12. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
    Hatchback: (See page WW-18)
    Sedan: (See page WW-10)
13. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
14. **REMOVE FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-19)
    Sedan: (See page WW-10)
15. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-122)**
16. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**
17. **REMOVE OUTER COWL TOP PANEL**
    Hatchback: (See page EM-123)
    Sedan: (See page EM-123)
18. **REMOVE BATTERY (See page EM-122)**

19. **REMOVE BATTERY TRAY**

20. **REMOVE BATTERY CARRIER (See page EM-125)**

21. **REMOVE NO. 2 CYLINDER HEAD COVER (See page IG-9)**

22. **REMOVE AIR CLEANER ASSEMBLY (See page EM-124)**

23. **REMOVE AIR CLEANER BRACKET (See page EM-125)**

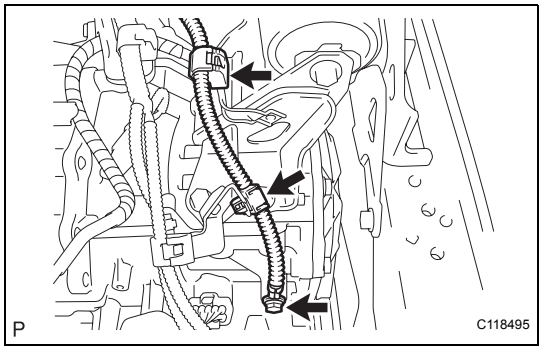
24. **POSITION WHEELS FACING STRAIGHT AHEAD**

25. **REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-32)**

26. **SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-74)**

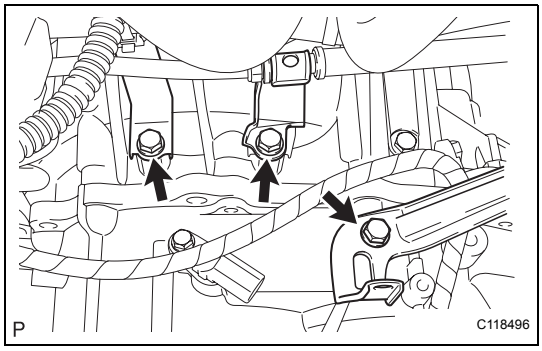
27. **SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY (See page PS-75)**

28. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-106)**



29. **SEPARATE NO. 3 ENGINE WIRE**
    (a) Remove the bolt and separate No. 3 engine wire from the automatic transaxle.
    (b) Separate the 2 clamps from the engine mount insulator.

30. **DISCONNECT CONNECTORS**
    (a) Separate the park neutral position switch connector and separate the clamp from the engine mount insulator LH.
    (b) Separate the transmission wire connector and separate the clamp from the engine mount insulator.
    (c) Separate the transmission revolution sensor connector.
    (d) Separate the vehicle speed sensor connector.



31. **DISCONNECT WIRE HARNESS**
    (a) Remove the 3 bolts and separate the 3 wire harness clamp brackets from the automatic transaxle.

32. **REMOVE STARTER ASSEMBLY (See page ST-9)**

33. **REMOVE FRONT AXLE HUB NUT LH (See page DS-3)**

34. **REMOVE FRONT AXLE HUB NUT RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.

35. **SEPARATE FRONT SPEED SENSOR LH (w/ ABS) (See page DS-3)**

36. **SEPARATE FRONT SPEED SENSOR RH (w/ ABS)**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.

AX

37. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)**

38. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
The separation procedure for the RH side is the same as that for the LH side.

39. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)**

40. **SEPARATE TIE ROD END SUB-ASSEMBLY RH**
HINT:
The separation procedure for the RH side is the same as that for the LH side.

41. **SEPARATE FRONT LOWER SUSPENSION ARM LH (See page DS-4)**

42. **SEPARATE FRONT LOWER SUSPENSION ARM RH**
HINT:
The separation procedure for the RH side is the same as that for the LH side.

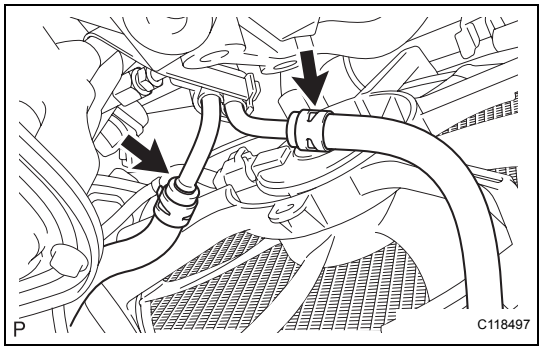
43. **REMOVE TRANSMISSION CASE PROTECTOR (w/o ABS) (See page AX-146)**

44. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)**

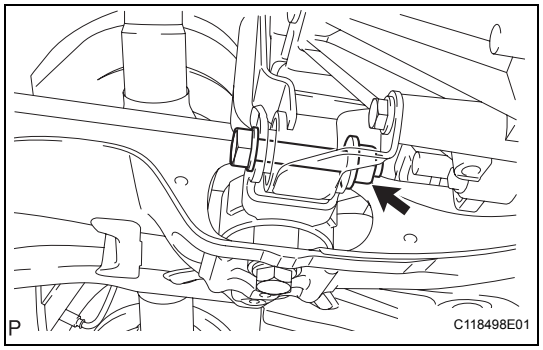
45. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)**

46. **SUSPEND ENGINE ASSEMBLY (See page PS-75)**

47. **SEPARATE INLET OIL COOLER HOSE**
(a) Separate the inlet oil cooler hose from inlet No. 1 oil cooler tube.



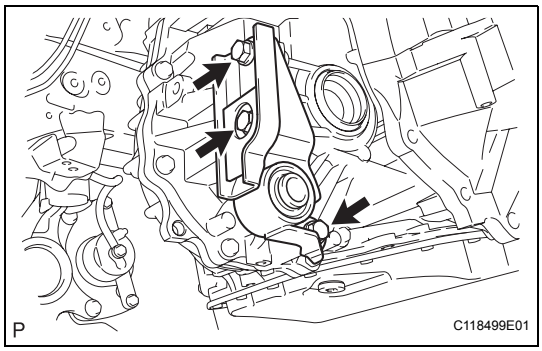
48. **SEPARATE OUTLET OIL COOLER HOSE**
(a) Separate the outlet oil cooler hose from outlet No. 1 oil cooler tube.



49. **SEPARATE ENGINE MOVING CONTROL ROD**
(a) Remove the bolt and nut and separate the engine moving control rod from the bracket.

50. **REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-76)**

AX

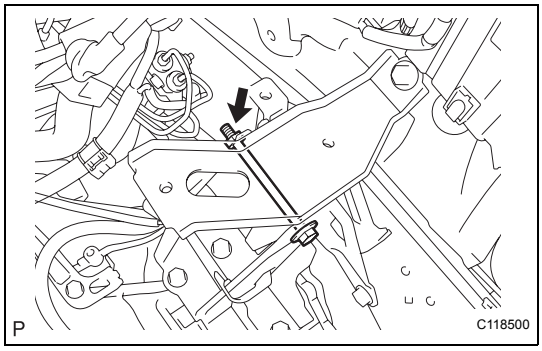


51. REMOVE ENGINE MOVING CONTROL ROD BRACKET

(a) Remove the 3 bolts and remove the engine moving control rod bracket.

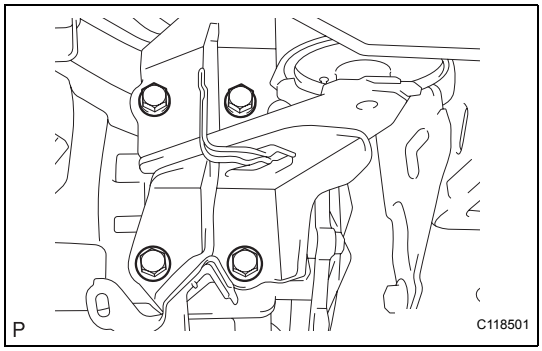
52. SUPPORT AUTOMATIC TRANSAXLE ASSEMBLY

(a) Support the automatic transmission with the transmission jack.



53. SEPARATE ENGINE MOUNTING INSULATOR LH

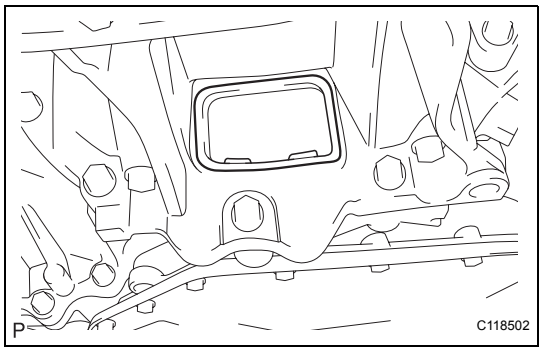
(a) Remove the bolt and nut and separate the engine mounting insulator LH from the bracket.



54. REMOVE ENGINE MOUNTING BRACKET LH

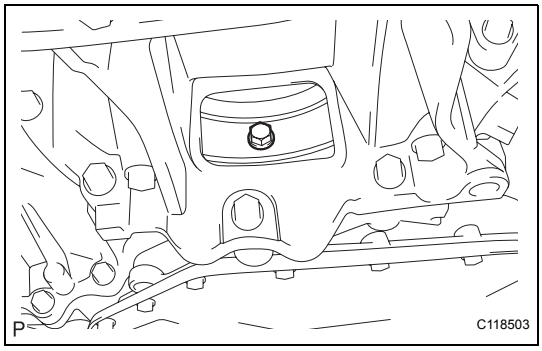
(a) Remove the 4 bolts and remove the engine mounting bracket LH from the automatic transaxle.

AX

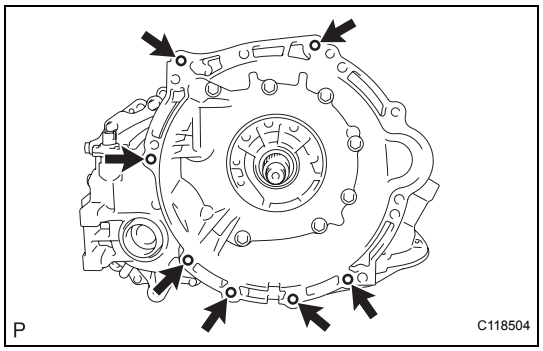


55. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

(a) Remove the flywheel housing under cover.



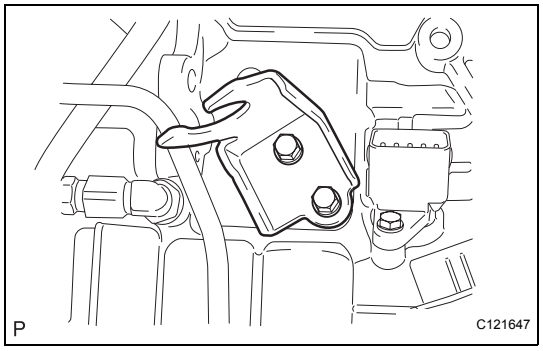
(b) Remove the 6 torque converter set bolts while holding the crankshaft pulley bolt with a wrench.



(c) Remove the 7 bolts and remove the automatic transmission from the engine.

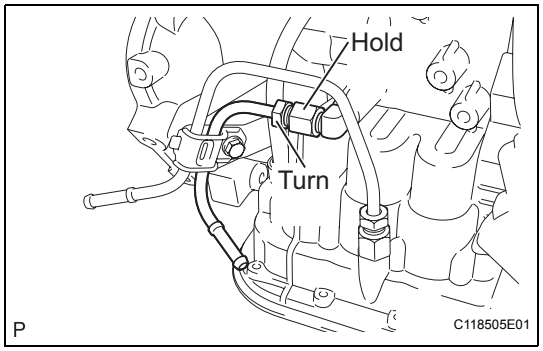
56. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Remove the torque converter clutch from the automatic transaxle.



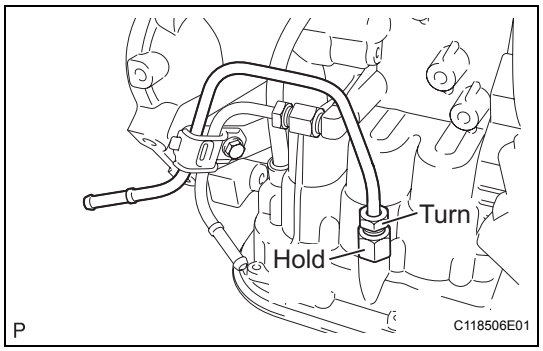
57. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and remove No. 1 transmission control cable bracket from the automatic transaxle.



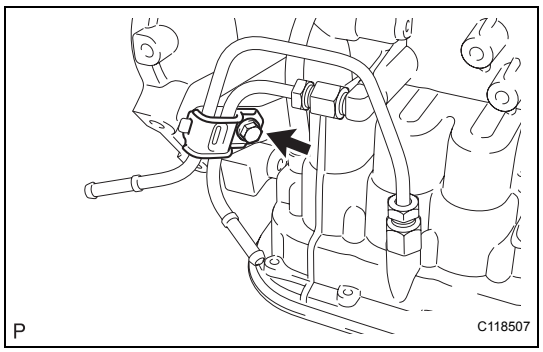
58. SEPARATE INLET NO. 1 OIL COOLER TUBE

(a) Using SST, remove the inlet oil cooler tube while holding the oil cooler tube union with a spanner.
SST 09023-12701



59. SEPARATE OUTLET NO. 1 OIL COOLER TUBE

(a) Using SST, remove the outlet oil cooler tube while holding the oil cooler tube union with a spanner.
SST 09023-12701



60. REMOVE NO. 2 OIL COOLER TUBE CLAMP

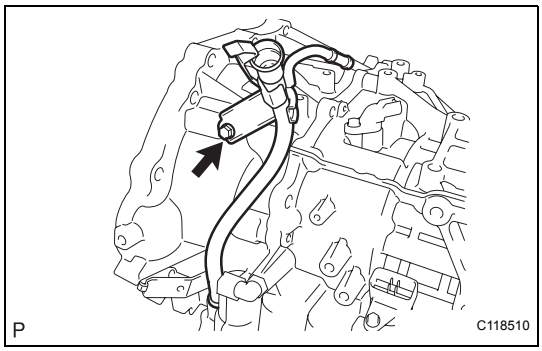
(a) Remove the bolt and remove No. 2 oil cooler tube clamp from the oil filler tube.

(b) Remove the inlet oil cooler tube and the outlet oil cooler tube from the automatic transaxle.

61. REMOVE TRANSMISSION OIL LEVEL GAUGE SUB-ASSEMBLY

(a) Remove the oil level gauge from the oil filler tube.

AX



62. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

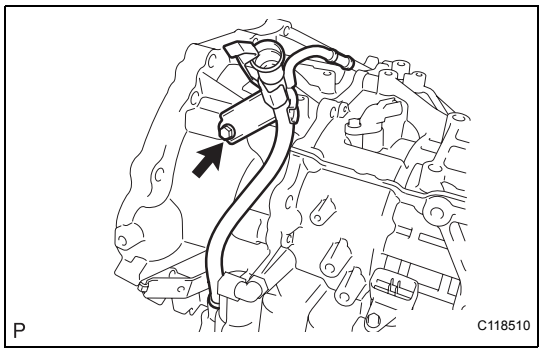
(a) Remove the bolt and remove the oil filler tube.
(b) Remove the O-ring from the oil filler tube.

INSTALLATION

1. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Apply ATF to a new O-ring, and install it onto the oil filler tube.

(b) Install the oil filler tube onto the automatic transaxle with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



2. INSTALL TRANSMISSION OIL LEVEL GAUGE SUB-ASSEMBLY

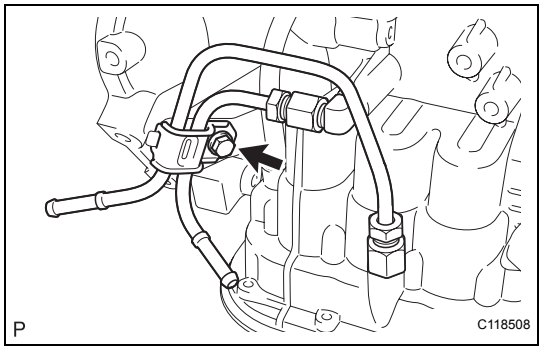
(a) Install the oil level gauge into the oil filler tube.

3. INSTALL NO. 2 OIL COOLER TUBE CLAMP

(a) Provisionally install outlet No. 1 oil cooler tube into the oil cooler tube union.

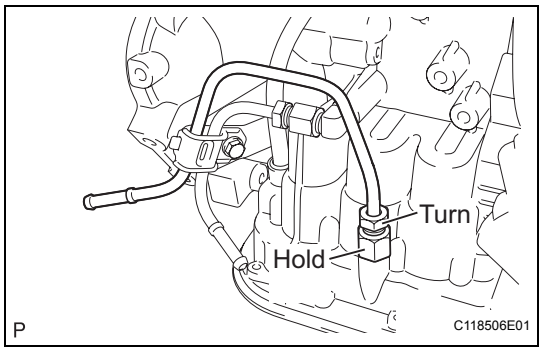
(b) Provisionally install inlet No. 1 oil cooler tube into the oil cooler tube union.

(c) Provisionally install No. 2 oil cooler tube clamp onto the oil level gauge with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



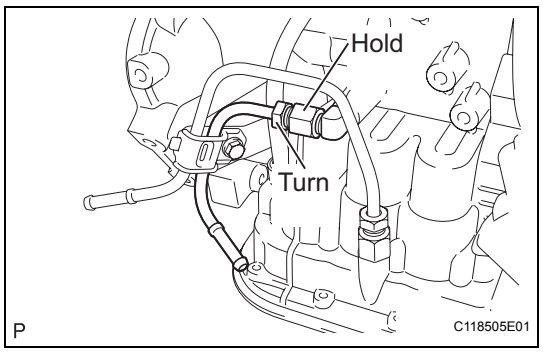
4. INSTALL OUTLET NO. 1 OIL COOLER TUBE

(a) Using SST, install outlet No. 1 oil cooler tube while holding the oil cooler tube union with a spanner.
SST 09023-12701
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)

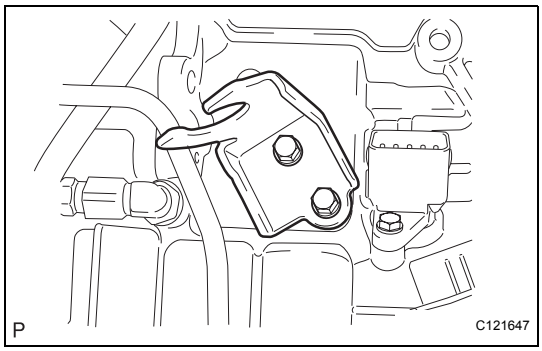


5. INSTALL INLET NO. 1 OIL COOLER TUBE

(a) Using SST, install inlet No. 1 oil cooler tube while holding the oil cooler tube union with a spanner.
SST 09023-12701
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)



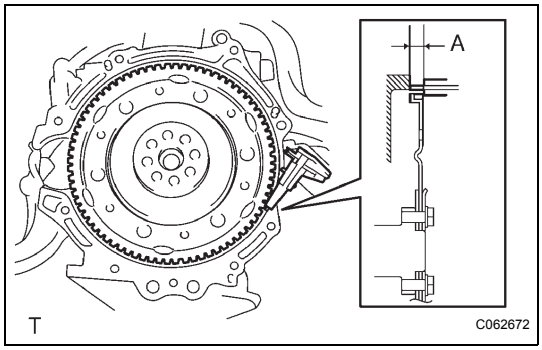
AX



6. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET

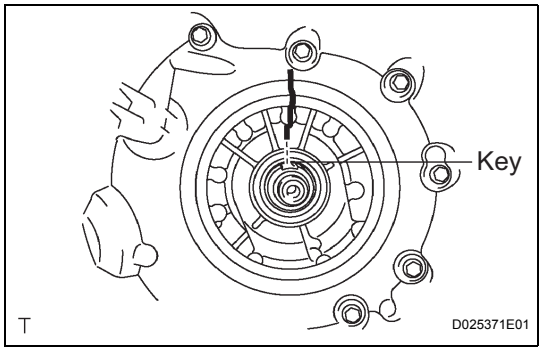
(a) Install No. 1 transmission control cable bracket onto the automatic transaxle with the 2 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

7. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY (See page AX-171)

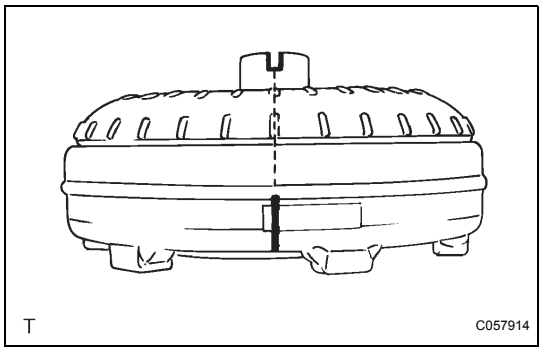


8. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

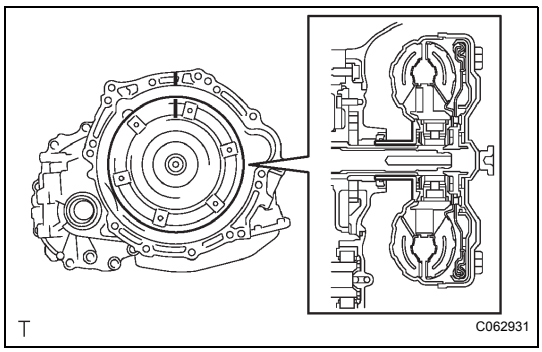
(a) Using vernier calipers, measure dimension A between the transaxle fitting part of the engine and the converter fitting part of the drive plate.



(b) Set the key at the top of the front oil pump drive gear and put a mark on the housing.

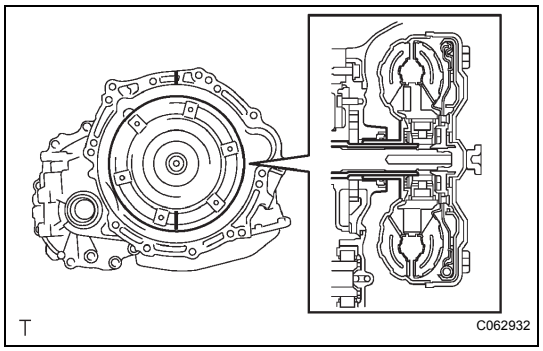


(c) Put a mark on the torque converter so that its groove is clearly indicated.

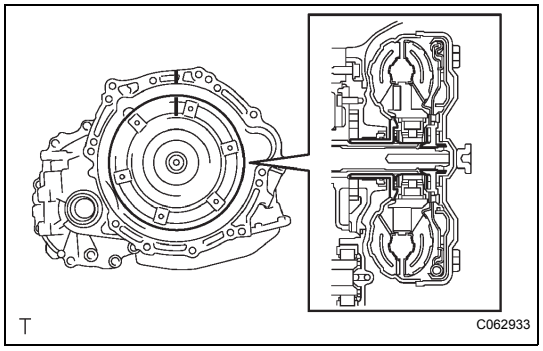


(d) Align the mark on the case with the one on the converter and fit the spline of the input shaft to the spline of the turbine runner.

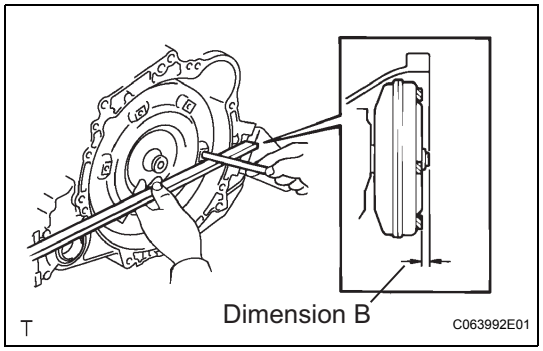
AX



(e) Rotating the converter, fit the spline of the stator shaft with that of the stator.
HINT:
Rotate it approximately 180 degrees.



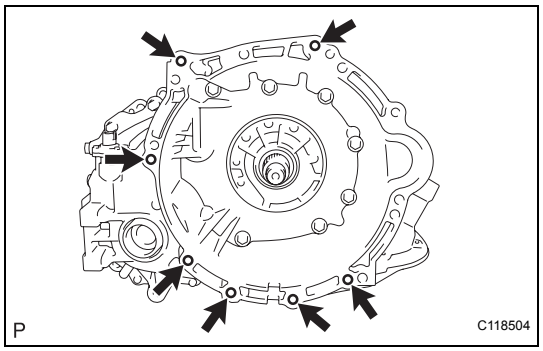
(f) Rotating the converter, align the mark on the case with the one on the converter again and fit the key of the oil pump drive gear into the keyway of the converter.
NOTICE:
Do not push the converter excessively when rotating it.



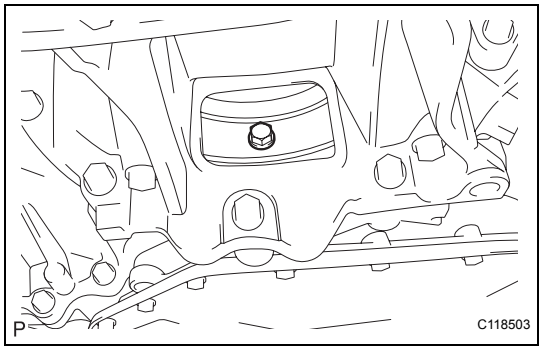
(g) Using vernier calipers and a straight edge, measure dimension B shown in the illustration and check that dimension B is greater than dimension A, which was measured in step (a).
Standard:
A + 1 mm (0.04 in.) or more
NOTICE:
Subtract the thickness of the straight edge from the measured value to gain dimension B.

AX

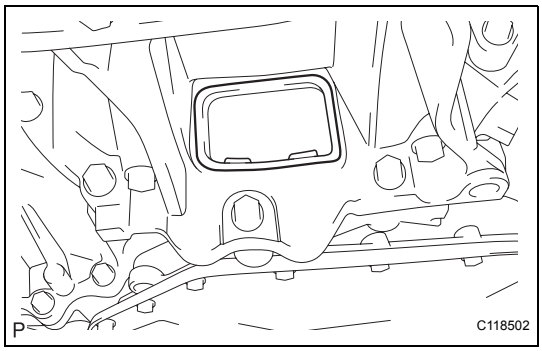
9. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY



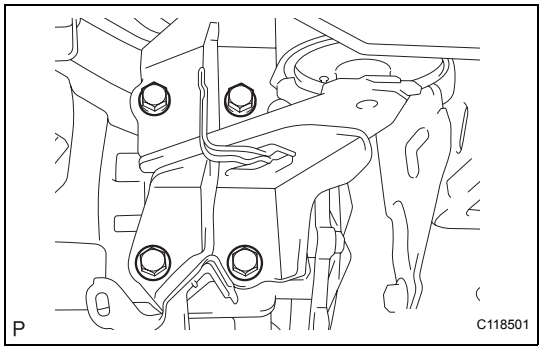
(a) Install the automatic transaxle onto the engine with the 7 bolts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



(b) Install the 6 torque converter set bolts while holding the crankshaft pulley bolt with a wrench.
Torque: 27 N*m (280 kgf*cm, 20 ft.*lbf)

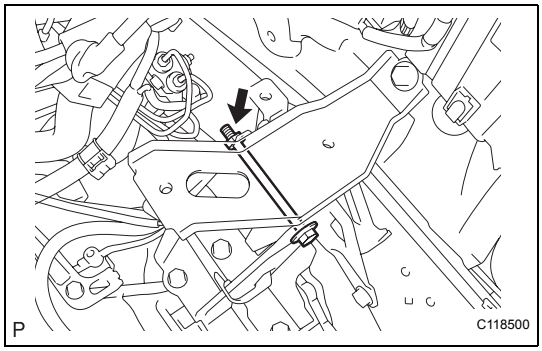


(c) Install the flywheel housing under cover.



10. INSTALL ENGINE MOUNTING BRACKET LH

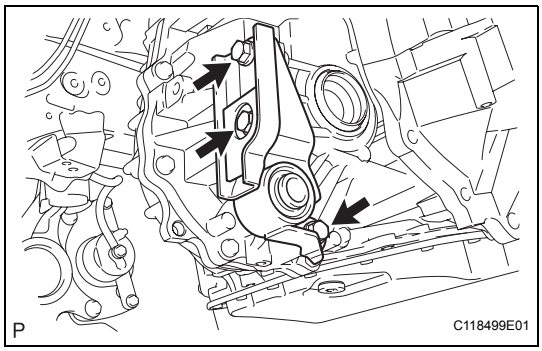
(a) Install the engine mounting bracket LH onto the automatic transaxle with the 4 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



11. INSTALL ENGINE MOUNTING INSULATOR LH

(a) Install the engine mounting insulator LH and the engine mounting bracket LH with the bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)

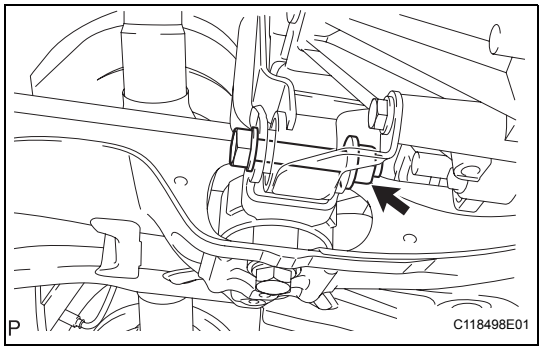
AX



12. INSTALL ENGINE MOVING CONTROL ROD BRACKET

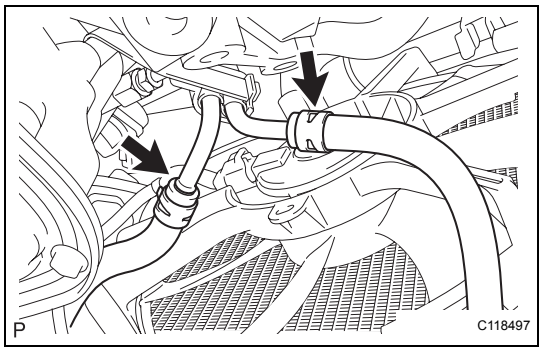
(a) Install the engine moving control bracket onto the automatic transaxle with the 3 bolts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

13. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-77)

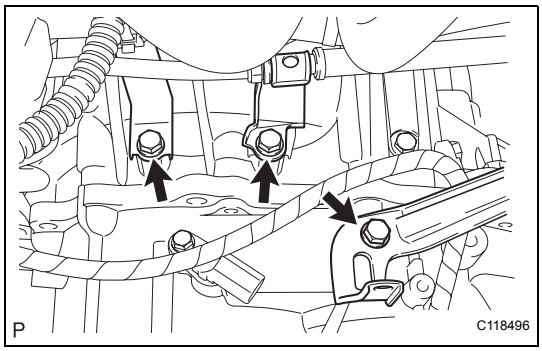


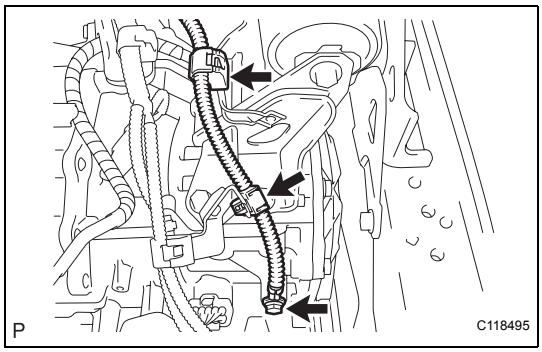
14. INSTALL ENGINE MOVING CONTROL ROD

(a) Install the engine moving control rod and the engine moving control bracket with the bolt and nut.
Torque: 120 N*m (1,224 kgf*cm, 89 ft.*lbf)



15. **INSTALL OUTLET OIL COOLER HOSE**
    (a) Install the outlet oil cooler hose onto the outlet oil cooler tube.
16. **INSTALL INLET OIL COOLER HOSE**
    (a) Install the inlet oil cooler hose onto the inlet oil cooler tube.
17. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**
18. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**
19. **REMOVE TRANSMISSION CASE PROTECTOR (w/o ABS) (See page AX-147)**
20. **INSTALL FRONT LOWER SUSPENSION ARM LH (See page DS-14)**
21. **INSTALL FRONT LOWER SUSPENSION ARM RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
22. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
23. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
24. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
25. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
26. **INSTALL FRONT SPEED SENSOR LH (w/ ABS) (See page DS-15)**
27. **INSTALL FRONT SPEED SENSOR RH (w/ ABS)**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
28. **INSTALL FRONT AXLE HUB NUT LH (See page DS-15)**
29. **INSTALL FRONT AXLE HUB NUT RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
30. **INSTALL STARTER ASSEMBLY (See page ST-17)**





31. **CONNECT WIRE HARNESS**
    (a) Install the 3 wire harness clamp brackets onto the automatic transaxle with the 3 bolts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

32. **CONNECT CONNECTOR**
    (a) Connect the vehicle speed sensor connector.
    (b) Connect the transmission revolution sensor connector.
    (c) Connect the transmission wire connector and install the clamp onto the engine mount insulator.
    (d) Connect the park neutral position switch connector and install the clamp onto the engine mount insulator.

33. **INSTALL NO. 3 ENGINE WIRE**
    (a) Install No. 3 engine wire onto the automatic transaxle with the bolt.
    Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)
    (b) Install the 2 clamps onto the engine mount insulator.

34. **INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-109)**

35. **INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY (See page PS-79)**

36. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-79)**

37. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page PS-79)**

38. **INSTALL AIR CLEANER BRACKET (See page EM-145)**

39. **INSTALL AIR CLEANER ASSEMBLY (See page EM-146)**

40. **INSTALL NO. 2 CYLINDER HEAD COVER (See page IG-10)**

41. **INSTALL BATTERY CARRIER (See page EM-145)**

42. **INSTALL BATTERY TRAY**

43. **INSTALL BATTERY (See page EM-148)**

44. **INSTALL OUTER COWL TOP PANEL**
    Hatchback: (See page EM-146)
    Sedan: (See page EM-147)

45. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-147)**

46. **INSTALL FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-148)**

47. **INSTALL FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-21)
    Sedan: (See page WW-12)

48. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**

49. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
Hatchback: (See page WW-21)
Sedan: (See page WW-12)

50. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**

51. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**

52. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**

53. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH**
Hatchback: (See page WW-22)
Sedan: (See page WW-13)

54. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH**
Hatchback: (See page WW-23)
Sedan: (See page WW-14)

55. **INSTALL FRONT WIPER ARM HEAD CAP**
Hatchback: (See page WW-23)
Sedan: (See page WW-15)

56. **INSPECT HOOD**
Hatchback: (See page ED-3)
Sedan: (See page ED-1)

57. **ADJUST HOOD**
Hatchback: (See page ED-4)
Sedan: (See page ED-2)

58. **ADD AUTOMATIC TRANSAXLE FLUID**
Fluid type:
T-WS
Capacity:
2.9 liters (3.1 US qts, 2.6 Imp. qts)

59. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-93)**

60. **CHECK AUTOMATIC TRANSAXLE FLUID LEAKAGE**

61. **ADJUST SHIFT LEVER POSITION (See page AX-137)**

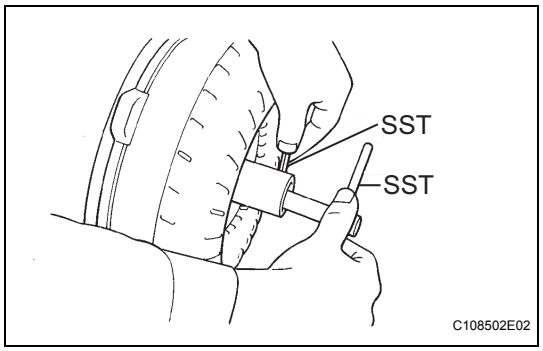
62. **INSPECT SHIFT LEVER POSITION (See page AX-134)**

63. **INSTALL ENGINE UNDER COVER RH**

64. **INSTALL ENGINE UNDER COVER LH**

65. **INSTALL FRONT WHEELS**
Torque: 103 N*m (1050 kgf*cm, 76 ft.*lbf)

66. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(See page SP-2)



TORQUE CONVERTER CLUTCH AND DRIVE PLATE

INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the one-way clutch.

(1) Install SST so that it fits into notch of the converter hub and the notch of the outer race of the one-way clutch.

SST 09350-32014 (09351-32010, 09351-32020)

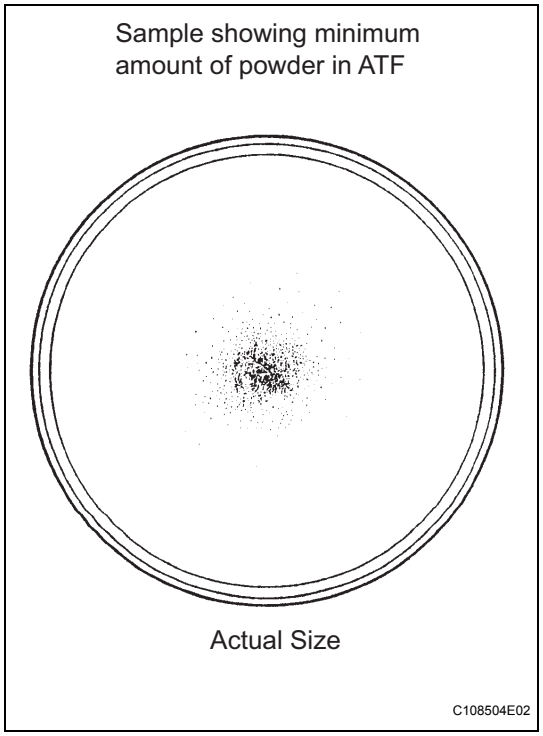
(2) Press on the serrations of the stator with a finger and rotate it.

Check that it rotates smoothly when turned clockwise and locks up when turned counterclockwise.

SST 09350-32014 (09351-32010, 09351-32020)

If necessary, clean the converter and check the one-way clutch.

Replace the converter if the one-way clutch still does not operate as specified.



(b) Check the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly meets any of the cases mentioned below, replace the torque converter clutch.

Malfunction Item:

Any metallic sound is heard from the torque converter clutch during stall test or when the shift lever is in the N position.
The one-way clutch is released or locked in both directions.
Fine powder exceeding the sample limit is identified in ATF.
(See the sample.)

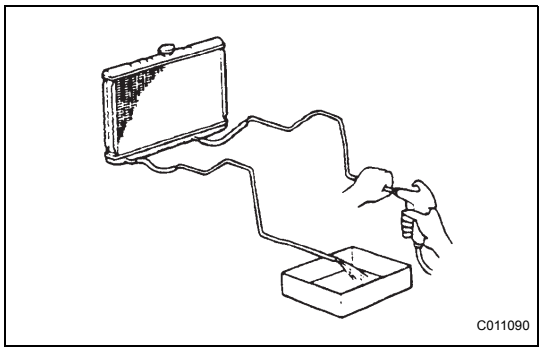
HINT:

The sample shows approximately. 0.25 liters (0.26 US qts, 0.22 lmp. qts) of ATF that is taken out from the removed torque converter clutch.

(c) Replace the ATF in the torque converter clutch.

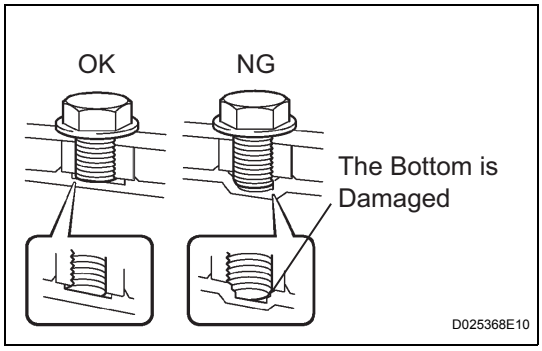
(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it with the installation surface facing up.

AX



(d) Clean and check the oil cooler and oil pipe line.
(1) If the torque converter clutch is inspected or the ATF is changed, clean the oil cooler and oil pipe line.
HINT:
- Spray compressed air of 196 kpa (2 kgf/cm^2, 28 psi) from the inlet hose.
- If excessive fine powder is found in the ATF, add new ATF using a bucket pump and clean it again.

(2) If the ATF is cloudy, inspect the oil cooler (radiator).



2. INSPECT DRIVE PLATE AND RING GEAR

(a) Set up a dial indicator and measure the drive plate runout.
Maximum runout:
0.20 mm (0.0079 in.)
If the runout is not within the specification or the ring gear is damaged, replace the drive plate.

(b) Check the ring gear for damage.

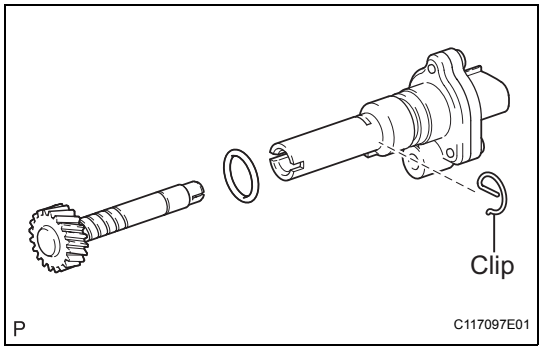
DISASSEMBLY

1. REMOVE SPEEDOMETER SENSOR

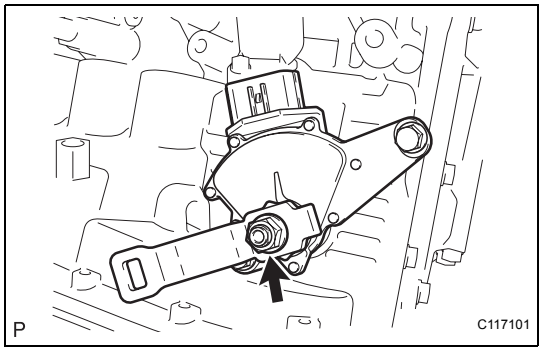
(a) Remove the bolt and remove the speedometer sensor.



2. REMOVE SPEEDOMETER DRIVEN GEAR

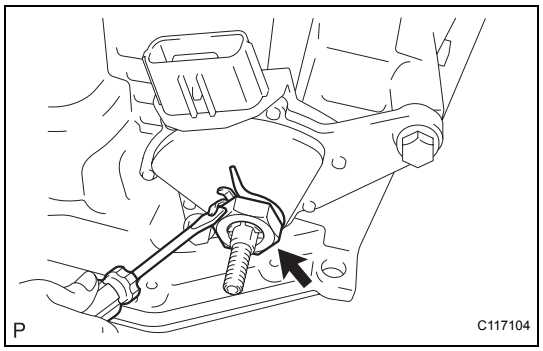
(a) Remove the clip and speedometer driven gear from the speedometer sensor.

(b) Remove the O-ring from the speedometer sensor.

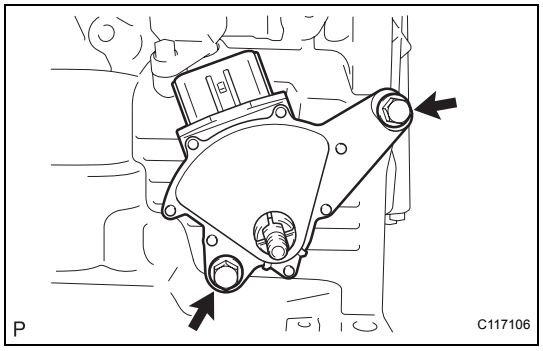


3. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Remove the nut and washer and remove the control lever shaft.

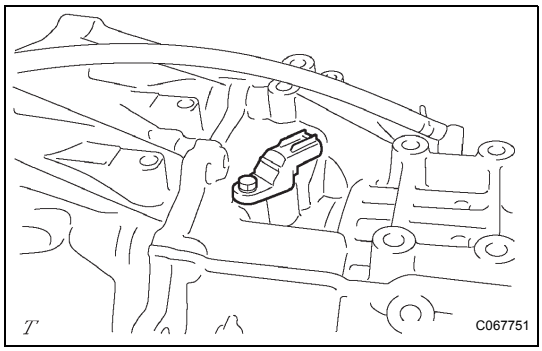


(b) Using a screwdriver, pry out the lock plate and remove the manual valve shaft nut.



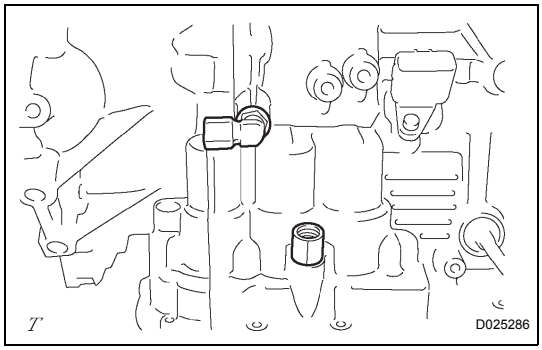
(c) Remove the 2 bolts and pull out the park/neutral position switch assembly.

AX



4. REMOVE TRANSMISSION REVOLUTION SENSOR

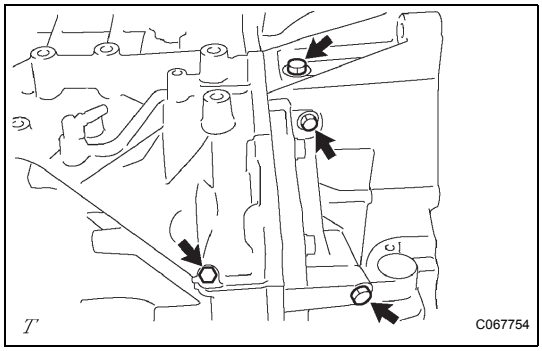
(a) Remove the bolt and remove the transmission revolution sensor.



5. REMOVE OIL COOLER TUBE UNION

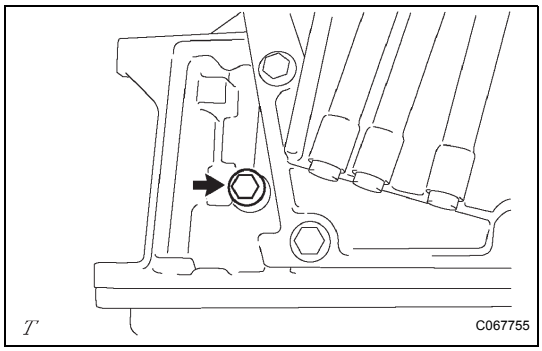
(a) Remove the 2 oil cooler tube unions from the transaxle case.

(b) Remove the 2 O-rings from the 2 oil cooler tube unions.



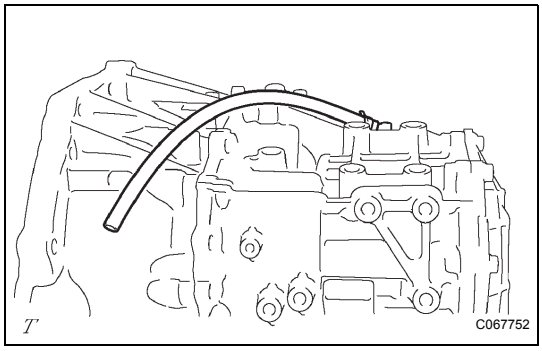
6. REMOVE NO. 1 TRANSAXLE CASE PLUG

(a) Remove the 4 No. 1 transaxle case plugs from the transaxle housing and transaxle case.



(b) Remove the No. 1 transaxle case plug from the transaxle case.

(c) Remove the O-rings from the No. 1 transaxle case plugs.

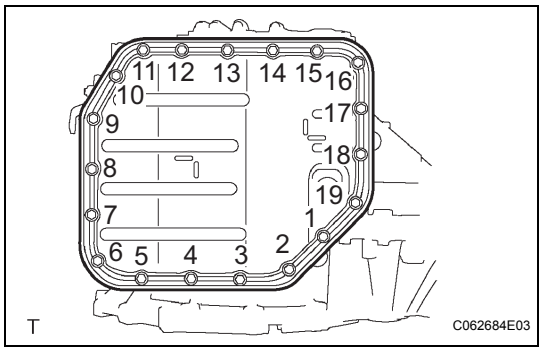


7. REMOVE BREATHER PLUG HOSE

(a) Remove the breather plug hose from the transaxle case.

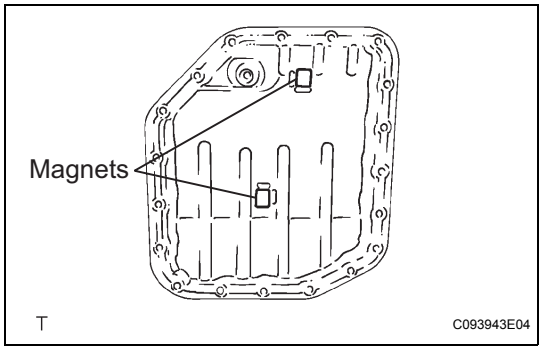
8. FIX AUTOMATIC TRANSAXLE ASSEMBLY

AX



9. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Remove the 19 bolts and remove the oil pan and oil pan gasket.



(b) Remove the 2 oil cleaner magnets from the oil pan.

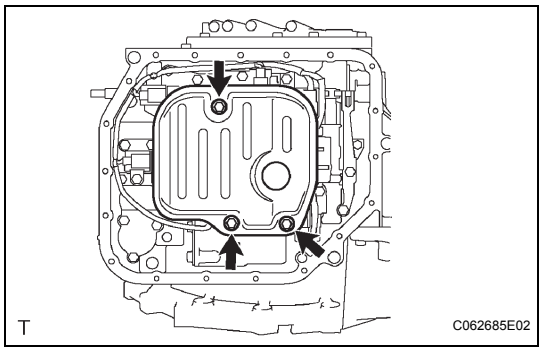
(c) Examine the particles in the pan.

(1) Collect any steel chips with the removed magnets.

Carefully look at the foreign matter and particles in the pan and on the magnets to predict the type of wear which might be found in the transaxle.

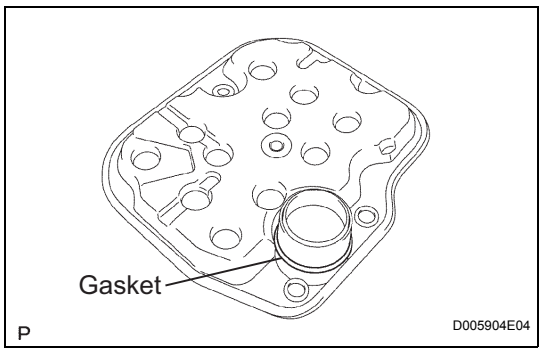
Steel (magnetic): bearing, gear and clutch plate wear

Brass (non-magnetic): bearing wear



10. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

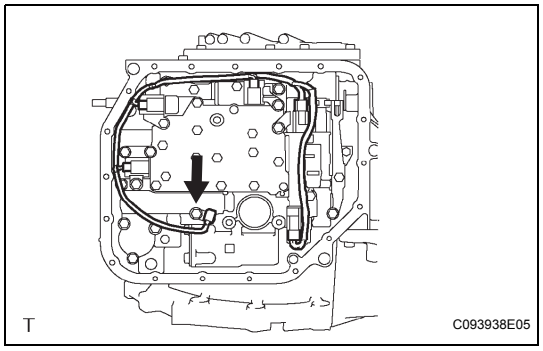
(a) Remove the 3 bolts and remove the oil strainer assembly.



(b) Remove the oil strainer gasket from the oil strainer.

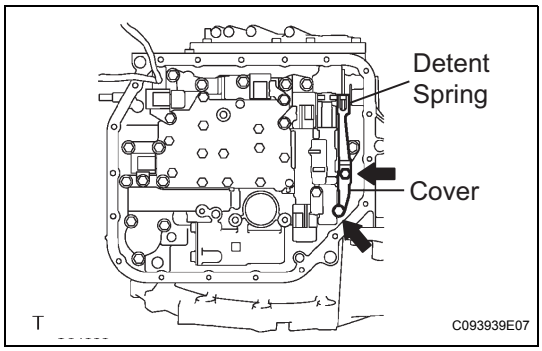
11. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Disconnect the 5 solenoid connectors.

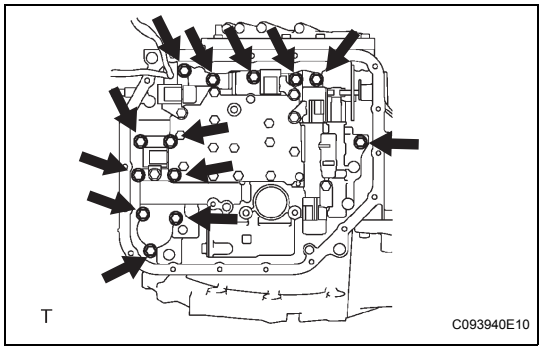


(b) Remove the bolt and lock plate and remove the ATF temperature sensor.

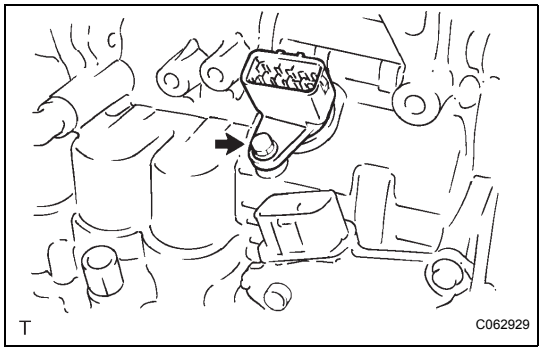
AX



(c) Remove the 2 bolts and remove the detent spring cover and detent spring.

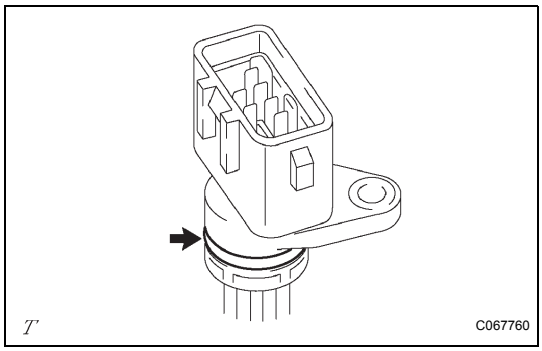


(d) Remove the 13 bolts and the valve body assembly from the transaxle case.

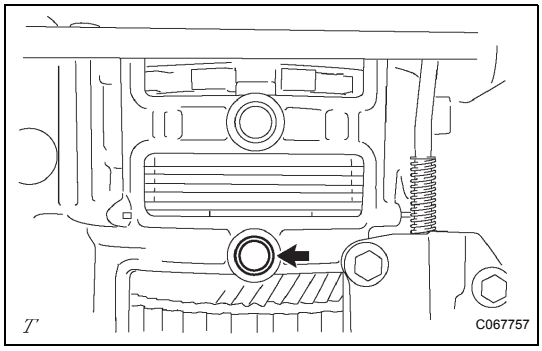


12. REMOVE TRANSMISSION WIRE

(a) Remove the bolt and the transmission wire from the transaxle case.



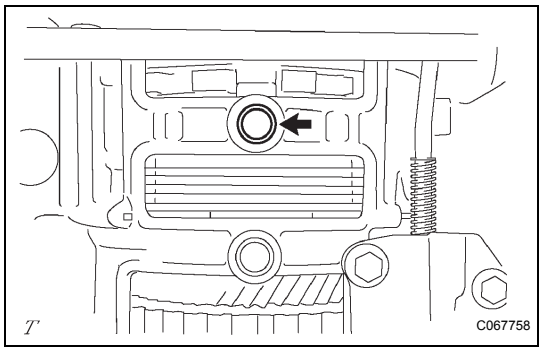
(b) Remove the O-ring from the transmission wire.



13. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET

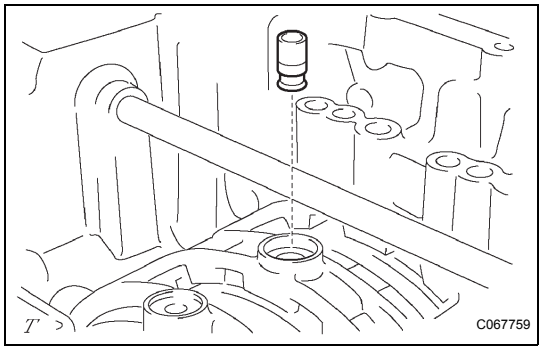
(a) Remove the transaxle case 2nd brake gasket from the transaxle case.

AX



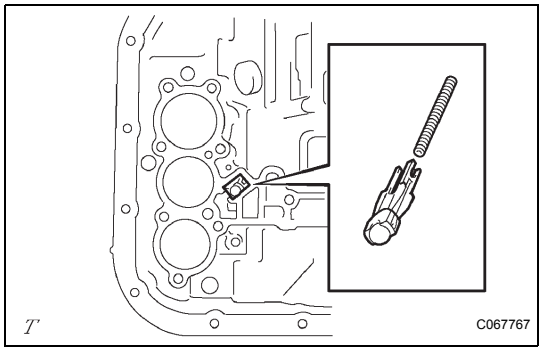
14. REMOVE TRANSAXLE CASE GASKET

(a) Remove the transaxle case gasket from the transaxle case.



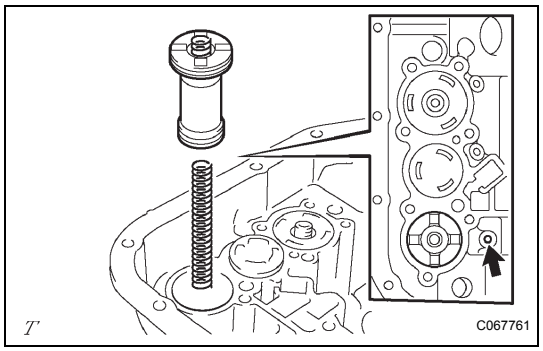
15. REMOVE BRAKE DRUM GASKET

(a) Remove the brake drum gasket from the transaxle case.



16. REMOVE CHECK BALL BODY

(a) Remove the check ball body and spring from the transaxle case.

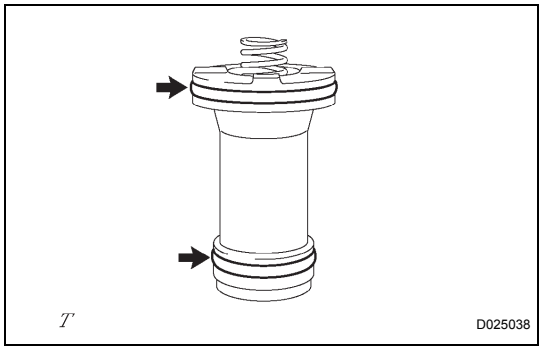


17. REMOVE B-2 ACCUMULATOR PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the B-2 accumulator piston and spring.

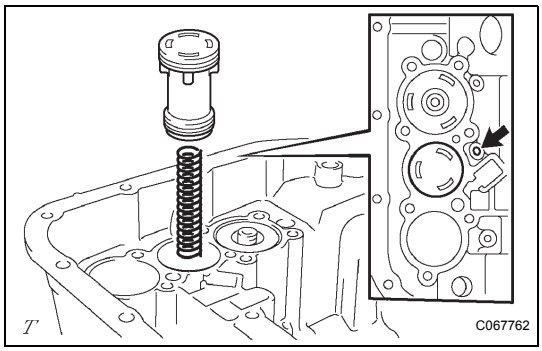
NOTICE:

- **Blowing the air may cause the piston to jump out. When removing the piston, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



(b) Remove the 2 O-rings from the B-2 accumulator piston.

AX

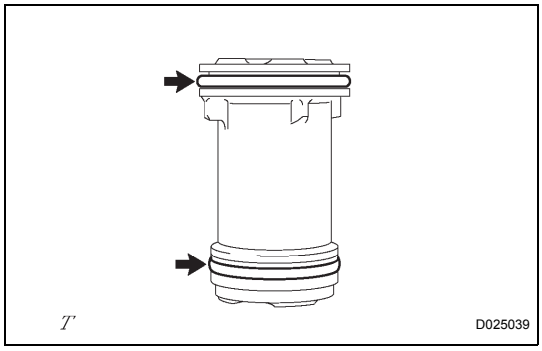


18. REMOVE C-3 ACCUMULATOR PISTON

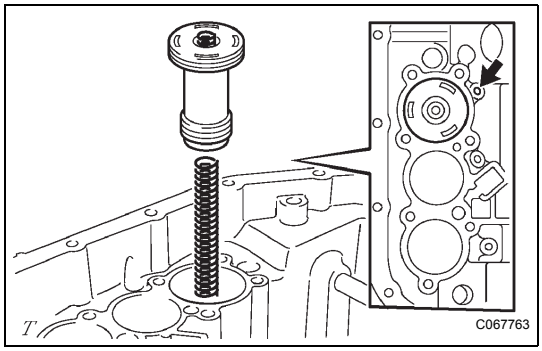
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the C-3 accumulator piston and spring.

NOTICE:

- **Blowing the air may cause the piston to jump out. When removing the piston, hold it with your hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



(b) Remove the 2 O-rings from the C-3 accumulator piston.

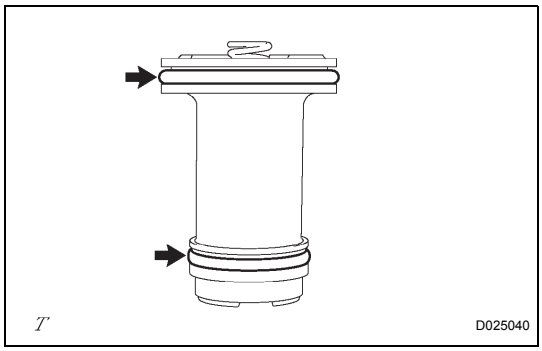


19. REMOVE C-2 ACCUMULATOR PISTON

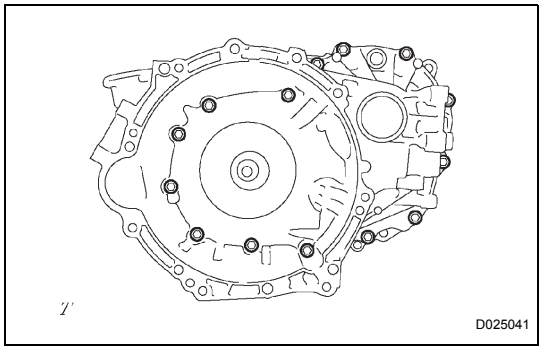
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the C-2 accumulator piston and the spring.

NOTICE:

- **Blowing the air may cause the piston to jump out. When removing the piston, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



(b) Remove the 2 O-rings from the C-2 accumulator piston.



20. REMOVE TRANSAXLE HOUSING

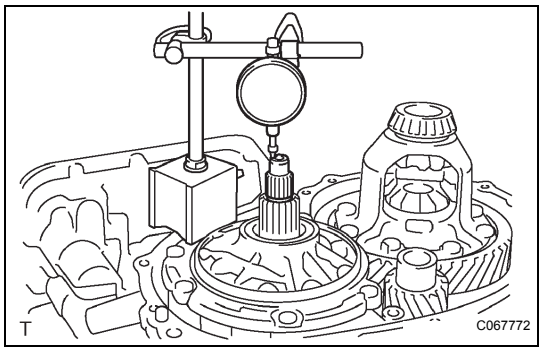
(a) Remove the 14 bolts.

(b) Tap around the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.

NOTICE:

The differential gear assembly may be accidentally removed when the transaxle housing is removed.

AX



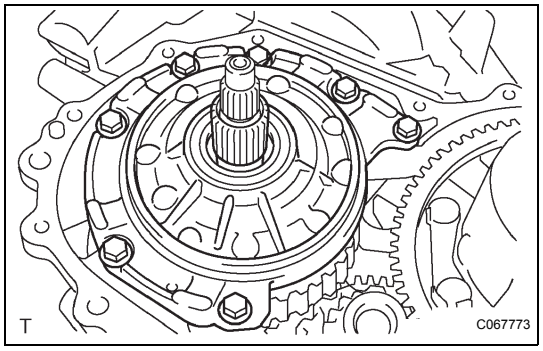
21. INSPECT INPUT SHAFT END PLAY

(a) Measure the end play in the axial direction.

End play:

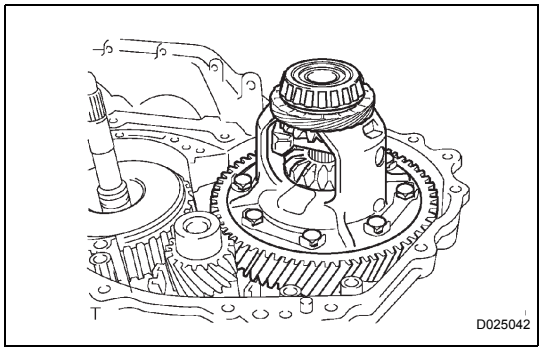
0.37 to 1.29 mm (0.0146 to 0.0508 in.)

If the end play is not as specified, select and replace the thrust needle roller bearing.



22. REMOVE OIL PUMP ASSEMBLY

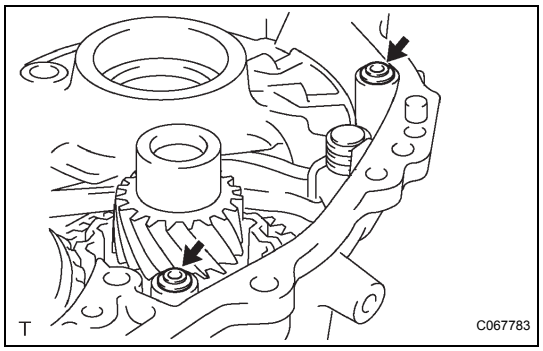
(a) Remove the 7 bolts and the oil pump assembly from the transaxle case.



23. REMOVE DIFFERENTIAL GEAR ASSEMBLY

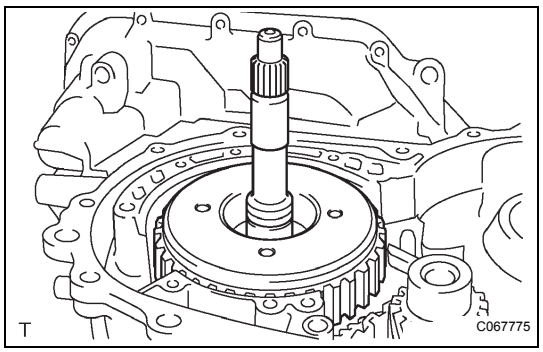
(a) Remove the differential gear assembly from the transaxle case.

AX



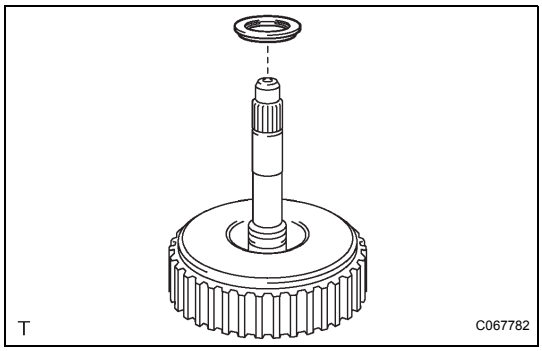
24. REMOVE OVERDRIVE BRAKE GASKET

(a) Using a screwdriver, remove the 2 overdrive brake gaskets from the transaxle case.



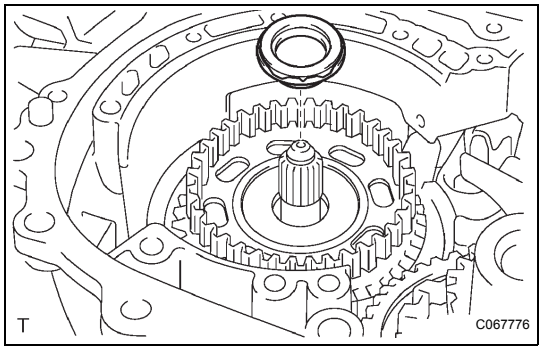
25. REMOVE INPUT SHAFT ASSEMBLY

(a) Remove the input shaft assembly from the transaxle case.



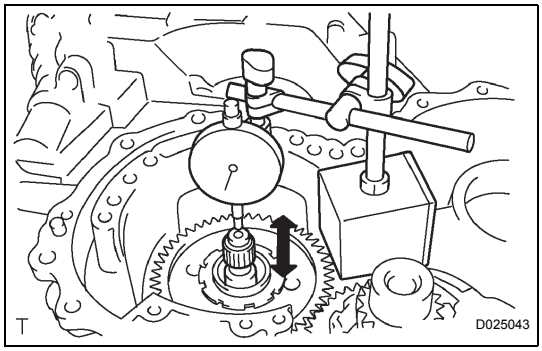
26. REMOVE STATOR SHAFT THRUST NEEDLE ROLLER BEARING

(a) Remove the thrust needle roller bearing from the input shaft.



27. REMOVE FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING

(a) Remove the thrust needle roller bearing from the forward clutch hub.



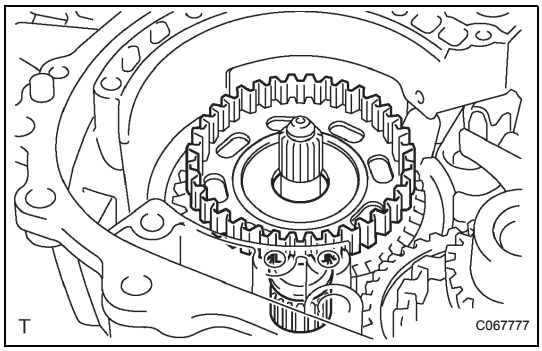
28. INSPECT INTERMEDIATE SHAFT ASSEMBLY

(a) Using a dial indicator, measure the clearance of the intermediate shaft.

Standard clearance:

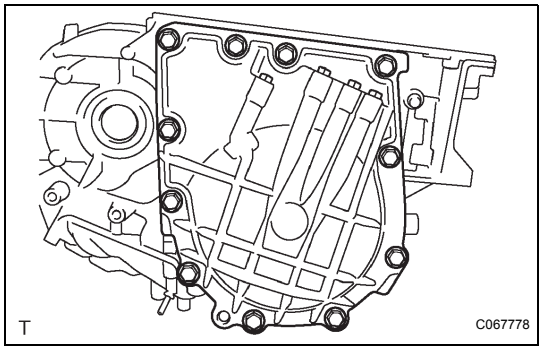
0.204 to 0.966 mm (0.008 to 0.038 in.)

AX



29. REMOVE FORWARD CLUTCH HUB SUB-ASSEMBLY

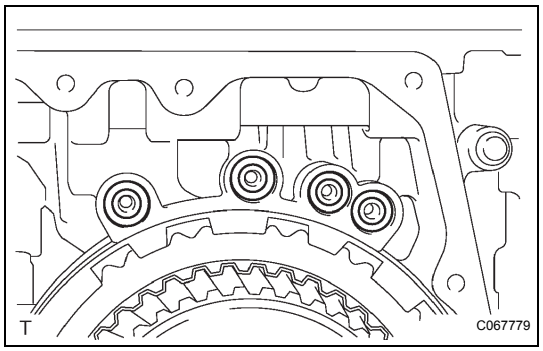
(a) Remove the forward clutch hub from the transaxle case.



30. REMOVE REAR TRANSAXLE COVER ASSEMBLY

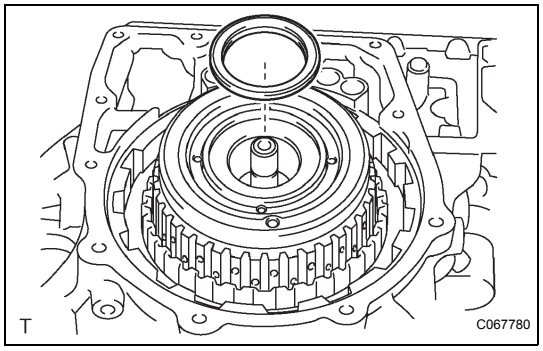
(a) Remove the 11 bolts.

(b) Tap around the circumference of the rear transaxle cover with a plastic hammer to remove the rear transaxle cover from the transaxle case.



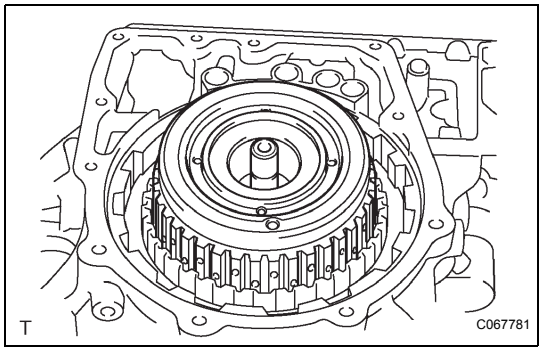
31. REMOVE TRANSAXLE CASE GASKET

(a) Remove the 4 transaxle case gaskets.



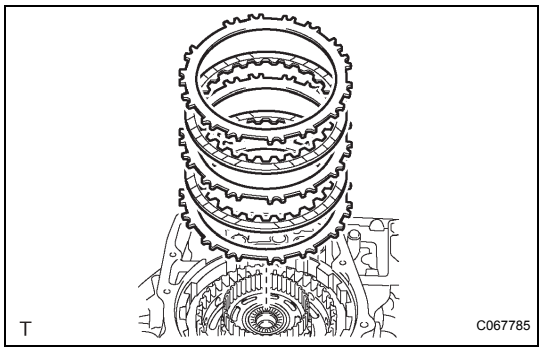
32. REMOVE REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING

(a) Using a magnetic finger, remove the thrust needle roller bearing.



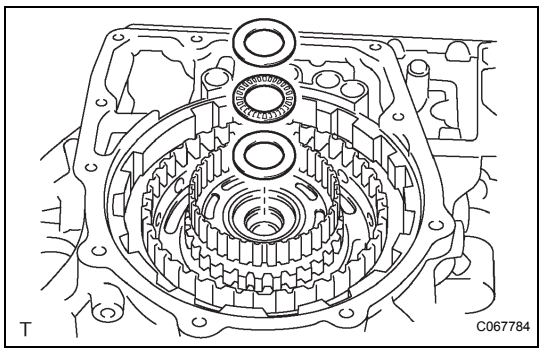
33. REMOVE INTERMEDIATE SHAFT ASSEMBLY

(a) Remove the intermediate shaft assembly from the transaxle case.



34. REMOVE 2ND COAST AND OVERDRIVE BRAKE DISC

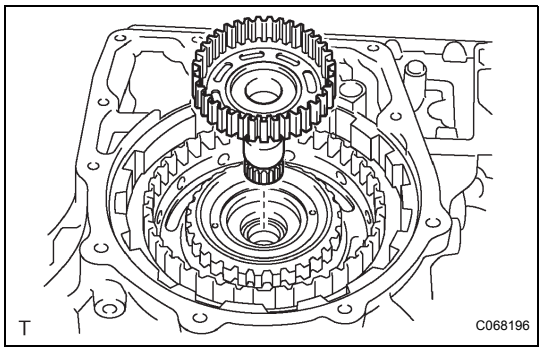
(a) Remove the flange, 2 discs and 2 No. 2 flanges from the transaxle.



35. REMOVE THRUST NEEDLE ROLLER BEARING

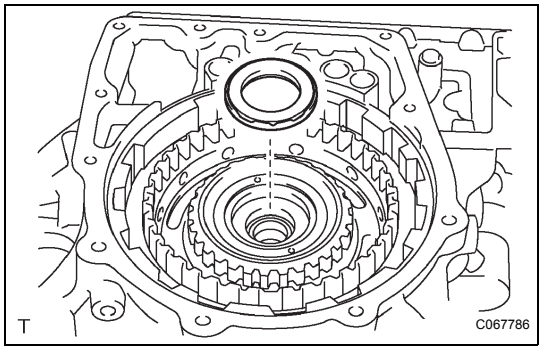
(a) Using a magnetic finger, remove the C-2 hub thrust bearing race, the thrust needle roller bearing and the thrust bearing race from the direct clutch hub.

AX



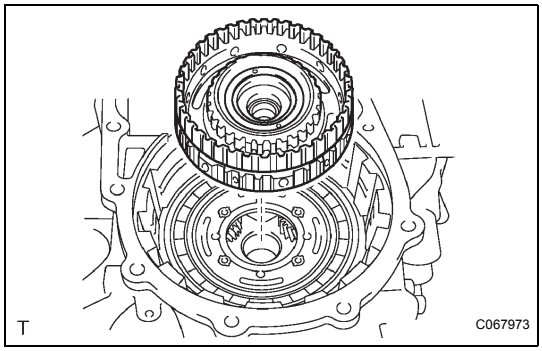
36. REMOVE DIRECT CLUTCH HUB

(a) Remove the direct clutch hub from the transaxle case.



37. REMOVE REAR NO. 2 PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

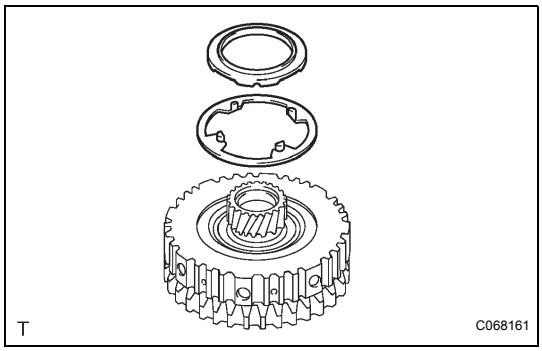
(a) Using a magnetic finger, remove the thrust bearing from the rear thrust needle bearing.



38. REMOVE REAR PLANETARY SUN GEAR ASSEMBLY

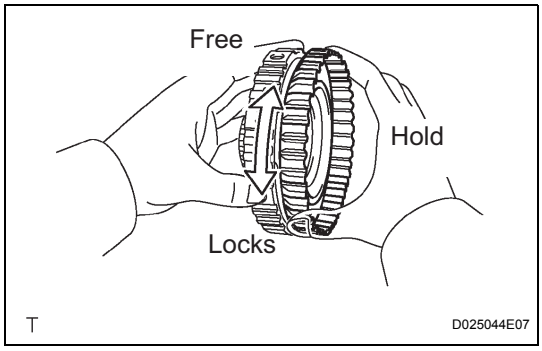
(a) Remove the rear planetary sun gear from the transaxle case.

AX



39. REMOVE REAR PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

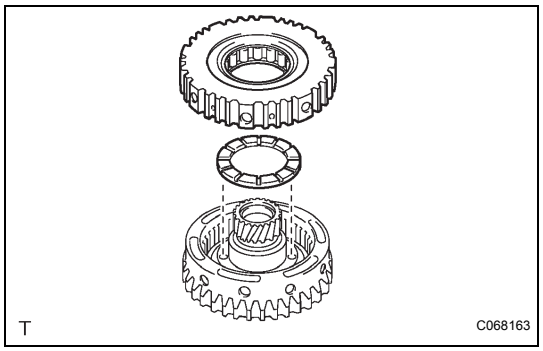
(a) Remove the rear planetary sun gear thrust needle roller bearing and thrust washer No. 1 from the rear planetary sun gear.



40. INSPECT 1-WAY CLUTCH ASSEMBLY

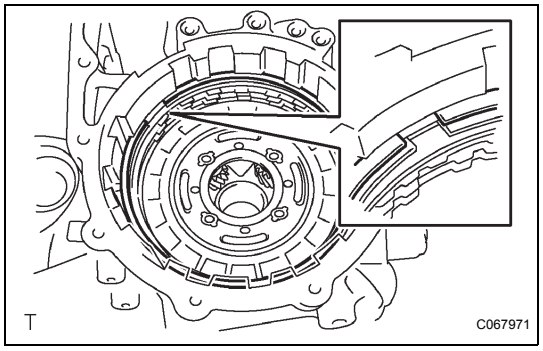
(a) Hold the rear planetary sun gear and turn the 1-way clutch.

(b) Make sure that 1-way clutch turns freely counterclockwise and locks when turned clockwise.



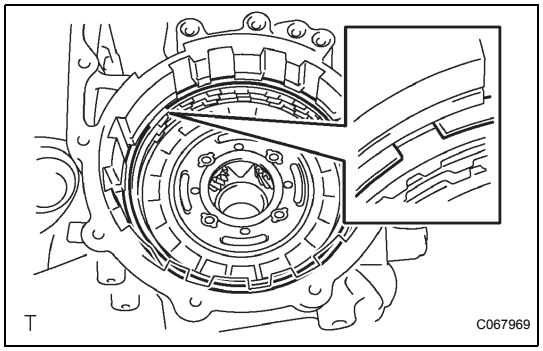
41. REMOVE 1-WAY CLUTCH ASSEMBLY

(a) Remove the 1-way clutch assembly and planetary carrier thrust washer No. 2 from the rear planetary sun gear.



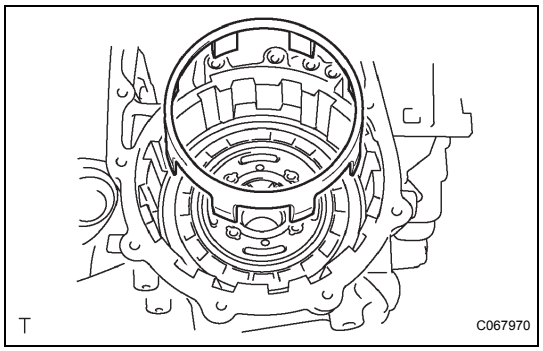
42. REMOVE 2ND COAST AND OVERDRIVE BRAKE FLANGE HOLE SNAP RING

(a) Using a screwdriver, remove the snap ring from the transaxle case.



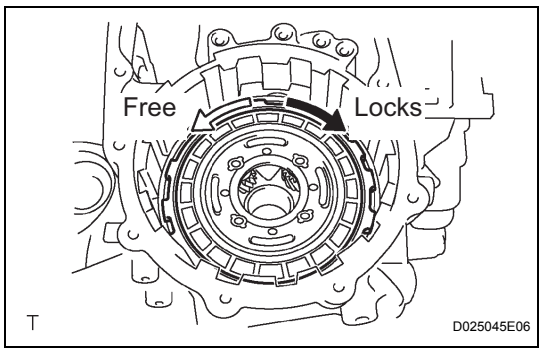
43. REMOVE 2ND BRAKE BRAKE DISC

(a) Using a screwdriver, remove the snap ring.
(b) Remove the flange, 3 discs and 3 plates from the transaxle.



44. REMOVE 2ND BRAKE PISTON SLEEVE

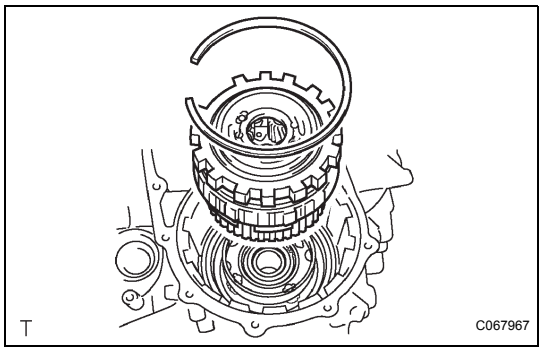
(a) Remove the 2nd brake piston sleeve from the transaxle case.



45. INSPECT NO. 2 1-WAY CLUTCH

(a) Install the 1-way clutch and the thrust washer onto the rear planetary sun gear.
(b) Hold the rear planetary sun gear and turn the 1-way clutch.
(c) Make sure that the 1-way clutch turns freely counterclockwise and locks when turned clockwise.

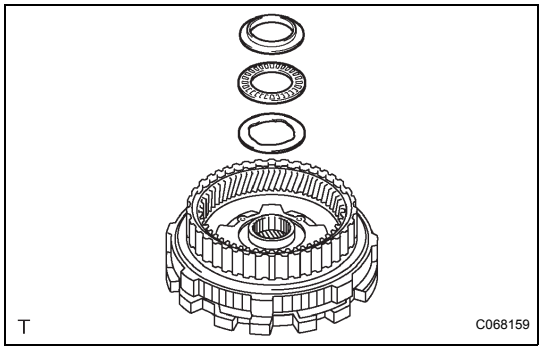
AX



46. REMOVE REAR PLANETARY GEAR ASSEMBLY

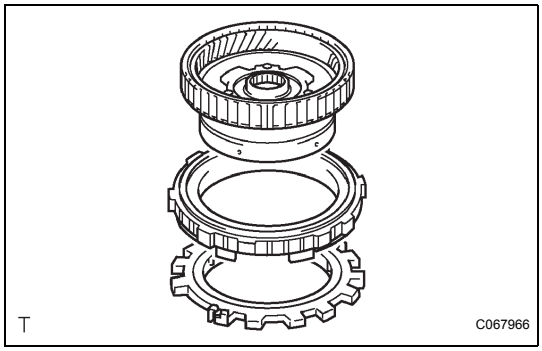
(a) Using a screwdriver, remove the snap ring.

(b) Remove the rear planetary gear assembly from the transaxle case.



47. REMOVE REAR PLANETARY GEAR THRUST NEEDLE ROLLER BEARING

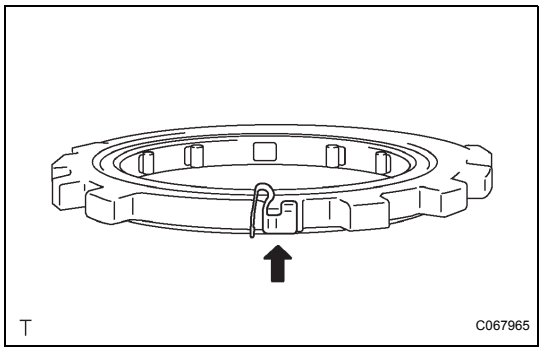
(a) Remove the thrust needle roller bearing and 2 bearing races from the rear planetary gear assembly.



48. REMOVE NO. 2 1-WAY CLUTCH

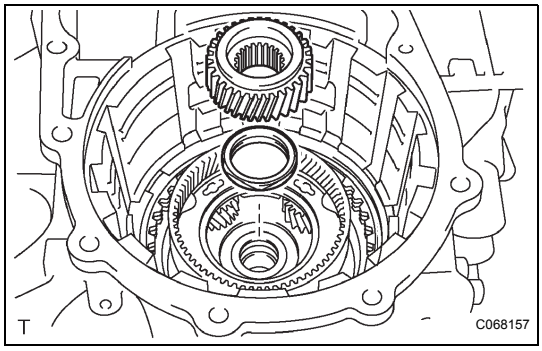
(a) Separate the 2nd brake cylinder, 1-way clutch No. 2 and the rear planetary gear.

AX



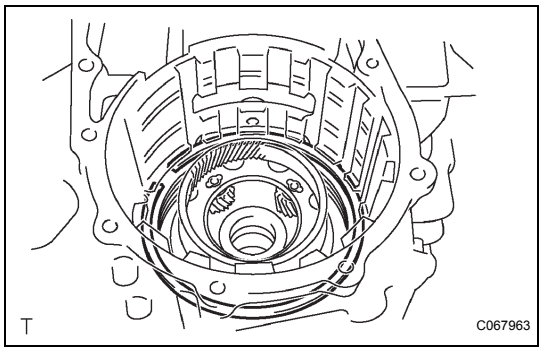
49. REMOVE OUTER RACE RETAINER

(a) Remove the retainer from 1-way clutch No. 2.



50. REMOVE FRONT PLANETARY SUN GEAR

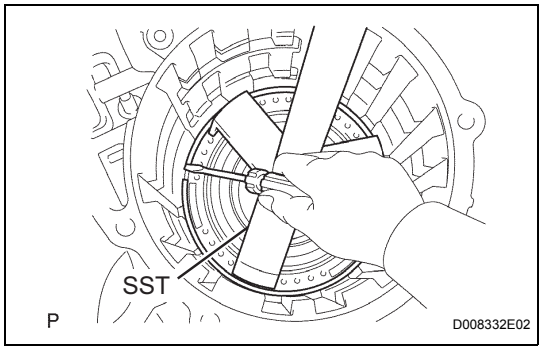
(a) Remove the front planetary sun gear and thrust needle roller bearing from the transaxle case.



51. REMOVE 1ST AND REVERSE BRAKE DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates from the transaxle case.

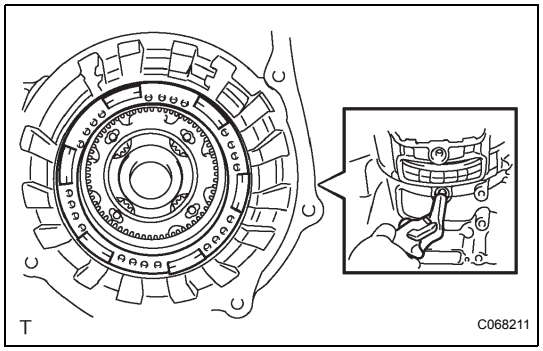


52. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using SST, a press and a screwdriver, remove the snap ring.

SST 09387-00070

(b) Remove the 1st and reverse brake return spring sub-assembly.



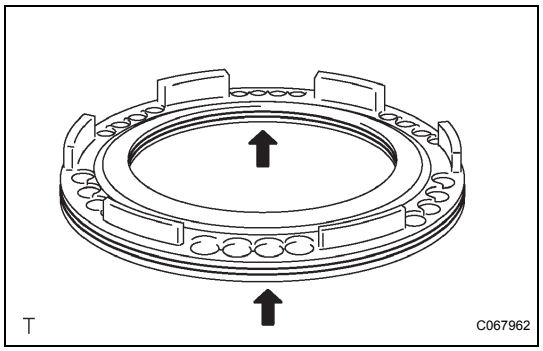
53. REMOVE NO. 2 1ST AND REVERSE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the 1st and reverse brake piston.

NOTICE:

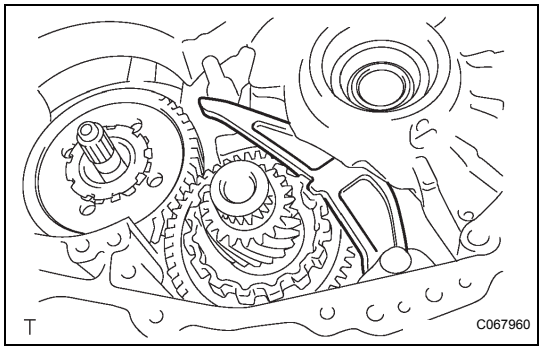
- **Blowing the air may cause the piston to jump out. When removing the piston, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**

AX



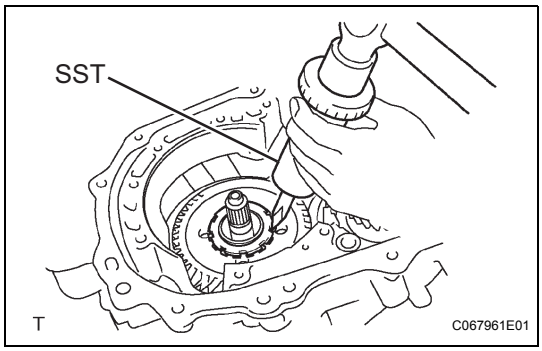
54. REMOVE NO. 2 1ST AND REVERSE BRAKE PISTON O-RING

(a) Remove the 2 O-rings from No. 2 1st and reverse brake piston.

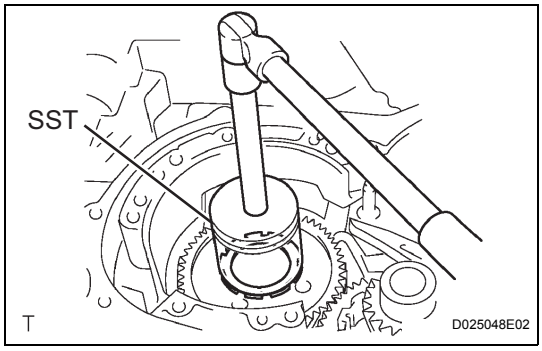


55. REMOVE COUNTER DRIVE GEAR NUT

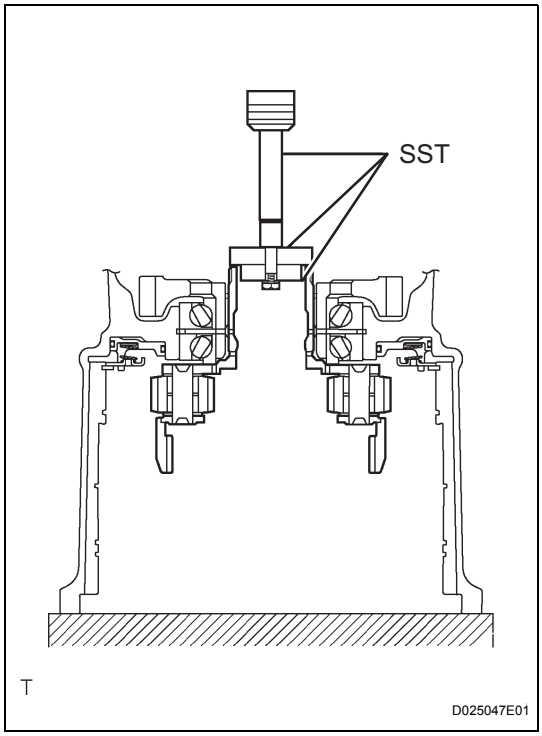
(a) Fix the counter driven gear with the parking lock pawl.



(b) Using SST and a hammer, release the lock washer.
SST 09930-00010



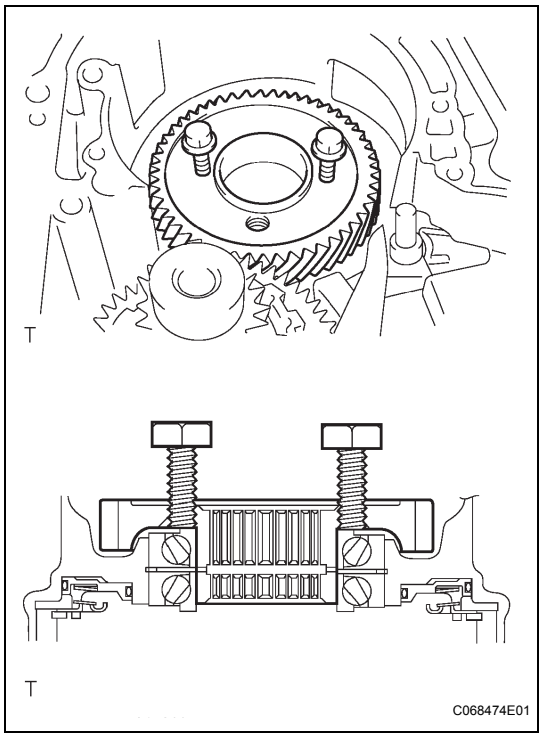
(c) Using SST, remove the nut and lock washer.
SST 09387-00120



56. REMOVE PLANETARY GEAR ASSEMBLY

(a) Using SST and a press, remove the planetary gear assembly from the transaxle case.
SST 09950-60010 (09951-00400, 09951-00320, 09952-06010), 09950-70010 (09951-07100)

AX

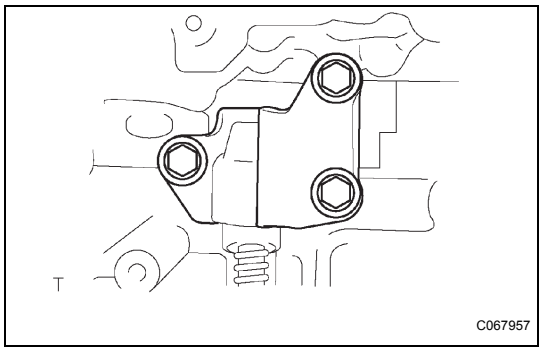


57. REMOVE COUNTER DRIVE GEAR

(a) Install the 2 bolts onto the counter drive gear.
Bolt (M6):
L = 40 to 80 mm
Pitch = 1.0 mm

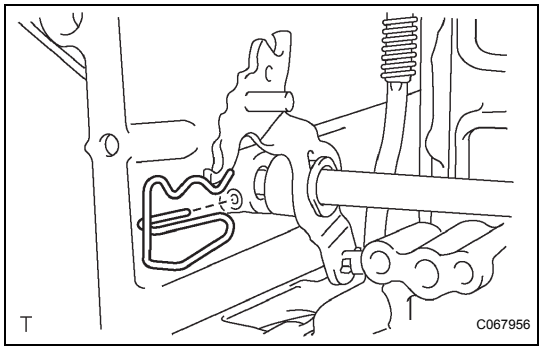
(b) Rotate the 2 bolts and remove the counter drive gear and front planetary sun gear.

(c) Remove the 2 radial ball bearings from the counter drive gear and front planetary sun gear.



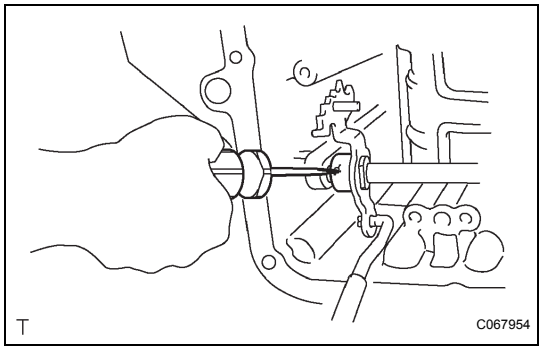
58. REMOVE PARKING LOCK PAWL BRACKET

(a) Remove the 3 bolts, cam guide and bracket from the transaxle case.



59. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING

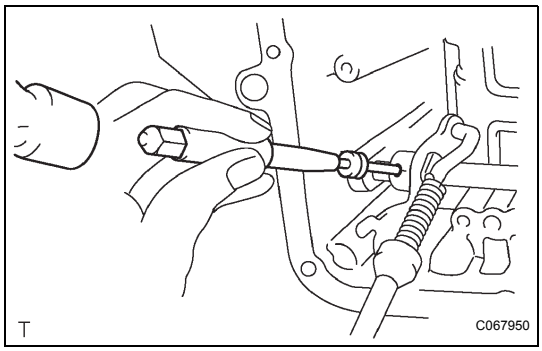
(a) Remove the manual valve lever shaft retainer spring from the manual valve lever shaft.



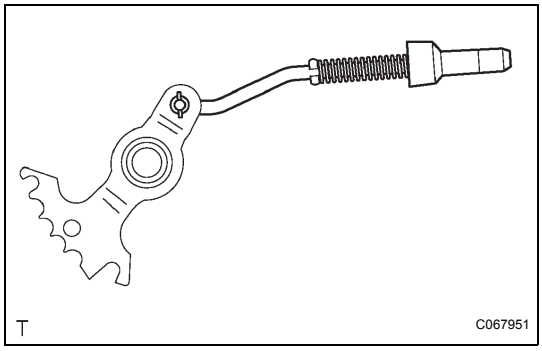
60. REMOVE MANUAL VALVE LEVER SUB-ASSEMBLY

(a) Using a screwdriver, release and remove the spacer.

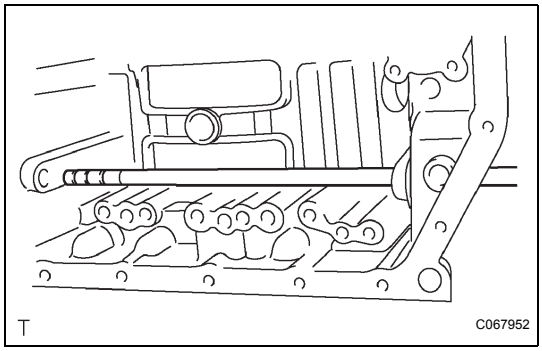
AX



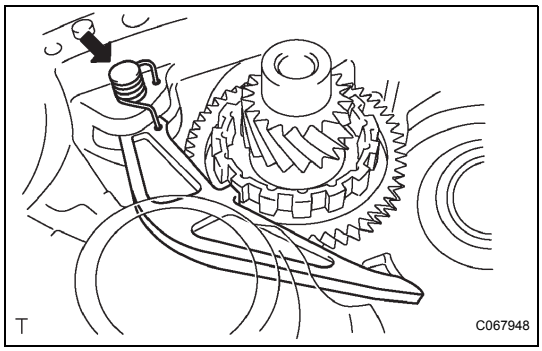
(b) Using a pin punch and hammer, drive out the manual valve lever shaft spring pin.
(c) Remove the manual valve lever shaft and manual valve lever.



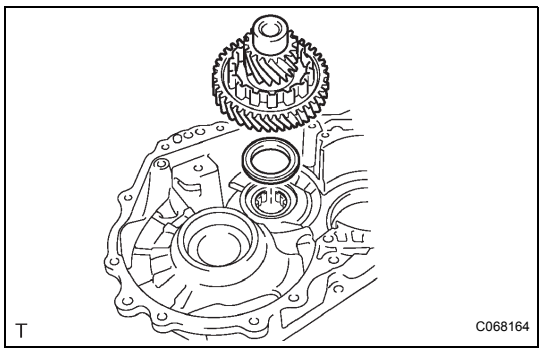
61. REMOVE PARKING LOCK ROD SUB-ASSEMBLY
(a) Remove the parking lock rod from the manual valve lever.



62. REMOVE MANUAL VALVE LEVER SHAFT
(a) Remove the manual valve lever shaft from the transaxle case.

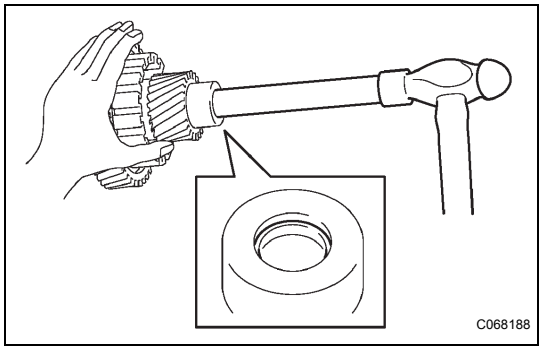


63. REMOVE PARKING LOCK PAWL
(a) Using a screwdriver, remove the parking lock pawl shaft from the transaxle case.
(b) Remove the parking lock pawl torsion spring and parking lock pawl from the transaxle case.



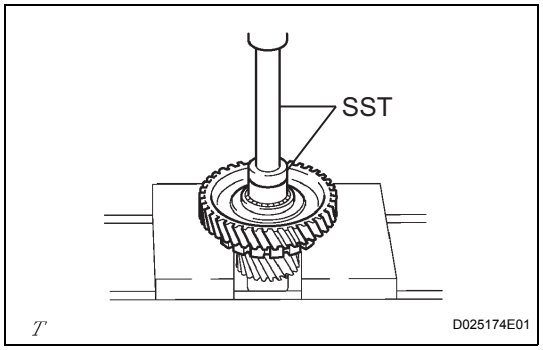
64. REMOVE COUNTER DRIVEN GEAR
(a) Remove the counter driven gear, drive pinion and thrust needle roller bearing from the transaxle case.

AX



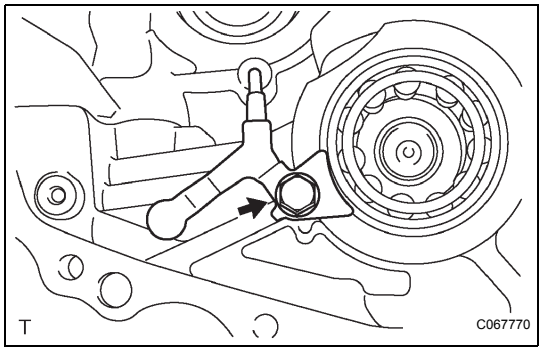
65. REMOVE DIFFERENTIAL DRIVE PINION PLUG

(a) Using a brass bar and a hammer, remove the differential drive pinion plug.



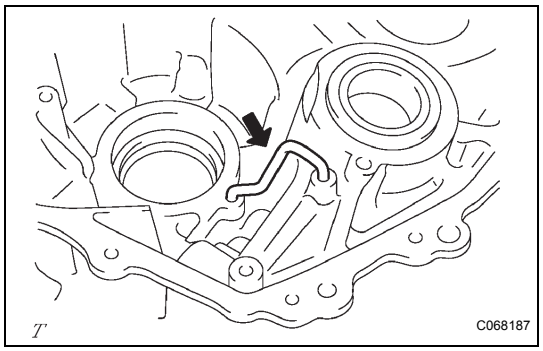
66. REMOVE DIFFERENTIAL DRIVE PINION

(a) Using SST and a press, remove the differential drive pinion from the counter driven gear.
SST 09950-60010 (09951-00350), 09950-70010 (09951-07150)



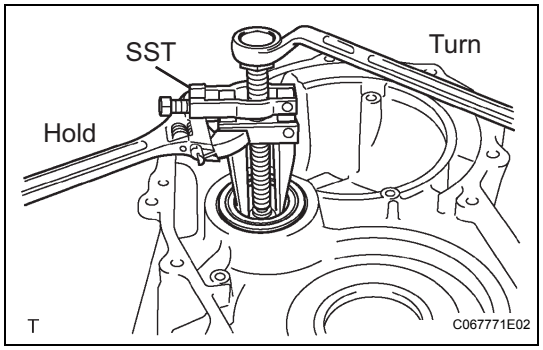
67. REMOVE BEARING LOCK PLATE

(a) Remove the bolt and remove the bearing lock plate.



68. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

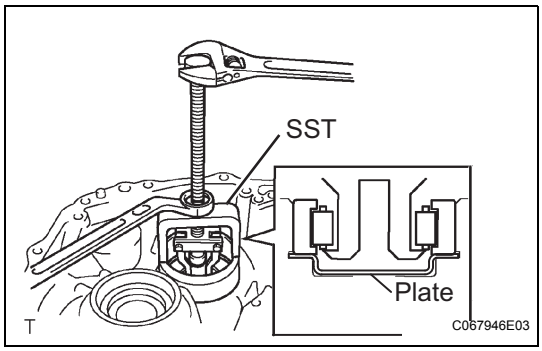
(a) Remove the differential gear lube apply tube from the transaxle housing.



69. REMOVE FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front drive pinion front tapered roller bearing from the transaxle housing.
SST 09308-10010

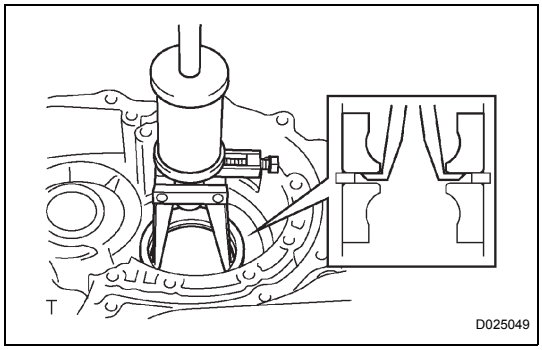
AX



70. REMOVE FRONT DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front drive pinion rear tapered roller bearing from the transaxle case.
SST 09612-65014 (09612-01040)

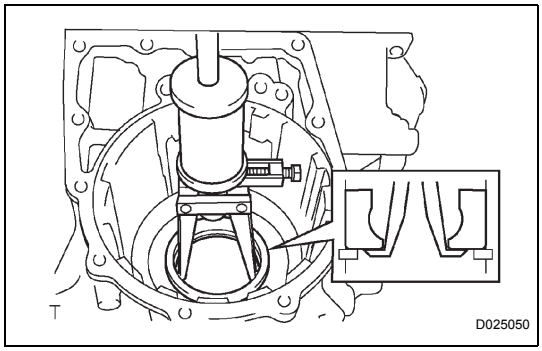
(b) Remove transaxle case plate No. 1 from the transaxle case.



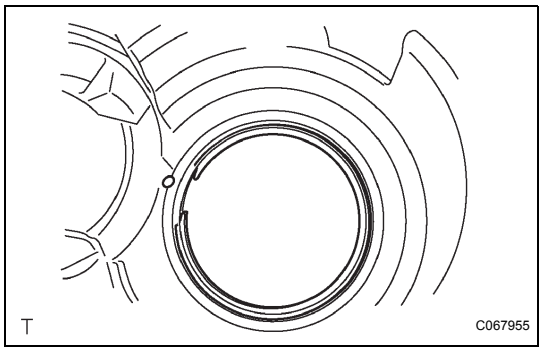
71. REMOVE COUNTER DRIVE GEAR BEARING

(a) Remove the 2 counter drive gear bearing inner races RH from the transaxle case.

(b) Using SST, remove the counter drive gear bearing LH outer race from the transaxle case.
SST 09308-00010

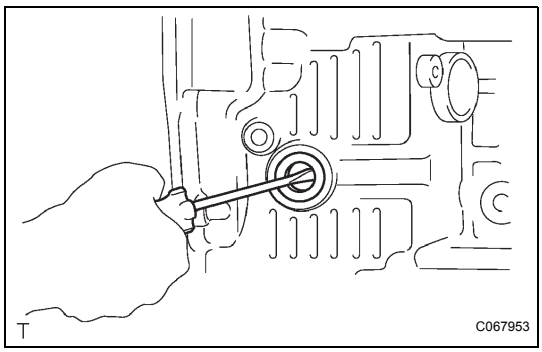


(c) Using SST, remove the counter drive gear bearing rear outer race from the transaxle case.
SST 09308-00010



72. REMOVE COUNTER DRIVE GEAR HOLE SNAP RING

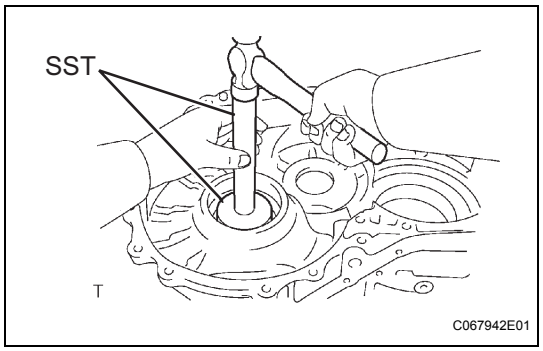
(a) Using a screwdriver, remove the counter drive gear hole snap ring from the transaxle case.



73. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the oil seal from the transaxle case.

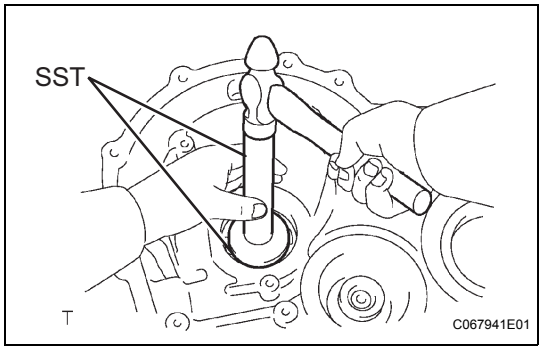
AX



74. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the oil seal from the transaxle case.

SST 09950-60010 (09951-00550), 09950-70010 (09951-07100)

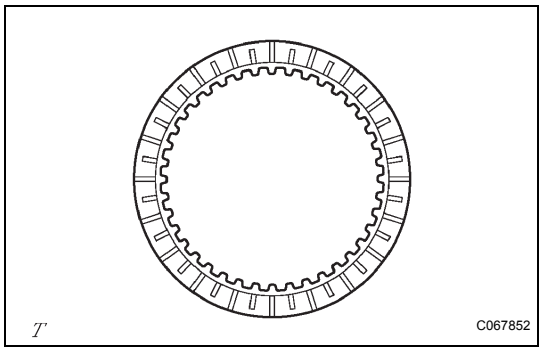


75. REMOVE TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the transaxle case oil seal from the transaxle housing.

SST 09950-60010 (09951-00530), 09950-70010 (09951-07100)

INSPECTION

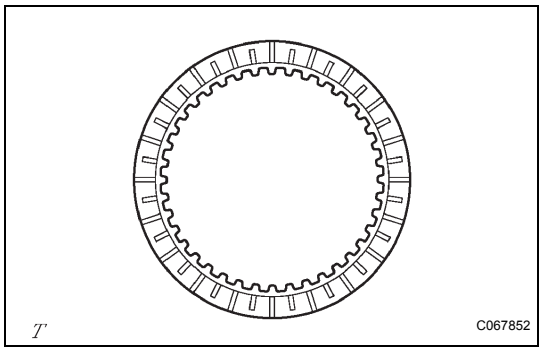


1. INSPECT 2ND COAST AND OVERDRIVE BRAKE DISC

(a) Check whether the sliding surfaces of the disc, plate and flange are worn or burnt.
If necessary, replace them.

NOTICE:

- **If the lining of the disc is peeling off or discolored, or even if a part of the printed number is defaced, replace all the discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

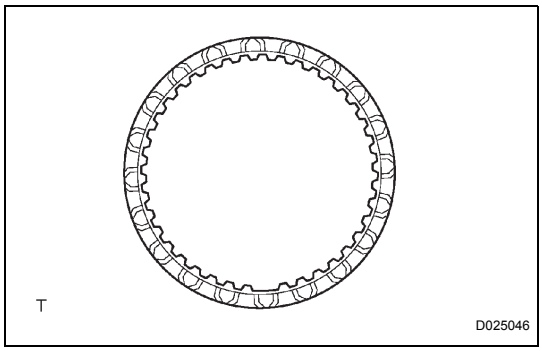


2. INSPECT 2ND BRAKE BRAKE DISC

(a) Check whether the sliding surfaces of the disc, plate and flange are worn or burnt.
If necessary, replace them.

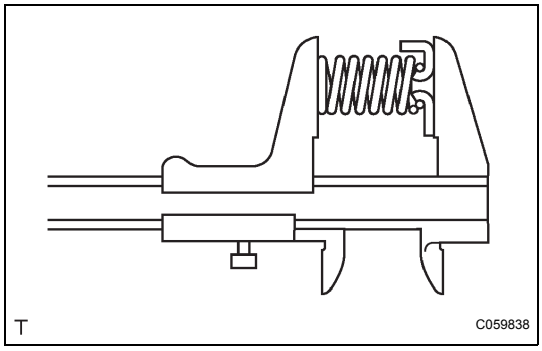
NOTICE:

- **If the lining of the disc is peeling off or discolored or even if a part of the printed mark is defaced, replace all the discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



3. INSPECT 1ST AND REVERSE BRAKE DISC

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.
If necessary, replace them.
NOTICE:
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all the discs.**
- **Before assembling new discs, soak in ATF for at least 15 minutes.**

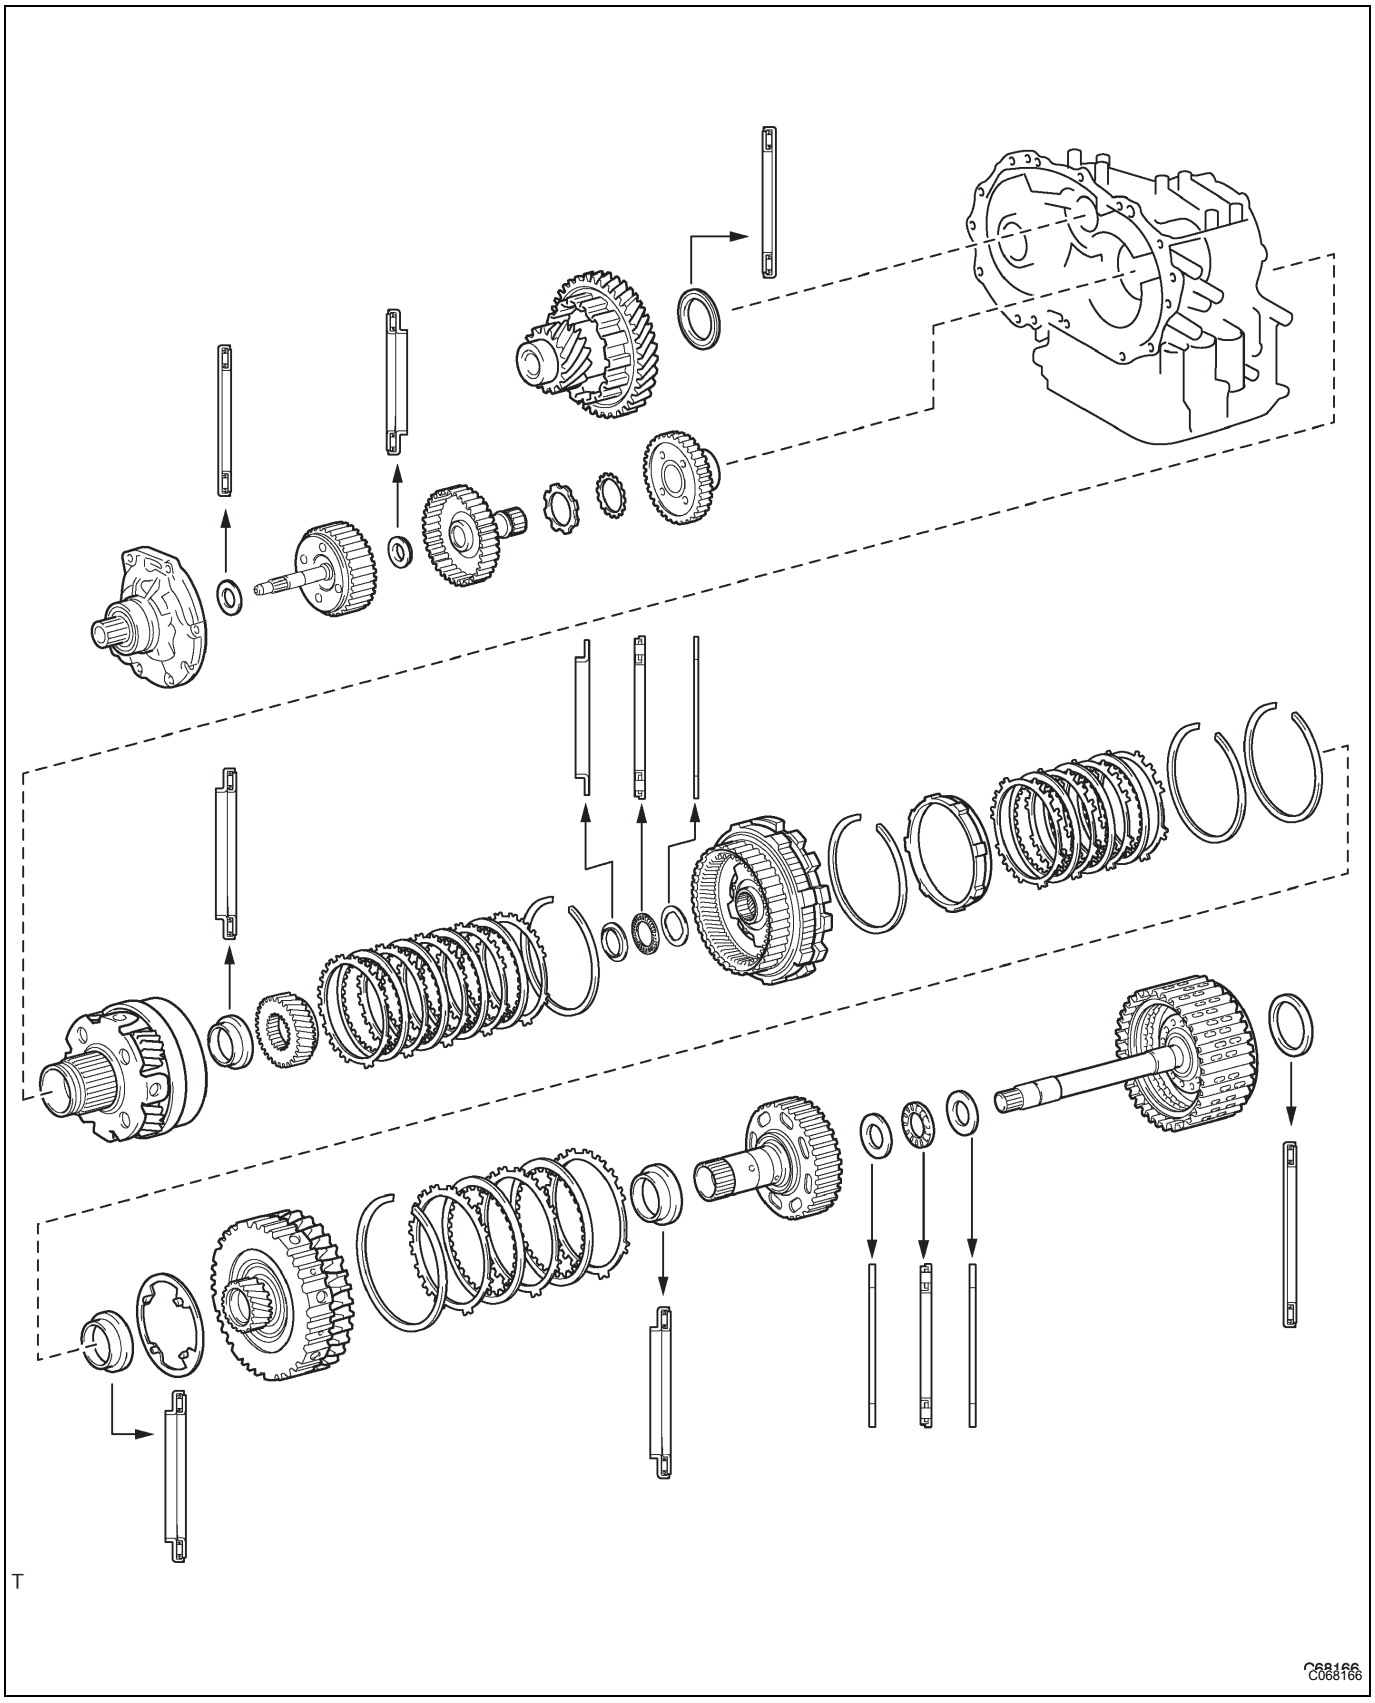


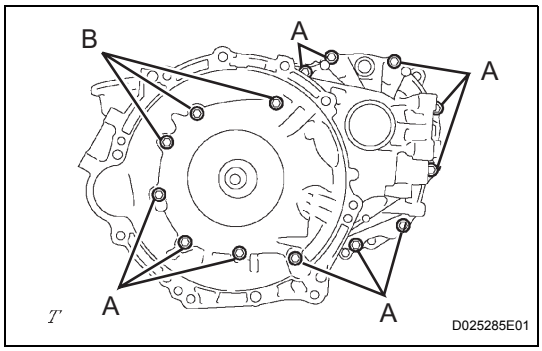
4. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
13.96 mm (0.5496 in.)

REASSEMBLY

1. BEARING POSITION



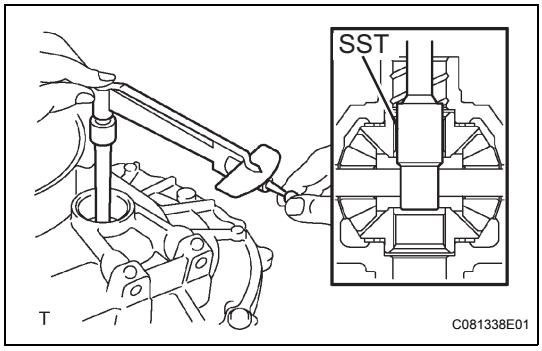


2. INSPECT DIFFERENTIAL CASE TAPERED ROLLER BEARING PRELOAD

(a) Coat the front differential case and bearing with ATF and install them onto the transaxle case.

(b) Install the transaxle housing with the 14 bolts.

Torque: Bolt A
29 N*m (300 kgf*cm, 22 ft.*lbf)
Bolt B
22 N*m (225 kgf*cm, 16 ft.*lbf)



(c) Using SST and a small torque wrench, measure the preload of the differential gear.

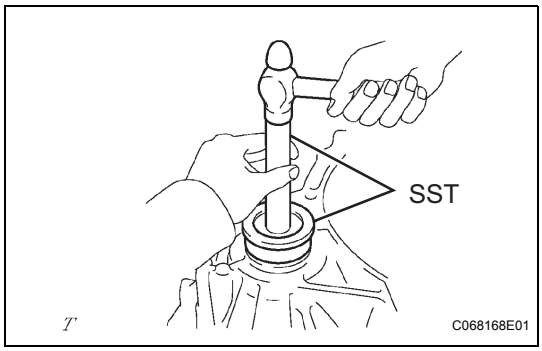
Preload

Bearing	Standard
New	0.98 to 1.57 N*m (10.0 to 16.0 kgf*cm 8.7 to 13.9 in.*lbf)
Used	0.49 to 0.78 N*m (5.0 to 8.0 kgf*cm 4.3 to 6.9 in.*lbf)

If the preload is not within the specifications, remove the differential from the transaxle case.
Select a new transaxle case side adjusting shim in accordance with the following table.

Adjusting shim thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
01	1.90 (0.0748)	11	2.40 (0.0945)
02	1.95 (0.0768)	12	2.45 (0.0965)
03	2.00 (0.0787)	13	2.50 (0.0984)
04	2.05 (0.0807)	14	2.55 (0.1004)
05	2.10 (0.0827)	15	2.60 (0.1024)
06	2.15 (0.0846)	16	2.65 (0.1043)
07	2.20 (0.0866)	17	2.70 (0.1063)
08	2.25 (0.0885)	18	2.75 (0.1082)
09	2.30 (0.0906)	19	2.80 (0.1102)
10	2.35 (0.0925)		



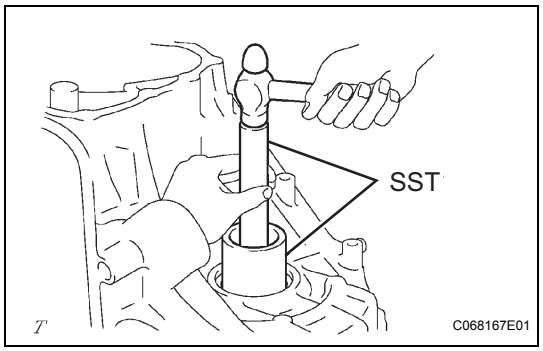
3. INSTALL TRANSAXLE CASE OIL SEAL

(a) Coat the lip of a new oil seal with MP grease.

(b) Using SST and a hammer, drive in a new oil seal.

SST 09554-14010, 09950-70010 (09951-07100)
Oil seal drive in depth:
1.5 to 2.5 mm (0.059 to 0.098 in.)

AX



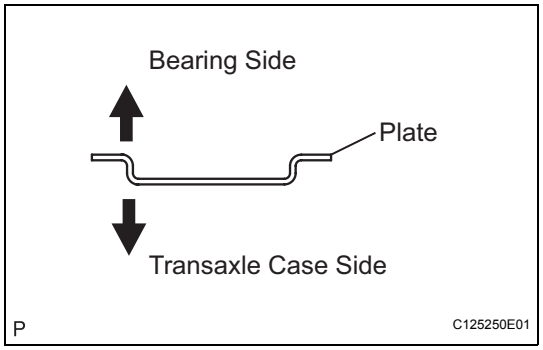
4. INSTALL FRONT TRANSAXLE CASE OIL SEAL

(a) Coat the lip of a new oil seal with MP grease.

(b) Using SST and a hammer, drive in a new oil seal.

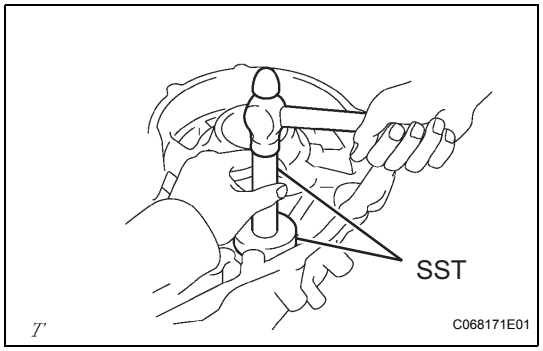
SST 09726-27012 (09726-02041), 09950-70010 (09951-07150)

Oil seal drive in depth:
5.4 to 6.4 mm (0.213 to 0.252 in.)



5. INSTALL FRONT DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Install transaxle case plate No. 1 onto the transaxle case.

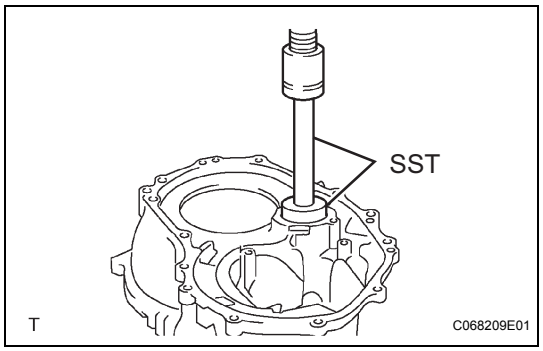


(b) Using SST and a hammer, install the front drive pinion rear tapered roller bearing onto the transaxle case.

SST 09950-60010 (09951-00610), 09950-70010 (09951-07150)

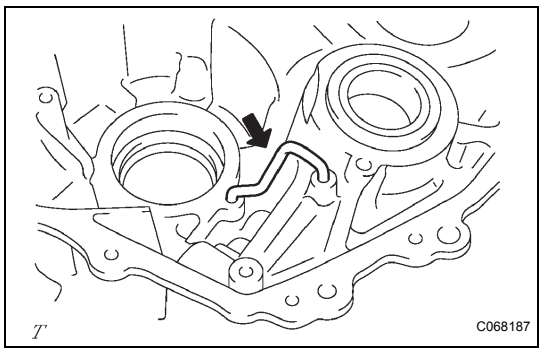
6. INSTALL FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Install the thrust bearing onto the transaxle housing.



(b) Using SST and a press, install a new front drive pinion front tapered roller bearing onto the transaxle housing.

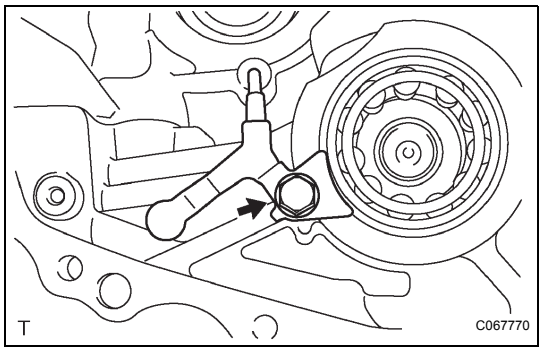
SST 09950-60010 (09951-00650), 09950-70010 (09951-07150)



7. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

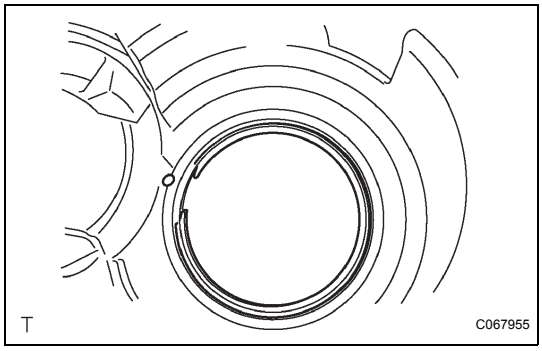
(a) Install the differential gear lube apply tube onto the transaxle housing.

AX



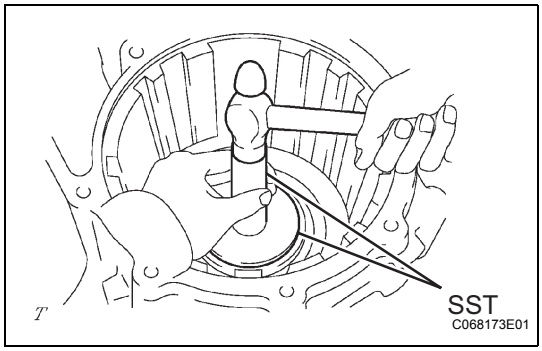
8. INSTALL BEARING LOCK PLATE

(a) Install the bearing lock plate onto the transaxle housing with the bolt.
Torque: 11 N*m (115 kgf*cm, 8 ft.*lbf)



9. INSTALL COUNTER DRIVE GEAR HOLE SNAP RING

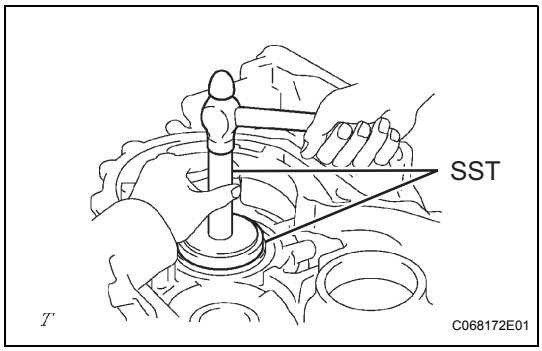
(a) Using a screwdriver, install the counter drive gear hole snap ring onto the transaxle case.



10. INSTALL COUNTER DRIVE GEAR BEARING

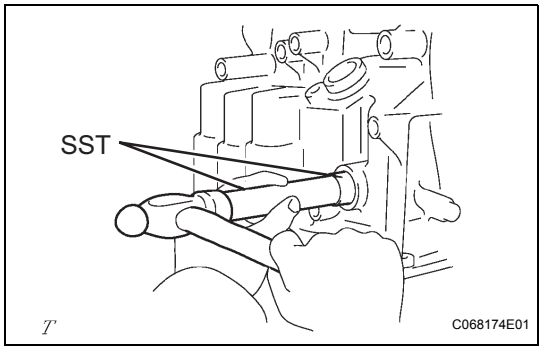
(a) Using SST and a hammer, install the counter drive gear bearing LH outer race onto the transaxle case.
SST 09950-60020 (09951-00890), 09950-70010 (09951-07150)

AX



(b) Using SST and a hammer, install the counter drive gear bearing RH outer race onto the transaxle case.
SST 09950-60020 (09951-00890), 09950-70010 (09951-07150)

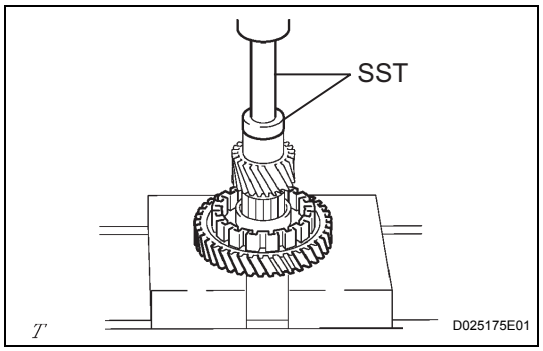
(c) Install the counter drive gear bearing onto the transaxle case.



11. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Coat the lip of a new oil seal with MP grease.

(b) Using SST and a hammer, install a new manual valve lever shaft oil seal.
SST 09950-60010 (09951-00220), 09950-70010 (09951-07100)
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.020 to 0.020 in.)



12. INSTALL DIFFERENTIAL DRIVE PINION

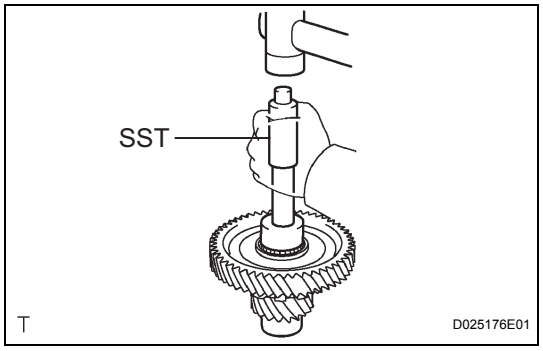
(a) Using SST and a press, install the differential drive pinion onto the counter driven gear.

SST 09950-60010 (09951-00350), 09950-70010 (09951-07150)

NOTICE:

When replacing the counter driven gear, replace the counter drive gear in the transaxle case as well.

Press the differential drive pinion in until it comes into contact with the counter driven gear.



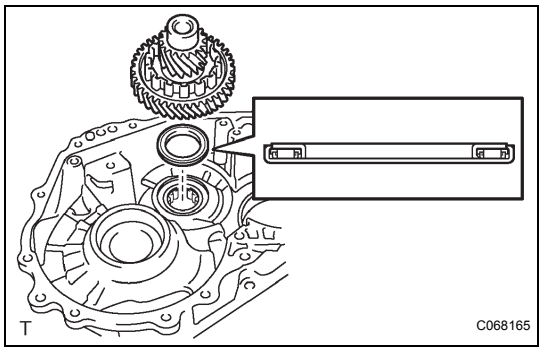
13. INSTALL DIFFERENTIAL DRIVE PINION PLUG

(a) Using SST and a plastic hammer, install a new differential drive pinion plug onto the differential drive pinion.

SST 09221-25026 (09221-00071)

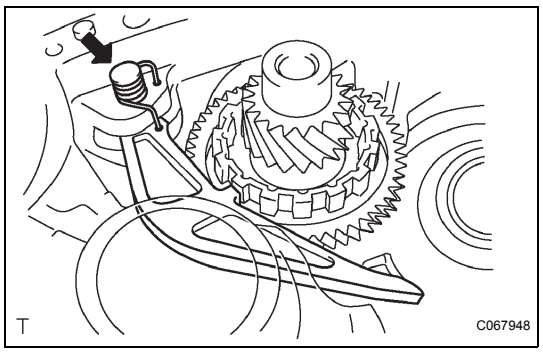
Standard clearance:

2.5 to 2.6 mm (0.0984 to 0.1023 in.)



14. INSTALL COUNTER DRIVEN GEAR

(a) Install the counter driven gear and drive pinion thrust bearing onto the transaxle case.



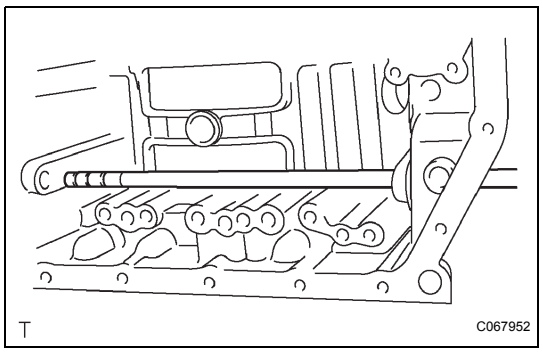
15. INSTALL PARKING LOCK PAWL

(a) Coat the parking lock pawl shaft with ATF.

(b) Install the parking lock pawl, parking lock pawl shaft torsion spring and parking lock pawl shaft onto the transaxle case.

NOTICE:

Check that the parking lock pawl moves smoothly.



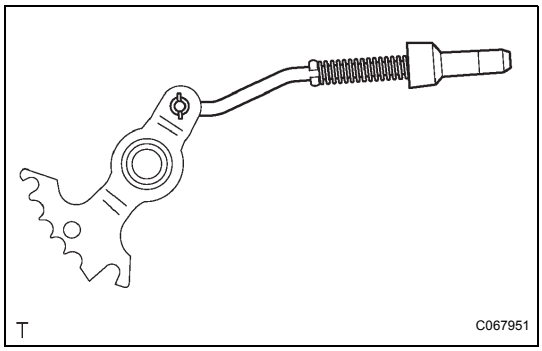
16. INSTALL MANUAL VALVE LEVER SHAFT

(a) Install the manual valve lever shaft onto the transaxle case.

NOTICE:

Do not damage the oil seal lip.

AX



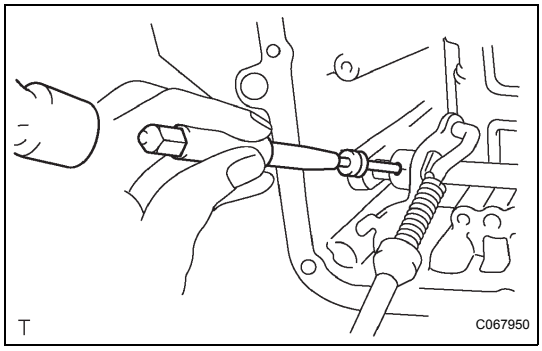
17. INSTALL PARKING LOCK ROD SUB-ASSEMBLY

(a) Install the parking lock rod onto the manual valve lever.

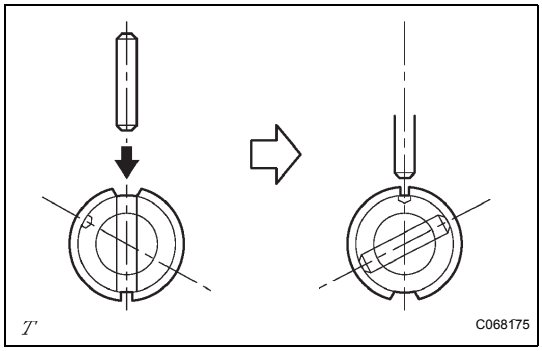
18. INSTALL MANUAL VALVE LEVER SUB-ASSEMBLY

(a) Coat the manual valve lever sub-assembly with ATF.

(b) Install the manual valve lever and a new manual valve lever spacer onto the manual valve lever shaft.



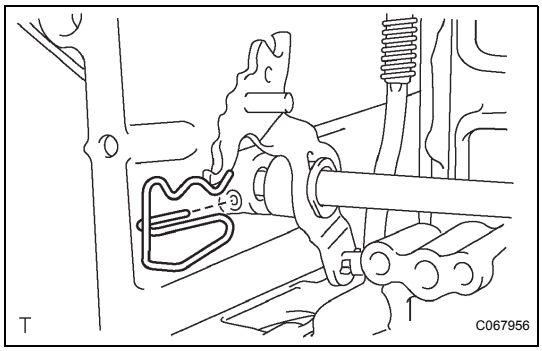
(c) Using a pin punch and hammer, drive in the pin.



(d) Turn the spacer and lever shaft to align the small hole for locating the staking position in the spacer with the staking position mark on the lever shaft.

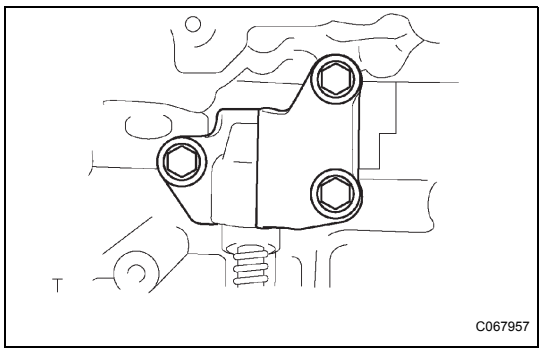
(e) Using a pin punch, stake the spacer through the small hole.

(f) Check that the spacer does not turn.



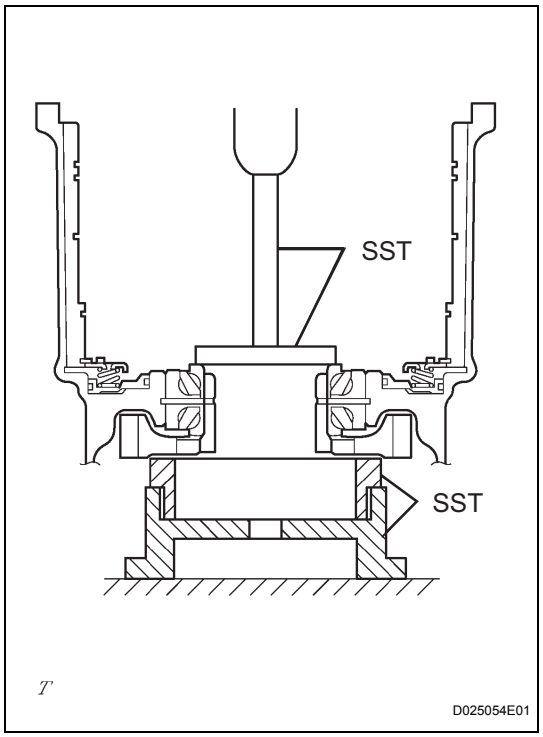
19. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Install the manual valve lever shaft retainer spring onto the manual valve lever shaft.



20. INSTALL PARKING LOCK PAWL BRACKET

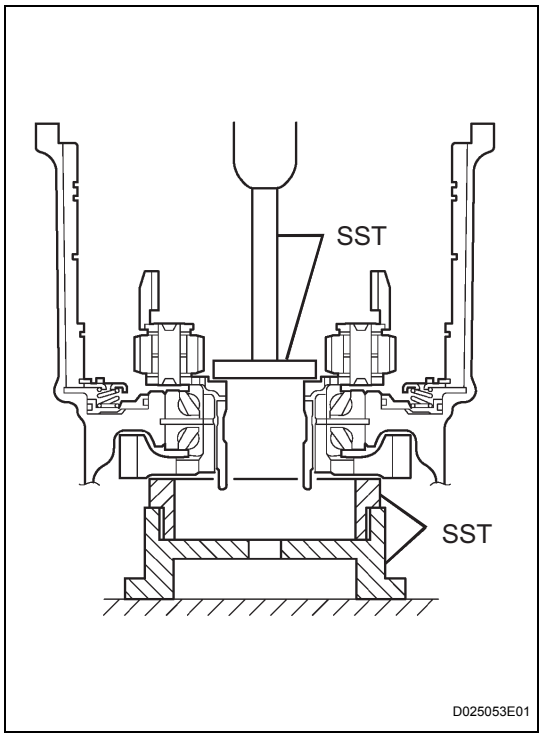
(a) Install the parking lock pawl bracket, parking lock rod and cam guide sleeve onto the transaxle case with the 3 bolts.
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)



21. INSTALL COUNTER DRIVE GEAR

(a) Using SST and a press, install the counter drive gear onto the transaxle case.

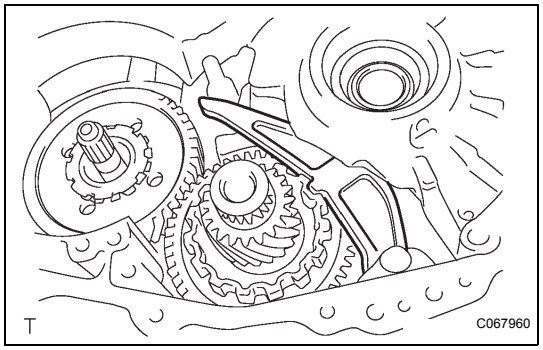
SST 09223-15030, 09527-17011, 09950-60010 (09951-00650), 09950-70010 (09951-07150)



22. INSTALL PLANETARY GEAR ASSEMBLY

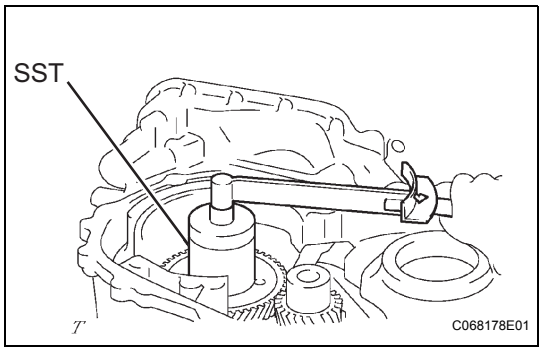
(a) Using SST and a press, install the planetary gear assembly onto the transaxle case.

SST 09950-60010 (09951-00480), 09223-15030, 09527-17011, 09950-70010 (09951-07150)

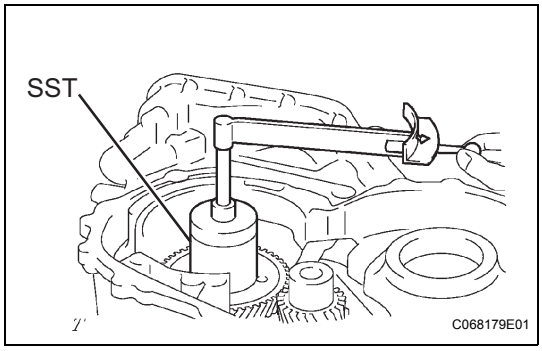


23. INSTALL COUNTER DRIVE GEAR NUT

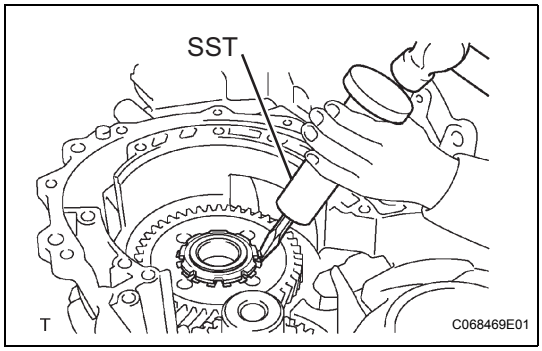
(a) Fix the counter driven gear with the parking lock pawl.



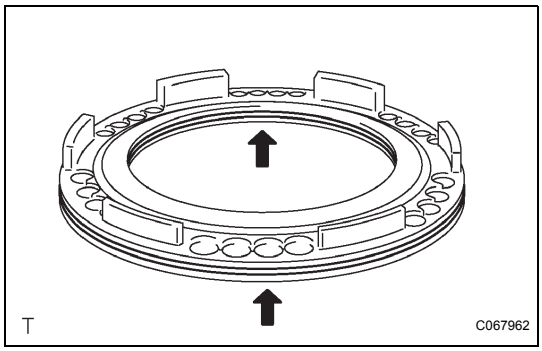
(b) Using SST, install a new lock washer and nut.
SST 09387-00120
Torque: 280 N*m (2,855 kgf*cm, 207 ft.*lbf)



(c) Using SST and a small torque wrench, measure the rotating torque while turning the counter drive gear at 60 turns per minute.
SST 09387-00120
Rotating torque:
0.20 to 0.49 N*m (2 to 5 kgf*cm, 2 to 4 in.*lbf)

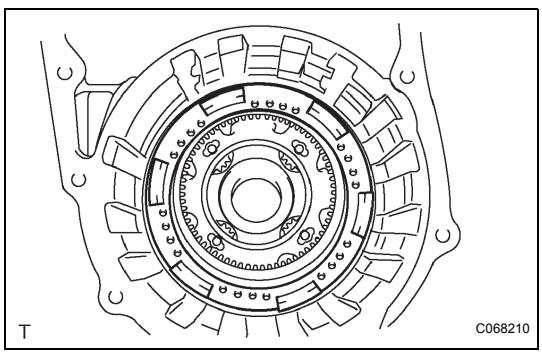


(d) Using SST and a hammer, stake the lock nut washer.
SST 09930-00010



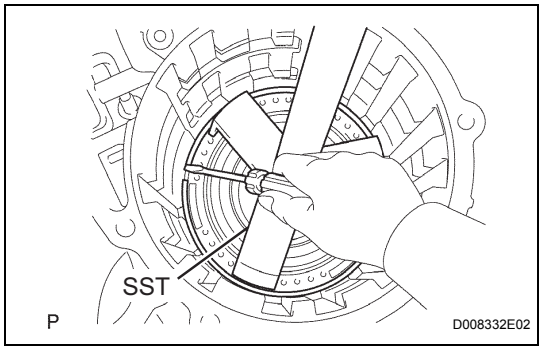
24. INSTALL NO. 2 1ST AND REVERSE BRAKE PISTON O-RING

(a) Coat 2 new O-rings with ATF, and install them onto No. 2 brake piston.



25. INSTALL NO. 2 1ST AND REVERSE BRAKE PISTON

(a) Coat No. 2 1st and reverse brake piston with ATF, and install it into the transaxle case.
NOTICE:
Do not damage the oil seal lip.

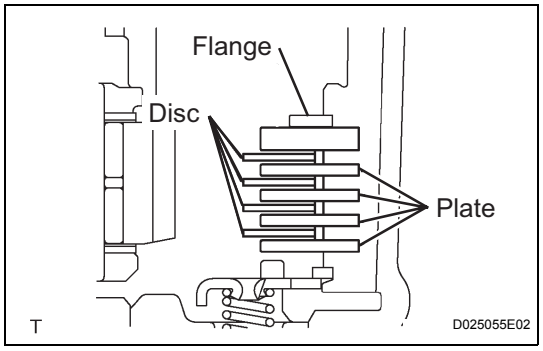


26. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Install the 1st and reverse brake return spring sub-assembly onto the transaxle case.

(b) Using SST, a press and a screwdriver, install the snap ring.

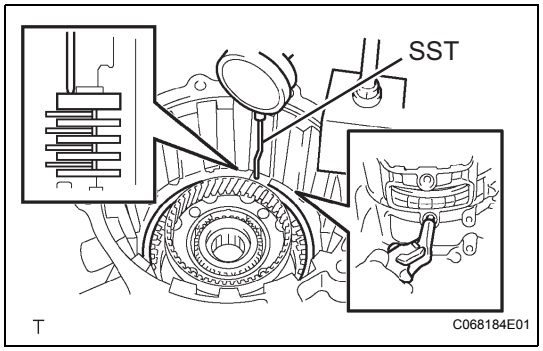
SST 09387-00070



27. INSTALL 1ST AND REVERSE BRAKE DISC

(a) Install the 4 plates, 4 discs and flange onto the transaxle case.

(b) Using a screwdriver, install the snap ring.



28. INSPECT PACK CLEARANCE OF FIRST AND REVERSE BRAKE

(a) Using SST and a dial indicator, measure the first and reverse brake clearance while pressing the disc and plate from the rear side.

SST 09350-36010 (09350-06110)

Pack clearance:

0.806 to 1.206 mm (0.0317 to 0.0475 in.)

NOTICE:

If the clearance is outside the specifications, select a new brake flange.

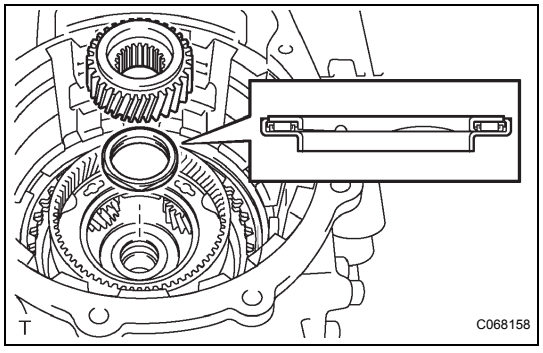
HINT:

There are 4 different flange thicknesses.

Flange thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
-	3.4 (0.134)	2	3.8 (0.150)
1	3.6 (0.142)	3	4.0 (0.157)

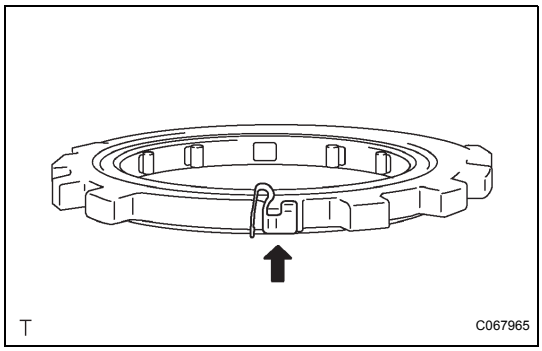
(b) Check that the 1st and reverse brake piston moves when compressed air is applied (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole.



29. INSTALL FRONT PLANETARY SUN GEAR

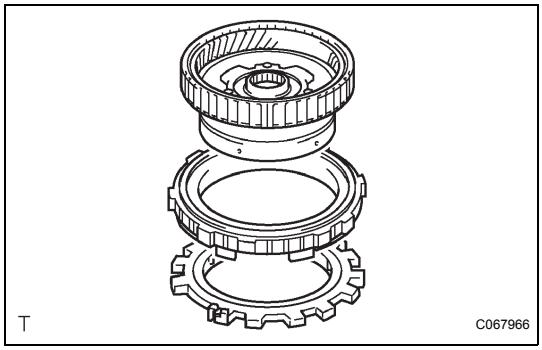
(a) Install the planetary sun gear and needle roller bearing onto the planetary gear assembly.

AX



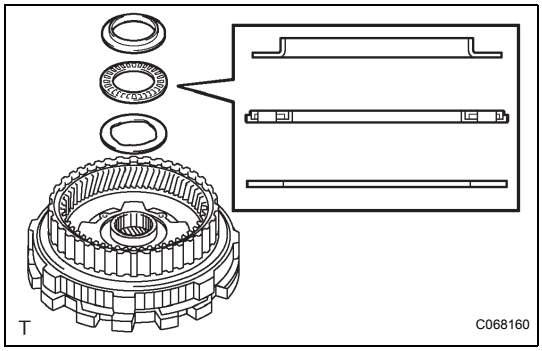
30. INSTALL OUTER RACE RETAINER

(a) Install the outer retainer onto No. 2 1-way clutch.



31. INSTALL NO. 2 1-WAY CLUTCH

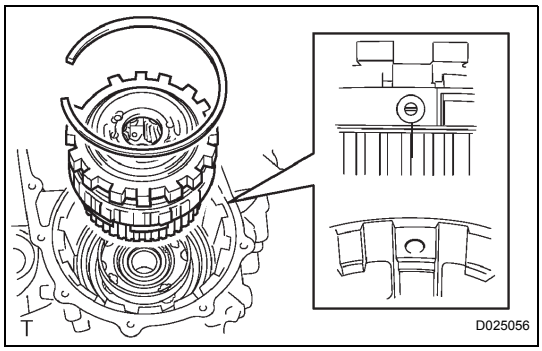
(a) Install the 1-way clutch and 2nd brake piston assembly onto the rear planetary gear assembly.



32. INSTALL REAR PLANETARY GEAR THRUST NEEDLE ROLLER BEARING

(a) Install No. 2 thrust bearing race, the planetary gear thrust needle roller bearing and thrust bearing race onto the rear planetary gear assembly.

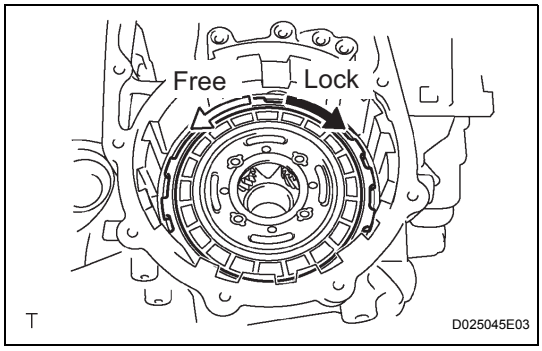
AX



33. INSTALL REAR PLANETARY GEAR ASSEMBLY

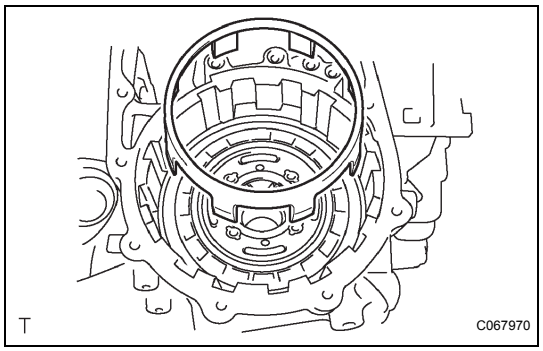
(a) Install the rear planetary gear assembly onto the transaxle case.

(b) Using a screwdriver, install the snap ring.



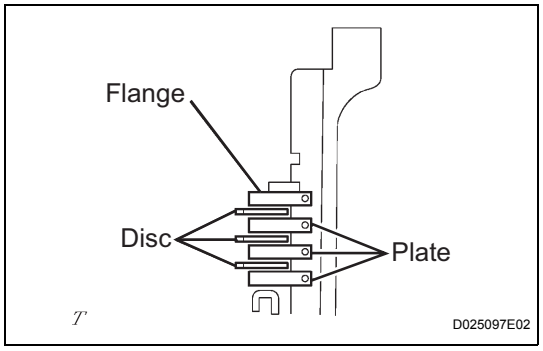
34. INSPECT NO. 2 1-WAY CLUTCH

(a) Check that the rear planetary gear turns freely counterclockwise and locks when turned clockwise.



35. INSTALL 2ND BRAKE PISTON SLEEVE

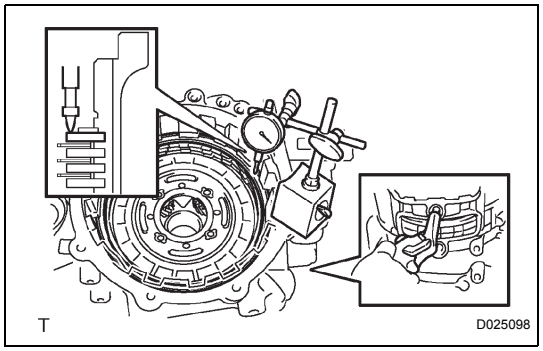
(a) Install the 2nd brake piston sleeve onto the transaxle case.



36. INSTALL 2ND BRAKE BRAKE DISC

(a) Install the 3 discs, 3 plates and flange onto the transaxle case.

(b) Using a screwdriver, install a snap ring onto the transaxle case.



37. INSPECT PACK CLEARANCE OF 2ND BRAKE

(a) Using a dial indicator, measure the 2nd brake pack clearance while applying and releasing compressed air (392 to 785 kPa, 4 to 8 kgf/cm^2, 57 to 114 psi).

Pack clearance:

0.847 to 1.247 mm (0.0333 to 0.0491 in.)

NOTICE:

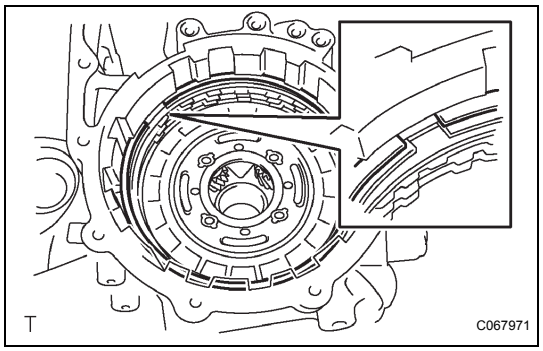
If the clearance is outside the specifications, select a new brake flange.

HINT:

There are 4 different flange thicknesses.

Flange thickness

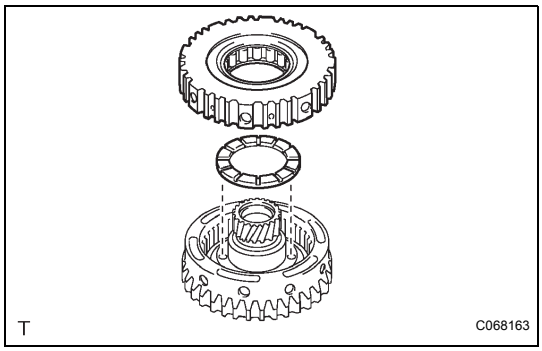
Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)



38. INSTALL 2ND COAST AND OVERDRIVE BRAKE FLANGE HOLE SNAP RING

(a) Using a screwdriver, install a snap ring onto the transaxle case.

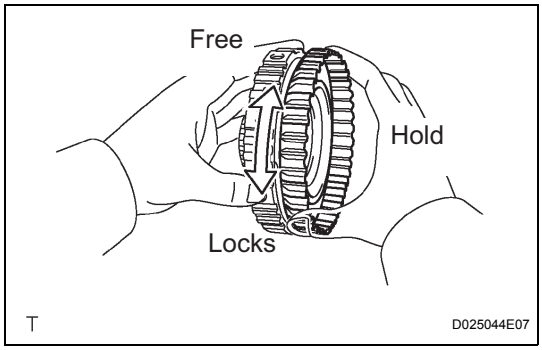
AX



39. INSTALL 1-WAY CLUTCH ASSEMBLY

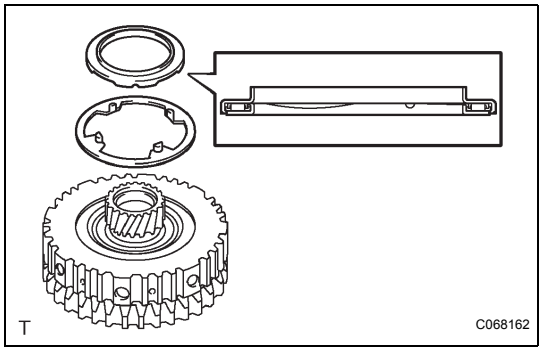
(a) Install No. 2 thrust washer onto the rear planetary gear assembly.

(b) Install 1-way clutch assembly onto the rear planetary sun gear assembly.



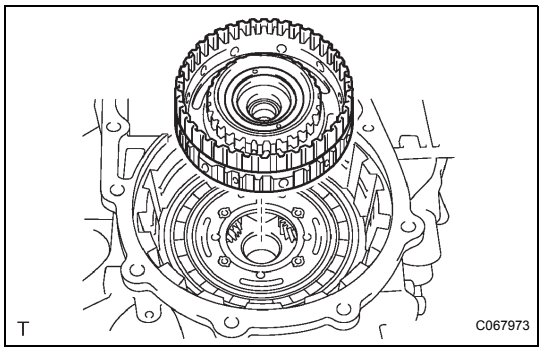
40. INSPECT 1-WAY CLUTCH ASSEMBLY

(a) Hold the rear planetary sun gear and turn the 1-way clutch and check that the 1-way clutch turns freely counterclockwise and locks when turned clockwise.



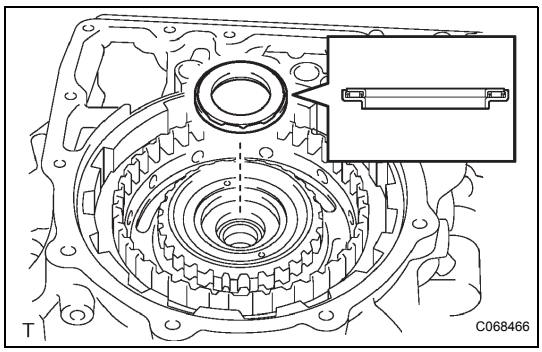
41. INSTALL REAR PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

(a) Install the thrust bearing and a washer onto the rear planetary sun gear.



42. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY

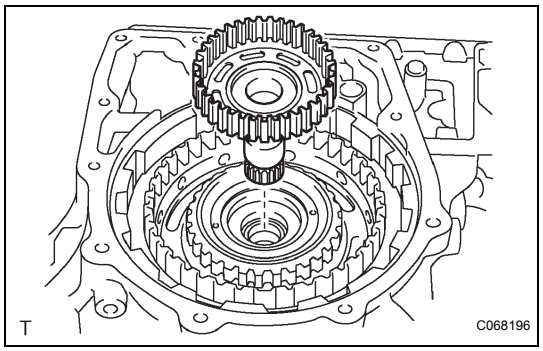
(a) Install the rear planetary sun gear assembly.



43. INSTALL REAR NO. 2 PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

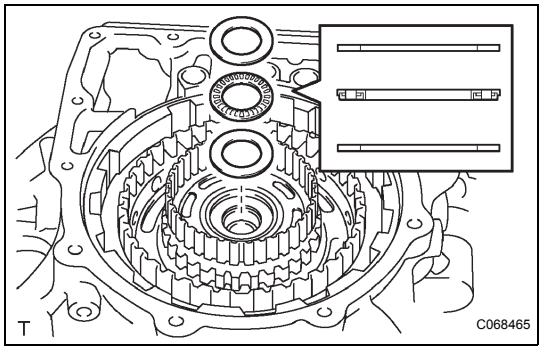
(a) Install the thrust bearing onto the rear planetary sun gear.

AX



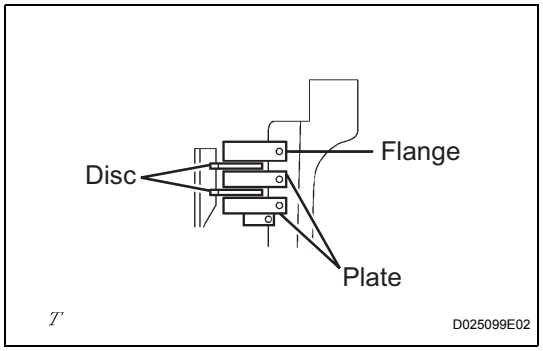
44. INSTALL DIRECT CLUTCH HUB

(a) Install the direct clutch hub.



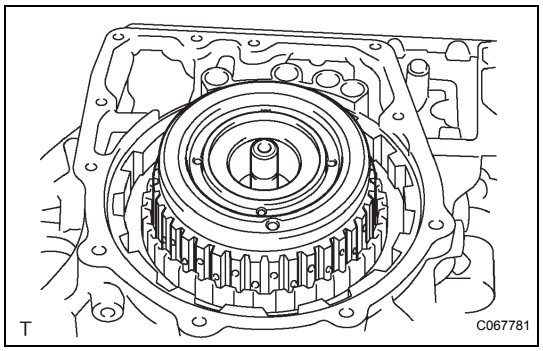
45. INSTALL THRUST NEEDLE ROLLER BEARING

(a) Install No. 3 thrust bearing race, the thrust needle roller bearing and the C-2 hub thrust bearing race onto the direct clutch hub.



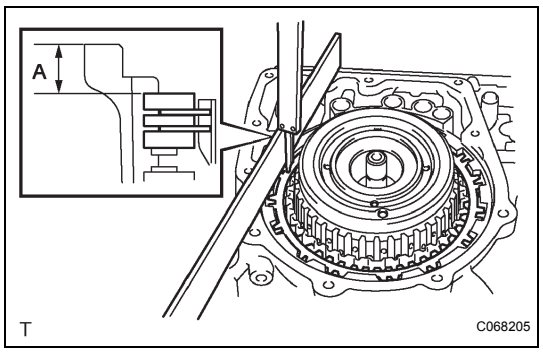
46. INSTALL 2ND COAST AND OVERDRIVE BRAKE DISC

(a) Install the 2 discs, 2 plates and flange onto the transaxle case.



47. INSTALL INTERMEDIATE SHAFT ASSEMBLY

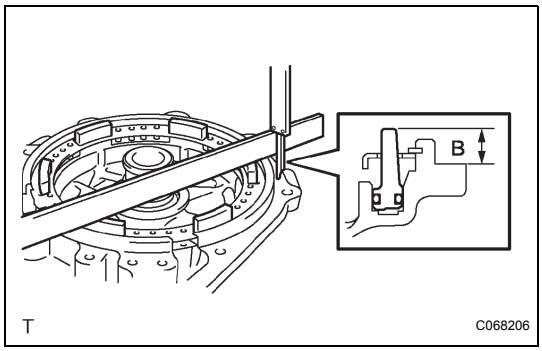
(a) Install the intermediate shaft assembly onto the transaxle case.



48. INSPECT 2ND COAST AND OVERDRIVE BRAKE CLEARANCE

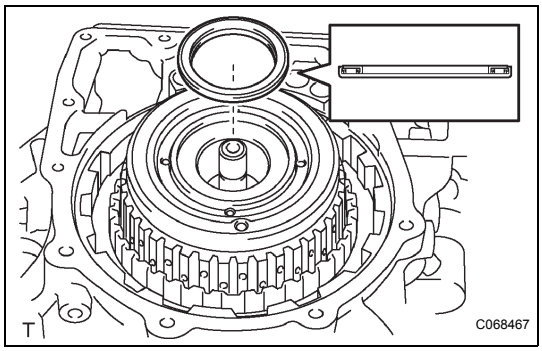
(a) As shown in the illustration, place a straight edge on the transaxle case and measure the distance between the 2nd coast and O/D brake flange and straight edge using vernier calipers. (Dimension A)

AX



(b) As shown in the illustration, place a straight edge on the O/D brake piston and measure the distance between the transaxle rear cover and straight edge using vernier calipers. (Dimension B)
Calculate the piston stroke value using the following formula. Select a flange which meets the piston stroke value and install it.
Pack clearance:
2.091 to 2.491 mm (0.0823 to 0.0981 in.)
NOTICE:
If the clearance is outside the specifications, select a new brake flange.
HINT:
There are 4 different flange thicknesses.
Flange thickness

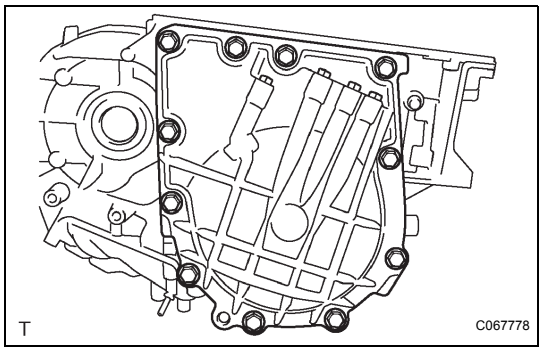
Mark	Thickness mm (in.)	Mark	Thickness mm (in,)
4	4.0 (0.1575)	6	4.4 (0.1732)
5	4.2 (0.1654)	7	4.6 (0.1811)



49. INSTALL REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING

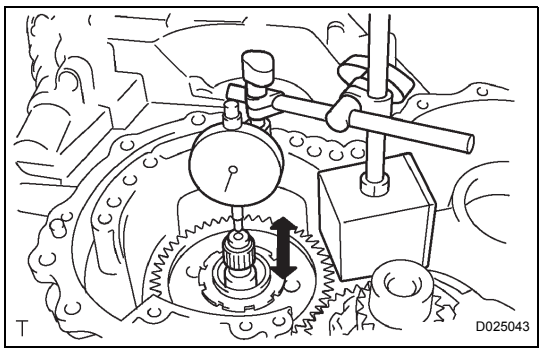
(a) Install the bearing onto the intermediate shaft.

AX



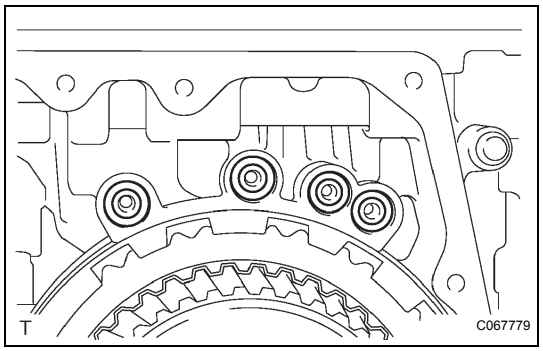
50. INSPECT INTERMEDIATE SHAFT ASSEMBLY

(a) Install the transaxle rear cover with the 11 bolts.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



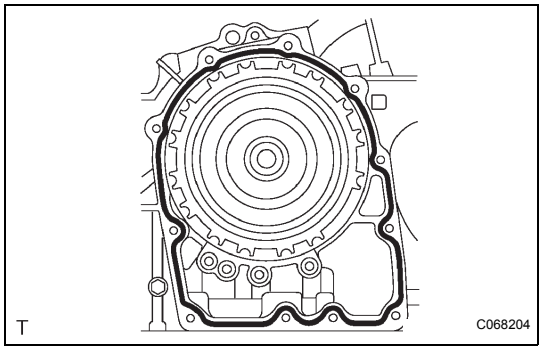
(b) Using a dial indicator, measure the clearance of the intermediate shaft.
Standard clearance:
0.204 to 0.966 mm (0.008 to 0.038 in.)

(c) Remove the 11 bolts and the transaxle rear cover.



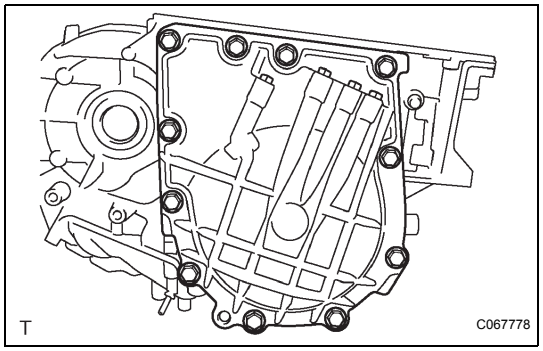
51. INSTALL TRANSAXLE CASE GASKET

(a) Install 4 new gaskets onto the transaxle case.

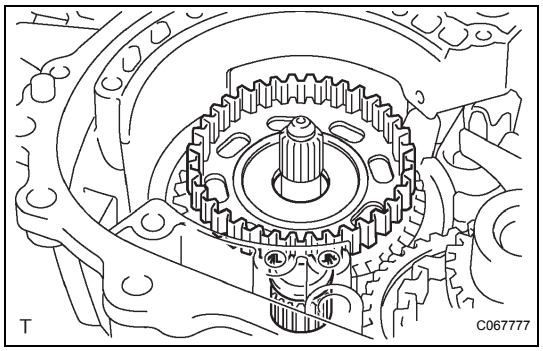


52. INSTALL REAR TRANSAXLE COVER ASSEMBLY

(a) Apply FIPG to the transaxle case.
FIPG:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent

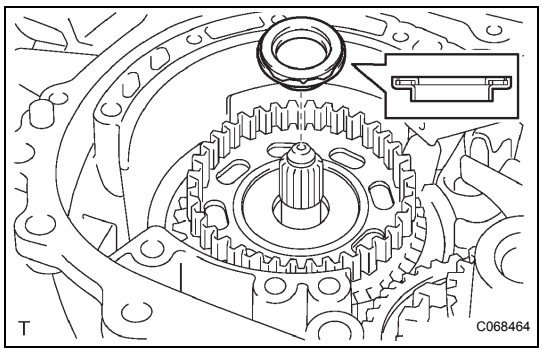


(b) Install the rear transaxle cover with the 11 bolts.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



53. INSTALL FORWARD CLUTCH HUB SUB-ASSEMBLY

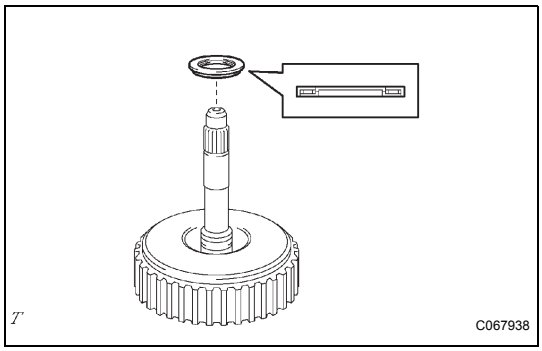
(a) Install the forward clutch hub sub-assembly onto the transaxle case.



54. INSTALL FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING

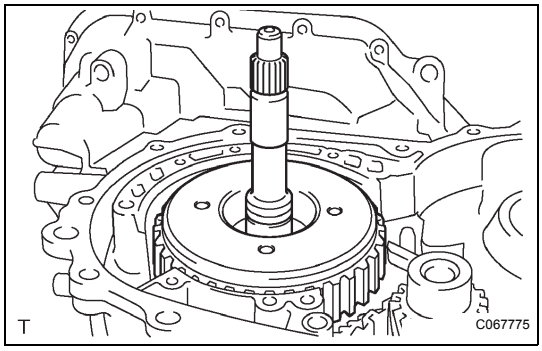
(a) Install the bearing onto the forward clutch hub.

AX



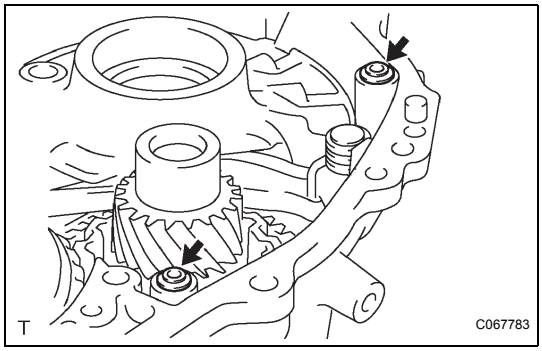
55. INSTALL STATOR SHAFT THRUST NEEDLE ROLLER BEARING

(a) Install the bearing onto the input shaft assembly.



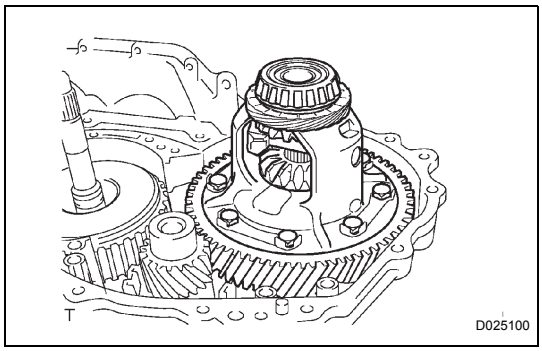
56. INSTALL INPUT SHAFT ASSEMBLY

(a) Install the input shaft assembly onto the transaxle case.



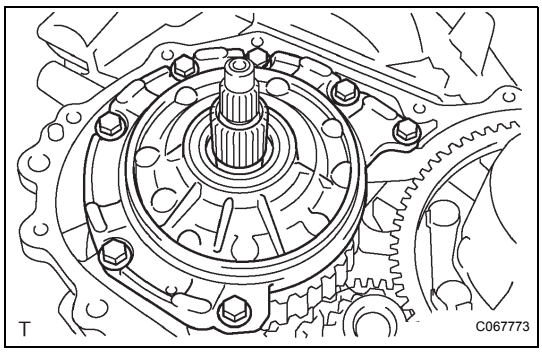
57. INSTALL OVERDRIVE BRAKE GASKET

(a) Install 2 new gaskets onto the transaxle case.



58. INSTALL DIFFERENTIAL GEAR ASSEMBLY

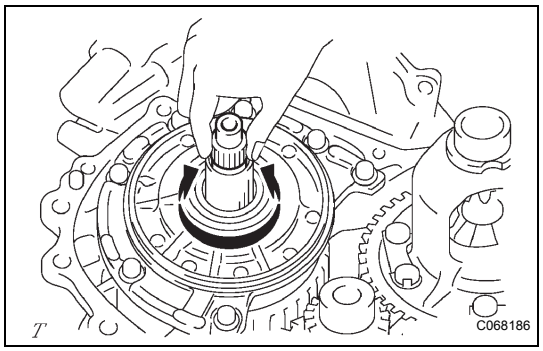
(a) Install the differential gear assembly onto the transaxle case.



59. INSTALL OIL PUMP ASSEMBLY

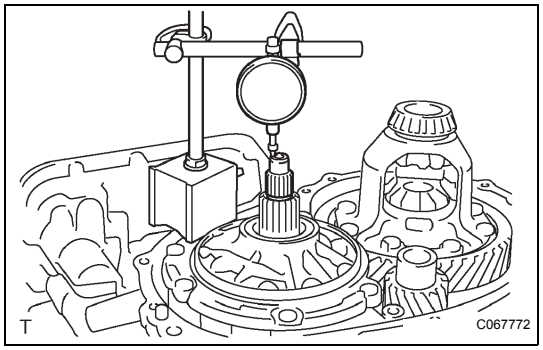
(a) Install the oil pump with the 7 bolts.
Torque: 22 N*m (225 kgf*cm, 16 ft.*lbf)

AX



60. INSPECT INPUT SHAFT ASSEMBLY

(a) Make sure that the input shaft turns smoothly.



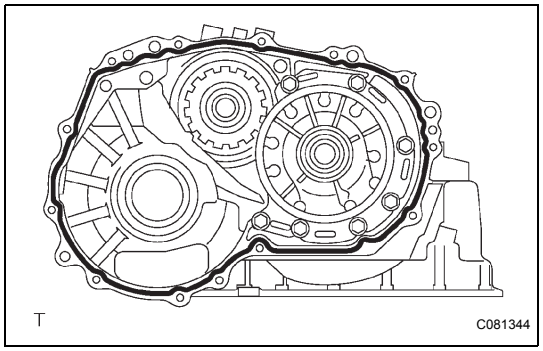
61. INSPECT INPUT SHAFT END PLAY

(a) Measure the end play in the axial direction.

End play:

0.37 to 1.29 mm (0.0146 to 0.0508 in.)

If the end play is not as specified, replace the thrust needle roller bearing.

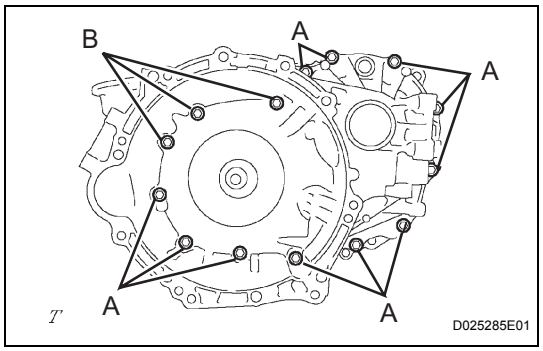


62. INSTALL TRANSAXLE HOUSING

(a) Apply FIPG to the transaxle case.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent



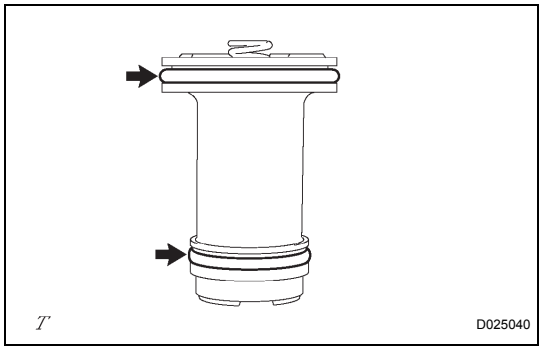
(b) Install the transaxle housing with the 14 bolts.

Torque: Bolt A

29 N*m (300 kgf*cm, 22 ft.*lbf)

Bolt B

22 N*m (225 kgf*cm, 16 ft.*lbf)

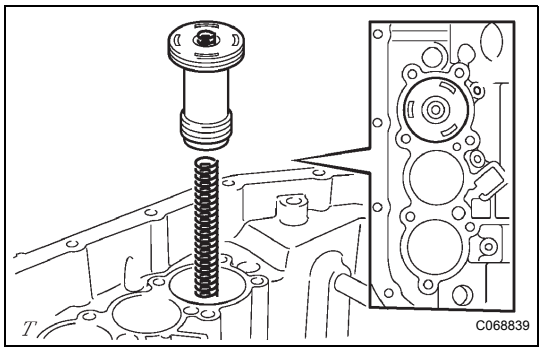


63. INSTALL C-2 ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF and install them onto the C-2 accumulator piston.

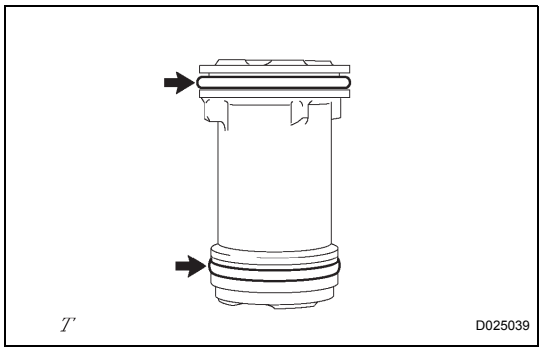
NOTICE:

Do not damage the O-rings.



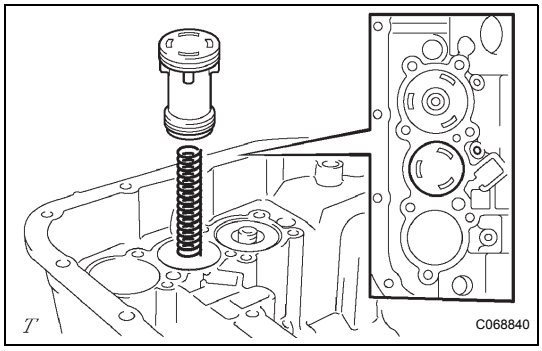
(b) Install the spring and C-2 accumulator piston.
Accumulator spring

Spring	Free length/ Outer diameter mm (in.)	Color
C-2	66.90 (2.6339) 17.20 (0.6772)	-



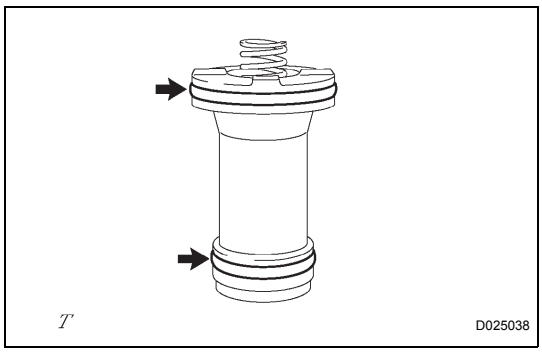
64. INSTALL C-3 ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF and install them onto the C-3 accumulator piston.
NOTICE:
Do not damage the O-rings.



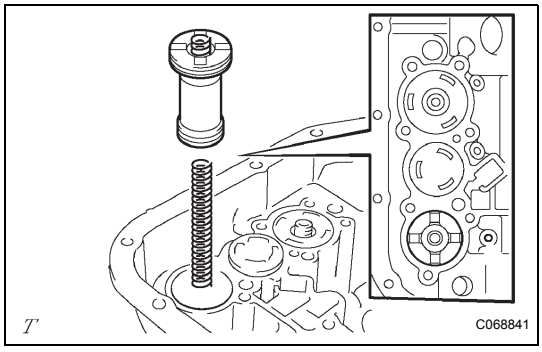
(b) Install the spring and C-3 accumulator piston.
Accumulator spring

Spring	Free length/ Outer diameter mm (in.)	Color
C-3	80.20 (3.1575) 18.70 (0.7362)	Blue



65. INSTALL B-2 ACCUMULATOR PISTON

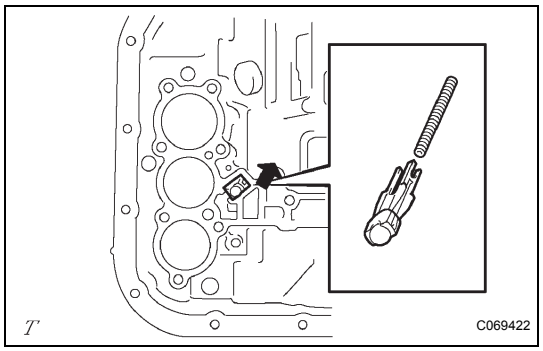
(a) Coat 2 new O-rings with ATF and install them onto the B-2 accumulator piston.
NOTICE:
Do not damage the O-rings.



(b) Install the spring and B-2 accumulator piston.
Accumulator spring

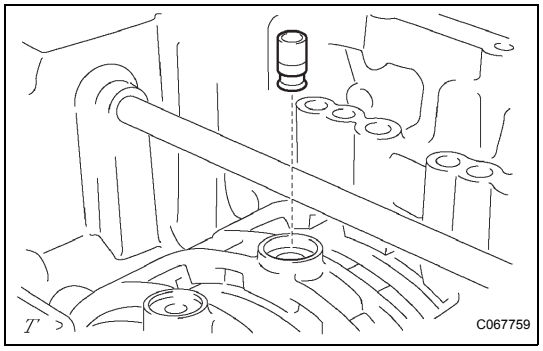
Spring	Free length/ Outer diameter mm (in.)	Color
B-2	66.90 (2.6339) 15.50 (0.6102)	Green

AX



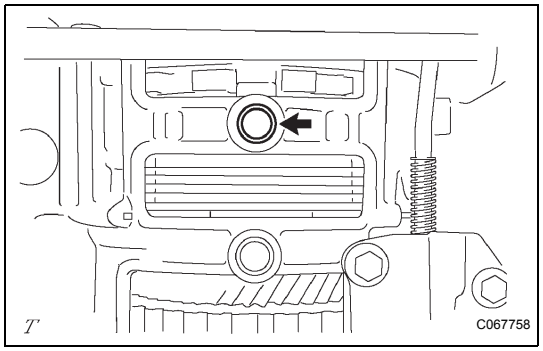
66. INSTALL CHECK BALL BODY

(a) Install the spring and check ball body.



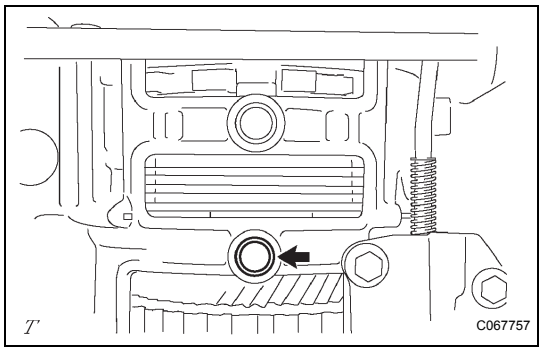
67. INSTALL BRAKE DRUM GASKET

(a) Install a new brake drum gasket.



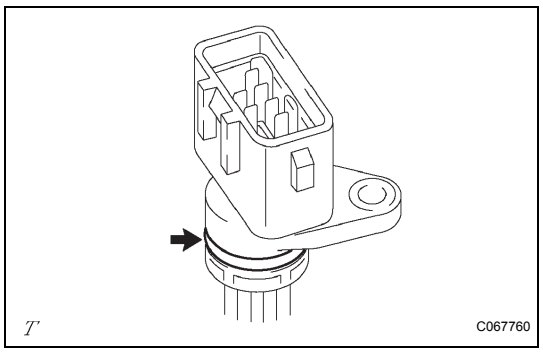
68. INSTALL TRANSAXLE CASE GASKET

(a) Coat a new transaxle case gasket with ATF, and install it onto the transaxle case.



69. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET

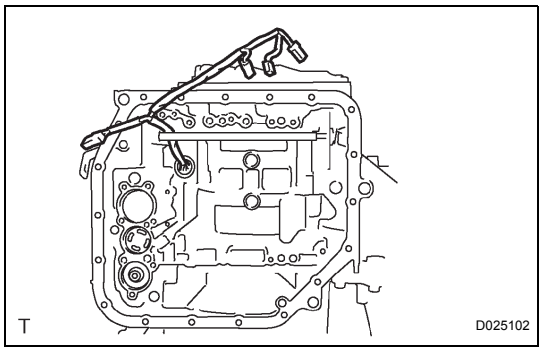
(a) Coat a new transaxle case 2nd brake gasket with ATF, and install it onto the transaxle case.



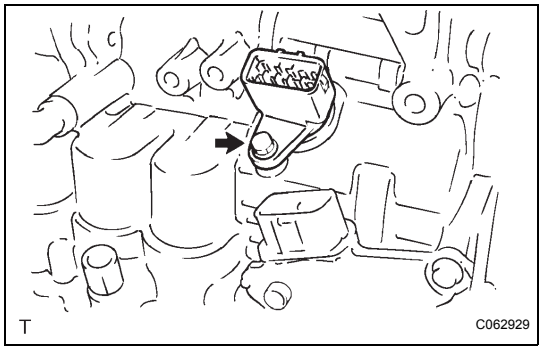
70. INSTALL TRANSMISSION WIRE

(a) Coat a new O-ring with ATF, and install it onto the transmission wire.

AX



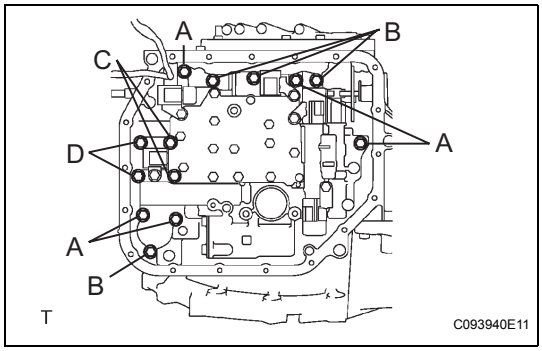
(b) Insert the transmission wire into the transaxle.



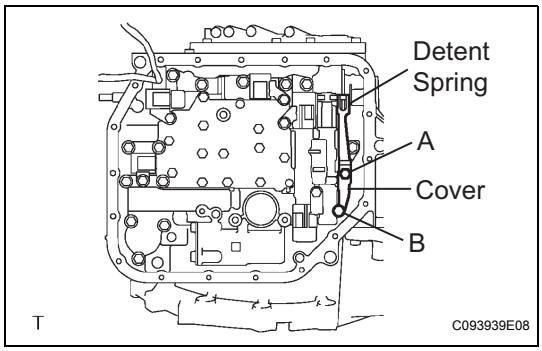
(c) Install the transmission wire with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

71. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Align the groove of the manual valve with the pin of the manual valve lever.



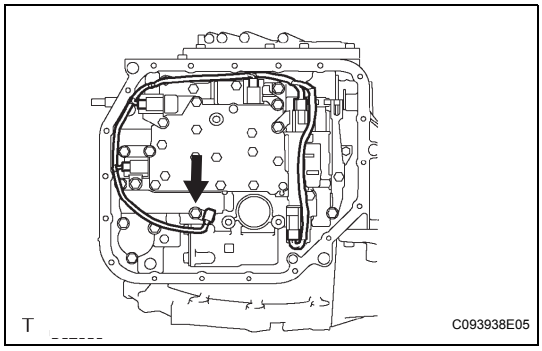
(b) Provisionally install the valve body with the 13 bolts.
Bolt length:
Bolt A: 32 mm (1.26 in.)
Bolt B: 22 mm (0.87 in.)
Bolt C: 55 mm (2.17 in.)
Bolt D: 45 mm (1.77 in.)



(c) Provisionally install the detent spring and detent spring cover with the 2 bolts.
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 45 mm (1.77 in.)

(d) Check that the manual valve lever is in contact with the center of the roller at the tip of the detent spring.

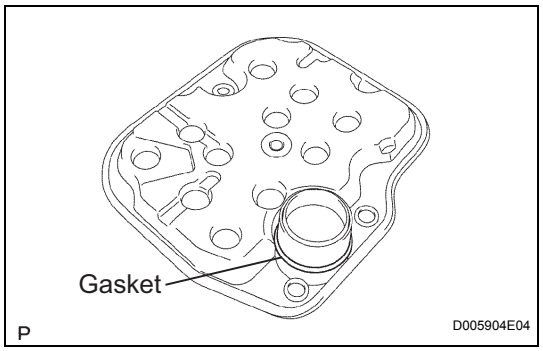
(e) Tighten the 15 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)



(f) Connect the 5 solenoid connectors.

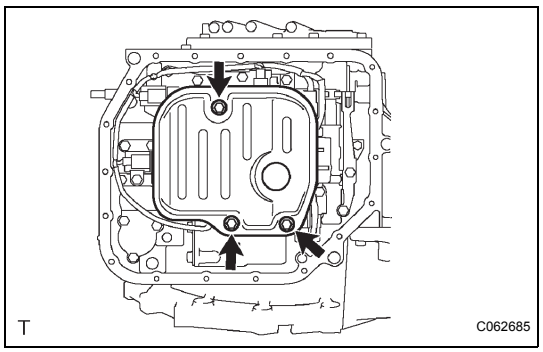
(g) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)
Bolt length:
55 mm (2.17 in.)

AX

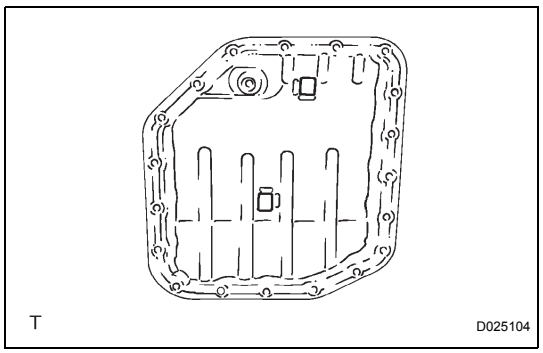


72. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new O-ring with ATF, and install it into the oil strainer.



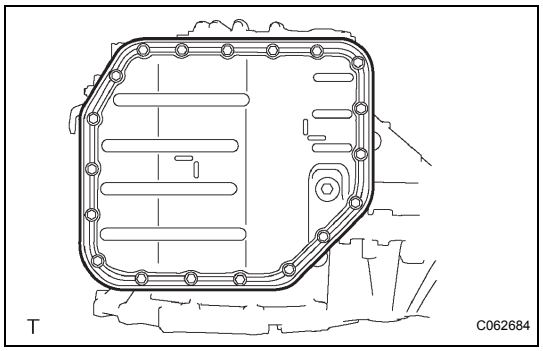
(b) Install the valve body oil strainer assembly onto the automatic transaxle with the 3 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)



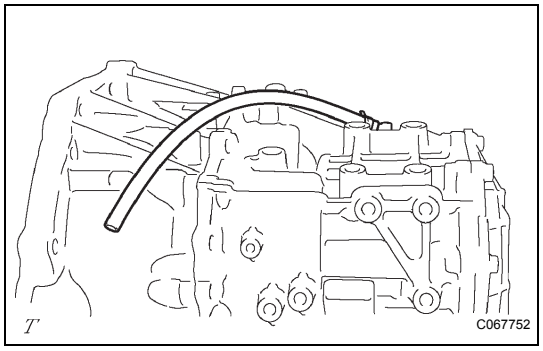
73. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets onto the oil pan.

(b) Install a new oil pan gasket onto the oil pan.



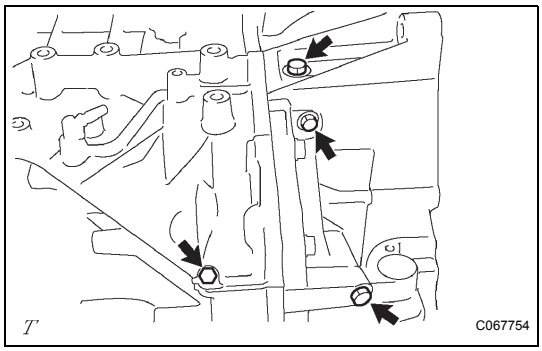
(c) Install the oil pan with the 19 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)



74. INSTALL BREATHER PLUG HOSE

(a) Install the breather plug hose onto the transaxle case.

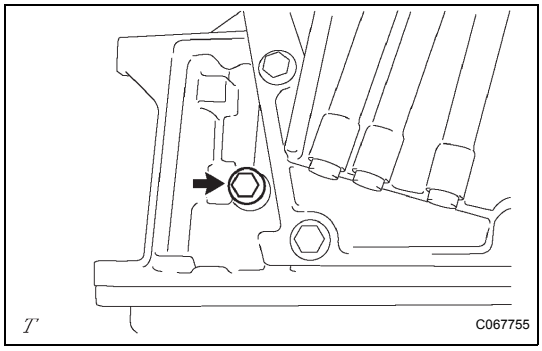
AX



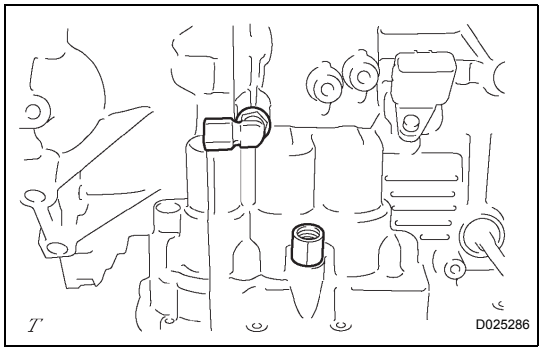
75. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Coat 5 new O-rings with ATF, and install them onto the screw plugs.

(b) Install the 4 screw plugs onto the transaxle housing and transaxle case.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)



(c) Install the screw plug onto the transaxle case.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)

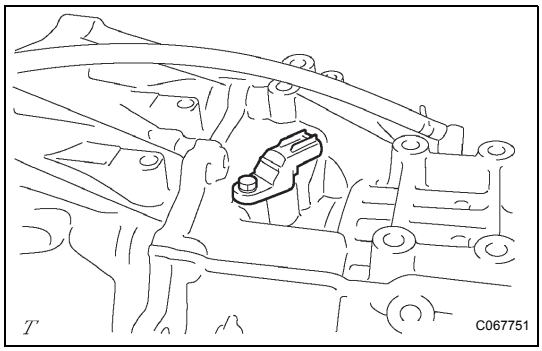


76. INSTALL OIL COOLER TUBE UNION

(a) Coat 2 new O-rings with ATF, and install them into the 2 oil cooler tube unions.

(b) Install the 2 oil cooler tube unions onto the transaxle case.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

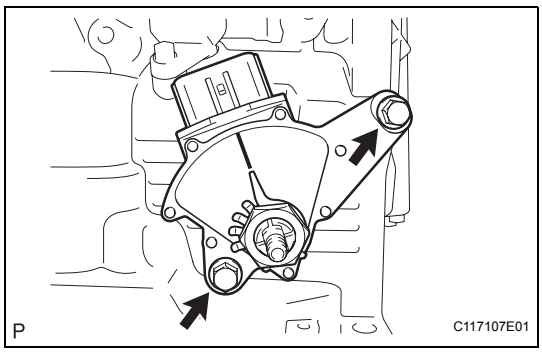
AX



77. INSTALL TRANSMISSION REVOLUTION SENSOR

(a) Coat a new O-ring with ATF, and install it into the transmission revolution sensor.

(b) Install the transmission revolution sensor onto the transaxle case with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



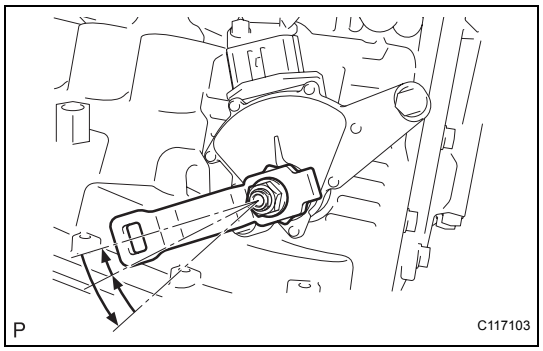
78. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch assembly onto the manual transaxle.

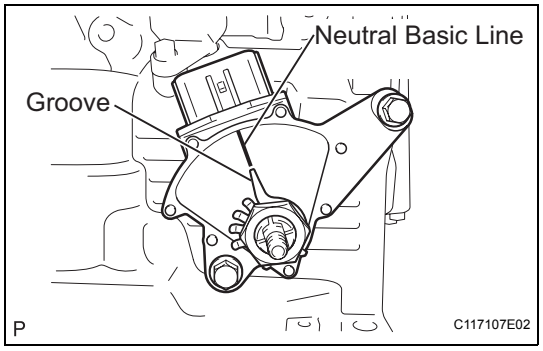
(b) Provisionally install the 2 bolts.

(c) Replace the lock plate with a new one and tighten the manual valve shaft nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

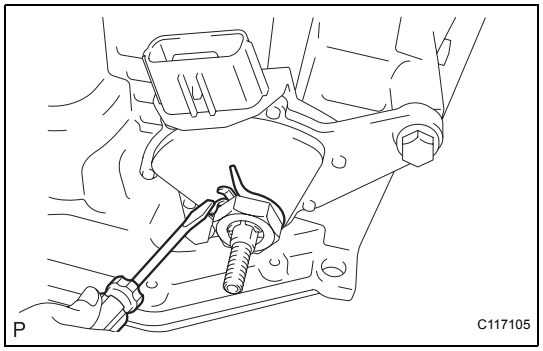
(d) Provisionally install the control shaft lever.



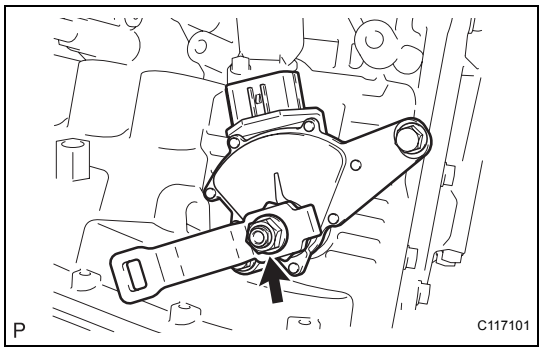
(e) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.
(f) Remove the control shaft lever.



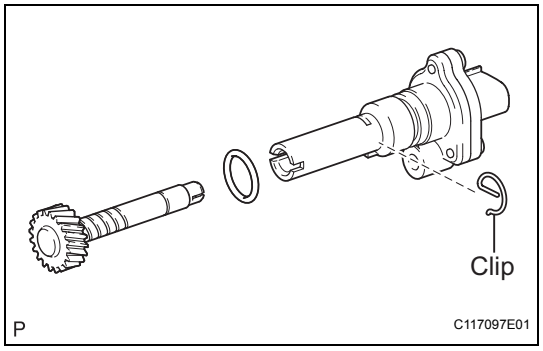
(g) Align the groove with the neutral basic line.
(h) Hold the switch in this position and tighten the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(i) Using a screwdriver, stake the nut with the lock plate.

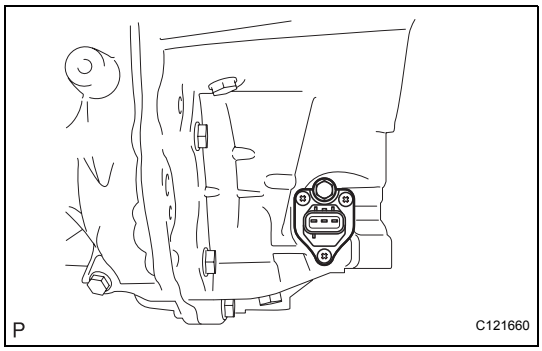


(j) Install the control shaft lever with the nut and washer.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



79. INSTALL SPEEDOMETER DRIVEN GEAR
(a) Coat a new O-ring with ATF and install it into the speedometer sensor.
(b) Install the driven gear into the speedometer sensor with the clip.

AX



80. INSTALL SPEEDOMETER SENSOR

(a) Install the speedometer sensor onto the transaxle housing.

OIL PUMP

COMPONENTS

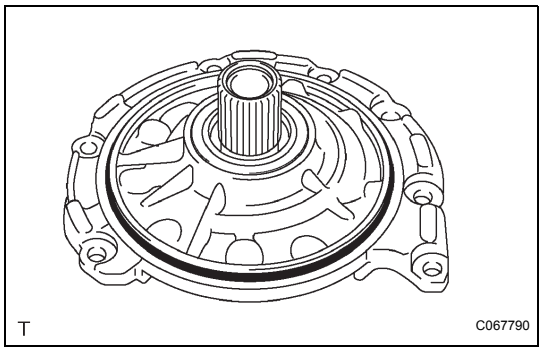
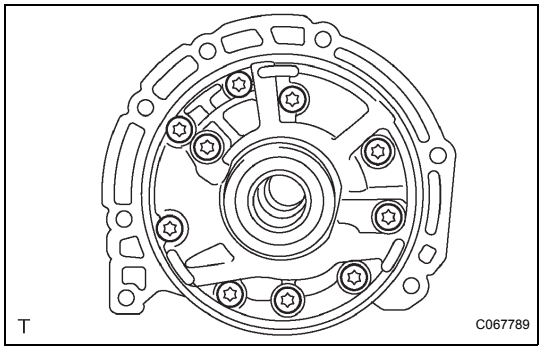
AX



DISASSEMBLY

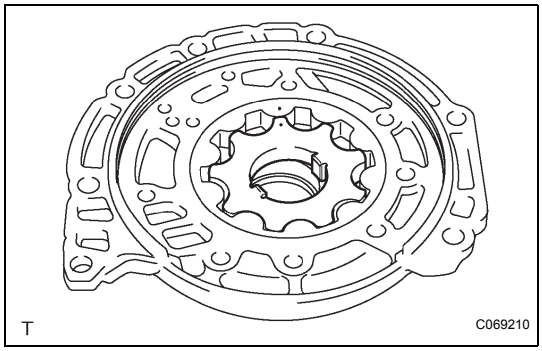
1. REMOVE FRONT OIL PUMP BODY O-RING

(a) Remove the front oil pump O-ring from the oil pump.



2. REMOVE STATOR SHAFT ASSEMBLY

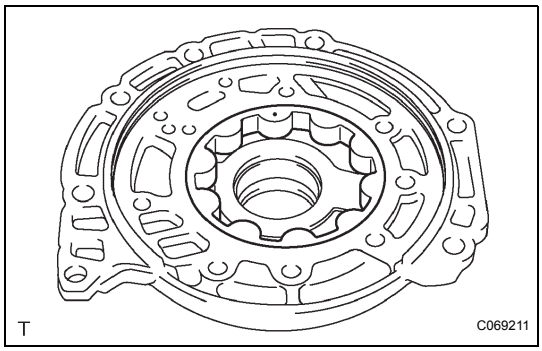
(a) Using "Torx" socket wrench T30, remove the 10 "Torx" screws.



3. REMOVE FRONT OIL PUMP DRIVE GEAR

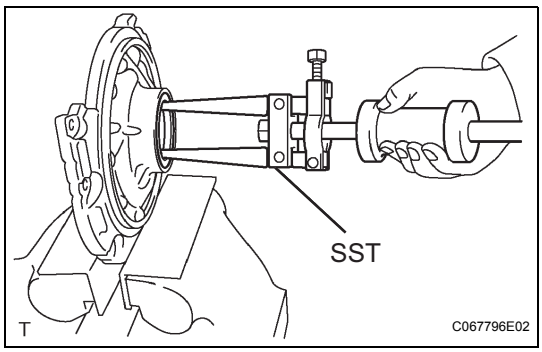
(a) Remove the front oil pump drive gear from the oil pump body.

AX



4. REMOVE FRONT OIL PUMP DRIVEN GEAR

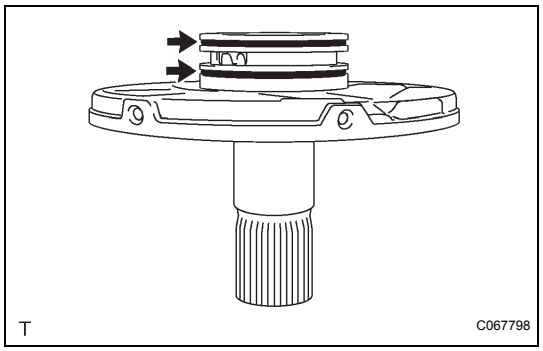
(a) Remove the front oil pump driven gear from the oil pump body.



5. REMOVE FRONT OIL PUMP OIL SEAL

(a) Using SST, remove the front oil pump oil seal from the oil pump body.

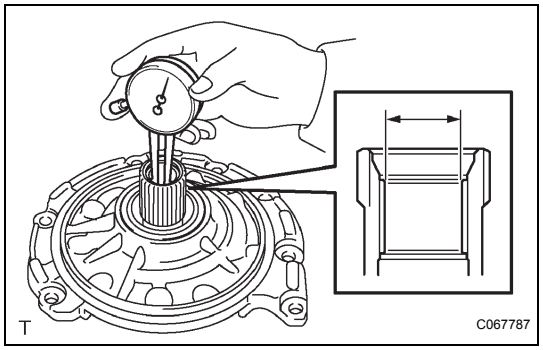
SST 09308-00010



6. REMOVE CLUTCH DRUM OIL SEAL RING

(a) Using a screwdriver, remove the 2 clutch drum oil seal rings from the stator shaft assembly.

INSPECTION

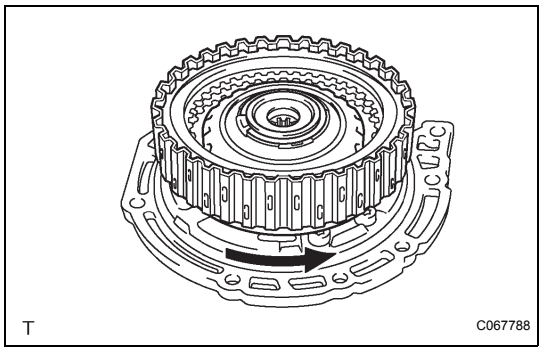


1. INSPECT STATOR SHAFT ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the stator shaft bushings.

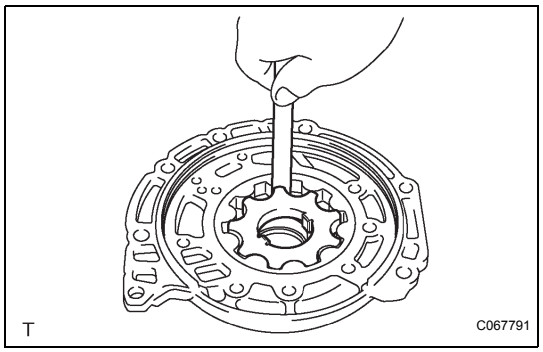
Standard inside diameter:
21.500 to 21.526 mm (0.84646 to 0.84748 in.)
Maximum inside diameter:
21.526 mm (0.84748 in.)

If the inside diameter is greater than the maximum, replace the stator shaft.



(b) Install the input shaft assembly onto the stator shaft assembly and check that the input shaft assembly turns smoothly.

NOTICE:
Replace the stator assembly with a new one if it moves roughly or makes unusual noise.
Inspect the input shaft's contact surface with the bearing when replacing, and replace the input shaft with a new one if any damage or discoloration is found.

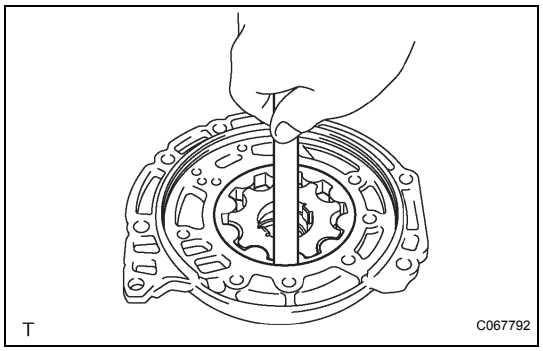


2. INSPECT OIL PUMP GEAR CLEARANCE

(a) Measure the clearance between the tips of the driven gear teeth and the drive gear teeth.

Standard tip clearance:
0.07 to 0.15 mm (0.0028 to 0.0059 in.)
Maximum tip clearance:
0.15 mm (0.0059 in.)

If the tip clearance is greater than the maximum, replace the oil pump body sub-assembly.

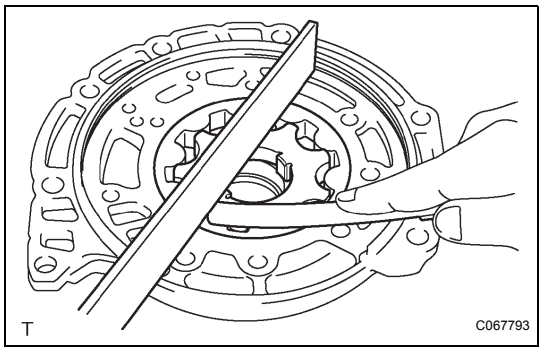


(b) Push the driven gear to one side of the body. Using a feeler gauge, measure the clearance.

Standard body clearance:
0.10 to 0.15 mm (0.0039 to 0.0059 in.)
Maximum body clearance:
0.15 mm (0.0059 in.)

If the body clearance is greater than the maximum, replace the oil pump body sub-assembly.

AX

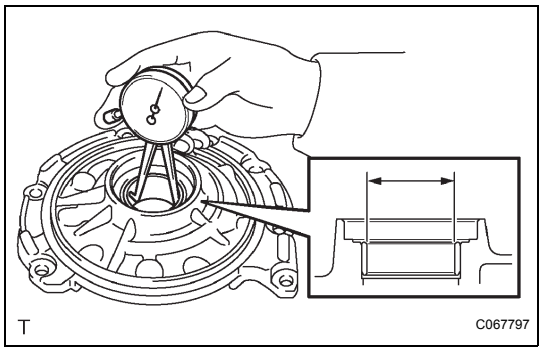


(c) Using a steel straight edge and feeler gauge, measure the side clearance of both gears.
Standard side clearance:
0.02 to 0.05 mm (0.0008 to 0.0020 in.)
Maximum side clearance:
0.05 mm (0.0020 in.)
If the side clearance is greater than the maximum, replace the drive gear, driven gear or pump body.
Drive gear thickness

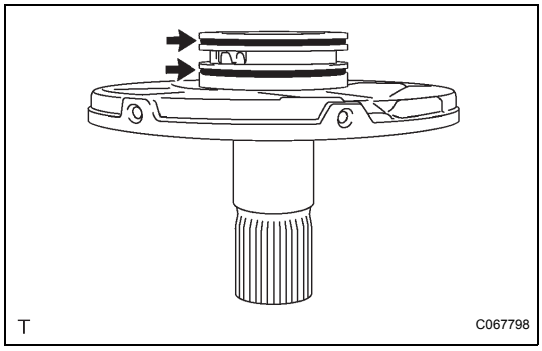
No.	Thickness mm (in.)
1	9.44 to 9.45 (0.3709 to 0.3713)
2	9.45 to 9.46 (0.3713 to 0.3717)
3	9.46 to 9.47 (0.3717 to 0.3721)
4	9.47 to 9.48 (0.3721 to 0.3725)
5	9.48 to 9.49 (0.3725 to 0.3729)

Driven gear thickness

No.	Thickness mm (in.)
1	9.44 to 9.45 (0.3709 to 0.3713)
2	9.45 to 9.46 (0.3713 to 0.3717)
3	9.46 to 9.47 (0.3717 to 0.3721)
4	9.47 to 9.48 (0.3721 to 0.3725)
5	9.48 to 9.49 (0.3725 to 0.3729)

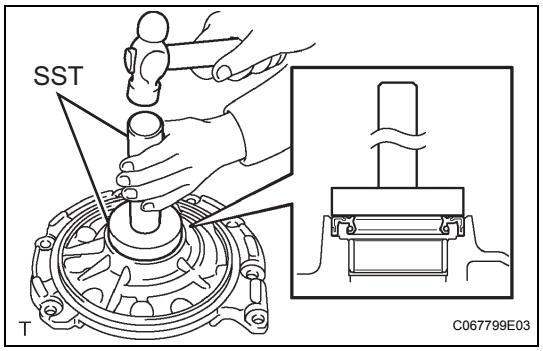


3. INSPECT FRONT OIL PUMP BODY SUB-ASSEMBLY
(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.
Standard inside diameter:
38.113 to 38.138 mm (1.50050 to 1.50149 in.)
Maximum inside diameter:
38.138 mm (1.50149 in.)
If the inside diameter is greater than the maximum, replace the oil pump body sub-assembly.



REASSEMBLY

1. INSTALL CLUTCH DRUM OIL SEAL RING
(a) Coat 2 new clutch drum oil seal rings with ATF, and install them onto the stator shaft.

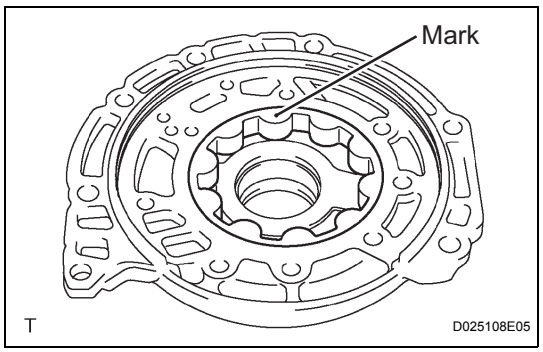


2. INSTALL FRONT OIL PUMP OIL SEAL

(a) Using SST, install the front oil pump oil seal into the oil pump body.

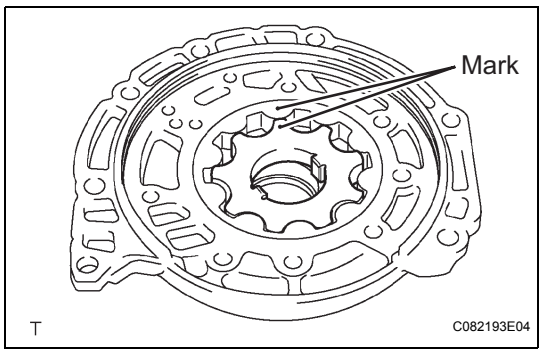
SST 09950-60010 (09951-00550), 09950-70010 (09951-07100)

Oil seal drive in depth:
-0.15 to 0.15 mm (-0.006 to 0.006 in.)



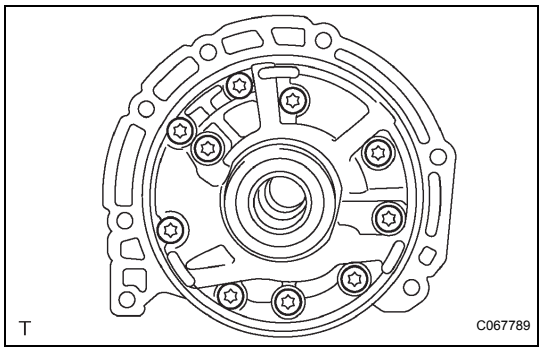
3. INSTALL FRONT OIL PUMP DRIVEN GEAR

(a) Coat the front oil pump driven gear with ATF, and install it into the oil pump body with the marked side facing upward.



4. INSTALL FRONT OIL PUMP DRIVE GEAR

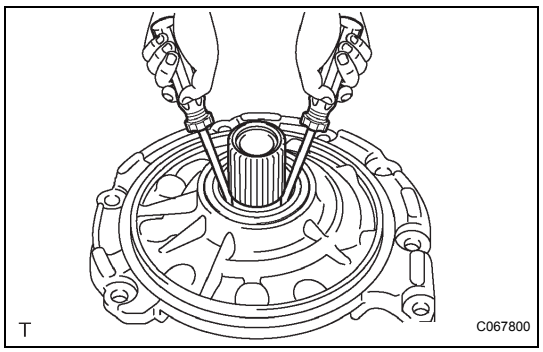
(a) Coat the front oil pump drive gear with ATF, and install it into the oil pump body with the marked side facing upward.



5. INSTALL STATOR SHAFT ASSEMBLY

(a) Using "Torx" socket wrench T30, install the stator shaft assembly with 10 "Torx" screws.

Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

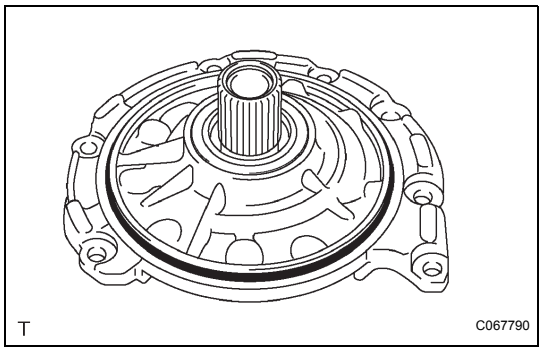


6. INSPECT OIL PUMP ASSEMBLY

(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.

NOTICE:
Do not damage the oil seal lip.

AX

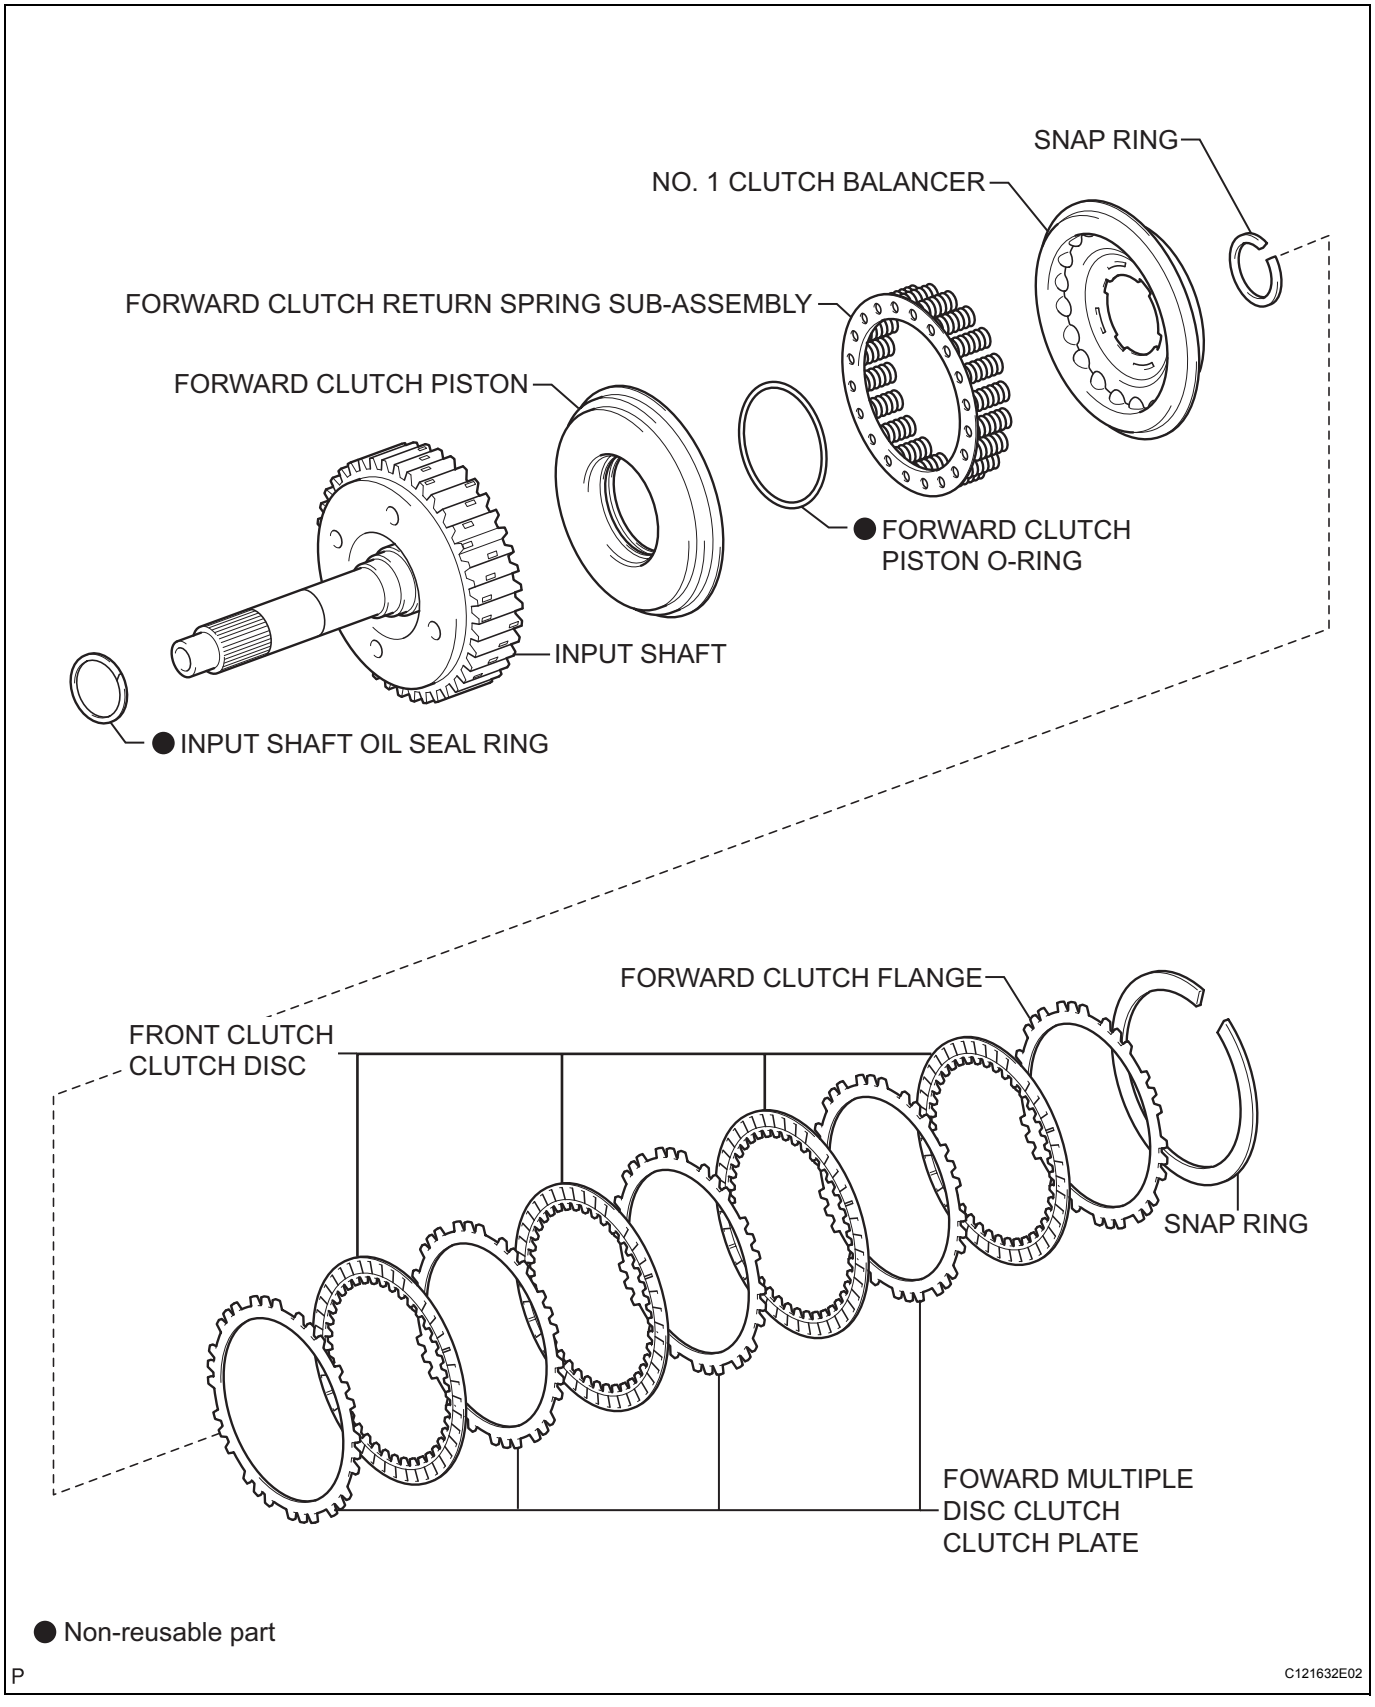


7. INSTALL FRONT OIL PUMP BODY O-RING

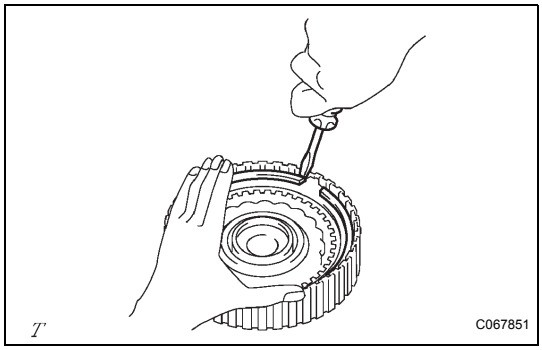
(a) Coat a new front oil pump body O-ring with ATF, and install it onto the oil pump.

INPUT SHAFT

COMPONENTS



AX

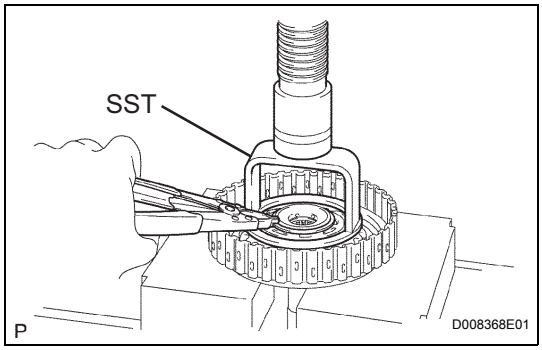


DISASSEMBLY

1. REMOVE FRONT CLUTCH CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates from the input shaft.



2. REMOVE FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

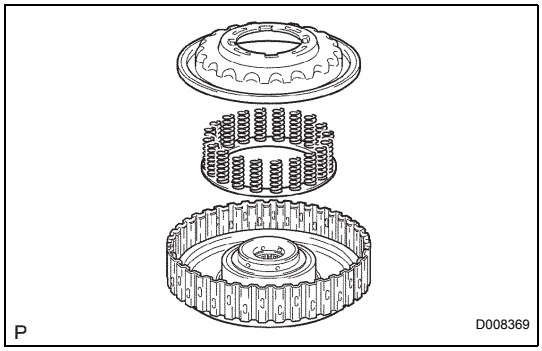
(a) Using SST on the clutch balancer, compress the return spring with a press.

SST 09320-89010

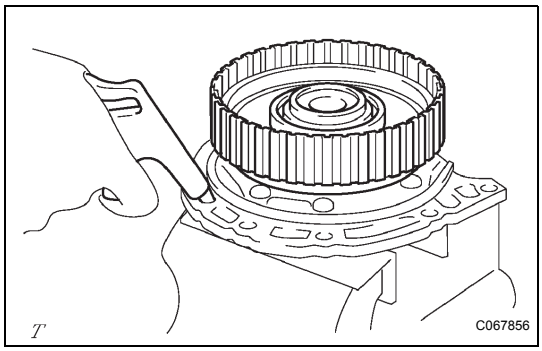
NOTICE:

Do not compress the return spring excessively.

(b) Using a snap ring expander, remove the snap ring.



(c) Remove the clutch balancer and piston return spring.



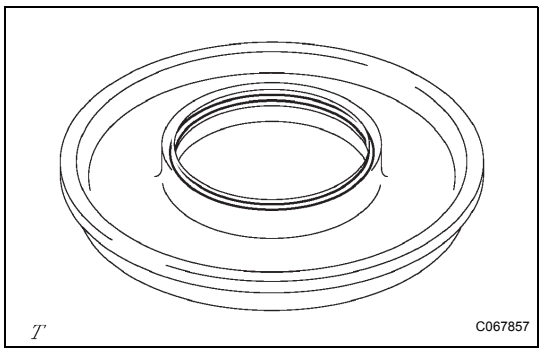
3. REMOVE FORWARD CLUTCH PISTON

(a) Place the input shaft onto the oil pump.

(b) Holding the forward clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

HINT:

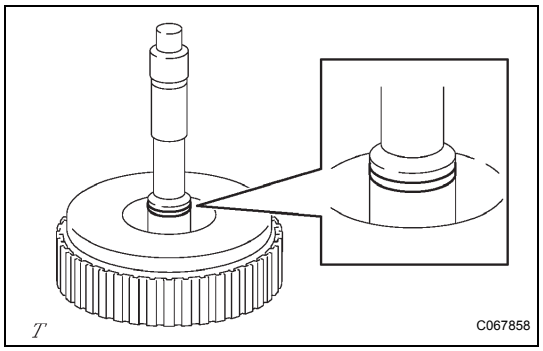
When the piston can not be removed due to being slanted, either blow the air again with the protruding side pushed or remove the piston using needle-nose pliers with their tips wrapped in protective tape.



4. REMOVE FORWARD CLUTCH PISTON O-RING

(a) Using a screwdriver, remove the clutch piston O-ring from the forward clutch piston.

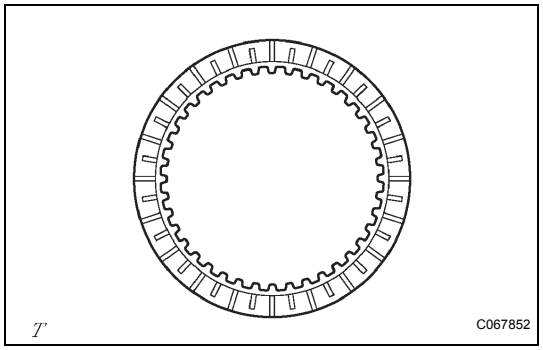
AX



5. REMOVE INPUT SHAFT OIL SEAL RING

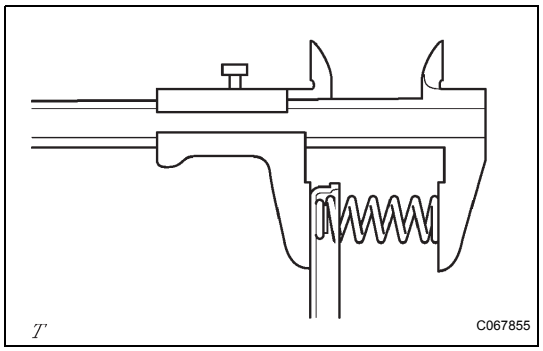
(a) Using a screwdriver, remove the input shaft oil seal ring from the input shaft.

INSPECTION



1. INSPECT FRONT CLUTCH CLUTCH DISC

(a) Check whether the sliding surface of the disc, plate and flange are worn or burnt.
If necessary, replace them.
NOTICE:
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed number is defaced, replace all the discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

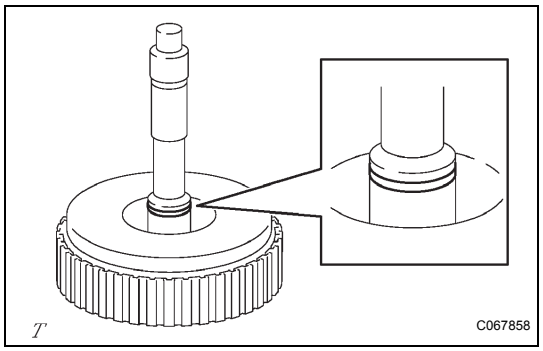


2. INSPECT FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
21.69 mm (0.8540 in.)

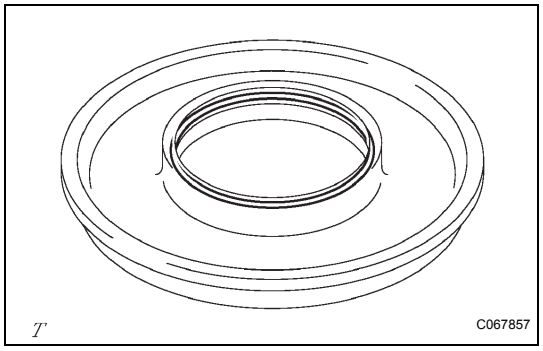
AX

REASSEMBLY



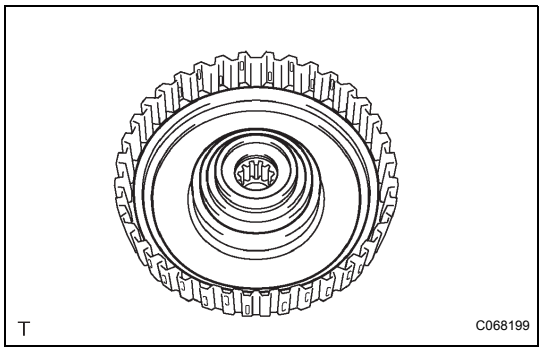
1. INSTALL INPUT SHAFT OIL SEAL RING

(a) Coat a new input shaft oil seal ring with ATF, and install it into the input shaft.



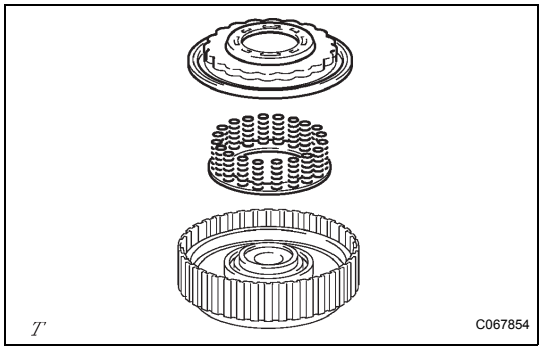
2. INSTALL FORWARD CLUTCH PISTON O-RING

(a) Coat a new clutch piston O-ring with ATF, and install it into the forward clutch piston.



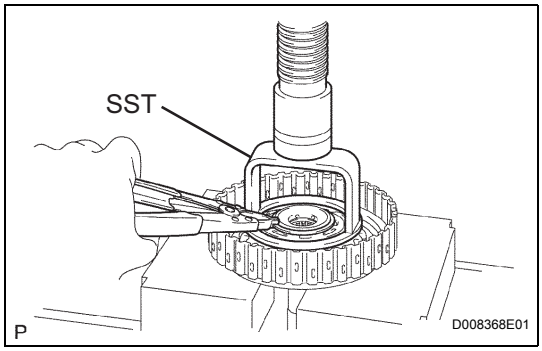
3. INSTALL FORWARD CLUTCH PISTON

(a) Install the forward clutch piston into the input shaft.
NOTICE:
Do not damage the O-ring.

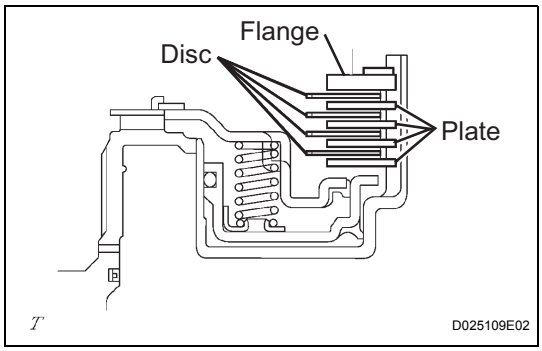


4. INSTALL FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Install the return spring and clutch balancer into the input shaft.

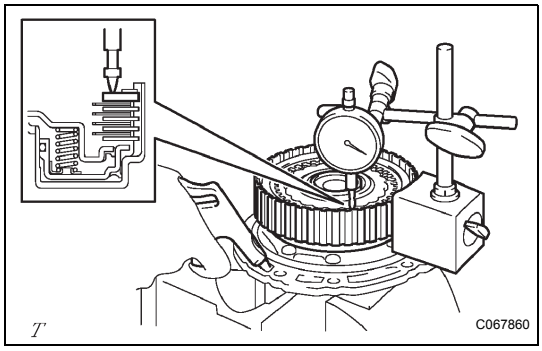


(b) Using SST, a press and snap ring pliers, install the snap ring onto the input shaft.
SST 09320-89010



5. INSTALL FRONT CLUTCH CLUTCH DISC

(a) Install the 4 plates, 4 discs and flange.
(b) Using a screwdriver, install the snap ring into the input shaft.



6. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Using a dial indicator, measure the pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).
Pack clearance:
1.406 to 1.806 mm (0.05535 to 0.07110 in.)
NOTICE:
If the clearance is outside the specifications, select a new brake flange.

AX

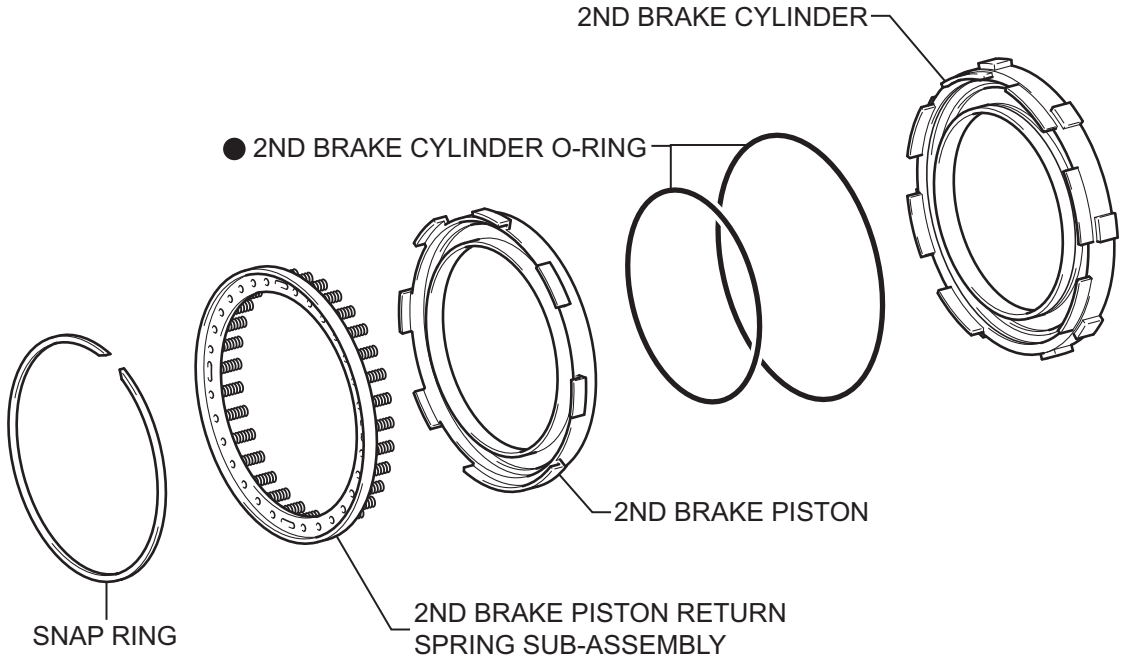
HINT:
There are 4 different flange thicknesses.

Flange thickness

No.	Thickness mm (in.)	No.	Thickness mm (in.)
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

SECOND BRAKE PISTON

COMPONENTS



● Non-reusable part

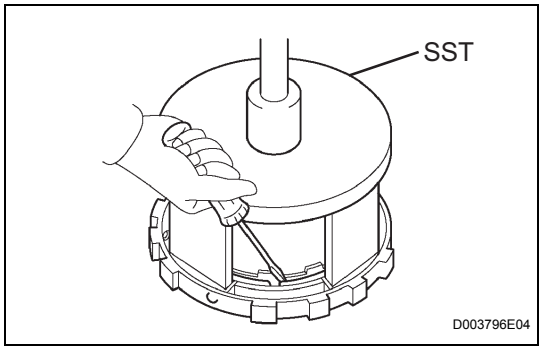
C121633E02

AX

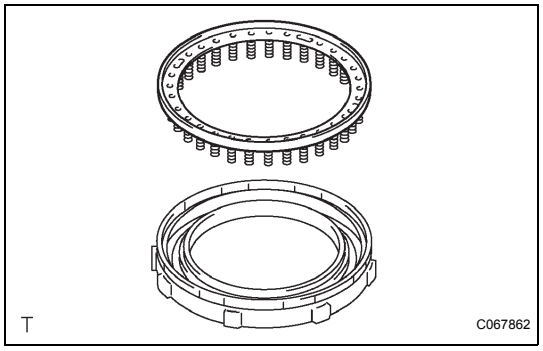


DISASSEMBLY

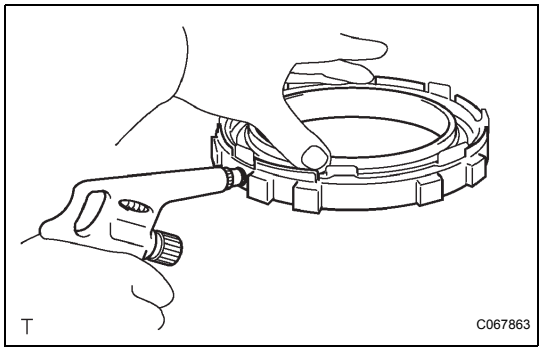
1. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using SST and a press, remove the snap ring from the 2nd brake piston.
SST 09387-00060

(b) Remove the 2nd brake return spring from the 2nd brake cylinder.

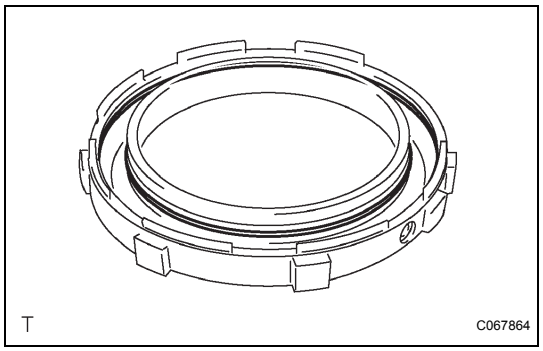


(c) Remove the 2nd brake piston return spring sub-assembly from the 2nd brake cylinder.



2. REMOVE 2ND BRAKE PISTON

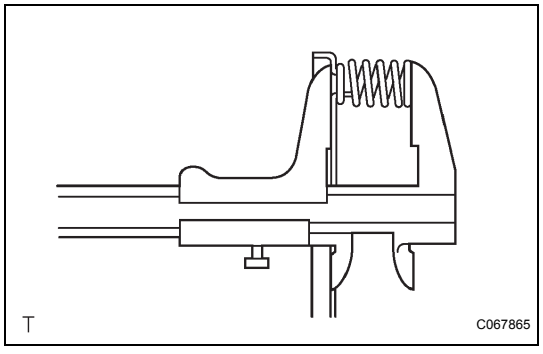
(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm^2 , 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.



3. REMOVE 2ND BRAKE CYLINDER O-RING

(a) Using a screwdriver, remove the 2 O-rings from the 2nd brake cylinder.

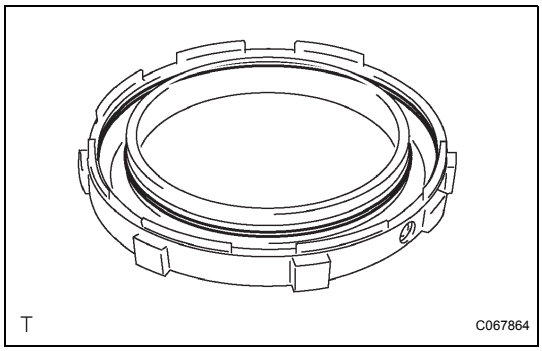
INSPECTION



1. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
14.65 mm (0.5768 in.)

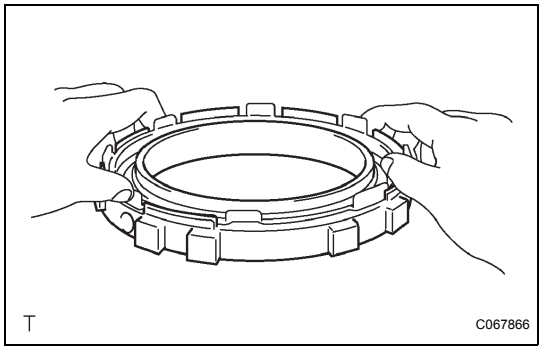
AX



REASSEMBLY

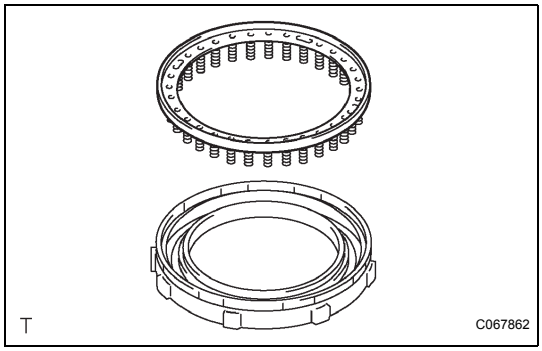
1. INSTALL 2ND BRAKE CYLINDER O-RING

(a) Coat 2 new 2nd brake cylinder O-rings with ATF, and install them into the 2nd brake cylinder.
NOTICE:
Do not damage the O-rings.



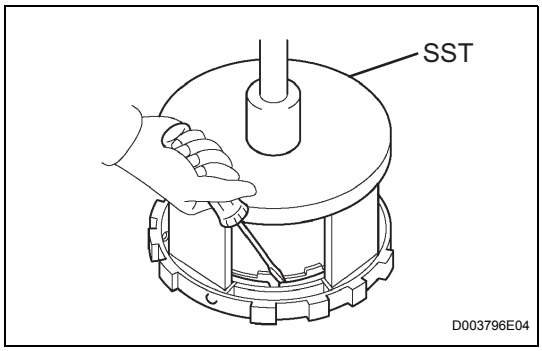
2. INSTALL 2ND BRAKE PISTON

(a) Coat the 2nd brake piston with ATF, and install it into the 2nd brake cylinder.
CAUTION:
Do not damage the O-rings when pressing the 2nd brake piston into the 2nd brake cylinder by hand.



3. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Install the piston return spring.



(b) Place SST on the piston return spring, and compress the piston return spring with a press.
(c) Using a screwdriver, install the snap ring.
NOTICE:
Make sure that the end gap of the snap ring is not aligned with the piston return spring claw.

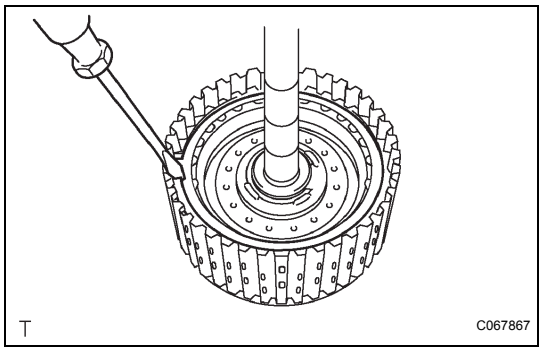
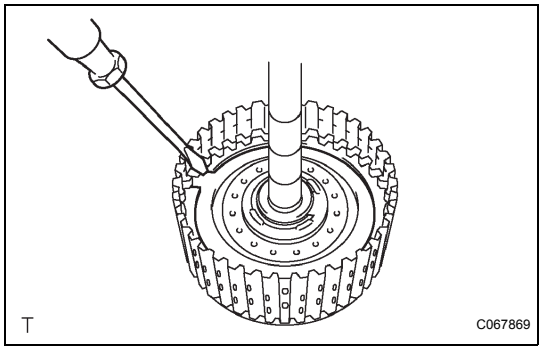
DISASSEMBLY



1. REMOVE REVERSE CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

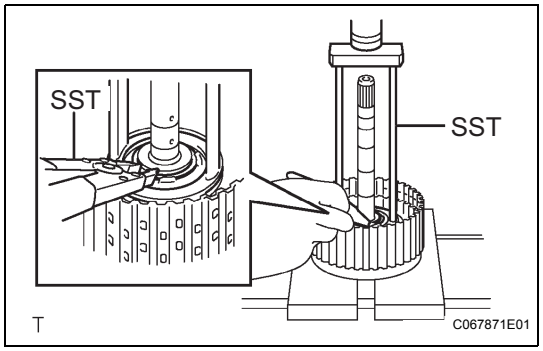
(b) Remove the flange, 2 discs and 2 plates.



2. REMOVE DIRECT CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

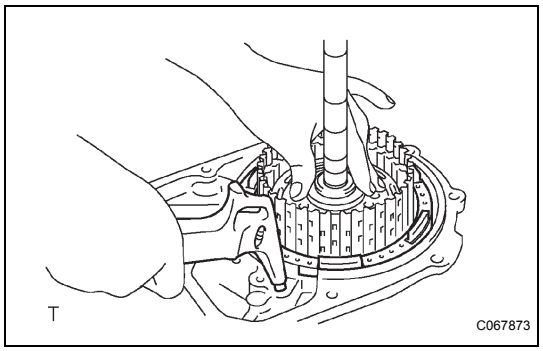
(b) Remove the direct clutch flange, 3 plates and 3 rear clutch flanges.



3. REMOVE DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Using SST and a press, remove the snap ring.
SST 09387-00020

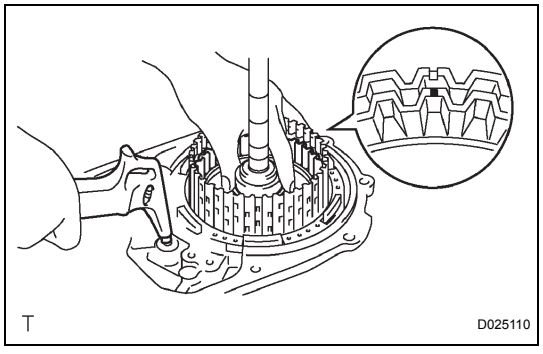
(b) Remove the direct clutch return spring sub-assembly from the intermediate shaft.



4. REMOVE DIRECT CLUTCH PISTON SUB-ASSEMBLY

(a) Install the intermediate shaft onto the transaxle rear cover.

(b) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole shown in the illustration and remove the direct clutch piston from the intermediate shaft.
NOTICE:
- **Blowing the air may cause the piston to jump out. When removing the piston, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



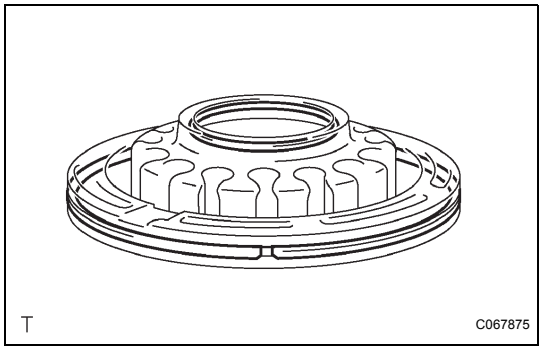
5. REMOVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Install the intermediate shaft onto the transaxle rear cover.

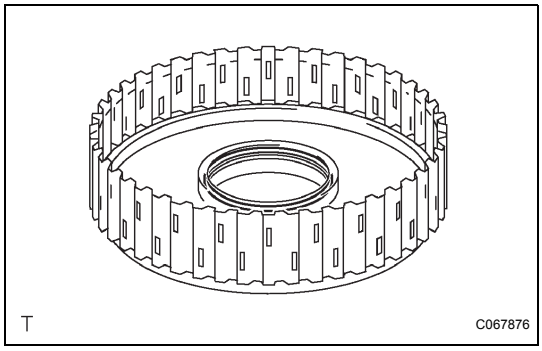
(b) Put a matchmark on the direct clutch drum in the same position as the cutout of the intermediate shaft assembly.

AX

(c) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole shown in the illustration and remove the direct clutch drum from the intermediate shaft.
NOTICE:
- **Blowing the air may cause the drum to jump out. When removing the drum, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



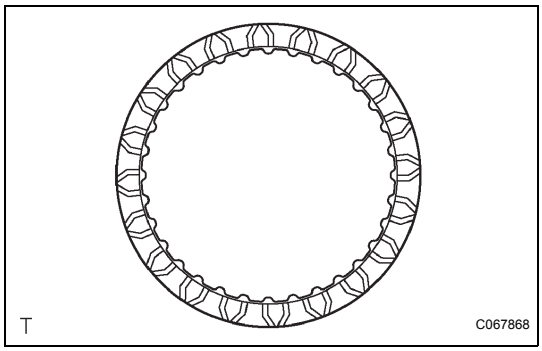
6. REMOVE DIRECT CLUTCH PISTON O-RING
(a) Using a screwdriver, remove the 2 piston O-rings from the direct clutch piston.



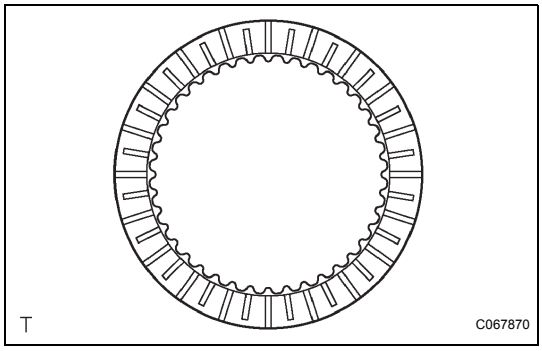
7. REMOVE DIRECT CLUTCH DRUM O-RING
(a) Using a screwdriver, remove the direct clutch drum O-ring from the direct clutch drum.

AX

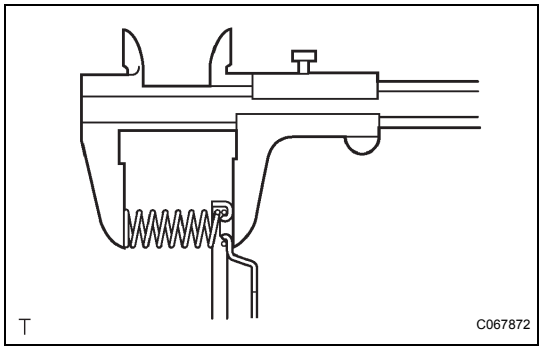
INSPECTION



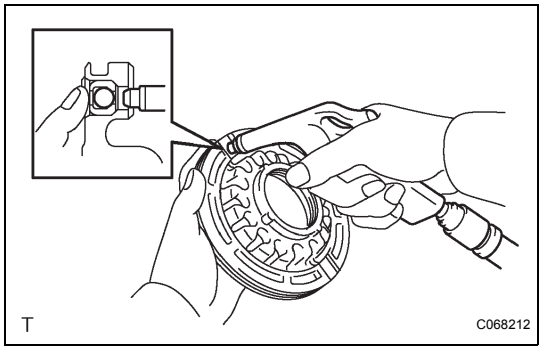
1. INSPECT REVERSE CLUTCH DISC
(a) Check whether the sliding surfaces of the disc, plate and flange are worn or burnt.
If necessary, replace them.
NOTICE:
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all the discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



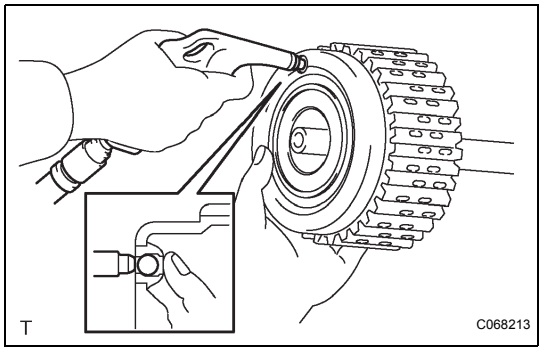
2. INSPECT DIRECT CLUTCH DISC
(a) Check whether the sliding surface of the disc, plate and flange are worn or burnt.
If necessary, replace them.
NOTICE:
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all the discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



3. **INSPECT DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY**
   (a) Using vernier calipers, measure the free length of the spring together with the spring seat.
   Standard free length:
   32.9 mm (1.2953 in.)



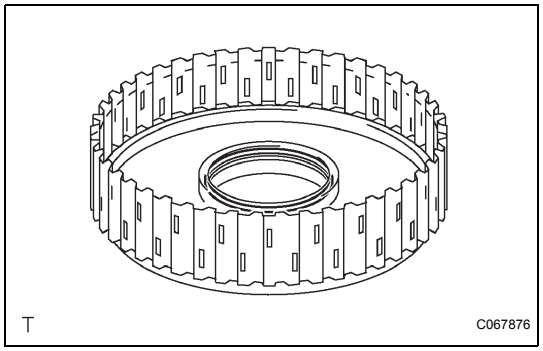
4. **INSPECT DIRECT CLUTCH PISTON SUB-ASSEMBLY**
   (a) Shake the direct clutch pin and confirm that the check ball is not stuck.
   (b) Apply low pressure compressed air to the check ball and check that no air leakage is identified.



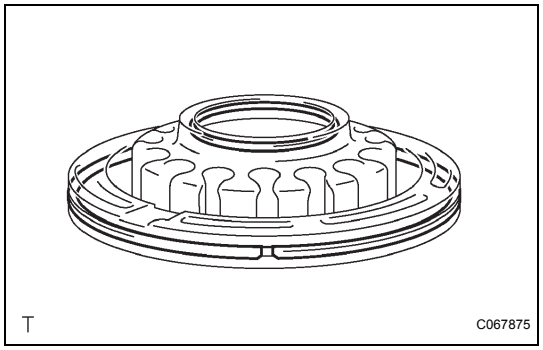
5. **INSPECT INTERMEDIATE SHAFT SUB-ASSEMBLY**
   (a) Shake the direct clutch pin and confirm that the check ball is not stuck.
   (b) Apply low pressure compressed air to the check ball and check that no air leakage is identified.

AX

REASSEMBLY

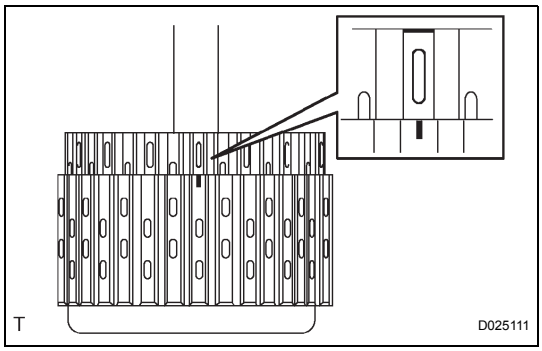


1. **INSTALL DIRECT CLUTCH DRUM O-RING**
   (a) Coat a new O-ring with ATF and install it into the direct clutch drum.
   NOTICE:
   Do not damage the O-rings.

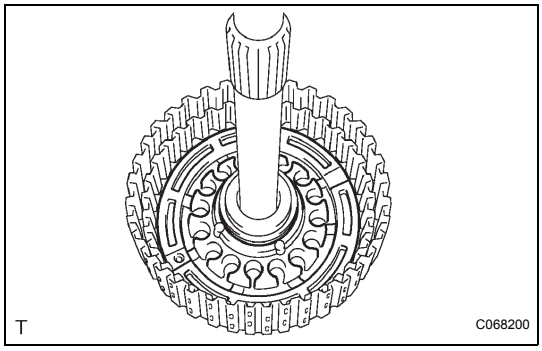


2. **INSTALL DIRECT CLUTCH PISTON O-RING**
   (a) Coat 2 new O-rings with ATF and install them into the direct clutch piston.
   NOTICE:
   Do not damage the O-rings.

3. **INSTALL DIRECT CLUTCH DRUM SUB-ASSEMBLY**
   (a) Coat the direct clutch drum with ATF.

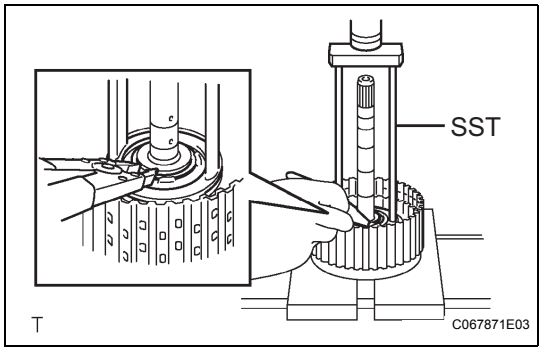


(b) Align the cutout in the intermediate shaft assembly with the matchmark on the direct clutch drum and install the direct clutch drum onto the intermediate shaft assembly.
NOTICE:
Do do not damage the O-ring or the lip of the clutch drum.



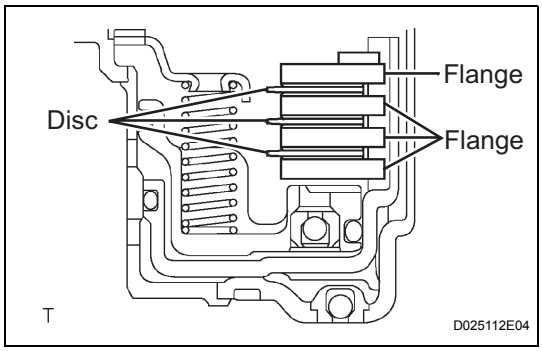
4. INSTALL DIRECT CLUTCH PISTON SUB-ASSEMBLY

(a) Coat the direct clutch piston with ATF and install it into the intermediate shaft.
NOTICE:
Do not damage the O-ring or the direct clutch piston.



5. INSTALL DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY

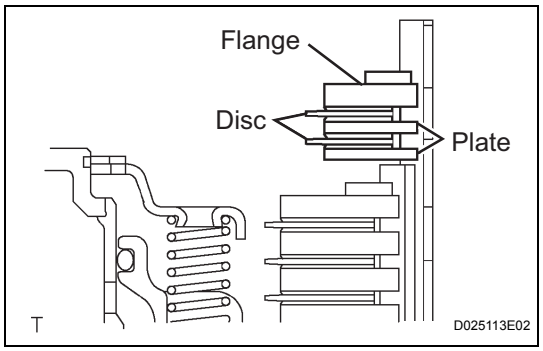
(a) Install the direct clutch return spring onto the direct clutch piston.
(b) Place SST on the piston return spring and compress the springs with a press.
SST 09387-00020
(c) Using snap ring pliers, install the snap ring into the direct clutch drum.
NOTICE:
- **Stop pressing the press when the spring seat is lowered to 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove to prevent the spring seat from deforming.**
- **Do not expand the snap ring excessively.**



6. INSTALL DIRECT CLUTCH DISC

(a) Coat the 3 rear clutch flanges, 3 discs and direct clutch flange with ATF and install them onto the intermediate shaft.
(b) Install the snap ring into the intermediate shaft.

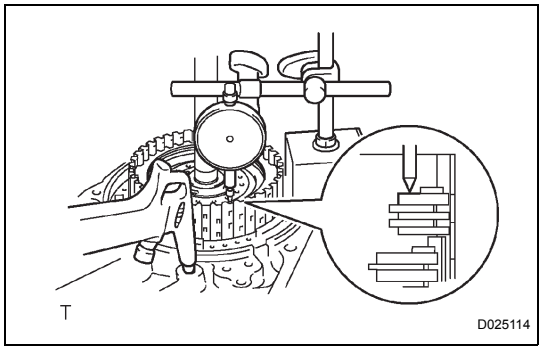
AX



7. INSTALL REVERSE CLUTCH DISC

(a) Coat the 2 plates, 2 discs and flange with ATF, and install them onto the intermediate shaft.

(b) Install the snap ring into the intermediate shaft.



8. INSPECT PACK CLEARANCE OF REVERSE CLUTCH

(a) Install the intermediate shaft and thrust needle roller bearing onto the transaxle rear cover.

(b) Using a dial indicator, measure the reverse clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

0.86 to 1.26 mm (0.0339 to 0.0496 in.)

NOTICE:

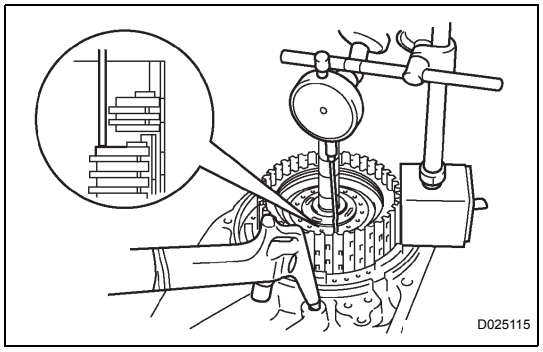
If the clearance is outside the specifications, select a new brake flange.

HINT:

There are 4 different flange thicknesses.

Flange thickness

No.	Thickness mm (in.)	No.	Thickness mm (in.)
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)



9. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the intermediate shaft and thrust needle roller bearing onto the transaxle rear cover.

(b) Using a dial indicator and measuring terminal (SST), measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

SST 09350-36010 (09350-06110)

HINT:

The direct and reverse clutch will come out as the compressed air is applied.

Therefore, while performing the check, press on the input shaft of the direct and reverse clutch using a stamping machine or the equivalent so that the pressure is not applied to the direct and reverse clutch.

Pack clearance:

0.62 to 1.02 mm (0.0244 to 0.0402 in.)

NOTICE:

If the clearance is outside the specifications, select a new brake flange.

HINT:

There are 4 different flange thicknesses.

AX

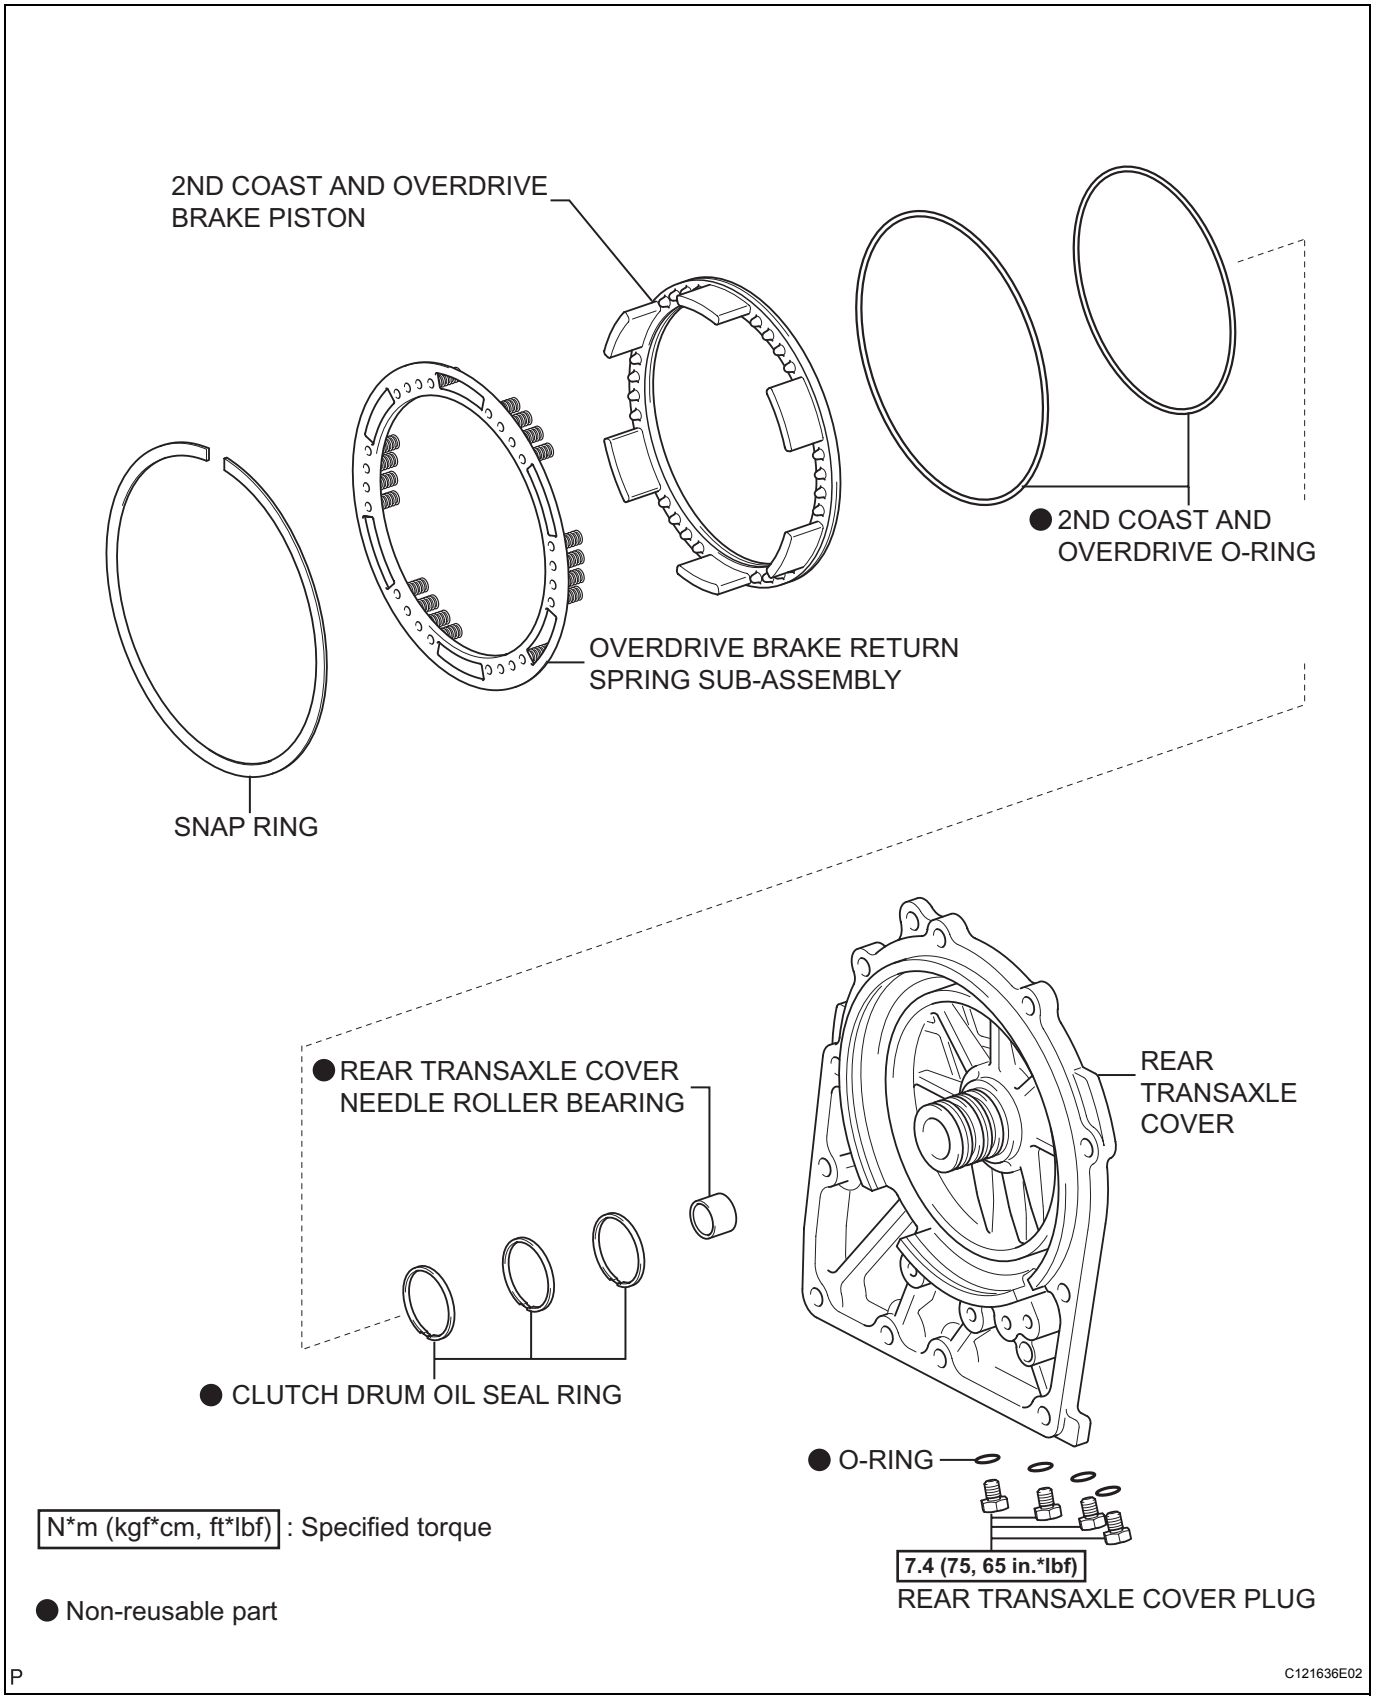
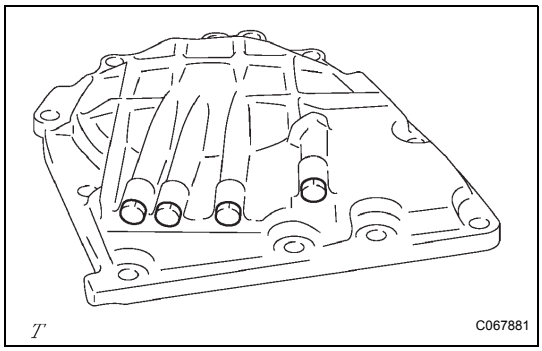
TRANSAXLE REAR COVER

COMPONENTS



AX

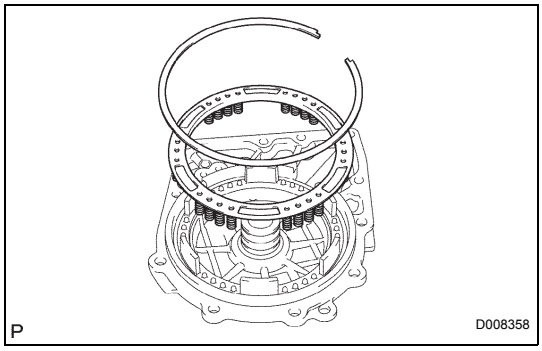


DISASSEMBLY

1. REMOVE REAR TRANSAXLE COVER PLUG

(a) Remove the 4 rear transaxle cover plugs from the rear transaxle cover.

(b) Using a screwdriver, remove the 4 O-rings from the 4 rear transaxle cover plugs.



2. REMOVE OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

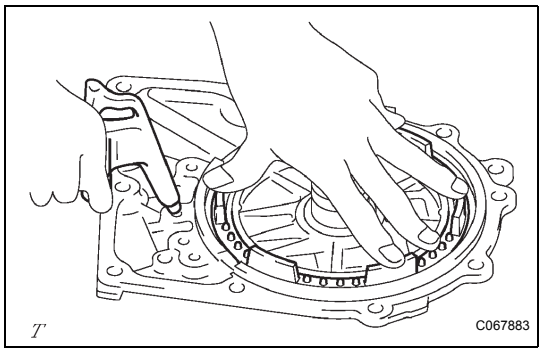
(a) Using SST, a press and a screwdriver, remove the snap ring.

SST 09387-00070

NOTICE:

Stop the press when the overdrive brake piston is lowered to 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove, to prevent the overdrive brake piston from being deformed.

(b) Remove the overdrive brake return spring from the transaxle rear cover.

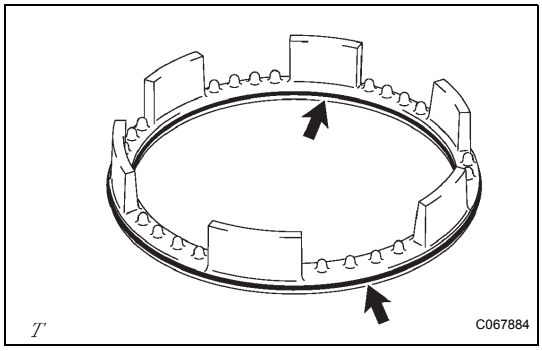


3. REMOVE 2ND COAST AND OVERDRIVE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the overdrive brake piston.

NOTICE:

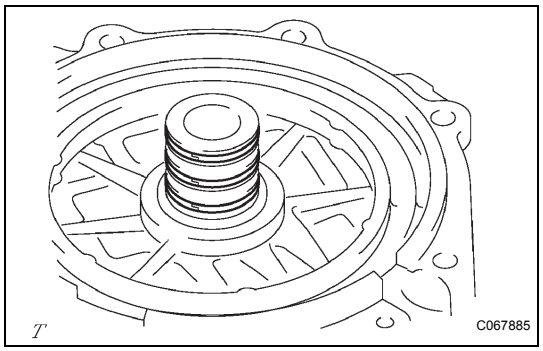
- **Blowing the air may cause the piston to jump out. When removing the piston, hold it by hand using a shop rag or piece of cloth.**
- **Do not splash ATF with the compressed air.**



4. REMOVE 2ND COAST AND OVERDRIVE O-RING

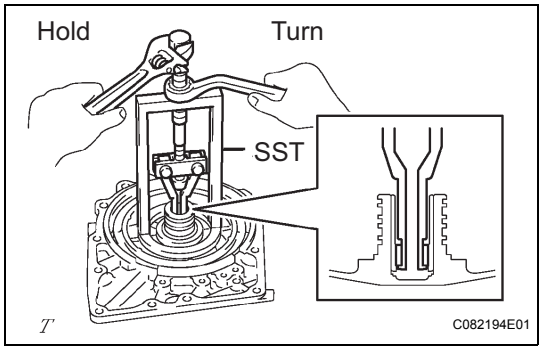
(a) Using a screwdriver, remove the 2 O-rings from the 2nd coast and overdrive brake piston.

AX



5. REMOVE CLUTCH DRUM OIL SEAL RING

(a) Remove the 3 oil seals from the transaxle rear cover.

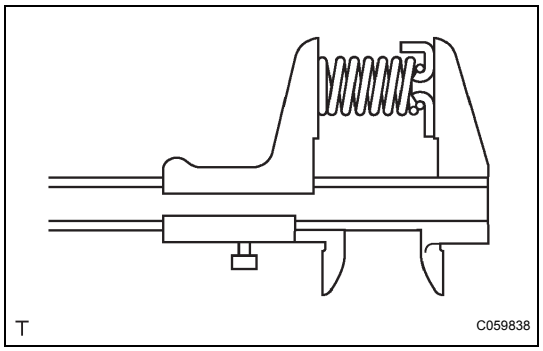


6. REMOVE REAR TRANSAXLE COVER NEEDLE ROLLER BEARING

(a) Using SST, remove the bearing from the rear transaxle cover.

SST 09387-00041 (09387-01021)

INSPECTION



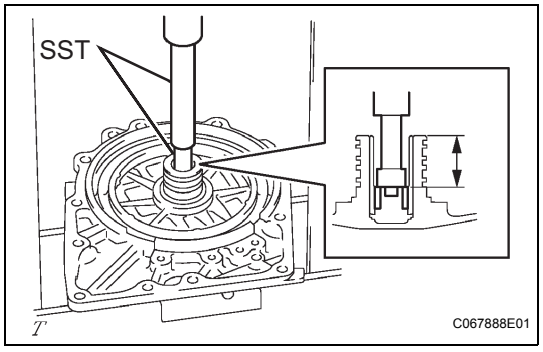
1. INSPECT OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.

Standard free length:
17.88 mm (0.7039 in.)

AX

REASSEMBLY



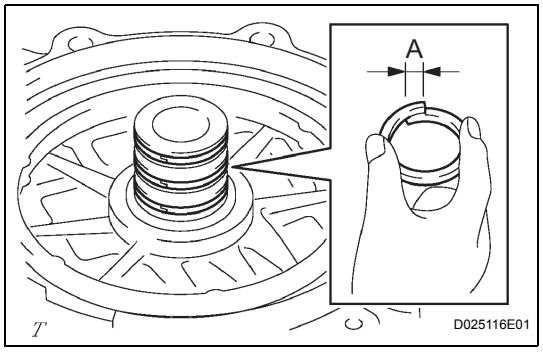
1. INSTALL REAR TRANSAXLE COVER NEEDLE ROLLER BEARING

(a) Coat a new needle roller bearing with ATF.

(b) Using SST and a press, install the needle roller bearing into the rear transaxle cover.

SST 09950-60010 (09951-00190, 09952-06010), 09950-70010 (09951-07100)

Standard clearance:
25.2 mm (0.992 in.)

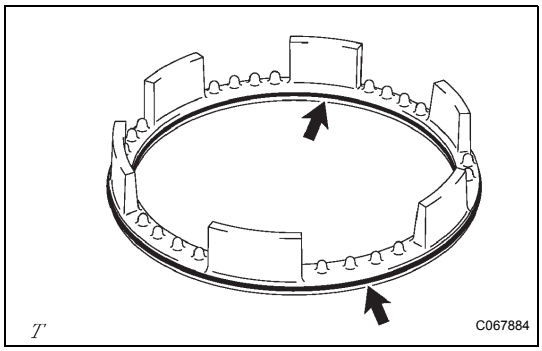


2. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Compress the oil seal ring from both sides to reduce dimension A.

Dimension A:
5.0 mm (0.197 in.)

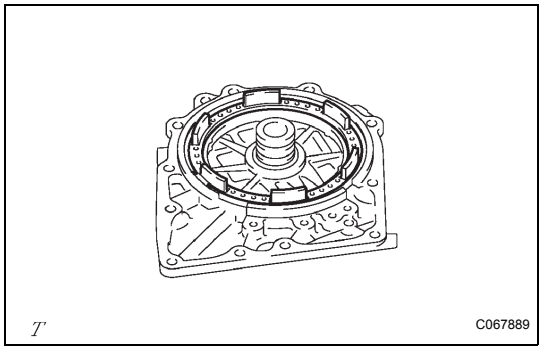
(b) Coat the oil seal ring with ATF and install it onto the rear transaxle cover.



3. INSTALL 2ND COAST AND OVERDRIVE O-RING

(a) Coat 2 new O-rings with ATF and install them into the 2nd coast and overdrive brake piston.

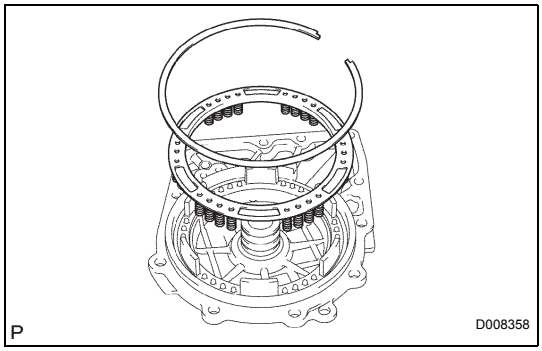
NOTICE:
Do not damage the O-rings.



4. INSTALL 2ND COAST AND OVERDRIVE BRAKE PISTON

(a) Coat the piston with ATF and install it into the transaxle rear cover.

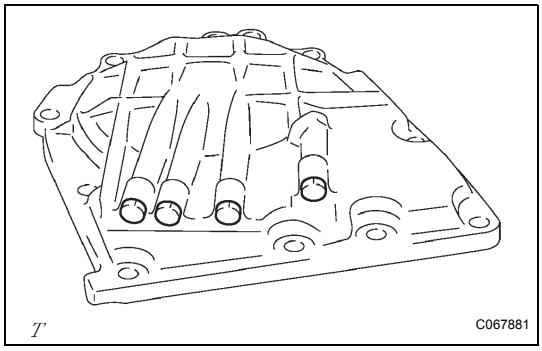
NOTICE:
Do not damage the O-rings.



5. INSTALL OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using SST and a press, install the overdrive brake return spring and snap ring onto the transaxle rear cover.

SST 09387-00070
NOTICE:
- **Stop pressing the press when the spring sheet is lowered to 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove, to prevent the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**



6. INSTALL REAR TRANSAXLE COVER PLUG

(a) Coat 4 new O-rings with ATF, and install them into the 4 rear transaxle cover plugs.

(b) Install the 4 rear transaxle cover plugs into the rear transaxle cover.

Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)
NOTICE:
Do not damage the O-rings.

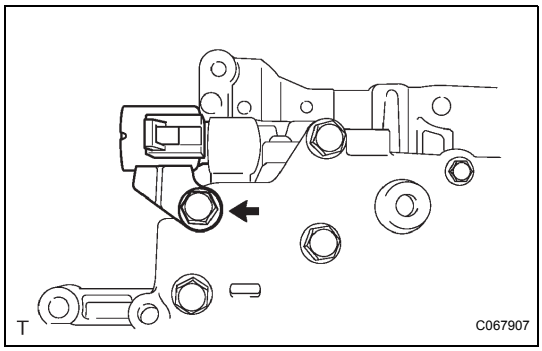
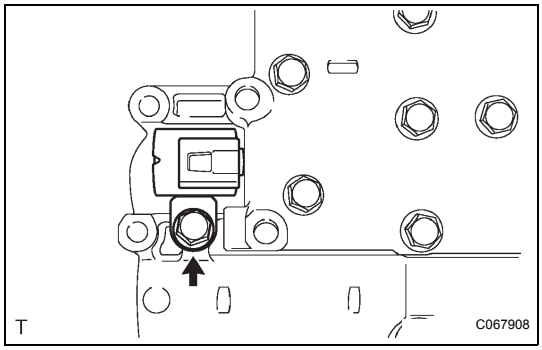
DISASSEMBLY



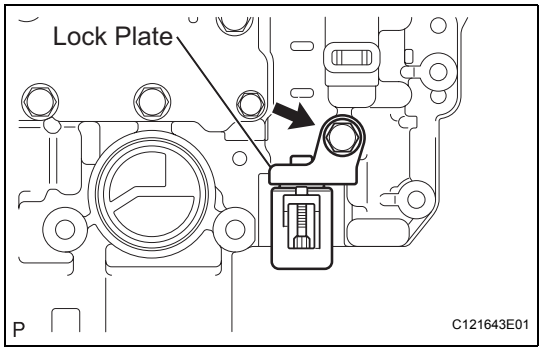
1. REMOVE SHIFT SOLENOID VALVE S1

(a) Remove the bolt and pull out shift solenoid valve S1.



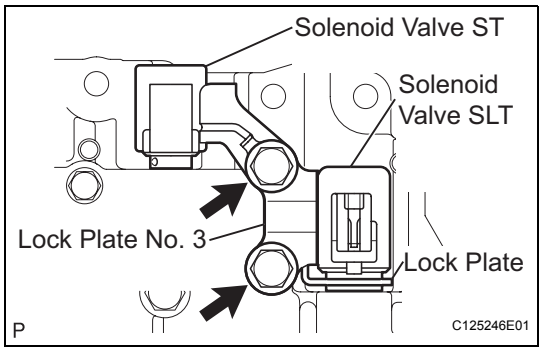
2. REMOVE SHIFT SOLENOID VALVE S2

(a) Remove the bolt and pull out shift solenoid valve S2.



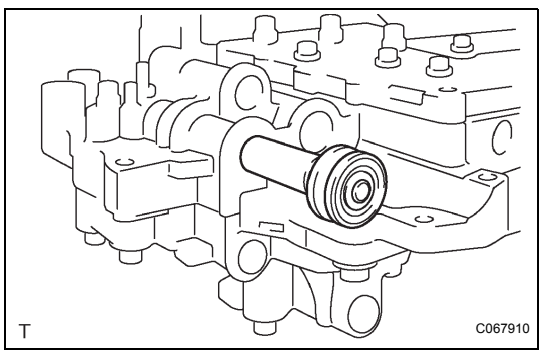
3. REMOVE SHIFT SOLENOID VALVE SLU

(a) Remove the bolt and the solenoid lock plate.
(b) Pull out the shift solenoid valve SLU.



4. REMOVE NO. 3 SOLENOID LOCK PLATE

(a) Remove the 2 bolts and No. 3 solenoid lock plate from the valve body.
(b) Pull out the shift solenoid valve ST from the valve body.
(c) Remove the solenoid lock plate from the shift solenoid valve SLT.
(d) Pull out the shift solenoid valve SLT from the valve body.

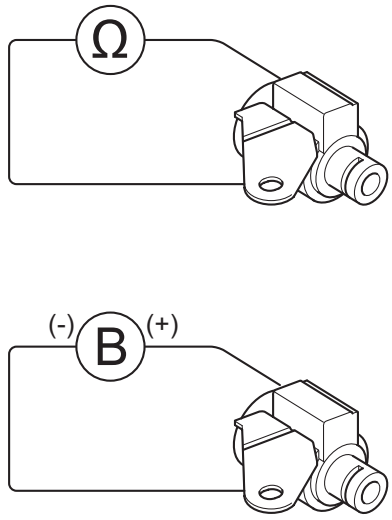


5. REMOVE MANUAL VALVE

(a) Remove the manual valve from the valve body assembly.

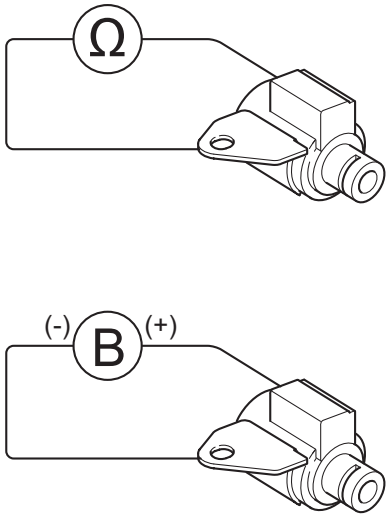
AX

Shift Solenoid Valve S1:



Y C130146E01

Shift Solenoid Valve S2:



Y C130147E01

INSPECTION

1. INSPECT SHIFT SOLENOID VALVE S1

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(b) Connect the positive (+) battery lead to the terminal of the solenoid connector, and the negative (-) battery lead to the solenoid body, and check the operation of the valve.

NOTICE:

While using the battery during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

2. INSPECT SHIFT SOLENOID VALVE S2

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S2) - Solenoid Body (S2)	11 to 15 Ω at 20°C (68°F)

(b) Connect the positive (+) battery lead to the terminal of the solenoid connector, and the negative (-) battery lead to the solenoid body, and check the operation of the valve.

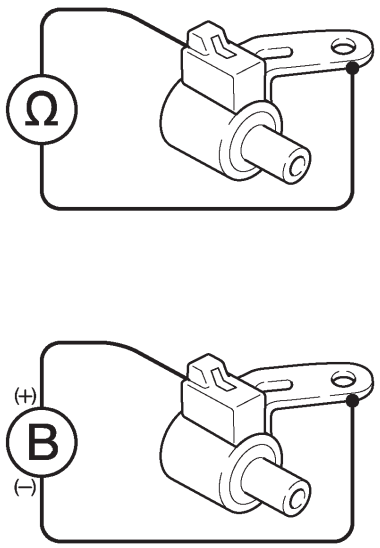
NOTICE:

While using the battery during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

Shift Solenoid Valve ST:



N D009034E02

3. INSPECT SHIFT SOLENOID VALVE ST

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (ST) - Solenoid Body (ST)	11 to 15 Ω at 20°C (68°F)

(b) Connect the positive (+) battery lead to the terminal of the solenoid connector, and the negative (-) battery lead to the solenoid body, and check the operation of the valve.

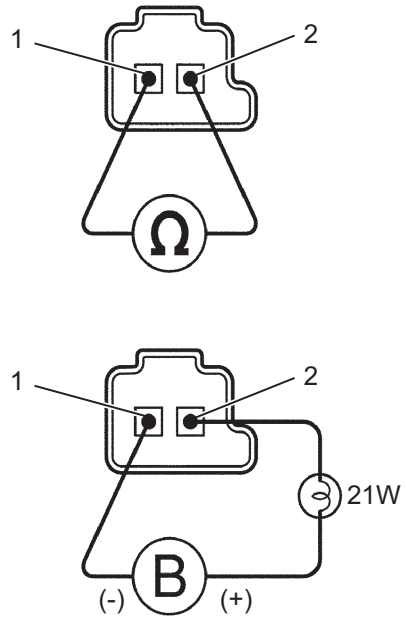
NOTICE:

While using the battery during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

Shift Solenoid Valve SLT:



P G020767E42

4. INSPECT SHIFT SOLENOID VALVE SLT

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(b) Connect the positive (+) battery lead with a 21 W bulb to terminal 2 and the negative (-) battery lead to terminal 1 of the solenoid valve connector, and check the operation of the valve.

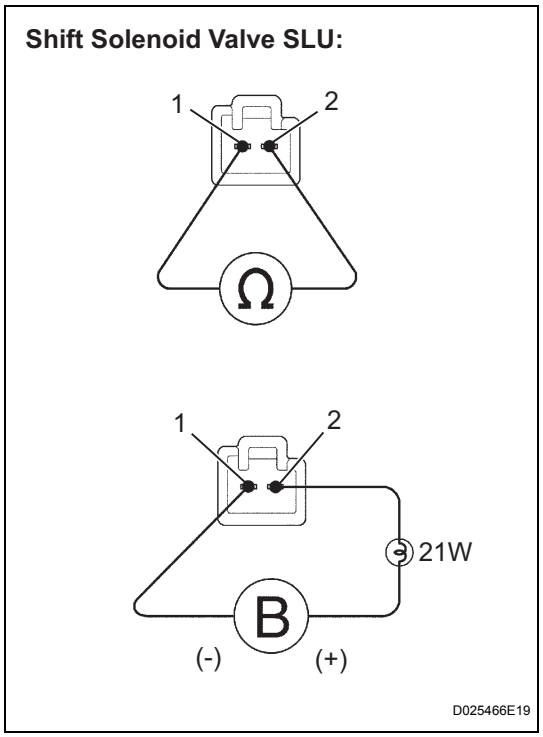
NOTICE:

While using the battery during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

AX



5. INSPECT SHIFT SOLENOID VALVE SLU

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(b) Connect the positive (+) battery lead with a 21 W bulb to terminal 2 and the negative (-) battery lead to terminal 1 of the solenoid valve connector, and check the operation of the valve.

NOTICE:

While using the battery during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

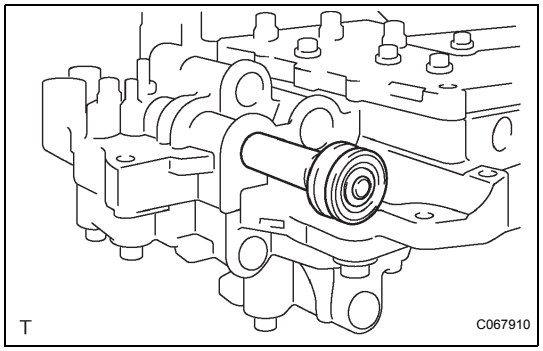
OK:

The solenoid makes an operating sound.

REASSEMBLY

1. INSTALL MANUAL VALVE

(a) Coat the manual valve with ATF, and install it onto the valve body.



AX

2. INSTALL NO. 3 SOLENOID LOCK PLATE

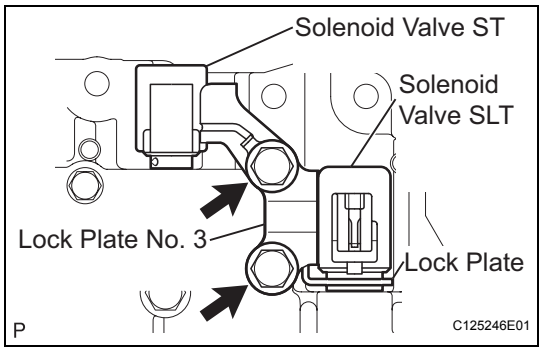
(a) Install the shift solenoid valve SLT onto the valve body.

(b) Install the solenoid lock plate onto the shift solenoid valve SLT.

(c) Install the shift solenoid valve ST onto the valve body.

(d) Install the No. 3 solenoid lock plate onto the valve body with the 2 bolts.

Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

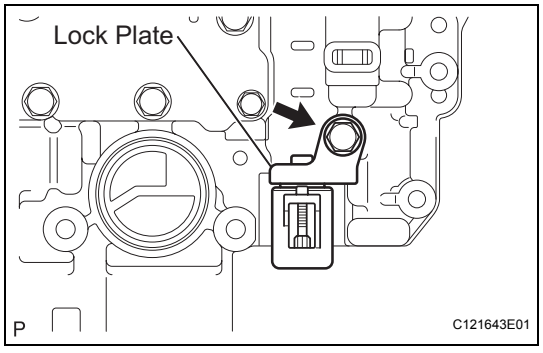


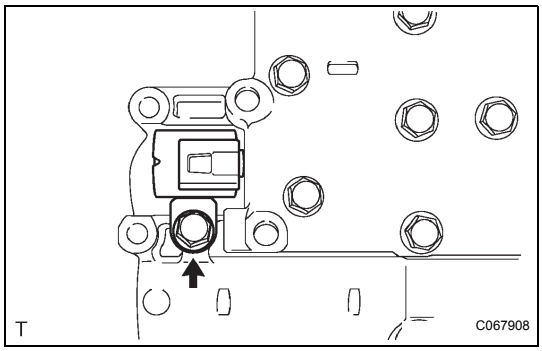
3. INSTALL SHIFT SOLENOID VALVE SLU

(a) Install the shift solenoid valve SLU onto the valve body.

(b) Install the solenoid lock plate with the bolt.

