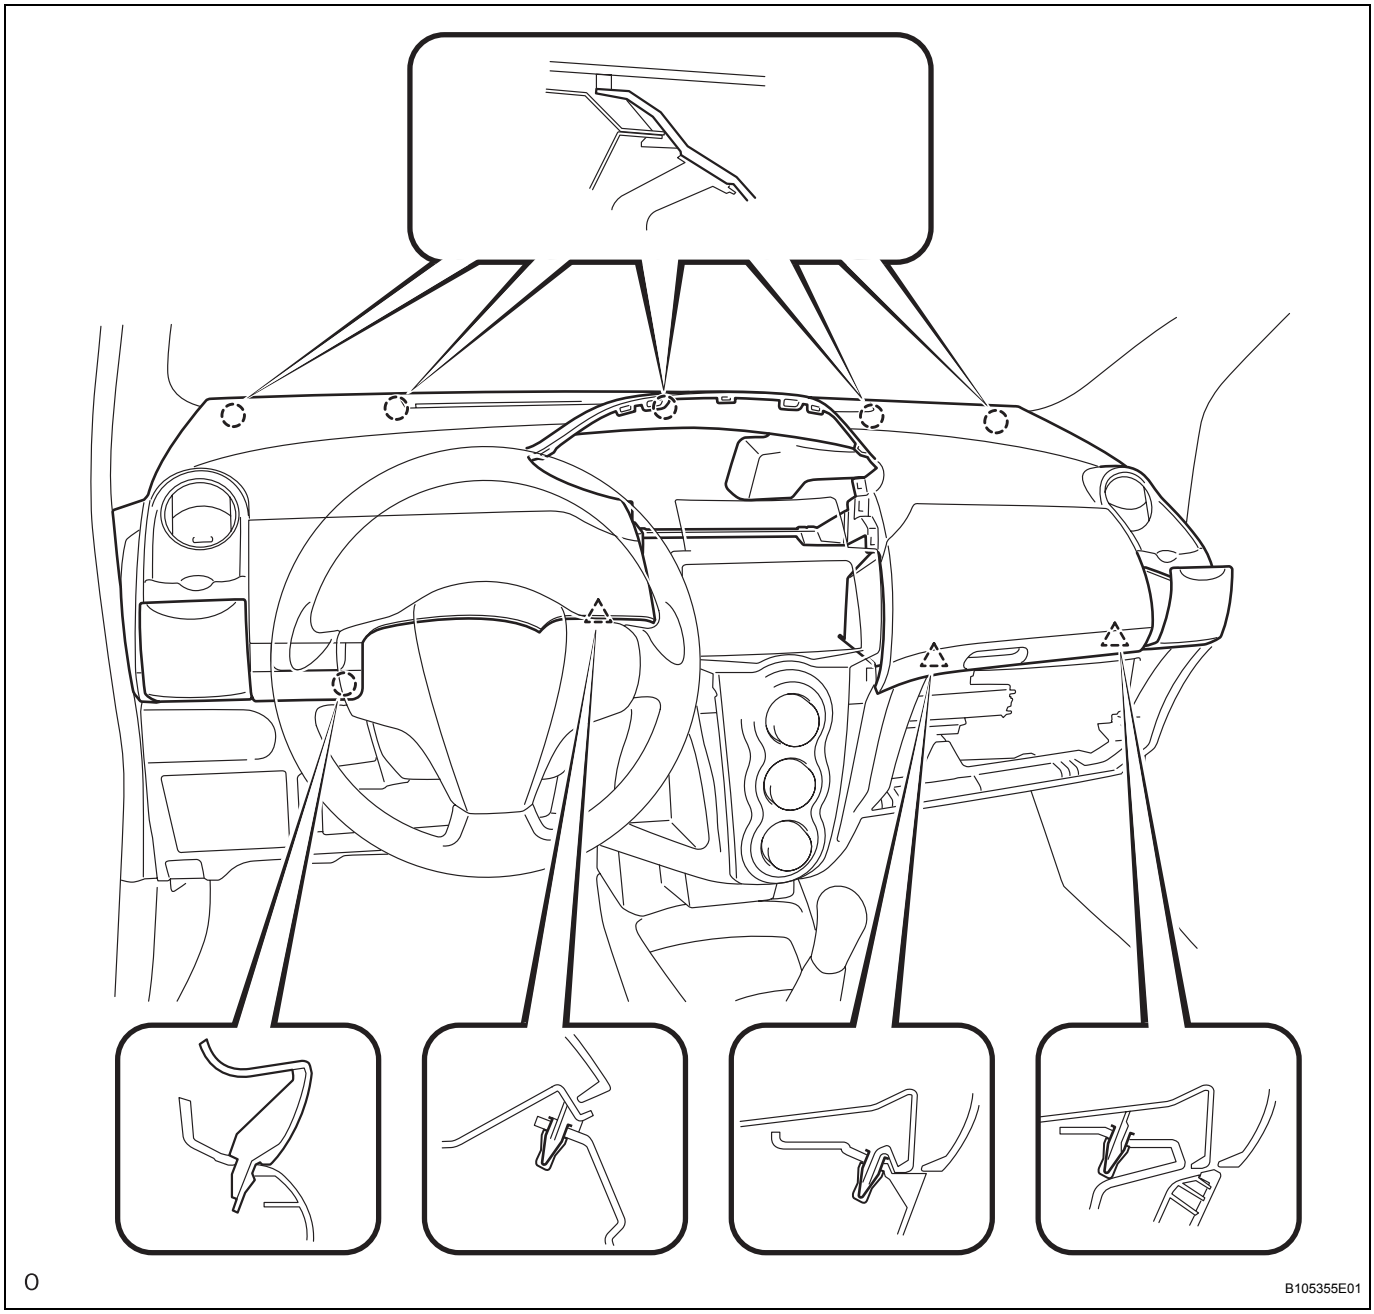
(a) Slide the slider and disconnect the passenger airbag connector.
(b) Disconnect the clamp.
(c) Remove the 2 <C> bolts and 4 <B> screws.

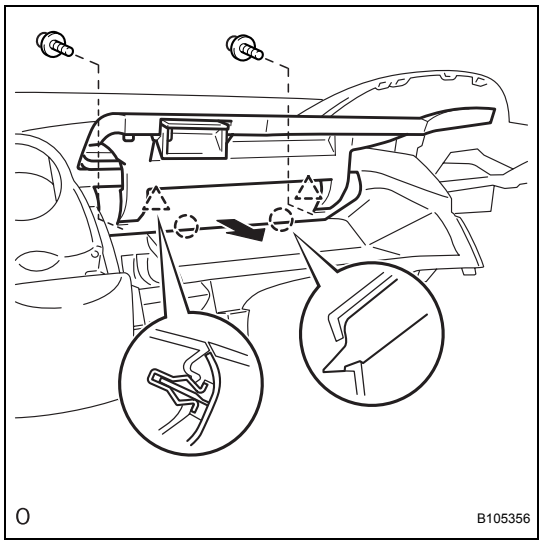


(d) Disconnect the connectors.
(e) Disengage the claw and 3 clips while lifting the rear instrument panel up.

IP

(f) While lifting the instrument panel, slide it toward the rear of the vehicle. Disengage the 5 claws of the front side of the instrument panel and remove the instrument panel.

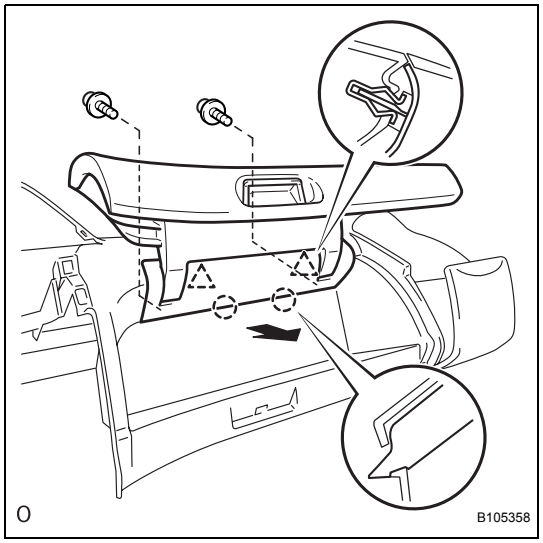




14. REMOVE NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY

(a) Remove the 2 <A> screws.

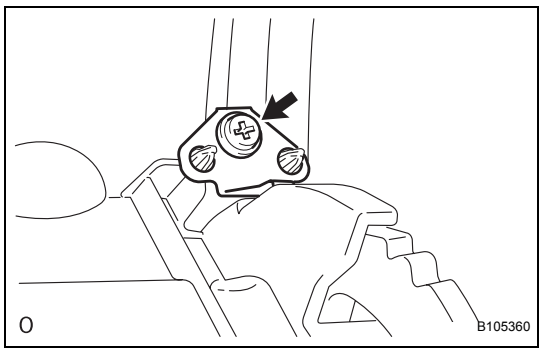
(b) Pull the instrument panel box door toward the rear of the vehicle, disengage the 2 claws and 2 clips and remove the instrument panel box door.



15. REMOVE NO. 2 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY

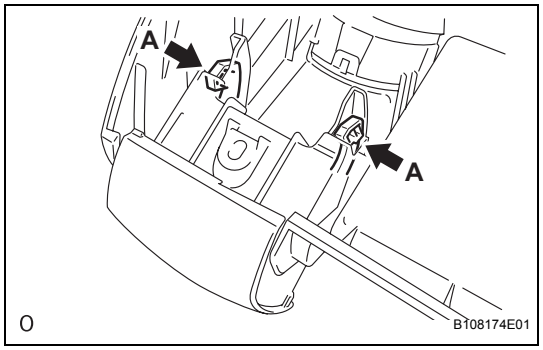
(a) Remove the 2 <A> screws.

(b) Pull the instrument panel box door toward the rear of the vehicle, disengage the 2 claws and 2 clips and remove the instrument panel box door.



16. REMOVE INSTRUMENT PANEL CUP HOLDER SPRING

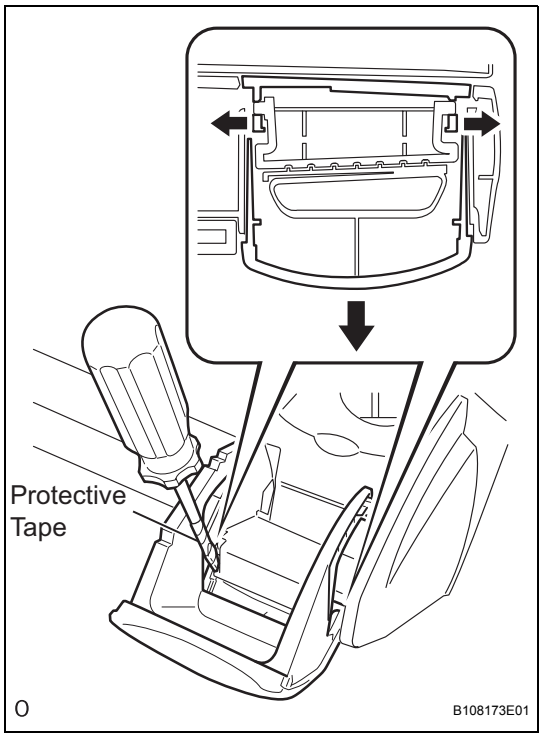
(a) Remove screw <A> and remove the cup holder spring.



17. REMOVE NO. 1 INSTRUMENT PANEL CUP HOLDER

(a) Slightly deform portion A of the cup holder by pressing it and release the stopper.

IP

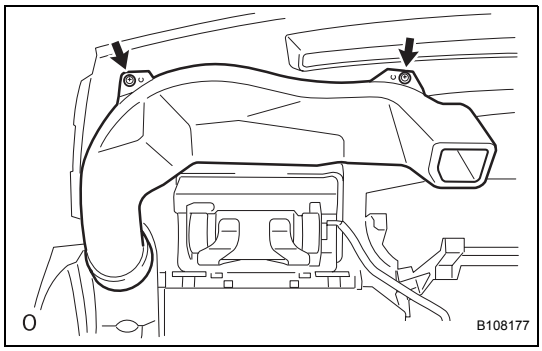


(b) Using a screwdriver with its tip wrapped in protective tape, prize the hinge portion of the cup holder from side to side while being careful not to apply excessive load to the axis of the instrument panel upper, and remove the cup holder.

18. REMOVE NO. 2 INSTRUMENT PANEL CUP HOLDER

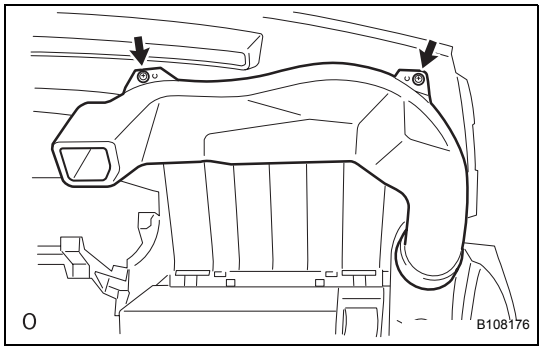
HINT:

Use the same procedure as for the RH side.



19. REMOVE NO. 2 HEATER TO REGISTER DUCT

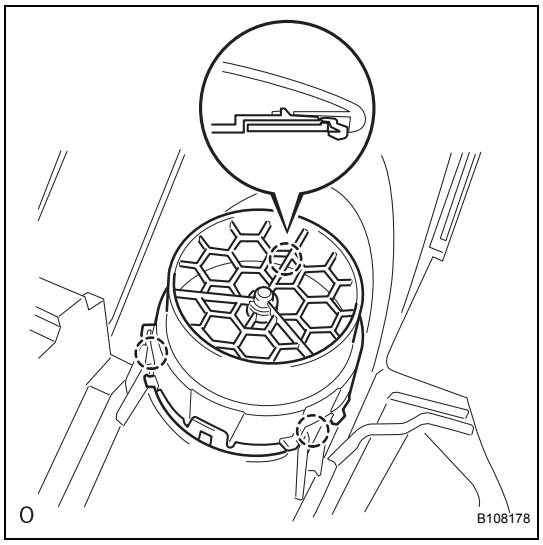
(a) Remove the 2 <A> screws and remove the register duct.



20. REMOVE NO. 1 HEATER TO REGISTER DUCT

(a) Remove the 2 <A> screws and remove the register duct.

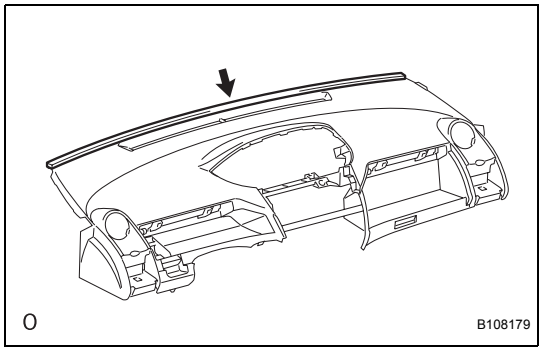
IP



21. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

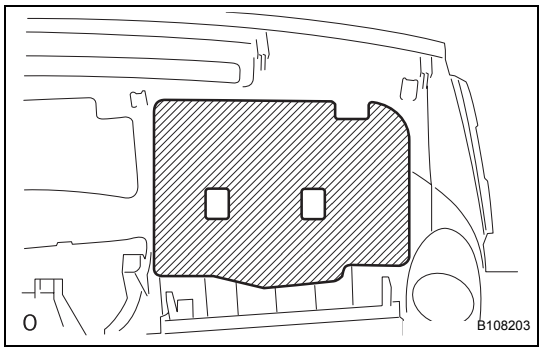
(a) Disengage the 3 claws and remove the register.
HINT:
Use the same procedure as for the opposite side.

22. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-340)



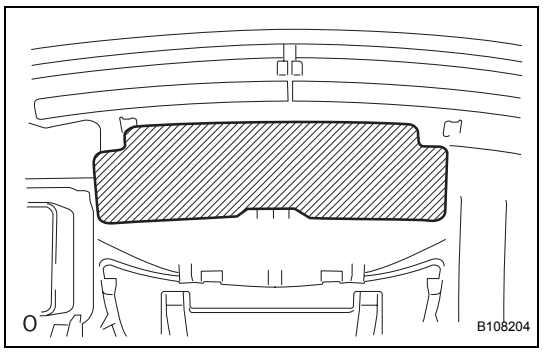
23. REMOVE INSTRUMENT PANEL CUSHION

(a) Remove the instrument panel cushion from the instrument panel upper.



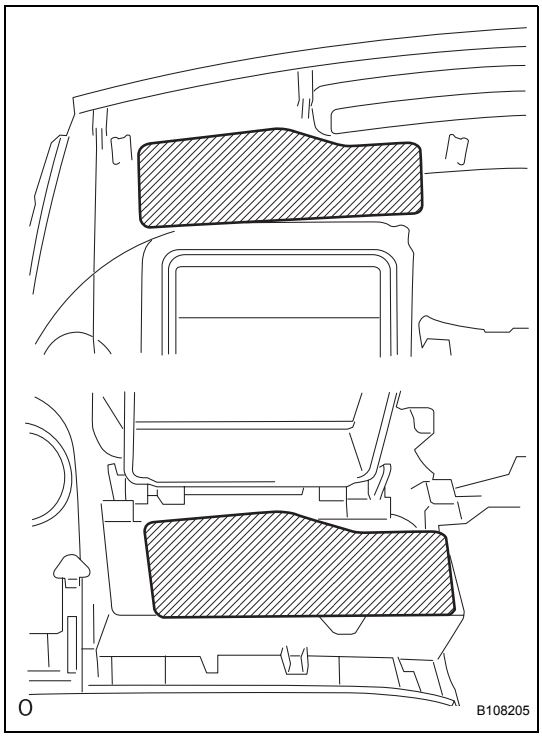
24. REMOVE NO. 1 INSTRUMENT PANEL CUSHION

(a) Remove the instrument panel cushion from the instrument panel upper.



25. REMOVE NO. 2 INSTRUMENT PANEL CUSHION

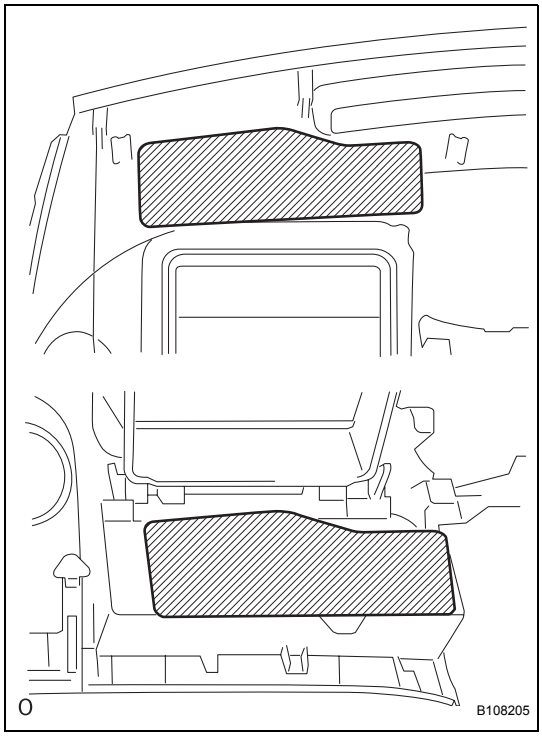
(a) Remove the instrument panel cushion from the instrument panel upper.



26. REMOVE NO. 3 INSTRUMENT PANEL CUSHION

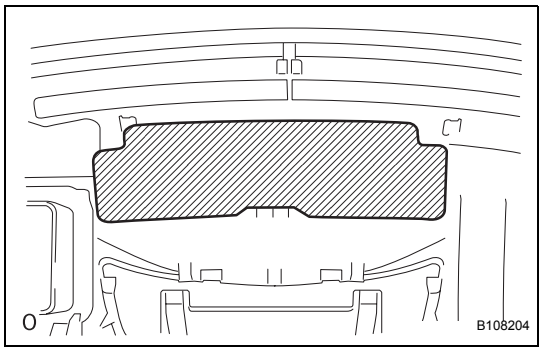
(a) Remove the 2 instrument panel cushions from the instrument panel upper.

INSTALLATION



1. INSTALL NO. 3 INSTRUMENT PANEL CUSHION

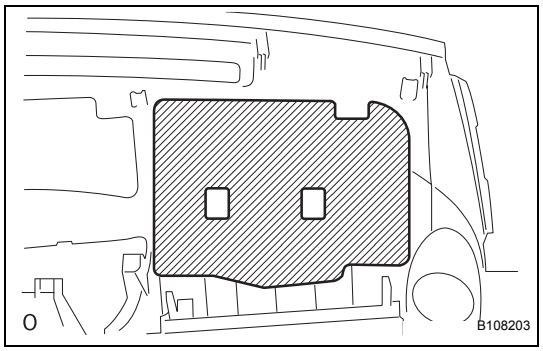
(a) Install the 2 instrument panel cushions onto the instrument panel upper.



2. INSTALL NO. 2 INSTRUMENT PANEL CUSHION

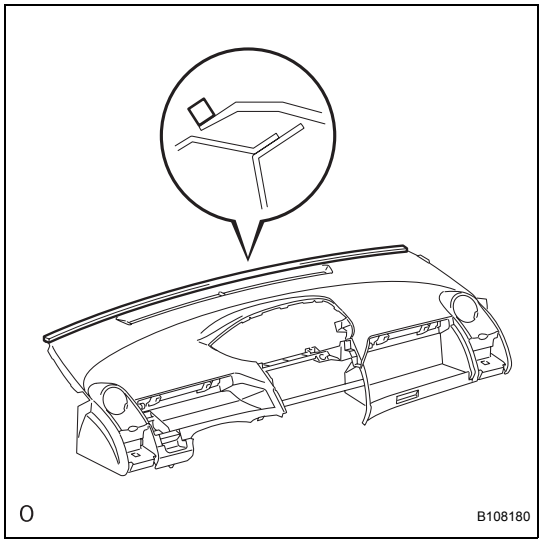
(a) Install the instrument panel cushion onto the instrument panel upper.

IP



3. INSTALL NO. 1 INSTRUMENT PANEL CUSHION

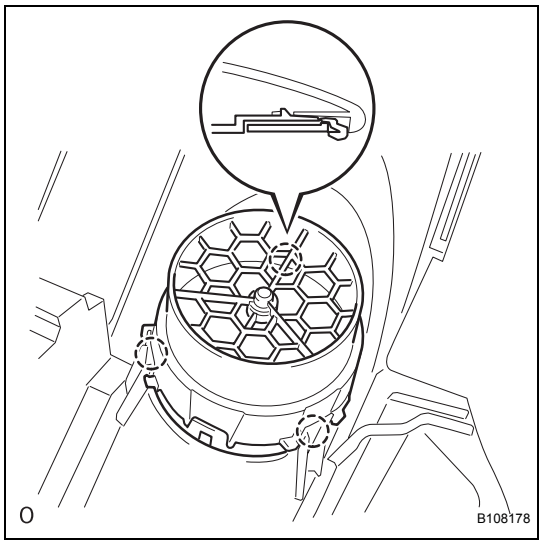
(a) Install the instrument panel cushion onto the instrument panel upper.



4. INSTALL INSTRUMENT PANEL CUSHION

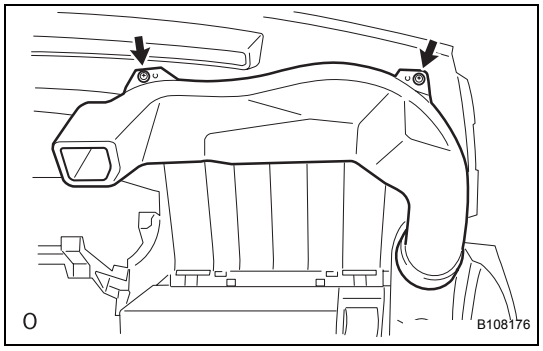
(a) Install the instrument panel cushion onto the instrument panel upper.

5. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-341)



6. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

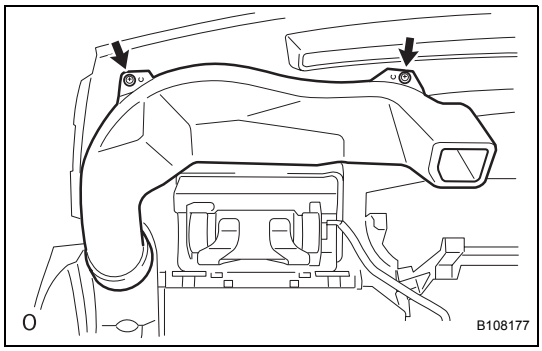
(a) Engage the 3 claws and install the register.
HINT:
Use the same procedure as for the opposite side.



7. INSTALL NO. 1 HEATER TO REGISTER DUCT

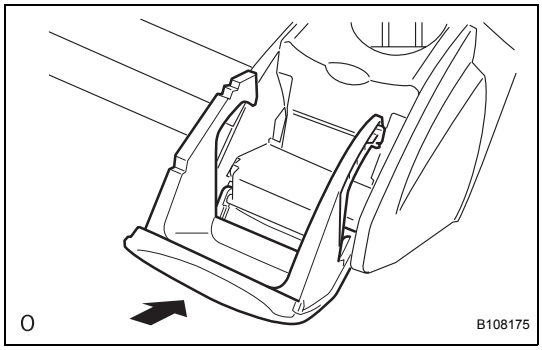
(a) Install the register duct with the 2 <A> screws.

IP



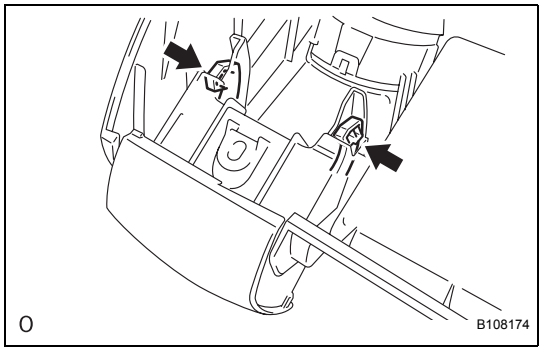
8. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Install the register duct with the 2 <A> screws.



9. INSTALL NO. 1 INSTRUMENT PANEL CUP HOLDER

(a) Engage the hinge portion of the cup holder and install the cup holder.

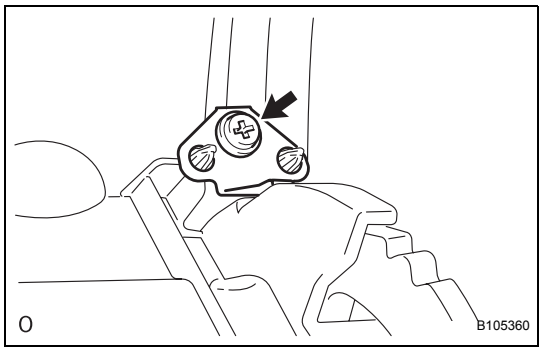


(b) Engage the stopper of the cup holder.

10. INSTALL NO. 2 INSTRUMENT PANEL CUP HOLDER

HINT:

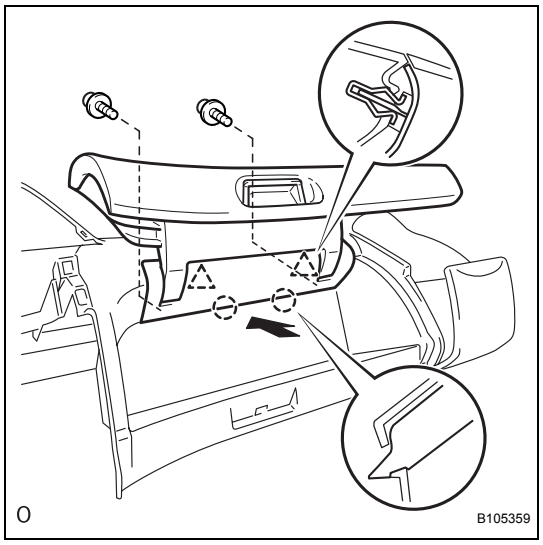
Use the same procedure as for the RH side.



11. INSTALL INSTRUMENT PANEL CUP HOLDER SPRING

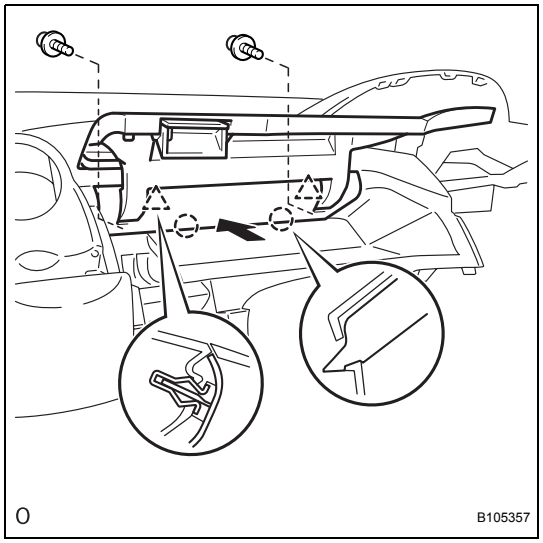
(a) Install the cup holder spring with screw <A>.

IP



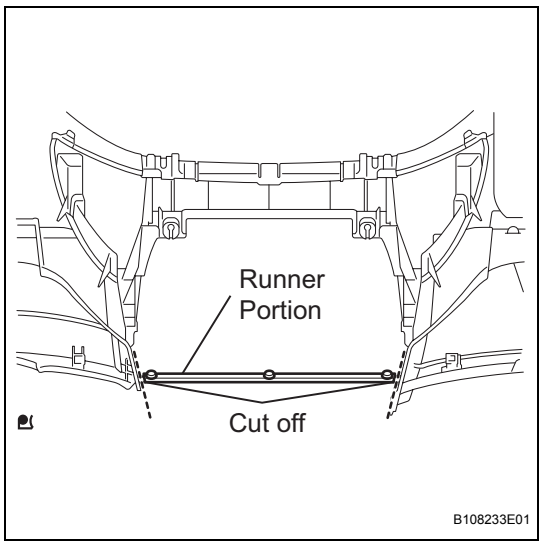
12. INSTALL NO. 2 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY

(a) Engage the 2 claws and 2 clips.
(b) Install the box door with the 2 <A> screws.



13. INSTALL NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY

(a) Engage the 2 claws and 2 clips.
(b) Install the box door with the 2 <A> screws.

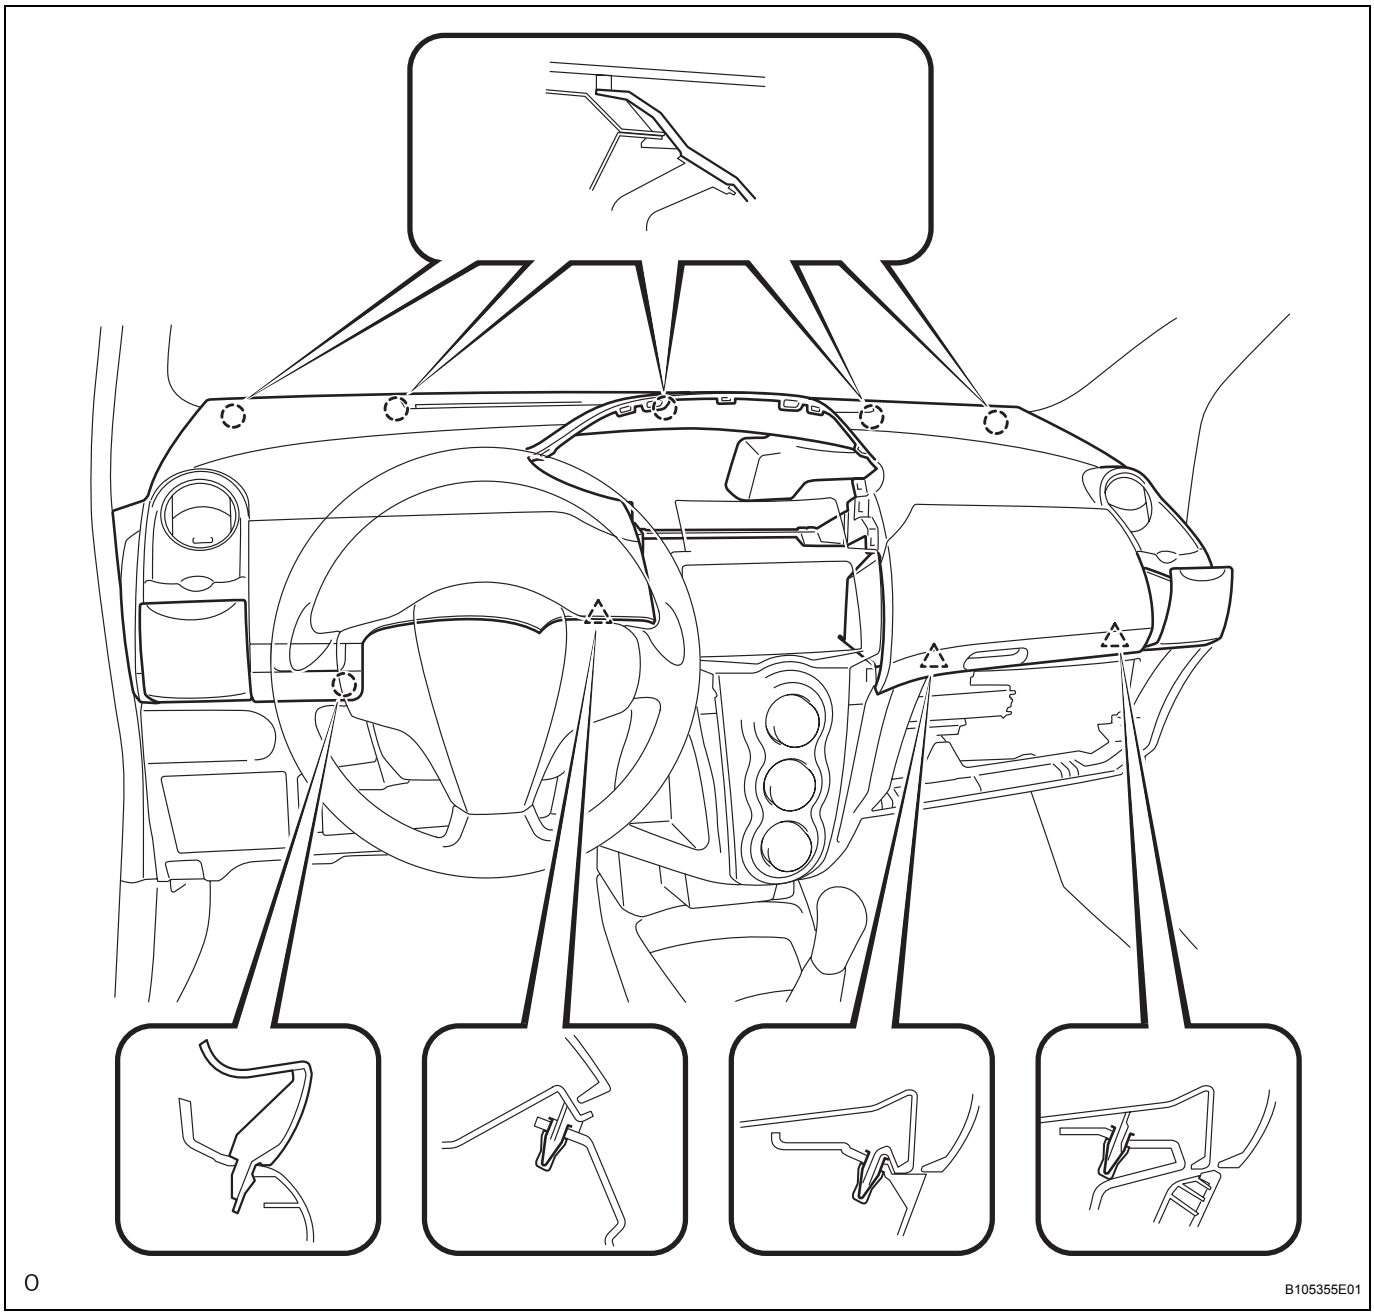


14. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Using a nipper, cut off both ends of the runner portion shown in the illustration (When installing a new one).
(b) Engage the 5 claws at the upper side of the instrument panel.

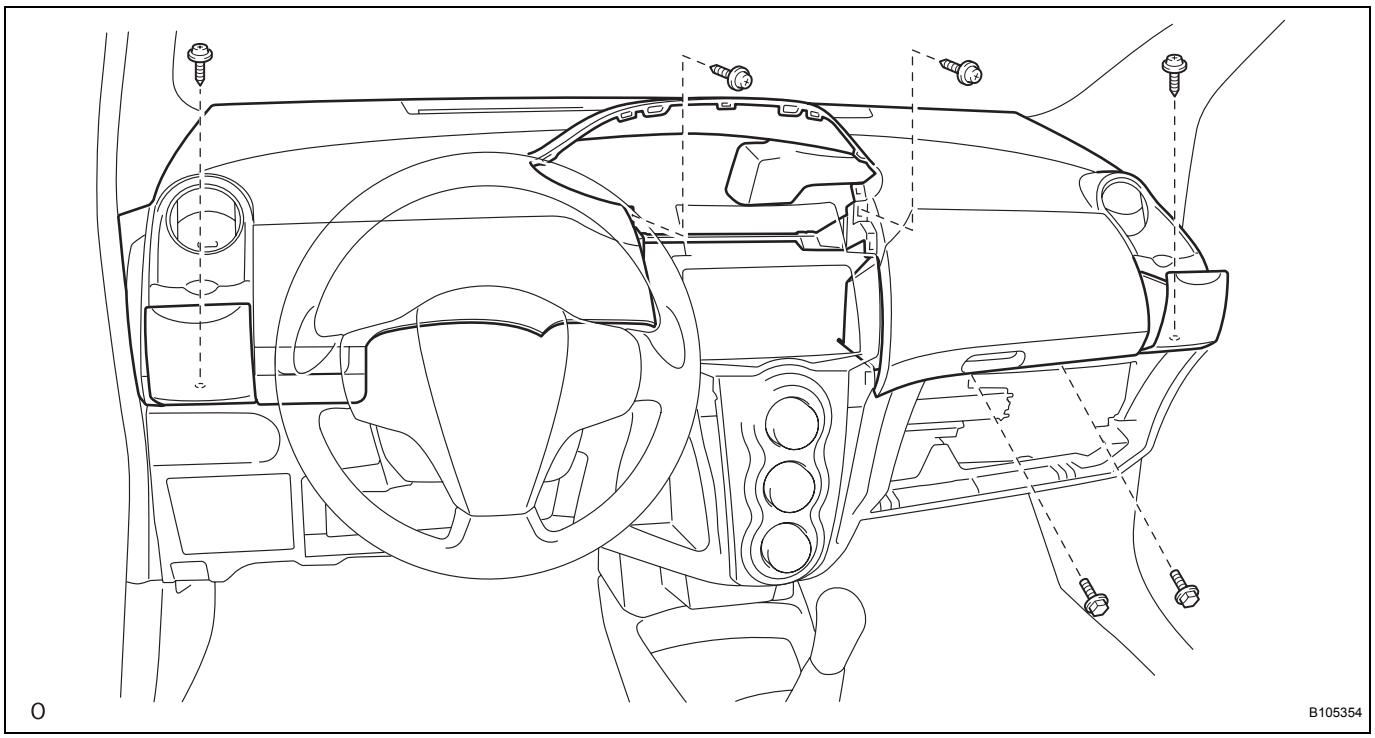
IP

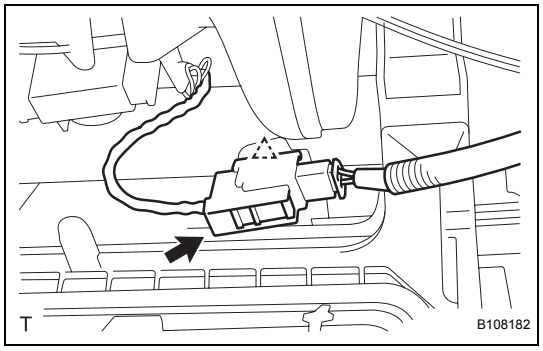
(c) Engage the claw and the 3 clips at the lower side of the instrument panel.



(d) Install the instrument panel upper with the 2 <C> bolts and 4 <B> screws.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf) for bolt

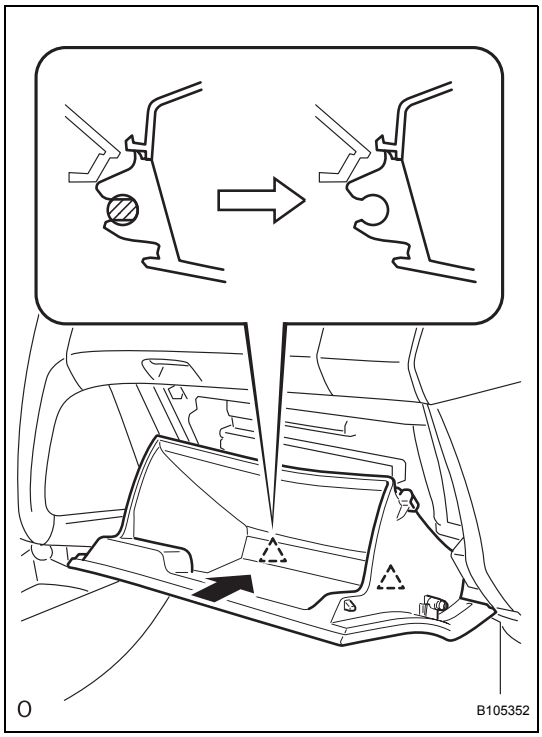
(e) Connect the connectors.





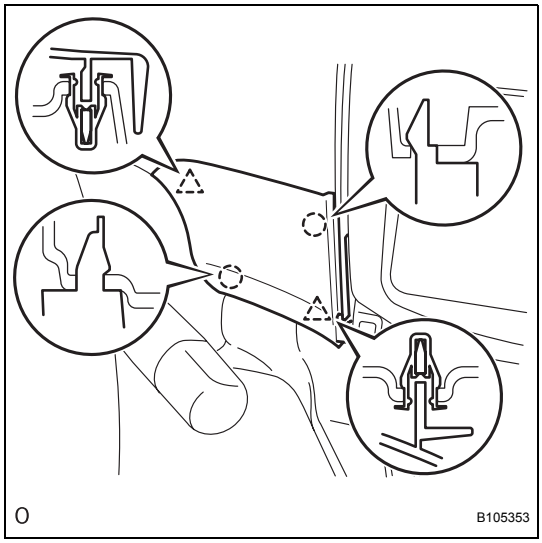
(f) Connect the passenger airbag connector and clamp.

IP



15. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY**
    (a) Engage the claw of the hinge portion in the horizontal direction to install the glove compartment door assembly.
    NOTICE:
    Engage the claw in the horizontal direction, otherwise, installation failure caused by excessive play around the hinge portion will result.

    (b) Slightly deform the upper portion of the glove compartment door assembly to engage the stopper.



16. **INSTALL NO. 1 SWITCH HOLE BASE**
    (a) Disengage the 2 clips and 2 claws and install the switch hole base.
17. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
18. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
19. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
20. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)**
21. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
22. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
23. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**

24. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**

25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

26. **CHECK SRS WARNING LIGHT**

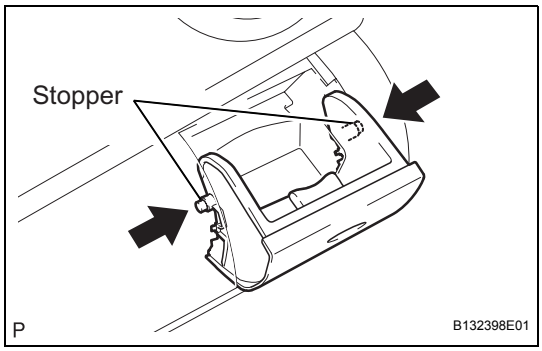
P B132394E01

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

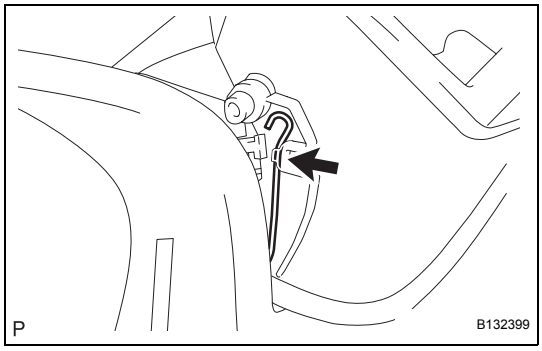
IP



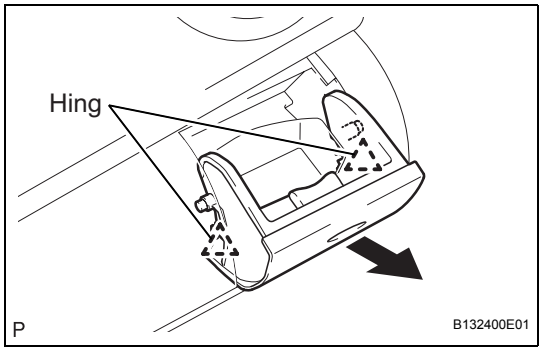
3. REMOVE INSTRUMENT PANEL CUP HOLDER RH

(a) Open the instrument panel cup holder.

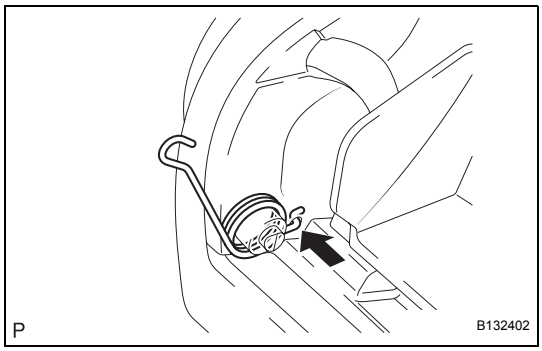
(b) Flex both sides of the instrument panel cup holder and disengage the 2 stoppers.



(c) Disengage the spring.

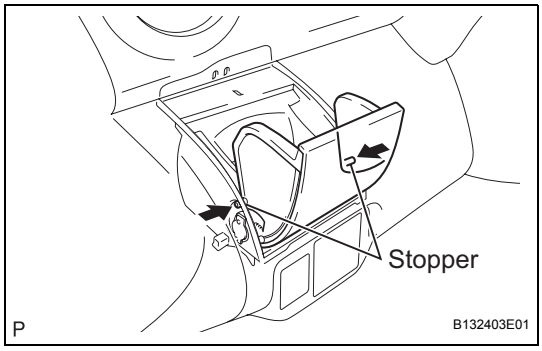


(d) Remove the instrument panel cup holder by moving it toward either the inside or the outside of the vehicle and disengaging the 2 hinges one at a time.



4. REMOVE INSTRUMENT PANEL CUP HOLDER SPRING RH

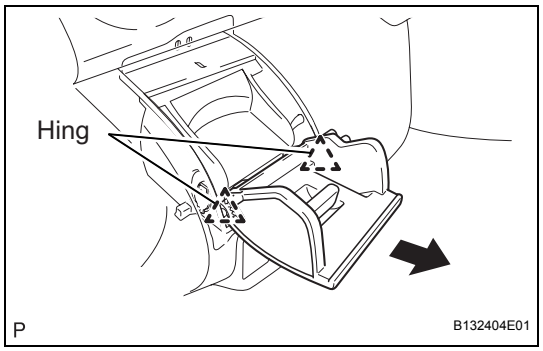
(a) Remove the spring.



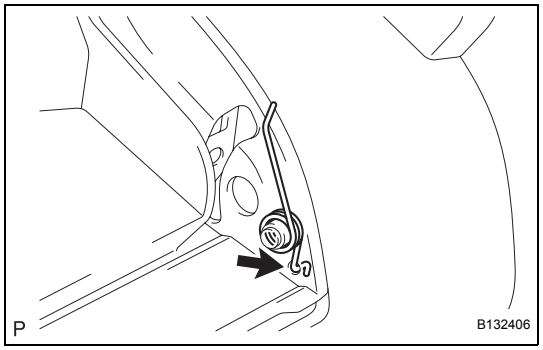
5. REMOVE INSTRUMENT PANEL CUP HOLDER LH

(a) Open the instrument panel cup holder.

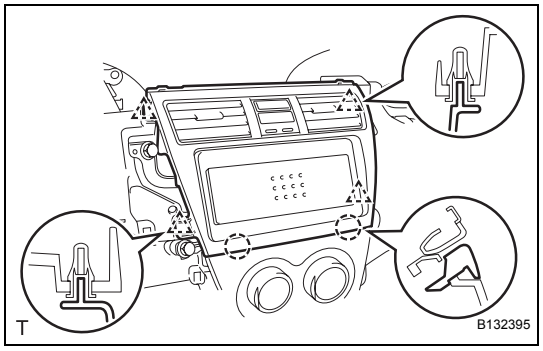
(b) Flex both sides of the instrument panel cup holder and disengage the 2 stoppers.



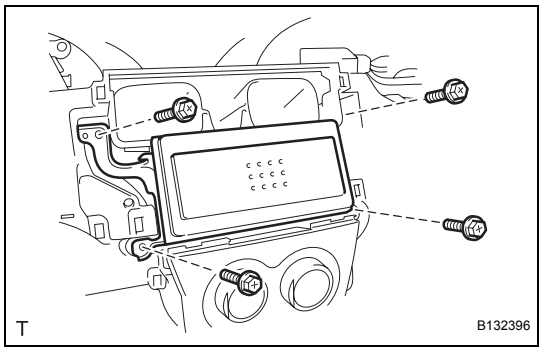
(c) Remove the instrument panel cup holder by moving it toward either the inside or the outside of the vehicle and disengaging the 2 hinges one at a time.



6. **REMOVE INSTRUMENT PANEL CUP HOLDER SPRING LH**
   (a) Remove the spring.
7. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
8. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
9. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
10. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
11. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**



12. **REMOVE INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY**
    (a) Disengage the 2 claws and 4 clips and remove the instrument cluster panel center.



13. **REMOVE STEREO OPENING COVER (w/o Radio Receiver)**
    (a) Remove the 4 screws and remove the stereo opening cover.
14. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-38)**
15. **REMOVE AIR CONDITIONING PANEL ASSEMBLY (See page AC-239)**
16. **DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**
17. **DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**
18. **DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**

19. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-5)**
20. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-5)**
21. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**

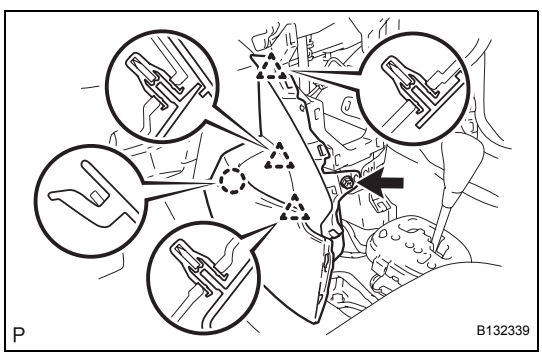
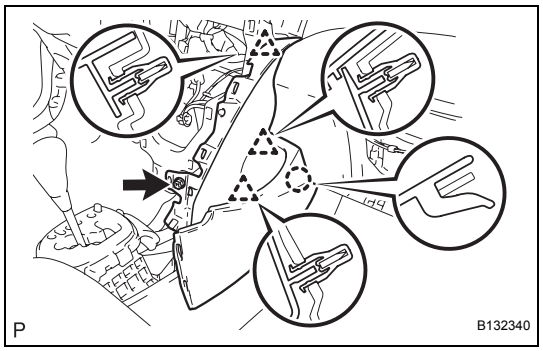
23. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
24. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**
25. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)**
26. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-14)**
27. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)**
28. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-14)**
29. **REMOVE COWL SIDE TRIM BOARD RH (See page IR-15)**
30. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-15)**
31. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)**
32. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-84)**
33. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)**
34. **REMOVE CONSOLE BOX CARPET (See page IP-85)**
35. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)**
36. **REMOVE INSTRUMENT PAD LOWER LH**
    (a) Remove screw <I>.
    (b) Disengage the claw and 3 clips and remove the instrument panel pad lower.



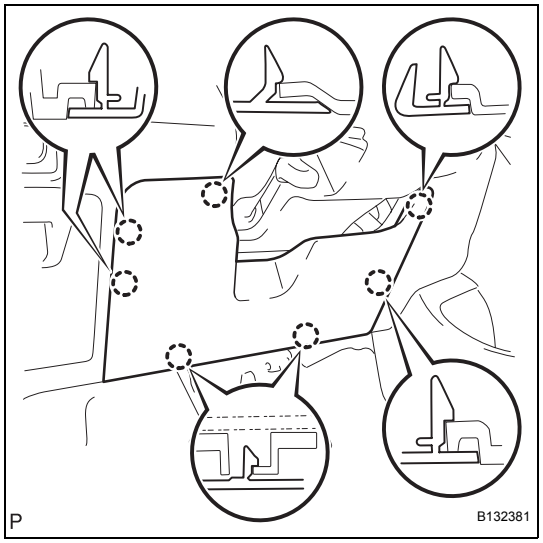
IP



37. REMOVE INSTRUMENT PAD LOWER RH

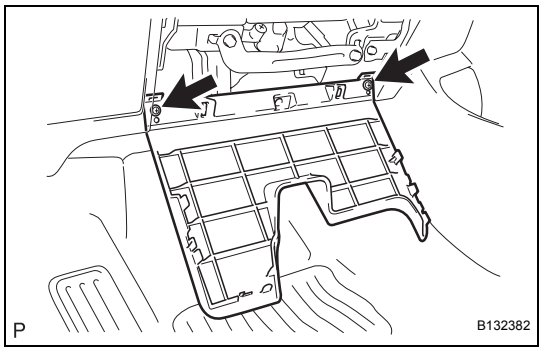
(a) Remove screw <I>.

(b) Disengage the claw and 3 clips and remove the instrument panel pad lower.

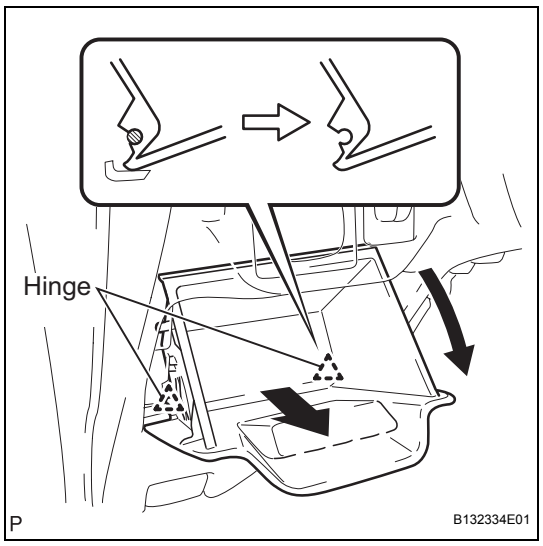


38. REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY

(a) Disengage the 7 claws and open the instrument panel lower finish panel.



(b) Remove the 2 <A> screws and remove the instrument panel lower finish panel.

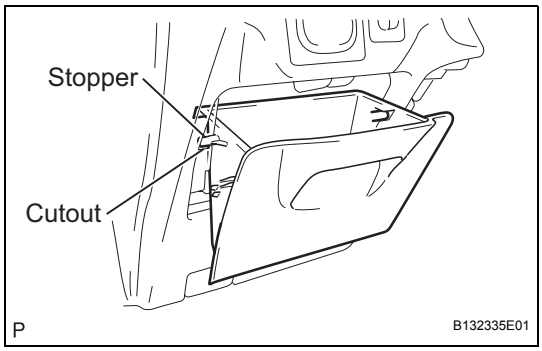


39. REMOVE INSTRUMENT PANEL BOX

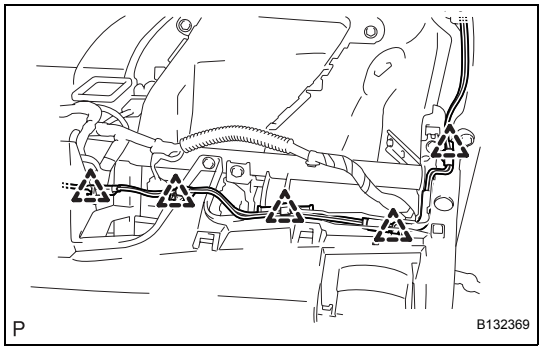
(a) Open the instrument panel box.

(b) Pull the instrument panel box out horizontally with the instrument panel open and disengage the 2 hinges.

IP

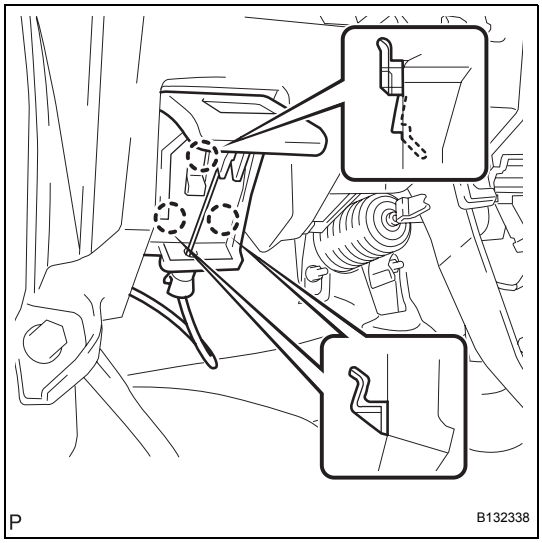


(c) Remove the stopper of the instrument panel box from the cutout of the instrument panel lower and remove the instrument panel box.



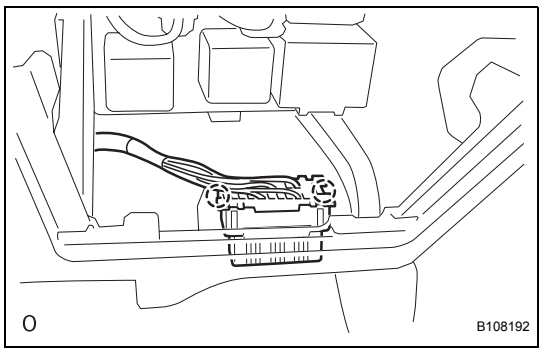
40. DISCONNECT ANTENNA CORD SUB-ASSEMBLY

(a) Disconnect the 5 antenna cord clamps.



41. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Disengage the 3 claws and separate the hood lock control lever.



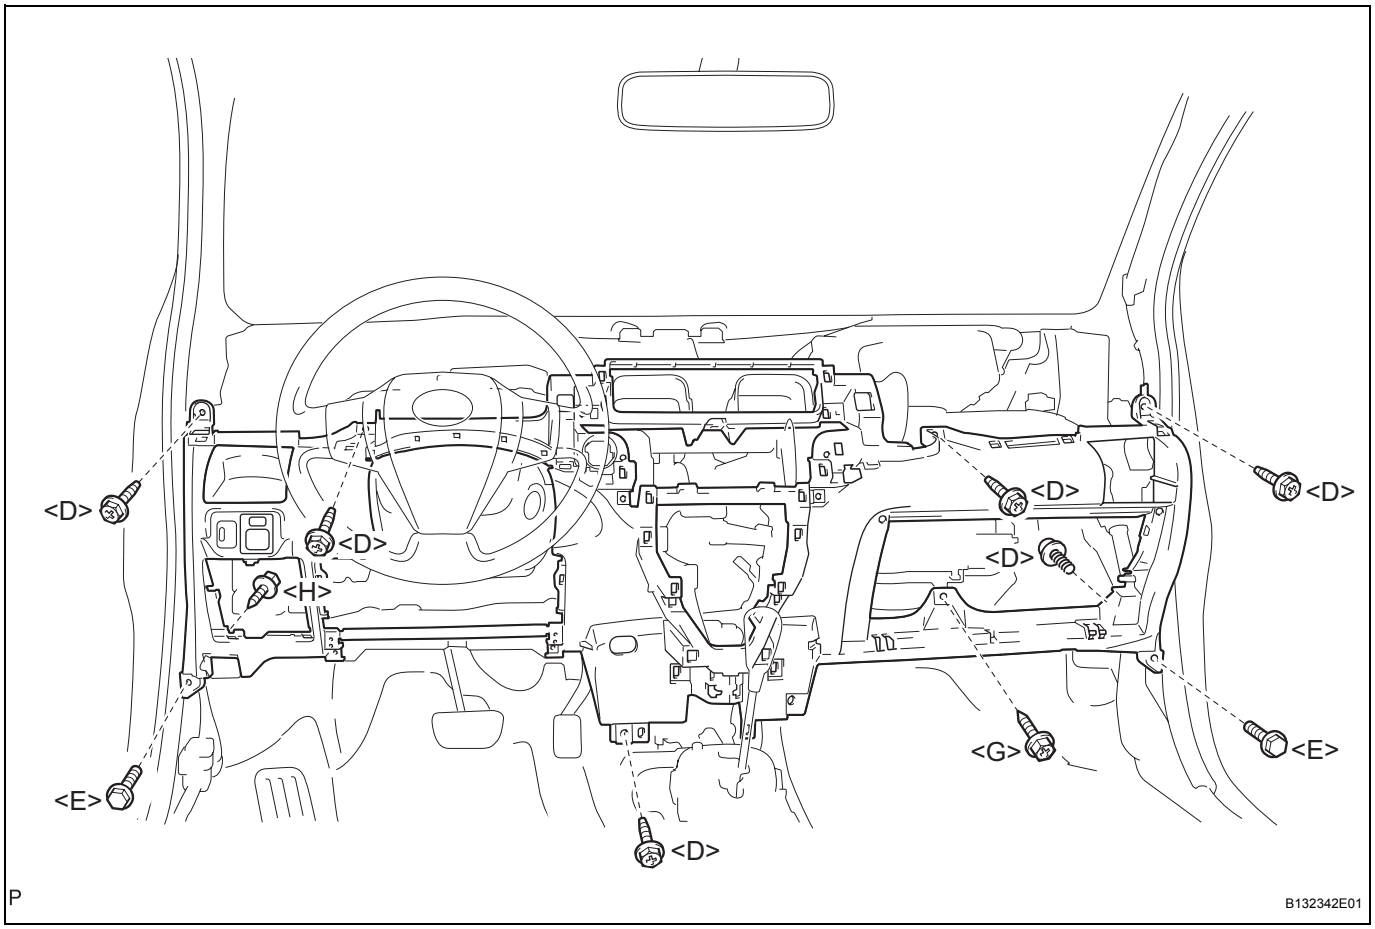
42. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

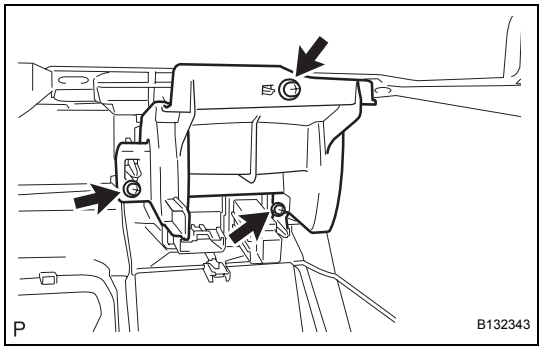
(a) Disengage the 2 claws and disconnect the DLC3 connector.

(b) Disconnect the clamps and connectors.

IP

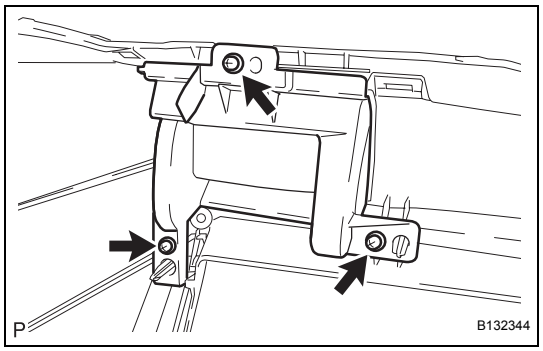
(c) Remove the 6 <D> bolts, 2 <E> bolts, screw <G> and screw <H> and remove the lower instrument panel.





43. REMOVE INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY LH

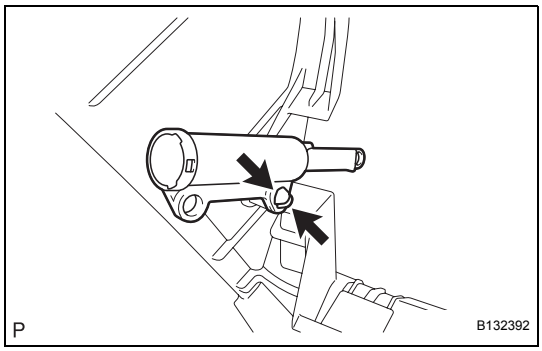
(a) Remove the 3 <A> screws and the instrument panel cup holder.



44. REMOVE INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY RH

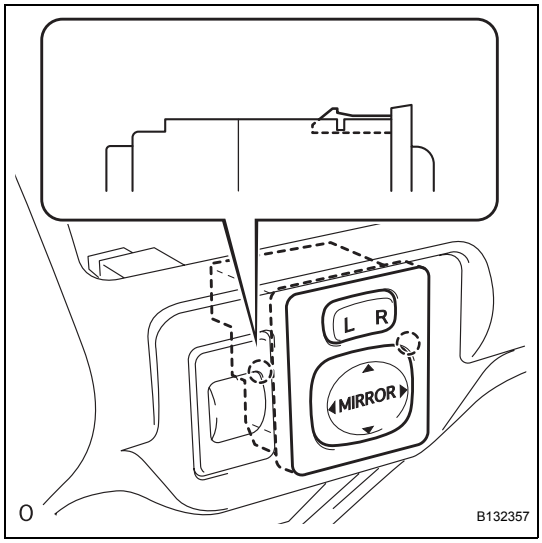
(a) Remove the 3 <A> screws and the instrument panel box.

IP



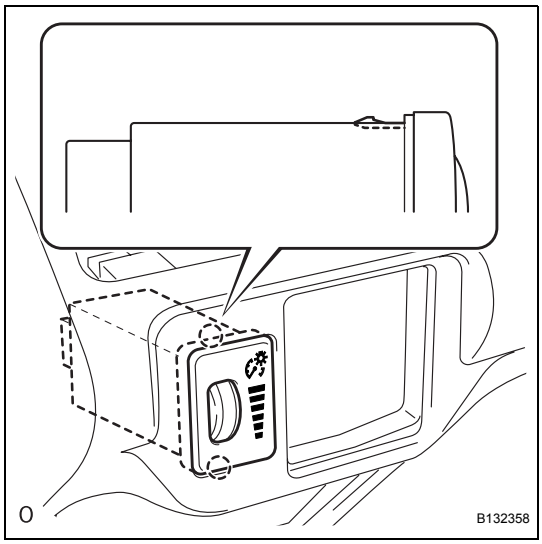
45. REMOVE GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY

(a) Disengage the claw and remove the glove compartment door stopper.



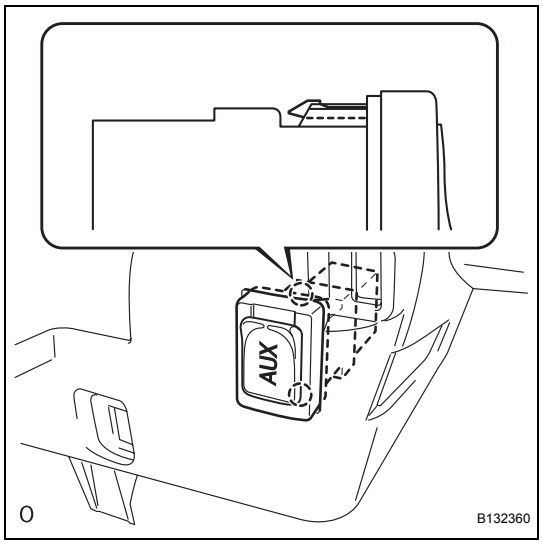
46. REMOVE OUTER MIRROR SWITCH ASSEMBLY

(a) Disengage the 2 claws and remove the outer mirror switch.



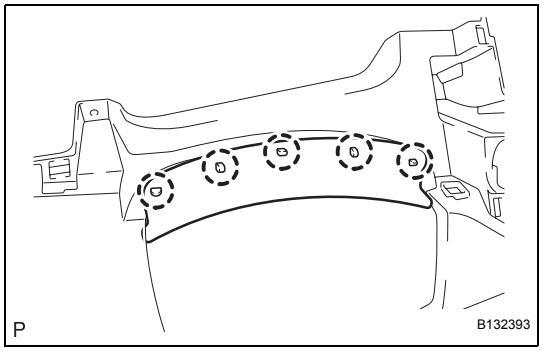
47. REMOVE LIGHT CONTROL RHEOSTAT

(a) Disengage the 2 claws and remove the light control rheostat.



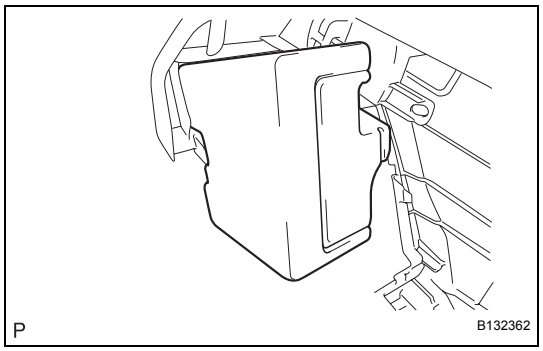
48. REMOVE STEREO JACK ADAPTER ASSEMBLY

(a) Disengage the 2 claws and remove the stereo jack adapter.



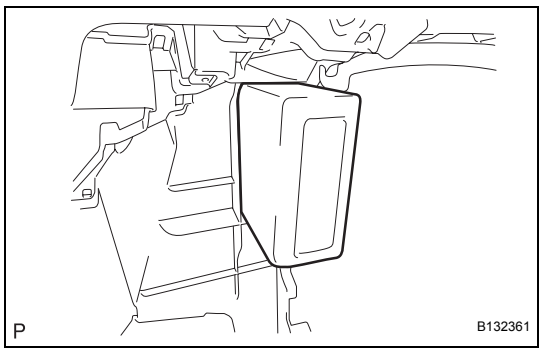
49. REMOVE INSTRUMENT CLUSTER FINISH PANEL SEAL

(a) Disengage the 5 claws and remove the panel seal.



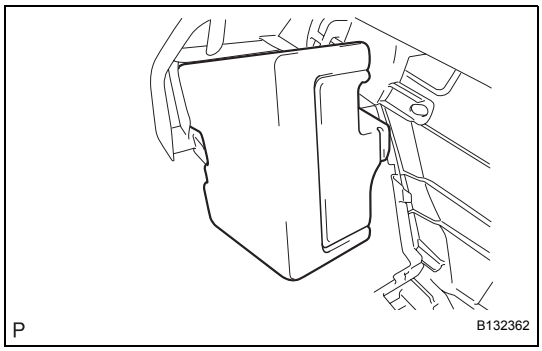
50. REMOVE INSTRUMENT PANEL NO. 1 SAFETY PAD

(a) Remove the safety pad.



51. REMOVE INSTRUMENT PANEL NO. 2 SAFETY PAD

(a) Remove the safety pad.



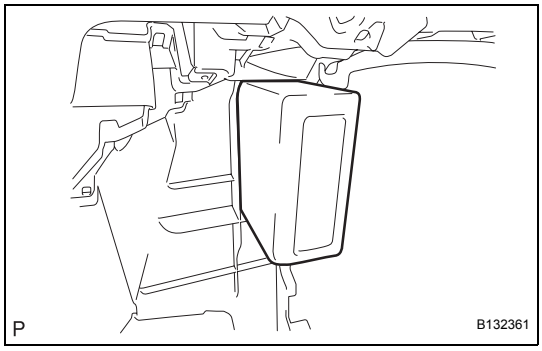
INSTALLATION

1. INSTALL INSTRUMENT PANEL NO. 1 SAFETY PAD

(a) Apply butyl tape to install the instrument panel safety pad No. 1 onto the instrument panel lower (When installing a new one).

Adhesive:

Part No. 08850-00065, Butyl Tape Set or the equivalent

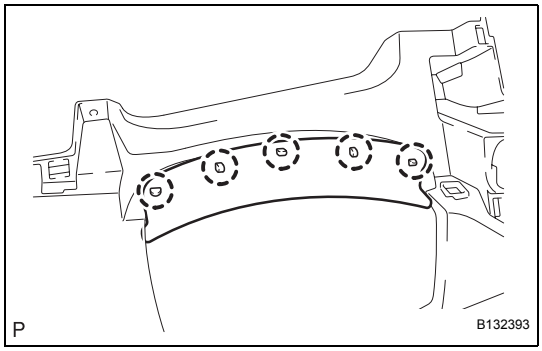


2. INSTALL INSTRUMENT PANEL NO. 2 SAFETY PAD

(a) Apply butyl tape to install the instrument panel safety pad No. 2 onto the instrument panel lower (When installing a new one).

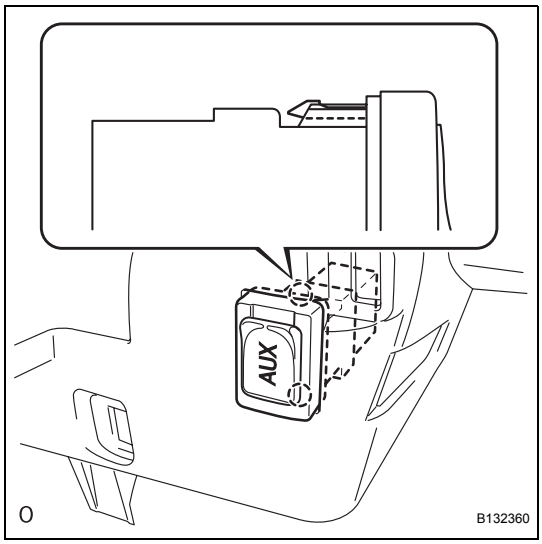
Adhesive:

Part No. 08850-00065, Butyl Tape Set or the equivalent



3. INSTALL INSTRUMENT CLUSTER FINISH PANEL SEAL

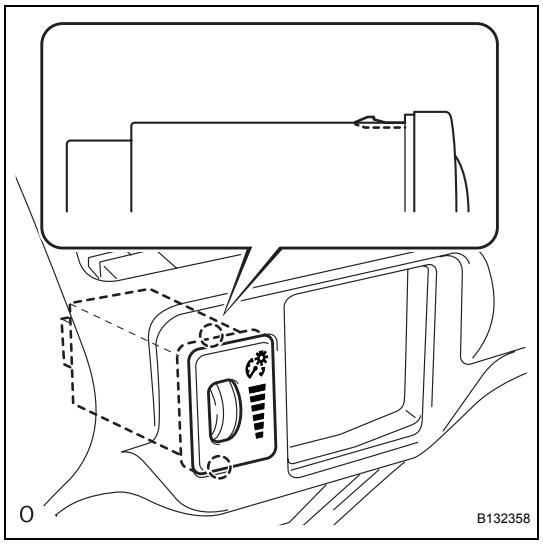
(a) Engage the 5 claws and install the panel seal.



4. INSTALL STEREO JACK ADAPTER ASSEMBLY

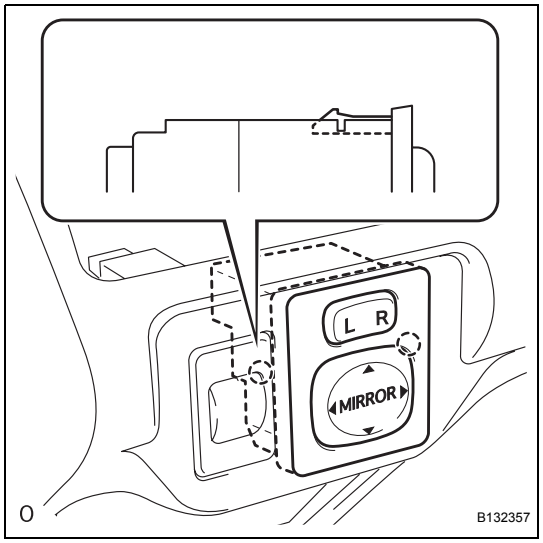
(a) Engage the 2 claws and install the stereo jack adapter.

IP



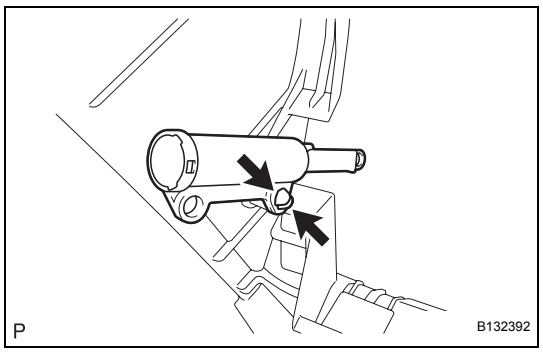
5. INSTALL LIGHT CONTROL RHEOSTAT

(a) Engage the 2 claws and install the light control rheostat.



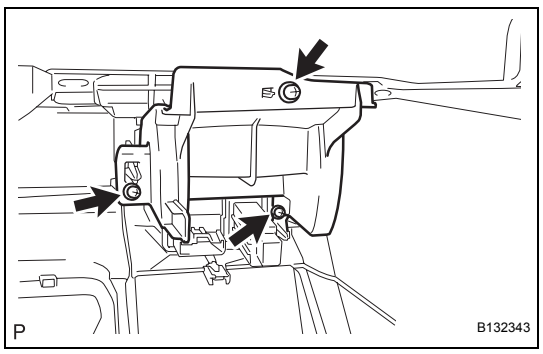
6. INSTALL OUTER MIRROR SWITCH ASSEMBLY

(a) Engage the 2 claws and install the outer mirror switch.



7. INSTALL GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY

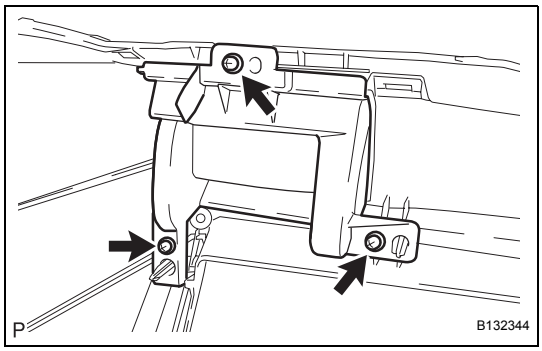
(a) Engage the claw and install the glove compartment door stopper.



8. INSTALL INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY LH

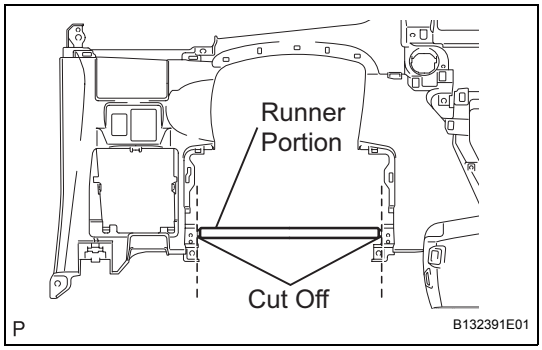
(a) Install the instrument panel cup holder with the 3 <A> screws.

IP



9. INSTALL INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY RH

(a) Install the instrument panel cup holder with the 3 <A> screws.

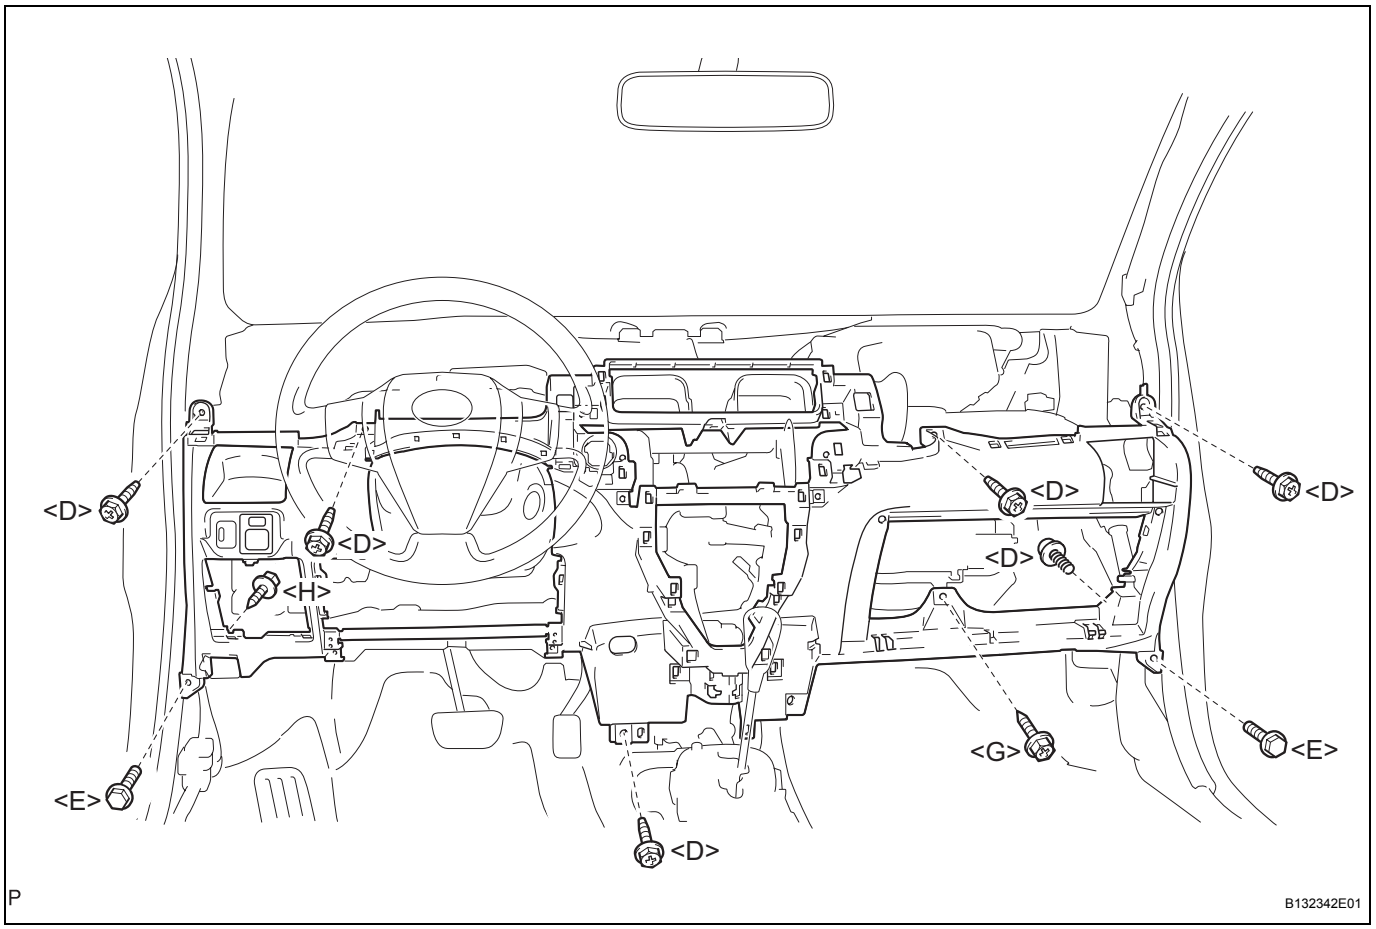


10. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

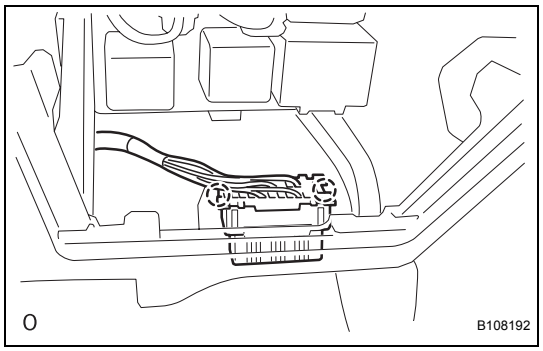
(a) Using a nipper, cut off both ends of the runner portion shown in the illustration (When installing a new one).

(b) Install the lower instrument panel with the 6 <D> bolts, 2 <E> bolts, screw <G> and screw <H>.
NOTICE:
Do not excessively tighten the <D> bolts, as this may damage the area not being tightened.

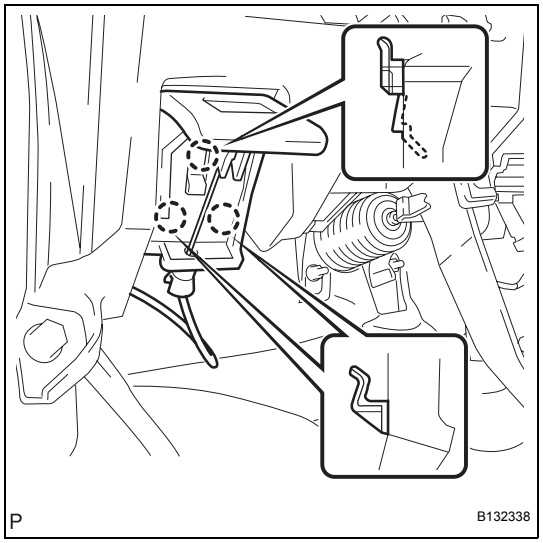
(c) Connect the clamps and connectors.



IP

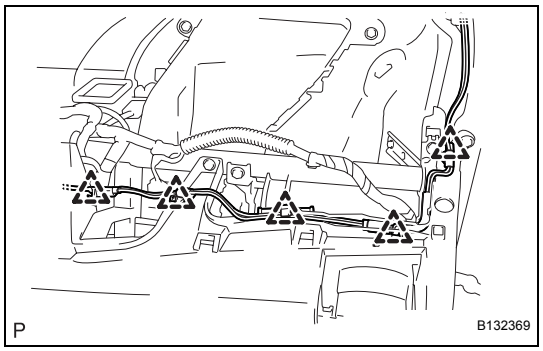


(d) Engage the 2 claws and connect the DLC3 connector.



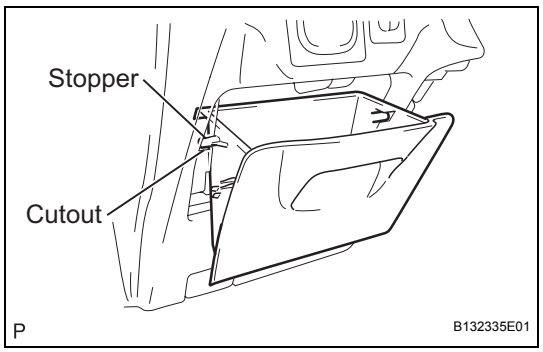
11. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Engage the 3 claws to connect the control lever.



12. CONNECT ANTENNA CORD SUB-ASSEMBLY

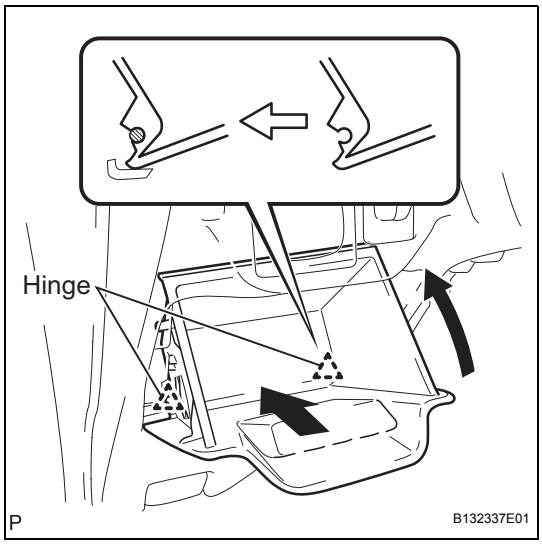
(a) Connect the 5 antenna cord clamps.



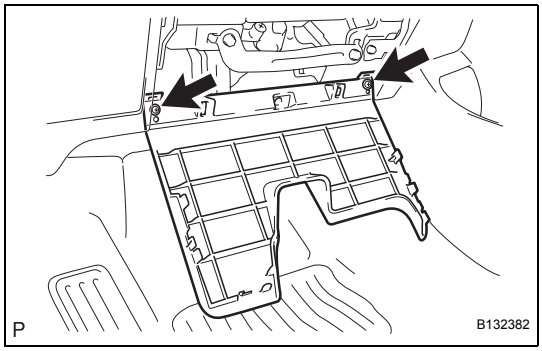
13. INSTALL INSTRUMENT PANEL BOX

(a) Insert the stopper of the instrument panel box from the cutout of the instrument panel lower.

IP

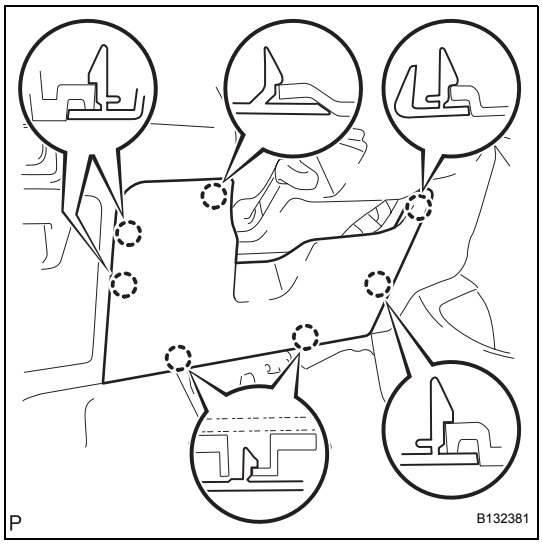


(b) Engage the 2 hinges with the instrument panel open.
(c) Close the instrument panel box.

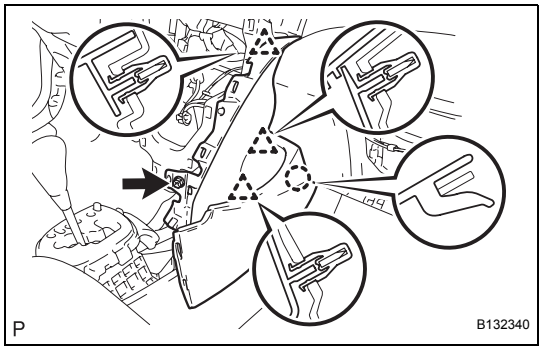


14. INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY

(a) Install the 2 <A> screws.

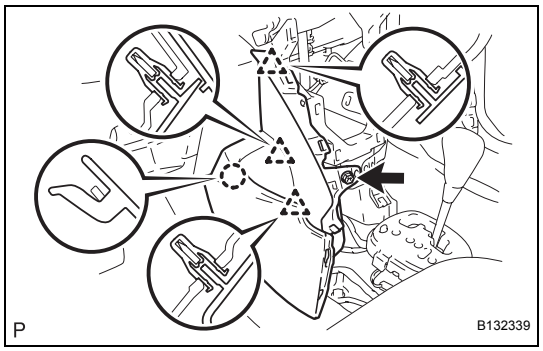


(b) Engage the 7 claws and install the instrument panel lower finish panel.

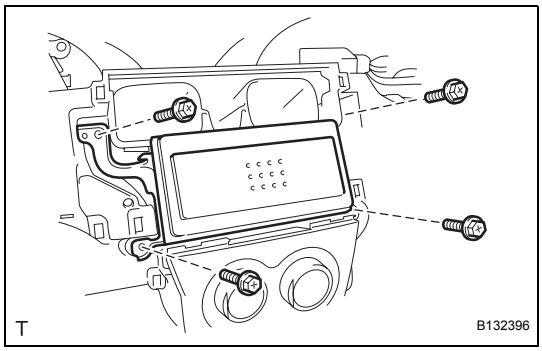


15. INSTALL INSTRUMENT PAD LOWER RH

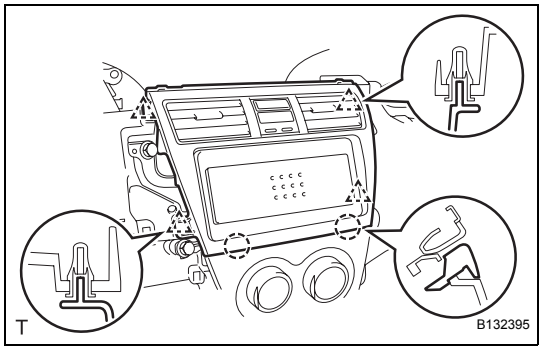
(a) Engage the claw and 3 clips and install the instrument pad lower.
(b) Install screw <I>.



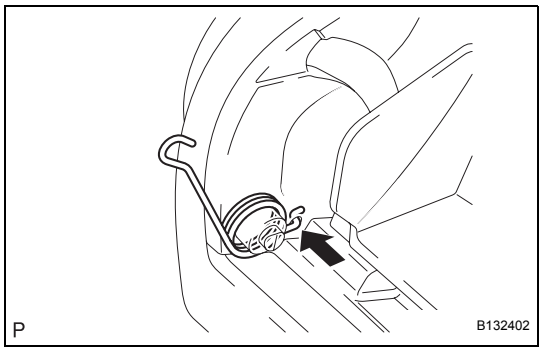
16. **INSTALL INSTRUMENT PAD LOWER LH**
    (a) Engage the claw and 3 clips and install the instrument pad lower.
    (b) Install screw <I>.
17. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)**
18. **INSTALL CONSOLE BOX CARPET (See page IP-88)**
19. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)**
20. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-89)**
21. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-89)**
22. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-34)**
23. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-34)**
24. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-35)**
25. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-34)**
26. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-35)**
27. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-35)**
28. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)**
29. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
30. **INSTALL FRONT PILLAR GARNISH RH (See page IR-29)**
31. **INSTALL FRONT PILLAR GARNISH LH (See page IR-30)**
32. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-14)**
33. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)**
34. **CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)**
35. **CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)**
36. **CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)**
37. **INSTALL AIR CONDITIONING PANEL ASSEMBLY (See page AC-246)**



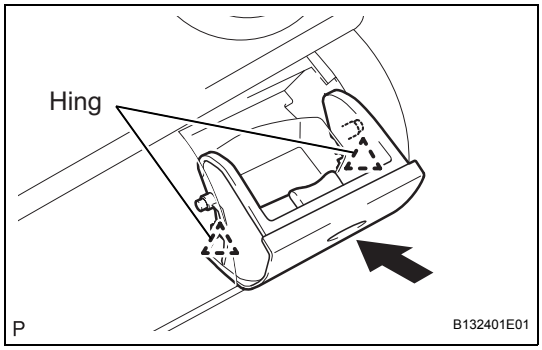
38. **INSTALL STEREO OPENING COVER (w/o Radio Receiver)**
    (a) Install the stereo opening cover with the 4 screws.
39. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-40)**



40. **INSTALL INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY**
    (a) Engage the 2 claws and 4 clips and install the instrument cluster finish panel center.
41. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**
42. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
43. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
44. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
45. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**

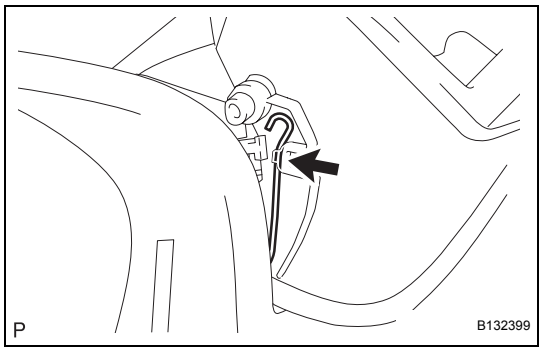


46. **INSTALL INSTRUMENT PANEL CUP HOLDER SPRING RH**
    (a) Install the spring.

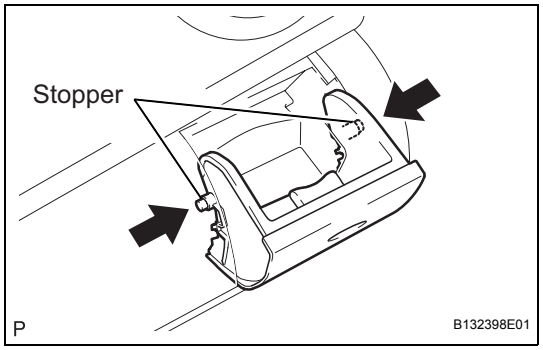


47. **INSTALL INSTRUMENT PANEL CUP HOLDER RH**
    (a) Install the 2 hinges of the cup holder one at a time.

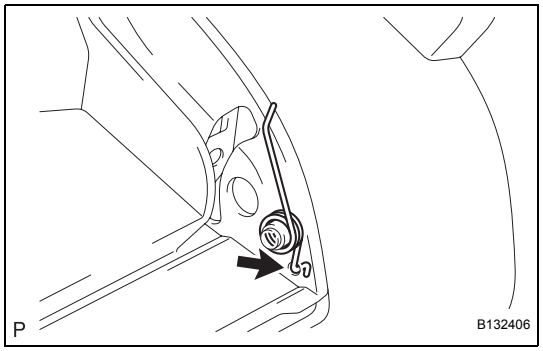
IP



(b) Engage the spring with the instrument panel cup holder.

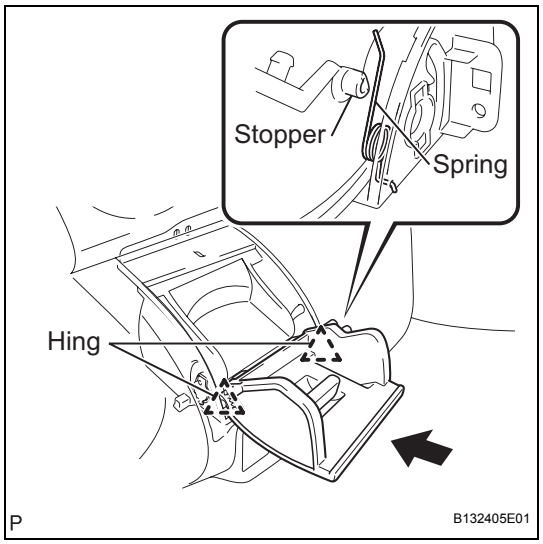


(c) Flex both sides of the cup holder and engage the 2 stoppers.
(d) Close the instrument panel cup holder.



48. INSTALL INSTRUMENT PANEL CUP HOLDER SPRING LH

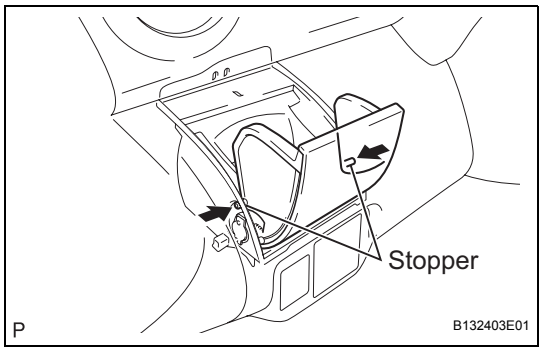
(a) Install the spring.



49. INSTALL INSTRUMENT PANEL CUP HOLDER LH

(a) Install the 2 hinges of the cup holder one at a time.
HINT:
Make sure that the spring is set in the position shown in the illustration.

IP



(b) Flex both sides of the cup holder and engage the 2 stoppers.
(c) Close the instrument panel cup holder.

50. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

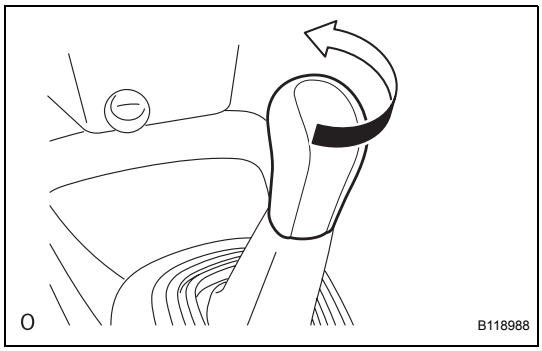
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**

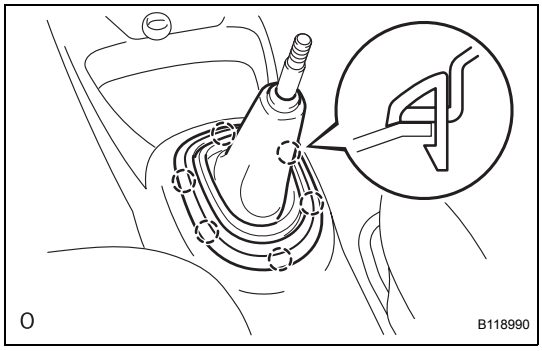
IP

6. REMOVE COMBINATION METER ASSEMBLY (See page ME-146)
7. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER (See page AC-250)
8. REMOVE RADIO TUNER OPENING COVER (w/o Radio Receiver) (See page AC-125)
9. REMOVE RADIO RECEIVER ASSEMBLY (See page AV-44)
10. REMOVE AIR CONDITIONER PANEL SUB-ASSEMBLY (See page AC-250)
11. DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
12. DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
13. DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
14. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)
15. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)
16. REMOVE FRONT PILLAR GARNISH RH (See page IR-58)
17. REMOVE FRONT PILLAR GARNISH LH (See page IR-59)
18. REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)
19. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)
20. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)
21. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)
22. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-49)
23. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)
24. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)
25. REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)
26. REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)



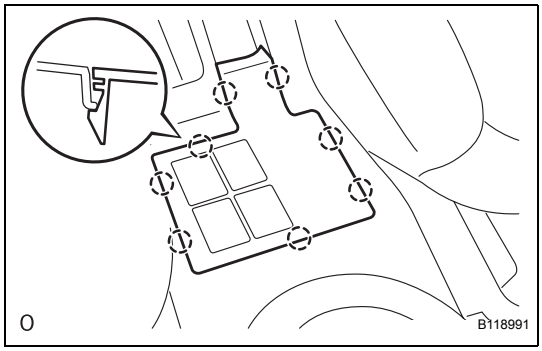
27. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

(a) Remove the shift lever knob.



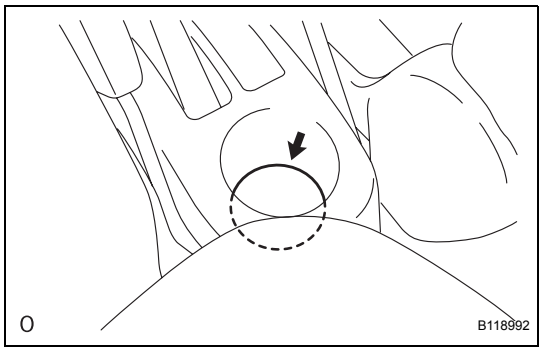
28. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle)

(a) Disengage the 6 claws and remove the shifting hole cover.



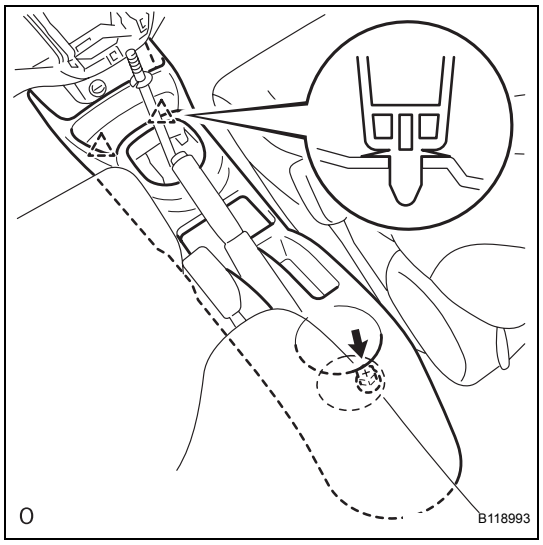
29. REMOVE CONSOLE BOX REAR COVER

(a) Disengage the 8 claws and remove the console box rear cover.



30. REMOVE CONSOLE BOX CARPET

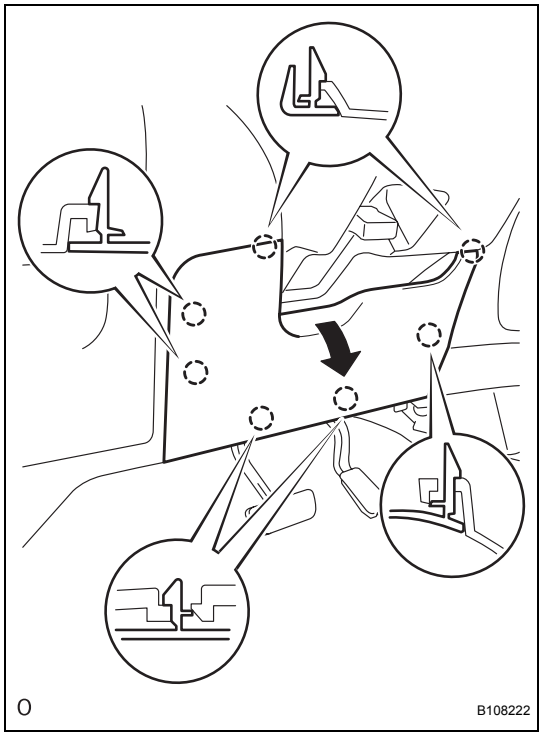
(a) Remove the console box carpet.



31. REMOVE CONSOLE BOX ASSEMBLY REAR

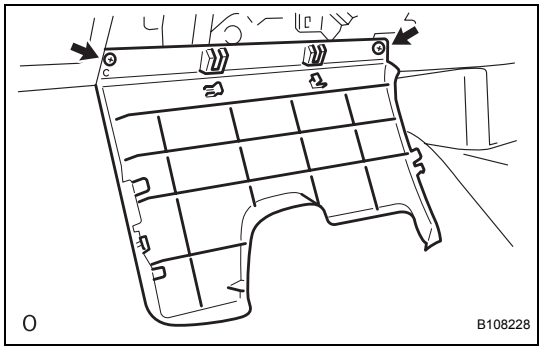
(a) Remove bolt <F>.

(b) Disengage the 2 clips and remove the console box rear.

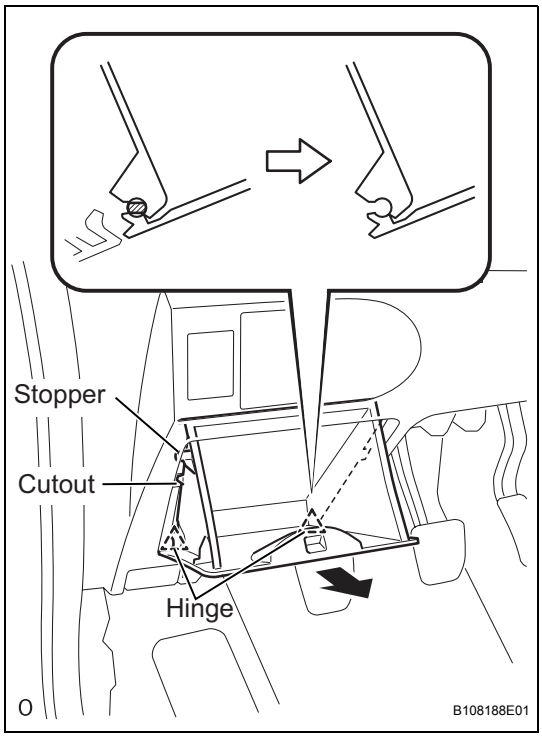


32. REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER

(a) Disengage the 7 claws and open the instrument panel finish panel lower.



(b) Remove the 2 <A> screws and the instrument panel finish panel lower.

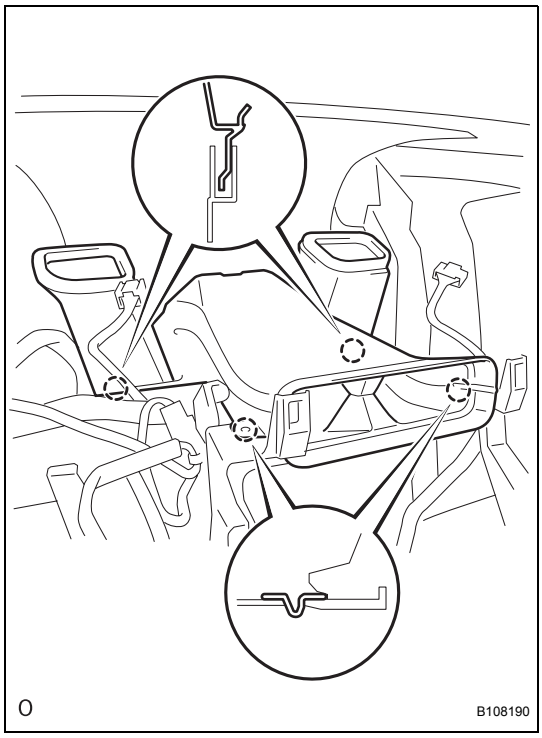


33. REMOVE INSTRUMENT PANEL BOX

(a) Open the instrument panel box.

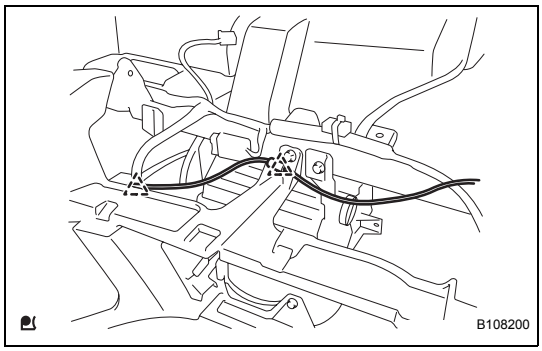
(b) Pull the hinge side of the instrument panel box out horizontally with the instrument panel open and disengage the 2 hinges.

(c) Remove the stopper of the instrument panel box from the cutout of the instrument panel lower and remove the instrument panel box.



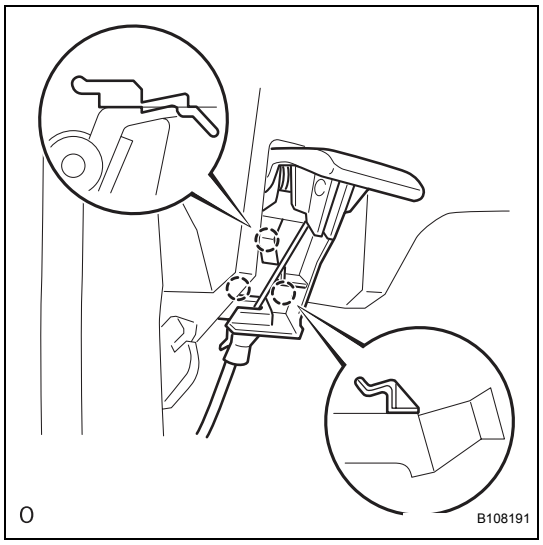
34. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY

(a) Disengage the 4 claws and remove the heater to register duct.



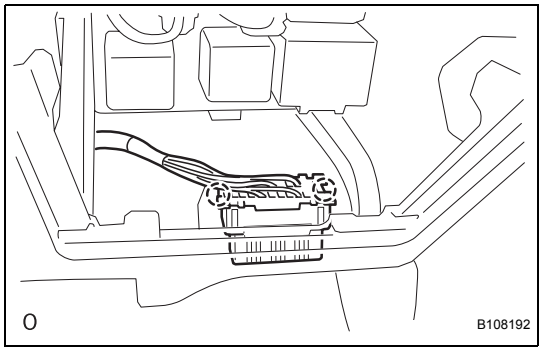
35. DISCONNECT ANTENNA CORD SUB-ASSEMBLY

(a) Disconnect the 2 antenna cord clamps.



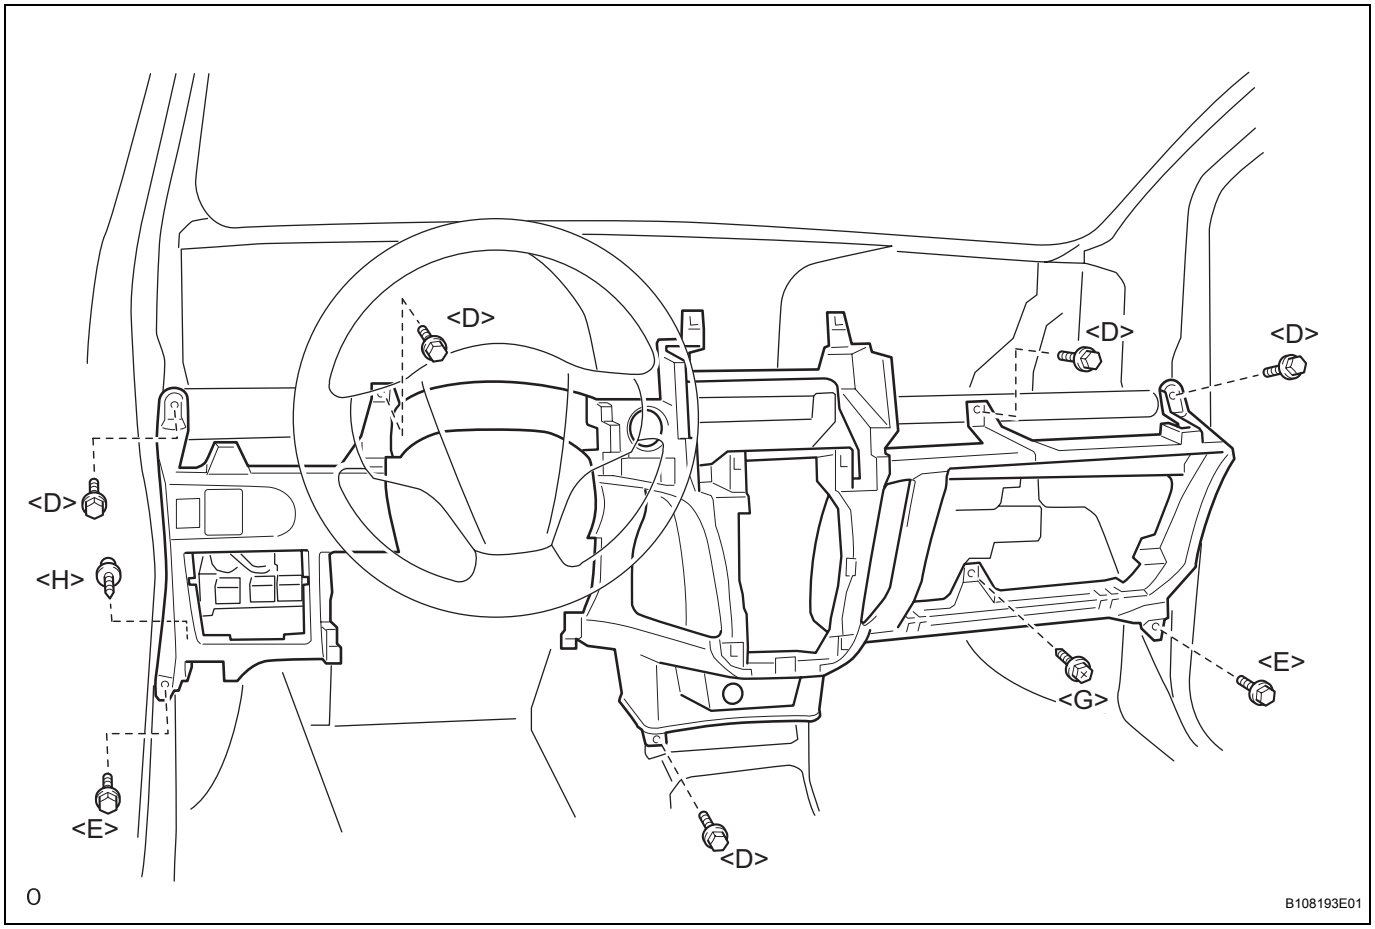
36. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Disengage the 3 claws and separate the hood lock control lever.



37. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Disengage the 2 claws and disconnect the DLC3 connector.
(b) Disconnect the clamps and connectors.
(c) Remove the 5 <D> bolts, 2 <E> bolts, screw <G> and screw <H> and remove the lower instrument panel.



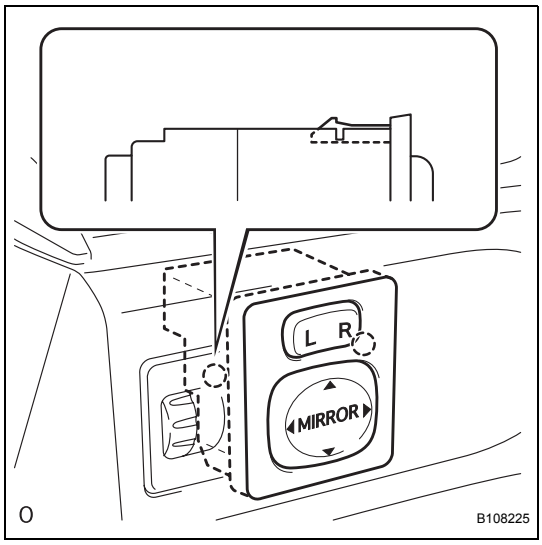
IP

38. REMOVE POWER OUTLET SOCKET ASSEMBLY (See page OT-9)

39. REMOVE POWER OUTLET SOCKET COVER (See page OT-10)

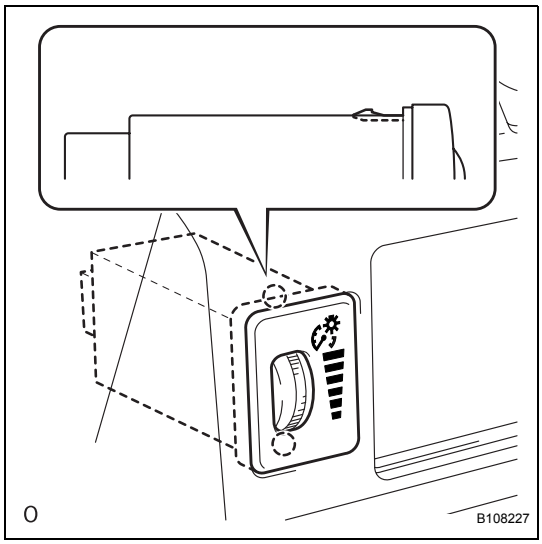
40. REMOVE OUTER MIRROR SWITCH ASSEMBLY

(a) Disengage the 2 claws and remove the outer mirror switch.



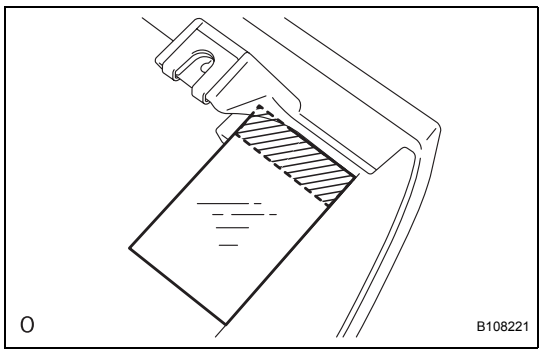
41. REMOVE LIGHT CONTROL RHEOSTAT

(a) Disengage the 2 claws and remove the light control rheostat.

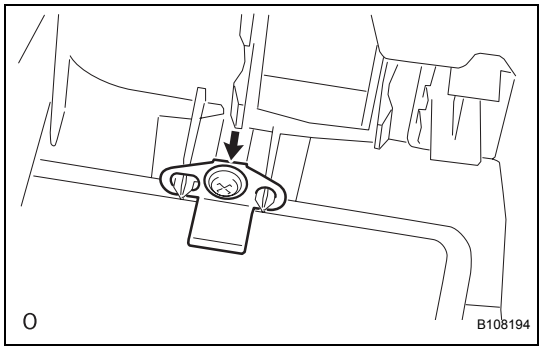


42. REMOVE FRONT PANEL SEAL

(a) Remove the front panel seal.

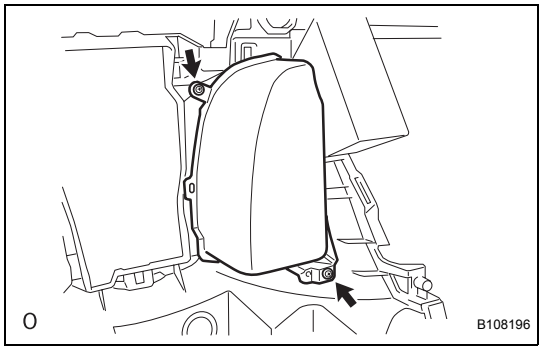


IP



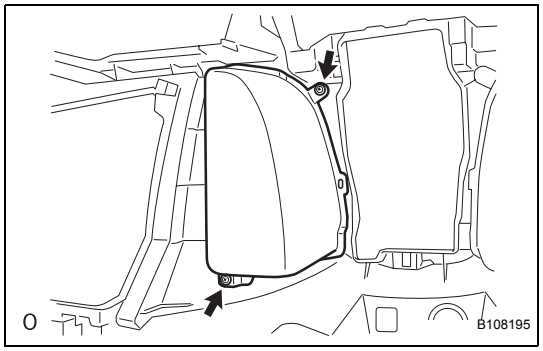
43. REMOVE INSTRUMENT PANEL BOX SPRING

(a) Remove screw <A> and the instrument panel box spring.



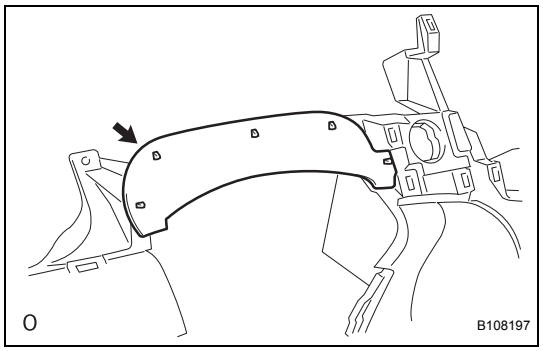
44. REMOVE NO. 1 INSTRUMENT PANEL BOX

(a) Remove the 2 <A> screws and the instrument panel box.



45. REMOVE NO. 2 INSTRUMENT PANEL BOX

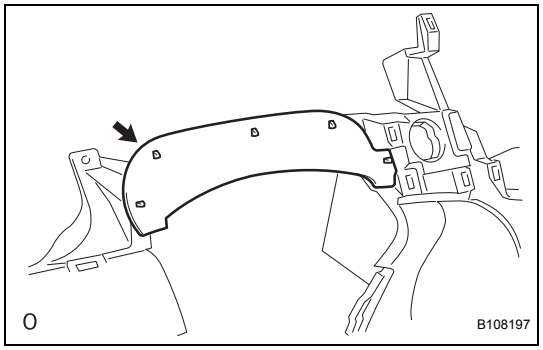
(a) Remove the 2 <A> screws and the instrument panel box.