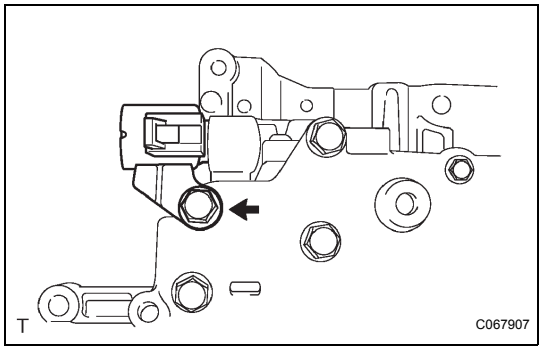
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)





4. INSTALL SHIFT SOLENOID VALVE S2

(a) Install shift solenoid valve S2 with the bolt.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

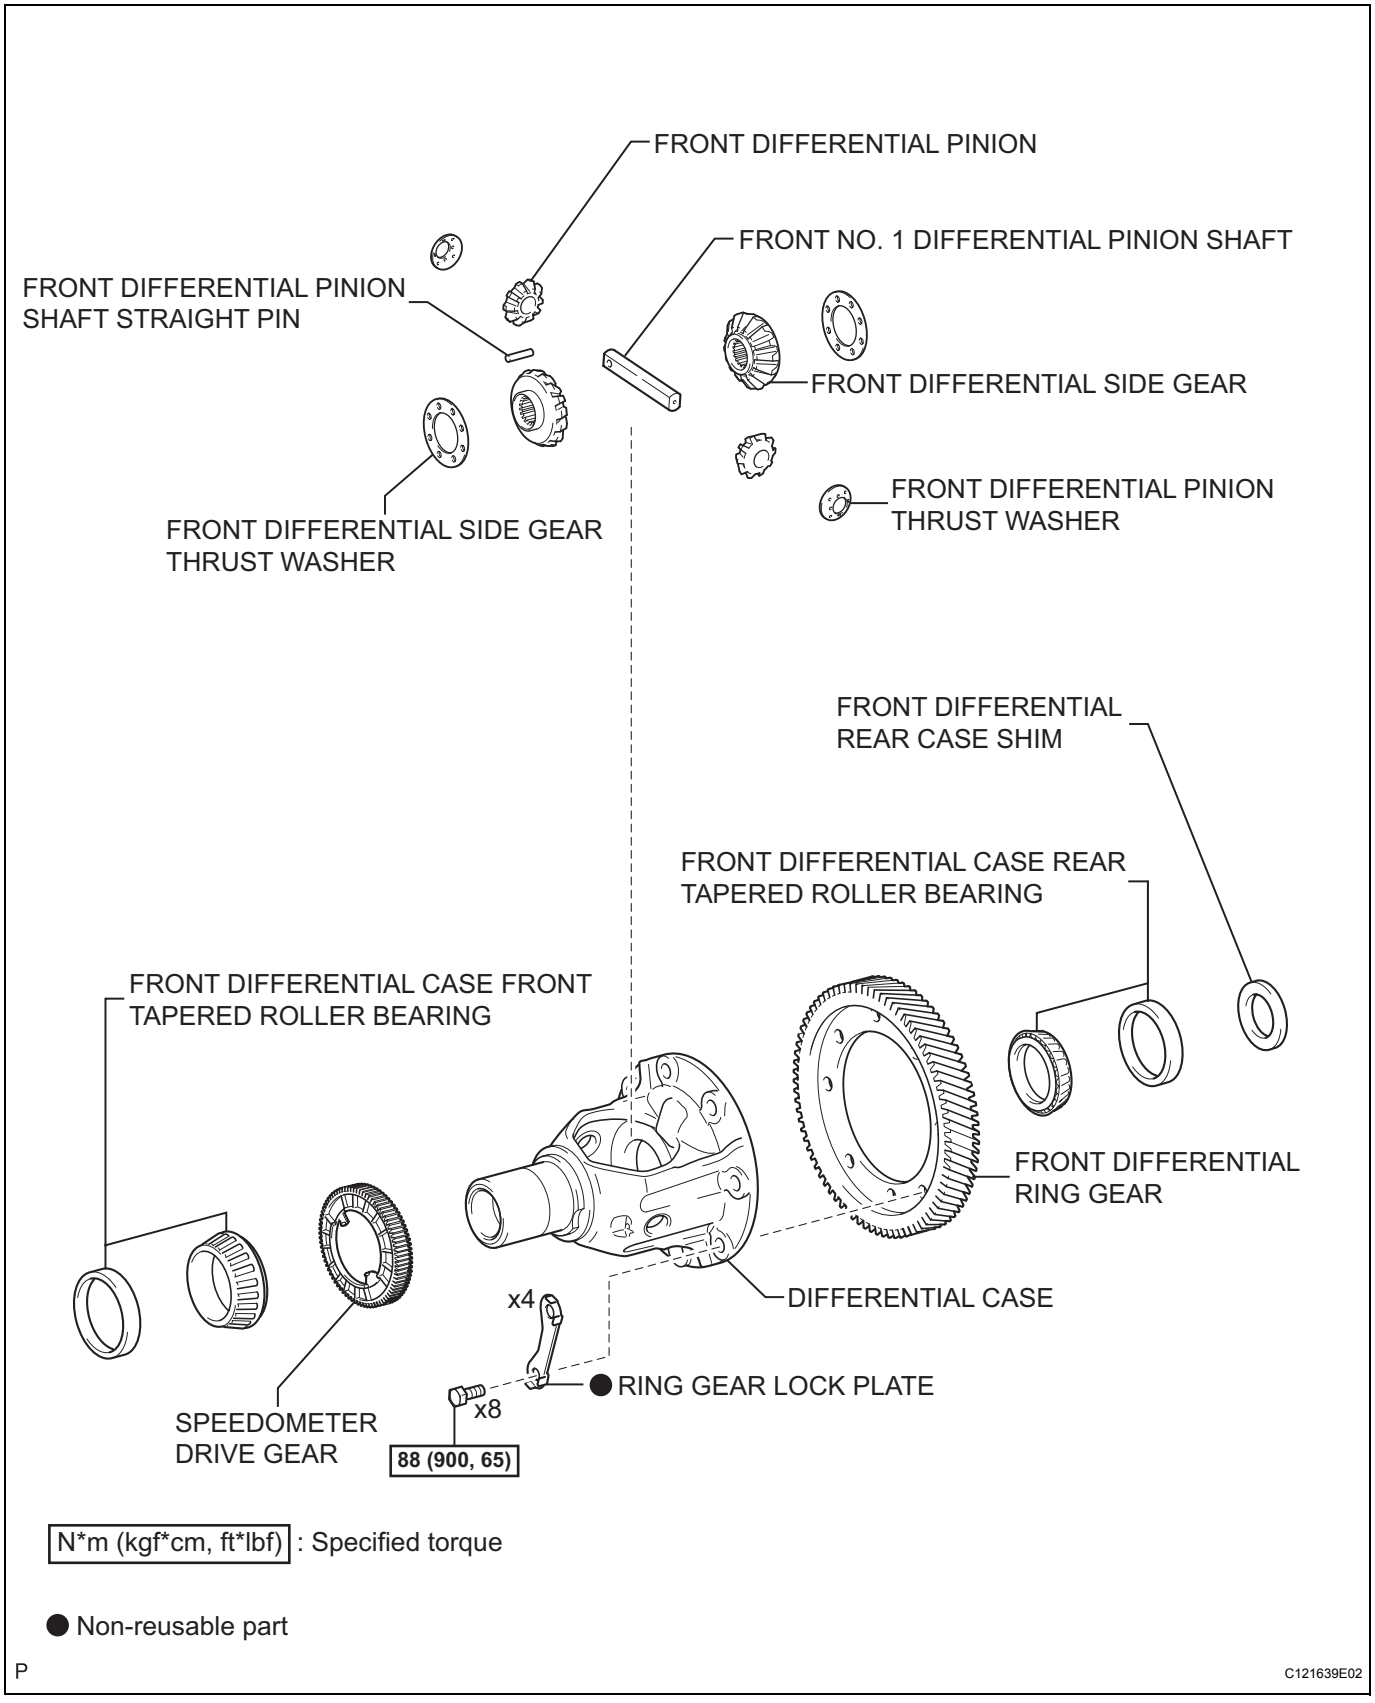


5. INSTALL SHIFT SOLENOID VALVE S1

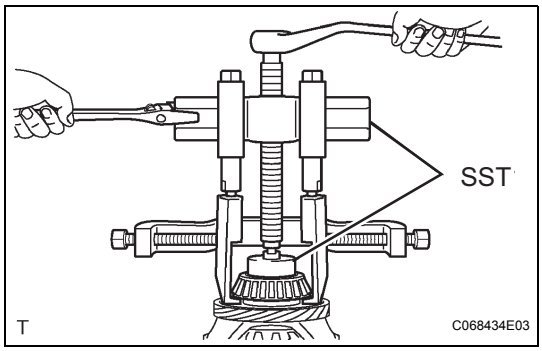
(a) Install shift solenoid valve S1 with the bolt.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

DIFFERENTIAL CASE

COMPONENTS



AX

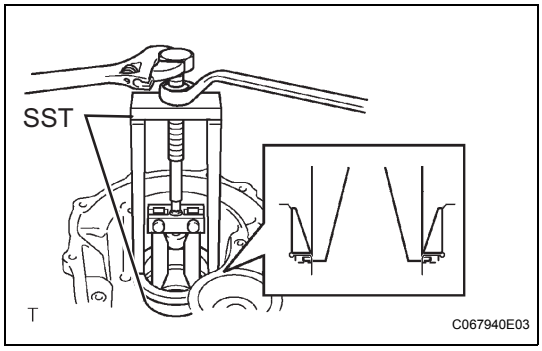


DISASSEMBLY

1. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

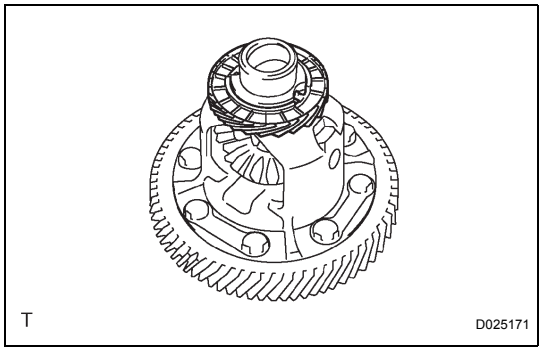
(a) Using SST, remove the front differential case front tapered roller bearing from the differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04030, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00390)



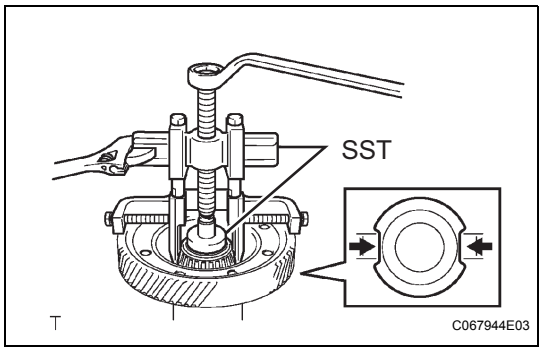
(b) Using SST, remove the front differential case RH tapered roller bearing outer race from the transaxle housing.

SST 09387-00041 (09387-02020, 09387-02010)



2. REMOVE SPEEDOMETER DRIVE GEAR

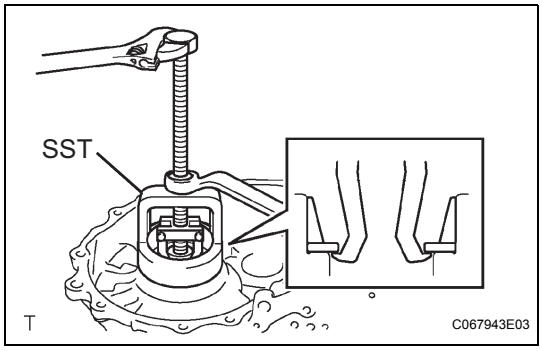
(a) Remove the speedometer drive gear from the differential case.



3. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

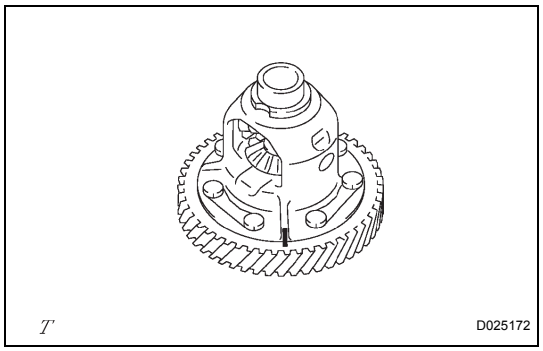
(a) Using SST, remove the front differential case tapered roller bearing from the differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00430)



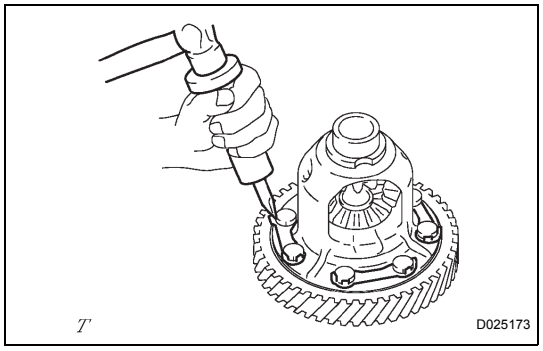
(b) Using SST, remove the front differential case tapered roller bearing outer race from the transaxle case.

SST 09612-65014 (09612-01010)

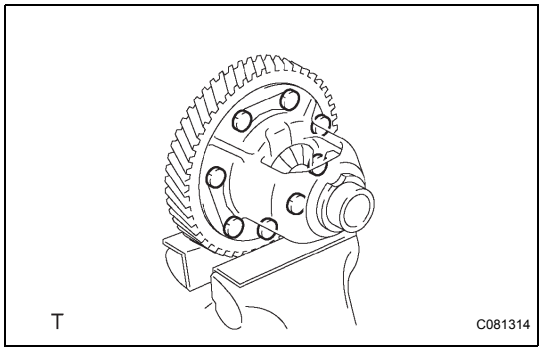


4. REMOVE FRONT DIFFERENTIAL RING GEAR

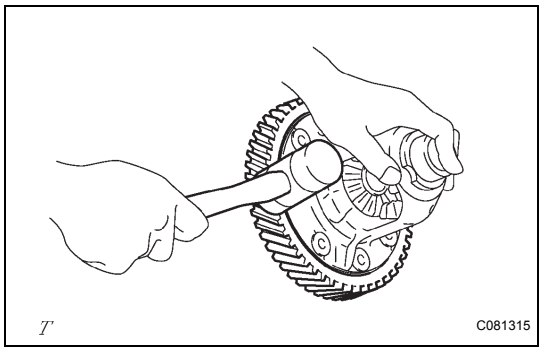
(a) Place matchmarks on the front differential ring gear and differential case.



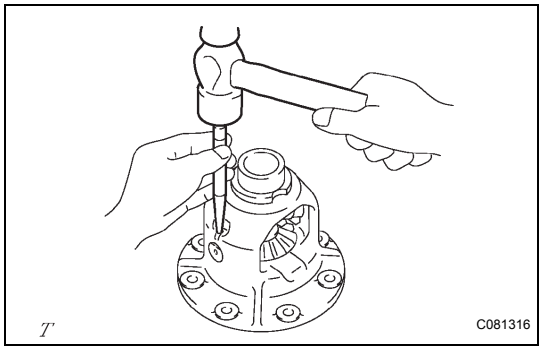
(b) Using SST and a hammer, release the lock plate.
SST 09930-00010



(c) Remove the 8 bolts and the lock plate.



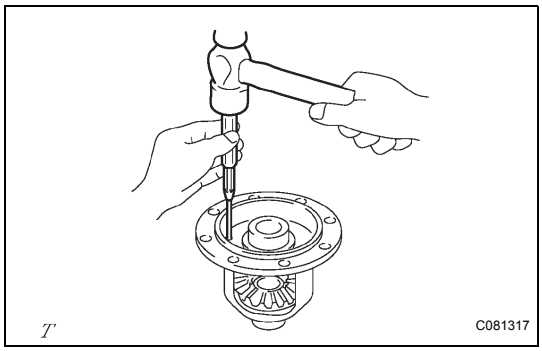
(d) Using a plastic hammer, remove the front differential ring gear from the differential case.



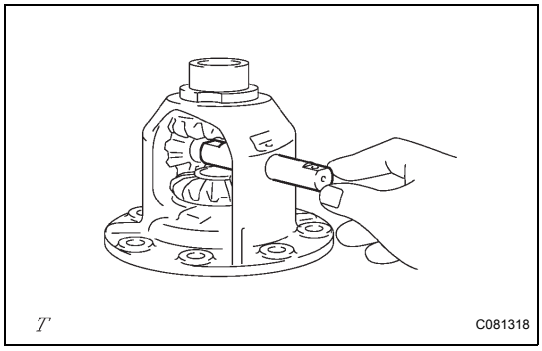
5. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a punch and a hammer, release the differential case.

AX

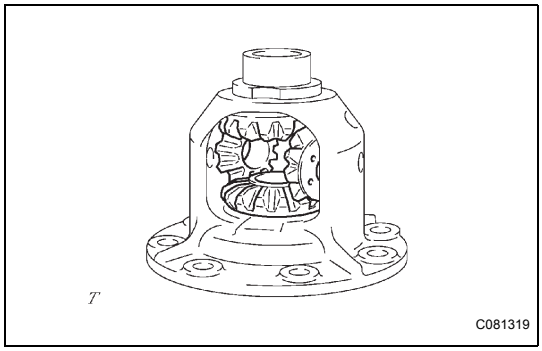


(b) Using a pin punch and a hammer, remove the straight pin.



6. REMOVE FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Remove the pinion shaft from the front differential case.

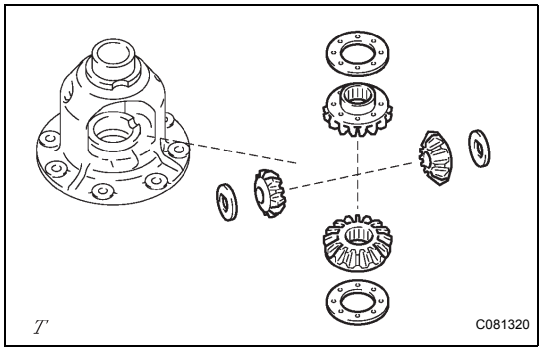


7. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 pinions, 2 thrust washers, 2 side gears and 2 thrust washers No. 1 from the front differential case.

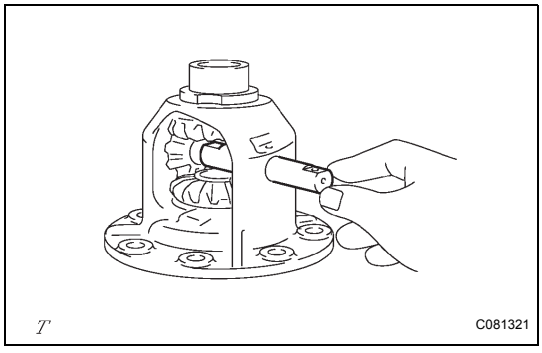
AX

REASSEMBLY



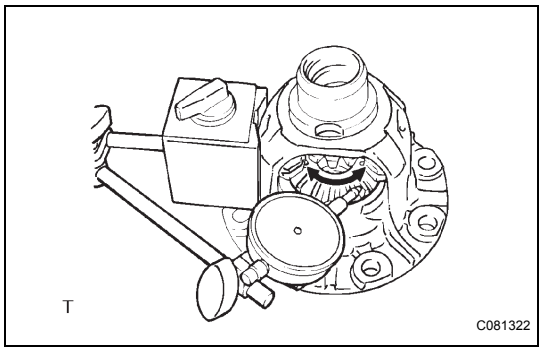
1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) After applying ATF to the 2 front differential side gears, 2 side gear thrust washers No. 1, 2 front differential pinions and 2 pinion thrust washers, install them onto the front differential case.
HINT:
When installing them, set the alignment of the front differential pinions perpendicular to that of the side gear and rotate them so that their holes are aligned with the holes in the differential case.



2. INSTALL FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Install the pinion shaft so as to align the lock pin holes in the pinion shaft and differential case.



3. INSPECT BACKLASH

(a) Measure the side gear backlash while holding 1 pinion gear toward the case.

Standard backlash:

0.05 to 0.20 mm (0.0020 to 0.0079 in.)

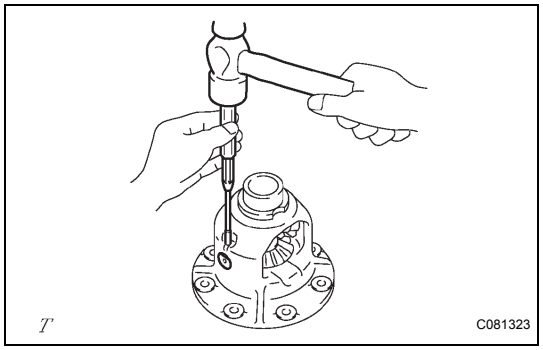
If the backlash is outside the specifications, install the correct thrust washer to the side gear.

(b) Referring to the table below, select thrust washers which will ensure that the backlash is within the specifications for both sides.

Thrust washer thickness

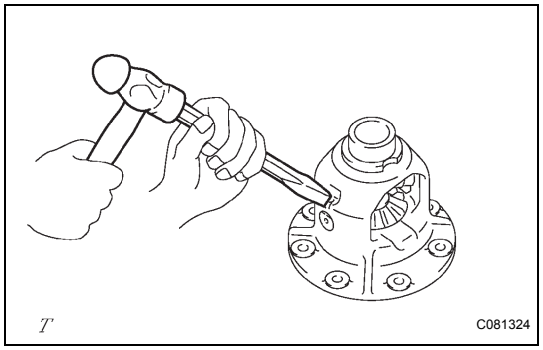
Thickness mm (in.)	Thickness mm (in.)
0.95 (0.0374)	1.10 (0.0433)
1.00 (0.0394)	1.15 (0.0453)
1.05 (0.0413)	1.20 (0.0472)

If the backlash is not within the specifications, install a thrust washer of a different thickness.

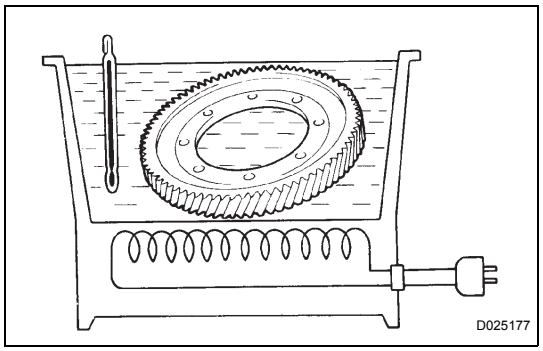


4. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and a hammer, install the pinion shaft straight pin.



(b) Using a chisel and a hammer, stake the differential case.

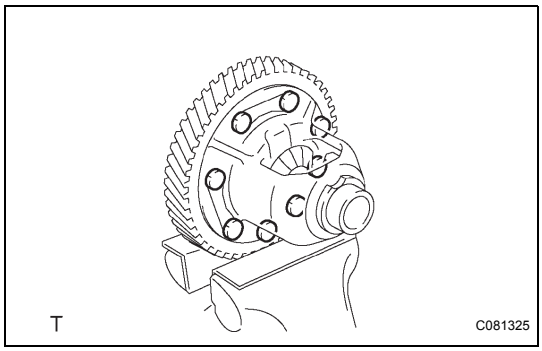


5. INSTALL FRONT DIFFERENTIAL RING GEAR

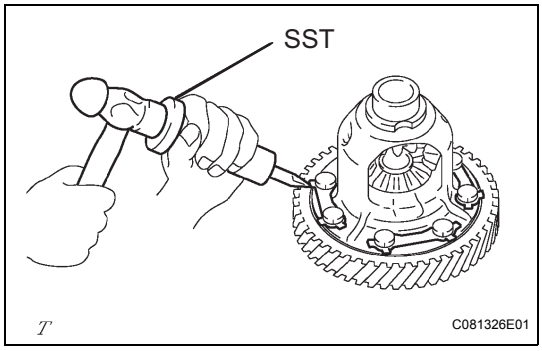
(a) Using ATF and a heater, heat the front differential ring gear to 90 to 110°C (194 to 230°F).

(b) Clean the contact surface of the front differential case.

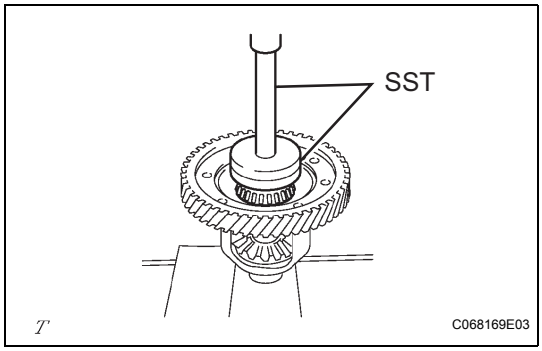
AX



(c) Install 4 new ring gear lock plates with the 8 bolts.
Torque: 88 N*m (900 kgf*cm, 65 ft.*lbf)

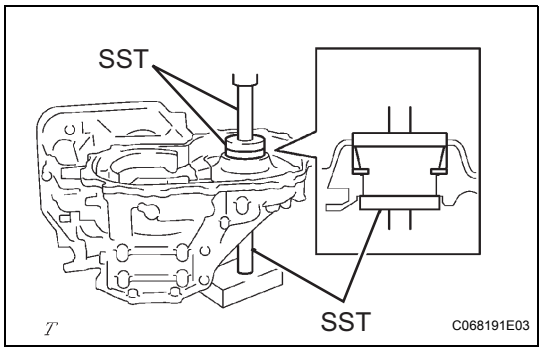


(d) Using SST, stake the ring gear lock plate.
SST 09930-00010

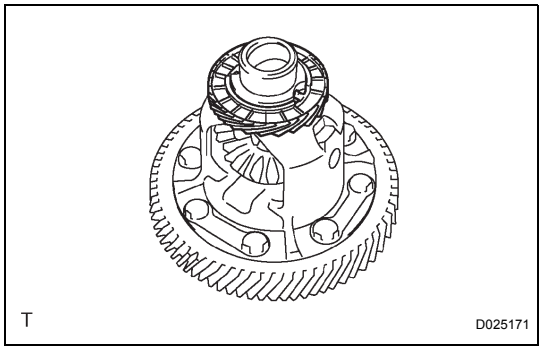


6. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case LH tapered roller bearing inner race onto the differential case.
SST 09726-40010, 09950-60020 (09951-00790)



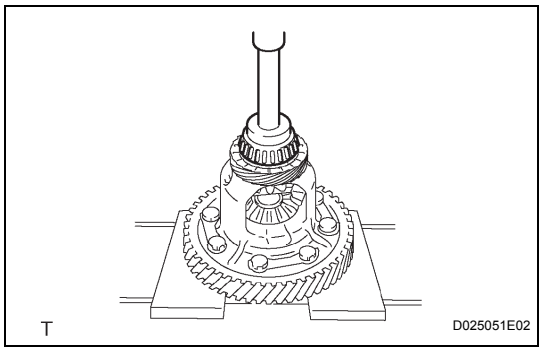
(b) Using SST and a press, install the shim and bearing outer race onto the transaxle case.
SST 09950-60020 (09951-00720), 09950-60010 (09951-00650), 09950-70010 (09951-07100, 09951-07200)



7. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install the speedometer drive gear onto the differential case.

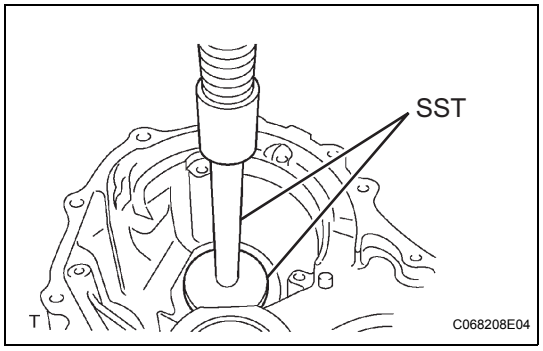
AX



8. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, install the bearing inner race onto the differential case.

SST 09950-60010 (09951-00460), 09950-70010 (09951-07100)



(b) Using SST and a press, install the tapered roller bearing onto the transaxle housing.

SST 09950-70010 (09951-07150), 09950-60020 (09951-00680)

CLUTCH SYSTEM

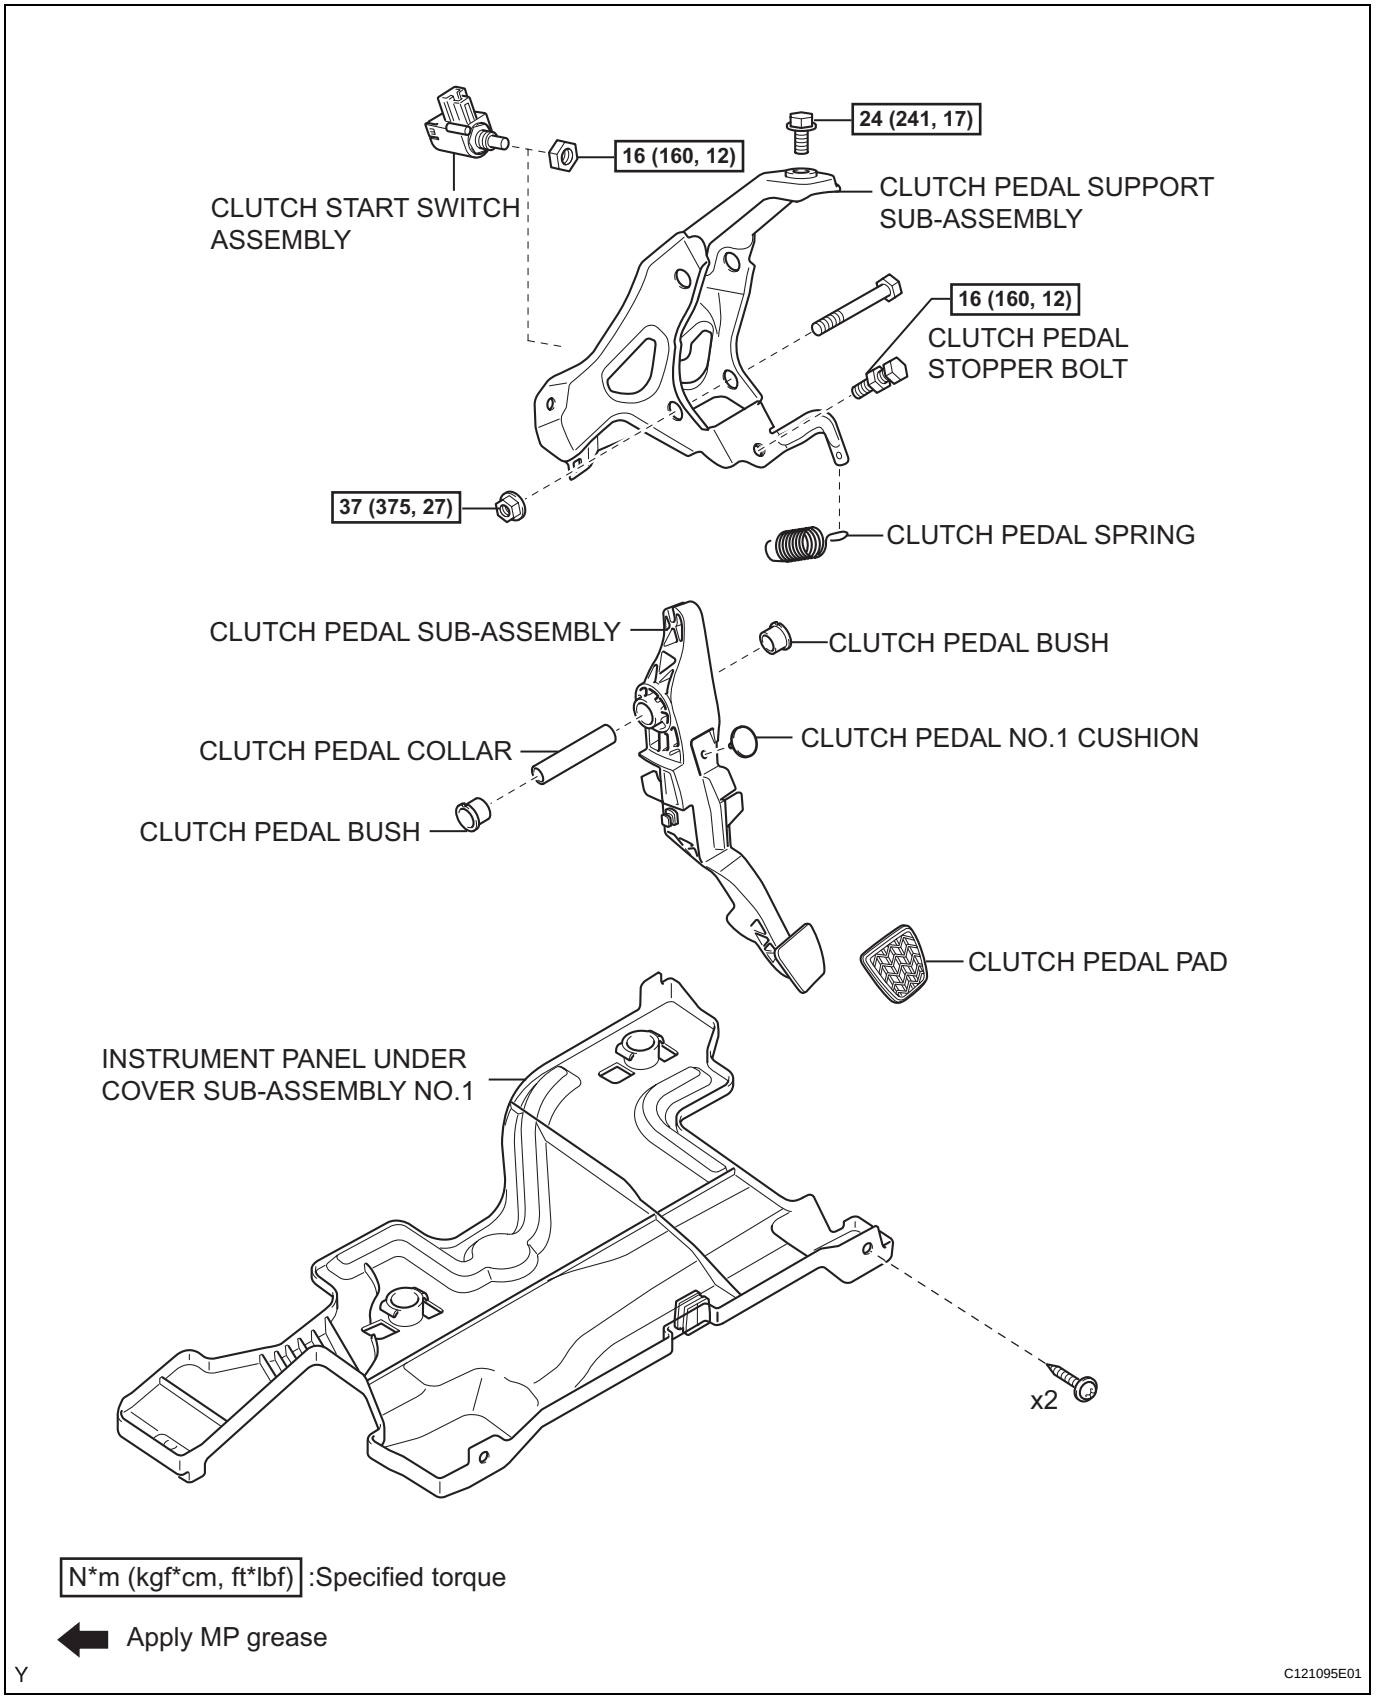
PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. The numbers indicate the likelihood of the possible causes of the problem in descending order. Check each part in order. Replace parts as necessary.

Symptom	Suspected area	See page
Clutch grabs/chatters	1. Engine mounting (Loose)	-
	2. Clutch disc assembly (Excessive runout)	CL-15
	3. Clutch disc assembly (Oily)	CL-15
	4. Clutch disc assembly (Worn out)	CL-15
	5. Clutch disc torsion spring (Damaged)	CL-15
	6. Clutch disc assembly (Glazed)	CL-15
	7. Diaphragm spring (Tip out of alignment)	CL-15
Clutch pedal spongy	1. Clutch line (Air in line)	-
	2. Master cylinder cup (Damaged)	CL-9
	3. Release cylinder rubber (Damaged)	CL-12
Clutch noisy	1. Clutch release bearing assembly (Worn, dirty or damaged)	CL-15
	2. Clutch disc torsion spring (Damaged)	CL-15
Clutch slips	1. Clutch pedal (Free play out of adjustment)	CL-3
	2. Clutch disc assembly (Oily)	CL-15
	3. Clutch disc assembly (Worn out)	CL-15
	4. Diaphragm spring (Damaged)	CL-15
	5. Pressure plate (Distorted)	CL-15
	6. Flywheel sub-assembly (Distorted)	CL-15
Clutch does not disengage	1. Clutch pedal (Free play out of adjustment)	CL-3
	2. Clutch line (Air in line)	-
	3. Master cylinder cup (Damaged)	CL-9
	4. Release cylinder cup (Damaged)	CL-12
	5. Clutch disc assembly (Out of line)	CL-15
	6. Clutch disc assembly (Excessive runout)	CL-15
	7. Clutch disc assembly (Lining broken)	CL-15
	8. Clutch disc assembly (Dirty or burned)	CL-15
	9. Clutch disc assembly (Oily)	CL-15
	10. Clutch disc assembly (Lack of spline grease)	CL-15

CLUTCH PEDAL

COMPONENTS



CL

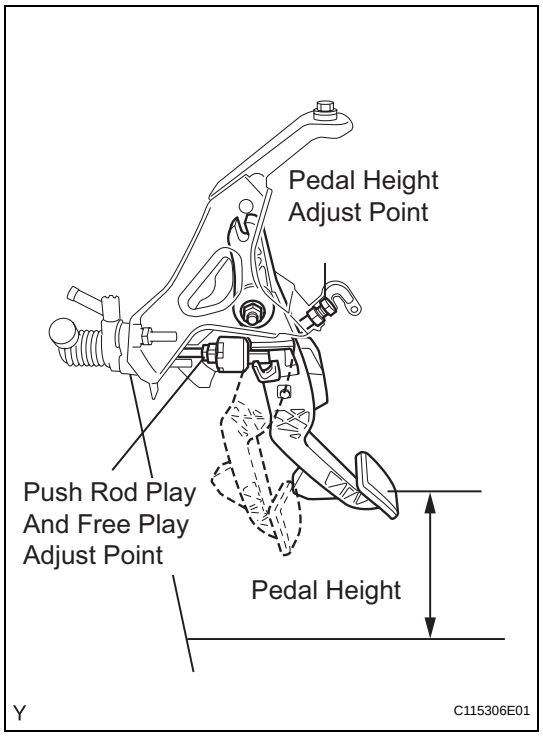
ON-VEHICLE INSPECTION

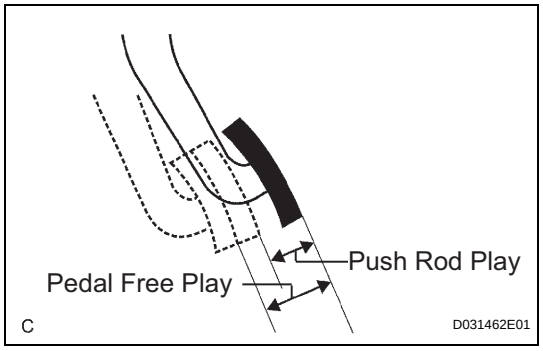
1. INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY

(a) Pull back the floor carpet.

(b) Check that the pedal height is correct.
Pedal height from dash panel:
133.0 to 143.0 mm (5.236 to 5.630 in.)

(c) If the pedal height is not as specified, adjust it as follows.
(1) Loosen the lock nut and turn the stopper bolt until the correct height is obtained.
(2) Tighten the lock nut.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



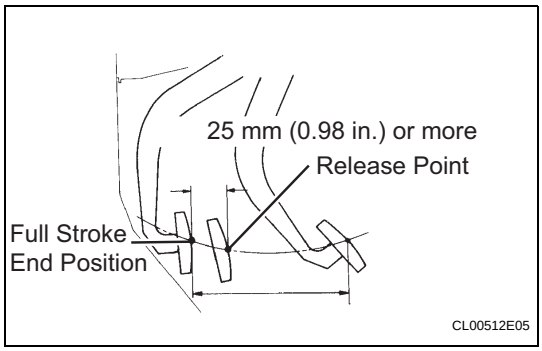


2. INSPECT AND ADJUST PEDAL FREE PLAY AND PUSH ROD PLAY

(a) Check that the pedal free play and push rod play are correct.
(1) Depress the pedal until clutch resistance begins to be felt.
Pedal free play:
5.0 to 15.0 mm (0.197 to 0.591 in.)
(2) Gently depress the pedal until the resistance begins to increase a little.
Push rod play at pedal top:
1.0 to 5.0 mm (0.039 to 0.197 in.)

(b) Adjust the pedal free play and push rod play.
(1) Loosen the lock nut and turn the push rod until the correct free play and push rod play are obtained.
(2) Tighten the lock nut.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)
(3) After adjusting the pedal free play, check the pedal height.

CL



3. INSPECT AND ADJUST CLUTCH RELEASE POINT

(a) Check the clutch release point.

(1) Pull the parking brake lever and install a wheel stoppers.

(2) Start the engine and run it at idle.

(3) Without depressing the clutch pedal, slowly move the shift lever into reverse until the gears come into contact.

(4) Gradually depress the clutch pedal and measure the stroke distance from the point that the gear noise stops (release point) up to the full stroke end position.

Standard distance:

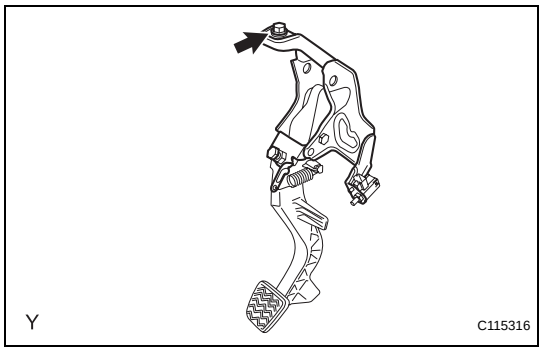
25 mm (0.98 in.) or more (From pedal stroke end position to release point)

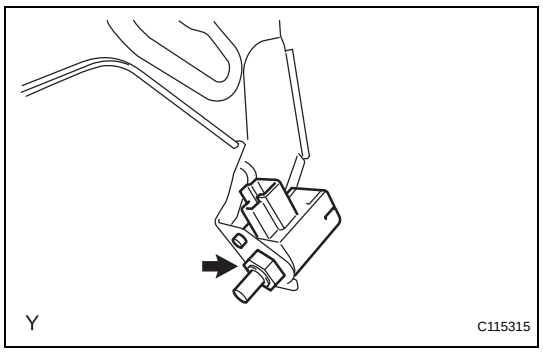
If the distance is not as specified, perform the following operations.

- Check pedal height.
- Check push rod play and pedal free play.
- Bleed the clutch line.
- Check the clutch cover assembly and disc assembly.

REMOVAL

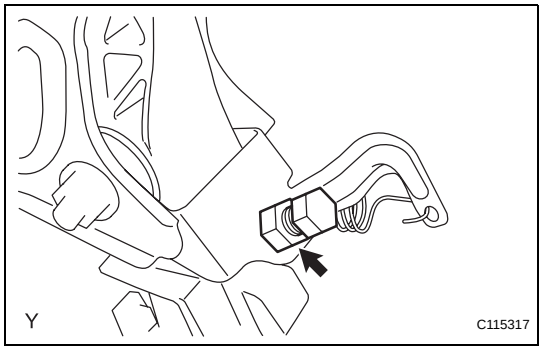
1. **REMOVE BRAKE BOOSTER ASSEMBLY**
   (See page BR-41)
2. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY UPPER (for Hatchback)**
   (See page IP-19)
3. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY UPPER (for Sedan)**
   (See page IP-5)
4. **REMOVE CLUTCH RESERVOIR TUBE (See page CL-9)**
5. **DISCONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE (See page CL-9)**
6. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY NO.1 (See page IR-50)**
7. **REMOVE CLUTCH MASTER CYLINDER ASSEMBLY (See page CL-9)**
8. **REMOVE CLUTCH PEDAL SUPPORT SUB-ASSEMBLY**
   (a) Disconnect the wire harness clamp.
   (b) Disconnect the clutch start switch connector.
   (c) Remove the bolt and clutch pedal support.





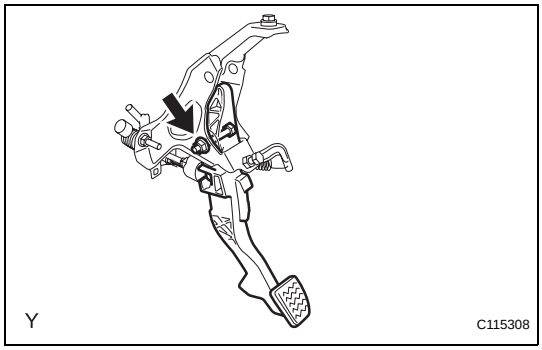
9. **REMOVE CLUTCH START SWITCH ASSEMBLY**
   (a) Remove the nut and clutch start switch.

CL



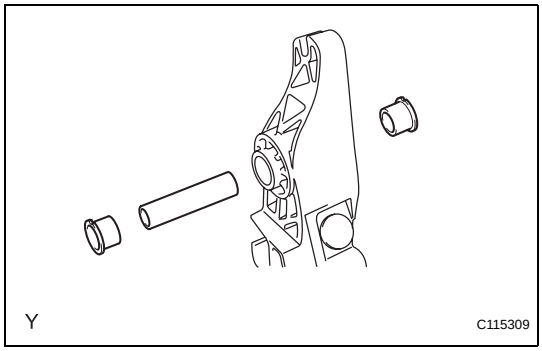
10. REMOVE CLUTCH PEDAL STOPPER BOLT
(a) Loosen the lock nut and remove the clutch pedal stopper bolt.

11. REMOVE CLUTCH PEDAL SPRING

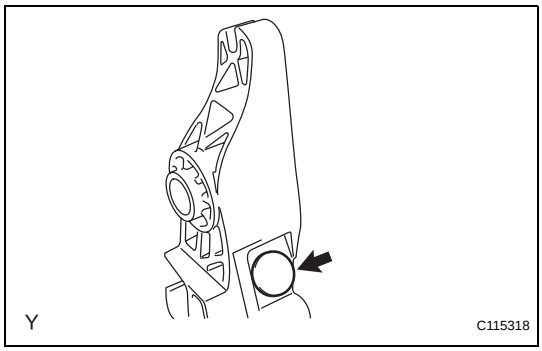


12. REMOVE CLUTCH PEDAL SUB-ASSEMBLY
(a) Remove the bolt and the nut.
(b) Remove the clutch pedal from the clutch pedal support.

13. REMOVE CLUTCH PEDAL PAD

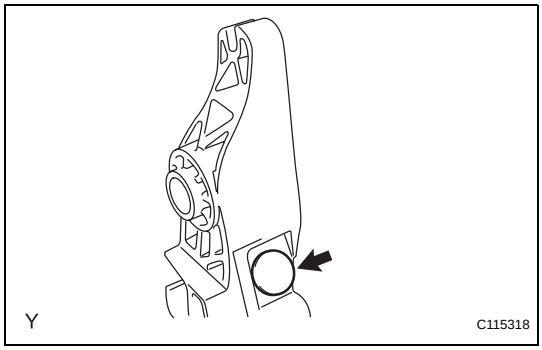


14. REMOVE CLUTCH PEDAL BUSH
(a) Remove the 2 bushes from the clutch pedal.
(b) Remove the collar from the clutch pedal.

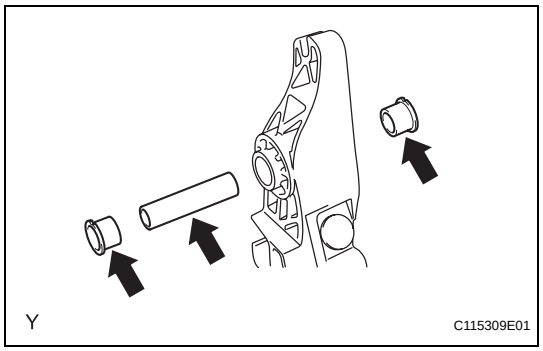


15. REMOVE CLUTCH PEDAL NO.1 CUSHION
(a) Remove the clutch pedal No. 1 cushion from the clutch pedal.

INSTALLATION



1. INSTALL CLUTCH PEDAL NO.1 CUSHION
(a) Install the clutch pedal No. 1 cushion onto the clutch pedal.

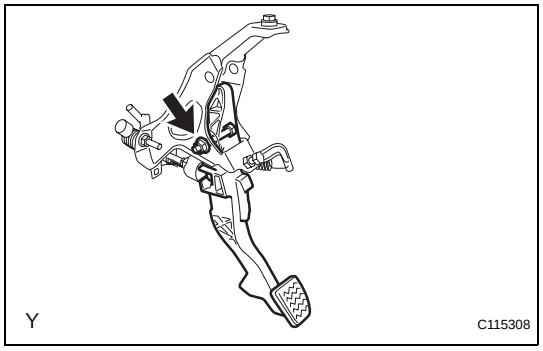


2. INSTALL CLUTCH PEDAL BUSH

(a) Apply MP grease to the 2 bushes and collar.

(b) Install the 2 bushes and collar onto the clutch pedal.

3. INSTALL CLUTCH PEDAL PAD



4. INSTALL CLUTCH PEDAL SUB-ASSEMBLY

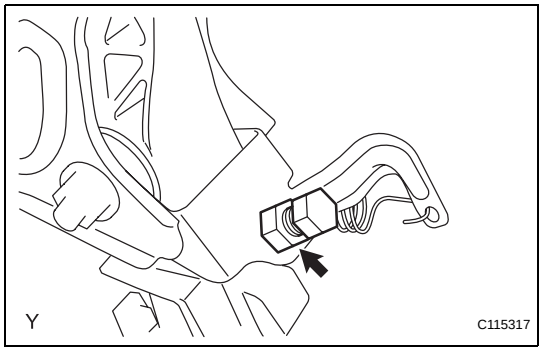
(a) Install the clutch pedal onto the clutch pedal support with the bolt and the nut.

Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

HINT:

Install the bolt from the left side of the vehicle.

5. INSTALL CLUTCH PEDAL SPRING

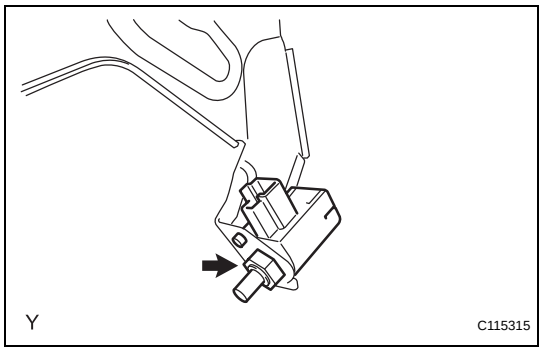


6. INSTALL CLUTCH PEDAL STOPPER BOLT

(a) Install the clutch pedal stopper bolt so that its end touches the clutch pedal cushion.

HINT:

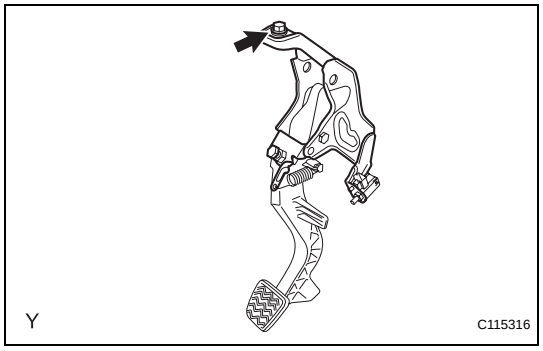
Tighten the lock nut to the specified torque when adjusting the clutch pedal.



7. INSTALL CLUTCH START SWITCH ASSEMBLY

(a) Install the clutch start switch with the nut.

Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



8. INSTALL CLUTCH PEDAL SUPPORT SUB-ASSEMBLY

(a) Install the clutch pedal support onto the vehicle with the bolt.

Torque: 24 N*m (241 kgf*cm, 17 ft.*lbf)

(b) Connect the clutch start switch connector.

(c) Connect the wire harness clamp.

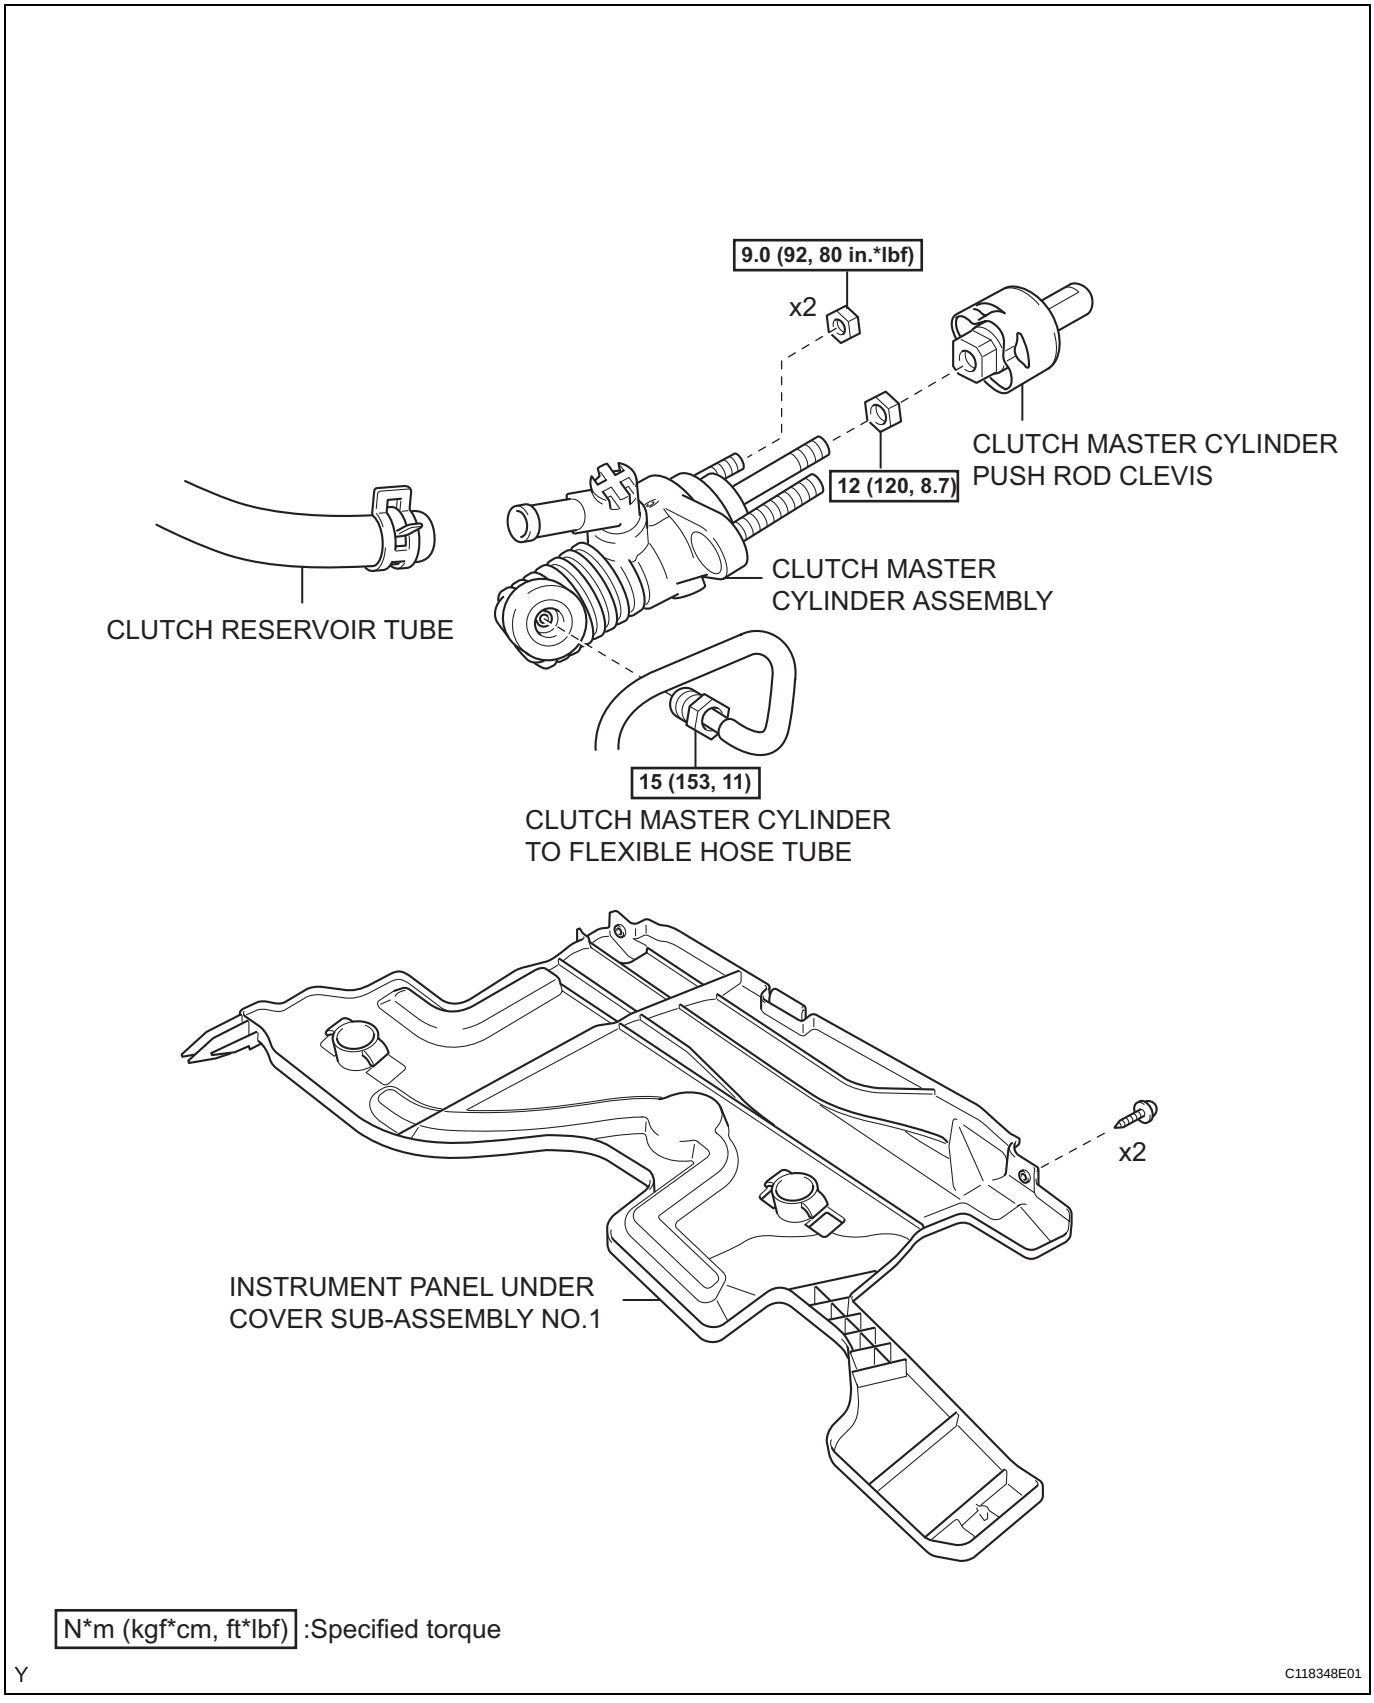
9. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY
(See page CL-10)

CL

10. **CONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE (See page CL-10)**
11. **INSTALL CLUTCH RESERVOIR TUBE (See page CL-10)**
12. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY UPPER (for Hatchback)**
(See page IP-26)
13. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY UPPER (for Sedan)**
(See page IP-10)
14. **INSTALL BRAKE BOOSTER ASSEMBLY**
(See page BR-43)
15. **INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY (See page CL-3)**
16. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY NO.1 (See page IR-82)**

CLUTCH MASTER CYLINDER

COMPONENTS

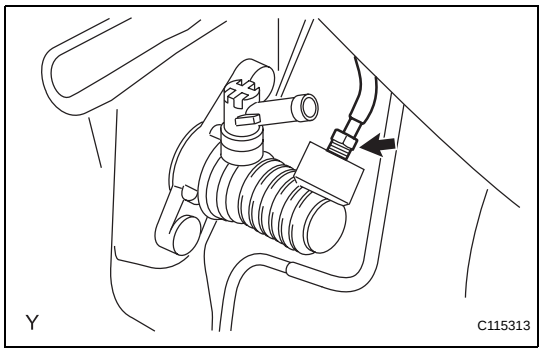


CL

REMOVAL

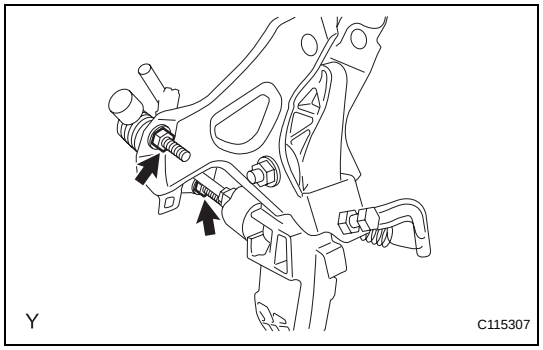
1. **REMOVE BRAKE BOOSTER ASSEMBLY**
   (See page BR-41)

2. **REMOVE CLUTCH RESERVOIR TUBE**
   (a) Loosen the clip and remove the clutch reservoir tube from the clutch master cylinder assembly.
   HINT:
   Use a container to collect the fluid.

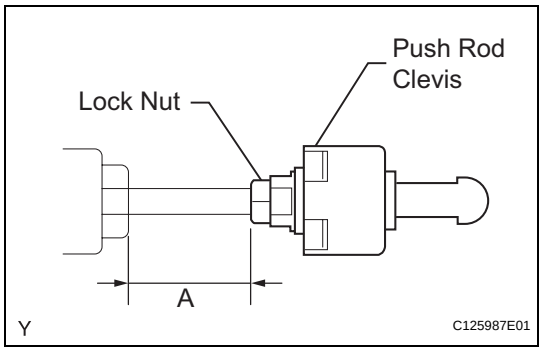


3. **DISCONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE**
   (a) Using SST, disconnect the flexible hose tube.
   SST 09023-00101
   HINT:
   Use a container to collect the fluid.

4. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY NO.1 (See page IR-50)**

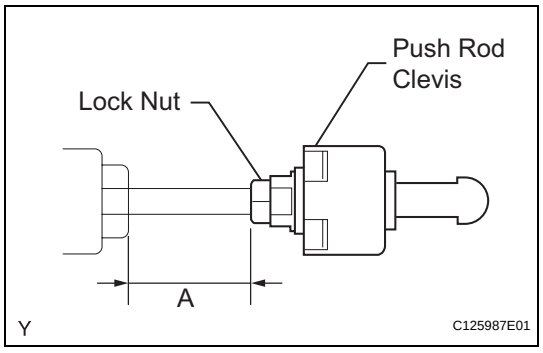


5. **REMOVE CLUTCH MASTER CYLINDER ASSEMBLY**
   (a) Remove the 2 nuts and the clutch master cylinder.



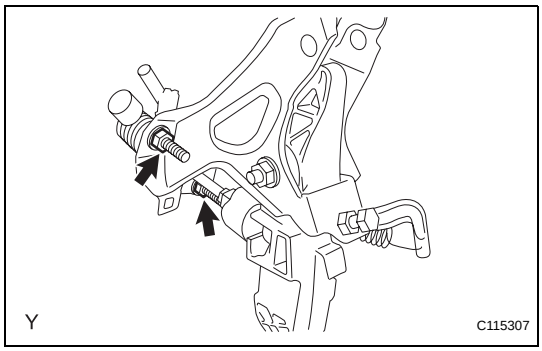
6. **REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS**
   (a) Measure dimension A as shown in the illustration before loosening the lock nut.
   (b) Loosen the lock nut and remove the push rod clevis.
   (c) Remove the lock nut.

INSTALLATION



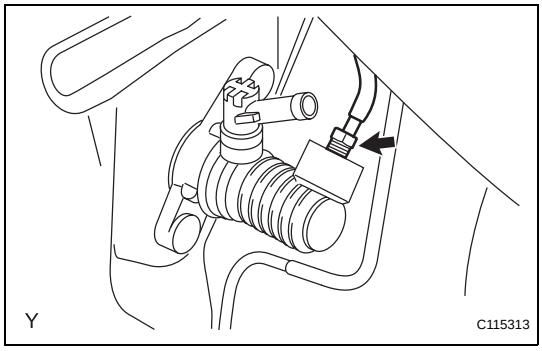
1. **INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS**
   (a) Install the lock nut onto the push rod.
   (b) Install the push rod clevis.
   (c) Tighten the lock nut and check the dimension A is same as the dimension A that has been measured.

CL



2. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY

(a) Install the clutch master cylinder with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



3. CONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST, connect the flexible hose tube.
SST 09023-00101
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

4. INSTALL CLUTCH RESERVOIR TUBE

(a) Connect the clutch reservoir tube with the clip to the clutch master cylinder assembly.

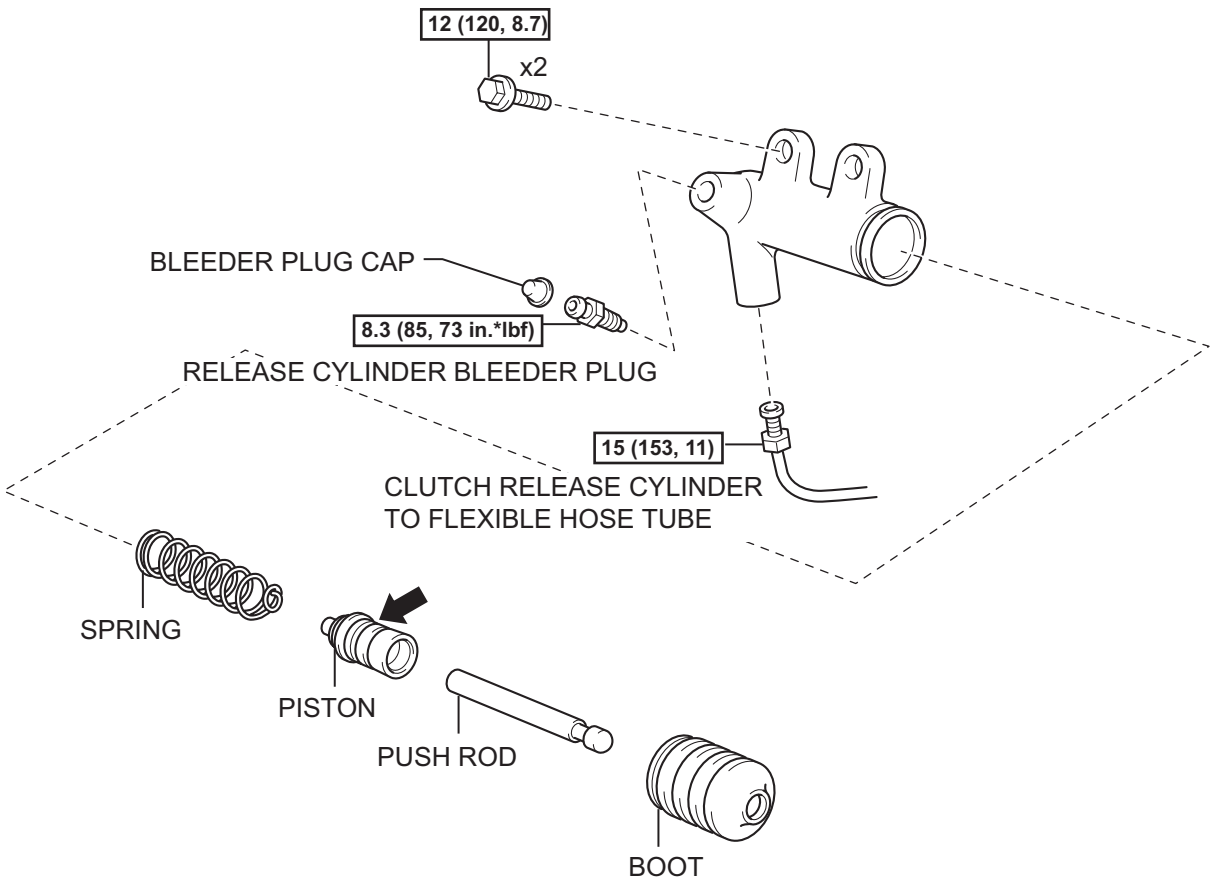
5. INSTALL BRAKE BOOSTER ASSEMBLY
(See page BR-43)

6. INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY (See page CL-3)

7. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY NO.1 (See page IR-82)

CLUTCH RELEASE CYLINDER

COMPONENTS



N*m (kgf*cm, ft*lbf) :Specified torque

Lithium soap base glycol grease

Y

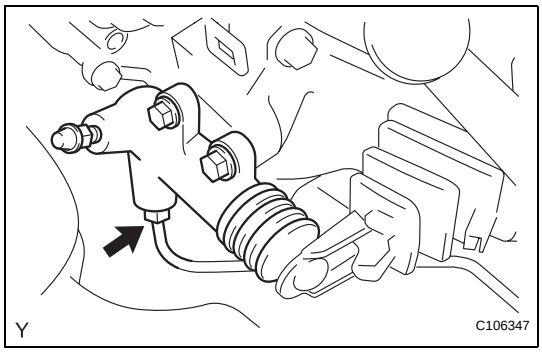
C106366E01

CL

REMOVAL

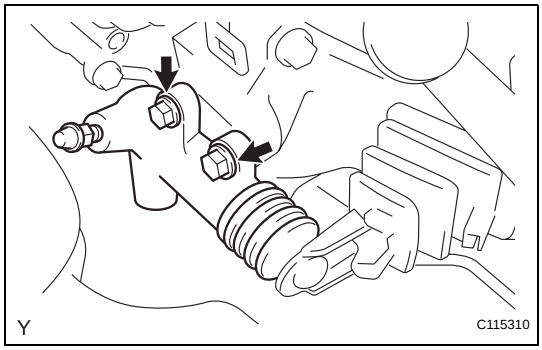
1. DRAIN BRAKE FLUID

2. DISCONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE



(a) Using SST, disconnect the flexible hose tube.
SST 09023-00101
HINT:
Use a container to collect the fluid.

3. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY



(a) Remove the 2 bolts and the clutch release cylinder.

DISASSEMBLY

1. REMOVE CLUTCH RELEASE CYLINDER KIT

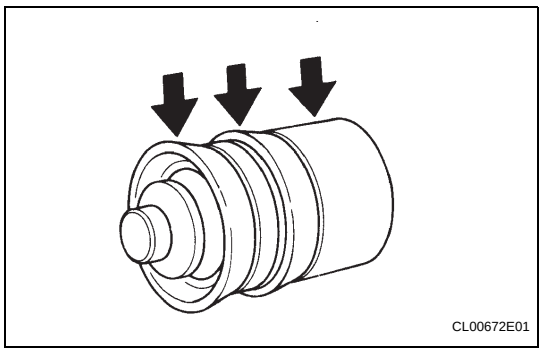
(a) Remove the boot from the cylinder body.
(b) Remove the push rod from the cylinder body.
(c) Remove the piston from the cylinder body.
NOTICE:
Do not damage the inside of the cylinder body.
(d) Remove the spring from the cylinder body.
(e) Remove the bleeder plug cap from the bleeder plug.

2. REMOVE RELEASE CYLINDER BLEEDER PLUG

REASSEMBLY

1. INSTALL RELEASE CYLINDER BLEEDER PLUG
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

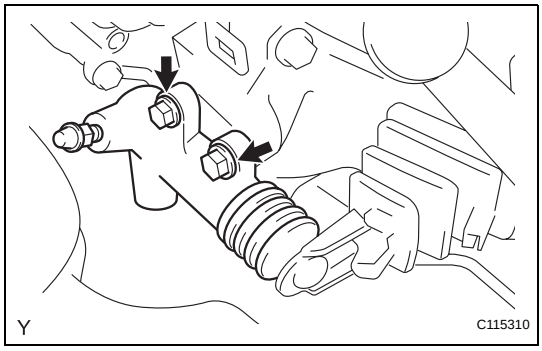
2. INSTALL CLUTCH RELEASE CYLINDER KIT
(a) Install the bleeder plug cap onto the bleeder plug.
(b) Install a new spring onto the cylinder body.



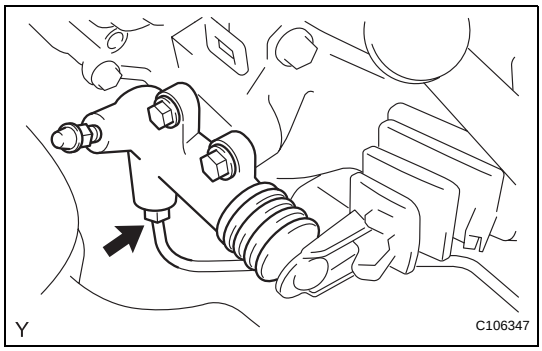
(c) Coat the parts with lithium soap base glycol grease, as shown in the illustration.
(d) Install the piston onto the cylinder body.
NOTICE:
Do not damage the inside of the cylinder body.
(e) Install the push rod onto the cylinder body.
(f) Install the boot onto the cylinder body.

INSTALLATION

1. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY
(a) Install the clutch release cylinder with the 2 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



2. CONNECT CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE
(a) Using SST, connect the flexible hose tube.
SST 09023-00101
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



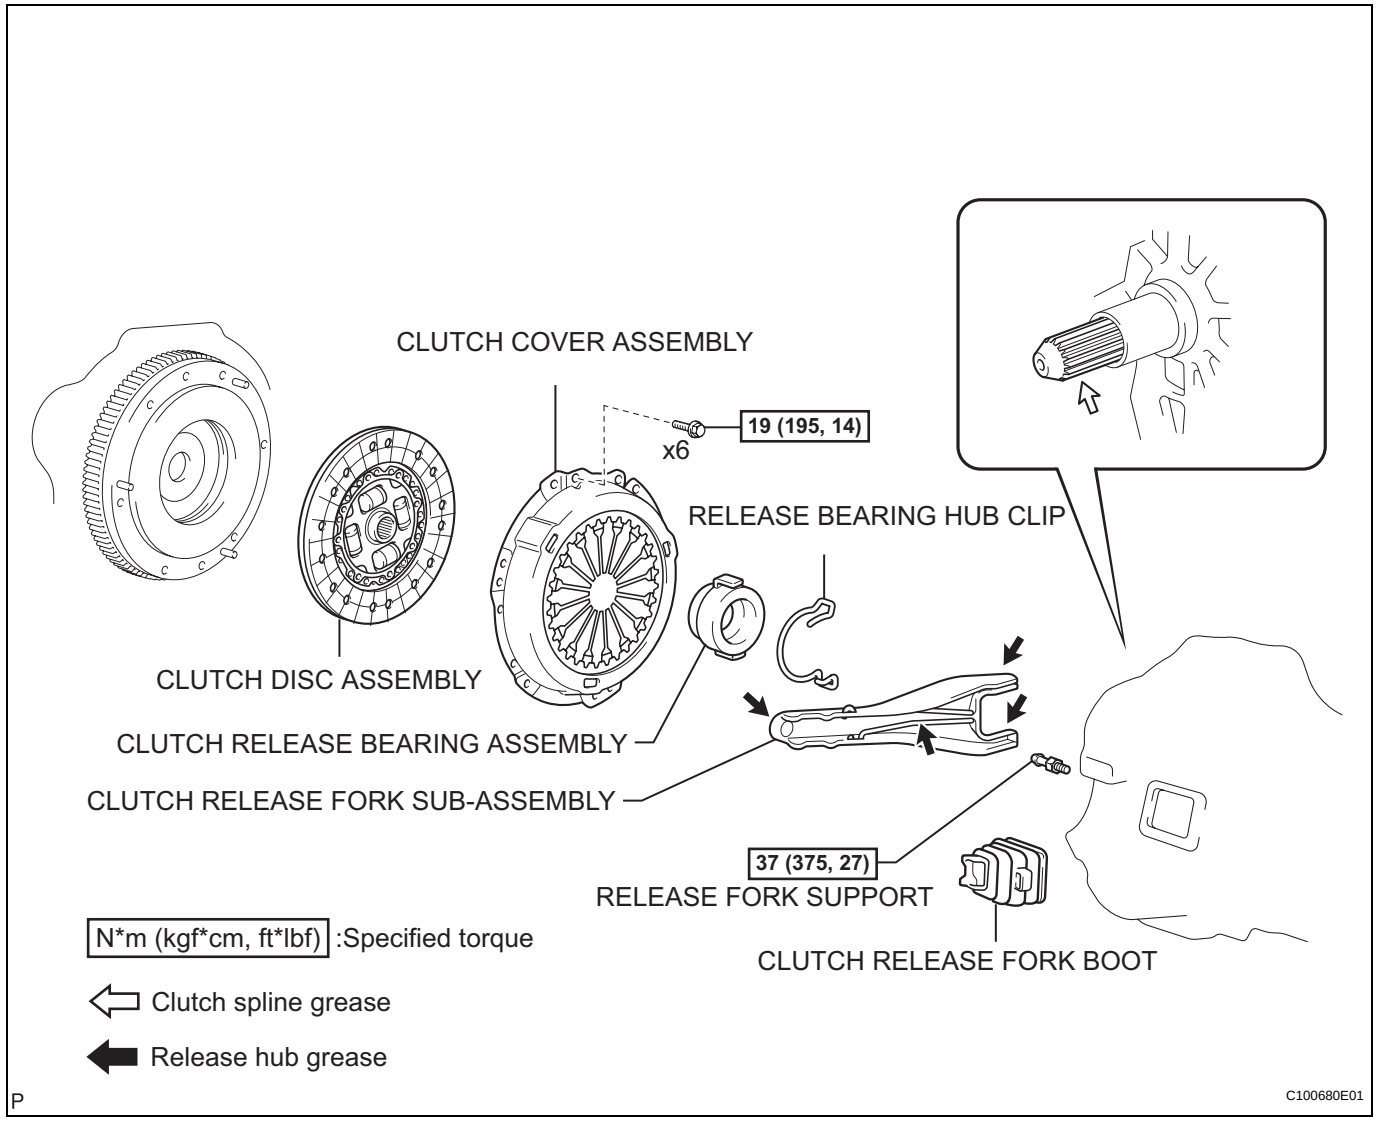
3. BLEED CLUTCH PIPE LINE
(a) Fill the brake reservoir tank with brake fluid and bleed the clutch system.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

4. CHECK FOR CLUTCH FLUID LEAKAGE

CL

CLUTCH UNIT

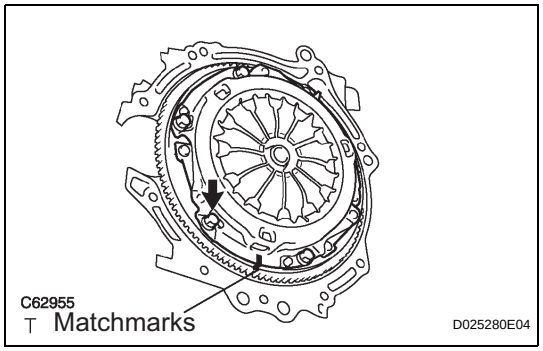
COMPONENTS

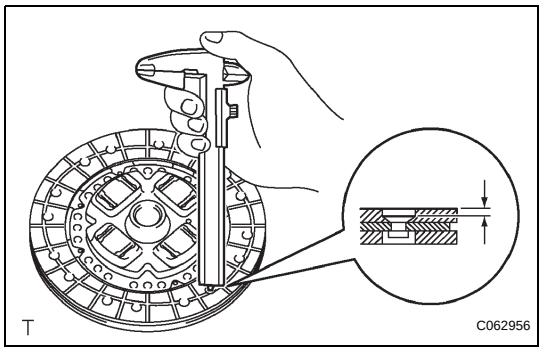


CL

REMOVAL

1. **REMOVE MANUAL TRANSAXLE ASSEMBLY**
   (See page MX-26)
2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork with the clutch release bearing from the manual transaxle.
3. **REMOVE CLUTCH RELEASE FORK BOOT**
4. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the clutch release bearing from the clutch release fork.
5. **REMOVE RELEASE BEARING HUB CLIP**
6. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the manual transaxle.
7. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Align the matchmark on the clutch cover assembly with the one on the flywheel.
   (b) Loosen each set bolt one turn at a time until the spring tension is released.
   (c) Remove the set bolts and pull off the clutch cover.
   NOTICE:
   Do not drop the clutch disc.
8. **REMOVE CLUTCH DISC ASSEMBLY**

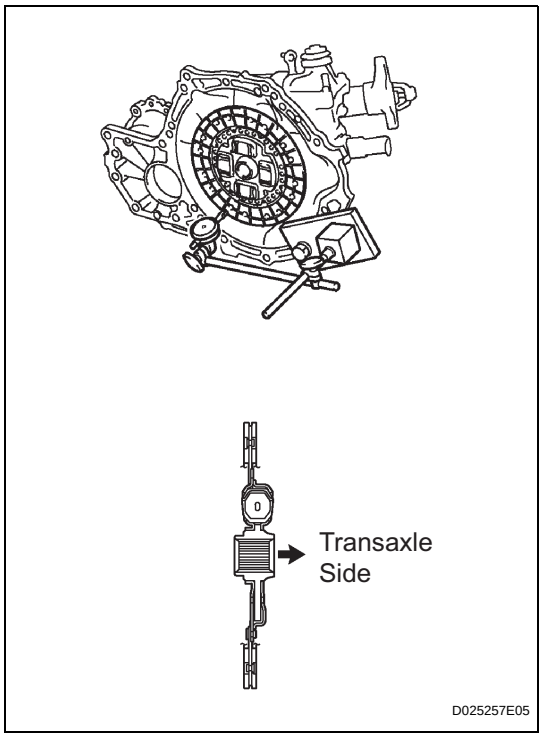




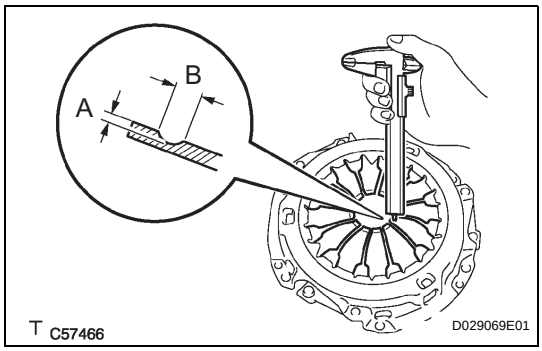
INSPECTION

1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Minimum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.
   (b) Install the clutch disc assembly onto the transaxle assembly.
   NOTICE:
   Insert the clutch disc assembly in the correct direction.

CL

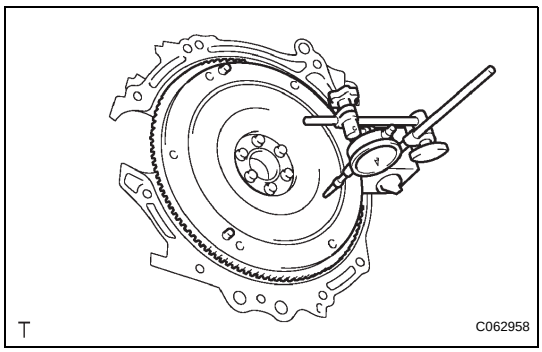


(c) Using a dial gauge, measure the clutch disc assembly runout.
Maximum runout:
0.8 mm (0.031 in.)
If necessary, replace the clutch disc assembly.



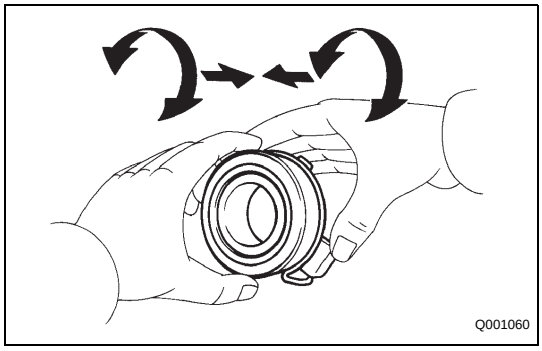
2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using vernier calipers, measure the depth and width of the diaphragm spring wear.
Maximum:
A (Depth): 0.5 mm (0.020 in.)
B (Width): 6.0 mm (0.236 in.)
If necessary, replace the clutch cover assembly.



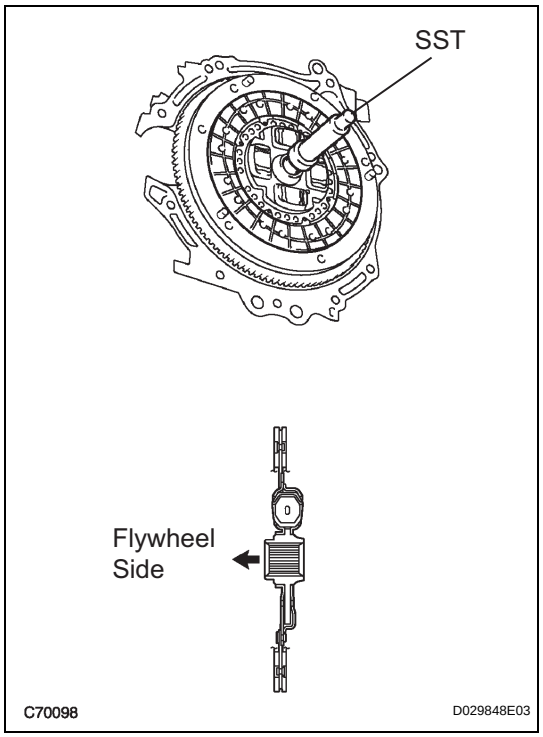
3. INSPECT FLYWHEEL SUB-ASSEMBLY

(a) Using a dial gauge, check the flywheel sub-assembly runout.
Maximum runout:
0.1 mm (0.004 in.)
If necessary, replace the flywheel sub-assembly.



4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

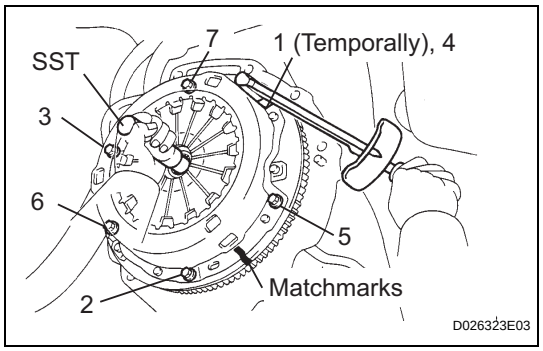
(a) Check that the clutch release bearing assembly moves smoothly without abnormal resistance by turning the sliding parts of the clutch release bearing assembly (contact surfaces with the clutch cover) while applying force in the axial direction.
(b) Inspect the clutch release bearing assembly for damage and wear.
HINT:
If necessary, replace the release bearing assembly.



INSTALLATION

1. INSTALL CLUTCH DISC ASSEMBLY

(a) Insert SST into the clutch disc assembly, then insert them both into the flywheel sub-assembly.
SST 09301-00110
NOTICE:
Insert the clutch disc assembly in the correct direction.

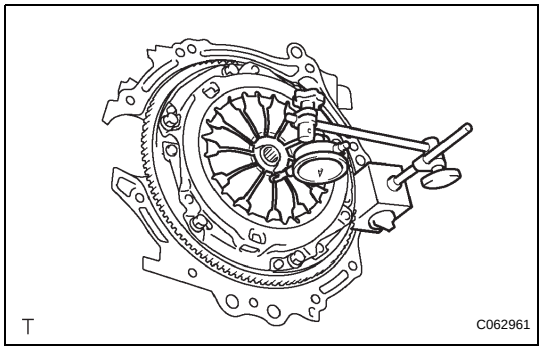


2. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmark on the clutch cover assembly with that on the flywheel sub-assembly.

(b) Following the procedures shown in the illustration, tighten the 6 bolts in order, starting with the bolt located near the knock pin at the top.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
HINT:
- Following the order in the illustration, tighten the blots evenly one at a time.
- Move SST up and down, right and left lightly after checking that the disc is in the center, and tighten the bolts.

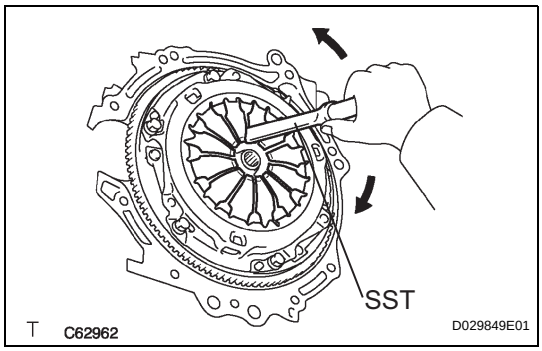
SST 09301-00110

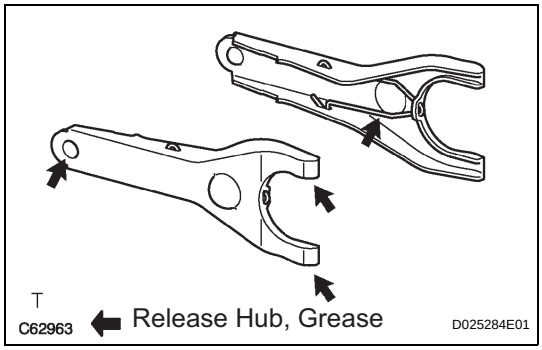


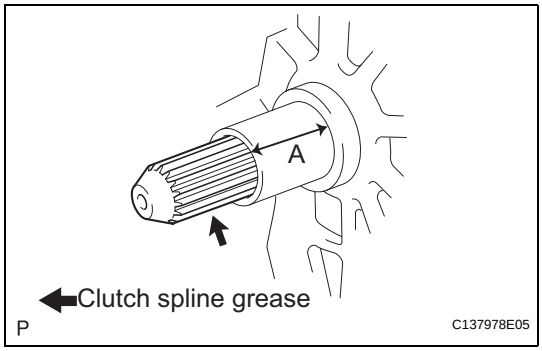
3. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.
Maximum non-alignment:
0.5 mm (0.020 in.)

CL







(b) If the alignment is not as specified, using SST, adjust the diaphragm spring tip alignment.
SST 09333-00013

4. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

5. INSTALL CLUTCH RELEASE FORK BOOT

6. INSTALL RELEASE BEARING HUB CLIP

7. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the contact surfaces of the release fork and release bearing assembly, release fork and push rod, and release fork and fork support.
Sealant:
Toyota Genuine Release Hub Grease or Equivalent

(b) Install the release fork onto the release bearing assembly.

8. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

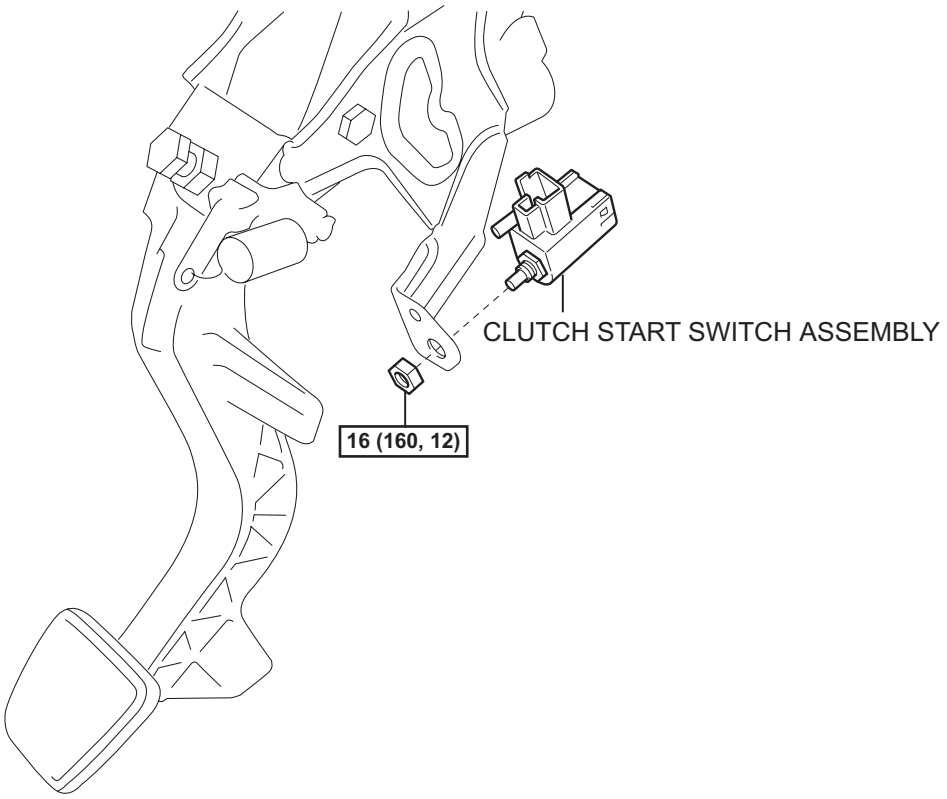
(a) Apply clutch spline grease to the input shaft spline.
Sealant:
Toyota Genuine Clutch Spline Grease or Equivalent
NOTICE:
Do not apply grease to portion A shown in the illustration.

(b) Install the clutch release bearing with release fork onto the transaxle assembly.
NOTICE:
After the installation, move the fork forward and backward to check that the release bearing slides smoothly.

9. INSTALL MANUAL TRANSAXLE ASSEMBLY
(See page MX-30)

CLUTCH START SWITCH

COMPONENTS

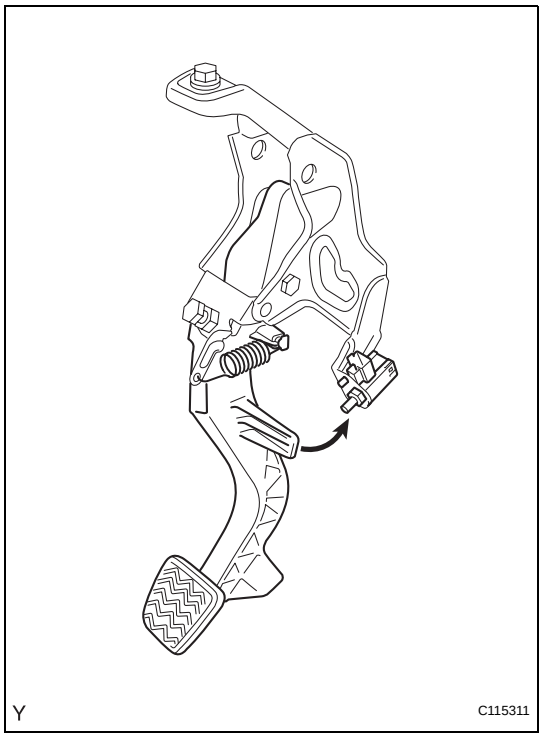


N*m (kgf*cm, ft*lbf) :Specified torque

Y

C116833E01

CL

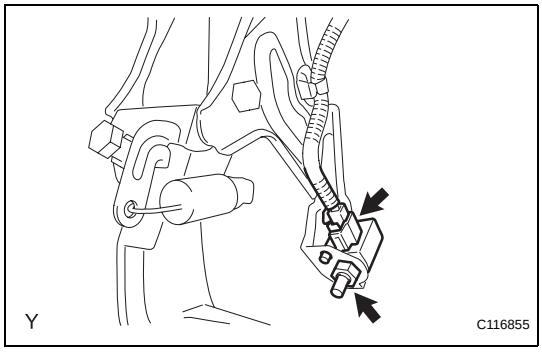


ON-VEHICLE INSPECTION

1. CHECK CLUTCH START SYSTEM

(a) Check that the engine does not start when the clutch pedal is released.

(b) Check that the engine starts when the clutch pedal is fully depressed.
If necessary, replace the clutch start switch assembly.



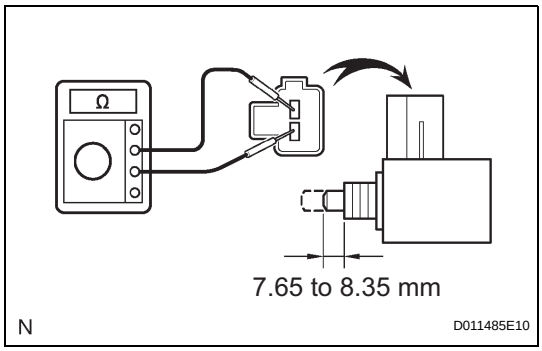
REMOVAL

1. REMOVE CLUTCH START SWITCH ASSEMBLY

(a) Disconnect the clutch start switch connector.

(b) Remove the nut and clutch start switch from the bracket.

CL

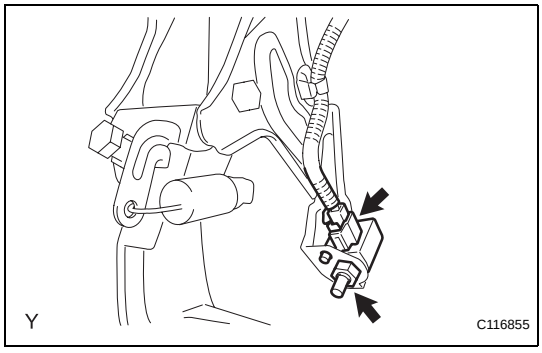


INSPECTION

1. INSPECT CLUTCH START SWITCH ASSEMBLY

(a) Check the resistance between the terminals when the switch is ON and OFF.
Standard resistance

Switch position	Condition
ON (pushed in)	Below 1Ω
OFF (released)	10 kΩ or higher



INSTALLATION

1. INSTALL CLUTCH START SWITCH ASSEMBLY

(a) Install the clutch start switch with the nut.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)
NOTICE:
Insert the protrusion of the clutch start switch into the hole in the clutch pedal support.

(b) Connect the clutch start switch connector.

2. INSPECT CLUTCH START SWITCH ASSEMBLY (See page CL-20)

MANUAL TRANSAXLE SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. The numbers indicate the likelihood of the possible causes in descending order. Check each part in order. Replace parts as necessary.

Symptom	Suspected area	See page
Noise	1. Oil (Level low)	MX-2
	2. Oil (Wrong)	MX-2
	3. Gear (Input shaft) (Worn or damaged)	MX-78
	4. Gear (Output shaft) (Worn or damaged)	MX-89
	5. Bearing (Input shaft) (Worn or damaged)	MX-76
	6. Bearing (Output shaft) (Worn or damaged)	MX-86
	7. Bearing (Differential case) (Worn or damaged)	MX-101
Oil leakage	1. Oil (Level too high)	MX-2
	2. Gasket (Damaged)	MX-41
	3. Oil seal (Worn or damaged)	MX-4
Hard or impossible to shift	1. Control cable (Faulty)	MX-16
	2. Shift fork (Worn)	MX-56
	3. Synchronizer ring ((Input shaft) Worn or damaged)	MX-78

MANUAL TRANSAXLE OIL

ON-VEHICLE INSPECTION

1. INSPECT TRANSAXLE OIL

(a) Stop the vehicle in a level place.

(b) Remove the transmission filler plug and the gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the bottom of the transmission filler plug opening.

NOTICE:

- **Excessively large or small amounts of oil may cause problems.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

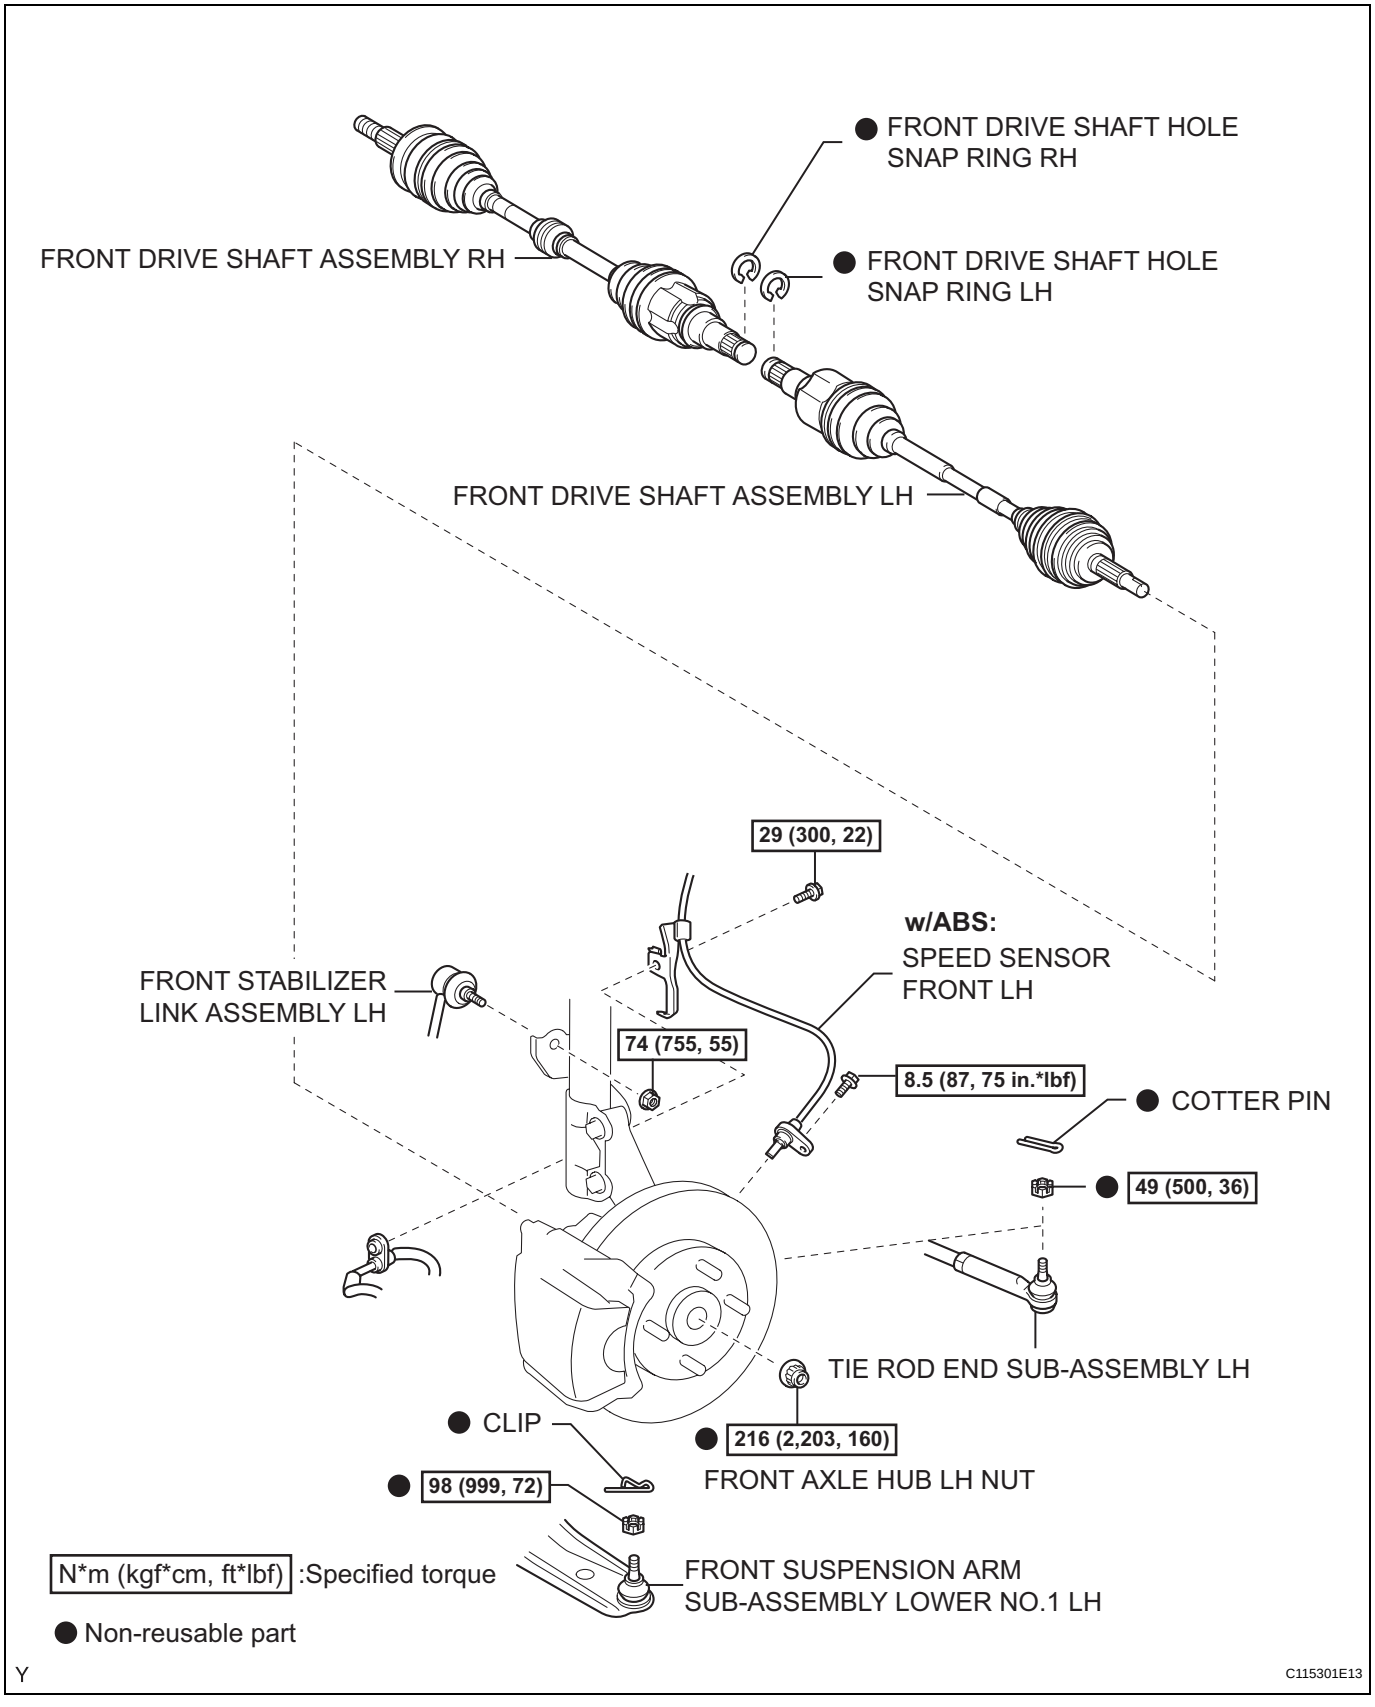
(d) Check for oil leakage when the oil level is low.

(e) Install the transmission filler plug and a new gasket.

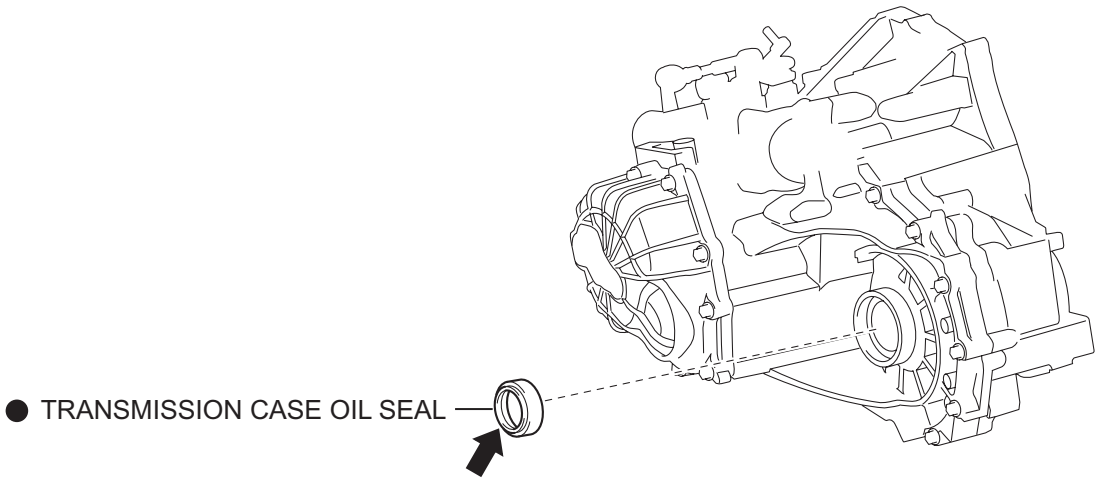
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

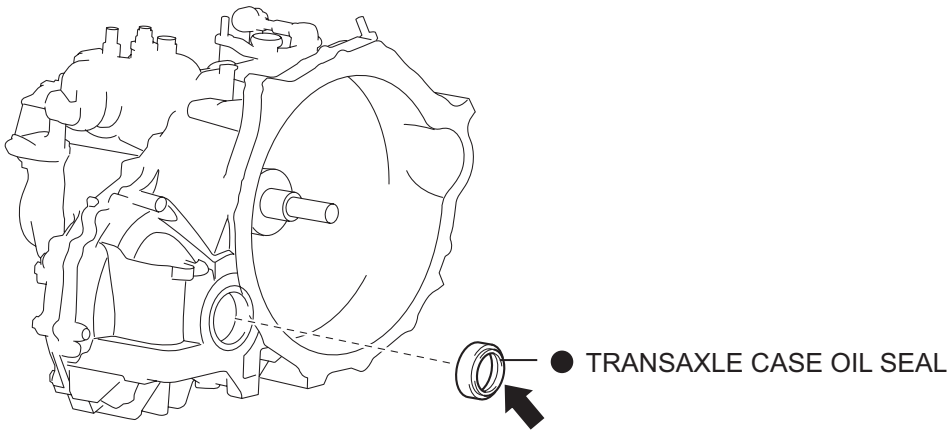
DIFFERENTIAL OIL SEAL

COMPONENTS



MX





● Non-reusable part

⬅ Apply MP grease

Y

C108463E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **DRAIN TRANSAXLE OIL**
   (a) Remove the filler plug and the gasket.
   (b) Remove the drain plug and gasket, and then drain the manual transaxle oil.
   (c) Install a new gasket and the drain plug.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

3. **REMOVE FRONT WHEELS**

4. **REMOVE FRONT AXLE HUB LH NUT (See page DS-3)**

5. **REMOVE FRONT AXLE HUB RH NUT**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.

6. **SEPARATE SPEED SENSOR FRONT LH (w/ ABS) (See page DS-3)**

7. **SEPARATE SPEED SENSOR FRONT RH (w/ ABS)**
   HINT:
   The separation procedure for the RH side is the same as that for the LH side.

8. **SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 LH (See page DS-4)**

9. **SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 RH**
   HINT:
   The separation procedure for the RH side is the same as that for the LH side.

10. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)**

11. **SEPARATE TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.

12. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)**

13. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.

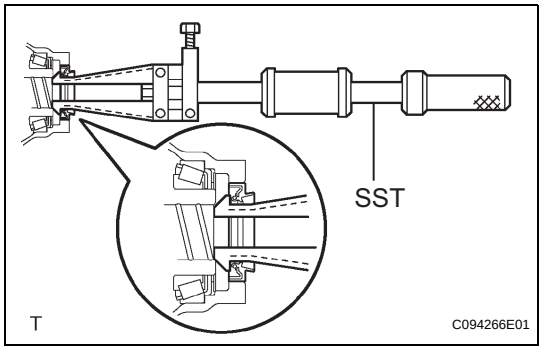
14. **SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-4)**

15. **SEPARATE FRONT AXLE ASSEMBLY RH**
HINT:
The separation procedure for the RH side is the same as that for the LH side.

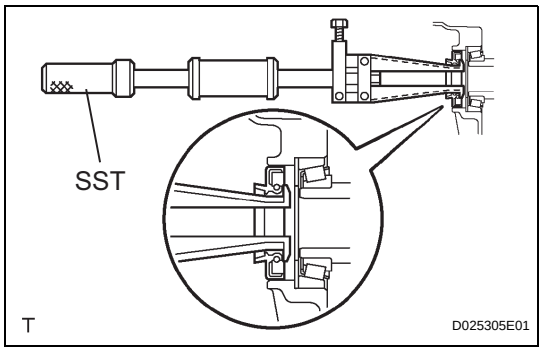
16. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)**

17. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)**

18. **REMOVE TRANSAXLE CASE OIL SEAL**
(a) Using SST, remove the oil seal.
SST 09308-00010

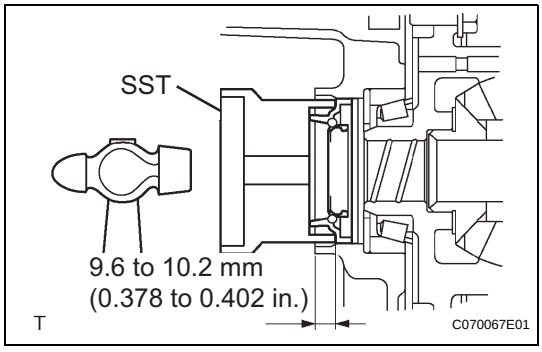


19. **REMOVE TRANSMISSION CASE OIL SEAL**
(a) Using SST, remove the oil seal.
SST 09308-00010

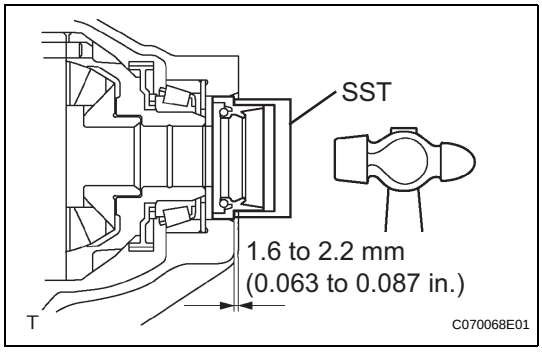


INSTALLATION

1. **INSTALL TRANSMISSION CASE OIL SEAL**
(a) Coat the lip of a new oil seal with MP grease.
(b) Using SST and a hammer, install the new oil seal.
SST 09309-37010
Drive in depth:
9.6 to 10.2 mm (0.378 to 0.402 in.)
NOTICE:
Do not damage the oil seal lip.



2. **INSTALL TRANSAXLE CASE OIL SEAL**
(a) Coat the lip of a new oil seal with MP grease.
(b) Using SST and a hammer, install the new oil seal.
SST 09710-26011 (09710-05061)
Drive in depth:
1.6 to 2.2 mm (0.063 to 0.087 in.)
NOTICE:
Do not damage the oil seal lip.



3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**

4. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**

MX

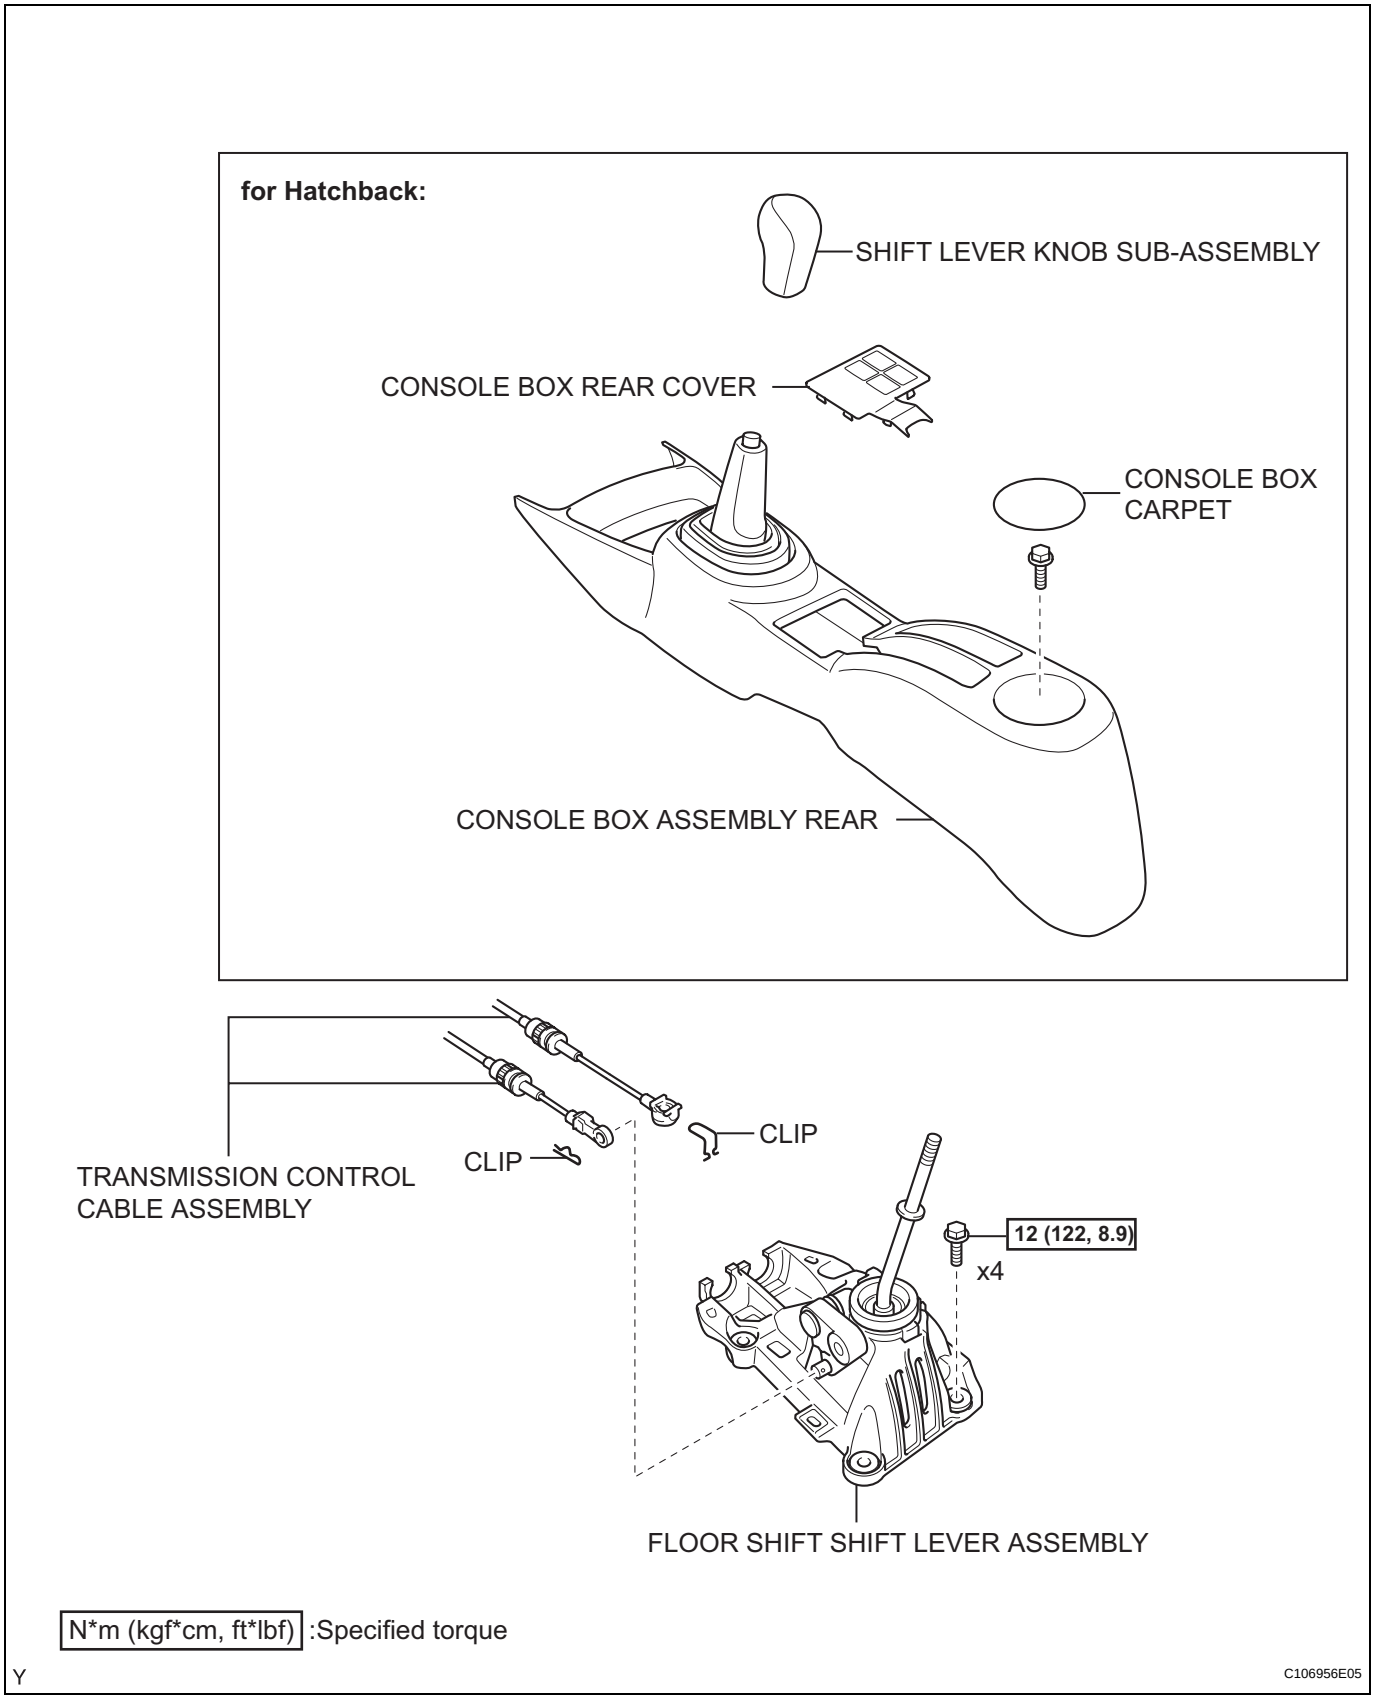
5. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-14)**
6. **INSTALL FRONT AXLE ASSEMBLY RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.
7. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
8. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.
9. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
10. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
11. **INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 LH (See page DS-14)**
12. **INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
13. **INSTALL SPEED SENSOR FRONT LH (w/ ABS) (See page DS-15)**
14. **INSTALL SPEED SENSOR FRONT RH (w/ ABS)**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
15. **INSTALL FRONT AXLE HUB LH NUT (See page DS-15)**
16. **INSTALL FRONT AXLE HUB RH NUT**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
17. **INSTALL FRONT WHEELS**
18. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
19. **ADD TRANSAXLE OIL**
20. **INSPECT AND ADJUST TRANSAXLE OIL (See page MX-2)**
21. **INSPECT ABS SPEED SENSOR SIGNAL**
    (See page BC-14)

22. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(See page SP-2)

23. **CHECK FOR TRANSAXLE OIL LEAKAGE**

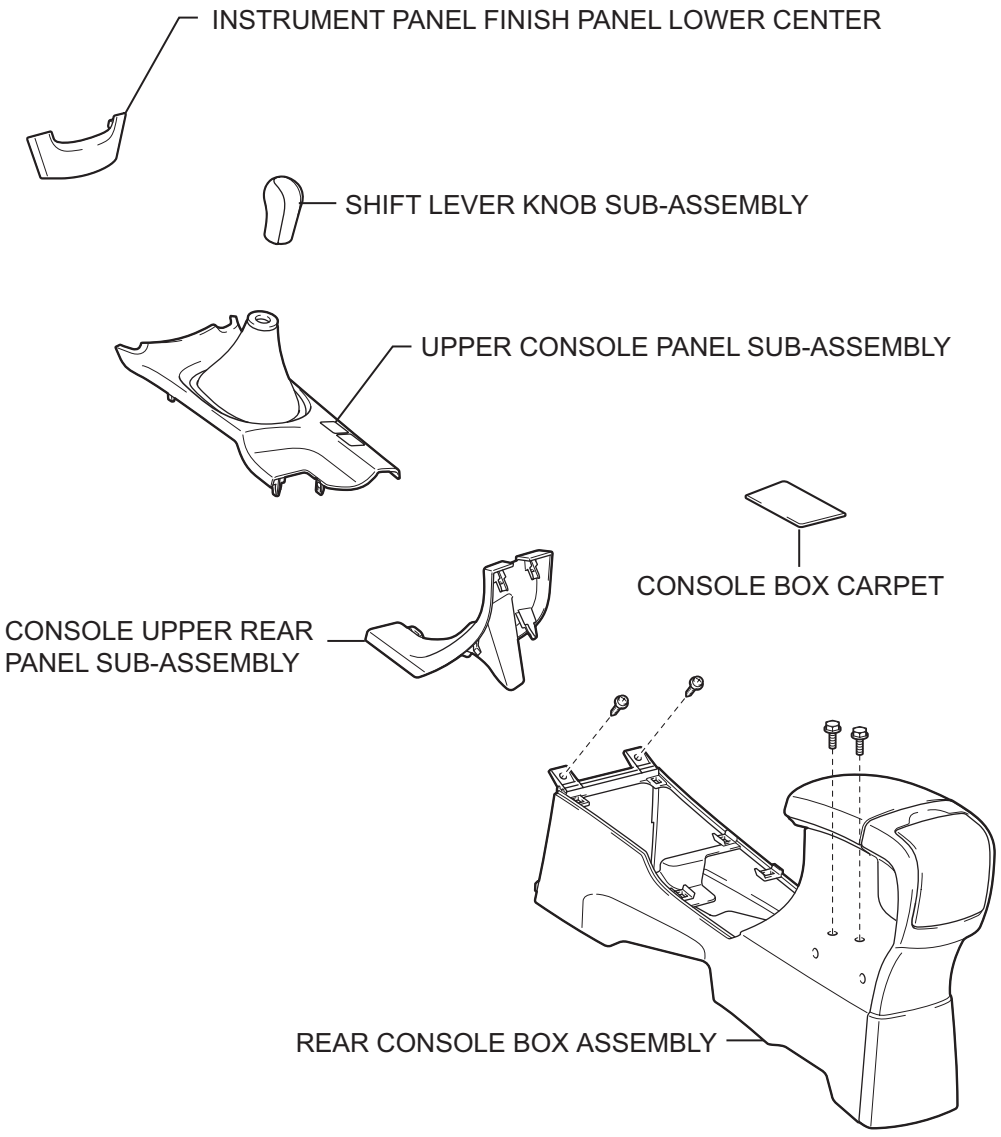
FLOOR SHIFT LEVER ASSEMBLY

COMPONENTS



MX

for Sedan:



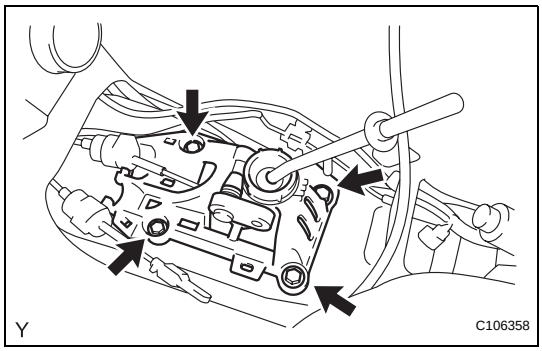
P

C136395E01

MX

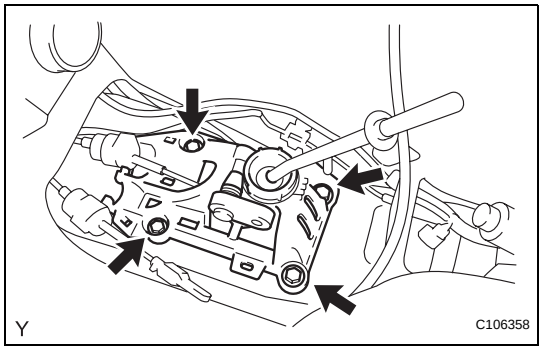
REMOVAL

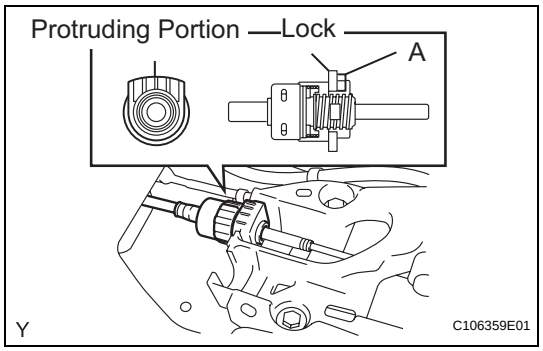
1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Hatchback) (See page IP-68)**
2. **REMOVE CONSOLE BOX ASSEMBLY REAR (for Hatchback) (See page IP-69)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-138)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Sedan) (See page IP-84)**
5. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
6. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
7. **REMOVE CONSOLE BOX CARPET (for Sedan) (See page IP-85)**
8. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Sedan) (See page IP-85)**
9. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Remove the clip and disconnect the control select cable from the shift lever.
   (b) Turn the lock to release it and separate the control select cable from the shift lever retainer.
   (c) Disconnect the control shift cable from the shift lever.
   (d) Turn the lock to release it and separate the control shift cable from the shift lever retainer.
10. **REMOVE FLOOR SHIFT SHIFT LEVER ASSEMBLY**
    (a) Remove the 4 bolts and remove the shift lever.

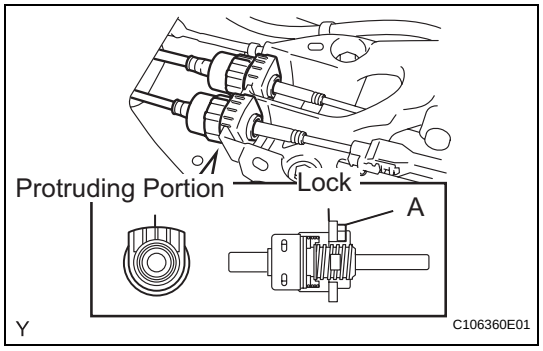


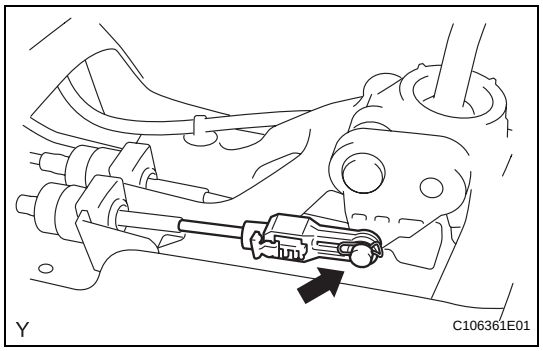
INSTALLATION

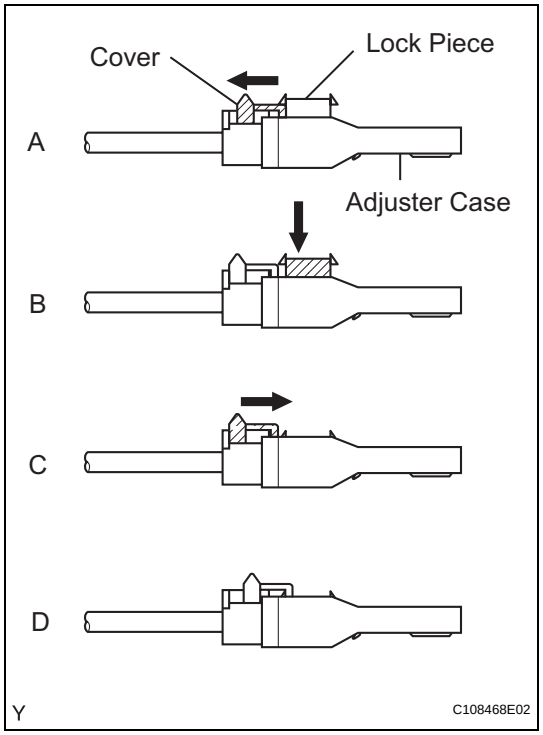
1. **INSTALL FLOOR SHIFT SHIFT LEVER ASSEMBLY**
   (a) Install the shift lever with the 4 bolts.
   Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf)











2. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the control shift cable onto the shift lever retainer.

NOTICE:

- **Install the cable with the protruding portion of the cable outer facing upward.**
- **After installing, check that the lock of the cable outer is protruding beyond portion A, as shown in the illustration.**

(b) Connect the control shift cable to the shift lever.

(c) Install the control select cable onto the shift lever retainer.

NOTICE:

- **Install the cable with the protruding portion of the cable outer facing upward.**
- **After installing, check that the lock of the cable outer is protruding beyond portion A, as shown in the illustration.**

(d) Connect the control select cable to the shift lever.

NOTICE:

- **Connect the control select cable so that the adjusting mechanism lock of the control select cable is installed on the left side of the vehicle.**
- **Insert the clip in the direction shown in the illustration.**

(e) Adjust the length of the control select cable.

(1) Slide the adjuster case cover in the direction shown in the illustration (Illustration A).

(2) Gently pull the cable rod toward the rear of the vehicle by hand to pull the cable taut.

(3) Press the lock piece into the adjuster case and lock it (Illustration B).

(4) Slide the cover in the direction shown in the illustration (Illustration C).

NOTICE:

Slide the cover past the protrusion of the lock piece (Illustration D).

3. INSTALL CONSOLE BOX ASSEMBLY REAR (for Hatchback) (See page IP-79)

4. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Hatchback) (See page IP-80)

5. INSTALL REAR CONSOLE BOX ASSEMBLY (for Sedan) (See page IP-88)

MX

6. **INSTALL CONSOLE BOX CARPET (for Sedan) (See page IP-88)**
7. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
8. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
9. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Sedan) (See page IP-89)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)**

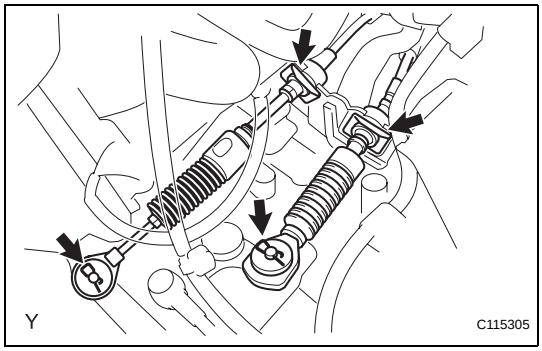
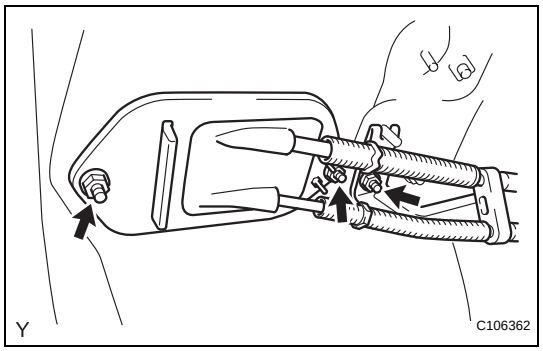
7. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
8. **REMOVE CONSOLE BOX CARPET (for Sedan) (See page IP-85)**
9. **REMOVE REAR CONSOLE BOX ASSEMBLY (for Sedan) (See page IP-85)**
10. **DISCONNECT OXYGEN SENSOR CONNECTOR**
11. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-5)**
12. **REMOVE FRONT FLOOR HEAT INSULATOR NO.1**
    (a) Remove the 2 bolts and nut and remove floor heat insulator No.1.
13. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
    (a) Disconnect the control shift cable from the shift lever.
    (b) Turn the lock to release it and separate the control shift cable from the shift lever retainer.
    (c) Remove the clip and disconnect the control select cable from the shift lever.
    (d) Turn the lock to release it and separate the control select cable from the shift lever retainer.
    (e) Remove the 2 clips and the 2 washers, and disconnect the 2 cables from the transaxle.
    (f) Remove the 2 clips and disconnect the 2 cables from the control cable bracket.



MX

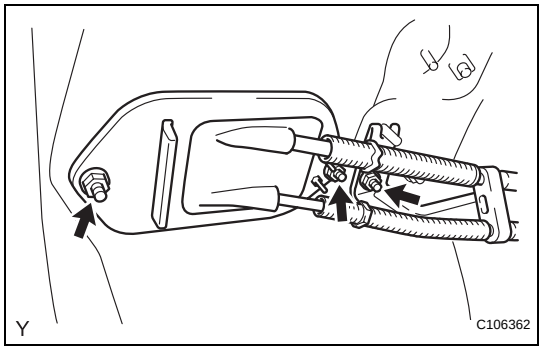


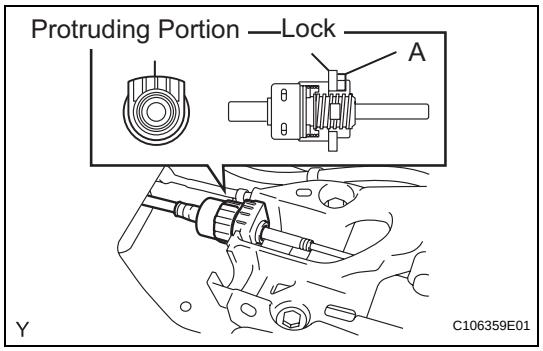
(g) Remove the 3 nuts and remove the transmission control cable.

INSTALLATION

1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the control cable with the 3 nuts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



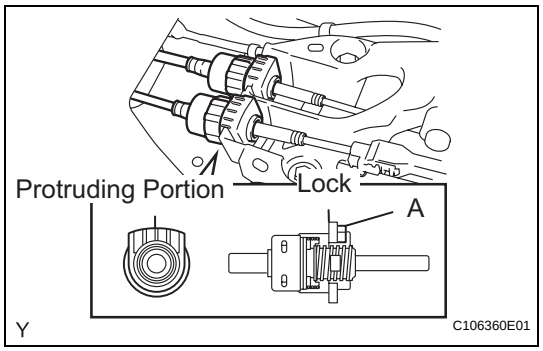


(b) Install the control shift cable onto the shift lever retainer.
NOTICE:
- **Install the cable with the protruding portion of the cable outer facing upward.**
- **After installing, check that the lock of the cable outer is protruding beyond portion A, as shown in the illustration.**

(c) Connect the control shift cable to the shift lever.

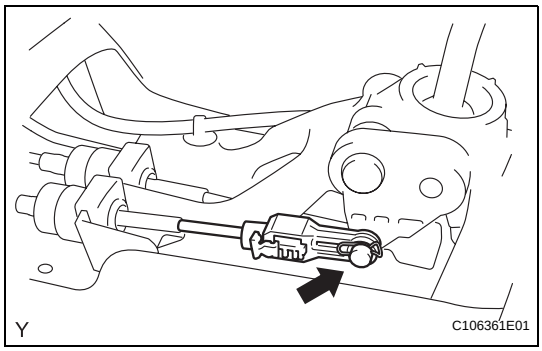
(d) Install the control shift cable onto the control cable bracket with a new clip.

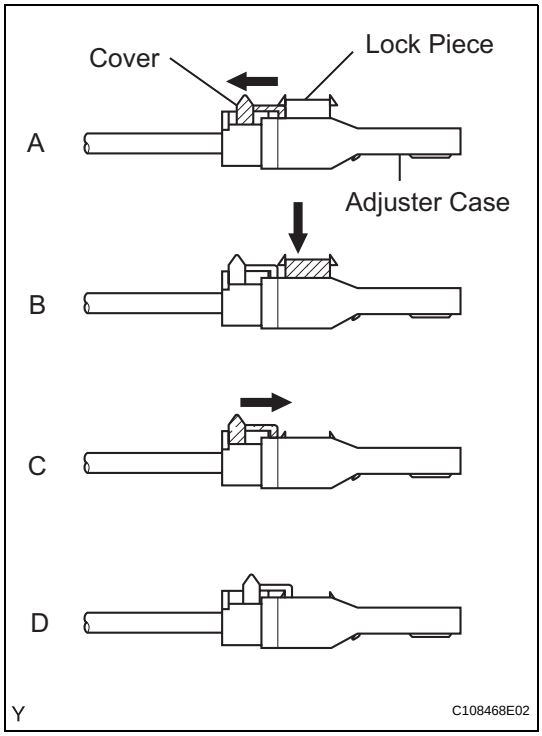
(e) Connect the control shift cable to the transaxle through the washer.



(f) Install the control select cable onto the shift lever retainer.
NOTICE:
- **Install the cable with the protruding portion of the cable outer facing upward.**
- **After installing, check that the lock of the cable outer is protruding beyond portion A, as shown in the illustration.**

MX





(g) Connect the control select cable to the shift lever with the clip.
NOTICE:
- **Connect the control select cable so that the adjusting mechanism lock of the control select cable is installed on the left side of the vehicle.**
- **Insert the clip in the direction shown in the illustration.**

(h) Install the control select cable onto the control cable bracket with a new clip.

(i) Connect the control select cable to the transaxle through the washer.

(j) Adjust the length of the control select cable.
(1) Slide the adjuster case cover in the direction shown in the illustration (Illustration A).
(2) Gently pull the cable rod toward the rear of the vehicle by hand to pull the cable taut.
(3) Press the lock piece into the adjuster case and lock it (Illustration B).
(4) Slide the cover in the direction shown in the illustration (Illustration C).
NOTICE:
Slide the cover past the protrusion portion of the lock piece (Illustration D).

2. INSTALL FRONT FLOOR HEAT INSULATOR NO.1

(a) Install floor heat insulator No. 1 with the 2 bolts and nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

3. INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-8)

4. CONNECT OXYGEN SENSOR CONNECTOR

5. INSTALL CONSOLE BOX ASSEMBLY REAR (for Hatchback) (See page IP-79)

6. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Hatchback) (See page IP-80)

7. INSTALL REAR CONSOLE BOX ASSEMBLY (for Sedan) (See page IP-88)

8. INSTALL CONSOLE BOX CARPET (for Sedan) (See page IP-88)

9. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)

10. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)

11. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Sedan) (See page IP-89)

12. INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

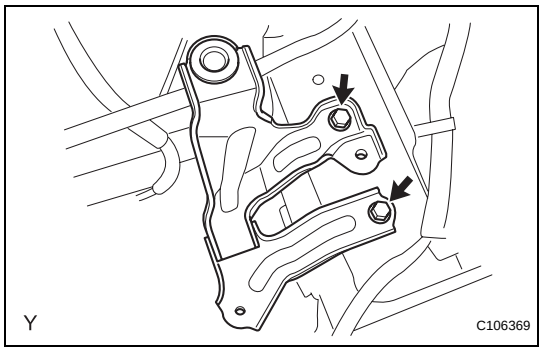
20. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (for Sedan) (See page WW-10)**
21. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**

22. REMOVE COWL TOP PANEL OUTER (for Sedan) (See page EM-123)

23. REMOVE CYLINDER HEAD COVER NO.2 (See page IG-9)

24. REMOVE AIR CLEANER ASSEMBLY (See page EM-124)



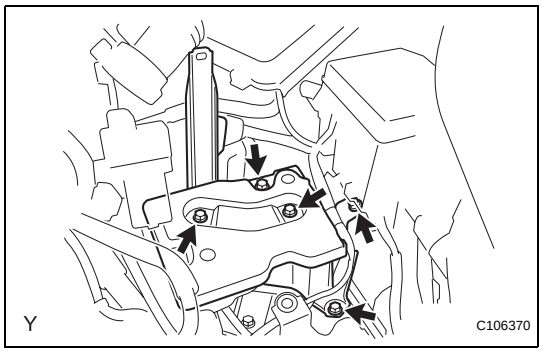
25. REMOVE AIR CLEANER BRACKET

(a) Remove the 2 bolts and the air cleaner bracket.

26. REMOVE BATTERY CLAMP SUB-ASSEMBLY

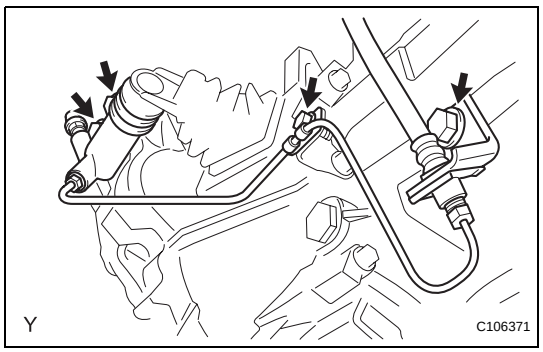
27. REMOVE BATTERY

28. REMOVE BATTERY TRAY



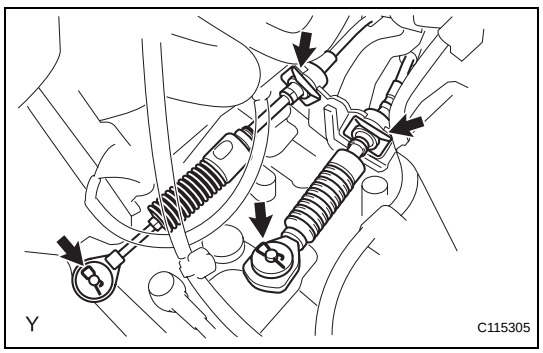
29. REMOVE BATTERY CARRIER

(a) Remove the 5 bolts and the battery carrier.



30. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY

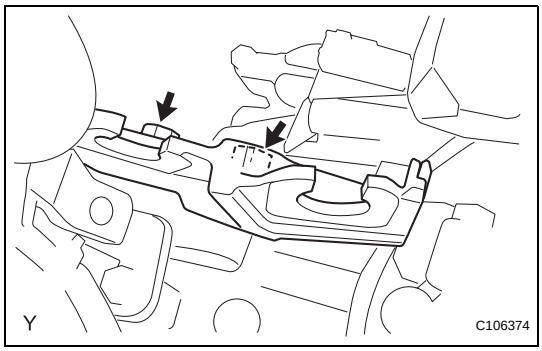
(a) Remove the 4 bolts, then separate the clutch release cylinder.
HINT:
Suspend the clutch release cylinder with a piece of rope so as not to overload the clutch pipe.



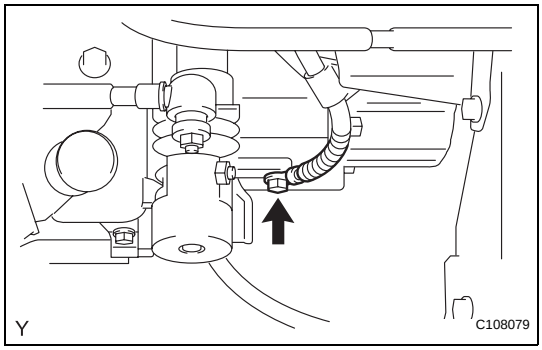
31. SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Remove the 2 clips and the 2 washers, and disconnect the 2 cables from the transaxle.

(b) Remove the 2 clips and disconnect the 2 cables from the control cable bracket.



32. REMOVE CONTROL CABLE BRACKET
(a) Remove the 2 bolts and the control cable bracket.



33. DISCONNECT WIRE HARNESS
(a) Remove the bolt, then disconnect the wire harness.

34. DISCONNECT CONNECTOR
(a) Disconnect the back-up light switch connector.

35. REMOVE STARTER ASSEMBLY (See page ST-9)

36. REMOVE FRONT AXLE HUB LH NUT (See page DS-3)

37. REMOVE FRONT AXLE HUB RH NUT
HINT:
The removal procedure for the RH side is the same as that for the LH side.

38. SEPARATE SPEED SENSOR FRONT LH (w/ ABS) (See page DS-3)

39. SEPARATE SPEED SENSOR FRONT RH (w/ ABS)
HINT:
The separation procedure for the RH side is the same as that for the LH side.

40. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 LH (See page DS-4)

41. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 RH
HINT:
The separation procedure for the RH side is the same as that for the LH side.

42. SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)

43. SEPARATE TIE ROD END SUB-ASSEMBLY RH
HINT:
The separation procedure for the RH side is the same as that for the LH side.

44. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)

45. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
The separation procedure for the RH side is the same as that for the LH side.

46. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-4)

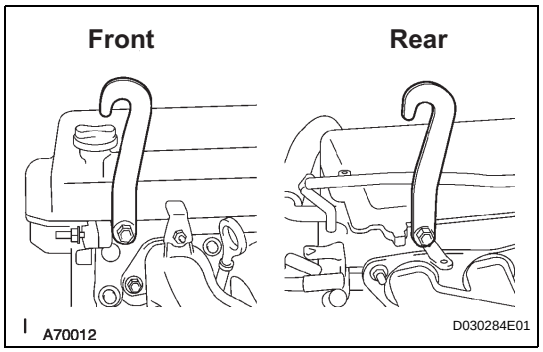
47. SEPARATE FRONT AXLE ASSEMBLY RH

HINT:

The separation procedure for the RH side is the same as that for the LH side.

48. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)

49. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)



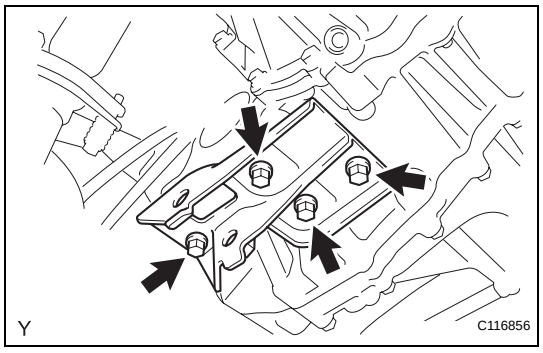
50. SUSPEND ENGINE ASSEMBLY

(a) Install the 2 hangers in the correct direction.

(b) Attach the engine chain hoist to the hangers.

CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.
Parts No.:
Engine Hanger: 12281-21010
Bolt:
91642-81025
Torque: 40 N*m (408 kgf*cm, 29 ft.*lbf)

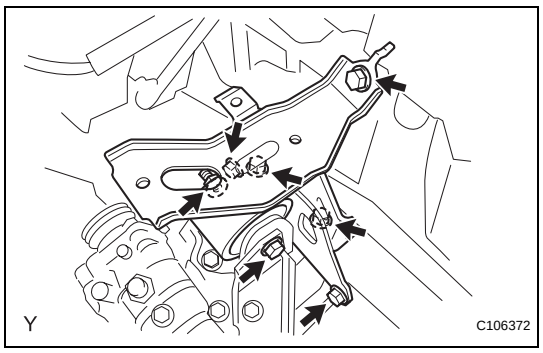
51. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-76)



52. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING CONTROL BRACKET

(a) Remove the 4 bolts and the engine mounting control bracket.

53. SUPPORT MANUAL TRANSAXLE ASSEMBLY

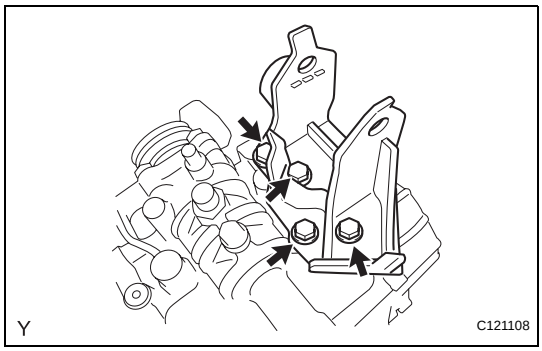


54. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt and nut, then separate the engine mounting insulator LH.

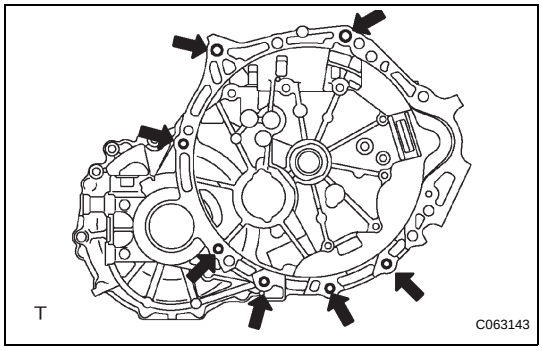
(b) Remove the 5 bolts and the engine mounting insulator LH.

MX



55. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

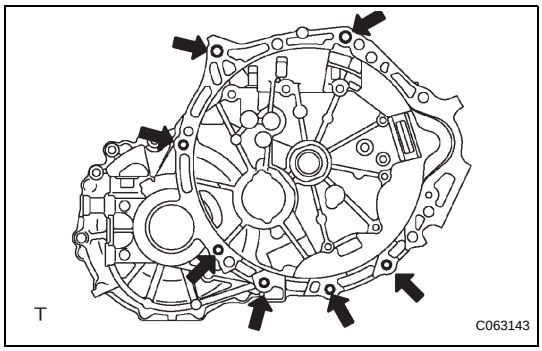
(a) Remove the 4 bolts and the engine mounting bracket LH.



56. REMOVE MANUAL TRANSAXLE ASSEMBLY

(a) Remove the 7 bolts and the manual transaxle.

INSTALLATION

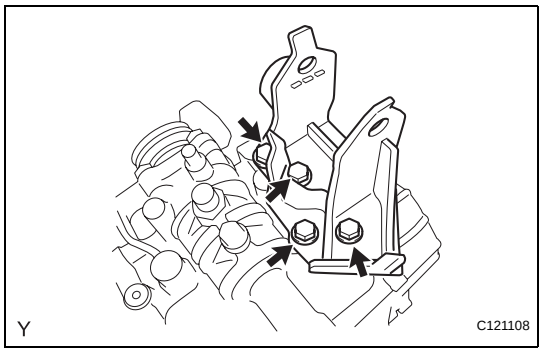


1. INSTALL MANUAL TRANSAXLE ASSEMBLY

(a) Align the input shaft with the clutch disc and install the manual transaxle onto the engine.

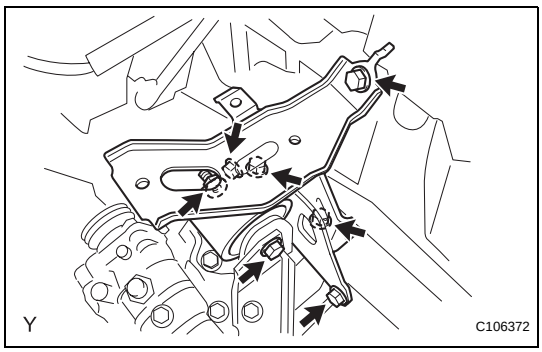
(b) Install the 7 bolts.
Torque: 33 N*m (336 kgf*cm, 24 ft.*lbf)

MX



2. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

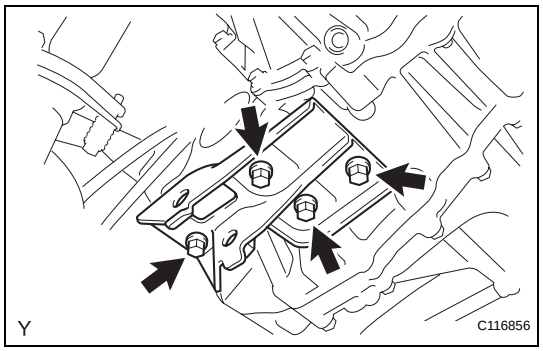
(a) Install the engine mounting bracket LH with the 4 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



3. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator LH with the 5 bolts.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)

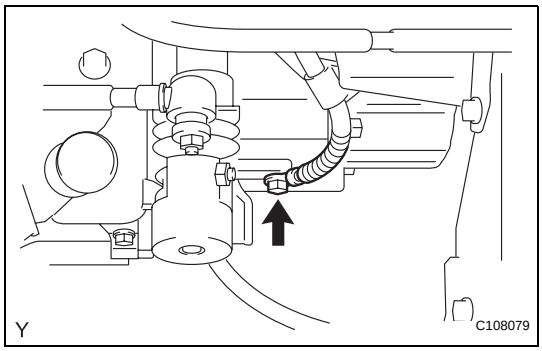
(b) Install the engine mounting bracket LH and engine insulator LH with the bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)



4. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING CONTROL BRACKET**
   (a) Install the engine mounting control bracket with the 4 bolts.
   Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
5. **INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-77)**
6. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**
7. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**
8. **INSTALL FRONT AXLE ASSEMBLY LH**
9. **INSTALL FRONT AXLE ASSEMBLY RH (See page DS-14)**
10. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
11. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
12. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
13. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
14. **INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 LH (See page DS-14)**
15. **INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO.1 RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
16. **INSTALL SPEED SENSOR FRONT LH (w/ ABS) (See page DS-15)**
17. **INSTALL SPEED SENSOR FRONT RH (w/ ABS)**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
18. **INSTALL FRONT AXLE HUB LH NUT (See page DS-15)**
19. **INSTALL FRONT AXLE HUB RH NUT**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
20. **INSTALL STARTER ASSEMBLY (See page ST-17)**

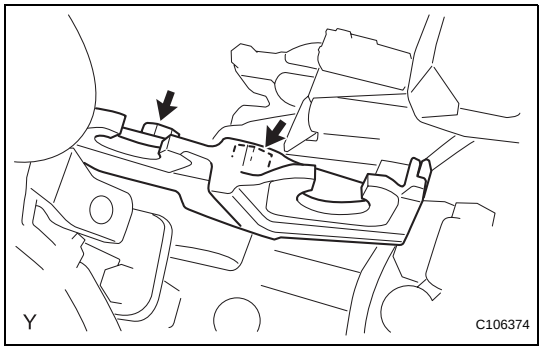
21. CONNECT CONNECTOR

(a) Connect the back-up light switch connector.



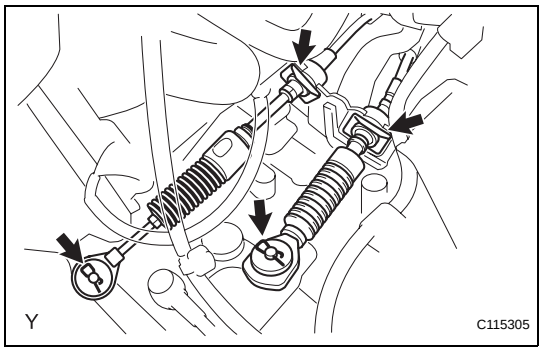
22. CONNECT WIRE HARNESS

(a) Connect the wire harness with the bolt.
Torque: 26 N*m (260 kgf*cm, 19 ft.*lbf)



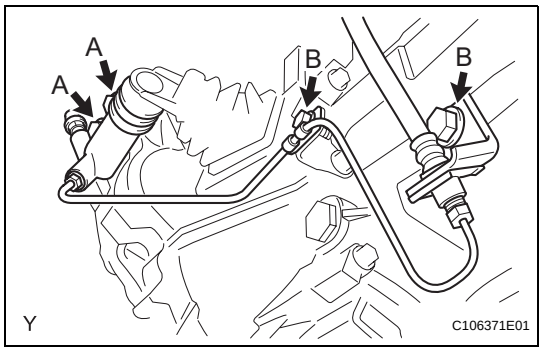
23. INSTALL CONTROL CABLE BRACKET

(a) Install the control cable bracket with the 2 bolts.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



24. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

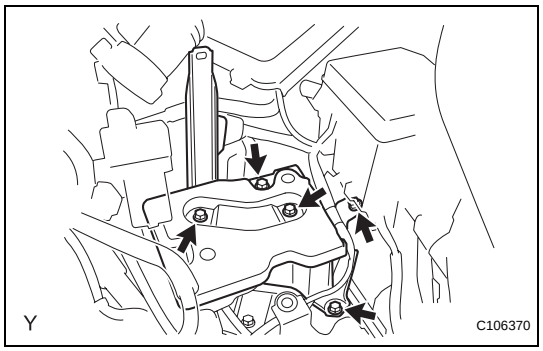
(a) Connect the 2 cable ends and install the 2 washers and the 2 clips.
(b) Install 2 new clips onto the control cable bracket.



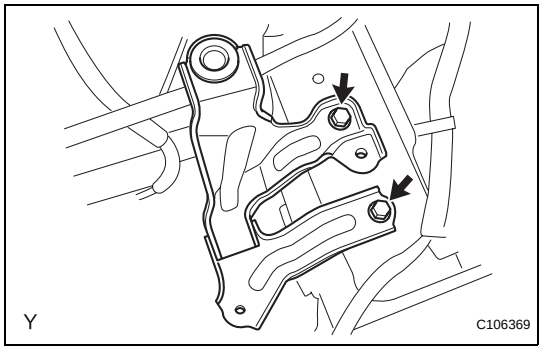
25. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Install the clutch release cylinder and clutch pipe with the 4 bolts.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf) for bolt A
12 N*m (122 kgf*cm, 8.9 ft.*lbf) for bolt B

MX



26. **INSTALL BATTERY CARRIER**
    (a) Install the battery carrier with the 5 bolts.
    Torque: 17 N*m (175 kgf*cm, 13 ft.*lbf)
27. **INSTALL BATTERY TRAY**
28. **INSTALL BATTERY**
29. **INSTALL BATTERY CLAMP SUB-ASSEMBLY**



30. **INSTALL AIR CLEANER BRACKET**
    (a) Install the air cleaner bracket with the 2 bolts.
    Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
31. **INSTALL AIR CLEANER ASSEMBLY (See page EM-146)**
32. **INSTALL CYLINDER HEAD COVER NO.2 (See page IG-10)**
33. **INSTALL COWL TOP PANEL OUTER (for Hatchback) (See page EM-146)**
34. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO.2 (for Hatchback) (See page EM-147)**
35. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (for Hatchback) (See page WW-21)**

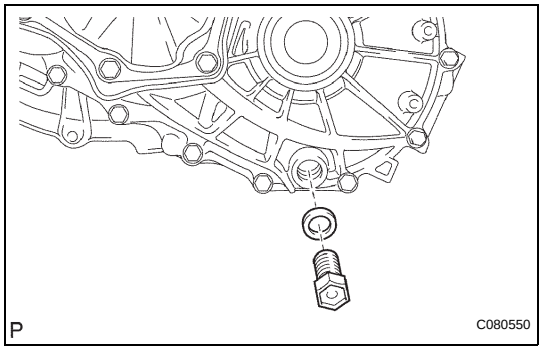
DISASSEMBLY

1. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the manual transmission filler plug and gasket from the manual transmission case.



2. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the drain plug sub-assembly and gasket from the manual transmission case.

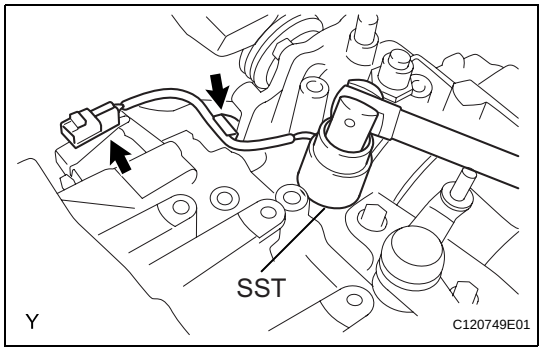
3. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Remove the bolt and speedometer driven hole cover sub-assembly from the transaxle case.

(b) Remove the O-ring from the speedometer driven hole cover sub-assembly.

4. REMOVE SPEEDOMETER SENSOR (w/o ABS)

(a) Remove the bolt and speedometer sensor from the transaxle case.

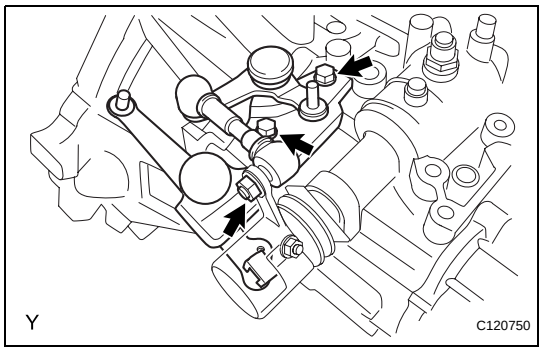


5. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Separate the back-up light switch wire harness from the 2 clamps.

(b) Using SST, remove the back-up light switch assembly and gasket from the manual transmission case.

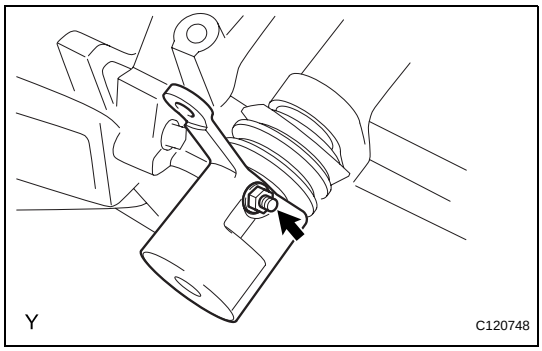
SST 09817-16011



6. REMOVE SELECTING BELL CRANK ASSEMBLY

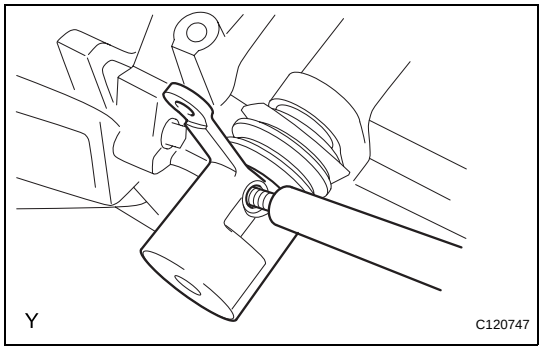
(a) Remove the 2 bolts and nut and remove the selecting bell crank assembly from the manual transmission case.

(b) Remove the control shift lever bush.



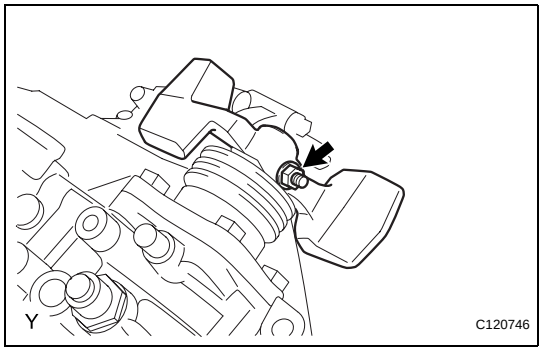
7. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER

(a) Remove the nut and spring washer.



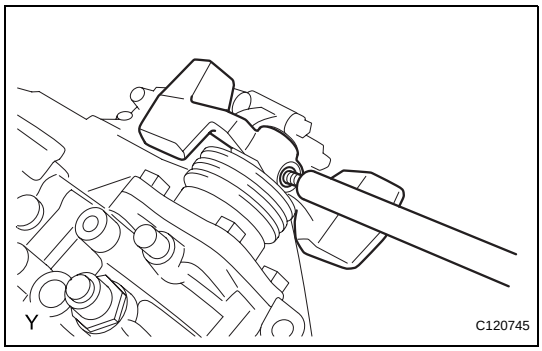
(b) Using a brass bar and a hammer, remove the lock pin.

(c) Remove the floor shift control shift lever.



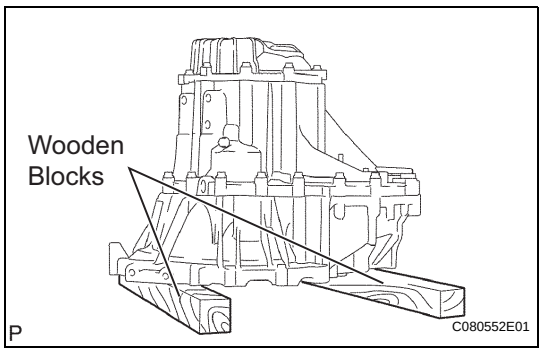
8. REMOVE SHIFT LEVER DAMPER

(a) Remove the nut and spring washer.



(b) Using a brass bar and a hammer, remove the lock pin.

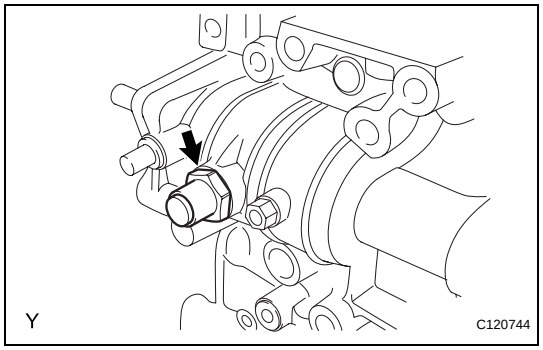
(c) Remove the shift lever damper.



9. FIX MANUAL TRANSAXLE ASSEMBLY

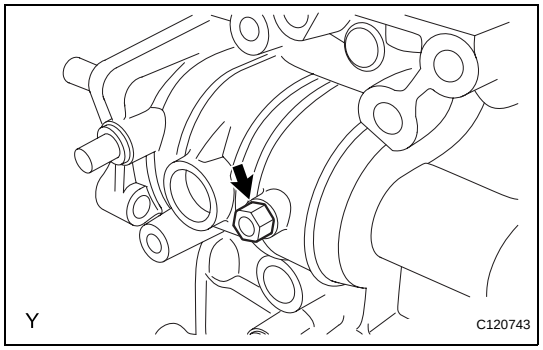
(a) Place the manual transaxle assembly on wooden blocks.

MX



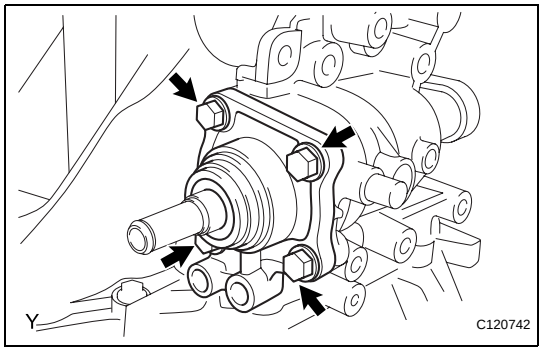
10. REMOVE LOCK BALL ASSEMBLY NO.1

(a) Remove lock ball assembly No. 1 from the manual transmission case.



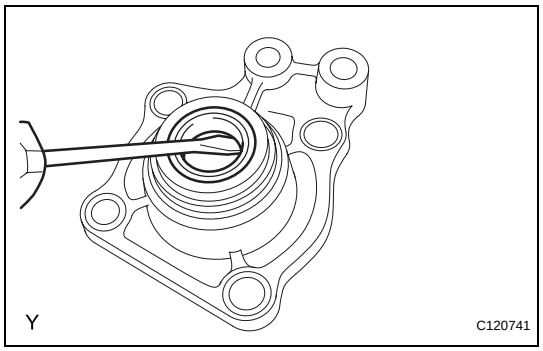
11. REMOVE SHIFT GATE PIN

(a) Remove the shift gate pin and washer from the transmission case.



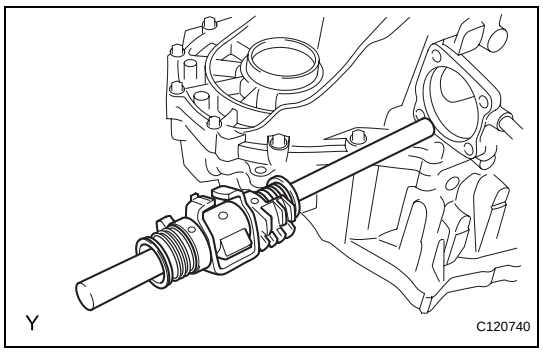
12. REMOVE CONTROL SHAFT COVER

(a) Remove the 4 bolts, control shaft cover and gasket from the manual transmission case.



13. REMOVE CONTROL SHAFT COVER OIL SEAL

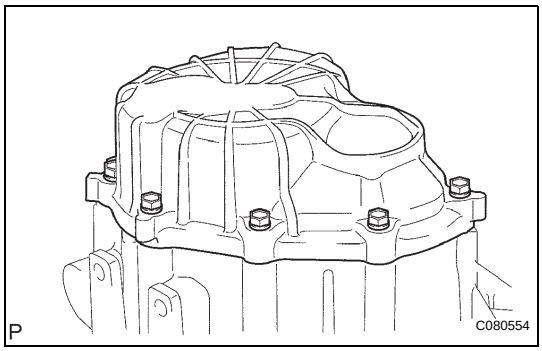
(a) Using a screwdriver, remove the control shaft cover oil seal from the control shaft cover.



14. REMOVE SHIFT AND SELECT LEVER SHAFT ASSEMBLY

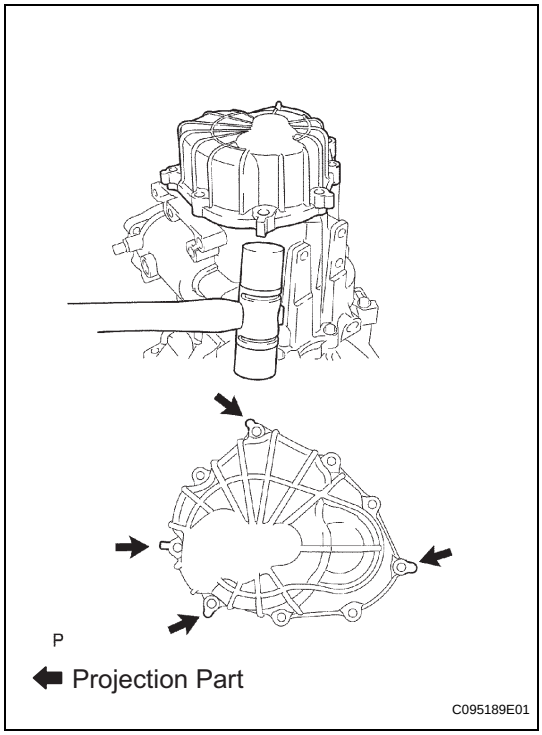
(a) Remove the shift and select lever shaft assembly from the transmission case.

MX



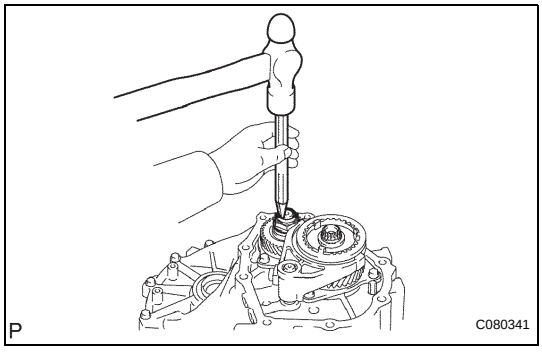
15. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Remove the 9 bolts.



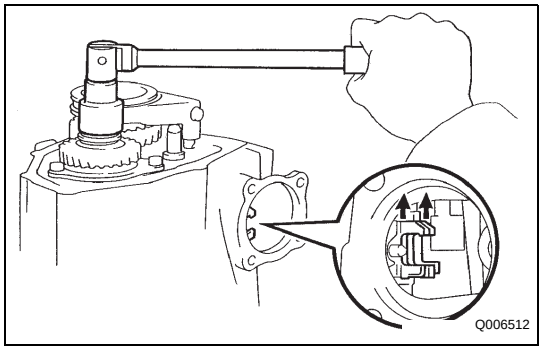
(b) Using a plastic hammer, carefully tap the projection of the manual transmission case cover sub-assembly to remove the manual transmission case cover from the manual transmission case.
NOTICE:
Do not damage the manual transmission case.

MX

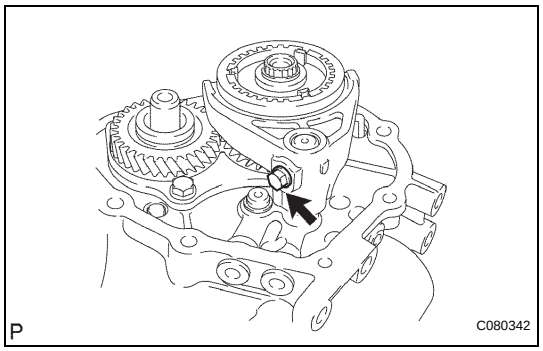


16. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Using a chisel and a hammer, loosen the staked part of the manual transmission output shaft rear set nut.

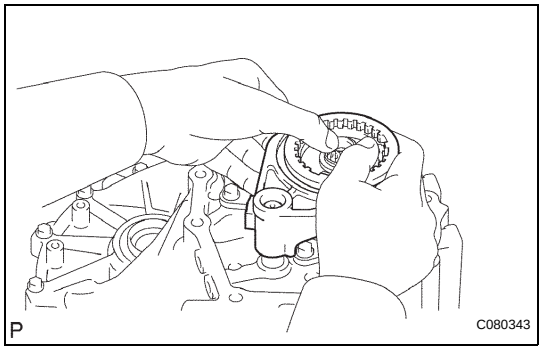


(b) Engage the 2 gears simultaneously to lock the transmission.
(c) Remove the manual transmission output shaft rear set nut.
(d) Disengage the 2 gears.

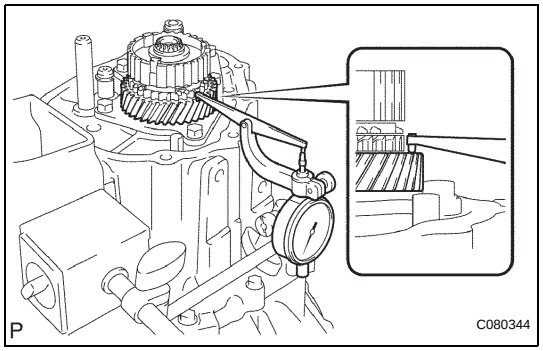


17. REMOVE GEAR SHIFT FORK NO.3

(a) Remove the gear shift fork lock bolt from gear shift fork No. 3.



(b) Remove transmission hub sleeve No. 3 with gear shift fork No. 3 from transmission clutch hub No. 3.

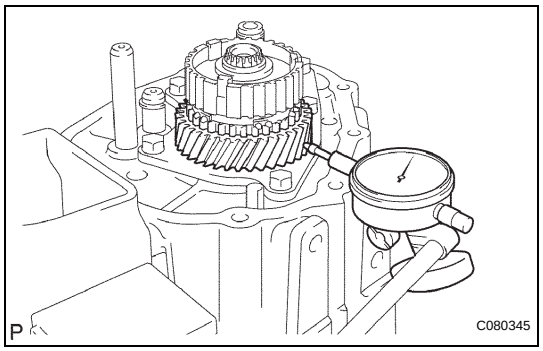


18. INSPECT 5TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 5th gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 3, the 5th gear or input shaft rear radial ball bearing.

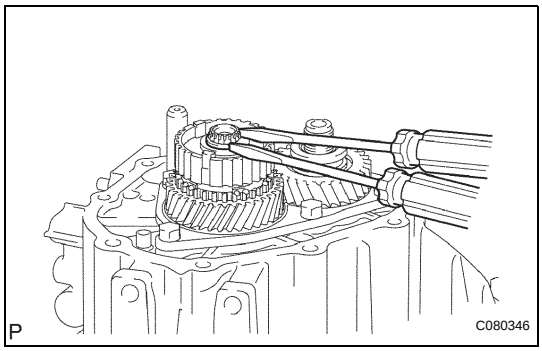


19. INSPECT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 5th gear radial clearance.

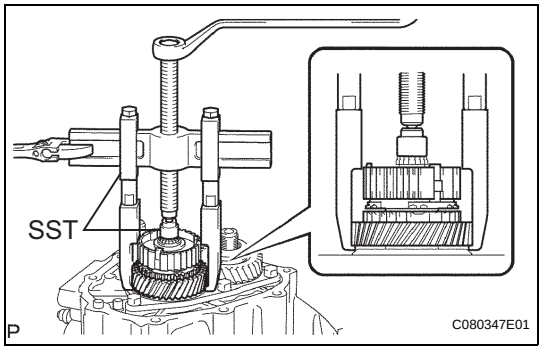
Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the 5th gear, 5th gear needle roller bearing or input shaft.

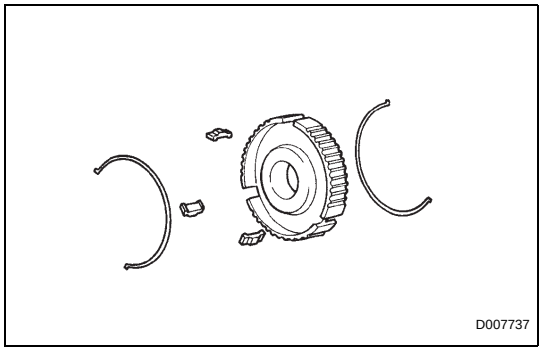


20. REMOVE TRANSMISSION CLUTCH HUB NO.3

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.

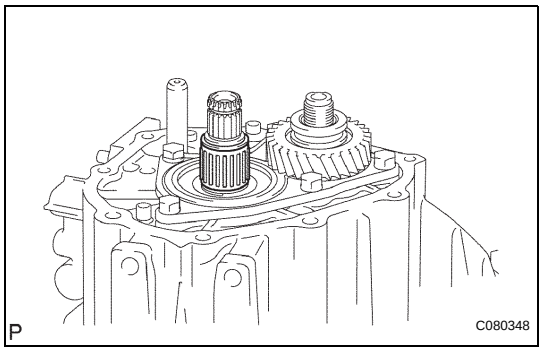


(b) Using SST, remove transmission clutch hub No. 3, the 5th gear and synchronizer ring No. 3 from the input shaft.
SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04011), 09950-60010 (09951-00180)



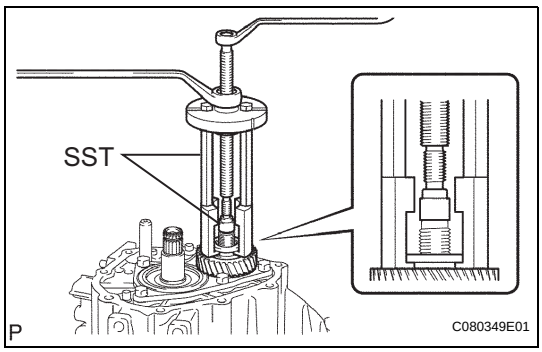
(c) Remove the 3 synchromesh shifting keys and 2 synchromesh shifting key springs from transmission clutch hub No. 3.

MX



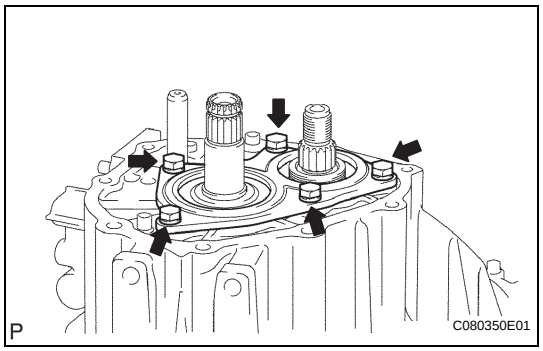
21. REMOVE 5TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 5th gear needle roller bearing and 5th gear bearing spacer from the input shaft.



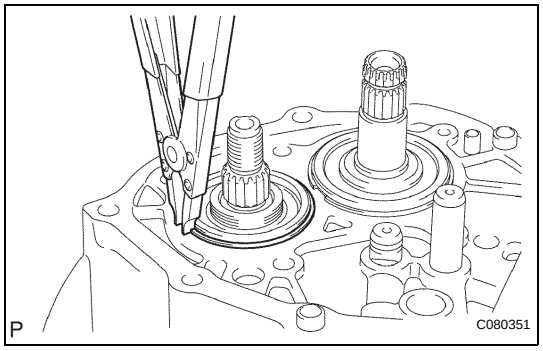
22. REMOVE 5TH DRIVEN GEAR

(a) Using SST, remove the 5th driven gear from the output shaft.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03021), 09950-60010 (09951-00180)



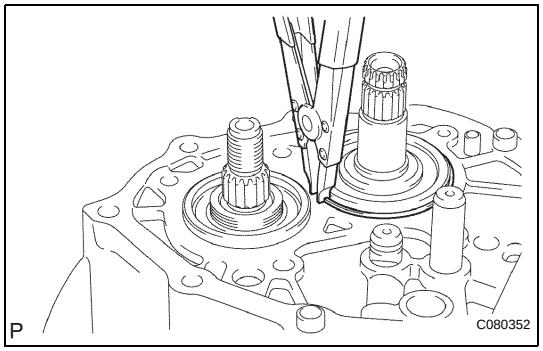
23. REMOVE BEARING RETAINER REAR

(a) Remove the 5 bolts and bearing retainer rear from the manual transmission case.



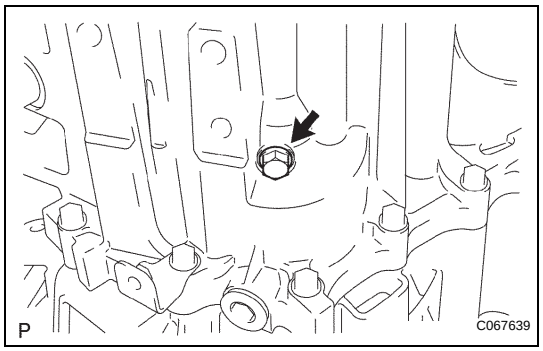
24. REMOVE OUTPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, remove the output shaft rear bearing hole snap ring from the output shaft.



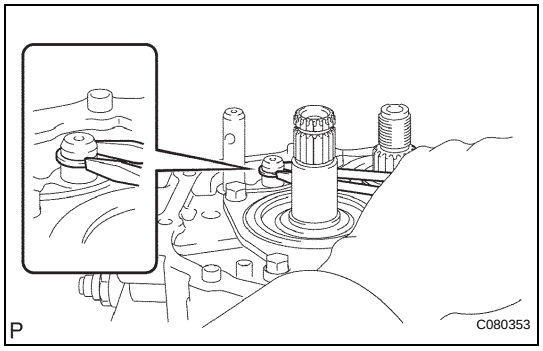
25. REMOVE INPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, remove the input shaft rear bearing hole snap ring from the input shaft.



26. REMOVE REVERSE IDLER GEAR SHAFT BOLT

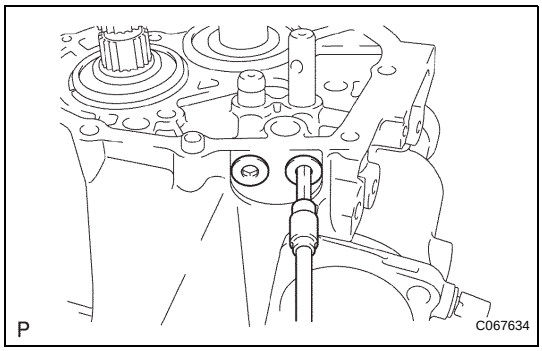
(a) Remove the reverse idler gear shaft bolt and reverse idler gear shaft gasket from the manual transmission case.



27. REMOVE SHIFT FORK SHAFT SHAFT SNAP RING

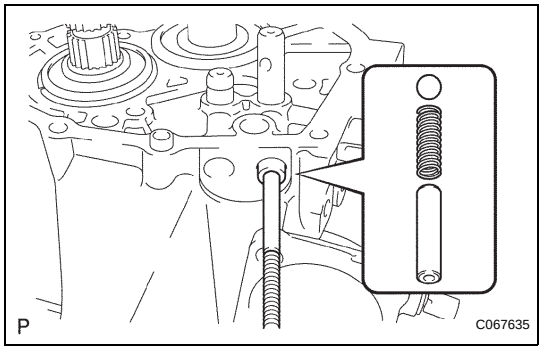
(a) Using 2 screwdrivers and a hammer, tap out the snap ring from gear shift fork shaft No. 2.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.

MX

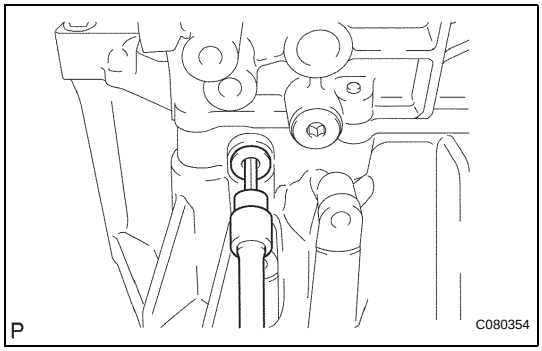


28. REMOVE SHIFT DETENT BALL

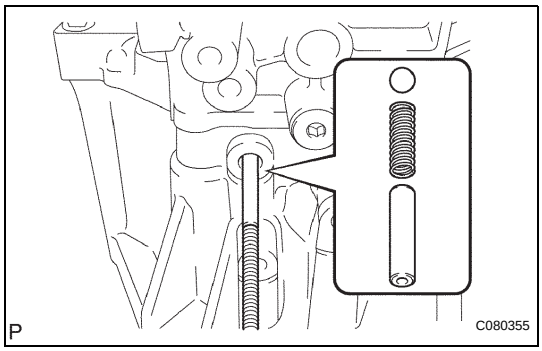
(a) Using a hexagon wrench, remove the 2 shift detent ball plugs from the manual transmission case.



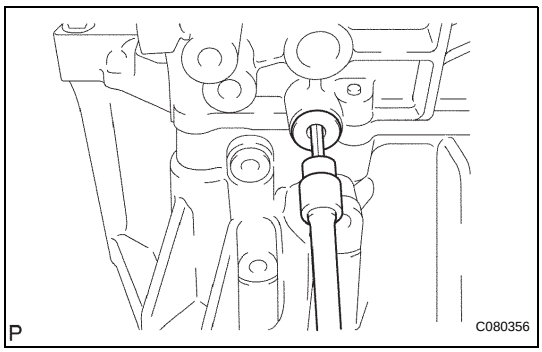
(b) Using a magnetic finger, remove the 2 shift detent ball spring seats No. 1, 2 shift detent ball springs and 2 shift detent balls from the manual transmission case.



(c) Using a hexagon wrench, remove the shift detent ball plug from the front transaxle case.



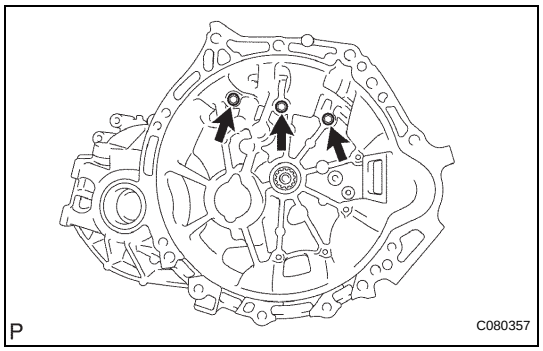
(d) Using a magnetic finger, remove the seat, spring and ball from the front transaxle case.



29. REMOVE LOCK BALL ASSEMBLY NO.2

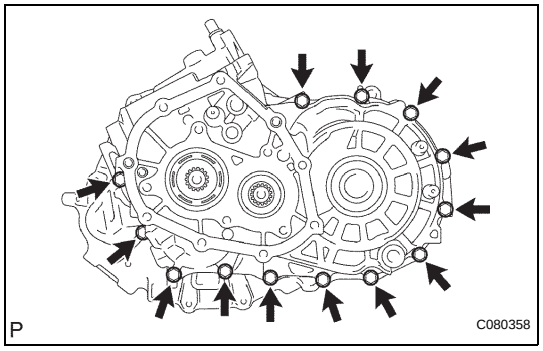
(a) Using a hexagon wrench, remove lock ball assembly No. 2 from the manual transmission case.

MX

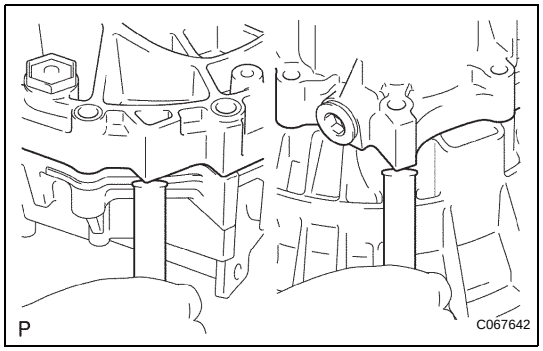


30. REMOVE MANUAL TRANSMISSION CASE

(a) Remove the 3 bolts from the front transaxle case.

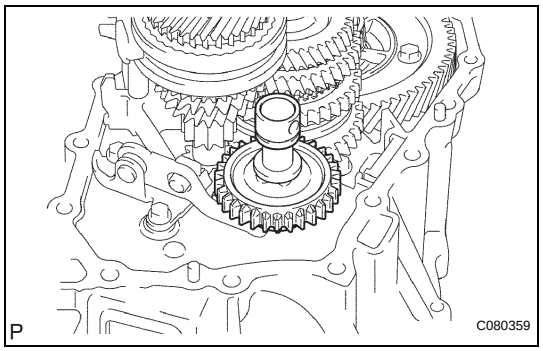


(b) Remove the 13 bolts from the manual transmission case.



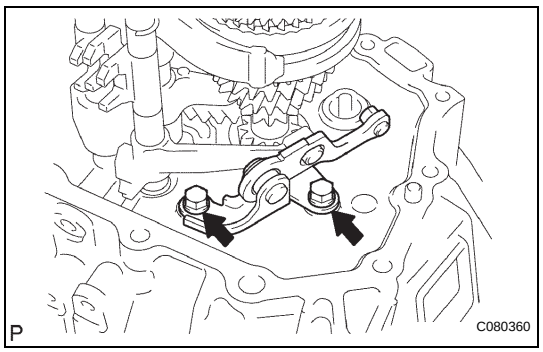
(c) Using a brass bar and a hammer, carefully tap the projections of the manual transmission case to remove the transmission case from the transaxle case.

NOTICE:
Do not damage the manual transmission case and transaxle case.



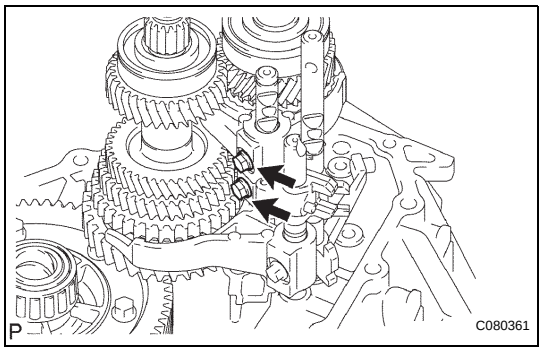
31. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Remove the reverse idler gear sub-assembly, thrust washer and reverse idler gear shaft from the front transaxle case.



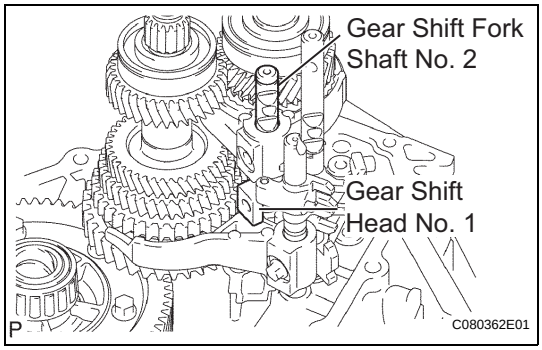
32. REMOVE REVERSE SHIFT ARM BRACKET ASSEMBLY

(a) Remove the 2 bolts and reverse shift arm bracket assembly from the front transaxle case.

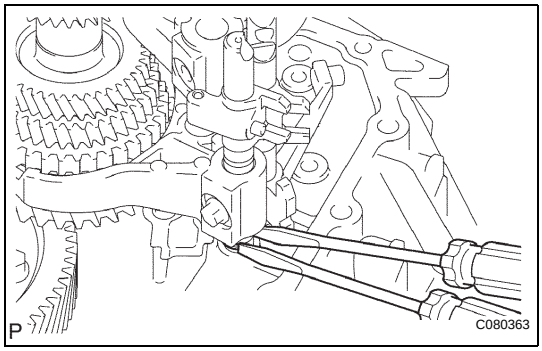


33. REMOVE GEAR SHIFT FORK SHAFT NO.2

(a) Remove the 2 bolts from gear shift fork No. 2 and gear shift head No. 1.



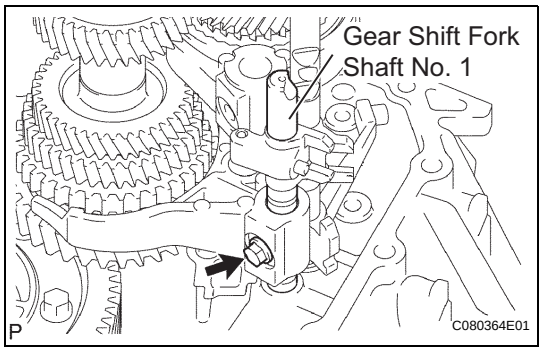
(b) Remove gear shift fork shaft No. 2 and gear shift head No. 1 from the front transaxle case.



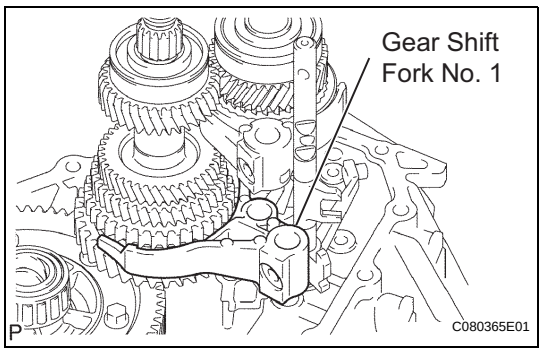
34. REMOVE GEAR SHIFT FORK SHAFT NO.1

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.

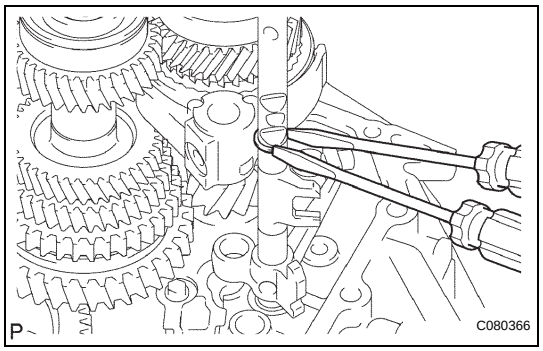
MX



(b) Remove the shift fork set bolt and gear shift fork shaft No. 1 from gear shift fork No. 1.

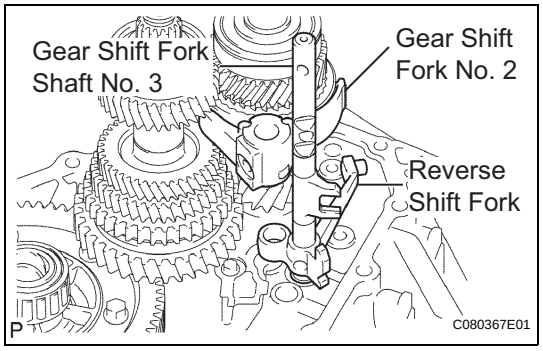


(c) Remove gear shift fork No. 1.

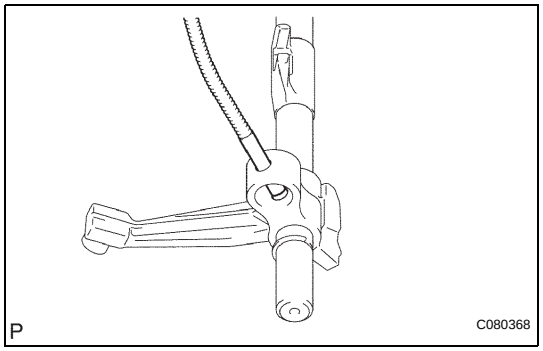


35. REMOVE GEAR SHIFT FORK SHAFT NO.3

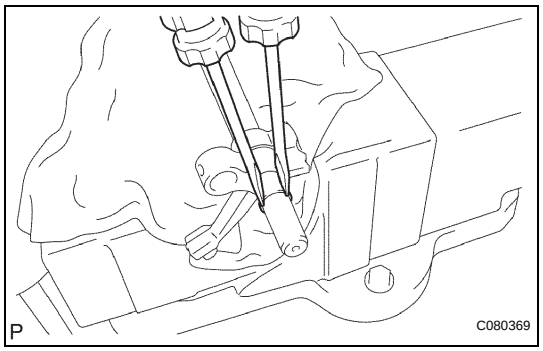
(a) Using 2 screwdrivers and a hammer, tap out the snap ring from gear shift fork shaft No. 3.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.



(b) Remove shift fork shaft No. 3 together with the reverse shift fork and gear shift fork No. 2 from the manual transaxle case.

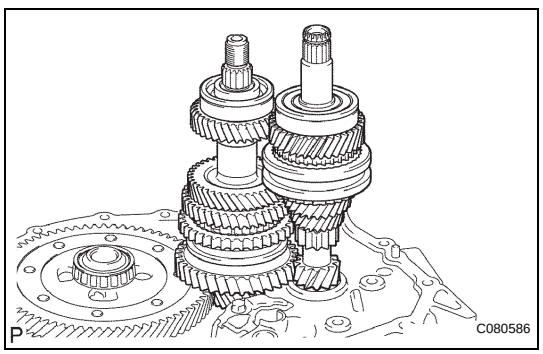


(c) Using a magnetic finger, remove the 2 reverse shift fork balls from the reverse shift fork.



(d) Using 2 screwdrivers and a hammer, tap the snap ring out of shift fork shaft No. 3.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.

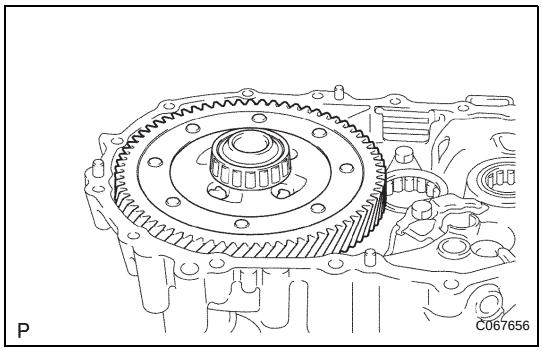
(e) Remove the reverse shift fork from gear shift fork shaft No. 3.



36. REMOVE INPUT SHAFT ASSEMBLY

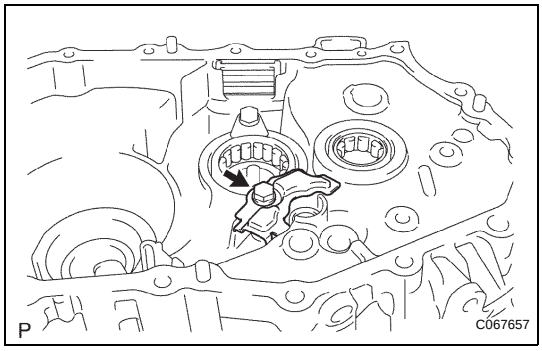
(a) Remove the input shaft assembly and output shaft assembly from the front transaxle case.

MX



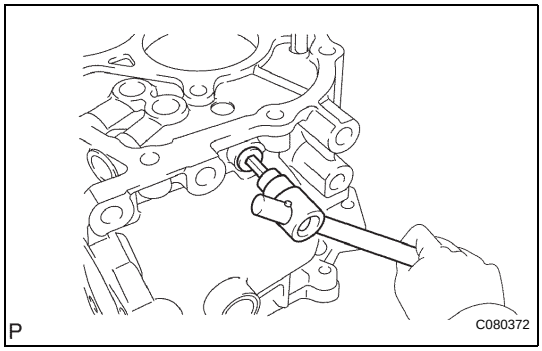
37. REMOVE DIFFERENTIAL CASE ASSEMBLY

(a) Remove the differential case assembly from the front transaxle case.



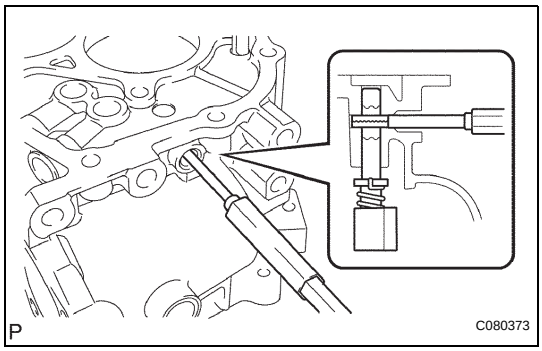
38. REMOVE MANUAL TRANSAXLE CASE RECEIVER

(a) Remove the bolt and manual transaxle case receiver from the front transaxle case.

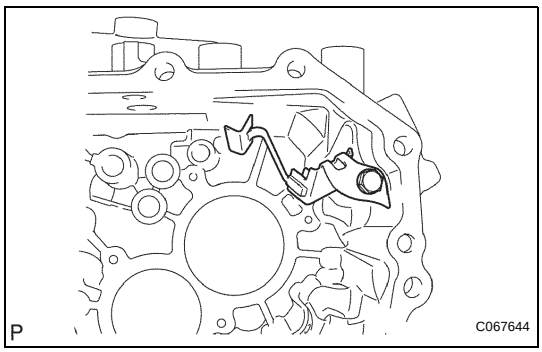


39. REMOVE REVERSE RESTRICT PIN ASSEMBLY

(a) Using a hexagon wrench, remove the reverse restrict pin plug from the manual transmission case.



(b) Using a pin punch (ϕ5 mm) and a hammer, drive out the slotted spring pin and remove the reverse restrict pin assembly from the manual transmission case.

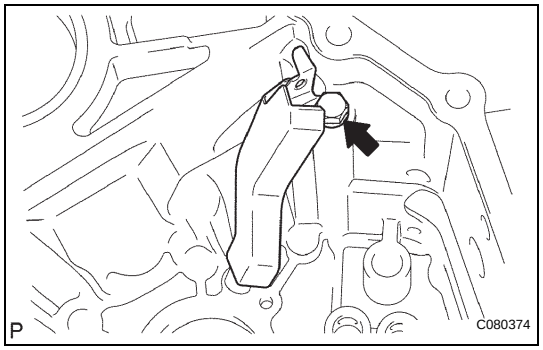


40. REMOVE OIL RECEIVER PIPE NO. 1

(a) Remove the bolt and oil receiver pipe No. 1 from the manual transmission case.

NOTICE:
Do not damage oil receiver pipe No. 1.

MX

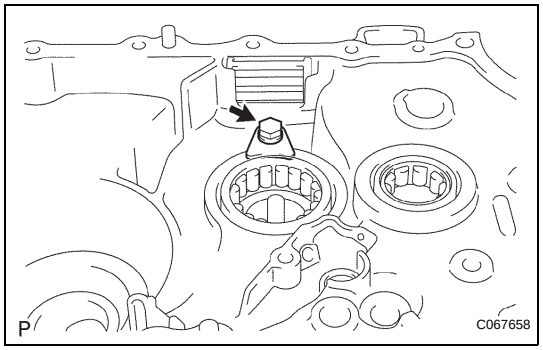


41. REMOVE OIL RECEIVER PIPE NO. 2

(a) Remove the bolt and oil receiver pipe No. 2 from the manual transmission case.

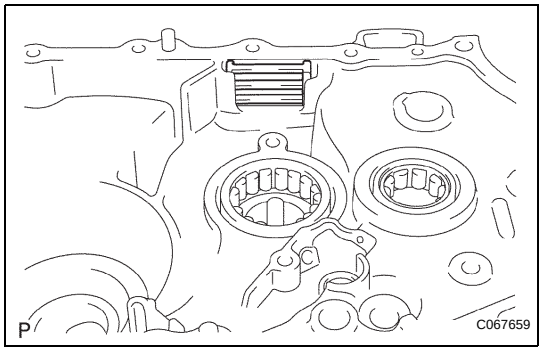
NOTICE:

Do not damage oil receiver pipe No. 2.



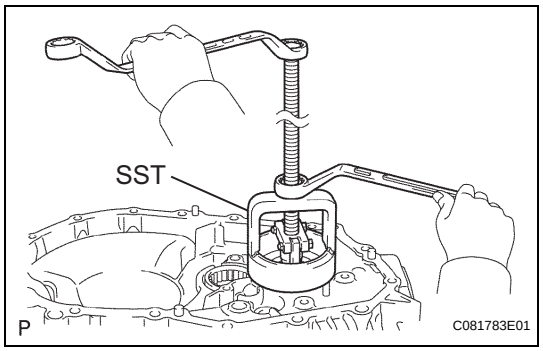
42. REMOVE BEARING LOCK PLATE

(a) Remove the bolt and bearing lock plate from the front transaxle case.



43. REMOVE TRANSMISSION MAGNET

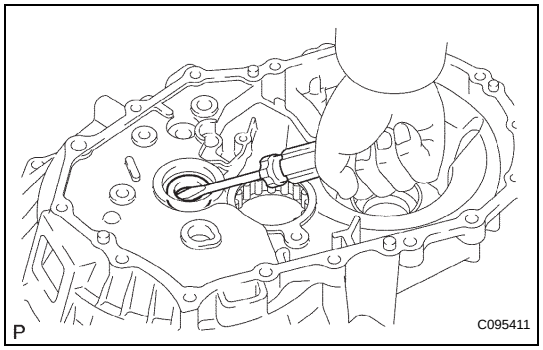
(a) Remove the transmission magnet from the front transaxle case.



44. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST, remove the input shaft front bearing from the front transaxle case.

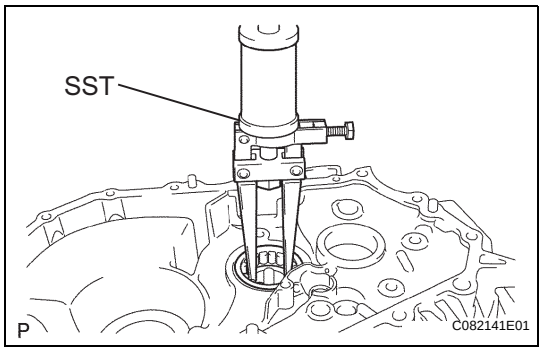
SST 09612-65014 (09612-01050, 09612-01060)



45. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using a screwdriver, remove the front transaxle case oil seal from the transaxle case.

MX



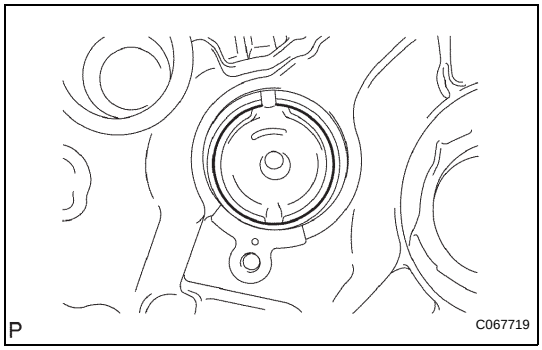
46. REMOVE OUTPUT SHAFT FRONT BEARING

(a) Using SST, remove the output shaft front bearing from the front transaxle case.

SST 09308-00010

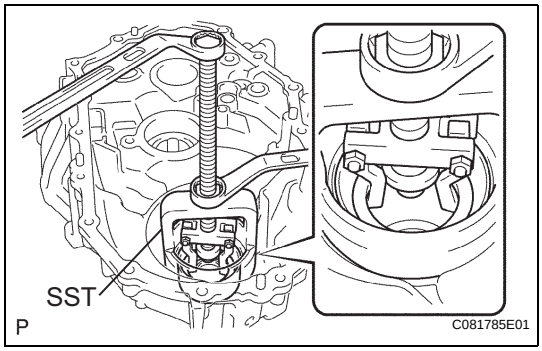
NOTICE:

Do not apply excessive force to the front transaxle case when installing it.



47. REMOVE OUTPUT SHAFT COVER

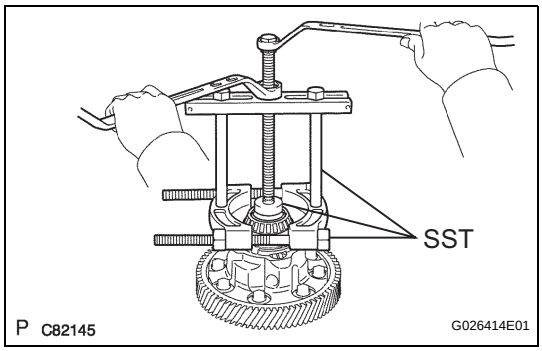
(a) Remove the output shaft cover from the front transaxle case.



48. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case front tapered roller bearing (outer race) and plate washer from the front transaxle case.

SST 09612-65014 (09612-01040, 09612-01050)

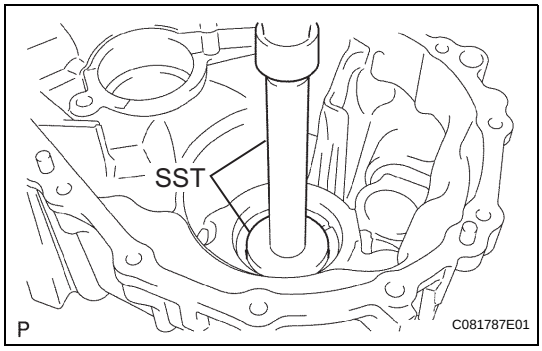


(b) Using SST, remove the front differential case front tapered roller bearing (inner race) from the differential case assembly.

SST 09950-00020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00360)

NOTICE:

Do not damage the bearing.

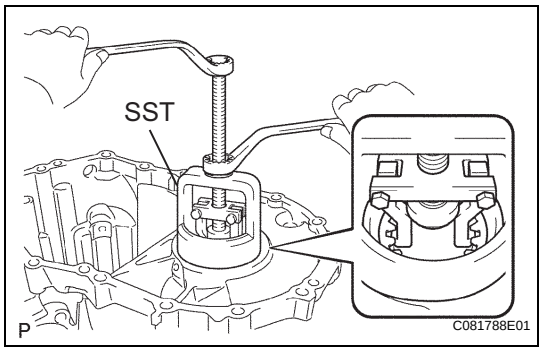


49. REMOVE TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the transaxle case oil seal from the front transaxle case.

SST 09950-60010 (09951-00530), 09950-70010 (09951-07150)

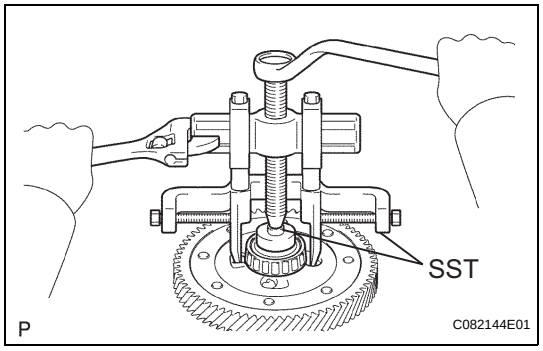
MX



50. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case rear tapered roller bearing (outer race) and plate washer from the transmission case.

SST 09612-65014 (09612-01040, 09612-01050)

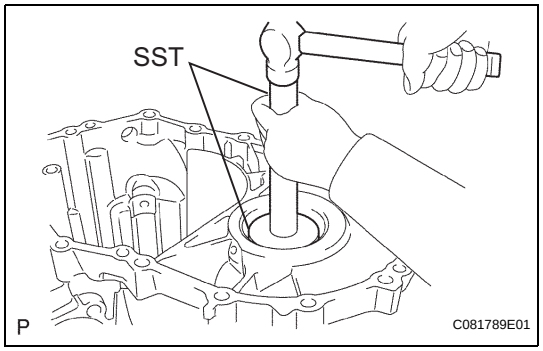


(b) Using SST, remove the front differential case rear tapered roller bearing (inner race) from the front differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00360)

NOTICE:

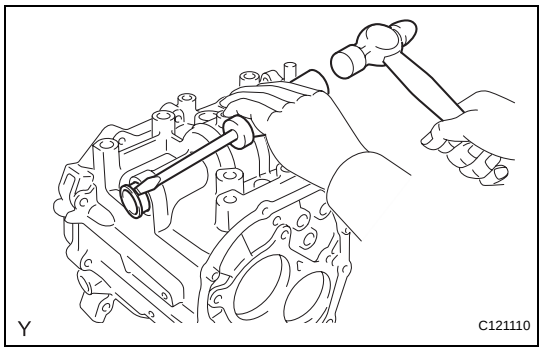
Do not damage the bearing.



51. REMOVE TRANSMISSION CASE OIL SEAL

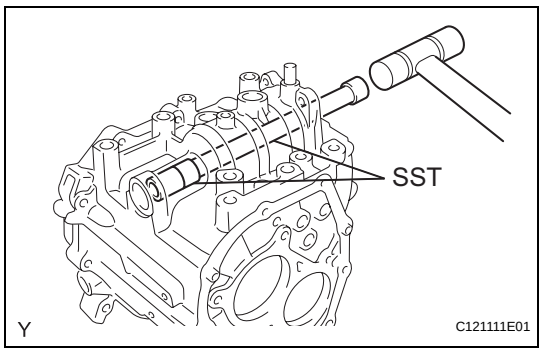
(a) Using SST and a hammer, drive out the transmission case oil seal from the manual transmission case.

SST 09950-60010 (09951-00530), 09950-70010 (09951-07150)



52. REMOVE SHIFT AND SELECT LEVER SHAFT OIL SEAL

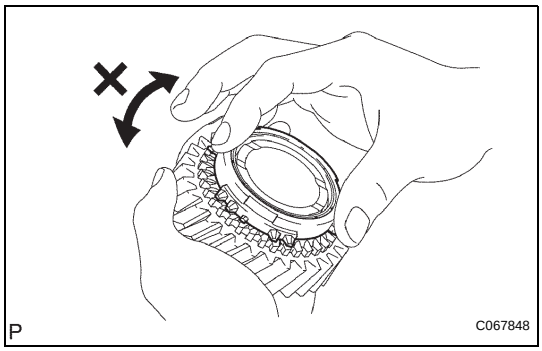
(a) Using a screwdriver and hammer, remove the shift and select lever shaft oil seal.



53. REMOVE SHIFT AND SELECT LEVER SHAFT SLIDE BALL BEARING

(a) Using SST and a hammer, remove the shift and select lever shaft slide ball bearing.

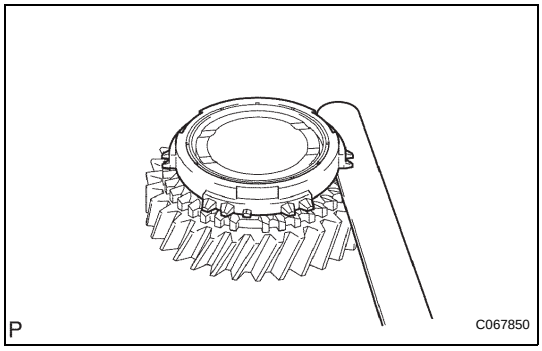
SST 09950-60010 (09951-00220), 09950-70010 (09951-07200)



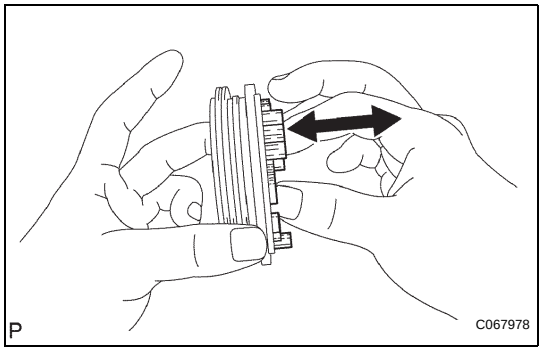
INSPECTION

1. INSPECT SYNCHRONIZER RING NO.3

(a) Check for wear and damage.
(b) Coat the 5th gear cone with gear oil.
(c) Turn the synchronizer ring in one direction while pushing it against the 5th gear cone.
(d) Check that the ring locks.
If the synchronizer ring does not lock, replace the synchronizer ring.

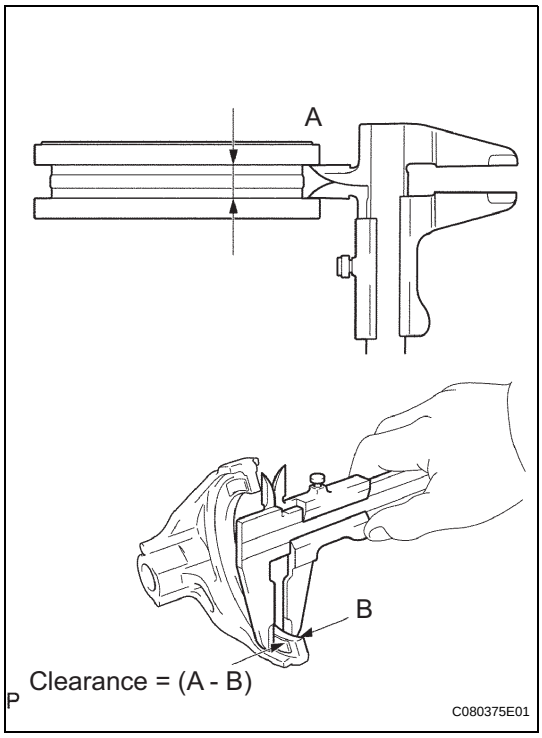


(e) Using a feeler gauge, measure the clearance between the synchronizer ring back and the gear spline end.
Minimum clearance:
0.75 mm (0.0295 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



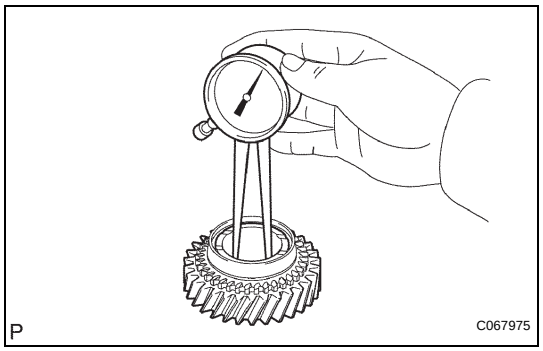
2. INSPECT TRANSMISSION HUB SLEEVE NO.3

(a) Check the sliding condition between transmission hub sleeve No. 3 and transmission clutch hub No. 3.
(b) Check that the edges of the transmission hub sleeve No. 3 spline gear are not worn down.



(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 3 groove (A) and the thickness of the claw part on the gear shift fork No. 3 (B), and calculate the clearance.
Standard clearance (A - B):
0.3 to 0.5 mm (0.012 to 0.0020 in.)
If the clearance exceeds the standard, replace transmission hub sleeve No. 3 and gear shift fork No. 3.

MX

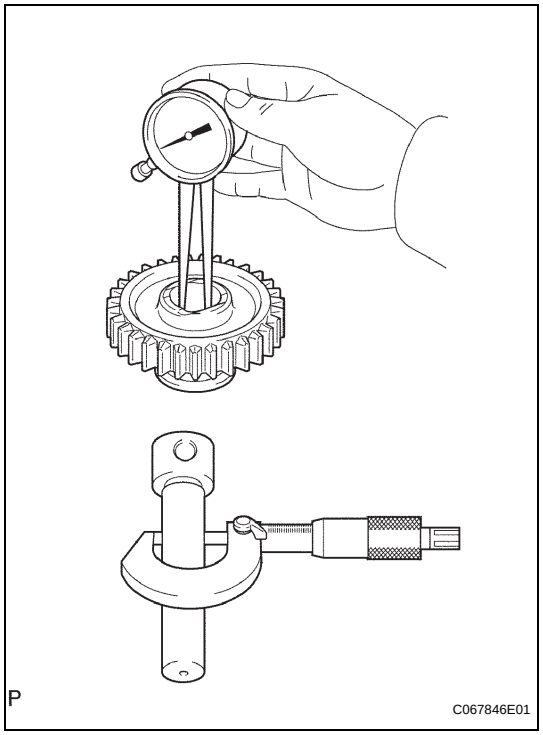


3. INSPECT 5TH GEAR

(a) Using a caliper gauge, measure the inside diameter of the 5th gear.

Standard inside diameter:
29.915 to 29.931 mm (1.1778 to 1.1783 in.)
Maximum inside diameter:
29.931 mm (1.1783 in.)

If the inside diameter exceeds the maximum, replace the 5th gear.



4. INSPECT REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Using a caliper gauge, inspect the reverse idle gear.

Standard inside diameter:
18.040 to 18.058 mm (0.7102 to 0.7109 in.)
Maximum inside diameter:
18.058 mm (0.7109 in.)

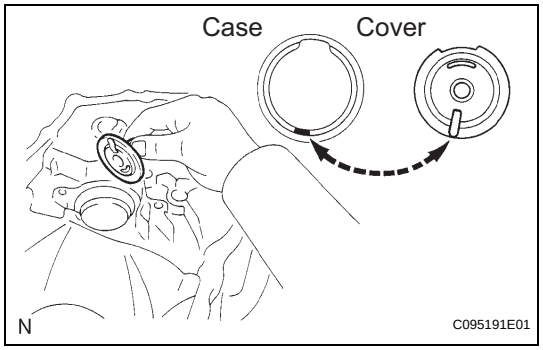
If the inside diameter exceeds the maximum, replace the reverse idler gear sub-assembly.

(b) Using a micrometer, inspect the reverse idler gear shaft as shown in the illustration.

Standard outer diameter:
17.966 to 17.984 mm (0.7073 to 0.7080 in.)
Minimum outer diameter:
17.966 mm (0.7073 in.)

If the outer diameter is less than the minimum, replace the reverse idler gear shaft.

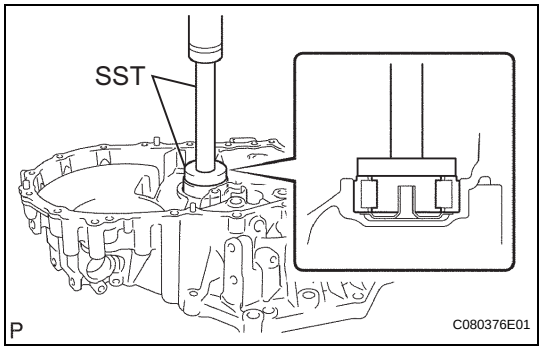
REASSEMBLY



1. INSTALL OUTPUT SHAFT COVER

(a) Coat the output shaft cover with MP grease and install it onto the front transaxle case.

NOTICE:
Insert the output shaft cover projection into the case side hollow.



2. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Coat a new output shaft front bearing with gear oil. Using SST and a press, install it onto the front transaxle case.

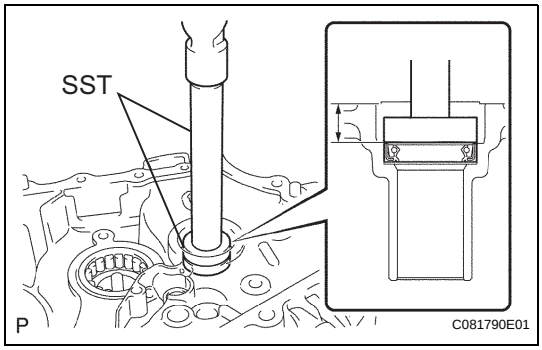
SST 09950-60010 (09951-00550), 09950-70010 (09951-07150)

NOTICE:

- **Install the new bearing in the correct direction, as shown in the illustration.**

MX

- **When replacing the output shaft front bearing, replace the output shaft front bearing inner race at the same time.**



3. INSTALL FRONT TRANSAXLE CASE OIL SEAL

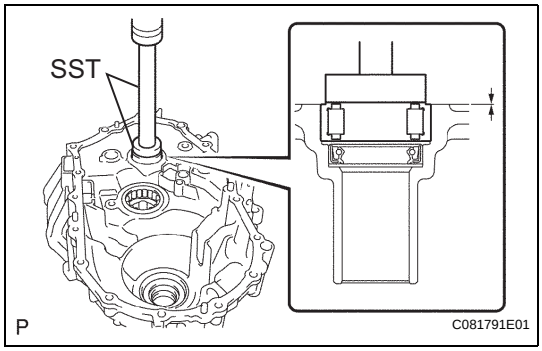
(a) Using SST and a hammer, install a new front transaxle case oil seal onto the front transalxe case.

SST 09950-60010 (09951-00370), 09950-70010 (09951-07150)

Drive in depth:

15.6 to 16.0 mm (0.6141 to 0.6299 in.)

(b) Coat the lip of the front transaxle case oil seal with MP grease.



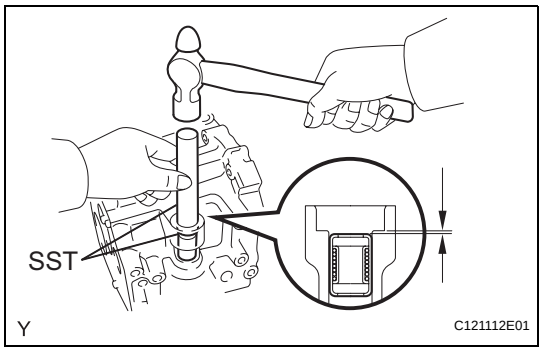
4. INSTALL INPUT SHAFT FRONT BEARING

(a) Coat a new input shaft front bearing with gear oil, and using SST and a press, install it onto the front transaxle case.

SST 09950-60010 (09951-00420), 09950-70010 (09951-07150)

Drive in depth:

0 to 0.3 mm (0 to 0.0118 in.)



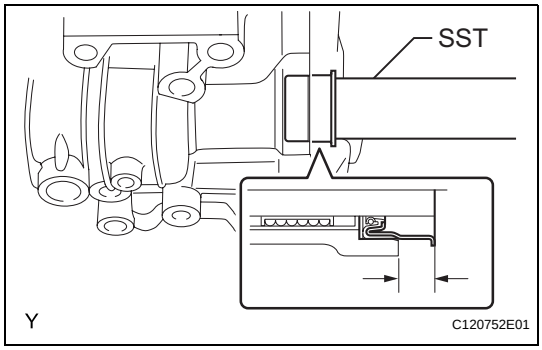
5. INSTALL SHIFT AND SELECT LEVER SHAFT SLIDE BALL BEARING

(a) Using SST and a hammer, install the shift and select lever shaft slide ball bearing onto the transmission case.

SST 09950-60010 (09951-00220), 09950-70010 (09951-07100)

Drive in depth:

0 to 0.5 mm (0 to 0.0020 in.)



6. INSTALL SHIFT AND SELECT LEVER SHAFT OIL SEAL

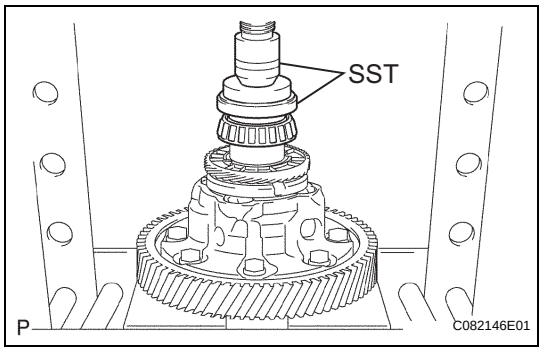
(a) Using SST, install the shift and select lever shaft oil seal onto the transmission case.

SST 09950-70010 (09951-07150), 09950-60010 (09951-00240)

Drive in depth:

9.7 to 10.3 mm (0.382 to 0.406 in.)

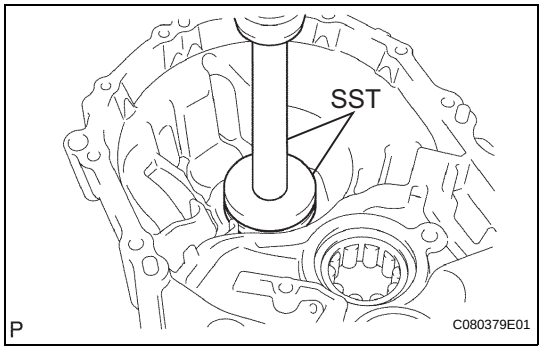
MX



7. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

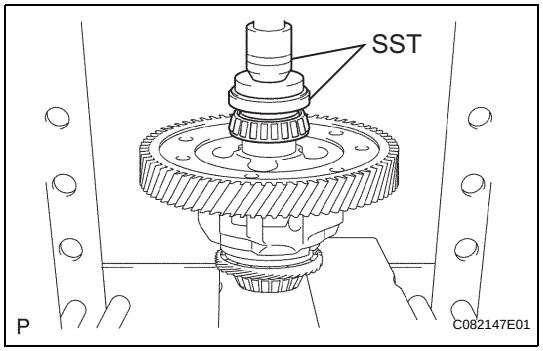
(a) Using SST and a press, install the front differential case front tapered roller bearing (inner race) onto the front differential case.

SST 09350-32014 (09351-32120), 09950-60010 (09951-00530)



(b) Using SST and a press, install the front differential case front tapered roller bearing (outer race) together with the plate washer onto the front transaxle case.

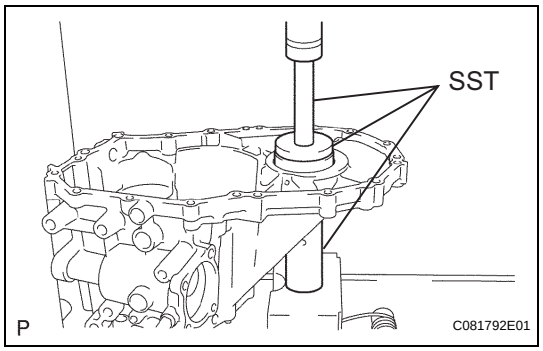
SST 09950-60020 (09951-00680), 09950-70010 (09951-07150)



8. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case rear tapered roller bearing (inner race) onto the differential case.

SST 09350-32014 (09351-32120), 09950-60010 (09951-00530)

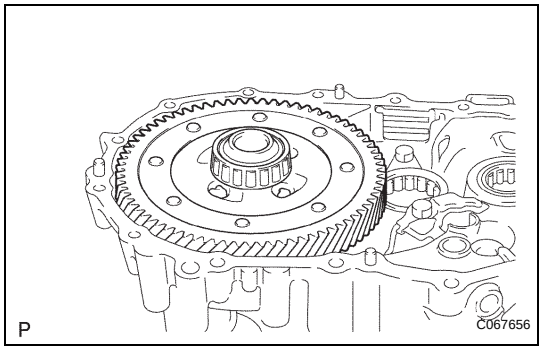


(b) Using SST and a press, install the front differential case rear tapered roller bearing (outer race) with plate washer onto the transmission case.

SST 09309-36010, 09950-60020 (09951-00710), 09950-70010 (09951-07150)

HINT:

Use a plate washer of the same thickness as the removed one.

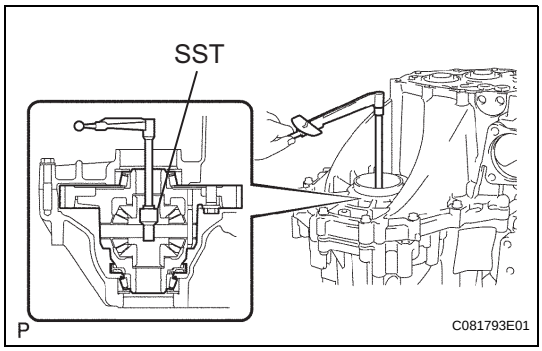


9. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

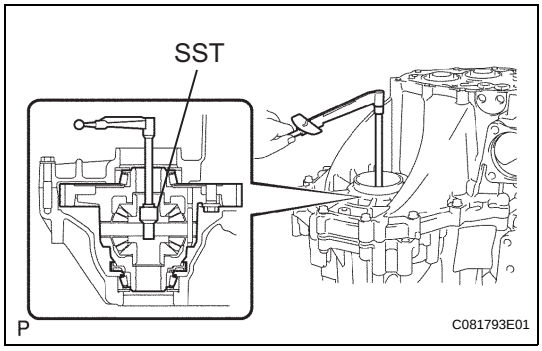
(a) Coat the differential case assembly with gear oil, and install it onto the front transaxle case.

(b) Install the manual transmission case with the 16 bolts.

Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)



(c) Using SST and a torque wrench, turn the differential case assembly to the right and left 2 or 3 times to allow the bearings to settle.
SST 09564-32011



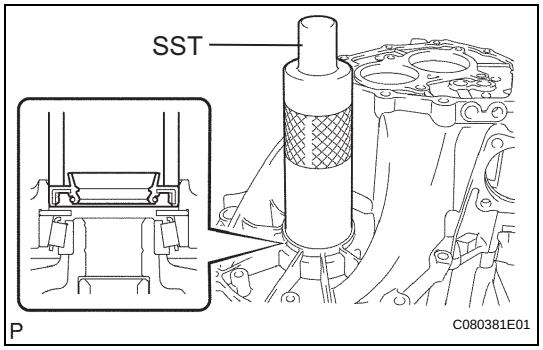
(d) Using SST and a torque wrench, measure the preload.
SST 09564-32011
Preload (at starting):
New bearing:
0.78 to 1.57 N*m (7.95 to 16.0 kgf*cm, 6.9 to 13.89 in.*lbf)
Used bearing:
0.49 to 0.98 N*m (5.0 to 10.0 kgf*cm, 4.34 to 8.67 in.*lbf)
If the preload is outside the specifications, select another plate washer.
Plate washer thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
AA	2.10 (0.0827)	LL	2.60 (0.1024)
BB	2.15 (0.0846)	MM	2.65 (0.1043)
CC	2.20 (0.0866)	NN	2.70 (0.1063)
DD	2.25 (0.0886)	PP	2.75 (0.1083)
EE	2.30 (0.0906)	QQ	2.80 (0.1102)
FF	2.35 (0.0925)	RR	2.85 (0.1122)
GG	2.40 (0.0945)	SS	2.90 (0.1142)
HH	2.45 (0.0965)	TT	2.95 (0.1161)
JJ	2.50 (0.0984)	UU	3.00 (0.1181)
KK	2.55 (0.1004)	-	-

HINT:
The preload changes by approximately 0.3 to 0.4 N*m (3 to 4 kgf*cm, 2.6 to 3.5 in.*lbf) per each 0.05 mm (0.0020 in.) change in plate washer thickness.

(e) Remove the 16 bolts and the manual transmission case.

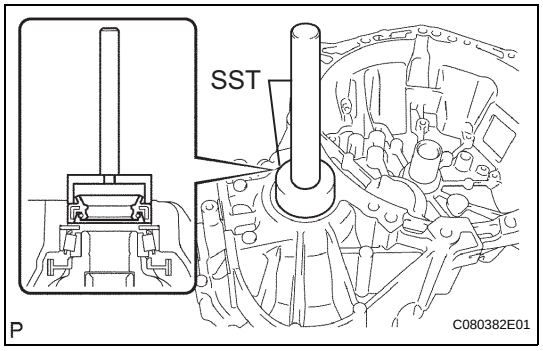
(f) Remove the differential case assembly from the front transaxle case.



10. INSTALL TRANSMISSION CASE OIL SEAL

(a) Using SST and a hammer, install a new transmission case oil seal onto the manual transmission case.
SST 09316-60011 (09316-00011)
Drive in depth:
9.6 to 10.2 mm (0.378 to 0.402 in.)

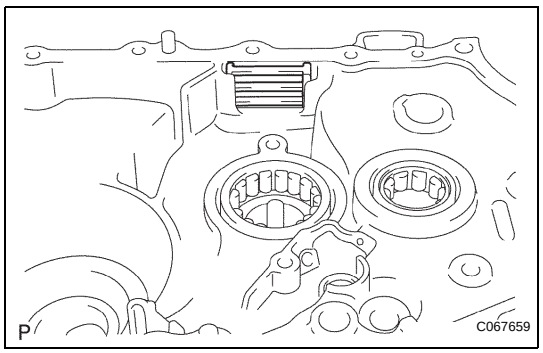
(b) Coat the lip of the front transmission case oil seal with MP grease.



11. INSTALL TRANSAXLE CASE OIL SEAL

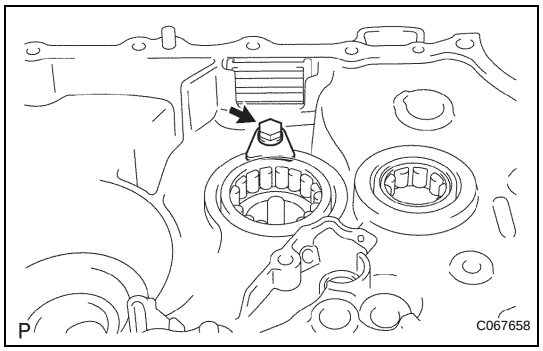
(a) Using SST and a hammer, install a new transaxle case oil seal onto the front transaxle case.
Drive in depth:
1.6 to2.2 mm (0.063 to 0.087 in.)
SST 09710-20011 (09710-06071), 09950-70010 (09951-07150)

(b) Coat the lip of the transaxle case oil seal with MP grease.



12. INSTALL TRANSMISSION MAGNET

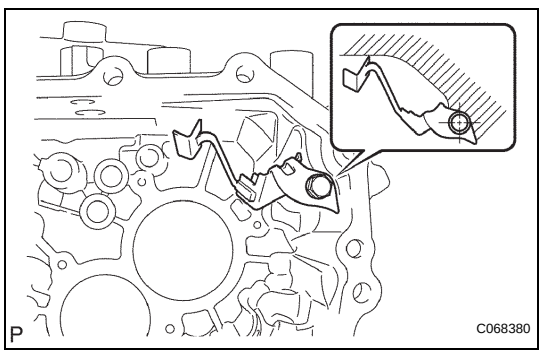
(a) Clean the transmission magnet and install it onto the front transaxle case.



13. INSTALL BEARING LOCK PLATE

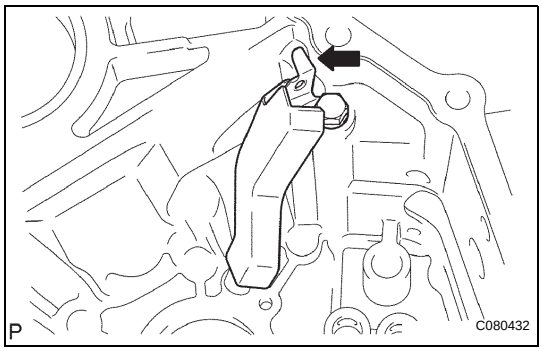
(a) Install the bearing lock plate onto the front transaxle case with the bolt.
Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)

MX



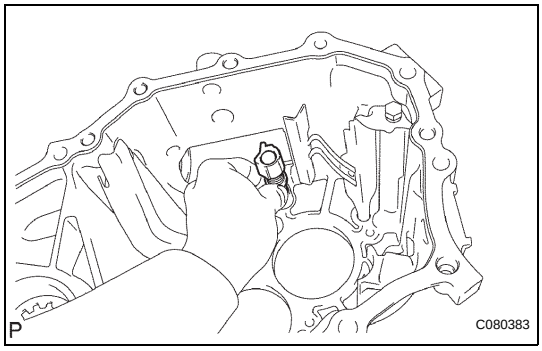
14. INSTALL OIL RECEIVER PIPE NO. 1

(a) Install oil receiver pipe No. 1 onto the manual transmission case with the bolt.
Torque: 17 N*m (175 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Do not deform oil receiver pipe No. 1.**
- **Install the oil receiver pipe No. 1 while holding it against the manual transmission case, as shown in the illustration.**



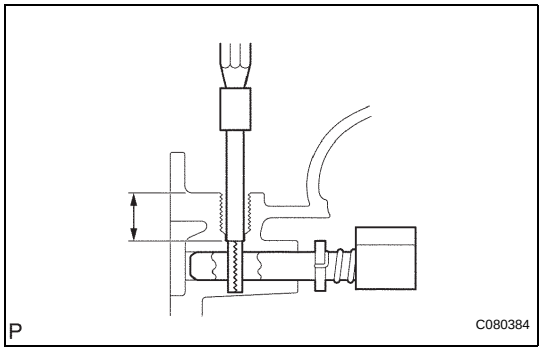
15. INSTALL OIL RECEIVER PIPE NO. 2

(a) Install the oil receiver pipe No. 2 onto the manual transmission case with the bolt.
Torque: 17 N*m (175 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Do not deform oil receiver pipe No. 2.**
- **Install the oil receiver pipe No. 2 while holding it against the manual transmission case, as shown in the illustration.**

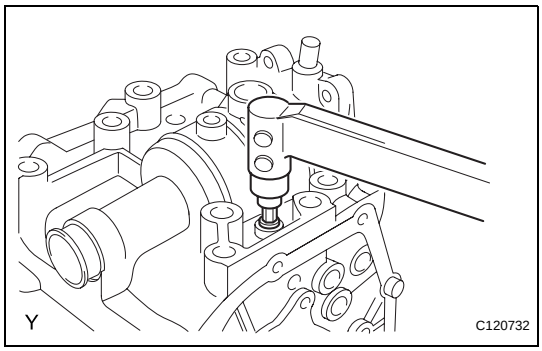


16. INSTALL REVERSE RESTRICT PIN ASSEMBLY

(a) Install the reverse restrict pin assembly onto the manual transmission case.
NOTICE:
Set the reverse restrict pin assembly in the correct orientation.

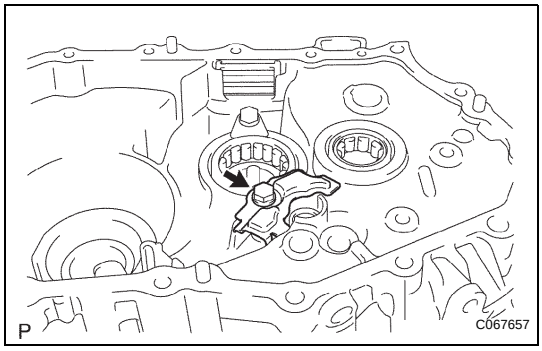


(b) Using a pin punch (ϕ5 mm) and a hammer, install the slotted pin onto the reverse restrict pin assembly.
Drive in depth:
15.5 to 16.5 mm (0.6102 to 0.6496 in.)



(c) Apply sealant to the reverse restrict pin plug.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

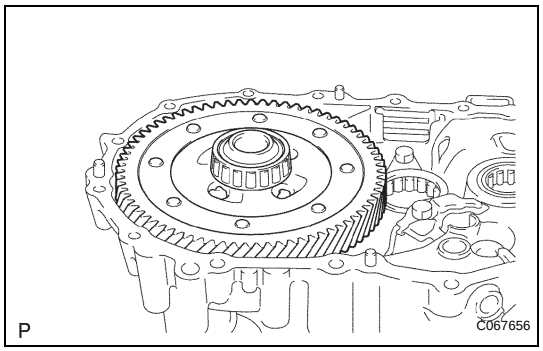
(d) Using a hexagon wrench and a torque wrench, install the reverse restrict pin plug onto the manual transmission case.
Torque: 13 N*m (130 kgf*cm, 9.3 ft.*lbf)



17. INSTALL MANUAL TRANSAXLE CASE RECEIVER

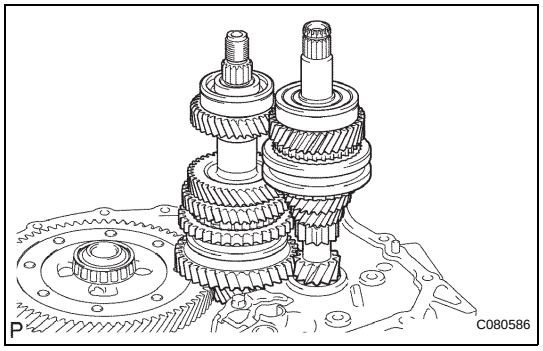
(a) Install the manual transaxle case receiver onto the front transaxle case with the bolt.
Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)

MX



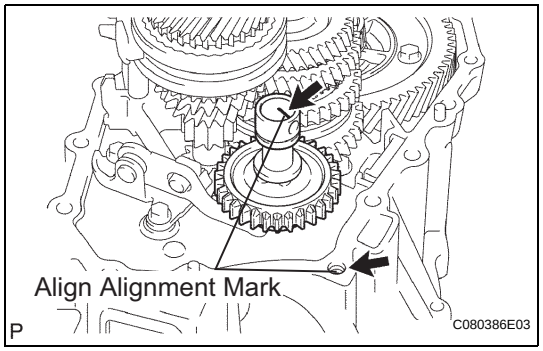
18. INSTALL DIFFERENTIAL CASE ASSEMBLY

(a) Coat the differential case tapered roller bearing with gear oil and install the differential case assembly onto the front transaxle case.



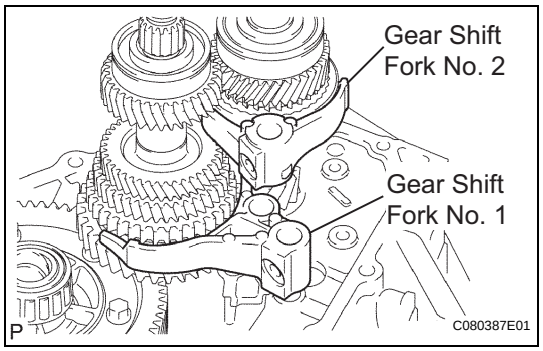
19. INSTALL INPUT SHAFT ASSEMBLY

(a) Coat the sliding and rotating surfaces of the input and output shafts with gear oil and install them onto the transaxle case.



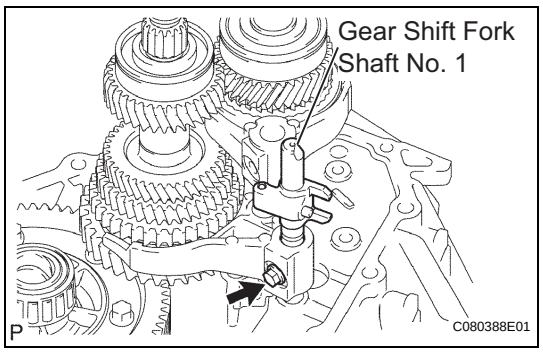
20. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Coat the reverse idler gear sub-assembly, thrust washer and reverse idler gear shaft with gear oil and install them as shown in the illustration.
HINT:
Align the mark on the reverse idler gear shaft with the bolt hole shown in the illustration.



21. INSTALL GEAR SHIFT FORK SHAFT NO.1

(a) Coat gear shift fork No. 1 and gear shift fork No. 2 with gear oil and install them.

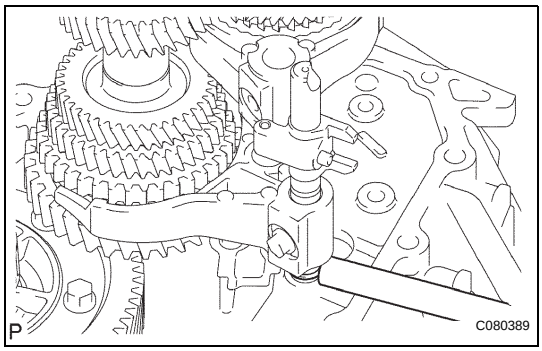


(b) Coat gear shift fork shaft No. 1 with gear oil and install it.

(c) Apply sealant to the shift fork set bolt.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

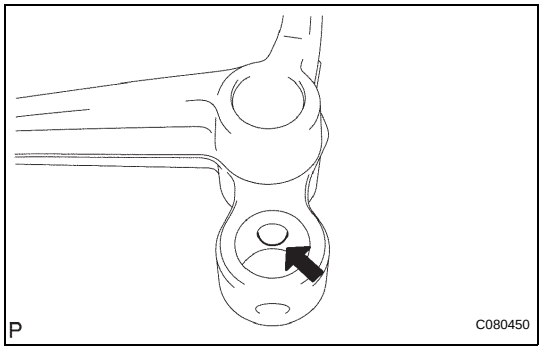
(d) Install the shift fork set bolt.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)

MX



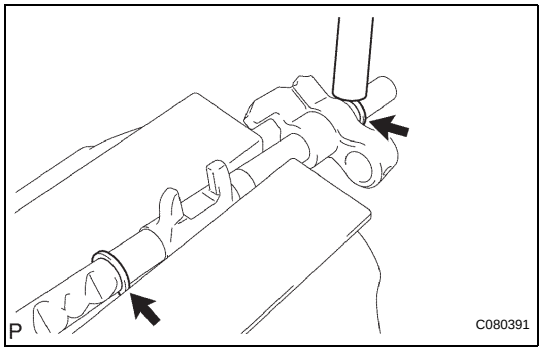
(e) Using a brass bar and a hammer, install a new shaft snap ring onto gear shift fork shaft No. 1.

22. INSTALL GEAR SHIFT FORK SHAFT NO.3

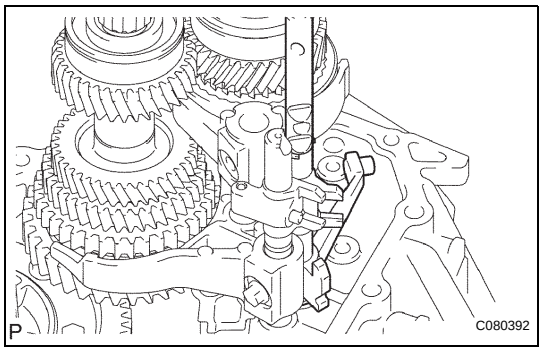


(a) Coat the 2 shift fork balls with MP grease and install them onto the reverse shift fork.

(b) Install the reverse shift fork onto gear shift fork shaft No. 3.

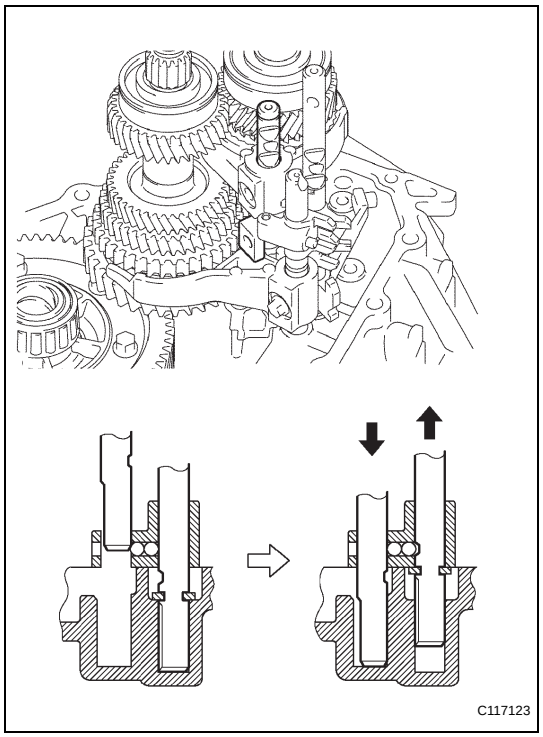


(c) Using a brass bar and a hammer, install 2 new shift fork shaft snap rings onto shift fork shaft No. 3.



(d) Coat gear shift fork shaft No. 3 with gear oil and install it.

MX

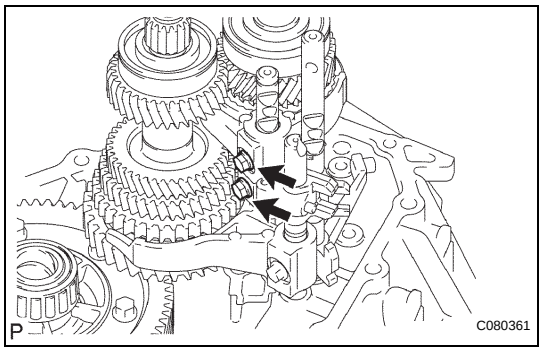


23. INSTALL GEAR SHIFT FORK SHAFT NO.2

(a) Coat gear shift head No. 1 and gear shift fork shaft No. 2 with gear oil and install them.

NOTICE:

To avoid interference by the 2 shift fork balls, lift up gear shift fork shaft No. 3 to the position shown in the illustration.

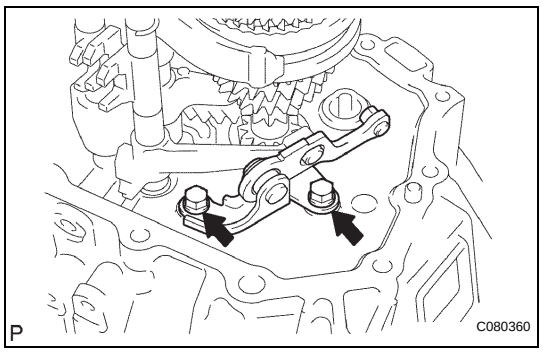


(b) Coat the 2 shift lock bolts with sealant and install them onto gear shift fork No. 2 and shift head No. 1.

Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

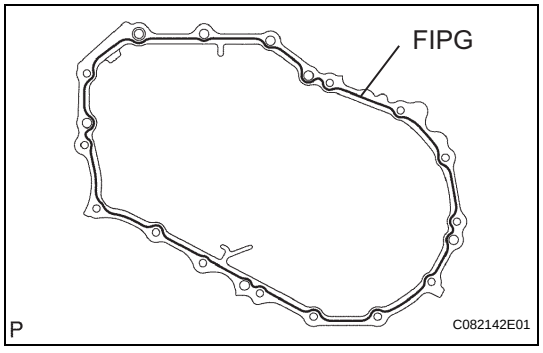
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



24. INSTALL REVERSE SHIFT ARM BRACKET ASSEMBLY

(a) Install the reverse shift arm bracket assembly onto the front transaxle case with 2 bolts.

Torque: 17 N*m (175 kgf*cm, 13 ft.*lbf)



25. INSTALL MANUAL TRANSMISSION CASE

(a) Apply FIPG to the manual transmission case, as shown in the illustration.

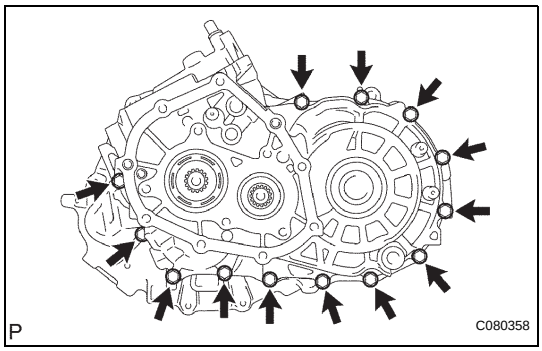
FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent

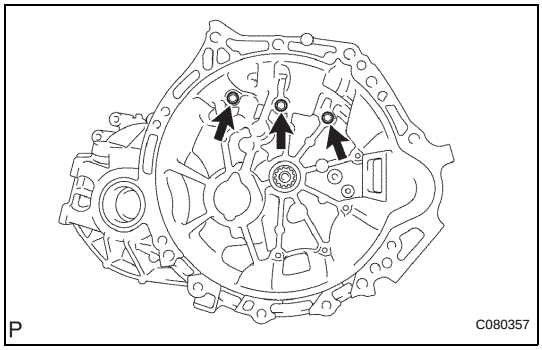
NOTICE:

Assemble the parts within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

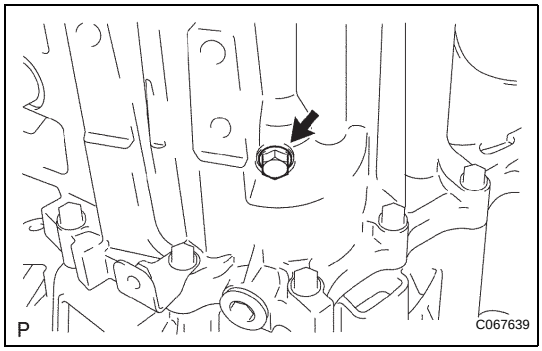
MX



(b) Install the 13 bolts onto the manual transmission side.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)

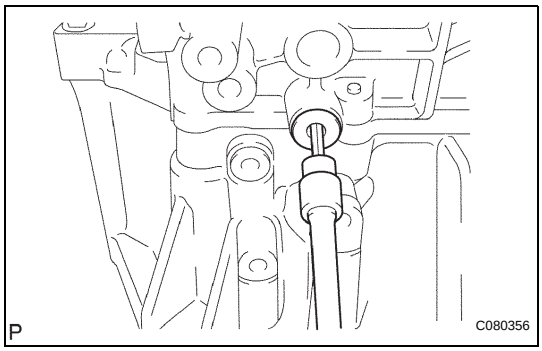


(c) Install the 3 bolts onto the manual transaxle side.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)



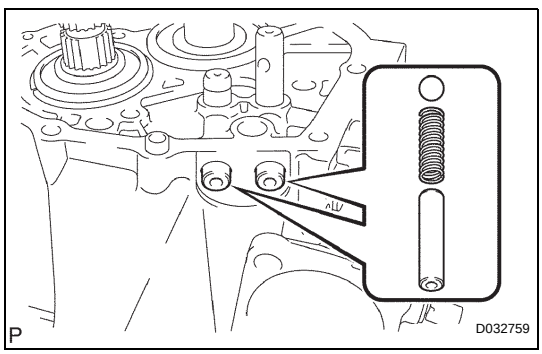
26. INSTALL REVERSE IDLER GEAR SHAFT BOLT

(a) Coat the reverse idler gear shaft bolt with sealant and install it with a new gasket.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)



27. INSTALL LOCK BALL ASSEMBLY NO.2

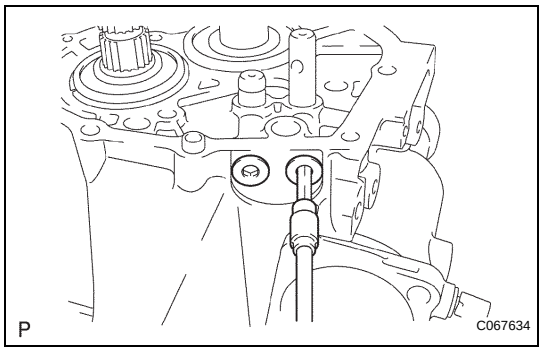
(a) Coat lock ball assembly No. 2 with sealant and install it with a hexagon wrench.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)



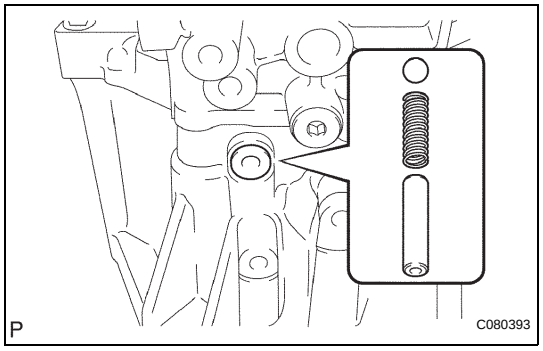
28. INSTALL SHIFT DETENT BALL

(a) Install the 2 shift detent balls, 2 shift detent ball springs and 2 shift detent ball spring seats No. 1 onto the manual transmission case.

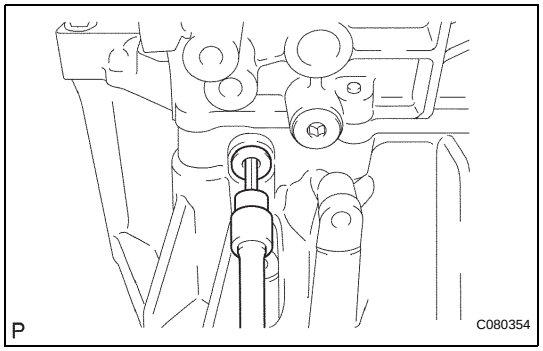
MX



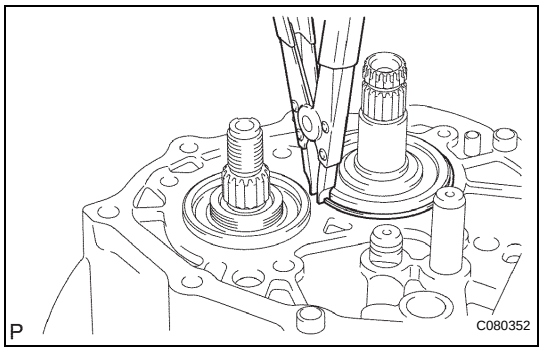
(b) Coat the 2 shift detent ball plugs with sealant and install them using a hexagon wrench.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



(c) Install the shift detent ball, shift detent ball compression spring and shift detent ball spring seat No. 1 onto the front transaxle case.

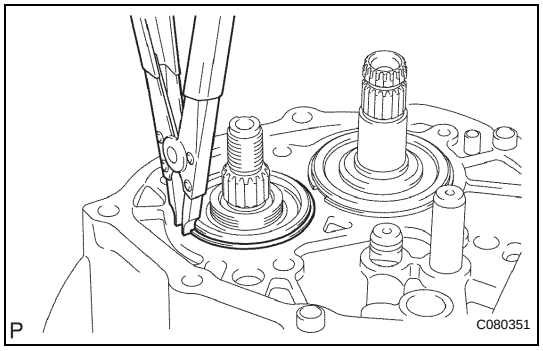


(d) Coat the shift detent ball plug with sealant and install it using a hexagon wrench.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



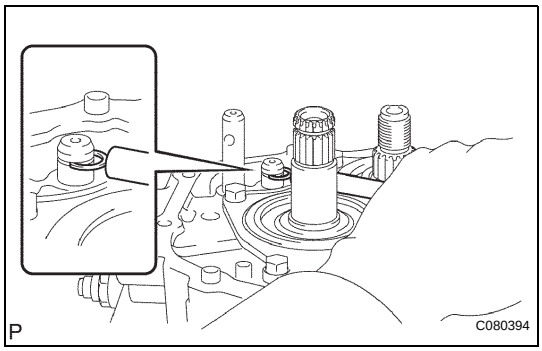
29. INSTALL INPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, install the input shaft rear bearing hole snap ring onto the input shaft.



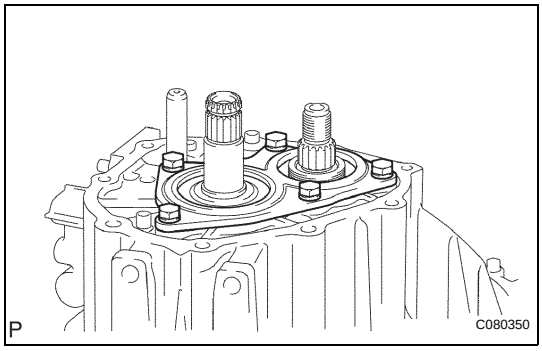
30. INSTALL OUTPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, install the output shaft rear bearing hole snap ring onto the output shaft.



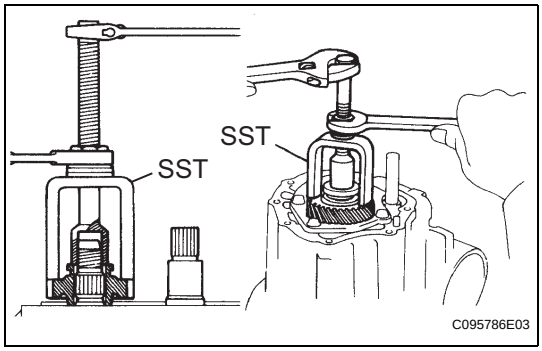
31. INSTALL SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using a brass bar and a hammer, install a new shift fork shaft shaft snap ring onto the shift fork shaft No. 2.



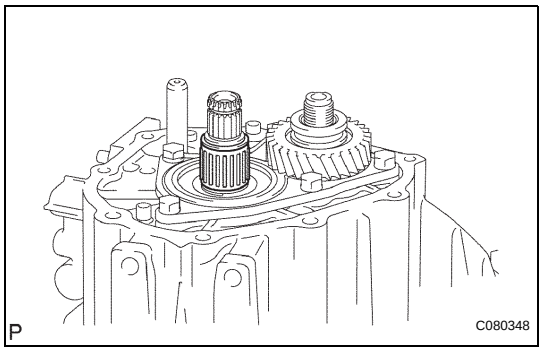
32. INSTALL BEARING RETAINER REAR

(a) Coat the 5 bolts with sealant, and install the bearing retainer rear onto the manual transmission case with the 5 bolts.
Torque: 27 N*m (280 kgf*cm, 20 ft.*lbf)



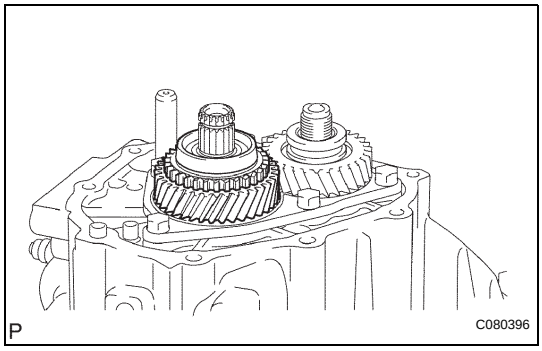
33. INSTALL 5TH DRIVEN GEAR

(a) Using SST, install the 5th driven gear onto the output shaft.
SST 09309-12020



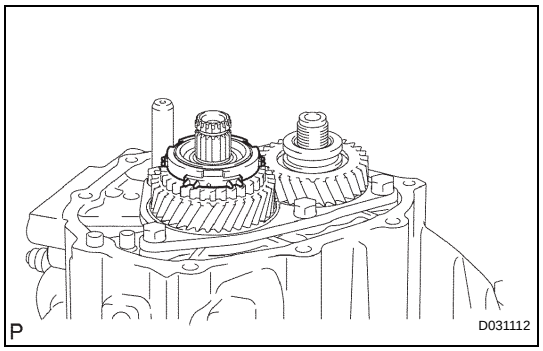
34. INSTALL 5TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 5th gear needle roller bearing and 5th gear bearing spacer with gear oil, and install them onto the input shaft.



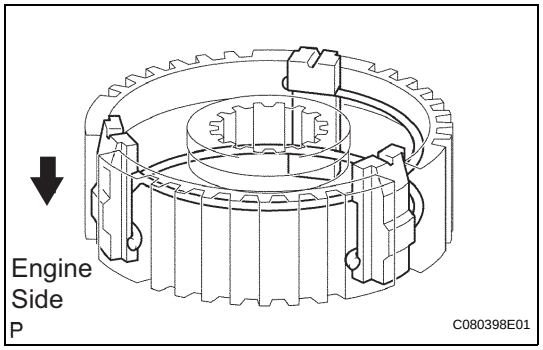
35. INSTALL 5TH GEAR

(a) Coat the 5th gear with gear oil and install it onto the input shaft.



36. INSTALL SYNCHRONIZER RING NO.3

(a) Coat synchronizer ring No. 3 with gear oil and install it onto the 5th gear.

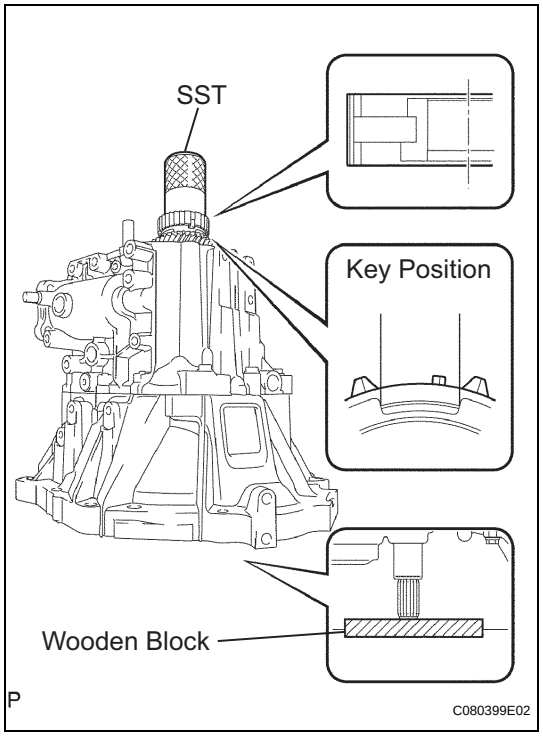


37. INSTALL TRANSMISSION CLUTCH HUB NO.3

(a) Install the 3 synchromesh shifting keys and 2 synchromesh shifting key springs onto the transmission clutch hub No. 3, as shown in the illustration.

NOTICE:

Do not set the 2 shifting key spring openings in the same position.

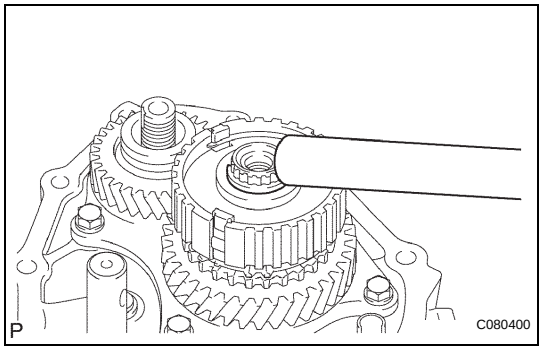


(b) Using SST and a hammer, install transmission clutch hub No. 3 onto the input shaft.

SST 09636-20010

NOTICE:

- **Do not install transmission clutch hub No. 3 in the wrong direction.**
- **Install the transmission clutch hub No. 3 with the synchronizer ring No. 3 key groove and synchromesh shifting key No. 3 aligned.**
- **Check that the 5th gear is rotating.**
- **Place a suitable sized wooden block to support the input shaft.**



(c) Select a clutch hub No. 3 shaft snap ring that will allow minimum axial play.

Clearance:

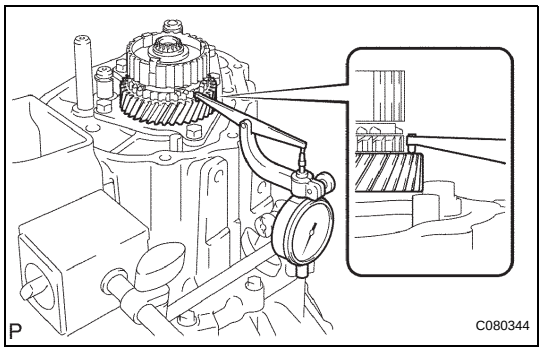
0.1 mm or less

Snap ring thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
A	2.25 (0.0886)	E	2.49 (0.0980)
B	2.31 (0.0909)	F	2.55 (0.1004)
C	2.37 (0.0933)	G	2.61 (0.1028)

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
D	2.43 (0.0957)	-	-

(d) Using a brass bar and a hammer, install the snap ring onto the input shaft.

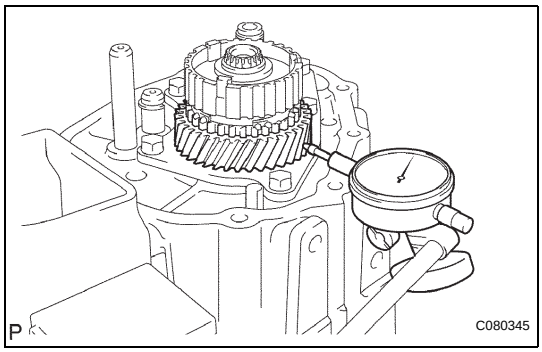


38. INSPECT 5TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 5th gear thrust clearance.

Standard clearance:
0.1 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 3, the 5th gear or input shaft rear radial ball bearing.



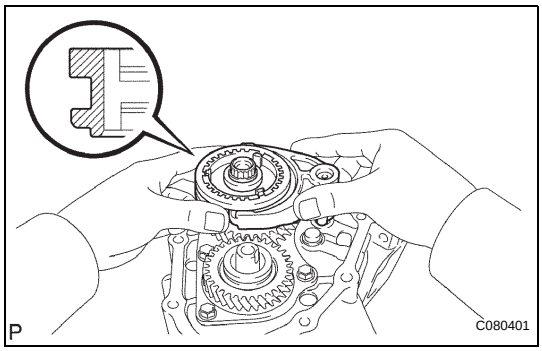
39. INSPECT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure 5th gear radial clearance.

Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the 5th gear, 5th gear needle roller bearing or input shaft.

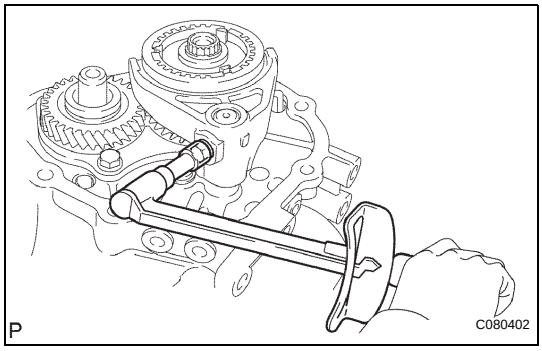
MX



40. INSTALL GEAR SHIFT FORK NO.3

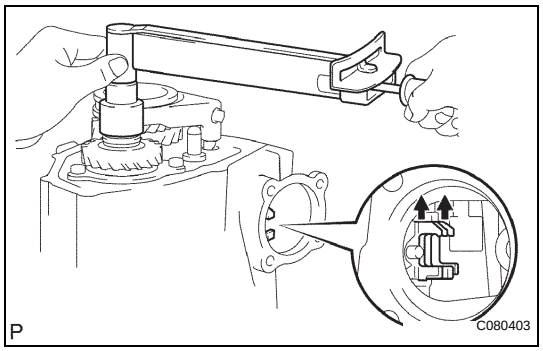
(a) Coat transmission clutch hub sleeve No. 3 with gear oil and install it together with gear shift fork No. 3 onto transmission clutch hub No. 3.

HINT:
Set the transmission clutch hub No. 3 in the correct orientation.



(b) Coat the gear shift fork lock bolt with sealant, and install it onto gear shift fork No. 3.

Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)

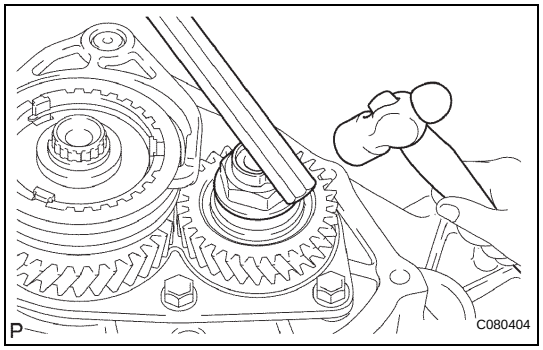


41. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Engage the 2 gears simultaneously to lock the transmission.

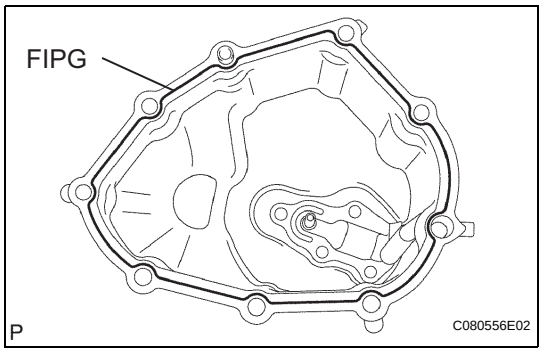
(b) Coat a new manual transmission output shaft rear set nut with sealant.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

(c) Install the new manual transmission output shaft rear set nut.
Torque: 118 N*m (1,200 kgf*cm, 87 ft.*lbf)



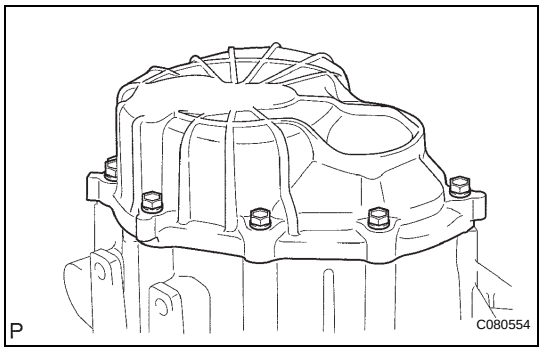
(d) Using a chisel and a hammer, stake the manual transmission output shaft rear set nut.

(e) Disengage the 2 gears.



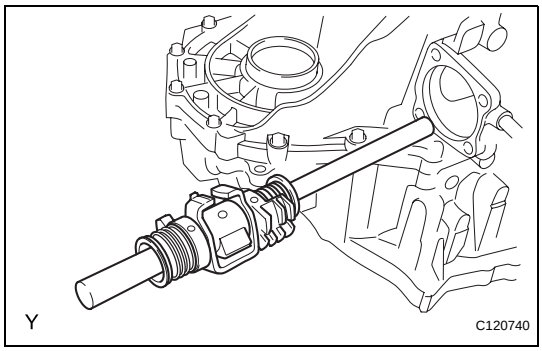
42. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Apply FIPG to the manual transaxle case cover sub-assembly as shown in the illustration.
FIPG:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent
NOTICE:
Assemble the parts within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.



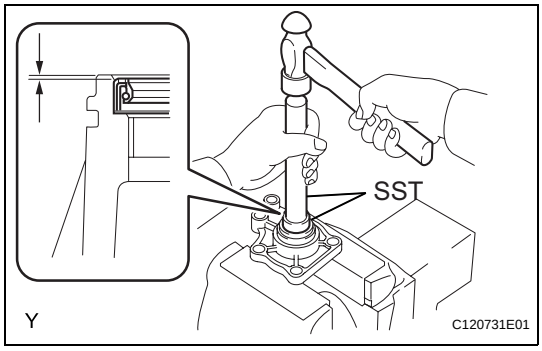
(b) Install the manual transmission case cover sub-assembly onto the manual transmission case with the 9 bolts.
Torque: 18 N*m (185 kgf*cm, 14 ft.*lbf)

MX



43. INSTALL SHIFT AND SELECT LEVER SHAFT ASSEMBLY

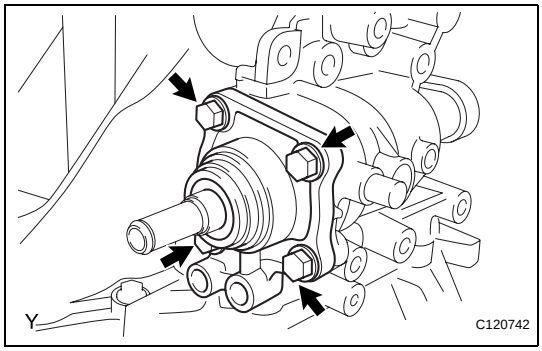
(a) Coat the shift and select lever shaft assembly with gear oil, and install it onto the transmission case.



44. INSTALL CONTROL SHAFT COVER OIL SEAL

(a) Using SST and a hammer, install a new control shaft cover oil seal onto the control shaft cover.
Drive in depth:
0.2 to 1.2 mm (0.0079 to 0.0472 in.)
SST 09950-60010 (09951-00280), 09950-70010 (09951-07150)

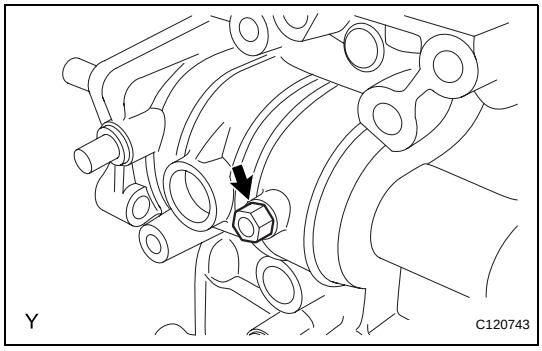
(b) Coat the control shaft cover oil seal with MP grease.



45. INSTALL CONTROL SHAFT COVER

(a) Coat the 4 bolts with sealant. Install a new gasket and control shaft cover onto the manual transmission case with the 4 bolts.
Torque: 20 N*m (200 kgf*cm, 14 ft.*lbf)
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
NOTICE:
Set the claws of the shift interlock plate into the shift head part of the gear shift fork shaft securely.

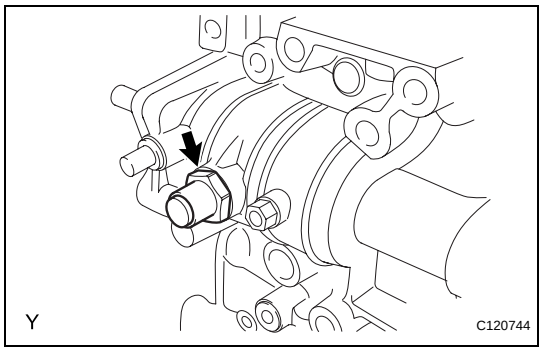
MX



46. INSTALL SHIFT GATE PIN

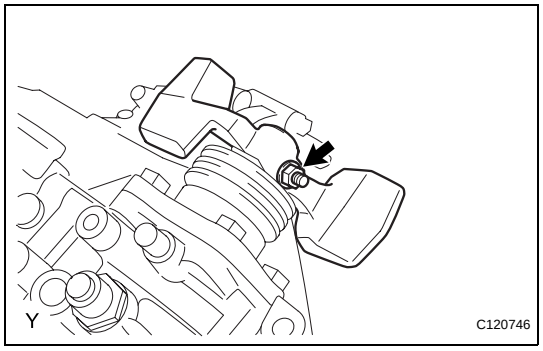
(a) Coat the shift gate pin with sealant.

(b) Install the washer and shift gate pin.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



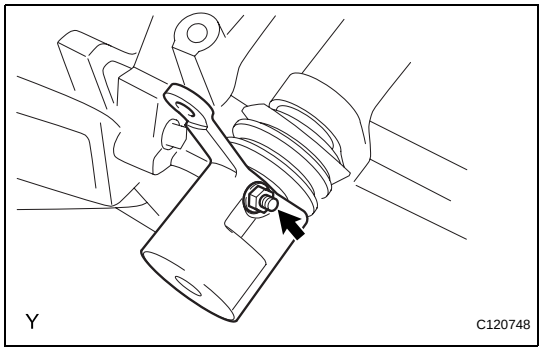
47. INSTALL LOCK BALL ASSEMBLY NO.1

(a) Coat lock ball assembly No. 1 with sealant, install it onto the manual transmission case.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



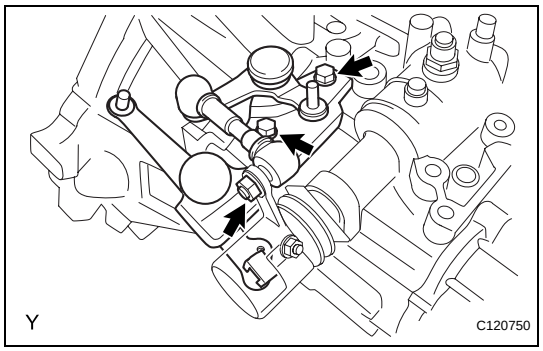
48. INSTALL SHIFT LEVER DAMPER

(a) Install the dust boot onto the control shaft cover.
(b) Install the shift lever damper with the lock pin onto the shift and select lever shaft assembly.
(c) Install the spring washer with the nut.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



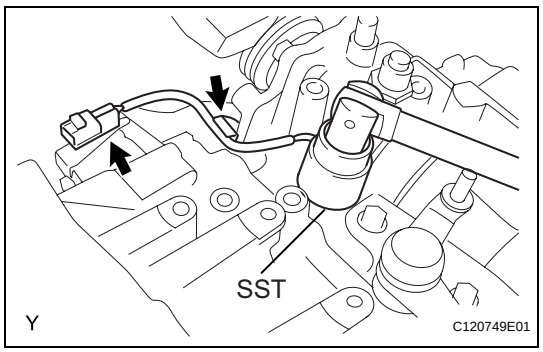
49. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER

(a) Install the dust boot onto the shift and select lever shaft oil seal.
(b) Install the floor shift control shift lever with the lock pin onto the shift and select lever shaft assembly.
(c) Install the spring washer with the nut.
Torque: 12 N*m (120 kgf*cm, 8.7 ft.*lbf)



50. INSTALL SELECTING BELL CRANK ASSEMBLY

(a) Install the selecting bell crank assembly together with the control shift lever bush onto the manual transmission case with the 2 bolts and nut.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf) for bolt
12 N*m (120 kgf*cm, 8.7 ft.*lbf) for nut
NOTICE:
Apply MP grease to the inside circumferential surface of the control shift lever bush.



51. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch assembly onto the manual transmission case with a new gasket.
SST 09817-16011
Torque: 40 N*m (410 kgf*cm, 30 ft.*lbf)
(b) Install the back-up light switch wire harness into the 2 clamps.

52. INSTALL SPEEDOMETER SENSOR (w/o ABS)

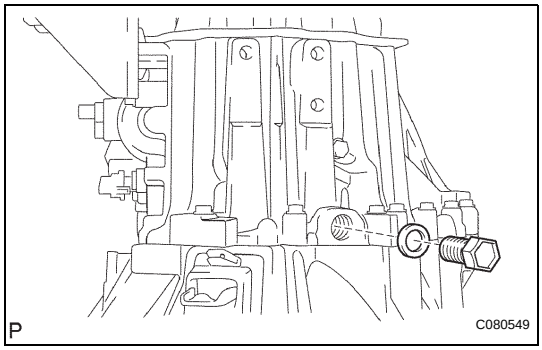
(a) Install a new O-ring onto the speedometer sensor.

MX

(b) Install the speedometer sensor onto the transaxle case with the bolt.
Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)

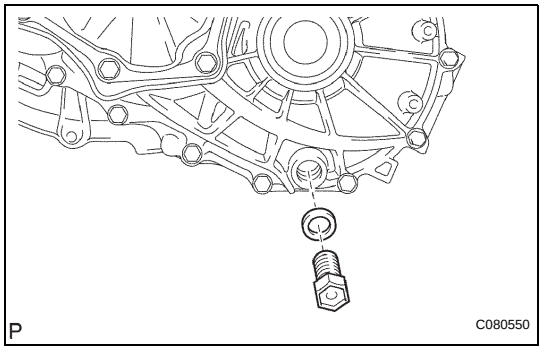
53. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Install a new O-ring onto the speedometer driven hole cover sub-assembly.
(b) Install the speedometer driven hole cover sub-assembly onto the manual transaxle case with the bolt.
Torque: 11 N*m (115 kgf*cm, 8.3 ft.*lbf)



54. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the manual transmission filler plug onto the manual transmission case with a new gasket.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

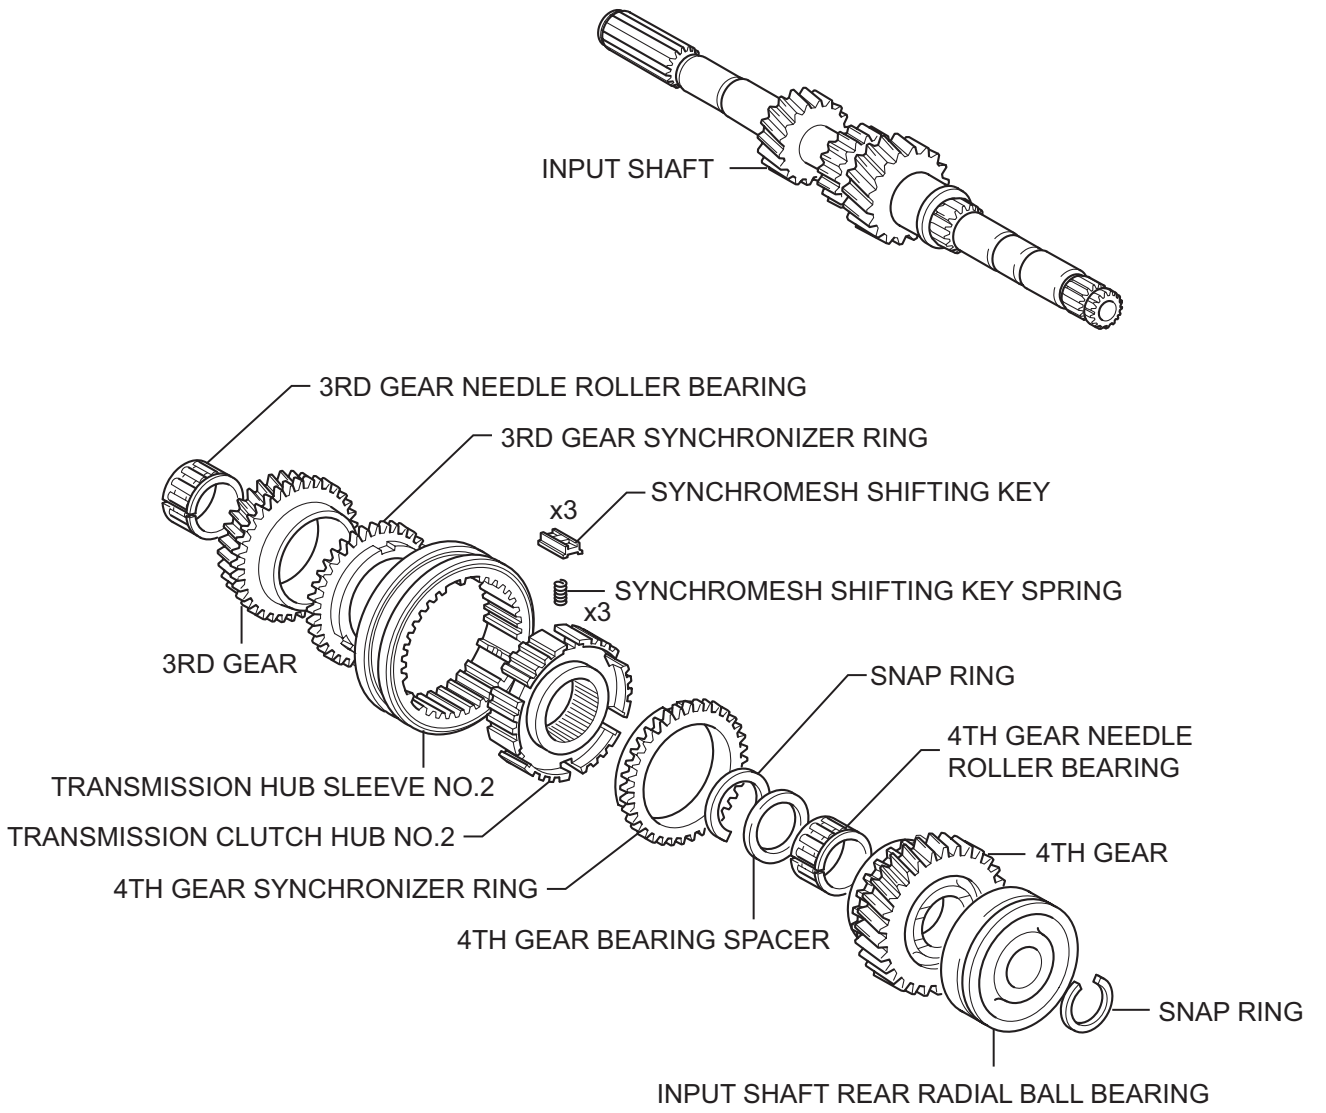


55. INSTALL DRAIN PLUG SUB-ASSEMBLY

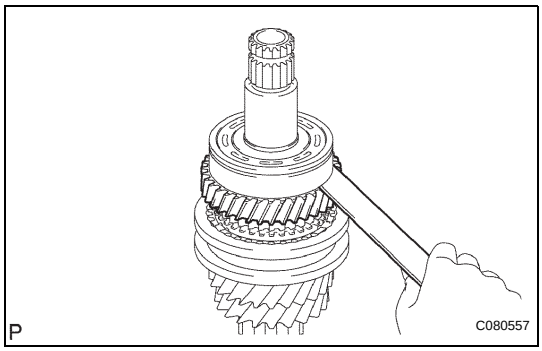
(a) Install the drain plug onto the manual transmission case with a new gasket.
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

INPUT SHAFT

COMPONENTS



MX



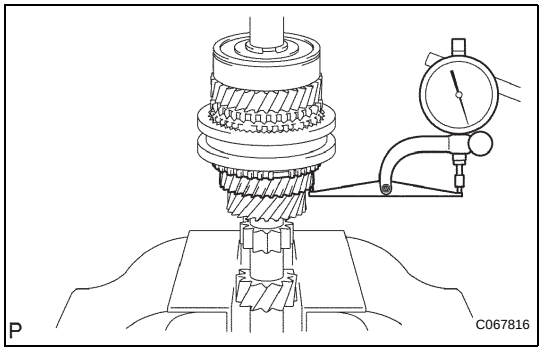
DISASSEMBLY

1. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:
0.1 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 2, the 4th gear or input shaft rear radial ball bearing.

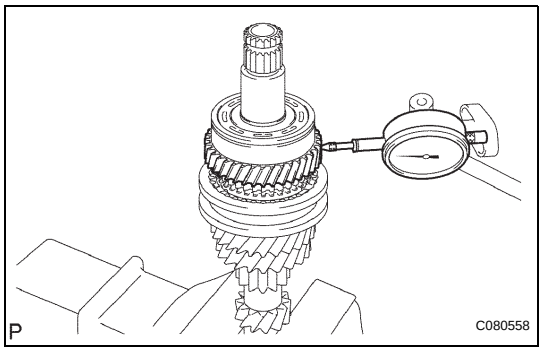


2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial gauge, measure the 3rd gear thrust clearance.

Standard clearance:
0.1 to 0.35 mm (0.0039 to 0.0138 in.)
Maximum clearance:
0.35 mm (0.0138 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 2, the 3rd gear or input shaft.



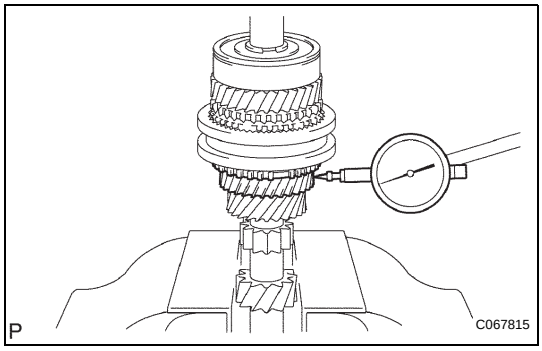
3. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance between the gear and shaft.

Standard clearance:
0.009 to 0.050 mm (0.0004 to 0.0020 in.)
Maximum clearance:
0.050 mm (0.0020 in.)

If the clearance exceeds the maximum, replace the 4th gear, 4th gear needle roller bearing or input shaft.

MX

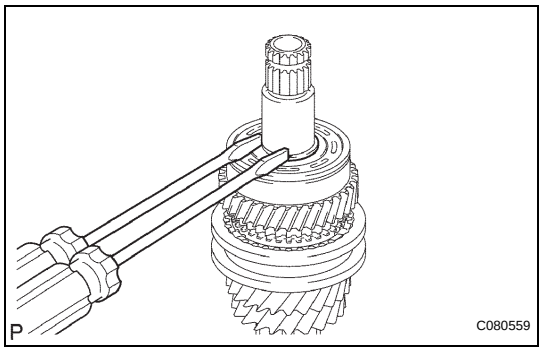


4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 3rd gear radial clearance between the gear and shaft.

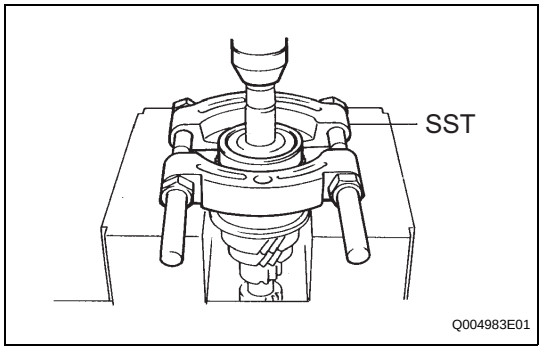
Standard clearance:
KOYO made bearing:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made bearing:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the 3rd gear, 3rd gear needle roller bearing or input shaft.

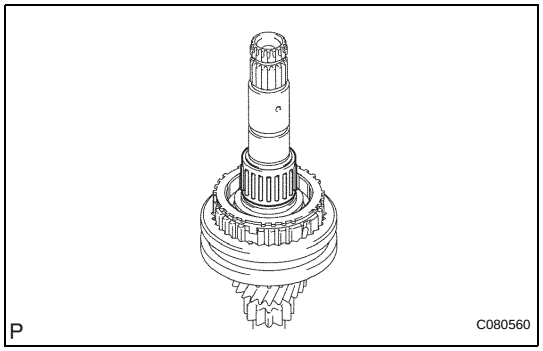


5. REMOVE 4TH GEAR

(a) Using 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from the input shaft.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.

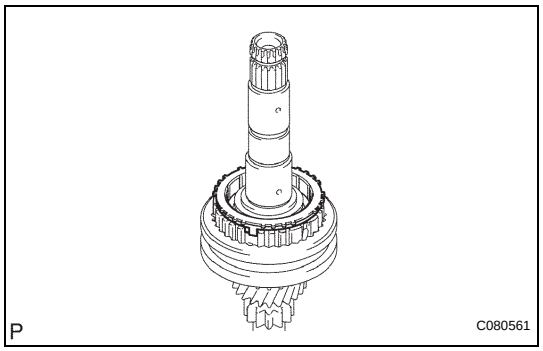


(b) Using SST and a press, remove the input shaft rear radial ball bearing and 4th gear from the input shaft.
SST 09950-00020
HINT:
- Do not tighten SST excessively.
- Support the input shaft assembly by hand to prevent it from dropping off.



6. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

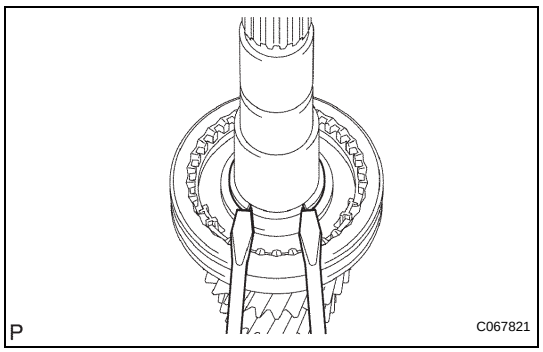
(a) Remove the 4th gear needle roller bearing and 4th gear bearing spacer from the input shaft.



7. REMOVE 4TH GEAR SYNCHRONIZER RING

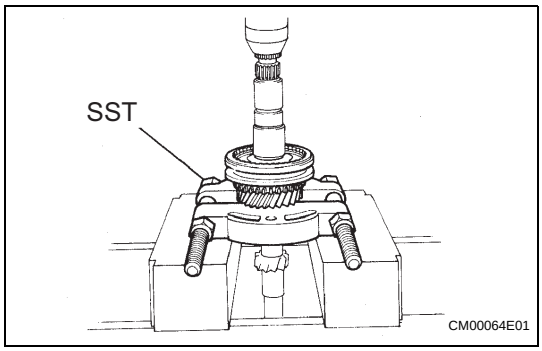
(a) Remove synchronizer ring No. 2 from transmission clutch hub No. 2.

MX

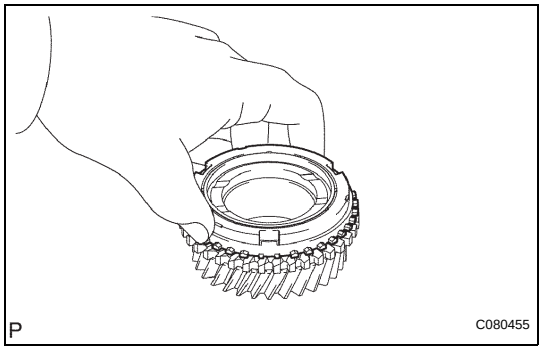


8. REMOVE 3RD GEAR

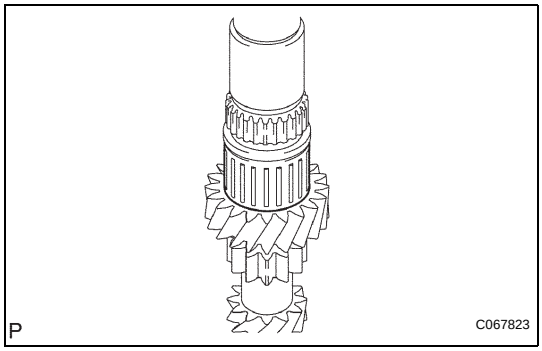
(a) Using 2 screwdrivers and a hammer, remove the clutch hub No. 2 setting shaft snap ring from the input shaft.
HINT:
Use a shop rag or piece of cloth to keep the snap ring from flying off.



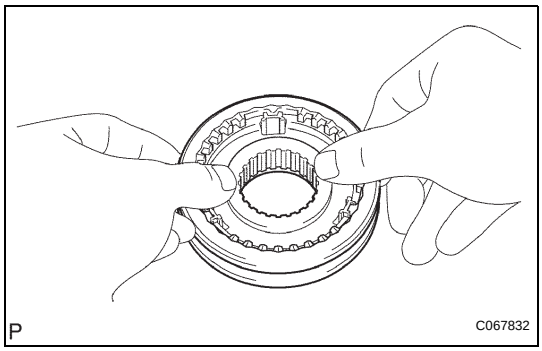
(b) Using SST and a press, remove transmission clutch hub No. 2 and the 3rd gear from the input shaft.
SST 09950-00020
NOTICE:
- **Do not tighten SST excessively.**
- **Support the input shaft by hand to prevent it from dropping off.**



9. REMOVE 3RD GEAR SYNCHRONIZER RING
(a) Remove synchronizer ring No. 2 from the 3rd gear.

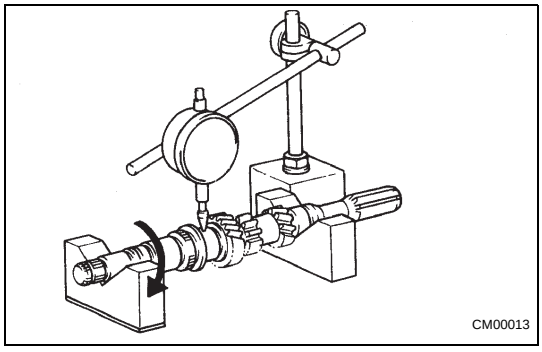


10. REMOVE 3RD GEAR NEEDLE ROLLER BEARING
(a) Remove the 3rd gear needle roller bearing from the input shaft.

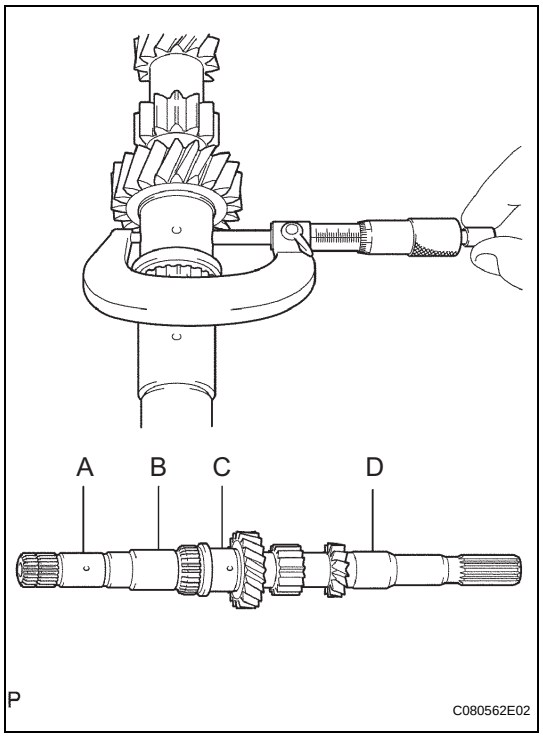


11. REMOVE TRANSMISSION HUB SLEEVE NO.2
(a) Remove transmission hub sleeve No. 2, the 3 shifting keys and 3 shifting key springs from transmission clutch hub No. 2.
NOTICE:
Use a shop rag or piece of cloth to keep the shifting key and shifting key spring from flying off.

INSPECTION



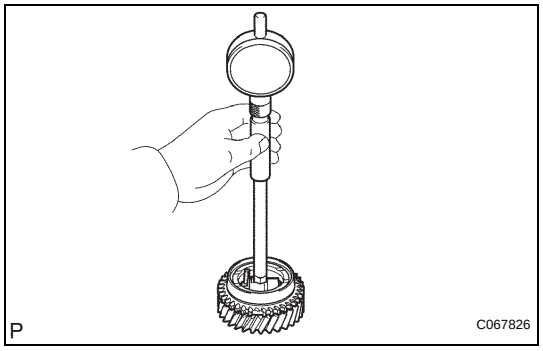
1. INSPECT INPUT SHAFT
(a) Using a dial gauge, check the input shaft runout.
Maximum runout:
0.015 mm (0.0006 in.)
If the runout exceeds the maximum, replace the input shaft.



(b) Using a micrometer, measure the outer diameter of the input shaft journal surface, at the locations indicated.

Standard outer diameter:
Part A:
24.885 to 24.900 mm (0.9797 to 0.9803 in.)
Part B:
28.991 to 29.006 mm (1.1414 to 1.1420 in.)
Part C:
30.985 to 31.000 mm (1.2198 to 1.2204 in.)
Part D:
24.985 to 25.000 mm (0.9836 to 0.9842 in.)
Minimum outer diameter:
Part A:
24.885 mm (0.9797 in.)
Part B:
28.991 mm (1.1414 in.)
Part C:
30.985 mm (1.2198 in.)
Part D:
24.985 mm (0.9836 in.)

If the outer diameters are less than the minimums, replace the input shaft.

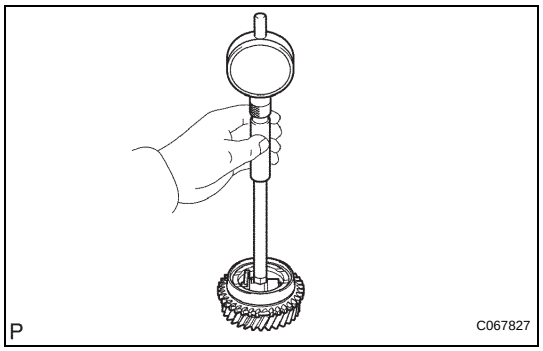


2. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Standard inside diameter:
34.015 to 34.031 mm (1.3391 to 1.3398 in.)
Maximum inside diameter:
34.031 mm (1.3398 in.)

If the inside diameter exceeds the maximum, replace the 4th gear.

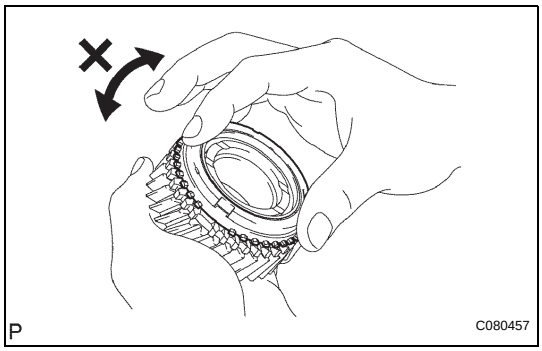


3. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

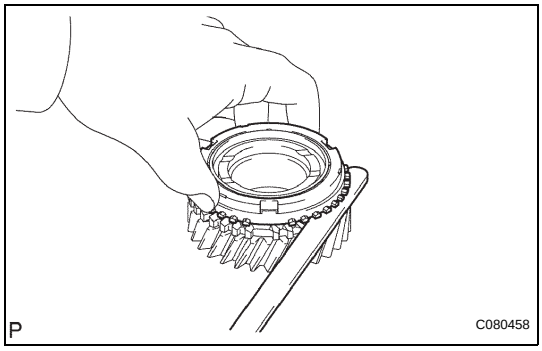
Standard inside diameter:
36.015 to 36.031 mm (1.4179 to 1.4185 in.)
Maximum inside diameter:
36.031 mm (1.4185 in.)

If the inside diameter exceeds the maximum, replace the 3rd gear.

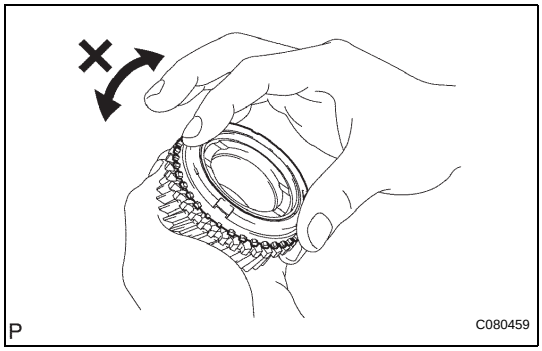


4. INSPECT 4TH GEAR SYNCHRONIZER RING

(a) Check for wear and damage.
(b) Coat the 4th gear cone with gear oil.
(c) Turn the synchronizer ring in one direction while pushing it against the 4th gear cone.
(d) Check that the ring locks.
If the synchronizer outer ring does not lock, replace the synchronizer ring.



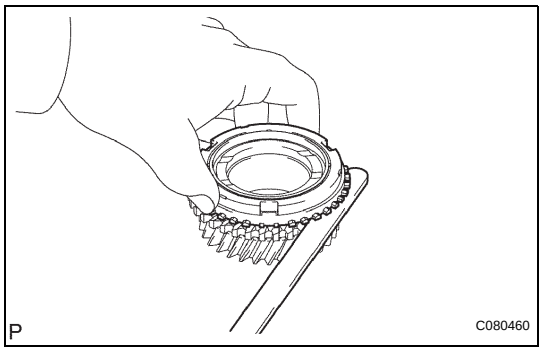
(e) Using a feeler gauge, measure the clearance between the synchronizer ring back and the gear spline end.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0649 in.)
Minimum clearance:
0.75 mm (0.0295 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



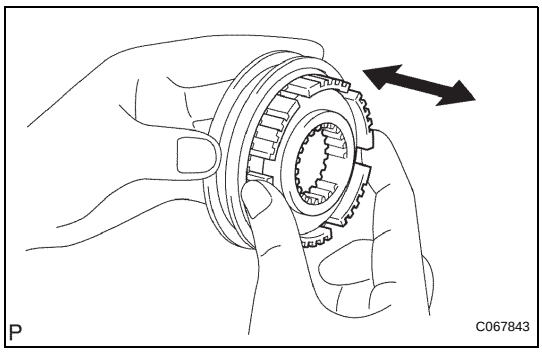
5. INSPECT 3RD GEAR SYNCHRONIZER RING

(a) Check for wear and damage.
(b) Coat the 3rd gear cone with gear oil.
(c) Turn the synchronizer ring in one direction while pushing it against the 3rd gear cone.
(d) Check that the ring locks.
If the synchronizer outer ring does not lock, replace the synchronizer ring.

MX

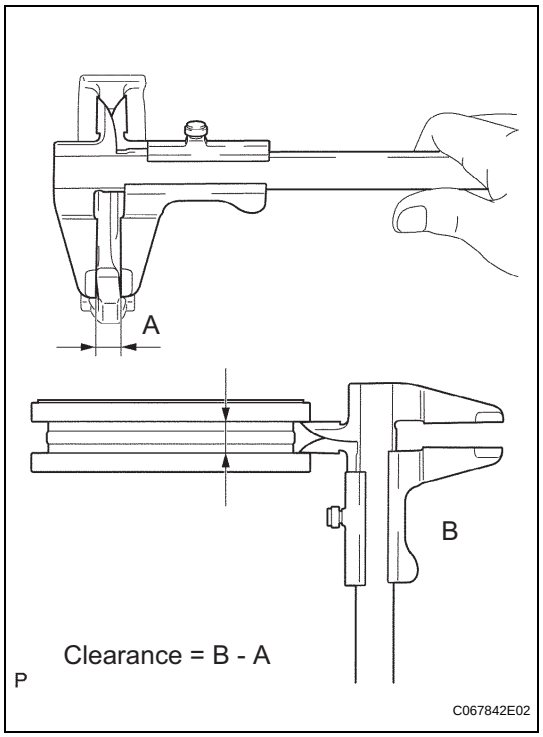


(e) Using a feeler gauge, measure the clearance between the synchronizer ring back and the gear spline end.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)
Minimum clearance:
0.75 mm (0.0295 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



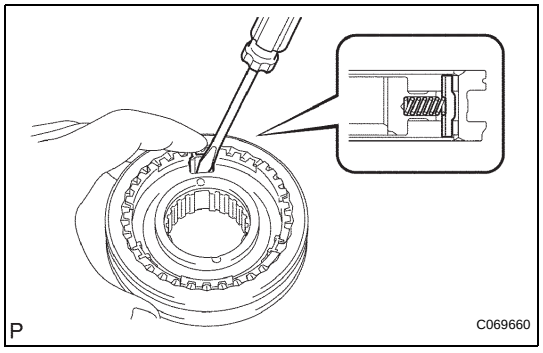
6. INSPECT TRANSMISSION HUB SLEEVE NO.2

(a) Check the sliding condition between transmission hub sleeve No. 2 and transmission clutch hub No. 2.
(b) Check that the edges of the transmission hub sleeve No. 2 spline gear are not worn down.



(c) Using vernier calipers, measure the width of the transmission hub sleeve No. 2 groove (B) and the thickness of the claw part on gear shift fork No. 2 (A), and calculate the clearance.
Standard clearance (B - A):
0.15 to 0.35 mm (0.0059 to 0.0137 in.)
If the clearance is outside the specifications, replace transmission hub sleeve No. 2 and gear shift fork No. 2.

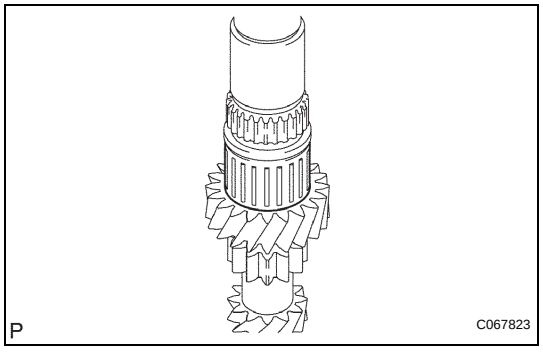
REASSEMBLY



1. INSTALL TRANSMISSION HUB SLEEVE NO.2

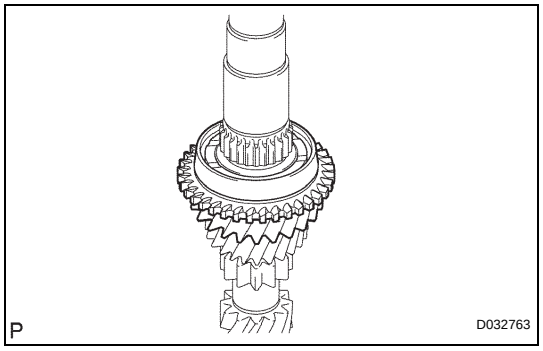
(a) Coat transmission hub sleeve No. 2 with gear oil, and install it to transmission clutch hub No. 2.
NOTICE:
Orient the transmission hub sleeve No.2 and transmission clutch hub No.2 correctly.

(b) Using a screwdriver, install the 3 synchromesh key springs with 3 synchromesh shifting keys onto transmission clutch hub No. 2.



2. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

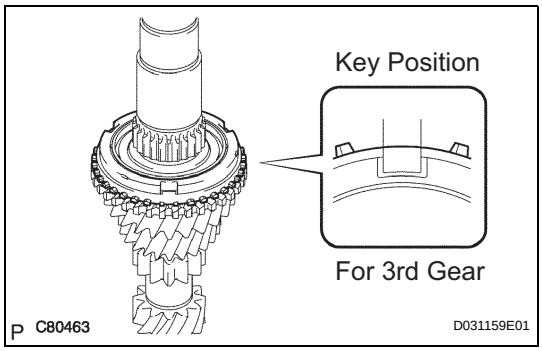
(a) Coat the 3rd gear needle roller bearing with gear oil and install it onto the input shaft.



3. INSTALL 3RD GEAR

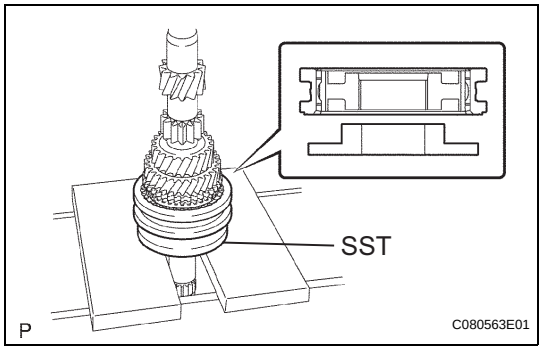
(a) Coat the 3rd gear with gear oil and install it onto the input shaft.

MX



4. INSTALL 3RD GEAR SYNCHRONIZER RING

(a) Coat the 3rd gear synchronizer ring with gear oil and install it onto the 3rd gear.



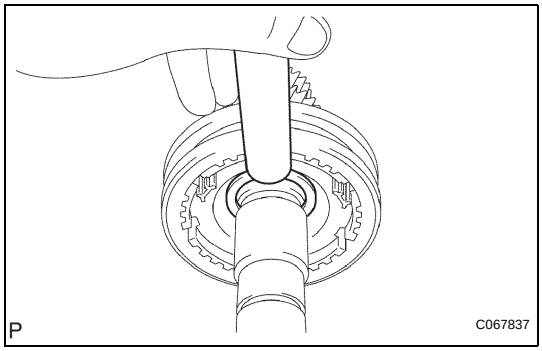
5. INSTALL TRANSMISSION CLUTCH HUB NO.2

(a) Using SST and a press, install transmission clutch hub No. 2 onto the input shaft.

SST 09316-60011 (09316-00021)

NOTICE:

Fit the synchromesh shifting key into the groove of the synchronizer ring correctly.



(b) Select a snap ring that will allow minimum axial play.

Standard clearance:

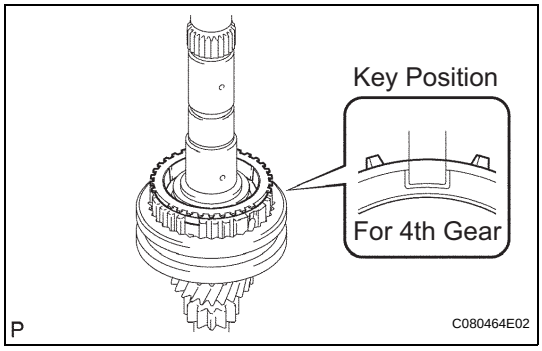
0.1 mm (0.0039 in.) or less.

Snap ring thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
0	2.30 (0.0906)	3	2.48 (0.0976)
1	2.36 (0.0929)	4	2.54 (0.1000)
2	2.42 (0.0953)	5	2.60 (0.1024)

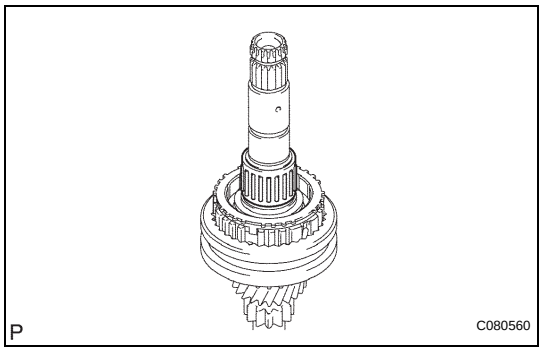
(c) Using a brass bar and a hammer, install the snap ring onto the input shaft.

MX



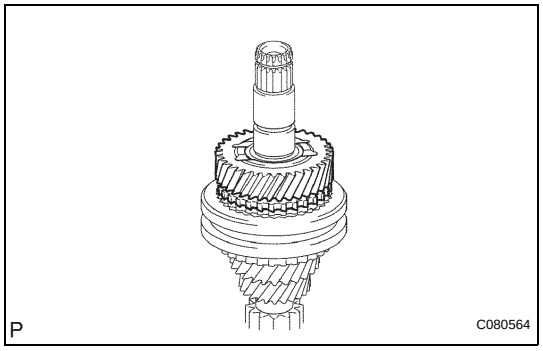
6. INSTALL 4TH GEAR SYNCHRONIZER RING

(a) Coat the 4th gear synchronizer ring with gear oil and install it onto transmission clutch hub No. 2.



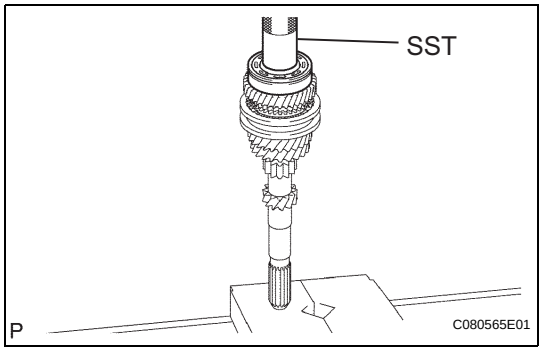
7. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 4th gear needle roller bearing and 4th gear bearing spacer with gear oil and install them onto transmission clutch hub No. 2.



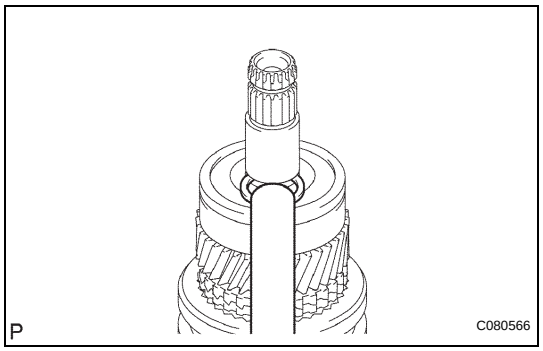
8. INSTALL 4TH GEAR

(a) Coat the 4th gear with gear oil and install it onto the input shaft.



9. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing onto the input shaft.
SST 09608-04031

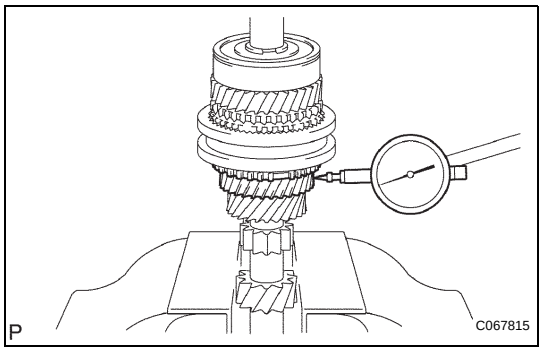


(b) Select a snap ring that will allow minimum axial play.
Standard clearance:
0.1 mm (0.0039 in.) or less
Snap ring thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
A	2.29 (0.0901)	D	2.47 (0.0972)
B	2.35 (0.0925)	E	2.53 (0.0996)
C	2.41 (0.0948)	F	2.59 (0.1019)

(c) Using a brass bar and a hammer, install the snap ring onto the input shaft.
NOTICE:
Do not damage the journal surface of the snap ring.

MX



10. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 3rd gear radial clearance.

Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

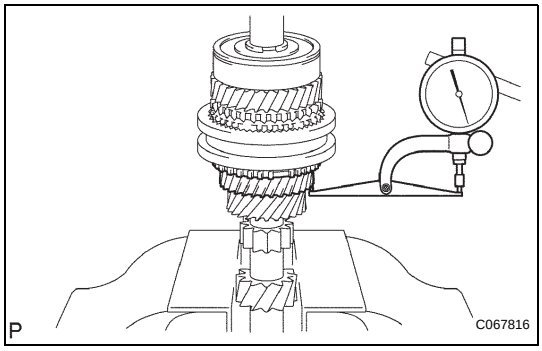
If the clearance exceeds the maximum, replace the 3rd gear, 3rd gear needle roller bearing or input shaft.

11. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 4th gear radial clearance.

Standard clearance:
0.009 to 0.050 mm (0.0004 to 0.0020 in.)
Maximum clearance:
0.050 mm (0.0020 in.)

If the clearance exceeds the maximum, replace the 4th gear, 4th gear needle roller bearing or input shaft.

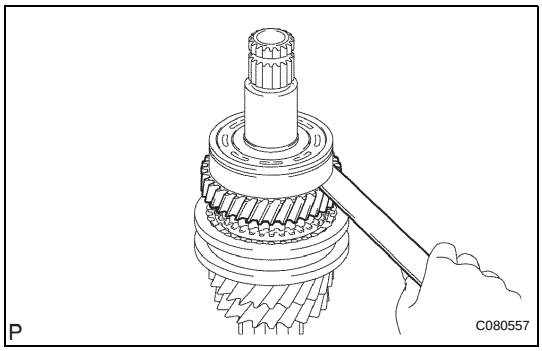


12. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial gauge, measure the 3rd thrust clearance.

Standard clearance:
0.1 to 0.35 mm (0.0039 to 0.0138 in.)
Maximum clearance:
0.35 mm (0.0138 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 2, the 3rd gear or input shaft.



13. INSPECT 4TH GEAR THRUST CLEARANCE

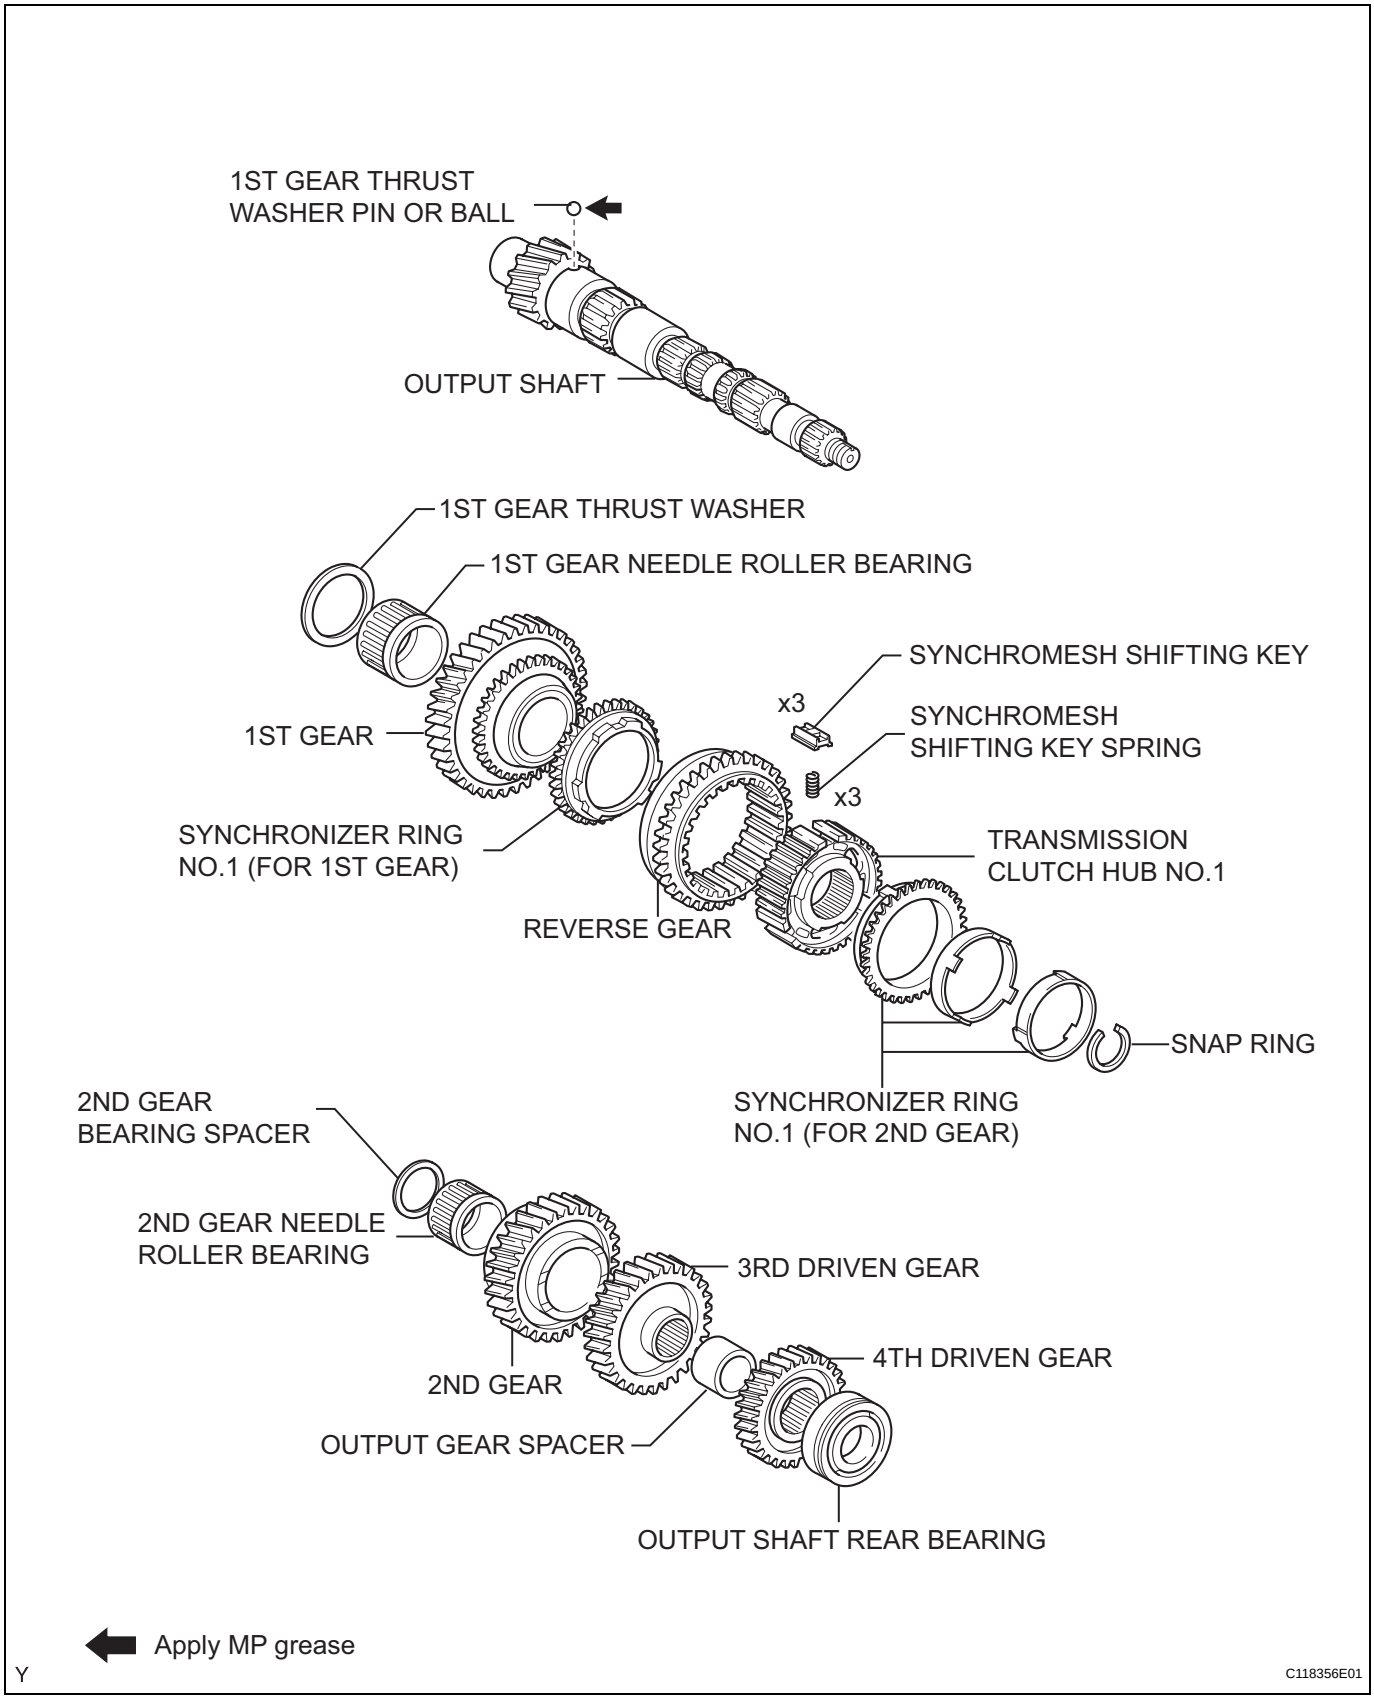
(a) Using a feeler gauge, measure the 4th thrust clearance.

Standard clearance:
0.1 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

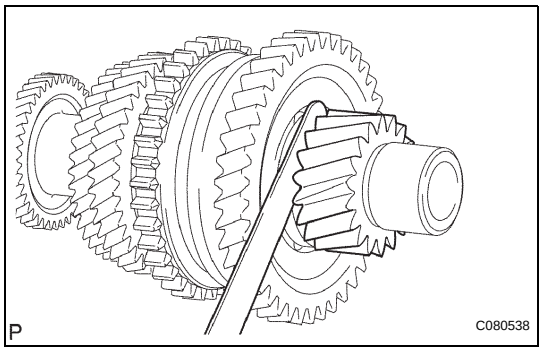
If the clearance exceeds the maximum, replace transmission clutch hub No. 2, the 4th gear or input shaft rear radial ball bearing.

OUTPUT SHAFT

COMPONENTS



MX



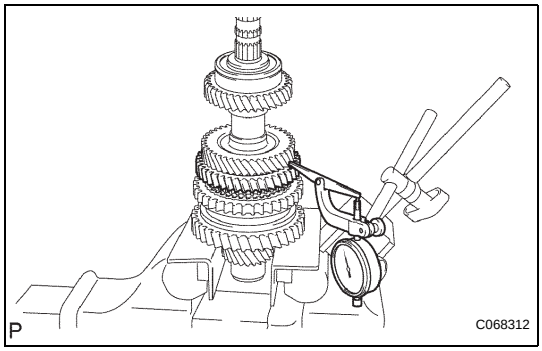
DISASSEMBLY

1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 1st gear thrust clearance.

Standard clearance:
0.10 to 0.40 mm (0.0039 to 0.0157 in.)
Maximum clearance:
0.40 mm (0.0157 in.)

If the clearance exceeds the maximum, replace the 1st gear thrust washer, 1st gear or transmission clutch hub No. 1.

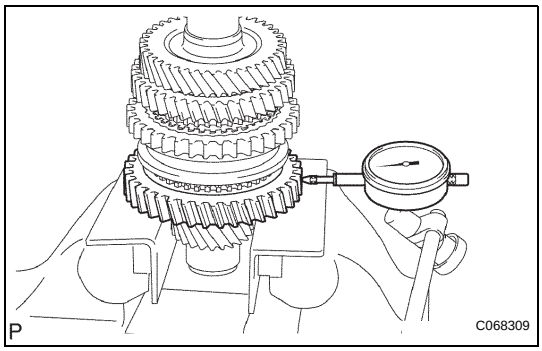


2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial gauge, measure the 2nd gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace transmission clutch hub No. 1, 2nd gear or 3rd driven gear.



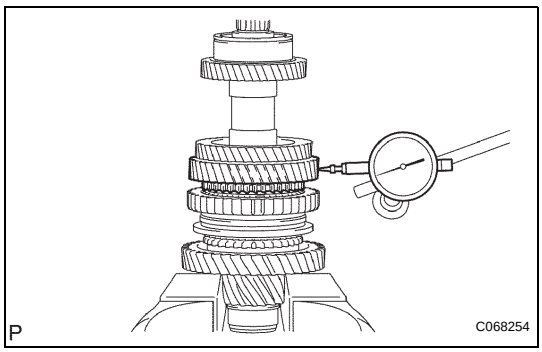
3. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 1st gear radial clearance between the gear and shaft.

Standard clearance:
KOYO made bearing:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made bearing:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the 1st gear or 1st gear needle roller bearing.

MX

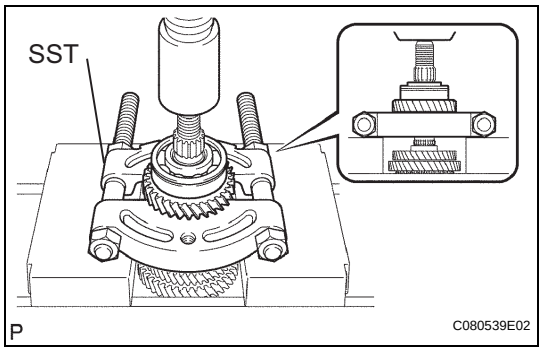


4. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 2nd gear radial clearance between the gear and shaft.

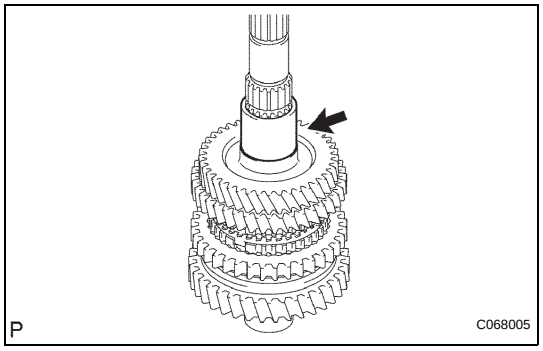
Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.0023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the 2nd gear or 2nd gear needle roller bearing.



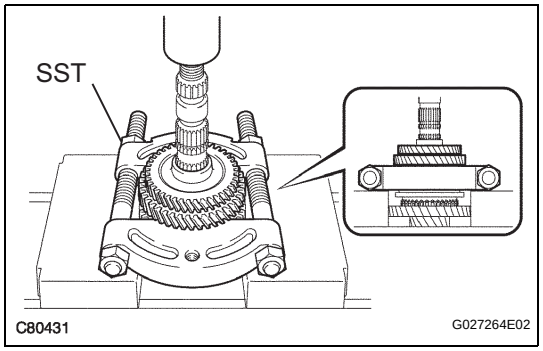
5. REMOVE 4TH DRIVEN GEAR

(a) Using SST and a press, remove the output shaft rear bearing and 4th driven gear from the output shaft.
SST 09950-00020



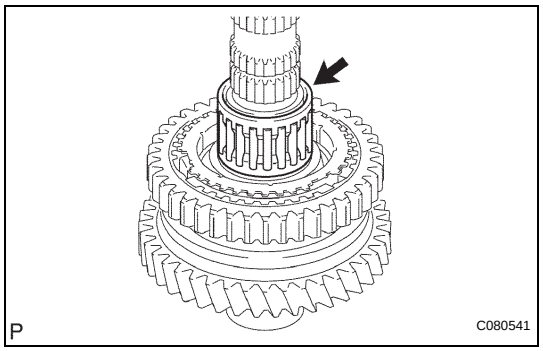
6. REMOVE OUTPUT GEAR SPACER

(a) Remove the output gear spacer from the output shaft.



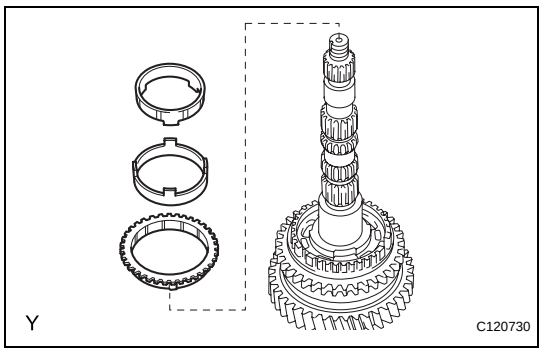
7. REMOVE 2ND GEAR

(a) Using SST and a press, remove the 3rd driven gear with 2nd gear from the output shaft.
SST 09950-00020



8. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

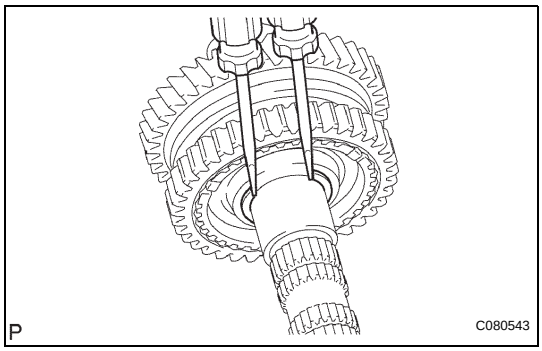
(a) Remove the 2nd gear needle roller bearing and 2nd gear bearing spacer from the output shaft.



9. REMOVE SYNCHRONIZER RING NO.1 (FOR 2ND GEAR)

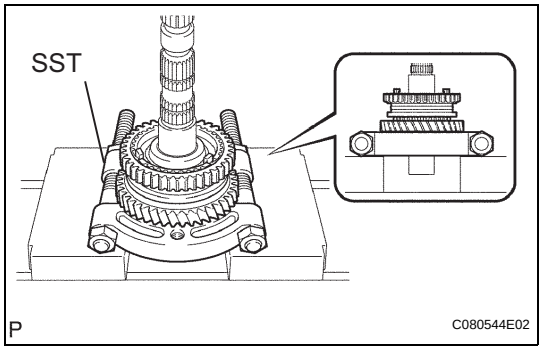
(a) Remove synchronizer ring No. 1 from the output shaft.

MX

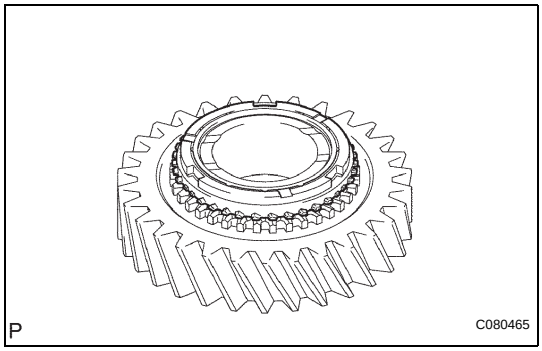


10. REMOVE 1ST GEAR

(a) Using 2 screwdrivers and a hammer, remove the clutch hub No. 1 shaft snap ring from the output shaft.
HINT:
Use a shop rag or piece of cloth to keep the shaft snap ring from flying off.



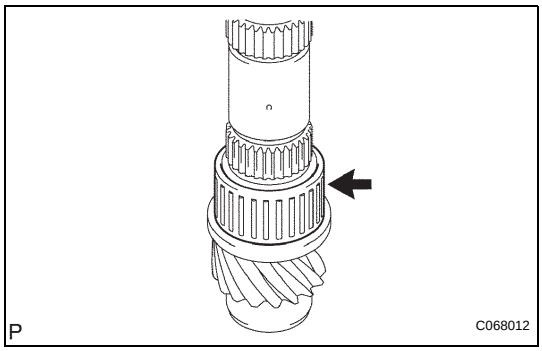
(b) Using SST and a press, remove the clutch hub No. 1 assembly and 1st gear from the output shaft.
SST 09950-00020
NOTICE:
- **Do not tighten SST excessively.**
- **Support the input shaft by hand to prevent it from dropping off.**



11. REMOVE SYNCHRONIZER RING GEAR NO.1 (FOR 1ST GEAR)

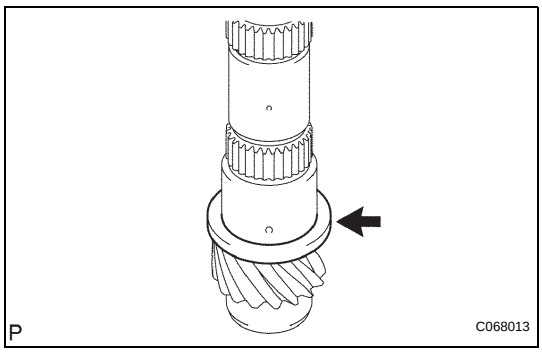
(a) Remove synchronizer ring No. 1 from the 1st gear.

MX



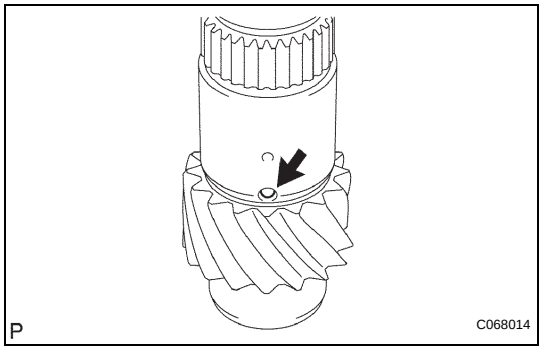
12. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.



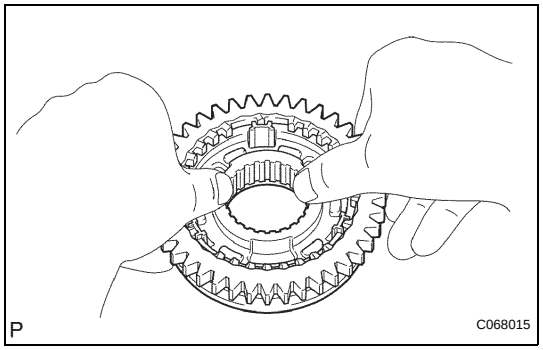
13. REMOVE 1ST GEAR THRUST WASHER

(a) Remove the 1st gear thrust washer from the output shaft.



14. REMOVE 1ST GEAR THRUST WASHER PIN OR BALL

(a) Remove the 1st gear thrust washer pin or ball from the output shaft.



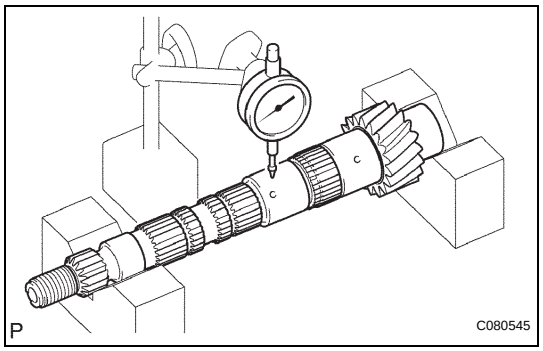
15. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys and 3 synchromesh shifting key springs from transmission clutch hub No. 1.

NOTICE:

Use a shop rag or piece of cloth to keep the shifting key and shifting key spring from flying off.

INSPECTION



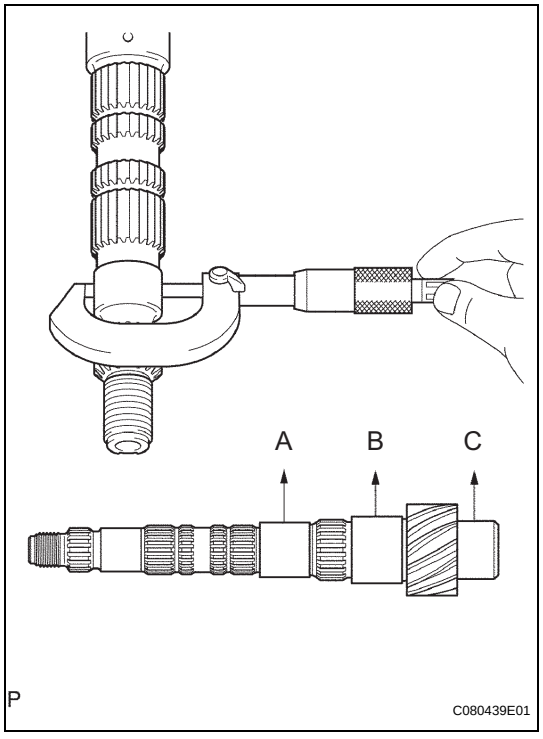
1. INSPECT OUTPUT SHAFT

(a) Using a dial gauge and 2 V-blocks, check the output shaft runout.

Maximum runout:

0.015 mm (0.0006 in.)

If the runout exceeds the maximum, replace the output shaft.



(b) Using a micrometer, measure the outer diameter of the output shaft journal surface, at the locations indicated.

Standard outer diameter:

Part A:

31.985 to 32.000 mm (1.2592 to 1.2598 in.)

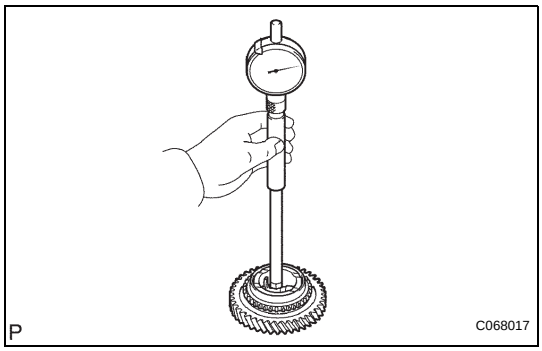
Part B:

37.985 to 38.000 mm (1.4955 to 1.4961 in.)

Part C:

32.985 to 33.000 mm (1.2986 to 1.2992 in.)

If the outer diameters are less than the minimums, replace the output shaft.

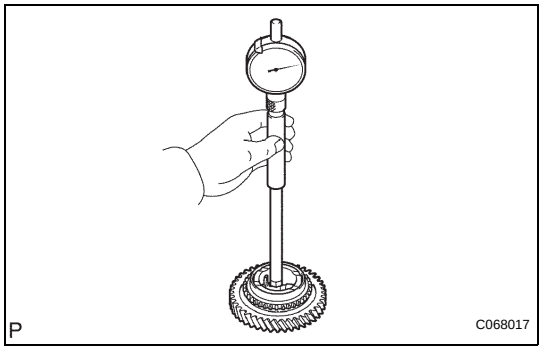


2. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 2nd gear.

Standard inside diameter:
38.015 to 38.031 mm (1.4967 to 1.4972 in.)
Maximum inside diameter:
38.031 mm (1.4972 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.

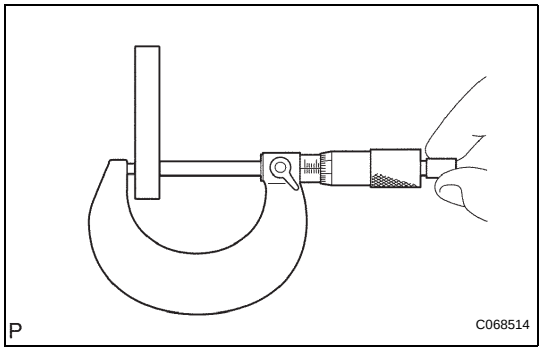


3. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 1st gear.

Standard inside diameter:
44.015 to 44.031 mm (1.7328 to 1.7335 in.)
Maximum inside diameter:
44.031 mm (1.7335 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.



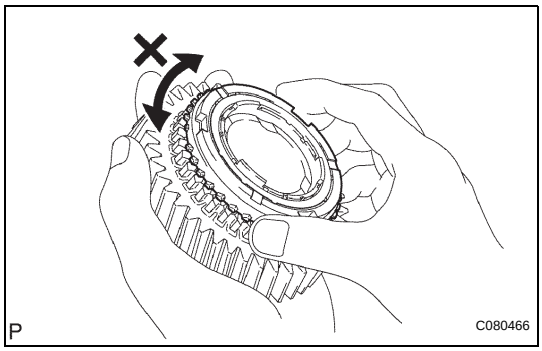
4. INSPECT 1ST GEAR THRUST WASHER

(a) Using a micrometer, measure the 1st gear thrust washer.

Standard thickness:
5.975 to 6.025 mm (0.2352 to 0.2372 in.)
Minimum thickness:
5.975 mm (0.2352 in.)

If the thickness is less than the minimum, replace the 1st gear thrust washer.

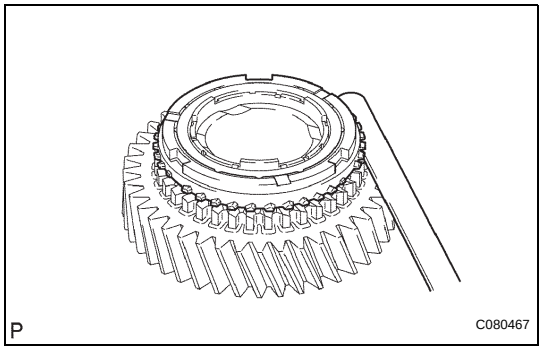
MX



5. INSPECT SYNCHRONIZER RING NO.1 (FOR 2ND GEAR)

(a) Check for wear and damage.
(b) Coat the 2nd gear cone with gear oil.
(c) Turn the synchronizer ring in one direction while pushing it against the 2nd gear cone.
(d) Check that the ring locks.

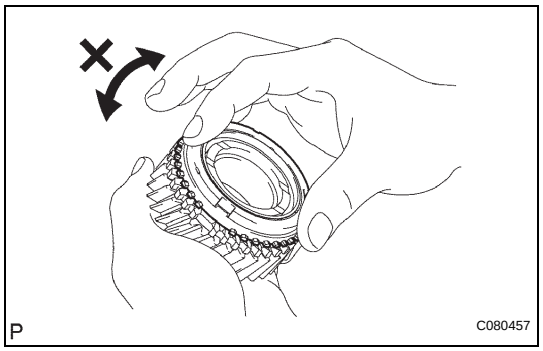
If the synchronizer ring does not lock, replace the synchronizer ring.



(e) Using a feeler gauge, measure the clearance between the synchronizer ring back and the gear spline end.

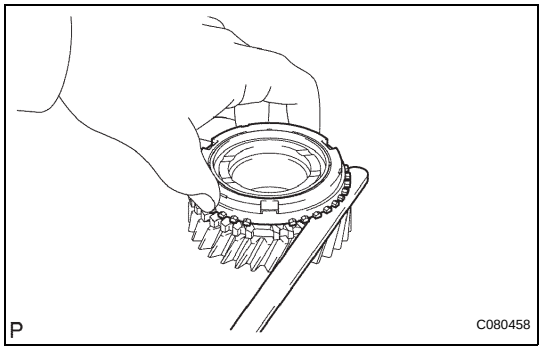
Standard clearance:
0.70 to 1.3 mm (0.0276 to 0.0512 in.)
Minimum clearance:
0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.

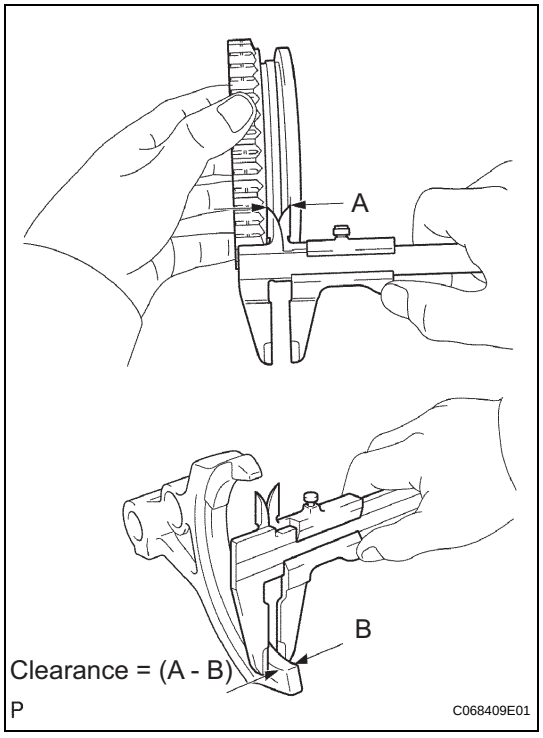


6. INSPECT SYNCHRONIZER RING NO.1 (FOR 1ST GEAR)

(a) Check for wear and damage.
(b) Coat the 1st gear cone with gear oil.
(c) Turn the synchronizer ring in one direction while pushing it against the 1st gear cone.
(d) Check that the ring locks.
If the synchronizer ring does not lock, replace the synchronizer ring.

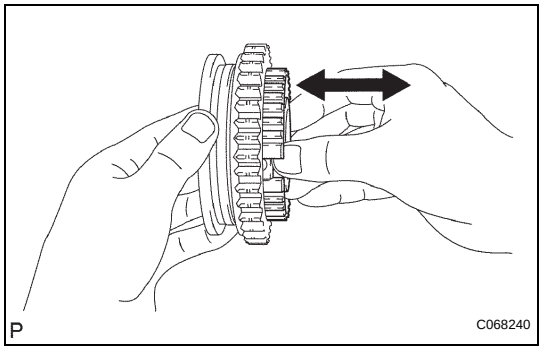


(e) Using a feeler gauge, measure the clearance between the synchronizer ring back and the gear spline end.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)
Minimum clearance:
0.75 mm (0.0295 in.)
If the clearance is less than the minimum, replace the synchronizer ring.



7. INSPECT REVERSE GEAR

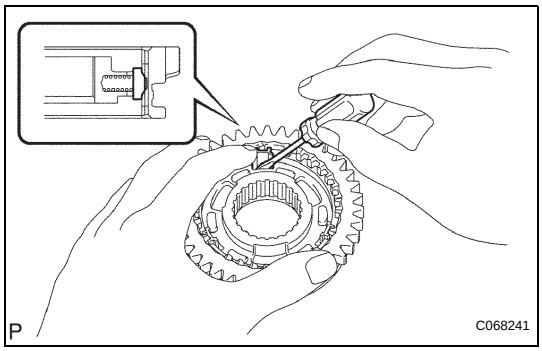
(a) Using a vernier calipers, measure the width of the reverse gear groove (A) and the thickness of the claw part on the reverse shift fork (B), and calculate the clearance.
Standard clearance (A - B):
0.15 to 0.35 mm (0.0059 to 0.0138 in.)
If the clearance is outside the specifications, replace the reverse gear and reverse shift fork.



8. INSPECT TRANSMISSION CLUTCH HUB NO.1

(a) Check that transmission clutch hub No. 1 and the reverse gear slide smoothly.
(b) Check that the edges of the reverse gear spline gear are not worn down.

MX



REASSEMBLY

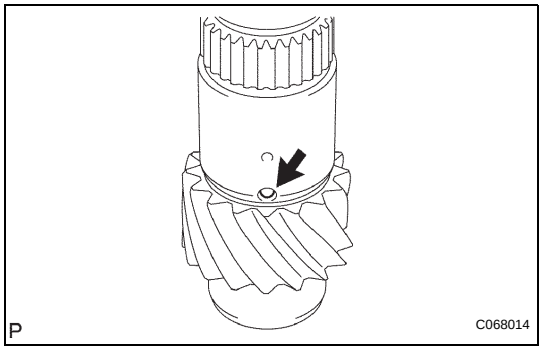
1. INSTALL REVERSE GEAR

(a) Coat the reverse gear with gear oil and install it onto transmission clutch hob No. 1.

NOTICE:

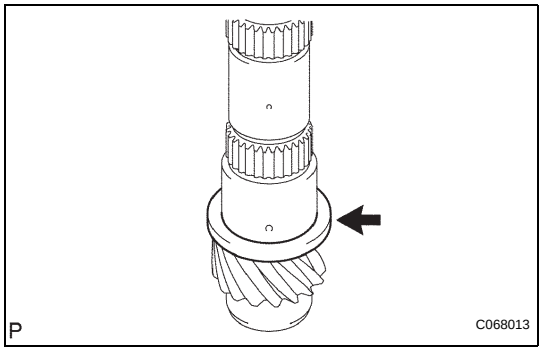
Orient the reverse gear and transmission clutch hub No. 1 correctly.

(b) Install the 3 synchromesh shifting key springs and 3 synchromesh keys onto transmission clutch hub No. 1.



2. INSTALL 1ST GEAR THRUST WASHER PIN OR BALL

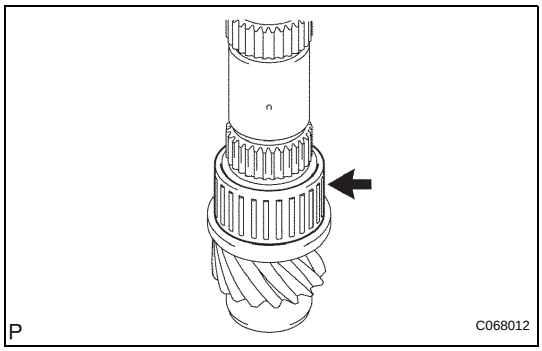
(a) Coat the 1st gear thrust washer pin or ball with MP grease, and install it onto the output shaft.



3. INSTALL 1ST GEAR THRUST WASHER

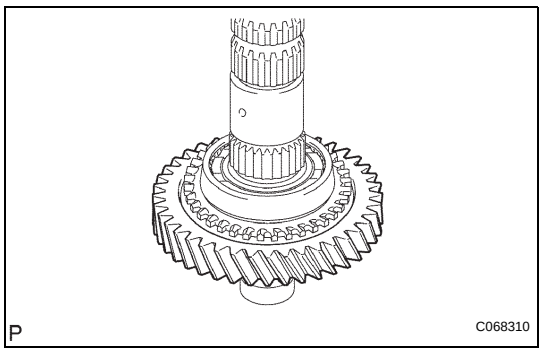
(a) Coat the 1st gear thrust washer with gear oil and install it onto the output shaft.

MX



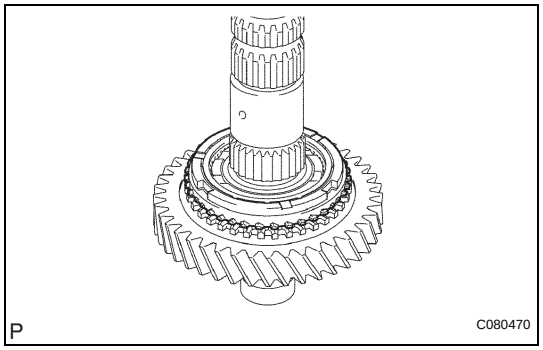
4. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil and install it onto the output shaft.



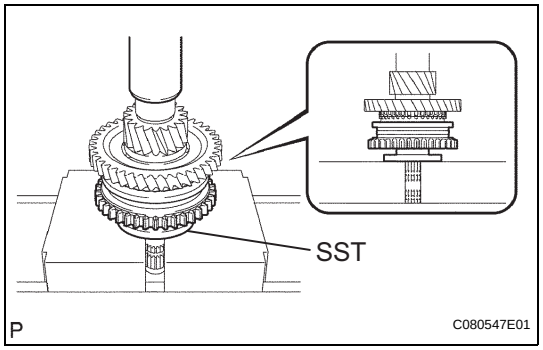
5. INSTALL 1ST GEAR

(a) Coat the 1st gear with gear oil and install it onto the output shaft.



6. INSTALL SYNCHRONIZER RING NO.1 (FOR 1ST GEAR)

(a) Coat synchronizer ring No. 1 with gear oil and install it onto the 1st gear.



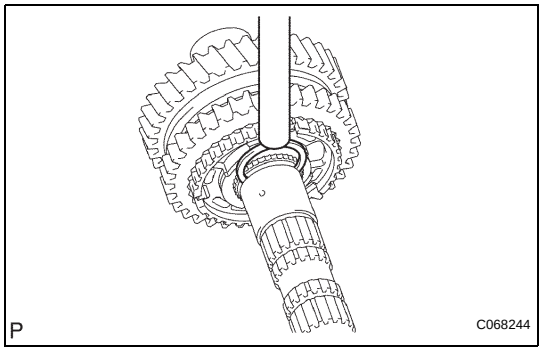
7. INSTALL TRANSMISSION CLUTCH HUB NO.1

(a) Using SST and a press, install transmission clutch hub No. 1 onto the output shaft.

SST 09316-60011 (09316-00031)

HINT:

- The 1st gear can be turned.
- While checking that the 1st gear thrust washer pin or ball is inserted into the groove of the 1st gear thrust washer, press and fit the clutch hub No. 1.



(b) Select a snap ring that will allow minimum axial play.

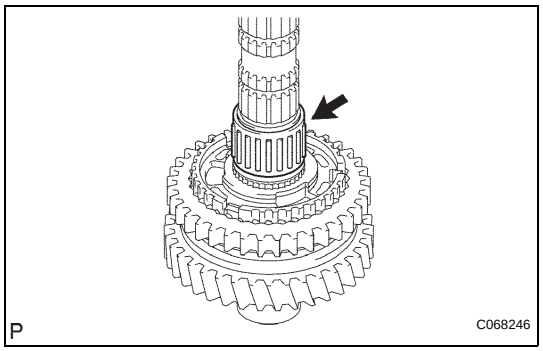
Standard clearance:
0.1 mm (0.039 in.) or less

Snap ring thickness

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
A	2.50 (0.0984)	D	2.68 (0.1055)
B	2.56 (0.1008)	E	2.74 (0.1079)
C	2.62 (0.1031)	F	2.80 (0.1102)

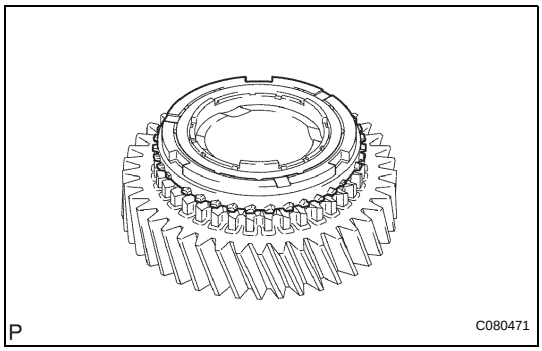
(c) Using a brass bar and a hammer, install the snap ring onto the output shaft.

NOTICE:
Do not damage the journal surface of the output shaft.



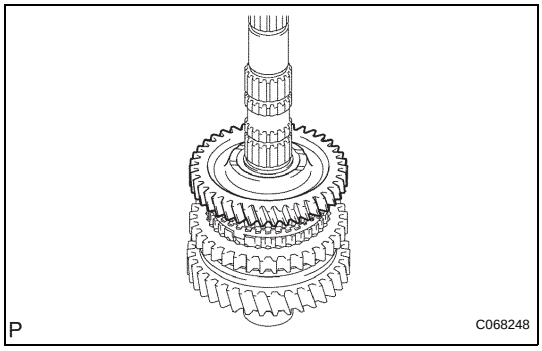
8. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing and 2nd gear bearing spacer with gear oil, and install them onto the output shaft.



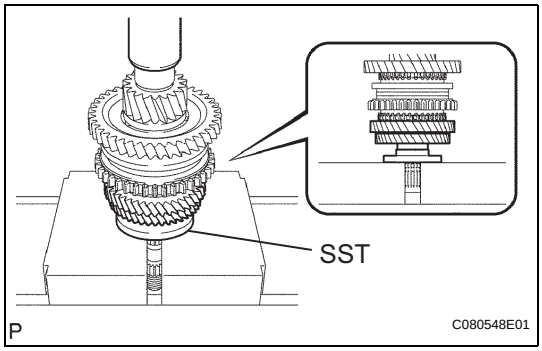
9. INSTALL SYNCHRONIZER RING NO.1 (FOR 2ND GEAR)

(a) Coat synchronizer ring No. 1 with gear oil and install it onto the 2nd gear.



10. INSTALL 2ND GEAR

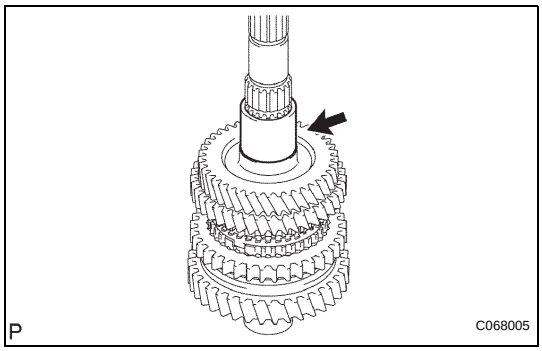
(a) Coat the 2nd gear with gear oil and install it onto the output shaft.



11. INSTALL 3RD DRIVEN GEAR

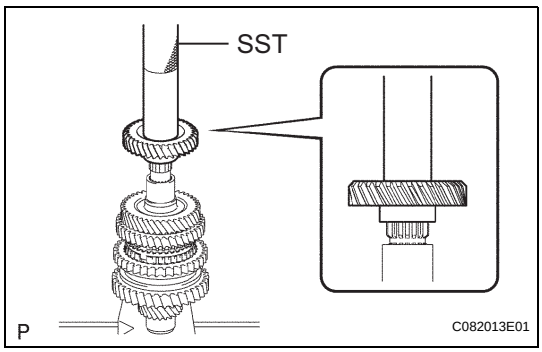
(a) Using SST and a press, install the 3rd driven gear onto the output shaft.
SST 09316-60011 (09316-00031)

MX



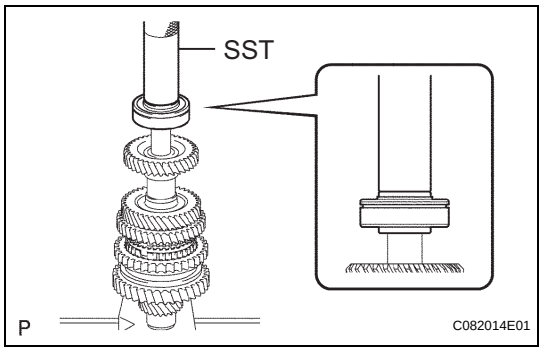
12. INSTALL OUTPUT GEAR SPACER

(a) Install the output gear spacer onto the output shaft.



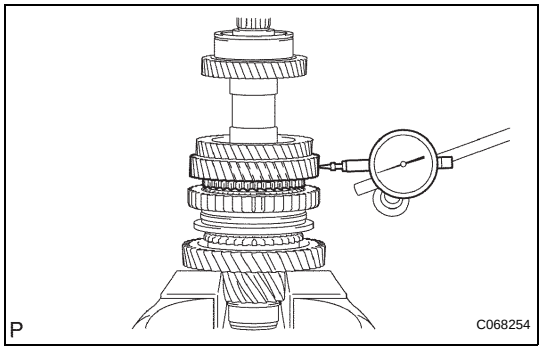
13. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, install the 4th driven gear onto the output shaft.
SST 09612-22011



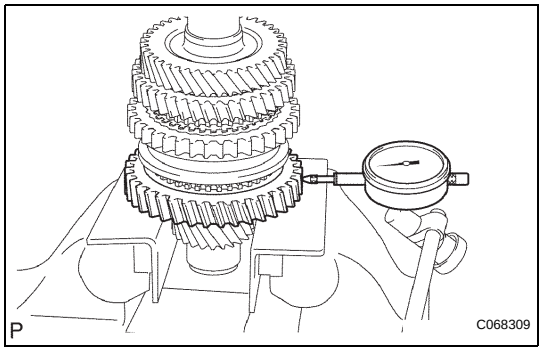
14. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install the output shaft rear bearing onto the output shaft.
SST 09612-22011



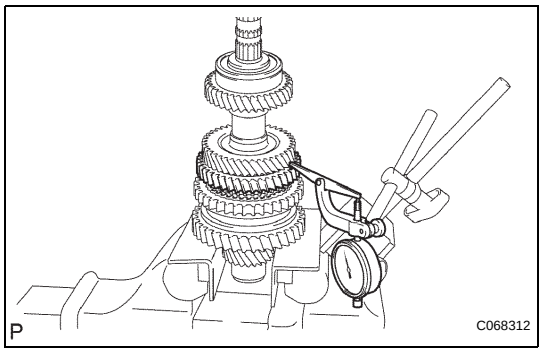
15. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 2nd gear radial clearance between the gear and shaft.
Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.00023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)
If the clearance exceeds the maximum, replace the 2nd gear or 2nd gear needle roller bearing.



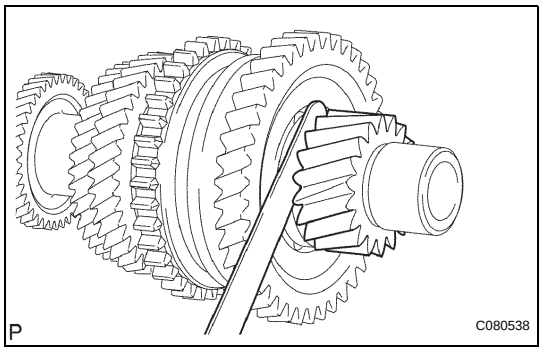
16. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial gauge, measure the 1st gear radial clearance between the gear and shaft.
Standard clearance:
KOYO made:
0.015 to 0.058 mm (0.0006 to 0.00023 in.)
NSK made:
0.015 to 0.056 mm (0.0006 to 0.0022 in.)
Maximum clearance:
KOYO made:
0.058 mm (0.0023 in.)
NSK made:
0.056 mm (0.0022 in.)
If the clearance exceeds the maximum, replace the 1st gear or 1st gear needle roller bearing.



17. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial gauge, measure the 2nd gear thrust clearance.
Standard clearance:
0.10 to 0.55 mm (0.0039 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)
If the clearance exceeds the maximum, replace transmission clutch hub No. 1, the 2nd gear or 3rd driven gear.



18. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 1st gear thrust clearance.

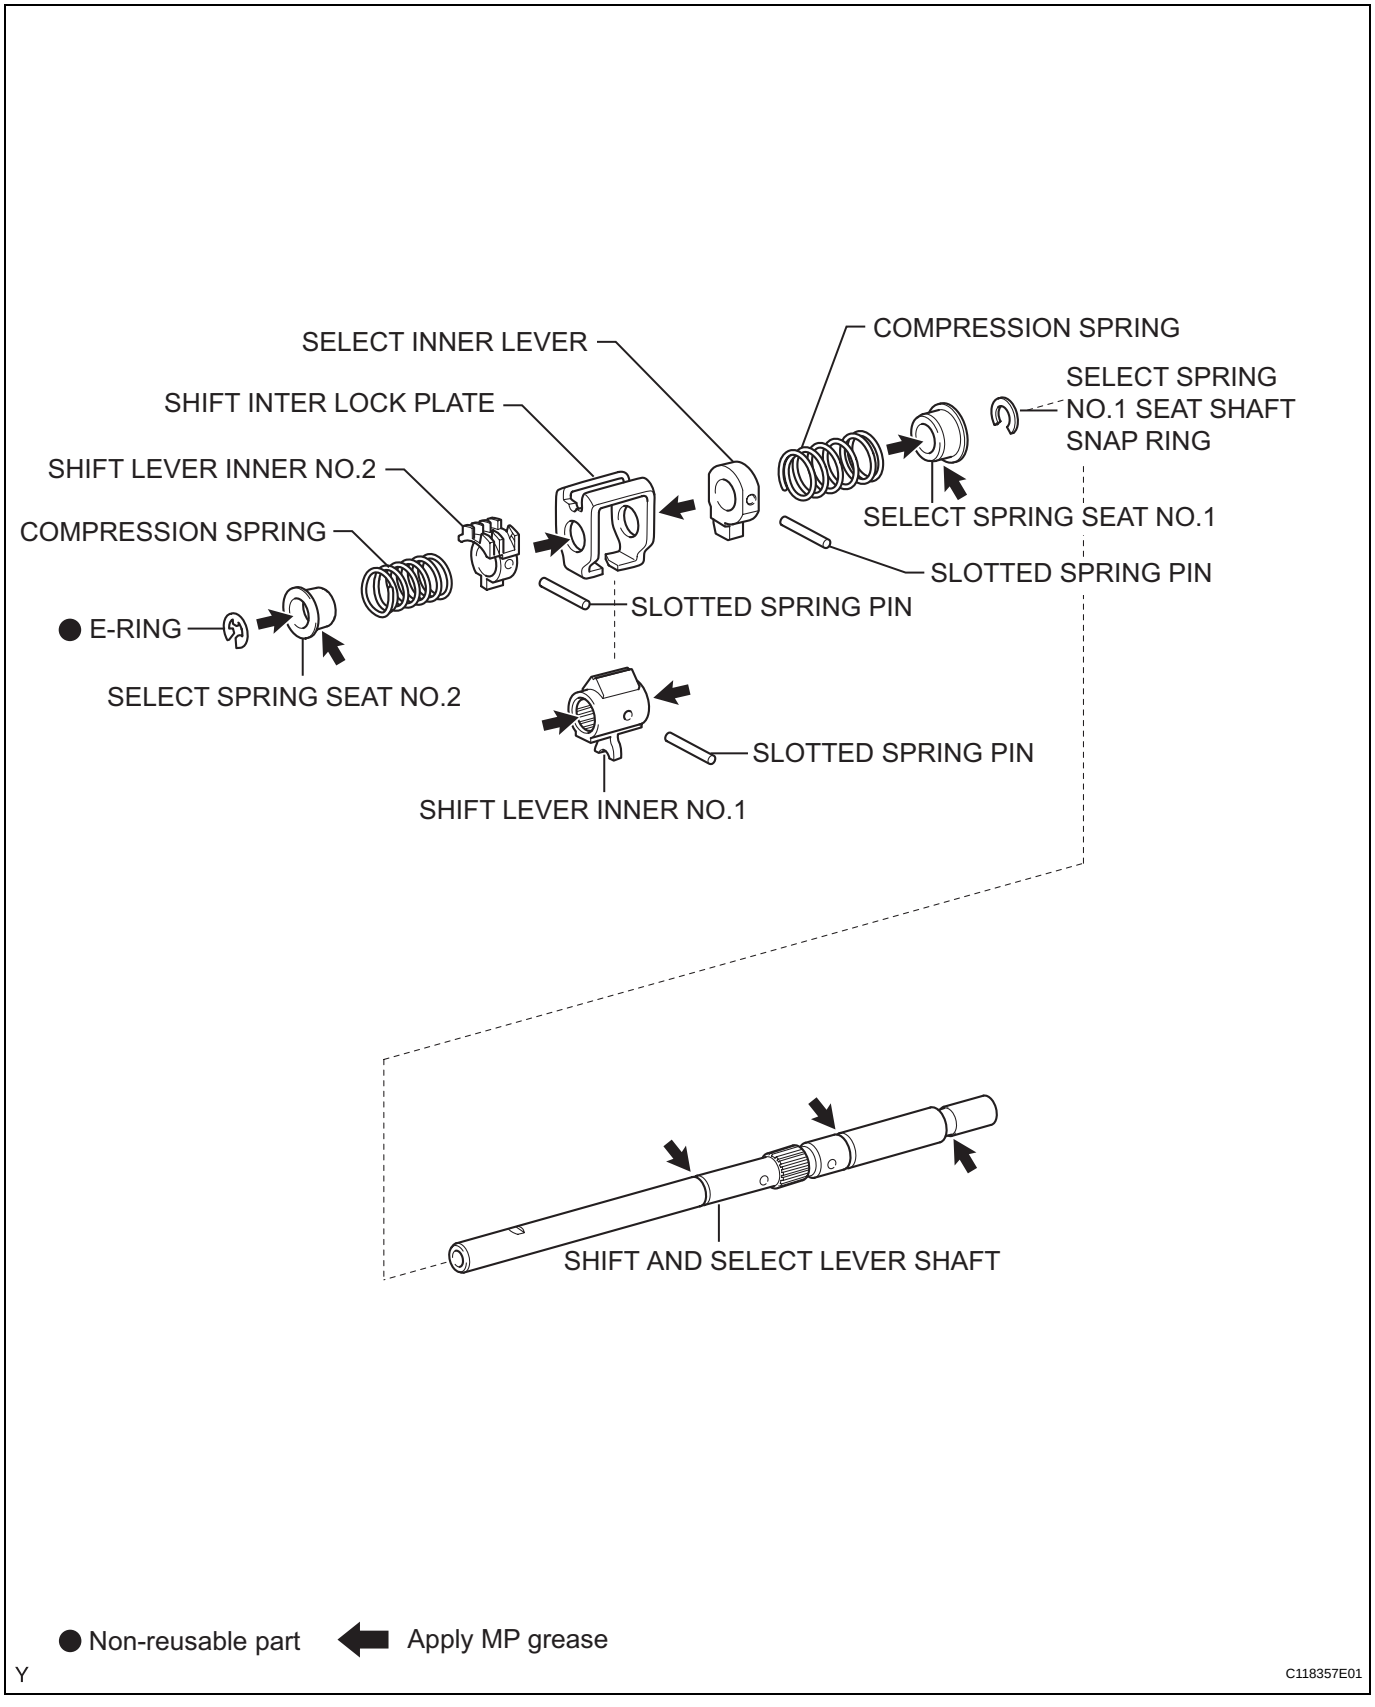
Standard clearance:
0.10 to 0.40 mm (0.0039 to 0.0157 in.)

Maximum clearance:
0.40 mm (0.0157 in.)

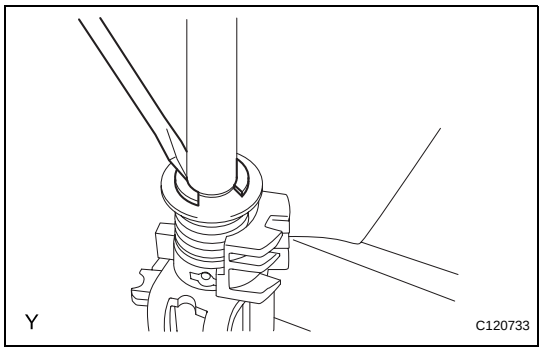
If the clearance exceeds the maximum, replace the 1st gear thrust washer, 1st gear or transmission clutch hub No. 1.

SHIFT AND SELECT LEVER SHAFT

COMPONENTS



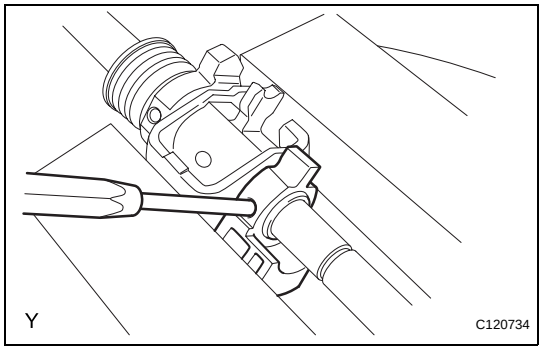
MX



DISASSEMBLY

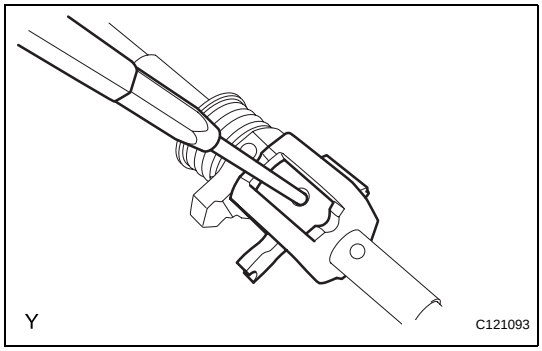
1. REMOVE SELECT SPRING SEAT NO.2

(a) Using a screwdriver, remove the select spring No. 2 seat E-ring, select spring seat No. 2 and select return compression spring No. 2 from the shift and select lever shaft.



2. REMOVE SHIFT LEVER INNER NO.2

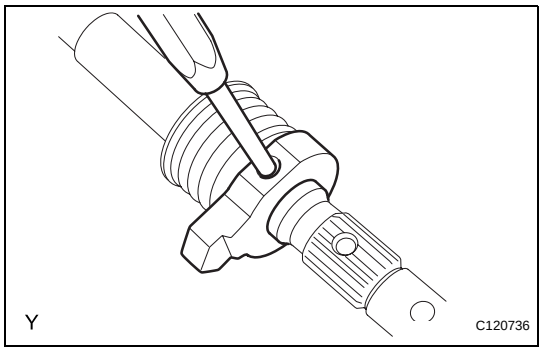
(a) Using a pin punch (ϕ5 mm) and a hammer, remove the shift inner lever slotted spring pin and shift lever inner No. 2 from the shift and select lever shaft.
HINT:
Check the orientation of shift lever inner No. 2.



3. REMOVE SHIFT LEVER INNER NO.1

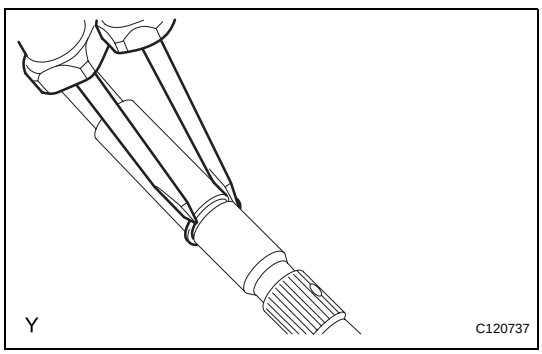
(a) Using a pin punch (ϕ5 mm) and a hammer, remove the shift inner lever slotted spring pin, shift lever inner No. 1 and shift inter lock plate from the shift and select lever shaft.
HINT:
Check the orientation of shift lever inner No. 1.

MX



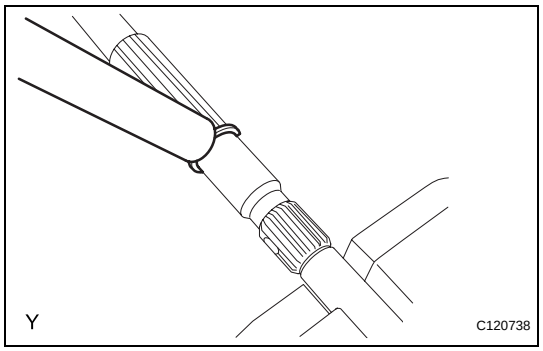
4. REMOVE SELECT INNER LEVER

(a) Using a pin punch (ϕ5 mm) and a hammer, remove the select inner lever slotted spring pin, select inner lever, select return compression spring No. 1 and select spring seat No. 1 from shift and select lever shaft.
HINT:
Check the orientation of the select inner lever.



5. REMOVE SELECT SPRING NO.1 SEAT SHAFT SNAP RING

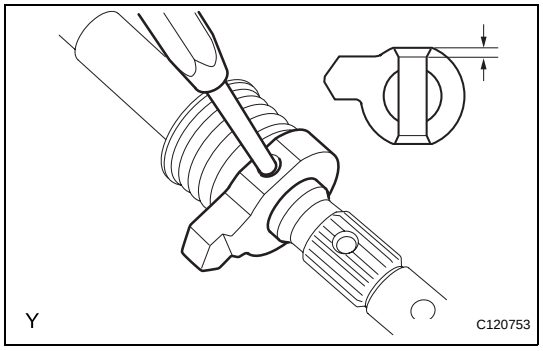
(a) Using 2 screwdrivers and a hammer, remove the select spring No. 1 seat shaft snap ring.



REASSEMBLY

1. INSTALL SELECT SPRING NO.1 SEAT SHAFT SNAP RING

(a) Coat the shift and select lever shaft with MP grease, and install a snap ring onto the shift and select lever shaft using a brass bar and a hammer.



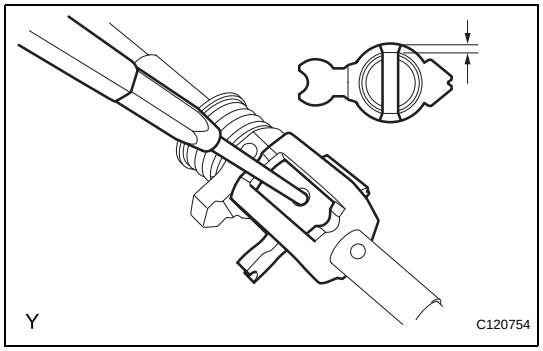
2. INSTALL SELECT INNER LEVER

(a) Coat select spring seat No. 1 with MP grease.

(b) Using a pin punch (ϕ5 mm) and a hammer, install select spring seat No. 1, select return compression spring No. 1, the select inner lever and select inner lever slotted spring pin onto the shift and select lever.

Drive in depth:

3.0 to 4.0 mm (0.1181 to 0.1575 in)



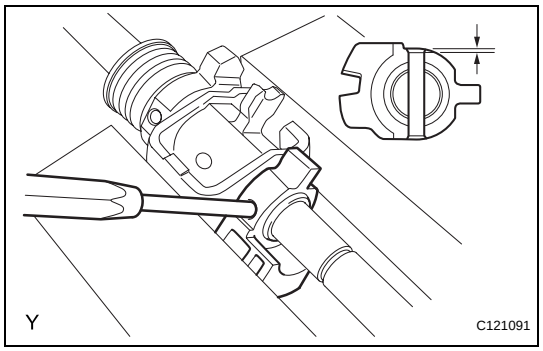
3. INSTALL SHIFT LEVER INNER NO.1

(a) Coat the shift inter lock plate and shift lever inner No. 1 with MP grease.

(b) Using a pin punch (ϕ5 mm) and a hammer, install the shift inter lock plate, shift lever inner No. 1 and shift inner lever slotted spring pin onto the shift and select lever shaft.

Drive in depth:

-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)



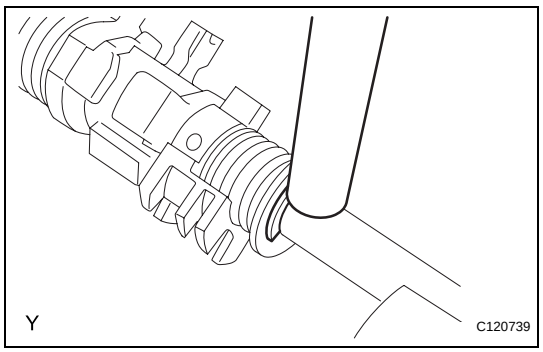
4. INSTALL SHIFT LEVER INNER NO.2

(a) Coat shift lever inner No. 2 with MP grease.

(b) Using a pin punch (ϕ5 mm) and a hammer, install shift lever inner No. 2 and shift inner lever slotted spring pin onto the shift and select lever shaft.

Drive in depth:

1.0 to 2.0 mm (0.0394 to 0.0787 in.)



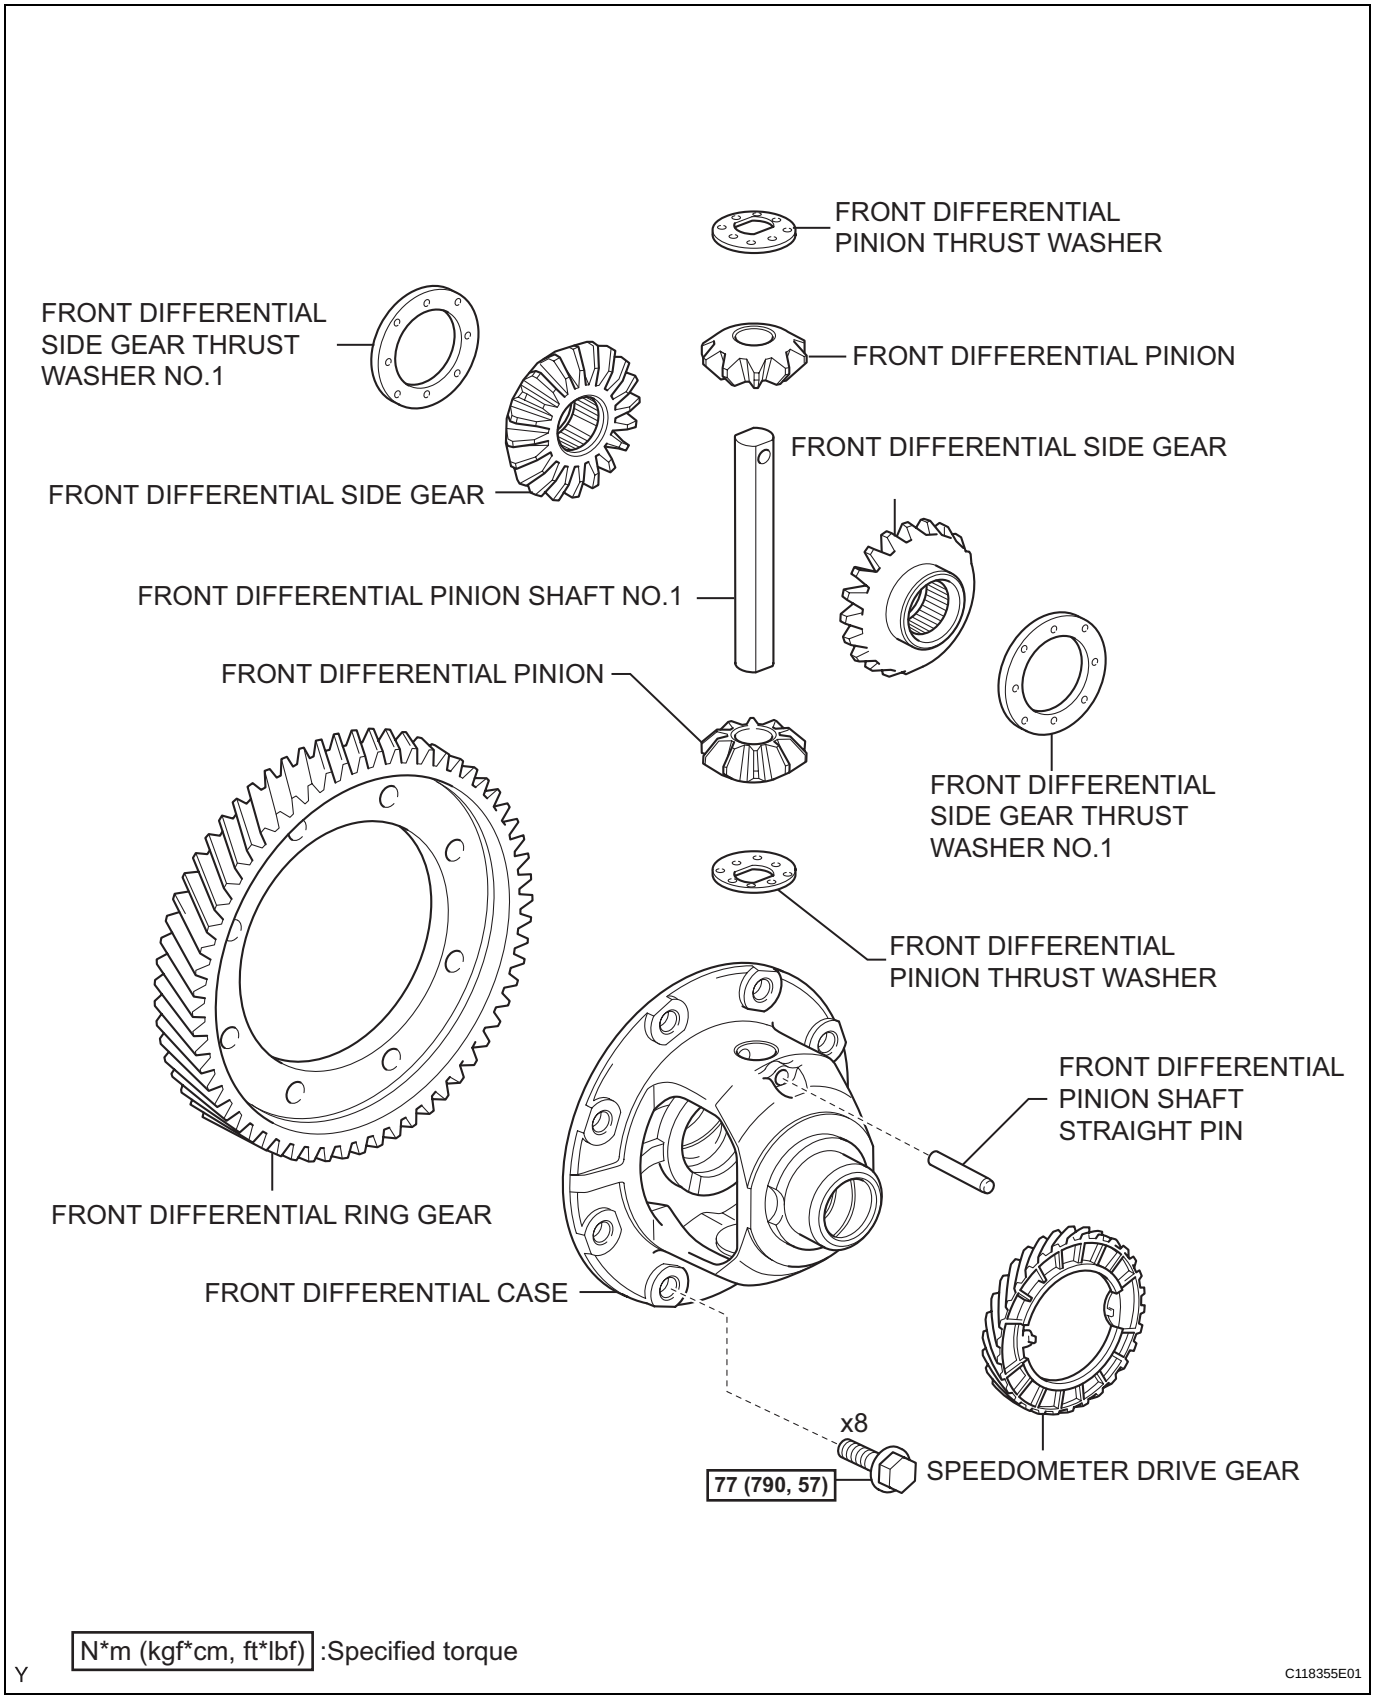
5. INSTALL SELECT SPRING SEAT NO.2

(a) Coat select spring seat No. 2 with MP grease.

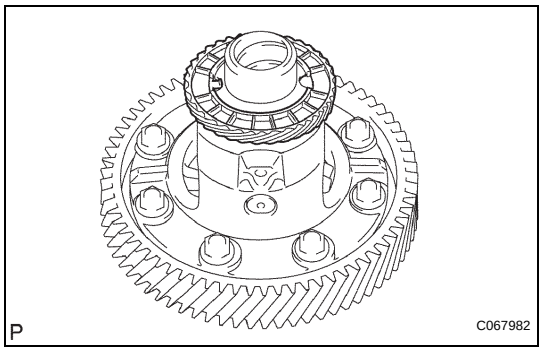
(b) Install select spring seat No. 2 and select return compression spring No. 2. Using pliers, install a new select spring seat No. 2 E-ring onto the shift and select lever shaft.

DIFFERENTIAL CASE

COMPONENTS



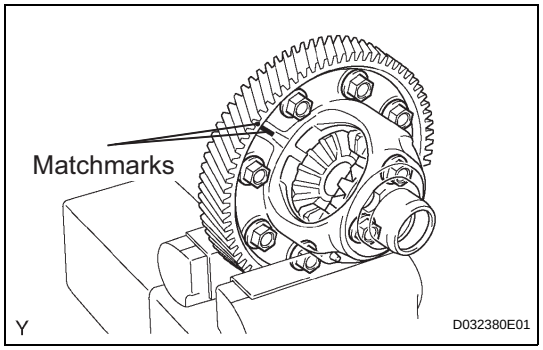
MX



DISASSEMBLY

1. REMOVE SPEEDOMETER DRIVE GEAR

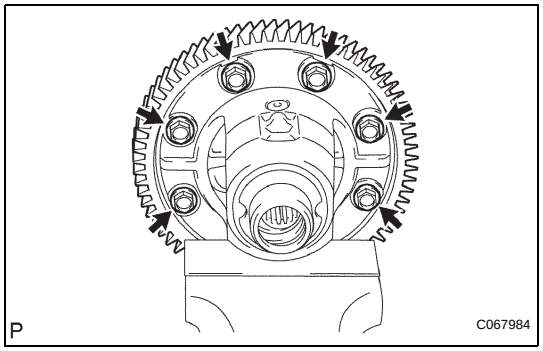
(a) Remove the speedometer drive gear from the front differential case.



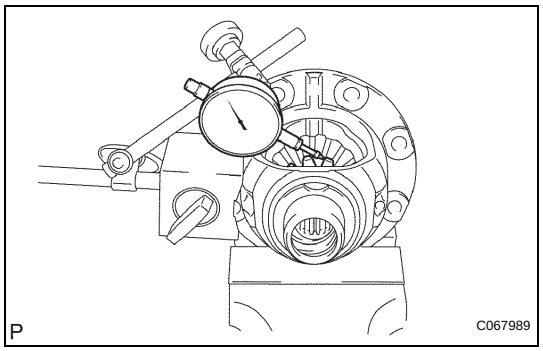
2. REMOVE FRONT DIFFERENTIAL RING GEAR

(a) Place matchmarks on the front differential ring gear and the front differential case.

(b) Remove the 8 bolts.



(c) Using a plastic hammer, remove the front differential ring gear from the front differential case.



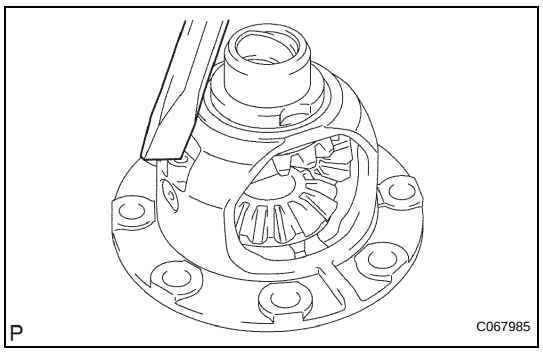
3. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Fix the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.

Standard backlash:

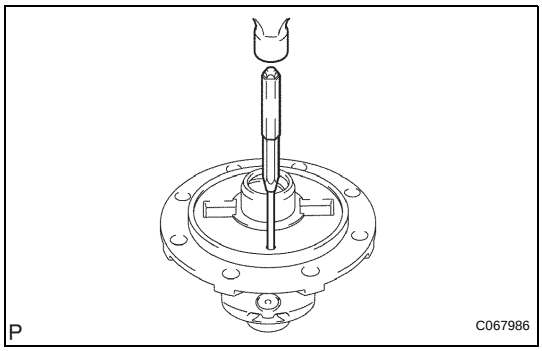
0.05 to 0.20 mm (0.0020 to 0.0079 in.)

If the backlash is outside the specifications, replace the side gear thrust washers.

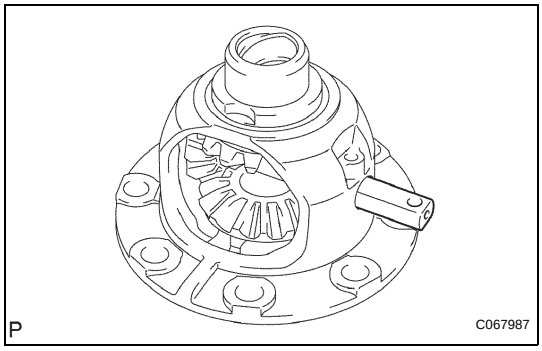


4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a chisel and a hammer, loosen the staked part of the front differential case.

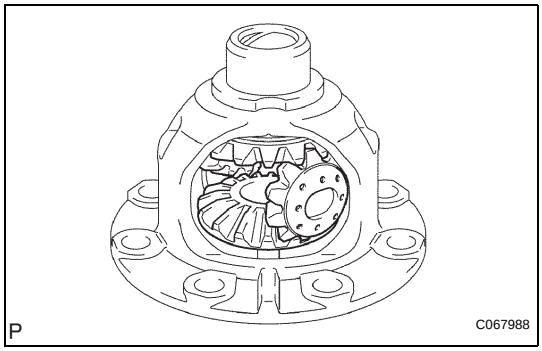


(b) Using a pin punch (ϕ3 mm) and a hammer, remove the front differential pinion shaft straight pin from the front differential case.



5. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Remove front differential pinion shaft No. 1 from the front differential case.

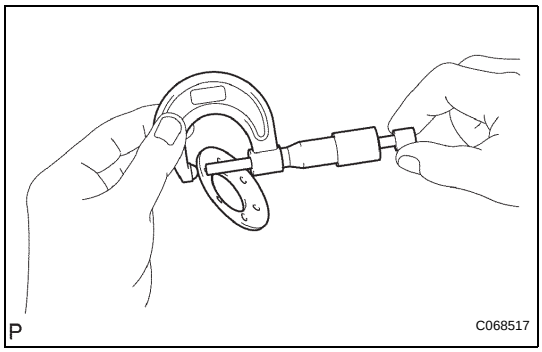


6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 front differential pinion thrust washers, 2 front differential side gear thrust washers No. 1 and 2 front differential side gears from the front differential case.
HINT:
Revolving the front differential pinion, remove the 2 pinions and 2 side gears.

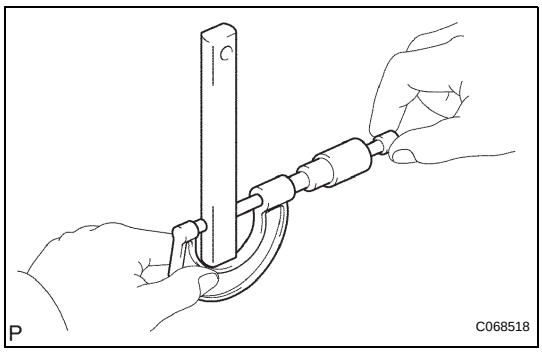
INSPECTION

MX



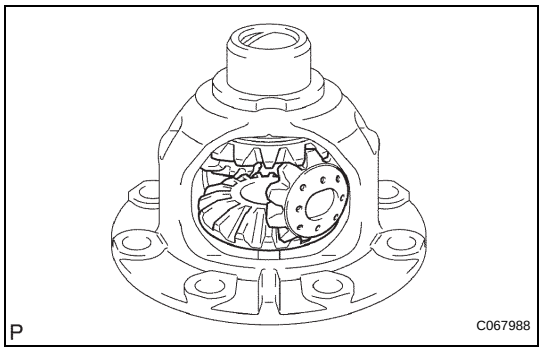
1. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER

(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.
Minimum thickness:
0.94 mm (0.03701 in.)
If the thickness is less than the minimum, replace the front differential pinion thrust washer.



2. INSPECT FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Using a micrometer, measure the outer diameter of front differential pinion shaft No. 1.
Minimum outer diameter:
16.982 mm (0.6685 in.)
If the outer diameter is less than the minimum, replace front differential pinion shaft No. 1.



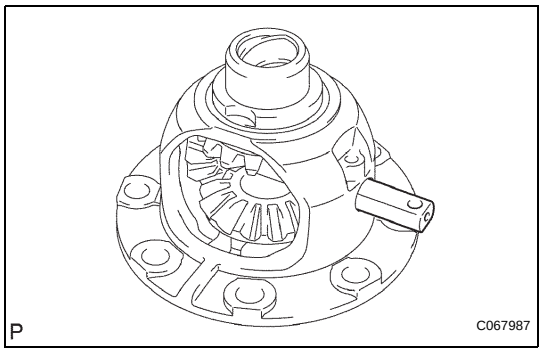
REASSEMBLY

1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the sliding and rotating surfaces of the front differential side gear with gear oil.

(b) Install the 2 front differential side gear thrust washers No. 1 onto the 2 front differential side gears.

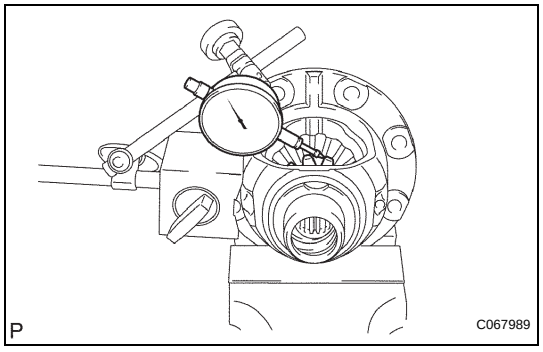
(c) Install the 2 front differential side gears, 2 front differential pinions and 2 front differential pinion thrust washers onto the front differential case.
HINT:
Revolving the front differential side gear, install the 2 front differential pinions and 2 front differential pinion thrust washers.



2. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Coat front differential pinion shaft No. 1 with MP grease.

(b) Install front differential pinion shaft No. 1 onto the front differential case so that the hole for the front differential pinion shaft straight pin is aligned with the hole in the front differential case.

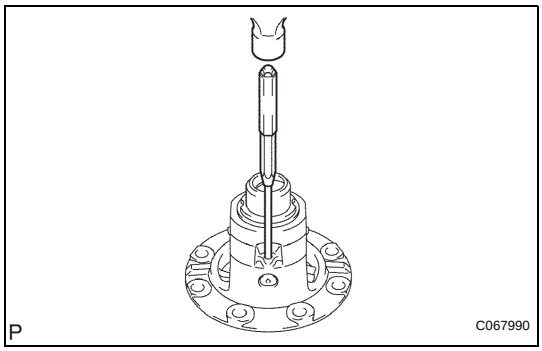


3. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Fix the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.
Standard backlash:
0.05 to 0.20 mm (0.0020 to 0.0079 in.)
If the backlash is outside the specifications, replace the side gear thrust washer.
Thrust washer thickness

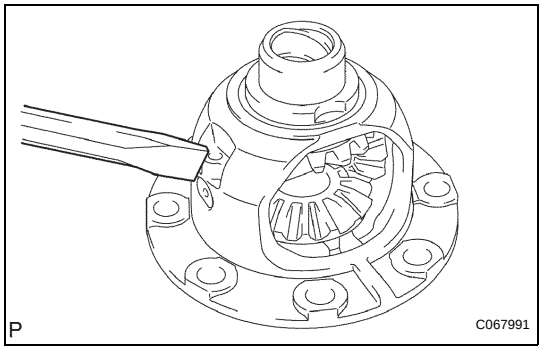
Parts No.	Thickness mm (in.)
41361 - 22140	0.95 (0.0374 in.)
41361 - 22020	1.00 (0.0394 in.)
41361 - 22150	1.05 (0.0413 in.)
41361 - 22030	1.10 (0.0433 in.)
41361 - 22160	1.15 (0.0452 in.)
41361 - 22040	1.20 (0.0472 in.)

HINT:
- Because the thrust washer does not have any marks for distinction, measure the thickness with a micrometer to select a proper thrust washer.
- Select washers of the same thickness for both the right and left.

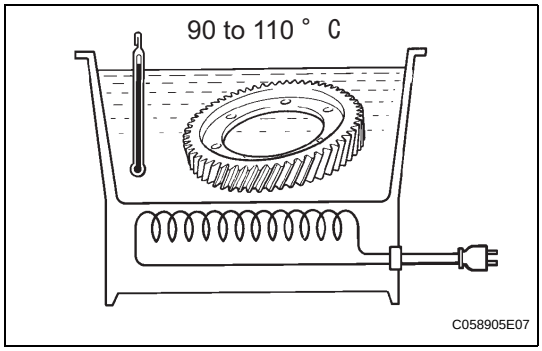


4. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch (ϕ3 mm) and a hammer, install the front differential pinion shaft straight pin onto the front differential case.



(b) Using a chisel and a hammer, stake the front differential case hole.

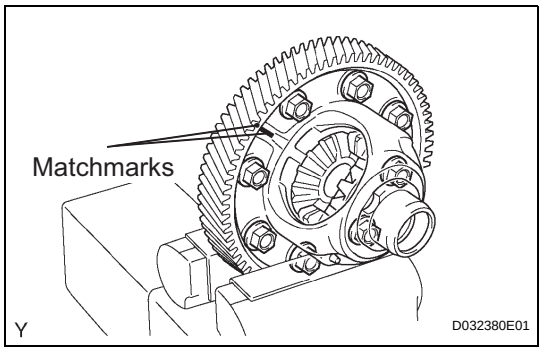


5. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Clean the contact surfaces of the front differential case and ring gear.

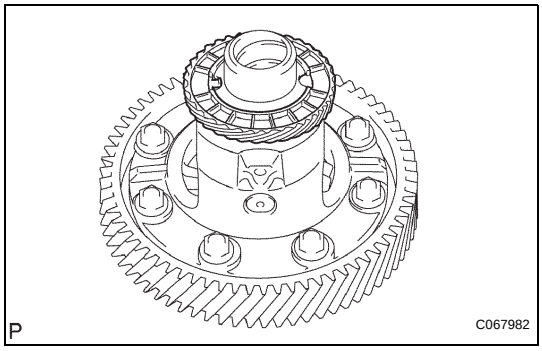
(b) Using a heater, heat the front differential ring gear to 90 to 110°C (194.0 to 230.0°F).

(c) After the moisture on the ring gear has completely evaporated, quickly install the ring gear onto the differential case.



(d) Aligning the 2 matchmarks, quickly install the front differential ring gear onto the front differential case.

(e) Install the 8 bolts.
Torque: 77 N*m (790 kgf*cm, 57 ft.*lbf)



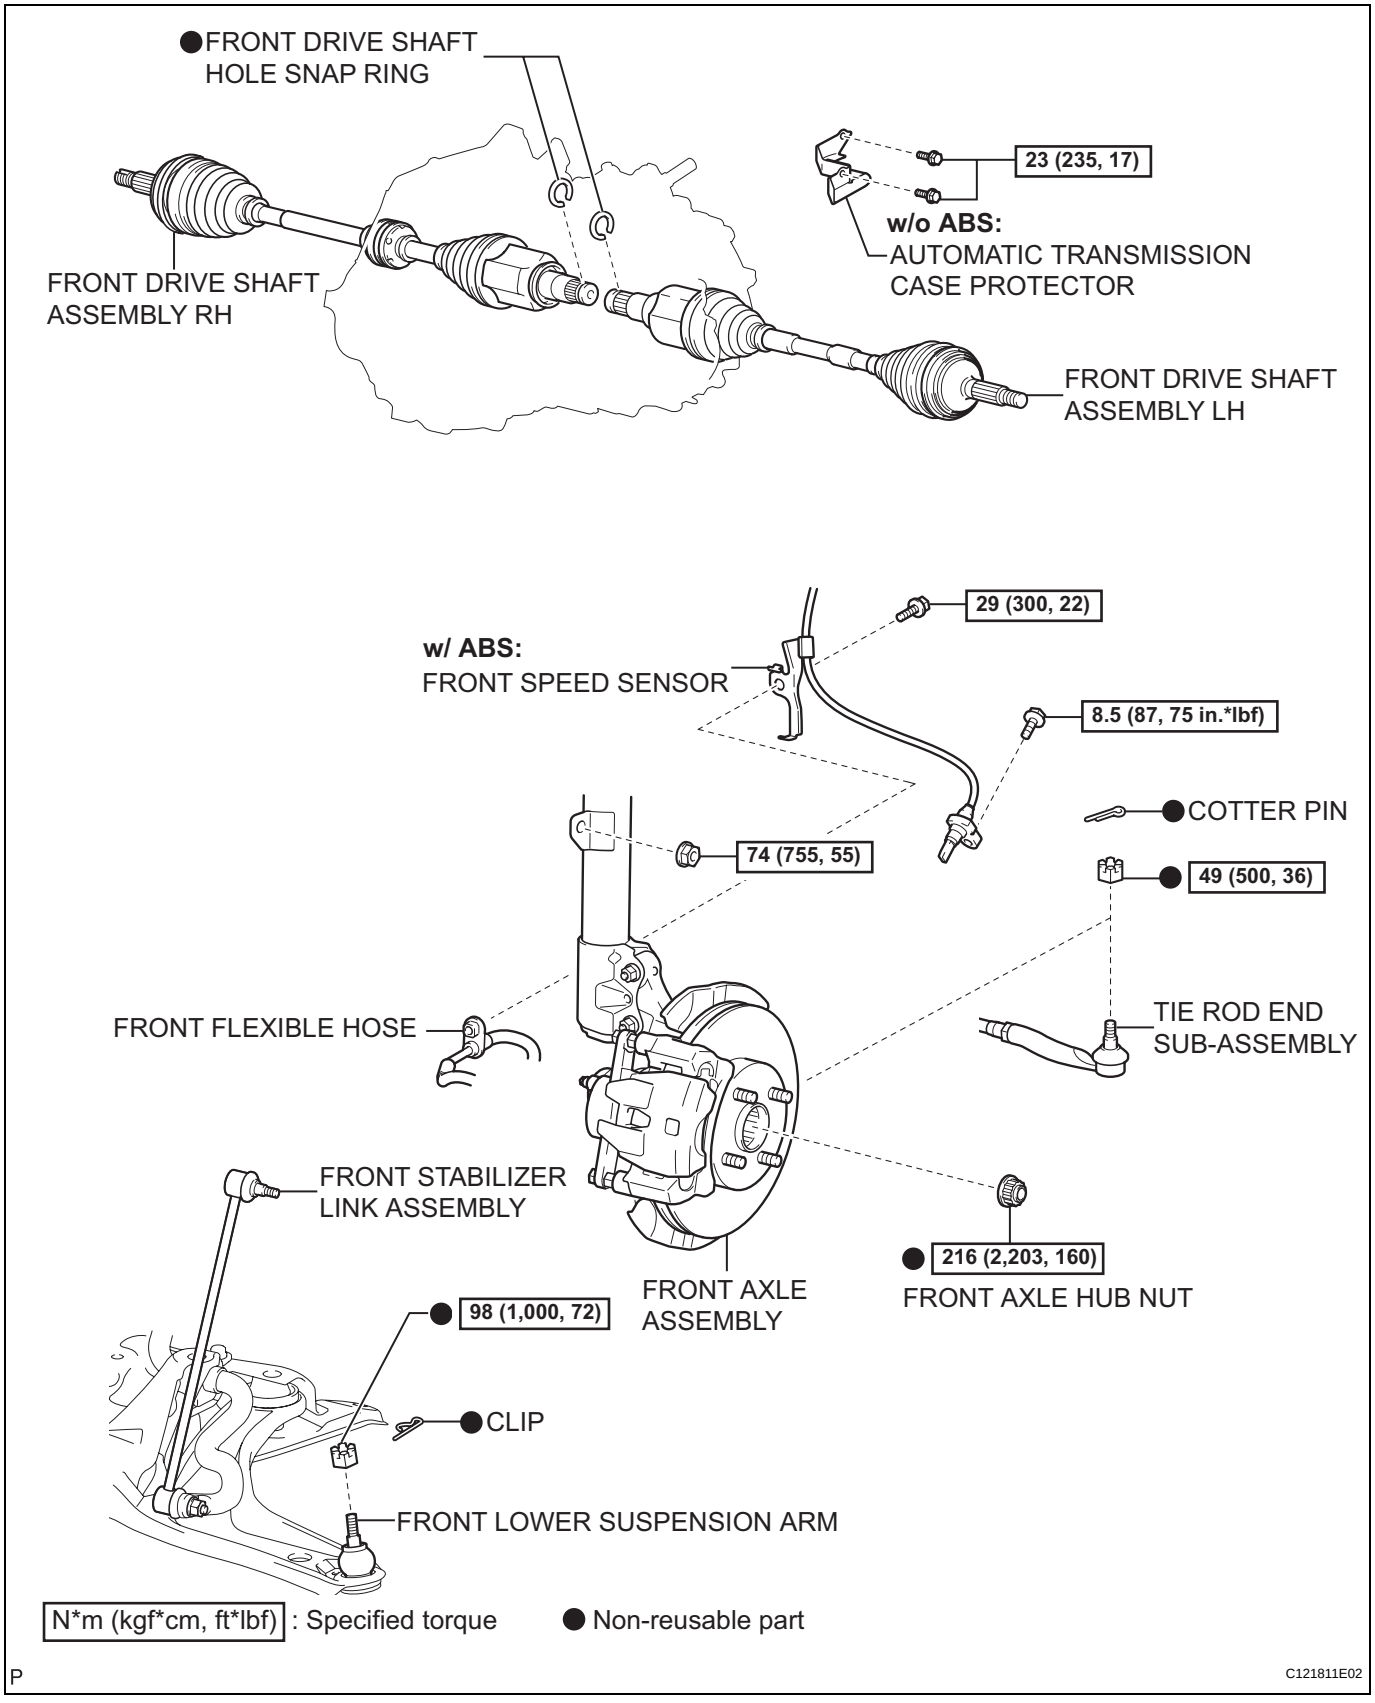
6. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install the speedometer drive gear onto the front differential case.

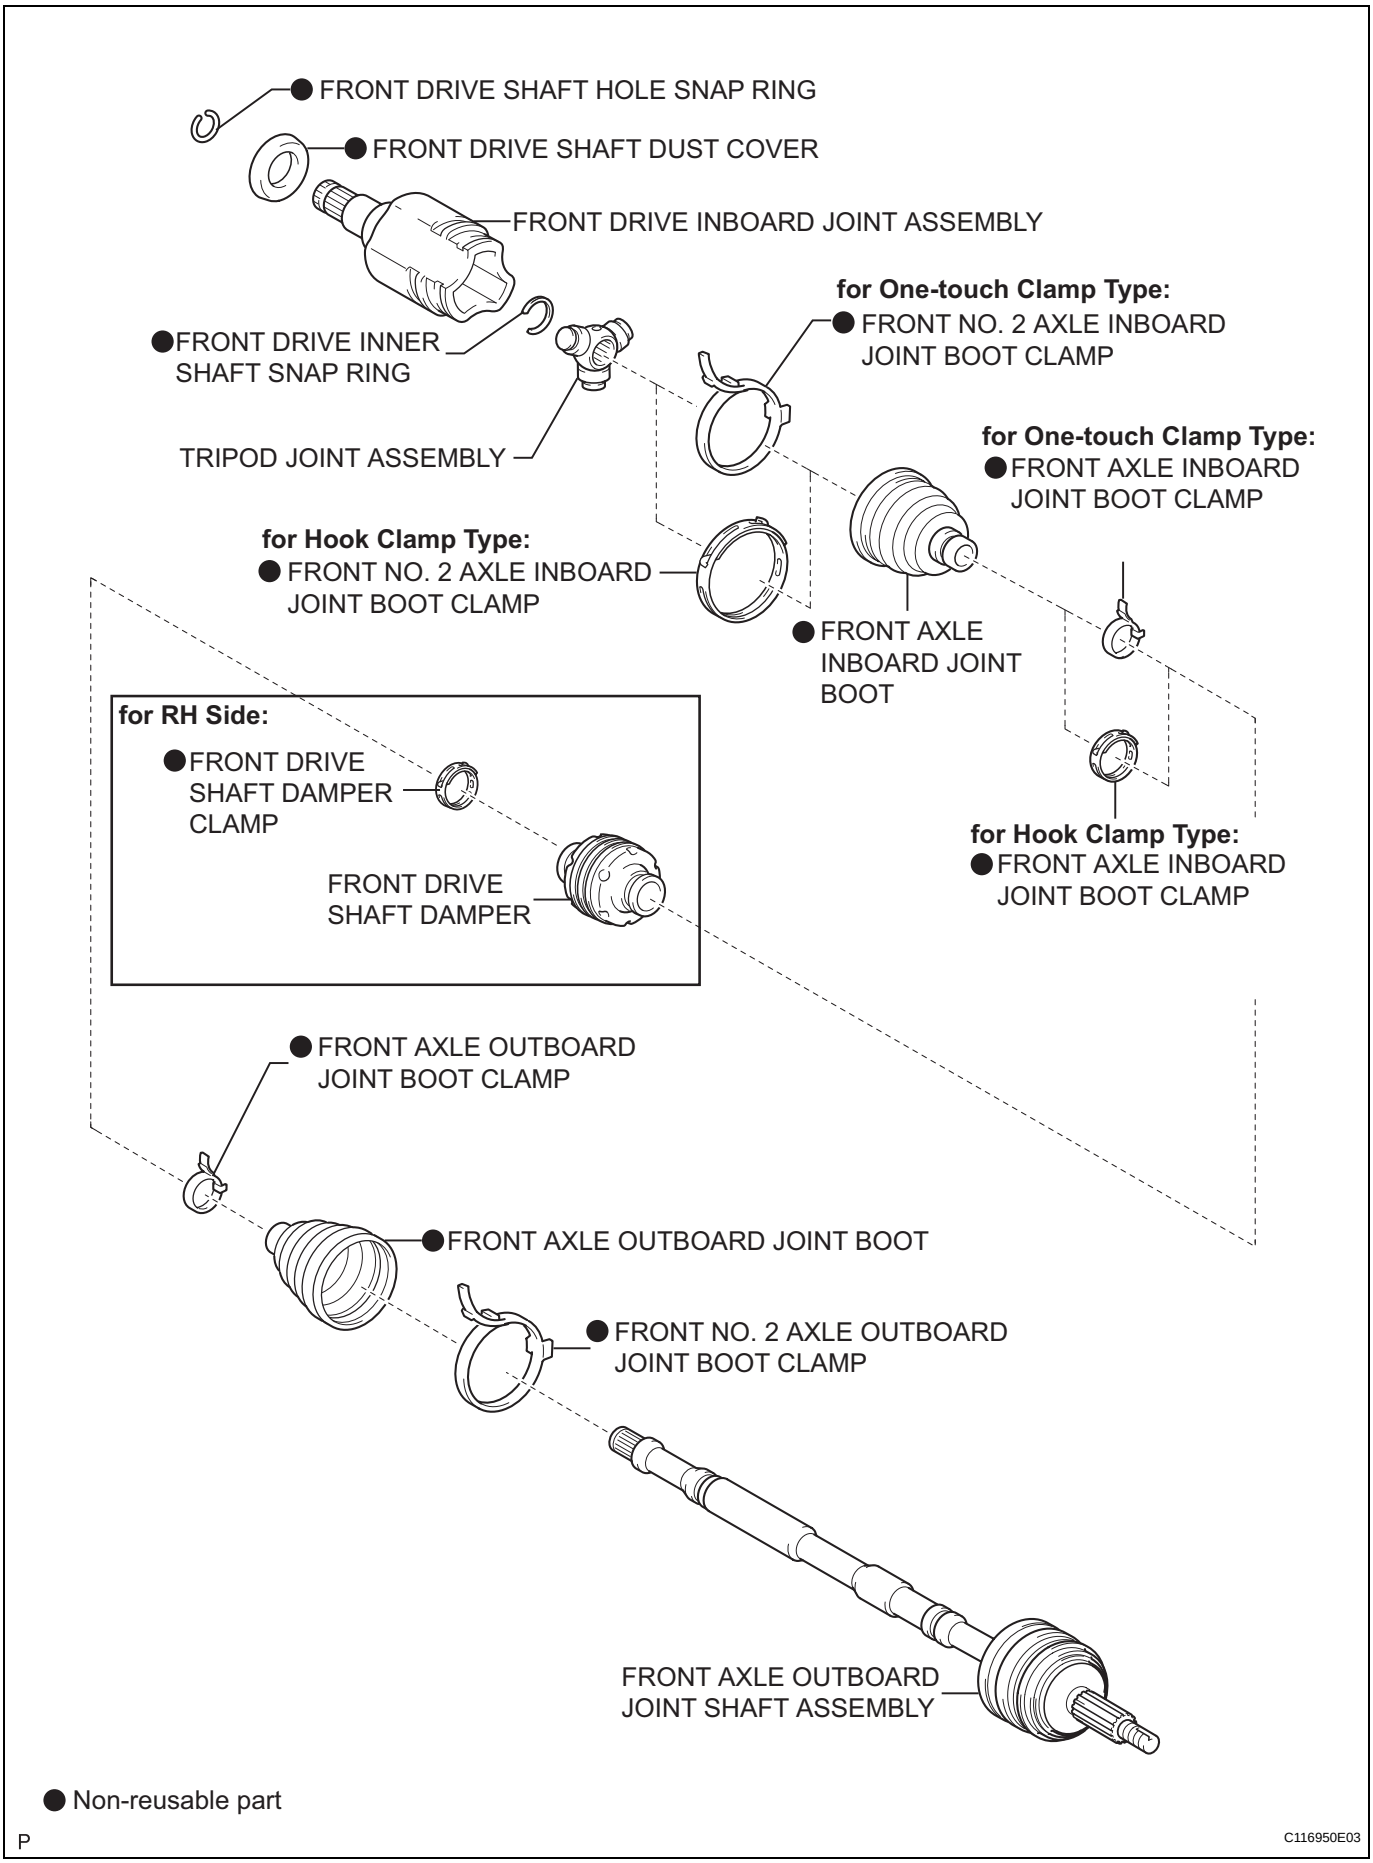
MX

FRONT DRIVE SHAFT

COMPONENTS



DS



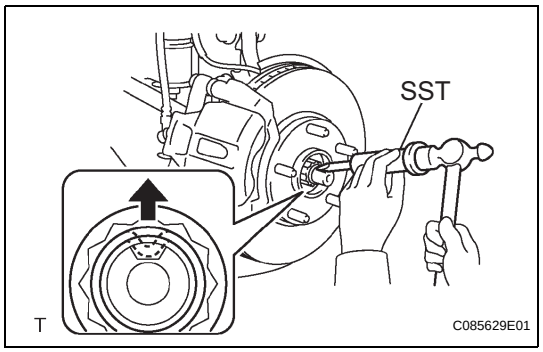
DS

P

C116950E03

REMOVAL

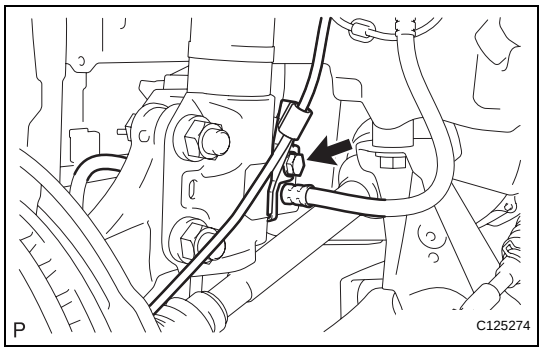
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-159)**
3. **DRAIN TRANSAXLE OIL (for Manual Transaxle) (See page MX-26)**
4. **REMOVE FRONT WHEEL**
5. **REMOVE FRONT AXLE HUB NUT**



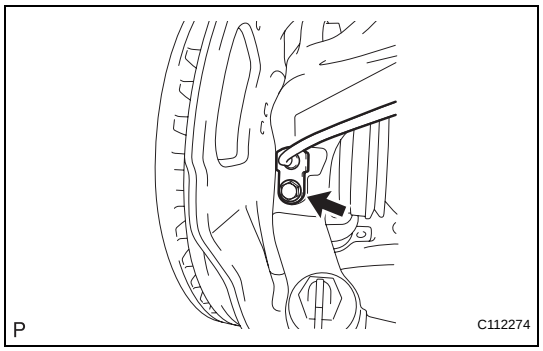
(a) Using SST and a hammer, release the staked part of the axle hub nut.
SST 09930-00010
NOTICE:
- **Insert SST into the groove with the flat surface facing up.**
- **Do not damage the tip of SST using grinders.**
- **Completely unstake the staked part before removing the axle hub nut.**
- **Do not damage the threads of the drive shaft.**

(b) Using a 30 mm socket wrench, remove the axle hub nut.

6. **SEPARATE FRONT SPEED SENSOR (w/ ABS)**



(a) Remove the bolt and separate the speed sensor and flexible hose.

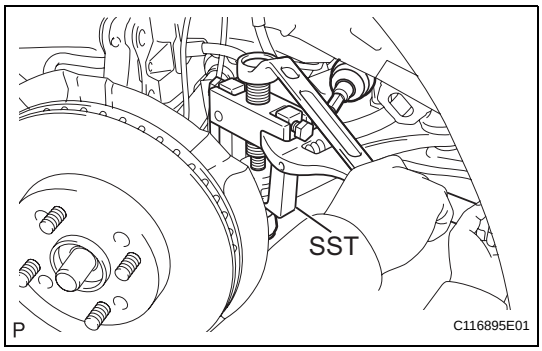


(b) Remove the bolt and separate the speed sensor from the steering knuckle.
NOTICE:
- **Keep the speed sensor tip and installation portion free of foreign matter.**
- **Remove the speed sensor without turning it from its original installation angle.**

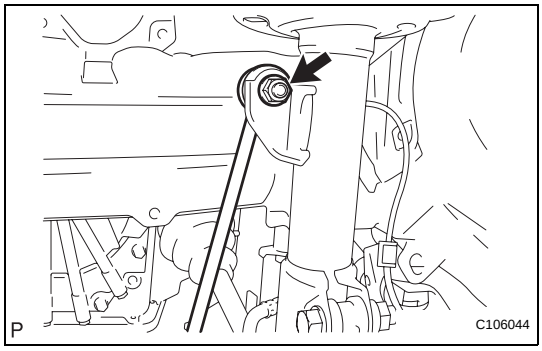
7. **SEPARATE TIE ROD END SUB-ASSEMBLY**

(a) Remove the cotter pin and castle nut.

DS

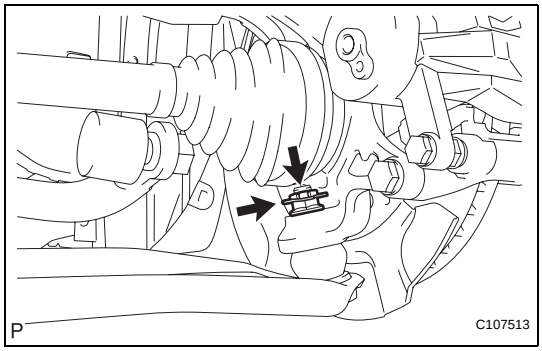


(b) Using SST, separate the tie rod end from the steering knuckle.
SST 09628-62011
NOTICE:
Do not damage the tie rod end dust cover.



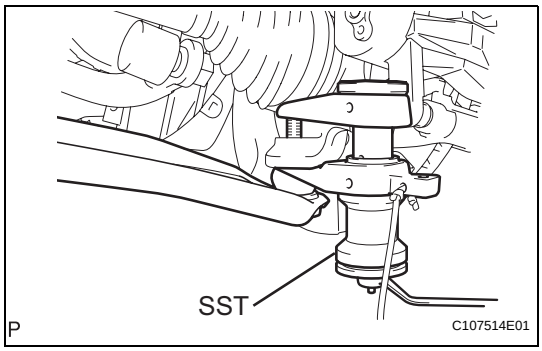
8. SEPARATE FRONT STABILIZER LINK ASSEMBLY

(a) Remove the nut and separate the stabilizer link from the shock absorber.
HINT:
If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.



9. SEPARATE FRONT LOWER SUSPENSION ARM

(a) Remove the clip and castle nut.



(b) Using SST, separate the lower arm.
SST 09628-00011
NOTICE:
- **Do not damage the lower ball joint dust cover.**
- **Suspend SST with a piece of string or the equivalent.**

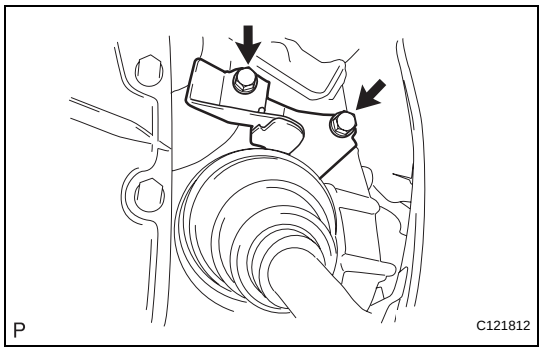
10. SEPARATE FRONT AXLE ASSEMBLY

(a) Using a plastic hammer, tap the end of the drive shaft and disengage the fitting between the drive shaft and front axle.
HINT:
If it is difficult to disengage the fitting, tap the end of the drive shaft with a brass bar and hammer.

(b) Push the front axle out of the vehicle to remove the drive shaft from the front axle.
NOTICE:
- **Do not push the front axle further out of the vehicle than is necessary.**
- **Do not damage the outboard joint boot.**
- **Do not damage the speed sensor rotor.**

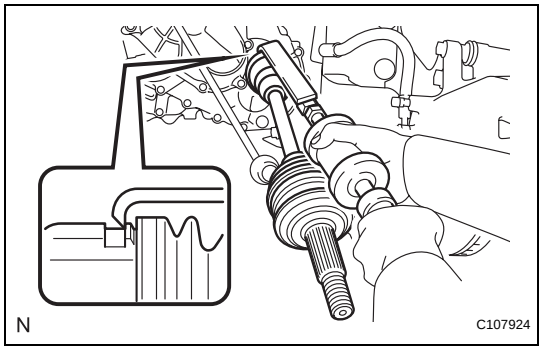
DS

- **Suspend the drive shaft with a piece of string or the equivalent.**



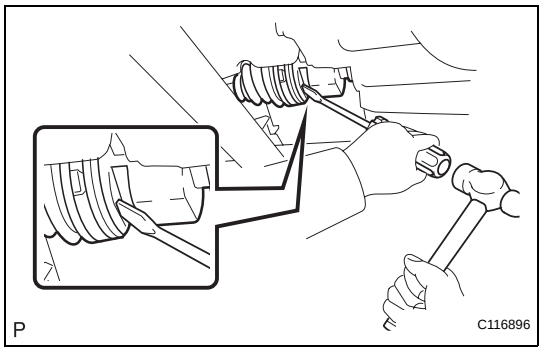
11. REMOVE AUTOMATIC TRANSMISSION CASE PROTECTOR (w/o ABS)

(a) Remove the 2 bolts and transmission case protector.



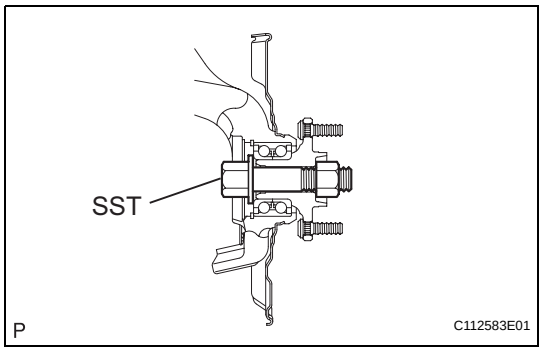
12. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

(a) Using SST, remove the drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)
NOTICE:
- **Do not damage the oil seal.**
- **Do not damage the inboard joint boot.**
- **Do not drop the drive shaft.**



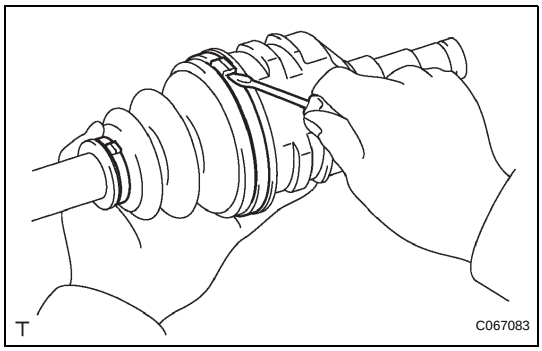
13. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH

(a) Using a screwdriver and hammer, remove the drive shaft.
NOTICE:
- **Do not damage the oil seal.**
- **Do not damage the inboard joint boot.**
- **Do not drop the drive shaft.**



14. FIX FRONT AXLE ASSEMBLY
SST 09608-16042 (09608-02021, 09608-02041)
HINT:
The hub bearing could be damaged if it is subjected to the vehicle's full weight, such as when moving the vehicle with the drive shaft removed. If it is absolutely necessary to place the vehicle's full weight on the hub bearing, first support it with SST.

DS

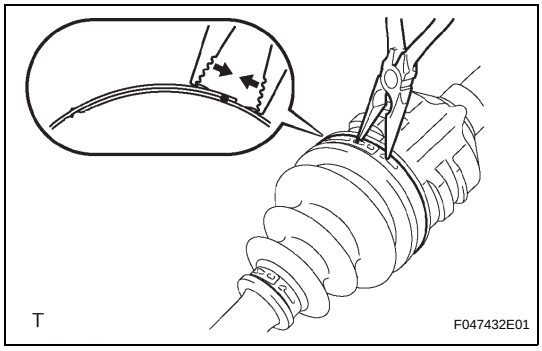


DISASSEMBLY

1. REMOVE FRONT NO. 2 AXLE INBOARD JOINT BOOT CLAMP

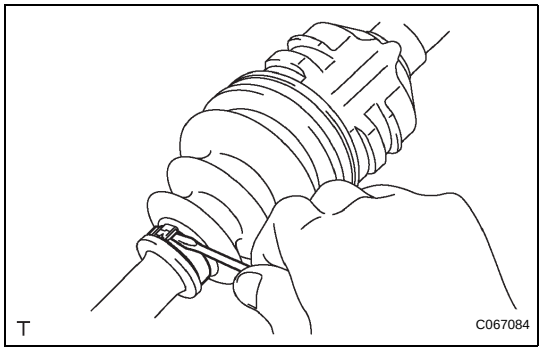
(a) for One-touch Clamp Type:

(1) Using a screwdriver, release the staked part of the boot clamp and separate the boot clamp.



(b) for Hook Clamp Type:

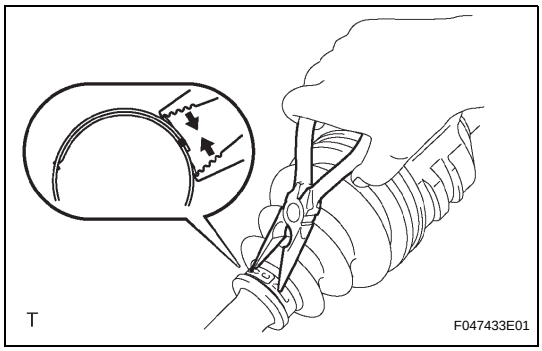
(1) Using needle-nose pliers, disengage the hook and remove the boot clamp.



2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) for One-touch Clamp Type:

(1) Using a screwdriver, release the staked part of the boot clamp and separate the boot clamp.



(b) for Hook Clamp Type:

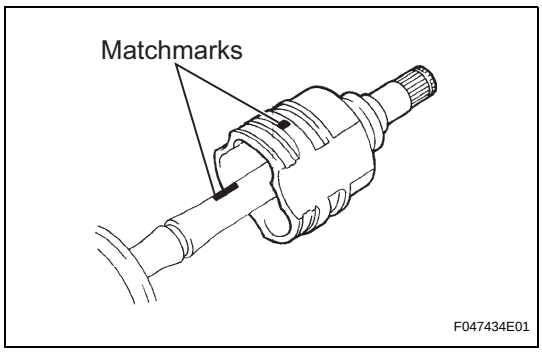
(1) Using needle-nose pliers, disengage the hook and remove the boot clamp.

3. SEPARATE FRONT AXLE INBOARD JOINT BOOT

(a) Separate the inboard joint boot from the inboard joint.

4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Remove the old grease from the inboard joint.

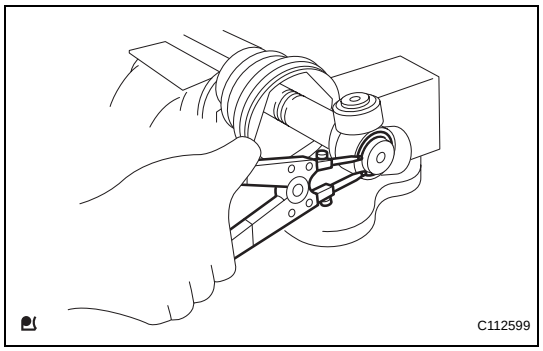


(b) Place matchmarks on the inboard joint and outboard joint shaft.
NOTICE:
Do not cause any damage when placing the marks.

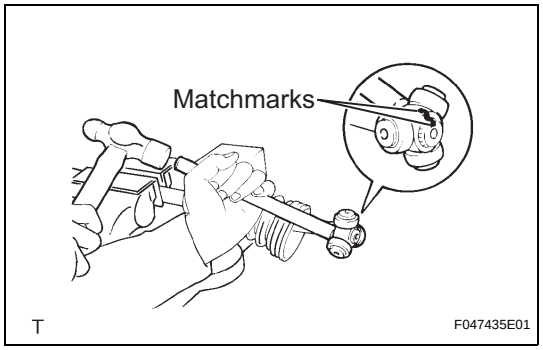
(c) Remove the inboard joint from the outboard joint shaft.

(d) Fix the outboard joint shaft in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

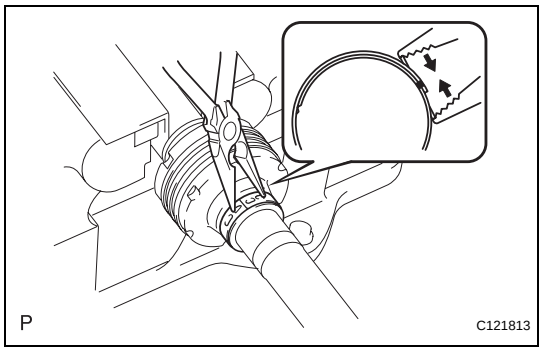
DS



(e) Using a snap ring expander, remove the snap ring.

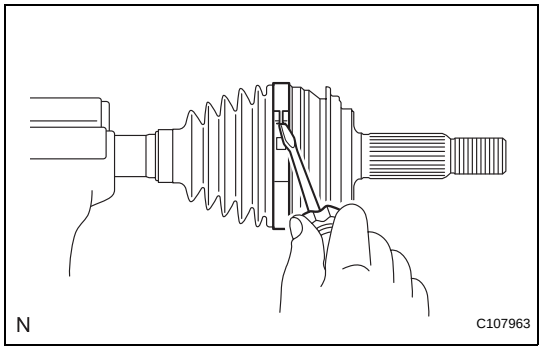


(f) Place matchmarks on the tripod joint and outboard joint shaft.
NOTICE:
Do not cause any damage when placing the marks.
(g) Using a brass bar and hammer, remove the tripod joint.
NOTICE:
Do not tap the roller.
(h) Remove the inboard joint boot No. 2 clamp, the inboard joint boot and the inboard joint boot clamp.

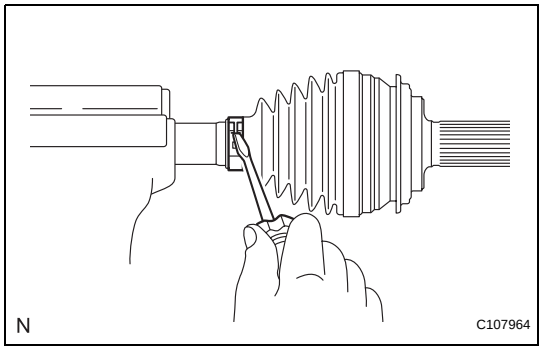


5. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP (for RH Side)
(a) Using needle-nose pliers, disengage the hook and remove the damper clamp.

6. REMOVE FRONT DRIVE SHAFT DAMPER (for RH Side)

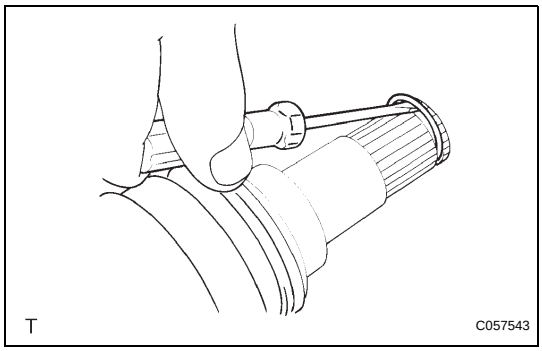


7. REMOVE FRONT NO. 2 AXLE OUTBOARD JOINT BOOT CLAMP
(a) Using a screwdriver, release the staked part of the boot clamp and remove the boot clamp.



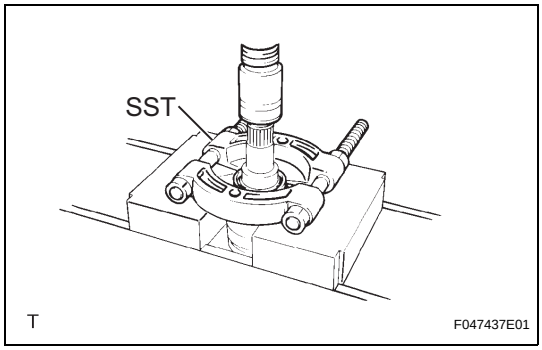
8. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP
(a) Using a screwdriver, release the staked part of the boot clamp and remove the boot clamp.

9. REMOVE FRONT AXLE OUTBOARD JOINT BOOT
(a) Remove the outboard joint boot from the outboard joint shaft.
(b) Remove the old grease from the outboard joint.



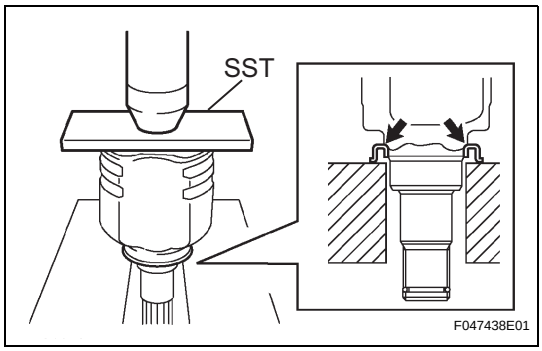
10. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING

(a) Using a screwdriver, remove the snap ring.



11. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the dust cover.
SST 09950-00020
NOTICE:
Do not drop the inboard joint.



REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, install a new dust cover into the inboard joint until it is flush with the end.
SST 09527-10011
NOTICE:
- **Install the dust cover in the correct orientation.**
- **Do not deform the dust cover.**

2. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING

(a) Install a new snap ring.

3. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

(a) Wrap the spline of the outboard joint shaft with protective tape.

(b) Install new parts onto the outboard joint shaft in the following order.

1.	Front axle outboard joint boot No. 2 clamp
2.	Front axle outboard joint boot
3.	Front axle outboard joint boot clamp

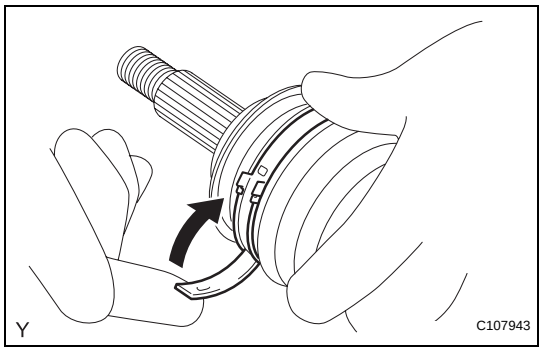
(c) Pack the outboard joint shaft joint portion and outboard joint boot with grease.
Standard Quantity:
125 to 135 g (4.4 to 4.8 oz.)

(d) Install the outboard joint boot onto the outboard joint shaft groove.
NOTICE:
Keep the groove free of grease.

DS

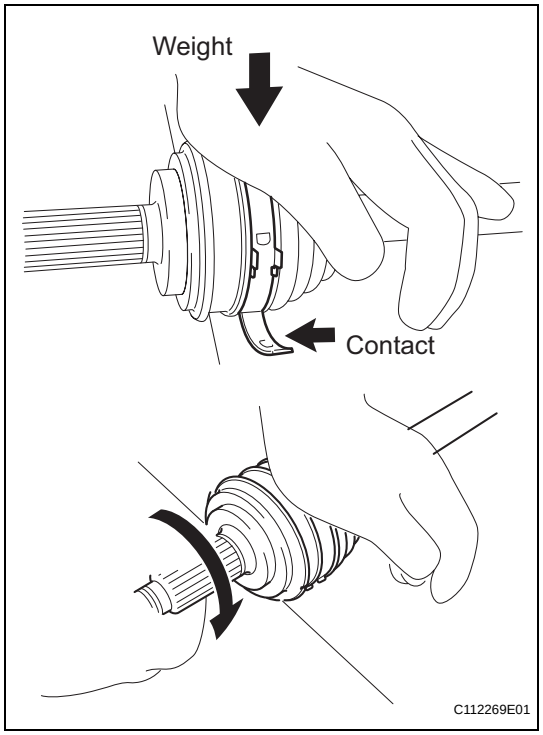
4. INSTALL FRONT NO. 2 AXLE OUTBOARD JOINT BOOT CLAMP

CAUTION:
Wear protective gloves to avoid injuries to your hands.



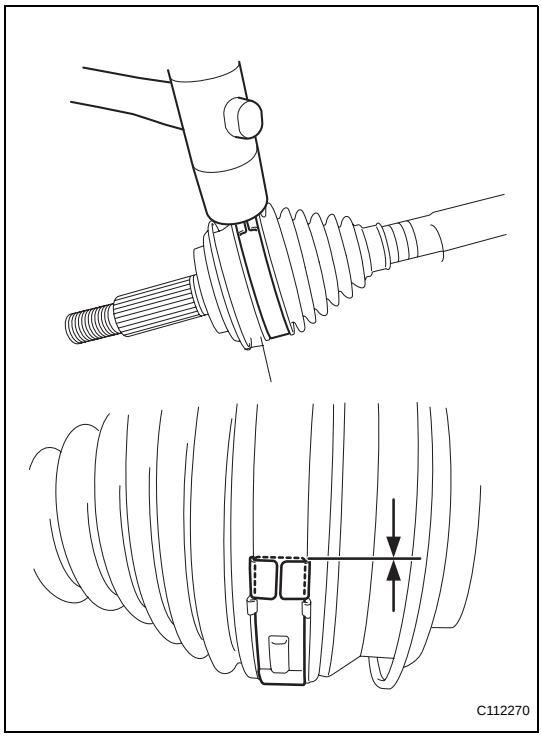
(a) Install the boot clamp onto the outboard joint boot and provisionally bend the lever.

NOTICE:
- **Set the lever into the guide groove correctly.**
- **Check the band and the lever for any deformation before bending the lever.**
- **Set the lever into the guide groove correctly and install the clamp as far into the inner side of the vehicle as possible.**



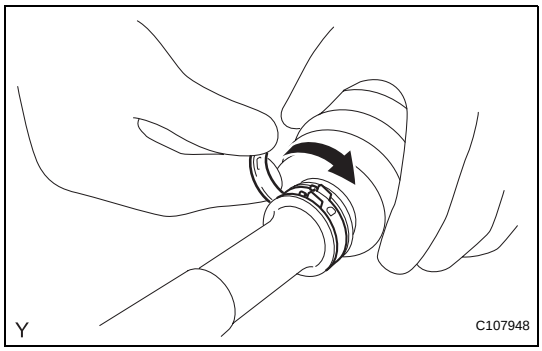
(b) Lean your weight on your hand and roll the outboard joint forward while pressing the outboard joint against the work plane. Roll the outboard joint and fold the lever until a click sound can be heard.

NOTICE:
- **Do not damage the deflector.**
- **Make sure that the outboard joint is in direct contact with the work plane.**

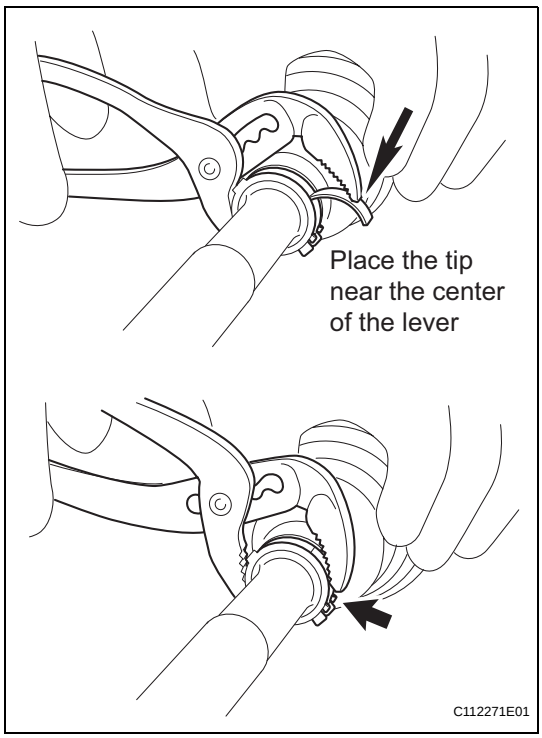


(c) Using a plastic hammer, tap the buckle to fix it while adjusting the clearance between the lever and the groove to make the clearances between the buckle edge and the lever end even.
NOTICE:
Do not damage the outboard joint boot.

5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP
CAUTION:
Wear protective gloves to avoid injuries to your hands.

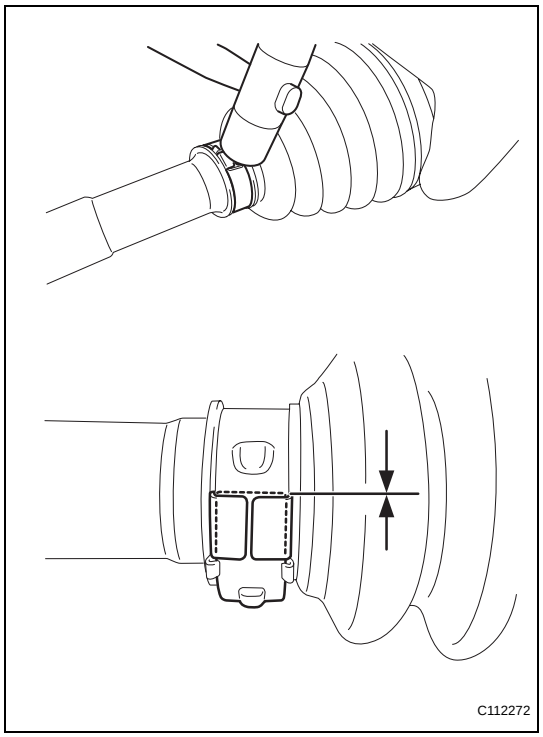


(a) Install the boot clamp onto the outboard joint boot and provisionally bend the lever.
NOTICE:
- **Set the lever into the guide groove correctly.**
- **Check the band and the lever for any deformation before bending the lever.**

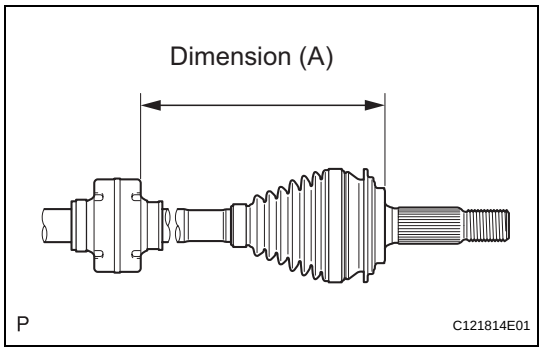


(b) Using water pump pliers, pinch the boot clamp to provisionally fix it.

DS

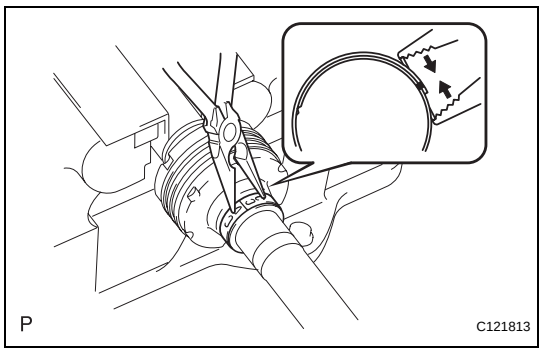


(c) Using a plastic hammer, tap the buckle to fix it while adjusting the clearance between the lever and the groove to make the clearances between the buckle edge and the lever end even.
NOTICE:
Do not damage the outboard joint boot.



6. INSTALL FRONT DRIVE SHAFT DAMPER (for RH Side)

(a) Install the drive shaft damper onto dimension (A) shown in the illustration.
Dimension (A):
425.6 to 429.6 mm (16.76 to 16.91 in.)



7. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP (for RH Side)

(a) Using needle-nose pliers, align the concave part with the protrusion of a new damper clamp in order to fix it.

8. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

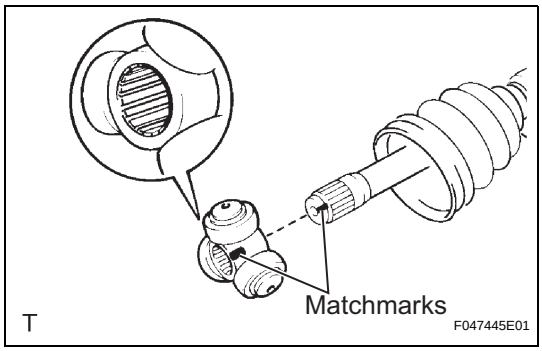
(a) Install new parts onto the outboard joint shaft in the following order.

1.	Front axle inboard joint boot clamp
2.	Front axle inboard joint boot
3.	Front axle inboard joint boot No. 2 clamp

(b) Fix the outboard joint shaft in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

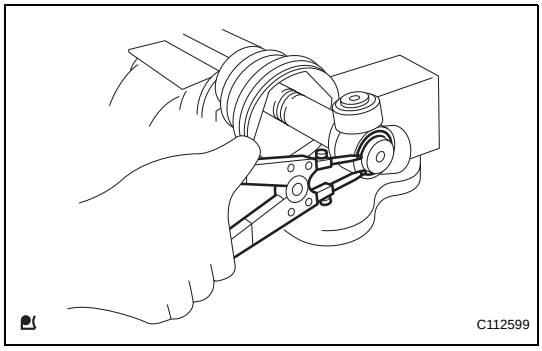
(c) Remove the protective tape.

DS



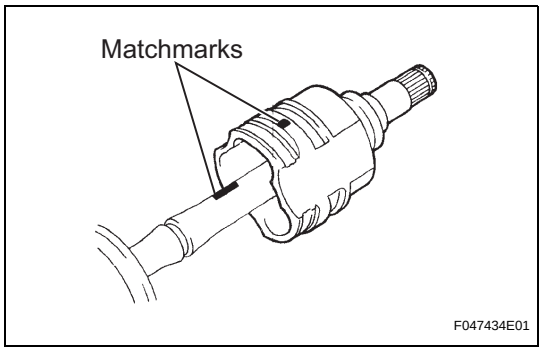
(d) Align the matchmarks and install the tripod joint onto the outboard joint shaft.
NOTICE:
Face the serration side of the tripod joint outward and install it onto the outboard joint end.

(e) Using a brass bar and hammer, install the tripod joint.
NOTICE:
- **Do not hit the roller portion.**
- **Keep the tripod joint free of foreign matter.**



(f) Using a snap ring expander, install a new snap ring.

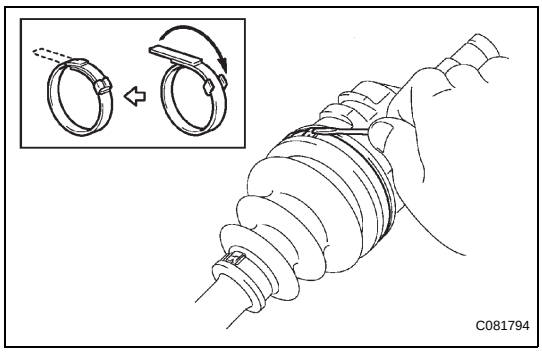
(g) Pack the inboard joint with grease.
Standard Quantity:
125 to 135 g (4.4 to 4.8 oz.)



(h) Align the matchmarks and install the inboard joint onto the outboard joint shaft.

9. INSTALL FRONT AXLE INBOARD JOINT BOOT

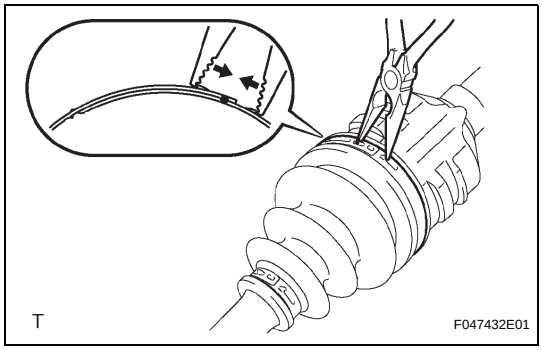
(a) Install the inboard joint boot into the grooves of the inboard joint and outboard joint shaft.
NOTICE:
Keep the grooves free of grease.



10. INSTALL FRONT NO. 2 AXLE INBOARD JOINT BOOT CLAMP

(a) for One-touch Clamp Type:

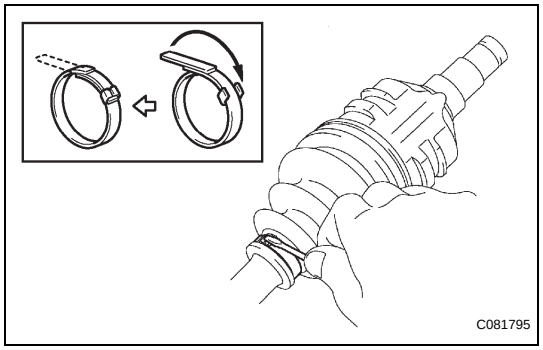
(1) Install the boot clamp onto the inboard joint boot and caulk the boot clamp with a screwdriver.
NOTICE:
Do not damage the boot.



(b) for Hook Clamp Type:

(1) Using needle-nose pliers, align the concave part with the protrusion of the boot clamp in order to fix it.
NOTICE:
- **Do not damage the boot.**
- **Do not deform the claw of the hook.**

DS



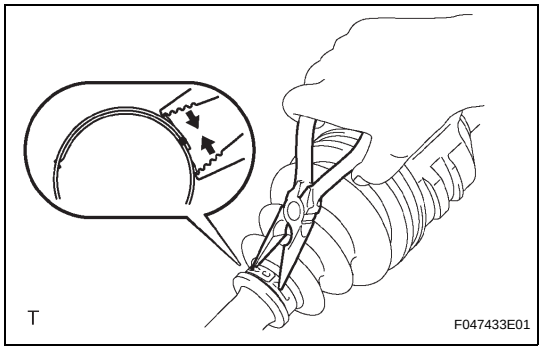
11. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) for One-touch Clamp Type:

(1) Install the boot clamp onto the inboard joint boot and caulk the boot clamp with a screwdriver.

NOTICE:

Do not damage the boot.

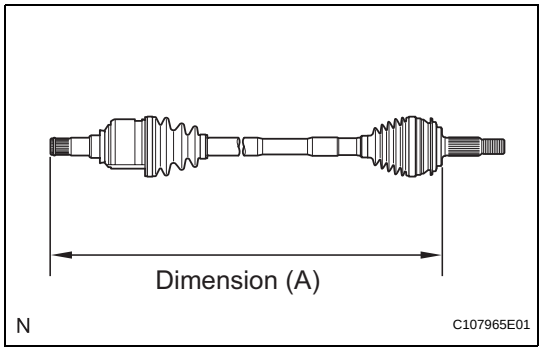


(b) for Hook Clamp Type:

(1) Using needle-nose pliers, align the concave part with the protrusion of the boot clamp in order to fix it.

NOTICE:

- **Do not damage the boot.**
- **Do not deform the claw of the hook.**



12. INSPECT FRONT DRIVE SHAFT

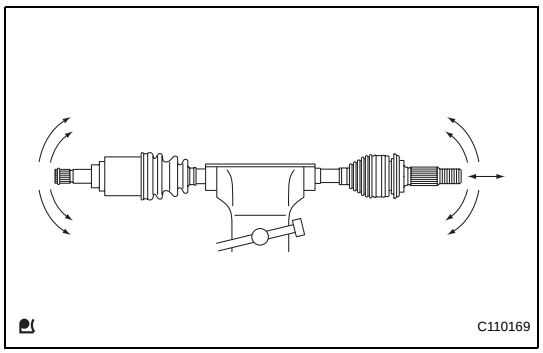
(a) Check whether the drive shaft dimensions are within the following specifications.

HINT:

The following table shows dimension (A) of the drive shaft.

Dimension (A)

LH	RH
584.3 mm (23.00 in.)	**826.3 mm (32.53 in.)**



(b) Check for noticeable looseness when turning the joint up and down, left and right, and in the thrust direction.

(c) Check for cracks, damage and grease leakage on the boot joint.

NOTICE:

Keep the drive shaft level while moving it.

DS

INSTALLATION

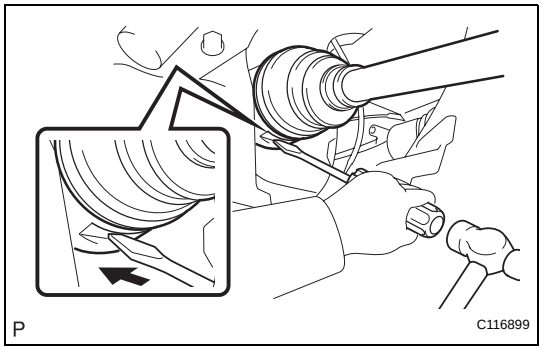
1. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH

(a) for Automatic Transaxle:

(1) Coat the spline of the inboard joint with ATF.

(b) for Manual Transaxle:

(1) Coat the spline of the inboard joint with gear oil.



(c) Align the inboard joint splines and install the drive shaft with a screwdriver and hammer.

NOTICE:

- **Face the cut area of the front drive inboard joint hole snap ring downward.**
- **Do not damage the oil seal.**
- **Do not damage the inboard joint boot.**

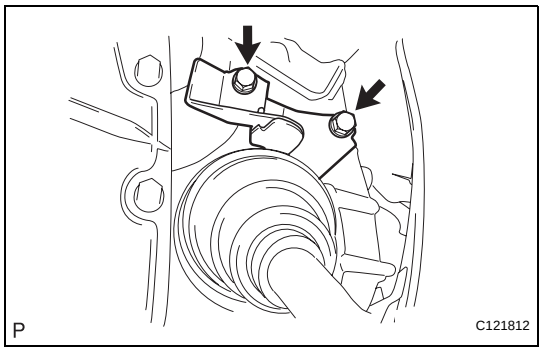
HINT:

Confirm whether the drive shaft is securely driven in by checking the reaction force and sound.

2. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH

HINT:

The installation procedure for the RH side is the same as that for the LH side.



3. INSTALL AUTOMATIC TRANSMISSION CASE PROTECTOR (w/o ABS)

(a) Install the transmission case protector with the 2 bolt.

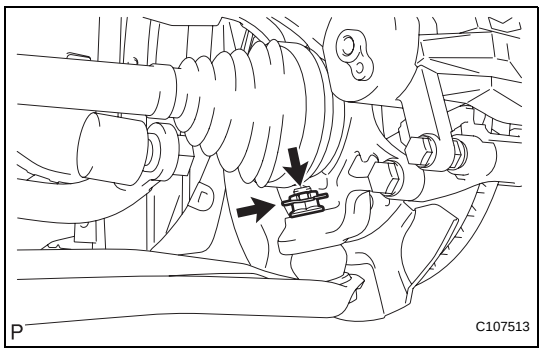
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

4. INSTALL FRONT AXLE ASSEMBLY

(a) Push the front axle out of the vehicle to align the spline of the drive shaft with the front axle and insert the front axle.

NOTICE:

- **Do not push the front axle further out of the vehicle than is necessary.**
- **Do not damage the outboard joint boot.**
- **Check for any foreign matter on the speed sensor rotor and insertion part.**
- **Do not damage the speed sensor rotor.**



5. INSTALL FRONT LOWER SUSPENSION ARM

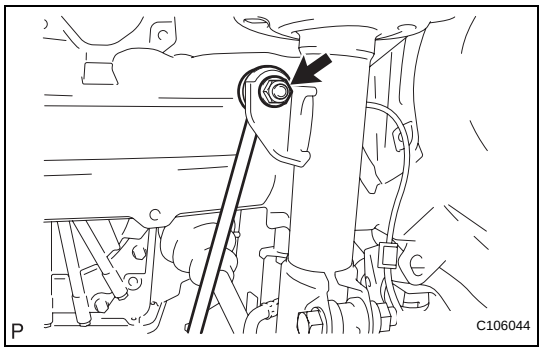
(a) Install the lower arm onto the steering knuckle with a new castle nut.

Torque: 98 N*m (1,000 kgf*cm, 72 ft.*lbf)

NOTICE:

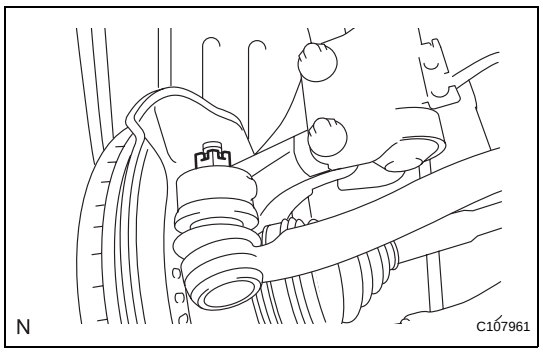
If the holes for the clip are not aligned, tighten the nut by a further turn of up to 60°.

(b) Install a new clip.



6. INSTALL FRONT STABILIZER LINK ASSEMBLY

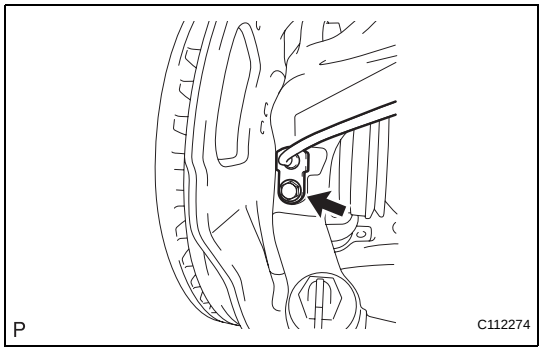
(a) Install the stabilizer link with the nut.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.



7. INSTALL TIE ROD END SUB-ASSEMBLY

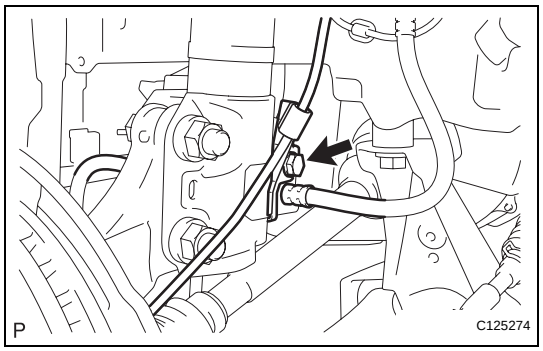
(a) Install the tie rod end onto the steering knuckle with a new castle nut.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
NOTICE:
If the holes for the clip are not aligned, tighten the nut by a further turn of up to 60°.

(b) Install a new cotter pin.

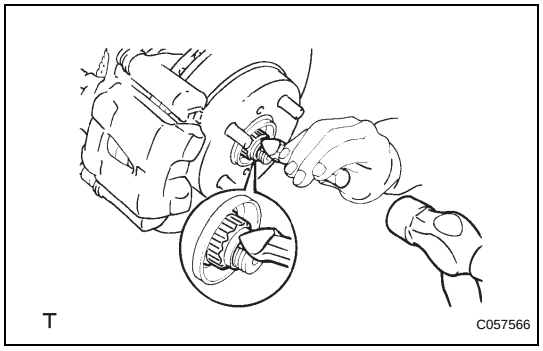


8. INSTALL FRONT SPEED SENSOR (w/ ABS)

(a) Install the speed sensor onto the steering knuckle with the bolt.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
- **Check that the speed sensor tip and installation portion are free of foreign matter.**
- **Install the speed sensor without turning it from its original installation angle.**



(b) Install the flexible hose and speed sensor with the bolt.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
NOTICE:
Install the flexible hose and speed sensor without twisting them.



9. INSTALL FRONT AXLE HUB NUT

(a) Using a 30 mm socket wrench, install a new axle hub nut.
Torque: 216 N*m (2,203 kgf*cm, 160 ft.*lbf)

(b) Using a chisel and hammer, caulk the axle hub nut.

10. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

DS

12. **ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-170)**
13. **ADD TRANSAXLE OIL (for Manual Transaxle)**
14. **INSPECT AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-93)**
15. **INSPECT TRANSAXLE OIL (for Manual Transaxle) (See page MX-2)**
16. **CHECK AUTOMATIC TRANSAXLE FLUID LEAKAGE (for Automatic Transaxle)**
17. **CHECK TRANSAXLE OIL LEAKAGE (for Manual Transaxle)**
18. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-2)
19. **CHECK ABS SENSOR SIGNAL (w/ ABS)** (See page BC-14)

AXLE SYSTEM

PROBLEM SYMPTOMS TABLE

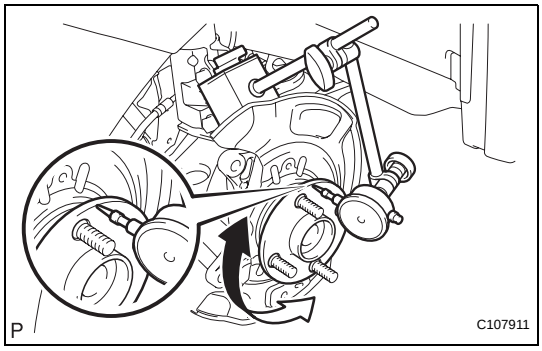
HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Vehicle unstable	1. Front wheel alignment	SP-2
	2. Rear wheel alignment	SP-10
	3. Steering linkage	-
	4. Hub bearing	AH-1
	5. Front stabilizer bar	SP-42
Front wheel shimmy	1. Wheels (Out of balance)	TW-2
	2. Front shock absorber	SP-18
	3. Hub bearing	AH-1
Rear wheel shimmy	1. Wheels (Out of balance)	TW-2
	2. Rear shock absorber	SP-55
	3. Hub bearing	AH-1

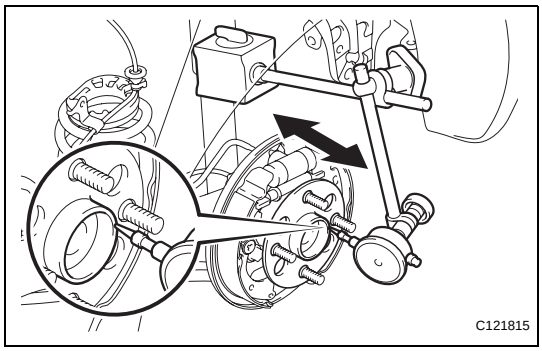
ON-VEHICLE INSPECTION

1. **REMOVE FRONT WHEEL**
2. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
3. **REMOVE FRONT DISC (See page BR-50)**
4. **INSPECT FRONT AXLE HUB BEARING**
   (a) Inspect the axle hub backlash.
      (1) Using a dial indicator, check the backlash near the center of the axle hub.
      Maximum:
      0.05 mm (0.0020 in.)
      If the backlash exceeds the maximum, replace the bearing.

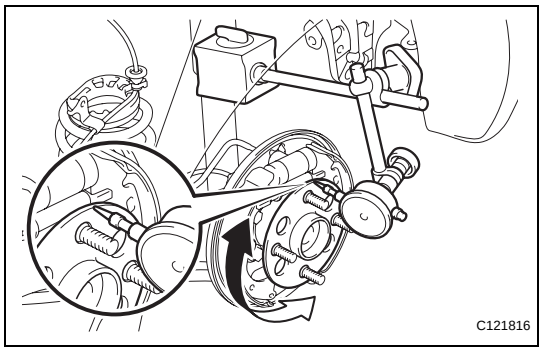
   (b) Inspect the axle hub runout.
      (1) Using a dial indicator, check the runout of the surface of the axle hub.
      Maximum:
      0.05 mm (0.0020 in.)
      If the runout exceeds the maximum, replace the bearing and axle hub.



5. **INSTALL FRONT DISC (See page BR-52)**
6. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
7. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
8. **REMOVE REAR WHEEL**
9. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
10. **INSPECT REAR AXLE HUB BEARING**
    (a) Inspect the axle hub and bearing backlash.
       (1) Using a dial indicator, check the backlash near the center of the axle hub.
       Maximum:
       0.05 mm (0.0020 in.)
       If the backlash exceeds the maximum, replace the axle hub and bearing.



AH



(b) Inspect the axle hub and bearing runout.
  (1) Using a dial indicator, check the runout of the surface of the axle hub.
  Maximum:
  0.07 mm (0.0028 in.)
  If the runout exceeds the maximum, replace the axle hub and bearing.

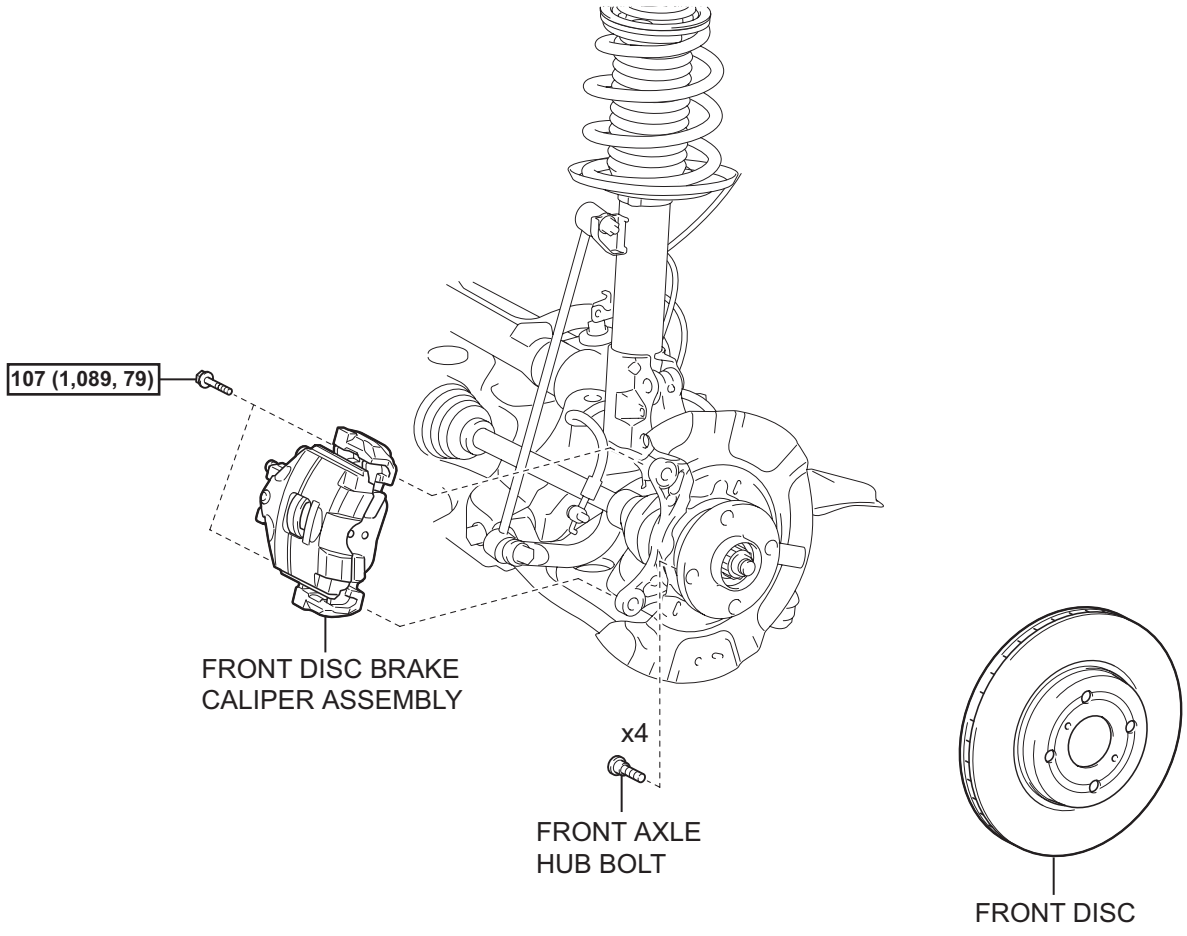
11. INSTALL REAR BRAKE DRUM SUB-ASSEMBLY

12. ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)

13. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

FRONT AXLE HUB BOLT

COMPONENTS



N*m (kgf*cm, ft*lbf) :Specified torque

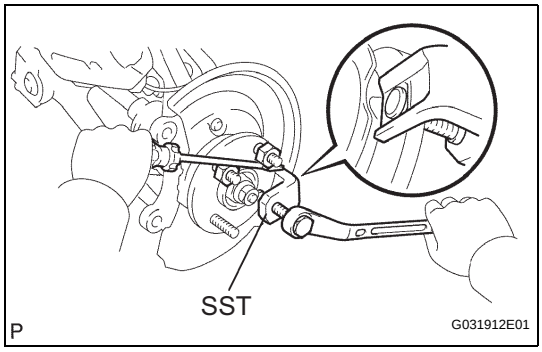
P

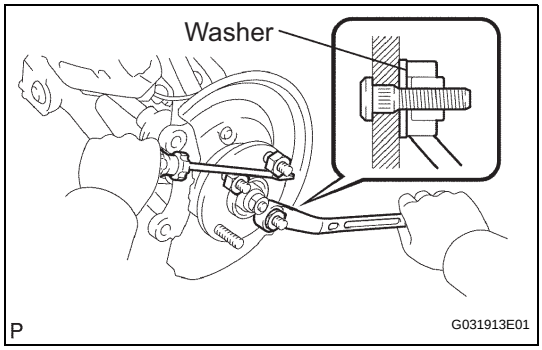
C118252E01

AH

REMOVAL

1. **REMOVE FRONT WHEEL**
2. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
3. **REMOVE FRONT DISC (See page BR-50)**
4. **REMOVE FRONT AXLE HUB BOLT**
   (a) Using SST and a screwdriver or the equivalent to hold the axle hub, remove the hub bolt.
   SST 09628-10011



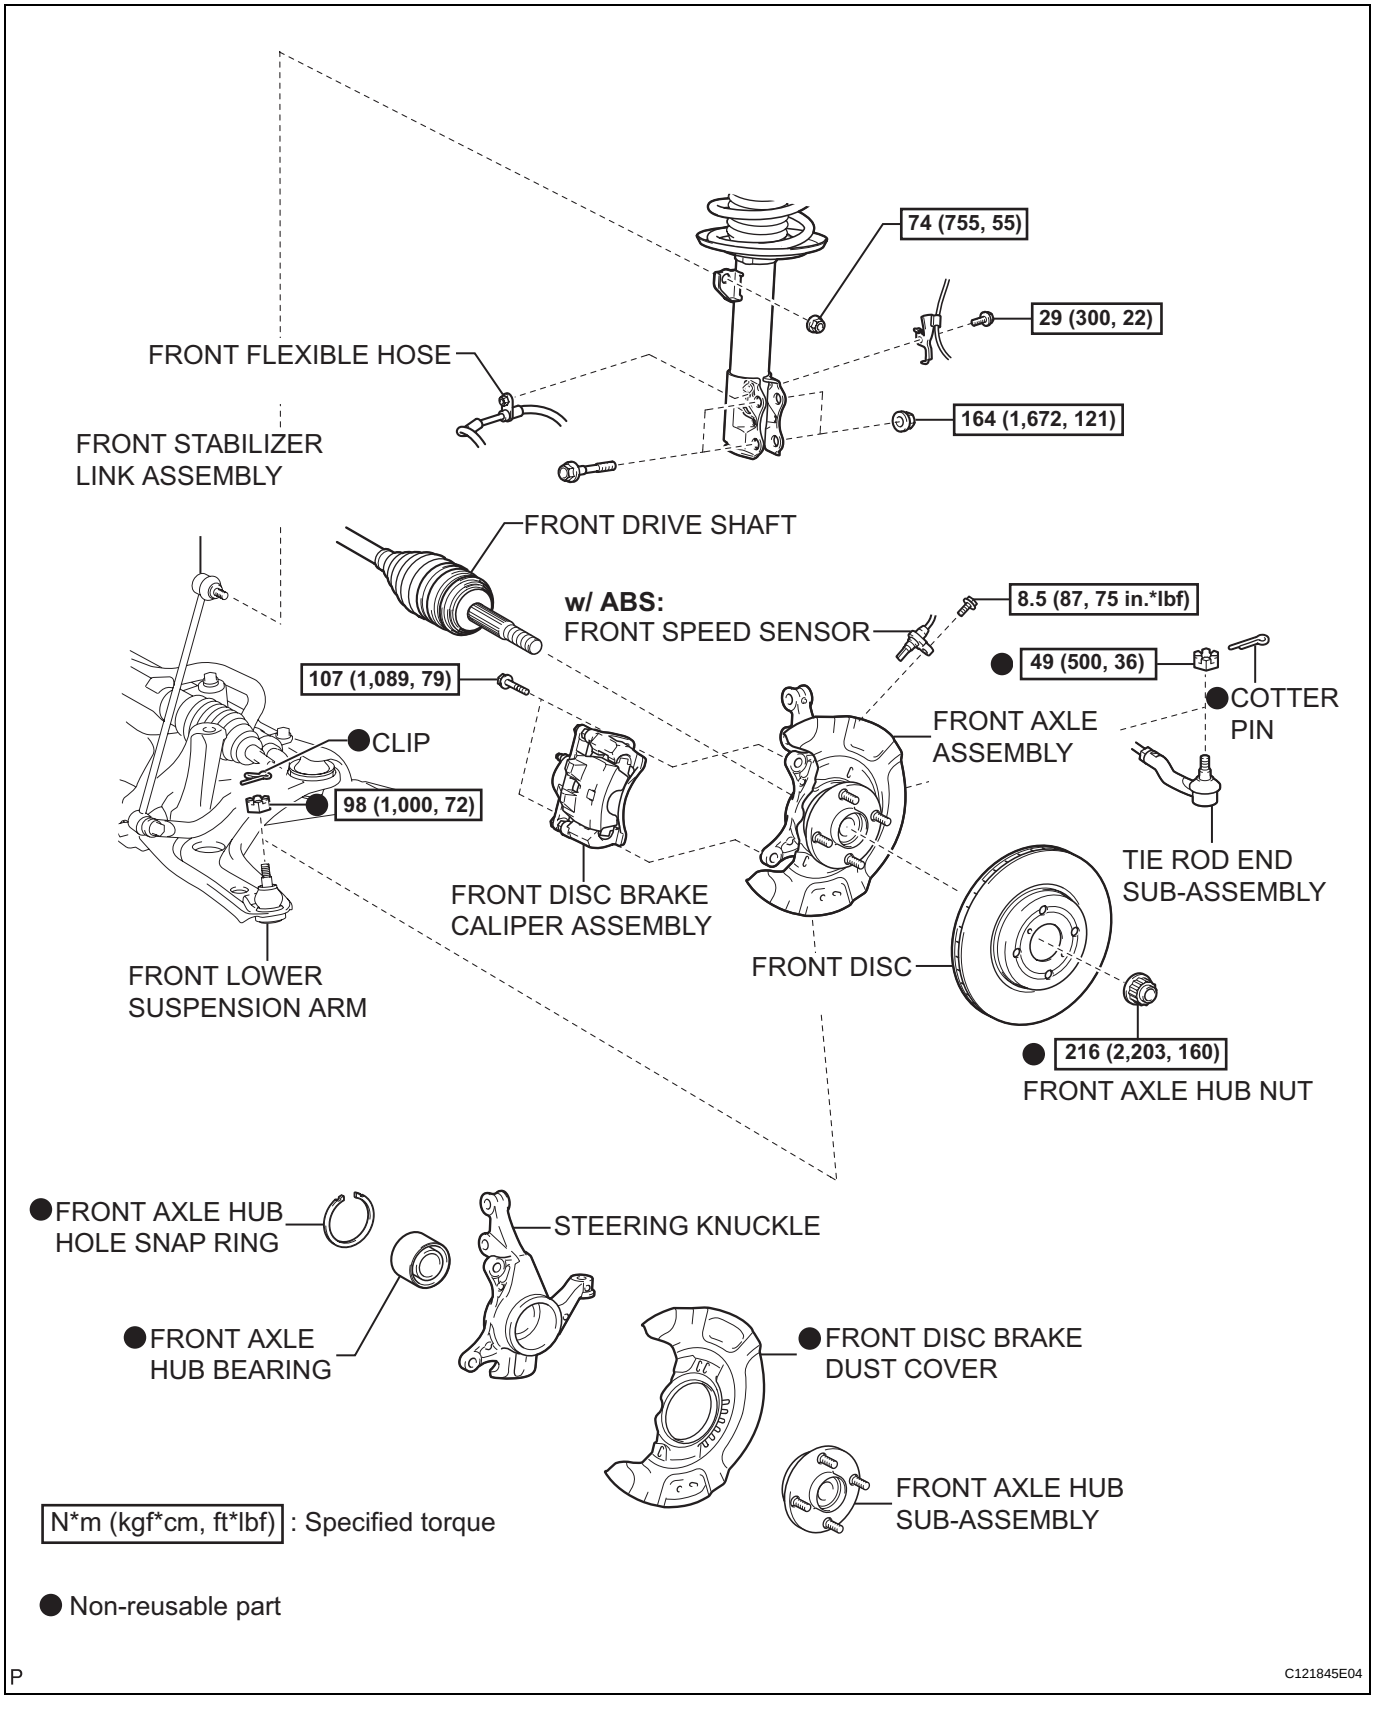


INSTALLATION

1. **INSTALL FRONT AXLE HUB BOLT**
   (a) Install the washer and the nut onto a new hub bolt, as shown in the illustration.
   (b) Using a screwdriver or the equivalent to hold the axle hub, install the hub bolt by tightening the nut.
2. **INSTALL FRONT DISC (See page BR-52)**
3. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
4. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

FRONT AXLE HUB

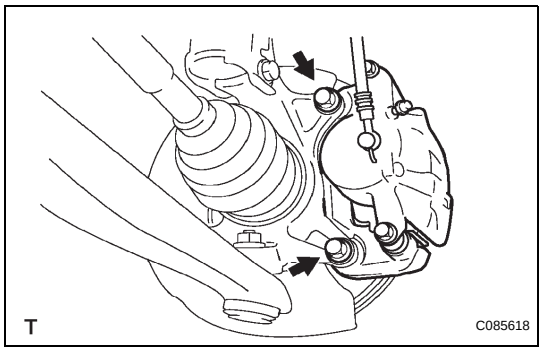
COMPONENTS



AH

REMOVAL

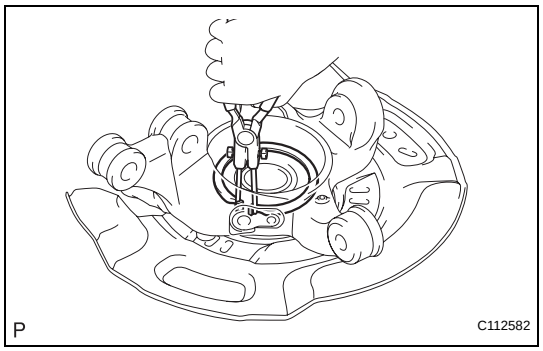
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **REMOVE FRONT AXLE HUB NUT (See page DS-3)**
4. **SEPARATE FRONT SPEED SENSOR (w/ ABS) (See page DS-3)**
5. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY**
   (a) Remove the 2 bolts and separate the disc brake caliper from the steering knuckle.
   NOTICE:
   Hang the caliper using a piece of string or the equivalent.



6. **REMOVE FRONT DISC (See page BR-50)**
7. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-3)**
8. **SEPARATE FRONT STABILIZER LINK ASSEMBLY (See page DS-4)**
9. **SEPARATE FRONT LOWER SUSPENSION ARM (See page DS-4)**
10. **SEPARATE FRONT AXLE ASSEMBLY**
    (a) Using a plastic hammer, tap the end of the drive shaft and disengage the fitting between the drive shaft and front axle.
    HINT:
    If it is difficult to disengage the fitting, tap the end of the drive shaft with a brass bar and hammer.
    (b) Push the front axle out of the vehicle to remove the drive shaft from the front axle.
    NOTICE:
    - **Do not push the front axle further out of the vehicle than is necessary.**
    - **Do not damage the outboard joint boot.**
    - **Do not damage the speed sensor rotor.**
    - **Suspend the drive shaft with a piece of string or the equivalent.**

    (c) Remove the 2 nuts and 2 bolts and remove the front axle assembly.
    HINT:
    Keep the nut from rotating while turning the bolt.

AH



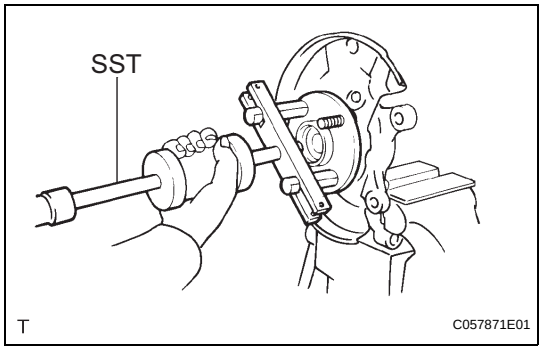
DISASSEMBLY

1. REMOVE FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, remove the hole snap ring.

NOTICE:

When removing the hole snap ring, do not damage the magnetic rotor surface.



2. REMOVE FRONT AXLE HUB SUB-ASSEMBLY

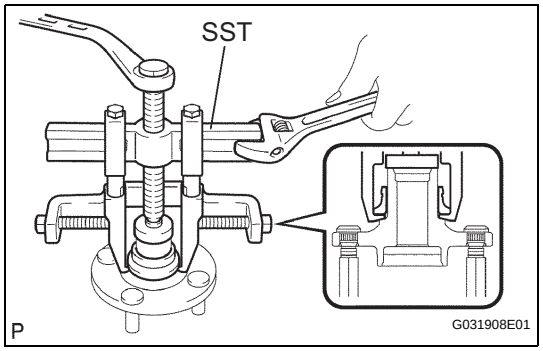
(a) Fix the steering knuckle in a vise between aluminum plates.

NOTICE:

Do not overtighten the vise.

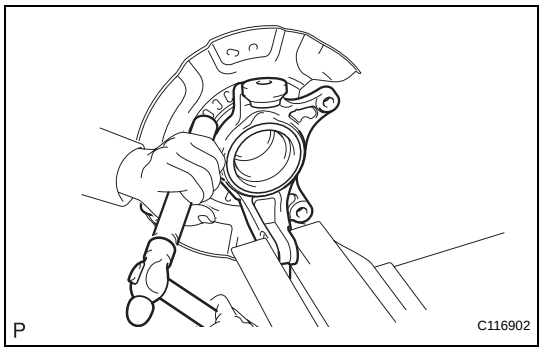
(b) Using SST, remove the axle hub.

SST 09520-00031



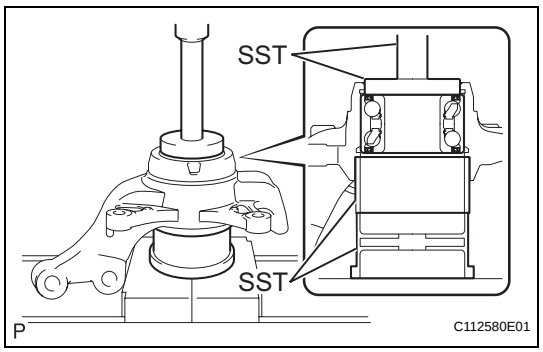
(c) Using SST, remove the hub bearing inner race from the axle hub.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04011, 09957-04010, 09958-04011), 09950-60010 (09951-00370)



3. REMOVE FRONT DISC BRAKE DUST COVER

(a) Remove the dust cover by tapping the back side with a brass bar and hammer.



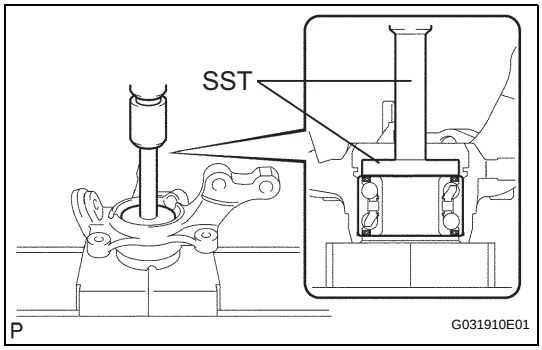
4. REMOVE FRONT AXLE HUB BEARING

(a) Install the removed hub bearing inner race onto the outer side of the hub bearing.

(b) Using SST and a press, remove the hub bearing from the steering knuckle.

SST 09223-15020, 09387-00041 (09387-02010), 09950-60010 (09951-00630), 09950-70010 (09951-07100)

AH



REASSEMBLY

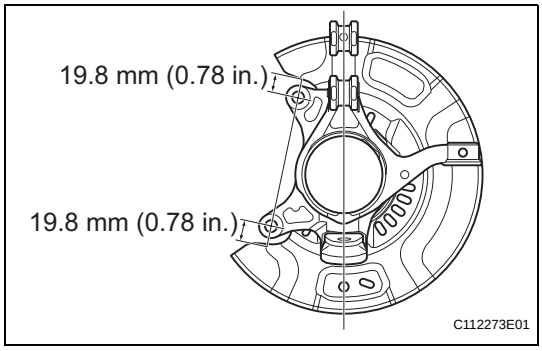
1. INSTALL FRONT AXLE HUB BEARING

(a) Using SST and a press, insert a new hub bearing, with its magnetic rotor side facing the inside of the vehicle, until it reaches the end of the steering knuckle.

SST 09950-60020 (09951-00710), 09950-70010 (09951-07100)

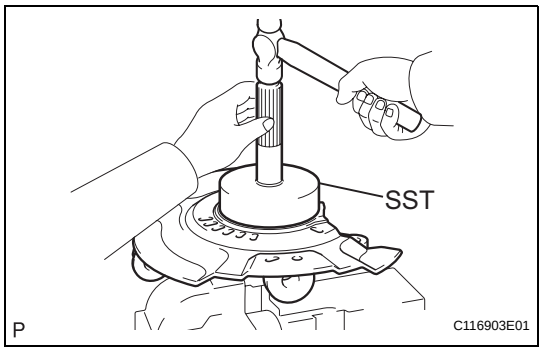
NOTICE:

- **Do not remove the inner race because the hub bearing is built into the oil seal.**
- **Do not use bearings that have been removed.**
- **Do not wipe off any grease that has been applied to new bearings.**
- **Do not bring magnets close to the magnetic rotor surface of the bearing.**
- **Keep the magnetic rotor surface of the bearing free of foreign matter.**



2. INSTALL FRONT DISC BRAKE DUST COVER

(a) Provisionally install a new disc brake dust cover, as shown in the illustration.

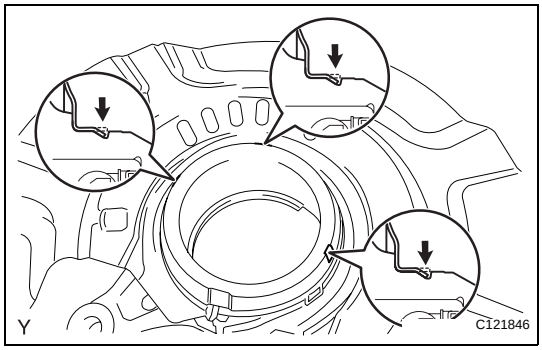


(b) Using SST and a hammer, install the disc brake dust cover.

SST 09223-56010

NOTICE:

- **Uniformly press in the disc brake dust cover while sliding SST slightly.**
- **Surely press in the disc brake dust cover until the pressing-in base.**

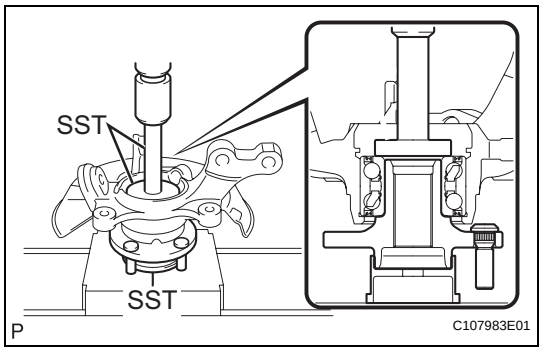


(c) Using a chisel, fix the 3 points on the circumference.

NOTICE:

Securely fold each end into the engagement grooves.

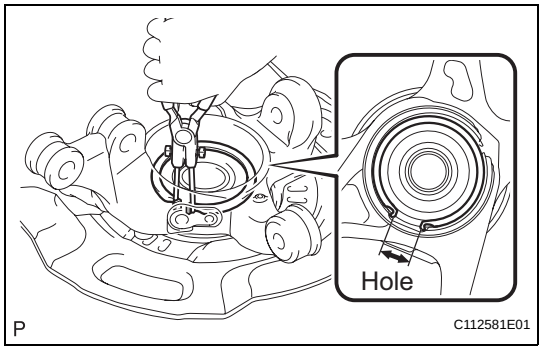
AH



3. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

(a) Using SST and a press, press the axle hub into the steering knuckle.

SST 09608-32010, 09950-60010 (09951-00500), 09950-70010 (09951-07100)

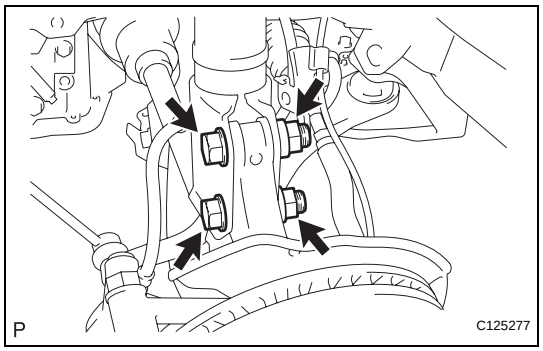


4. INSTALL FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, install a new hole snap ring, as shown in the illustration.

NOTICE:

- **Do not overlap the end of the snap ring and the installation hole in the speed sensor on the knuckle side.**
- **Do not damage the magnetic rotor surface of the bearing when installing the snap ring.**



INSTALLATION

1. INSTALL FRONT AXLE ASSEMBLY

(a) Install the front axle assembly onto the shock absorber.

(b) Install the 2 bolts and 2 nuts.

Torque: 164 N*m (1,672 kgf*cm, 121 ft.*lbf)

HINT:

Keep the nut from rotating while turning the bolt.

(c) Push the front axle out of the vehicle to align the spline of the drive shaft with the front axle and insert the front axle.

NOTICE:

- **Do not push the front axle further out of the vehicle than is necessary.**
- **Do not damage the outboard joint boot.**
- **Check for any foreign matter on the speed sensor rotor and insertion part.**
- **Do not damage the speed sensor rotor.**

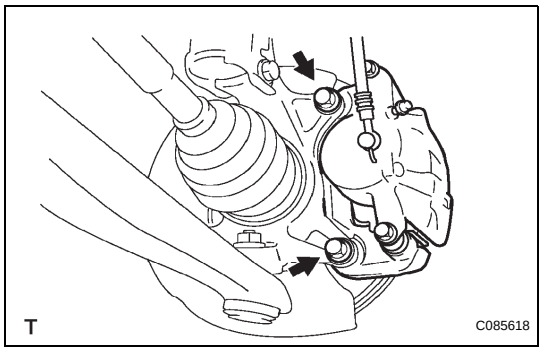
2. INSTALL FRONT LOWER SUSPENSION ARM (See page DS-14)

3. INSTALL FRONT STABILIZER LINK ASSEMBLY (See page DS-14)

4. INSTALL TIE ROD END SUB-ASSEMBLY (See page DS-15)

5. INSTALL FRONT DISC (See page BR-52)

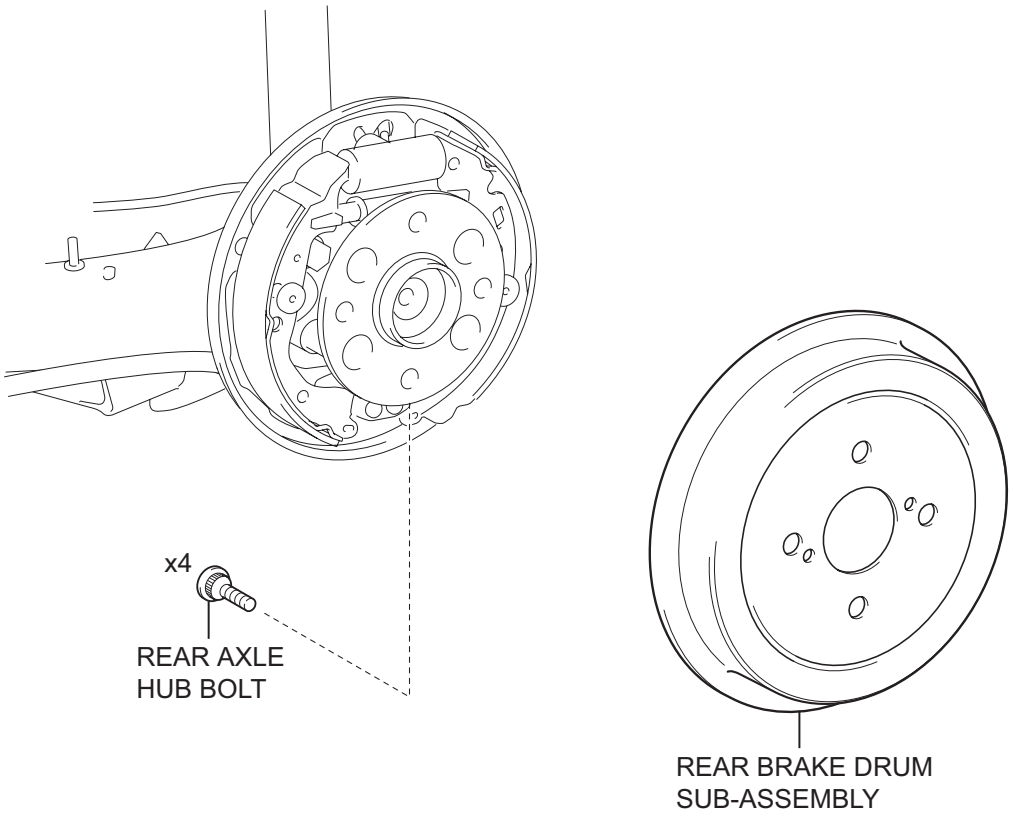
AH



6. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY**
   (a) Install the disc brake caliper onto the steering knuckle.
   Torque: 107 N*m (1,089 kgf*cm, 79 ft.*lbf)
7. **INSTALL FRONT SPEED SENSOR (w/ ABS) (See page DS-15)**
8. **INSTALL FRONT AXLE HUB NUT (See page DS-15)**
9. **INSPECT FRONT AXLE HUB BEARING (See page AH-1)**
10. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
11. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-2)
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
13. **CHECK ABS SENSOR SIGNAL (w/ ABS)** (See page BC-14)

REAR AXLE HUB BOLT

COMPONENTS

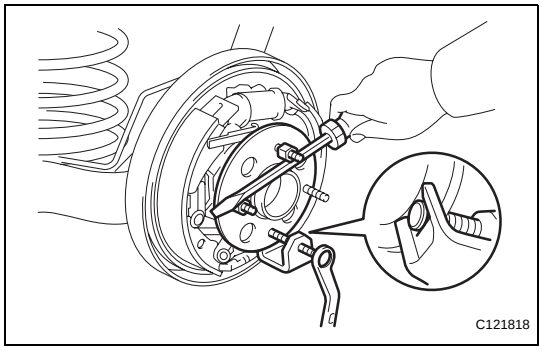


P

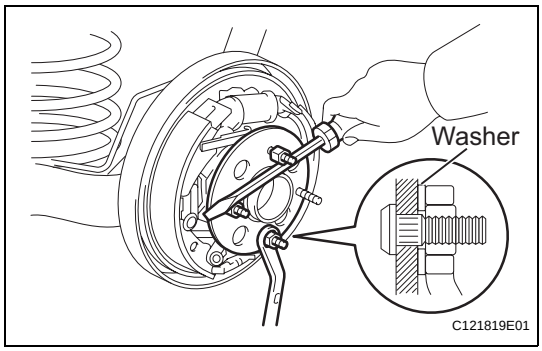
C121817E01

REMOVAL

1. **REMOVE REAR WHEEL**
2. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
3. **REMOVE REAR AXLE HUB BOLT**
   (a) Using SST and a screwdriver or the equivalent, remove the hub bolt.
   SST 09628-10011



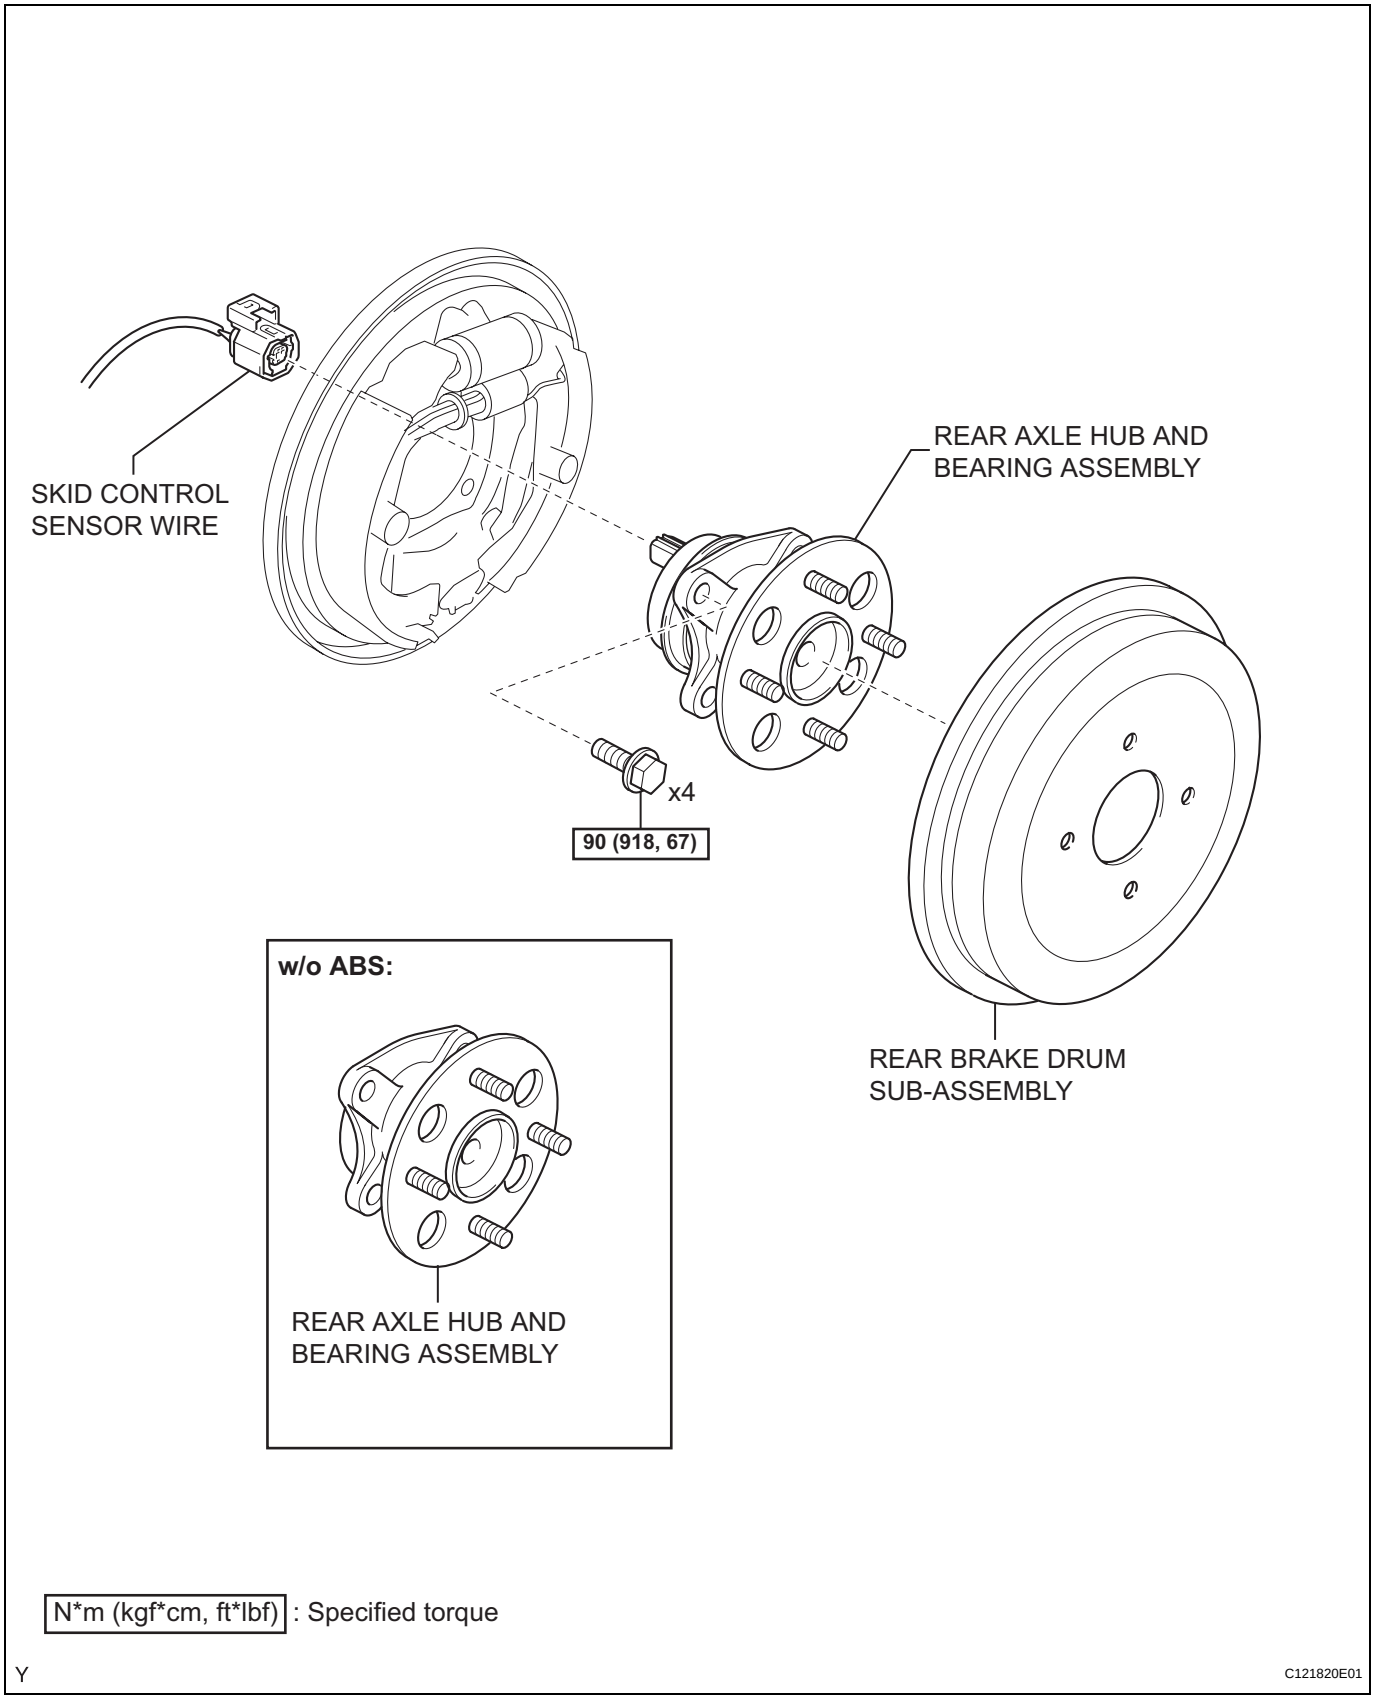
INSTALLATION



1. **INSTALL REAR AXLE HUB BOLT**
   (a) Install the washer and the nut onto a new hub bolt as shown in the illustration.
   (b) Using a screwdriver or the equivalent to hold the hub and bearing, install the hub bolt by tightening the nut.
2. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
3. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)**
4. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REAR AXLE HUB AND BEARING

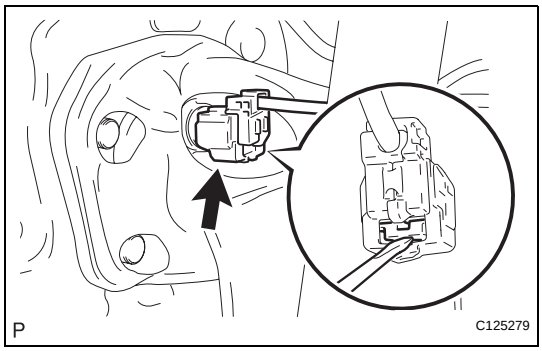
COMPONENTS



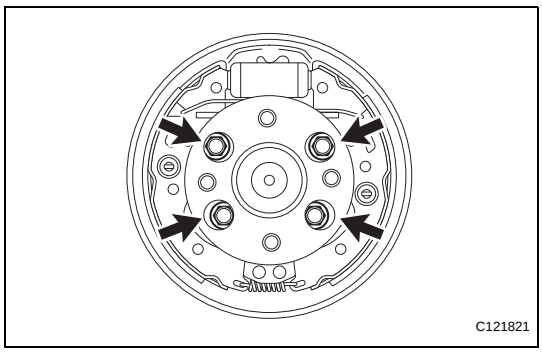
AH

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR WHEEL**
3. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
4. **DISCONNECT SKID CONTROL SENSOR WIRE (w/ ABS)**
   (a) Using a screwdriver, remove the claw of the connector lock portion and disconnect the skid control sensor wire connector.
   NOTICE:
   Do not remove the connector cover from the connector because the skid control sensor wire may be damaged.

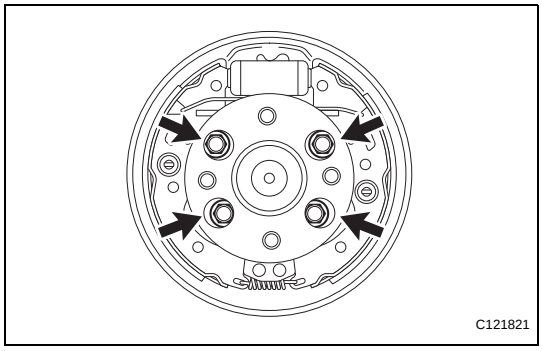


5. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY**
   (a) Remove the 4 bolts and remove the axle hub and bearing from the axle beam.
   NOTICE:
   Suspend the backing plate with a piece of rope.

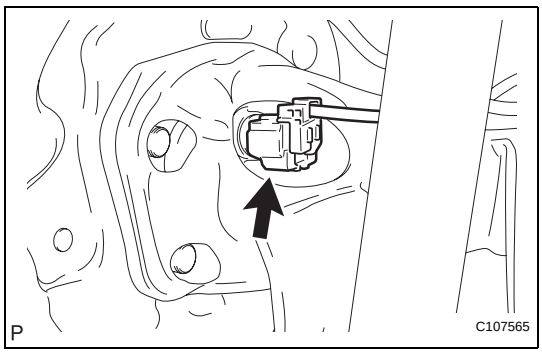


INSTALLATION

1. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY**
   (a) Install the axle hub and bearing onto the axle beam with the 4 bolts.
   Torque: 90 N*m (918 kgf*cm, 67 ft.*lbf)
2. **INSPECT REAR AXLE HUB BEARING (See page AH-2)**



3. **CONNECT SKID CONTROL SENSOR WIRE (w/ ABS)**
   (a) Connect the skid control sensor wire connector.
4. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
5. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)**
6. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
8. **CHECK ABS SENSOR SIGNAL (w/ ABS)**
   (See page BC-14)



AH

SUSPENSION SYSTEM

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

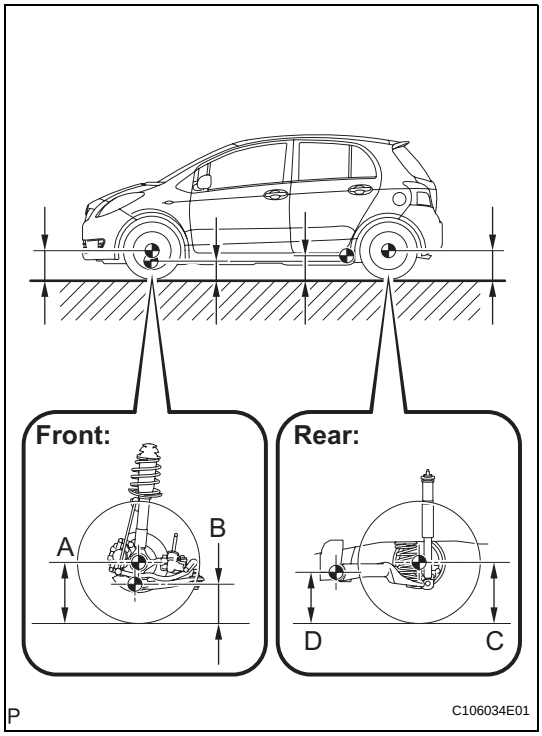
Symptom	Suspected area	See page
Vehicle unstable	1. Tires (Worn or improperly inflated)	TW-1
	2. Front wheel alignment	SP-2
	3. Rear wheel alignment	SP-10
	4. Hub bearing	AH-1
	5. Front shock absorber with coil spring	SP-18
	6. Rear shock absorber	SP-55
	7. Rear coil spring	SP-49
Bottoming	1. Vehicle (Overloaded)	-
	2. Front shock absorber with coil spring	SP-18
	3. Rear shock absorber	SP-55
	4. Rear coil spring	SP-49
Swaying/pitching	1. Tires (Worn or improperly inflated)	TW-1
	2. Front stabilizer bar	SP-42
	3. Front shock absorber with coil spring	SP-18
	4. Rear shock absorber	SP-55
	5. Rear coil spring	SP-49
Front wheel shimmy	1. Tires (Worn or improperly inflated)	TW-1
	2. Wheels (Out of balance)	TW-2
	3. Front wheel alignment	SP-2
	4. Front suspension lower arm	SP-23
	5. Front shock absorber with coil spring	SP-18
	6. Hub bearing	AH-1
Rear wheel shimmy	1. Tires (Worn or improperly inflated)	TW-1
	2. Wheels (Out of balance)	TW-2
	3. Rear wheel alignment	SP-10
	4. Rear axle beam	SP-63
	5. Rear shock absorber	SP-55
	6. Rear coil spring	SP-49
	7. Hub bearing	AH-1
Abnormal tire wear	1. Tires (Worn or improperly inflated)	TW-1
	2. Wheels (Out of balance)	TW-2
	3. Front wheel alignment	SP-2
	4. Rear wheel alignment	SP-10
Vehicle pull	1. Tires (Worn or improperly inflated)	TW-1
	2. Front wheel alignment	SP-2
	3. Rear wheel alignment	SP-10
	4. Brake (Dragging)	BR-4
	5. Steering wheel (Off center)	-

FRONT WHEEL ALIGNMENT

ADJUSTMENT

1. **INSPECT TIRES (See page TW-1)**

2. **MEASURE VEHICLE HEIGHT**



(a) Hatch back:

Vehicle height

Destination	A-B	C-D
Except for Rough Road Package	88 mm (3.46 in.)	20 mm (0.79 in.)
Rough Road Package	68 mm (2.68 in.)	0 mm (0 in.)

Measuring points:

A:
Ground clearance of front wheel center

B:
Ground clearance of lower arm set front bolt center

C:
Ground clearance of rear wheel center

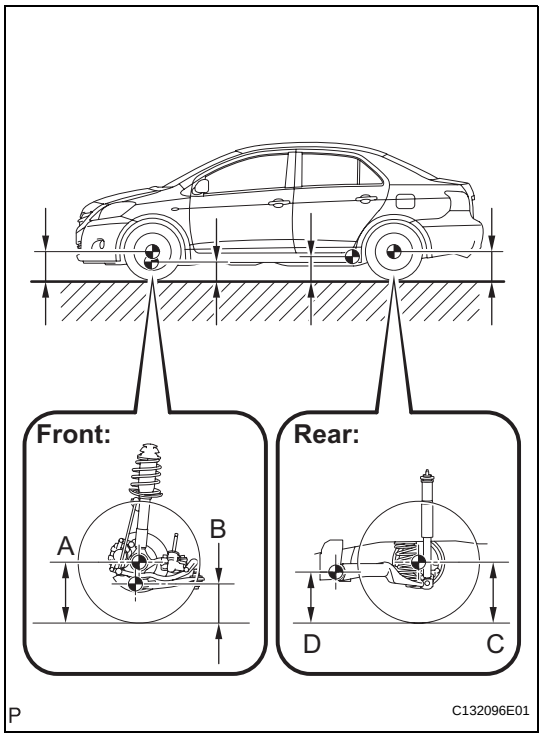
D:
Ground clearance of axle beam set bolt center

NOTICE:

Before inspecting the wheel alignment, check the vehicle height.

HINT:

Bounce the vehicle up and down at the corners to stabilize the suspension before inspecting the vehicle height.



(b) Sedan:

Vehicle height

Destination	A-B	C-D
Except for Rough Road Package	87 mm (3.43 in.)	16 mm (0.63 in.)
Rough Road Package	67 mm (2.64 in.)	-2 mm (-0.08 in.)

Measuring points:

A:
Ground clearance of front wheel center

B:
Ground clearance of lower arm set front bolt center

C:
Ground clearance of rear wheel center

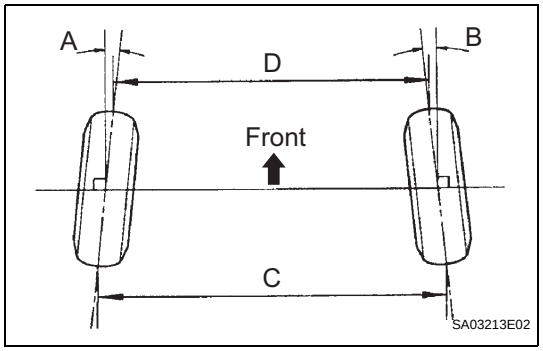
D:
Ground clearance of axle beam set bolt center

NOTICE:

Before inspecting the wheel alignment, check the vehicle height.

SP

HINT:
Bounce the vehicle up and down at the corners to stabilize the suspension before inspecting the vehicle height.



3. INSPECT TOE-IN

Toe-in:

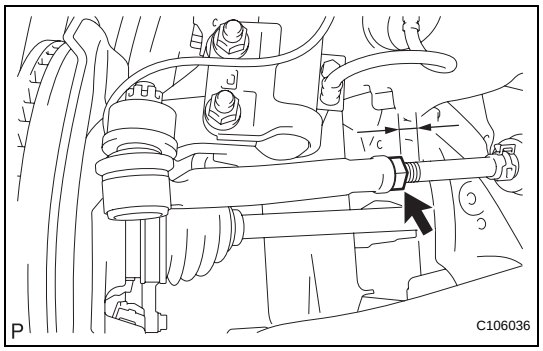
Hatchback

A+B	C-D
0°09' +- 0°13' (0.15° +- 0.22°)	1.5 +- 2.0 mm (0.06 +- 0.08 in.)

Sedan

A+B	C-D
0°12' +- 0°06' (0.20° +- 0.10°)	2.0 +- 2.0 mm (0.08 +- 0.08 in.)

HINT:
Only measure C-D when A+B can not be measured.
If the toe-in is not within the specified value, adjust it at the rack ends.



4. ADJUST TOE-IN

(a) Measure the thread lengths of the right and left rack ends.
Standard:
Difference in thread length of 1.5 mm (0.059 in.) or less

(b) Remove the rack boot set clips.

(c) Loosen the tie rod end lock nuts.

(d) Adjust the rack ends if the difference in thread length between the right and left rack ends is not within the specified range.
(1) Extend the shorter rack end if the measured toe-in deviates toward the outer-side.
(2) Shorten the longer rack end if the measured toe-in deviates toward the inner-side.

(e) Turn the right and left rack ends by an equal amount to adjust the toe-in.
HINT:
Try to adjust the toe-in to the center of the specified range.

(f) Make sure that the lengths of the right and left rack ends are the same.
Toe-in

Body Type	Toe-in
Hatchback	1.5 +- 1.0 mm (0.06 +- 0.04 in.)
Sedan	2.0 +- 1.0 mm (0.08 +- 0.04 in.)

(g) Tighten the tie rod end lock nuts to the specified torque.
Torque: 75 N*m (760 kgf*cm, 55 ft.*lbf)

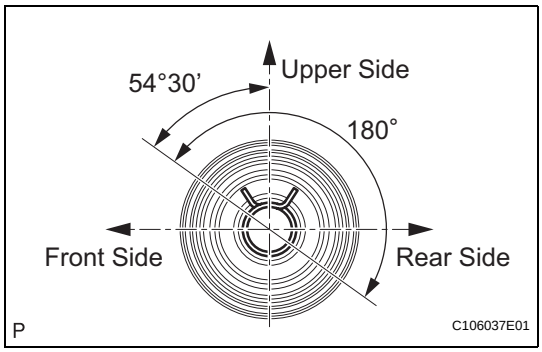
SP

NOTICE:
Provisionally tighten the lock nut while holding the hexagonal part of the steering rack end so that the lock nut and the steering rack end do not turn together. Hold the width across flat of the tie rod end and tighten the lock nut.

(h) Place the boots on the seats.

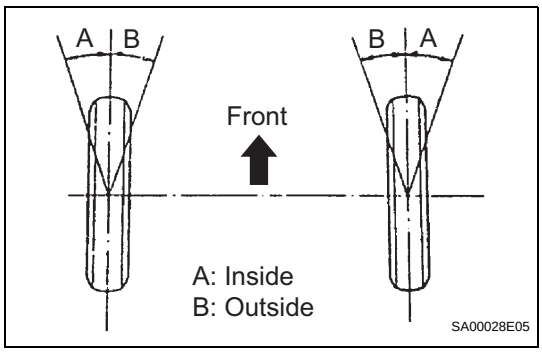
(i) Using pliers, install the clip as shown in the illustration.

NOTICE:
Make sure that the boots are not twisted.



5. INSPECT WHEEL TURNING ANGLE

(a) Fully turn the steering wheel left and right, and measure the wheel turning angle.

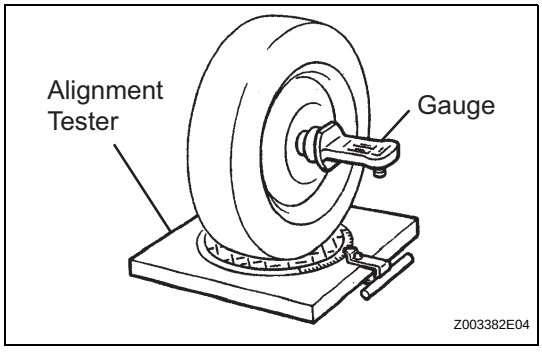


Wheel turning angle

Destination	Inside Wheel	Outside Wheel (Reference)
Except for Rough Road Package	40°57' +- 2° (40.95° +- 2°)	35°17' (35.29°)
Rough Road Package	41°22' +- 2° (41.37° +- 2°)	35°45' (35.75°)

If the right and left inside wheel angles are not within the specified range, check the right and left rack end lengths.

SP



6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Put the front wheel on the center of the alignment tester.

(b) Remove the wheel cap.

(c) Set the camber-caster-steering axis inclination gauge at the center of the axle hub or drive shaft.

(d) Inspect the camber, caster and steering axis inclination.

Camber, caster and steering axis inclination: Hatchback

Destination	Camber	Caster	Steering Axis Inclination (Reference)
Except for Rough Road Package	-0°10' +- 45' (-0.17°+- 0.75°)	4°46' +- 45' (4.77°+- 0.75°)	11°18' (11.30°)

Destination	Camber	Caster	Steering Axis Inclination (Reference)
Rough Road Package	0°06' +- 45' (0.10°+- 0.75°)	4°27' +- 45' (4.45°+- 0.75°)	10°47' (10.78°)

Sedan

Destination	Camber	Caster	Steering Axis Inclination (Reference)
Except for Rough Road Package	-0°10' +- 45' (-0.17°+- 0.75°)	4°39' +- 45' (4.65°+- 0.75°)	11°16' (11.27°)
Rough Road Package	0°06' +- 45' (0.10°+- 0.75°)	4°23' +- 45' (4.38°+- 0.75°)	10°47' (10.78°)

NOTICE:
- **Perform the inspection while the vehicle is empty (without a spare tire or tools on board).**
- **The tolerance for the difference between the left and right wheels is 30' (0.5°) or less for both the camber and caster.**

(e) Remove the camber-caster-steering axis inclination gauge and attachment.

(f) Install the wheel cap.

If the caster and steering axis inclination are not within the specified values after the camber has been correctly adjusted, recheck the suspension parts for damage and wear.

7. ADJUST CAMBER

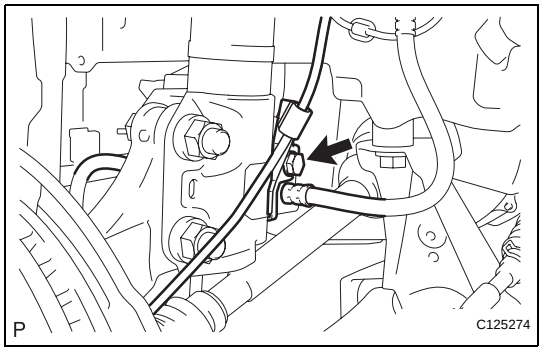
NOTICE:

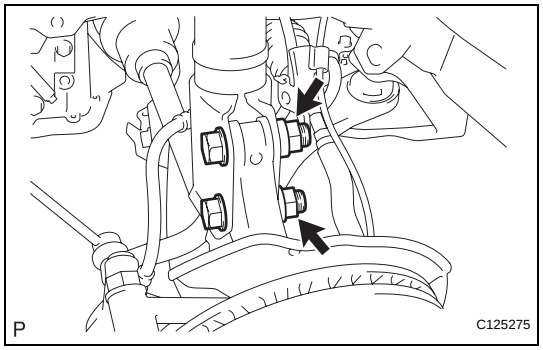
Inspect the toe-in after the camber has been adjusted.

(a) Remove the front wheel.

(b) w/ ABS:

(1) Remove the bolt and separate the speed sensor and flexible hose.





(c) Remove the 2 nuts on the lower side of the shock absorber.

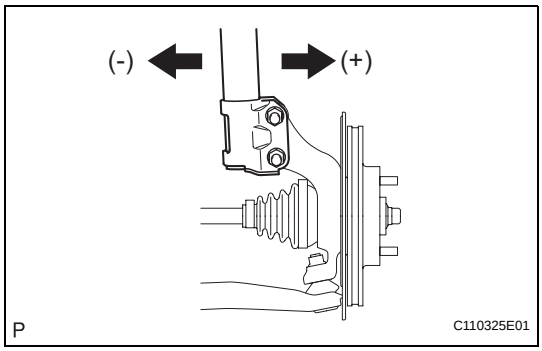
HINT:

Keep the bolt from rotating while loosening and removing the nuts.

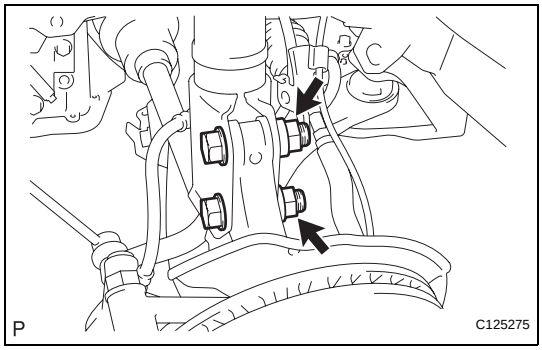
(d) Clean the installation surfaces of the shock absorber and steering knuckle.

(e) Provisionally install the 2 nuts (Step A).

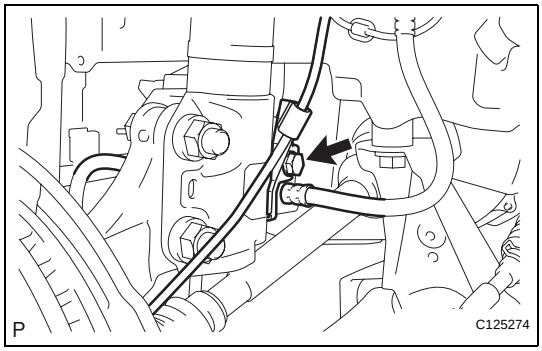
SP



(f) Fully push or pull the axle hub in the direction of the required adjustment (Step B).

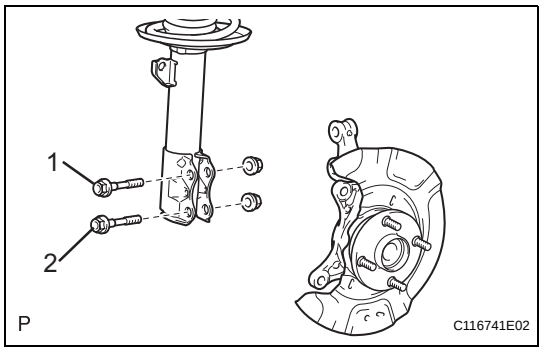


(g) Tighten the 2 nuts.
Torque: 164 N*m (1,672 kgf*cm, 121 ft.*lbf)
HINT:
Keep the bolt from rotating while loosening and removing the nuts.



(h) w/ ABS:
(1) Install the flexible hose and speed sensor with the bolt.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
NOTICE:
Install the flexible hose and speed sensor without twisting them.

(i) Install the front wheel.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



(j) Check the camber.
If the measured value is not within the specification, calculate the required adjustment amount using the formula below.
(Camber adjustment amount) = Center of specified range - Measured value
Check the combination of installed bolts. Select appropriate bolts from the table below to adjust the camber to within the specified range.
HINT:
Try to adjust the camber to the center of the specified range.

Move axle toward (+) in step (B)	Refer to table (1) (Move axle toward positive side)
Move axle toward (-) in step (B)	Refer to table (2) (Move axle toward negative side)

SP

(k) Table (1) (Move the axle toward the positive side).

P

C111317E08

The body and suspension may be damaged if the camber is not correctly adjusted in accordance with the above table.

NOTICE:

Replace the nut with a new one when replacing the bolt.

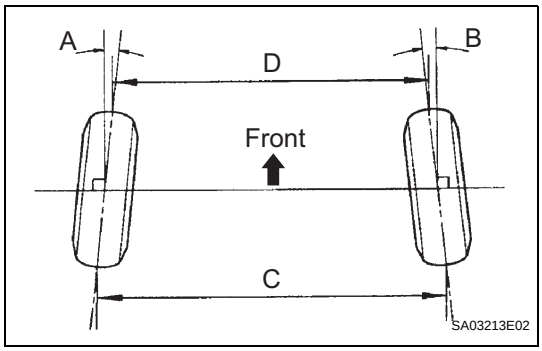
SP

(m) Repeat the steps mentioned above. At step (A), replace 1or 2 selected bolts.
HINT:
Replace one bolt at a time when replacing 2 bolts.

REAR WHEEL ALIGNMENT

INSPECTION

1. **INSPECT TIRES (See page TW-1)**
2. **MEASURE VEHICLE HEIGHT (See page SP-2)**
3. **INSPECT TOE-IN**
   Toe-in:
   Hatchback



Destination	Tire Size	A+B	C-D
Except for Rough Road Package	175/65R14	0°17' +- 0°20' (0.28°+- 0.33°)	2.8 +- 3.0 mm (0.11 +- 0.12 in.)
	185/60R15	0°17' +- 0°20' (0.28°+- 0.33°)	2.9 +- 3.0 mm (0.11 +- 0.12 in.)
Rough Road Package	175/65R14	0°13' +- 0°20' (0.22°+- 0.33°)	2.2 +- 3.0 mm (0.09 +- 0.12 in.)
	185/60R15	0°13' +- 0°20' (0.22°+- 0.33°)	2.2 +- 3.0 mm (0.09 +- 0.12 in.)

Sedan

Destination	Tire Size	A+B	C-D
Except for Rough Road Package	175/65R14	0°17' +- 0°20' (0.28°+- 0.33°)	2.8 +- 3.0 mm (0.11 +- 0.12 in.)
	185/60R15	0°17' +- 0°20' (0.28°+- 0.33°)	2.9 +- 3.0 mm (0.11 +- 0.12 in.)
Rough Road Package	175/65R14	0°13' +- 0°20' (0.22°+- 0.33°)	2.1 +- 3.0 mm (0.08 +- 0.12 in.)
	185/60R15	0°13' +- 0°20' (0.22°+- 0.33°)	2.2 +- 3.0 mm (0.09 +- 0.12 in.)

HINT:
Only measure C-D when A+B can not be measured.

SP

4. **INSPECT CAMBER**
   (a) Install the camber-caster-kingpin gauge and position the rear wheel on the alignment tester.
   (b) Inspect the camber.
   Camber:
   Hatchback

Destination	Camber
Except for Rough Road Package	-0°57' +- 45' (-0.95°+- 0.75°)
Rough Road Package	-0°54' +- 45' (-0.90°+- 0.75°)

Sedan

Destination	Camber
Except for Rough Road Package	**-0°56' +- 45' (-0.93°+- 0.75°)**
Rough Road Package	**-0°54' +- 45' (-0.90°+- 0.75°)**

NOTICE:
The tolerance for the difference between the left and right wheels is 30' (0.5°) or less for both cambers.
If the camber is not within the specified range, inspect the suspension parts and replace them if necessary.

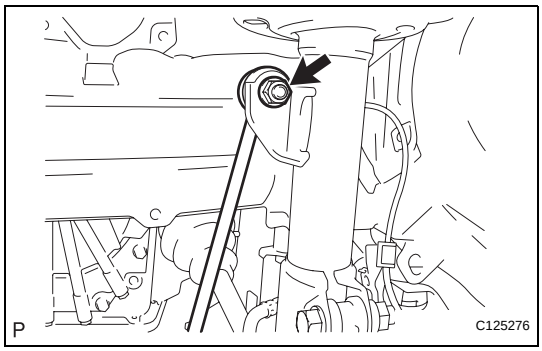
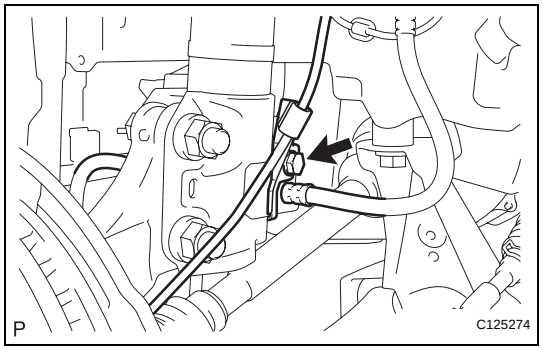
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WIPER ARM HEAD CAP**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
5. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
6. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
7. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
   Hatchback: (See page WW-18)
   Sedan: (See page WW-10)
9. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
10. **REMOVE FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-19)
    Sedan: (See page WW-10)
11. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-122)**
12. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**
13. **REMOVE OUTER COWL TOP PANEL**
    Hatchback: (See page EM-123)
    Sedan: (See page EM-123)
14. **REMOVE FRONT WHEEL**
15. **SEPARATE FRONT STABILIZER LINK ASSEMBLY**
    (a) Remove the nut and separate the stabilizer link from the shock absorber.
    HINT:
    If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.



SP

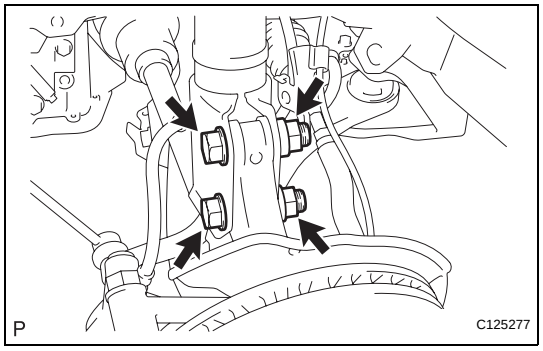


16. SEPARATE FRONT FLEXIBLE HOSE

(a) w/ ABS:
  (1) Remove the bolt and separate the speed sensor and flexible hose.

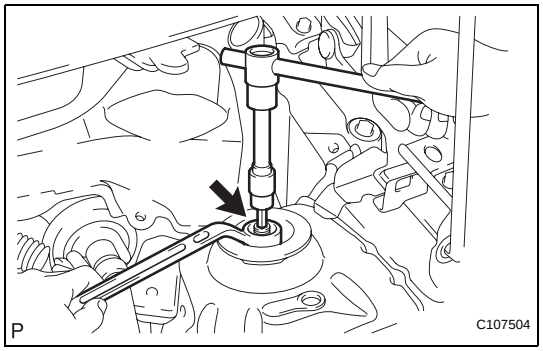
(b) w/o ABS:
  (1) Remove the bolt and separate the flexible hose.

17. REMOVE FRONT SUSPENSION SUPPORT DUST COVER



18. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Remove the 2 nuts and 2 bolts and separate the shock absorber with coil spring from the steering knuckle.
HINT:
Keep the bolt from rotating while loosening and removing the nuts.



(b) Using a socket hexagon wrench 6, fix the shock absorber rod and remove the nut.

(c) Remove No. 2 suspension support .

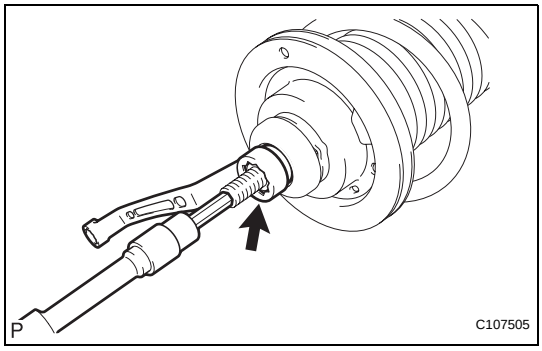
(d) Remove the front shock absorber with coil spring from the vehicle.

DISASSEMBLY

1. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

2. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Using a socket hexagon wrench 6, fix the shock absorber rod and loosen the nut.

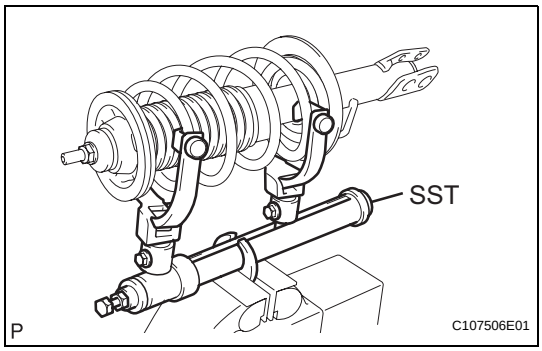


(b) Using SST, compress the coil spring.

SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not use an impact wrench. It will damage SST.



(c) Remove the nut.

3. REMOVE FRONT UPPER COIL SPRING SEAT

(a) Remove the upper coil spring seat with the strut mounting bearing and spring bumper from the shock absorber.

4. REMOVE FRONT SPRING BUMPER

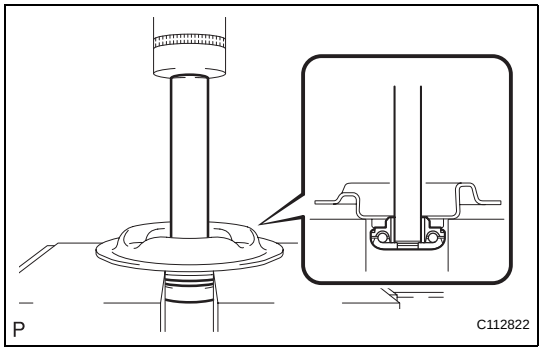
(a) Remove the spring bumper from the upper coil spring seat.

5. REMOVE FRONT UPPER COIL SPRING INSULATOR

6. REMOVE FRONT COIL SPRING

7. REMOVE STRUT MOUNTING BEARING

(a) Using a brass bar and press, remove the strut mounting bearing from the upper coil spring seat.



INSPECTION

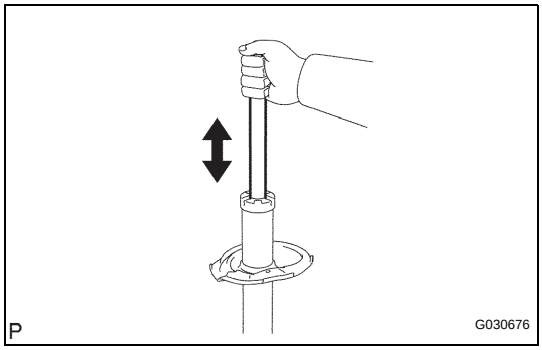
1. INSPECT FRONT SHOCK ABSORBER

(a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or abnormal sound during the operation.

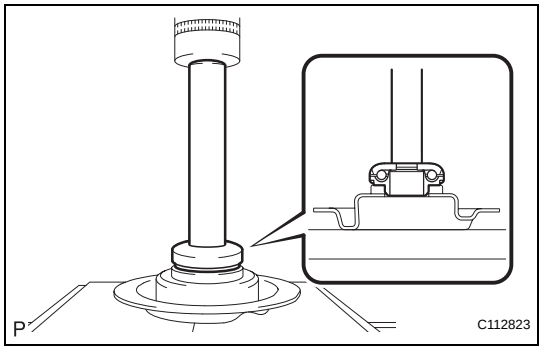
If there is any abnormality, replace the shock absorber with a new one.

NOTICE:

When disposing of the shock absorber, see DISPOSAL on page SP-21.



SP



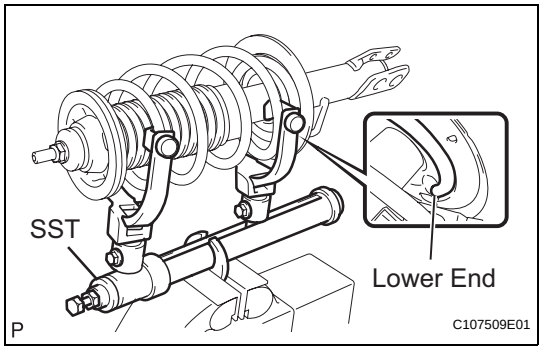
REASSEMBLY

1. INSTALL STRUT MOUNTING BEARING

(a) Using a brass bar and press, install the strut mounting bearing onto the coil spring seat upper.

NOTICE:

The strut mounting bearing must be securely installed.



2. INSTALL FRONT COIL SPRING

(a) Using SST, compress the coil spring.

SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not use an impact wrench. It will damage SST.

(b) Install the coil spring onto the shock absorber.

NOTICE:

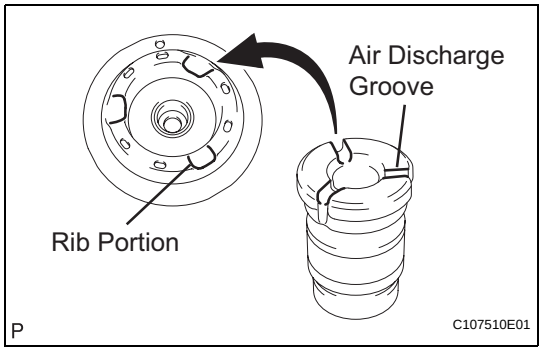
A spring of a smaller diameter should be installed in the upward direction.

HINT:

Fit the lower end of the coil spring into the gap of the absorber lower seat.

3. INSTALL FRONT UPPER COIL SPRING INSULATOR

4. INSTALL FRONT SPRING BUMPER



(a) Install the spring bumper onto the upper coil spring seat with the air discharge groove of the spring bumper and the rib portion of the upper coil spring seat aligned.

NOTICE:

Securely insert the spring bumper into the upper coil spring seat.

5. INSTALL FRONT UPPER COIL SPRING SEAT

(a) Install the upper coil spring seat with the strut mounting bearing and spring bumper onto the shock absorber.

6. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

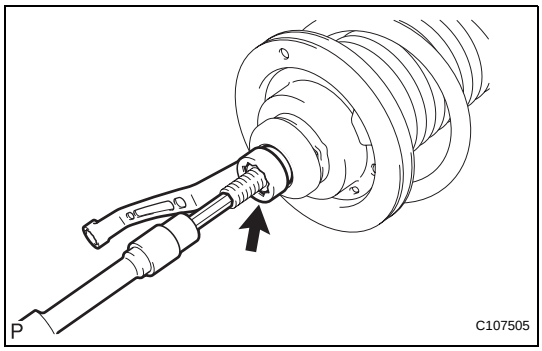
(a) Provisionally tighten a new nut.

(b) Remove SST from the front coil spring.

NOTICE:

Do not use an impact wrench. It will damage SST.

SP



(c) Using a socket hexagon wrench 6, fix the shock absorber rod and tighten the nut.
Torque: 33 N*m (340 kgf*cm, 25 ft.*lbf)

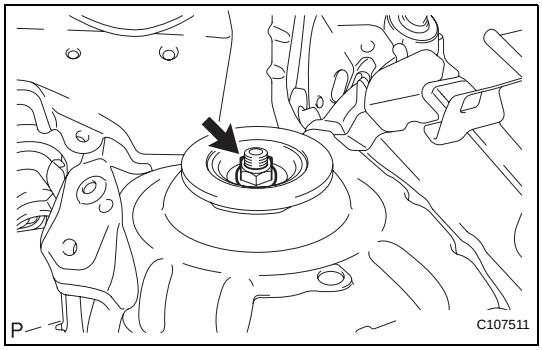
7. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

INSTALLATION

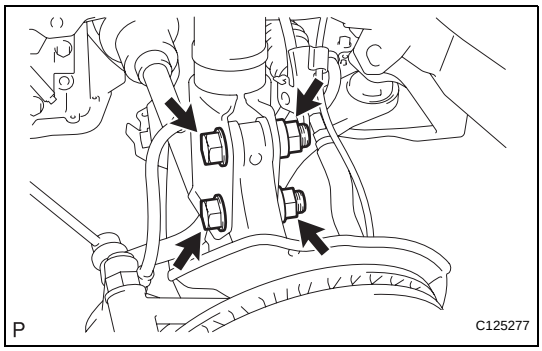
1. TEMPORARILY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Provisionally tighten a new nut through No. 2 suspension support.

(b) Install the front shock absorber with coil spring onto the steering knuckle.



(c) Install the 2 bolts and 2 nuts.
Torque: 164 N*m (1,672 kgf*cm, 121 ft.*lbf)
HINT:
Keep the bolt from rotating while loosening and removing the nuts.



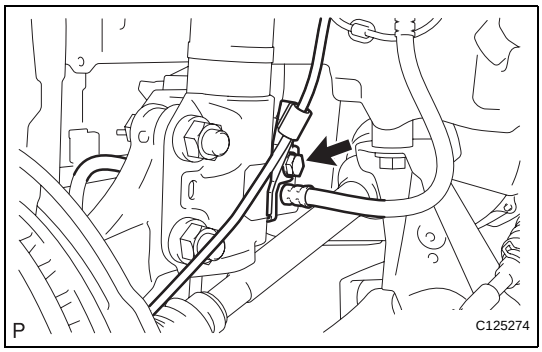
2. INSTALL FRONT FLEXIBLE HOSE

(a) w/ ABS:

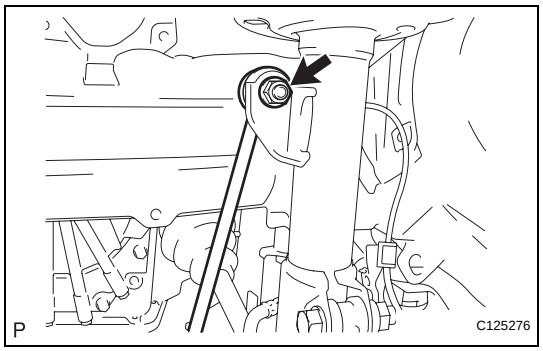
(1) Install the flexible hose and speed sensor with the bolt.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
NOTICE:
Install the flexible hose and speed sensor without twisting them.

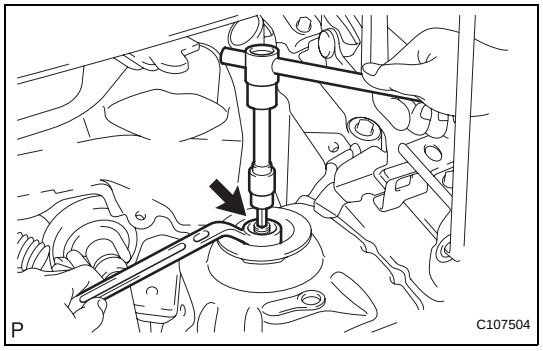
(b) w/o ABS:

(1) Install the flexible hose with the bolt.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
NOTICE:
Install the flexible hose without twisting them.



SP





3. **INSTALL FRONT STABILIZER LINK ASSEMBLY**
   (a) Install the stabilizer link with the nut.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.

4. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

5. **FULLY TIGHTEN FRONT SHOCK ABSORBER WITH COIL SPRING**
   (a) Using a socket hexagon wrench 6, fix the shock absorber rod and tighten the nut.
   Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

6. **INSTALL FRONT SUSPENSION SUPPORT DUST COVER**

7. **INSTALL OUTER COWL TOP PANEL**
   Hatchback: (See page EM-146)
   Sedan: (See page EM-147)

8. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-147)**

9. **INSTALL FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-148)**

10. **INSTALL FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-21)
    Sedan: (See page WW-12)

11. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**

12. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
    Hatchback: (See page WW-21)
    Sedan: (See page WW-12)

13. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**

14. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**

15. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**

16. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH**
    Hatchback: (See page WW-22)
    Sedan: (See page WW-13)

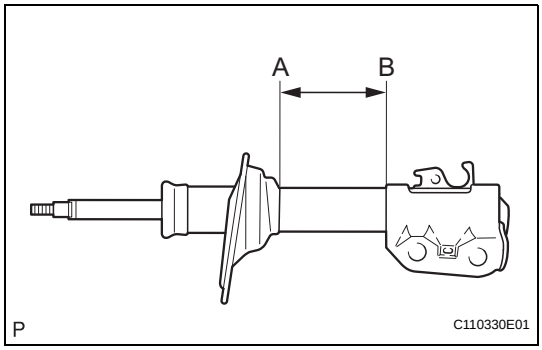
17. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH**
    Hatchback: (See page WW-23)
    Sedan: (See page WW-14)

18. **INSTALL FRONT WIPER ARM HEAD CAP**
Hatchback: (See page WW-23)
Sedan: (See page WW-15)

19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

20. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(See page SP-2)

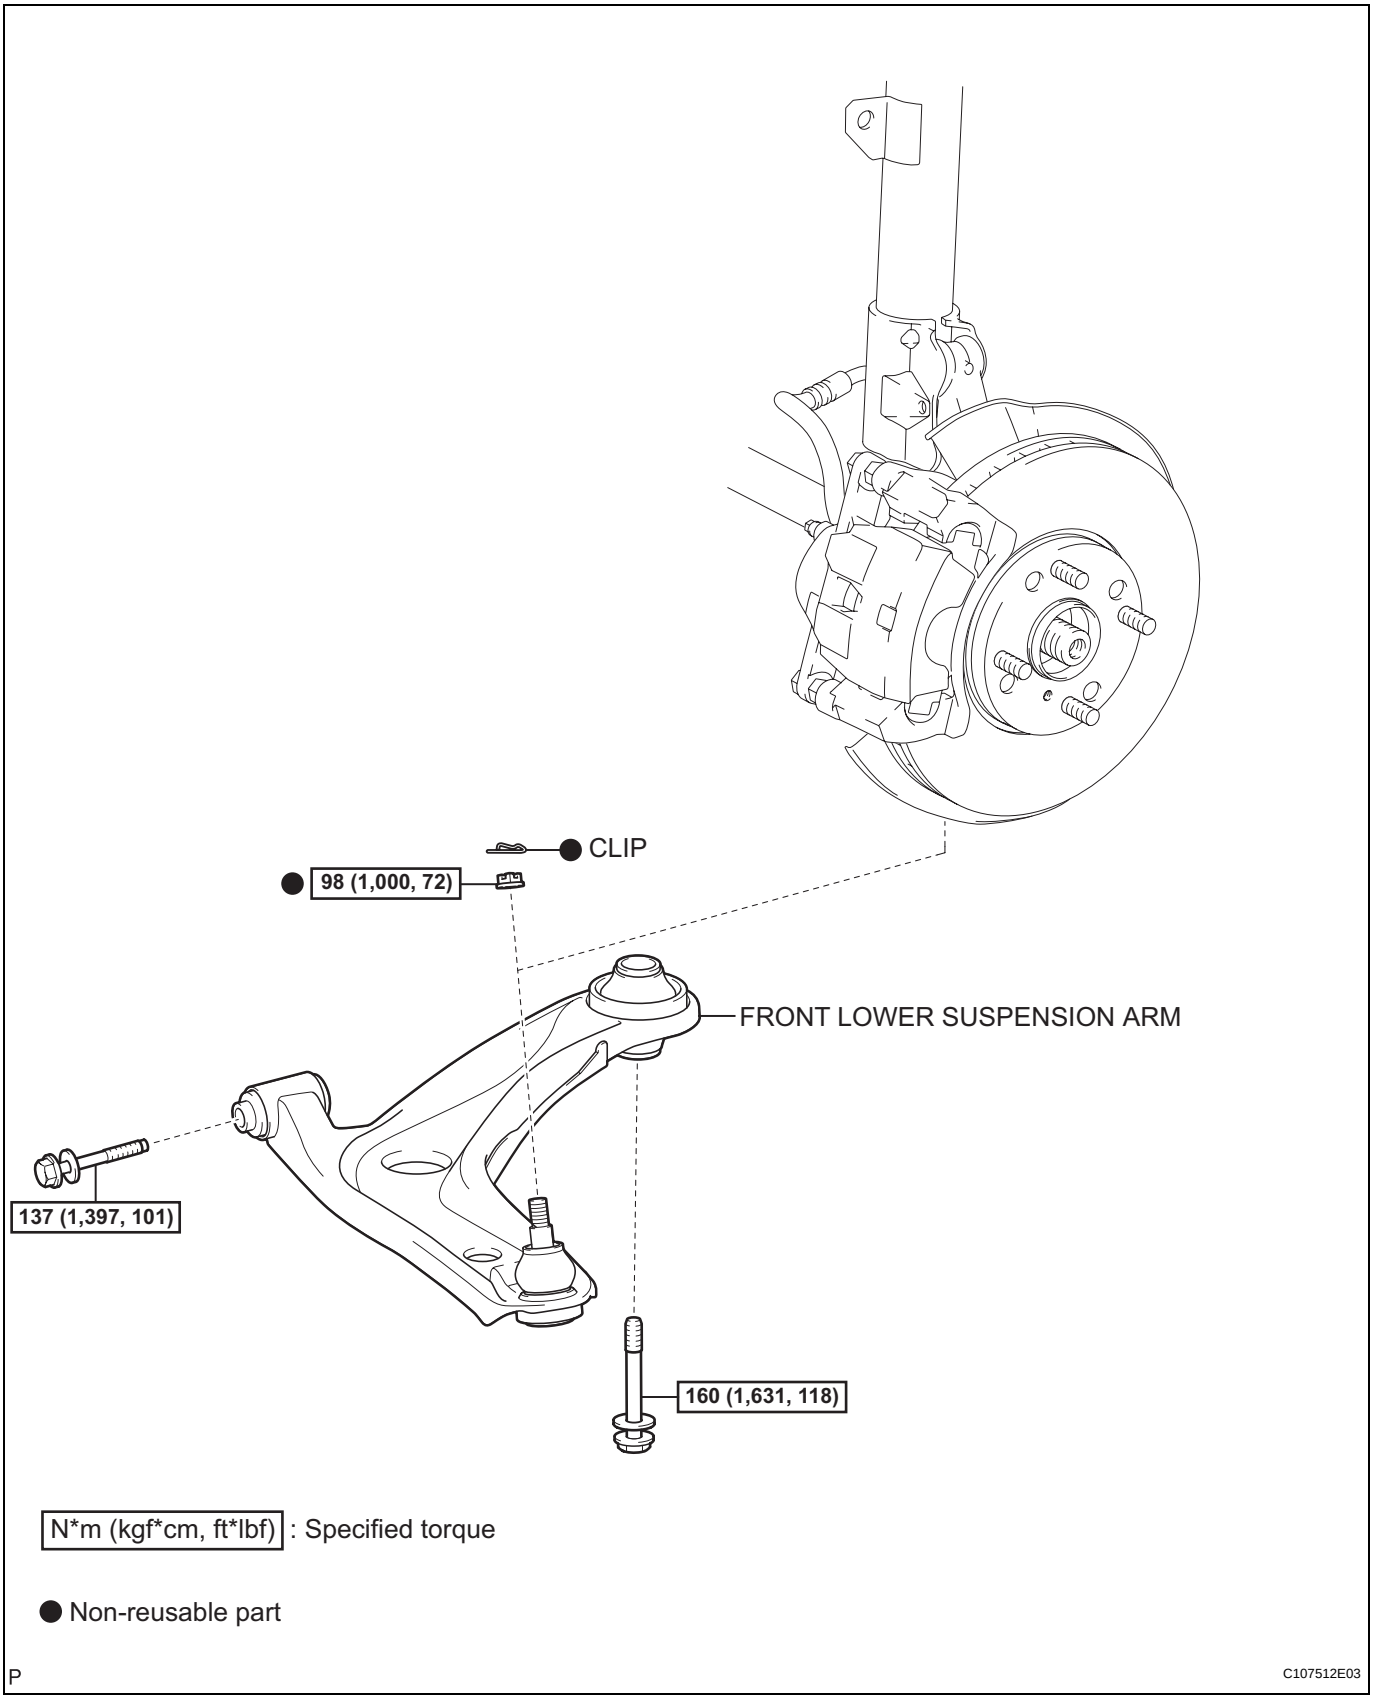
DISPOSAL



1. **DISPOSE OF FRONT SHOCK ABSORBER**
   (a) Fully extend the shock absorber piston rod, and fix it at an angle in a vise or similar tool.
   (b) Using a drill or similar tool, slowly make a hole in the area (A-B) shown in the illustration to discharge the gas inside.
   NOTICE:
   - **The gas is colorless, odorless and harmless.**
   - **Since the discharging gas may cause chips to scatter, cover the drill with a shop rag or piece of cloth when making the hole.**

FRONT LOWER SUSPENSION ARM (for LH Side)

COMPONENTS



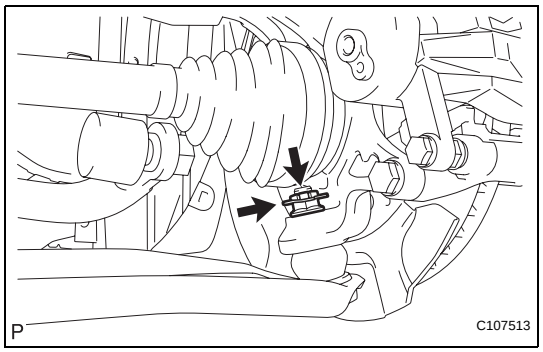
SP

REMOVAL

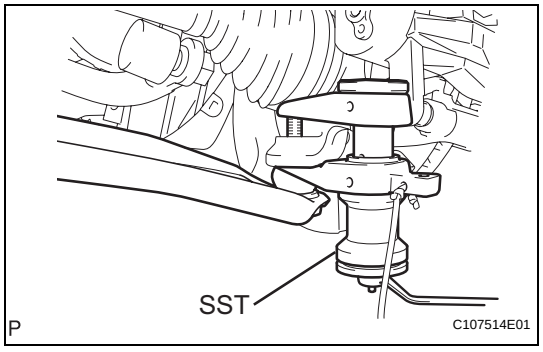
1. REMOVE FRONT WHEEL

2. REMOVE FRONT LOWER SUSPENSION ARM

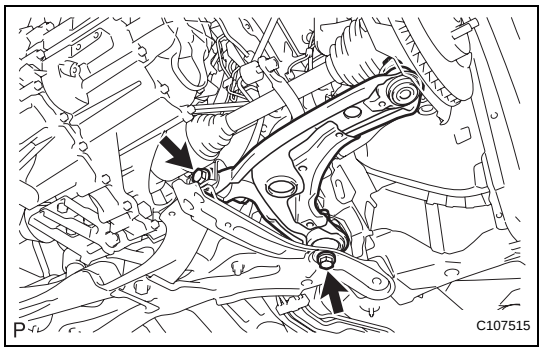
(a) Remove the clip and castle nut.



(b) Using SST, separate the lower arm.
SST 09628-00011
NOTICE:
- **Do not damage the lower arm dust cover.**
- **Suspend SST with a piece of string or the equivalent.**



(c) Remove the 2 bolts and lower arm.



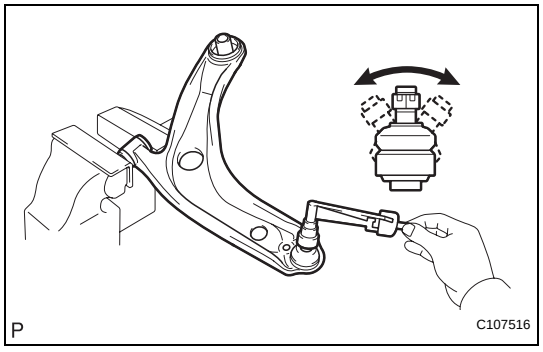
INSPECTION

1. INSPECT FRONT LOWER SUSPENSION ARM

(a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.

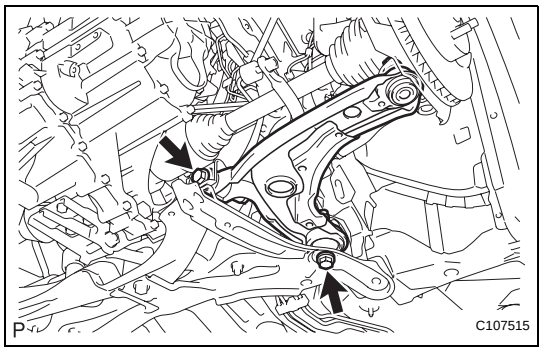
(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
Torque: 0.78 to 3.43 N*m (8 to 35 kgf*cm, 6.9 to 30 in.*lbf)

(c) Check for any cracks and grease leakage on the ball joint dust cover.



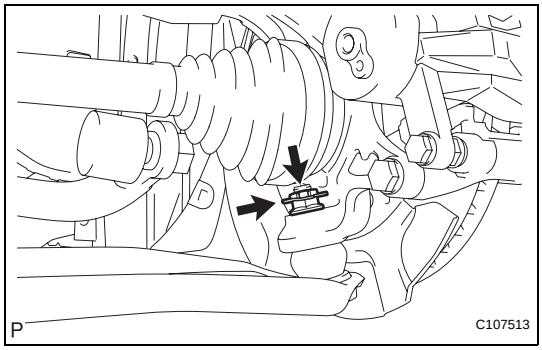
SP

INSTALLATION



1. TEMPORARILY TIGHTEN FRONT LOWER SUSPENSION ARM

(a) Provisionally tighten the lower arm with the 2 bolts.



(b) Install the lower arm onto the steering knuckle with a new castle nut.
Torque: 98 N*m (1,000 kgf*cm, 72 ft.*lbf)
NOTICE:
If the holes for the clip are not aligned, tighten the nut by a further turn of up to 60°.

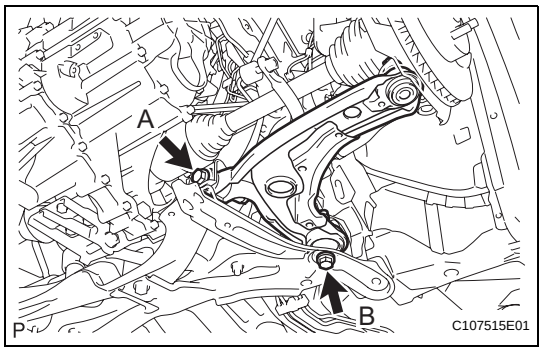
(c) Install a new clip.

2. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

3. STABILIZE SUSPENSION

(a) Lower the vehicle from the jack.

(b) Bounce the vehicle up and down several times to stabilize the suspension.



4. FULLY TIGHTEN FRONT LOWER SUSPENSION ARM

(a) Fully tighten the 2 bolts.
Torque: Bolt A
137 N*m (1,397 kgf*cm, 101 ft.*lbf)
Bolt B
160 N*m (1,631 kgf*cm, 118 ft.*lbf)

5. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-2)

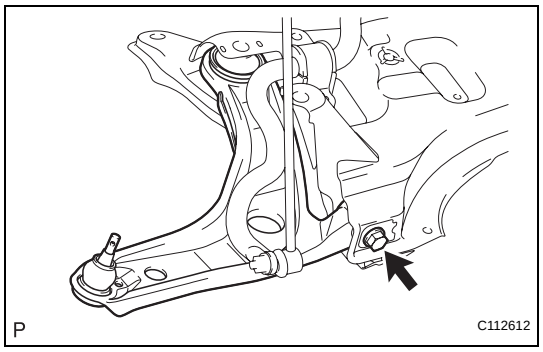
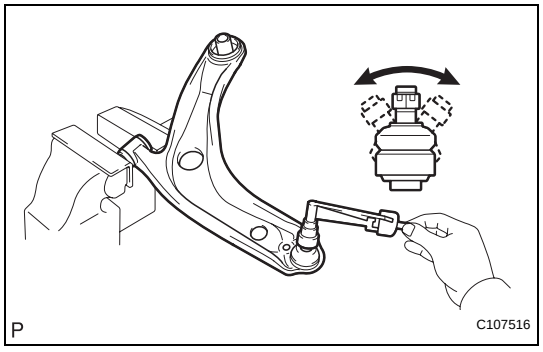
3. **REMOVE FRONT WIPER ARM HEAD CAP**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
6. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
7. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
8. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
9. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
   Hatchback: (See page WW-18)
   Sedan: (See page WW-10)
10. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
11. **REMOVE FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-19)
    Sedan: (See page WW-10)
12. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-122)**
13. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**
14. **REMOVE OUTER COWL TOP PANEL**
    Hatchback: (See page EM-123)
    Sedan: (See page EM-123)
15. **POSITION WHEELS FACING STRAIGHT AHEAD**
16. **REMOVE FRONT WHEEL**
17. **REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-32)**
18. **REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-74)**

SP

19. **REMOVE STEERING COLUMN HOLE COVER SUB-ASSEMBLY (See page PS-75)**
20. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)**
21. **SEPARATE TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
22. **SEPARATE FRONT LOWER SUSPENSION ARM LH (See page DS-4)**
23. **SEPARATE FRONT LOWER SUSPENSION ARM RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
24. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)**
25. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
26. **SUSPEND ENGINE ASSEMBLY (See page PS-75)**
27. **REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-76)**
28. **REMOVE FRONT LOWER SUSPENSION ARM RH**
    (a) Remove the bolt and lower arm.

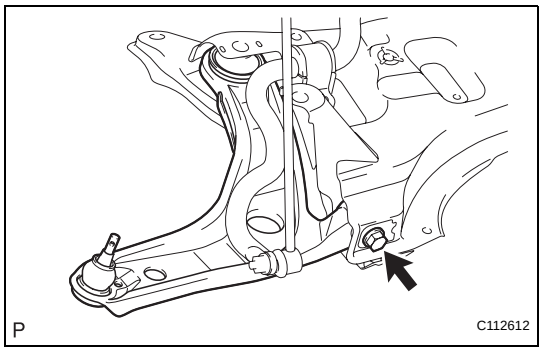


INSPECTION



1. **INSPECT FRONT LOWER SUSPENSION ARM**
   (a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.
   (b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
   Torque: 0.78 to 3.43 N*m (8 to 35 kgf*cm, 6.9 to 30 in.*lbf)
   (c) Check for any cracks and grease leakage on the ball joint dust cover.

SP



INSTALLATION

1. **TEMPORARILY TIGHTEN FRONT LOWER SUSPENSION ARM RH**
   (a) Install the lower arm onto the crossmember and provisionally tighten the bolt.
2. **INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-77)**
3. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
4. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.
5. **INSTALL FRONT LOWER SUSPENSION ARM LH (See page DS-14)**
6. **INSTALL FRONT LOWER SUSPENSION ARM RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.

18. **REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-74)**

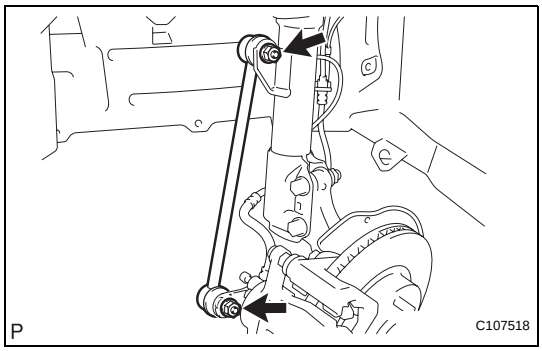
19. **REMOVE STEERING COLUMN HOLE COVER SUB-ASSEMBLY (See page PS-75)**

20. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)**

21. **SEPARATE TIE ROD END SUB-ASSEMBLY RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.

22. **SEPARATE FRONT LOWER SUSPENSION ARM LH (See page DS-4)**

23. **SEPARATE FRONT LOWER SUSPENSION ARM RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.



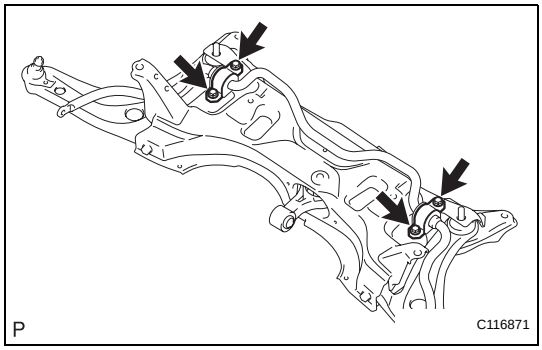
24. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH**
(a) Remove the 2 nuts and stabilizer link
HINT:
If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.

25. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.

26. **SUSPEND ENGINE ASSEMBLY (See page PS-75)**

27. **REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-76)**

28. **REMOVE POWER STEERING GEAR (See page PS-76)**

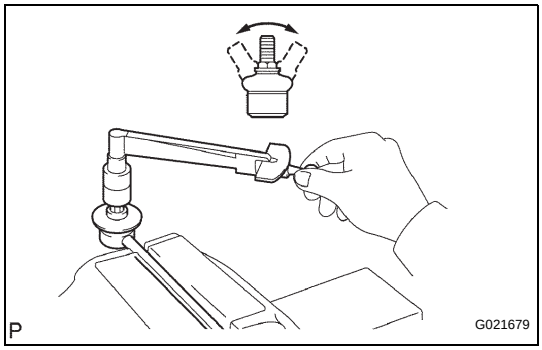


29. **REMOVE FRONT STABILIZER BRACKET LH**
(a) Remove the 2 bolts and the stabilizer bracket.

30. **REMOVE FRONT STABILIZER BRACKET RH**
(a) Remove the 2 bolts and the stabilizer bracket.

31. **REMOVE FRONT STABILIZER BAR**

32. **REMOVE FRONT STABILIZER BAR BUSH**

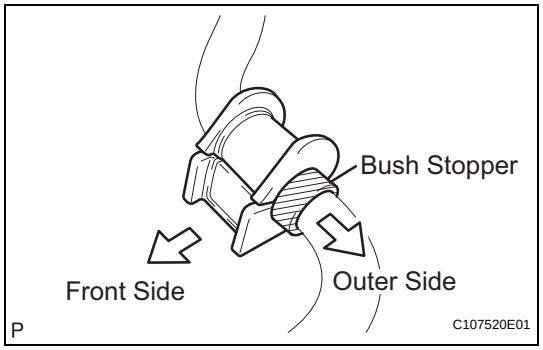


INSPECTION

1. **INSPECT FRONT STABILIZER LINK ASSEMBLY**
(a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.
(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.
Torque: 1.0 N*m (10 kgf*cm, 8.9 in.*lbf) or less
(c) Check for any cracks and grease leakage on the ball joint dust cover.

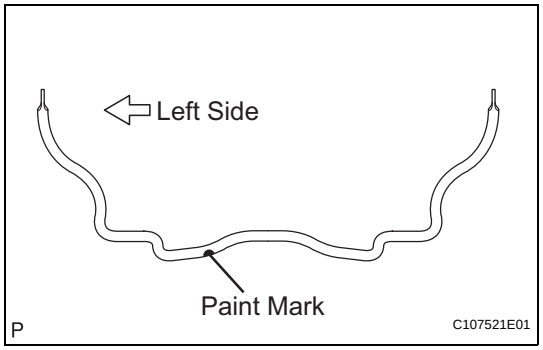
SP

INSTALLATION



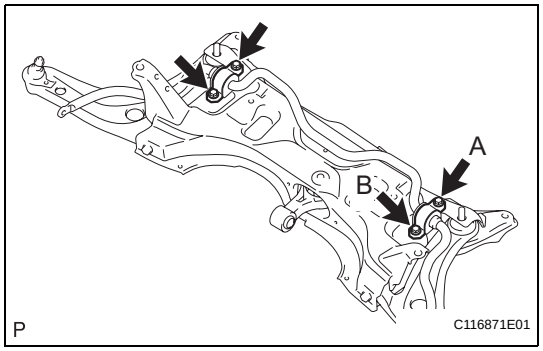
1. INSTALL FRONT STABILIZER BAR BUSH

(a) Install the stabilizer bar bush to the stabilizer bar.
HINT:
- Install the bush onto the stabilizer so that the bush stopper of the stabilizer bar faces the outside of the vehicle.
- Install the bush with its cutout facing the front of the vehicle.



2. INSTALL FRONT STABILIZER BAR

(a) Install the stabilizer onto the crossmember with the paint mark on the left side of the vehicle.



3. INSTALL FRONT STABILIZER BRACKET LH

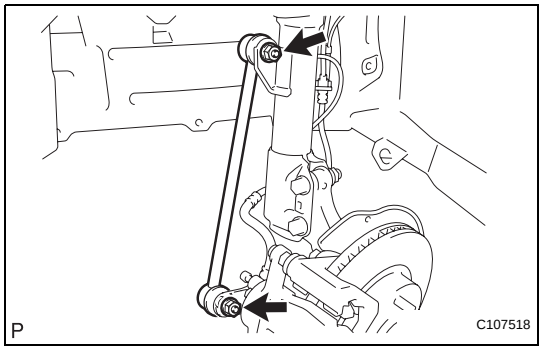
(a) Provisionally tighten bolt A.
(b) Tighten the bolts to the specified torque, in the order of B then A.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

4. INSTALL FRONT STABILIZER BRACKET RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

5. INSTALL POWER STEERING GEAR (See page PS-77)

6. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page PS-77)



7. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

(a) Install the stabilizer link with the 2 nuts.
HINT:
If the ball joint turns together with the nut, use a socket hexagon wrench 6 to hold the stud.

8. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

9. INSTALL FRONT LOWER SUSPENSION ARM LH (See page DS-14)

10. INSTALL FRONT LOWER SUSPENSION ARM RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

11. INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)

SP

12. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.

13. **INSTALL STEERING COLUMN HOLE COVER SUB-ASSEMBLY (See page PS-79)**

14. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-79)**

15. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page PS-79)**

16. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

17. **POSITION WHEELS FACING STRAIGHT AHEAD**

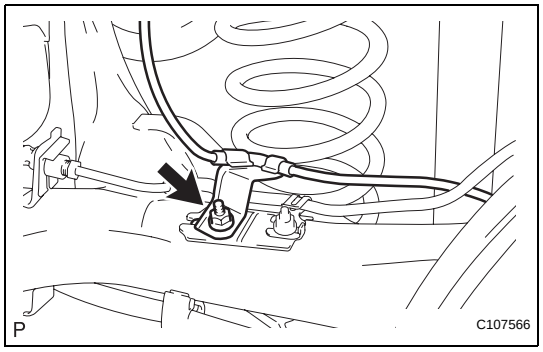
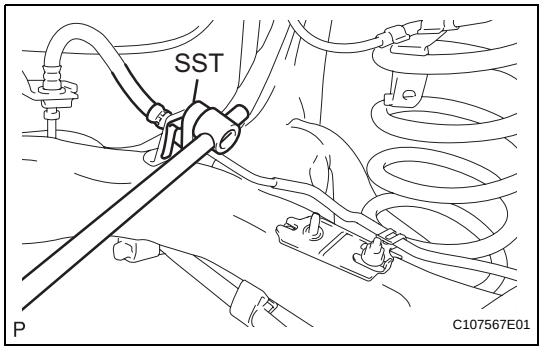
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
3. **REMOVE REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
4. **REMOVE REAR WHEEL**
5. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
6. **SEPARATE SKID CONTROL SENSOR WIRE (w/ ABS)**
   (a) Using a screwdriver, remove the claw of the connector lock portion and disconnect the skid control sensor wire connector.
   NOTICE:
   Do not remove the connector cover from the connector because the skid control sensor wire may be damaged.

   (b) Remove the nut and separate the skid control sensor wire.

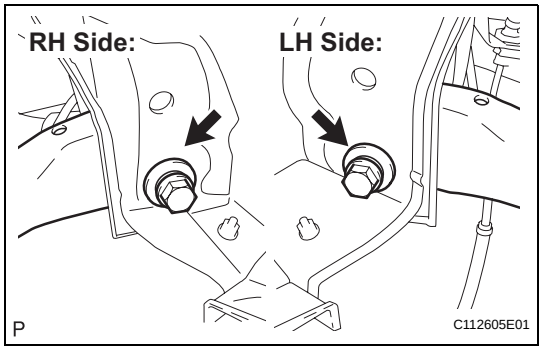


7. **SEPARATE REAR LH FLEXIBLE HOSE**
   (a) Using SST, separate the brake tube from the flexible hose.
   SST 09023-00101
   (b) Remove the clip and disconnect the flexible hose from the axle beam.



8. **SEPARATE REAR RH FLEXIBLE HOSE**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.

SP



9. LOOSEN REAR AXLE BEAM

(a) Loosen the 2 bolts.

NOTICE:
Do not remove the bolts.

10. REMOVE REAR ABSORBER CAP (for Hatchback)

11. REMOVE REAR SHOCK ABSORBER CAP LH

12. REMOVE REAR SHOCK ABSORBER CAP RH

13. REMOVE REAR SHOCK ABSORBER LH (See page SP-55)

14. REMOVE REAR SHOCK ABSORBER RH

HINT:
The removal procedure for the RH side is the same as that for the LH side.

15. REMOVE REAR COIL SPRING LH

(a) Lower the jacks slowly.
(b) Remove the coil spring, coil spring insulator upper and coil spring insulator lower.

16. REMOVE REAR COIL SPRING RH

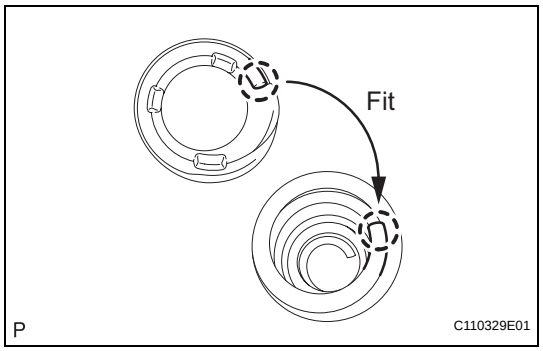
HINT:
The removal procedure for the RH side is the same as that for the LH side.

INSTALLATION

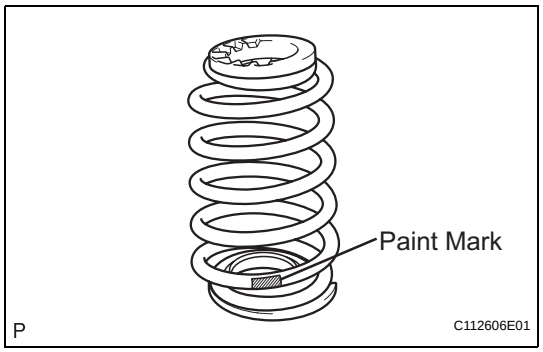
1. INSTALL REAR COIL SPRING LH

(a) Install the coil spring insulator lower onto the axle beam.

(b) Install the coil spring insulator upper so that its gap fits onto the end of coil spring.



(c) Install the coil spring onto the axle beam.
NOTICE:
The paint mark of the coil spring should be towards the underside and rear side of the vehicle.



2. INSTALL REAR COIL SPRING RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

3. TEMPORARILY TIGHTEN REAR SHOCK ABSORBER LH (See page SP-56)

4. TEMPORARILY TIGHTEN REAR SHOCK ABSORBER RH

HINT:
The installation procedure for the RH side is the same as that for the LH side.

5. INSTALL REAR SHOCK ABSORBER CAP LH

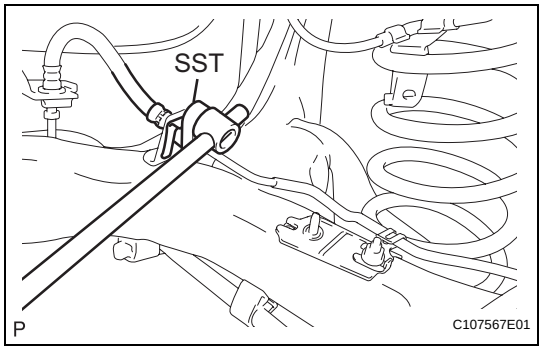
6. INSTALL REAR SHOCK ABSORBER CAP RH

7. INSTALL REAR ABSORBER CAP (for Hatchback)

8. INSTALL REAR LH FLEXIBLE HOSE

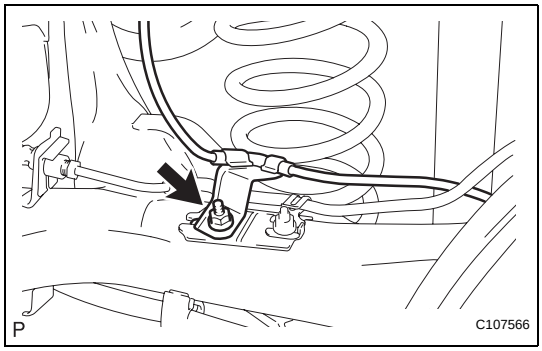
(a) Connect the flexible hose onto the axle beam with a new clip.

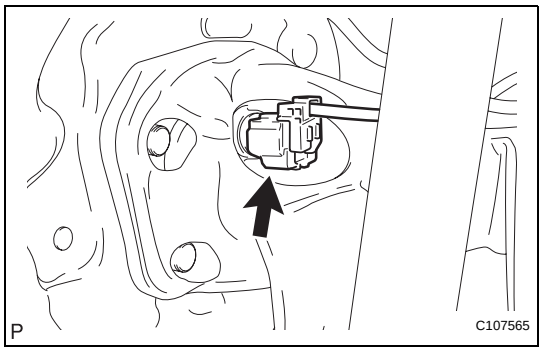
(b) Using SST, install the brake tube.
SST 09023-00101
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)



HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

SP





9. **INSTALL REAR RH FLEXIBLE HOSE**
HINT:
The installation procedure for the RH side is the same as that for the LH side.

10. **INSTALL SKID CONTROL SENSOR WIRE (w/ ABS)**
(a) Install the skid control sensor wire onto the axle beam with the nut.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

(b) Connect the skid control sensor wire connector.

11. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

12. **STABILIZE SUSPENSION**
(a) Lower the vehicle from the jack.
(b) Bounce the vehicle up and down several times to stabilize the suspension.

13. **FULLY TIGHTEN REAR AXLE BEAM (See page SP-68)**

14. **FULLY TIGHTEN REAR SHOCK ABSORBER LH (See page SP-56)**

15. **FULLY TIGHTEN REAR SHOCK ABSORBER RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.

16. **INSTALL REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-108)**

17. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-109)**

18. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

19. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**

20. **BLEED MASTER CYLINDER (See page BR-10)**

21. **BLEED BRAKE LINE (See page BR-12)**

22. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**

23. **CHECK FOR BRAKE FLUID LEAKAGE**

24. **INSPECT REAR WHEEL ALIGNMENT**
(See page SP-10)

25. CHECK ABS SENSOR SIGNAL (w/ ABS)
(See page BC-14)

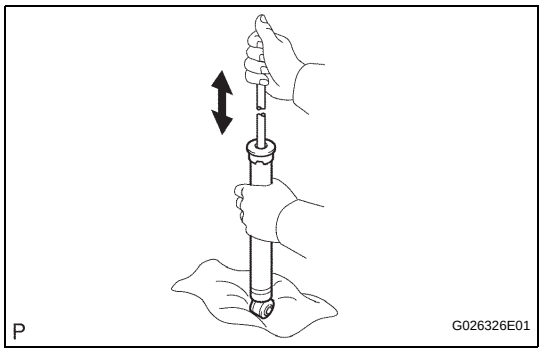
REMOVAL

1. **REMOVE REAR WHEEL**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
3. **REMOVE REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
4. **REMOVE REAR ABSORBER CAP (for Hatchback)**
5. **REMOVE REAR SHOCK ABSORBER CAP**
6. **REMOVE REAR SHOCK ABSORBER**
   (a) Support the axle beam with a jack. Insert a wooden block between the jack and the rear axle spring seat to prevent damage.

   (b) Remove the 2 nuts while keeping the piston rod from rotating.
   (c) Remove the cushion retainer and suspension support.

   (d) Remove the bolt while keeping the nut from rotating and remove the shock absorber.
   NOTICE:
   Remove the nut on the bolt side because the one on the lower side is a jam nut.
7. **REMOVE REAR SUSPENSION SUPPORT STOPPER**
8. **REMOVE REAR SUSPENSION SUPPORT ASSEMBLY**

INSPECTION



1. **INSPECT REAR SHOCK ABSORBER**
   (a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or abnormal sound during the operation.
   If there is any abnormality, replace the shock absorber with a new one.
   NOTICE:
   When disposing of the shock absorber rear, see DISPOSAL on page SP-57.

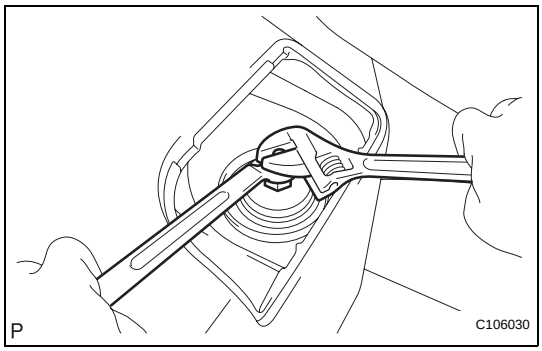
SP

INSTALLATION

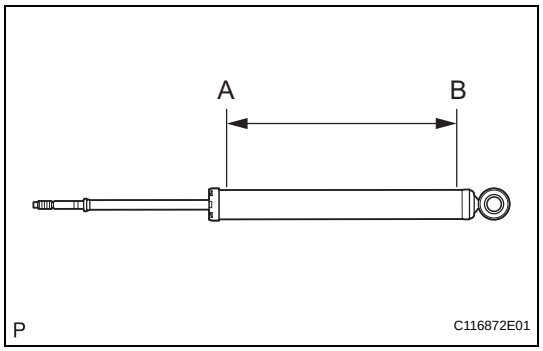
1. **INSTALL REAR SUSPENSION SUPPORT ASSEMBLY**
2. **INSTALL REAR SUSPENSION SUPPORT STOPPER**
3. **TEMPORARILY TIGHTEN REAR SHOCK ABSORBER**
   (a) Support the axle beam with a jack. Insert a wooden block between the jack and the rear axle spring seat to prevent damage.
   (b) Jack up the axle beam slowly, and provisionally tighten the shock absorber (lower side) with the bolt and nut to the axle beam.
   (c) Install the suspension support and cushion retainer.

   (d) While holding the piston rod, install a new nut (lower nut) to the specified standard.
   Standard:
   15 to 18 mm (0.591 to 0.709 in.)

   (e) While holding the piston rod, tighten a new nut (upper nut).
   Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)
4. **INSTALL REAR SHOCK ABSORBER CAP**
5. **INSTALL REAR ABSORBER CAP (for Hatchback)**
6. **INSTALL REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-108)**
7. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-109)**
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
9. **STABILIZE SUSPENSION**
   (a) Lower the vehicle from the jack.
   (b) Bounce the vehicle up and down several times to stabilize the suspension.
10. **FULLY TIGHTEN REAR SHOCK ABSORBER**
    (a) Fully tighten the shock absorber (lower side) with the bolt.
    Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
11. **INSPECT REAR WHEEL ALIGNMENT**
    (See page SP-10)



SP



DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER

(a) Fully extend the shock absorber piston rod.

(b) Using a drill or similar tool, slowly make a hole in the area (A-B) shown in the illustration to discharge the gas inside.

NOTICE:

- **The gas is colorless, odorless and harmless.**
- **Since the discharging gas may cause chips to scatter, cover the drill with a shop rag or piece of cloth when making the hole.**

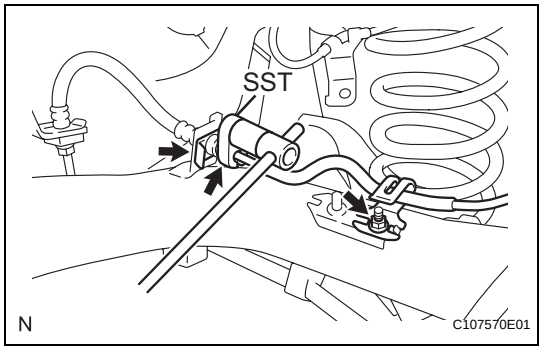
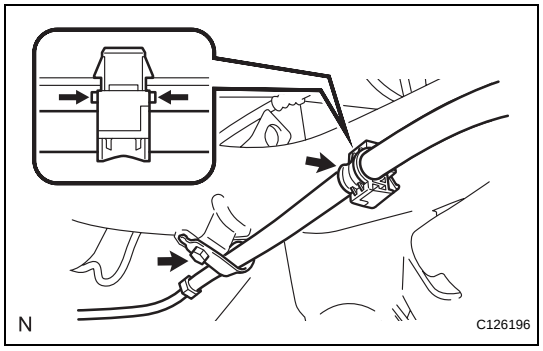
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
3. **REMOVE REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-106)**
4. **REMOVE REAR WHEEL**
5. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
6. **SEPARATE SKID CONTROL SENSOR WIRE (w/ ABS) (See page SP-49)**
7. **SEPARATE REAR NO. 4 BRAKE TUBE**
   (a) Using SST, separate the brake tube from the flexible hose.
   SST 09023-00100
   (b) Remove the clip and disconnect the flexible hose from the axle beam.
   (c) Remove the nut and separate the brake tube.



8. **SEPARATE REAR NO. 3 BRAKE TUBE**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
9. **SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY**
   (a) Using pliers, pinch both ends of the claw of cable clamp and flex the clamp to remove it.
   (b) Remove the bolt and separate the parking brake cable.
   (c) Remove the cable clamp from the parking brake cable.
   HINT:
   Replace the clamp with a new one when installing the parking brake cable.



10. **SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY**
    HINT:
    The removal procedure for the RH side is the same as that for the LH side.
11. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
12. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH (See page AH-14)**

SP

13. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.

14. **LOOSEN REAR AXLE BEAM (See page SP-50)**

15. **REMOVE REAR ABSORBER CAP (for Hatchback)**

16. **REMOVE REAR SHOCK ABSORBER CAP LH**

17. **REMOVE REAR SHOCK ABSORBER CAP RH**

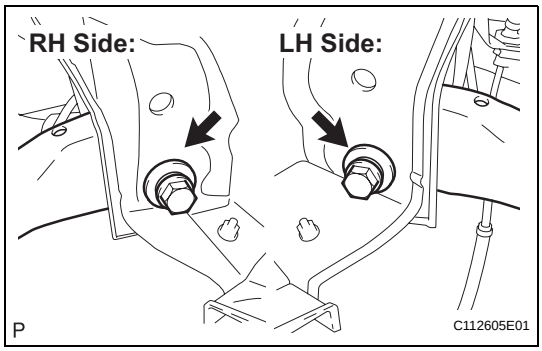
18. **REMOVE REAR SHOCK ABSORBER LH (See page SP-55)**

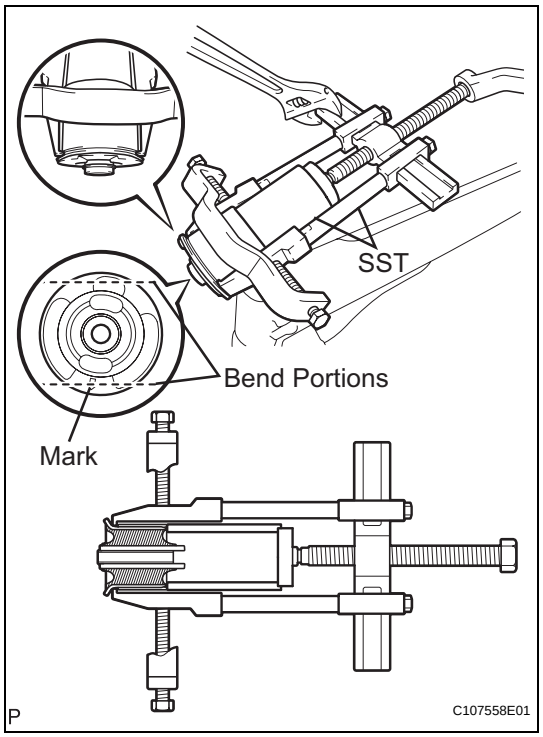
19. **REMOVE REAR SHOCK ABSORBER RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.

20. **REMOVE REAR COIL SPRING LH (See page SP-50)**

21. **REMOVE REAR COIL SPRING RH**
HINT:
The removal procedure for the RH side is the same as that for the LH side.

22. **REMOVE REAR AXLE BEAM**
(a) Remove the 2 bolts and remove the axle beam.





REPLACEMENT

1. REMOVE REAR AXLE CARRIER BUSH LH

(a) Place a match mark on the axle beam with it aligned with the bush mark.

(b) Using a chisel and hammer, bend the 2 portions of the bush rib.

NOTICE:

Bend the bush rib until the claw of SST can be suspended.

(c) Using SST, remove the bush from the axle beam.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04020, 09955-04011, 09957-04010, 09958-04011), 09612-30012, 09950-60010 (09951-00590)

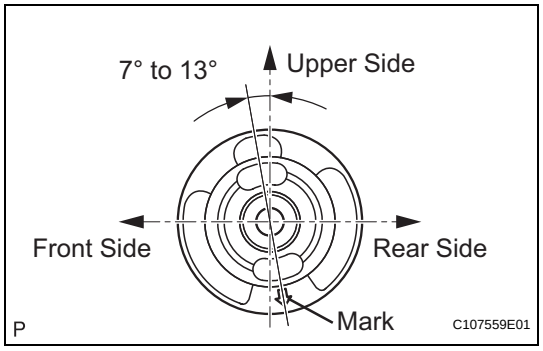
NOTICE:

Apply paint to any scratches on the rear axle beam.

2. REMOVE REAR AXLE CARRIER BUSH RH

HINT:

The removal procedure for the RH side is the same as that for the LH side.

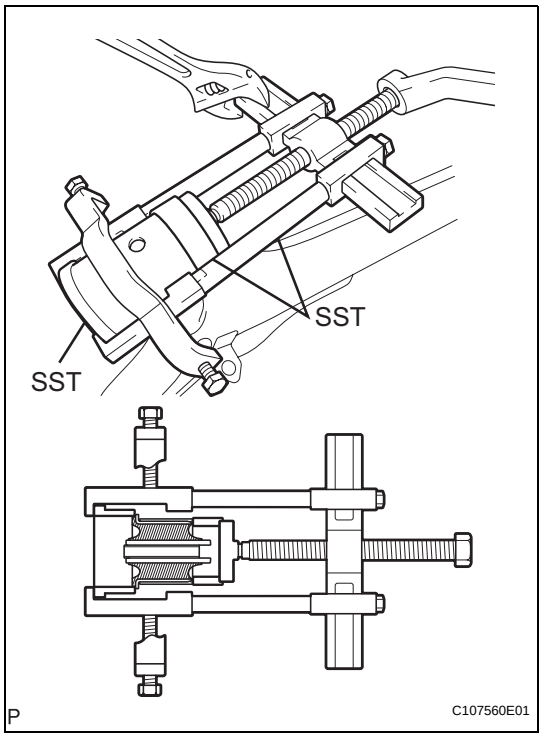


3. INSTALL REAR AXLE CARRIER BUSH LH

(a) Align the matchmarks on a new bush and the axle beam and provisionally install the bush onto the axle beam, as shown in the illustration.

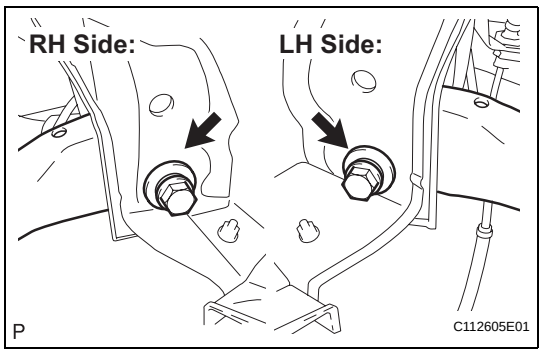
NOTICE:

Install the bush in the same orientation as the old one was prior to removal because they are directional.



(b) Using SST, install the bush onto the axle beam.
SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04030, 09955-04051, 09957-04010, 09958-04011), 09950-60020 (09951-00810, 09387-02010), 09223-15020
NOTICE:
Do not damage the rubber portion when installing the bush.

4. **INSTALL REAR AXLE CARRIER BUSH RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.



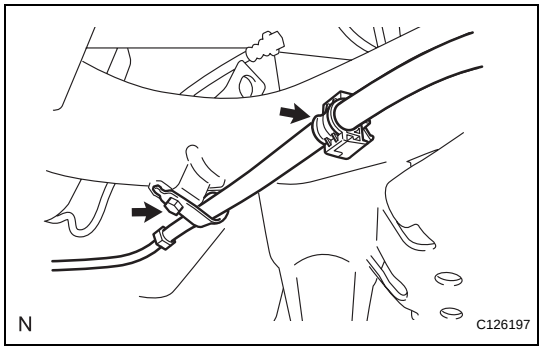
INSTALLATION

1. **TEMPORARILY TIGHTEN REAR AXLE BEAM**
(a) Support the rear axle beam with a jack.
(b) Install the axle beam onto the vehicle and provisionally tighten the 2 bolts.
2. **INSTALL REAR COIL SPRING LH (See page SP-50)**
3. **INSTALL REAR COIL SPRING RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.
4. **TEMPORARILY TIGHTEN REAR SHOCK ABSORBER LH (See page SP-56)**
5. **TEMPORARILY TIGHTEN REAR SHOCK ABSORBER RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.
6. **INSTALL REAR SHOCK ABSORBER CAP LH**
7. **INSTALL REAR SHOCK ABSORBER CAP RH**
8. **INSTALL REAR ABSORBER CAP (for Hatchback)**
9. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH (See page AH-14)**
10. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY RH**
HINT:
The installation procedure for the RH side is the same as that for the LH side.

11. INSPECT REAR AXLE HUB BEARING (See page AH-2)

12. INSTALL REAR BRAKE DRUM SUB-ASSEMBLY

13. ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)

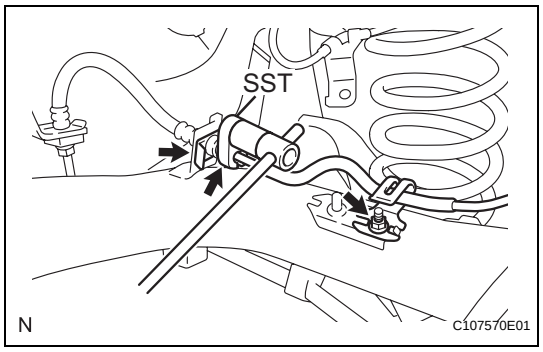


14. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the parking brake cable with the bolt and a new clamp.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

15. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:
The installation procedure for the RH side is the same as that for the LH side.



16. INSTALL REAR NO. 4 BRAKE TUBE

(a) Install the brake tube onto the axle beam with the nut.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

(b) Connect the flexible hose to the axle beam with a new clip.

(c) Using SST, install the brake tube onto the flexible hose.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

17. INSTALL REAR NO. 3 BRAKE TUBE

HINT:
The installation procedure for the RH side is the same as that for the LH side.

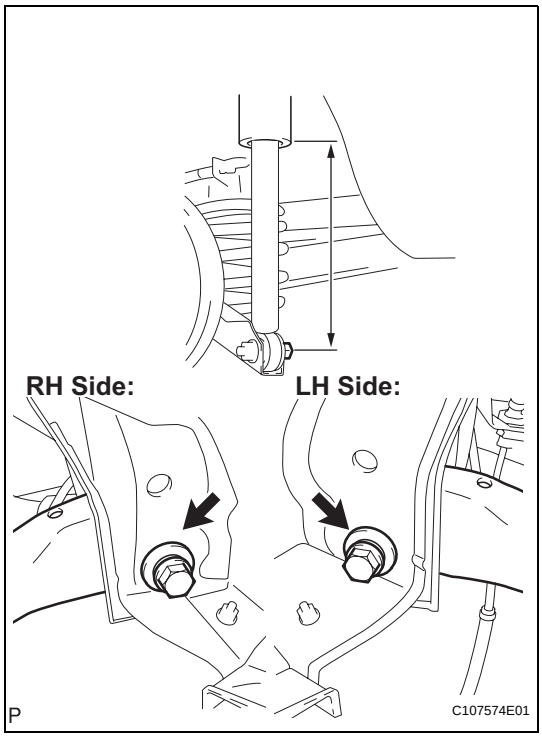
18. INSTALL SKID CONTROL SENSOR WIRE (w/ ABS) (See page SP-51)

19. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

20. STABILIZE SUSPENSION

(a) Lower the vehicle from the jack.