46. REMOVE INSTRUMENT CLUSTER FINISH PANEL SEAL

(a) Disengage the 5 claws and remove the panel seal.

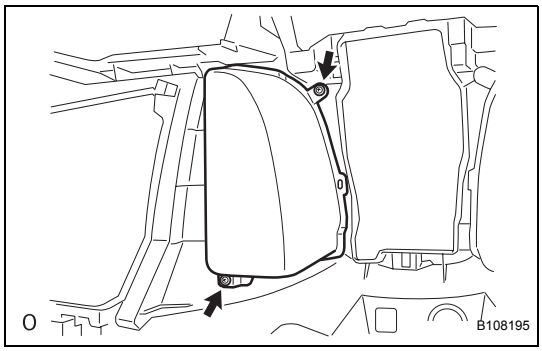
INSTALLATION



1. INSTALL INSTRUMENT CLUSTER FINISH PANEL SEAL

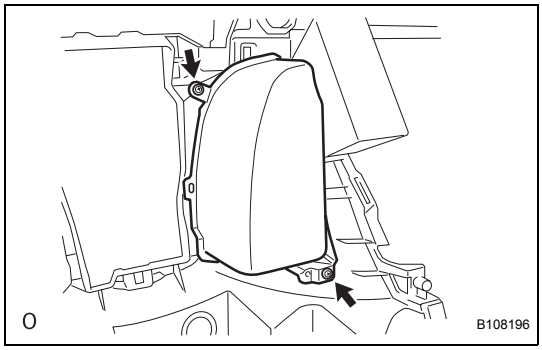
(a) Engage the 5 claws and install the panel seal.

IP



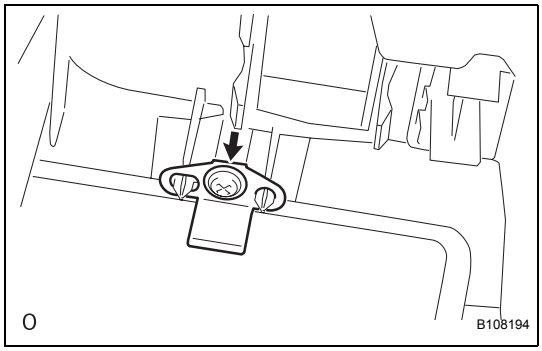
2. INSTALL NO. 2 INSTRUMENT PANEL BOX

(a) Install the instrument panel box with the 2 <A> screws.



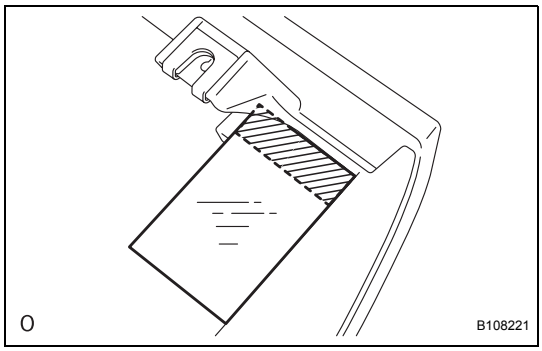
3. INSTALL NO. 1 INSTRUMENT PANEL BOX

(a) Install the instrument panel box with the 2 <A> screws.



4. INSTALL INSTRUMENT PANEL BOX SPRING

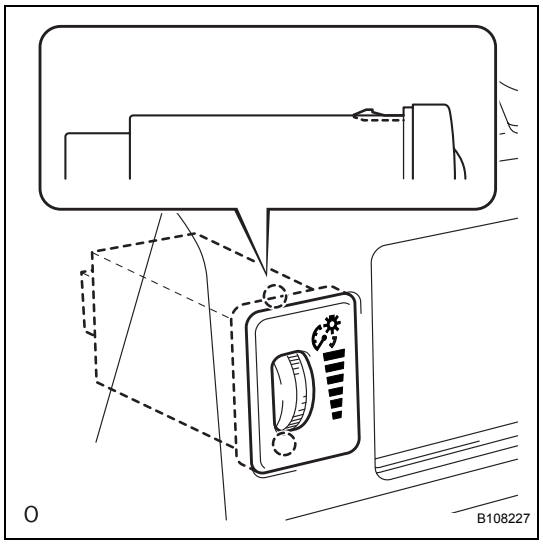
(a) Install the instrument panel box spring with screw <A>.



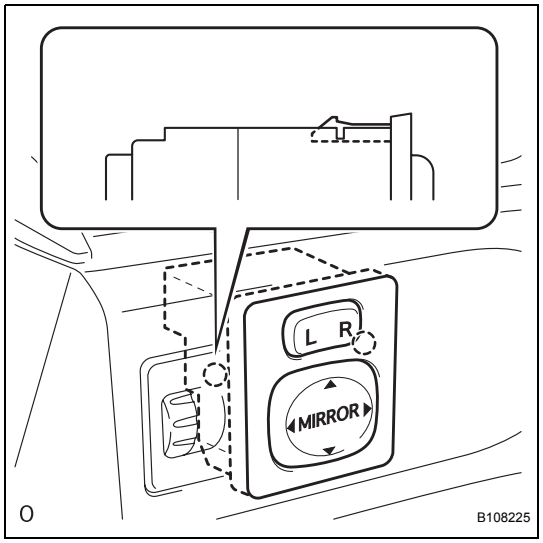
5. INSTALL FRONT PANEL SEAL

(a) Install the front panel seal.

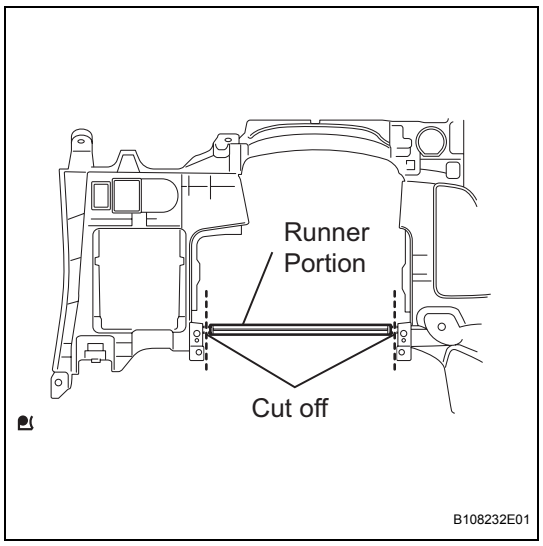
IP



6. **INSTALL LIGHT CONTROL RHEOSTAT**
   (a) Engage the 2 claws and install the light control rheostat.



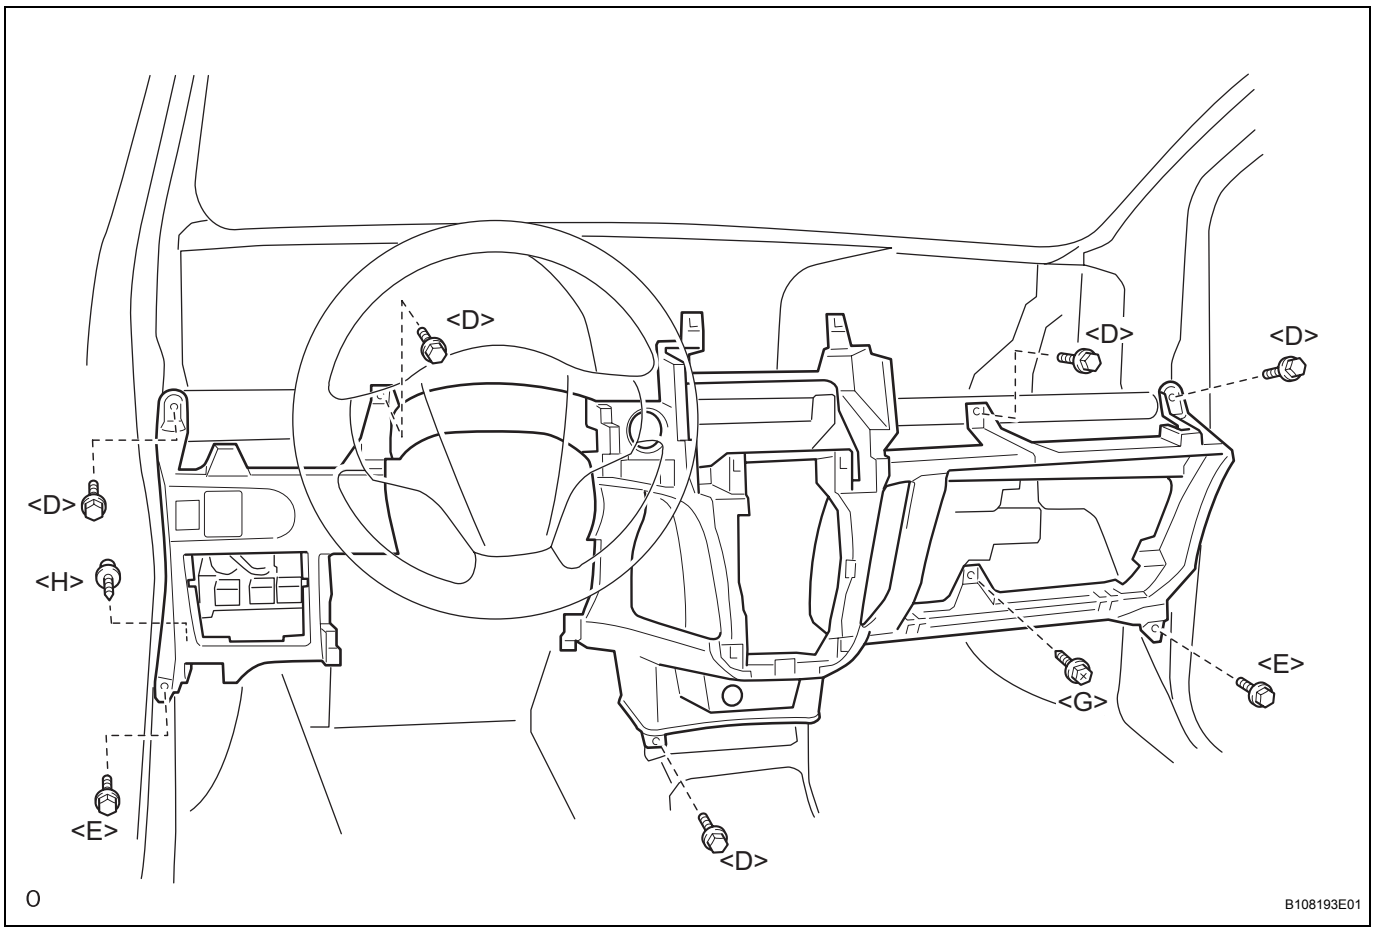
7. **INSTALL OUTER MIRROR SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the outer mirror switch.
8. **INSTALL POWER OUTLET SOCKET COVER (See page OT-10)**
9. **INSTALL POWER OUTLET SOCKET ASSEMBLY (See page OT-10)**



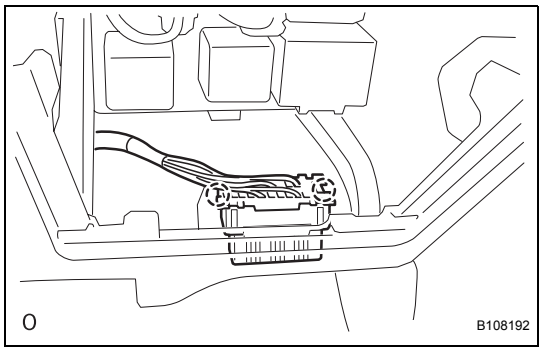
10. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY**
    (a) Using a nipper, cut off both ends of the runner portion shown in the illustration (When installing a new one).
    (b) Apply butyl tape to install a new instrument panel pad lower onto the instrument panel lower (When installing a new one).
    Adhesive:
    Part No. 08850-00065, Butyl Tape Set or the equivalent
    (c) Install the lower instrument panel with the 5 <D> bolts, 2 <E> bolts, screw <G> and screw <H>.
    NOTICE:
    Do not excessively tighten the <D> bolts, otherwise, it may damage the area not being tightened.

IP

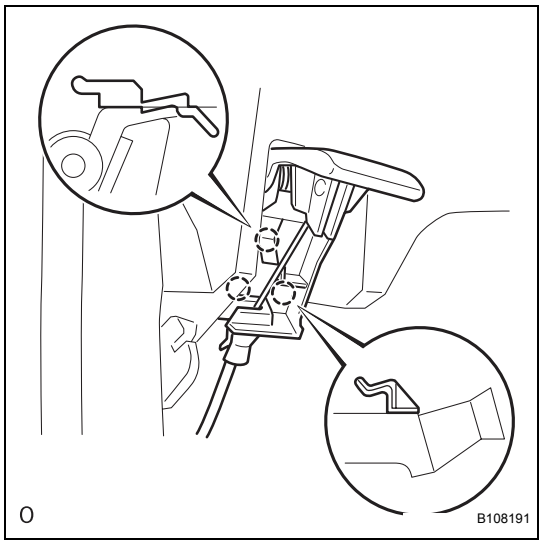
(d) Connect the clamps and connectors.



(e) Engage the 2 claws to connect the DLC3 connector.

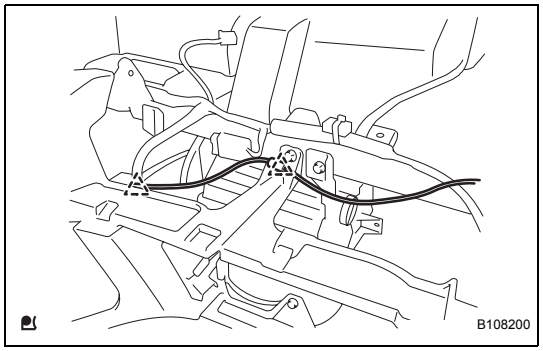


IP



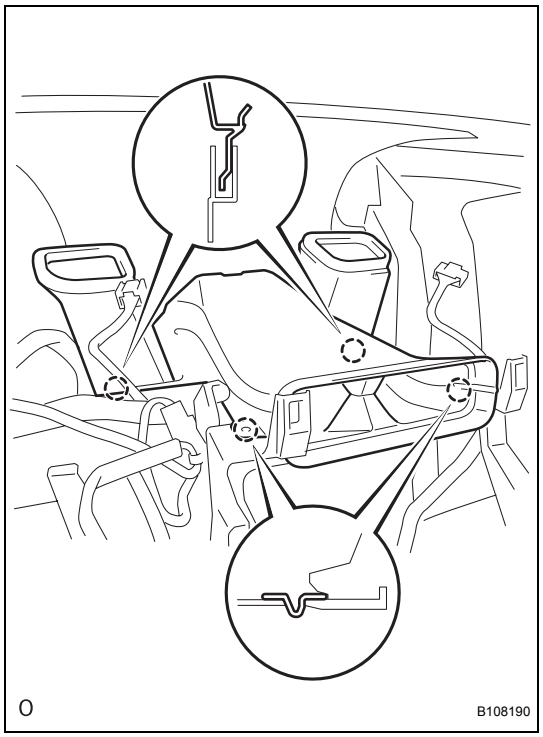
11. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Engage the 3 claws to connect the control lever.



12. CONNECT ANTENNA CORD SUB-ASSEMBLY

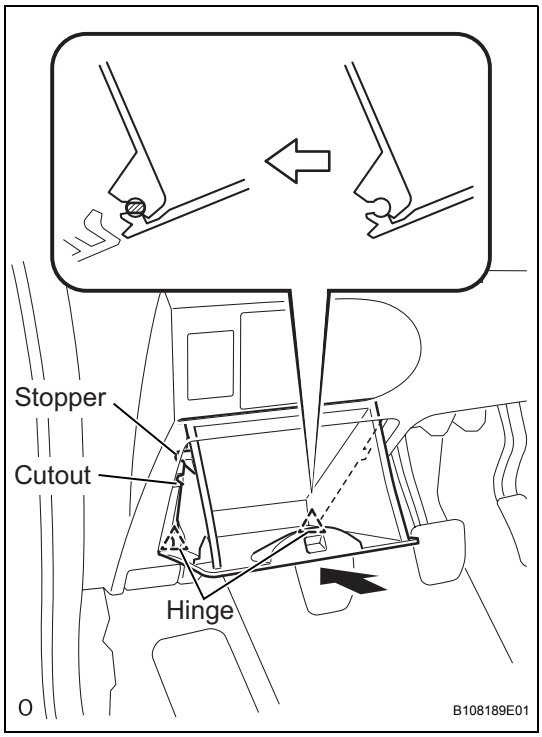
(a) Connect the 2 antenna cord clamps.



13. INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY

(a) Engage the 4 claws and install the heater to register duct.

IP

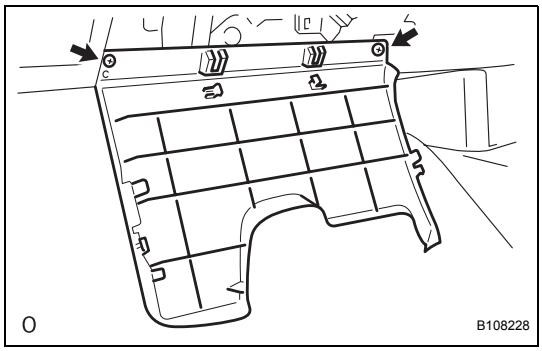


14. INSTALL INSTRUMENT PANEL BOX

(a) Insert the stopper of the instrument panel box from the cutout of the instrument panel lower.

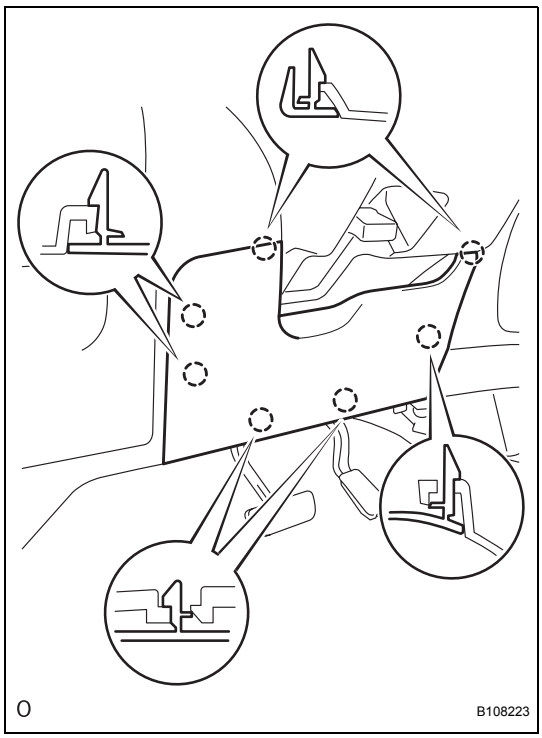
(b) Engage the hinges with the instrument panel open.

(c) Close the instrument panel box.



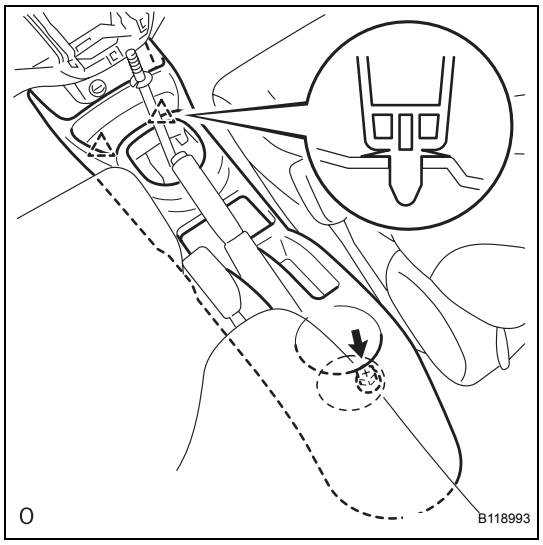
15. INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER

(a) Install the 2 <A> screws.



(b) Engage the 7 claws and install the instrument panel finish panel lower.

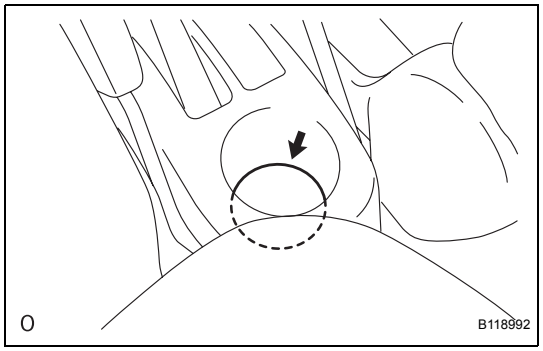
IP



16. INSTALL CONSOLE BOX ASSEMBLY REAR

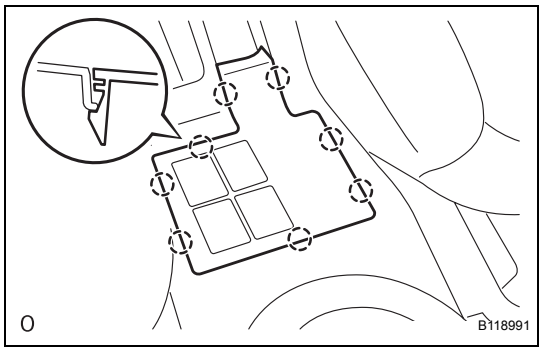
(a) Engage the 2 clips and install the console box rear.

(b) Install bolt <F>.



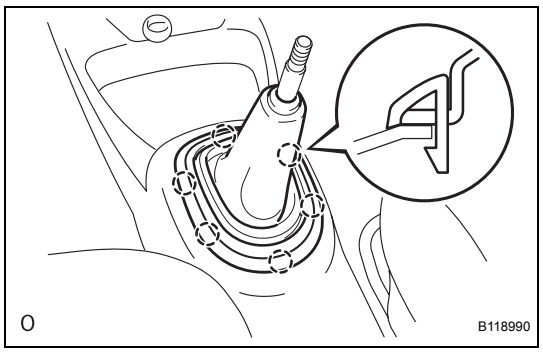
17. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.



18. INSTALL CONSOLE BOX REAR COVER

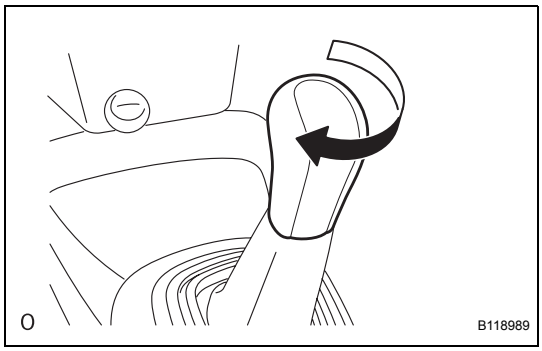
(a) Engage the 8 claws and install the console box rear cover.



19. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle)

(a) Engage the 6 claws and install the shifting hole cover.

IP



20. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
    (a) Install the shift lever knob.
21. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)**

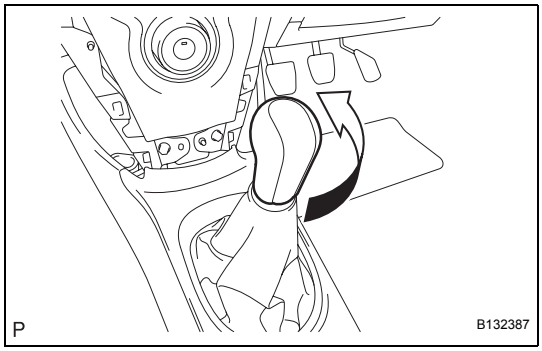
REMOVAL

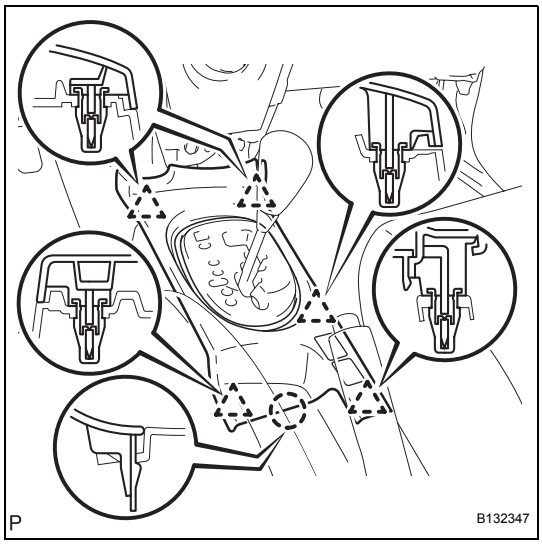
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**

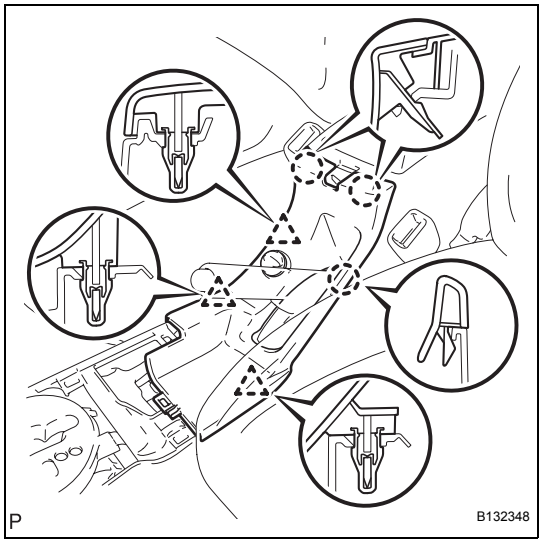
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
   (a) Remove the shift lever knob.



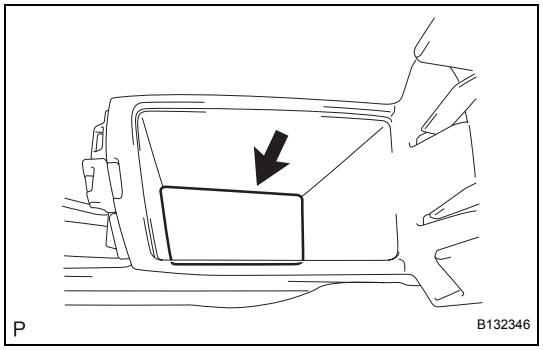
4. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY**
   (a) Shift the shift lever into the N position.
   (b) Disengage the 5 clips and the claw and remove the upper console panel.



5. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY**
   (a) Disengage the 3 clips and 3 claws.
   (b) Disconnect the connector and remove the console upper rear panel.

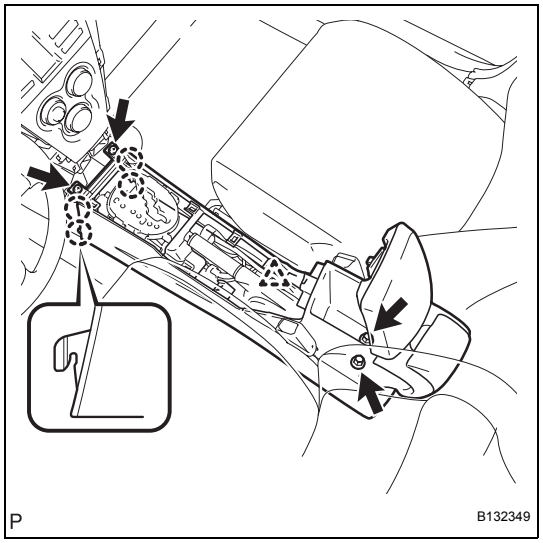


IP



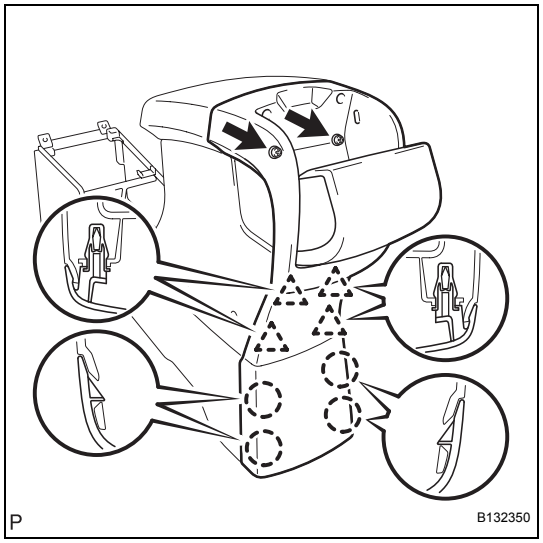
6. REMOVE CONSOLE BOX CARPET

(a) Remove the console box carpet.



7. REMOVE REAR CONSOLE BOX ASSEMBLY

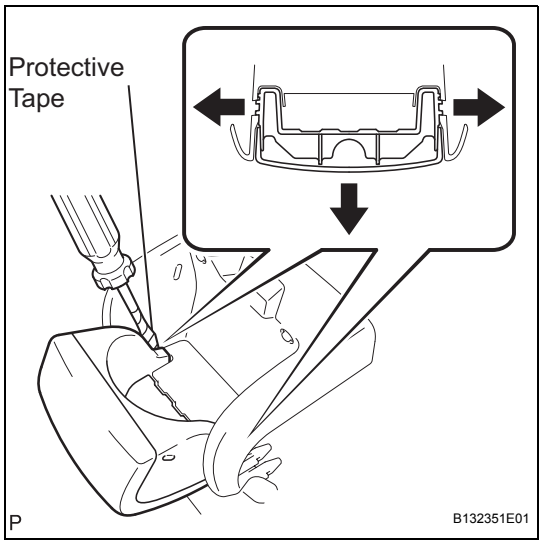
(a) Disconnect the clamp.
(b) Remove the 2 bolts and 2 screws.
(c) Disengage the 4 claws and remove the rear console box.



DISASSEMBLY

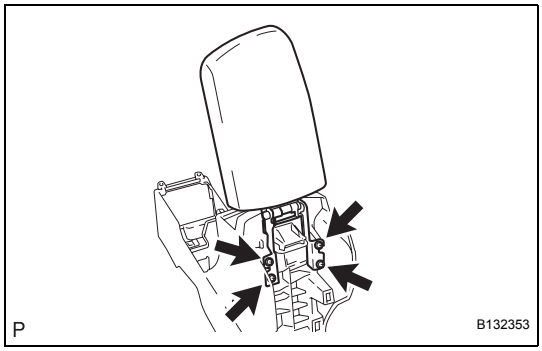
1. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Remove the 2 screws.
(b) Disengage the 4 claws and 4 clips and remove the console rear end panel.



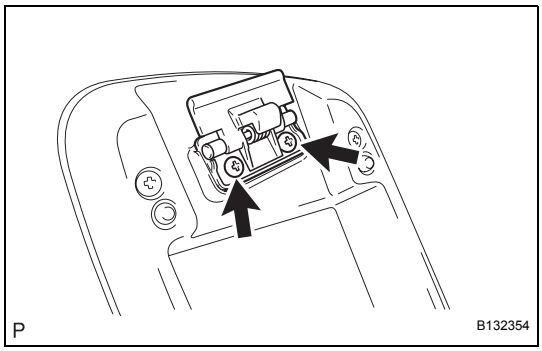
2. REMOVE CONSOLE BOX CUP HOLDER

(a) Using a screwdriver with its tip wrapped in protective tape, prize the hinge portion of the cup holder from side to side while being careful not to apply excessive load to the axis of the instrument panel upper, and remove the cup holder.



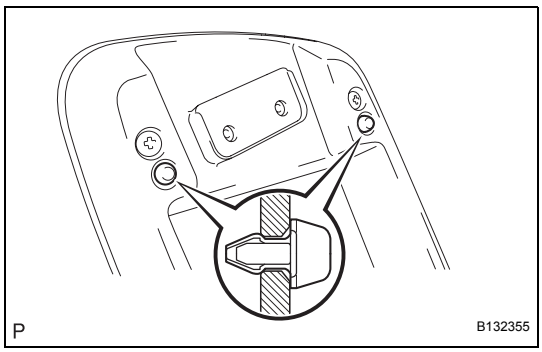
3. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

(a) Remove the 4 screws and remove the console compartment door.



4. REMOVE CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

(a) Remove the 2 screws and remove the console compartment door lock.

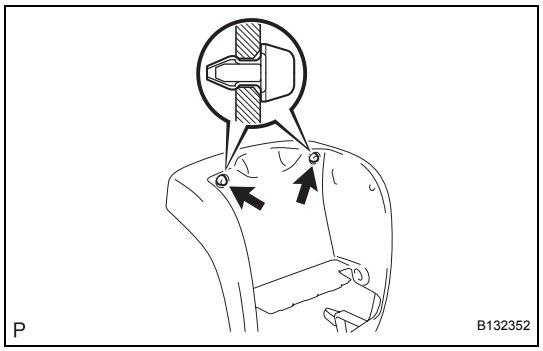


5. REMOVE CONSOLE COMPARTMENT DOOR CUSHION

(a) for Console compartment door:

(1) Remove the console compartment door cushion.

IP

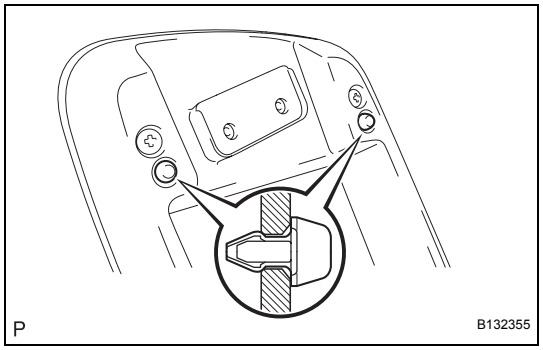


(b) for Console rear end panel:
(1) Remove the console compartment door cushion.

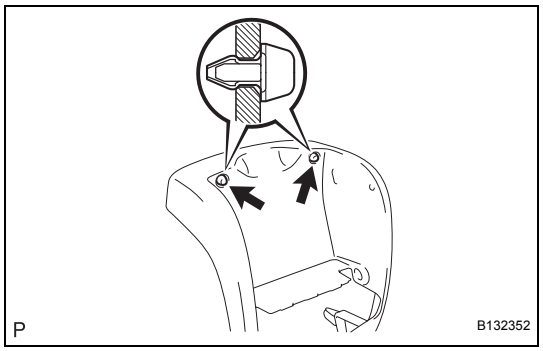
REASSEMBLY

1. INSTALL CONSOLE COMPARTMENT DOOR CUSHION

(a) for Console compartment door:
(1) Install the console compartment door cushion.



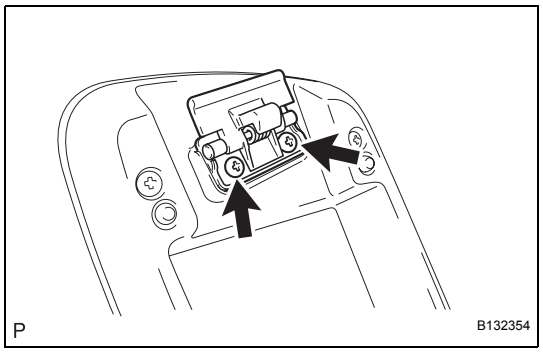
(b) for Console rear end panel:
(1) Install the console compartment door cushion.



IP

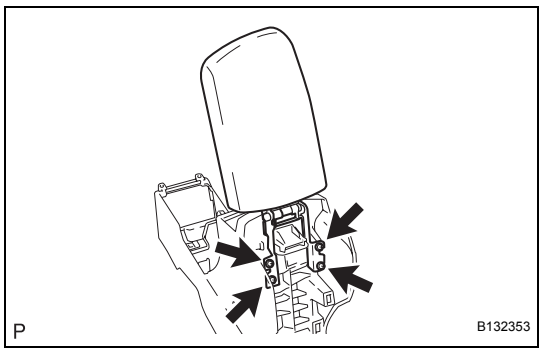
2. INSTALL CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

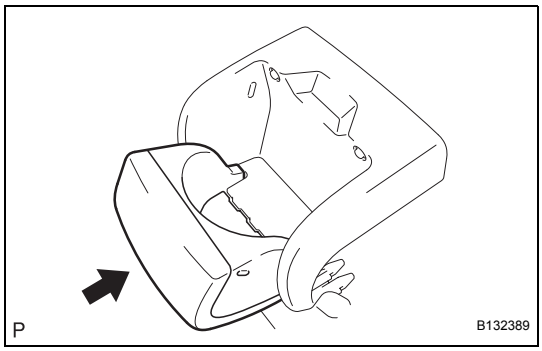
(a) Install the console compartment door lock with the 2 screws.



3. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

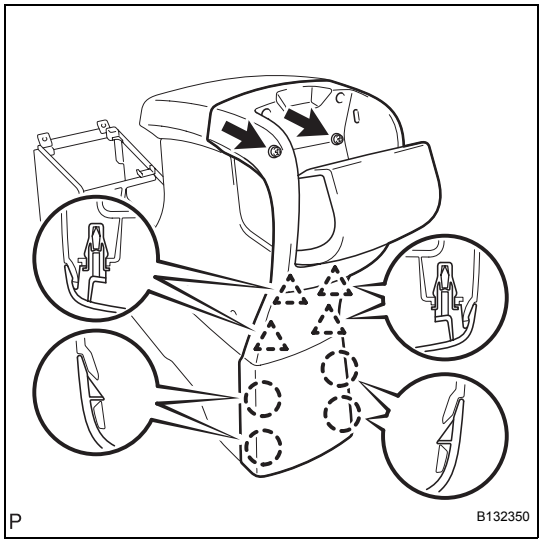
(a) Install the console compartment door lock with the 4 screws.





4. INSTALL CONSOLE BOX CUP HOLDER

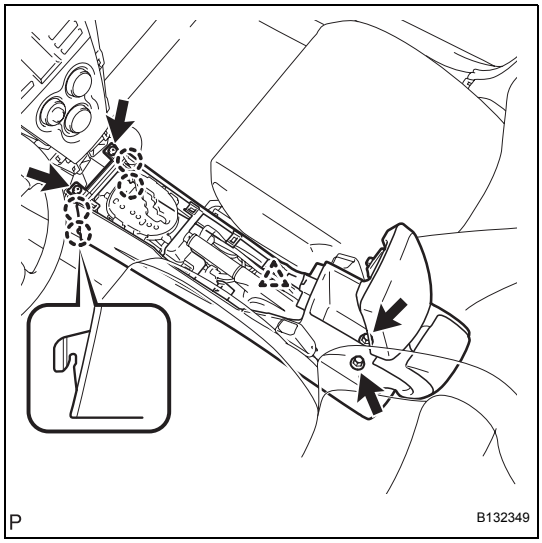
(a) Engage the hinge portion of the cup holder and install the cup holder.



5. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

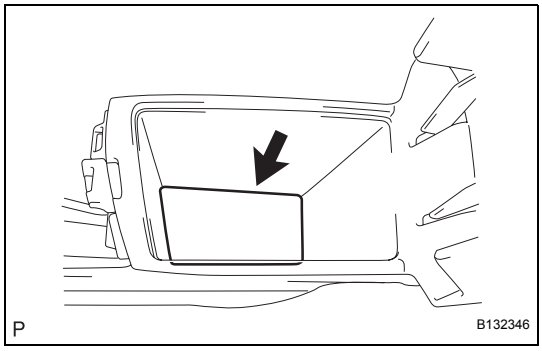
(a) Engage the 4 claws and 4 clips.
(b) Install the console rear end panel with the 2 screws.

INSTALLATION



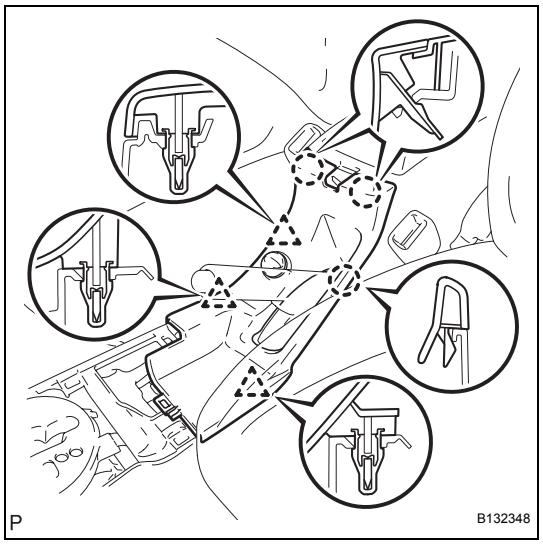
1. INSTALL REAR CONSOLE BOX ASSEMBLY

(a) Engage the 4 claws and install the rear console box.
(b) Install the 2 bolts and 2 screws.
(c) Connect the clamp.

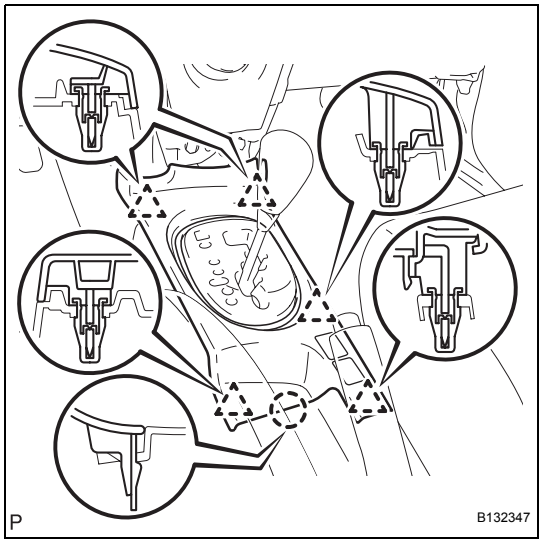


2. INSTALL CONSOLE BOX CARPET

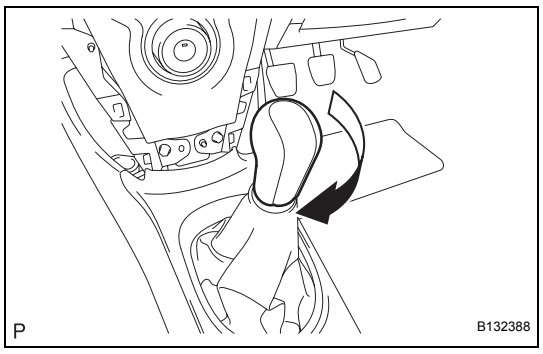
(a) Install the console box carpet.



3. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY**
   (a) Connect the connector.
   (b) Engage the 3 clips and 3 claws and install the console upper rear panel.



4. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY**
   (a) Engage the 5 clips and the claw and install the upper console panel.



5. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
   (a) Install the shift lever knob.

6. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**

7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

SYSTEM DESCRIPTION

1. SEAT BELT WARNING SYSTEM DESCRIPTION

If a seat belt is not fastened, this system flashes the seat belt warning light and sounds the seat belt warning buzzer as a reminder.

2. FUNCTIONS OF MAIN COMPONENTS

SB

Components	Function
Front Seat Inner Belt Assembly LH	Informs center airbag sensor assembly of front driver seat belt condition (fastened or unfastened)
Front Seat Inner Belt Assembly RH	Informs occupant classification ECU of front passenger seat belt condition (fastened or unfastened)
Occupant Classification ECU	Informs center airbag sensor assembly of front passenger seat condition (occupied or unoccupied) Informs center airbag sensor assembly of front passenger seat belt condition (fastened or unfastened)
Occupant Classification Sensor	Informs occupant classification ECU of front passenger seat condition (occupied or unoccupied)
Main Body ECU	Informs combination meter assembly of front driver and front passenger seat belt condition (fastened or unfastened) Informs combination meter assembly of front passenger seat condition (occupied or unoccupied)
Front Driver Seat Belt Warning Light	If front driver seat belt is unfastened and ignition switch is ON, combination meter assembly flashes seat belt warning light of combination meter assembly as reminder
Front Passenger Seat Belt Warning Light	Hatchback: When front passenger seat is occupied and ignition switch is ON, if passenger seat belt is unfastened, combination meter assembly flashes front passenger seat belt warning light of instrument panel finish panel end RH as reminder Sedan: When front passenger seat is occupied and ignition switch is ON, if passenger seat belt is unfastened, combination meter assembly flashes front passenger seat belt warning light of hazard warning signal switch assembly as reminder
Seat Belt Warning Buzzer for Front Driver Side and Front Passenger Side	If front driver or front passenger seat belt is unfastened and ignition switch is ON, combination meter assembly sounds buzzer as reminder

3. SYSTEM OPERATION

- When the ignition switch is ON, this system detects the condition of the seat belts based on signals from the front seat inner belt switches (for driver and front passenger seats) and the occupant classification sensor (front passenger side only).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the seat belt warning system.
- *: Use the intelligent tester.

SB

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.
Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

CUSTOMIZE PARAMETERS

HINT:
The following item can be customized.

Combination Meter Assembly

Display (Item)	Default	Function	Setting
SEAT BELT WARN	D/P ON	Changes seat belt warning buzzer setting	D/P ON / D ON / P ON / D/P OFF

NOTICE:

- **When the customer requests the modification of a function, first make sure that the function(s) can be customized.**
- **Record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

SB

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

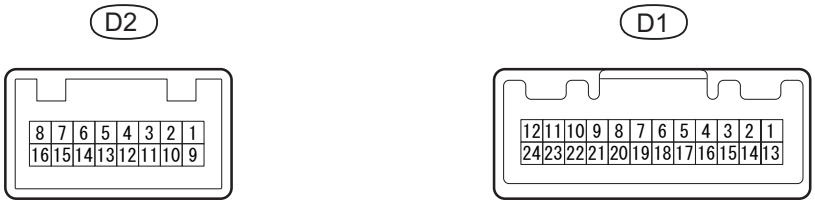
Seat belt warning system

Symptom	Suspected area	See page
Front driver seat belt warning light does not operate	Front seat inner belt assembly LH (for Hatchback)	SB-40
	Front seat inner belt assembly LH (for Sedan)	SB-34
	Wire harness	SB-22
	Center airbag sensor assembly	SB-22
	Main body ECU	SB-22
	Combination meter assembly	SB-22
Front passenger seat belt warning light does not operate	Fuse	SB-24
	Front passenger seat belt warning light (for Hatchback)	SB-6
	Front passenger seat belt warning light (for Sedan)	SB-3
	Front seat inner belt assembly RH (for Hatchback)	SB-40
	Front seat inner belt assembly RH (for Sedan)	SB-34
	Occupant classification sensor	RS-226
	Wire harness	SB-24
	Occupant classification ECU	SB-24
	Center airbag sensor assembly	SB-24
	Main body ECU	SB-24
	Combination meter assembly	SB-24
Seat belt warning buzzer does not sound (Front driver and front passenger seat belt warning lights operate normally)	Combination meter assembly (for Hatchback)	ME-73
	Combination meter assembly (for Sedan)	ME-10

TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY

Hatchback:



Sedan:

(a) Disconnect the D1 combination meter assembly connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D1-1 - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
D1-2 - Body ground	L - Body ground	Battery	Always	11 to 14 V
D1-24 - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the combination meter assembly connector.
(d) Measure the voltage of the wire harness side connector.

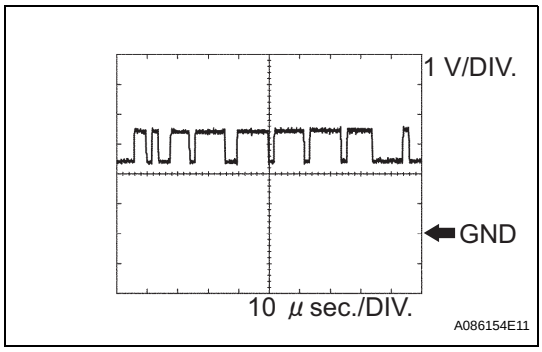
Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D1-20 - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation (See waveform 1)
D1-21 - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation (See waveform 2)
D2-9*1 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is unfastened	Alternating between 11 to 14 V and below 1 V
D2-9*1 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is fastened	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D76-9*2 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is unfastened	Alternating between 11 to 14 V and below 1 V
D76-9*2 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is fastened	Below 1 V

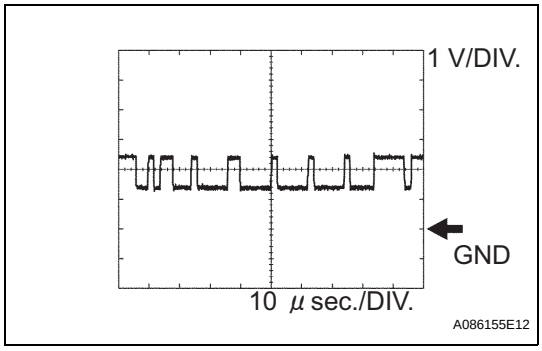
SB

*1: Hatchback
*2: Sedan
If the result is not as specified, the combination meter may have a malfunction.



(e) Waveform 1 (Reference): Using an oscilloscope
CAN communication signal

Terminal Name	D1-21 (CANL) - D1-24 (ET)
Tester Range	1V/DIV, 10μs/DIV
Condition	Ignition switch ON

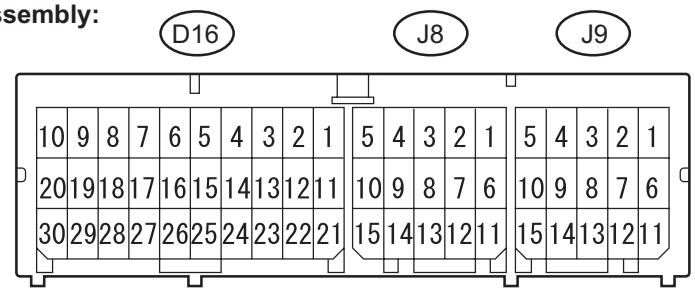


(f) Waveform 2 (Reference): Using an oscilloscope
CAN communication signal

Terminal Name	D1-21 (CANL) - D1-24 (ET)
Tester Range	1V/DIV, 10μs/DIV
Condition	Ignition switch ON

2. CENTER AIRBAG SENSOR ASSEMBLY

Center Airbag Sensor Assembly:

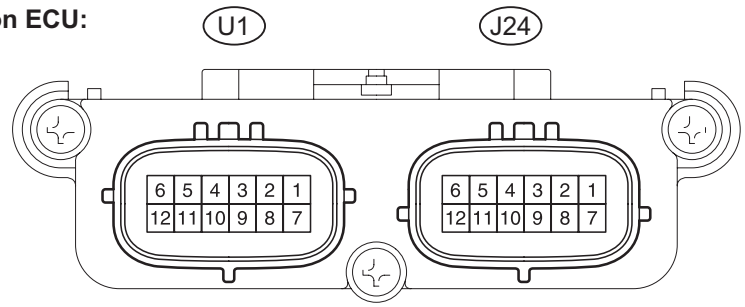


Terminal No.	Terminal Symbol	Destination
D16-13	CANH	CAN communication line
D16-21	IG2	IGN fuse
D16-22	CANL	CAN communication line
D16-25	E1	Ground
D16-26	E2	Ground
J8-11	DBE+	Front seat inner belt assembly LH
J8-12	DBE-	Front seat inner belt assembly LH
J9-12	FSP+	Occupant Classification ECU

Terminal No.	Terminal Symbol	Destination
J9-13	FSP-	Occupant Classification ECU

3. OCCUPANT CLASSIFICATION ECU

Occupant Classification ECU:



P H100909E04

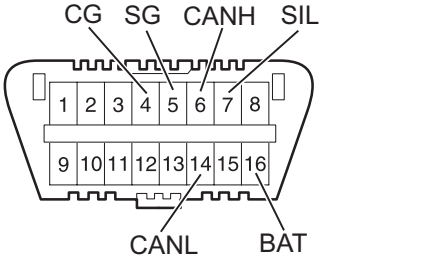
(a) Disconnect the J24 occupant classification ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
J24-7 (IG) - J24-3 (GND)	O - W-B	Power source (IG2 Fuse)	Ignition switch OFF	Below 1 V
J24-7 (IG) - J24-3 (GND)	O - W-B	Power source (IG2 Fuse)	Ignition switch ON	11 to 14 V
J24-1 (+B) - Body ground	V - Body ground	Power source (ECU-B Fuse)	Always	11 to 14 V
J24-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the occupant classification ECU connector.
(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BSW (J24-9) - BGND (J24-5)	O - P	Passenger side buckle switch line	Buckle switch ON Buckle switch OFF	Pulse generation
FSR+ (J24-8) - FSR- (J24-4)	GR - Y	Center airbag sensor assembly communication line	Ignition switch ON	Pulse generation

If the result is not as specified, the combination meter may have a malfunction.



T H100769E16

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

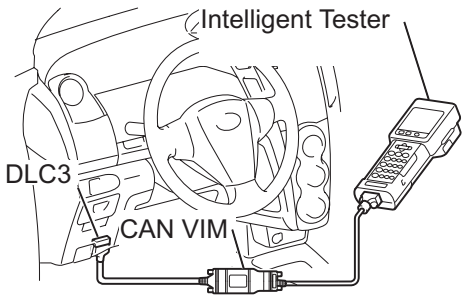
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

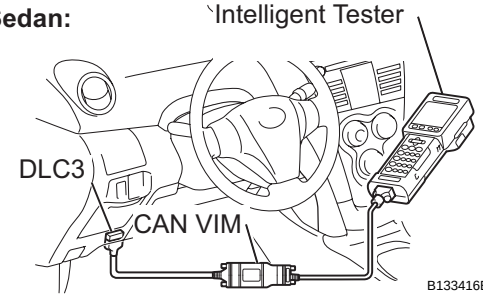
Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Hatchback:



Sedan:



2. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

3. INSPECT FRONT DRIVER SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the driver seat belt is not fastened, check that the combination meter assembly driver seat belt warning light blinks.

(c) When the seat belt is fastened, check that the combination meter assembly driver side seat belt warning light turns off.

4. INSPECT FRONT PASSENGER SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the front passenger seat is occupied, but the seat belt is not fastened, check that the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2 blinks.
*1: Hatchback
*2: Sedan

(c) When the front passenger seat belt is fastened, check that the front passenger seat belt warning light turns off.

5. INSPECT SEAT BELT WARNING BUZZER USING DRIVER SEAT BELT

(a) Turn the ignition switch ON.

(b) When the driver seat belt is not fastened within 1.8 seconds of the ignition switch being turned ON, check that the seat belt warning buzzer sounds at 1.2 second intervals for 6 seconds.

(c) When the driver seat belt is not fastened within 13.8 seconds of the ignition switch being turned ON and the vehicle speed reaches 12.4 mph (20 km/h) or more, check that the buzzer sounds at 1.2 second intervals for 9.6 seconds.

(d) After the buzzer has sounded for 9.6 seconds, check that the buzzer sounds at 0.4 second intervals for a further 20 seconds.

(e) When 29.6 seconds have elapsed since the buzzer started sounding in step (c) above, check that the buzzer stops sounding.

(f) After the buzzer has stopped sounding, turn the ignition switch OFF and then start the engine again. With the driver seat belt unfastened, drive the vehicle at 12.4 mph (20 km/h) or more. Check that the buzzer sounds.

(g) After the buzzer has stopped sounding, fasten the driver seat belt, drive the vehicle at 12.4 mph (20 km/h) or more, and then unfasten the seat belt. Check that the buzzer sounds.

(h) After the buzzer has stopped sounding, move the shift lever to R. Then move the shift lever to D (for A/T only). With the driver seat belt unfastened, drive the vehicle at 12.4 mph (20km/h) or more. Check that the buzzer sounds.

6. INSPECT SEAT BELT WARNING BUZZER USING FRONT PASSENGER SEAT BELT

HINT:
If the following inspection is conducted by one person, since the front passenger seat belt warning buzzer function uses signals from the occupant classification sensors, place an object with a weight of 36 kg (79.37 lb) or more on the front passenger seat.

(a) Turn the ignition switch ON.

(b) When the front passenger seat belt is not fastened within 1.8 seconds of the ignition switch being turned ON, check that the seat belt warning buzzer sounds at 1.2 second intervals for 6 seconds.

(c) When the front passenger seat belt is not fastened within 13.8 seconds of the ignition switch being turned ON and the vehicle speed reaches 12.4 mph (20 km/h) or more, check that the buzzer sounds at 1.2 second intervals for 9.6 seconds.

(d) After the buzzer has sounded for 9.6 seconds, check that the buzzer sounds at 0.4 second intervals for a further 20 seconds.

(e) When 29.6 seconds have elapsed since the buzzer started sounding in step (c) above, check that the buzzer stops sounding.

(f) After the buzzer has stopped sounding, turn the ignition switch OFF and then start the engine again. With the front passenger seat belt unfastened, drive the vehicle at 12.4 mph (20 km/h) or more. Check that the buzzer sounds.

(g) After the buzzer has stopped sounding, fasten the front passenger seat belt, drive the vehicle at 12.4 mph (20 km/h) or more, and then unfasten the front passenger seat belt. Check that the buzzer sounds.

(h) After the buzzer has stopped sounding, move the shift lever to R. Then move the shift lever to D. With the front passenger seat belt unfastened, drive the vehicle at 12.4 mph (20km/h) or more. Check that the buzzer sounds.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

By accessing the DATA LIST using the intelligent tester, values of the switches and sensors can be read without removing any parts. Reading the DATA LIST is the first step of troubleshooting and is one method of shortening labor time.

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.

(c) Enter the DATA LIST by following the prompts displayed on the tester screen.

Center Airbag Sensor Assembly

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
D BUCKLE SW	Buckle switch (Driver side)/ UNSET: Seat belt not fastened SET: Seat belt fastened NG: Data not determined	UNSET/SET	-
P BUCKLE SW	Buckle switch (Passenger side)/ UNSET: Seat belt not fastened SET: Seat belt fastened NG: Data not determined	UNSET/SET	-

Occupant Classification ECU

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
P BUCKLE SW	Buckle switch (Front passenger side)/ UNSET: Front passenger side seat belt is unfastened SET: Front passenger side seat belt is fastened NG: Front passenger side seat belt is malfunctioning	UNSET/SET	-
PASSENGER CLASS	Front passenger classification/ AF05: Adult (36 to 54 kg (79.37 to 119.05 lb)) is seated AM50: Adult more than 54 kg (119.05 lb) is seated CHILD: Child (less than 36 kg (79.37 lb)) is seated CRS: Child restraint system (less than 7 kg (15.43 lb)) and front passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set OFF: Vacant	AF05/AM50/CHILD/CRS/OFF	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the ACTIVE TEST by following the prompts displayed on the tester screen.

Combination Meter Assembly:

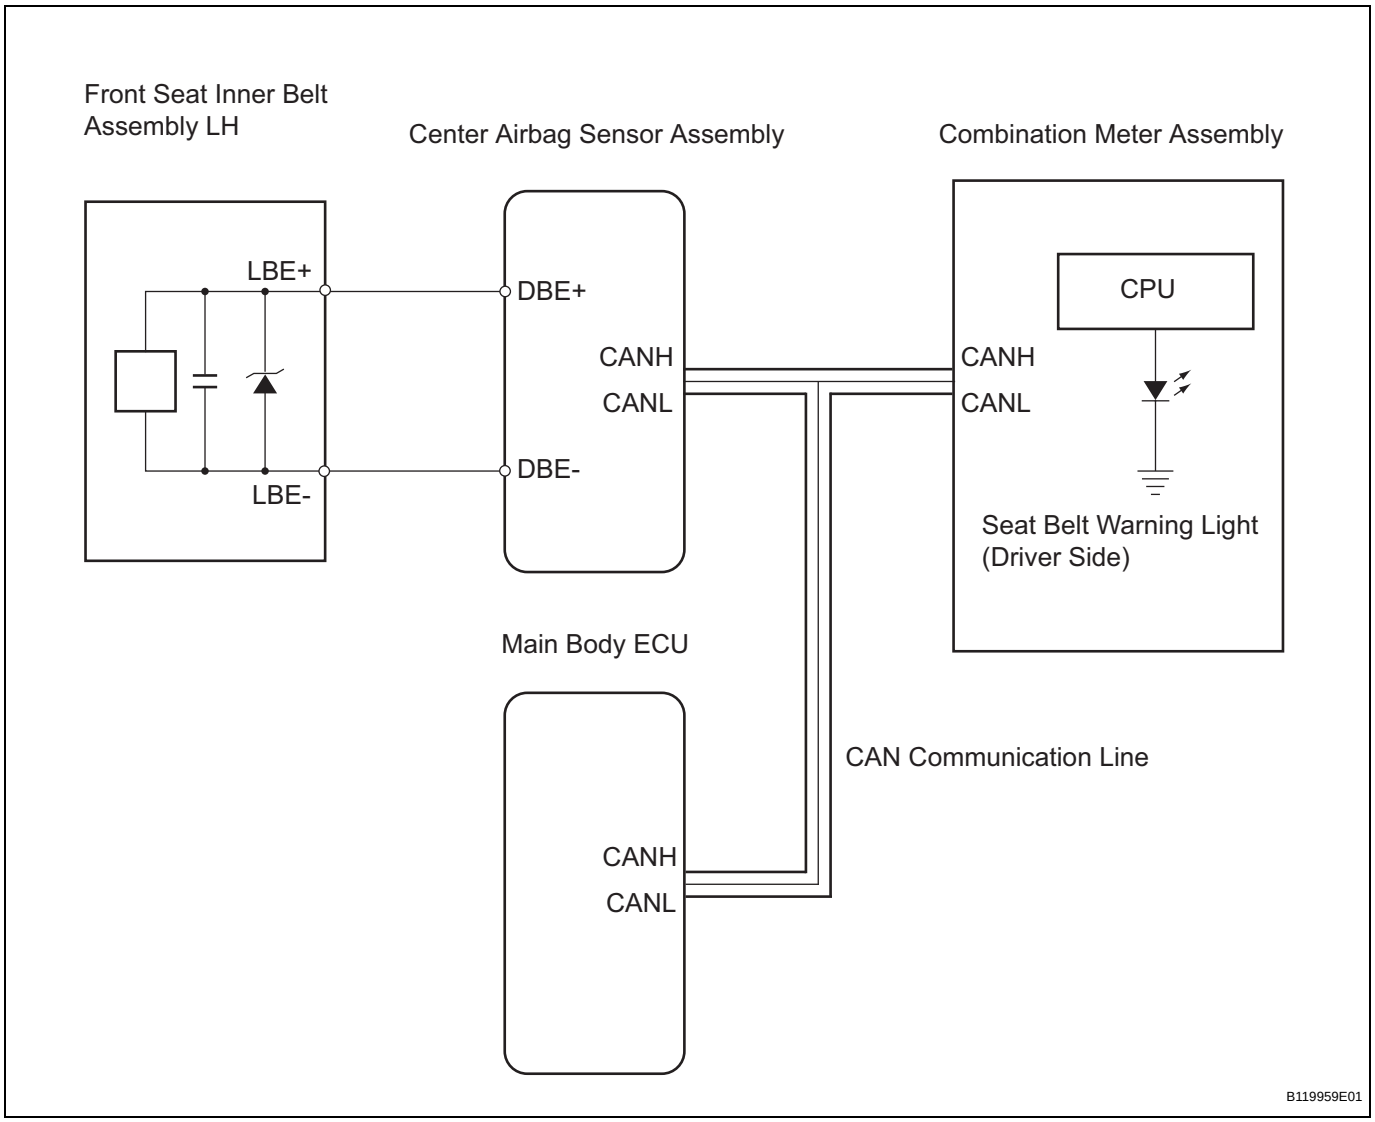
Item	Test Details	Diagnostic Note
D-BELT REMIND	Front driver seat belt warning light / OFF or ON	-
P-BELT REMIND	Front passenger seat belt warning light / OFF or ON	-

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is ON, the center airbag sensor assembly communicates the status of the front seat inner belt assembly LH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the driver seat belt warning light in the combination meter assembly. When the seat belt is fastened, the combination meter assembly stops flashing the front driver seat belt warning light.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK SUPPLEMENTAL RESTRAINT SYSTEM

(a) Connect the intelligent tester with the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.

REPLACE COMBINATION METER ASSEMBLY

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

When the ignition switch is ON and the front passenger seat is occupied, the center airbag sensor assembly communicates the status of the front seat inner belt assembly RH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2. When the seat belt is fastened, the combination meter assembly stops flashing the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2.

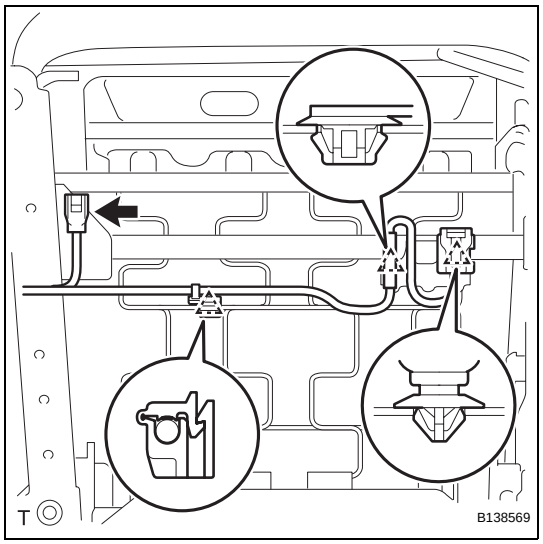
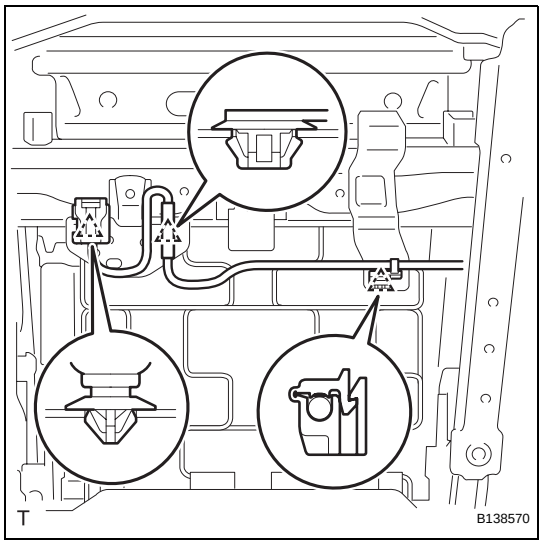
REMOVAL

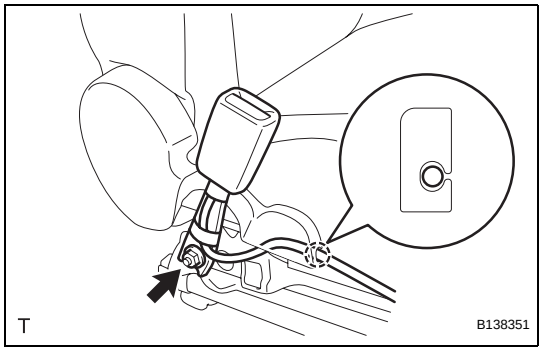
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (See page SE-5)**
3. **REMOVE FRONT SEAT ASSEMBLY (See page SE-5)**
4. **REMOVE FRONT SEAT INNER BELT ASSEMBLY**
   (a) for Driver Side:
      (1) Disconnect the seat position sensor connector.
      (2) Using a clip remover, remove the connector.
      (3) Using a clip remover, remove the clamp.
      (4) Remove the clamp.

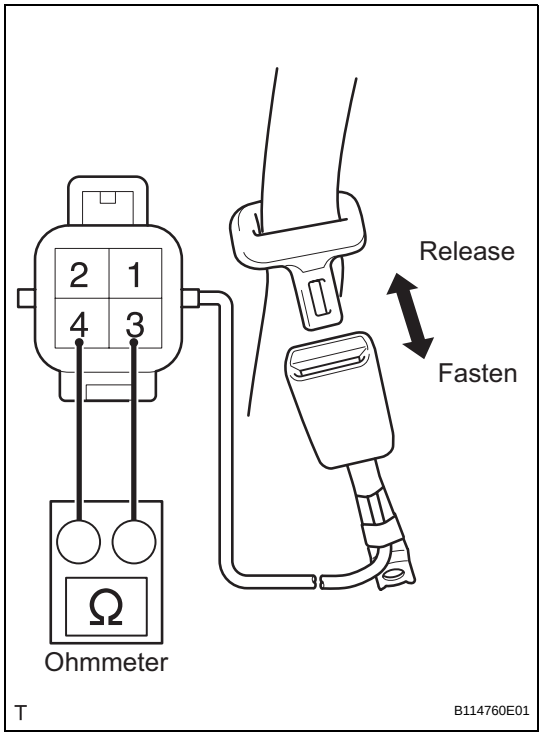




(b) for Front Passenger Seat:
  (1) Using a clip remover, remove the connector.
  (2) Using a clip remover, remove the clamp.
  (3) Remove the clamp.



(c) Remove the wire harness from the claw of the front seat cushion inner shield.
(d) Remove the nut and the front seat inner belt.



INSPECTION

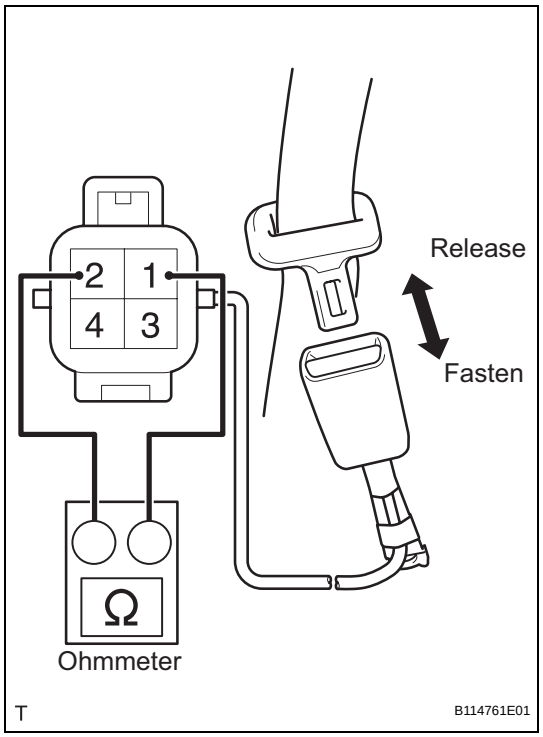
1. INSPECT FRONT SEAT INNER BELT ASSEMBLY

(a) for Driver Side:
  (1) Check the resistance.
    1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
3 - 4	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

If the result is not as specified, replace the front seat inner belt.



(b) for Front Passenger Side:

(1) Check the resistance.

1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

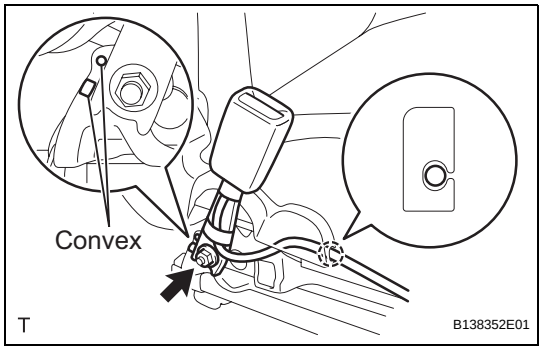
If the result is not as specified, replace the front seat inner belt.

SB

SB

INSTALLATION

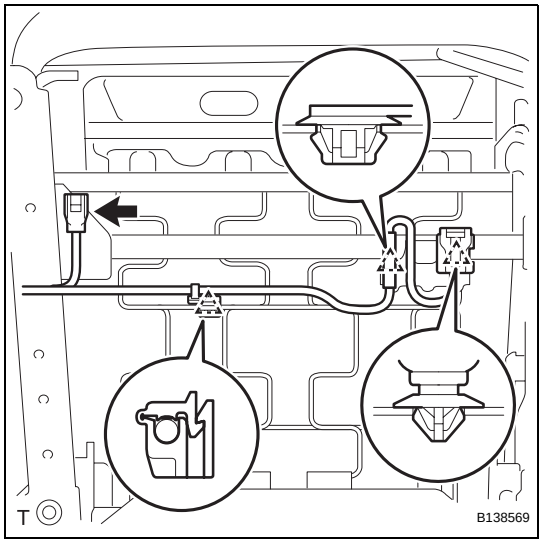
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and drive sides, unless otherwise specified.



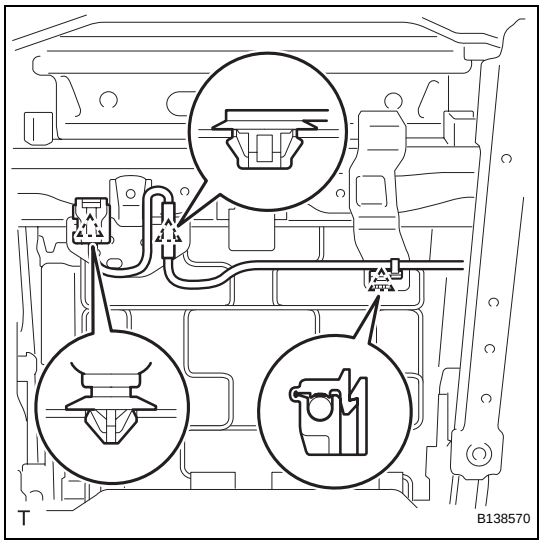
1. INSTALL FRONT SEAT INNER BELT ASSEMBLY

(a) Install the front seat inner belt with the nut.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the front seat inner belt over the convex areas of the front seat adjuster frame.

(b) Install the wire harness into the claw of the front seat cushion inner shield.



(c) for Driver Side:
(1) Install the 2 clamps.
(2) Install the connector.
(3) Connect the seat position sensor connector.



(d) for Front Passenger Side:
  (1) Install the 2 clamps.
  (2) Install the connector.

2. **INSTALL FRONT SEAT ASSEMBLY (See page SE-20)**

3. **INSTALL FRONT SEAT HEADREST ASSEMBLY (See page SE-21)**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

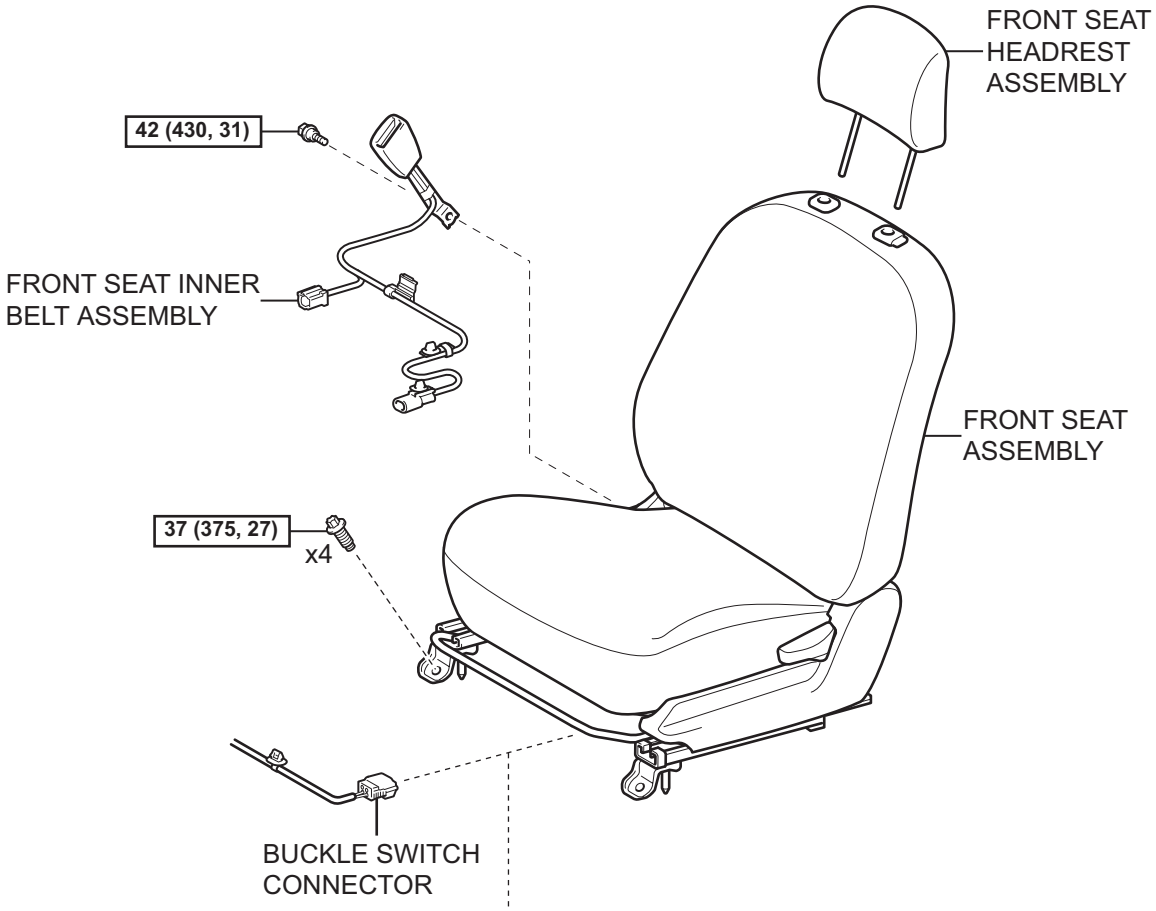
5. **INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)**
   (See page RS-31)

SB

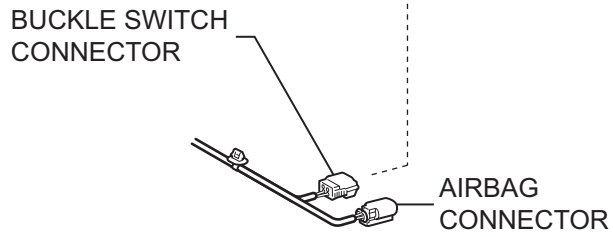
FRONT SEAT INNER BELT ASSEMBLY (for Hatchback)

COMPONENTS

for Driver Side:



w/ Front Seat Side Airbag:



N*m (kgf*cm, ft*lbf) : Specified torque

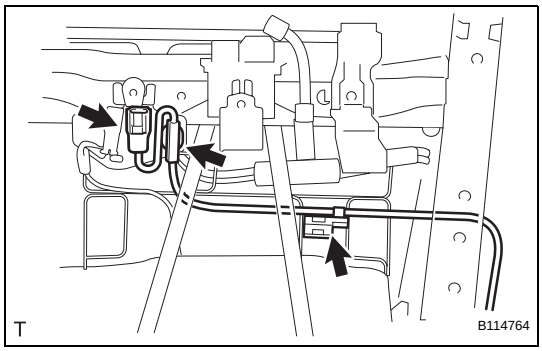
REMOVAL

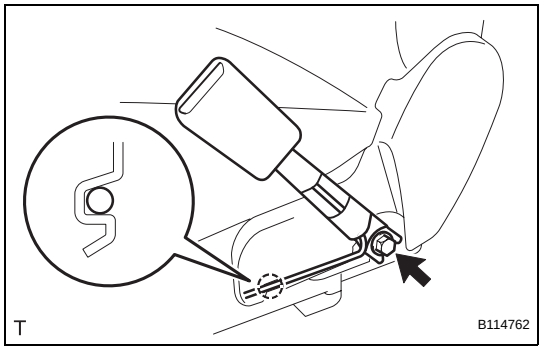
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See pageRS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the driver and front passenger sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (See page SE-28)**
3. **REMOVE FRONT SEAT ASSEMBLY (See page SE-28)**
4. **REMOVE FRONT SEAT INNER BELT ASSEMBLY**
   (a) for Driver Side:
      (1) Disconnect the seat position sensor connector.
      (2) Remove the buckle switch connector.
      (3) Remove the 2 wiring harness clamps.

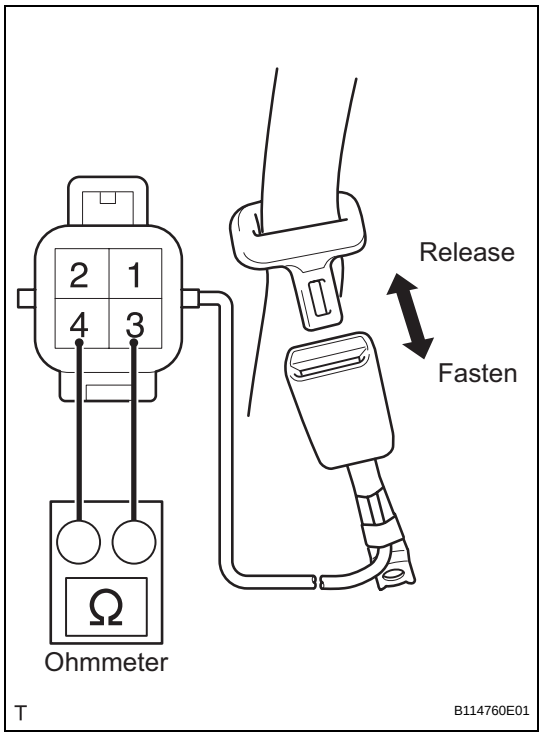
      (4) Remove the wire harness from the claw of the front seat cushion shield.
      (5) Remove the bolt and the front seat inner belt.



(b) for Front Passenger Side:
(1) Remove the buckle switch connector.
(2) Remove the 2 wiring harness clamps.



(3) Remove the wiring harness from the claw of the front seat cushion shield.
(4) Remove the bolt and the front seat inner belt.



INSPECTION

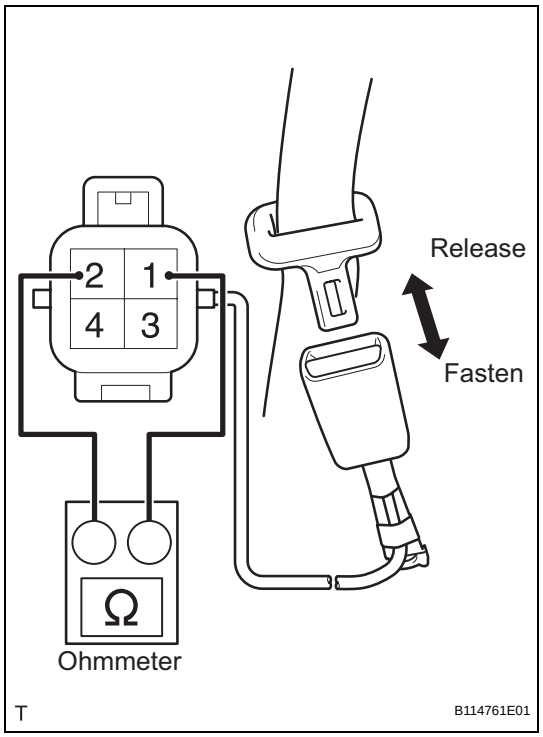
1. INSPECT FRONT SEAT INNER BELT ASSEMBLY

(a) for Driver Side:
(1) Check the resistance.
1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
3 - 4	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

If the result is not as specified, replace the front seat inner belt.



(b) for Front Passenger Side:

(1) Check the resistance.

1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

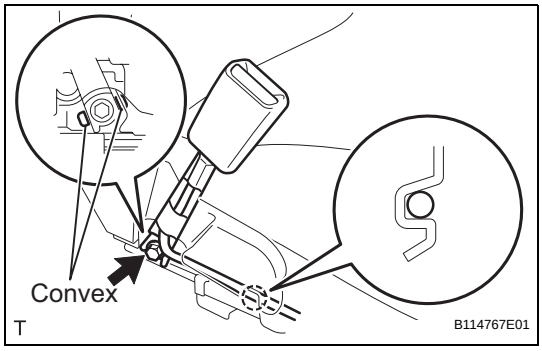
If the result is not as specified, replace the front seat inner belt.

SB

SB

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See pageRS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the driver and front passenger sides, unless otherwise specified.

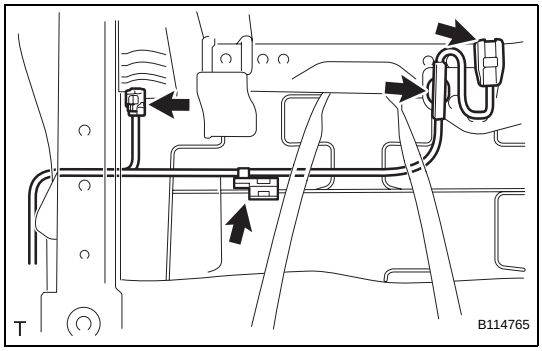


1. INSTALL FRONT SEAT INNER BELT ASSEMBLY

(a) for Driver Side:

(1) Install the front seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the front seat inner belt over the convex areas of the front seat adjuster frame.

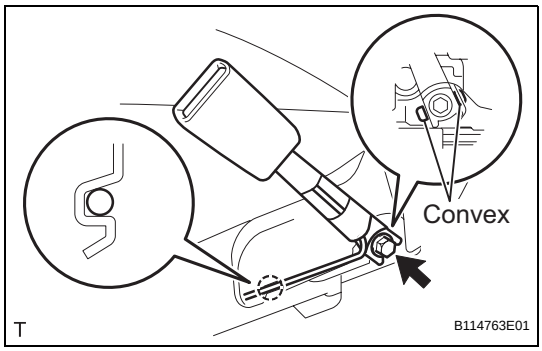
(2) Install the wire harness into the claw of the front seat cushion shield.



(3) Install the 2 wiring harness clamps.

(4) Install the buckle switch connector.

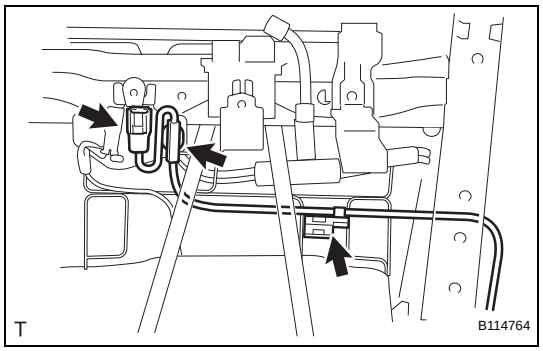
(5) Connect the seat position sensor connector.



(b) for Front Passenger Side:

(1) Install the front seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the front seat inner belt over the convex areas of the front seat adjuster frame.

(2) Install the wiring harness onto the claw of the front seat cushion shield.



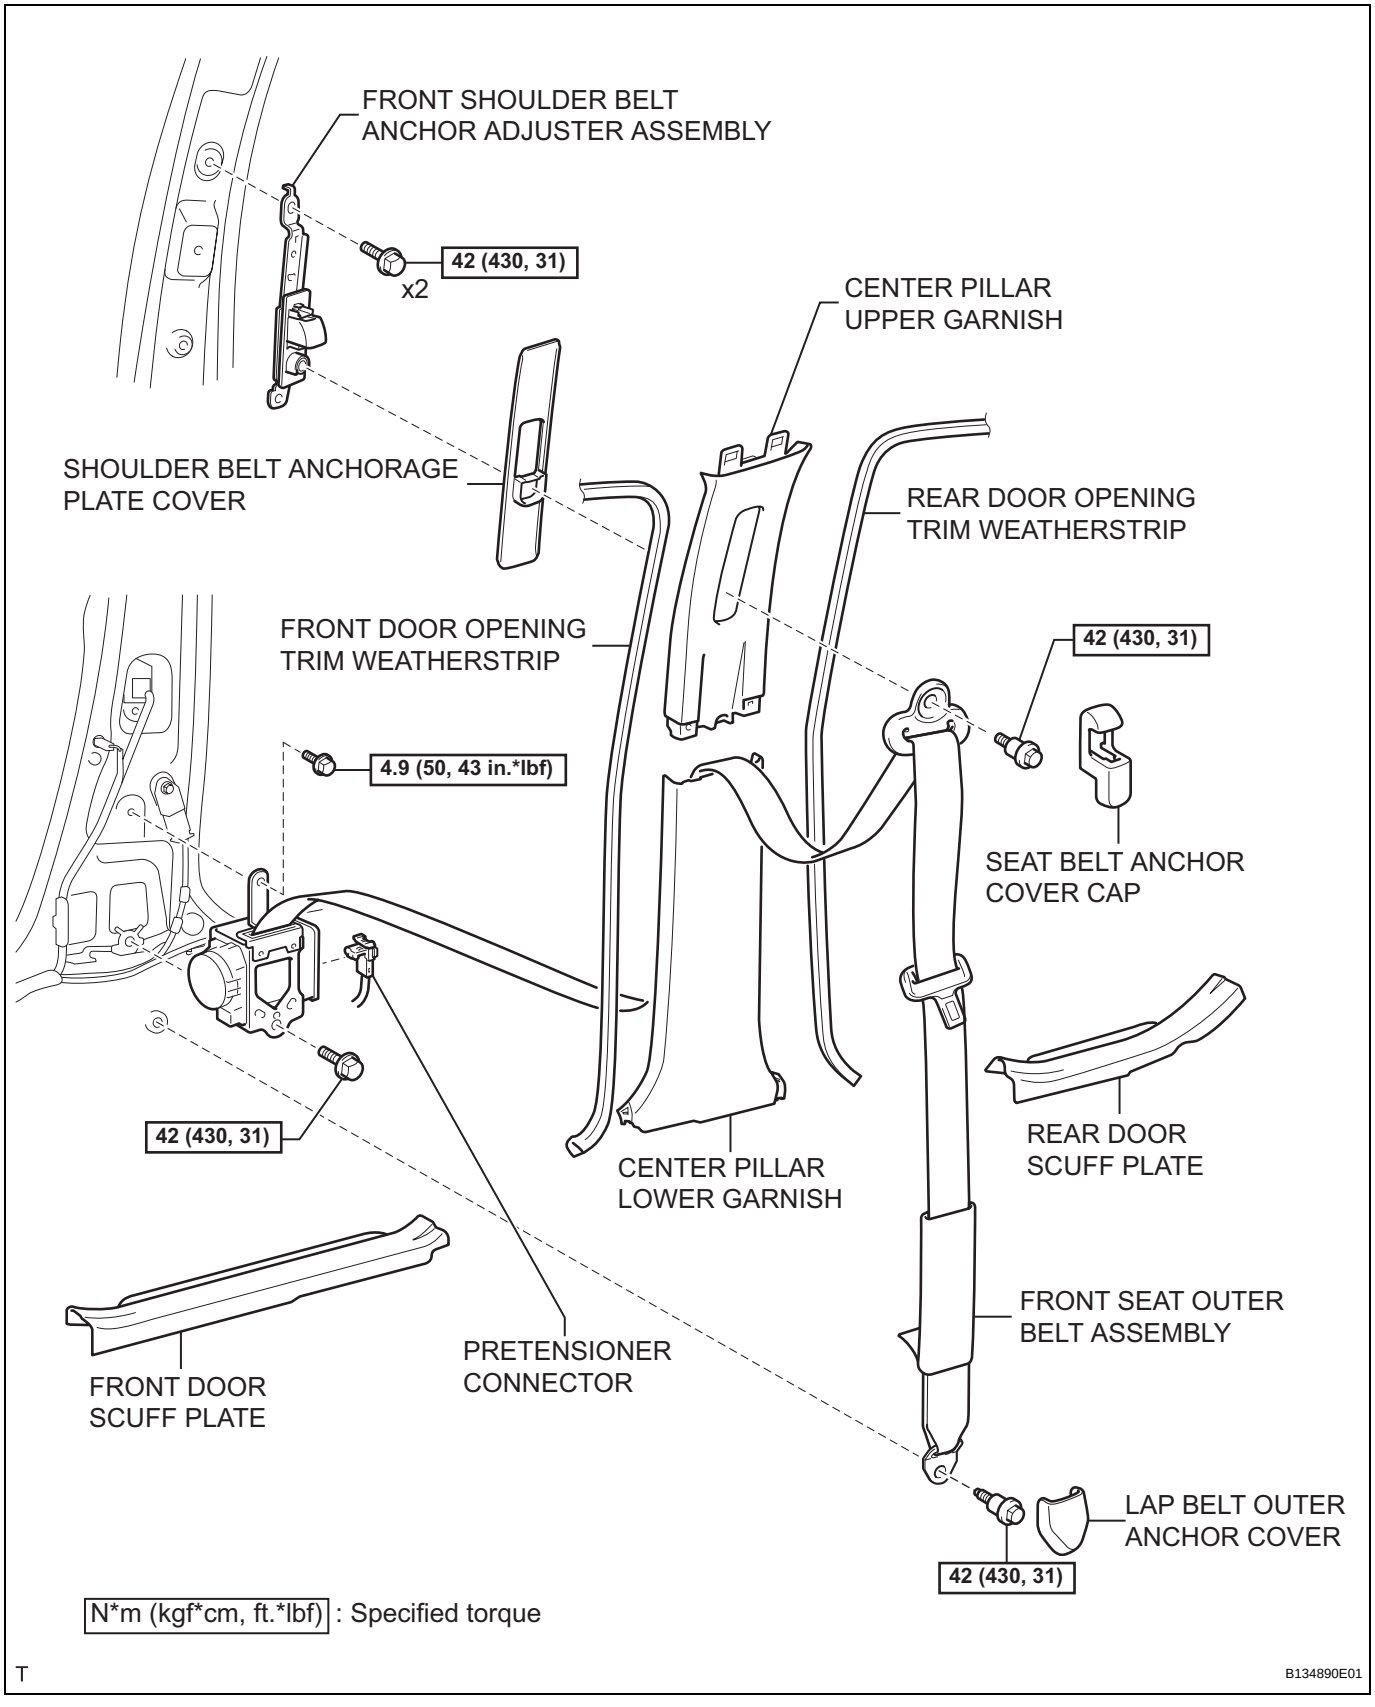
(3) Install the 2 wiring harness clamps.
(4) Install the buckle switch connector.

2. **INSTALL FRONT SEAT ASSEMBLY (See page SE-42)**
3. **INSTALL FRONT SEAT HEADREST ASSEMBLY (See page SE-43)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
5. **INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)**
   (See page RS-31)

SB

FRONT SEAT OUTER BELT ASSEMBLY (for Sedan)

COMPONENTS

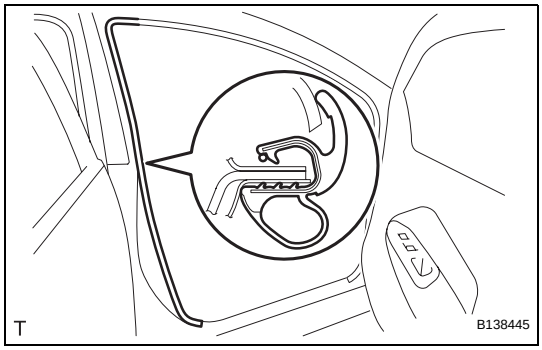


SB

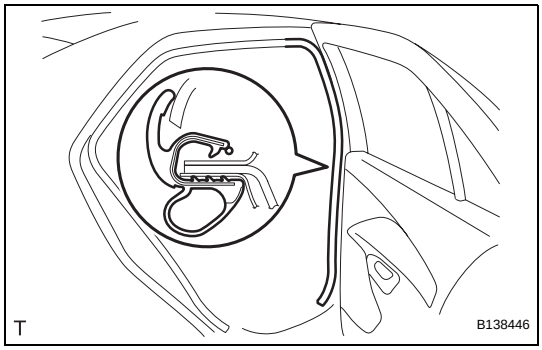
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

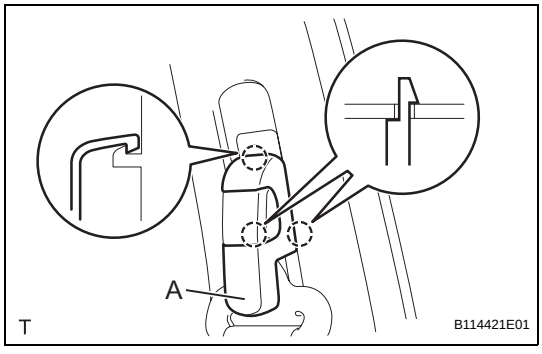
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-14)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-15)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.

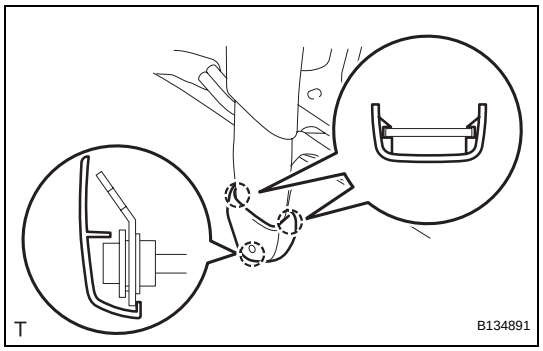


5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the rear door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.
6. **REMOVE CENTER PILLAR LOWER GARNISH (See page IR-16)**



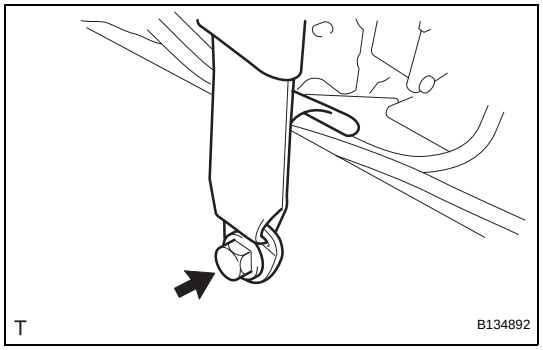
7. **REMOVE SEAT BELT ANCHOR COVER CAP**
   (a) Pull portion A, shown in the illustration, toward you, remove the 2 claws on the lower side followed by the claw on the upper side. Then remove the seat belt anchor cover cap.





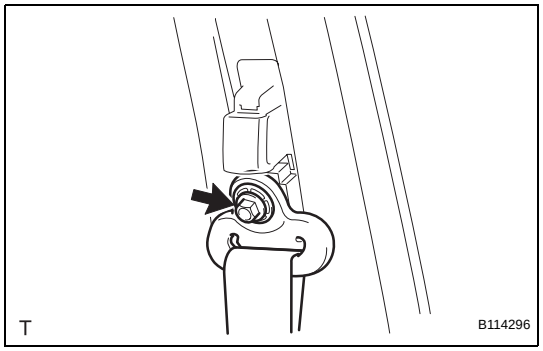
8. REMOVE LAP BELT OUTER ANCHOR COVER

(a) Disengage the 3 claws and remove the lap belt outer anchor cover.

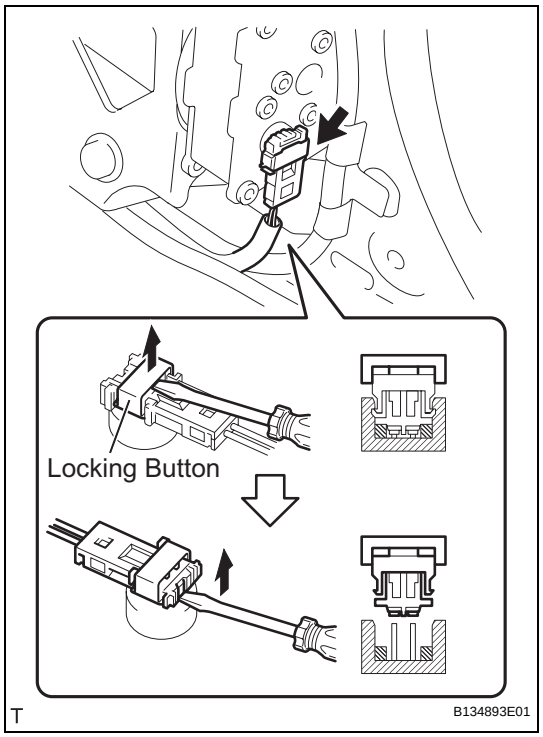


9. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

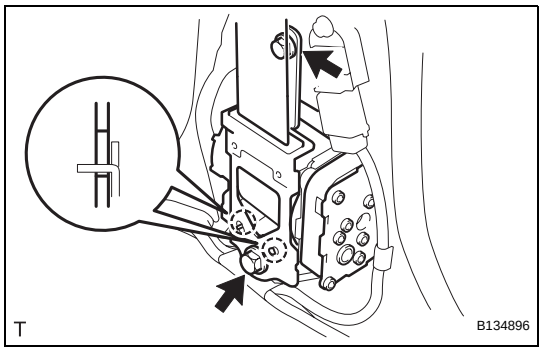
(a) Remove the bolt and the anchor plate.



(b) Remove the bolt and the shoulder anchor.

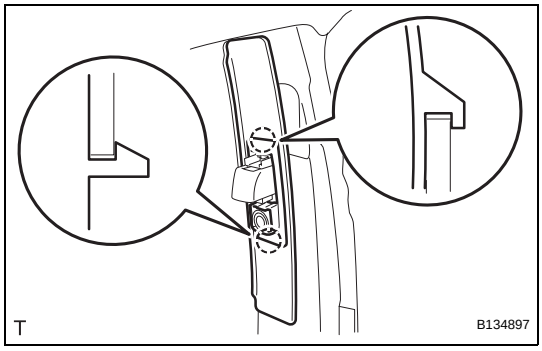


(c) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.



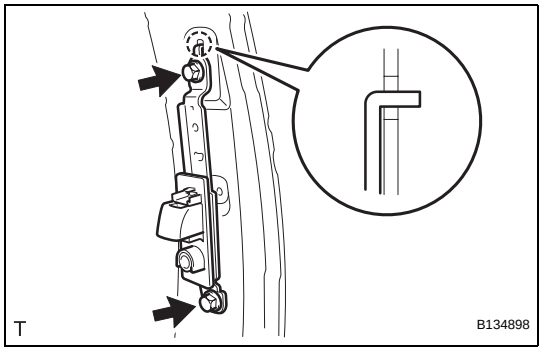
(d) Remove the 2 bolts, the 2 hooks and the retractor.

10. REMOVE CENTER PILLAR UPPER GARNISH (See page IR-17)



11. REMOVE SHOULDER BELT ANCHORAGE PLATE COVER

(a) Disengage the 2 claws and remove the shoulder belt anchorage plate cover.

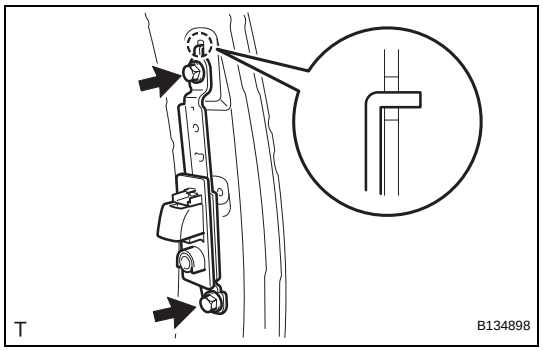


12. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts, the hook and the front shoulder belt anchor adjuster.

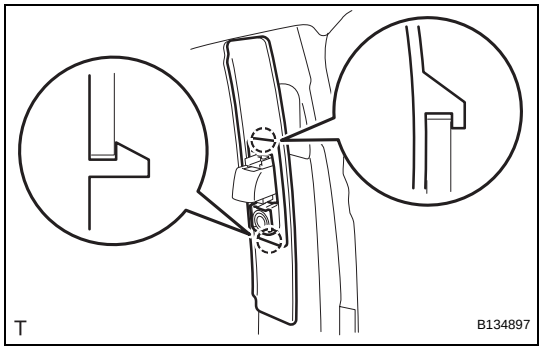
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

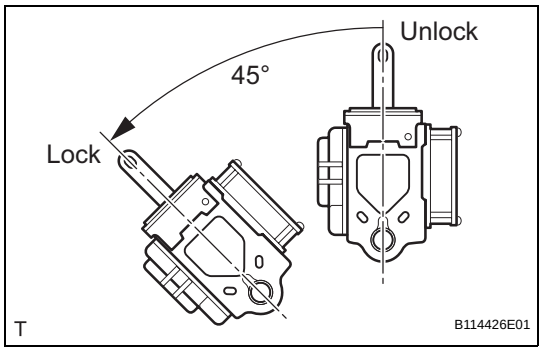
(a) Insert the hook into the body hole and install the shoulder belt anchor adjuster with the 2 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



2. INSTALL SHOULDER BELT ANCHORAGE PLATE COVER

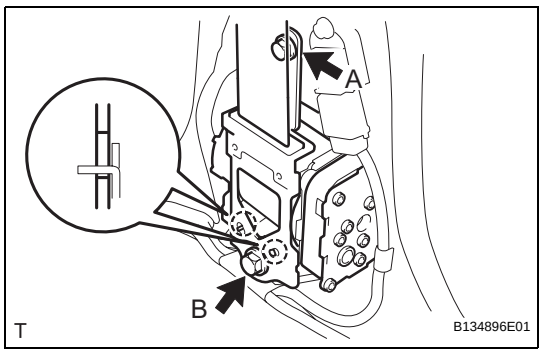
(a) Engage the 2 claws and install the shoulder belt anchorage plate cover.

3. INSTALL CENTER PILLAR UPPER GARNISH (See page IR-31)

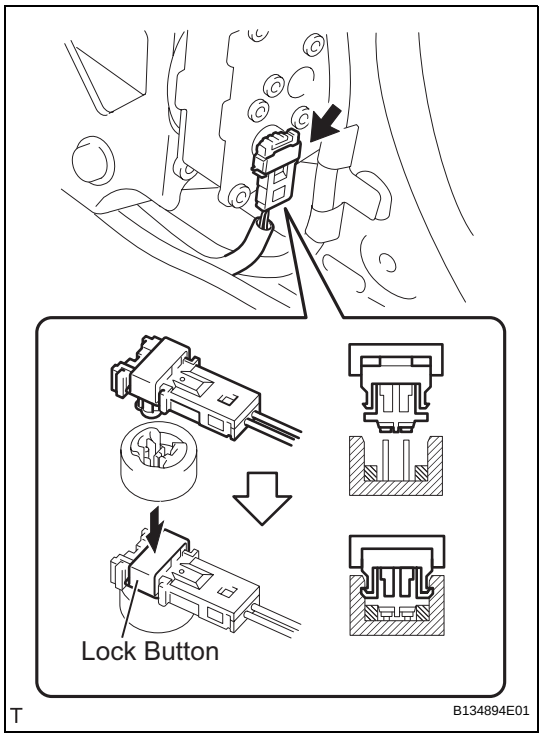


4. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

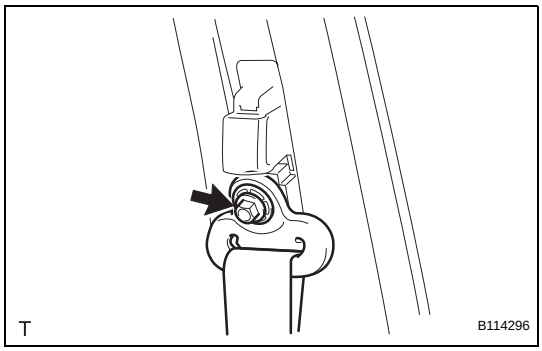
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15 ° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45 ° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the front seat outer belt.



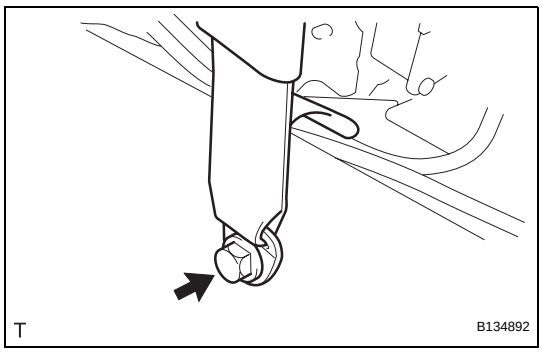
(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B



(d) Connect the pretensioner connector.
  (1) Connect the pretensioner connector.
  (2) Lock the locking button.
  NOTICE:
  Securely lock the locking button.



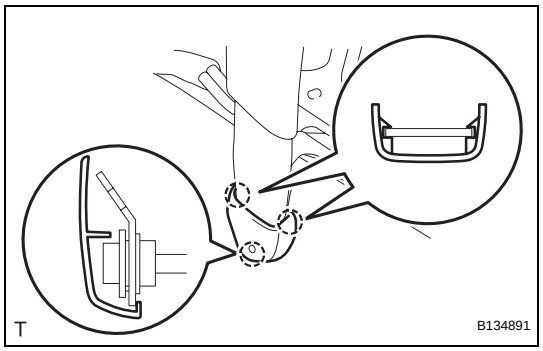
(e) Install the shoulder anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



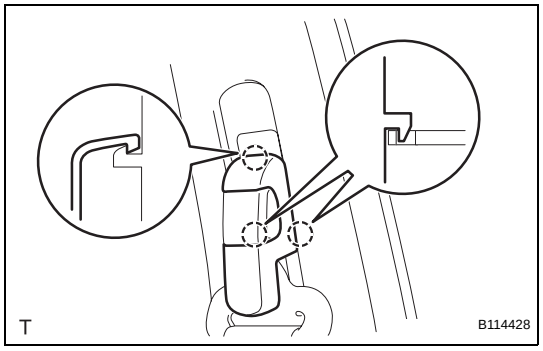
(f) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

(g) Check that the ELR locks.
NOTICE:
- **The check should be performed with the front seat outer belt installed.**
- **Do not allow the anchor part of the front seat outer belt and the protruding parts of the floor panel to overlap.**

  (1) With the belt installed, check that the belt locks when it is pulled out quickly.
  If the operation is not as specified, replace the front seat outer belt.

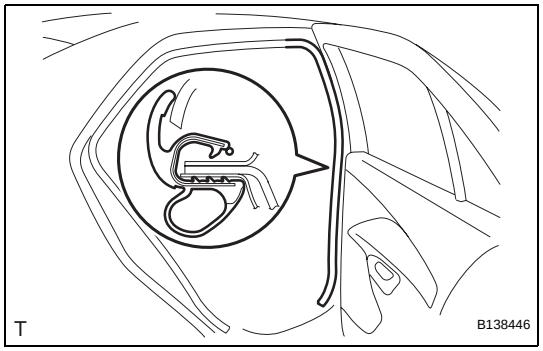


5. INSTALL LAP BELT OUTER ANCHOR COVER
(a) Engage the 3 claws and install the lap belt outer anchor cover.

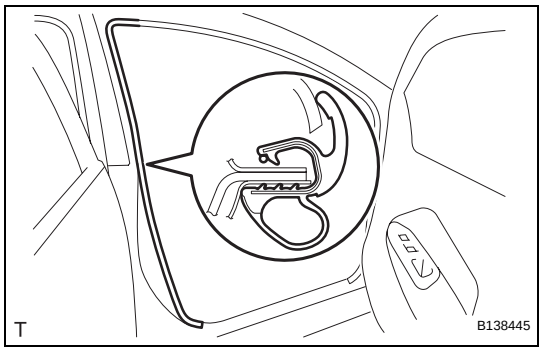


6. INSTALL SEAT BELT ANCHOR COVER CAP
(a) Engage the 3 claws and install the seat belt anchor cover cap.

7. INSTALL CENTER PILLAR LOWER GARNISH (See page IR-32)



8. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP
(a) Install the rear door opening trim weatherstrip.



9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP
(a) Install the front door opening trim weatherstrip.

10. INSTALL REAR DOOR SCUFF PLATE (See page IR-34)

11. INSTALL FRONT DOOR SCUFF PLATE (See page IR-35)

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

13. INSPECT SRS WARNING LIGHT
(See page RS-31)

SB

SB

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **When activating a front seat outer belt (with seat belt pretensioner), stand at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing the activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **When activating the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool).**
- **Perform the operation in a place away from electrical interference.**

HINT:

The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

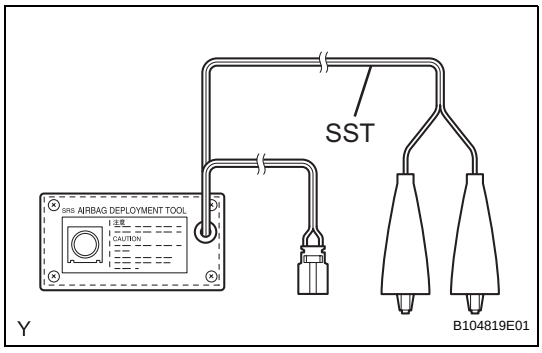
Prepare a battery as the power source to activate the seat belt pretensioner.

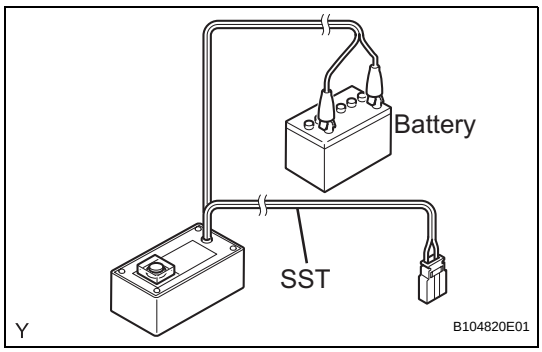
(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.

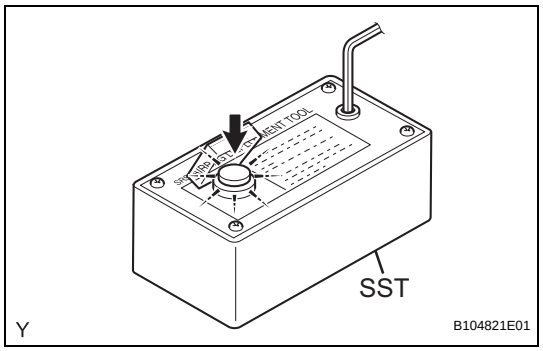




(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

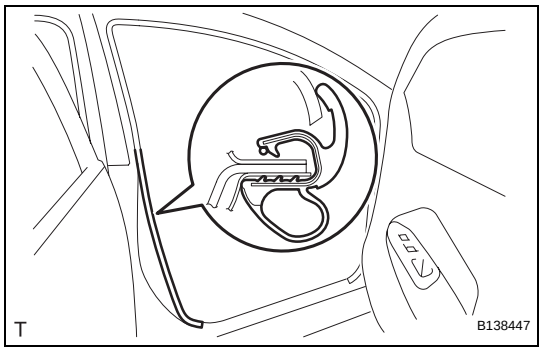
(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from the negative battery terminal.

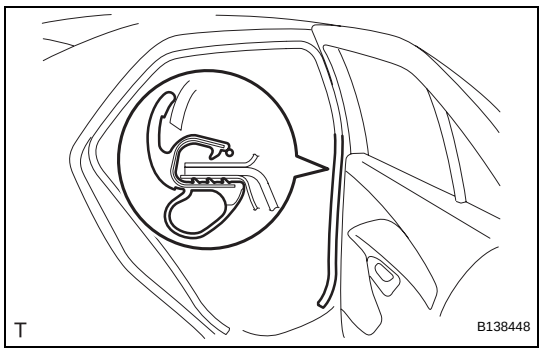
(2) Remove the front door scuff plate (See page IR-14).

(3) Remove the rear door scuff plate (See page IR-15).



(4) Remove the front door opening trim weatherstrip.

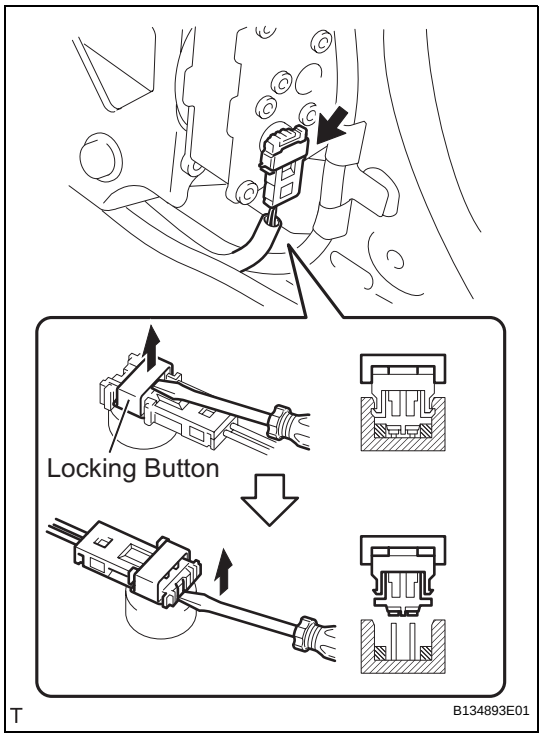
1. Remove the front door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.



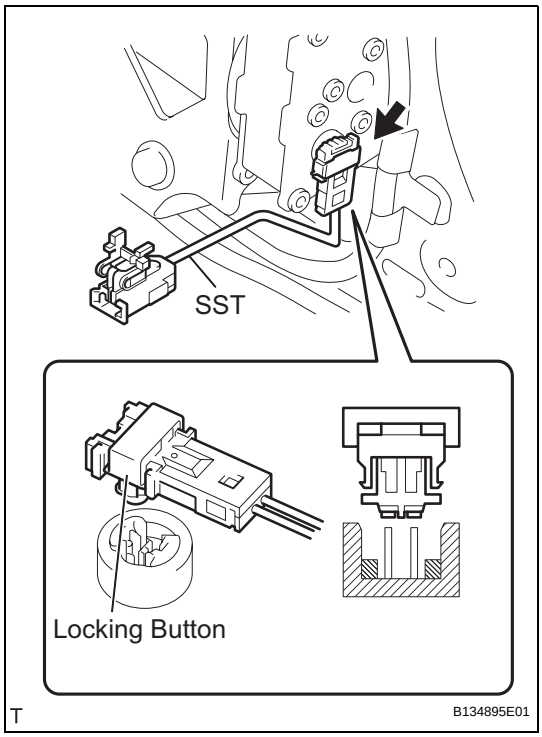
(5) Remove the rear door opening trim weatherstrip.

1. Remove the rear door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.

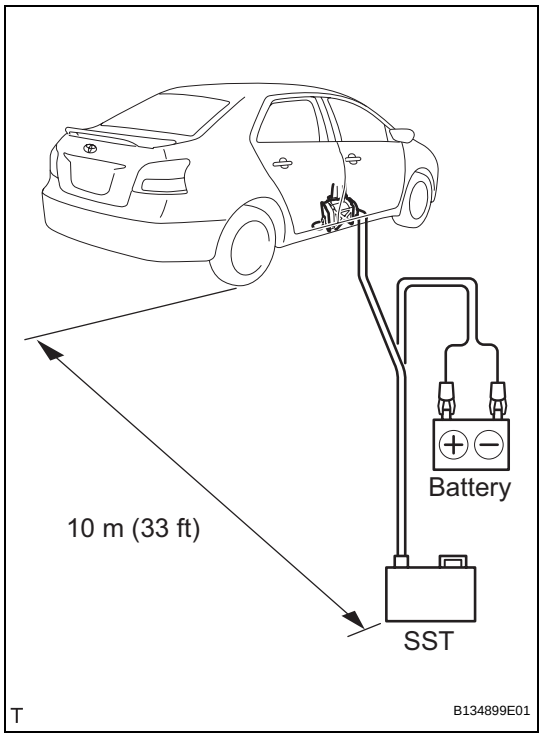
(6) Remove the center pillar lower garnish (See page IR-16).



(7) Disconnect the pretensioner connector.
1. Using a screwdriver, release the locking button.
2. Using a screwdriver, disconnect the pretensioner connector.



(d) Connect SST.
(1) Connect SST, then the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700

(3) Close the doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.

(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.

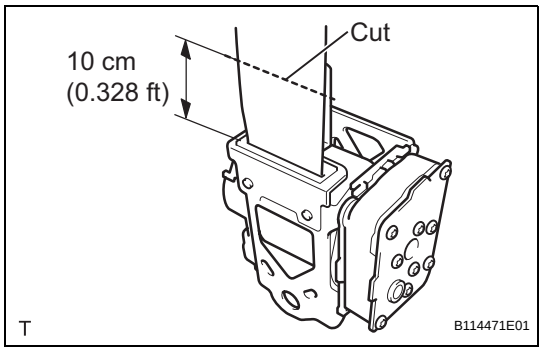
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

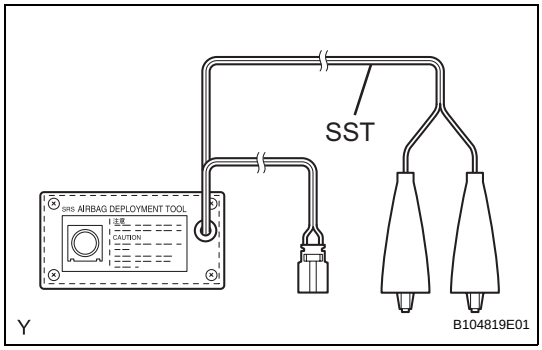
2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)
HINT:
Prepare a battery as the power source to activate the seat belt pretensioner.
NOTICE:
- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Be sure to follow the procedures described below when activating the seat belt pretensioner.**

(a) Remove the front seat outer belt (See page SB-44).

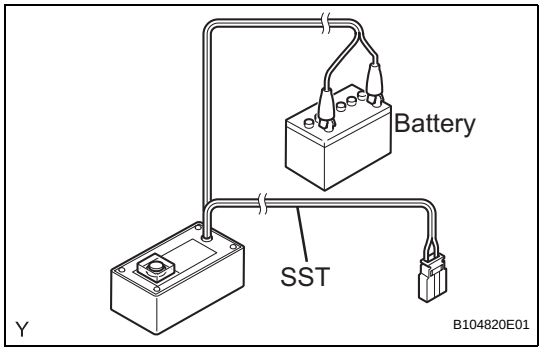


(b) Wind the seat belt with the retractor.

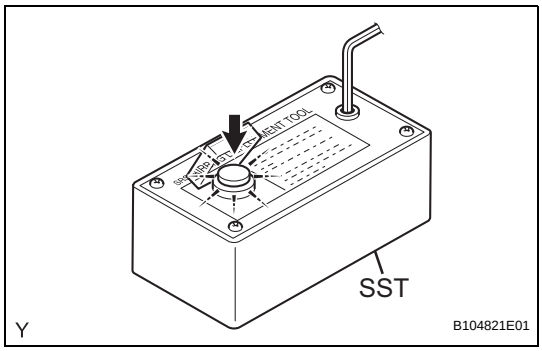
(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.
HINT:
The retractor resistance increases in correlation with how much the seat belt is wound.