(b) Bounce the vehicle up and down several times to stabilize the suspension.



21. **FULLY TIGHTEN REAR AXLE BEAM**
    (a) Suspend the jack on the rear axle spring seat and adjust the length of the shock absorber to the reference value.
    Length of shock absorber:
    220 mm (8.7 in.)
    (b) Fully tighten the 2 bolts.
    Torque: 90 N*m (918 kgf*cm, 67 ft.*lbf)
22. **FULLY TIGHTEN REAR SHOCK ABSORBER LH (See page SP-56)**
23. **FULLY TIGHTEN REAR SHOCK ABSORBER RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
24. **INSTALL REAR SEATBACK ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-108)**
25. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Sedan Fixed Seat Type) (See page SE-109)**
26. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
27. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**
28. **BLEED MASTER CYLINDER (See page BR-10)**
29. **BLEED BRAKE LINE (See page BR-12)**
30. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
31. **CHECK FOR BRAKE FLUID LEAKAGE**
32. **INSPECT REAR WHEEL ALIGNMENT**
    (See page SP-10)
33. **CHECK ABS SENSOR SIGNAL (w/ ABS)**
    (See page BC-14)

TIRE AND WHEEL SYSTEM

INSPECTION

1. INSPECT TIRES

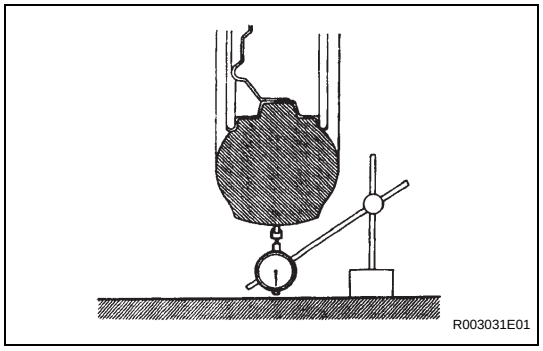
(a) Check the tires for wear and proper inflation pressure.

Cold tire inflation pressure:
for Hatchback

Destination	Tire Size	Vehicle Speed	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
North America	P175/65R14 81S P185/60R15 84T	Driving below 160 km/h (100 mph)	220 (2.2, 32)	220 (2.2, 32)
		Driving over 160 km/h (100 mph)	240 (2.4, 35)	240 (2.4, 35)
Mexico	185/60R15 84H	Driving below 160 km/h (100 mph)	220 (2.2, 32)	220 (2.2, 32)
		Driving over 160 km/h (100 mph)	230 (2.3, 33)	230 (2.3, 33)

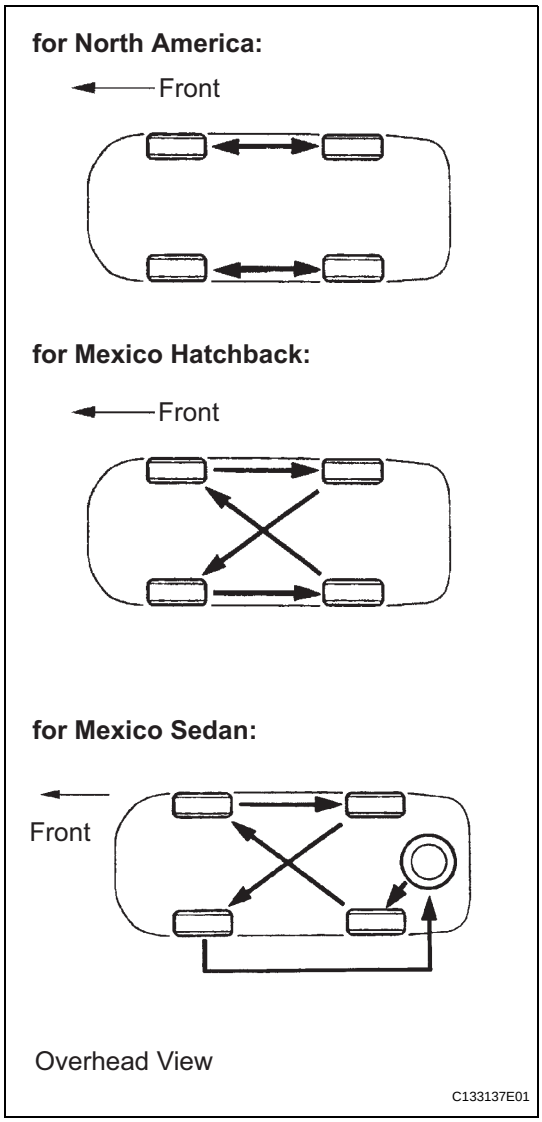
for Sedan

Destination	Tire Size	Vehicle Speed	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
North America	P175/65R14 81S P185/60R15 84T	Driving below 160 km/h (100 mph)	220 (2.2, 32)	220 (2.2, 32)
		Driving over 160 km/h (100 mph)	240 (2.4, 35)	240 (2.4, 35)
Mexico	175/65R14 82T 185/60R15 84H	Driving below 160 km/h (100 mph)	220 (2.2, 32)	220 (2.2, 32)
		Driving over 160 km/h (100 mph)	230 (2.3, 33)	230 (2.3, 33)



(b) Using a dial indicator, check the tire runout.

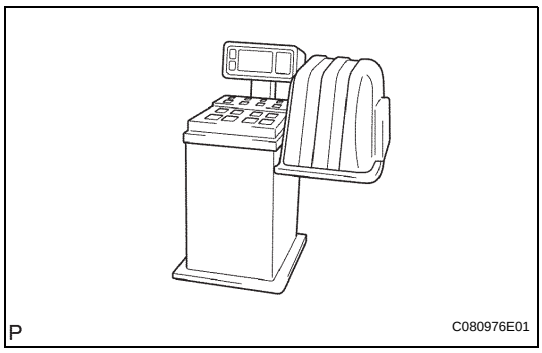
Tire runout:
1.4 mm (0.055 in.) or less



2. ROTATE TIRES

HINT:

Rotate tires, as shown in the illustration.



3. INSPECT WHEEL BALANCE

(a) Check and perform off-car balancing.

(b) If required, perform on-car balancing.

Imbalance after adjustment:

8 g (0.018 lb) or less

4. INSPECT FRONT AXLE HUB BEARING (See page AH-1)

5. INSPECT REAR AXLE HUB BEARING (See page AH-2)

TW

ANTI-LOCK BRAKE SYSTEM

PRECAUTION

1. TROUBLESHOOTING PRECAUTION

- When there are malfunctions in the contact points of the terminals or installation problems with any parts, removal and installation of the suspected problem parts may return the system to its normal condition, either entirely or temporarily.
- In order to determine the location of the malfunction, be sure to check the conditions from the time the malfunction occurred, through data such as DTC and freeze frame data outputs. Record this information before disconnecting any connectors and removing or installing any parts.
- Since the anti-lock brake system may be influenced by malfunctions in other systems, be sure to check for DTCs in other systems.
- Be sure to remove and install the brake actuator and each sensor with the ignition switch off, unless specified in the inspection procedures.
- When removing and installing the brake actuator and each sensor, be sure to check that the normal display is output during a test mode inspection and a DTC output inspection after reinstalling all the parts.
- If the DTC of the CAN communication line is output, repair the malfunction in the communication line and then troubleshoot the anti-lock brake system.
- Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.

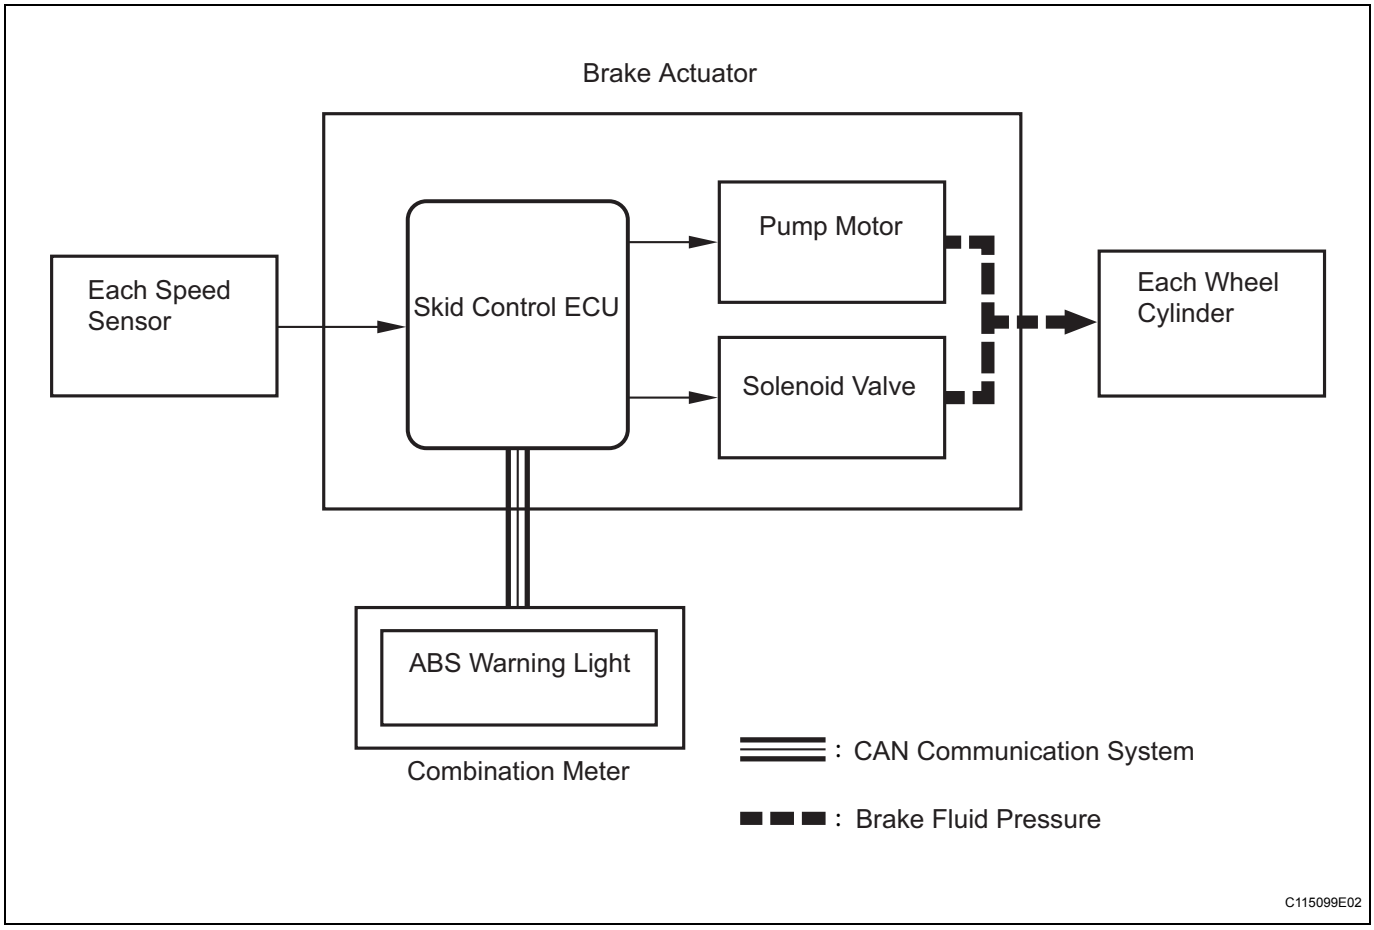
SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

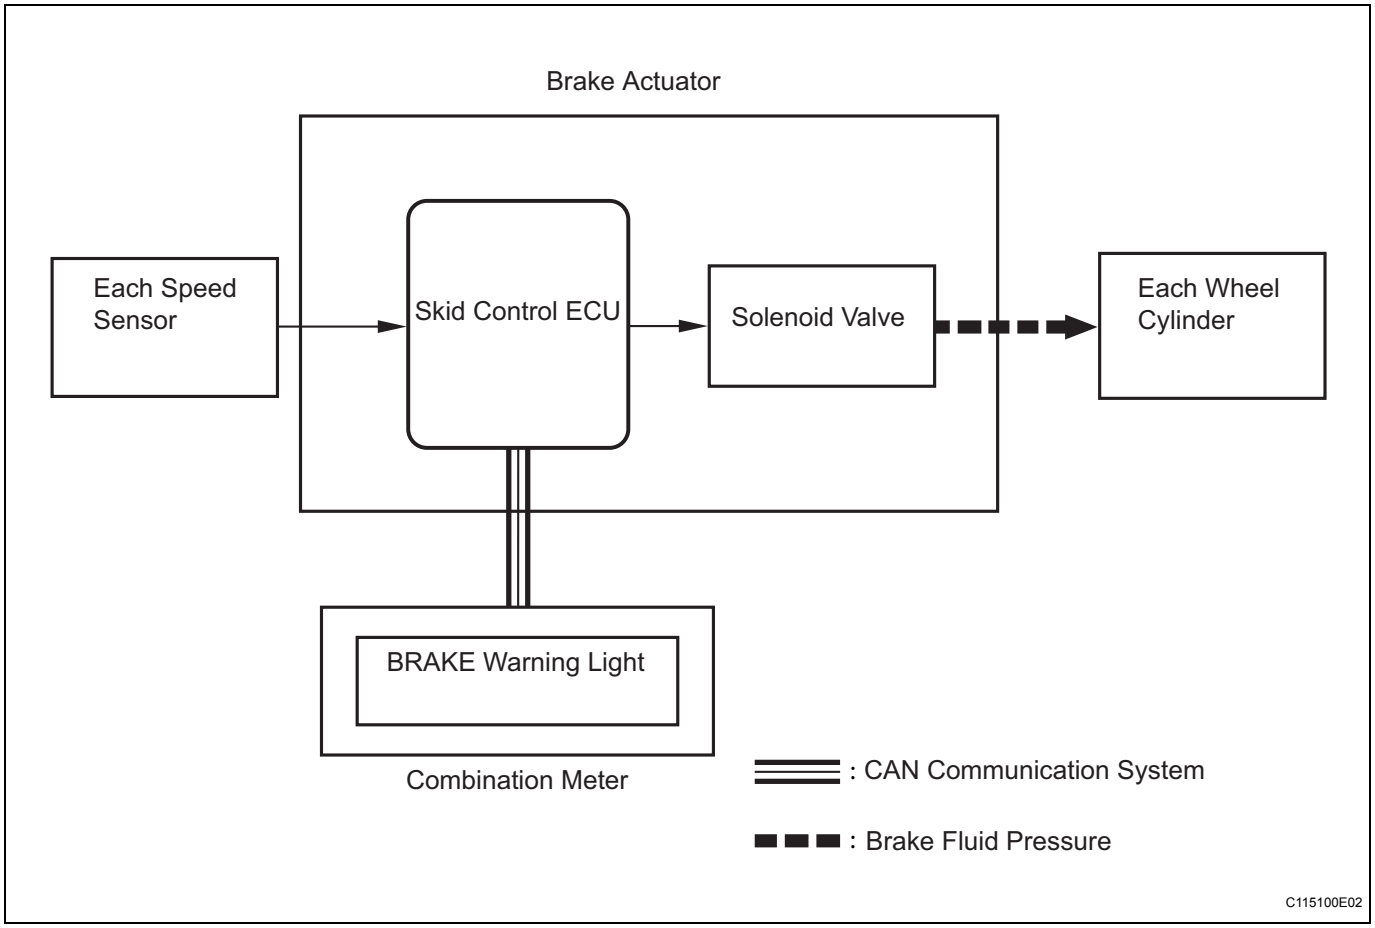
HINT:
The skid control ECU forms a single unit with the brake actuator.

(a) ABS (Anti-lock Brake System)
The ABS helps prevent the wheels from locking when the brakes are applied firmly or on a slippery surface.



(1) Operation description
The skid control ECU detects wheel lock conditions by receiving vehicle speed signals from each speed sensor, and sends control signals to the pump motor and solenoid valve to prevent the wheels from locking by controlling the brake fluid pressure of each wheel cylinder. The ABS warning light comes on when the ABS system malfunctions.

(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes the ABS, realizing the proper brake force distribution between the front and rear wheels in accordance with the driving conditions and vehicle load. In addition, when the brakes are applied while cornering, it also controls the braking forces of the right and left wheels, helping to maintain vehicle stability.



(1) Operation description
The skid control ECU receives speed signals from each speed sensor to detect the slip conditions of the wheels and sends control signals to the solenoid.
The solenoid valve controls the brake fluid pressure of each wheel cylinder and divides the control power properly between the front and rear wheels and the right and left wheels.
The BRAKE warning light comes on to indicate malfunctions in the EBD system.

2. ABS with EBD OPERATION

(a) Based on the signals received from each of the 4 wheel speed sensors, the skid control ECU calculates the speed and deceleration of each wheel, and checks the wheel slippage conditions. The ECU controls the pressure holding valve and pressure reduction valve in order to adjust the brake fluid pressure of each wheel cylinder in accordance with the slippage conditions.

3. FAIL SAFE FUNCTION

(a) When a failure occurs in the ABS system, the ABS warning light comes on and its operation is prohibited. In addition to this, when a failure which disables the EBD operation occurs, the brake warning light comes on and its operation is prohibited.
If control is prohibited due to a malfunction during operation, control is disabled gradually to avoid sudden vehicle instability.

4. INITIAL CHECK

(a) When the vehicle speed first reaches approximately 4 mph (6 km/h) or more after the ignition switch is turned on, each solenoid valve and the motor of the brake actuator are sequentially activated to perform electrical checks. During the initial check, the operating sound of the solenoid valve and motor can be heard from the engine compartment, but this does not indicate a malfunction.

5. FUNCTION OF COMPONENTS

Components	Functions
Front speed sensor (Semiconductor speed sensor, magnetic sensor rotor)	• Detects the wheel speed and sends a signal to the skid control ECU. • The front speed sensor (semiconductor speed sensor) with the integrated bearing and the sensor rotor (magnetic sensor rotor) are installed on the front axle hub. • The magnetic sensor rotor is equipped with north and south poles (48 of each), which are evenly spaced around its circumference. • The magnetic field changes as the magnetic sensor rotor rotates. The semiconductor speed sensor detects the change and outputs it as the vehicle speed pulse.
Skid control sensor (Semiconductor speed sensor, magnetic sensor rotor)	• The skid control sensor (semiconductor speed sensor) and the sensor rotor (magnetic sensor rotor) are installed on the rear axle carrier. • The skid control sensor has the same structure and functions as the front speed sensor.
Skid control ECU (Housed in brake actuator)	• Processes the signals from the sensors to control the ABS. • Sends and receives control signals to and from the ECM via CAN communication.
Brake actuator	• Consists of the master cylinder cut solenoid valve, holding solenoid valve, pump motor, and reservoir, and adjusts the brake fluid pressure applied to each wheel cylinder. • Houses the skid control ECU.
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
ABS warning light	• Illuminates to inform the driver that a malfunction in the ABS has occurred. • Blinks to indicate DTCs that relate to the ABS.
BRAKE warning light	• Illuminates to inform the driver that the parking brake is ON when the system is normal, and when the brake fluid has decreased. • Illuminates to inform the driver that a malfunction in the EBD has occurred.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

CHECK FOR INTERMITTENT PROBLEMS

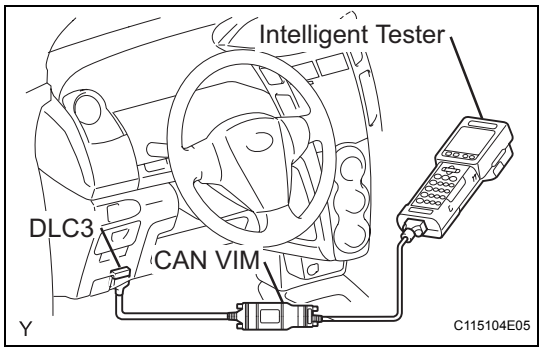
1. CHECK FOR INTERMITTENT PROBLEMS

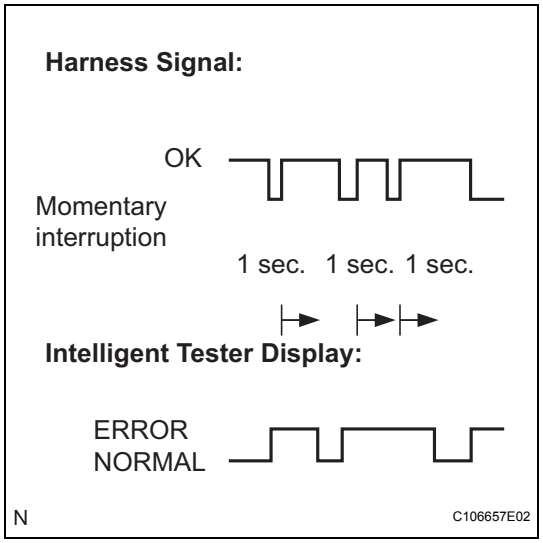
HINT:

A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected by using the ECU data list function of an intelligent tester.

(a) Turn the ignition switch off and connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on.



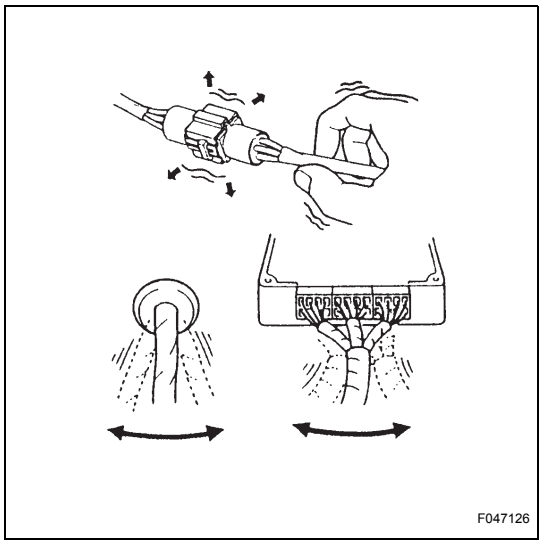


(c) Follow the prompts on the intelligent tester to display the DATA LIST and select areas where a momentary interruption should be monitored.

HINT:

- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned on (initial check).
- If the status remains on the ERROR display, check for continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the intelligent tester remains on for 1 second after the harness signal changes from a momentary interruption (open circuit) to normal condition.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-



(d) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.
OK:
Display does not change.
HINT:
The connector and/or wire harness have a momentary interruption (open circuit) if the display changes. Repair or replace the connector and wire harness if either of them is faulty.

TEST MODE PROCEDURE

HINT:

- By switching the skid control ECU from normal mode to test mode, abnormality detection sensitivity is enhanced and troubleshooting can be conducted efficiently.
- Perform a sensor check in test mode after the speed sensor or sensor rotor has been repaired or replaced.
- If the ignition switch is turned from on to ACC or off during test mode, DTCs related to the signal check function will be erased.
- During test mode, the skid control ECU stores all DTCs related to the signal check function, and the DTCs are erased if normality is confirmed. Any remaining DTCs are those indicating abnormalities that were found.

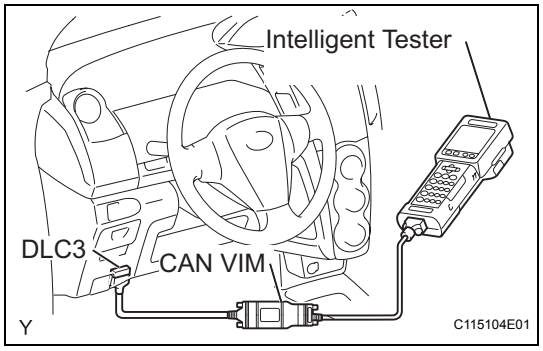
1. TEST MODE (SIGNAL CHECK) PROCEDURE (USING INTELLIGENT TESTER)

(a) Turn the ignition switch off.

(b) Check that the steering wheel is in the straight-ahead position.

(c) A/T: Check that the shift lever is in the P position and apply the parking brake.

(d) M/T: Check that the shift lever is in neutral and apply the parking brake.



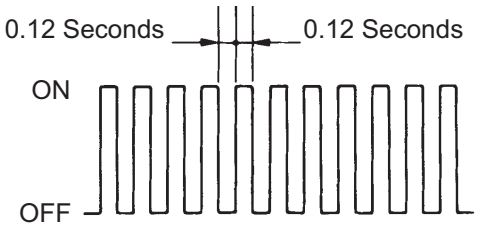
(e) Connect the intelligent tester to the DLC3.

(f) Turn the ignition switch on.

(g) Turn the tester on.

(h) Switch the skid control ECU to test mode using the intelligent tester.
Select the following menu items: DIAGNOSIS / OBD/MOBD /select vehicle / ABS / SIGNAL CHECK.

Blinking Pattern in TEST MODE:



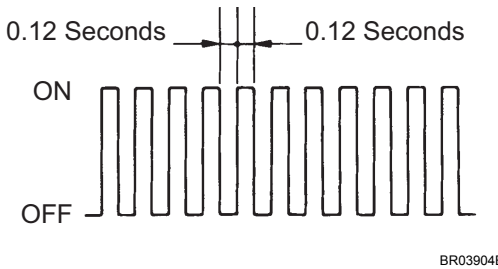
(i) Check that the ABS warning light blinks as shown in the illustration.
HINT:
If the ABS warning light does not blink, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are described in the sections listed in the table below.

Section Title	See Page
ABS Warning Light does not Come ON	BC-73
TS and CG Terminal Circuit	BC-84

(j) Start the engine.

BC

Blinking Pattern in TEST MODE:



2. SPEED SENSOR CHECK (USING INTELLIGENT TESTER)

(a) Check that the ABS warning light is blinking as shown in the illustration.

(b) Check the speed sensor signal.

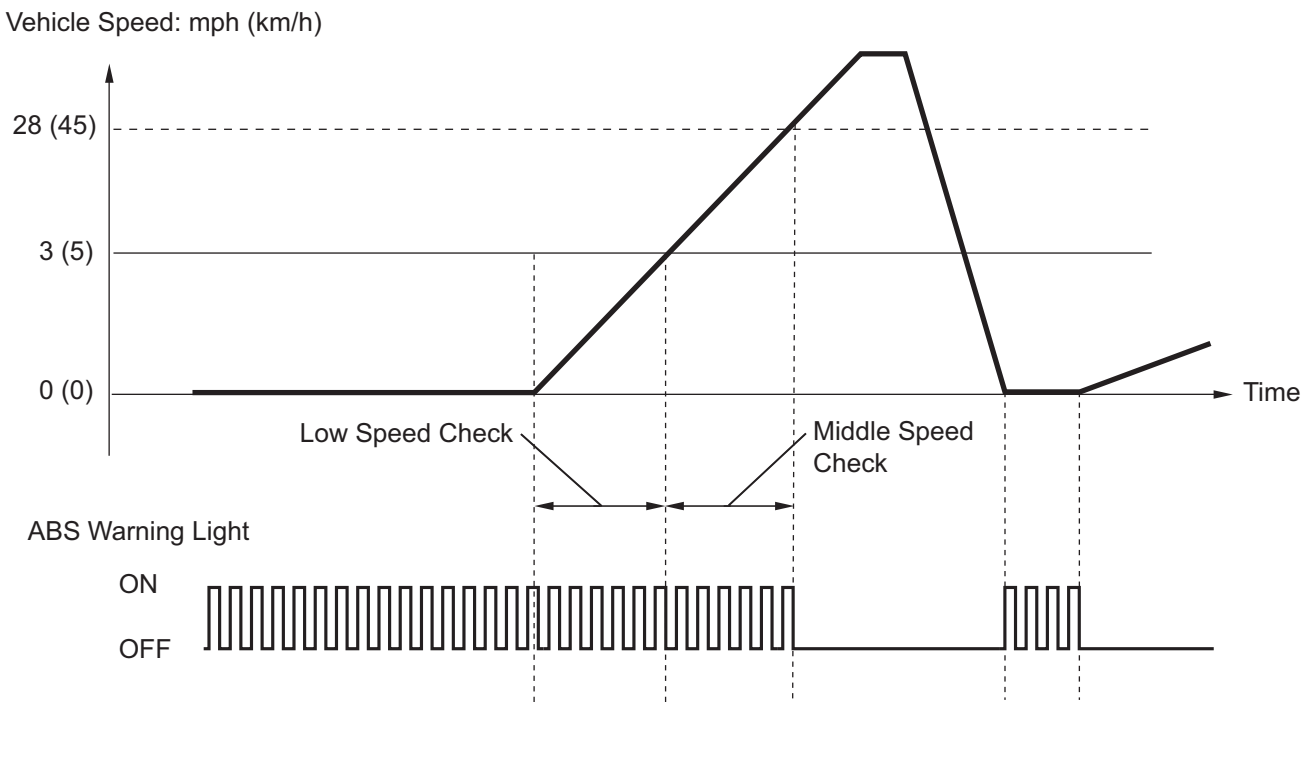
(1) Drive the vehicle straight forward at a speed of 28 mph (45 km/h) or more for several seconds.

(2) Check that the ABS warning light goes off.

HINT:

- The sensor check may not be completed if one or more wheels spin or the steering wheel is turned.
- If the speed sensor check is commenced while the steering wheel is turned, the ABS warning light may come on after the low speed check is finished.
- The ABS warning light comes on immediately when an abnormality is detected.
- When the speed sensor signal is normal, the ABS warning light goes off while the vehicle is driven at 28 mph (45 km/h) or more and blinks in the test mode pattern while stationary.
- Do not drive the vehicle at a speed of 50 mph (80 km/h) or more after the ABS warning light turns off, because test mode DTCs are set again when the vehicle speed exceeds 50 mph (80km/h).

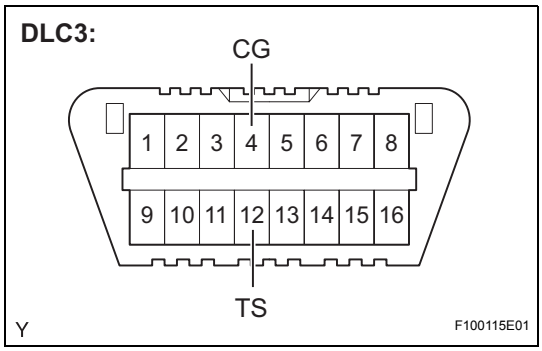
Blinking pattern in speed sensor check:



(3) Stop the vehicle.

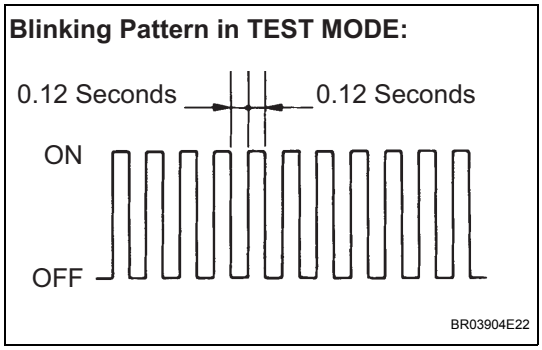
3. **END SENSOR CHECK (USING INTELLIGENT TESTER)**
   (a) When the sensor check is successfully completed, the ABS warning light blinks in the test mode pattern when the vehicle is stopped, and goes off when the vehicle is driven.
   NOTICE:
   If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driven and the ABS does not operate.
4. **READ SIGNAL CHECK FUNCTION DTCS (USING INTELLIGENT TESTER)**
   (a) Read the DTC(s) by following the instructions on the tester screen.
   HINT:
   See the list of DTCs (refer to step 9).
5. **TEST MODE (SIGNAL CHECK) PROCEDURE (USING SST CHECK WIRE)**
   (a) Turn the ignition switch off.
   (b) Check that the steering wheel is in the straight-ahead position.
   (c) A/T: Check that the shift lever is in the P position and apply the parking brake.
   (d) M/T: Check that the shift lever is in neutral and apply the parking brake.

BC



(e) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

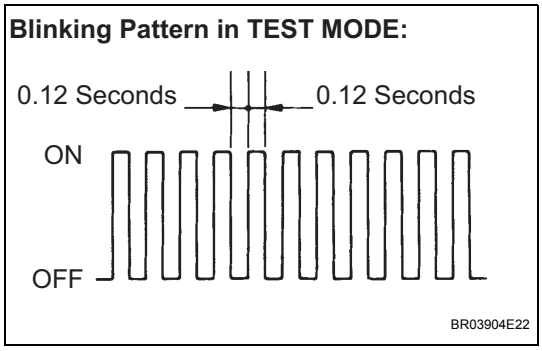
(f) Turn the ignition switch on.



(g) Check that the ABS warning light blinks as shown in the illustration.
HINT:
If the ABS warning light does not blink, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are described in the sections listed in the table below.

Section Title	See Page
ABS Warning Light does not Come ON	BC-73
TS and CG Terminal Circuit	BC-84

(h) Start the engine.



6. SPEED SENSOR CHECK (USING SST CHECK WIRE)

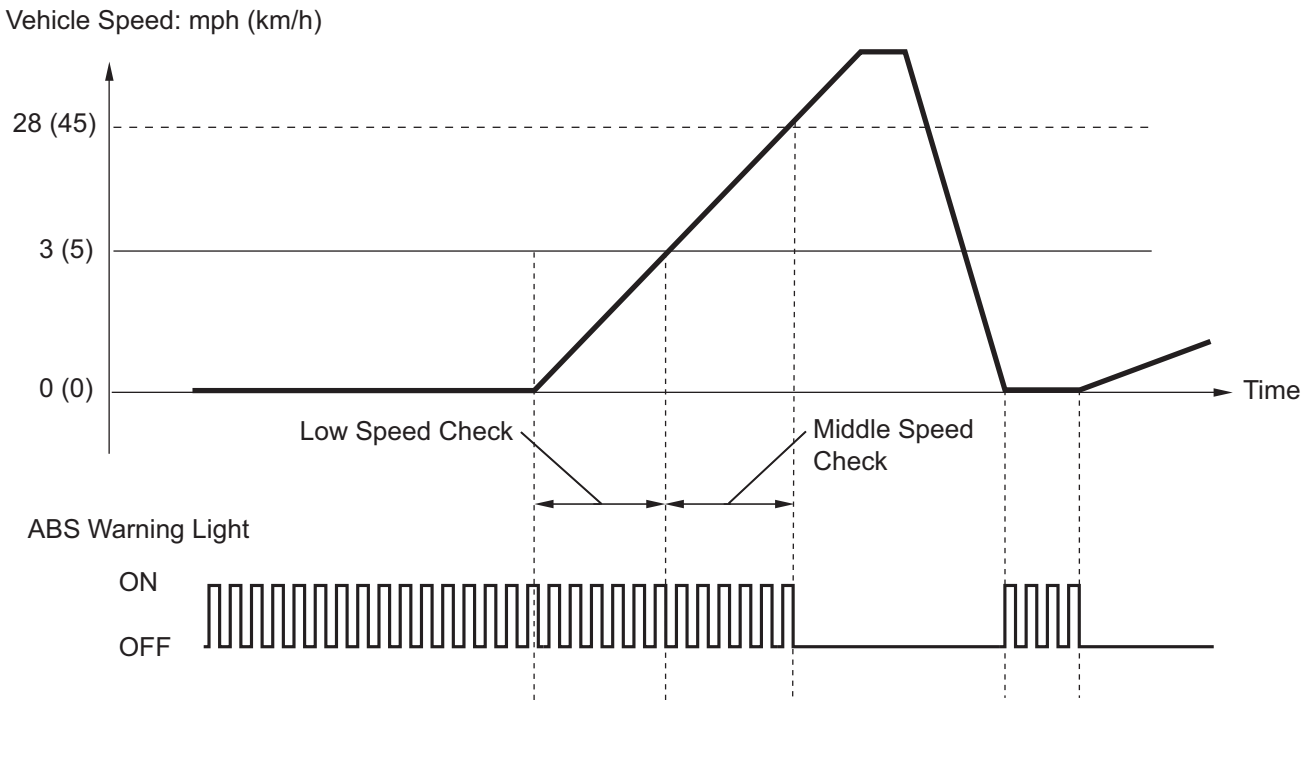
(a) Check that the ABS warning light blinks as shown in the illustration.

(b) Check the speed sensor signal.

(1) Drive the vehicle straight forward at a speed of 28 mph (45km/h) or more for several seconds, and then step on the brake pedal.

(2) Check that the ABS warning light goes off.
HINT:
- The sensor check may not be completed if one or more wheels spin or the steering wheel is turned.
- If the speed sensor check is commenced while the steering wheel is turned, the ABS warning light may come on after the low speed check is finished.
- The ABS warning light comes on immediately when an abnormality is detected.
- When the speed sensor signal is normal, the ABS warning light goes off while the vehicle is driven at 28 mph (45 km/h) or more and blinks in the test mode pattern while stationary.
- Do not drive the vehicle at a speed of 50 mph (80 km/h) or more after the ABS warning light turns off, because test mode DTCs are set again when the vehicle speed exceeds 50 mph (80km/h).

Blinking pattern in speed sensor check:



(3) Stop the vehicle.

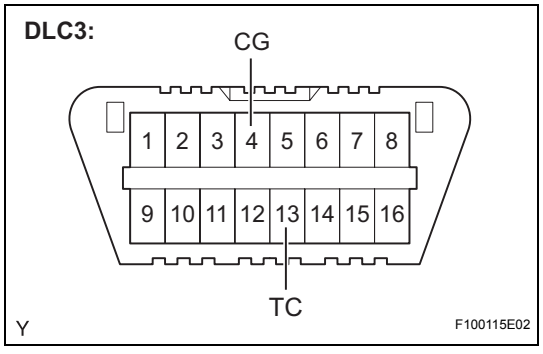
7. END SENSOR CHECK (USING SST CHECK WIRE)

(a) When the sensor check is successfully completed, the ABS warning light blinks in the test mode pattern when the vehicle is stopped, and goes off when the vehicle is driven.

NOTICE:

If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driven and the ABS does not operate.

DLC3:



8. READ SIGNAL CHECK FUNCTION DTCS (USING SST CHECK WIRE)

(a) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(b) Turn the ignition switch on.

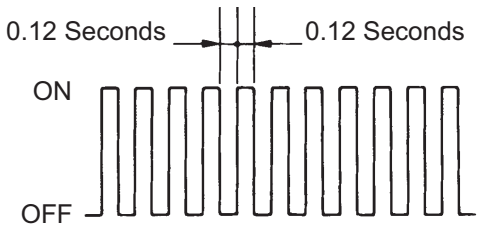
(c) Read the number of blinks of the ABS warning light.

HINT:

- See the list of DTCs (refer to step 9).

BC

Blinking Pattern in TEST MODE:



- If all the sensors are normal, a normal system code is output (the light comes on for 0.25 seconds at intervals of 0.25 seconds).

(d) After the check, disconnect the SST from terminals TC and CG of the DLC3.

(e) Turn the ignition switch off.

9. SPEED SENSOR CHECK FUNCTION DTCs

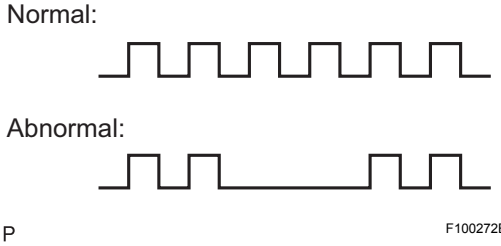
Code No.	Diagnosis	Trouble Areas
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Front speed sensor RH circuit • Sensor installation • Foreign matter on sensor tip or sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Front speed sensor LH circuit • Sensor installation • Foreign matter on sensor tip or sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Skid control sensor RH • Skid control sensor RH circuit • Sensor installation
C1274/74	Low output signal of rear speed sensor LH	• Skid control sensor LH • Skid control sensor LH circuit • Sensor installation
C1275/75	Abnormal change in output signal of front speed sensor RH	• Front speed sensor RH • Front speed sensor RH circuit • Foreign matter on sensor tip or sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	• Front speed sensor LH • Front speed sensor LH circuit • Foreign matter on sensor tip or sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Skid control sensor RH • Skid control sensor RH circuit
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Skid control sensor LH • Skid control sensor LH circuit

HINT:

- The DTCs in this table are only output in test mode.
- Detection of DTCs from C1271/71 to C1274/74 is completed before the vehicle speed reaches 3 mph (5 km/h).
- Detection of DTCs from C1275/75 to C1278/78 is completed several seconds after the vehicle speed exceeds 28 mph (45 km/h).
- C1271/71 - C1274/74: Speed output from only one wheel is extremely low despite other wheel speed outputs reaching 3 mph (5 km/h).
- C1275/75 - C1278/78: Abnormal speed sensor output frequency is as shown in the illustration.

BC

Example:



PROBLEM SYMPTOMS TABLE

If no DTCs are displayed during the DTC check but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake actuator or sensor, turn the ignition switch off.

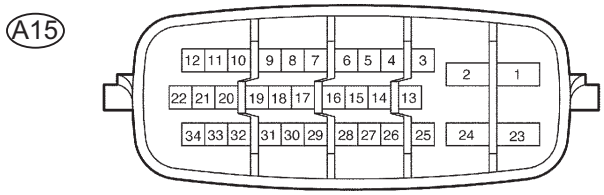
ANTI-LOCK BRAKE SYSTEM

Symptom	Suspected area	See page
ABS and/or EBD does not operate	1. Check DTC again and make sure that normal system code displayed.	BC-25
	2. IG power source circuit	BC-59
	3. Front speed sensor circuit	BC-37
	4. Skid control sensor circuit	BC-44
	5. Check brake actuator using intelligent tester. (Check brake actuator operation using active test function.) If abnormal, check hydraulic circuit for leakage.	BC-34
	6. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator (skid control ECU).	BC-89
ABS and/or EBD does not operate efficiently	1. Check DTC again and make sure that normal system code displayed.	BC-25
	2. Front speed sensor circuit	BC-37
	3. Skid control circuit	BC-44
	4. Stop light switch circuit	BC-64
	5. Check brake actuator using intelligent tester. (Check brake actuator operation using active test function.) If abnormal, check hydraulic circuit for leakage.	BC-34
	6. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator (skid control ECU).	BC-89
Sensor signal check cannot be done	1. TS and CG terminal circuit	BC-84
	2. Brake actuator (skid control ECU)	BC-89
DTC check cannot be done	1. Check DTC again and make sure that normal system code displayed.	BC-25
	2. TC and CG terminal circuit	BC-81
	3. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace brake actuator (skid control ECU).	BC-89
ABS warning light remains on	1. ABS warning light circuit	BC-70
	2. Brake actuator (skid control ECU)	BC-89
ABS warning light does not come on	1. ABS warning light circuit	BC-73
	2. Brake actuator (skid control ECU)	BC-89
BRAKE warning light remains on	1. BRAKE waning light circuit	BC-74
	2. Brake actuator (skid control ECU)	BC-89
BRAKE warning light does not come on	1. BRAKE warning light circuit	BC-79
	2. Brake actuator (skid control ECU)	BC-89

TERMINALS OF ECU

1. Terminals of ECU

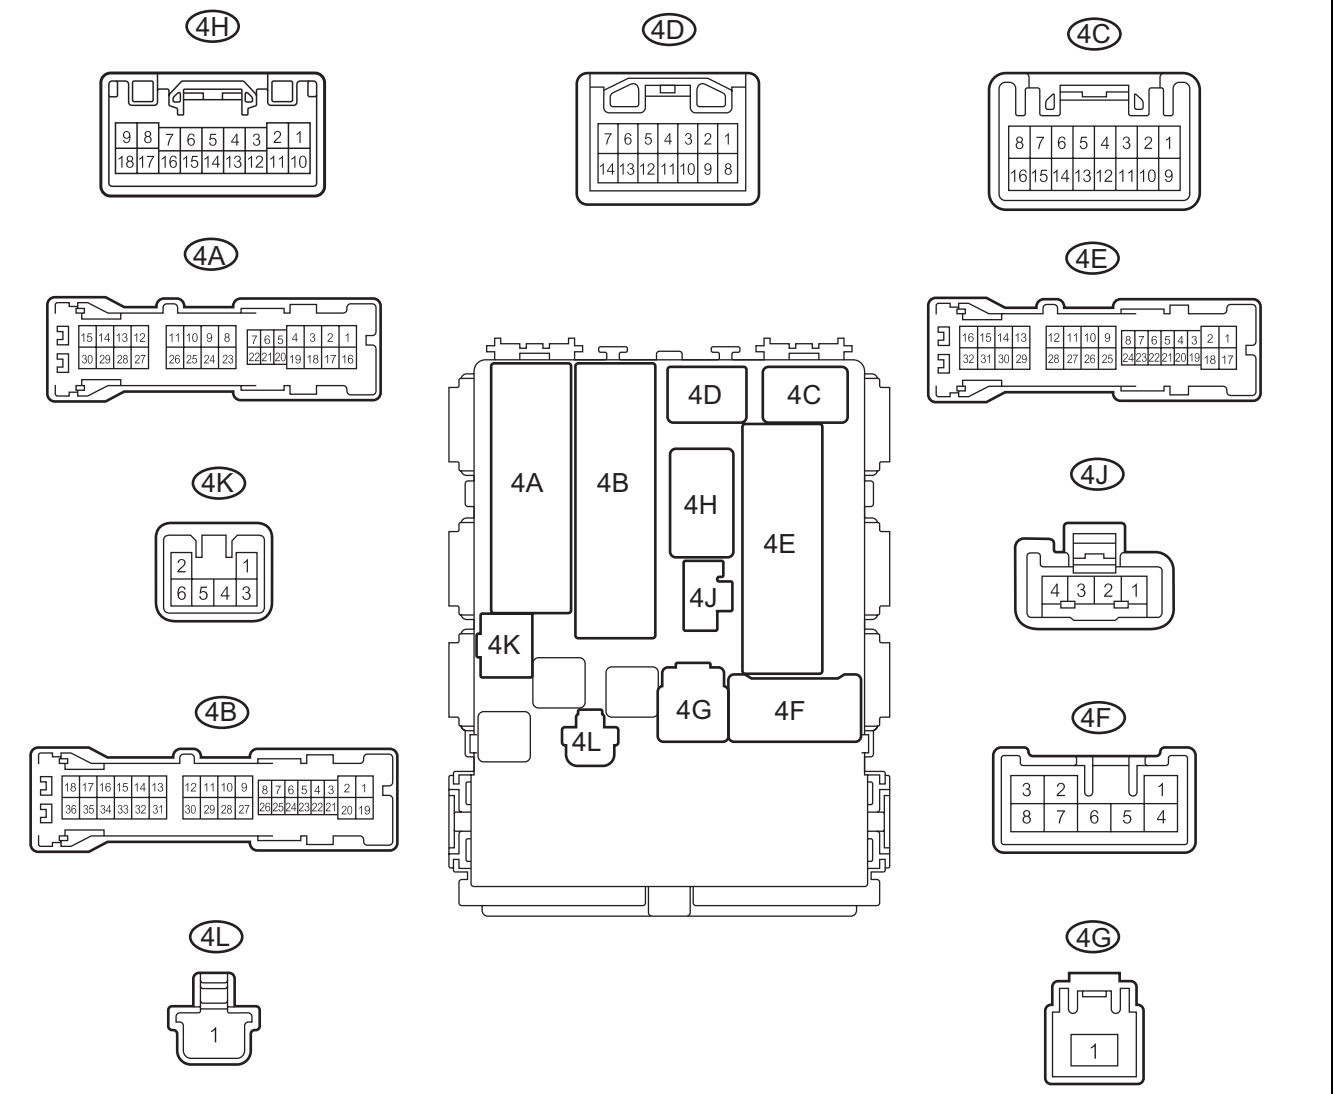
Skid Control ECU:



C110609E01

Symbols (Terminals No.)	Terminal Description
+BS (A15-1)	Solenoid valve power supply
GND1 (A15-2)	Skid control ECU ground
CANL (A15-5)	CAN communication line L
CANH (A15-6)	CAN communication line H
FL- (A15-8)	Front LH wheel speed signal input
FL+ (A15-9)	Front LH wheel speed sensor power supply
STP (A15-10)	Stop light switch input
RL+ (A15-11)	Rear LH wheel speed sensor power supply
RL- (A15-12)	Rear LH wheel speed signal input
+BM (A15-23)	Motor relay power supply
GND2 (A15-24)	Actuator pump motor ground
IG1 (A15-25)	ECU power supply
FR- (A15-30)	Front RH wheel speed signal input
FR+ (A15-31)	Front RH wheel speed sensor power supply
RR+ (A15-33)	Rear RH wheel speed sensor power supply
RR- (A15-34)	Rear RH wheel speed signal input

Main Body ECU (Rear View):



H

E114510E04

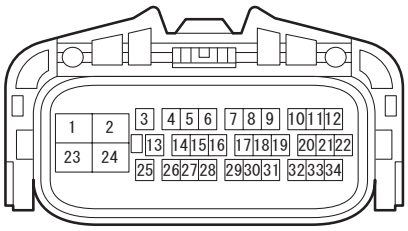
Symbols (Terminals No.)	Terminal Description
PKB (4C-2)	Parking brake switch input

2. Terminal inspection

(a) Disconnect the connector and measure the resistance and voltage on the wire harness side.
HINT:
The voltage cannot be measured with the connector connected to the skid control ECU as the connector is water resistant.

BC

Skid Control ECU (harness side connector):

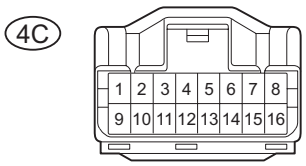


C107496E01

Standard:

Symbols	Wiring Color	Terminal Description	Conditions	Specified Conditions
+BS (A15-1) - Body ground	W - Body ground	Solenoid valve power supply	Always	11 to 14 V
GND1 (A15-2) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
STP (A15-10) - Body ground	G - Body ground	Stop light switch input	Stop light switch ON Brake pedal depressed	8 to 14 V
STP (A15-10) - Body ground	G - Body ground	Stop light switch input	Stop light switch OFF Brake pedal released	Below 1.5 V
+BM (A15-23) - Body ground	B - Body ground	Motor relay power supply	Always	11 to 14 V
GND2 (A15-24) - Body ground	W-B - Body ground	Actuator pump motor ground	Always	Below 1 Ω
IG1 (A15-25) - Body ground	B - Body ground	ECU power supply	Ignition switch on	11 to 14 V

Main Body ECU (harness side connector):

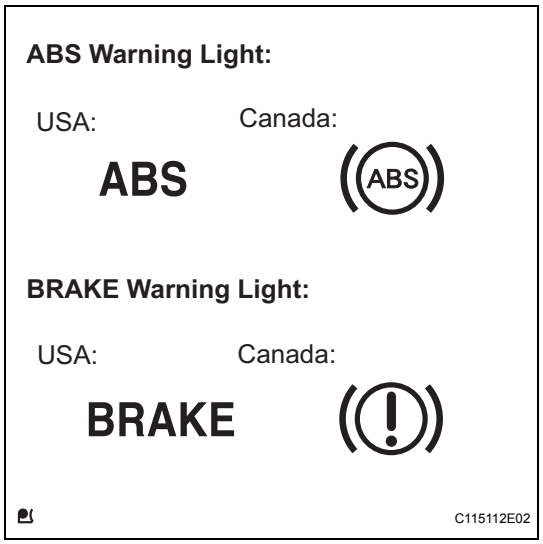


Y

C118700E01

Standard resistance:

Symbols	Wiring Color	Terminal Description	Conditions	Specified Conditions
PKB (4C-2) - Body ground	Y - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 Ω
PKB (4C-2) - Body ground	Y - Body ground	Parking brake switch input	Parking brake switch OFF	10 kΩ or higher



DIAGNOSIS SYSTEM

1. DIAGNOSIS

If the skid control ECU detects a malfunction, the ABS and/or BRAKE warning lights come on in accordance with the trouble area, to warn the driver.
The table below indicates which lights come on when there are malfunctions in particular functions.

Item / Trouble Area	ABS System	EBD System	Skid Control ECU
ABS warning light	○	○	○
Brake warning light	-	○	○

○: Light ON, -: Light OFF

HINT:

- The DTCs can be read by connecting SST (09843-18040) between the TC and CG terminals of the DLC3 and observing the blinking pattern of the ABS warning light, or by using an intelligent tester (See page BC-25).
- This system has a sensor signal check function (See page BC-14).

2. WARNING LIGHT CHECK

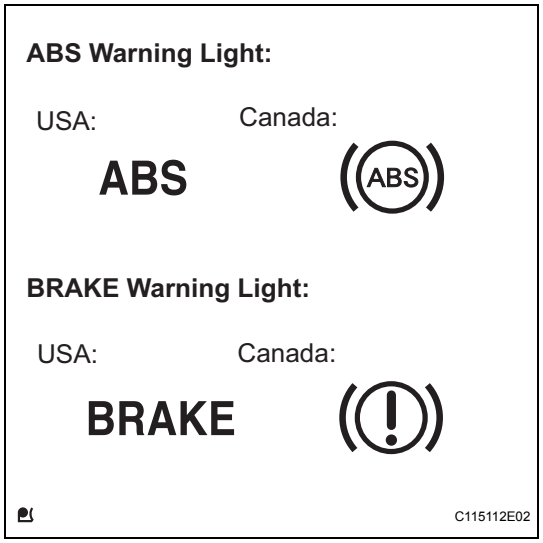
(a) Release the parking brake lever.

NOTICE:
Before releasing the parking brake lever, set chocks to hold the vehicle for safety.

HINT:
When the parking brake is applied or the brake fluid level is low, the brake warning light comes on.

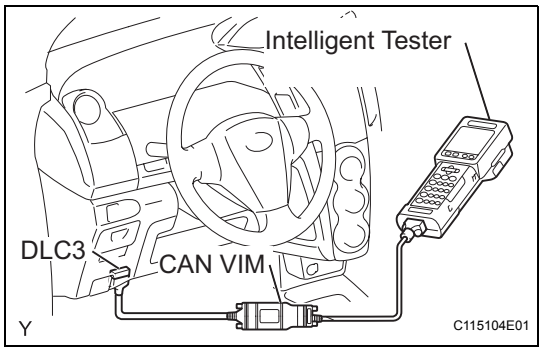
(b) When the ignition switch is turned on, check that the ABS warning light and brake warning light come on and go off in approximately 3 seconds.

HINT:
If the warning lights do not illuminate, confirm whether the bulbs have burned out, and also check for CAN communication system DTCs, since the skid control ECU and combination meter are connected by the CAN communication line.
If the warning light remains on, perform the relevant troubleshooting procedures. The relevant troubleshooting procedures are described in the sections listed in the table below.



Section Title	See Page
ABS Warning Light Remains ON	BC-70
Brake Warning Light Remains ON	BC-74

BC



DTC CHECK / CLEAR

1. DTC CHECK (USING INTELLIGENT TESTER)

(a) Check DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on.

(3) Turn the tester on.

(4) Read the DTCs using the intelligent tester. Select the following menu items: DIAGNOSIS / OBD/MOBD / select vehicle / ABS / DTC INFO / TROUBLE CODES.

2. DTC CLEAR (USING INTELLIGENT TESTER)

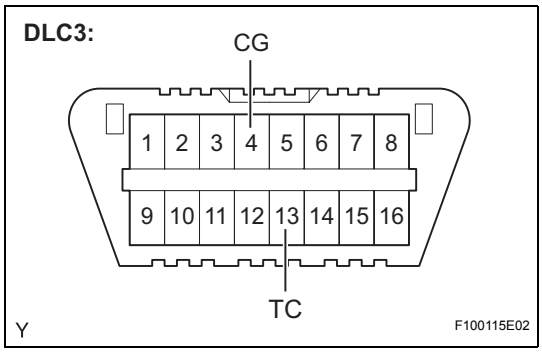
(a) Clear the DTCs.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on.

(3) Turn the tester on.

(4) Clear the DTCs using the intelligent tester. Select the following menu items: DIAGNOSIS / OBD/MOBD / select vehicle / ABS / DTC INFO / CLEAR CODES.



3. DTC CHECK (USING SST CHECK WIRE)

(a) Check DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch on.

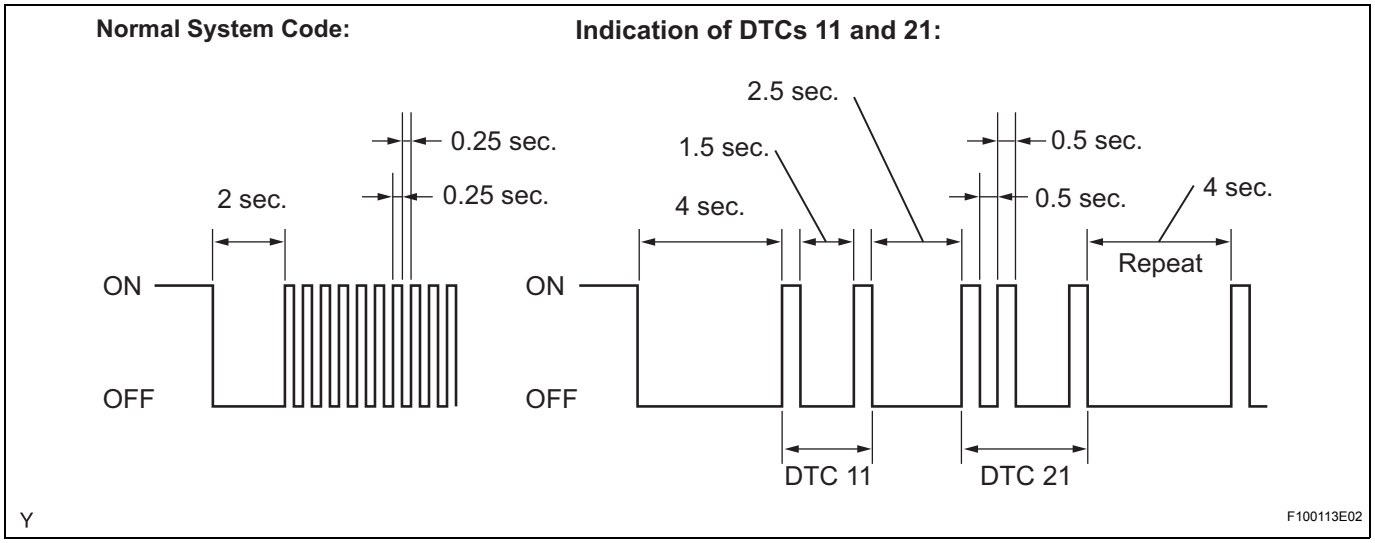
(3) Read 2-digit DTCs indicated by the blinking of the ABS warning light on the combination meter.

HINT:

- If the ABS warning light does not blink, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are described in the sections listed in the table below.

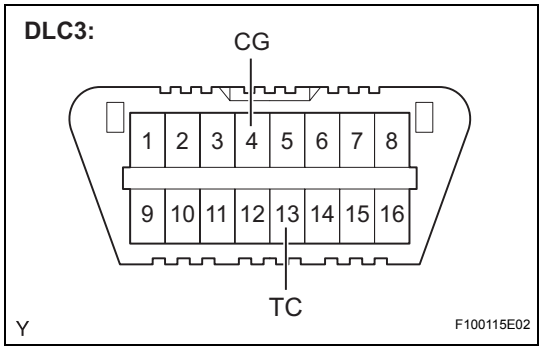
Section Title	See Page
ABS Warning Light does not Come ON	BC-73
TC and CG Terminal Circuit	BC-81

- As an example, the blinking patterns of the normal system code and DTCs 11 and 21 are shown below.



- DTCs are explained in "DIAGNOSTIC TROUBLE CODE CHART" (See page BC-31).

(4) After completing the check, disconnect SST from terminals TC and CG of the DLC3, and turn the ignition switch off.
HINT:
If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.

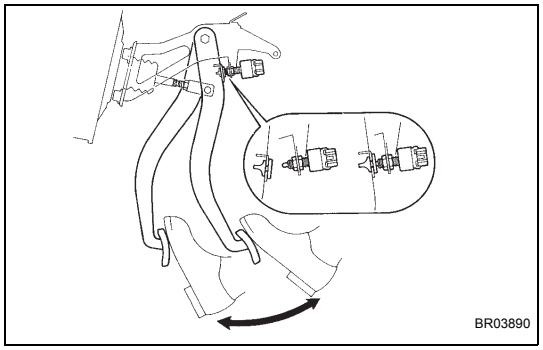


4. DTC CLEAR (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the ignition switch on.



(3) Clear the DTCs stored in the skid control ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light blinks in the normal system code pattern.

(5) Remove SST from the terminals of the DLC3.

(6) Turn the ignition switch off.
HINT:
The DTCs cannot be cleared by removing the battery cable or ECU-IG fuse.

5. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch on.

(b) Check that the ABS warning light goes off within approximately 3 seconds.

BC

(c) Turn the ignition switch off.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:

- Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) state as freeze frame data.
- The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on since the last time the ABS was activated. However, if the vehicle was stationary or running at a low speed (4.3 mph [7 km/h] or less), or if a DTC is detected, the skid control ECU stops counting.
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates the data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored when the ABS operated is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates are performed until the data is cleared.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) From the display on the tester, select "FREEZE FRAME DATA".

Item (Display)	Measurement Item	Reference Values
FREEZE TIME	Elapsed time since freeze frame data stored	Min.: 0 ms Max.: 500 ms
#IG ON	Number of ignition switch on operations since freeze frame data stored	0 to 31
STOP LAMP SW	Stop light switch signal	ON: Stop light switch ON OFF: Stop light switch OFF
PARKING BRAKE SW	Parking brake switch signal	ON: Parking brake switch ON OFF: Parking brake switch OFF
OPERATED SYSTEM	Operated system status	ABS: ABS activated FAIL: Fail safe mode activated SYS: System prohibited NON: No system activated
FORWARD&REA G	Forward and backward G	Min.: -25.11 m/s^2 Max.: 24.91 m/s^2
FR WHEEL SPD	FR wheel speed	Min.: 0 mph (0 km/h) Max.: 202 mph (326.4 km/h)
FL WHEEL SPD	FL wheel speed	Min.: 0 mph (0 km/h) Max.: 202 mph (326.4 km/h)
RR WHEEL SPD	RR wheel speed	Min.: 0 mph (0 km/h) Max.: 202 mph (326.4 km/h)
RL WHEEL SPD	RL wheel speed	Min.: 0 mph (0 km/h) Max.: 202 mph (326.4 km/h)
VEHICLE SPD	Vehicle speed	Min.: 0 mph (0 km/h) Max.: 202 mph (326.4 km/h)
SPD GRADE	Vehicle speed grade	Min.: -25.11 m/s^2 Max.: 24.91 m/s^2

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with any sensor signals or actuator systems, the skid control ECU prohibits the power supply to the brake actuator.
  ABS control is prohibited, but EBD control continues as far as possible. If EBD control is impossible, the BRAKE warning light comes on to warn the driver (See page BC-24).
- If any system components have malfunctions before starting control, the operation stops immediately. If any system components have malfunctions during control, the control stops gradually so as not to trigger any sudden changes in the vehicle conditions.
  If it is impossible to control the systems, the warning light comes on to inform the driver of the malfunctions in the systems (See page BC-24).

HINT:

- If the ABS system malfunctions, the brake system operates normally without the ABS system control.
- If the brake actuator malfunctions, a gradual loss of brake performance is expected, and ABS system control is prohibited.

ABS and EBD system

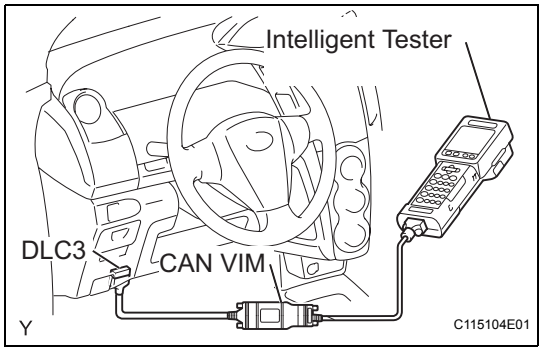
Malfunction Area	Fail-Safe Operation
ABS system	ABS control prohibited
EBD system	ABS and EBD control prohibited

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By referring to the DATA LIST displayed on the intelligent tester, the values and status of parts such as switches, sensors and actuators can be read without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening diagnostic time.



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the intelligent tester on.
(d) Select the following menu items: DIAGNOSIS / OBD / MOBD / select vehicle / ABS / DATA LIST.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Notes
ABS WARN LAMP	ABS warning light / ON or OFF	ON: ABS warning light ON OFF: ABS warning light OFF	-
BRAKE WARN LAMP	BRAKE warning light / ON or OFF	ON: BRAKE warning light ON OFF: BRAKE warning light OFF	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
DECELERAT SEN	Deceleration sensor reading / min.: -25.11 m/s, max.: 24.91 m/s	Approximately 0+-0.13 while stationary	-
FORWARD&REA G	Forward and rearward G	min.: -25.11 m/s^2 max.: 24.91 m/s^2	-
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar to speed indicated on speedometer
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar to speed indicated on speedometer
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar to speed indicated on speedometer
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar to speed indicated on speedometer
VEHICLE SPD	Maximum speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar to speed indicated on speedometer
FR WHEEL ACCEL	FR wheel acceleration / min.: -25.11 m/s^2, max.: 24.91 m/s^2	min.: -200.84 m/s^2 max.: 199.27 m/s^2	-
FL WHEEL ACCEL	FL wheel acceleration / min.: -25.11 m/s^2, max.: 24.91 m/s^2	min.: -200.84 m/s^2 max.: 199.27 m/s^2	-
RR WHEEL ACCEL	RR wheel acceleration / min.: -25.11 m/s^2, max.: 24.91 m/s^2	min.: -200.84 m/s^2 max.: 199.27 m/s^2	-

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Notes
RL WHEEL ACCEL	RL wheel acceleration / min.: -25.11 m/s^2, max.: 24.91 m/s^2	min.: -200.84 m/s^2 max.: 199.27 m/s^2	-
FR ABS STATUS	FR wheel ABS control status / ON or OFF	ON: During control	-
FL ABS STATUS	FL wheel ABS control status / ON or OFF	ON: During control	-
RR ABS STATUS	RR wheel ABS control status / ON or OFF	ON: During control	-
RL ABS STATUS	RL wheel ABS control status / ON or OFF	ON: During control	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-
ECB MTR RELAY	ABS Motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-
SFRH (*1)	ABS solenoid (SFRH) / ON or OFF	ON: Operates OFF: Does not operate	-
SFRR (*2)	ABS solenoid (SFRR) / ON or OFF	ON: Operates OFF: Does not operate	-
SFLH (*3)	ABS solenoid (SFLH) / ON or OFF	ON: Operates OFF: Does not operate	-
SFLR (*4)	ABS solenoid (SFLR) / ON or OFF	ON: Operates OFF: Does not operate	-
SRRH (*5)	ABS solenoid (SRRH) / ON or OFF	ON: Operates OFF: Does not operate	-
SRRR (*6)	ABS solenoid (SRRR) / ON or OFF	ON: Operates OFF: Does not operate	-
SRLH (*7)	ABS solenoid (SRLH) / ON or OFF	ON: Operates OFF: Does not operate	-
SRLR (*8)	ABS solenoid (SRLR) / ON or OFF	ON: Operates OFF: Does not operate	-
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
#DTC	Number of recorded DTCs / min.: 0, max.: 255	min.: 0 max.: 255	-

HINT:

- *1: SFRH (S: Solenoid, F: Front, R: Right, H: Holding)
- *2: SFRR (S: Solenoid, F: Front, R: Right, R: Reduction)
- *3: SFLH (S: Solenoid, F: Front, L: Left, H: Holding)
- *4: SFLR (S: Solenoid, F: Front, L: Left, R: Reduction)
- *5: SRRH (S: Solenoid, R: Rear, R: Right, H: Holding)
- *6: SRRR (S: Solenoid, R: Rear, R: Right, R: Reduction)

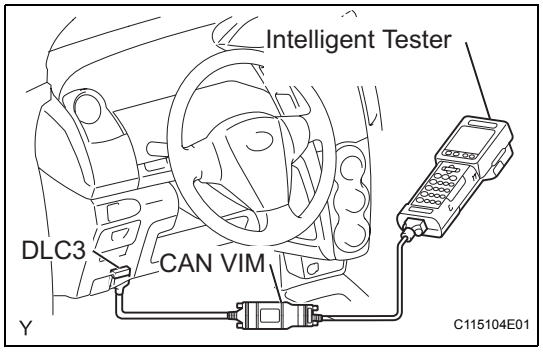
- *7: SRLH (S: Solenoid, R: Rear, L: Left, H: Holding)
- *8: SRLR (S: Solenoid, R: Rear, L: Left, R: Reduction)

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows parts such as relays and actuators to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening diagnostic time.

It is possible to display the DATA LIST during the ACTIVE TEST.



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the intelligent tester on.
(d) By following the prompts on the tester, perform the ACTIVE TEST.

HINT:

- The ignition switch must be turned on to proceed to the ACTIVE TEST using the intelligent tester.
- The ACTIVE TESTs of the ABS solenoid, ABS motor relay, ABS warning light and BRAKE warning light are available when the vehicle is stopped.
- The motors stop automatically after 5 seconds of activation to prevent them from being damaged. When the motors are operated repeatedly, certain intervals are required between operations.
- Solenoids stop automatically after 2 seconds of activation to prevent them from being damaged, and can only be operated again after a certain interval.
- Do not depress the brake pedal while only the pressure reduction solenoid valves are on.
- Do not drive 2 or more solenoids simultaneously except to operate the pressure holding solenoid valves and pressure reduction solenoid valves of the wheels.

Item (Display)	Test Details	Diagnostic Notes
ABS WARN LAMP	Turns ABS warning light ON or OFF	Observe combination meter
BRAKE WARN LAMP	Turns BRAKE warning light ON or OFF	Observe combination meter
SOL RELAY	Turns ABS solenoid relay ON or OFF	-
MOTOR RELAY	Turns ABS motor relay ON or OFF	Operation sound of motor can be heard
SRLR	Turns ABS solenoid (SRLR) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SRLH	Turns ABS solenoid (SRLH) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SRRR) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON or OFF	Operation sound of solenoid (clicking sound) can be heard

Item (Display)	Test Details	Diagnostic Notes
SFLR	Turns ABS solenoid (SFLR) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SFRR	Turns ABS solenoid (SFRR) ON or OFF	Operation sound of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON or OFF	Operation sound of solenoid (clicking sound) can be heard

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:
When replacing any parts, turn the ignition switch off.
HINT:

- If no abnormality is found when inspecting parts, check the skid control ECU and check for poor contact at ground points.
- If a DTC is displayed during the DTC check, check the circuit for the DTC listed in the table below. For details of each DTC, refer to the page indicated.
- When 2 or more DTCs are detected, perform circuit inspections one by one until the problem is identified.
- All DTCs in the table below are detected in accordance with 1 trip detection logic.

DTC chart:

DTC No.	Detection Item	Trouble Areas	See page
C0200/31 (*1)	Right Front Wheel Speed Sensor Signal	1. Front speed sensor RH 2. Front speed sensor RH circuit 3. Sensor installation 4. Foreign matter on sensor tip or sensor rotor 5. Brake actuator (skid control ECU)	BC-37
C0205/32 (*1)	Left Front Wheel Speed Sensor Signal	1. Front speed sensor LH 2. Front speed sensor LH circuit 3. Sensor installation 4. Foreign matter on sensor tip or sensor rotor 5. Brake actuator (skid control ECU)	BC-37
C0210/33 (*1)	Right Rear Wheel Speed Sensor Signal	1. Skid control sensor RH 2. Skid control sensor RH circuit 3. Sensor installation 4. Brake actuator (skid control ECU)	BC-44
C0215/34 (*1)	Left Rear Wheel Speed Sensor Signal	1. Skid control sensor LH 2. Skid control sensor LH circuit 3. Sensor installation 4. Brake actuator (skid control ECU)	BC-44
C0226/21	SFR Solenoid Circuit	Brake actuator	BC-51
C0236/22	SFL Solenoid Circuit	Brake actuator	BC-51
C0246/23	SRR Solenoid Circuit	Brake actuator	BC-51
C0256/24	SRL Solenoid Circuit	Brake actuator	BC-51
C0273/13	Open in ABS Motor Relay Circuit	1. ABS1/VSC1 fuse 2. Wire harness (+ BM circuit) 3. Brake actuator (skid control ECU)	BC-54
C0274/14	Short to B+ in ABS Motor Relay Circuit	1. ABS1/VSC1 fuse 2. Wire harness (+ BM circuit) 3. Brake actuator (skid control ECU)	BC-54
C0278/11	Open in ABS Solenoid Relay Circuit	1. ABS2/VSC2 fuse 2. Wire harness (+BS) 3. Brake actuator (skid control ECU)	BC-57
C0279/12	Short to B+ in ABS Solenoid Relay Circuit	1. ABS2/VSC2 fuse 2. Wire harness (+BS) 3. Brake actuator (skid control ECU)	BC-57

DTC No.	Detection Item	Trouble Areas	See page
C1235/35	Foreign Object is Attached on Tip of Front Speed Sensor RH	1. Front speed sensor RH 2. Front speed sensor RH circuit 3. Foreign matter on sensor tip or sensor rotor 4. Brake actuator (skid control ECU)	BC-37
C1236/36	Foreign Object is Attached on Tip of Front Speed Sensor LH	1. Front speed sensor LH 2. Front speed sensor LH circuit 3. Foreign matter on sensor tip or sensor rotor 4. Brake actuator (skid control ECU)	BC-37
C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH	1. Skid control sensor RH 2. Skid control sensor RH circuit 3. Brake actuator (skid control ECU)	BC-44
C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH	1. Skid control sensor LH 2. Skid control sensor LH circuit 3. Brake actuator (skid control ECU)	BC-44
C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage	1. Battery 2. Charging system 3. ECU-IG fuse 4. AM1 fuse 5. IG1 relay 6. Brake actuator (skid control ECU)	BC-59
C1249/49	Open in Stop Light Switch Circuit	1. Stop light switch 2. Stop light switch circuit 3. Brake actuator (skid control ECU)	BC-64
C1251/51 (*1)	Open in Pump Motor Circuit	Brake actuator	BC-68
U0073/94	Control Module Communication Bus OFF	CAN communication system	BC-69

HINT:

*1:

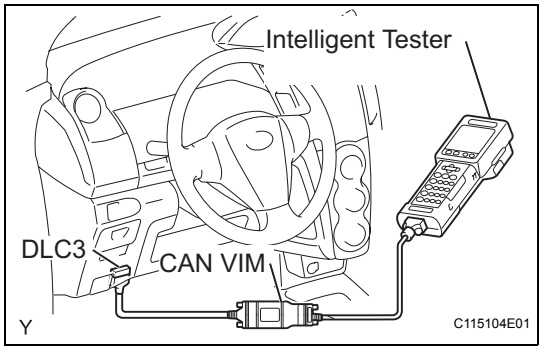
Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed.

1. Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
2. Clear the DTC(s).

Test Mode DTC:

DTC No.	Detection Item	Trouble Areas	See page
C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)	1. Front speed sensor RH 2. Front speed sensor RH circuit 3. Sensor installation 4. Foreign matter on sensor tip or sensor rotor	BC-37
C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)	1. Front speed sensor LH 2. Front speed sensor LH circuit 3. Sensor installation 4. Foreign matter on sensor tip or sensor rotor	BC-37
C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)	1. Skid control sensor RH 2. Skid control sensor RH circuit 3. Sensor installation	BC-44
C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)	1. Skid control sensor LH 2. Skid control sensor LH circuit 3. Sensor installation	BC-44

DTC No.	Detection Item	Trouble Areas	See page
C1275/75	Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)	1. Front speed sensor RH 2. Front speed sensor RH circuit 3. Foreign matter on sensor tip or sensor rotor	BC-37
C1276/76	Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)	1. Front speed sensor LH 2. Front speed sensor LH circuit 3. Foreign matter on sensor tip or sensor rotor	BC-37
C1277/77	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)	1. Skid control sensor RH 2. Skid control sensor RH circuit	BC-44
C1278/78	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)	1. Skid control sensor LH 2. Skid control sensor LH circuit	BC-44



ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and allow it to idle.
(c) Turn the tester on.
(d) Perform the active test using the intelligent tester. Select the following menu items: DIAGNOSIS / OBD/MOBD / select vehicle / ABS / ACTIVE TEST.

2. INSPECT BRAKE ACTUATOR MOTOR

(a) With the motor relay ON, check the actuator motor operation sound.
(b) Turn the motor relay OFF.
(c) Depress the brake pedal and hold it for approximately 15 seconds. Check that the brake pedal cannot be depressed further.
(d) With the motor relay ON, check that the pedal does not pulsate.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(e) Turn the motor relay OFF and release the brake pedal.

3. INSPECT BRAKE ACTUATOR SOLENOID (for Front Right Wheel)

NOTICE:
Never turn ON a solenoid in any manner other than described below.
(a) With the brake pedal depressed, perform the following operations.
(b) Turn the SFRH and SFRR solenoids ON simultaneously, and check that the pedal cannot be depressed further.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.

BC

(c) Turn the SFRH and SFRR solenoids OFF simultaneously, and check that the pedal can be depressed further.
(d) Turn the motor relay ON, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(e) Turn the motor relay OFF and release the brake pedal.

4. INSPECT BRAKE ACTUATOR SOLENOID (for Front Left Wheel)
NOTICE:
Never turn ON a solenoid in any manner other than described below.
(a) With the brake pedal depressed, perform the following operations.
(b) Turn the SFLH and SFLR solenoids ON simultaneously, and check that the pedal cannot be depressed further.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(c) Turn the SFLH and SFLR solenoids OFF simultaneously, and check that the pedal can be depressed further.
(d) Turn the motor relay ON, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(e) Turn the motor relay OFF and release the brake pedal.

5. INSPECT BRAKE ACTUATOR SOLENOID (for Rear Right Wheel)
NOTICE:
Never turn ON a solenoid in any manner other than described below.
(a) With the brake pedal depressed, perform the following operations.
(b) Turn the SRRH and SRRR solenoids ON simultaneously, and check that the pedal cannot be depressed further.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(c) Turn the SRRH and SRRR solenoids OFF simultaneously, and check that the pedal can be depressed further.

(d) Turn the motor relay ON, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(e) Turn the motor relay OFF and release the brake pedal.

6. INSPECT BRAKE ACTUATOR SOLENOID (for Rear Left Wheel)
NOTICE:
Never turn ON a solenoid in any manner other than described below.
(a) With the brake pedal depressed, perform the following operations.
(b) Turn the SRLH and SRLR solenoids ON simultaneously, and check that the pedal cannot be depressed further.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(c) Turn the SRLH and SRLR solenoids OFF simultaneously, and check that the pedal can be depressed further.
(d) Turn the motor relay ON, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay ON for more than 5 seconds continuously. Allow intervals of at least 20 seconds between consecutive operations.
(e) Turn the motor relay OFF and release the brake pedal.

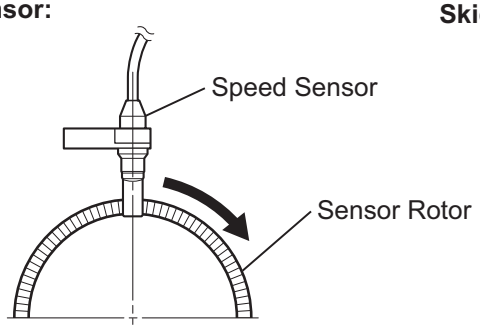
DTC	**C0200/31**	**Right Front Wheel Speed Sensor Signal**
DTC	**C0205/32**	**Left Front Wheel Speed Sensor Signal**
DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**
DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**
DTC	**C1271/71**	**Low Output Signal of Front Speed Sensor RH (Test Mode DTC)**
DTC	**C1272/72**	**Low Output Signal of Front Speed Sensor LH (Test Mode DTC)**
DTC	**C1275/75**	**Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)**
DTC	**C1276/76**	**Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

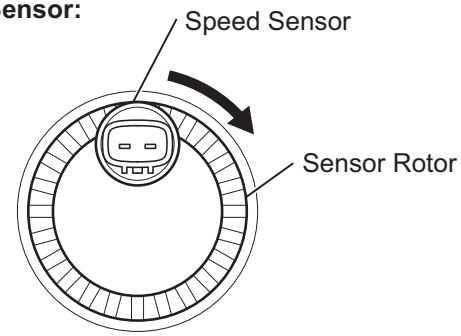
The speed sensors detect the wheel speeds and send appropriate signals to the skid control ECU. Speed sensor rotors have rows of alternating N and S magnetic poles, and their magnetic fields change as the rotors turn.

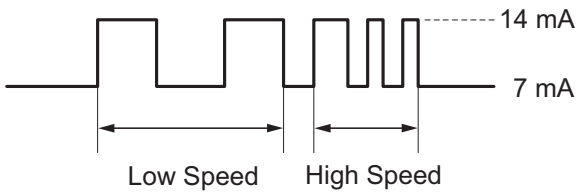
The speed sensors detect those magnetic changes and send pulse signals to the skid control ECU. The ECU monitors the wheel speeds through these pulse signals to control the ABS control system.

Front Speed Sensor:



Skid Control Sensor:





C115116E03

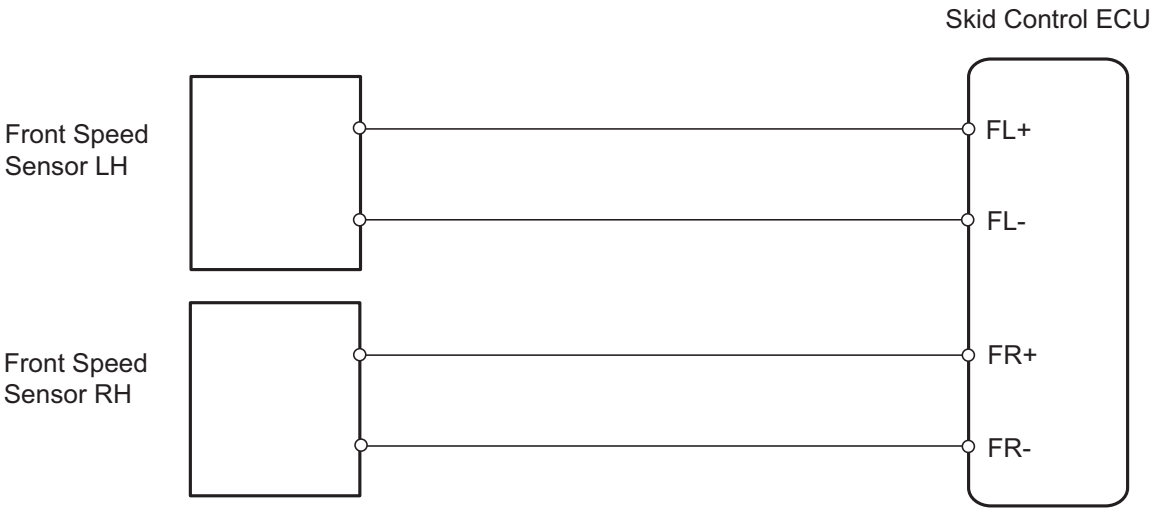
DTC No.	DTC Detecting Conditions	Trouble Areas
C0200/31 C0205/32	When any of following conditions detected: 1. At vehicle speed of 6 mph (10 km/h) or more, open or short in sensor signal circuit continues for 1 second or more. 2. Momentary interruption of sensor signal from abnormal wheel occurs 255 times or more. 3. Open in speed sensor signal circuit continues for 0.5 seconds or more. 4. With IG1 terminal voltage 9.5 V or more, sensor power supply voltage decreases for 0.5 seconds or more. 5. When vehicle driven at speed of more than 6 mph (10 km/h), speed of one wheel below one-seventh of other wheel speeds for 15 seconds or more.	• Front speed sensor • Front speed sensor circuit • Sensor installation • Foreign matter on sensor tip or sensor rotor • Brake actuator (skid control ECU)
C1235/35 C1236/36	When either of following conditions detected: 1. At vehicle speed of 12 mph (20 km/h) or more, noise occurs 75 times or more in sensor signal from abnormal wheel within 5 seconds. 2. At vehicle speed of 6 mph (10 km/h) or more, noise input once per rotor rotation for 15 seconds or more.	• Front speed sensor • Front speed sensor circuit • Foreign matter on sensor tip or sensor rotor • Brake actuator (skid control ECU)
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Sensor installation • Foreign matter on sensor tip or sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Foreign matter on sensor tip or sensor rotor

BC

HINT:

- DTCs C0200/31 and C1235/35 relate to the front speed sensor RH.
- DTCs C0205/32 and C1236/36 relate to the front speed sensor LH.

WIRING DIAGRAM

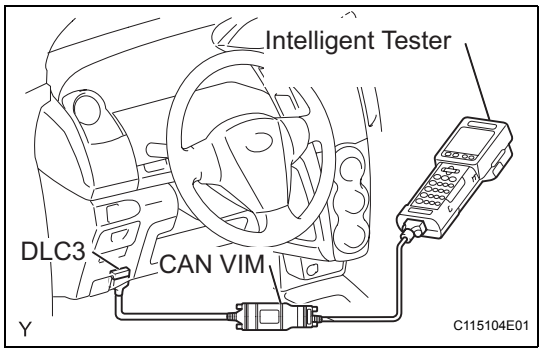


INSPECTION PROCEDURE

NOTICE:

Check the speed sensor signal in test mode after cleaning or replacement (See page BC-14).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Using the intelligent tester, check for any momentary interruption in the wire harness and connector of the speed sensor.
Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

BC

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2 READ VALUE OF DATA LIST (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and drive the vehicle.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST.
(e) Select the item "FR (FL) WHEEL SPD" in the DATA LIST and read the value displayed on the intelligent tester.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading : min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Similar to speed indicated on speedometer
FL WHEEL SPD	Wheel speed sensor (FL) reading : min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Similar to speed indicated on speedometer

(f) Check that there is no significant difference between the speed value displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
There is no significant difference in the displayed speed values.
HINT:
There is a tolerance of +- 10% in the speedometer indication.

NG → Go to step 5

OK

3 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Perform a TEST MODE inspection and check for DTCs (See page BC-14).
OK:
No DTC output.

NG → REPLACE FRONT SPEED SENSOR

OK

4 RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

Result	Proceed to
DTC not output	A
DTC output	B

B → **Go to step 11**

A

END

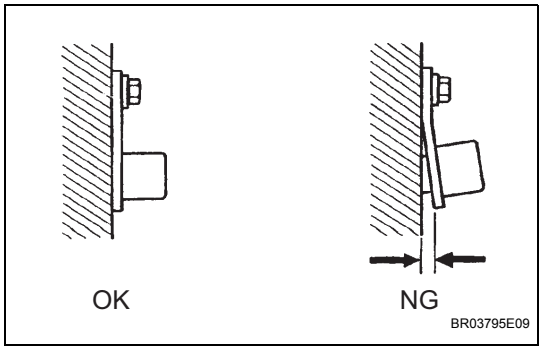
5 CHECK FRONT SPEED SENSOR INSTALLATION

(a) Check that the speed sensor installation bolt is tightened properly.
OK:
The installation bolt is tightened properly.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

NG → **TIGHTEN BOLT PROPERLY**

OK

6 CHECK FRONT SPEED SENSOR



(a) Visually check the speed sensor for deformation and damage.
OK:
No deformation or damage.
No gap between the sensor and front steering knuckle.

NG → **REPLACE FRONT SPEED SENSOR**

OK

7 CHECK SPEED SENSOR TIP

(a) Remove the speed sensor (See page BC-95).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.

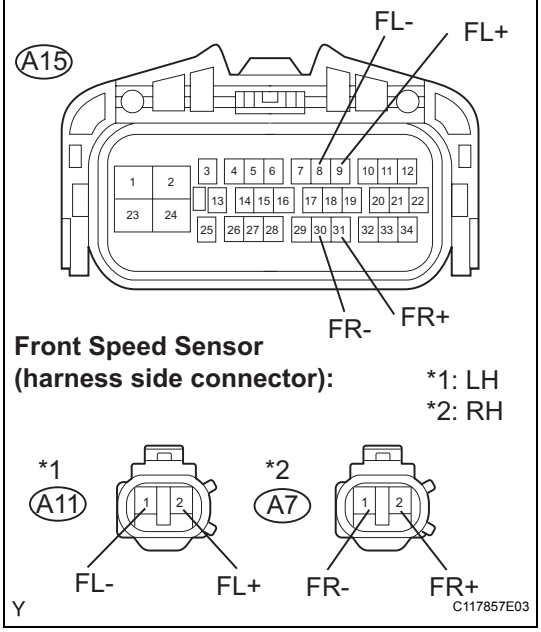
NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

BC

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Disconnect the front speed sensor connector.
(c) Measure the resistance.

Standard resistance (LH)

Tester Connection	Specified Condition
A15-9 (FL+) - A11-2 (FL+)	Below 1 Ω
A15-8 (FL-) - A11-1 (FL-)	Below 1 Ω

Standard resistance (RH)

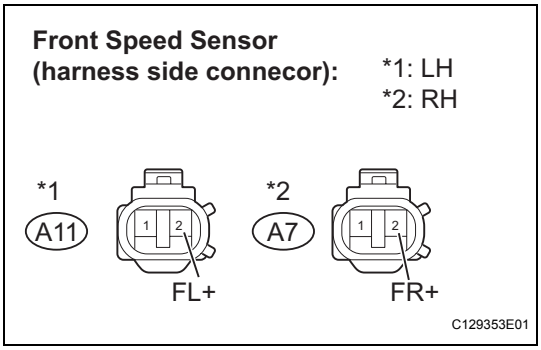
Tester Connection	Specified Condition
A15-31 (FR+) - A7-2 (FR+)	Below 1 Ω
A15-30 (FR-) - A7-1 (FR-)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9 INSPECT FRONT SPEED SENSOR (INPUT VOLTAGE)

Front Speed Sensor (harness side connecor):



(a) Disconnect the speed sensor connector.
(b) Turn the ignition switch on.
(c) Measure the voltage.

Standard voltage

Tester Connection	Specified Condition
A11-2 (FL+) - Body ground	5.7 to 17.3 V
A7-2 (FR+) - Body ground	5.7 to 17.3 V

NG → **REPLACE BRAKE ACTUATOR**

OK

10 RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

Result	Proceed to
DTC output	A

BC

Result	Proceed to
DTC not output	B

B → END

A

11 REPLACE FRONT SPEED SENSOR

(a) Replace the front speed sensor (See page BC-95).

NEXT

12 RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPLACE BRAKE ACTUATOR

DTC	C0210/33	Right Rear Wheel Speed Sensor Signal

DTC	C0215/34	Left Rear Wheel Speed Sensor Signal

DTC	C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH

DTC	C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH

DTC	C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)

DTC	C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DTC	C1277/77	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)

DTC	C1278/78	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)

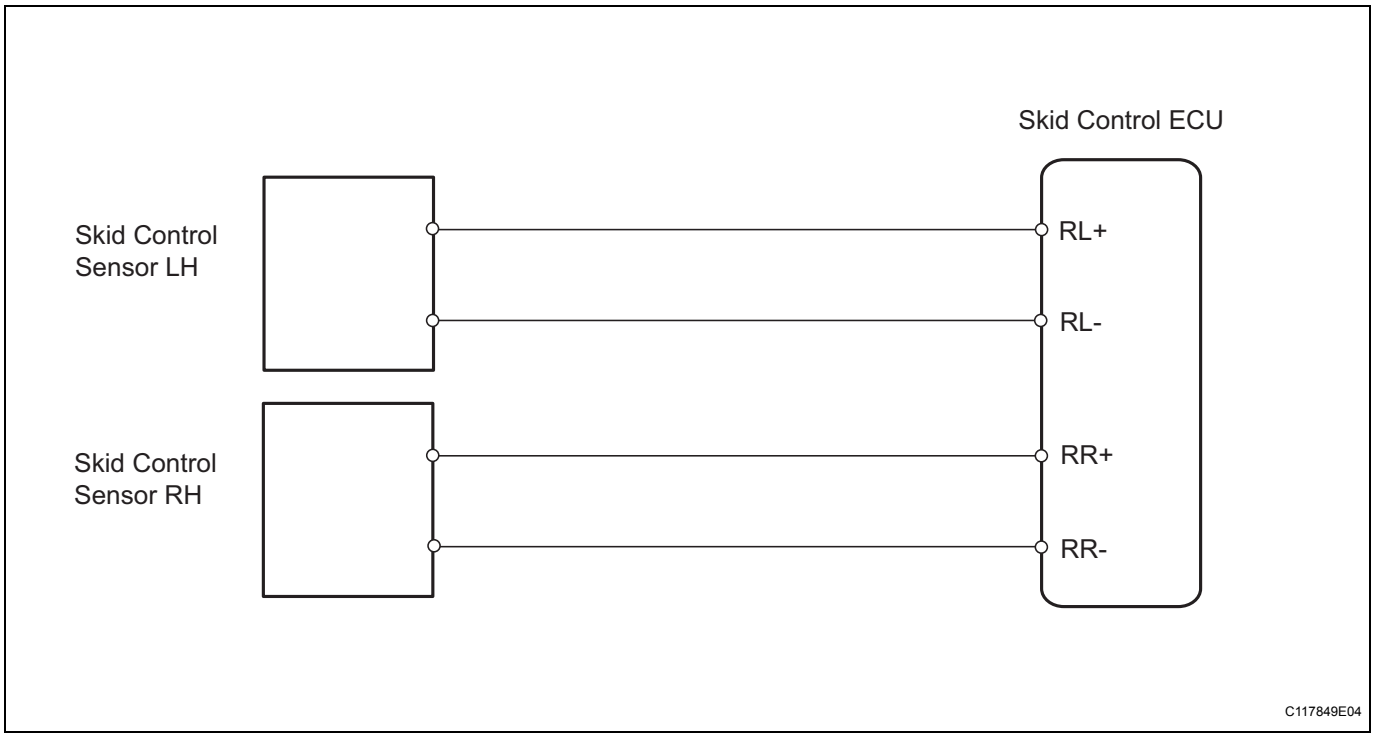
DESCRIPTION

Refer to DTC C0200/31 (See page BC-37).

DTC No.	DTC Detecting Conditions	Trouble Areas
C0210/33 C0215/34	When any of following conditions detected: 1. At vehicle speed of 6 mph (10 km/h) or more, open or short in sensor signal circuit continues for 1 second or more. 2. Momentary interruption of sensor signal from abnormal wheel occurs 255 times or more. 3. Open in speed sensor signal circuit continues for 0.5 seconds or more. 4. With IG1 terminal voltage 9.5 V or more, sensor power supply voltage decreases for 0.5 seconds or more. 5. When vehicle driven at speed of more than 6 mph (10 km/h), one of wheel speeds below one-seventh of other wheel speeds for 15 seconds or more.	• Skid control sensor • Skid control sensor circuit • Sensor installation • Brake actuator (skid control ECU)
C1238/38 C1239/39	When either of following conditions detected: 1. At vehicle speed of 12 mph (20 km/h) or more, noise occurs 75 times or more in sensor signal from abnormal wheel in 5 seconds. 2. At vehicle speed of 6 mph (10 km/h) or more, noise input once per rotor rotation for 15 seconds or more.	• Skid control sensor • Skid control sensor circuit • Brake actuator (skid control ECU)
C1273/73 C1274/74	Detected only during test mode.	• Skid control sensor • Skid control sensor circuit • Sensor installation
C1277/77 C1278/78	Detected only during test mode.	• Skid control sensor • Skid control sensor circuit

HINT:
- DTC C0210/33 and C1238/38 relate to the skid control sensor RH.
- DTC C0215/34 and C1239/39 relate to the skid control sensor LH.

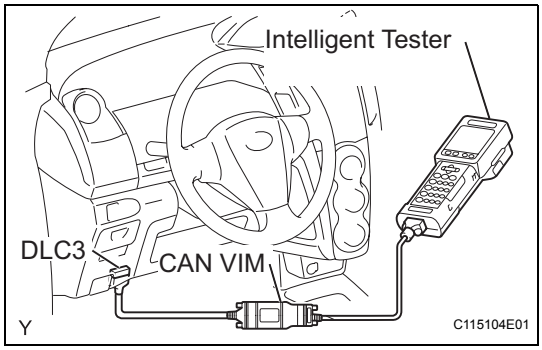
WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:
Check the speed sensor signal in test mode after cleaning or replacement (See page BC-14).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Using the intelligent tester, check for any momentary interruptions in the wire harness of the speed sensor. Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Condition
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

OK:
There are no momentary interruptions.

BC

HINT:
Perform this inspection before removing the sensor and connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2	READ VALUE OF DATA LIST (SKID CONTROL SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and drive the vehicle.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST.
(e) Select the item "RR (RL) WHEEL SPD" in the DATA LIST and read the value displayed on the intelligent tester.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading : min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Similar to speed indicated on speedometer
RL WHEEL SPD	Wheel speed sensor (RL) reading : min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Similar to speed indicated on speedometer

(f) Check that there is no significant difference between the speed value displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
There is no significant difference in the displayed speed values.
HINT:
There is a tolerance of +- 10% in the speedometer indication.

NG → Go to step 5

OK

3	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Perform a TEST MODE inspection and check for DTCs (See page BC-14).
OK:
No DTCs output.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

BC

4	RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

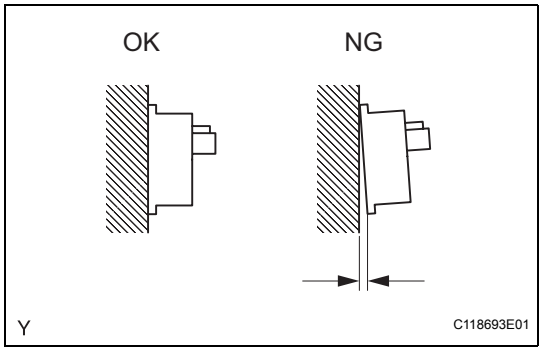
Result	Proceed to
DTC not output	A
DTC output	B

B → **Go to step 10**

A

END

5	CHECK SKID CONTROL SENSOR



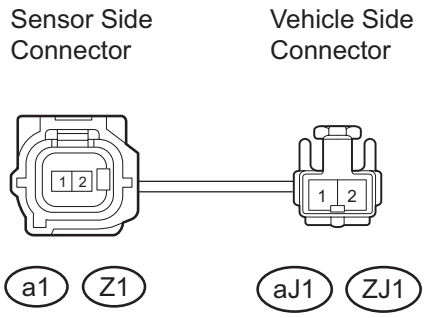
(a) Visually check the skid control sensor for deformation and damage.
OK:
No deformation or damage.
No gap between the sensor and rear axle carrier.

NG → **REPLACE SKID CONTROL SENSOR**

OK

6 INSPECT SKID CONTROL SENSOR WIRE

Skid Control Sensor Wire:



(a) Disconnect the skid control sensor wire.
(b) Measure the resistance.

Standard resistance (LH)

Tester Connection	Specified Condition
a1-1 - aJ1-1	Below 1 Ω
a1-1 - aJ1-2	10 kΩ or higher
a1-1 - Body ground	10 kΩ or higher
a1-2 - aJ1-1	10 kΩ or higher
a1-2 - aJ1-2	Below 1 Ω
a1-2 - Body ground	10 kΩ or higher

Standard resistance (RH)

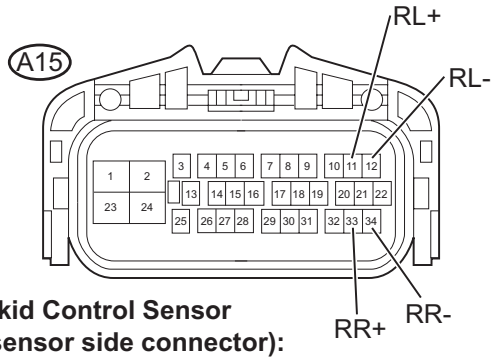
Tester Connection	Specified Condition
Z1-1 - ZJ1-1	Below 1 Ω
Z1-1 - ZJ1-2	10 kΩ or higher
Z1-1 - Body ground	10 kΩ or higher
Z1-2 - ZJ1-1	10 kΩ or higher
Z1-2 - ZJ1-2	Below 1 Ω
Z1-2 - Body ground	10 kΩ or higher

NG → **REPLACE SKID CONTROL SENSOR WIRE**

OK

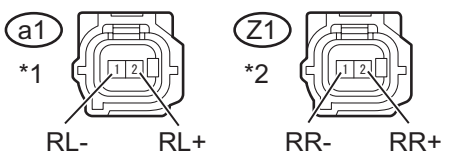
7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - REAR SPEED SENSOR)

Skid Control ECU (harness side connector):



Skid Control Sensor (sensor side connector):

*1: LH
*2: RH



(a) Disconnect the skid control ECU connector.
(b) Disconnect the skid control sensor connector.
(c) Measure the resistance.

Standard resistance (LH)

Tester Connection	Specified Condition
A15-11 (RL+) - a1-2 (RL+)	Below 1 Ω
A15-12 (RL-) - a1-1 (RL-)	Below 1 Ω

Standard resistance (RH)

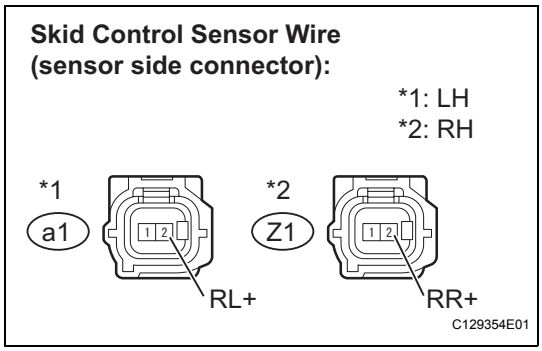
Tester Connection	Specified Condition
A15-33 (RR+) - Z1-2 (RR+)	Below 1 Ω
A15-34 (RR-) - Z1-1 (RR-)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

8	CHECK SKID CONTROL SENSOR (INPUT VOLTAGE)



(a) Disconnect the skid control sensor connector.
(b) Turn the ignition switch on.
(c) Measure the voltage.

Standard voltage

Tester Connection	Specified Condition
a1-2 (RL+) - Body ground	5.7 to 17.3 V
Z1-2 (RR+) - Body ground	5.7 to 17.3 V

NG → REPLACE BRAKE ACTUATOR

OK

9	RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

REPLACE BRAKE ACTUATOR

DTC	C0273/13	Open in ABS Motor Relay Circuit

DTC	C0274/14	Short to B+ in ABS Motor Relay Circuit

DESCRIPTION

The ABS motor relay supplies the power to the ABS pump motor. While the ABS is activated, the skid control ECU switches the motor relay ON and operates the ABS pump motor.

DTC No.	DTC Detecting Conditions	Trouble Areas
C0273/13	When either of following conditions (1 or 2) detected: 1. All of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage between 9.5 V and 17.2 V. (b) During initial check or ABS operation. (c) Relay contact open when relay on. 2. Both of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage 9.5 V or less. (b) Relay contact remains open when relay on.	• ABS1/VSC1 fuse • Wire harness (+BM circuit) • Brake actuator (skid control ECU)
C0274/14	When motor relay off, motor relay remains closed for 4 seconds or more.	• ABS1/VSC1 fuse • Wire harness (+BM circuit) • Brake actuator (skid control ECU)

HINT:
C0273/13 and C0274/14: The skid control ECU begins to detect these DTCs when the vehicle speed exceeds 4 mph (6 km/h).

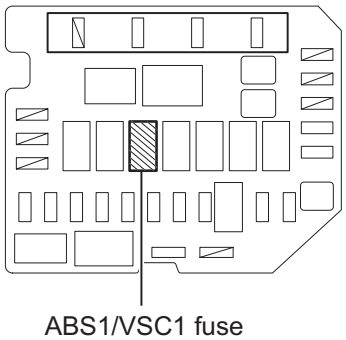
WIRING DIAGRAM

See page BC-52.

INSPECTION PROCEDURE

1	INSPECT FUSE (ABS1/VSC1)

Engine Room R/B:



(a) Remove the ABS1/VSC1 fuse from the engine room R/B.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω

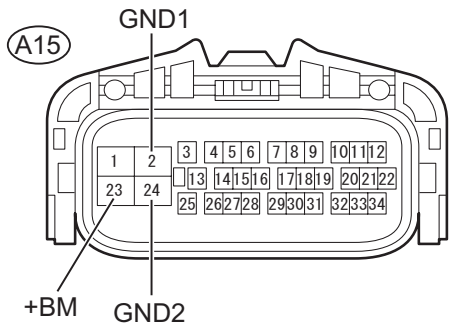
NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

BC

2	CHECK HARNESS AND CONNECTOR (BATTERY - SKID CONTROL ECU - BODY GROUND)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
A15-23 (+BM) - Body ground	11 to 14 V

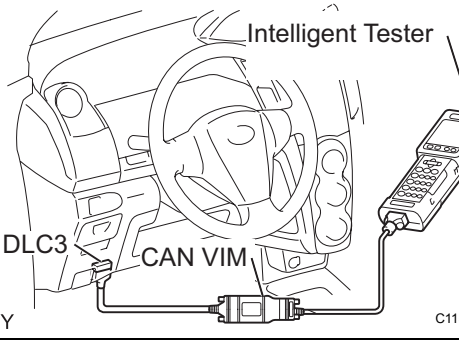
(c) Measure the resistance
Standard resistance

Tester Connection	Specified Condition
A15-2 (GND1) - Body ground	Below 1 Ω
A15-24 (GND2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (ABS MOTOR RELAY)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Clear the DTCs (See page BC-25).
(e) Perform the active test using the intelligent tester. Select the following menu items: Chassis / ABS/VSC/TRC / Active Test.

ACTIVE TEST: ABS

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of motor can be heard

(f) Check for the operation sound of the ABS motor when operating it with the intelligent tester.
OK:
The operation sound of the ABS motor can be heard.

NG → **REPLACE BRAKE ACTUATOR**

OK

4	RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.

BC

(c) Drive the vehicle at 4 mph (6 km/h) or more to activate the initial check.
(d) Check if the same DTC(s) is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPLACE BRAKE ACTUATOR

DTC	C0278/11	Open in ABS Solenoid Relay Circuit

DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

DESCRIPTION

The solenoid relay supplies power to the ABS solenoid.
After the ignition switch is turned on, the vehicle speed has reached 3 mph (5 km/h) and the solenoid is determined to be normal by the initial check self-diagnosis, the relay switches on. If any open or short circuits are detected, the relay switches off.
These DTCs may be set if the voltage supply to the solenoid relay (+BS) falls below the DTC detection threshold due to the battery or alternator outputs being insufficient.

DTC No.	DTC Detecting Condition	Trouble Areas
C0278/11	When either of following conditions (1 or 2) detected: 1. Both of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage between 9.5 V and 17.2 V. (b) Solenoid relay contact open when relay on. 2. Both of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage becomes lower than 9.5 V when relay turned on. (b) Relay contact remains open.	• ABS2/VSC2 fuse • Wire harness (+BS) • Brake actuator (skid control ECU)
C0279/12	Immediately after ignition switch turned on, solenoid relay contact closed for 0.2 seconds or more when relay off.	• ABS2/VSC2 fuse • Wire harness (+BS) • Brake actuator (skid control ECU)

HINT:
C0278/11 and C0279/12: The skid control ECU begins to detect these DTCs when the vehicle speed exceeds 4 mph (6 km/h).

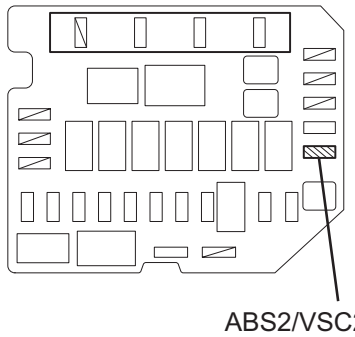
WIRING DIAGRAM

See page BC-52.

INSPECTION PROCEDURE

1	INSPECT FUSE (ABS2/VSC2)

Engine Room R/B:



(a) Remove the ABS2/VSC2 fuse from the engine room R/B.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω

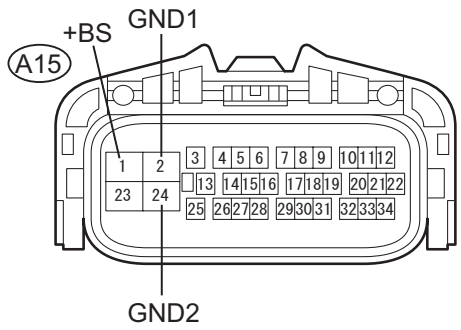
NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

BC

OK

2	CHECK HARNESS AND CONNECTOR (BATTERY - SKID CONTROL ECU - BODY GROUND)

Skid Control ECU
(harness side connector):



C117862E01

(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
A15-1 (+BS) - Body ground	11 to 14 V

(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
A15-2 (GND1) - Body ground	Below 1 Ω
A15-24 (GND2) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3	RECONFIRM DTC

(a) Clear the DTC(s) (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at 4 mph (6 km/h) or more to activate the initial check.
(d) Check if the same DTC(s) is output (See page BC-25).

A

REPLACE BRAKE ACTUATOR

BC

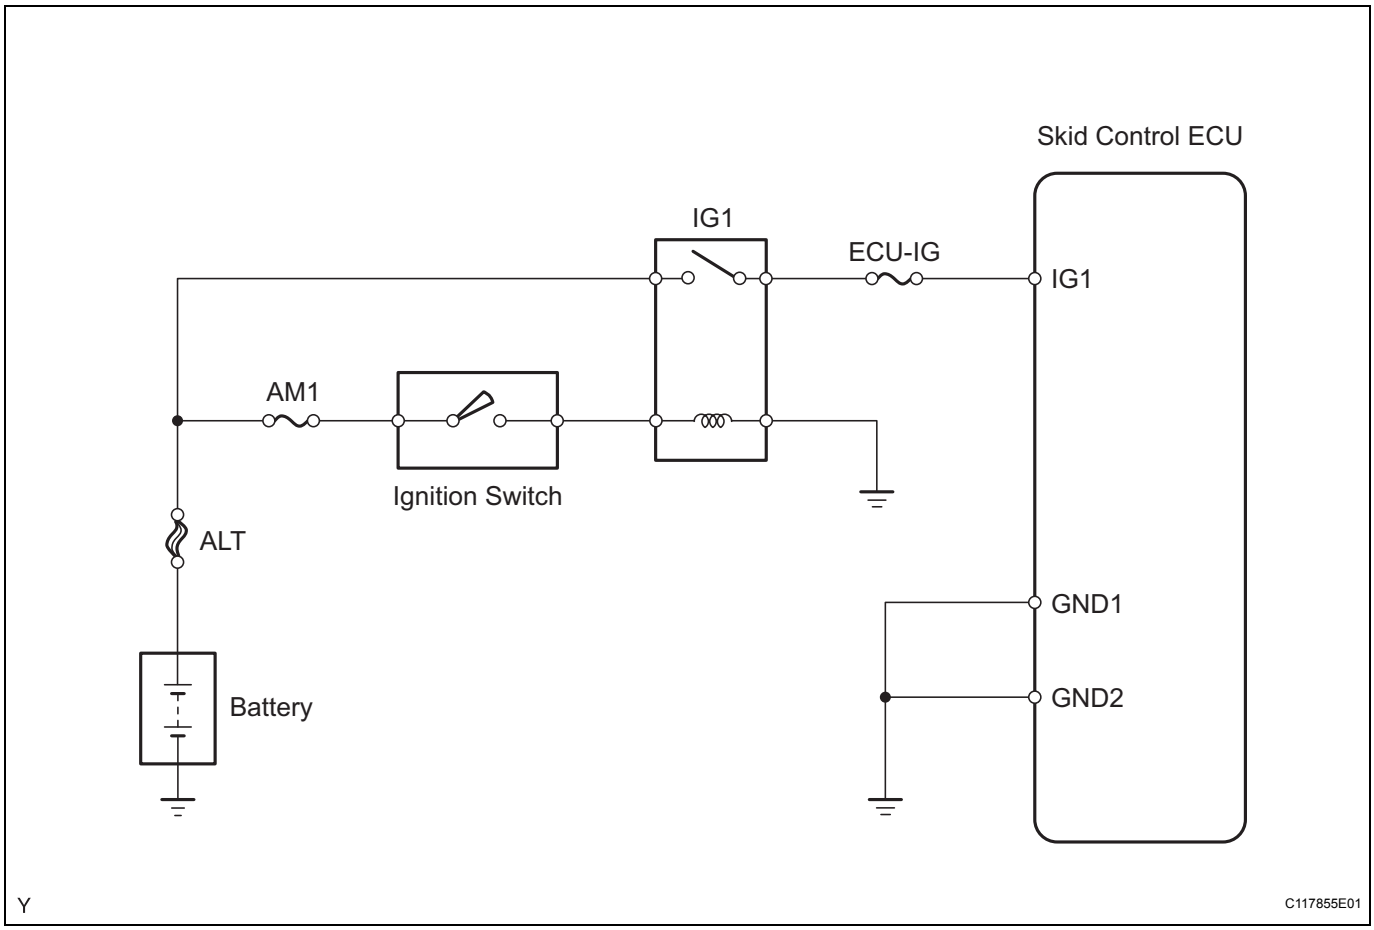
DTC	C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage

DESCRIPTION

When there is an abnormality in the power supply circuit of the brake actuator (skid control ECU), the skid control ECU sets a DTC and the operation is prohibited by the fail-safe function. This DTC is set when the voltage supplied to terminal IG1 is outside the DTC detection threshold, due to abnormalities in the battery, power source circuits or charging circuits such as the alternator circuit.
The fail-safe function is canceled when the voltage to terminal IG1 returns to normal.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1241/41	When any of following conditions detected: 1. At vehicle speed of 2 mph (3 km/h) or more, IG1 terminal voltage 9.5 V or less for 10 seconds or more. 2. When IG1 terminal voltage below 9.5 V, relay off condition continues for 0.2 seconds or more despite ECU turning motor relay on. 3. When IG1 terminal voltage below 9.5 V, wheel speed sensor power source voltage decreases for 60 seconds or more.	• Battery • Charging system • ECU-IG fuse • AM1 fuse • IG1 relay • Brake actuator (skid control ECU)

WIRING DIAGRAM

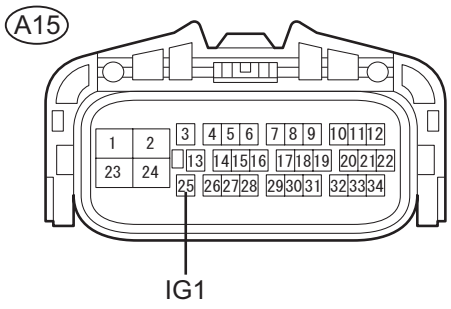


BC

INSPECTION PROCEDURE

1 CHECK SKID CONTROL ECU TERMINAL VOLTAGE

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on.
(c) Measure the voltage.

Standard voltage

Tester Connection	Specified Condition
A15-25 (IG1) - Body ground	11 to 14 V

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Clear the DTC (See page BC-25).
(b) Drive the vehicle at 2 mph (3 km/h) or more for several seconds.
(c) Check if the same DTC is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

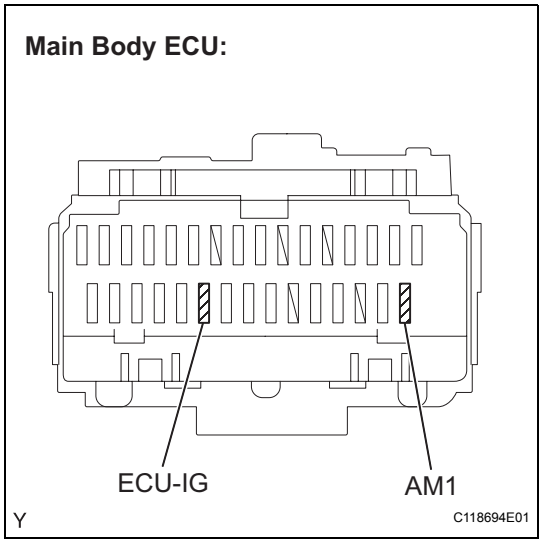
REPLACE BRAKE ACTUATOR

BC

3	INSPECT FUSES (ECU-IG, AM1)



(a) Remove the ECU-IG fuse and AM1 fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

4	INSPECT BATTERY

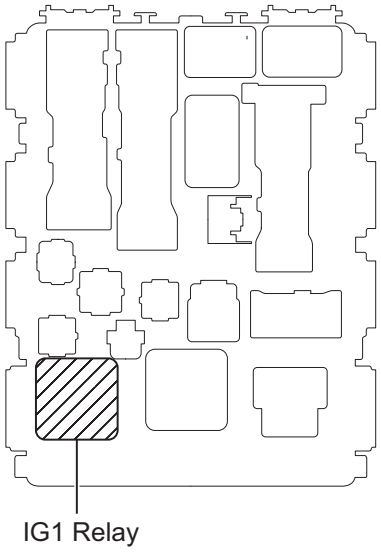
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK CHARGING SYSTEM**

OK

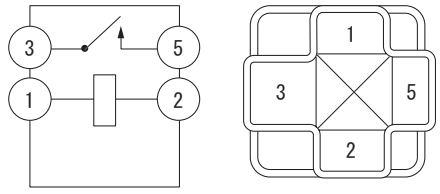
5	INSPECT IG1 RELAY

Main Body ECU:



Y C118689E01

(a) Remove the IG1 relay from the main body ECU.



C113445

(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

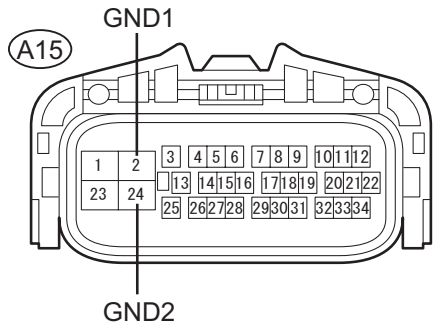
NG → **REPLACE IG1 RELAY**

OK

BC

6	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BODY GROUND)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
A15-2 (GND1) - Body ground	Below 1 Ω
A15-24 (GND2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE ACTUATOR

DTC	C1249/49	Open in Stop Light Switch Circuit

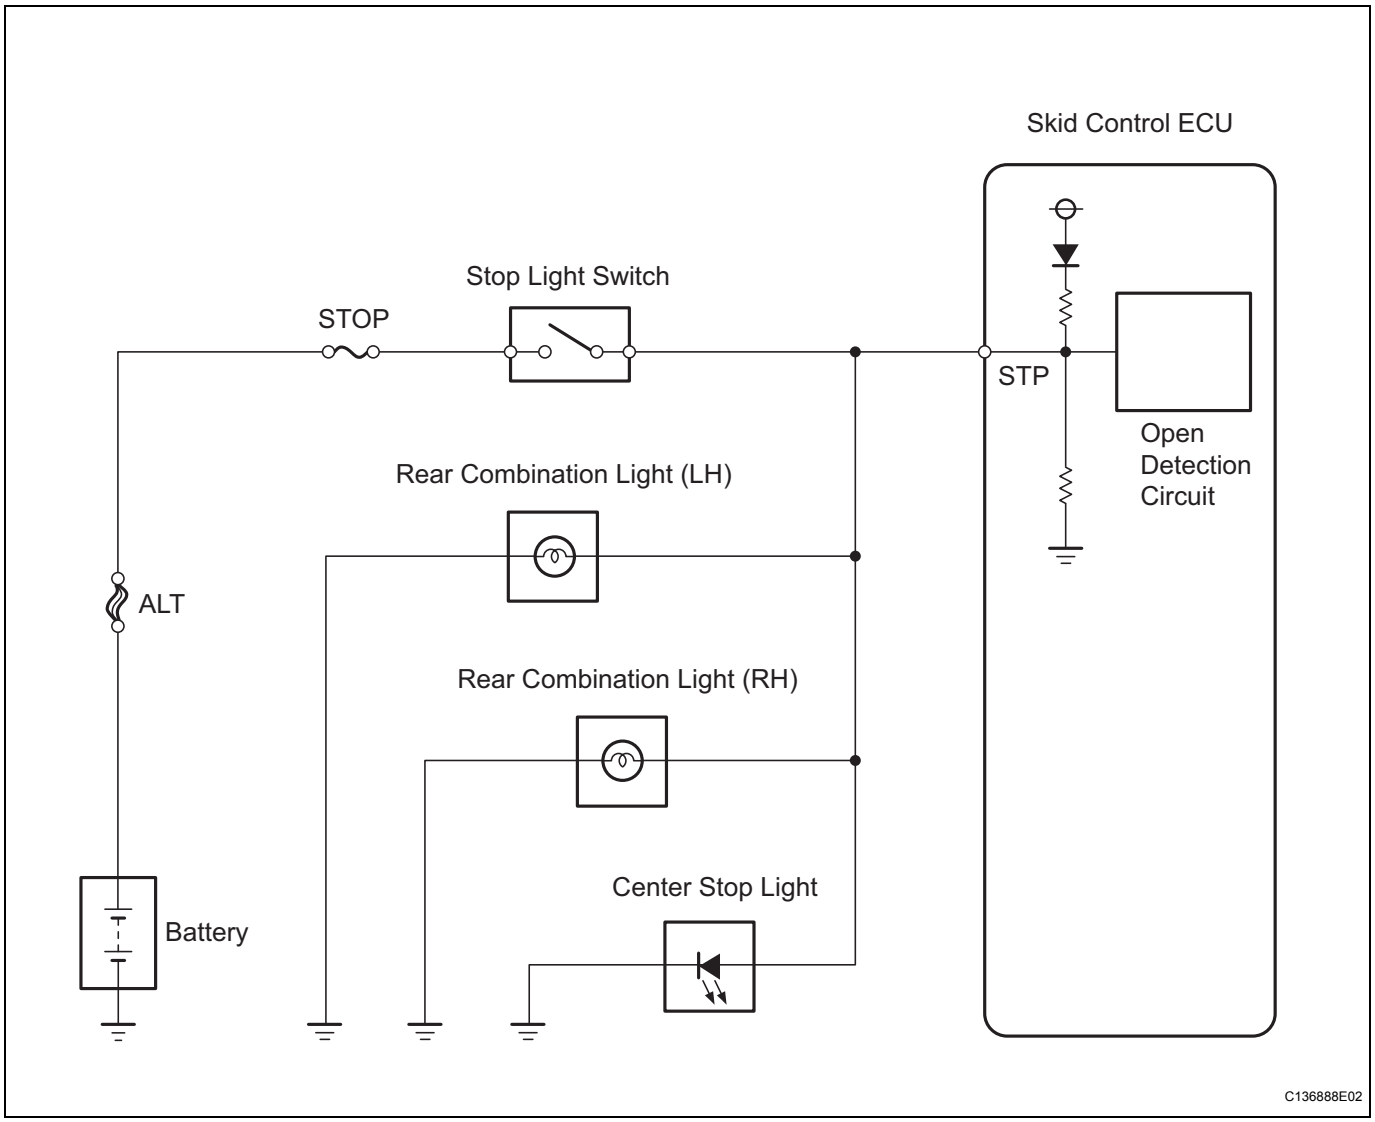
DESCRIPTION

The skid control ECU detects the brake operating conditions through a signal transmitted by the stop light switch. The skid control ECU incorporates an open circuit detection circuit. This DTC is set under either of the following conditions:

- An open is detected in the stop light signal input line when the stop light switch is off.
- An open is detected in the stop light circuit lead to the ground when the stop light switch is off.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1249/49	When IG1 terminal voltage 9.5 to 17.2 V, open circuit of stop light switch continues for 0.3 seconds or more.	• Stop light switch • Stop light switch circuit • Brake actuator (skid control ECU)

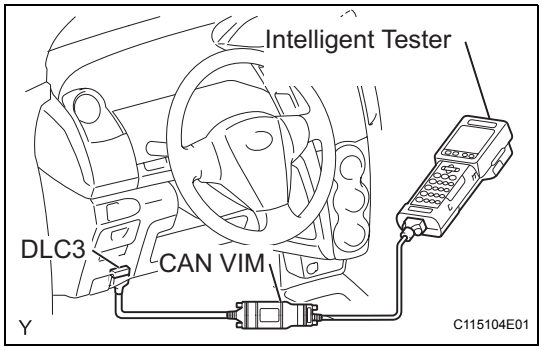
WIRING DIAGRAM



BC

INSPECTION PROCEDURE

1	CHECK STOP LIGHT SWITCH OPERATION



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Conditions
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released

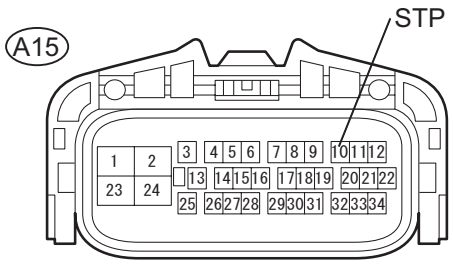
(e) Check that "STOP LAMP SW" is turned ON and OFF when the brake pedal is depressed and released.
OK:
"STOP LAMP SW" is turned ON and OFF in accordance with the operation of the brake pedal.

NG → **Go to step 3**

OK

2	CHECK SKID CONTROL ECU TERMINAL VOLTAGE (STP)

Skid Control ECU (harness side connector):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Switch Condition	Specified Condition
A15-10 (STP) - Body ground	Brake pedal depressed	8 to 14 V
A15-10 (STP) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 5**

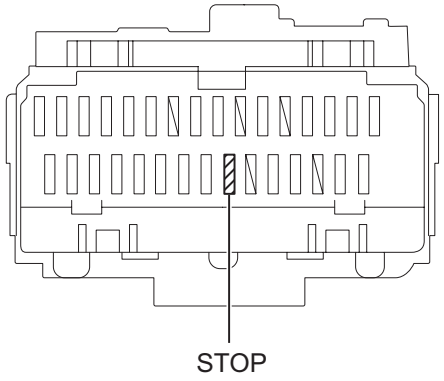
OK

REPLACE BRAKE ACTUATOR

BC

3	INSPECT FUSE (STOP)

Main Body ECU:



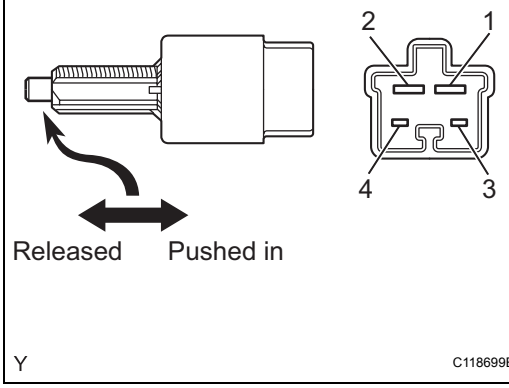
(a) Remove the STOP fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

4	INSPECT STOP LIGHT SWITCH ASSEMBLY

Stop Light Switch:



(a) Disconnect the stop light switch connector.
(b) Measure the resistance.
Standard resistance

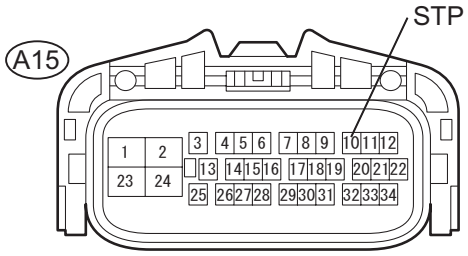
Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
3 - 4	Switch pin released	10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin pushed in	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

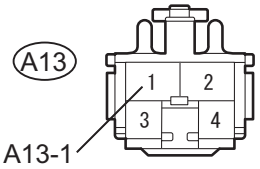
OK

5	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT SWITCH)

Skid Control ECU (harness side connector):



Stop Light Switch (harness side connector):



C118696E01

(a) Disconnect the skid control ECU connector.
(b) Disconnect the stop light switch connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
A15-10 (STP) - A13-1	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	RECONFIRM DTC

(a) Clear the DTC (See page BC-25).
(b) Check if the same DTC is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

B → **END**

BC

REPLACE BRAKE ACTUATOR

DTC	C1251/51	Open in Pump Motor Circuit

DESCRIPTION

The motor relay (semiconductor relay) is housed in the skid control ECU and drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detecting Conditions	Trouble Areas
C1251/51	When either of following conditions detected: 1. Actuator pump motor does not operate properly. 2. Open in actuator pump motor circuit continues for at least 2 seconds.	Brake actuator

WIRING DIAGRAM

See page BC-52.

INSPECTION PROCEDURE

1 CHECK POWER SOURCE CIRCUIT

(a) Check that the battery voltage, power source voltage, and the ground condition of the skid control ECU are normal.

OK:

The battery voltage, power source voltage, and the ground condition of the skid control ECU are normal.

NG → **REPAIR POWER SOURCE CIRCUIT**

OK ↓

2 RECONFIRM DTC

(a) Clear the DTC (See page BC-25).
(b) Start the engine.
(c) Drive the vehicle at a speed of 4 mph (6 km/h) or more for several seconds.
(d) Check if the same DTC is output (See pageBC-25).

Result

REPLACE BRAKE ACTUATOR

DTC	U0073/94	Control Module Communication Bus OFF

DESCRIPTION

DTC No.	DTC Detecting Conditions	Trouble Areas
U0073/94	When either of following conditions detected: 1. After data output from skid control ECU completed, output continues for 5 seconds or more. 2. Bus off condition occurs once or more per 0.1 second 10 times in succession.	CAN communication system

INSPECTION PROCEDURE

1	RECONFIRM DTC

(a) Clear the DTC (See page BC-25).
(b) Check if the same DTC is output (See page BC-25).

Result

Result	Proceed to
DTC output	A
DTC not output	B

B → END

A

REPAIR CAN COMMUNICATION SYSTEM

ABS Warning Light Remains ON

DESCRIPTION

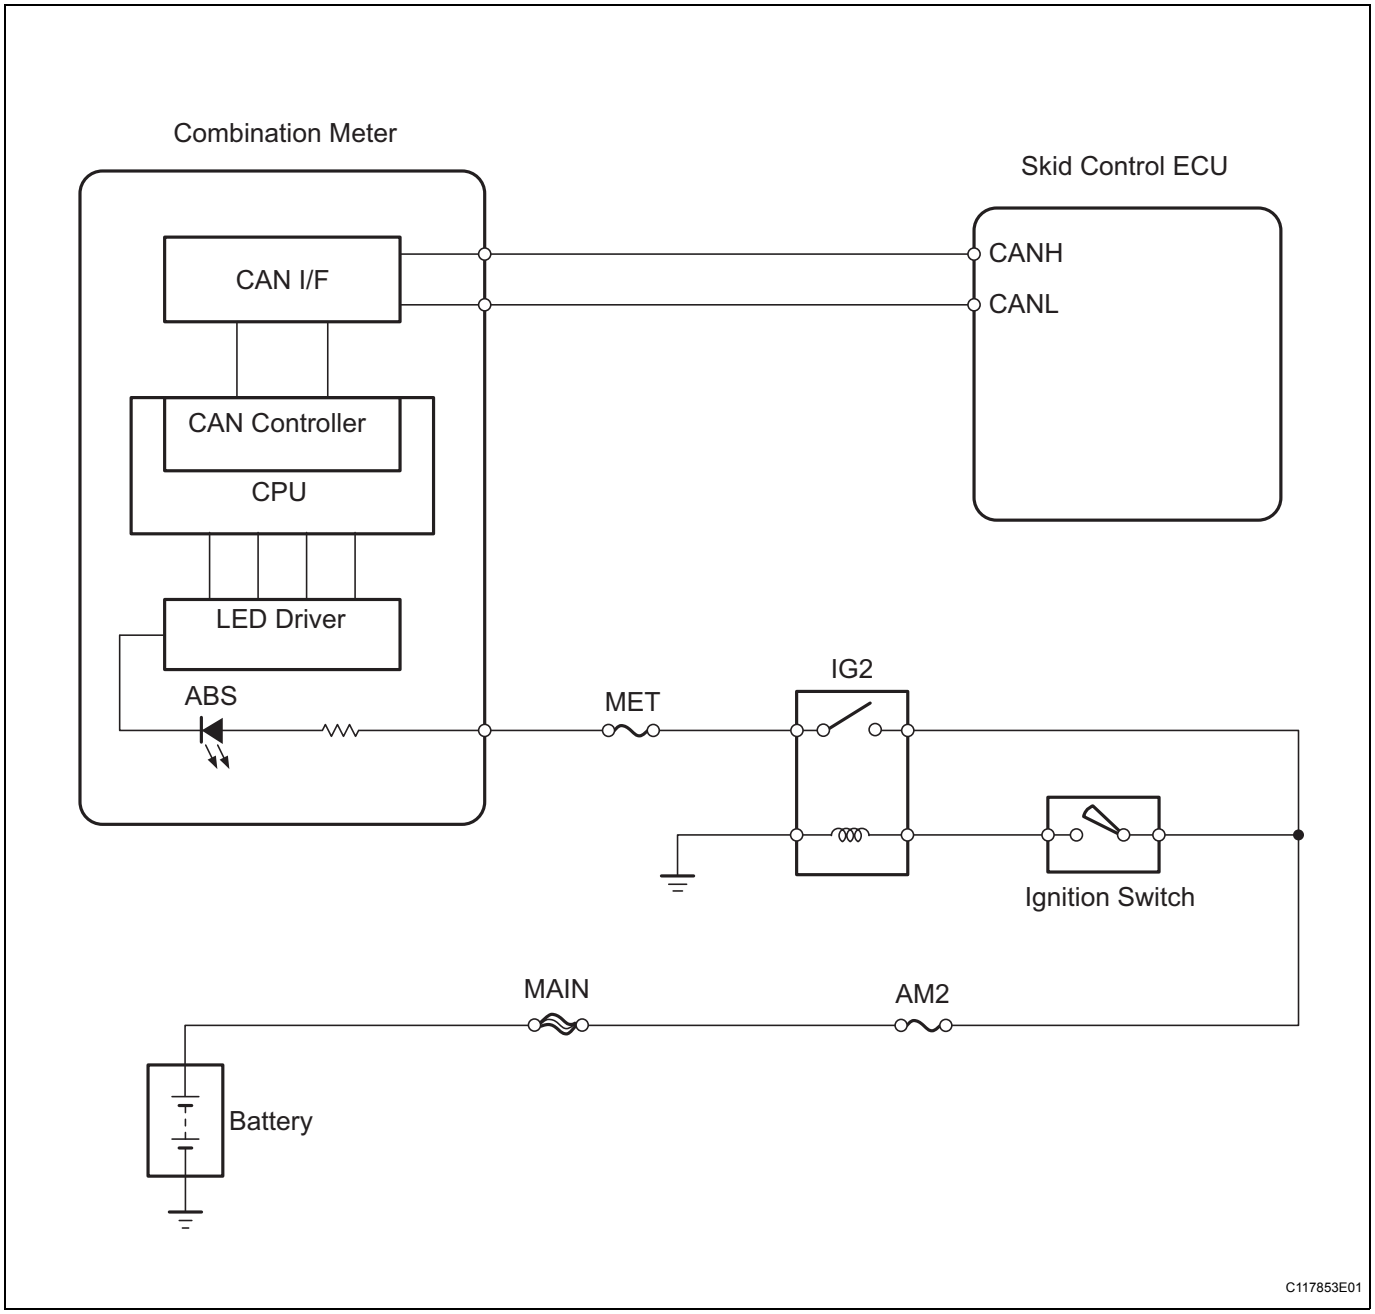
If any of the following conditions are detected, the ABS warning light remains on:

1. The ECU connectors are disconnected from the skid control ECU.
2. There is a malfunction in the skid control ECU internal circuit.
3. There is an open or short in the wire harness between the combination meter and the skid control ECU.

HINT:

The intelligent tester may not be used when there is a malfunction in the skid control ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

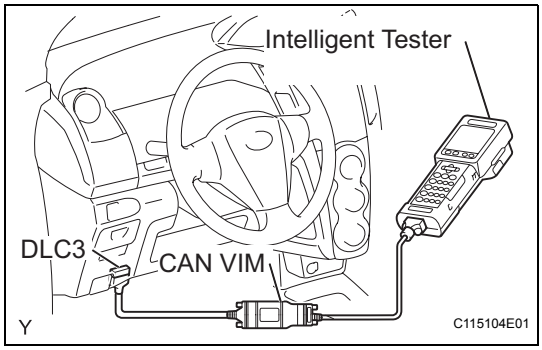
2	CHECK CONNECTOR CONNECTION CONDITION

(a) Check the skid control ECU connector condition.
OK:
The connector is securely connected.

NG → CONNECT CONNECTOR CORRECTLY

OK

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (ABS WARNING LIGHT)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/MOBD / select vehicle / ABS / ACTIVE TEST / ABS WARN LAMP.

ACTIVE TEST: ABS

Item (Display)	Test Details	Diagnostic Notes
ABS WARN LAMP	Turns ABS warning light ON and OFF	Observe combination meter

BC

(e) Check that the ABS warning light turns on and off in the combination meter using the intelligent tester.
OK:
The ABS warning light turns ON and OFF in accordance with the intelligent tester operation.
HINT:
When the ABS warning light remains illuminated, an open in the wire harness of the combination meter or abnormalities in the meter circuit should be considered.

NG → CHECK COMBINATION METER CIRCUIT

OK

REPLACE BRAKE ACTUATOR

ABS Warning Light does not Come ON

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

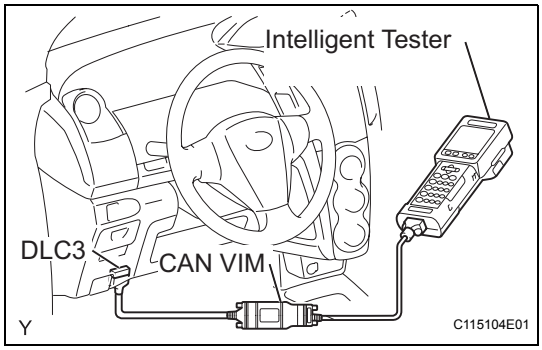
Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (ABS WARNING LIGHT)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / ACTIVE TEST / ABS WARN LAMP.

ACTIVE TEST: ABS

Item (Display)	Test Details	Diagnostic Notes
ABS WARN LAMP	Turns ABS warning light ON and OFF	Observe combination meter

(e) Check that the ABS warning light turns on and off in the combination meter using the intelligent tester.

OK:

The ABS warning light turns ON and OFF in accordance with the intelligent tester operation.

NG → CHECK COMBINATION METER CIRCUIT

OK

REPLACE BRAKE ACTUATOR

BC

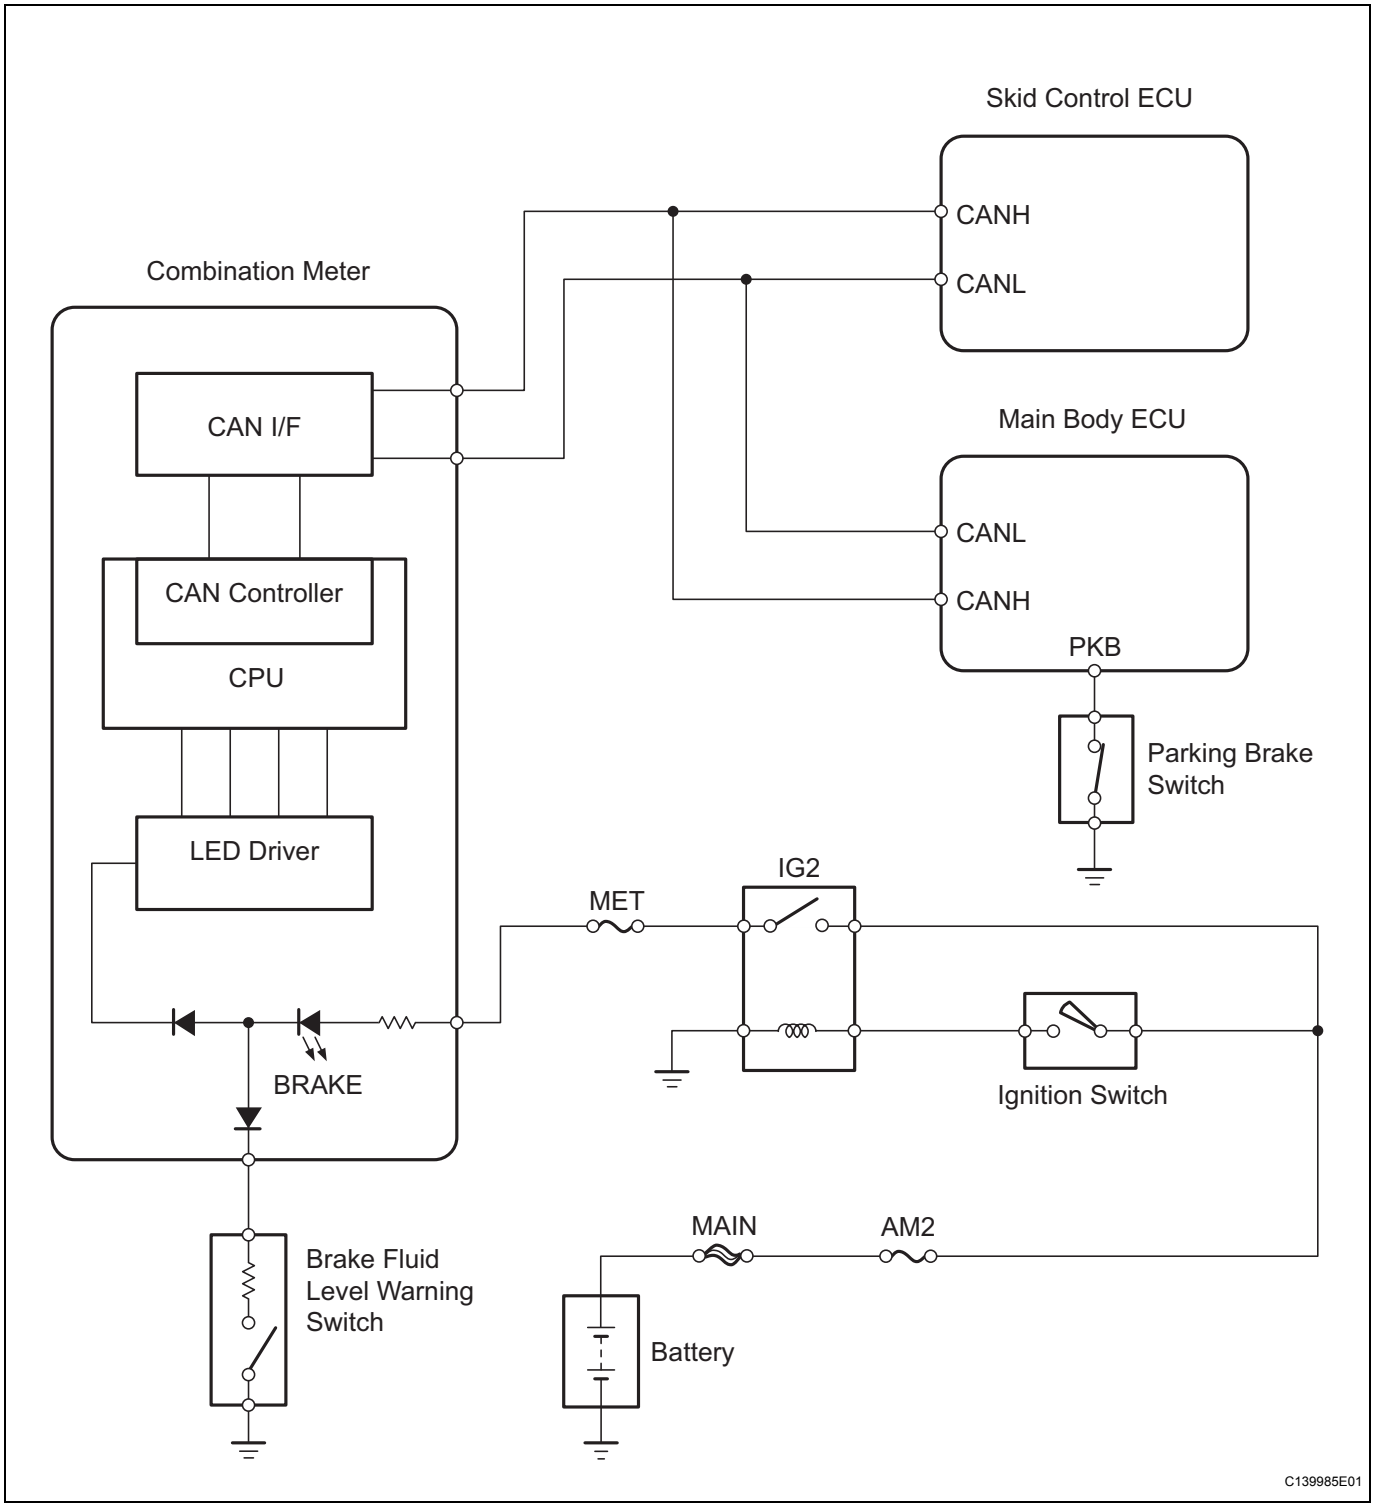
Brake Warning Light Remains ON

DESCRIPTION

If any of the following conditions are detected, the BRAKE warning light remains on:

1. The ECU connectors are disconnected from the skid control ECU.
2. The brake fluid level is insufficient.
3. The parking brake is applied.
4. The EBD is defective.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

1	PREPARE FOR INSPECTION

(a) Check that both of the following conditions are satisfied.
- The brake fluid level in the brake master cylinder reservoir is correct.
- The parking brake is released.

HINT:
When the ABS warning light remains illuminated, repair the malfunctions in the ABS system first.

NEXT

2	CHECK DTC

(a) Check if any ABS DTCs are output (See page BC-25).

Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A

3	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

4	CHECK CONNECTOR CONNECTION CONDITION

(a) Check if the skid control ECU connector is connected securely.

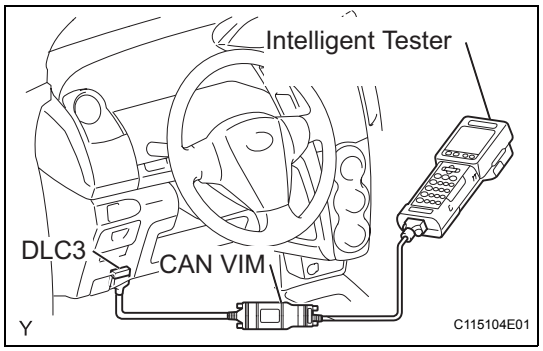
OK:

The connector is connected securely.

NG → CONNECTOR CORRECTLY

OK

5	CHECK PARKING BRAKE SWITCH ASSEMBLY



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle / ABS / DATA LIST / PARKING BRAKE SW.

DATA LIST: ABS

Item (Display)	Measurement Item / Range (Display)	Normal Condition
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released

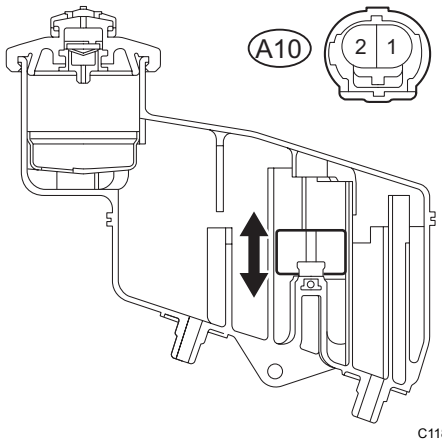
(e) Check that "ON" and "OFF" are properly indicated on the tester display in accordance with the parking brake lever operation.
OK:
Tester display changes in accordance with the parking brake lever operation.

NG → **Go to step 9**

OK

6	INSPECT BRAKE FLUID LEVEL WARNING SWITCH

Brake Fluid Level Warning Switch:



(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance.
HINT:
There is a float inside the reservoir. Its position can be changed by increasing or decreasing the brake fluid level.
Standard resistance

Tester Connection	Condition	Specified Condition
A10-1 - A10-2	Float up (Switch OFF)	1.9 to 2.1 kΩ
A10-1 - A10-2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after the above check is finished, adjust the brake fluid level to the MAX level.

NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**

BC

OK

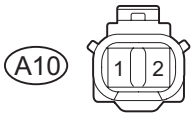
7	CHECK HARNESS AND CONNECTOR (COMBINATION METER - BRAKE FLUID LEVEL WARNING SWITCH)

(a) Disconnect the D2 combination meter connector.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance.

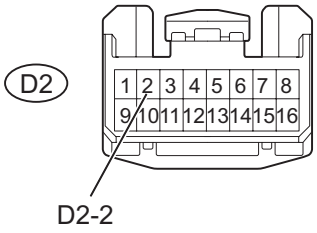
Standard resistance

Tester Connection	Specified Condition
D2-2 - A10-1	Below 1 Ω
D2-2 - Body ground	10 kΩ or higher
A10-2 - Body ground	10 kΩ or higher

Brake Fluid Level Warning Switch (harness side connector):



Combination Meter (harness side connector):



C118702E01

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	INSPECT COMBINATION METER

(a) Inspect the combination meter assembly (See page ME-24 or ME-88).

NG → **REPLACE COMBINATION METER**

OK

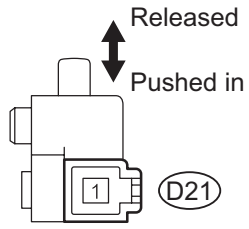
BC

REPLACE BRAKE ACTUATOR

9	INSPECT PARKING BRAKE SWITCH ASSEMBLY

(a) Disconnect the parking brake switch connector.

Parking Brake Switch:



C118703E01

(b) Measure the resistance.
Standard resistance

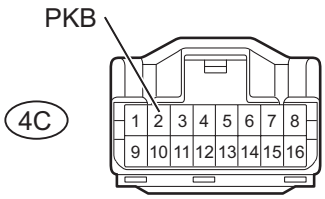
Tester Connection	Condition	Specified Condition
D21-1 - Body ground	Parking brake switch ON (Switch pin released)	Below 1 Ω
D21-1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

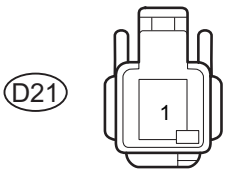
OK

10 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARKING BRAKE SWITCH ASSEMBLY)

Main Body ECU:



Parking Brake Switch:



C120360E01

(a) Disconnect connector 4C of the main body ECU (See page BC-21).
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
4C-2 (PKB) - D21-1	Below 1 Ω
4C-2 (PKB) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

BC

Brake Warning Light does not Come ON

WIRING DIAGRAM

See page BC-74.

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

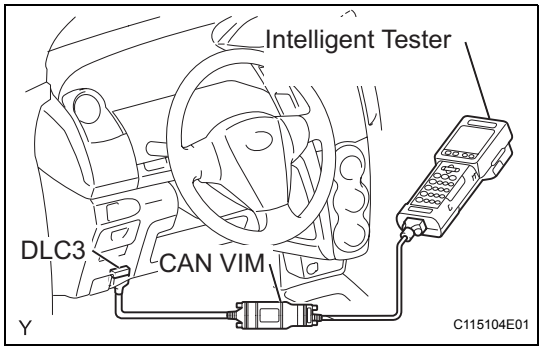
Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (BRAKE WARNING LIGHT)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / select vehicle /ACTIVE TEST / BRAKE WARN LAMP.

ACTIVE TEST: ABS

Item (Display)	Test Details	Diagnostic Note
BRAKE WARN LAMP	Turns BRAKE warning light ON and OFF	Observe combination meter

(e) Check that the BRAKE warning light turns on and off in the combination meter using the intelligent tester.
OK:
The BRAKE warning light turns ON and OFF in accordance with the intelligent tester operation.

OK → REPLACE BRAKE ACTUATOR

NG

3	INSPECT COMBINATION METER

(a) Inspect the combination meter (See page ME-24 or ME-84).

BC

NG → **REPLACE COMBINATION METER**

OK

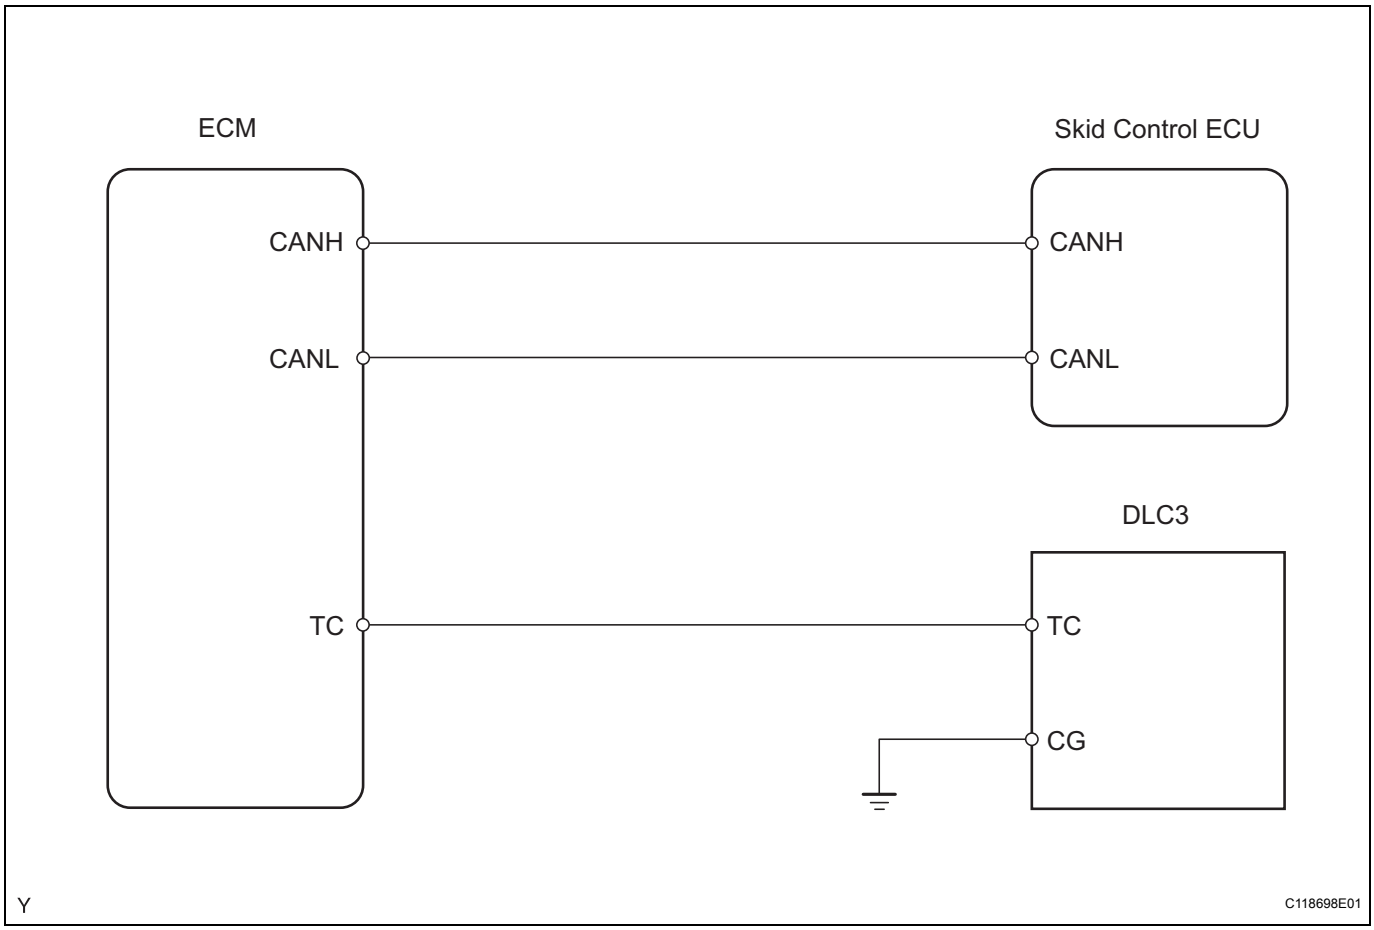
REPLACE BRAKE ACTUATOR

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the skid control ECU to display 2-digit DTCs by flashing the ABS warning light.

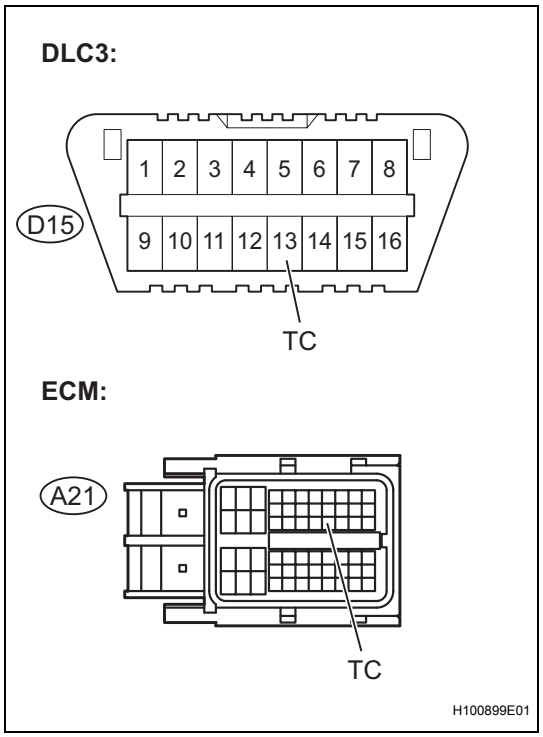
WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (DLC3 - ECM)

(a) Turn the ignition switch off.
(b) Disconnect the ECM connector.



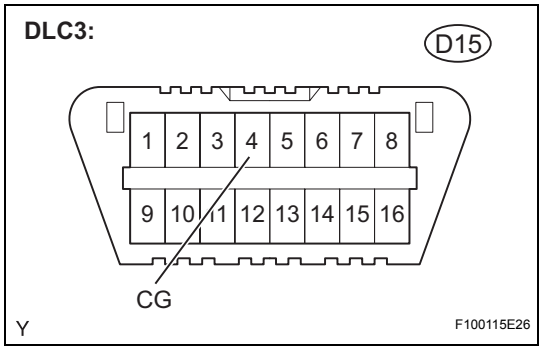
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D15-13 (TC) - A21-27 (TC)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (DLC3 - BODY GROUND)



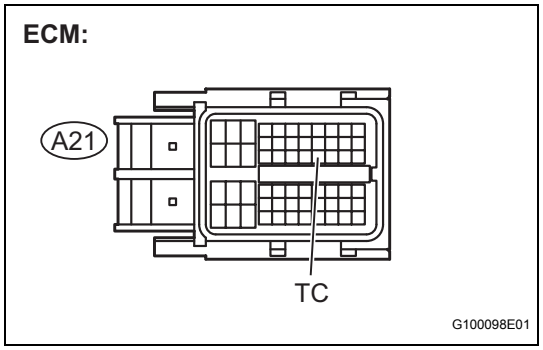
(a) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D15-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)



(a) Disconnect the ECM connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
A21-27 (TC) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

4	REPLACE ECM

(a) Replace the ECM.
(b) Check for DTCs of the ECM (See page ES-34).

Result

Result	Proceed to
DTC not output	A
DTC output	B

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A

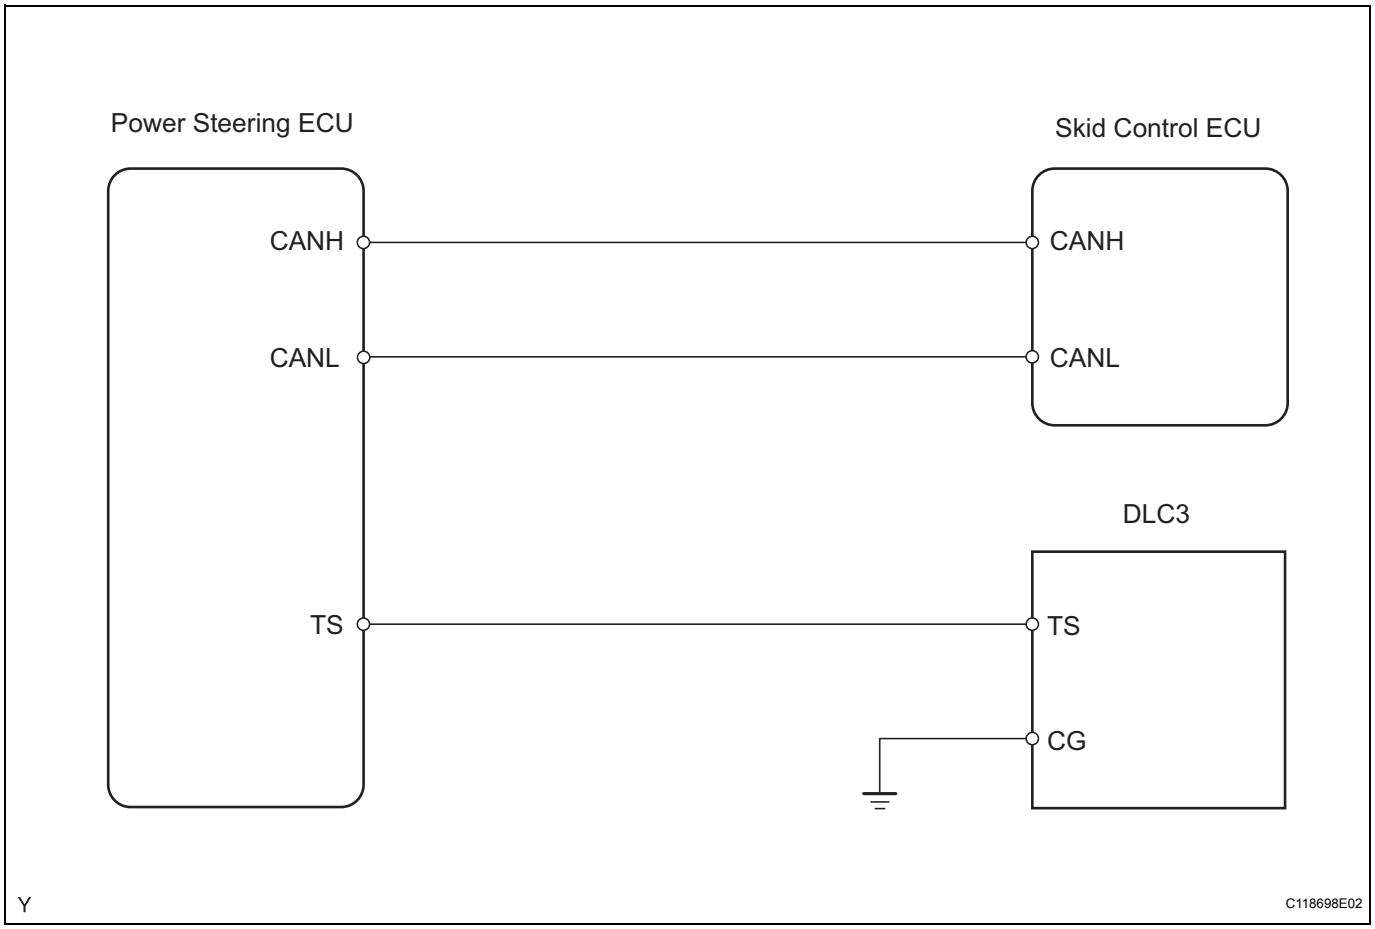
END

TS and CG Terminal Circuit

DESCRIPTION

In sensor check mode, malfunctions of the speed sensor that cannot be detected when the vehicle is stopped can be detected by driving the vehicle.
Transition to sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on.

WIRING DIAGRAM

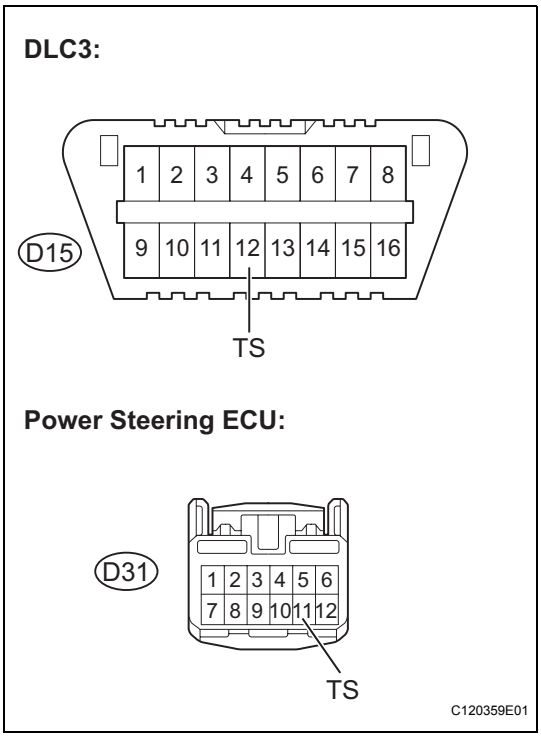


INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (DLC3 - POWER STEERING ECU)

(a) Turn the ignition switch off.
(b) Disconnect the power steering ECU connector.

BC



(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
D15-12 (TS) - D31-11 (TS)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

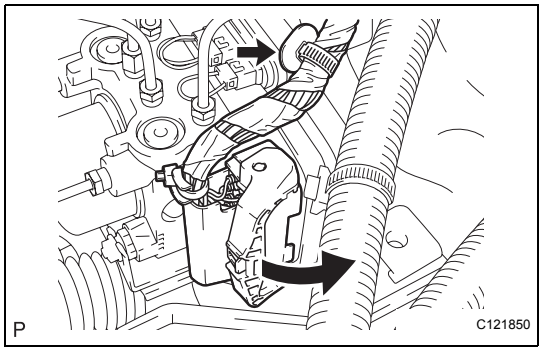
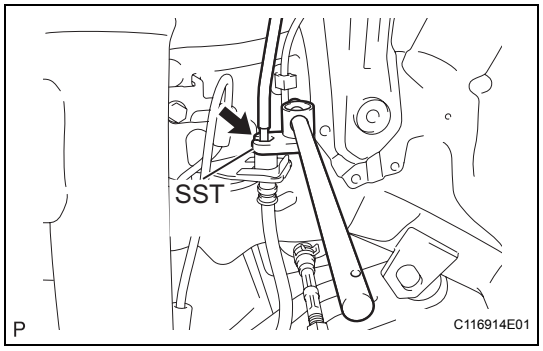
REMOVAL

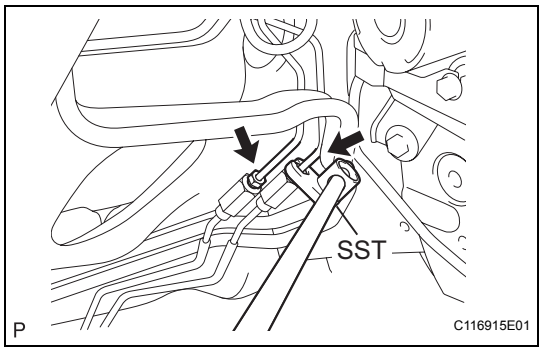
1. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
2. **REMOVE BATTERY (See page EM-122)**
3. **REMOVE BATTERY TRAY**
4. **REMOVE BATTERY CARRIER (See page EM-125)**
5. **REMOVE BRAKE ACTUATOR**
   (a) Remove the clip and disconnect the wire harness.
   (b) Move the lock lever in the direction indicated by the arrow to release the lock and disconnect the brake actuator connector from the actuator.



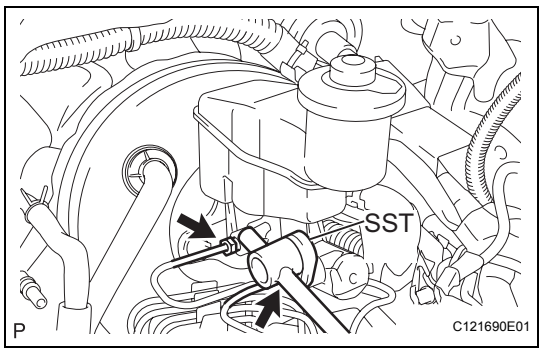
(c) Using SST, separate the brake tube from the front flexible hose.
SST 09023-00100



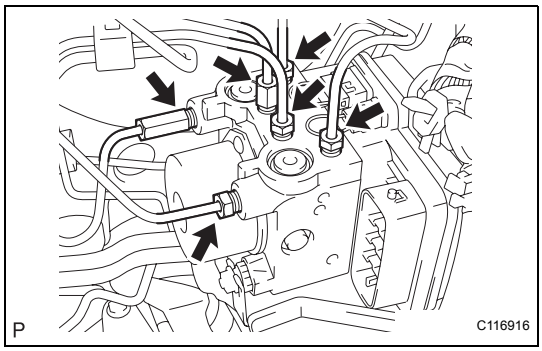
(d) Using SST, separate the 2 brake tubes from the brake tube No. 1 way.
SST 09023-00100



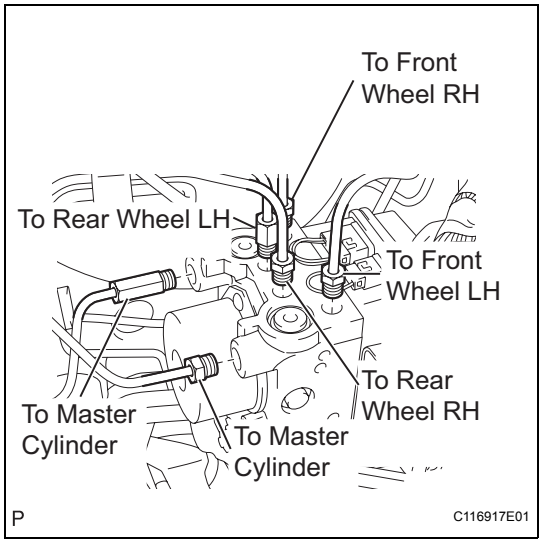
(e) Using SST, separate the 2 brake tubes from the brake master cylinder.
SST 09023-00100



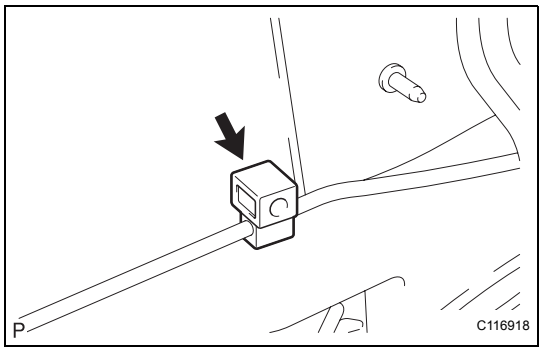
BC



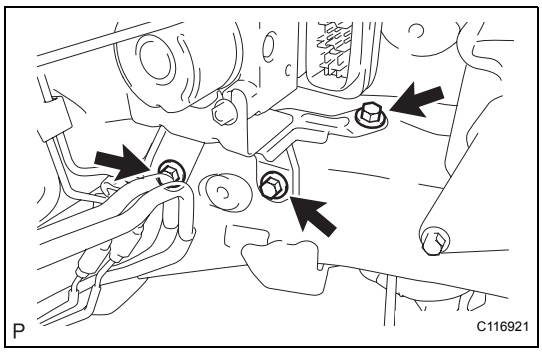
(f) Using SST, separate the 6 brake tubes from the brake actuator.
SST 09023-00100



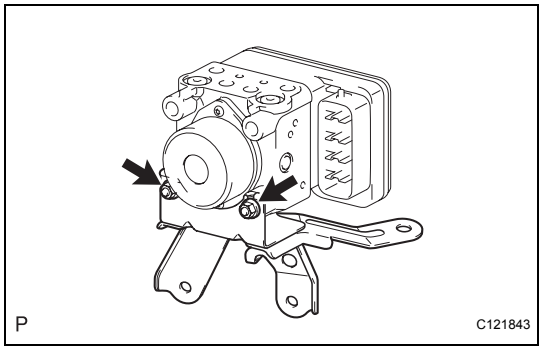
(g) Use tags or labels to identify the place to reconnect each brake tube.



(h) Disconnect the brake tube clamp.



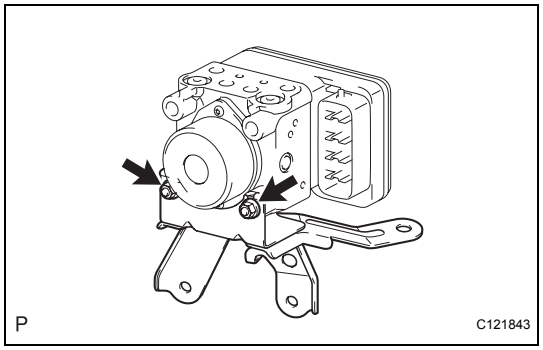
(i) Remove the 3 bolts and the actuator with bracket.



6. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

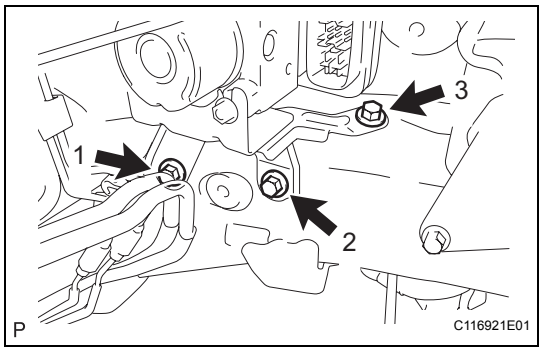
(a) Remove the 2 nuts and the bracket.

INSTALLATION



1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

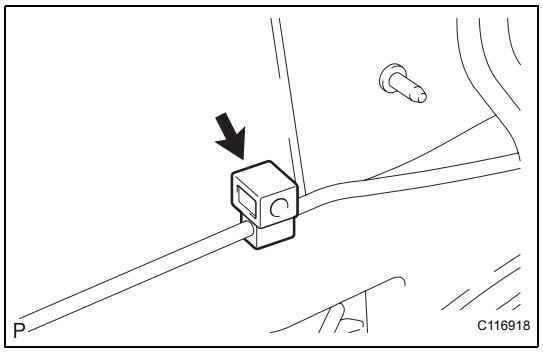
(a) Install the actuator bracket with the 2 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
Do not remove the hole plug before connecting the brake tube. New actuators are filled with brake fluid.



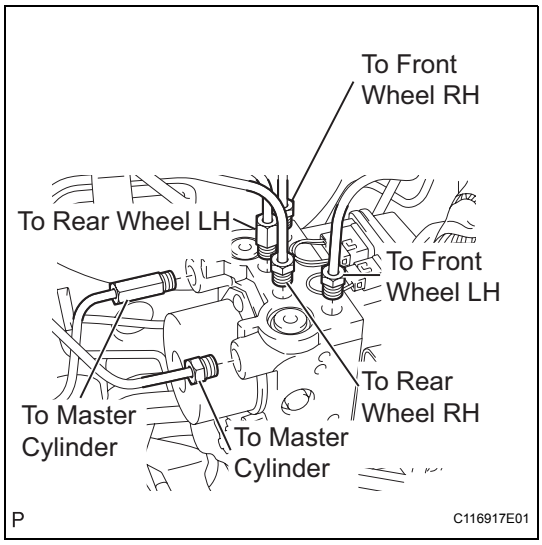
2. INSTALL BRAKE ACTUATOR

(a) Provisionally install the 3 bolts onto the actuator bracket in the sequence shown in the illustration.

(b) Tighten the 3 bolts in the sequence shown in the illustration.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



(c) Connect a new brake tube clamp.



(d) Using SST, install each brake tube into the correct position of the actuator, as shown in the illustration.

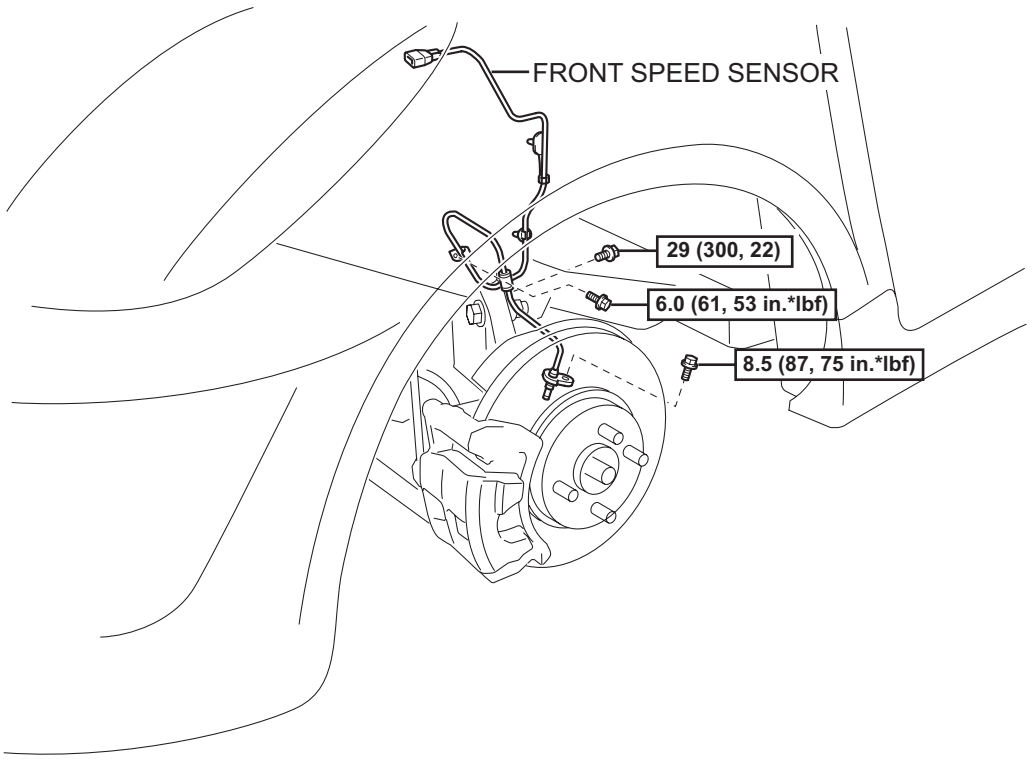
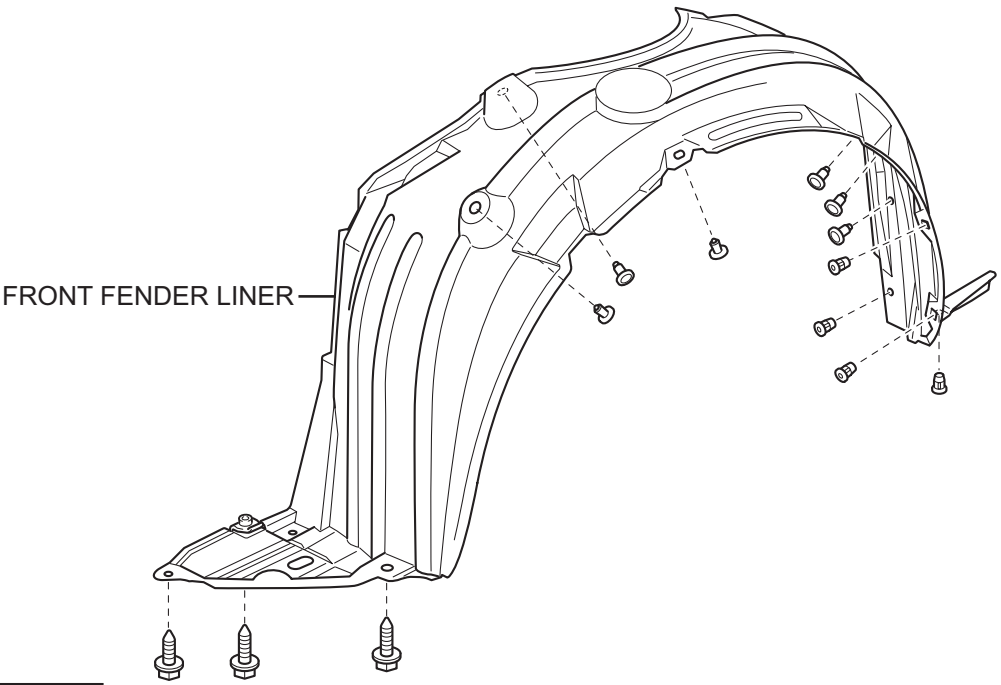
FRONT SPEED SENSOR

COMPONENTS





N*m (kgf*cm, ft*lbf) :Specified torque

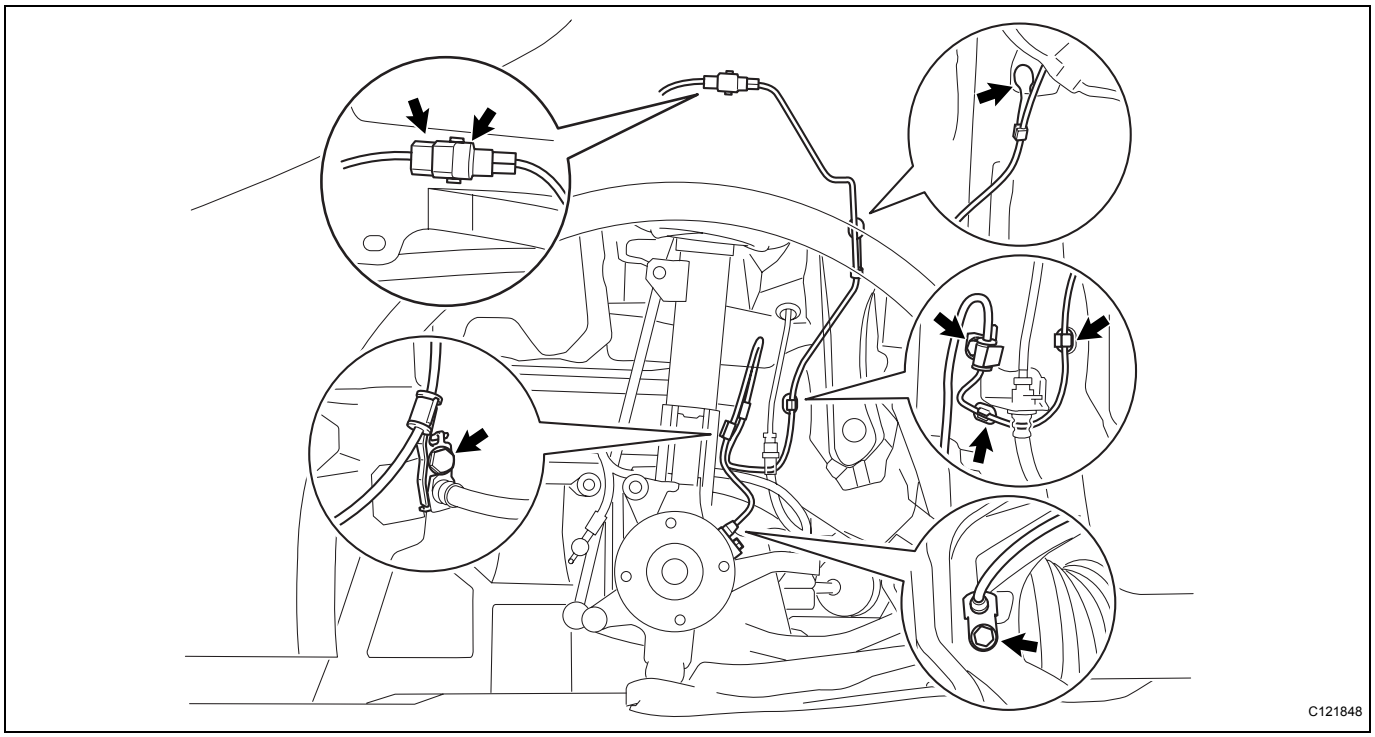
Y

C125281E01

BC

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL**
3. **REMOVE FRONT FENDER LINER**
   (a) Remove the 3 screws, 6 clips and 4 grommets and remove the front fender liner.
4. **REMOVE FRONT SPEED SENSOR**



(a) Remove the speed sensor clip from the body.
(b) Disconnect the speed sensor connector.
(c) Remove the 3 clips.
(d) Remove the bolt and separate the clamp from the body.
(e) Remove the bolt and separate the clamp from the shock absorber.
(f) Remove the bolt and remove the speed sensor from the steering knuckle.

NOTICE:

- **Keep the speed sensor tip and installation portion free of foreign matter.**
- **Remove the speed sensor without turning it from its original installation angle.**

INSPECTION

1. INSPECT FRONT SPEED SENSOR

(a) Check the connector case and terminals for any deformation or corrosion.

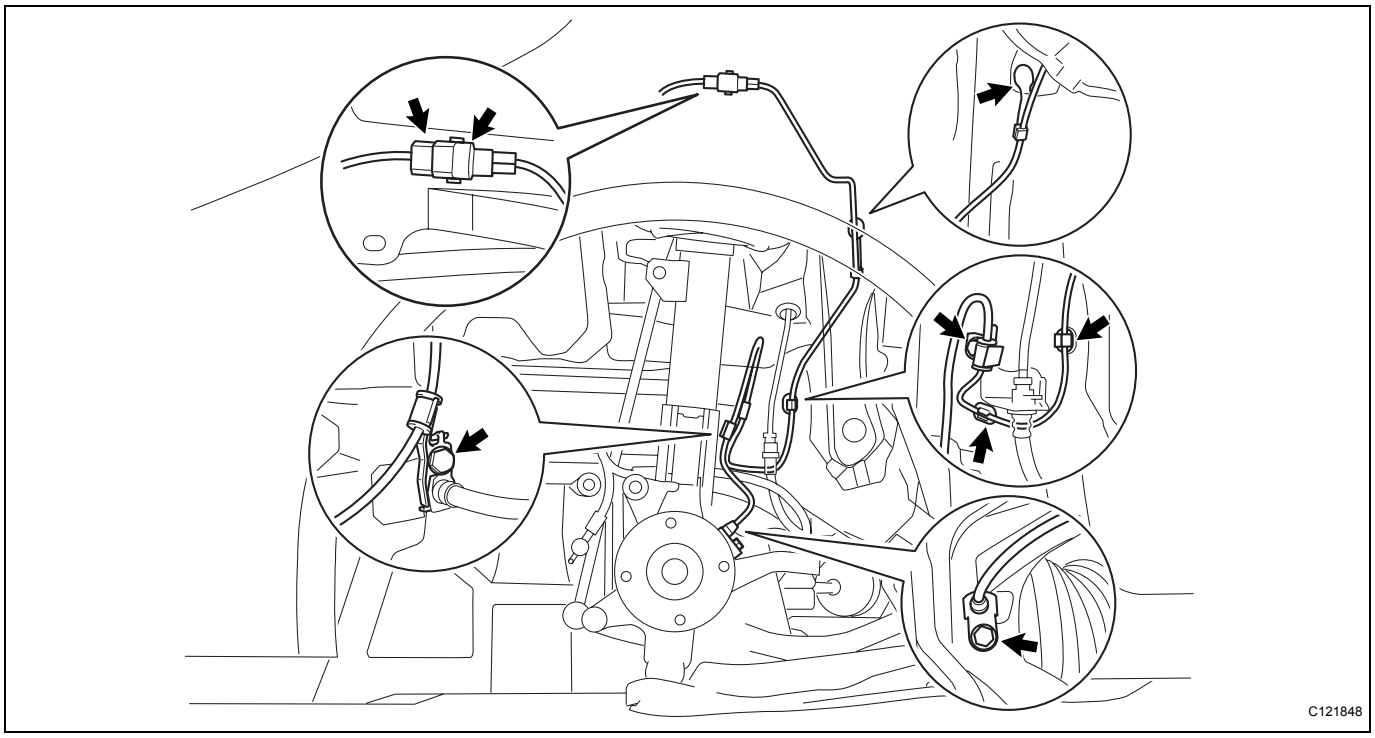
Standard:

No deformation or corrosion.

If necessary, replace the speed sensor.

INSTALLATION

1. INSTALL FRONT SPEED SENSOR



(a) Install the speed sensor onto the steering knuckle with the bolt.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
- **Check that the speed sensor tip and installation portion are free of foreign matter.**
- **Install the speed sensor without turning it from its original installation angle.**

(b) Install the clamp onto the shock absorber with the bolt.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)

(c) Install the clamp onto the body with the bolt.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

(d) Install the 3 clips.

(e) Connect the speed sensor connector.

(f) Install the speed sensor clip onto the body.

2. INSTALL FRONT FENDER LINER

(a) Install the front fender liner with the 3 screws, 6 clips and 4 grommets.
NOTICE:
The speed sensor wire should not protrude beyond the front fender liner.

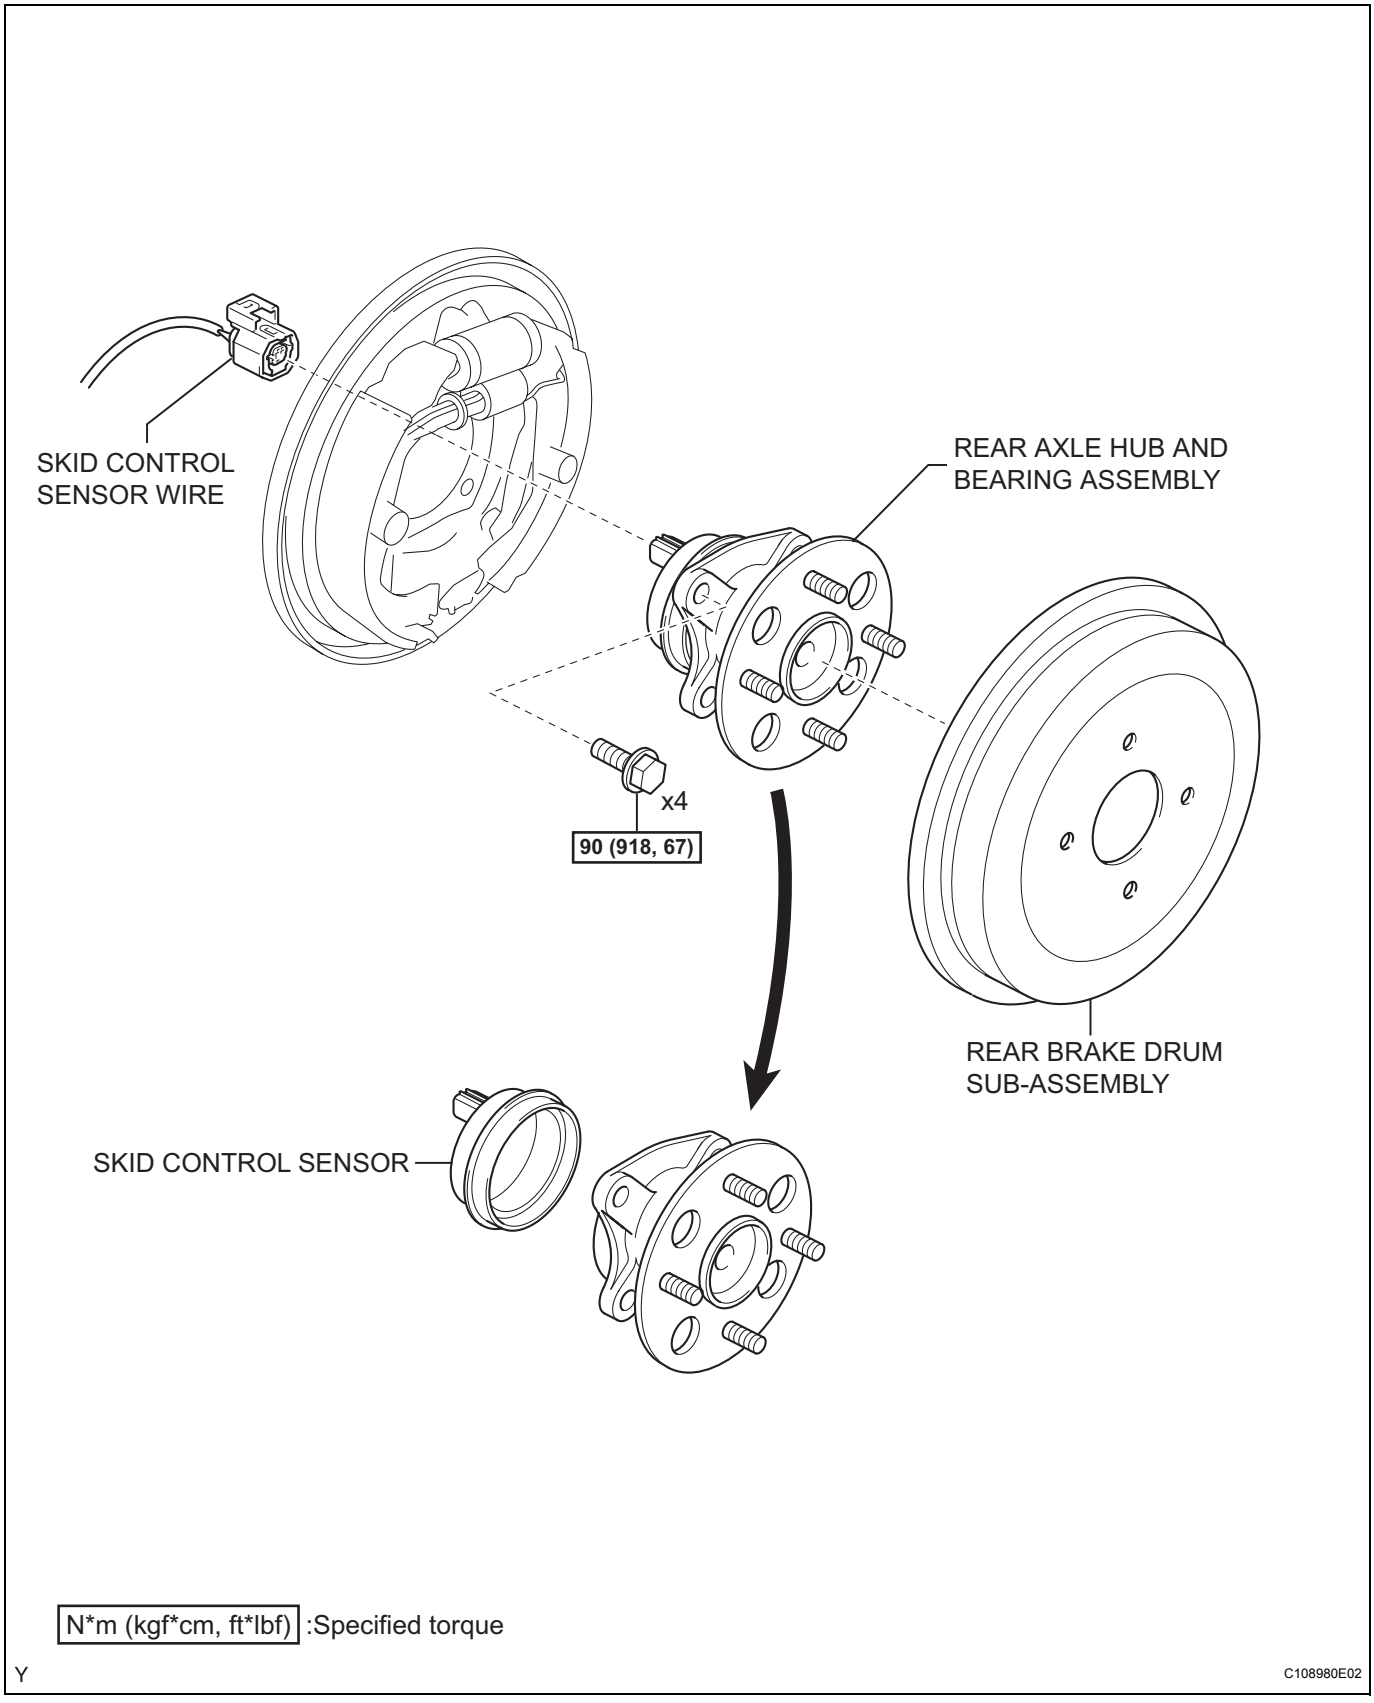
3. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

5. CHECK ABS SENSOR SIGNAL
(See page BC-14)

SKID CONTROL SENSOR

COMPONENTS



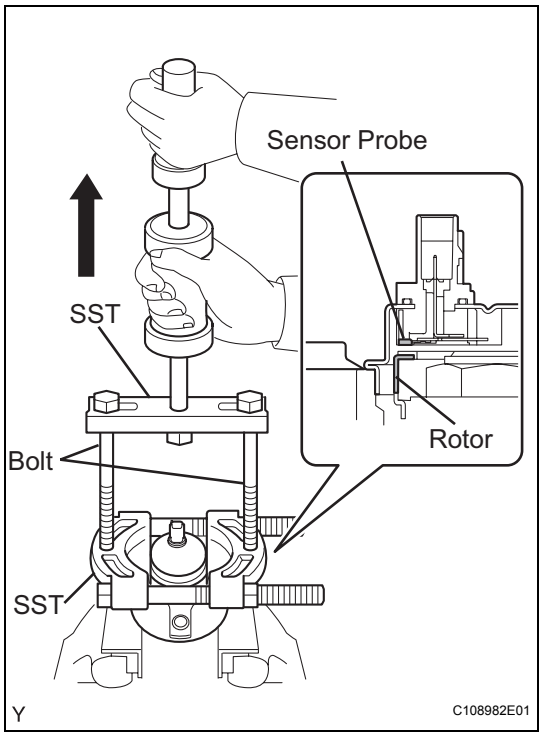
N*m (kgf*cm, ft*lbf) :Specified torque

Y

C108980E02

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR WHEEL**
3. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
4. **DISCONNECT SKID CONTROL SENSOR WIRE (See page AH-14)**
5. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY (See page AH-14)**
6. **REMOVE SKID CONTROL SENSOR**



(a) Install the 4 hub nuts and the 4 hub bolts onto the rear axle hub, and then fix the rear axle hub in a vice between aluminum plates.

NOTICE:

If the skid control sensor is dropped or heavily damaged, replace the rear axle hub and bearing.

(b) Using a 3 mm pin punch and hammer, remove the 2 pins from SST (09520-00031) and remove the attachment (09521-00010).

(c) Using SST and the 2 bolts (90101-12007), remove the skid control sensor from the rear axle hub.

SST 09520-00031 (09520-00040), 09521-00020, 09950-00020

NOTICE:

- **Pull the skid control sensor off straight, being careful not to make contact with the skid control sensor rotor.**
- **If the skid control sensor rotor is damaged or deformed, replace the rear axle hub and bearing.**
- **Do not damage the skid control sensor or rear axle hub contact surfaces.**
- **Keep the sensor rotor free of foreign matter.**

INSPECTION

1. INSPECT SKID CONTROL SENSOR

(a) Check the connector case and terminals for any deformation or corrosion.

Standard:

No deformation or corrosion.

If necessary, replace the speed sensor.

INSTALLATION

1. **INSTALL SKID CONTROL SENSOR**
   (a) Wipe the sealant off the skid control sensor installation surface using white gasoline.
   NOTICE:
   Keep the sensor rotor free of foreign matter.

   (b) Install the skid control sensor onto the rear axle hub in the highest possible installation position.
   HINT:
   The distance between the installation holes should be larger on the upper side than the lower side.

   (c) Using SST and a press, install a new skid control sensor into the rear axle hub until it is flush with the end.
   SST 09214-76011
   NOTICE:
   - **Do not use a hammer when installing.**
   - **Check for any foreign matter on the sensor probe.**
   - **Press the skid control sensor in slowly without turning it.**

2. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY (See page AH-14)**
3. **INSPECT REAR AXLE HUB BEARING (See page AH-2)**
4. **CONNECT SKID CONTROL SENSOR WIRE (See page AH-14)**
5. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
6. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)**
7. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
9. **CHECK ABS SENSOR SIGNAL**
   (See page BC-14)

BRAKE SYSTEM

PRECAUTION

1. **Necessary care must be taken to replace each part properly as it could affect the brake system performance. This could cause driving hazards. Replace each part with an identical part with the same number.**
2. **It is very important to keep parts and the area clean when repairing the brake system.**
3. **If the vehicle is equipped with a mobile communication system, refer to the precautions in the INTRODUCTION section.**

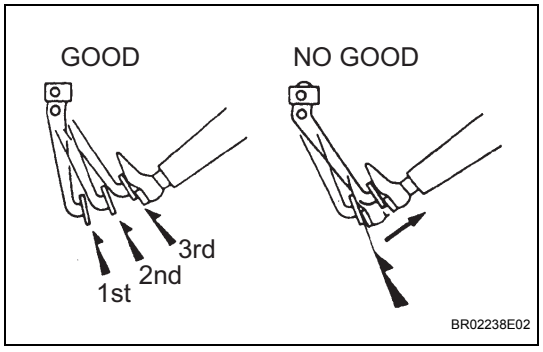
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Low pedal or spongy pedal	1. Fluid leakage in brake system	-
	2. Air in brake system	BR-10
	3. Piston seal (Worn or damaged)	BR-50
	4. Wheel cylinder cup (Damaged)	BR-62
	5. Brake master cylinder (Faulty)	BR-29
Brake drag	1. Brake pedal free play (Minimum)	BR-8
	2. Parking brake lever travel (Out of adjustment)	PB-2
	3. Rear drum brake shoe clearance (Out of adjustment)	BR-67
	4. Pad (Cracked or distorted)	BR-51
	5. Brake shoe (Cracked or distorted)	BR-62
	6. Front disc brake piston (Stuck)	BR-50
	7. Piston (Stuck)	BR-62
	8. Front disc brake piston (Frozen)	BR-50
	9. Piston (Frozen)	BR-62
	10. Tension or return spring (Faulty)	BR-60
	11. Booster system (Vacuum leakage)	BR-5
	12. Brake master cylinder (Faulty)	BR-29
Brake pull	1. Front disc brake piston (Stuck)	BR-50
	2. Piston (Stuck)	BR-62
	3. Pad (Oily)	BR-51
	4. Brake shoe (Oily)	BR-62
	5. Front disc brake piston (Frozen)	BR-50
	6. Piston (Frozen)	BR-62
	7. Front disc (Scored)	BR-51
	8. Rear brake drum (Scored)	BR-62
	9. Pad (Cracked or distorted)	BR-51
	10. Brake shoe (Cracked or distorted)	BR-62
Hard pedal but braking inefficient	1. Fluid leakage in brake system	-
	2. Air in brake system	BR-10
	3. Front disc brake piston (Stuck)	BR-50
	4. Piston (Stuck)	BR-62
	5. Pad (Cracked or distorted)	BR-51
	6. Brake shoe (Cracked or distorted)	BR-62
	7. Pad (Oily)	BR-51
	8. Brake shoe (Oily)	BR-62
	9. Pad (Glazed)	BR-51
	10. Brake shoe (Glazed)	BR-62
	11. Front disc (Scored)	BR-51
	12. Rear brake drum (Scored)	BR-62
	13. Booster system (Vacuum leakage)	BR-5

Symptom	Suspected area	See page
Noise from brakes	1. Pad (Cracked or distorted)	BR-51
	2. Brake shoe (Cracked or distorted)	BR-62
	3. Installation bolt (Loose)	BR-48
	4. Front disc (Scored)	BR-51
	5. Rear brake drum (Scored)	BR-62
	6. Pad support plate (Loose)	BR-51
	7. Sliding pin (Worn)	BR-48
	8. Pad (Dirty)	BR-51
	9. Brake shoe (Dirty)	BR-62
	10. Pad (Glazed)	BR-51
	11. Brake shoe (Glazed)	BR-62
	12. Tension or return spring (Faulty)	BR-60
	13. Anti-squeal shim (Damaged)	BR-48
	14. Shoe hold down spring (Damaged)	BR-60



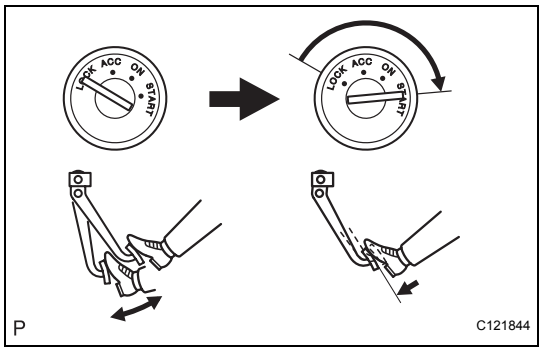
ON-VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER

(a) Check the air tightness.

(1) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.
HINT:
- If the pedal can be depressed to the floor on the 1st time, but cannot be depressed as far on the 2nd or 3rd times, the booster is airtight. If not, inspect the vacuum check valve.
- If the vacuum check valve is normal, replace the brake booster assembly.

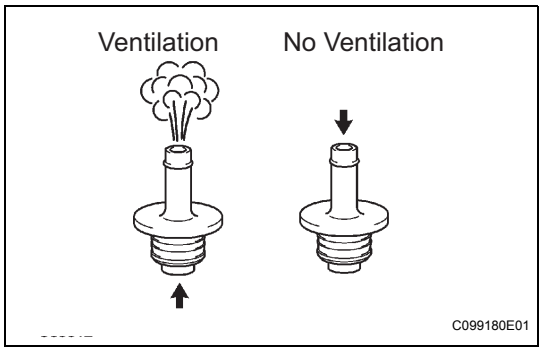
(2) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed.
HINT:
- If there is no change in the pedal reserve distance after holding the pedal for 30 seconds, the booster is airtight. If not, inspect the vacuum check valve.
- If the vacuum check valve is normal, replace the brake booster assembly.



(b) Check the operation.

(1) Depress the brake pedal several times with the engine stopped and check that there is no change in the pedal reserve distance.

(2) Depress the brake pedal and start the engine.
HINT:
- If the pedal goes down slightly, the operation is normal. If not, inspect the vacuum check valve.
- If the vacuum check valve is normal, replace the brake booster assembly.



2. INSPECT VACUUM CHECK VALVE

(a) Check the vacuum check valve.
  (1) Slide the clip and disconnect the vacuum hose.
  (2) Remove the vacuum check valve from the brake booster.
  (3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.
  If any fault is found, replace the vacuum hose assembly.
  (4) Install the vacuum check valve onto the brake booster.
  (5) Connect the vacuum hose with the clip.

3. INSPECT PROPORTIONING VALVE (w/o ABS)

(a) Remove the bleeder plug from the front brake caliper and rear wheel cylinder.
(b) for Hatchback:

  (1) Install SST and the bleed the air.
  SST 09709-29018
  (2) Raise the front brake caliper pressure and inspect the rear wheel cylinder pressure.

Standard fluid pressure

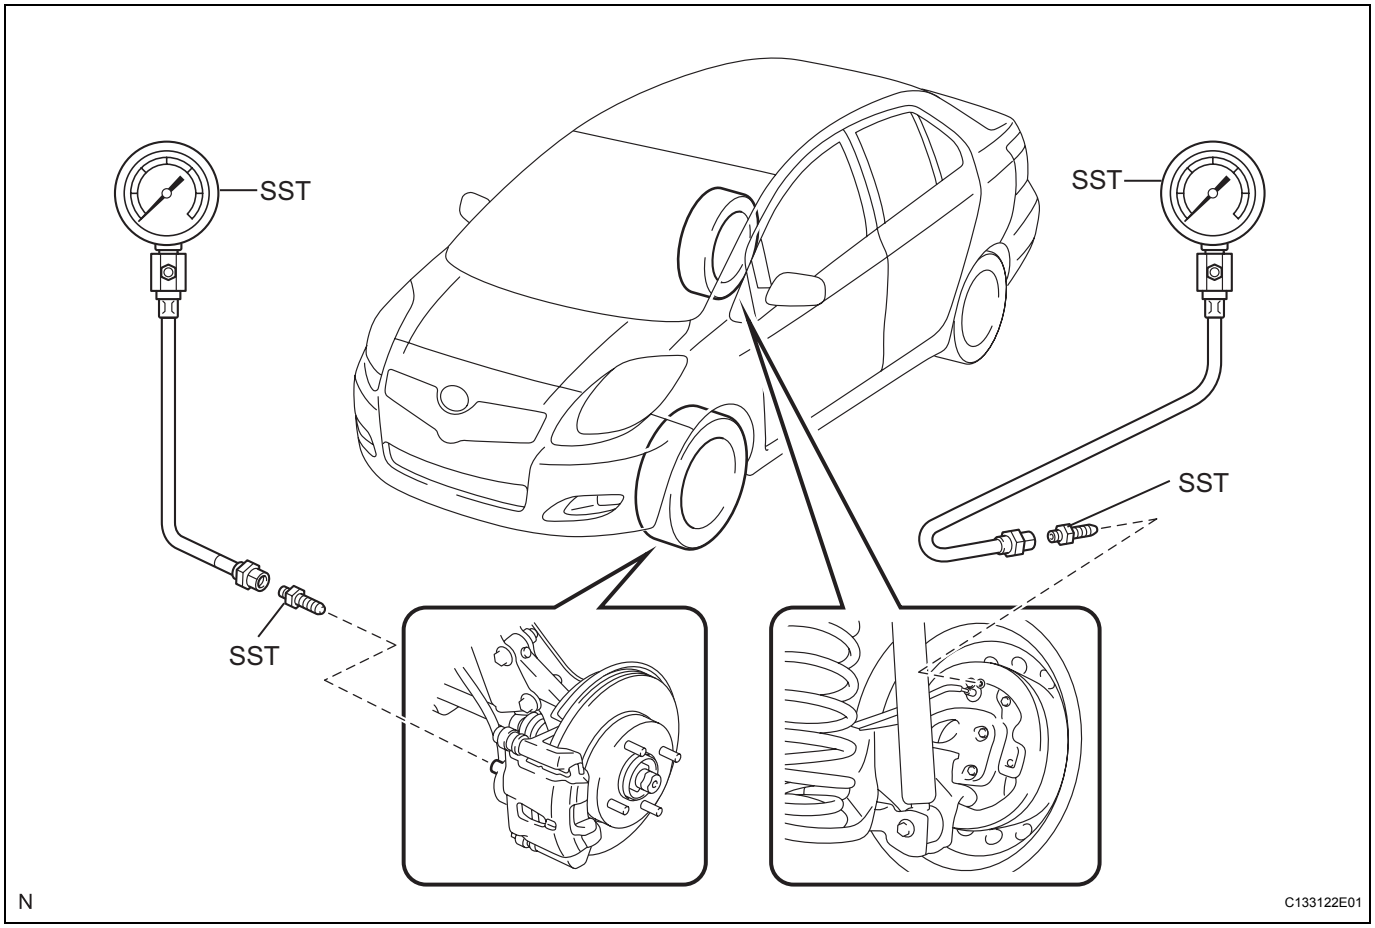
Front Brake Caliper Pressure	Rear Wheel Cylinder Pressure
1,500 kPa (15.3 kgf/cm^2, 218 psi)	1,500 kPa (15.3 kgf/cm^2, 218 psi)
5,000 kPa (51.0 kgf/cm^2, 725 psi)	2,350 kPa (24.0 kgf/cm^2, 341 psi)

Front Brake Caliper Pressure	Rear Wheel Cylinder Pressure
8,000 kPa (81.6 kgf/cm^2, 1,160 psi)	3,100 kPa (31.6 kgf/cm^2, 450 psi)

HINT:
When inspecting the fluid pressure, inspect the left front and right rear together, and the right front and left rear together.
If the rear wheel cylinder pressure is incorrect, replace the proportioning valve.

(3) Remove SST.

(c) for Sedan:



(1) Install SST and the bleed the air.
SST 09709-29018

(2) Raise the front brake caliper pressure and inspect the rear wheel cylinder pressure.

Standard fluid pressure

Front Brake Caliper Pressure	Rear Wheel Cylinder Pressure
1,500 kPa (15.3 kgf/cm^2, 218 psi)	1,500 kPa (15.3 kgf/cm^2, 218 psi)
5,000 kPa (51.0 kgf/cm^2, 725 psi)	2,350 kPa (24.0 kgf/cm^2, 341 psi)
8,000 kPa (81.6 kgf/cm^2, 1,160 psi)	3,100 kPa (31.6 kgf/cm^2, 450 psi)

HINT:
When inspecting the fluid pressure, inspect the left front and right rear together, and the right front and left rear together.

If the rear wheel cylinder pressure is incorrect, replace the proportioning valve.

(3) Remove SST.

(d) Install the bleeder plug onto the front brake caliper and rear wheel cylinder.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

(e) Bleed the brake fluid (See page BR-10).

(f) Check the brake fluid leakage.

ADJUSTMENT

1. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY**
   Hatchback: (See page IP-67)
   Sedan: (See page IP-44)

2. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY**
   Hatchback: (See page IP-69)
   Sedan: (See page IP-45)

3. **INSPECT AND ADJUST BRAKE PEDAL**
   (a) Inspect the brake pedal height.
   Pedal height from floor

w/ ABS	w/o ABS
107.3 to 117.3 mm (4.224 to 4.618 in.)	107.8 to 117.8 mm (4.244 to 4.638 in.)

If the pedal height is incorrect, adjust it.

   (b) Adjust the brake pedal height.
   (1) Disconnect the connector from the stop light switch.
   (2) Turn the stop light switch counterclockwise, and remove the stop light switch.
   (3) Loosen the push rod lock nut.
   (4) Adjust the pedal height by turning the pedal push rod.
   Pedal height from floor

w/ ABS	w/o ABS
107.3 to 117.3 mm (4.224 to 4.618 in.)	107.8 to 117.8 mm (4.244 to 4.638 in.)

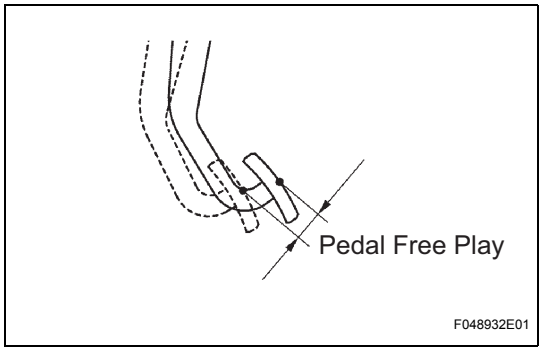
   (5) Tighten the push rod lock nut.
   Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

   (6) Insert the stop light switch into the adjuster until it just touches the brake pedal.
   NOTICE:
   Do not depress the brake pedal.

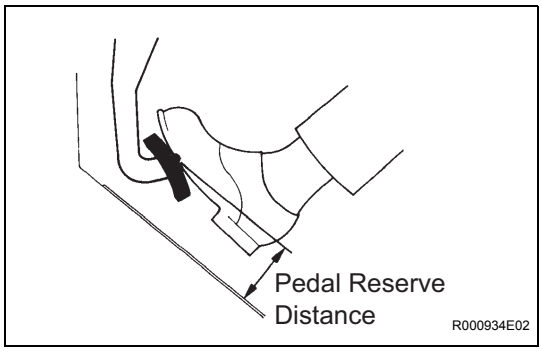
   (7) Make a quarter turn clockwise to install the stop light switch.
   NOTICE:
   Do not depress the brake pedal.
   HINT:
   The turning torque for installing the stop light switch:
   Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less

BR

(8) Check the stop light switch clearance.
Stop light switch clearance:
0.5 to 2.6 mm (0.020 to 0.102 in.)
(9) Connect the connector to the stop light switch.



(c) Inspect the brake pedal free play.
(1) Stop the engine and depress the brake pedal several times until there is no vacuum left in the booster.
(2) Push in the pedal until the beginning of the resistance is felt. Measure the distance as shown.
Pedal free play:
1.0 to 6.0 mm (0.039 to 0.236 in.)
If incorrect, troubleshoot the brake system.



(d) Inspect the brake pedal reserve distance.
(1) Release the parking brake lever. With the engine running, depress the pedal and measure the pedal reserve distance as shown.
Pedal reserve distance from floor at 294 N (30 kgf, 66.1 lbf)

w/ ABS	w/o ABS
More than 73 mm (2.87 in.)	More than 70 mm (2.75 in.)

HINT:
Sound and resistance from the brake booster when the brake pedal is depressed without a vacuum does not indicate a problem.
If incorrect, troubleshoot the brake system.

4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY
Hatchback: (See page IP-78)
Sedan: (See page IP-54)

5. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY
Hatchback: (See page IP-80)
Sedan: (See page IP-55)

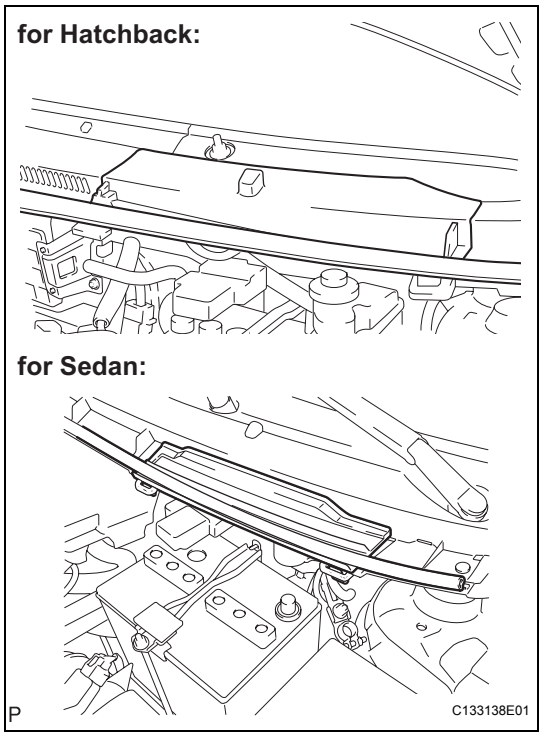
BRAKE FLUID

BLEEDING

NOTICE:
Immediately wash off any brake fluid that comes into contact with any painted surfaces.
HINT:
If any work is done on the brake system or if air in the brake lines is suspected, bleed the air from the system.

1. FILL RESERVOIR WITH BRAKE FLUID

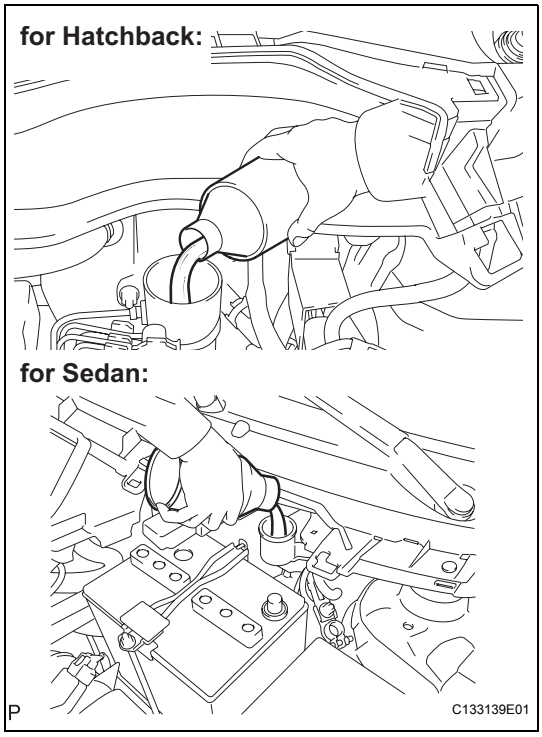
(a) Disengage the 3 clips and separate the hood to cowl top seal.
(b) Remove the cowl top ventilator louver.

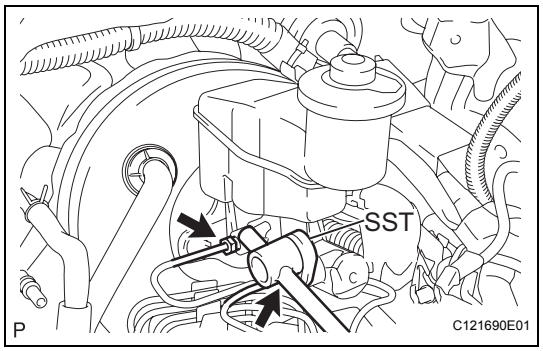


(c) Set the brake fluid can upside down on the reservoir.
Fluid:
SAE J1703 or FMVSS No. 116 DOT3

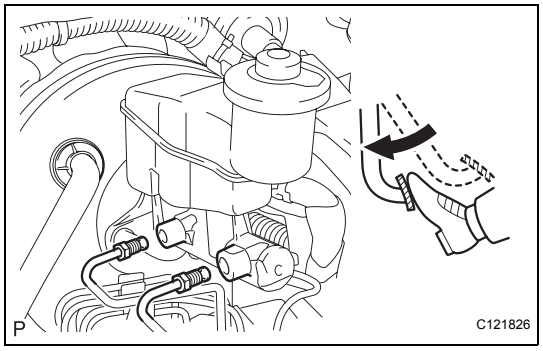
2. BLEED MASTER CYLINDER

HINT:
If the master cylinder has been disassembled or if the reservoir becomes empty, bleed the air from the master cylinder.

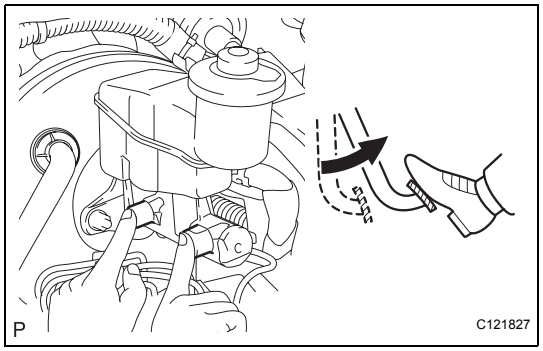




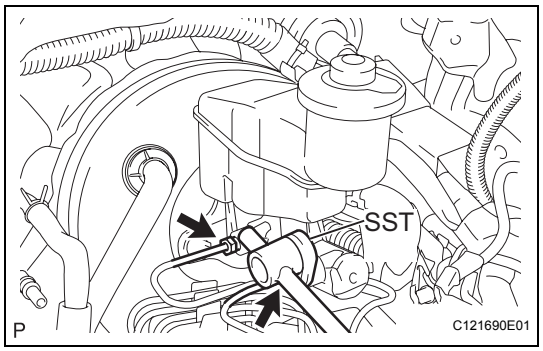
(a) Using SST, disconnect the brake tubes from the master cylinder.
SST 09023-00100



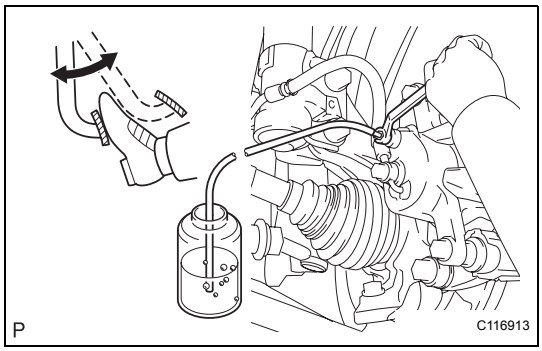
(b) Slowly depress the brake pedal and hold it there (Step A).



(c) Block the outer holes with your fingers, and release the brake pedal (Step B).
(d) Repeat step A and B 3 or 4 times.



(e) Using SST, connect the brake tubes to the master cylinder.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.



3. BLEED BRAKE LINE

(a) Connect the vinyl tube to the bleeder plug.
(b) Depress the brake pedal several times, then loosen the bleeder plug with the pedal depressed (Step C).
(c) At the point where the fluid stops coming out, tighten the bleeder plug, then release the brake pedal (Step D).
(d) Repeat step C and D until all the air in the fluid is completely bled out.
(e) Tighten the bleeder plug.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
(f) Repeat the above procedure to bleed the air out of the brake line for each wheel.

4. CHECK FLUID LEVEL IN RESERVOIR

(a) Check the fluid level and add fluid if necessary.
Fluid:
SAE J1703 or FMVSS No. 116 DOT3

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
6. **REMOVE COMBINATION METER ASSEMBLY**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
7. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
8. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
9. **REMOVE FRONT PILLAR GARNISH RH**
   Hatchback: (See page IP-19)
   Sedan: (See page IP-5)
10. **REMOVE FRONT PILLAR GARNISH LH**
    Hatchback: (See page IP-19)
    Sedan: (See page IP-5)
11. **REMOVE NO. 1 SWITCH HOLE BASE (for Hatchback) (See page IP-20)**
12. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY**
    Hatchback: (See page IP-20)
    Sedan: (See page IP-6)
13. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY**
    Hatchback: (See page IP-21)
    Sedan: (See page IP-6)
14. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY**
    Hatchback: (See page IP-67)
    Sedan: (See page IP-44)

15. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY
Hatchback: (See page IP-69)
Sedan: (See page IP-45)

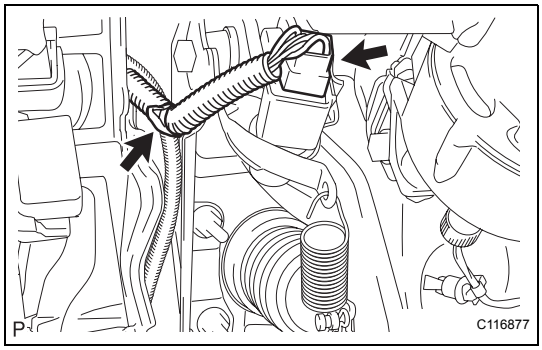
16. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page PS-74)

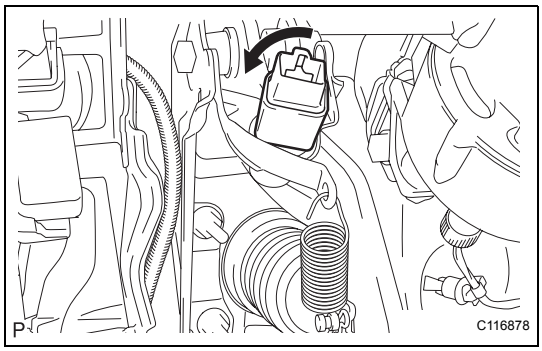
17. REMOVE STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-32)

18. REMOVE STOP LIGHT SWITCH

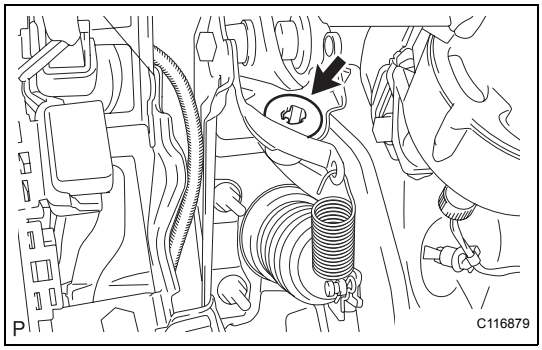
(a) Disconnect the connector from the stop light switch.

(b) Disconnect the wire harness clamp from the pedal support.



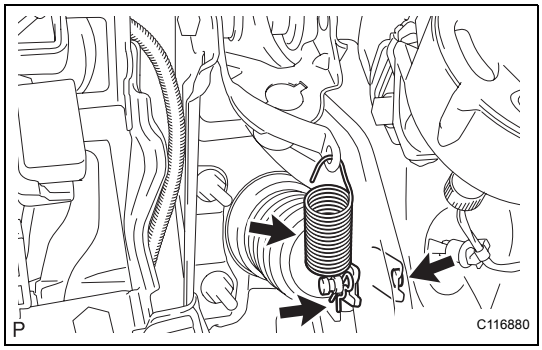


(c) Turn the stop light switch counterclockwise, and remove the stop light switch.



19. REMOVE STOP LIGHT SWITCH MOUNTING ADJUSTER

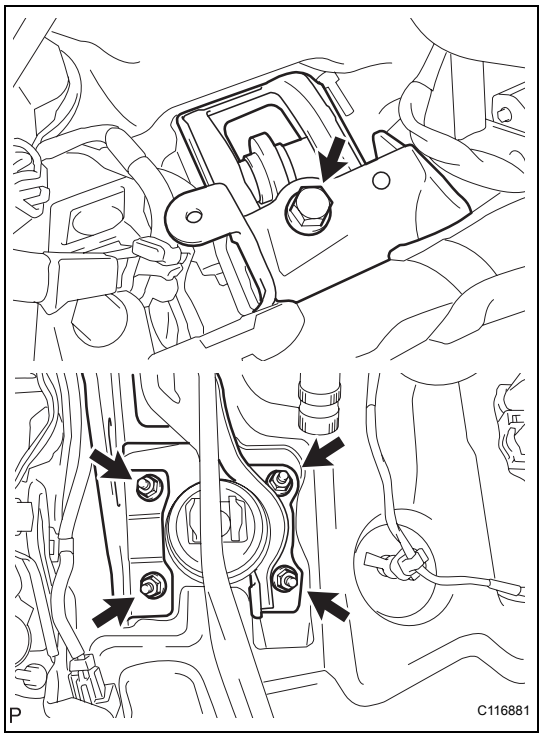
(a) Remove the stop light switch mounting adjuster from the pedal support.



20. SEPARATE BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Remove the brake pedal return spring.

(b) Remove the clip and the push rod pin and separate the push rod clevis from the brake pedal.



21. REMOVE BRAKE PEDAL SUPPORT

(a) Remove the 4 nuts and bolt and remove the pedal support.

22. REMOVE BRAKE PEDAL

(a) Remove the nut and brake pedal shaft and remove the brake pedal from the pedal support.

23. REMOVE BRAKE PEDAL BUSH

(a) Remove the 2 brake pedal bushes from the brake pedal.

24. REMOVE BRAKE PEDAL PAD

(a) Remove the brake pedal pad from the brake pedal.

INSTALLATION

1. INSTALL BRAKE PEDAL PAD

(a) Install the brake pedal pad onto the brake pedal.

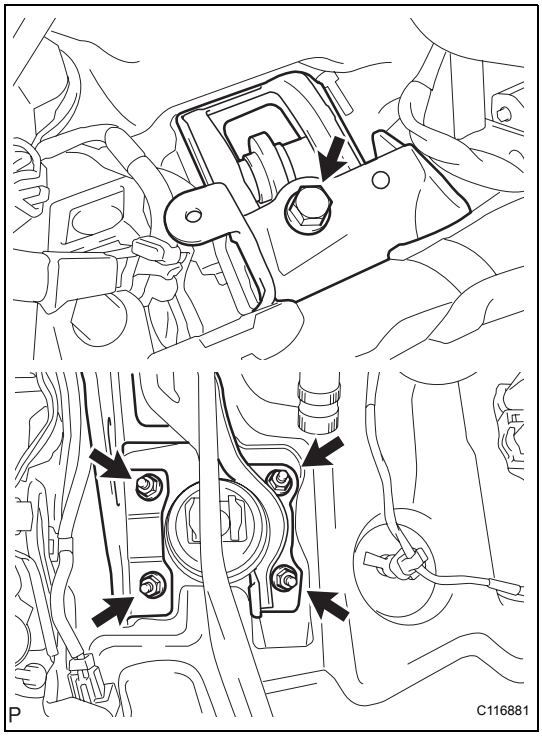
2. INSTALL BRAKE PEDAL BUSH

(a) Apply lithium soap base glycol grease to the 2 bushes.

(b) Install the 2 bushes onto the brake pedal.

3. INSTALL BRAKE PEDAL

(a) Install the brake pedal onto the pedal support with the brake pedal shaft and nut.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

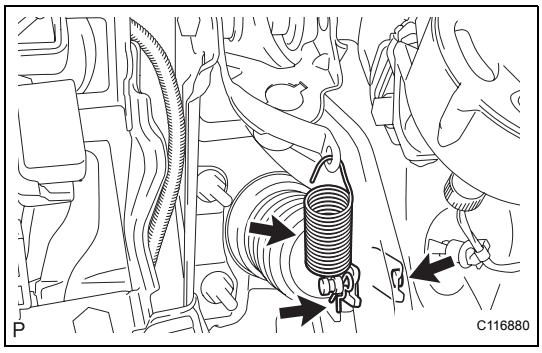


4. INSTALL BRAKE PEDAL SUPPORT

(a) Install the pedal support with the bolt and 4 nuts.
Torque: Bolt
24 N*m (241 kgf*cm, 17 ft.*lbf)
Nut
9.0 N*m (92 kgf*cm, 80 in.*lbf)

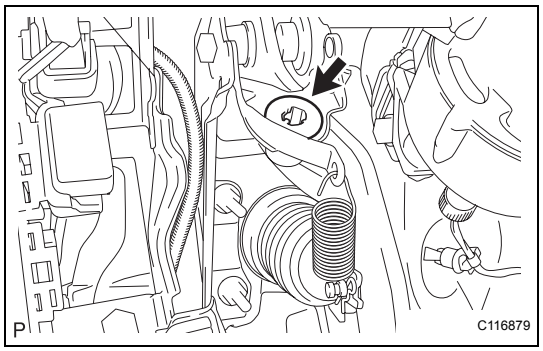
5. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Apply lithium soap base glycol grease to the push rod pin.

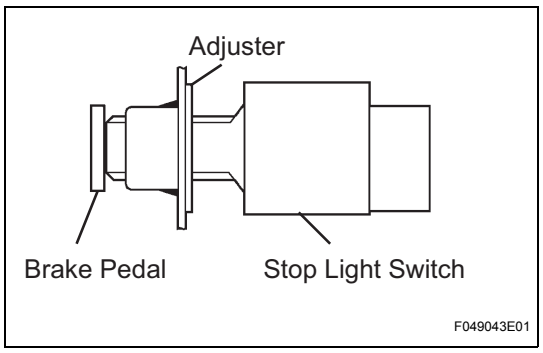


(b) Install the push rod clevis with the push rod pin and clip.

(c) Install the brake pedal return spring.



6. **INSTALL STOP LIGHT SWITCH MOUNTING ADJUSTER**
   (a) Install a new stop light switch mounting adjuster onto the pedal support.



7. **INSTALL STOP LIGHT SWITCH**
   (a) Insert the stop light switch into the adjuster until it just touches the brake pedal.
   NOTICE:
   Do not depress the brake pedal.

   (b) Make a quarter turn clockwise to install the stop light switch.
   NOTICE:
   Do not depress the brake pedal.
   HINT:
   The turning torque for installing the stop light switch:
   Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
   (c) Check the stop light switch clearance.
   Stop light switch clearance:
   0.5 to 2.6 mm (0.020 to 0.102 in.)
   (d) Connect the wire harness clamp onto the pedal support.
   (e) Connect the connector to the stop light switch.

8. **INSPECT AND ADJUST BRAKE PEDAL (See page BR-8)**

9. **INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-39)**

10. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page SR-39)**

11. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY**
    Hatchback: (See page IP-78)
    Sedan: (See page IP-54)

12. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY**
    Hatchback: (See page IP-80)
    Sedan: (See page IP-55)

13. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY**
    Hatchback: (See page IP-29)

Sedan: (See page IP-11)

14. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY**
Hatchback: (See page IP-32)
Sedan: (See page IP-13)

15. **INSTALL NO. 1 SWITCH HOLE BASE (for Hatchback) (See page IP-32)**

16. **INSTALL FRONT PILLAR GARNISH RH**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

17. **INSTALL FRONT PILLAR GARNISH LH**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

18. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

19. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

20. **INSTALL COMBINATION METER ASSEMBLY**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

21. **INSTALL INSTRUMENT CLUSTER FINISH PANEL**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

22. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH**
Hatchback: (See page IP-32)
Sedan: (See page IP-14)

23. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH**
Hatchback: (See page IP-33)
Sedan: (See page IP-14)

24. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page ME-142)**

25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

26. **INSPECT SRS WARNING LIGHT**
(See page RS-31)

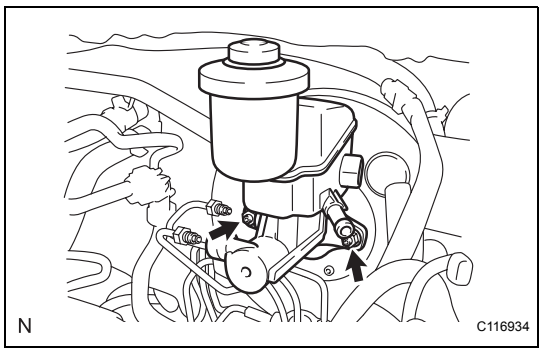
REMOVAL

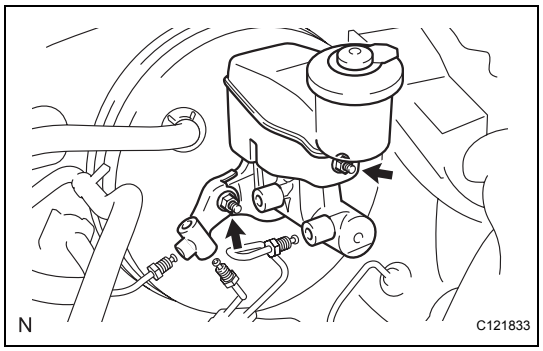
1. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
2. **REMOVE BATTERY (See page EM-122)**
3. **REMOVE BATTERY TRAY**
4. **REMOVE BATTERY CARRIER (See page EM-125)**
5. **DISCONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle)**
   (a) Slide the clip and disconnect the reservoir tube.
6. **REMOVE BRAKE MASTER CYLINDER**
   NOTICE:
   Remove the brake master cylinder after depressing the brake pedal several times and bleeding the vacuum pressure from inside the brake booster.
   (a) Disconnect the brake fluid level warning switch connector.

   (b) w/o ABS:
      (1) Using SST, separate the 3 brake tubes from the brake tube way.
      SST 09023-00100

   (c) Using SST, separate the 2 brake tubes from the brake master cylinder.
      SST 09023-00100

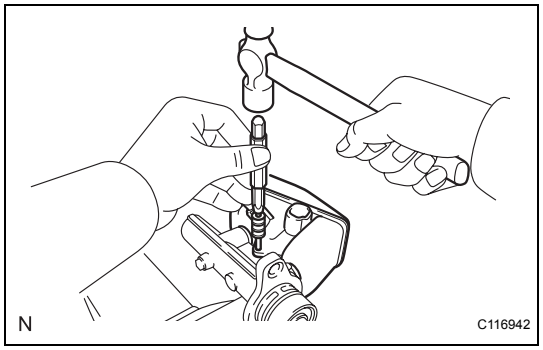
   (d) w/ ABS:
      (1) Remove the 2 nuts and remove the brake master cylinder.





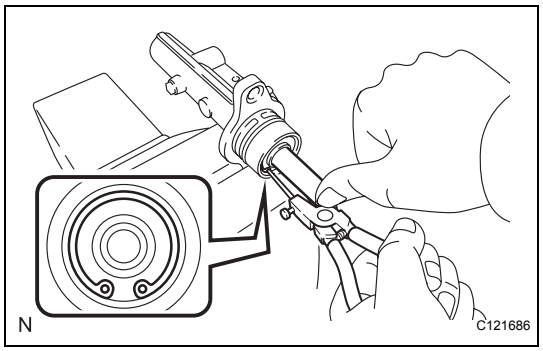
(e) w/o ABS:
  (1) Remove the 2 nuts and brake tube way and remove the brake master cylinder.
(f) Remove the O-ring from the brake master cylinder.

DISASSEMBLY



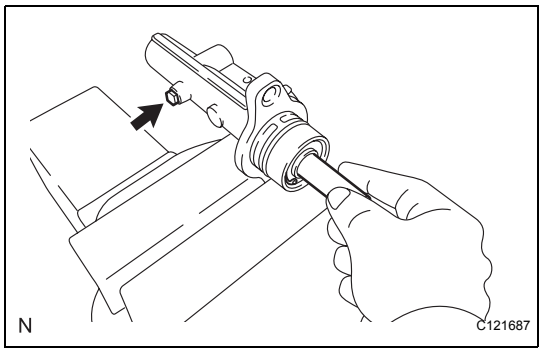
1. REMOVE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY

(a) Fix the brake master cylinder in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.
(b) Using a pin punch and hammer, tap out the straight pin.
(c) Remove the master cylinder reservoir and 2 grommets.
(d) Remove the filler cap and strainer from the master cylinder reservoir.

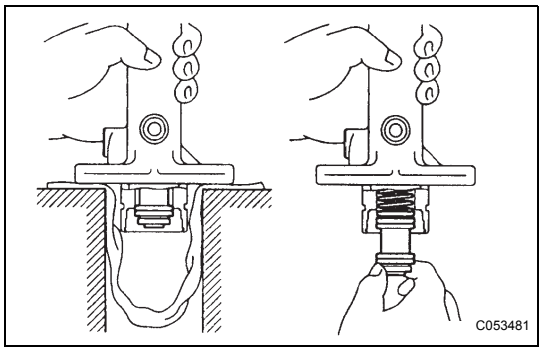


2. REMOVE BRAKE MASTER CYLINDER KIT

(a) Push in the piston and remove the snap ring using snap ring pliers.



(b) Push in the piston and remove the piston stopper bolt and gasket.
(c) Remove No. 1 piston from the master cylinder body by pulling it straight out.
NOTICE:
Do not scratch the inside of the cylinder body.



(d) Tap the flanged part against wooden blocks until the end of No. 2 piston comes out. When the end of No. 2 piston comes out, pull No. 2 piston straight out of the master cylinder body.
NOTICE:
Do not scratch the inside of the cylinder body.

INSPECTION

1. INSPECT BRAKE MASTER CYLINDER

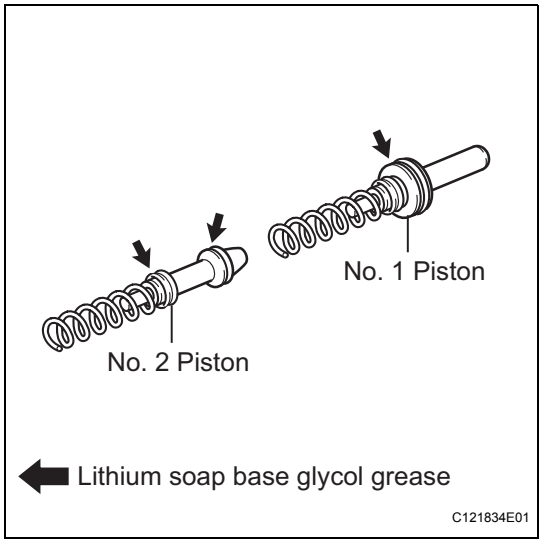
(a) Check the inside of the master cylinder body for scratch.

If scratched, replace the brake master cylinder sub-assembly with a new one.

REASSEMBLY

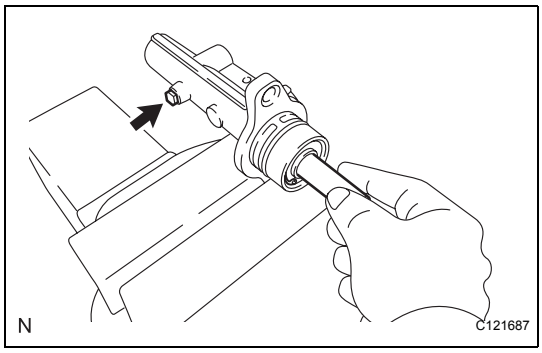
1. INSTALL BRAKE MASTER CYLINDER KIT

(a) Fix the master cylinder body in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

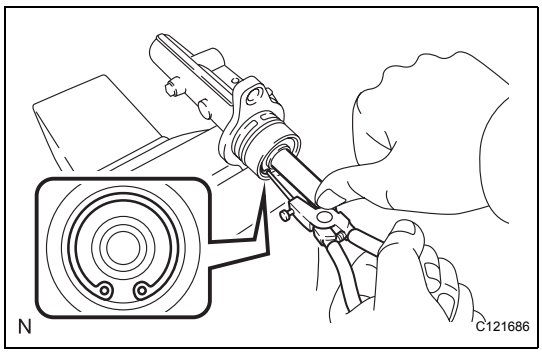


(b) Apply lithium soap base glycol grease to the rubber part as shown in the illustration.

(c) Install No. 1 piston and No. 2 piston onto the master cylinder body.
NOTICE:
- **Install the piston straight while being not to careful damage the inside of the cylinder.**
- **Do not damage the lip of the cylinder cup.**



(d) Push in the piston and install a new gasket and a new piston stopper bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



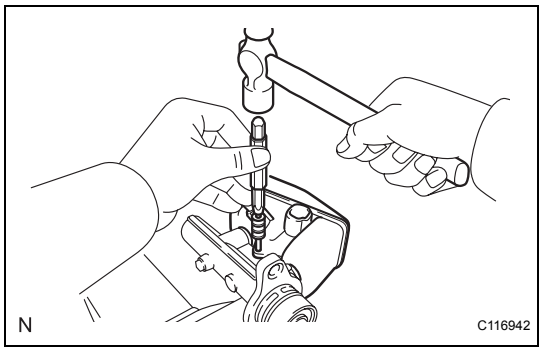
(e) Install the snap ring using snap ring pliers with the piston pushed in.
NOTICE:
Do not scratch the inside of the cylinder body.

2. INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY

(a) Install the strainer and filler cap onto the master cylinder reservoir.

(b) Apply lithium soap base glycol grease to the 2 grommets and install them onto the master cylinder body.

(c) Install the master cylinder reservoir onto the master cylinder body.



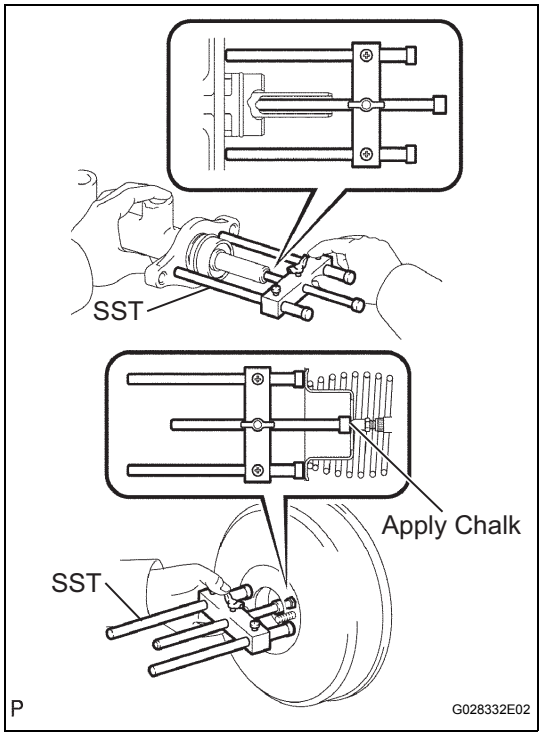
(d) Using a pin punch and hammer, tap in the straight pin.

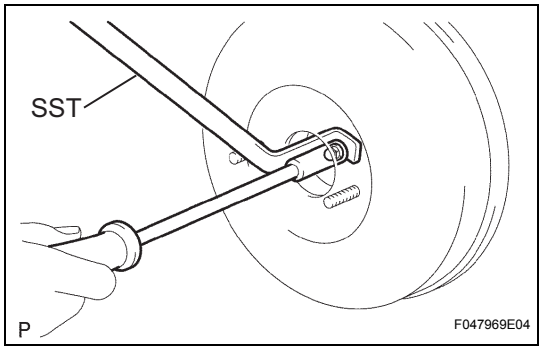
INSTALLATION

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD

(a) Set SST on the master cylinder and lower the rod of SST until it just touches the piston.
SST 09737-00013

(b) Apply chalk to the flat tip of the SST rod. Turn SST upside down and measure the clearance between the brake booster push rod and SST.
Standard Clearance:
-0.21 to 0 mm (-0.0083 to 0 in.)
If there is clearance between the SST main body and the shell of the brake booster, the push rod is protruding too far. If the chalk does not stick to the tip of the brake booster push rod, the push rod protrusion is insufficient.

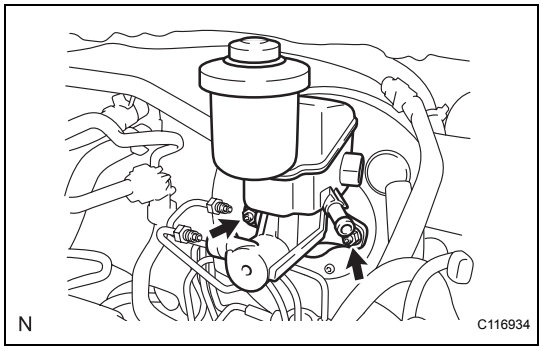




(c) If the clearance is not within the standard, adjust the length by holding the rod using SST and turning the tip of the rod using a 7 mm socket driver.
SST 09737-00020
NOTICE:
Check the push rod clearance again after adjusting.

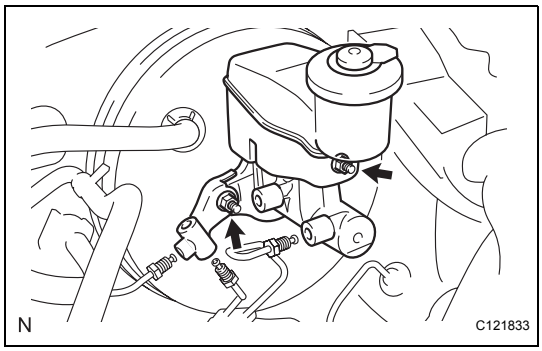
2. INSTALL BRAKE MASTER CYLINDER

(a) Install a new O-ring onto the brake master cylinder.

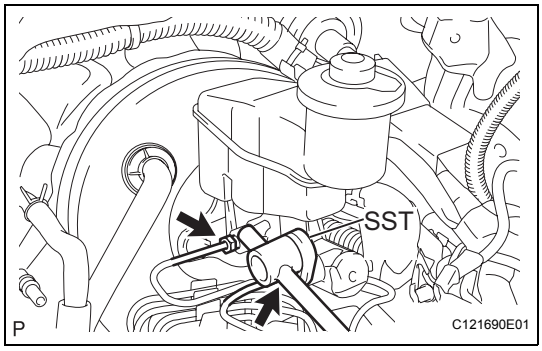


(b) w/ ABS:
(1) Install the brake master cylinder with the 2 nuts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)

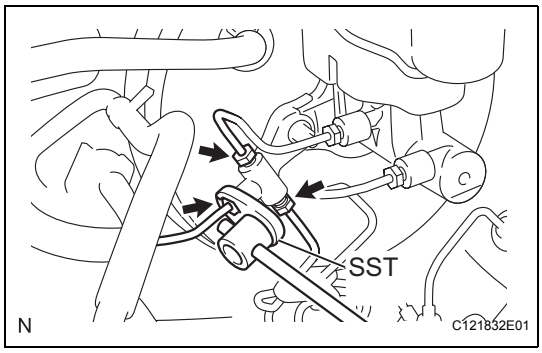
BR



(c) w/o ABS:
(1) Install the brake master cylinder and brake tube way with the 2 nuts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)

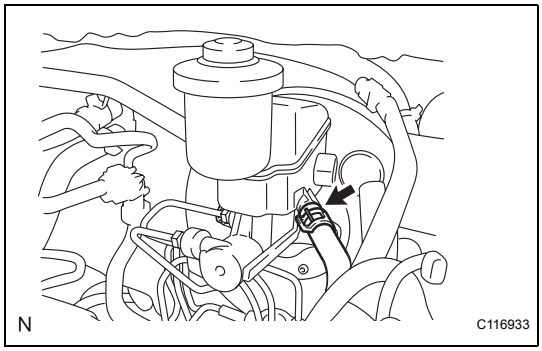


(d) Using SST, install the 2 brake tubes onto the brake master cylinder.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.



(e) w/o ABS:
(1) Using SST, install the 3 brake tubes to the brake tube way.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

(f) Connect the brake fluid level warning switch connector.



3. CONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle)
(a) Connect the reservoir tube with the clip.

4. INSTALL BATTERY CARRIER (See page EM-145)

5. INSTALL BATTERY TRAY

6. INSTALL BATTERY (See page EM-148)

7. FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)

8. BLEED MASTER CYLINDER (See page BR-10)

9. BLEED BRAKE LINE (See page BR-12)

10. CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)

11. CHECK FOR BRAKE FLUID LEAKAGE

REMOVAL

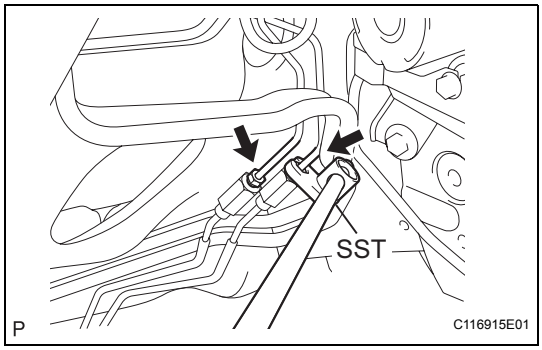
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
3. **REMOVE FRONT WIPER ARM HEAD CAP**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
6. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
7. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
8. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
9. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
   Hatchback: (See page WW-18)
   Sedan: (See page WW-10)
10. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
11. **REMOVE FRONT WIPER MOTOR AND LINK**
    Hatchback: (See page WW-19)
    Sedan: (See page WW-10)
12. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-122)**
13. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**
14. **REMOVE OUTER COWL TOP PANEL**
    Hatchback: (See page EM-123)
    Sedan: (See page EM-123)
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY**
    Hatchback: (See page IP-67)
    Sedan: (See page IP-44)
16. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY**
    Hatchback: (See page IP-69)

Sedan: (See page IP-45)

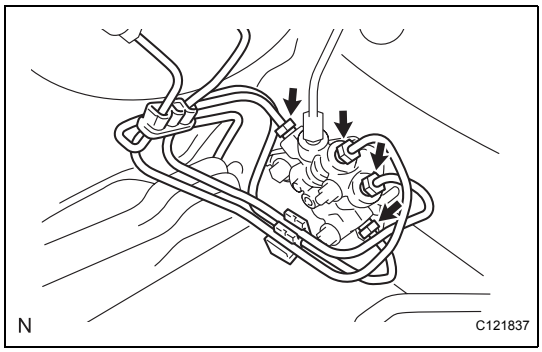
17. **REMOVE BATTERY (See page EM-122)**
18. **REMOVE BATTERY TRAY**
19. **REMOVE BATTERY CARRIER (See page EM-125)**
20. **REMOVE BRAKE ACTUATOR (w/ ABS) (See page BC-89)**
21. **DISCONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle) (See page BR-28)**
22. **REMOVE BRAKE MASTER CYLINDER (See page BR-28)**
23. **SEPARATE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (See page BR-20)**
24. **REMOVE BRAKE BOOSTER**

(a) w/o ABS:

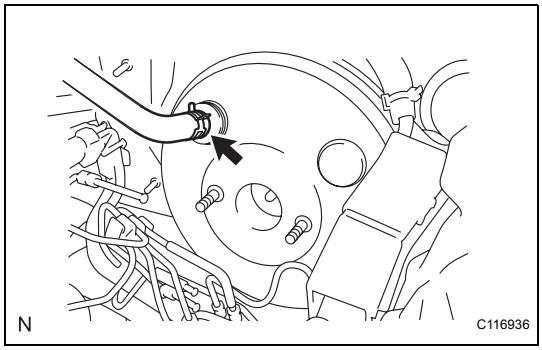
(1) Using SST, separate the 2 brake tubes from the brake tube No. 1 way.
SST 09023-00100

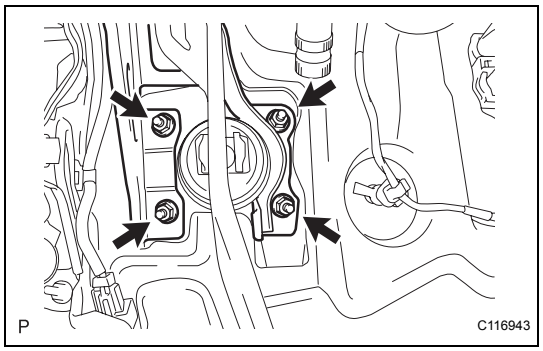


(2) Using SST, remove the brake tube assembly from the proportioning valve.
SST 09023-00100

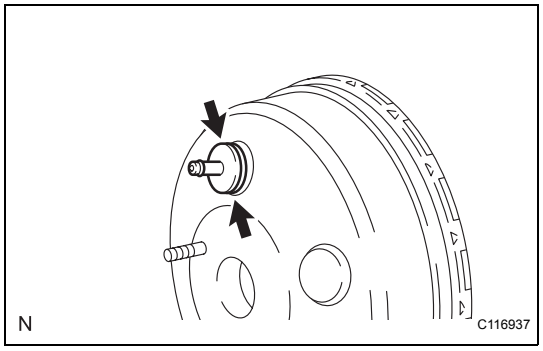


(b) Slide the clip and disconnect the vacuum hose from the check valve.





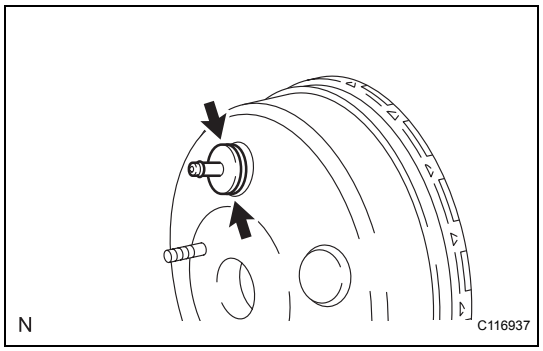
(c) Remove the 4 nuts and remove the brake booster.
(d) Remove the gasket from the brake booster.
(e) Loosen the push rod lock nut and remove the push rod clevis.



25. REMOVE BRAKE VACUUM CHECK VALVE ASSEMBLY

(a) Remove the vacuum check valve from the brake booster.
(b) Remove the grommet from the brake booster.

INSTALLATION

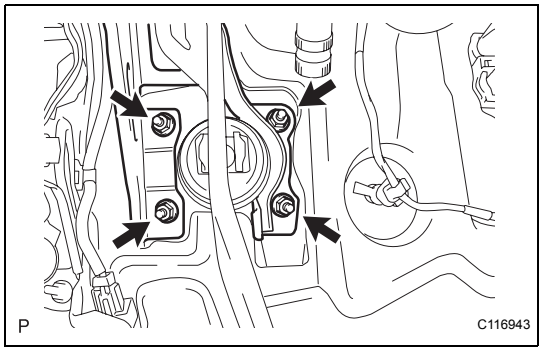


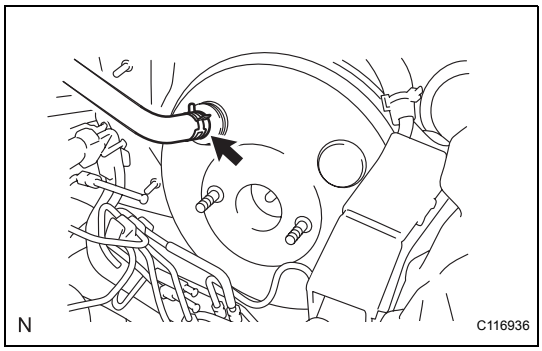
1. INSTALL BRAKE VACUUM CHECK VALVE ASSEMBLY

(a) Install the grommet onto the brake booster.
(b) Install the vacuum check valve onto the brake booster.

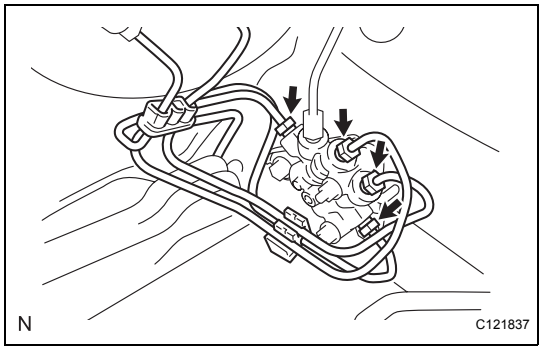
2. INSTALL BRAKE BOOSTER

(a) Provisionally install the push rod clevis onto the brake booster.
HINT:
Tighten the push rod lock nut when adjusting the brake pedal height.
(b) Install a new gasket onto the brake booster.
(c) Install the brake booster with the 4 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



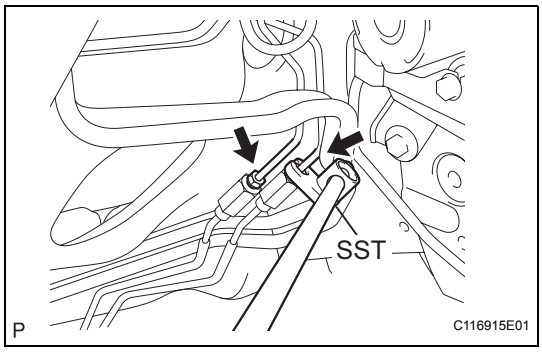


(d) Connect the vacuum hose to the vacuum check valve with the clip.



(e) w/o ABS:

(1) Using SST, install the brake tube assembly onto the proportioning valve.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.



(2) Using SST, install the 2 brake tubes onto the brake tube No. 1 way.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

3. **INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (See page BR-21)**
4. **INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD (See page BR-31)**
5. **INSTALL BRAKE MASTER CYLINDER (See page BR-32)**
6. **CONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle) (See page BR-33)**
7. **INSTALL BRAKE ACTUATOR (w/ ABS) (See page BC-91)**
8. **INSTALL BATTERY CARRIER (See page EM-145)**
9. **INSTALL BATTERY TRAY**
10. **INSTALL BATTERY (See page EM-148)**

11. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY**
Hatchback: (See page IP-78)
Sedan: (See page IP-54)

12. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY**
Hatchback: (See page IP-80)
Sedan: (See page IP-55)

13. **INSTALL OUTER COWL TOP PANEL**
Hatchback: (See page EM-146)
Sedan: (See page EM-147)

14. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-147)**

15. **INSTALL FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-148)**

16. **INSTALL FRONT WIPER MOTOR AND LINK**
Hatchback: (See page WW-21)
Sedan: (See page WW-12)

17. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**

18. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
Hatchback: (See page WW-21)
Sedan: (See page WW-12)

19. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**

20. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**

21. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**

22. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH**
Hatchback: (See page WW-22)
Sedan: (See page WW-13)

23. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH**
Hatchback: (See page WW-23)
Sedan: (See page WW-14)

24. **INSTALL FRONT WIPER ARM HEAD CAP**
Hatchback: (See page WW-23)
Sedan: (See page WW-15)

25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

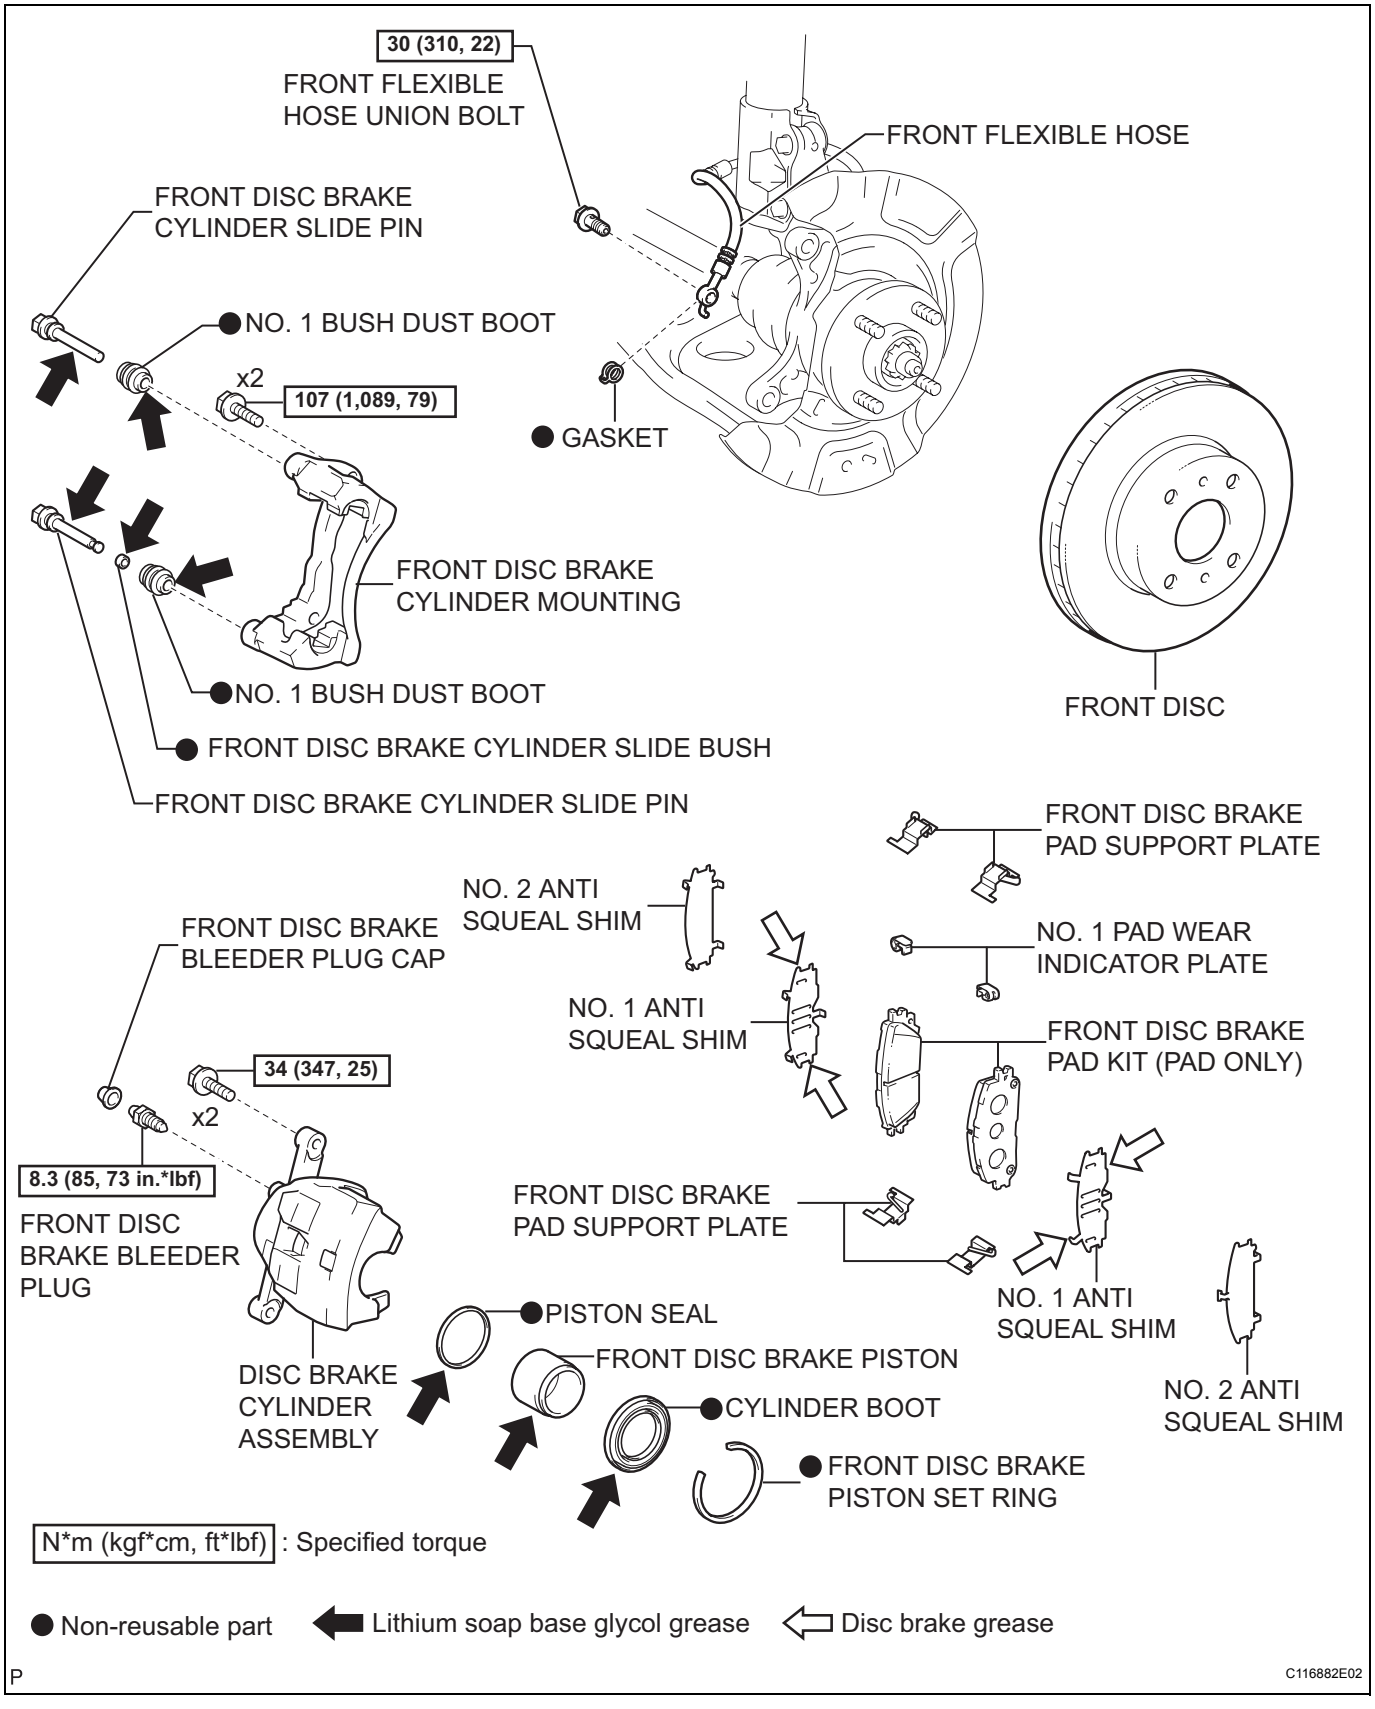
26. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**

27. **BLEED MASTER CYLINDER (See page BR-10)**

28. **BLEED BRAKE LINE (See page BR-12)**
29. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
30. **CHECK FOR BRAKE FLUID LEAKAGE**
31. **INSPECT AND ADJUST BRAKE PEDAL (See page BR-8)**

FRONT BRAKE

COMPONENTS



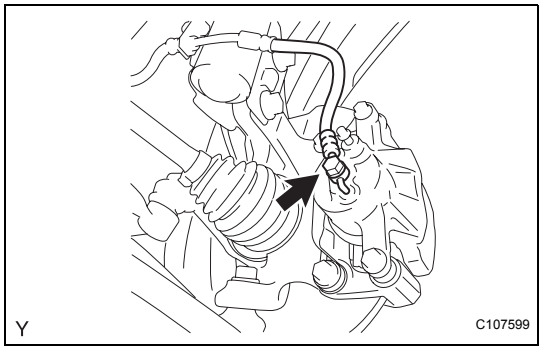
BR

REMOVAL

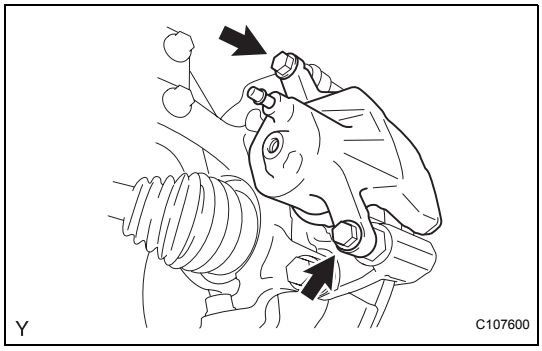
1. **REMOVE FRONT WHEEL**

2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.

3. **DISCONNECT FRONT FLEXIBLE HOSE**
   (a) Remove the union bolt and gasket and separate the flexible hose from the disc brake cylinder.



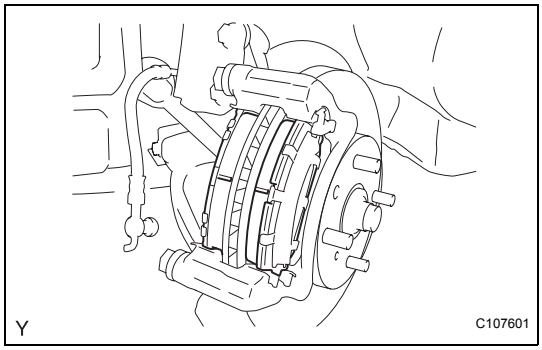
4. **REMOVE DISC BRAKE CYLINDER ASSEMBLY**
   (a) Fix the slide pin with a spanner, remove the 2 bolts and remove the disc brake cylinder.



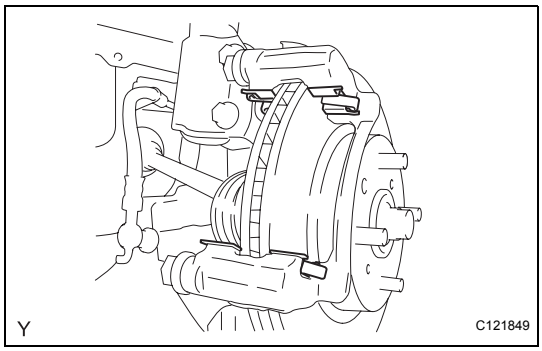
5. **REMOVE FRONT DISC BRAKE PAD KIT (PAD ONLY)**
   (a) Remove the 2 disc brake pads from the disc brake cylinder mounting.

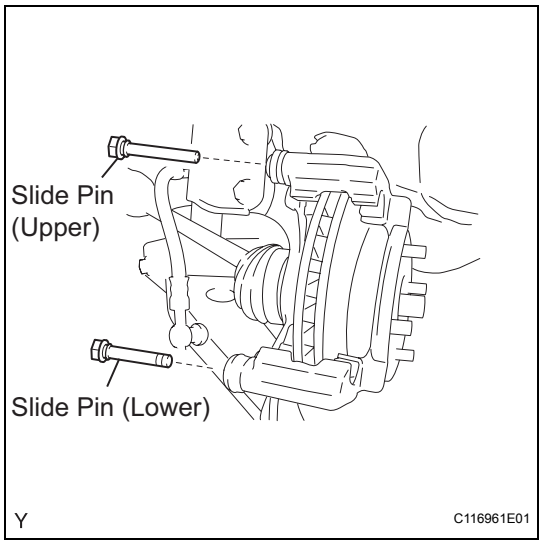
6. **REMOVE FRONT ANTI SQUEAL SHIM KIT**
   (a) Remove the No. 1 anti squeal shim and No. 2 anti squeal shim from each brake pad.

7. **REMOVE NO. 1 PAD WEAR INDICATOR PLATE**
   (a) Remove the indicator plate from each brake pad.



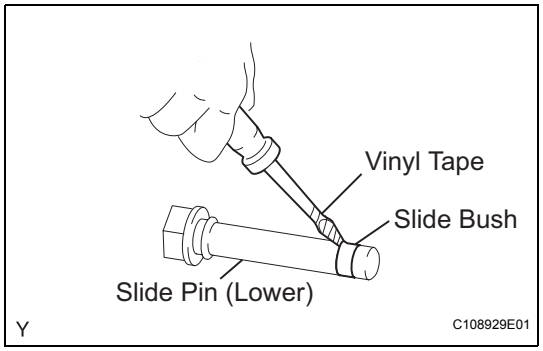
8. **REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE**
   (a) Remove the 4 disc brake pad support plates from the disc brake cylinder mounting.





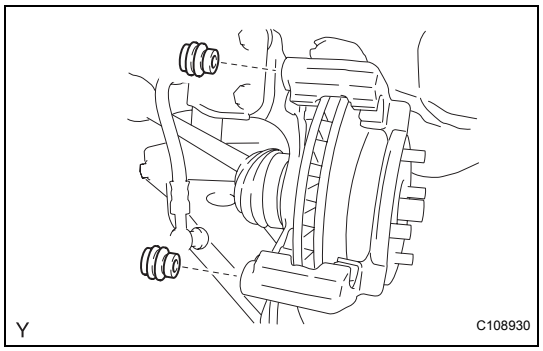
9. REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Remove the slide pin (upper) and slide pin (lower) from the disc brake cylinder mounting.



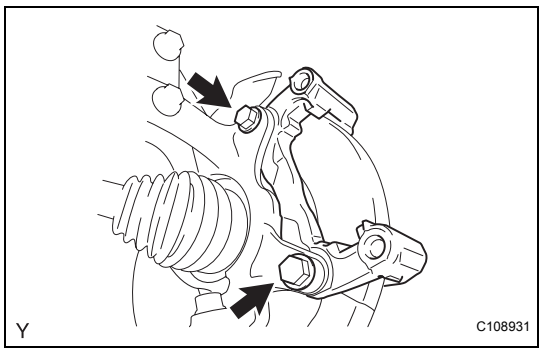
10. REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSH

(a) Using a screwdriver with its tip wrapped in protective tape, remove the slide bush from the slide pin (lower).



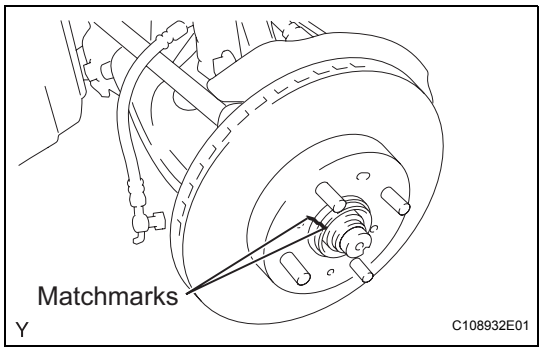
11. REMOVE NO. 1 BUSH DUST BOOT

(a) Remove the 2 dust boots from the disc brake cylinder mounting.



12. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING

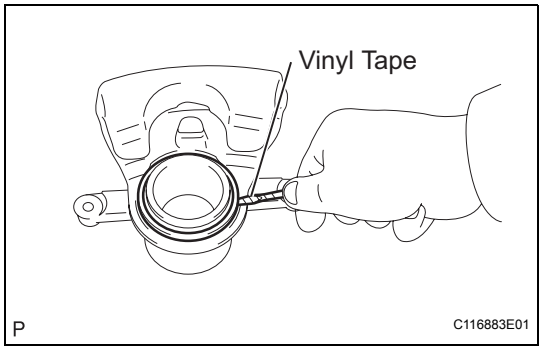
(a) Remove the 2 bolts and remove the disc brake cylinder mounting from the steering knuckle.



13. REMOVE FRONT DISC

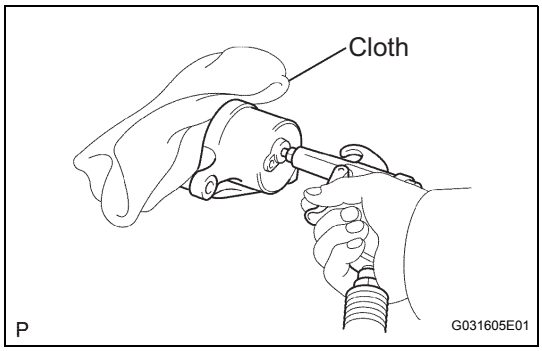
(a) Place matchmarks on the disc and axle hub and remove the disc.

DISASSEMBLY



1. REMOVE CYLINDER BOOT

(a) Using a screwdriver with its tip wrapped in protective tape, remove the set ring and cylinder boot from the disc brake cylinder.

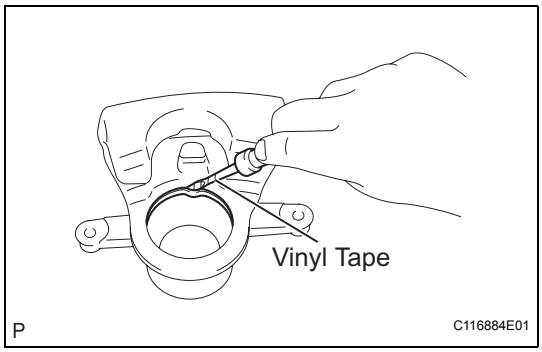


2. REMOVE FRONT DISC BRAKE PISTON

(a) Place a shop rag or piece of cloth between the piston and disc brake cylinder.

(b) Apply compressed air to remove the piston from the disc brake cylinder.

CAUTION:
Do not place your fingers in front of the piston when applying compressed air.
NOTICE:
Do not spatter the brake fluid.



3. REMOVE PISTON SEAL

(a) Using a screwdriver with its tip wrapped in protective tape, remove the piston seal from the disc brake cylinder.

NOTICE:
Do not damage the inner surface or piston seal groove of the cylinder.

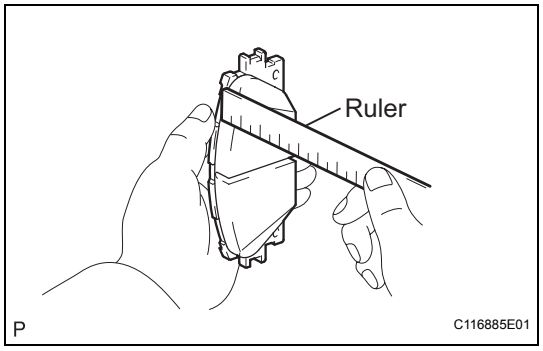
4. REMOVE FRONT DISC BRAKE BLEEDER PLUG CAP

5. REMOVE FRONT DISC BRAKE BLEEDER PLUG

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring.
If necessary, replace the disc brake cylinder and piston.

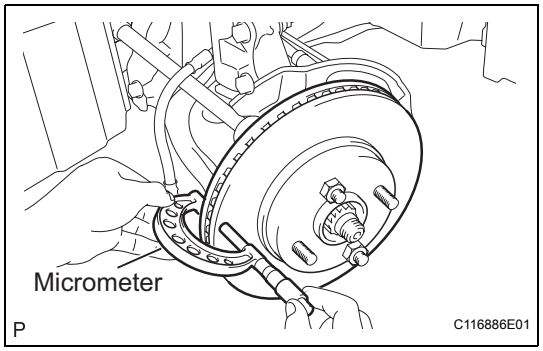


2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.
Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the pad lining thickness is equal to or less than the minimum thickness, replace the disc brake pad kit.

3. INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the disc brake pad supports have sufficient rebound, that there is no deformation, cracks or wear, and that all rust and dirt are removed.
If necessary, replace the disc brake pad support plate.



4. INSPECT DISC THICKNESS

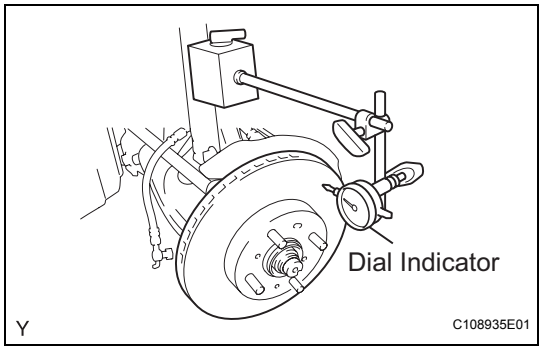
(a) Using a micrometer, measure the disc thickness.
Standard thickness:
22.0 mm (0.866 in.)
Minimum thickness:
19.0 mm (0.748 in.)
If the disc thickness is less than the minimum, replace the front disc.

5. INSPECT DISC RUNOUT

(a) Check the bearing play in the axial direction and check for the axle hub runout (See page AH-1).

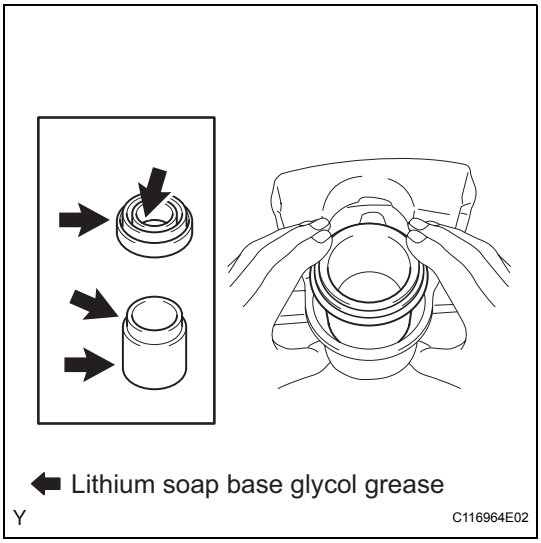
(b) Provisionally fasten the front disc together with the hub nuts.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the front disc.
Maximum disc runout:
0.05 mm (0.0020 in.)
If the runout exceeds the maximum value, change the installation positions of the disc and axle to make the minimum runout. If the runout exceeds the maximum even when the installation positions are changed, grind the disc. If the disc thickness is less than the minimum, replace the front disc.

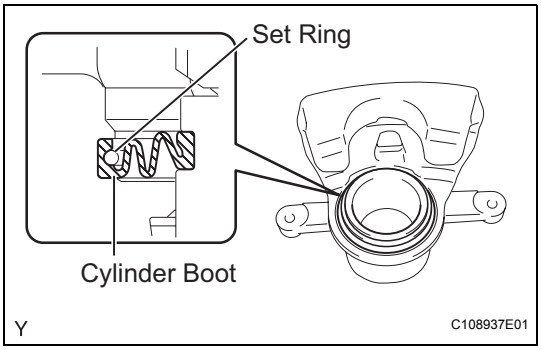


REASSEMBLY

1. **TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG**
2. **INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP**
3. **INSTALL PISTON SEAL**
   (a) Apply lithium soap base glycol grease to a new piston seal.
   (b) Install the piston seal onto the disc brake cylinder.
   NOTICE:
   Securely install the piston seal into the groove of the disc brake cylinder.
4. **INSTALL FRONT DISC BRAKE PISTON**
   (a) Apply lithium soap base glycol grease to the piston and a new cylinder boot.
   (b) Install the cylinder boot onto the piston.
   (c) Install the piston into the disc brake cylinder.
   NOTICE:
   Do not forcibly install the piston into the disc brake cylinder.

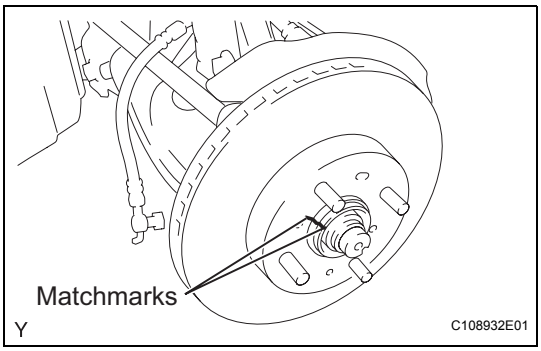


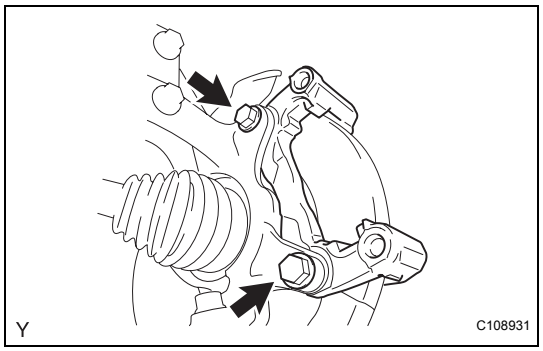
5. **INSTALL CYLINDER BOOT**
   (a) Install the cylinder boot into the disc brake cylinder.
   NOTICE:
   Securely install the cylinder boot into the groove of the disc brake cylinder.
   (b) Using a screwdriver, install a new set ring.
   NOTICE:
   Do not damage the cylinder boot.



INSTALLATION

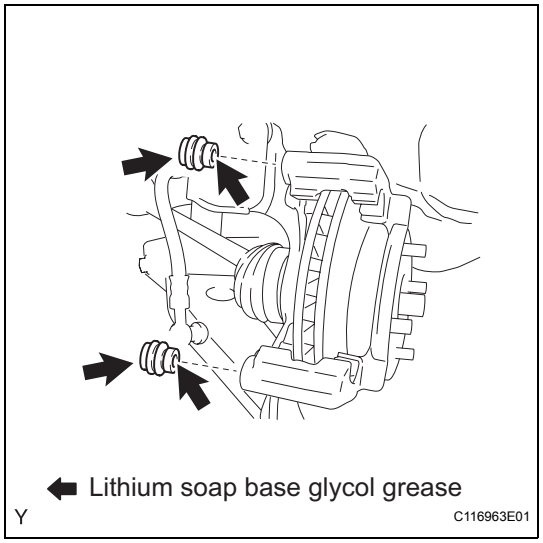
1. **INSTALL FRONT DISC**
   (a) Align the matchmarks of the disc and axle hub and install the disc.
   NOTICE:
   When replacing the disc, select the position that gives the minimum disc runout.





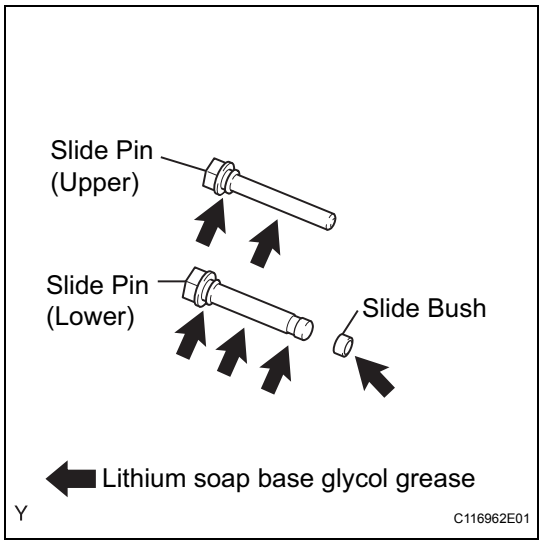
2. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

(a) Install the disc brake cylinder mounting onto the steering knuckle with the 2 bolts.
Torque: 107 N*m (1,089 kgf*cm, 79 ft.*lbf)



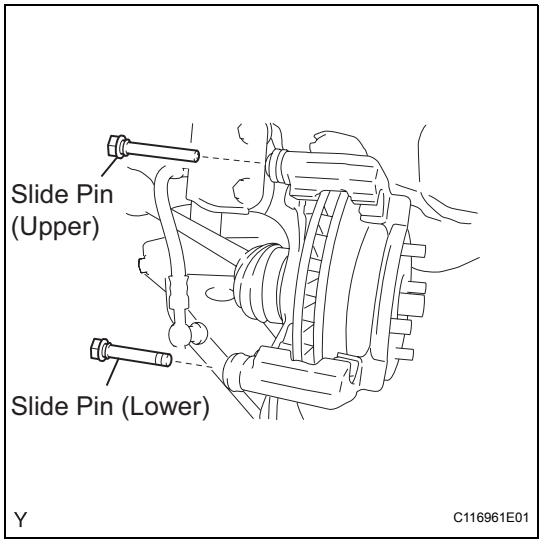
3. INSTALL NO. 1 BUSH DUST BOOT

(a) Apply lithium soap base glycol grease to 2 new dust boots.
(b) Install the 2 dust boots onto the disc brake cylinder mounting.



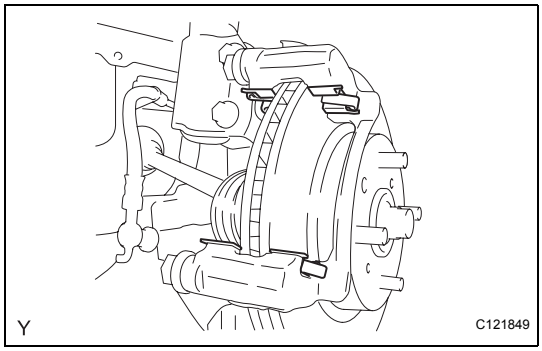
4. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSH

(a) Apply lithium soap base glycol grease to the slide pins and a new slide bush, as shown in the illustration.
(b) Install the slide bush onto the slide pin (lower).



5. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Install the slide pin (upper) and slide pin (lower) onto the cylinder mounting.

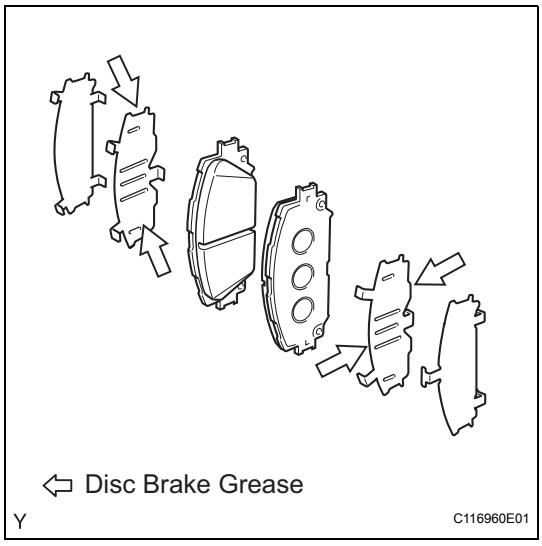


6. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Install the 4 disc brake pad support plates onto the disc brake cylinder mounting.

7. INSTALL NO. 1 PAD WEAR INDICATOR PLATE

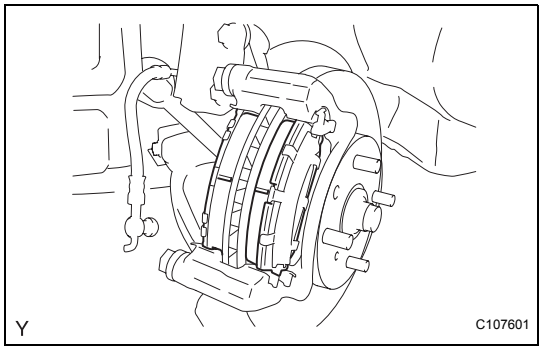
(a) Install the indicator plates onto the upper side of the brake pad.



8. INSTALL FRONT ANTI SQUEAL SHIM KIT

(a) Apply disc brake grease to both sides of each No. 1 anti-squeal shim.

(b) Install the anti squeal shims onto each brake pad.

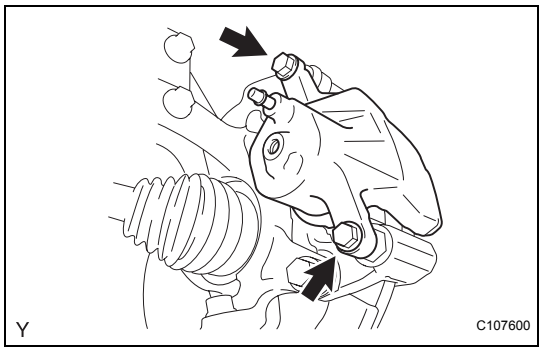


9. INSTALL FRONT DISC BRAKE PAD KIT (PAD ONLY)

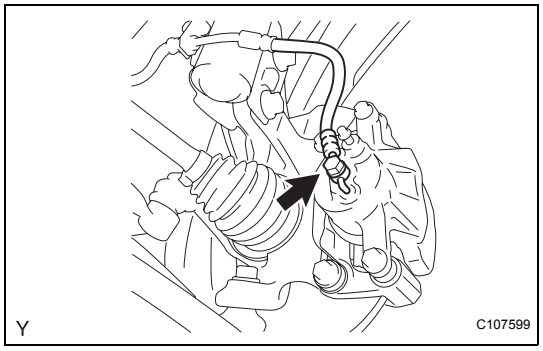
(a) Install the 2 disc brake pads onto the disc brake cylinder mounting.

NOTICE:

There should be no oil or grease on the friction surfaces of the disc brake pads or the front disc.



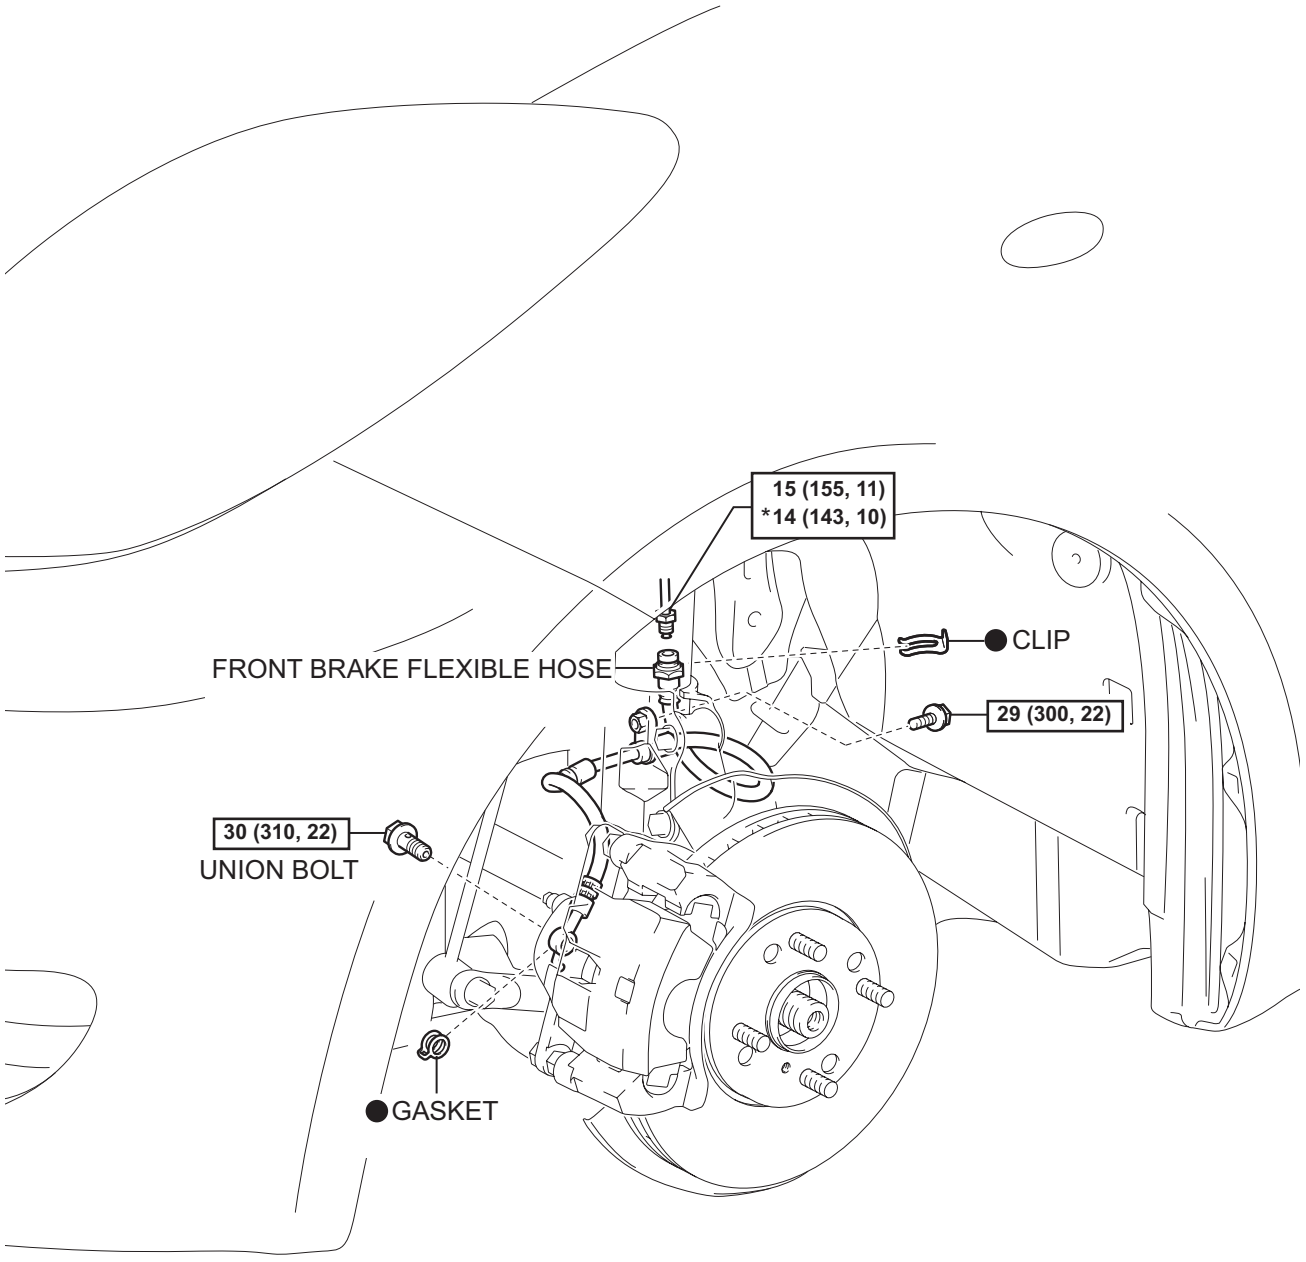
10. **INSTALL DISC BRAKE CYLINDER ASSEMBLY**
    (a) Install the disc brake cylinder onto the disc brake cylinder mounting with the 2 bolts.
    Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)



11. **CONNECT FRONT FLEXIBLE HOSE**
    (a) Connect the flexible hose with the union bolt and a new gasket.
    Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)
    HINT:
    Install the flexible hose lock securely into the lock hole in the disc brake cylinder.
12. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**
13. **BLEED MASTER CYLINDER (See page BR-10)**
14. **BLEED BRAKE LINE (See page BR-12)**
15. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
16. **CHECK FOR BRAKE FLUID LEAKAGE**
17. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

FRONT BRAKE FLEXIBLE HOSE

COMPONENTS



BR

N*m (kgf*cm, ft*lbf) : Specified torque

● Non-reusable part

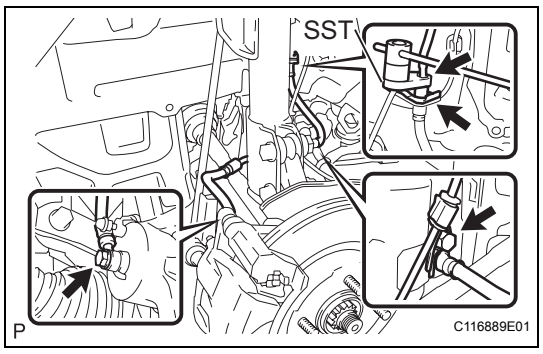
* For use with SST

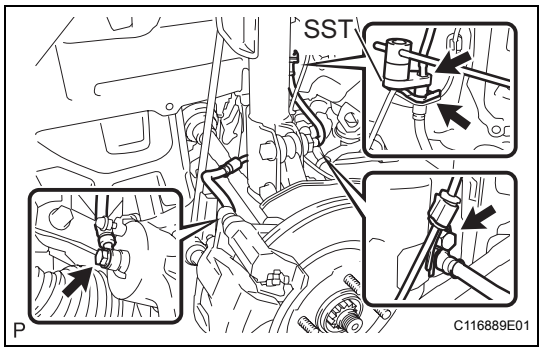
P

C116890E02

REMOVAL

1. **REMOVE FRONT WHEEL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
3. **REMOVE FRONT BRAKE FLEXIBLE HOSE**
   (a) Using SST, separate the brake tube.
   SST 09023-00100
   (b) Remove the clip.
   (c) w/ ABS:
   (1) Remove the bolt and separate the flexible hose and speed sensor.
   (d) w/o ABS:
   (1) Remove the bolt and separate the flexible hose.
   (e) Remove the union bolt and gasket and remove the flexible hose from the disc brake cylinder.