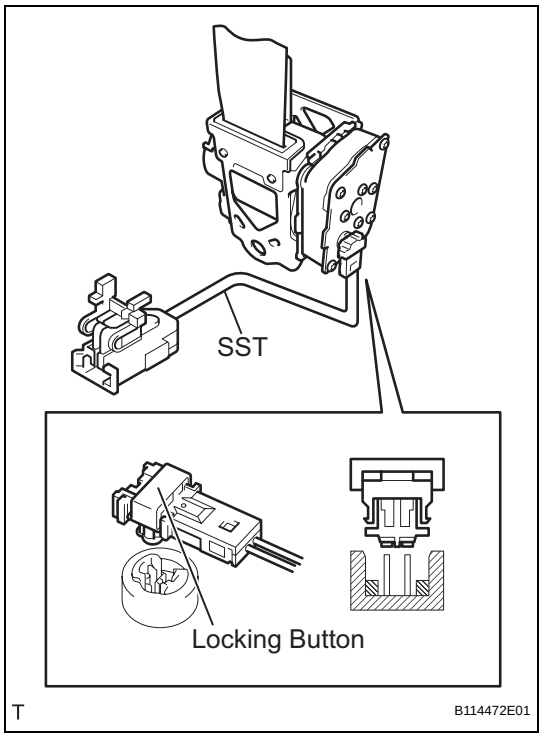
(d) Check whether SST is functioning.
SST 09082-00700
CAUTION:
Always use the specified SST when activating the seat belt pretensioner.



(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.



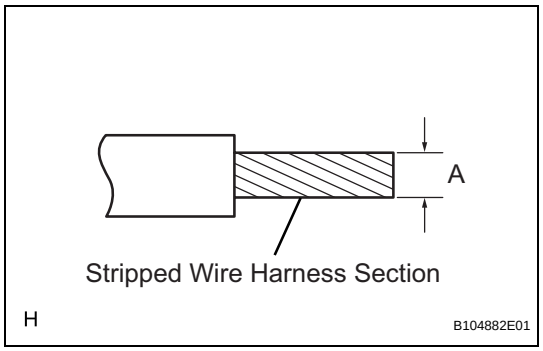
(e) Connect SST.

(1) Connect SST, then the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.

Stripped wire harness section

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)

CAUTION:

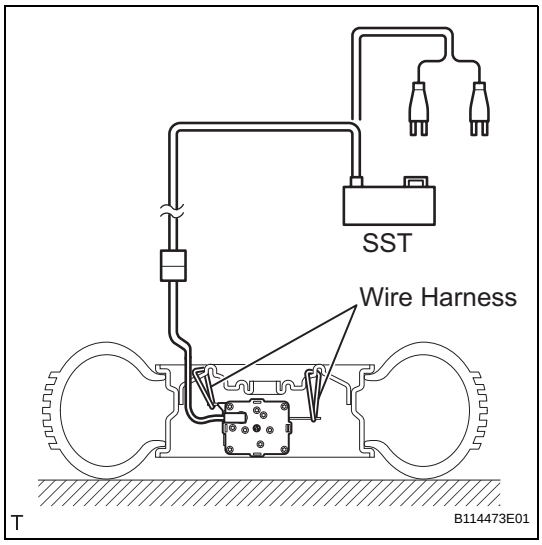
- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

HINT:

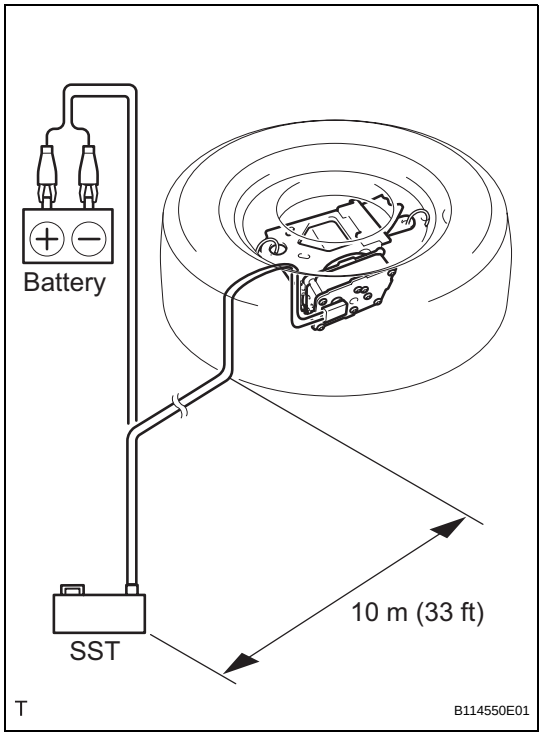
To calculate the area of the stripped wire harness cross section:

Area = 3.14 x $(Diameter)^2$ divided by 4

SB



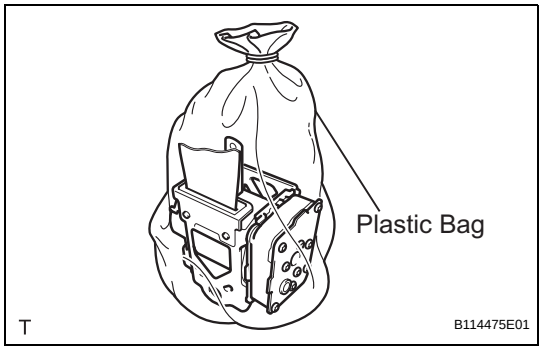
(3) Connect SST.
SST 09082-00700
NOTICE:
- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt, as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Take care not to damage the SST wire harness.

(f) Activate the seat belt pretensioner.
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.



(h) Dispose of the front seat outer belt (with the seat belt pretensioner).
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling an front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

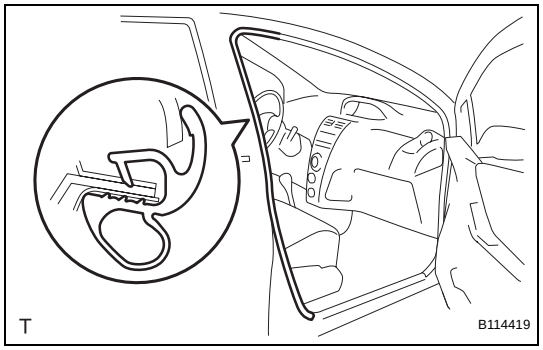
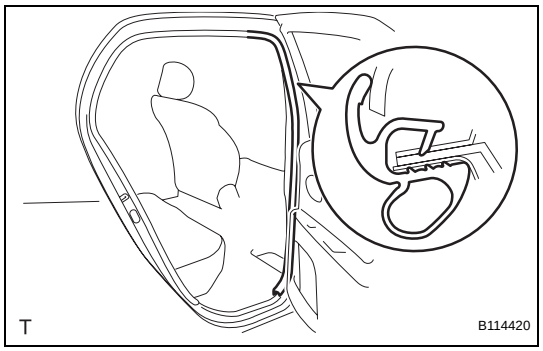
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

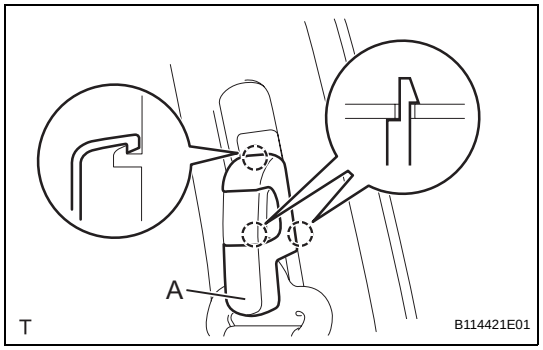
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-49)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-51)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.



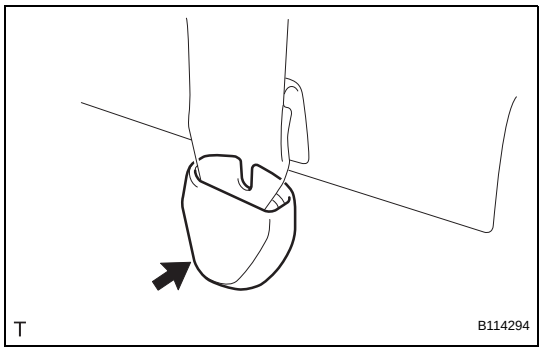
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the rear door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.
6. **REMOVE CENTER PILLAR LOWER GARNISH (See page IR-55)**



7. **REMOVE SEAT BELT ANCHOR COVER CAP**
   (a) Pull portion A, shown in the illustration, toward you, remove the 2 claws on the lower side followed by the claw on the upper side. Then remove the seat belt anchor cover cap.

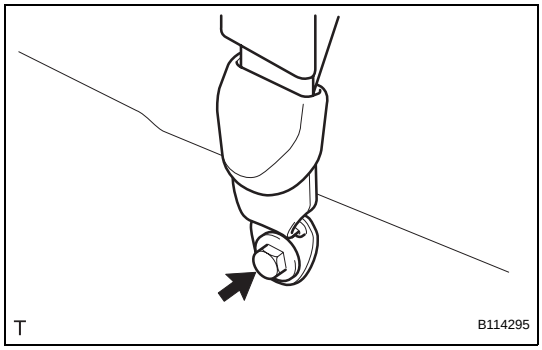


SB

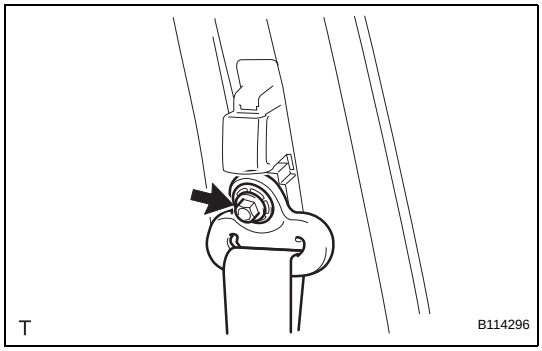


8. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

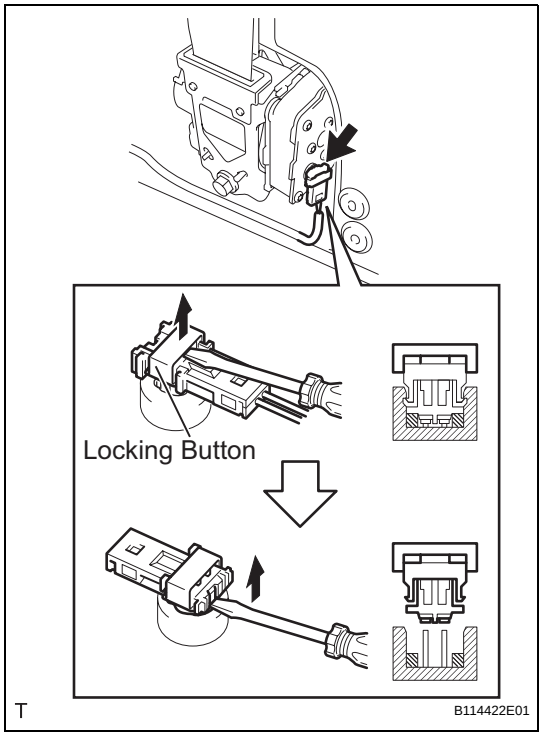
(a) Remove the anchor plate cover.



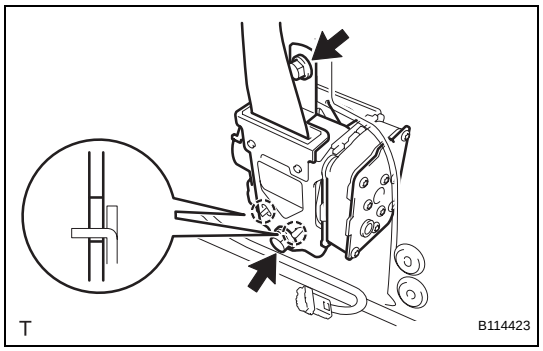
(b) Remove the bolt and the anchor plate.



(c) Remove the bolt and the through anchor.

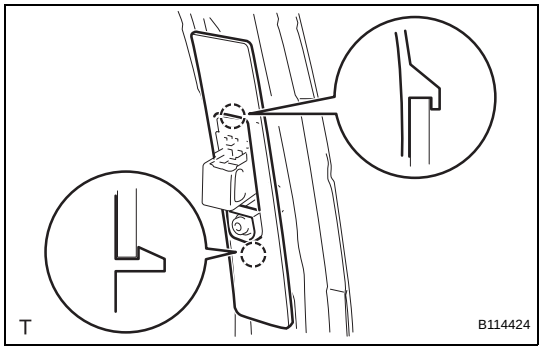


(d) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.



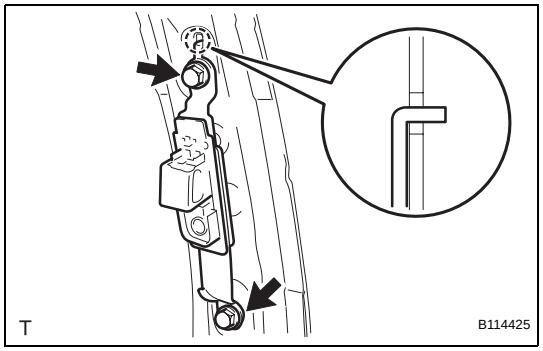
(e) Remove the 2 bolts, the 2 hooks and the retractor.

9. REMOVE CENTER PILLAR UPPER GARNISH (See page IR-55)



10. REMOVE SHOULDER BELT ANCHOR COVER

(a) Disengage the 2 claws and remove the shoulder belt anchor cover.



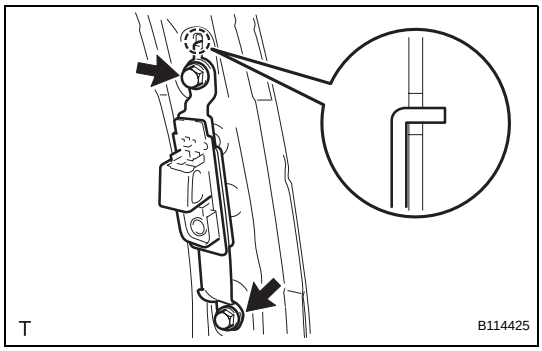
11. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts, the hook and the front shoulder belt anchor adjuster.

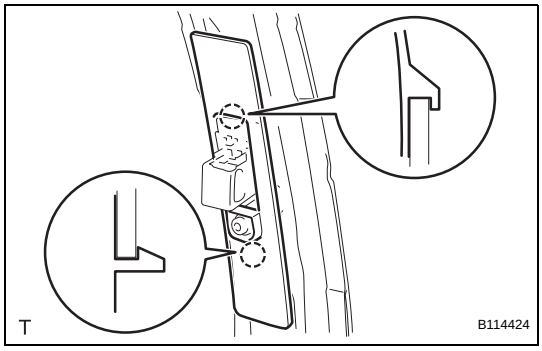
SB

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

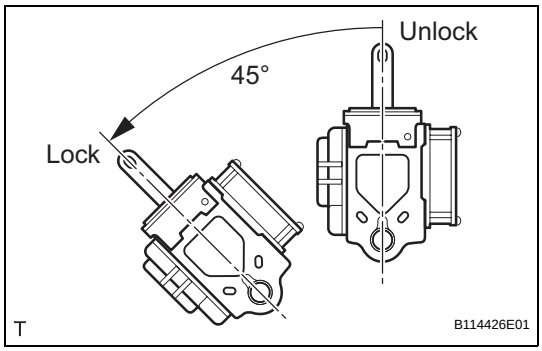


1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY
(a) Insert the hook into the body hole and install the shoulder belt anchor adjuster with the 2 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

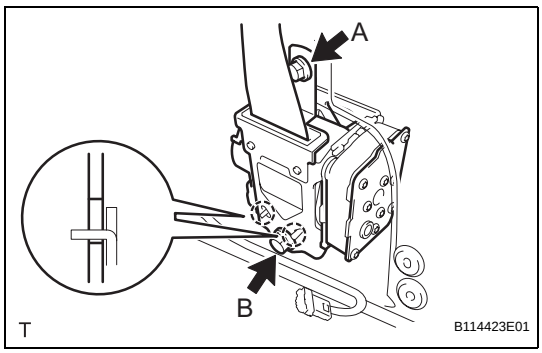


2. INSTALL SHOULDER BELT ANCHOR COVER
(a) Engage the 2 claws and install the shoulder belt anchor cover.

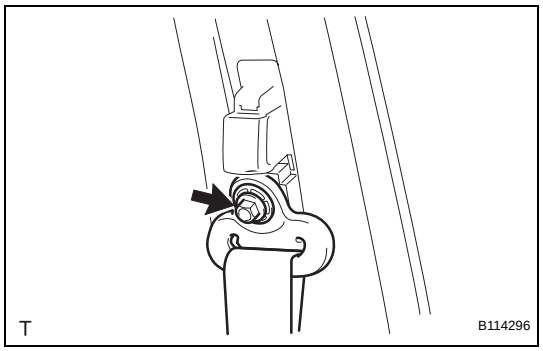
3. INSTALL CENTER PILLAR UPPER GARNISH (See page IR-76)



4. INSTALL FRONT SEAT OUTER BELT ASSEMBLY
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the front seat outer belt.

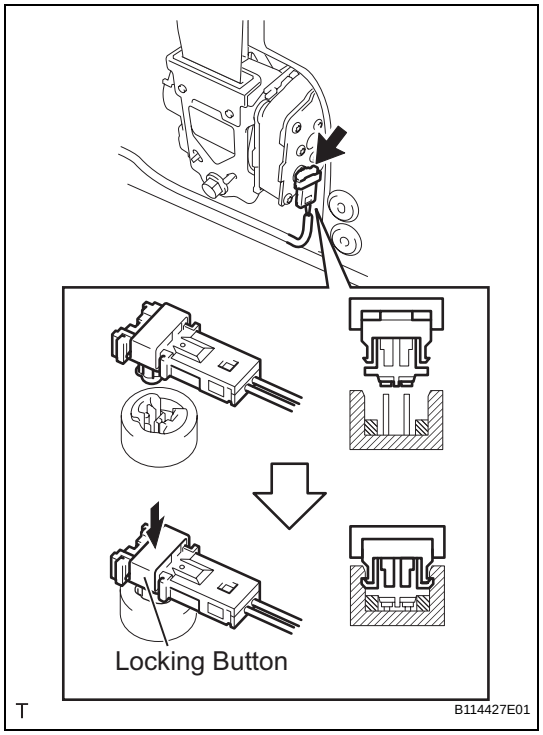


(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B

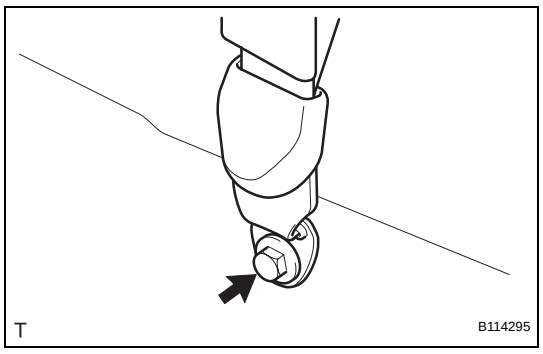


(d) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

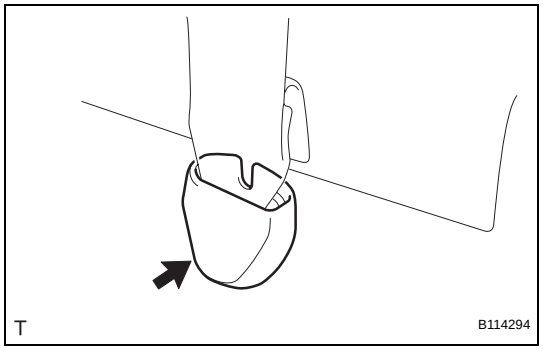
(e) Check that the ELR locks.
NOTICE:
Perform the check with the front seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the front seat outer belt.



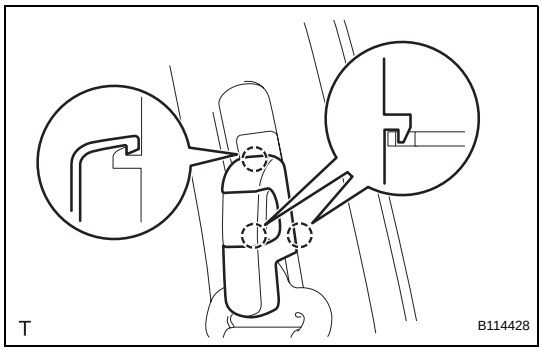
(f) Connect the pretensioner connector.
(1) Connect the pretensioner connector.
(2) Lock the locking button.
NOTICE:
Securely lock the locking button.



(g) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

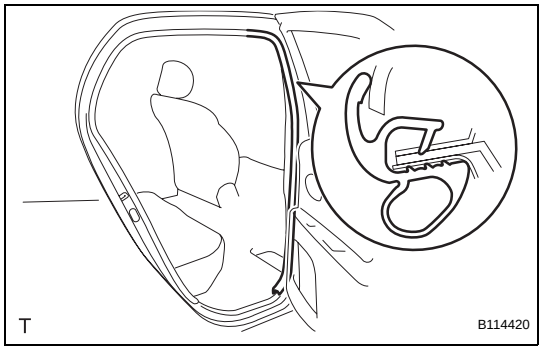


(h) Install the anchor plate cover.

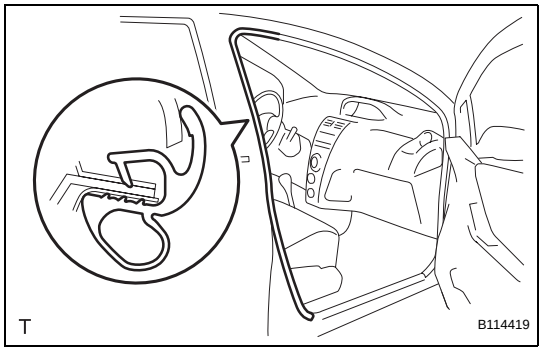


5. **INSTALL SEAT BELT ANCHOR COVER CAP**
   (a) Engage the 3 claws and install the seat belt anchor cover cap.

6. **INSTALL CENTER PILLAR LOWER GARNISH (See page IR-76)**



7. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the rear door opening trim weatherstrip.



8. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.

9. **INSTALL REAR DOOR SCUFF PLATE (See page IR-80)**

10. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-82)**

11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

12. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **Stand at least 10 m (33 ft) away when activating a front seat outer belt (with seat belt pretensioner).**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing an activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **Always use the specified SST (SRS airbag deployment tool) when activating the seat belt pretensioner.**
- **Perform the operation in a place away from electrical interference.**

HINT:

The procedure described below is for the RH side. Use the same procedure for the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

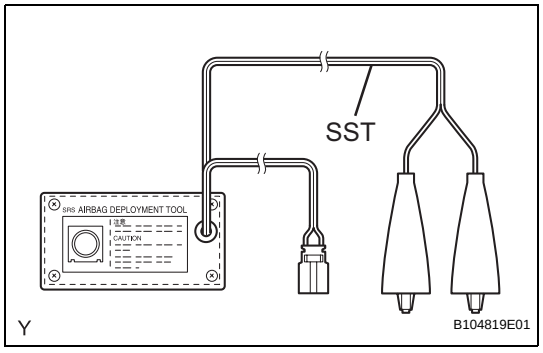
Prepare a battery as the power source to activate the seat belt pretensioner.

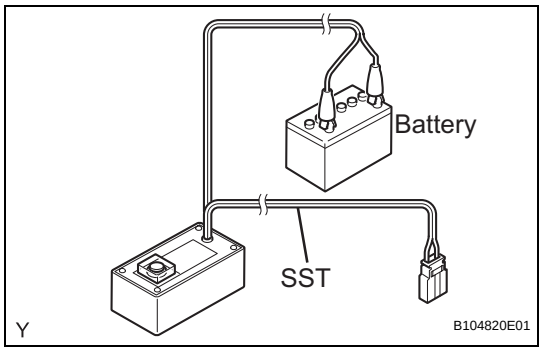
(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.

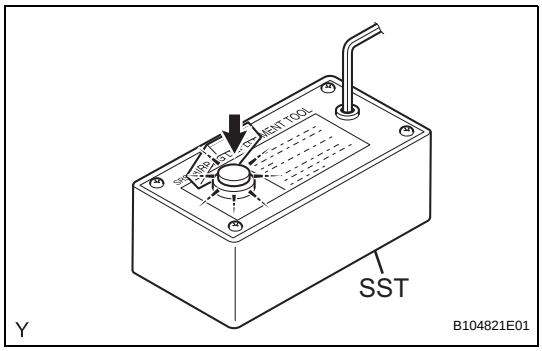




(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

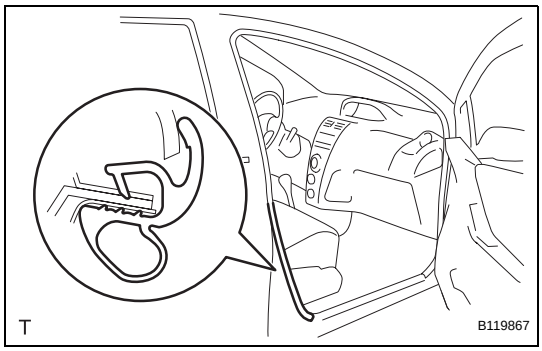
(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from negative battery terminal.

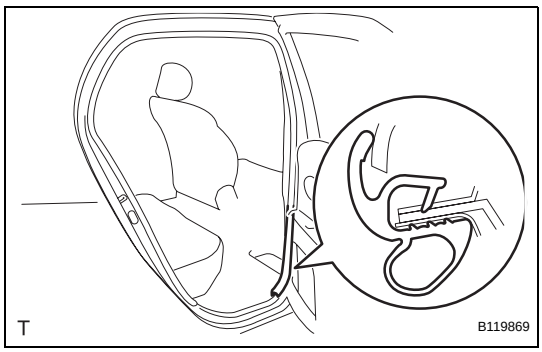
(2) Remove the front door scuff plate (See page IR-49).

(3) Remove the rear door scuff plate (See page IR-51).



(4) Remove the front door opening trim weatherstrip.

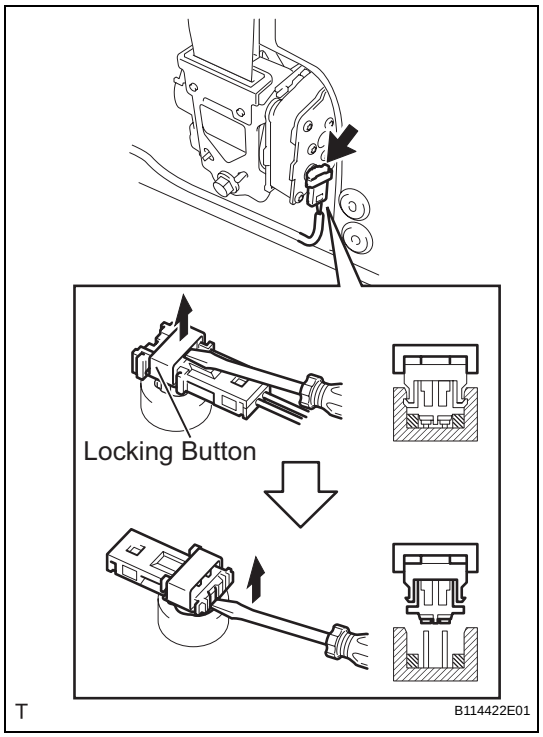
1. Remove the front door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.



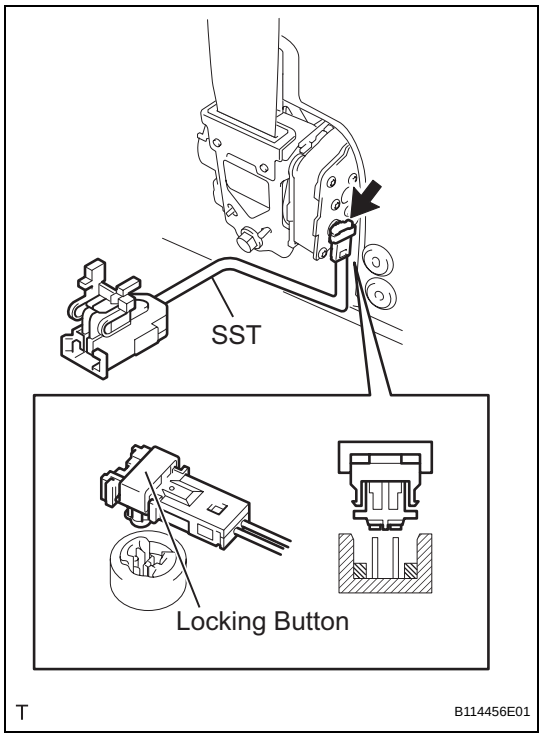
(5) Remove the rear door opening trim weatherstrip.

1. Remove the rear door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.

(6) Remove the center pillar lower garnish (See page IR-55).



(7) Disconnect the pretensioner connector as shown in the illustration.



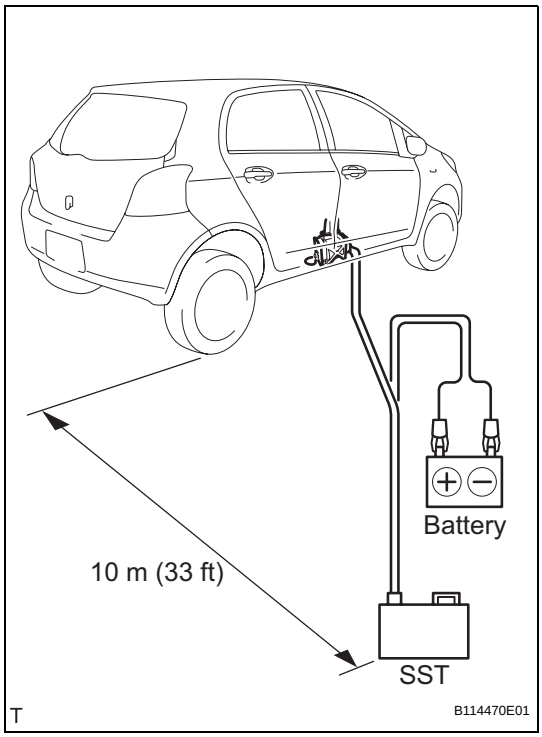
(d) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness



(2) Move SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700

(3) Close the doors and windows of the vehicle.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.
NOTICE:
Do not damaging the SST wire harness.

(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.

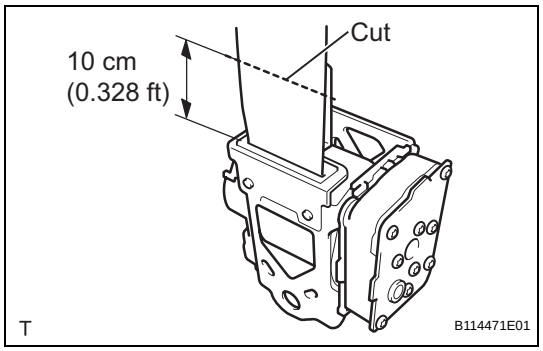
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

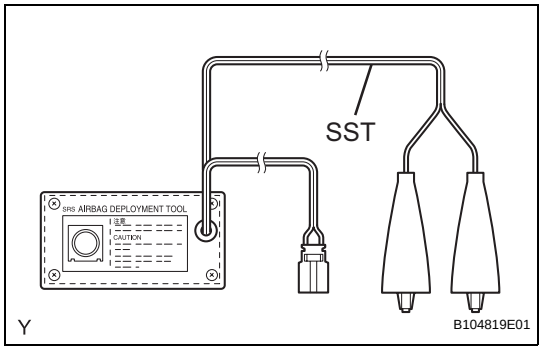
(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)
HINT:
Prepare a battery as the power source to activate the seat belt pretensioner.
NOTICE:
- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Follow the procedure described below when activating the seat belt pretensioner.**

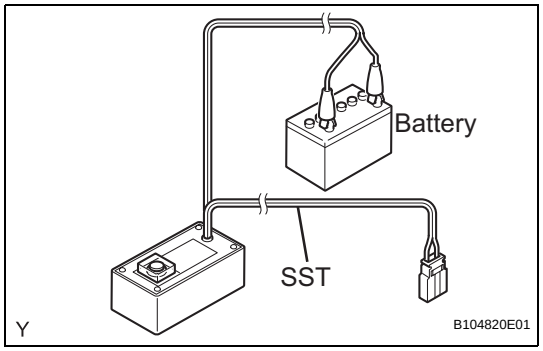
(a) Remove the front seat outer belt assembly (See page SB-59).



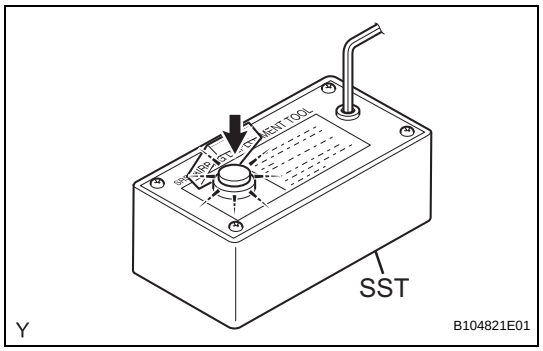
(b) Wind the seat belt with the retractor.
(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.
HINT:
The retractor resistance increases in correlation with how much the seat belt is wound.



(d) Check whether SST is functioning.
SST 09082-00700
CAUTION:
Always use the specified SST when activating the seat belt pretensioner.

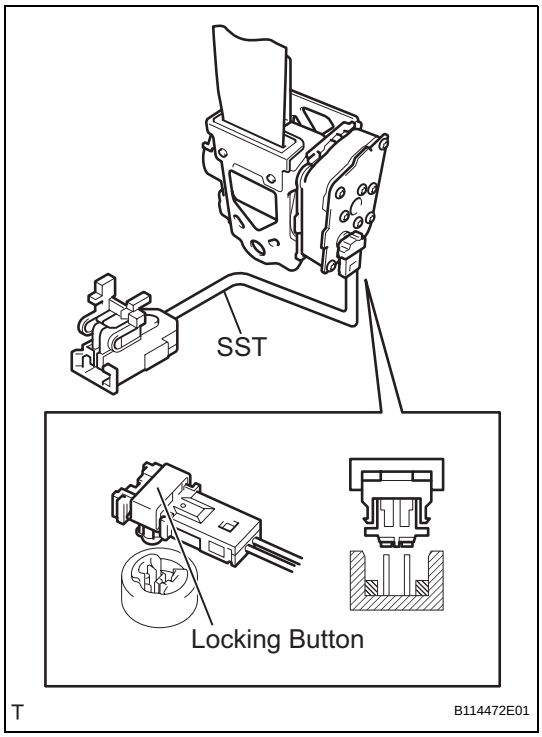


(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

SB



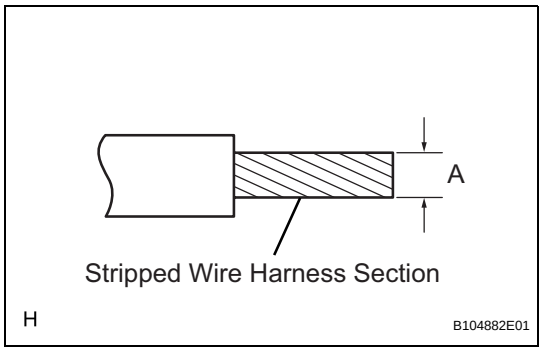
(e) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.

Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)

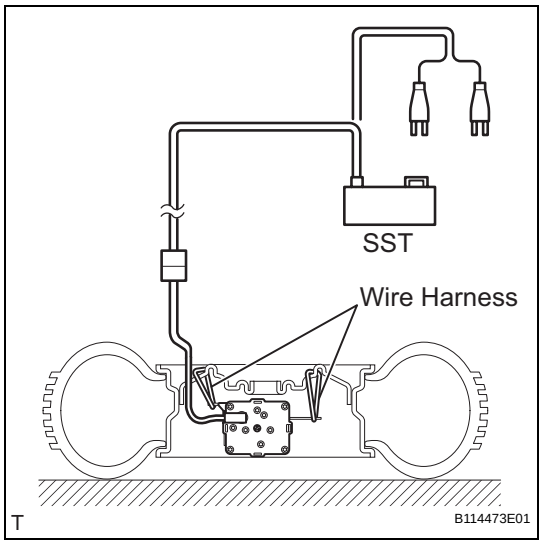
CAUTION:

- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

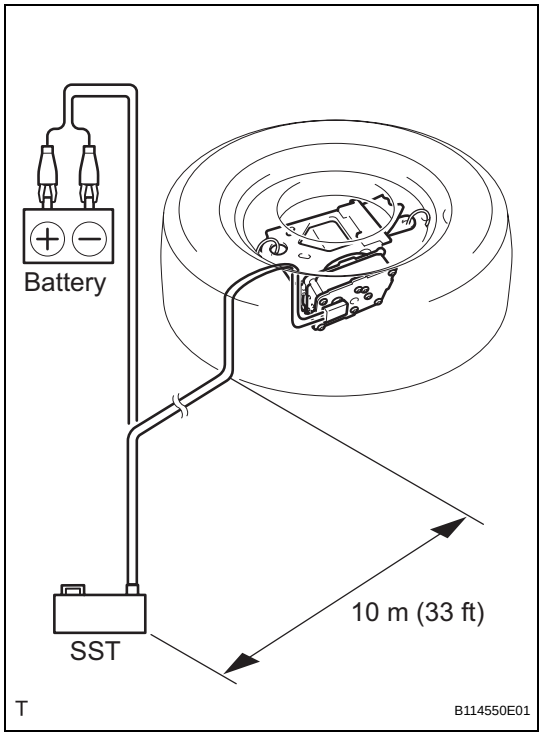
HINT:

To calculate the area of the stripped wire harness cross section:

Area = 3.14 x $(Diameter)^2$ divided by 4



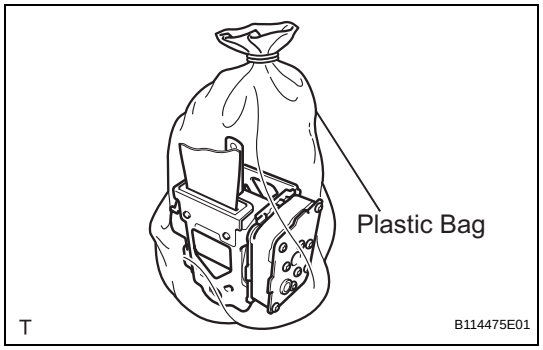
(3) Connect SST.
SST 09082-00700
NOTICE:
- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt, as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Do not damage the SST wire harness.

(f) Activate the seat belt pretensioner.
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.



(h) Dispose of the front seat outer belt (with the seat belt pretensioner).
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

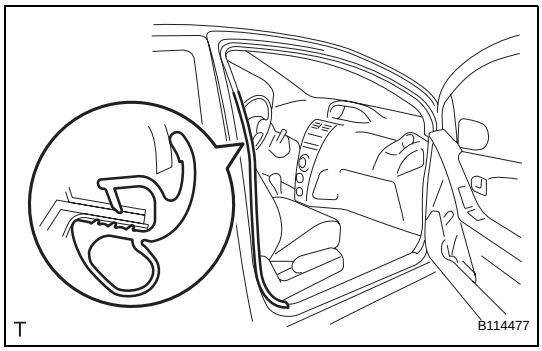
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
   (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
   HINT:
   Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
   (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
   (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
   (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
   (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**

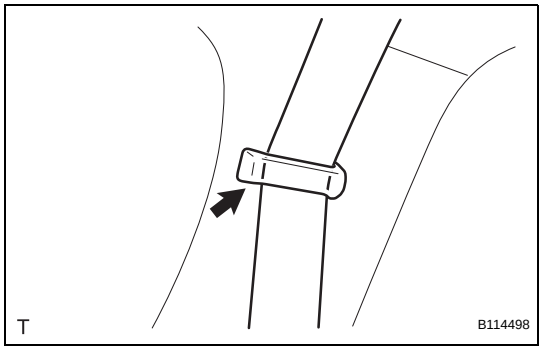
SB

10. REMOVE FRONT DOOR SCUFF PLATE (See page IR-97)



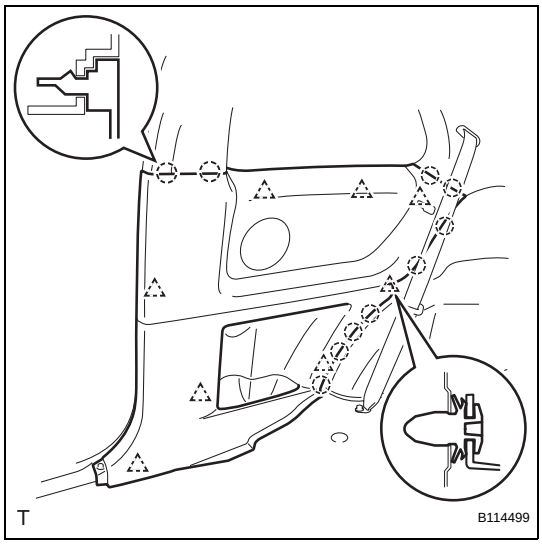
11. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP

(a) Remove the front door opening trim weatherstrip to the extent that the front quarter trim panel can be removed.



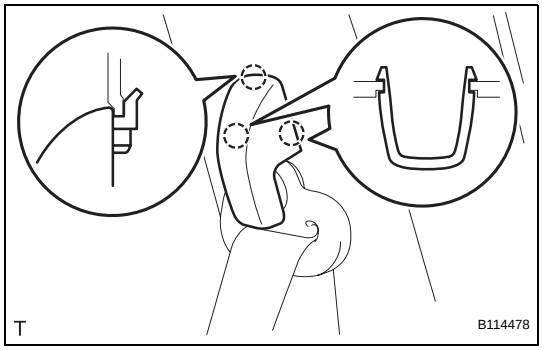
12. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the belt.



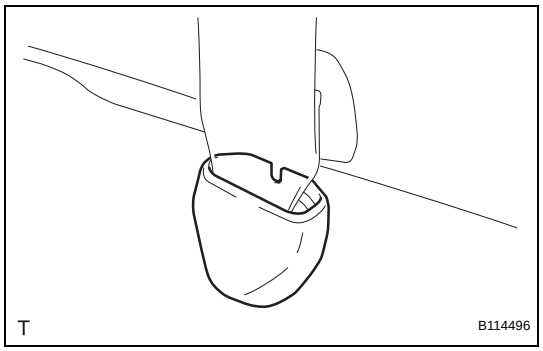
13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.



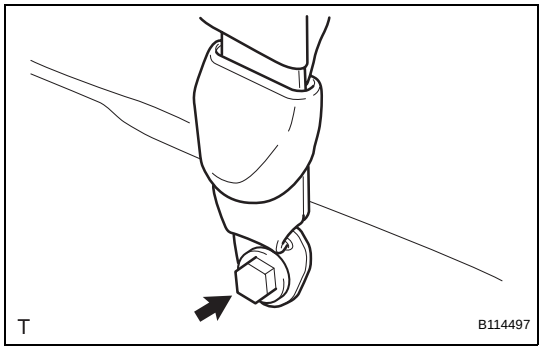
14. REMOVE SEAT BELT ANCHOR COVER CAP

(a) Disengage the 3 claws and remove the seat belt anchor cover cap.

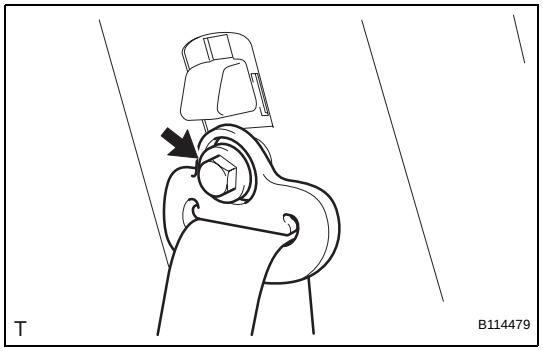


15. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

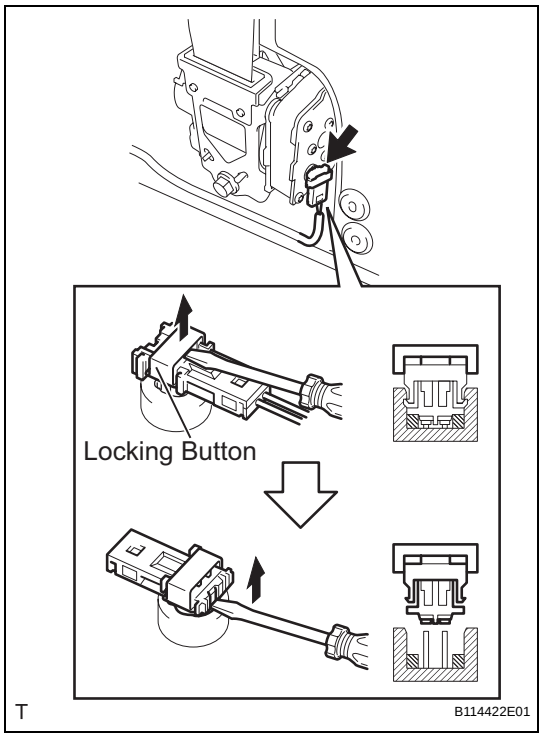
(a) Remove the anchor plate cover.



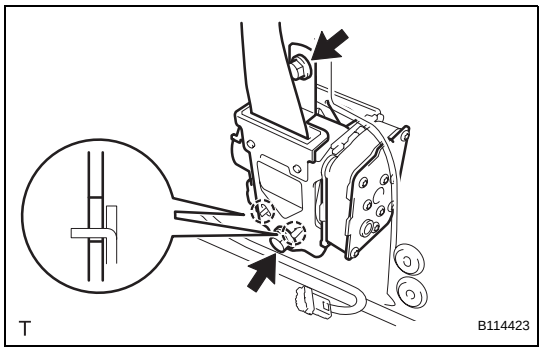
(b) Remove the bolt and the anchor plate.



(c) Remove the bolt and the through anchor.



(d) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.

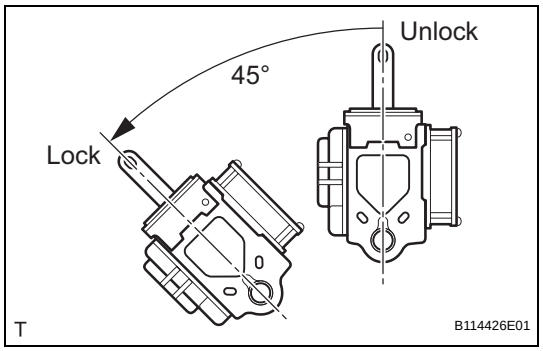


(e) Remove the 2 bolts, the 2 hooks and the retractor.

SB

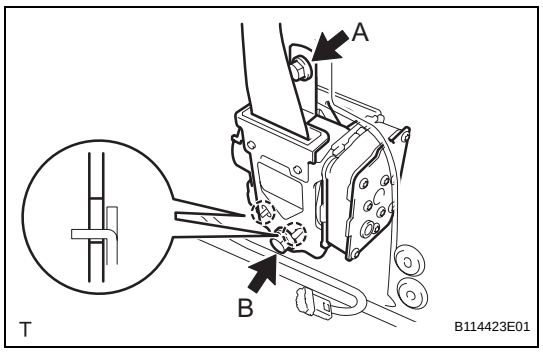
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

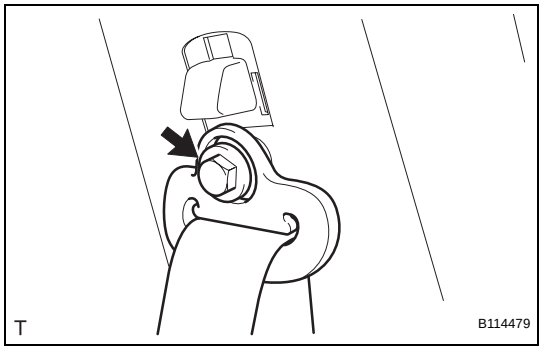


1. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

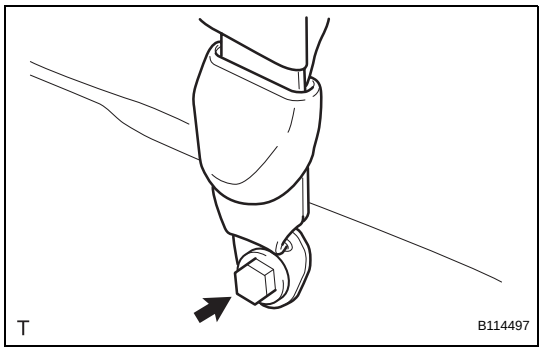
(a) Check the angle of inclination required to lock the retractor.
  (1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
  NOTICE:
  Do not disassemble the retractor.
  If the operation is not as specified, replace the front seat outer belt.



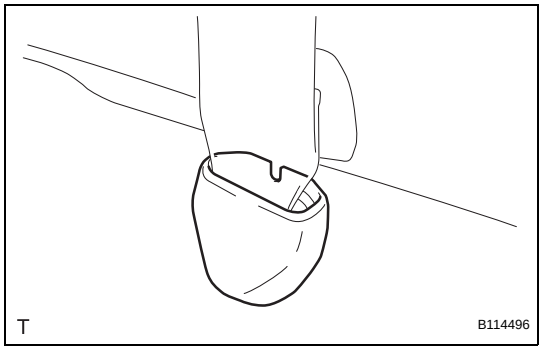
(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B



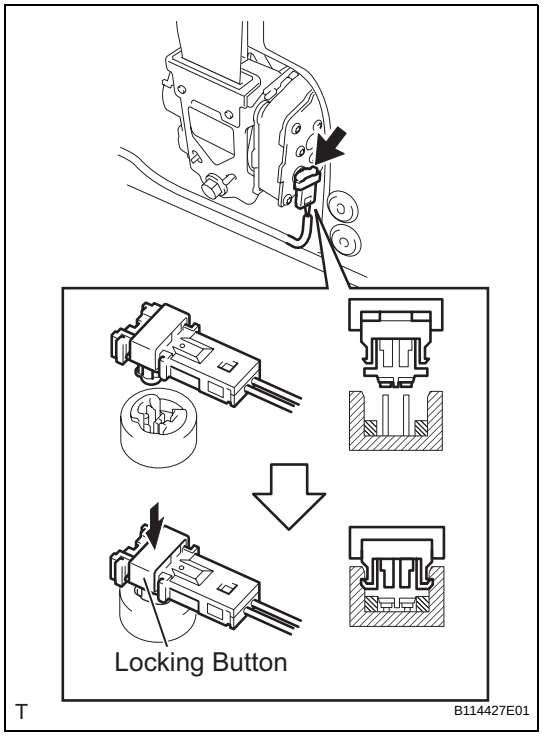
(d) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the ELR locks.
NOTICE:
Perform the check with the front seat outer belt installed
  (1) With the belt installed, check that the belt locks when it is pulled out quickly.
  If the operation is not as specified, replace the front seat outer belt.



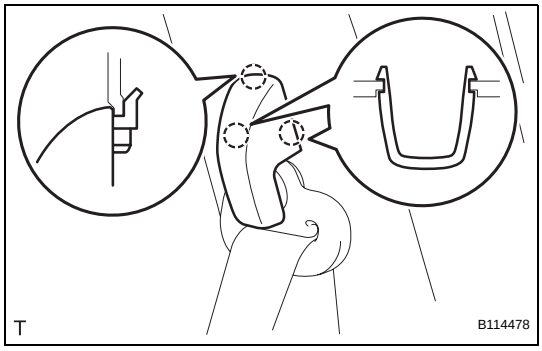
(f) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(g) Install the anchor plate cover.

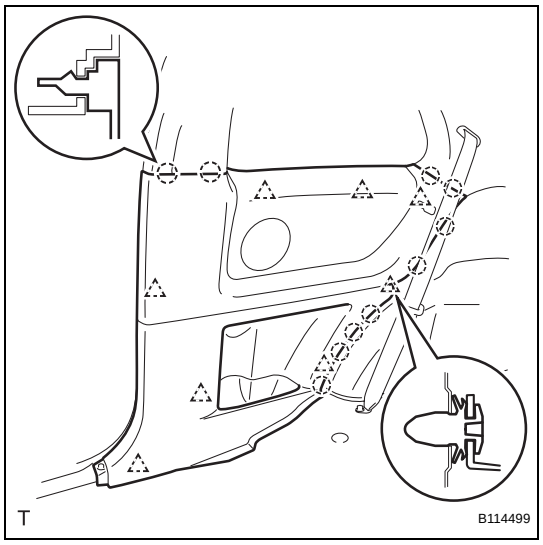


(h) Connect the pretensioner connector.
(1) Connect the pretensioner connector.
(2) Lock the locking button.
NOTICE:
Securely lock the locking button.

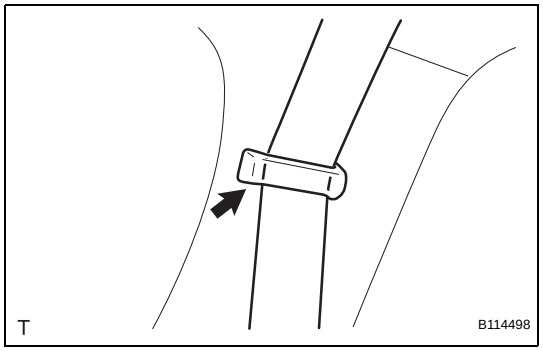


2. INSTALL SEAT BELT ANCHOR COVER CAP

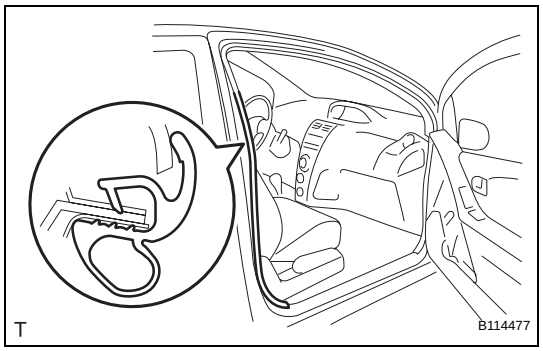
(a) Engage the 3 claws and install the seat belt anchor cover cap.



3. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY**
   (a) Engage the 8 clips, the retainer and the 10 claws and install the front quarter trim panel.



4. **INSTALL REAR SEAT OUTER BELT ASSEMBLY**
   (a) Install the belt.



5. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.
6. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-119)**
7. **INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the rear seat assembly (See page SE-102).
   (b) for LH Side:
      (1) Install the rear seat assembly (See page SE-84).
8. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)**
9. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-85).
10. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

11. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

12. INSTALL DECK FLOOR BOX

(a) for RH side:

(1) Install the deck floor box (See page IR-83).

(b) for LH Side:

HINT:

Use the same procedure as for the RH side.

13. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

14. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

16. INSPECT SRS WARNING LIGHT

(See page RS-31)

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **Stand at least 10 m (33 ft) away when activating a front seat outer belt (with seat belt pretensioner).**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing an activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **Always use the specified SST (SRS airbag deployment tool) when activating the seat belt pretensioner.**
- **Perform the operation in a place away from electrical interference.**

NOTICE:

Always use "Torx" socket wrench E10 when removing the rear seat.

HINT:

The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

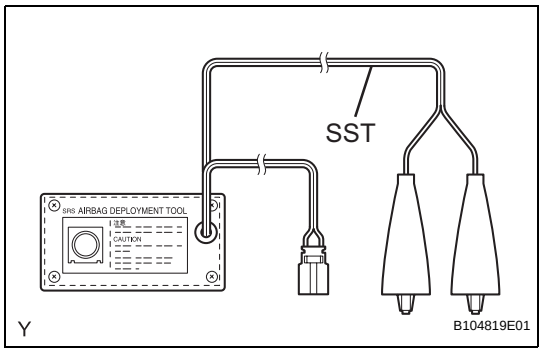
Prepare a battery as the power source to activate the seat belt pretensioner.

(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

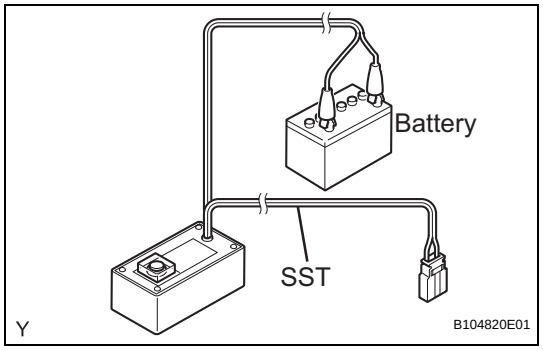
Always use the specified SST when activating the seat belt pretensioner.



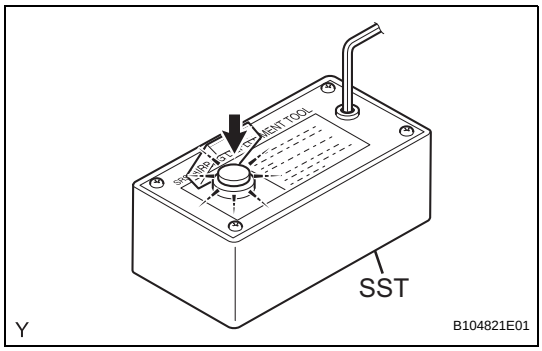
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



SB



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from the negative battery terminal.

(2) Remove the package tray trim panel assembly (See page IR-48).

(3) Remove the deck board sub-assembly (See page IR-48).

(4) Remove the deck floor box RH (See page IR-48).

(5) Remove the deck floor box LH (for 60/40 Split Seat Type and Bench Seat Type).
HINT:
Use the same procedure as for the RH side.

(6) Remove the rear seat No. 1 leg cover (for 60/40 Split Seat Type) (See page SB-75).

(7) Remove the rear seat No. 2 leg cover (for 60/40 Split Seat Type LH Side) (See page SE-70).

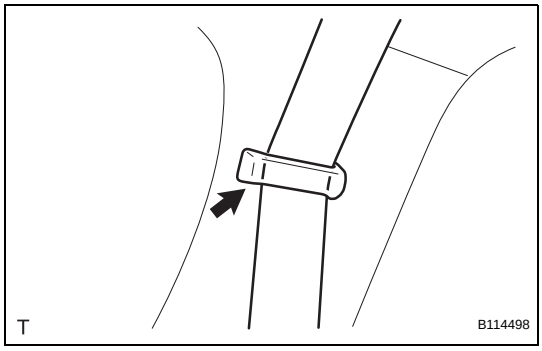
(8) Remove the rear seat assembly (for 60/40 Split Seat Type) (See page SB-75).

(9) Remove the rear seat cushion cover pad sub-assembly (for Bench Seat Type) (See page SE-114).

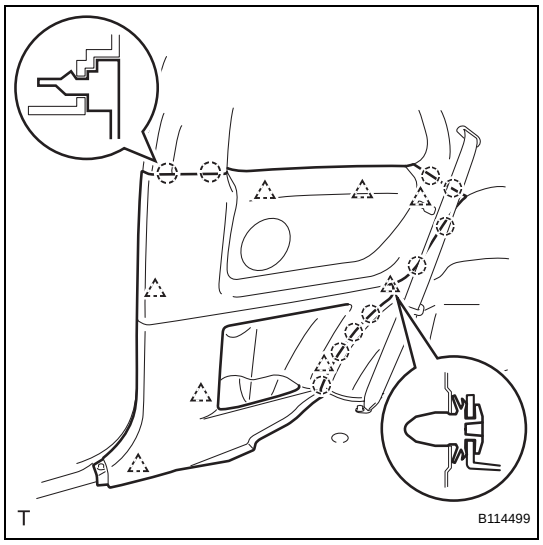
(10) Remove the rear seatback assembly (for Bench Seat Type) (See pageSE-115).

(11) Remove the front door scuff plate (See page IR-97).

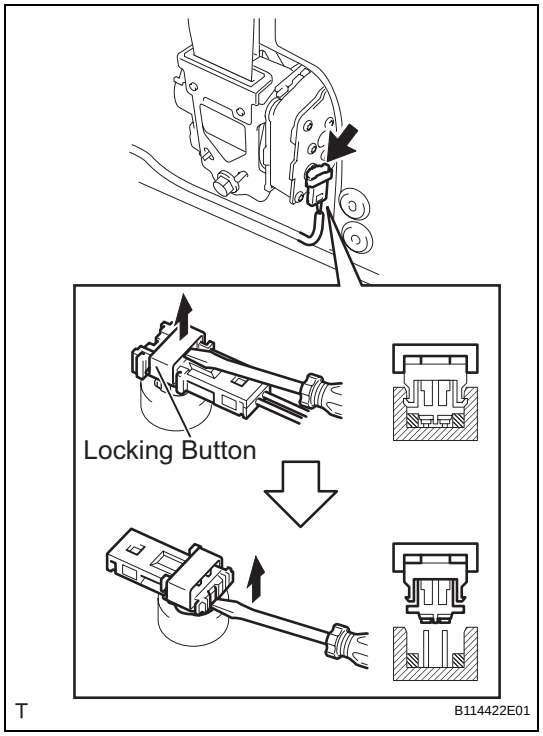
(12) Remove the front door opening trim weatherstrip (See page SB-76).



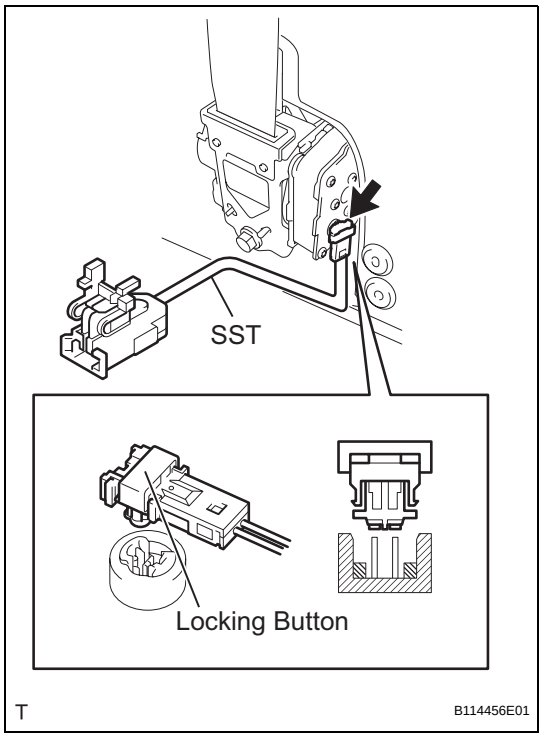
(13) Remove the rear seat outer belt assembly.
1. Remove the belt.



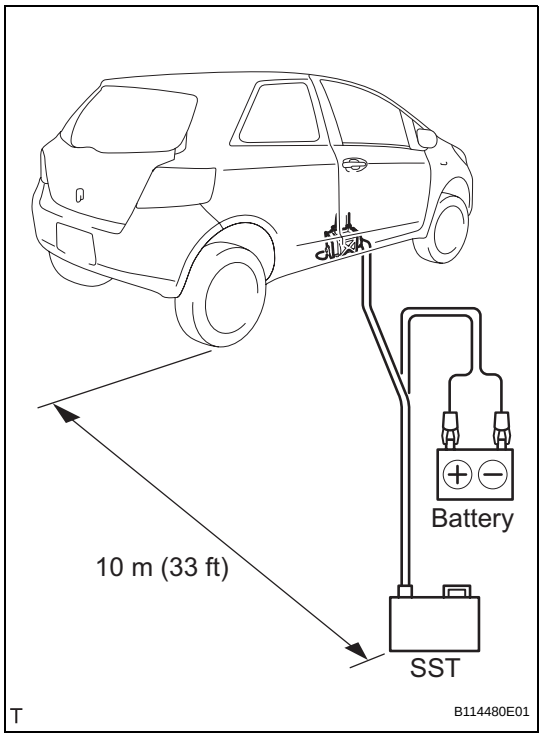
(14) Remove the front quarter trim panel assembly.
1. Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.



(15) Disconnect the pretensioner connector as shown in the illustration.



(d) Connect SST.
(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move the SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700
(3) Close the doors and windows of the vehicle.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.
NOTICE:
Do not damage the SST wire harness.
(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.
(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.

CAUTION:

- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling an front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)

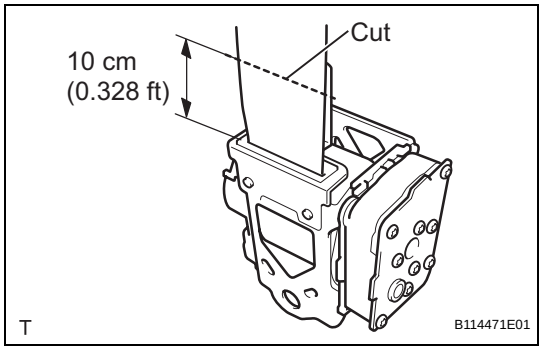
HINT:

Prepare a battery as the power source to activate the seat belt pretensioner.

NOTICE:

- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Follow the procedure described below when activating the seat belt pretensioner.**

(a) Remove the front seat outer belt assembly (See page SB-75).

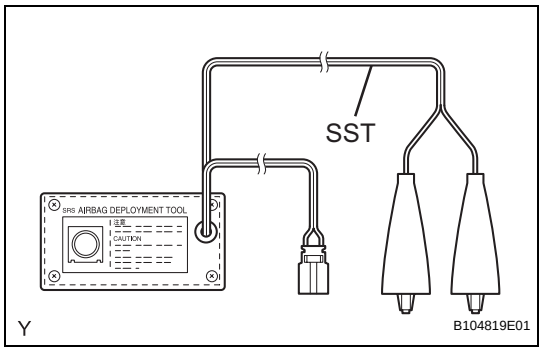


(b) Wind the seat belt with the retractor.

(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.

HINT:

The retractor resistance increases in correlation with how much the seat belt is wound.

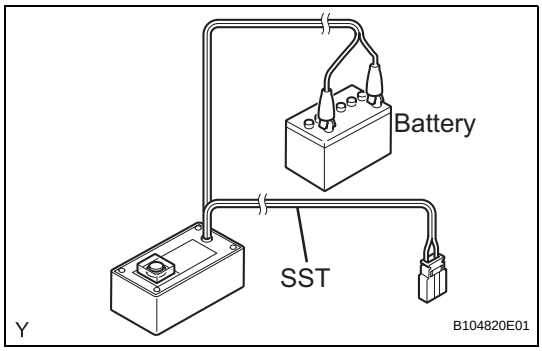


(d) Check whether SST is functioning.

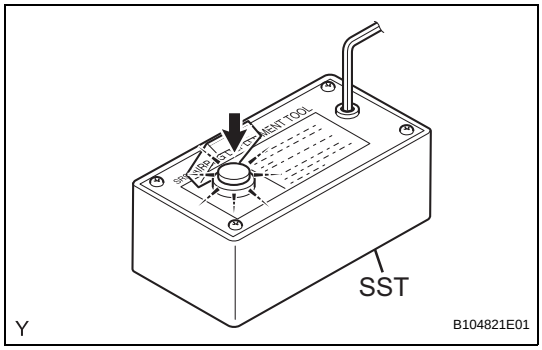
SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.



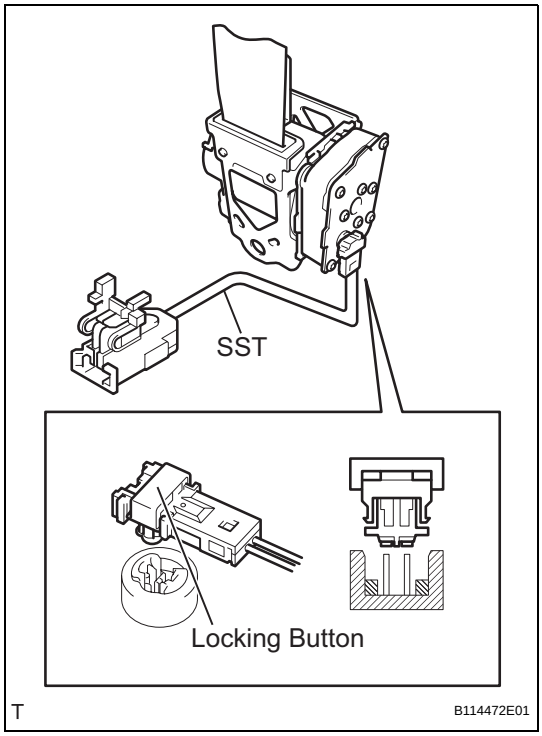
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

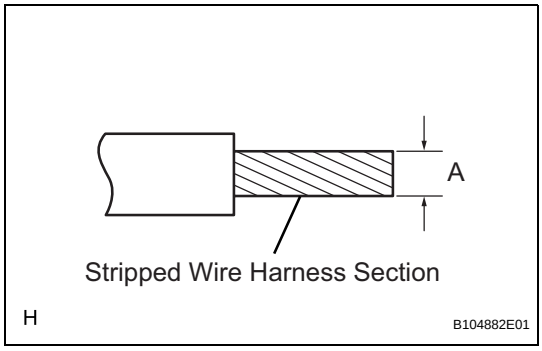
(e) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)



CAUTION:

- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

HINT:

To calculate the area of the stripped wire harness cross section:

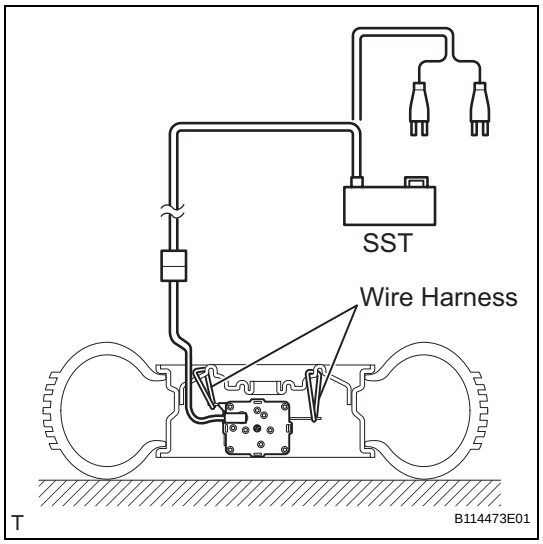
Area = 3.14 x (Diameter)^2 divided by 4

(3) Connect SST.

SST 09082-00700

NOTICE:

- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.

NOTICE:

Do not damage the SST wire harness.

(f) Activate the seat belt pretensioner.

(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

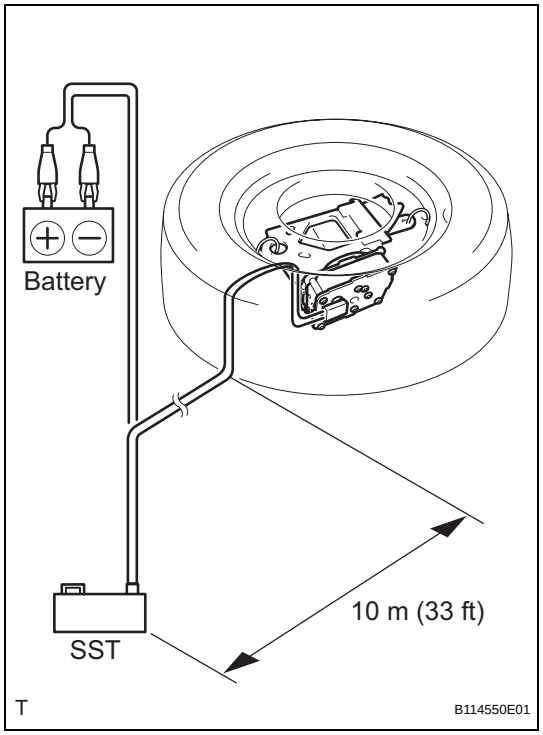
(2) Check that no one is within 10 m (33 ft) of the wheel.

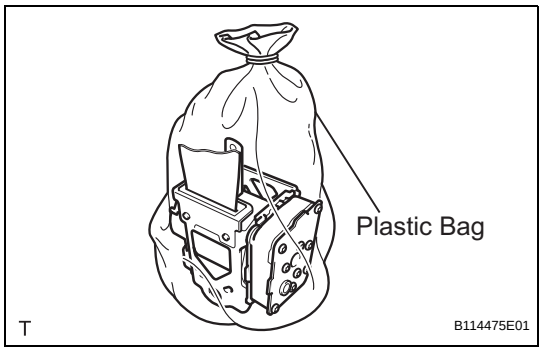
(3) Press the SST activation switch and activate the seat belt pretensioner.

HINT:

The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.





(h) Dispose of the front seat outer belt (with the seat belt pretensioner).

CAUTION:

- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

REMOVAL

1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-46).

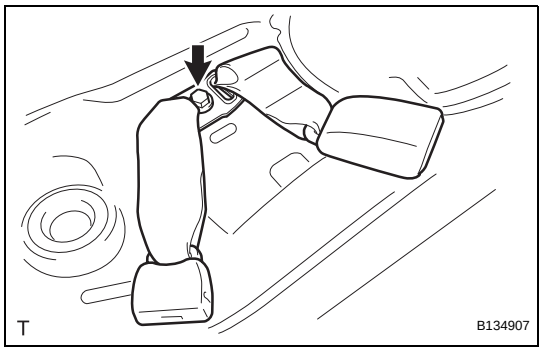
(b) for Fixed Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-106).

2. REMOVE REAR SEAT INNER BELT ASSEMBLY

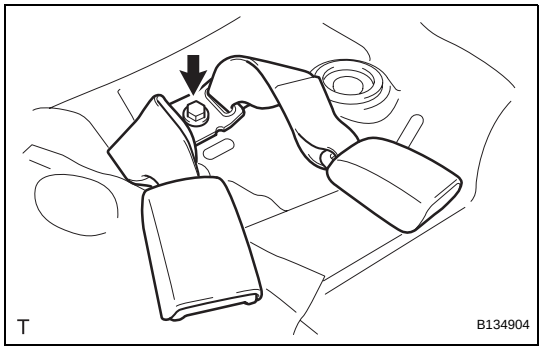
(a) for RH Side (for 60/40 Split Seat Type):

(1) Remove the bolt and the rear seat inner belt.



(b) LH Side:

(1) Remove the bolt and the rear seat inner belt.



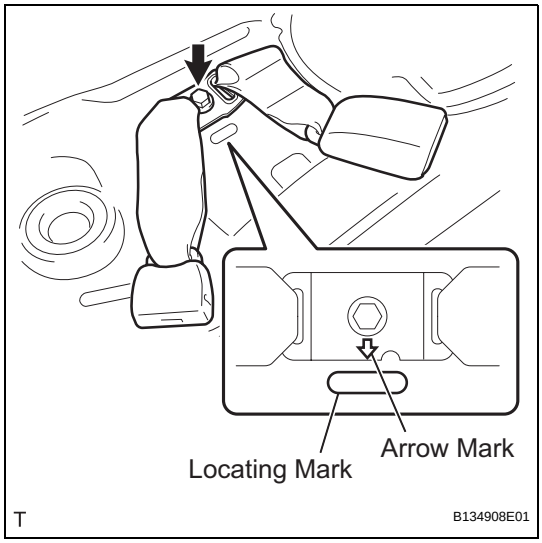
INSTALLATION

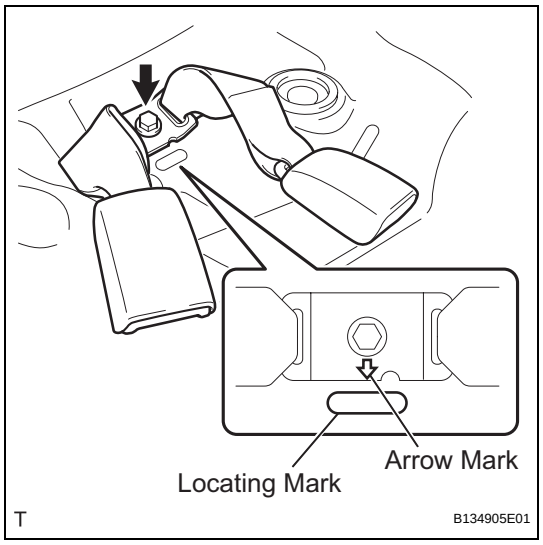
1. INSTALL REAR SEAT INNER BELT ASSEMBLY

(a) for RH Side (60/40 Split Seat Type):

(1) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**





(b) for LH Side:
  (1) Install the rear seat inner belt with the bolt.
  Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
  NOTICE:
  - **Install the anchor plate with the arrow mark facing forward.**
  - **Do not place the anchor plate over the locating mark area of the floor panel.**

2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:
  (1) Install the rear seat cushion cover pad (See page SE-53).

(b) for Fixed Seat Type:
  (1) Install the rear seat cushion cover pad (See page SE-109).

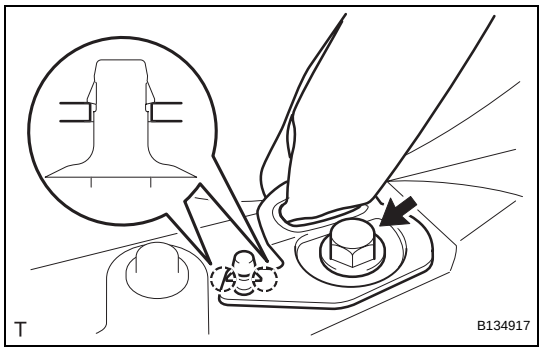
17. **REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)**

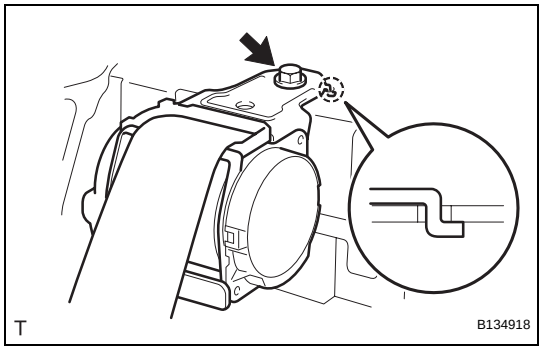
18. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-173)



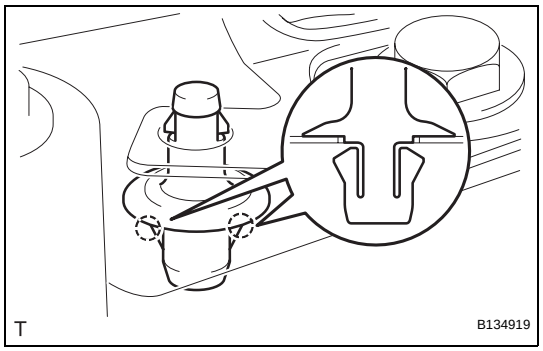
19. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the bolt.

(b) Disengage the 2 claws and remove the anchor plate.



(c) Remove the bolt, the hook and the retractor.



20. REMOVE SEAT BELT HOLE SEAL

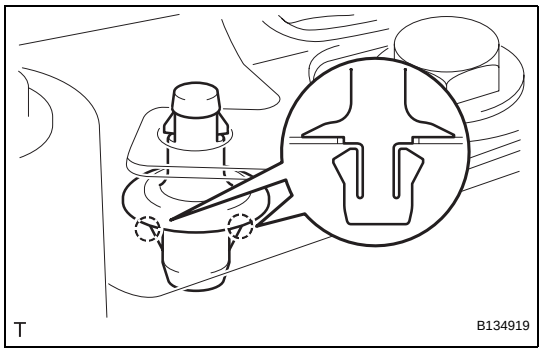
(a) Disengage the 2 claws and remove the seat belt hole seal.

SB

SB

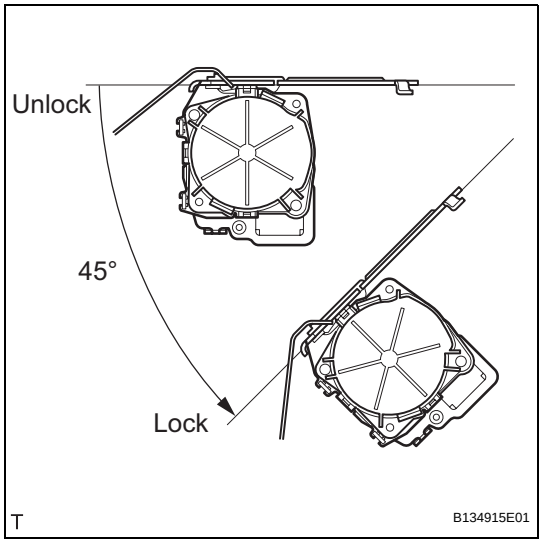
INSTALLATION

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL SEAT BELT HOLE SEAL

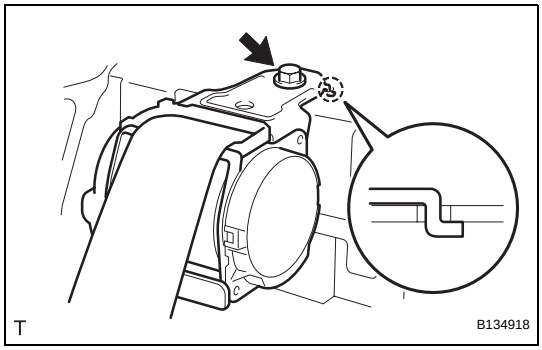
(a) Engage the 2 claws and install the seat belt hole seal.



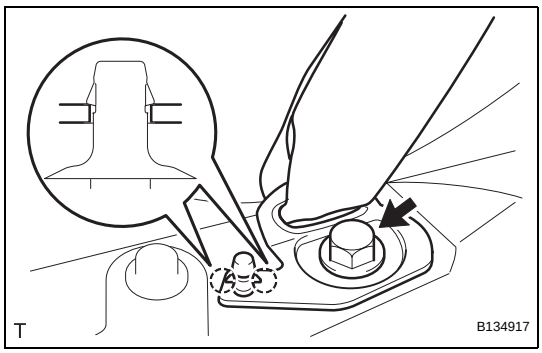
2. INSTALL REAR SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction.
Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.



(b) Insert the hook into the body hole and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Engage the 2 claws and install the anchor plate.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the ELR locks.
NOTICE:
- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

3. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-174)**
4. **INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)**
5. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)**
6. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)**
7. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
8. **INSTALL REAR SEAT SIDE COVER LH (See page IR-33)**
9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-175)**
10. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-175)**
11. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**
13. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
14. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
15. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**
16. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**
17. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**
18. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**
19. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
    (a) for 60/40 Split Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-53).
    (b) for Fixed Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-109).

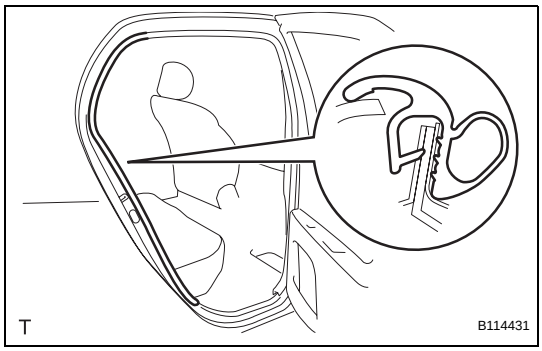
REMOVAL

CAUTION:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

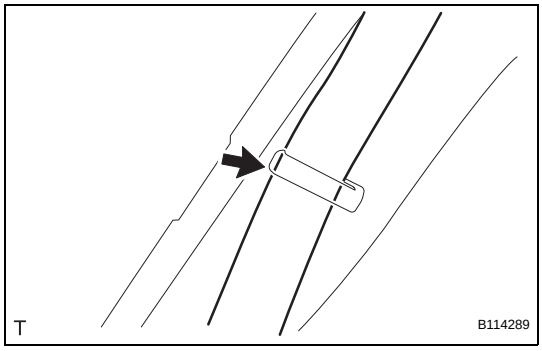
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for LH Side)**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
      (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
      HINT:
      Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
      (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
10. **REMOVE REAR DOOR SCUFF PLATE (See page IR-51)**



11. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP

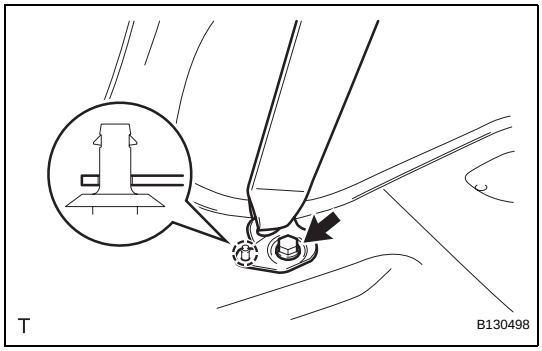
(a) Remove the rear door opening trim weatherstrip to the extent that the deck trim side panel and roof side inner garnish can be removed.

12. REMOVE REAR DECK TRIM COVER (See page IR-49)



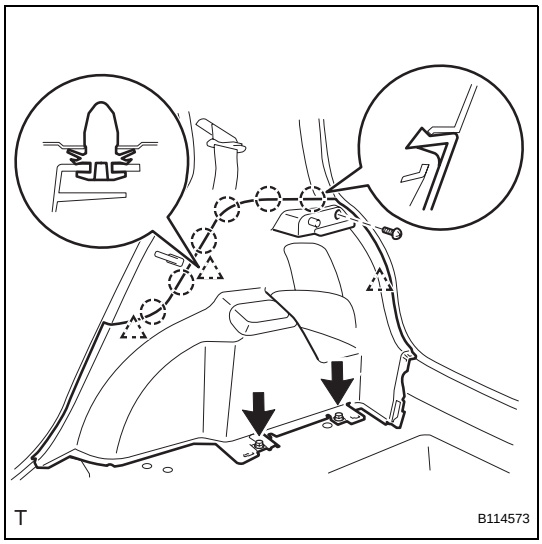
13. REMOVE DECK TRIM SIDE PANEL ASSEMBLY

(a) Remove the belt of the rear seat outer belt from the rear seat shoulder belt hanger.



(b) Remove the bolt.

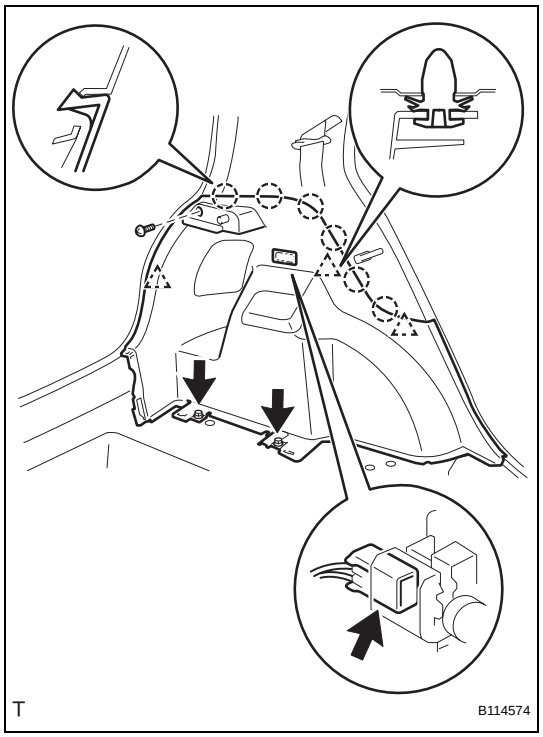
(c) Disengage the clip and remove the anchor plate of the rear seat outer belt.



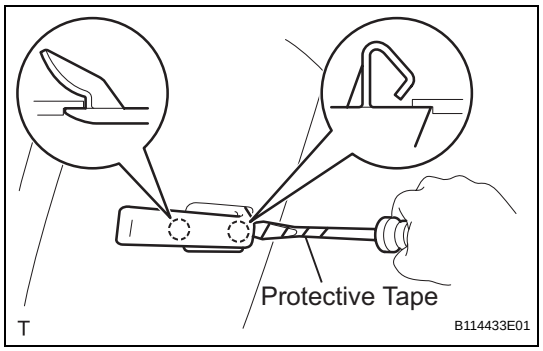
(d) for RH side:

(1) Remove the 3 screws.

(2) Disengage the 3 clips and the 6 claws and remove the deck trim side panel.

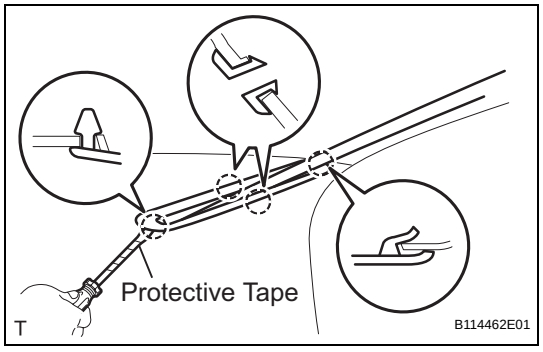


(e) for LH side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 6 claws.
(3) Disconnect the luggage compartment room light connector and remove the deck trim side panel.



14. REMOVE REAR SEAT SHOULDER BELT HANGER

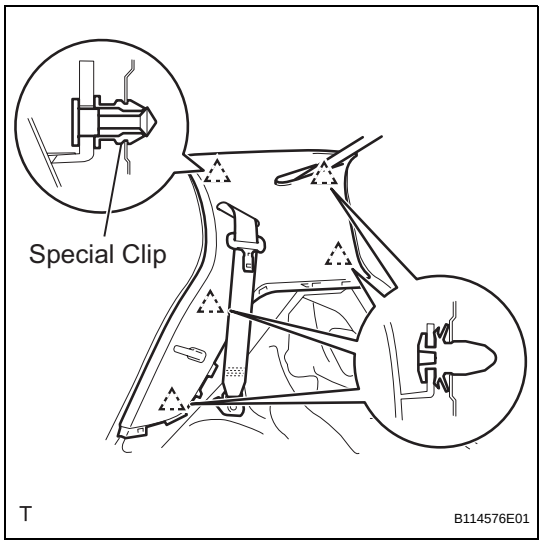
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat shoulder belt hanger.



15. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the center belt guide.

SB



16. REMOVE ROOF SIDE INNER GARNISH

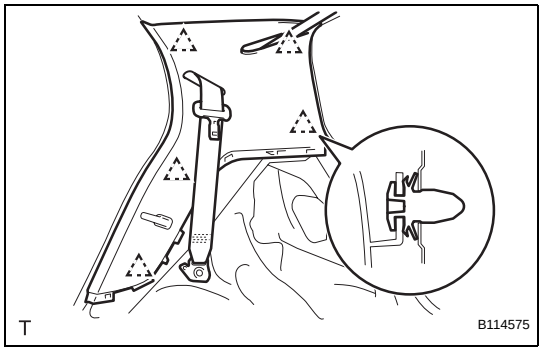
(a) for RH Side (w/ Curtain Shield Airbag):

NOTICE:

Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

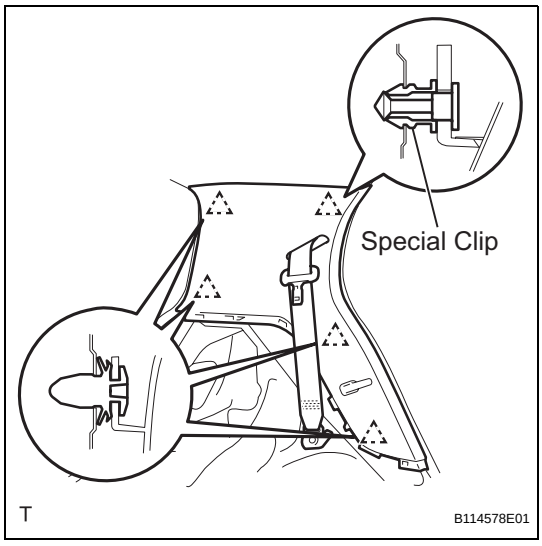
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



(b) for RH Side (w/o Curtain Shield Airbag):

(1) Disengage the 5 clips.

(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



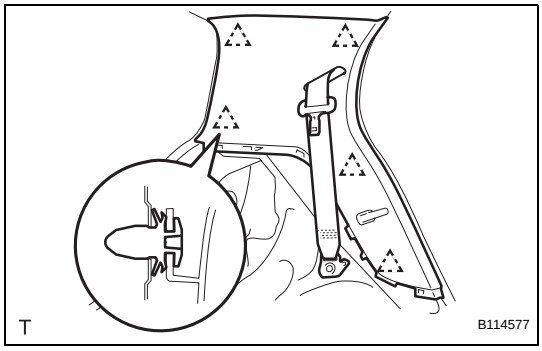
(c) for LH Side (w/ Curtain Shield Airbag):

NOTICE:

Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

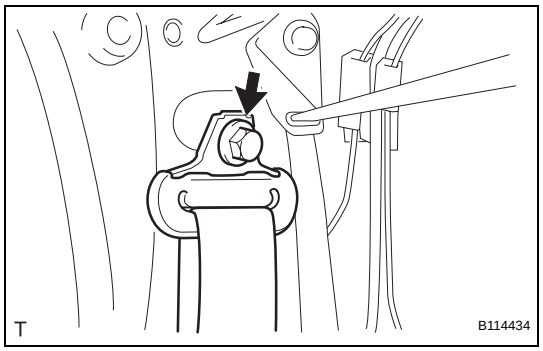
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



(d) for LH Side (w/o Curtain Shield Airbag):

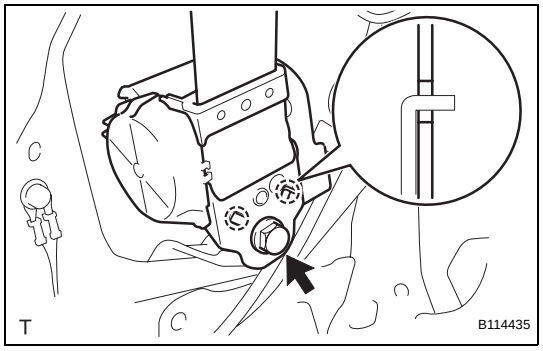
(1) Disengage the 5 clips.

(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

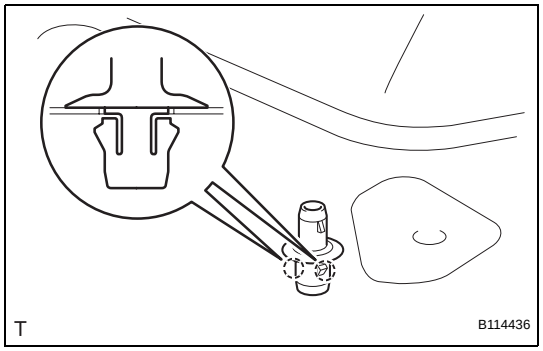


17. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the bolt and the through anchor.



(b) Remove the bolt, the 2 hooks and the retractor.



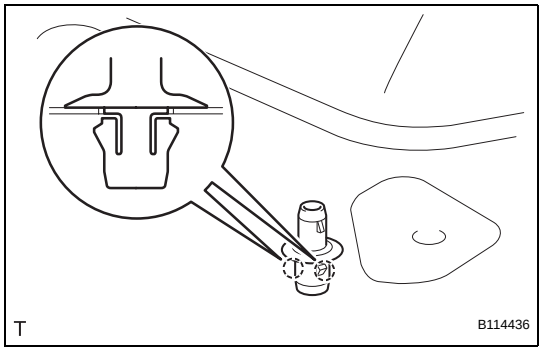
18. REMOVE SEAT BELT HOLE SEAL

(a) Disengage the 2 claws and remove the seat belt hole seal.

SB

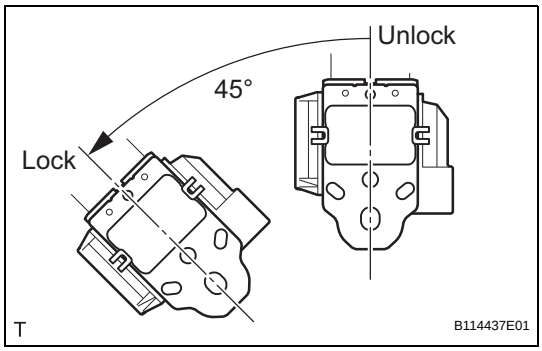
INSTALLATION

CAUTION:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL SEAT BELT HOLE SEAL

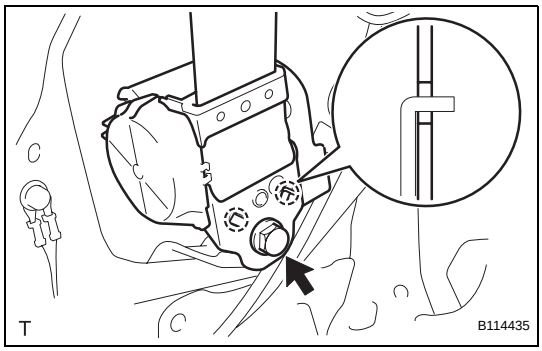
(a) Engage the 2 claws and install the seat belt hole seal.



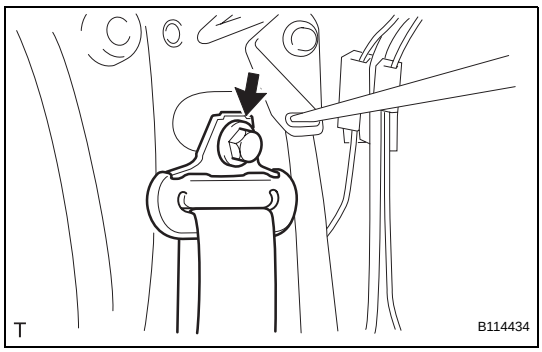
2. INSTALL REAR SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.



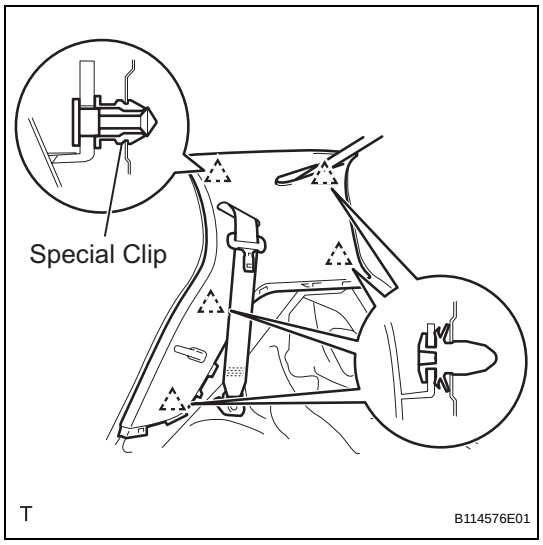
(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

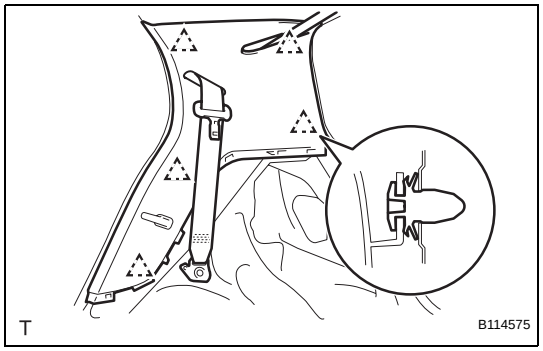
(d) Check that the ELR locks.
NOTICE:
Perform the check with the rear seat outer belt installed.

(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

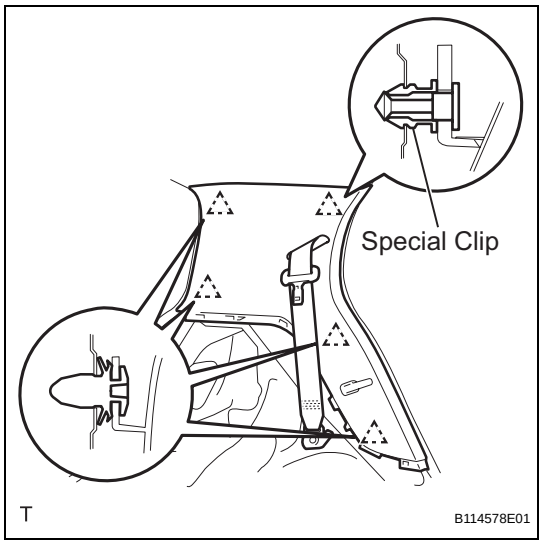


3. INSTALL ROOF SIDE INNER GARNISH

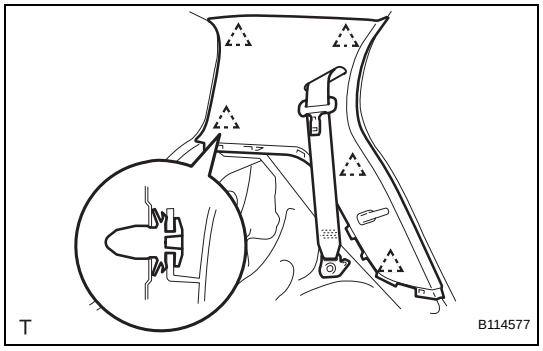
(a) for RH Side (w/ Curtain Shield Airbag):
  (1) Install a new special clip.
  (2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
  (3) Engage the 5 clips and install the roof side inner garnish.



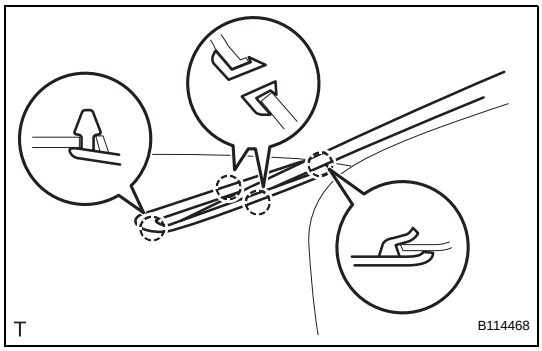
(b) for RH Side (w/o Curtain Shield Airbag):
  (1) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
  (2) Engage the 5 clips and install the roof side inner garnish.



(c) for LH Side (w/ Curtain Shield Airbag):
  (1) Install a new special clip.
  (2) Pass the rear seat outer belt through the slit in the roof side inner garnish.
  (3) Engage the 5 clips and install the roof side inner garnish.

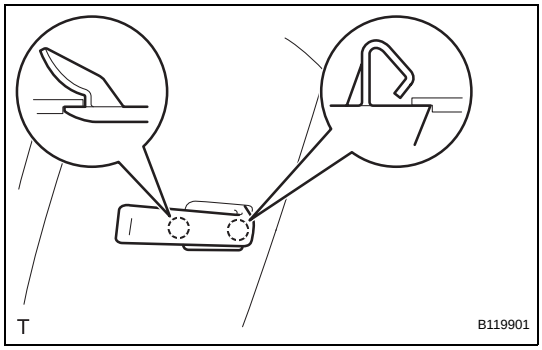


(d) for LH Side (w/o Curtain Shield Airbag):
  (1) Pass the rear seat outer belt through the slit in the roof side inner garnish.
  (2) Engage the 5 clips and install the roof side inner garnish.



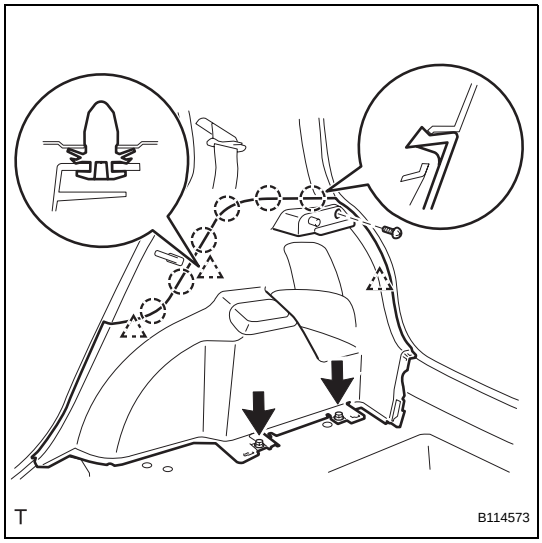
4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Engage the 4 claws and install the center belt guide.



5. INSTALL REAR SEAT SHOULDER BELT HANGER

(a) Engage the 2 claws and install the rear seat shoulder belt hanger.

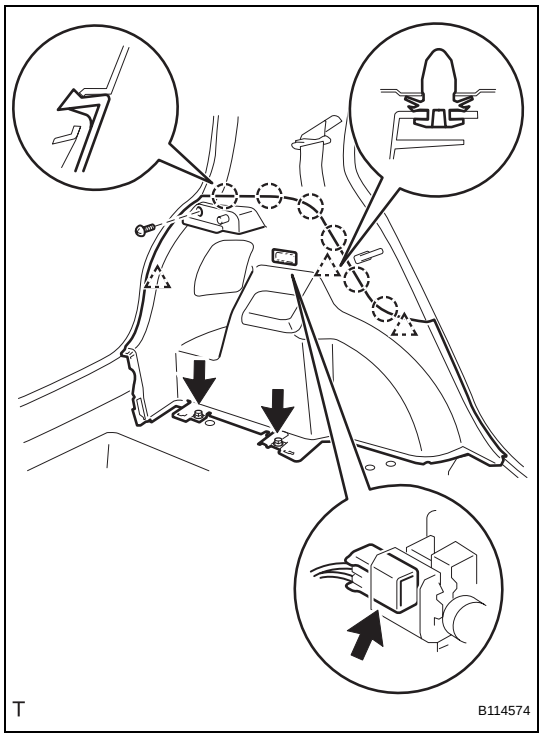


6. INSTALL DECK TRIM SIDE PANEL ASSEMBLY

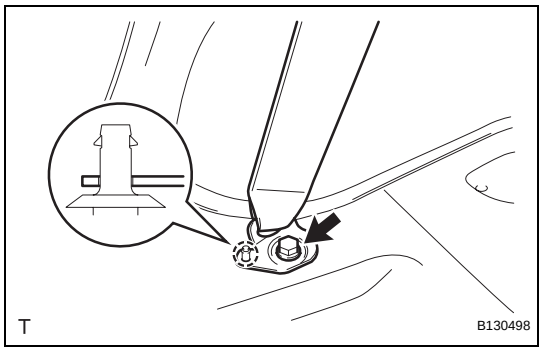
(a) for RH Side:

(1) Engage the 3 clips and the 6 claws and install the deck trim side panel.

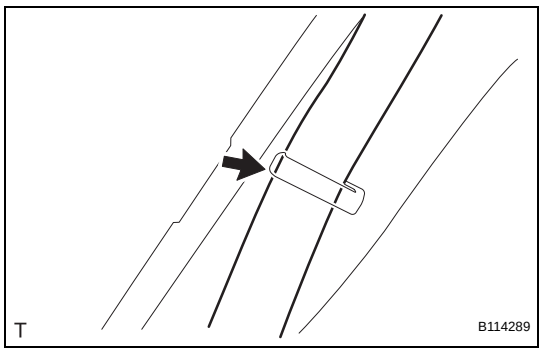
(2) Tighten the 3 screws.



(b) for LH Side:
(1) Connect the luggage compartment room light connector.
(2) Engage the 3 clips and the 6 claws and install the deck trim side panel.
(3) Tighten the 3 screws.

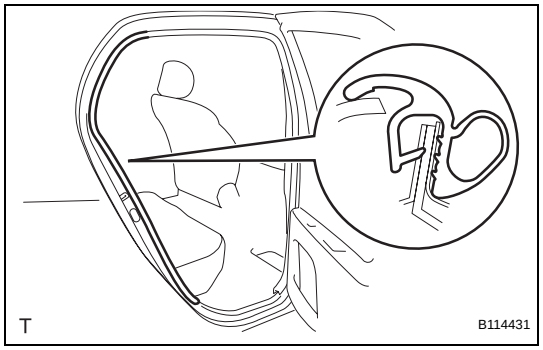


(c) Engage the clip and install the anchor plate of the rear seat outer belt.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(e) Install the belt of the rear seat outer belt into the rear seat shoulder belt hanger.

7. INSTALL REAR DECK TRIM COVER (See page IR-82)



8. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP
(a) Install the rear door opening trim weatherstrip.

9. INSTALL REAR DOOR SCUFF PLATE (See page IR-80)

10. INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)
(a) for RH Side:
(1) Install the rear seat assembly (See page SE-102).

(b) for LH Side:
(1) Install the rear seat assembly (See page SE-84).

11. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)

12. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)
(a) for RH Side:
(1) Install the No. 1 rear seat leg cover (See page SE-103).
(b) for LH Side:
(1) Install the No. 1 rear seat leg cover (See page SE-85).

13. INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)

14. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

15. INSTALL DECK FLOOR BOX
(a) for RH Side:
(1) Install the deck floor box (See page IR-83).
(b) for LH Side:
HINT:
Use the same procedure as for the RH side.

16. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

17. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for LH Side)

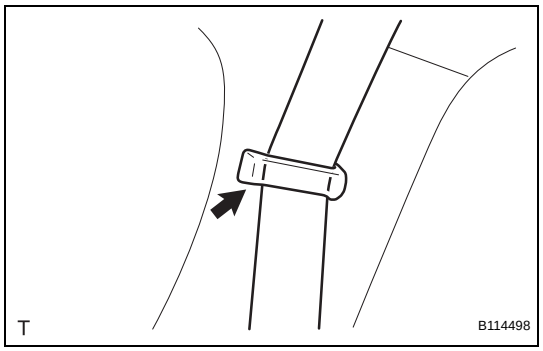
REMOVAL

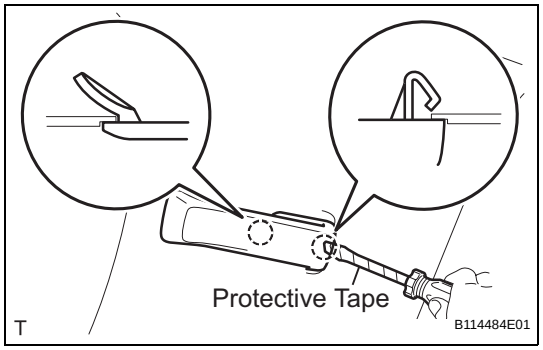
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for LH Side)**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
      (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
      HINT:
      Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
      (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
10. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-97)**
11. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-76)**

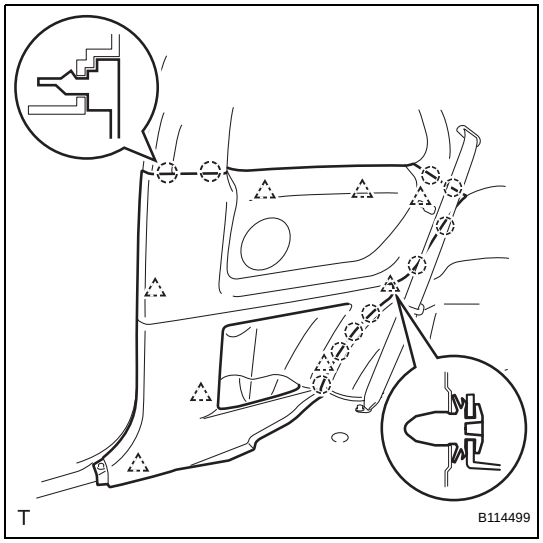


12. REMOVE REAR SEAT SHOULDER BELT HANGER

(a) Remove the belt of the rear seat outer belt.



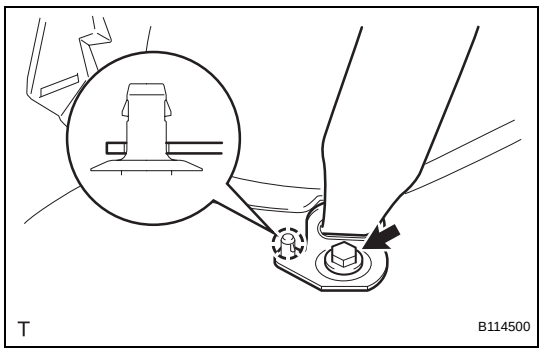
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat shoulder belt hanger.



13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.

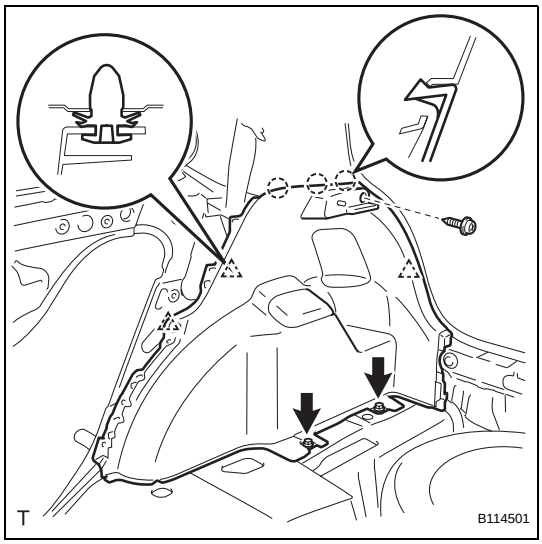
14. REMOVE REAR DECK TRIM COVER (See page IR-49)



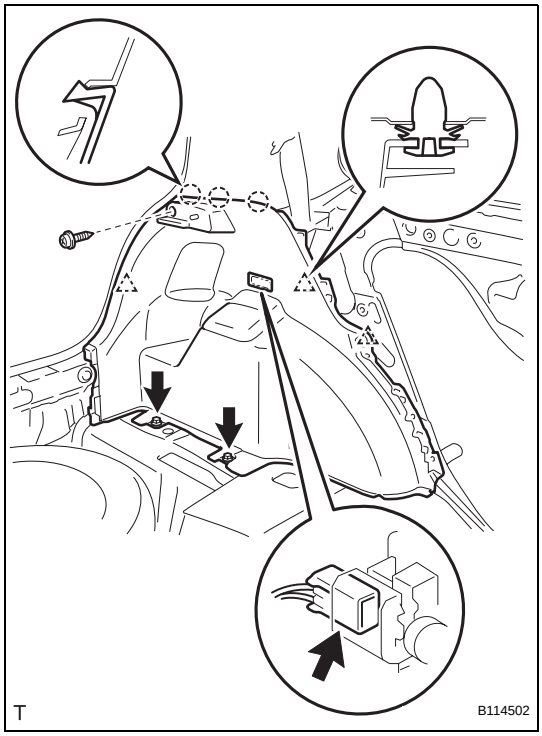
15. REMOVE DECK TRIM SIDE PANEL ASSEMBLY

(a) Remove the bolt.

(b) Disengage the clip and the anchor plate of the rear seat outer belt.

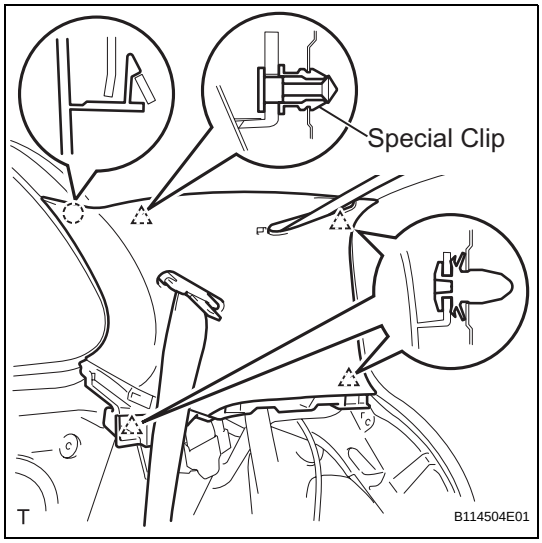


(c) for RH Side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 3 claws and remove the deck trim side panel.



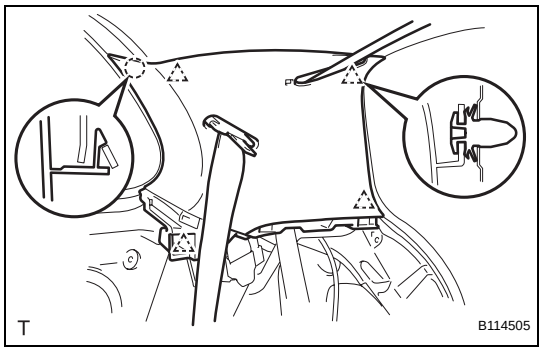
(d) for LH Side:
(1) Remove the 3 screws.
(2) Disengage the 3 clips and the 3 claws.
(3) Disconnect the luggage compartment room light connector and remove the deck trim side panel.

16. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-113)

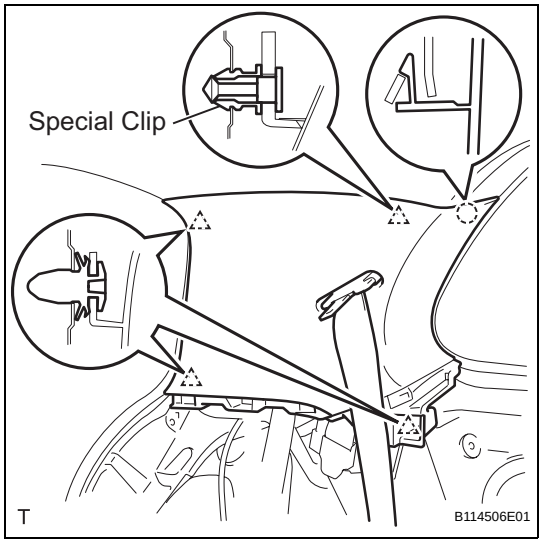


17. REMOVE ROOF SIDE INNER GARNISH

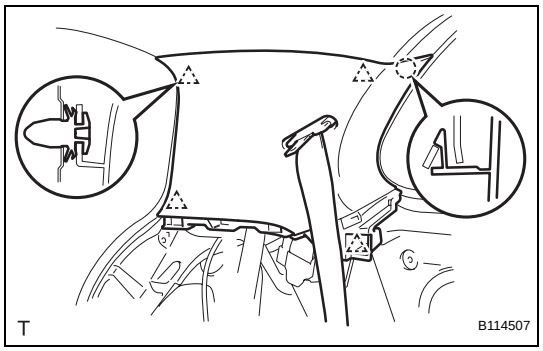
(a) for RH Side (w/ Curtain Shield Airbag):
NOTICE:
Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



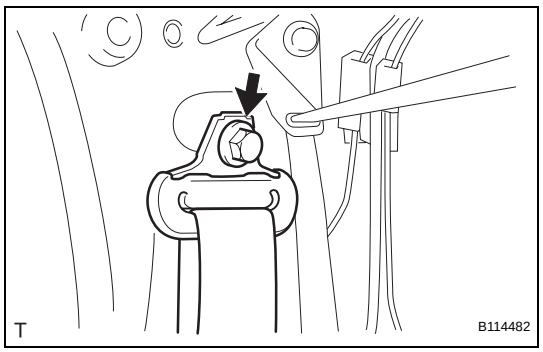
(b) for RH Side (w/o Curtain Shield Airbag):
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish and remove the roof side inner garnish.



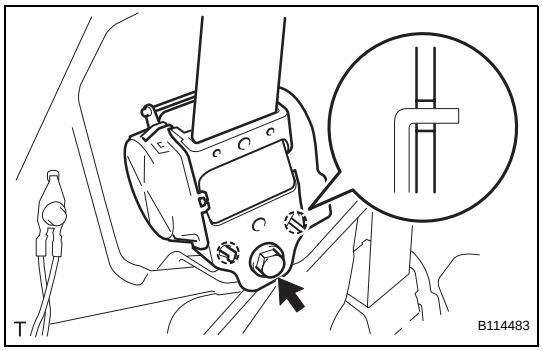
(c) for LH Side (w/ Curtain Shield Airbag):
NOTICE:
Replace the special clip with a new one because it is damaged when the roof side inner garnish is removed.
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



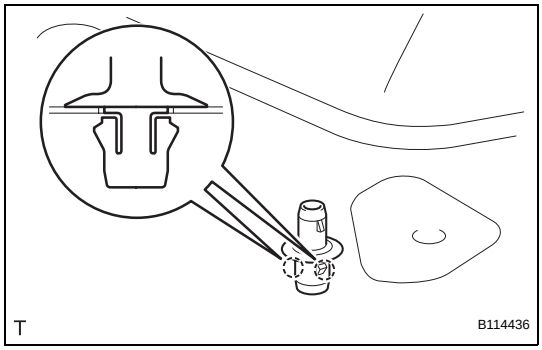
(d) for LH Side (w/o Curtain Shield Airbag):
(1) Disengage the 4 clips and the claw.
(2) Pass the rear seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.



18. REMOVE REAR SEAT OUTER BELT ASSEMBLY
(a) Remove the bolt and the through anchor.



(b) Remove the bolt, the 2 hooks and the retractor.

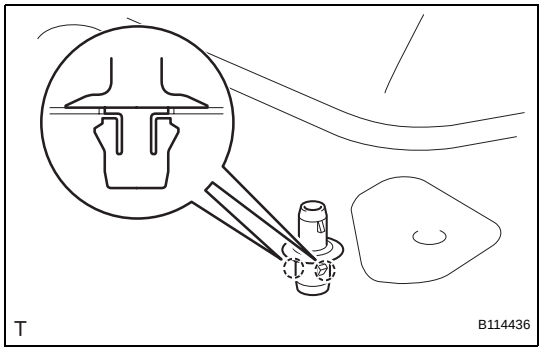


19. REMOVE SEAT BELT HOLE SEAL

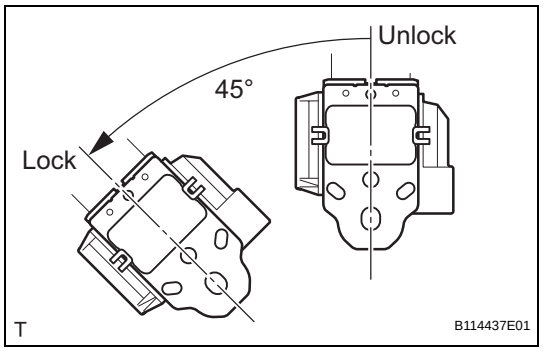
(a) Disengage the 2 claws and remove the seat belt hole seal.

INSTALLATION

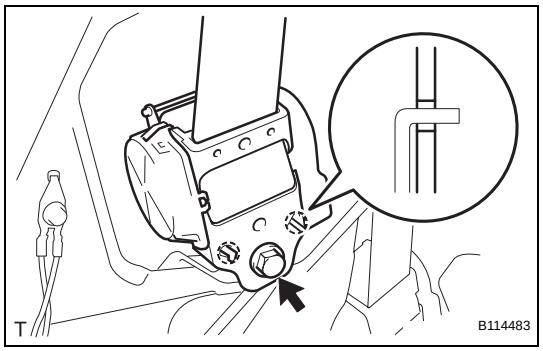
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



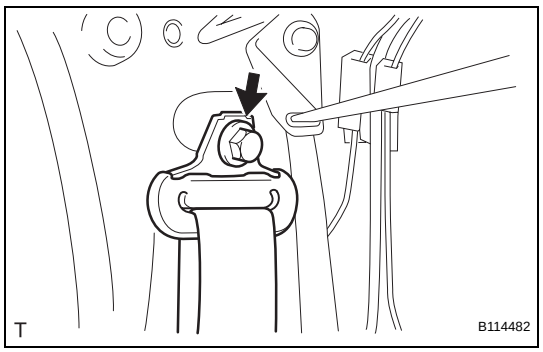
1. INSTALL SEAT BELT HOLE SEAL
(a) Engage the 2 claws and install the seat belt hole seal.



2. INSTALL REAR SEAT OUTER BELT ASSEMBLY
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.

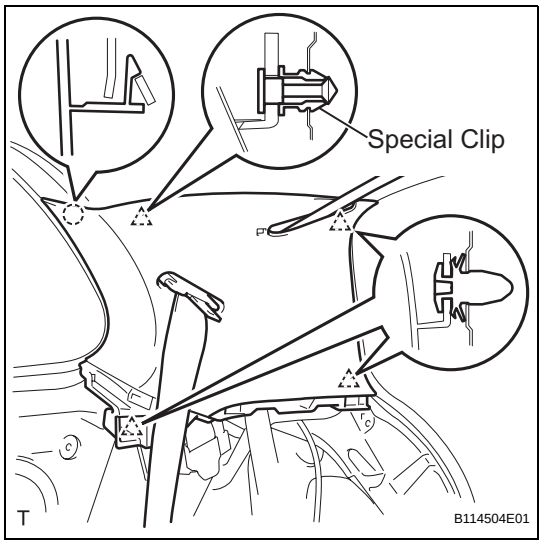


(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



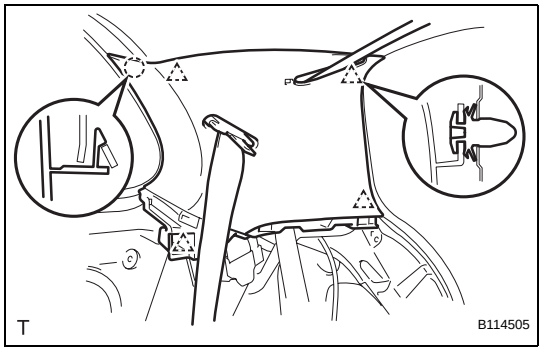
(c) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(d) Check that the ELR locks.
NOTICE:
Perform the check with the rear seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

SB

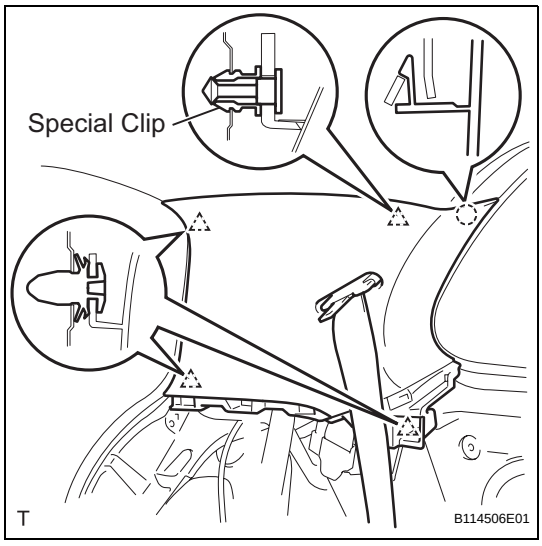


3. INSTALL ROOF SIDE INNER GARNISH

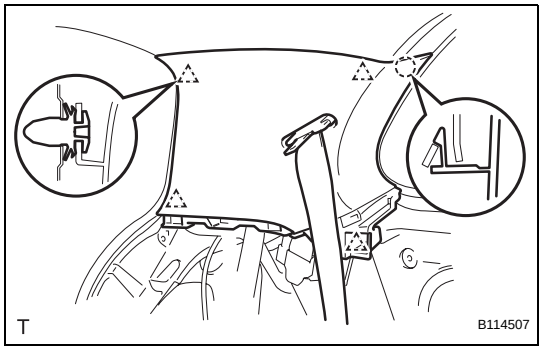
(a) for RH Side (w/ Curtain Shield Airbag):
- (1) Install a new special clip.
- (2) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
- (3) Engage the 4 clips and the claw and install the roof side inner garnish.



(b) for RH Side (w/o Curtain Shield Airbag):
- (1) Pass the rear seat outer and rear center seat outer belts through the slit in the roof side inner garnish.
- (2) Engage the 4 clips and the claw and install the roof side inner garnish.

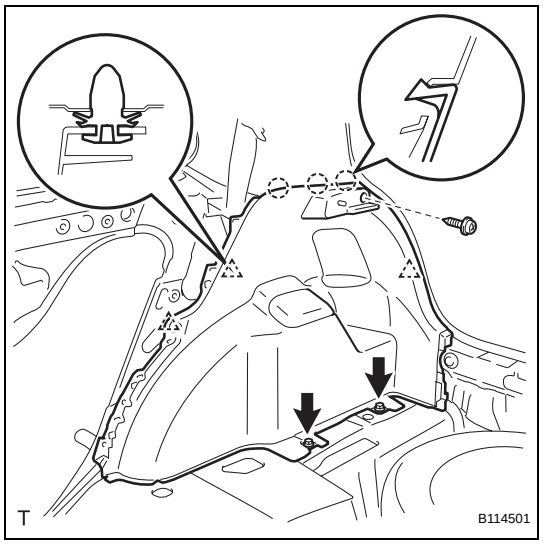


(c) for LH Side (w/ Curtain Shield Airbag):
- (1) Install a new special clip.
- (2) Pass the rear seat outer belt through the slit in the roof side inner garnish.
- (3) Engage the 4 clips and the claw and install the roof side inner garnish.



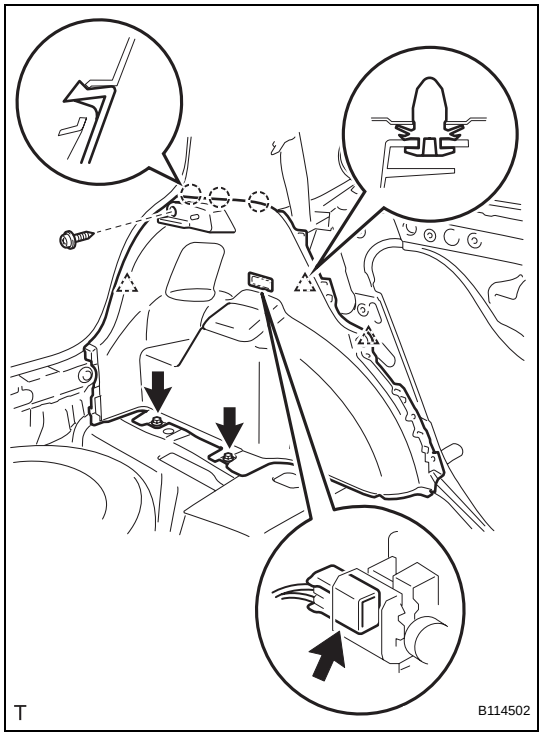
(d) for LH Side (w/o Curtain Shield Airbag):
- (1) Pass the rear seat outer belt through the slit in the roof side inner garnish.
- (2) Engage the 4 clips and the claw and install the roof side inner garnish.

4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-117)

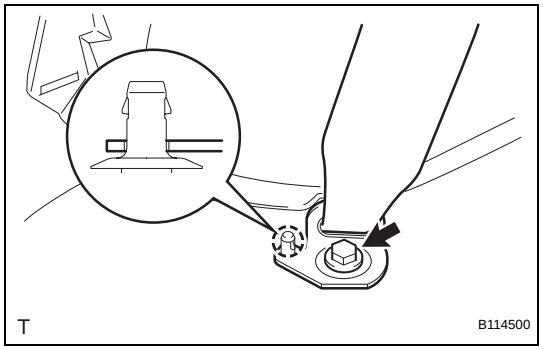


5. INSTALL DECK TRIM SIDE PANEL ASSEMBLY

(a) for RH Side:
  (1) Engage the 3 clips and the 3 claws and install the deck trim side panel.
  (2) Tighten the 3 screws.



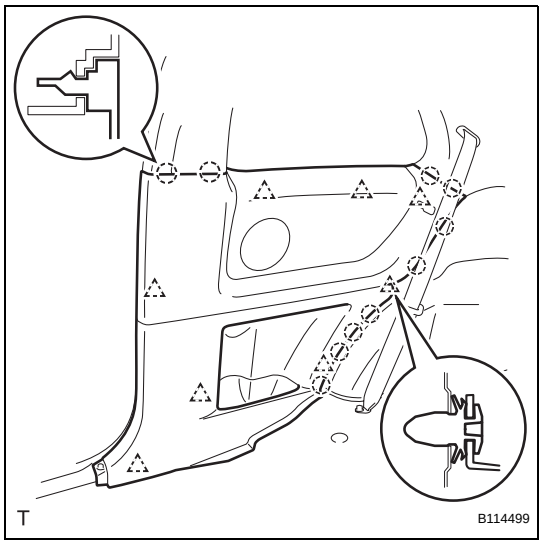
(b) for LH Side:
  (1) Connect the luggage compartment room light connector.
  (2) Engage the 3 clips and the 3 claws and install the deck trim side panel.
  (3) Tighten the 3 screws.



(c) Engage the clip and install the anchor plate of the rear seat outer belt.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

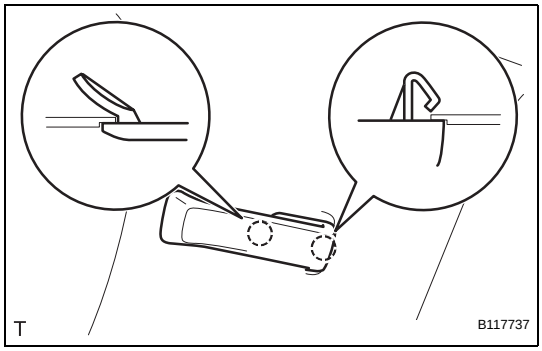
6. INSTALL REAR DECK TRIM COVER (See page IR-82)

SB



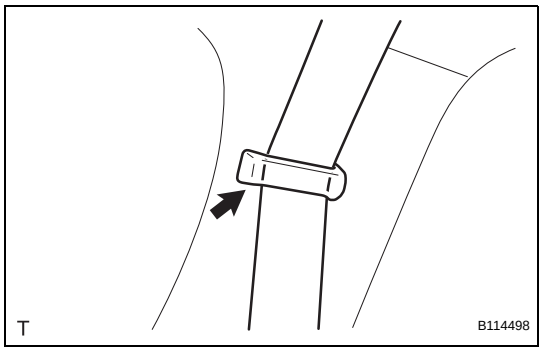
7. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Engage the 8 clips, the retainer and the 10 claws and install the front quarter trim panel.



8. INSTALL REAR SEAT SHOULDER BELT HANGER

(a) Engage the 2 claws and install the rear seat shoulder belt hanger.



(b) Install the belt of the rear seat outer belt.

9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP (See page SB-80)

10. INSTALL FRONT DOOR SCUFF PLATE (See page IR-119)

11. INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)

(a) for RH Side:

(1) Install the rear seat assembly (See page SE-102).

(b) for LH Side:

(1) Install the rear seat assembly (See page SE-84).

12. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)

13. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)

(a) for RH Side:

(1) Install the No. 1 rear seat leg cover (See pageSE-103).

(b) for LH Side:

(1) Install the No. 1 rear seat leg cover (See page SE-85).

14. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

15. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**

16. **INSTALL DECK FLOOR BOX**
    (a) for RH Side:
        (1) Install the deck floor box (See page IR-83).
    (b) for LH Side:
        HINT:
        Use the same procedure as for the RH side.

17. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**

18. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**

19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for LH Side)**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REMOVAL

1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-46).

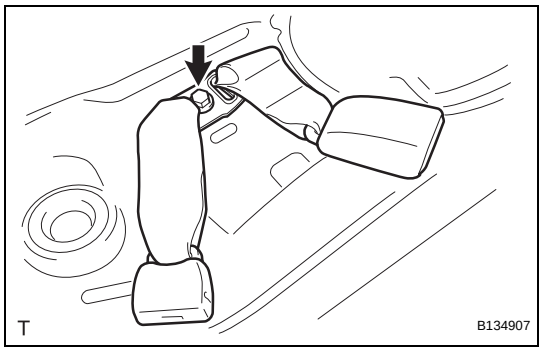
(b) for Fixed Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-106).

2. REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY

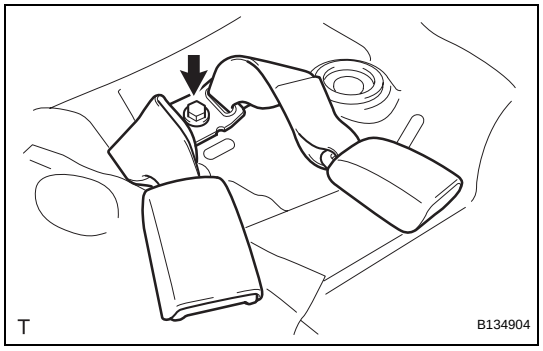
(a) for RH Side (for 60/40 Split Seat Type):

(1) Remove the bolt and the rear center seat inner belt.



(b) for LH Side:

(1) Remove the bolt and the rear center seat inner belt.



INSTALLATION

1. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY

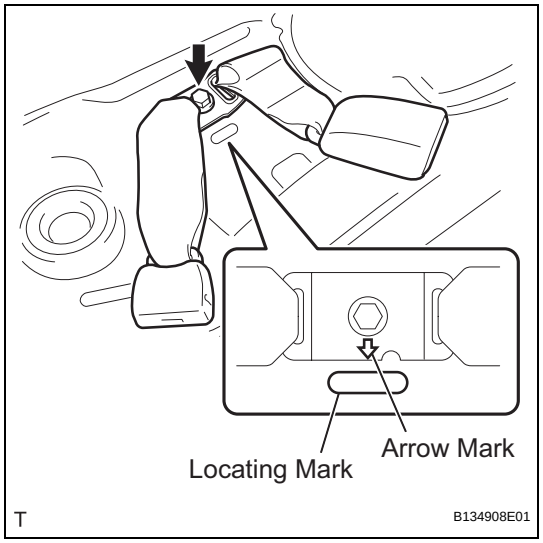
(a) for RH Side (for 60/40 Split Seat Type):

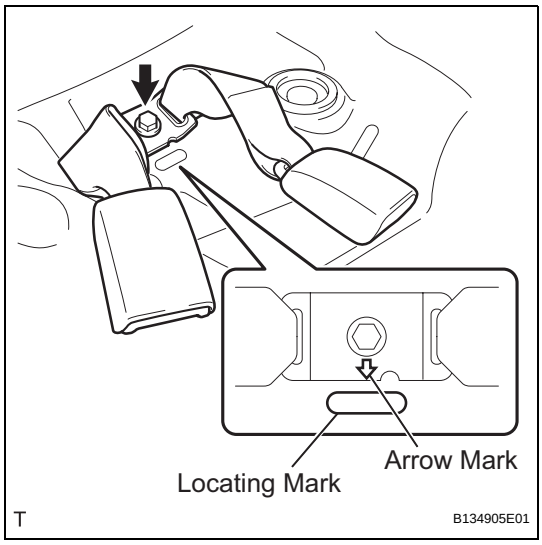
(1) Install the rear center seat inner belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**





(b) for LH Side:

(1) Install the rear center seat inner belt with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**

2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Install the rear seat cushion cover pad (See page SE-53).

(b) for Fixed Seat Type:

(1) Install the rear seat cushion cover pad (See page SE-109).

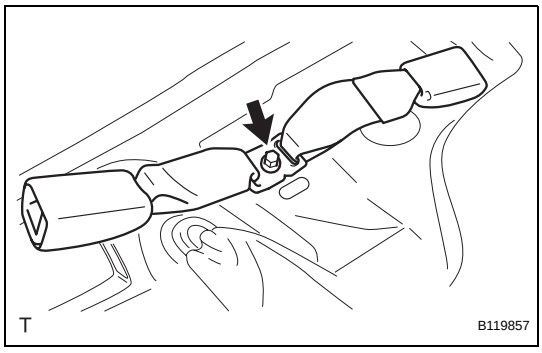
REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
2. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
3. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
4. **REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Using "Torx" socket wrench E10, remove the 3 bolts and pull up the rear seat cushion.

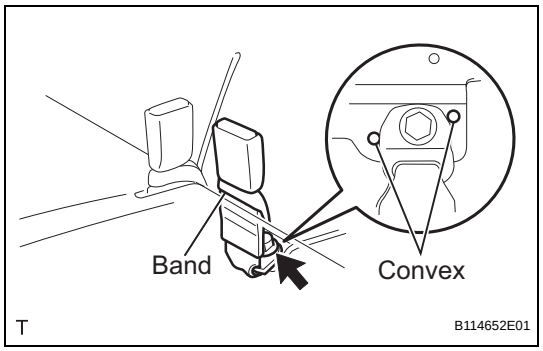
      (2) Remove the belt from the band.
      (3) Remove the bolt and the rear center seat inner belt.

   (b) for Hold Down Seat Type:
      (1) Remove the bolt and the rear center seat inner belt.



INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.



1. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY

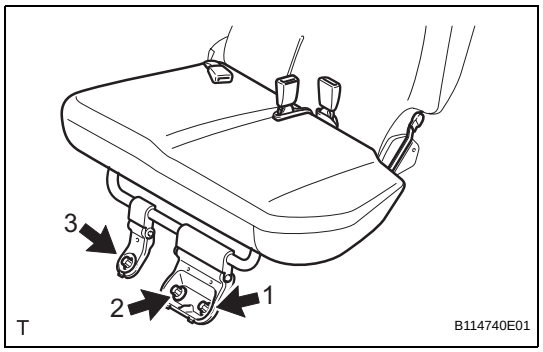
(a) for 60/40 Split Seat Type

(1) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex areas of the rear seat back frame.

(2) Install the belt into the band.

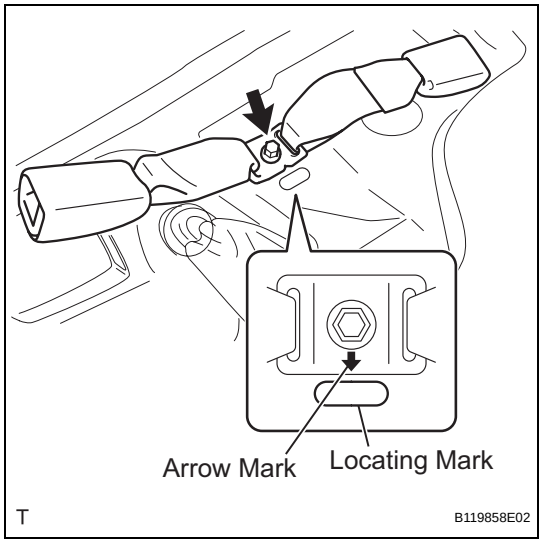
(3) Install the rear seat cushion.

(4) Using "Torx" socket wrench E10, tighten the 3 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



(b) for Hold Down Seat Type:

(1) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**



2. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

3. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

4. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

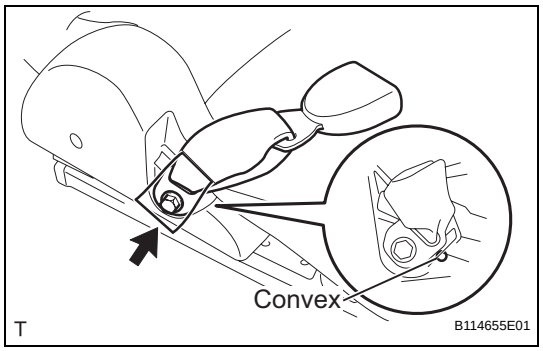
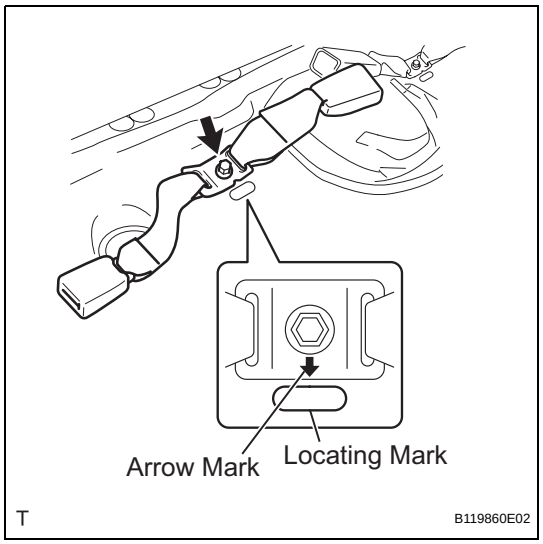
INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.





1. **INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Install the rear center seat inner belt with the bolt.
      Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
      NOTICE:
      Do not place the anchor plate over the convex area of the rear seat back frame.

   (b) for Hold Down Seat Type:
      (1) Install the rear center seat inner belt with the bolt.
      Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
      NOTICE:
      - **Install the anchor plate with the arrow mark facing forward.**
      - **Do not place the anchor plate over the locating mark area of the floor panel.**

2. **INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type) (See page SE-84)**
3. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
4. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
5. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
6. **INSTALL DECK FLOOR BOX (for 60/40 Split Seat Type)**
   HINT:
   Use the same procedure as for the RH side (See page IR-83).
7. **INSTALL DECK BOARD SUB-ASSEMBLY (for 60/40 Split Seat Type) (See page IR-83)**
8. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for 60/40 Split Seat Type) (See page IR-83)**

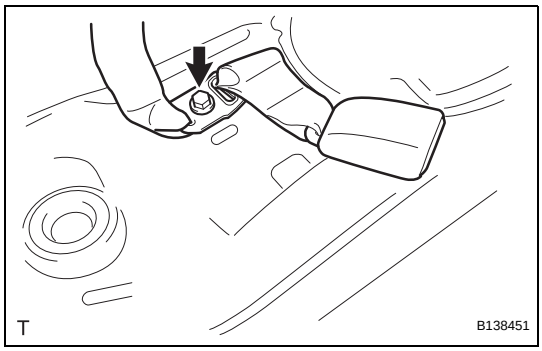
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/o Rear Spoiler)**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-46).
   (b) for Fixed Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-106).
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
4. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-46)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
6. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
7. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
8. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
9. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
10. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-15)**
11. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-173)**
12. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-173)**
13. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
14. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
15. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**
16. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)**
17. **REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)**
18. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-173)**

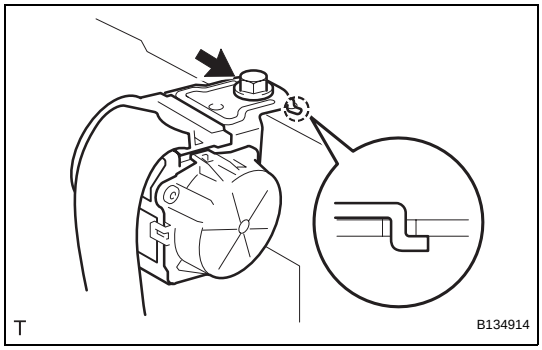
SB



19. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY

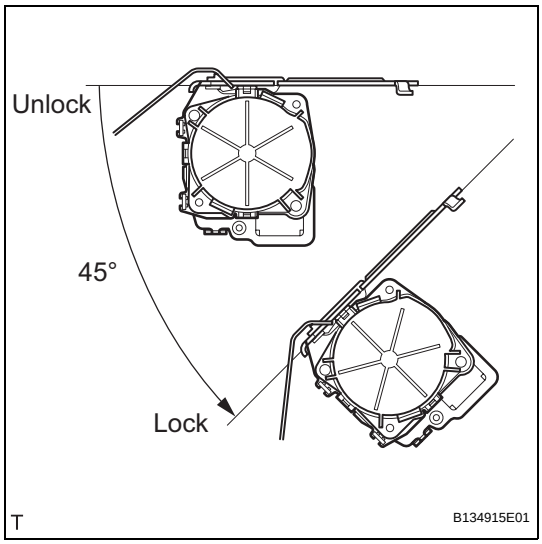
(a) for Fixed Seat Type:

(1) Remove the bolt and the anchor plate.



(b) Remove the bolt, the hook and the retractor.

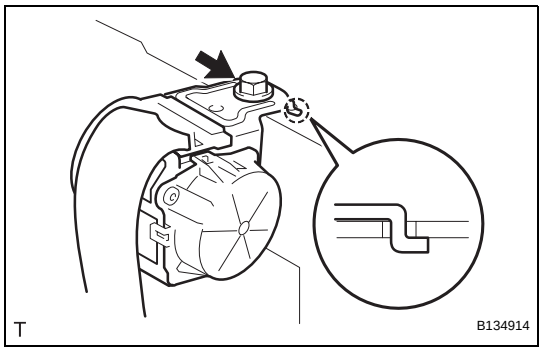
INSTALLATION



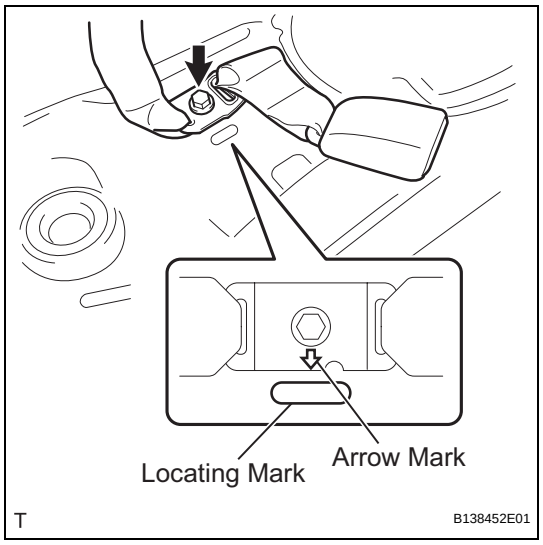
1. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear center seat outer belt.



(b) Insert the hook into the body hole and install the retractor with the bolt.



(c) for Fixed Seat Type:

(1) Install the anchor plate with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**

(d) Check that the ELR locks.

NOTICE:

- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

(1) With the belt installed, check that the belt locks when it is pulled out quickly.

If the operation is not as specified, replace the rear center seat outer belt.

2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-174)**
3. **INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)**
4. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)**
5. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)**
6. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
7. **INSTALL REAR SEAT SIDE COVER LH (See page IR-33)**
8. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-175)**
9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-175)**
10. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
11. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**
12. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
13. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
14. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**
15. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**

16. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**

17. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**

18. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
    (a) for 60/40 Split Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-53).
    (b) for Fixed Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-109).

19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/o Rear Spoiler)**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

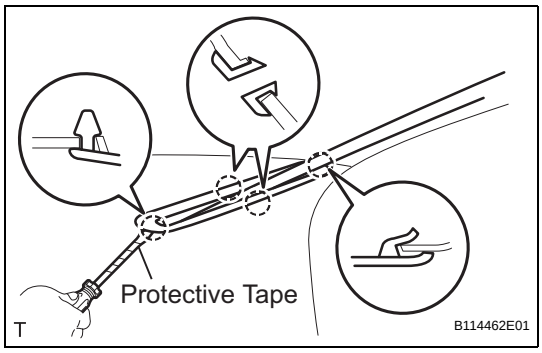
12. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-51)**
13. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-51)**
14. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-112)**
15. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
16. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
17. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-51)**
18. **REMOVE REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-51)**

SB

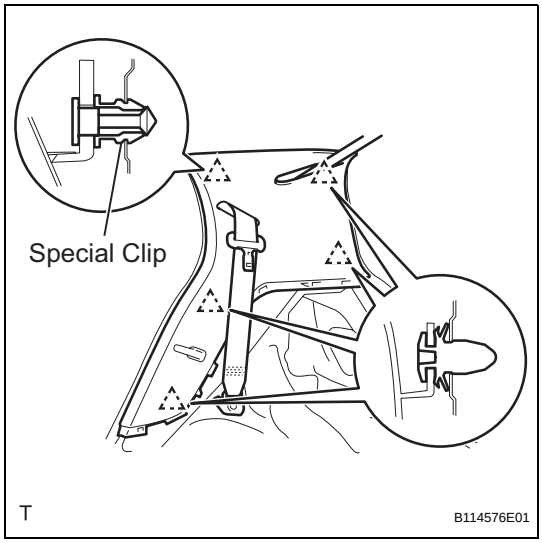
19. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-52)

20. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-52)



21. REMOVE ROOF SIDE INNER GARNISH RH

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the center belt guide.



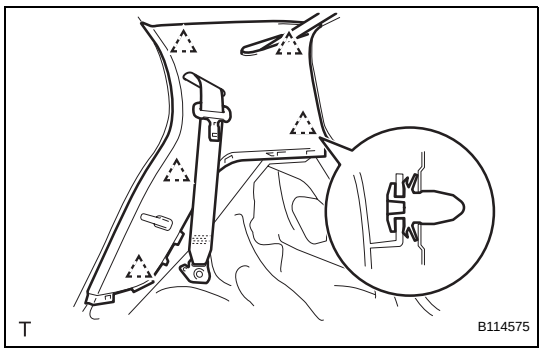
(b) w/ Curtain Shield Airbag:

NOTICE:

Replace the special clip with a new one when the roof side inner garnish is removed.

(1) Disengage the 5 clips.

(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

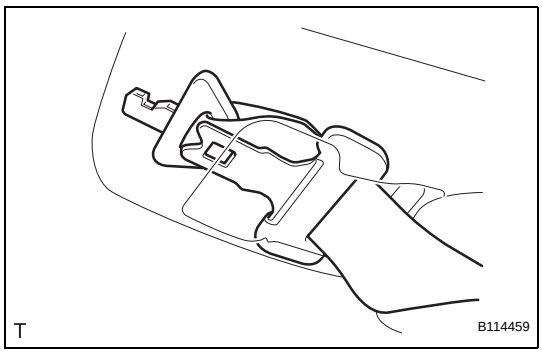


(c) w/o Curtain Shield Airbag:

(1) Disengage the 5 clips.

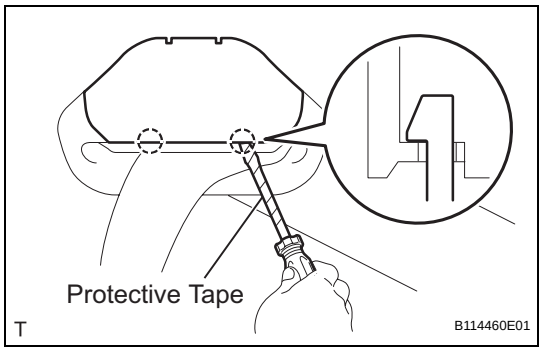
(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish and remove the roof side inner garnish.

22. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-54)

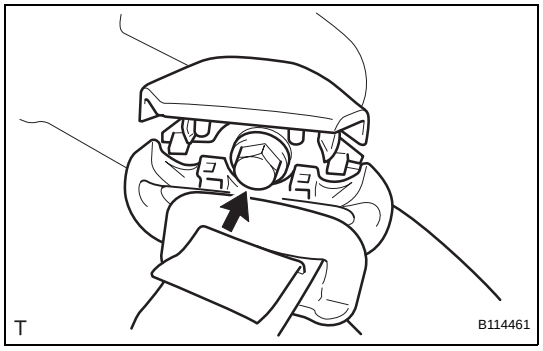


23. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY

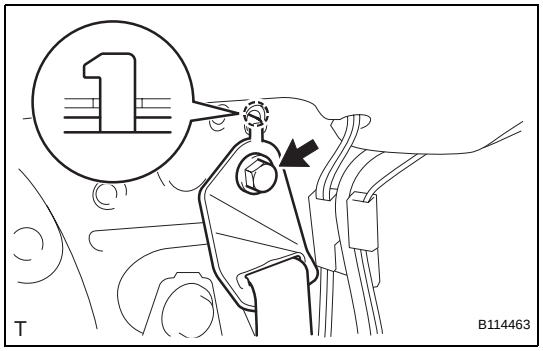
(a) Remove the 2 tongue plates.



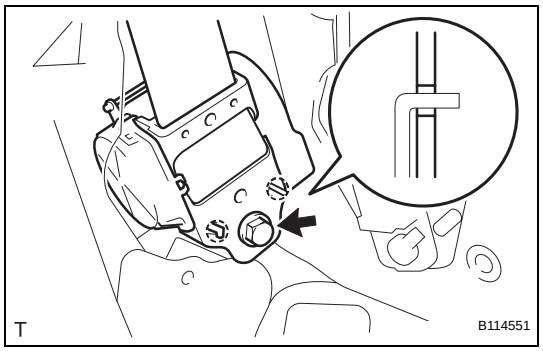
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and open the slip joint cover.



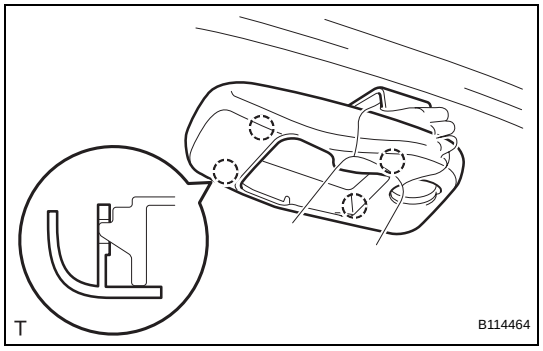
(c) Remove the bolt and the through anchor.



(d) Remove the bolt, the hook and the bracket.

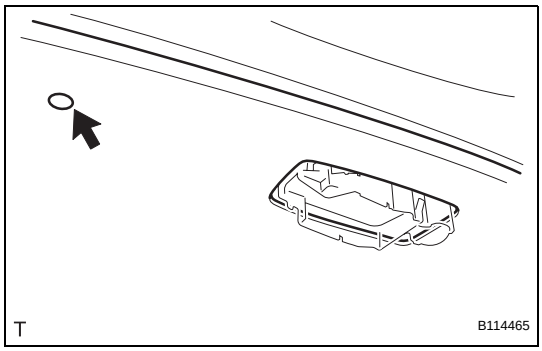


(e) Remove the bolt, the 2 hooks and the retractor.



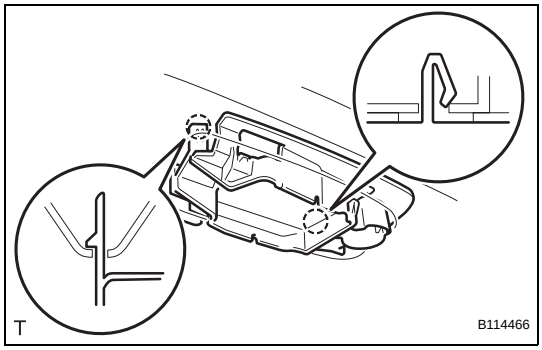
24. REMOVE SEAT BELT ANCHOR COVER

(a) Using a moulding remover, disengage the 4 claws and remove the seat belt anchor cover.



25. REMOVE ROOF HEADLINING ASSEMBLY

(a) Using a clip remover, remove the clip and the roof headlining.

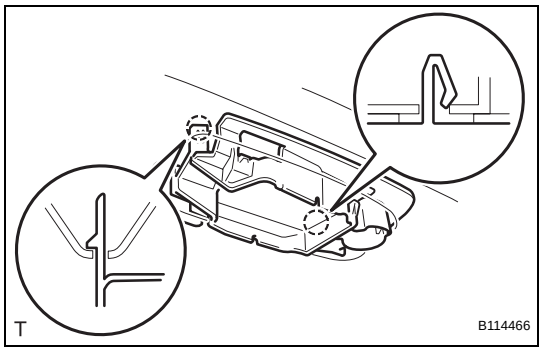


26. REMOVE REAR SEAT SHOULDER BELT COVER

(a) Disengage the 2 claws and remove the rear seat shoulder belt cover.

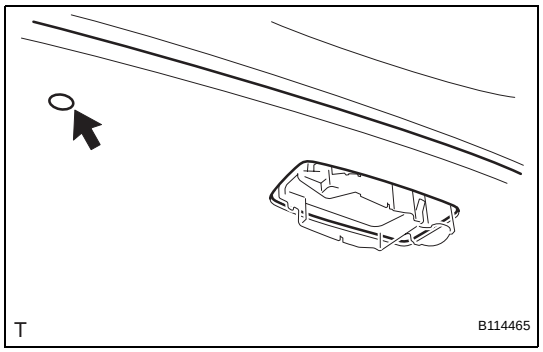
INSTALLATION

CAUTION:
Always use "Torx" socket wrench E10 when installing the rear seat.



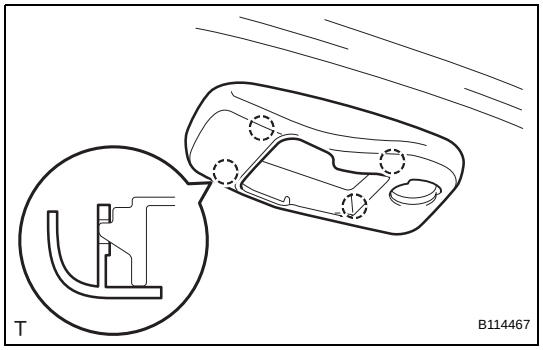
1. INSTALL REAR SEAT SHOULDER BELT COVER

(a) Engage the 2 claws and install the rear seat shoulder belt cover.



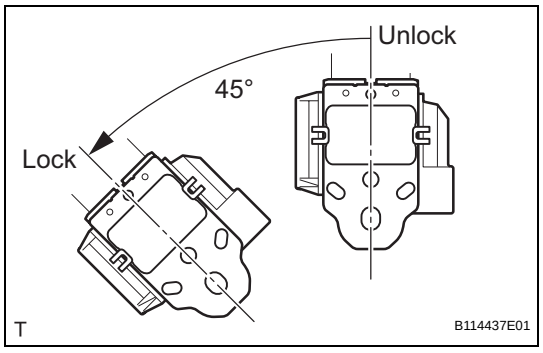
2. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining with the clip.



3. INSTALL SEAT BELT ANCHOR COVER

(a) Engage the 4 claws and install the seat belt anchor cover.



4. INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.

NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.

SB

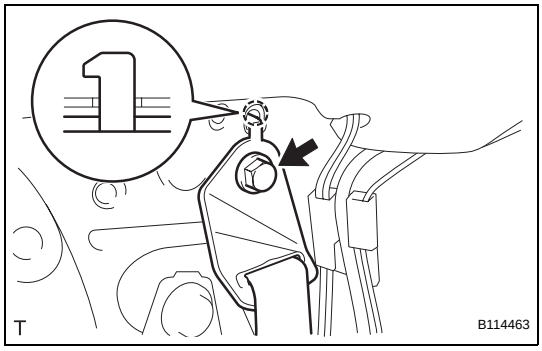
(b) Hook the lower stay of the retractor onto the 2 body hooks and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Insert the hook into the body hole and install the bracket with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

(d) Check that the ELR locks.
NOTICE:
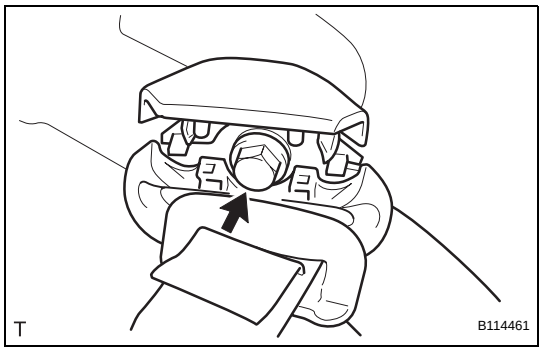
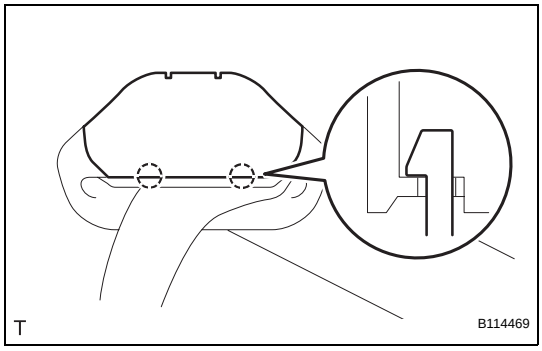
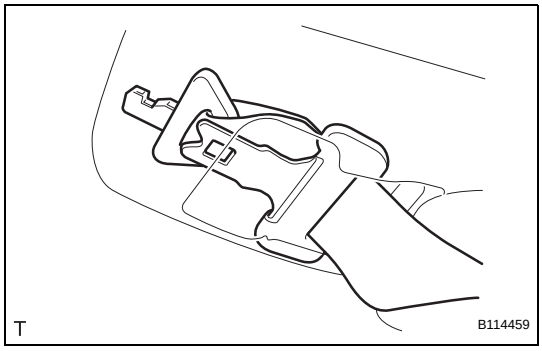
Perform the check with the rear center seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear center seat outer belt.



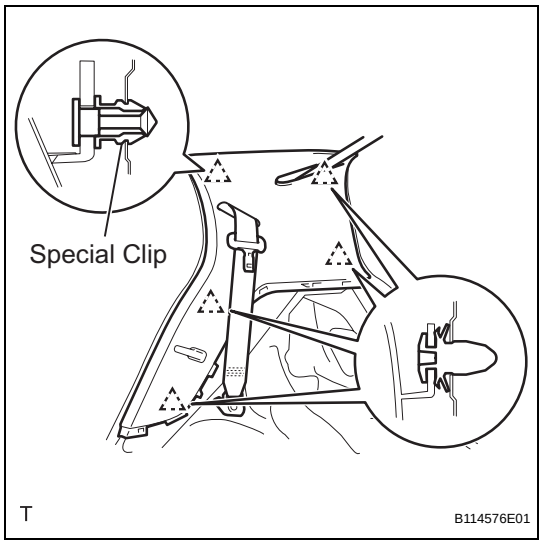
(e) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(f) Engage the 2 claws and close the slip joint cover.



(g) Install the 2 tongue plates.



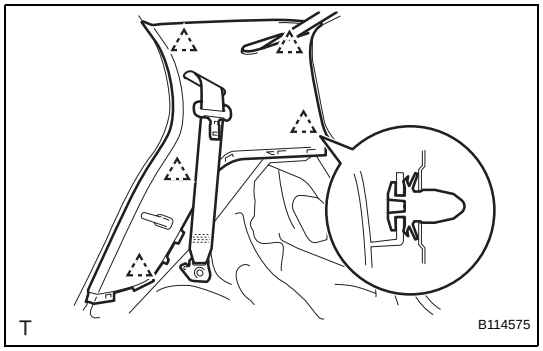
5. INSTALL ROOF SIDE INNER GARNISH RH

(a) w/ Curtain Shield Airbag:

(1) Install a new special clip.

(2) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.

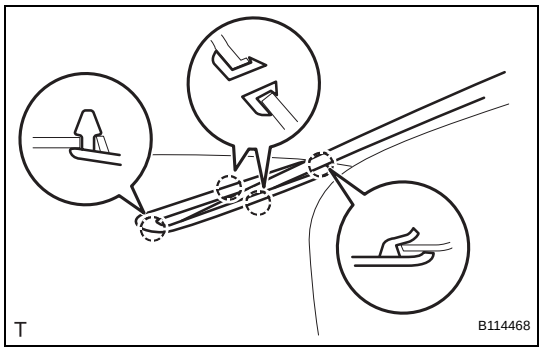
(3) Engage the 5 clips and install the roof side inner garnish.



(b) w/o Curtain Shield Airbag:

(1) Pass the rear seat outer belt and the rear center seat outer belt through the slit in the roof side inner garnish.

(2) Engage the 5 clips and install the roof side inner garnish.



(c) Engage the 4 claws and install the center belt guide.

6. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-77)

7. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-79)

8. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-79)

9. INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-79)

10. INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-80)

11. INSTALL REAR DECK TRIM COVER (See page IR-82)

12. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page SB-119)

13. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

HINT:

Use the same procedure as for the RH side.

14. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)

15. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-80)

SB

16. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**

REMOVAL

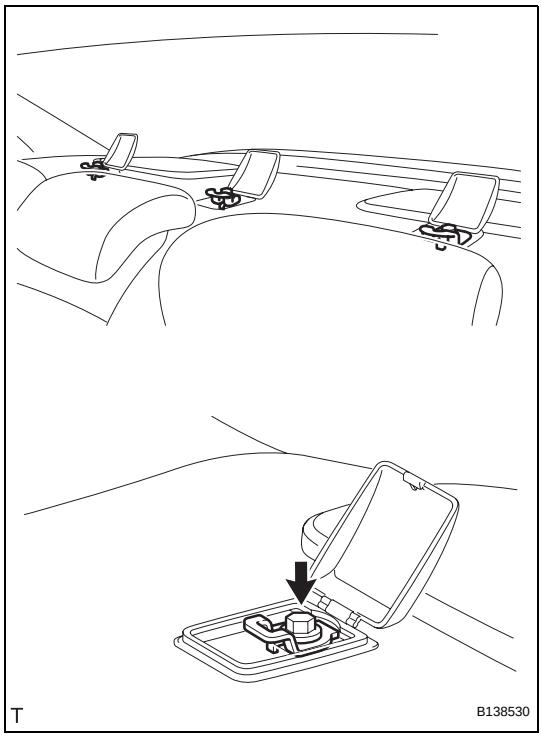
1. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

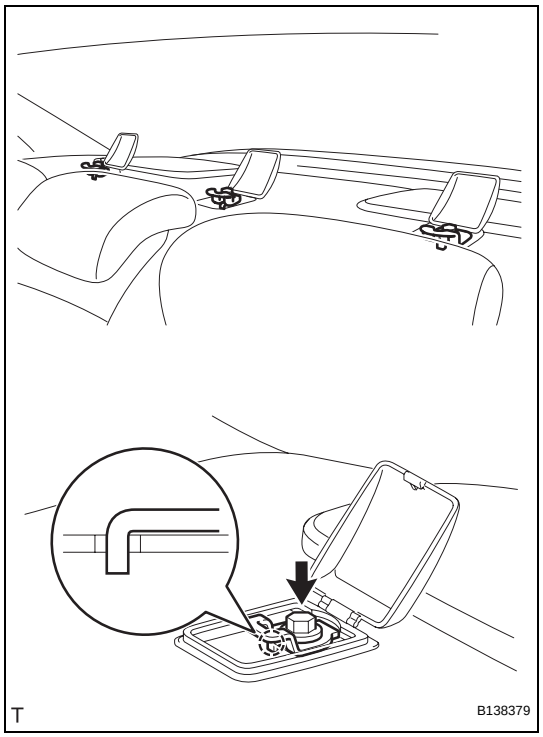
HINT:

Use the same procedure to remove all the child restraint seat tether anchor brackets.

(a) Disengage the claw and open the package tray trim cover.



(b) Remove the bolt and the child restraint seat tether anchor bracket.



INSTALLATION

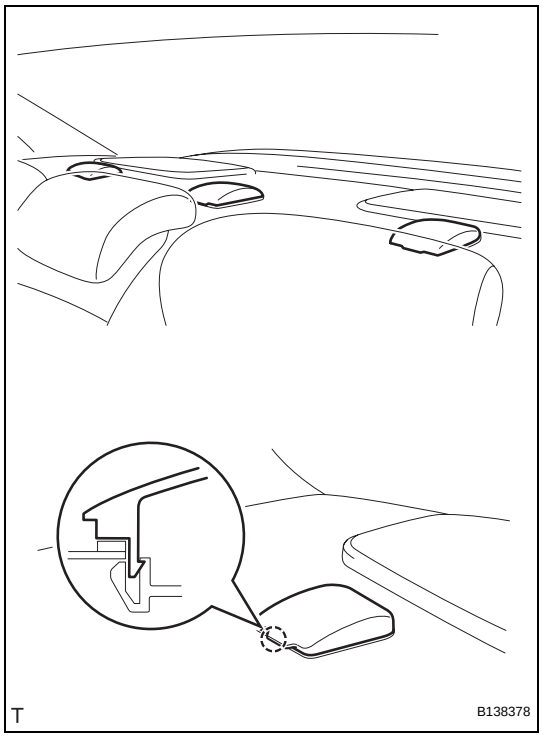
1. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

HINT:

Use the same procedure to install all the child restraint seat tether anchor brackets.

(a) Insert the hook into the body hole and install the child restraint seat tether anchor bracket with the bolt.

Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(b) Engage the claw and close the package tray rim cover.

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
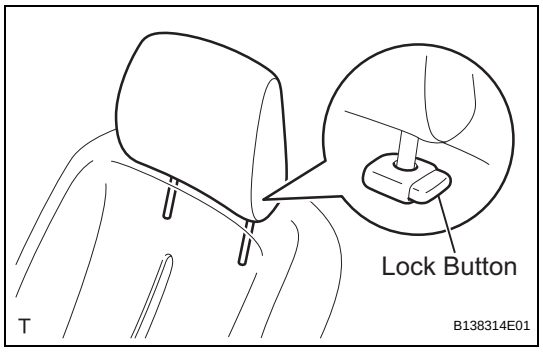
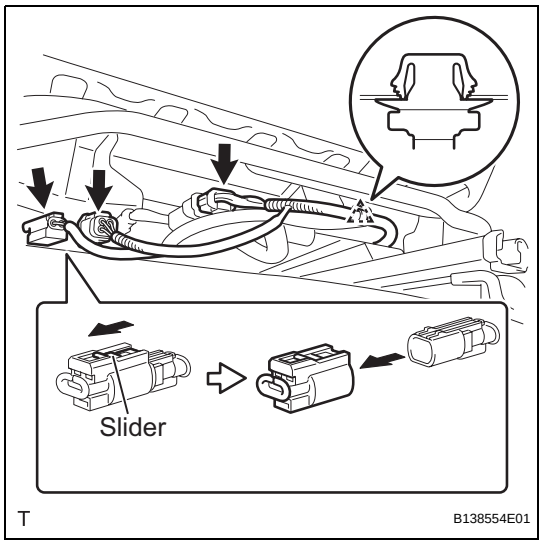
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the driver and front passenger sides, unless otherwise specified.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
CAUTION:
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).

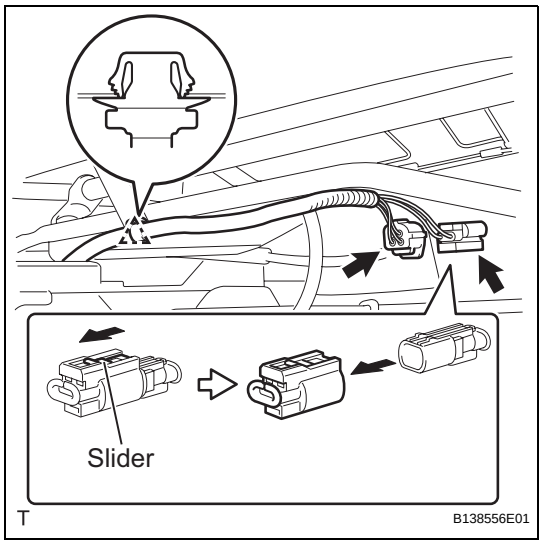
2. REMOVE FRONT SEAT HEADREST ASSEMBLY
(a) Push in the lock button of the front seat headrest support and remove the front seat headrest.



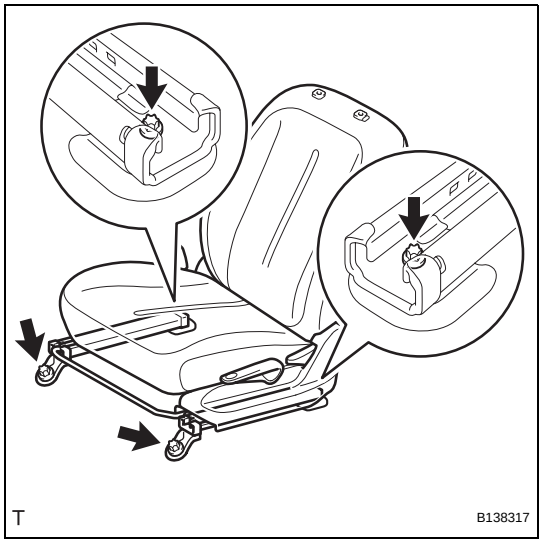
3. REMOVE FRONT SEAT ASSEMBLY
(a) for Driver Side:
(1) Using a clip remover, remove the clamp.
(2) w/ Front Seat Side Airbag:
1. Slide the slider and disconnect the airbag connector.
(3) Disconnect the buckle switch connector.



SE



(b) for Front Passenger Side:
  (1) Using a clip remover, remove the clamp.
  (2) w/ Front Seat Side Airbag:
    1. Slide the slider and disconnect the airbag connector.
  (3) Disconnect the buckle switch connector.
  (4) Disconnect the occupant detection ECU connector.



(c) Move the front seat to its most rearward position.
(d) Using "Torx" socket wrench E10, remove the 2 bolts from the front side.
(e) Move the front seat to its most forward position.
(f) Using "Torx" socket wrench E10, remove the 2 bolts from the rear side.
(g) Remove the front seat.

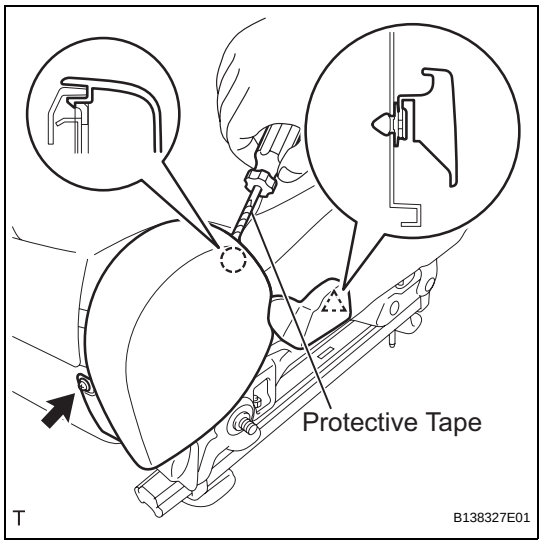
DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat adjuster frame could cause injuries to your hands.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

1. REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-33)

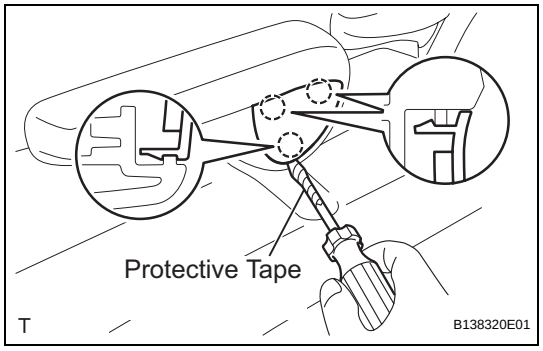
2. REMOVE FRONT SEAT CUSHION INNER SHIELD

(a) Remove the screw.
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and the clip and remove the front seat cushion outer shield.



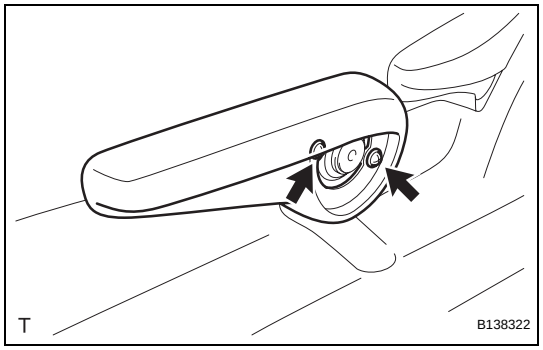
3. REMOVE VERTICAL ADJUSTER COVER (w/ Vertical Adjuster)

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 3 claws and remove the vertical adjuster cover.

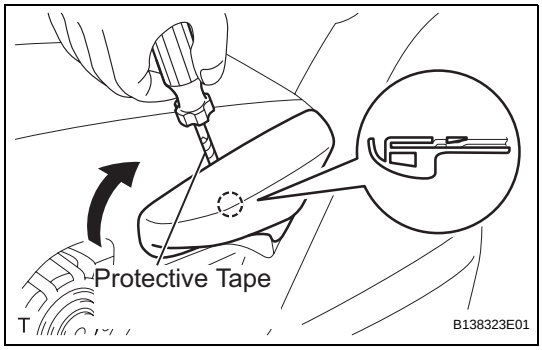


4. REMOVE VERTICAL ADJUSTER KNOB (w/ Vertical Adjuster)

(a) Remove the 2 screws and the vertical adjuster knob.

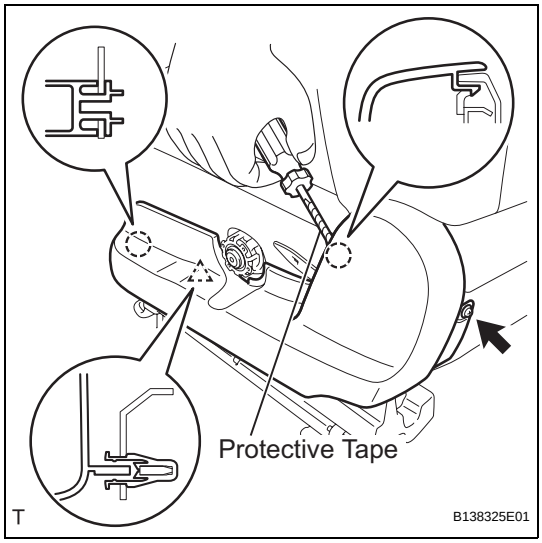


SE



5. REMOVE RECLINING ADJUSTER RELEASE HANDLE

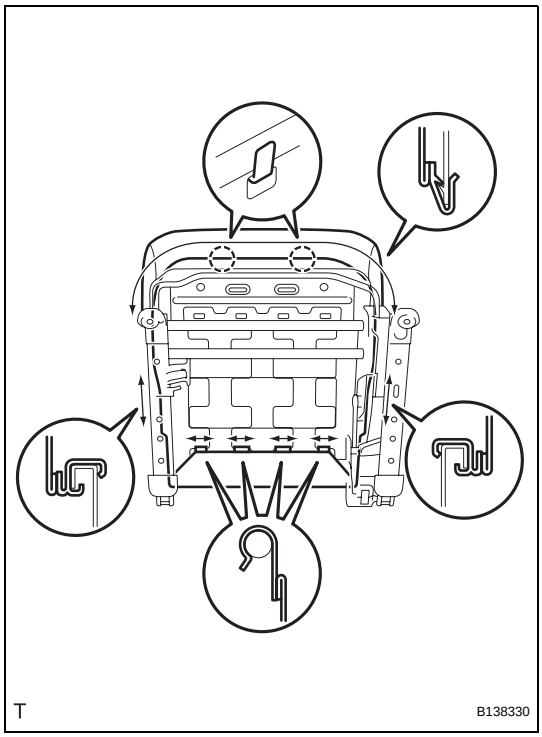
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the reclining adjuster release handle.



6. REMOVE FRONT SEAT CUSHION OUTER SHIELD

(a) Remove the screw.

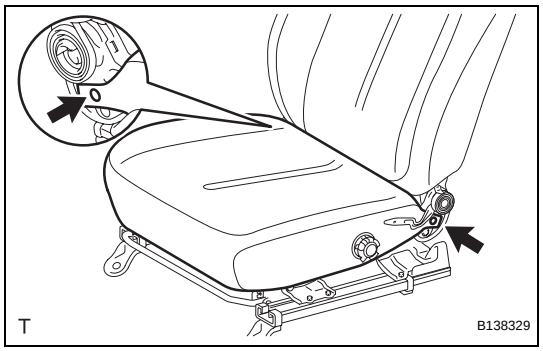
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and the clip and remove the front seat cushion outer shield.



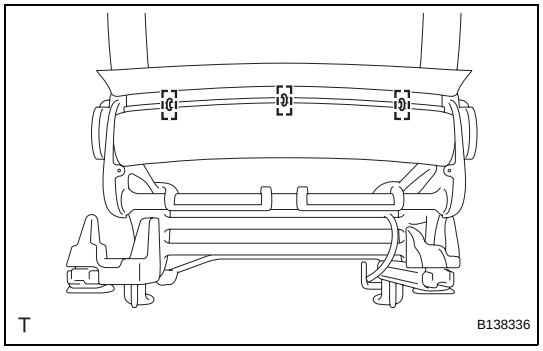
7. REMOVE FRONT SEAT CUSHION COVER PAD

(a) Disengage the 2 claws and 7 hooks.

SE

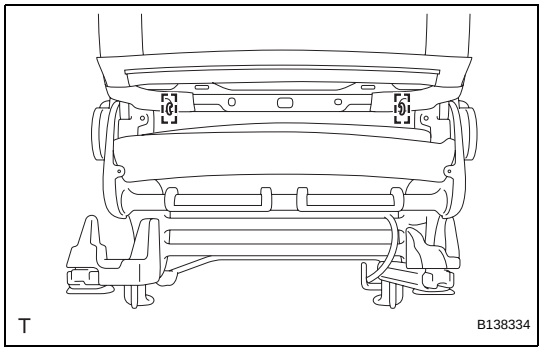


(b) Using a clip remover, remove the 2 clips and the front seat cushion cover pad.

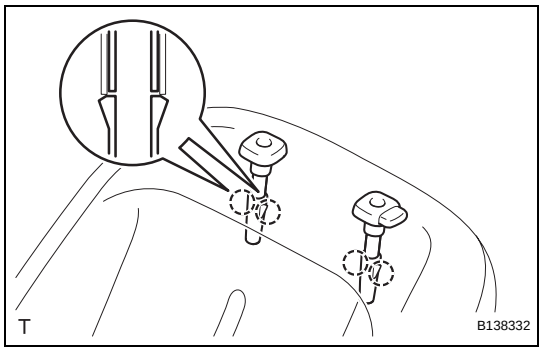


8. REMOVE FRONT SEAT HEADREST SUPPORT

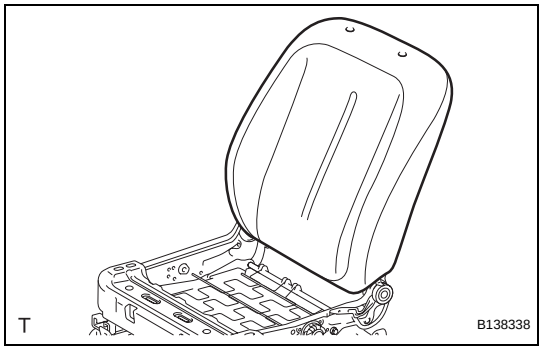
(a) Remove the 3 hog rings.



(b) Remove the 2 hog rings.



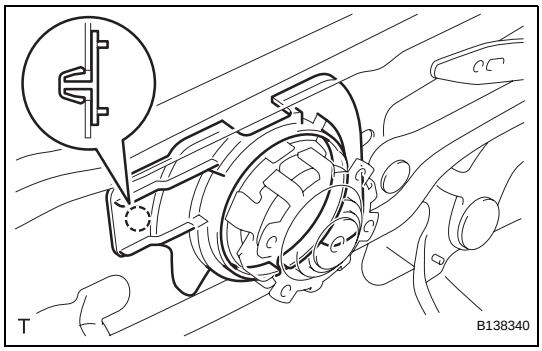
(c) Disengage the 2 claws and remove the front seat headrest support.
HINT:
Use the same procedure for both sides.



9. REMOVE FRONT SEATBACK COVER PAD

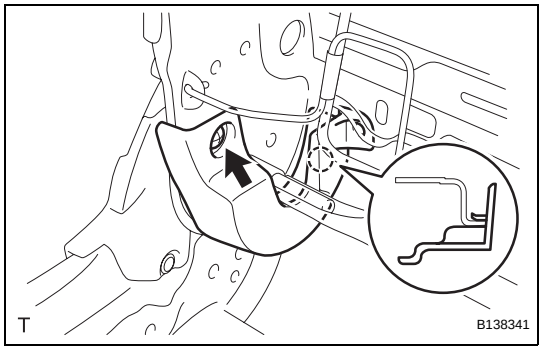
(a) Remove the front seatback cover pad.

SE



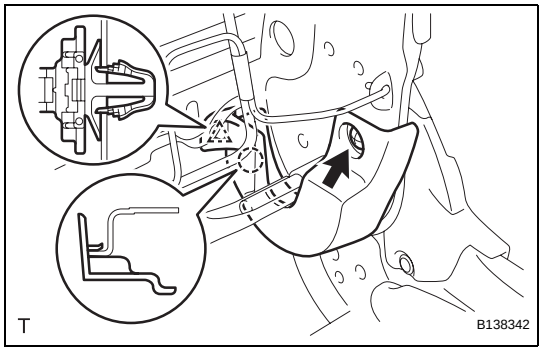
10. REMOVE VERTICAL ADJUSTER SPACER (w/ Vertical Adjuster)

(a) Disengage the claw and remove the vertical adjuster spacer.



11. REMOVE RECLINING ADJUSTER INSIDE COVER RH

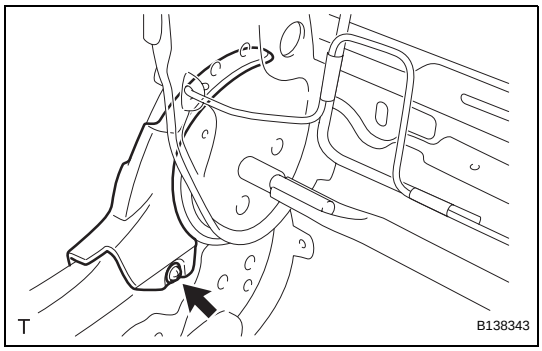
(a) Remove the screw.
(b) Disengage the claw and remove the reclining adjuster inside cover.



12. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) w/ Front Seat Side Airbag:
  (1) Remove the clamp.
(b) Remove the screw.
(c) Disengage the claw and remove the reclining adjuster inside cover.

SE

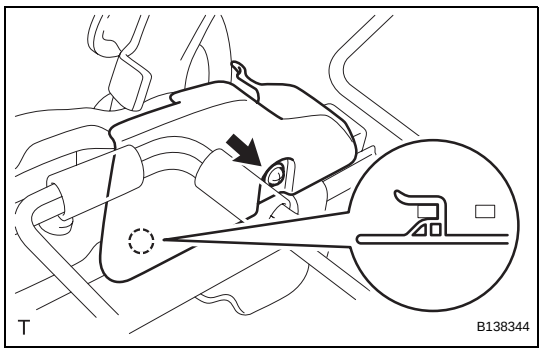


13. REMOVE RECLINING ADJUSTER OUTSIDE COVER RH

(a) Remove the screw and the reclining adjuster outside cover.

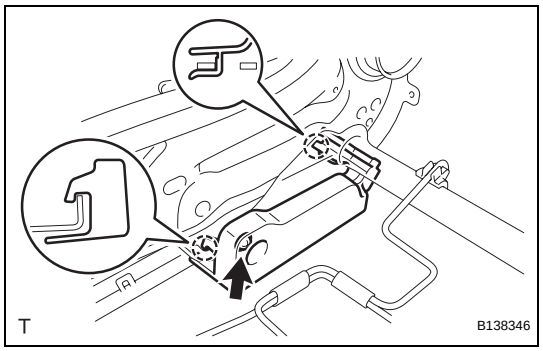
14. REMOVE RECLINING ADJUSTER OUTSIDE COVER LH

HINT:
Use the same procedure as for the RH side.

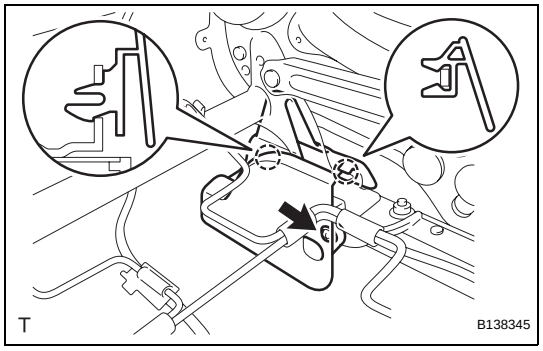


15. REMOVE FRONT SEAT CUSHION LOWER SHIELD RH

(a) w/ Vertical Adjuster:
  (1) Remove the screw.
  (2) Disengage the claw and remove the front seat cushion lower shield.

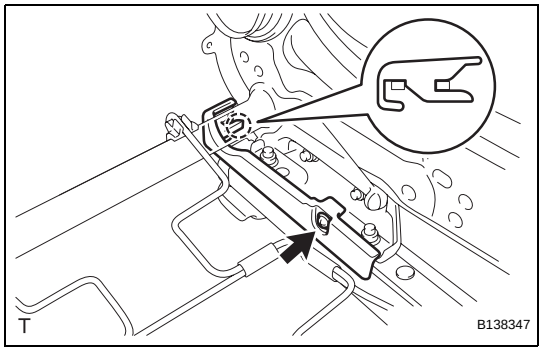


(b) w/o Vertical Adjuster:
(1) Remove the screw.
(2) Disengage the 2 claws and remove the front seat cushion lower shield.

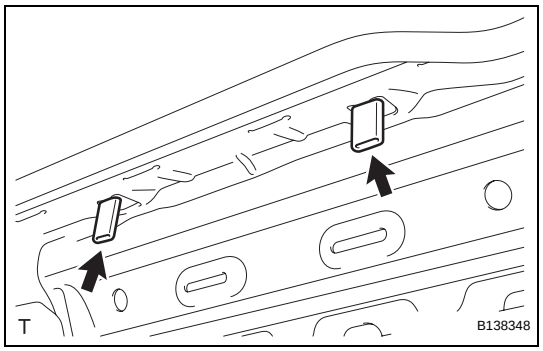


16. REMOVE FRONT SEAT CUSHION LOWER SHIELD LH

(a) w/ Vertical Adjuster:
(1) Remove the screw.
(2) Disengage the 2 claws and remove the front seat cushion lower shield.

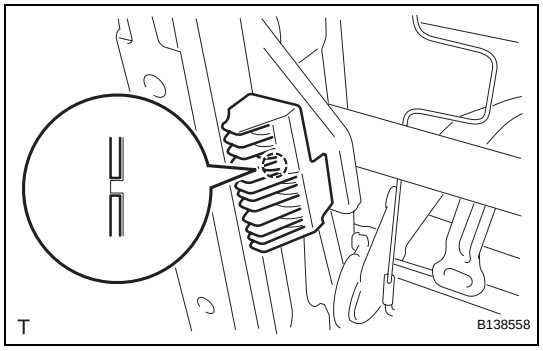


(b) w/o Vertical Adjuster:
(1) Remove the screw.
(2) Disengage the claw and remove the front seat cushion lower shield.



17. REMOVE FRONT SEAT CUSHION PROTECTOR

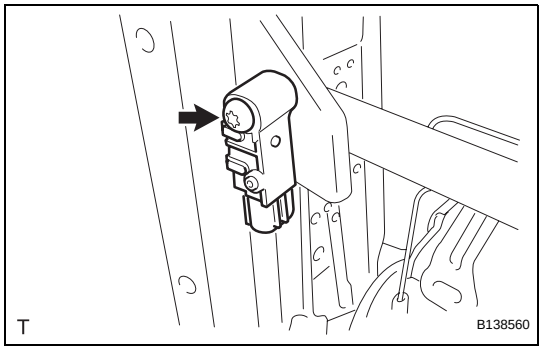
(a) Remove the 2 front seat cushion protectors.



18. REMOVE SEAT POSITION SENSOR PROTECTOR (for Driver Side)

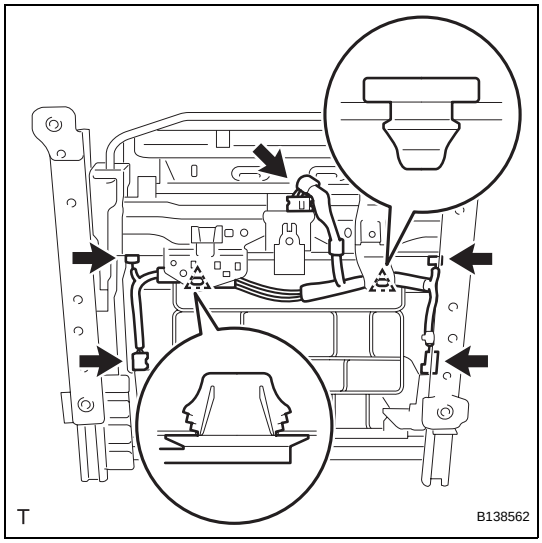
(a) Disengage the pin and remove the seat position sensor protector.

SE



19. REMOVE SEAT POSITION SENSOR (for Driver Side)

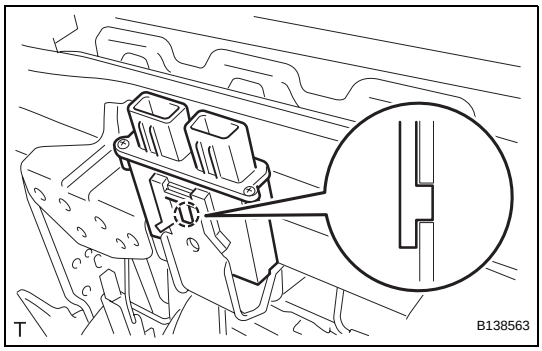
(a) Using "Torx" socket wrench T30, remove the bolt and the seat position sensor.



20. REMOVE FRONT SEAT WIRE (for Front Passenger Side)

(a) Disconnect the 5 connectors.

(b) Remove the 2 clamps and the front seat wire



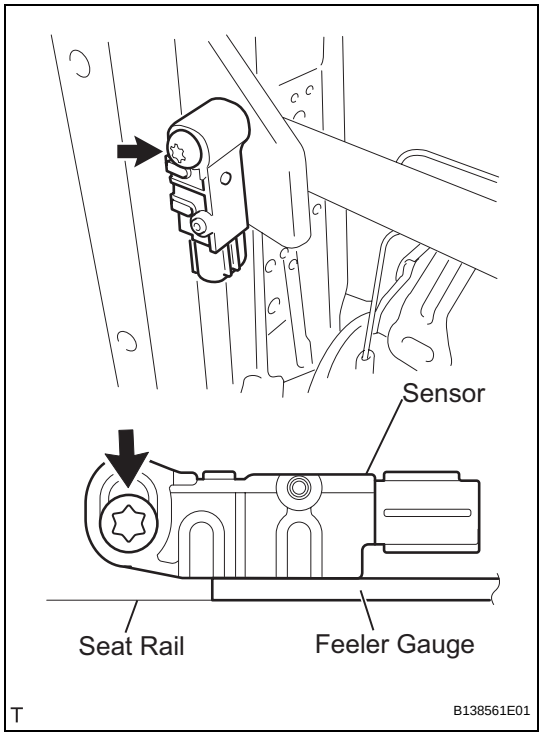
21. REMOVE OCCUPANT DETECTION ECU (for Front Passenger Side)

(a) Disengage the claw and remove the occupant detection ECU.

SE

REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat adjuster frame could cause injuries to your hands.
HINT:
The procedure described below is for the driver side of LHD. Use the same procedure for both the front passenger and driver sides of LHD, unless otherwise specified.



1. INSTALL SEAT POSITION SENSOR (for Driver Side)

(a) Provisionally install the seat position sensor.
NOTICE:
- **If the seat position sensor has been damaged, or there are any cracks, dents or other defects in the case, bracket or connector, replace the seat position sensor with a new one.**
- **When installing the seat position sensor, make sure that the SRS warning does not interfere with other parts and is not pinched between other parts.**

(b) Install a 1 mm (0.04 in.) feeler gauge between the seat rail and seat position sensor, as shown in the illustration.
HINT:
Make sure that the clearance between the seat position sensor and seat rail is within 0.6 to 2 mm (0.023 to 0.079 in.).

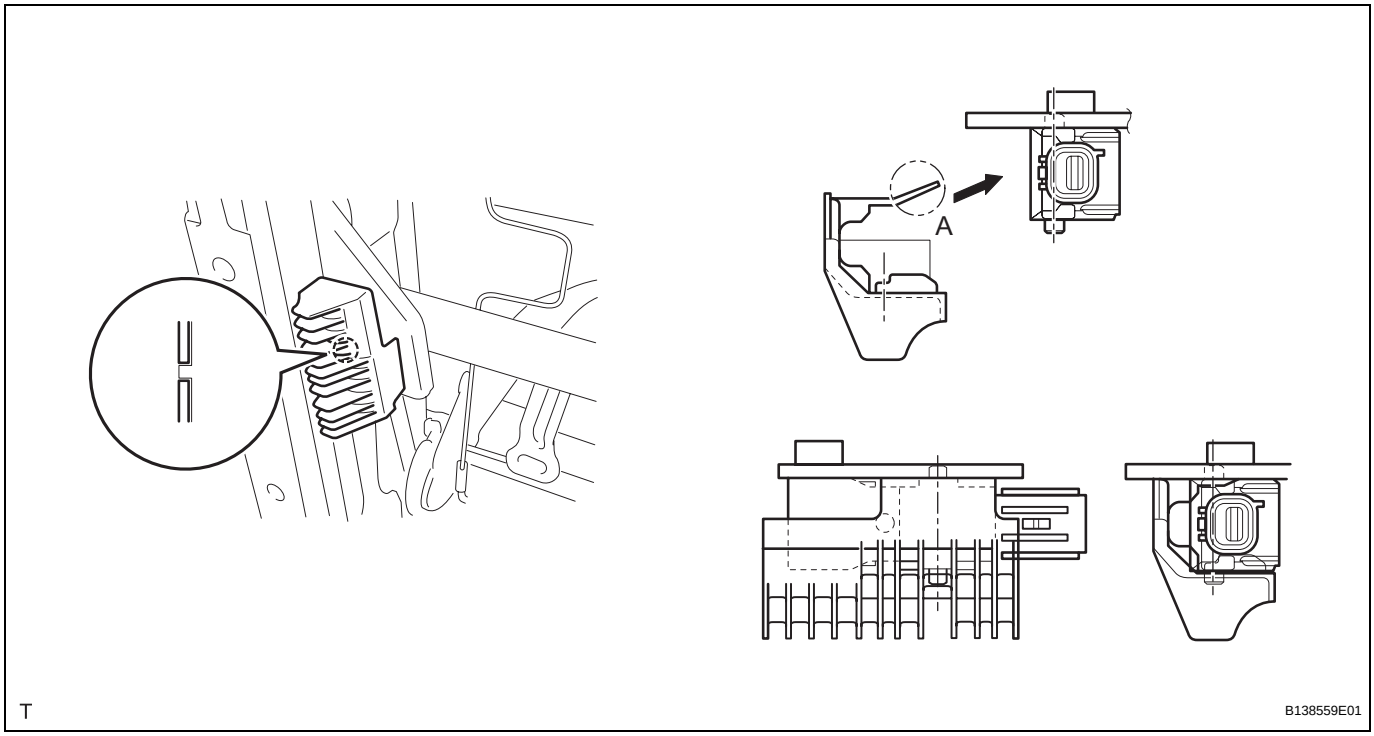
(c) Push the top of the seat position sensor toward the seat rail.

(d) While holding the seat position sensor, tighten the bolt using "Torx" socket wrench T30.
Torque: 8.0 N*m (80 kgf*cm, 71 in.*lbf)

SE

2. INSTALL SEAT POSITION SENSOR PROTECTOR (for Driver Side)

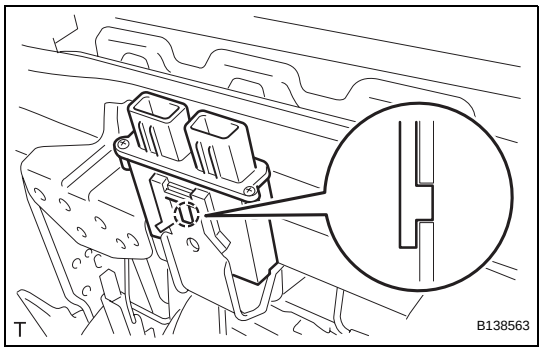
(a) Engage the pin and install a new seat position sensor protector.



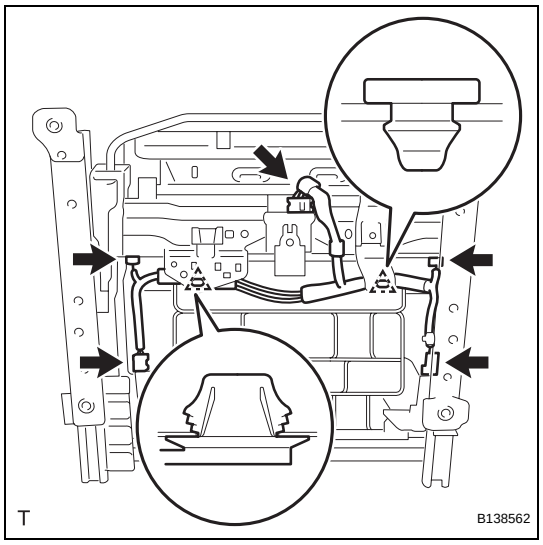
NOTICE:
Do not damage portion A, shown in the illustration, when installing the seat position sensor protector.

3. INSTALL OCCUPANT DETECTION ECU (for Front Passenger Side)

(a) Engage the claw and install the occupant detection ECU.



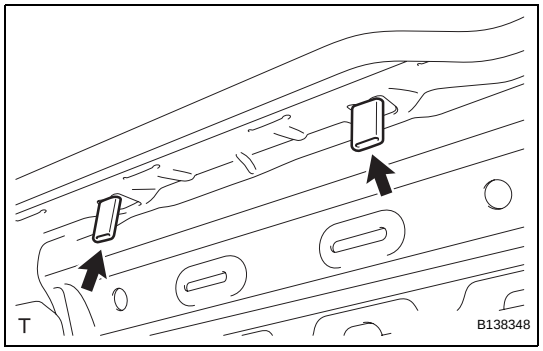
SE



4. INSTALL FRONT SEAT WIRE

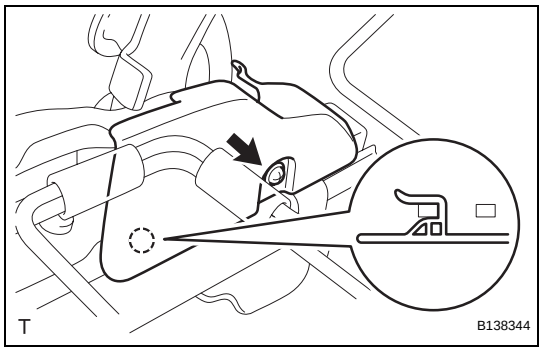
(a) Install the front seat wire with the 2 clamps.

(b) Connect the 5 connectors.



5. INSTALL FRONT SEAT CUSHION PROTECTOR

(a) Install the 2 front seat cushion protectors.

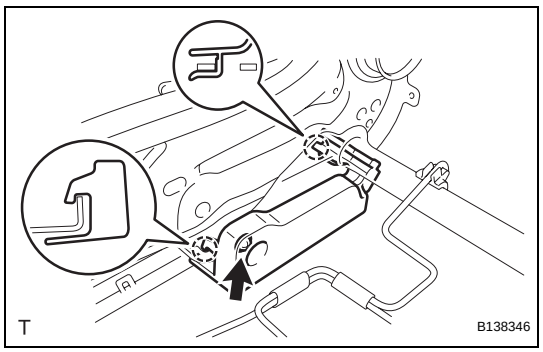


6. INSTALL FRONT SEAT CUSHION LOWER SHIELD RH

(a) w/ Vertical Adjuster:

(1) Engage the claw and install the front seat cushion lower shield.

(2) Tighten the screw.

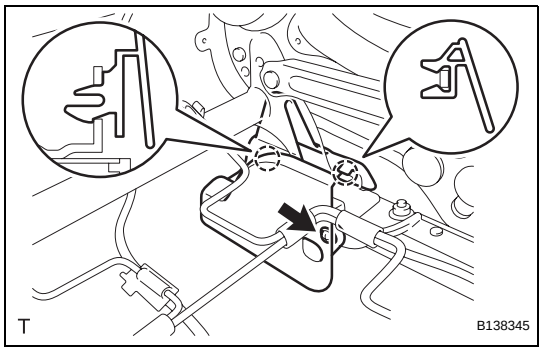


(b) w/o Vertical Adjuster:

(1) Engage the 2 claws and install the front seat cushion lower shield.

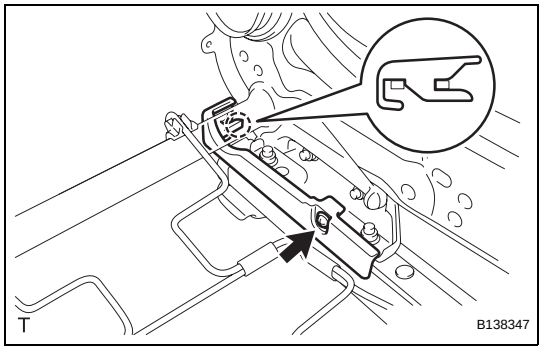
(2) Tighten the screw.

SE

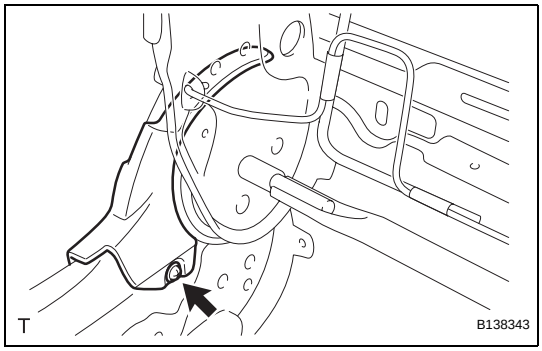


7. INSTALL FRONT SEAT CUSHION LOWER SHIELD LH

(a) w/ Vertical Adjuster:
  (1) Engage the 2 claws and install the front seat cushion lower shield.
  (2) Tighten the screw.



(b) w/o Vertical Adjuster:
  (1) Engage the claw and install the front seat cushion lower shield.
  (2) Tighten the screw.



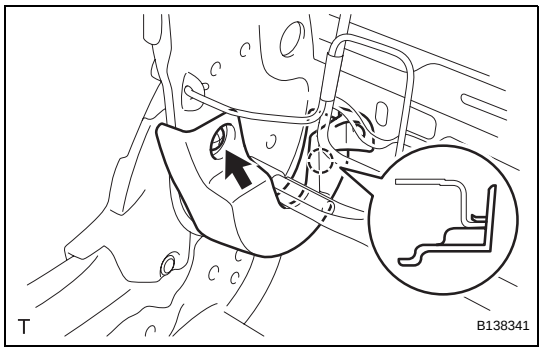
8. INSTALL RECLINING ADJUSTER OUTSIDE COVER RH

(a) Install the reclining adjuster outside cover with the screw.

9. INSTALL RECLINING ADJUSTER OUTSIDE COVER LH

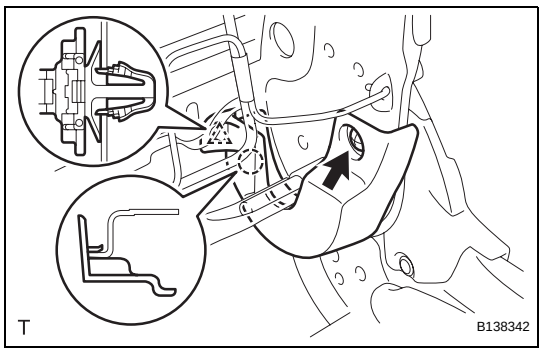
HINT:
Use the same procedure as for the RH side.

SE



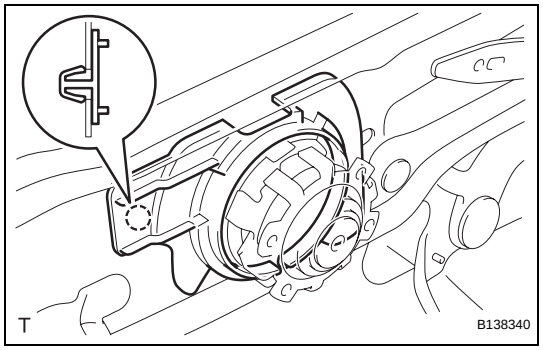
10. INSTALL RECLINING ADJUSTER INSIDE COVER RH

(a) Engage the claw and install the reclining adjuster inside cover.
(b) Tighten the screw.



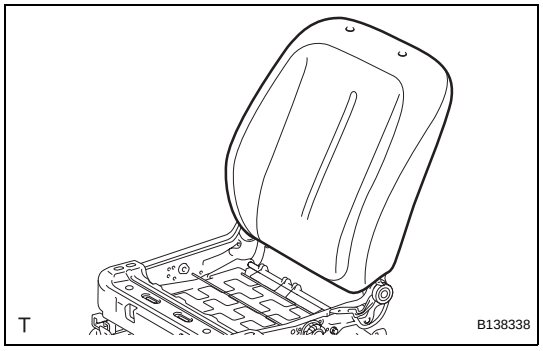
11. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) Engage the claw and install the reclining adjuster inside cover.
(b) Tighten the screw.
(c) w/ Front Seat Side Airbag:
  (1) Install the clamp.



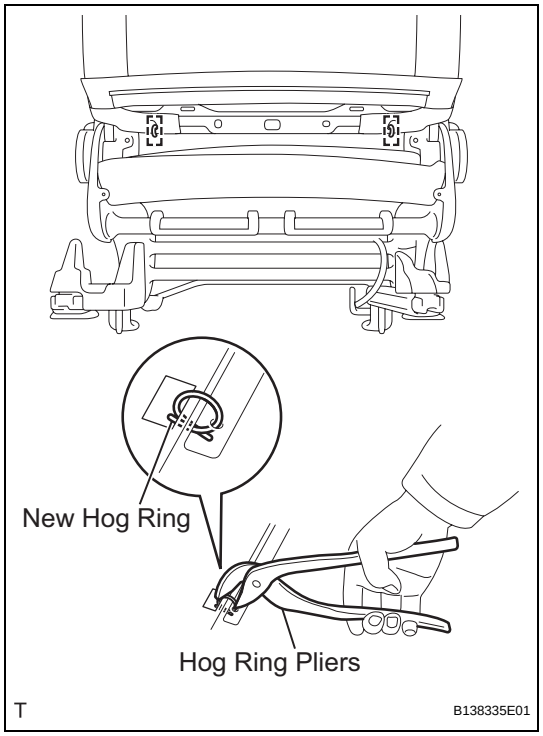
12. INSTALL VERTICAL ADJUSTER SPACER (w/ Vertical Adjuster)

(a) Engage the claw and install the vertical adjuster spacer.



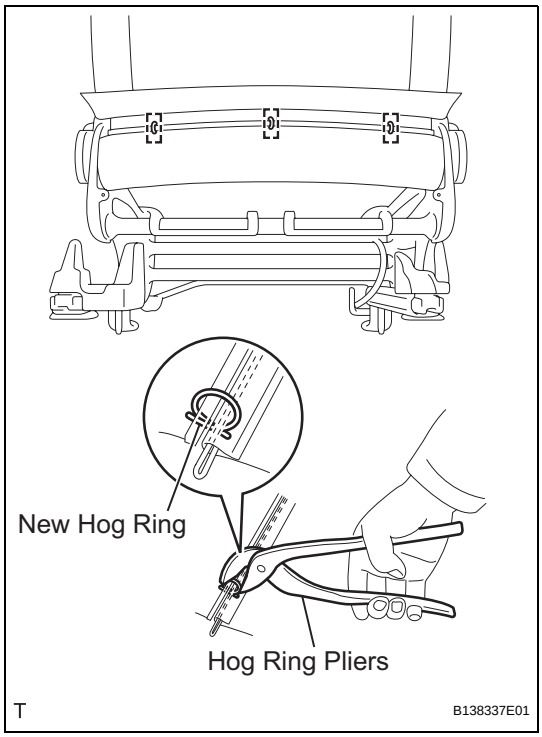
13. INSTALL FRONT SEATBACK COVER PAD

(a) Install the front seatback cover pad.

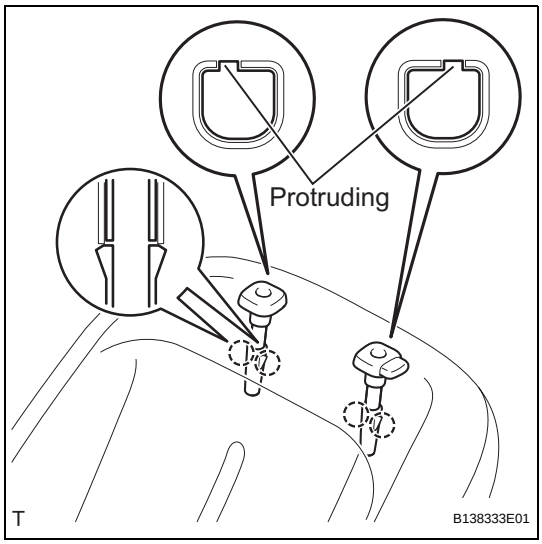


(b) Using hog ring pliers, install 2 new hog rings.

SE



(c) Using hog ring pliers, install 3 new hog rings.



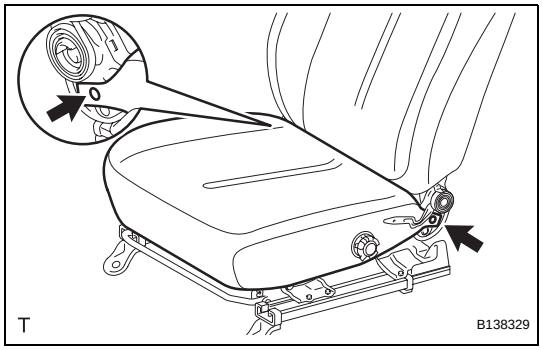
14. INSTALL FRONT SEAT HEADREST SUPPORT

HINT:

Use the same procedure for both sides.

(a) Align the protruding portion of the front seat headrest support with the installation groove of the front seat adjuster frame.

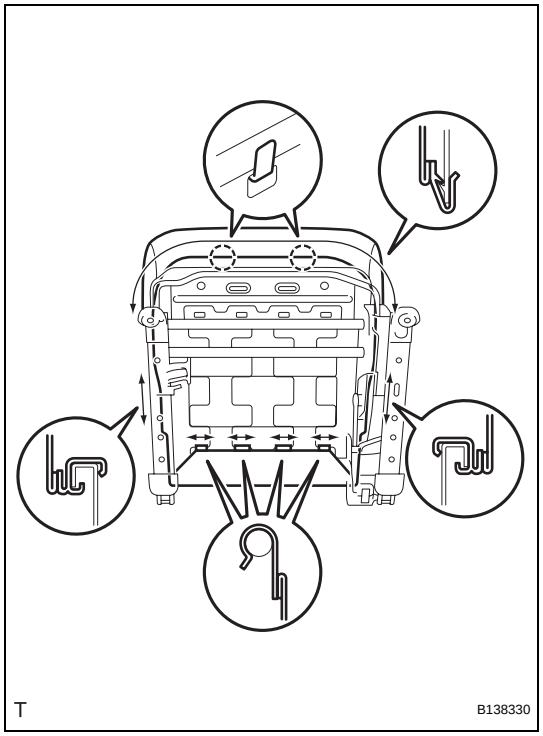
(b) Engage the 2 claws and install the front seat headrest support.



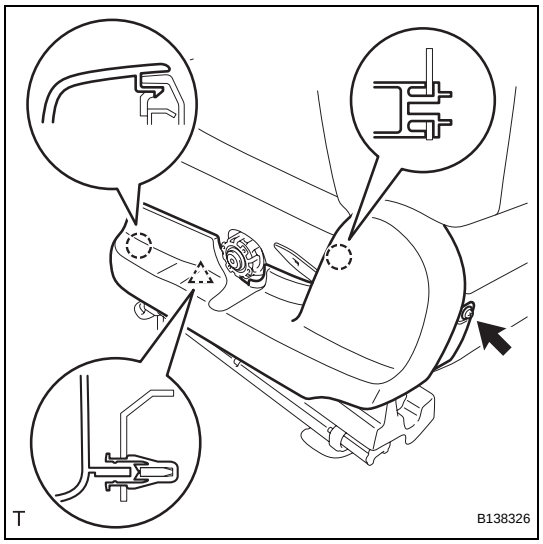
15. INSTALL FRONT SEAT CUSHION COVER PAD

(a) Install the front seat cushion cover pad with the 2 clips.

SE



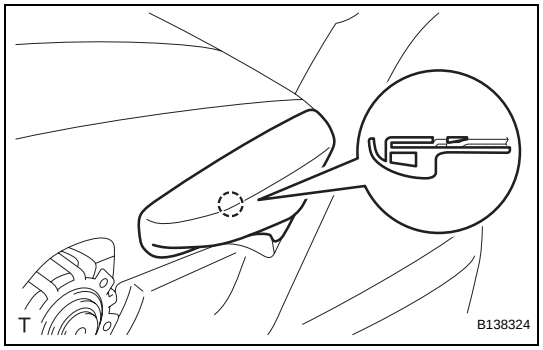
(b) Engage the 2 claws and the 7 hooks.



16. INSTALL FRONT SEAT CUSHION OUTER SHIELD

(a) Engage the 2 claws and the clip and install the front seat cushion outer shield.

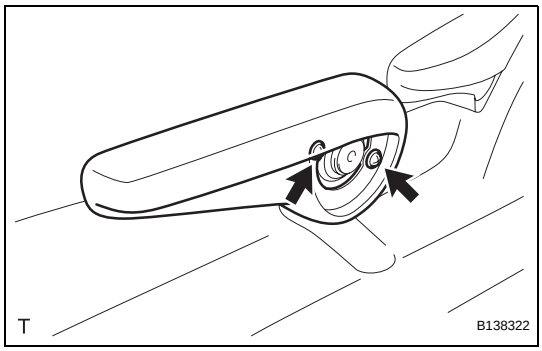
(b) Tighten the screw.



17. INSTALL RECLINING ADJUSTER RELEASE HANDLE

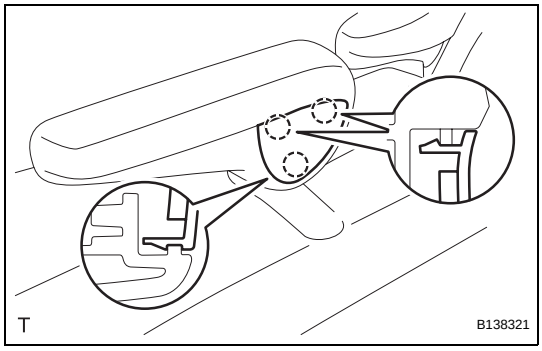
(a) Engage the claw and install the reclining adjuster release handle.

SE



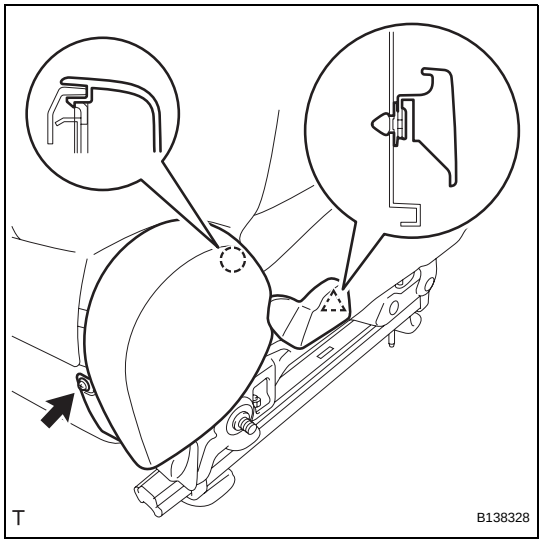
18. INSTALL VERTICAL ADJUSTER KNOB (w/ Vertical Adjuster)

(a) Install the vertical seat adjuster knob.



19. INSTALL VERTICAL ADJUSTER COVER (w/ Vertical Adjuster)

(a) Engage the 3 claws and install the vertical adjuster cover.



20. INSTALL FRONT SEAT CUSHION INNER SHIELD

(a) Engage the claw and the clip and install the front seat cushion inner shield.

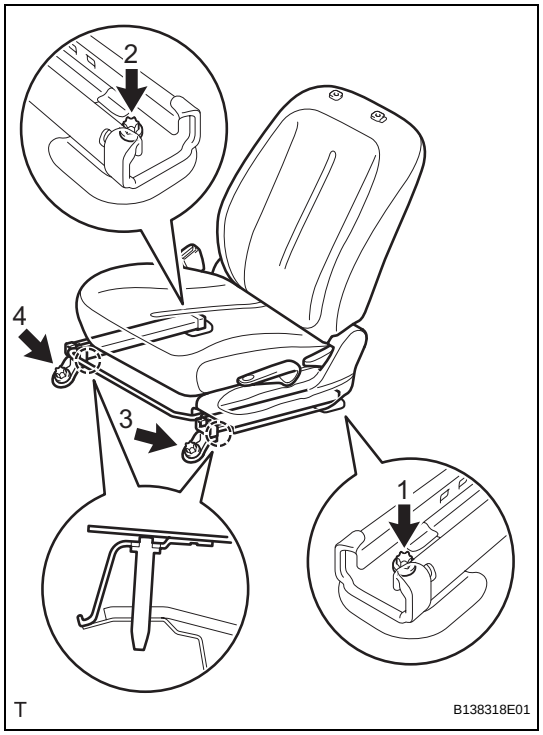
(b) Tighten the screw.

21. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-35)

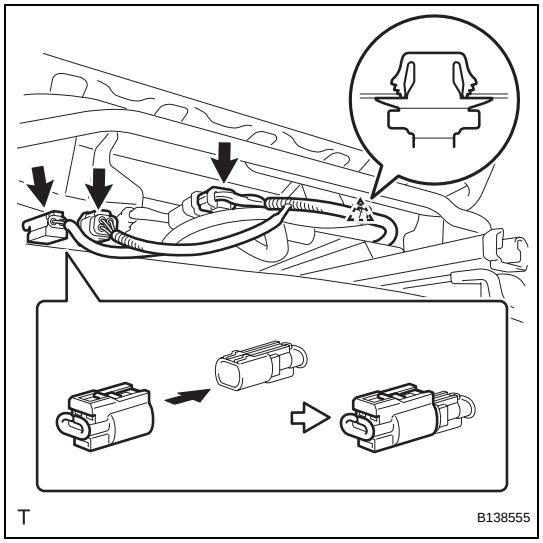
SE

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

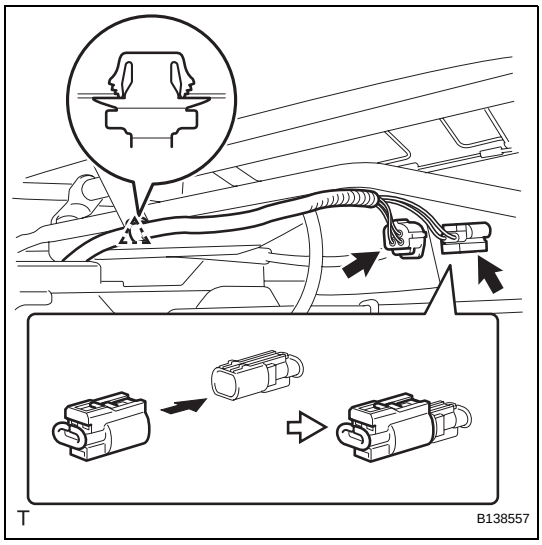


1. INSTALL FRONT SEAT ASSEMBLY
NOTICE:
Follow the procedure described below in order to prevent the seat tracks from locking separately.
(a) Insert the 2 locating pins through the 2 body holes, place the front seat in the most forward position, and then make sure that the inner and outer seat tracks are locked securely.
(b) Using "Torx" socket wrench E10, tighten bolt 1 and then bolt 2 on the rear side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)
(c) Move the front seat to the most rearward position, and then make sure that the inner and outer seat tracks are locked securely.
(d) Using "Torx" socket wrench E10, tighten bolt 3 and then bolt 4 on the front side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)
HINT:
If the inner and outer seat tracks do not lock simultaneously, loosen the bolts and adjust the seat tracks.

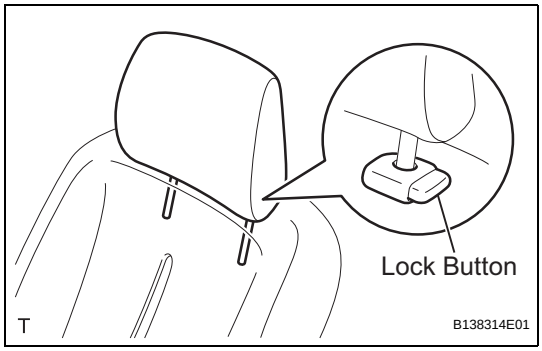


(e) for Driver Side:
(1) w/ Front Seat Side Airbag:
1. Connect the airbag connector.
(2) Connect the buckle switch connector.
(3) Install the clamp.

SE



(f) for Front Passenger Side:
  (1) w/ Front Seat Side Airbag:
    1. Connect the airbag connector.
  (2) Connect the buckle switch connector.
  (3) Connect the occupant detection ECU connector.
  (4) Install the clamp.



2. INSTALL FRONT SEAT HEADREST ASSEMBLY

(a) Push in the lock button of the front seat headrest support and install the front seat headrest.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

4. INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)

(See page RS-31)

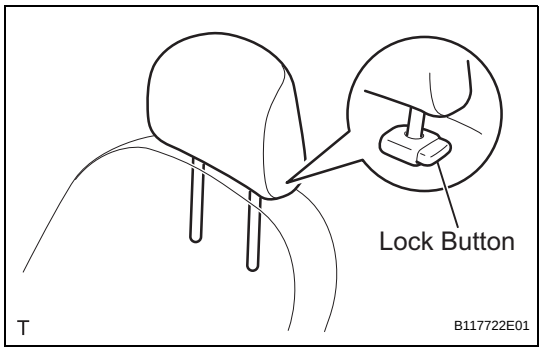
REMOVAL

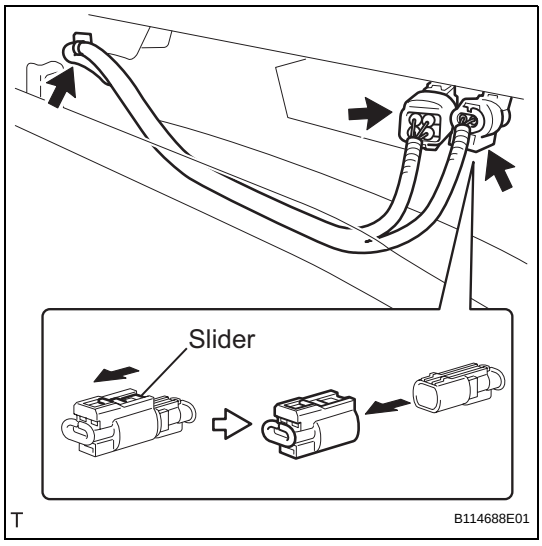
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
CAUTION:
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).

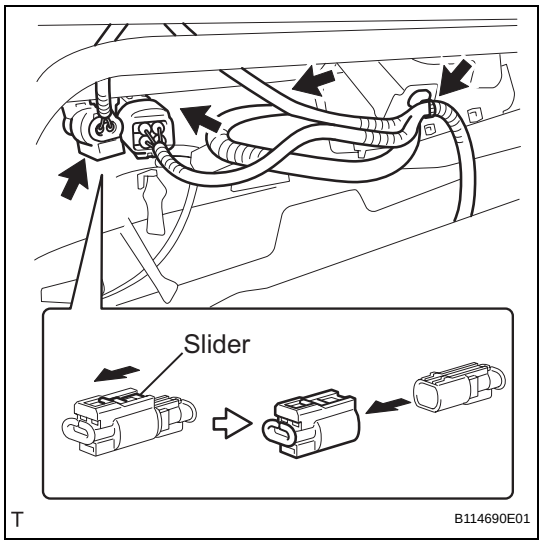
2. REMOVE FRONT SEAT HEADREST ASSEMBLY
(a) Push in the lock buttons of the front seat headrest support and remove the front seat headrest.



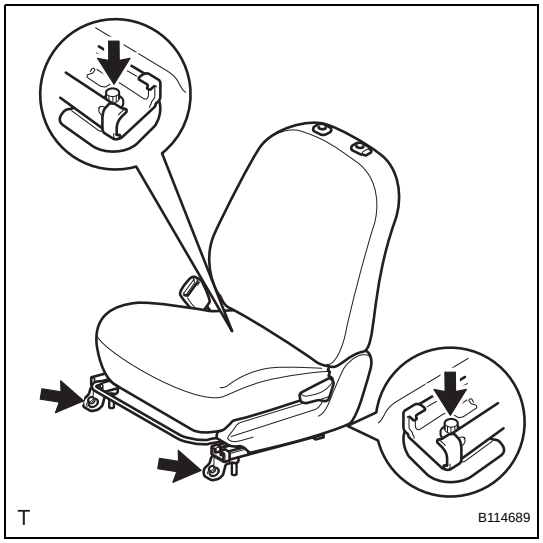
SE



3. REMOVE FRONT SEAT ASSEMBLY
(a) for Driver Side:
(1) Disconnect the buckle switch connector.
(2) w/ Front Seat Side Airbag:
1. Slide the slider and disconnect the airbag connector.
(3) Using a clip remover, remove the clamp.



(b) for Front Passenger Seat:
  (1) Disconnect the buckle switch connector.
  (2) w/ Front Seat Side Airbag:
    1. Slide the slider and disconnect the airbag connector.
  (3) Disconnect the occupant classification ECU connector.
  (4) Using a clip remover, remove the clamp.

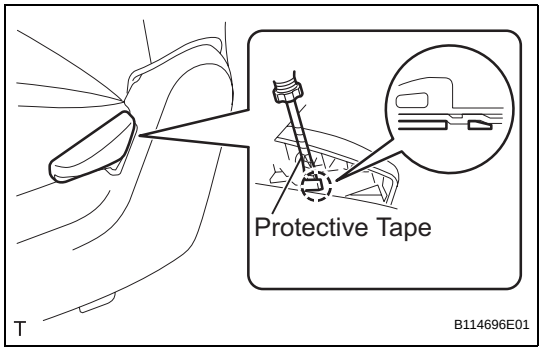


(c) Using "Torx" socket wrench E10, remove the 4 bolts and the front seat.

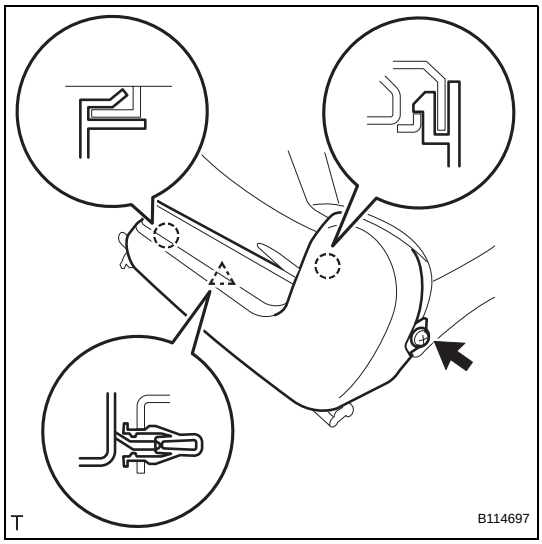
SE

DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat adjuster frame could cause injuries to your hands.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

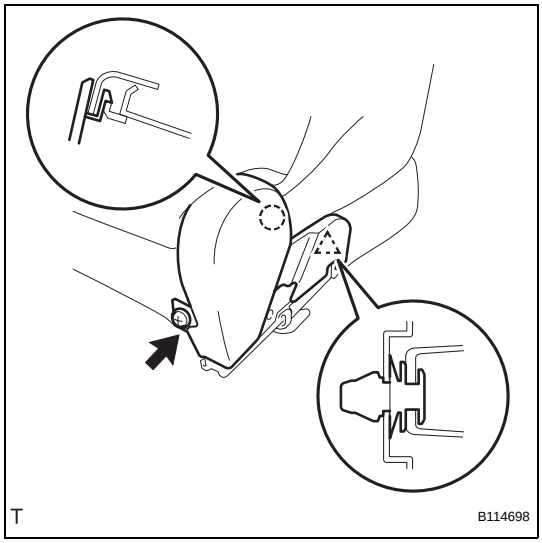


1. REMOVE RECLINING ADJUSTER RELEASE HANDLE
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the reclining adjuster release handle.



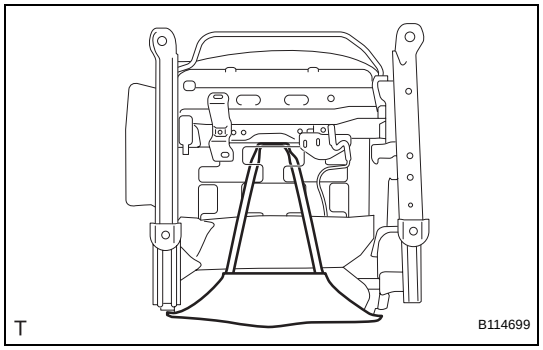
2. REMOVE FRONT SEAT CUSHION SHIELD LH
(a) Remove the screw.
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and clip, and remove the front seat cushion shield.

3. REMOVE FRONT SEAT INNER BELT ASSEMBLY
(See page SB-39)



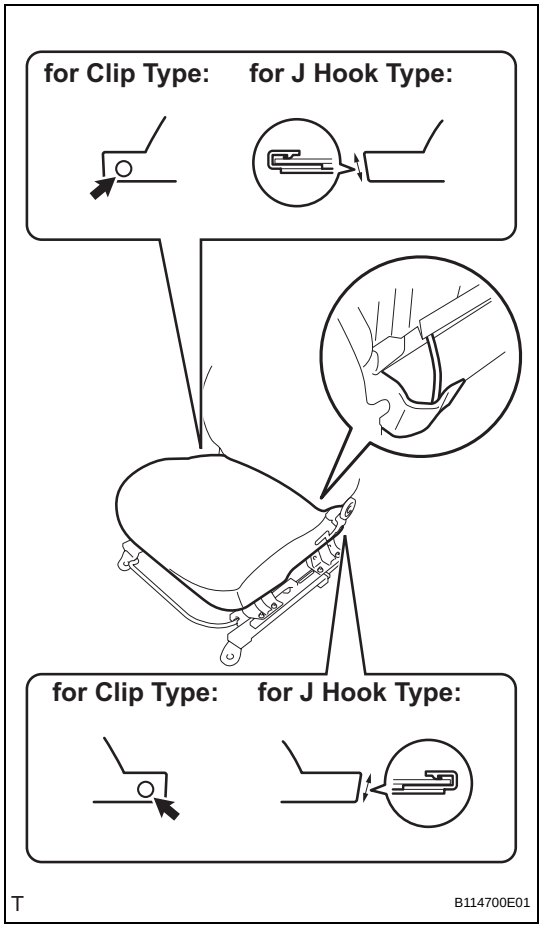
4. REMOVE FRONT SEAT CUSHION SHIELD RH
(a) Remove the screw.
(b) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and clip, and remove the front seat cushion shield.

SE



5. REMOVE FRONT SEAT CUSHION COVER PAD

(a) Remove the front seatback cover band.

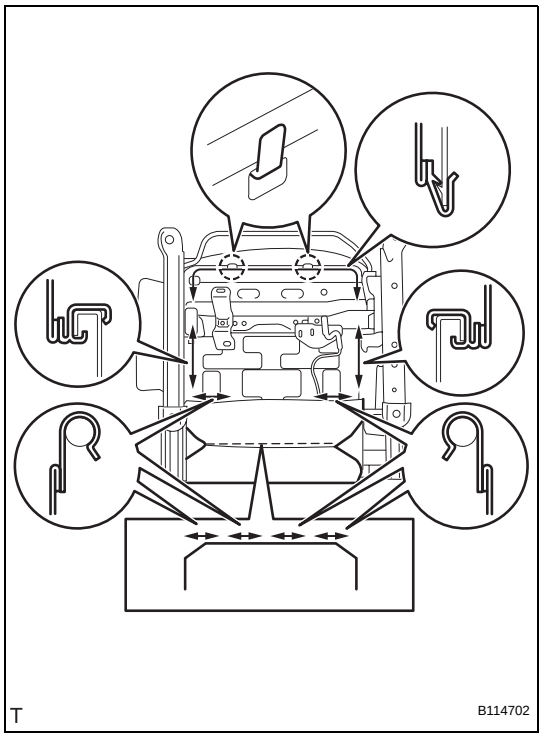


(b) for Clip Type:
  (1) Using a clip remover, remove the 2 clips.

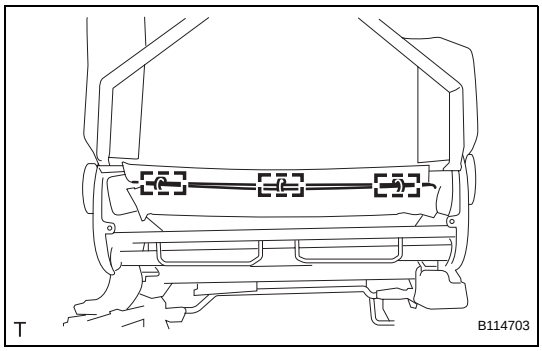
(c) for J Hook Type:
  (1) Disengage the 2 hooks.

(d) w/ Front Seat Side Airbag:
  (1) Remove the hook tape from the front seat cushion cover pad fixing cover.

SE

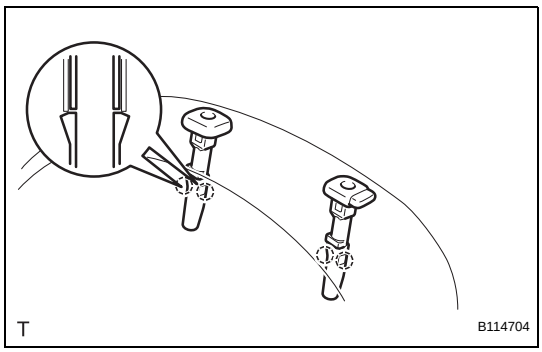


(e) Disengage the 2 claws and 9 hooks, and remove the front seat cushion cover pad.

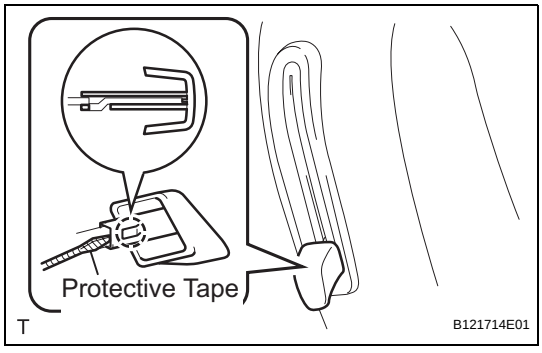


6. REMOVE FRONT SEAT HEADREST SUPPORT

(a) Remove the 3 hog rings shown in the illustration.

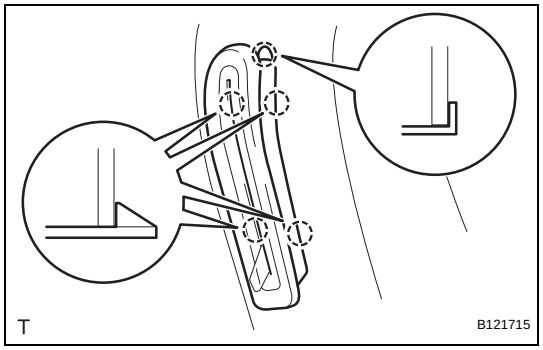


(b) Disengage the 2 claws and remove the front seat headrest support.
HINT:
Use the same procedure for both sides.



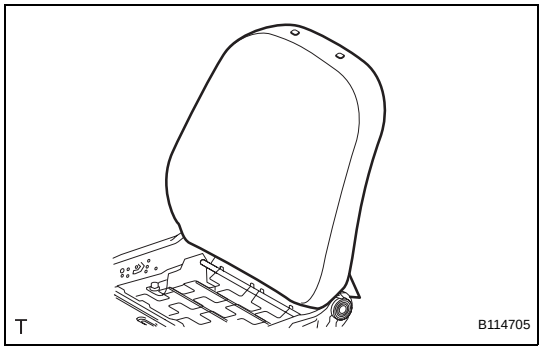
7. REMOVE RECLINING REMOTE CONTROL LEVER (for Walk in Seat Type)

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the reclining adjuster release handle.



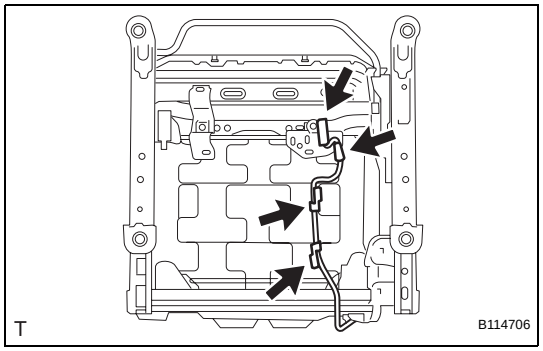
8. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL (for Walk in Seat Type)

(a) Disengage the 5 claws and remove the reclining remote control lever bezel.



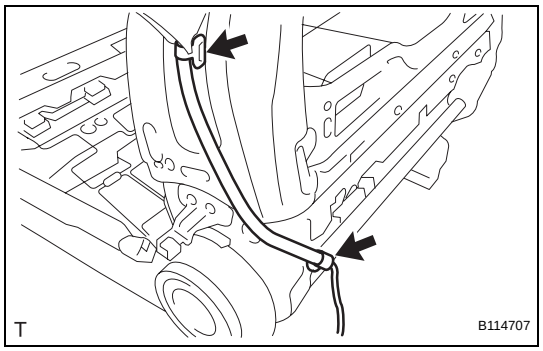
9. REMOVE FRONT SEATBACK COVER PAD

(a) Remove the front seatback cover pad.

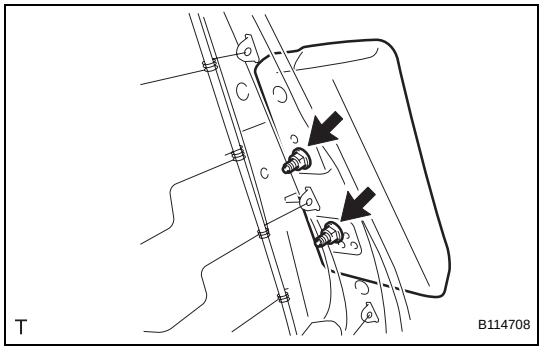


10. REMOVE FRONT SEAT SIDE AIRBAG ASSEMBLY (w/ Front Seat Side Airbag)

(a) Remove the airbag connector and the 3 clamps.