INSTALLATION

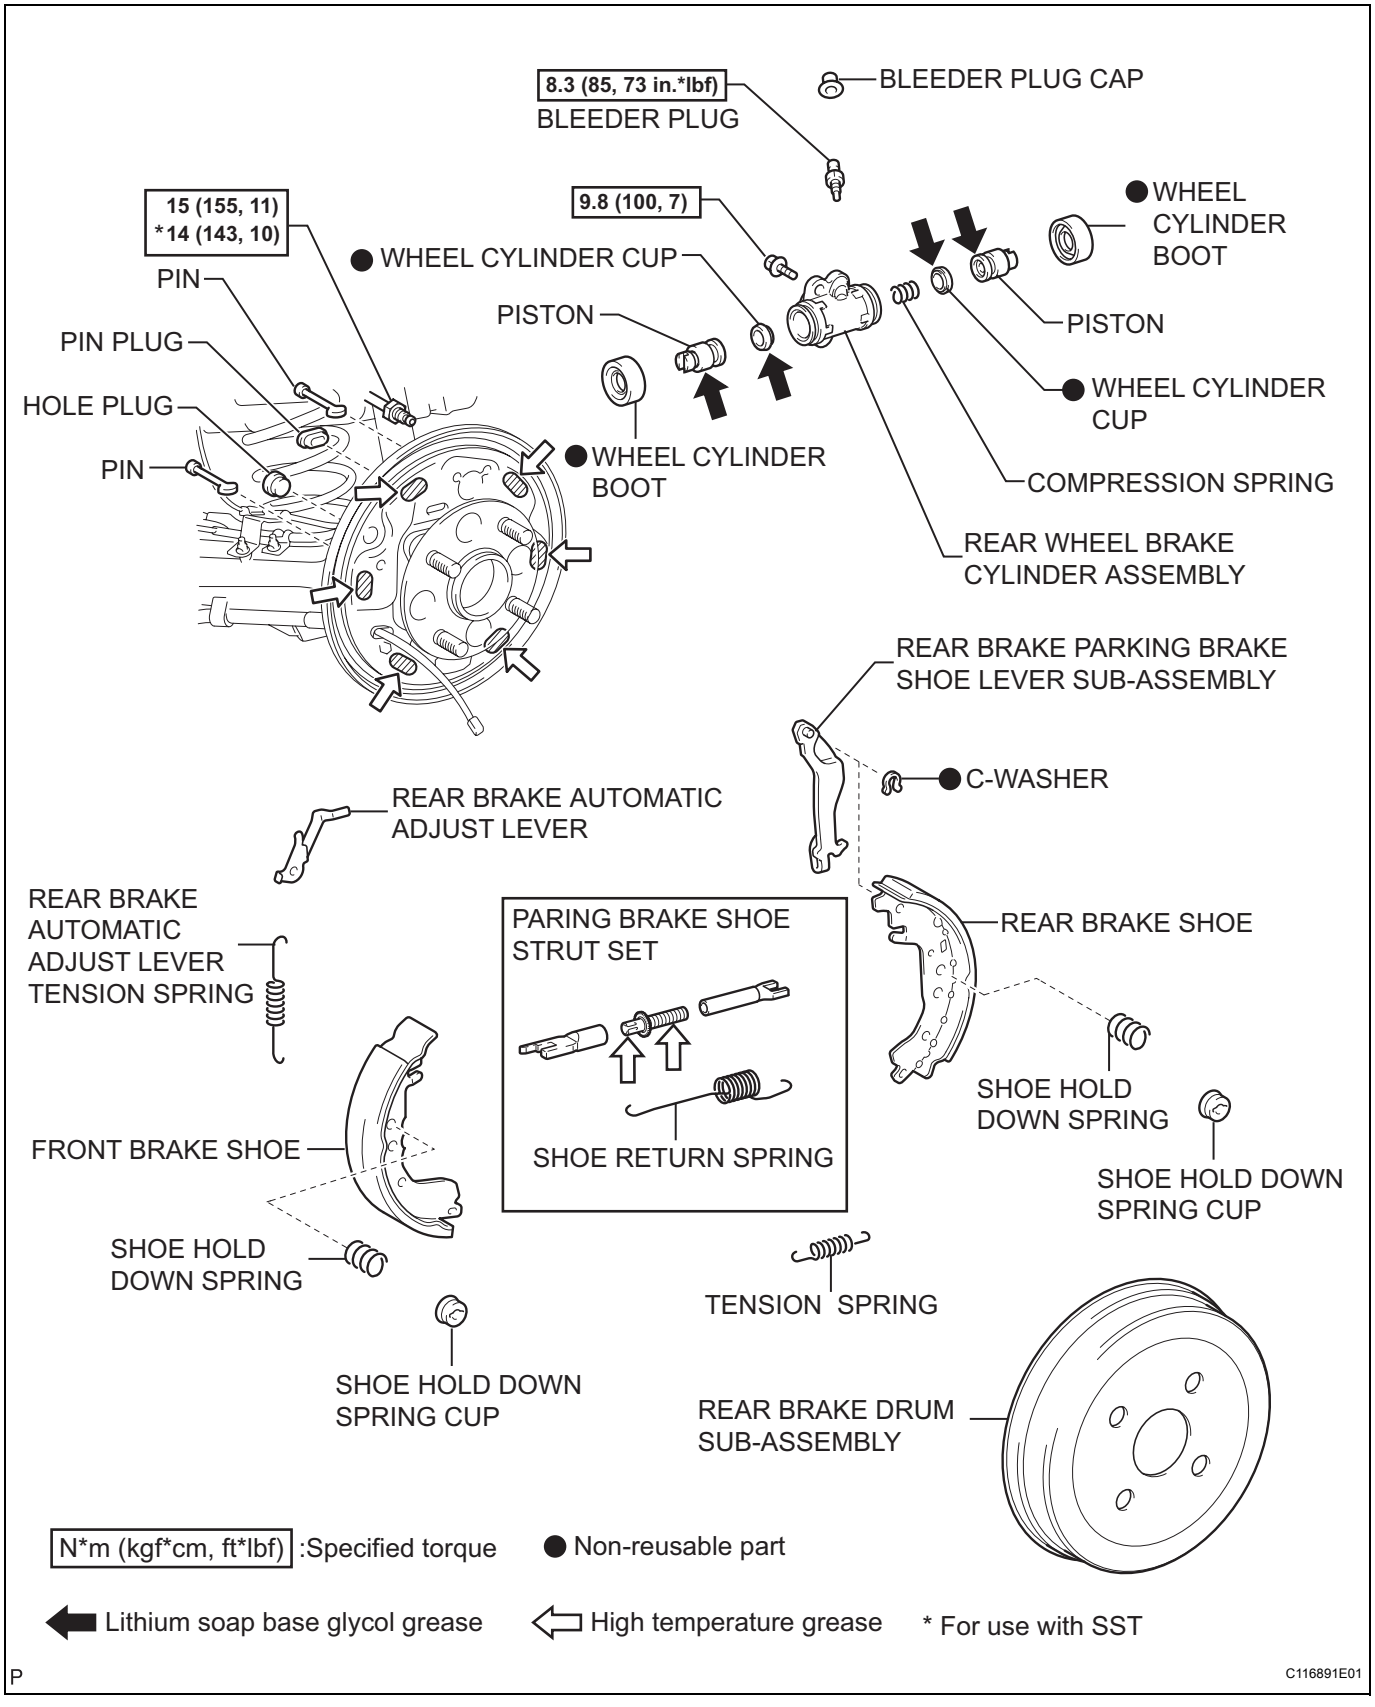
1. **INSTALL FRONT BRAKE FLEXIBLE HOSE**
   (a) Install the flexible hose with the union bolt and a new gasket.
   Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)
   HINT:
   Install the flexible hose lock securely into the lock hole in the disc brake cylinder.
   (b) w/ ABS:
   (1) Install the flexible hose and speed sensor with the bolt.
   Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
   NOTICE:
   Install the flexible hose and speed sensor without twisting them.
   (c) w/o ABS:
   (1) Install the flexible hose with the bolt.
   Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
   NOTICE:
   Install the flexible hose without twisting it.
   (d) Install a new clip.
   (e) Using SST, install the brake tube.
   SST 09023-00100
   Torque: for use without SST
   15 N*m (155 kgf*cm, 11 ft.*lbf)
   for use with SST
   14 N*m (143 kgf*cm, 10 ft.*lbf)
   HINT:
   - Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
   - This torque value is effective when SST is parallel to a torque wrench.
2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**

BR

3. **BLEED MASTER CYLINDER (See page BR-10)**
4. **BLEED BRAKE LINE (See page BR-12)**
5. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
6. **CHECK FOR BRAKE FLUID LEAKAGE**
7. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REAR DRUM BRAKE

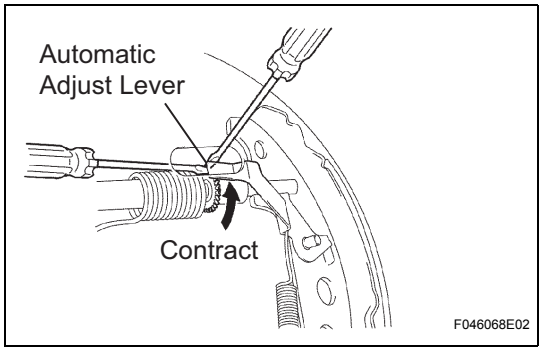
COMPONENTS



BR

REMOVAL

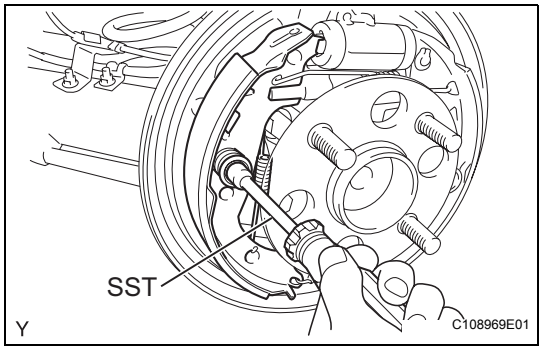
1. **REMOVE REAR WHEEL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
3. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY**
   (a) Release the parking brake and remove the rear brake drum.
   If the rear brake drum cannot be removed easily, perform the following procedure.
   (b) Remove the hole plug and insert a screwdriver through the hole into the backing plate, and hold the automatic adjust lever away from the adjuster.
   (c) Using another screwdriver, contract the brake shoe by turning the adjusting bolt.

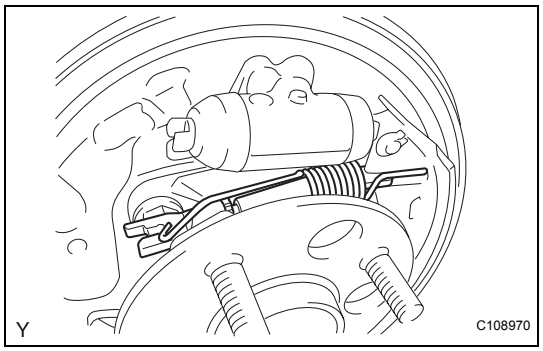


DISASSEMBLY

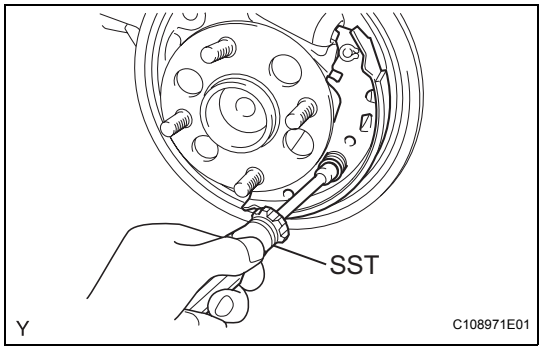
1. **REMOVE REAR BRAKE SHOE KIT**
   (a) Using SST, separate the shoe return spring from the front brake shoe.
   SST 09703-30010
   NOTICE:
   Do not damage the wheel cylinder boot.

   (b) Using SST, remove the shoe hold down spring cup, shoe hold down spring, pin and front brake shoe.
   SST 09718-00010
   (c) Remove the tension spring.

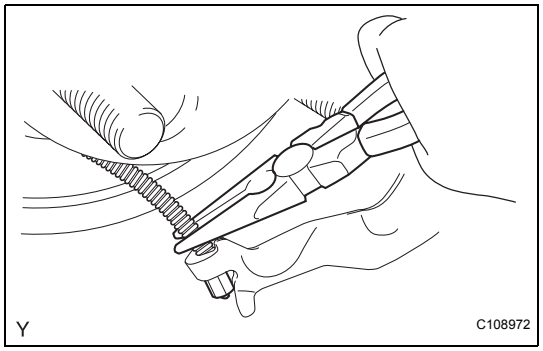




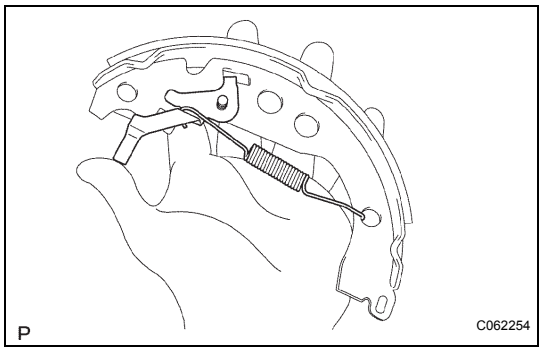
(d) Remove the shoe return spring from the rear brake shoe and remove the parking brake shoe strut set.



(e) Using SST, remove the shoe hold down spring cup, shoe hold down spring, pin and rear brake shoe.
SST 09718-00010

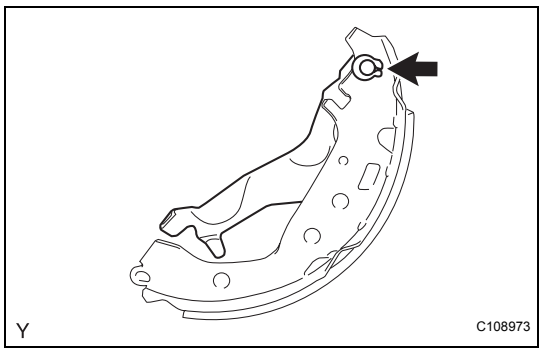


(f) Using needle-nose pliers, separate the parking brake cable.



2. REMOVE REAR BRAKE AUTOMATIC ADJUST LEVER

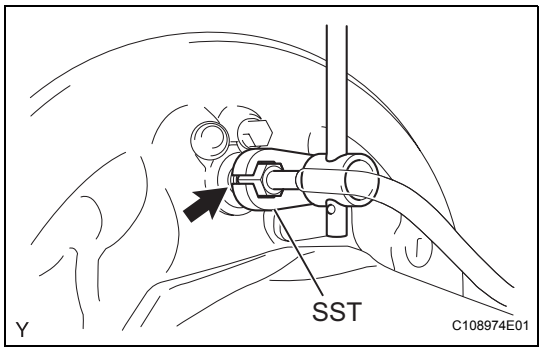
(a) Remove the automatic adjust lever tension spring and remove the automatic adjust lever.



3. REMOVE REAR BRAKE PARKING BRAKE SHOE LEVER SUB-ASSEMBLY

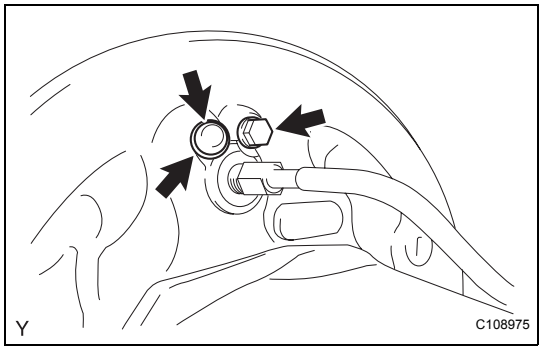
(a) Using a screwdriver, remove the C-washer and remove the parking brake shoe lever.

BR

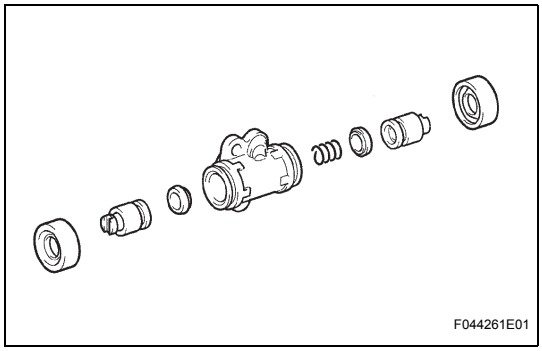


4. REMOVE REAR WHEEL BRAKE CYLINDER ASSEMBLY

(a) Using SST, separate the brake tube from the rear wheel brake cylinder.
SST 09023-00100
HINT:
Use a container to catch the brake fluid.



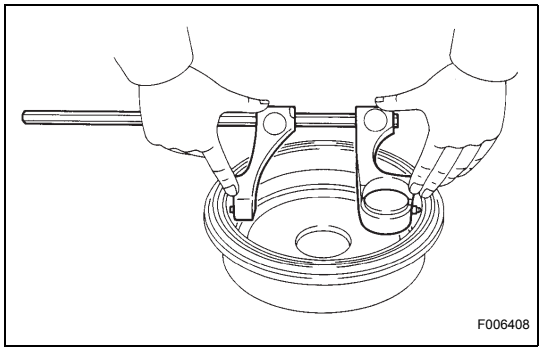
(b) Remove the bleeder plug cap.
(c) Remove the bleeder plug.
(d) Remove the bolt and remove the rear wheel brake cylinder.



5. REMOVE REAR WHEEL CYLINDER KIT

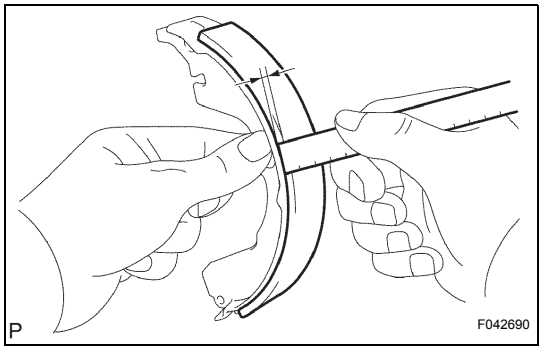
(a) Remove the 2 wheel cylinder boots from the wheel brake cylinder.
(b) Remove the 2 pistons.
(c) Remove the compression spring.
(d) Remove the wheel cylinder cup from each piston.

INSPECTION



1. INSPECT REAR BRAKE DRUM INSIDE DIAMETER

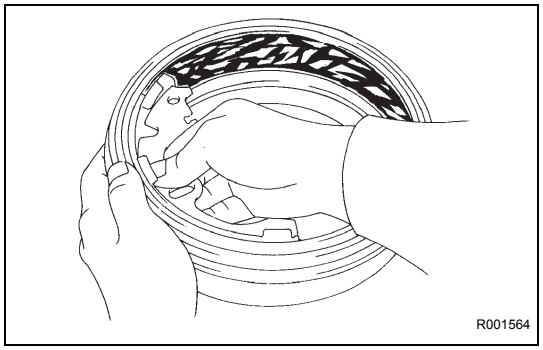
(a) Using a brake drum gauge or the equivalent, measure the inside diameter of the brake drum.
Standard inside diameter:
200 mm (7.874 in.)
Maximum inside diameter:
201 mm (7.913 in.)
If the inside diameter is greater than the maximum, replace the brake drum.



2. INSPECT REAR BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the thickness of the shoe lining.
Standard thickness:
4.0 mm (0.157 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the lining thickness is equal to or less than the minimum value, or if there is any severe or uneven wear, replace the brake shoe.

NOTICE:
If the brake shoes need replacing, they must be replaced as a set.



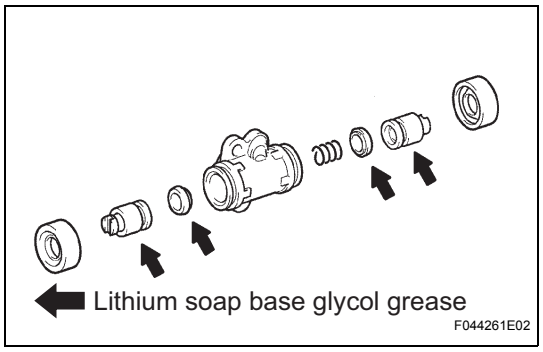
3. INSPECT REAR BRAKE DRUM AND REAR BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the drum, then grind the brake shoe lining so that they fit together properly.
If the contact between the drum and the shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe assembly.

4. INSPECT WHEEL BRAKE CYLINDER

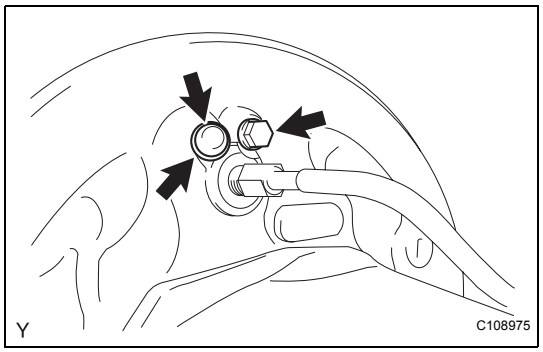
Check the cylinder bore and piston for rust and scoring.

REASSEMBLY



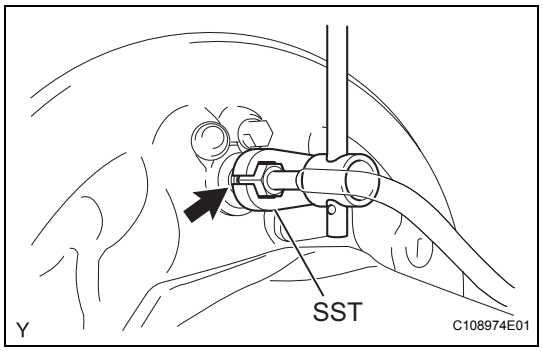
1. INSTALL REAR WHEEL CYLINDER KIT

(a) Apply lithium soap base glycol grease to 2 new wheel cylinder cups and the 2 pistons.
(b) Install the wheel cylinder cup onto each piston.
(c) Install the compression spring and 2 pistons onto the wheel brake cylinder.
(d) Install 2 new wheel cylinder boots onto the wheel brake cylinder.

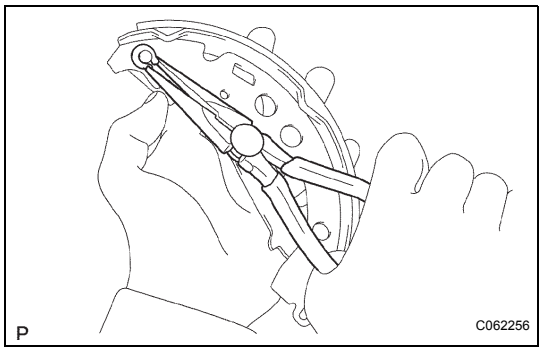


2. INSTALL REAR WHEEL BRAKE CYLINDER ASSEMBLY

(a) Install the wheel brake cylinder with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(b) Provisionally install the bleeder plug.
(c) Install the bleeder plug cap.

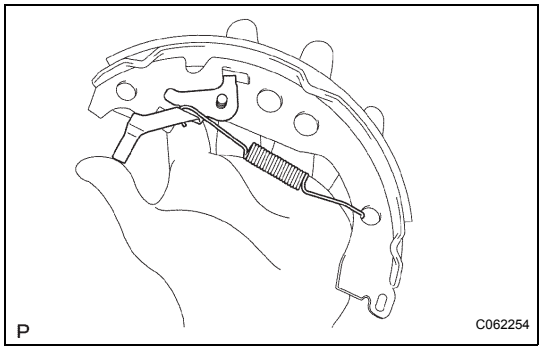


(d) Using SST, install the brake tube.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.



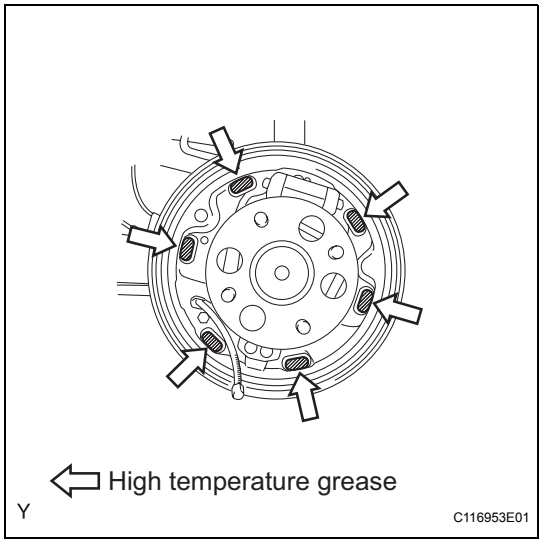
3. INSTALL REAR BRAKE PARKING BRAKE SHOE LEVER SUB-ASSEMBLY

(a) Using needle-nose pliers, install the parking brake shoe lever with a new C-washer.



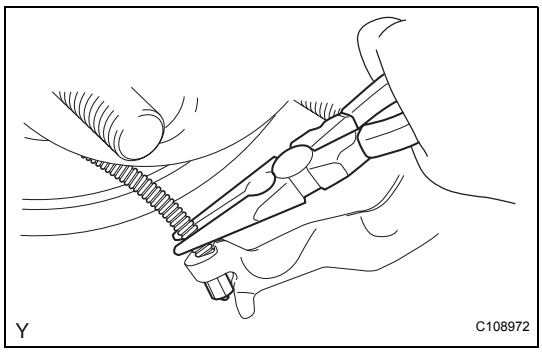
4. INSTALL REAR BRAKE AUTOMATIC ADJUST LEVER

(a) Install the automatic adjust lever and automatic adjust lever tension spring onto the front brake shoe.

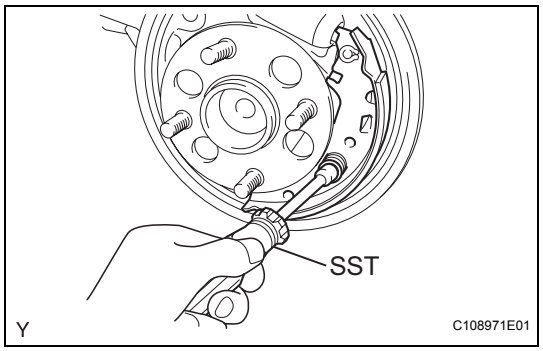


5. INSTALL REAR BRAKE SHOE KIT

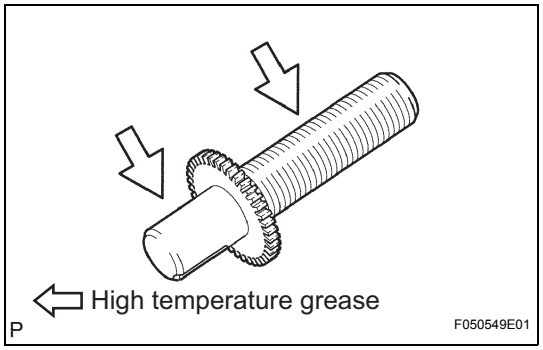
(a) Apply high temperature grease to the surface of the backing plate which is in contact with the shoe.



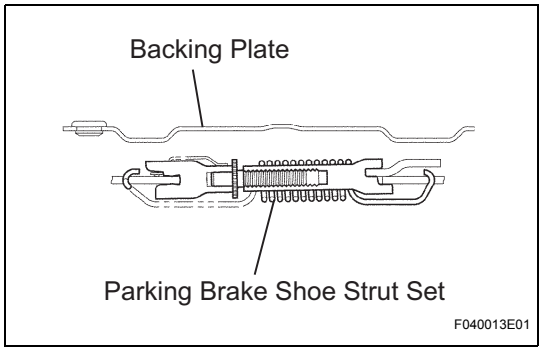
(b) Using needle-nose pliers, install the parking brake cable onto the parking brake shoe lever.



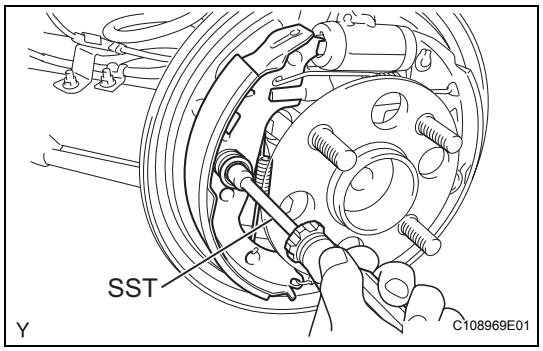
(c) Using SST, install the rear brake shoe, pin, shoe hold down spring and shoe hold down spring cup.
SST 09718-00010



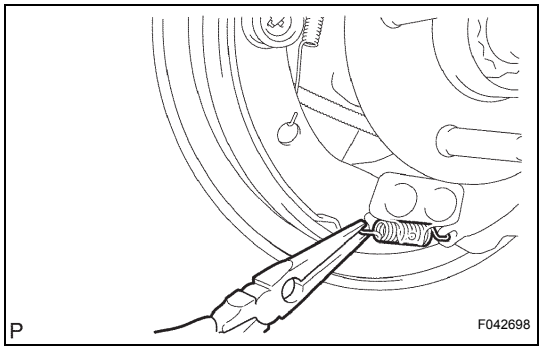
(d) Apply high temperature grease to the adjusting bolt.



(e) Install the parking brake shoe strut set as shown in the illustration.

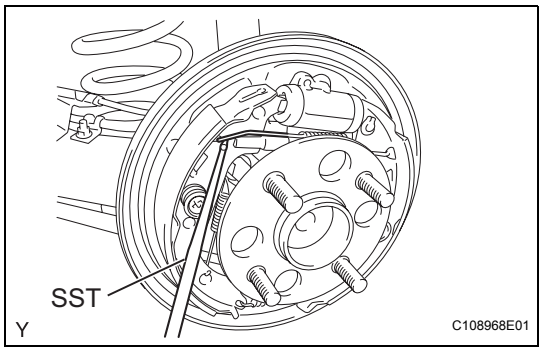


(f) Using SST, install the front brake shoe, pin, shoe hold down spring and shoe hold down spring cup.
SST 09718-00010



(g) Using needle-nose pliers, install the tension spring onto the front brake shoe and rear brake shoe.

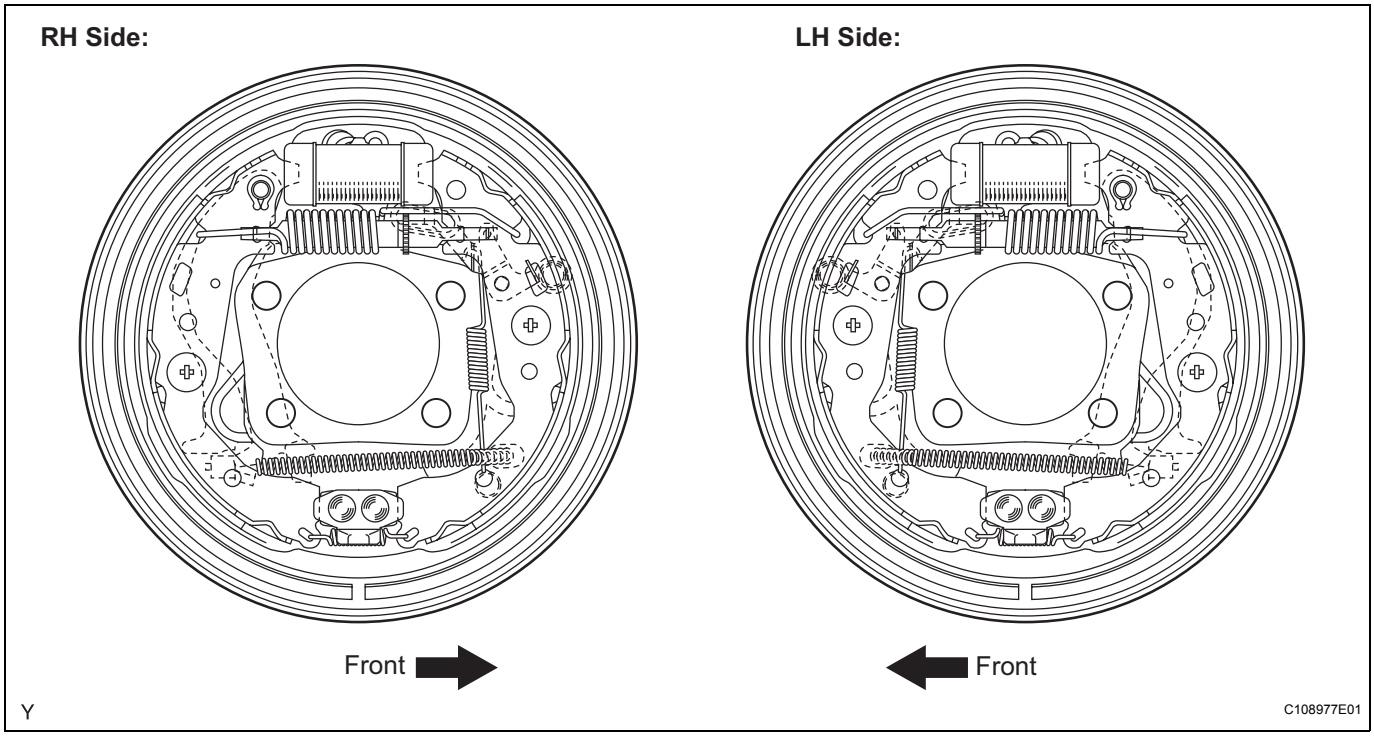
BR

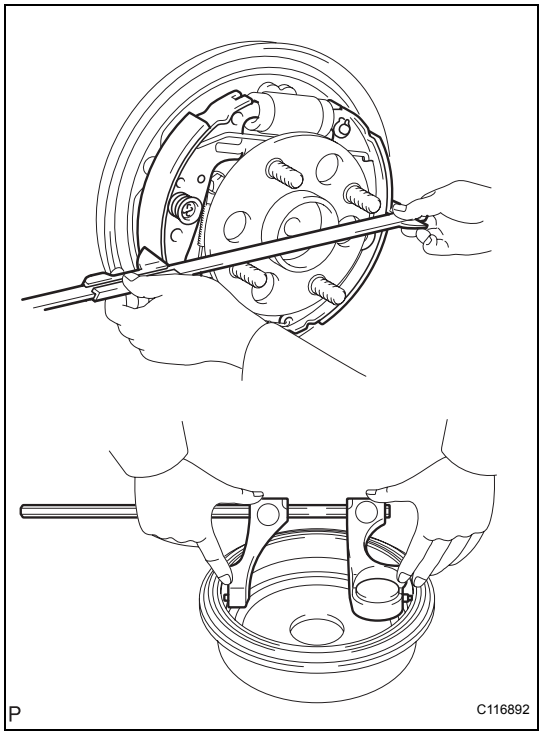


(h) Using SST, install the shoe return spring onto the front brake shoe.
SST 09703-30010
NOTICE:
Do not damage the wheel cylinder boot.

6. CHECK REAR DRUM BRAKE INSTALLATION

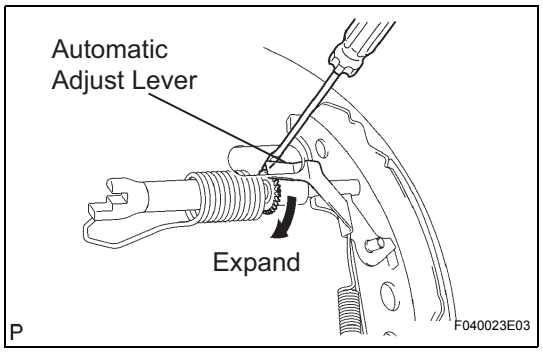
(a) Check that each part is installed properly.





(b) Measure the brake drum inner diameter and the diameter of the brake shoes. Check that the difference between the diameters is equal to the specified shoe clearance.
Shoe clearance:
0.6 mm (0.024 in.)
NOTICE:
There should be no oil or grease adhering to the friction surfaces of the shoe lining or the drum.

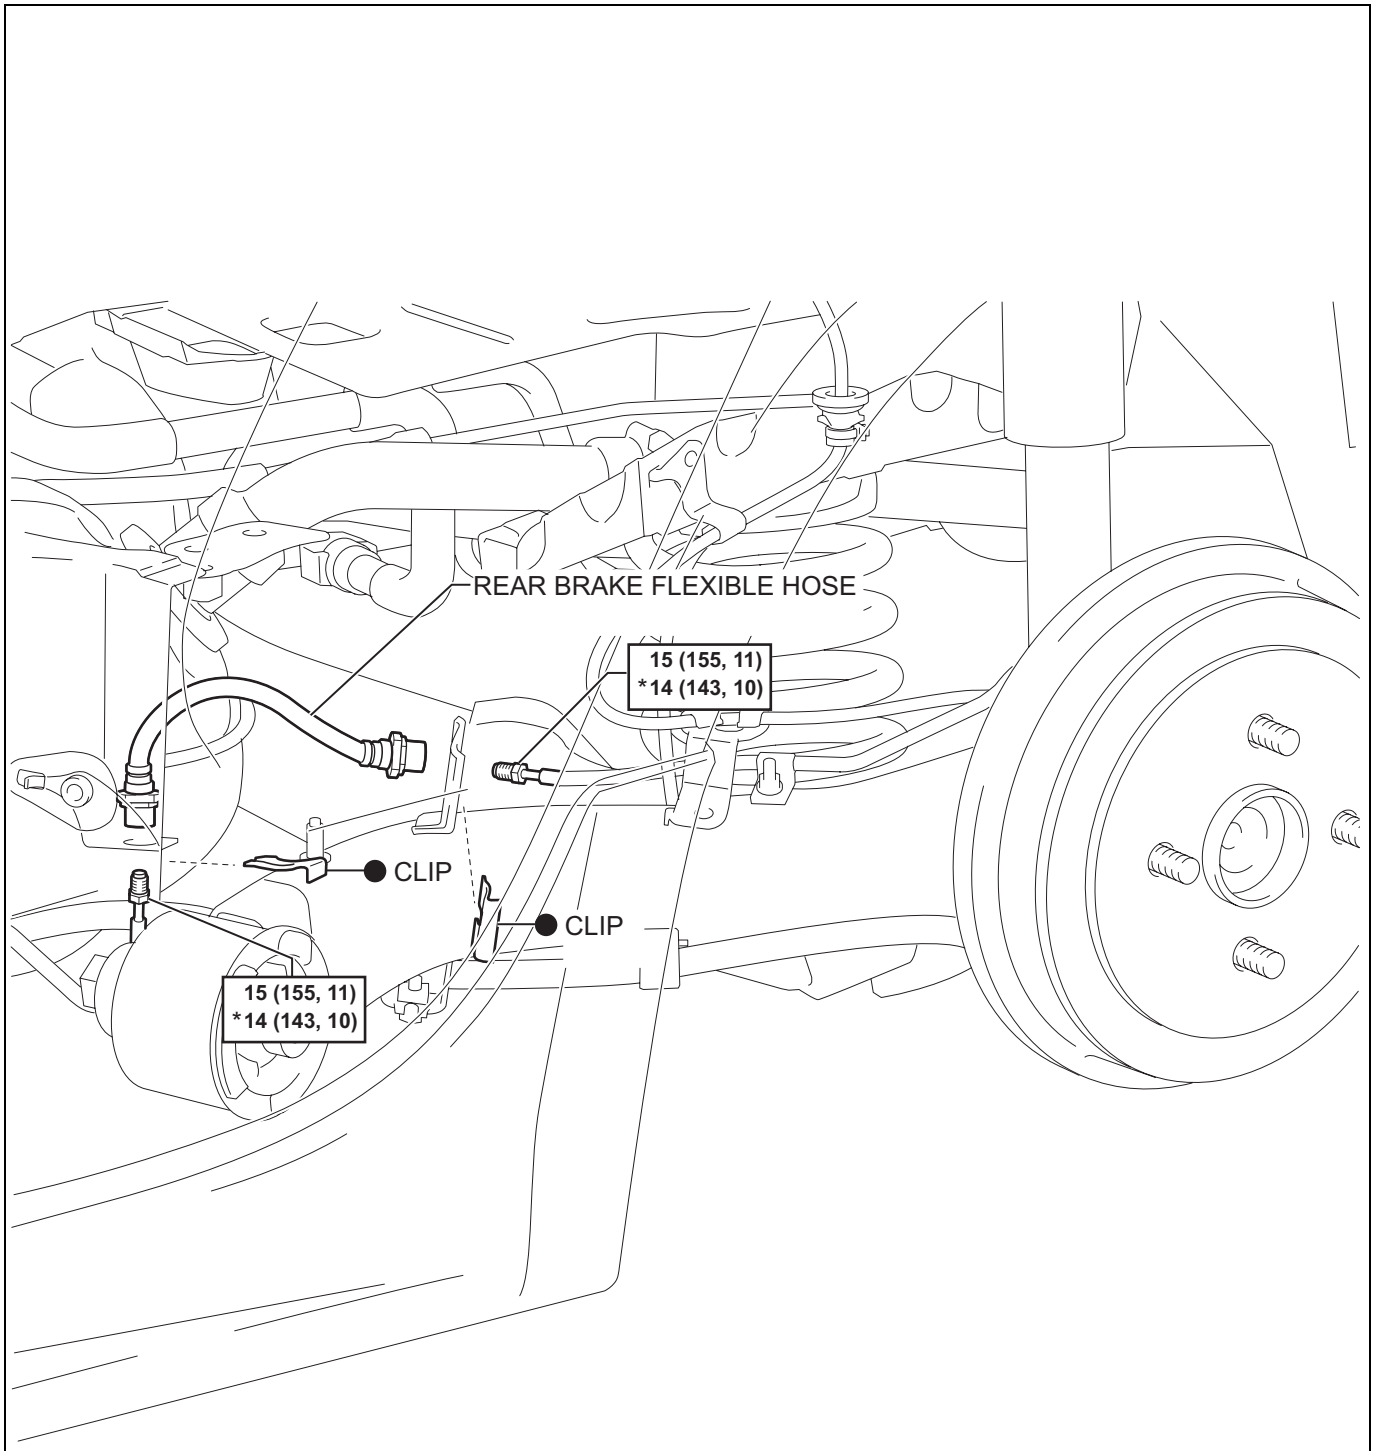
INSTALLATION



1. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
2. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE**
   (a) Provisionally install the 2 hub nuts.
   (b) Remove the hole plug, and turn the adjuster to expand the shoe until the drum locks.
   (c) Using a screwdriver, release the adjuster 12 notches.
   (d) Install the hole plug.
3. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**
4. **BLEED MASTER CYLINDER (See page BR-10)**
5. **BLEED BRAKE LINE (See page BR-12)**
6. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
9. **INSPECT PARKING BRAKE LEVER TRAVEL (See page PB-1)**
10. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**

REAR BRAKE FLEXIBLE HOSE

COMPONENTS



BR

N*m (kgf*cm, ft*lbf) : Specified torque

● Non-reusable part

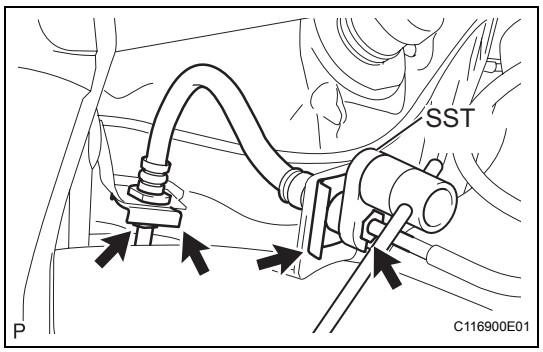
* For use with SST

P

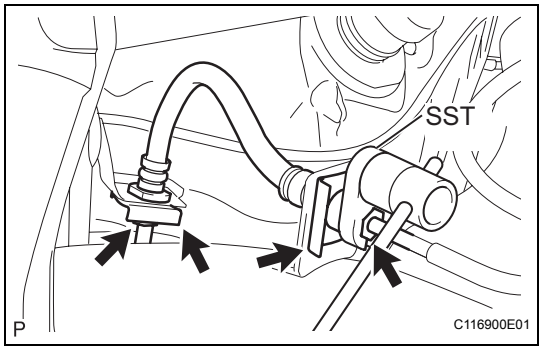
C116901E02

REMOVAL

1. **REMOVE REAR WHEEL**
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Immediately wash off any brake fluid that comes into contact with any painted surfaces.
3. **REMOVE REAR BRAKE FLEXIBLE HOSE**
   (a) Using SST, separate the brake tubes.
   SST 09023-00100
   (b) Remove the 2 clips and flexible hose from the axle beam.



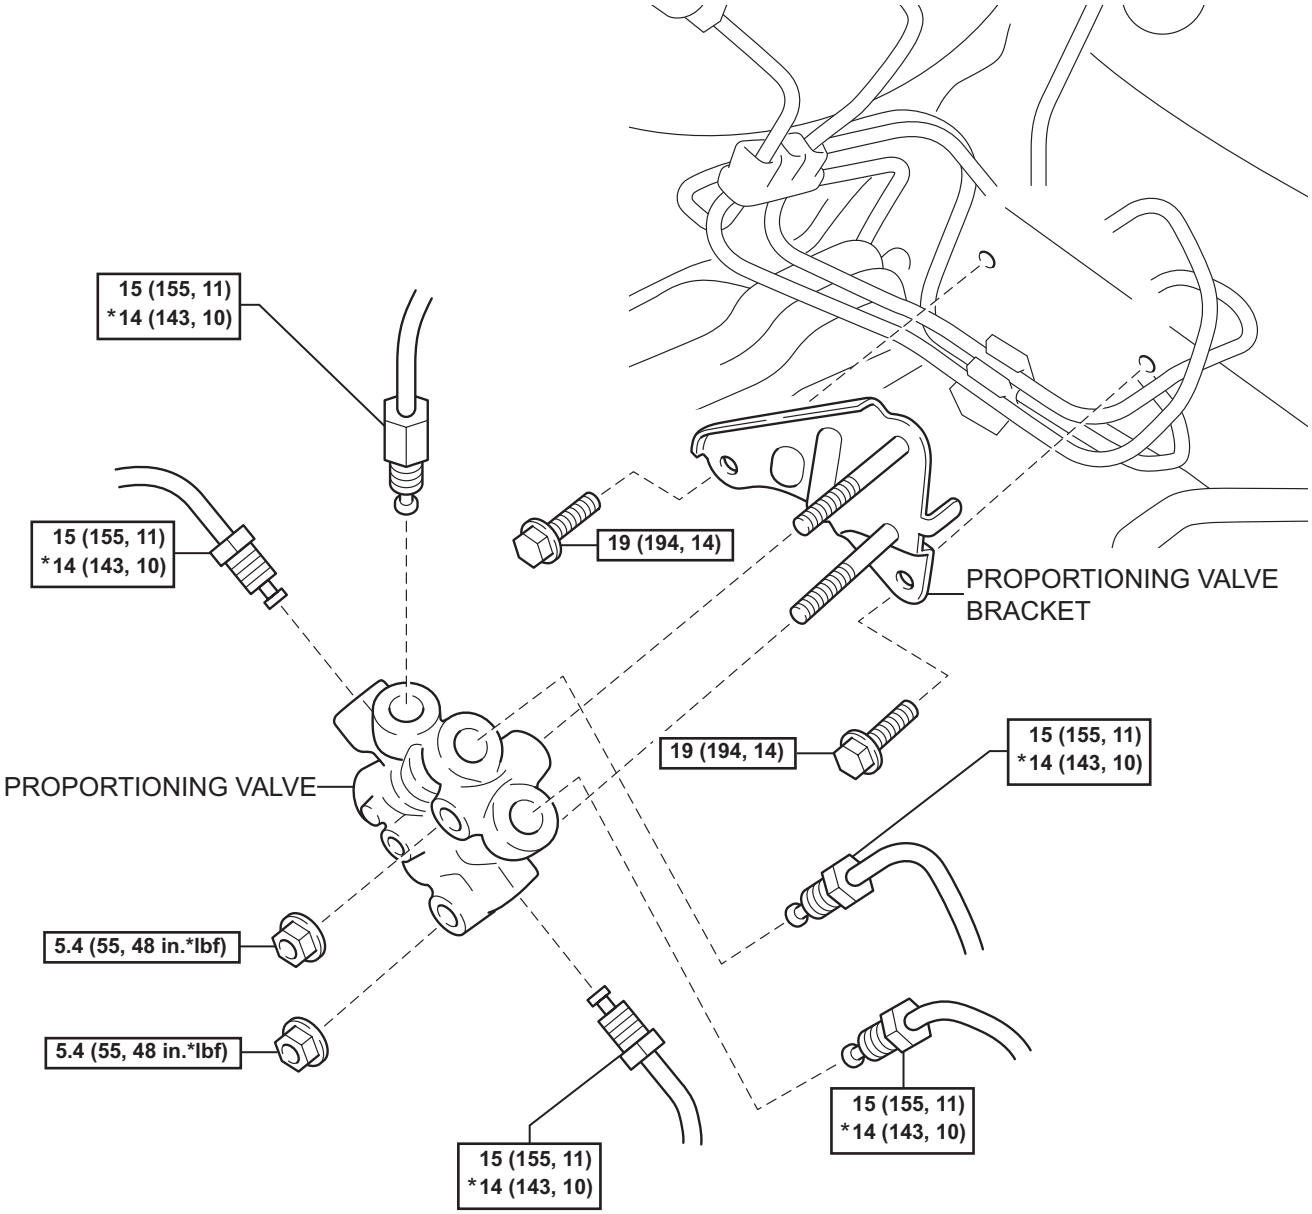
INSTALLATION



1. **INSTALL REAR BRAKE FLEXIBLE HOSE**
   (a) Install the flexible hose with the 2 new clips onto the axle beam.
   (b) Using SST, install the 2 brake tubes onto the flexible hose.
   SST 09023-00100
   Torque: for use without SST
   15 N*m (155 kgf*cm, 11 ft.*lbf)
   for use with SST
   14 N*m (143 kgf*cm, 10 ft.*lbf)
   HINT:
   - Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
   - This torque value is effective when SST is parallel to a torque wrench.
2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**
3. **BLEED MASTER CYLINDER (See page BR-10)**
4. **BLEED BRAKE LINE (See page BR-12)**
5. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
6. **CHECK FOR BRAKE FLUID LEAKAGE**
7. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

PROPORTIONING VALVE

COMPONENTS



BR

N*m (kgf*cm, ft*lbf) : Specified torque

* For use with SST

N

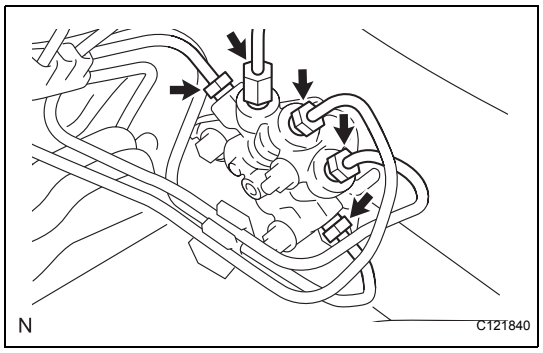
C121839E02

REMOVAL

1. DRAIN BRAKE FLUID

NOTICE:

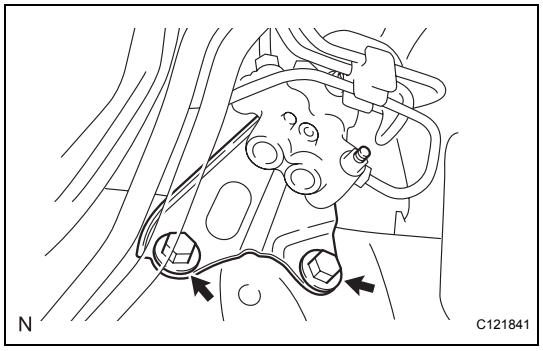
Immediately wash off any brake fluid that comes into contact with any painted surfaces.



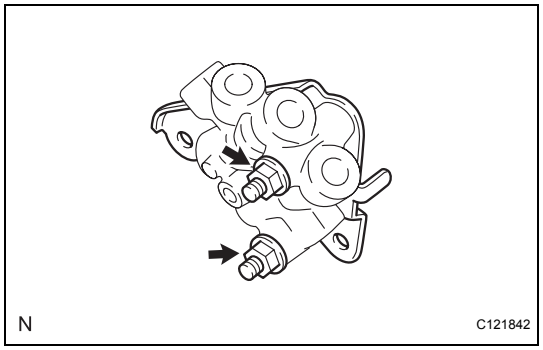
2. REMOVE PROPORTIONING VALVE

(a) Using SST, separate the 5 brake tubes from the proportioning valve.

SST 09023-00100



(b) Remove the 2 bolts and remove the proportioning vale bracket.



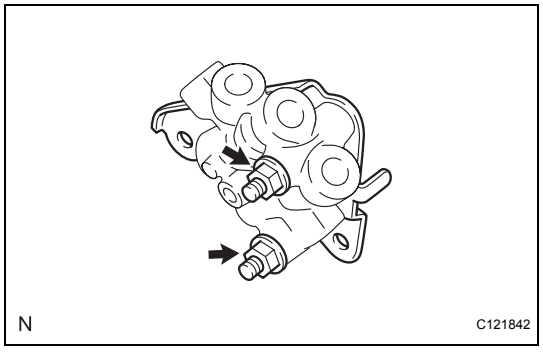
(c) Remove the 2 nuts and remove the proportioning valve from the proportioning valve bracket.

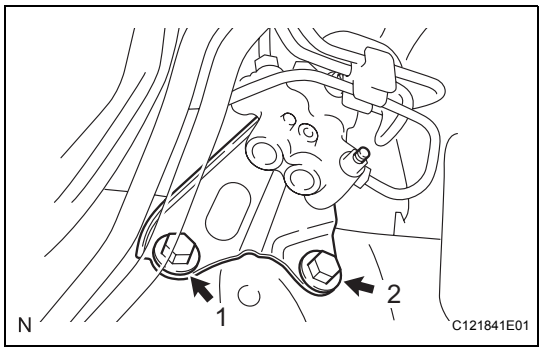
INSTALLATION

1. INSTALL PROPORTIONING VALVE

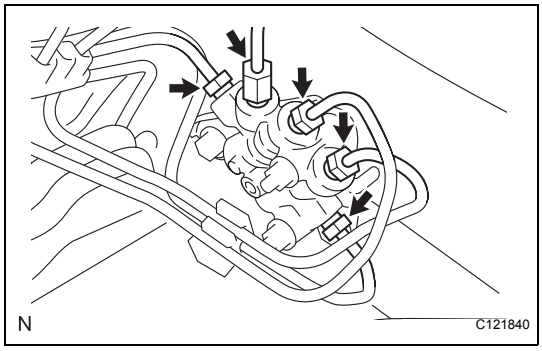
(a) Install the proportioning valve onto the proportioning valve bracket with the 2 nuts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)





(b) Install the 2 bolts onto the proportioning valve bracket in the sequence order shown in the illustration.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



(c) Using SST, install the 5 brake tubes onto the proportioning valve.
SST 09023-00100
Torque: for use without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
for use with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
HINT:
- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- This torque value is effective when SST is parallel to a torque wrench.

2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-10)**
3. **BLEED MASTER CYLINDER (See page BR-10)**
4. **BLEED BRAKE LINE (See page BR-12)**
5. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-12)**
6. **CHECK FOR BRAKE FLUID LEAKAGE**

PARKING BRAKE SYSTEM

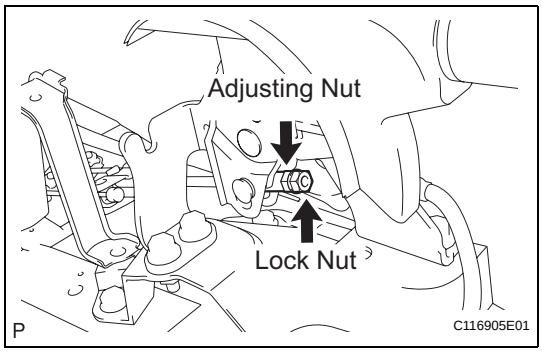
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in the order suggested. If necessary, replace the applicable parts.

Symptom	Suspected area	See page
Brake drag	1. Parking brake lever travel (Out of adjustment)	PB-1
	2. Parking brake wire (Sticking)	PB-17
	3. Rear drum brake shoe clearance (Out of adjustment)	BR-67
	4. Parking brake shoe lining (Cracked or distorted)	BR-62
	5. Tension or return spring (Damaged)	BR-60

ADJUSTMENT

1. **REMOVE REAR WHEEL**
2. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)**
3. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
4. **INSPECT PARKING BRAKE LEVER TRAVEL**
   (a) Slowly pull the parking brake lever to the fully applied position, counting the number of clicks.
   Parking brake lever travel:
   6 to 9 clicks at 200 N (20 kgf, 45 lbf)
5. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-6)**
6. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
7. **REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-6)**
8. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-6)**
9. **REMOVE REAR CONSOLE BOX COVER (for Hatchback) (See page PB-6)**
10. **REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-7)**
11. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
12. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
13. **ADJUST PARKING BRAKE LEVER TRAVEL**
    (a) Loosen the lock nut and turn the adjusting nut until the parking brake lever travel is corrected to within the specified range.
    Parking brake lever travel:
    6 to 9 clicks at 200 N (20 kgf, 45 lbf)
    (b) Tighten the lock nut.
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
    (c) Operate the parking brake lever 3 to 4 times, and check the parking brake lever travel.
    (d) Check whether the parking brake drags or not.
    (e) When operating the parking brake lever, check that the brake warning light illuminates.
    Standard:
    Brake warning light always illuminates at the first click.
14. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
15. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
16. **INSTALL REAR CONSOLE BOX COVER (for Hatchback) (See page PB-11)**



PB

17. **INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
18. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-12)**
19. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-12)**
20. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
21. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-12)**

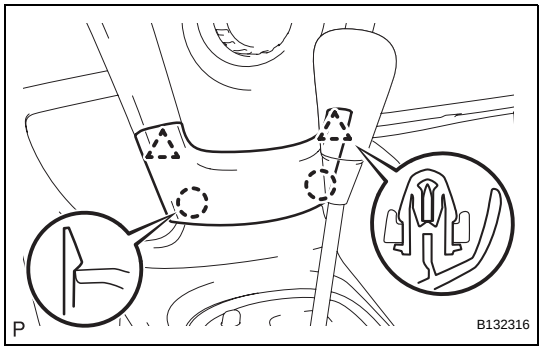
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan)

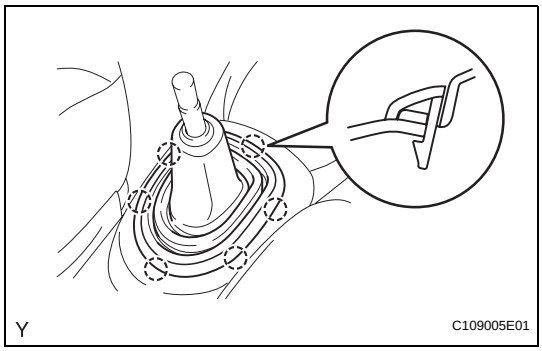
(a) Disengage the 2 claws and 2 clips and remove the instrument panel finish panel.



3. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

4. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle)

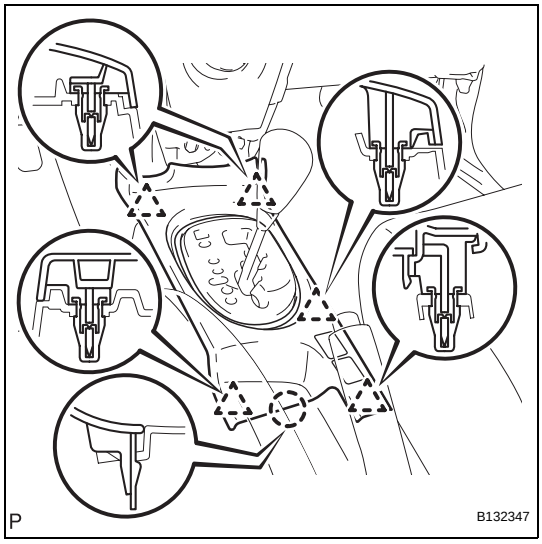
(a) Disengage the 6 claws and remove the shifting hole cover.



5. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan)

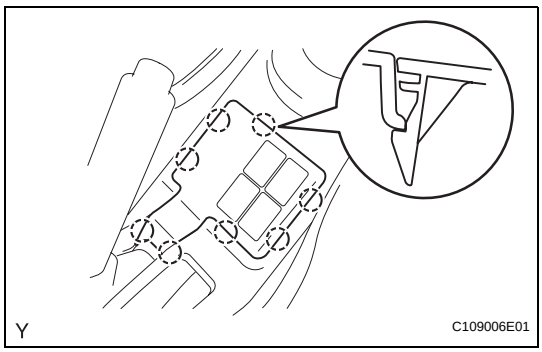
(a) Shift the shift lever into the N position.

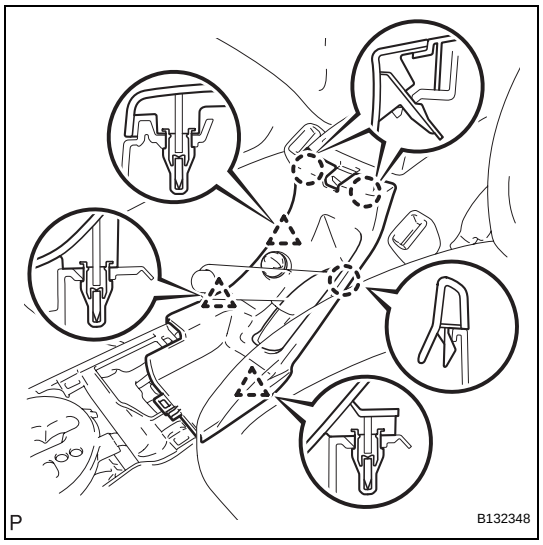
(b) Disengage the 5 clips and the claw and remove the upper console panel.



6. REMOVE REAR CONSOLE BOX COVER (for Hatchback)

(a) Disengage the 8 claws and remove the rear console box cover.

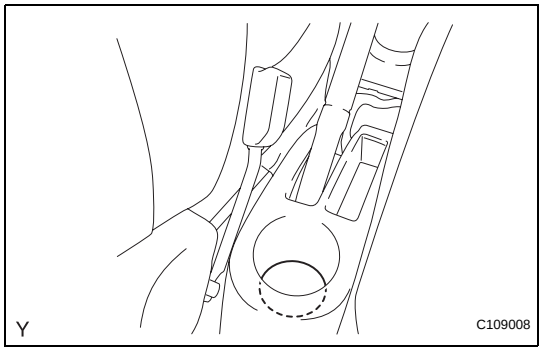




7. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan)

(a) Disengage the 3 clips and 3 claws.

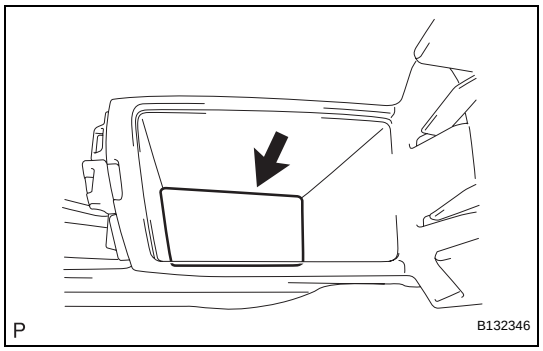
(b) Disconnect the connector and remove the rear upper console panel.



8. REMOVE CONSOLE BOX CARPET

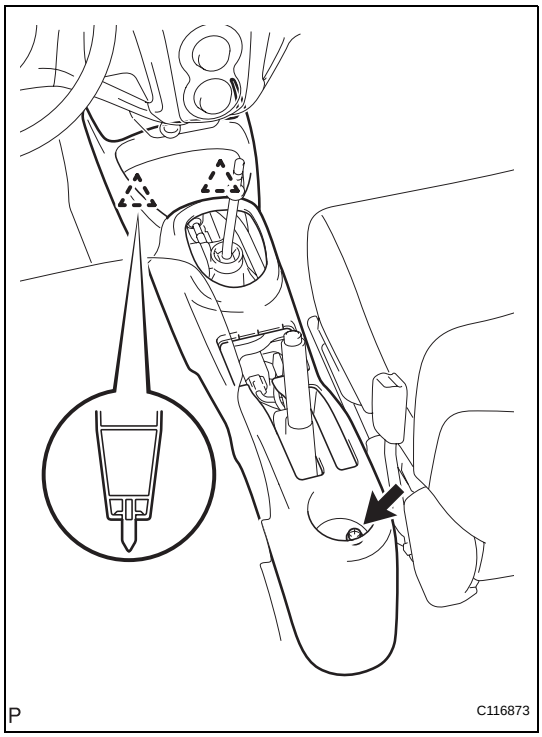
(a) for Hatchback:

(1) Remove the console box carpet.



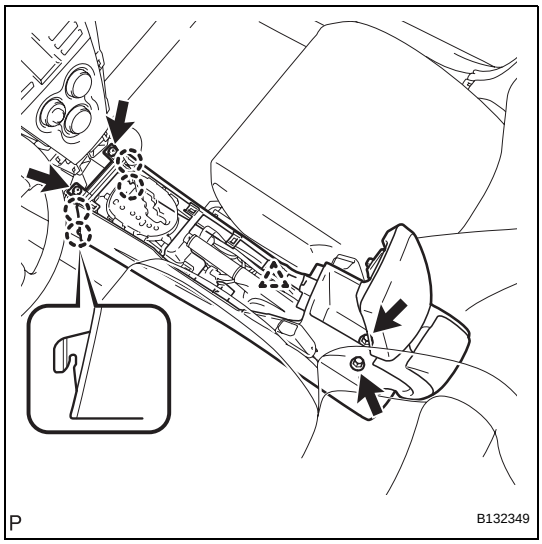
(b) for Sedan:

(1) Remove the console box carpet.

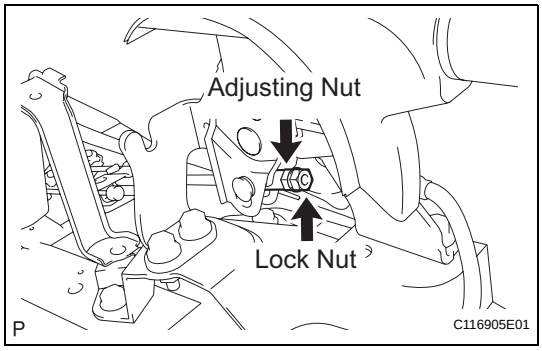


9. REMOVE REAR CONSOLE BOX ASSEMBLY

(a) for Hatchback:
  (1) Remove the bolt.
  (2) Disengage the 2 clips to remove the rear console box.



(b) for Sedan:
  (1) Disconnect the clamp.
  (2) Remove the 2 bolts and 2 screws.
  (3) Disengage the 4 claws and remove the rear console box.



10. LOOSEN NO. 1 WIRE ADJUSTING NUT

(a) Loosen the lock nut and the adjusting nut.

11. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

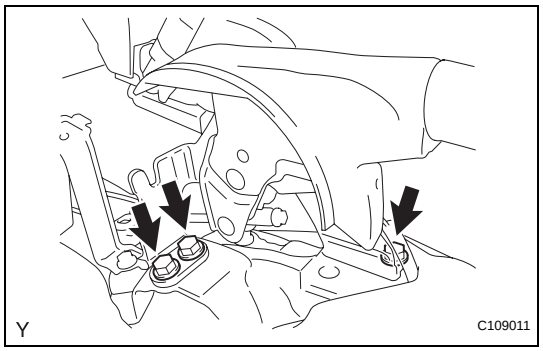
(a) Disconnect the parking brake cable from the parking brake equalizer.

12. DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY

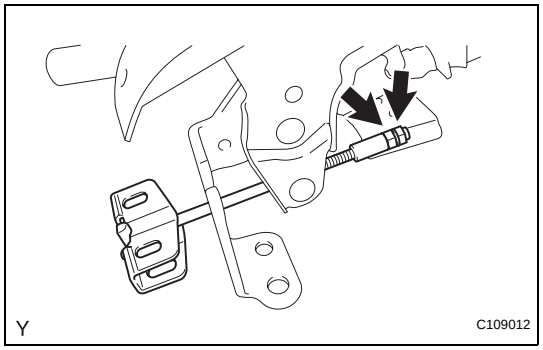
(a) Disconnect the parking brake cable from the parking brake equalizer.

13. REMOVE PARKING BRAKE LEVER

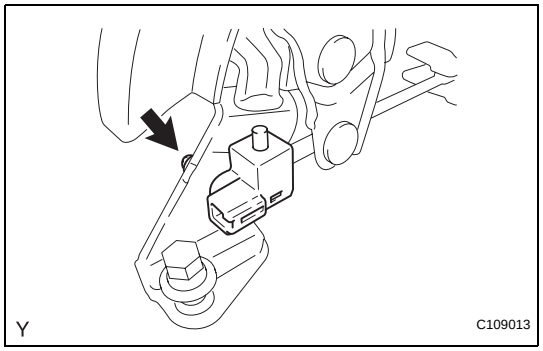
(a) Disconnect the parking brake switch connector.



(b) Remove the 3 bolts and remove the parking brake lever.



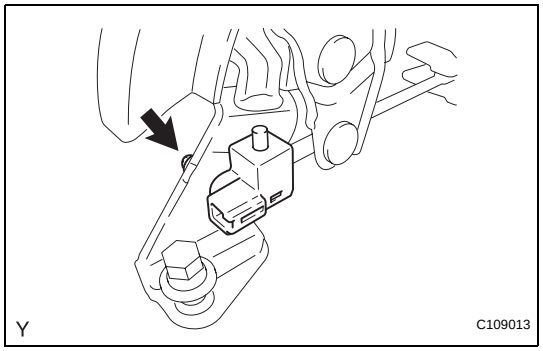
(c) Remove the lock nut and adjusting nut to remove the parking brake pull rod and parking brake equalizer.



14. REMOVE PARKING BRAKE SWITCH

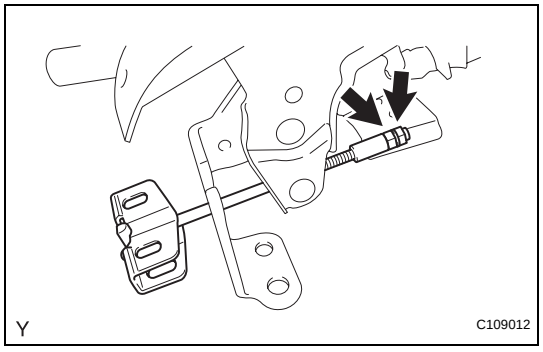
(a) Remove the screw and remove the parking brake switch.

INSTALLATION



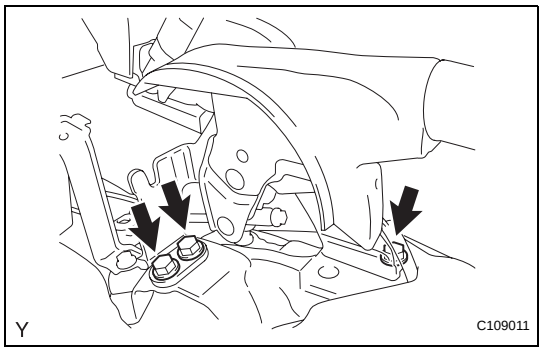
1. INSTALL PARKING BRAKE SWITCH

(a) Install the parking brake switch with the screw.
Torque: 0.9 N*m (9 kgf*cm, 8 in.*lbf)



2. INSTALL PARKING BRAKE LEVER

(a) Install the parking brake pull rod and parking brake equalizer, and then provisionally install the adjusting nut and the lock nut.



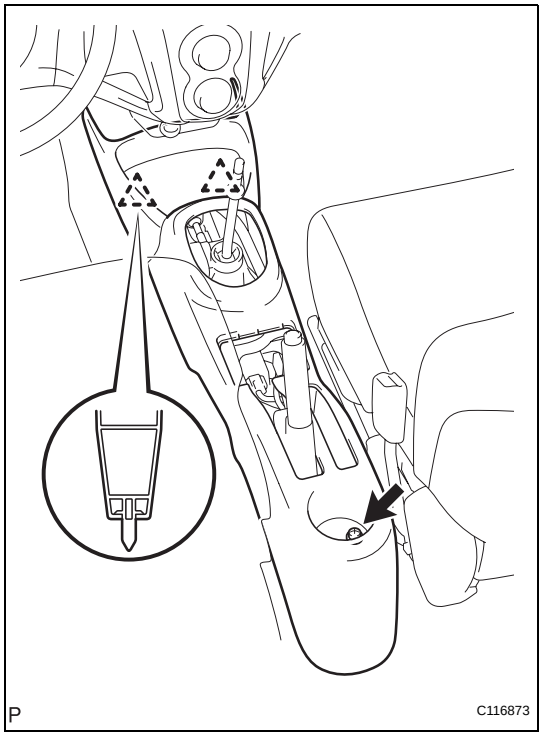
(b) Install the parking brake lever with the 3 bolts.
Torque: 13 N*m (127 kgf*cm, 9 ft.*lbf)
(c) Connect the parking brake switch connector.

3. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY
(a) Connect the parking brake cable to the parking brake equalizer.

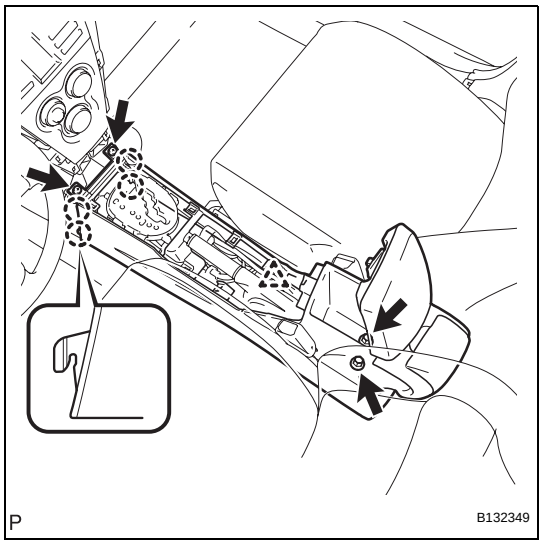
4. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY
(a) Connect the parking brake cable to the parking brake equalizer.

5. INSPECT PARKING BRAKE LEVER TRAVEL (See page PB-1)

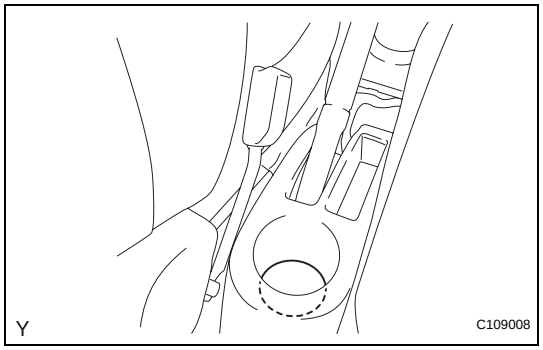
6. ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)



7. INSTALL REAR CONSOLE BOX ASSEMBLY
(a) for Hatchback:
(1) Engage the 2 clips and install the rear console box.
(2) Install the bolt.



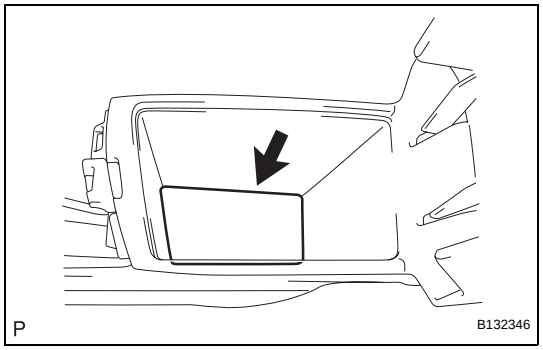
(b) for Sedan:
(1) Engage the 4 claws and install the rear console box.
(2) Install the 2 bolts and 2 screws.
(3) Connect the clamp.



8. INSTALL CONSOLE BOX CARPET

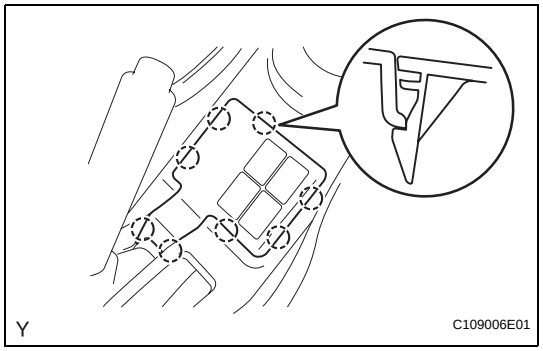
(a) for Hatchback:

(1) Install the console box carpet.



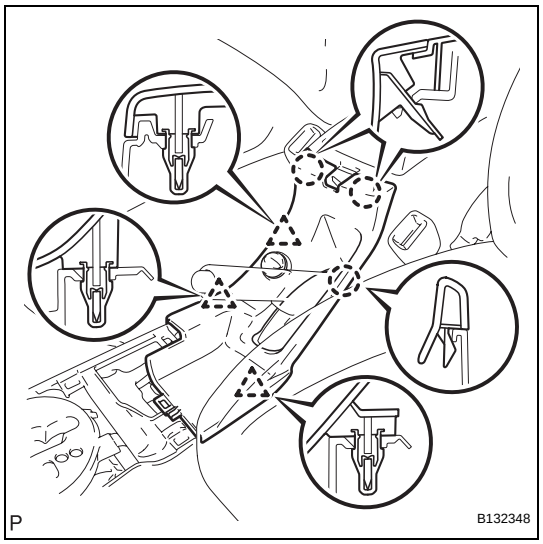
(b) for Sedan:

(1) Install the console box carpet.



9. INSTALL REAR CONSOLE BOX COVER (for Hatchback)

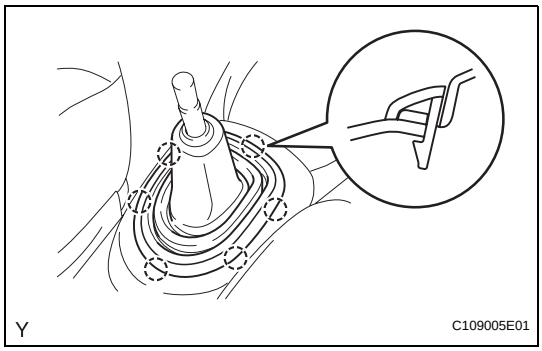
(a) Engage the 8 claws to install the rear console box cover.



10. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan)

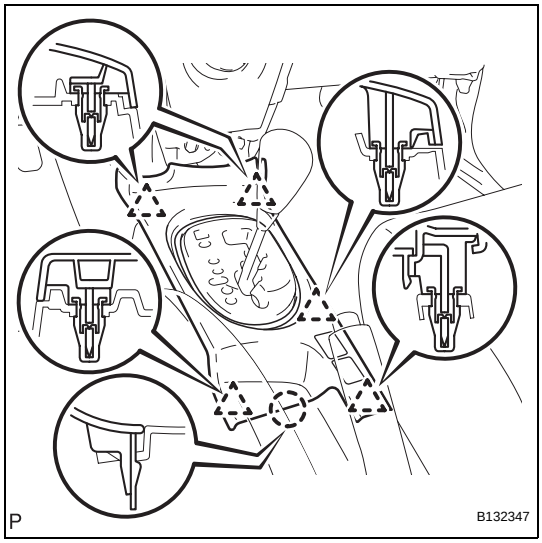
(a) Connect the connector.

(b) Engage the 3 clips and 3 claws and install the rear upper console panel.



11. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle)

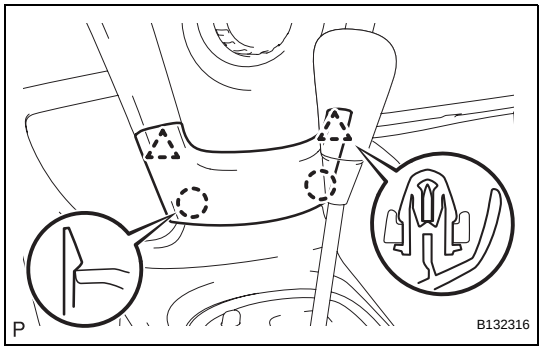
(a) Engage the 6 claws to install the shifting hole cover.



12. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan)

(a) Engage the 5 clips and the claw and install the upper console panel.

13. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)



14. INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan)

(a) Engage the 2 claws and 2 clips and install the instrument panel finish panel.

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

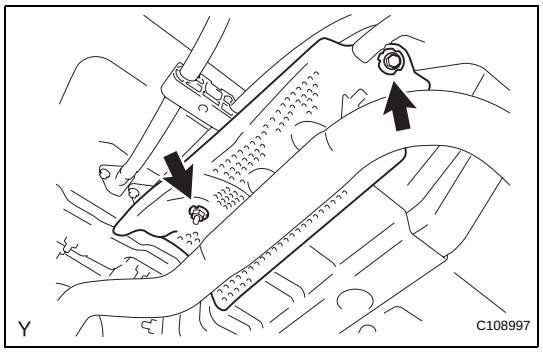
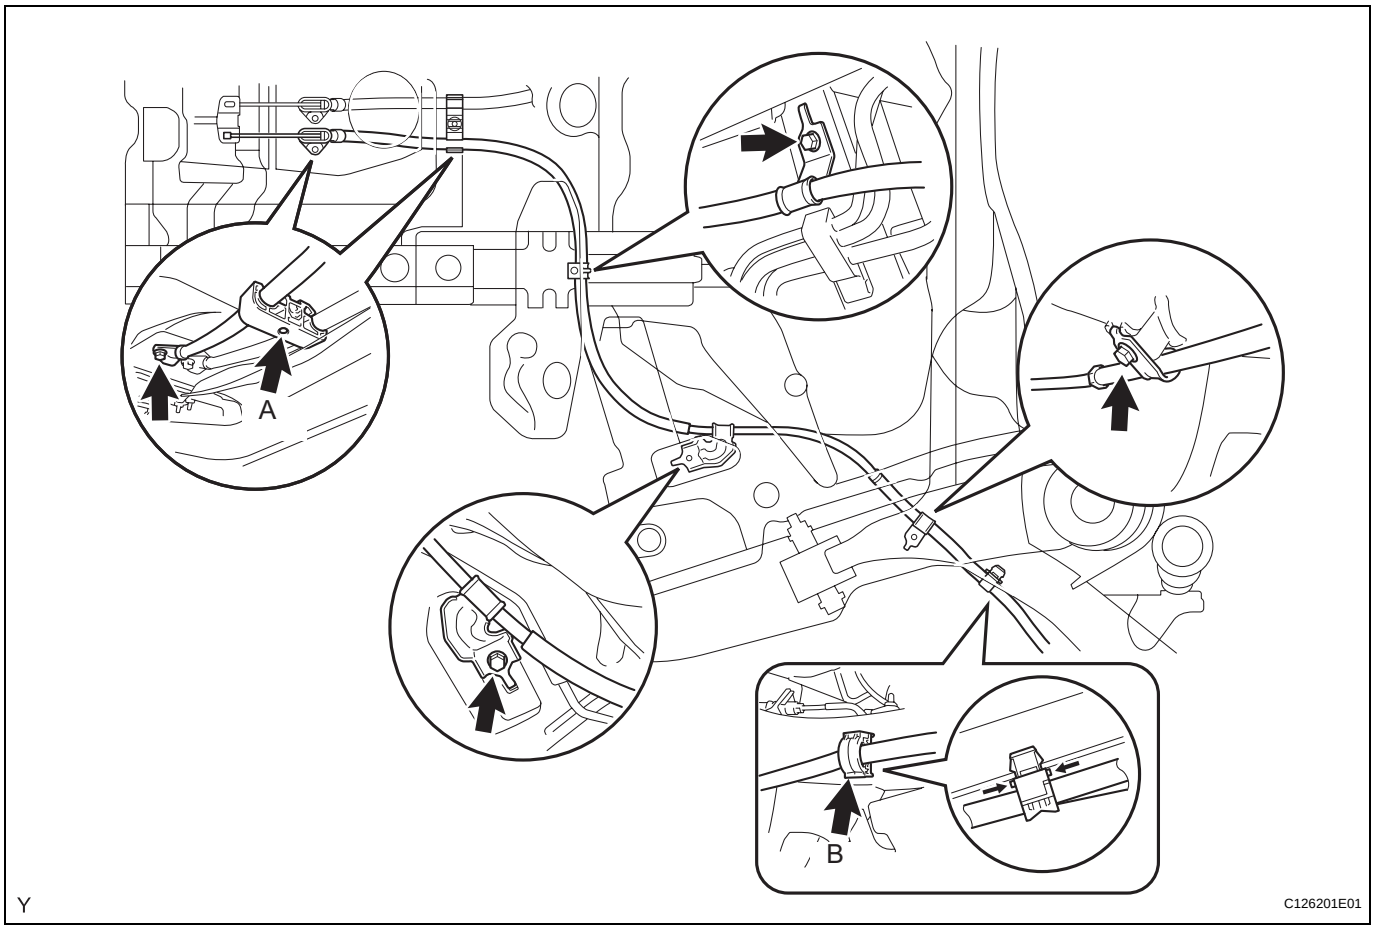
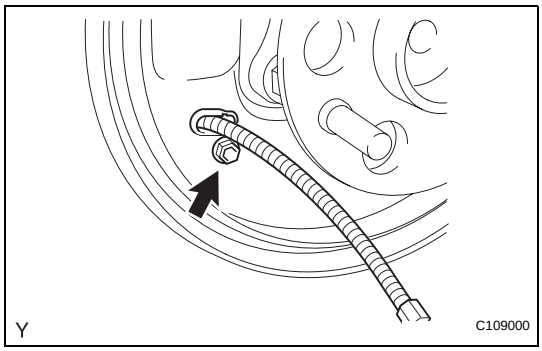
REMOVAL

1. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-6)**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
3. **REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-6)**
4. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-6)**
5. **REMOVE REAR CONSOLE BOX COVER (for Hatchback) (See page PB-6)**
6. **REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-7)**
7. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
8. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
9. **REMOVE REAR WHEEL**
10. **REMOVE REAR BRAKE DRUM SUB-ASSEMBLY (See page BR-60)**
11. **REMOVE REAR BRAKE SHOE KIT (See page BR-60)**
12. **REMOVE FRONT NO. 4 FLOOR HEAT INSULATOR**
    (a) Remove the 2 nuts and remove the heat insulator.
13. **LOOSEN NO. 1 WIRE ADJUSTING NUT (See page PB-8)**
14. **REMOVE PARKING BRAKE CABLE**
    (a) Disconnect the cable end from the equalizer.
    (b) Remove cable clamp A from the body.
    (c) Remove the 4 bolts.



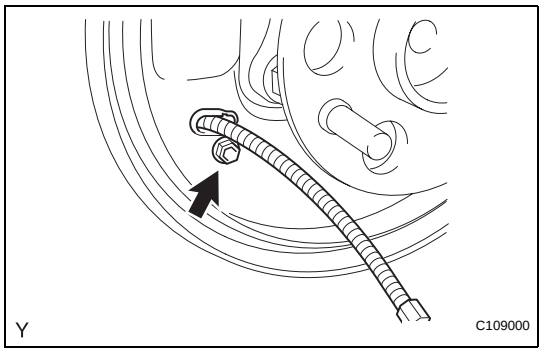
(d) Using pliers, pinch both ends of the claw of cable clamp B and flex the clamp to remove it.





(e) Remove the bolt and remove the parking brake cable from the backing plate.

(f) Remove the cable clamp B from the parking brake cable.
HINT:
Replace the cable clamp B with a new one when installing the parking brake cable.



INSTALLATION

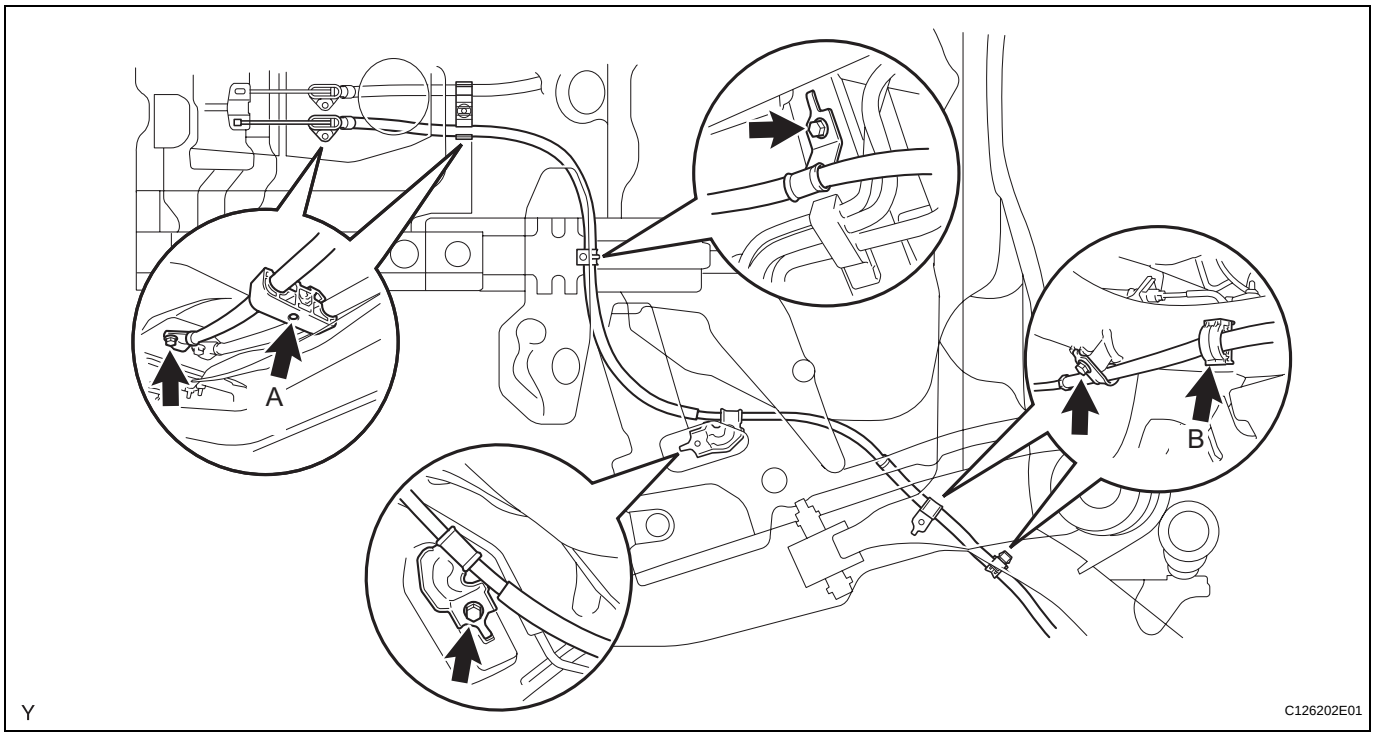
1. INSTALL PARKING BRAKE CABLE

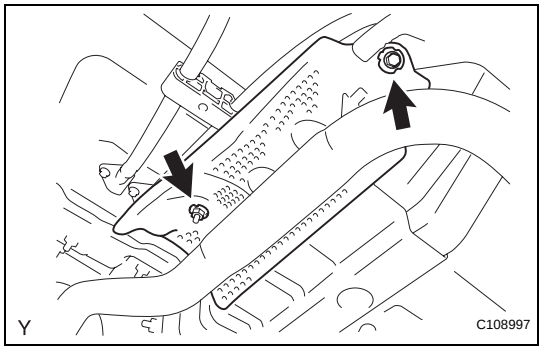
(a) Install the parking brake cable onto the backing plate with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(b) Install a new cable clamp B onto the rear axle beam.
NOTICE:
Securely install the clamp.

(c) Tighten the 4 bolts.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

(d) Pass the parking brake cable through a new cable clamp A, and then install cable clamp A onto the stud bolt.
NOTICE:
Securely install the clamp.
(e) Connect the cable end to the equalizer.





2. **INSTALL FRONT NO. 4 FLOOR HEAT INSULATOR**
(a) Install the heat insulator with the 2 nuts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
3. **INSTALL REAR BRAKE SHOE KIT (See page BR-64)**
4. **CHECK REAR DRUM BRAKE INSTALLATION (See page BR-66)**
5. **INSTALL REAR BRAKE DRUM SUB-ASSEMBLY**
6. **ADJUST REAR DRUM BRAKE SHOE CLEARANCE (See page BR-67)**
7. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
8. **INSPECT PARKING BRAKE LEVER TRAVEL (See page PB-1)**
9. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**
10. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
11. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
12. **INSTALL REAR CONSOLE BOX COVER (for Hatchback) (See page PB-11)**

13. **INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-11)**
14. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-12)**
15. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-12)**
16. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
17. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-12)**

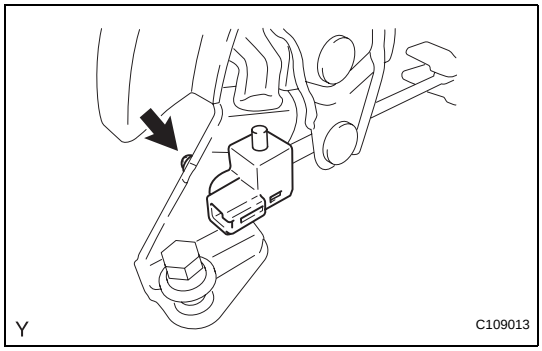
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-6)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
4. **REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-6)**
5. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-6)**
6. **REMOVE REAR CONSOLE BOX COVER (for Hatchback) (See page PB-6)**
7. **REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-7)**
8. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
9. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
10. **REMOVE PARKING BRAKE SWITCH**
    (a) Disconnect the parking brake switch connector.
    (b) Remove the screw and remove the parking brake switch.



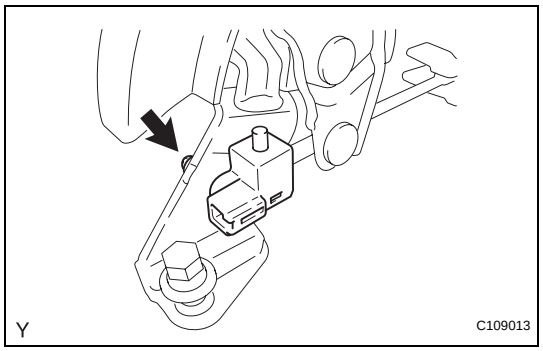
INSPECTION

1. **INSPECT PARKING BRAKE SWITCH**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - Ground	Released	Below 1 Ω
1 - Ground	Pushed in	10 kΩ or higher

If the result is not as specified, replace the parking brake switch.



INSTALLATION

1. **INSTALL PARKING BRAKE SWITCH**
   (a) Install the parking brake switch with the screw.
   Torque: 0.9 N*m (9 kgf*cm, 8 in.*lbf)
   (b) Connect the parking brake switch connector.
2. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
3. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
4. **INSTALL REAR CONSOLE BOX COVER (for Hatchback) (See page PB-11)**
5. **INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-11)**
6. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-12)**
7. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-12)**
8. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
9. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-12)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(See page RS-1)

2. HANDLING PRECAUTIONS FOR STEERING COLUMN

(a) When handling the steering column assembly.

(1) Avoid any impact to the steering column assembly, especially to the motor or the torque sensor. Replace with a new one if dropped or subjected to any severe impacts.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly or other steering-related parts have been removed and either reinstalled or replaced, perform steering center point adjustment (zero point calibration).

(b) When disconnecting or reconnecting the connectors.

(1) When disconnecting connectors related to the electronic motor power steering system, turn the ignition switch to ON (the engine is stopped), center the steering wheel, turn the ignition switch to OFF, and then disconnect the connectors.

(2) When reconnecting connectors related to the electronic motor power steering system, make sure that the ignition switch is turned to OFF. Center the steering wheel and then turn the ignition switch to ON (the engine is stopped).

NOTICE:

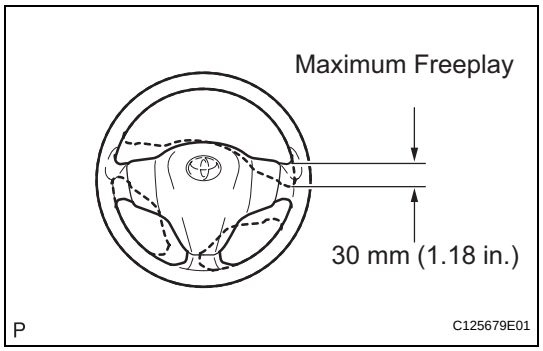
Do not turn the ignition switch to ON when the steering wheel is not centered

(3) If the above operations are not carried out correctly, the steering center point (zero point) will deviate, causing a difference in steering effort between right and left turns. If there is a difference in the steering effort between right and left turns, perform the steering center point adjustment (zero point calibration).

PROBLEM SYMPTOMS TABLE

STEERING

Symptom	Suspected area	See page
Hard steering	Front tires (Improperly inflated or unevenly worn)	TW-1
	Front wheel alignment (Incorrect)	SP-2
	Front suspension (lower ball joint)	SP-23
	Steering intermediate shaft (for Sedan)	SR-12
	Steering intermediate shaft (for Hatchback)	SR-30
	Steering column assembly (for Sedan)	SR-12
	Steering column assembly (for Hatchback)	SR-30
	Steering gear assembly (for Sedan)	PS-63
	Steering gear assembly (for Hatchback)	PS-73
	Power steering ECU (for Sedan)	PS-83
	Power steering ECU (for Hatchback)	PS-89
Poor return	Front tires (Improperly inflated or unevenly worn)	TW-1
	Front wheel alignment (Incorrect)	SP-2
	Steering column assembly (for Sedan)	SR-12
	Steering column assembly (for Hatchback)	SR-30
	Steering gear assembly (for Sedan)	PS-63
	Steering gear assembly (for Hatchback)	PS-73
	Power steering ECU (for Sedan)	PS-83
	Power steering ECU (for Hatchback)	PS-89
No free play or excessive play	Steering intermediate shaft (for Sedan)	SR-12
	Steering intermediate shaft (for Hatchback)	SR-30
	Steering gear assembly (for Sedan)	PS-63
	Steering gear assembly (for Hatchback)	PS-73
Knocking (or clunking) sound occurs when steering wheel turned while power steering in operation	Steering intermediate shaft (for Sedan)	SR-12
	Steering intermediate shaft (for Hatchback)	SR-30
	Front suspension (lower ball joint)	SP-23
	Front axle hub (Hub bearing)	AH-6
	Steering gear assembly (for Sedan)	PS-63
	Steering gear assembly (for Hatchback)	PS-73
Friction sound occurs when steering wheel turned during low speed driving	Power steering motor (for Sedan)	SR-12
	Power steering motor (for Hatchback)	SR-30
	Steering column assembly (for Sedan)	SR-12
	Steering column assembly (for Hatchback)	SR-30
High-pitched sound (squealing sound) occurs when steering wheel turned slowly with vehicle stopped	Power steering motor (for Sedan)	SR-12
	Power steering motor (for Hatchback)	SR-30
Steering wheel vibrates and noise occurs when steering wheel turned while vehicle stopped	Power steering motor (for Sedan)	SR-12
	Power steering motor (for Hatchback)	SR-30
	Steering column assembly (for Sedan)	SR-12
	Steering column assembly (for Hatchback)	SR-30



ON-VEHICLE INSPECTION

1. CHECK STEERING WHEEL FREE PLAY

(a) Stop the vehicle and align the tires facing straight ahead.

(b) Turn the steering wheel gently right and left, and check the steering wheel free play.

Maximum Free Play:
30 mm (1.18 in.)

(c) If the freeplay exceeds the maximum, replace the steering intermediate shaft sub-assembly or steering gear.

REPAIR

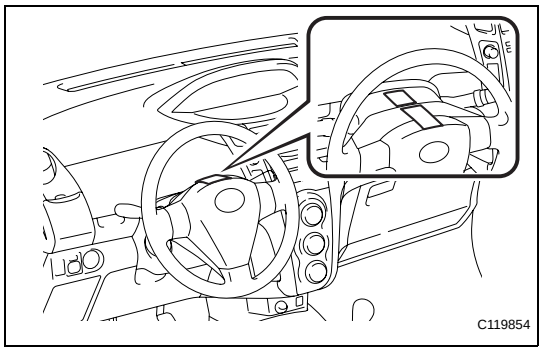
1. CORRECT STEERING OFF CENTER

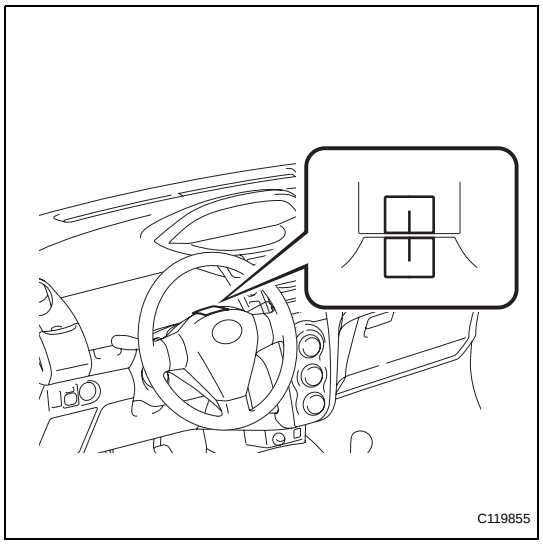
(a) Check whether the steering wheel is off-center.

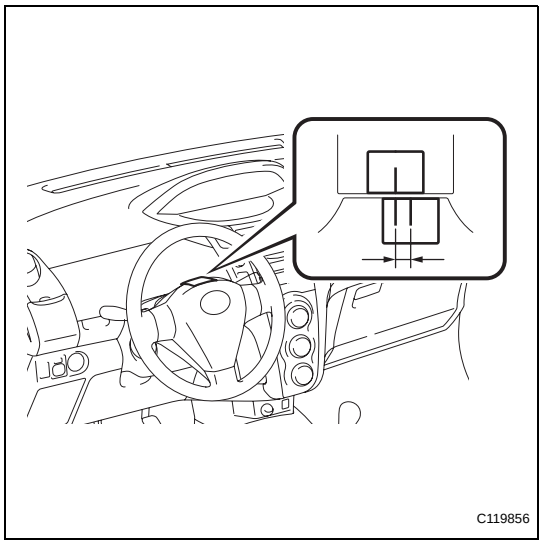
(1) Apply masking tape to the top center of the steering wheel and the steering column upper cover.

(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), holding the steering wheel to maintain the course.

(3) Draw a line on the masking tape, as shown in the illustration.

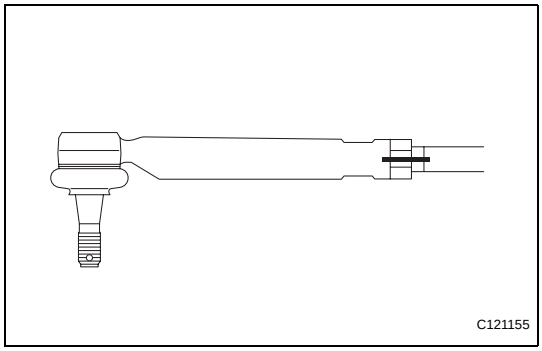




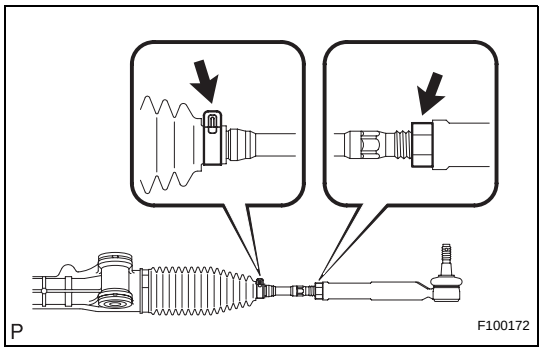


(4) Turn the steering wheel to the straight position.
HINT:
Look at the upper surface of the steering wheel, the steering spokes and the SRS airbag line to determine the straight position.
(5) Draw another line on the masking tape on the steering wheel, as shown in the illustration.
(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.
(7) Convert the measured distance to the steering angle.
HINT:
- Measured distance of 1 mm (0.04 in.) = Approximately 1 degree steering angle.
- Make a note of the steering angle.

(b) Adjust the steering angle



(c) For steps (1) and (2) below, carry out RH and LH procedures separately.
(1) Draw a line on the tie rod and rack end where it can easily be seen.
(2) Using a paper gauge, measure the distance between the tie rod end and the rack end screw.



(3) Remove the RH and LH boot clips from the rack boots.
(4) Loosen the RH and LH lock nuts.
(5) Turn the RH and LH rack ends by the same amount (but in opposite directions) in accordance with the steering angle.
HINT:
- Electronic Power Steering:
  1 turn (360°) of rack end (1.25 mm (0.049 in.) horizontal movement) - 10.5° of steering angle.

(6) Tighten the RH and LH lock nuts.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is less than 1.5 mm (0.059 in.).
(7) Install the RH and LH boot clips.

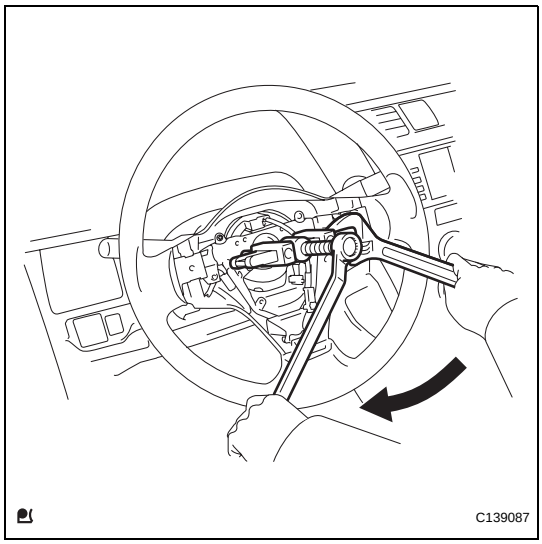
REMOVAL

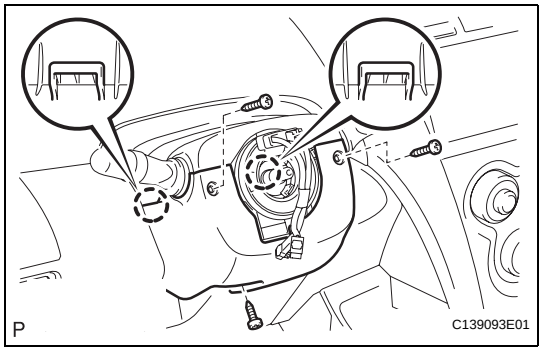
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

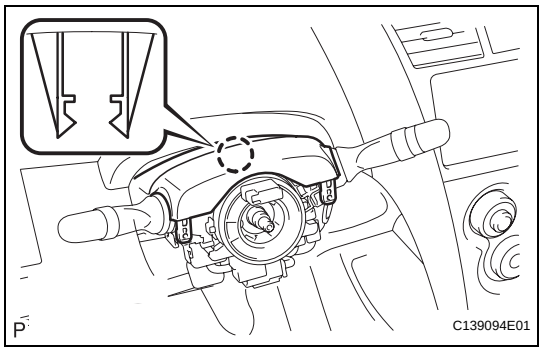
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE STEERING PAD (See page RS-309)**
4. **REMOVE STEERING WHEEL ASSEMBLY**
   (a) Remove the nut and place matchmarks on the steering wheel assembly and steering column assembly.

   (b) Using SST, remove the steering wheel assembly.
   NOTICE:
   Apply a small amount of grease to the threads and tip of the SST center bolt before using.



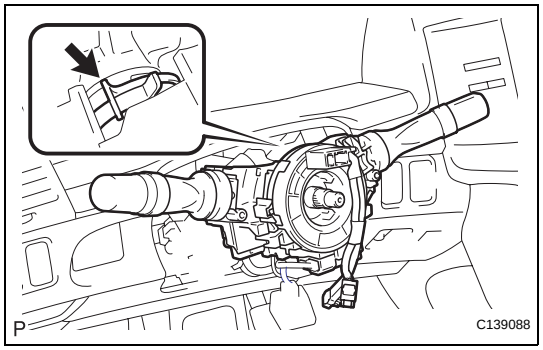
5. **REMOVE STEERING COLUMN COVER**
   (a) Remove the 3 screws, disengage the 2 claws, release the tilt lever and remove the steering column lower cover.





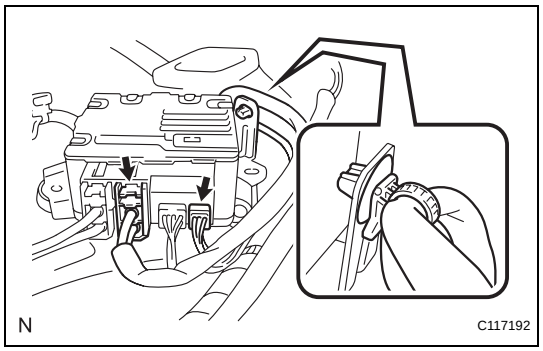
(b) Disengage the claw and remove the steering column upper cover.

6. **REMOVE COMBINATION SWITCH ASSEMBLY**
   (a) Disconnect all connectors from the turn signal switch with spiral cable.

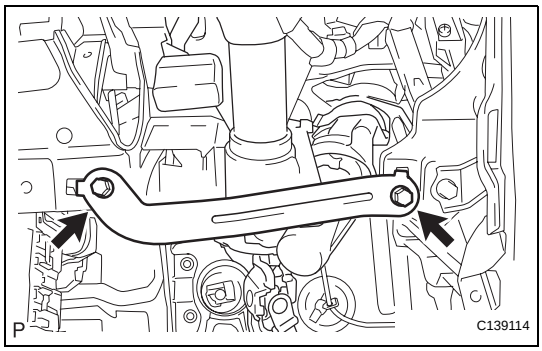


(b) Disengage the clamp indicated by the arrow in the illustration and remove the combination switch assembly from the steering column assembly.

7. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
8. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
9. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
10. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
11. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
12. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-5)**
13. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-5)**
14. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
15. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
16. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
17. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**

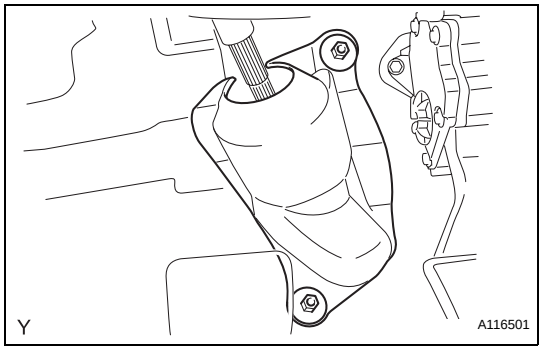


18. **DISCONNECT POWER STEERING ECU**
    (a) Detach the power steering motor harness and torque sensor wire harness clamps from the power steering ECU side.
    (b) Disconnect the 2 steering column assembly connectors from the power steering ECU.
19. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)**
20. **REMOVE INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-45)**



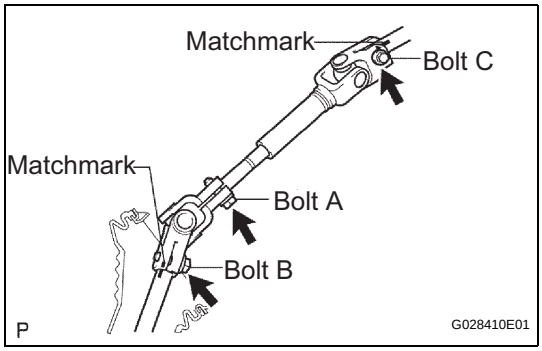
21. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT

(a) Remove the 2 bolts and remove the reinforcement instrument panel sub.



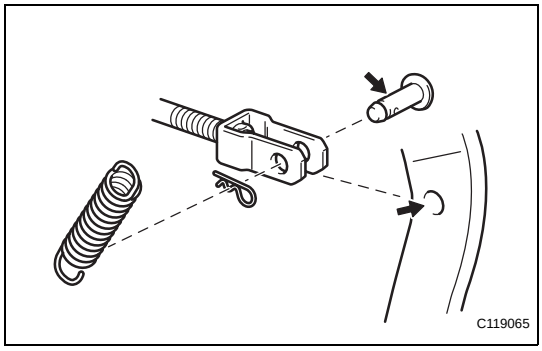
22. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Pull back the floor carpet, remove the 2 clips and remove the column hole cover silencer sheet.



23. REMOVE NO.2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Loosen bolt A.
(b) Place matchmarks on the steering intermediate assembly and steering gear assembly.
(c) Remove bolt B and detach the steering intermediate assembly from the steering gear assembly.
(d) Place matchmarks on the steering intermediate assembly and steering column assembly.
(e) Remove bolt C and detach the steering intermediate shaft assembly from the steering column assembly.

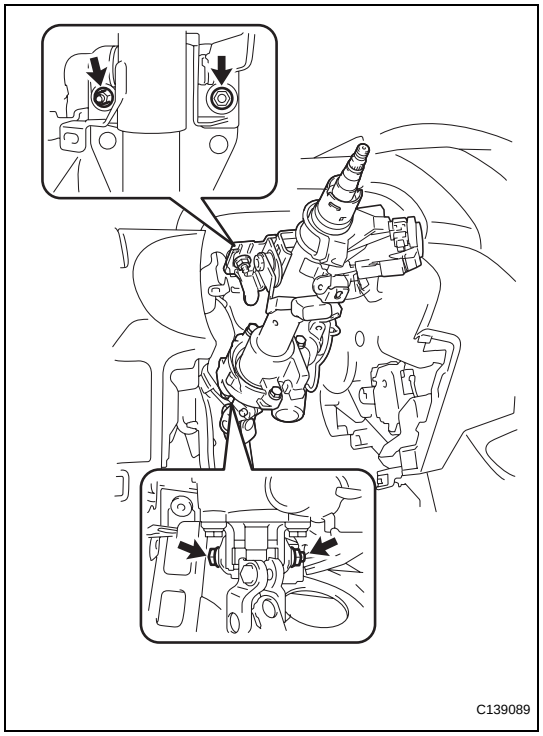


24. REMOVE BRAKE PEDAL PAD (for Automatic Transaxle)

(a) Using needle-nose pliers, remove the brake pedal return spring.
(b) Remove the clip from the brake master cylinder push rod clevis pin.
(c) Remove the brake master cylinder push rod clevis pin and detach the push rod clevis from the brake pedal.
(d) Remove the bolt, nut and 2 brake pedal bushes, and remove the brake pedal assembly.

25. REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)

26. REMOVE BRAKE PEDAL SUPPORT (for Manual Transaxle) (See page BR-21)

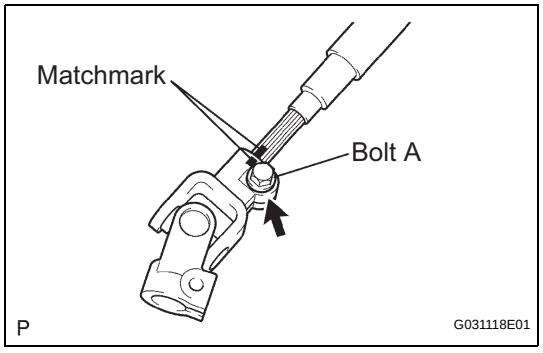


27. REMOVE STEERING COLUMN ASSEMBLY

(a) Disconnect all connectors and detach all wire harness clamps from the steering column assembly.

(b) Remove the bolt and 2 nuts and remove the steering column assembly from the instrument panel reinforcement assembly.

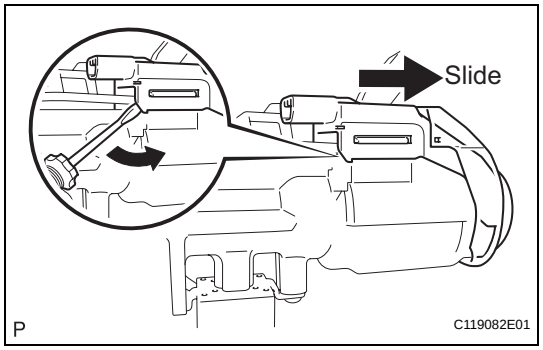
DISASSEMBLY



1. REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY

(a) Place matchmarks on steering intermediate shaft assembly No. 2 and the steering sliding yoke.

(b) Remove bolt A and remove the steering sliding yoke from steering intermediate shaft No. 2.



2. REMOVE TRANSPONDER KEY AMPLIFIER

(a) Disengage the 2 claws and slide the transponder key amplifier in the direction shown in the illustration, to detach it from the steering column upper with switch bracket assembly.

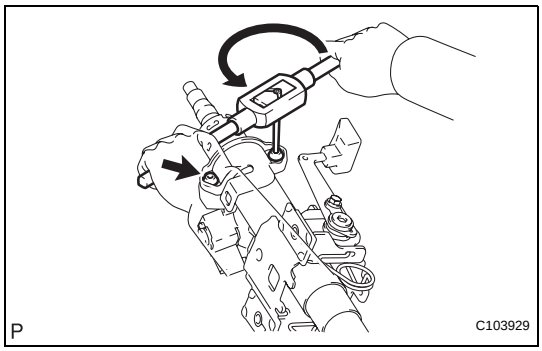
3. REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY

(a) Fix the steering column assembly in a vise between aluminum plates.

NOTICE:

Do not overtighten the vise.

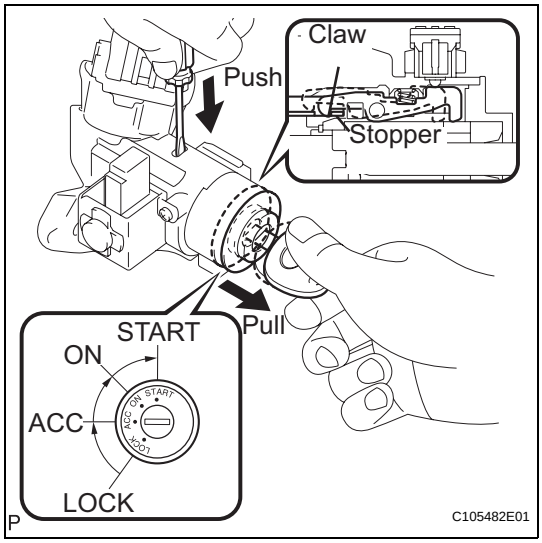
(b) Using a drill, drill a hole in each of the 2 steering lock set bolts, to insert an screw extractor.



(c) Using the screw extractor, remove the 2 steering lock set bolts and remove the steering column upper with switch bracket assembly and steering column clamp upper.

4. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY

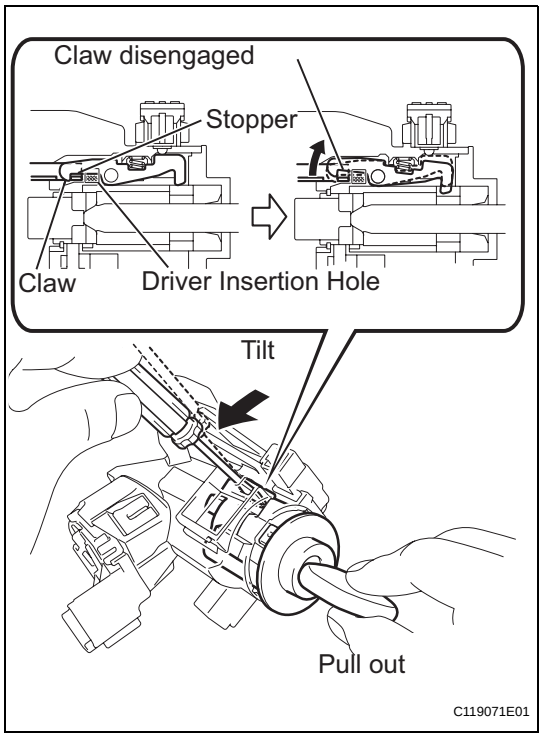
(a) Turn the ignition switch to on (ACC).



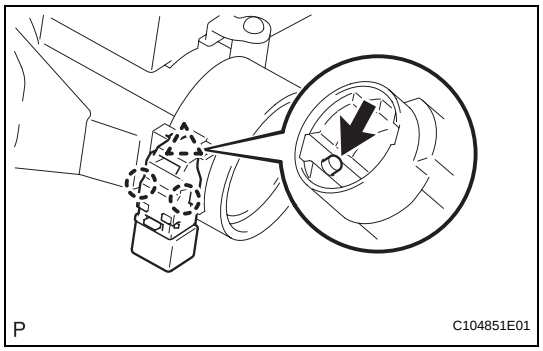
(b) Insert the tip of a screwdriver into the hole in the steering column bracket assembly upper, as shown in the illustration, and pull the ignition switch lock cylinder assembly out until its claw comes into contact with the stopper of the steering column bracket assembly upper.

NOTICE:

Pull the ignition switch lock cylinder assembly out until its claw comes into contact with the stopper of the steering column bracket assembly upper. Otherwise, the following procedure cannot be conducted properly.

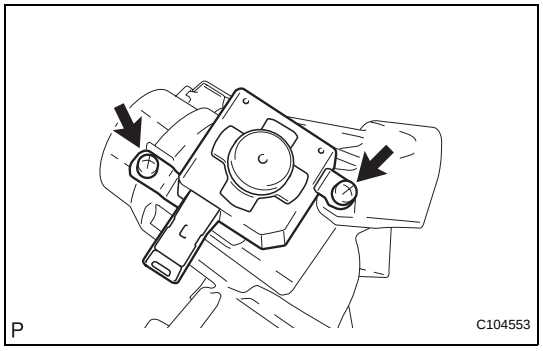


(c) Insert the tip of a screwdriver into the hole in the steering column bracket and tilt it downward, as shown in the illustration, to disengage the claw of the ignition switch lock cylinder. Then pull out the ignition switch lock cylinder.



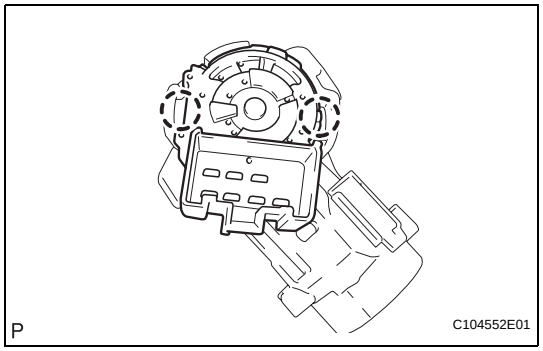
5. REMOVE UN-LOCK WARNING SWITCH ASSEMBLY

(a) Push up the unlock warning switch assembly center portion to disengage the 2 claws.
HINT:
Slide the unlock warning switch assembly, in the direction shown by the arrow in the illustration, to remove it.



6. REMOVE KEY INTER LOCK SOLENOID

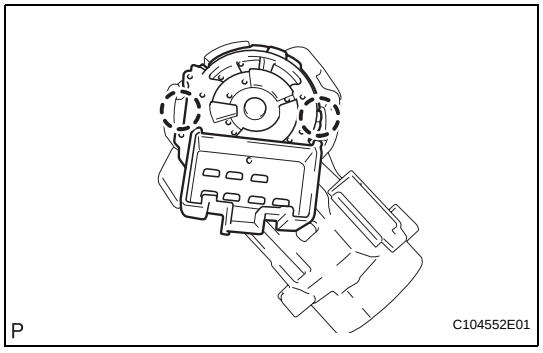
(a) for Automtic Transaxle:
(1) Remove the 2 screws and remove the key lock solenoid from the steering column bracket assembly upper.



7. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

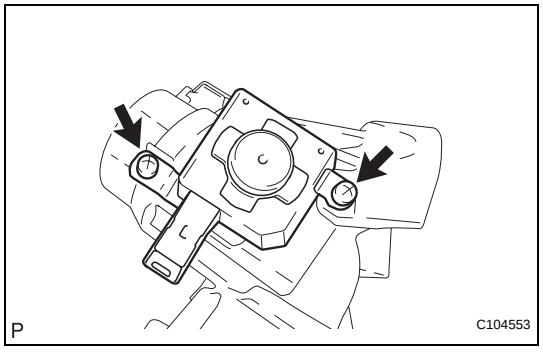
(a) Disengage the 2 claws and remove the ignition (starter) switch assembly from the steering column bracket assembly upper.

REASSEMBLY



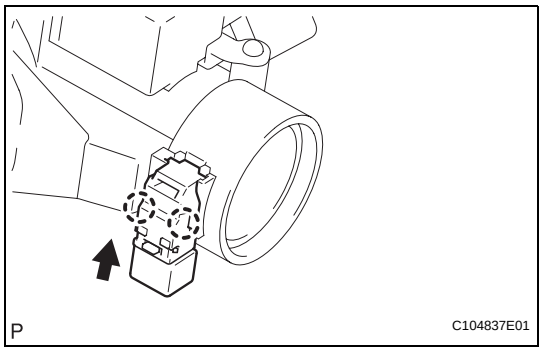
1. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY

(a) Engage the 2 claws to install the ignition (starter) switch assembly onto the steering column bracket assembly upper.



2. INSTALL KEY INTER LOCK SOLENOID

(a) for Automtic Transaxle:
(1) Install the key interlock solenoid onto the steering column bracket assembly upper with the 2 screws.



3. INSTALL UN-LOCK WARNING SWITCH ASSEMBLY

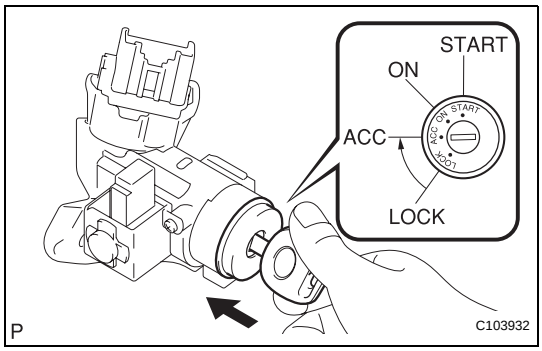
(a) Engage the 2 claws to install the un-lock warning switch assembly onto the steering column bracket assembly upper.
HINT:
Slide the unlock warning switch assembly, in the direction shown by the arrow in the illustration, to install it.

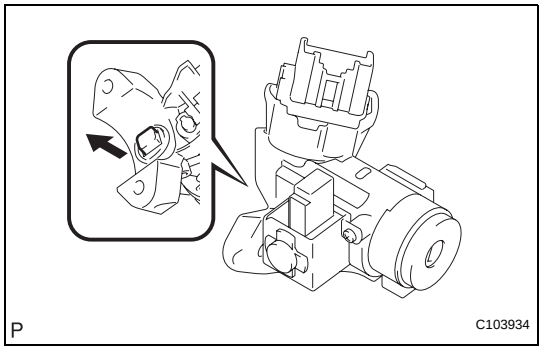
4. INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY

(a) Turn the ignition switch to on (ACC).

(b) Install the ignition switch lock cylinder assembly into the steering column bracket assembly upper.

(c) Make sure that the ignition switch lock cylinder assembly is securely fixed onto the ignition switch lock cylinder assembly.

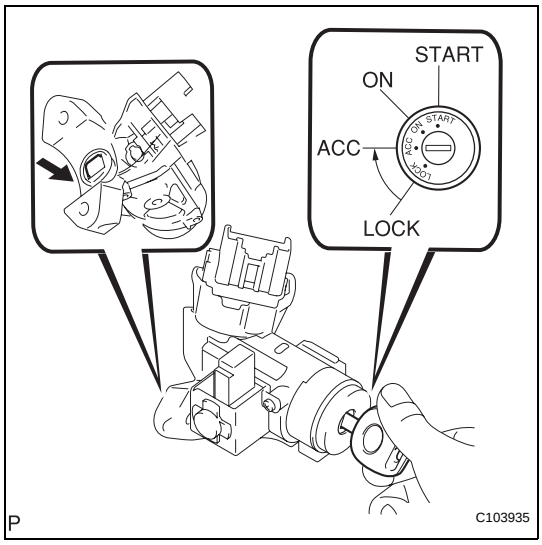




5. INSPECT STEERING LOCK OPERATION

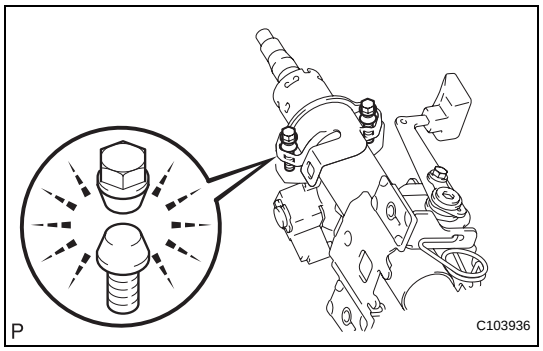
(a) Remove the key and check that the steering lock function is activated.

(b) Insert the key, turn the ignition switch to on (ACC) and check that the steering lock function is inactivated.

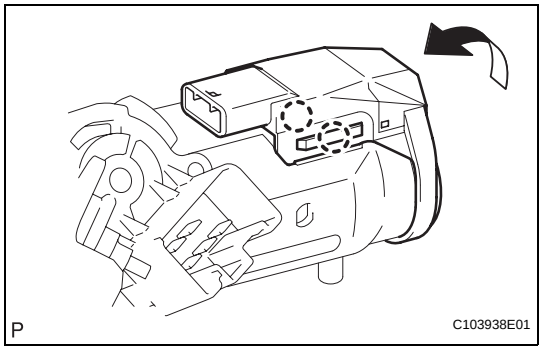


6. INSTALL STEERING COLUMN UPPER W/SWITCH BRACKET ASSEMBLY

(a) Fix the steering column assembly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

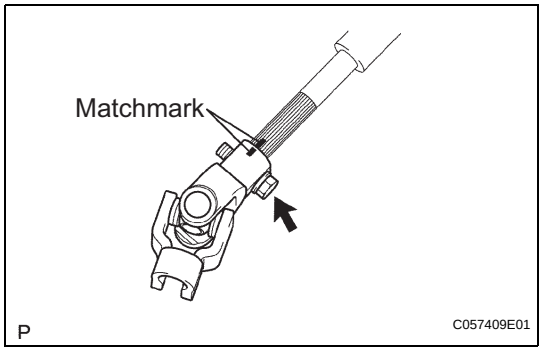


(b) Install the steering column upper with switch bracket assembly and steering column clamp upper with 2 new steering lock set bolts, and then tighten the bolts until their heads come off.



7. INSTALL TRANSPONDER KEY AMPLIFIER

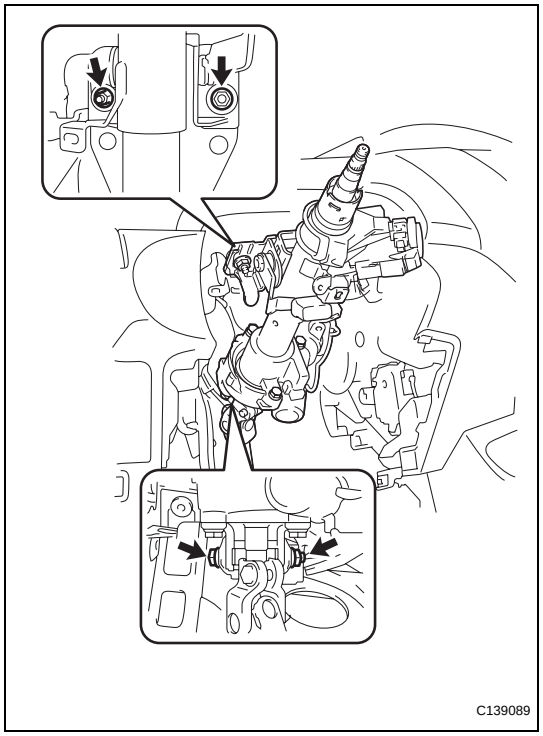
(a) Engage the 2 claws and install the transponder key amplifier onto the steering column upper with the switch bracket.



8. INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY

(a) Align the matchmarks on steering intermediate shaft assembly No. 2 and steering sliding yoke and provisionally install them with the bolt.

INSTALLATION



1. INSTALL STEERING COLUMN ASSEMBLY

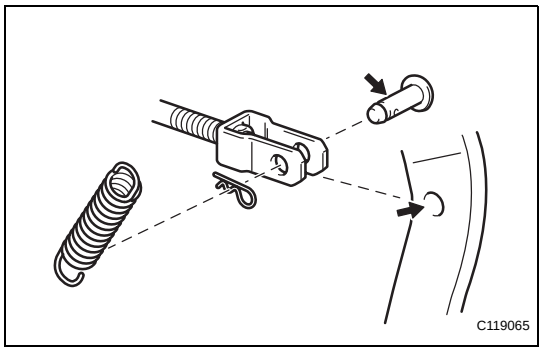
(a) Install the steering column assembly onto the instrument panel reinforcement assembly with the bolt and 2 nuts.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(b) Connect all the connectors and clamp the wire harnesses onto the steering column assembly bracket.

2. INSTALL BRAKE PEDAL (for Automatic Transaxle)

(a) Apply MP grease No. 2 to the brake master cylinder push rod clevis pin and installation surfaces.

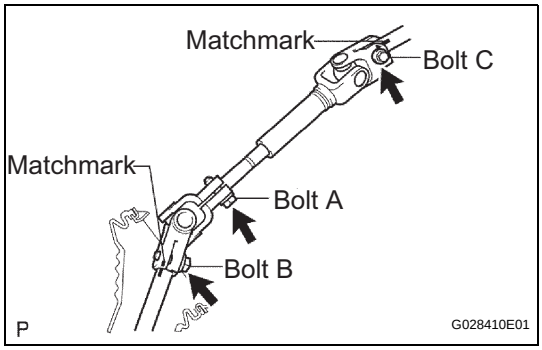
(b) Install the 2 brake pedal bushes, and install the brake pedal with the nut and brake pedal shaft.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



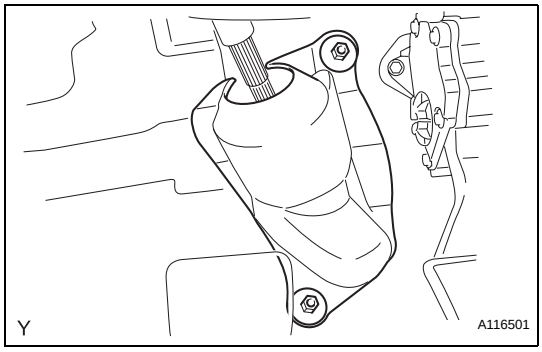
(c) Apply lithium soap base glycol grease to the brake master cylinder push rod clevis pin and installation surfaces.
(d) Connect the brake master cylinder push rod clevis to the brake pedal with the brake master cylinder push rod clevis pin, install the clip onto the brake master cylinder push rod clevis pin, and then install the brake pedal return spring.

3. INSTALL BRAKE PEDAL SUPPORT (for Manual Transaxle) (See page BR-21)

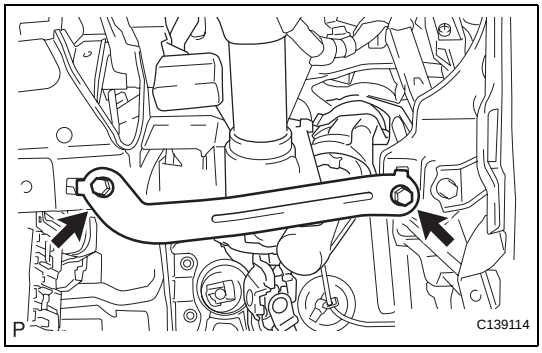
4. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)



5. INSTALL NO.2 STEERING INTERMEDIATE SHAFT ASSEMBLY
(a) Connect all the connectors and clamp the wire harnesses onto the steering column assembly bracket.
(b) Align the matchmarks on steering intermediate shaft assembly No. 2 and the steering sliding yoke and provisionally install them with bolt C.
Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
(c) Align the matchmarks on the steering sliding yoke and steering gear assembly and install them with bolt B.
Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
(d) Tighten bolt A.
Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)



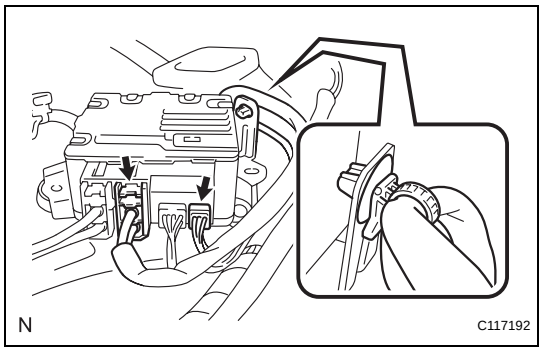
6. INSTALL COLUMN HOLE COVER SILENCER SHEET
(a) Install the column hole cover plate with the 2 clips.
(b) Install the floor carpet.



7. INSTALL INSTRUMENT PANEL SUB REINFORCEMENT
(a) Align the 2 claws and install the reinforcement instrument panel sub with the 2 bolts.

8. INSTALL INSTRUMENT LOWER PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-54)

9. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)



10. INSTALL POWER STEERING ECU

(a) Connect the 2 steering column assembly connectors to the power steering ECU.

(b) Install the power steering motor harness and torque sensor wire harness clamps onto the side of the power steering ECU.

(c) Tilt the steering column assembly up and down to make sure that the power steering motor harness and torque sensor wire harness do not interfere with any components.

11. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)

12. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)

13. INSTALL FRONT PILLAR GARNISH RH (See page IR-29)

14. INSTALL FRONT PILLAR GARNISH LH (See page IR-30)

15. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-14)

16. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)

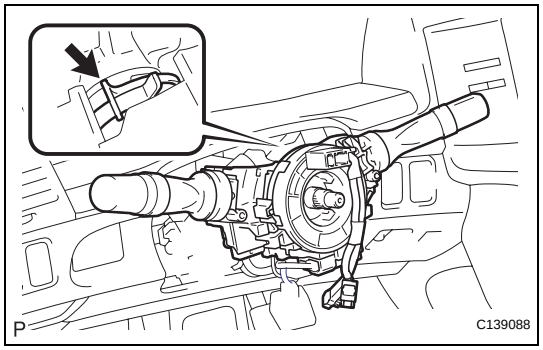
17. INSTALL COMBINATION METER ASSEMBLY (See page ME-140)

18. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)

19. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)

20. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)

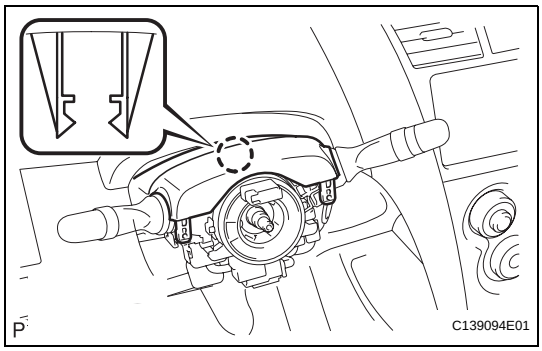
21. INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)



22. INSTALL COMBINATION SWITCH ASSEMBLY

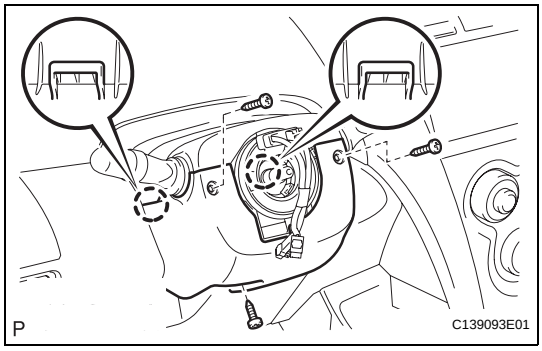
(a) Install the combination switch assembly onto the steering column assembly with the clamp.

(b) Connect all the connectors to the turn signal switch with spiral cable.



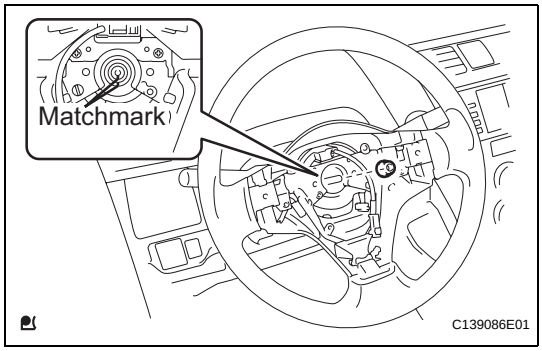
23. INSTALL STEERING COLUMN COVER

(a) Engage the claw to install the steering column upper cover.



(b) Engage the 2 claws to install the steering column lower cover.

(c) Install the 3 screws.



24. INSTALL STEERING WHEEL ASSEMBLY

(a) Align the matchmarks and install the steering wheel assembly onto the steering column assembly.

(b) Install the nut.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(c) Connect all connectors to the spiral cable.

25. INSTALL STEERING PAD (See page RS-310)

26. POSITION FRONT WHEELS FACING STRAIGHT AHEAD

27. CHECK SRS WARNING LIGHT
(See page RS-31)

28. PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT
(See page PS-12)

STEERING COLUMN ASSEMBLY (for Hatchback)

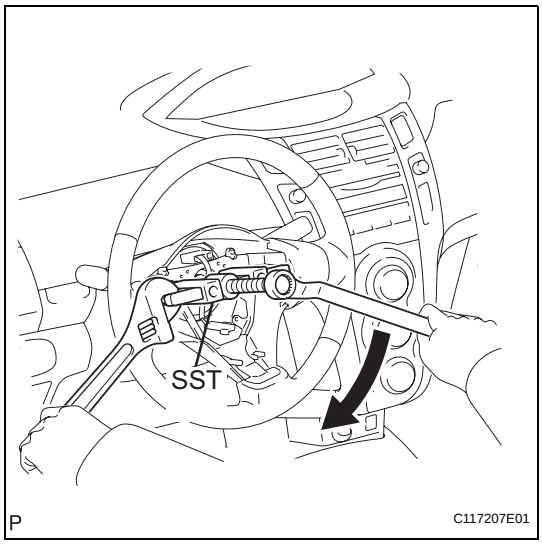
REMOVAL

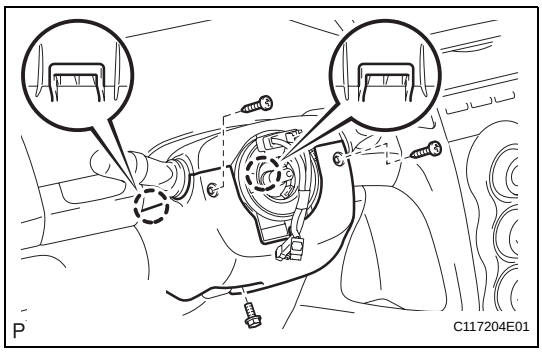
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing
RS-1

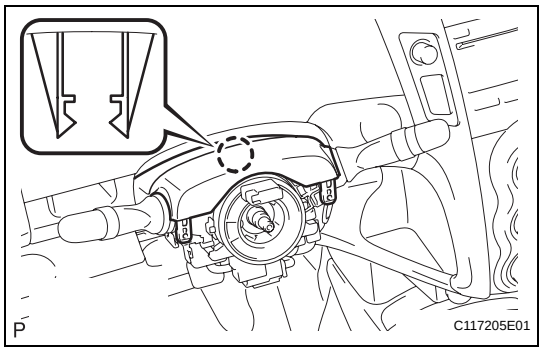
1. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE STEERING PAD (See page RS-309)**
4. **REMOVE STEERING WHEEL ASSEMBLY**
   (a) Remove the nut and place matchmarks on the steering wheel assembly and steering column assembly.

   (b) Using SST, remove the steering wheel assembly.
   SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)
   NOTICE:
   Apply a small amount of grease to the threads and tip of the SST center bolt before using.



5. **REMOVE STEERING COLUMN COVER**
   (a) Remove the 3 screws, disengage the 2 claws, release the tilt lever and remove the steering column lower cover.

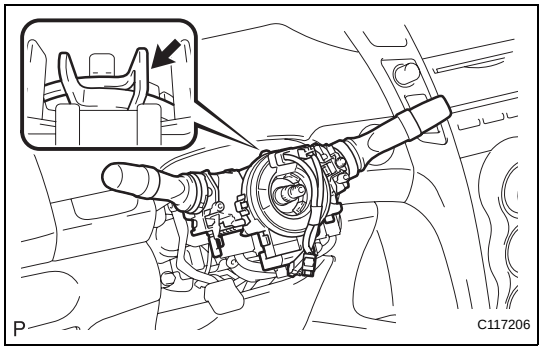




(b) Disengage the claw and remove the steering column upper cover.

6. REMOVE COMBINATION SWITCH ASSEMBLY

(a) Disconnect all connectors from the turn signal switch with spiral cable.



(b) Disengage the clamp indicated by the arrow in the illustration and remove the turn signal switch assembly with spiral cable from the steering column assembly.

7. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)

8. REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)

9. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)

10. REMOVE COMBINATION METER ASSEMBLY (See page ME-146)

11. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)

12. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

HINT:
Use the same procedure for the RH side as for the LH side.

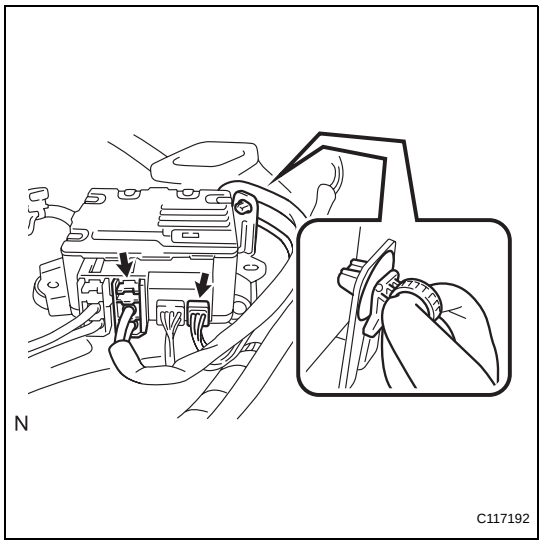
13. REMOVE FRONT PILLAR GARNISH RH (See page IR-58)

14. REMOVE FRONT PILLAR GARNISH LH (See page IR-59)

15. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)

16. REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)

17. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)



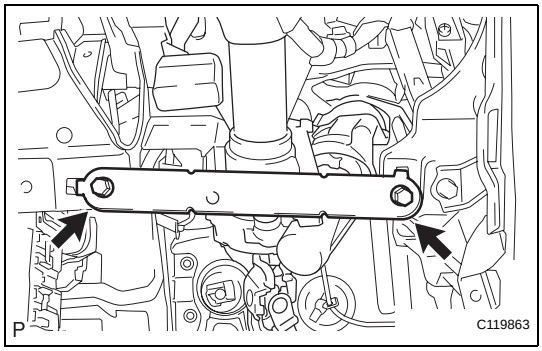
18. DISCONNECT POWER STEERING ECU

(a) Detach the power steering motor harness and torque sensor wire harness clamps from the power steering ECU side.

(b) Disconnect the 2 steering column assembly connectors from the power steering ECU.

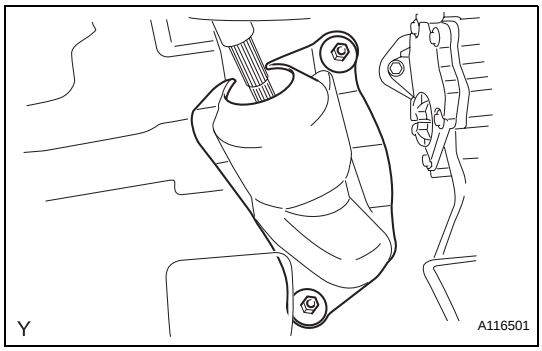
19. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)

20. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-69)



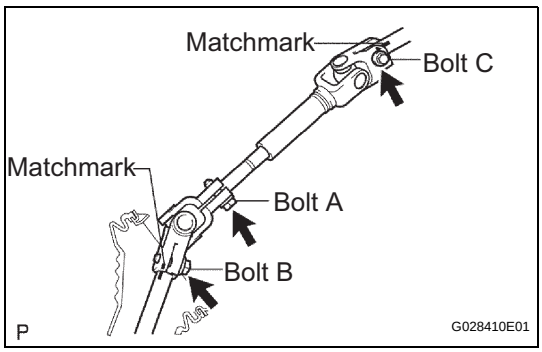
21. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT

(a) Remove the 2 bolts and remove the reinforcement instrument panel sub.



22. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Pull back the floor carpet, remove the 2 clips and remove the column hole cover silencer sheet.



23. REMOVE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Loosen bolt A.

(b) Place matchmarks on the steering intermediate assembly and steering gear assembly.

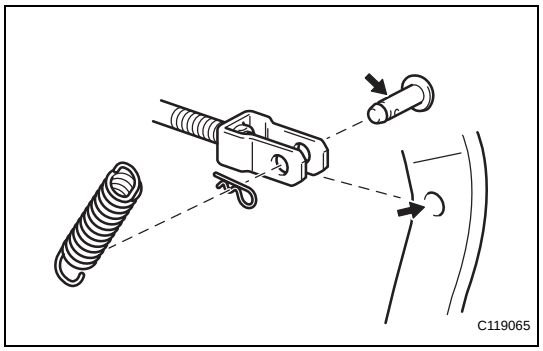
(c) Remove bolt B and detach the steering intermediate assembly from the steering gear assembly.

(d) Place matchmarks on the steering intermediate assembly and steering column assembly.

(e) Remove bolt C and detach the steering intermediate shaft assembly from the steering column assembly.

24. REMOVE BRAKE PEDAL (for Automatic Transaxle)

(a) Using needle-nose pliers, remove the brake pedal return spring.



(b) Remove the clip from the brake master cylinder push rod clevis pin.
(c) Remove the brake master cylinder push rod clevis pin and detach the push rod clevis from the brake pedal
(d) Remove the bolt, nut and 2 brake pedal bushes, and remove the brake pedal assembly.

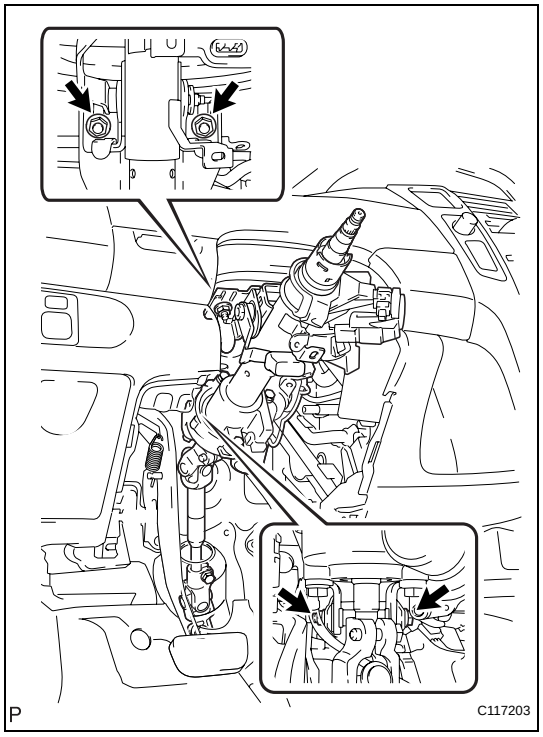
25. REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)

26. REMOVE BRAKE PEDAL SUPPORT (for Manual Transaxle) (See page BR-21)

27. REMOVE STEERING COLUMN ASSEMBLY

(a) Disconnect all connectors and detach all wire harness clamps from the steering column assembly.

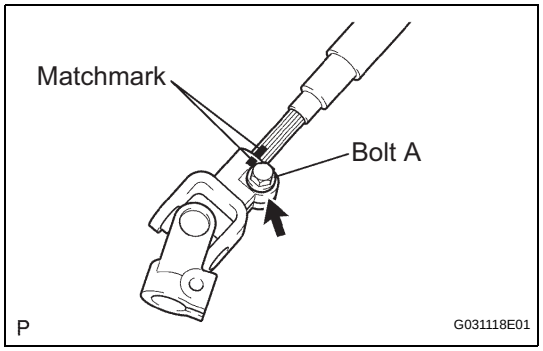
(b) Remove the 3 bolts and remove the steering column assembly from the instrument panel reinforcement assembly.

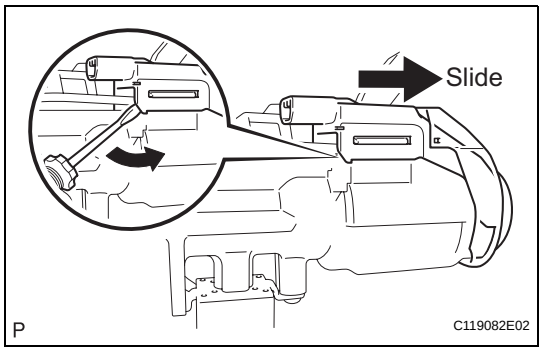


DISASSEMBLY

1. REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY

(a) Place matchmarks on No. 2 steering intermediate shaft assembly and the steering sliding yoke.
(b) Remove bolt A and remove the steering sliding yoke from No. 2 steering intermediate shaft.





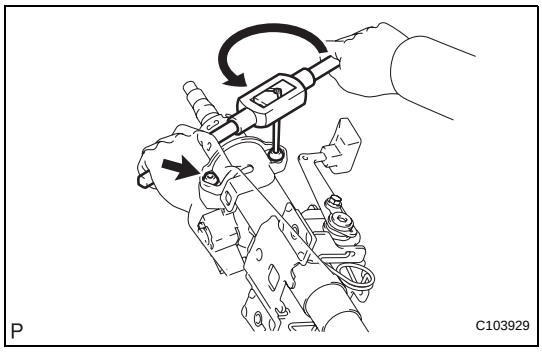
2. REMOVE TRANSPONDER KEY AMPLIFIER

(a) Disengage the 2 claws and slide the transponder key amplifier in the direction shown in the illustration, to detach it from the steering column upper with switch bracket assembly.

3. REMOVE STEERING COLUMN UPPER

(a) Fix the steering column assembly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

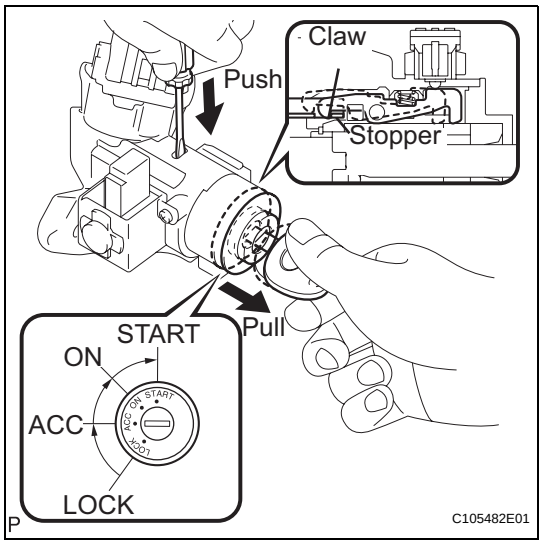
(b) Using a drill, drill a hole in each of the 2 steering lock set bolts, to insert a screw extractor.



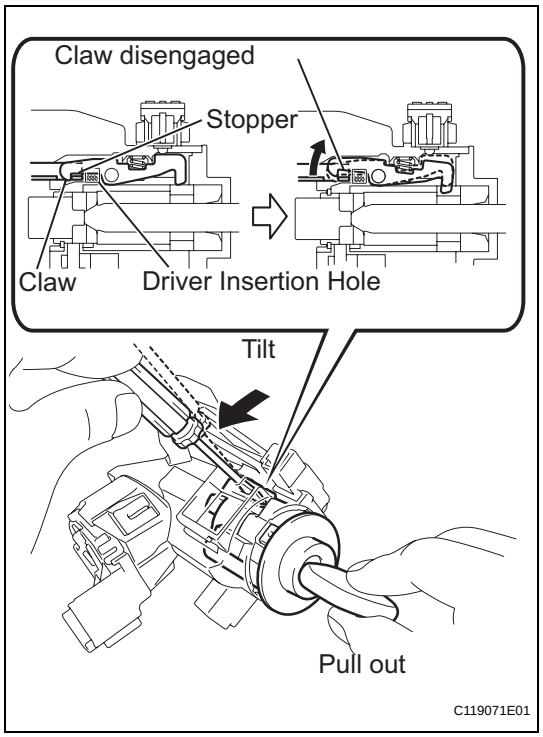
(c) Using the screw extractor, remove the 2 steering lock set bolts and remove the steering column upper w/ switch bracket assembly and steering column clamp upper.

4. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY

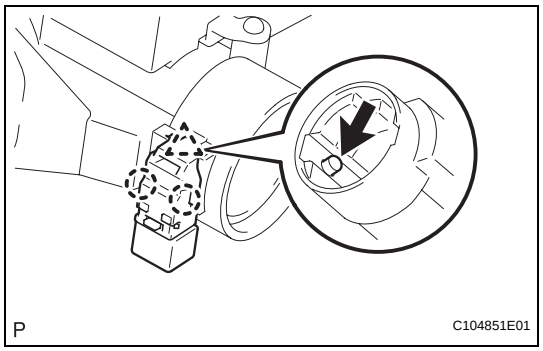
(a) Turn the ignition switch to ACC.



(b) Insert the tip of a screwdriver into the hole in the steering column bracket assembly upper, as shown in the illustration, and pull the ignition switch lock cylinder assembly out until its claw comes into contact with the stopper of the steering column bracket assembly upper.
NOTICE:
Pull the ignition switch lock cylinder assembly out until its claw comes into contact with the stopper of the steering column bracket assembly upper. Otherwise, the following procedure cannot be conducted properly.

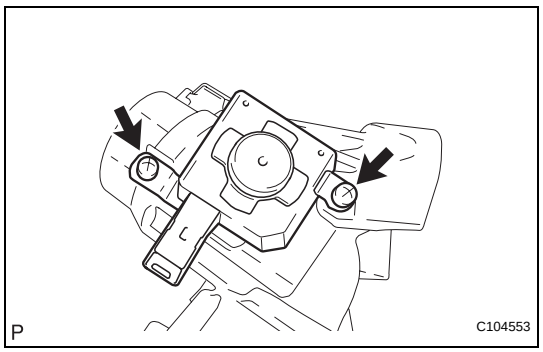


(c) Insert the tip of a screwdriver into the hole in the steering column bracket and tilt it downward, as shown in the illustration, to disengage the claw of the ignition switch lock cylinder. Then pull out the ignition switch lock cylinder.



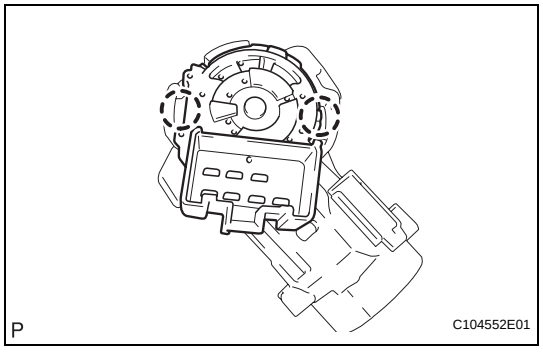
5. REMOVE UN-LOCK WARNING SWITCH ASSEMBLY

(a) Push up the un-lock warning switch assembly center portion to disengage the 2 claws.
HINT:
Slide the un-lock warning switch assembly, in the direction shown by the arrow in the illustration, to remove it.



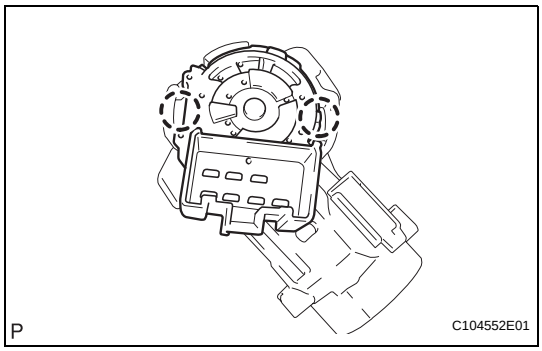
6. REMOVE KEY INTER LOCK SOLENOID (for Automatic Transaxle)

(a) Remove the 2 screws and remove the key lock solenoid from the steering column bracket assembly upper.



7. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

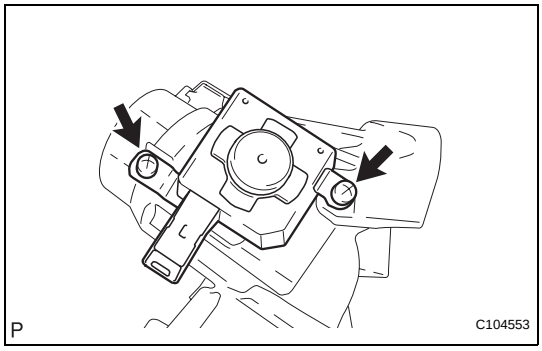
(a) Disengage the 2 claws and remove the ignition (starter) switch assembly from the steering column bracket assembly upper.



REASSEMBLY

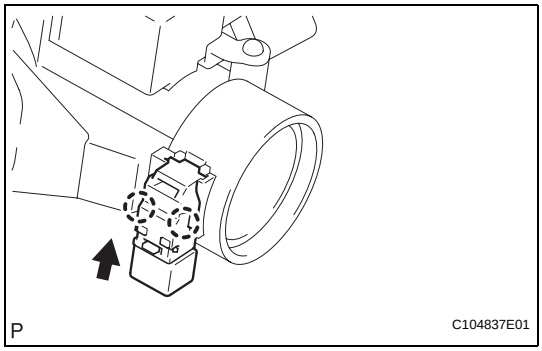
1. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY

(a) Engage the 2 claws to install the ignition (starter) switch assembly onto the steering column bracket assembly upper.



2. INSTALL KEY INTER LOCK SOLENOID (for Automatic Transaxle)

(a) Install the key inter lock solenoid onto the steering column bracket assembly upper with the 2 screws.



3. INSTALL UN-LOCK WARNING SWITCH ASSEMBLY

(a) Engage the 2 claws to install the un-lock warning switch assembly onto the steering column bracket assembly upper.

HINT:

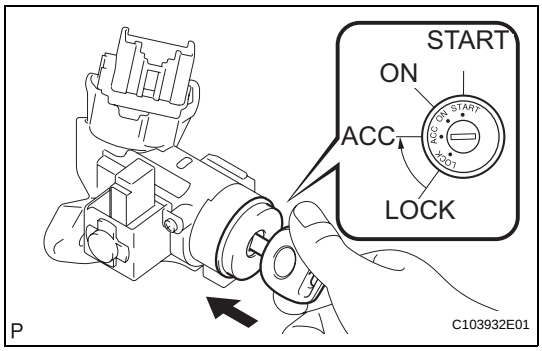
Slide the un-lock warning switch assembly, in the direction shown by the arrow in the illustration, to install it.

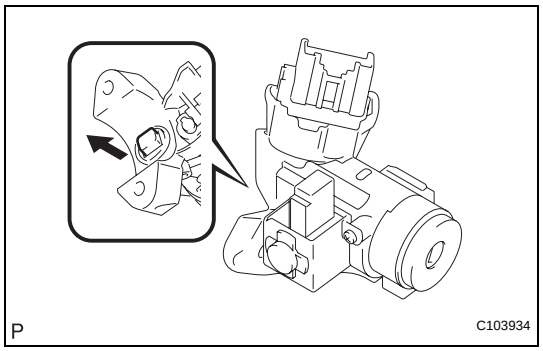
4. INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY

(a) Turn the ignition switch to ACC.

(b) Install the ignition switch lock cylinder assembly into the steering column bracket assembly upper.

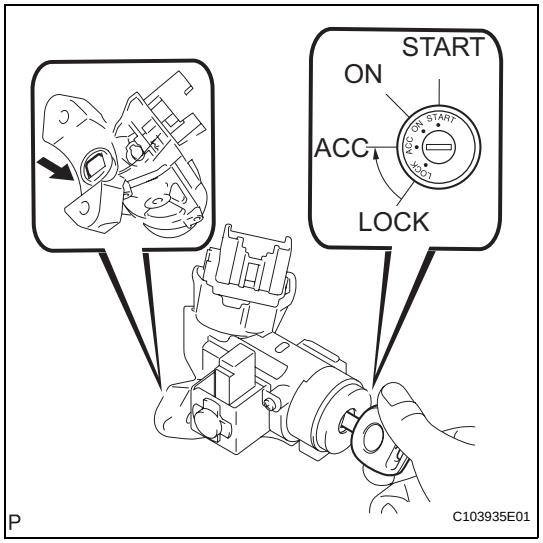
(c) Make sure that the ignition switch lock cylinder assembly is securely fixed onto the ignition switch lock cylinder assembly.





5. INSPECT STEERING LOCK OPERATION

(a) Remove the key and check that the steering lock function is activated.



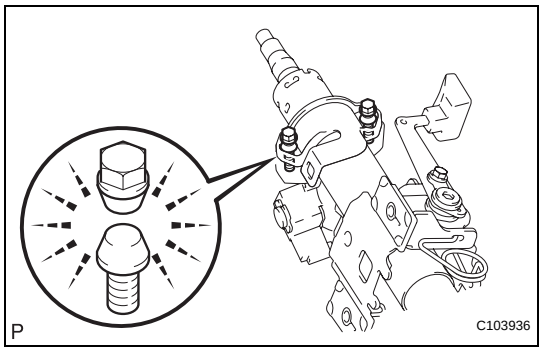
(b) Insert the key, turn the ignition switch to ACC and check that the steering lock function is inactivated.

6. INSTALL STEERING COLUMN UPPER W/SWITCH BRACKET ASSEMBLY

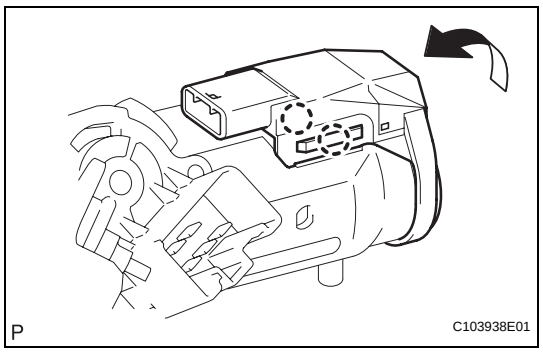
(a) Fix the steering column assembly in a vise between aluminum plates.

NOTICE:

Do not overtighten the vise.

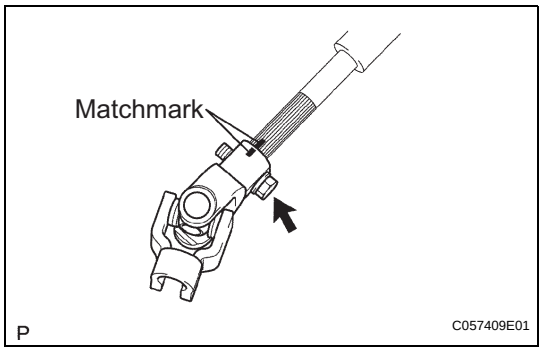


(b) Install the steering column upper with switch bracket assembly and steering column clamp upper with 2 new steering lock set bolts, and then tighten the bolts until their heads come off.



7. INSTALL TRANSPONDER KEY AMPLIFIER

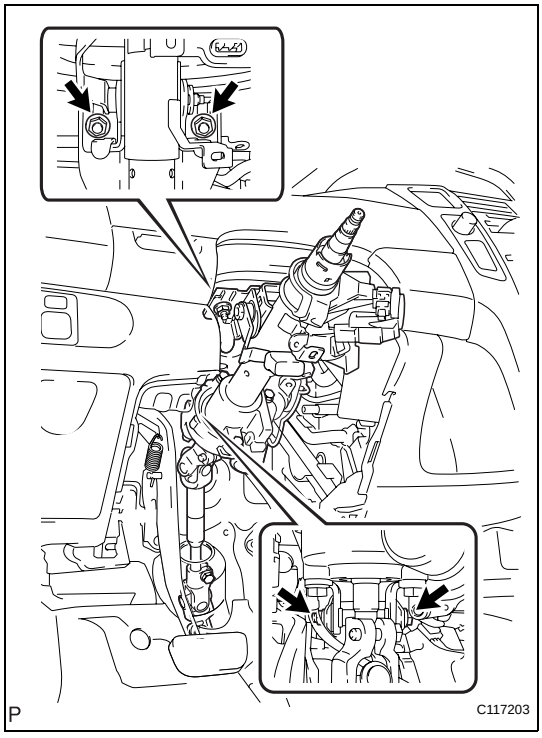
(a) Engage the 2 claws and install the transponder key amplifier onto the steering column upper with the switch bracket.



8. INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY

(a) Align the matchmarks on steering intermediate shaft assembly No. 2 and the steering sliding yoke and provisionally install them with the bolt.

INSTALLATION



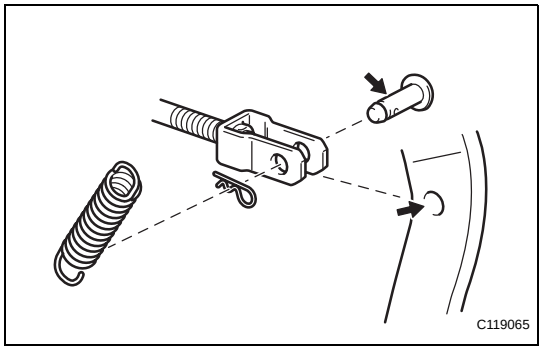
1. INSTALL STEERING COLUMN ASSEMBLY

(a) Install the steering column assembly onto the instrument panel reinforcement assembly with the 3 bolts.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(b) Connect all the connectors and clamp the wire harnesses onto the steering column assembly bracket.

2. INSTALL BRAKE PEDAL (for Automatic Transaxle)

(a) Apply MP grease No. 2 to the brake pedal bush and its installation surfaces.



(b) Install the 2 brake pedal bushes, and install the brake pedal with the nut and brake pedal shaft.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

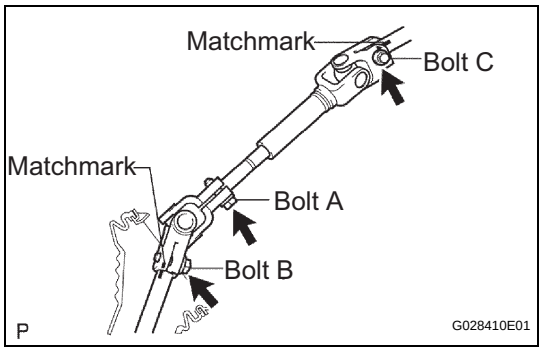
(c) Apply lithium soap base glycol grease to the brake master cylinder push rod clevis pin and its installation point.

(d) Connect the brake master cylinder push rod clevis to the brake pedal with the brake master cylinder push rod clevis pin, install the clip onto the brake master cylinder push rod clevis pin, and then install the brake pedal return spring.

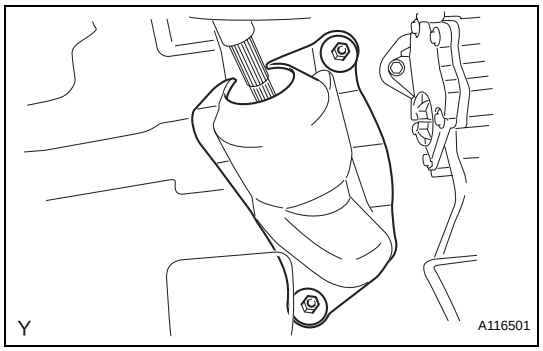
(e) Connect all the connectors and clamp the wire harnesses onto the steering column assembly bracket.

3. INSTALL BRAKE PEDAL SUPPORT (for Manual Transaxle) (See page BR-21)

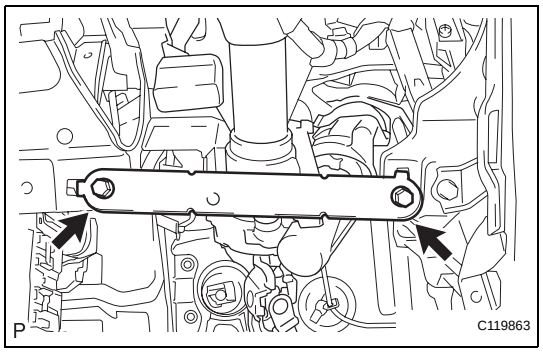
4. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)



5. **INSTALL NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY**
   (a) Align the matchmarks on steering intermediate shaft assembly No. 2 and the steering sliding yoke and provisionally install them with bolt C.
   Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
   (b) Align the matchmarks on the steering sliding yoke and steering gear assembly and install them with bolt B.
   Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
   (c) Tighten bolt A.
   Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)



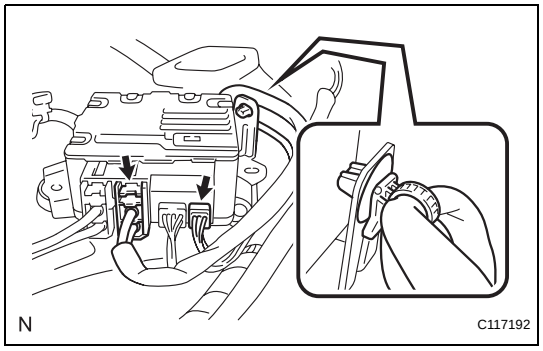
6. **INSTALL COLUMN HOLE COVER SILENCER SHEET**
   (a) Install the column hole cover plate with the 2 clips.
   (b) Install the floor carpet.



7. **INSTALL INSTRUMENT PANEL SUB REINFORCEMENT**
   (a) Align the 2 claws and install the reinforcement instrument panel sub with the 2 bolts.

8. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-78)**

9. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)**



10. **CONNECT POWER STEERING ECU**
    (a) Connect the 2 steering column assembly connectors to the power steering ECU.
    (b) Install the power steering motor harness and torque sensor wire harness clamps onto the side of the power steering ECU.
    (c) Tilt the steering column assembly up and down to make sure that the power steering motor harness and torque sensor wire harness do not interfere with any components.

11. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**

12. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**

13. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**

14. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**

15. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**

16. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**

17. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
HINT:
Use the same procedure for the RH side as for the LH side.

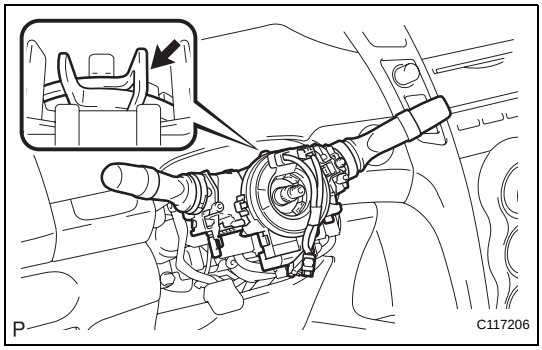
18. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**

19. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**

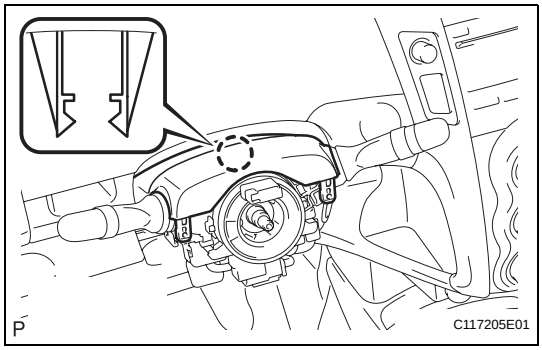
20. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**

21. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**

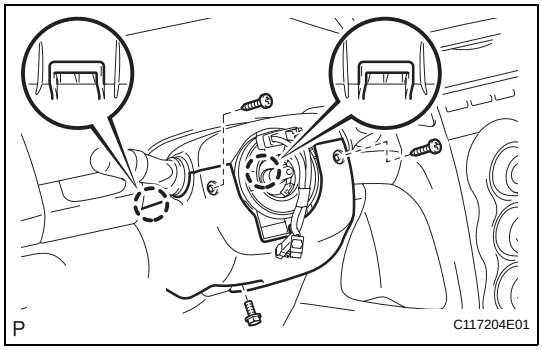
22. **INSTALL COMBINATION SWITCH ASSEMBLY**
(a) Install the turn signal switch assembly with spiral cable onto the steering column assembly with the clamp
(b) Connect all the connectors to the turn signal switch with spiral cable.

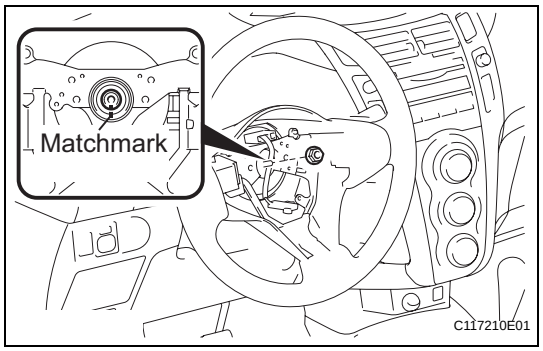


23. **INSTALL STEERING COLUMN COVER**
(a) Engage the claw to install the steering column upper cover.



(b) Engage the 2 claws to install the steering column lower cover.
(c) Install the 3 screws.





24. INSTALL STEERING WHEEL ASSEMBLY

(a) Align the matchmarks and install the steering wheel assembly onto the steering column assembly.

(b) Install the nut.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(c) Connect all the connectors to the spiral cable.

25. INSTALL STEERING PAD (See page RS-310)

26. POSITION FRONT WHEELS FACING STRAIGHT AHEAD

27. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

28. INSPECT SRS WARNING LIGHT TURNS OFF
(See page RS-31)

29. PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT
(See page PS-12)

POWER STEERING SYSTEM

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbags before servicing.

(a) Stop the vehicle on a level, paved road and align the wheels facing straight ahead.

(b) Disconnect the cable from the negative battery terminal.

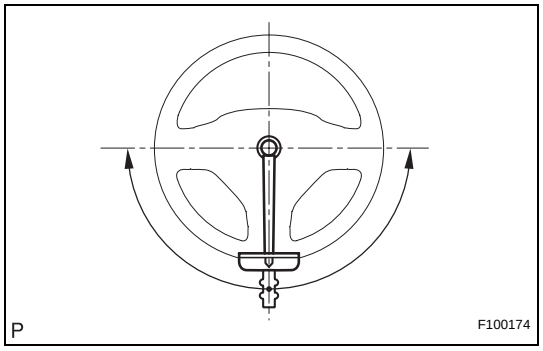
(c) Remove the steering pad (See page RS-309).

(d) Connect the cable to the negative battery terminal.

(e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(f) Turn the ignition switch to ON (the engine is stopped) so that the power steering is ready to operate.



(g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while turning. Check the opposite direction in the same manner.

Steering effort (Reference):

5.5 N*m (56 kgf*cm, 49 in.*lbf)

(h) Align the front wheels facing straight ahead.

(i) Disconnect the cable from the negative battery terminal.

(j) Install the steering pad (See page RS-310).

(k) Connect the cable to the negative battery terminal.

(l) Clear the DTCs (See page RS-38).

(m) Inspect the airbag warning light (See page RS-31).

2. CHECK STEERING WHEEL FREE PLAY

(a) Turn the ignition switch to ON so that the power steering is ready to operate.

(b) Align the wheels facing straight ahead.

(c) Gently turn the steering wheel right and left with your finger and check the steering wheel freeplay.

Maximum freeplay:

30 mm (1.18 in.)

HINT:

If the freeplay is outside the specifications, replace intermediate shaft No. 2 or the steering gear with a new one.

ELECTRONIC POWER STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTION

(a) When handling the electronic parts;
- Avoid any impact to parts such as ECUs and relays. Replace with new ones if dropped or subjected to a severe blow.
- Do not expose to high temperatures or humidity.
- Do not touch the connector terminals, in order to prevent deformation or malfunctions due to static electricity.
- When the power steering ECU has been replaced with a new one, perform the torque sensor zero point calibration. (See page PS-12)

(b) When handling the steering column assembly;
- Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace with new ones if dropped or subjected to a severe blow.
- Do not pull the wire harness when moving the steering column assembly.
- When the steering column assembly has been replaced, perform the torque sensor zero point calibration after initializing the torque sensor zero point. (See page PS-12)

(c) When disconnecting and reconnecting the connectors;
- When disconnecting the connectors related to the electronic power steering system, turn the ignition switch on, center the steering wheel, turn the ignition switch off, and then disconnect the connectors.
- When reconnecting the connectors related to the electronic power steering system, ensure that the ignition switch is off. Center the steering wheel and then turn the ignition switch on.
  NOTICE:
  Do not turn the ignition switch on when the steering wheel is not centered.
- If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the torque sensor zero point calibration. (See page PS-12)

2. PRECAUTIONS FOR CAN COMMUNICATION

(a) CAN communication lines are used to receive information from the skid control ECU (ABS ECU) and the ECM, and to transmit warnings to the combination meter. When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting of the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the electronic power steering system after confirming that the CAN communication system is normal.

(c) Since the CAN communication line has its own length and route, it cannot be repaired temporarily with the bypass wire, etc.

SYSTEM DESCRIPTION

1. DESCRIPTION

The EPS (Electronic Power Steering) system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist power steering effort.

The power steering ECU determines the direction and the amount of assisting power in accordance with the vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, steering effort is controlled to be light during low speed driving and moderately high during high speed driving.

(a) Power steering ECU:
The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.
For vehicles without ABS, the power steering ECU receives vehicle speed signals from the speedometer.

(b) Torque sensor:
The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) EPS motor:
The EPS motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

HOW TO PROCEED WITH TROUBLESHOOTING

Perform troubleshooting according to the following flowchart.
HINT:
For further details, see the page given.
The intelligent tester can be used in steps 3, 4, 7, 10 and 13.

1 VEHICLE BROUGHT TO WORKSHOP

2 CUSTOMER PROBLEM ANALYSIS

NEXT

3 CHECK DTC AND FREEZE FRAME DATA

(a) Record DTCs and freeze frame data. (See page PS-25)

NEXT

4 CLEAR DTC AND FREEZE FRAME DATA

HINT:
Clear DTC and FREEZE FRAME DATA (See page PS-25).

NEXT

5 PROBLEM SYMPTOM CONFIRMATION

- SYMPTOM DOES NOT OCCUR: GO TO STEP 6
- SYMPTOM OCCURS: GO TO STEP 7

6 SYMPTOM SIMULATION

NEXT

7 CHECK DTC

(a) Recheck for DTCs (See page PS-25).
HINT:
- Refer to the diagnostic trouble code chart when any DTCs are output.

PS

- When any CAN communication system DTCs are output, perform troubleshooting on the CAN communication system first.
- When communication to the power steering ECU is not established through the intelligent tester, inspect terminals SIL of the DLC3 and the power steering ECU, and the IG circuit of the power steering ECU.

→ **NORMAL SYSTEM CODE OUTPUT: GO TO STEP 8**

→ **DTC OUTPUT: GO TO STEP 9**

CALIBRATION

1. TORQUE SENSOR ZERO POINT CALIBRATION (USING INTELLIGENT TESTER)

NOTICE:

Perform the torque sensor zero point calibration when any of the following conditions occur.

- The steering column assembly (containing the torque sensor) has been replaced.
- The power steering ECU has been replaced.
- The steering wheel has been replaced.
- The steering gear assembly has been replaced.
- There is a difference in steering effort between turning right and left.

(a) Center the steering wheel and align the front wheels straight ahead.

(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch on and turn the tester on.

(d) Initialize the torque sensor zero point calibration signal and perform the zero point calibration by following the prompts on the tester screen.

(e) Confirm that no DTCs are output after the zero point calibration is completed.

1. When DTC C1515/15 is output, see page PS-35.
2. When DTC C1516/16 is output, see page PS-36.
3. When DTC C1534/34 is output, see page PS-40.

NOTICE:

Do not touch the steering wheel during the calibration.

2. TORQUE SENSOR ZERO POINT CALIBRATION (USING SST CHECK WIRE)

(a) Center the steering wheel and align the front wheels straight ahead.

(b) Initialize the torque sensor zero point calibration signal.

HINT:

If the power steering ECU is replaced, initialization is not necessary.

(1) Stop the vehicle and turn the ignition switch off.

(2) Using SST, connect terminals TS and CG of the DLC3.

SST 09843-18040

(3) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(4) Turn the ignition switch on.

(5) Disconnect and reconnect terminal TC of the DLC3 20 times or more within 20 seconds.

(6) Check that DTC C1515/15 is output.

(c) Perform the torque sensor zero point calibration.

NOTICE:

Do not touch the steering wheel during the calibration.

HINT:

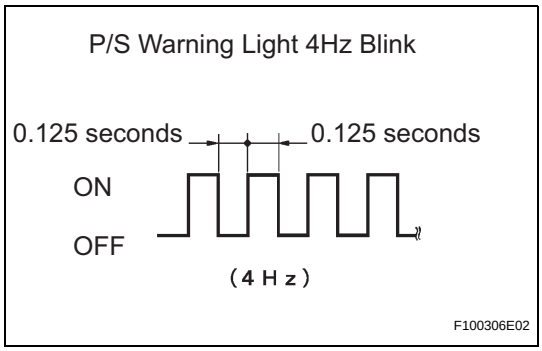
Check whether any DTCs except C1515/15 are output.

(1) Stop the vehicle and turn the ignition switch off.

(2) Using SST, connect terminals TS and CG of the DLC3 and turn the ignition switch on.

SST 09843-18040

(3) Wait for 7 seconds after the P/S warning light comes on.



(4) Confirm that the P/S warning light blinks at intervals of 0.125 seconds (4Hz blink).

(5) Disconnect the SST.

SST 09843-18040

(6) Confirm that no DTCs are output.

1. When DTC C1515/15 is output, see page PS-35.
2. When DTC C1516/16 is output, see page PS-36.
3. When DTC C1534/34 is output, see page PS-40.

TEST MODE PROCEDURE

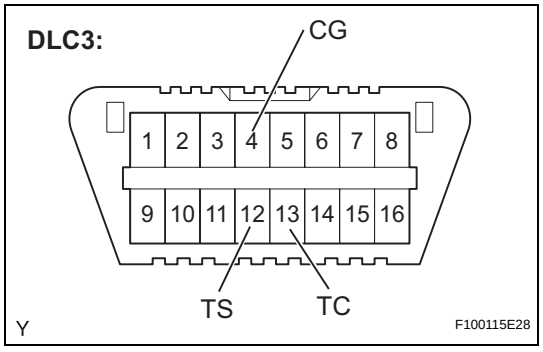
NOTICE:
The torque sensor zero point calibration is performed automatically when the test mode inspection is conducted after the power steering ECU has been replaced with a new one.
HINT:

- Speed sensor signals can be checked easily in test mode.
- Test mode code C1571/71 is stored during the transition to test mode. This code does not indicate a malfunction since the code will be cleared when the ECU determines that the sensor is normal.
- The test mode code is cleared simultaneously when test mode is terminated.

1. TEST MODE START-UP

(a) When using an intelligent tester;
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on and enter test mode by following the instructions on the tester screen.

(b) When not using an intelligent tester;
(1) Turn the ignition switch off and connect terminals 12 (TS) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on.

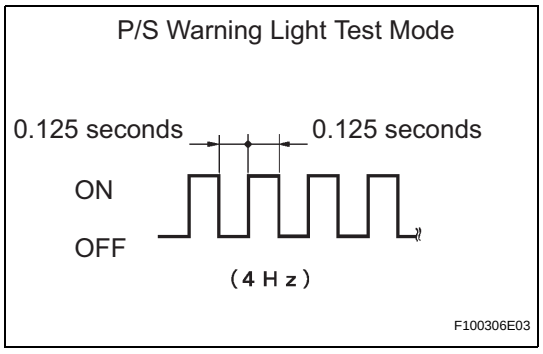


NOTICE:

- **Be sure to connect the correct terminals of the connector, otherwise a malfunction may occur.**
- **If the torque sensor zero point calibration has not been performed, the torque sensor zero point calibration is performed automatically when test mode is entered.**

2. CHECK TEST MODE DISPLAY

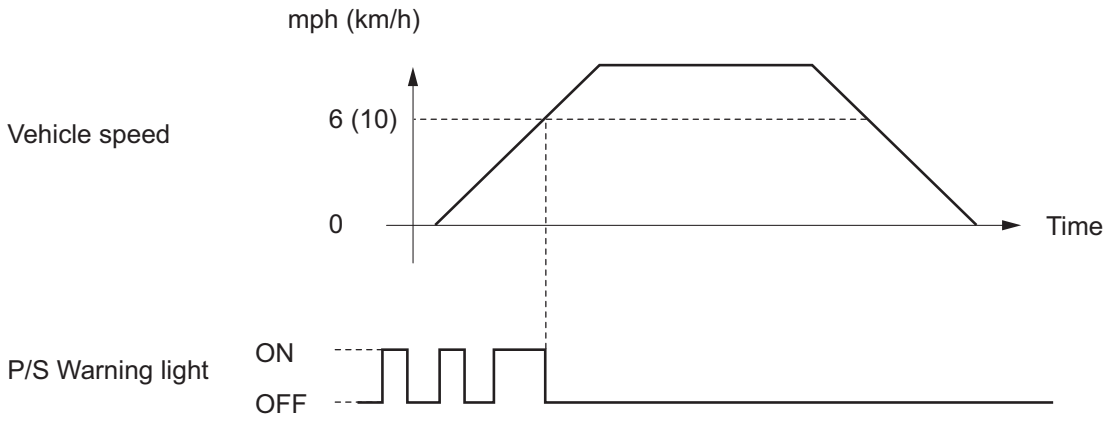
(a) The P/S warning light blinks as shown on the left when test mode is entered.
NOTICE:
If the torque sensor zero point calibration has not been performed, the P/S warning comes on until the torque sensor zero point calibration is completed, and shows the test mode blink pattern after the torque sensor zero point calibration is completed.



3. CHECK VEHICLE SPEED SIGNAL (W/O ABS)

(a) Drive the vehicle until the vehicle speed reaches 6 mph (10 Km/h) or more.

When system is normal:



4Hz blink	Light blinks until test mode code C1571/71 cleared. Light goes off at 6 mph (10 km/h) or more.

C117900E01

4. READ TEST MODE CODE

(a) When using an intelligent tester;

(1) Check the DTCs in test mode.

NOTICE:

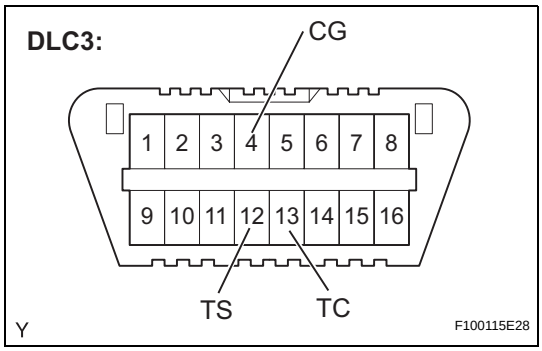
Test mode code is cleared when test mode is terminated.

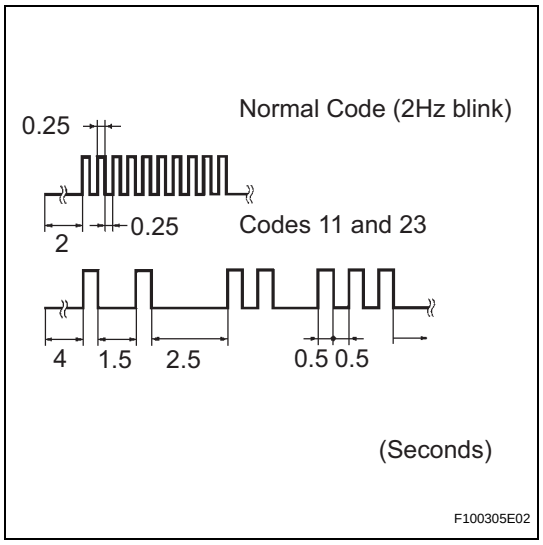
(b) When not using an intelligent tester;

(1) Turn the ignition switch off.

(2) Connect terminals 12 (TS) and 4 (CG) of the DLC3, and also terminals 13 (TC) and 4 (CG) of the DLC3.

SST 09843-18040





(3) Read the number of times that the P/S warning light on the combination meter blinks.
- To indicate the normal code, the P/S warning light comes on for 0.25 seconds at intervals of 0.25 seconds (2Hz blink).
- When outputting a DTC, the P/S warning light displays it at intervals of 4 seconds. When outputting two or more DTCs, the P/S warning light displays each DTC at intervals of 2.5 seconds, and repeats from the first one 4 seconds after indicating the last one.
- If two or more malfunctions are detected at the same time, DTCs are displayed in ascending numerical order.

5. END OF TEST MODE

(a) When using an intelligent tester;
(1) Return to normal mode by following the instructions on the tester screen.
(2) Turn the ignition switch off and disconnect the tester.

(b) When not using an intelligent tester;
(1) Turn the ignition switch off and disconnect terminals 13 (TC) and 4 (CG), and terminals 12 (TS) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on.

TEST MODE CODE

Code	Detection Item	Conditions to clear code	Trouble areas
C1571/71	Vehicle speed check	Vehicle speed 6 mph (10 Km/h) or more	If code cannot be cleared, any of following areas may malfunction. • Speed sensor • Combination meter • Power steering ECU • Wire harness and connector

PROBLEM SYMPTOMS TABLE

for Hatchback

Symptom	Suspected area	See page
Heavy steering	Front tires (improperly inflated, unevenly worn)	TW-1
	Front wheel alignment (incorrect)	SP-2
	Front suspension (Lower ball joint)	SP-23
	Steering gear assembly	PS-73
	Power steering motor	SR-30
	Battery and power source system	-
	Power source voltage of power steering ECU	IN-26
	Power steering ECU	PS-89
Steering effort differs between turning right and left or uneven	Steering center point (zero point) not recorded completely	PS-12
	Front tires (improperly inflated, unevenly worn)	TW-1
	Front wheel alignment (incorrect)	SP-2
	Front suspension (Lower ball joint)	SP-23
	Steering gear assembly	PS-73
	Torque sensor (built into steering column)	SR-30
	Steering column assembly	SR-30
	Power steering motor	SR-30
	Power steering ECU	PS-89
While driving, steering effort does not change in accordance with vehicle speed or steering wheel does not return properly	Front suspension (Lower ball joint)	SP-23
	Speed sensor (w/ ABS)	BC-14
	Skid control ECU (ABS ECU)	BC-89
	Combination meter (w/o ABS)	ME-145
	Torque sensor (built into steering column)	SR-30
	Power steering motor	SR-30
	Power steering ECU	PS-89
	Controlling CAN communication system	CA-9
Friction occurs when turning steering wheel during low speed driving	Power steering motor	SR-30
	Steering column assembly	SR-30
High-pitched sound (squeaking) occurs when turning steering wheel slowly when vehicle stopped	Power steering motor	SR-30
Steering wheel vibrates and noise occurs when turning steering wheel with vehicle stopped	Power steering motor	SR-30
	Steering column assembly	SR-30
P/S warning always indicated on combination meter	Power source voltage of power steering ECU	IN-26
	Combination meter	ME-145
	Power steering ECU	PS-89

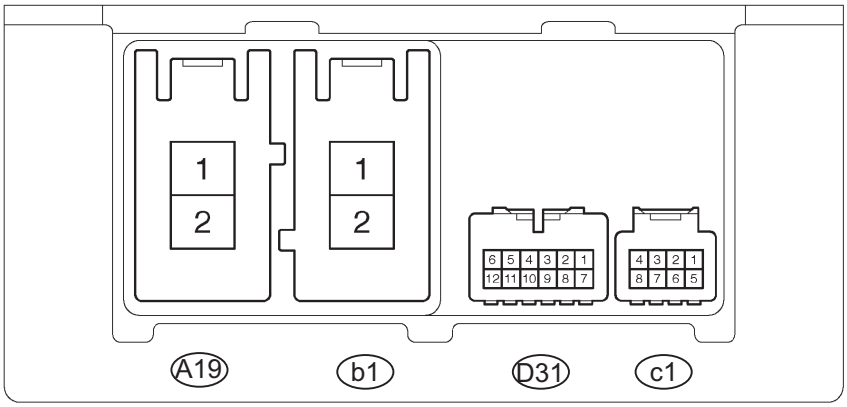
Steering wheel vibrates and noise occurs when turning steering wheel with vehicle stopped	Power steering motor	SR-12
	Steering column assembly	SR-12
P/S warning always indicated on combination meter	Power source voltage of power steering ECU	IN-26
	Combination meter	ME-138
	Power steering ECU	PS-83

TERMINALS OF ECU

Power Steering ECU:

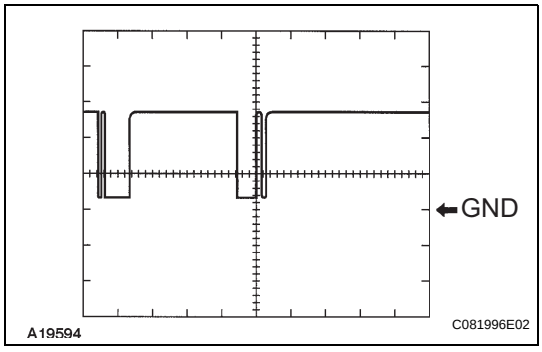


N

F044303E02

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
PIG (A19-1) - PGND (A19-2)	EPS fuse	Always	11 to 14 V
PGND (A19-2) - Body ground	Body ground	Always	Below 1 Ω
M1 (b1-1) - PGND (A19-2)	Power steering motor	1. With ignition switch on, turn steering wheel to left 2. With ignition switch on, turn steering wheel to right	1. 11 to 14 V 2. Below 1 V
M2 (b1-2) - PGND (A19-2)	Power steering motor	1. With ignition switch on, turn steering wheel to left 2. With ignition switch on, turn steering wheel to right	1. Below 1 V 2. 11 to 14 V
CANH (D31-1) - CANL (D31-7)	CAN BUS	Ignition switch off	108 to 132 Ω
SIL (D31-2) - PGND (A19-2)	DLC3	Communication established by connecting intelligent tester to DLC3	Pulse generation (See waveform 1)
IG (D31-6) - PGND (A19-2)	ECU-IG fuse	Ignition switch on	11 to 14 V
TS (D31-11) - PGND (A19-2)	DLC3	Ignition switch on	11 to 14 V
SPD* (D31-5) - PGND (A19-2)	Speed signal	Ignition switch on	Pulse generation (See waveform 2)
TRQ1 (c1 -5) - PGND (A19-2)	Torque sensor	With ignition switch on, turn steering wheel to left and right	0.3 to 4.7 V
TRQV (c1-6) - PGND (A19-2)	Torque sensor	Ignition switch on	7.5 to 8.5 V
TRQ2 (c1-7) - PGND (A19-2)	Torque sensor	With ignition switch on, turn steering wheel to left and right	0.3 to 4.7 V
TRQG (c1-8) - PGND (A19-2)	Torque sensor	Always	Below 1 Ω

* Only for vehicles without ABS



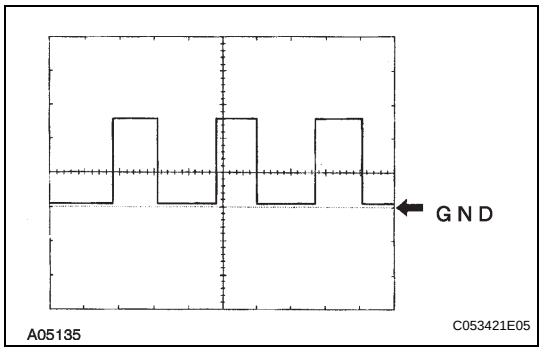
A19594

C081996E02

1. Waveform 1 Reference

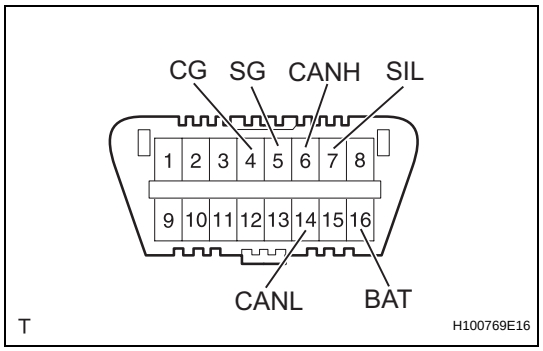
Terminal	SIL - Body ground
Tool setting	5 V/DIV, 1 ms/DIV
Condition	Communication established by connecting intelligent tester to DLC3

PS



2. Waveform 2
Reference

Terminal	SPD - Body ground
Tool setting	5 V/DIV, 20 ms/DIV
Condition	Vehicle speed approximately 12.4 mph (20 km/h)



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3:
The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

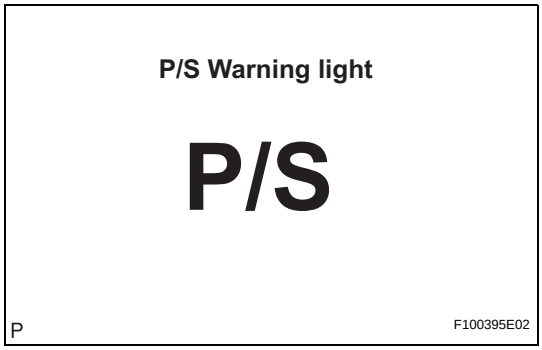
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.



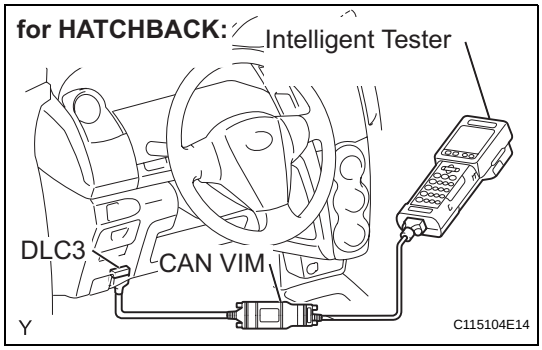
2. WARNING LIGHT

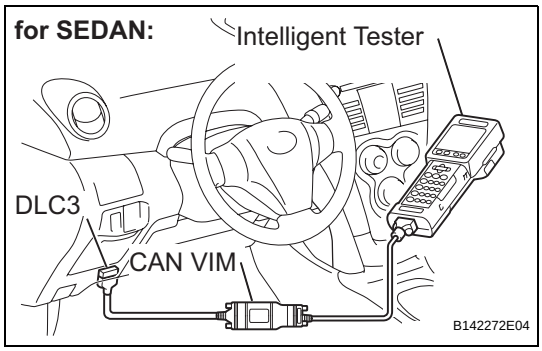
(a) When a problem occurs in the electronic power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

DTC CHECK / CLEAR

1. CHECK DTC

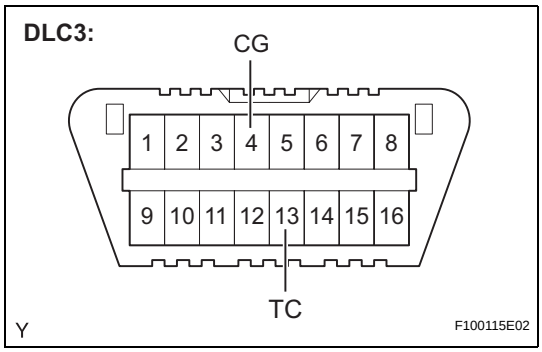
(a) When using an intelligent tester;



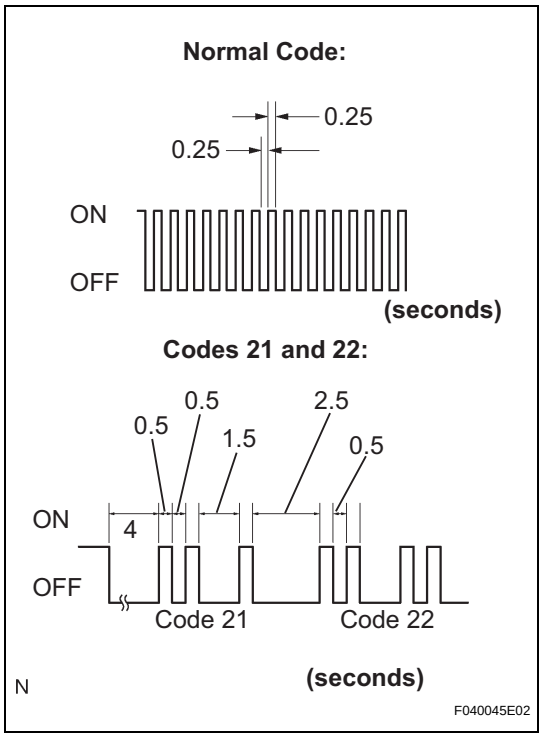


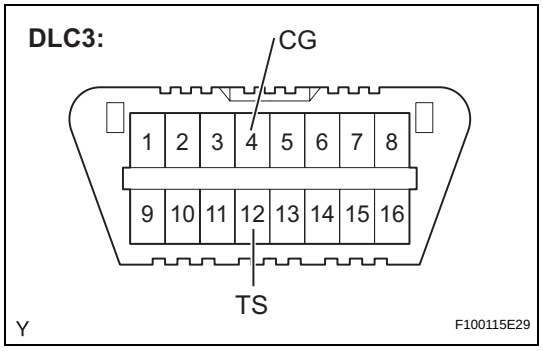
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on and turn the tester on.
(3) Read the DTCs by following the prompts on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

(b) When not using an intelligent tester;



(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on.





(3) Read and write down any DTCs indicated by the P/S warning light on the combination meter. Refer to the chart on the left for examples of a normal code and DTCs 21 and 22.
HINT:
- If the P/S warning light does not blink to display any DTCs set or the normal code, inspect the circuit shown in the table below.

Trouble Area	See Page
EPS warning light circuit	PS-53

- If two or more malfunctions are detected simultaneously, DTCs will be displayed in ascending numerical order.

(4) Refer to the Diagnostic Trouble Code Chart (See page PS-29) for DTC information.

2. CLEAR DTC

(a) When using an intelligent tester;
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on and turn the tester on.
(3) Clear the DTCs by following the prompts on the intelligent tester.
(4) Turn the ignition switch off.
(5) Disconnect the intelligent tester from the DLC3.

(b) When not using an intelligent tester;
(1) Using SST, connect terminals 12 (TS) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on.
(3) Disconnect the SST check wire from terminal 4 (CG) and reconnect it, and repeat this procedure 4 times or more within 8 seconds.
(4) Check that the P/S warning light blinks a code to indicate normality.
(5) Turn the ignition switch off.
(6) Remove the SST from the DLC3.

FAIL-SAFE CHART

When a problem occurs in the electronic power steering system, the P/S warning light on the combination meter comes on, and the ECU stops the steering power assist, maintains the amount of power assist constant, or reduces the amount of power assist to protect the system.

DTC No.	Malfunction	Fail-safe
C1511/11 C1512/12 C1513/13 C1514/14	Torque sensor malfunction	Assist force restricted
C1517/17	Torque sensor malfunction	Power assist stopped
C1524/24	Motor malfunction	Power assist stopped
C1531/31 C1532/32	Power steering ECU malfunction	Power assist stopped
C1533/33	Temperature sensor malfunction in power steering ECU	Assist force restricted
C1534/34	EEPROM abnormal	Assist force restricted
C1535/35	Steering wheel location data error	Power assist stopped
C1541/41 C1542/42	Speed sensor malfunction	Amount of power assist remains constant at speed of 43 mph (70 Km/h)
C1551/51	IG power source voltage error	Assist force restricted
C1552/52	PIG power source voltage error	Assist force restricted
C1553/53	Overvoltage at IG and PIG terminals	Assist force restricted
C1554/54	Power source relay malfunction	Power assist stopped
C1555/55	Motor relay malfunction	Power assist stopped
U0073	CAN bus malfunction	-
U0105	ECM communication error	Amount of power assist remains constant at speed of 43 mph (70 Km/h)
U0121	ABS ECU communication error	Amount of power assist remains constant at speed of 43 mph (70 Km/h)
-	Extremely high temperature in ECU	Assist force restricted until normal ECU temperature recovers
-	Power source voltage drop	Assist force suspended until voltage recovers

HINT:

The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.

DATA LIST / ACTIVE TEST

1. DATA LIST

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Operate the intelligent tester according to the prompts on the tester and select DATA LIST.

Item	Item Description	Inspection Condition	Reference value
TRQ1	Torque sensor 1 output value: Minimum: 0 V, Maximum: 5 V	1. Steering wheel not turned (without load) 2. Steering wheel turned to right with vehicle stopped 3. Steering wheel turned to left with vehicle stopped	1. 2.3 to 2.7 V 2. 2.5 to 4.7 V 3. 0.3 to 2.5 V
TRQ2	Torque sensor 2 output value: Minimum: 0 V, Maximum: 5 V	1. Steering wheel not turned (without load) 2. Steering wheel turned to right with vehicle stopped 3. Steering wheel turned to left with vehicle stopped	1. 2.3 to 2.7 V 2. 2.5 to 4.7 V 3. 0.3 to 2.5 V
TRQ3	Torque value for assist control: Minimum: 0 V, Maximum: 5 V	1. Steering wheel not turned (without load) 2. Steering wheel turned to right with vehicle stopped 3. Steering wheel turned to left with vehicle stopped	1. 2.3 to 2.7 V 2. 2.5 to 4.7 V 3. 0.3 to 2.5 V
SPD	Vehicle speed from meter: Minimum: 0 mph (km/h), Maximum: 158.5 mph (255 km/h)	1. Vehicle stopped 2. Vehicle driven at constant speed	1. 0 mph (km/h) 2. No significant fluctuation
MOTOR ACTUAL	Current to motor: Minimum: -128 A, Maximum: 127 A	-	-
COMMAND VALUE	Requested current to motor: Minimum: -128 A, Maximum: 127 A	-	-
THERMISTOR TEMP	ECU substrate temperature: Minimum: -50 °C, Maximum: 205 °C	Ignition switch on	-
PIG SUPPLY	Power source voltage to activate motor: Minimum: 0 V, Maximum: 25.5 V	Power steering in operation	11 to 14 V
IG SUPPLY	ECU power source voltage: Minimum: 0 V, Maximum: 25.5 V	-	11 to 14 V
TRQ1 ZERO VAL	Zero point value of torque sensor 1: Minimum: 0 V, Maximum: 5 V	Steering wheel not turned (without load)	2.3 to 2.7 V
TRQ2 ZERO VAL	Zero point value of torque sensor 2: Minimum: 0 V, Maximum: 5 V	Steering wheel not turned (without load)	2.3 to 2.7 V
TRQ3 ZERO VAL	Zero point value of torque sensor for assist control: Minimum: 0 V, Maximum: 5 V	Steering wheel not turned (without load)	2.3 to 2.7 V
MOTOR TERMINAL(+)	Motor terminal M1 voltage: Minimum: 0 V, Maximum: 25.5 V	1. Steering wheel turned to right 2. Steering wheel turned to left	1. Below 1 V 2. 11 to 14 V
MOTOR TERMINAL(-)	Motor terminal M2 voltage: Minimum: 0 V, Maximum: 25.5 V	1. Steering wheel turned to right 2. Steering wheel turned to left	1. 11 to 14 V 2. Below 1 V
MTR OVERHEAT	Continuous overheat prevention control record: REC/UNREC	-	-
MTR LOW POWER	PIG power source voltage drop record: REC/UNREC	-	-

Item	Item Description	Inspection Condition	Reference value
CONTROL MODE	Codes indicating DTC detection timing during ECU control displayed in hexadecimal	-	-
IG ON/OFF TIMES	Number of times ignition switch turned on after DTC detection: Minimum: 0 time, Maximum: 255 times	-	-
# CODE	Number of detected DTCs when freeze frame data stored: Minimum: 0 time, Maximum: 255 times	-	-
ECU ID	ECU identification information	-	-
TEST MODE STAT	Selected mode: NORMAL MODE / TEST MODE	-	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- If any DTCs are displayed during the DTC check, inspect the circuit listed for those DTCs. For details of each DTC, refer to the page indicated in the DTC chart.
- Test mode code C1571/71 is stored during the transition to test mode. This code does not indicate a malfunction since the code will be cleared when the ECU determines that the sensor is normal. The test mode code is cleared simultaneously when test mode is terminated.
- The P/S warning light remains illuminated during test mode and starts blinking when the speed sensor is determined to be normal.

DTC No.	Detection Item	Trouble Areas	Normal Return	P/S Warning Light	See page
C1511/11	Torque Sensor 1 Malfunction	• Steering column assembly (Torque sensor) • Power steering ECU	Ignition switch on again	○	PS-32
C1512/12	Torque Sensor Circuit Malfunction	• Steering column assembly (Torque sensor) • Power steering ECU	Ignition switch on again	○	PS-32
C1513/13	Torque Sensor Circuit Malfunction	• Steering column assembly (Torque sensor) • Power steeing ECU	Ignition switch on again	○	PS-32
C1514/14	Torque Sensor Power Source Circuit Malfunction	• Steering column assembly (Torque sensor) • Power steering ECU	Ignition switch on again	○	PS-32
C1515/15	Torque Sensor Zero Point Adjustment is not Initialized	• Torque sensor zero point calibration not performed • Steering column assembly	After calibrating torque sensor zero point	○	PS-35
C1516/16	Torque Sensor Zero Point Adjustment Incomplete	• Torque sensor zero point calibration failure • Steering column assembly	After calibrating torque sensor zero point normally	○	PS-36

DTC	C1511/11	Torque Sensor 1 Malfunction

DTC	C1512/12	Torque Sensor Circuit Malfunction

DTC	C1513/13	Torque Sensor Circuit Malfunction

DTC	C1514/14	Torque Sensor Power Source Circuit Malfunction

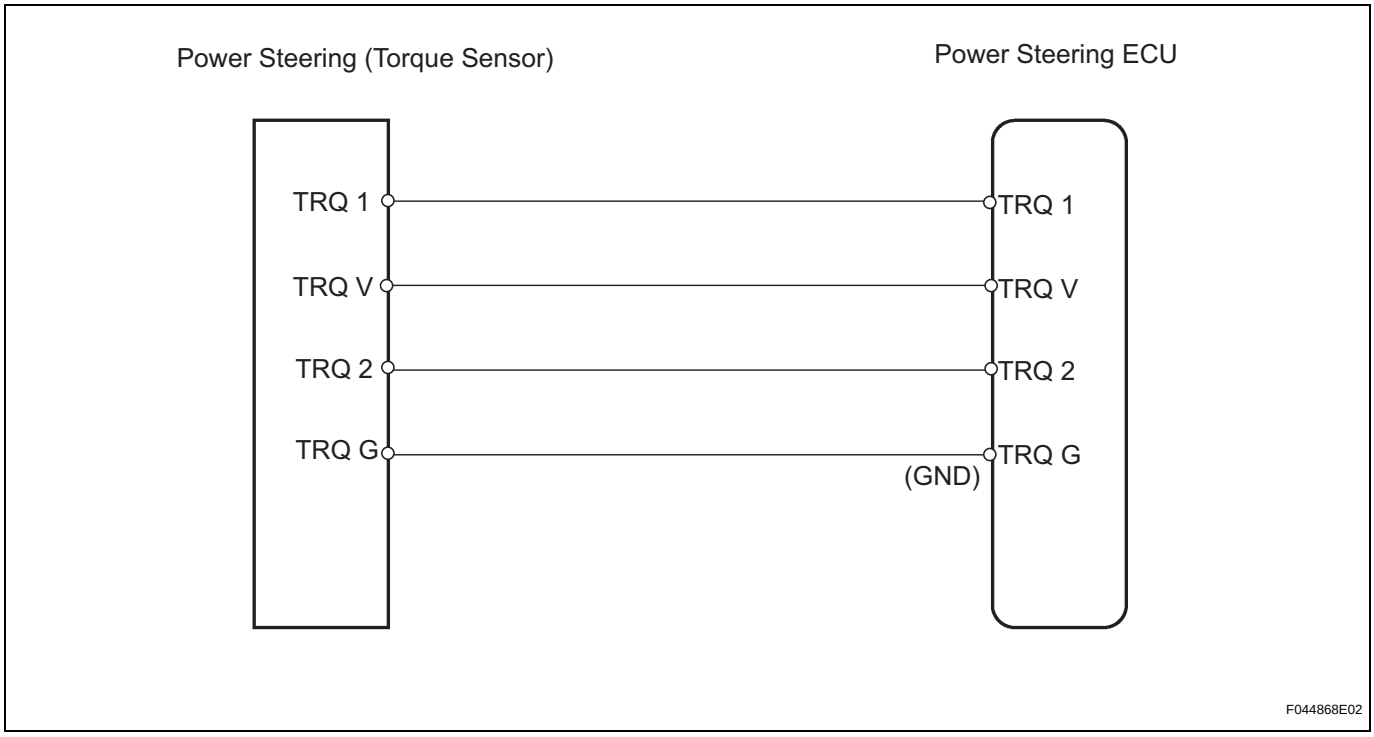
DTC	C1517/17	Torque Sensor Hold Malfunction

DESCRIPTION

The torque sensor converts the rotation torque input from the steering wheel into electric signals and sends them to the power steering ECU.

DTC No.	Detection Item	Trouble Area
C1511/11	Torque sensor (TRQ1) signal error or stop	• Torque sensor (built into steering column assembly) • Power steering ECU
C1512/12	Torque sensor (TRQ2) signal error or stop	
C1513/13	Deviation between torque sensor TRQ1 and TRQ2 exceeds specified value	
C1514/14	Torque sensor power source voltage error	
C1517/17	Temporary control due to malfunction related to torque sensor continues for long time	

WIRING DIAGRAM



INSPECTION PROCEDURE

1 READ VALUE OF DATA LIST (TRQ1, TRQ2)

(a) Connect the intelligent tester to DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Select the items [TRQ1] and [TRQ2] in the DATA LIST.
(d) Measure the voltage.

Item	Item Description	Inspection Condition	Reference Value
TRQ1	Torque sensor 1 output value Minimum: 0 V, Maximum: 5 V	1. Steering wheel not turned (without load) 2. Turning steering wheel to right with vehicle stopped 3. Turning steering wheel to left with vehicle stopped	1. 2.3 to 2.7 V 2. 2.5 to 4.7 V 3. 0.3 to 2.5 V
TRQ2	Torque sensor 2 output value Minimum: 0 V, Maximum: 5 V		

(e) Check the difference in the values between [TRQ1] and [TRQ2].

OK:

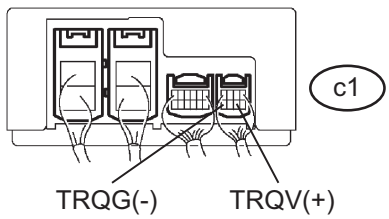
The voltage difference is below 0.3 V.

OK → **CHECK INTERMITTENT PROBLEMS**

NG

2 INSPECT POWER STEERING ECU (OUTPUT)

Power Steering ECU:



G21778

(a) Turn the ignition switch on.
(b) Measure the voltage.

Standard voltage

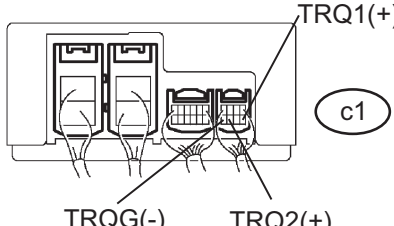
Tester Connection	Condition	Specified condition
TRQV (c1-6) - TRQG (c1-8)	Ignition switch on	7.5 to 8.5 V

NG → **REPLACE POWER STEERING ECU**

OK

3 INSPECT STEERING COLUMN ASSEMBLY (TORQUE SENSOR)

Power Steering ECU:



G21778

(a) Turn the ignition switch on.
(b) Measure the voltage.

Standard voltage

Tester Connection	Condition (Steering Position)	Specified Condition
TRQ1 (c1-5) - TRQG (c1-8)	Center position	2.3 to 2.7 V
TRQ2 (c1-7) - TRQG (c1-8)	Center position	2.3 to 2.7 V
TRQ1 (c1-5) - TRQG (c1-8)	Turned to right	2.5 to 4.7 V

PS

Tester Connection	Condition (Steering Position)	Specified Condition
TRQ2 (c1-7) - TRQG (c1-8)	Turned to right	2.5 to 4.7 V
TRQ1 (c1-5) - TRQG (c1-8)	Turned to left	0.3 to 2.5 V
TRQ2 (c1-7) - TRQG (c1-8)	Turned to left	0.3 to 2.5 V

NG → **REPLACE STEERING COLUMN ASSEMBLY**

OK

REPLACE POWER STEERING ECU

DTC	C1515/15	Torque Sensor Zero Point Adjustment is not Initialized

DESCRIPTION

This DTC does not indicate a malfunction. The power steering ECU outputs this DTC when it determines that the torque sensor zero point calibration has not been performed.

DTC No.	DTC Detection Condition	Trouble Area
C1515/15	Torque sensor zero point calibration not performed.	• Torque sensor zero point calibration • Steering column assembly

INSPECTION PROCEDURE

1	PERFORM ZERO POINT CALIBRATION (TORQUE SENSOR)

NEXT

2	CONFIRM DTC

(a) Check for DTCs (See page PS-25).

Result

DTC still output even after performing torque sensor zero point calibration 3 times.	A
DTC still output even after performing torque sensor zero point calibration once or twice.	B
Normal system code output.	C

HINT:
The steering column assembly must be replaced if C1515/15 is still output even after the torque sensor zero point calibration is performed 3 times.

B	Go to step 1
C	END

A

REPLACE STEERING COLUMN ASSEMBLY

DTC	C1516/16	Torque Sensor Zero Point Adjustment Incomplete

DESCRIPTION

This DTC does not indicate a malfunction. The power steering ECU outputs this DTC when it determines that the torque sensor zero point calibration has not been completed successfully.

DTC No.	DTC Detection Condition	Trouble area
C1516/16	Torque sensor zero point calibration not completed successfully.	• Torque sensor zero point calibration failure • Steering column assembly

INSPECTION PROCEDURE

1	CLEAR DTC

NEXT

2	PERFORM INITIALIZATION (TORQUE SENSOR ZERO POINT)

NEXT

3	PERFORM ZERO POINT CALIBRATION (TORQUE SENSOR)

NEXT

4	CONFIRM DTC

(a) Check for DTCs (See page PS-25).

Result

DTC still output even after performing torque sensor zero point calibration 3 times.	A
DTC still output even after performing torque sensor zero point calibration once or twice.	B
Normal system code output.	C

HINT:
The steering column assembly must be replaced if C1516/16 is still output even after the torque sensor zero point calibration is performed 3 times.

B → Go to step 1

C → END

A

REPLACE STEERING COLUMN ASSEMBLY

PS

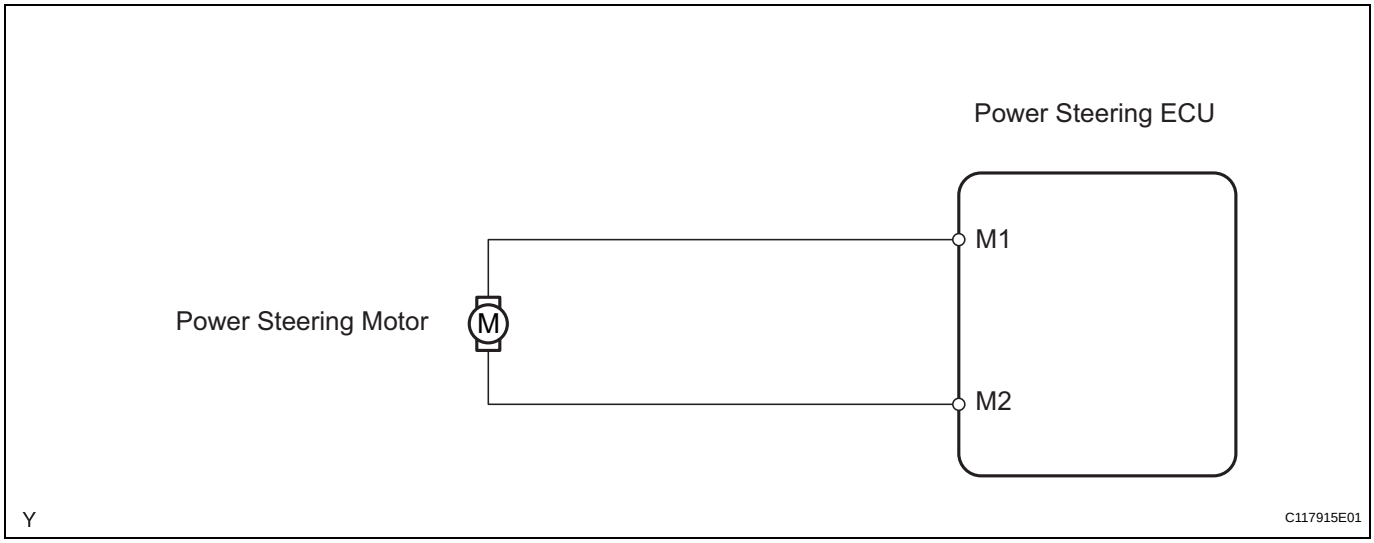
DTC	C1524/24	Motor Circuit Malfunction

DESCRIPTION

The power steering ECU supplies the current to the power steering motor through the motor circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1524/24	Short (or open) in motor circuit or abnormal voltage or current in motor circuit.	• Steering column assembly • Power steering ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (MOTOR ACTUAL CURRENT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Select the items [MOTOR ACTUAL CURRENT] and [COMMAND VALUE] in the DATA LIST and read the value displayed on the intelligent tester.

Standard current

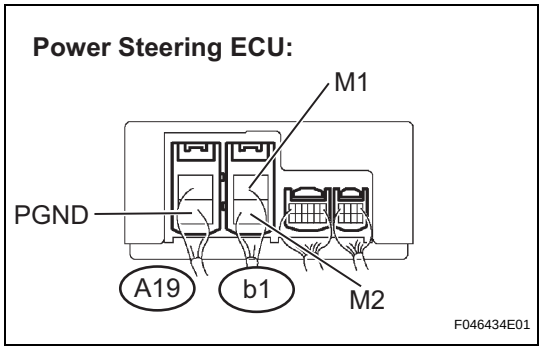
Data List Item	Steering Position (Left Turned)	Steering Position (Center)	Steering Position (Right Turned)
MOTOR ACTUAL	10 A to 55 A	-1 A to +1 A	-55 A to -10 A
COMMAND VALUE	55 A	0 A	-55 A

HINT:
The current changes when steering wheel is turned.

OK → CHECK INTERMITTENT PROBLEMS

NG

2 INSPECT POWER STEERING ECU



(a) Turn the ignition switch on.
(b) Measure the voltage.

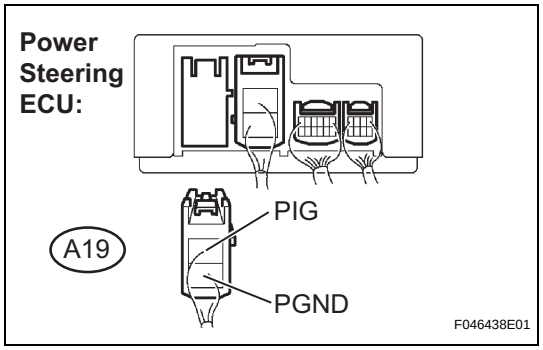
Standard voltage

Tester Connection	Condition (Steering Position)	Specified Condition
M1 (b1-1) - PGND (A19-2)	Turned to right	Below 1 V
M1 (b1-1) - PGND (A19-2)	Turned to left	11 to 14 V
M2 (b1-2) - PGND (A19-2)	Turned to right	11 to 14 V
M2 (b1-2) - PGND (A19-2)	Turned to left	Below 1 V

OK → Go to step 4

NG

3 CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)



(a) Disconnect the connector from the power steering ECU.
(b) Measure the resistance and the voltage.

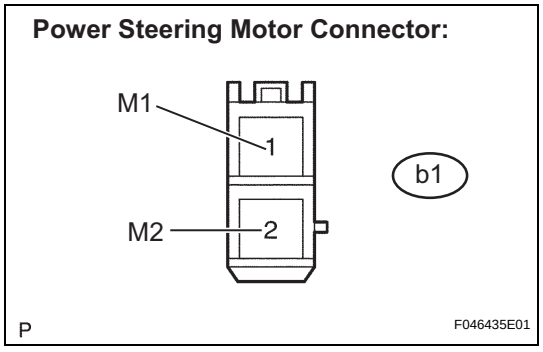
Standard

Tester Connection	Condition	Specified Condition
PGND (A19-2) - Body ground	Always	Below 1 Ω
PIG (A19-1) - Body ground	Ignition switch on.	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4 INSPECT STEERING COLUMN ASSEMBLY (POWER STEERING MOTOR)



(a) Disconnect the connector from the power steering ECU.
(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
M1 (b1-1) - M2 (b1-2)	Always	0.08 to 0.15 Ω
M1 (b1-1) - Body ground	Always	1 MΩ or higher
M2 (b1-2) - Body ground	Always	1 MΩ or higher

NG → REPLACE STEERING COLUMN ASSEMBLY

PS

OK

REPLACE POWER STEERING ECU

DTC	C1531/31	EPS ECU Circuit Malfunction

DTC	C1532/32	EPS ECU Circuit Malfunction

DTC	C1533/33	EPS ECU Circuit Malfunction

DTC	C1534/34	EPS ECU Circuit Malfunction

DTC	C1535/35	Steering Wheel Location Data Error

DESCRIPTION

The fail-safe function operates to stop power assist when DTCs indicating ECU malfunctions are output. However, the power assist operation continues when DTC C1534/34 is output because it indicates an EEPROM error in the ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1531/31	ECU internal malfunction (CPU malfunction)	Power steering ECU
C1532/32	ECU internal malfunction (Peripheral circuit malfunction)	
C1533/33	ECU internal malfunction (Substrate temperature sensor malfunction)	
C1534/34	ECU internal malfunction (EEPROM error)	
C1535/35	Steering wheel location data error (LHD or RHD)	

INSPECTION PROCEDURE

1	CONFIRM DTC

(a) Check for DTCs.

OK:

DTCs other than C1531/31, C1532/32, C1533/33, C1534/34 and C1535/35 are not output.

NG → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

OK

REPLACE POWER STEERING ECU

DTC	C1541/41	Speed Sensor Malfunction

DTC	C1542/42	Speed Sensor Malfunction

DTC	C1571/71	Speed Sensor Malfunction (Test Mode DTC)

DESCRIPTION

The power steering ECU controls the assisting power in accordance with the vehicle speed signals from the combination meter.

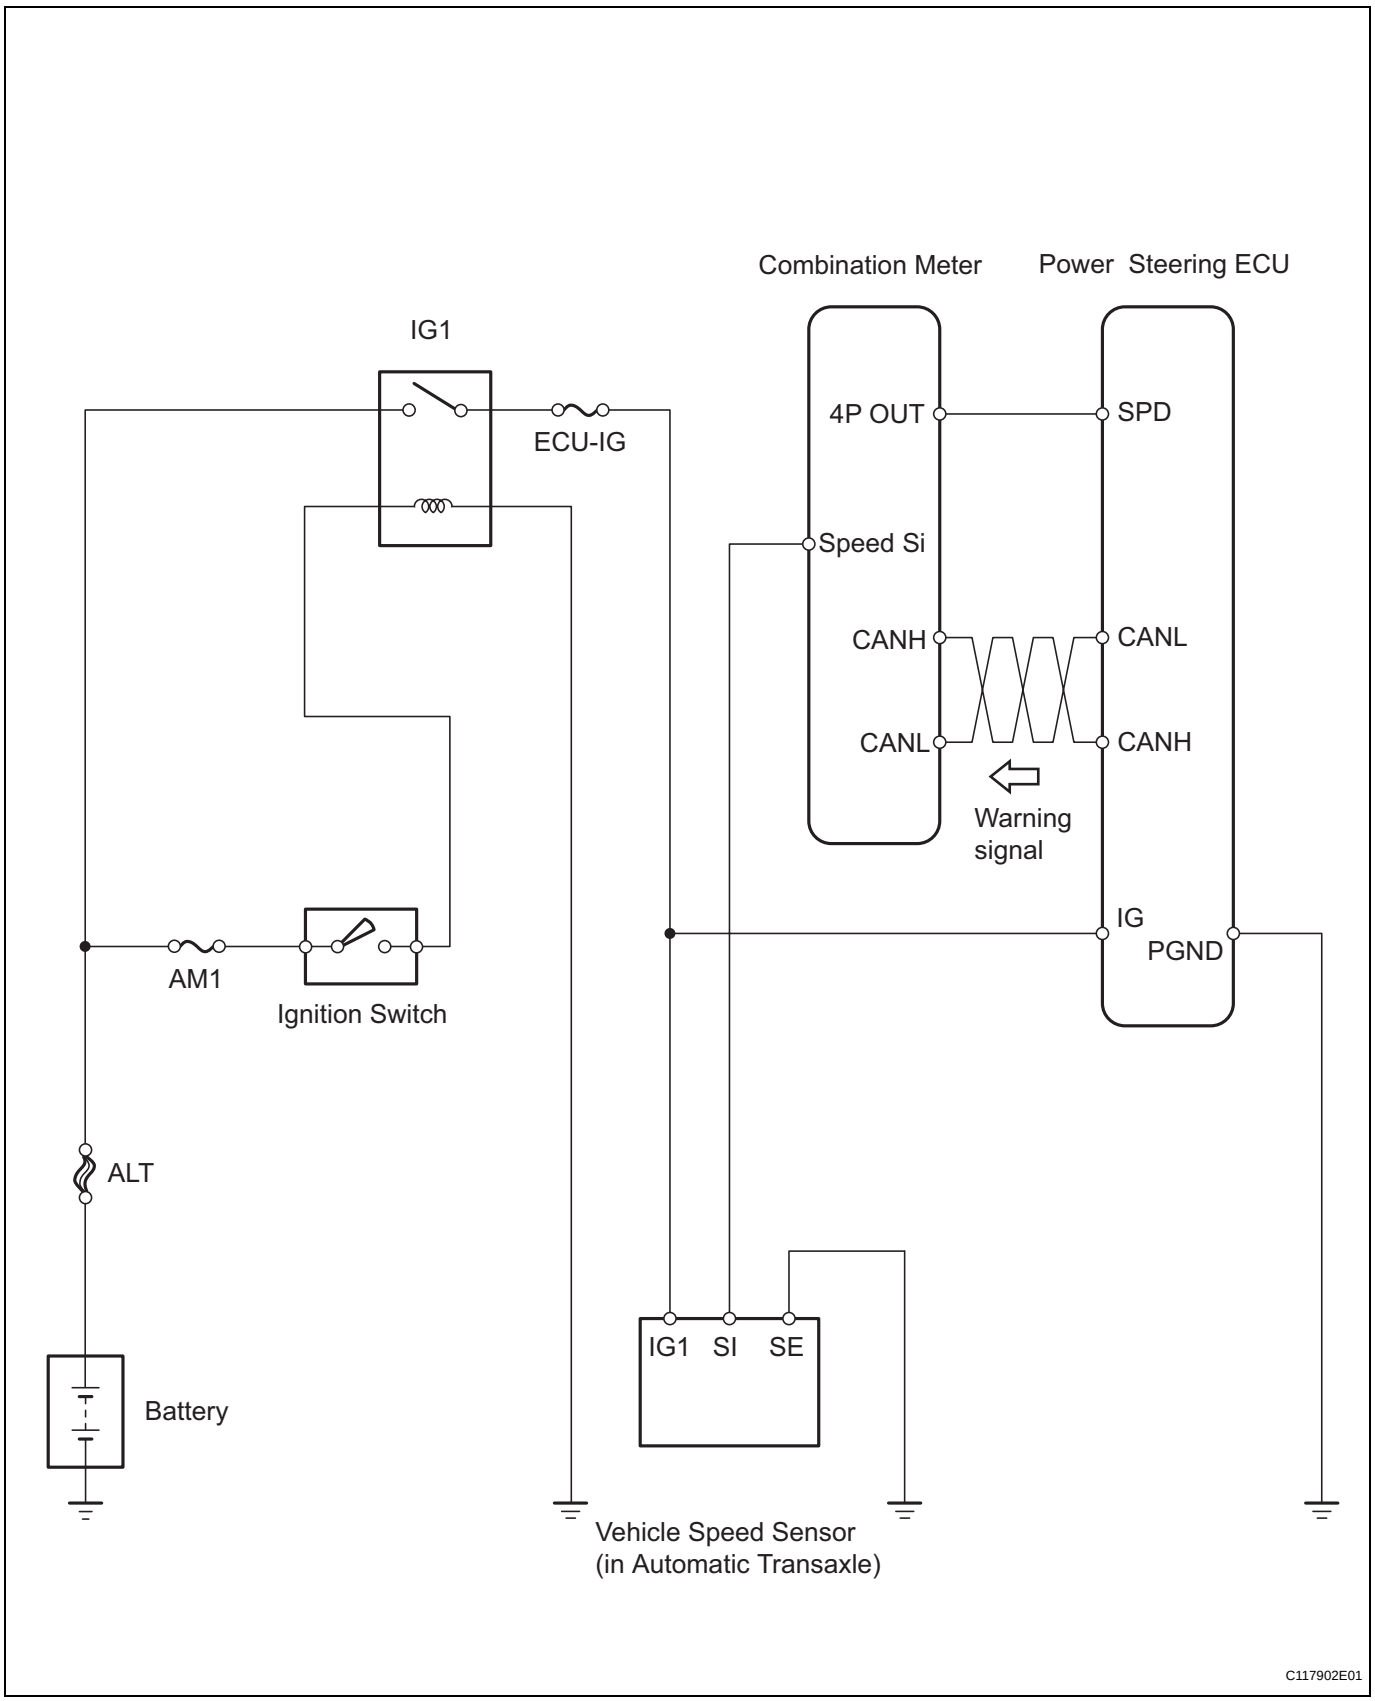
HINT:

These DTCs are only for vehicles without a skid control ECU (ABS ECU).

When the sensor is normal, a pulse signal (43 Hz at 37 mph [60 km/h]) that alternates between 0 V and 5 V is transmitted to the ECU.

DTC No.	Detection Item	Trouble Area
C1541/41	Speed sensor malfunction.	• Speed sensor • Speed sensor circuit • Combination meter • Power steering ECU
C1542/42		
C1571/71	Speed sensor malfunction (Test mode).	

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Confirm that DTC C1571/71 has been cleared by activating test mode after the repair is completed.

1	READ VALUE OF DATA LIST (SPD)

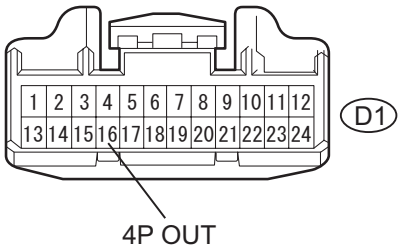
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Select the item [SPD] in the DATA LIST and read the value displayed on the intelligent tester.
(d) Drive the vehicle and check that there is no significant difference between the speed value displayed by the intelligent tester and the speed value displayed by the speedometer.
OK:
Speed values are same.
HINT:
There is tolerance of + - 10 % in the speedometer indication.

OK → **CHECK INTERMITTENT PROBLEMS**

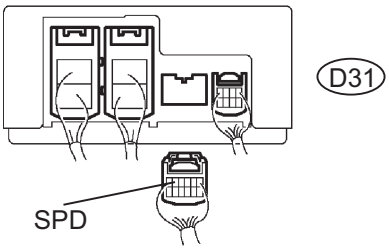
NG

2	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - COMBINATION METER)

Combination Meter (harness side):



Power steering ECU:



C122913E01

(a) Disconnect the connectors from the power steering ECU and the combination meter.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
SPD (D31-5) - 4P OUT (D1-16)	Always	Below 1 Ω
SPD (D31-5) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

GO TO COMBINATION METER SYSTEM

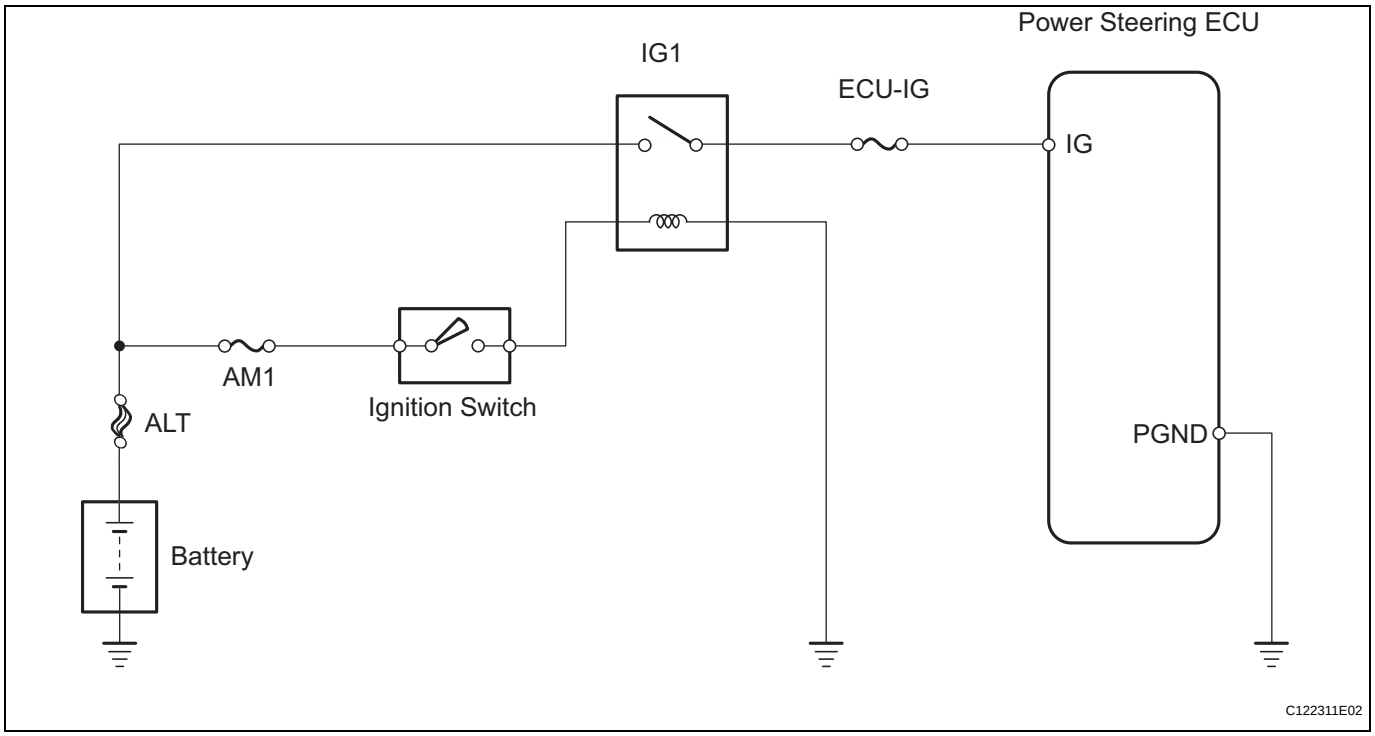
DTC	C1551/51	IG Power Source Circuit Malfunction

DESCRIPTION

The power steering ECU distinguishes the ignition switch status as on or off through the IG power source circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1551/51	Open or short in IG power source circuit with ignition switch on.	• ECU-IG fuse • IG power source circuit • Power steering ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (IG SUPPLY)

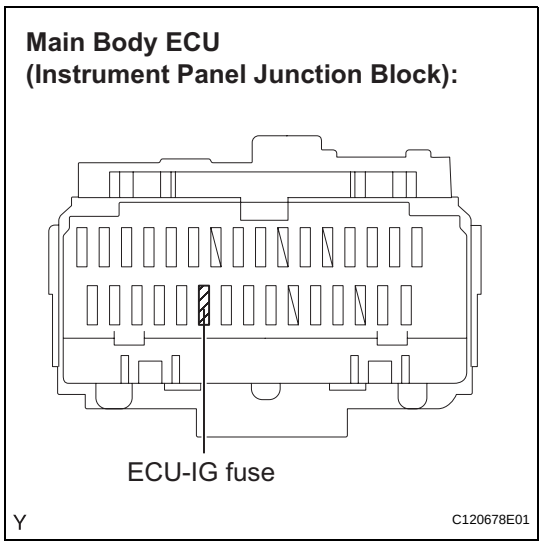
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Select the item [IG SUPPLY] in the DATA LIST and read the value displayed on the intelligent tester.
Standard voltage:
11 to 14 V

OK → **CHECK INTERMITTENT PROBLEMS**

NG

PS

2	INSPECT FUSE (ECU-IG)

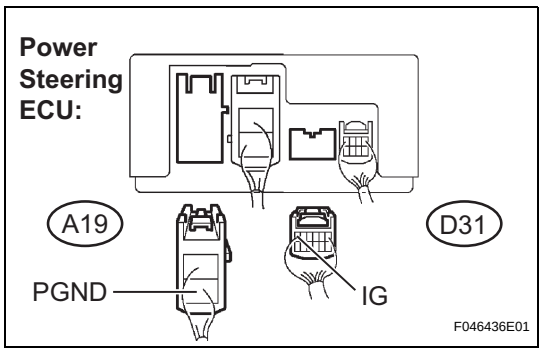


(a) Remove the ECU-IG fuse from the instrument panel J/B.
(b) Check the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **INSPECT SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

3	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)



(a) Disconnect the connectors from the power steering ECU.
(b) Measure the voltage and the resistance.
Standard

Tester Connection	Condition	Specified Condition
IG (D31-6) - Body ground	Ignition switch on	11 to 14 V
PGND (A19-2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE POWER STEERING ECU

DTC	C1552/52	PIG Power Source Circuit

DTC	C1553/53	When Resetting Voltage, Vehicle is Being Driven

DTC	C1554/54	EPS Relay Circuit

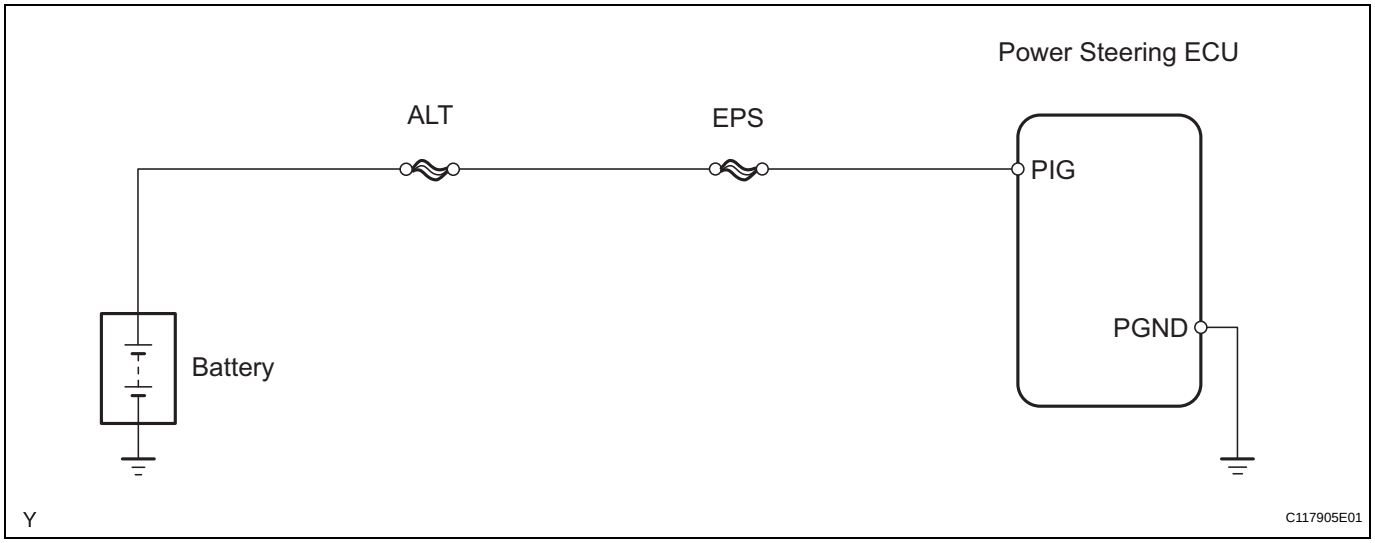
DTC	C1555/55	EPS Motor Relay Circuit

DESCRIPTION

When a problem occurs in the system, the power source relay circuit and the motor relay circuit are shut off to stop the power assist. The ECU must be replaced when there is a problem with the relays because each relay is built into the ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1552/52	PIG power source circuit malfunction	• EPS fuse • PIG power source circuit • Power steering ECU
C1553/53	Abnormal overvoltage	• IG and PIG power source circuit • Power steering ECU
C1554/54	Power source relay circuit malfunction	• EPS fuse • PIG power source circuit • Power steering ECU
C1555/55	Motor relay circuit malfunction	• Power steering ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (PIG SUPPLY)

(a) Connect the intelligent tester to the DLC3.
(b) Select the item [PIG SUPPLY] in the DATA LIST and read the value displayed on the intelligent tester.

PS

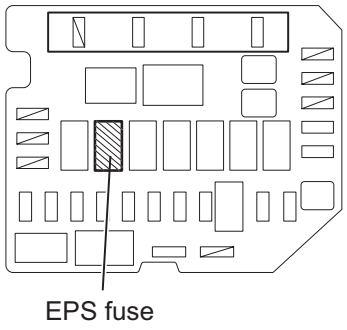
Standard voltage:
Always 11 to 14 V

OK → **CHECK INTERMITTENT PROBLEMS**

NG

2 INSPECT FUSE (EPS FUSE)

Engine Room R/B:



C117909E01

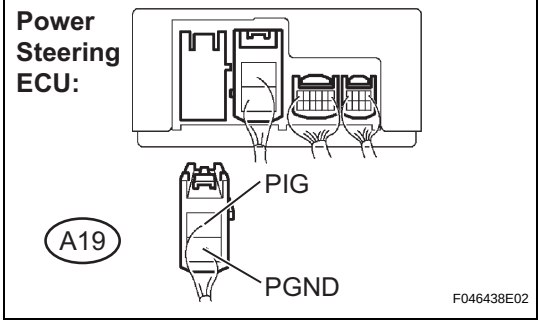
(a) Remove the EPS fuse from the engine room R/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1Ω

NG → **INSPECT SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

3 CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)

Power Steering ECU:



F046438E02

(a) Disconnect the connector from the power steering ECU.
(b) Measure the voltage and the resistance.
Standard

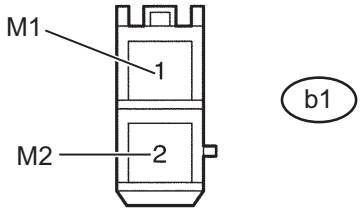
Tester Connection	Condition	Specified Condition
PIG (A19-1) - Body ground	Always	11 to 14 V
PGND (A19-2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT STEERING COLUMN ASSEMBLY (POWER STEERING MOTOR)

Power Steering Motor Connector:



(a) Disconnect the connector from the power steering ECU.
(b) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
M1 (b1-1) - M2 (b1-2)	Always	0.08 to 0.15 Ω
M1 (b1-1) - Body ground	Always	1 MΩ or higher
M2 (b1-2) - Body ground	Always	1 MΩ or higher

NG → **REPLACE STEERING COLUMN ASSEMBLY**

OK

REPLACE POWER STEERING ECU

DTC	C1581/81	Assist Map Un-Writing

DESCRIPTION

The power steering ECU outputs this DTC when it determines that the assist map is not written in the ECU.
The power steering ECU must be replaced when this DTC is output because this malfunction cannot be repaired.
HINT:
The assist map data is written in the power steering ECU to control assisting power. The assist map is selected from five types based on the vehicle specification communication data (designation and grade package information).

DTC No.	DTC Detection Condition	Trouble Area
C1581/81	Assist map not written in power steering ECU	Power steering ECU

INSPECTION PROCEDURE

1	CONFIRM DTC

(a) Check for DTCs (See page PS-25).
OK:
DTCs other than C1581/81 are not output.

NG → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

OK

REPLACE POWER STEERING ECU

DTC	U0073	Control Module Communication Bus OFF

DTC	U0105	Lost Communication with ECM

DTC	U0121	Lost Communication with Anti-lock Brake System (ABS) Control Module

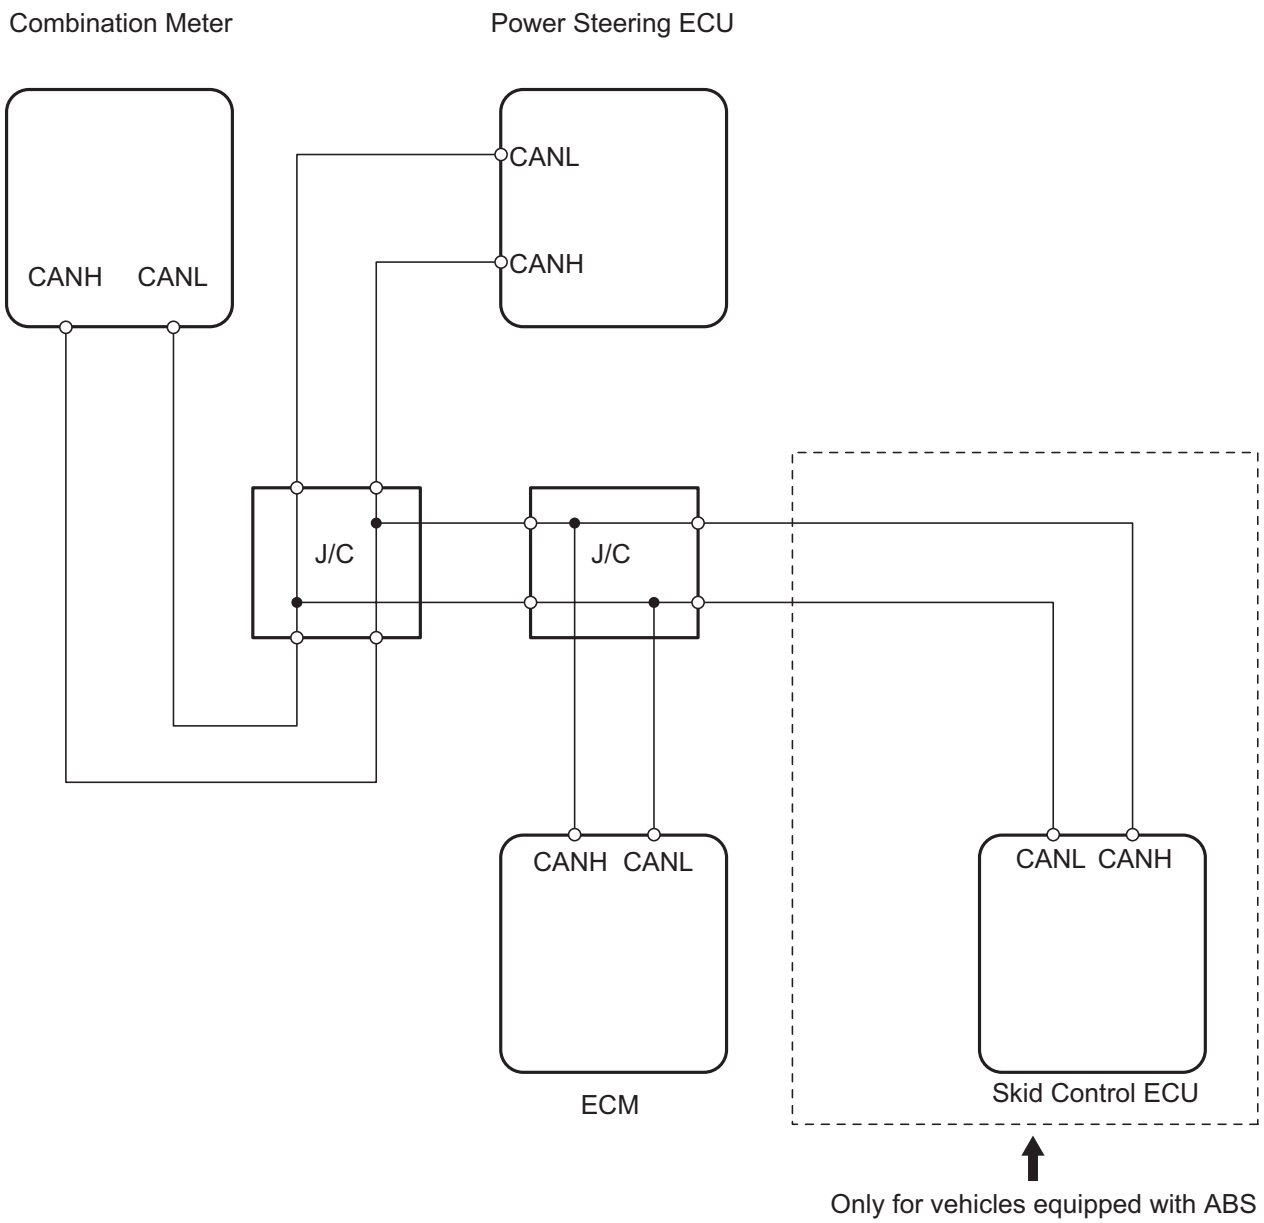
DESCRIPTION

The power steering ECU receives signals from the ECM and the skid control ECU (ABS ECU) via the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
U0073	CAN communication error (CAN bus off)	• CAN communication system
U0105	ECM communication error	• CAN communication system • ECM
U0121	Skid control ECU (ABS ECU) communication error	• CAN communication system • Skid control ECU (ABS ECU)

HINT:
When two or more DTCs starting with [U] are output simultaneously, inspect the connectors and wire harness of each ECU.

WIRING DIAGRAM



Y

C117903E01

INSPECTION PROCEDURE

1	CONFIRM DTC

(a) Check for DTCs (See page PS-25).
OK:
DTCs other than U0073, U0105 and U0121 are not output.

NG → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

OK

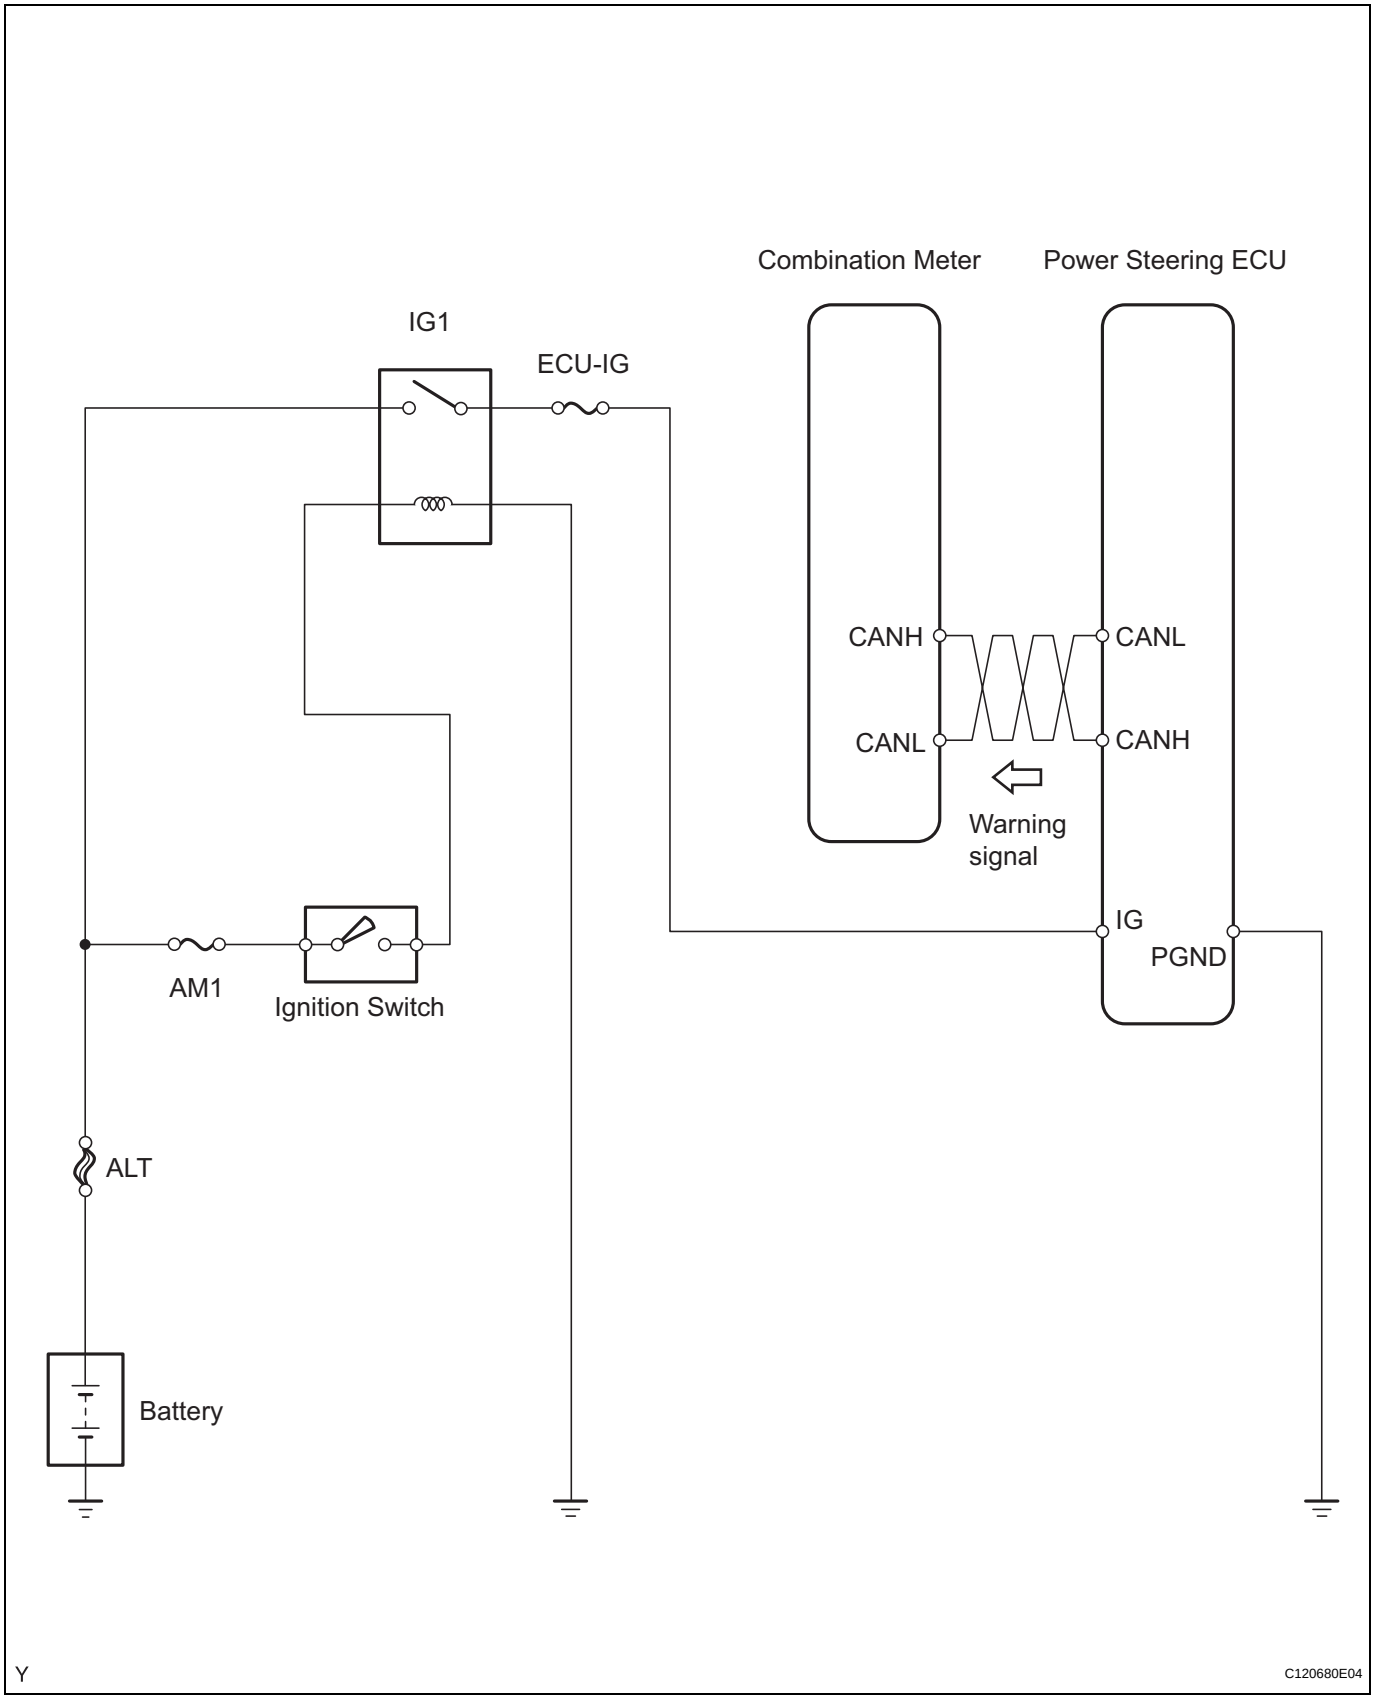
GO TO CAN COMMUNICATION SYSTEM

EPS Warning Light Circuit

DESCRIPTION

If the power steering ECU detects a malfunction, the P/S warning light comes on. At this time, the power steering ECU stores a DTC in its memory.

WIRING DIAGRAM



INSPECTION PROCEDURE

1 **INSPECT CAN COMMUNICATION SYSTEM**

(a) Using the intelligent tester, check for DTCs and confirm that there are no problems in the CAN communication system.
OK:
DTCs are not output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

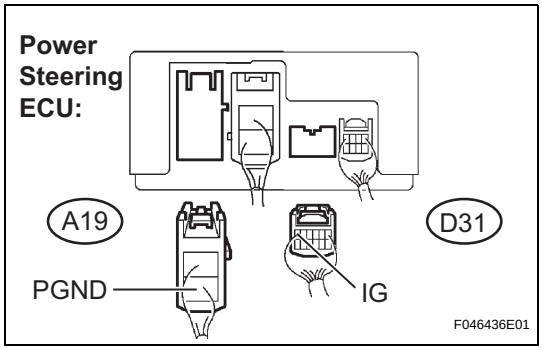
2 **READ VALUE OF DATA LIST (IG SUPPLY)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Select the item [IG SUPPLY] in the DATA LIST and read value displayed on the intelligent tester.
Standard voltage:
11 to 14 V

NG → **INSPECT POWER SOURCE CIRCUIT (IG) (See page PS-45)**

OK

3 **CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)**



(a) Disconnect the connectors from the power steering ECU.
(b) Measure the voltage and the resistance.
Standard

Tester Connection	Condition	Specified Condition
IG (D31-6) - Body ground	Ignition switch on	11 to 14 V
PGND (A19-2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 **REPLACE POWER STEERING ECU**

NOTICE:
After replacing the power steering ECU, perform the torque sensor zero point calibration.

NEXT

PS

5	CHECK PS WARNING LIGHT (COMBINATION METER)

(a) Check that the P/S warning light on the combination meter does not come on.
OK:
The P/S warning light does not come on.

NG → **REPLACE COMBINATION METER**

OK

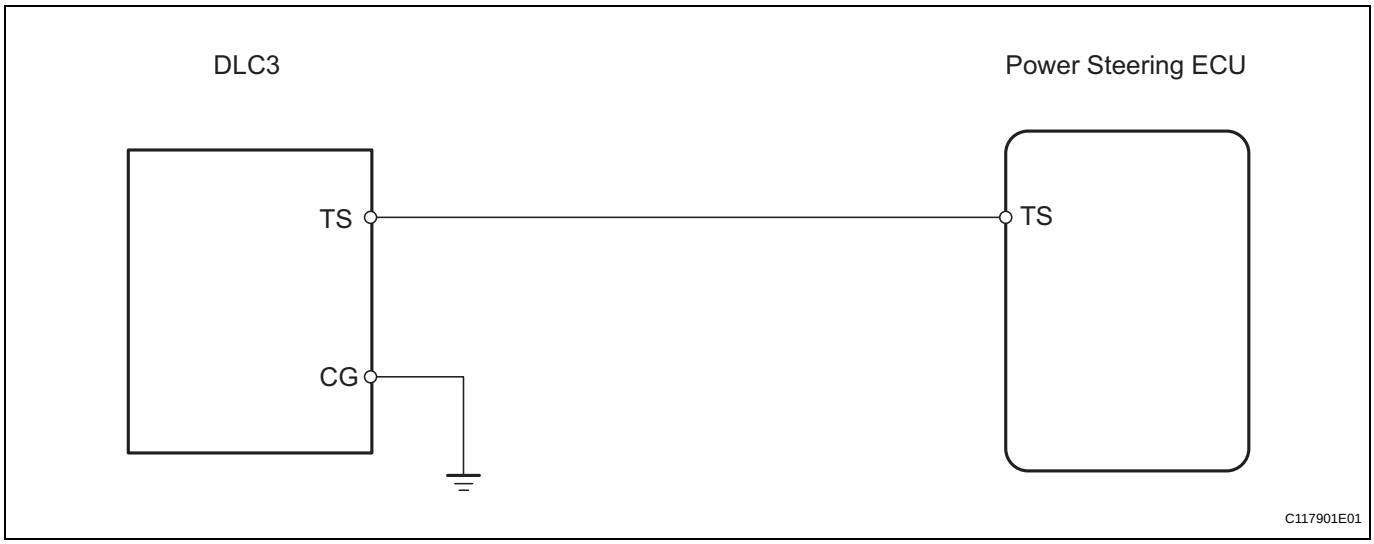
END

TS and CG Terminal Circuit

DESCRIPTION

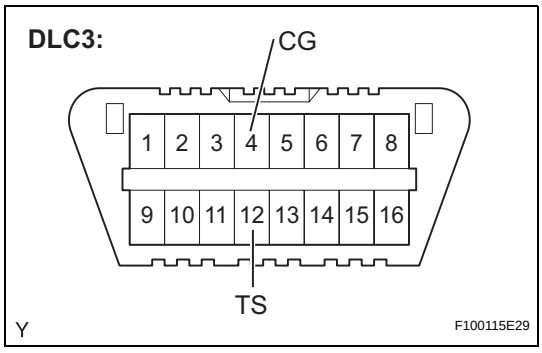
The power steering ECU can be changed from normal mode to the mode for the torque sensor zero point calibration by turning the ignition switch on after the DLC3 TS and CG terminals have been connected.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT DLC3 TERMINAL VOLTAGE



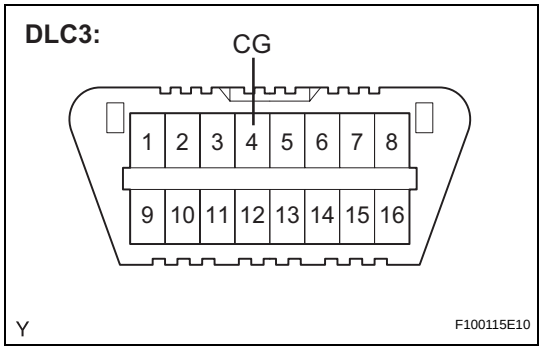
(a) Turn the ignition switch on.
(b) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
TS (12) - CG (4)	11 to 14 V

OK → **END**

NG

2	CHECK HARNESS AND CONNECTOR (DLC3 - BODY GROUND)



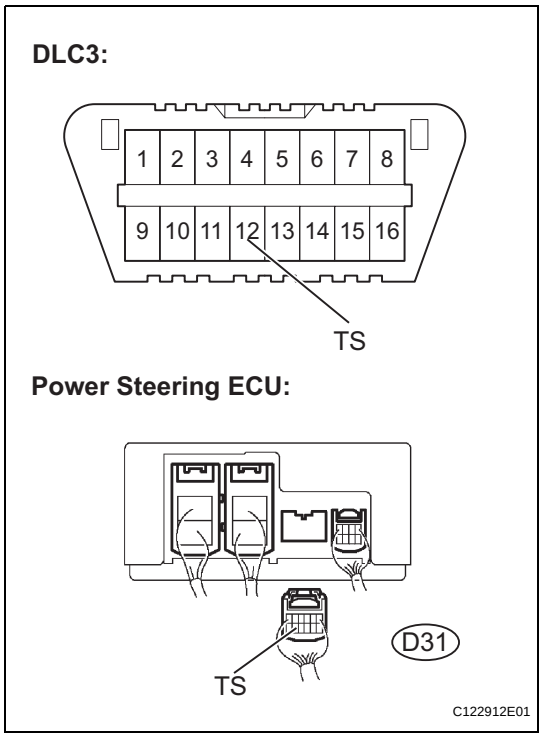
(a) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
CG (4) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - DLC3)



(a) Disconnect the connector from the power steering ECU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
TS (D31-11) -TS (12)	Below 1 Ω
TS (D31-11) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

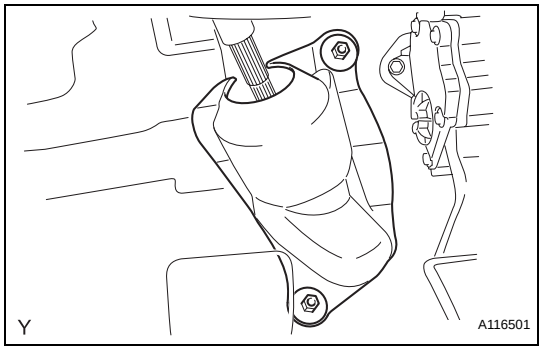
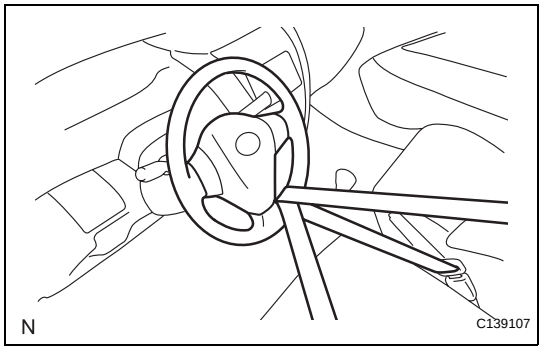
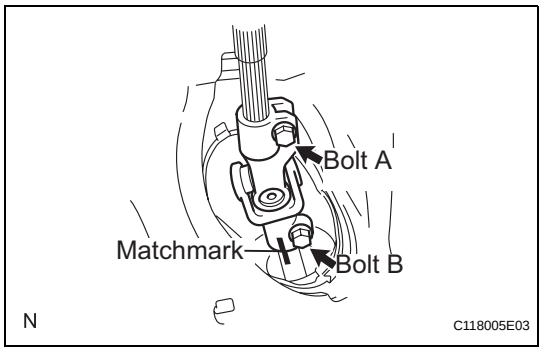
REMOVAL

1. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE HOOD SUB-ASSEMBLY**
   (a) Remove the 4 bolts and remove the hood.
4. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-9)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
7. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (See page WW-10)**
8. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (See page WW-10)**
9. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
10. **REMOVE FRONT WIPER MOTOR AND LINK (See page WW-10)**
11. **REMOVE FRONT AIR SHUTTER SEAL (See page EM-123)**
12. **REMOVE COWL TOP PANEL OUTER (See page BR-41)**
13. **REMOVE COLUMN HOLE COVER SILENCER SHEET**
    (a) Remove the floor carpet and 2 clips and remove the column hole cover silencer.

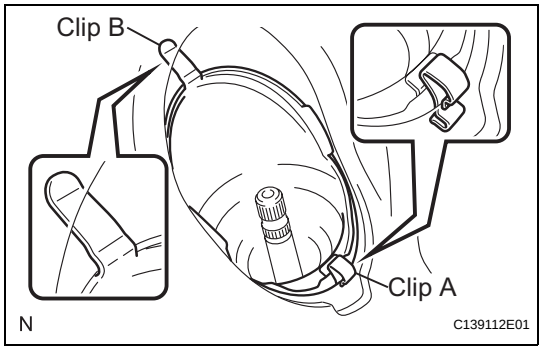


14. **REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Use a seat belt to fix the steering wheel assembly, in order to avoid breakage of the spiral cable.





(b) Place matchmarks on the sliding yoke of the steering intermediate shaft assembly and the power steering.
(c) Loosen bolt A, remove bolt B and separate the steering intermediate shaft assembly.



15. REMOVE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY
(a) Remove clip A, separate clip B from the body and separate No. 1 steering column hole cover sub-assembly.

16. REMOVE FRONT WHEEL

17. REMOVE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)

18. REMOVE TIE ROD END SUB-ASSEMBLY RH
HINT:
Use the same procedure for the RH side as for the LH side.

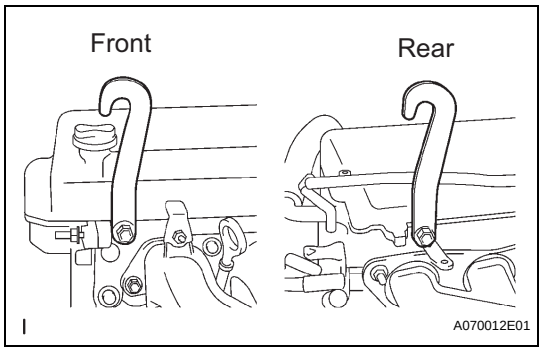
19. REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)

20. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
Use the same procedure for the RH side as for the LH side.

21. REMOVE FRONT SUSPENSION LOWER ARM LH (See page DS-4)

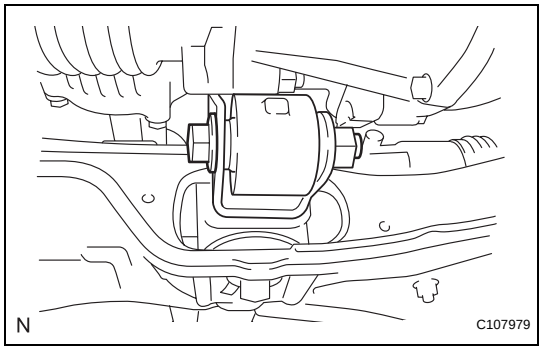
22. REMOVE FRONT SUSPENSION LOWER ARM RH
HINT:
Use the same procedure for the RH side as for the LH side.

23. SUSPEND ENGINE ASSEMBLY
(a) 1NZ-FE
(1) Remove the bolt and remove the radio setting condenser.
(2) Remove the bolt and remove the air-fuel ratio sensor wiring bracket.



(3) Install the engine hanger with the bolt in the position shown in the illustration.
Part No.:
Engine hanger :
12281-21010
Bolt:
91642-81025
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

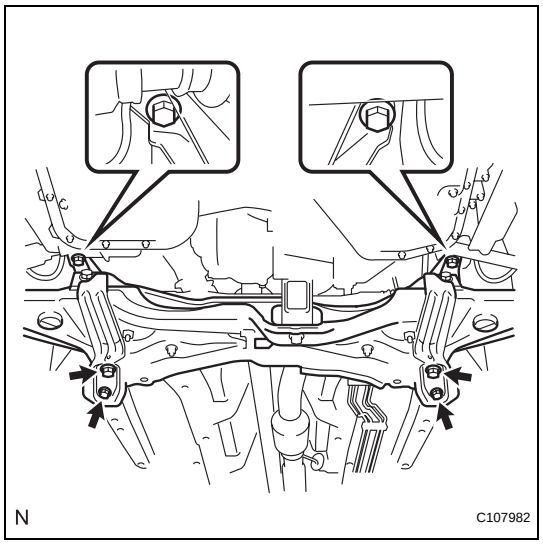
(4) Using an engine sling device and a chain block, support the engine assembly w/transaxle and front suspension crossmember.



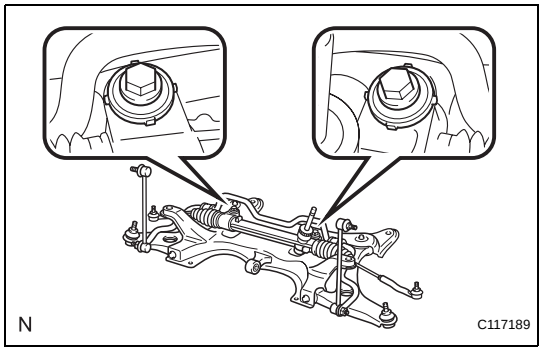
24. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Remove the bolt and separate the engine moving control rod.

(b) Support the front suspension crossmember with a transmission jack.

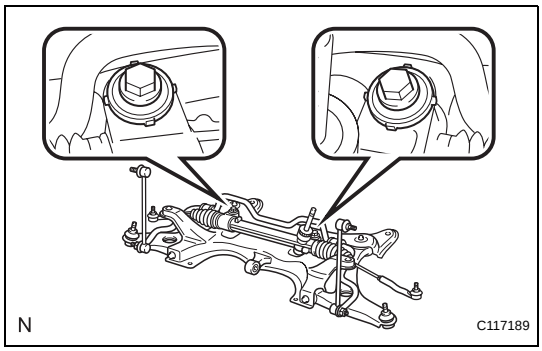


(c) Remove the 6 bolts and remove the suspension crossmember.



25. REMOVE POWER STEERING GEAR

(a) Remove the 2 bolts and 2 nuts and remove the power steering gear from the suspension crossmember.
NOTICE:
Keep the nut from rotating while turning the bolt.



INSTALLATION

1. INSTALL POWER STEERING GEAR

(a) Install the power steering gear onto the front suspension crossmember with the 2 bolts and 2 nuts.

Torque: 96 N*m (979 kgf*cm, 71 ft.*lbf)

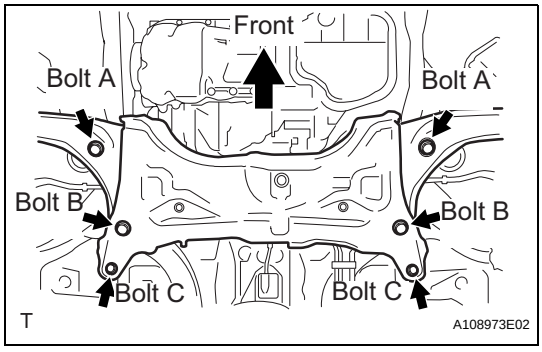
NOTICE:

Keep the nut from rotating while turning the bolt.

2. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Support the front suspension crossmember with a transmission jack.

(b) Provisionally install the front suspension crossmember onto the body with the 6 bolts.



Bolt	Underhead Length (mm)
A	38
B	99
C	45

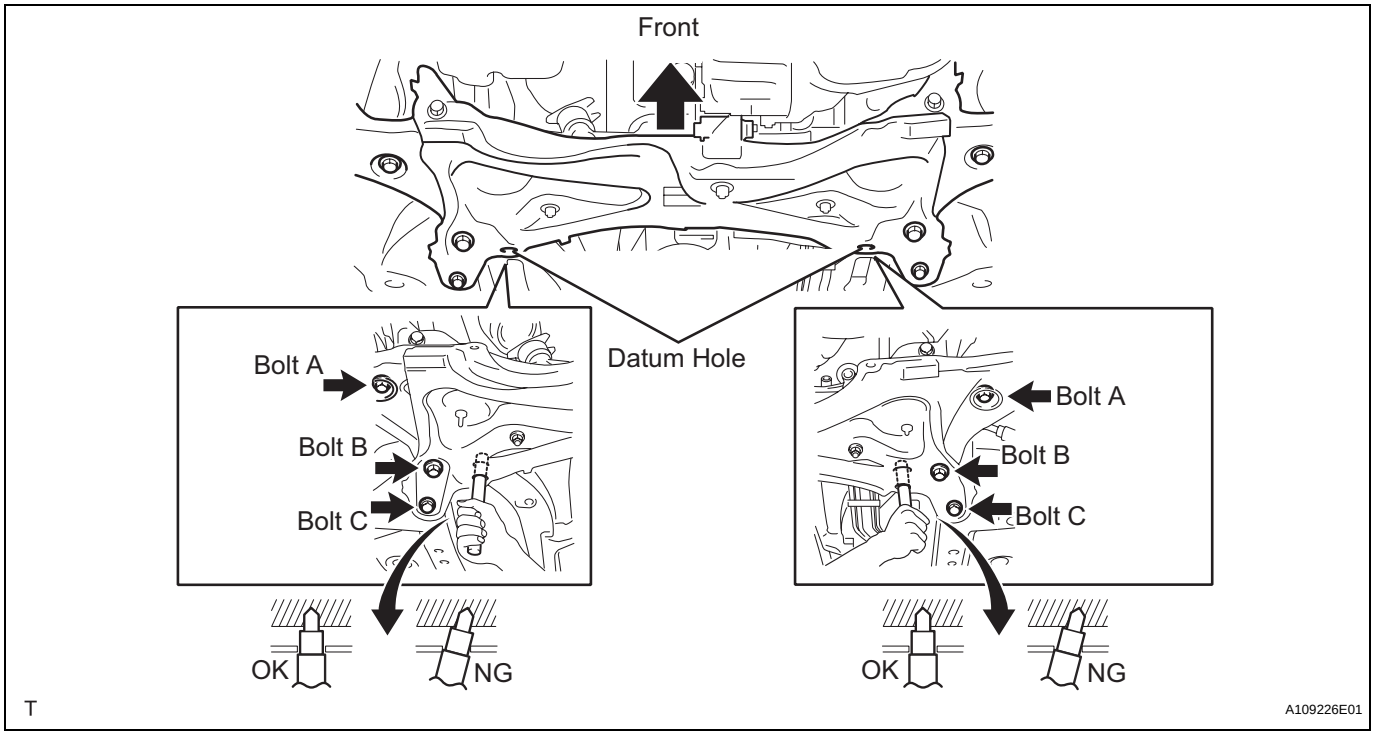
(c) By inserting SST into the datum holes in the front suspension crossmembers RH and LH alternately, tighten bolts A, B and C on both sides to the specified torque, in several steps.

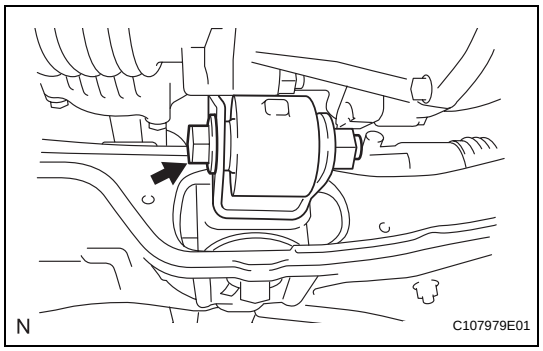
SST 09670-00011

Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C

NOTICE:

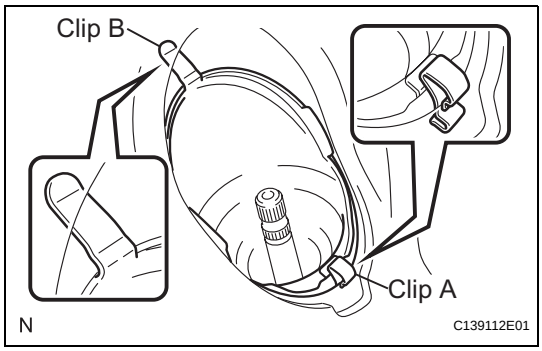
- **Insert SST into the datum hole in a vertical orientation.**
- **If SST can not be inserted into the datum hole vertically, loosen all the bolts and then insert SST again.**



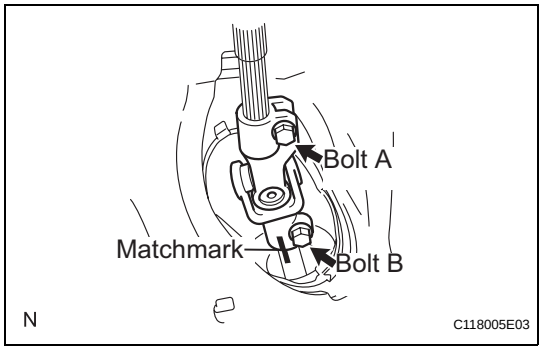


(d) Install the engine moving control rod with the bolt.
Torque: 120 N*m (1,224 kgf*cm, 89 ft.*lbf)

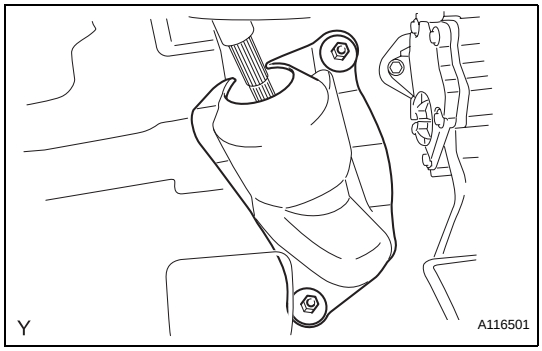
3. **INSTALL FRONT SUSPENSION LOWER ARM LH (See page DS-14)**
4. **INSTALL FRONT SUSPENSION LOWER ARM RH**
HINT:
Use the same procedure for the LH side.
5. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
6. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
Use the same procedure for the LH side.
7. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
8. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
HINT:
Use the same procedure for the LH side.
9. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



10. **INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY**
    (a) Install clip B onto the body portion and install No. 1 steering column hole cover sub-assembly onto the body portion with clip A.
    NOTICE:
    Make sure that the lip portion of hole cover No. 1 is not damaged.



11. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Align the matchmarks and install the sliding yoke onto the intermediate shaft.
    Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
    (b) Tighten bolt A.
    Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)



12. **INSTALL COLUMN HOLE COVER SILENCER SHEET**
    (a) Install the column hole cover silencer sheet with the 2 clips.
    (b) Install the floor carpet.
13. **INSTALL COWL TOP PANEL OUTER (See page BR-45)**
14. **INSTALL FRONT AIR SHUTTER SEAL (See page EM-148)**
15. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-12)**
16. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-12)**
17. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (See page WW-13)**
18. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (See page WW-13)**
19. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-13)**
20. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-14)**
21. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-15)**
22. **PROVISIONALLY TIGHTEN HOOD SUB-ASSEMBLY**
    (a) Provisionally install the hood with the 4 bolts.
    HINT:
    Tighten the bolts to the specified torque after inspecting the hood.
23. **INSPECT HOOD SUB-ASSEMBLY (See page ED-1)**

24. **ADJUST HOOD SUB-ASSEMBLY (See page ED-2)**
25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 ft.*lbf)
26. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
27. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-2)
28. **CHECK ABS SPEED SENSOR SIGNAL**
    (See page BC-14)

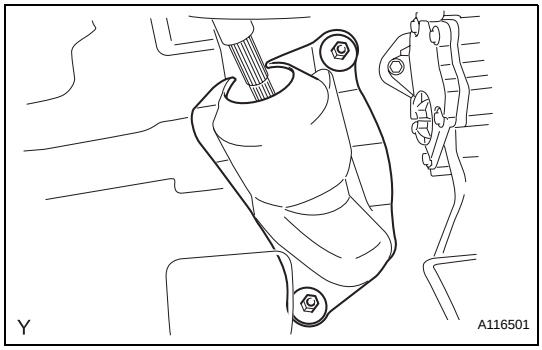
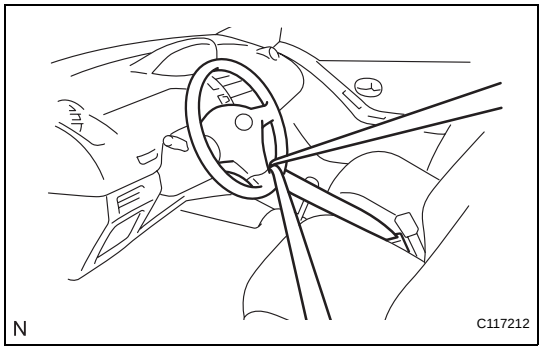
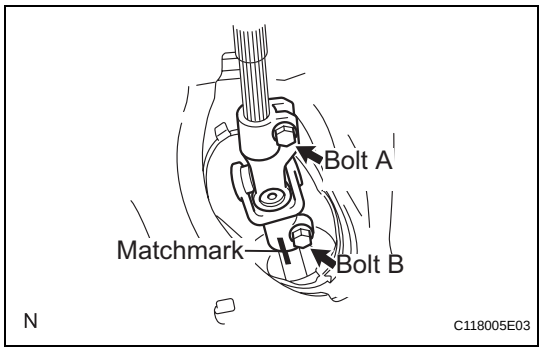
REMOVAL

1. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE HOOD SUB-ASSEMBLY**
   (a) Remove the 4 bolts and remove the hood.
4. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-17)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-17)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-17)**
7. **REMOVE HOOD TO COWL TOP SEAL (See page WW-18)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-18)**
9. **REMOVE COWL TOP VENTILATOR LOUVER LH (See page WW-18)**
10. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (See page WW-19)**
11. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-122)**
12. **REMOVE COWL TOP PANEL OUTER (See page EM-123)**
13. **REMOVE COLUMN HOLE COVER SILENCER SHEET**
    (a) Remove the floor carpet and 2 clips and remove the column hole cover silencer.

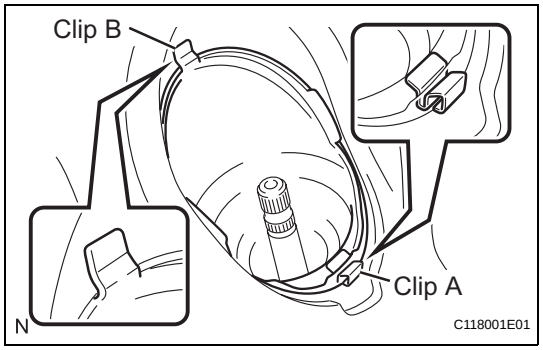


14. **REMOVE STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Use a seat belt to fix the steering wheel assembly, in order to avoid breakage of the spiral cable.





(b) Place the matchmarks on the sliding yoke of the steering intermediate shaft assembly and the power steering.
(c) Loosen bolt A, remove bolt B and separate the steering intermediate shaft assembly



15. REMOVE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove clip A, separate clip B from the body and separate No. 1 steering column hole cover sub-assembly.
NOTICE:
Do not damage clip B.

16. REMOVE FRONT WHEEL

17. REMOVE TIE ROD END SUB-ASSEMBLY (See page DS-3)

18. REMOVE TIE ROD END SUB-ASSEMBLY
HINT:
Use the same procedure for the RH side as for the LH side.

19. REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)

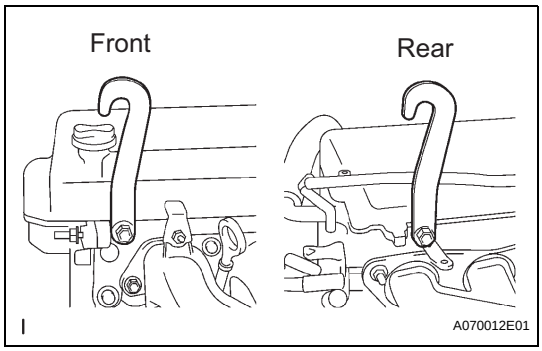
20. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
Use the same procedure for the RH side as for the LH side.

21. REMOVE FRONT SUSPENSION LOWER ARM LH (See page DS-4)

22. REMOVE FRONT SUSPENSION LOWER ARM RH
HINT:
Use the same procedure for the RH side as for the LH side.

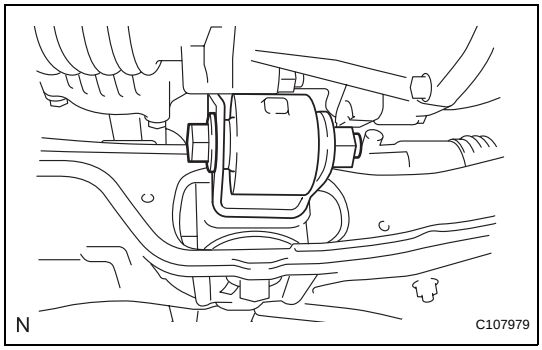
23. SUSPEND ENGINE ASSEMBLY

(a) 1NZ-FE
(1) Remove the bolt and remove the radio setting condenser.
(2) Remove the bolt and remove the air-fuel ratio sensor wiring bracket.



(3) Install the engine hanger with the bolt in the position shown in the illustration.
Part No. :
Engine hanger : 12281-21010
Bolt :
91642-81025
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

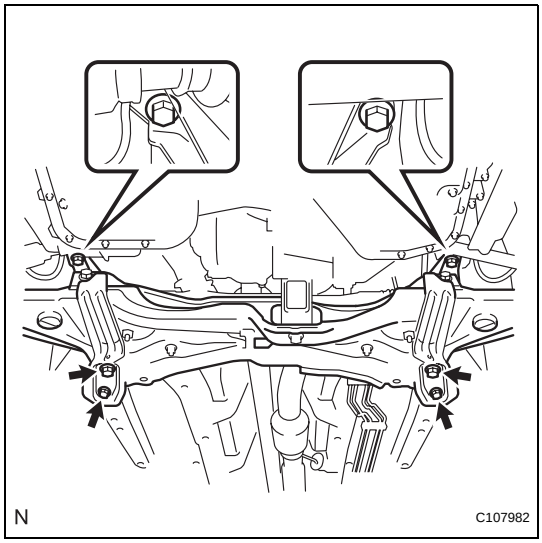
(4) Using an engine sling device and chain block, support the engine assembly with transaxle and front suspension crossmember.



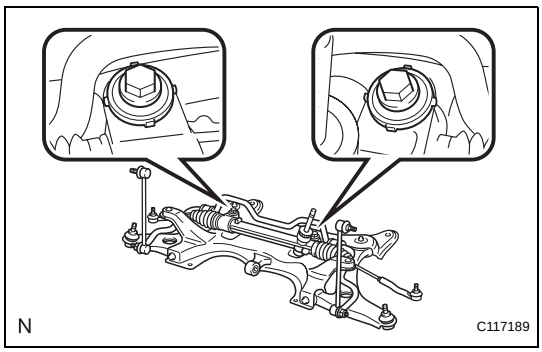
24. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Remove the bolt and separate the engine moving control rod.

(b) Support the front suspension crossmember with a tool such as a transmission jack.

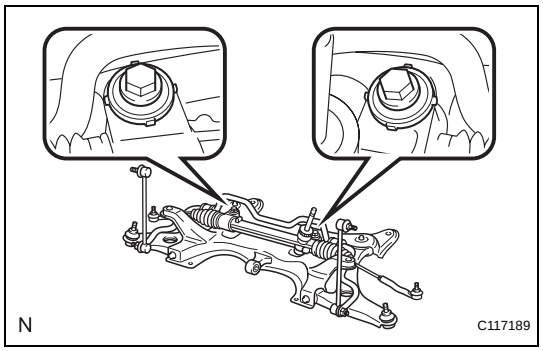


(c) Remove the 6 bolts and remove the suspension crossmember.



25. REMOVE POWER STEERING GEAR

(a) Remove the 2 bolts and 2 nuts and remove the power steering gear from the suspension crossmember.
NOTICE:
Keep the nut from rotating while turning the bolt.



INSTALLATION

1. INSTALL POWER STEERING GEAR

(a) Install the power steering gear onto the front suspension crossmember with the 2 bolts and 2 nuts.

Torque: 96 N*m (979 kgf*cm, 71 ft.*lbf)

NOTICE:

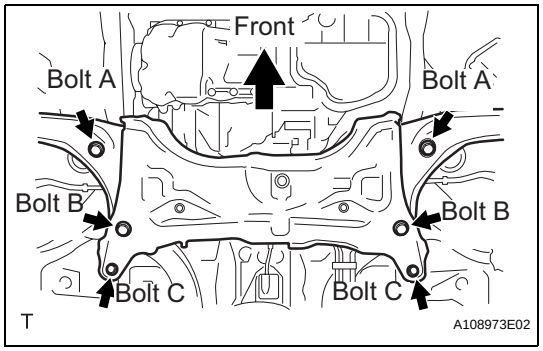
Keep the nut from rotating while turning the bolt.

2. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

SST 09670-00010

(a) Support the front suspension crossmember with a tool such as transmission jack.

(b) Provisionally install the front suspension crossmember into the vehicle with the 6 bolts



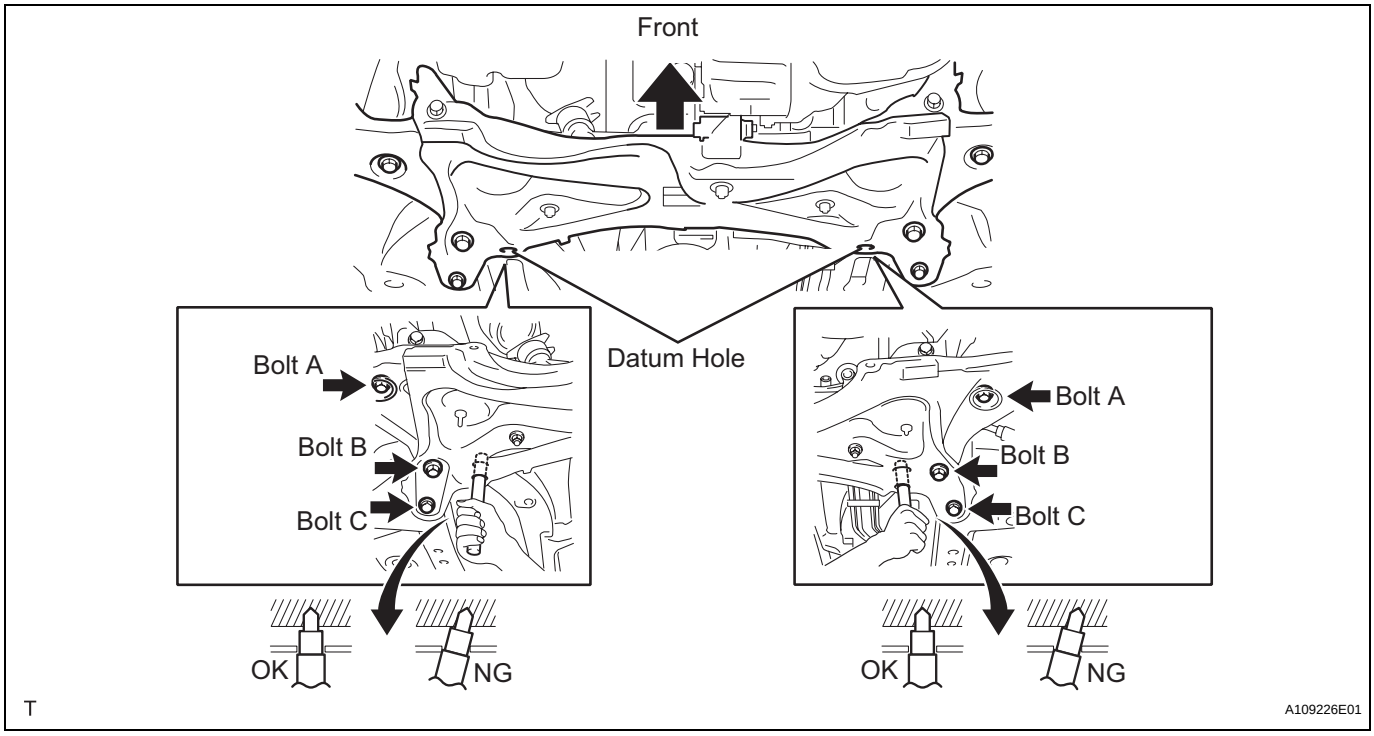
Bolt	Underhead Length (mm)
A	38
B	99
C	45

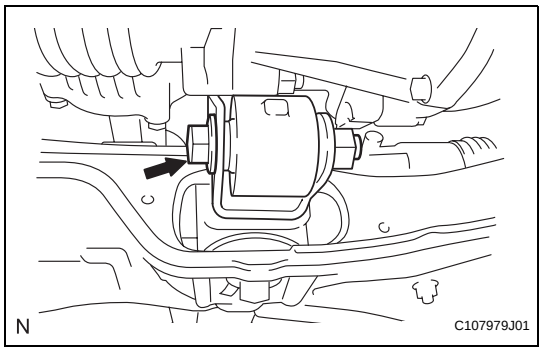
(c) By inserting SST into the datum holes in the front suspension crossmembers RH and LH sides alternately, tighten bolts A, B and C on both sides to the specified torque, in several steps.

Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C

NOTICE:

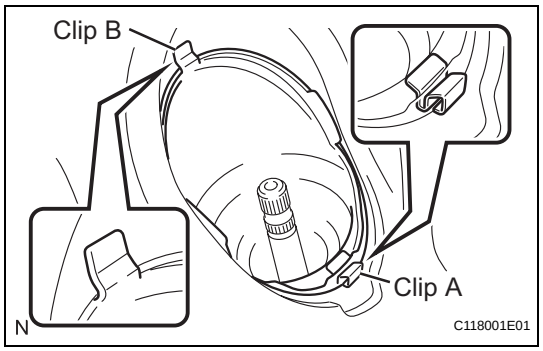
- **Insert SST into the datum holes in a vertical orientation.**
- **If SST can not be inserted into the datum holes vertically, loosen all the bolts and then insert SST again.**



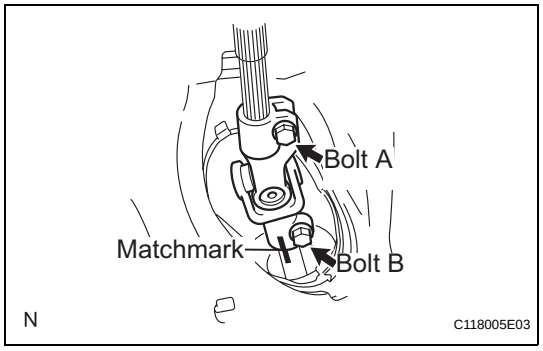


(d) Install the engine moving control rod with the bolt.
Torque: 120 N*m (1224 kgf*cm, 89 ft.*lbf)

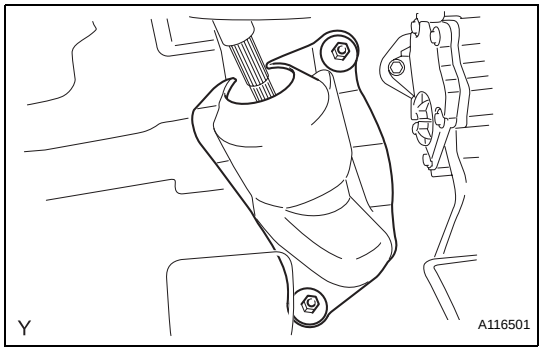
3. **INSTALL FRONT SUSPENSION LOWER ARM LH (See page DS-14)**
4. **INSTALL FRONT SUSPENSION LOWER ARM RH**
HINT:
Use the same procedure for the LH side.
5. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)**
6. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
Use the same procedure for the LH side.
7. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
8. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
HINT:
Use the same procedure for the LH side.
9. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



10. **INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY**
    (a) Install clip B onto the body portion and install No. 1 steering column hole cover sub-assembly onto the body portion with clip A.
    NOTICE:
    Make sure that the lip portion of No. 1 steering column hole cover sub-assembly is not damaged.



11. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Align the matchmarks and install the sliding yoke onto the intermediate shaft.
    Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)
    (b) Tighten bolt A.
    Torque: 28 N*m (290 kgf*cm, 21 ft.*lbf)



12. **INSTALL COLUMN HOLE COVER SILENCER SHEET**
    (a) Install the column hole cover silencer sheet with the 2 clips.
    (b) Install the floor carpet

13. **INSTALL COWL TOP PANEL OUTER (See page EM-146)**

14. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-147)**

15. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-21)**

16. **INSTALL COWL TOP VENTILATOR LOUVER LH (See page WW-21)**

17. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-21)**

18. **INSTALL HOOD TO COWL TOP SEAL (See page WW-22)**

19. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-17)**

20. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-23)**

21. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**

22. **TEMPORARILY TIGHTEN HOOD SUB-ASSEMBLY**
    (a) Provisionally install the hood with the 4 bolts.
    HINT:
    Tighten the bolts to the specified torque after inspecting the hood.

23. **INSPECT HOOD SUB-ASSEMBLY (See page ED-3)**

24. **ADJUST HOOD SUB-ASSEMBLY (See page ED-4)**
25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
26. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
27. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-2)
28. **CHECK ABS SPEED SENSOR SIGNAL**
    (See page BC-14)

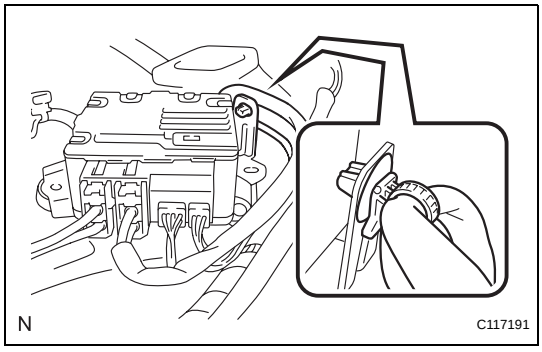
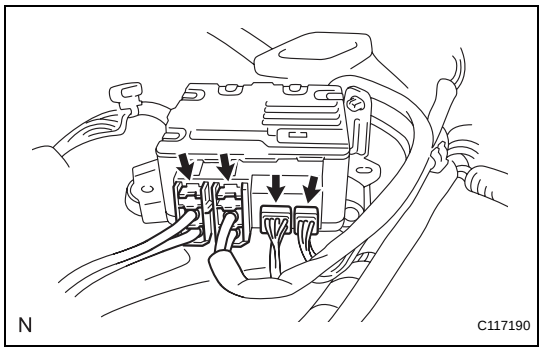
REMOVAL

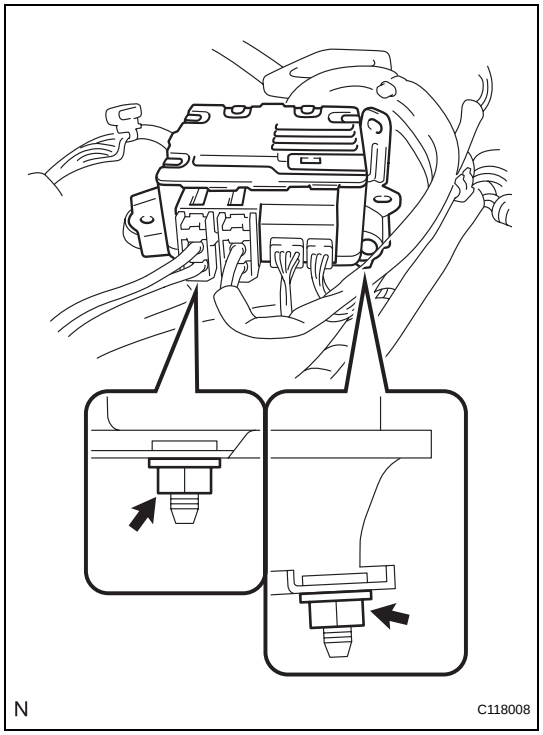
HINT:
Use the same procedure for both the RH and LH sides.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   (a) Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
6. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
7. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
   (a) Separate the front door opening trim weatherstrip.
8. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   (a) Separate the front door opening trim weatherstrip.
9. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
10. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
11. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
12. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**
13. **REMOVE POWER STEERING ECU**
    (a) Separate the wire harness clamp.