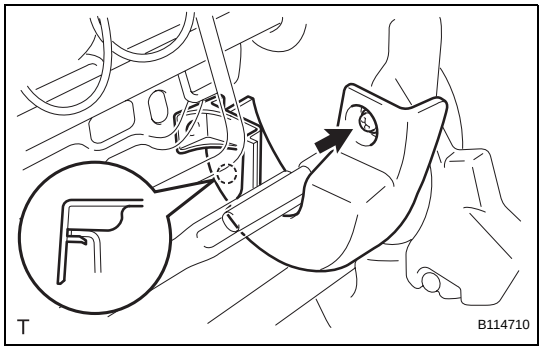


(b) Using a clip remover, remove the 2 clamps.



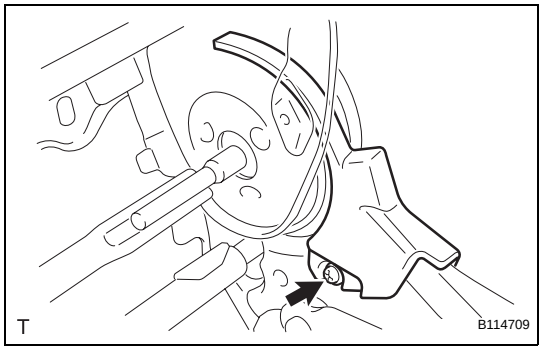
(c) Remove the 2 nuts and the front seat side airbag.

SE



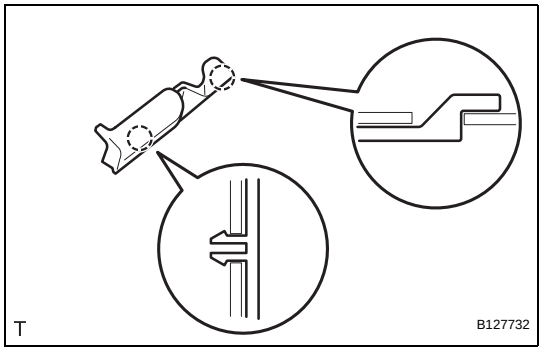
11. REMOVE RECLINING ADJUSTER INSIDE COVER LH
(a) Remove the screw.
(b) Disengage the claw and remove the reclining adjuster inside cover.

12. REMOVE RECLINING ADJUSTER INSIDE COVER RH
HINT:
Use the same procedure as for the LH side.



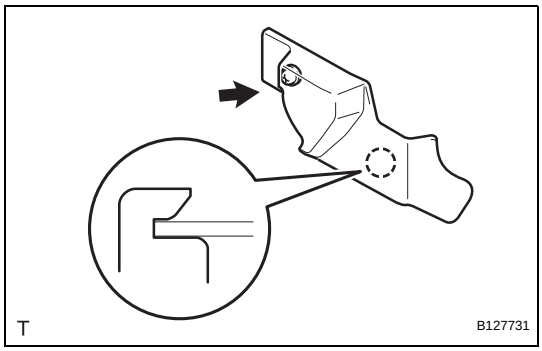
13. REMOVE RECLINING ADJUSTER OUTSIDE COVER LH
(a) Remove the screw and the reclining adjuster outside cover.

14. REMOVE RECLINING ADJUSTER OUTSIDE COVER RH
HINT:
Use the same procedure as for the LH side.

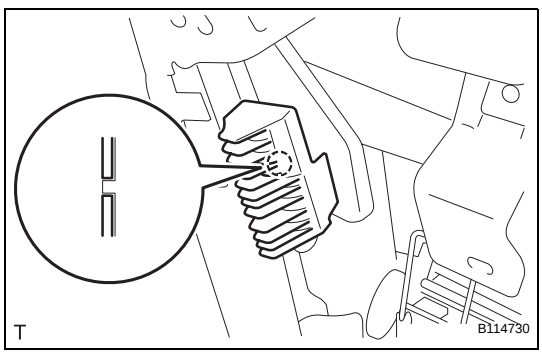


15. REMOVE FRONT SEAT CUSHION LOWER SHIELD LH
(a) Disengage the 2 claws and remove the front seat cushion lower shield.

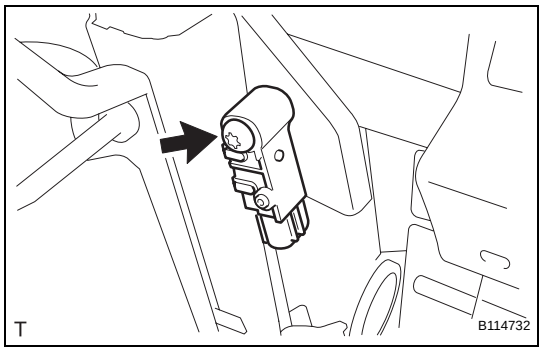
SE



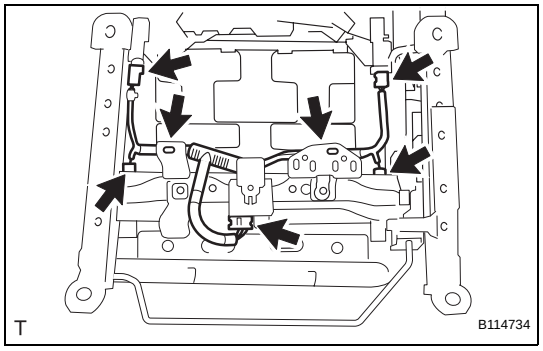
16. REMOVE FRONT SEAT CUSHION LOWER SHIELD RH
(a) Remove the screw.
(b) Disengage the claw and remove the front seat cushion lower shield.



17. REMOVE SEAT POSITION SENSOR (for Driver Side)
(a) Disengage the pin and remove the seat position sensor protector.

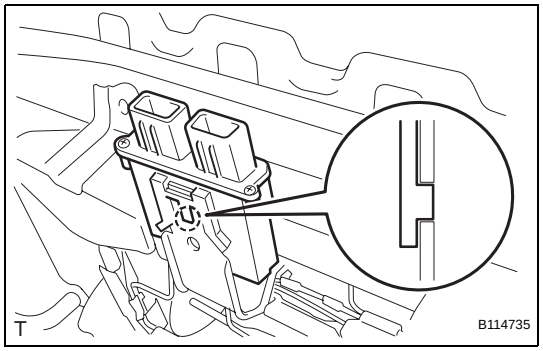


(b) Using "Torx" socket wrench T30, remove the bolt and the seat position sensor.



18. REMOVE FRONT SEAT WIRE (for Front Passenger Side)

(a) Disconnect the 5 connectors.
(b) Remove the 2 clamps and the front seat wire.



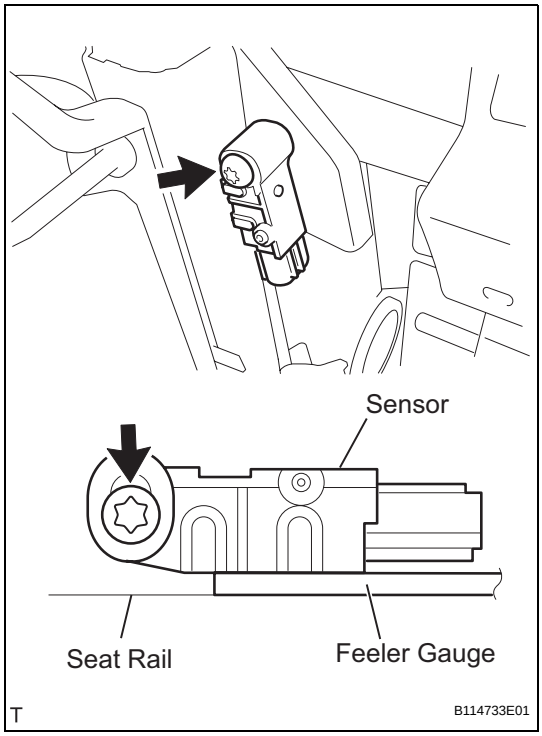
19. REMOVE OCCUPANT CLASSIFICATION ECU (for Front Passenger Side)

(a) Disengage the claw and remove the occupant classification ECU.

SE

REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the front seat adjuster frame could cause injuries to your hands.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.



1. INSTALL SEAT POSITION SENSOR (for Driver Side)

(a) Provisionally install the seat position sensor.
NOTICE:
- **If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the seat position sensor with a new one.**
- **When installing the seat position sensor, make sure that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

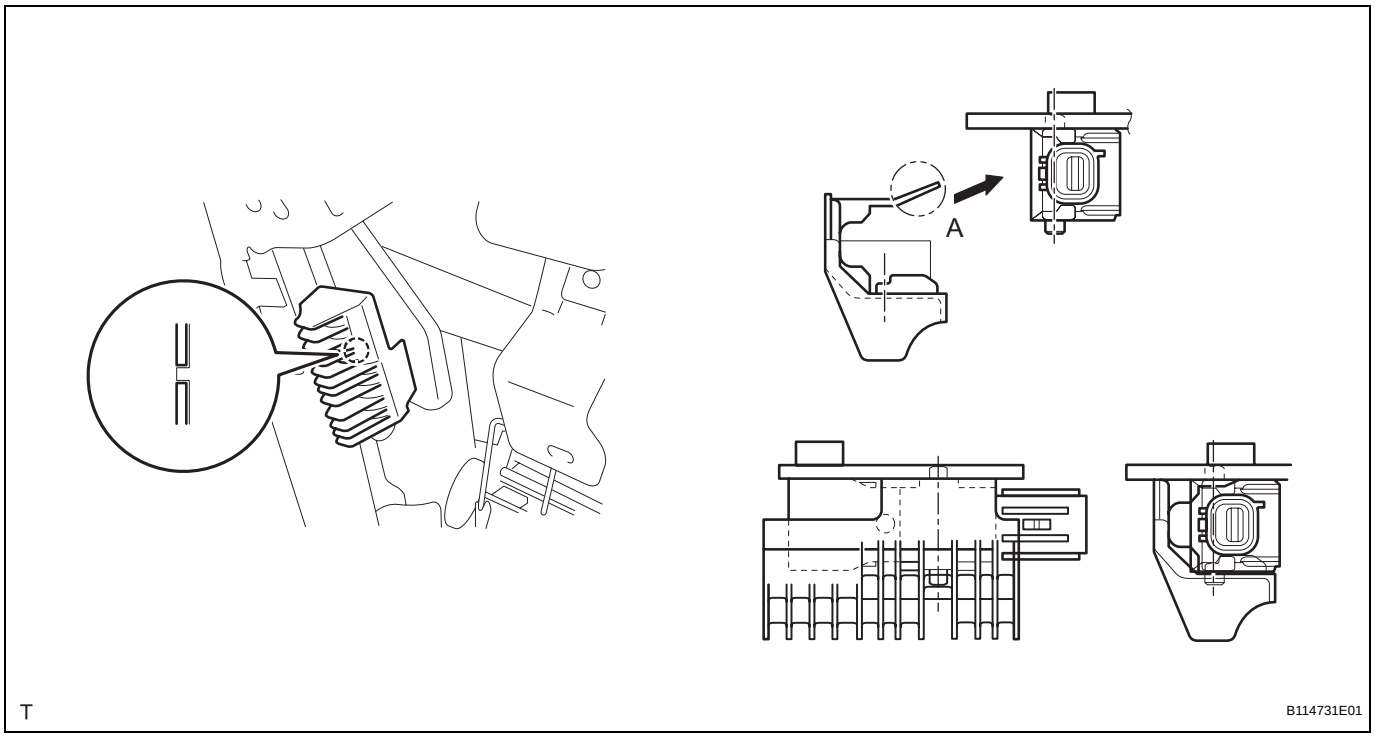
(b) Install a 1 mm (0.04 in.) feeler gauge between the seat rail and seat position sensor, as shown in the illustration.
HINT:
Make sure that the clearance between the seat position sensor and seat rail is within 0.6 to 2 mm (0.023 to 0.079 in.).

(c) Push the top of the seat position sensor toward the seat rail.

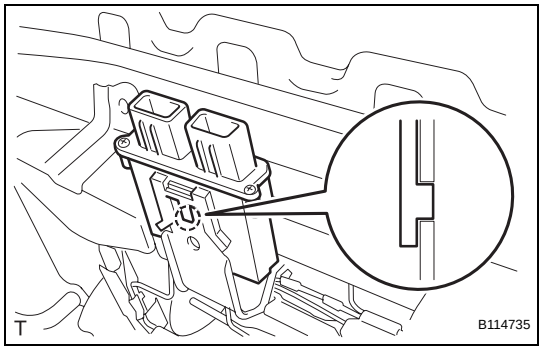
(d) While holding the seat position sensor, tighten the seat position sensor using "Torx" socket wrench T30.
Torque: 8.0 N*m (70 kgf*cm, 71 in.*lbf)

SE

(e) Engage the pin and install a new seat position sensor protector.

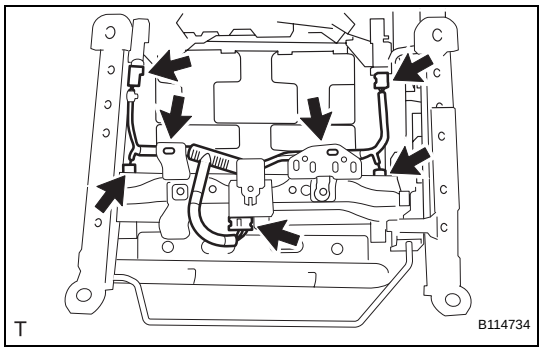


NOTICE:
Do not damage portion A, shown in the illustration, when installing the seat position sensor protector.



2. INSTALL OCCUPANT CLASSIFICATION ECU (for Front Passenger Side)

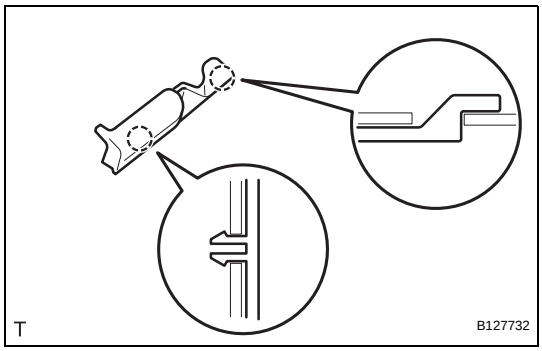
(a) Engage the claw and install the occupant classification ECU.



3. INSTALL FRONT SEAT WIRE (for Front Passenger Side)

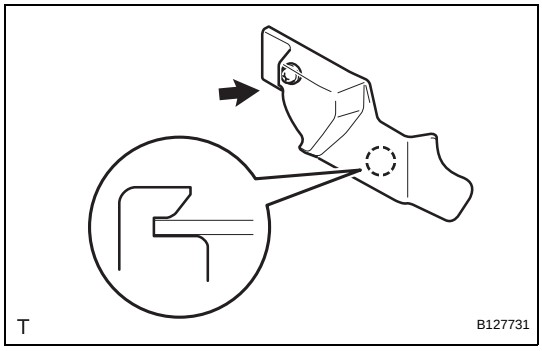
(a) Install the front seat wire with the 2 clamps.
(b) Connect the 5 connectors.

SE



4. INSTALL FRONT SEAT CUSHION LOWER SHIELD LH

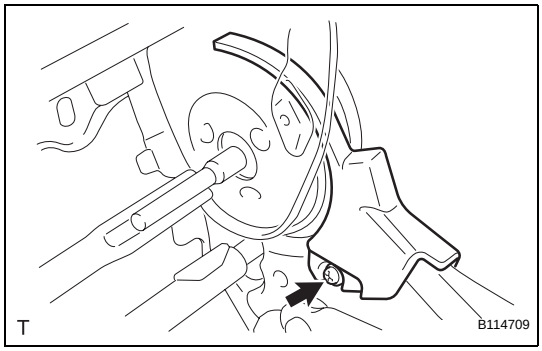
(a) Engage the 2 claws and install the front seat cushion lower shield.



5. INSTALL FRONT SEAT CUSHION LOWER SHIELD RH

(a) Engage the claw and install the front seat cushion lower shield.

(b) Tighten the screw.



6. INSTALL RECLINING ADJUSTER OUTSIDE COVER LH

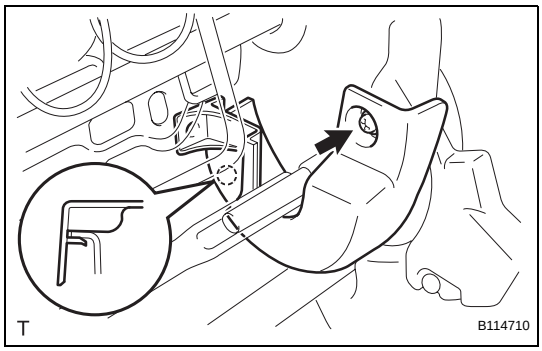
(a) Install the reclining adjuster outside cover with the screw.

7. INSTALL RECLINING ADJUSTER OUTSIDE COVER RH

HINT:

Use the same procedure as for the LH side.

SE



8. INSTALL RECLINING ADJUSTER INSIDE COVER LH

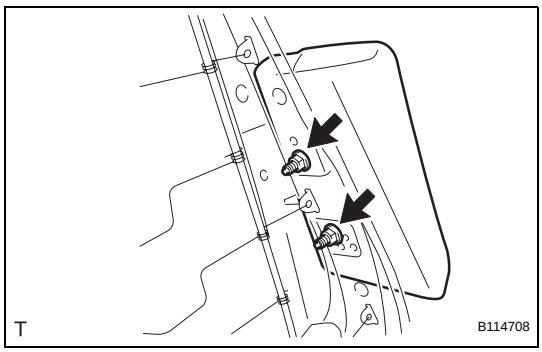
(a) Engage the claw and install the reclining adjuster inside cover.

(b) Tighten the screw.

9. INSTALL RECLINING ADJUSTER INSIDE COVER RH

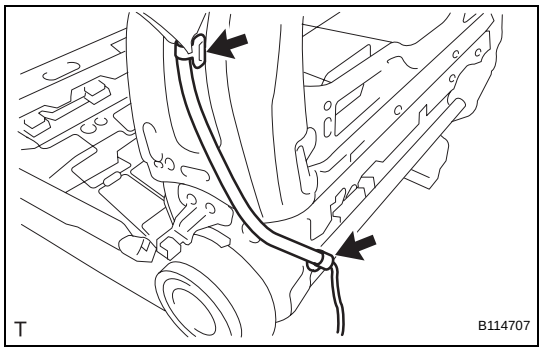
HINT:

Use the same procedure as for the LH side.

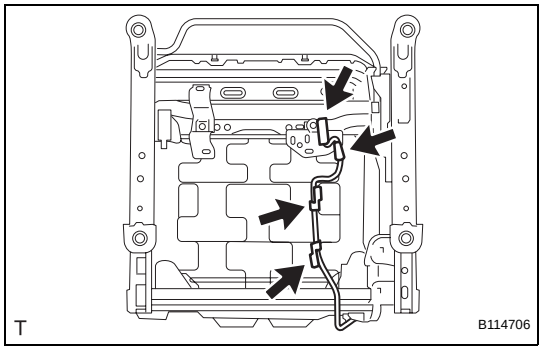


10. INSTALL FRONT SEAT SIDE AIRBAG ASSEMBLY (w/ Front Seat Side Airbag)

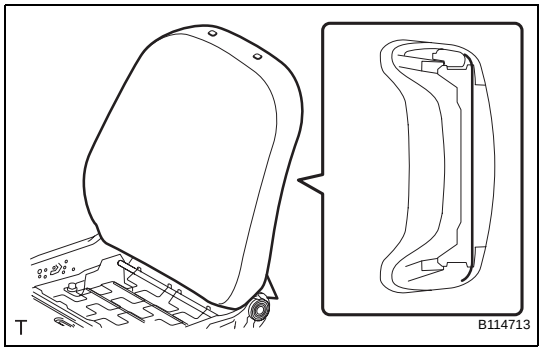
(a) Install the front seat side airbag with the 2 nuts.
Torque: 5.5 N*m (55 kgf*cm, 49 in.*lbf)



(b) Install the 2 clamps.



(c) Install the 3 clamps and the airbag connector.

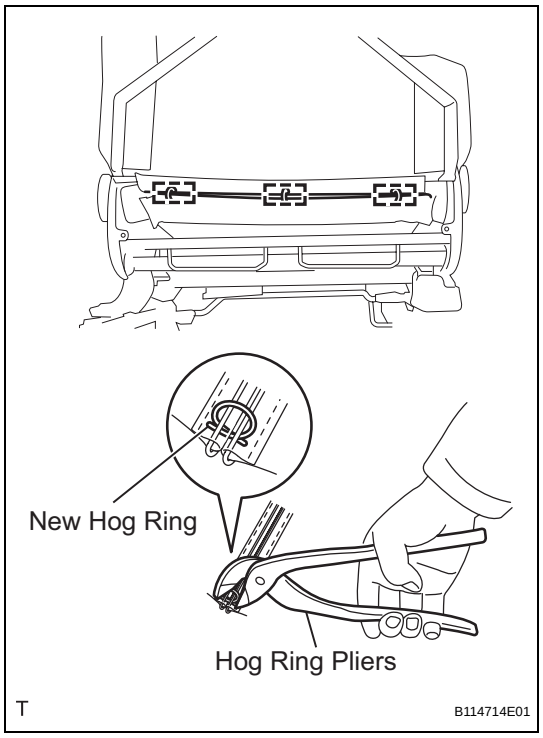


11. INSTALL FRONT SEATBACK COVER PAD

(a) Install the front seatback cover pad.

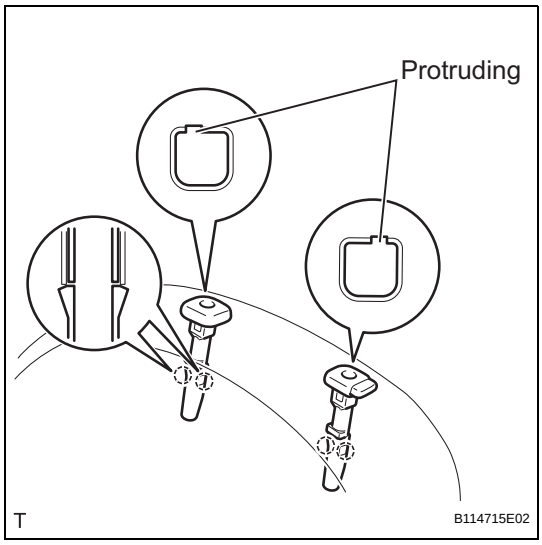
NOTICE:

The fabring for fixing the airbag must mot be wrinkled when installing the front seatback cover pad (w/ Front Seat Side Airbag).



(b) Using hog ring pliers, install 3 new hog rings as shown in the illustration.

SE



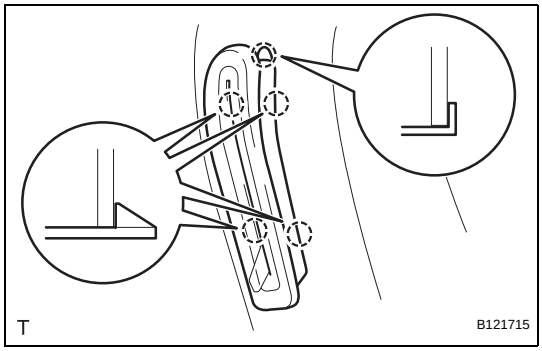
12. INSTALL FRONT SEAT HEADREST SUPPORT

HINT:

Use the same procedure for both sides.

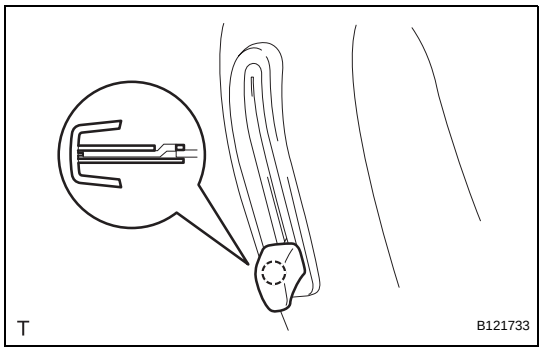
(a) Align the protruding portion of the front seat headrest support with the installation groove of the front seat back frame.

(b) Engage the 2 claws and install the front seat headrest support.



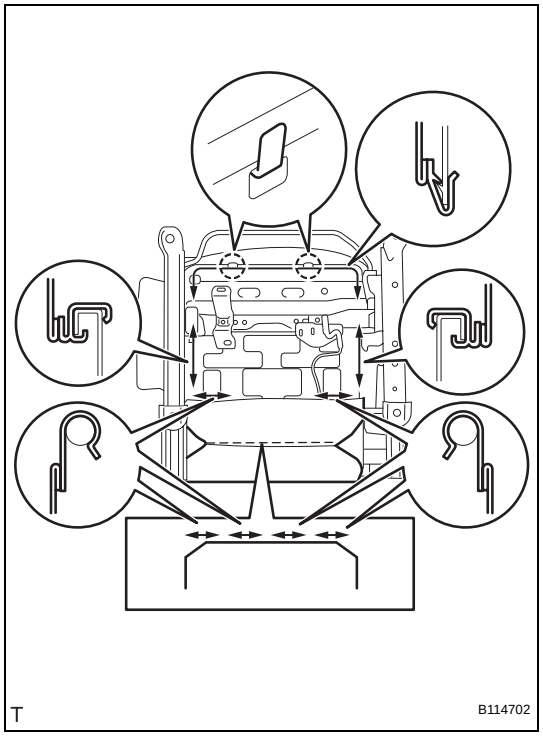
13. INSTALL RECLINING REMOTE CONTROL LEVER BEZEL (for Walk in Seat Type)

(a) Engage the 5 claws and install the reclining remote control lever bezel.



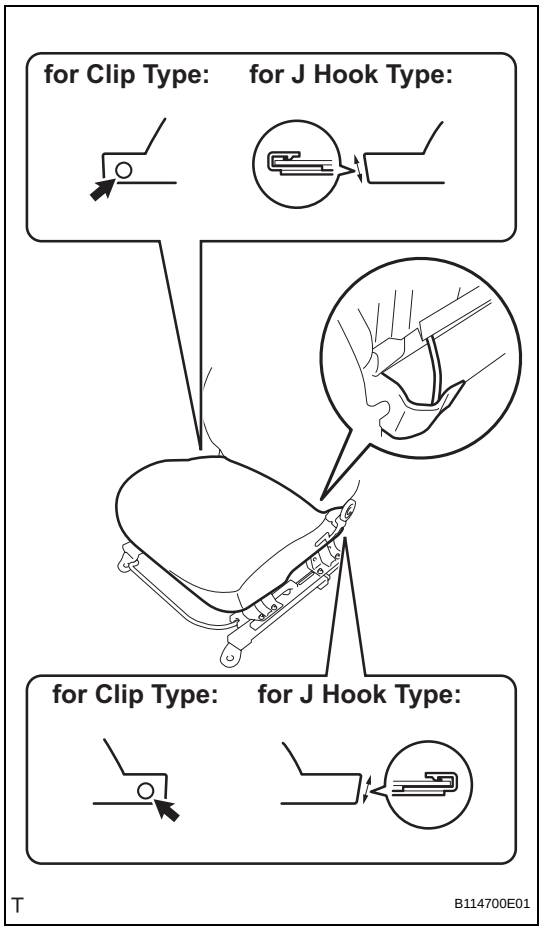
14. INSTALL RECLINING REMOTE CONTROL LEVER (for Walk in Seat Type)

(a) Engage the claw and install the reclining adjuster release handle.



15. INSTALL FRONT SEAT CUSHION COVER PAD

(a) Engage the 2 claws and 9 hooks, and install the front seat cushion cover pad.

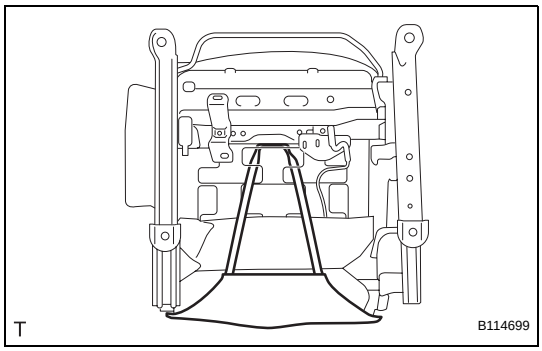


(b) w/ Front Seat Side Airbag:
  (1) Fix the front seat side airbag wire harness with the front seat cushion cover pad fixing cover.

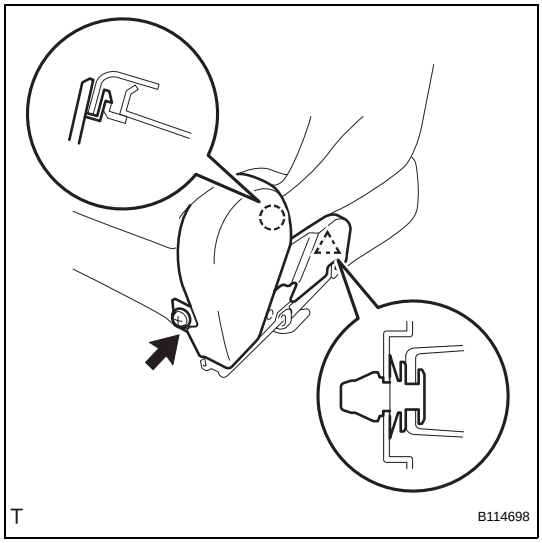
(c) for Clip Type:
  (1) Install the 2 clips.

(d) for J Hook Type:
  (1) Engage the 2 hooks.

SE



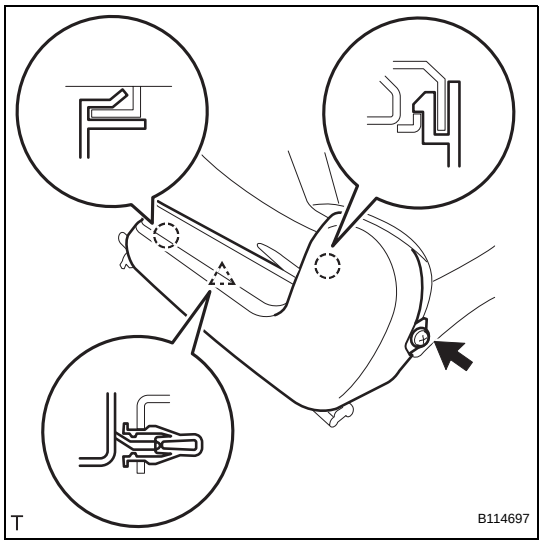
(e) Install the front seatback cover band.



16. INSTALL FRONT SEAT CUSHION SHIELD RH

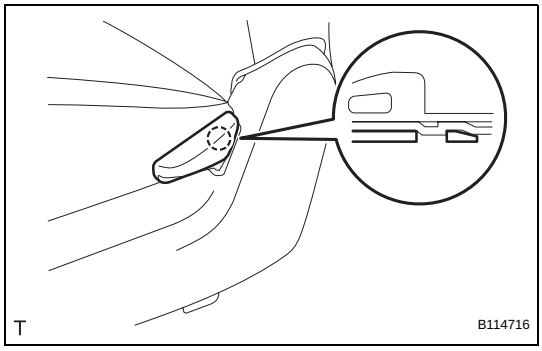
(a) Engage the claw and the clip and install the front seat cushion shield.
(b) Tighten the screw.

17. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-41)



18. INSTALL FRONT SEAT CUSHION SHIELD LH

(a) Engage the 2 claws and the clip and install the front seat cushion shield.
(b) Tighten the screw.



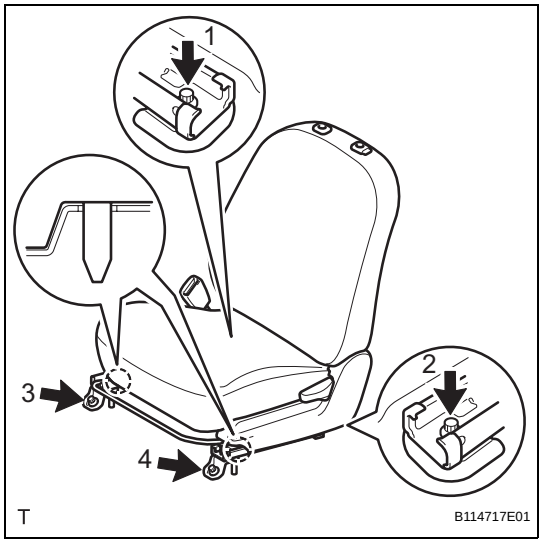
19. INSTALL RECLINING ADJUSTER RELEASE HANDLE

(a) Engage the claw and install the reclining adjuster release handle.

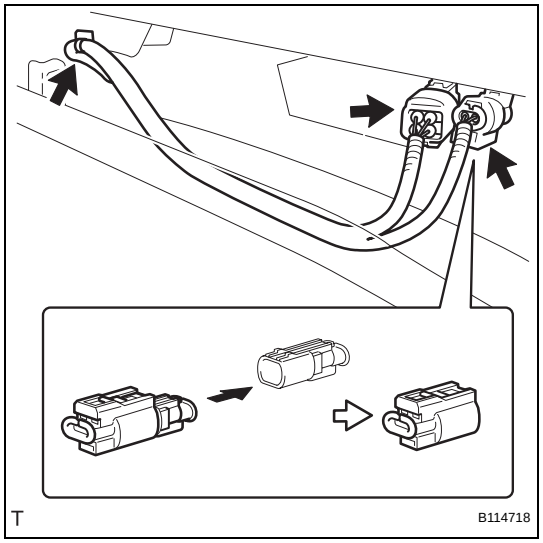
SE

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both front passenger and driver sides, unless otherwise specified.

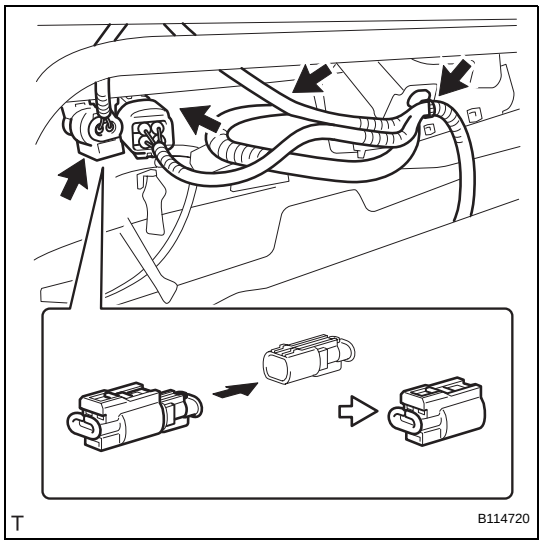


1. INSTALL FRONT SEAT ASSEMBLY
NOTICE:
Follow the procedure described below in order to prevent the seat tracks from locking separately.
(a) Insert the 2 location pins through the 2 body holes, place the front seat in the most forward position and make sure that the inner and outer seat tracks are locked securely.
(b) Using "Torx" socket wrench E10, install bolt 1 and then bolt 2 onto the rear side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)
(c) Move the front seat to the most rearward position, and then make sure that the inner and outer seat tracks are securely locked.
(d) Using "Torx" socket wrench E10, install bolt 3 and then bolt 4 onto the rear side.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)
(e) Make sure that the inner and outer seat tracks lock simultaneously after the seat is moved.
HINT:
If the inner and outer seat tracks do not lock simultaneously, adjust the seat tracks by loosening the bolts.

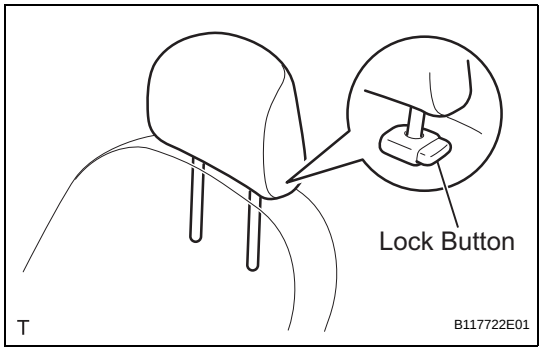


(f) for Driver Side:
(1) w/ Front Seat Side Airbag:
1. Connect the airbag connector.
(2) Connect the buckle switch connector.
(3) Install the clamp.

SE



(g) for Front Passenger Side:
  (1) w/ Front Seat Side Airbag:
    1. Connect the airbag connector.
  (2) Connect the occupant classification ECU connector.
  (3) Connect the buckle switch connector.
  (4) Install the clamp.



2. INSTALL FRONT SEAT HEADREST ASSEMBLY

(a) Push in the 2 lock buttons of the front seat headrest supports and install the 2 front seat headrests.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

4. INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)

(See page RS-31)

REMOVAL

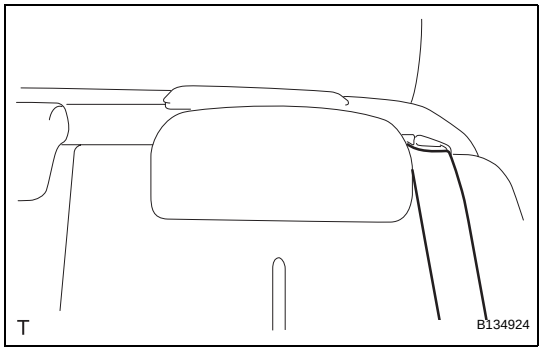
1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) Hold the front edge of the rear seat cushion cover pad and lift it up, as shown in the illustration, to disengage the 2 hooks.

NOTICE:

Hold the area around the hooks so as to avoid deforming the rear seat cushion frame.

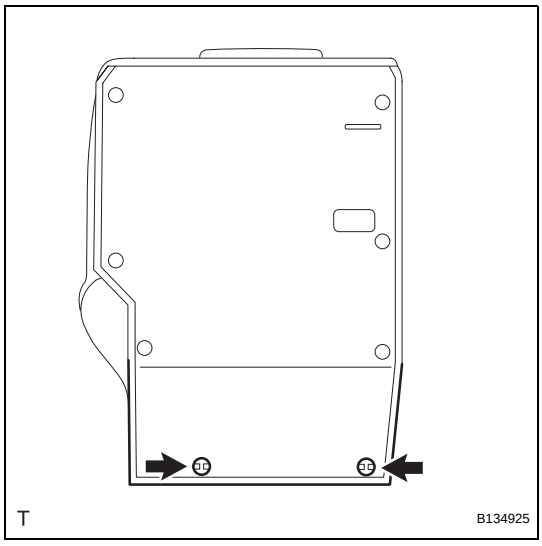
(b) Pass the rear seat inner belt through the slit in the rear seat cushion cover pad, disengage the hook between the rear seat cushion cover pad and the rear seatback, and remove the rear seat cushion cover pad.



2. REMOVE REAR SEATBACK ASSEMBLY

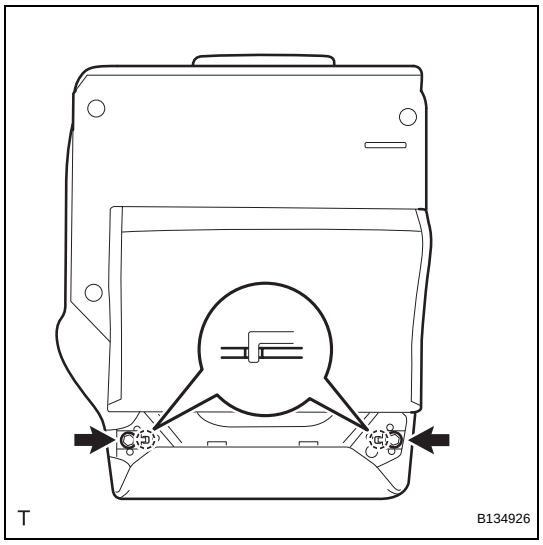
(a) Remove the rear seat outer belt from the rear seat shoulder belt guide.

(b) Pull the rear seatback lock release button and tilt the rear seatback forward.



(c) Using a clip remover, remove the 2 clips and the rear seatback cover.

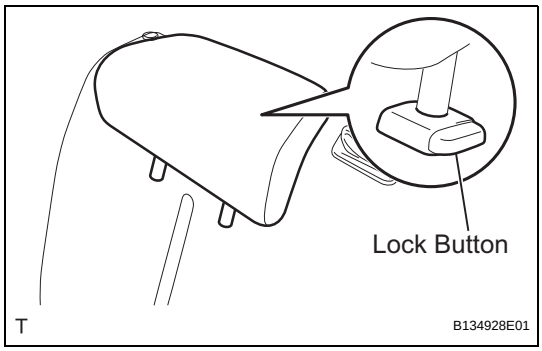
SE



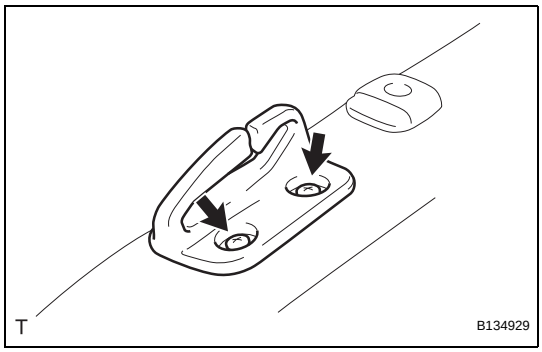
(d) Remove the 2 bolts, the 2 hooks and the rear seatback.

DISASSEMBLY

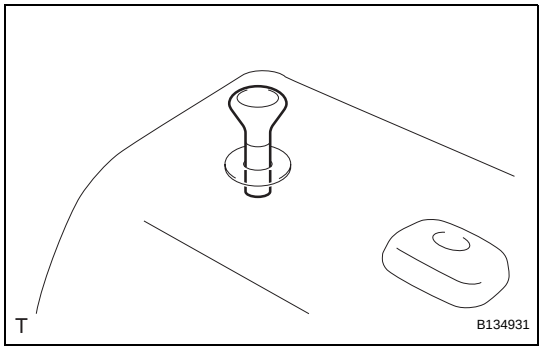
CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



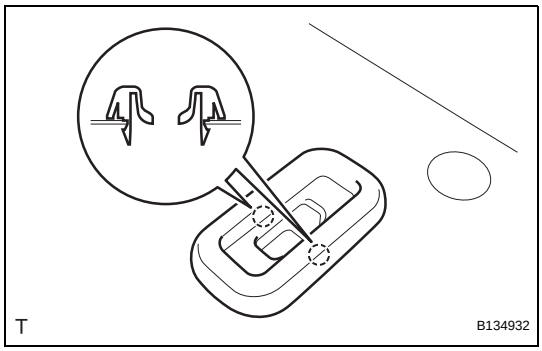
1. REMOVE REAR SEAT HEADREST ASSEMBLY
(a) Push the lock button of the rear seat headrest support and remove the rear seat headrest.



2. REMOVE REAR SEAT SHOULDER BELT GUIDE
(a) Remove the 2 screws and the rear seat shoulder belt guide.

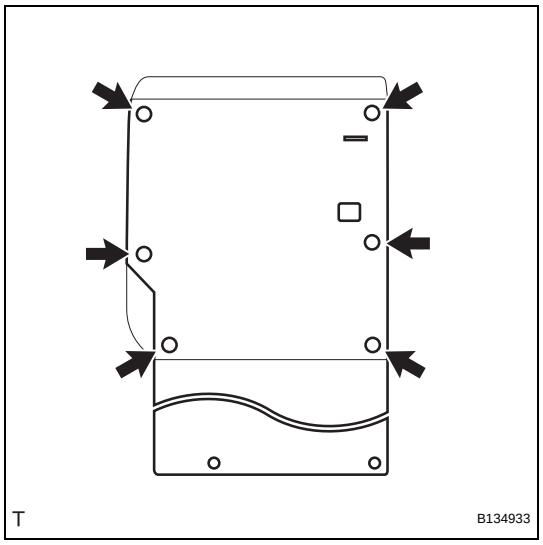


3. REMOVE REAR SEATBACK LOCK RELEASE BUTTON
(a) Remove the rear seatback lock release button.



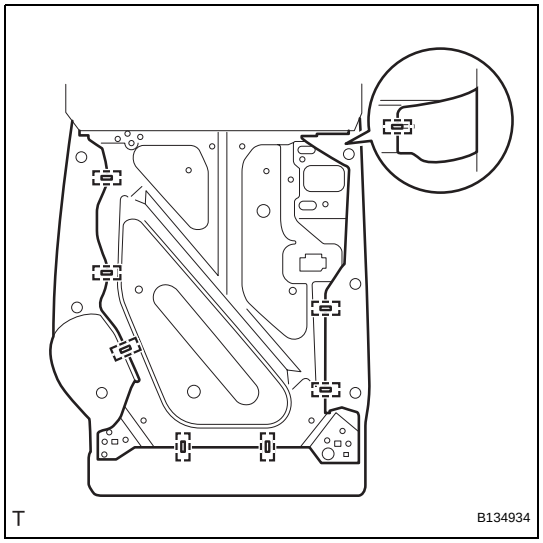
4. REMOVE REAR SEATBACK LOCK CONTROL BEZEL
(a) Disengage the 2 claws and remove the rear seatback lock control bezel.

SE

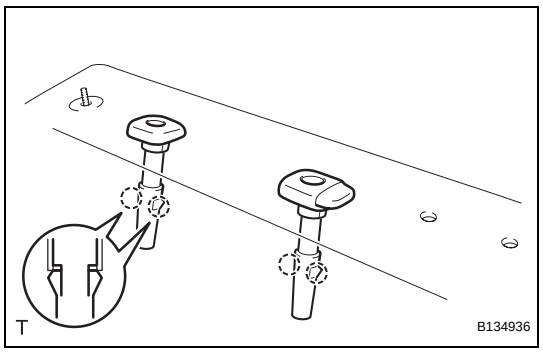


5. REMOVE REAR SEAT HEADREST SUPPORT

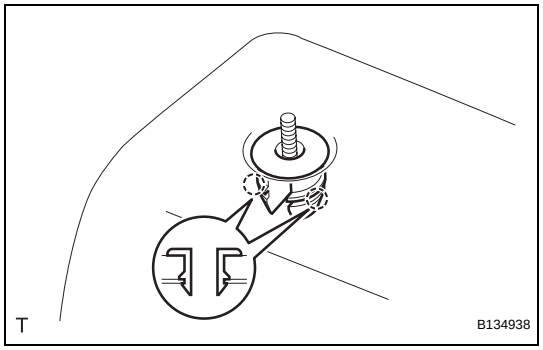
(a) Using a clip remover, remove the 6 clips and open the rear seatback cover.



(b) Remove the 8 hog rings.



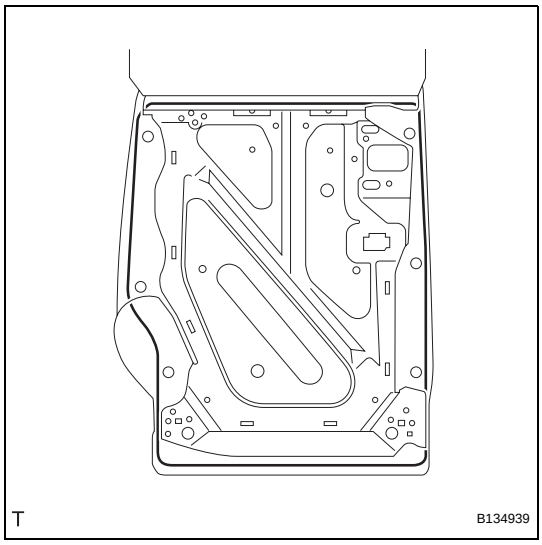
(c) Disengage the 2 claws and remove the rear seat headrest support.
HINT:
Use the same procedure for both sides.



6. REMOVE REAR SEATBACK STOP BUTTON GROMMET

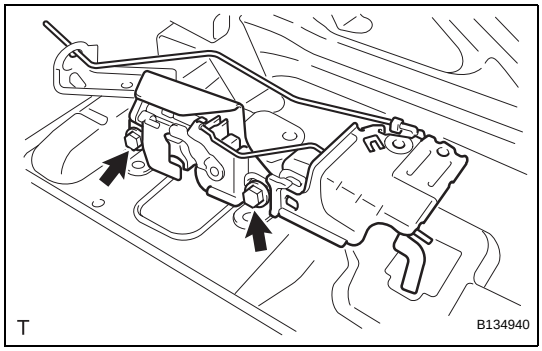
(a) Disengage the 2 claws and remove the rear seatback stop button grommet.

SE



7. REMOVE REAR SEATBACK FRAME SUB-ASSEMBLY

(a) Remove the rear seatback frame.

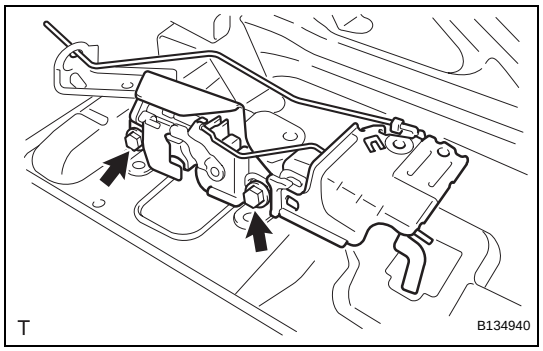


8. REMOVE REAR SEATBACK LOCK ASSEMBLY

(a) Remove the 2 bolts and the rear seatback lock.

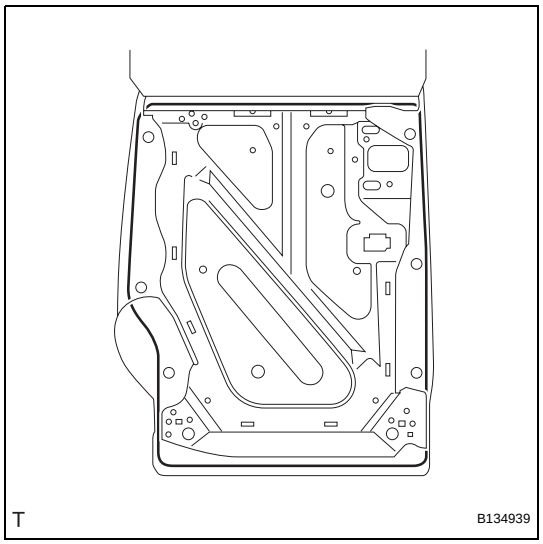
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



1. INSTALL REAR SEATBACK LOCK ASSEMBLY

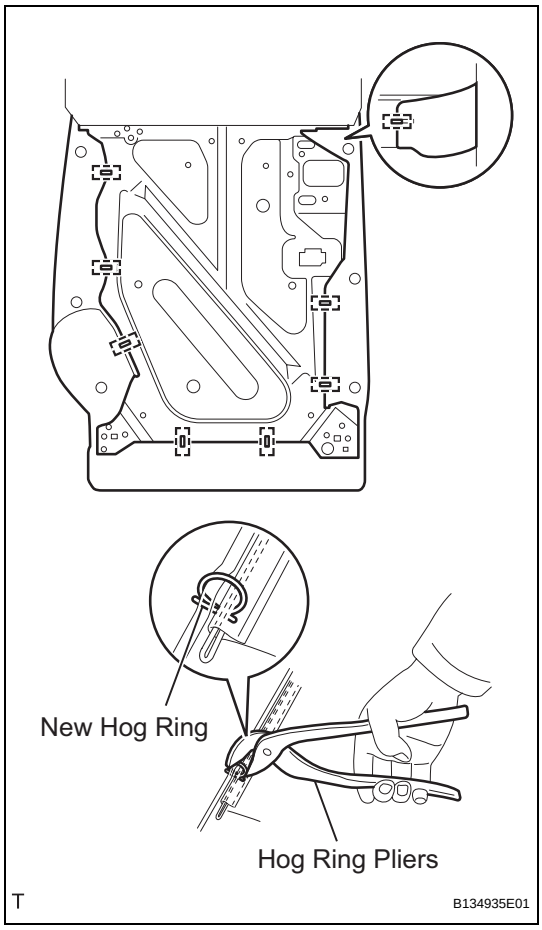
(a) Install the rear seatback lock with the 2 bolts.
Torque: 19.1 N*m (195 kgf*cm, 14 ft.*lbf)



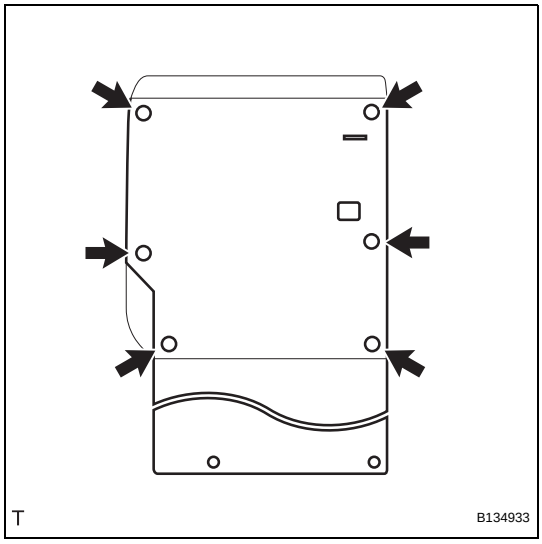
2. INSTALL REAR SEATBACK FRAME SUB-ASSEMBLY

(a) Install the rear seatback frame.

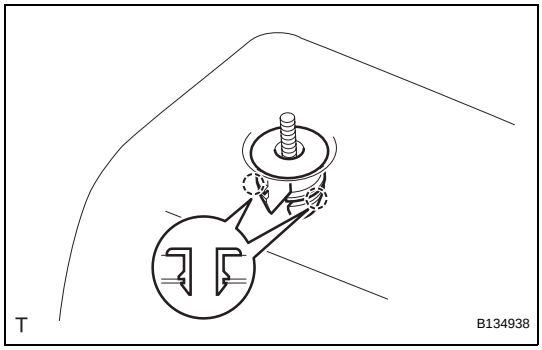
SE



(b) Using hog ring pliers, install 8 new hog rings as shown in the illustration.



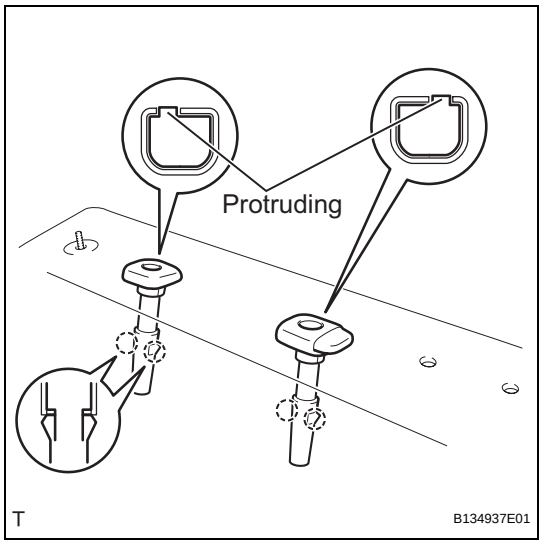
(c) Install the rear seatback cover with the 6 clips.



3. INSTALL REAR SEATBACK STOP BUTTON GROMMET

(a) Engage the 2 claws and install the rear seatback stop button grommet.

SE



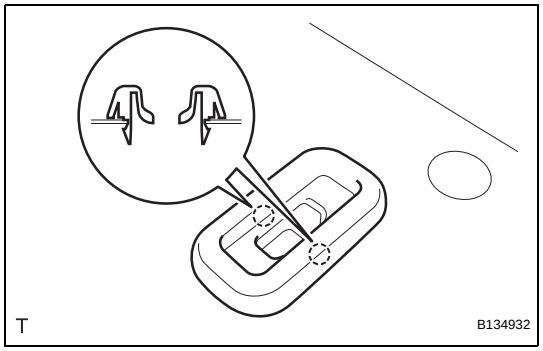
4. INSTALL REAR SEAT HEADREST SUPPORT

HINT:

Use the same procedure for both sides.

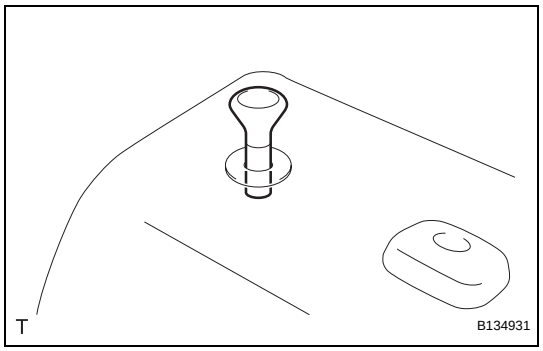
(a) Align the protruding portion of the rear seat headrest support with the installation groove of the rear seatback frame.

(b) Engage the 2 claws and install the rear seat headrest support.



5. INSTALL REAR SEATBACK LOCK CONTROL BEZEL

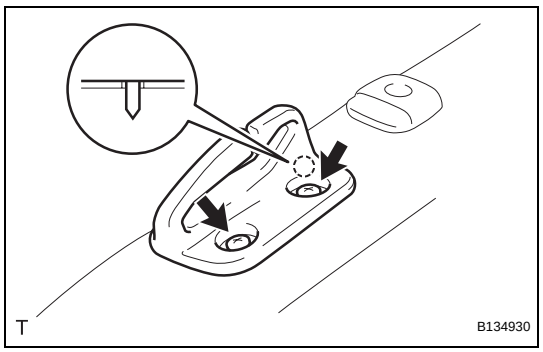
(a) Engage the 2 claws and install the rear seatback lock control bezel.



6. INSTALL REAR SEATBACK LOCK RELEASE BUTTON

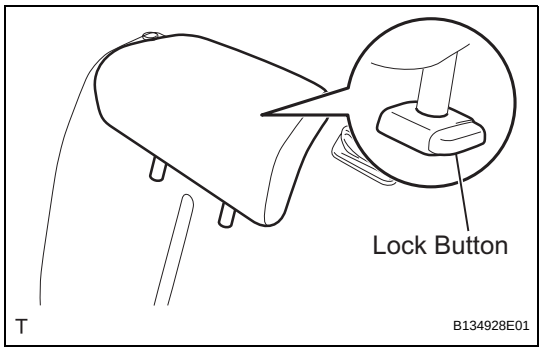
(a) Install the rear seatback lock release button.

SE



7. INSTALL REAR SEAT SHOULDER BELT GUIDE

(a) Insert the pin into the rear seatback frame hole and install the rear seat shoulder belt guide with the 2 screws.



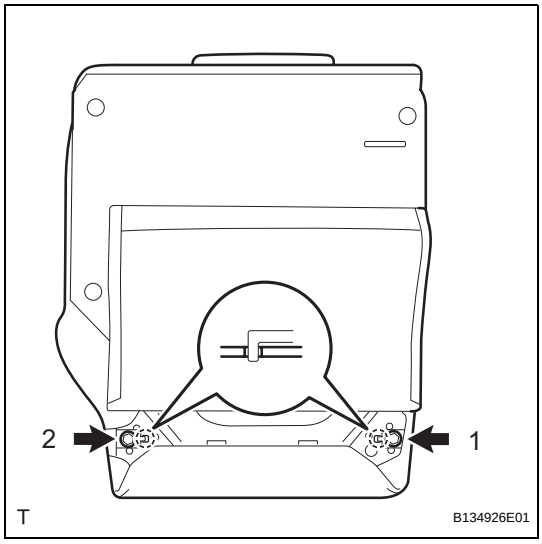
8. INSTALL REAR SEAT HEADREST ASSEMBLY

(a) Push the lock button of the rear seat headrest support and install the rear seat headrest.

INSTALLATION

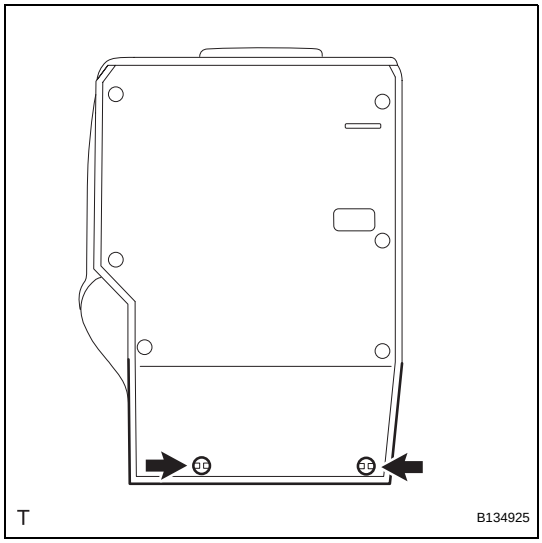
1. INSTALL REAR SEATBACK ASSEMBLY

(a) Insert the 2 hooks into the rear seatback frame hole and install the rear seatback, tightening the 2 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

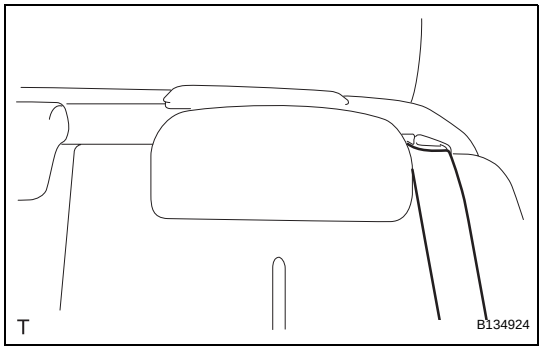


(b) Install the rear seatback cover with the 2 clips.

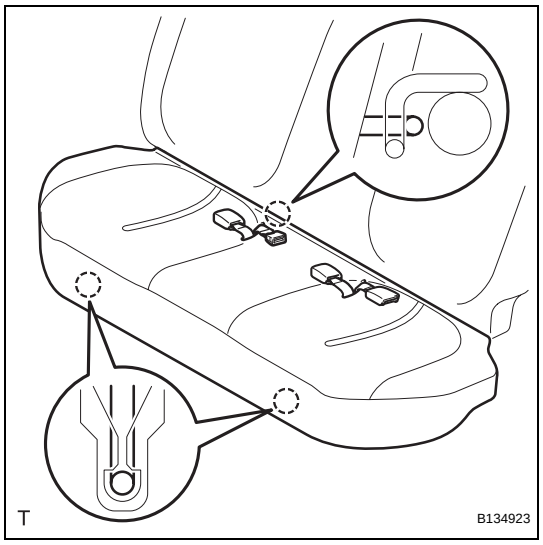
(c) Pull up the rear seatback.



(d) Install the rear seat outer belt into the rear seat shoulder belt guide.



SE



2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) Pass the rear seat inner belt through the rear seat cushion cover pad slit.

(b) Engage the 3 hooks and install the rear seat cushion cover pad.

NOTICE:

Make sure that the 2 rear seat cushion lock hooks and the rear seat cushion frame are securely engaged.

(a) Push the lock button of the rear seat headrest support and remove the rear seat headrest.

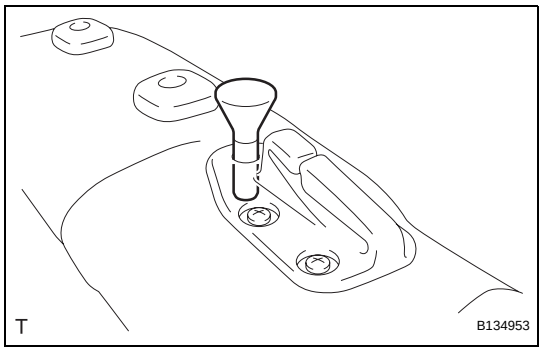
3. REMOVE REAR SEAT SHOULDER BELT GUIDE

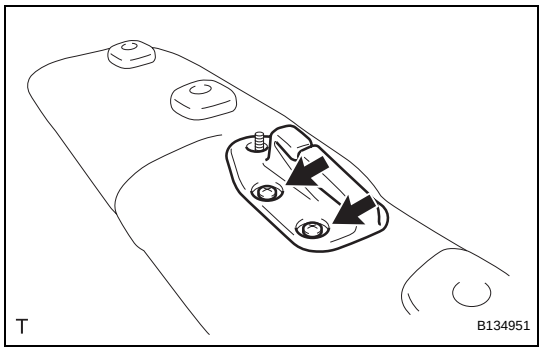
(a) Remove the 2 screws and the rear seat shoulder belt guide.



4. REMOVE REAR SEATBACK LOCK RELEASE BUTTON

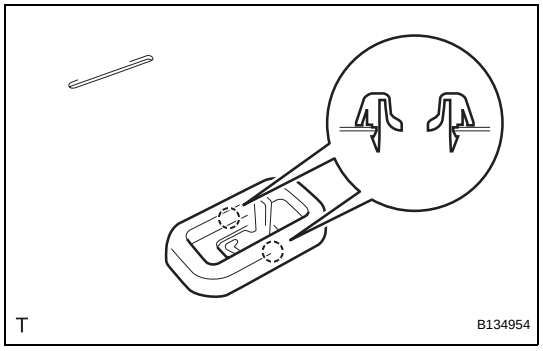
(a) Remove the rear seatback lock release button.

SE



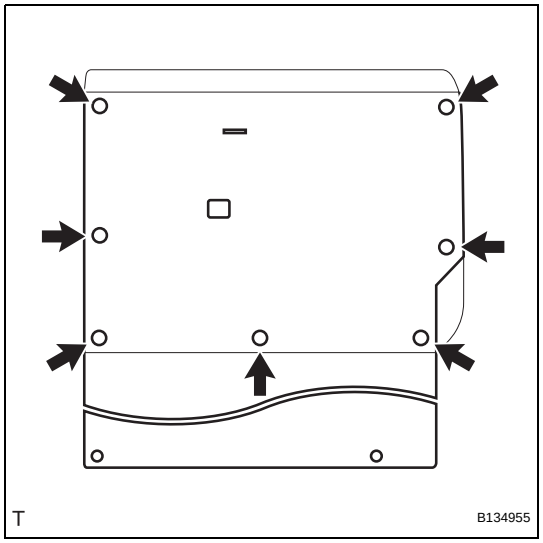
5. REMOVE REAR CENTER SEAT SHOULDER BELT GUIDE

(a) Remove the 2 screws and the rear center seat shoulder belt guide.



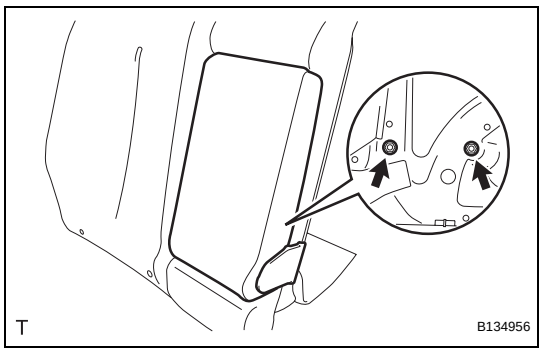
6. REMOVE REAR SEATBACK LOCK CONTROL BEZEL

(a) Disengage the 2 claws and remove the rear seatback lock control bezel.



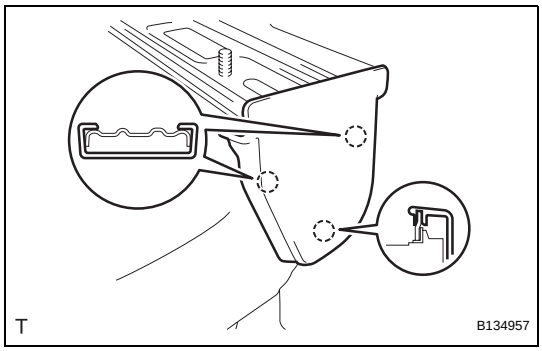
7. REMOVE REAR SEAT CENTER ARMREST ASSEMBLY

(a) Using a clip remover, remove the 7 clips and open the rear seatback cover.



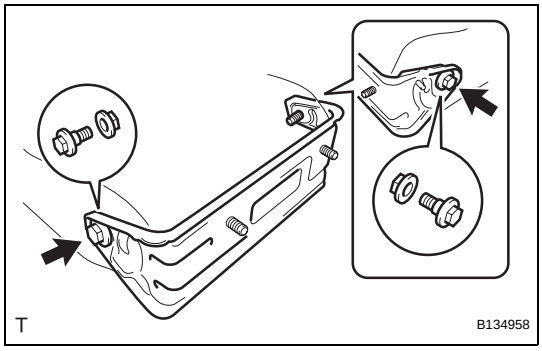
(b) Remove the 2 nuts, the 2 wave washers and the rear seat center armrest.

SE



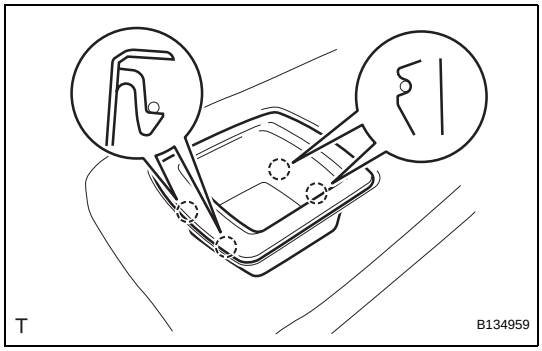
8. REMOVE REAR SEAT CENTER ARMREST HINGE COVER

(a) Disengage the 3 claws and remove the rear seat armrest hinge cover.



9. REMOVE REAR SEAT CENTER ARMREST HINGE

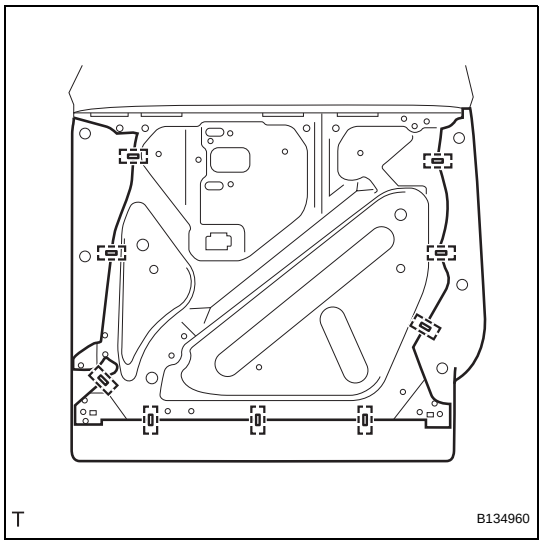
(a) Remove the 2 bolts, the 2 spacers and the rear seat armrest hinge.



10. REMOVE CUP HOLDER ASSEMBLY

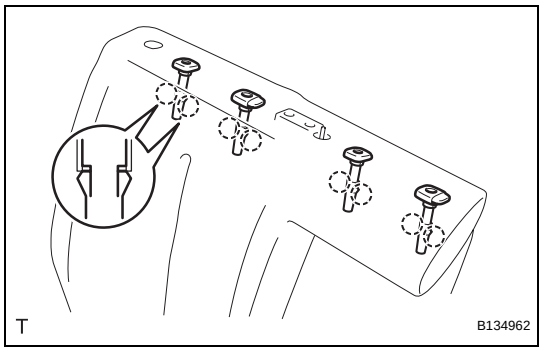
(a) Disengage the 4 claws and remove the cup holder.

SE

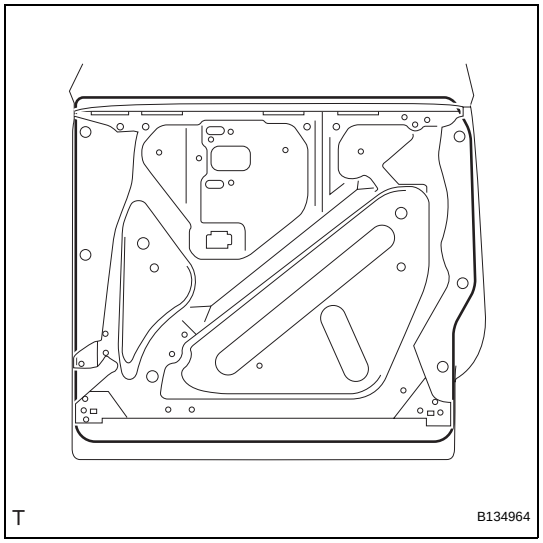


11. REMOVE REAR SEAT HEADREST SUPPORT

(a) Remove the 9 hog rings.

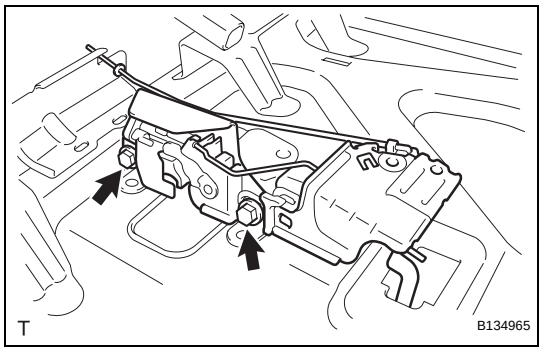


(b) Disengage the 2 claws and remove the rear seat headrest support.
HINT:
Use the same procedure to remove all the rear seat headrest supports.



12. REMOVE REAR SEATBACK FRAME SUB-ASSEMBLY

(a) Remove the rear seatback frame.



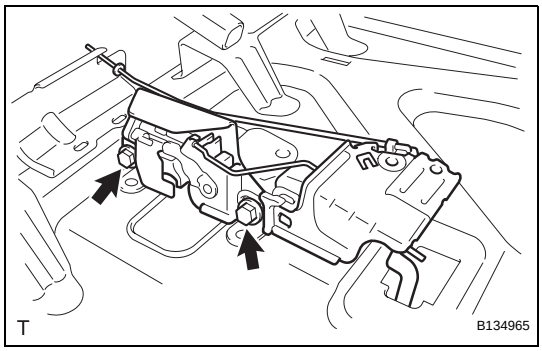
13. REMOVE REAR SEATBACK LOCK ASSEMBLY

(a) Remove the 2 bolts and the rear seatback lock.

SE

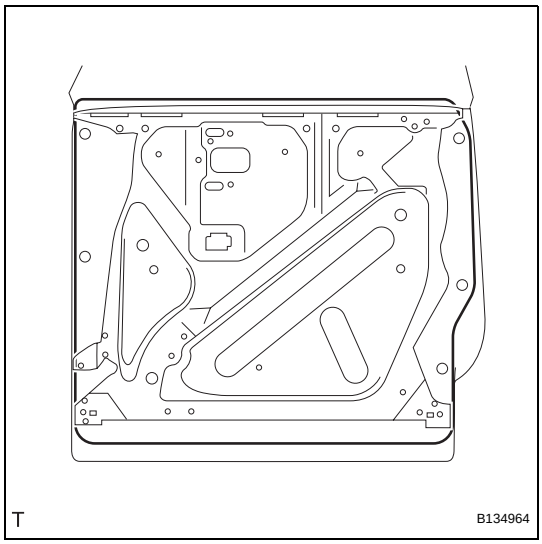
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



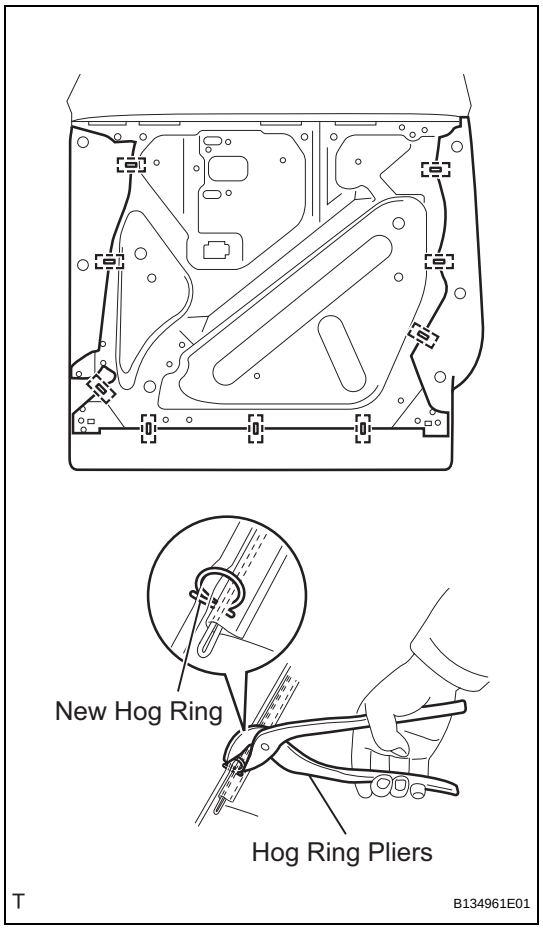
1. INSTALL REAR SEATBACK LOCK ASSEMBLY

(a) Install the rear seatback lock with the 2 bolts.
Torque: 19.1 N*m (195 kgf*cm, 14 ft.*lbf)

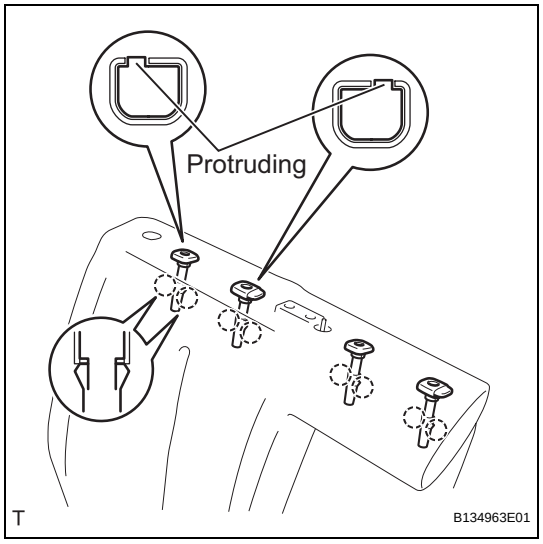


2. INSTALL REAR SEATBACK FRAME SUB-ASSEMBLY

(a) Install the rear seatback frame.



(b) Using hog ring pliers, install 9 new hog rings as shown in the illustration.



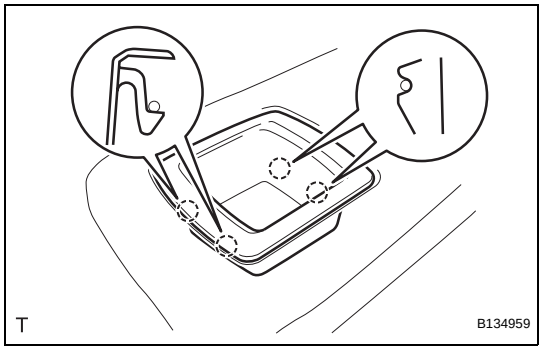
3. INSTALL REAR SEAT HEADREST SUPPORT

HINT:

Use the same procedure to install all the rear seat headrest supports.

(a) Align the protruding portion of the rear seat headrest support with the installation groove of the rear seatback frame.

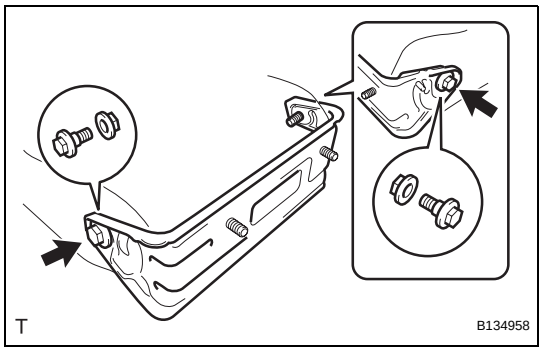
(b) Engage the 2 claws and install the rear seat headrest support.



4. INSTALL CUP HOLDER ASSEMBLY

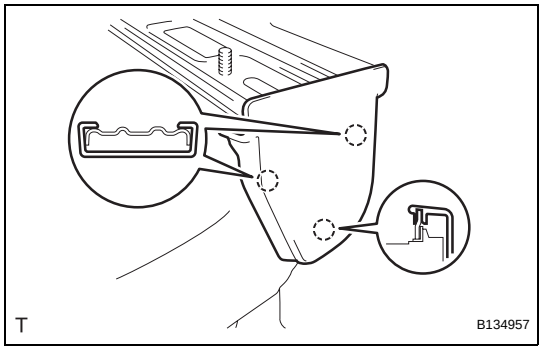
(a) Engage the 4 claws and install the rear seat cup holder.

SE



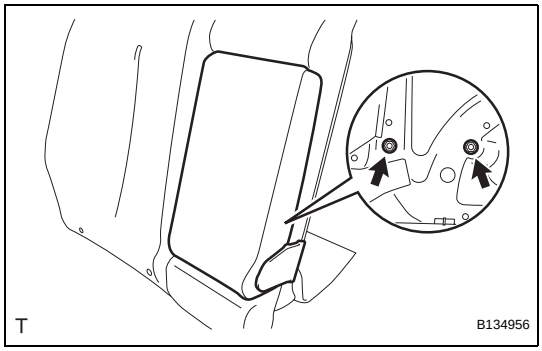
5. INSTALL REAR SEAT CENTER ARMREST HINGE

(a) Install the rear seat armrest hinge with the 2 bolts, the 2 spacers and the 2 spacers.
Torque: 21 N*m (215 kgf*cm, 16 ft.*lbf)



6. INSTALL REAR SEAT CENTER ARMREST HINGE COVER

(a) Engage the 3 claws and install the rear seat center armrest hinge cover.

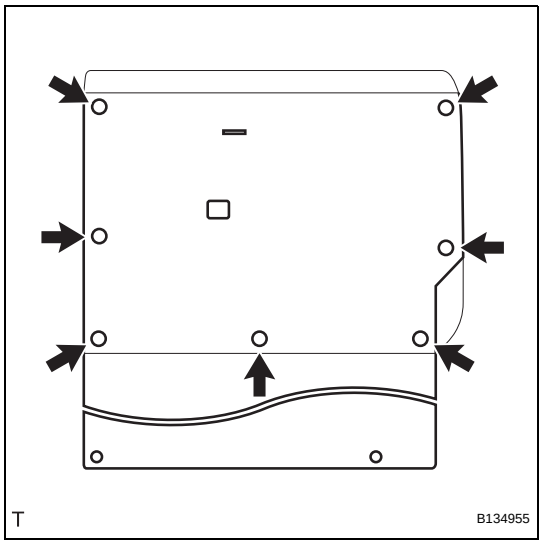


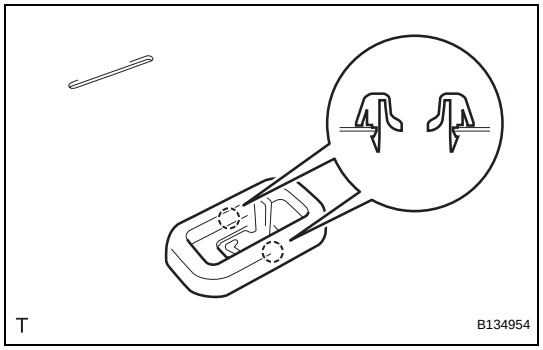
7. INSTALL REAR SEAT CENTER ARMREST ASSEMBLY

(a) Install the rear seat center armrest with the 2 nuts and the 2 wave washers.
Torque: 33 N*m (335 kgf*cm, 24 ft.*lbf)

SE

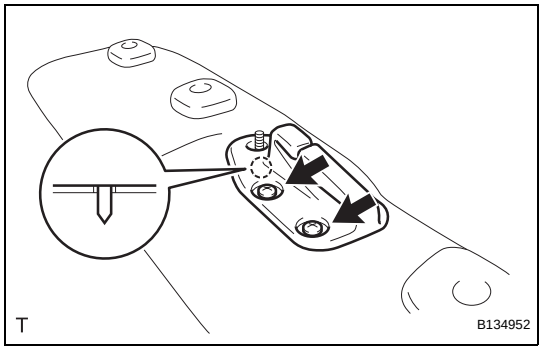
(b) Install the rear seatback cover with the 7 clips.





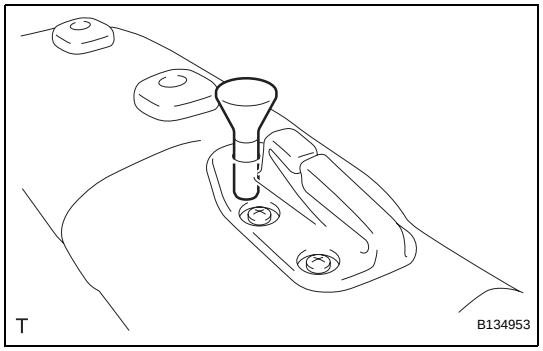
8. INSTALL REAR SEATBACK LOCK CONTROL BEZEL

(a) Engage the 2 claws and install the rear seatback lock control bezel.



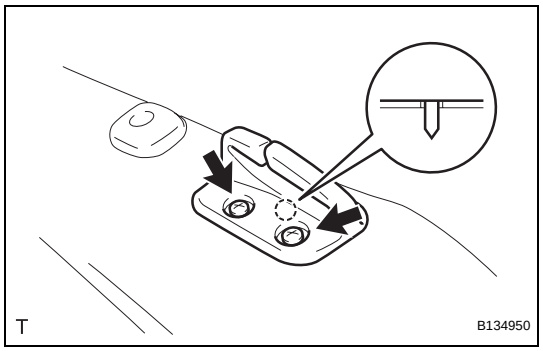
9. INSTALL REAR CENTER SEAT SHOULDER BELT GUIDE

(a) Insert the pin into the rear seatback frame hole and install the rear center seat shoulder belt guide with the 2 screws.



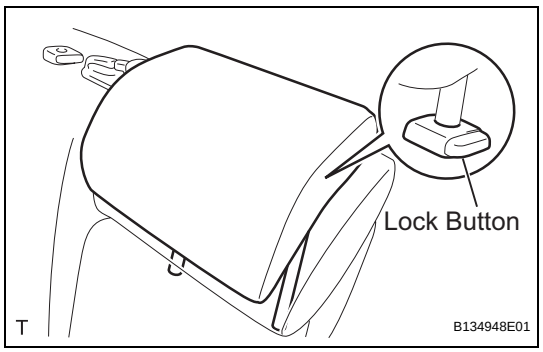
10. INSTALL REAR SEATBACK LOCK RELEASE BUTTON

(a) Install the rear seatback lock release button.



11. INSTALL REAR SEAT SHOULDER BELT GUIDE

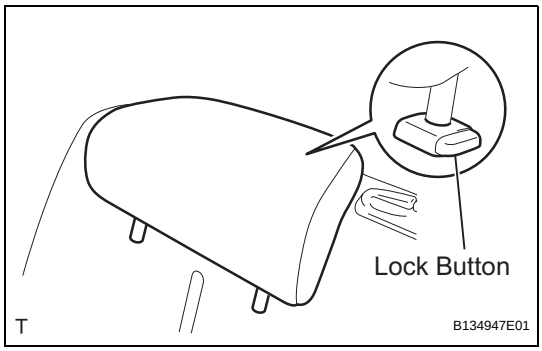
(a) Insert the pin into the rear seatback frame hole and install the rear seat shoulder belt guide with the 2 screws.



12. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY

(a) Push the lock button of the rear seat headrest support and install the rear seat headrest.

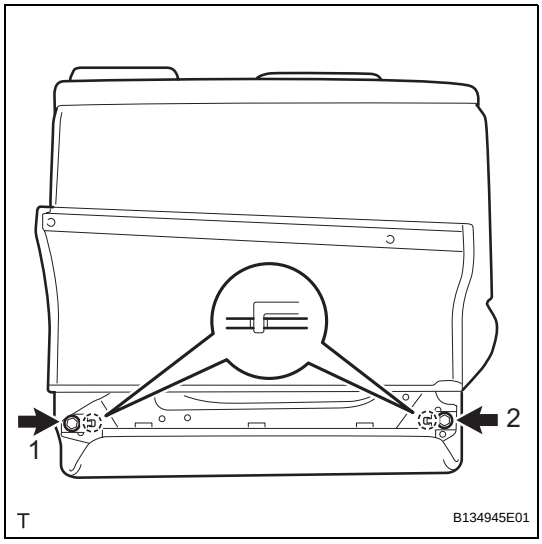
SE



13. INSTALL REAR SEAT HEADREST ASSEMBLY

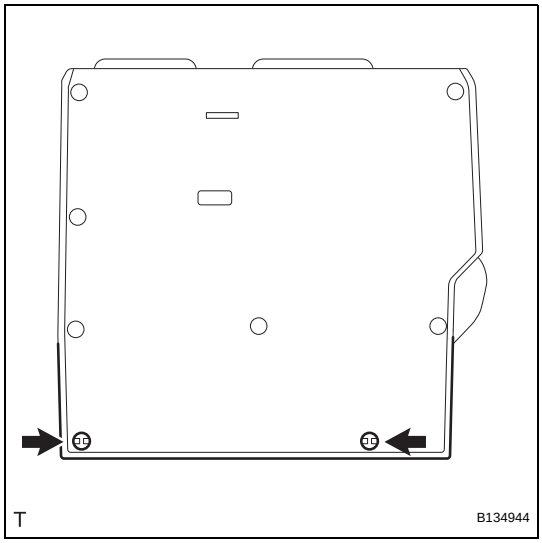
(a) Push the lock button of the rear seat headrest support and install the rear seat headrest.

INSTALLATION



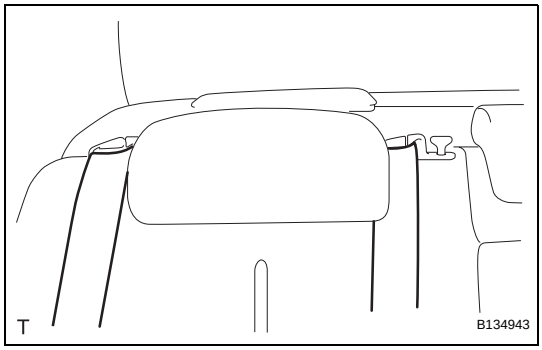
1. INSTALL REAR SEATBACK ASSEMBLY

(a) Insert the 2 hooks into the rear seatback frame hole and install the rear seatback, tightening the 2 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



(b) Install the rear seatback cover with the 2 clips.

(c) Pull up the rear seatback.



(d) Install the rear seat outer belt into the rear seat shoulder belt guide.

(e) Install the rear center seat outer belt into the rear center seat shoulder belt guide.

2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (See page SE-53)

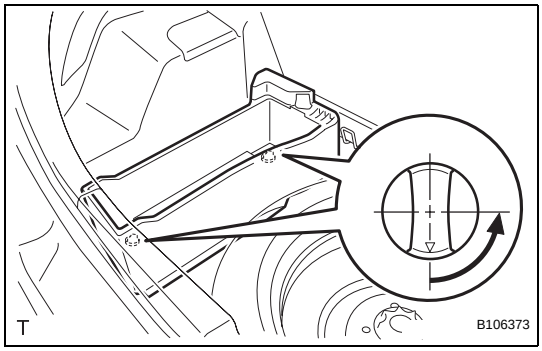
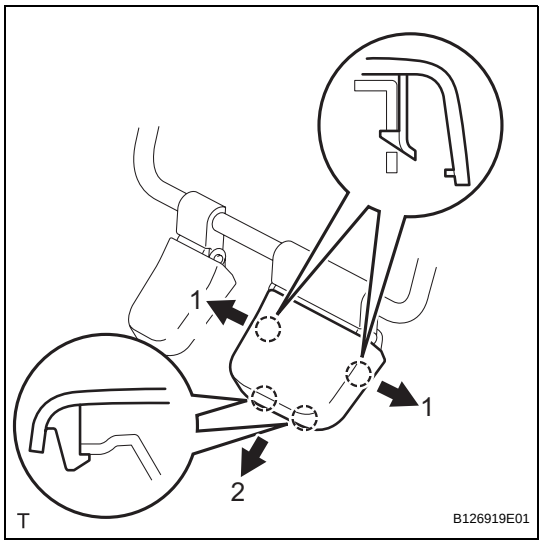
REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

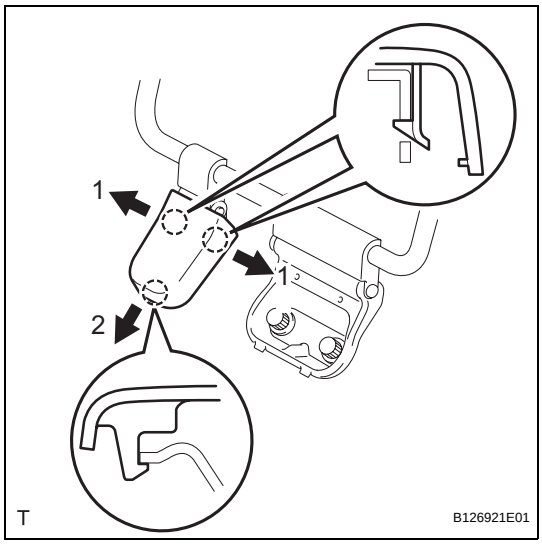
1. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
2. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
3. **REMOVE DECK FLOOR BOX**
   (a) Release the 2 knobs and remove the deck floor box.



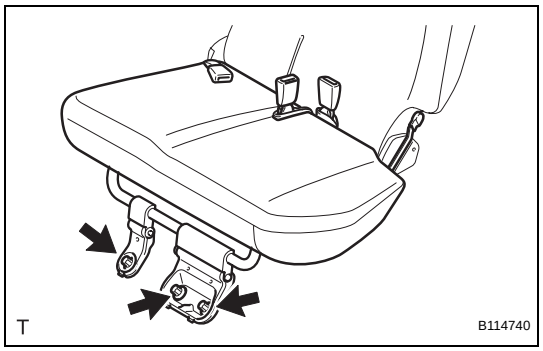
4. **REMOVE NO. 1 REAR SEAT LEG COVER**
   (a) Disengage the 4 claws in the sequence shown in the illustration and remove the No. 1 rear seat leg cover.



5. **REMOVE NO. 2 REAR SEAT LEG COVER**
   (a) Disengage the 3 claws in the sequence shown in the illustration and remove the No. 2 rear seat leg cover.

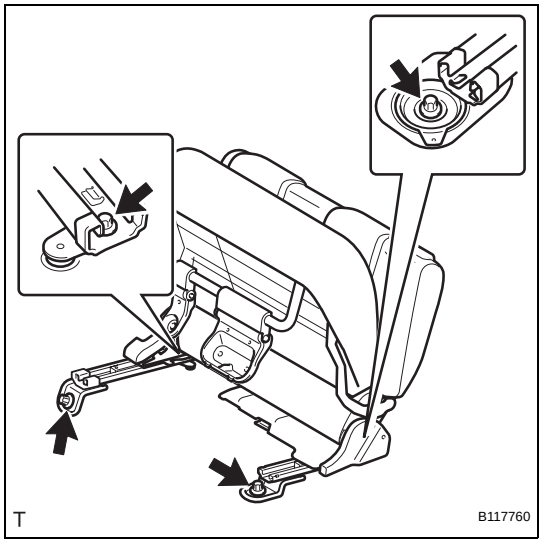


SE



6. REMOVE REAR SEAT ASSEMBLY

(a) Using "Torx" socket wrench E10, remove the 3 bolts and pull up the rear seat cushion.

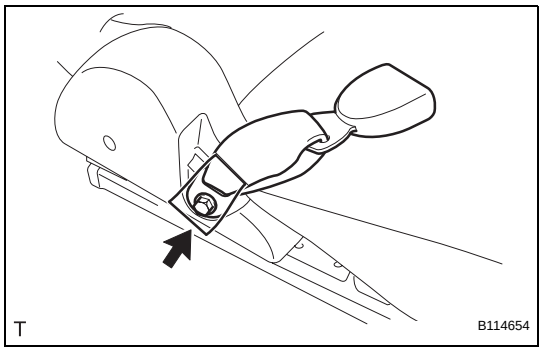


(b) Using "Torx" socket wrench E10, remove the 4 bolts and the rear seat.

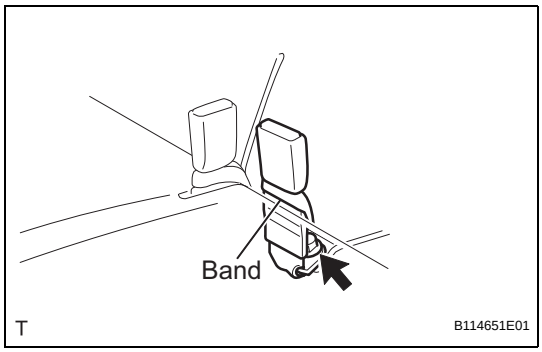
SE

DISASSEMBLY

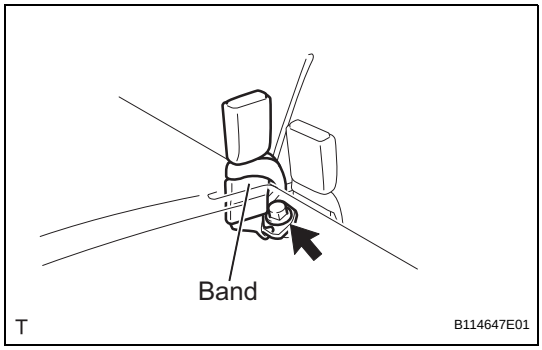
CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



1. REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY RH
(a) Remove the bolt and the rear center seat inner belt.

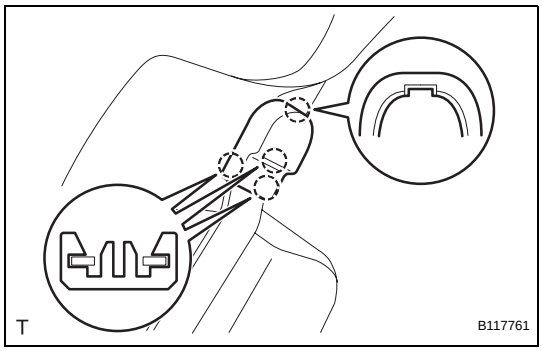


2. REMOVE REAR CENTER SEAT INNER BELT ASSEMBLY LH
(a) Remove the belt from the band.
(b) Remove the bolt and the rear center seat inner belt.

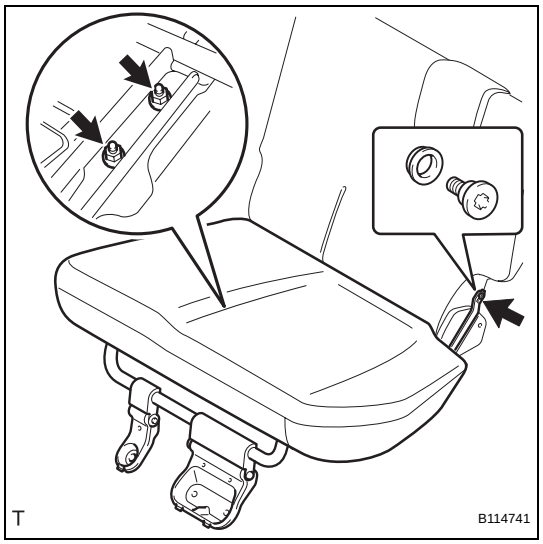


3. REMOVE REAR SEAT INNER BELT ASSEMBLY
(a) Remove the belt from the band.
(b) Remove the bolt and the rear seat inner belt.

SE



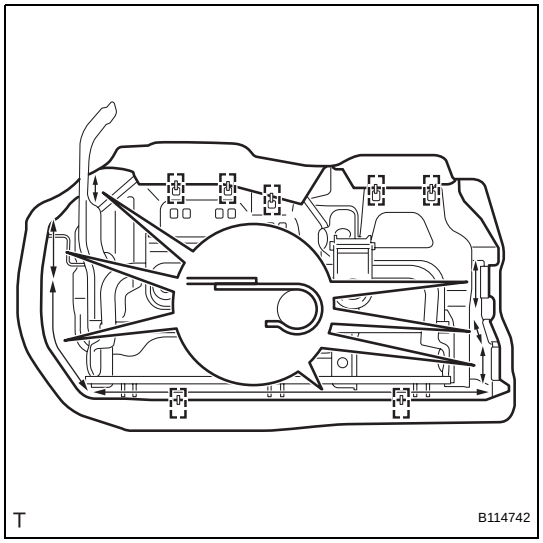
4. REMOVE REAR SEAT SIDE HINGE COVER
(a) Disengage the 4 claws and remove the rear seat side hinge cover.



5. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Using "Torx" socket wrench T45, remove the bolt and the spacer.

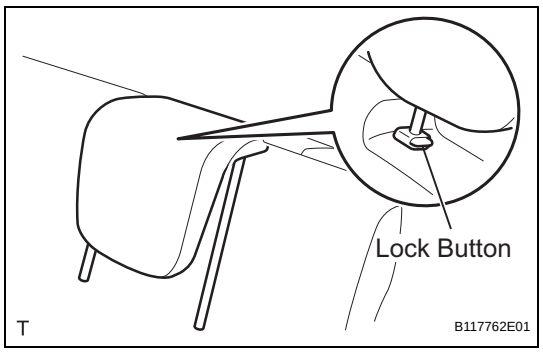
(b) Remove the 2 nuts and rear seat cushion.



6. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

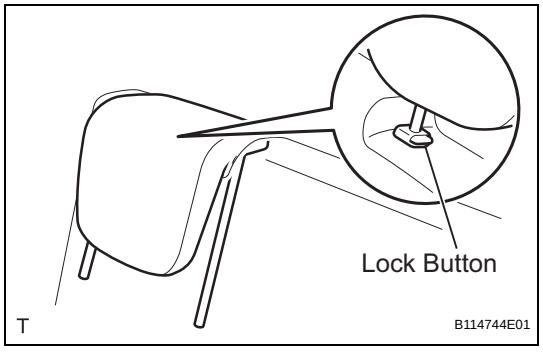
(a) Remove the 7 hog rings.

(b) Disengage the 7 hooks and remove the rear seat cushion cover pad.



7. REMOVE REAR SEAT HEADREST ASSEMBLY

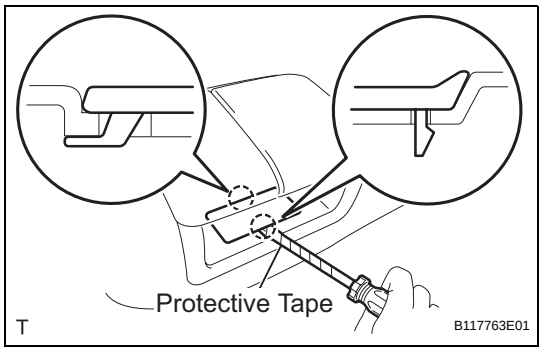
(a) Push in the lock button of the rear seat headrest support and remove the rear seat headrest.



8. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY

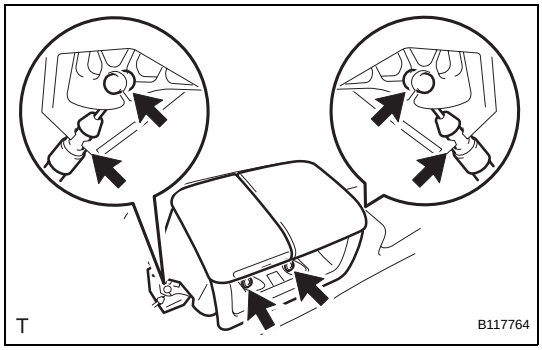
(a) Push in the lock button of the rear seat headrest support and remove the rear center seat headrest.

SE



9. REMOVE REAR SEAT LOCK STRIKER COVER

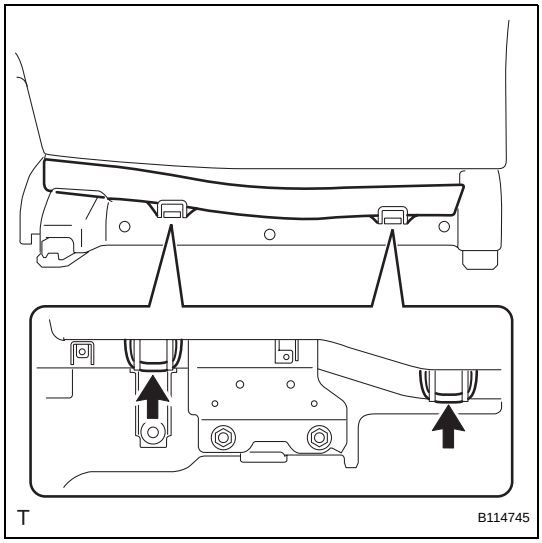
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat lock striker cover.



10. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Remove the 2 screws.

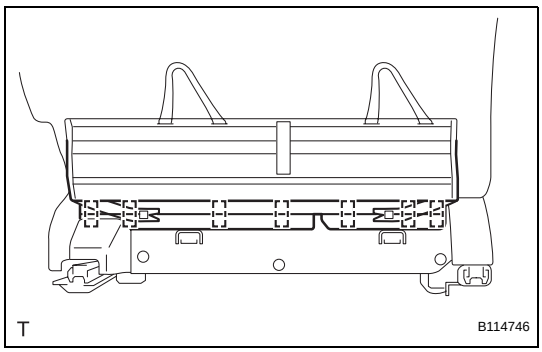
(b) Disconnect the rear seat reclining control cable and the rear seat slide control cable, and remove the rear seat lock control lever.



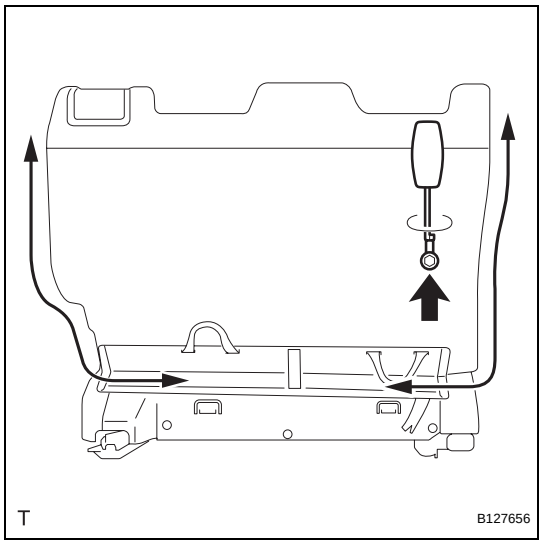
11. REMOVE REAR SEAT HEADREST SUPPORT

(a) Remove the 2 rear seatback cover bands.

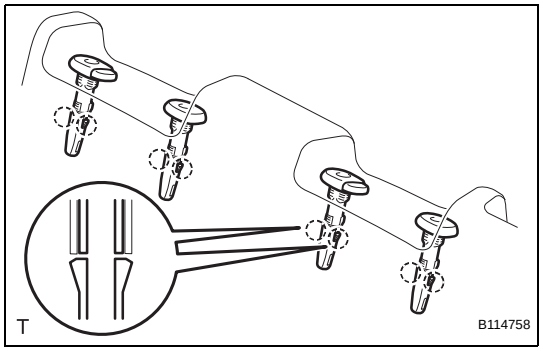
(b) Remove the 7 hog rings.



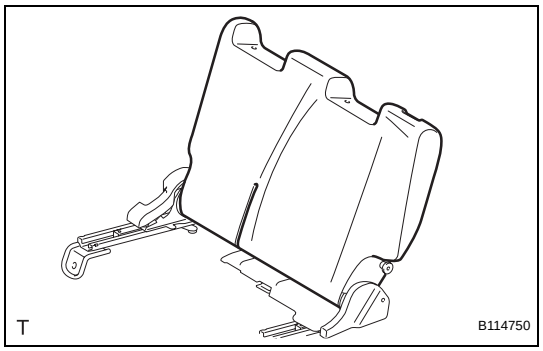
SE



(c) Unfasten the 2 zippers.
(d) Remove the bolt and the rear seat belt hook.

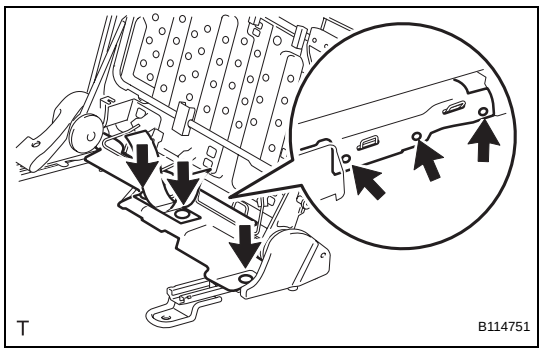


(e) Disengage the 2 claws and remove the rear seat headrest support.
HINT:
Use the same procedure to remove all the rear seat headrest supports.



12. REMOVE REAR SEATBACK COVER PAD SUB-ASSEMBLY

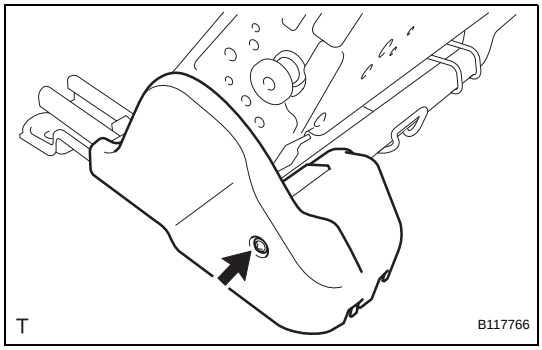
(a) Remove the rear seatback cover pad.



13. REMOVE REAR SEAT UNDER TRAY COVER

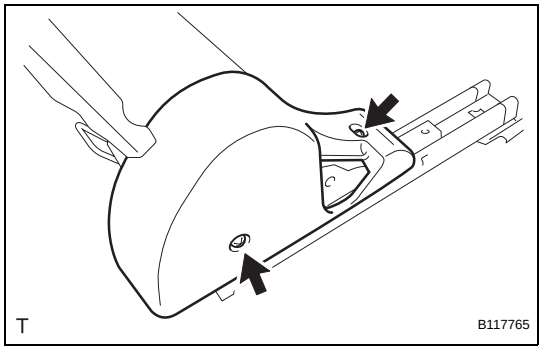
(a) Using a clip remover, remove the 6 clips and the rear seat under tray cover.

SE



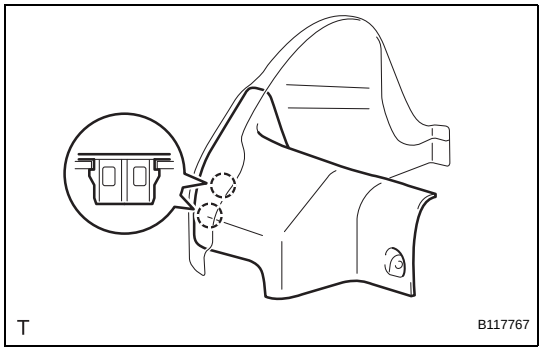
14. REMOVE REAR SEAT RECLINING OUTSIDE COVER LH

(a) Remove the screw and the rear seat reclining outside cover.



15. REMOVE REAR SEAT RECLINING OUTSIDE COVER RH

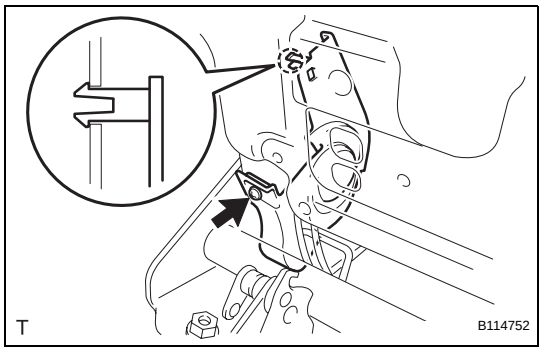
(a) Remove the 2 screws and the rear seat reclining outside cover.



16. REMOVE REAR SEAT RECLINING INSIDE COVER

(a) Disengage the 2 claws and remove the reclining inside cover.

SE



17. REMOVE RECLINING ADJUSTER INSIDE COVER LH

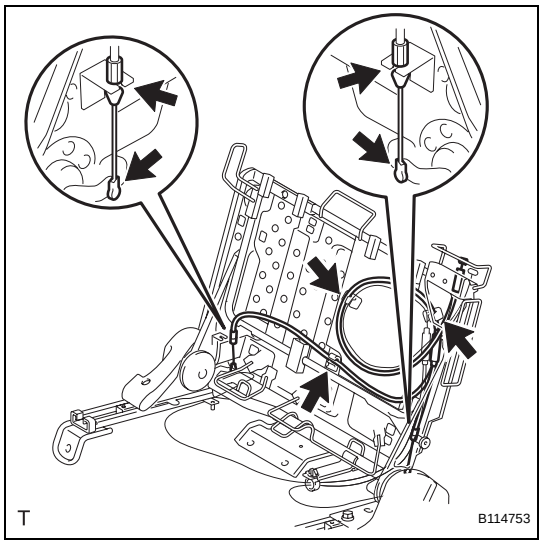
(a) Remove the screw.

(b) Disengage the claw and remove the reclining adjuster inside cover.

18. REMOVE RECLINING ADJUSTER INSIDE COVER RH

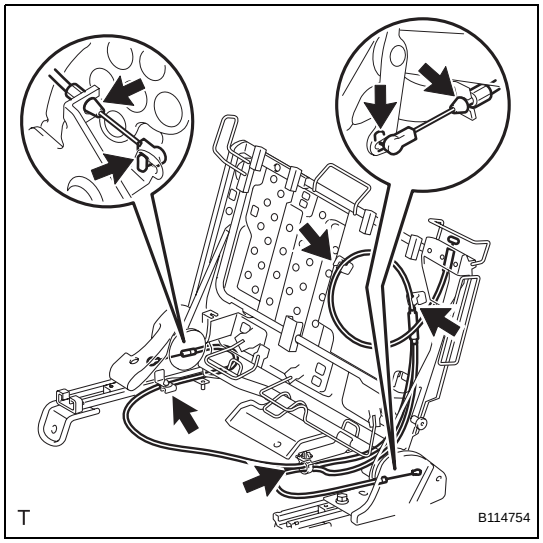
HINT:

Use the same procedure as for the LH side.



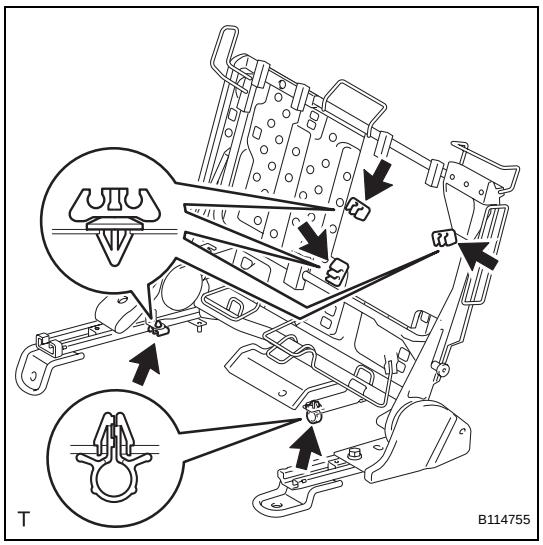
19. REMOVE REAR SEAT RECLINING CONTROL CABLE

(a) Remove the rear seat reclining control cable.



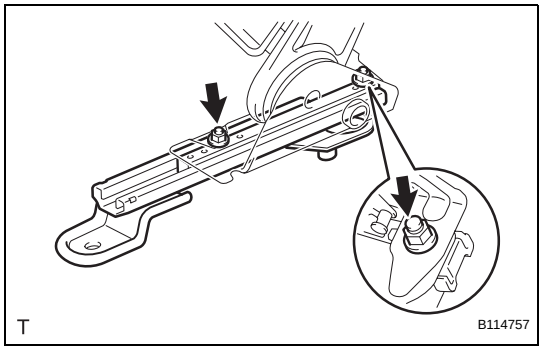
20. REMOVE REAR SEAT SLIDE CONTROL CABLE

(a) Remove the rear seat slide control cable.



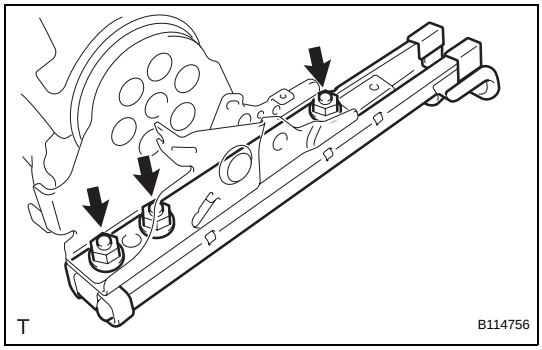
(b) Remove the 5 clamps.

SE



21. REMOVE REAR SEAT TRACK ASSEMBLY LH

(a) Remove the 2 nuts and the rear seat track.

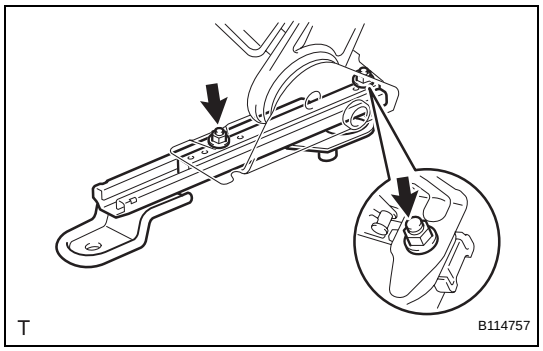


22. REMOVE REAR SEAT TRACK ASSEMBLY RH

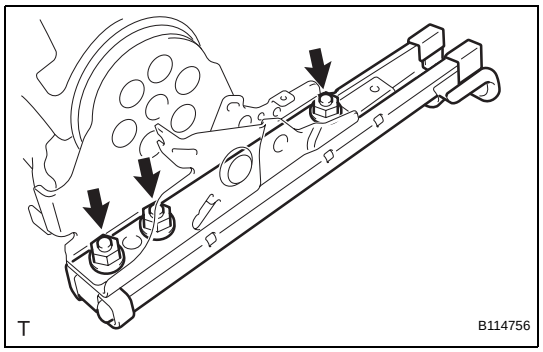
(a) Remove the 3 nuts and the rear seat track.

REASSEMBLY

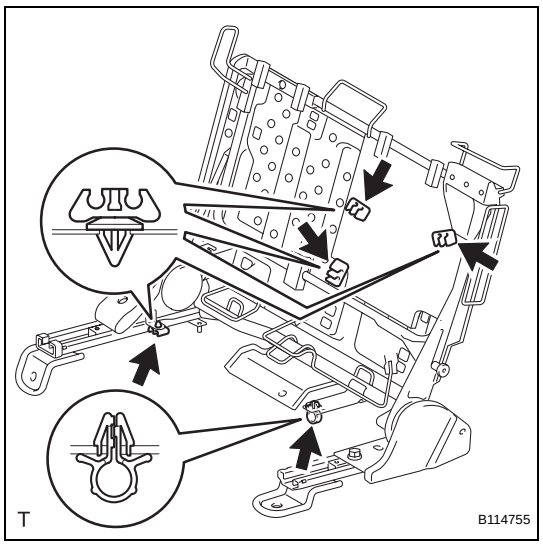
CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



1. INSTALL REAR SEAT TRACK ASSEMBLY LH
(a) Install the rear seat track with the 2 nuts.
Torque: 33 N*m (335 kgf*cm, 24 ft.*lbf)

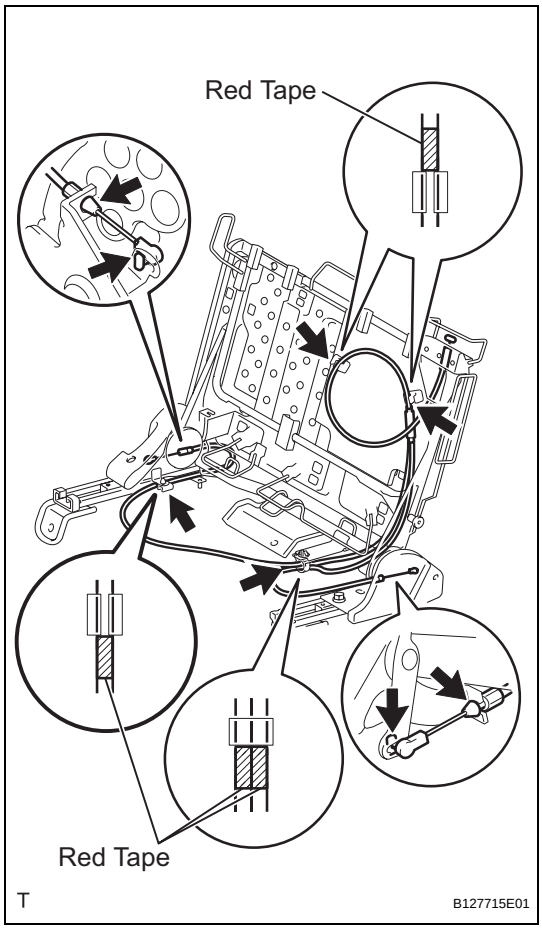


2. INSTALL REAR SEAT TRACK ASSEMBLY RH
(a) Install the rear seat track with the 3 nuts.
Torque: 33 N*m (335 kgf*cm, 24 ft.*lbf)

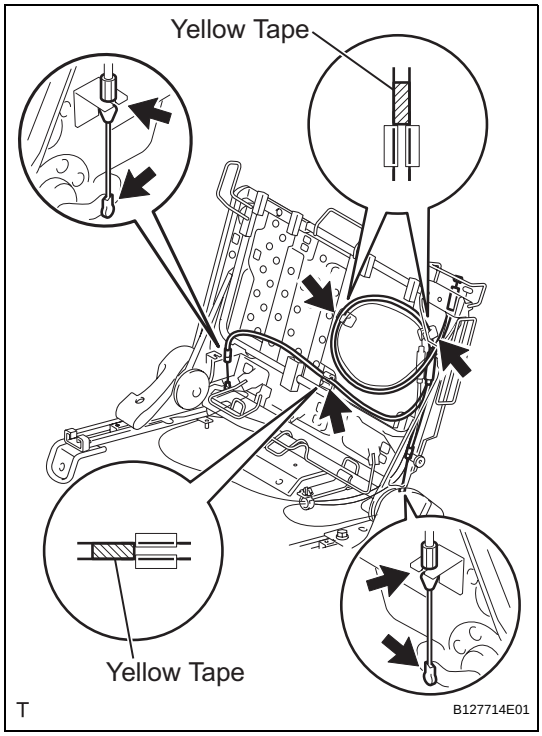


3. INSTALL REAR SEAT SLIDE CONTROL CABLE
(a) Install the 5 clamps.

SE



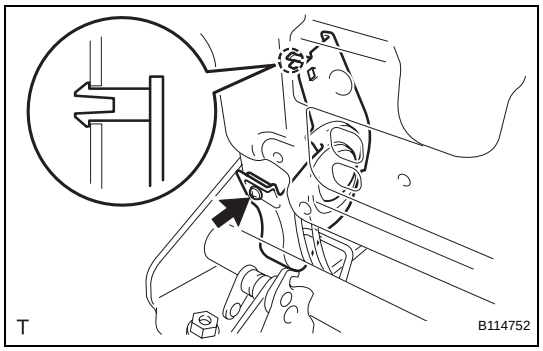
(b) Install the rear seat slide control cable as shown in the illustration.