(b) Disconnect the 4 connectors.

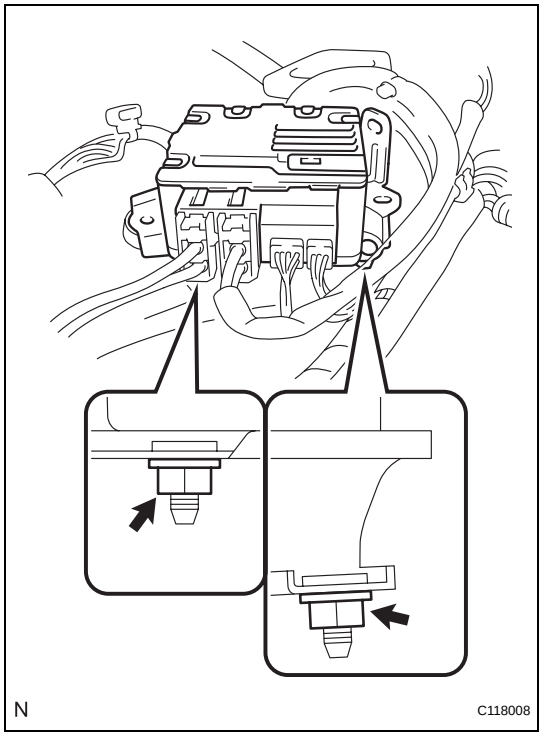


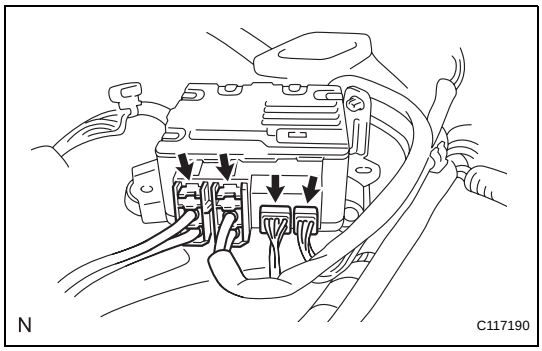
(c) Remove the 2 nuts and remove the power steering ECU.

INSTALLATION

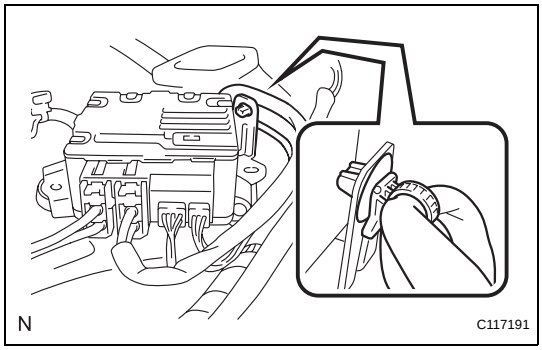
1. INSTALL POWER STEERING ECU

(a) Install the power steering ECU with the 2 nuts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)





(b) Connect the 4 connectors.



(c) Install the wire harness clamp.
NOTICE:
Make sure that the wire harness of the steering column assembly is installed onto the power steering ECU bracket and that it is not pulled too tightly.

2. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)**
3. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
4. **INSTALL FRONT PILLAR GARNISH RH (See page IR-29)**
5. **INSTALL FRONT PILLAR GARNISH LH (See page IR-30)**
6. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-34)**
7. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)**
8. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**
9. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
14. **CHECK SRS WARNING LIGHT**
(See page RS-31)
15. **PERFORM ZERO POINT CALIBRATION**
(See page PS-12)

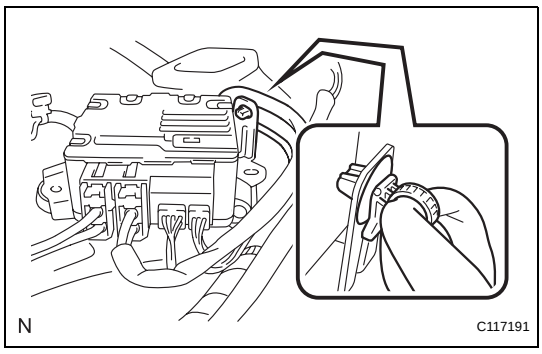
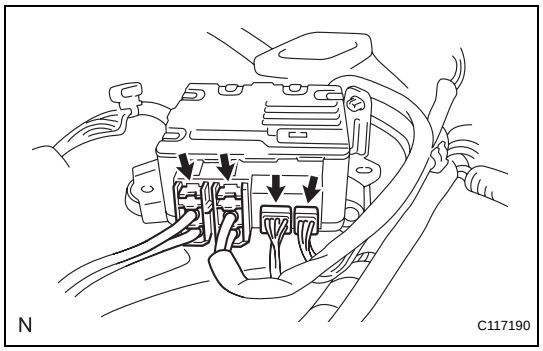
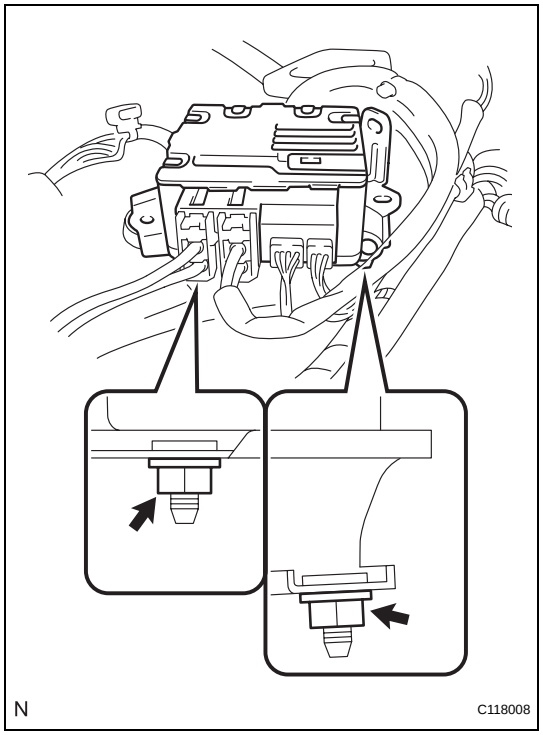
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
4. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
5. **REMOVE COMBINATION METER ASSEMBLY (See page ME-146)**
6. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
7. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   HINT:
   Use the same procedure for the RH side as for the LH side.
8. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
9. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**
10. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)**
11. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
12. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)**
13. **REMOVE POWER STEERING ECU**
    (a) Separate the wire harness clamp.

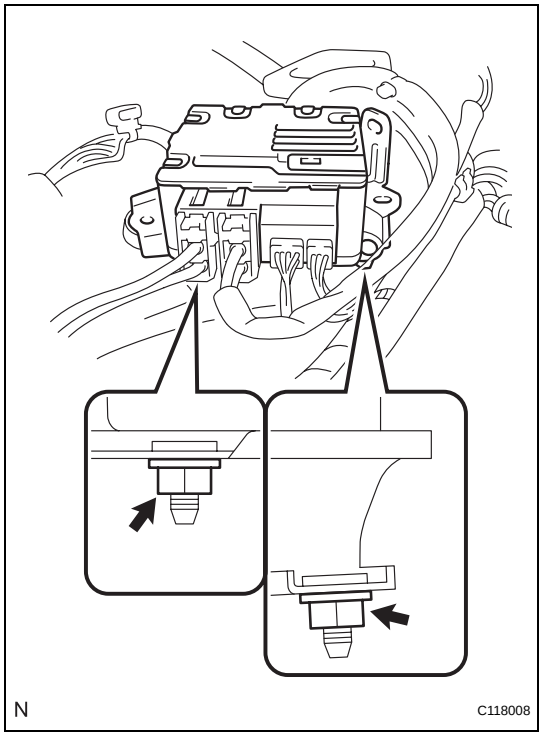




(b) Disconnect the 4 connectors.



(c) Remove the 2 nuts and remove the power steering ECU.

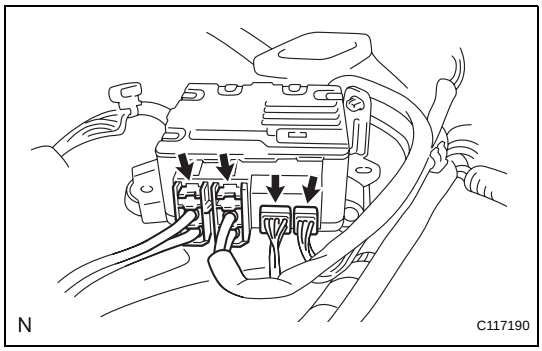


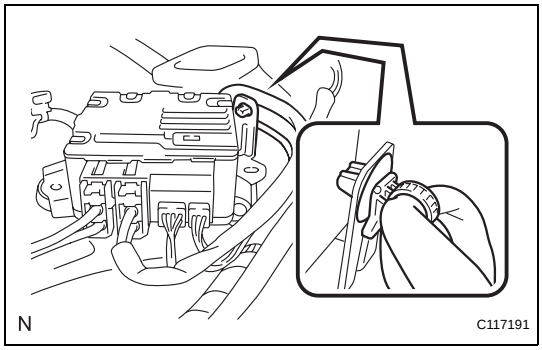
INSTALLATION

1. INSTALL POWER STEERING ECU

(a) Install the power steering ECU with the 2 nuts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

PS





(b) Connect the 4 connectors.

(c) Install the wire harness clamp.
NOTICE:
Make sure that the wire harness of the steering column assembly is installed onto the power steering ECU bracket and that it is not pulled too tightly.

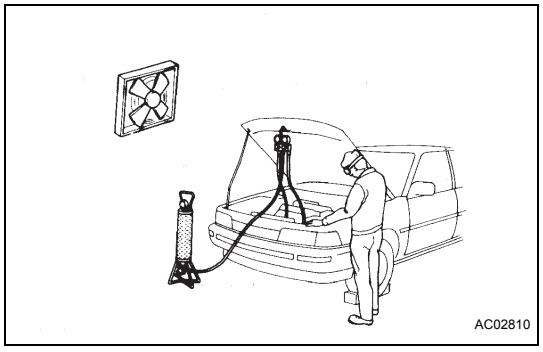
2. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**
3. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
4. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
5. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
6. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
7. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
8. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
   HINT:
   Use the same procedure for the RH side as for the LH side.
9. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
10. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IR-72)**
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
14. **PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT**
    (See page PS-12).

AIR CONDITIONING SYSTEM

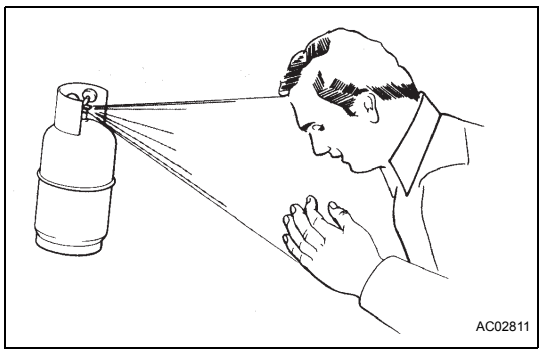
PRECAUTION

1. **IF ANY OF FOLLOWING CONDITIONS ARE MET, KEEP ENGINE IDLING WITH A/C ON (ENGINE SPEED AT LESS THAN 2000 RPM) FOR AT LEAST 1 MINUTE:**
   - Refrigerant gas has been refilled or A/C parts have been replaced.
   - Long time has elapsed since engine was stopped.

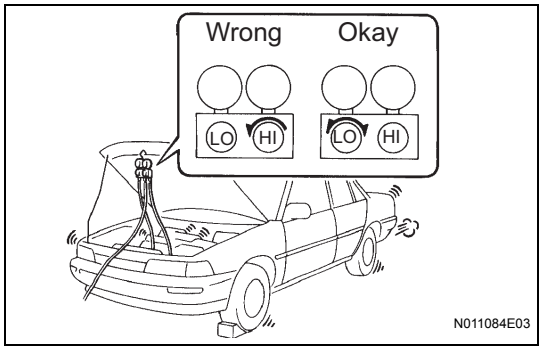
   NOTICE:
   If the engine speed exceeds 2,000 rpm, the A/C compressor may be damaged.



2. **DO NOT HANDLE REFRIGERANT IN ENCLOSED AREAS OR NEAR OPEN FLAMES**
3. **ALWAYS WEAR EYE PROTECTION**



4. **BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN**
   If liquid refrigerant gets in your eyes or on your skin:
   (a) Wash the area with lots of cold water.
   CAUTION:
   Do not rub your eyes or skin.
   (b) Apply clean petroleum jelly to the skin.
   (c) Go immediately to a hospital or see a physician for professional treatment.
5. **NEVER HEAT CONTAINER OR EXPOSE IT TO NAKED FLAMES**
6. **BE CAREFUL NOT TO DROP CONTAINER OR SUBJECT IT TO PHYSICAL SHOCKS**



7. **DO NOT OPERATE COMPRESSOR WITH INSUFFICIENT REFRIGERANT IN REFRIGERANT SYSTEM**
   If there is not enough refrigerant in the refrigerant system, oil lubrication will be insufficient and compressor burnout may occur. Necessary care should be taken to avoid this.
8. **DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING**
   Open and close only the low pressure valve. Opening and closing the high pressure valve could cause the charging cylinder to rupture.

9. **BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT**
   If the refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy and engine overheating.
10. **DO NOT OPERATE ENGINE AND COMPRESSOR WITHOUT REFRIGERANT**
    CAUTION:
    This may damage the inside of the compressor.

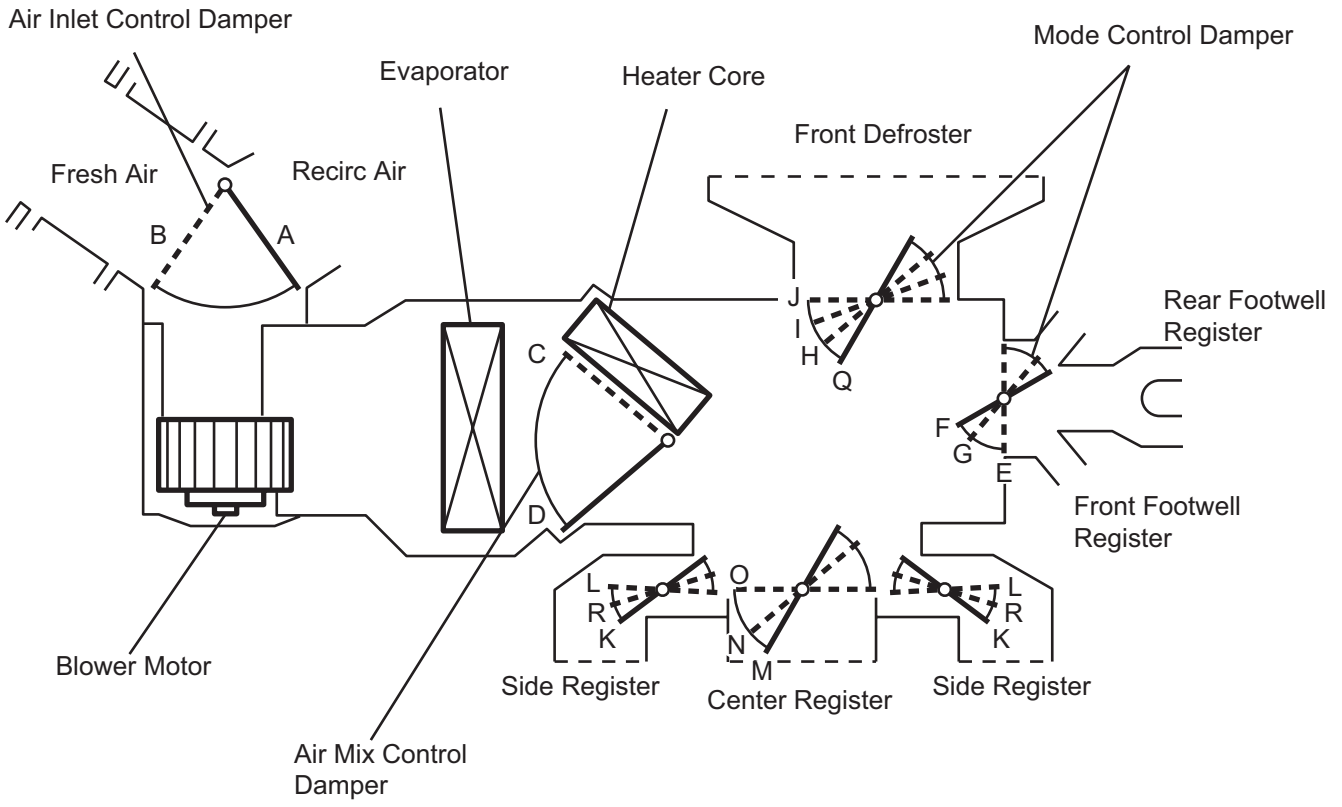
SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system has the following features:
The air conditioning amplifier controls the operation of parts, such as the air conditioning compressor, automatically in accordance with the operating conditions of the air conditioning system.

2. MODE POSITION AND DAMPER OPERATION

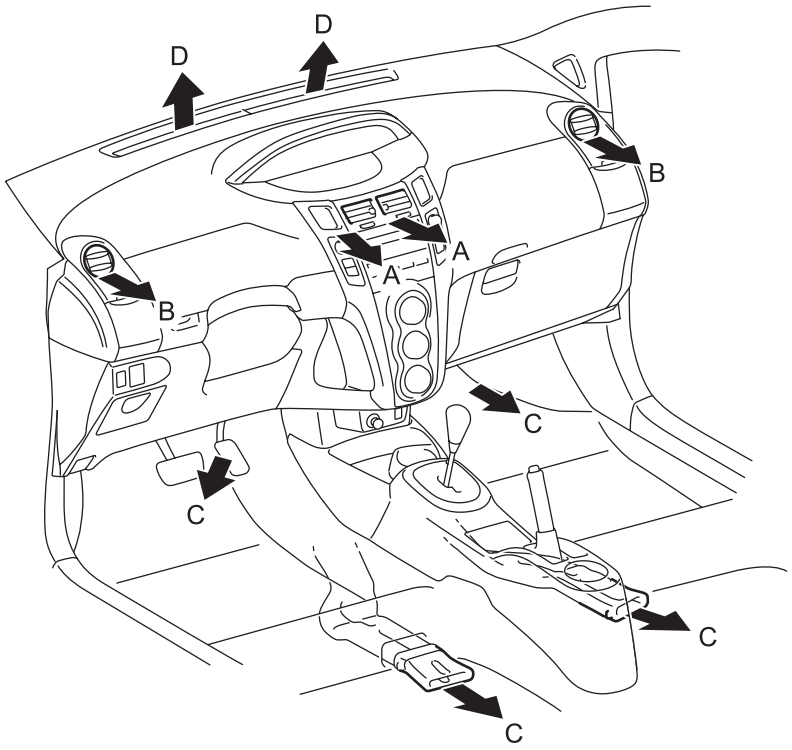


Control Damper	Control Position	Damper Position	Operation
Air Inlet Control Damper	FRESH	A	Allows outside air to enter.
	RECIRC	B	Recirculates internal air.
Air Mix Control Damper	COOL to HOT	C, D	Continuously changes mix ratio of warm and cool air between COOL and HOT.

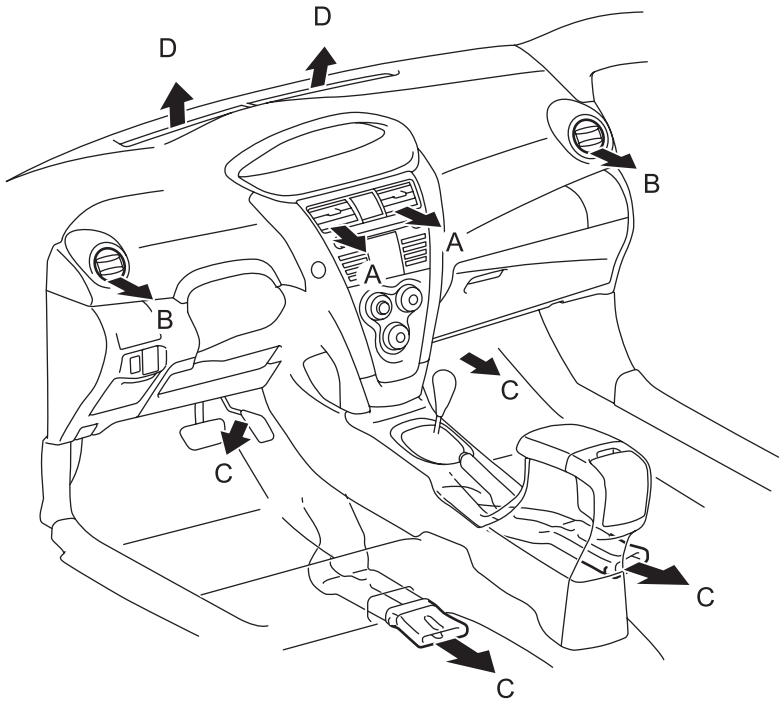
Control Damper	Control Position	Damper Position	Operation
Mode Control Damper	FACE	M, L, E, J	Blows air from center register and side registers.
	BI-LEVEL	N, R, F, J	Blows air from center register, side registers, front footwell register and rear footwell register.
	FOOT	O, K, F, I	Blows air from side registers, front footwell register, and rear footwell register. Also, blows some air from front defroster.
	FOOT/DEF	O, K, G, H	Blows air from front defroster, side registers, front footwell register, and rear footwell register.
	DEF	O, R, E, Q	Blows air from front defroster and side registers.

3. AIR OUTLET AND AIR FLOW VOLUME

HATCHBACK:



SEDAN:



E133592E01

The circle size (○) indicates the proportion of the flow volume.

Air Outlet Mode		Air Outlet Position Symbol			
		A	B	C	D
		Center Face	Side Face	Foot	Defroster
	FACE	◯	◯	X	X
	BI-LEVEL	○	○	◯	X
	FOOT	X	○	◯	○
	FOOT/DEF	X	○	○	○
	DEF	X	○	X	◯

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the air conditioning system.
- Use an intelligent tester in steps 4, 5 and 7.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS AND SYMPTOM CHECK

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4	CHECK CAN COMMUNICATION SYSTEM

(a) Use an intelligent tester to check if the CAN communication system is functioning.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

A

5	CHECK DTC

(a) Check for DTCs and write down any DTCs that are output.
(b) Clear the DTCs.
(c) Referring to the DTCs written above, simulate the DTC output conditions and check whether any DTCs of the air conditioning system recur.
Result

Result	Proceed to
DTC is not output	A

Result	Proceed to
DTC is output	B

B → GO TO STEP 8

A

6 REFER TO PROBLEM SYMPTOMS TABLE

(See page AC-15)

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Air conditioning system

Symptom	Suspected area	See page
No functions of A/C system operate	A/C Fuse	-
	Wire harness or connector	-
	Air conditioning amplifier	AC-16
Airflow Control: blower motor does not operate	HTR, GAUGE Fuse	-
	Blower motor circuit	AC-43
	Wire harness or connector	-
Airflow Control: blower motor does not change speed	Blower resistor	AC-203
	Blower motor	AC-200
	Heater control (for Hatchback)	AC-254
	Heater control (for Sedan)	AC-243
Temperature Control: No cool air comes out	Refrigerant volume	AC-62
	Refrigerant pressure	AC-62
	Heater control base (for Hatchback)	AC-253
	Heater control base (for Sedan)	AC-242
	Air conditioning pressure sensor	AC-230
	Compressor and pulley	AC-207
	Expansion valve	-
	Air conditioning amplifier	AC-16
	ECM	ES-26
	CAN communication	CA-9

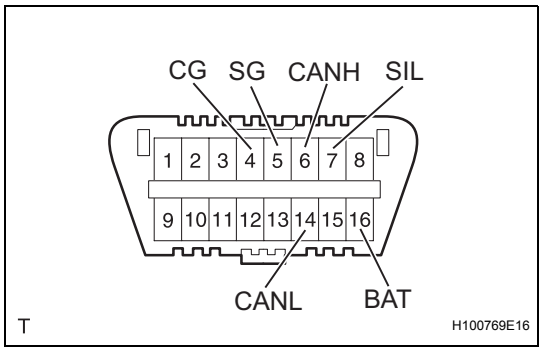
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Air conditioning system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use an intelligent tester with CAN VIM connected, to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



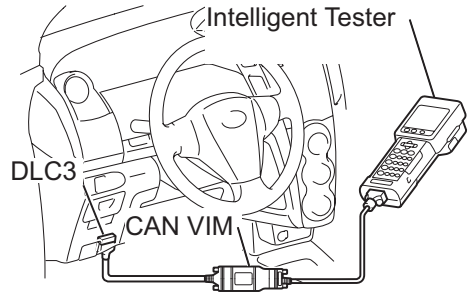
Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

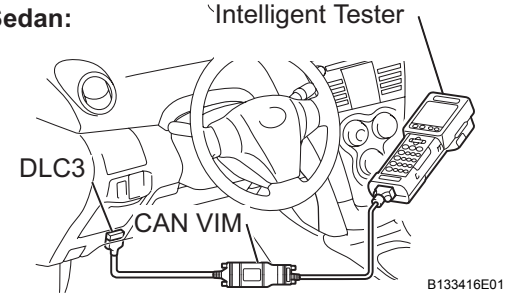
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Hatchback:



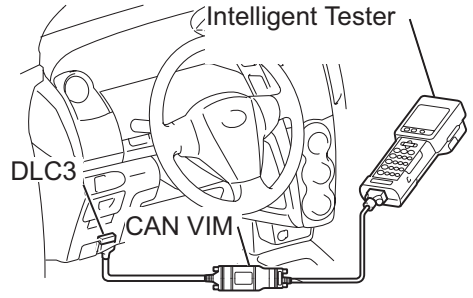
Sedan:



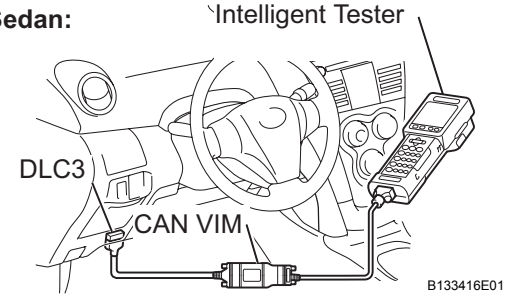
HINT:
Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Hatchback:



Sedan:



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Clear the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DATA LIST by following the prompts on the tester screen.

DATA LIST

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	-
COOLANT TEMP	Engine coolant temperature / Min.: 1.3°C (34.34°F) Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed after engine warmed up	-
AMBI TEMP	Adjusted ambient temperature Min.: -30.8°C (-23.44°F) Max.: 50.8°C (123.44°F)	-	-
EVAP FIN TEMP	Evaporator fin thermistor / Min.: -29.7°C (-21.46°F) Max.: 59.55°C (139.19°F)	Actual evaporator temperature is displayed	-
REG PRESS SENS	Regulator pressure sensor / Min.: 0 kgf / cm2G Max.: 38.25 kgf / cm2G	Actual regulator pressure is displayed	-
REG CTRL CURRNT	Regulator control current / Min.: 0 A Max.: 0.997 A	-	-
#CODES	Number of trouble codes / Min.: 0, Max.: 100	Number of DTCs displayed	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, the VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The Data List can be displayed in the Active Test.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Perform the ACTIVE TEST according to the display on the tester.

ACTIVE TEST

Item	Test Details / Display (Range)	Diagnostic Note
HEATER LEVEL	Heater Active Level / Min.: 0, Max.: 3	-
A/C MAG CLUTCH	Magnetic clutch relay / OFF, ON	-

DIAGNOSTIC TROUBLE CODE CHART

- If a trouble code is displayed during the DTC check, inspect the suspected areas listed for that code. For details of the code, refer to the "See page" in the DTC chart.
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.

HINT:
When the air conditioning system functions properly, DTC B1400/00 is output.

Air conditioning system

DTC No.	Detection Item	Trouble Area	Memory	See page
B1412/12	Ambient Temperature Sensor Circuit	- Ambient temperature sensor - Harness and connector between ambient temperature sensor and air conditioning amplifier - Air conditioning amplifier	-	AC-23
B1413/13	Evaporator Temperature Sensor Circuit	- No .1 cooler thermistor (evaporator temperature sensor) - Harness and connector between No .1 cooler thermistor (evaporator temperature sensor) and air conditioning amplifier - Air conditioning amplifier	-	AC-27
B1423/23	Pressure Sensor Circuit	- Air conditioning pressure sensor - Harness and connector between air conditioning pressure sensor and air conditioning amplifier - Air conditioning amplifier	-	AC-31
B1451/51	Compressor Solenoid Circuit	- Compressor and pulley - Harness and connector between air conditioning amplifier and compressor and pulley - Air conditioning amplifier	-	AC-37
B1499/99	Multiplex Communication Circuit	- Air conditioning amplifier power source circuit - Air conditioning amplifier - ECM - Combination meter assembly - CAN communication line	-	AC-41

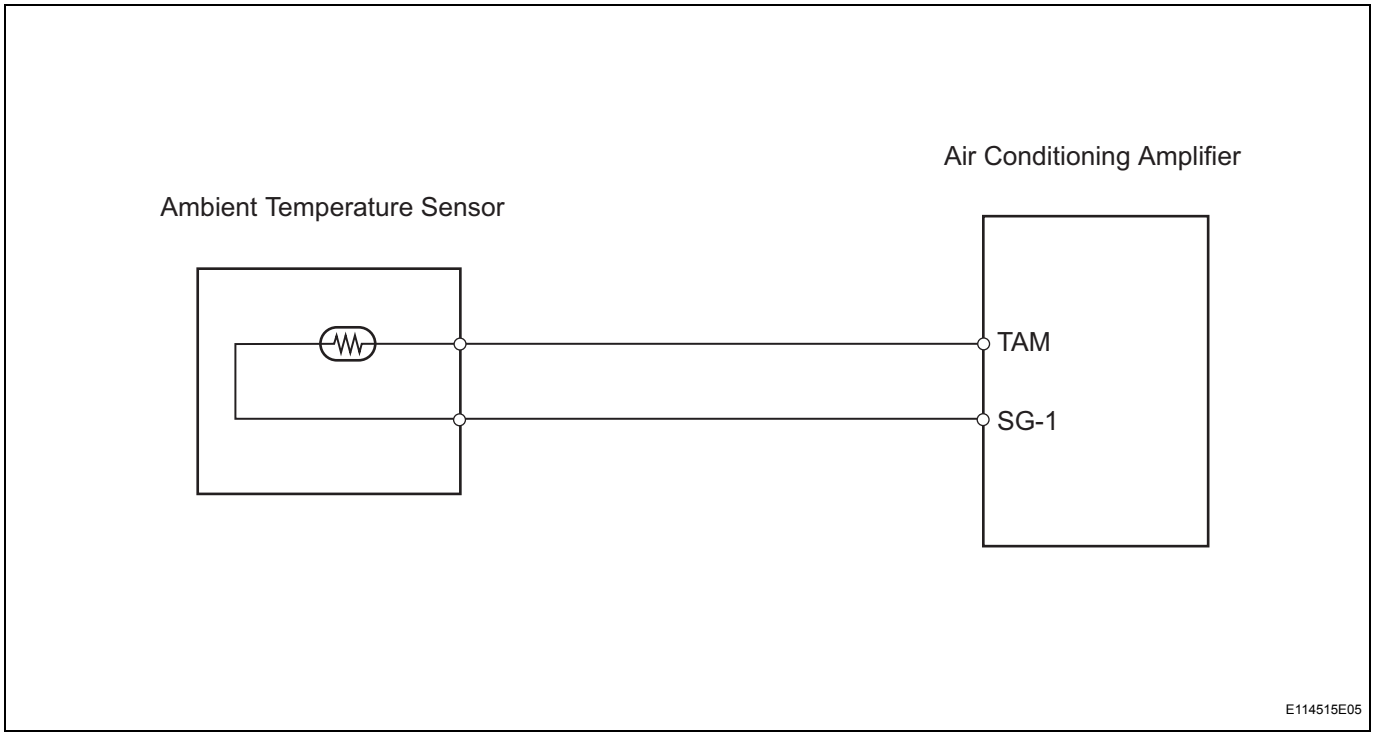
DTC	B1412/12	Ambient Temperature Sensor Circuit

DESCRIPTION

The ambient temperature sensor is installed in the front part of the condenser to detect the ambient temperature and control the air conditioner. The sensor is connected to the air conditioning amplifier and detects fluctuations in the ambient temperature. This data is used for controlling the room temperature. The sensor sends a signal to the air conditioning amplifier. The resistance of the ambient temperature sensor changes in accordance with the ambient temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases. The air conditioning amplifier applies a voltage (5 V) to the ambient temperature sensor and reads voltage changes as changes in the resistance of the ambient temperature sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1412/12	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness and connector between ambient temperature sensor and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE USING INTELLIGENT TESTER (AMBI TEMP SENS)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

AC

DATA LIST / AIR CONDITIONER

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open circuit: -23.3°C (-9.94°F) Short circuit: 65.95°C (150.71°F)

OK:

The display is as specified in the normal condition column.

B5-1 - Body ground	10 kΩ or higher
B5-2 - Body ground	10 kΩ or higher

(d) Reconnect the ambient temperature sensor connector.
(e) Reconnect the air conditioning amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1413/13	Evaporator Temperature Sensor Circuit

DESCRIPTION

The No. 1 cooler thermistor (evaporator temperature sensor) is installed on the evaporator in the air conditioner unit to detect the temperature of the cooled air that has passed through the evaporator and to control the air conditioner. It sends signals to the air conditioning amplifier, which change in accordance with the resistance of the No. 1 cooler thermistor (evaporator temperature sensor). As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases. The air conditioning amplifier applies a voltage (5V) to the No. 1 cooler thermistor (evaporator temperature sensor) and reads voltage changes as changes in the resistance of the evaporator temperature sensor. This sensor is used for frost prevention.

DTC No.	DTC Detection Condition	Trouble Area
B1413/13	Open or short in evaporator temperature sensor circuit	• No. 1 cooler thermistor (evaporator temperature sensor) • Harness and connector between No. 1 cooler thermistor (evaporator temperature sensor) and air conditioning amplifier • Air conditioning amplifier

REPLACE AIR CONDITIONING AMPLIFIER

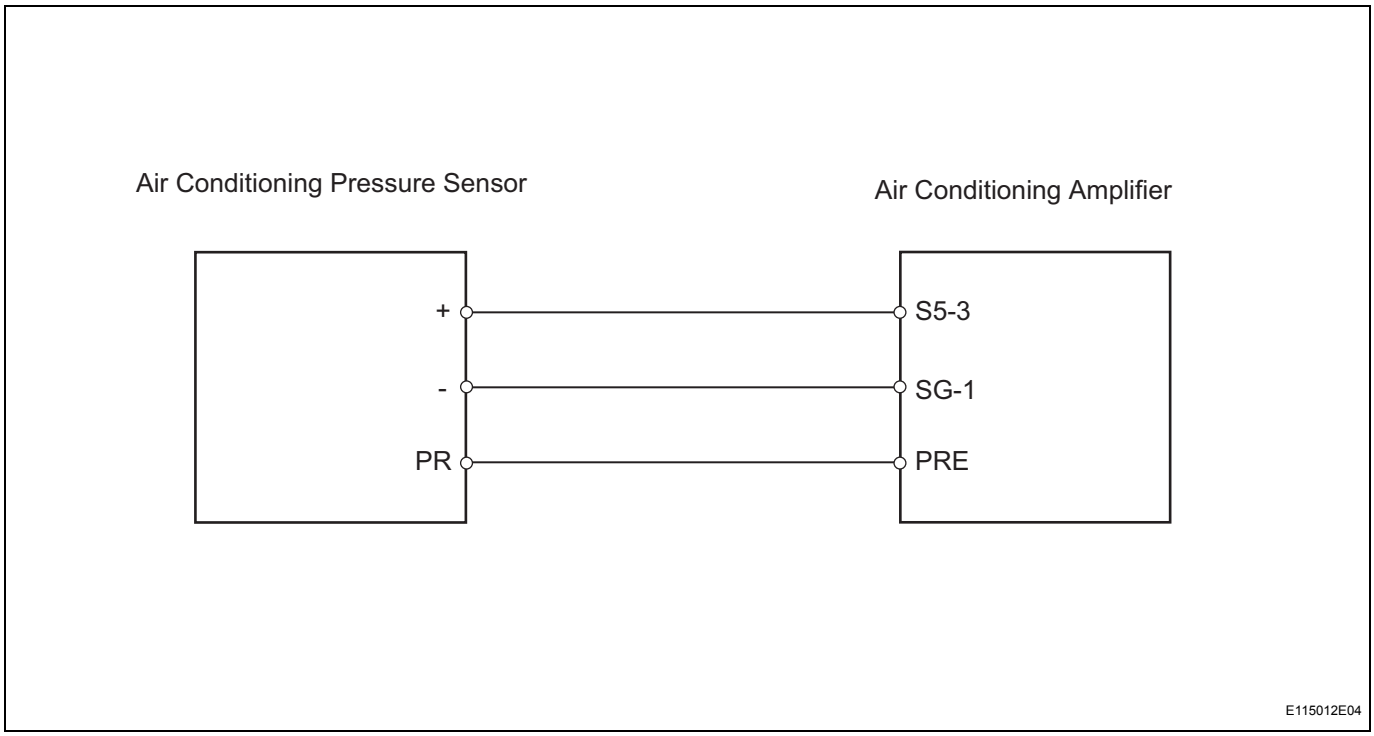
DTC	B1423/23	Pressure Sensor Circuit

DESCRIPTION

This DTC is output when the refrigerant pressure is either extremely low (0.19 Mpa [2.0 kgf/cm^2, 28 psi] or less) or extremely high (3.14 Mpa [32.0 kgf/cm^2, 455 psi] or more). The pressure sensor, which is installed on the pipe of the high pressure side, detects the refrigerant pressure and sends a refrigerant pressure signal to the air conditioning amplifier. The air conditioning amplifier determines the pressure from the signals in accordance with the sensor characteristics, and controls the compressor.

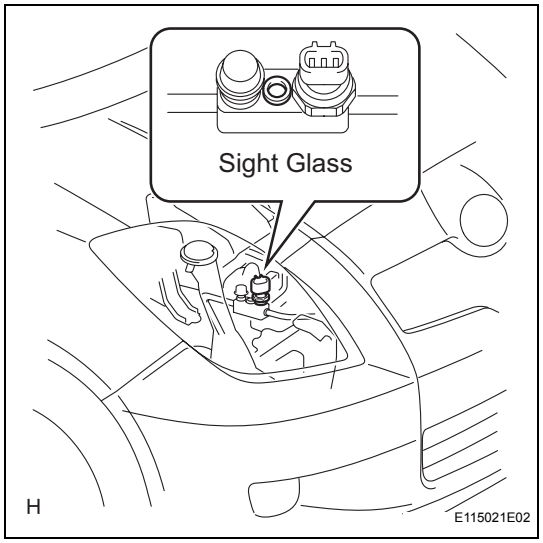
DTC No.	DTC Detection Condition	Trouble Area
B1423/23	Open or short in pressure sensor circuit	• Air conditioning pressure sensor • Harness and connector between air conditioning pressure sensor and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK REFRIGERANT



(a) Check the sight glass of the cooler unit refrigerant liquid pipe.
  (1) Prepare the vehicle in accordance with the chart below.

Item	Condition
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON

  (2) Compare the sight glass to the following chart.

Item	Symptom	Amount of Refrigerant	Corrective Procedures
1	Bubbles visible	Insufficient*	(1) Check for gas leakage and repair if necessary (2) Add refrigerant until bubbles disappear
2	No bubbles visible	Empty, insufficient or too much	Refer to items 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	(1) Check for gas leakage with gas leak detector and repair if necessary (2) Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Correct or too much	Refer to items 5 and 6
5	Immediately after A/C turned OFF, refrigerant becomes clear	Too much	(1) Drain or discharge refrigerant (2) Bleed air and supply proper amount of purified refrigerant
6	Immediately after A/C turned OFF, refrigerant foams and then becomes clear	Correct	-

HINT:
*: If the ambient temperature is higher than usual but cooling is sufficient, bubbles in the sight glass are permissible.

NG → **CHARGE REFRIGERANT**

OK

2	READ VALUE OF INTELLIGENT TESTER (REG PRESS SENS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.

(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

DATA LIST / AIR CONDITIONER

Item	Measure Item / Display (Range)	Normal Condition	Diagnostic Note
REG PRESS SENS (Regulator pressure sensor)	Regulator Pressure Sensor / Min.: 0 kgf / cm 2G, Max.: 38.25 kgf / cm 2G	Actual regulator pressure is displayed	-

OK:

The display is as specified in the normal condition column.

C8-1 - C8-2	10.1 to 11.1 Ω at 25°C (77°F)

(c) Reconnect the compressor and pulley connector.

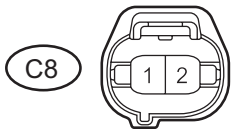
NG → **REPLACE COMPRESSOR AND PULLEY**

OK

3	CHECK HARNESS AND CONNECTOR (COMPRESSOR AND PULLEY - AIR CONDITIONING AMPLIFIER)

Wire Harness Side:

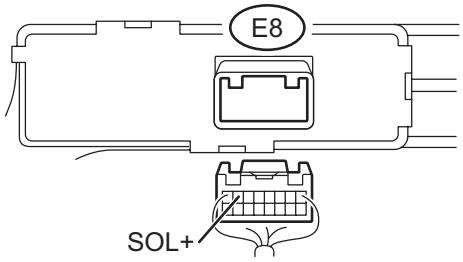
Compressor and Pulley Connector



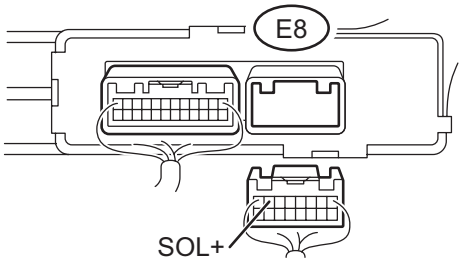
Front View

Air Conditioning Amplifier Connector

w/o PTC Heater



w/ PTC Heater



E119780E04

(a) Disconnect the C8 compressor and pulley connector.
(b) Disconnect the E8 air conditioning amplifier connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
C8-1 - E8-7 (SOL+)	Below 1 Ω
C8-1 - Body ground	10 kΩ or higher

(d) Reconnect the compressor and pulley connector.
(e) Reconnect the air conditioning amplifier connector.

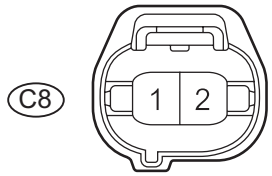
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (COMPRESSOR AND PULLEY - BODY GROUND)

Wire Harness Side:

Compressor and Pulley Connector



Front View

E119774E01

(a) Disconnect the C8 compressor and pulley connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
C8-2 - Body ground	Below 1 Ω

(c) Reconnect the compressor and pulley connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

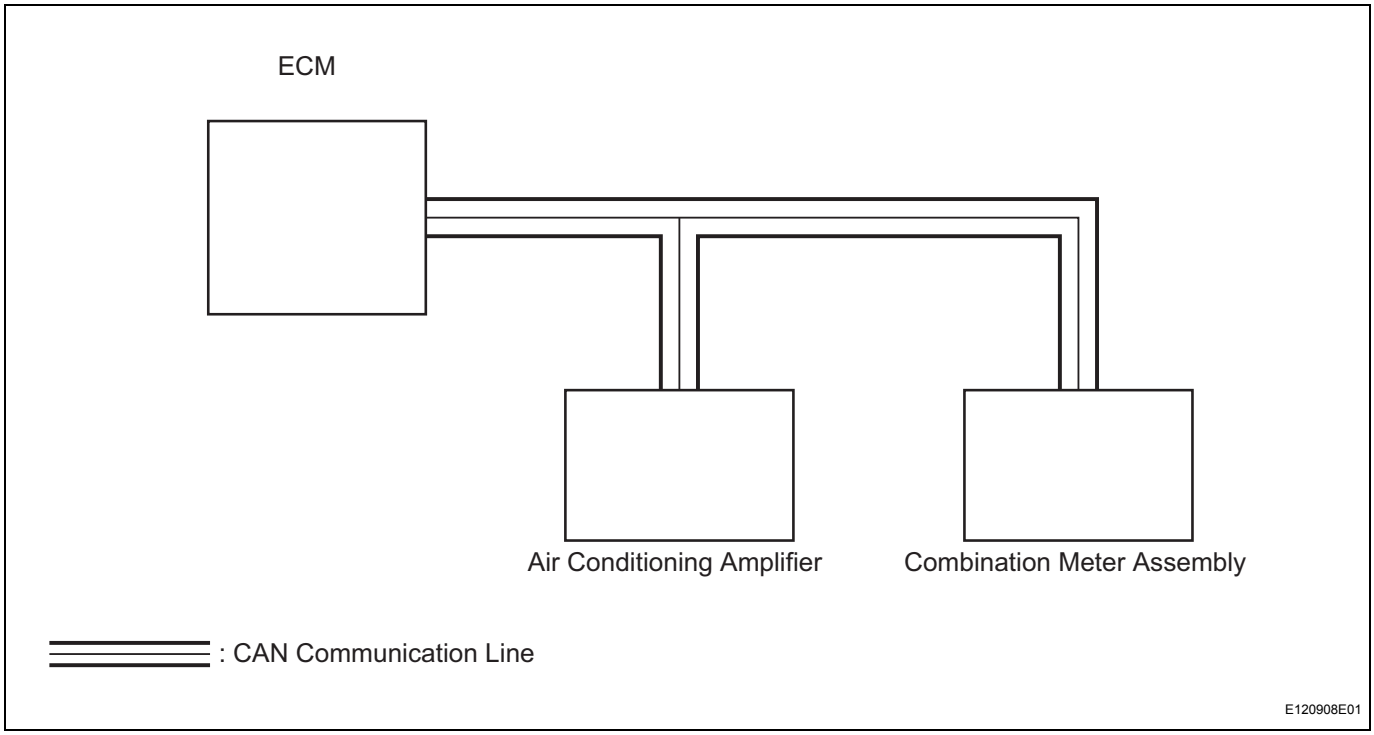
DTC	B1499/99	Multiplex Communication Circuit

DESCRIPTION

The air conditioning amplifier communicates data with the ECM and combination meter assembly through the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
B1499/99	Open in CAN communication line	• Air conditioning amplifier power source circuit • Air conditioning amplifier • ECM • Combination meter assembly • CAN communication line

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC OUTPUT (DTC B1499/99)

(a) Clear the DTC.
  (1) Connect an intelligent tester with CAN VIM to the DLC3 with the ignition switch turned OFF.
  (2) Turn the ignition switch ON and turn the intelligent tester main switch ON.
  (3) Clear the DTC by following the prompts on the tester screen.
  HINT:
  Refer to the intelligent tester operator's manual for further details.

(b) Read the DTC.

(1) Connect an intelligent tester with CAN VIM to the DLC3 with the ignition switch turned OFF.
(2) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(3) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

Result

Result	Proceed to
DTC (B1499/99) is output	A
DTC (B1499/99) is not output	B

B → **SYSTEM IS OK**

A

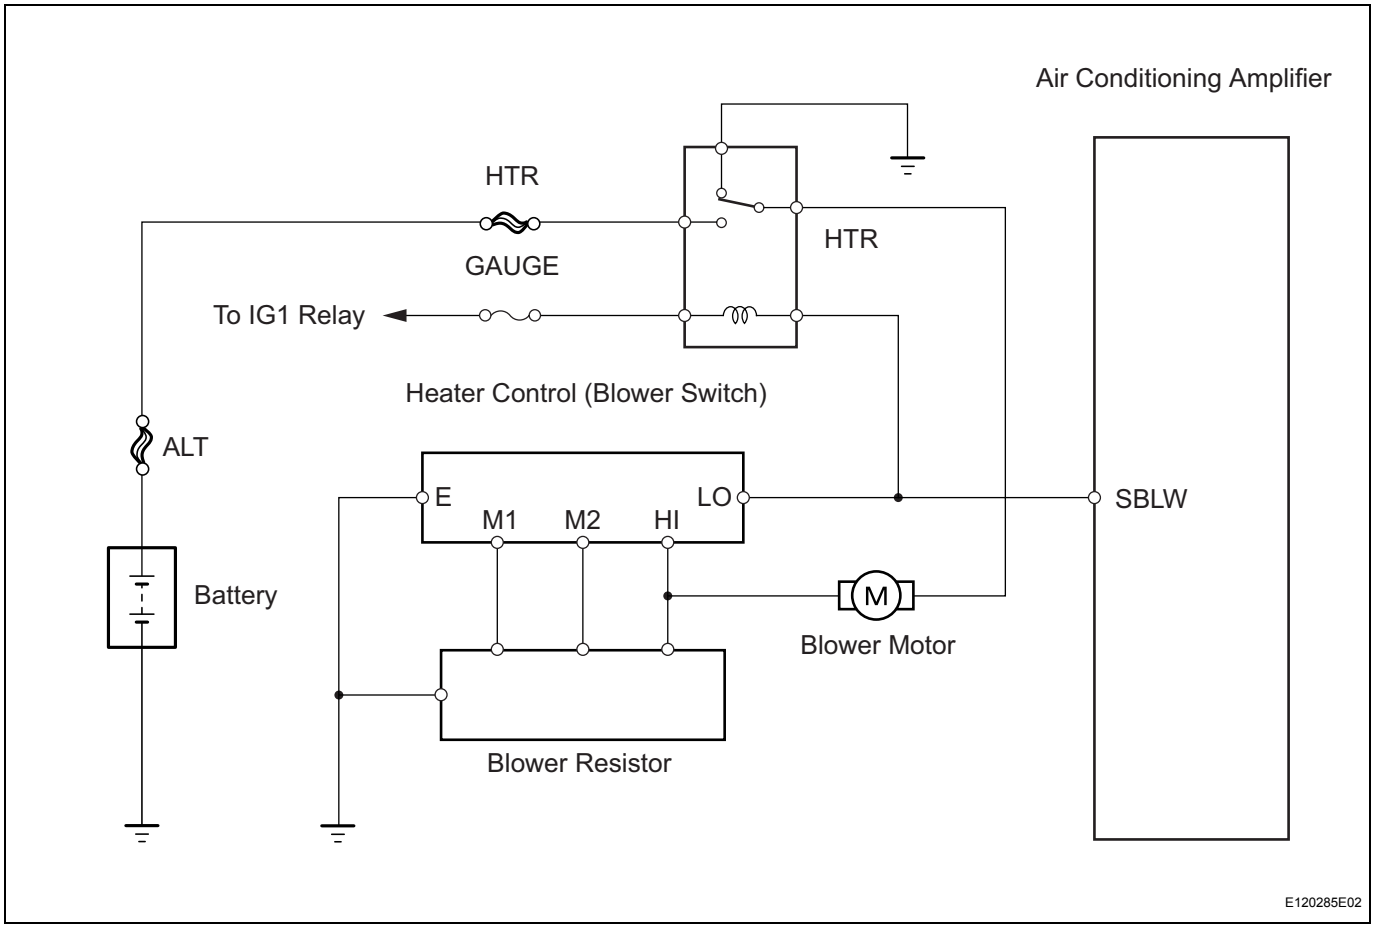
GO TO CAN COMMUNICATION SYSTEM

Blower Motor Circuit

DESCRIPTION

When the heater control (blower switch) is set to position 1 or higher, the contact of the HTR relay is closed, current flows to the blower motor, and the blower motor operates. The blower motor speed can be changed by exchanging the ground and the blower resistor circuit with the heater control (blower switch).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (GAUGE, HTR)

(a) Remove the GAUGE fuse from the main body ECU.
(b) Remove the HTR fuse from the engine room relay block.
(c) Measure the resistance.

Standard resistance

Tester Item	Specified Condition
GAUGE fuse	Below 1 Ω
HTR fuse	Below 1 Ω

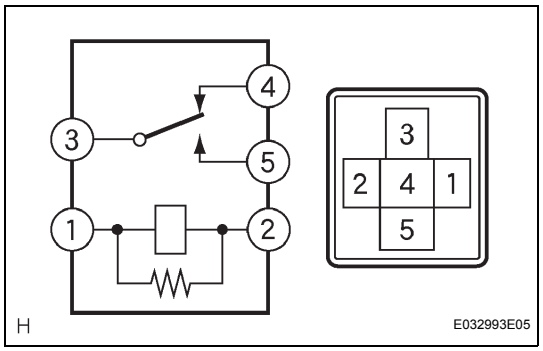
(d) Reinstall the GAUGE fuse.
(e) Reinstall the HTR fuse.

NG	REPLACE FUSE

AC

OK

2	INSPECT HTR RELAY



(a) Remove the HTR relay from the main body ECU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

(c) Reinstall the HTR relay.

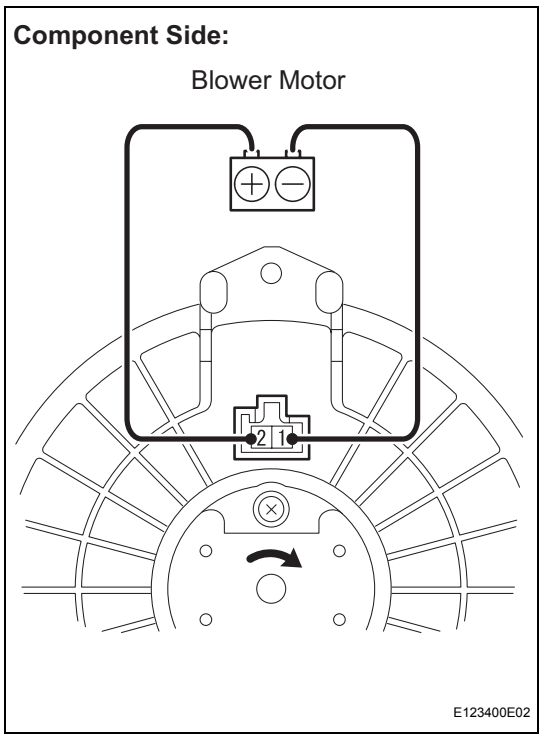
NG → REPLACE HTR RELAY

OK

3	INSPECT BLOWER MOTOR

Component Side:

Blower Motor



(a) Disconnect the E4 blower motor connector.
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the blower motor operates smoothly.
OK:
The blower motor operates smoothly.
(c) Measure the current.
Standard current

Tester Connection	Specified Condition
E4-2 (+B) - E4-1 (GND)	1 to 3 A

(d) Reconnect the blower motor connector.

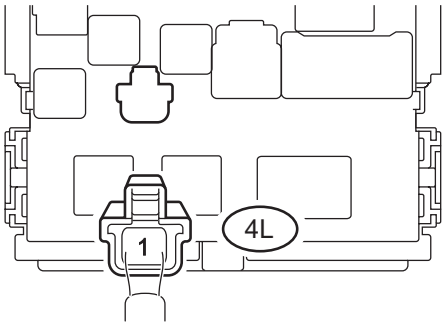
NG → REPLACE BLOWER MOTOR

OK

4	CHECK HARNESS AND CONNECTOR (HTR FUSE - MAIN BODY ECU)

Wire Harness Side:

Main Body ECU Rear View



E120471E01

(a) Disconnect the 4L main body ECU connector.
(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
4L-1 - Body ground	Always	11 to 14 V

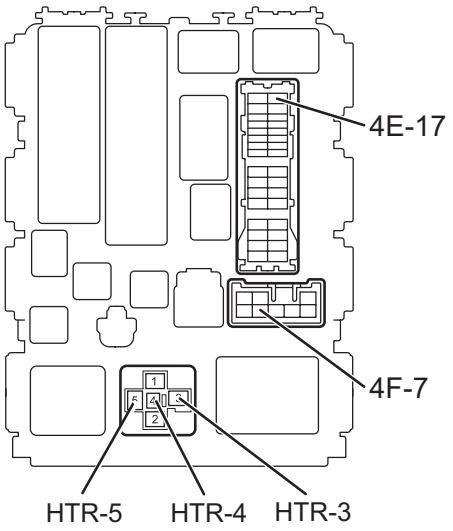
(c) Reconnect the main body ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

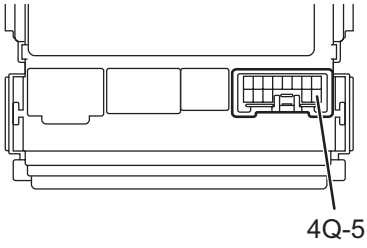
OK

5	CHECK MAIN BODY ECU

Main Body ECU Rear View:



Main Body ECU Front View:



E120470E01

OK

(a) Remove the HTR relay from the main body ECU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
4F-7 - HTR-3	Below 1 Ω
4E-17 - HTR-4	Below 1 Ω

(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
HTR-5 - Body ground	Always	11 to 14 V

(d) Reinstall the HTR relay.
(e) Measure the voltage.
Standard voltage

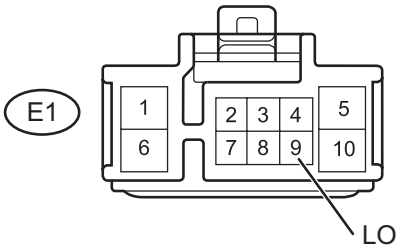
Tester Connection	Condition	Specified Condition
4Q-5 - Body ground	Ignition switch ON	11 to 14 V

NG → **REPLACE MAIN BODY ECU**

6	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - HEATER CONTROL (BLOWER SWITCH))

Wire Harness Side:

Heater Control (Blower Switch) Connector



Front View

E120224E04

(a) Disconnect the E1 heater control (blower switch) connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
E1-9 (LO) - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the heater control (blower switch) connector.

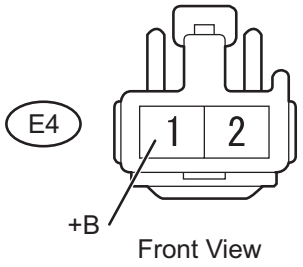
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BLOWER MOTOR)

Wire Harness Side:

Blower Motor Connector



Front View

E119793E04

(a) Disconnect the E4 blower motor connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
E4-1 (+B) - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the blower motor connector.

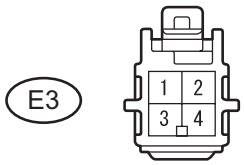
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8 CHECK HARNESS AND CONNECTOR (BLOWER RESISTOR - BLOWER MOTOR)

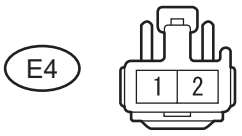
Wire Harness Side:

Blower Resistor Connector



Front View

Blower Motor Connector



Front View

E120282E01

(a) Disconnect the E3 blower resistor connector.
(b) Disconnect the E4 blower motor connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E3-4 - E4-1	Below 1 Ω

(d) Reconnect the blower resistor connector.
(e) Reconnect the blower motor connector.

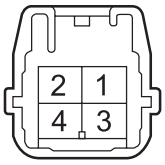
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9 INSPECT BLOWER RESISTOR

Component Side:

Blower Resistor



E120977E01

(a) Remove the blower resistor.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
4 - 1	3.12 to 3.60Ω
4 - 3	1.45 to 1.67Ω
4 - 2	0.52 to 0.60Ω

(c) Reinstall the blower resistor.

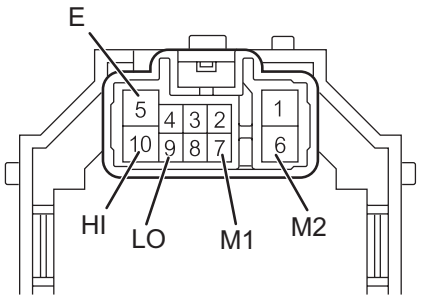
NG → **REPLACE BLOWER RESISTOR**

OK

10 INSPECT HEATER CONTROL (BLOWER SWITCH)

Component Side:

Heater Control (Blower Switch)



E117010E05

(a) Remove the heater control (blower switch).
(b) Measure the resistance.
Standard resistance

Switch Position	Tester Connection	Specified Condition
0	ALL - 5 (E)	10 kΩ or higher
1	9 (LO) - 5 (E)	Below 1 Ω
1 - 2	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
2	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
2 - 3	9 (LO) - 5 (E) - 7 (M1) - 6 (M2)	Below 1 Ω
3	9 (LO) - 5 (E) - 6 (M2)	Below 1 Ω
3 - 4	9 (LO) - 5 (E) - 6 (M2) - 10 (HI)	Below 1 Ω
4	9 (LO) - 5 (E) - 10 (HI)	Below 1 Ω

(c) Reinstall the heater control (blower switch).

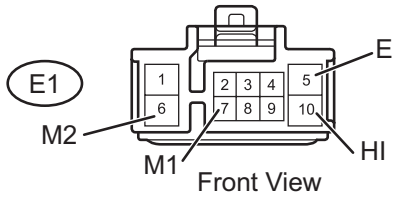
NG → **REPLACE HEATER CONTROL**

OK

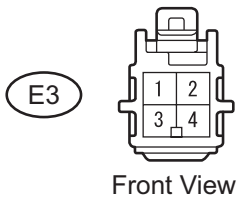
11 CHECK HARNESS AND CONNECTOR (HEATER CONTROL (BLOWER SWITCH) - BLOWER RESISTOR)

Wire Harness Side:

Heater Control (Blower Switch) Connector



Blower Resistor Connector



E120283E02

(a) Disconnect the E1 heater control (blower switch) connector.
(b) Disconnect the E3 blower resistor connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
E1-5 (E) - E3-1	Below 1 Ω
E1-6 (M2) - E3-2	Below 1 Ω
E1-7 (M1) - E3-3	Below 1 Ω
E1-10 (HI) - E3-4	Below 1 Ω

(d) Reconnect the heater control (blower switch) connector.
(e) Reconnect the blower resistor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (BLOWER RESISTOR - BODY GROUND)

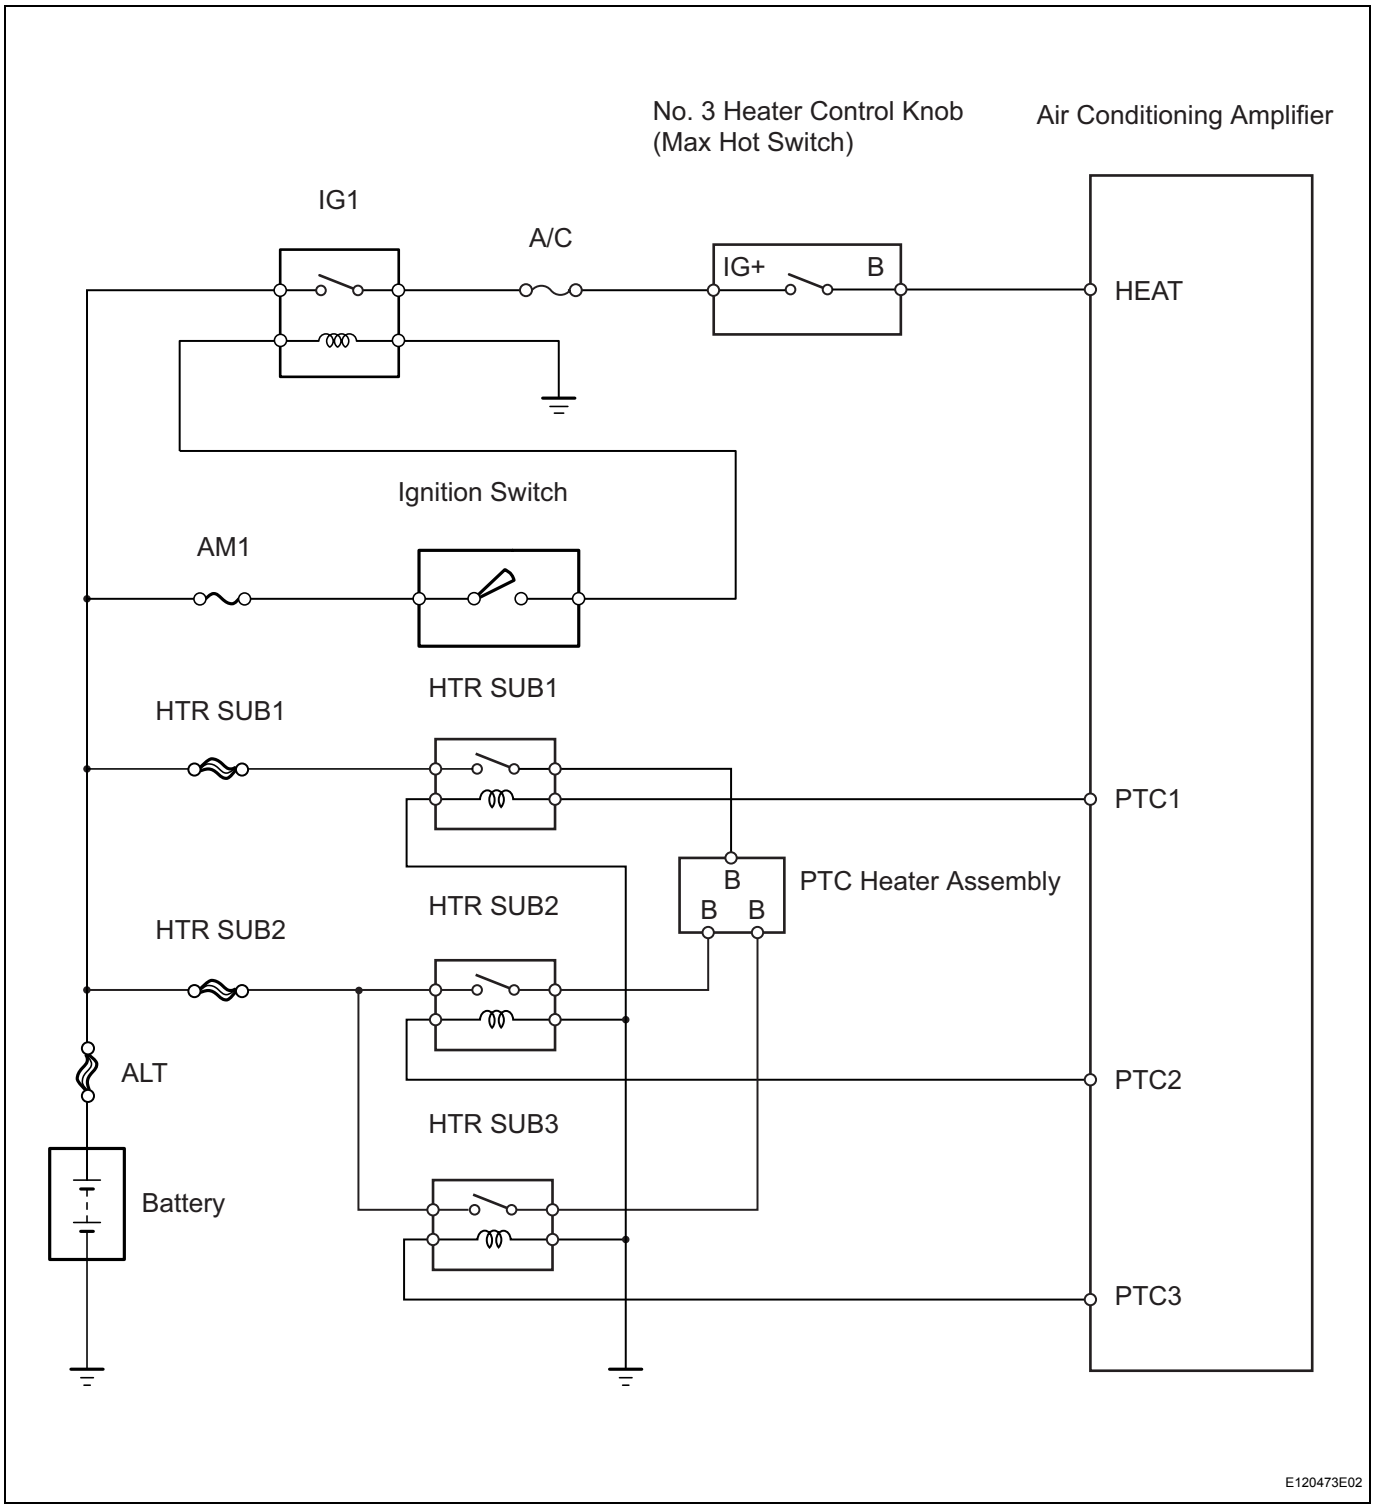
AC

PTC Heater Circuit

DESCRIPTION

PTC heater relays are closed in accordance with signals from the air conditioning amplifier assembly and power is supplied to the PTC heater assembly installed on the radiator heater unit.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (A/C, HTR SUB1, HTR SUB2)

(a) Remove the A/C fuse from the main body ECU.
(b) Remove the HTR SUB1 and HTR SUB2 fuses from the engine room relay block.
(c) Measure the resistance.
Standard resistance

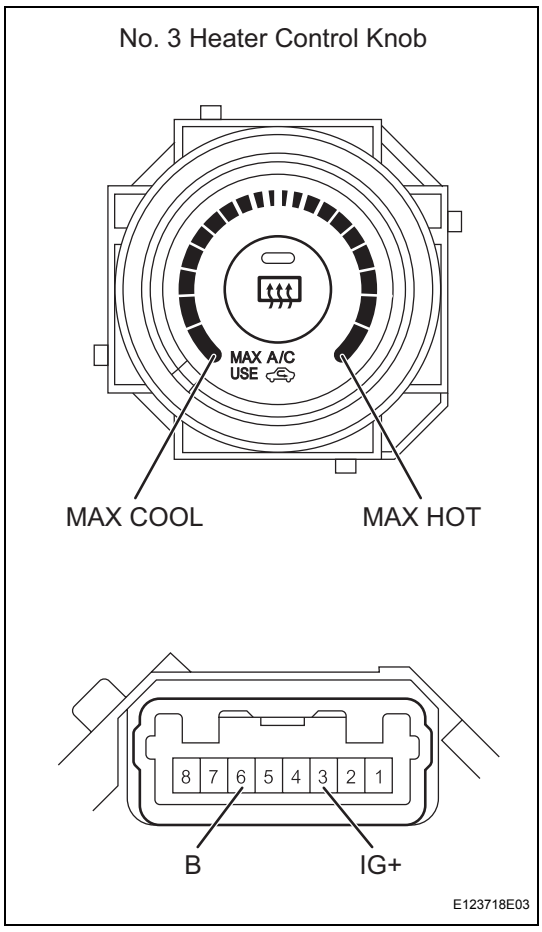
Tester Item	Specified Condition
A/C fuse	Below 1 Ω
HTR SUB 1 fuse	Below 1 Ω
HTR SUB 2 fuse	Below 1 Ω

(d) Reinstall the A/C fuse.
(e) Reinstall the HTR SUB1 and HTR SUB2 fuses.

NG → REPLACE FUSE

OK

2	INSPECT NO. 3 HEATER CONTROL KNOB



(a) Remove the No. 3 heater control knob.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
3 (IG+) - 6 (B)	Max hot position	Below 1 Ω
3 (IG+) - 6 (B)	Other than max hot position	10 kΩ or higher

(c) Reinstall the No. 3 heater control knob.

NG → REPLACE NO. 3 HEATER CONTROL KNOB

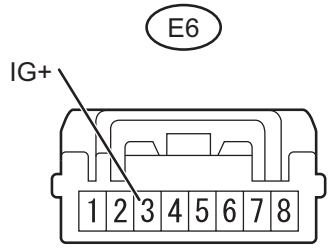
OK

AC

3	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - AIR CONDITIONING AMPLIFIER)

Wire Harness Side:

No. 3 Heater Control Knob Connector



Front View

E120225E03

(a) Disconnect the E6 No. 3 heater control knob connector.
(b) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
E6-3 (IG+) - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the No. 3 heater control knob connector.

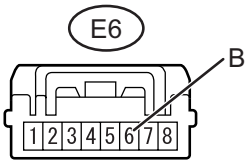
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (No. 3 HEATER CONTROL KNOB - AIR CONDITIONING AMPLIFIER)

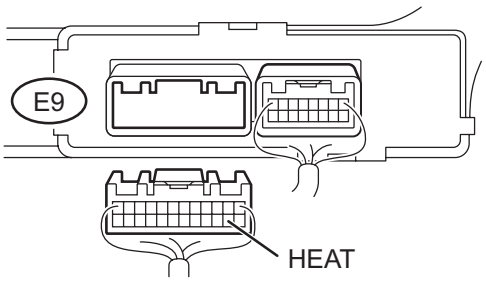
Wire Harness Side:

No. 3 Heater Control Knob Connector



Front View

Air Conditioning Amplifier Connector



E120281E03

(a) Disconnect the E6 No. 3 heater control knob connector.
(b) Disconnect the E9 air conditioning amplifier connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
E6-6 (B) - E9-14 (HEAT)	Below 1 Ω

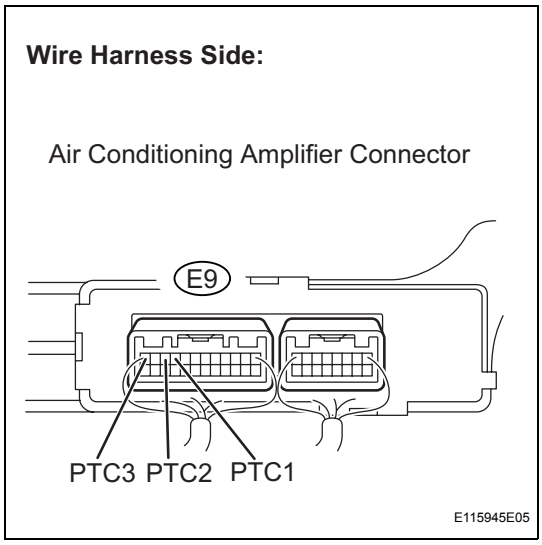
(d) Reconnect the No. 3 heater control knob connector.
(e) Reconnect the air conditioning amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

AC

OK

5 INSPECT AIR CONDITIONING AMPLIFIER



(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Turn the ignition switch ON.
(c) When the PTC heater operating conditions are met (engine at idling speed or faster, ambient temperature is 10°C (50°F) or less, engine coolant temperature is 65°C (149°F) or less, and No. 3 heater control knob setting is MAX HOT), turn the blower switch to the Lo setting.
(d) Wait 30 seconds.
(e) Measure the voltage.

Standard voltage

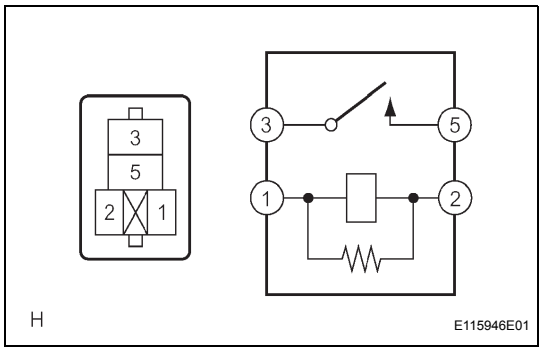
Tester Connection	Specified Condition
E9-9 (PTC1) - Body ground	11 to 14 V
E9-10 (PTC2) - Body ground	11 to 14 V
E9-12 (PTC3) - Body ground	11 to 14 V

(f) Reinstall the air conditioning amplifier.

NG → REPLACE AIR CONDITIONING AMPLIFIER

OK

6 INSPECT PTC HEATER RELAY (HTR SUB1, HTR SUB2, HTR SUB3)



(a) Remove the HTR SUB1 relay from the engine room relay block.
(b) Remove the HTR SUB2 and HTR SUB3 relays from the engine room sub relay block.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

(d) Reinstall the HTR SUB1 relay.
(e) Reinstall the HTR SUB2 and HTR SUB3 relays.

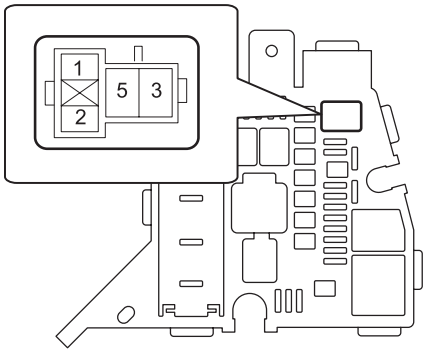
NG → REPLACE PTC HEATER RELAY

OK

7	CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PTC HEATER RELAY)

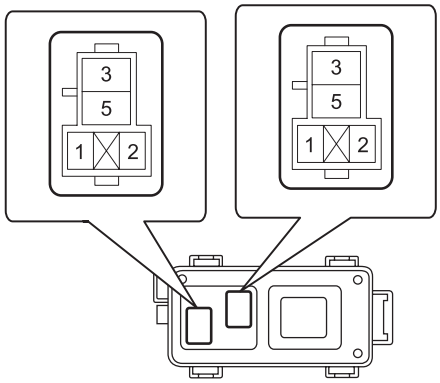
Engine Room R/B:

HTR SUB1 Relay



Engine Room R/B No. 2:

HTR SUB3 Relay HTR SUB2 Relay



E120466E04

OK

(a) Remove the HTR SUB1 relay from the engine room R/B.
(b) Remove the HTR SUB2 and HTR SUB3 relays from the engine room R/B No. 2.
(c) Turn the ignition switch ON.
(d) When the PTC heater operating conditions are met (engine at idling speed or faster, ambient temperature is 10°C (50°F) or less, engine coolant temperature is 65°C (149°F) or less, and No. 3 heater control knob setting is MAX HOT), turn the blower switch to the Lo setting.
(e) Wait 30 seconds.
(f) Measure the voltage.
Standard voltage.

Tester Connection	Specified Condition
HTR SUB1-2 - Body ground	11 to 14V
HTR SUB2-2 - Body ground	11 to 14V
HTR SUB3-2 - Body ground	11 to 14V

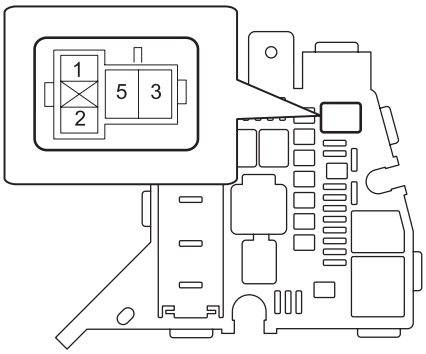
(g) Reinstall the HTR SUB1 relay.
(h) Reinstall the HTR SUB2 and HTR SUB3 relays.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

8 CHECK HARNESS AND CONNECTOR (PTC HEATER RELAY - BODY GROUND)

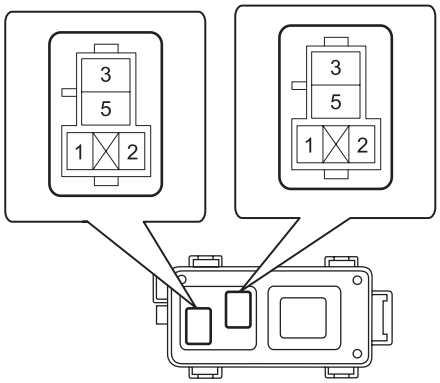
Engine Room R/B:

HTR SUB1 Relay



Engine Room R/B No. 2:

HTR SUB3 Relay HTR SUB2 Relay



E120466E04

(a) Remove the HTR SUB1 relay from the engine room R/B.
(b) Remove the HTR SUB2 and HTR SUB3 relays from the engine room R/B No. 2.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
HTR SUB1-1 - Body ground	Below 1 Ω
HTR SUB2-1 - Body ground	Below 1 Ω
HTR SUB3-1 - Body ground	Below 1 Ω

(d) Reinstall the HTR SUB1 relay.
(e) Reinstall the HTR SUB2 and HTR SUB3 relays.

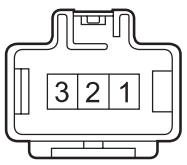
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9 INSPECT PTC HEATER ASSEMBLY

Component Side:

PTC Heater Assembly Connnector



H

E115947E03

(a) Disconnect the A17 PTC heater assembly connector.
(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
1 - 2	Below 1 Ω
1 - 3	Below 1 Ω
2 - 3	Below 1 Ω

(c) Reconnect the PTC heater assembly connector.

NG → **REPLACE PTC HEATER ASSEMBLY**

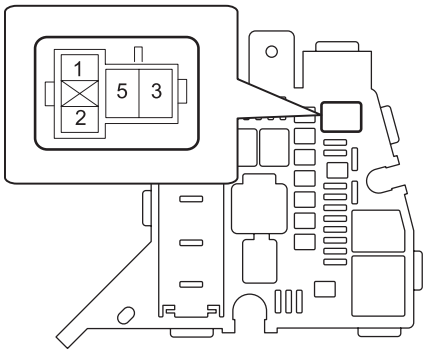
AC

OK

10	CHECK HARNESS AND CONNECTOR (BATTERY - PTC HEATER RELAY)

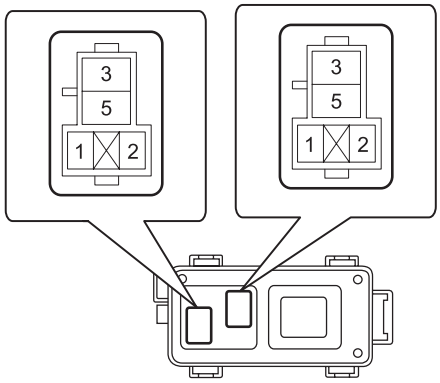
Engine Room R/B:

HTR SUB1 Relay



Engine Room R/B No. 2:

HTR SUB3 Relay HTR SUB2 Relay



E120466E04

(a) Remove the HTR SUB1 relay from the engine room R/B.
(b) Remove the HTR SUB2 and HTR SUB3 relays from the engine room R/B No. 2.
(c) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
HTR SUB1-5 - Body ground	Always	11 to 14 V
HTR SUB2-5 - Body ground	Always	11 to 14 V
HTR SUB3-5 - Body ground	Always	11 to 14 V

(d) Reinstall the HTR SUB1 relay.
(e) Reinstall the HTR SUB2 and HTR SUB3 relays.

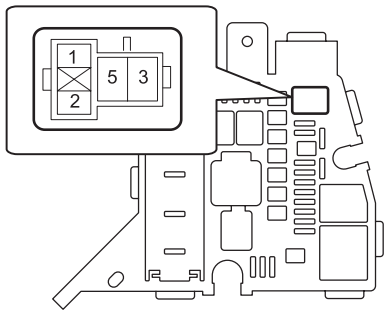
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11	CHECK HARNESS AND CONNECTOR (PTC HEATER RELAY - PTC HEATER ASSEMBLY)

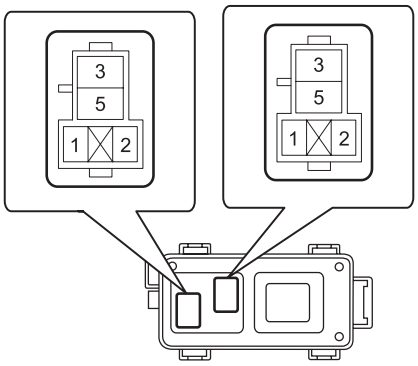
Engine Room R/B:

HTR SUB1 Relay



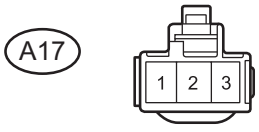
Engine Room R/B No. 2:

HTR SUB3 Relay HTR SUB2 Relay



Wire Harness Side:

PTC Heater Assembly Connector



Front View

E120286E02

(a) Remove the HTR SUB1 relay from the engine room R/B.
(b) Remove the HTR SUB2 and HTR SUB3 relays from the engine room R/B No. 2.
(c) Disconnect the A17 PTC heater assembly connector.
(d) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
HTR SUB1-3 - A17-2 (B)	Below 1 Ω
HTR SUB2-3 - A17-3 (B)	Below 1 Ω
HTR SUB3-3 - A17-1 (B)	Below 1 Ω

(e) Reinstall the HTR SUB1 relay.
(f) Reinstall the HTR SUB2 and HTR SUB3 relays.
(g) Reconnect the PTC heater assembly connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

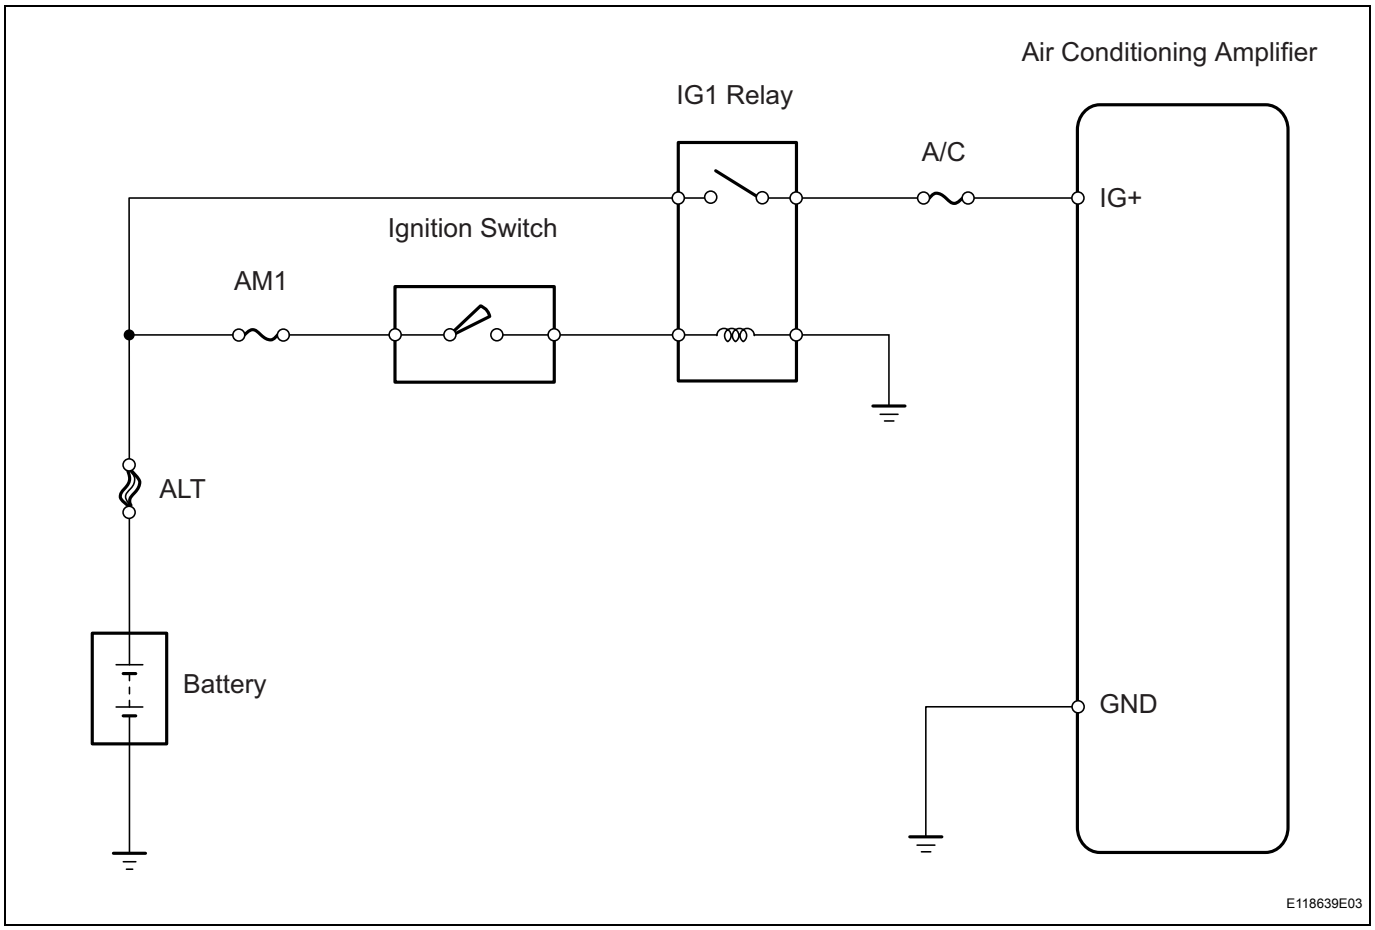
REPLACE AIR CONDITIONING AMPLIFIER

IG Power Source Circuit

DESCRIPTION

This is the main power source supplied to the air conditioning amplifier when the ignition switch is turned on. This power source is used for operating components such as the air conditioning amplifier.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Start the engine before the inspection. Check the IG1 relay or battery if the engine does not start.

1	INSPECT FUSE (A/C)

(a) Remove the A/C fuse from the main body ECU.
(b) Measure the resistance.
Standard resistance:
Bellow 1 Ω
(c) Reinstall the A/C fuse.

NG → **REPLACE FUSE**

OK

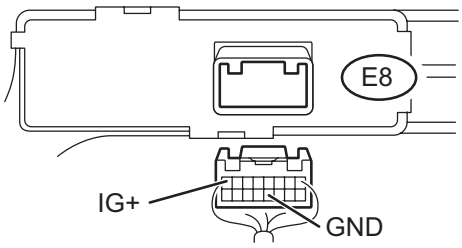
AC

2	INSPECT AIR CONDITIONING AMPLIFIER

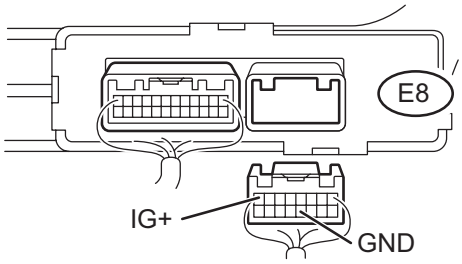
Wire Harness Side:

Air Conditioning Amplifier Connector

w/o PTC Heater:



w/ PTC Heater:



E119775E01

(a) Disconnect the E8 air conditioning amplifier connector.
(b) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
E8-8 (IG+) - E8-12 (GND)	Ignition switch ON	11 to 14 V

(c) Reconnect the air conditioning amplifier connector.

NG → **Go to step 3**

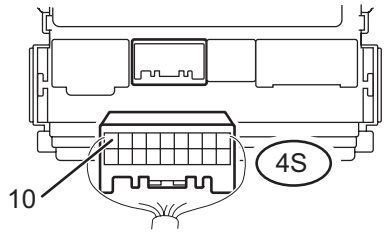
OK

REPLACE AIR CONDITIONING AMPLIFIER

3	CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - MAIN BODY ECU)

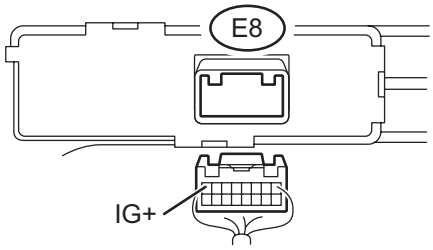
Wire Harness Side:

Main Body ECU (Front View)

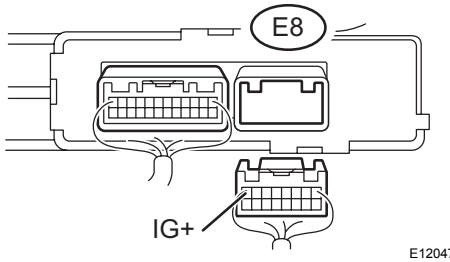


Air Conditioning Amplifier Connector

w/o PTC Heater:



w/ PTC Heater:



E120472E03

(a) Disconnect the E8 air conditioning amplifier connector.
(b) Disconnect the 4S main body ECU connector.
(c) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
E8-8 (IG+) - 4S-10	Below 1 Ω

(d) Reconnect the air conditioning amplifier connector.
(e) Reconnect the main body ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

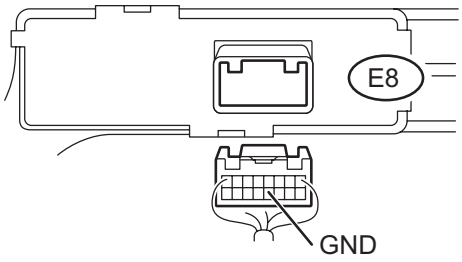
4	CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BODY GROUND)

(a) Disconnect the E8 air conditioning amplifier connector.

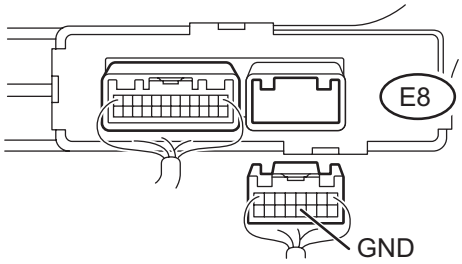
Wire Harness Side :

Air Conditioning Amplifier Connector

w/o PTC Heater:



w/ PTC Heater:



E119775E02

(b) Measure the resistance.
Standard resistance

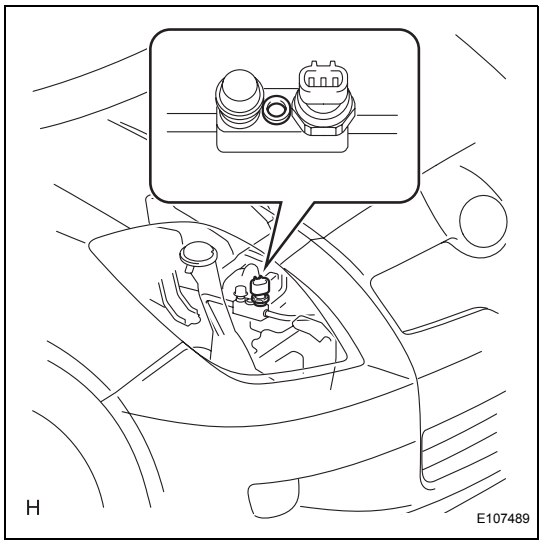
Tester Connection	Specified Condition
E8-12 (GND) - Body ground	Below 1 Ω

(c) Reconnect the air conditioning amplifier connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



REFRIGERANT

ON-VEHICLE INSPECTION

1. INSPECT REFRIGERANT VOLUME

(a) Check the sight glass on liquid tube sub-assembly A.

Test conditions:
- Engine running at 1,500 rpm.
- Blower speed control switch at HI.
- A/C switch ON.
- Temperature control lever in MAX. COLD position.
- All doors fully open.

Item	Symptom	Amount of Refrigerant	Corrective Procedures
1	Bubbles visible	Insufficient*	(1) Check for gas leakage and repair if necessary (2) Add refrigerant until bubbles disappear
2	No bubbles visible	Empty, insufficient or too much	Refer to items 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	(1) Check for gas leakage with gas leak detector and repair if necessary (2) Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Correct or too much	Refer to items 5 and 6
5	Immediately after A/C turned OFF, refrigerant becomes clear	Too much	(1) Drain or discharge refrigerant (2) Bleed air and supply proper amount of purified refrigerant
6	Immediately after A/C turned OFF, refrigerant foams and then becomes clear	Correct	-

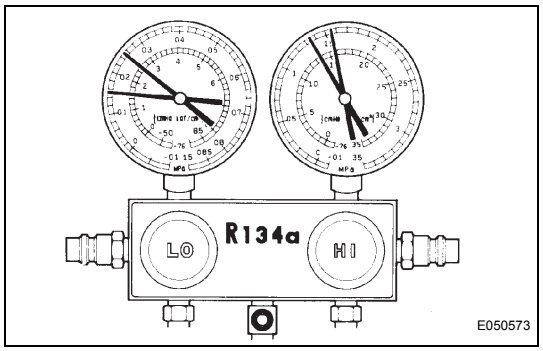
HINT:

*: If the ambient temperature is higher than usual but cooling is sufficient, bubbles in the sight glass are permissible.

2. CHECK REFRIGERANT PRESSURE USING MANIFOLD GAUGE SET

(a) This is a method to identify trouble areas by using a manifold gauge set. Read the manifold gauge pressure under the following conditions.

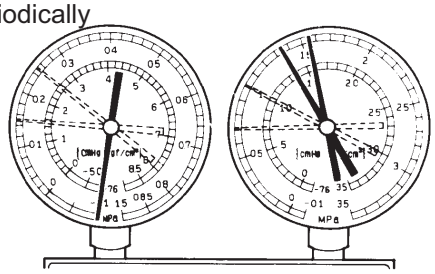
Test conditions:
- Engine warm.
- All doors fully open.
- A/C switch ON.
- Blower speed control switch at HI.
- Engine running at 1,500 rpm.
- Air inlet mode damper set at recirculation.
- Temperature control lever in MAX. COLD position.
- Air temperature at air inlet 30 to 35°C (86 to 95°F).



(1) When the refrigerant volume is correct, the gauge reading indicates as follows:
Low pressure side:
0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2)
High pressure side:
1.37 to 1.57 MPa (14 to 16 kgf/cm^2)
HINT:
Pressure varies in accordance with certain conditions (outside air temperature, sunlight and wind).

(2) When there is moisture in the refrigeration system:

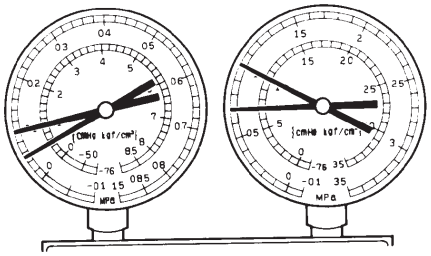
Condition: Air conditioning system periodically cools and then fails to cool.



Symptoms	Probable Cause	Diagnosis	Corrective Actions
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at expansion valve orifice, causing temporary interruption of cycle However, when melted, returns to normal condition	• Receiver dryer oversaturated • Moisture in refrigeration system freezes at expansion valve orifice and blocks refrigerant circulation	1. Replace receiver dryer 2. Remove moisture from cycle by repeatedly evacuating air 3. Supply appropriate volume of new refrigerant

(3) When cooling is insufficient:

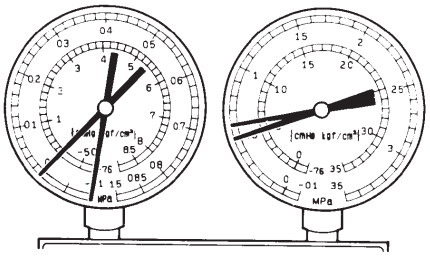
Condition: Air conditioning system does not function effectively.



Symptoms	Probable Cause	Diagnosis	Corrective Actions
• Pressure low on both low and high pressure sides • Cooling performance insufficient	Gas leakage from refrigeration system	• Insufficient refrigerant • Refrigerant leakage	1. Check for gas leakage using gas leak detector, and repair if necessary 2. Supply appropriate volume of new refrigerant 3. If indicated pressure value close to 0 when connected to gauge, create vacuum after inspecting and repairing location of leakage

(4) When the circulation of the refrigerant is poor:

Condition: Air conditioning system does not function effectively.

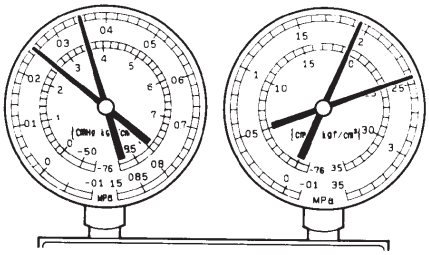


I022119E02

Symptoms	Probable Cause	Diagnosis	Corrective Action
• Pressure low on both low and high pressure sides • Frost exists on piping from condenser to A/C unit	Refrigerant flow obstructed by dirt in condenser	Condenser clogged	Replace condenser

(5) When the refrigerant does not circulate:

Condition: Air conditioning system does not function or functions intermittently.

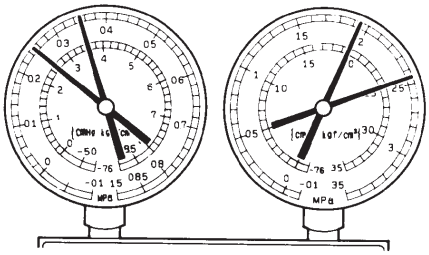


I022121E02

Symptoms	Probable Causes	Diagnosis	Corrective Actions
• Vacuum indicated on low pressure side, and extremely low pressure indicated on high pressure side • Frost or condensation seen on piping on both sides of condenser or expansion valve	• Refrigerant flow obstructed by moisture or dirt in refrigeration system • Refrigerant flow obstructed by gas leakage from expansion valve	Refrigerant does not circulate	1. Check expansion valve 2. Clean expansion valve with compressed air 3. Replace condenser 4. Evacuate air and then supply appropriate volume of new refrigerant 5. For gas leakage from expansion valve, replace expansion valve

(6) When the refrigerant is overcharged or cooling of condenser is insufficient:

Condition: Air conditioning system does not function effectively.

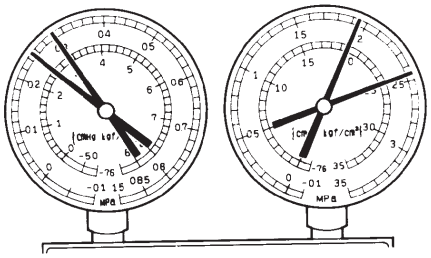


I022121E03

Symptoms	Probable Causes	Diagnosis	Corrective Actions
Pressure extremely high on both sides	• Excessive refrigerant • Cooling performance of condenser insufficient	• Excessive refrigerant • Cooling performance of condenser insufficient	1. Clean condenser fins 2. Check condenser fan motor operation by switching A/C ON 3. If 1 and 2 normal, check amount of refrigerant and supply appropriate volume of refrigerant

(7) When there is air in the refrigeration system:

Condition: Air conditioning system does not function.



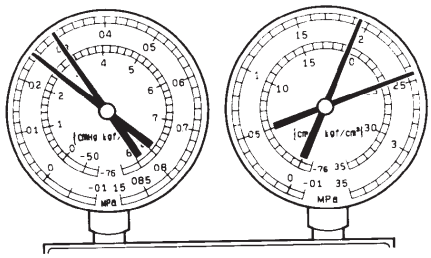
NOTE: These gauge indications occur when the refrigeration system opens and the refrigerant is supplied without performing vacuum purging.

I022122E02

Symptoms	Probable Causes	Diagnosis	Corrective Actions
• Pressure extremely high on both low and high pressure sides • Low pressure piping too hot to touch	Air in refrigeration system	• Air in refrigeration system • Insufficient vacuum purging	1. Check whether compressor oil dirty or insufficient 2. Evacuate air and supply new refrigerant

(8) When the expansion valve malfunctions:

Condition: Air conditioning system does not function effectively.

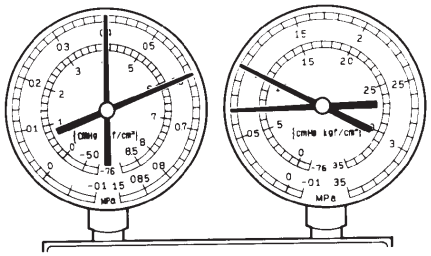


I022123E02

Symptoms	Probable Causes	Diagnosis	Corrective Actions
• Pressure extremely high on both low and high pressure sides • Frost or condensation on piping on low pressure side	Expansion valve malfunction	• Excessive refrigerant in low pressure piping • Expansion valve opening too wide	Replace expansion valve

(9) When the compressor is defective:

Condition: Air conditioning system does not function.



I022124E02

Symptoms	Probable Cause	Diagnosis	Corrective Actions
• Pressure extremely high on both low and high pressure sides • Pressure extremely low on high pressure side	Internal leakage in compressor	• Compression failure of compressor • Leakage from damaged valve or broken sliding parts in compressor	Repair or replace compressor

3. INSPECT IDLING SPEED

(a) Warm up the engine.

(b) Inspect the idling speed when these conditions are established.

- Engine warm
- Transmission shifted to either the neutral or the parking position.

Standard:

for manual transaxle

Condition	Idling Speed
Switch A/C OFF	550 to 650 rpm
Switch A/C ON (A/C Lo → Hi)	700 → 850 rpm

for automatic transaxle

Condition	Idling Speed
Switch A/C OFF	650 to 750 rpm
Switch A/C ON (A/C Lo → Hi)	700 → 850 rpm

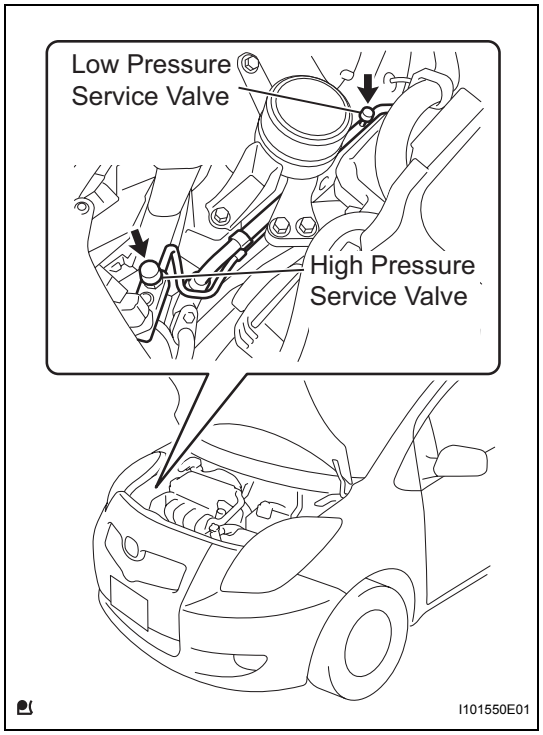
If the idling speed is not as specified, check the idle control system.

REPLACEMENT

NOTICE:
When recharging refrigerant, collect together all the refrigerant remaining in the cycle, then recharge and seal the refrigerant as described below. (Do not overcharge.)

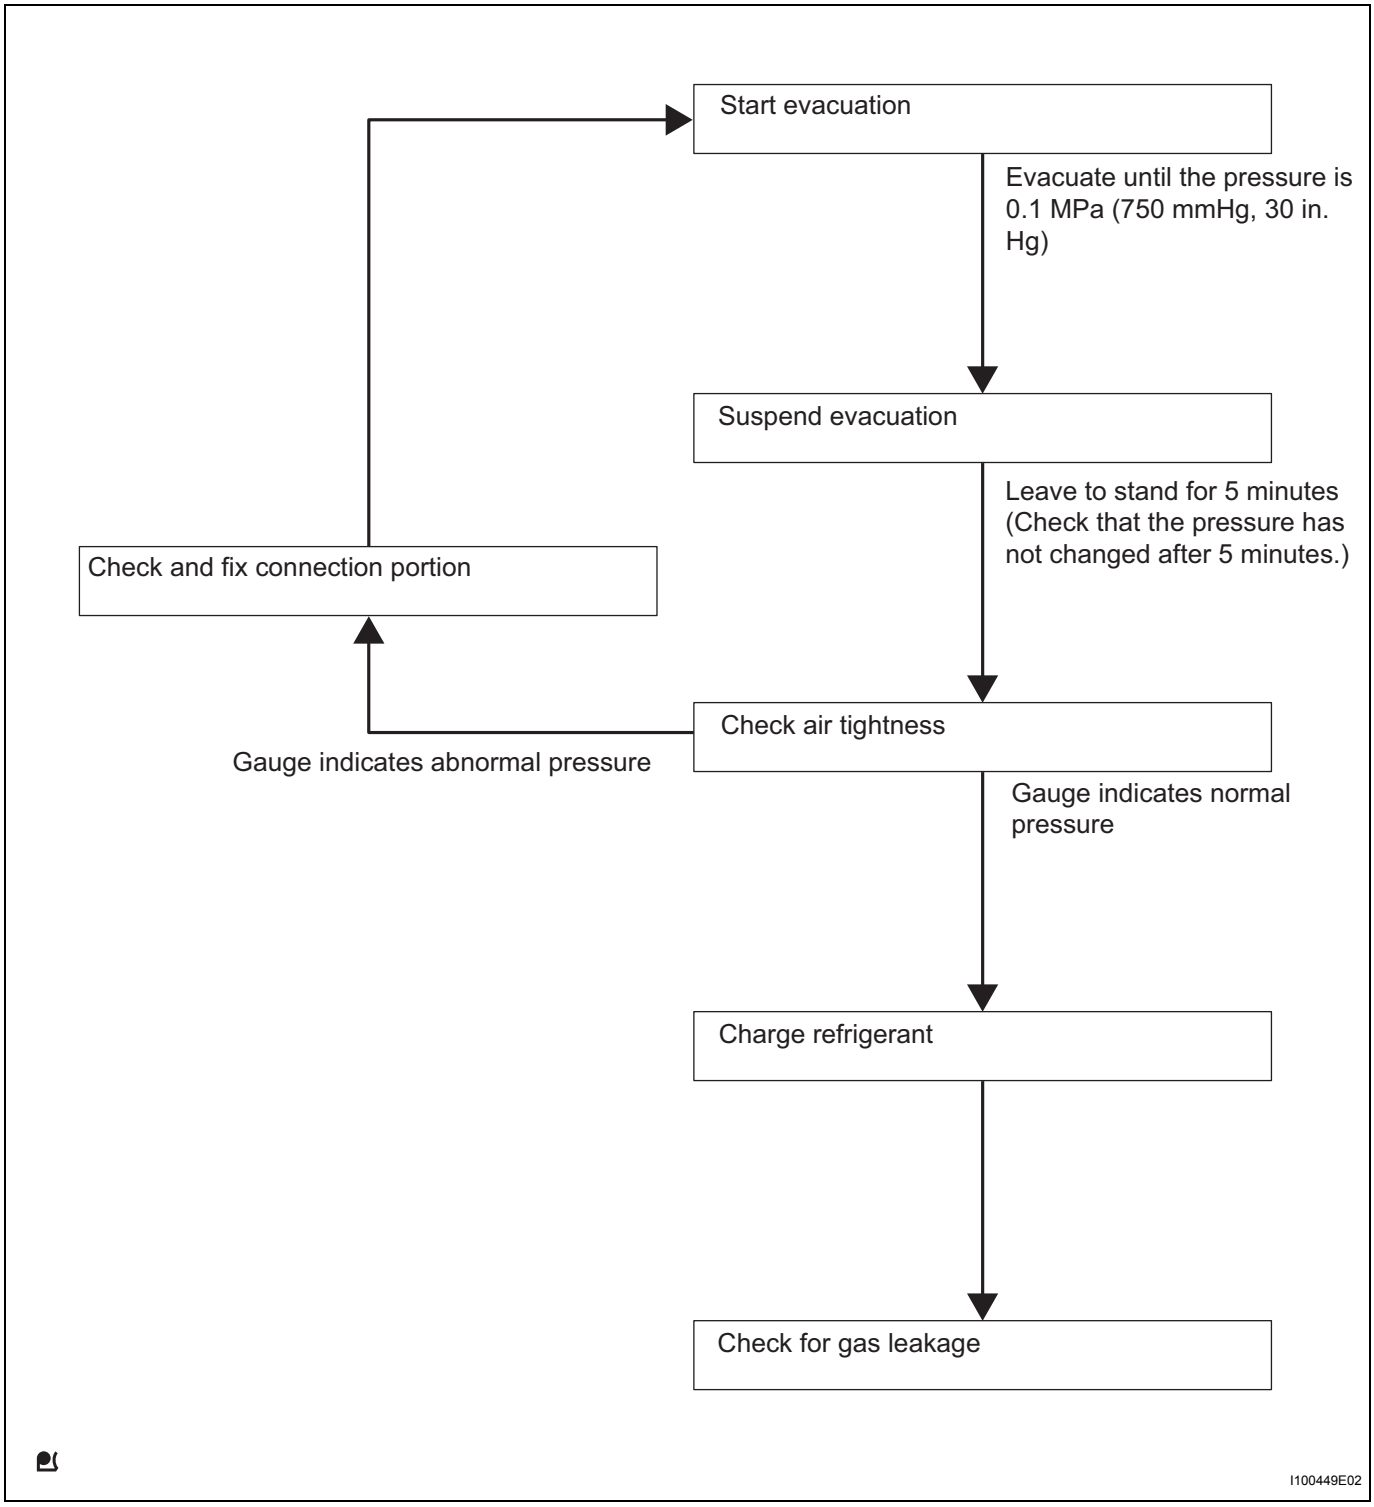
1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Start up the engine.
(b) Switch A/C ON.
(c) Turn the blower switch to ON.
(d) Operate the cooler compressor with an engine speed of approximately 1,000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the remaining compressor oil from each component, in the cooler compressor.
(e) Stop the engine.
(f) Remove the caps from the service valves on the refrigerant line.
(g) Connect the Freon collection/recycling device to discharge the refrigerant gas remaining in the refrigeration system.
NOTICE:
Use the Freon collection/recycling device in accordance with the manufacturer's instruction manual.



2. CHARGE REFRIGERANT

SST 07110-58060 (07117-58080, 07117-58090, 07117-78050, 07117-88060, 07117-88070, 07117-88080)

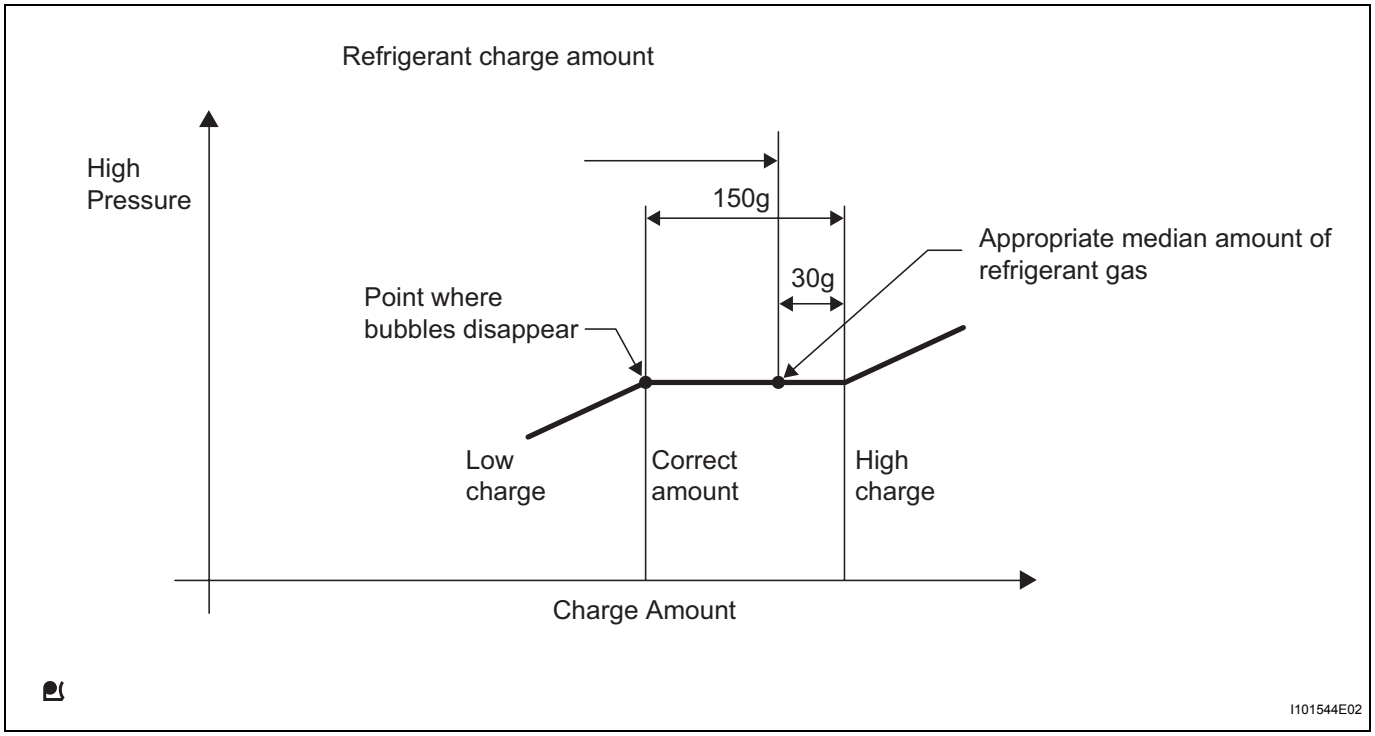


NOTICE:
Charge refrigerant in accordance with equipment manual.

(a) Perform vacuum purging using a vacuum pump.
(b) Charge refrigerant HFC-134a (R134a).
Standard:
330 to 390g (11.64 to 13.76oz.)

NOTICE:
Do not start the engine before charging it with refrigerant as the cooler compressor doesn't work properly without sufficient refrigerant. This could cause the compressor to overheat.
HINT:

- The relationship between refrigerant charge amount and pressure is as follows.



- High Charge Range:
  If refrigerant is overcharged, pressure rises on the high-pressure side. High-pressure cut off frequently occurs. This causes insufficient cooling performance and also insufficient compressor lubrication.
- Low Charge Range:
  Shortage of refrigerant causes insufficient cooling performance and low circulation of refrigerant oil, which shortens compressor life. Operation with insufficient coolant raises refrigerant temperature and causes heat deterioration of rubber seals and hoses. Cracking and thus refrigerant leakage may occur.

(1) Install the caps onto the service valves on the refrigerant line.

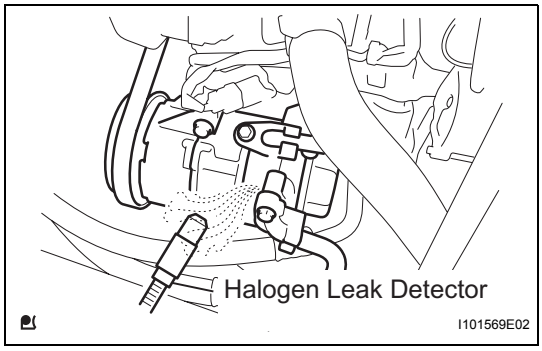
3. WARM UP ENGINE
NOTICE:
Warm up the engine at less than 2,000 rpm for 1 minute or more after charging it with refrigerant.

4. CHECK FOR REFRIGERANT LEAKAGE

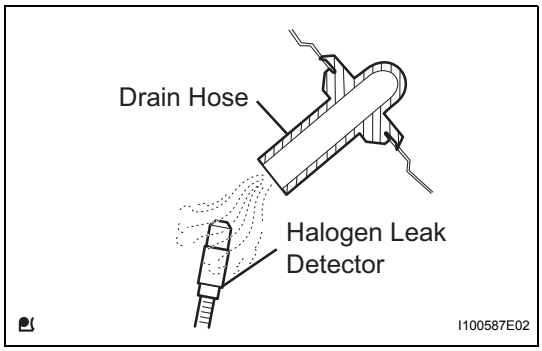
(a) After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.

(b) Perform the operation as follows:
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system.
  When compressor is off: approximately 392 to 588 kPa (4 to 6 kgf*cm^2, 57 to 85 psi)

HINT:
It is impossible for the above pressure to be maintained if there is leakage.



(c) Using the halogen leak detector, check the refrigerant line, especially the connection points, for leakage.



(d) Bring the halogen leak detector close to the drain hose before performing the test.
HINT:
- After the blower motor has stopped, leave the cooling unit for at least 15 minutes.
- Place the halogen leak detector sensor under the drain hose.
- When bringing the halogen leak detector close to the drain hose, make sure that the halogen leak detector does not react to the volatile gases.

If such a reaction is unavoidable, the vehicle must be lifted up.

(e) If a gas leak is not detected from the drain hose, remove the blower motor from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

(f) Disconnect the pressure switch connector and leave it for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

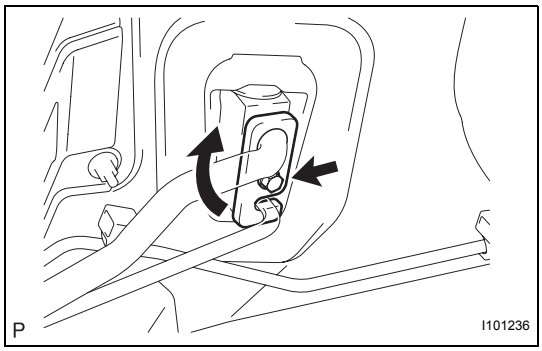
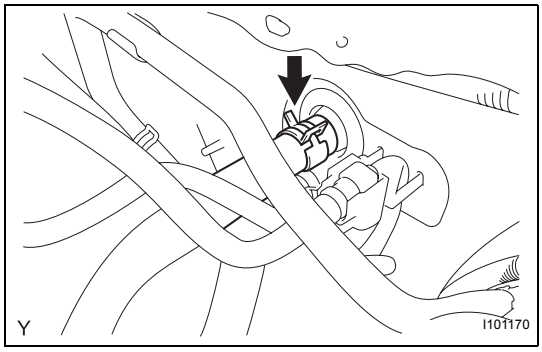
REMOVAL

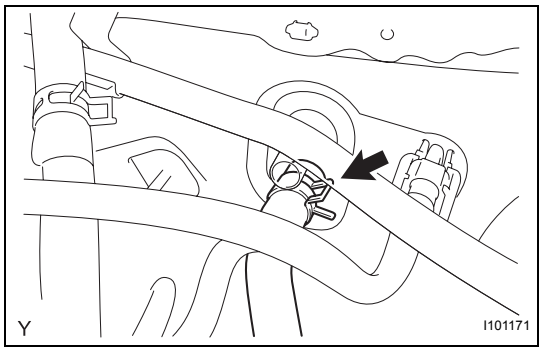
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
Use the same procedure for both the RH and LH sides.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
3. **DRAIN ENGINE COOLANT (for 1NZ-FE) (See page CO-8)**
4. **DISCONNECT SUCTION TUBE SUB-ASSEMBLY**
   (a) Remove the bolt.
   (b) Turn the hook type connector clockwise and disconnect the suction tube.
   (c) Remove the O-ring from the suction tube.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



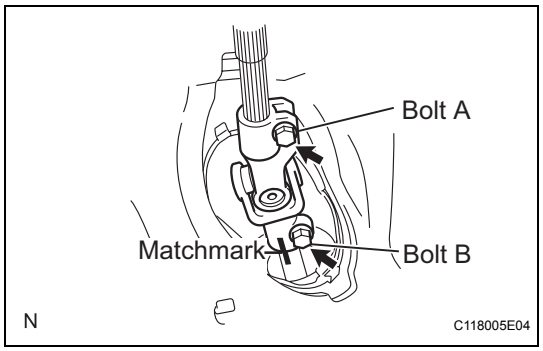
5. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY**
   (a) Disconnect the liquid tube.
   (b) Remove the O-ring from the liquid tube.
   NOTICE:
   Seal the openings of the disconnected parts with vinyl tape to prevent moisture and foreign matter from entering.
6. **DISCONNECT HEATER WATER OUTLET HOSE**
   (a) Using pliers, grip the claws of the clip, slide the clip and disconnect the heater water outlet hose from the heater unit.





7. **DISCONNECT HEATER WATER INLET HOSE**
   (a) Using pliers, grip the claws of the clip, slide the clip and disconnect the heater water inlet hose from the heater unit.
8. **BOLTS, SCREWS AND NUTS TABLE (See page IP-41)**
9. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
10. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
11. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
12. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
13. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
14. **REMOVE INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (See page IP-43)**
15. **REMOVE STEREO OPENING COVER (w/o Radio Receiver) (See page IP-43)**
16. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-38)**
17. **REMOVE AIR CONDITIONING PANEL ASSEMBLY (See page AC-239)**
18. **DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**
19. **DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**
20. **DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**
21. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-5)**
22. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-5)**
23. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
24. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
25. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
26. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**
27. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)**
28. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-14)**

29. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-14)
30. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)
31. REMOVE COWL SIDE TRIM BOARD RH (See page IR-15)
32. REMOVE COWL SIDE TRIM BOARD LH (See page IR-15)
33. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)
34. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-84)
35. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)
36. REMOVE CONSOLE BOX CARPET (See page IP-85)
37. REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)
38. REMOVE INSTRUMENT PAD LOWER LH (See page IP-44)
39. REMOVE INSTRUMENT PAD LOWER RH (See page IP-45)
40. REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY (See page IP-45)
41. REMOVE INSTRUMENT PANEL BOX (See page IP-45)
42. DISCONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-46)
43. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-46)
44. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)
45. POSITION FRONT WHEELS FACING STRAIGHT AHEAD
46. REMOVE STEERING PAD (See page RS-309)
47. REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)
48. REMOVE STEERING COLUMN COVER (See page SR-12)
49. REMOVE COMBINATION SWITCH ASSEMBLY (See page SR-13)
50. DISCONNECT POWER STEERING ECU (See page SR-13)
51. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-14)



52. **REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-14)**

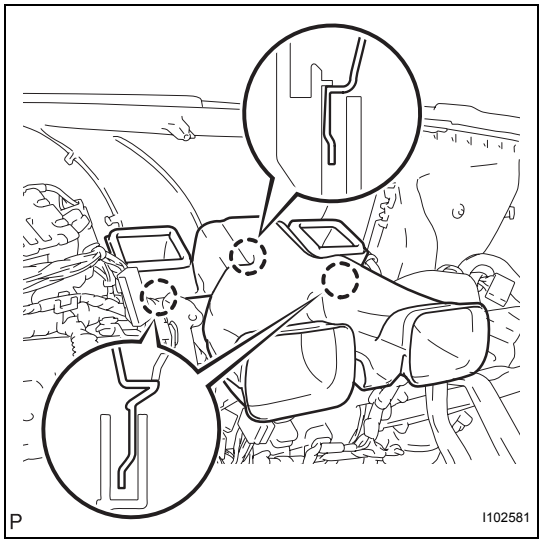
53. **SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Place matchmarks on the sliding yoke of the steering intermediate shaft and the power steering link.
    (b) Loosen bolt A, remove bolt B and remove the steering yoke.

54. **REMOVE BRAKE PEDAL (for Automatic Transaxle) (See page SR-14)**

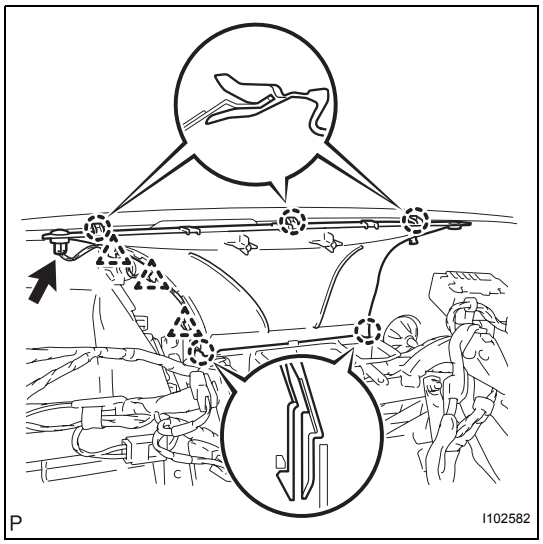
55. **REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)**

56. **REMOVE BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)**

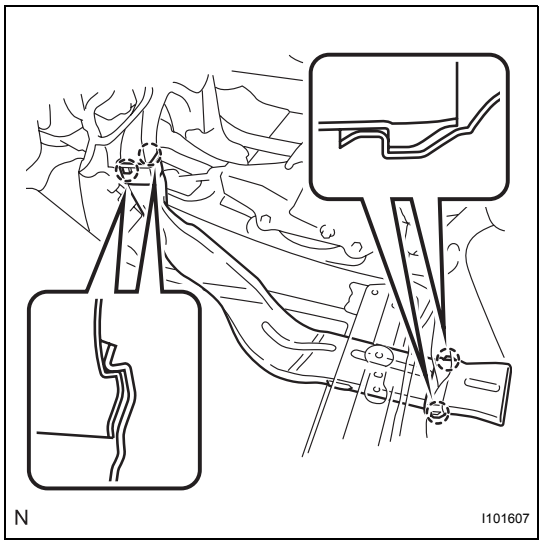
57. **REMOVE STEERING COLUMN ASSEMBLY (See page SR-15)**



58. **REMOVE HEATER TO REGISTER DUCT ASSEMBLY**
    (a) Disengage the 3 claws and remove the heater to register duct.

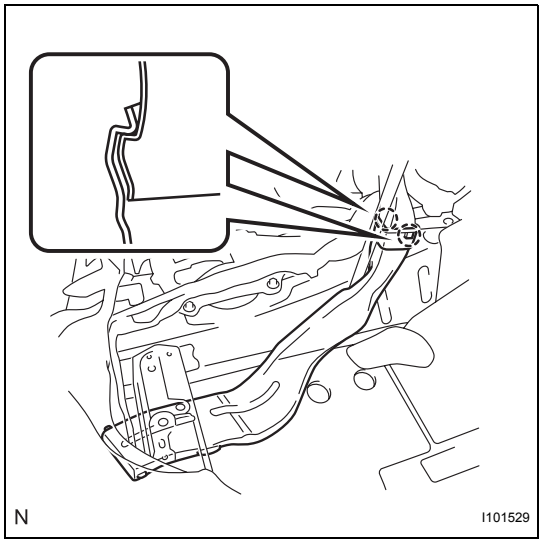


59. **REMOVE DEFROSTER NOZZLE ASSEMBLY**
    (a) Disconnect the connector and 3 clamps.
    (b) Disengage the 5 claws and remove the defroster nozzle.



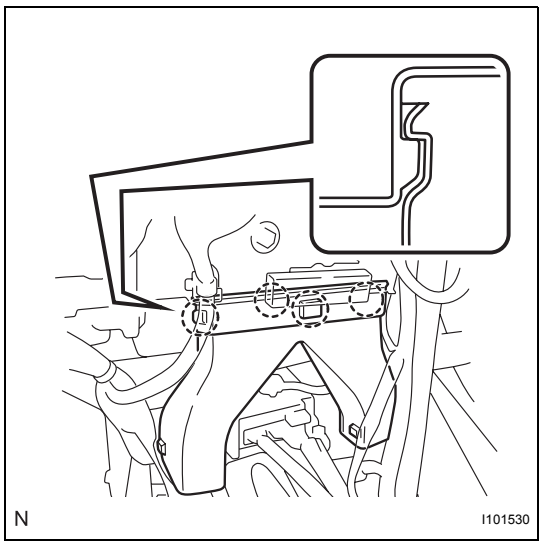
60. REMOVE REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles)

(a) Disengage the 4 claws and remove the air duct.



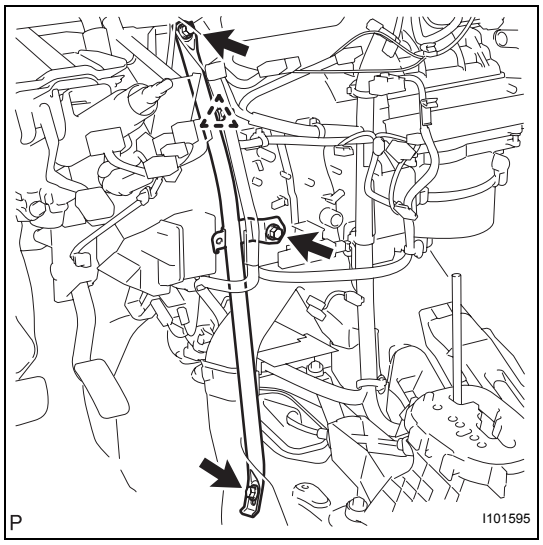
61. REMOVE REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles)

(a) Disengage the 2 claws and remove the air duct.



62. REMOVE REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles)

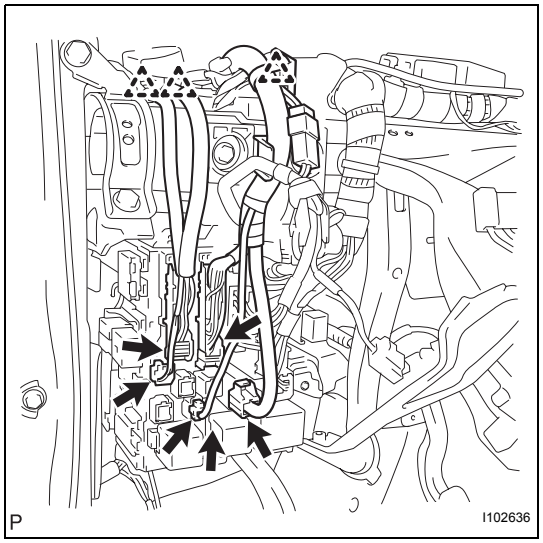
(a) Disengage the 4 claws and remove the air duct.



63. REMOVE INSTRUMENT PANEL BRACE SUB-ASSEMBLY

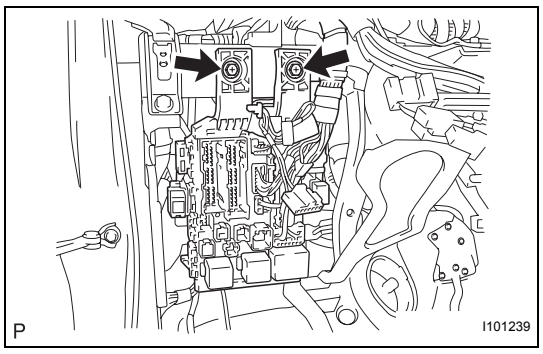
(a) Disengage the clamp.

(b) Remove the bolt, screw and nut and remove the instrument panel brace.

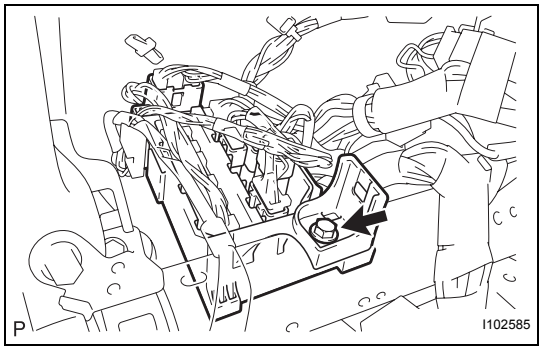


64. SEPARATE MAIN BODY ECU (DRIVER SIDE J/B)

(a) Disconnect the 5 connectors and the 3 clamps.

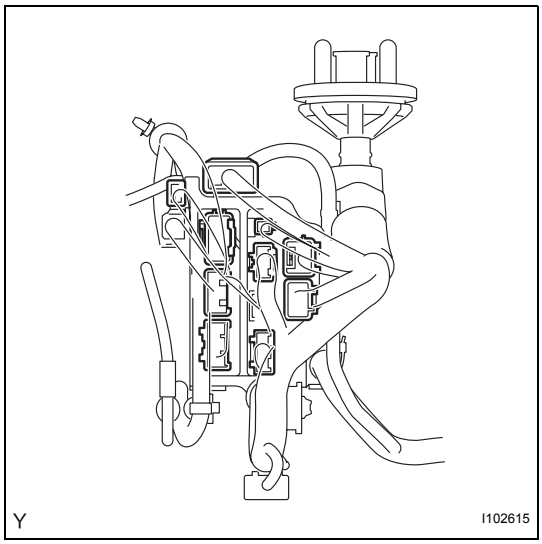


(b) Remove the 2 bolts and separate the main body ECU.

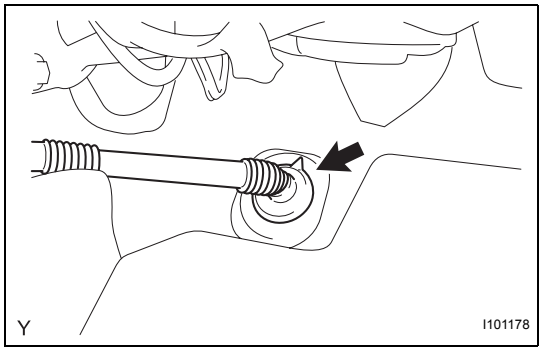


65. SEPARATE CONNECTOR NO. 2 HOLDER

(a) Remove the bolt.

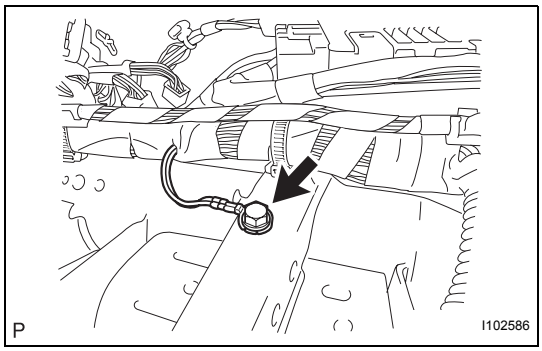


(b) Disconnect the connectors and separate the connector No. 2 holder.

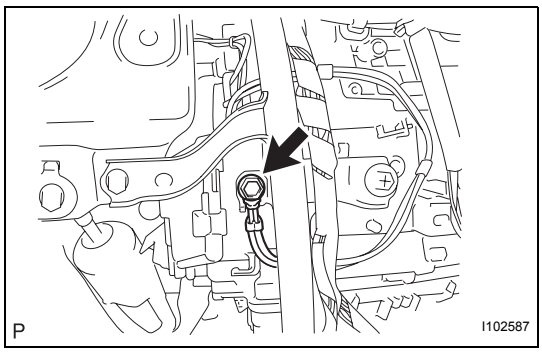


66. REMOVE INSTRUMENT PANEL REINFORCEMENT

(a) Disconnect the drain hose.



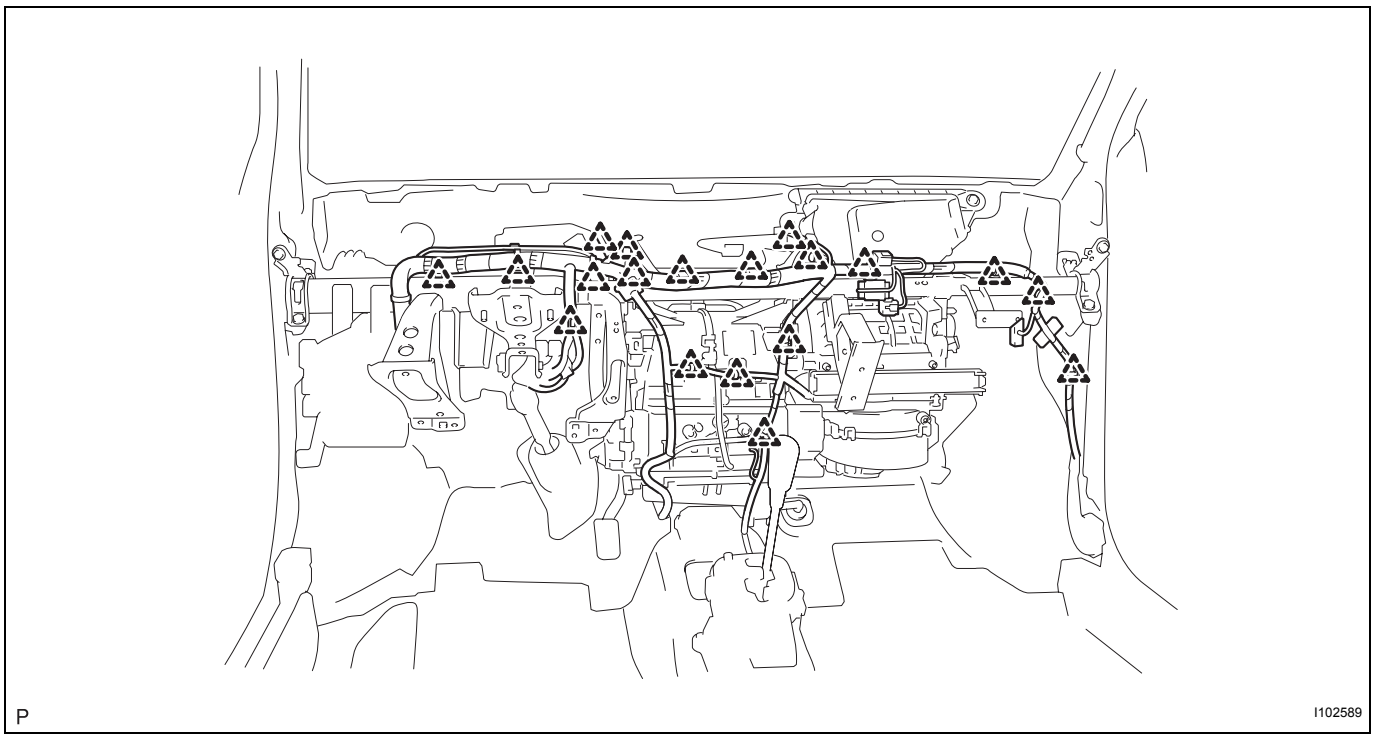
(b) Remove the bolt and disconnect the ground wire.



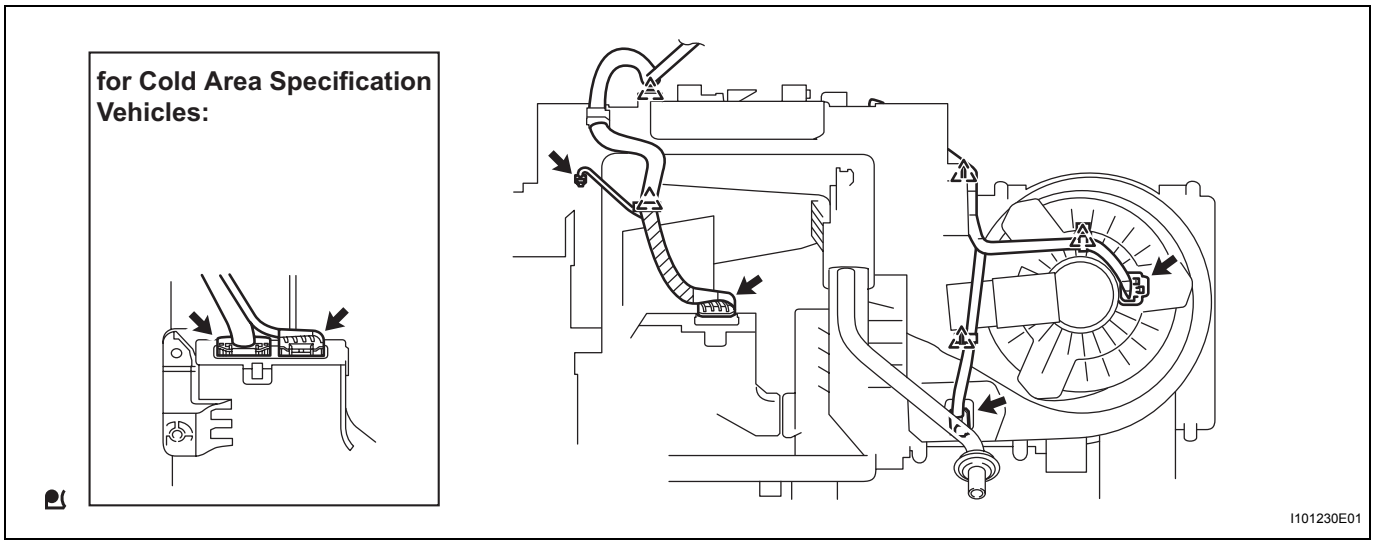
(c) Remove the bolt and disconnect the ground wire. (for Cold area specification vehicles)

(d) Disconnect the connectors.

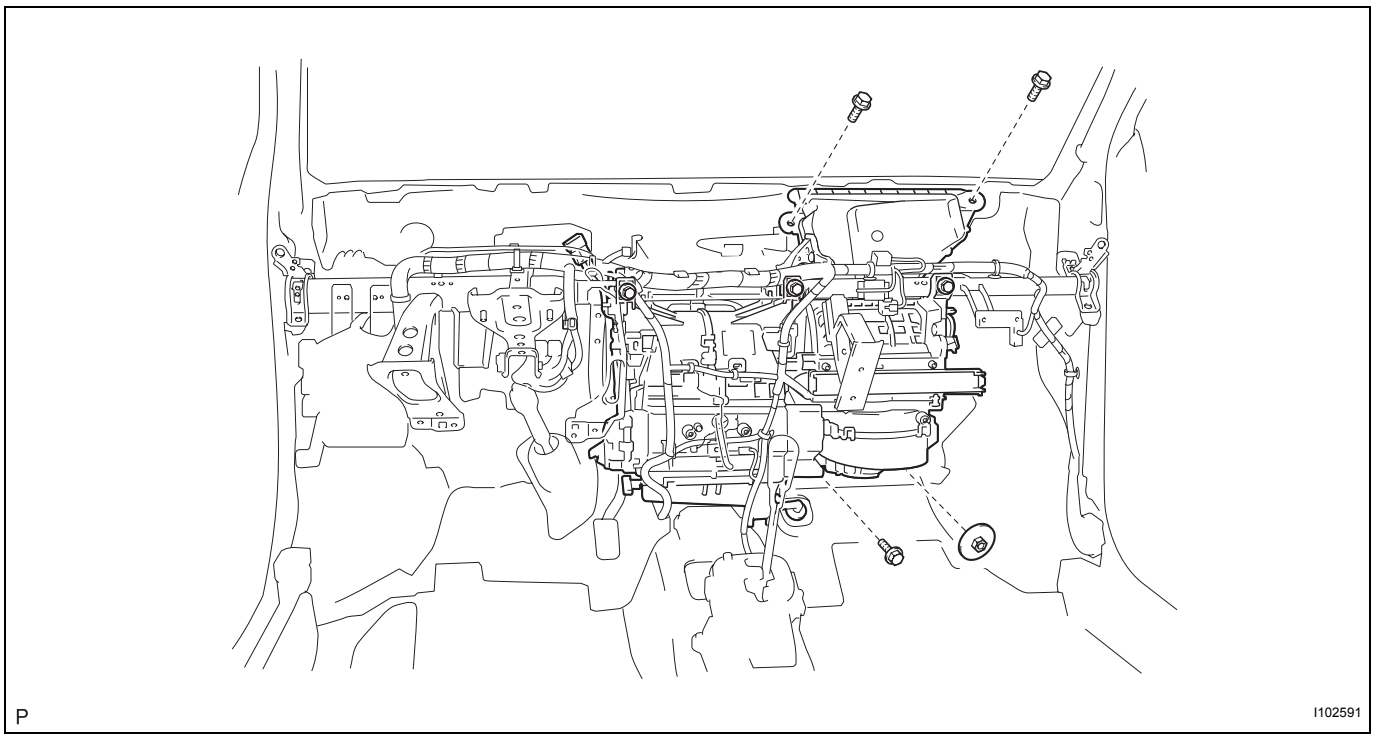
(e) Disengage the clamps.



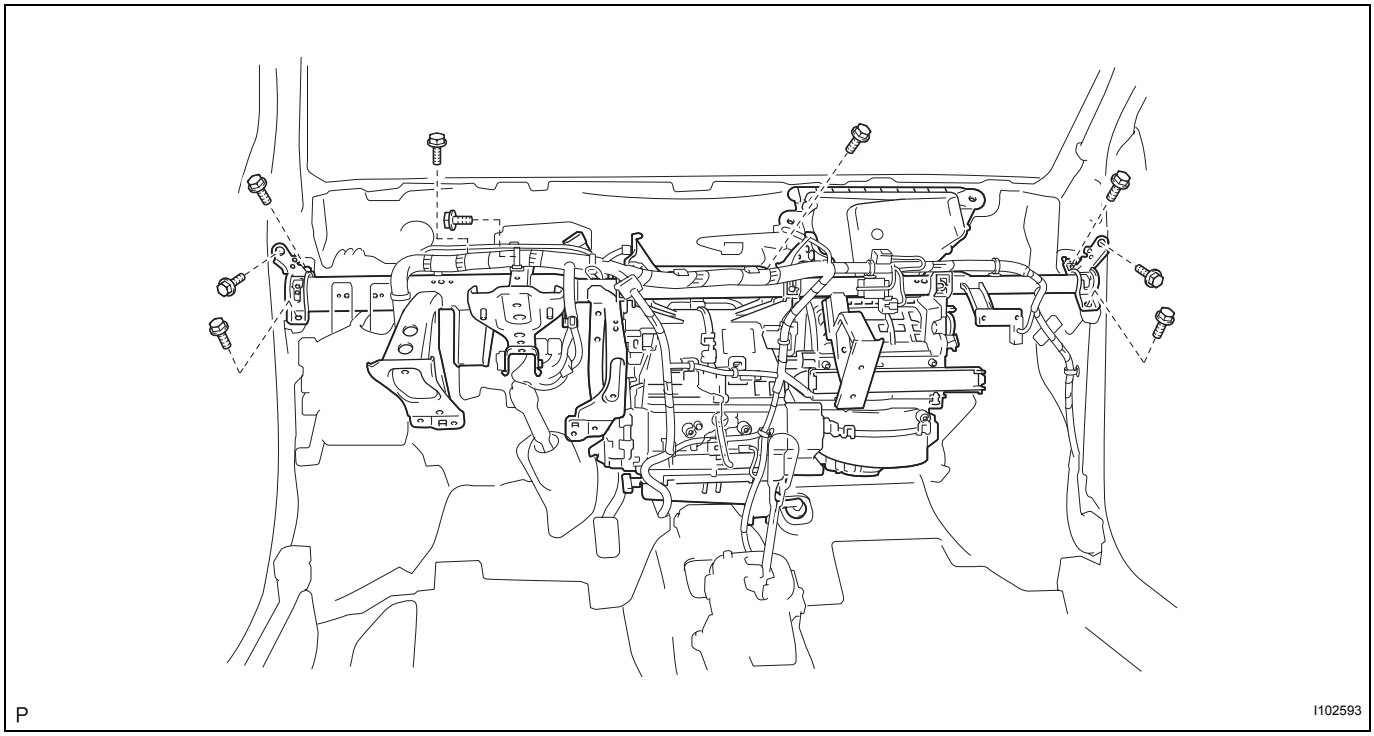
(f) Disconnect the connectors and clamps.

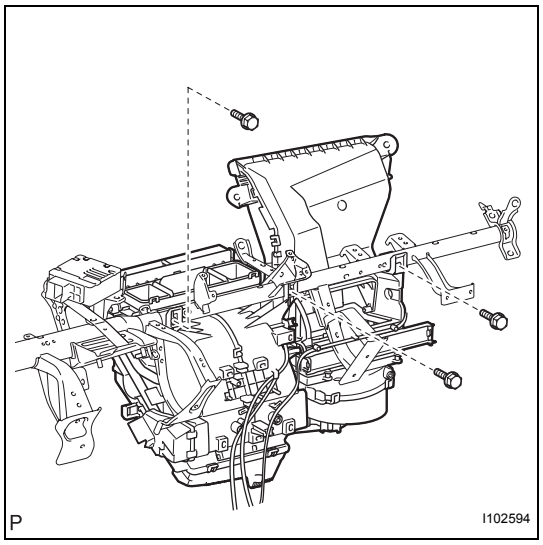


(g) Remove the 3 bolts and the nut.

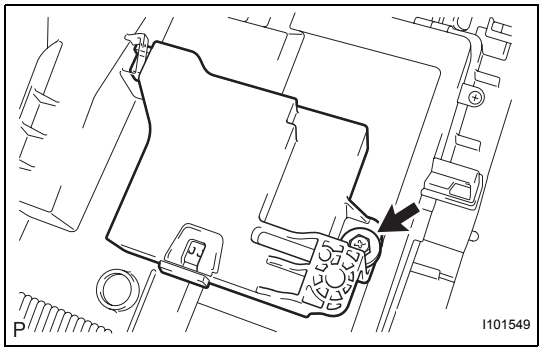


(h) Remove the 9 bolts and remove the instrument panel reinforcement together with the air conditioning unit.



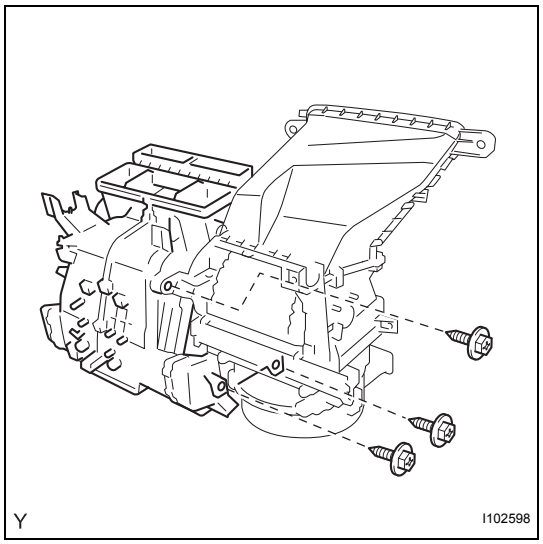


(i) Remove the 3 screws and the air conditioning unit.



67. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

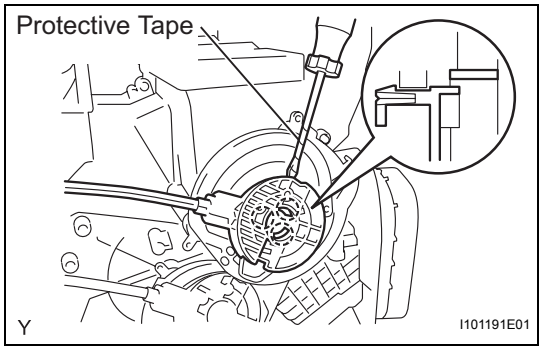
(a) Remove the screw and the air conditioning amplifier.



68. REMOVE AIR CONDITIONING UNIT

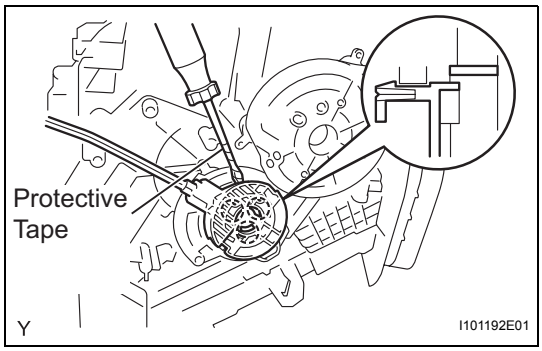
(a) Remove the 3 screws and the air conditioning unit.

DISASSEMBLY



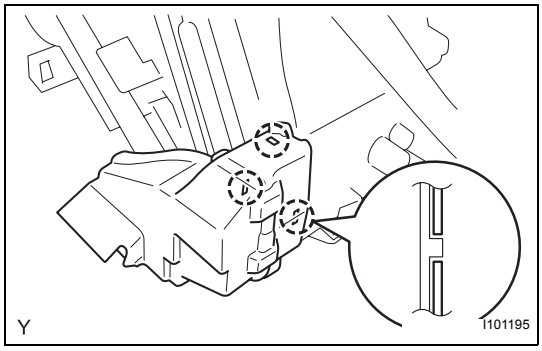
1. REMOVE DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the defroster damper control cable.



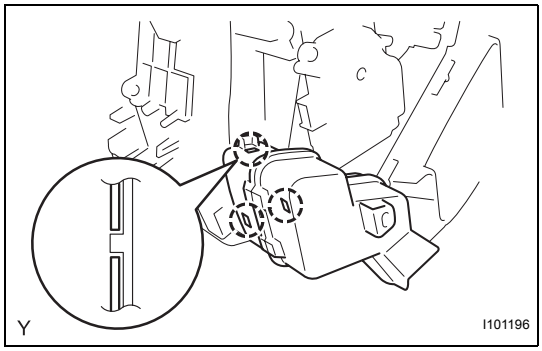
2. REMOVE AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the air mix damper control cable.



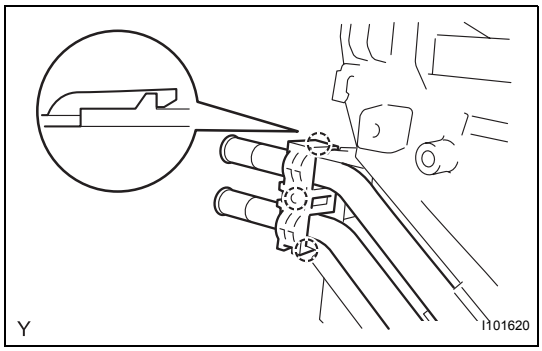
3. REMOVE NO. 1 AIR DUCT

(a) Disengage the 3 claws and remove the air duct.



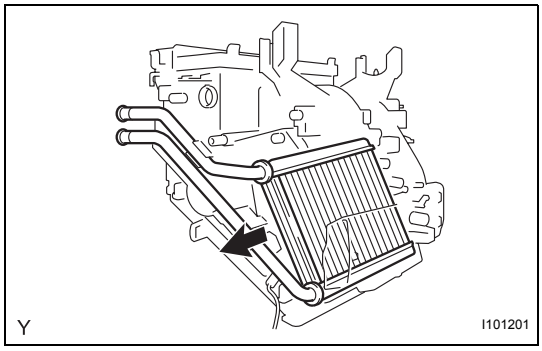
4. REMOVE NO. 2 AIR DUCT

(a) Disengage the 3 claws and remove the air duct.

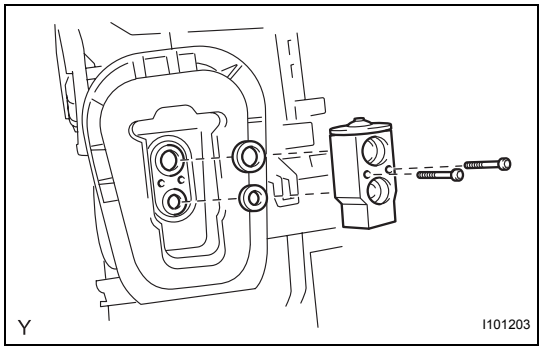


5. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Disengage the 3 claws and remove the clamp.



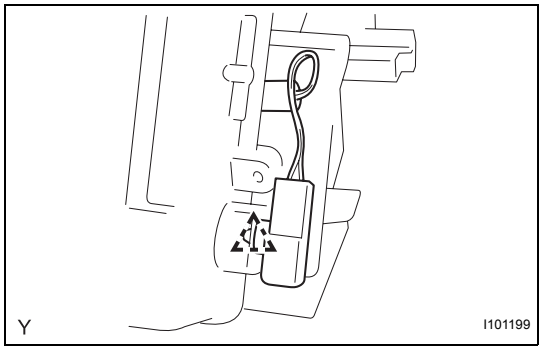
(b) Remove the heater radiator unit from the air conditioner radiator assembly.



6. REMOVE COOLER EXPANSION VALVE

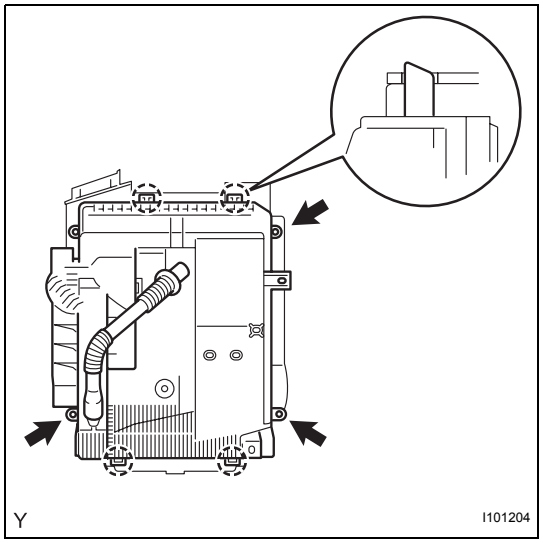
(a) Using a hexagon wrench 4, remove the 2 hexagon bolts and detach the cooler expansion valve.

(b) Remove the 2 O-rings from the No. 1 cooler evaporator.



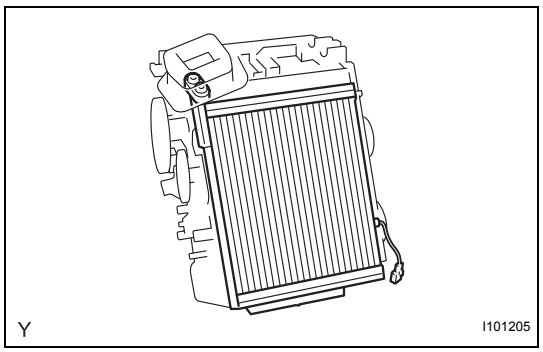
7. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

(a) Disengage the cooler thermistor connector.

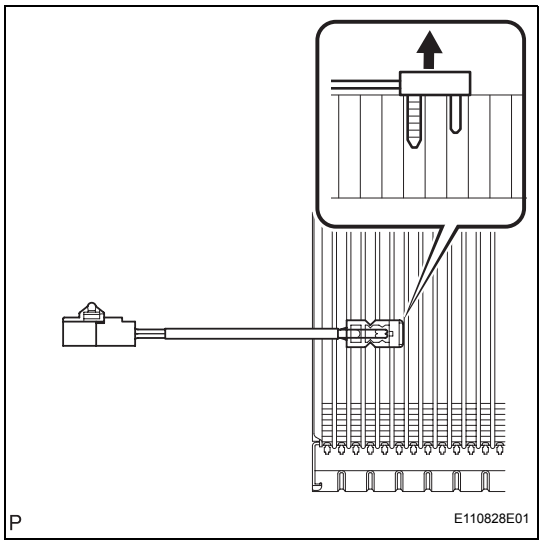


(b) Remove the 3 screws.

(c) Disengage the 4 claws and remove the heater case lower.



(d) Remove the cooler evaporator.



8. REMOVE NO. 1 COOLER THERMISTOR

(a) Remove the cooler thermistor from the cooler evaporator.

INSPECTION

1. INSPECT NO. 1 COOLER THERMISTOR

(a) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

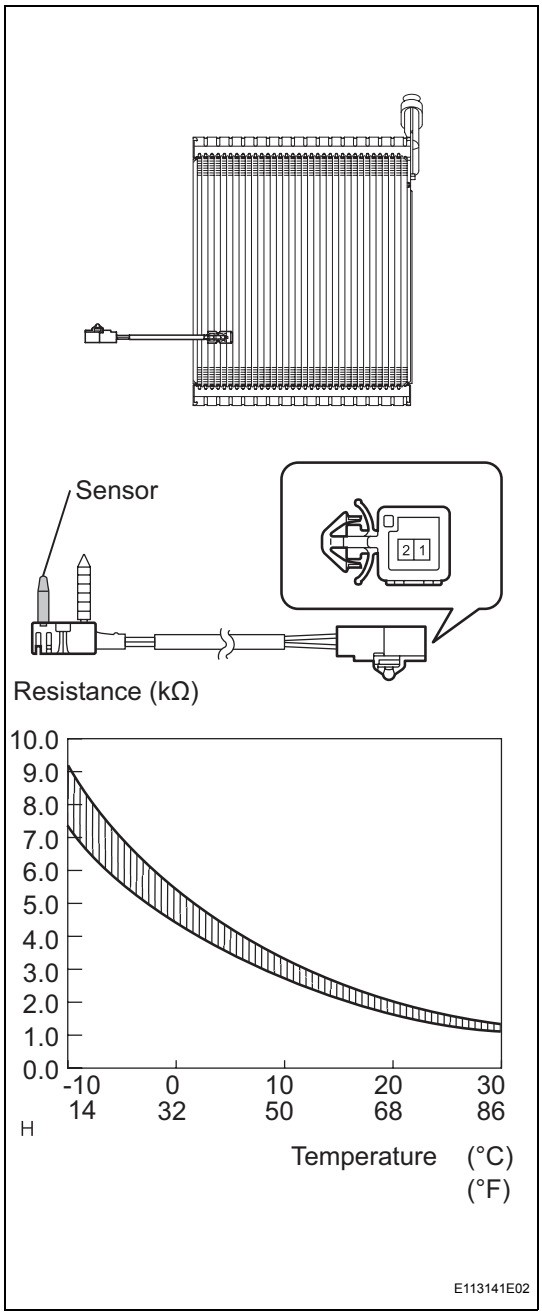
NOTICE:

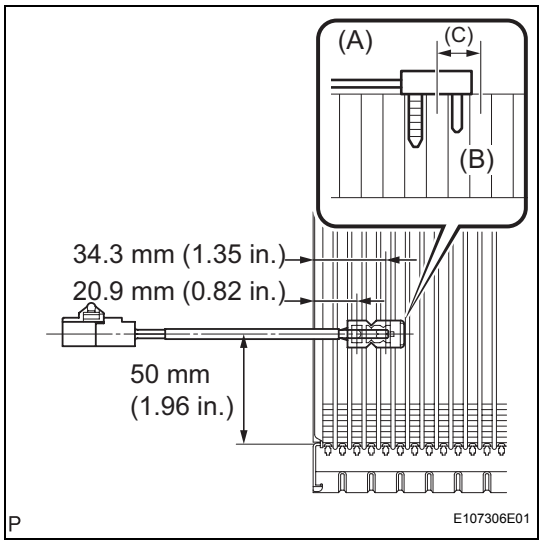
- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the temperature of the sensor and the cooler thermistor must be the same.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the operation is not as specified, replace the cooler thermistor.





REASSEMBLY

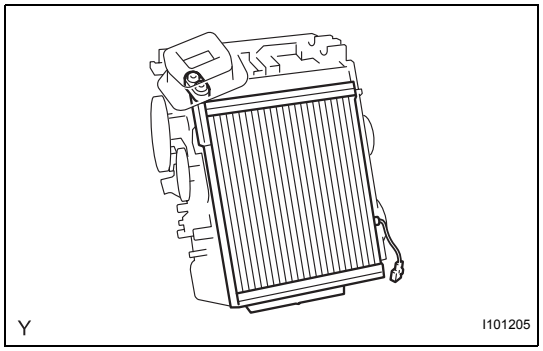
1. INSTALL NO. 1 COOLER THERMISTOR

(a) Install the sensor onto the evaporator as shown in the illustration.

(b) Check that the sensor sticks to the evaporator surface as shown in the illustration (A: Sensor, B: Evaporator).

NOTICE:

If reusing the evaporator, do not reinsert the sensor in the same position that it was in before. Insert it within area C, shown in the illustration.



2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

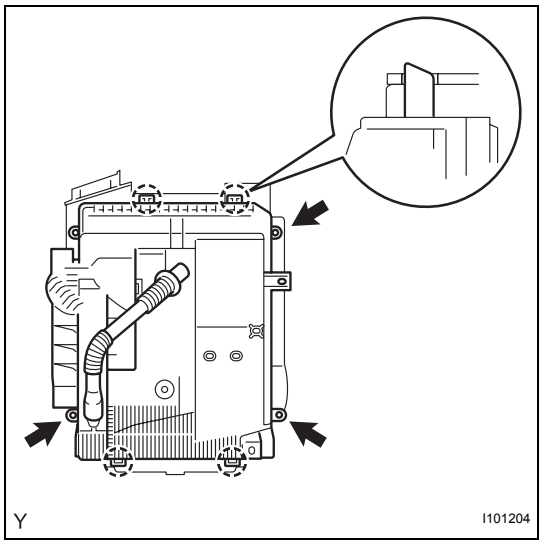
HINT:

If a new cooler evaporator is installed, add compressor oil to the cooler evaporator as follows.

Compressor oil:

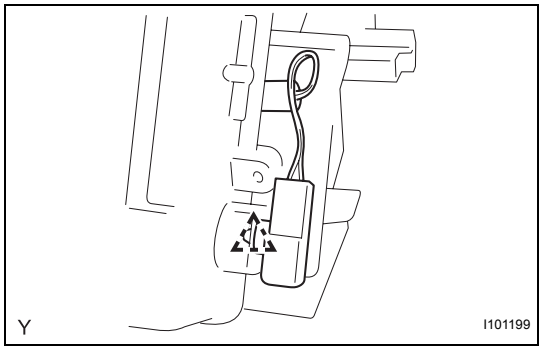
ND-OIL8 or the equivalent. Add 40 cc (1.35 fl. oz.)

(a) Install the cooler evaporator.

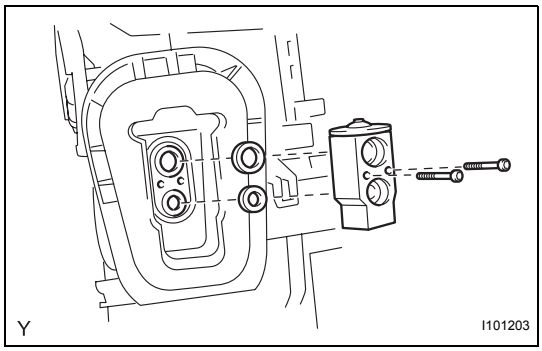


(b) Engage the 4 claws and install the heater case lower.

(c) Install the 3 screws.



(d) Engage the cooler thermistor connector.

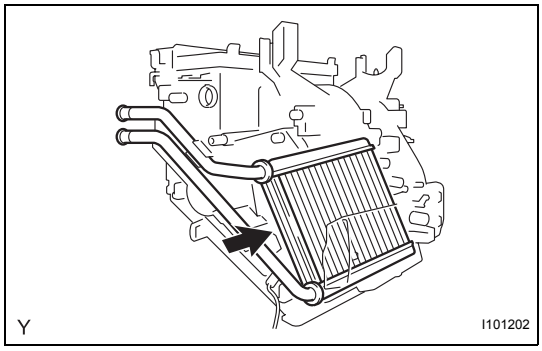


3. INSTALL COOLER EXPANSION VALVE

(a) Apply sufficient compressor oil (ND-OIL8) to 2 new O-rings and the fitting surface of the cooler expansion valve.
Compressor oil:
ND-OIL8 or the equivalent

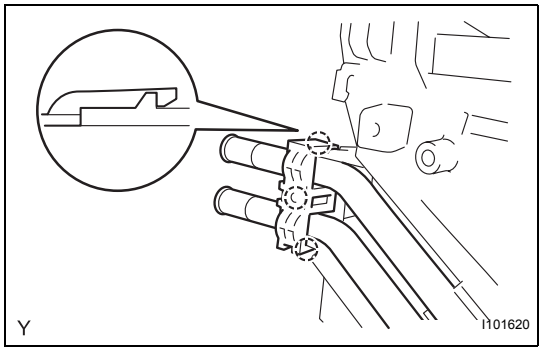
(b) Install the 2 O-rings onto the cooler evaporator.

(c) Using a hexagon wrench 4, install the cooler expansion valve with the 2 hexagon bolts.
Torque: 3.5 N*m (36 kgf*cm, 31 in.*lbf)

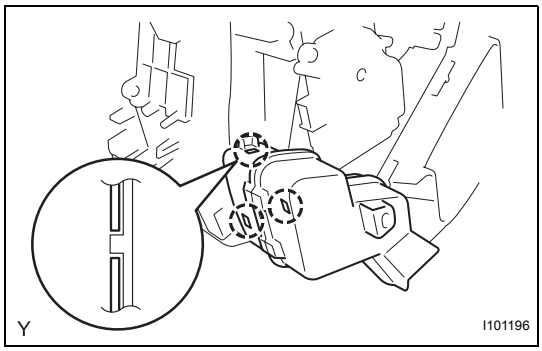


4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Install the heater radiator unit onto the air conditioner radiator assembly.

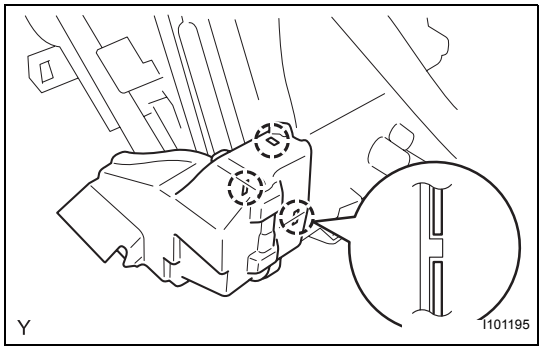


(b) Engage the 3 clips and install the clamp.



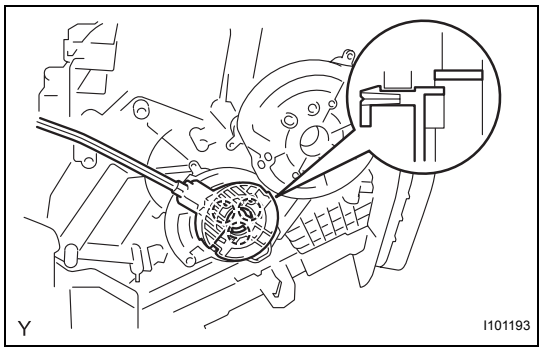
5. INSTALL NO. 2 AIR DUCT

(a) Engage the 3 claws and install the air duct.



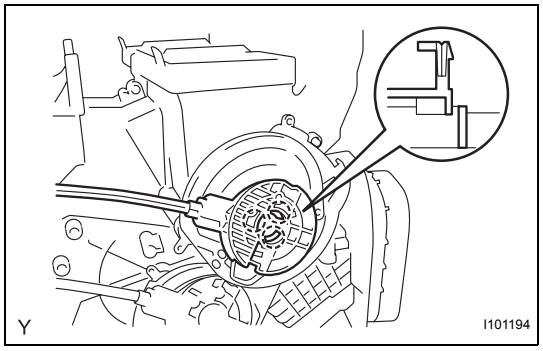
6. INSTALL NO. 1 AIR DUCT

(a) Engage the 3 claws and install the air duct.



7. INSTALL AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

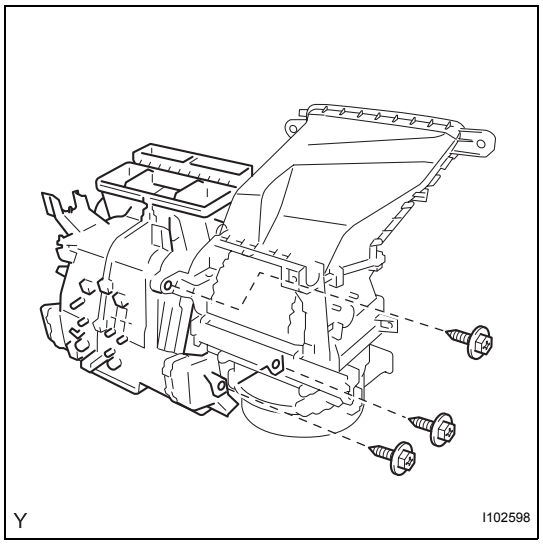
(a) Engage the claw and install the air mix damper control cable.



8. INSTALL DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

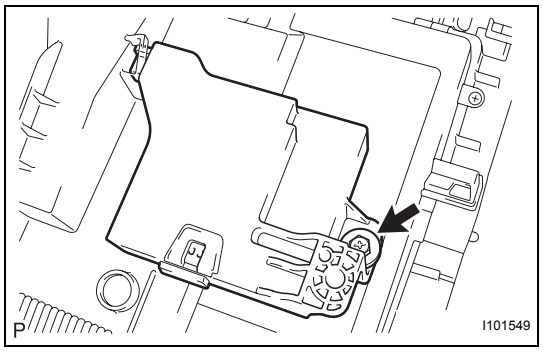
(a) Engage the claw and install the defroster damper control cable.

INSTALLATION



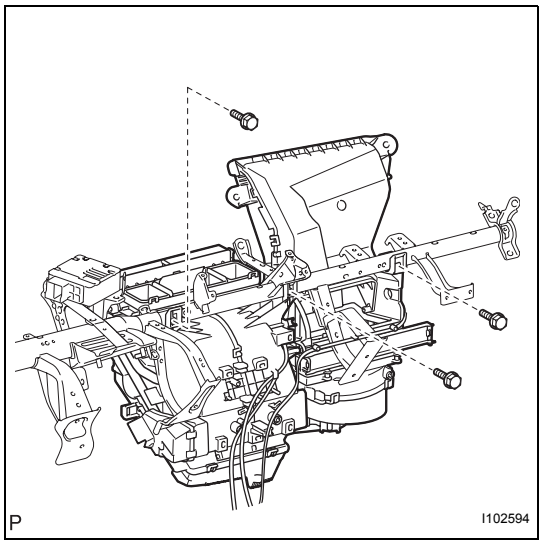
1. INSTALL AIR CONDITIONING UNIT

(a) Install the air conditioning unit with the 3 screws.



2. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

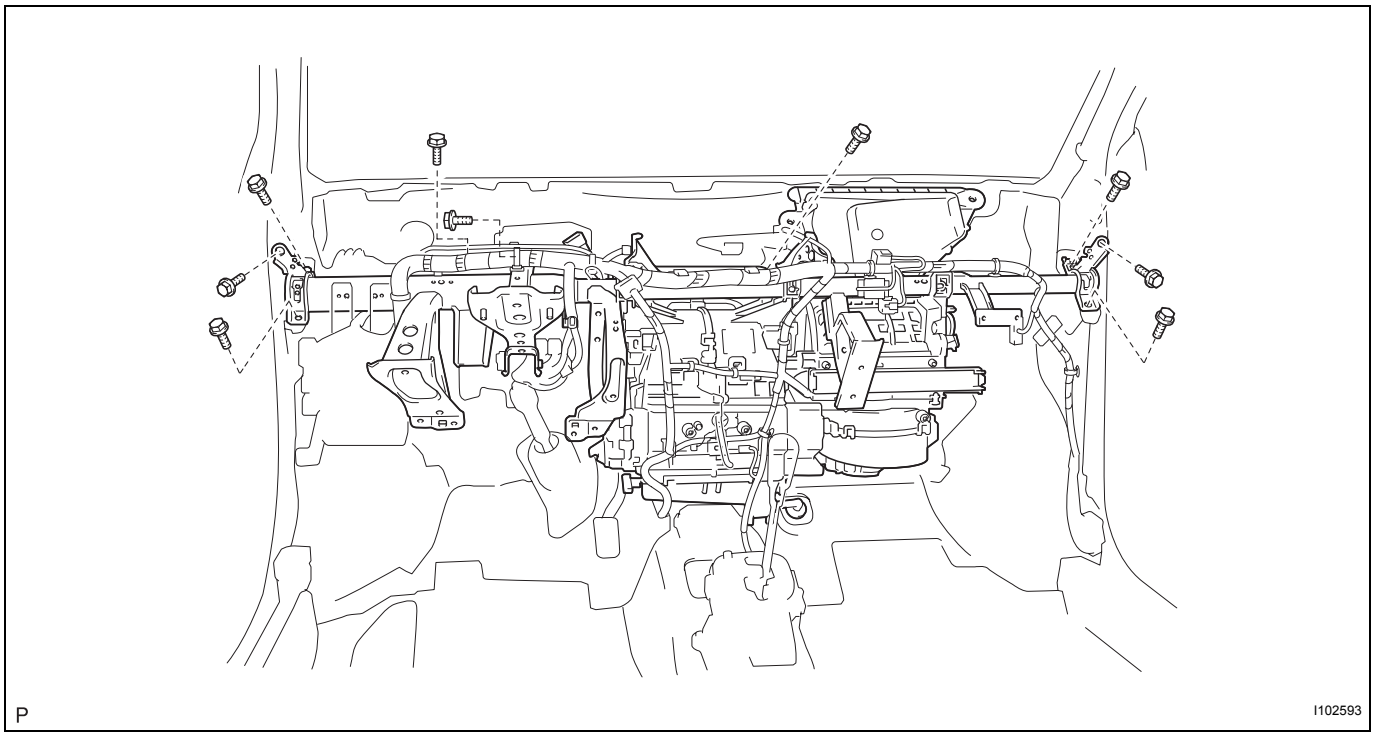
(a) Install the air conditioning amplifier with the screw.



3. INSTALL INSTRUMENT PANEL REINFORCEMENT

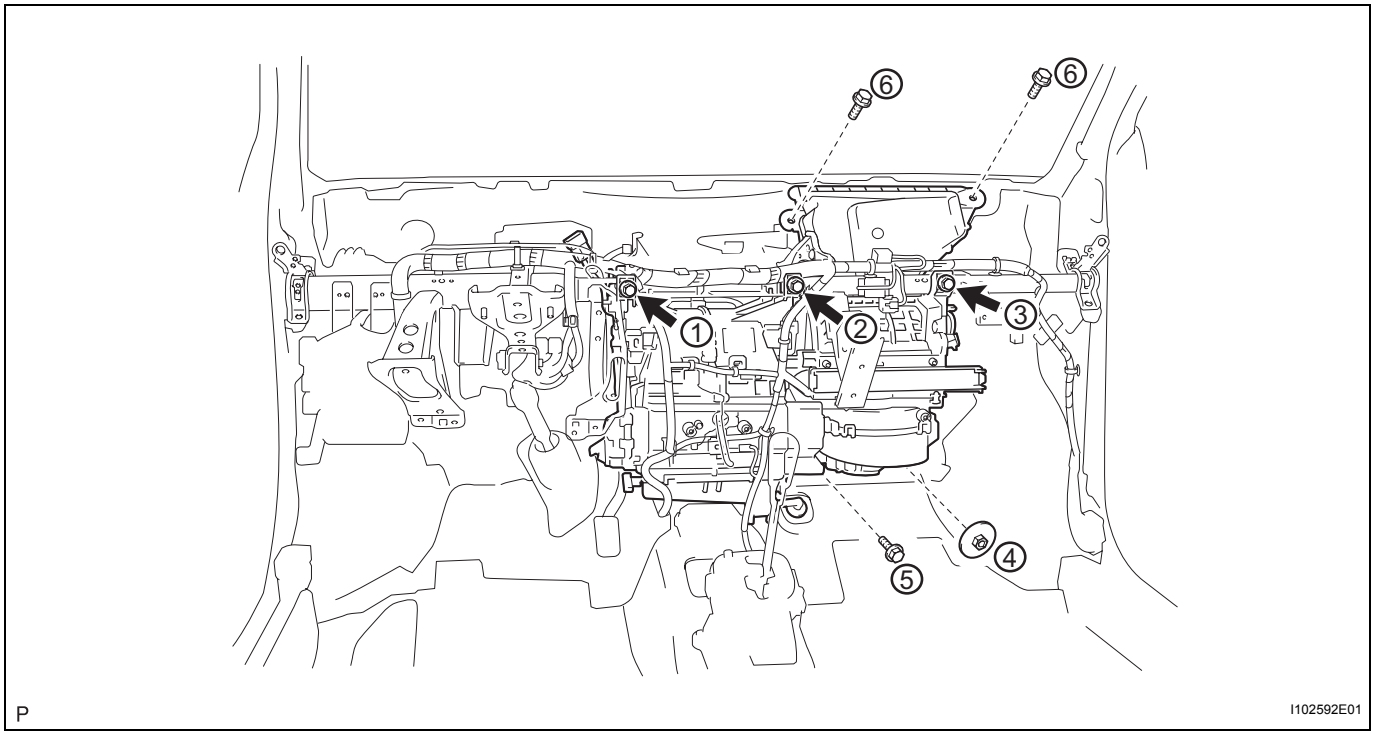
(a) Provisionally tighten the air conditioning unit with the 3 screws.

(b) Install the instrument panel reinforcement and the air conditioning unit with the 9 bolts.

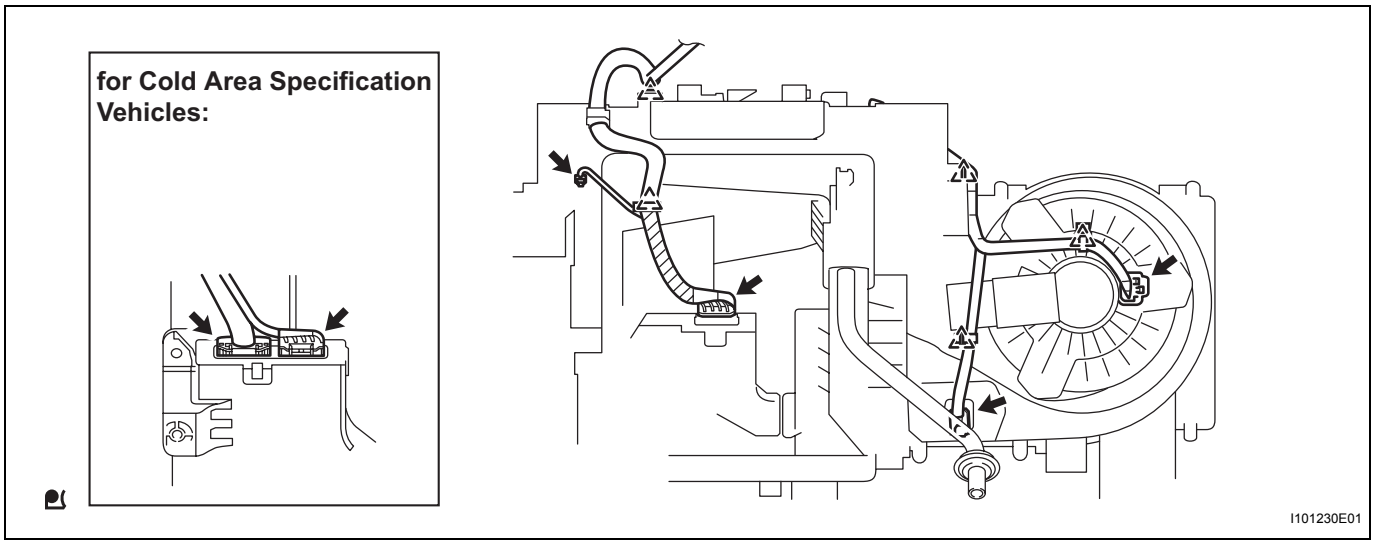


(c) Install the 3 screws, 3 bolts and the nut in the sequence shown in the illustration.

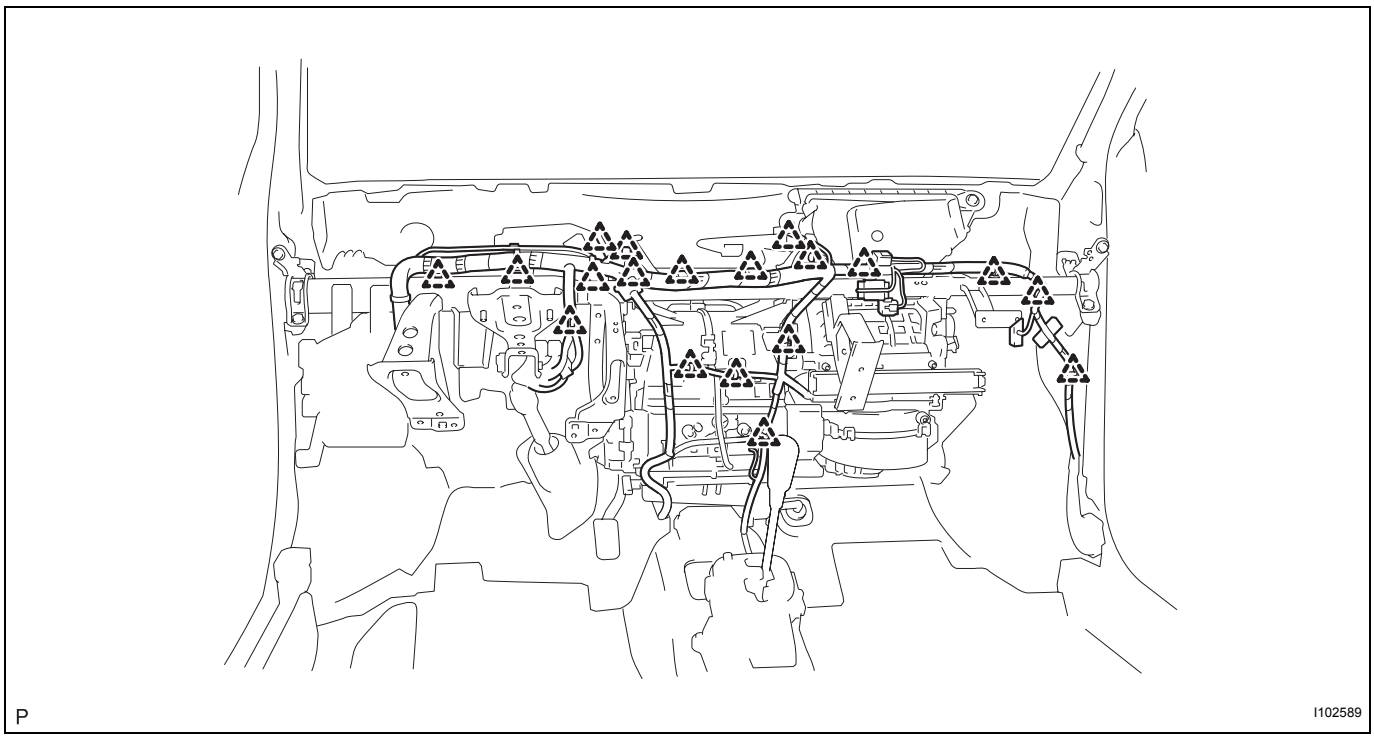
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf) for screw
9.8 N*m (100 kgf*cm, 87 in.*lbf) for nut
9.8 N*m (100 kgf*cm, 87 in.*lbf) for bolt

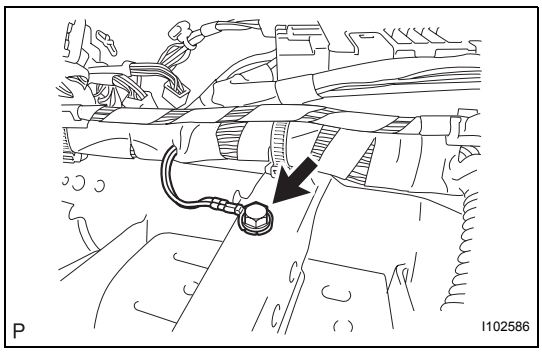


(d) Install the wire harness with the clamps and connect the connectors.

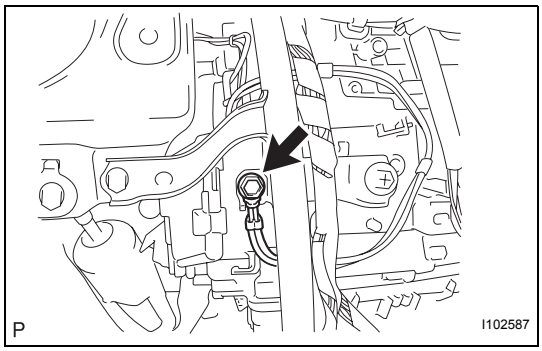


(e) Engage the clamps.

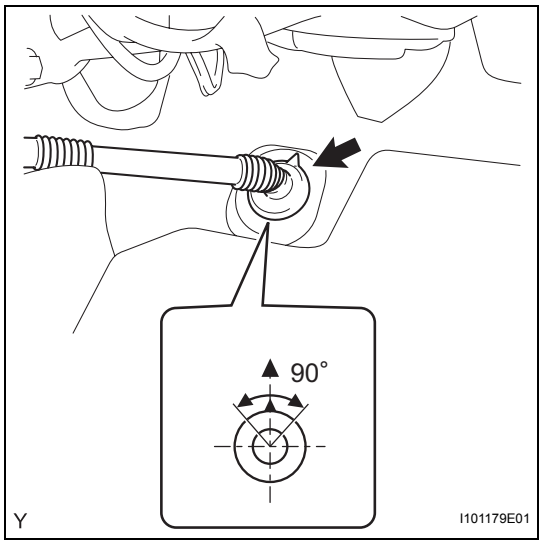




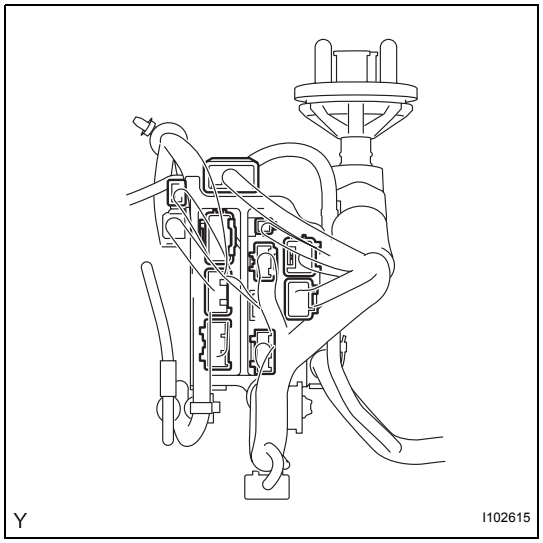
(f) Install the ground wire with the bolt.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)



(g) Install the ground wire with the bolt. (for Cold area specification vehicles)
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

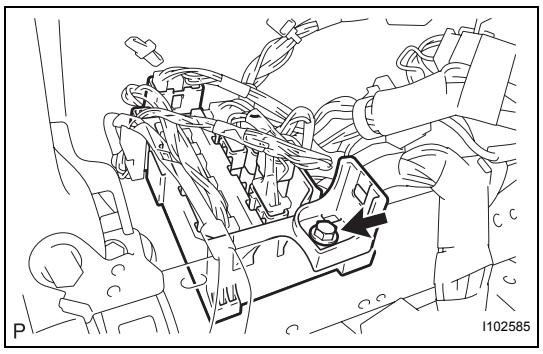


(h) Install the drain hose into the position shown in the illustration.
NOTICE:
- **Install the drain hose with its UP mark facing upward, within the 90 degree range shown in the illustration.**
- **Install the drain hose without twisting it.**

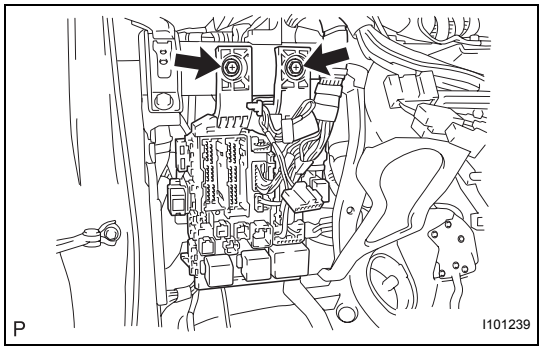


4. INSTALL CONNECTOR NO. 2 HOLDER

(a) Connect the connectors and install the wire harness.

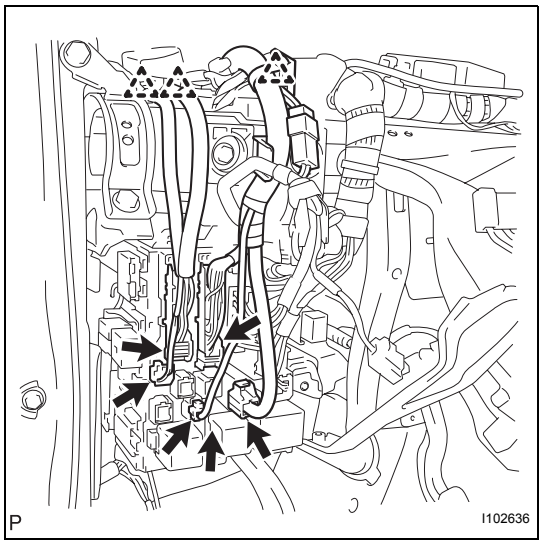


(b) Install the connector holder with the bolt.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)

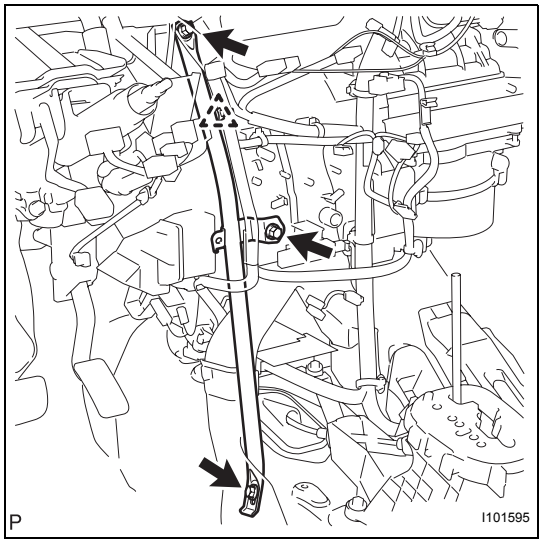


5. INSTALL MAIN BODY ECU (DRIVER SIDE J/B)

(a) Install the main body ECU with the 2 bolts.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)



(b) Connect the 5 connectors and the 3 clamps.

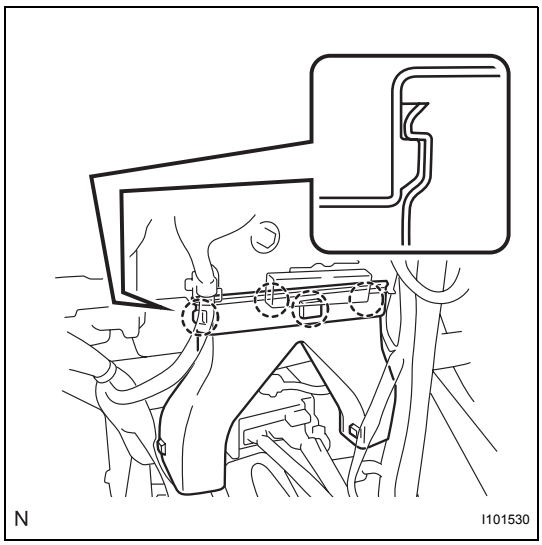


6. INSTALL INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) Install the instrument panel brace with the bolt, screw and nut.

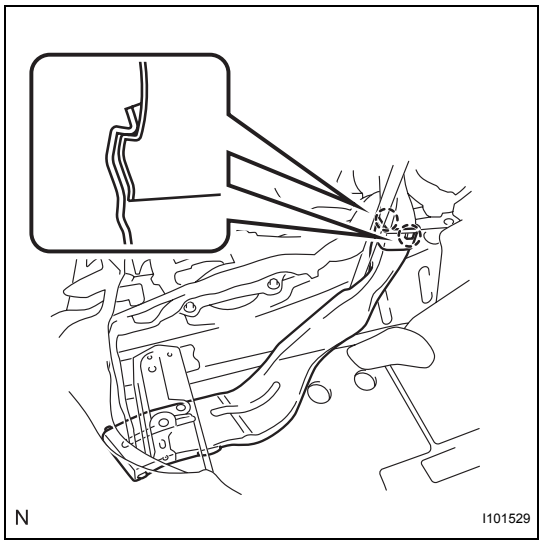
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf) for screw
9.8 N*m (100 kgf*cm, 87 in.*lbf) for nut
9.8 N*m (100 kgf*cm, 87 in.*lbf) for bolt

(b) Engage the clamp.



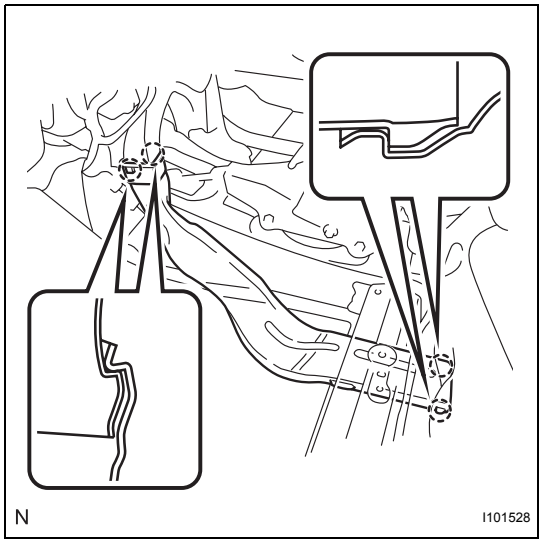
7. INSTALL REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles)

(a) Engage the 4 claws and install the air duct.



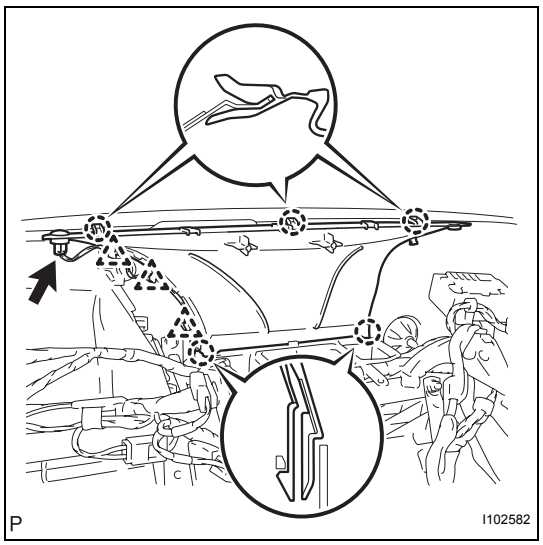
8. INSTALL REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles)

(a) Engage the 2 claws and install the air duct.



9. INSTALL REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles)

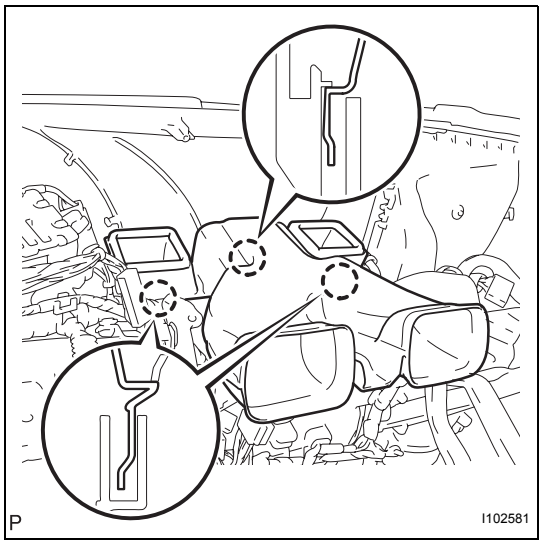
(a) Engage the 4 claws and install the air duct.



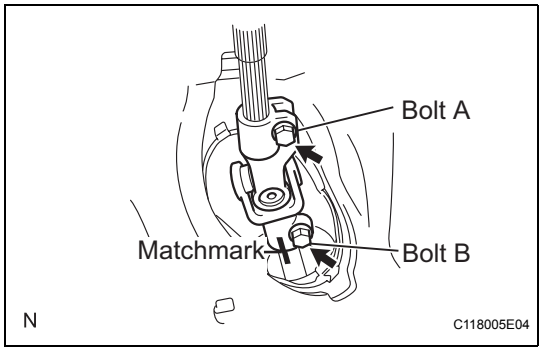
10. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Engage the 5 claws and install the defroster nozzle.

(b) Connect the 3 clamps and connector and install the wire harness.



11. **INSTALL HEATER TO REGISTER DUCT ASSEMBLY**
    (a) Engage the 3 claws and install the heater to register duct.
12. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-19)**
13. **INSTALL BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)**
14. **INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)**
15. **INSTALL BRAKE PEDAL (for Automatic Transaxle) (See page SR-19)**



16. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Align the matchmarks and install the sliding yoke onto the power steering assembly with bolt B.
    Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
    (b) Tighten bolt A.
    Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
17. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page SR-20)**
18. **INSTALL INSTRUMENT PANEL SUB REINFORCEMENT**
19. **CONNECT POWER STEERING ECU (See page SR-21)**
20. **INSTALL COMBINATION SWITCH ASSEMBLY (See page SR-21)**
21. **INSTALL STEERING COLUMN COVER (See page SR-22)**
22. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-22)**
23. **INSTALL STEERING PAD (See page RS-310)**
24. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-52)**
25. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-53)**
26. **CONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-53)**
27. **INSTALL INSTRUMENT PANEL BOX (See page IP-53)**
28. **INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY (See page IP-54)**
29. **INSTALL INSTRUMENT PAD LOWER RH (See page IP-54)**

30. INSTALL INSTRUMENT PAD LOWER LH (See page IP-55)
31. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)
32. INSTALL CONSOLE BOX CARPET (See page IP-88)
33. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)
34. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-89)
35. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-89)
36. INSTALL COWL SIDE TRIM BOARD RH (See page IR-34)
37. INSTALL COWL SIDE TRIM BOARD LH (See page IR-34)
38. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-35)
39. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)
40. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-35)
41. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-35)
42. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)
43. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)
44. INSTALL FRONT PILLAR GARNISH RH (See page IR-29)
45. INSTALL FRONT PILLAR GARNISH LH (See page IR-30)
46. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-14)
47. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)
48. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
49. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
50. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
51. INSTALL AIR CONDITIONING PANEL ASSEMBLY (See page AC-246)

52. **INSTALL STEREO OPENING COVER (w/o Radio Receiver) (See page IP-56)**

53. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-40)**

54. **INSTALL INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (See page IP-56)**

55. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**

56. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**

57. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**

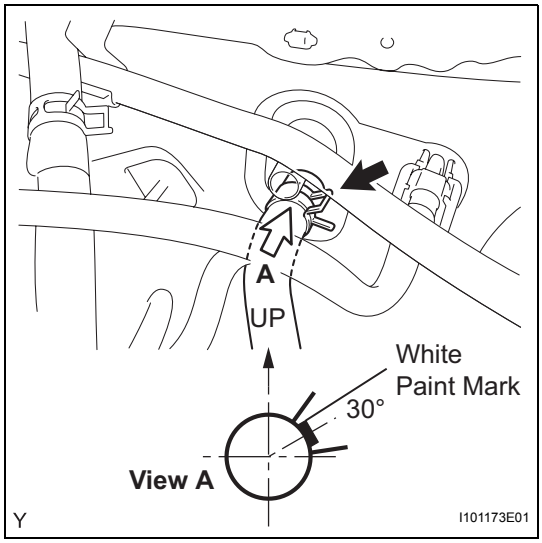
58. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**

59. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**

60. **CONNECT HEATER WATER INLET HOSE**

(a) Install the heater water inlet hose onto the heater unit.

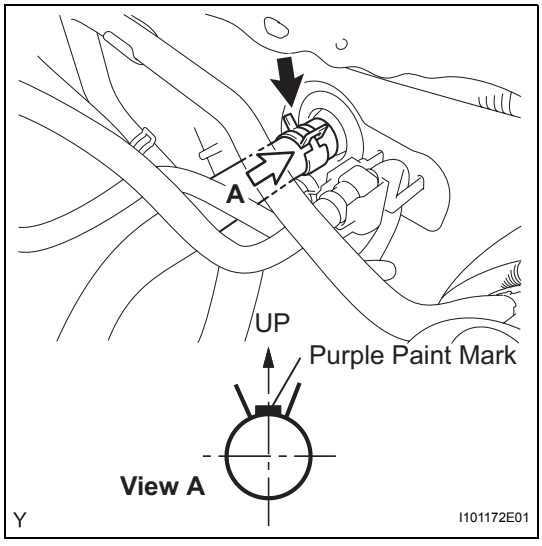
NOTICE:
Perform the installation with the hose clip and mark at the correct angle as shown in the illustration.



61. **CONNECT HEATER WATER OUTLET HOSE**

(a) Install the heater water outlet hose onto the heater unit.

NOTICE:
Perform the installation with the hose clip and mark at the correct angle as shown in the illustration.



62. **INSTALL LIQUID TUBE SUB-ASSEMBLY**

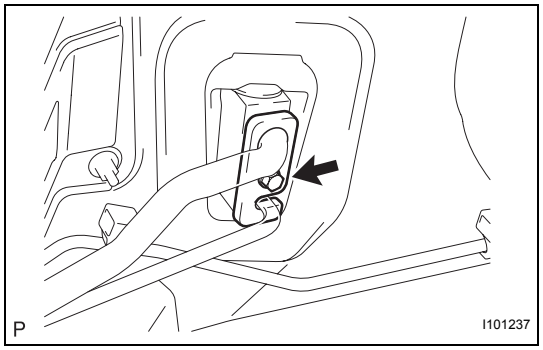
(a) Remove the vinyl tape from the liquid tube and the connecting portion of the unit.

(b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the connecting part of the liquid tube.

Compressor oil:
ND-OIL8 or the equivalent

(c) Install the O-ring onto the liquid tube.

(d) Connect the liquid tube to the unit.



63. **INSTALL SUCTION TUBE SUB-ASSEMBLY**
    (a) Remove the vinyl tape from the suction tube and the connecting part of the unit.
    (b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the connecting part of the suction tube.
    Compressor oil:
    ND-OIL8 or the equivalent
    (c) Install the O-ring onto the suction tube.
    (d) Insert the tube joints securely into the fitting holes and tighten the bolt.
    Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
64. **ADD ENGINE COOLANT (for 1NZ-FE) (See page CO-8)**
65. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
66. **CHECK SRS WARNING LIGHT**
    (See page RS-31)
67. **CHARGE REFRIGERANT (See page AC-67)**
68. **WARM UP ENGINE (See page AC-69)**
69. **CHECK FOR ENGINE COOLANT LEAK (for 1NZ-FE) (See page CO-1)**
70. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**
71. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
72. **PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT (See page SR-22)**

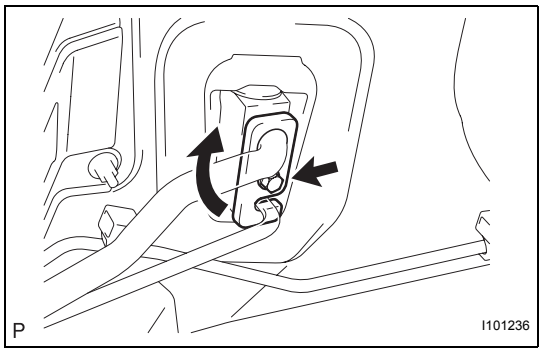
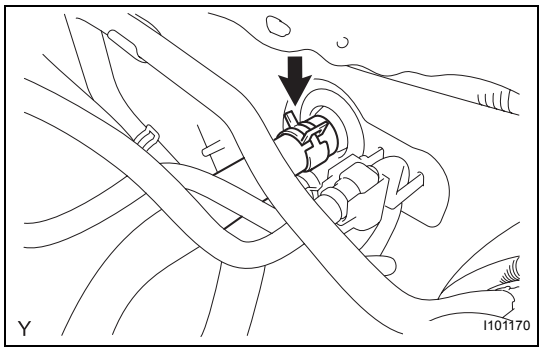
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-31).
HINT:
Use the same procedure for both the RH and LH sides.

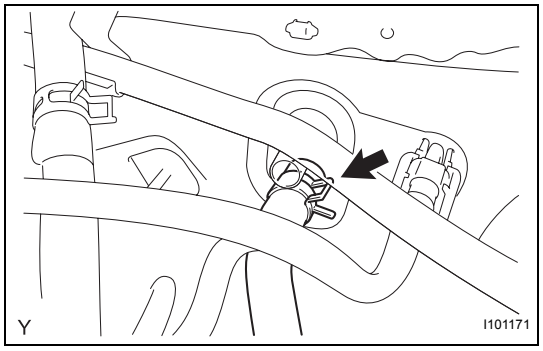
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
3. **DRAIN ENGINE COOLANT (See page CO-8)**
4. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-17)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-17)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-17)**
7. **REMOVE HOOD TO COWL TOP SEAL (See page WW-18)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-18)**
9. **REMOVE COWL TOP VENTILATOR LOUVER LH (See page WW-18)**
10. **REMOVE FRONT WIPER MOTOR AND LINK (See page WW-19)**
11. **REMOVE NO. 2 COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-122)**
12. **REMOVE COWL TOP PANEL OUTER (See page EM-123)**
13. **DISCONNECT SUCTION TUBE SUB-ASSEMBLY**
    (a) Remove the bolt.
    (b) Turn the hook type connector clockwise and disconnect the suction tube.
    (c) Remove the O-ring from the suction tube.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.
14. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY**
    (a) Disconnect the liquid tube.



(b) Remove the O-ring from liquid tube.
NOTICE:
Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



15. **DISCONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)**
(a) Using pliers, grip the claws of the clip, slide the clip and disconnect the heater water outlet hose from the heater unit.



16. **DISCONNECT HEATER WATER INLET HOSE A**
(a) Using pliers, grip the claws of the clip, slide the clip and disconnect the heater water inlet hose from the heater unit.

17. **BOLTS, SCREWS AND NUTS TABLE (See page IP-66)**

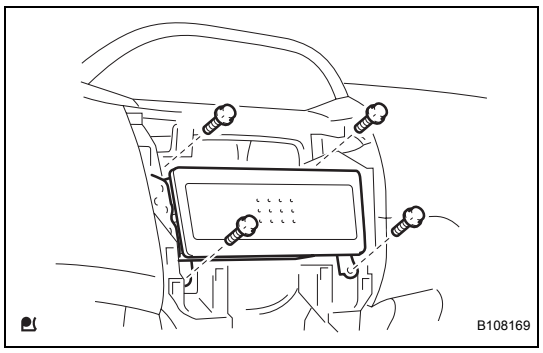
18. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**

19. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**

20. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**

21. **REMOVE COMBINATION METER ASSEMBLY (See page ME-146)**

22. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER (See page AC-250)**



23. **REMOVE RADIO TUNER OPENING COVER (w/o Radio Receiver)**
(a) Remove the 4 bolts and the radio tuner opening cover.

24. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-44)**

25. **REMOVE AIR CONDITIONER PANEL SUB-ASSEMBLY (See page AC-250)**

26. **DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)**

27. **DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)**

28. **DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)**

29. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**

30. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)
31. REMOVE FRONT PILLAR GARNISH RH (See page IR-58)
32. REMOVE FRONT PILLAR GARNISH LH (See page IR-59)
33. REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)
34. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)
35. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)
36. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)
37. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-49)
38. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)
39. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)
40. REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)
41. REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)
42. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-68)
43. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page IP-68)
44. REMOVE CONSOLE BOX REAR COVER (See page IP-68)
45. REMOVE CONSOLE BOX CARPET (See page IP-68)
46. REMOVE CONSOLE BOX ASSEMBLY REAR (See page IP-69)
47. REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER (See page IP-69)
48. REMOVE INSTRUMENT PANEL BOX (See page IP-70)
49. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (See page IP-70)
50. DISCONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-70)
51. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-71)
52. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-71)

53. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**

54. **REMOVE STEERING PAD (See page RS-309)**

55. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-30)**

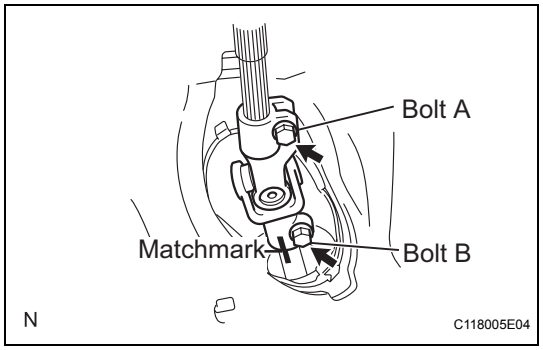
56. **REMOVE STEERING COLUMN COVER (See page SR-30)**

57. **REMOVE COMBINATION SWITCH ASSEMBLY (See page SR-31)**

58. **DISCONNECT POWER STEERING ECU (See page SR-32)**

59. **REMOVE INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-32)**

60. **REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-32)**



61. **SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Place matchmarks on the sliding yoke of the steering intermediate shaft and the power steering link.
    (b) Loosen bolt A, remove bolt B and separate the steering yoke.

62. **REMOVE BRAKE PEDAL (for Automatic Transaxle) (See page SR-32)**

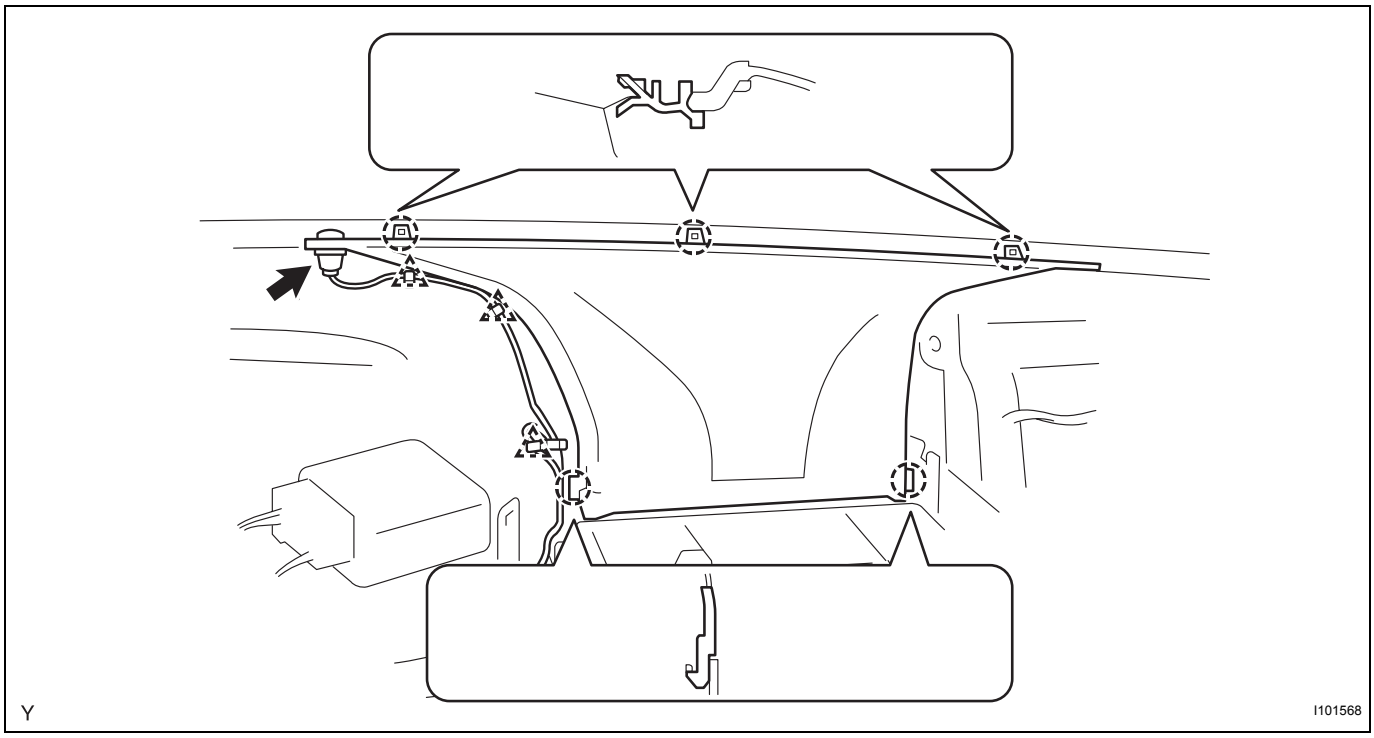
63. **REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)**

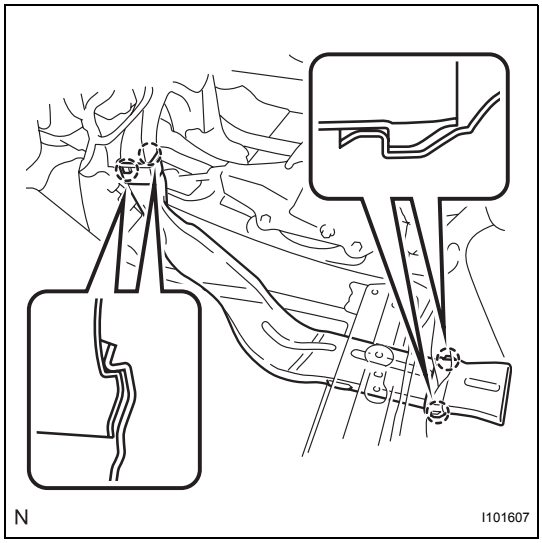
64. **REMOVE BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)**

65. **REMOVE STEERING COLUMN ASSEMBLY (See page SR-33)**

66. **REMOVE DEFROSTER NOZZLE ASSEMBLY**
    (a) Disconnect the connectors and clamps.

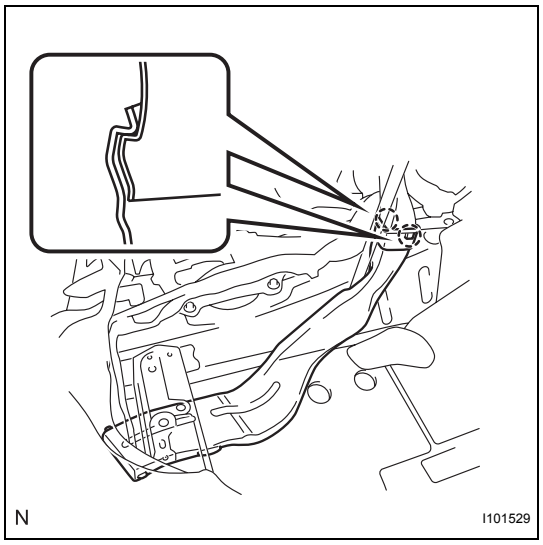
(b) Disengage the 5 claws and remove the defroster nozzle.





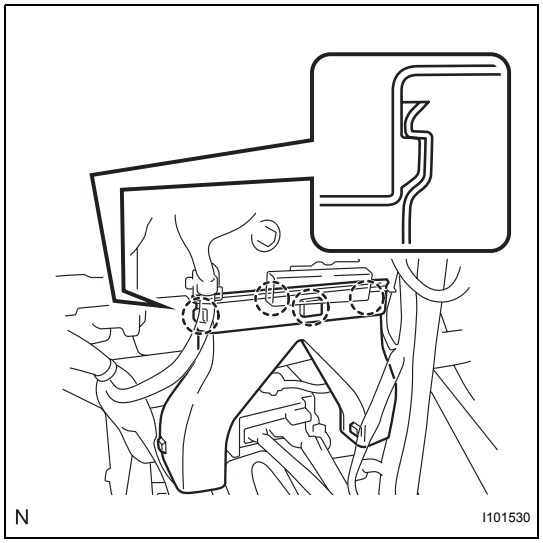
67. REMOVE REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles)

(a) Disengage the 4 claws and remove the air duct.



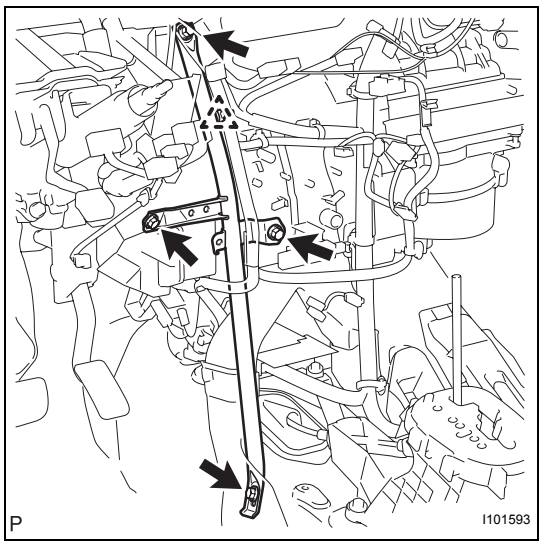
68. REMOVE REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles)

(a) Disengage the 2 claws and remove the air duct.



69. REMOVE REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles)

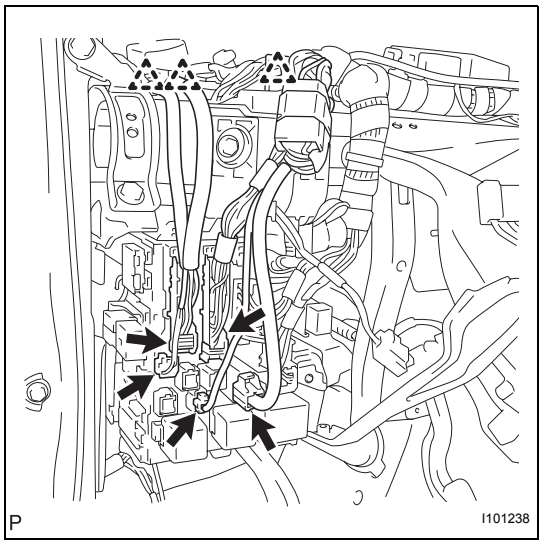
(a) Disengage the 4 claws and remove the air duct.



70. REMOVE INSTRUMENT PANEL BRACE SUB-ASSEMBLY

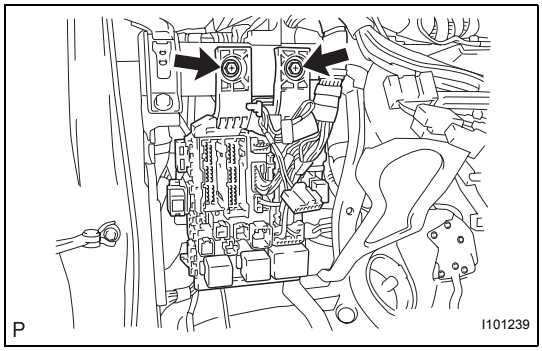
(a) Disengage the clamp.

(b) Remove 2 bolts, screw and nut and remove the instrument panel brace.

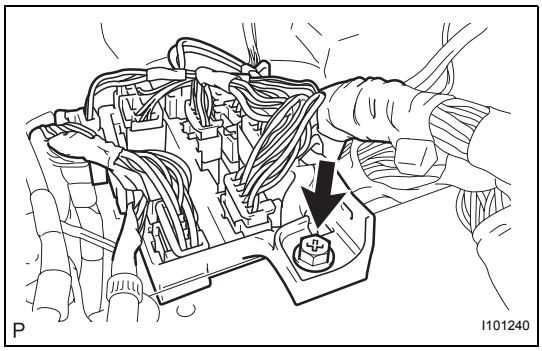


71. SEPARATE MAIN BODY ECU

(a) Disconnect the 5 connectors and 3 clamps.

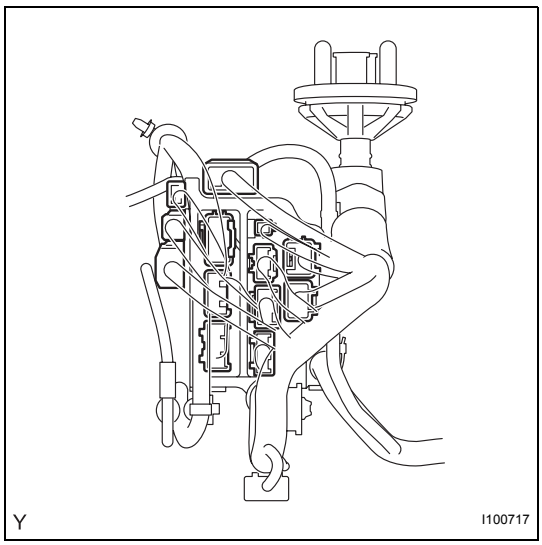


(b) Remove the 2 bolts and separate the main body ECU.

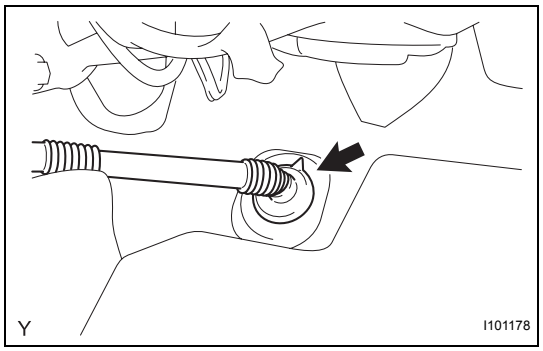


72. SEPARATE CONNECTOR NO. 2 HOLDER

(a) Remove the bolt.

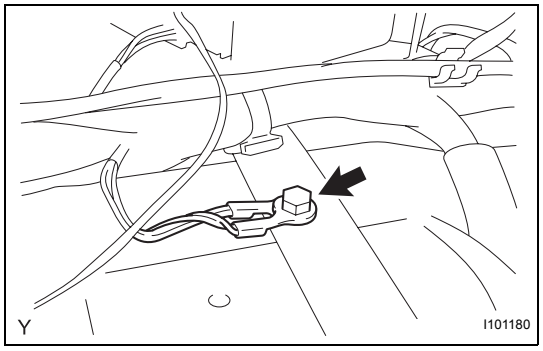


(b) Disconnect the connectors and separate the connector No. 2 holder.

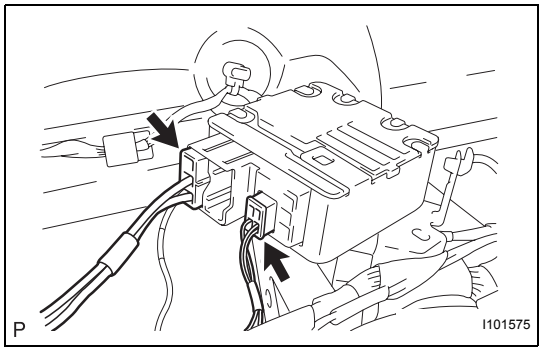


73. REMOVE INSTRUMENT PANEL REINFORCEMENT

(a) Disconnect the drain hose.

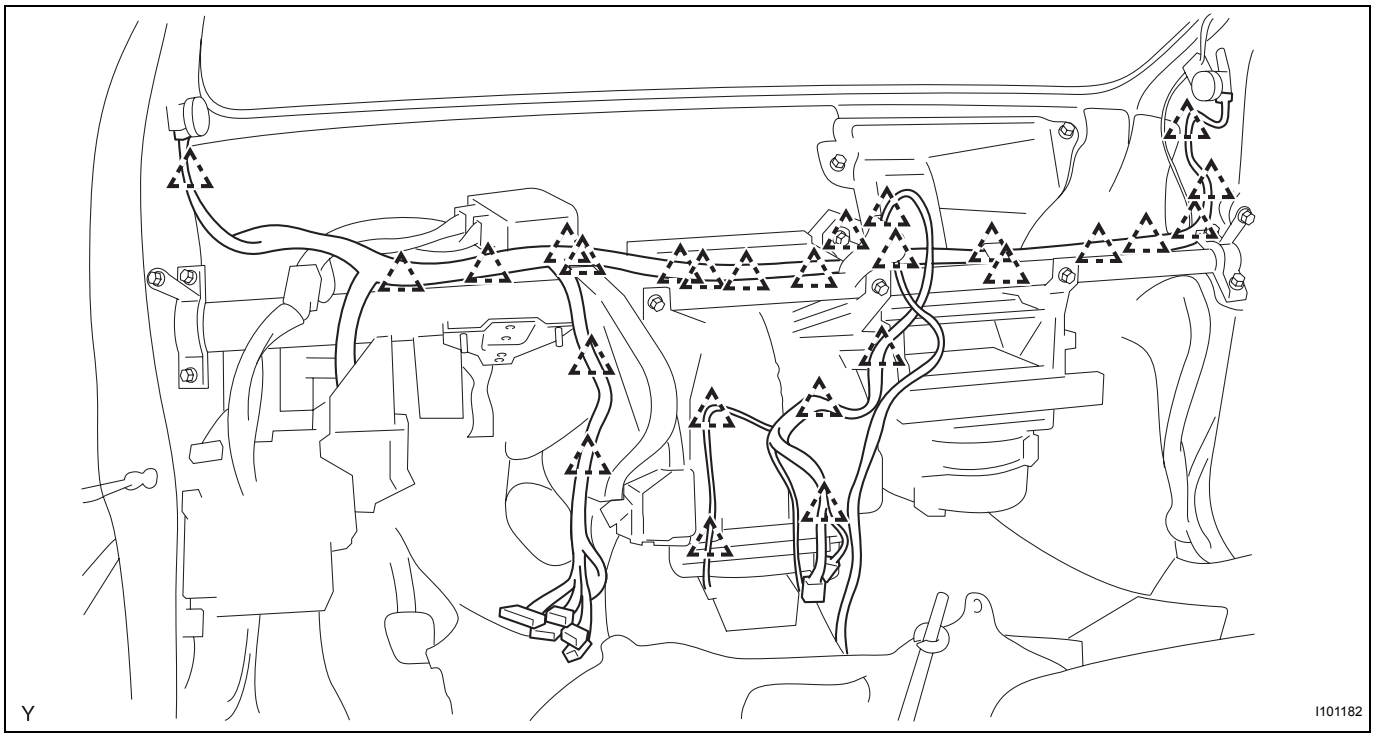


(b) Remove the bolt and disconnect the ground wire.



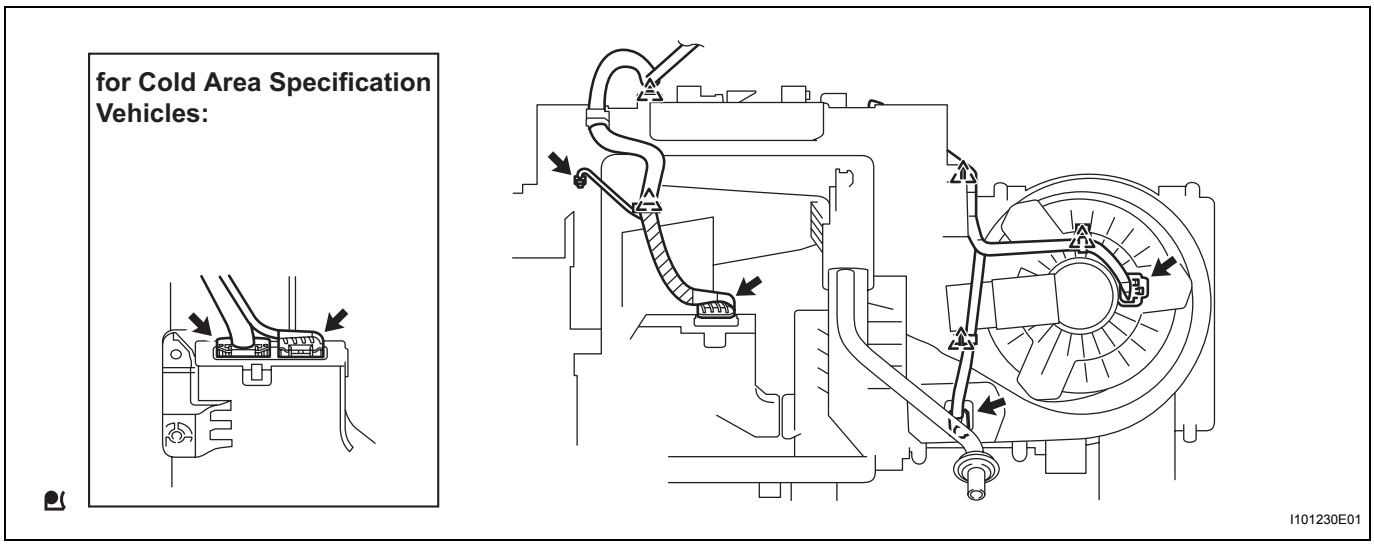
(c) Disconnect the connector.

(d) Disengage the clamps.

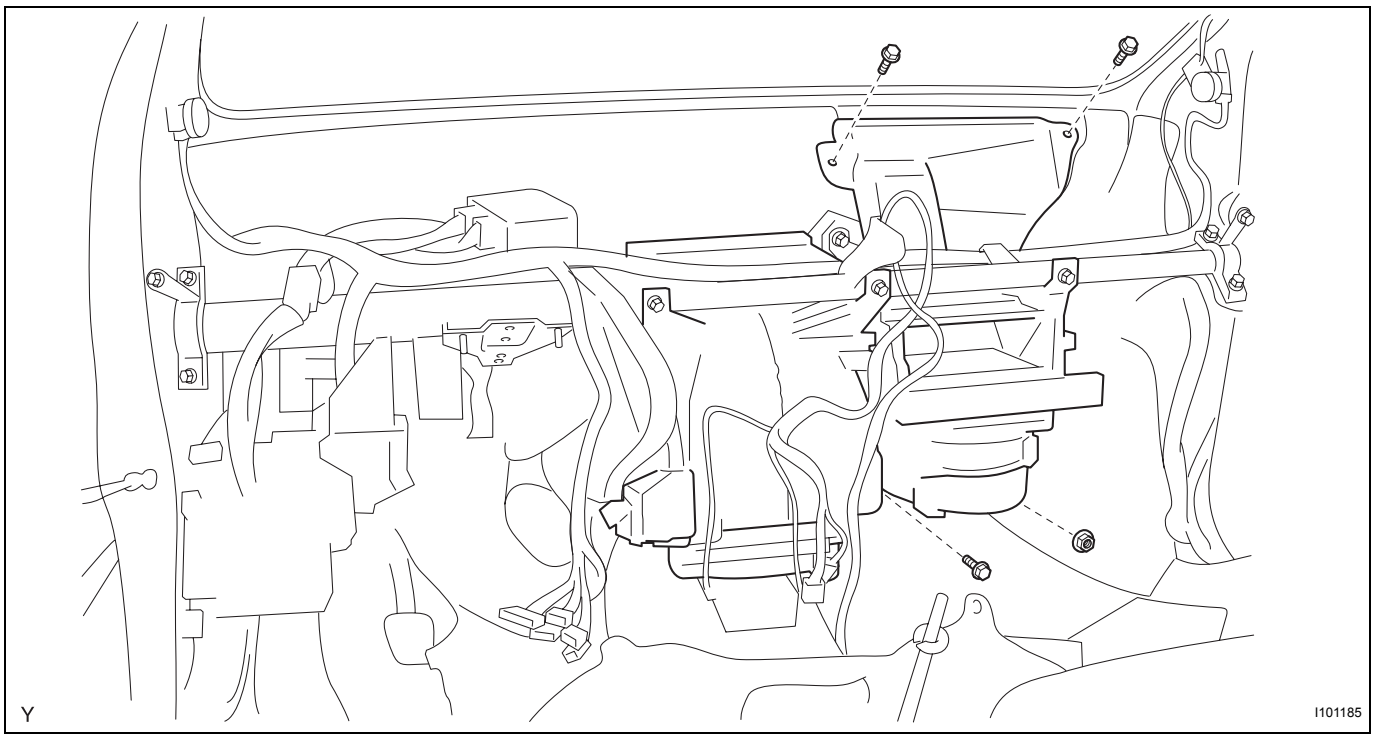


AC

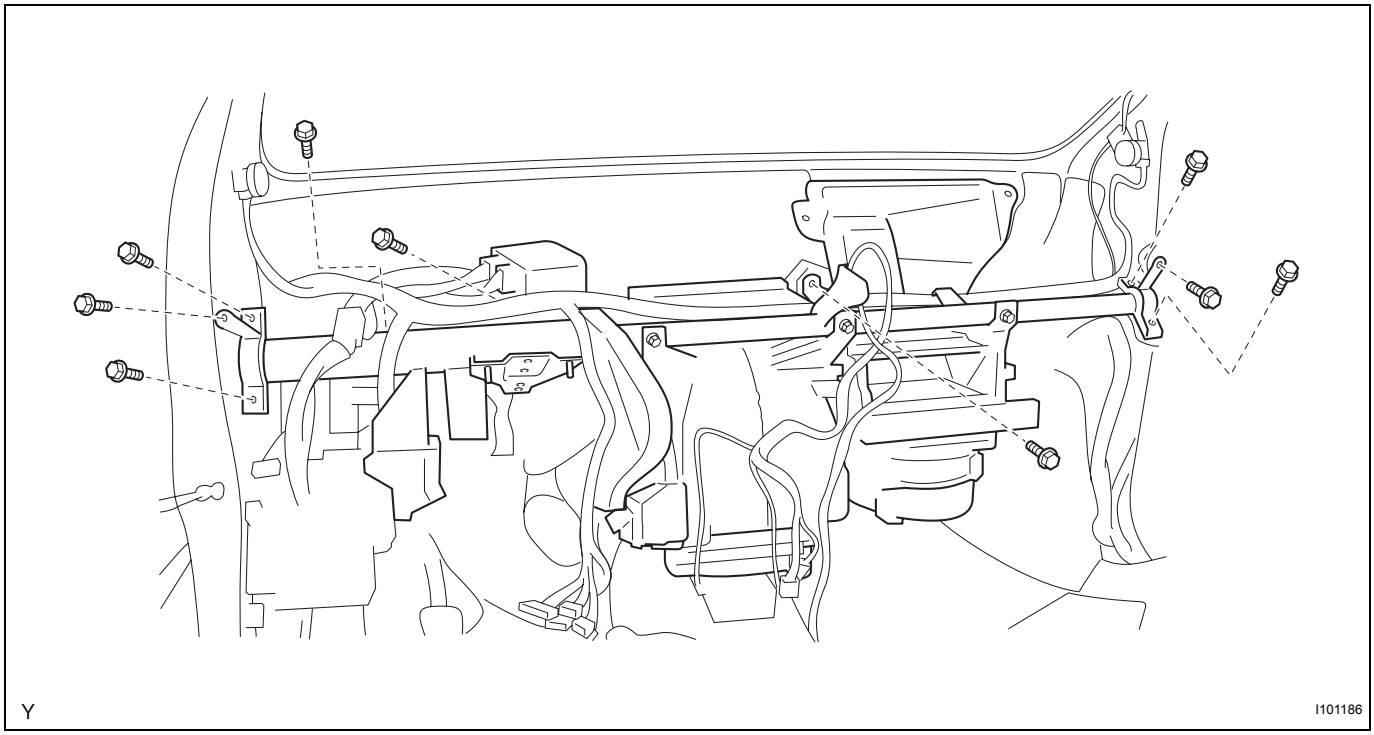
(e) Disconnect the connectors and clamps.



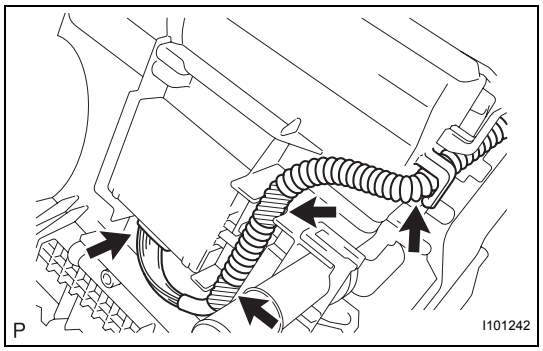
(f) Remove the 3 bolts and the nut.



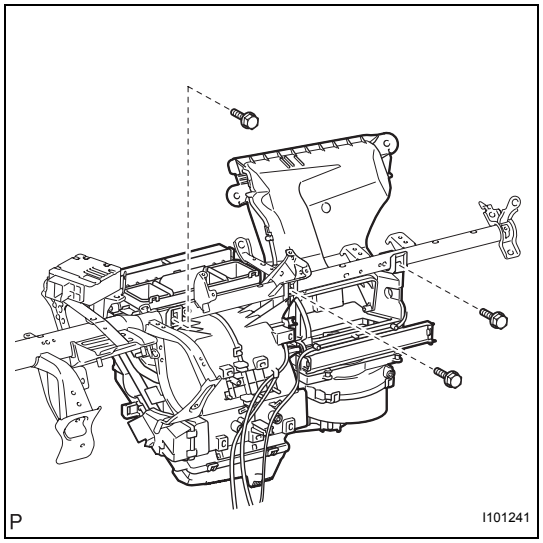
(g) Remove the 9 bolts and remove the instrument panel reinforcement together with the air conditioning unit.



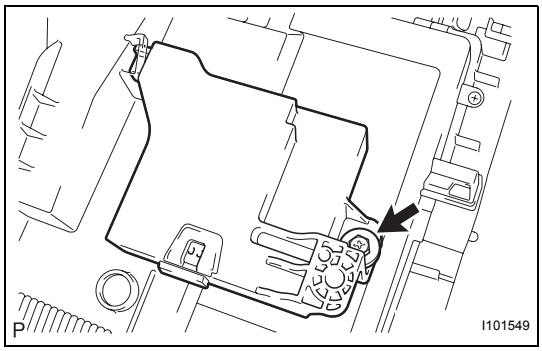
(h) Disconnect the connector and the 3 clamps.



(i) Remove the 3 screws and the air conditioning unit.

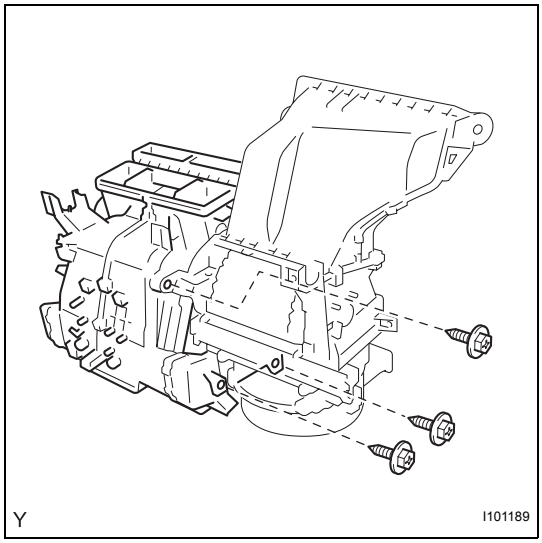


AC



74. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

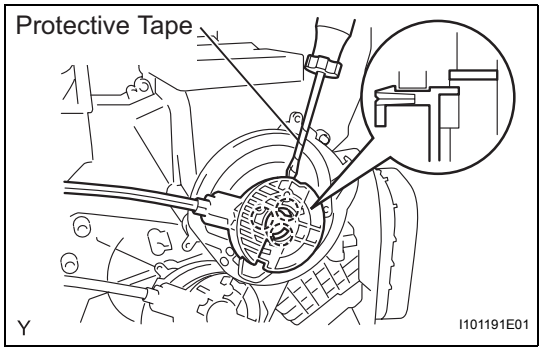
(a) Remove the screw and the air conditioning amplifier.



75. REMOVE AIR CONDITIONING UNIT

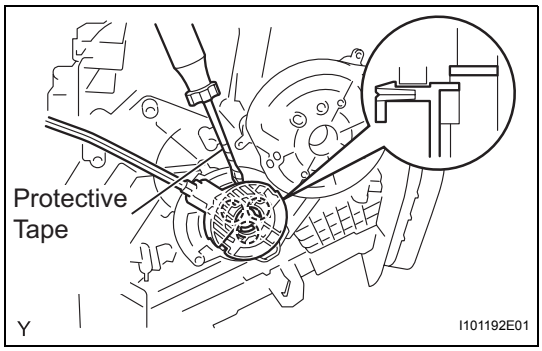
(a) Remove the 3 screws and the air conditioning unit.

DISASSEMBLY



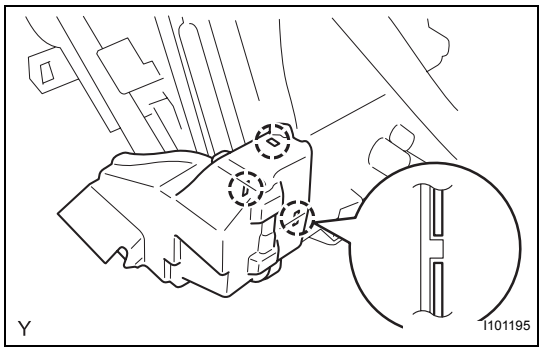
1. REMOVE DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the defroster damper control cable.



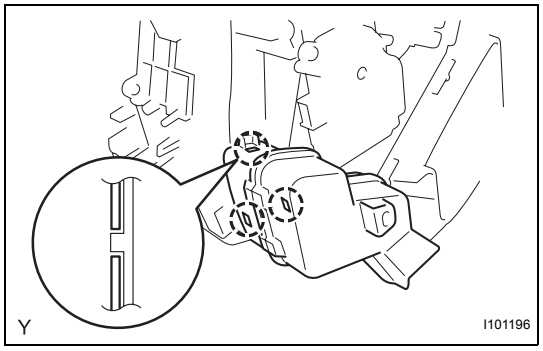
2. REMOVE AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the air mix damper control cable.



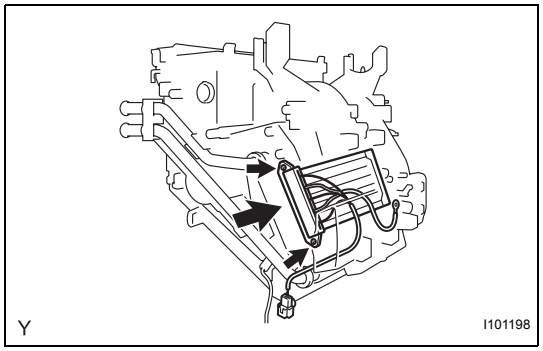
3. REMOVE NO. 1 AIR DUCT

(a) Disengage the 3 claws and remove the air duct.



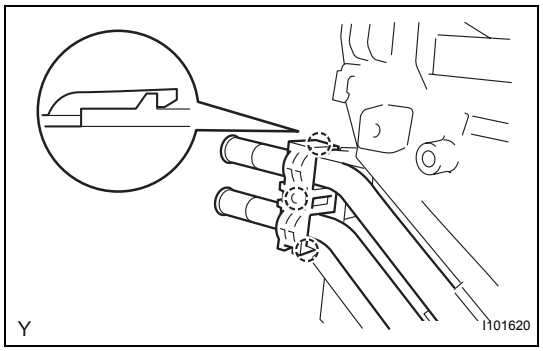
4. REMOVE NO. 2 AIR DUCT

(a) Disengage the 3 claws and remove the air duct.



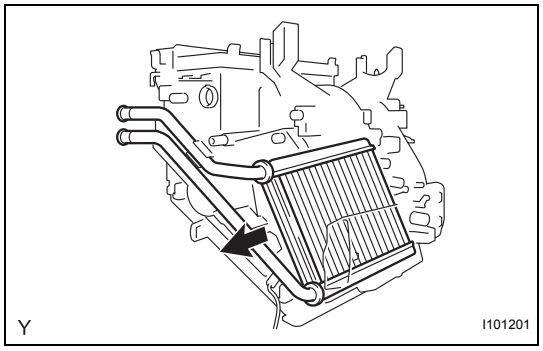
5. REMOVE PTC HEATER ASSEMBLY (for Cold Area Specification Vehicles)

(a) Remove the 2 screws and the PTC heater.

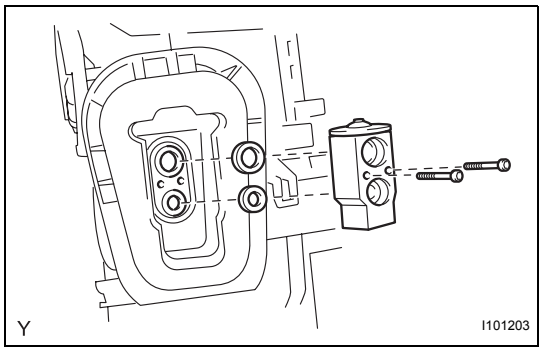


6. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Disengage the 3 claws and remove the clamp.



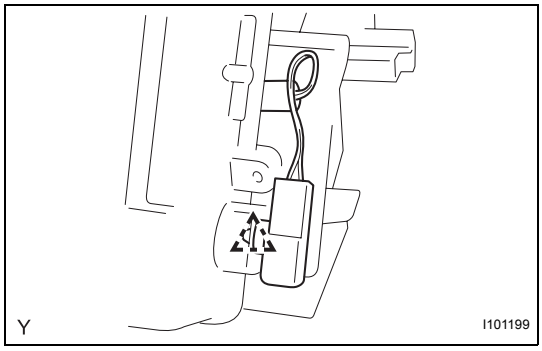
(b) Remove the heater radiator unit from the air conditioner radiator assembly.



7. REMOVE COOLER EXPANSION VALVE

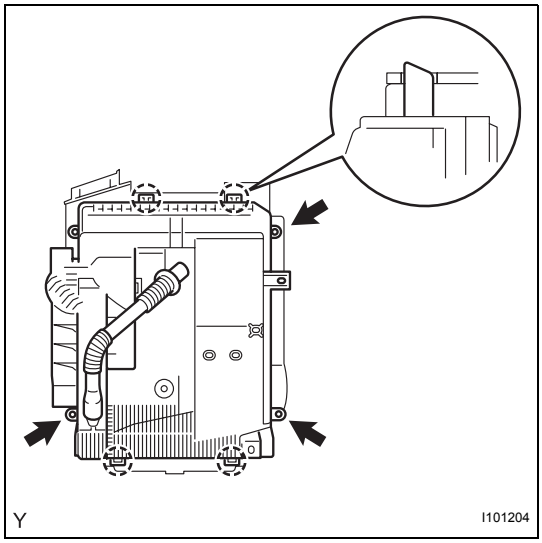
(a) Using a hexagon wrench 4, remove the 2 hexagon bolts and detach the cooler expansion valve.

(b) Remove the 2 O-rings from the cooler evaporator.



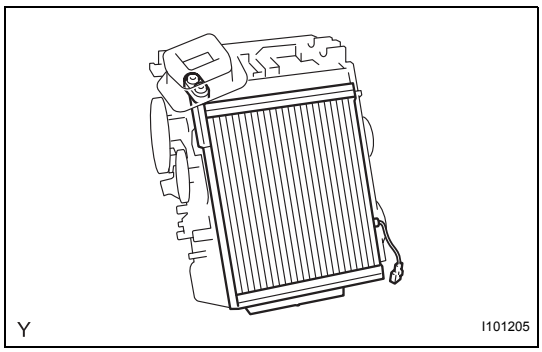
8. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

(a) Disengage the cooler thermistor connector.

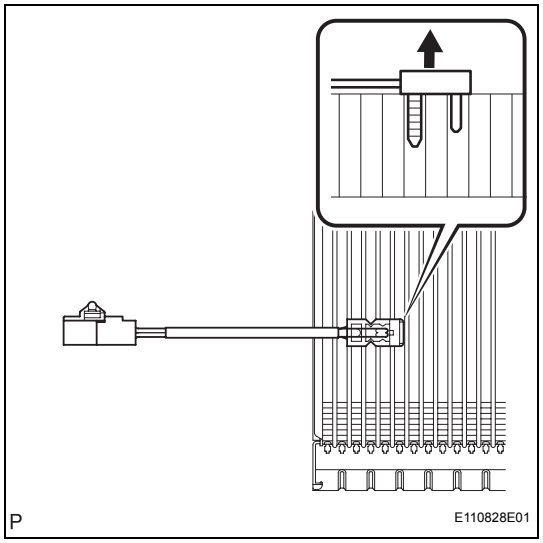


(b) Remove the 3 screws.

(c) Disengage the 4 claws and remove the heater case lower.



(d) Remove the cooler evaporator.



9. REMOVE NO. 1 COOLER THERMISTOR

(a) Remove the cooler thermistor from the cooler evaporator.

INSPECTION

1. INSPECT NO. 1 COOLER THERMISTOR

(a) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

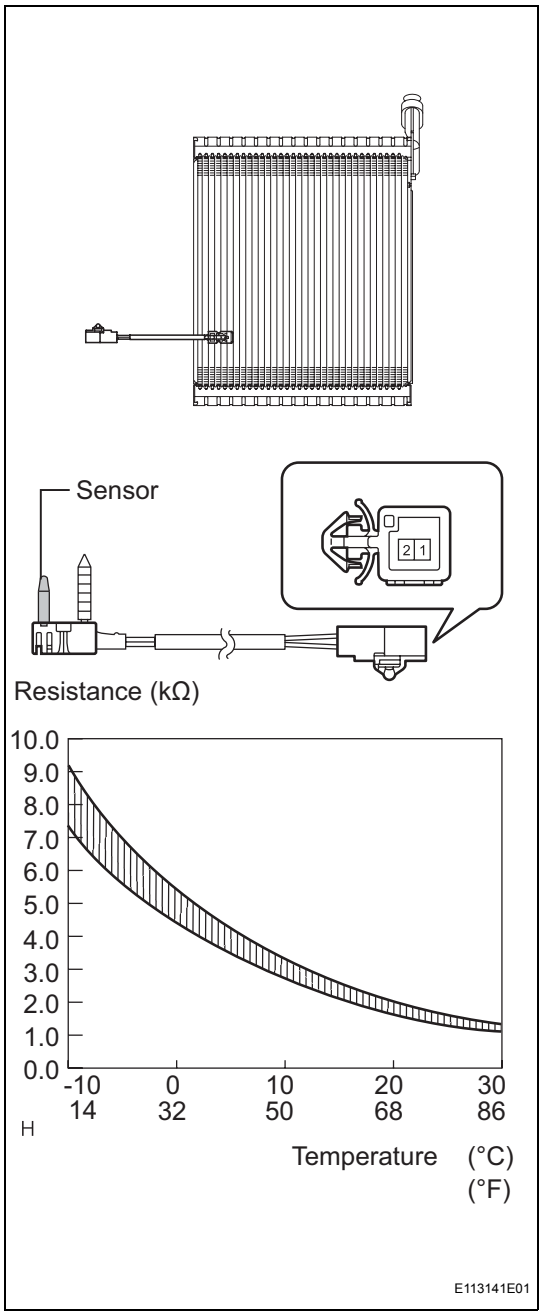
NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the temperature of the sensor and the cooler thermistor must be the same.**

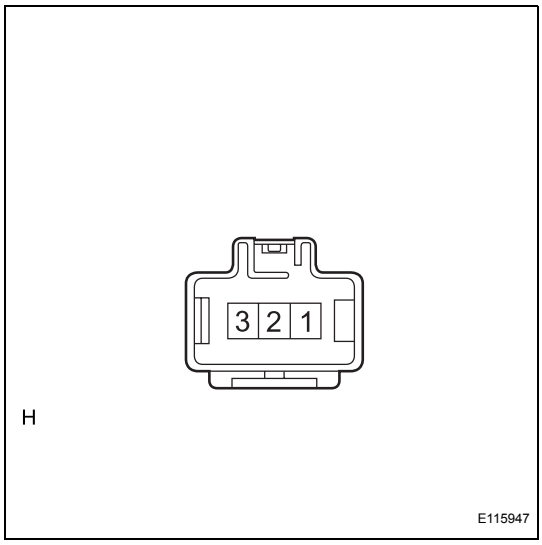
HINT:

As the temperature increases, the resistance decreases (see the graph).

If the operation is not as specified, replace the cooler thermistor.



AC



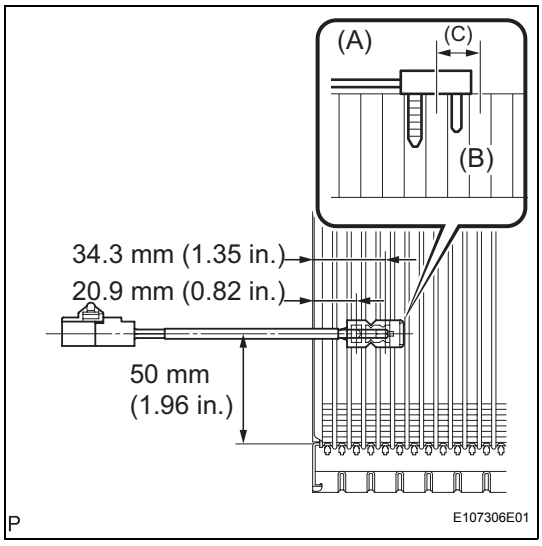
2. INSPECT PTC HEATER ASSEMBLY

(a) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
1 - 2	Below 1 Ω
2 - 3	Below 1 Ω
1 - 3	Below 1 Ω

If the resistance value is not as specified, replace the PTC heater assembly.



REASSEMBLY

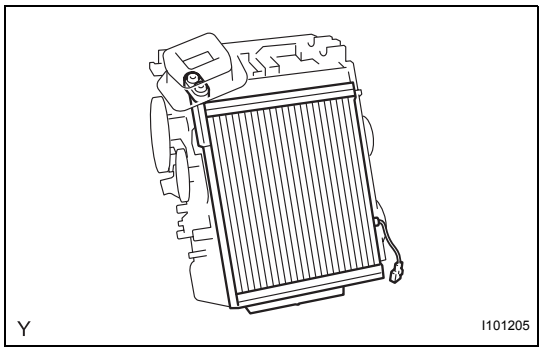
1. INSTALL NO. 1 COOLER THERMISTOR

(a) Install the sensor onto the evaporator as shown in the illustration.

(b) Check that the sensor sticks to the evaporator surface as shown in the illustration (A: Sensor, B: Evaporator).

NOTICE:

If reusing the evaporator, do not reinsert the sensor in the same position that it was in before. Insert it within area C shown in the illustration.



2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

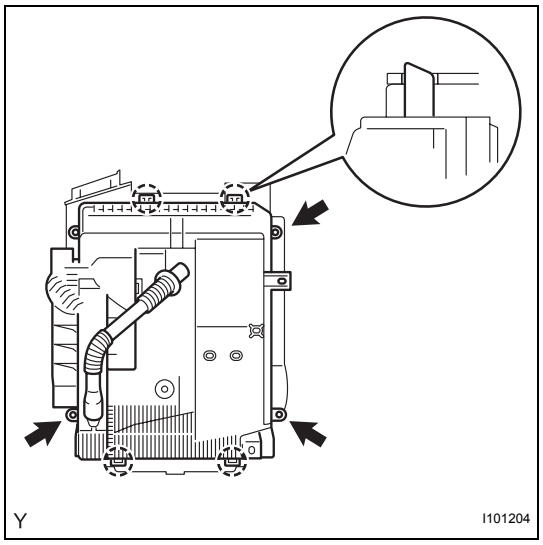
HINT:

If a new cooler evaporator is installed, add compressor oil to the cooler evaporator as follows.

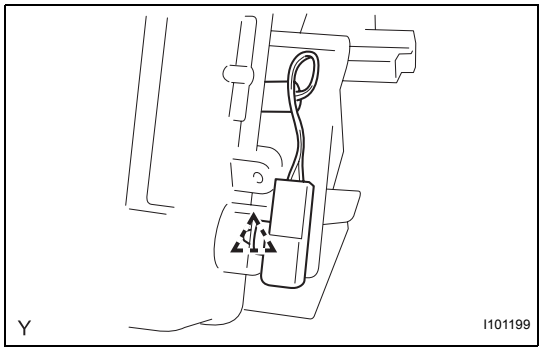
Compressor oil:

ND-OIL8 or the equivalent. Add 40 cc (1.35 fl. oz.)

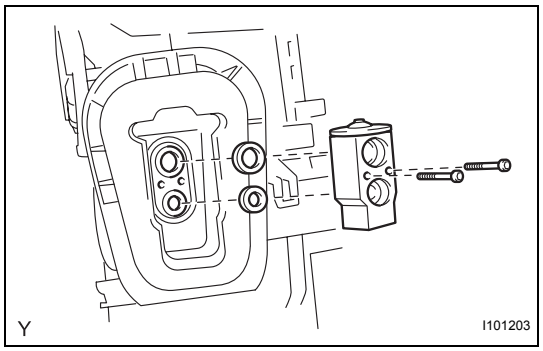
(a) Install the cooler evaporator.



(b) Engage the 4 claws and install the heater case lower.
(c) Install the 3 screws.

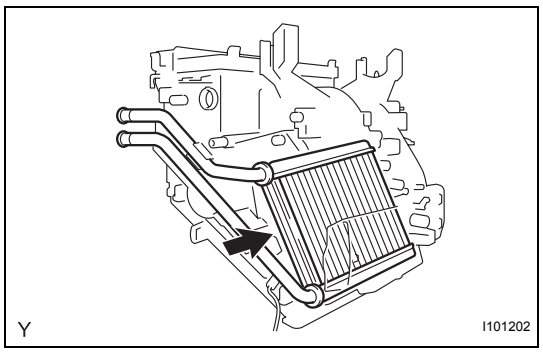


(d) Engage the cooler thermistor connector.



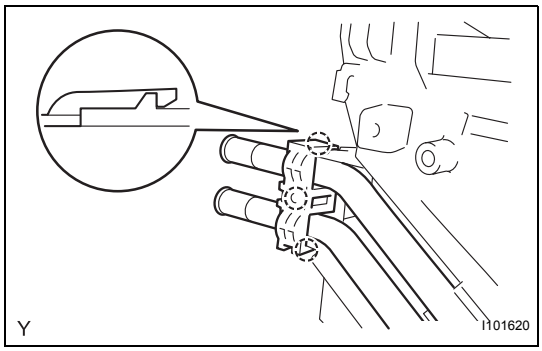
3. INSTALL COOLER EXPANSION VALVE

(a) Apply sufficient compressor oil (ND-OIL8) to 2 new O-rings and the fitting surface of the cooler expansion valve.
Compressor oil:
ND-OIL8 or the equivalent
(b) Install the 2 O-rings onto the cooler evaporator.
(c) Using a hexagon wrench 4, install the cooler expansion valve with the 2 hexagon bolts.
Torque: 3.5 N*m (36 kgf*cm, 31 in.*lbf)

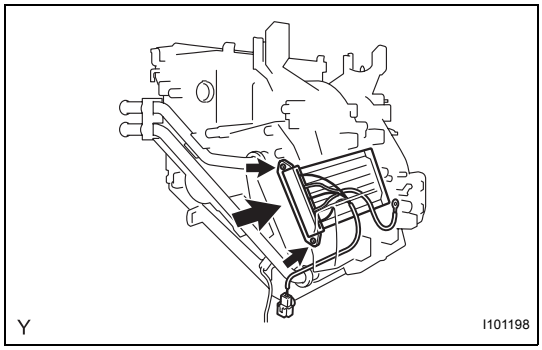


4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Install the radiator heater unit onto the air conditioner radiator assembly.

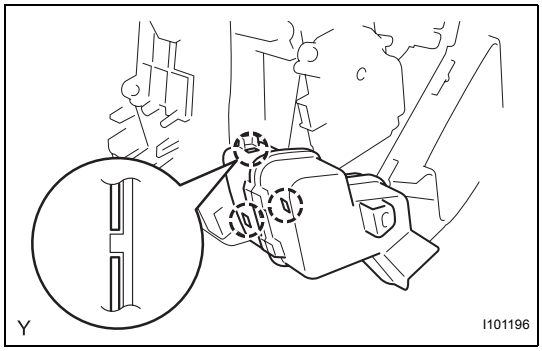


(b) Engage the 3 clips and install the clamp.



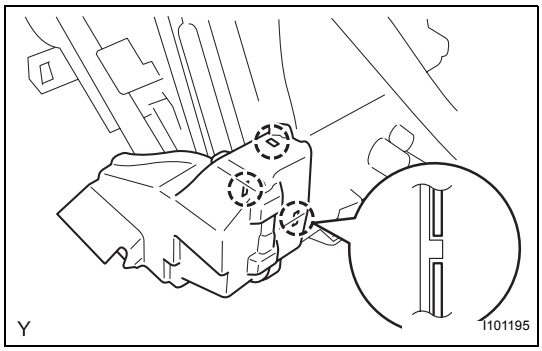
5. INSTALL PTC HEATER ASSEMBLY (for Cold Area Specification Vehicles)

(a) Install the PTC heater with the 2 screws.



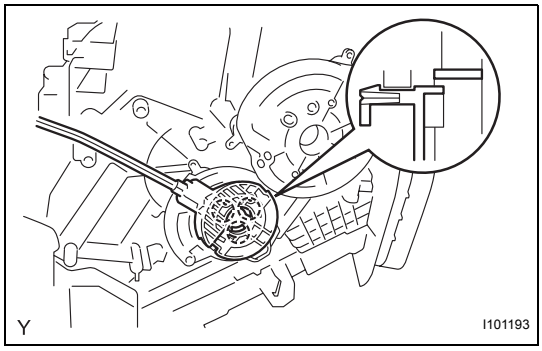
6. INSTALL NO. 2 AIR DUCT

(a) Engage the 3 claws and install the air duct.



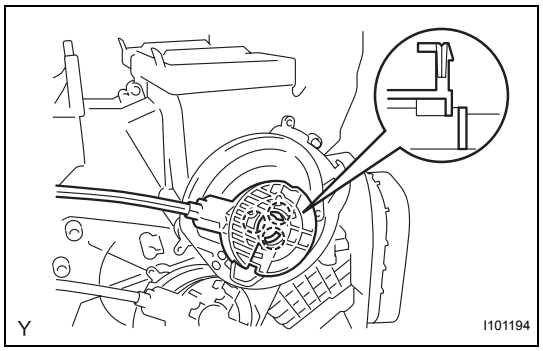
7. INSTALL NO. 1 AIR DUCT

(a) Engage the 3 claws and install the air duct.



8. INSTALL AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

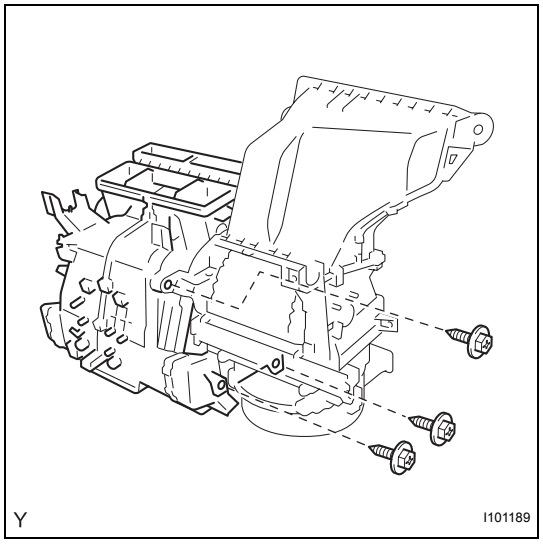
(a) Engage the claw and install the air mix damper control cable.



9. INSTALL DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

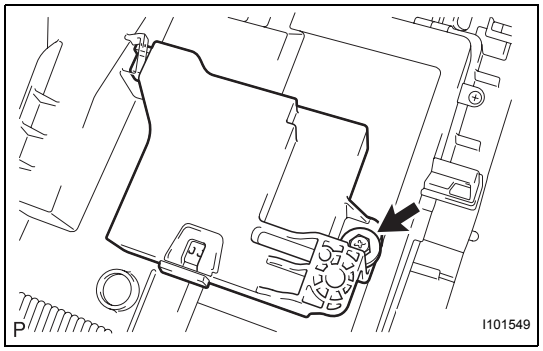
(a) Engage the claw and install the defroster damper control cable.

INSTALLATION



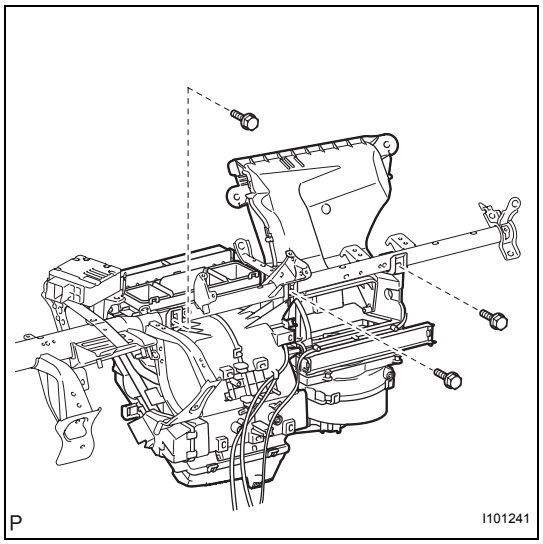
1. INSTALL AIR CONDITIONING UNIT

(a) Install the air conditioning unit with the 3 screws.



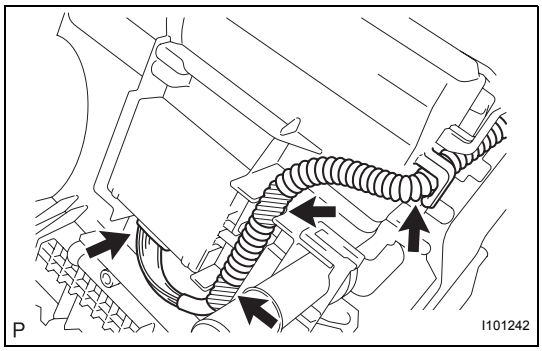
2. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Install the air conditioning amplifier with the screw.

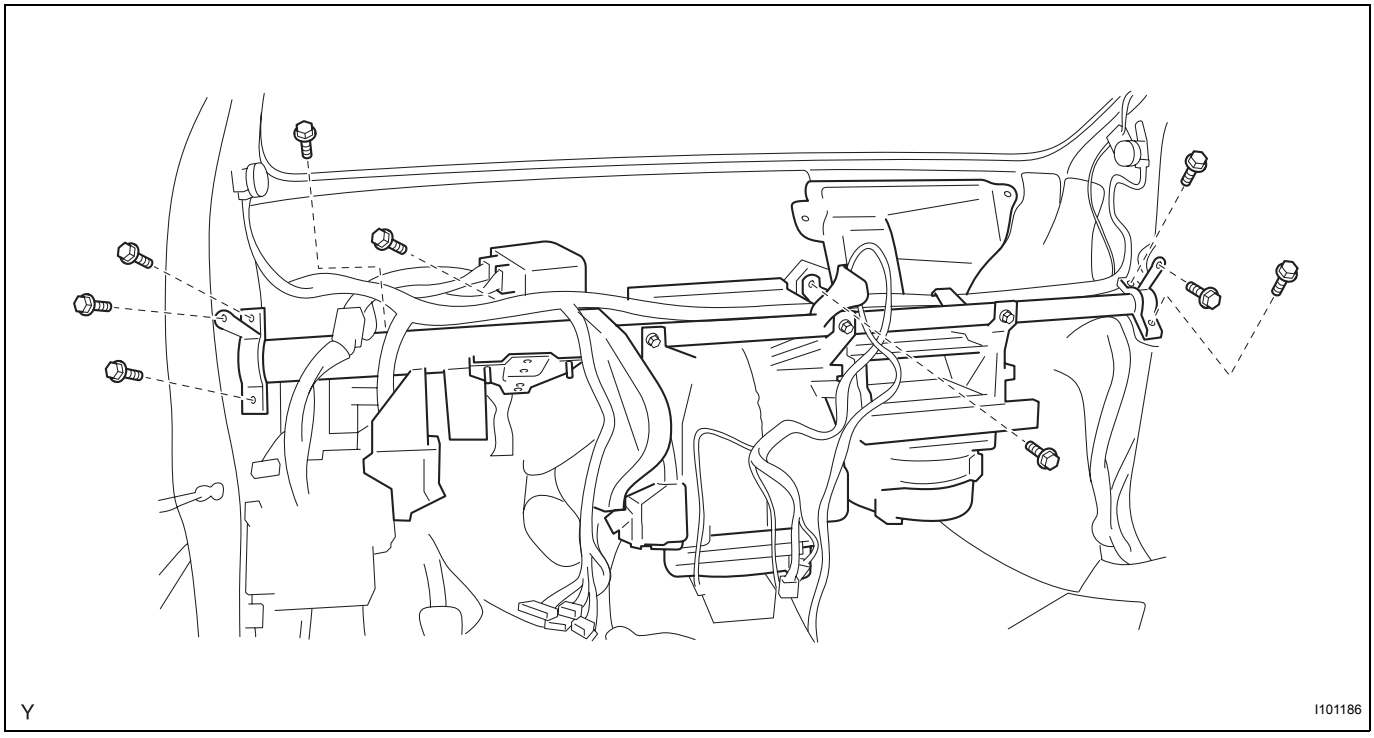


3. INSTALL INSTRUMENT PANEL REINFORCEMENT

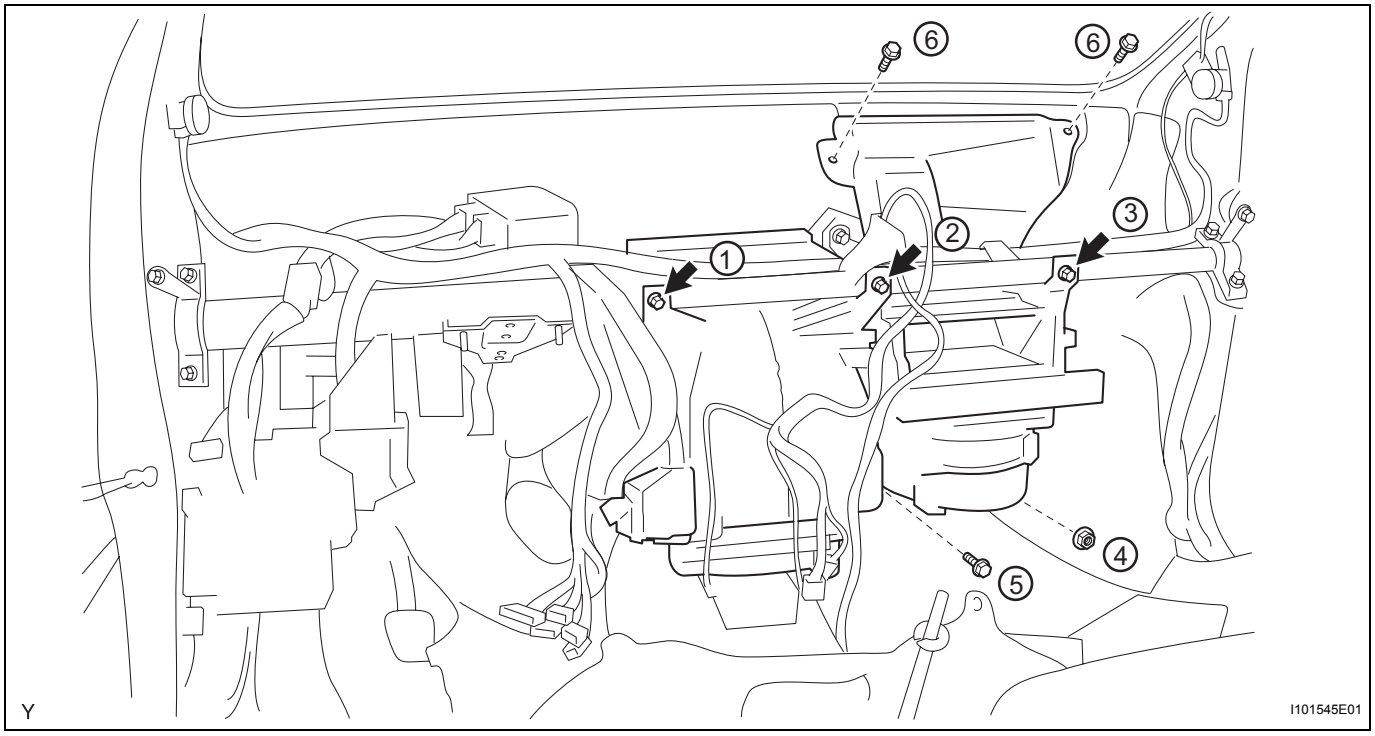
(a) Provisionally tighten the air conditioning unit with the 3 screws.



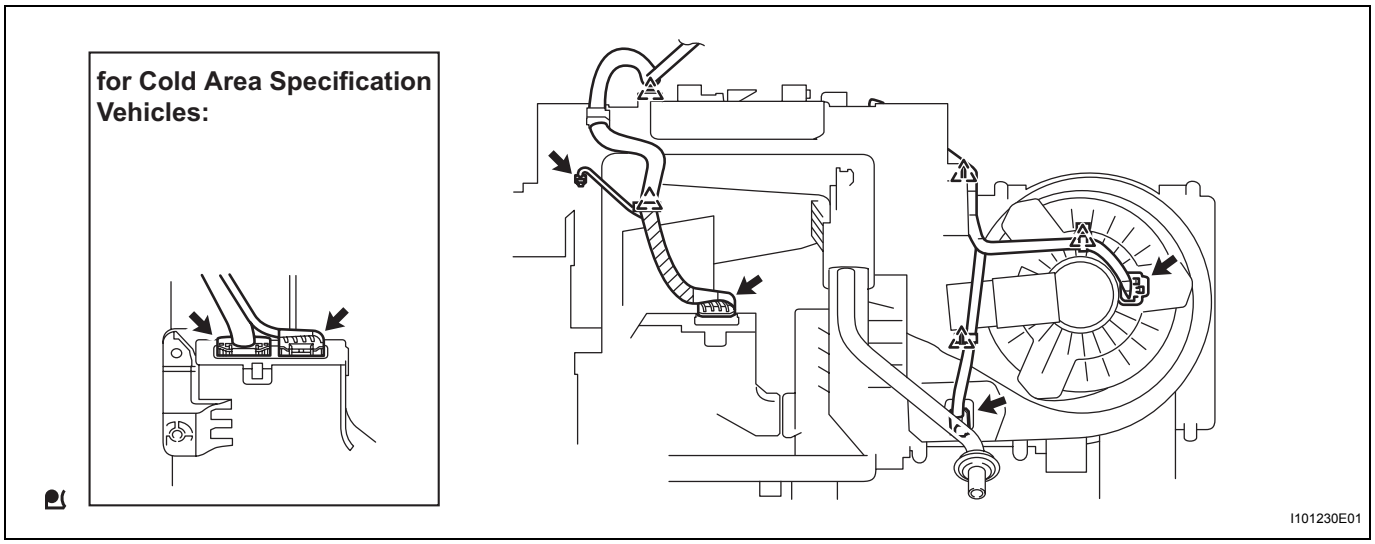
(b) Connect the connector and the 3 clamps.
(c) Install the instrument panel reinforcement and the air conditioning unit with the 9 bolts.



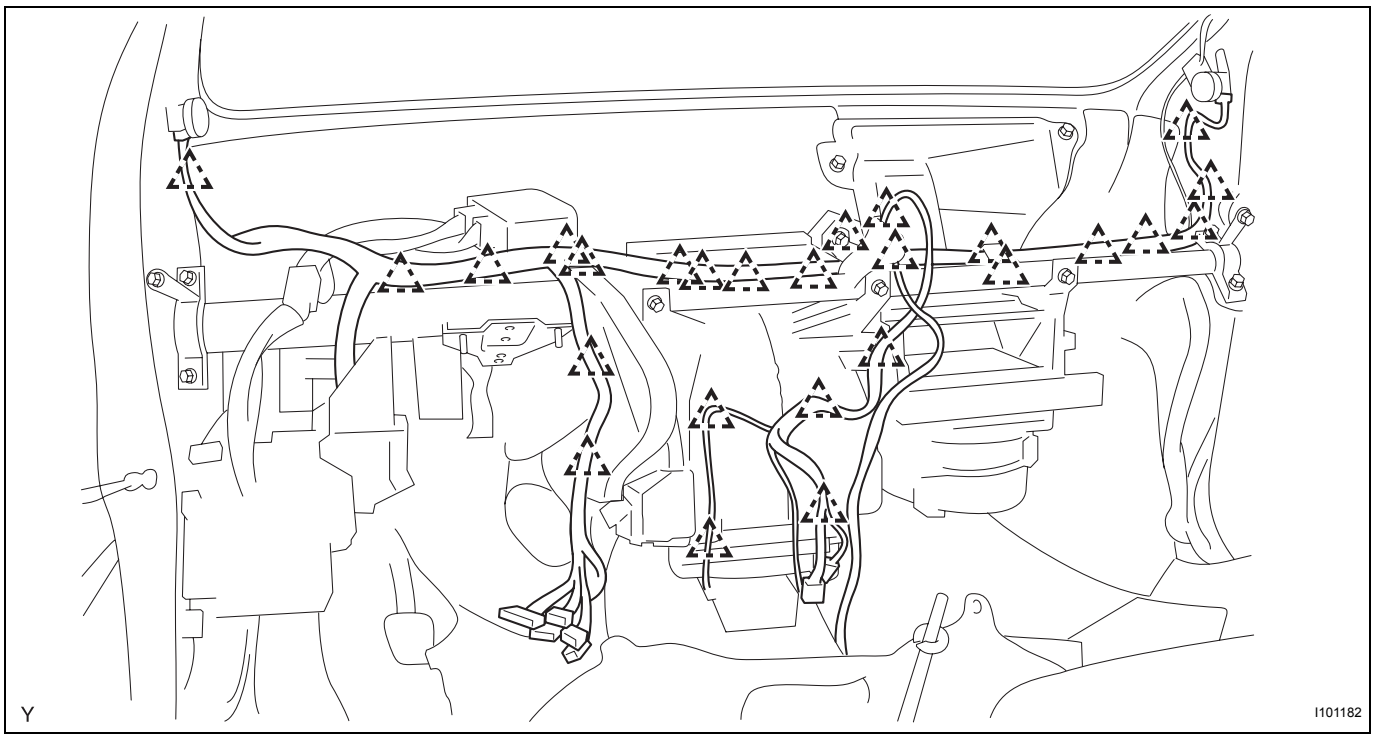
(d) Install the 3 screws, 3 bolts and nut in the sequence shown in the illustration.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf) for screw
9.8 N*m (100 kgf*cm, 87 in.*lbf) for nut
9.8 N*m (100 kgf*cm, 87 in.*lbf) for bolt

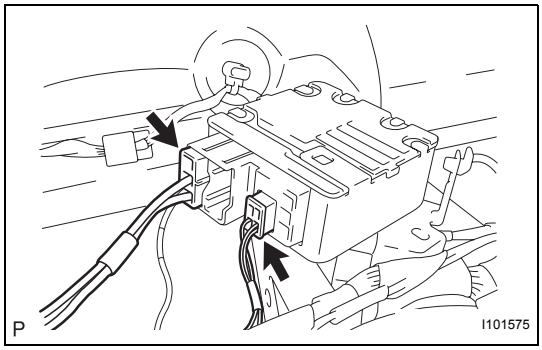


(e) Install the wire harness with the clamps and connectors.

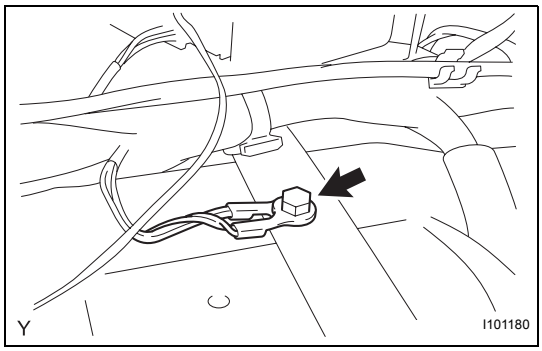


(f) Engage the clamps.

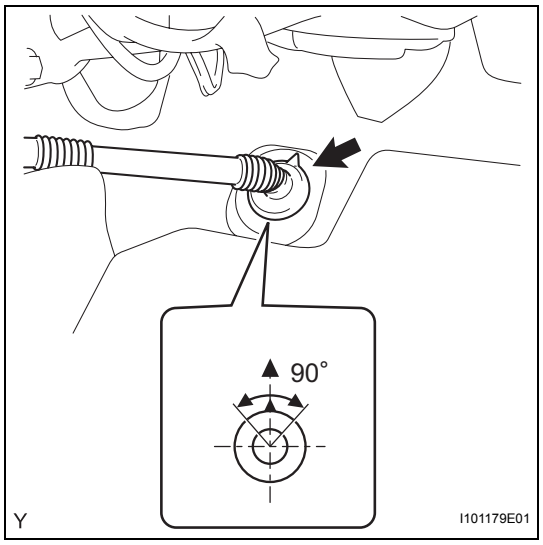




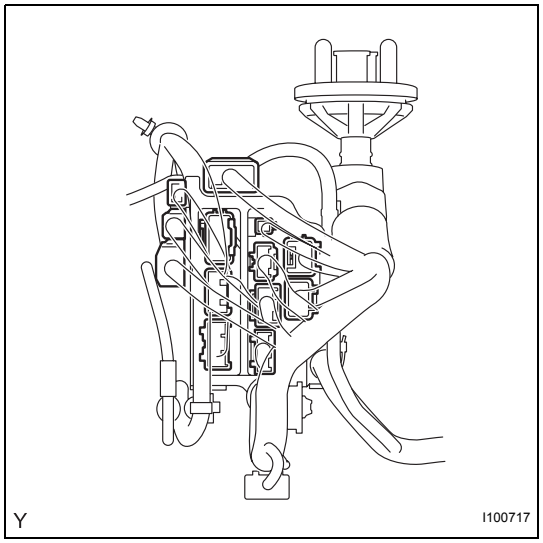
(g) Connect the connectors.



(h) Install the ground wire with the bolt.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)

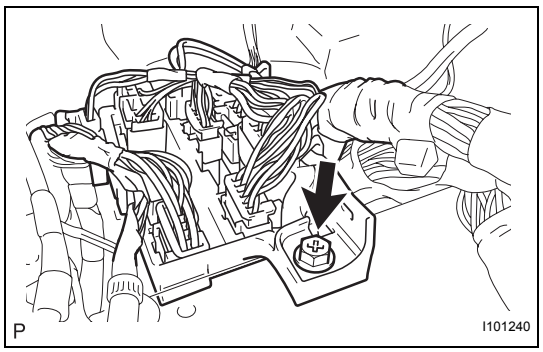


(i) Install the drain hose into the position shown in the illustration.
NOTICE:
- **Install the drain hose with its UP mark facing upward, within the 90 degree range shown in the illustration.**
- **Install the drain hose without twisting it.**

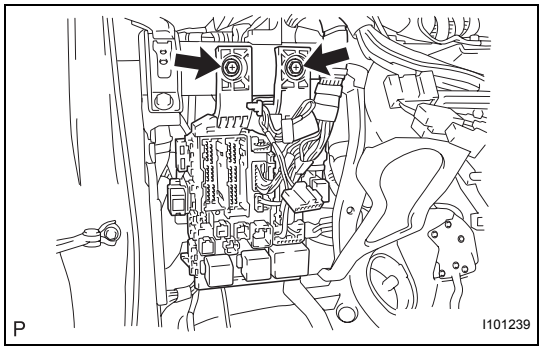


4. INSTALL CONNECTOR NO. 2 HOLDER

(a) Connect the connectors and install the wire harness.

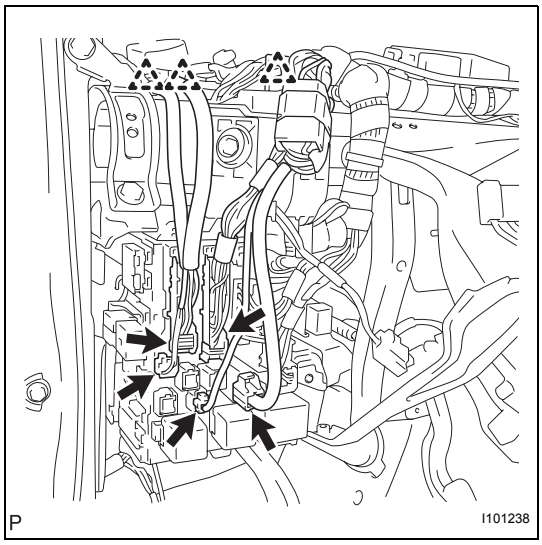


(b) Install the connector holder with the bolt.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)

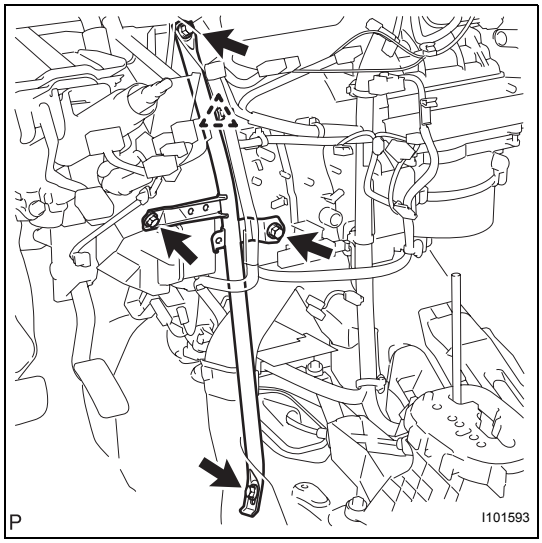


5. INSTALL MAIN BODY ECU

(a) Install the main body ECU with the 2 bolts.
Torque: 3.2 N*m (33 kgf*cm, 28 in.*lbf)



(b) Connect the 5 connectors and the 3 clamps.

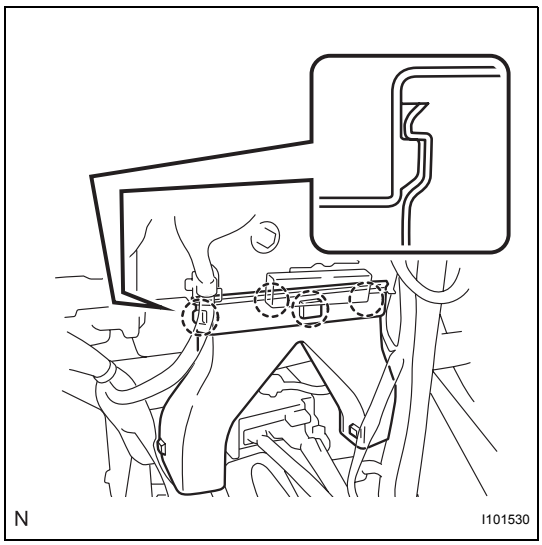


6. INSTALL INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) Install the instrument panel brace with the 2 bolts, screw and nut.

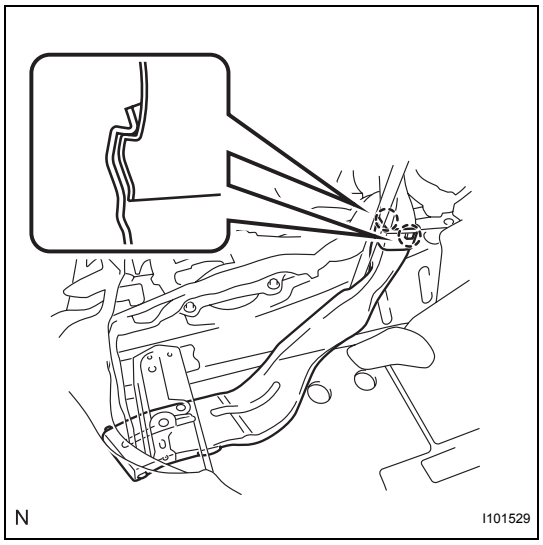
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf) for screw
9.8 N*m (100 kgf*cm, 87 in.*lbf) for nut
9.8 N*m (100 kgf*cm, 87 in.*lbf) for bolt

(b) Engage the clamp.



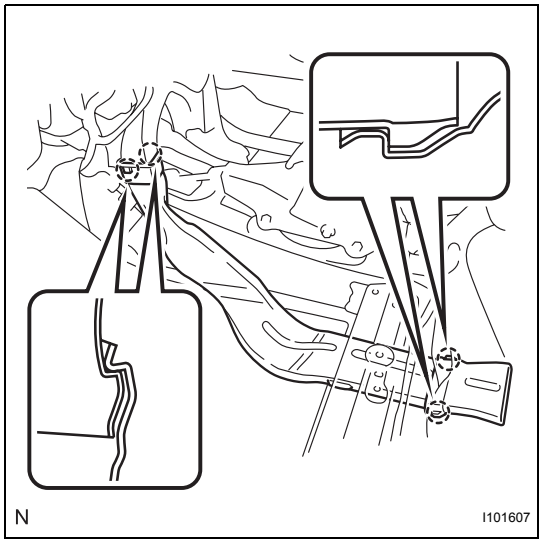
7. INSTALL REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles)

(a) Engage the 4 claws and install the air duct.



8. INSTALL REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles)

(a) Engage the 2 claws and install the air duct.



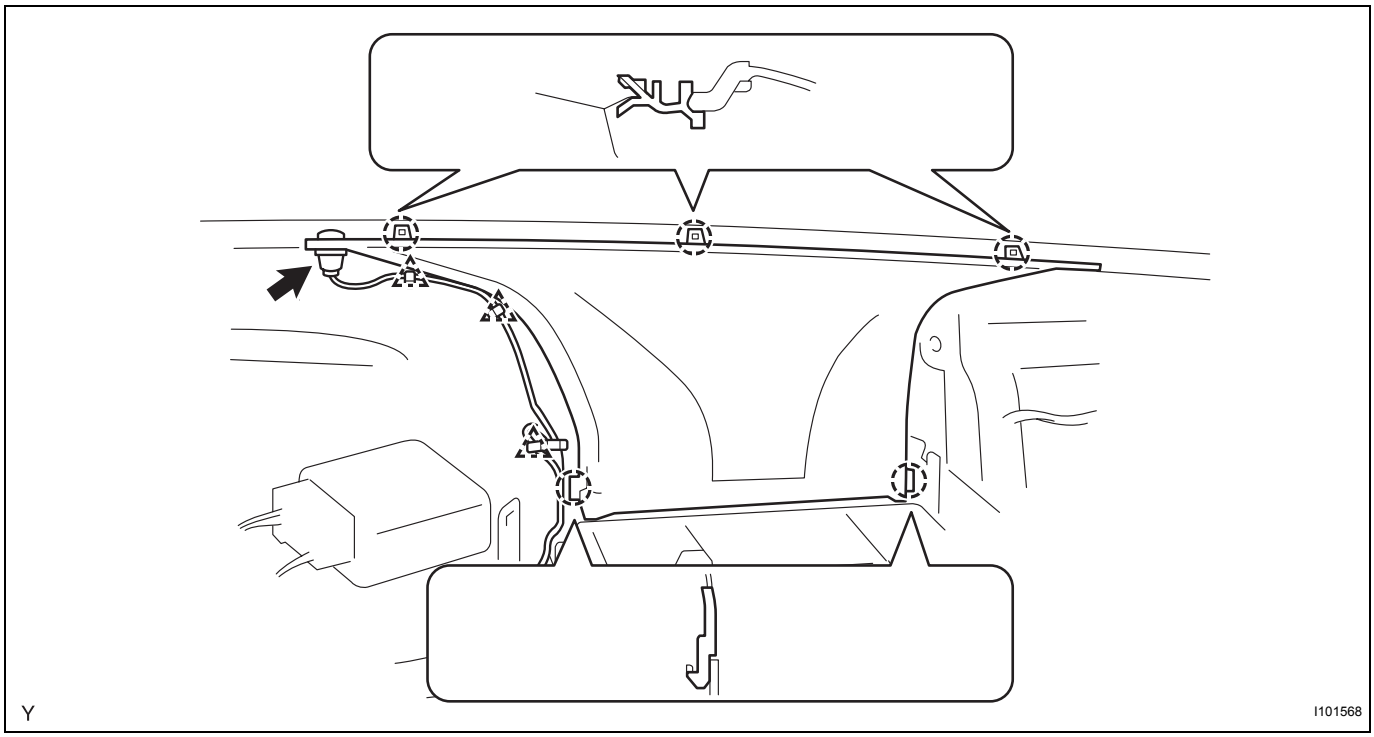
9. INSTALL REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles)

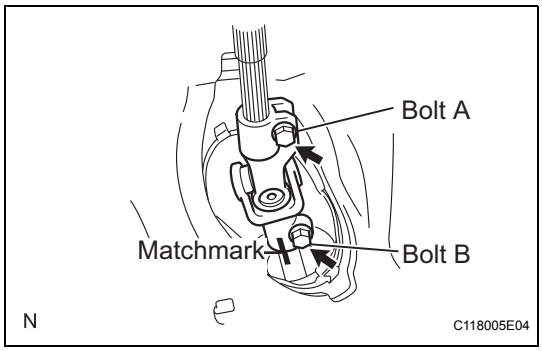
(a) Engage the 4 claws and install the air duct.

10. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Engage the 5 claws and install the defroster nozzle.

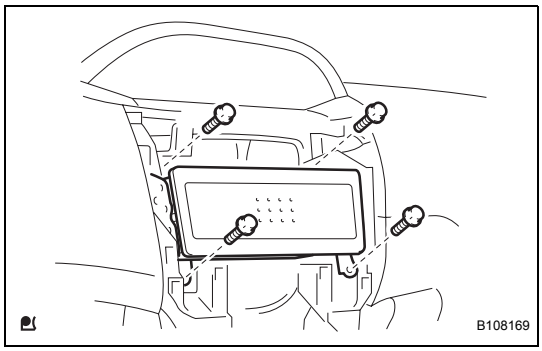
(b) Connect the clamps and connectors and install the wire harness.



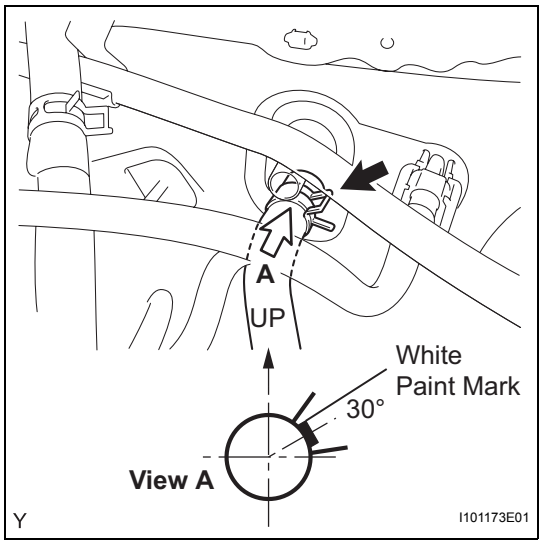


11. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-38)**
12. **INSTALL BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)**
13. **INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)**
14. **INSTALL BRAKE PEDAL (for Automatic Transaxle) (See page SR-38)**
15. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY**
    (a) Align the matchmarks and install the sliding yoke onto the power steering assembly with bolt B.
    Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
    (b) Tighten bolt A.
    Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
16. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page SR-39)**
17. **INSTALL INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-39)**
18. **CONNECT POWER STEERING ECU ASSEMBLY (See page SR-39)**
19. **INSTALL COMBINATION SWITCH ASSEMBLY (See page SR-40)**
20. **INSTALL STEERING COLUMN COVER (See page SR-40)**
21. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-41)**
22. **INSTALL STEERING PAD (See page RS-310)**
23. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-75)**
24. **CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-77)**
25. **CONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-77)**
26. **INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (See page IP-77)**
27. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
28. **INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER (See page IP-78)**
29. **INSTALL CONSOLE BOX ASSEMBLY REAR (See page IP-79)**
30. **INSTALL CONSOLE BOX CARPET (See page IP-79)**
31. **INSTALL CONSOLE BOX REAR COVER (See page IP-79)**

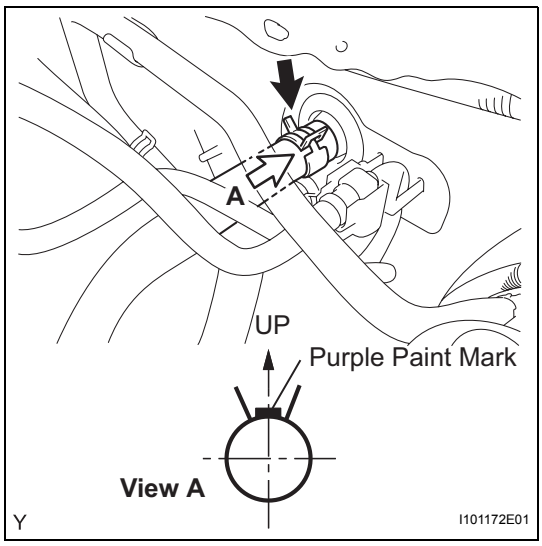
32. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page IP-79)
33. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-80)
34. INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)
35. INSTALL COWL SIDE TRIM BOARD LH (See page IR-81)
36. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)
37. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-81)
38. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)
39. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-82)
40. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)
41. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)
42. INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)
43. INSTALL FRONT PILLAR GARNISH RH (See page IR-71)
44. INSTALL FRONT PILLAR GARNISH LH (See page IR-72)
45. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)
46. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)
47. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
48. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
49. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
50. INSTALL AIR CONDITIONER PANEL SUB-ASSEMBLY (See page AC-257)



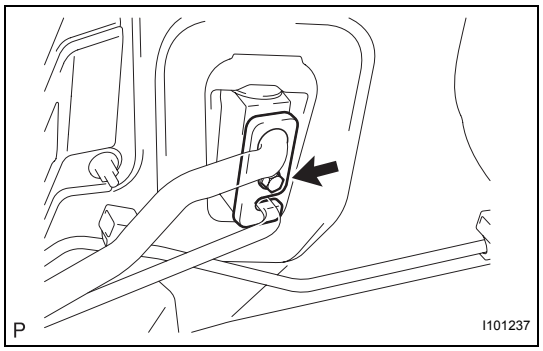
51. **INSTALL RADIO TUNER OPENING COVER (w/o Radio Receiver)**
    (a) Install the radio tuner opening cover with the 4 bolts.
52. **INSTALL RADIO RECEIVER ASSEMBLY (See page AV-46)**
53. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER (See page AC-258)**
54. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
55. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
56. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
57. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**



58. **CONNECT HEATER WATER INLET HOSE A**
    (a) Install the heater water inlet hose onto the heater unit.
    NOTICE:
    Perform the installation with the hose clip and mark at the correct angle.



59. **CONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)**
    (a) Install the heater water outlet hose onto the heater unit.
    NOTICE:
    Perform the installation with the hose clip and mark at the correct angle.
60. **INSTALL LIQUID TUBE SUB-ASSEMBLY**
    (a) Remove the vinyl tape from liquid tube and the connecting portion of the unit.
    (b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the connecting part of liquid tube.
    Compressor oil:
    ND-OIL8 or the equivalent
    (c) Install the O-ring onto liquid tube.
    (d) connect liquid tube to the unit.
61. **INSTALL SUCTION TUBE SUB-ASSEMBLY**
    (a) Remove the vinyl tape from the suction tube and the connecting part of the unit.



(b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the connecting part of suction tube.
Compressor oil:
ND-OIL8 or the equivalent

(c) Install the O-ring onto the suction tube.

(d) Move the hook connector in the direction indicated by the arrow in the illustration.