4. INSTALL REAR SEAT RECLINING CONTROL CABLE

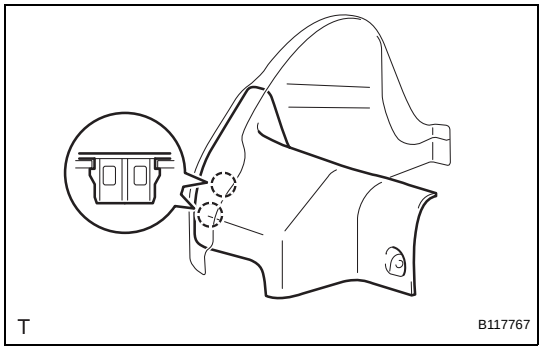
(a) Install the rear seat reclining control cable as shown in the illustration.

SE

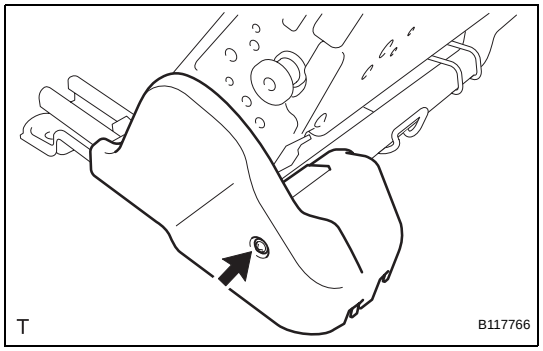


5. INSTALL RECLINING ADJUSTER INSIDE COVER LH
(a) Engage the claw and install the reclining adjuster inside cover.
(b) Tighten the screw.

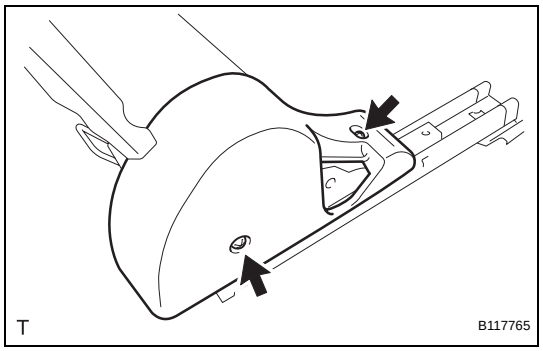
6. INSTALL RECLINING ADJUSTER INSIDE COVER RH
HINT:
Use the same procedure as for the LH side.



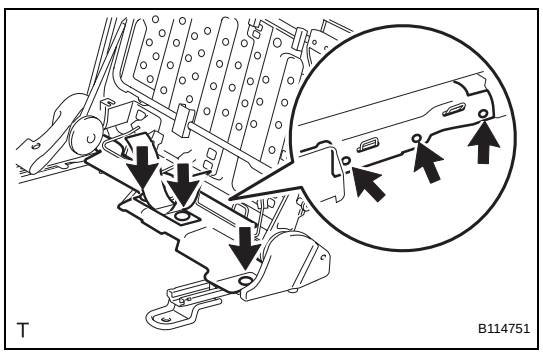
7. INSTALL REAR SEAT RECLINING INSIDE COVER
(a) Engage the 2 claws and install the rear seat reclining inside cover.



8. INSTALL REAR SEAT RECLINING OUTSIDE COVER LH
(a) Install the rear seat reclining outside cover with the screw.

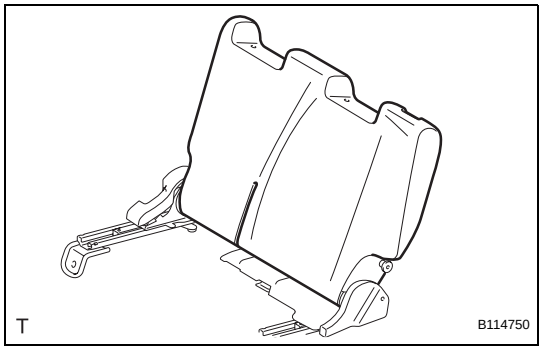


9. INSTALL REAR SEAT RECLINING OUTSIDE COVER RH
(a) Install the rear seat reclining outside cover with the 2 screws.



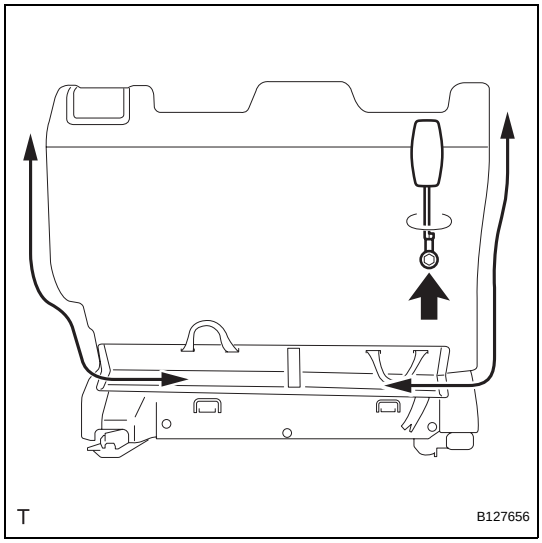
10. INSTALL REAR SEAT UNDER TRAY COVER
(a) Install the rear seat under tray cover with the 6 clips.

SE



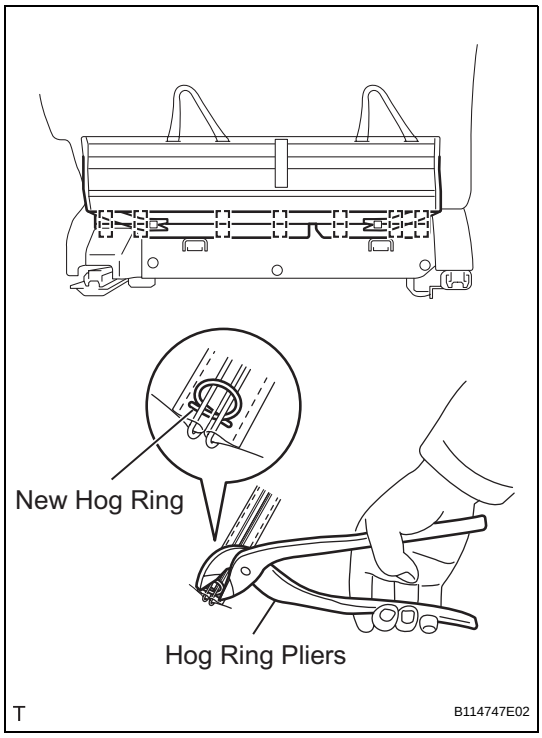
11. INSTALL REAR SEATBACK COVER PAD SUB-ASSEMBLY

(a) Install the rear seatback cover pad.



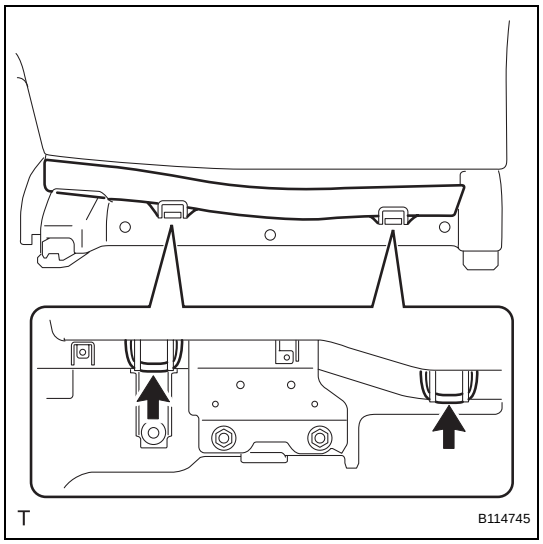
(b) Install the rear seat belt hook with the bolt.
Torque: 5.0 N*m (50 kgf*cm, 44 in.*lbf)

(c) Fasten the 2 zippers.

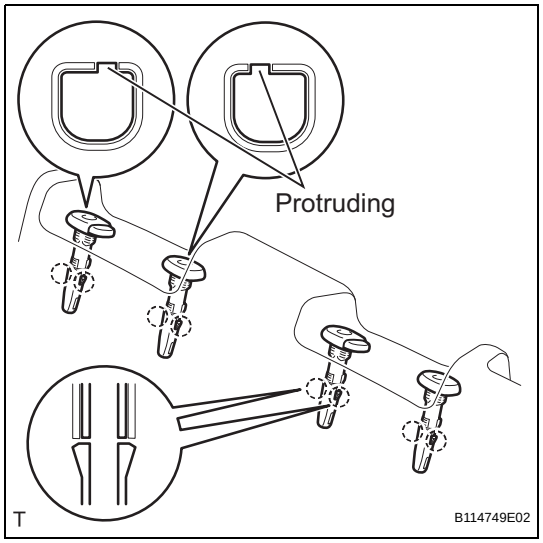


(d) Using hog ring pliers, install 7 new hog rings.

SE



(e) Install the 2 rear seatback bands.



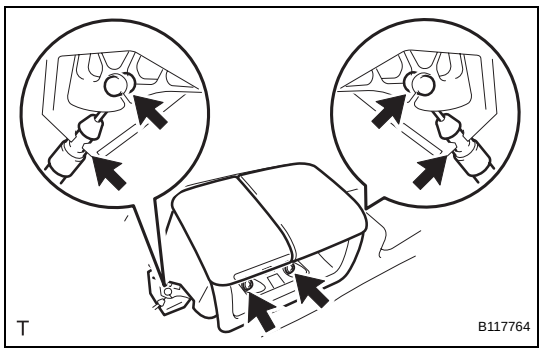
12. INSTALL REAR SEAT HEADREST SUPPORT

HINT:

Use the same procedure to install all the rear seat headrest supports.

(a) Align the protruding portion of the rear seat headrest support with the installation groove of the rear seatback frame.

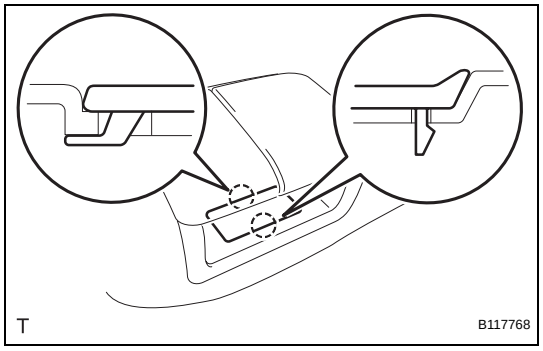
(b) Engage the 2 claws and install the rear seat headrest support.



13. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Connect the rear seat reclining control cable and the rear seat slide control cable, and install the rear seat lock control lever.

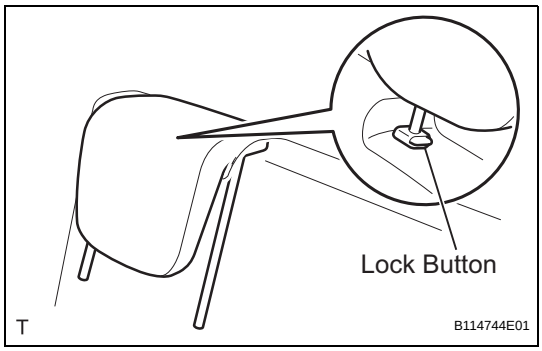
(b) Tighten the 2 screws.



14. INSTALL REAR SEAT LOCK STRIKER COVER

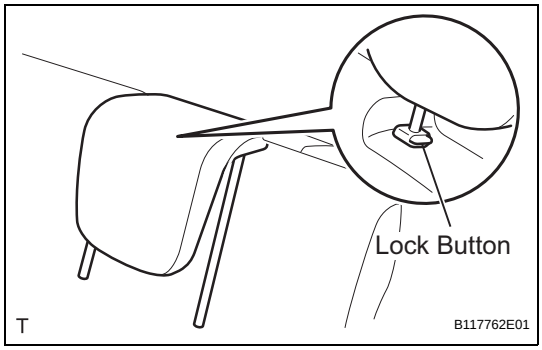
(a) Engage the 2 claws and install the rear seat lock striker cover.

SE



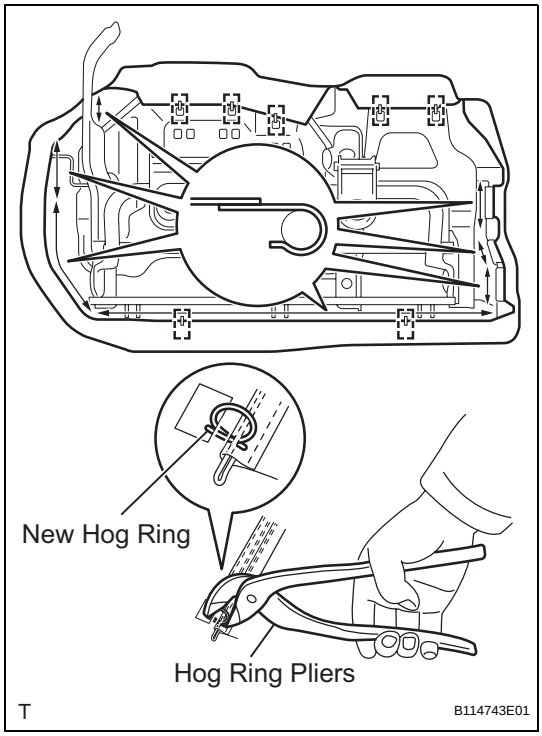
15. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY

(a) Push in the lock button of the rear seat headrest support and install the rear center seat headrest.



16. INSTALL REAR SEAT HEADREST ASSEMBLY

(a) Push in the lock button of the rear seat headrest support and install the rear seat headrest.

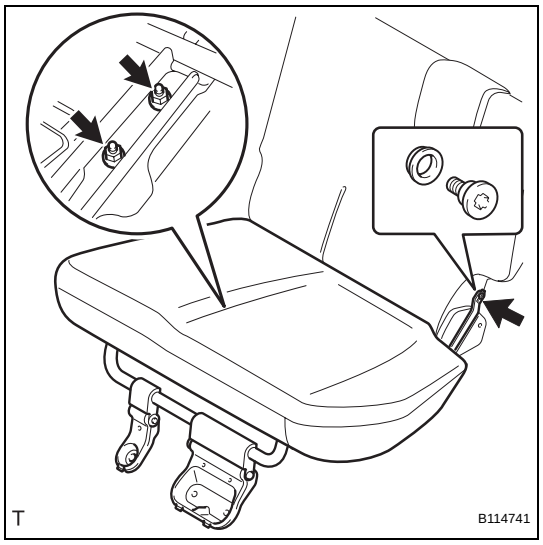


17. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) Engage the 7 hooks and install the rear seat cushion cover pad.

(b) Using hog ring pliers, install 7 new hog rings.

SE

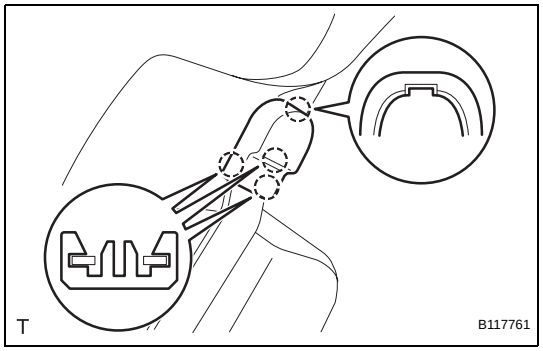


18. INSTALL REAR SEAT CUSHION ASSEMBLY

(a) Install the rear seat cushion with the 2 nuts.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)

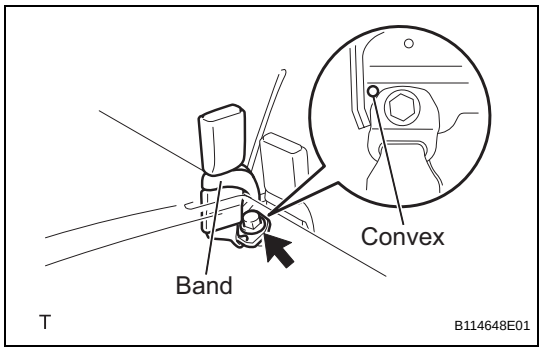
(b) Install the bolt into the spacer.

(c) Using "Torx" socket wrench T45, tighten the bolt.
Torque: 21 N*m (215 kgf*cm, 16 ft.*lbf)



19. INSTALL REAR SEAT SIDE HINGE COVER

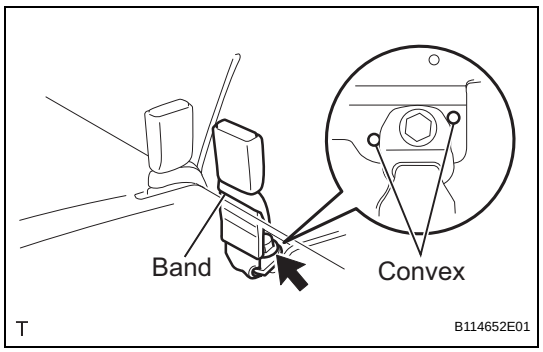
(a) Engage the 4 claws and install the rear seat side hinge cover.



20. INSTALL REAR SEAT INNER BELT ASSEMBLY

(a) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex area of the rear seatback frame.

(b) Install the belt into the band.

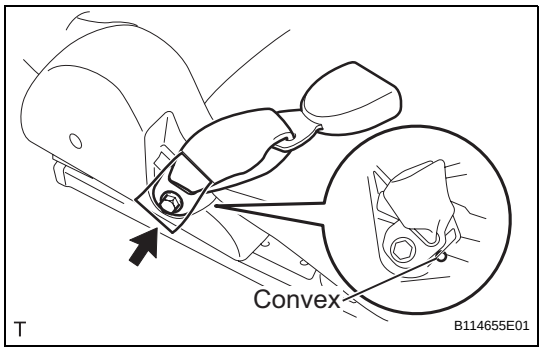


21. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY LH

(a) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex areas of the rear seatback frame.

(b) Install the belt into the band.

SE

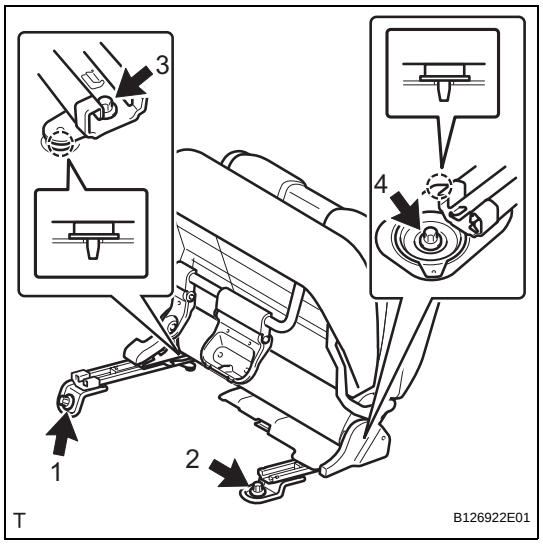


22. INSTALL REAR CENTER SEAT INNER BELT ASSEMBLY RH

(a) Install the rear center seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex area of the rear seatback frame.

INSTALLATION

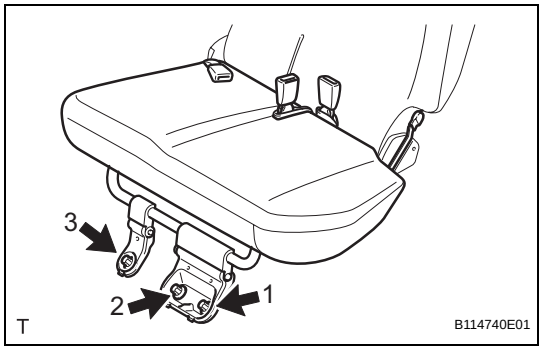
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.



1. INSTALL REAR SEAT ASSEMBLY

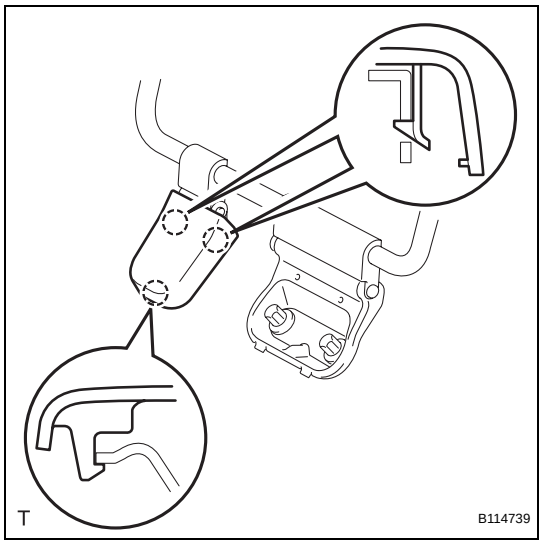
(a) Insert the 2 locating pins through the 2 body holes and install the rear seat.

(b) Using "Torx" socket wrench E10, install the 4 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



(c) Install the rear seat cushion.

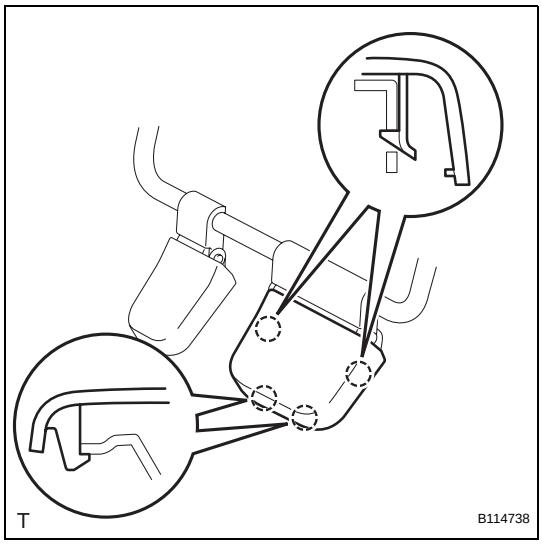
(d) Using "Torx" socket wrench E10, install the 3 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



2. INSTALL NO. 2 REAR SEAT LEG COVER

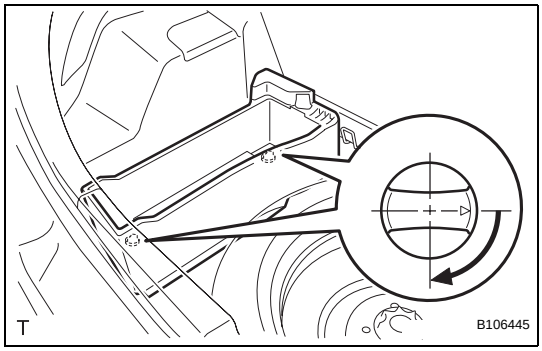
(a) Engage the 3 claws and install the No. 2 rear seat leg cover.

SE



3. INSTALL NO. 1 REAR SEAT LEG COVER

(a) Engage the 4 claws and install the No. 1 rear seat leg cover.



4. INSTALL DECK FLOOR BOX

(a) Install the deck floor box and lock the 2 knobs.

5. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

6. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)

REMOVAL

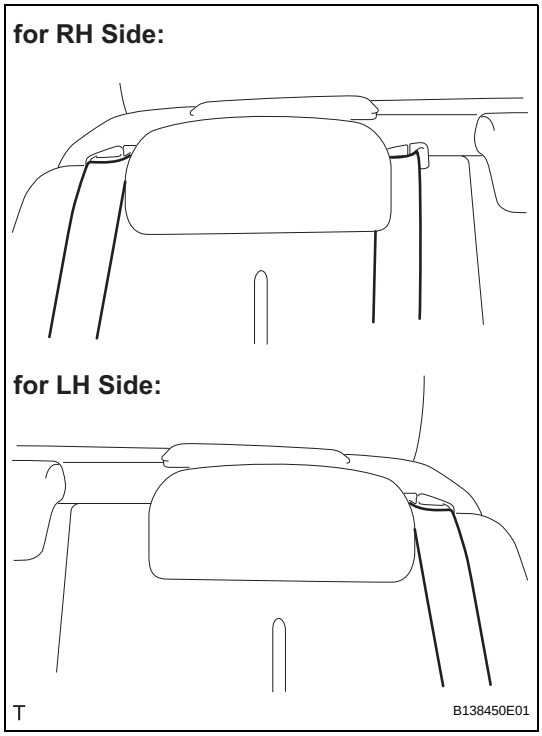
1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) Hold the front edge of the rear seat cushion cover pad and lift it up, as shown in the illustration, to disengage the 2 hooks.

NOTICE:

Hold the area around the hooks so as to avoid deforming the rear seat cushion frame.

(b) Pass the rear seat inner belt through the slit in the rear seat cushion cover pad, disengage the hook between the rear seat cushion cover pad and the rear seatback, and remove the rear seat cushion cover pad.



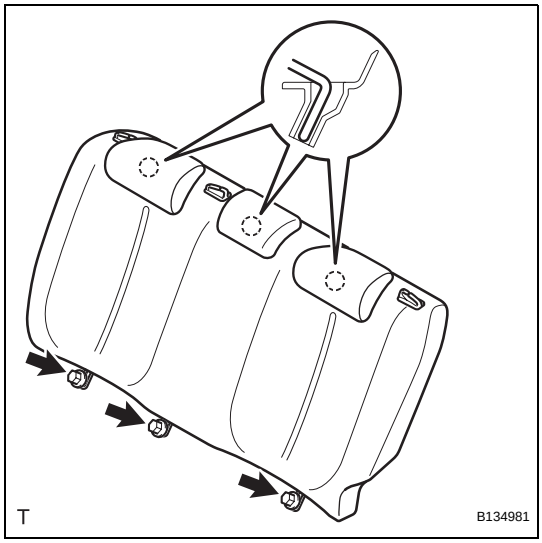
2. REMOVE REAR SEATBACK ASSEMBLY

(a) Remove the rear seat outer belt from the rear seat shoulder belt guide.

HINT:

Use the same procedure for both sides.

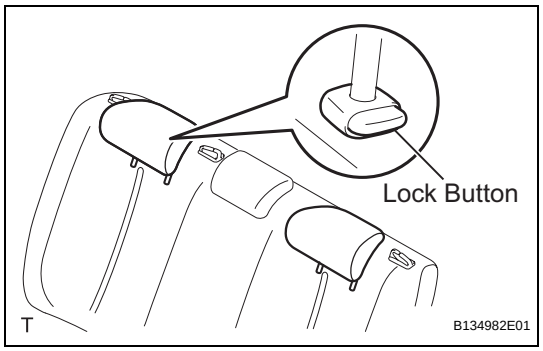
(b) Remove the rear center seat outer belt from the rear center seat shoulder belt guide.



(c) Remove the 3 bolts.

(d) Disengage the 3 hooks and remove the rear seatback.

SE



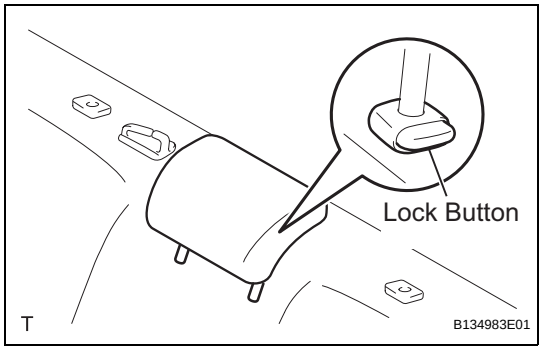
DISASSEMBLY

1. REMOVE REAR SEAT HEADREST ASSEMBLY

HINT:

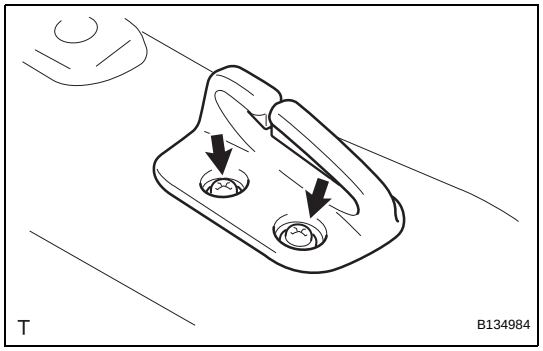
Use the same procedure for both sides.

(a) Push the lock button of the rear seat headrest support and remove the rear seat headrest.



2. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY

(a) Push the lock button of the rear seat headrest support and remove the rear center seat headrest.



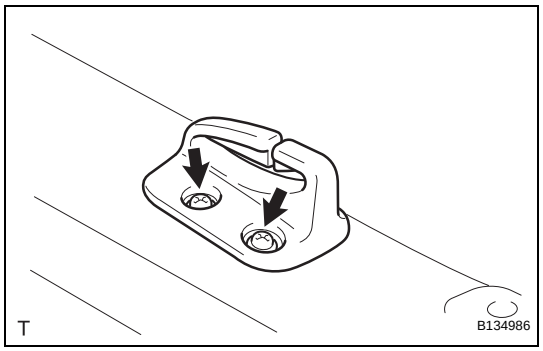
3. REMOVE REAR SEAT SHOULDER BELT GUIDE RH

(a) Remove the 2 screws and the rear seat shoulder belt guide.

4. REMOVE REAR SEAT SHOULDER BELT GUIDE LH

HINT:

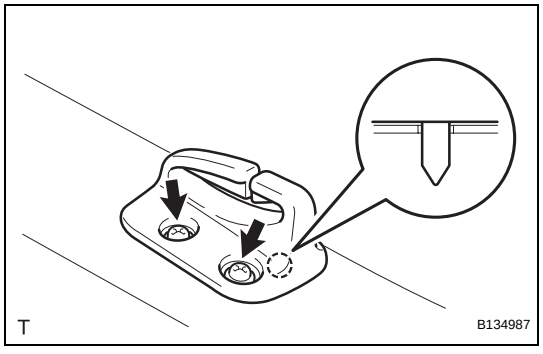
Use the same procedure as for the RH side.



5. REMOVE REAR CENTER SEAT SHOULDER BELT GUIDE

(a) Remove the 2 screws and the rear center seat shoulder belt guide.

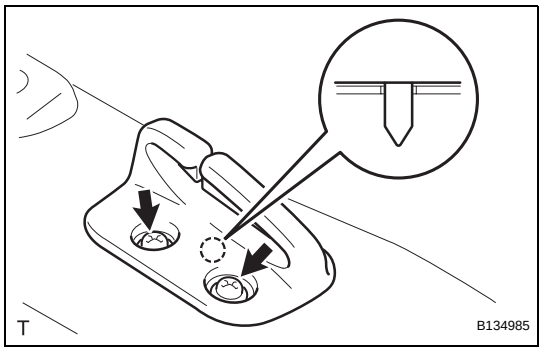
REASSEMBLY



1. INSTALL REAR CENTER SEAT SHOULDER BELT GUIDE

(a) Insert the pin into the rear seatback hole and install the rear center seat shoulder belt guide with the 2 screws.

SE



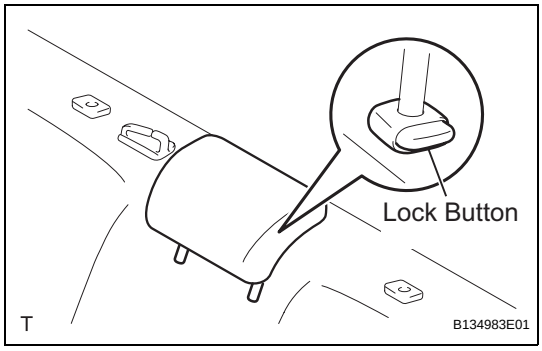
2. INSTALL REAR SEAT SHOULDER BELT GUIDE RH

(a) Insert the pin into the rear seatback hole and install the rear seat shoulder belt guide with the 2 screws.

3. INSTALL REAR SEAT SHOULDER BELT GUIDE LH

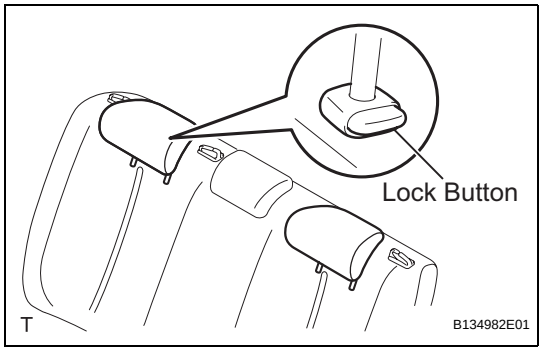
HINT:

Use the same procedure as for the RH side.



4. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY

(a) Push the lock button of the rear seat headrest support and install the rear center seat headrest.



5. INSTALL REAR SEAT HEADREST ASSEMBLY

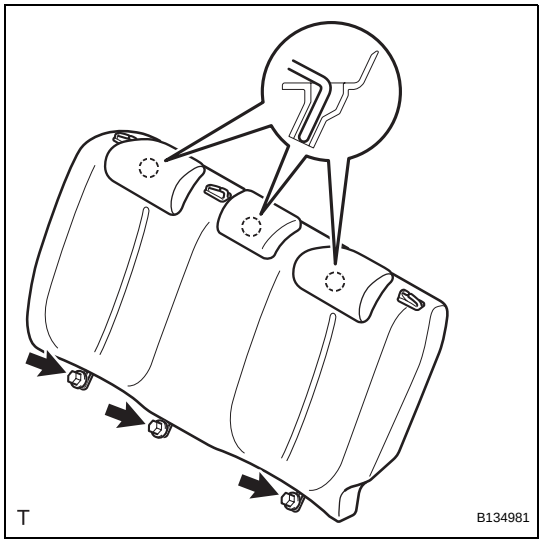
HINT:

Use the same procedure for both sides.

(a) Push the lock button of the rear seat headrest support and install the rear seat headrest.

SE

INSTALLATION

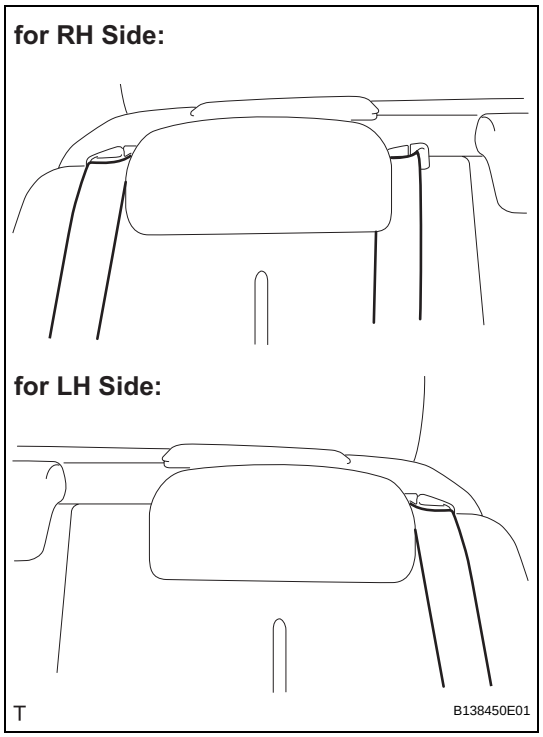


1. INSTALL REAR SEATBACK ASSEMBLY

(a) Engage the 3 hooks and install the rear seatback.

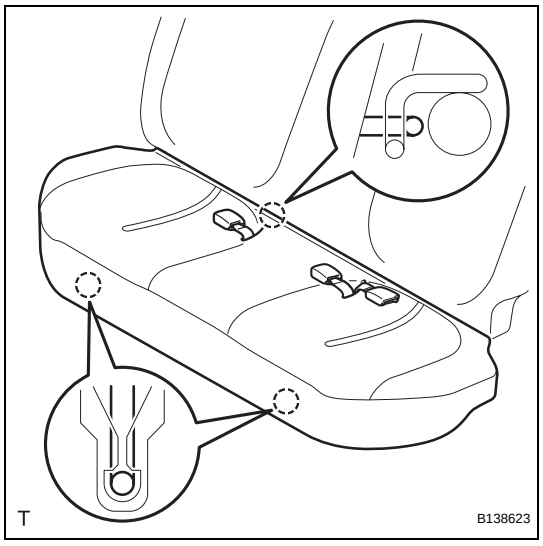
(b) Tighten the 3 bolts.

Torque: 7.9 N*m (80 kgf*cm, 70 in.*lbf)



(c) Install the rear seat outer belt into the rear seat shoulder belt guide.
HINT:
Use the same procedure for both sides.

(d) Install the rear center seat outer belt into the rear center seat shoulder belt guide.



2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) Pass the rear seat inner belt through the rear seat cushion cover pad slit.

(b) Engage the 3 hooks and install the rear seat cushion cover pad.
NOTICE:
Make sure that the 2 rear seat cushion lock hooks and the rear seat cushion frame are securely engaged.

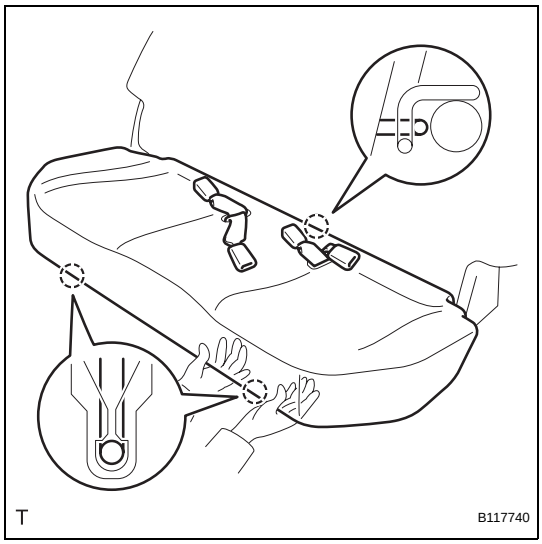
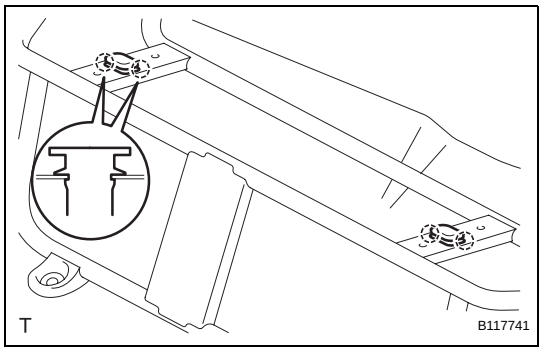
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

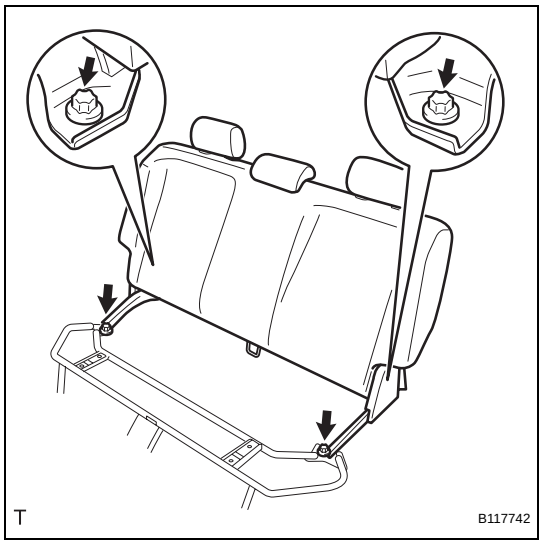
1. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
2. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
3. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
4. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
5. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
   (a) Hold the front edge of the rear seat cushion cover pad and lift it up, as shown in the illustration, to disengage the 2 rear seat cushion lock hooks.
   NOTICE:
   Hold the area around the rear seat cushion hooks so as to avoid deforming the rear seat cushion frame.
   (b) Pass the rear seat inner belt through the slit in the rear seat cushion cover pad, disengage the hook between the rear seat cushion cover pad and the rear seatback, and remove the rear seat cushion cover pad.



6. **REMOVE REAR SEAT CUSHION LOCK HOOK**
   (a) Disengage the 4 claws and remove the 2 rear seat cushion lock hooks.



SE

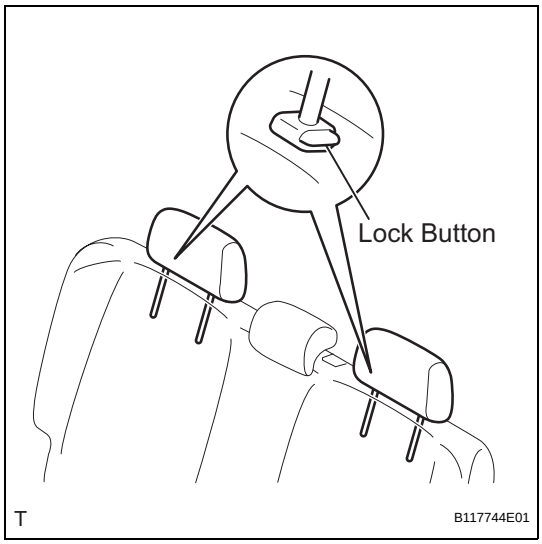


7. REMOVE REAR SEATBACK ASSEMBLY

(a) Using "Torx" socket wrench E10, remove the 4 bolts and the rear seat back.

DISASSEMBLY

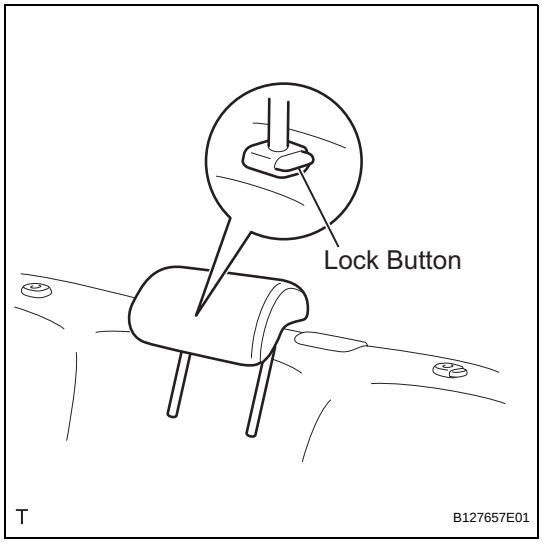
CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



1. REMOVE REAR SEAT HEADREST ASSEMBLY

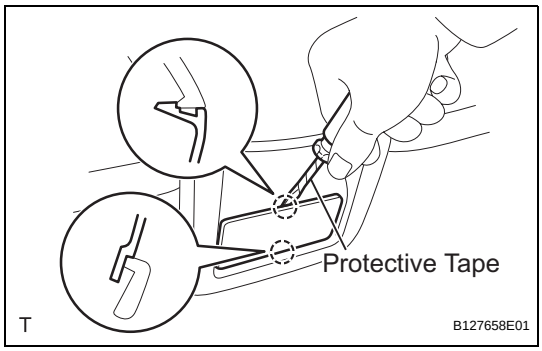
HINT:
Use the same procedure for both sides.

(a) Push in the lock button of the rear seat headrest support and remove the rear seat headrest.



2. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY

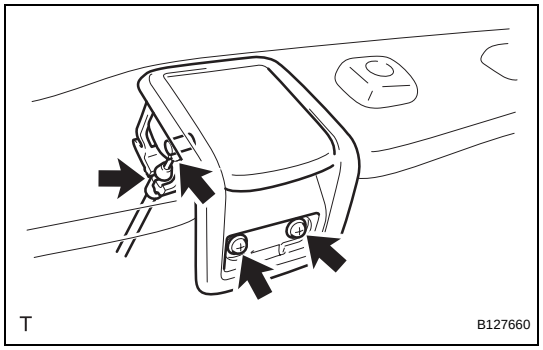
(a) Push in the lock button of the rear seat headrest and remove the rear center seat headrest.



3. REMOVE REAR SEAT LOCK STRIKER COVER

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the rear seat lock striker cover.

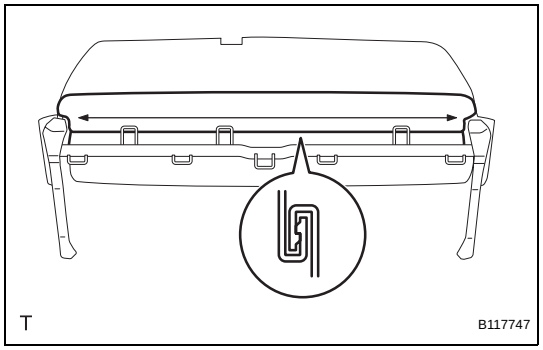
SE



4. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY

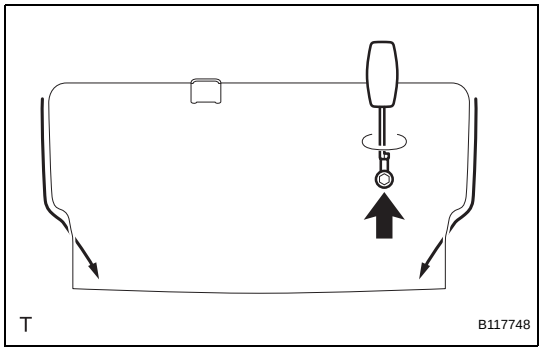
(a) Remove the 2 screws.

(b) Disconnect the rear seat reclining control cable and remove the rear seat lock control lever.



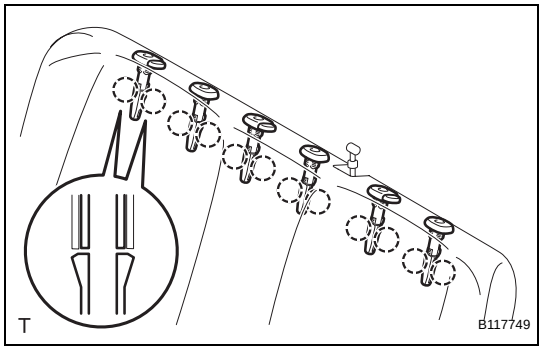
5. REMOVE REAR SEAT HEADREST SUPPORT

(a) Disengage the hook.

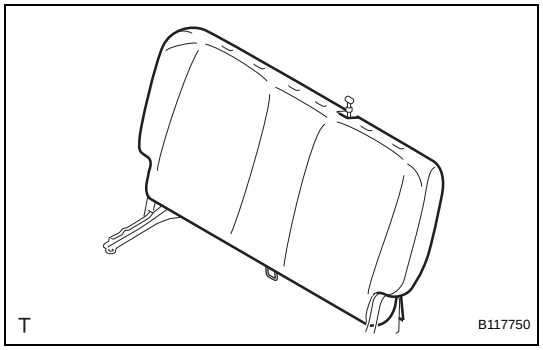


(b) Unfasten the 2 zippers.

(c) Remove the bolt and the rear seat belt hook.



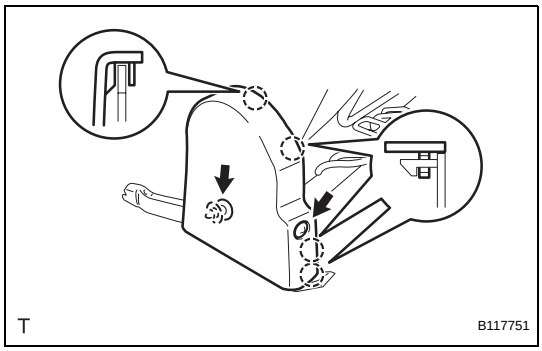
(d) Disengage the 2 claws and remove the rear seat headrest support.
HINT:
Use the same procedure to remove all the rear seat headrest supports.



6. REMOVE REAR SEATBACK COVER PAD SUB-ASSEMBLY

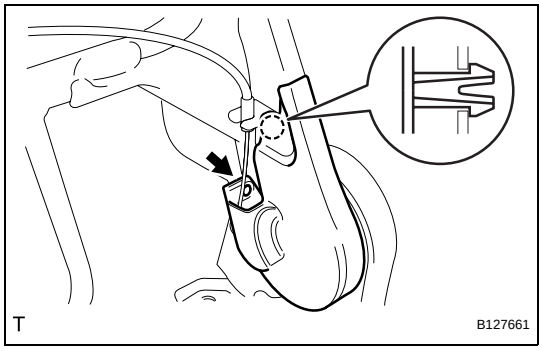
(a) Remove the rear seatback cover pad.

SE



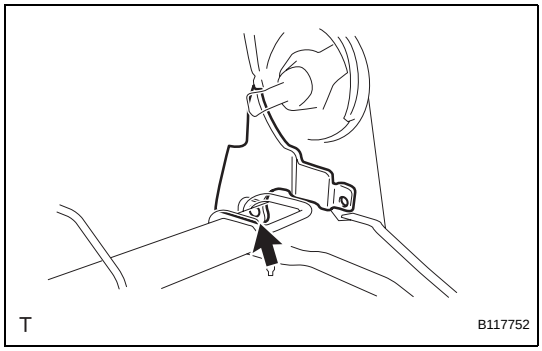
7. REMOVE REAR SEAT RECLINING COVER LH
(a) Remove the screw.
(b) Using a clip remover, remove the clip.
(c) Disengage the 4 claws and remove the rear seat reclining cover.

8. REMOVE REAR SEAT RECLINING COVER RH
HINT:
Use the same procedure as for the LH side.



9. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER LH
(a) Remove the screw.
(b) Disengage the claw and remove the reclining adjuster upper inside cover.

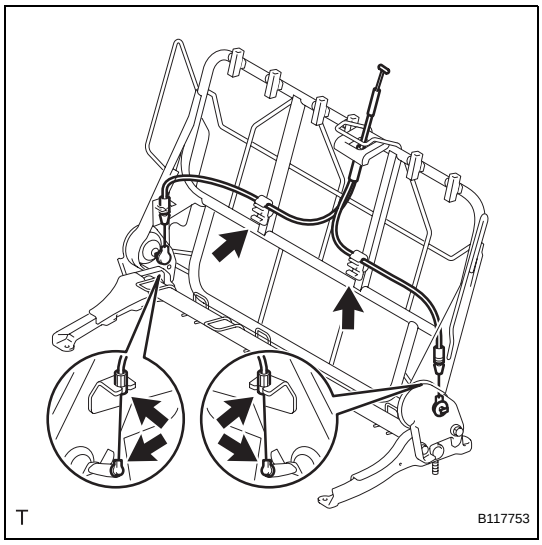
10. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER RH
HINT:
Use the same procedure as for the LH side.



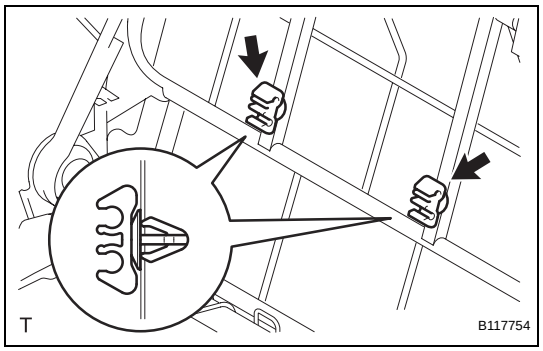
11. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER LH
(a) Using a clip remover, remove the clip and the reclining adjuster lower inside cover.

12. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER RH
HINT:
Use the same procedure as for the LH side.

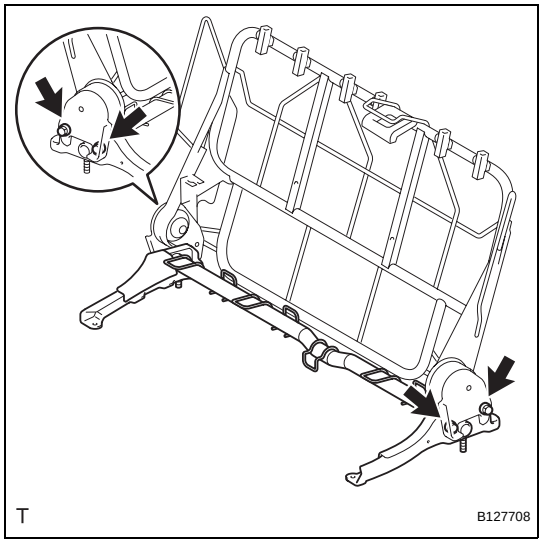
SE



13. REMOVE REAR SEAT RECLINING CONTROL CABLE
(a) Remove the rear seat reclining control cable.



(b) Remove the 2 clamps.



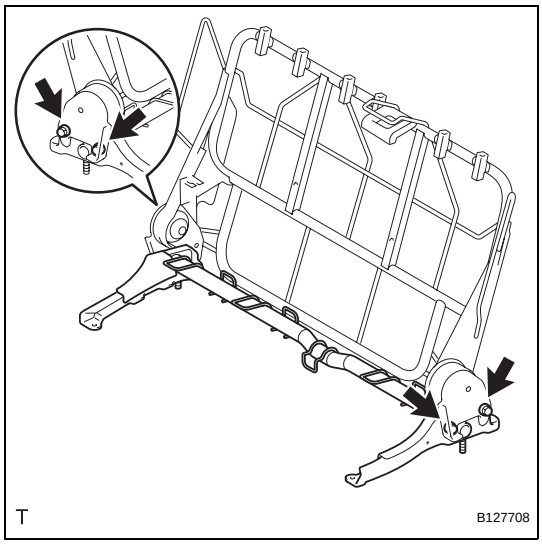
14. REMOVE REAR SEAT LEG SUB-ASSEMBLY

(a) Remove the 4 bolts and the rear seat leg.

SE

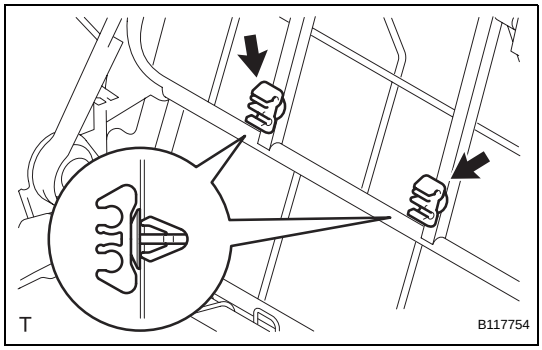
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp surfaces on the rear seatback frame could cause injuries to your hands.



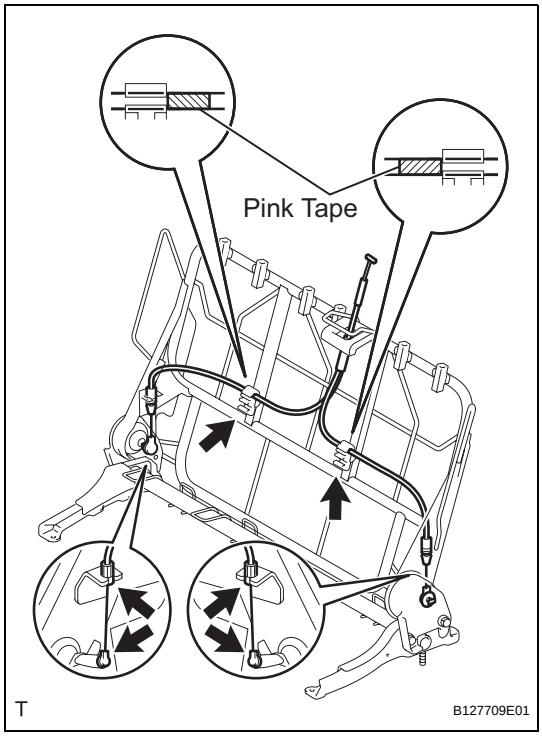
1. INSTALL REAR SEAT LEG SUB-ASSEMBLY

(a) Install the rear seat leg with the 4 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

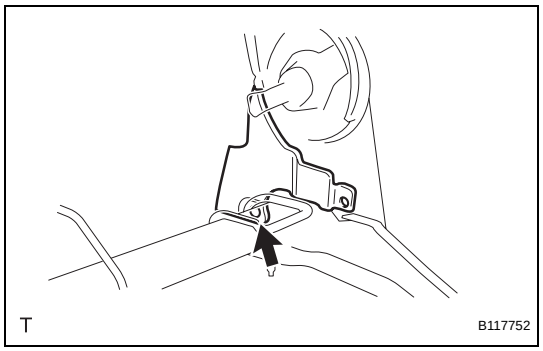


2. INSTALL REAR SEAT RECLINING CONTROL CABLE

(a) Install the 2 clamps.



(b) Install the rear seat reclining control cable as shown in the illustration.



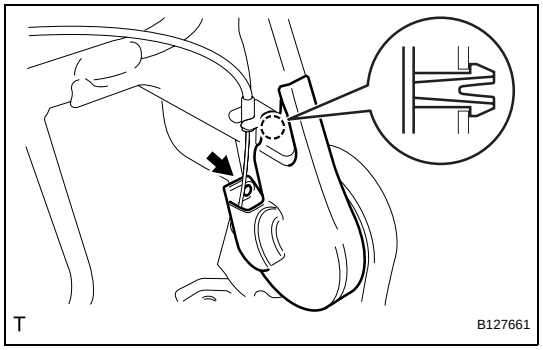
3. INSTALL RECLINING ADJUSTER LOWER INSIDE COVER LH

(a) Install the reclining adjuster lower inside cover with the clip.

4. INSTALL RECLINING ADJUSTER LOWER INSIDE COVER RH

HINT:

Use the same procedure as for the LH side.



5. INSTALL RECLINING ADJUSTER UPPER INSIDE COVER LH

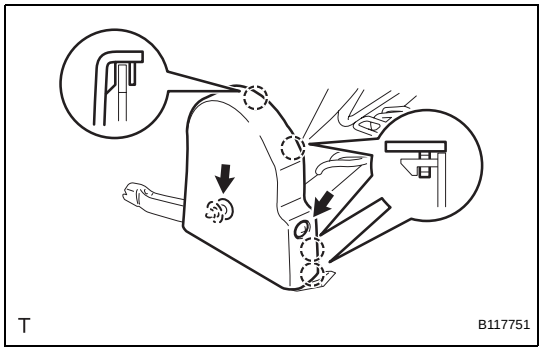
(a) Engage the claw and install the reclining adjuster upper inside cover.

(b) Tighten the screw.

6. INSTALL RECLINING ADJUSTER UPPER INSIDE COVER RH

HINT:

Use the same procedure as for the LH side.



7. INSTALL REAR SEAT RECLINING COVER LH

(a) Engage the 4 claws and install the rear seat reclining cover.

(b) Install the clip.

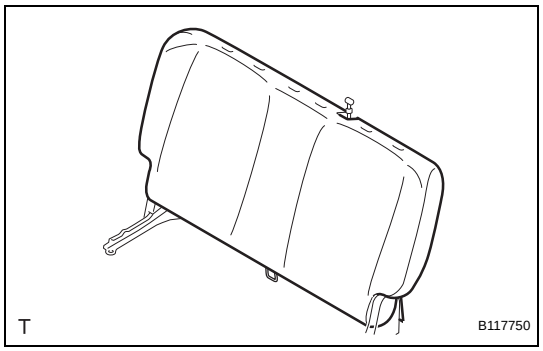
(c) Tighten the screw.

8. INSTALL REAR SEAT RECLINING COVER RH

HINT:

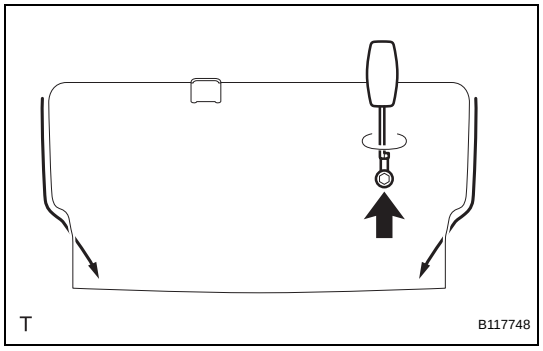
Use the same procedure as for the LH side.

SE



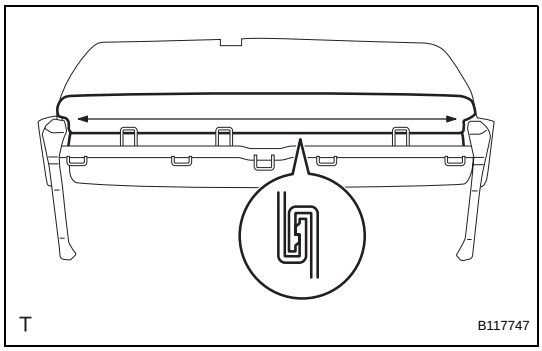
9. INSTALL REAR SEATBACK COVER PAD SUB-ASSEMBLY

(a) Install the rear seatback cover pad.

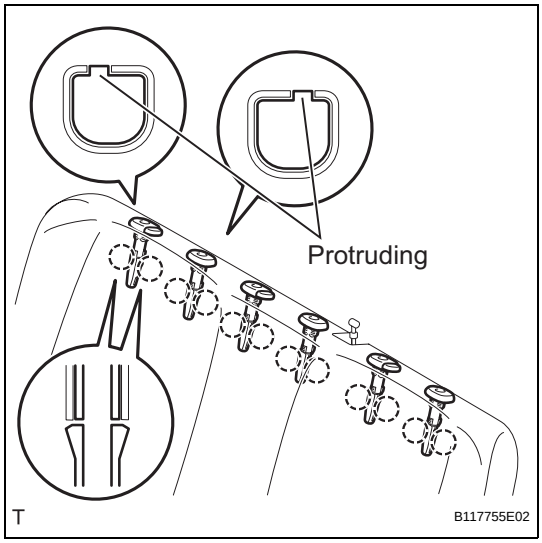


(b) Install the rear seat belt hook with the bolt.
Torque: 5.0 N*m (50 kgf*cm, 44 in.*lbf)

(c) Fasten the 2 zippers.



(d) Engage the hook.



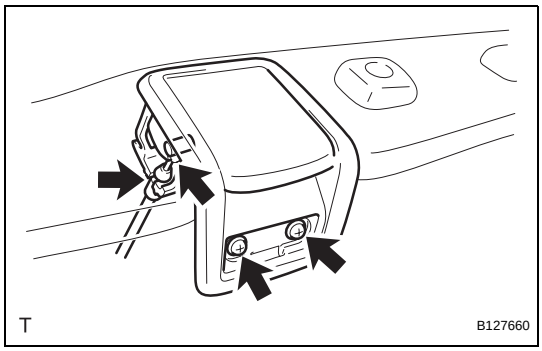
10. INSTALL REAR SEAT HEADREST SUPPORT

HINT:

Use the same procedure to install all the rear seat headrest supports.

(a) Align the protruding portion of the rear seat headrest support with the installation groove of the rear seatback frame.

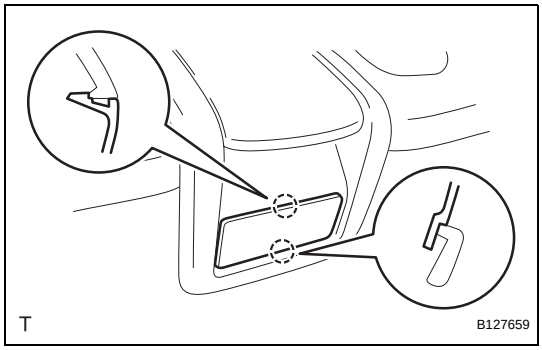
(b) Engage the 2 claws and install the rear seat headrest support.



11. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Connect the rear seat reclining control cable and install the rear seat lock control lever.

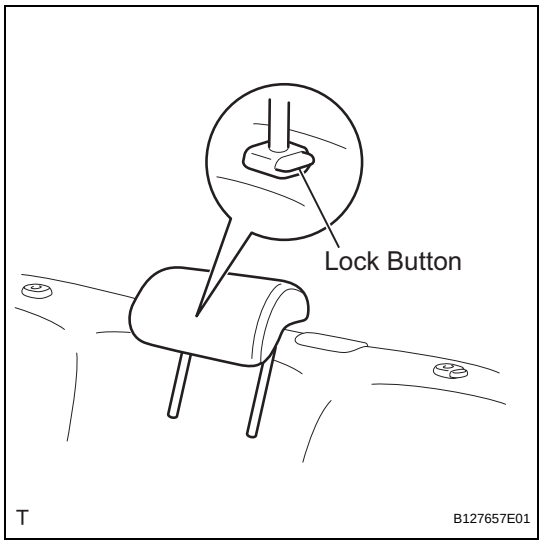
(b) Tighten the 2 screws.



12. INSTALL REAR SEAT LOCK STRIKER COVER

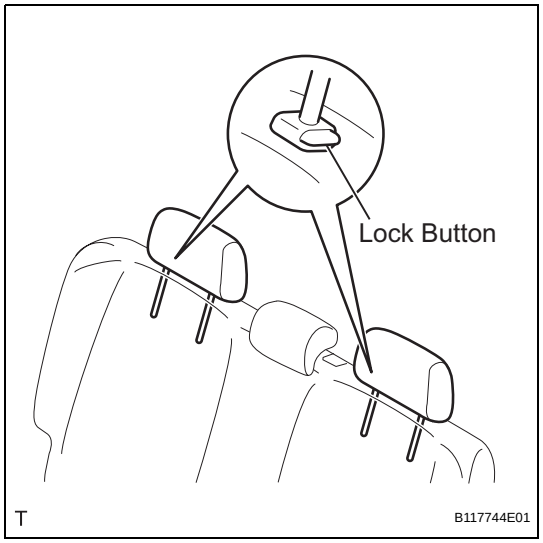
(a) Engage the 2 claws and install the rear seatback lock striker cover.

SE



13. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY

(a) Push in the lock button of the rear seat headrest support and install the rear center seat headrest.



14. INSTALL REAR SEAT HEADREST ASSEMBLY

HINT:

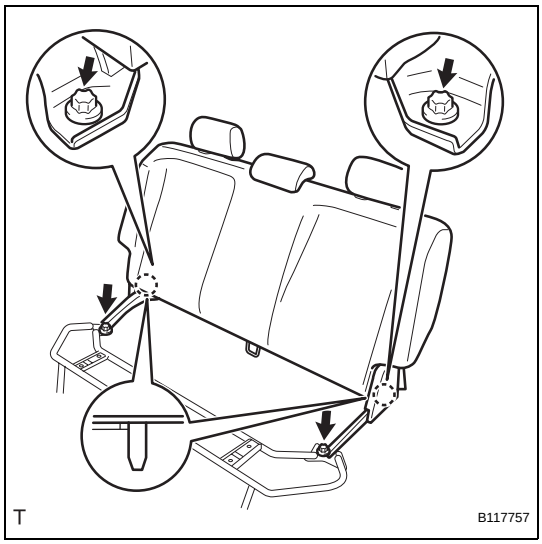
Use the same procedure for both sides.

(a) Push in the lock buttons of the rear seat headrest support and install the rear seat headrest.

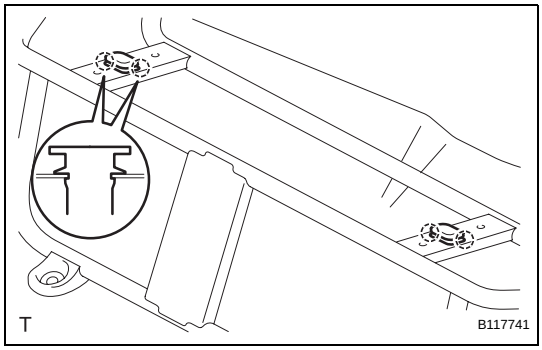
SE

INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.

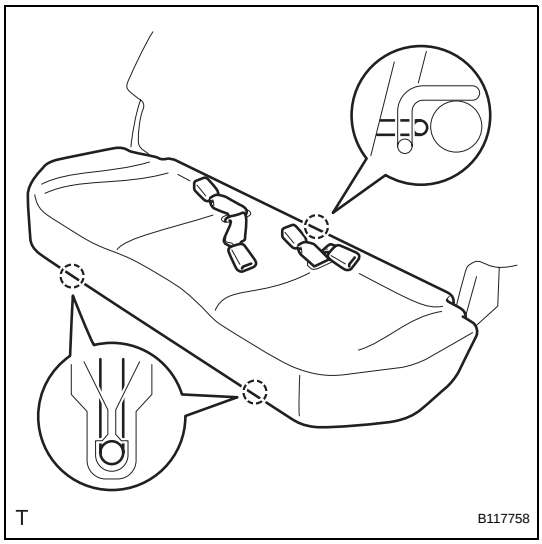


1. INSTALL REAR SEATBACK ASSEMBLY
(a) Insert the 2 locating pins through the 2 body holes and install the rear seatback.
(b) Using "Torx" socket wrench E10, tighten the 4 bolts.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



2. INSTALL REAR SEAT CUSHION LOCK HOOK
(a) Engage the 4 claws and install the 2 rear seat cushion lock hooks.

SE



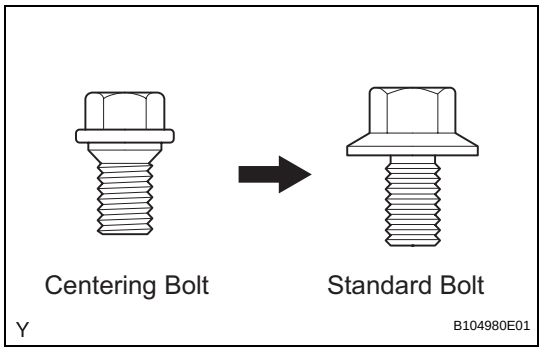
3. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY
(a) Pass the rear seat inner belt through the slit in the rear seat cushion cover pad.
(b) Engage the 3 hooks and install the rear seat cushion cover pad.
NOTICE:
Make sure that the rear seat cushion lock hooks and the rear seat cushion frame are securely engaged.

4. INSTALL DECK FLOOR BOX RH (See page IR-83)

5. INSTALL DECK FLOOR BOX LH (See page IR-83)

6. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

7. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)



HOOD (for Sedan)

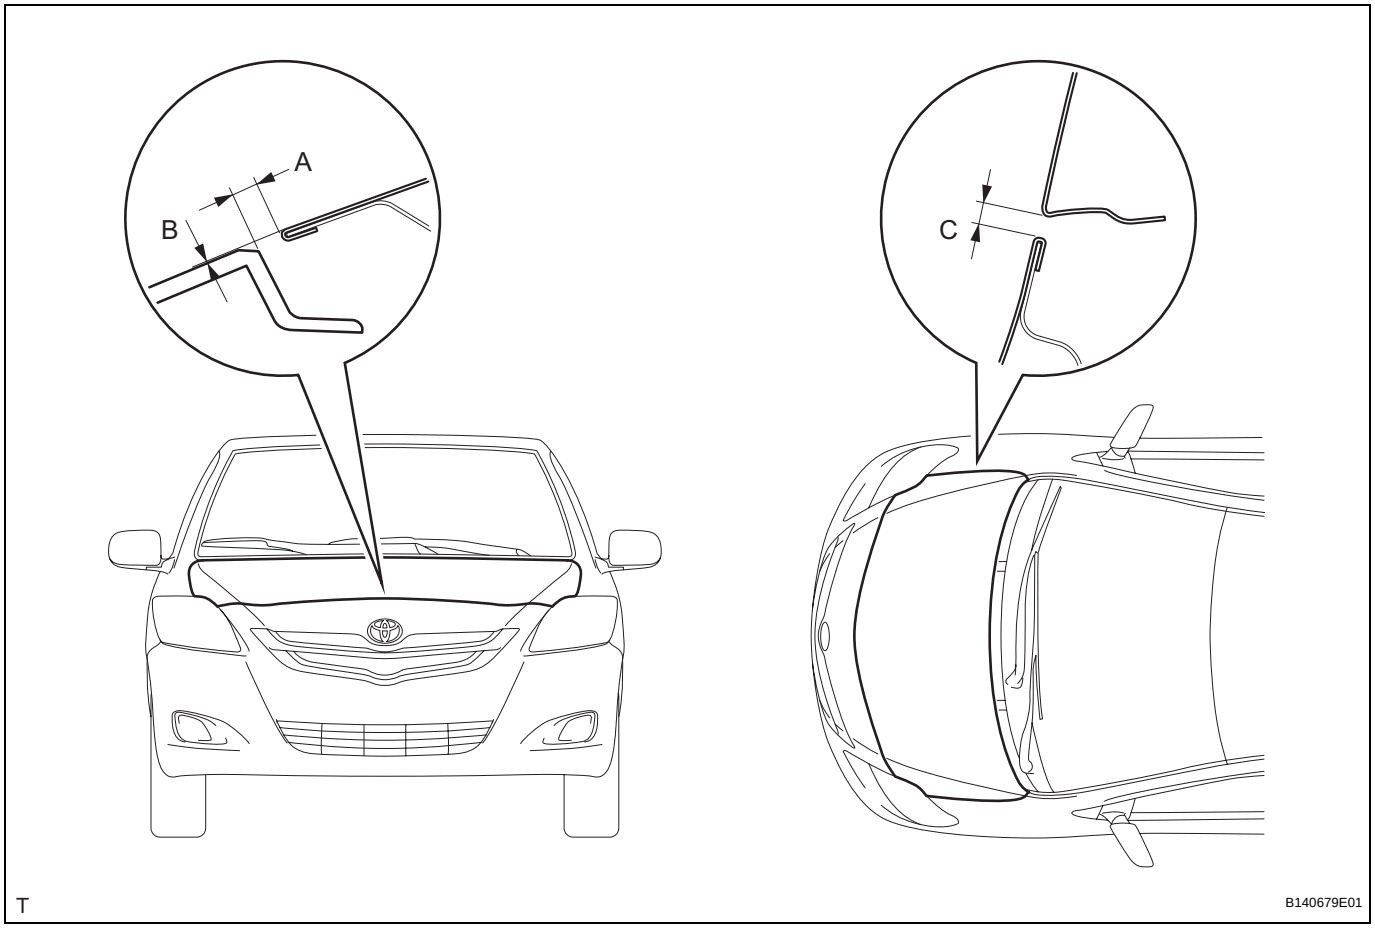
ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (see page SS-2).

1. INSPECT HOOD

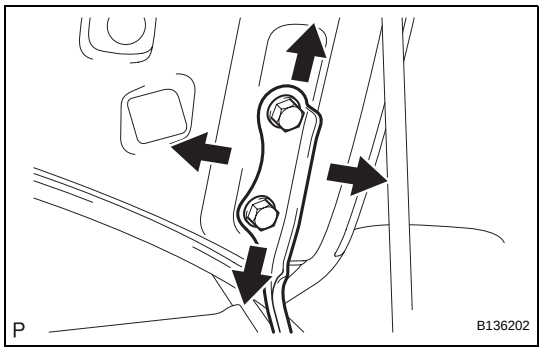
(a) Check that the clearance measurements are within the standard ranges.



Standard

Area	Measurement	Area	Measurement
A	2.35 to 6.35 mm (0.092 to 0.250 in.)	C	2.0 to 5.0 mm (0.079 to 0.197 in.)
B	-2 to 2 mm (-0.079 to 0.079 in.)	-	-

ED

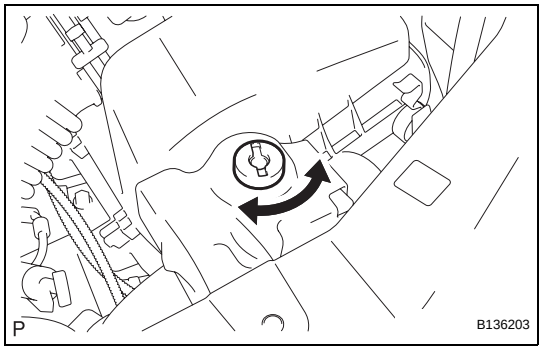


2. ADJUST HOOD

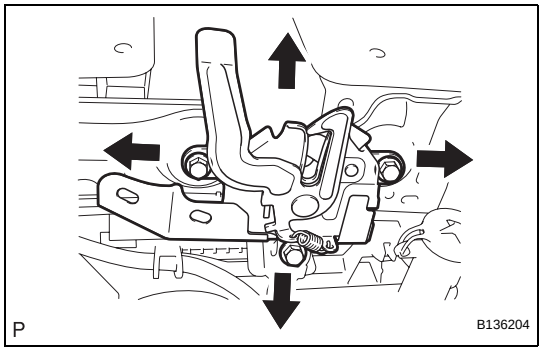
(a) Loosen the hood side hinge bolts.

(b) Move the hood to adjust the clearance to within the standard range.

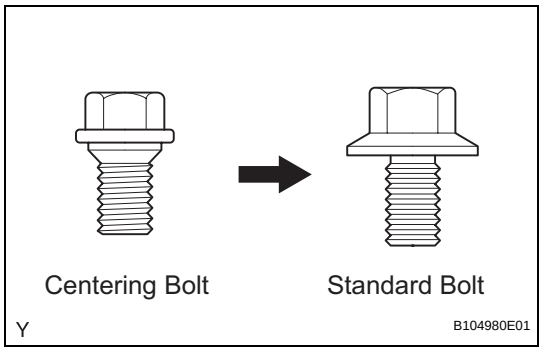
(c) Tighten the hood side hinge bolts after the adjustment.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



(d) Adjust the height of the hood front end by turning the cushion rubber.
HINT:
The cushion rubber can be raised and lowered by turning it.



(e) Adjust the hood lock.
(1) Loosen the 3 bolts.
(2) Adjust the hood lock position so that the striker can enter it smoothly.
(3) Tighten the 3 bolts after the adjustment.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



HOOD (for Hatchback)

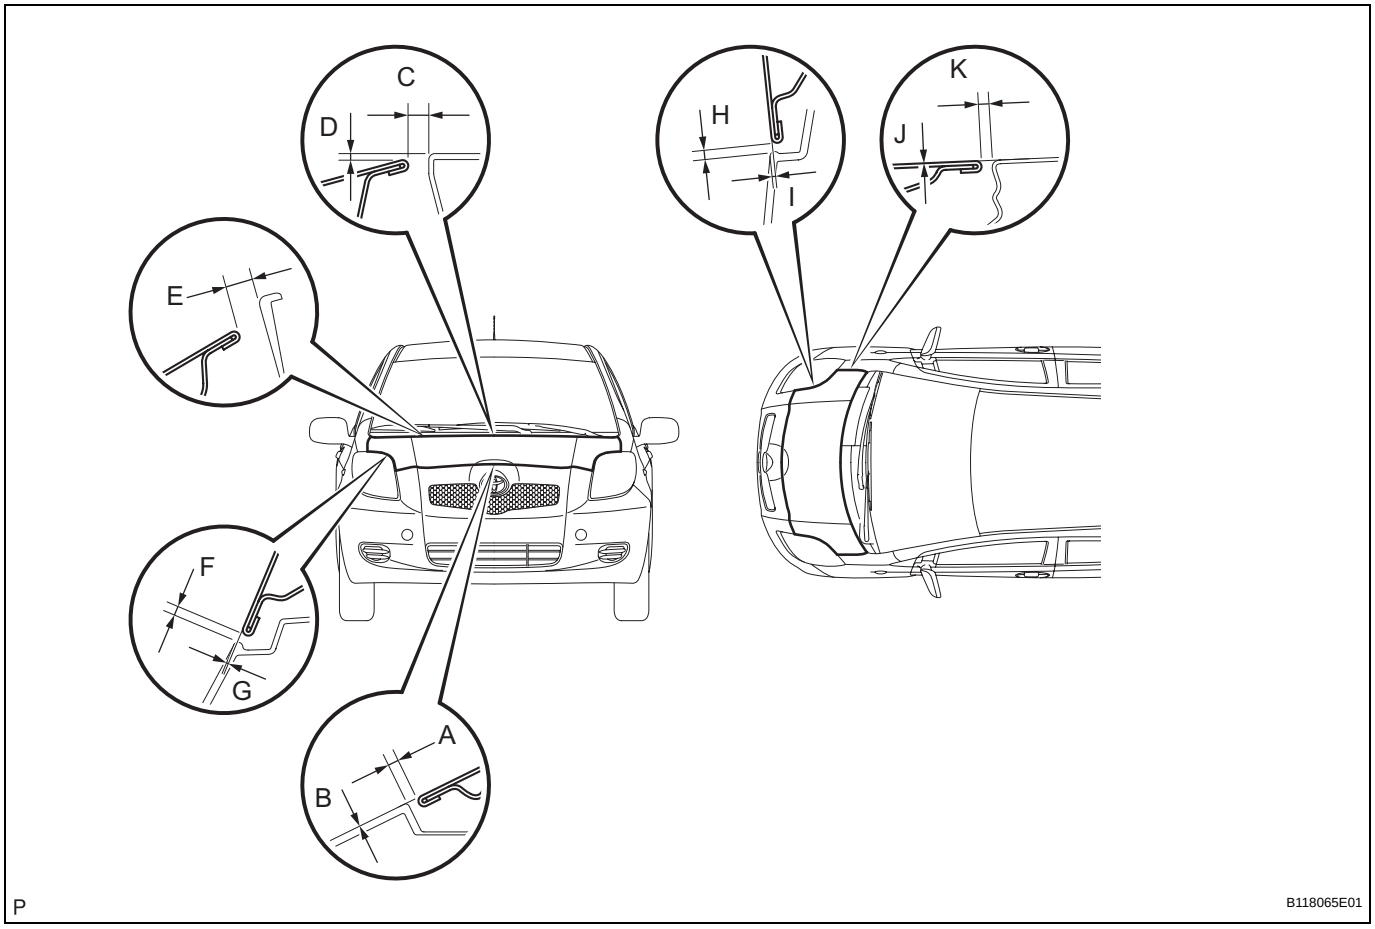
ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart.

1. INSPECT HOOD

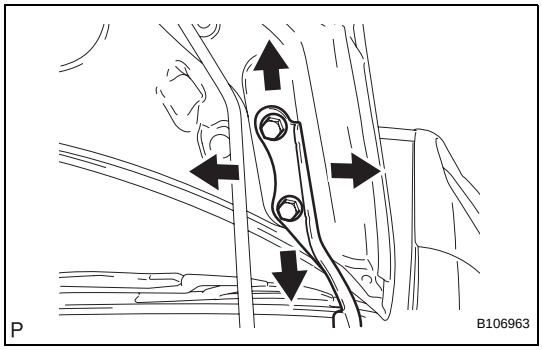
(a) Check that the clearance measurements are within the standard ranges.



Standard

Area	Measurement	Area	Measurement
A	1.7 to 5.7 mm (0.067 to 0.224 in.)	G	-1.55 to 2.45 mm (-0.061 to 0.096 in.)
B	-2 to 2 mm (-0.079 to 0.079 in.)	H	1.75 to 5.75 mm (0.067 to 0.226 in.)
C	4.45 to 10.45 mm (0.175 to 0.411 in.)	I	-1.25 to 2.75 mm (-0.049 to 0.108 in.)
D	-0.95 to 5.05 mm (-0.037 to 0.199 in.)	J	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
E	7.55 to 13.55 mm (0.297 to 0.533 in.)	K	2.0 to 5.0 mm (0.079 to 0.197 in.)

Area	Measurement	Area	Measurement
F	1.65 to 5.65 mm (0.065 to 0.222 in.)	-	-

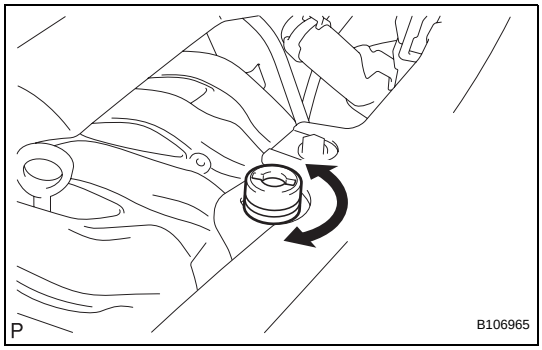


2. ADJUST HOOD

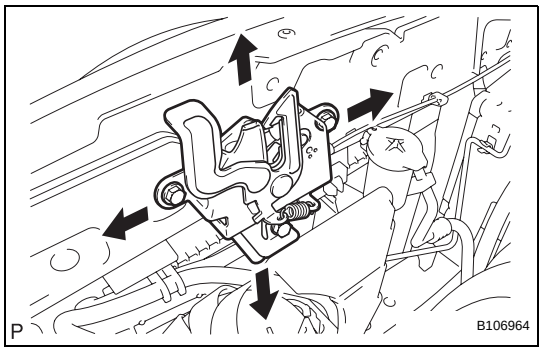
(a) Loosen the hood side hinge bolts.

(b) Move the hood to adjust the clearance to within the standard range.

(c) Tighten the hood side hinge bolts after the adjustment.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



(d) Adjust the height of the hood front end by turning the cushion rubber.
HINT:
The cushion rubber can be raised and lowered by turning it.



(e) Adjust the hood lock.
(1) Loosen the 3 bolts.
(2) Adjust the hood lock position so that the striker can enter it smoothly.
(3) Tighten the 3 bolts after the adjustment.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

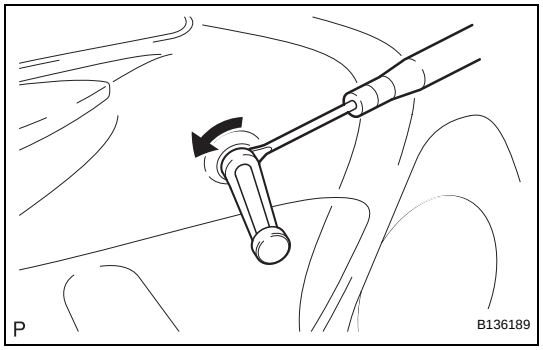
DISASSEMBLY

HINT:

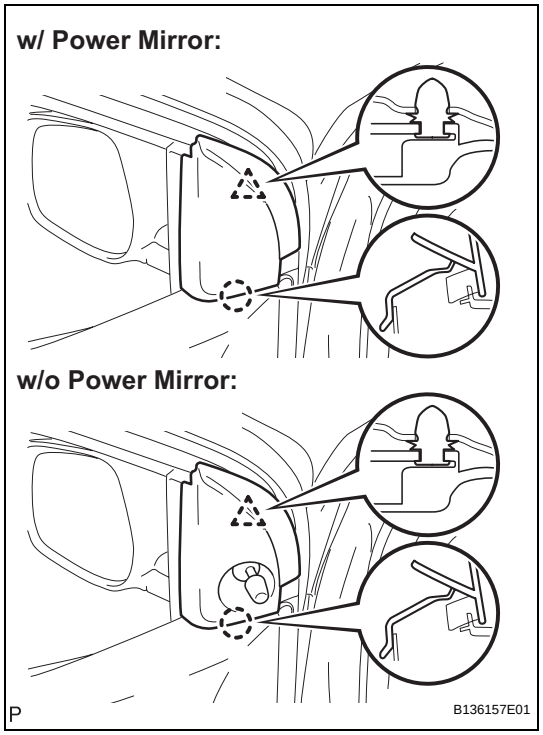
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



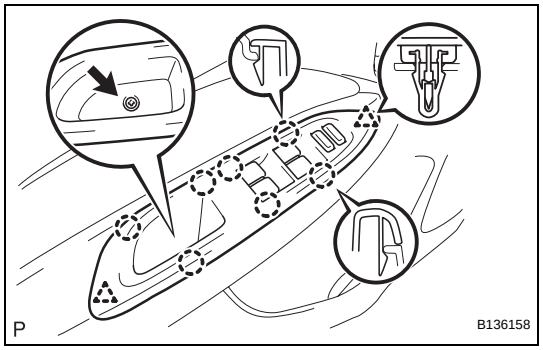
2. REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Insert a clip remover between the plate and door trim.
(b) Turn the handle with the clip remover inserted, as shown in the illustration.
(c) Remove the front door window regulator handle and clip.
(d) Remove the window regulator handle plate.



3. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH

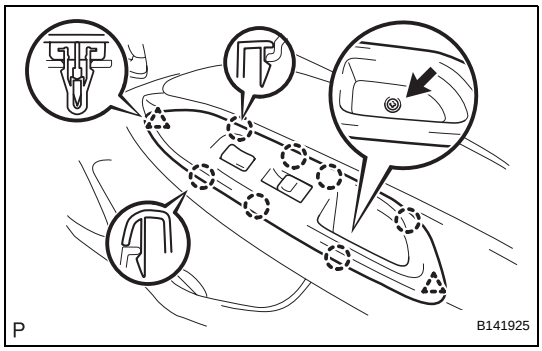
(a) Disengage the claw and clip and remove the front door lower frame bracket garnish.



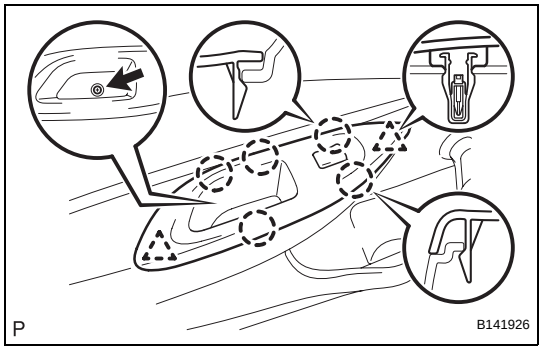
4. REMOVE FRONT ARMREST BASE UPPER PANEL

(a) for Driver side with power window:
  (1) Remove the screw.
  (2) Disengage the 7 claws and 2 clips and remove the front armrest base upper panel.
  (3) Disconnect the connector.

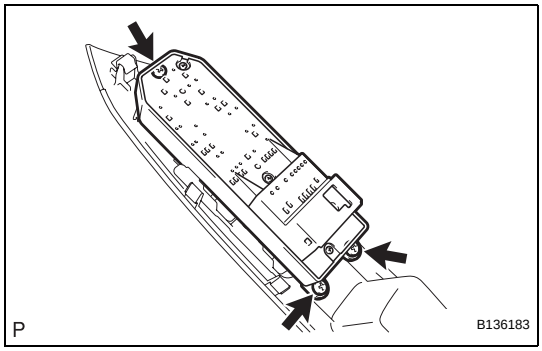
ED



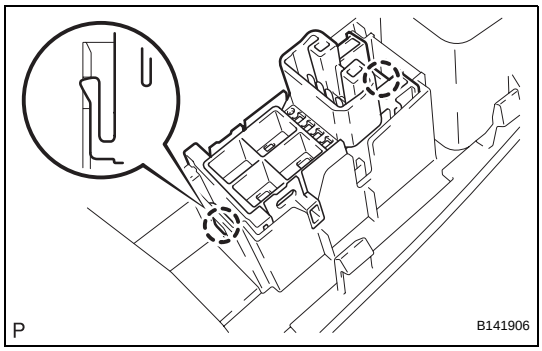
(b) for Front passenger side with power window:
(1) Remove the screw.
(2) Disengage the 7 claws and 2 clips and remove the front armrest base upper panel.
(3) Disconnect the connector.



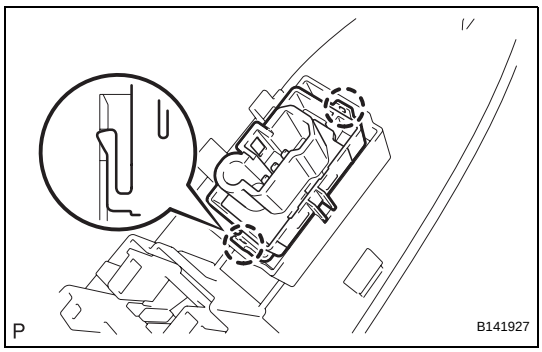
(c) w/o Power window:
(1) Remove the screw.
(2) Disengage the 5 claws and 2 clips and remove the front armrest base upper panel.



5. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Window)
(a) Remove the 3 screws and the power window regulator master switch.

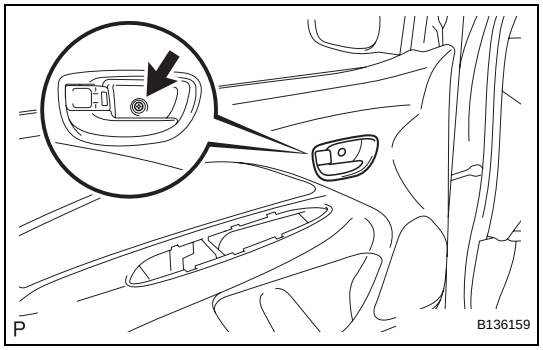


6. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY (w/ Power Window)
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the power window regulator switch.



7. REMOVE DOOR CONTROL SWITCH (w/ Power Door Lock)
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the door control switch.

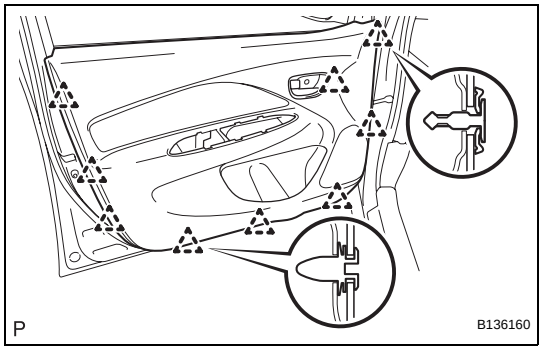
ED



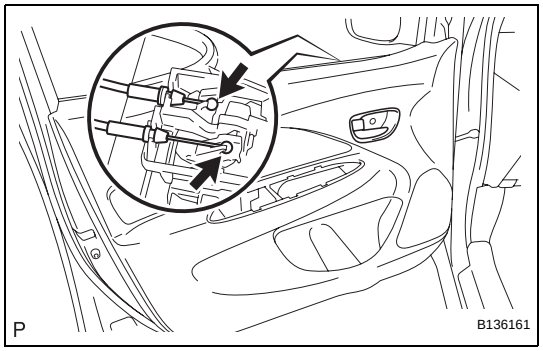
8. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) w/ Power window:

(1) Remove the screw.



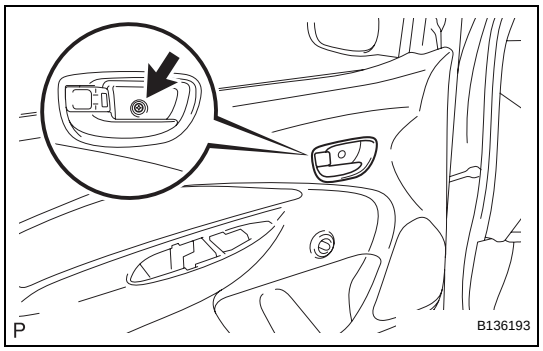
(2) Disengage the 9 clips.

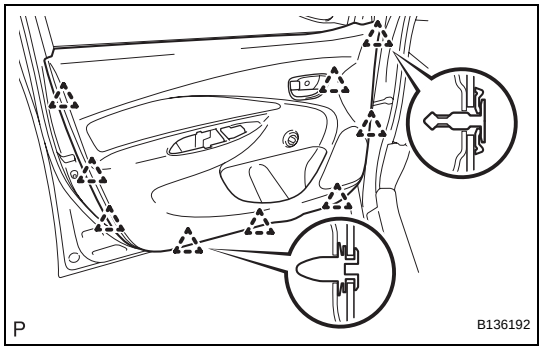


(3) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door trim board.

(b) w/o Power window:

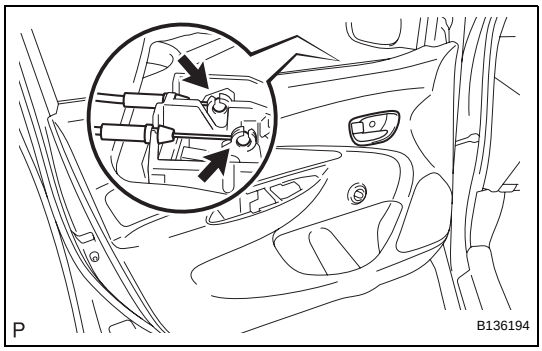
(1) Remove the screw.



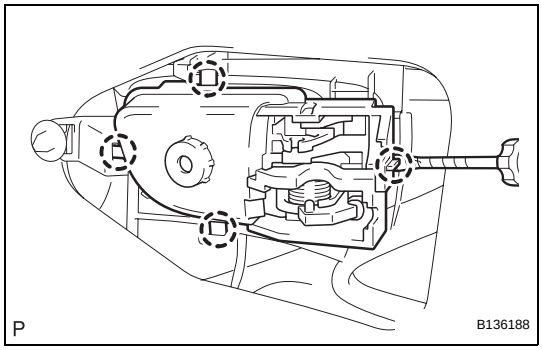


(2) Disengage the 9 clips.

ED



(3) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door trim board.



9. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the front door inside handle.

10. REMOVE FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Remove the front door glass weatherstrip inner from the front door trim board.

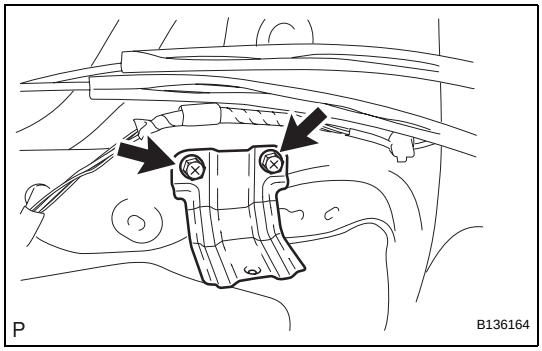
11. REMOVE FRONT NO.1 SPEAKER ASSEMBLY (See page AV-164)

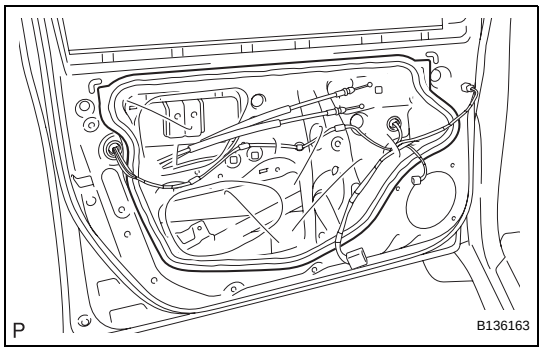
12. REMOVE OUTER REAR VIEW MIRROR (See page MI-8)

13. REMOVE FRONT DOOR BELT MOULDING (See page ET-85)

14. REMOVE FRONT DOOR TRIM BRACKET

(a) Remove the 2 screws and front door trim bracket.





15. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect the connectors and clamps, then remove the front door service hole cover.

NOTICE:
Remove any tape remaining on the door side.

16. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

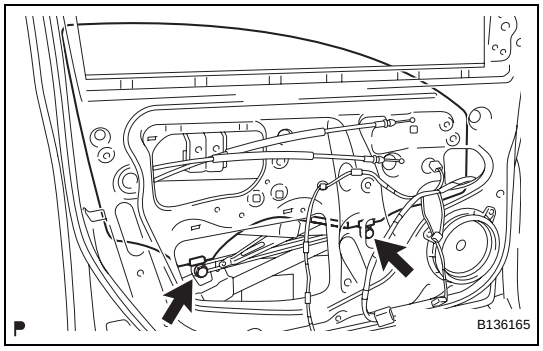
(a) w/ Power window:

(1) Driver side:
Provisionally install the power window regulator master switch.

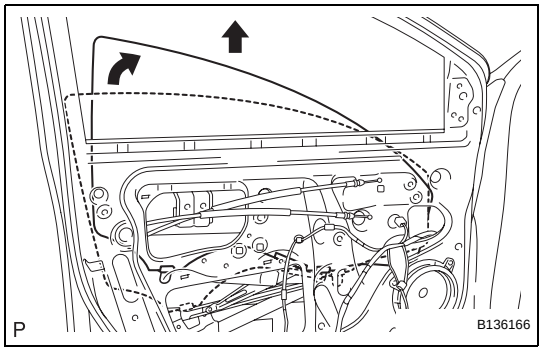
(2) Passenger side:
Provisionally install the power window regulator switch.

ED

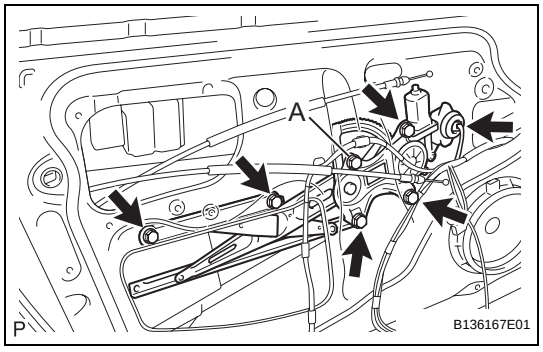
(b) w/o Power window:
(1) Provisionally install the front door window regulator handle.



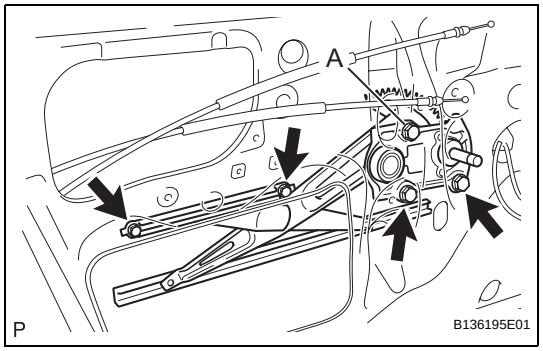
(c) Move the front door glass until the 2 bolts can be seen through the service holes.
(d) Remove the 2 bolts.
NOTICE:
Do not drop or damage the front door glass when removing the bolts.



(e) Remove the front door glass in the direction indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.
(f) w/ Power window:
(1) Driver side:
Remove the power window regulator master switch.
(2) Passenger side:
Remove the power window regulator switch.
(g) w/o Power window:
(1) Remove the front door window regulator handle.

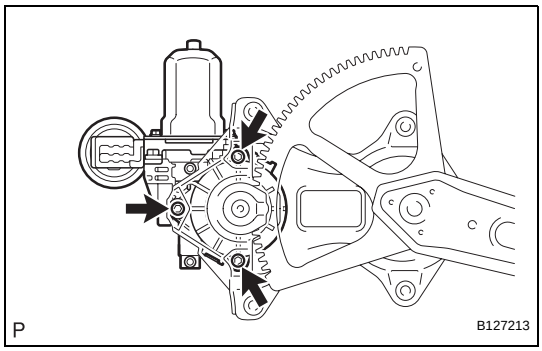


17. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY
(a) w/ Power window:
(1) Disconnect the connector.
(2) Loosen bolt A.
(3) Remove the 5 bolts, then remove the front door window regulator.
NOTICE:
Do not drop or damage the window regulator when removing the bolts.
HINT:
Remove the window regulator through the service hole.



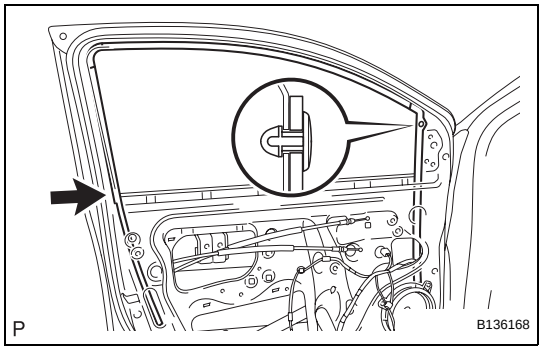
(b) w/o Power window:
(1) Loosen bolt A.
(2) Remove the 5 bolts, then remove the front door window regulator.
NOTICE:
Do not drop or damage the window regulator when removing the bolts.
HINT:
Remove the window regulator through the service hole.

ED



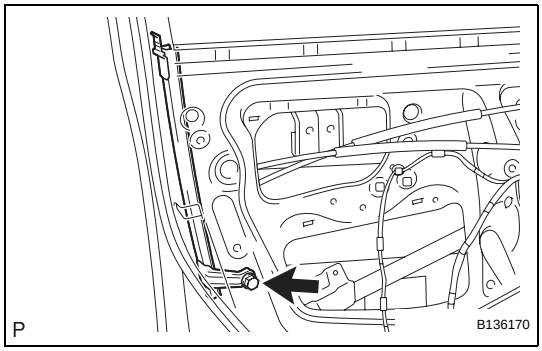
18. REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT (w/ Power Window)

(a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.



19. REMOVE FRONT DOOR GLASS RUN

(a) Disengage the clip, then remove the front door glass run.



20. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

(a) Remove the bolt, then remove the front door frame sub-assembly rear lower.

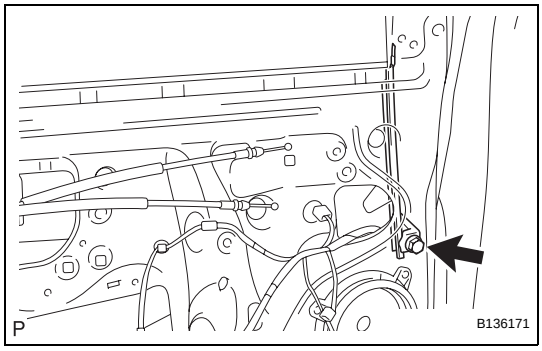
NOTICE:

Do not drop or damage the front door frame sub-assembly rear lower when removing the bolt.

HINT:

Remove the front door frame sub-assembly rear lower through the service hole.

ED



21. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

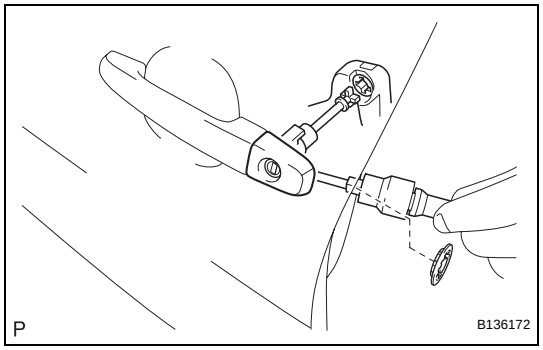
(a) Remove the bolt, then remove the front door frame sub-assembly front lower.

NOTICE:

Do not drop or damage the front door frame sub-assembly front lower when removing the bolts.

HINT:

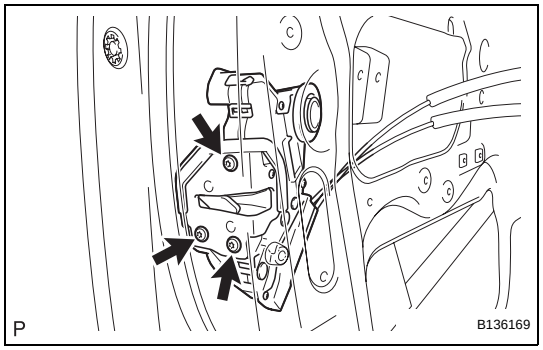
Remove the front door frame sub-assembly front lower through the service hole.



22. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

(a) Remove the hole plug.

(b) Using "Torx" socket wrench T30, loosen the screw and remove the cover with the door lock key cylinder installed.



23. REMOVE FRONT DOOR LOCK

(a) Using "Torx" socket wrench T30, remove the 3 screws.

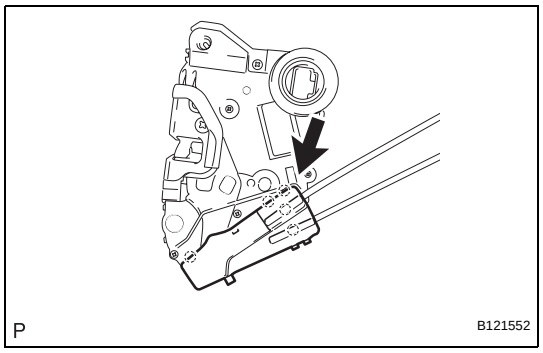
(b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.

NOTICE:

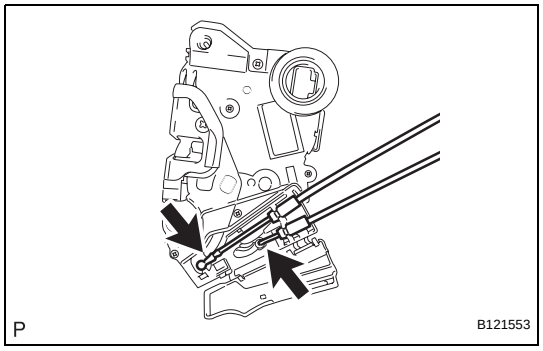
Do not drop or damage the front door lock when removing the screws.

HINT:

Remove the front door lock through the service hole.



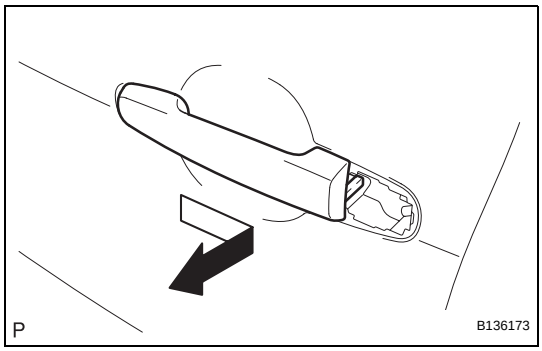
(c) Open the cover.



(d) Disconnect the front door lock remote control cable and front door inside locking cable.

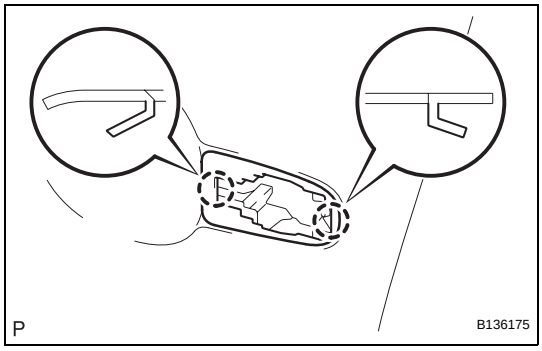
(e) Remove the door lock wire harness seal.

ED



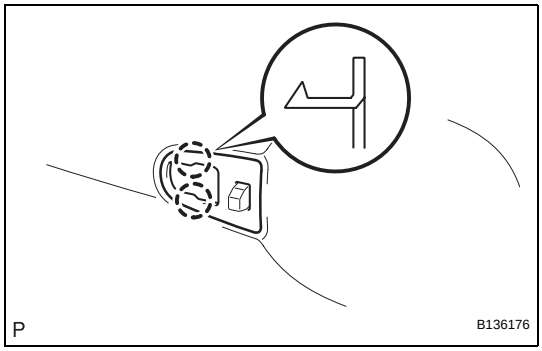
24. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Remove the handle by sliding and pulling it in the direction indicated by the arrow mark in the illustration.



25. REMOVE FRONT DOOR OUTSIDE HANDLE PAD REAR

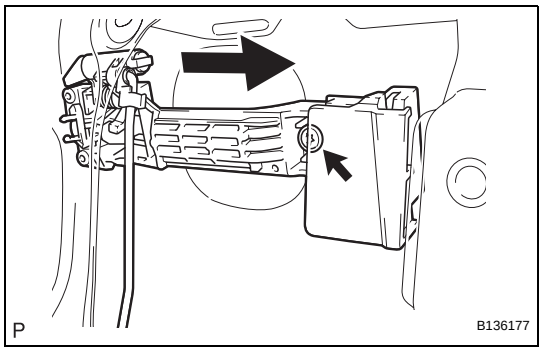
(a) Disengage the 2 claws and remove the front door outside handle pad rear.



26. REMOVE FRONT DOOR OUTSIDE HANDLE PAD FRONT

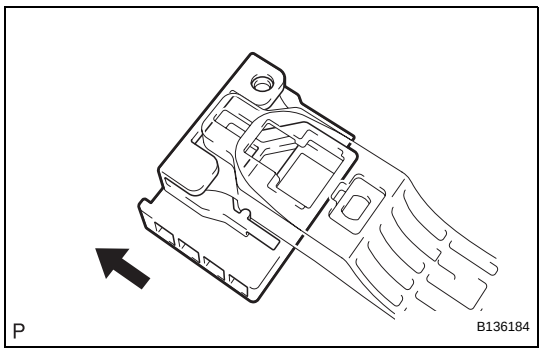
(a) Disengage the 2 claws and remove the front door outside handle pad front.

ED



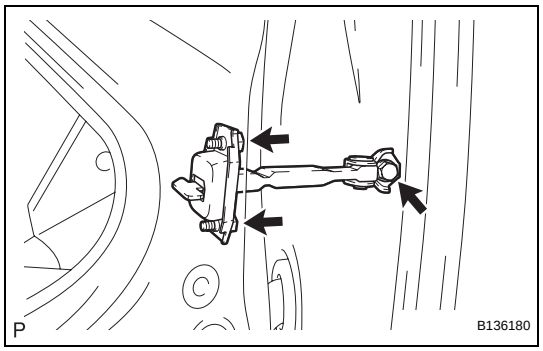
27. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using "Torx" socket wrench T30, loosen the screw.
(b) Slide the front outside handle frame to remove it.



28. REMOVE DOOR OUTSIDE HANDLE PROTECTOR

(a) Slide the door outside handle protector to remove it.



29. REMOVE FRONT DOOR CHECK ASSEMBLY

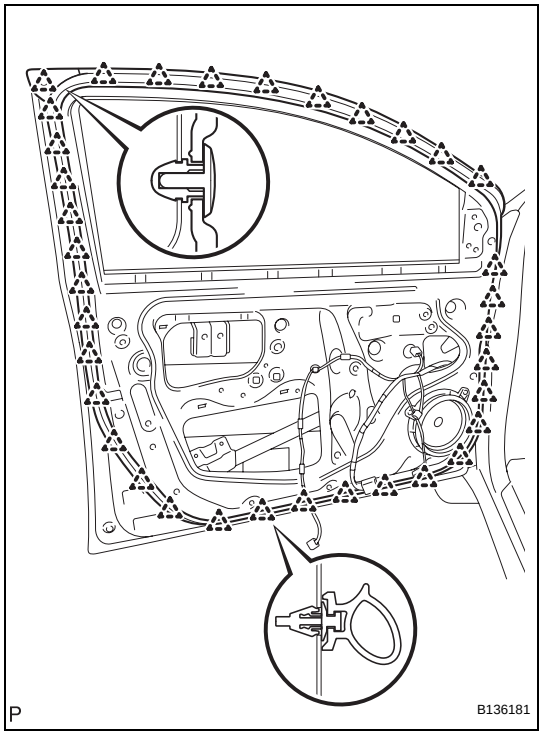
(a) Remove the 3 bolts, then remove the front door check.

NOTICE:

Do not drop or damage the door check when removing the bolts.

HINT:

Remove the door check through the service hole.

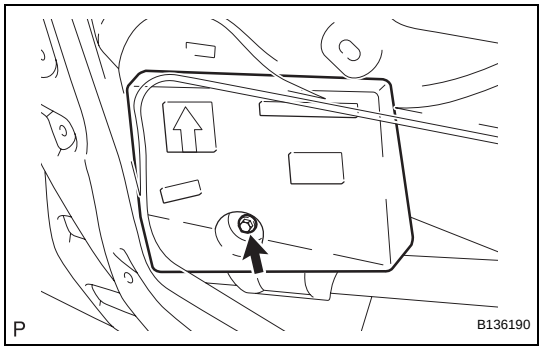


30. REMOVE FRONT DOOR WEATHERSTRIP

(a) Disengage the 35 clips and remove the front door weatherstrip.

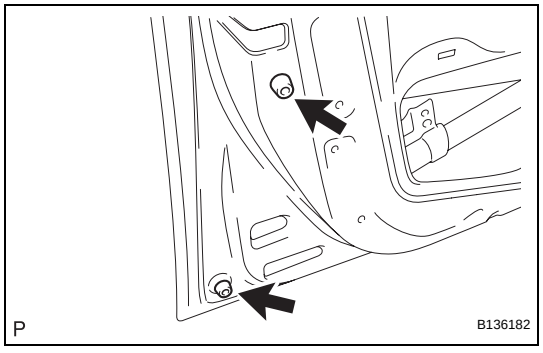
NOTICE:

Remove any tape remaining on the door side.



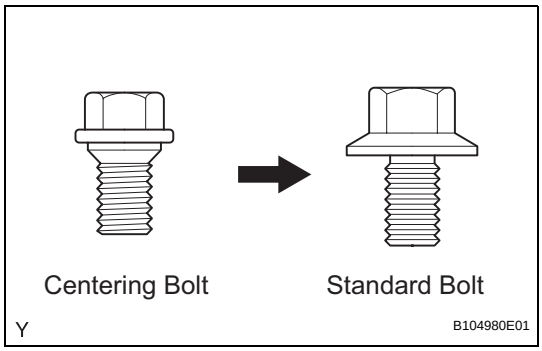
31. REMOVE FRONT DOOR STIFFENER CUSHION

(a) Remove the bolt and front door stiffener cushion.



32. REMOVE CUSHION

(a) Remove the 2 cushions from the door panel.



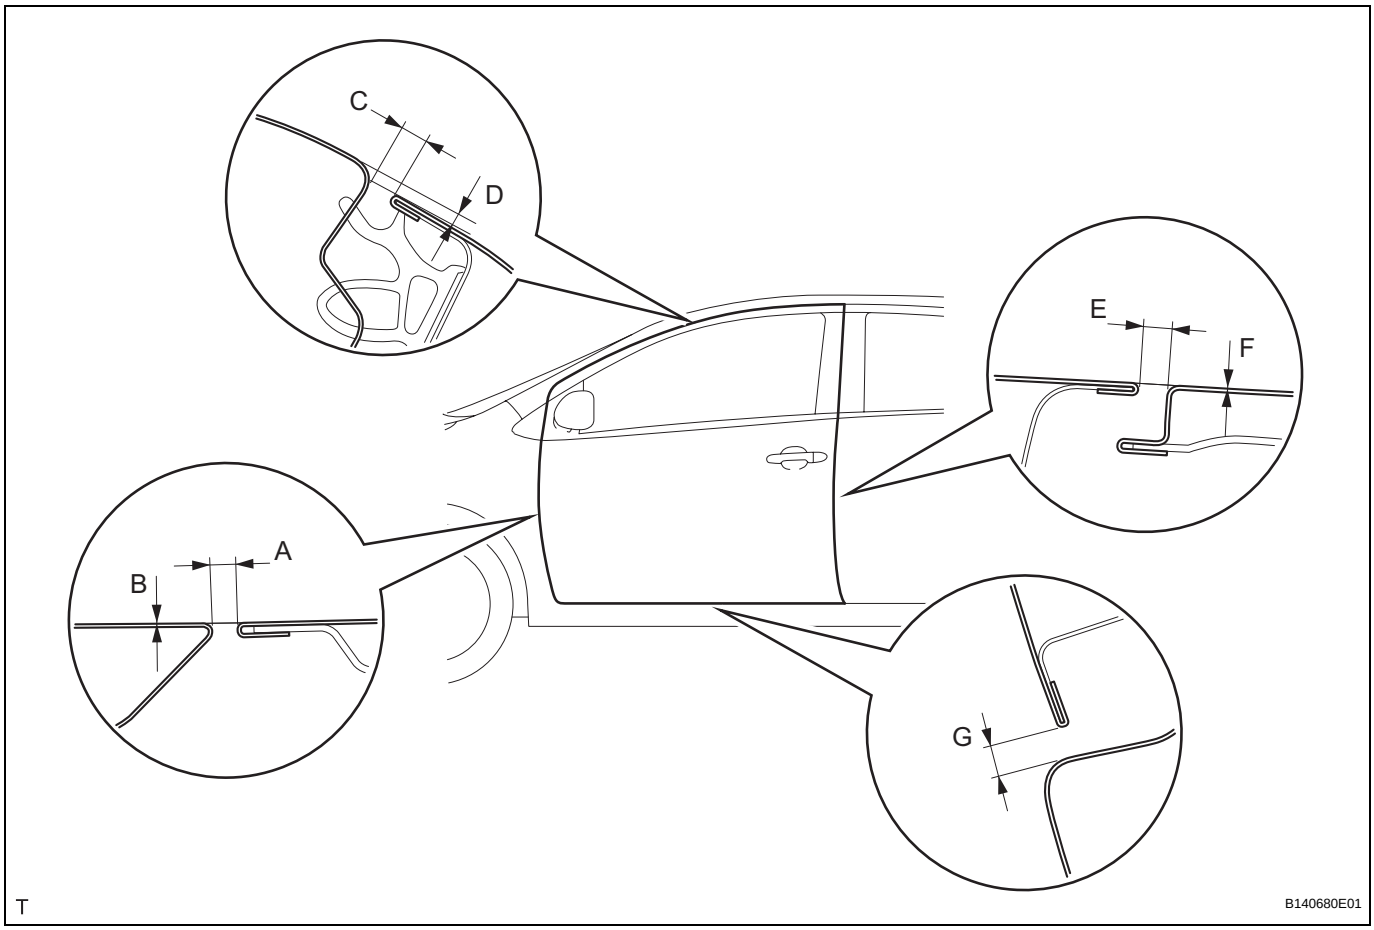
ADJUSTMENT

HINT:

- Before adjusting the door position on vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After the adjustment, inspect the SRS warning light, the side airbag system and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedure for the RH and LH sides.
- The procedures described below are for the LH side.
- Centering bolts are used to mount the door hinge onto the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (see page SS-2).

1. INSPECT FRONT DOOR

(a) Check that the clearance measurements are within the standard ranges.



Standard

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	E	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	F	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

ED

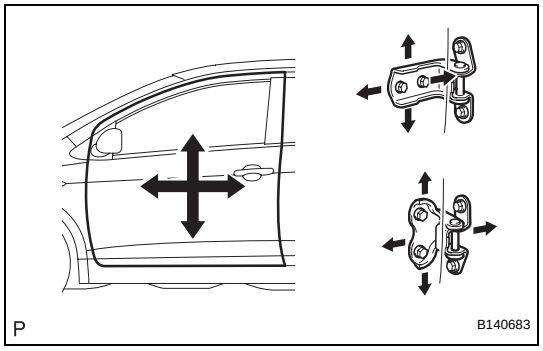
Area	Measurement	Area	Measurement
C	3.2 to 6.2 mm (0.126 to 0.244 in.)	G	4.2 to 7.2 mm (0.165 to 0.283 in.)
D	1.3 to 4.3 mm (0.051 to 0.169 in.)	-	-

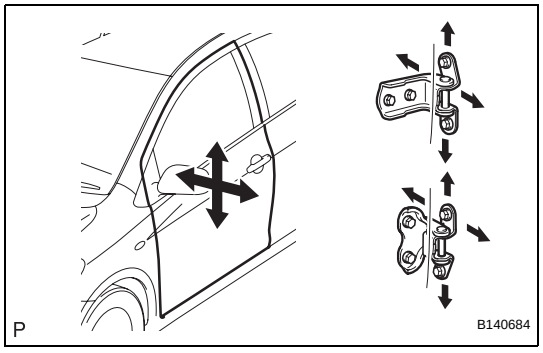
2. ADJUST FRONT DOOR

(a) Disconnect the cable from the negative battery terminal.
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.