(e) Insert the pipe joints securely into the fitting holes and tighten the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

62. **INSTALL COWL TOP PANEL OUTER (See page EM-146)**
63. **INSTALL NO. 2 COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-147)**
64. **INSTALL FRONT WIPER MOTOR AND LINK (See page WW-21)**
65. **INSTALL COWL TOP VENTILATOR LOUVER LH (See page WW-21)**
66. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-21)**
67. **INSTALL HOOD TO COWL TOP SEAL (See page WW-22)**
68. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-22)**
69. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-23)**
70. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**
71. **ADD ENGINE COOLANT (See page CO-8)**
72. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm)
73. **CHECK SRS WARNING LIGHT**
RS-31
74. **CHARGE REFRIGERANT (See page AC-67)**
75. **WARM UP ENGINE (See page AC-69)**
76. **CHECK FOR ENGINE COOLANT (See page CO-1)**
77. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**
78. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See pageRS-1).
HINT:
Use the same procedure for both the RH and LH sides.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
3. **DRAIN ENGINE COOLANT (for 1NZ-FE) (See page CO-8)**
4. **DISCONNECT SUCTION TUBE SUB-ASSEMBLY (See page AC-84)**
5. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY (See page AC-84)**
6. **DISCONNECT HEATER WATER OUTLET HOSE (See page AC-84)**
7. **DISCONNECT HEATER WATER INLET HOSE (See page AC-85)**
8. **BOLTS, SCREWS AND NUTS TABLE (See page IP-41)**
9. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
10. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
11. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
12. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
13. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
14. **REMOVE INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (See page IP-43)**
15. **REMOVE STEREO OPENING COVER (w/o Radio Receiver) (See page IP-43)**
16. **REMOVE RADIO RECEIVER ASSEMBLY (See page AV-38)**
17. **REMOVE AIR CONDITIONING PANEL ASSEMBLY (See page AC-239)**
18. **DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)**

19. DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)
20. DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-240)
21. SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-5)
22. SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-5)
23. REMOVE FRONT PILLAR GARNISH RH (See page IR-18)
24. REMOVE FRONT PILLAR GARNISH LH (See page IR-19)
25. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)
26. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)
27. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)
28. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-14)
29. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-14)
30. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)
31. REMOVE COWL SIDE TRIM BOARD RH (See page IR-15)
32. REMOVE COWL SIDE TRIM BOARD LH (See page IR-15)
33. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)
34. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-84)
35. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)
36. REMOVE CONSOLE BOX CARPET (See page IP-85)
37. REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)
38. REMOVE INSTRUMENT PAD LOWER LH (See page IP-44)
39. REMOVE INSTRUMENT PAD LOWER RH (See page IP-45)
40. REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY (See page IP-45)
41. REMOVE INSTRUMENT PANEL BOX (See page IP-45)

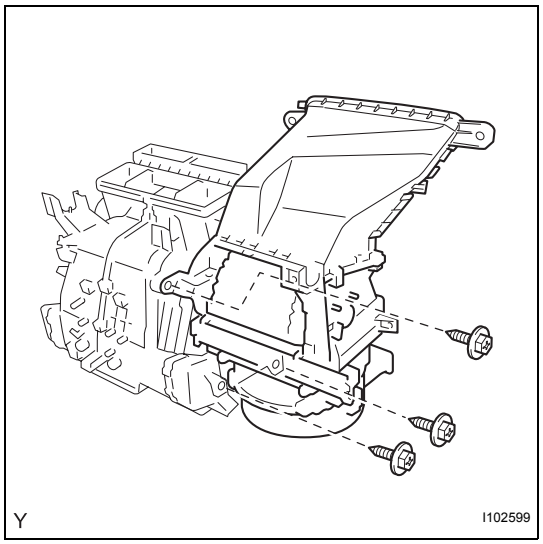
42. DISCONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-46)
43. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-46)
44. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)
45. POSITION FRONT WHEELS FACING STRAIGHT AHEAD
46. REMOVE STEERING PAD (See page RS-309)
47. REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)
48. REMOVE STEERING COLUMN COVER (See page SR-12)
49. REMOVE COMBINATION SWITCH ASSEMBLY (See page SR-13)
50. DISCONNECT POWER STEERING ECU (See page SR-13)
51. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-14)
52. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-14)
53. SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY (See page AC-87)
54. REMOVE BRAKE PEDAL (for Automatic Transaxle) (See page SR-14)
55. REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)
56. REMOVE BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)
57. REMOVE STEERING COLUMN ASSEMBLY (See page SR-15)
58. REMOVE HEATER TO REGISTER DUCT ASSEMBLY (See page AC-87)
59. REMOVE DEFROSTER NOZZLE ASSEMBLY (See page AC-87)
60. REMOVE REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-88)
61. REMOVE REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-88)
62. REMOVE REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-88)
63. REMOVE INSTRUMENT PANEL BRACE SUB-ASSEMBLY (See page AC-89)

64. **SEPARATE MAIN BODY ECU (DRIVER SIDE J/B) (See page AC-89)**

65. **SEPARATE CONNECTOR NO. 2 HOLDER (See page AC-89)**

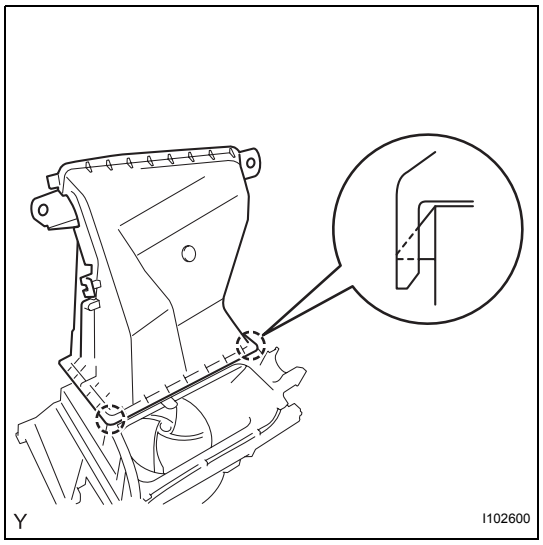
66. **REMOVE INSTRUMENT PANEL REINFORCEMENT (See page AC-90)**

67. **REMOVE BLOWER UNIT**
    (a) Remove the 3 screws and the blower unit.

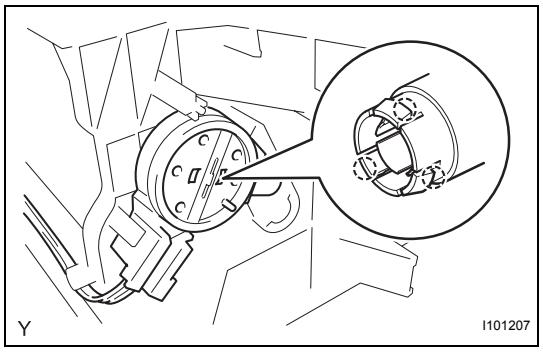


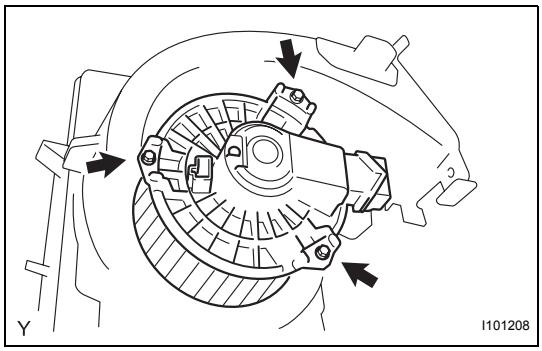
DISASSEMBLY

1. **REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY**
    (a) Disengage the 2 claws and remove the air duct.



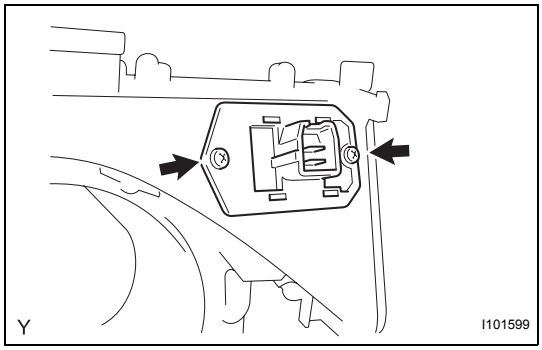
2. **REMOVE AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY**
    (a) Disengage the 3 claws and remove the air inlet damper control cable.





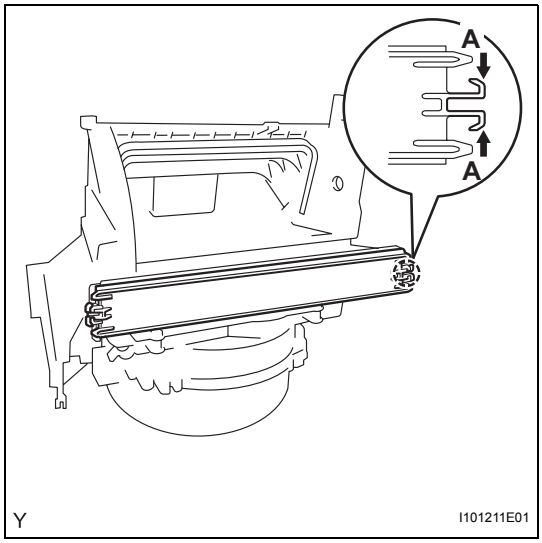
3. REMOVE BLOWER MOTOR

(a) Remove the 3 screws and the blower motor.



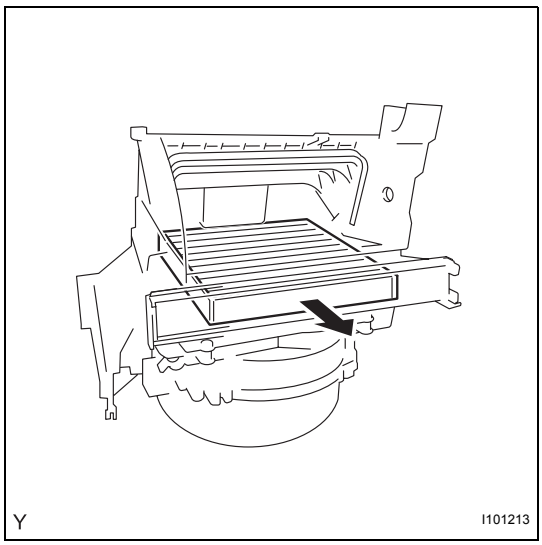
4. REMOVE BLOWER RESISTOR

(a) Remove the 2 screws and the blower resistor.



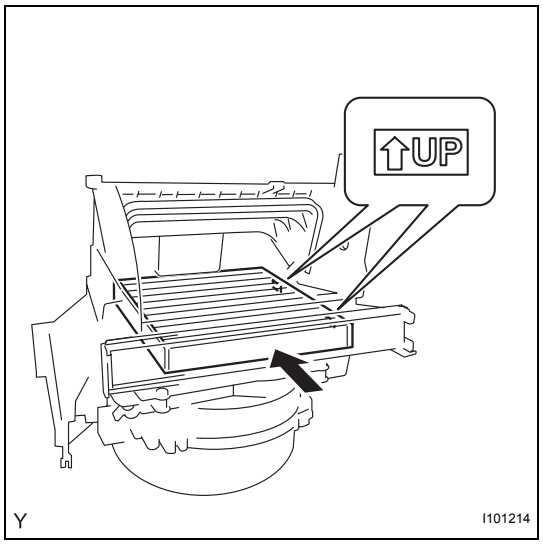
5. REMOVE AIR FILTER CASE

(a) Pinch portion A to disengage the claw and remove the air filter case.



6. REMOVE CLEAN AIR FILTER

(a) Remove the clean air filter from the blower assembly.

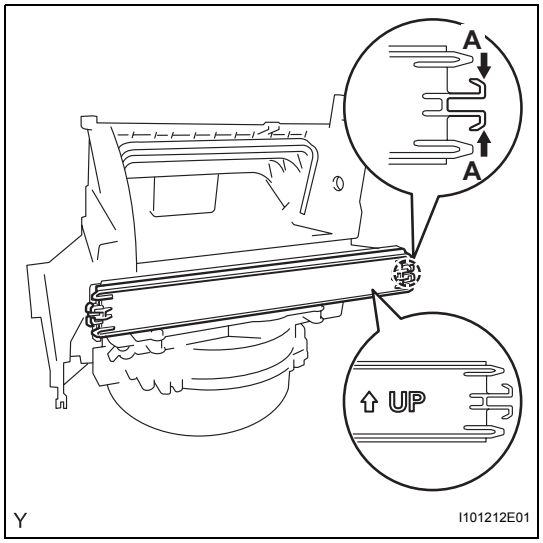


REASSEMBLY

1. INSTALL CLEAN AIR FILTER

(a) Install the clean air filter into the blower assembly.

NOTICE:
Install the clean air filter with its UP mark oriented in the correct direction.

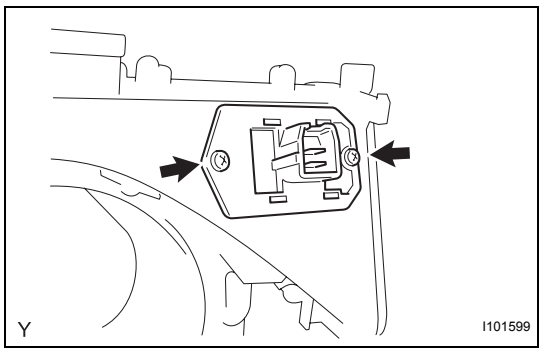


2. INSTALL AIR FILTER CASE

(a) Insert the rib of the air filter case into the blower assembly.

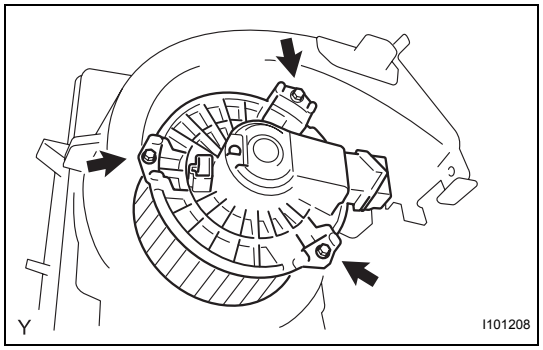
NOTICE:
Install the air filter case with its UP mark oriented in the correct direction.

(b) Pinch portion A to engage the claw and install the air filter case.



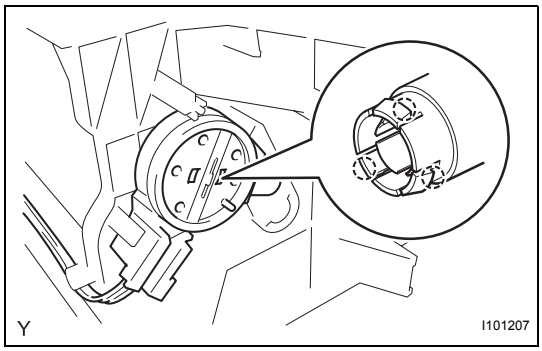
3. INSTALL BLOWER RESISTOR

(a) Install the blower resistor with the 2 screws.

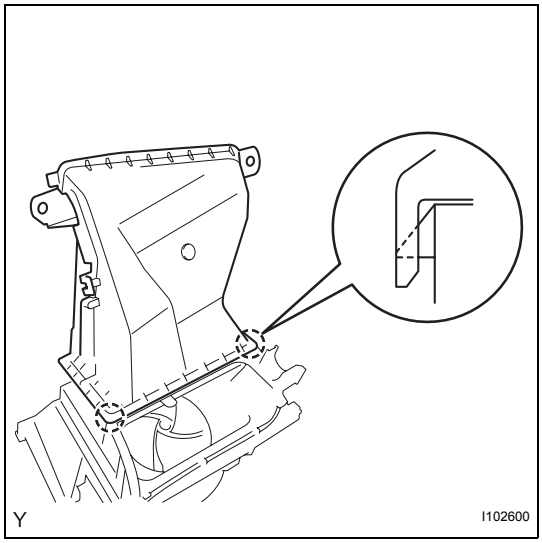


4. INSTALL BLOWER MOTOR

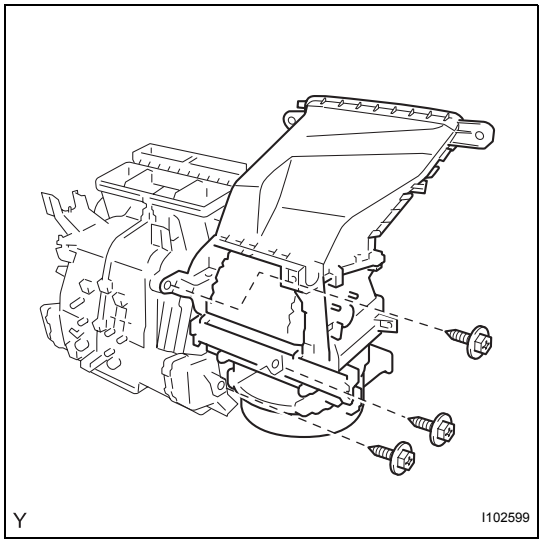
(a) Install the blower motor with the 3 screws.



5. **INSTALL AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY**
   (a) Engage the 3 claws and install the air inlet damper control cable.



6. **INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY**
   (a) Engage the 2 claws and install the air duct.



INSTALLATION

1. **INSTALL BLOWER UNIT**
   (a) Install the blower unit with the 3 screws.
2. **INSTALL INSTRUMENT PANEL REINFORCEMENT (See page AC-100)**
3. **INSTALL CONNECTOR NO. 2 HOLDER (See page AC-103)**
4. **INSTALL MAIN BODY ECU (DRIVER SIDE J/B) (See page AC-103)**
5. **INSTALL INSTRUMENT PANEL BRACE SUB-ASSEMBLY (See page AC-104)**
6. **INSTALL REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-104)**
7. **INSTALL REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-105)**
8. **INSTALL REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-105)**
9. **INSTALL DEFROSTER NOZZLE ASSEMBLY (See page AC-105)**
10. **INSTALL HEATER TO REGISTER DUCT ASSEMBLY (See page AC-106)**

11. INSTALL STEERING COLUMN ASSEMBLY (See page SR-19)
12. INSTALL BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)
13. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)
14. INSTALL BRAKE PEDAL (for Automatic Transaxle) (See page SR-19)
15. INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page AC-106)
16. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page SR-20)
17. INSTALL INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-20)
18. CONNECT POWER STEERING ECU (See page SR-21)
19. INSTALL COMBINATION SWITCH ASSEMBLY (See page SR-21)
20. INSTALL STEERING COLUMN COVER (See page SR-22)
21. INSTALL STEERING WHEEL ASSEMBLY (See page SR-22)
22. INSTALL STEERING PAD (See page RS-310)
23. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-52)
24. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-53)
25. CONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-53)
26. INSTALL INSTRUMENT PANEL BOX (See page IP-53)
27. INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY (See page IP-54)
28. INSTALL INSTRUMENT PAD LOWER RH (See page IP-54)
29. INSTALL INSTRUMENT PAD LOWER LH (See page IP-55)
30. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)
31. INSTALL CONSOLE BOX CARPET (See page IP-88)
32. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)
33. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-89)

34. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-89)
35. INSTALL COWL SIDE TRIM BOARD RH (See page IR-34)
36. INSTALL COWL SIDE TRIM BOARD LH (See page IR-34)
37. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-35)
38. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)
39. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-35)
40. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-35)
41. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)
42. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)
43. INSTALL FRONT PILLAR GARNISH RH (See page IR-29)
44. INSTALL FRONT PILLAR GARNISH LH (See page IR-30)
45. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-14)
46. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)
47. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
48. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
49. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-246)
50. INSTALL AIR CONDITIONING PANEL ASSEMBLY (See page AC-246)
51. INSTALL STEREO OPENING COVER (w/o Radio Receiver) (See page IP-56)
52. INSTALL RADIO RECEIVER ASSEMBLY (See page AV-40)
53. INSTALL INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY (See page IP-56)
54. INSTALL COMBINATION METER ASSEMBLY (See page ME-140)
55. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)

56. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
57. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
58. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
59. **CONNECT HEATER WATER INLET HOSE (See page AC-108)**
60. **CONNECT HEATER WATER OUTLET HOSE (See page AC-108)**
61. **INSTALL LIQUID TUBE SUB-ASSEMBLY (See page AC-108)**
62. **INSTALL SUCTION TUBE SUB-ASSEMBLY (See page AC-109)**
63. **ADD ENGINE COOLANT (for 1NZ-FE) (See page CO-8)**
64. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
65. **CHECK SRS WARNING LIGHT**
    (See page AC-109)
66. **CHARGE REFRIGERANT (See page AC-67)**
67. **WARM UP ENGINE (See page AC-69)**
68. **CHECK FOR ENGINE COOLANT LEAK (for 1NZ-FE) (See page CO-1)**
69. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**
70. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**
71. **PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT (See page SR-22)**

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
Use the same procedure for both the RH and LH sides.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
3. **DRAIN ENGINE COOLANT (See page CO-8)**
4. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-17)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-17)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-17)**
7. **REMOVE HOOD TO COWL TOP SEAL (See page WW-18)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-18)**
9. **REMOVE COWL TOP VENTILATOR LOUVER LH (See page WW-18)**
10. **REMOVE FRONT WIPER MOTOR AND LINK (See page WW-19)**
11. **REMOVE NO. 2 COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-122)**
12. **REMOVE COWL TOP PANEL OUTER (See page EM-123)**
13. **DISCONNECT SUCTION TUBE SUB-ASSEMBLY (See page AC-124)**
14. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY (See page AC-124)**
15. **DISCONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT) (See page AC-125)**
16. **DISCONNECT HEATER WATER INLET HOSE A (See page AC-125)**
17. **BOLTS, SCREWS AND NUTS TABLE (See page IP-66)**
18. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page WW-17)**
19. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page WW-17)**

20. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)
21. REMOVE COMBINATION METER ASSEMBLY (See page ME-146)
22. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER (See page AC-250)
23. REMOVE RADIO TUNER OPENING COVER (w/o Radio Receiver) (See page AC-125)
24. REMOVE RADIO RECEIVER ASSEMBLY (See page AV-44)
25. REMOVE AIR CONDITIONER PANEL SUB-ASSEMBLY (See page AC-250)
26. DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
27. DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
28. DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-251)
29. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)
30. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)
31. REMOVE FRONT PILLAR GARNISH RH (See page IR-58)
32. REMOVE FRONT PILLAR GARNISH LH (See page IR-59)
33. REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)
34. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)
35. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)
36. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)
37. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-49)
38. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)
39. REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)
40. REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)
41. REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)

42. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-68)
43. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page IP-68)
44. REMOVE CONSOLE BOX REAR COVER (See page IP-68)
45. REMOVE CONSOLE BOX CARPET (See page IP-68)
46. REMOVE CONSOLE BOX ASSEMBLY REAR (See page IP-69)
47. REMOVE INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER (See page IP-69)
48. REMOVE INSTRUMENT PANEL BOX (See page IP-70)
49. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (See page IP-70)
50. DISCONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-70)
51. SEPARATE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-71)
52. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-71)
53. POSITION FRONT WHEELS FACING STRAIGHT AHEAD
54. REMOVE STEERING PAD (See page RS-309)
55. REMOVE STEERING WHEEL ASSEMBLY (See page SR-30)
56. REMOVE STEERING COLUMN COVER (See page SR-30)
57. REMOVE COMBINATION SWITCH ASSEMBLY (See page SR-31)
58. DISCONNECT POWER STEERING ECU (See page SR-32)
59. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-32)
60. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page SR-32)
61. SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY (See page AC-127)
62. REMOVE BRAKE PEDAL (for Automatic Transaxle) (See page SR-32)
63. REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-20)
64. REMOVE BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)

65. **REMOVE STEERING COLUMN ASSEMBLY (See page SR-33)**

66. **REMOVE DEFROSTER NOZZLE ASSEMBLY (See page AC-127)**

67. **REMOVE REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-128)**

68. **REMOVE REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-129)**

69. **REMOVE REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-129)**

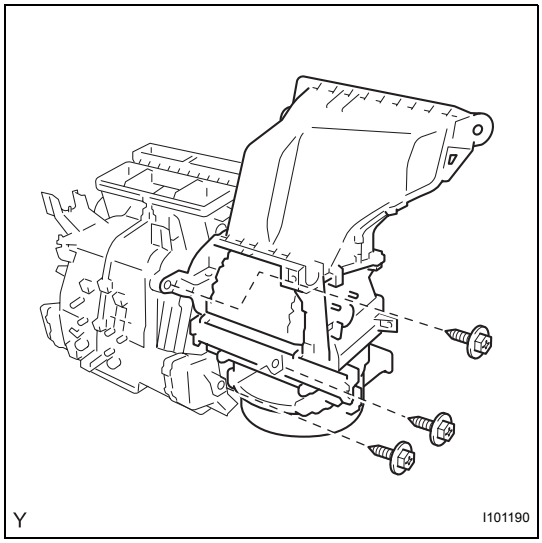
70. **REMOVE INSTRUMENT PANEL BRACE SUB-ASSEMBLY (See page AC-129)**

71. **SEPARATE MAIN BODY ECU (See page AC-130)**

72. **SEPARATE CONNECTOR NO. 2 HOLDER (See page AC-130)**

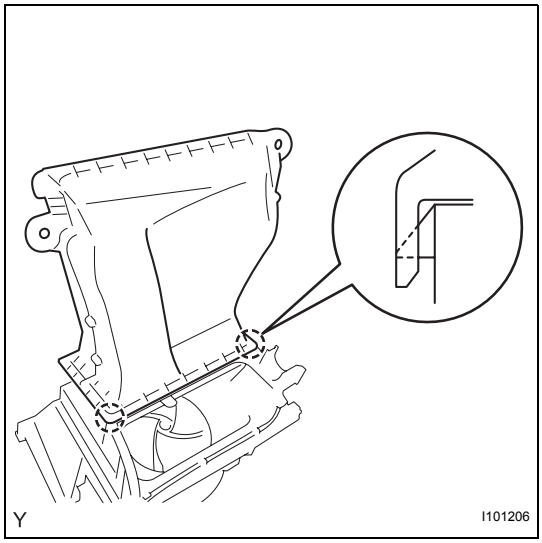
73. **REMOVE INSTRUMENT PANEL REINFORCEMENT (See page AC-131)**

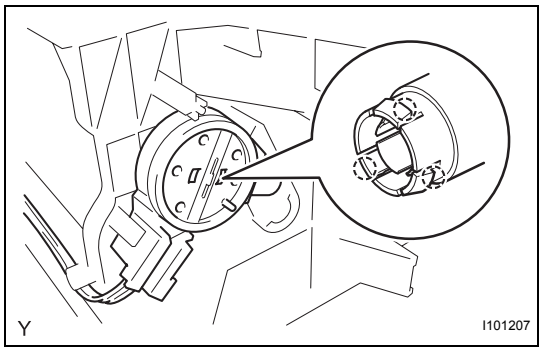
74. **REMOVE BLOWER UNIT**
    (a) Remove the 3 screws and the blower unit.



DISASSEMBLY

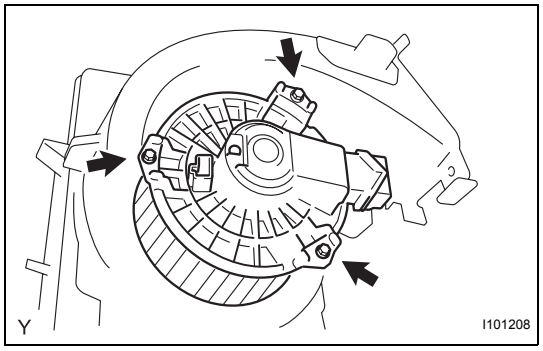
1. **REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY**
    (a) Disengage the 2 claws and remove the air duct.





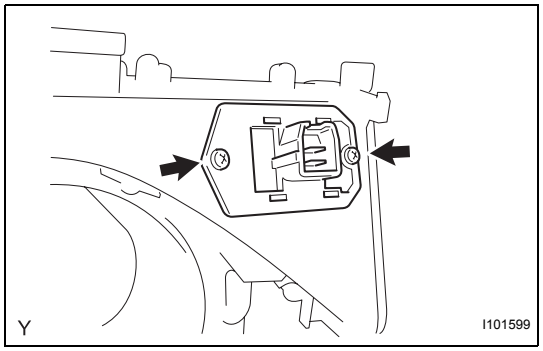
2. REMOVE AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Disengage the 3 claws and remove the air inlet damper control cable.



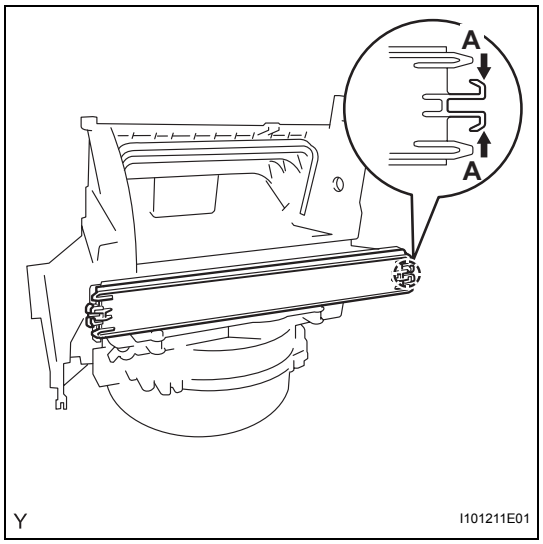
3. REMOVE BLOWER MOTOR

(a) Remove the 3 screws and the blower motor.



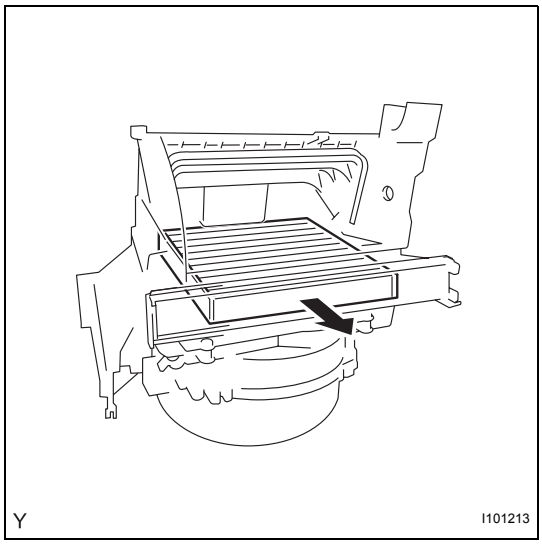
4. REMOVE BLOWER RESISTOR

(a) Remove the 2 screws and the blower resistor.



5. REMOVE AIR FILTER CASE

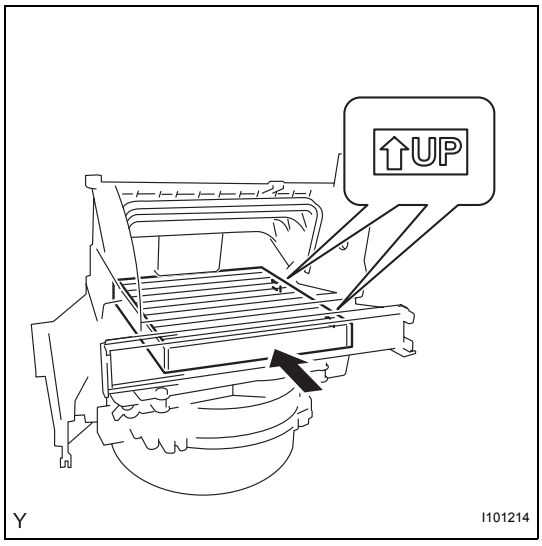
(a) Pinch portion A to disengage the claw and remove the air filter case.



6. REMOVE AIR REFINER ELEMENT

(a) Remove the air refiner element from the blower assembly.

REASSEMBLY

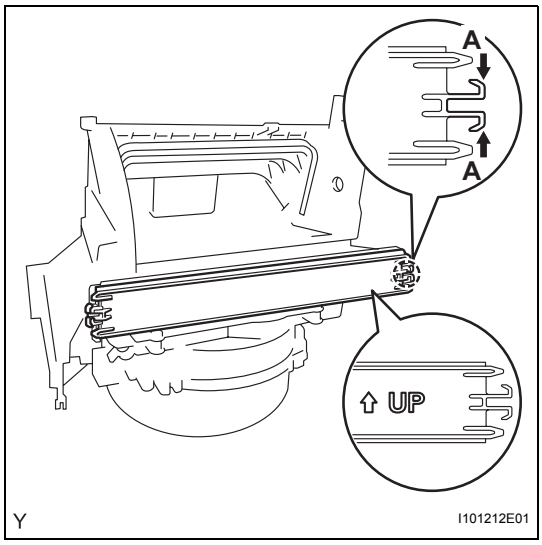


1. INSTALL AIR REFINER ELEMENT

(a) Install the air refiner element into the blower assembly.

NOTICE:

Install the air refiner element with its UP mark oriented in the correct direction.



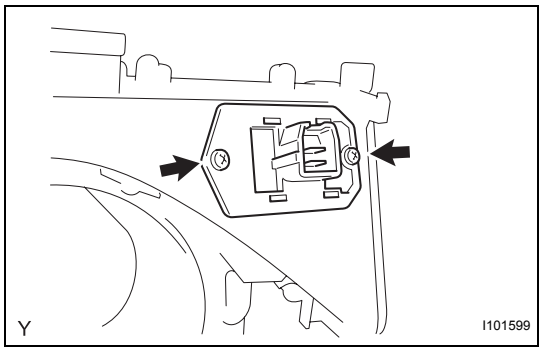
2. INSTALL AIR FILTER CASE

(a) Insert the rib of the air filter case into the blower assembly.

NOTICE:

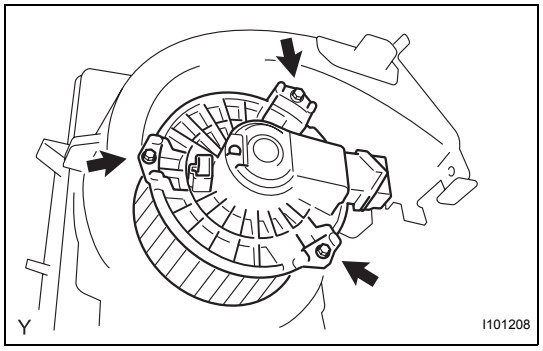
Install the air filter case with its UP mark oriented in the correct direction.

(b) Pinch portion A to engage the claw and install the air filter case.



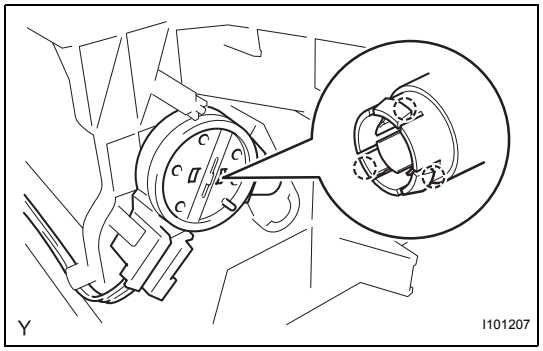
3. INSTALL BLOWER RESISTOR

(a) Install the blower resistor with the 2 screws.



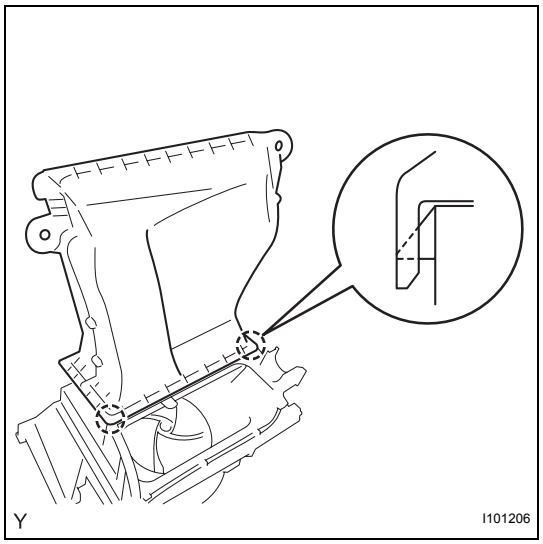
4. INSTALL BLOWER MOTOR

(a) Install the blower motor with the 3 screws.



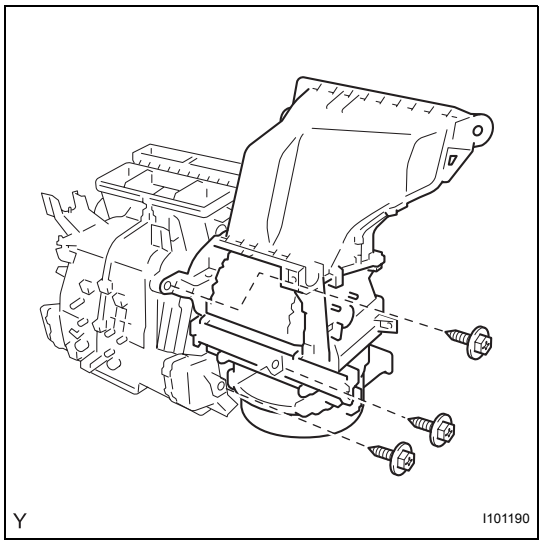
5. INSTALL AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Engage the 3 claws and install the air inlet damper control cable.



6. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY

(a) Engage the 2 claws and install the air duct.



INSTALLATION

1. **INSTALL BLOWER UNIT**
   (a) Install the blower unit with the 3 screws.
2. **INSTALL INSTRUMENT PANEL REINFORCEMENT (See page AC-141)**
3. **INSTALL CONNECTOR NO. 2 HOLDER (See page AC-145)**
4. **INSTALL MAIN BODY ECU (See page AC-145)**
5. **INSTALL INSTRUMENT PANEL BRACE SUB-ASSEMBLY (See page AC-146)**
6. **INSTALL REAR NO. 3 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-146)**
7. **INSTALL REAR NO. 1 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-147)**
8. **INSTALL REAR NO. 2 AIR DUCT (for Cold Area Specification Vehicles) (See page AC-147)**
9. **INSTALL DEFROSTER NOZZLE ASSEMBLY (See page AC-147)**
10. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-38)**
11. **INSTALL BRAKE PEDAL SUPPORT SUB-ASSEMBLY (for Manual Transaxle) (See page BR-21)**
12. **INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS (for Manual Transaxle) (See page BR-21)**
13. **INSTALL BRAKE PEDAL (for Automatic Transaxle) (See page SR-38)**
14. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page AC-148)**
15. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page SR-39)**
16. **INSTALL INSTRUMENT PANEL SUB REINFORCEMENT (See page SR-39)**
17. **CONNECT POWER STEERING ECU (See page SR-39)**
18. **INSTALL COMBINATION SWITCH ASSEMBLY (See page SR-40)**
19. **INSTALL STEERING COLUMN COVER (See page SR-40)**
20. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-41)**
21. **INSTALL STEERING PAD (See page RS-310)**
22. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-75)**

23. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-77)
24. CONNECT ANTENNA CORD SUB-ASSEMBLY (See page IP-77)
25. INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (See page IP-77)
26. INSTALL INSTRUMENT PANEL BOX (See page IP-78)
27. INSTALL INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LOWER (See page IP-78)
28. INSTALL CONSOLE BOX ASSEMBLY REAR (See page IP-79)
29. INSTALL CONSOLE BOX CARPET (See page IP-79)
30. INSTALL CONSOLE BOX REAR COVER (See page IP-79)
31. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page IP-79)
32. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-80)
33. INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)
34. INSTALL COWL SIDE TRIM BOARD LH (See page IR-81)
35. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)
36. INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-81)
37. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)
38. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-81)
39. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)
40. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)
41. INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)
42. INSTALL FRONT PILLAR GARNISH RH (See page IR-71)
43. INSTALL FRONT PILLAR GARNISH LH (See page IR-72)
44. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)
45. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)

46. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
47. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
48. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (See page AC-257)
49. INSTALL AIR CONDITIONER PANEL SUB-ASSEMBLY (See page AC-257)
50. INSTALL RADIO TUNER OPENING COVER (w/o Radio Receiver) (See page AC-150)
51. INSTALL RADIO RECEIVER ASSEMBLY (See page AV-46)
52. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER (See page AC-258)
53. INSTALL COMBINATION METER ASSEMBLY (See page ME-148)
54. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)
55. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)
56. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)
57. CONNECT HEATER WATER INLET HOSE A (See page AC-150)
58. CONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT) (See page AC-150)
59. INSTALL LIQUID TUBE SUB-ASSEMBLY (See page AC-150)
60. INSTALL SUCTION TUBE SUB-ASSEMBLY (See page AC-150)
61. INSTALL COWL TOP PANEL OUTER (See page EM-146)
62. INSTALL NO. 2 COWL TO REGISTER DUCT SUB-ASSEMBLY (See page EM-147)
63. INSTALL FRONT WIPER MOTOR AND LINK (See page WW-21)
64. INSTALL COWL TOP VENTILATOR LOUVER LH (See page WW-21)
65. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-21)
66. INSTALL HOOD TO COWL TOP SEAL (See page WW-22)
67. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-22)

68. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-23)**
69. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**
70. **ADD ENGINE COOLANT (See page CO-8)**
71. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm)
72. **CHECK SRS WARNING LIGHT**
    RS-31
73. **CHARGE REFRIGERANT (See page AC-67)**
74. **WARM UP ENGINE (See page AC-69)**

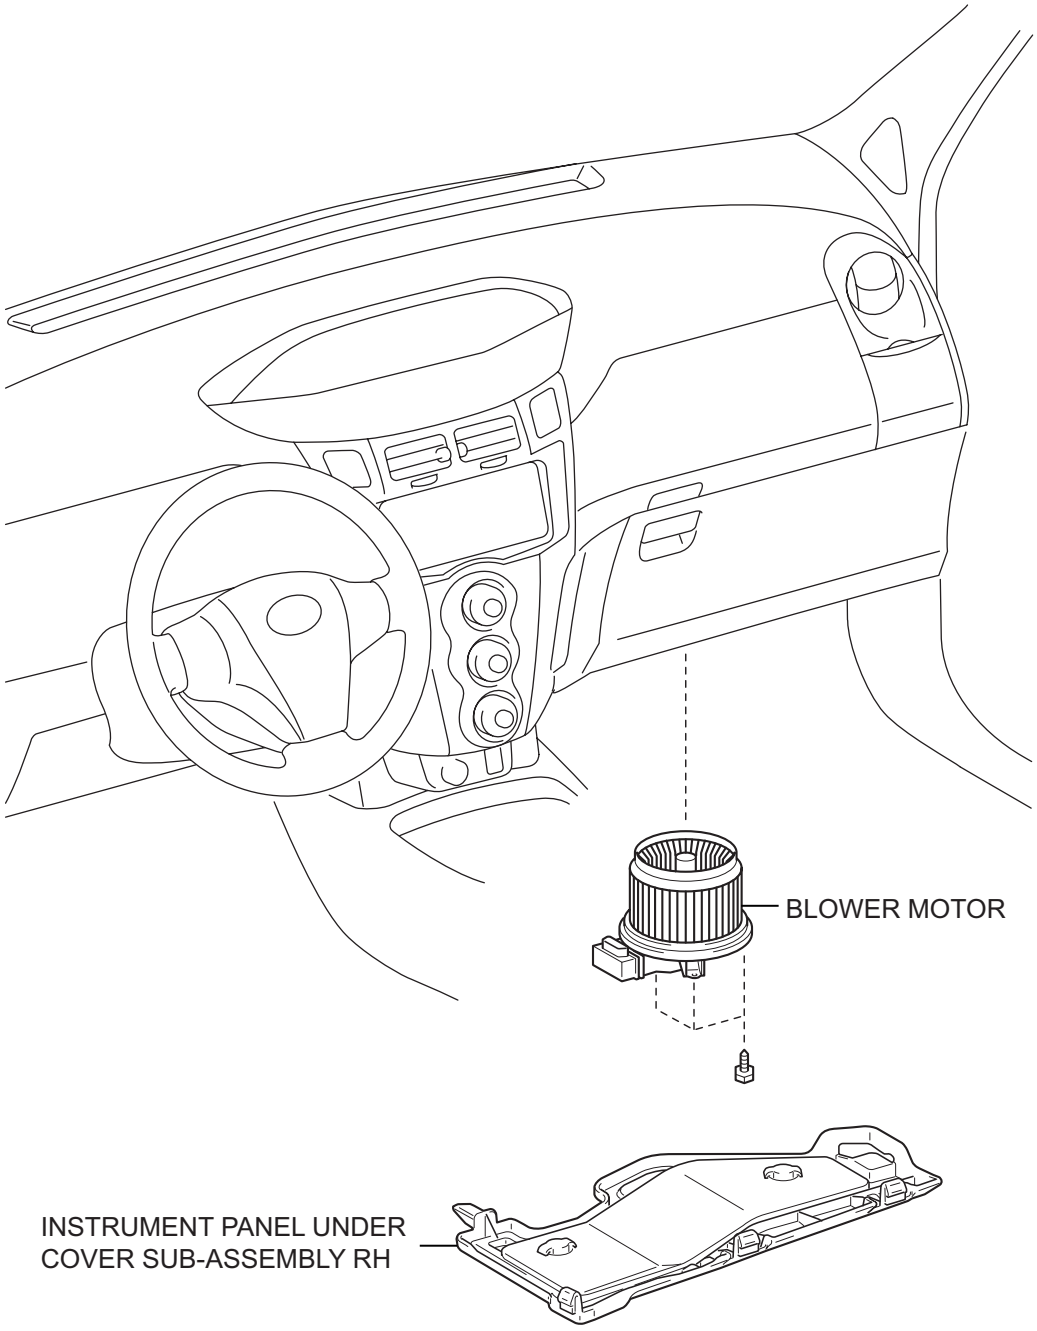
76. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**
77. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**

BLOWER MOTOR

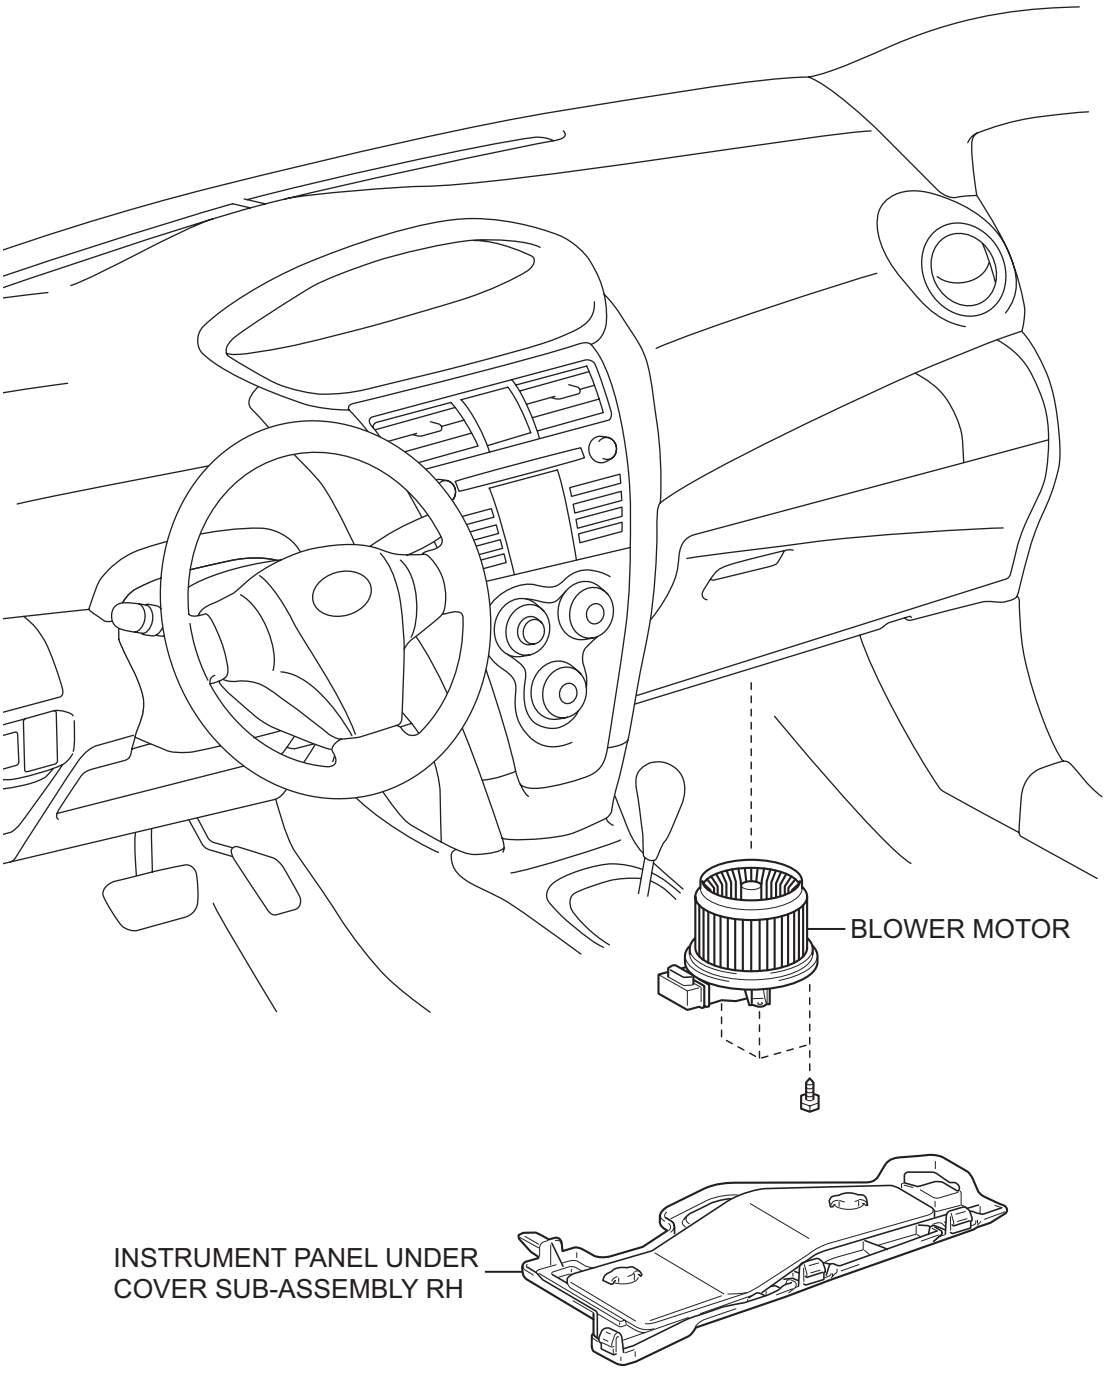
COMPONENTS

for Hatchback:



I101551E01

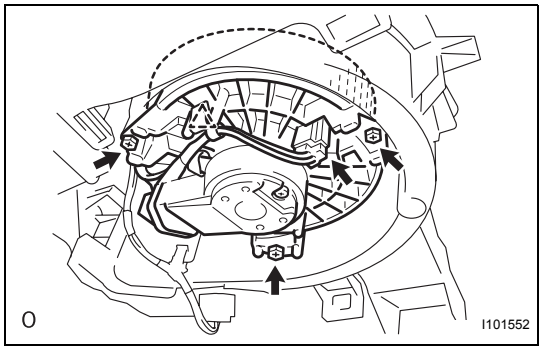
for Sedan:



I102621E01

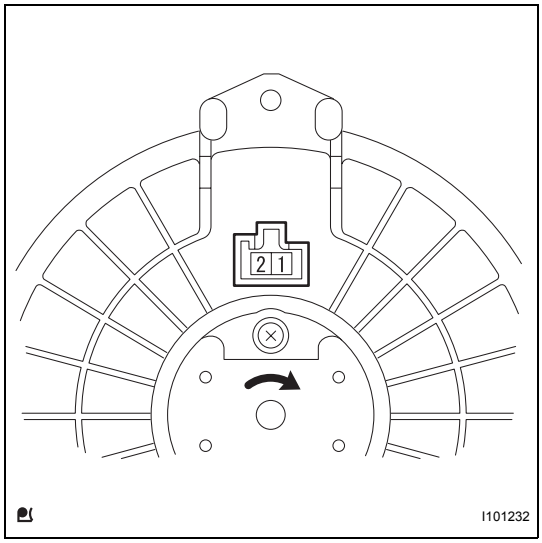
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Hatchback) (See page IR-50)**
3. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Sedan) (See page IR-14)**
4. **REMOVE BLOWER MOTOR**
   (a) Disconnect the connector and the clamp.
   (b) Remove the 3 screws and the blower motor.



INSPECTION

1. **INSPECT BLOWER MOTOR**
   (a) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the motor operates smoothly.
   OK:
   The motor operates smoothly.
   If the operation is not as specified, replace the blower motor.
   (b) Measure the current.
   Standard current

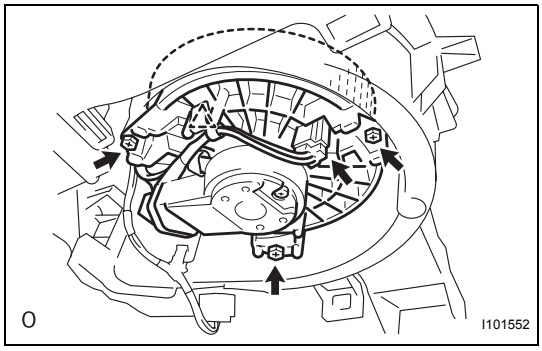


Tester Connection	Condition	Specified Condition
1 - 2	Blower motor operates	1 to 3 A

If the current value is not as specified, replace the blower motor.

INSTALLATION

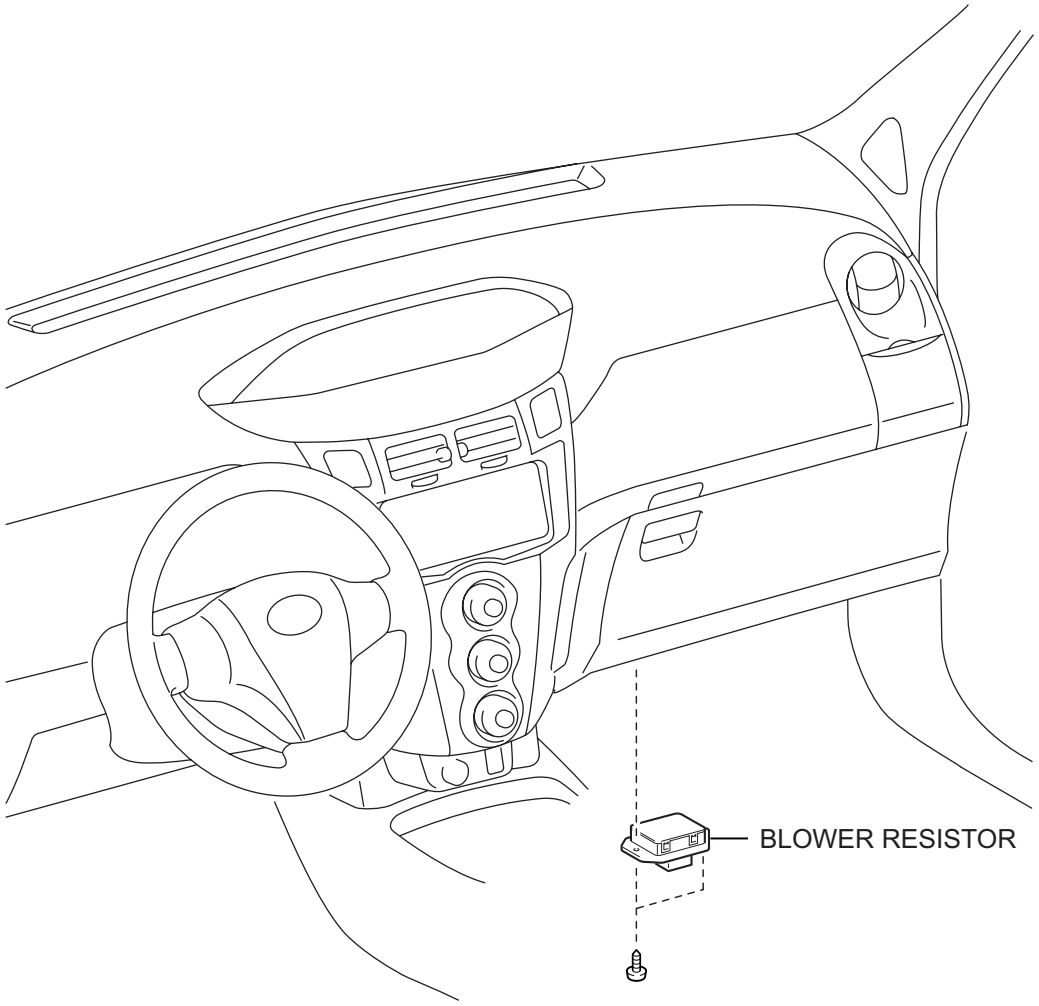
1. **INSTALL BLOWER MOTOR**
   (a) Install the blower motor with the 3 screws.
   (b) Connect the connector and the clamp.
2. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Hatchback) (See page IR-81)**
3. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Sedan) (See page IR-35)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

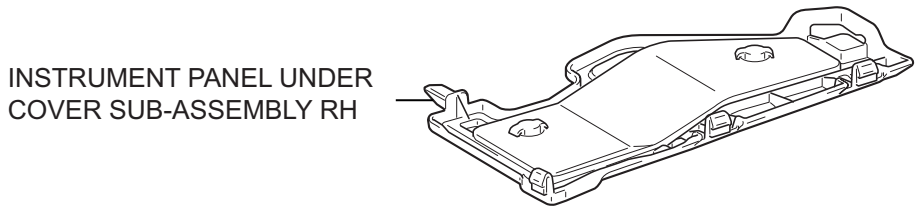


BLOWER RESISTOR

COMPONENTS

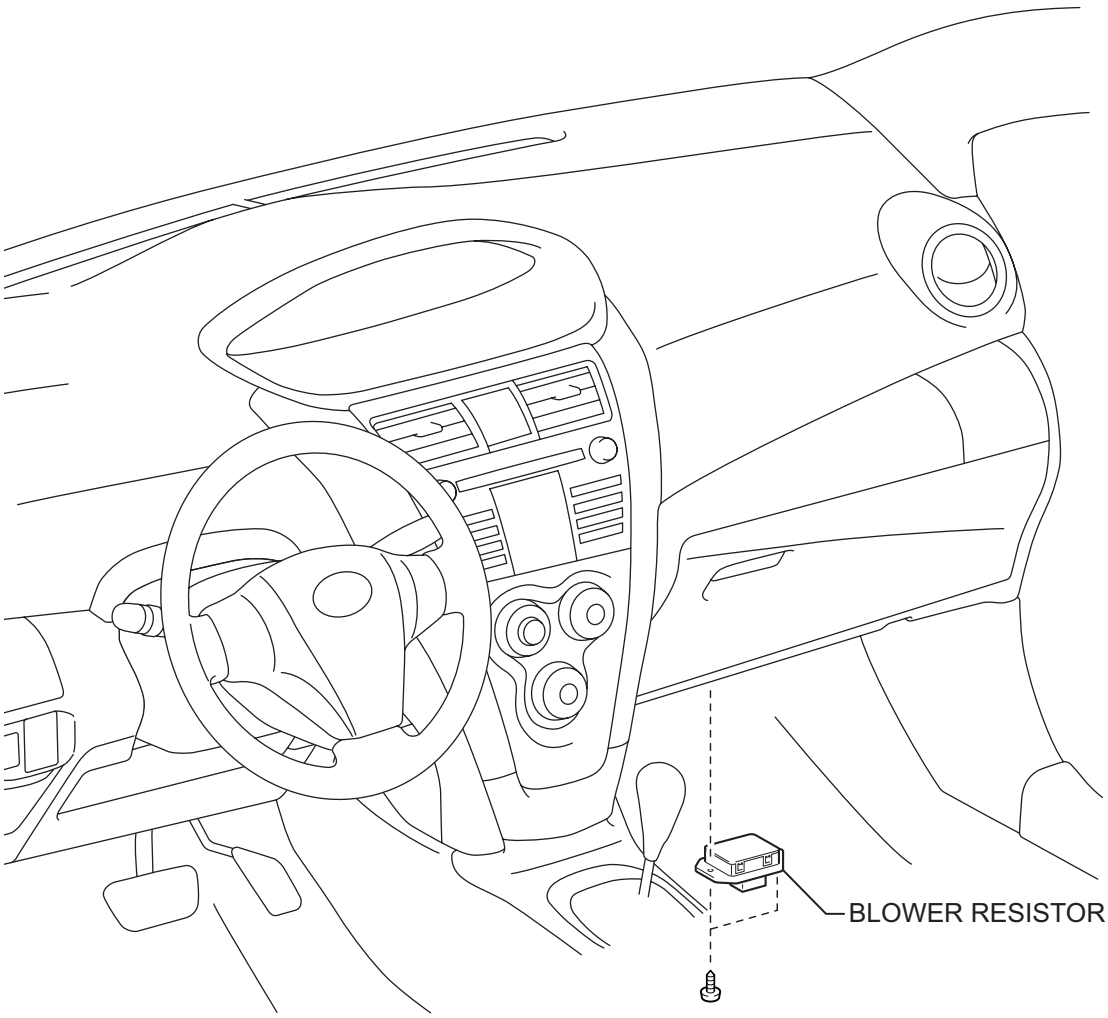
for Hatchback:

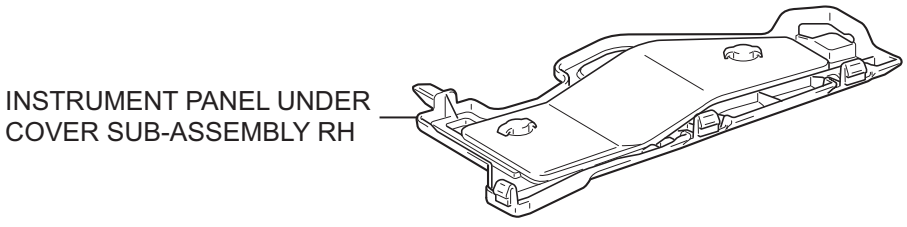




I101554E01

for Sedan:





I102622E01

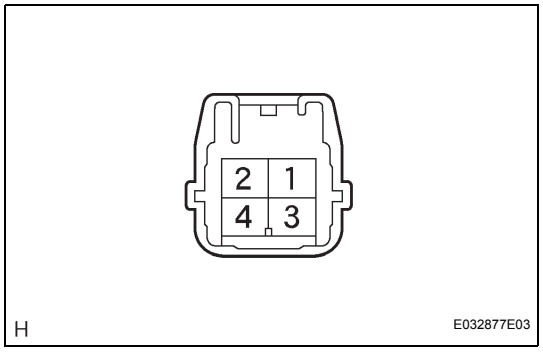
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Hatchback) (See page IR-50)**
3. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Sedan) (See page IR-14)**
4. **REMOVE BLOWER RESISTOR**
   (a) Pull back the floor carpet.

   (b) Disconnect the connector.
   (c) Remove the 2 screws and the blower resistor.

INSPECTION

1. **INSPECT BLOWER RESISTOR**
   (a) Measure the resistance.
   Standard resistance

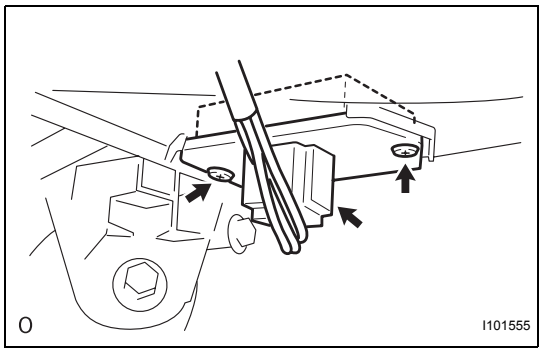


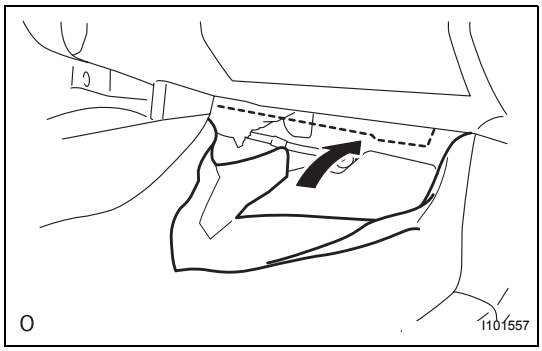
Tester Connection	Specified Condition
1 - 4	3.12 to 3.60 Ω
3 - 4	1.45 to 1.67 Ω
2 - 4	0.52 to 0.60 Ω

   If the resistance value is not as specified, replace the blower resistor.

INSTALLATION

1. **INSTALL BLOWER RESISTOR**
   (a) Install the blower resistor with the 2 screws.
   (b) Connect the connector.





(c) Install the floor carpet.

2. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Hatchback) (See page IR-81)**

3. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (for Sedan) (See page IR-35)**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

COMPRESSOR AND PULLEY (for 1NZ-FE)

⬅ Compressor Oil ND-8 or the equivalent ● Non-reusable part

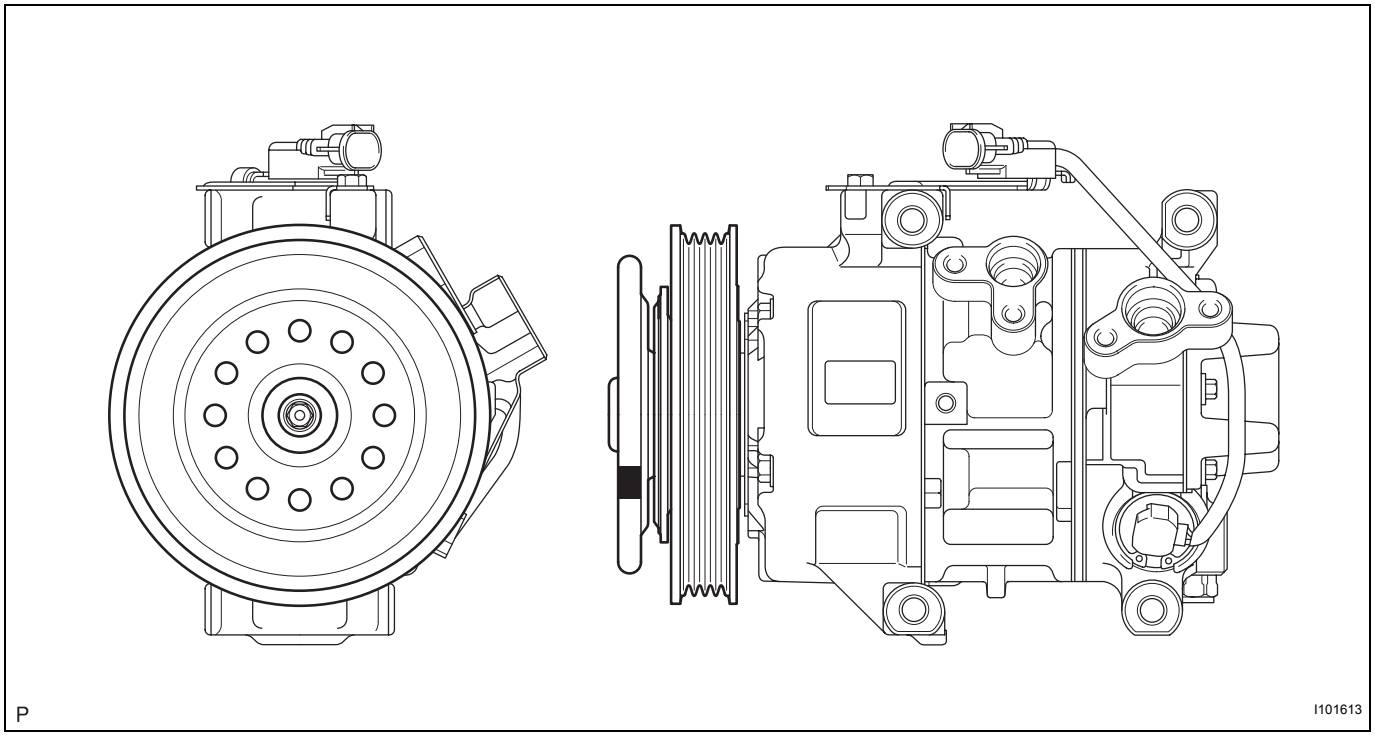
Y

I101614E01

ON-VEHICLE INSPECTION

1. INSPECT COMPRESSOR AND PULLEY

(a) Check the operation.

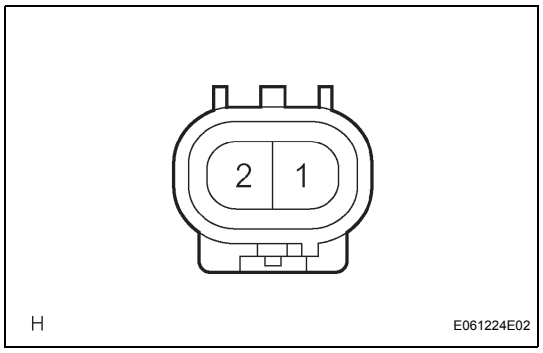


(1) Start the engine.

(2) Inspect the weight hub.

Standard:

The weight hub rotates along with the pulley.



(b) Measure the resistance between terminals 1 and 2.

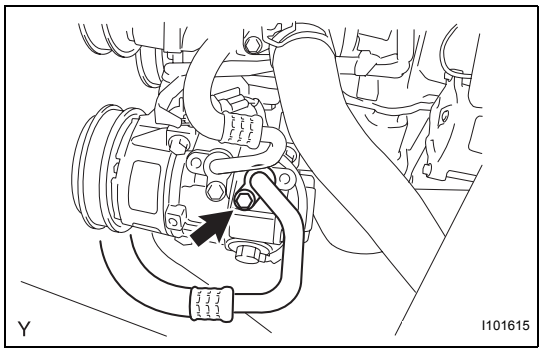
Standard resistance:

10.1 to 11.1 Ω at 25°C (77°F)

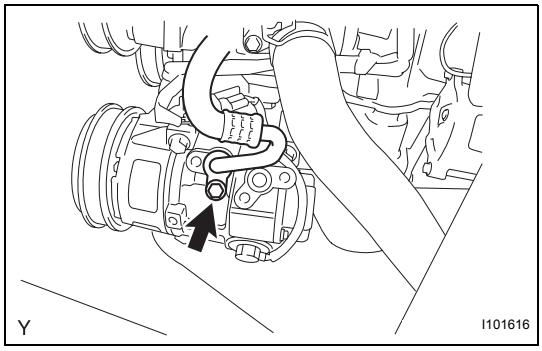
If the resistance is not as specified, replace the compressor and pulley.

REMOVAL

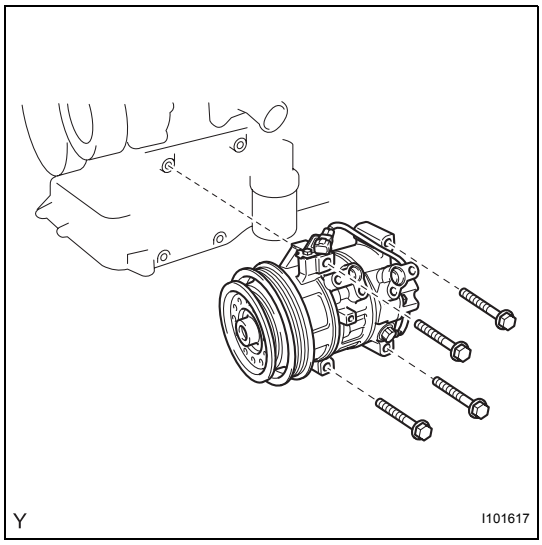
1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
5. **DISCONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the bolt and disconnect the suction hose.
   (b) Remove the O-ring from the suction hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.

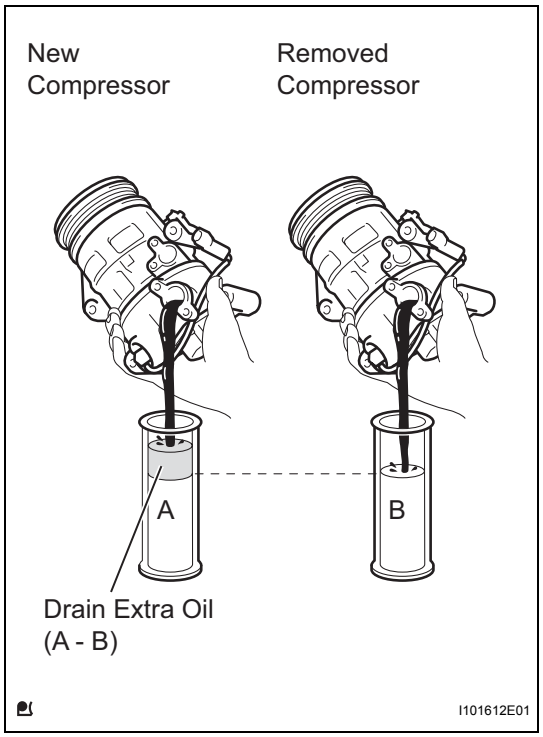


6. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the discharge hose.
   (b) Remove the O-ring from the discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



7. **REMOVE COMPRESSOR AND PULLEY**
   (a) Disconnect the connector.
   (b) Remove the 4 bolts and compressor.





INSTALLATION

1. ADJUST COMPRESSOR OIL

(a) When replacing the compressor with a new one, gradually discharge the refrigerant gas from the service valve. Then drain the following amount of oil from the new compressor before installation, so that the amount of oil contained in it is the same as that in the compressor to be replaced.

HINT:

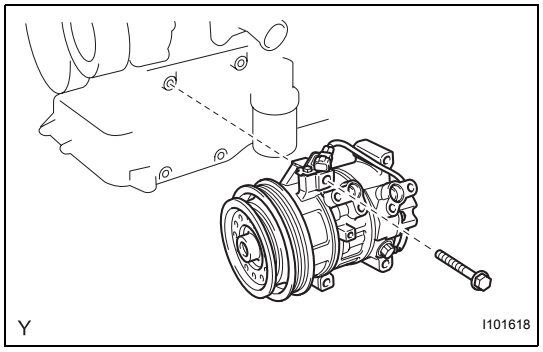
New compressors are filled with sufficient oil for the whole cycle. Therefore, it is necessary to drain residual oil from the condenser and cooling unit.

Standard:

(The amount of oil inside a new compressor: 90 (+15) cc (3.0 (+0.51) fl.oz.)) - (The amount of oil remaining in the removed compressor) = The amount of oil to be removed when replacing the compressor

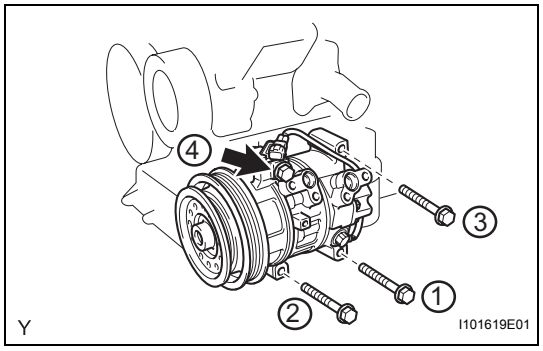
NOTICE:

- **When checking the compressor oil level, observe the precautions for cooler removal/ installation.**
- **If a new compressor is installed without removing the amount of oil remaining in the pipes of the vehicle, the amount of oil becomes too large. This prevents heat exchange in the refrigerant cycle and causes refrigeration failure.**
- **If the amount of oil remaining in the removed compressor is too small, check for oil leakage.**
- **Use ND-OIL8 compressor oil.**



2. INSTALL COMPRESSOR AND PULLEY

(a) Provisionally tighten the compressor with the bolt.



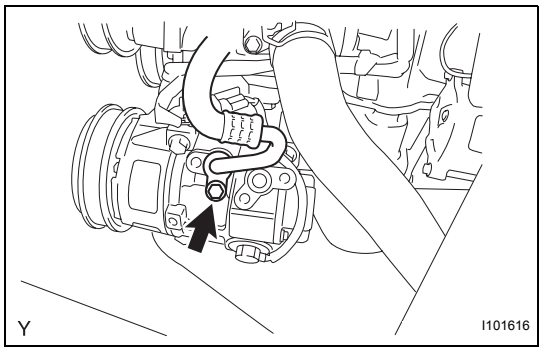
(b) Tighten the compressor with the 4 bolts.

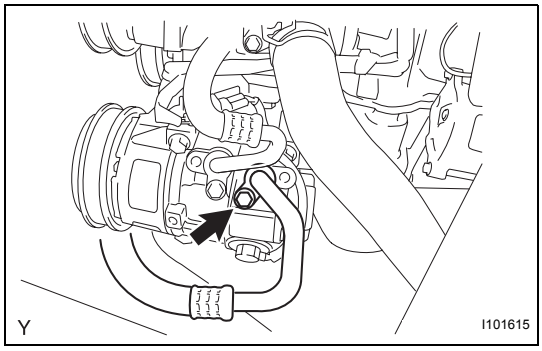
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

NOTICE:

Tighten the bolts in the sequence shown in the illustration to install the compressor.

(c) Connect the connector.





3. **INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the fitting surface of the compressor.
   Compressor oil:
   ND-OIL8 or the equivalent
   (c) Install the O-ring onto the discharge hose.
   (d) Install the discharge hose onto the compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

4. **INSTALL NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Apply sufficient compressor oil (ND-OIL8) to a new O-ring and the fitting surface of the compressor.
   Compressor oil:
   ND-OIL8 or the equivalent
   (c) Install the O-ring onto the suction hose.
   (d) Install the suction hose onto the compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

5. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**

6. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**

7. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**

8. **INSTALL ENGINE UNDER COVER RH**

9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

10. **CHARGE REFRIGERANT (See page AC-67)**

11. **WARM UP ENGINE (See page AC-69)**

12. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**

CONDENSER (for Sedan)

ON-VEHICLE INSPECTION

1. INSPECT CONDENSER ASSEMBLY

(a) If the fins of the cooler condenser assembly are dirty, clean them with water and dry them with compressed air.

NOTICE:

Do not damage the fins of the condenser assembly.

(b) If the fins of the cooler condenser assembly are bent, straighten them using a screwdriver or pliers.

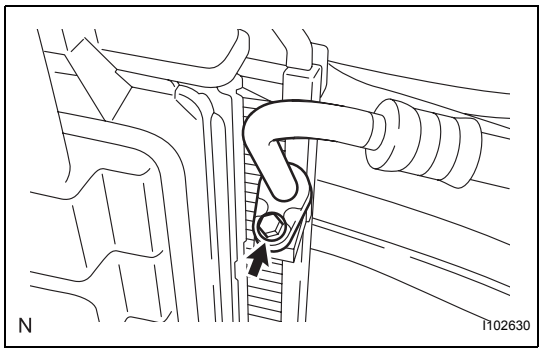
2. CHECK CONDENSER FOR REFRIGERANT LEAKAGE

(a) Check the pipe joints for gas leakage, using a halogen leak detector.

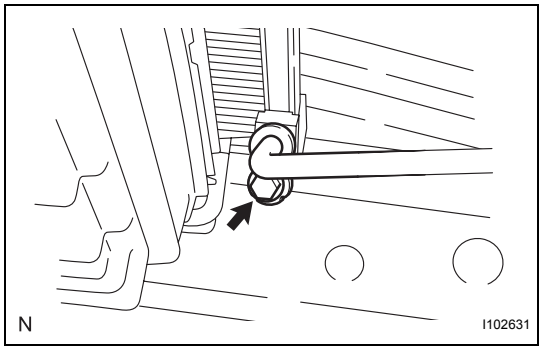
(b) Check the tightening torque of the joints if gas leakage is detected from any pipe joints.

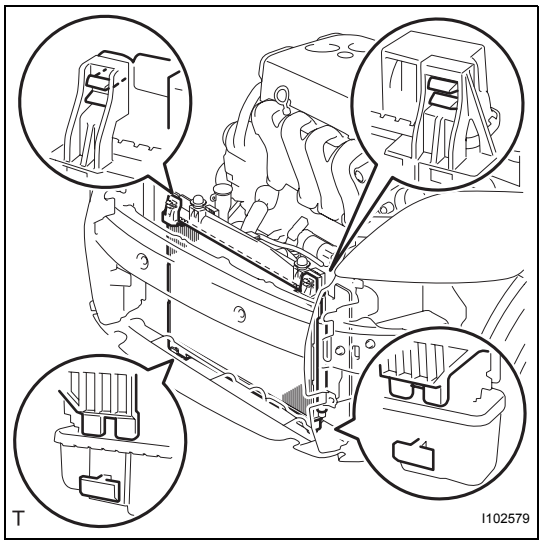
REMOVAL

1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE FRONT SPOILER COVER (See page ET-6)**
4. **REMOVE FRONT BUMPER COVER (See page ET-6)**
5. **REMOVE NO. 1 COOLER COVER (See page CO-31)**
6. **SEPARATE HOOD LOCK ASSEMBLY (w/ Theft Deterrent System) (See page CO-32)**
7. **SEPARATE HOOD LOCK ASSEMBLY (w/o Theft Deterrent System) (See page CO-32)**
8. **REMOVE RADIATOR SUPPORT SUB-ASSEMBLY UPPER (See page CO-33)**
9. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the discharge hose from the cooler condenser.
   (b) Remove the O-ring from the discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



10. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY A**
    (a) Remove the bolt and disconnect the liquid tube from the cooler condenser.
    (b) Remove the O-ring from the liquid tube.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.





11. REMOVE CONDENSER

(a) Disengage the 2 claws and remove the condenser from the vehicle.

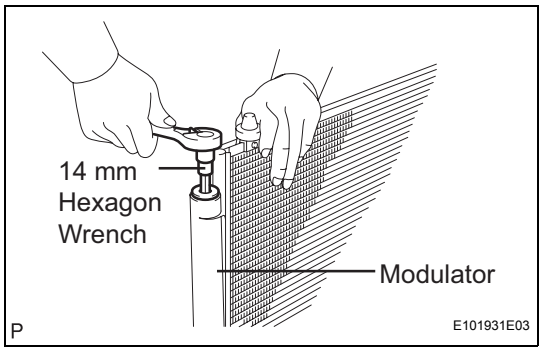
NOTICE:

Do not damage the condenser or radiator when removing the condenser.

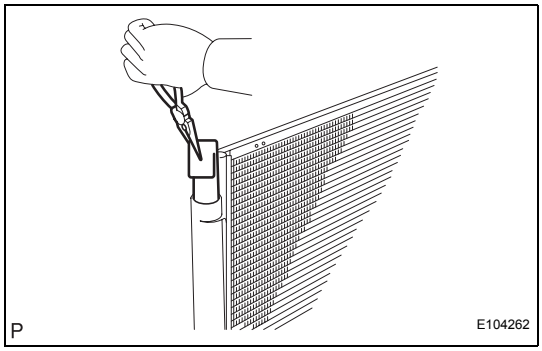
DISASSEMBLY

1. REMOVE COOLER DRYER

(a) Using a 14 mm straight hexagon wrench, remove the cap from the modulator.



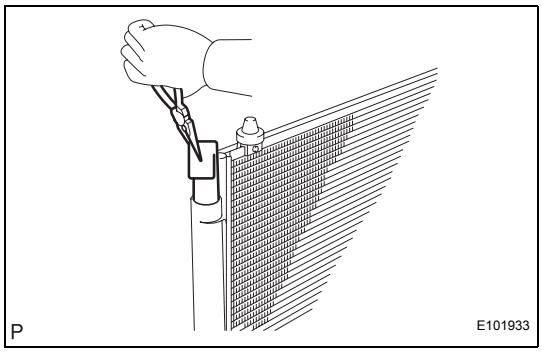
(b) Using pliers, remove the cooler dryer.

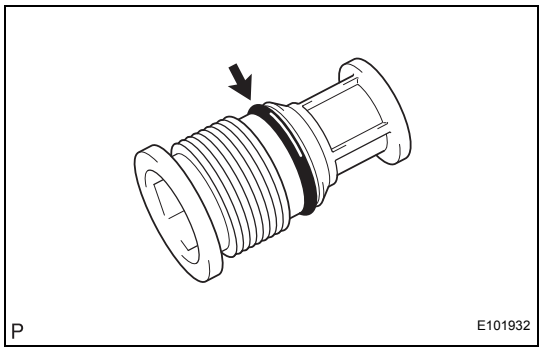


REASSEMBLY

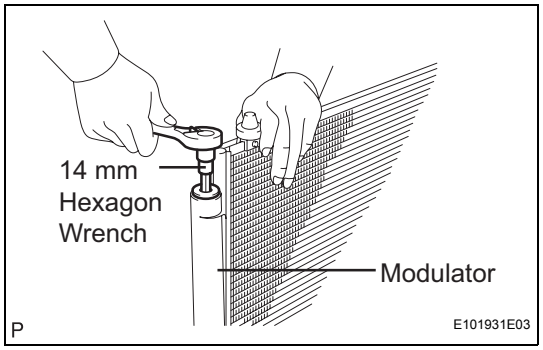
1. INSTALL COOLER DRYER

(a) Using pliers, install the cooler dryer into the modulator.



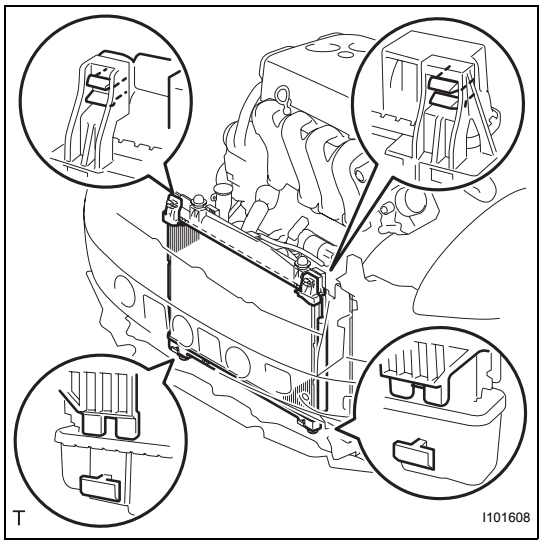


(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the cap.
Compressor oil:
ND-OIL 8 or the equivalent



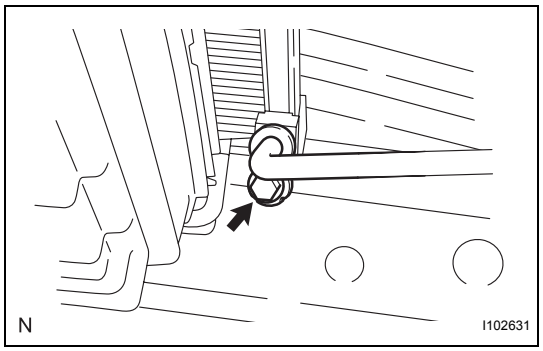
(c) Using a 14 mm straight hexagon wrench, install the cap onto the modulator.
Torque: 2.9 N*m (30 kgf*cm, 25 in.*lbf)

INSTALLATION



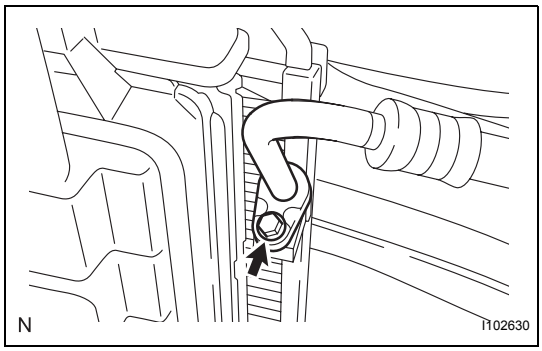
1. INSTALL CONDENSER

(a) Engage the 2 claws and install the condenser into the vehicle.
NOTICE:
Do not damage the condenser or radiator when installing the condenser.
HINT:
If a new condenser is installed, add compressor oil to the condenser as follows.
Compressor oil:
ND-OIL8 or the equivalent. Add 40 cc (1.35 fl. oz.)



2. INSTALL LIQUID TUBE SUB-ASSEMBLY A

(a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser.
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the pipe joint.
Compressor oil:
ND-OIL8 or the equivalent
(c) Install the O-ring onto the liquid tube.
(d) Install the liquid tube onto the cooler condenser with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



3. **INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser.
   (b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the hose joint.
   Compressor oil:
   ND-OIL8 or the equivalent
   (c) Install the O-ring onto the discharge hose.
   (d) Install the discharge hose onto the cooler condenser with the bolt.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
4. **INSTALL RADIATOR SUPPORT SUB-ASSEMBLY UPPER (See page CO-40)**
5. **INSTALL HOOD LOCK ASSEMBLY (w/ Theft Deterrent System) (See page CO-40)**
6. **INSTALL HOOD LOCK ASSEMBLY (w/o Theft Deterrent System) (See page CO-41)**
7. **INSTALL NO. 1 COOLER COVER (See page CO-41)**
8. **INSTALL FRONT BUMPER COVER (See page ET-16)**
9. **INSTALL FRONT SPOILER COVER (See page ET-19)**
10. **ADJUST HOOD LOCK ASSEMBLY (See page CO-42)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
12. **CHARGE REFRIGERANT (See page AC-67)**
13. **WARM UP ENGINE (See page AC-69)**
14. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**

ON-VEHICLE INSPECTION

1. INSPECT CONDENSER ASSEMBLY

(a) If the fins of the cooler condenser assembly are dirty, clean them with water and dry them with compressed air.

NOTICE:

Do not damage the fins of the condenser assembly.

(b) If the fins of the cooler condenser assembly are bent, straighten them using a screwdriver or pliers.

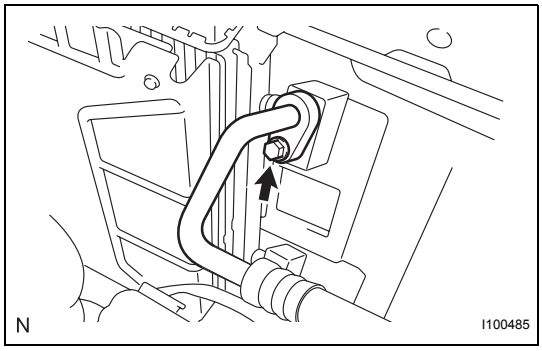
2. CHECK CONDENSER FOR REFRIGERANT LEAKAGE

(a) Check the pipe joints for gas leakage, using a halogen leak detector.

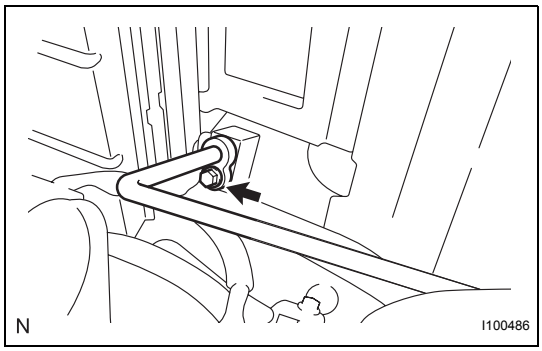
(b) Check the tightening torque of the joints if gas leakage is detected from any pipe joints.

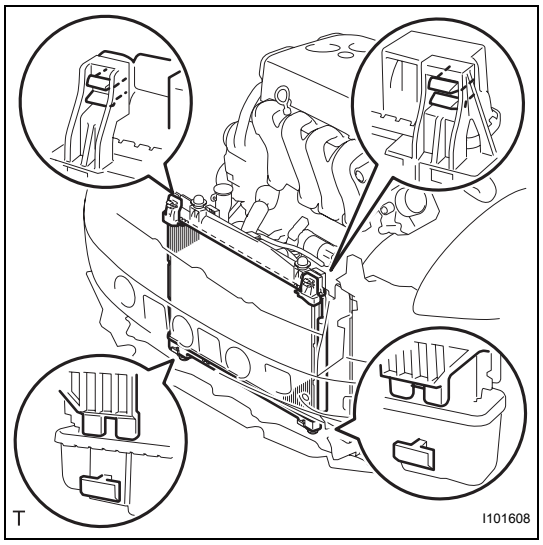
REMOVAL

1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-66)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE FRONT BUMPER COVER (See page ET-24)**
4. **REMOVE RADIATOR SUPPORT ABSORBER UPPER (See page CO-31)**
5. **REMOVE NO. 1 COOLER COVER (See page CO-31)**
6. **SEPARATE HOOD LOCK ASSEMBLY (w/ Theft Deterrent System) (See page CO-32)**
7. **SEPARATE HOOD LOCK ASSEMBLY (w/o Theft Deterrent System) (See page CO-32)**
8. **REMOVE RADIATOR SUPPORT SUB-ASSEMBLY UPPER (See page CO-33)**
9. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the discharge hose from the cooler condenser.
   (b) Remove the O-ring from the discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



10. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY A**
    (a) Remove the bolt and disconnect the liquid tube from the cooler condenser.
    (b) Remove the O-ring from the liquid tube.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.



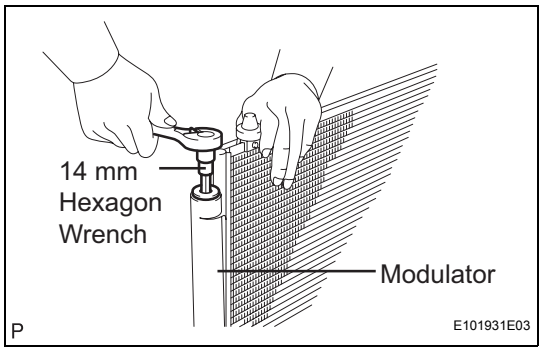


11. REMOVE CONDENSER

(a) Disengage the 2 claws and remove the condenser from the vehicle.

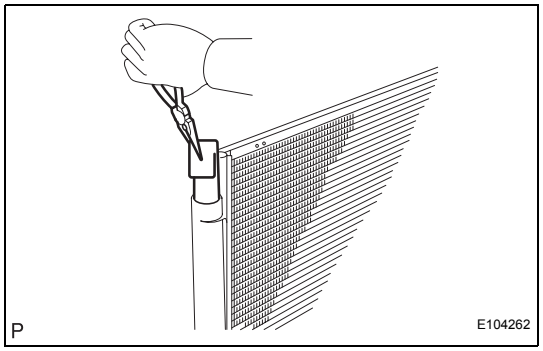
NOTICE:
Do not damage the condenser or radiator when removing the condenser.

DISASSEMBLY



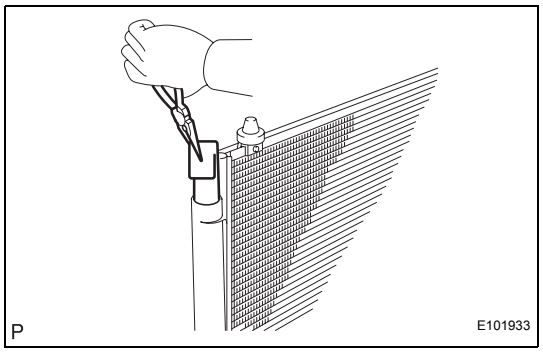
1. REMOVE COOLER DRYER

(a) Using a 14 mm straight hexagon wrench, remove the cap from the modulator.



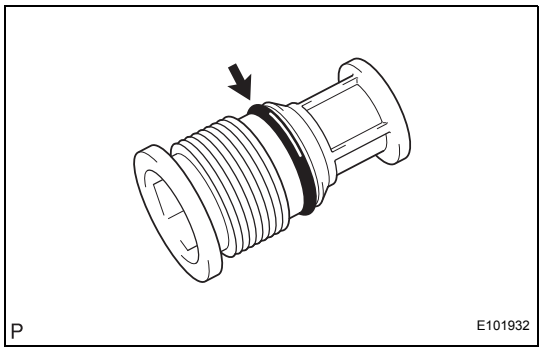
(b) Using pliers, remove the cooler dryer.

REASSEMBLY

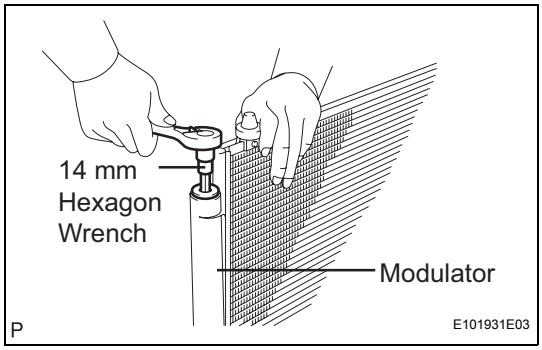


1. INSTALL COOLER DRYER

(a) Using pliers, install the cooler dryer onto the modulator.

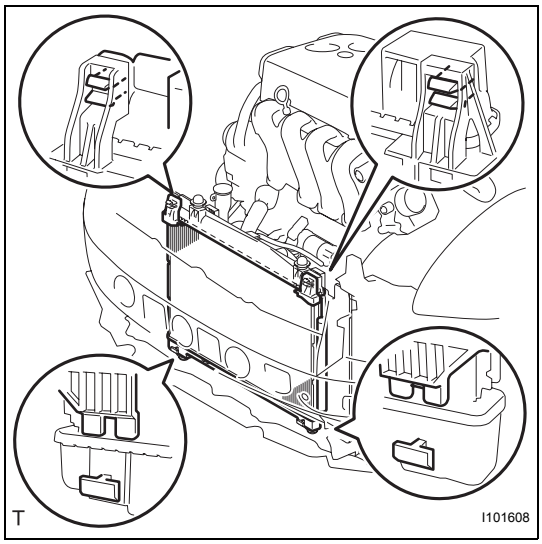


(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the cap.
Compressor oil:
ND-OIL 8 or the equivalent



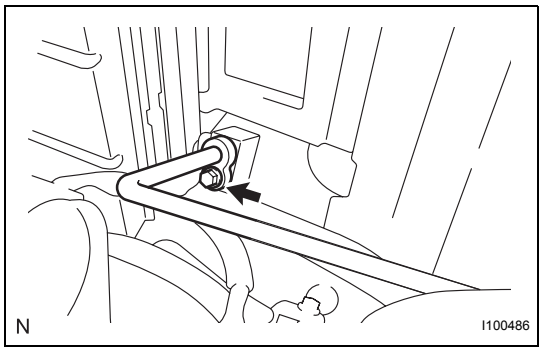
(c) Using a 14 mm straight hexagon wrench, install the cap onto the cooler condenser core.
Torque: 2.9 N*m (30 kgf*cm, 25 in.*lbf)

INSTALLATION



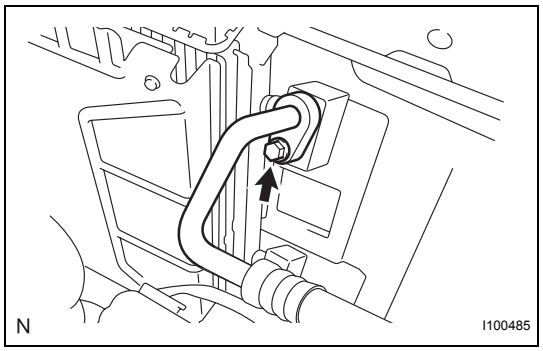
1. INSTALL CONDENSER

(a) Engage the 2 claws and install the condenser into the vehicle.
NOTICE:
Do not damage the condenser or radiator when installing the condenser.
HINT:
If a new condenser is installed, add compressor oil to the condenser as follows.
Compressor oil:
ND-OIL8 or the equivalent. Add 40 cc (1.35 fl. oz.)



2. INSTALL LIQUID TUBE SUB-ASSEMBLY A

(a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser.
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the pipe joint.
Compressor oil:
ND-OIL8 or the equivalent
(c) Install the O-ring onto the liquid tube.
(d) Install the tube onto the condenser with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

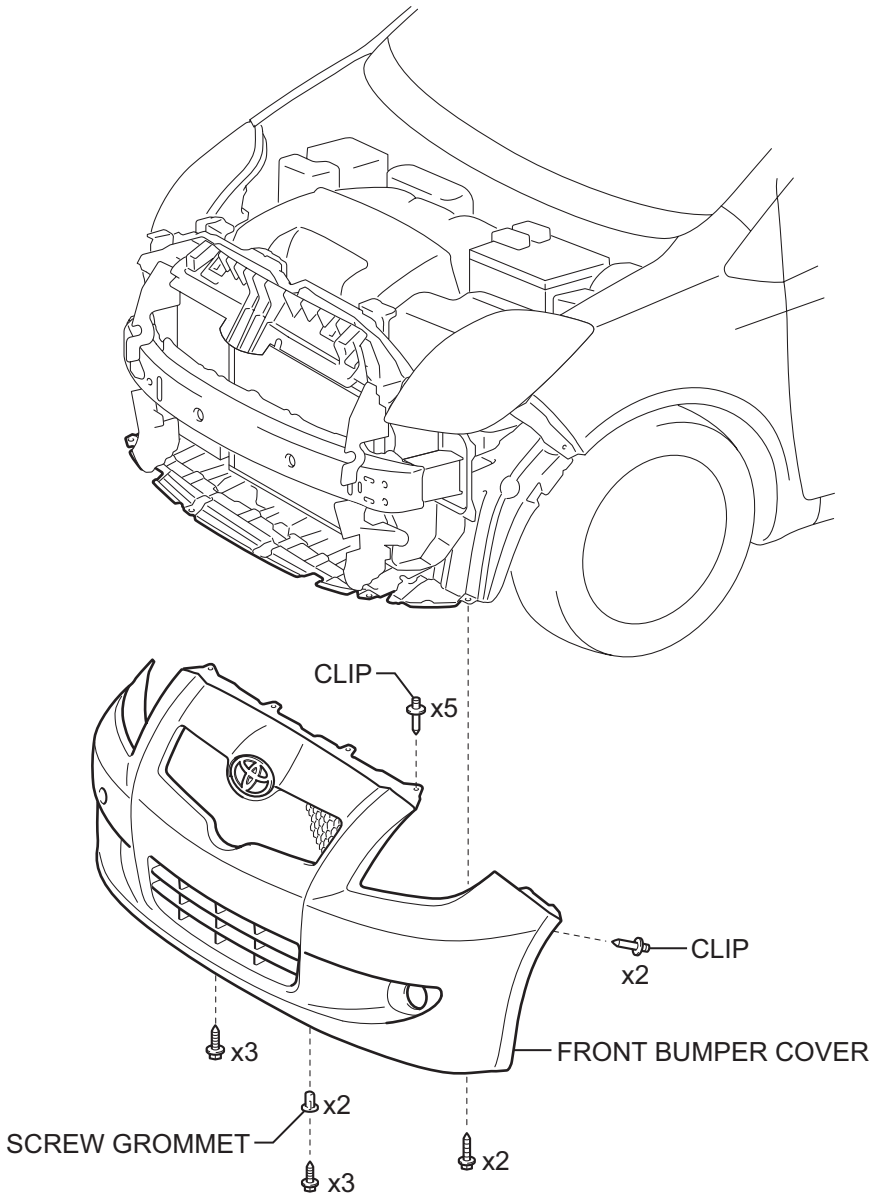


3. **INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser.
   (b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the hose joint.
   Compressor oil:
   ND-OIL8 or the equivalent
   (c) Install the O-ring onto the discharge hose.
   (d) Install the discharge hose onto the condenser with the bolt.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
4. **INSTALL RADIATOR SUPPORT SUB-ASSEMBLY UPPER (See page CO-40)**
5. **INSTALL HOOD LOCK ASSEMBLY (w/ Theft Deterrent System) (See page CO-40)**
6. **INSTALL HOOD LOCK ASSEMBLY (w/o Theft Deterrent System) (See page CO-41)**
7. **INSTALL NO. 1 COOLER COVER (See page CO-41)**
8. **INSTALL RADIATOR SUPPORT ABSORBER UPPER (See page CO-42)**
9. **INSTALL FRONT BUMPER COVER (See page ET-33)**
10. **ADJUST HOOD LOCK ASSEMBLY (See page CO-42)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
12. **CHARGE REFRIGERANT (See page AC-67)**
13. **WARM UP ENGINE (See page AC-69)**
14. **CHECK FOR REFRIGERANT LEAK (See page AC-69)**

AMBIENT TEMPERATURE SENSOR

COMPONENTS

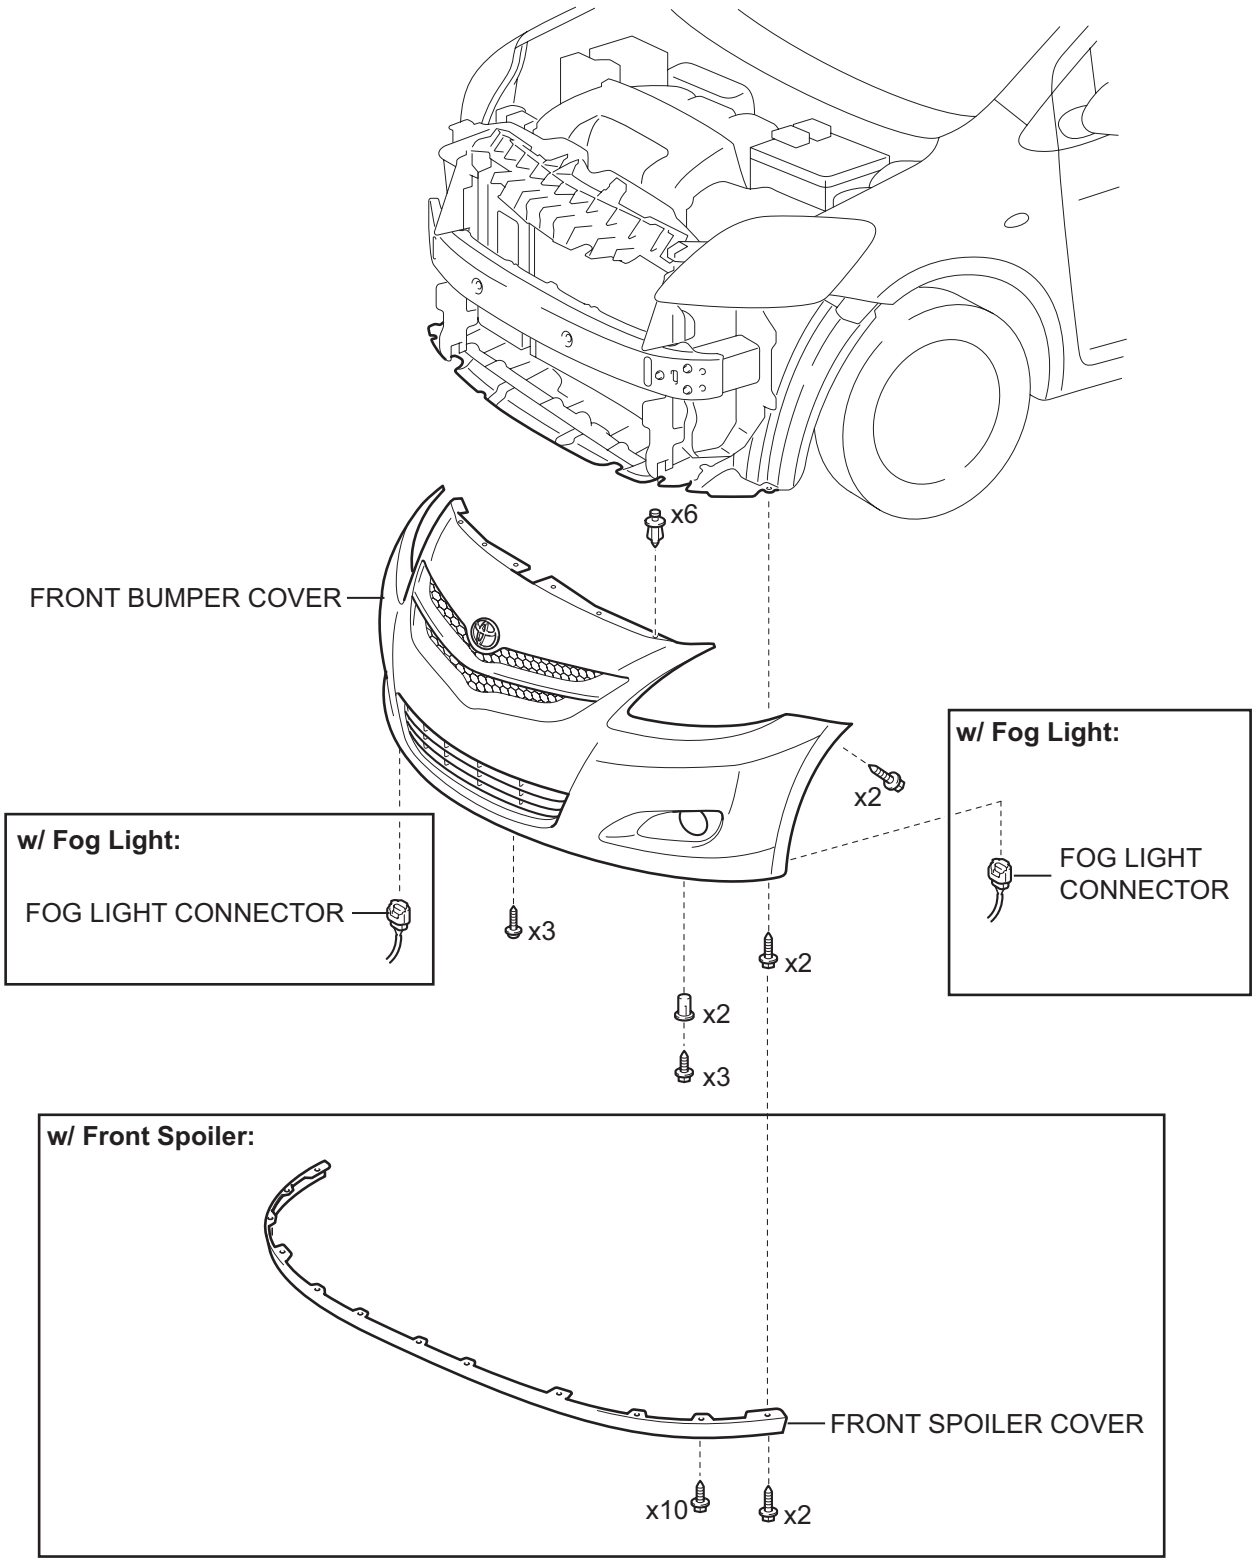
for Hatchback:



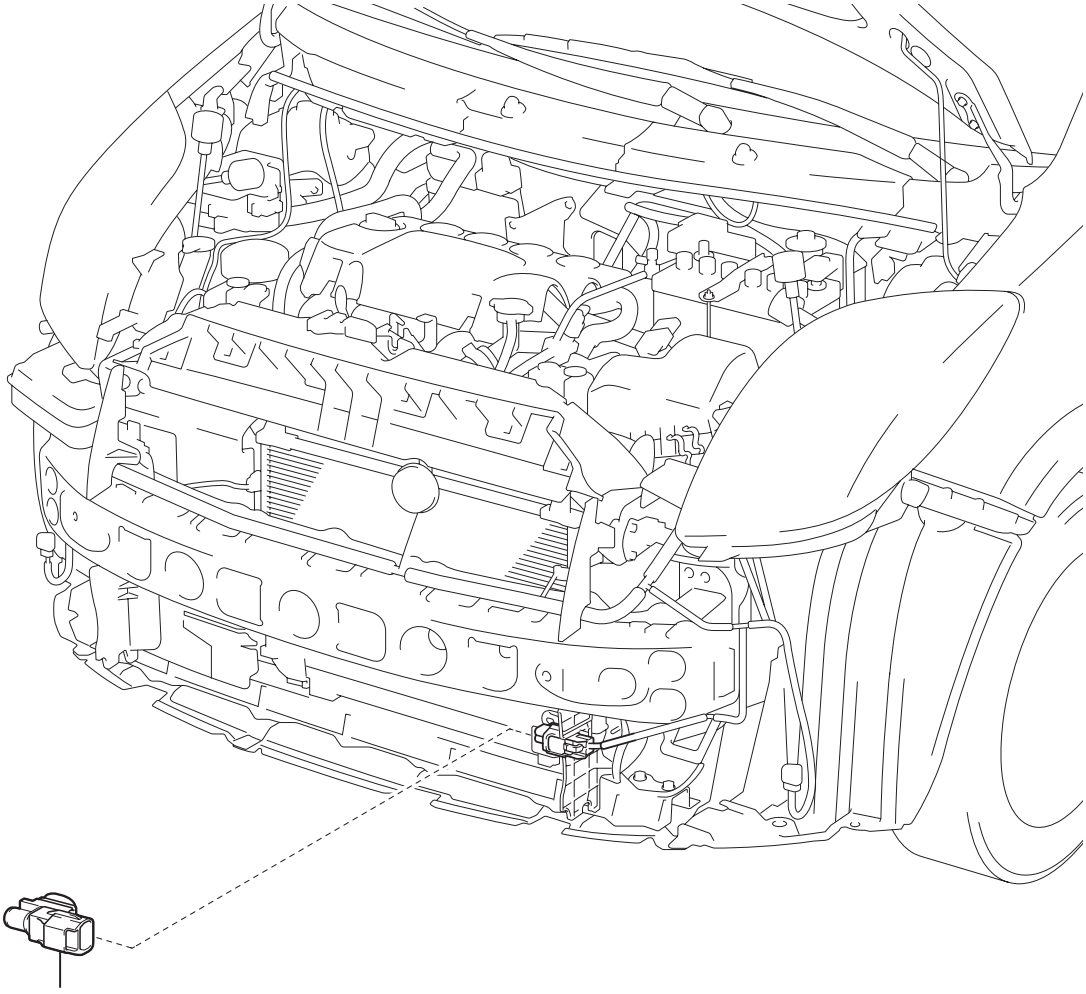
T

E117642E03

for Sedan:



B134796E07



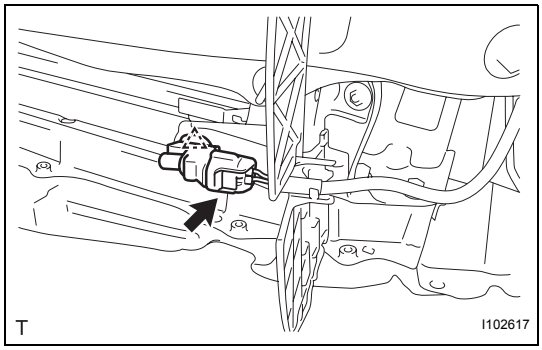
AMBIENT TEMPERATURE SENSOR

P

I101609E01

REMOVAL

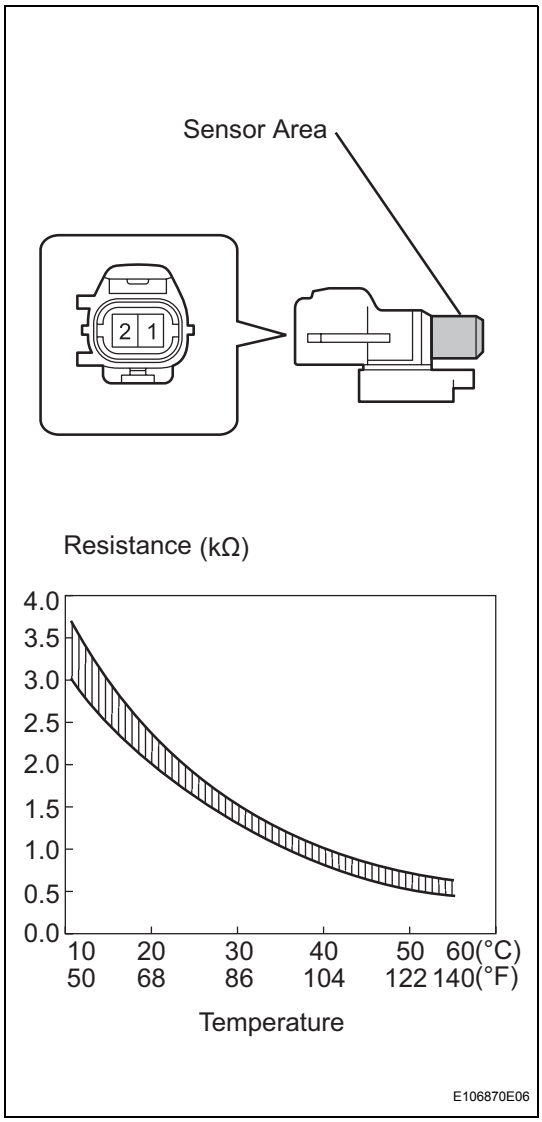
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT BUMPER COVER (for Hatchback) (See page ET-24)**
3. **REMOVE FRONT SPOILER COVER (for Sedan) (See page ET-6)**
4. **REMOVE FRONT BUMPER COVER (for Sedan) (See page ET-6)**
5. **REMOVE AMBIENT TEMPERATURE SENSOR**
   (a) Disconnect the connector.
   (b) Disengage the clamp and remove the ambient temperature sensor.



INSPECTION

1. **INSPECT AMBIENT TEMPERATURE SENSOR**
   (a) Measure the resistance.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

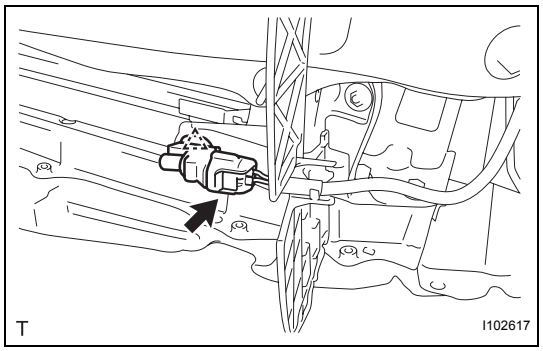


NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**

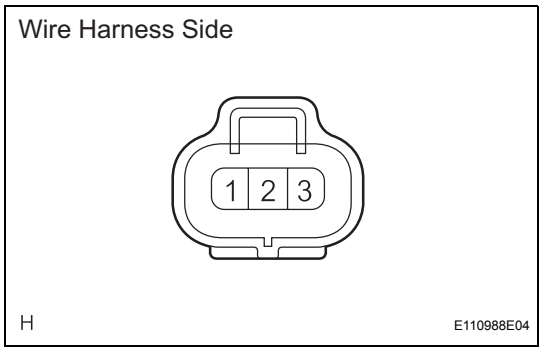
HINT:
As the temperature increases, the resistance decreases (see the graph).
If the result is not as specified, replace the ambient temperature sensor.

AC



INSTALLATION

1. **INSTALL AMBIENT TEMPERATURE SENSOR**
   (a) Engage the clamp and install the ambient temperature sensor.
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER COVER (for Hatchback) (See page ET-33)**
3. **INSTALL FRONT BUMPER COVER (for Sedan) (See page ET-16)**
4. **INSTALL FRONT SPOILER COVER (for Sedan) (See page ET-19)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



AIR CONDITIONING PRESSURE SENSOR

ON-VEHICLE INSPECTION

1. INSPECT PRESSURE SENSOR

(a) Check the wire harness.

(1) Disconnect the connector of the pressure sensor.

(2) Using an ohmmeter, measure the resistance of the wire harness side connector.

Standard resistance

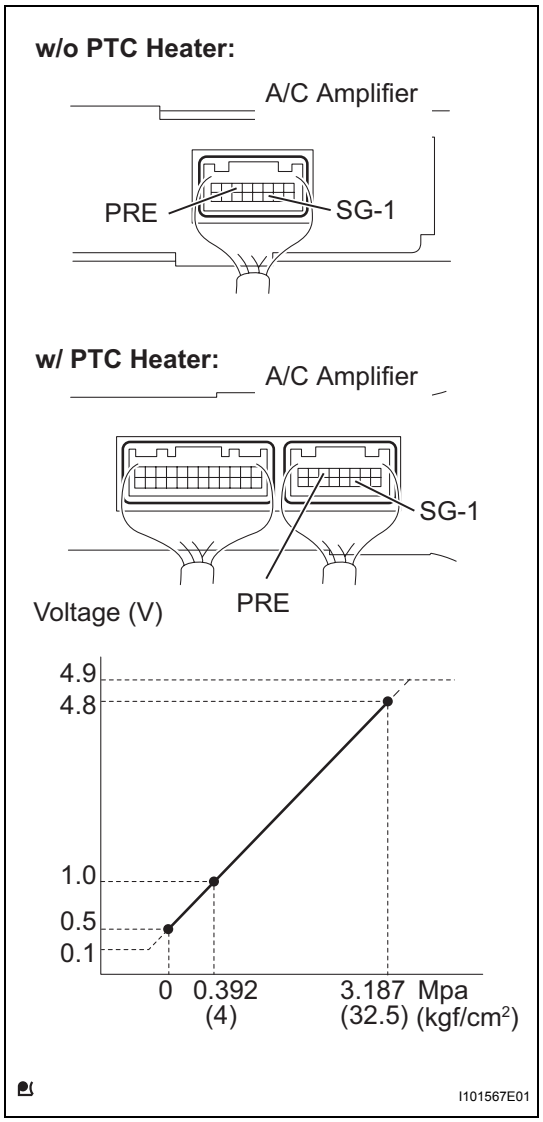
Tester Connection	Specified Condition
1 - Body ground	Below 1 Ω

(3) Turn the ignition switch ON.

(4) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
1 - 3	4.7 to 5.3 V



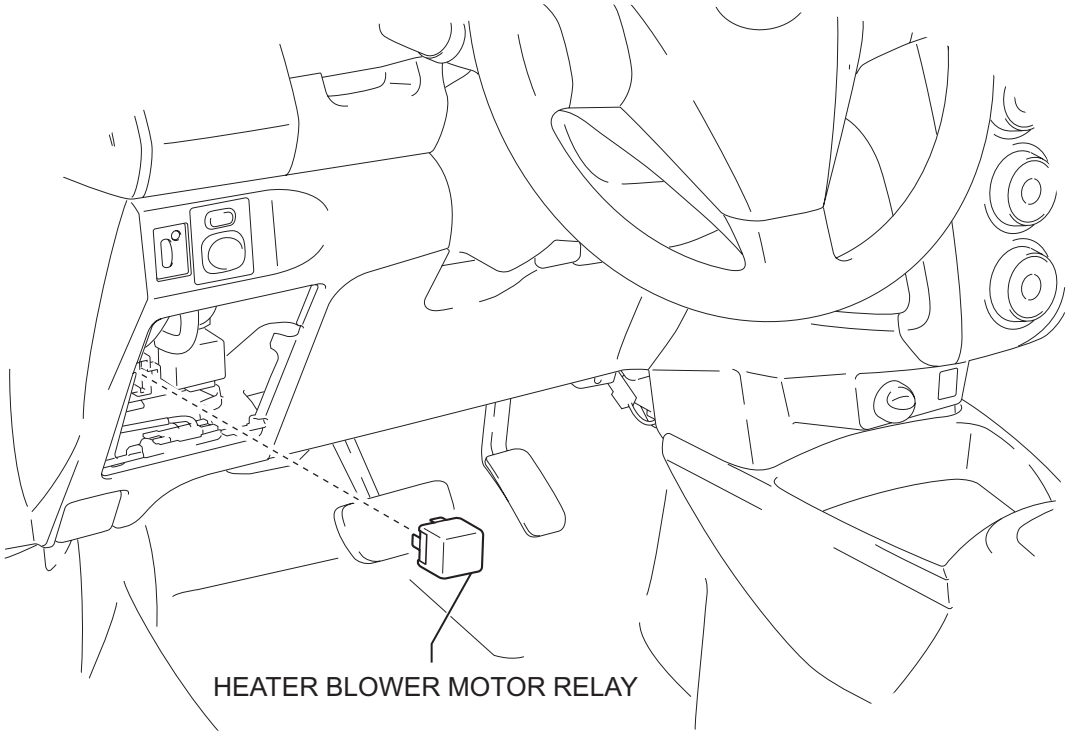
(b) Check the pressure sensor.
   (1) Set the manifold gauge.
   (2) Connect the connector to the pressure sensor.
   (3) Warm up the engine.
   (4) Switch A/C ON.
   (5) Using a voltmeter, measure the voltage between connector terminals 6 (PRE) and 11 (SG-1) of the air conditioner amplifier.
   HINT:
   Check from the rear of the connector while the it is connected to the air conditioning amplifier.
   Standard voltage

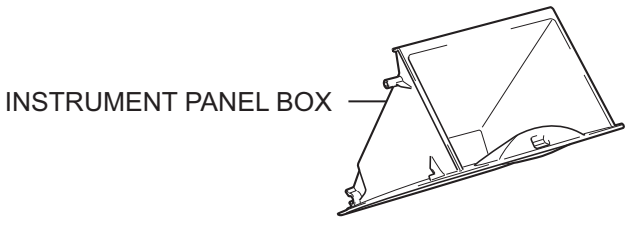
Refrigerant Pressure	Specified Condition
0.196 to 3.14 MPa (2.0 to 32 kgf/cm^2)	0.76 to 4.74 V

HEATER BLOWER MOTOR RELAY

COMPONENTS

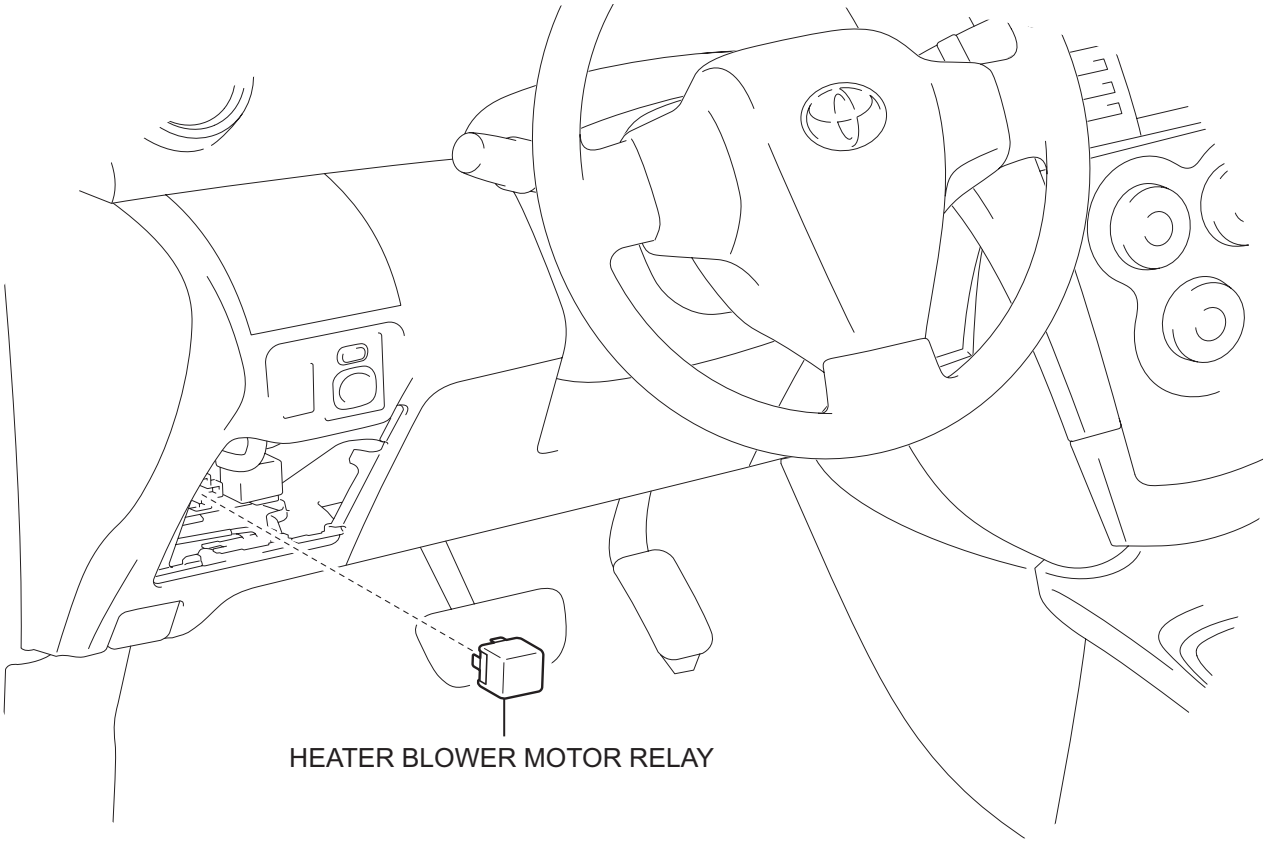
for Hatchback:

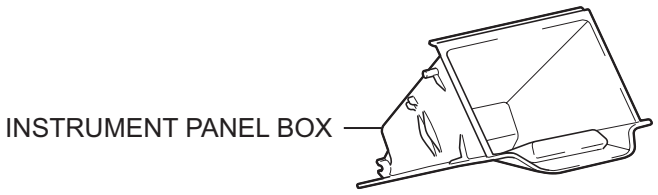




I101540E01

for Sedan:





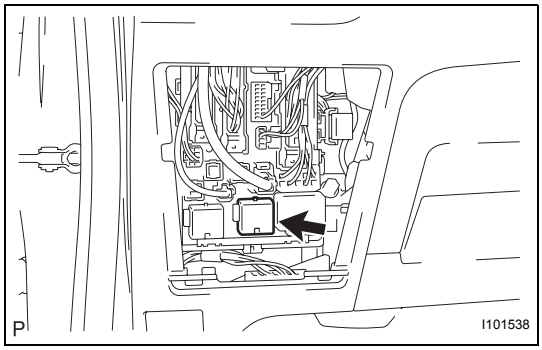
P

AC

I102619E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (for Hatchback) (See page IP-70)**
3. **REMOVE INSTRUMENT PANEL BOX (for Sedan) (See page IP-45)**
4. **REMOVE HEATER BLOWER MOTOR RELAY**
   (a) Remove the heater blower motor relay.

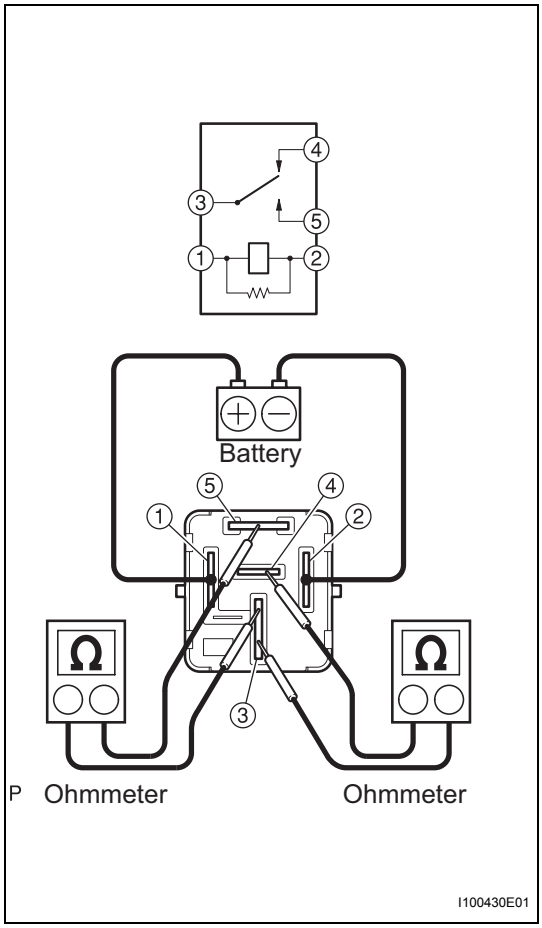


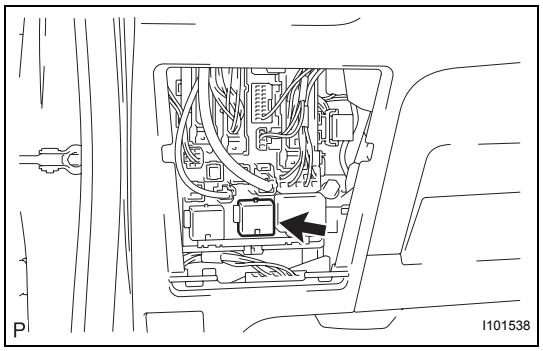
INSPECTION

1. **INSPECT HEATER BLOWER MOTOR RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between each terminal.
      Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (Apply battery voltage to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

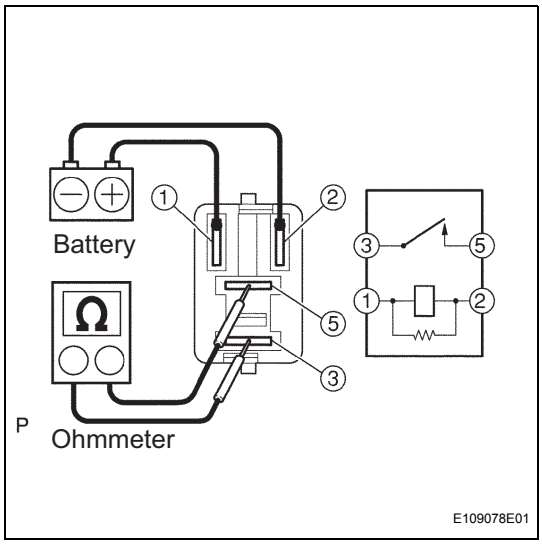
If the result is not as specified, replace the relay.





INSTALLATION

1. **INSTALL HEATER BLOWER MOTOR RELAY**
   (a) Install the heater blower motor relay.
2. **INSTALL INSTRUMENT PANEL BOX (for Hatchback) (See page IP-78)**
3. **INSTALL INSTRUMENT PANEL BOX (for Sedan) (See page IP-53)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



PTC HEATER RELAY

ON-VEHICLE INSPECTION

1. INSPECT PTC HEATER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the PTC heater relay.

AIR CONDITIONING PANEL ASSEMBLY (for Sedan)

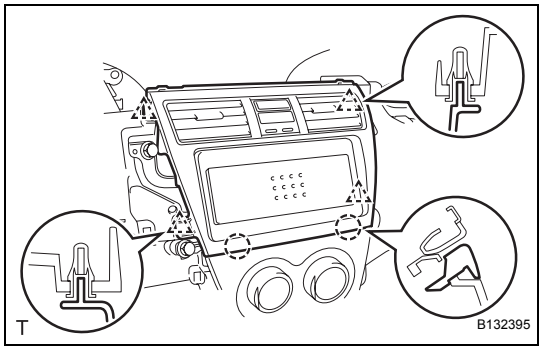
BULB
HEATER CONTROL
SUB-ASSEMBLY
BULB
HEATER CONTROL BASE
SUB-ASSEMBLY
BULB
NO. 3 HEATER CONTROL KNOB
INSTRUMENT PANEL FINISH
PANEL LOWER CENTER

I102565E01

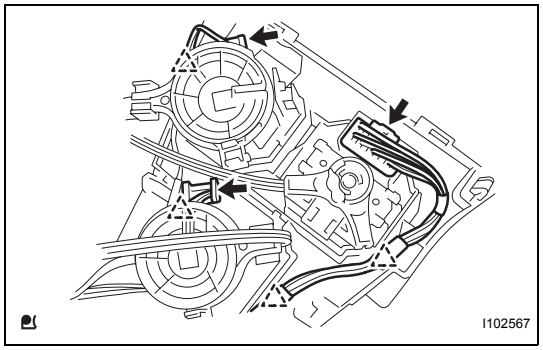
REMOVAL

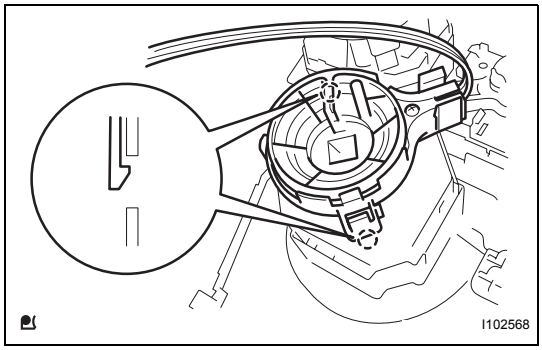
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
6. **REMOVE RADIO RECEIVER ASSEMBLY**
7. **REMOVE INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY**
   (a) Disengage the 2 claws and 4 clips and remove the instrument cluster finish panel center.



8. **REMOVE AIR CONDITIONING PANEL ASSEMBLY**
   (a) Disengage the 4 clips and 2 claws and remove the air conditioning panel.

   (b) Disconnect the 3 connectors and 4 clamps.

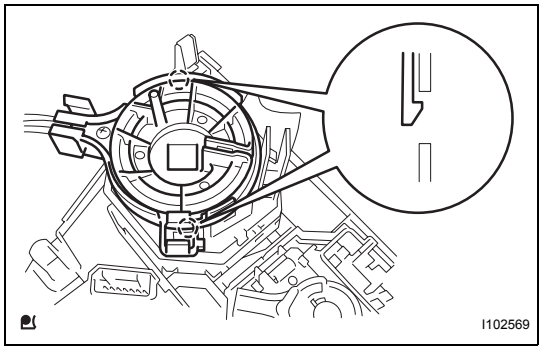




9. DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

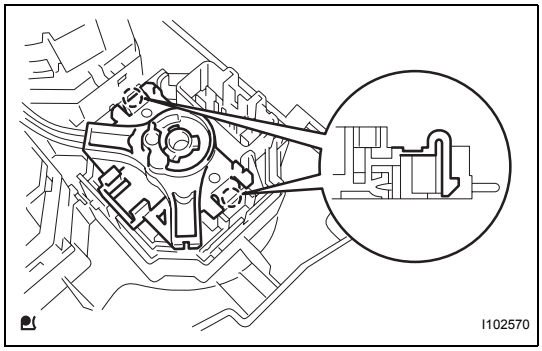
(a) Disconnect the air mix damper control cable from the clamp.

(b) Disengage the 2 claws and disconnect the air mix damper control cable.



10. DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

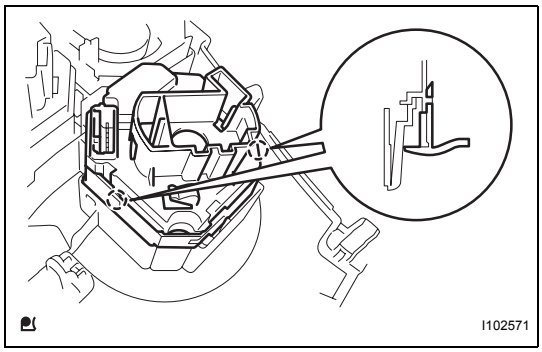
(a) Disengage the 2 claws and disconnect the defroster damper control cable.



11. DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

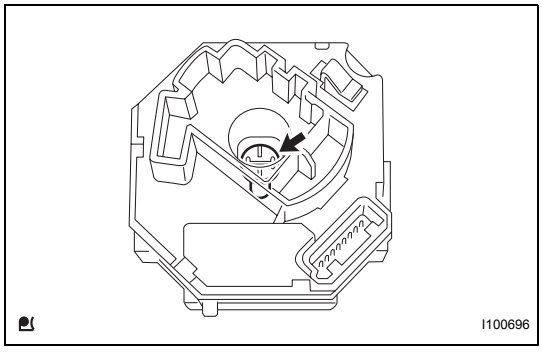
(a) Disengage the 2 claws and disconnect the air inlet damper control cable.

DISASSEMBLY

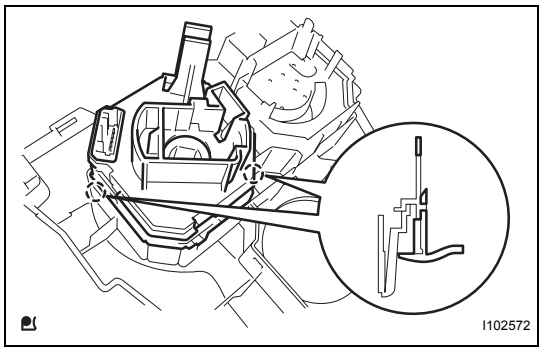


1. REMOVE NO. 3 HEATER CONTROL KNOB

(a) Disengage the 2 claws and remove the No. 3 heater control knob.

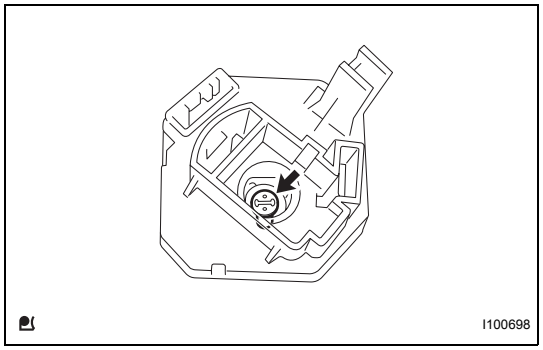


(b) Remove the bulb.

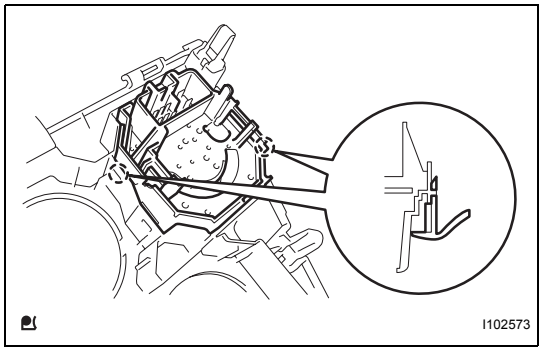


2. REMOVE HEATER CONTROL BASE SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the heater control base.

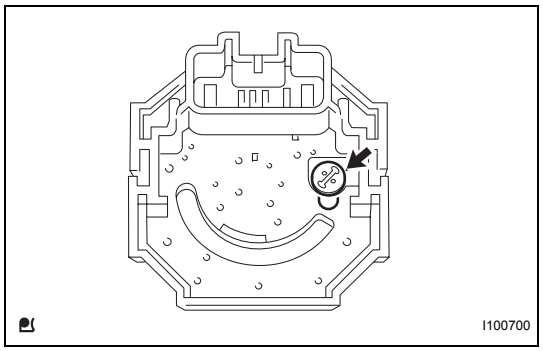


(b) Remove the bulb.

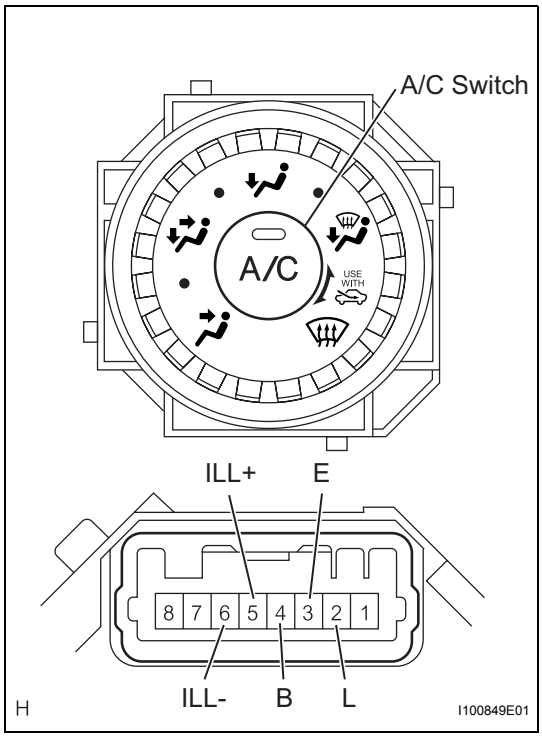


3. REMOVE HEATER CONTROL SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the heater control.



(b) Remove the bulb.



INSPECTION

1. INSPECT HEATER CONTROL BASE SUB-ASSEMBLY

(a) Check the heater control base resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (L) - 3 (E)	Always	10 kΩ or higher
2 (L) - 4 (B)	A/C switch OFF	10 kΩ or higher
3 (E) - 4 (B)	Always	10 kΩ or higher
2 (L) - 4 (B)	A/C switch ON	Below 1 Ω
5 (ILL+) - 6 (ILL-)	Always	Below 1 Ω

If the result is not as specified, replace the heater control base.

(b) Check the A/C indicator operation.

(1) Connect the positive (+) lead from the battery to terminal 2 (L) and the negative (-) lead to terminal (E).

(2) Push the A/C switch in and check that the indicator lights up.

Standard:

Indicator lights up

If the result is not as specified, replace the heater control base.

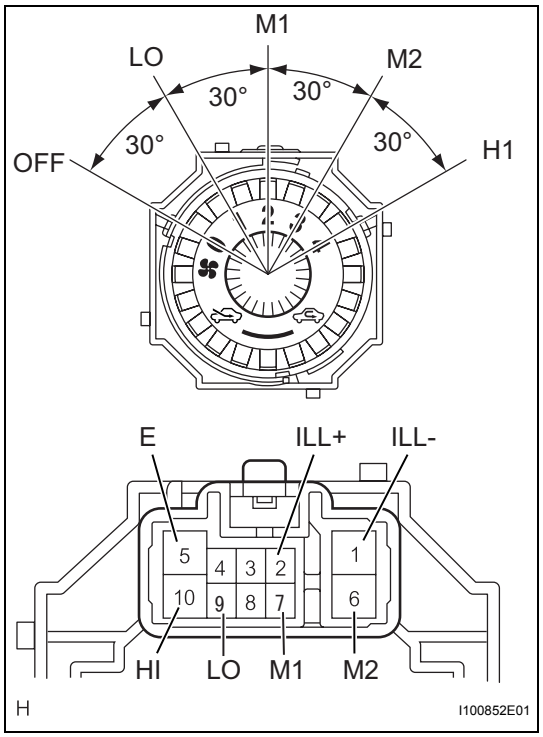
(c) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 5 (ILL+) and the negative (-) lead to terminal 6 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

If the result is not as specified, replace the bulb.



2. INSPECT HEATER CONTROL SUB-ASSEMBLY

(a) Check the heater control resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Switch Position	Tester Connection	Specified Condition
OFF	ALL - 5 (E)	10 kΩ or higher
LO	9 (LO) - 5 (E)	Below 1 Ω
LO - M1	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
M1	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
M1 - M2	9 (LO) - 5 (E) - 7 (M1) - 6 (M2)	Below 1 Ω
M2	9 (LO) - 5 (E) - 6 (M2)	Below 1 Ω
M2 - HI	9 (LO) - 5 (E) - 6 (M2) - 10 (HI)	Below 1 Ω
HI	9 (LO) - 5 (E) - 10 (HI)	Below 1 Ω

If the result is not as specified, replace the heater control.

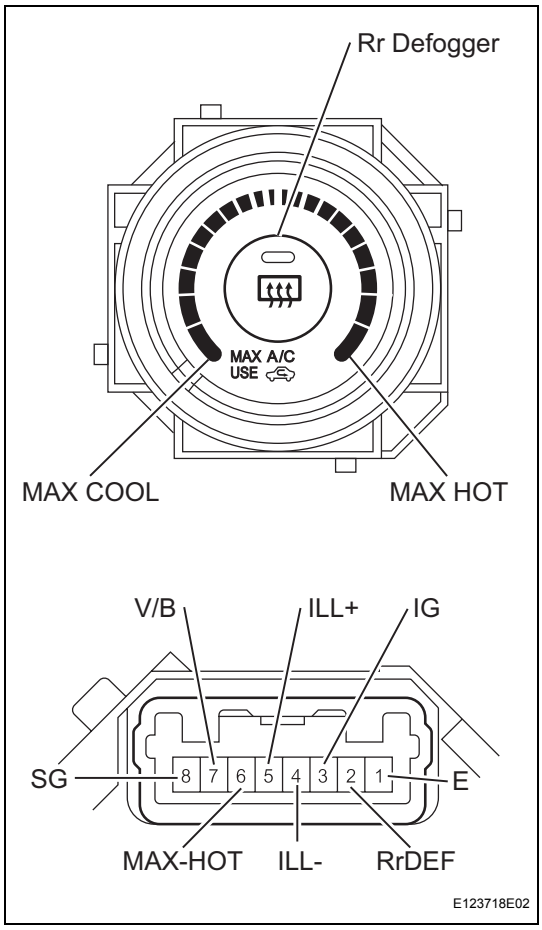
(b) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 2 (ILL+) and the negative (-) lead to terminal 1 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

If the result is not as specified, replace the bulb.



3. INSPECT NO. 3 HEATER CONTROL KNOB

(a) Check the No. 3 heater control knob resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (RrDEF) - 1 (E)	Rr. DEF switch OFF	10 kΩ or higher
2 (RrDEF) - 1 (E)	Rr. DEF switch ON	Below 1 Ω
3 (IG) - 6 (MAX HOT)	Except MAX HOT	10 kΩ or higher
3 (IG) - 6 (MAX HOT)	MAX HOT	Below 1 Ω
4 (ILL-) - 5 (ILL+)	Always	Below 1 Ω
7 (V/B) - 8 (SG)	Always	Below 1 Ω

If the result is not as specified, replace the No. 3 heater control knob.

(b) Check the Rr. DEF indicator operation.

(1) Connect the positive (+) lead from the battery to terminal 3 (IG) and the negative (-) lead to terminal 1 (E).

(2) Push the Rr. DEF switch in and check that the indicator lights up.

Standard:

Indicator lights up

If the result is not as specified, replace the No. 3 heater control knob.

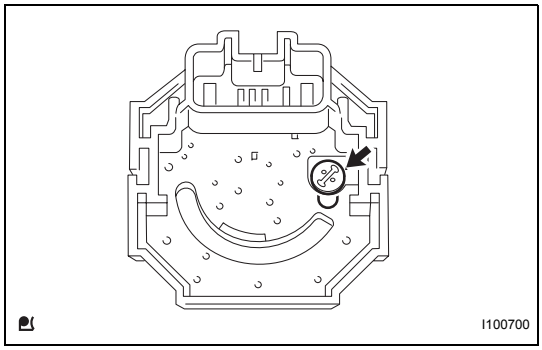
(c) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 5 (ILL+) and the negative (-) lead to terminal 4 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

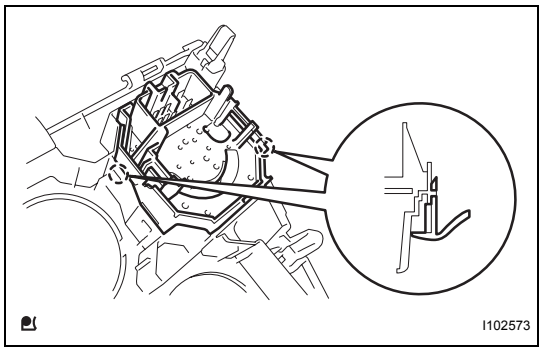
If the result is not as specified, replace the bulb.



REASSEMBLY

1. INSTALL HEATER CONTROL SUB-ASSEMBLY

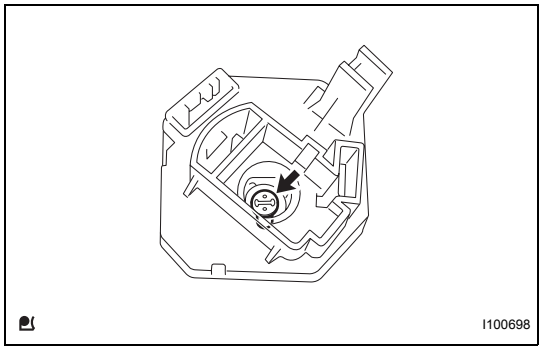
(a) Install the bulb.



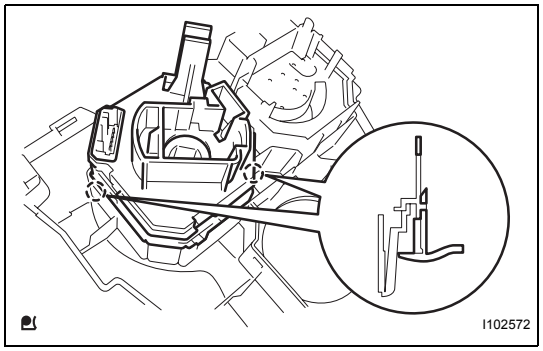
(b) Engage the 2 claws and install the heater control.

2. INSTALL HEATER CONTROL BASE SUB-ASSEMBLY

(a) Install the bulb.

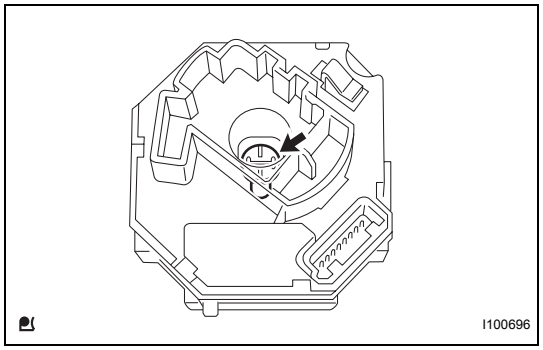


(b) Engage the 2 claws and install the heater control base.

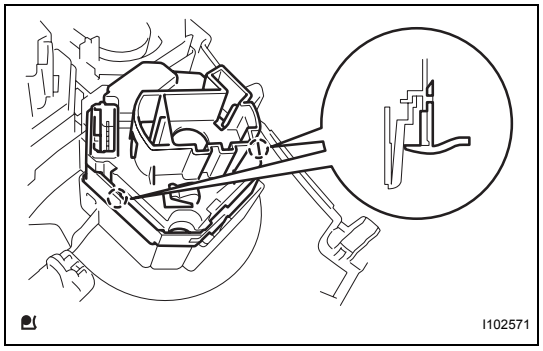


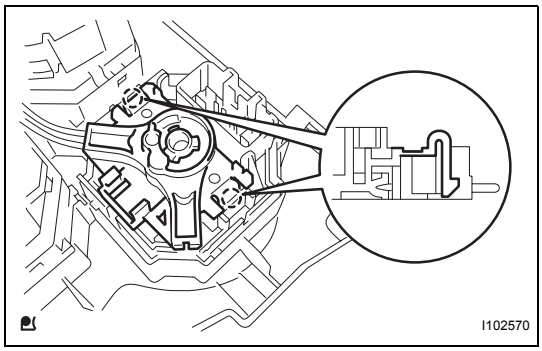
3. INSTALL NO. 3 HEATER CONTROL KNOB

(a) Install the bulb.



(b) Engage the 2 claws and install the No. 3 heater control knob.

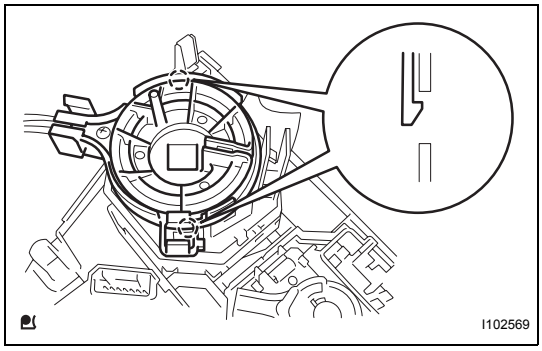




INSTALLATION

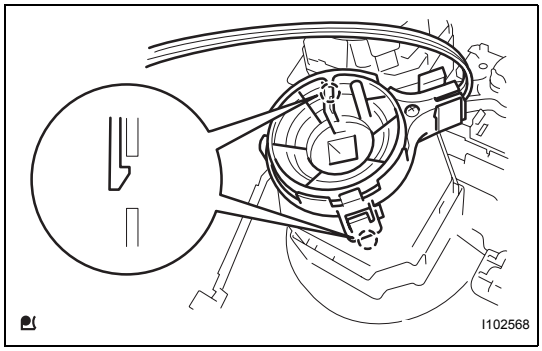
1. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Engage the 2 claws and connect the air inlet damper control cable.



2. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

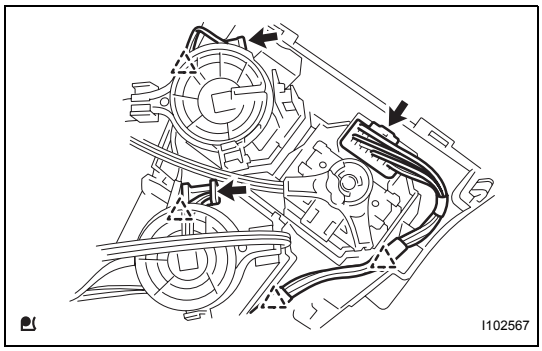
(a) Engage the 2 claws and connect the defroster damper control cable.



3. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

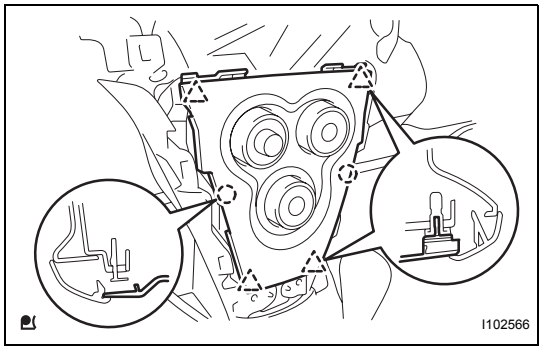
(a) Engage the 2 claws and connect the air mix control cable clamp.

(b) Connect the air mix damper control cable to the clamp.

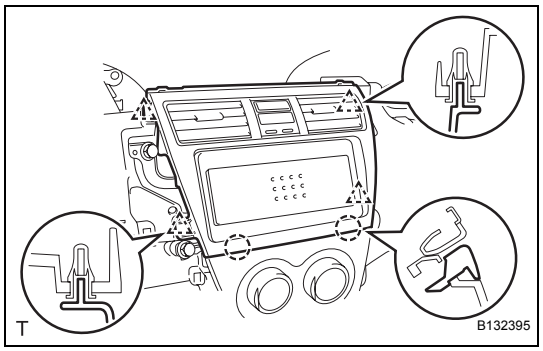


4. INSTALL AIR CONDITIONING PANEL ASSEMBLY

(a) Connect the 3 connectors and the 4 clamps.



(b) Engage the 4 clips and 2 claws and install the air conditioning panel.



5. **INSTALL INSTRUMENT CLUSTER FINISH PANEL CENTER SUB-ASSEMBLY**
   (a) Engage the 4 clips and 2 claws and install the instrument cluster finish panel.
6. **INSTALL RADIO RECEIVER ASSEMBLY**
7. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

AIR CONDITIONING PANEL ASSEMBLY (for Hatchback)

BULB
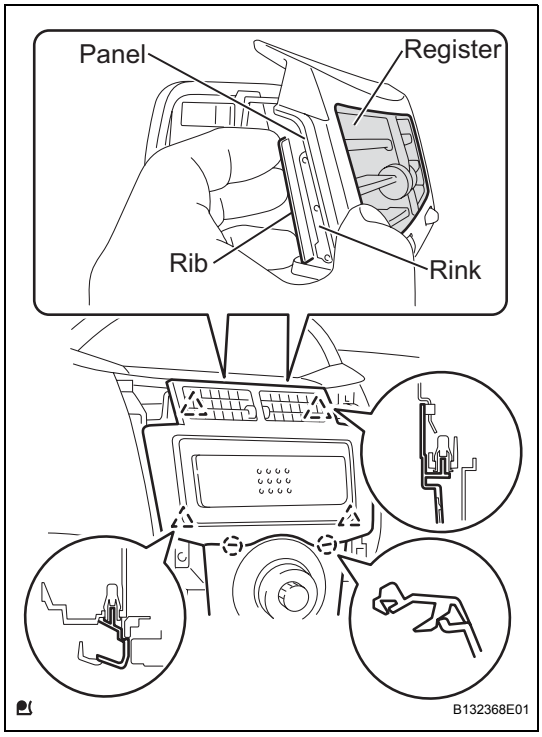
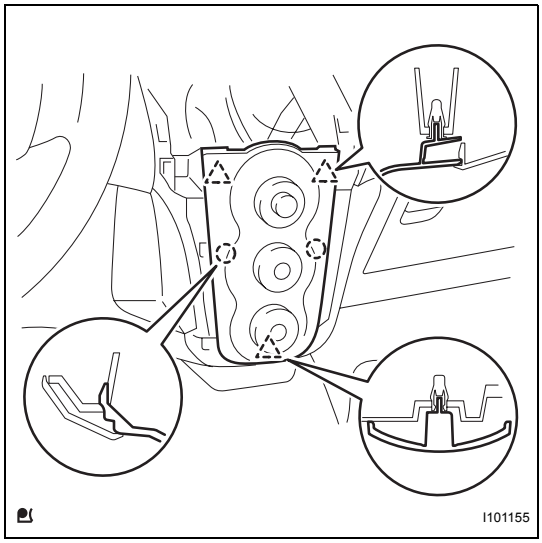
NO. 3 HEATER CONTROL KNOB
INSTRUMENT CLUSTER FINISH
PANEL LOWER CENTER
I100683E01

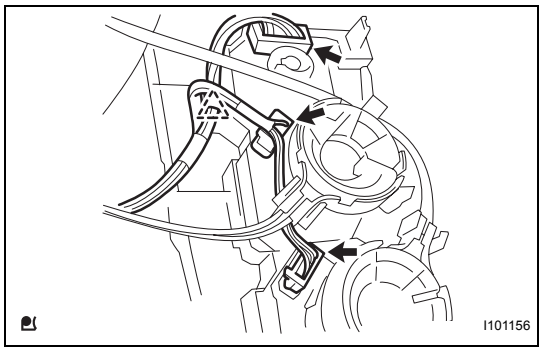
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
4. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER**
   (a) Disengage the 2 claws and 4 clips and remove the instrument cluster finish panel center.
   NOTICE:
   - **Grip the rib portion of the instrument cluster finish panel center by hand to remove it.**
   - **To avoid breakage of the instrument cluster finish panel center when removing it, do not apply excessive force to the register or pull out the rink or panel portions.**

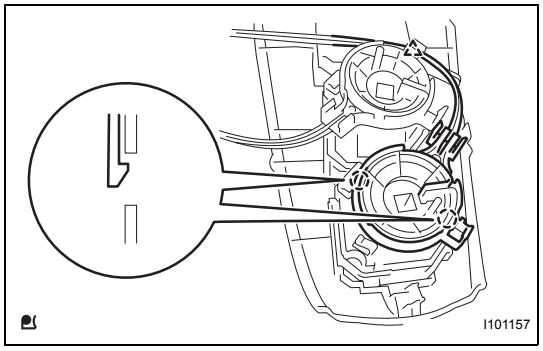


6. **REMOVE AIR CONDITIONING PANEL ASSEMBLY**
   (a) Disengage the 3 clips and 2 claws and remove the air conditioning panel.



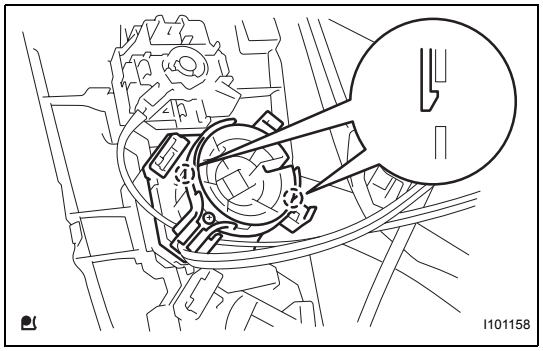


(b) Disconnect the 3 connectors and the clamp.



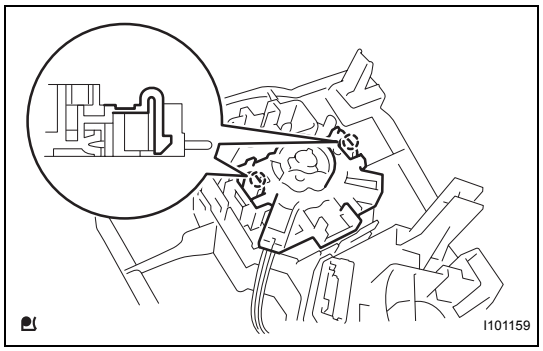
7. DISCONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Disconnect the air mix control cable from the clamp.
(b) Disengage the 2 claws and disconnect the air mix damper control cable.



8. DISCONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

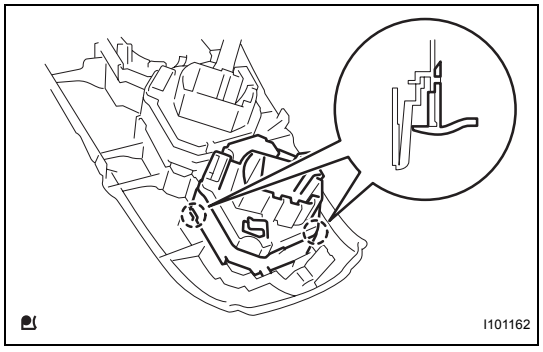
(a) Disengage the 2 claws and disconnect the defroster damper control cable.



9. DISCONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

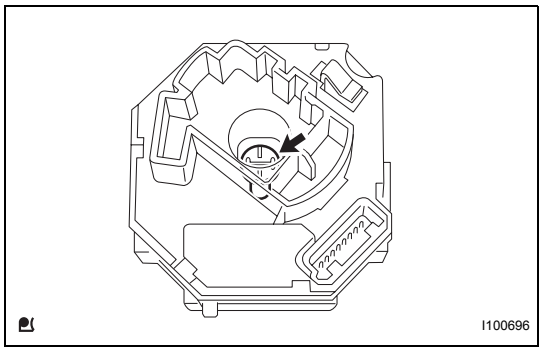
(a) Disengage the 2 claws and disconnect the air inlet damper control cable.

DISASSEMBLY

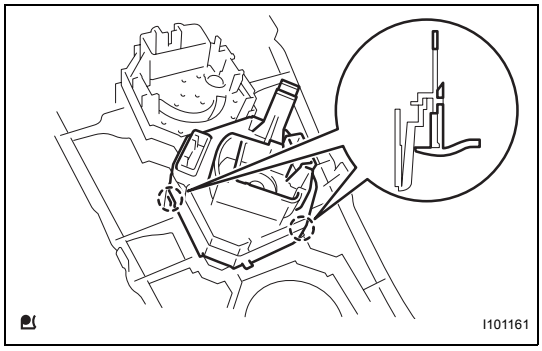


1. REMOVE NO. 3 HEATER CONTROL KNOB

(a) Disengage the 2 claws and remove the NO. 3 heater control knob.

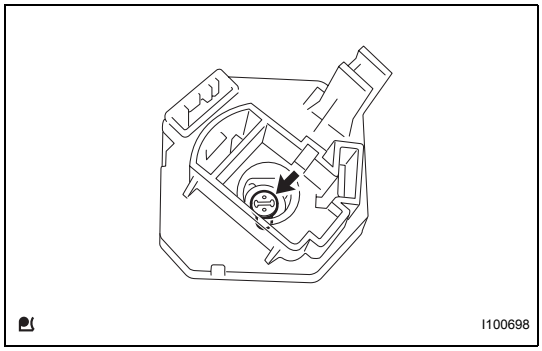


(b) Remove the bulb.

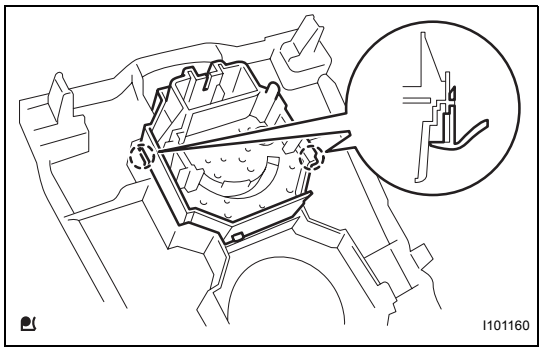


2. REMOVE HEATER CONTROL BASE SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the heater control base.

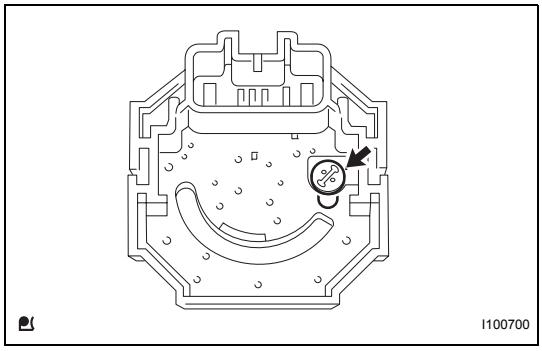


(b) Remove the bulb.

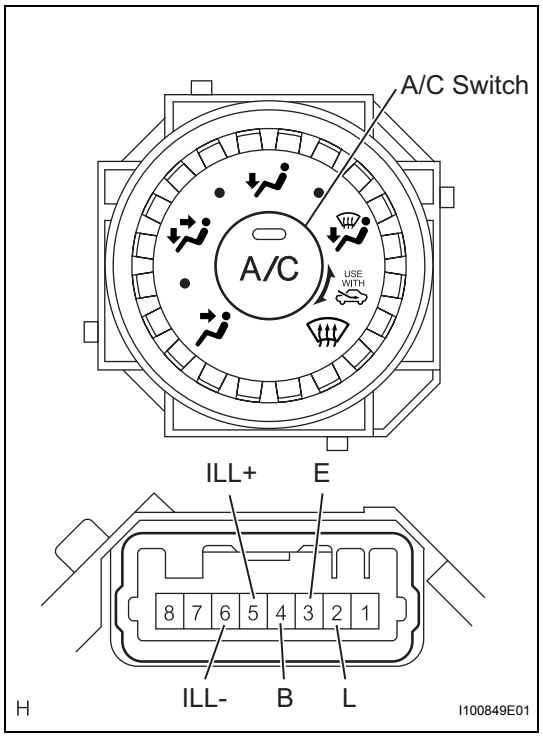


3. REMOVE HEATER CONTROL SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the heater control.



(b) Remove the bulb.



INSPECTION

1. INSPECT HEATER CONTROL BASE SUB-ASSEMBLY

(a) Check the heater control base resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (L) - 3 (E)	Always	10 kΩ or higher
2 (L) - 4 (B)	A/C switch OFF	10 kΩ or higher
3 (E) - 4 (B)	Always	10 kΩ or higher
2 (L) - 4 (B)	A/C switch ON	Below 1 Ω
5 (ILL+) - 6 (ILL-)	Always	Below 1 Ω

If the result is not as specified, replace the heater control base.

(b) Check the A/C indicator operation.

(1) Connect the positive (+) lead from the battery to terminal 2 (L) and the negative (-) lead to terminal (E).

(2) Push the A/C switch in and check that the indicator lights up.

Standard:

indicator lights up

If the result is not as specified, replace the heater control base.

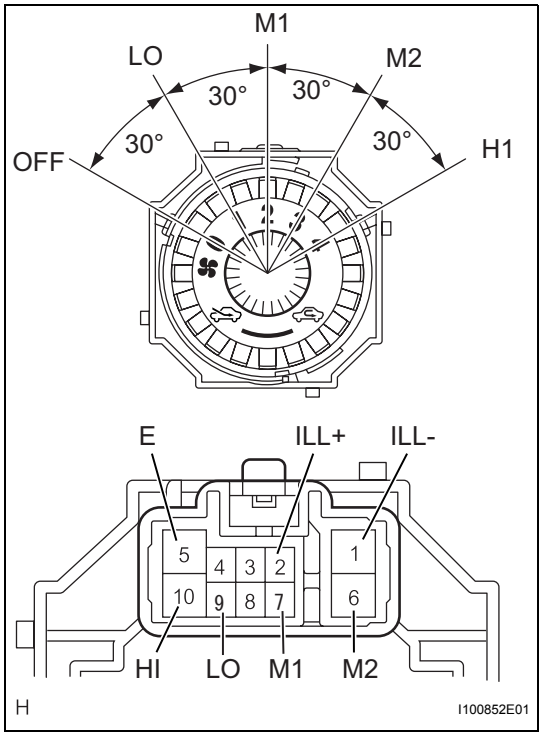
(c) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 5 (ILL+) and the negative (-) lead to terminal 6 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

If the result is not as specified, replace the bulb.



2. INSPECT HEATER CONTROL SUB-ASSEMBLY

(a) Check the heater control resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Switch Position	Tester Connection	Specified Condition
OFF	ALL - 5 (E)	10 kΩ or higher
LO	9 (LO) - 5 (E)	Below 1 Ω
LO - M1	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
M1	9 (LO) - 5 (E) - 7 (M1)	Below 1 Ω
M1 - M2	9 (LO) - 5 (E) - 7 (M1) - 6 (M2)	Below 1 Ω
M2	9 (LO) - 5 (E) - 6 (M2)	Below 1 Ω
M2 - HI	9 (LO) - 5 (E) - 6 (M2) - 10 (HI)	Below 1 Ω
HI	9 (LO) - 5 (E) - 10 (HI)	Below 1 Ω

If the result is not as specified, replace the heater control.

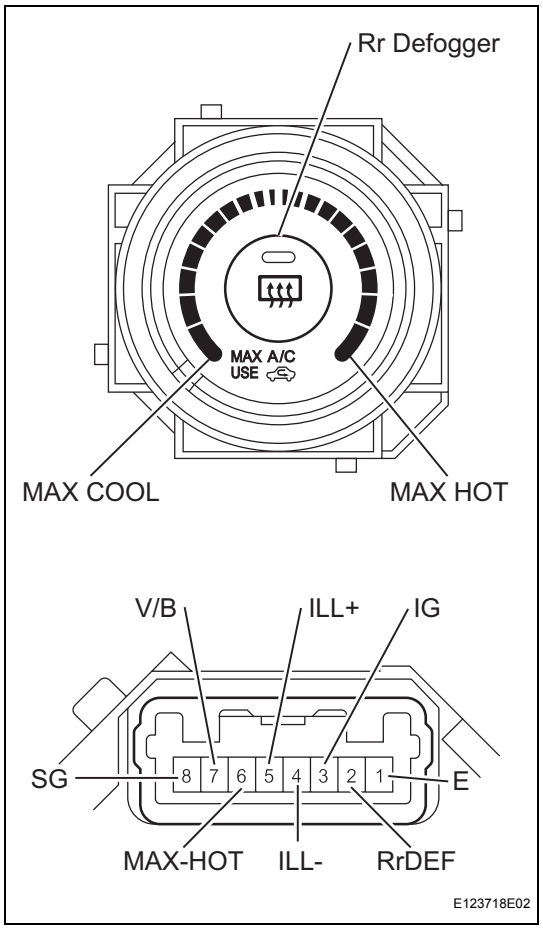
(b) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 2 (ILL+) and the negative (-) lead to terminal 1 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

If the result is not as specified, replace the bulb.



3. INSPECT NO. 3 HEATER CONTROL KNOB

(a) Check the No. 3 heater control knob resistance.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the values in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (RrDEF) - 1 (E)	Rr. DEF switch OFF	10 kΩ or higher
2 (RrDEF) - 1 (E)	Rr. DEF switch ON	Below 1 Ω
3 (IG) - 6 (MAX HOT)	Except MAX HOT	10 kΩ or higher
3 (IG) - 6 (MAX HOT)	MAX HOT	Below 1 Ω
4 (ILL-) - 5 (ILL+)	Always	Below 1 Ω
7 (V/B) - 8 (SG)	Always	Below 1 Ω

If the result is not as specified, replace the No. 3 heater control knob.

(b) Check the Rr. DEF indicator operation.

(1) Connect the positive (+) lead from the battery to terminal 3 (IG) and the negative (-) lead to terminal 1 (E).

(2) Push the Rr. DEF switch in and check that the indicator lights up.

Standard:

indicator lights up

If the result is not as specified, replace the No. 3 heater control knob.

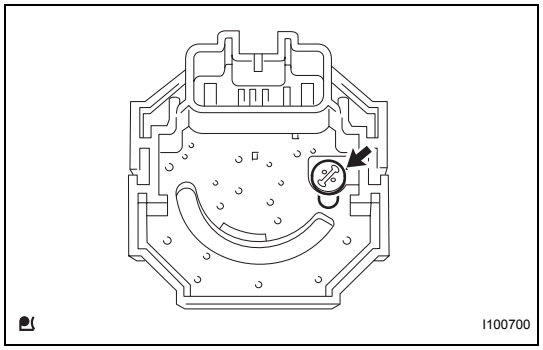
(c) Check the illumination operation.

(1) Connect the positive (+) lead from the battery to terminal 5 (ILL+) and the negative (-) lead to terminal 4 (ILL-), then check that the bulb illuminates.

Standard:

Bulb illuminates

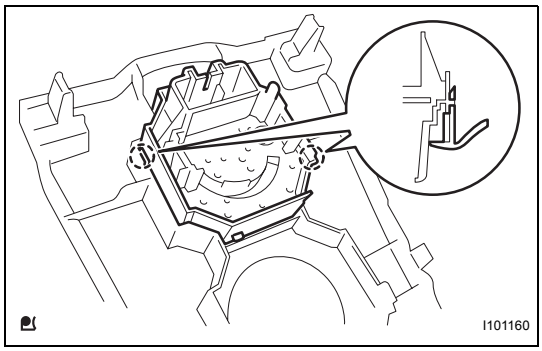
If the result is not as specified, replace the bulb.



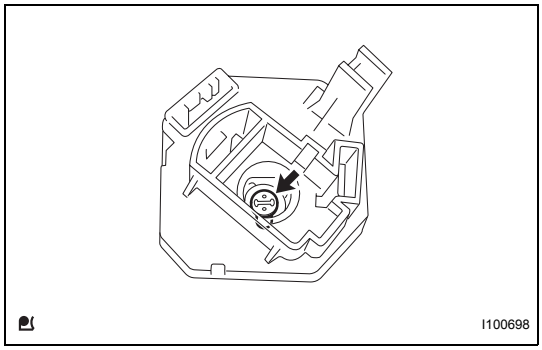
REASSEMBLY

1. INSTALL HEATER CONTROL SUB-ASSEMBLY

(a) Install the bulb.

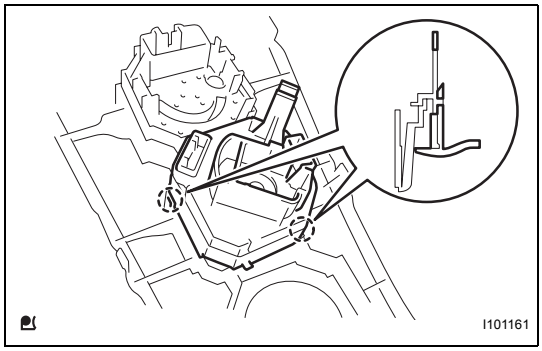


(b) Engage the 2 claws and install the heater control.

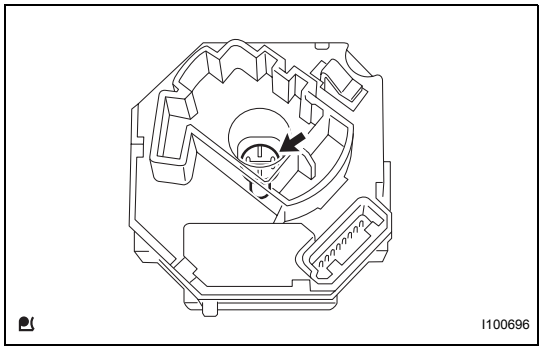


2. INSTALL HEATER CONTROL BASE SUB-ASSEMBLY

(a) Install the bulb.

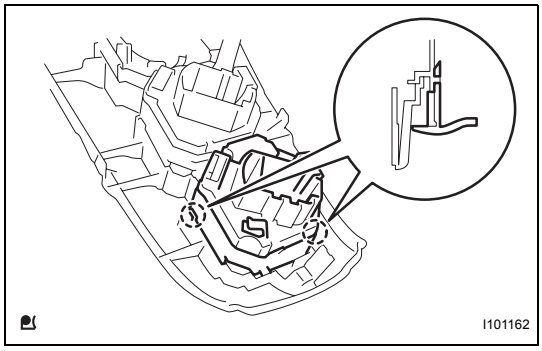


(b) Engage the 2 claws and install the heater control base.

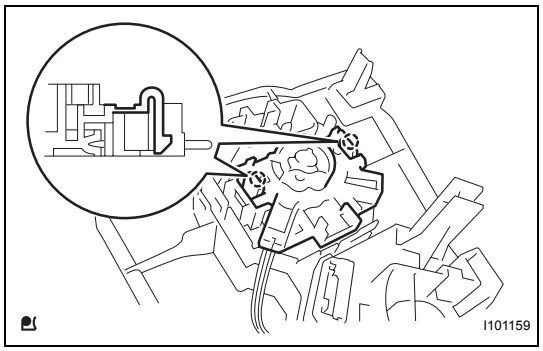


3. INSTALL NO. 3 HEATER CONTROL KNOB

(a) Install the bulb.



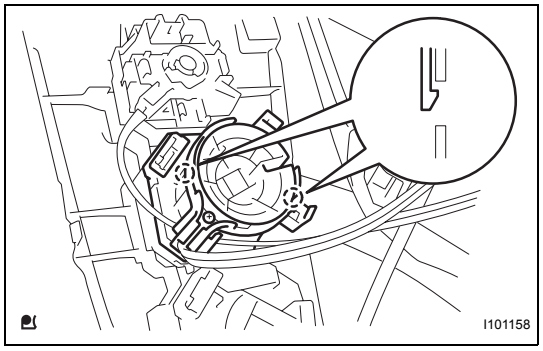
(b) Engage the 2 claws and install the No. 3 heater control knob.



INSTALLATION

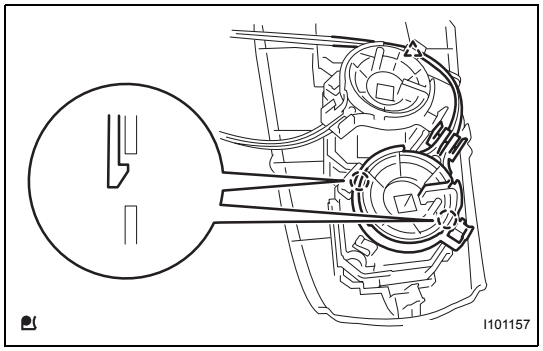
1. CONNECT AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

(a) Engage the 2 claws and connect the air inlet damper control cable.



2. CONNECT DEFROSTER DAMPER CONTROL CABLE SUB-ASSEMBLY

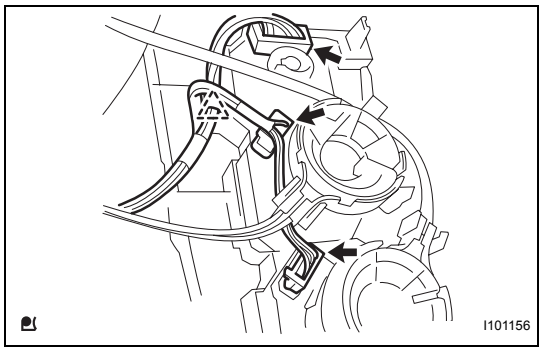
(a) Engage the 2 claws and connect the defroster damper control cable.



3. CONNECT AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY

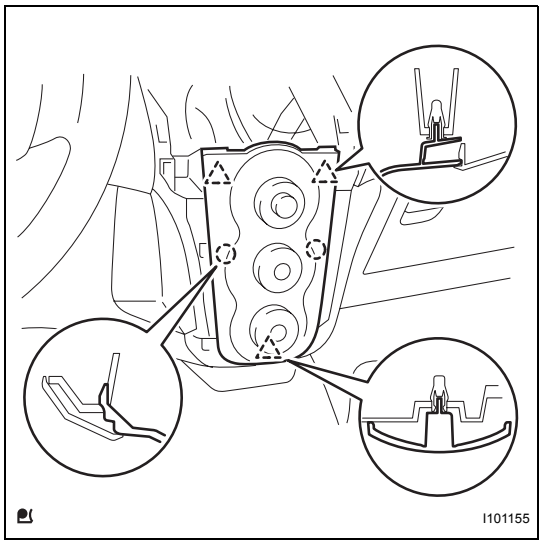
(a) Engage the 2 claws and connect the air mix control cable clamp.

(b) Connect the defroster damper control cable to the clamp.

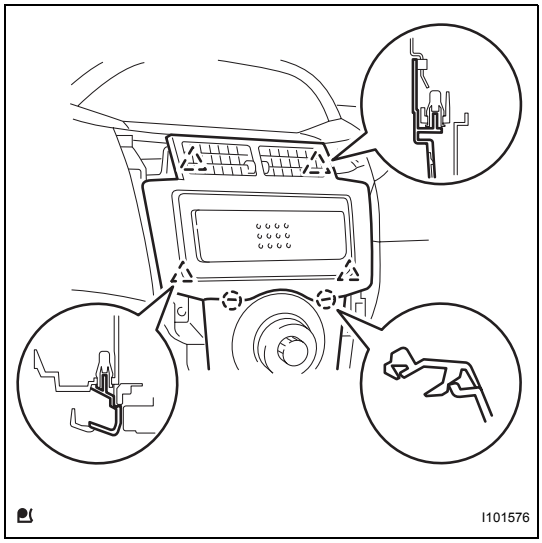


4. INSTALL AIR CONDITIONING PANEL ASSEMBLY

(a) Connect the 3 connectors and the clamp.



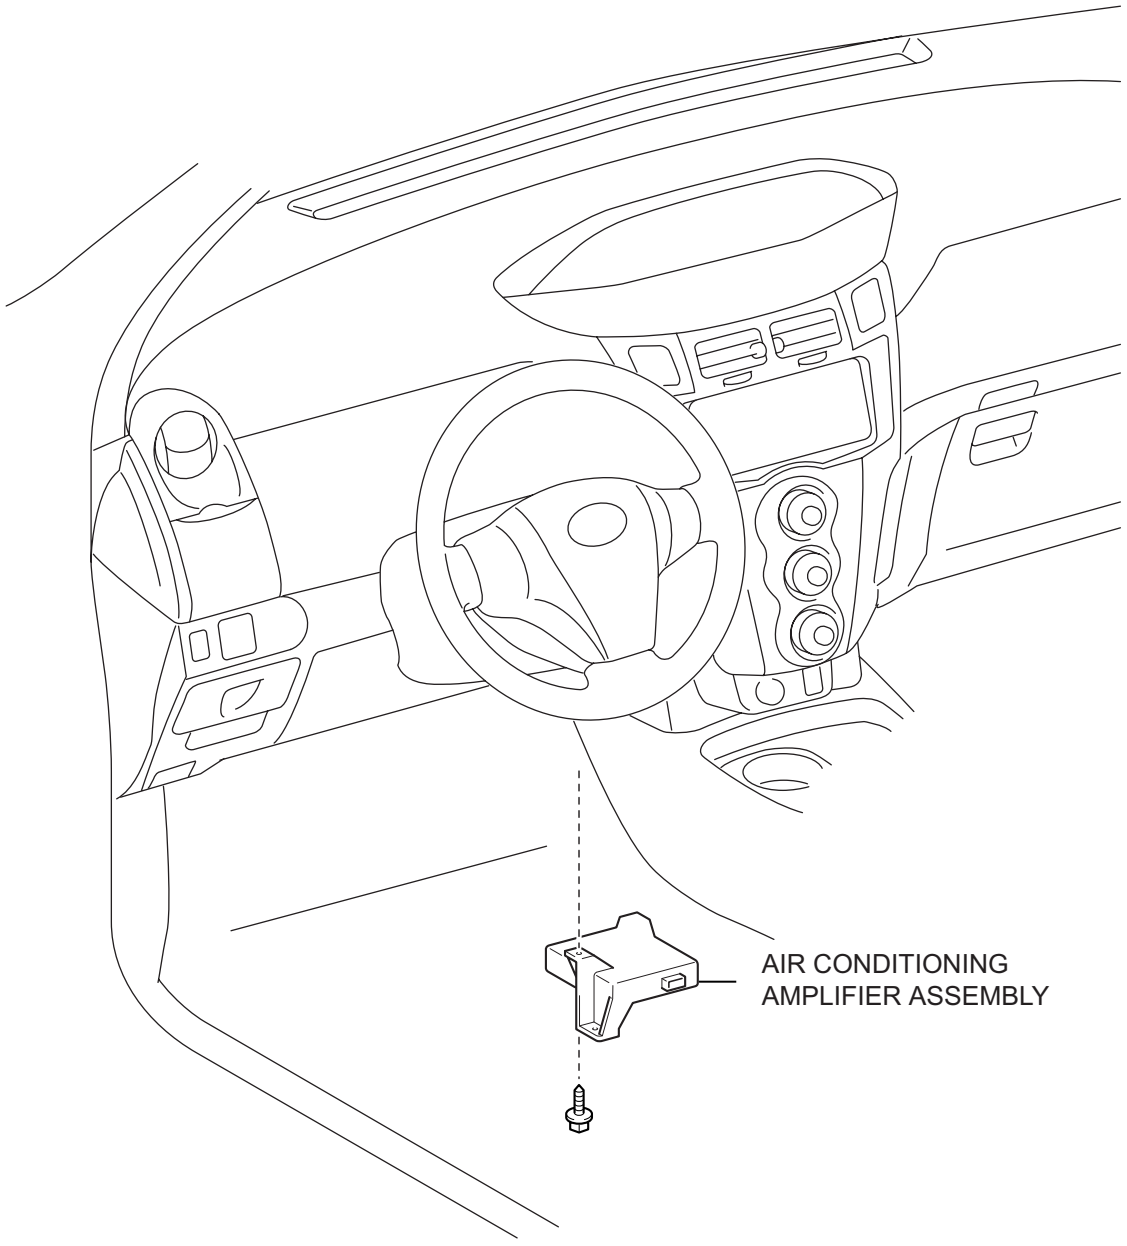
(b) Engage the 3 clips and 2 claws and install the air conditioning panel.



5. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY CENTER**
   (a) Engage the 4 clips and 2 claws and install the air conditioning panel.
6. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
7. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

AIR CONDITIONING AMPLIFIER

COMPONENTS



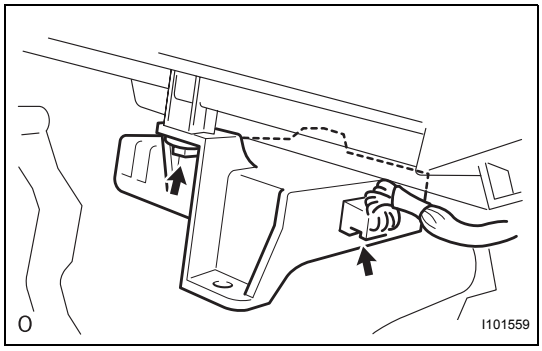
O

I101558E01

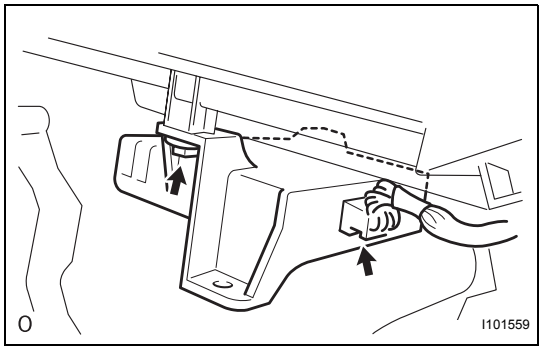
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY**
   (a) Remove the screw.
   (b) Disconnect the connector and remove the air conditioning amplifier.



INSTALLATION



1. **INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY**
   (a) Connect the connector.
   (b) Install the air conditioning amplifier with the screw.

2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

AIRBAG SYSTEM

PRECAUTION

CAUTION:

- **The vehicle is equipped with a Supplemental Restraint System (SRS), which consists of a driver airbag, front passenger airbag, side airbags, curtain shield airbags and front seat belt pretensioners. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Furthermore, if a mistake is made in servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the correct procedures as indicated in the repair manual.**
- **Wait at least 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery before starting the operation.**
  (The SRS is equipped with a back-up power source, so if work is started within 90 seconds of disconnecting the negative (-) terminal cable of the battery, the SRS may be deployed).
- **Do not directly expose the steering pad, front passenger airbag assembly, center airbag sensor assembly, front airbag sensor, front seat inner belt assembly, seat position sensor, occupant classification ECU, front seat side airbag assembly, side airbag sensor, curtain shield airbag assembly, rear airbag sensor or front seat outer belt assembly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.**
- **Even in the case of a minor collision when the SRS does not deploy, the following parts should be inspected.**
  - **Steering pad**
  - **Front passenger airbag assembly**
  - **Center airbag sensor assembly**
  - **Front airbag sensor**
  - **Front seat inner belt assembly**
  - **Seat position sensor**
  - **Occupant classification ECU**
  - **Front seat side airbag assembly**
  - **Side airbag sensor**
  - **Curtain shield airbag assembly**
  - **Rear airbag sensor**

- **Front seat outer belt assembly**

- **Before commencing repair work, remove the airbag sensor if any kind of shock is likely to occur to the airbag sensor during the operation.**
- **Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.**
- **Never disassemble or repair any of the following parts in order to reuse them. If any of these parts have been dropped, or a defect is found (e.g. cracks, dents or any other defects) in any of the housings, brackets or connectors, then replace the part with a new one.**
  - **Steering pad**
  - **Front passenger airbag assembly**
  - **Center airbag sensor assembly**
  - **Front airbag sensor**
  - **Front seat inner belt assembly**
  - **Seat position sensor**
  - **Occupant classification ECU**
  - **Front seat side airbag assembly**
  - **Side airbag sensor**
  - **Curtain shield airbag assembly**
  - **Rear airbag sensor**
  - **Front seat outer belt assembly**
- **Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached to the periphery of the SRS components. Follow the instructions in the cautions.**
- **After work on the SRS is completed, perform the SRS warning light check (See page RS-31).**
- **When the negative (-) terminal cable is disconnected from the battery, the memory will be cleared. Therefore make a record of the contents stored in each system before starting work. When the work is finished, reset each system as it was before. Never use a back-up power supply from outside the vehicle to avoid erasing the memory in any system.**
- **If the vehicle is equipped with a mobile communication system, refer to the precautions in the INTRODUCTION section.**

HINT:

In the airbag system, the center airbag sensor assembly, front airbag sensor LH and RH, side airbag sensor LH and RH, rear airbag sensor LH and RH are collectively referred to as the airbag sensors.

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

(a) Before starting the following operations, wait for at least 90 seconds after disconnecting the negative (-) terminal cable from the battery:

(1) Replacement of the airbag sensors

(2) Adjustment of the front/rear doors of the vehicle equipped with the side airbags and curtain shield airbags (fitting adjustment)

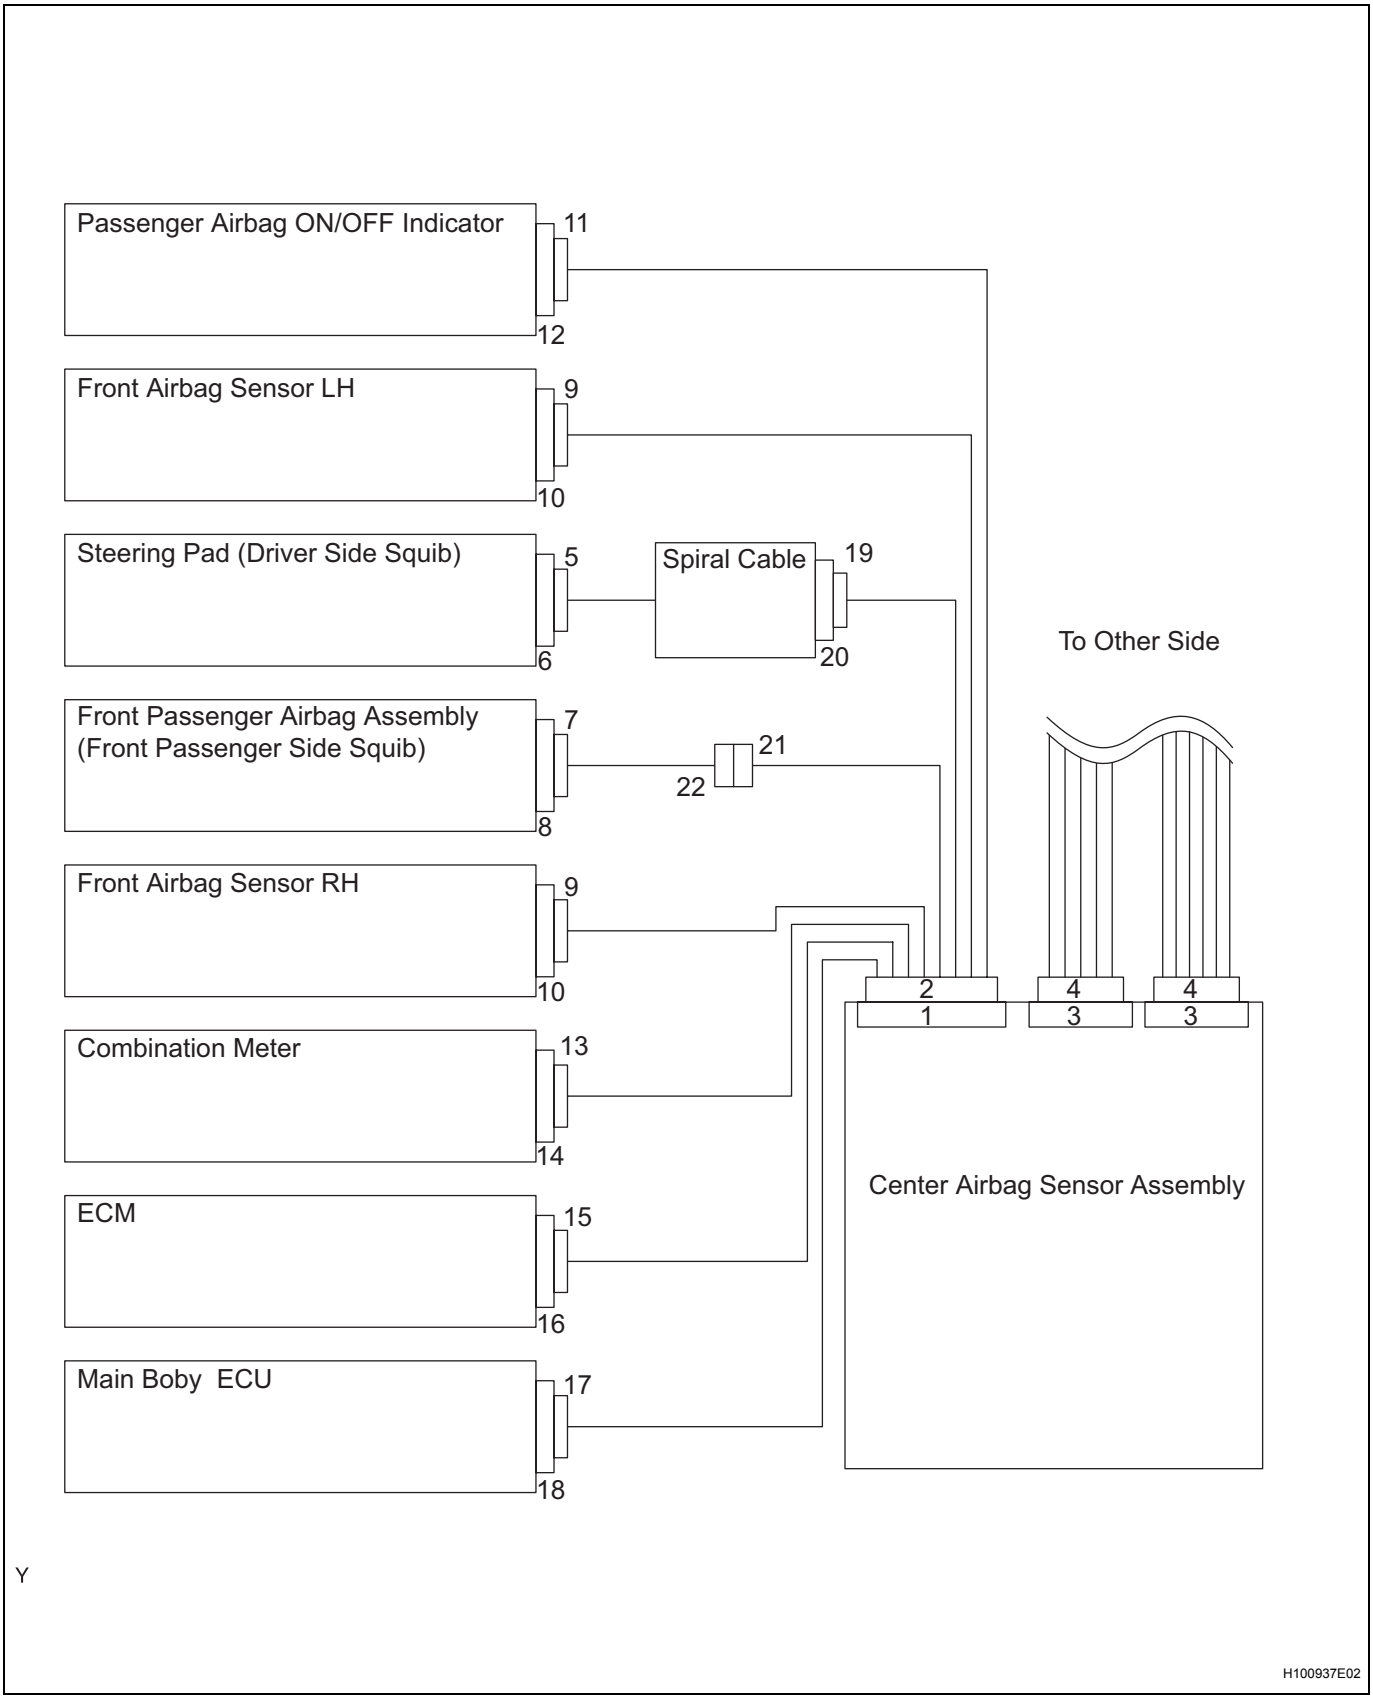
(b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.
(c) Do not use the airbag sensors which have been dropped during the operation or transportation.
(d) Do not disassemble the airbag sensors.

2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

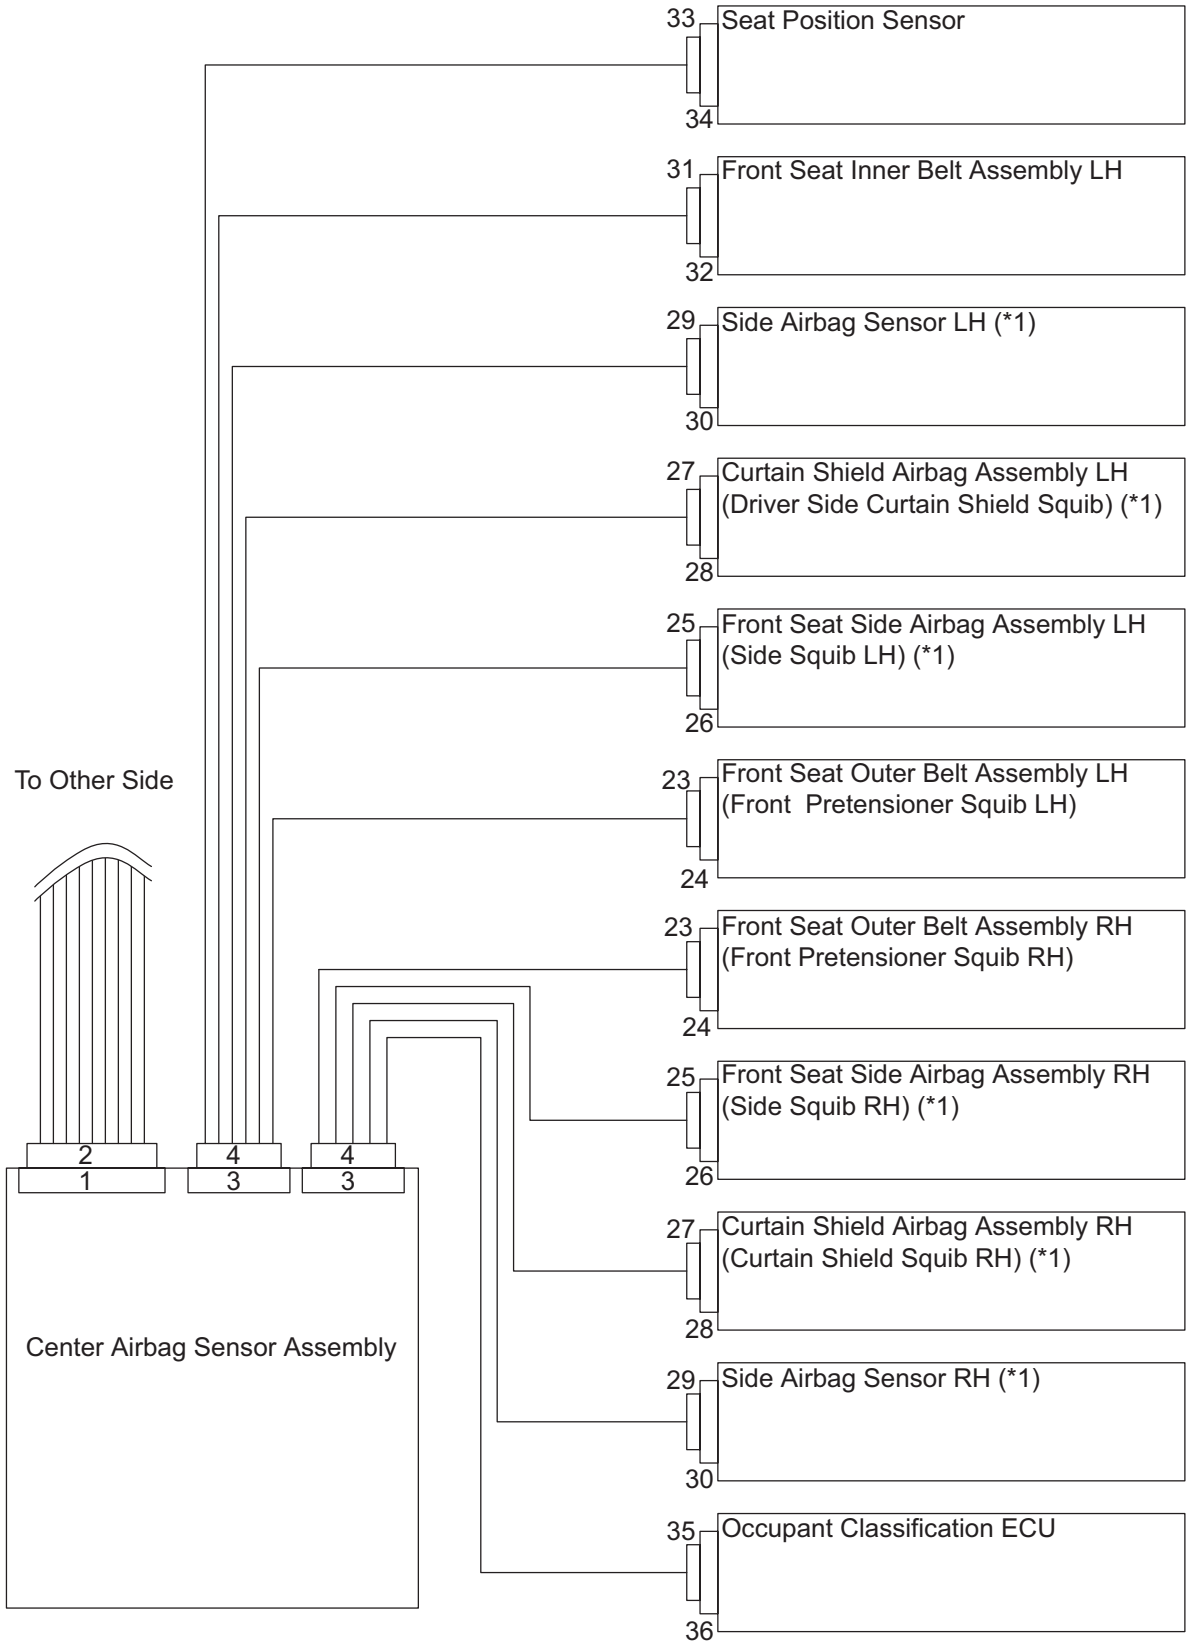
(a) When the airbag has not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.
(b) When any of the airbags have deployed, replace the airbag sensors and check the installation condition.

3. SRS CONNECTORS

(a) SRS connectors are located as shown in the following illustration.



RS

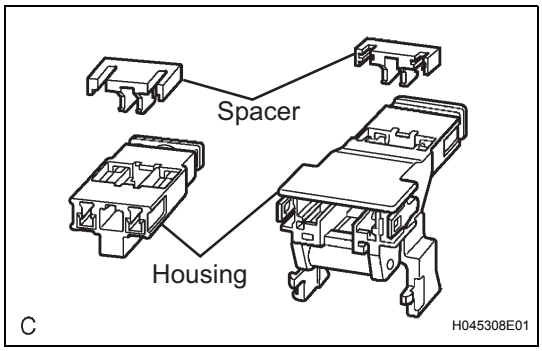


*1: w/ Side Airbag Assembly and Curtain Shield Airbag Assembly

Y

H100938E02

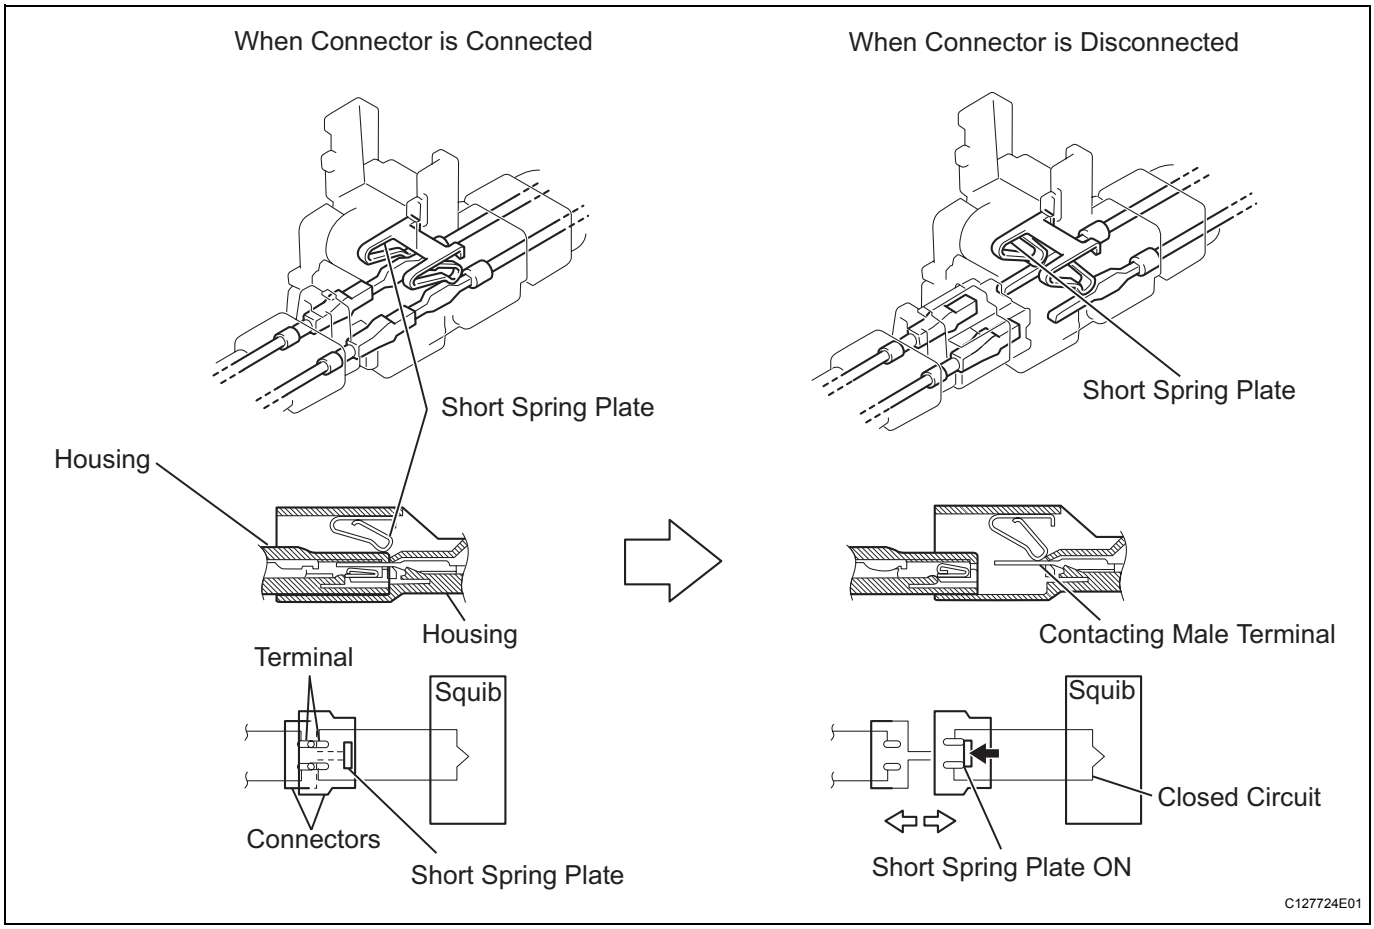
No.	Item	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 2, 4, 9, 11, 13, 15, 19, 21, 22, 25, 29, 31, 33
(2)	Activation Prevention Mechanism	Connectors 2, 4, 6, 8, 20, 22, 24, 26, 28
(3)	Half Connection Prevention Mechanism	Connectors 9, 19, 21, 26, 29
(4)	Connector Position Assurance Mechanism	Connector 9
(5)	Connector Lock Mechanism (1)	Connectors 5, 7, 23, 27
(6)	Connector Lock Mechanism (2)	Connectors 2, 4
(7)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3



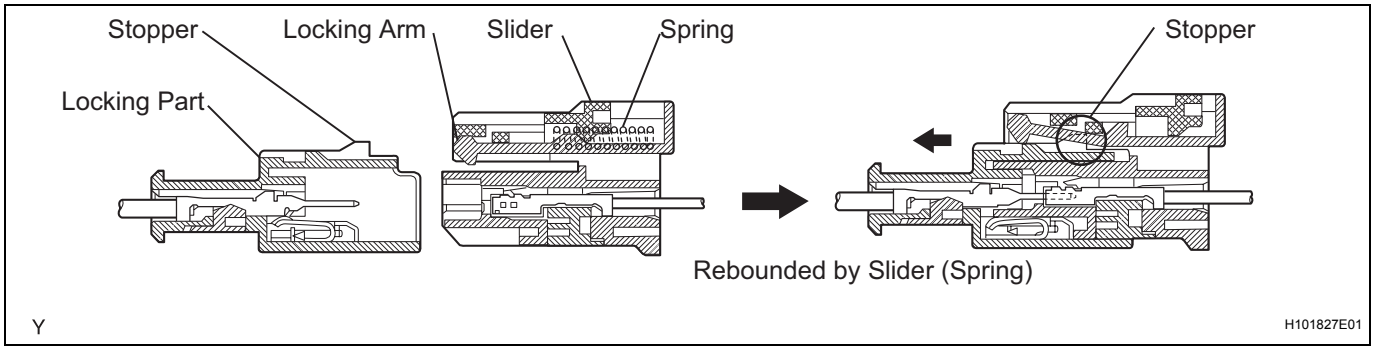
(b) All connectors in the SRS except the seat position sensor connector and the occupant classification ECU connector are colored yellow to distinguish them from other connectors. Some connectors have special functions, and are specially designed for the SRS. These connectors use durable gold-plated terminals, and are placed in the locations shown on the previous page to ensure high reliability.

(1) Terminal twin-lock mechanism:
Each connector is a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent the terminals from becoming disconnected.

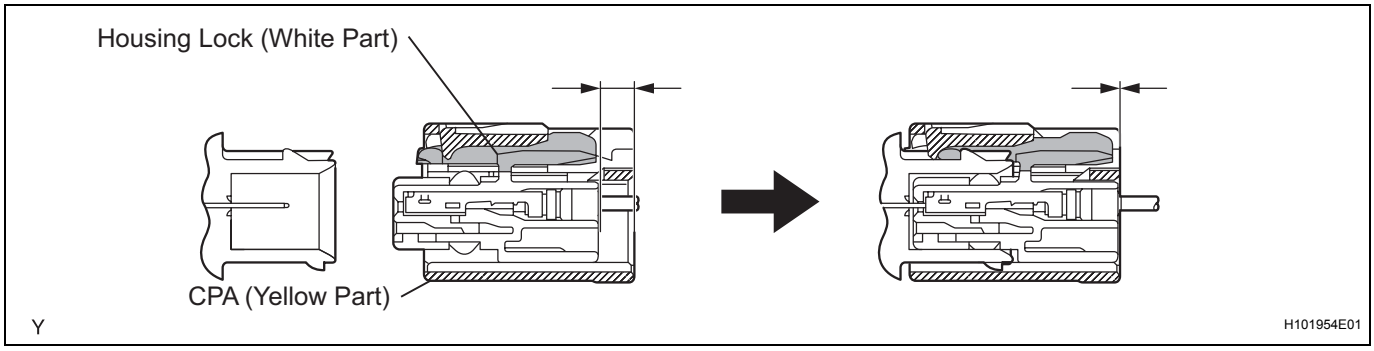
(2) Activation prevention mechanism:
Each connector contains a short spring plate. When the connector is disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.



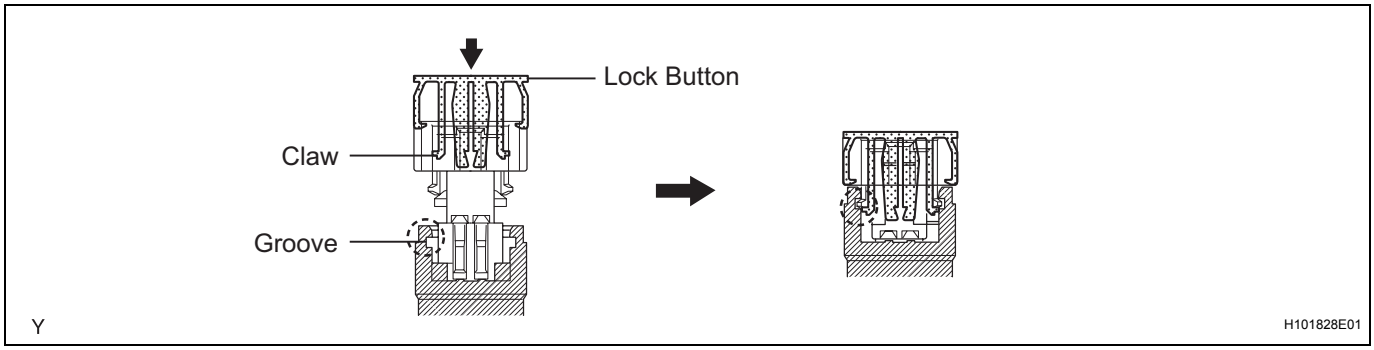
(3) Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected by the spring operation so that no continuity exists.



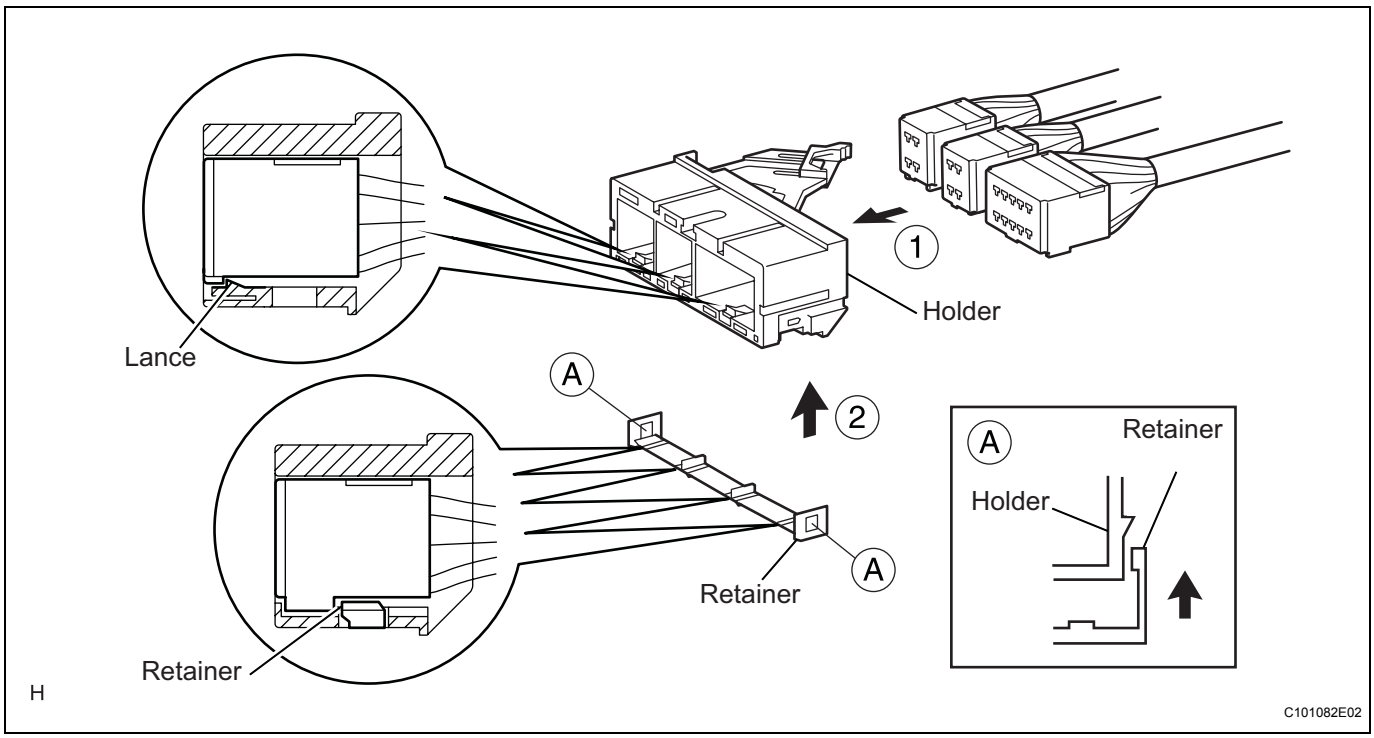
(4) Connector position assurance mechanism:
The CPA (yellow part) slides, which completes the connector engagement, only when the housing lock (white part) is completely engaged.



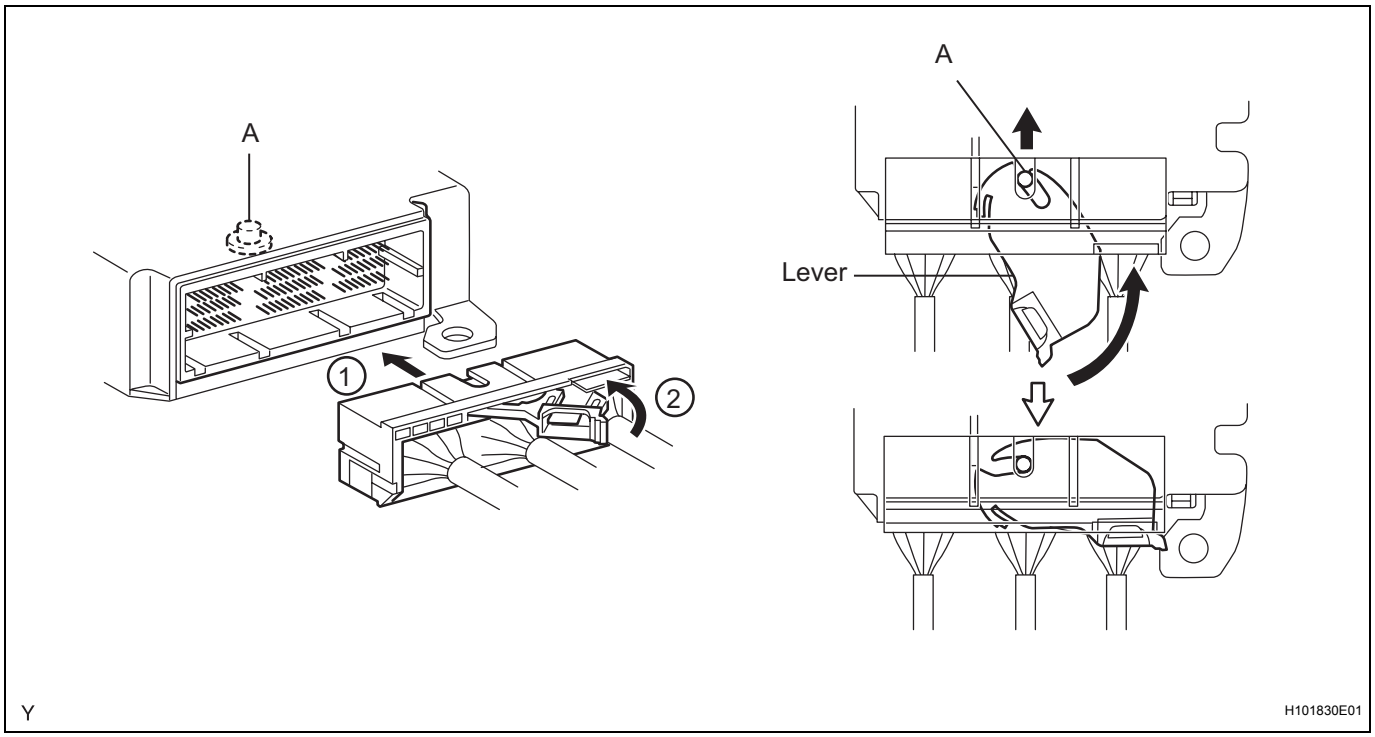
(5) Connector lock mechanism (1):
Locking the connector lock button connects the connector.



(6) Connector lock mechanism (2):
Both the primary lock with holder lances and the secondary lock with a retainer prevent the connectors from becoming disconnected.



(7) Improper connection prevention lock mechanism:
When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.

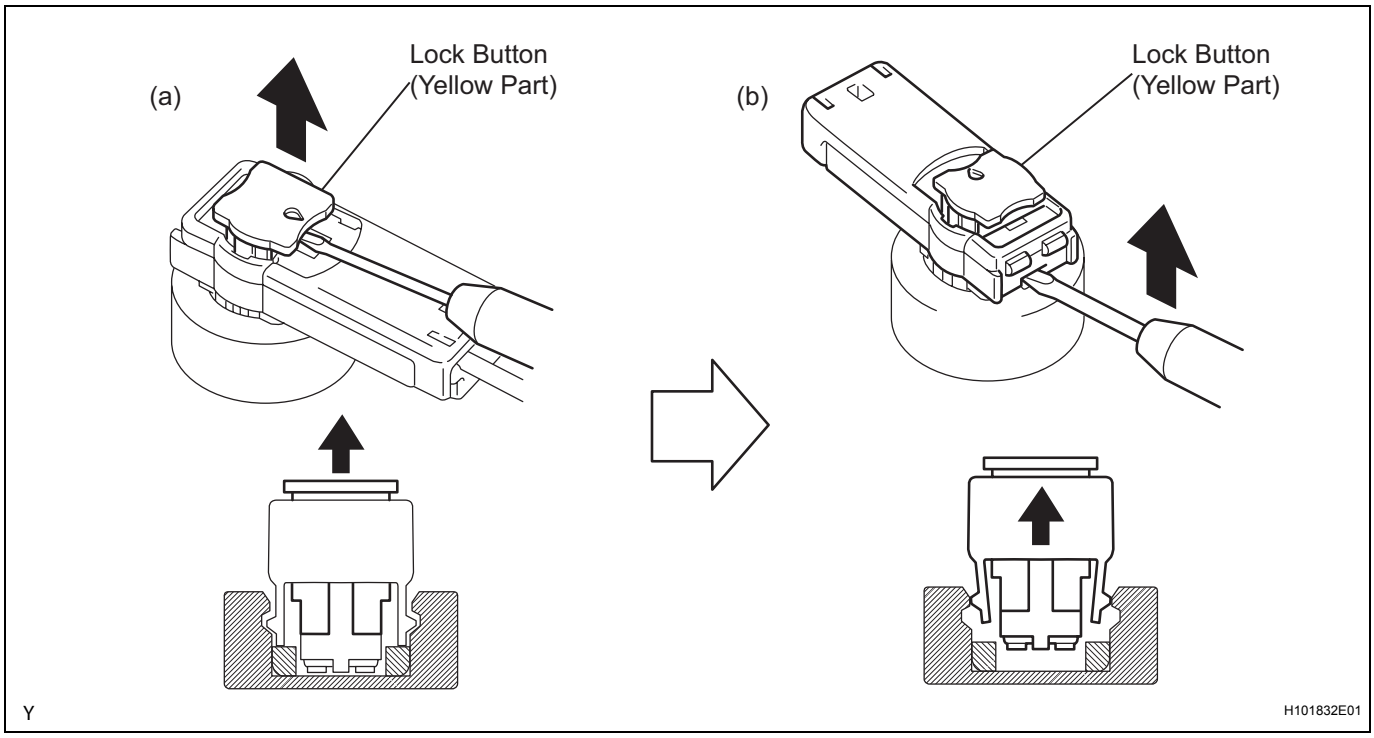


4. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY AND FRONT SEAT OUTER BELT ASSEMBLY

HINT:
Tape up the screwdriver tip before use.

(a) Release the lock button (yellow part) of the connector using a screwdriver.

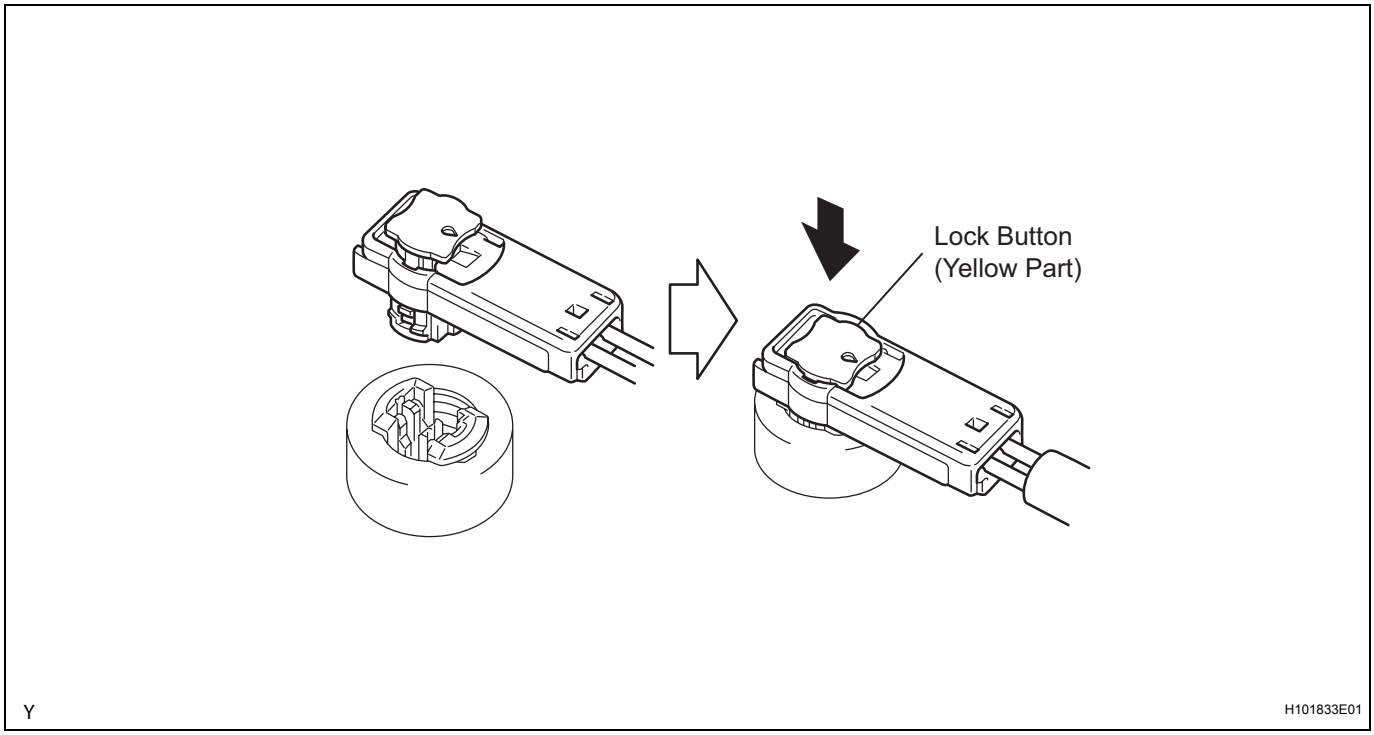
(b) Insert the screwdriver tip between the connector and the base, and then raise the connector.



5. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY AND FRONT SEAT OUTER BELT ASSEMBLY

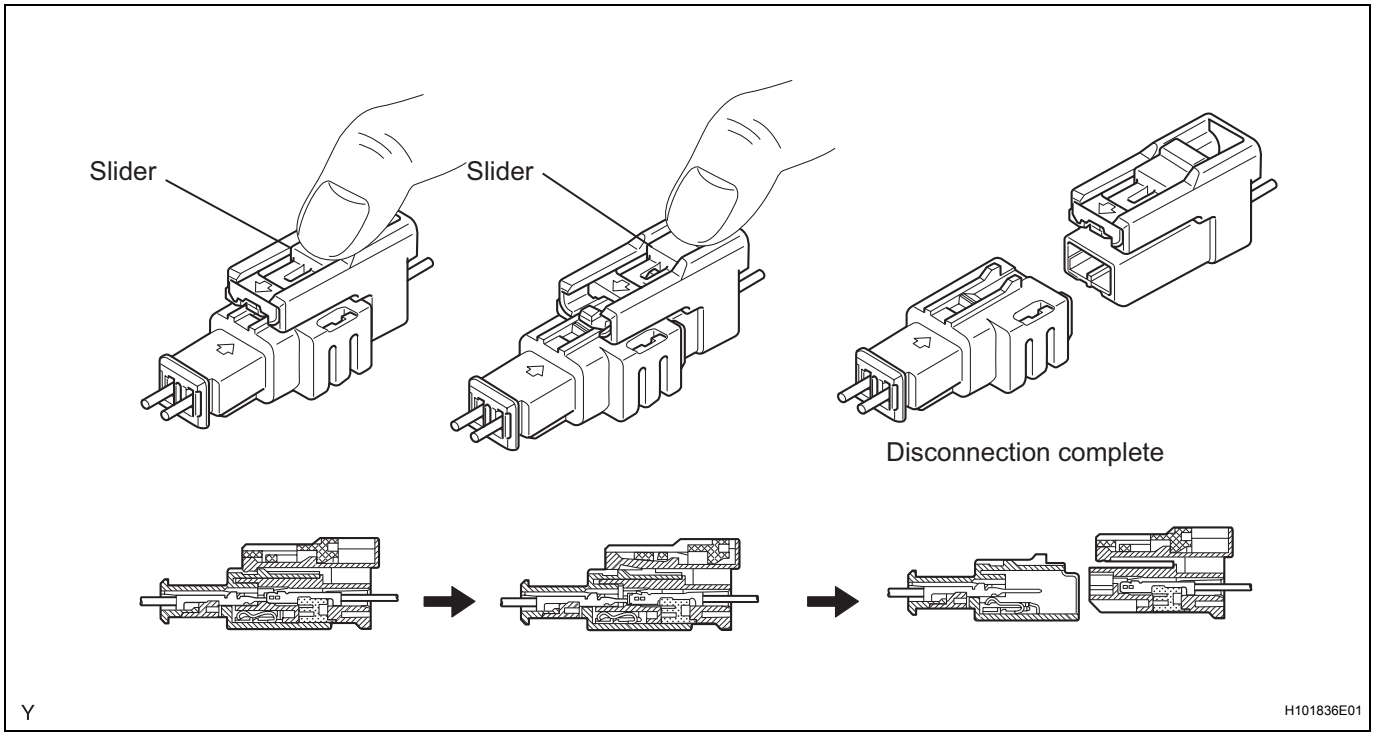
(a) Connect the connector.

(b) Push the lock button (yellow part) of the connector down securely. (When locking, a click sound can be heard.)



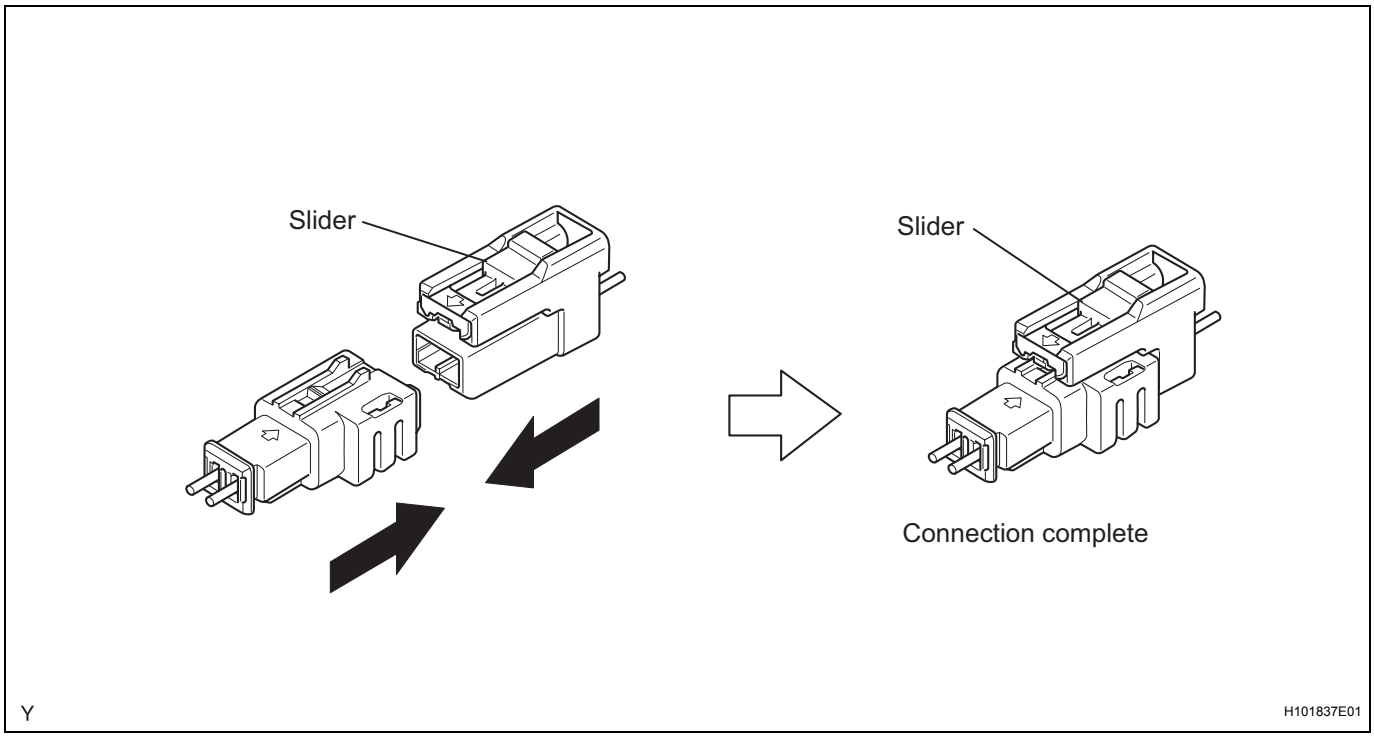
6. DISCONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



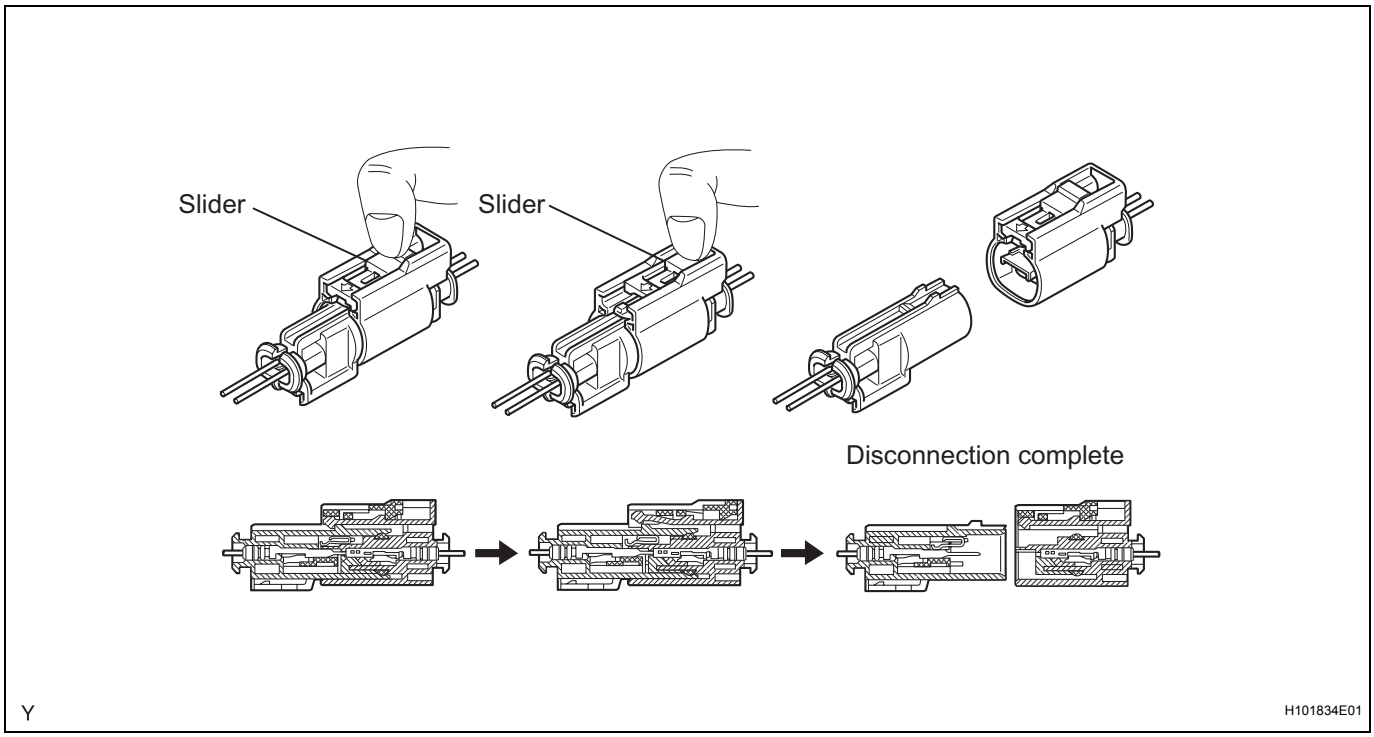
7. CONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider sides. Do not touch the slider while connecting, as this may result in an insecure fit.



8. DISCONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY AND REAR SEAT AIRBAG ASSEMBLY

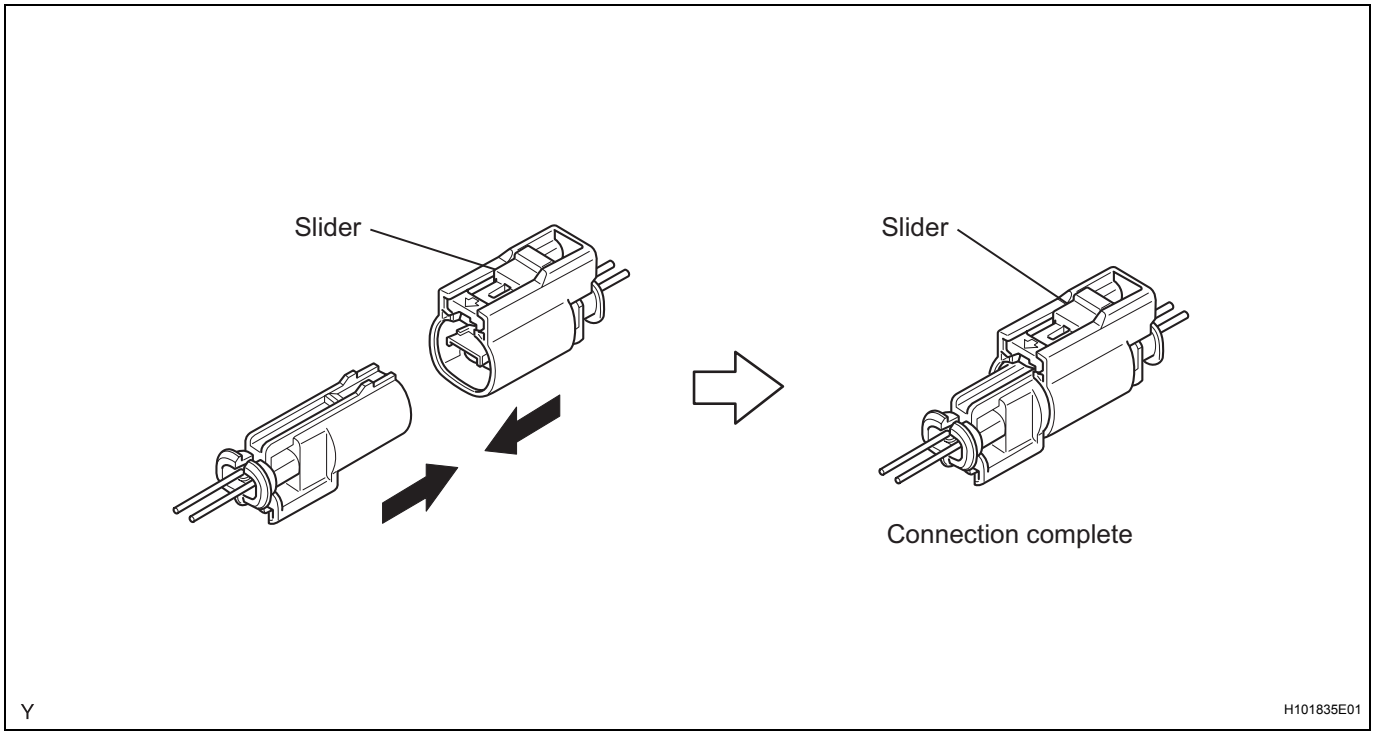
(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



9. CONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY AND REAR SEAT AIRBAG ASSEMBLY

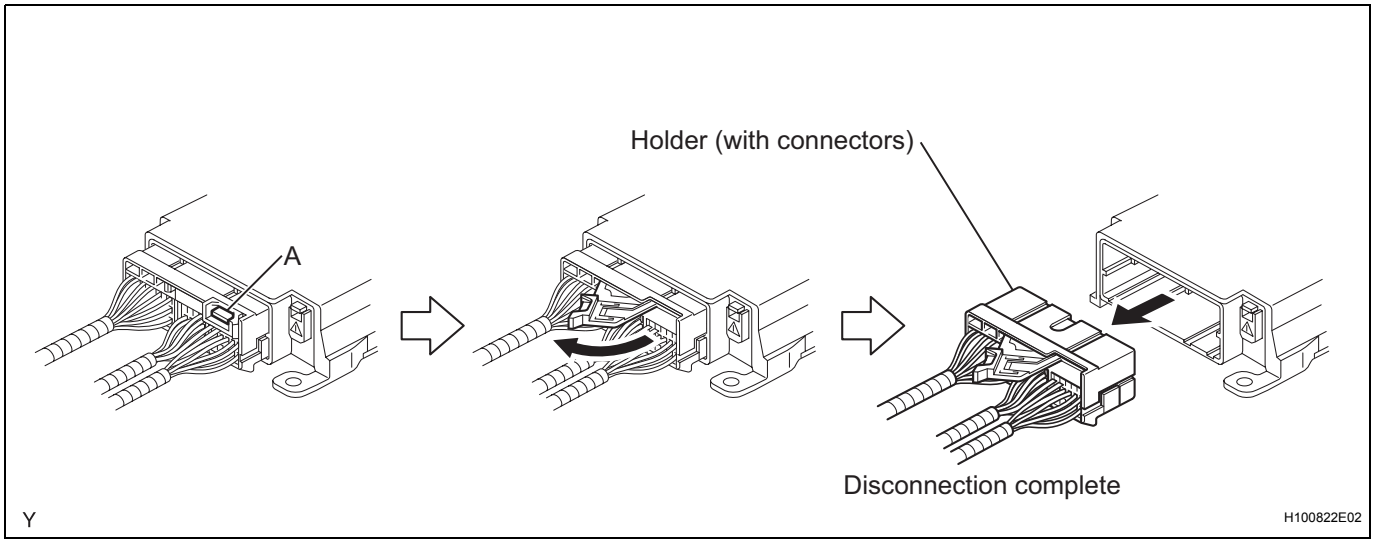
(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider slides. Do not touch the slider while connecting, as this may result in an insecure fit.

RS



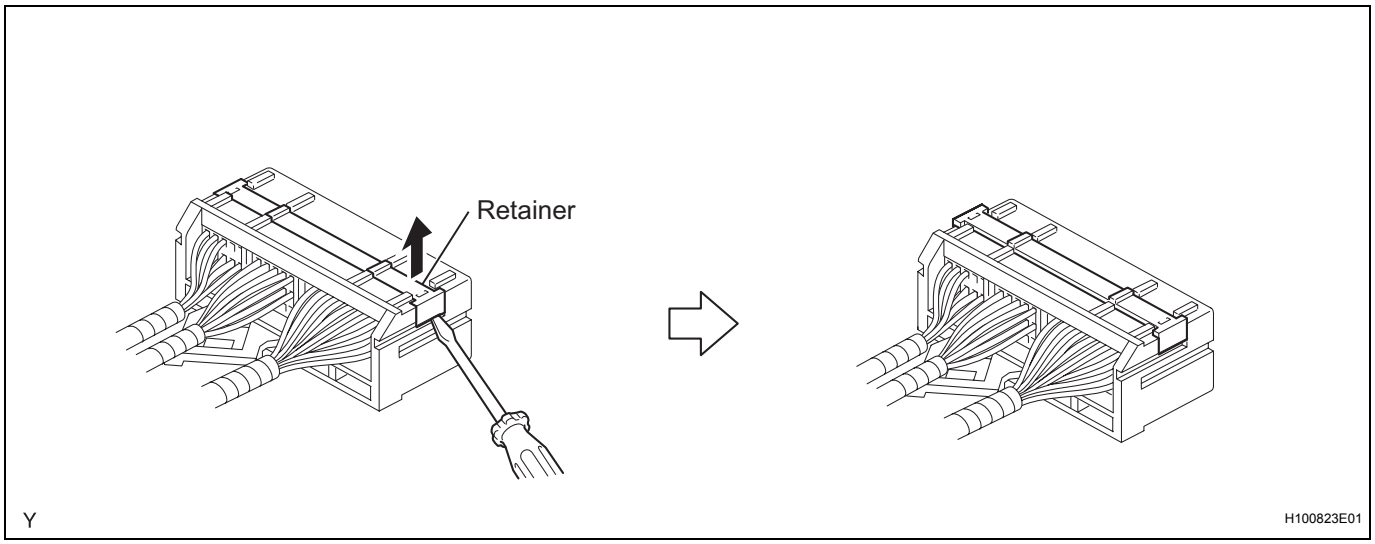
10. DISCONNECTION OF CONNECTORS FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).

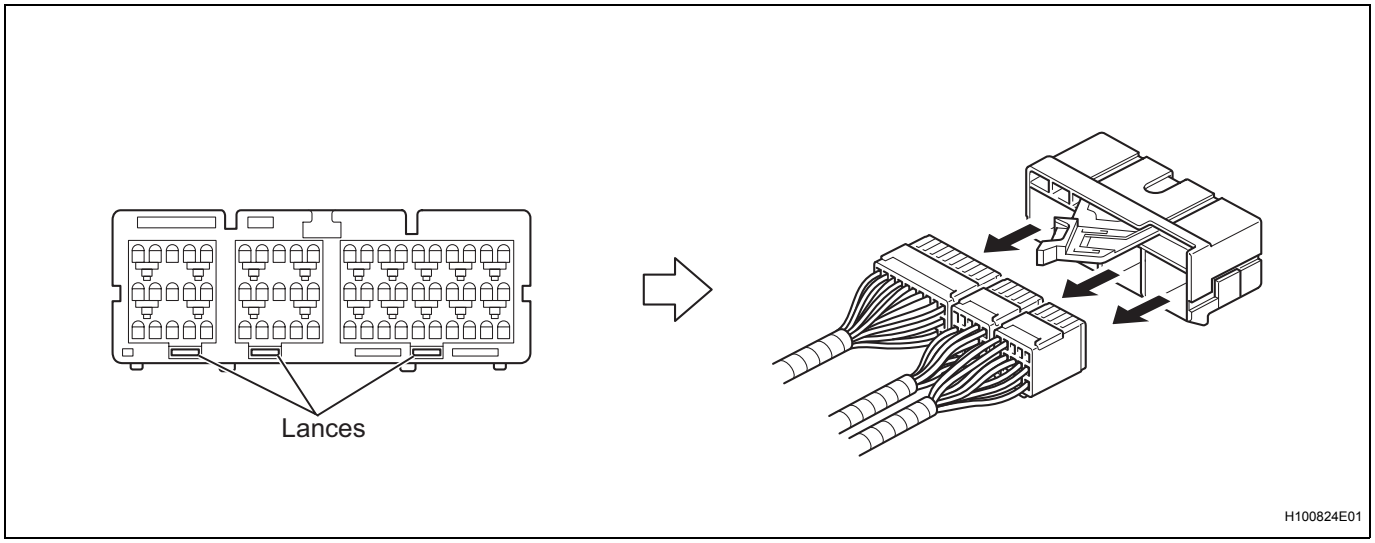


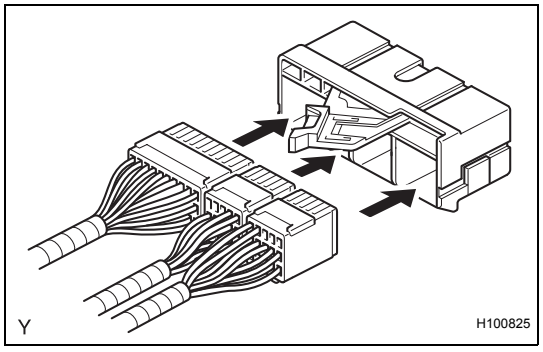
HINT:
Perform the following procedures when replacing the holder.

(b) Remove the holder.
(1) Using a screwdriver, unlock the retainer.



(2) Release the fitting lances and remove the holder.



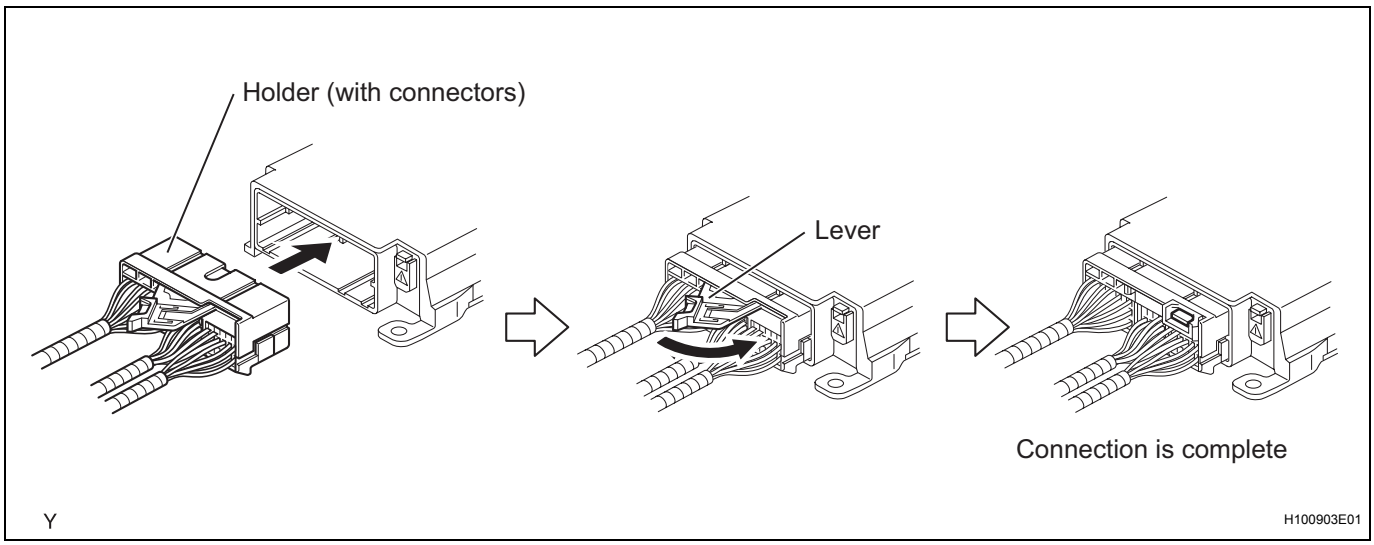


(c) Install the holder.
(1) Install the connectors into the holder. (When locking, a click sound can be heard.)
HINT:
The retainer is locked when the holder is connected.

11. CONNECTION OF CONNECTORS FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Firmly insert the holder (with connectors) into the center airbag sensor assembly until it cannot be pushed any further.

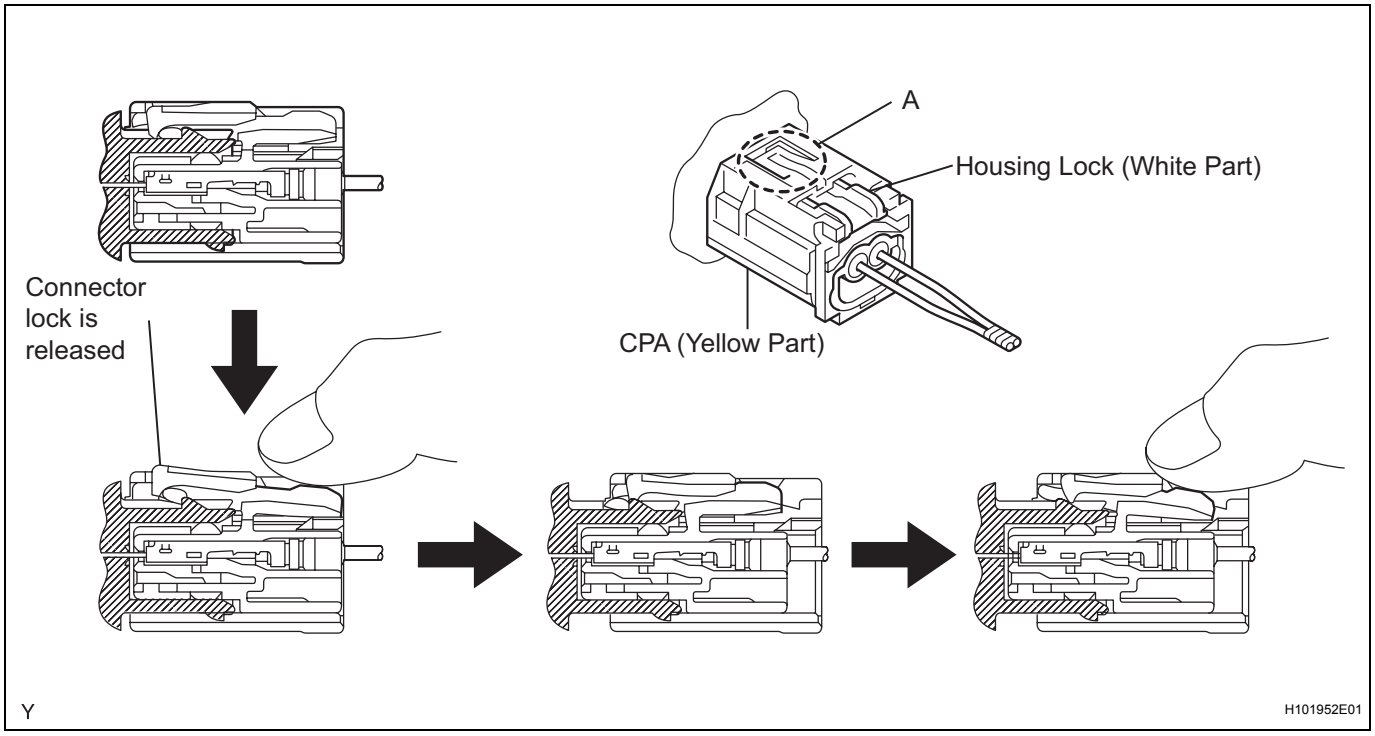
(b) Push the lever to connect the holder (with connectors). (When locking, a click sound can be heard.)
HINT:
The holder slides into the center airbag sensor assembly when it is being connected. Do not hold the holder while connecting, as it may result in an insecure fit.



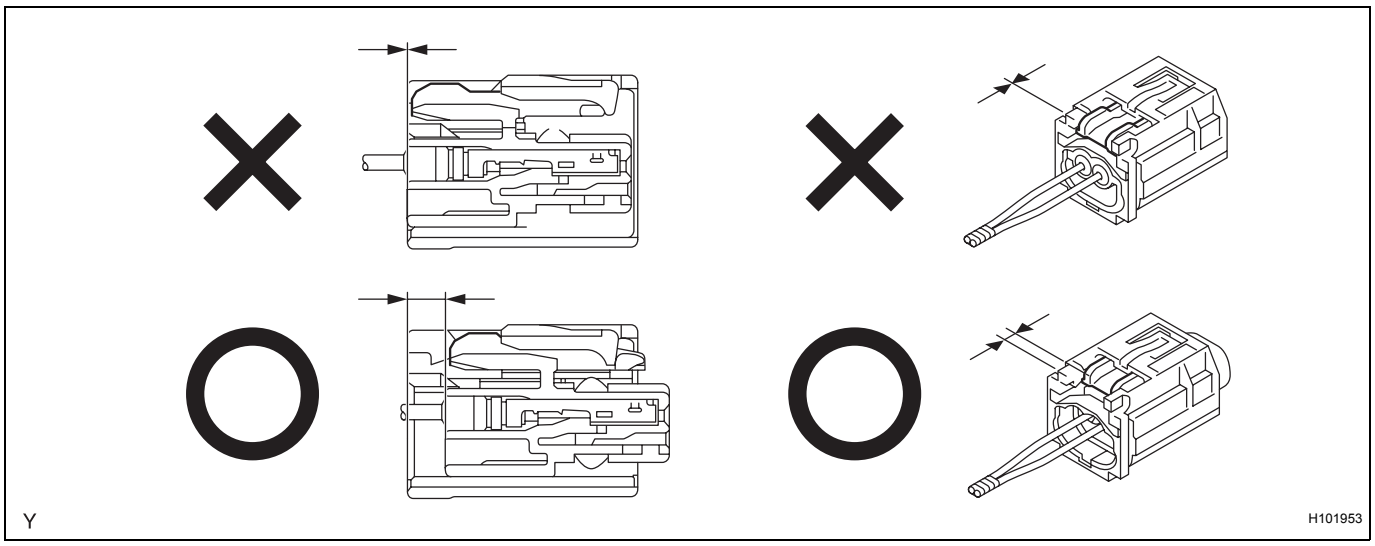
12. DISCONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR

(a) Push down the housing lock (white part) and slide the CPA (yellow part). (At this time, the connector cannot be disconnected yet.)

(b) Push down the housing lock (white part) again and disconnect the connector.
HINT:
Do not push down part A shown in the illustration when disconnecting.



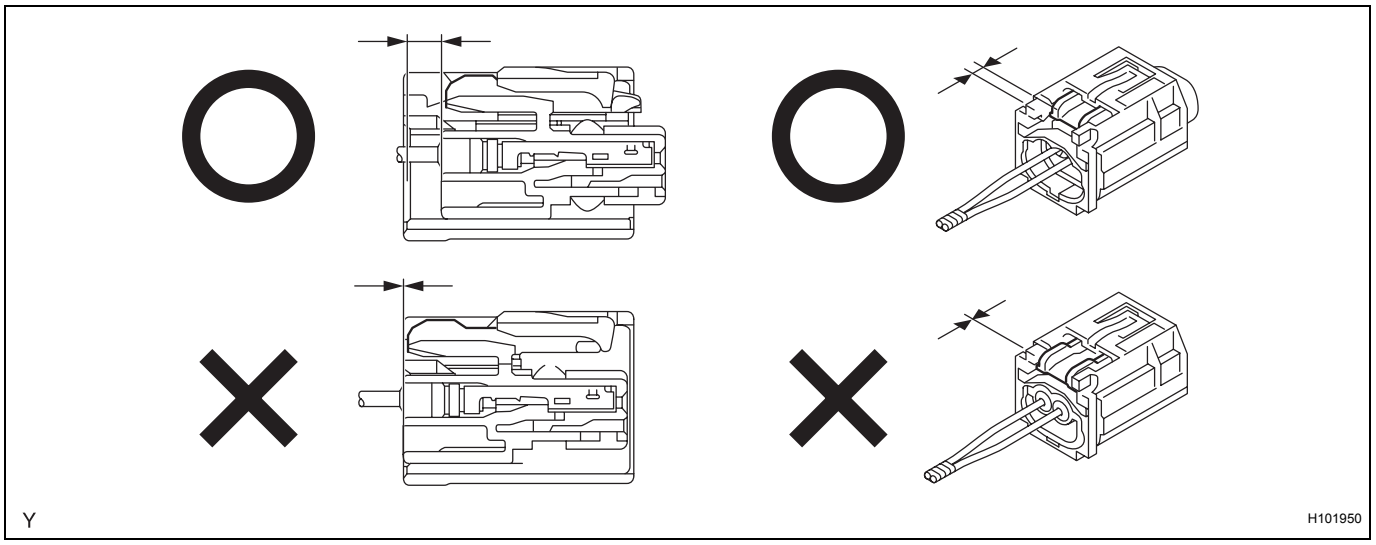
(c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.



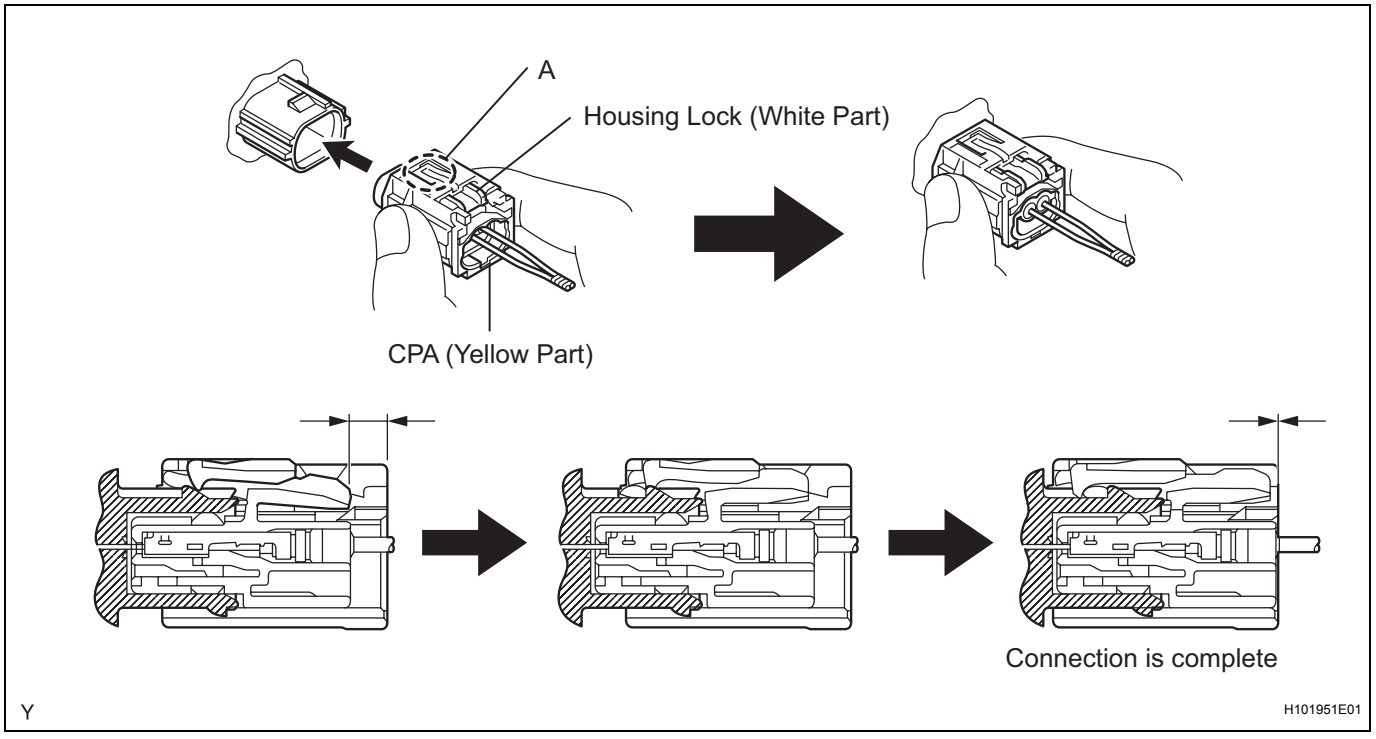
13. CONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR

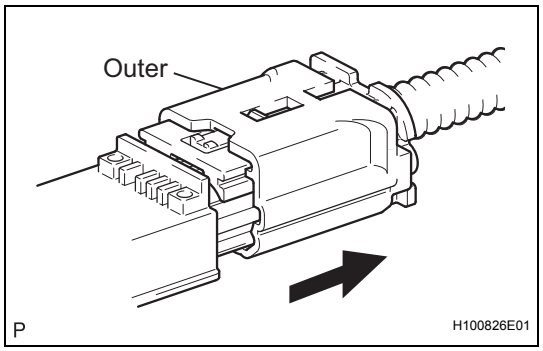
(a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

RS



(b) Be sure to engage the connectors until they are locked. (When locking, make sure that a click sound can be heard.)
HINT:
When connecting them, the housing lock (white part) slides. Do not hold the housing lock (white part) and part A, as it may result in an insecure fit.

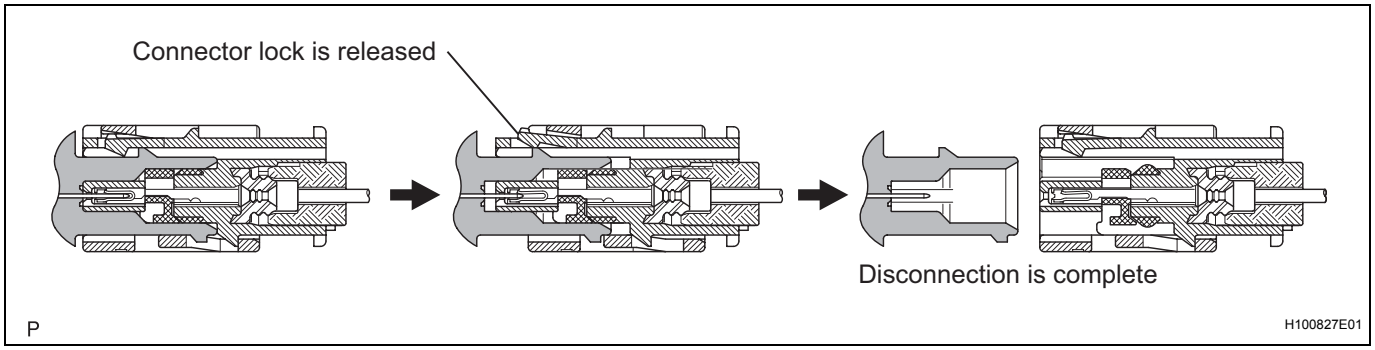




14. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) While holding both sides of the outer connector locking sleeve, slide the outer in the direction shown by the arrow.

(b) When the connector lock is released, the connectors are disconnected.
HINT:
Be sure to hold both outer flanks. Holding the top and bottom sides will make disconnection difficult.



15. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) Connect the connector as shown in the illustration. (When locking, make sure that the outer returns to its original position and a click sound can be heard)
HINT:
When connecting, the outer slides. Do not hold the outer while connecting, as it may result in an insecure fit.

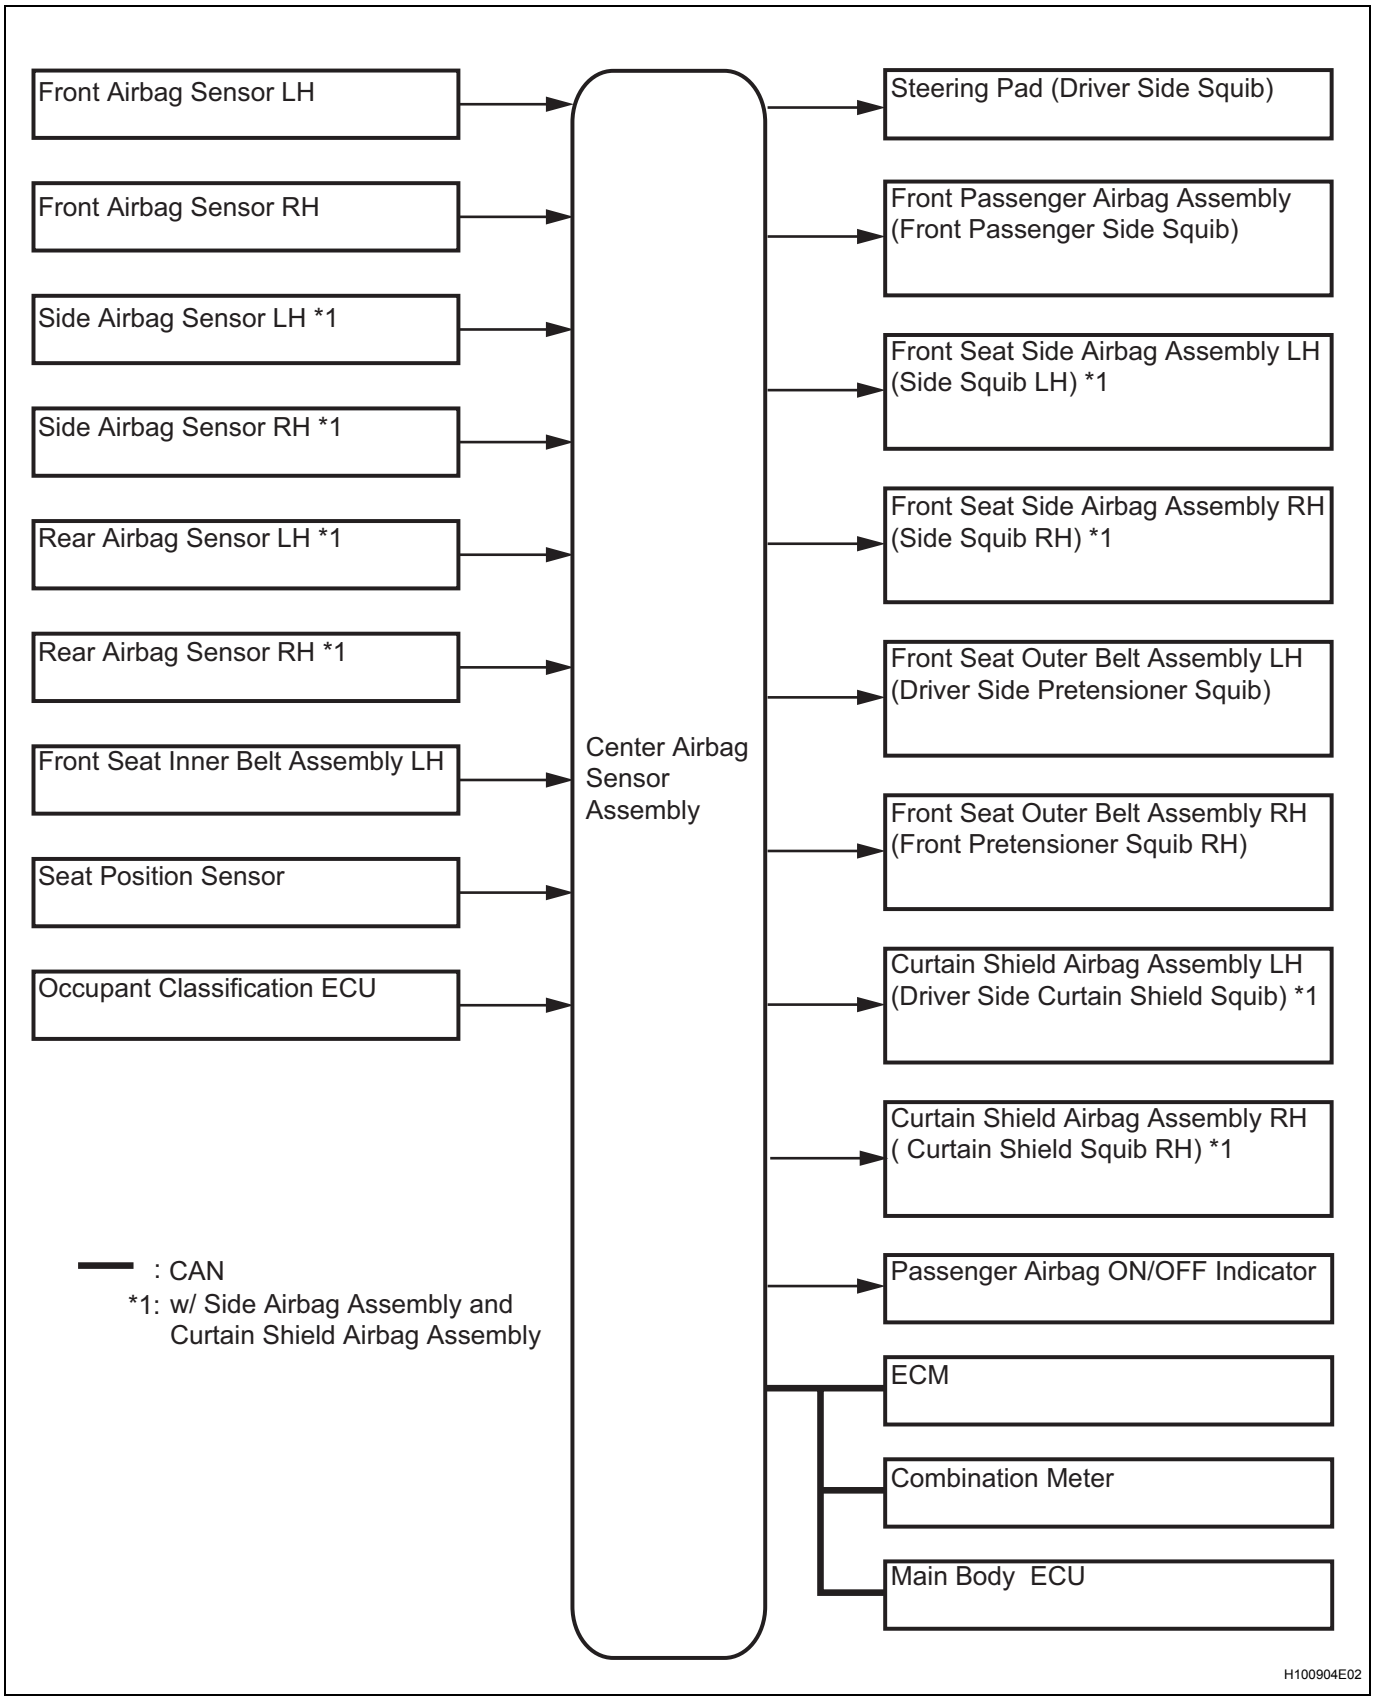
SYSTEM DIAGRAM

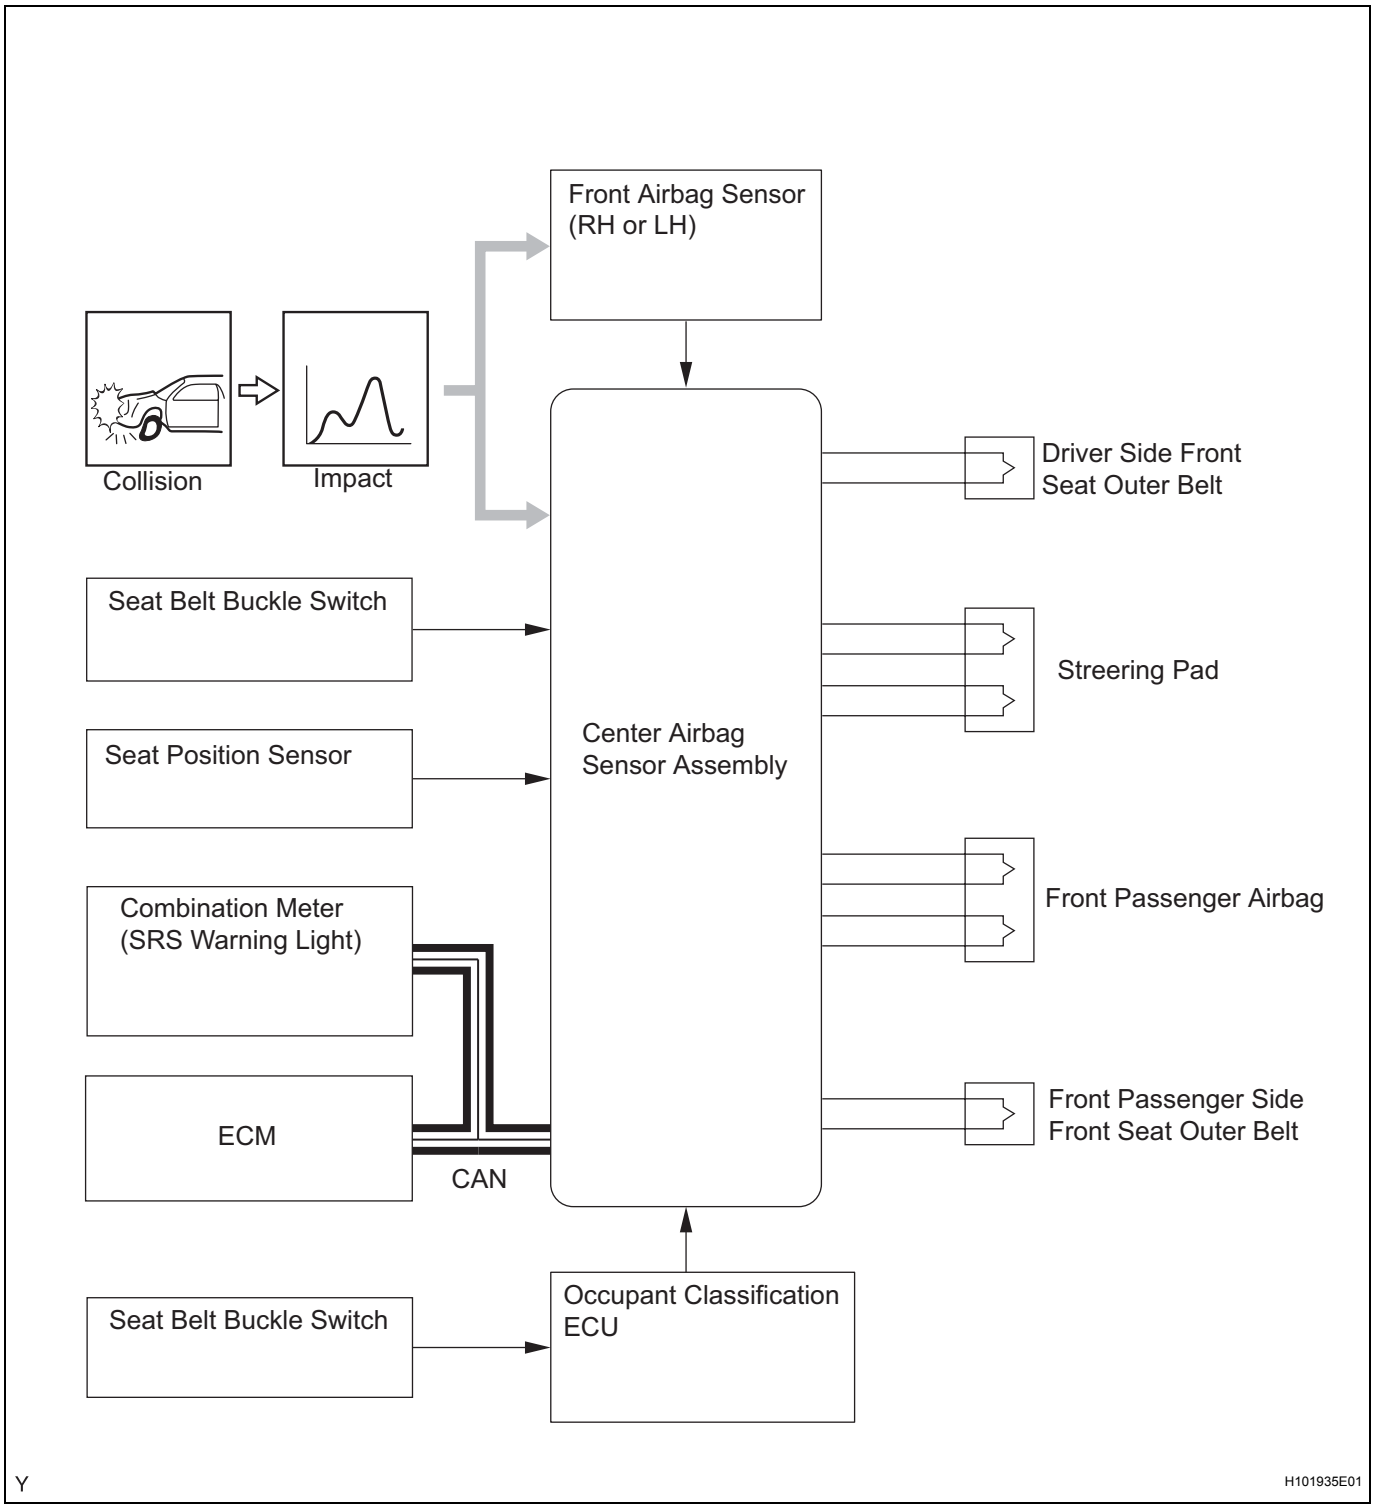


SYSTEM DESCRIPTION

1. GENERAL

(a) Airbag for Frontal Collision

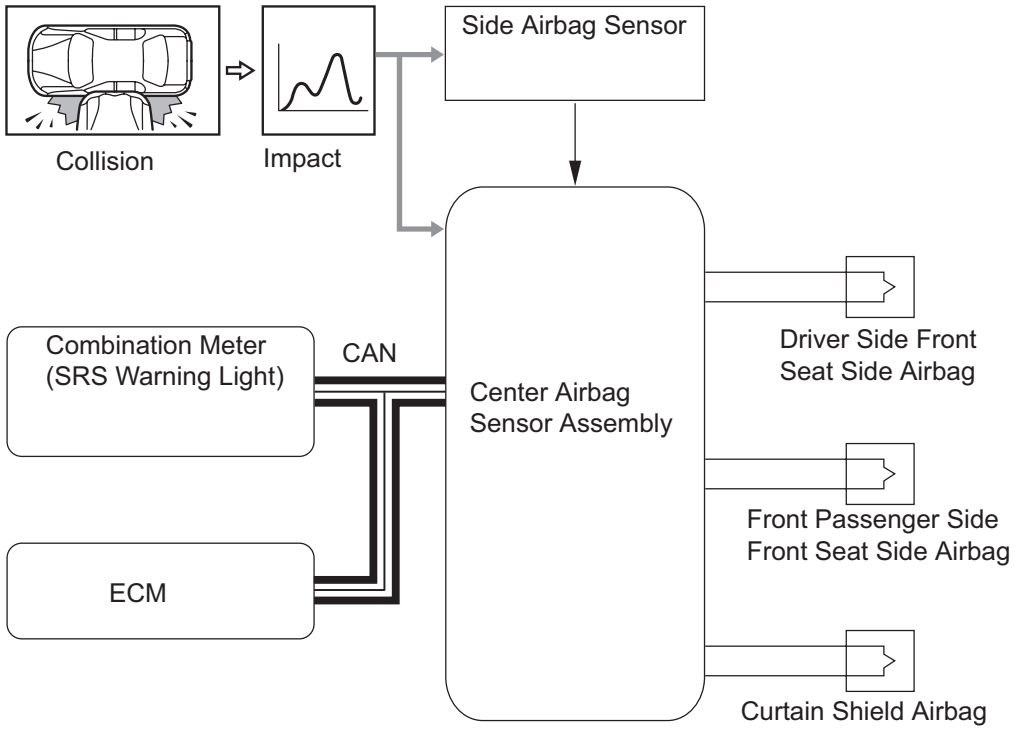
(1) The dual-stage SRS driver and front passenger airbags deploy simultaneously in the event of a frontal impact collision as supplements to the seat belts. The dual-stage SRS airbag system controls the airbag inflation output by judging the extent of the impact, the seat position and whether the seat belt is fastened.



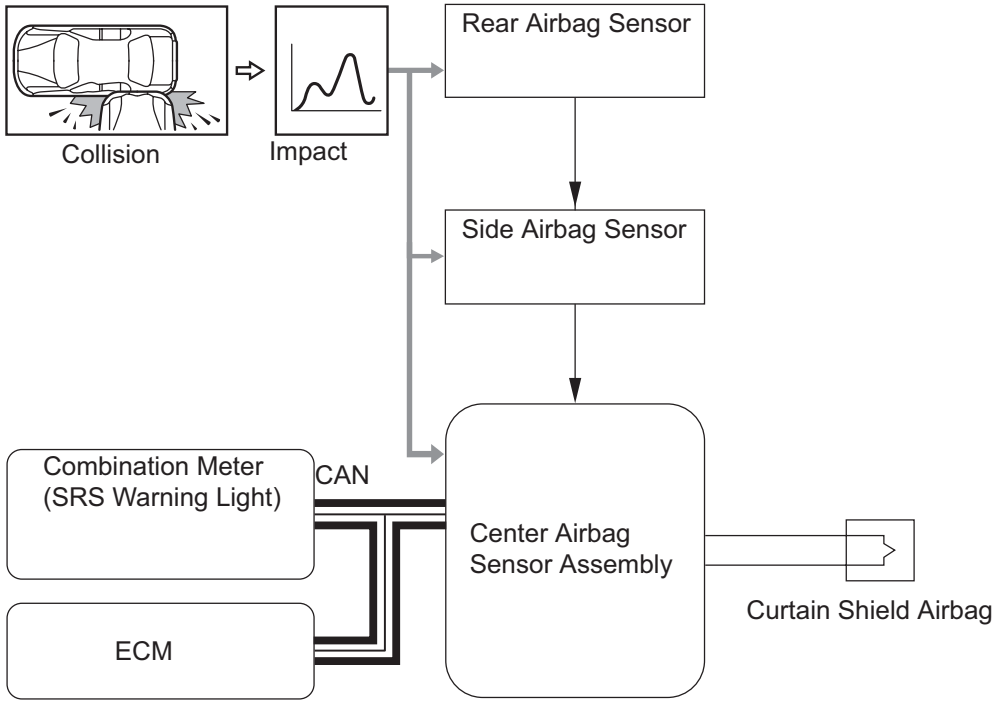
(b) Airbag for Side/Rear Side Collision
(1) SRS side and curtain shield airbags deploy simultaneously in the event of a side collision. Only the curtain shield airbag deploys in the event of a rear side collision.

RS

Airbag for Side Collision :



Airbag for Rear Side Collision :



H101946E01

2. MAIN COMPONENTS

Component	Description
SRS Driver & Front Passenger Airbags	Help reduce shocks to heads and chests of driver and front passenger in event of frontal impact collision as supplements to seat belts
Front Airbag Sensor	Converts distortion created in sensor into electrical signal based on deceleration of vehicle during front collision
Seat Belt Buckle Switch	Integrated into front seat inner belt assembly and detects whether seat belt fastened (for driver seat)
Seat Position Sensor	Detects sliding position of seat (for driver seat)
Front Seat Side and Curtain Shield Airbags	Help reduce shocks to heads and chests of driver, front passenger and outer rear passengers in event of side or rear side collision
Side Airbag Sensor and Rear Airbag Sensor	Convert distortion created in sensors into electrical signal based on deceleration of vehicle during side or rear side collision

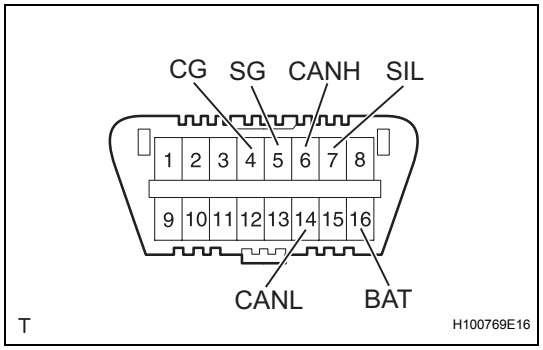
J9-13	FSP-	Occupant Classification ECU



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

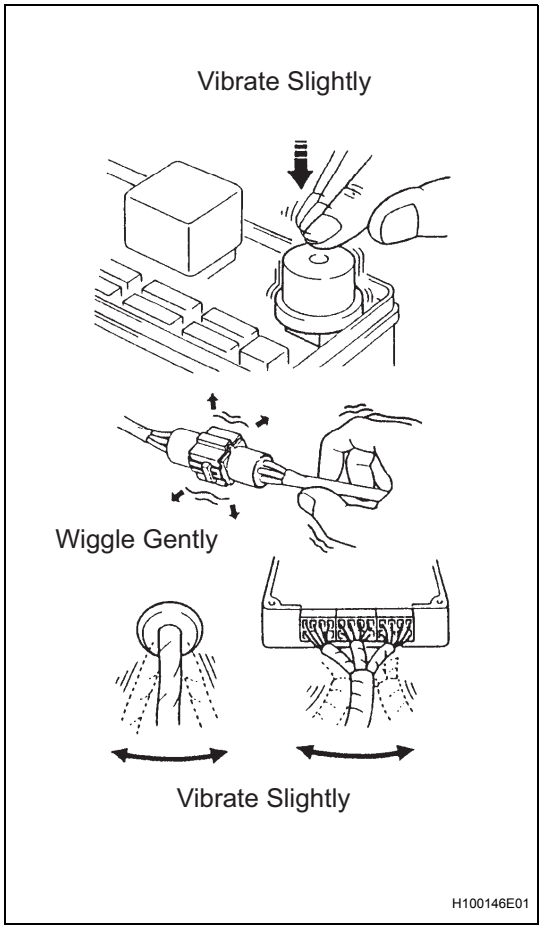
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

RS



2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation.

This leads to a standstill in troubleshooting.

(a) Simulation method: When vibration seems to be the major cause

HINT:

Perform this method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to the on position).

(1) Use your finger to slightly vibrate the part of the sensor considered to be the problem cause, and check whether the malfunction recurs.

HINT:

Wiggling the relays too strongly may result in open relays.

(2) Gently wiggle the connector.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

3. FUNCTION OF SRS WARNING LIGHT

(a) Primary check

(1) Turn the ignition switch to the lock position. Wait for at least 2 seconds, then turn the ignition switch to the on position. The SRS warning light comes on for approximately 6 seconds and the SRS airbag system diagnosis (including the seat belt pretensioner) is performed.

HINT:

If any malfunctions are detected during the primary check, the SRS warning light remains on even after the primary check period has elapsed.

(b) Constant check

(1) After the primary check, the center airbag sensor assembly constantly monitors the SRS airbag system for trouble.

HINT:

If any malfunctions are detected during the constant check, the center airbag sensor assembly functions as follows:

- The SRS warning light comes on.

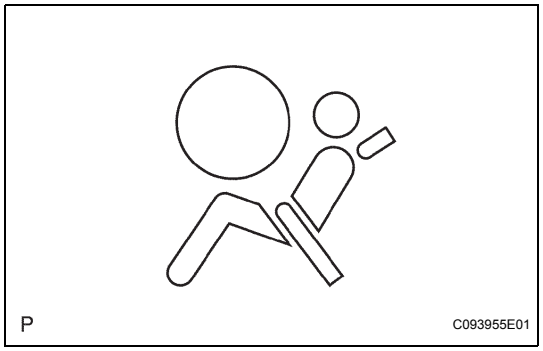
- The SRS warning light goes off, and then comes on again. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review

(1) When the airbag system is normal:
The SRS warning light comes on only during the primary check period (for approximately 6 seconds after the ignition switch is turned to the on position).

(2) When the airbag system malfunctions:
- The SRS warning light blinks after the primary check period has elapsed.
- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light remains off even after the ignition switch is turned from lock to on. However, if malfunctions such as an open circuit have occurred in the wire harness between the meter and ECU, the warning light comes on 10 seconds after the ignition switch is turned on.

HINT:
The center airbag sensor assembly keeps the SRS warning light on if any malfunctions have been detected in the airbag system.



4. SRS WARNING LIGHT CHECK

(a) Turn the ignition switch to the on position, and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the ignition switch is turned to the on position (constant check).
HINT:
When any of the following symptoms occur, refer to the Problem Symptoms Table (See page RS-29).
- The SRS warning light comes on occasionally, after the primary check period has elapsed.
- Even when the SRS warning light comes on, no DTCs are set.
- Even when the ignition switch is turned from the lock to on position, the SRS warning light remains off.

5. ACTIVATION PREVENTION MECHANISM

(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

(1) An activation prevention mechanism is built into the connector (on the center airbag sensor assembly side) of the airbag system squib circuit to prevent accidental airbag activation.

(2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off external electricity to prevent accidental airbag activation.

(b) RELEASE METHOD OF ACTIVATION PREVENTION MECHANISM

(1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm [0.020 in.]) between the terminals and the short spring to break the connection.

(2) Refer to the illustrations on the next 3 pages concerning connectors to utilize the activation prevention mechanism and its release method.

CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- **Do not release the activation prevention mechanism unless specifically directed by the troubleshooting procedure.**
- **To prevent the terminal and the short spring from being damaged, always use a piece of paper that is the same thickness as the male terminal.**

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Check for DTCs (Present DTC).

(1) Turn the ignition switch on, and wait for approximately 60 seconds.

(2) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check for DTCs (Past DTC).

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the ignition switch on, and wait for approximately 60 seconds.

(c) Read the DTCs.

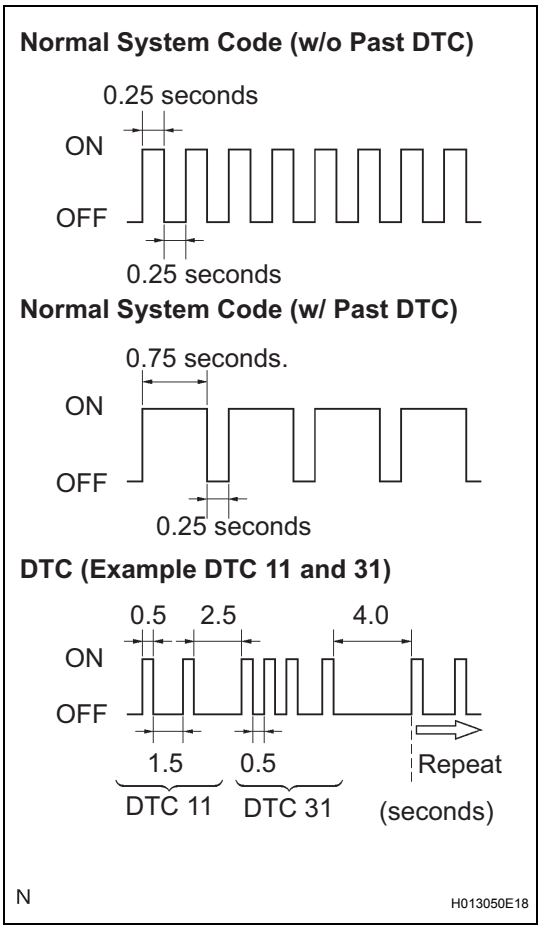
(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and DTCs 11 and 31 are shown in the illustration on the left.

- Normal system code indication (w/o past DTC)
  The light blinks twice per second.
- Normal system code indication (w/ past DTC)
  When the past DTC is stored in the center airbag sensor assembly, the light blinks once per second.
- DTC indication
  The first blinking pattern indicates the first digit DTC. The second blinking pattern occurs after a 1.5-second pause.

If there are two or more DTCs, there is a 2.5-second pause between each DTC. After all DTCs are shown, there is a 4.0-second pause, and they are all repeated.

HINT:

- If 2 or more malfunctions are found, the indication begins with the lowest numbered DTC.
- If DTCs are indicated without connecting the terminals, proceed to the "TC and CG Terminal Circuit" on page (See page RS-205).



2. DTC CLEAR (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) When the ignition switch is turned off (turned to the lock position), the DTCs are cleared.
HINT:
Depending on the DTCs, the DTCs may not all be cleared by turning off the ignition switch. In this case, proceed to the next operation.

(2) Using SST, connect terminals TC and CG of the DLC3, and then turn the ignition switch on.
SST 09843-18040

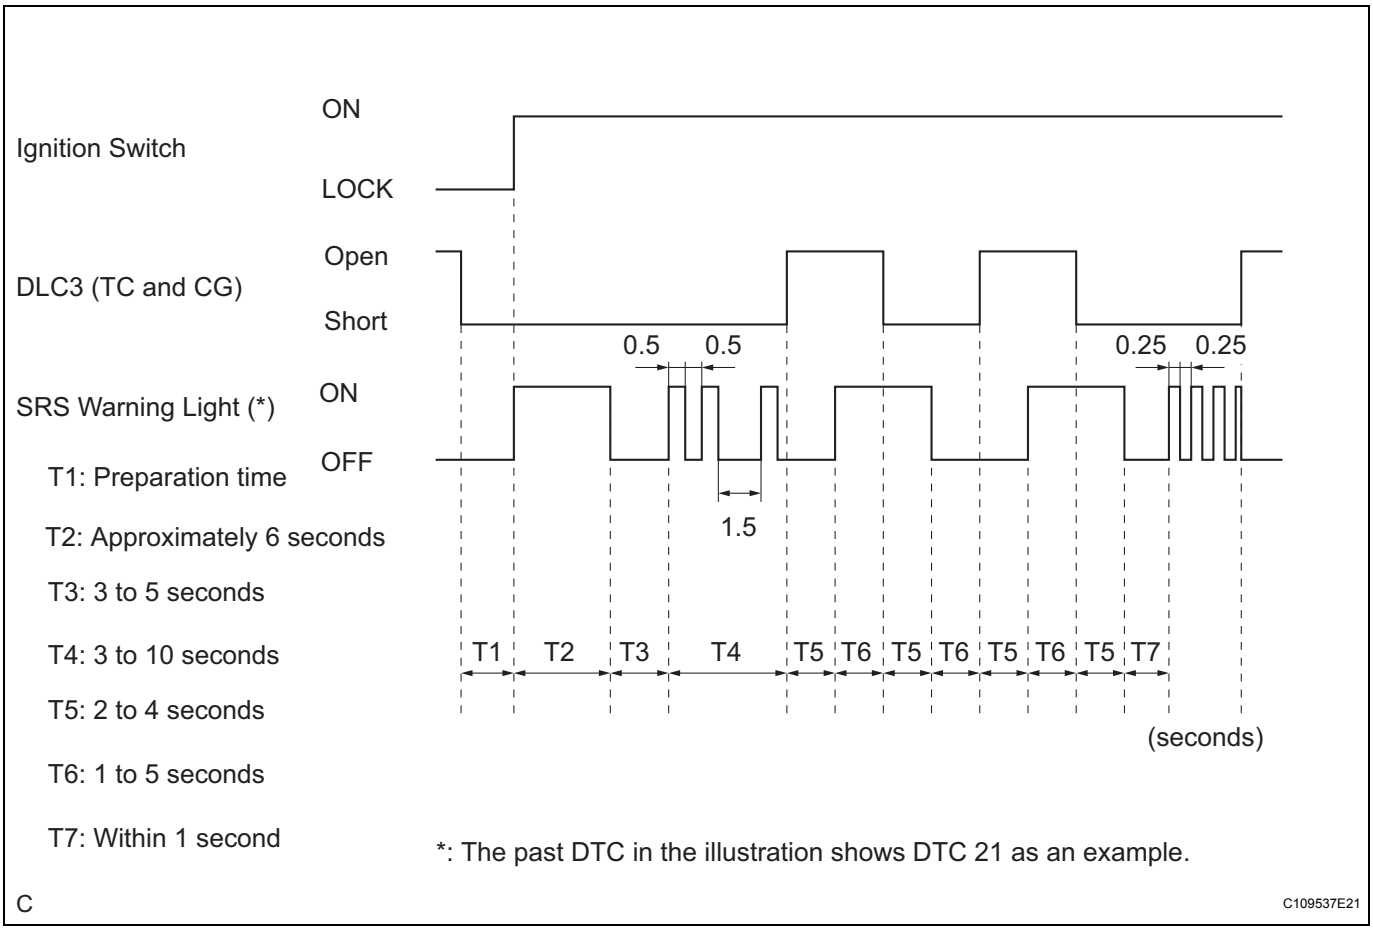
(3) Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check that the SRS warning light comes on after 3 seconds.

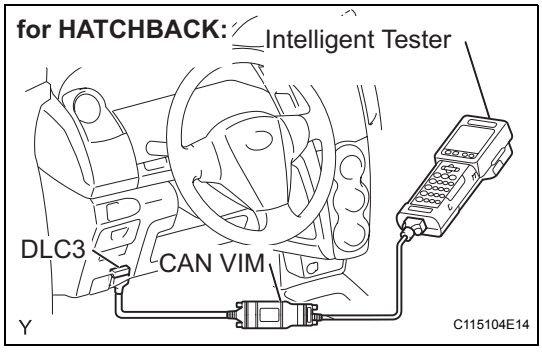
(4) Within 2 to 4 seconds of the SRS warning light coming on, connect terminals TC and CG of the DLC3.

(5) The SRS warning light goes off within 2 to 4 seconds of connecting terminals TC and CG of the DLC3. Then, disconnect terminal TC within 2 to 4 seconds of the SRS warning light going off.

(6) The SRS warning light comes on again within 2 to 4 seconds of disconnecting terminal TC. Then, reconnect terminals TC and CG within 2 to 4 seconds of the SRS warning light coming on.

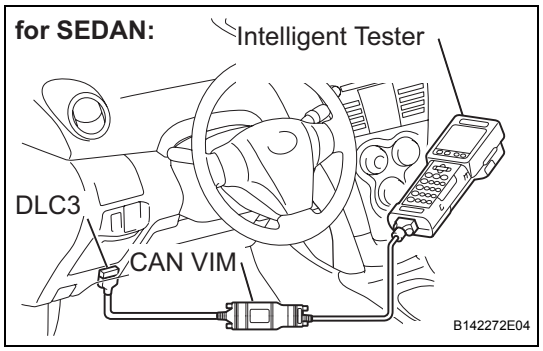
(7) Check that the SRS warning light goes off within 2 to 4 seconds of connecting terminals TC and CG of the DLC3. Also check that the normal system code is output within 1 second of the SRS warning light going off.
If DTCs are not cleared, repeat these procedure until the DTCs are cleared.





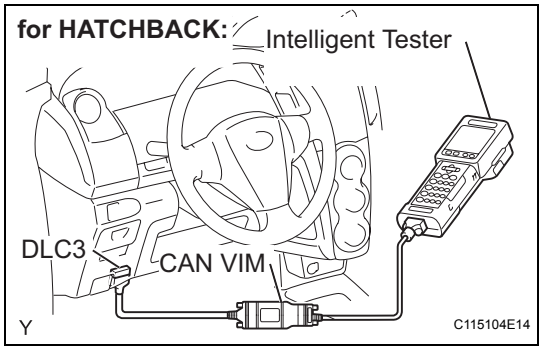
3. DTC CHECK

(a) Check for DTCs.