(b) Using SST, adjust the door horizontally and vertically by loosening the body side hinge bolts.
SST 09812-00010

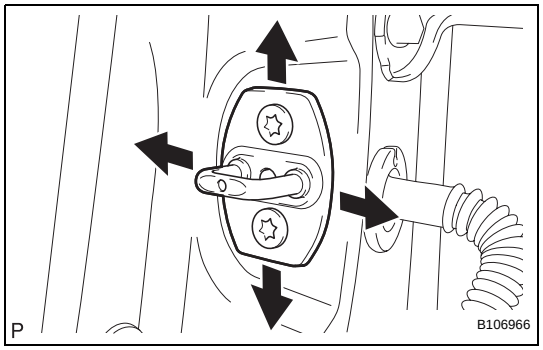
(c) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)





(d) Adjust the door horizontally and vertically by loosening the door side hinge bolts.

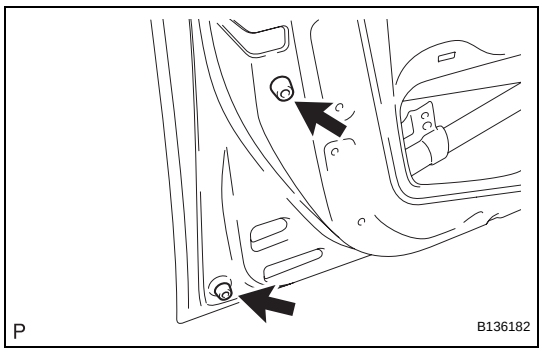
(e) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(f) Using "Torx" socket wrench T40, adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic-faced hammer.

(g) Using "Torx" socket wrench T40, tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

(h) Connect the cable to the negative battery terminal.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

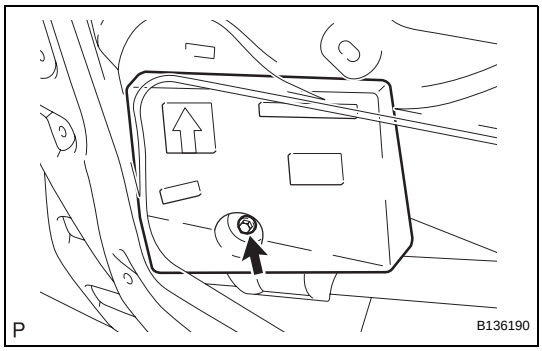


REASSEMBLY

1. INSTALL CUSHION

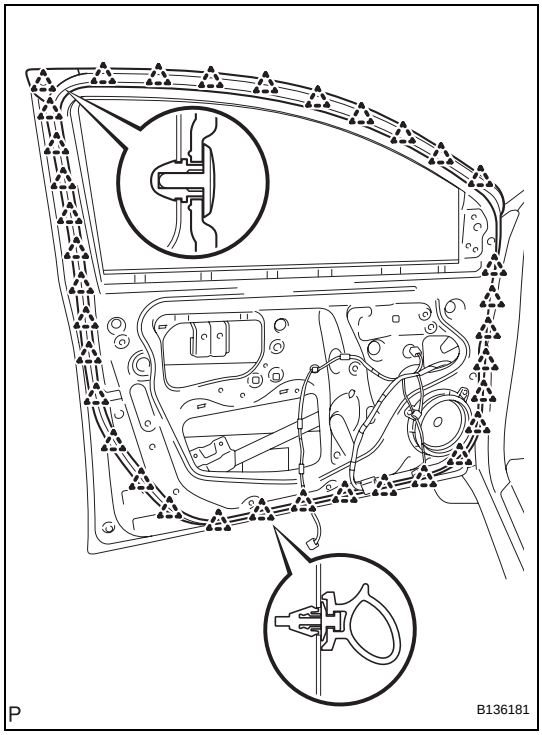
(a) Install the 2 cushions onto the door panel.

ED



2. INSTALL FRONT DOOR STIFFENER CUSHION

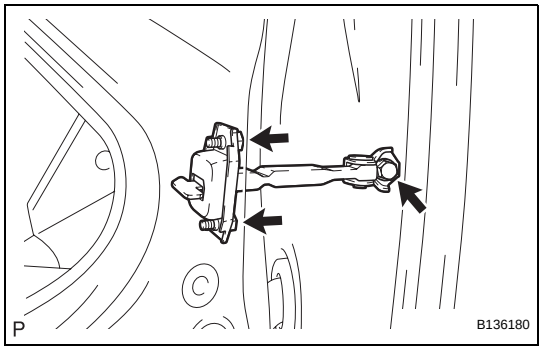
(a) Install the front door stiffener cushion with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



3. INSTALL FRONT DOOR WEATHERSTRIP

(a) Engage the 35 clips and install the front door weatherstrip.

ED



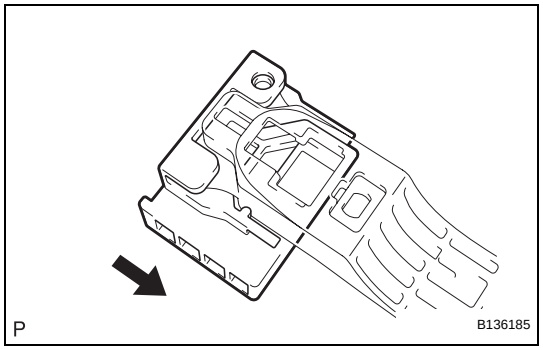
4. INSTALL FRONT DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the door check.

(b) Install the front door check onto the door panel with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

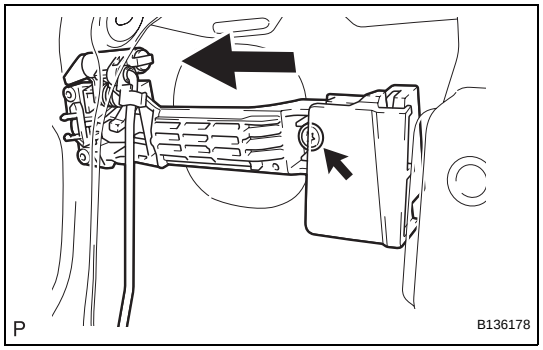
(c) Apply adhesive to the threads of the bolt.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

(d) Install the front door check onto the body panel with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



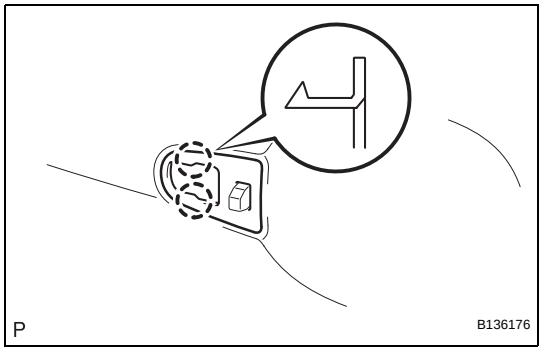
5. INSTALL DOOR OUTSIDE HANDLE PROTECTOR

(a) Slide the door outside handle protector to install it.



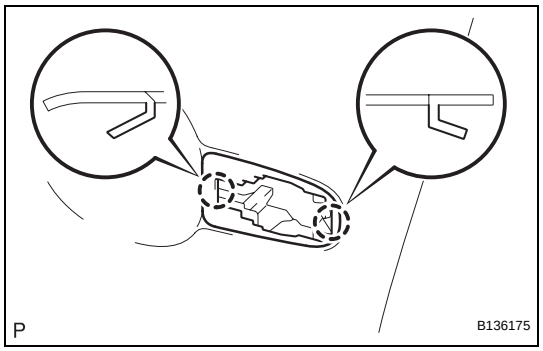
6. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using "Torx" socket wrench T30, install the front outside handle frame with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



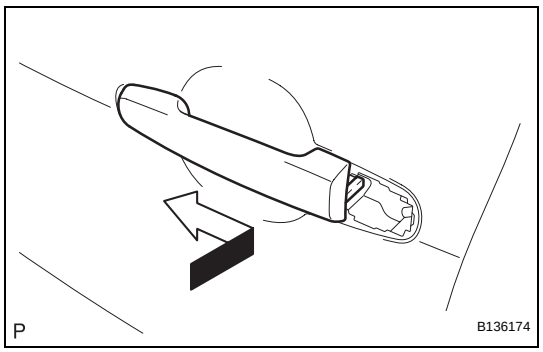
7. INSTALL FRONT DOOR OUTSIDE HANDLE PAD FRONT

(a) Engage the 2 claws and install the front door outside handle pad front.



8. INSTALL FRONT DOOR OUTSIDE HANDLE PAD REAR

(a) Engage the 2 claws and install the front door outside handle pad rear.



9. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Pushing the front door outside handle in the direction of the arrow mark shown in the illustration, install the front door outside handle.

10. INSTALL FRONT DOOR LOCK

NOTICE:

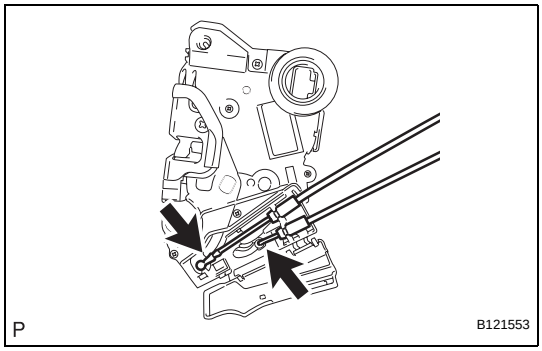
- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**

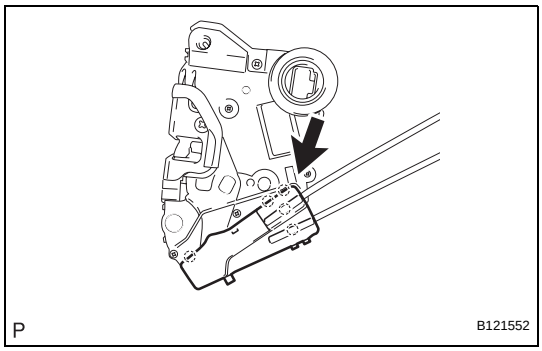
ED

- **Make sure that no grease or dirt adheres to the packing surface in the connecting part.**

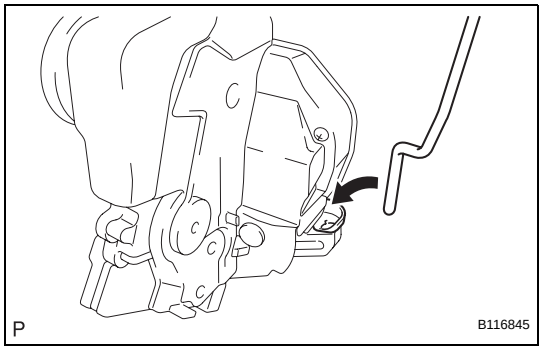
(a) Apply MP grease to the sliding and rotating areas of the front door lock.

(b) Connect the front door lock remote control cable and front door inside locking cable.

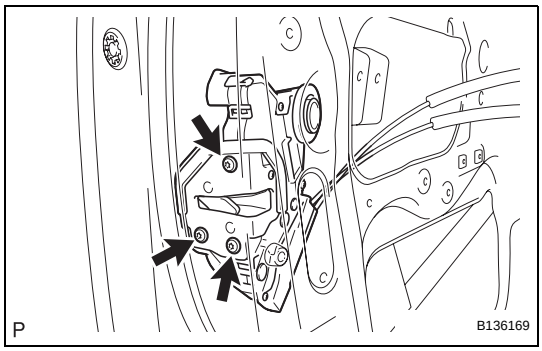




(c) Close the cover.



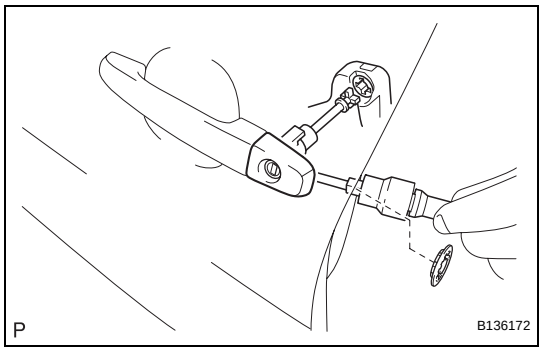
(d) Insert the door lock open rod into the front door lock, then set it to the door panel.
NOTICE:
Make sure that the outside handle link is securely engaged with the door lock.



(e) Apply adhesive to the threads of the screws.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

(f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

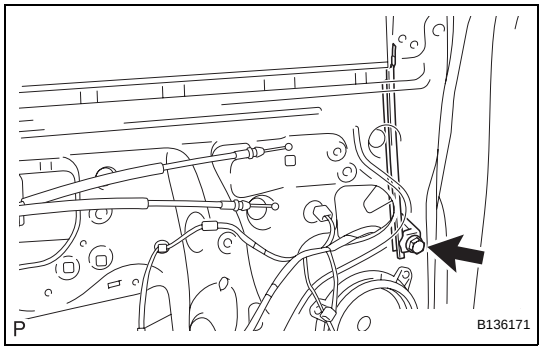
ED



11. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

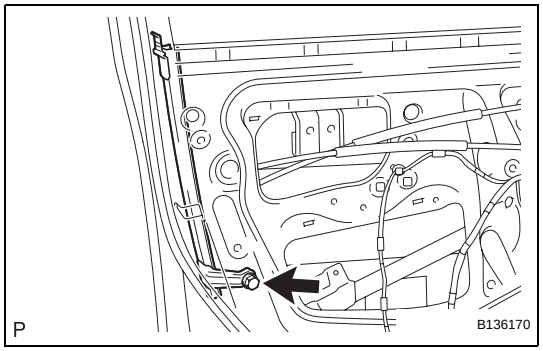
(a) Using "Torx" socket wrench T30, install the cover with the door lock key cylinder.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
HINT:
Make sure that the door lock key cylinder rod is inserted.

(b) Install the hole plug.



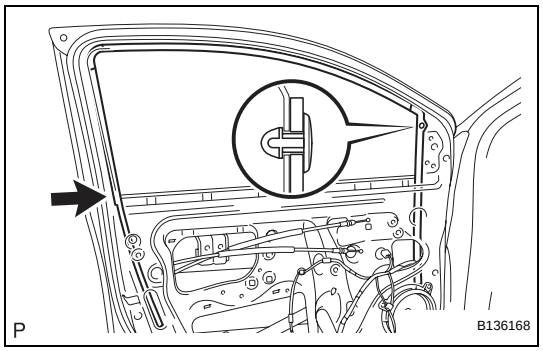
12. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

(a) Install the front door frame sub-assembly front lower with the bolt.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)



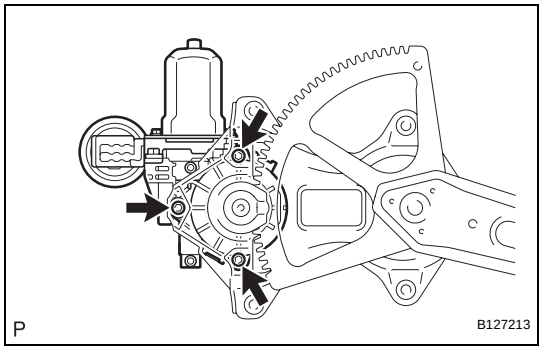
13. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

(a) Install the front door frame sub-assembly rear lower with the bolt.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)



14. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run, then engage the clip.



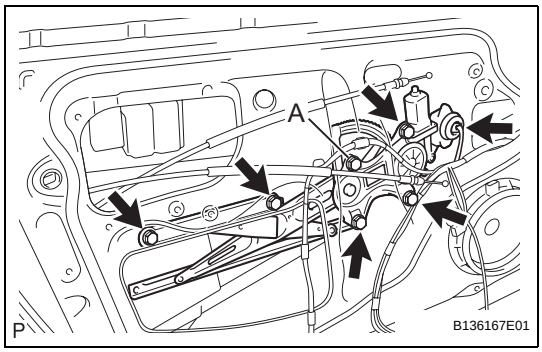
15. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT (w/ Power Window)

(a) Apply MP grease to the sliding and rotating areas of the regulator motor.

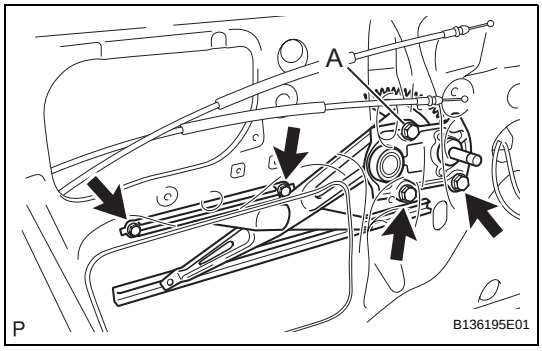
(b) Using "Torx" socket wrench T25, install the power window regulator motor assembly front with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

16. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding and rotating areas of the front door window regulator.
NOTICE:
Do not apply grease to the window regulator spring.



(b) w/ Power window:
(1) Loosely screw bolt A onto the front door window regulator.
(2) Insert the front door window regulator into the door panel. Use bolt A to hang the front door window regulator on the door panel.
NOTICE:
Do not drop the window regulator as it may be damaged.
(3) Install the front door window regulator with the 5 bolts, and tighten bolt A.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(4) Connect the connector.

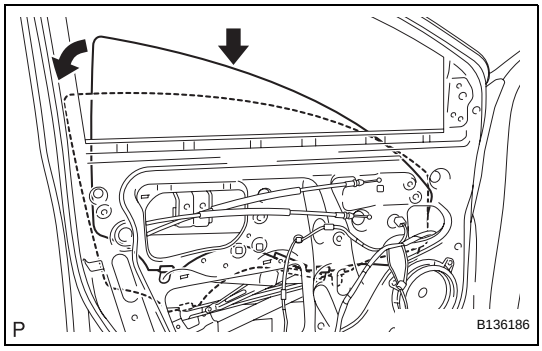


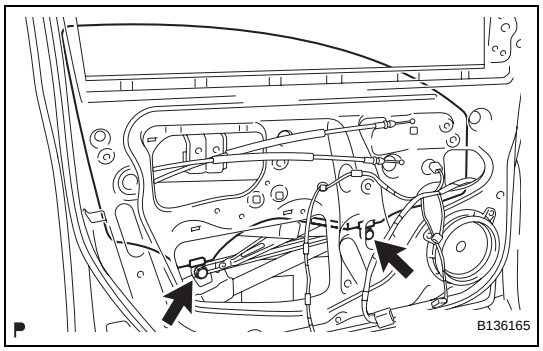
(c) w/o Power window:
(1) Loosely screw bolt A onto the front door window regulator.
(2) Insert the front door window regulator into the door panel. Use bolt A to hang the front door window regulator on the door panel.
NOTICE:
Do not drop the window regulator as it may be damaged.
(3) Install the front door window regulator with the 5 bolts, and tighten bolt A.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(4) Connect the connector.

ED

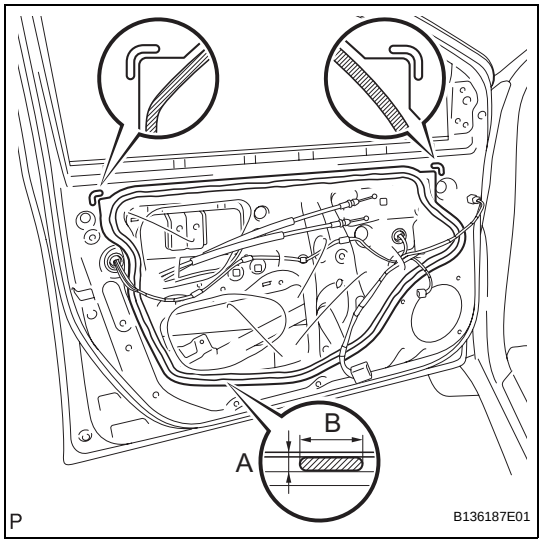
17. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the door glass into the door panel along the glass run as indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.





(b) Install the front door glass onto the front door window regulator with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

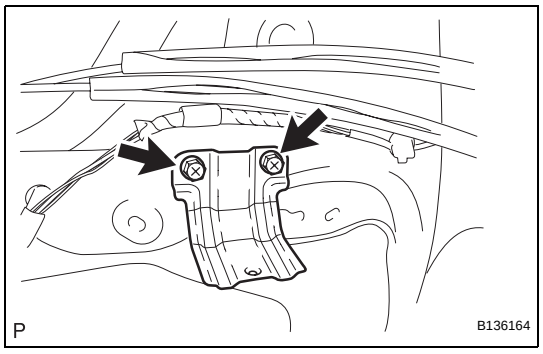


18. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the door panel, then install a new front door service hole cover as shown in the illustration.
Adhesive:
Part No. 08850-00065, Butyl Tape Set or the equivalent
Specification

Area	Dimension
A	2.0 mm (0.079 in.) or more
B	6.0 mm (0.236 in.) or more

HINT:
- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.



19. INSTALL FRONT DOOR TRIM BRACKET

(a) Install the front door trim bracket with the 2 screws.

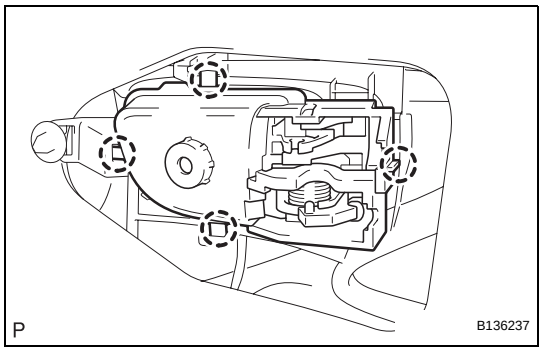
20. INSTALL FRONT DOOR BELT MOULDING (See page ET-86)

21. INSTALL OUTER REAR VIEW MIRROR (See page MI-11)

22. INSTALL FRONT NO.1 SPEAKER ASSEMBLY (See page AV-160)

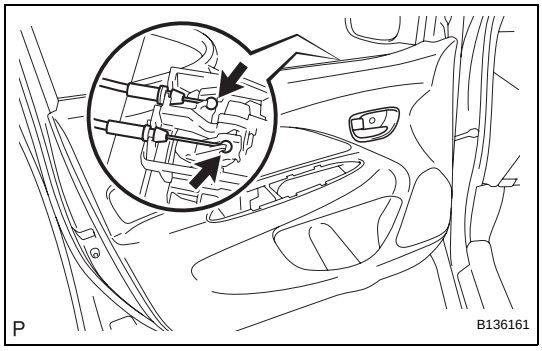
23. INSTALL FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Install the front door glass weatherstrip inner onto the front door trim board.



24. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

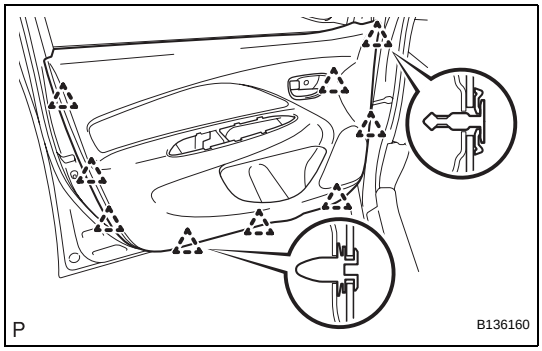
(a) Engage the 4 claws and install the front door inside handle.



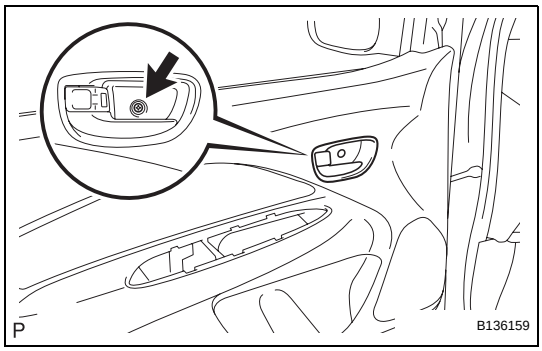
25. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) w/ Power window:

(1) Connect the front door lock remote control cable and front door inside locking cable.



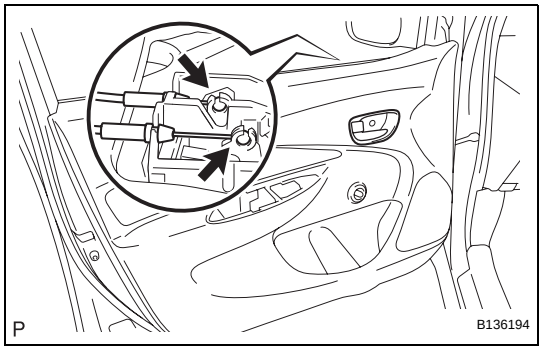
(2) Engage the 9 clips and install the front door trim board.



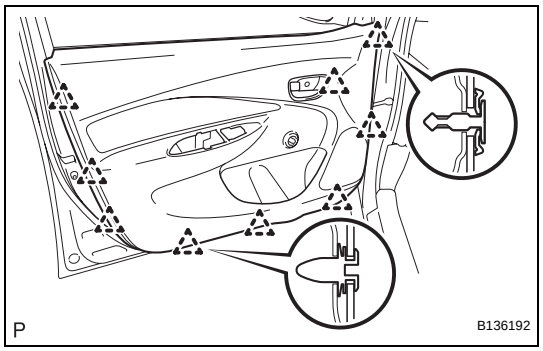
(3) Tighten the screw.

(b) w/o Power window:

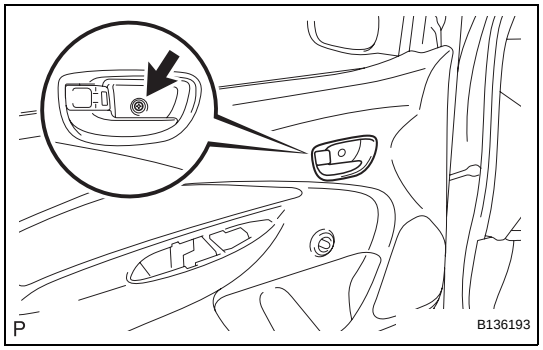
(1) Connect the front door lock remote control cable and front door inside locking cable.



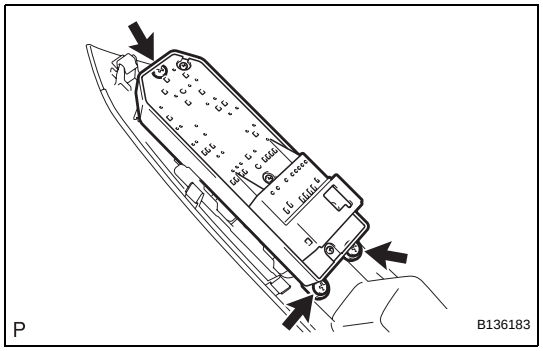
ED



(2) Engage the 9 clips and install the front door trim board.

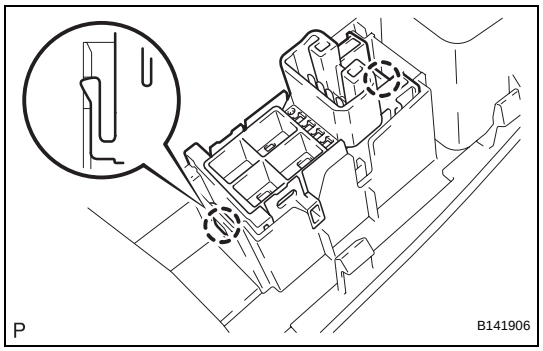


(3) Tighten the screw.



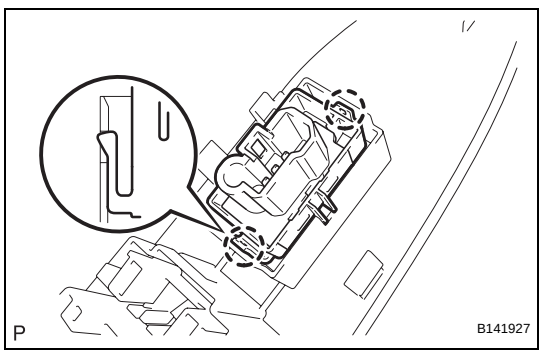
26. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (w/ Power Window)

(a) Install the power window regulator master switch with the 3 screws.



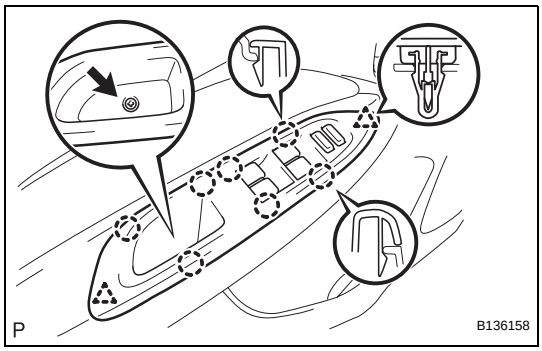
27. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY (w/ Power Window)

(a) Engage the 2 claws and install the power window regulator switch.



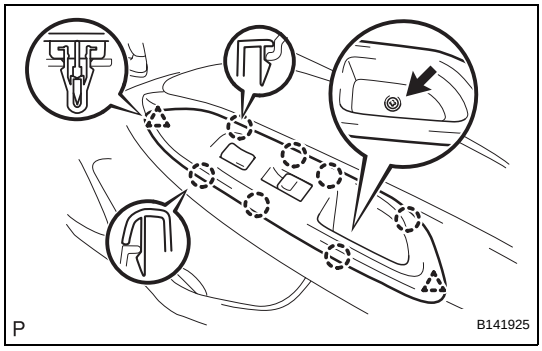
28. INSTALL DOOR CONTROL SWITCH (w/ Power Door Lock)

(a) Engage the 2 claws and install the door control switch.

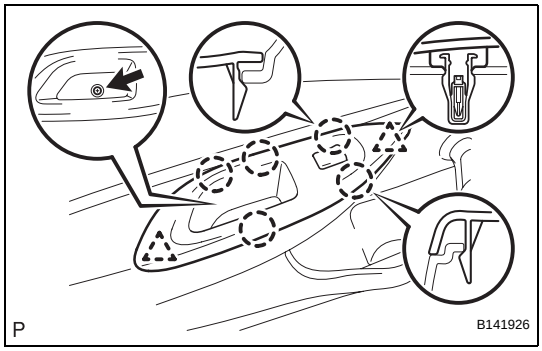


29. INSTALL FRONT ARMREST BASE UPPER PANEL

(a) for Driver side with power window:
  (1) Connect the connector.
  (2) Engage the 7 claws and 2 clips and install the front armrest base upper panel.
  (3) Tighten the screw.

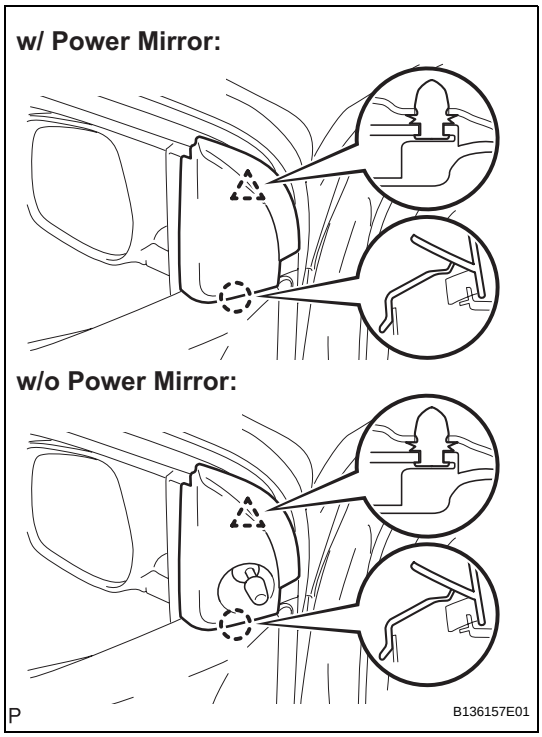


(b) for Front passenger side with power window:
  (1) Connect the connector.
  (2) Engage the 7 claws and 2 clips and install the front armrest base upper panel.
  (3) Tighten the screw.



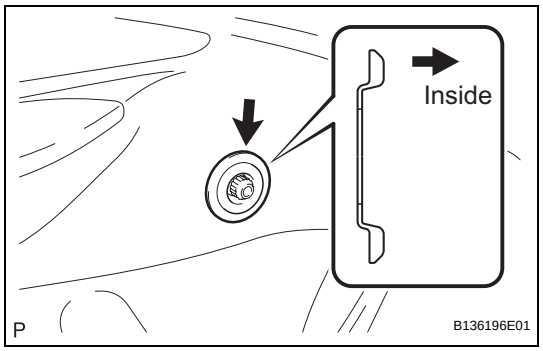
(c) w/o Power window:
  (1) Engage the 5 clips and 2 clips and install the front armrest base upper panel.
  (2) Tighten the screw.

ED



30. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH

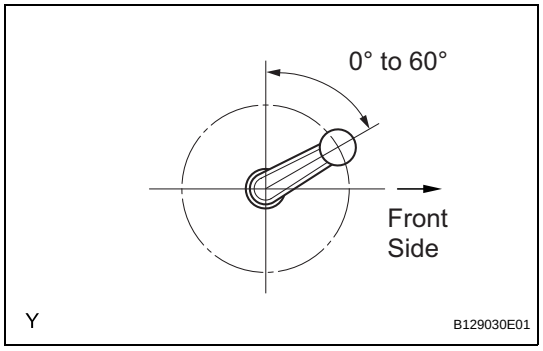
(a) Engage the claw and clip and install the front door lower frame bracket garnish.



31. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Install the window regulator handle plate.

(b) Open all the windows.



(c) Install the front door window regulator handle with the clip at the angle shown in the illustration.

32. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT DOOR (for Hatchback with Power Window)

COMPONENTS

DISASSEMBLY

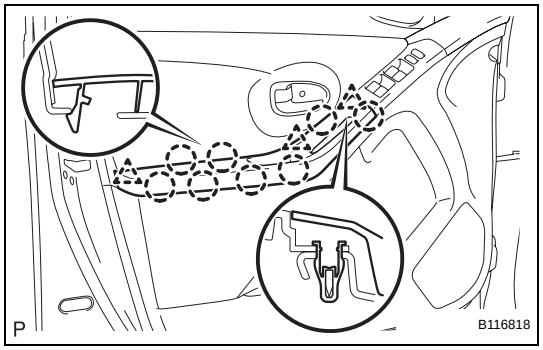
HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

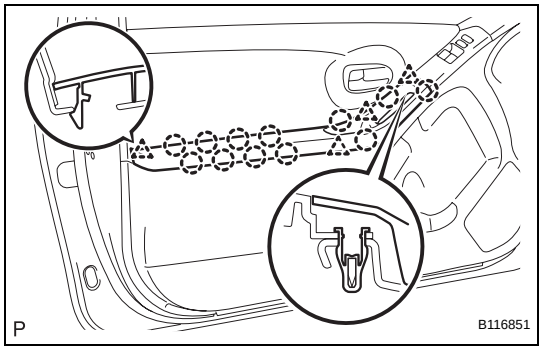
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE DOOR ARMREST COVER

(a) for 5 Door:
Using a screwdriver with its tip wrapped in protective tape, disengage the 8 claws and 3 clips and remove the door armrest cover.

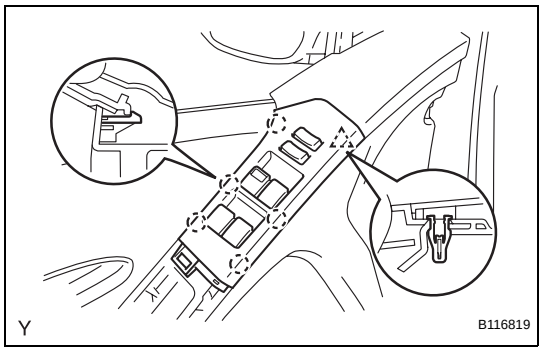


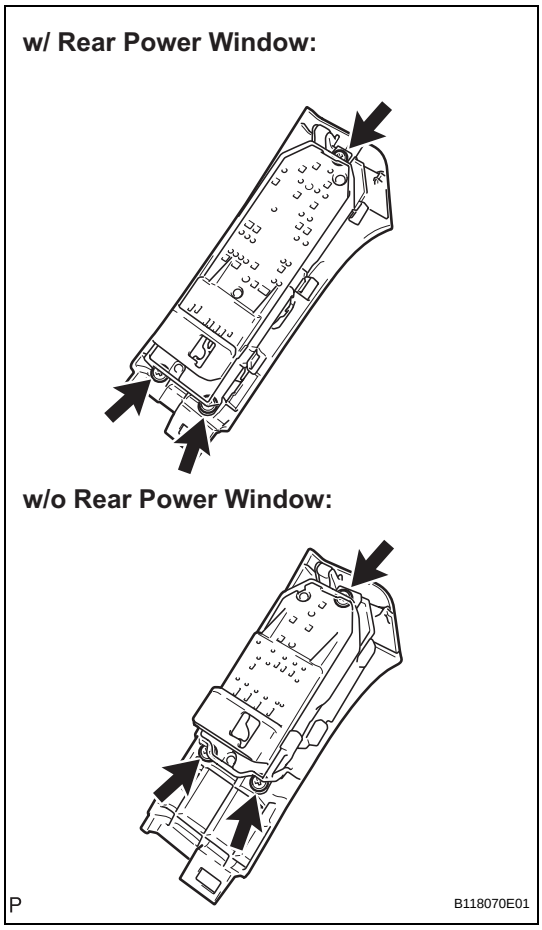
(b) for 3 Door:
Disengage the 12 claws and 4 clips and remove the door armrest cover.



3. REMOVE FRONT ARMREST BASE PANEL UPPER

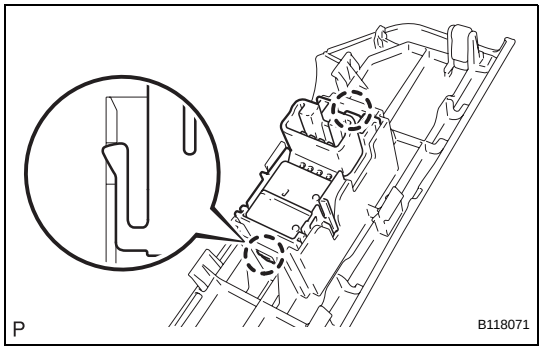
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws and clip and remove the front armrest base panel upper.
(b) Disconnect the connector.





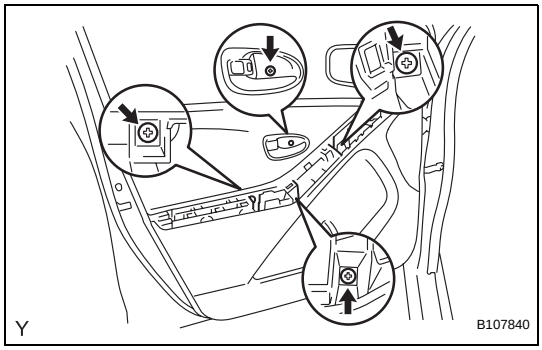
4. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Remove the 3 screws and the power window regulator master switch.



5. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY

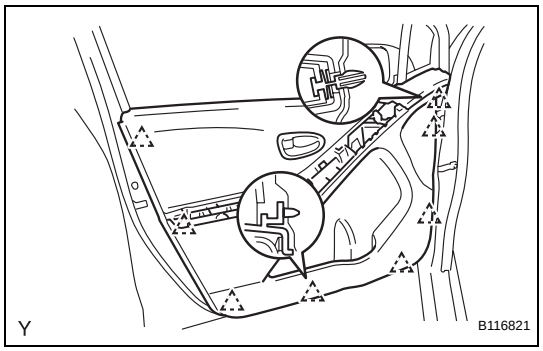
(a) Disengage the 2 claws and remove the power window regulator switch.



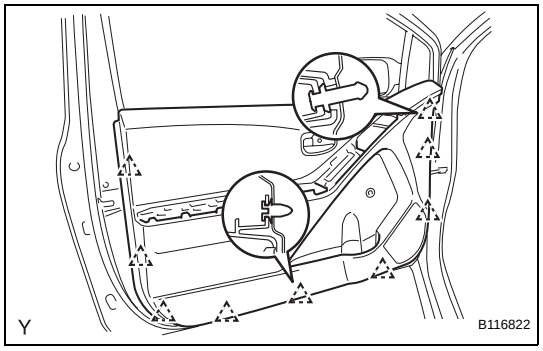
6. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 4 screws.

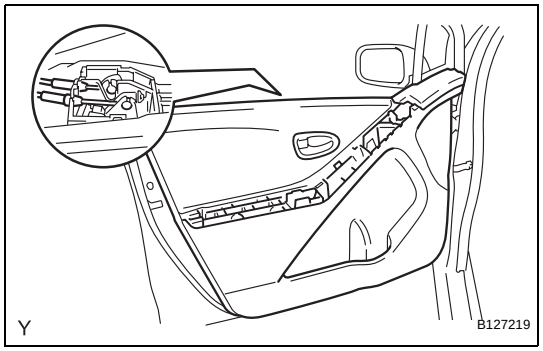
ED



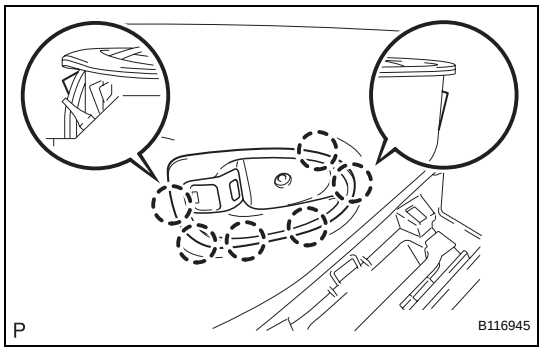
(b) 5 Door:
Disengage the 8 clips.



(c) 3 Door:
Disengage the 9 clips.



(d) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door trim board.



7. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the front door inside handle.

8. REMOVE FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Remove the front door glass weatherstrip inner from the front door trim board.

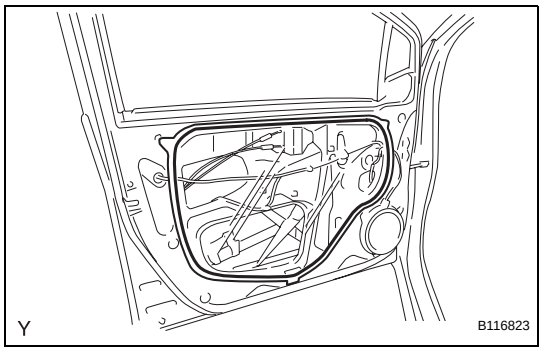
9. REMOVE FRONT NO.1 SPEAKER ASSEMBLY (See page AV-164)

10. REMOVE FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-114)

11. REMOVE FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)

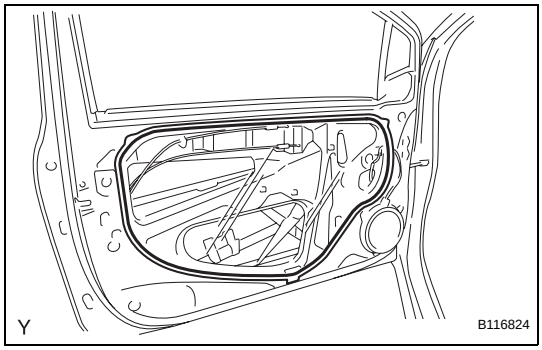
12. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)

13. REMOVE FRONT DOOR BELT MOULDING (See page ET-91)



14. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) for 5 Door:
Disconnect the connectors and clamps, then remove the front door service hole cover.
NOTICE:
Remove any tape remaining on the door side.

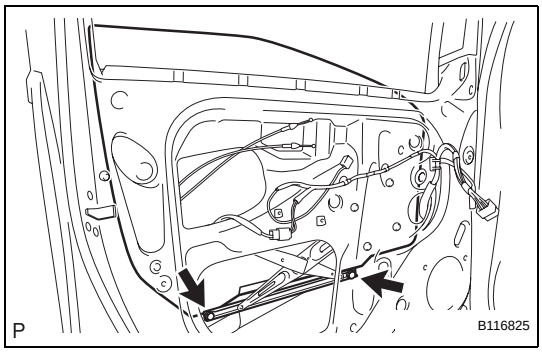


(b) for 3 Door:
Disconnect the connectors and clamps, then remove the front door service hole cover.
NOTICE:
Remove any tape remaining on the door side.

15. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

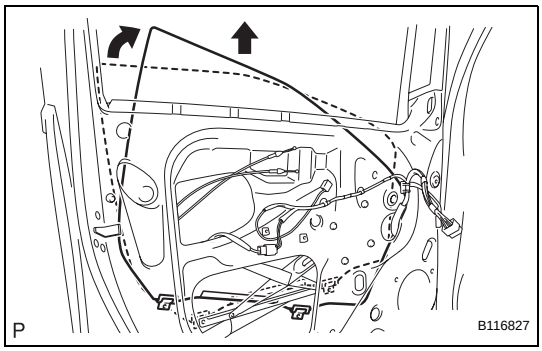
(a) Driver side:
Provisionally install the power window regulator master switch.

(b) Passenger side:
Provisionally install the power window regulator switch.



(c) Move the front door glass until the 2 bolts appear in the service holes.

(d) Remove the 2 bolts.
NOTICE:
Do not drop or damage the front door glass when removing the 2 bolts.

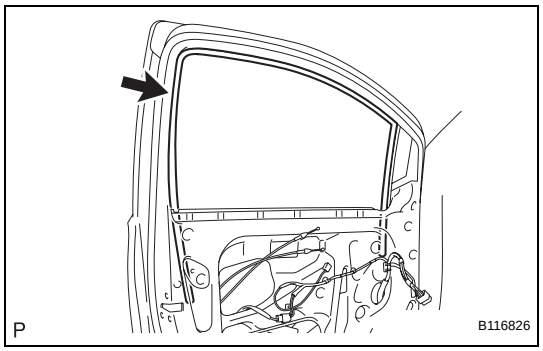


(e) Remove the front door glass in the direction indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.

(f) Driver side:
Remove the power window regulator master switch.

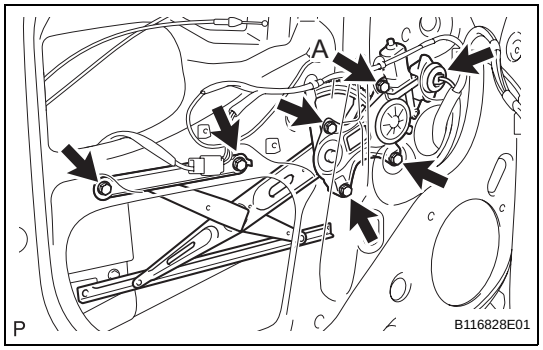
(g) Passenger side:
Remove the power window regulator switch.

ED



16. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.



17. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Disconnect the connector.

(b) Loosen bolt A.

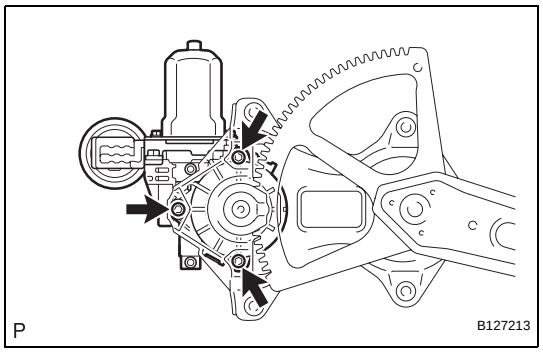
(c) Remove the 5 bolts, then remove the front door window regulator.

NOTICE:

Do not drop or damage the window regulator when removing the bolts.

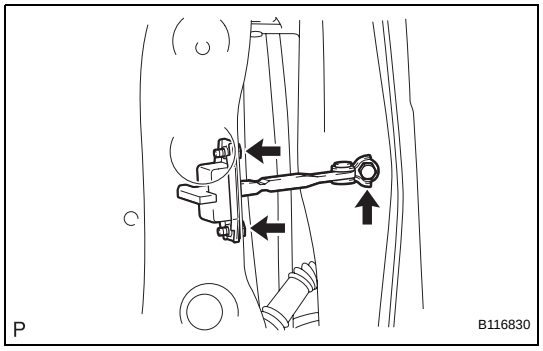
HINT:

Remove the window regulator through the service hole.



18. REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT

(a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.



19. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts, then remove the front door check.

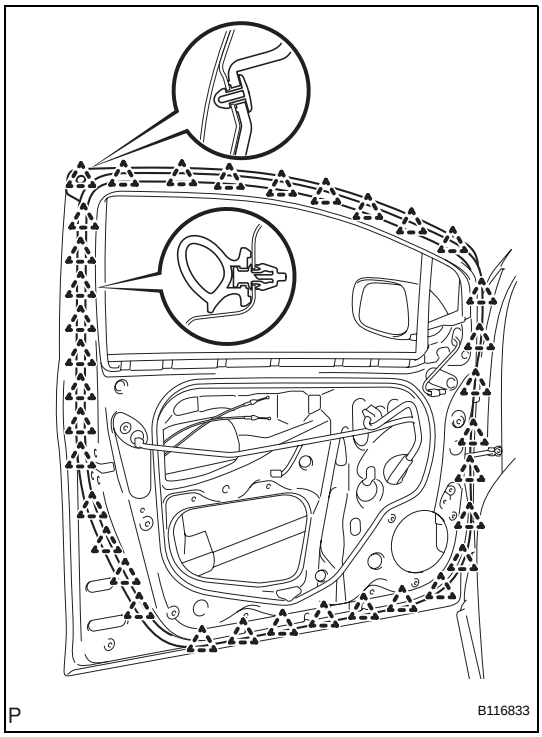
NOTICE:

Do not drop or damage the door check when removing the bolts.

HINT:

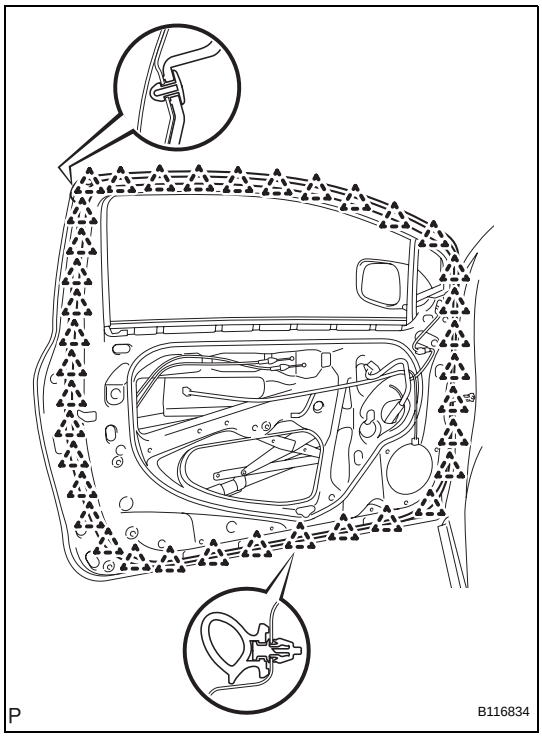
Remove the door check through the service hole.

ED

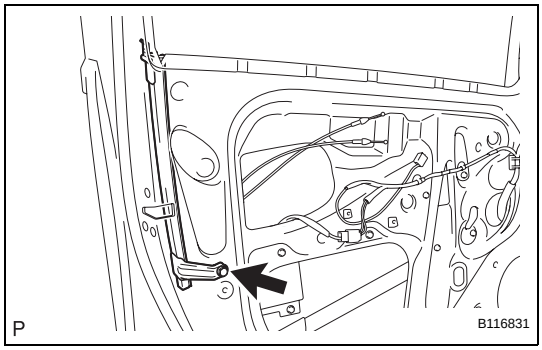


20. REMOVE FRONT DOOR WEATHERSTRIP

(a) for 5 Door:
Disengage the 35 clips and remove the front door weatherstrip.
NOTICE:
Remove any tape remaining on the door side.



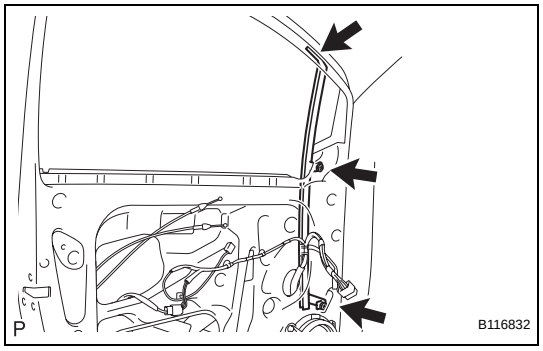
(b) for 3 Door:
Disengage the 37 clips and remove the front door weatherstrip.
NOTICE:
Remove any tape remaining on the door side.



21. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

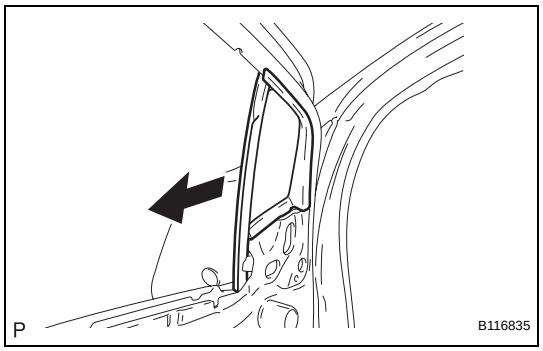
(a) Remove the bolt, then remove the front door frame sub-assembly rear lower.
NOTICE:
Do not drop or damage the front door frame sub-assembly rear lower when removing the bolt.

HINT:
Remove the front door frame sub-assembly rear lower through the service hole.



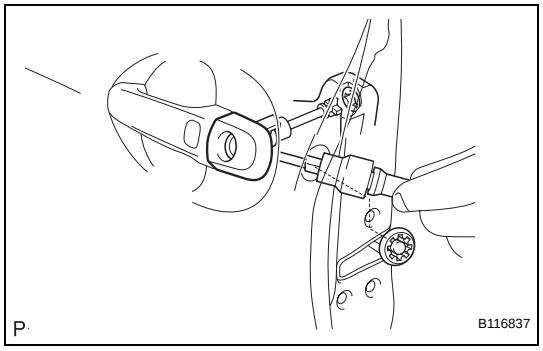
22. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

(a) Remove the 2 bolts and screw, then remove the front door frame sub-assembly front lower.
NOTICE:
Do not drop or damage the front door frame sub-assembly front lower when removing the bolts and screw.
HINT:
Remove the front door frame sub-assembly front lower through the service hole.



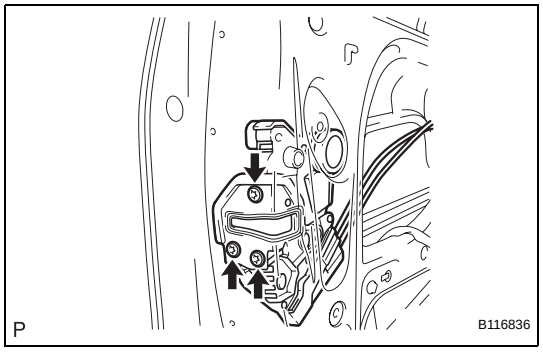
23. REMOVE FRONT DOOR FIX WINDOW WEATHERSTRIP

(a) Slide the front door fix window weatherstrip, in the direction indicated by the arrow in the illustration, to remove them.
(b) Remove the front door fix window glass from the front door fix window weatherstrip.



24. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

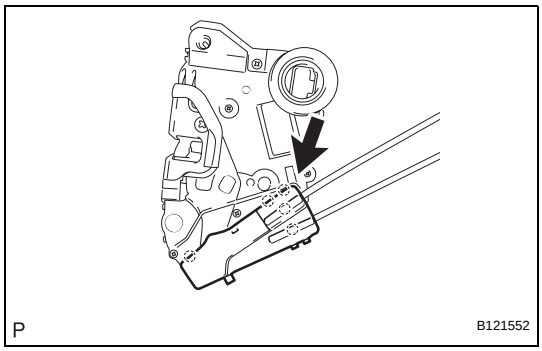
(a) Remove the hole plug.
(b) Using "Torx" socket wrench T30, loosen the screw and remove the cover with the door lock key cylinder installed.



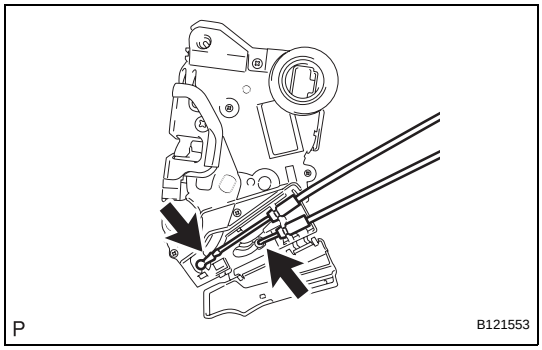
25. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Using "Torx" socket wrench T30, remove the 3 screws.
(b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.
NOTICE:
Do not drop or damage the door lock when removing the screws.
HINT:
Remove the front door lock through the service hole.

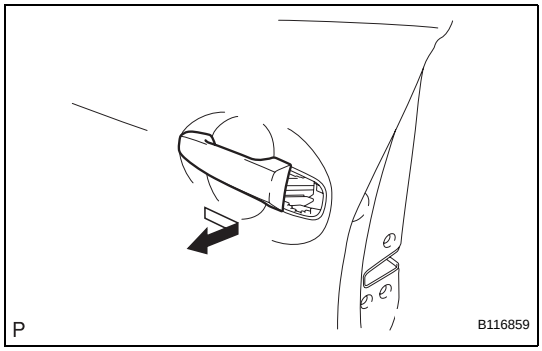
ED



(c) Disengage the 5 claws and open the cover.



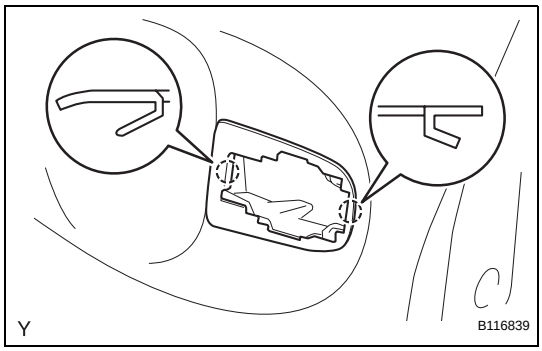
(d) Disconnect the front door lock remote control cable and front door inside locking cable.
(e) Remove the door lock wire harness seal.



26. REMOVE FRONT DOOR HANDLE ASSEMBLY OUTSIDE

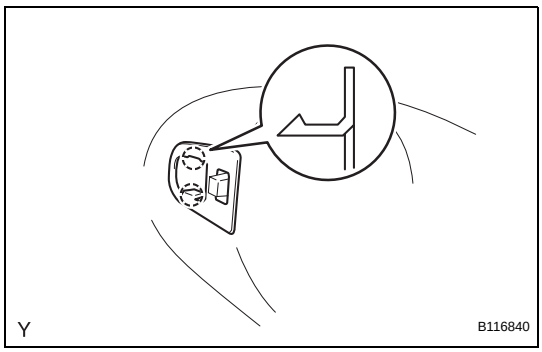
(a) Remove the handle by sliding and pulling it in the direction indicated by the arrow mark in the illustration.

ED



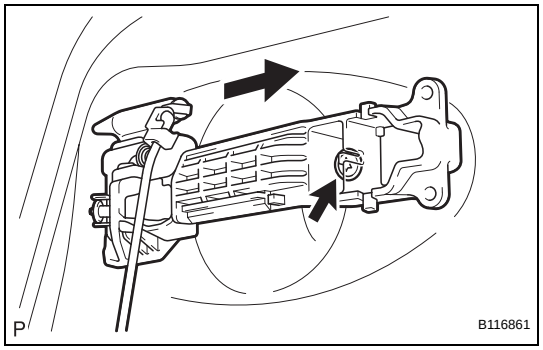
27. REMOVE FRONT DOOR OUTSIDE HANDLE PAD REAR

(a) Disengage the 2 claws and remove the front door outside handle pad rear.



28. REMOVE FRONT DOOR OUTSIDE HANDLE PAD FRONT

(a) Disengage the 2 claws and remove the front door outside handle pad front.



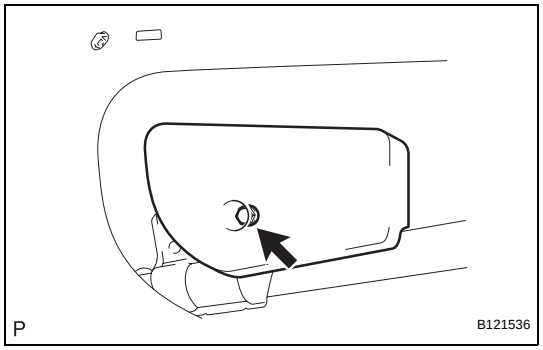
29. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using "Torx" socket wrench T30, loosen the screw.

(b) Slide the front outside handle frame to remove it.

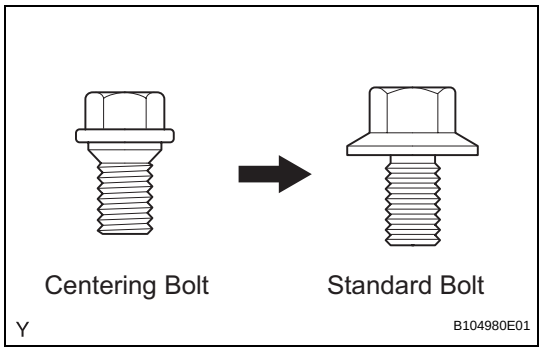
30. REMOVE CUSHION

(a) Remove the 2 cushions from the door panel.



31. REMOVE FRONT DOOR STIFFENER CUSHION

(a) Remove the bolt and front door stiffener cushion.



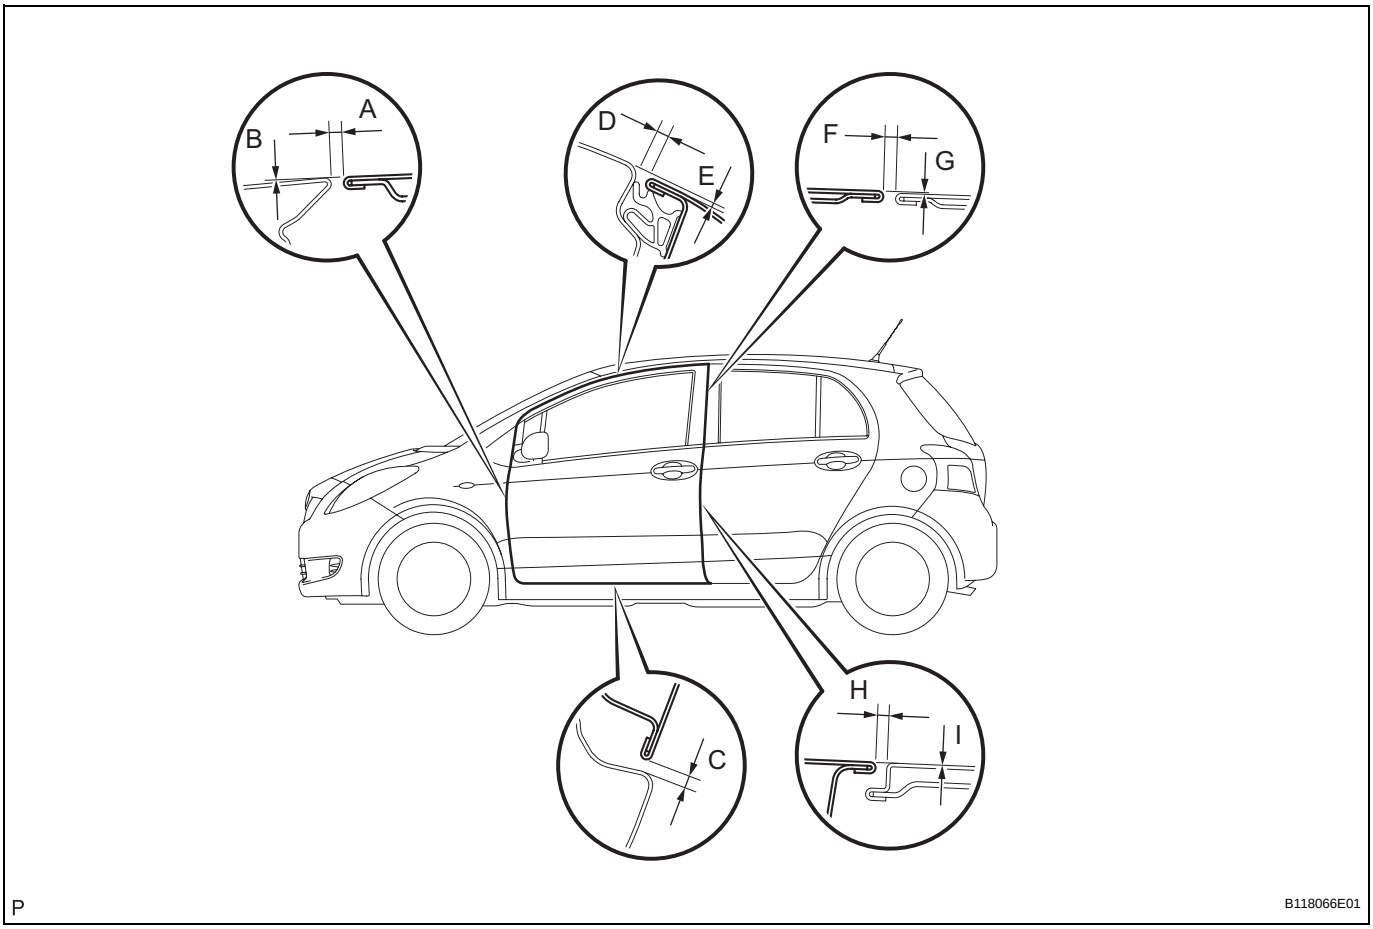
ADJUSTMENT

HINT:

- Before adjusting the door position on vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedure for the RH and LH sides.
- The procedures described below are for the LH side.
- Centering bolts are used to mount the door hinge onto the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart.

1. INSPECT FRONT DOOR (for 5 Door)

(a) Check that the clearance measurements are within the standard ranges.

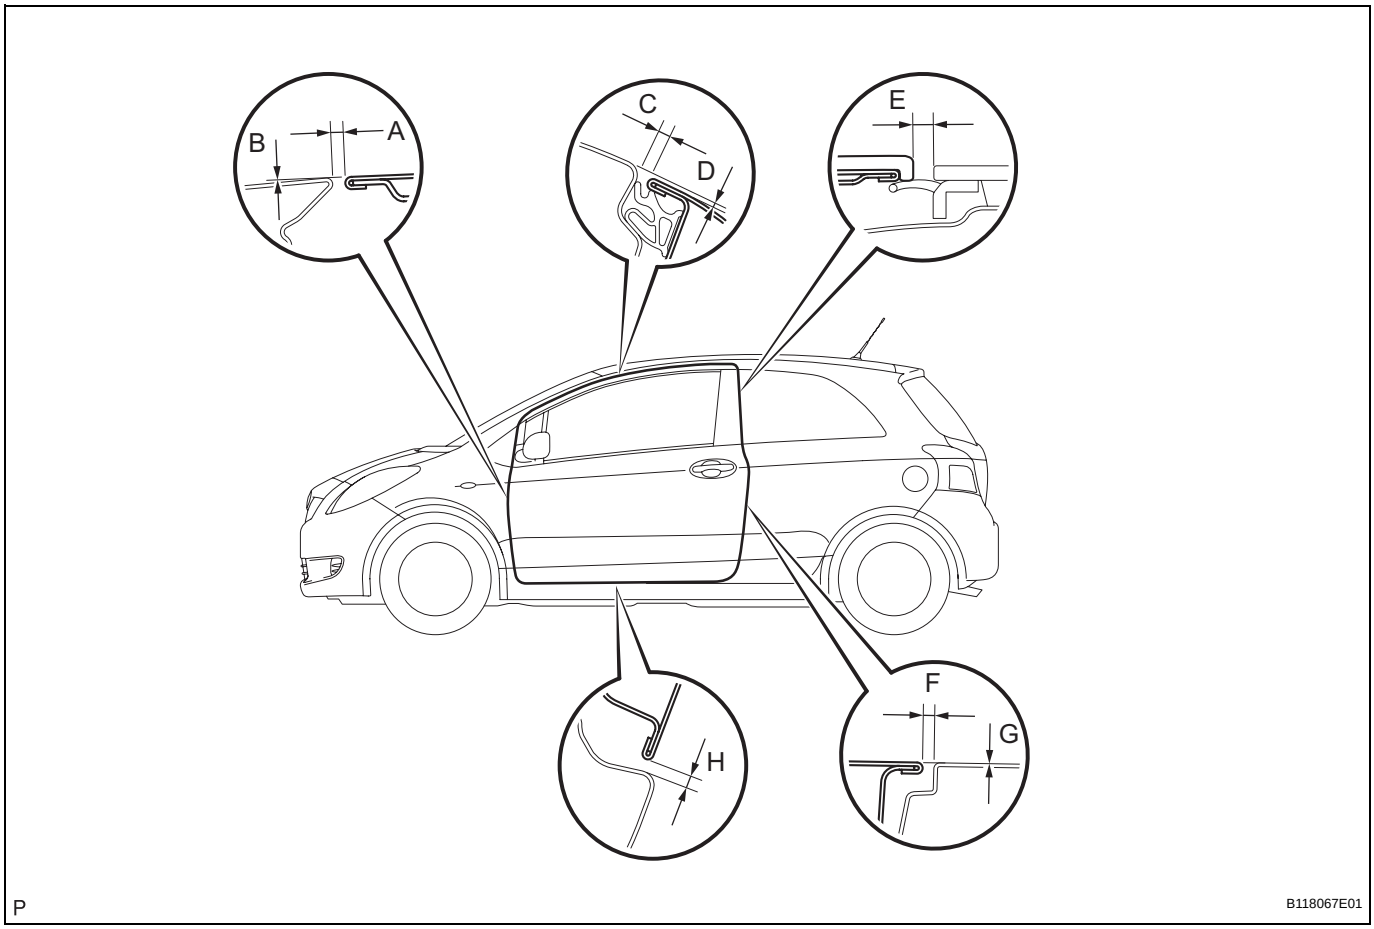


Standard

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	F	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	G	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
C	4.1 to 7.1 mm (0.161 to 0.280 in.)	H	3.3 to 6.3 mm (0.130 to 0.248 in.)
D	3.5 to 6.5 mm (0.138 to 0.256 in.)	I	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
E	2.8 mm (0.110 in.)	-	-

2. INSPECT FRONT DOOR (for 3 Door)

(a) Check that the clearance measurements are within the standard ranges.



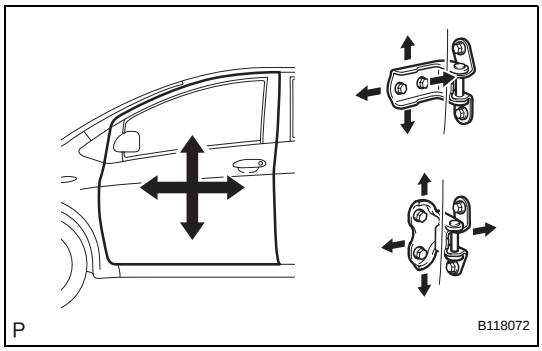
Standard

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	E	2.8 to 5.8 mm (0.110 to 0.228 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	F	2.5 to 5.5 mm (0.098 to 0.217 in.)
C	3.5 to 6.5 mm (0.138 to 0.256 in.)	G	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
D	2.8 mm (0.110 in.)	H	4.1 to 7.1 mm (0.161 to 0.280 in.)

3. ADJUST FRONT DOOR

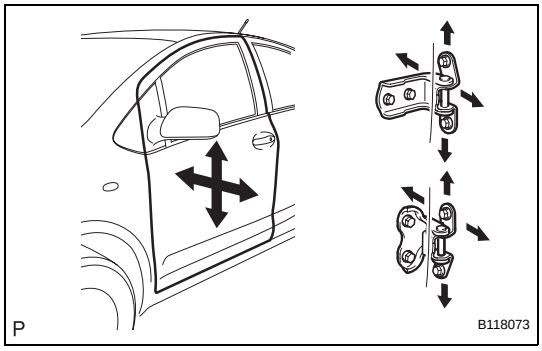
(a) Disconnect the cable from the negative battery terminal.

Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.



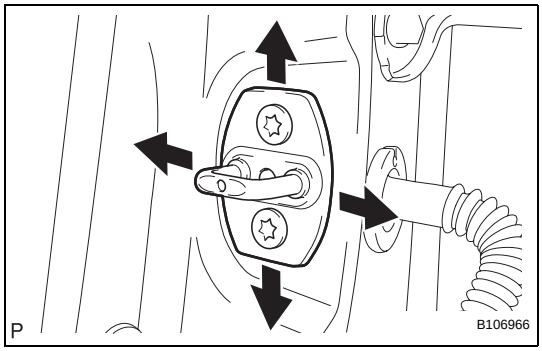
(b) Using SST, adjust the door horizontally and vertically by loosening the body side hinge bolts.
SST 09812-00010

(c) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(d) Adjust the door horizontally and vertically by loosening the door side hinge bolts.

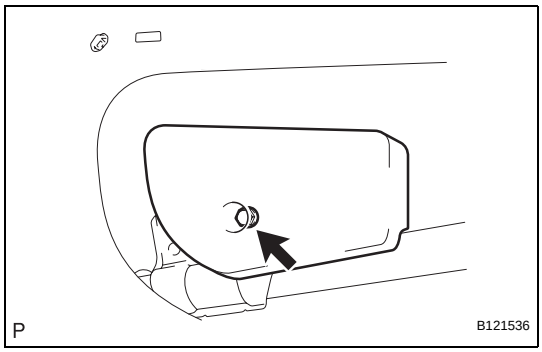
(e) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(f) Using "Torx" socket wrench T40, adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic-faced hammer.

(g) Using "Torx" socket wrench T40, tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

(h) Connect the cable to the negative battery terminal.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



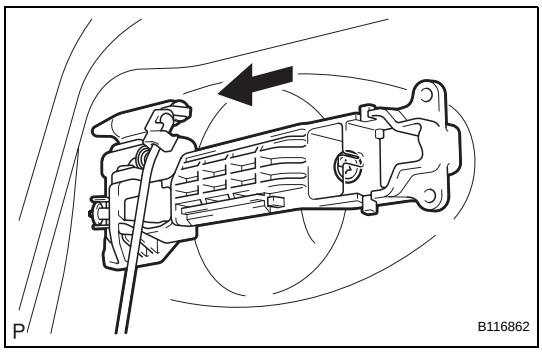
REASSEMBLY

1. INSTALL FRONT DOOR STIFFENER CUSHION

(a) Install the front door stiffener cushion with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

2. INSTALL CUSHION

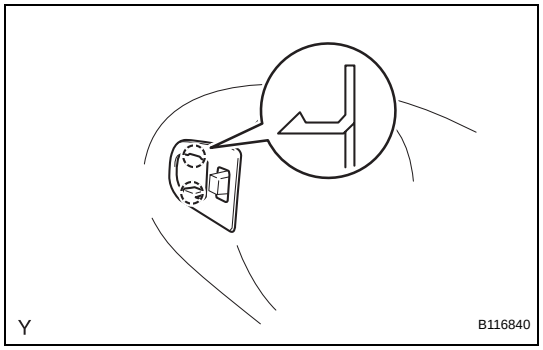
(a) Install the 2 cushions onto the door panel.



3. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

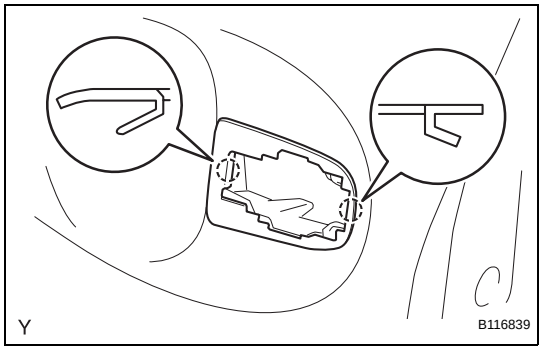
(a) Using "Torx" socket wrench T30, install the front outside handle frame with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

ED



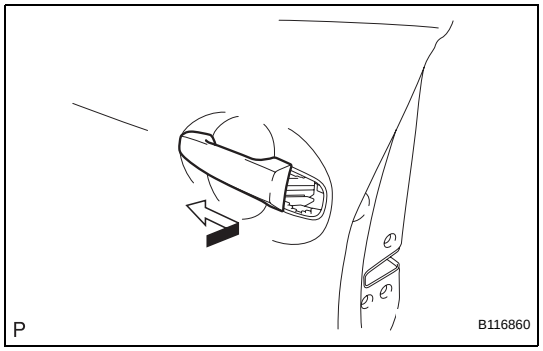
4. INSTALL FRONT DOOR OUTSIDE HANDLE PAD FRONT

(a) Engage the 2 claws and install the front door outside handle pad front.



5. INSTALL FRONT DOOR OUTSIDE HANDLE PAD REAR

(a) Engage the 2 claws and install the front door outside handle pad rear.



6. INSTALL FRONT DOOR HANDLE ASSEMBLY OUTSIDE

(a) Pushing the front door handle assembly outside in the direction of the arrow mark shown in the illustration, install the front door handle assembly outside.

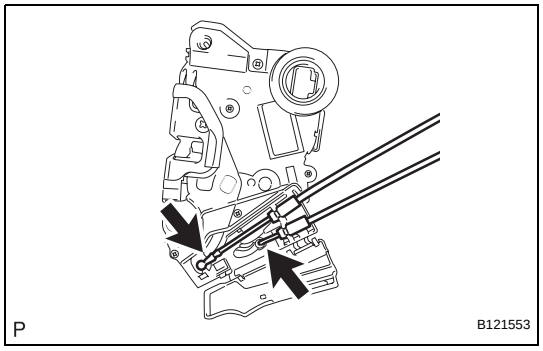
7. INSTALL FRONT DOOR LOCK ASSEMBLY

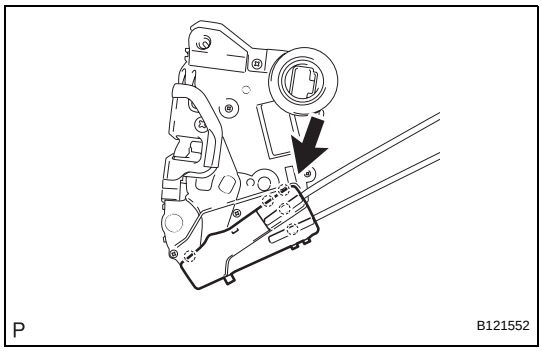
NOTICE:

- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**
- **Make sure that no grease and dirt adheres to the packing surface in the connecting part.**

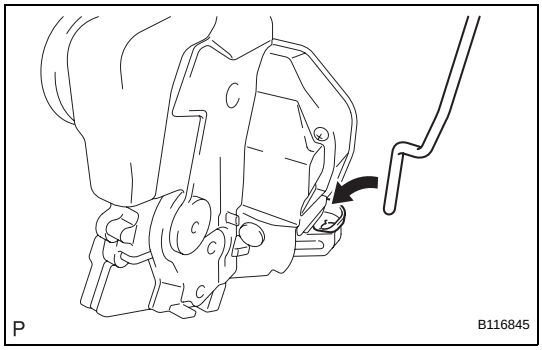
(a) Apply MP grease to the sliding and rotating areas of the front door lock.

(b) Connect the front door lock remote control cable and front door inside locking cable.

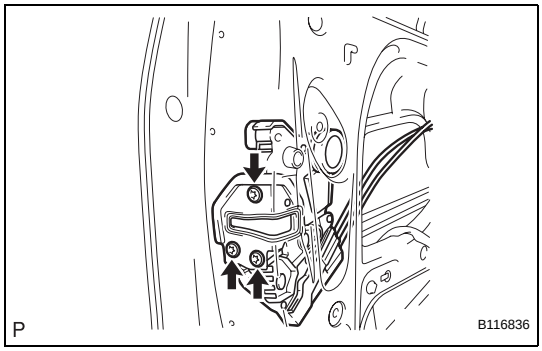




(c) Engage the 5 claws and close the cover.

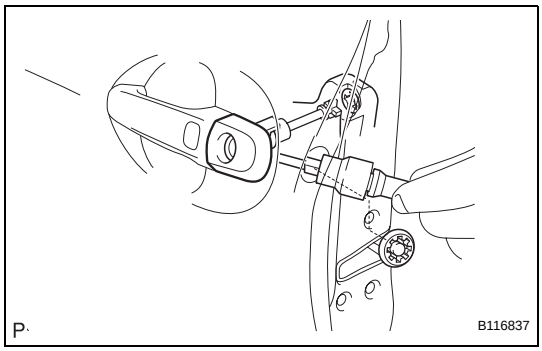


(d) Insert the door lock open rod into the front door lock, then set it to the door panel.
NOTICE:
Make sure that the outside handle link is securely engaged with the door lock.



(e) Apply adhesive to the threads of the screws.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or the equivalent

(f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



8. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

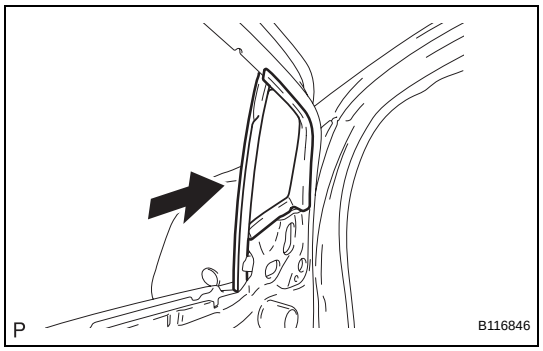
(a) Using "Torx" socket wrench T30, install the cover with the door lock key cylinder.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
HINT:
Make sure that the door lock key cylinder rod is inserted.

(b) Install the hole plug.

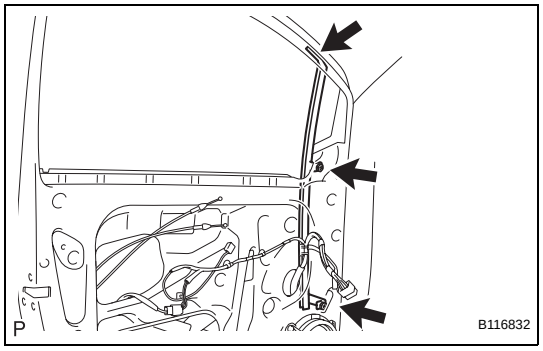
9. INSTALL FRONT DOOR FIX WINDOW WEATHERSTRIP

(a) Install the front door fix window glass onto the front door fix window weatherstrip.

ED

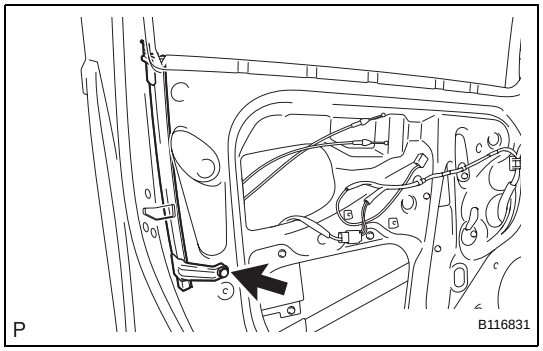


(b) Slide the front door fix window weatherstrip, in the direction indicated by the arrow in the illustration, to install it.



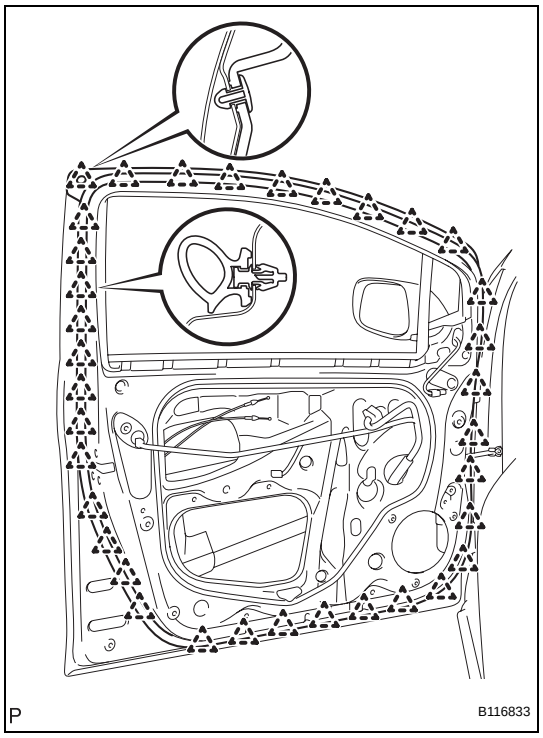
10. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

(a) Install the front door frame sub-assembly front lower with the 2 bolts and screw.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)



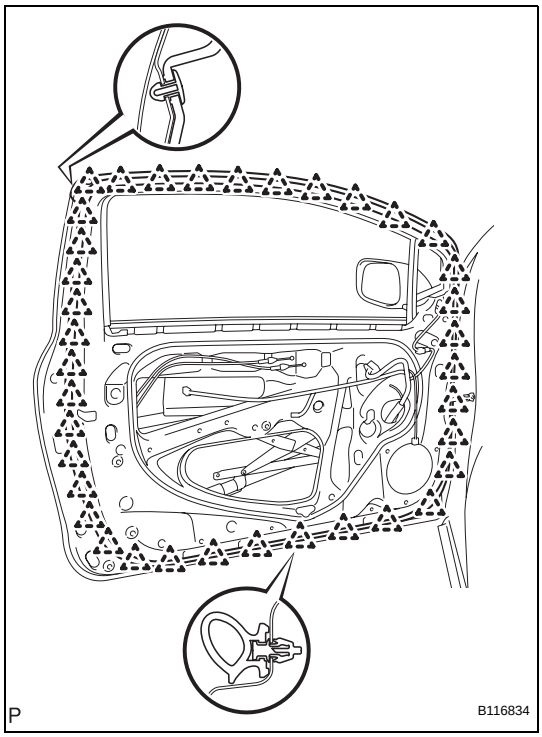
11. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

(a) Install the front door frame sub-assembly rear lower with the bolt.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)

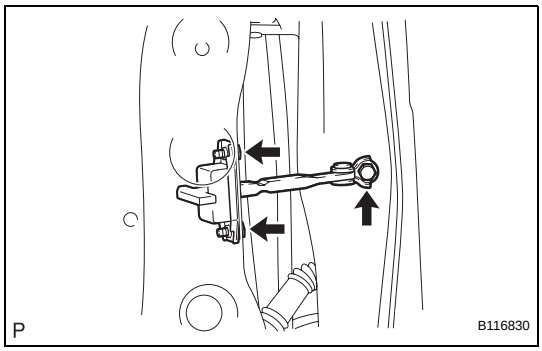


12. INSTALL FRONT DOOR WEATHERSTRIP

(a) for 5 Door:
Engage the 35 clips and install the front door weatherstrip.



(b) for 3 Door:
Engage the 37 clips and install the front door weatherstrip.



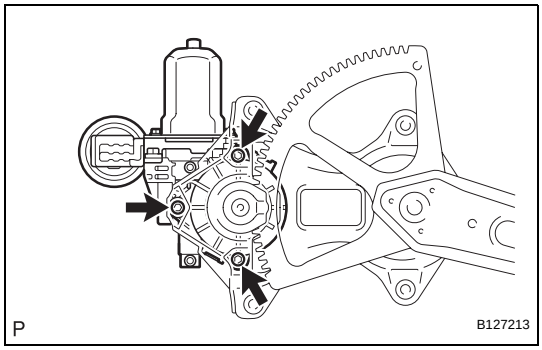
13. INSTALL FRONT DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the door check.

(b) Install the front door check onto the door panel with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Apply adhesive to the threads of the bolt.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or the equivalent

(d) Install the front door check onto the body panel with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



14. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT

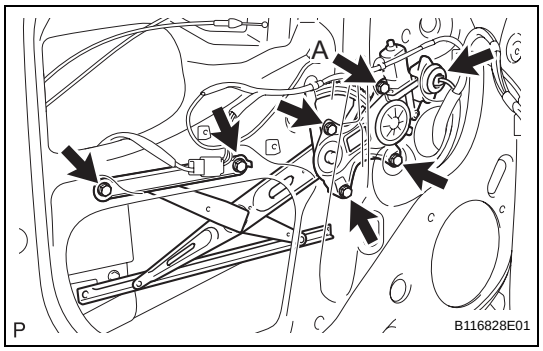
(a) Apply MP grease to the sliding and rotating areas of the regulator motor.

(b) Using "Torx" socket wrench T25, install the power window regulator motor assembly front with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

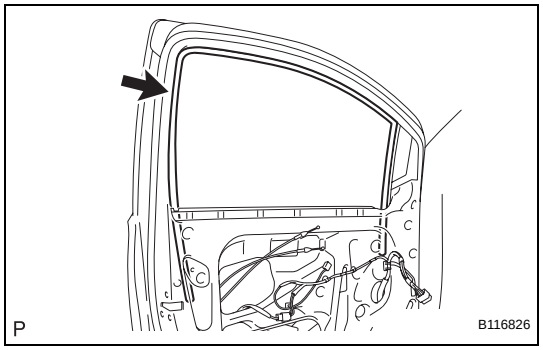
15. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding and rotating areas of the front door window regulator.
NOTICE:
Do not apply grease to the window regulator spring.

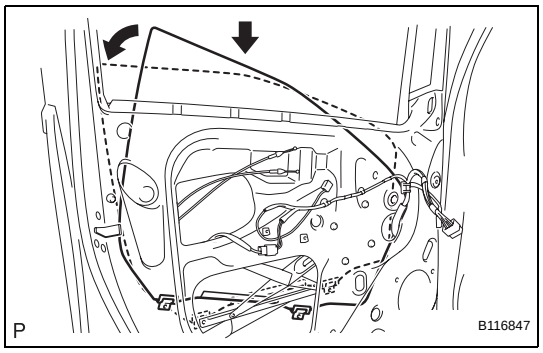
ED



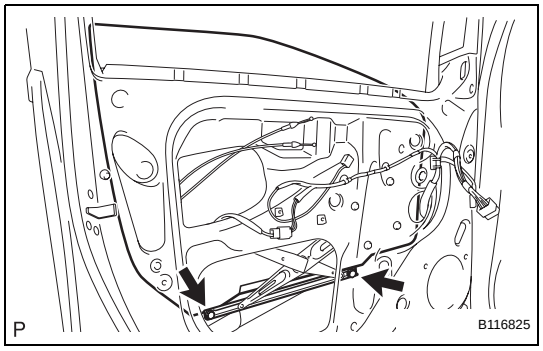
(b) Loosely screw bolt A onto the front door window regulator.
(c) Insert the front door window regulator into the door panel. Use bolt A to hang the front door window regulator on the door panel.
NOTICE:
Do not drop the window regulator as it may be damaged.
(d) Install the front door window regulator with the 5 bolts, and tighten bolt A.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(e) Connect the connector.



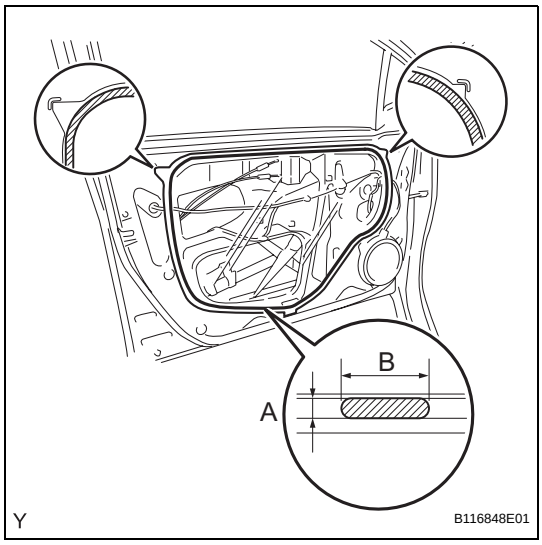
16. INSTALL FRONT DOOR GLASS RUN
(a) Install the front door glass run.



17. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY
(a) Insert the door glass into the door panel along the glass run as indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.



(b) Install the front door glass onto the front door window regulator with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



18. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) for 5 Door:

Apply butyl tape to the door panel, then install the front door service hole cover as shown in the illustration.

Adhesive:

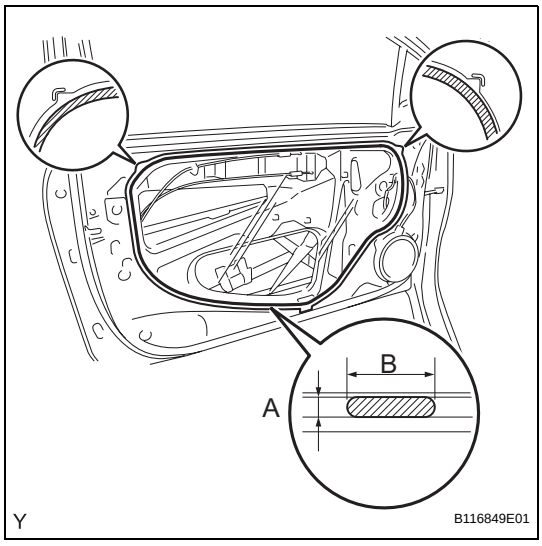
Part No. 08850-00065, Butyl Tape Set or the equivalent

Specification

Area	Dimension
A	2.0mm (0.079 in.) or more
B	6.0mm (0.236 in.) or more

HINT:

- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.



(b) for 3 Door:

Apply butyl tape to the door panel, then install the front door service hole cover as shown in the illustration.

Adhesive:

Part No. 08850-00065, Butyl Tape Set or the equivalent

Specification

Area	Dimension
A	2.0mm (0.079 in.) or more
B	6.0mm (0.236 in.) or more

HINT:

- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.

19. INSTALL FRONT DOOR BELT MOULDING (See page ET-92)

20. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)

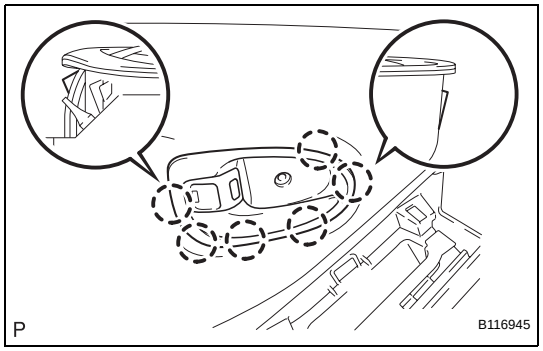
21. INSTALL FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)

22. INSTALL FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-115)

23. INSTALL FRONT NO.1 SPEAKER ASSEMBLY (See page AV-164)

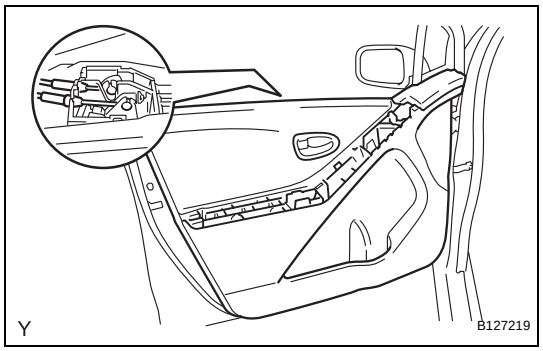
24. INSTALL FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Install the front door glass weatherstrip inner onto the front door trim board.



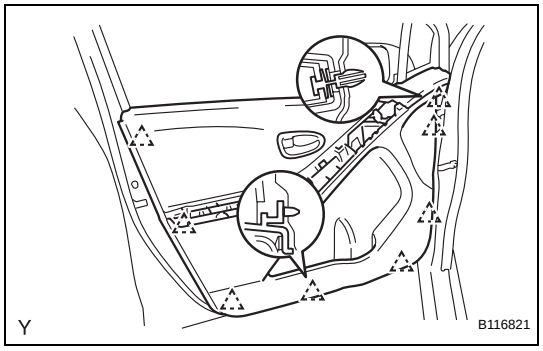
25. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Engage the 6 claws and install the front door inside handle.

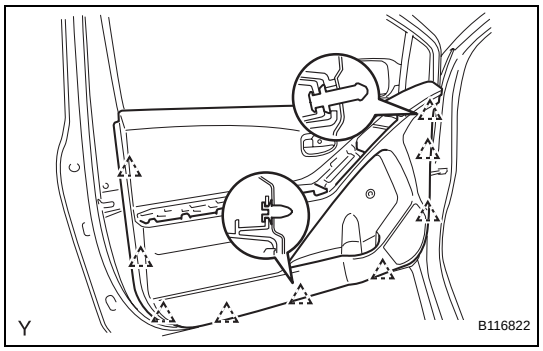


26. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the front door lock remote control cable and front door inside locking cable.

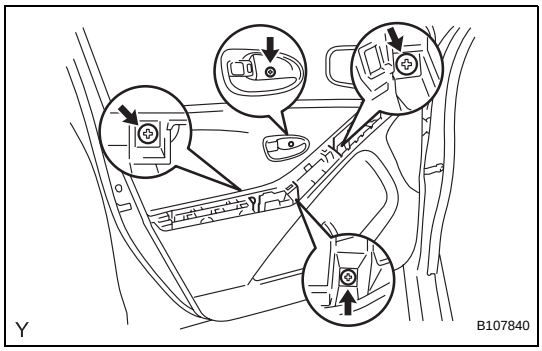


(b) 5 Door:
Engage the 8 clips and install the front door trim board.

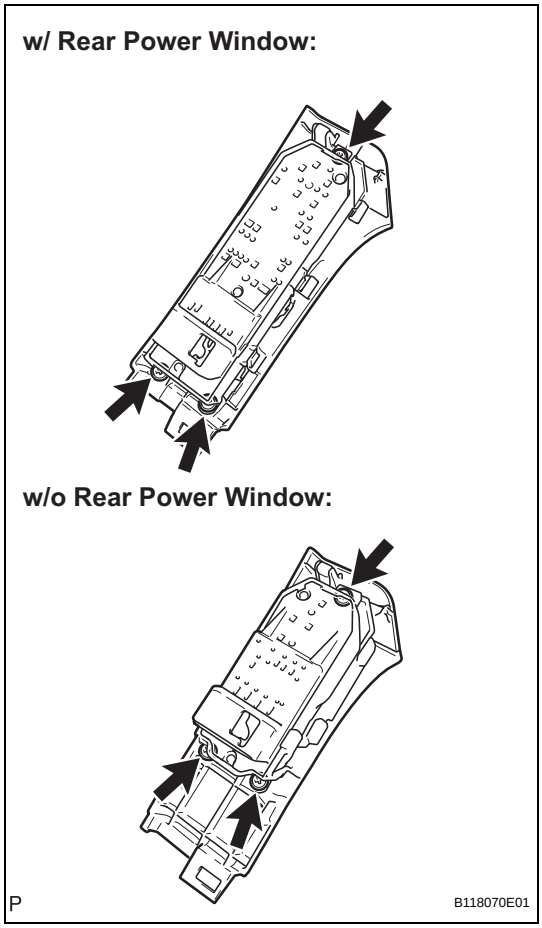


(c) 3 Door:
Engage the 9 clips and install the front door trim board.

ED

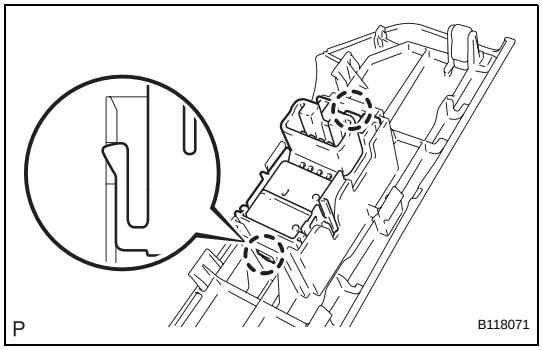


(d) Tighten the 4 screws.



27. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

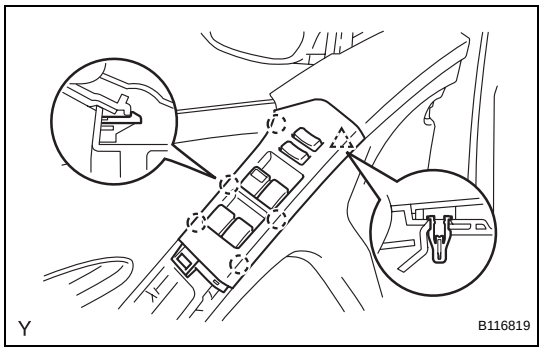
(a) Install the power window regulator master switch with the 3 screws.



28. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Engage the 2 claws and install the power window regulator switch.

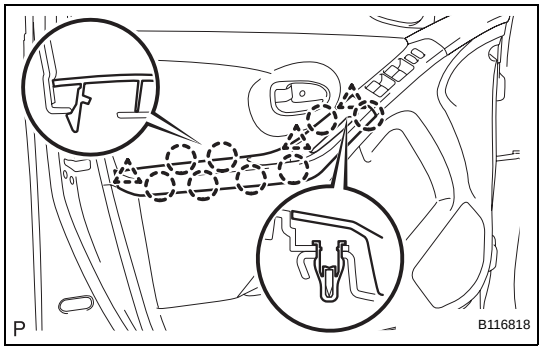
ED



29. INSTALL FRONT ARMREST BASE PANEL UPPER

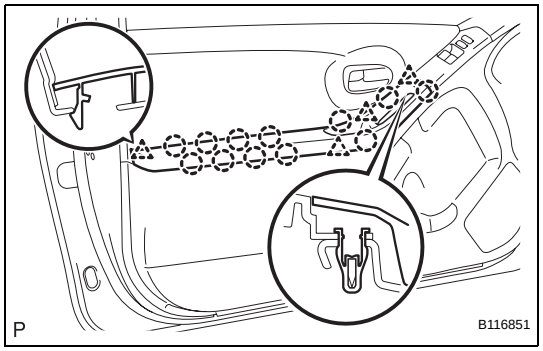
(a) Connect the connector.

(b) Engage the 5 claws and clip and install the front armrest base panel upper.



30. INSTALL DOOR ARMREST COVER

(a) for 5 Door:
Engage the 8 claws and 3 clips and install the door armrest cover.



(b) for 3 Door:
Engage the 12 claws and 4 clips and install the door armrest cover.

31. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

FRONT DOOR (for Hatchback without Power Window)

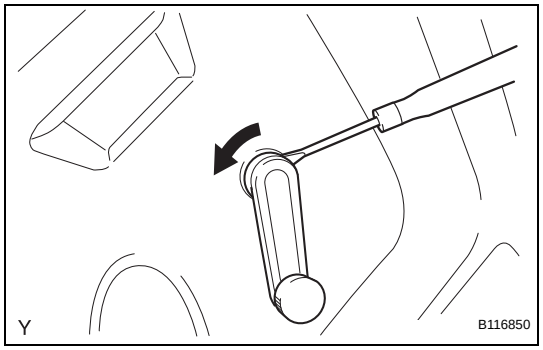
DISASSEMBLY

HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

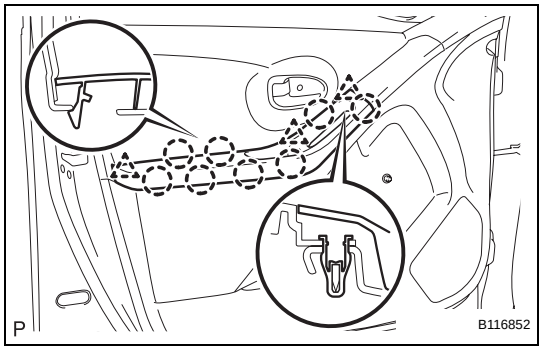
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE DOOR WINDOW REGULATOR HANDLE ASSEMBLY

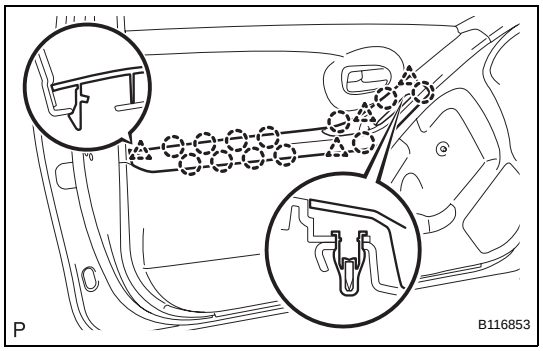


(a) Insert a clip remover between the plate and door trim.
(b) Turn the handle with the clip remover inserted, as shown in the illustration.
(c) Remove the front door window regulator handle and clip.
(d) Remove the window regulator handle plate.

3. REMOVE DOOR ARMREST COVER

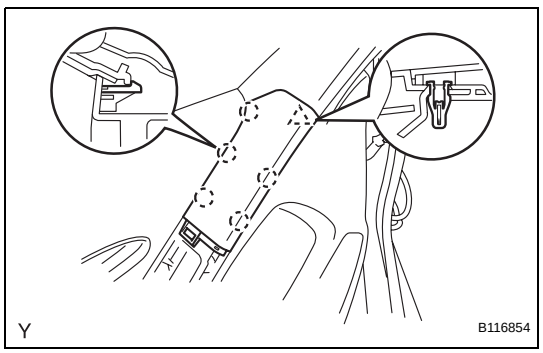


(a) for 5 Door:
Using a screwdriver with its tip wrapped in protective tape, disengage the 8 claws and 3 clips and remove the door armrest cover.



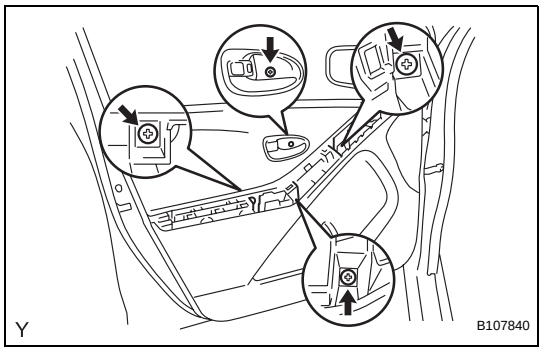
(b) for 3 Door:
Disengage the 12 claws and 4 clips and remove the door armrest cover.

4. REMOVE FRONT ARMREST BASE PANEL UPPER



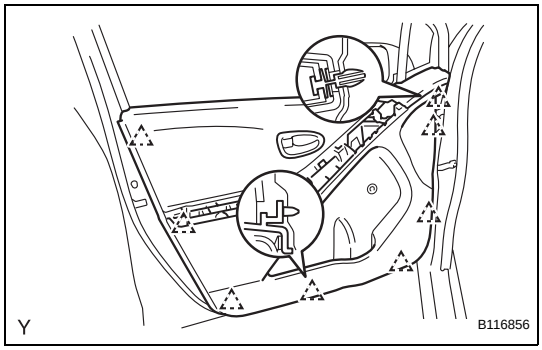
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws and clip and remove the front armrest base panel upper.

ED

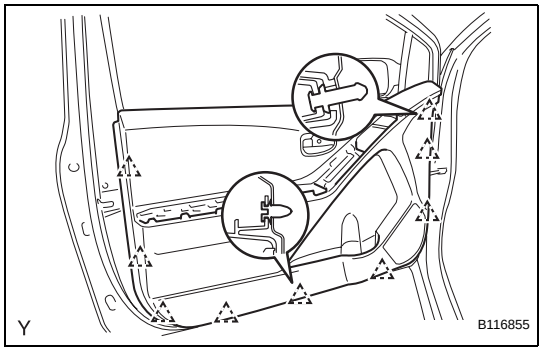


5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

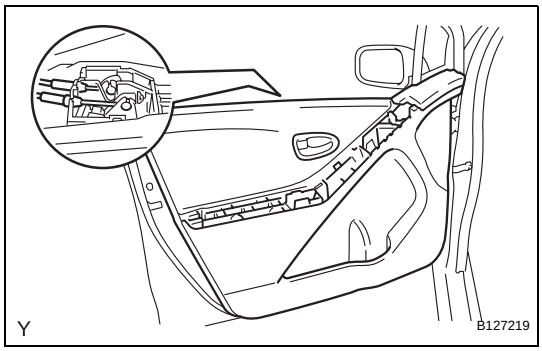
(a) Remove the 4 screws.



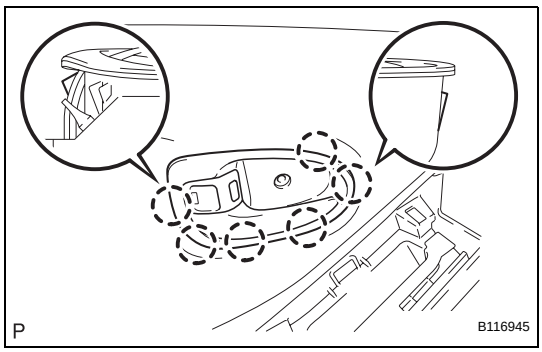
(b) for 5 Door:
Disengage the 8 clips.



(c) for 3 Door:
Disengage the 9 clips.



(d) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door trim board.



6. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the front door inside handle.

7. REMOVE FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Remove the front door glass weatherstrip inner from the front door trim board.

8. REMOVE FRONT NO.1 SPEAKER ASSEMBLY (See page AV-164)

ED

9. REMOVE FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-114)

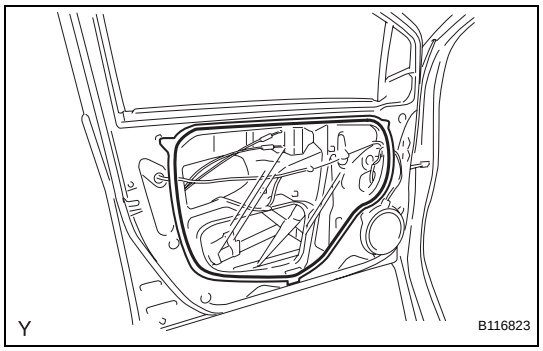
10. REMOVE FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)

11. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)

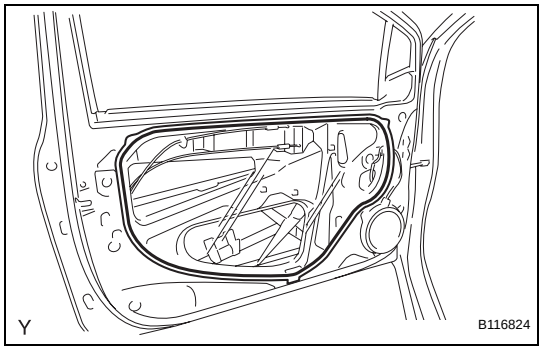
12. REMOVE FRONT DOOR BELT MOULDING (See page ET-91)

13. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) for 5 Door:
Disconnect the connectors and clamps, then remove the front door service hole cover.
NOTICE:
Remove any tape remaining on the door side.



(b) for 3 Door:
Disconnect the connectors and clamps, then remove the front door service hole cover.
NOTICE:
Remove any tape remaining on the door side.

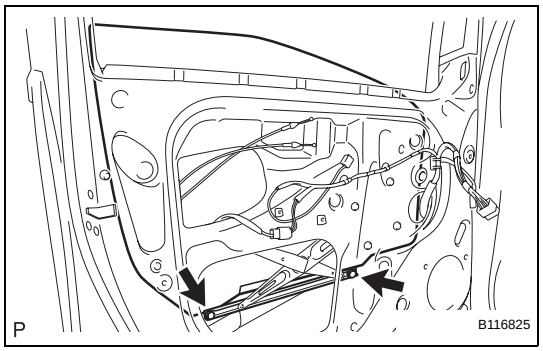


14. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

(a) Provisionally install the front door window regulator handle.

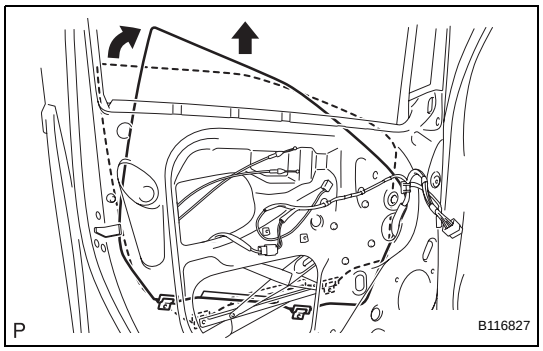
(b) Move the front door glass until the 2 bolts appear in the service holes.

(c) Remove the 2 bolts.
NOTICE:
Do not drop or damage the front door glass when removing the 2 bolts.

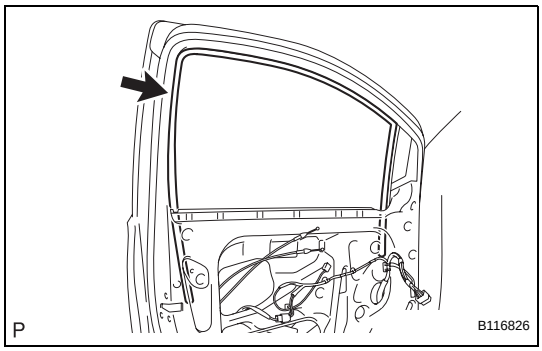


(d) Remove the front door glass in the direction indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.

(e) Remove the front door window regulator handle.

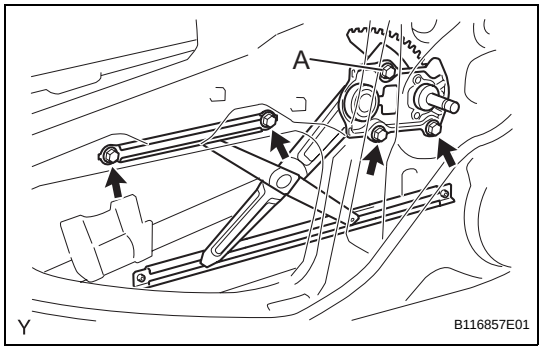


ED



15. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.



16. REMOVE FRONT DOOR WINDOW REGULATOR

(a) Loosen bolt A.

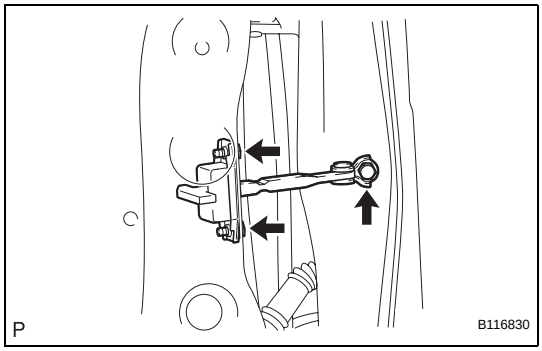
(b) Remove the 4 bolts, then remove the front door window regulator.

NOTICE:

Do not drop or damage the window regulator when removing the bolts.

HINT:

Remove the window regulator through the service hole.



17. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts, then remove the front door check.

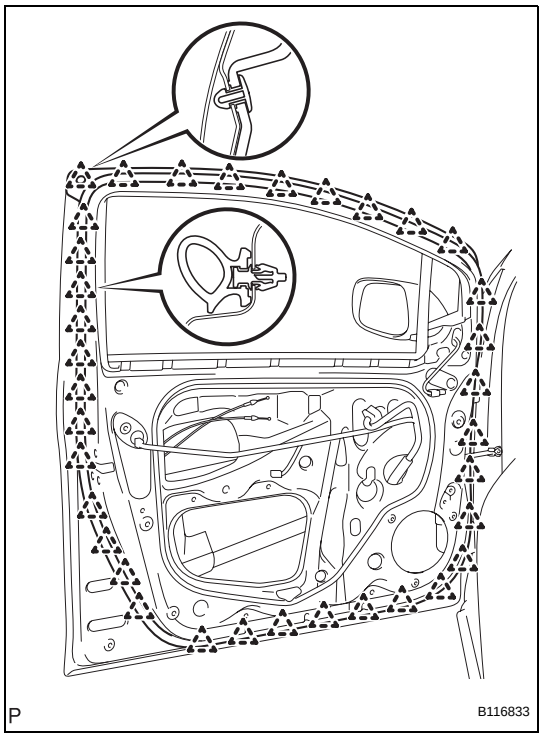
NOTICE:

Do not drop or damage the door check when removing the bolts.

HINT:

Remove the door check through the service hole.

ED



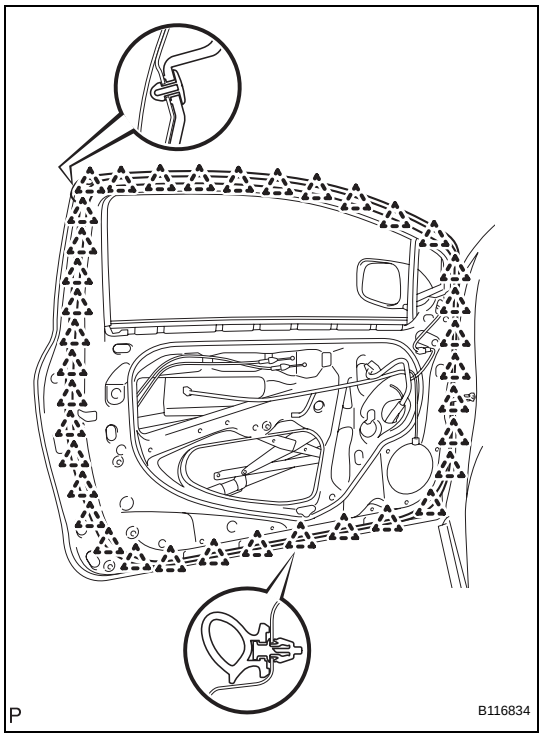
18. REMOVE FRONT DOOR WEATHERSTRIP

(a) for 5 Door:

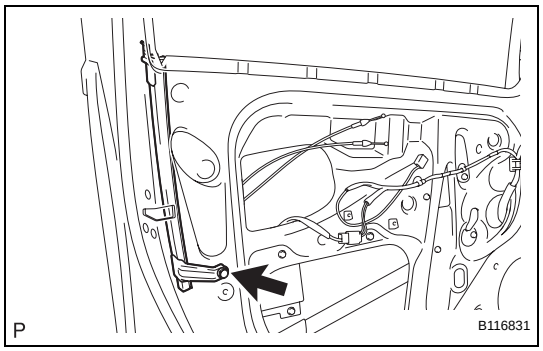
Disengage the 35 clips and remove the front door weatherstrip.

NOTICE:

Remove any tape remaining on the door side.

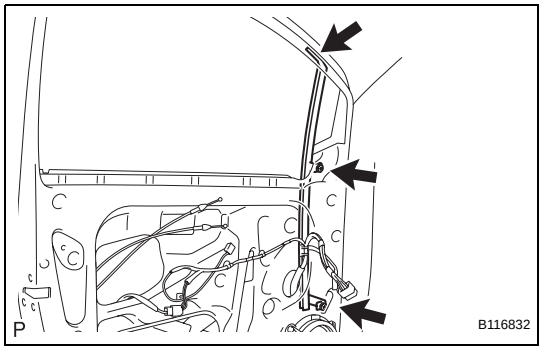


(b) for 3 Door:
Disengage the 37 clips and remove the front door weatherstrip.
NOTICE:
Remove any tape remaining on the door side.



19. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

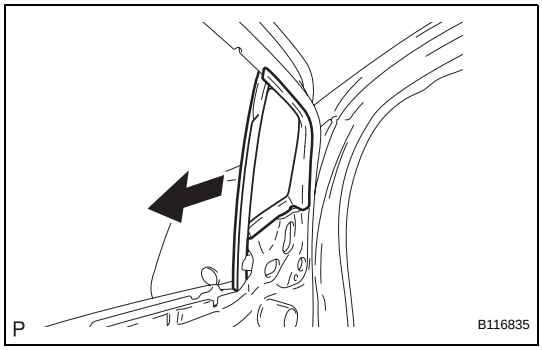
(a) Remove the bolt, then remove the front door frame sub-assembly rear lower.
NOTICE:
Do not drop or damage the front door frame sub-assembly rear lower when removing the bolt.
HINT:
Remove the front door frame sub-assembly rear lower through the service hole.



20. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

(a) Remove the 2 bolts and screw, then remove the front door frame sub-assembly front lower.
NOTICE:
Do not drop or damage the front door frame sub-assembly front lower when removing the bolts and screw.
HINT:
Remove the front door frame sub-assembly front lower through the service hole.

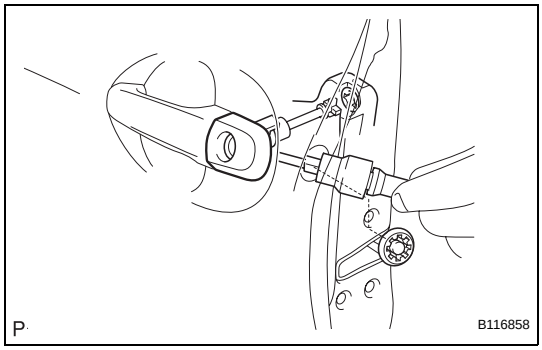
ED



21. REMOVE FRONT DOOR FIX WINDOW WEATHERSTRIP

(a) Slide the front door fix window weatherstrip, in the direction indicated by the arrow in the illustration, to remove it.

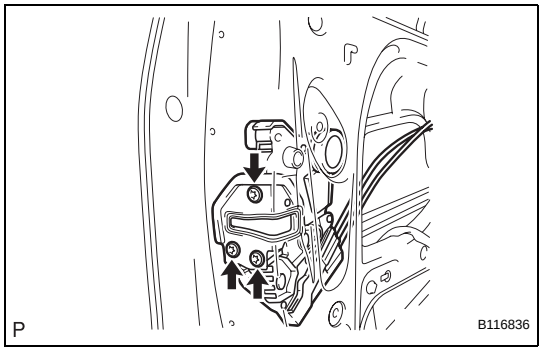
(b) Remove the front door fix window glass from the front door fix window weatherstrip.



22. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

(a) Remove the hole plug.

(b) Using "Torx" socket wrench T30, loosen the screw and remove the cover with the door lock key cylinder installed.



23. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Using "Torx" socket wrench T30, remove the 3 screws.

(b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.