(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on.
(3) Check the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

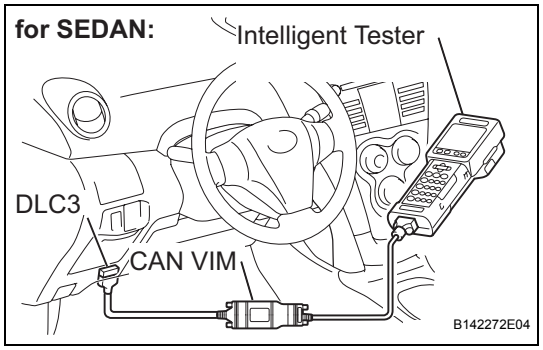
(b) Clear DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on.
(3) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.



CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

(a) Connect the intelligent tester to the DLC3.



(b) Turn the ignition switch on.
(c) Select the SIGNAL CHECK, and proceed checking with the intelligent tester.
NOTICE:
Select the SIGNAL CHECK from the DTC CHECK screen displayed on the intelligent tester to clear the output DTCs (both present and past).
HINT:
- DTCs can be detected more sensitively in check mode than in normal diagnosis mode.
- Perform the check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through the normal diagnosis mode inspection.

RS

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed on the intelligent tester, you can perform functions such as reading the values of switches and sensors without removing any parts. Reading the DATA LIST is the first step of troubleshooting and is one method shortening diagnostic time.

1. DATA LIST FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on and turn the tester on.
(c) Following the display on the tester screen, select the DATA LIST.
(d) Check the condition by referring to the table below.

Item	Measure Item/ Range (Display)	Normal Condition	Diagnostic Note
D SEAT POSITION	Seat position (Driver side)/ FORWARD: Seat position forward BKWARD: Seat position backward FAIL: Failure detected	FORWARD/BKWARD	-

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed for the DTC in the table below (refer to the appropriate page listed for that circuit).

HINT:

- When the SRS warning light remains on and the normal system code is output, a decrease in the source voltage is likely to occur. This malfunction is not stored in the memory of the center airbag sensor assembly. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more DTCs are indicated, the DTC with the lowest number appears first.
- If a DTC is not listed in the DTC chart, the center airbag sensor may have malfunctioned.
- In the case of any malfunctions concerning open circuits, shorts to ground, or shorts to B+ due to squibs, other DTCs may not be set. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Marks in the check mode column:
  -: DTC dose not correspond to check mode.
  ○: DTC corresponds to check mode.
- When DTC B1650/32 is set as a result of troubleshooting the Supplemental Restraint System (SRS), perform troubleshooting for the occupant classification system.

DTC	B1000/31	Center Airbag Sensor Assembly Malfunction

DESCRIPTION

The center airbag sensor assembly consists of parts including the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit, and the ignition control.

When the center airbag sensor assembly receives signals from the airbag sensor, it determines whether or not the SRS should be activated.

DTC B1000/31 is set when a malfunction is detected in the center airbag sensor assembly.

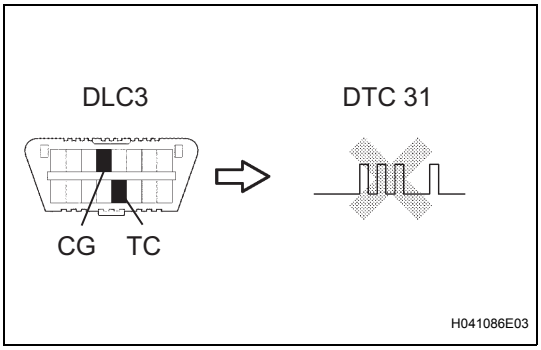
DTC No.	DTC Detecting Condition	Trouble Area
B1000/31	• Center airbag sensor assembly malfunction	• Center airbag sensor assembly

HINT:

When any other DTCs are set simultaneously with B1000/31, repair the malfunctions indicated by those DTCs first.

INSPECTION PROCEDURE

1	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(e) Clear any DTCs stored in the memory (See page RS-38).
(f) Turn the ignition switch to the lock position.
(g) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-38).

OK:

DTC B1000/31 is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1610/13	Front Airbag Sensor RH Circuit Malfunction

DESCRIPTION

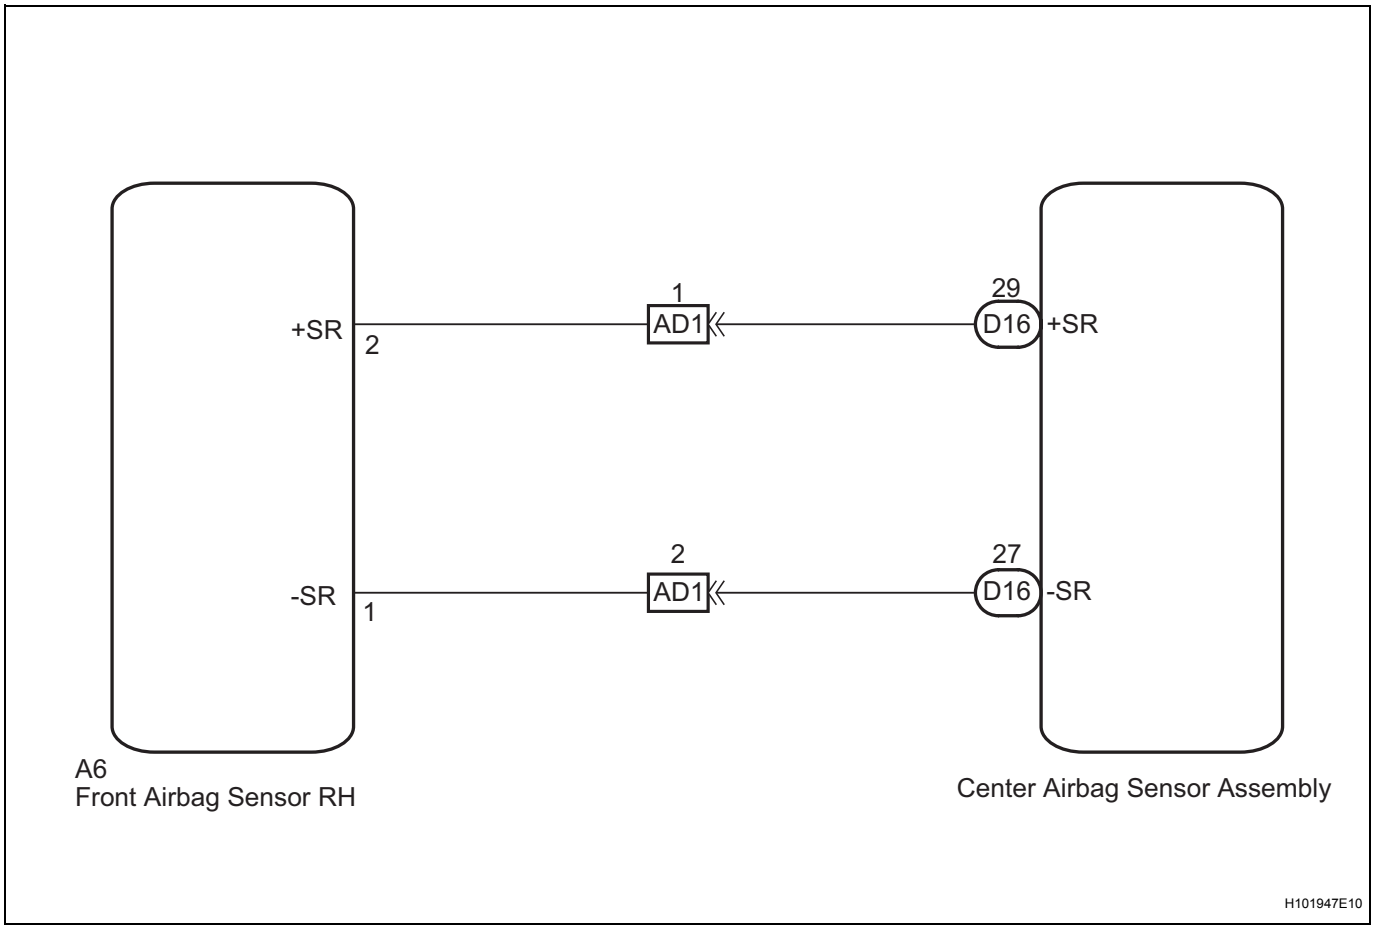
The front airbag sensor RH consists of part including the diagnostic circuit and the frontal deceleration sensor.

When the center airbag sensor assembly receives signals from the frontal deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1610/13 is set when a malfunction is detected in the front airbag sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1610/13	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in front airbag sensor RH circuit for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

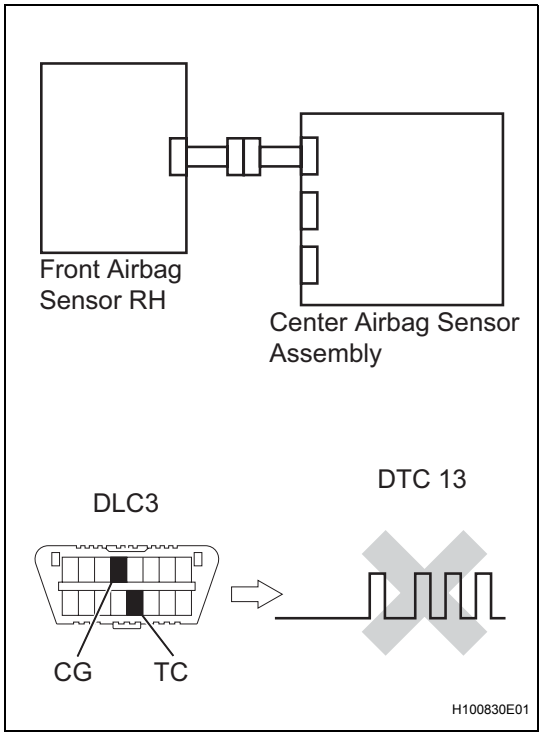
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.

4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.
   HINT:
   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

RS

1	CHECK DTC



(a) Turn the ignition switch on, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).
OK:
DTC B1610/13 is not output.
HINT:
DTCs other than DTC B1610/13 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

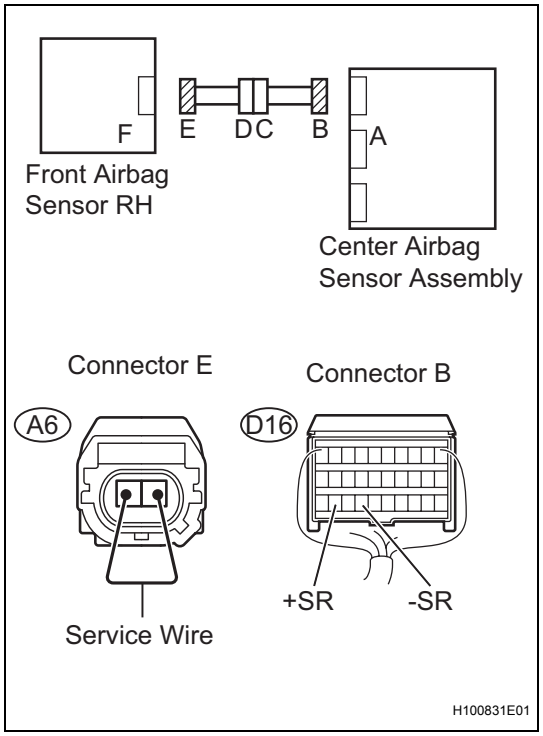
2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (FOR OPEN)



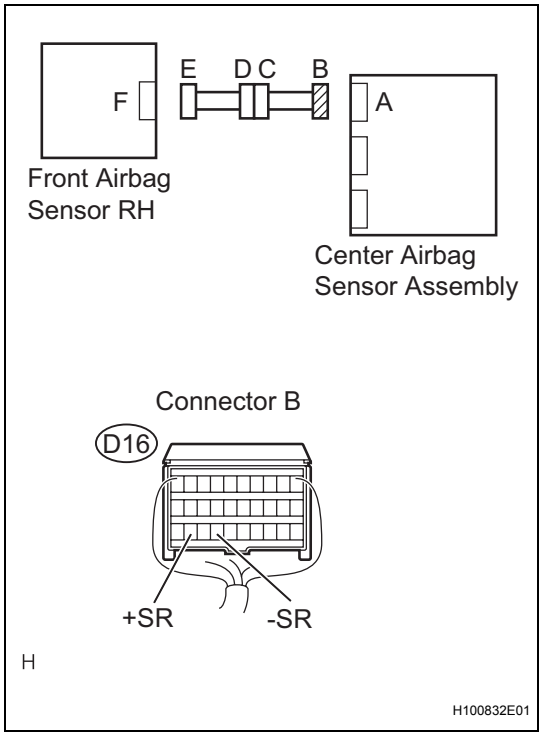
(a) Disconnect the connectors from the center airbag sensor assembly and the front airbag sensor RH.
(b) Using a service wire, connect A6-1 and A6-2 of connector E.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-29 (+SR) - D16-27 (-SR)	Always	Below 1 Ω

NG → **Go to step 8**

OK

4 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (FOR SHORT)



(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

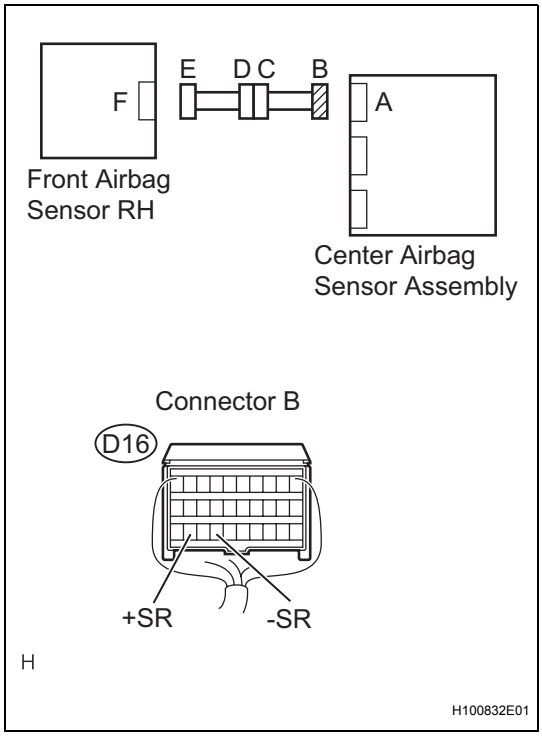
Tester Connection	Condition	Specified Condition
D16-29 (+SR) - D16-27 (-SR)	Always	1 MΩ or higher

NG → **Go to step 9**

OK

RS

5 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on.
(c) Measure the voltage.

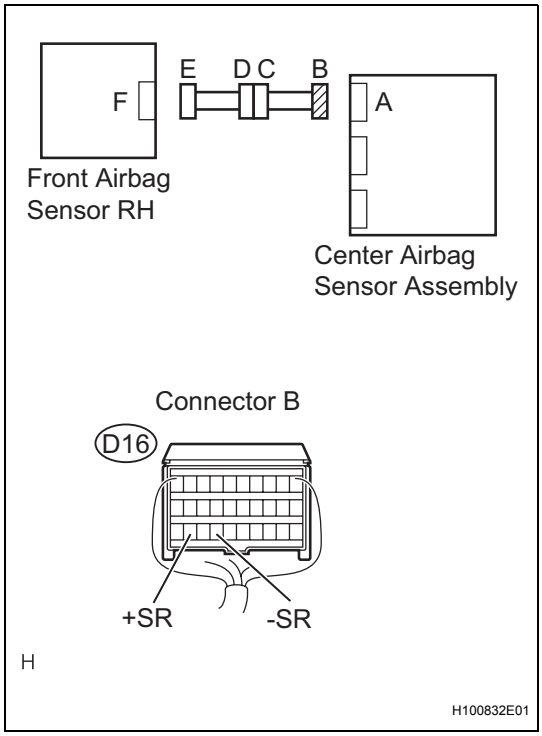
Standard voltage

Tester Connection	Condition	Specified Condition
D16-29 (+SR) - Body ground	Ignition switch on	Below 1 V
D16-27 (-SR) - Body ground	Ignition switch on	Below 1 V

NG → **Go to step 10**

OK

6 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

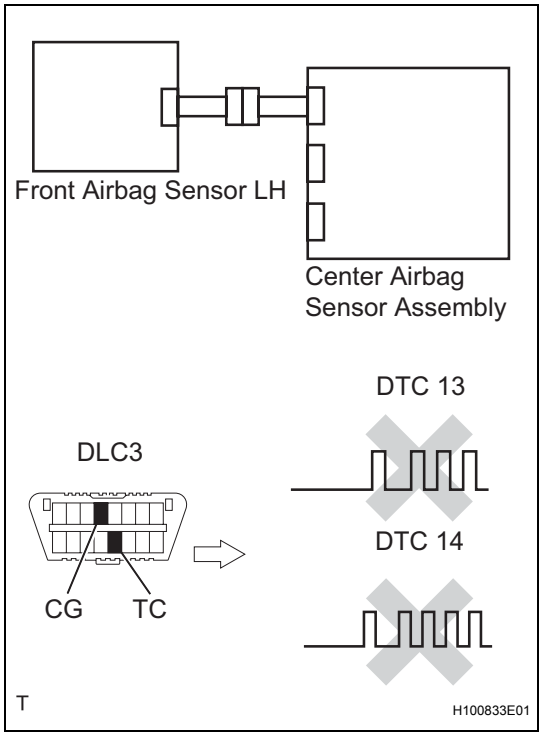
Standard resistance

Tester Connection	Condition	Specified Condition
D16-29 (+SR) - Body ground	Always	1 MΩ or higher
D16-27 (-SR) - Body ground	Always	1 MΩ or higher

NG → **Go to step 11**

OK

7	CHECK FRONT AIRBAG SENSOR RH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-38).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on, and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-38).

Result

Result	Proceed to
DTC B1610/13 is output.	A
DTC B1615/14 is output.	B
DTC B1610/13 and B1615/14 are not output.	C

HINT:
DTCs other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

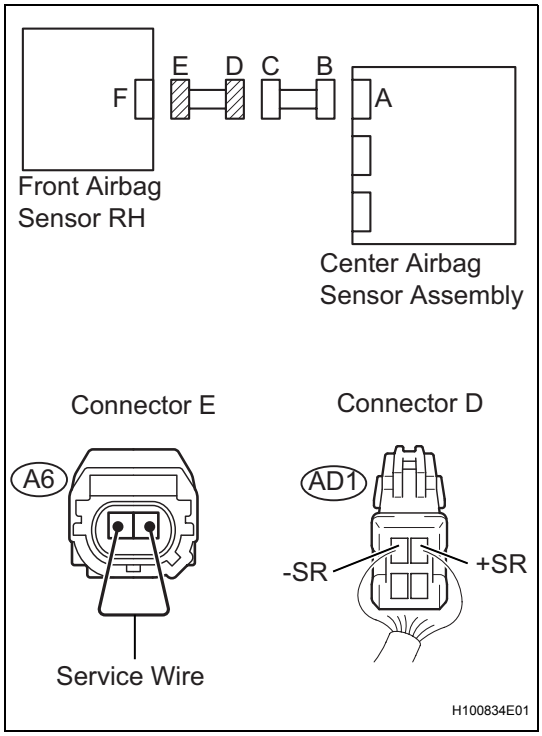
B → **REPLACE FRONT AIRBAG SENSOR RH**

C

USE SIMULATION METHOD TO CHECK

RS

8	CHECK ENGINE ROOM MAIN WIRE (FOR OPEN)



(a) Disconnect the engine room main wire connector from the instrument panel wire.
HINT:
The service wire has already been inserted into connector E.

(b) Measure the resistance.
Standard resistance

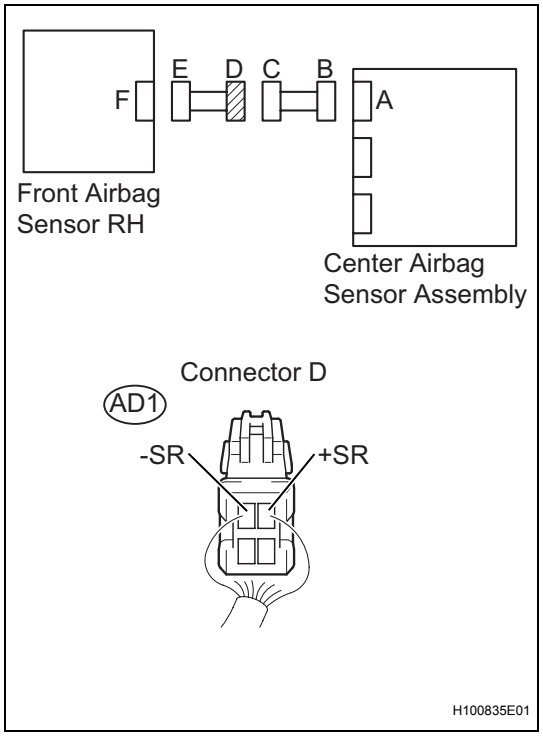
Tester Connection	Condition	Specified Condition
AD1-1 (+SR) - AD1-2 (-SR)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

9	CHECK ENGINE ROOM MAIN WIRE (FOR SHORT)



(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
AD1-1 (+SR) - AD1-2 (-SR)	Always	1 MΩ or higher

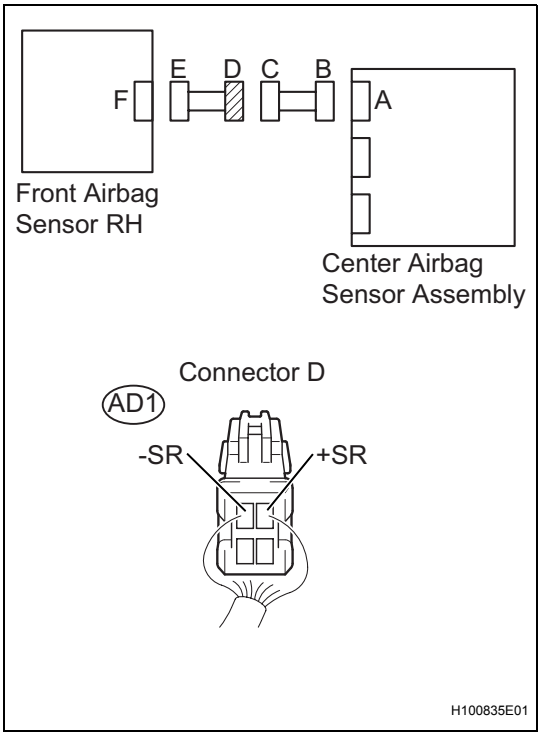
NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

RS

10	CHECK ENGINE ROOM MAIN WIRE (TO B+)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the engine room main wire connector from the instrument panel wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on.
(f) Measure the voltage.

Standard voltage

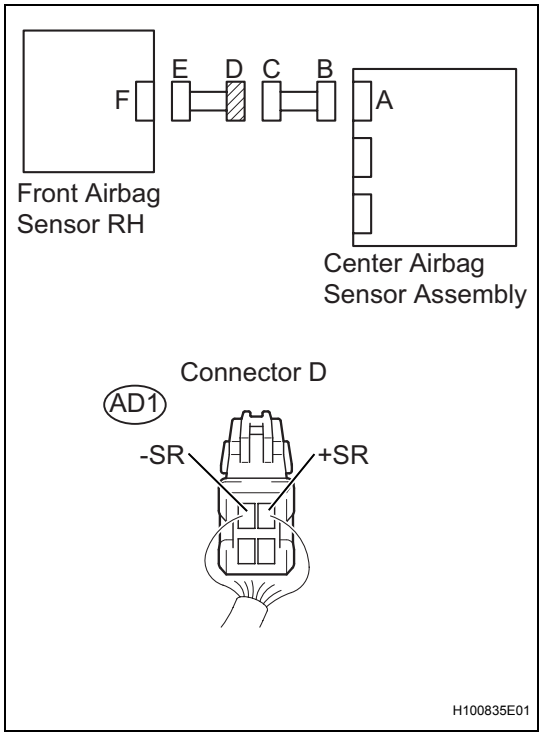
Tester Connection	Condition	Specified Condition
AD1-1 (+SR) - Body ground	Ignition switch on	Below 1 V
AD1-2 (-SR) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

11	CHECK ENGINE ROOM MAIN WIRE (TO GROUND)



(a) Disconnect the engine room main wire connector from the instrument panel wire.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
AD1-1 (+SR) - Body ground	Always	1 MΩ or higher
AD1-2 (-SR) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

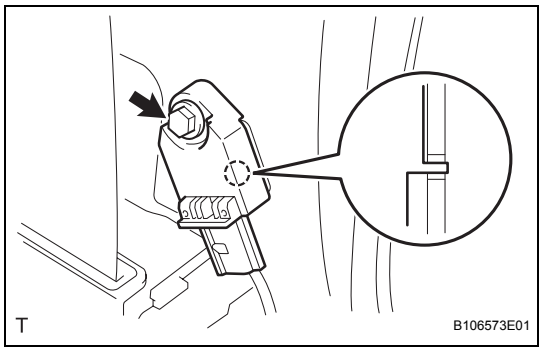
OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. **INSTALL SIDE AIRBAG SENSOR**
   (a) Confirm that the ignition switch is turned to OFF.
   (b) Confirm that the negative battery terminal is detached.
   CAUTION:
   - **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**

   (c) Insert the hook into the body hole and install the airbag sensor with the bolt.
   Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **Do not use a side airbag sensor that has been dropped.**
   - **Do not subject the side airbag sensor to any impact or force.**

   (d) Confirm that there is no looseness by shaking the side airbag sensor.

   (e) Connect the airbag connector.
2. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-118)**
3. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-119)**
4. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-119)**
5. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**
6. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**
7. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
8. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-119)**
9. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

10. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
11. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
12. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
13. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**
14. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**
15. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
16. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

ON-VEHICLE INSPECTION

1. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For rear airbag sensor removal and installation procedures, see pages RS-467 and RS-468, and be sure to carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center pillar of the vehicle or its periphery is damaged, check whether there is any damage to the rear airbag sensor. If there are any defects, such as those mentioned below, replace the rear airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

3. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For rear airbag sensor removal and installation procedures, see pages RS-467 and IR-107, and carefully follow the correct procedure.
   (a) Replace the rear airbag sensor.

RS

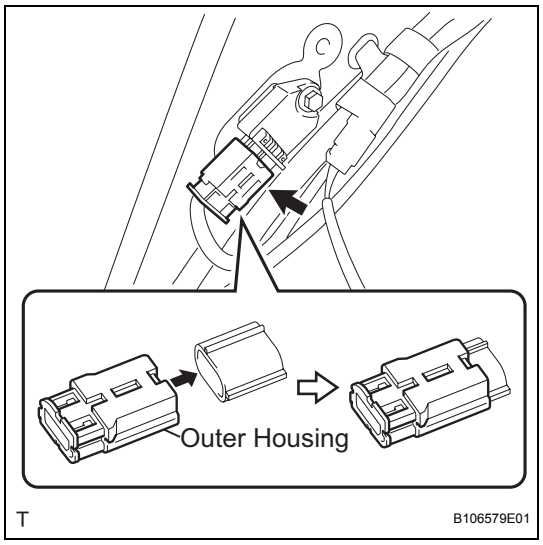
RS

REMOVAL

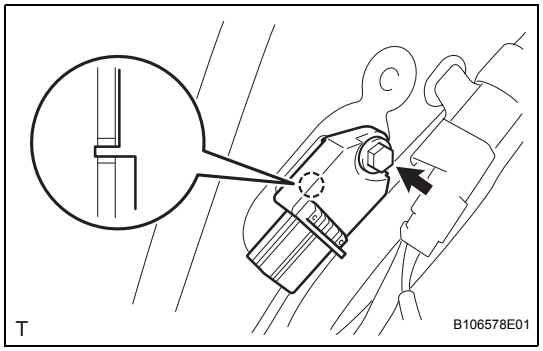
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (See page IR-13)**
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
4. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
6. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
7. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
8. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
9. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
10. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-15)**
11. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
12. **REMOVE REAR AIRBAG SENSOR**
    CAUTION:
    Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.



(a) Slide the outer housing and detach the airbag connector.



(b) Disengage the bolt and hook and remove the airbag sensor.

RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the LH and RH sides, unless otherwise specified.

1. **INSTALL REAR AIRBAG SENSOR**
   (a) Confirm that the ignition switch is turned to off.
   (b) Confirm that the negative battery terminal is detached.
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.

   (c) Insert the hook into the body hole and install the airbag sensor with the bolt.
   Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **Do not use a rear airbag sensor that has been dropped.**
   - **Do not subject the rear airbag sensor to any impact or force.**
   (d) Confirm that there is no looseness by shaking the rear airbag sensor.

   (e) Connect the airbag connector.
2. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
3. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-33)**
4. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
5. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
6. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
7. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**

RS

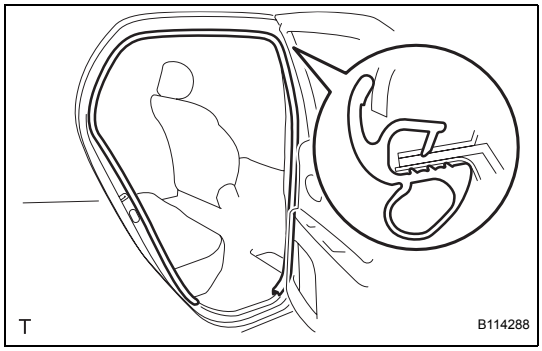
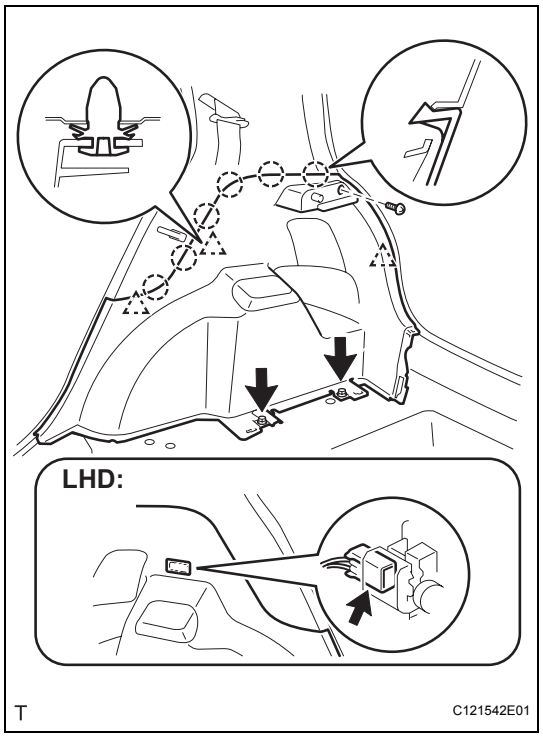
REMOVAL

CAUTION:
Some of the these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-48)**
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
13. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Remove the rear opening trim weatherstrip to the extent necessary to remove the deck trim side panel.
14. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-55)**





15. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH

(a) Remove the 3 screws.

(b) Disengage the 3 clips and the 6 claws and remove the deck trim side panel.

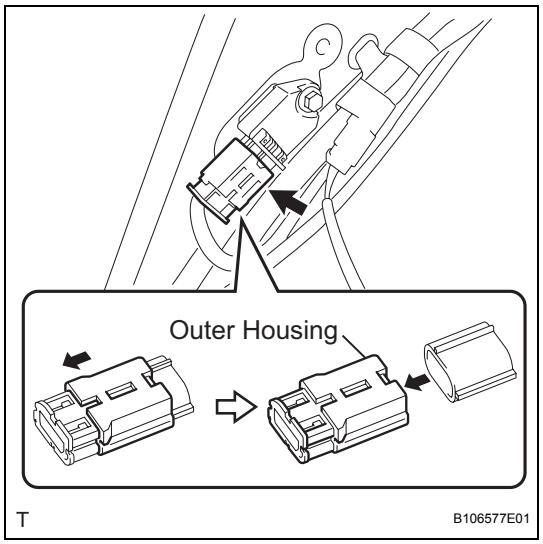
HINT:

When removing the deck trim side panel assembly LH, disconnect the room light connector and remove the deck trim side panel.

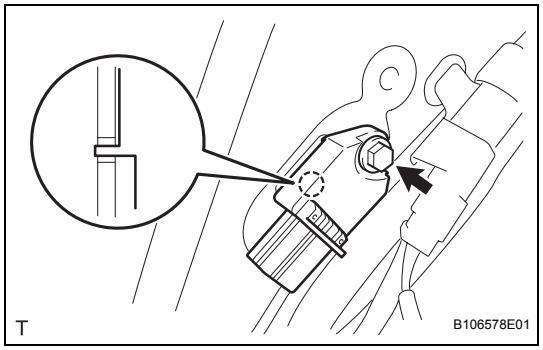
16. REMOVE REAR AIRBAG SENSOR

CAUTION:

Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.



(a) Slide the outer housing and detach the airbag connector.



(b) Disengage the bolt and hook and remove the airbag sensor.

RS

INSTALLATION

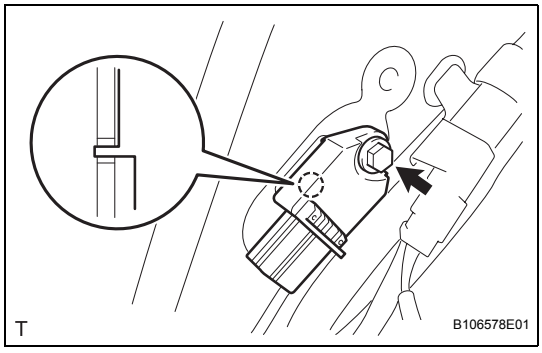
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the LH and RH sides, unless otherwise specified.

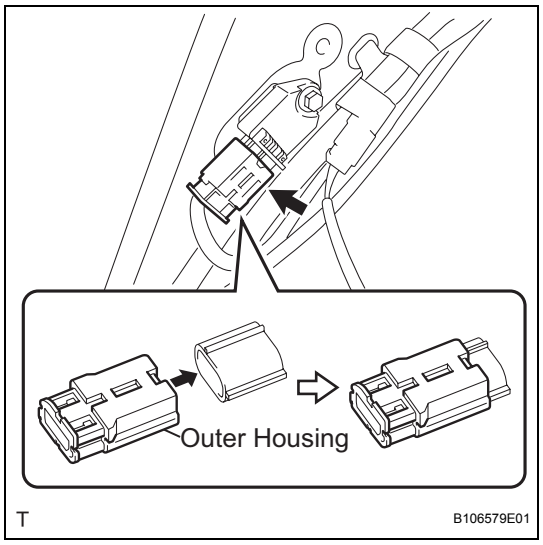
1. INSTALL REAR AIRBAG SENSOR

(a) Confirm that the ignition switch is turned to OFF.
(b) Confirm that the negative battery terminal is detached.
CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**

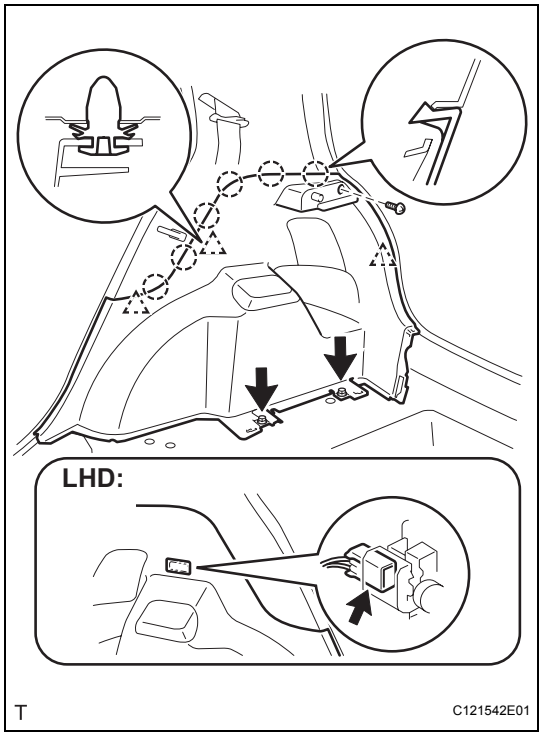
(c) Insert the hook into the body hole and install the airbag sensor with the bolt.
Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
NOTICE:
- **Do not use a rear airbag sensor that has been dropped.**
- **Do not subject the rear airbag sensor to any impact or force.**

(d) Confirm that there is no looseness by shaking the rear airbag sensor.



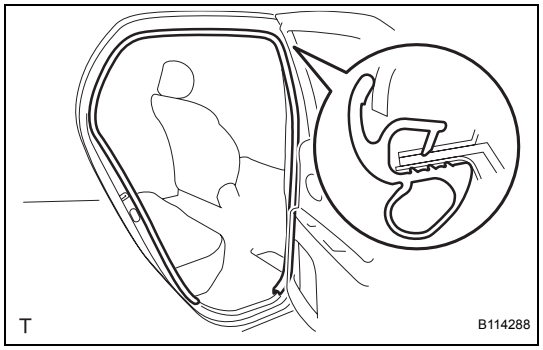


(e) Connect the airbag connector.



2. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH**
   (a) Engage the 3 clips and the 6 claws and install the deck trim side panel.
   (b) Tighten the 3 screws.
   HINT:
   When installing the rear seat outer belt assembly RH, connect the room light connector and install the deck trim side panel assembly RH.

3. **INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-31)**



4. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
   (a) Install the rear door opening trim weatherstrip.

5. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)**

6. **INSTALL REAR DECK TRIM COVER (See page IR-82)**

7. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**

8. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**

9. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**

10. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-82)**
11. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**
12. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)**
13. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
14. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
15. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**
16. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**
17. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
18. **INSPECT SRS WARNING LIGHT**

ON-VEHICLE INSPECTION

1. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For rear airbag sensor removal and installation procedures, see pages RS-481 and RS-483, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center pillar of the vehicle or its periphery is damaged, check whether there is any damage to the rear airbag sensor. If there are any defects, such as those mentioned below, replace the rear airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

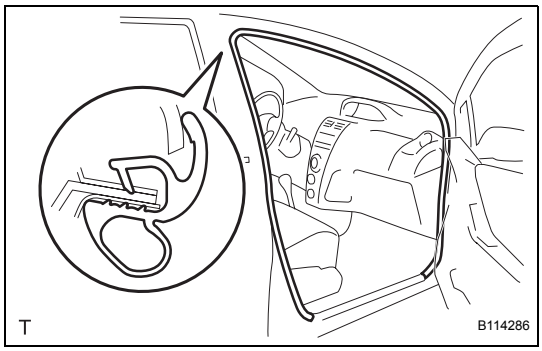
3. **INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For rear airbag sensor removal and installation procedures, see pages RS-481 and RS-483, and carefully follow the correct procedure.
   (a) Replace the rear airbag sensor.

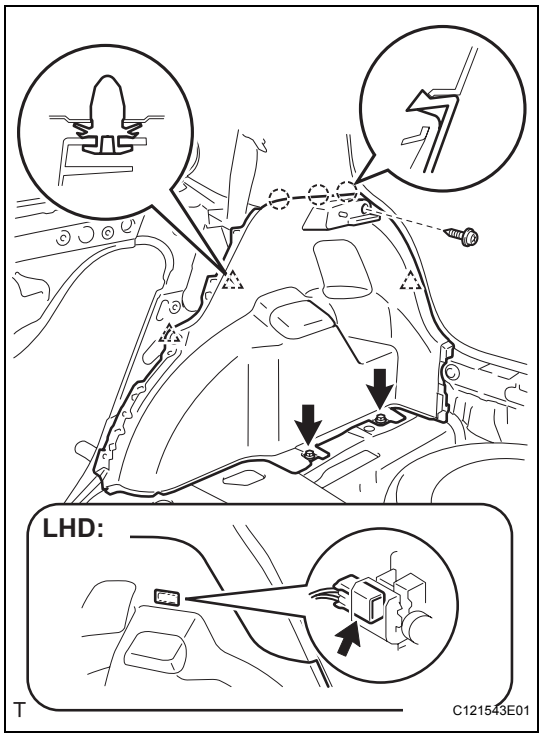
RS

REMOVAL

CAUTION:
Some of the these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-96)**
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for Slide Reclining Hold Down Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for Slide Reclining Hold Down Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-97)**
13. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Remove the rear opening trim weatherstrip to the extent necessary to remove the quarter trim panel assembly front.
14. **REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-97)**
15. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
16. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-98)**





17. REMOVE DECK SIDE TRIM PANEL ASSEMBLY RH

(a) Remove the 3 screws.

(b) Disengage the 3 clips and the 3 claws and remove the deck side trim panel.

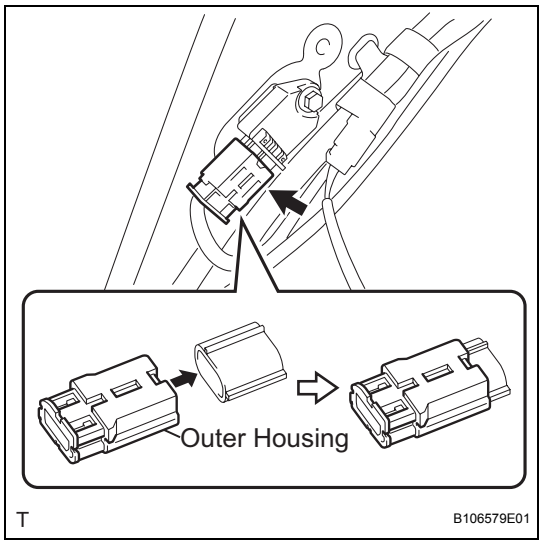
HINT:

When removing the deck side trim panel assembly LH, disconnect the room light connector and remove the deck side trim panel .

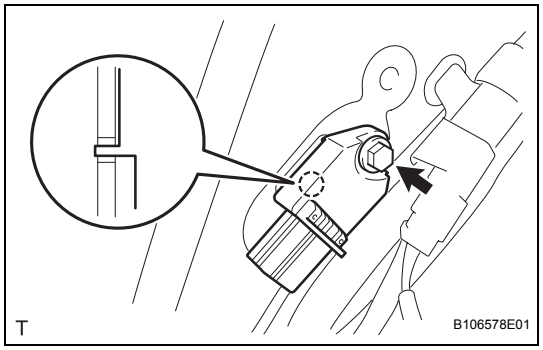
18. REMOVE REAR AIRBAG SENSOR

CAUTION:

Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.



(a) Slide the outer housing and detach the airbag connector.



(b) Remove the bolt, disengage the hook and remove the airbag sensor.

RS

RS

DTC	B1615/14	Front Airbag Sensor LH Circuit Malfunction

DESCRIPTION

The front airbag sensor LH consists of parts including the diagnostic circuit and the frontal deceleration sensor.

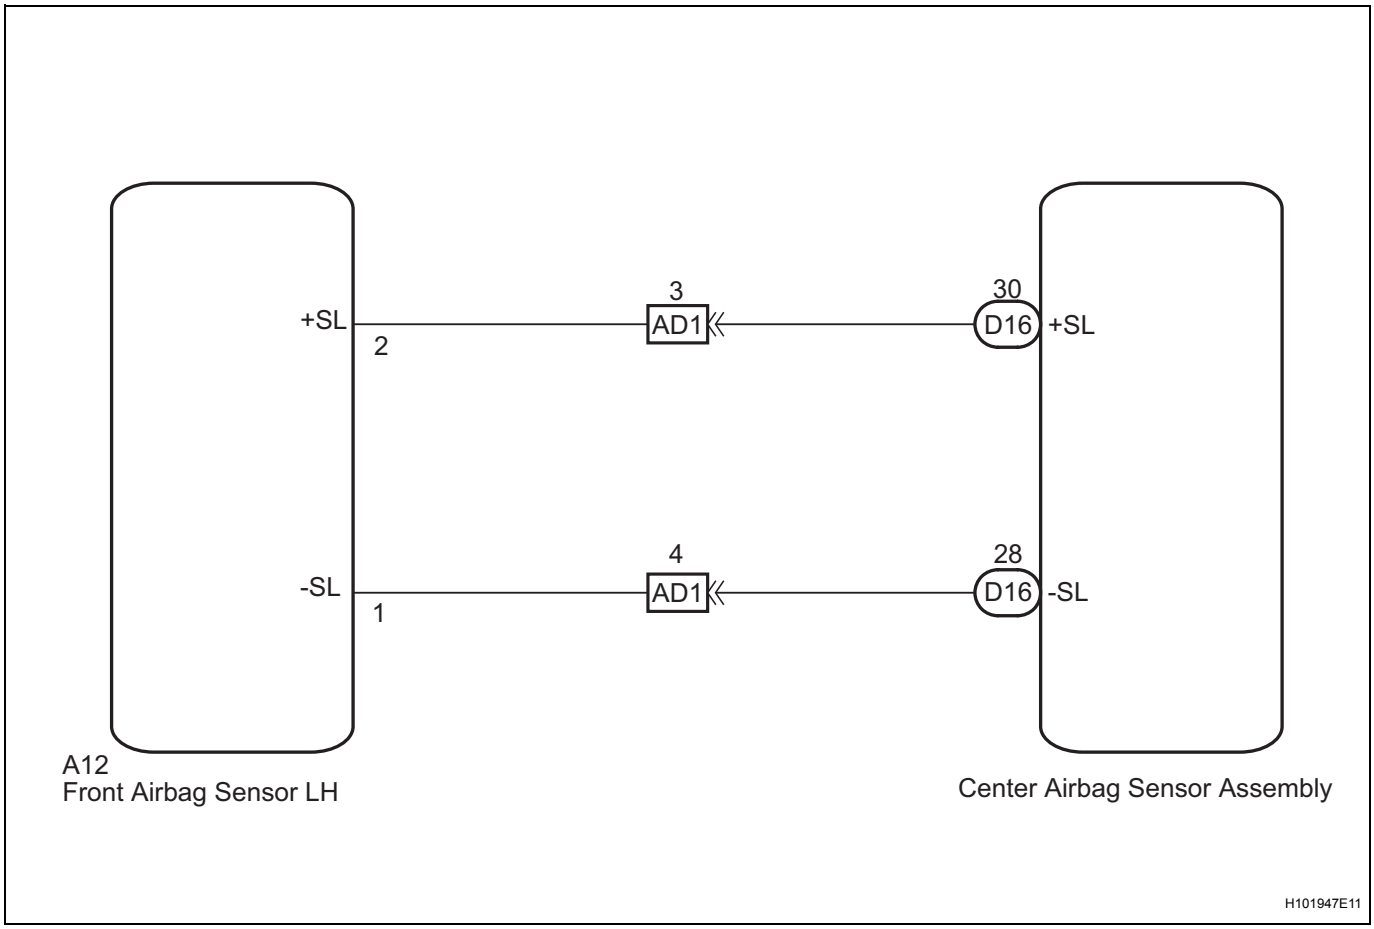
RS

When the center airbag sensor assembly receives signals from the frontal deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1615/14 is set when a malfunction is detected in the front airbag sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1615/14	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in front airbag sensor LH circuit for 2 seconds. • Front airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

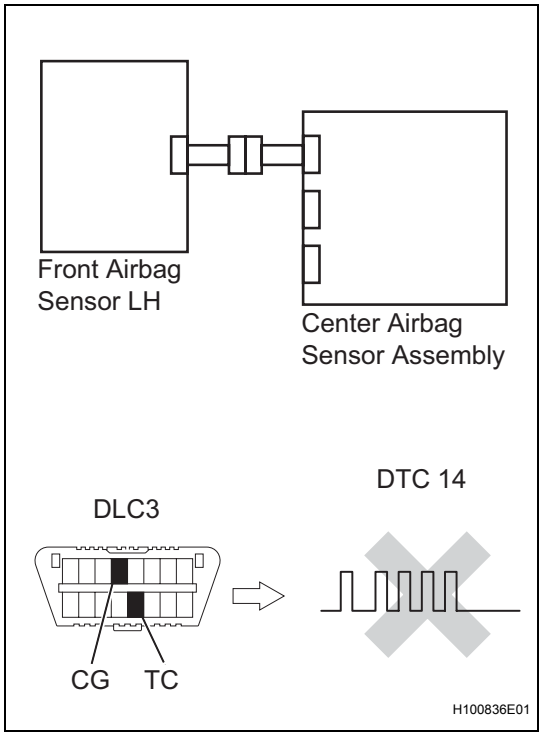
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.

4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.
   HINT:
   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

RS

1	CHECK DTC



(a) Turn the ignition switch on, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).
OK:
DTC B1615/14 is not output.
HINT:
DTCs other than DTC B1615/14 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

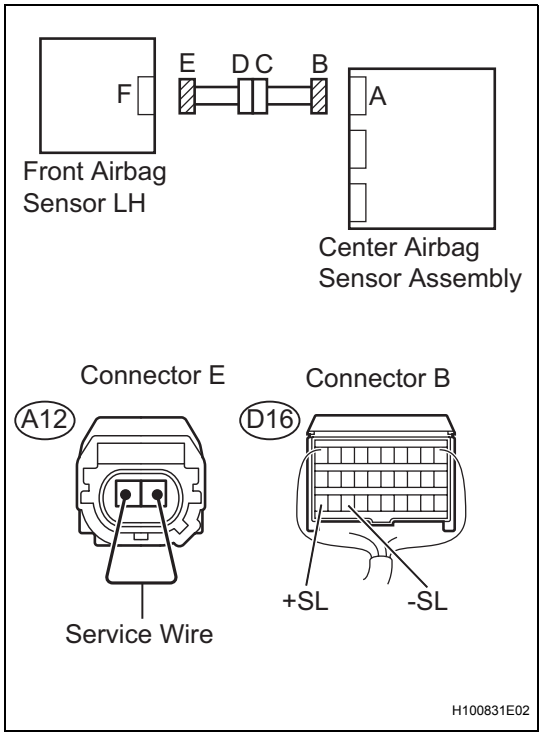
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3	CHECK FRONT AIRBAG SENSOR LH CIRCUIT (FOR OPEN)



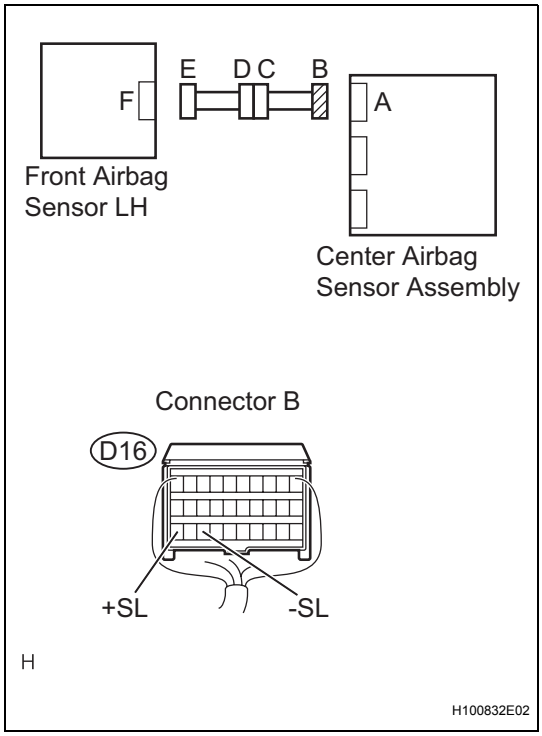
(a) Disconnect the connectors from the center airbag sensor assembly and the front airbag sensor LH.
(b) Using a service wire, connect A12-1 and A12-2 of connector E.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-30 (+SL) - D16-28 (-SL)	Always	Below 1 Ω

NG → **Go to step 8**

OK

4	CHECK FRONT AIRBAG SENSOR LH CIRCUIT (FOR SHORT)



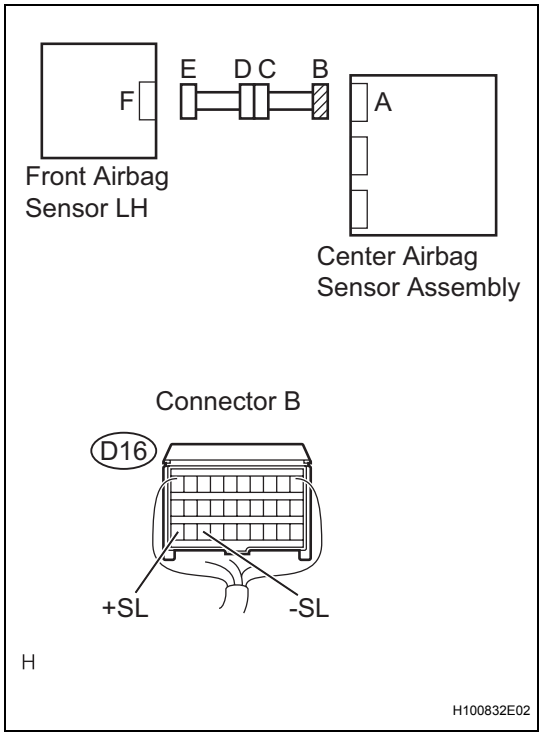
(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-30 (+SL) - D16-28 (-SL)	Always	1 MΩ or higher

NG → **Go to step 9**

OK

5 CHECK FRONT AIRBAG SENSOR LH CIRCUIT (TO B+)



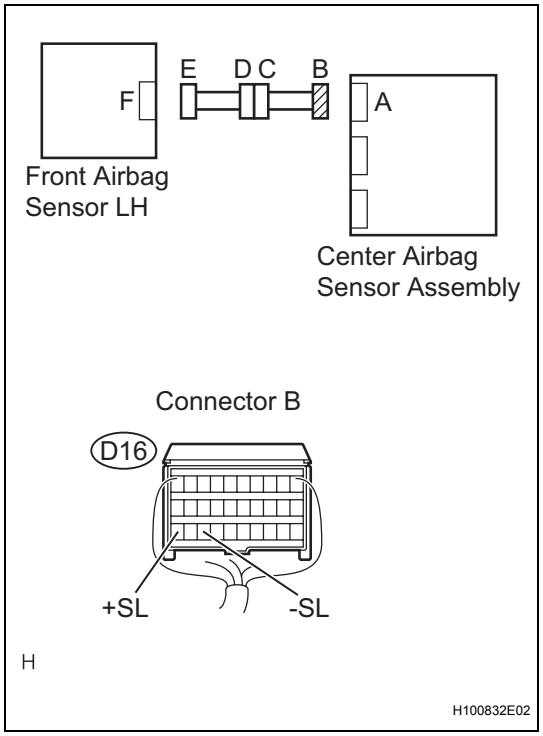
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D16-30 (+SL) - Body ground	Ignition switch on	Below 1 V
D16-28 (-SL) - Body ground	Ignition switch on	Below 1 V

NG → **Go to step 10**

OK

6 CHECK FRONT AIRBAG SENSOR LH CIRCUIT (TO GROUND)



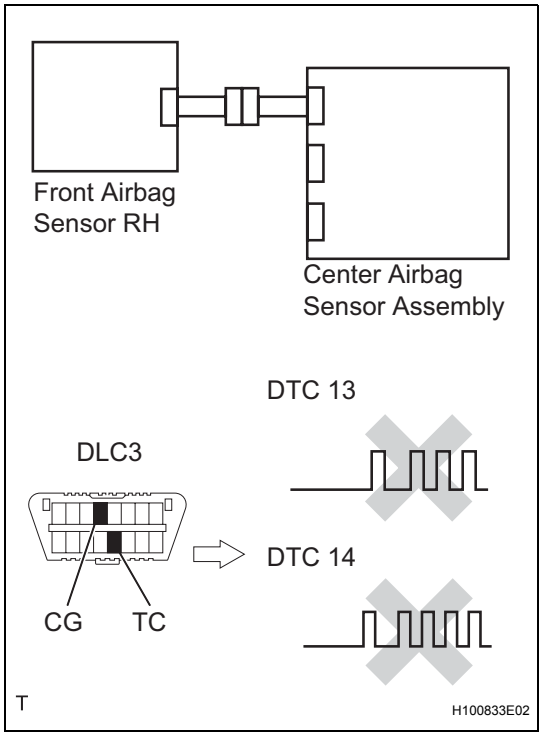
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-30 (+SL) - Body ground	Always	1 MΩ or higher
D16-28 (-SL) - Body ground	Always	1 MΩ or higher

NG → **Go to step 11**

OK

7	CHECK FRONT AIRBAG SENSOR LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-38).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on, and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-38).

Result

Result	Proceed to
DTC B1615/14 is output.	A
DTC B1610/13 is output.	B
DTC B1610/13 and B1615/14 are not output.	C

HINT:
DTCs other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

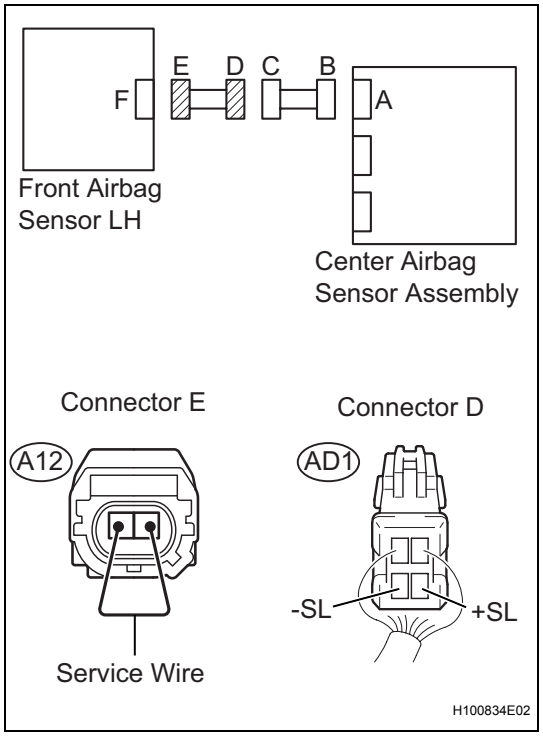
A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

B → **REPLACE FRONT AIRBAG SENSOR LH**

C

USE SIMULATION METHOD TO CHECK

8	CHECK ENGINE ROOM MAIN WIRE (FOR OPEN)



(a) Disconnect the engine room main wire connector from the instrument panel wire.
HINT:
The service wire has already been inserted into connector E.

(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
AD1-3 (+SL) - AD1-4 (-SL)	Always	Below 1 Ω

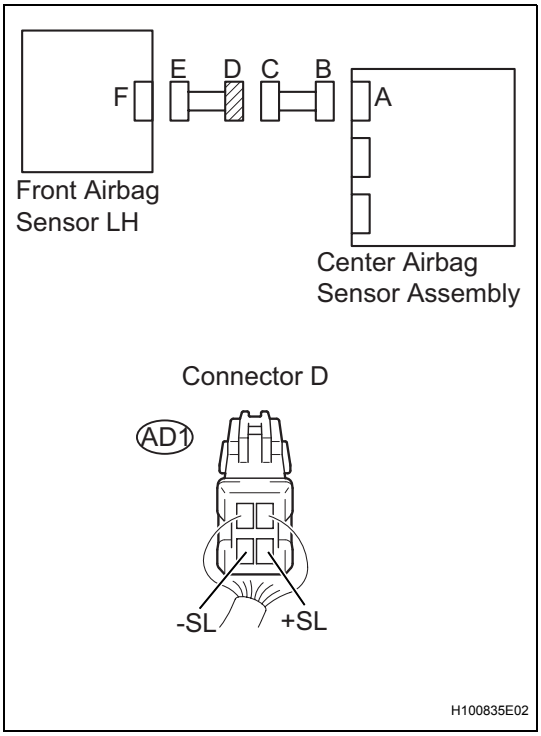
NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

RS

9	CHECK ENGINE ROOM MAIN WIRE (FOR SHORT)



(a) Disconnect the service wire from connector E.
(b) Measure the resistance.
Standard resistance

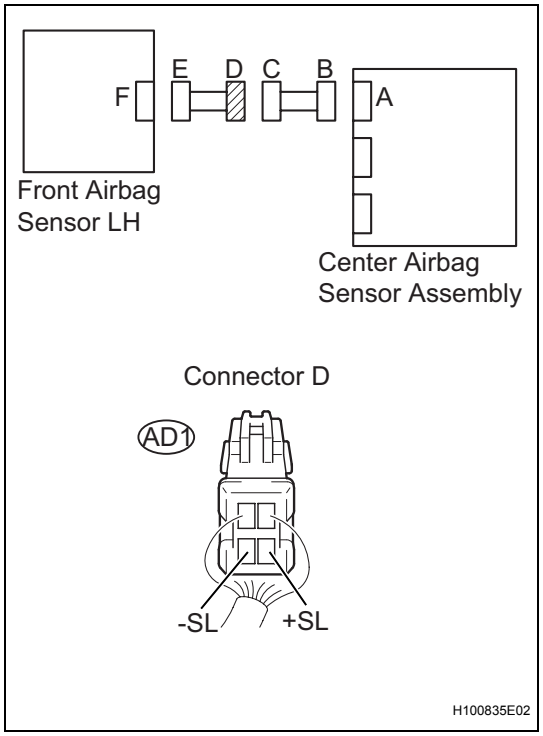
Tester Connection	Condition	Specified Condition
AD1-3 (+SL) - AD1-4 (-SL)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

OK

REPAIR OR REPLACE INSTRUMENT PANEL WIRE

10	CHECK ENGINE ROOM MAIN WIRE (TO B+)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative(-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the engine room main wire connector from the instrument panel wire.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on.
(f) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
AD1-3 (+SL) - Body ground	Ignition switch on	Below 1 V
AD1-4 (-SL) - Body ground	Ignition switch on	Below 1 V

ON-VEHICLE INSPECTION

1. **INSPECT SEAT POSITION SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT SEAT POSITION SENSOR (for Vehicle Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) Even if the airbag was not deployed, check whether there is any damage to the seat position sensor. If there are any defects such as those mentioned below, replace the seat position sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.

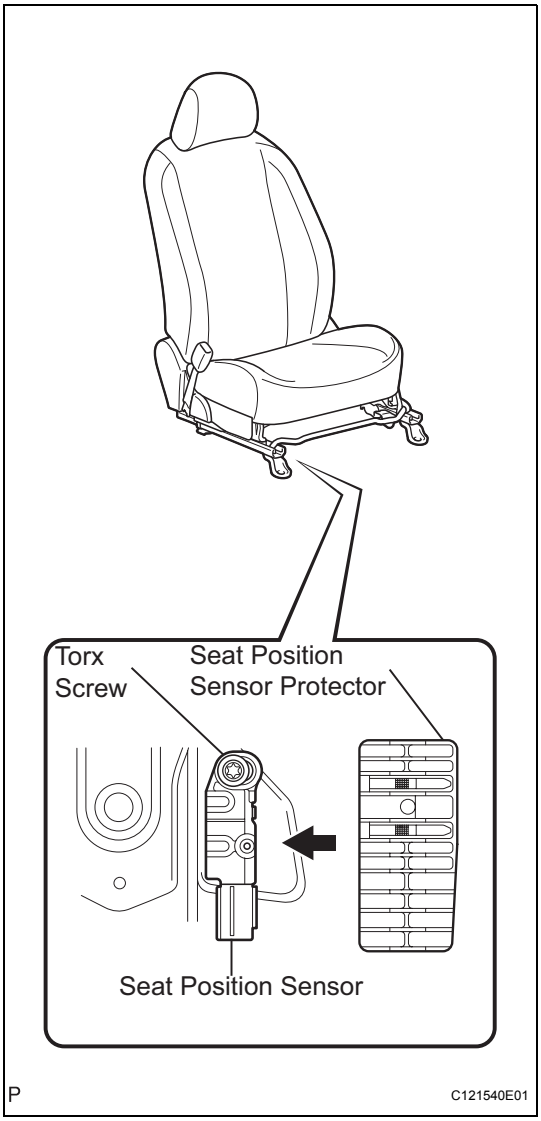
   CAUTION:
   Follow the correct removal and installation procedures.

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
Installation is in the reverse order of removal.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Sedan) (See page SE-5)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Hatchback) (See page SE-28)**
4. **REMOVE FRONT SEAT ASSEMBLY LH (for Sedan) (See page SE-5)**
5. **REMOVE FRONT SEAT ASSEMBLY LH (for Hatchback) (See page SE-28)**
6. **REMOVE SEAT SLIDE POSITION SENSOR PROTECTOR**
   (a) Remove the seat slide position sensor protector from the seat position airbag sensor.

RS



7. REMOVE SEAT POSITION AIRBAG SENSOR

(a) Disconnect the connector from the seat position airbag sensor.

(b) Using "Torx" socket wrench T30, remove the torx screw and the seat position airbag sensor.

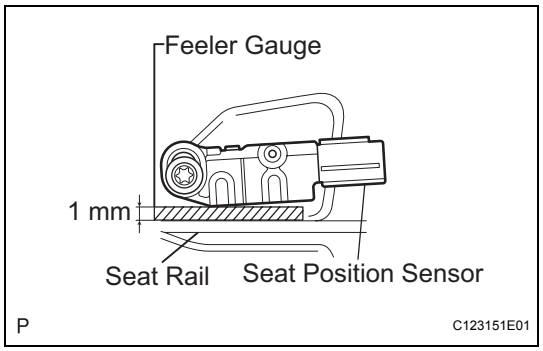
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.

1. INSTALL SEAT POSITION AIRBAG SENSOR

(a) Check that the ignition switch is turned to OFF.

(b) Check that the battery negative (-) terminal is disconnected.
CAUTION:
After removing the terminal, wait for at least 90 seconds before starting the operation.



(c) Using an 1 mm (0.039 in.) feeler gauge, install the seat position airbag sensor.
NOTICE:
- **If the seat position airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the seat position airbag sensor with a new one.**
- **When installing the seat position airbag sensor, make sure that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

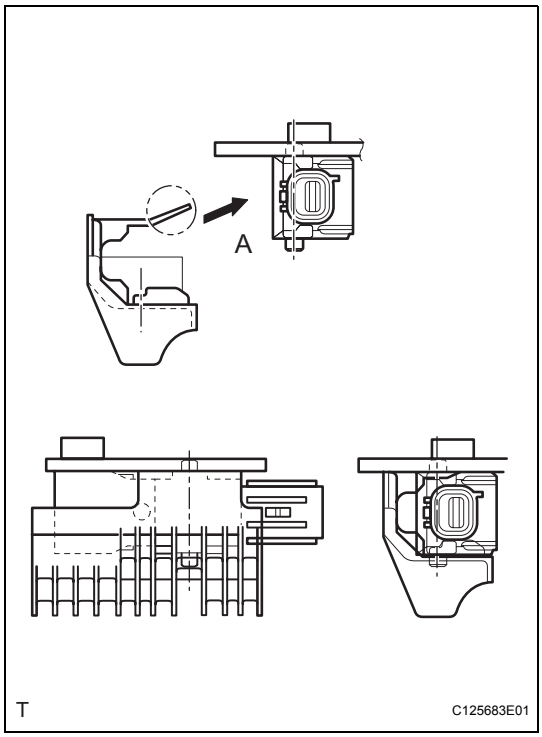
HINT:
Maintain a clearance between the seat position airbag sensor and the seat rail within 0.6 mm (0.023 in.) to 2 mm (0.079 in.).

(d) Using "Torx" socket wrench, tighten the torx screw to install the seat position airbag sensor.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(e) Make sure that a clearance between the seat position airbag sensor and the seat rail is within 0.6 mm (0.023 in.) to 2 mm (0.079 in.).

(f) Connect the connector to the seat position airbag sensor.

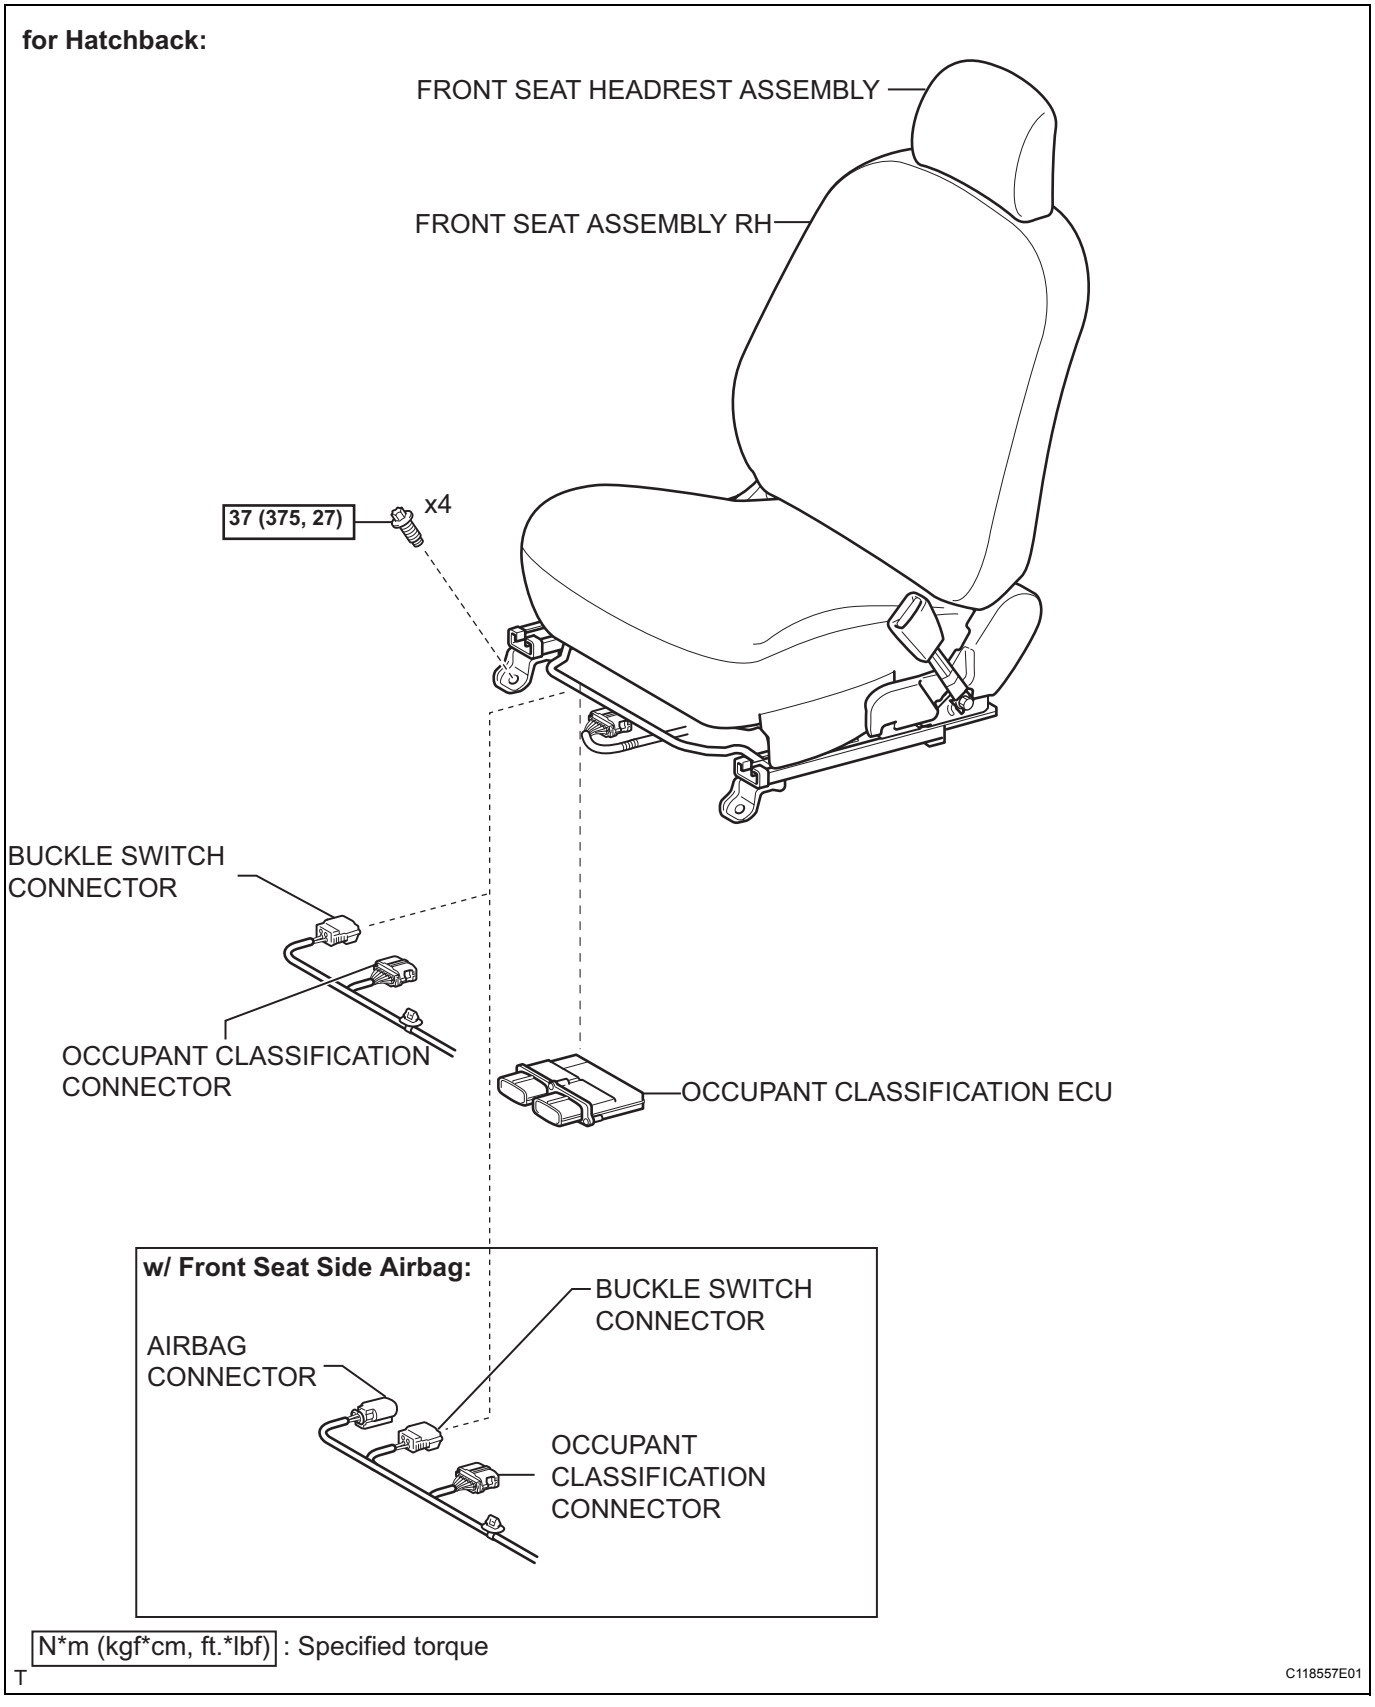
(g) Check that there is no looseness in the installation parts of the seat position airbag sensor.



2. **INSTALL SEAT SLIDE POSITION SENSOR PROTECTOR**
   (a) Engage the pin and install a new seat position sensor protector.
   NOTICE:
   Do not damage portion A, shown in the illustration, when installing the seat position sensor protector.
3. **REMOVE FRONT SEAT ASSEMBLY LH (for Sedan) (See page SE-20)**
4. **INSTALL FRONT SEAT ASSEMBLY LH (for Hatchback) (See page SE-42)**
5. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Sedan) (See page SE-21)**
6. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Hatchback) (See page SE-43)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (54 kgf*cm, 48 in.*lbf)
8. **INSPECT SRS WARNING LIGHT**
   (See page RS-31)

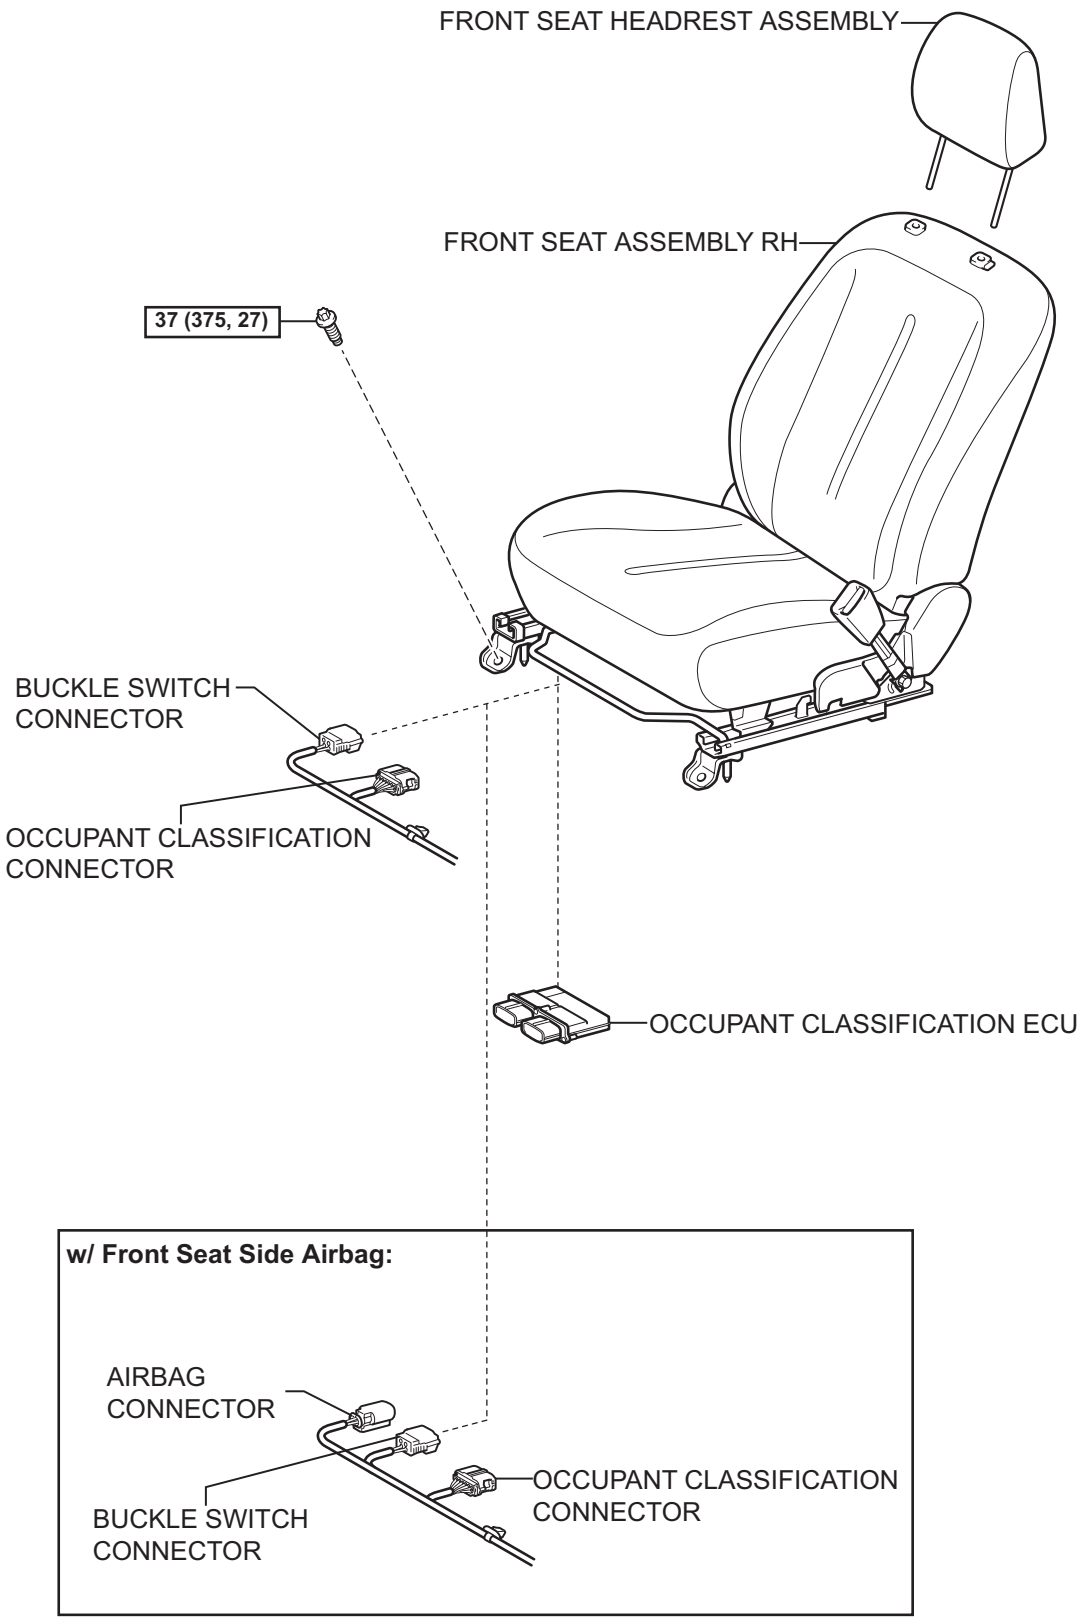
OCCUPANT CLASSIFICATION ECU

COMPONENTS



RS

for Sedan:



N*m (kgf*cm, ft*lbf) : Specified torque

ON-VEHICLE INSPECTION

1. **INSPECT OCCUPANT CLASSIFICATION ECU (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **REMOVE OCCUPANT CLASSIFICATION ECU (for Vehicle Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) Even if the airbag was not deployed, check if there is any damage to the occupant classification ECU. If there are any defects as those mentioned below, replace the occupant classification ECU with a new one:
   - Cracks, dents or chips in the case.
   - Cracks or other damage to the connector.

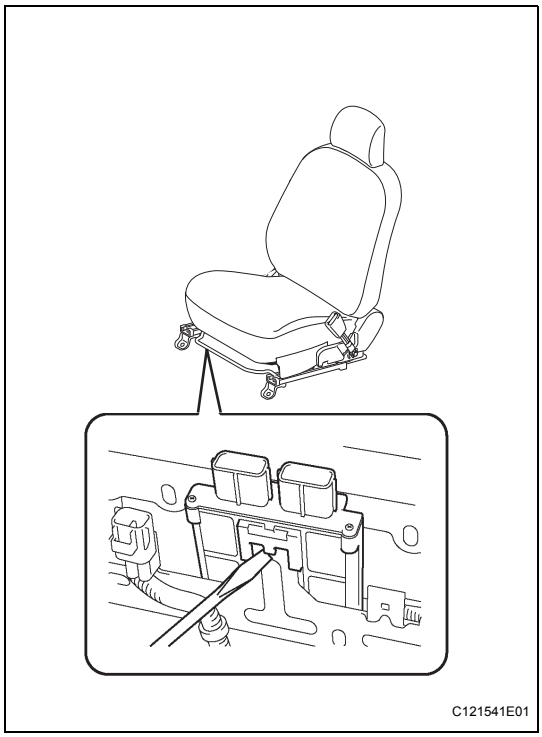
   CAUTION:
   Follow the correct removal and installation procedures.

RS

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Installation is in the reverse order of removal.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Sedan) (See page SE-5)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Hatchback) (See page SE-28)**
4. **REMOVE FRONT SEAT ASSEMBLY RH (for Sedan) (See page SE-5)**
5. **REMOVE FRONT SEAT ASSEMBLY RH (for Hatchback) (See page SE-28)**
6. **REMOVE OCCUPANT CLASSIFICATION ECU**
   (a) Disconnect the connectors from the occupant classification ECU.
   (b) Using a screwdriver, remove the occupant classification ECU.



C121541E01

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.

1. **INSTALL OCCUPANT CLASSIFICATION ECU**
   (a) Check that the ignition switch is turned OFF.
   (b) Check that the negative (-) battery terminal is disconnected.
   CAUTION:
   After removing the terminal, wait for at least 90 seconds before starting the operation.
   (c) Install the occupant classification ECU.
   (d) Connect the connectors to the occupant classification ECU.
   NOTICE:
   - **If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**

DTC	B1620/21	Driver Side - Side Airbag Sensor Circuit Malfunction

DESCRIPTION

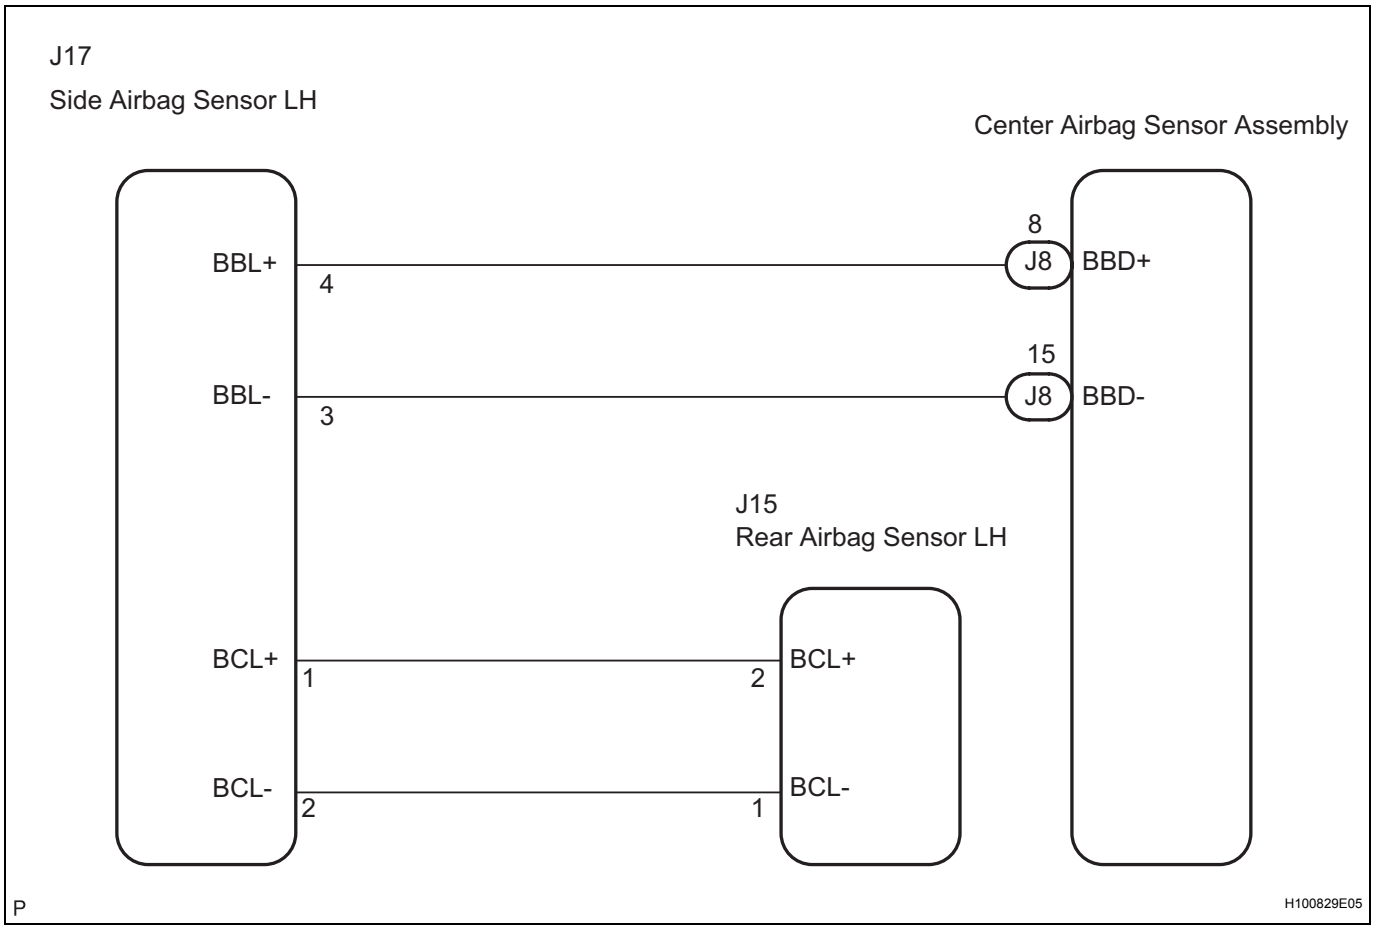
The side airbag sensor LH consists of parts including the diagnostic circuit and the lateral deceleration sensor.

When the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1620/21 is set when a malfunction is detected in the side airbag sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1620/21	• Center airbag sensor assembly detects open circuit signal in side airbag sensor LH circuit for 2 seconds. • Side airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Side airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

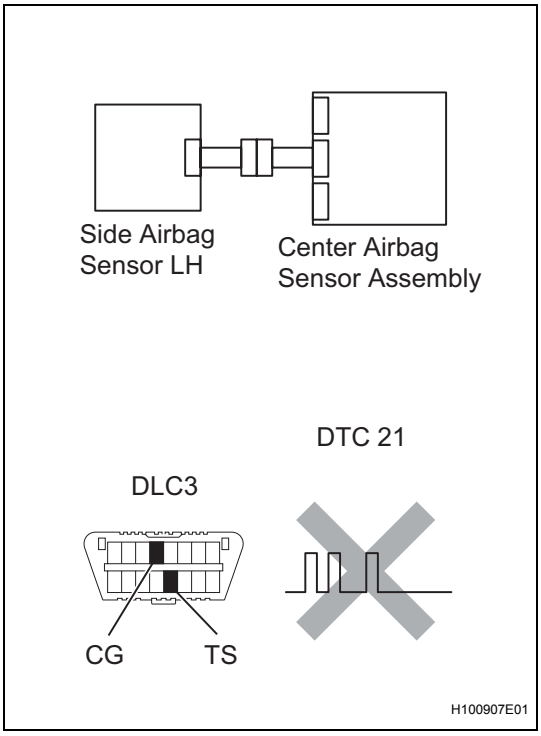
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.

HINT:

Skip the following steps if side and curtain shield airbags are not fitted.

8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

1 CHECK DTC



(a) Turn the ignition switch on, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).

OK:

DTC B1620/21 is not output.

HINT:

DTCs other than DTC B1620/21 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly, rear airbag sensor LH and the side airbag sensor LH.

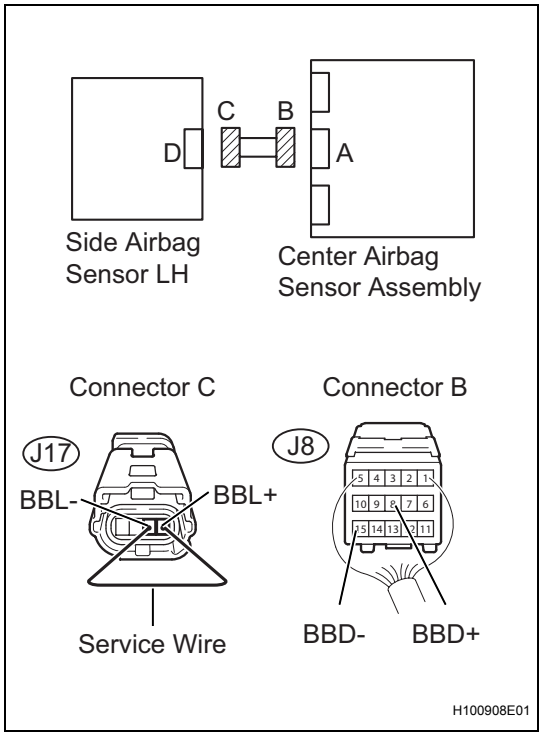
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK FLOOR WIRE (FOR OPEN)



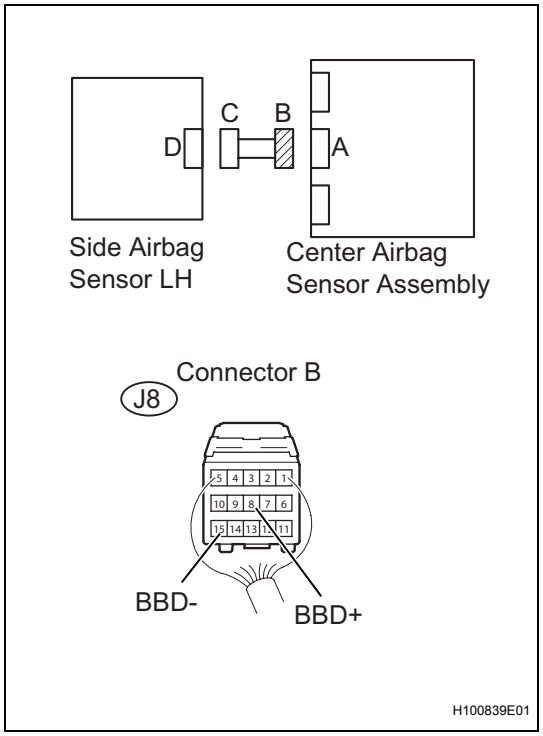
(a) Disconnect the connectors from the center airbag sensor assembly and the side airbag sensor LH.
(b) Using a service wire, connect J17-4 (BBL+) and J17-3 (BBL-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J8-8 (BBD+) - J8-15 (BBD-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (FOR SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

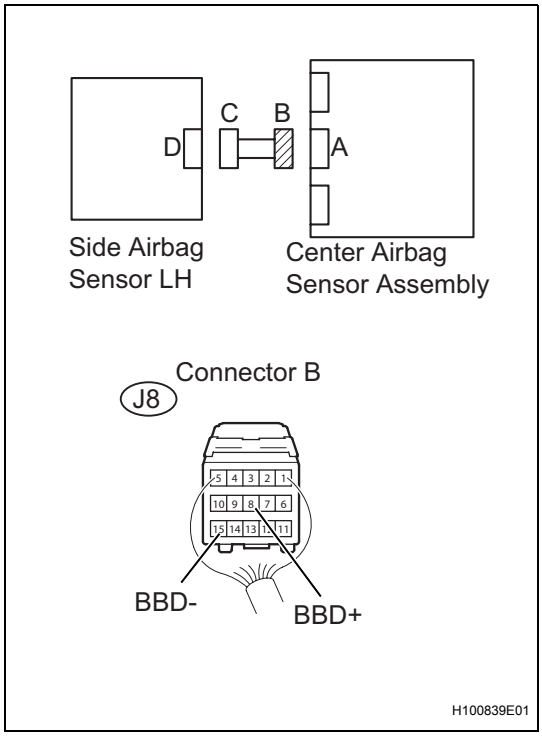
Tester Connection	Condition	Specified Condition
J8-8 (BBD+) - J8-15 (BBD-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5	CHECK FLOOR WIRE (TO B+)



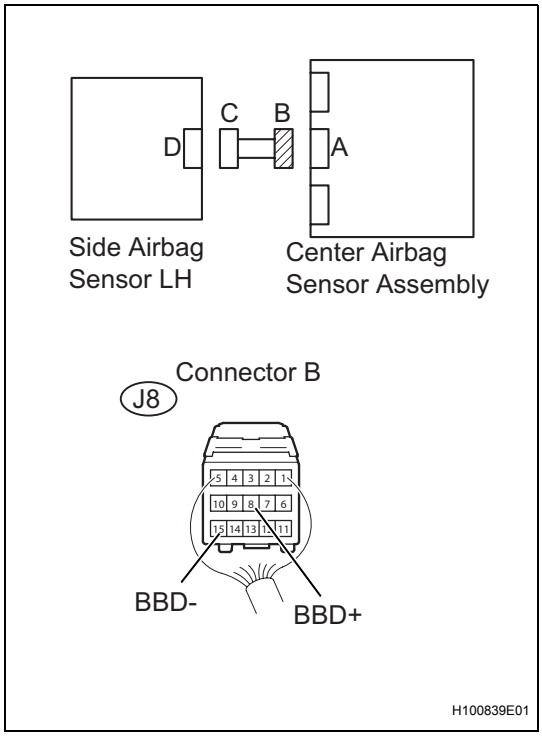
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the on position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
J8-8 (BBD+) - Body ground	Ignition switch on	Below 1 V
J8-15 (BBD-) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6	CHECK FLOOR WIRE (TO GROUND)



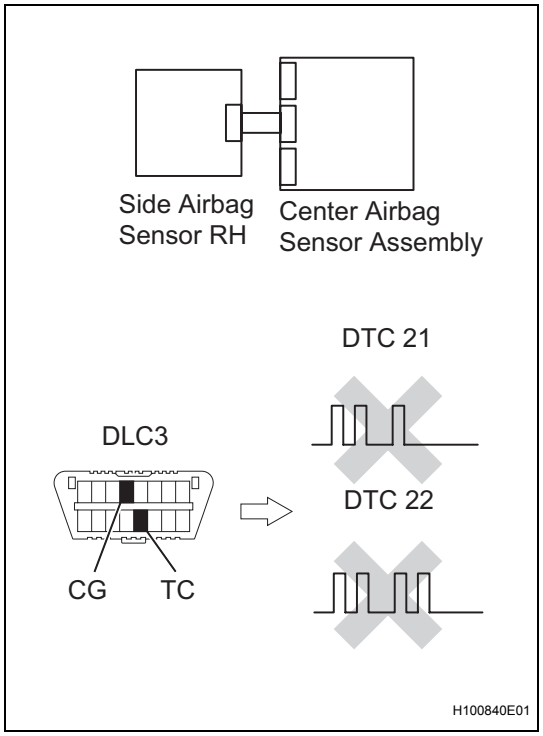
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J8-8 (BBD+) - Body ground	Always	1 MΩ or Higher
J8-15 (BBD-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

7	CHECK SIDE AIRBAG SENSOR LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the side airbag sensor RH with the side airbag sensor LH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-38).
(f) Turn the ignition switch to the lock position.
(g) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(h) Check for DTCs (See page RS-38).

USE SIMULATION METHOD TO CHECK

RS

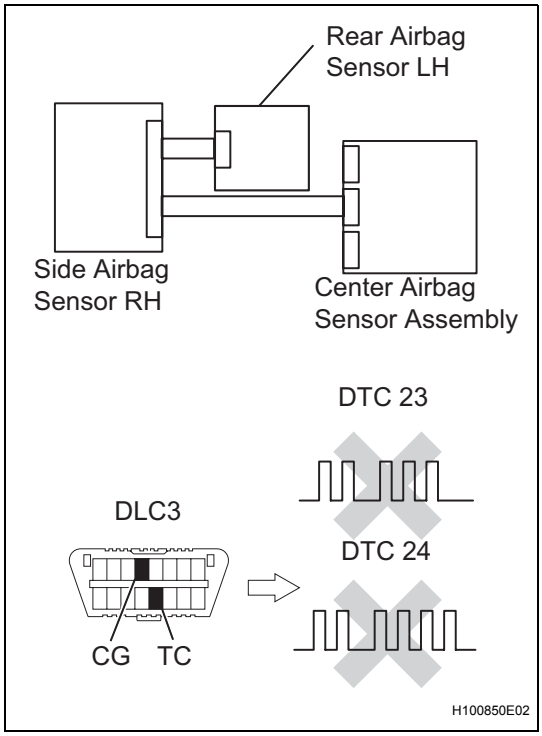
8	CHECK SIDE AIRBAG SENSOR LH



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Return the airbag sensor rear LH and RH to their original positions and connect the connectors to them.
(d) Interchange the side airbag sensor LH with the side airbag sensor RH and connect the connectors to them.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch to the lock position.
(i) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-38).

USE SIMULATION METHOD TO CHECK

DTC	B1635/24	Front Passenger Side Rear Airbag Sensor Circuit Malfunction

DESCRIPTION

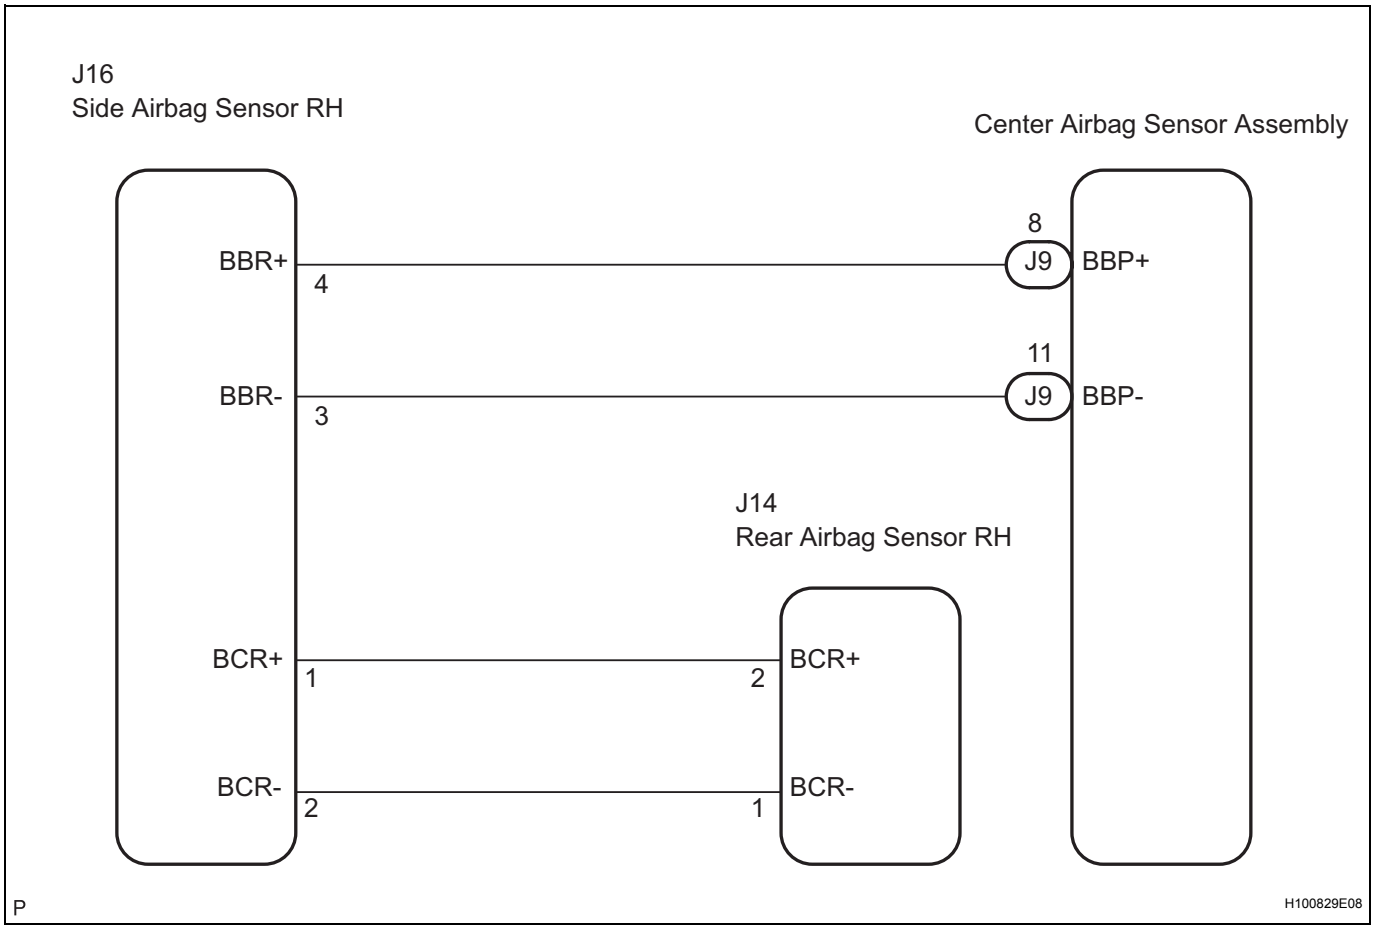
The rear airbag sensor RH consists of parts including the diagnostic circuit and the lateral deceleration sensor.

When the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1635/24 is recorded when a malfunction is detected in the rear airbag sensor RH circuit.

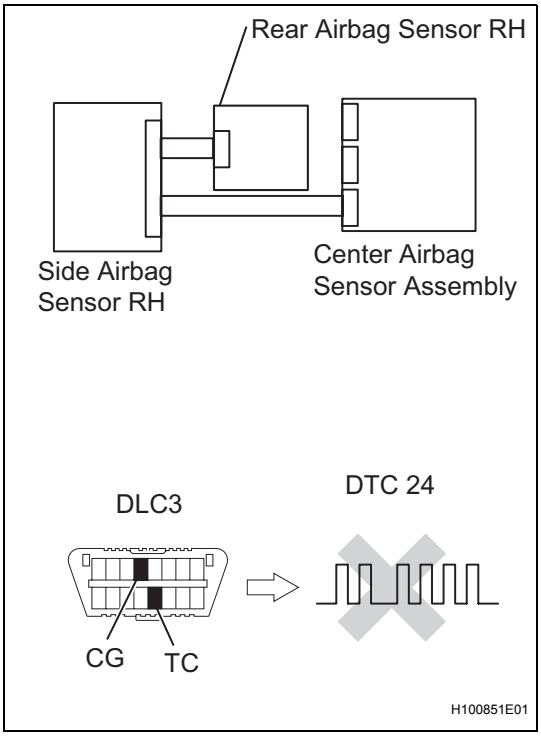
DTC No.	DTC Detecting Condition	Trouble Area
B1635/24	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in rear airbag sensor RH circuit for 2 seconds. • Rear airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).

OK:

DTC B1635/24 is not output.

HINT:
DTCs other than DTC B1635/24 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the rear airbag sensor RH.

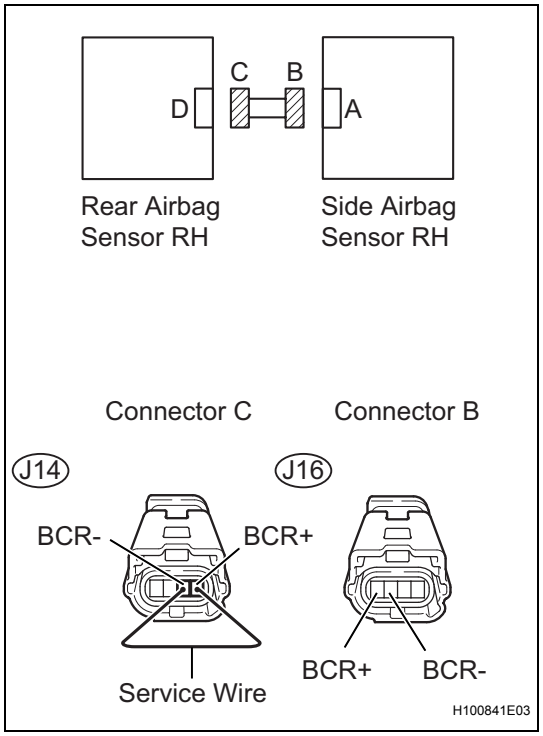
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK FLOOR WIRE (FOR OPEN)



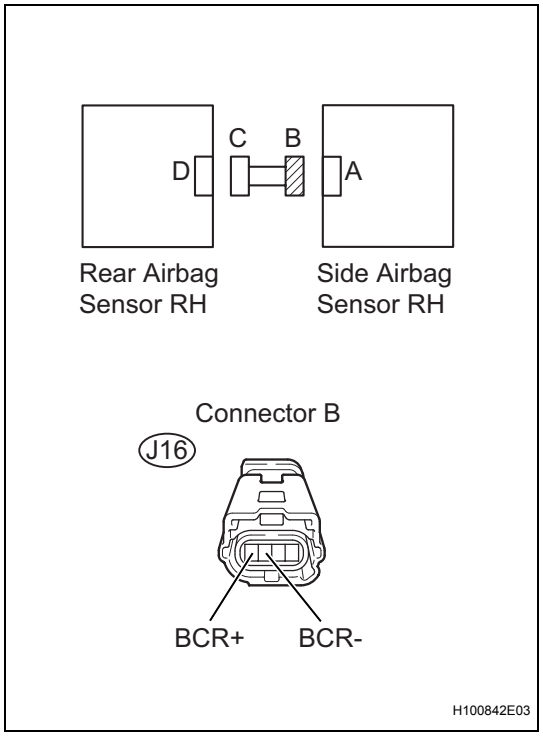
(a) Disconnect the connectors from the side airbag sensor RH and the rear airbag sensor RH.
(b) Using a service wire, connect J14-2 (BCR+) and J14-1 (BCR-) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J16-1 (BCR+) - J16-2 (BCR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (FOR SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

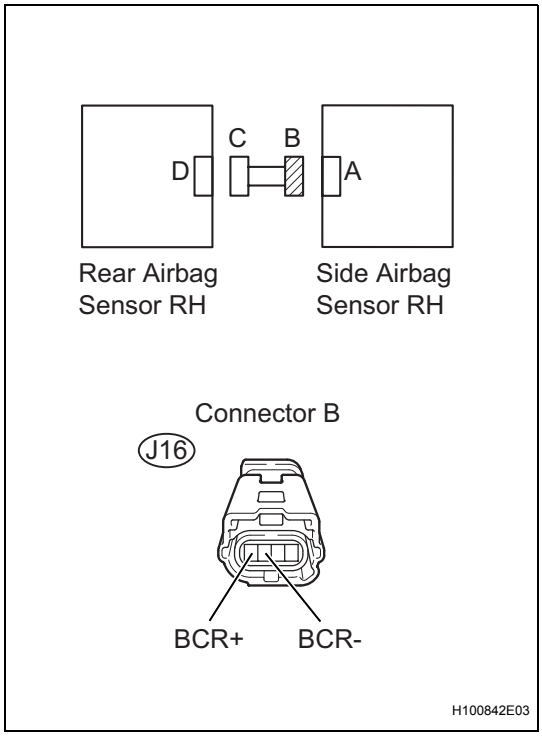
Tester Connection	Condition	Specified Condition
J16-1 (BCR+) - J16-2 (BCR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (TO B+)



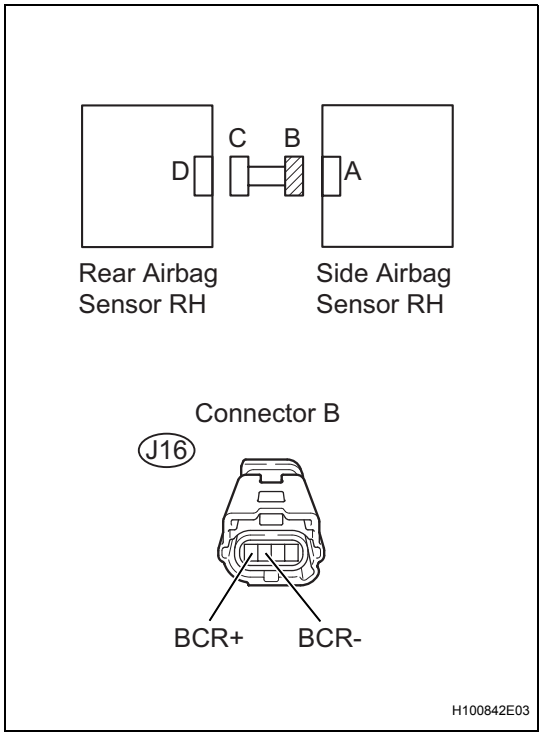
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
J16-1 (BCR+) - Body ground	Ignition switch on	Below 1 V
J16-2 (BCR-) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)



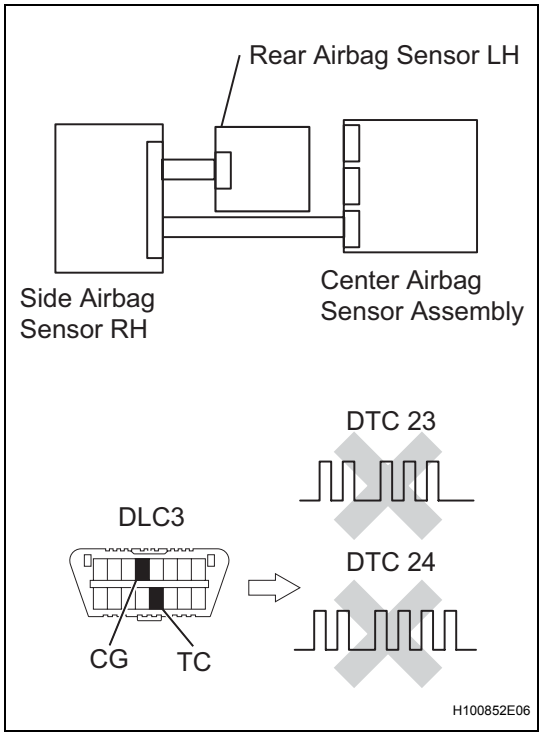
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J16-1 (BCR+) - Body ground	Always	1 MΩ or higher
J16-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

7	CHECK REAR AIRBAG SENSOR RH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the rear airbag sensor LH with the rear airbag sensor RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-38).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on, and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-38).

USE SIMULATION METHOD TO CHECK

DTC	B1650/32	Occupant Classification System Malfunction

DESCRIPTION

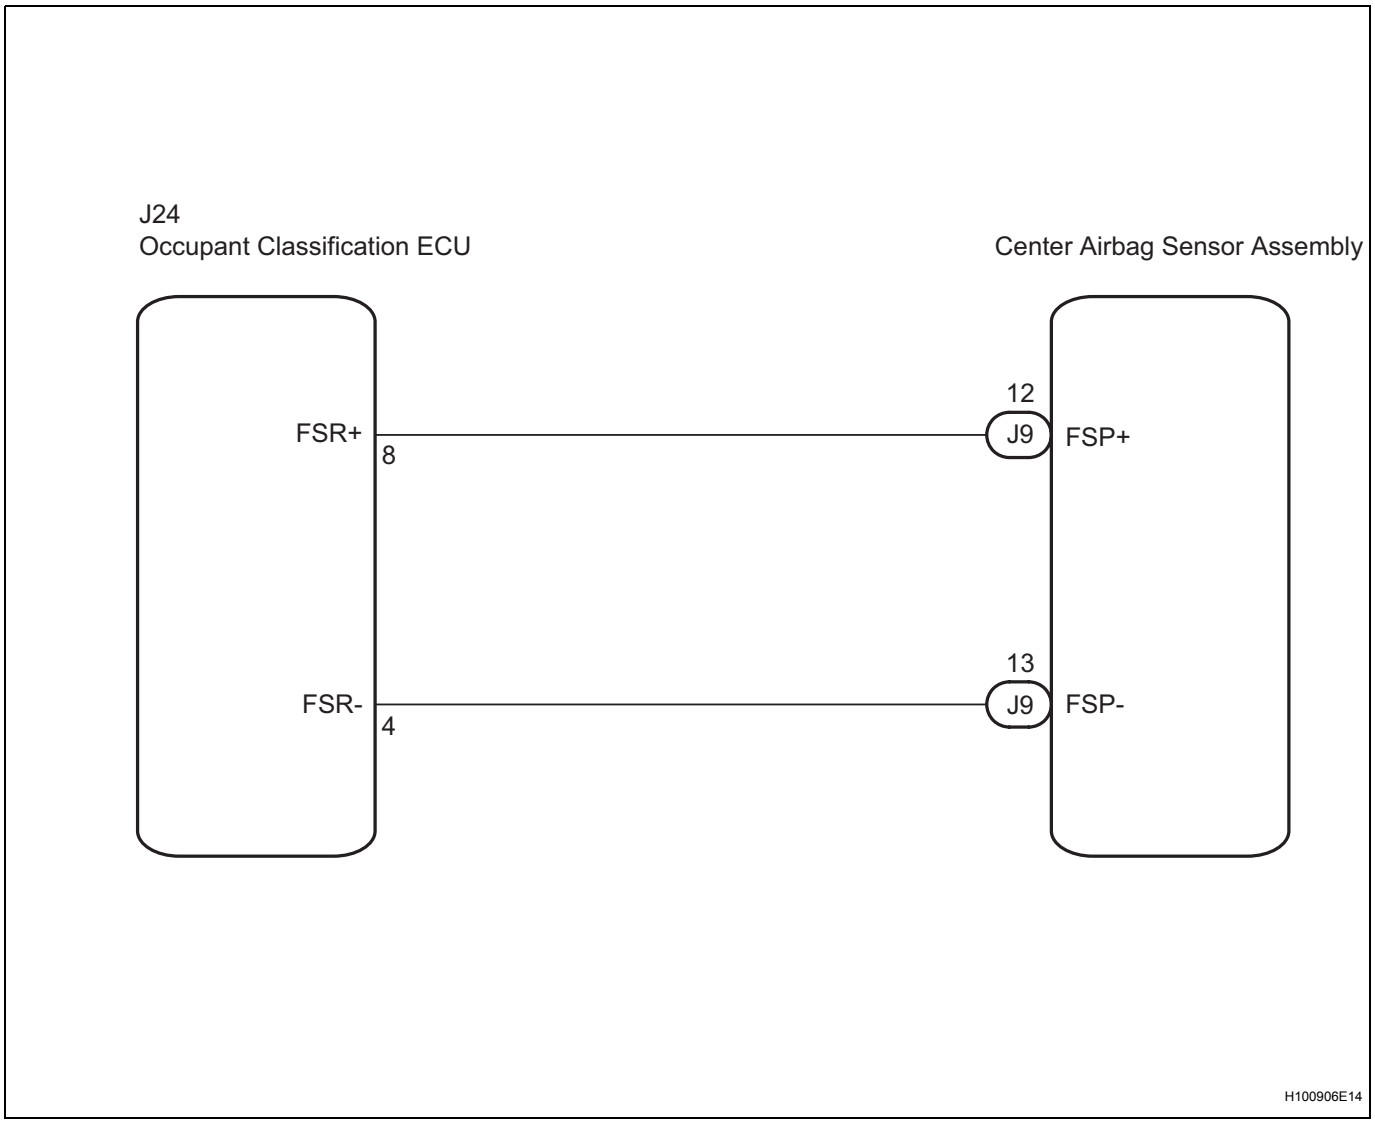
The occupant classification system circuit consists of the center airbag sensor assembly and the occupant classification system.

When the center airbag sensor assembly receives signals from the occupant classification ECU, it determines whether or not the front passenger airbag, front seat side airbag assembly RH and seat belt pretensioner RH should be operated.

DTC B1650/32 is set when a malfunction is detected in the occupant classification system circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1650/32	• Occupant classification system malfunction • Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in occupant classification system circuit for 2 seconds • Center airbag sensor assembly malfunction	• Floor wire • Occupant classification system • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

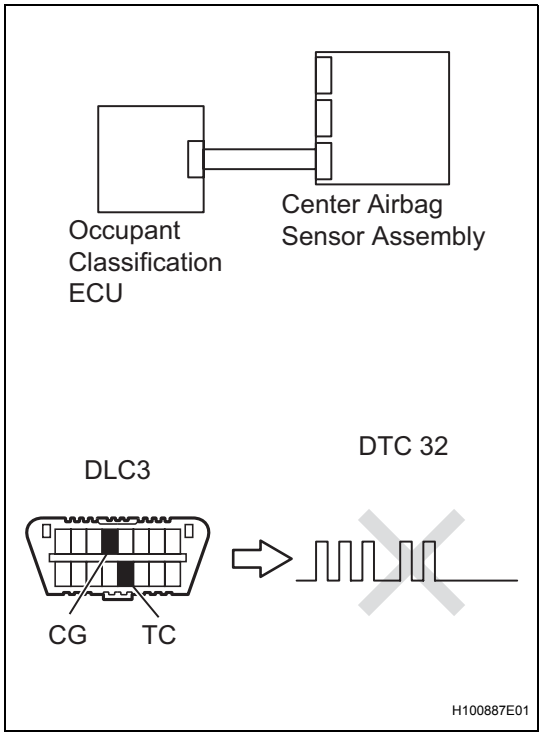
NOTICE:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.
   HINT:
   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC (CENTER AIRBAG SENSOR ASSEMBLY)



(a) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(e) Check for DTCs (See page RS-38).
OK:
DTC B1650/32 is not output.
HINT:
DTCs other than B1650/32 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK DTC (OCCUPANT CLASSIFICATION ECU)

(a) Turn the ignition switch to the on position, and wait for at least 10 seconds.
(b) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-223).
OK:
DTC is not output.

NG → GO TO DTC CHART

OK

3 CHECK CONNECTION OF CONNECTORS

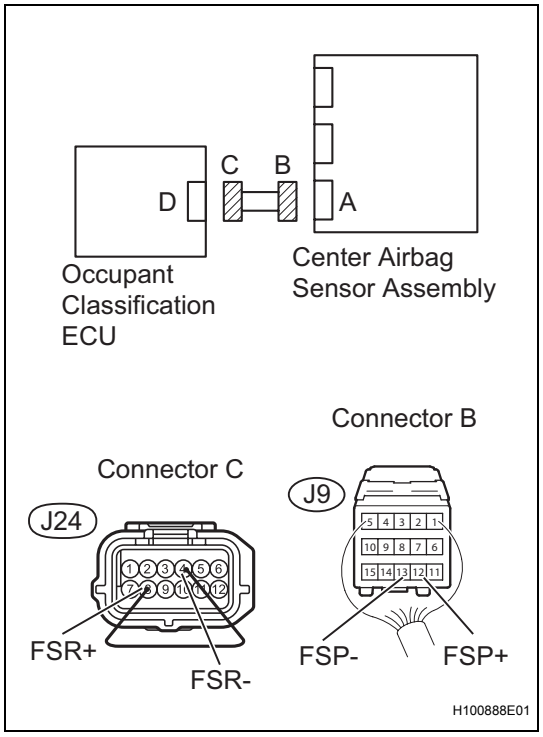
RS

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the occupant classification ECU.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS

OK

4 CHECK FLOOR WIRE (FOR OPEN)



(a) Disconnect the connectors from the center airbag sensor assembly and the occupant classification ECU.
(b) Using a service wire, connect J24-8 (FSR+) and J24-4 (FSR-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

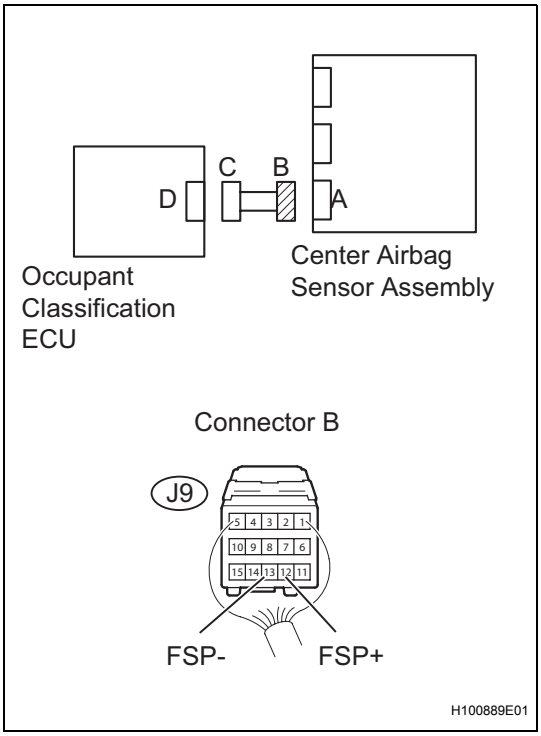
Tester Connection	Condition	Specified Condition
J9-12 (FSP+) - J9-13 (FSP-)	Always	Below 1 Ω

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

5 CHECK FLOOR WIRE (FOR SHORT)



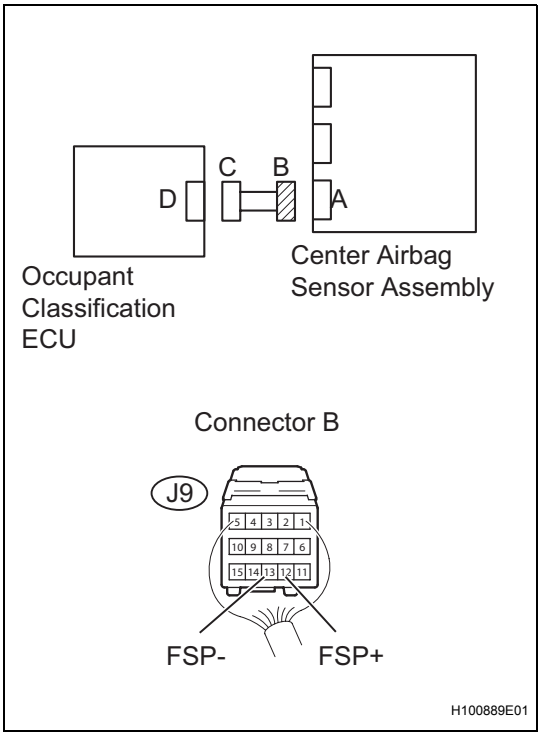
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J9-12 (FSP+) - J9-13 (FSP-)	Always	1 MΩ or Higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

6 CHECK FLOOR WIRE (TO B+)



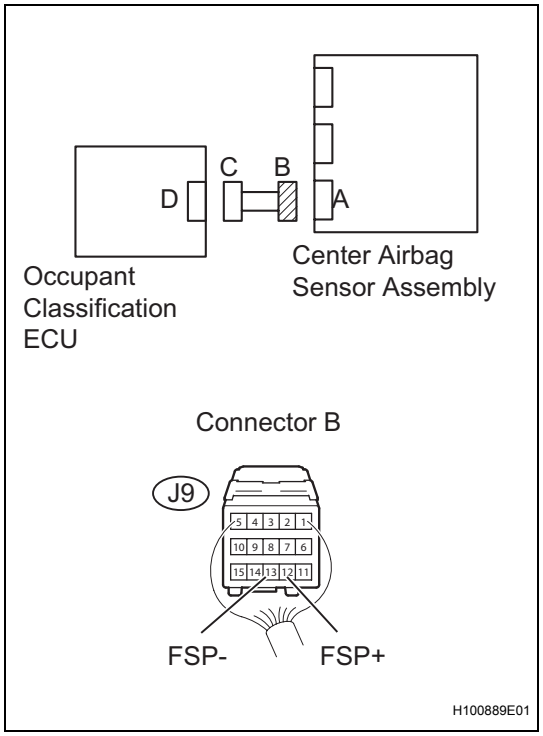
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the on position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
J9-12 (FSP+) - Body ground	Ignition switch on	Below 1 V
J9-13 (FSP-) - Body ground	Ignition switch on	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

7 CHECK FLOOR WIRE (TO GROUND)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

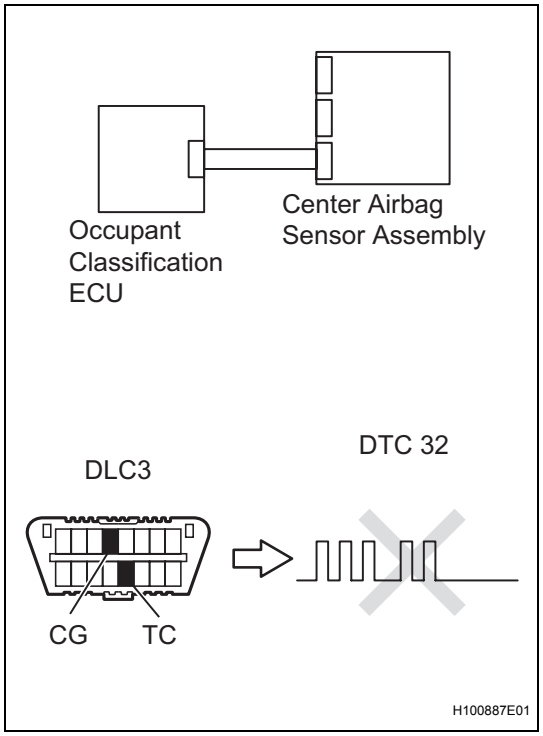
Standard resistance

Tester Connection	Condition	Specified Condition
J9-12 (FSP+) - Body ground	Always	1 MΩ or Higher
J9-13 (FSP-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

8 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the center airbag sensor assembly.
for Hatchback: (See page RS-437)
for Sedan: (See page RS-433)
HINT:
Perform the inspection using parts from a normal vehicle when possible.
(d) Connect the connectors to the center airbag sensor assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch to the lock position.
(i) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-38).

OK:

DTC B1650/32 is not output.

HINT:
DTCs other than B1650/32 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

RS

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the first sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

END

DTC	B1653/35	Seat Position Airbag Sensor Circuit Malfunction

DESCRIPTION

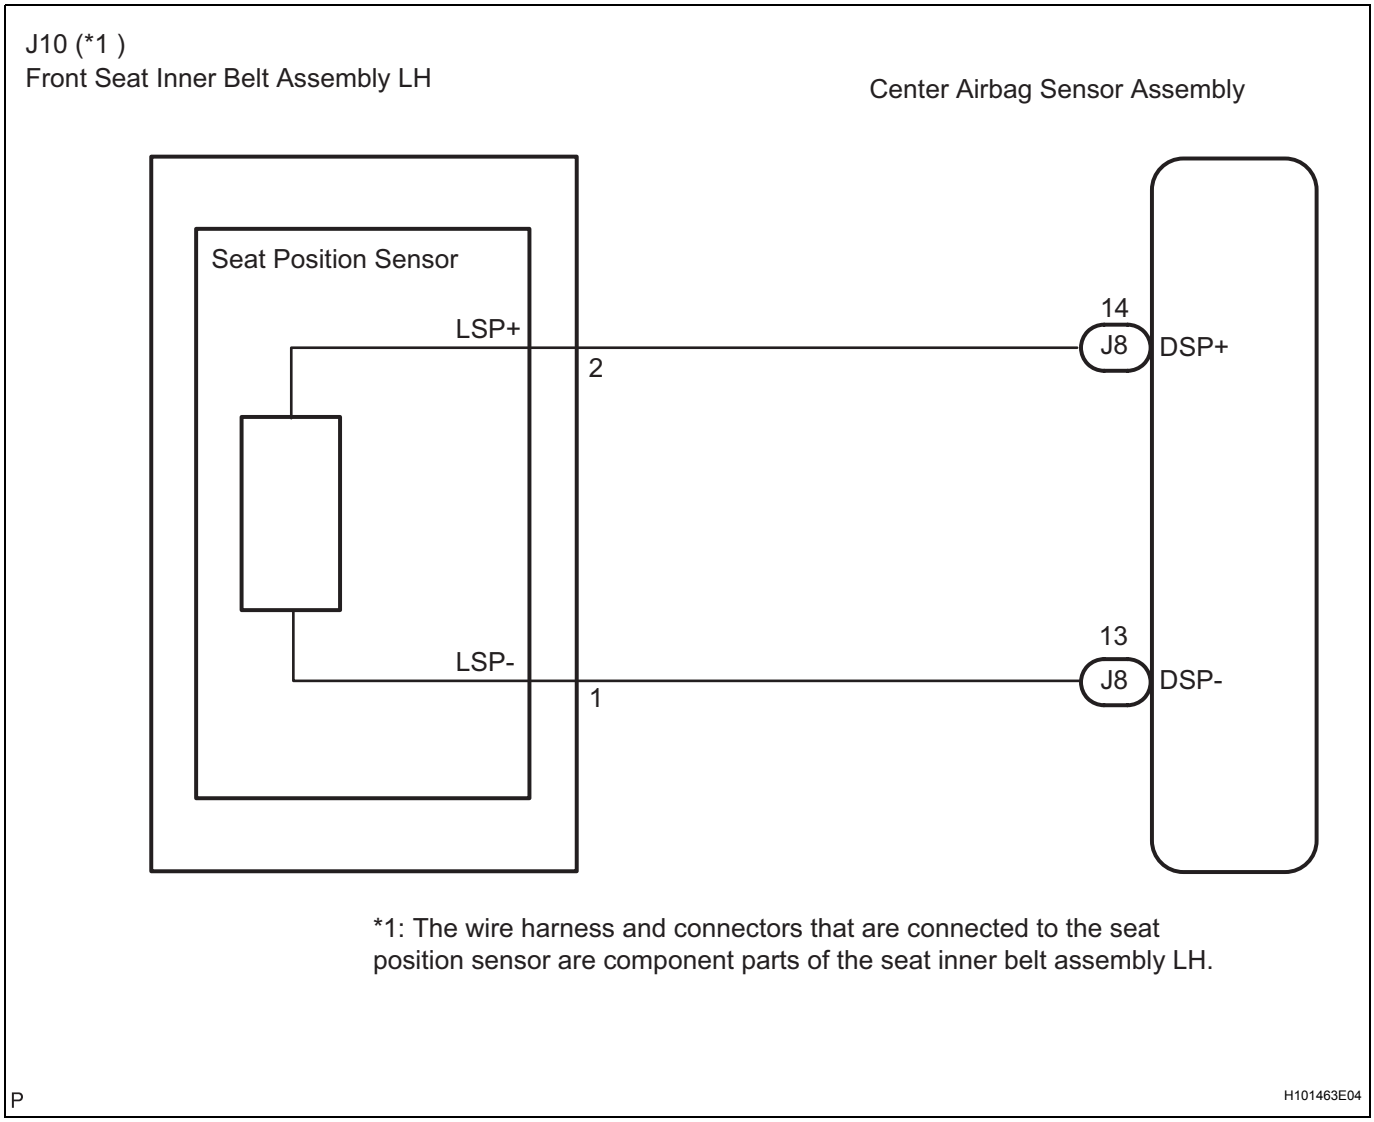
RS

The seat position sensor circuit consists of the center airbag sensor assembly and the seat position sensor.

DTC B1653/35 is recorded when a malfunction is detected in the seat position sensor circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1653/35	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in seat position sensor circuit for 2 seconds. • Seat position sensor malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat inner belt assembly • Seat position sensor • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

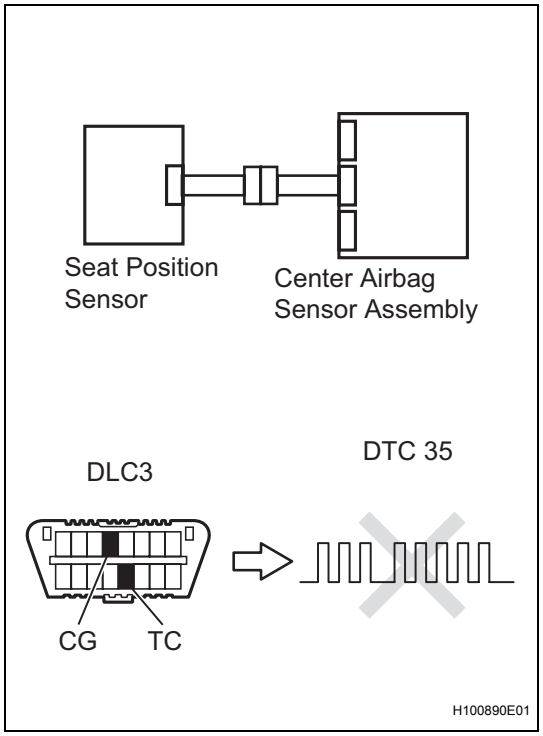
1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH
7. Disconnect the connector from the front seat outer belt assembly RH.

   HINT:

   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

RS

1	CHECK DTC



(a) Turn the ignition switch on, and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on, and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).

OK:

DTC B1653/35 is not output.

HINT:

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the seat position sensor.

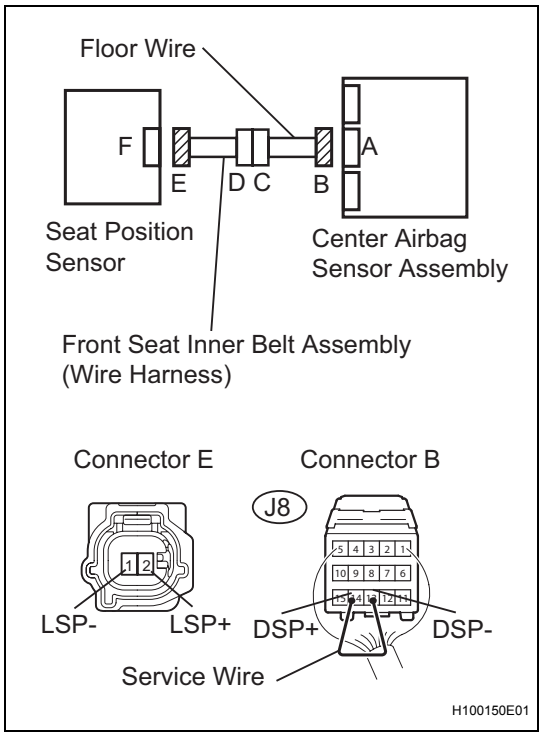
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3	CHECK SEAT POSITION SENSOR CIRCUIT (FOR OPEN)



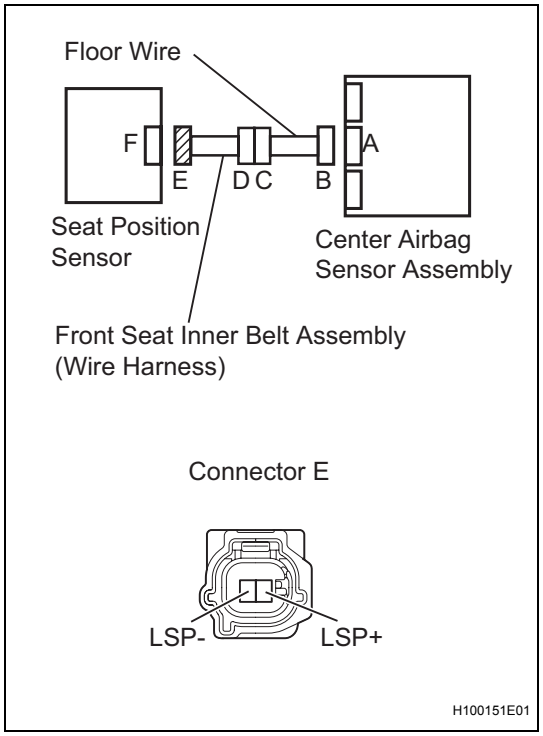
(a) Disconnect the connectors from the center airbag sensor assembly and the seat position sensor.
(b) Using a service wire, connect J8-14 (DSP+) and J8-13 (DSP-) of connector B.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
2 (LSP+) - 1 (LSP-)	Always	Below 1 Ω

NG → **Go to step 10**

OK

4 CHECK SEAT POSITION SENSOR CIRCUIT (FOR SHORT)



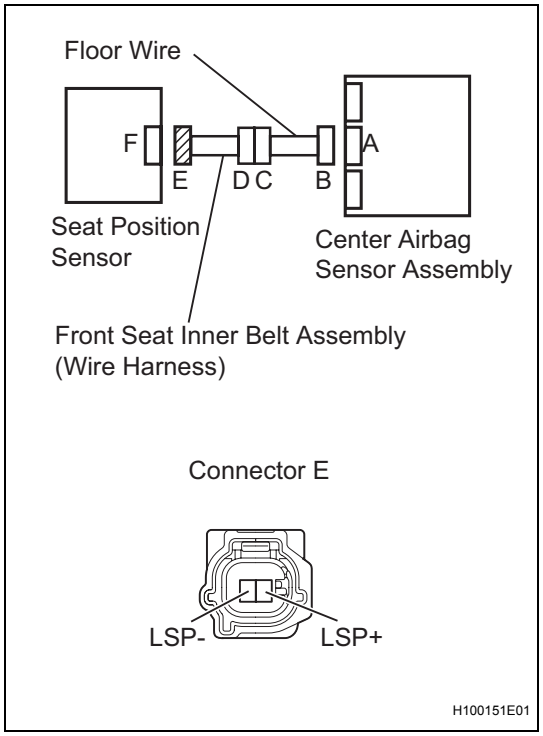
(a) Disconnect the service wire from connector B.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
2 (LSP+) - 1 (LSP-)	Always	1 MΩ or higher

NG → **Go to step 11**

OK

5 CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on.
(c) Measure the voltage.
Standard voltage

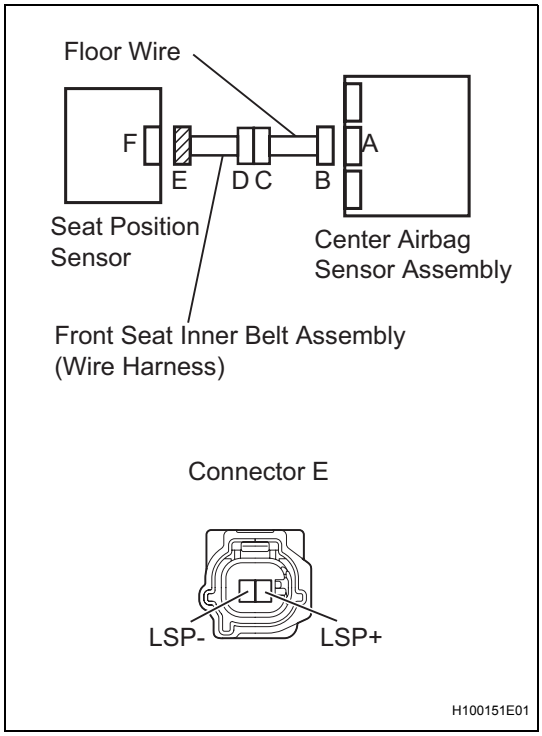
Tester Connection	Condition	Specified Condition
2 (LSP+) - Body ground	Ignition switch on	Below 1 V
1 (LSP-) - Body ground	Ignition switch on	Below 1 V

NG → **Go to step 12**

OK

RS

6 CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)



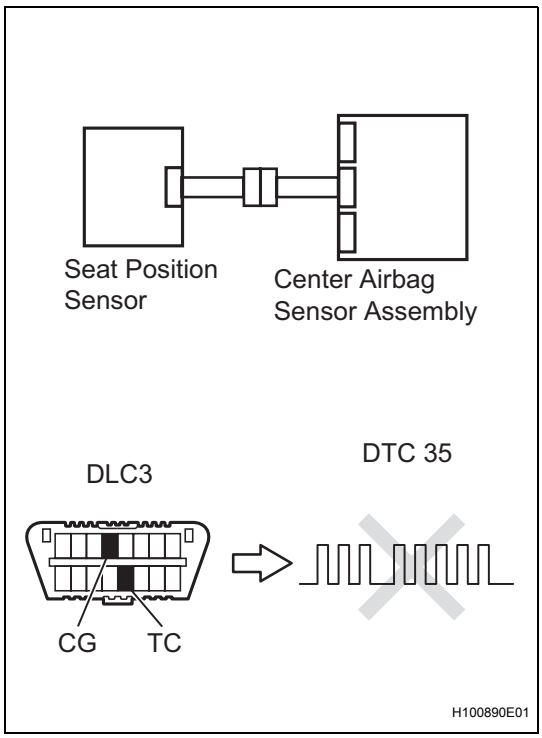
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the voltage.
Standard resistance

Tester Connection	Condition	Specified Condition
2 (LSP+) - Body ground	Always	1 MΩ or Higher
1 (LSP-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 13**

OK

7 CHECK SEAT POSITION SENSOR



(a) Connect the connectors to the center airbag sensor assembly and the seat position sensor.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).
OK:
DTC B1653/35 is not output.
HINT:

DTC	B1660/43	Passenger Airbag ON / OFF Indicator Circuit Malfunction

DESCRIPTION

The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor assembly and the front passenger seat belt warning light.
This circuit indicates the operation condition of the front passenger airbag assembly, the front passenger side front seat side airbag assembly and passenger side seat belt pretensioner.
DTC B1660/43 is set when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1660/43	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in passenger airbag ON/OFF indicator circuit for 2 seconds • Front passenger seat belt warning light malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Front passenger seat belt warning light (Passenger airbag ON/OFF Indicator) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

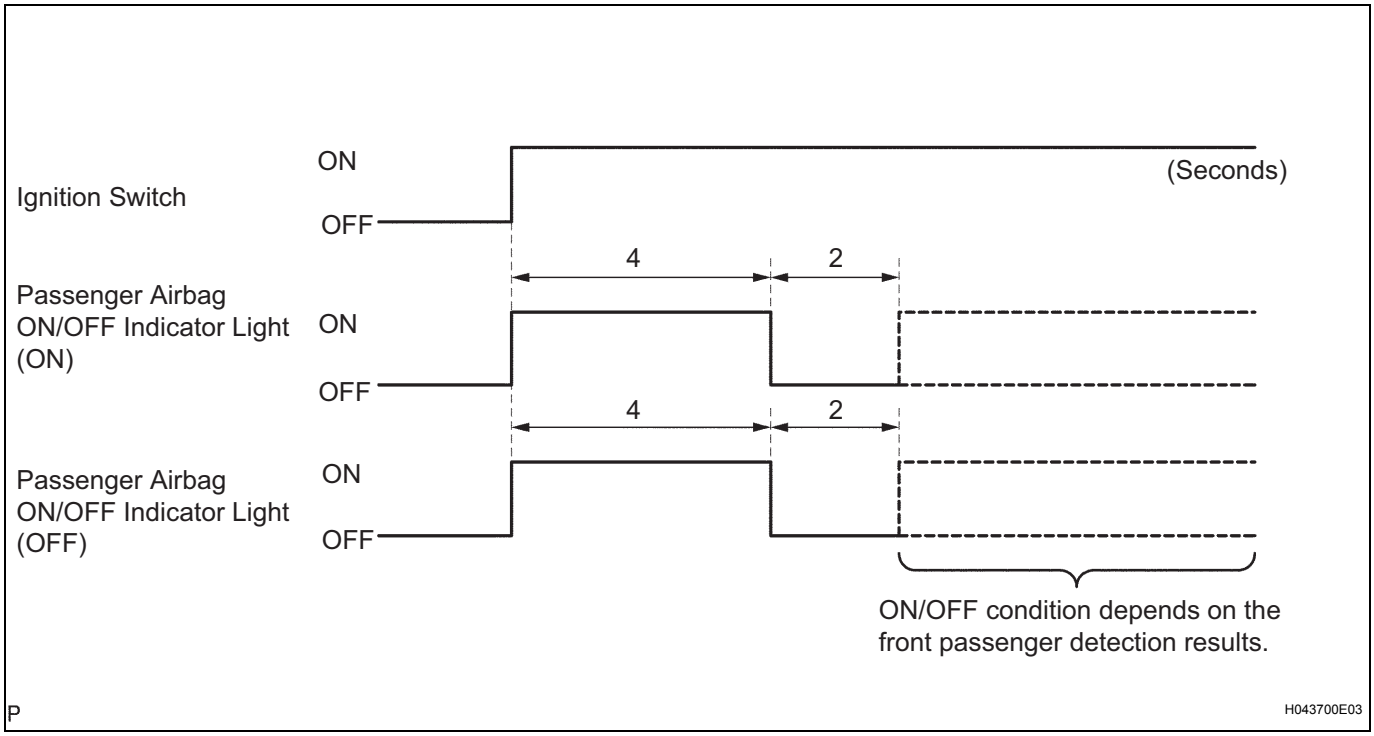
In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.

5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.
   HINT:
   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR OPERATION

(a) Turn the ignition switch to the on position.
(b) Check the passenger airbag ON/OFF indicator operation.
HINT:
Refer to the normal condition of the passenger airbag ON/OFF indicator (See page RS-31).



Result

ON/OFF Indicator Illumination	Proceed To
Always ON	A
OFF	B

B → Go to step 8

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front passenger seat belt warning light.
OK:
The connectors are properly connected.

RS

NG	CONNECT CONNECTORS

OK

3	CHECK FRONT PASSENGER SEAT BELT WARNING LIGHT

HATCHBACK:

SEDAN:

C135760E01

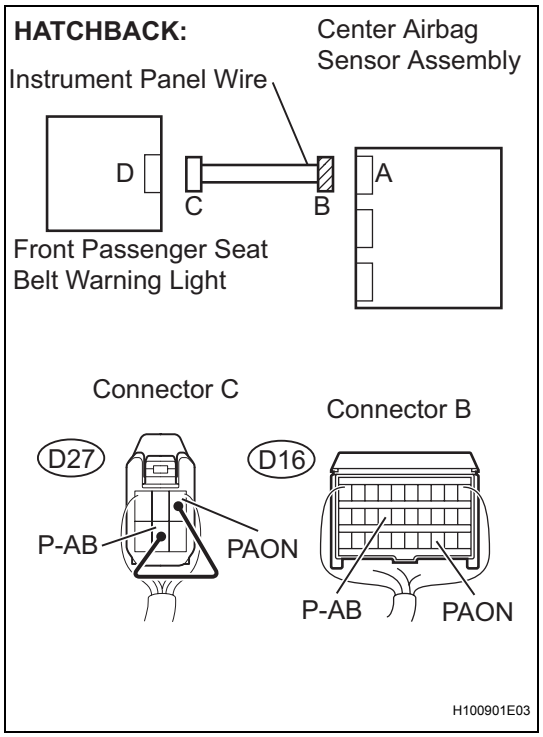
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch to the on position.
(f) Check the passenger airbag ON/OFF indicator operation.
OK:
Neither ON nor OFF passenger airbag ON/OFF indicator comes on.

OK	Go to step 14

NG

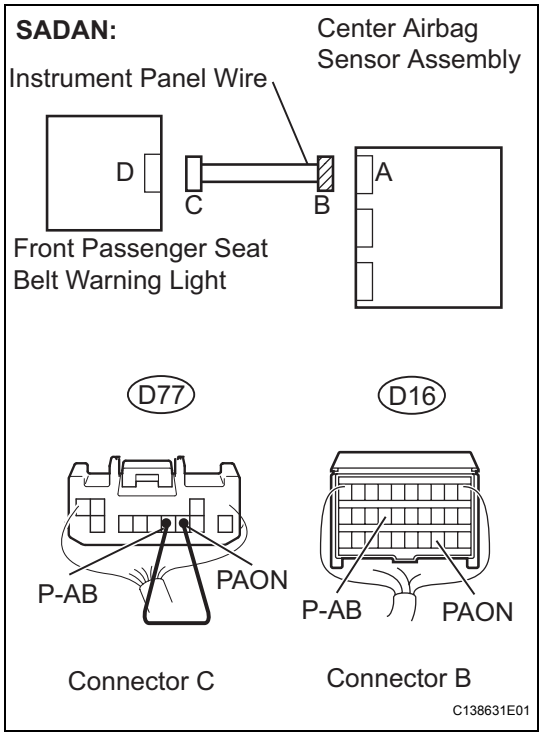
4	CHECK INSTRUMENT PANEL WIRE (FOR OPEN)

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.



(c) For hatchback models:
(1) Disconnect the connector from the front passenger seat belt warning light.
(2) Using a service wire, connect D27-1 (PAON) and D27-5 (P-AB) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(3) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-23 (PAON) - D16-17 (P-AB)	Always	Below 1 Ω



(d) For sedan models:
(1) Disconnect the connector from the front passenger seat belt warning light.
(2) Using a service wire, connect D77-9 (PAON) and D77-10 (P-AB) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(3) Measure the resistance.
Standard resistance

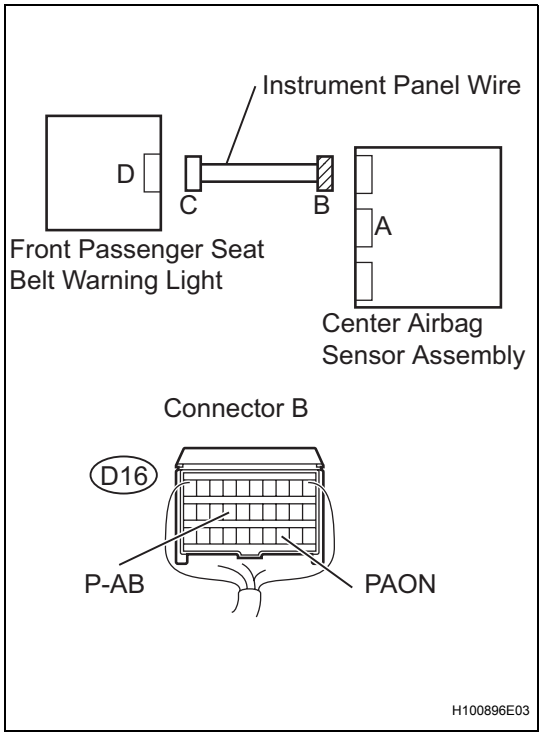
Tester Connection	Condition	Specified Condition
D16-23 (PAON) - D16-17 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

5	CHECK INSTRUMENT PANEL WIRE (FOR SHORT)



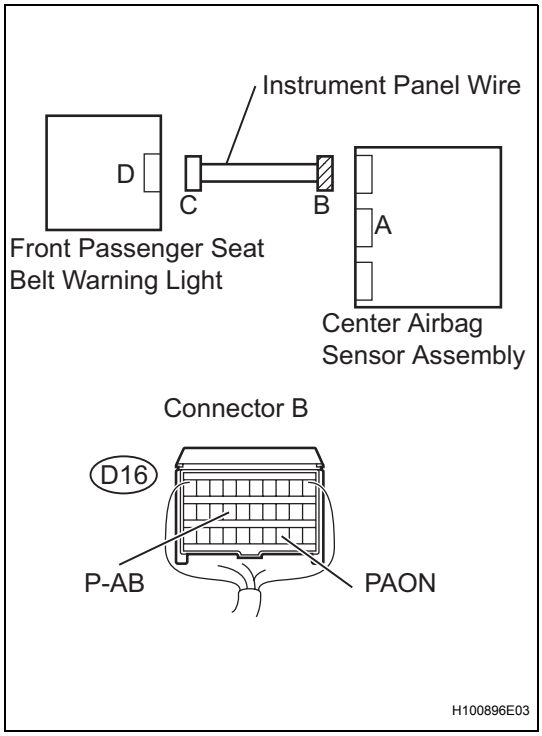
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-17 (P-AB) - D16-23 (PAON)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6	CHECK INSTRUMENT PANEL WIRE (TO B+)



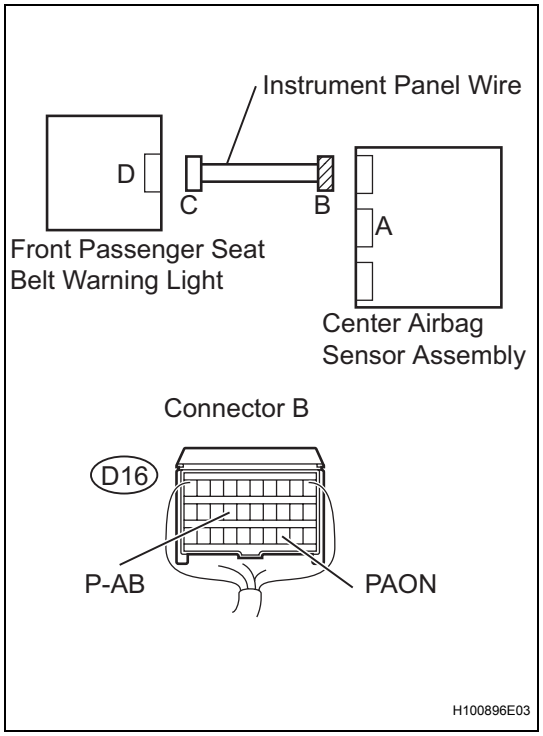
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the on position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D16-23 (PAON) - Body ground	Ignition switch on	Below 1 V
D16-17 (P-AB) -Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

7	CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
D16-17 (P-AB) -Body ground	Always	1 MΩ or Higher
D16-23 (PAON) -Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPLACE FRONT PASSENGER SEAT BELT WARNING LIGHT

8	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front passenger seat belt warning light.

OK:

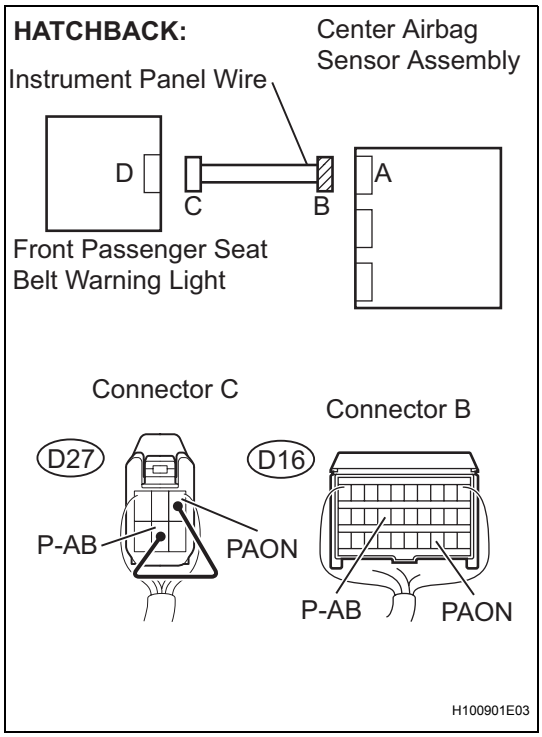
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

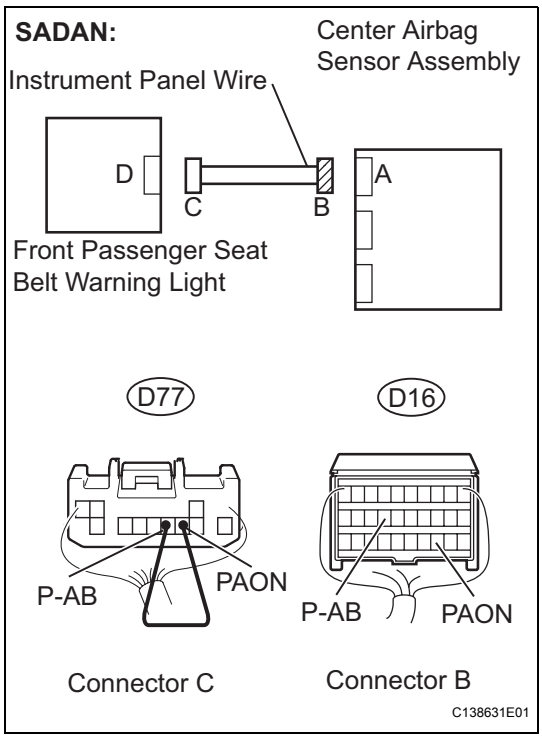
9	CHECK INSTRUMENT PANEL WIRE (FOR OPEN)

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.



(c) For hatchback models:
(1) Disconnect the connector from the front passenger seat belt warning light.
(2) Using a service wire, connect D27-1 (PAON) and D27-5 (P-AB) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(3) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-23 (PAON) - D16-17 (P-AB)	Always	Below 1 Ω



(d) For sedan models:
(1) Disconnect the connector from the front passenger seat belt warning light.
(2) Using a service wire, connect D77-9 (PAON) and D77-10 (P-AB) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(3) Measure the resistance.
Standard resistance

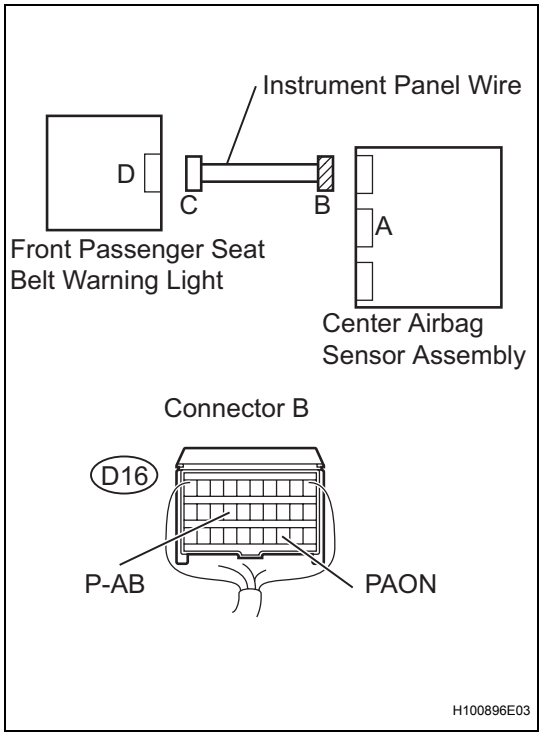
Tester Connection	Condition	Specified Condition
D16-23 (PAON) - D16-17 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS

10 CHECK INSTRUMENT PANEL WIRE (FOR SHROT)



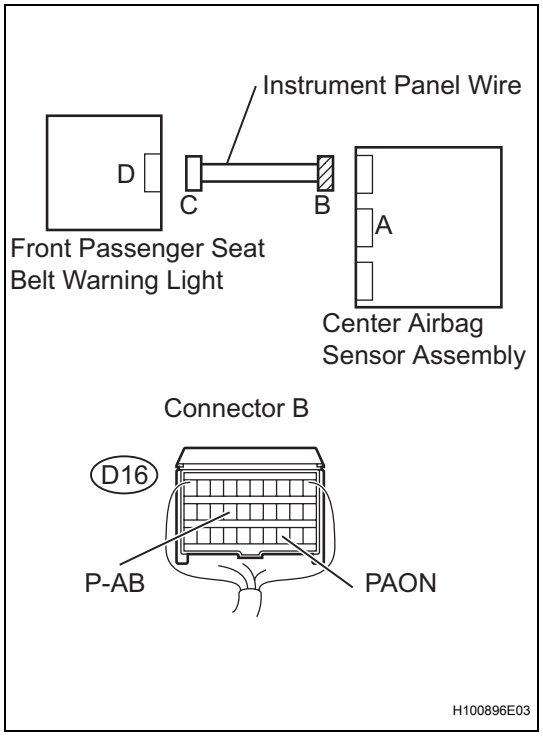
(a) Disconnect the service wire from connector B.
(b) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D16-17 (P-AB) - D16-23 (PAON)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

11 CHECK INSTRUMENT PANEL WIRE (TO B+)



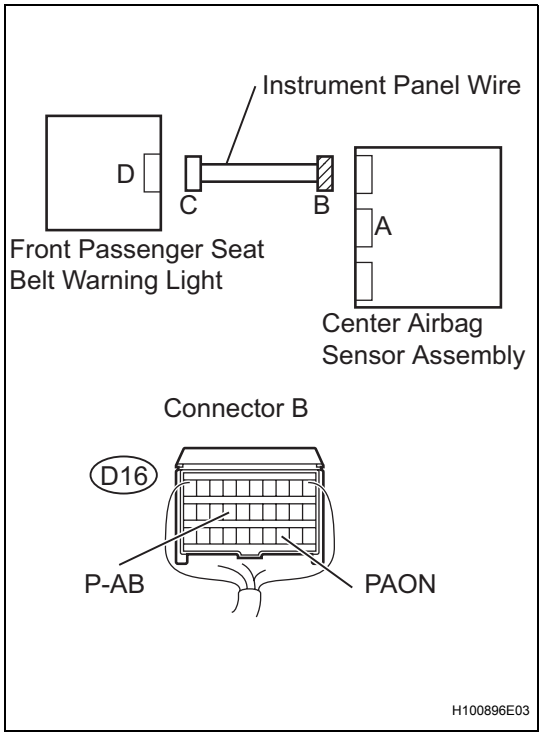
(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the on position.
(c) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D16-23 (PAON) - Body ground	Ignition switch on	Below 1 V
D16-17 (P-AB) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

12	CHECK INSTRUMENT PANEL WIRE (TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.
Standard resistance

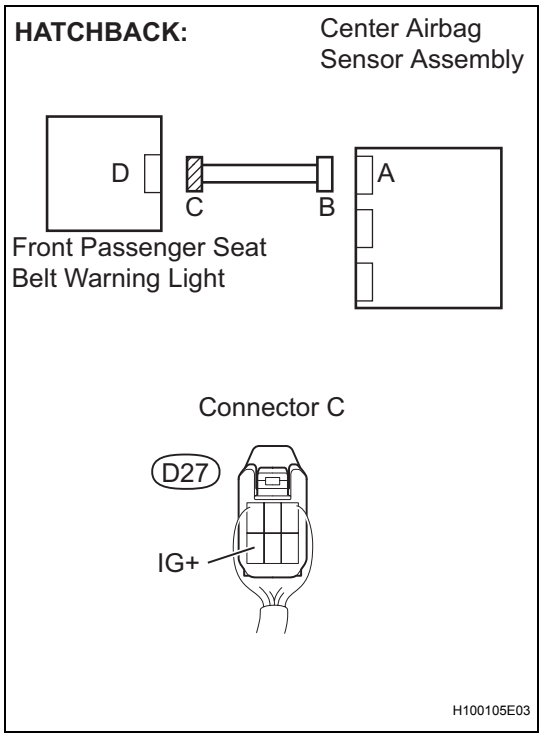
Tester Connection	Condition	Specified Condition
D16-17 (P-AB) - Body ground	Always	1 MΩ or Higher
D16-23 (PAON) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

13	CHECK WIRE HARNESS (POWER SOURCE)

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch to the on position.

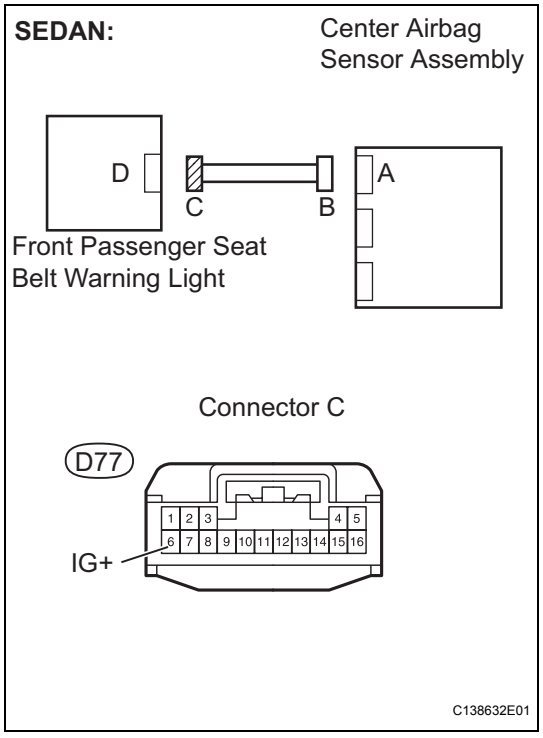


(c) Measure the voltage.

(1) For hatchback models:

Standard voltage (for HATCHBACK)

Tester Connection	Condition	Specified Condition
D27-6 (IG+) - Body ground	Ignition switch on	11 to 14 V



(2) For sedan models:

Standard voltage (for SEDAN)

Tester Connection	Condition	Specified Condition
D77-6 (IG+) - Body ground	Ignition switch on	11 to 14 V

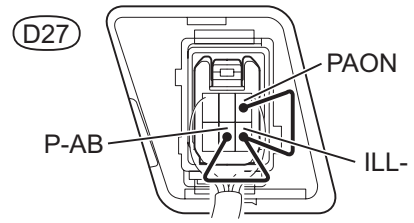
NG → **REPAIR OR REPLACE POWER SOURCE CIRCUIT**

OK

14	CHECK FRONT PASSENGER SEAT BELT WARNING LIGHT

(a) Turn the ignition switch off.

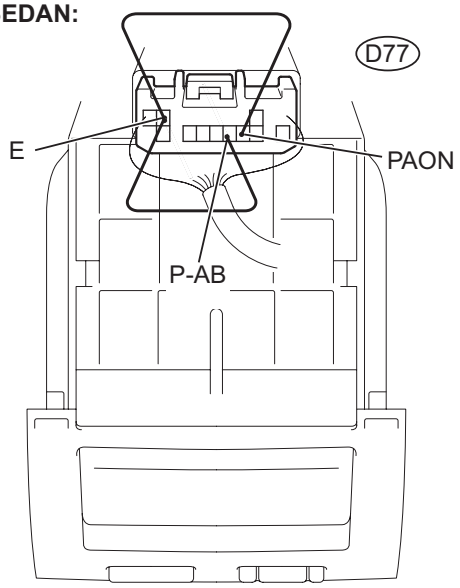
HATCHBACK:



Front Passenger Seat Belt Warning Light

Y H100935E02

SEDAN:



Front Passenger Seat Belt Warning Light

P C135761E01

OK

(b) For hatchback models:
  (1) Using a service wire, connect D27-1 (PAON) and D27-4 (ILL-) of the front passenger seat belt warning light connector.
  (2) Using a service wire, connect D27-5 (P-AB) and D27-4 (ILL-) of the front passenger seat belt warning light connector.

(c) For sedan models:
  (1) Using a service wire, connect D77-9 (PAON) and D77-4 (E) of the front passenger seat belt warning light connector.
  (2) Using a service wire, connect D77-10 (P-AB) and D77-4 (E) of the front passenger seat belt warning light connector.

(d) Turn the ignition switch to the on position.

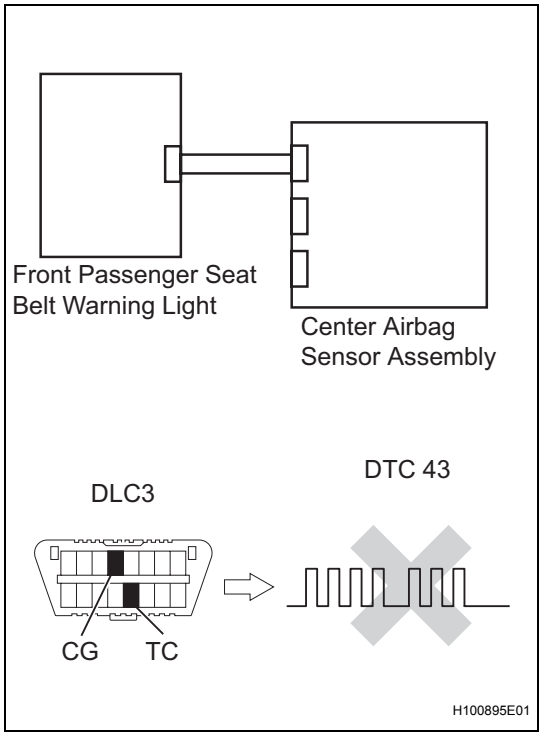
(e) Check the passenger airbag ON/OFF indicator operation.

OK:

Passenger airbag ON/OFF indicator comes on

NG → **REPLACE FRONT PASSENGER SEAT BELT WARNING LIGHT**

15	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the center airbag sensor assembly.
(d) Connect the connector to the front passenger seat belt warning light.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch to the lock position.
(i) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-38).

OK:

DTC B1660/43 is not output.

HINT:

DTCs other than B1660/43 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

RS

DTC	B1662/45	Indicator Light Circuit Malfunction

DESCRIPTION

The indicator light circuit consists of the center airbag sensor assembly and the combination meter. DTC B1662/45 is set when a malfunction is detected in the indicator light circuit.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1662/45	• Center airbag sensor assembly detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in indicator light circuit for 2 seconds • Indicator light circuit malfunction • Center airbag sensor assembly malfunction	• Combination meter • Center airbag sensor assembly • Instrument panel wire

INSPECTION PROCEDURE

NOTICE:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.

   HINT:

   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC (AIRBAG SYSTEM)

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-38).
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-38).

OK:

DTC B1662/45 is not output.

HINT:

DTCs other than B1662/45 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK DTC (CAN COMMUNICATION SYSTEM)

(a) Turn the ignition switch to the on position.
(b) Check the DTCs (See page CA-22).

OK:

DTC is not output.

NG → **CHECK CAN COMMUNICATION SYSTEM**

OK

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

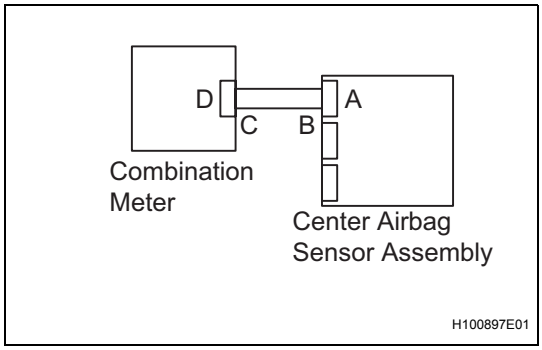
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the combination meter.
OK:
The connectors are properly connected.

RS

NG → **CONNECT CONNECTORS**

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the center airbag sensor assembly.
for Hatchback: (See page RS-437)
for Sedan: (See page RS-433)
HINT:
Perform the inspection using parts from a normal vehicle when possible.
(d) Connect the connectors to the center airbag sensor assembly and the combination meter.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch to the lock position.
(i) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(j) Check for DTCs (See page RS-38).
OK:
DTC B1662/45 is not output.
HINT:
DTCs other than B1662/45 may be output at this time, but they are not related to this check.

NG → **GO TO METER / GAUGE SYSTEM**

OK

END

DTC	B1800/51	Short in Driver Side Squib Circuit

DTC	B1801/51	Open in Driver Side Squib Circuit

DTC	B1802/51	Short to GND in Driver Side Squib Circuit

DTC	B1803/51	Short to B+ in Driver Side Squib Circuit

DESCRIPTION

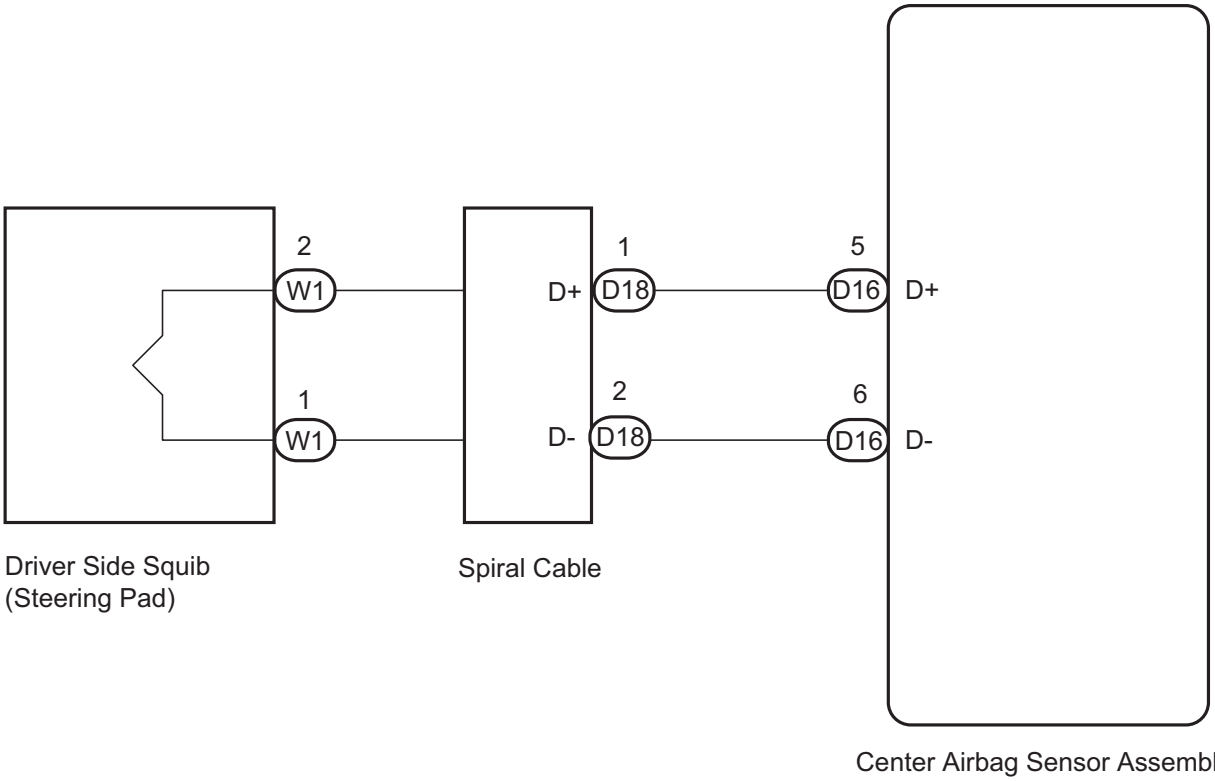
The driver side squib circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.

The circuit signals the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1800/51	• Center airbag sensor assembly detects line short circuit signal in driver side squib circuit 5 times during primary check. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	• Center airbag sensor assembly detects open circuit signal in driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1802/51	• Center airbag sensor assembly detects short circuit to ground signal in driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	• Center airbag sensor assembly detects short circuit to B+ signal in driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

WIRING DIAGRAM



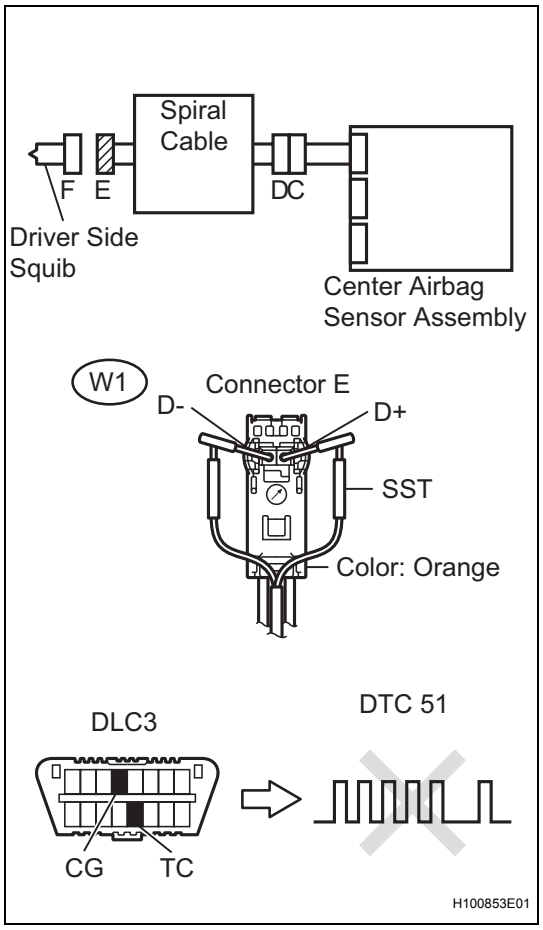
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	**CHECK STEERING PAD (DRIVER SIDE SQUIB)**

SST 09843-18060



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).
CAUTION:
Never connect a tester to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1800, B1801, B1802, B1803 and 51 are not output.
HINT:
DTCs other than DTC B1800, B1801, B1802, B1803 and 51 may be output at this time, but they are not related to this check.

OK	**REPLACE STEERING PAD**

NG

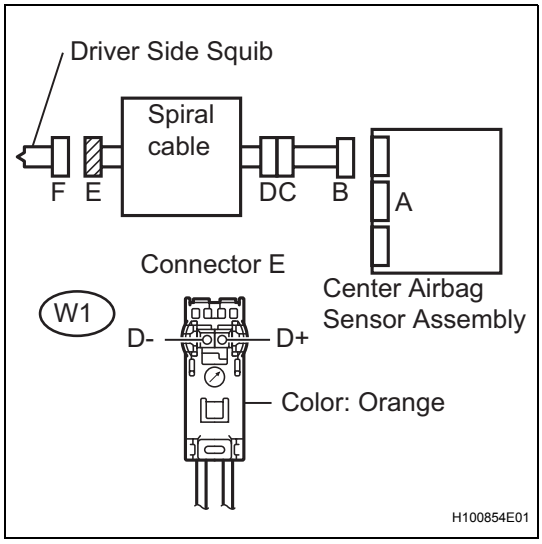
2	**CHECK CONNECTOR**

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG	**REPLACE SPIRAL CABLE**

OK

3	CHECK DRIVER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly and steering pad.

(b) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
W1-1 (D+) - Body ground	Ignition switch on	Below 1 V
W1-2 (D-) - Body ground	Ignition switch on	Below 1 V

(c) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - W1-2 (D-)	Always	Below 1 Ω

(d) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - Body ground	Always	1 MΩ or higher
W1-2 (D-) - Body ground	Always	1 MΩ or higher

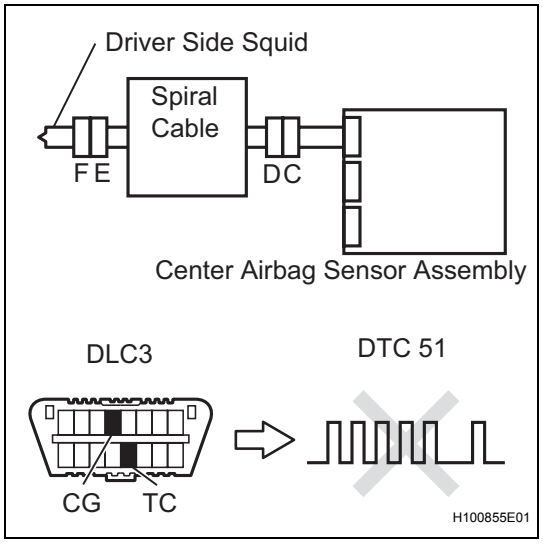
(e) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - W1-2 (D-)	Always	1 MΩ or higher

NG → **Go to step 5**

OK

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1800, B1801, B1802, B1803 and 51 are not output.

HINT:

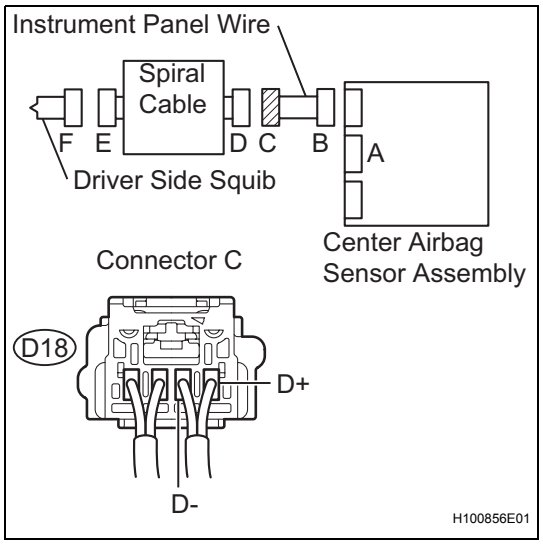
DTCs other than DTC B1800, B1801, B1802, B1803 and 51 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

5 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the spiral cable.
(c) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D18-1 (D+) - Body ground	Ignition switch on	Below 1 V
D18-2 (D-) - Body ground	Ignition switch on	Below 1 V

(d) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
D18-1 (D+) - D18-2 (D-)	Always	Below 1 Ω

(e) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D18-1 (D+) - Body ground	Always	1 MΩ or higher
D18-2 (D-) - Body ground	Always	1 MΩ or higher

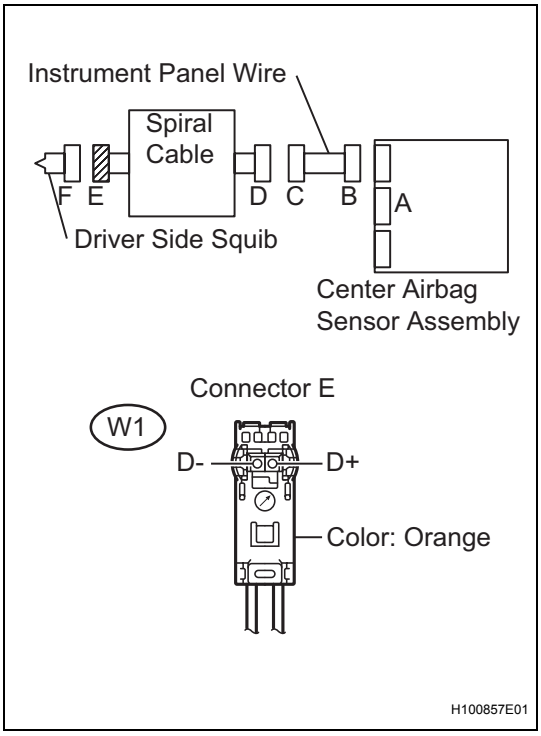
(f) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector B (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D18-1 (D+) - D18-2 (D-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK SPIRAL CABLE



(a) Check for short to B+ in the circuit.
(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on.
(3) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
W1-1 (D+) - Body ground	Ignition switch on	Below 1 V
W1-2 (D-) - Body ground	Ignition switch on	Below 1 V

(b) Check for open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - W1-2 (D-)	Always	Below 1 Ω

(c) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - Body ground	Always	1 MΩ or higher

Tester Connection	Condition	Specified Condition
W1-2 (D-) - Body ground	Always	1 MΩ or higher

(d) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector D (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W1-1 (D+) - W1-2 (D-)	Always	1 MΩ or higher

NG → **REPLACE SPIRAL CABLE**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1805/52	Short in Front Passenger Side Squib Circuit

DTC	B1806/52	Open in Front Passenger Side Squib Circuit

RS

DTC	B1807/52	Short to GND in Front Passenger Side Squib Circuit

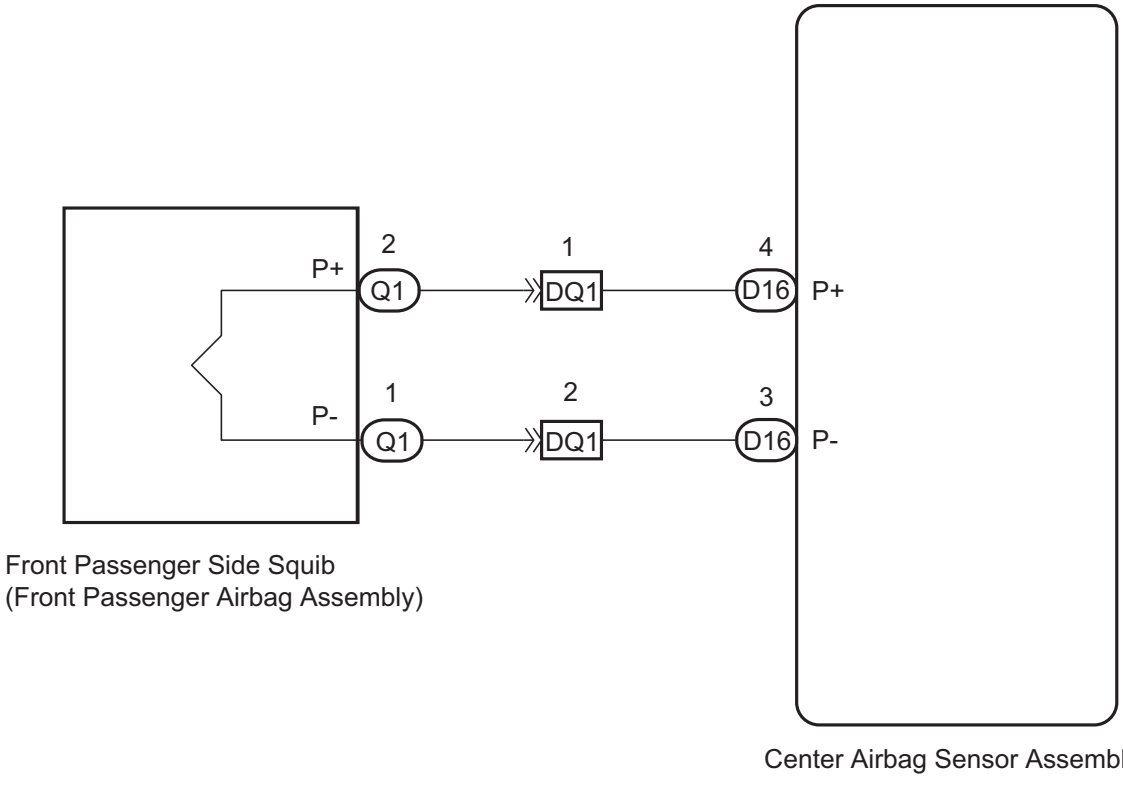
DTC	B1808/52	Short to B+ in Front Passenger Side Squib Circuit

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit signals the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1805/52	• Center airbag sensor assembly detects line short circuit signal in front passenger side squib circuit 5 times during primary check. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	• Center airbag sensor assembly detects open circuit signal in front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	• Center airbag sensor assembly detects short circuit to ground signal in front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	• Center airbag sensor assembly detects short circuit to B+ signal in front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

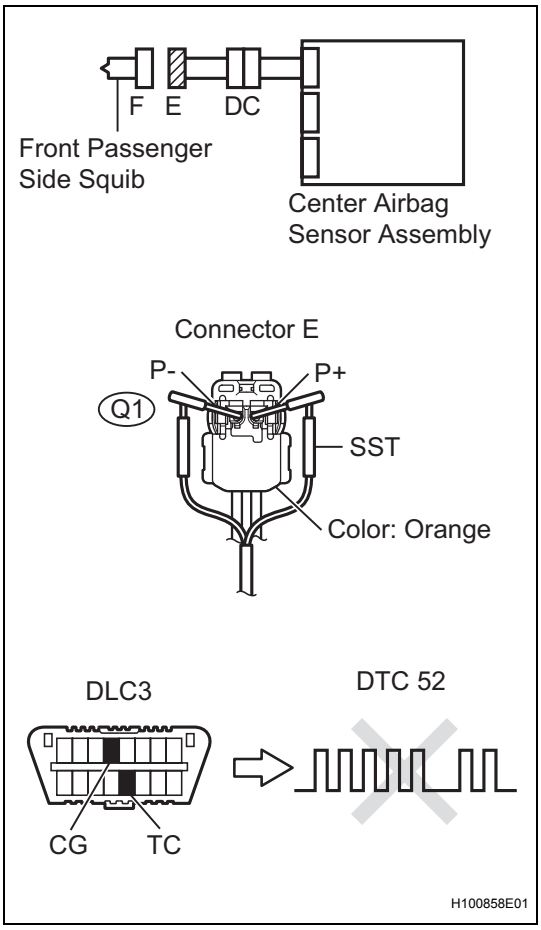
HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	**CHECK FRONT PASSENGER AIRBAG (FRONT PASSENGER SIDE SQUIB)**

SST 09843-18060

RS



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front passenger airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).
CAUTION:
Never connect a tester to the front passenger airbag assembly (front passenger side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1805, B1806, B1807, B1808 and 52 are not output.
HINT:
DTCs other than DTC B1805, B1806, B1807, B1808 and 52 may be output at this time, but they are not related to this check.

OK	**REPLACE FRONT PASSENGER AIRBAG**

NG

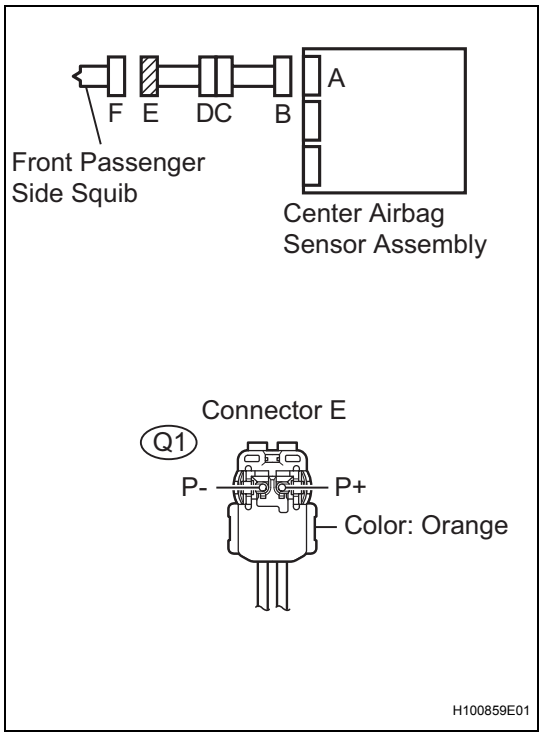
2	**CHECK CONNECTOR**

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the instrument panel wire assembly connectors (on the front passenger airbag side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG	**REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

3	CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly and front passenger airbag assembly.

(b) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Body ground	Ignition switch on	Below 1 V
Q1-1 (P-) - Body ground	Ignition switch on	Below 1 V

(c) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Q1-1 (P-)	Always	Below 1 Ω

(d) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Body ground	Always	1 MΩ or higher
Q1-1 (P-) - Body ground	Always	1 MΩ or higher

(e) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

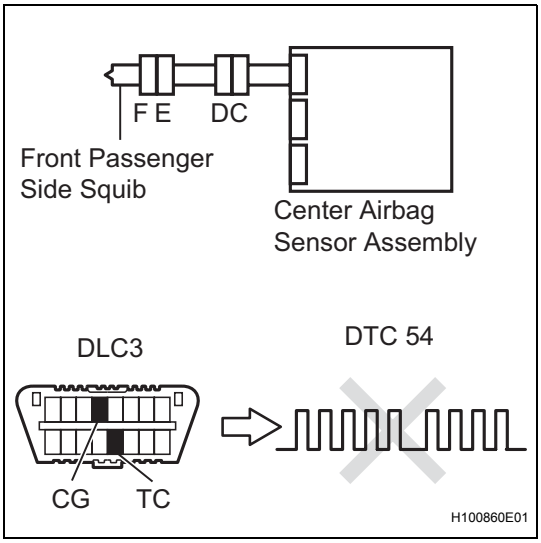
Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Q1-1 (P-)	Always	1 MΩ or higher

NG → **Go to step 5**

OK

RS

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1805, B1806, B1807, B1808 and 52 are not output.

HINT:

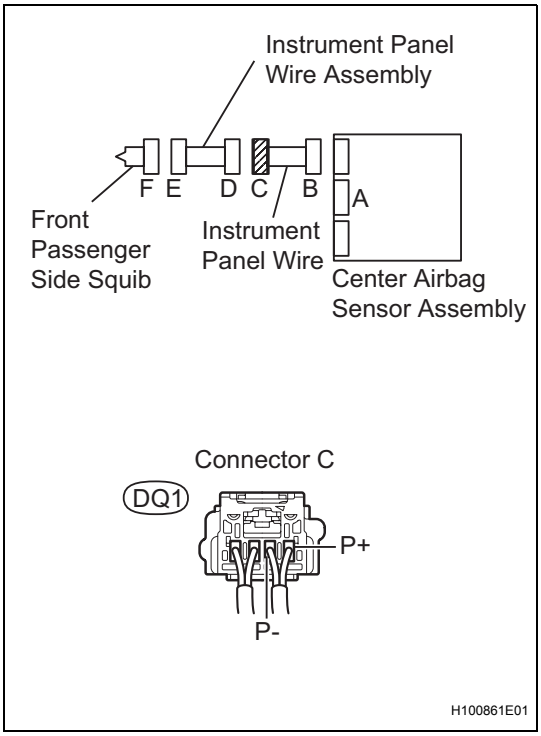
DTCs other than DTC B1805, B1806, B1807, B1808 and 52 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

5	CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the instrument panel wire assembly.
(c) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
DQ1-1 (P+) - Body ground	Ignition switch on	Below 1 V
DQ1-2 (P-) - Body ground	Ignition switch on	Below 1 V

(d) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
DQ1-1 (P+) - DQ1-2 (P-)	Always	Below 1 Ω

(e) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
DQ1-1 (P+) - Body ground	Always	1 MΩ or higher
DQ1-2 (P-) - Body ground	Always	1 MΩ or higher

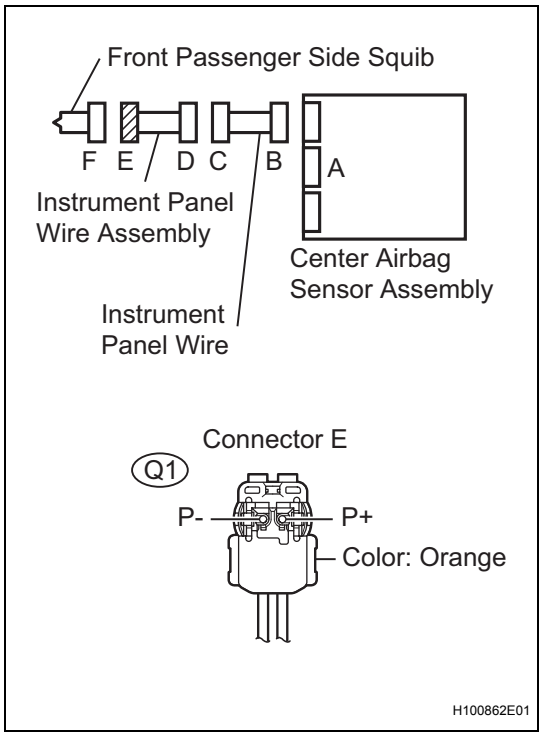
(f) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector B (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
DQ1-1 (P+) - DQ1-2 (P-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Check for short to B+ in the circuit.
(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on.
(3) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Body ground	Ignition switch on	Below 1 V
Q1-1 (P-) - Body ground	Ignition switch on	Below 1 V

(b) Check for open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Q1-1 (P-)	Always	Below 1 Ω

(c) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Body ground	Always	1 MΩ or higher
Q1-1 (P-) - Body ground	Always	1 MΩ or higher

(d) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector D (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
Q1-2 (P+) - Q1-1 (P-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1810/53	Short in Driver Side Squib 2nd Step Circuit

DTC	B1811/53	Open in Driver Side Squib 2nd Step Circuit

DTC	B1812/53	Short to GND in Driver Side Squib 2nd Step Circuit

RS

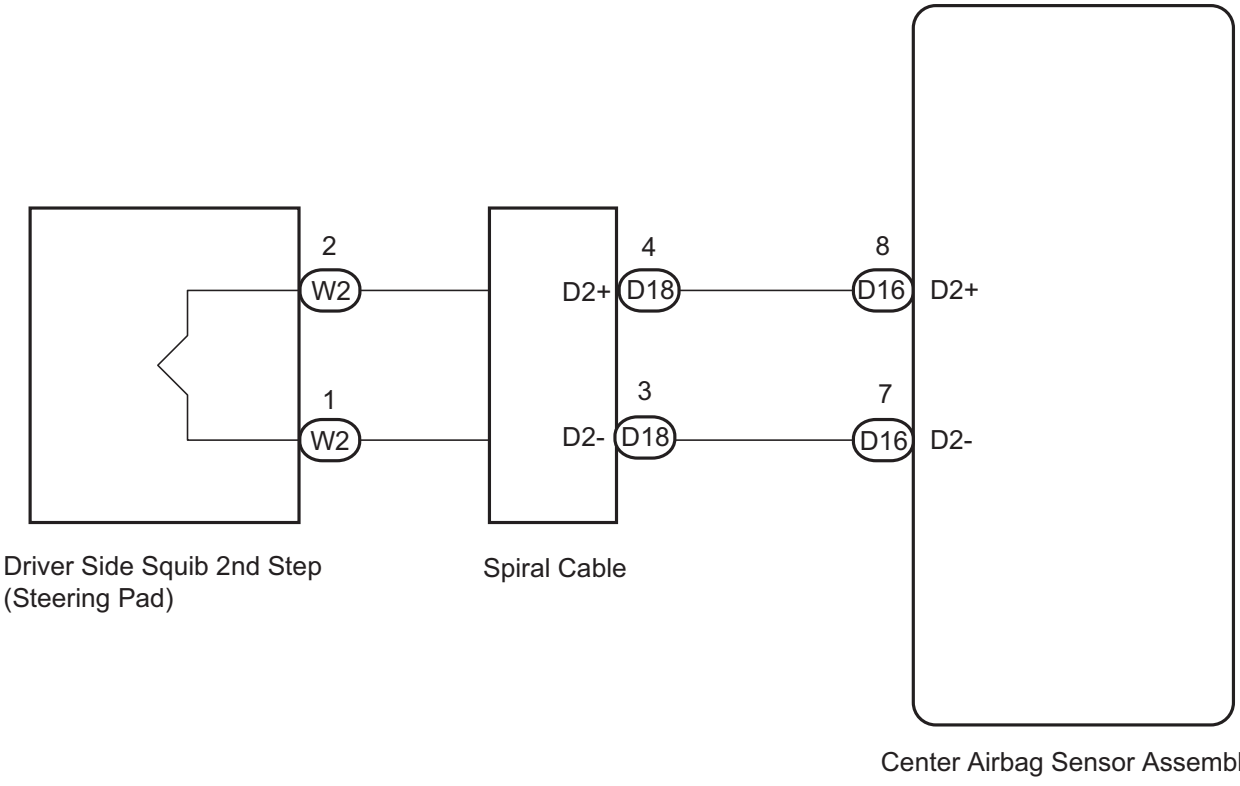
DTC	B1813/53	Short to B+ in Driver Side Squib 2nd Step Circuit

DESCRIPTION

The driver side squib 2nd step circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.
The circuit signals the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side squib 2nd step circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1810/53	• Center airbag sensor assembly detects line short circuit signal in driver side squib 2nd step circuit 5 times during primary check. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1811/53	• Center airbag sensor assembly detects open circuit signal in driver side squib 2nd step circuit for 2 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1812/53	• Center airbag sensor assembly detects short circuit to ground signal in driver side 2nd step circuit for 0.5 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1813/53	• Center airbag sensor assembly detects short circuit to B+ signal in driver side squib 2nd step circuit for 0.5 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM



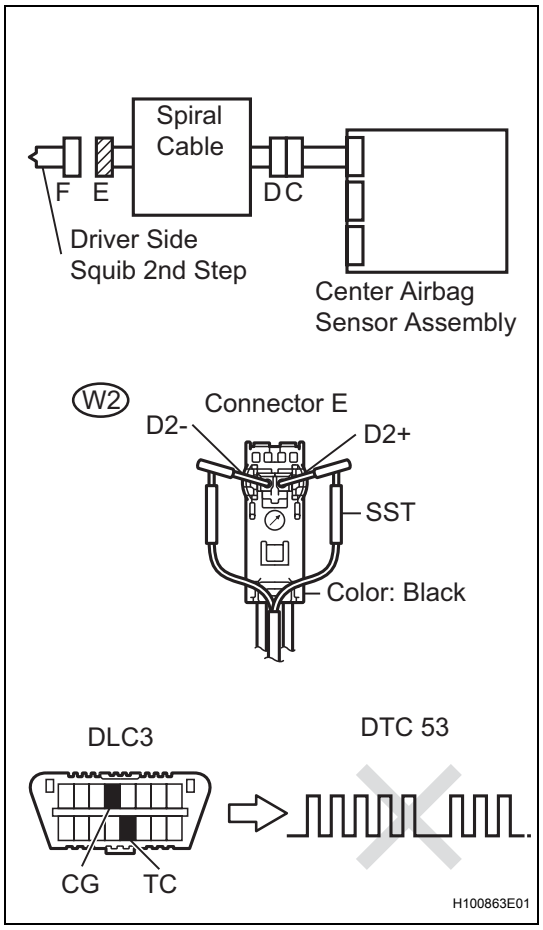
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	**CHECK STEERING PAD (DRIVER SIDE SQUIB 2ND STEP)**

SST 09843-18060



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (black connector).
CAUTION:
Never connect a tester to the steering pad (driver side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1810, B1811, B1812, B1813 and 53 are not output.
HINT:
DTCs other than DTC B1810, B1811, B1812, B1813, and 53 may be output at this time, but they are not related to this check.

OK	**REPLACE STEERING PAD**

NG

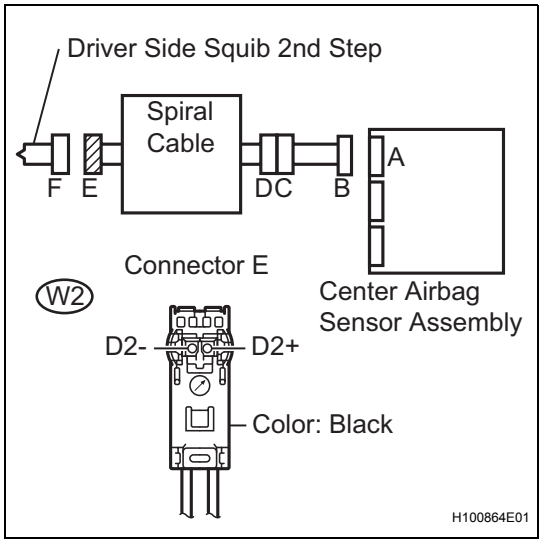
2	**CHECK CONNECTOR**

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG	**REPLACE SPIRAL CABLE**

OK

3	CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly and steering pad.

(b) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - Body ground	Ignition switch on	Below 1 V
W2-2 (D2-) - Body ground	Ignition switch on	Below 1 V

(c) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - W2-2 (D2-)	Always	Below 1 Ω

(d) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - Body ground	Always	1 MΩ or higher
W2-2 (D2-) - Body ground	Always	1 MΩ or higher

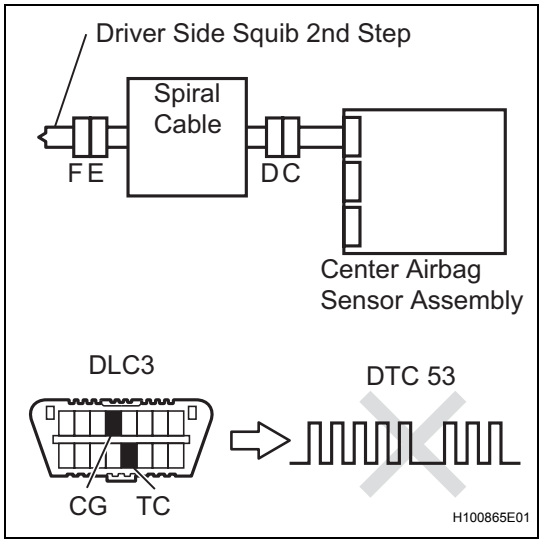
(e) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - W2-2 (D2-)	Always	1 MΩ or higher

NG → CHECK INSTRUMENT PANEL WIRE

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1810, B1811, B1812, B1813 and 53 are not output.

HINT:

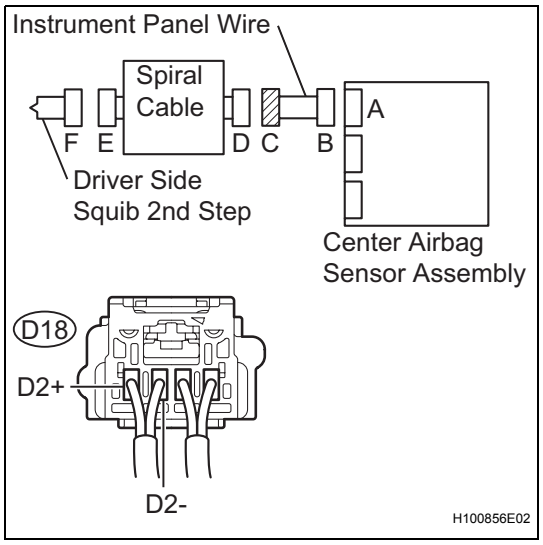
DTCs other than DTC B1810, B1811, B1812, B1813 and 53 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

5	CHECK INSTRUMENT PANEL WIRE



(a) Check for short to B+ in the circuit.
  (1) Restore the released activation prevention mechanism of connector B to the original condition.
  (2) Disconnect the instrument panel wire connector from the spiral cable.
  (3) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (4) Turn the ignition switch on.
  (5) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D18-4 (D2+) - Body ground	Ignition switch on	Below 1 V
D18-3 (D2-) - Body ground	Ignition switch on	Below 1 V

(b) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
D18-4 (D2+) - D18-3 (D2-)	Always	Below 1 Ω

(c) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D18-4 (D2+) - Body ground	Always	1 MΩ or higher
D18-3 (D2-) - Body ground	Always	1 MΩ or higher

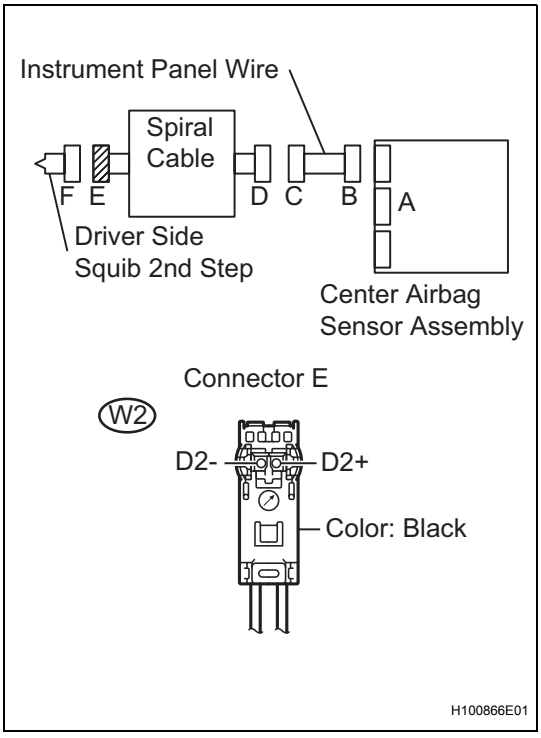
(d) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector B (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D18-4 (D2+) - D18-3 (D2-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

6 CHECK SPIRAL CABLE



(a) Check for short to B+ in the circuit.
(1) Connect the negative (-) terminal cable from the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on.
(3) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - Body ground	Ignition switch on	Below 1 V
W2-2 (D2-) - Body ground	Ignition switch on	Below 1 V

(b) Check for open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - W2-2 (D2-)	Always	Below 1 Ω

(c) Check for short to ground in the circuit.
(1) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - Body ground	Always	1 MΩ or higher
W2-2 (D2-) - Body ground	Always	1 MΩ or higher

(d) Check for short in the circuit.
(1) Release the activation prevention mechanism built into connector D (See page RS-31).
(2) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
W2-1 (D2+) - W2-2 (D2-)	Always	1 MΩ or higher

RS

NG → **REPLACE SPIRAL CABLE**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1815/54	Short in Front Passenger Side Squib 2nd Step Circuit

DTC	B1816/54	Open in Front Passenger Side Squib 2nd Step Circuit

DTC	B1817/54	Short to GND in Front Passenger Side Squib 2nd Step Circuit

DTC	B1818/54	Short to B+ in Front Passenger Side Squib 2nd Step Circuit

DESCRIPTION

The front passenger side squib 2nd step circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.

The circuit signals the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side squib 2nd step circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1815/54	• Center airbag sensor assembly detects line short circuit signal in front passenger side squib 2nd step circuit 5 times during primary check. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1816/54	• Center airbag sensor assembly detects open circuit signal in front passenger side squib 2nd step circuit for 2 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1817/54	• Center airbag sensor assembly detects short circuit to ground signal in front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1818/54	• Center airbag sensor assembly detects short circuit to B+ signal in front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly

USE SIMULATION METHOD TO CHECK

DTC	B1820/55	Short in Front Driver Side - Side Squib Circuit

DTC	B1821/55	Open in Front Driver Side - Side Squib Circuit

DTC	B1822/55	Short to GND in Front Driver Side - Side Squib Circuit

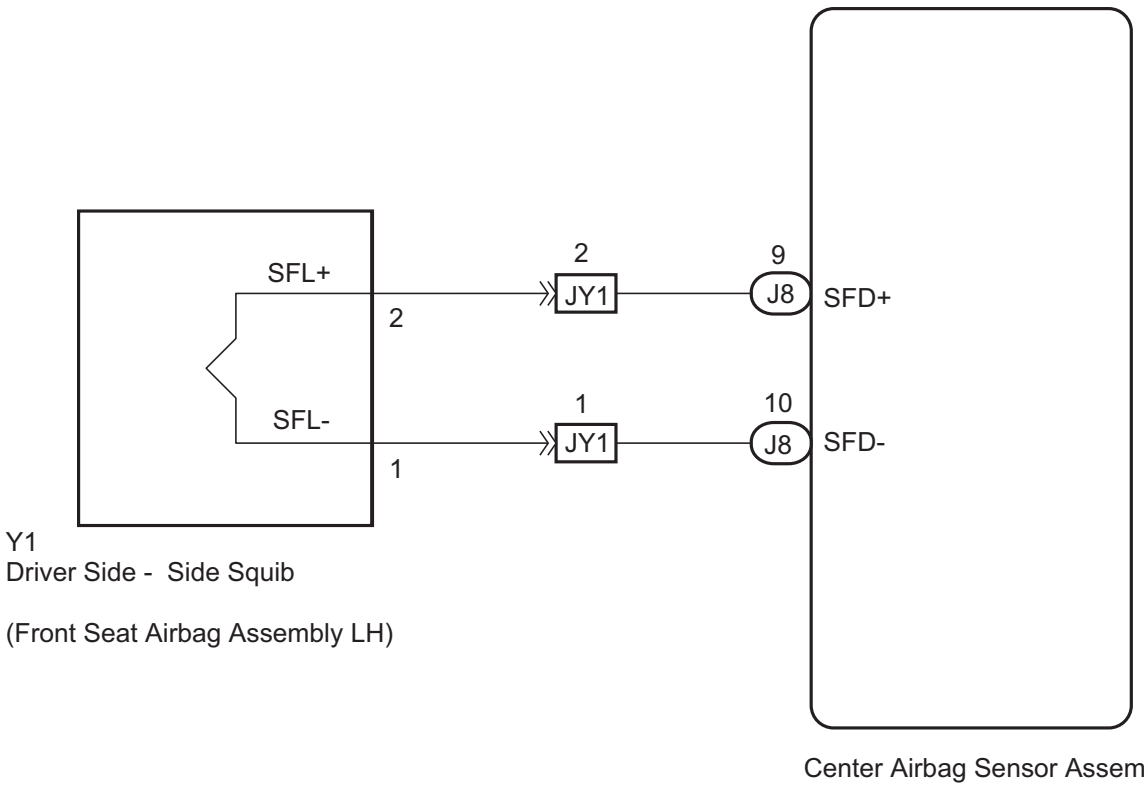
DTC	B1823/55	Short to B+ in Front Driver Side - Side Squib Circuit

DESCRIPTION

The driver side - side squib circuit consists of the center airbag sensor assembly and the front seat side airbag assembly LH.
This circuit signals the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side - side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1820/55	• Center airbag sensor assembly detects line short circuit signal in driver side - side squib circuit 5 times during primary check. • Driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Driver side - side squib) • Center airbag sensor assembly
B1821/55	• Center airbag sensor assembly detects open circuit signal in driver side - side squib circuit for 2 seconds. • Driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Driver side - side squib) • Center airbag sensor assembly
B1822/55	• Center airbag sensor assembly detects short circuit to ground signal in driver side - side squib circuit for 0.5 seconds. • Driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Driver side - side squib) • Center airbag sensor assembly
B1823/55	• Center airbag sensor assembly detects short circuit to B+ signal in driver side - side squib circuit for 0.5 seconds. • Driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Driver side - side squib) • Center airbag sensor assembly

WIRING DIAGRAM

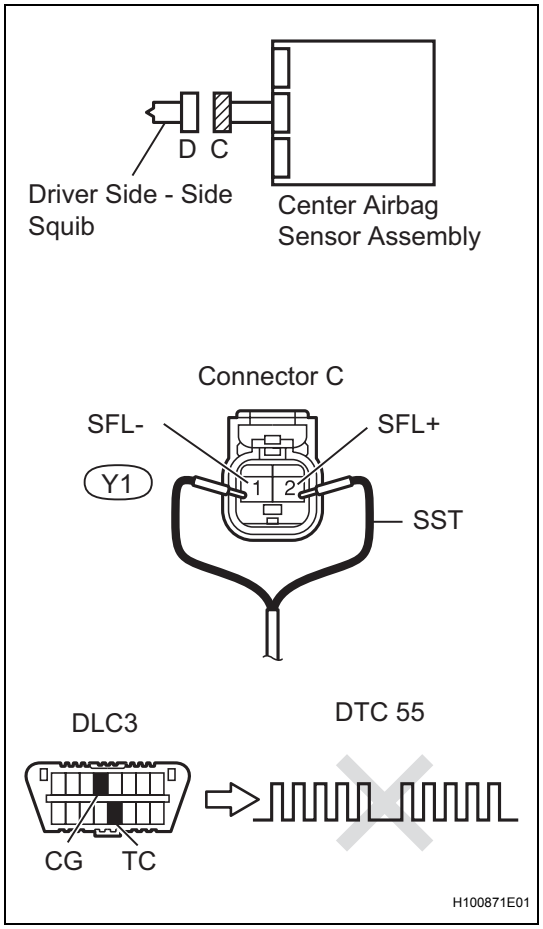


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY LH (DRIVER SIDE - SIDE SQUIB)



SST 09843-18060

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the front seat side airbag assembly LH.
(d) Connect the black wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect a tester to the front seat side airbag assembly LH (driver side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1820, B1821, B1822, B1823 and 55 are not output.
HINT:
DTCs other than DTC B1820, B1821, B1822, B1823 and 55 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT ASSEMBLY LH**

NG

2	CHECK CONNECTOR

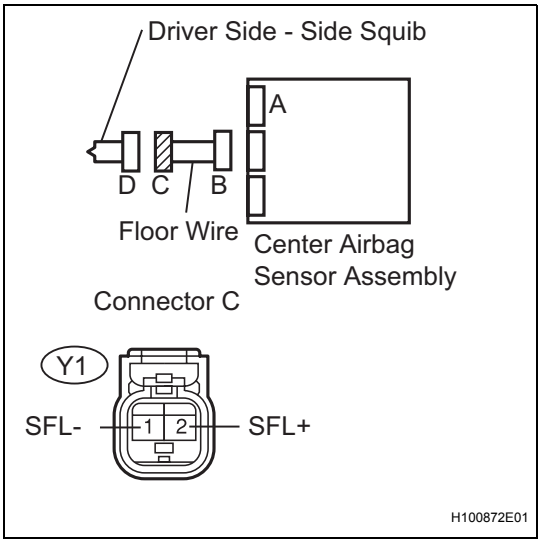
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connectors (on the front seat side airbag assembly LH side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

3	CHECK FLOOR WIRE (DRIVER SIDE - SIDE SQUIB CIRCUIT)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
Y1-1 (SFL-) - Body ground	Ignition switch on	Below 1 V
Y1-2 (SFL+) - Body ground	Ignition switch on	Below 1 V

(f) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
Y1-1 (SFL-) - Y1-2 (SFL+)	Always	Below 1 Ω

(g) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
Y1-1 (SFL-) - Body ground	Always	1 MΩ or higher
Y1-2 (SFL+) Body ground	Always	1 MΩ or higher

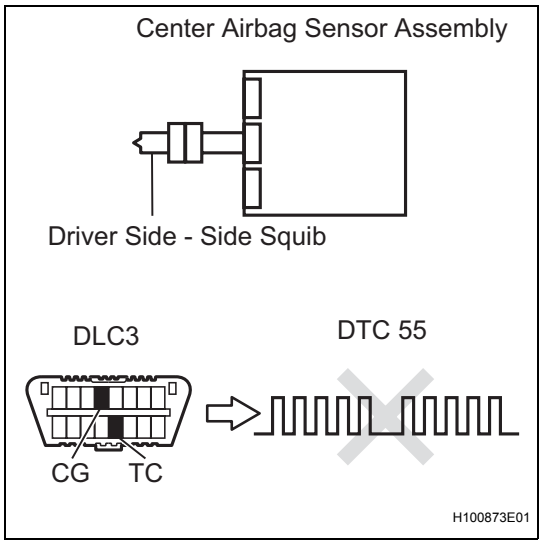
(h) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
Y1-1 (SFL-) - Y1-2 (SFL+)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat side airbag assembly LH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1820, B1821, B1822, B1823 and 55 are not output.

HINT:

DTCs other than DTC B1820, B1821, B1822, B1823 and 55 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1825/56	Short in Front Passenger Side - Side Squib Circuit

DTC	B1826/56	Open in Front Passenger Side - Side Squib Circuit

DTC	B1827/56	Short to GND in Front Passenger Side - Side Squib Circuit

DTC	B1828/56	Short to B+ in Front Passenger Side - Side Squib Circuit

DESCRIPTION

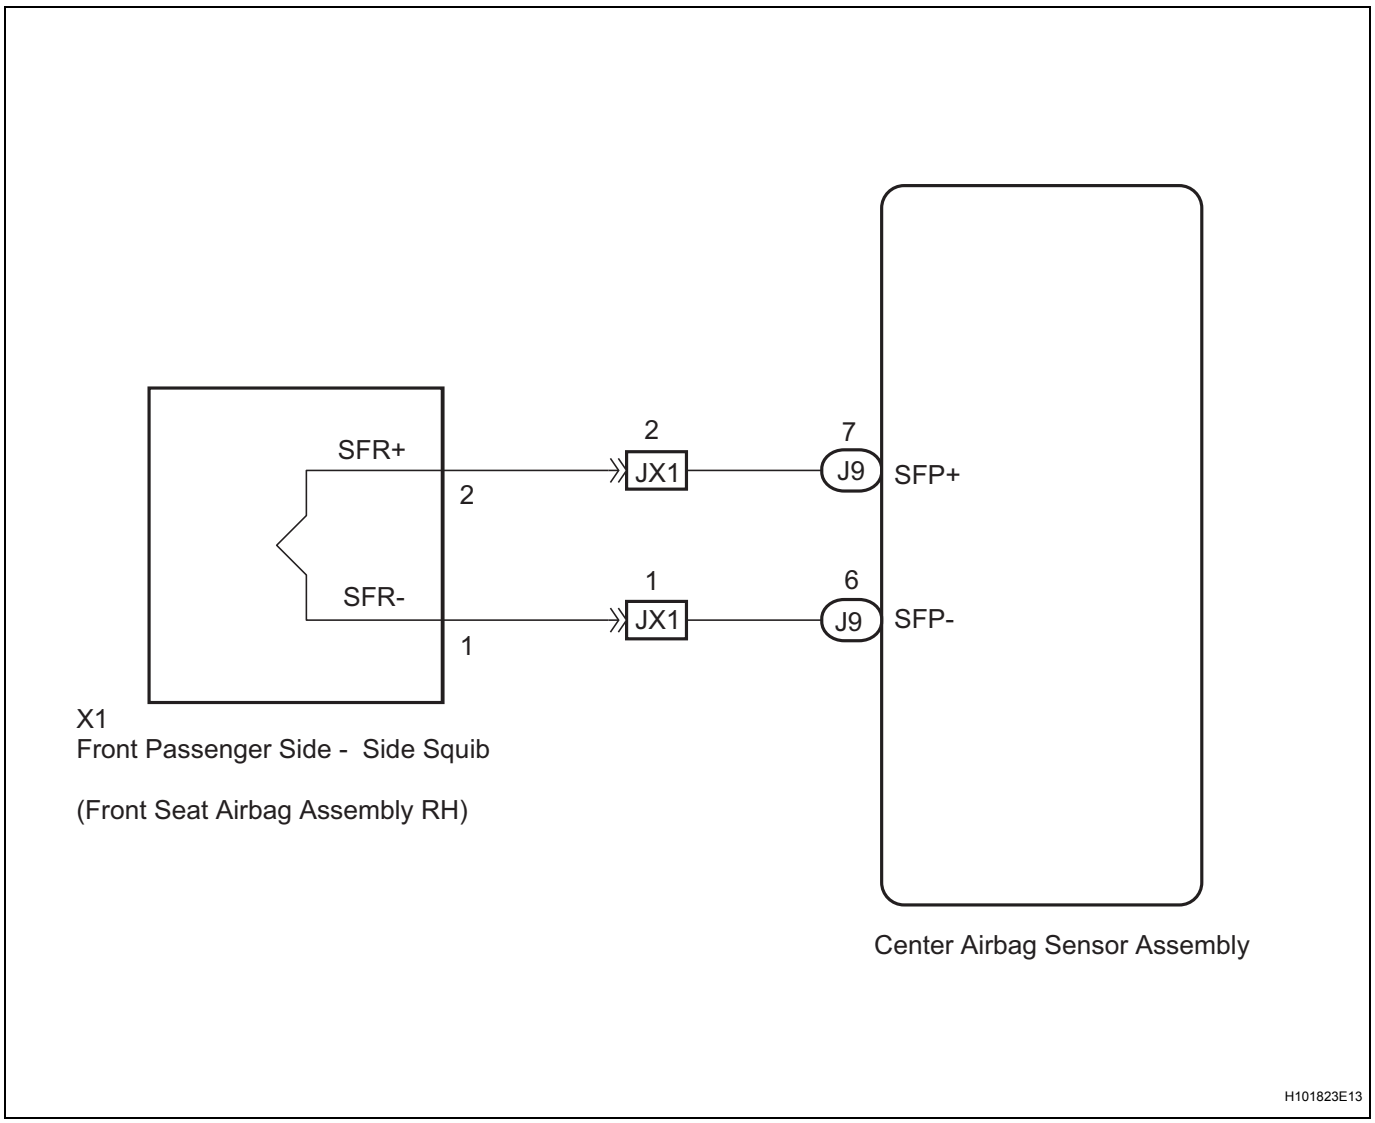
The front passenger side - side squib circuit consists of the center airbag sensor assembly and the front seat side airbag assembly RH.

The circuit signals the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side - side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1825/56	• Center airbag sensor assembly detects line short circuit signal in front passenger side - side squib circuit 5 times during primary check. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1826/56	• Center airbag sensor assembly detects open circuit signal in front passenger side - side squib circuit for 2 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1827/56	• Center airbag sensor assembly detects short circuit to ground signal in front passenger side - side squib circuit for 0.5 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1828/56	• Center airbag sensor assembly detects short circuit to B+ signal in front passenger side - side squib circuit for 0.5 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly

WIRING DIAGRAM



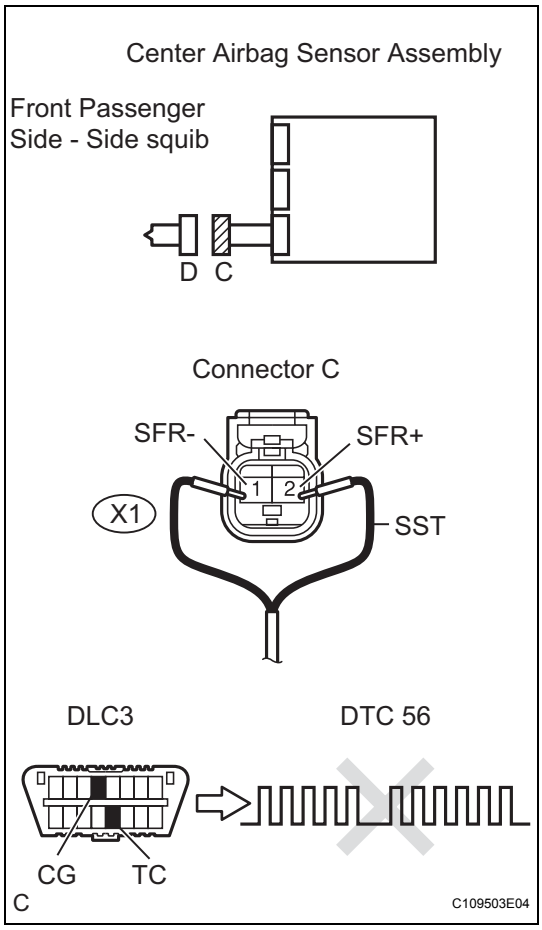
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	**CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY RH (FRONT PASSENGER SIDE - SIDE SQUIB)**

SST 09843-18060



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the front seat side airbag assembly RH.
(d) Connect the black wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect a tester to the front seat side airbag assembly RH (front passenger side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1825, B1826, B1827, B1828 and 56 are not output.
HINT:
DTCs other than DTC B1825, B1826, B1827, B1828 and 56 may be output at this time, but they are not related to this check.

OK	**REPLACE FRONT SEAT ASSEMBLY RH**

NG

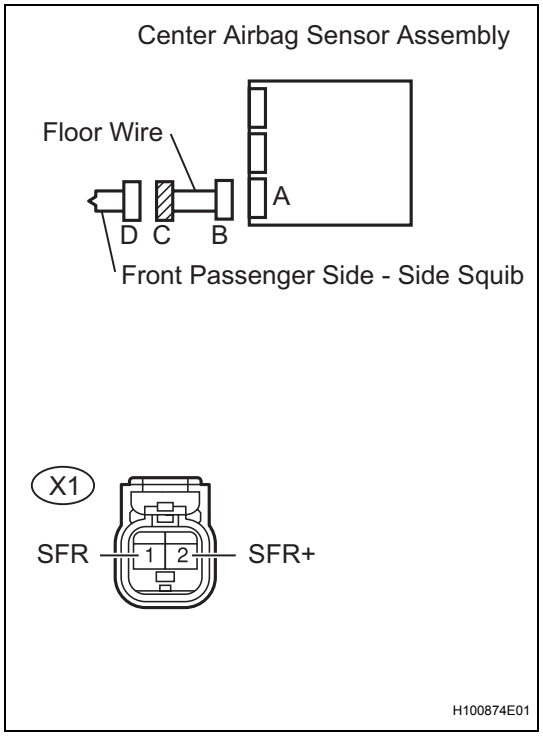
2	**CHECK CONNECTOR**

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connectors (on the front seat side airbag assembly RH side) are not damaged.
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG	**REPAIR OR REPLACE FLOOR WIRE**

OK

3	CHECK FLOOR WIRE (FRONT PASSENGER SIDE - SIDE SQUIB CIRCUIT)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
X1-1 (SFR-) - Body ground	Ignition switch on	Below 1 V
X1-2 (SFR+) - Body ground	Ignition switch on	Below 1 V

(f) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
X1-1 (SFR-) - X1-2 (SFR+)	Always	Below 1 Ω

(g) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
X1-1 (SFR-) - Body ground	Always	1 MΩ or higher
X1-2 (SFR+) Body ground	Always	1 MΩ or higher

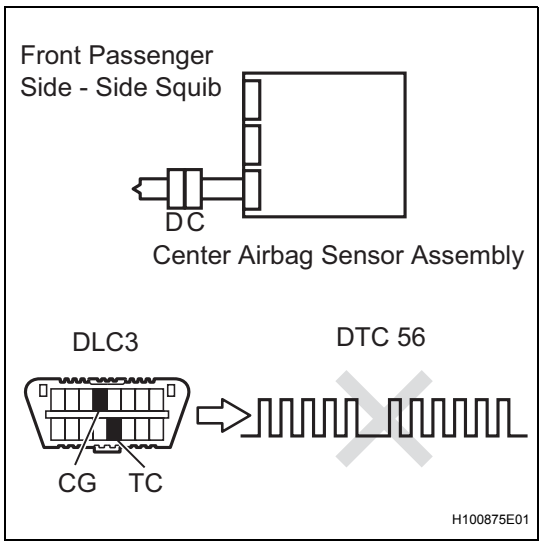
(h) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
X1-1 (SFR-) - X1-2 (SFR+)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat side airbag assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1825, B1826, B1827, B1828 and 56 are not output.

HINT:

DTCs other than DTC B1825, B1826, B1827, B1828 and 56 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

DTC	B1830/57	Short in Driver Side Curtain Shield Squib Circuit

DTC	B1831/57	Open in Driver Side Curtain Shield Squib Circuit

DTC	B1832/57	Short to GND in Driver Side Curtain Shield Squib Circuit

DTC	B1833/57	Short to B+ in Driver Side Curtain Shield Squib Circuit

DESCRIPTION

The driver side curtain shield squib circuit consists of the center airbag sensor assembly and the curtain shield airbag assembly LH.

The circuit signals the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the driver side curtain shield squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1830/57	• Center airbag sensor assembly detects line short circuit signal in driver side curtain shield squib circuit 5 times during primary check. • Driver side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly LH (Driver side curtain shield squib) • Center airbag sensor assembly
B1831/57	• Center airbag sensor assembly detects open circuit signal in driver side curtain shield squib circuit for 2 seconds. • Driver side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly LH (Driver side curtain shield squib) • Center airbag sensor assembly
B1832/57	• Center airbag sensor assembly detects short circuit to ground signal in driver side curtain shield squib circuit for 0.5 seconds. • Driver side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly LH (Driver side curtain shield squib) • Center airbag sensor assembly
B1833/57	• Center airbag sensor assembly detects short circuit to B+ signal in driver side curtain shield squib circuit for 0.5 seconds. • Driver side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Curtain shield airbag assembly LH (Driver side curtain shield squib) • Center airbag sensor assembly

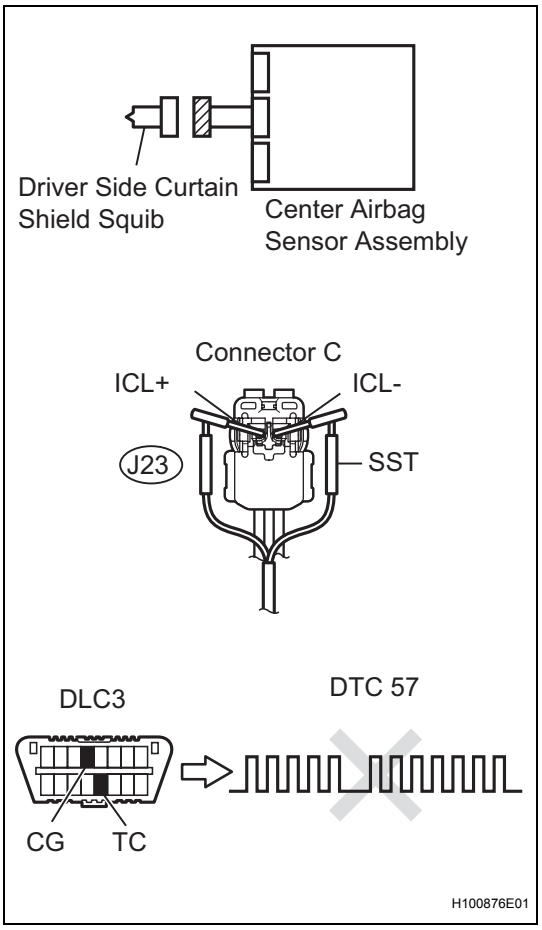
1	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY LH (DRIVER SIDE CURTAIN SHIELD SQUIB)



SST 09843-18060

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the curtain shield airbag assembly LH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect a tester to the curtain shield airbag assembly LH (driver side curtain shield squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1830, B1831, B1832, B1833 and 57 are not output.
HINT:
DTCs other than DTC B1830, B1831, B1832, B1833 and 57 may be output at this time, but they are not related to this check.

OK → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connectors (on the curtain shield airbag assembly LH side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

DESCRIPTION

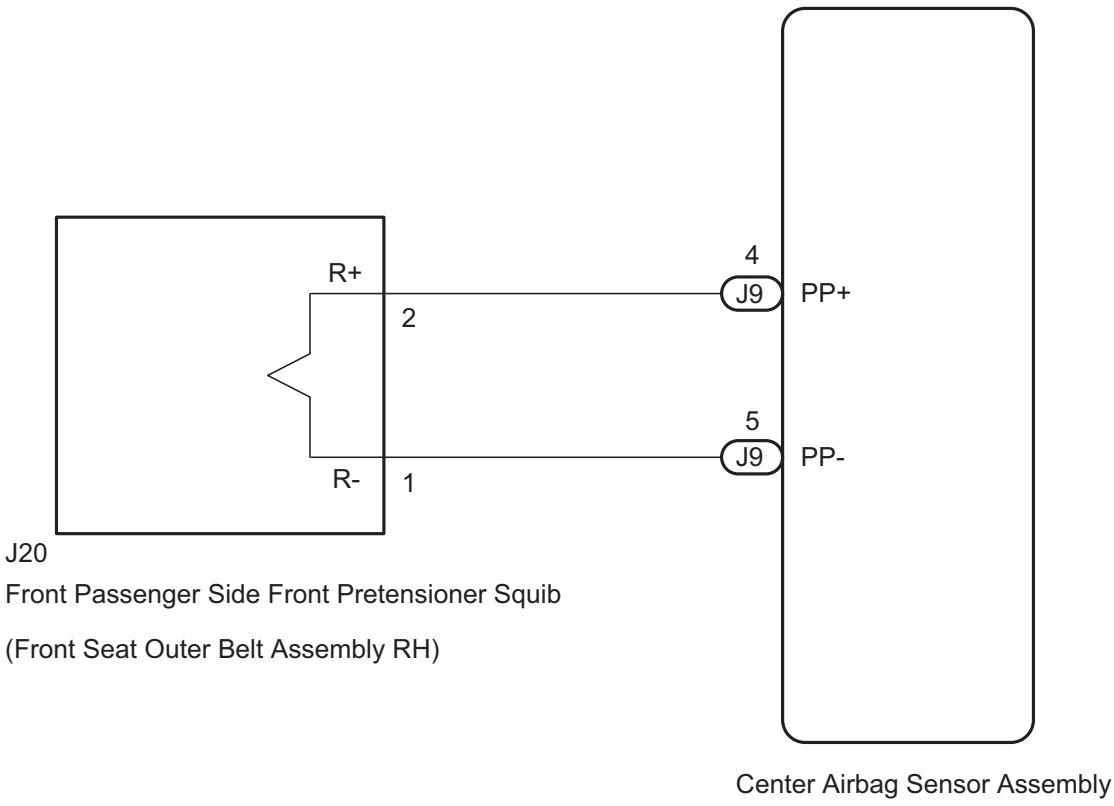
The front passenger side front pretensioner squib circuit consists of the center airbag sensor assembly and the front seat outer belt assembly RH.
This circuit signals the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side front pretensioner squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1905/74	• Center airbag sensor assembly detects line short circuit signal in front passenger side front pretensioner squib circuit 5 times during primary check. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly RH (Front passenger side front pretensioner squib) • Center airbag sensor assembly
B1906/74	• Center airbag sensor assembly detects open circuit signal in front passenger side front pretensioner squib circuit for 2 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly RH (Front passenger side front pretensioner squib) • Center airbag sensor assembly
B1907/74	• Center airbag sensor assembly detects short circuit to ground signal in front passenger side front pretensioner squib circuit for 0.5 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly RH (Front passenger side front pretensioner squib) • Center airbag sensor assembly
B1908/74	• Center airbag sensor assembly detects short circuit to B+ signal in front passenger side front pretensioner squib circuit for 0.5 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly RH (Front passenger side front pretensioner squib) • Center airbag sensor assembly

WIRING DIAGRAM



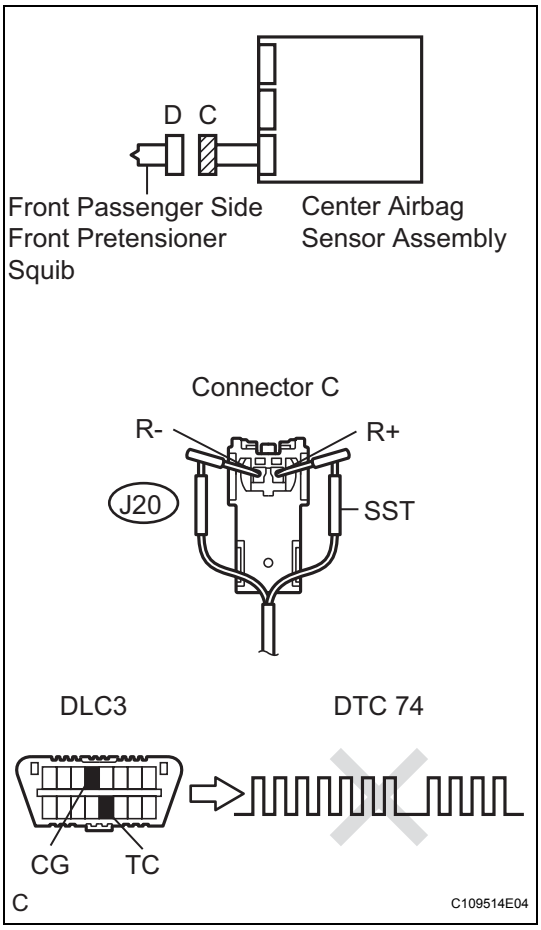
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting CHECK MODE (signal check) with the intelligent tester (See page RS-41).
- After selecting CHECK MODE (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-31).

1	CHECK FRONT SEAT OUTER BELT ASSEMBLY RH (FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB)

RS



SST 09843-18060

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front seat outer belt assembly RH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect a tester to the front seat outer belt assembly RH (front passenger side front pretensioner squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert the SST straight into the terminals of the connector.**

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-38).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on, and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-38).
OK:
DTC B1905, B1906, B1907, B1908 and 74 are not output.
HINT:
DTCs other than DTC B1905, B1906, B1907, B1908 and 74 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connector (on the front seat outer belt assembly RH side) is not damaged.

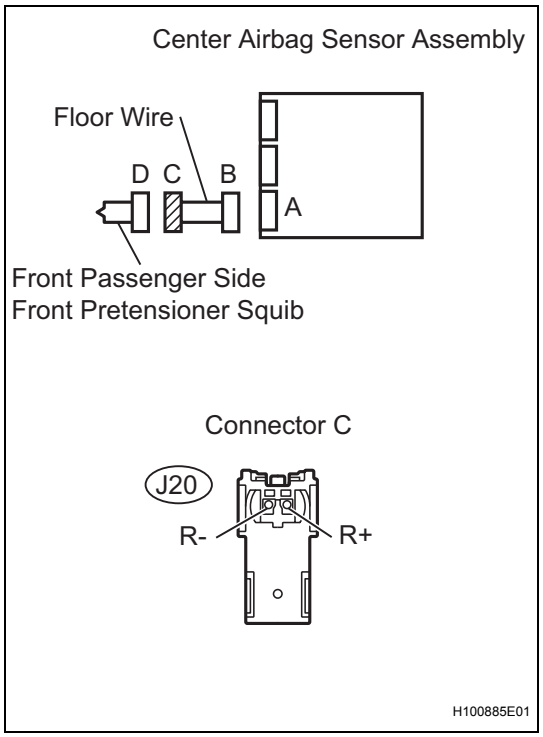
OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

3	CHECK FLOOR WIRE (FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on.
  (3) Measure the voltage.
  Standard voltage

Tester Connection	Condition	Specified Condition
J20-1 (R-) - Body ground	Ignition switch on	Below 1 V
J20-2 (R+) - Body ground	Ignition switch on	Below 1 V

(c) Check for open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
J20-1 (R-) - J20-2 (R+)	Always	Below 1 Ω

(d) Check for short to ground in the circuit.
  (1) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
J20-1 (R-) - Body ground	Always	1 MΩ or higher
J20-2 (R+) - Body ground	Always	1 MΩ or higher

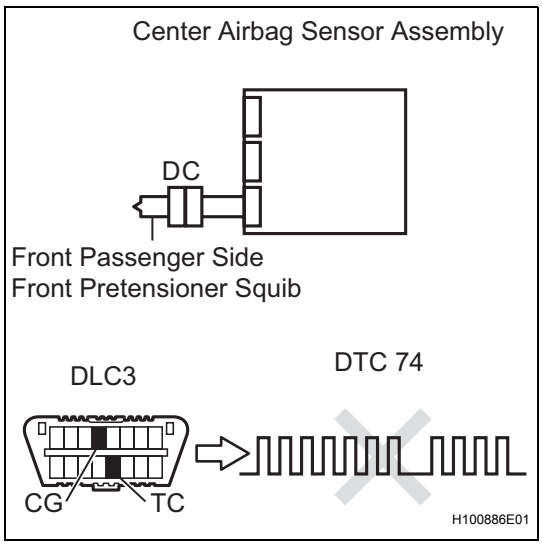
(e) Check for short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-31).
  (2) Measure the resistance.
  Standard resistance

Tester Connection	Condition	Specified Condition
J20-1 (R-) - J20-2 (R+)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat outer belt assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on, and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-38).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on, and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-38).

OK:

DTC B1905, B1906, B1907, B1908 and 74 are not output.

HINT:

DTCs other than DTC B1905, B1906, B1907, B1908 and 74 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK

SRS Warning Light Remains ON

DESCRIPTION

The SRS warning light is located on the combination meter.
When the SRS condition is normal, the SRS warning light illuminates for approximately 6 seconds after the ignition switch is turned from off to on, and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light illuminates or blinks to inform the driver of the problem. When terminals TC and CG of the DLC3 are connected, the SRS warning light blinks to indicate DTCs.
The center airbag sensor assembly is equipped with a voltage-increase circuit (DC-DC converter) in case the source voltage decreases. When the battery voltage decreases, the voltage-increase circuit (DC-DC converter) boosts the SRS voltage up to the normal level.
Malfunctions relating to battery voltage decreases cause the SRS warning light to illuminate, however, no DTCs are recorded in the center airbag sensor assembly. The SRS warning light goes off automatically when the source voltage returns to normal.
Signals to illuminate the SRS warning light are transmitted from the center airbag sensor assembly to the combination meter through the CAN communication system.

INSPECTION PROCEDURE

NOTICE:

In order to prevent unexpected airbag deployment, disconnect the following connectors before inspecting parts such as wire harnesses, if the application of tester probes to the center airbag sensor assembly connector is necessary.

RS

1. Turn the ignition switch to the lock position.
2. Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
3. Disconnect the connector from the center airbag sensor assembly.
4. Disconnect the connectors from the steering pad.
5. Disconnect the connectors from the front passenger airbag assembly.
6. Disconnect the connector from the front seat outer belt assembly LH.
7. Disconnect the connector from the front seat outer belt assembly RH.
   HINT:
   Skip the following steps if side and curtain shield airbags are not fitted.
8. Disconnect the connector from the front seat side airbag assembly LH.
9. Disconnect the connector from the front seat side airbag assembly RH.
10. Disconnect the connector from the curtain shield airbag assembly LH.
11. Disconnect the connector from the curtain shield airbag assembly RH.

1	CHECK DTC (CAN COMMUNICATION SYSTEM)

(a) Turn the ignition switch to the on position.
(b) Check the DTCs (See page CA-22).
OK:
DTC is not output.

NG → **CHECK CAN COMMUNICATION SYSTEM**

OK

2	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

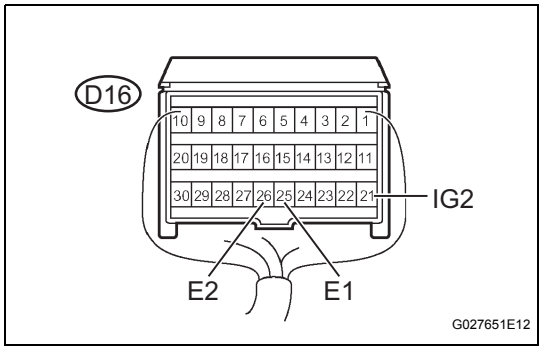
3	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and combination meter.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

4	CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF CENTER AIRBAG SENSOR ASSEMBLY)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on.
(d) Operate all components of the electrical system (defogger, wipers, headlights, heater blower, etc.).
(e) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D16-21 (IG2) - Body ground	Ignition switch on	11 to 14 V

(f) Turn the ignition switch off.
(g) Measure the resistance.

Standard resistance

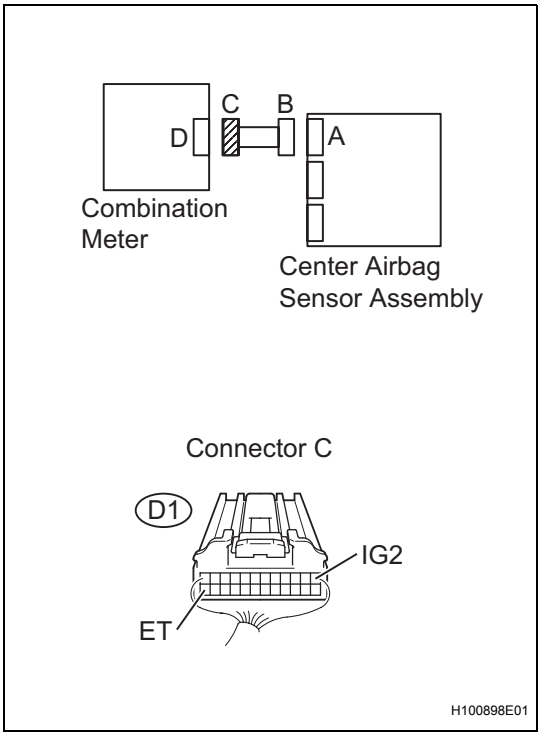
Tester Connection	Condition	Specified Condition
D16-25 (E1) - Body ground	Always	Below 1 Ω
D16-26 (E2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

RS

5	CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF COMBINATION METER)



(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Disconnect the connector from the combination meter.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on.
Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
D1-1 (IG2) - Body ground	Ignition switch on	11 to 14 V

(e) Turn the ignition switch off.
(f) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D1-24 (ET) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on.
(f) Check the SRS warning light condition.
OK:
The SRS warning light goes off after the primary check period and comes on again after approximately 10 seconds.
HINT:
The primary check period lasts for approximately 6 seconds after the ignition switch is turned on.

NG → **GO TO COMBINATION METER SYSTEM**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

SRS Warning Light does not Come ON

DESCRIPTION

See page RS-196.

WIRING DIAGRAM

See page RS-197.

INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

2	CHECK CONNECTION OF CONNECTORS

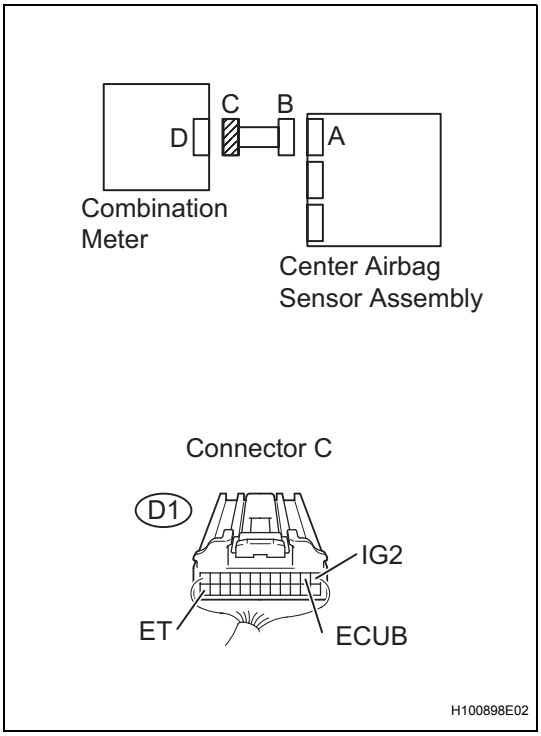
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the combination meter.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3	CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF COMBINATION METER)

RS



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the combination meter and center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on.
(f) Measure the voltage.

Standard voltage

Tester Connection	Condition	Specified Condition
D1-1 (IG2) - Body ground	Ignition switch on	11 to 14 V
D1-2 (ECUB) - Body ground	Always	11 to 14 V

(g) Turn the ignition switch off.
(h) Measure the resistance.

Standard resistance

Tester Connection	Condition	Specified Condition
D1-24 (ET) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on.
(f) Check the SRS warning light condition.

OK:

The SRS warning light goes off after the primary check period and comes on again after approximately 10 seconds.

HINT:

The primary check period lasts for approximately 6 seconds after the ignition switch is turned on.

NG → **GO TO COMBINATION METER SYSTEM**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

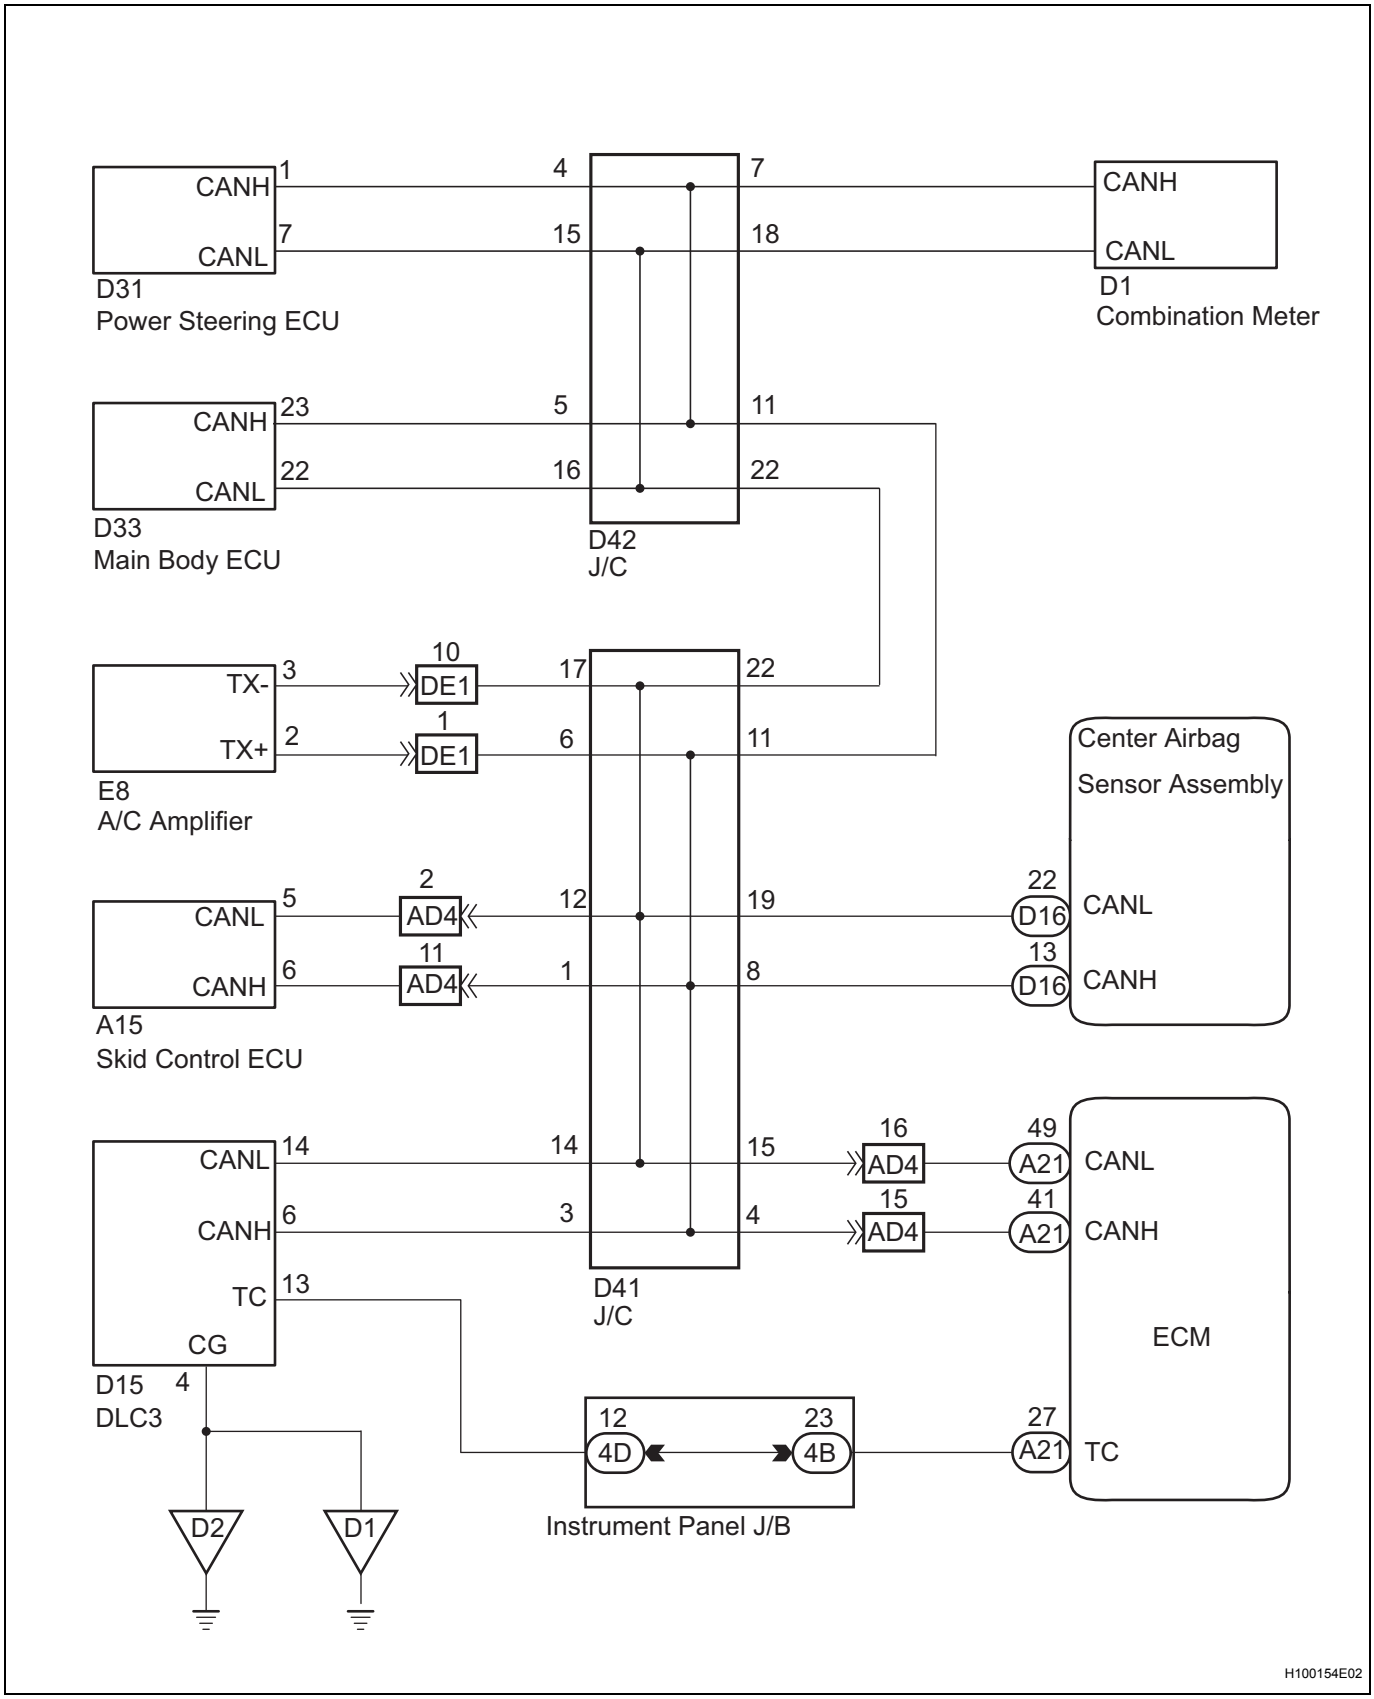
TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
The DTCs are displayed by blinking the SRS warning light.
HINT:

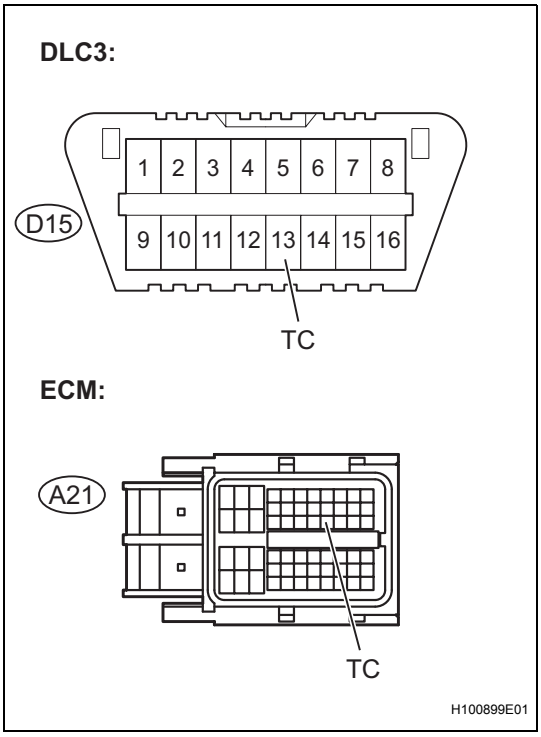
- Make sure that DTCs which relate to the CAN communication system are not output. If any of these DTCs are output, check the CAN communication system (See page CA-22).
- When a warning light keeps blinking, a short to ground in the wiring of terminal TC of the DLC3 or an internal ground short in an ECU is suspected.
- The DTC output mode signal is transmitted through the CAN to each ECU including the center airbag sensor assembly. Thus when no systems enter DTC output mode, the ECM may have a malfunction.

WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (DLC3 - ECM)



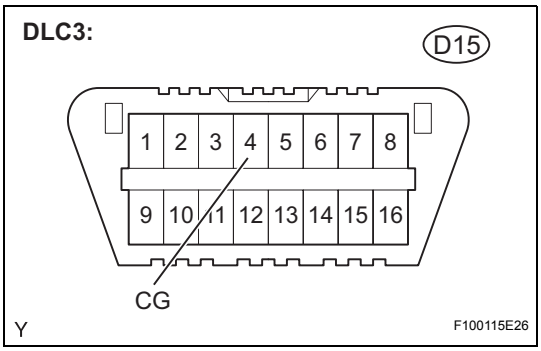
(a) Turn the ignition switch off.
(b) Disconnect the connector from the ECM.
(c) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
D15-13 (TC) - A21-27 (TC)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC OF DLC3 - TC OF ECM)**

OK

2 CHECK HARNESS AND CONNECTOR (CG OF DLC3 - BODY GROUND)



(a) Measure the resistance.
Standard resistance

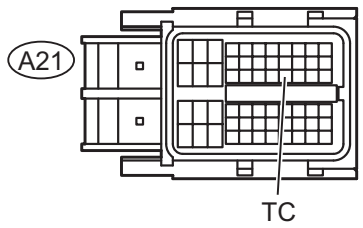
Tester Connection	Condition	Specified Condition
D15-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG OF DLC3 - BODY GROUND)**

OK

3	CHECK HARNESS AND CONNECTOR (TC OF ECM)

ECM:



(a) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
A21-27 (TC) - Body ground	Always	1 MΩ or higher

RS

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	REPLACE ECM

(a) Replace the ECM.
(b) Check for DTCs of the ECM (See page ES-34).
Result

Result	Proceed to
Normal system code is output	A
DTC is output	B
DTC output mode is set (except center airbag sensor assembly)	C

A → **END**

B → **GO TO INSPECTION PROCEDURE OF DTC OUTPUT**

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

OCCUPANT CLASSIFICATION SYSTEM

PRECAUTION

1. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) Perform the zero point calibration and sensitivity check if any of the following conditions apply.
- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

NOTICE:
When an accident vehicle is brought into the workshop for repair, check the flatness of the floor where the front passenger seat is mounted. If the flatness is not within +- 3.0 mm (0.118 in.), adjust it to the specified range.

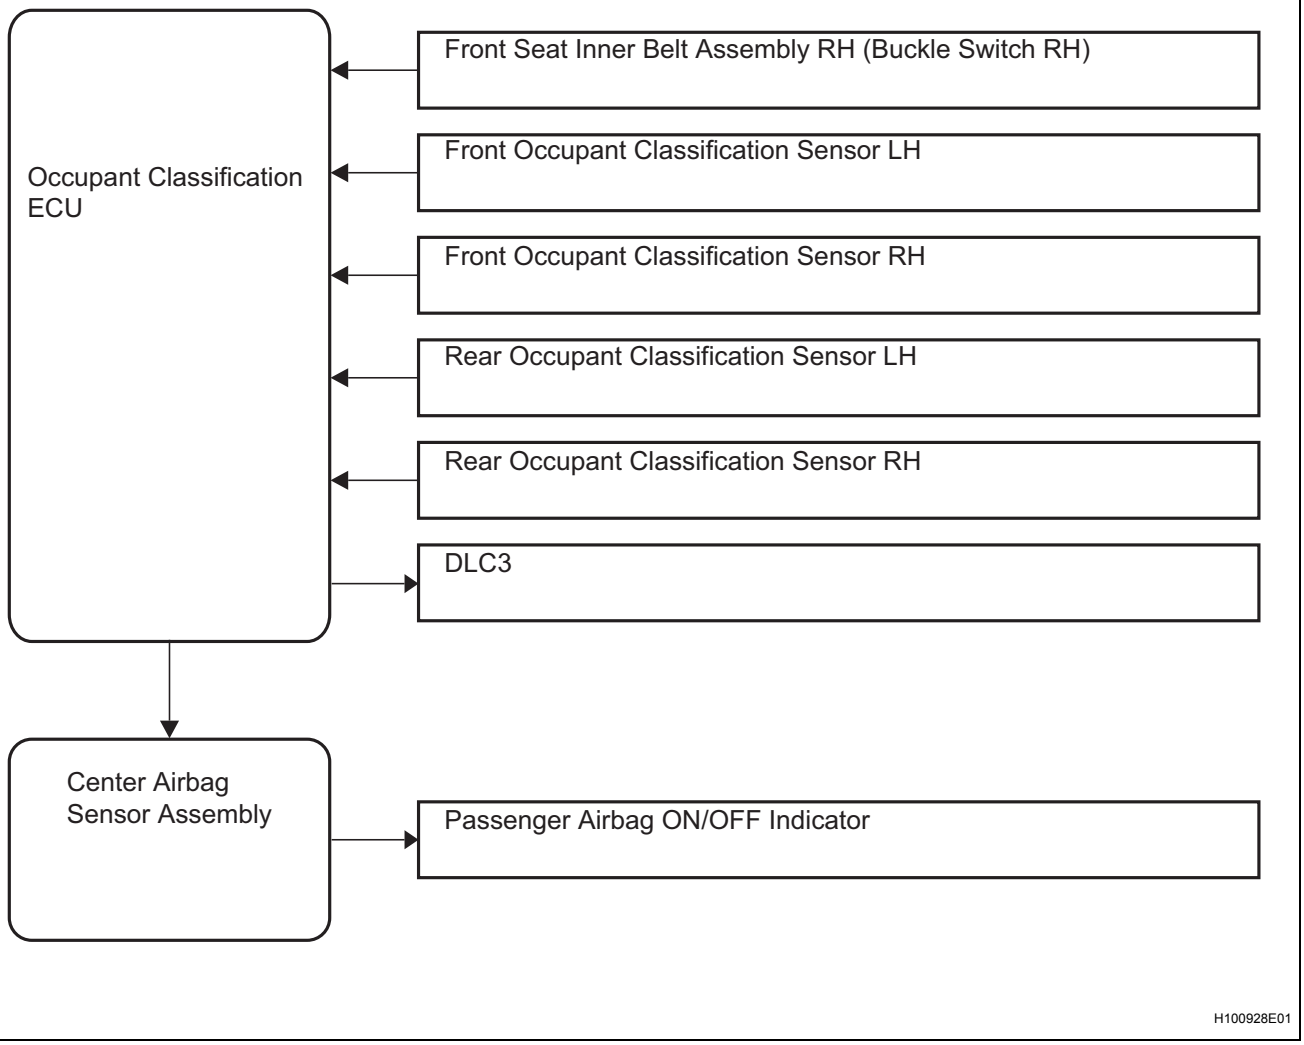
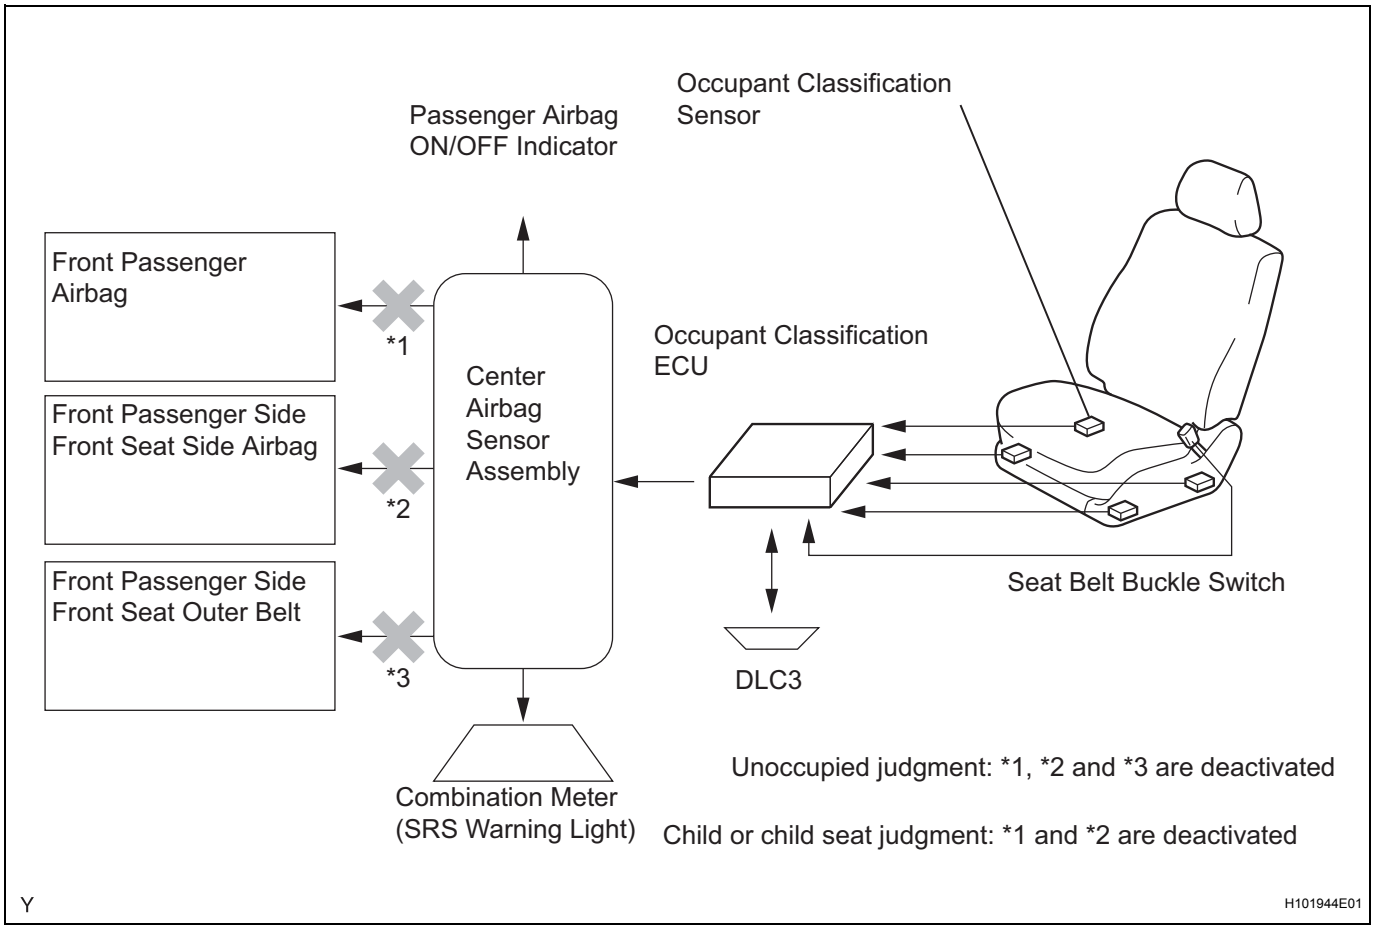
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. GENERAL

(a) The front passenger occupant classification system judges whether the front passenger seat is occupied by an adult or child (with child seat) or is unoccupied, in accordance with the load that is applied to the front passenger seat and whether the seat belt is buckled. Thus, when appropriate, it restricts the deployment of the front passenger airbag, front passenger side airbag, and the front passenger seat belt pretensioner. In addition, the system informs the driver of the result of the judgment through the use of the airbag ON/ OFF indicator.



2. MAIN COMPONENTS

Component	Description
Occupant Classification Sensor	Outputs voltages to occupant classification ECU in accordance with load applied to sensor
Occupant Classification ECU	Constantly monitors weight of front passenger seat load, and judges occupancy condition in accordance with signals from occupant classification sensors and seat belt buckle switch
Airbag ON/OFF Indicator	Airbag ON indicator illuminates when front passenger and front passenger side airbags activated. Airbag OFF indicator illuminates when front passenger and front passenger side airbags deactivated.
Seat Belt Buckle Switch	Detects whether seat belt fastened and outputs appropriate signals to occupant classification ECU

INITIALIZATION

1. ZERO POINT CALIBRATION

NOTICE:

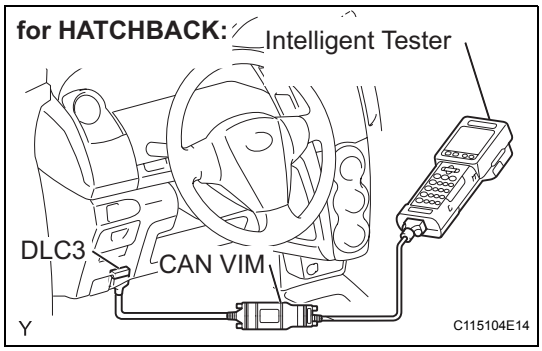
Make sure that the front passenger seat is not occupied before performing the operation.

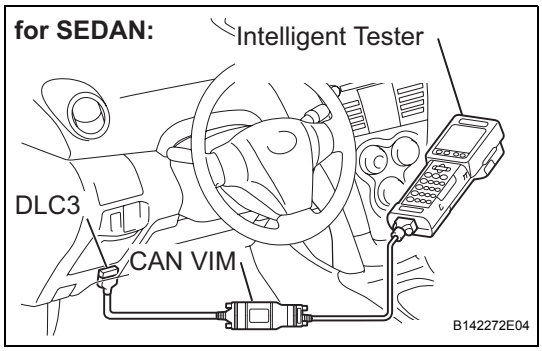
HINT:

Perform the zero point calibration and sensitivity check if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

(a) Zero point calibration and sensitivity check procedures





HINT:

Make sure that the zero point calibration has finished normally, and then perform the sensitivity check.

(1) Adjust the seat position in accordance with the table below.

Adjustment Item	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

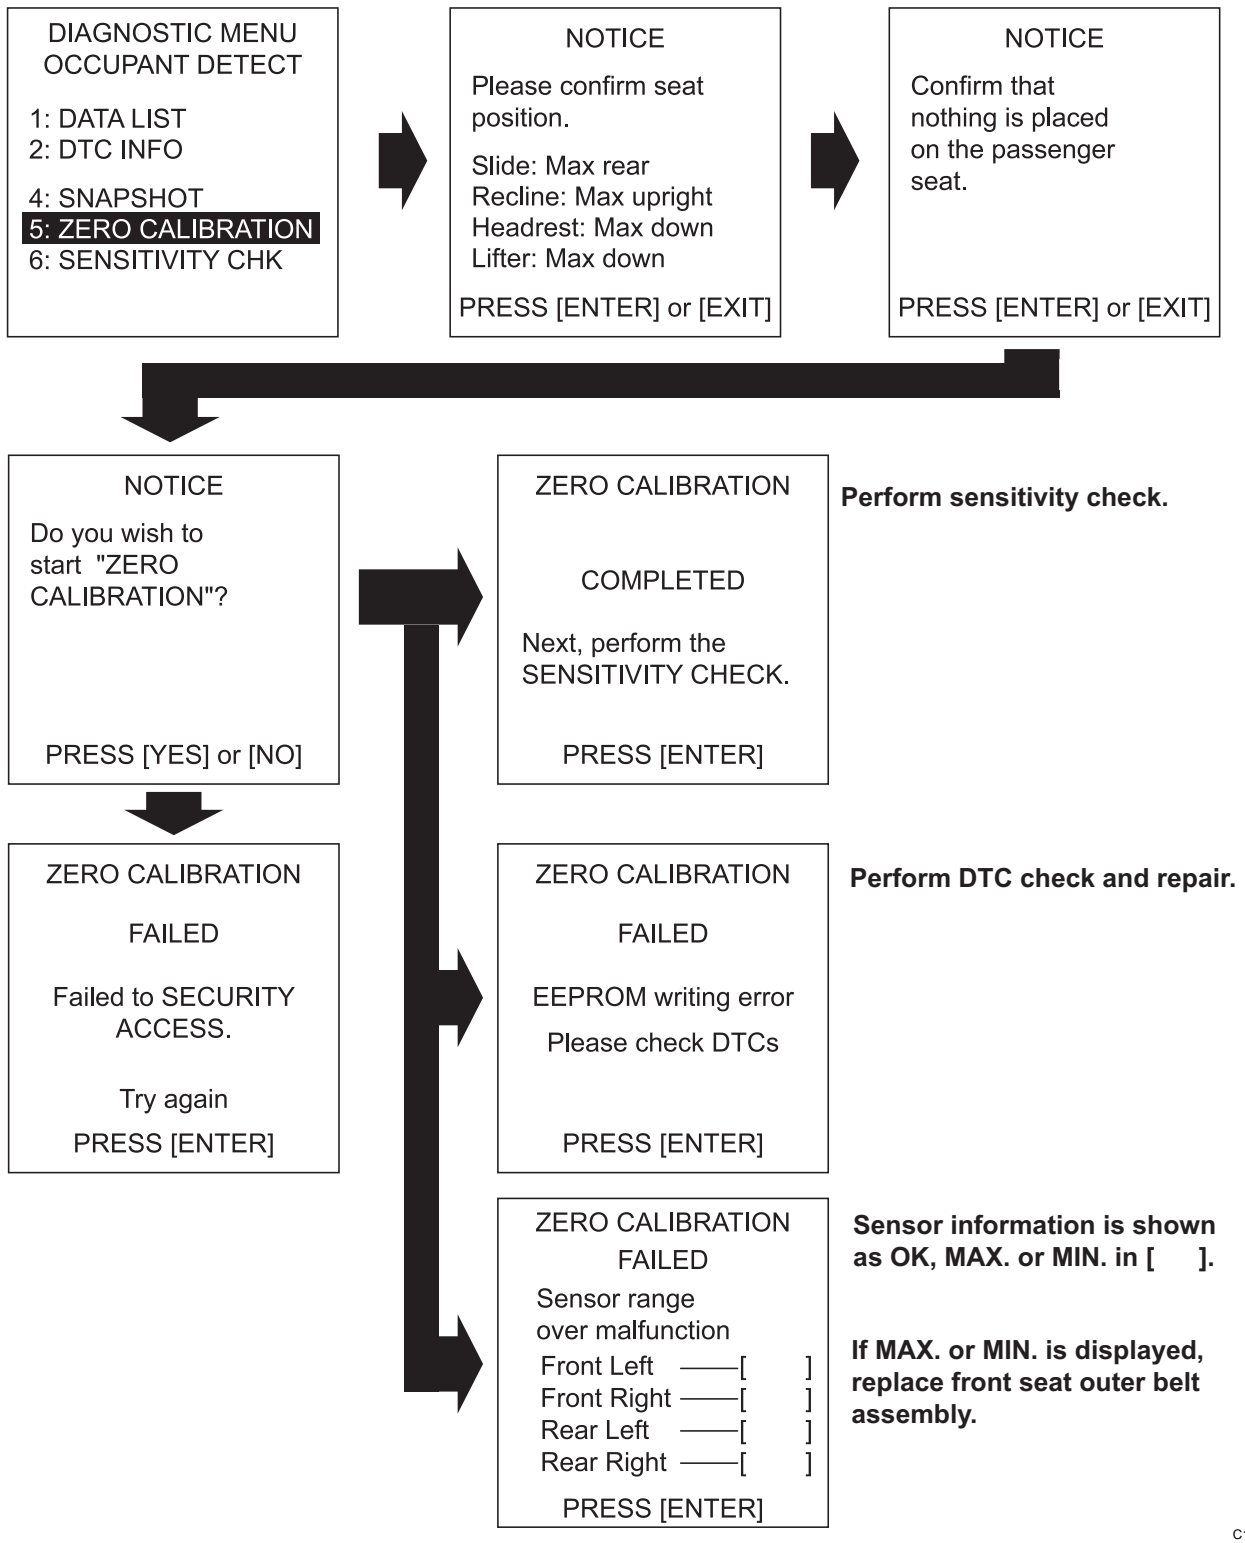
(2) Connect the intelligent tester to the DLC3.

(3) Turn the ignition switch to the ON position.

(4) Perform the zero point calibration by following the prompts on the tester screen.
Refer to the following screen flow.

ZERO POINT CALIBRATION PROCEDURE

1:DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT

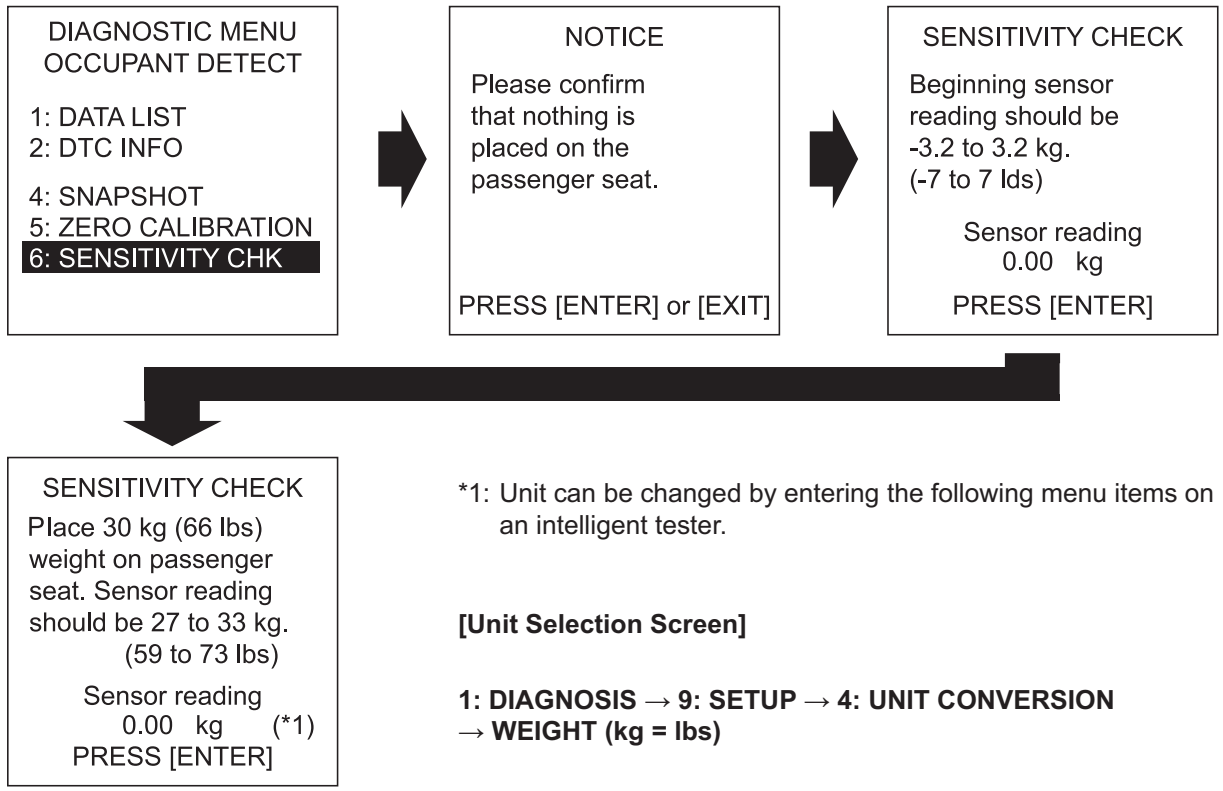


HINT:
Refer to the intelligent tester operator's manual for further details.
OK:
COMPLETED is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard range.

SENSITIVITY CHECK PROCEDURE

1: DIAGNOSIS → 1: OBD/MOBD → MODEL YEAR → MODEL SELECTION → 9: OCCUPANT DETECT



Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
- When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

- If the sensitivity deviates from the standard range, retighten the bolts of the front passenger seat taking care not to deform the seat rail. After performing this procedure, if the sensitivity is not within the standard range, replace the front seat assembly RH.
- If the zero point calibration has not finished normally, replace the front seat assembly RH.

PROBLEM SYMPTOMS TABLE

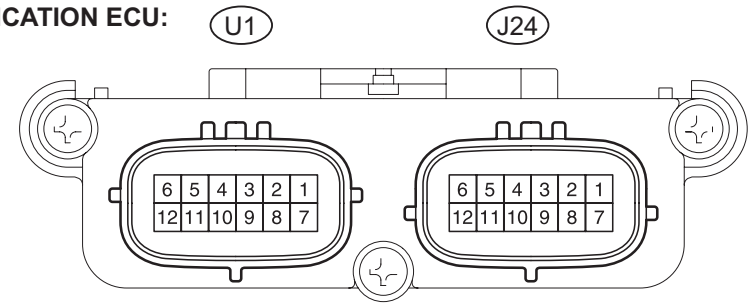
HINT:
Proceed to the troubleshooting for each circuit in the table below.

Symptom	Suspected area	See page
The front passenger seat condition differs from the indication by the passenger airbag ON/OFF indicator (DTC is not output).	Trouble in Passenger Airbag ON/OFF Indicator	RS-301

TERMINALS OF ECU

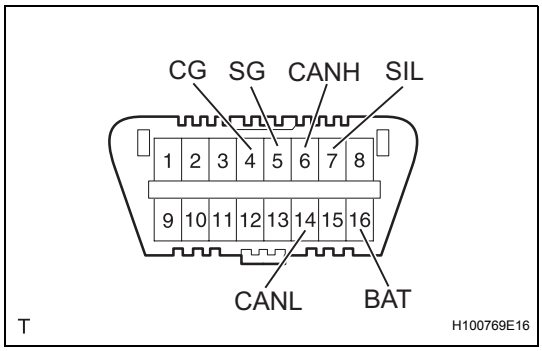
1. OCCUPANT CLASSIFICATION ECU

OCCUPANT CLASSIFICATION ECU:



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
+B (J24-1) - GND (J24-3)	V - W-B	Power source (ECU-B Fuse)	Always	11 to 14 V
DIA (J24-2) - GND (J24-3)	G - W-B	Diagnosis (DLC3)	Ignition switch on	Pulse generation
GND (J24-3) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
FSR- (J24-4) - GND (J24-3)	Y - W-B	Center airbag sensor assembly communication line (-)	Always	Below 1 Ω
BGND (J24-5) - GND (J24-3)	P - W-B	Passenger side buckle switch ground line	Always	Below 1 Ω
IG (J24-7) - GND (J24-3)	O - W-B	Power source (IG2 Fuse)	Ignition switch on	11 to 14 V
FSR+ (J24-8) - FSR- (J24-4)	GR - Y	Center airbag sensor assembly communication line	Ignition switch on	Pulse generation
BSW (J24-9) - BGND (J24-5)	O - P	Passenger side buckle switch line	Buckle switch ON Buckle switch OFF	Pulse generation
SGD1 (U1-1) - GND (J24-3)	G - W-B	Occupant classification sensor front LH ground line	Always	Below 1 Ω
SGD2 (U1-2) - GND (J24-3)	O - W-B	Occupant classification sensor front RH ground line	Always	Below 1 Ω
SGD3 (U1-3) - GND (J24-3)	W - W-B	Occupant classification sensor rear LH ground line	Always	Below 1 Ω
SGD4 (U1-4) - GND (J24-3)	BR - W-B	Occupant classification sensor rear RH ground line	Always	Below 1 Ω
SVC1 (U1-11) - SGD1 (U1-1)	R - G	Occupant classification sensor front LH power supply line	Ignition switch on, load is applied to occupant classification sensor front LH	4.5 to 5.1 V
SVC2 (U1-12) - SGD2 (U1-2)	W - O	Occupant classification sensor front RH power supply line	Ignition switch on, load is applied to occupant classification sensor front RH	4.5 to 5.1 V
SVC3 (U1-5) - SGD3 (U1-3)	GR - W	Occupant classification sensor rear LH power supply line	Ignition switch on, load is applied to occupant classification sensor rear LH	4.5 to 5.1 V
SVC4 (U1-6) - SGD4 (U1-4)	V - BR	Occupant classification sensor rear RH power supply line	Ignition switch on, load is applied to occupant classification sensor rear RH	4.5 to 5.1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SIG1 (U1-7) - SGD1 (U1-1)	SB - G	Occupant classification sensor front LH signal line	Ignition switch on, load is applied to occupant classification sensor front LH	0.2 to 4.7 V
SIG2 (U1-8) - SGD2 (U1-2)	L - O	Occupant classification sensor front RH signal line	Ignition switch on, load is applied to occupant classification sensor front RH	0.2 to 4.7 V
SIG3 (U1-9) - SGD3 (U1-3)	Y - W	Occupant classification sensor rear LH signal line	Ignition switch on, load is applied to occupant classification sensor rear LH	0.2 to 4.7 V
SIG4 (U1-10) - SGD4 (U1-4)	R - BR	Occupant classification sensor rear RH signal line	Ignition switch on, load is applied to occupant classification sensor rear RH	0.2 to 4.7 V



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

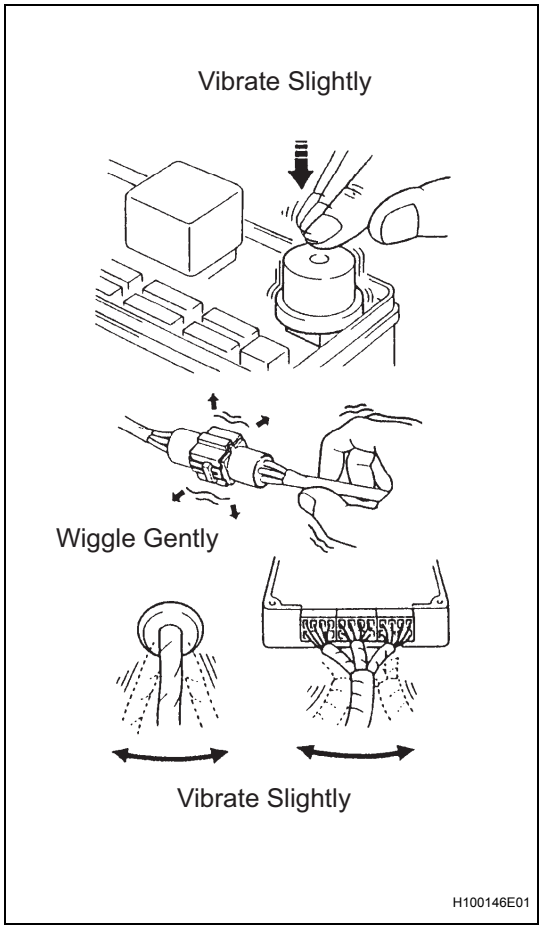
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. Regardless of the technician's experience or skill, if troubleshooting proceeds without confirmation of the problem symptoms, something important is likely to be overlooked and incorrect guesses may be made at some points in the repair operation.

This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to the on position).

(1) Slightly vibrate the part of the sensor considered to be the cause of the problem with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

(2) Slightly shake the connector vertically and horizontally.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

(b) Simulation method for DTC B1795: Turn the ignition switch from the lock to the on position, hold for 10 seconds, and then back to the lock position again 50 times in a row.

HINT:

DTC B1795 is output if the occupant classification ECU receives the ignition switch lock-on-lock signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system.

3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

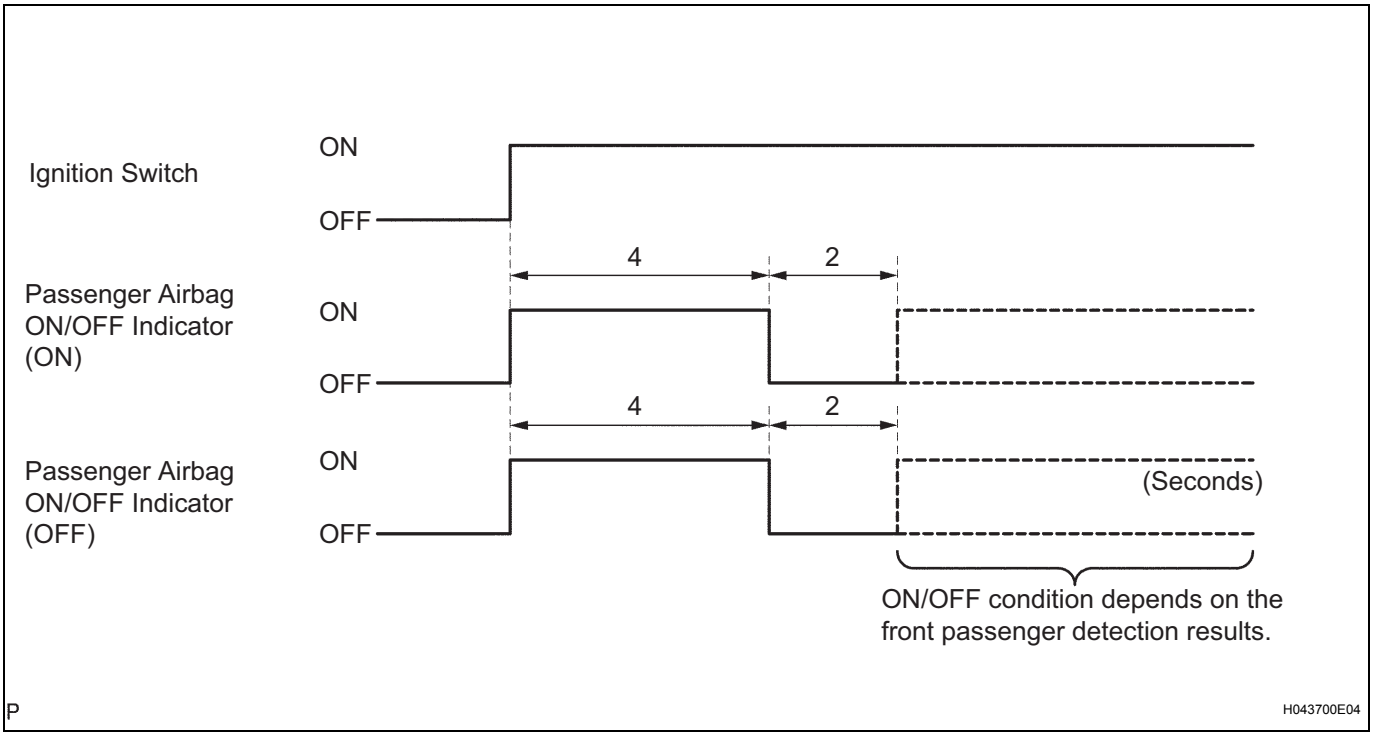
(1) Turn the ignition switch to the on position.

(2) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
(3) Approximately 6 seconds after the ignition switch is turned to the on position, the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

RS

Condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated	ON	OFF
Child is seated	OFF	ON
Child restraint system is set	OFF	ON
Front passenger occupant classification system failure	OFF	ON

HINT:
- The passenger airbag ON/OFF indicator operates based on the timing chart below in order to check the indicator light circuit.



- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator (OFF) come on. In this case, check the DTCs in the airbag system first.

HATCHBACK:

SEDAN:

C135760E01

4. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch to the on position.

(b) Check that the passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
HINT:
Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when approximately 6 seconds have elapsed after the ignition switch is turned to the on position.

RS

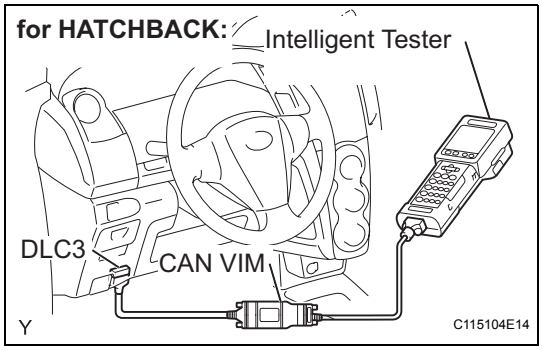
DTC CHECK / CLEAR

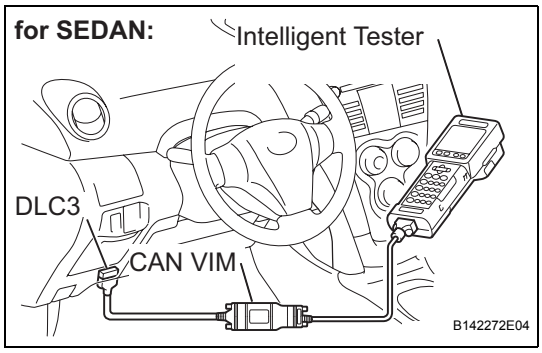
1. DTC CHECK

HINT:

- When DTC B1650/23 is detected as a result of troubleshooting for the airbag system, troubleshoot the occupant classification system.
- Use the intelligent tester to read and clear DTCs, otherwise the DTCs cannot be read and cleared.

(a) Check for DTCs.





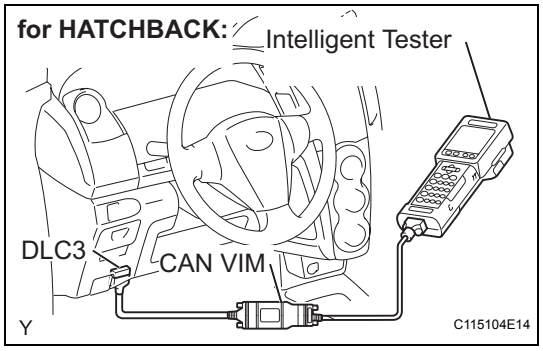
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the on position.
(3) Check for DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

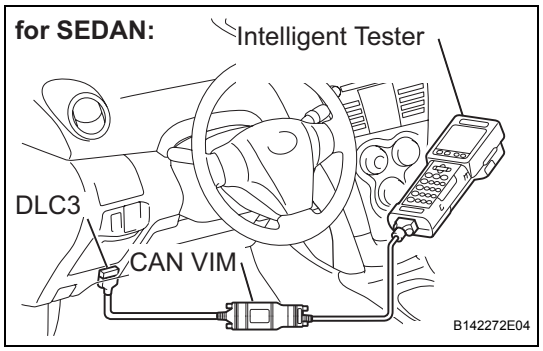
(b) Clear the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the on position.
(3) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed by the intelligent tester, you can check values of switches and sensors without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method to shorten diagnostic time.

RS





1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the on position.

(c) Following the display on the tester screen, read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
IG SW	Ignition switch condition/ ON: Ignition switch ON OFF: Ignition switch OFF	ON/OFF	-

DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

RS

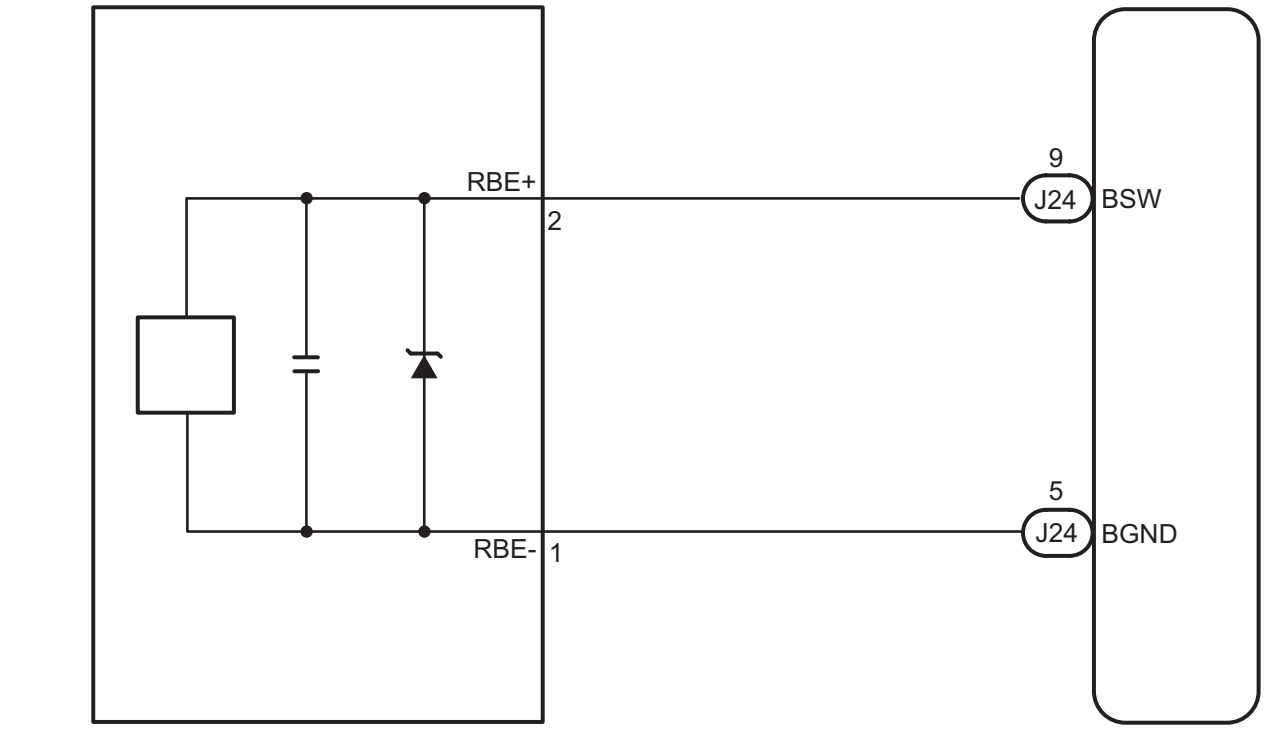
The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.

DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.

Troubleshoot DTC B1771 first when DTCs B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1771	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in passenger side buckle switch circuit for 2 seconds • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• Floor wire • Front seat inner belt assembly RH (Buckle switch RH) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

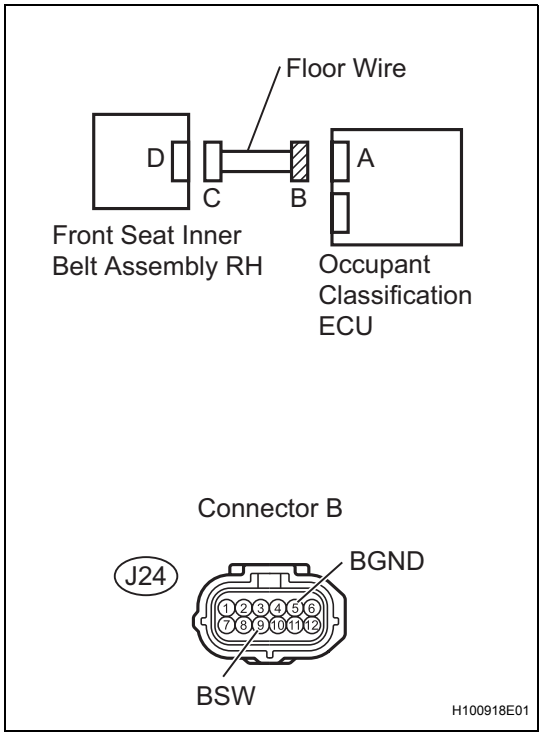
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3	CHECK FLOOR WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

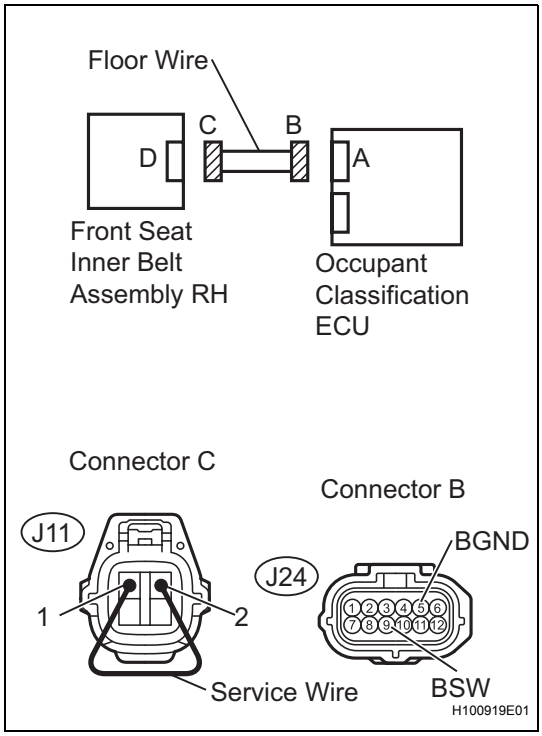
Standard voltage

Tester connection	Condition	Specified condition
J24-9 (BSW) - Body ground	Ignition switch on	Below 1 V
J24-5 (BGND) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4	CHECK FLOOR WIRE (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect J11-2 and J11-1 of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

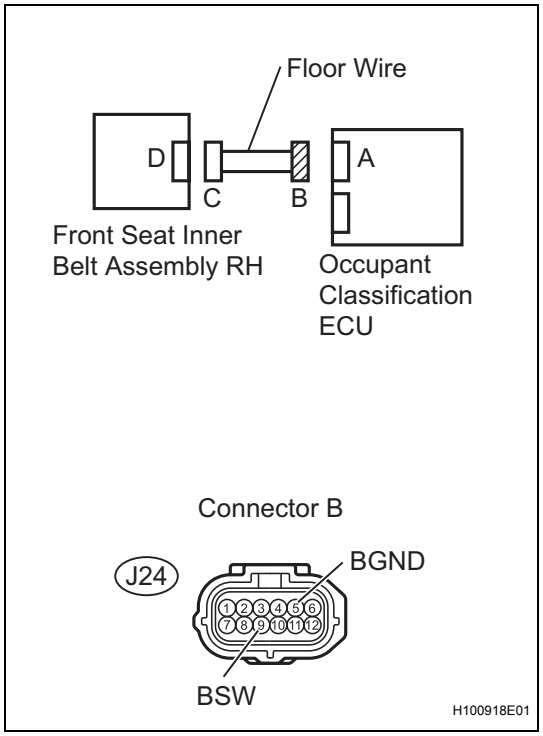
Standard resistance

Tester connection	Condition	Specified condition
J24-9 (BSW) - J24-5 (BGND)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

5 CHECK FLOOR WIRE (FOR SHORT)



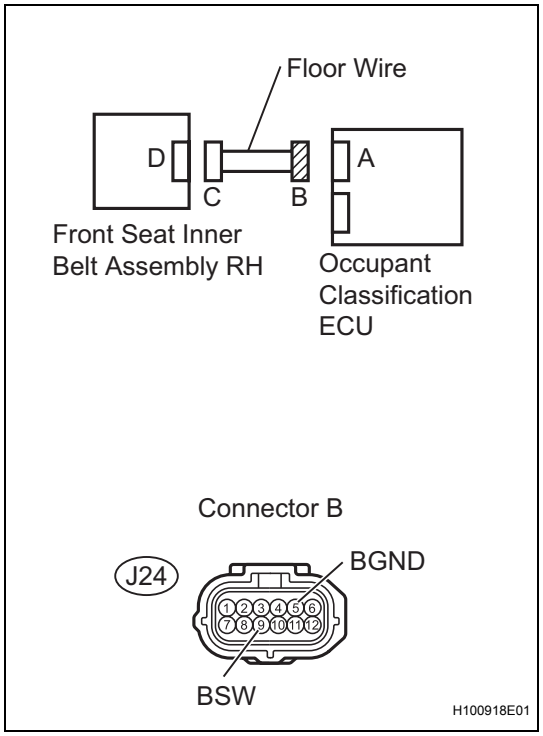
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
J24-9 (BSW) - J24-5 (BGND)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
J24-9 (BSW) - Body ground	Always	1 MΩ or higher
J24-5 (BGND) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

8	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly RH.
for Hatchback: (See page SB-39)
for Sedan: (See page SB-33)
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the on position.
(f) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the lock position.
(h) Turn the ignition switch to the on position.
(i) Check the DTCs (See page RS-223).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **END**

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

END

DTC	B1780	Front Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