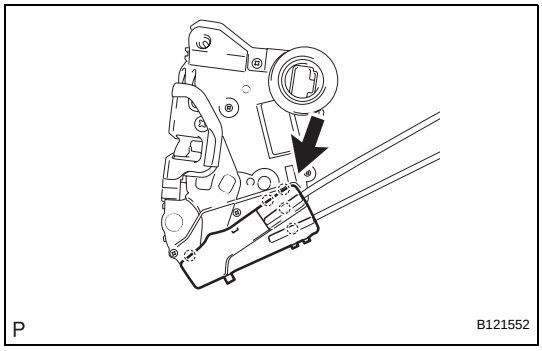
NOTICE:

Do not drop or damage the door lock when removing the screws.

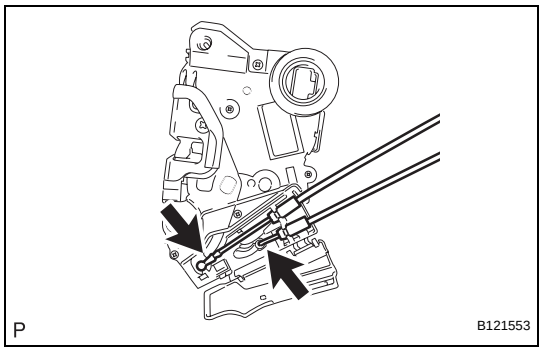
HINT:

Remove the front door lock through the service hole.

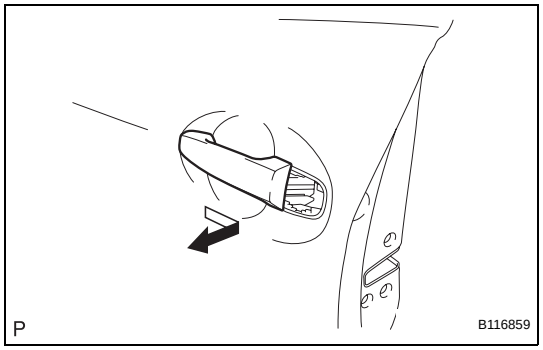
(c) Disengage the 5 claws and open the cover.



ED

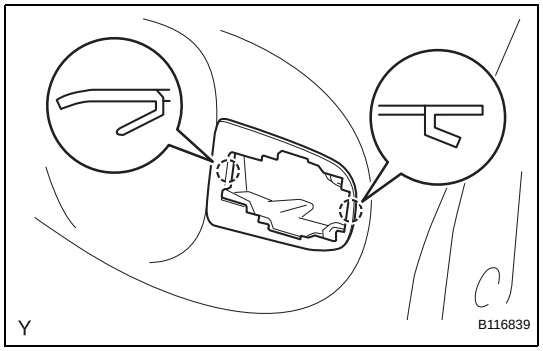


(d) Disconnect the front door lock remote control cable and front door inside locking cable.
(e) Remove the door lock wire harness seal.



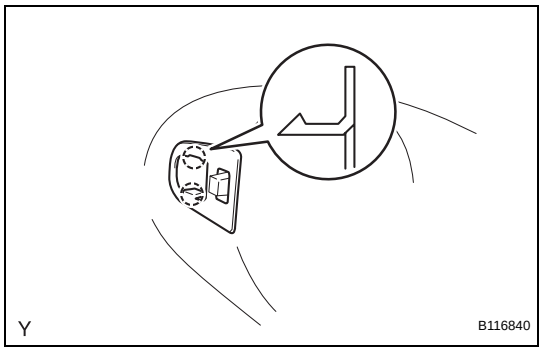
24. REMOVE FRONT DOOR HANDLE ASSEMBLY OUTSIDE

(a) Remove the handle by sliding and pulling it in the direction indicated by the arrow mark in the illustration.



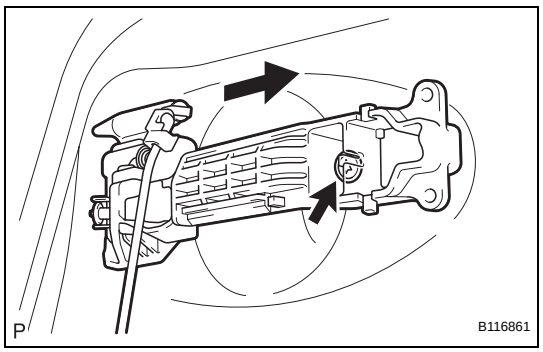
25. REMOVE FRONT DOOR OUTSIDE HANDLE PAD REAR

(a) Disengage the 2 claws and remove the front door outside handle pad rear.



26. REMOVE FRONT DOOR OUTSIDE HANDLE PAD FRONT

(a) Disengage the 2 claws and remove the front door outside handle pad front.



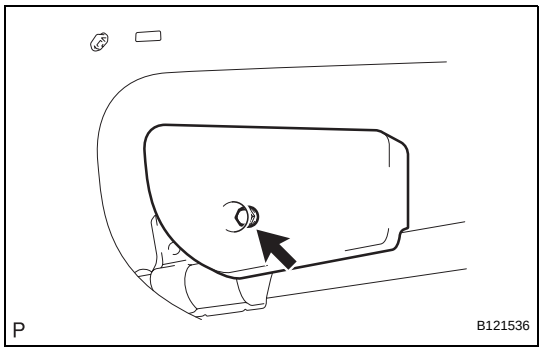
27. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using "Torx" socket wrench T30, loosen the screw.
(b) Slide the outside handle frame to remove it.

28. REMOVE CUSHION

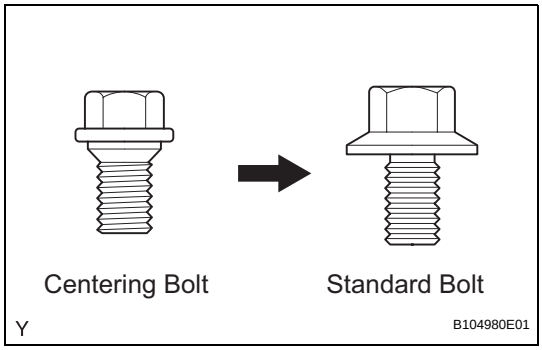
(a) Remove the 2 cushions from the door panel.

ED



29. REMOVE FRONT DOOR STIFFENER CUSHION

(a) Remove the bolt and front door stiffener cushion.



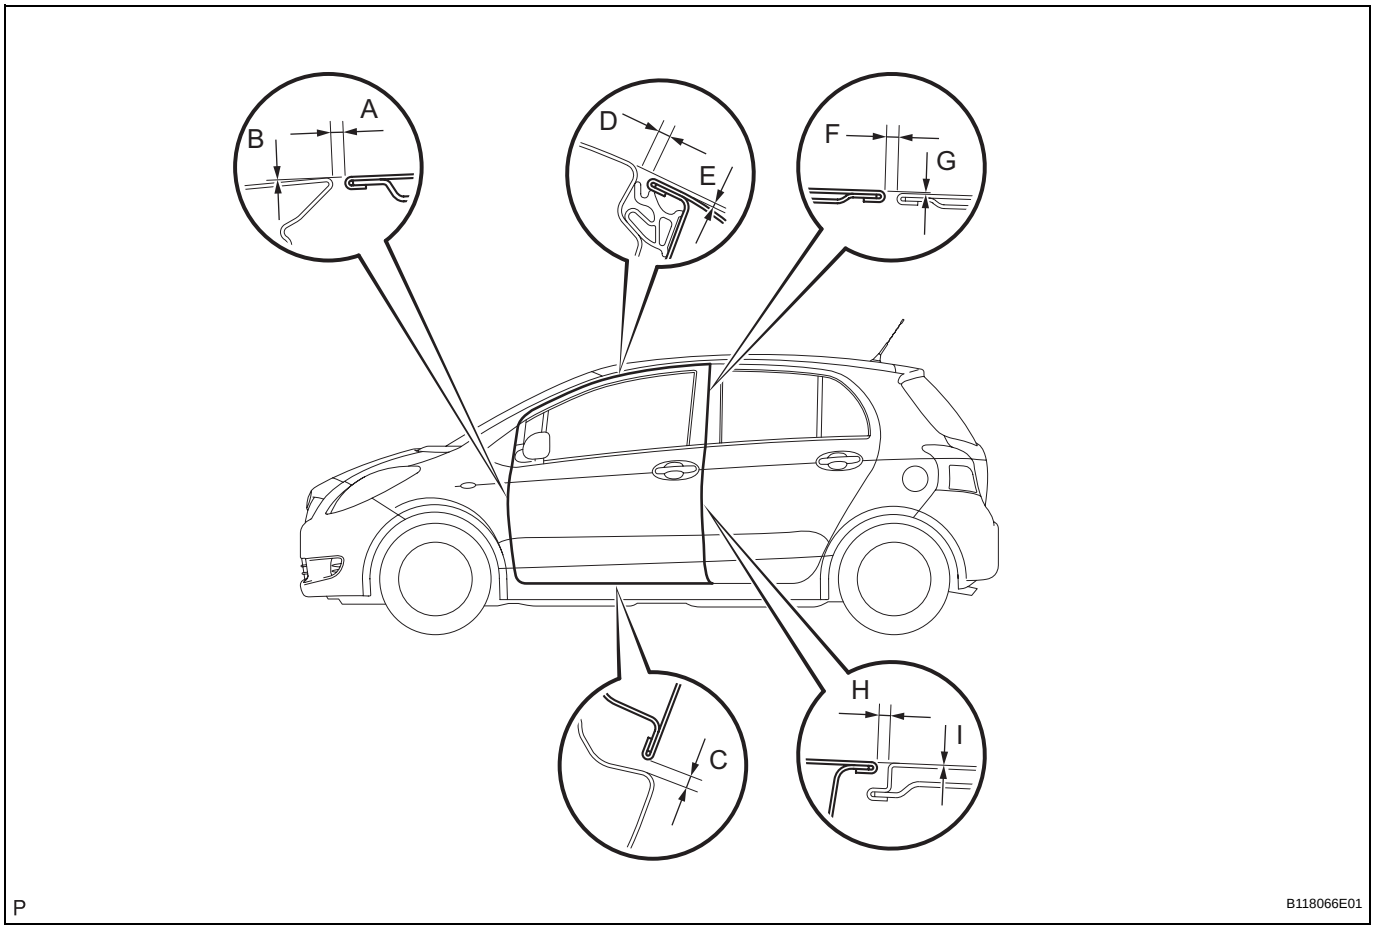
ADJUSTMENT

HINT:

- Before adjusting the door position on vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedure for the RH and LH sides.
- The procedures described below are for the LH side.
- Centering bolts are used to mount the door hinge onto the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart.

1. INSPECT FRONT DOOR (for 5 Door)

(a) Check that the clearance measurements are within the standard ranges.

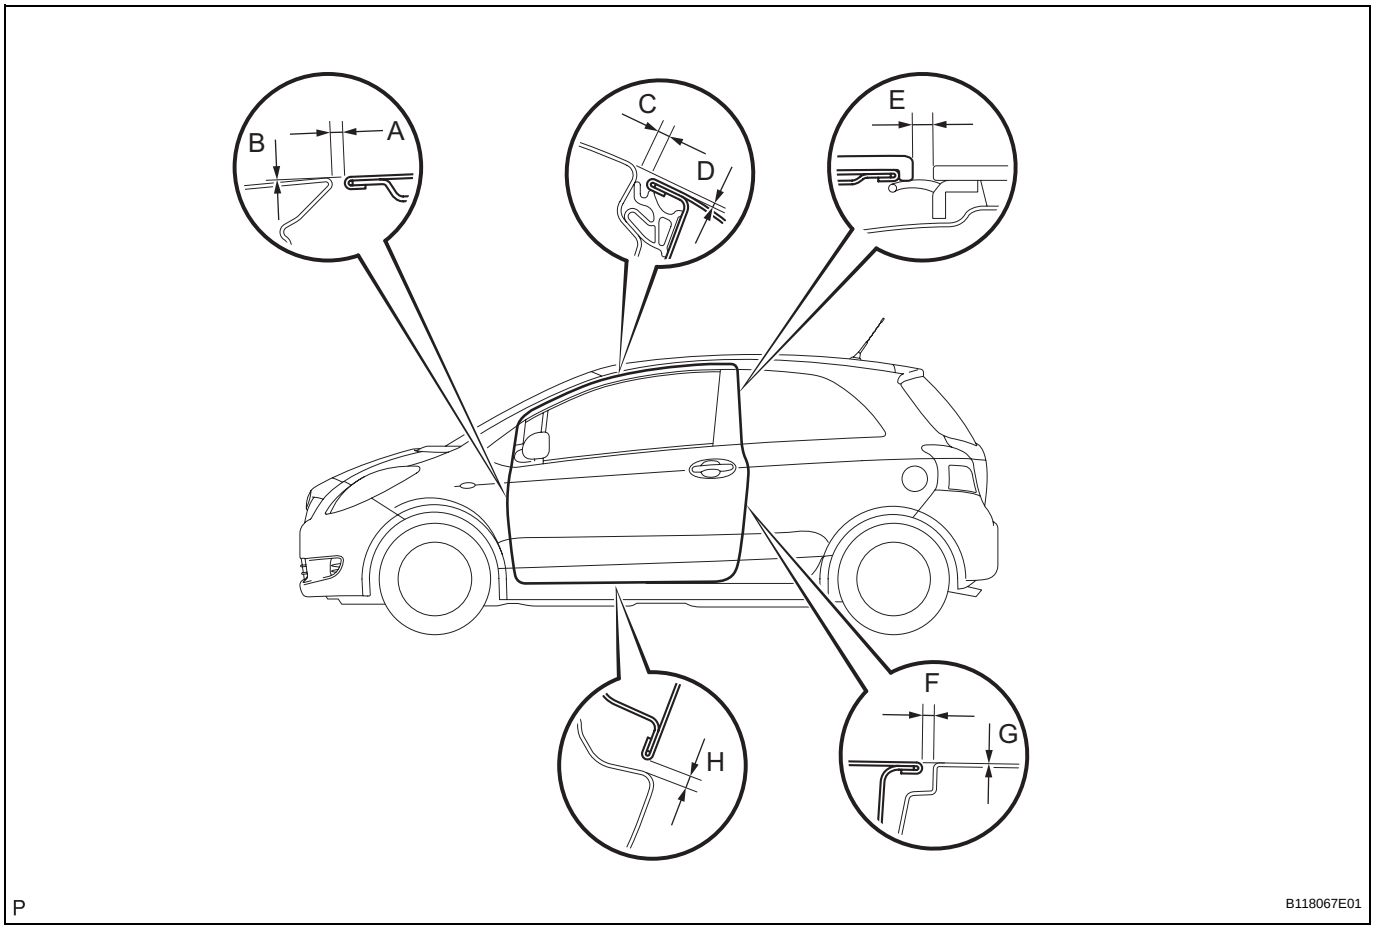


Standard

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	F	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	G	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
C	4.1 to 7.1 mm (0.161 to 0.280 in.)	H	3.3 to 6.3 mm (0.130 to 0.248 in.)
D	3.5 to 6.5 mm (0.138 to 0.256 in.)	I	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
E	2.8 mm (0.110 in.)	-	-

2. REMOVE FRONT DOOR (for 3 Door)

(a) Check that the clearance measurements are within the standard ranges.



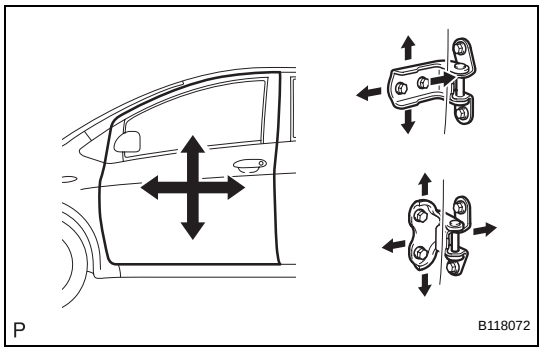
Standard

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	E	2.8 to 5.8 mm (0.110 to 0.228 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	F	2.5 to 5.5 mm (0.098 to 0.217 in.)
C	3.5 to 6.5 mm (0.138 to 0.256 in.)	G	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
D	2.8 mm (0.110 in.)	H	4.1 to 7.1 mm (0.161 to 0.280 in.)

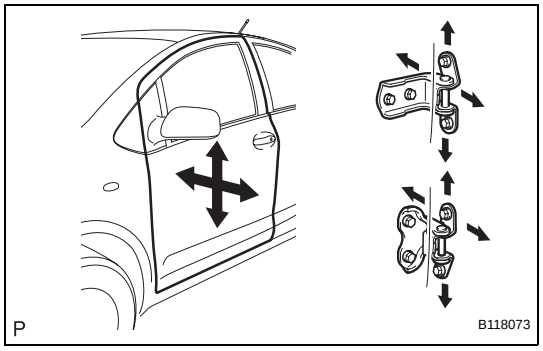
3. ADJUST FRONT DOOR

(a) Disconnect the cable from the negative battery terminal.

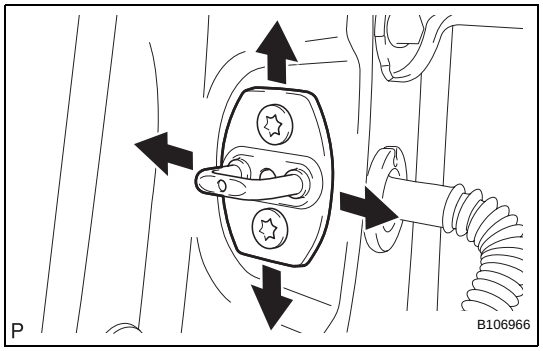
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.



(b) Using SST, adjust the door horizontally and vertically by loosening the body side hinge bolts.
SST 09812-00010
(c) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

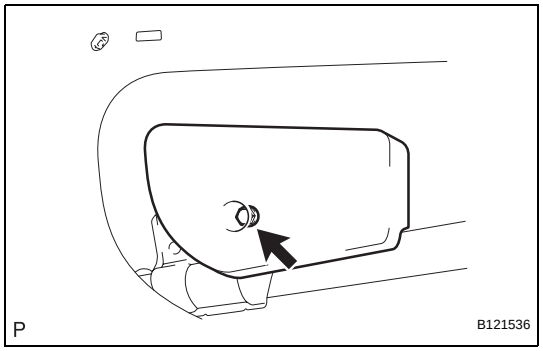


(d) Adjust the door horizontally and vertically by loosening the door side hinge bolts.
(e) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



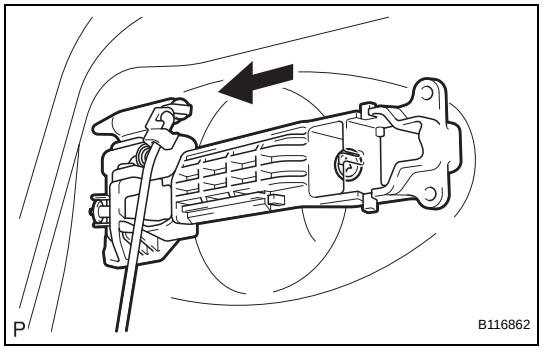
(f) Using "Torx" socket wrench T40, adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic-faced hammer.
(g) Using "Torx" socket wrench T40, tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)
(h) Connect the cable to the negative battery terminal.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REASSEMBLY

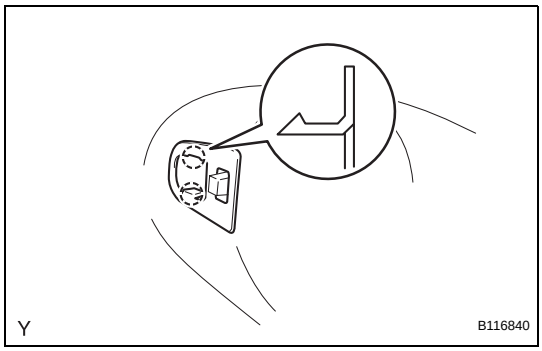


1. INSTALL FRONT DOOR STIFFENER CUSHION
(a) Install the front door stiffener cushion with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

2. INSTALL CUSHION
(a) Install the cushion onto the door panel.

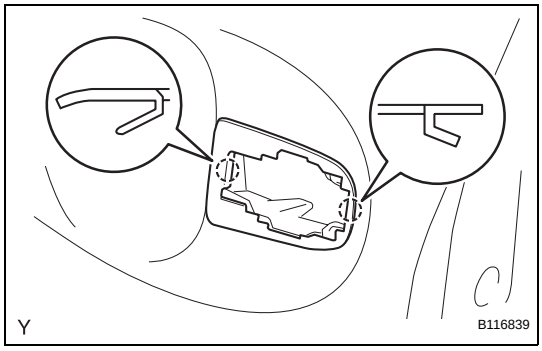


3. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY
(a) Using "Torx" socket wrench T30, install the front outside handle frame with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



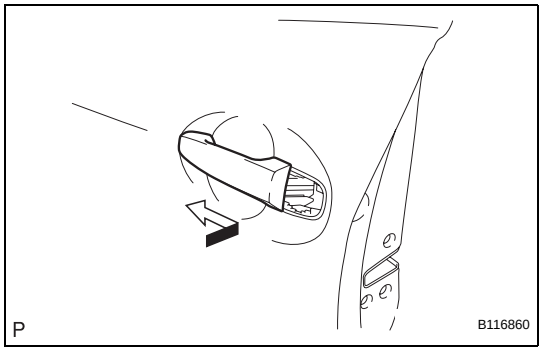
4. INSTALL FRONT DOOR OUTSIDE HANDLE PAD FRONT

(a) Engage the 2 claws and install the front door outside handle pad front.



5. INSTALL FRONT DOOR OUTSIDE HANDLE PAD REAR

(a) Engage the 2 claws and install the front door outside handle pad rear.



6. INSTALL FRONT DOOR HANDLE ASSEMBLY OUTSIDE

(a) Pushing the front door handle assembly outside in the direction of the arrow mark shown in the illustration, install the front door handle assembly outside.

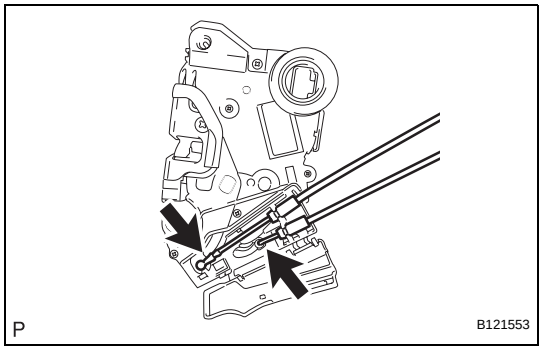
7. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

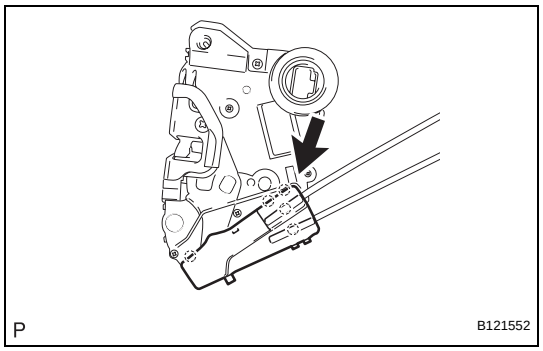
- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**
- **Make sure that no grease and dirt adheres to the packing surface in the connecting part.**

(a) Apply MP grease to the sliding and rotating areas of the front door lock.

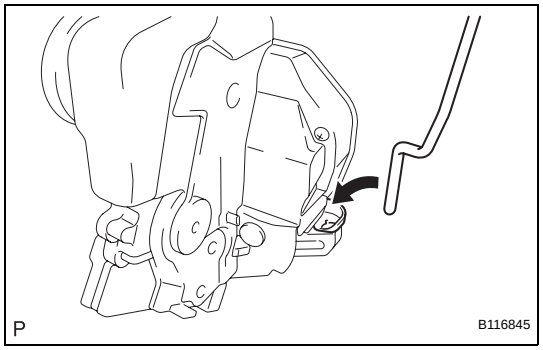
(b) Connect the front door lock remote control cable and front door inside locking cable.



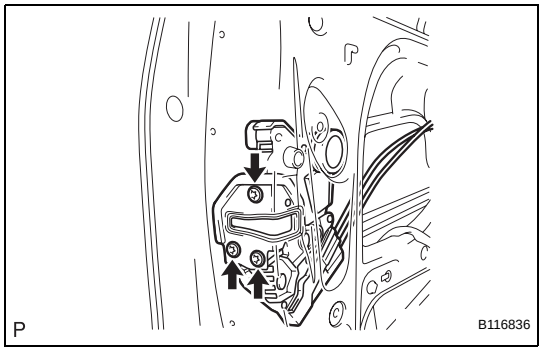
ED



(c) Engage the 5 claws and close the cover.

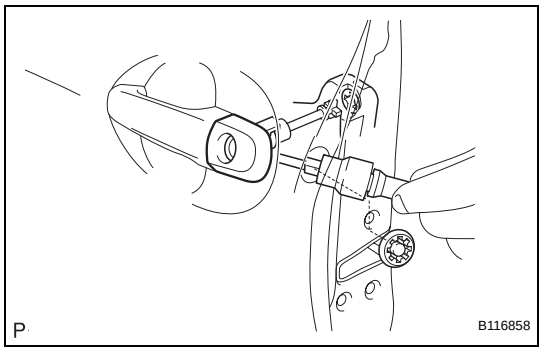


(d) Insert the door lock open rod into the front door lock, then set it to the door panel.
NOTICE:
Make sure that the outside handle link is securely engaged with the door lock.



(e) Apply adhesive to the threads of the screws.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or the equivalent

(f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



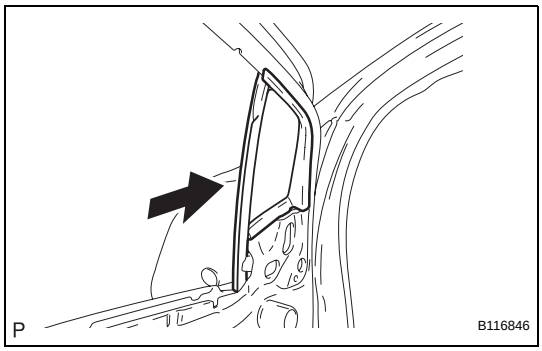
8. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

(a) Using "Torx" socket wrench T30, install the cover with the door lock key cylinder.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
HINT:
Make sure that the door lock key cylinder rod is inserted.

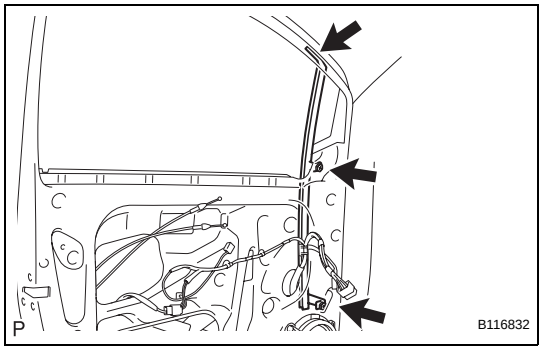
(b) Install the hole plug.

9. INSTALL FRONT DOOR FIX WINDOW WEATHERSTRIP

(a) Install the front door fix window glass onto the front door fix window weatherstrip.

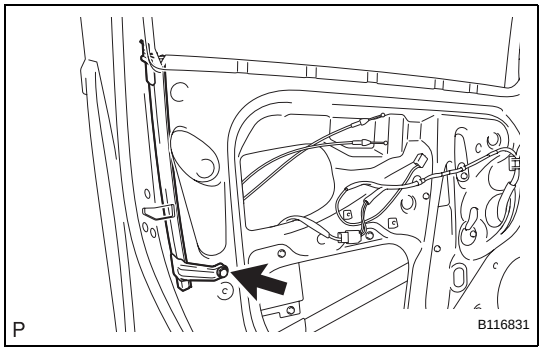


(b) Slide the front door fix window weatherstrip, in the direction indicated by the arrow in the illustration, to install it.



10. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER

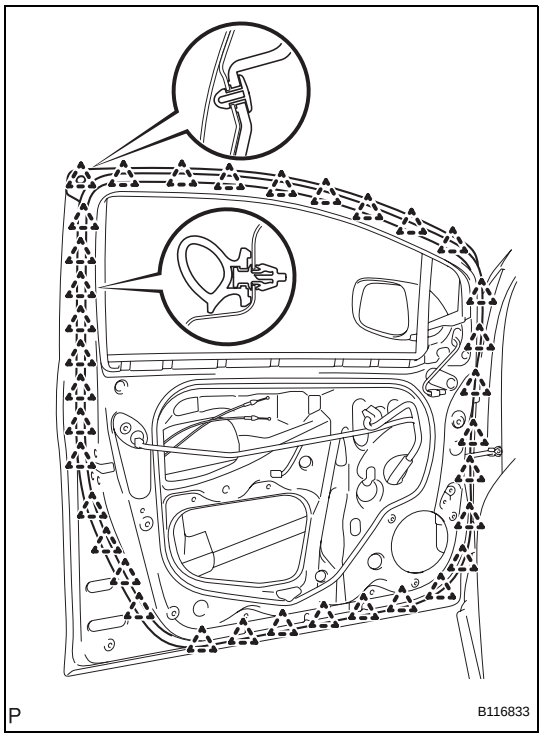
(a) Install the front door frame sub-assembly front lower with the 2 bolts and screw.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)



11. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY REAR LOWER

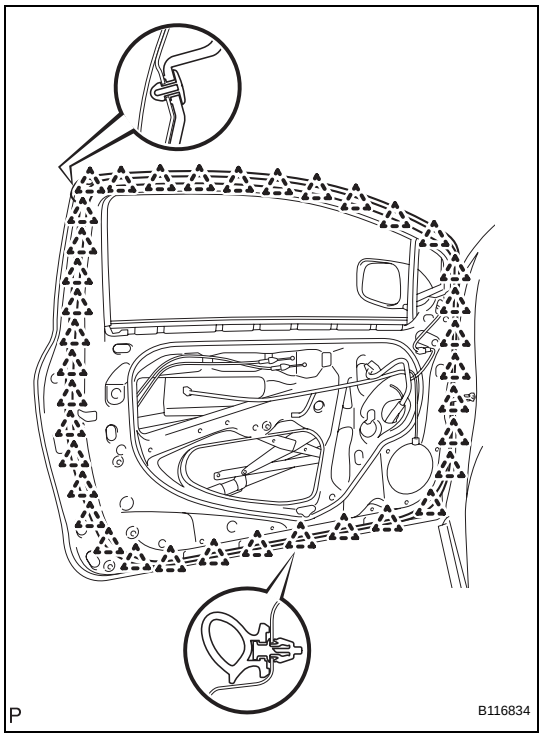
(a) Install the front door frame sub-assembly rear lower with the bolt.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)

ED

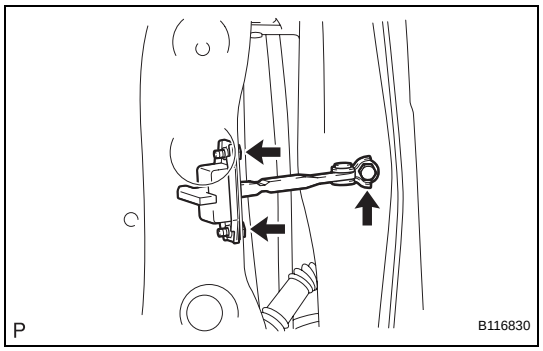


12. INSTALL FRONT DOOR WEATHERSTRIP

(a) for 5 Door:
Engage the 35 clips and install the front door weatherstrip.



(b) for 3 Door:
Engage the 37 clips and install the front door weatherstrip.



13. INSTALL FRONT DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the door check.

(b) Install the front door check onto the door panel with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

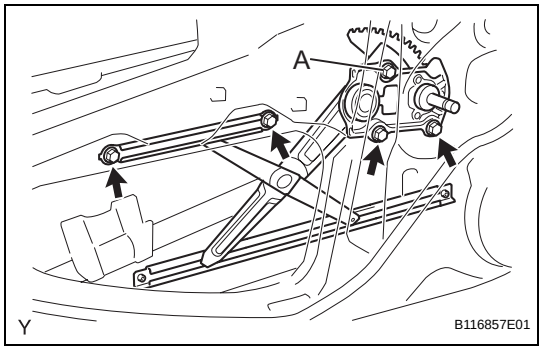
(c) Apply adhesive to the threads of the bolt.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or the equivalent

(d) Install the front door check onto the body panel with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

ED

14. INSTALL FRONT DOOR WINDOW REGULATOR

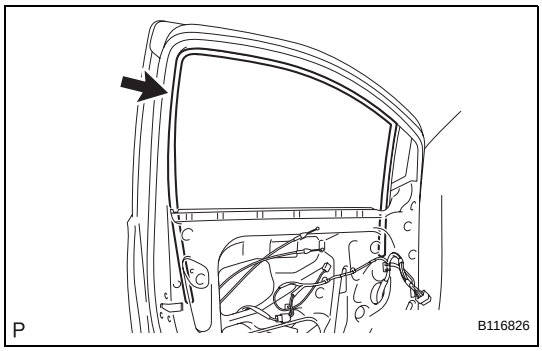
(a) Apply MP grease to the sliding and rotating areas of the front door window regulator sub-assembly.
NOTICE:
Do not apply grease to the window regulator spring.



(b) Loosely screw bolt A onto the front door window regulator sub-assembly.

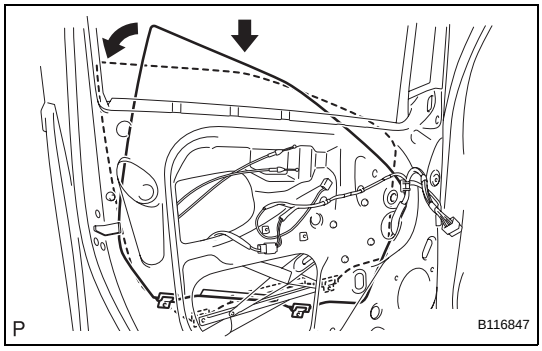
(c) Insert the front door window regulator into the door panel. Use bolt A to hang the front door window regulator on the door panel.
NOTICE:
Do not drop the window regulator as it may be damaged.

(d) Install the front door window regulator with the 4 bolts, and tighten bolt A.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



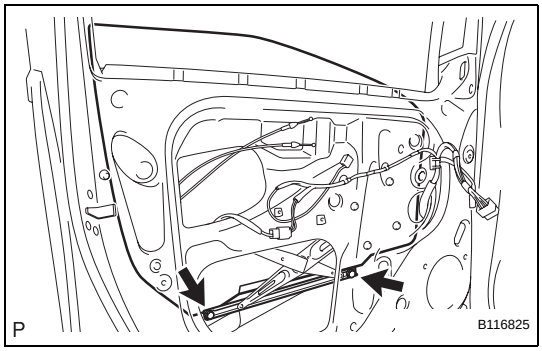
15. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.



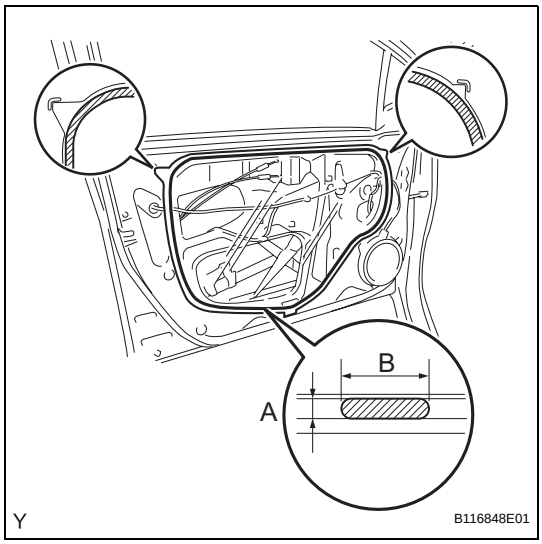
16. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the door glass into the door panel along the glass run as indicated by the arrows in the illustration.
NOTICE:
Do not damage the glass.



(b) Install the front door glass onto the front door window regulator with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

ED

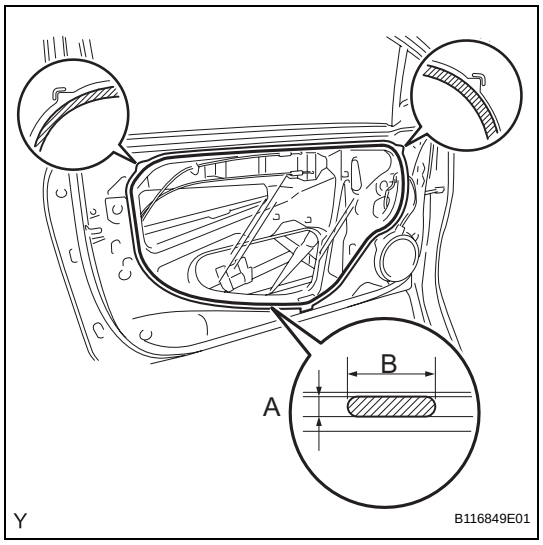


17. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) for 5 Door:
Apply butyl tape to the door panel, then install the front door service hole cover as shown in the illustration.
Adhesive:
Part No. 08850-00065, Butyl Tape Set or the equivalent
Specification

Area	Dimension
A	2.0 mm (0.079 in.) or more
B	6.0 mm (0.236 in.) or more

HINT:
- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.



(b) for 3 Door:
Apply butyl tape to the door panel, then install the front door service hole cover as shown in the illustration.

Adhesive:
Part No. 08850-00065, Butyl Tape Set or the equivalent

Specification

Area	Dimension
A	2.0 mm (0.079 in.) or more
B	6.0 mm (0.236 in.) or more

HINT:
- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.

18. INSTALL FRONT DOOR BELT MOULDING (See page ET-92)

19. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-16)

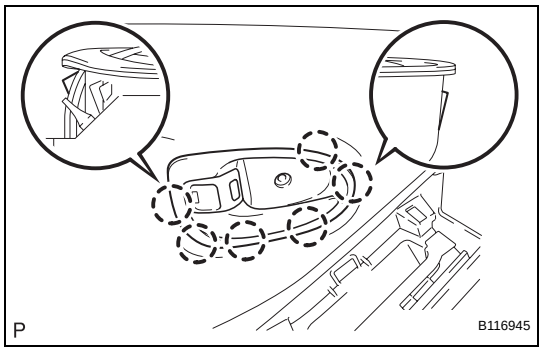
20. INSTALL FRONT DOOR WINDOW FRAME REAR MOULDING (for 3 Door) (See page ET-114)

21. INSTALL FRONT DOOR WINDOW FRAME FRONT MOULDING (See page ET-115)

22. INSTALL FRONT NO.1 SPEAKER ASSEMBLY (See page AV-164)

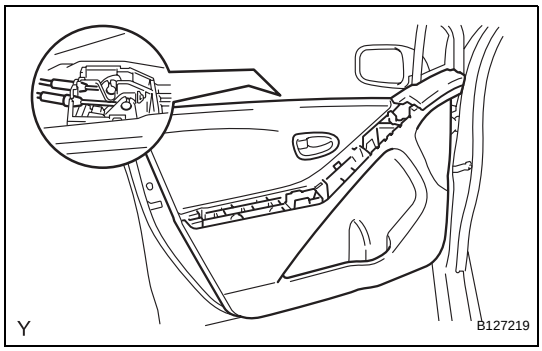
23. INSTALL FRONT DOOR GLASS WEATHERSTRIP INNER

(a) Install the front door glass weatherstrip inner onto the front door trim board.



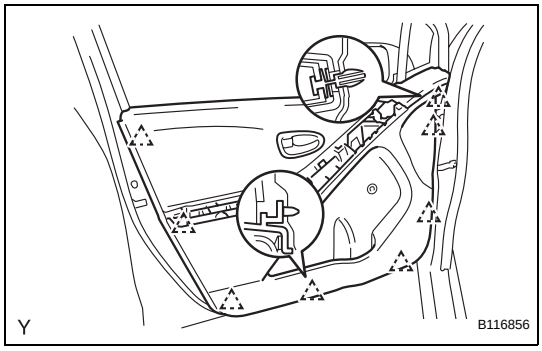
24. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Engage the 6 claws and install the front door inside handle.

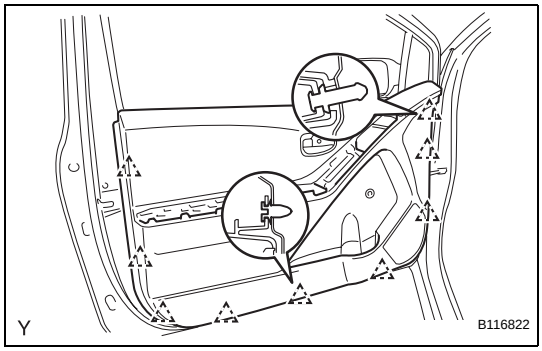


25. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

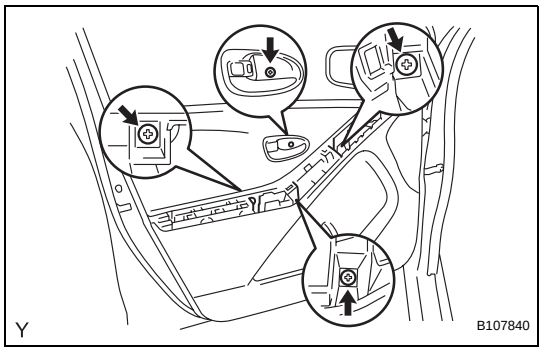
(a) Connect the front door lock remote control cable and front door inside locking cable.



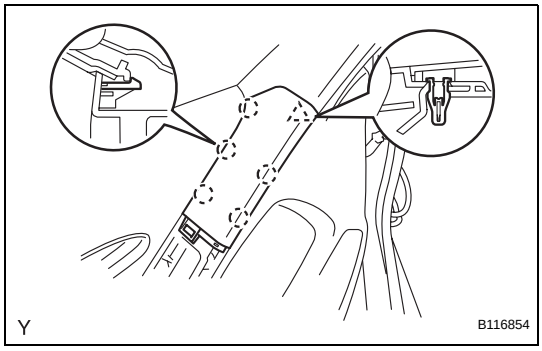
(b) for 5 Door:
Engage the 8 clips and install the front door trim board.



(c) for 3 Door:
Engage the 9 clips and install the front door trim board.



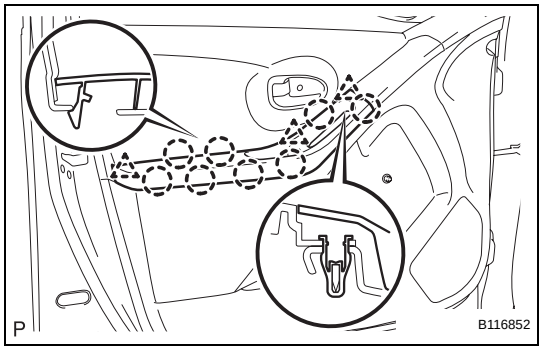
(d) Tighten the 4 screws.



26. INSTALL FRONT ARMREST BASE PANEL UPPER

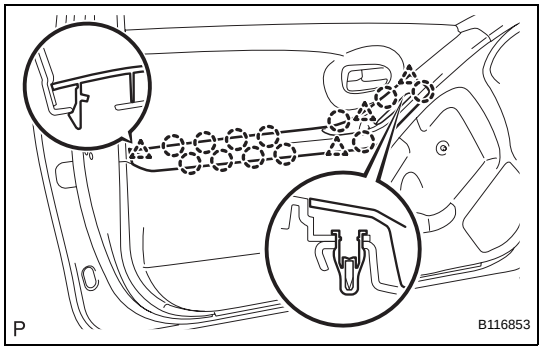
(a) Engage the 5 claws and clip and install the front door armrest base panel upper.

ED

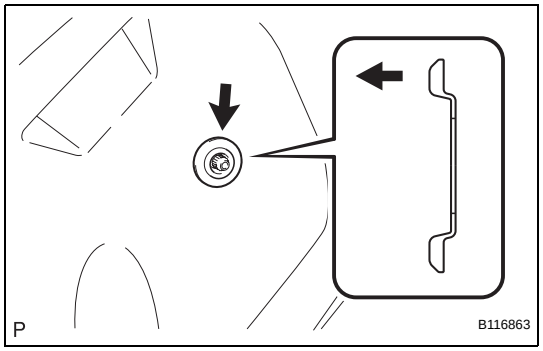


27. INSTALL DOOR ARMREST COVER

(a) for 5 Door:
Engage the 8 claws and 3 clips and install the door armrest cover.

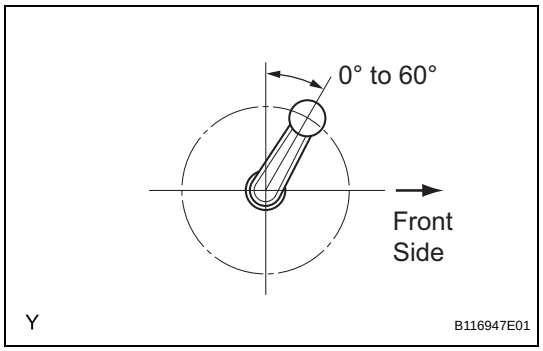


(b) for 3 Door:
Engage the 12 claws and 4 clips and install the door armrest cover.



28. INSTALL DOOR WINDOW REGULATOR HANDLE ASSEMBLY

(a) Install the window regulator handle plate.
(b) Open all the windows.



(c) Install the front door window regulator handle with the clip at the angle shown in the illustration.

29. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

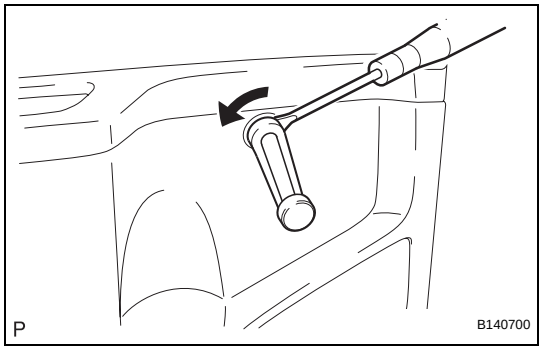
DISASSEMBLY

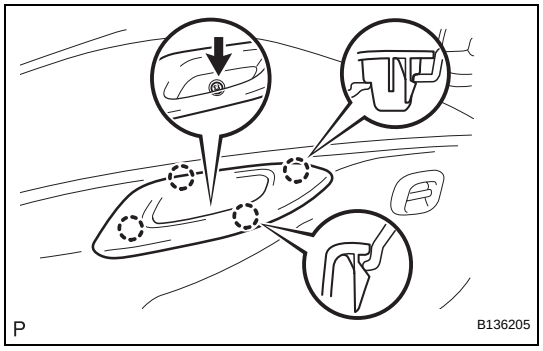
HINT:
- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



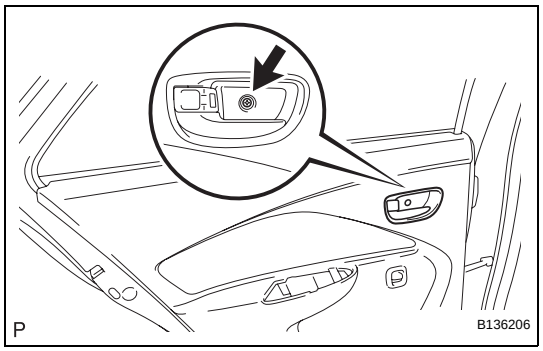
2. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Insert a clip remover between the plate and door trim.
(b) Turn the handle with the clip remover inserted, as shown in the illustration.
(c) Remove the rear door window regulator handle assembly and clip.
(d) Remove the window regulator handle plate.



3. REMOVE REAR DOOR ARMREST BASE UPPER PANEL

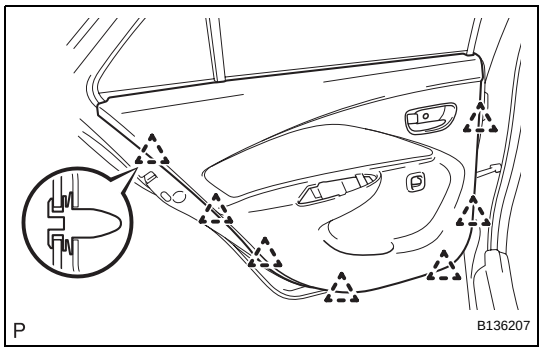
(a) Disengage the 4 claws and remove the rear door armrest base upper panel.



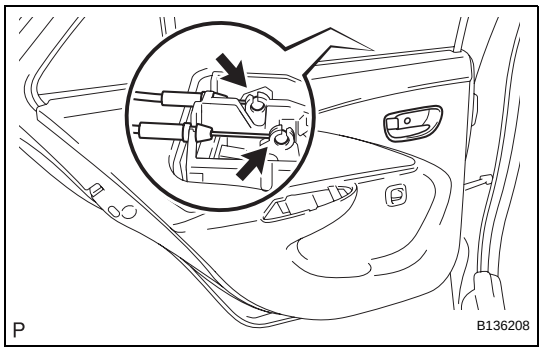
4. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the screw.

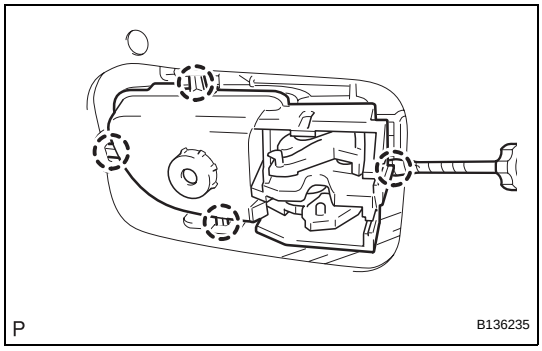
(b) Disengage the 7 clips.
(c) w/ Power window:
Disconnect the connector.



ED



(d) Disconnect the rear door lock remote control cable and rear door inside locking cable and remove the rear door trim board.

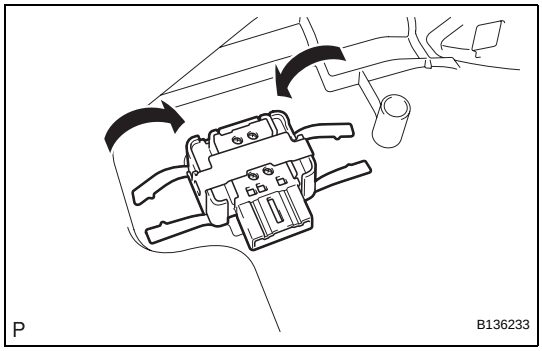


5. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 4 claws and remove the rear door inside handle.

6. REMOVE REAR DOOR GLASS WEATHERSTRIP INNER

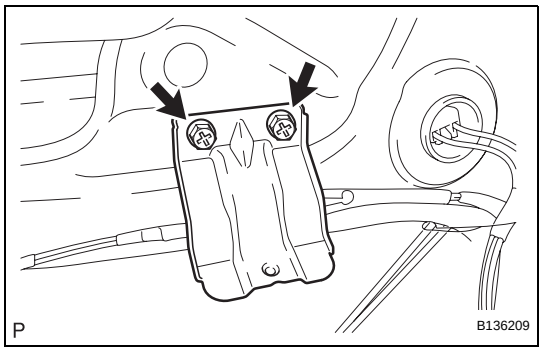
(a) Remove the rear door glass weatherstrip inner from the rear door trim board.



7. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR (w/ Power Window)

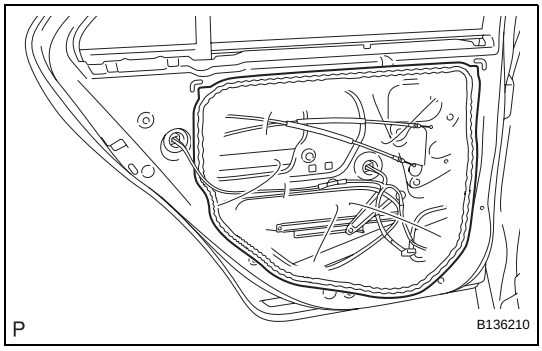
(a) Disengage the set plate and remove the power window regulator switch.

ED



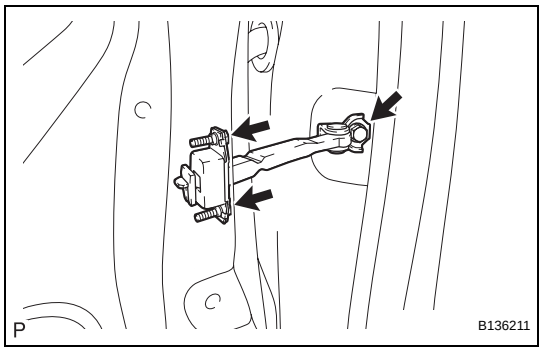
8. REMOVE REAR DOOR TRIM BRACKET

(a) Remove the 2 screws and the rear door trim bracket.



9. REMOVE REAR DOOR SERVICE HOLE COVER

(a) Disconnect the connectors and clamps, then remove the rear door service hole cover.
NOTICE:
Remove any tape remaining on the door side.



10. REMOVE REAR DOOR CHECK ASSEMBLY

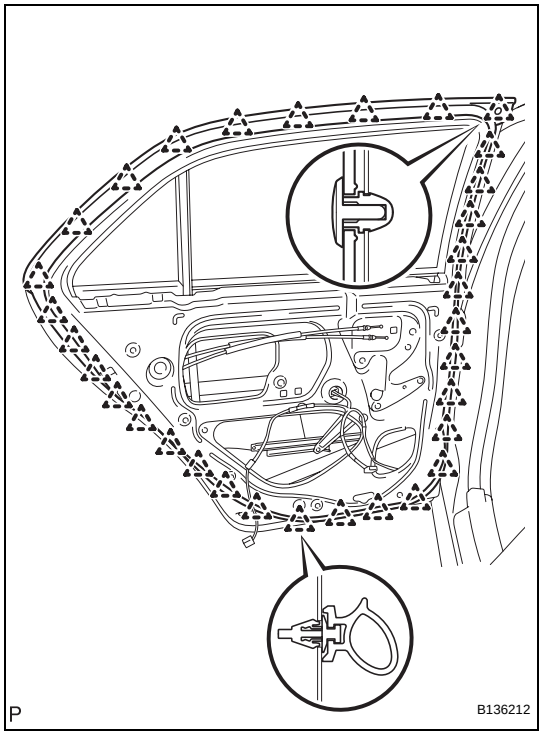
(a) Remove the 3 bolts, then remove the rear door check.

NOTICE:

Do not drop or damage the door check when removing the bolts.

HINT:

Remove the door check through the service hole.



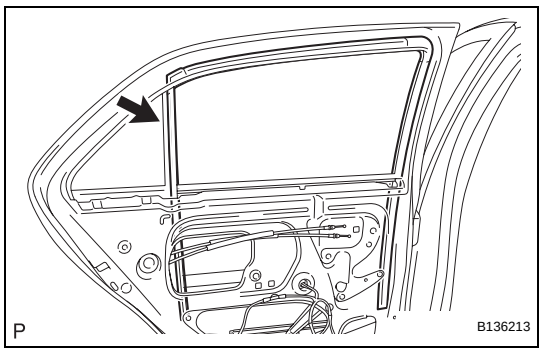
11. REMOVE REAR DOOR WEATHERSTRIP

(a) Disengage the 32 clips and remove the rear door weatherstrip.

NOTICE:

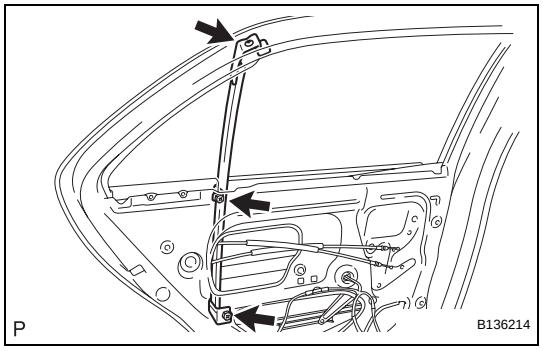
Remove any tape remaining on the door side.

12. REMOVE REAR DOOR BELT MOULDING (See page ET-95)



13. REMOVE REAR DOOR GLASS RUN

(a) Remove the rear door glass run.



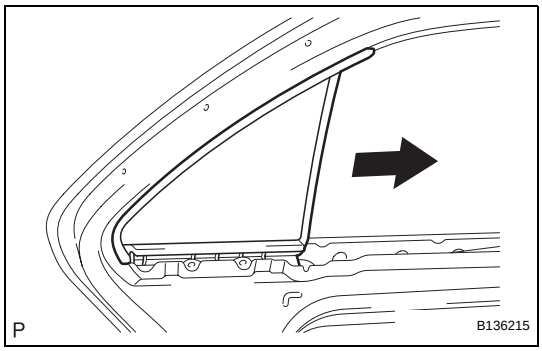
14. REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

(a) Remove the 2 bolts, screw and rear door window division bar.

NOTICE:

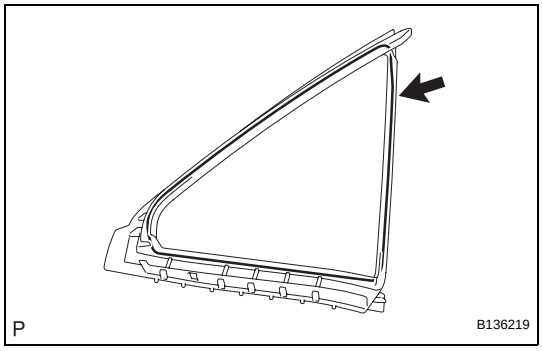
Do not drop or damage the rear door window division bar when removing the bolts and screw.

ED

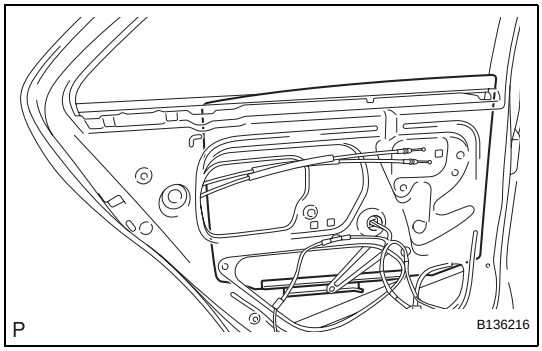


15. REMOVE REAR DOOR QUARTER WINDOW WEATHERSTRIP

(a) Slide the rear door quarter window weatherstrip, in the direction indicated by the arrow in the illustration, to remove it.



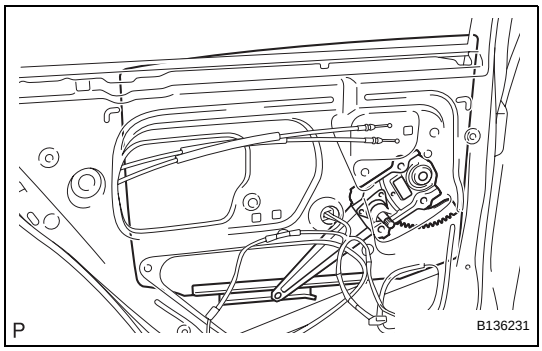
(b) Remove the rear door quarter window glass from the rear door quarter window weatherstrip.



16. REMOVE REAR DOOR GLASS SUB-ASSEMBLY

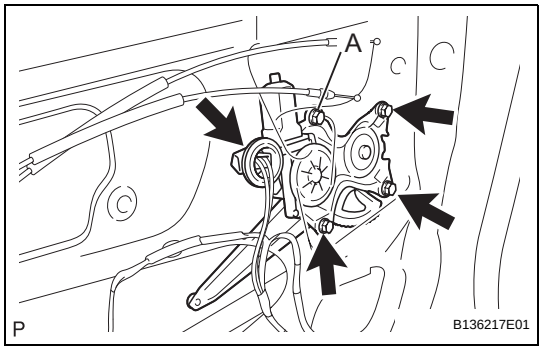
(a) w/ Power window:

(1) Remove the rear door glass from the rear door window regulator.



(b) w/o Power window:

(1) Remove the rear door glass from the rear door window regulator.



17. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) w/ Power window:

(1) Disconnect the connector.

(2) Loosen bolt A.

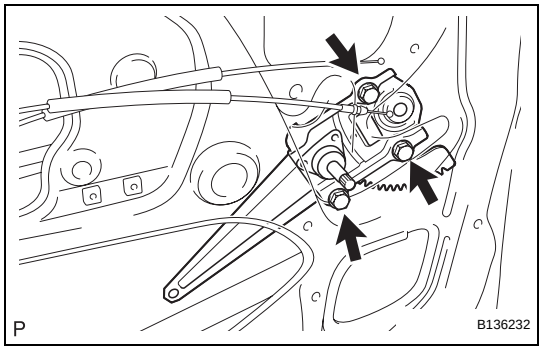
(3) Remove the 3 bolts, then remove the rear door window regulator.

NOTICE:

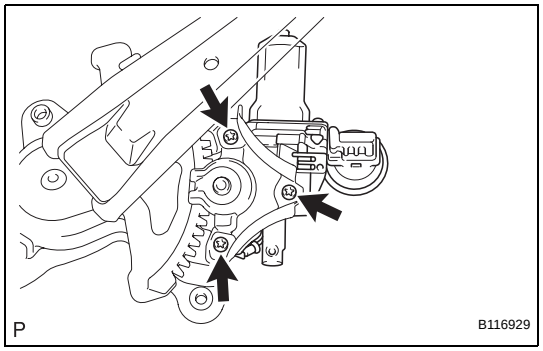
Do not drop or damage the rear door window regulator when removing the bolts.

ED

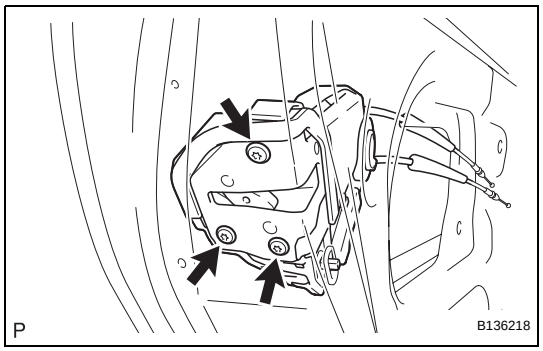
HINT:
Remove the window regulator through the service hole.



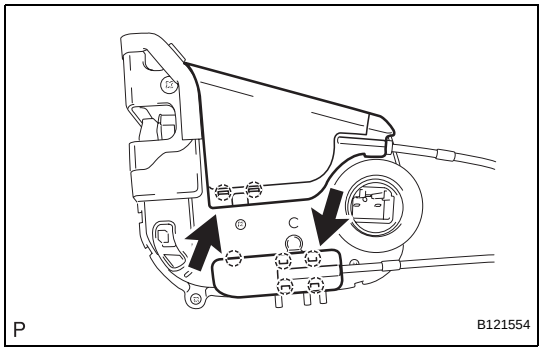
(b) w/o Power window:
(1) Remove the 3 bolts, then remove the rear door window regulator.
NOTICE:
Do not drop or damage the rear door window regulator when removing the bolts.
HINT:
Remove the window regulator through the service hole.



18. REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR (w/ Power Window)
(a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.

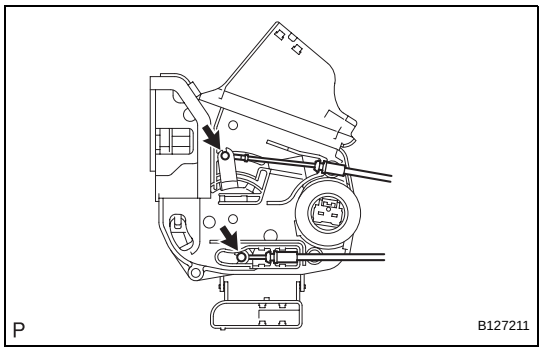


19. REMOVE REAR DOOR LOCK
(a) Using "Torx" socket wrench T30, remove the 3 screws.
(b) Move the rear door lock downward, remove the outside handle frame release plate and remove the rear door lock.
NOTICE:
Do not drop or damage the rear door lock when removing the screws.
HINT:
Remove the rear door lock through the service hole.

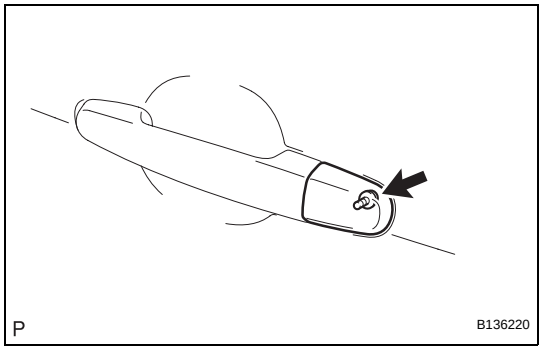


(c) Open the 2 covers.

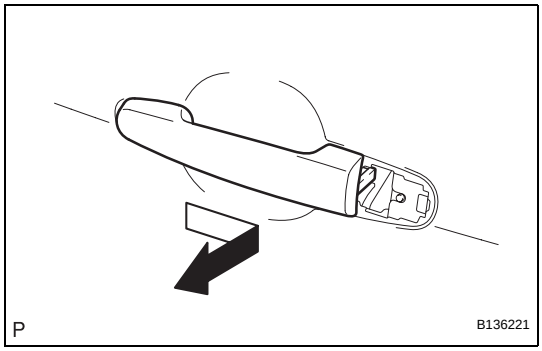
ED



(d) Disconnect the rear door lock remote control cable and rear door inside locking cable.
(e) Remove the door lock wire harness seal.

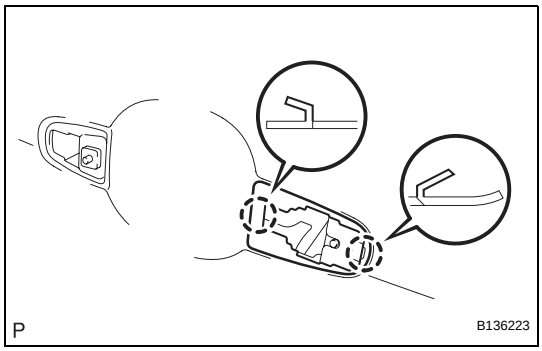


20. REMOVE REAR DOOR OUTSIDE HANDLE COVER
(a) Using "Torx" socket wrench T30, remove the screw and rear door outside handle cover.

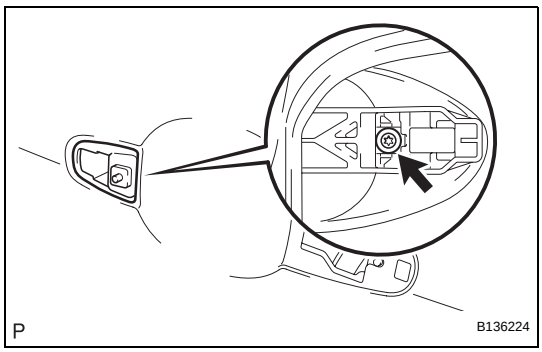


21. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY
(a) Remove the handle by sliding and pulling it in the direction indicated by the arrow mark in the illustration.

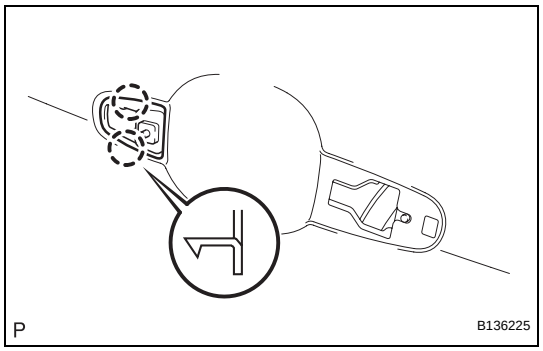
ED



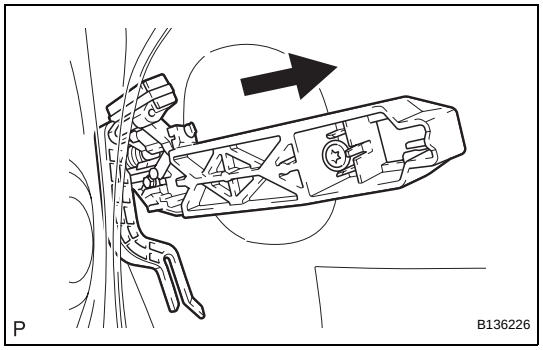
22. REMOVE REAR DOOR OUTSIDE HANDLE PAD REAR
(a) Disengage the 2 claws and remove the rear door outside handle pad rear.



23. REMOVE REAR DOOR OUTSIDE HANDLE PAD FRONT
(a) Using "Torx" socket wrench T30, loosen the screw.

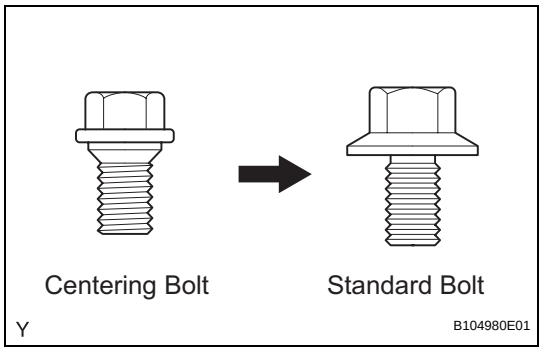


(b) Disengage the 2 claws and remove the rear door outside handle pad front.



24. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Slide the outside handle frame to remove it.



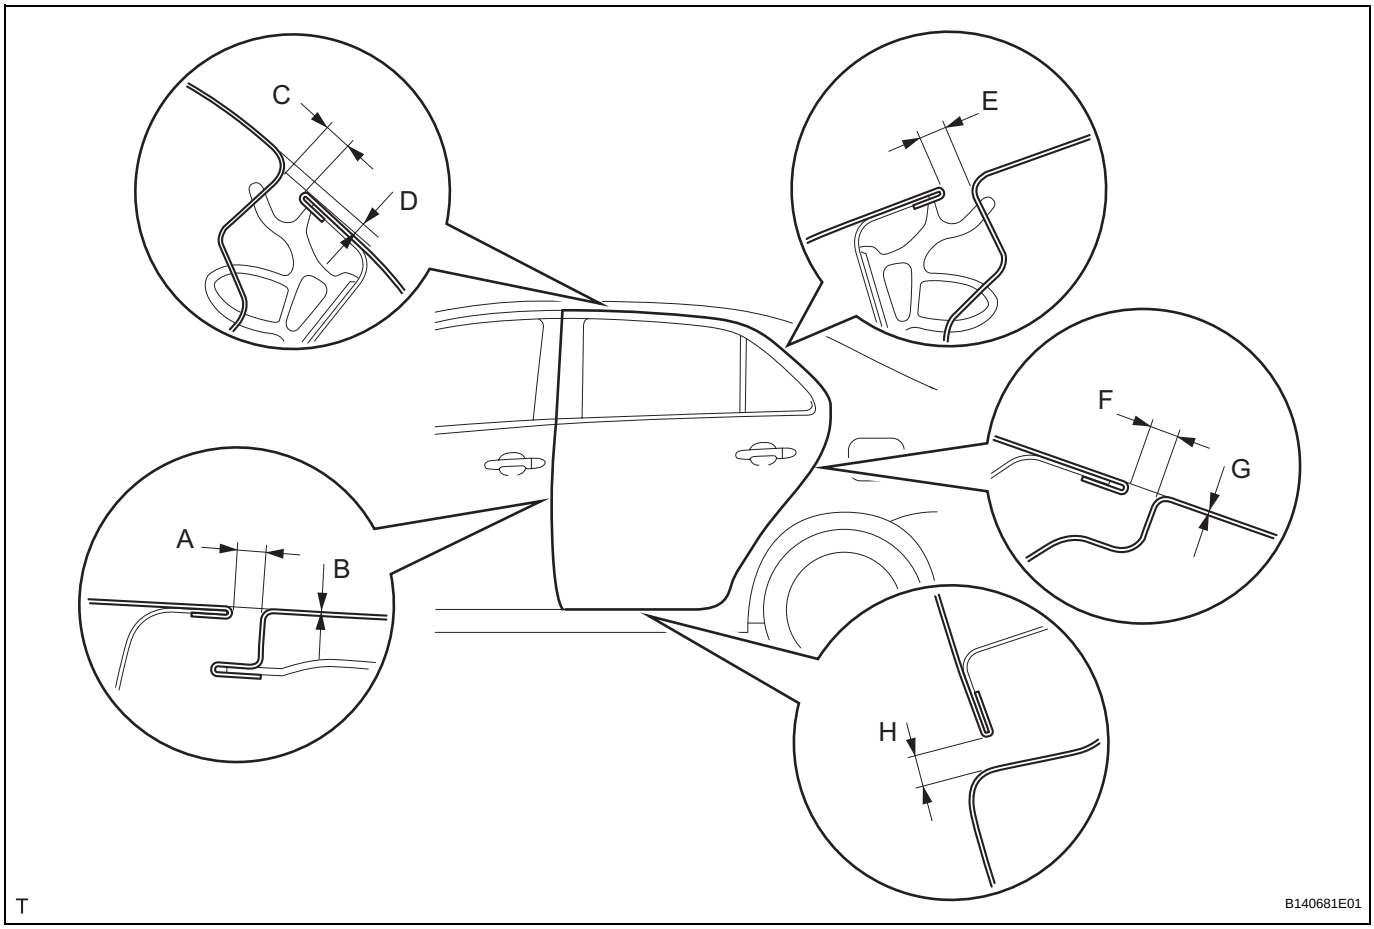
ADJUSTMENT

HINT:

- Before adjusting the door position on vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After the adjustment, inspect the SRS warning light, the side airbag system and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedure for the RH and LH sides.
- The procedures described below are for the LH side.
- Centering bolts are used to mount the door hinge onto the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute standard bolts (with washers) for the centering bolts when making adjustments.
- For bolts without torque specifications, check the standard bolt chart (see page SS-2).

1. INSPECT REAR DOOR

(a) Check that the clearance measurements are within the standard ranges.



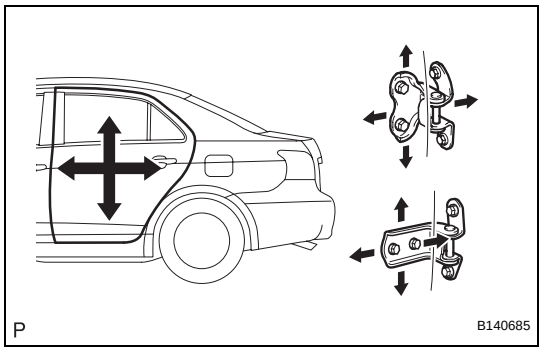
Standard

Area	Measurement	Area	Measurement
A	3.3 to 6.3 mm (0.130 to 0.248 in.)	E	2.5 to 5.5 mm (0.098 to 0.217 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	F	2.5 to 5.5 mm (0.098 to 0.217 in.)
C	3.2 to 6.2 mm (0.126 to 0.244 in.)	G	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
D	1.3 to 4.3 mm (0.051 to 0.169 in.)	H	4.2 to 7.2 mm (0.165 to 0.283 in.)

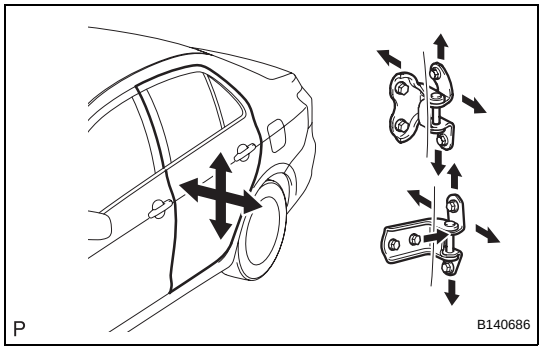
2. ADJUST REAR DOOR

(a) Disconnect the cable from the negative battery terminal.

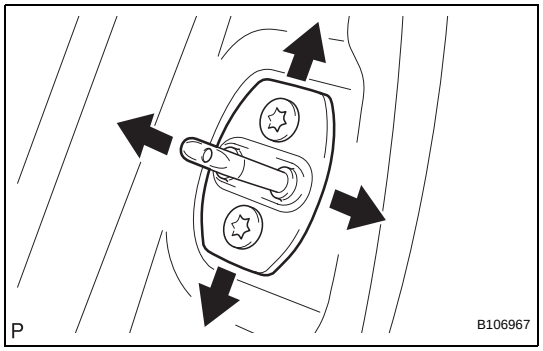
Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.



(b) Adjust the door horizontally and vertically by loosening the body side hinge bolts.
(c) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(d) Adjust the door horizontally and vertically by loosening the door side hinge bolts.
(e) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



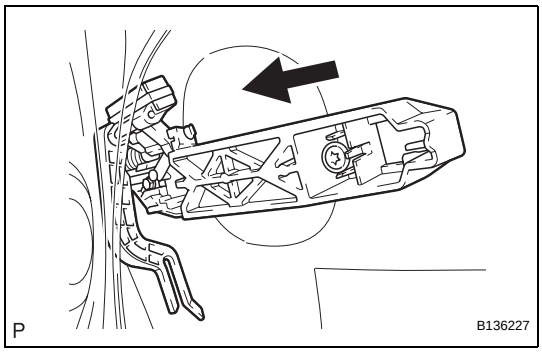
(f) Using "Torx" socket wrench T40, adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic-faced hammer.
(g) Using "Torx" socket wrench T40, tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)
(h) Connect the cable to the negative battery terminal.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

REASSEMBLY

1. INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

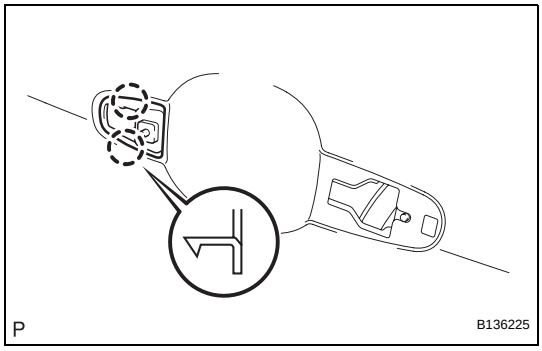
(a) Apply MP grease to the sliding areas of the rear door outside handle frame.

(b) Slide the outside handle frame to install it.

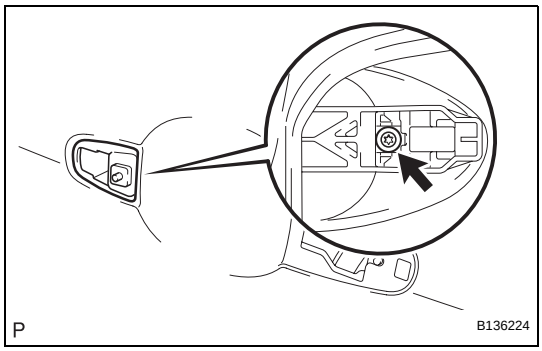


2. INSTALL REAR DOOR OUTSIDE HANDLE PAD FRONT

(a) Engage the 2 claws and install the rear door outside handle pad front.

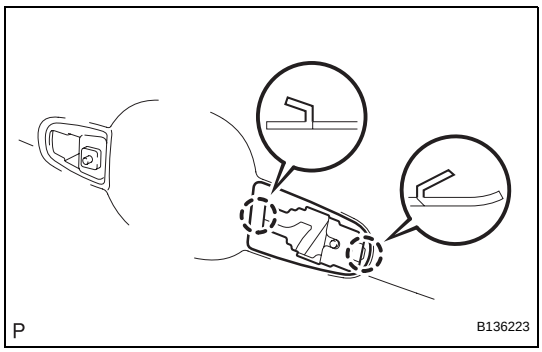


(b) Using "Torx" socket wrench T30, tighten the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

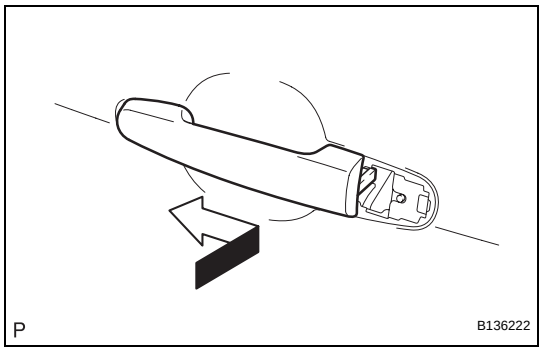


3. INSTALL REAR DOOR OUTSIDE HANDLE PAD REAR

(a) Engage the 2 claws and install the rear door outside handle pad rear.

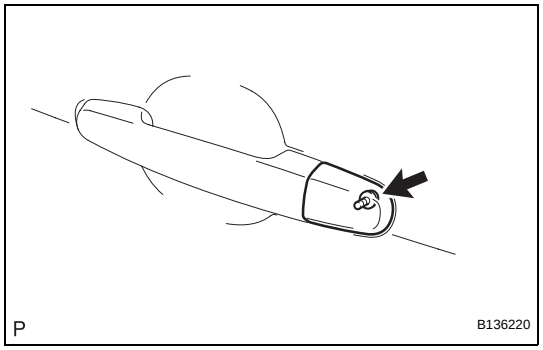


ED



4. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Pushing the rear door outside handle in the direction of the arrow mark shown in the illustration, install the rear door outside handle.



5. INSTALL REAR DOOR OUTSIDE HANDLE COVER

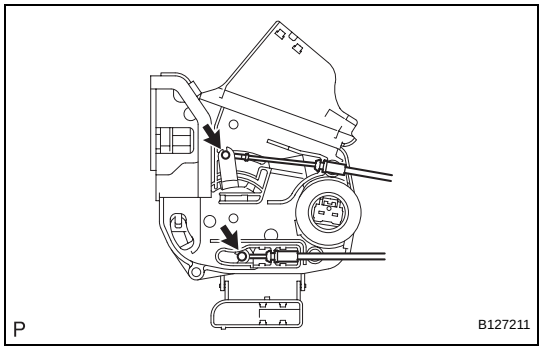
(a) Using "Torx" socket wrench T30, install the rear door outside handle cover with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

6. INSTALL REAR DOOR LOCK

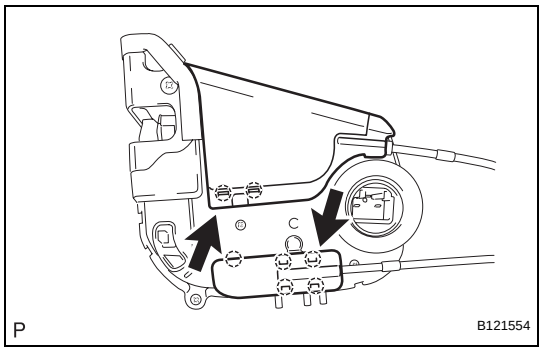
NOTICE:

- **If reusing a door lock that has been removed, replace the packing in the connecting part with new.**
- **Make sure that no grease or dirt adheres to the packing surface in the connecting part.**

(a) Apply MP grease to the sliding and rotating areas of the front door lock.



(b) Connect the rear door lock remote control cable and rear door inside locking cable.



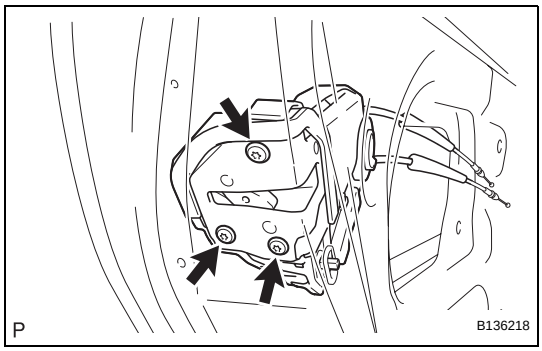
(c) Close the 2 covers.

(d) Insert the door lock into the outside handle frame release plate, then set it onto the door panel.

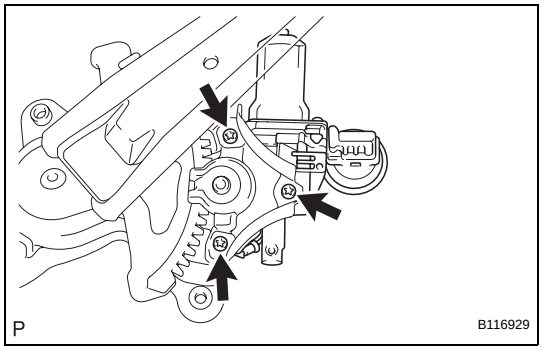
(e) Make sure that the outside handle frame link is securely engaged with the door lock.

(f) Apply adhesive to the threads of the screws.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

ED



(g) Using "Torx" socket wrench T30, install the rear door lock with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



7. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR (w/ Power Window)

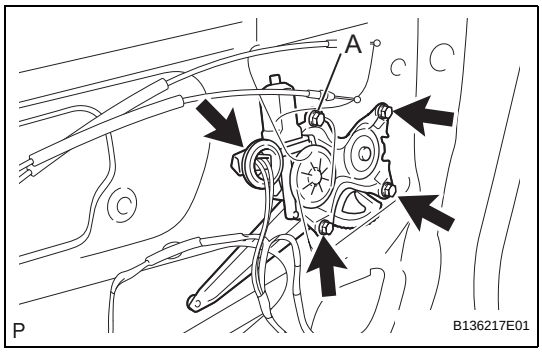
(a) Apply MP grease to the sliding and rotating areas of the regulator motor.

(b) Using "Torx" socket wrench T25, install the power window regulator motor with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

8. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) w/ Power window:

(1) Apply MP grease to the sliding and rotating areas of the rear door window regulator.
NOTICE:
Do not apply grease to the window regulator spring.



(2) Loosely screw bolt A onto the rear door window regulator.

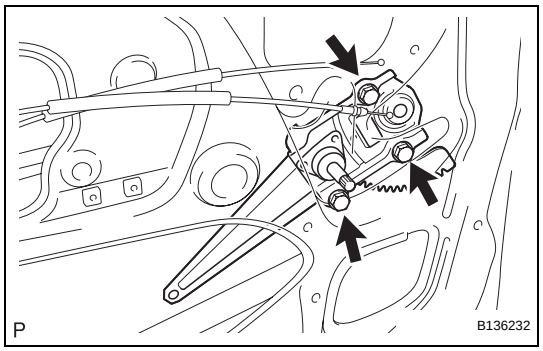
(3) Insert the rear door window regulator into the door panel. Use bolt A to hang the rear door window regulator on the door panel.
NOTICE:
Do not drop the window regulator as it may be damaged.

(4) Install the rear door window regulator with the 4 bolts, and tighten bolt A.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

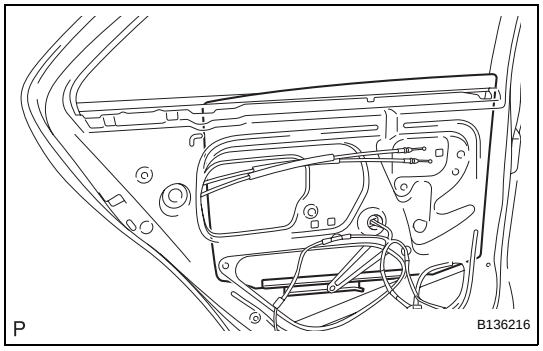
(5) Connect the connector.

(b) w/o Power window:

(1) Apply MP grease to the sliding and rotating areas of the rear door window regulator.
NOTICE:
Do not apply grease to the window regulator spring.



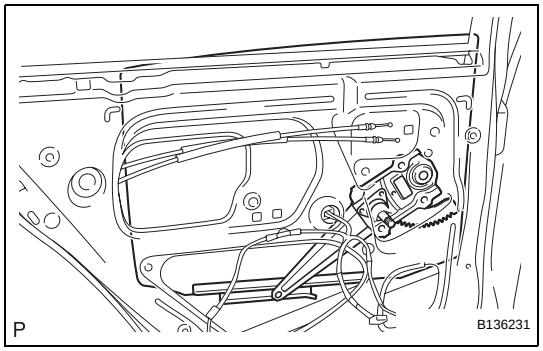
(2) Install the rear door window regulator with the 3 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



9. INSTALL REAR DOOR GLASS SUB-ASSEMBLY

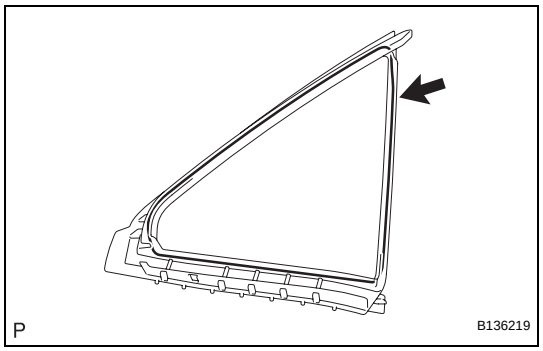
(a) w/ Power window:

(1) Install the rear door glass onto the rear door window regulator.



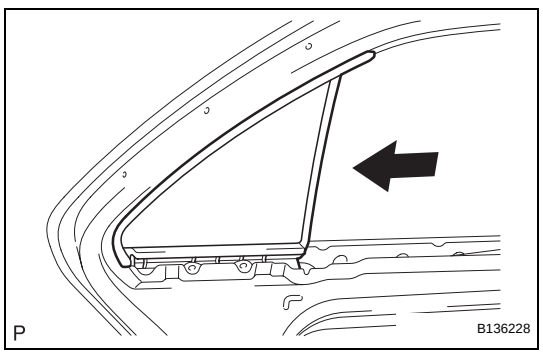
(b) w/o Power window:

(1) Install the rear door glass onto the rear door window regulator.

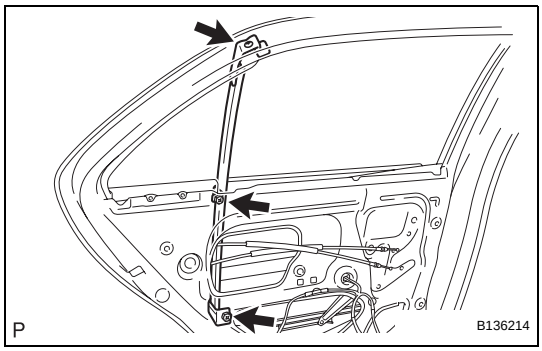


10. INSTALL REAR DOOR QUARTER WINDOW WEATHERSTRIP

(a) Install the rear door quarter window glass onto the rear door quarter window weatherstrip.

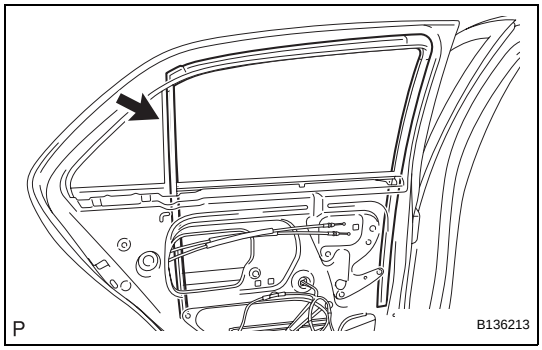


(b) Slide the rear door quarter window weatherstrip, in the direction indicated by the arrow in the illustration, to install it.



11. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

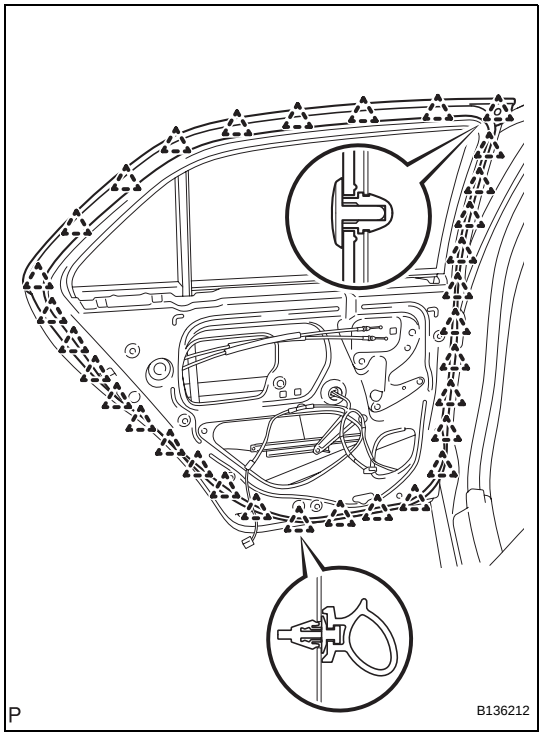
(a) Install the rear door window division bar with the 2 bolts and screw.
Torque: 6.2 N*m (63 kgf*cm, 54 in.*lbf)



12. INSTALL REAR DOOR GLASS RUN

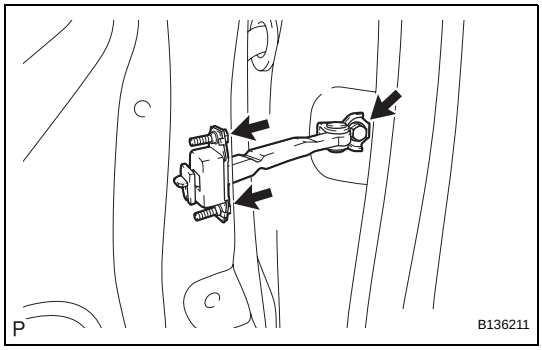
(a) Install the rear door glass run.

13. INSTALL REAR DOOR BELT MOULDING (See page ET-95)



14. INSTALL REAR DOOR WEATHERSTRIP

(a) Engage the 32 clips and install the rear door weatherstrip.



15. INSTALL REAR DOOR CHECK ASSEMBLY

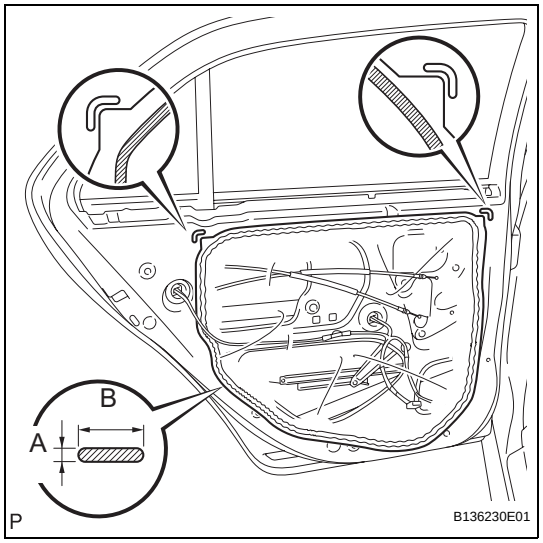
(a) Apply MP grease to the sliding areas of the door check.

(b) Install the rear door check onto the door panel with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Apply adhesive to the threads of the bolt.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

ED

(d) Install the rear door check onto the body panel with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

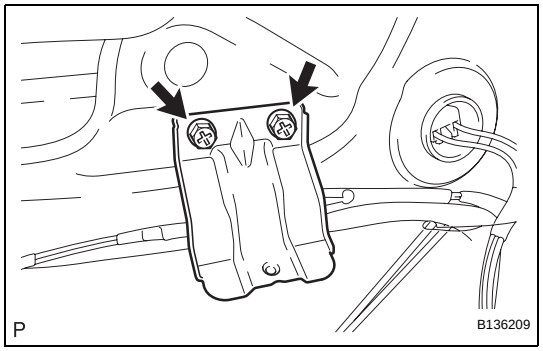


16. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the door panel, then install the rear door service hole cover as shown in the illustration.
Adhesive:
Part No. 08850-00065, Butyl Tape Set or the equivalent
Specification

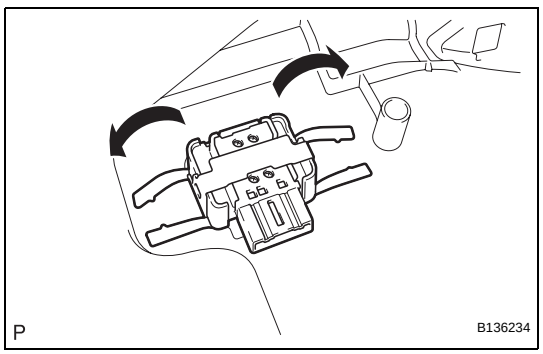
Area	Dimension
A	2.0 mm (0.079 in,) or more
B	6.0 mm (0.236 in.) or more

HINT:
- When installing the service hole cover, pull the links and connectors out through the service hole.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the quality of the seal.



17. INSTALL REAR DOOR TRIM BRACKET

(a) Install the rear door trim bracket with the 2 screws.

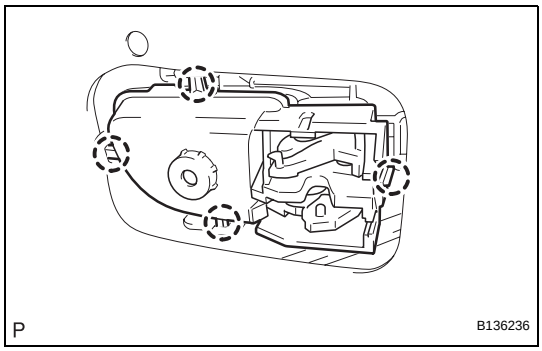


18. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR (w/ Power Window)

(a) Engage the set plate and install the power window regulator switch.

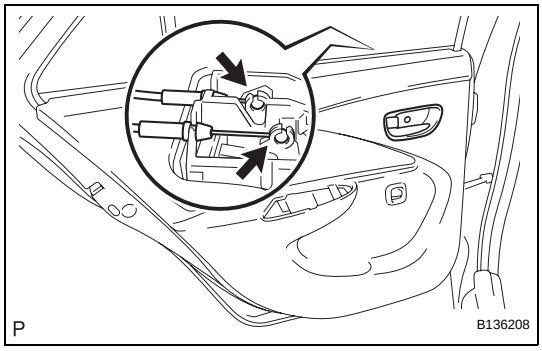
19. INSTALL REAR DOOR GLASS WEATHERSTRIP INNER

(a) Install the rear door glass weatherstrip inner onto the rear door trim board.



20. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

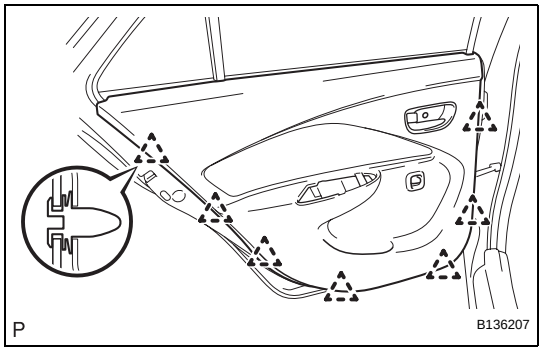
(a) Engage the 4 claws and install the rear door inside handle.



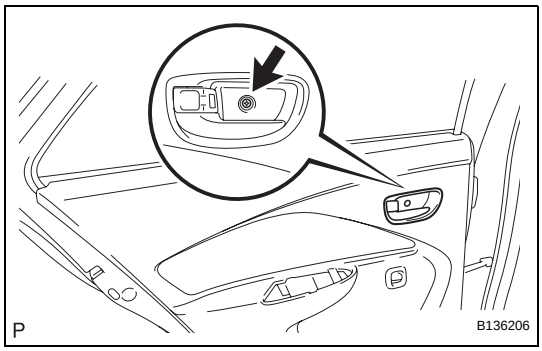
21. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the rear door lock remote control cable and rear door inside locking cable.

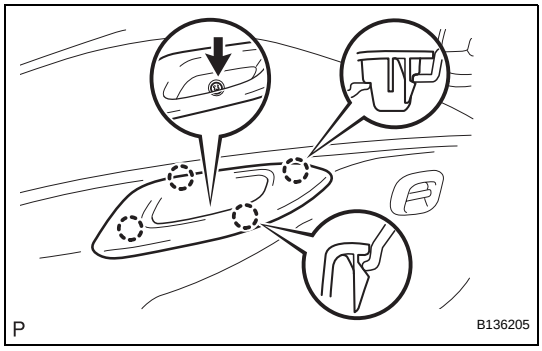
(b) w/ Power window:
Connect the connector.



(c) Engage the 7 clips and install the rear door trim board.



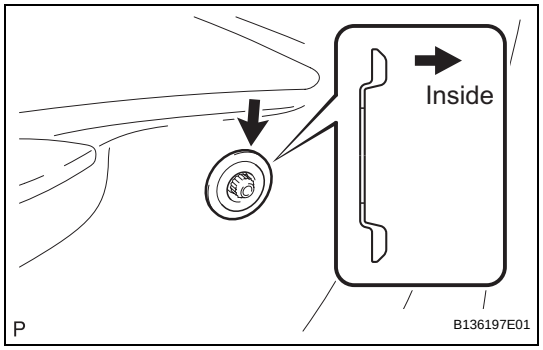
(d) Tighten the screw.



22. INSTALL REAR DOOR ARMREST BASE UPPER PANEL

(a) Engage the 4 claws and install the rear door armrest base upper panel.

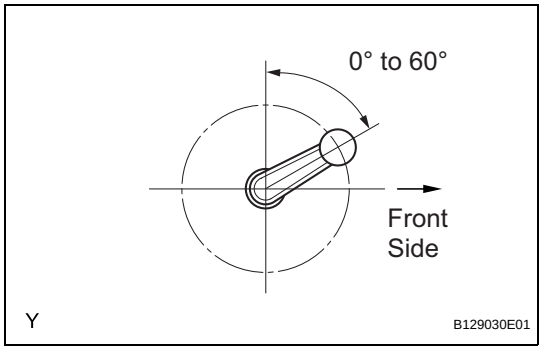
ED



23. INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Install the window regulator handle plate.

(b) Open all the windows.



(c) Install the rear door window regulator handle with the clip at the angle shown in the illustration.

24. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

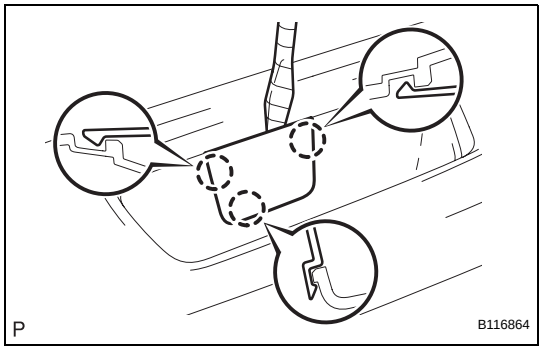
DISASSEMBLY

HINT:
- Use the same procedure for both the RH and LH side.
- The procedure described below is for the LH side.

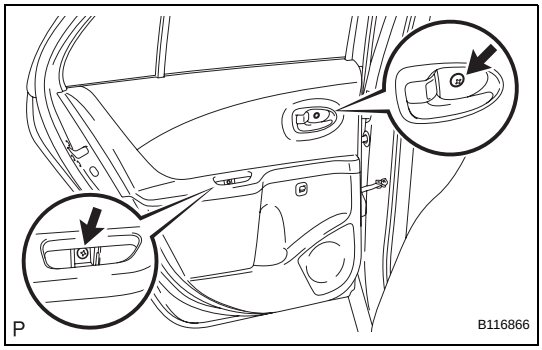
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

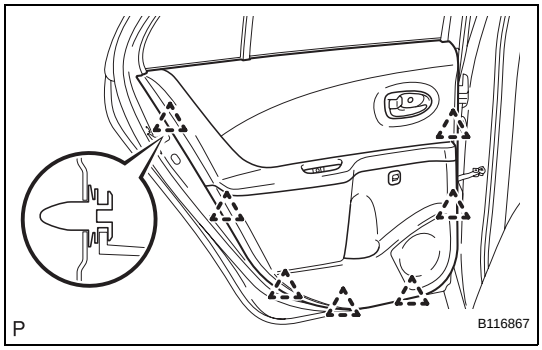
(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 3 claws and remove the rear door armrest plug.



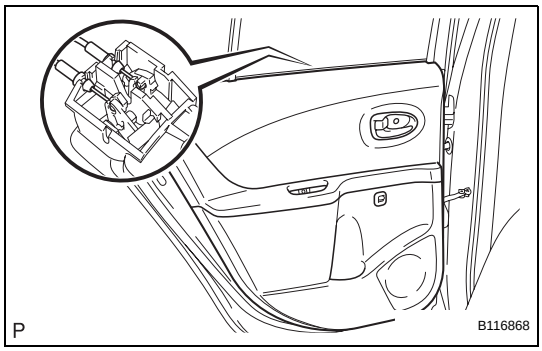
(b) Remove the 2 screws.



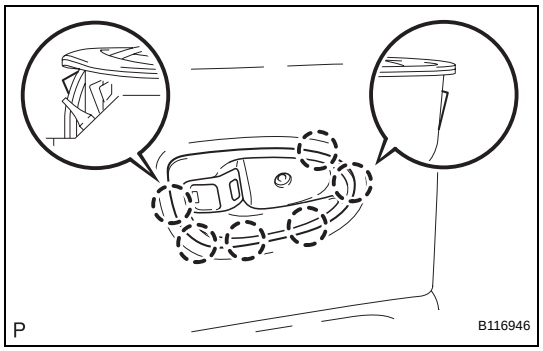
(c) Disengage the 7 clips.
(d) Disconnect the connector.



(e) Disconnect the rear door lock remote control cable and rear door inside locking cable and remove the rear door trim board.



ED

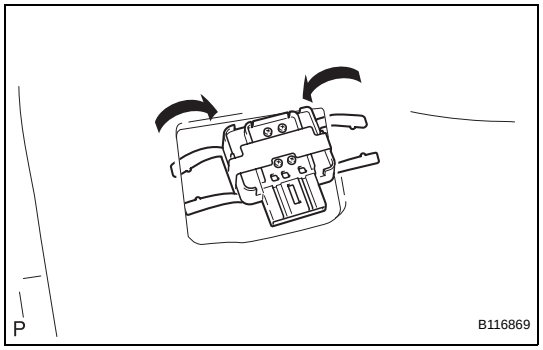


3. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the rear door inside handle.

4. REMOVE REAR DOOR GLASS WEATHERSTRIP INNER

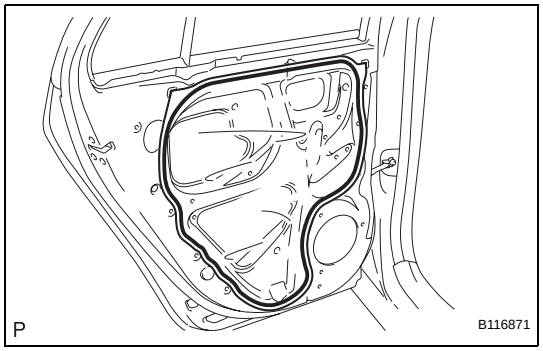
(a) Remove the rear door glass weatherstrip inner from the rear door trim board.



5. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY REAR

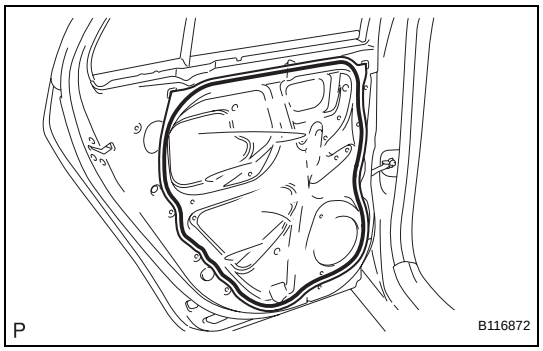
(a) Disengage the set plate and remove the power window regulator switch.

6. REMOVE REAR SPEAKER ASSEMBLY (w/ Rear Speaker) (See page AV-178)

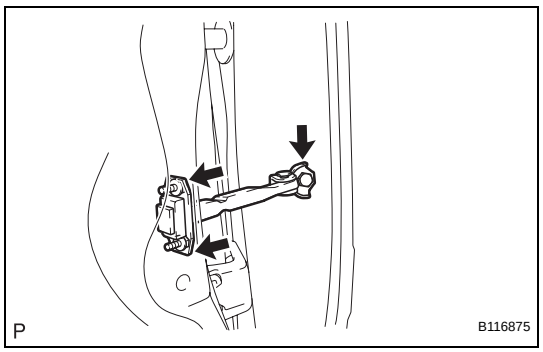


7. REMOVE REAR DOOR SERVICE HOLE COVER

(a) w/ Rear speaker:
Disconnect the connectors and clamps, then remove the rear door service hole cover.
NOTICE:
Remove any tape remaining on the door side.



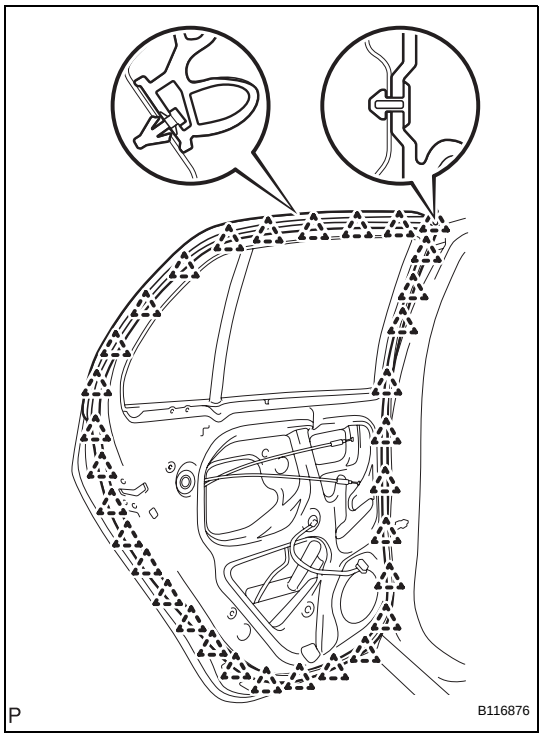
(b) w/o Rear speaker:
Disconnect the connectors and clamps, then remove the rear door service hole cover.
NOTICE:
Remove any tape remaining on the door side.



8. REMOVE REAR DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts, then remove the rear door check.
NOTICE:
Do not drop or damage the door check when removing bolts.
HINT:
Remove the door check through the service hole.

ED



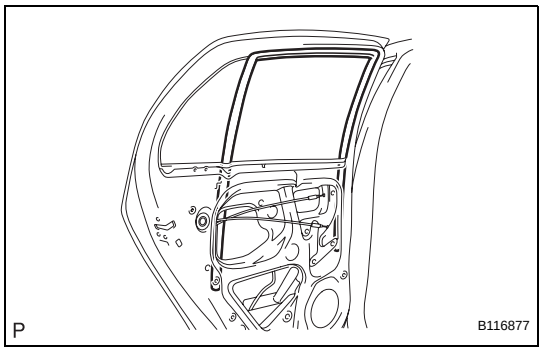
9. REMOVE REAR DOOR WEATHERSTRIP

(a) Disengage the 32 clips and remove the rear door weatherstrip.

NOTICE:

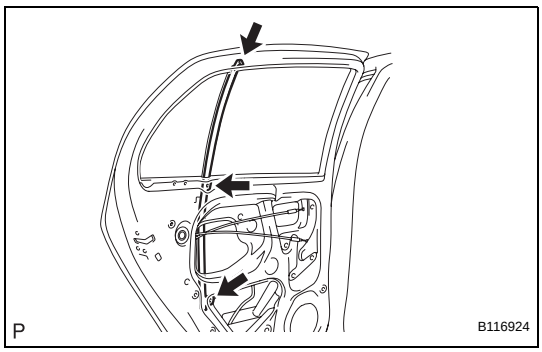
Remove any tape remaining on the door side.

10. REMOVE REAR DOOR BELT MOULDING (See page ET-97)



11. REMOVE REAR DOOR GLASS RUN

(a) Remove the rear door glass run.

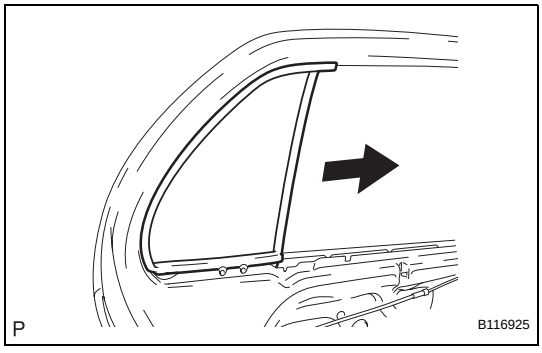


12. REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

(a) Remove the 2 bolts and screw and rear door window division bar.

NOTICE:

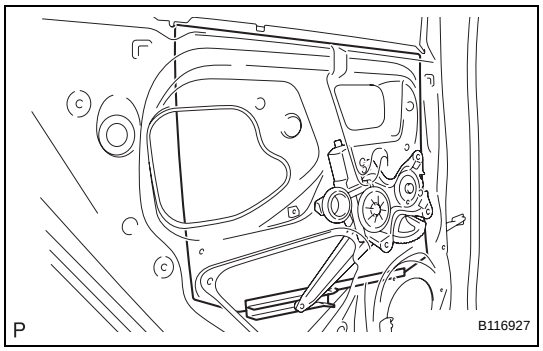
Do not drop or damage the rear door window division bar when removing the bolts and screw.



13. REMOVE REAR DOOR QUARTER WINDOW WEATHERSTRIP

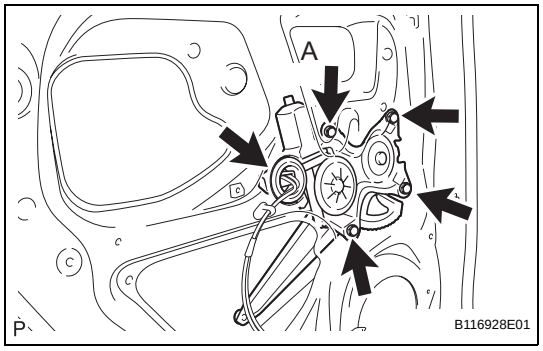
(a) Slide the rear door quarter window weatherstrip, in the direction indicated by the arrow in the illustration, to remove it.

(b) Remove the rear door quarter window glass from the rear door quarter window weatherstrip.



14. REMOVE REAR DOOR GLASS SUB-ASSEMBLY

(a) Remove the rear door glass from the rear door window regulator.



15. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Disconnect the connector.

(b) Loosen bolt A.

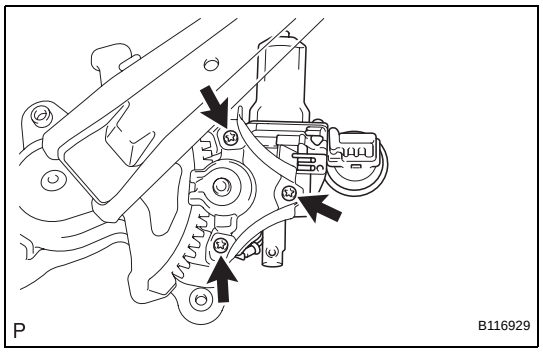
(c) Remove the 3 bolts, then remove the rear door window regulator.

NOTICE:

Do not drop or damage the window regulator when removing the bolts.

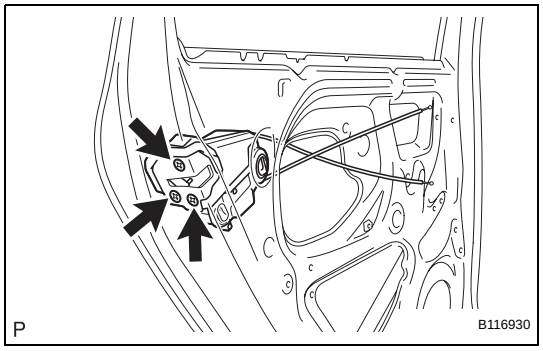
HINT:

Remove the window regulator through the service hole.



16. REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY REAR

(a) Using "Torx" socket wrench T25, remove the 3 screws and power window regulator motor.



17. REMOVE REAR DOOR LOCK ASSEMBLY

(a) Using "Torx" socket wrench T30, remove the 3 screws.

(b) Move the rear door lock downward, remove the outside handle frame release plate and remove the rear door lock.

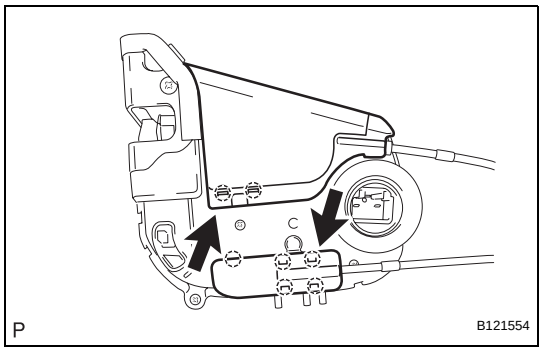
NOTICE:

Do not drop or damage the door lock when removing the screws.

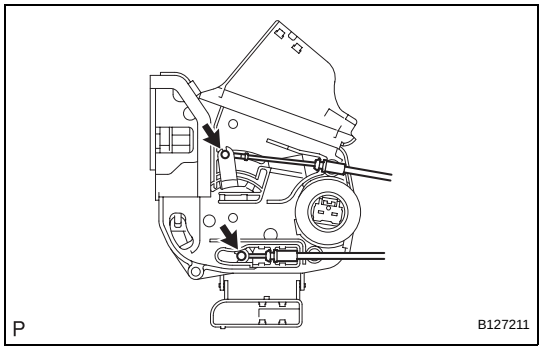
HINT:

Remove the rear door lock through the service hole.

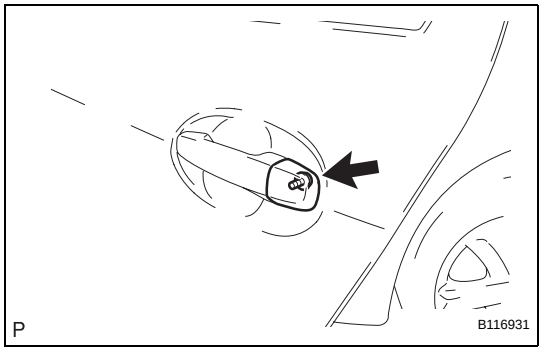
ED



(c) Disengage the 7 claws and open the 2 covers.

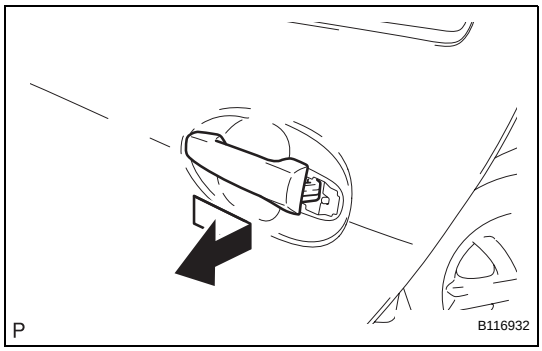


(d) Disconnect the rear door lock remote control cable and rear door inside locking cable.
(e) Remove the door lock wire harness seal.



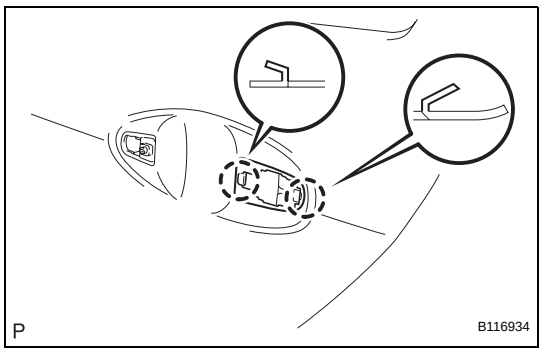
18. REMOVE REAR DOOR OUTSIDE HANDLE COVER

(a) Using "Torx" socket wrench T30, remove the screw and rear door outside handle cover.



19. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY

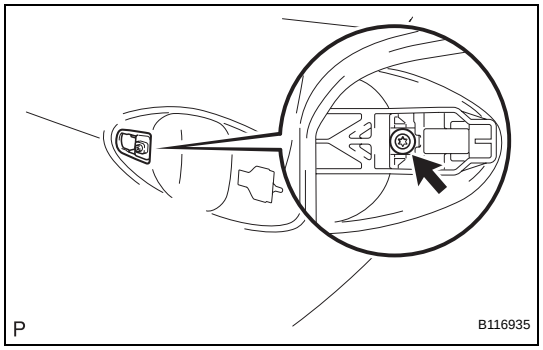
(a) Remove the handle by sliding and pulling it in the direction indicated by the arrow mark in the illustration.



20. REMOVE REAR DOOR OUTSIDE HANDLE PAD REAR

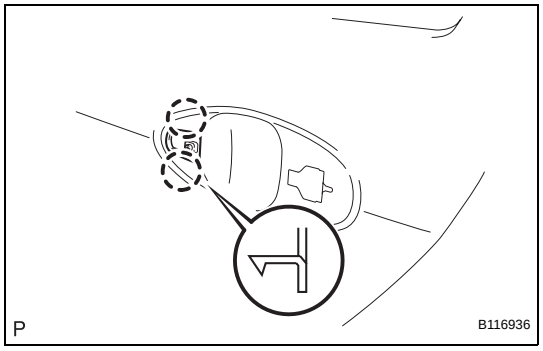
(a) Disengage the 2 claws and remove the rear door outside handle pad rear.

ED

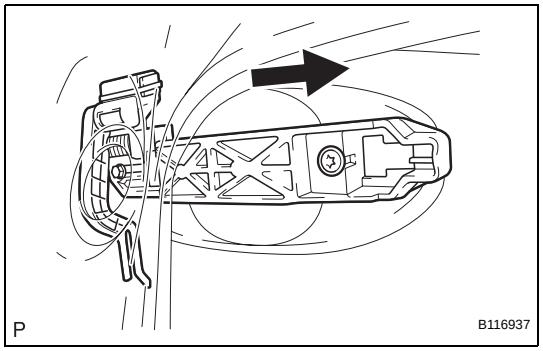


21. REMOVE REAR DOOR OUTSIDE HANDLE PAD FRONT

(a) Using "Torx" socket wrench T30, loosen the screw.

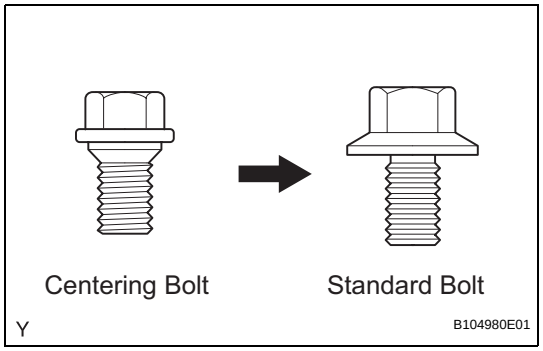


(b) Disengage the 2 claws and remove the rear door outside handle pad front.



22. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Slide the outside handle frame to remove it.



ADJUSTMENT

HINT:
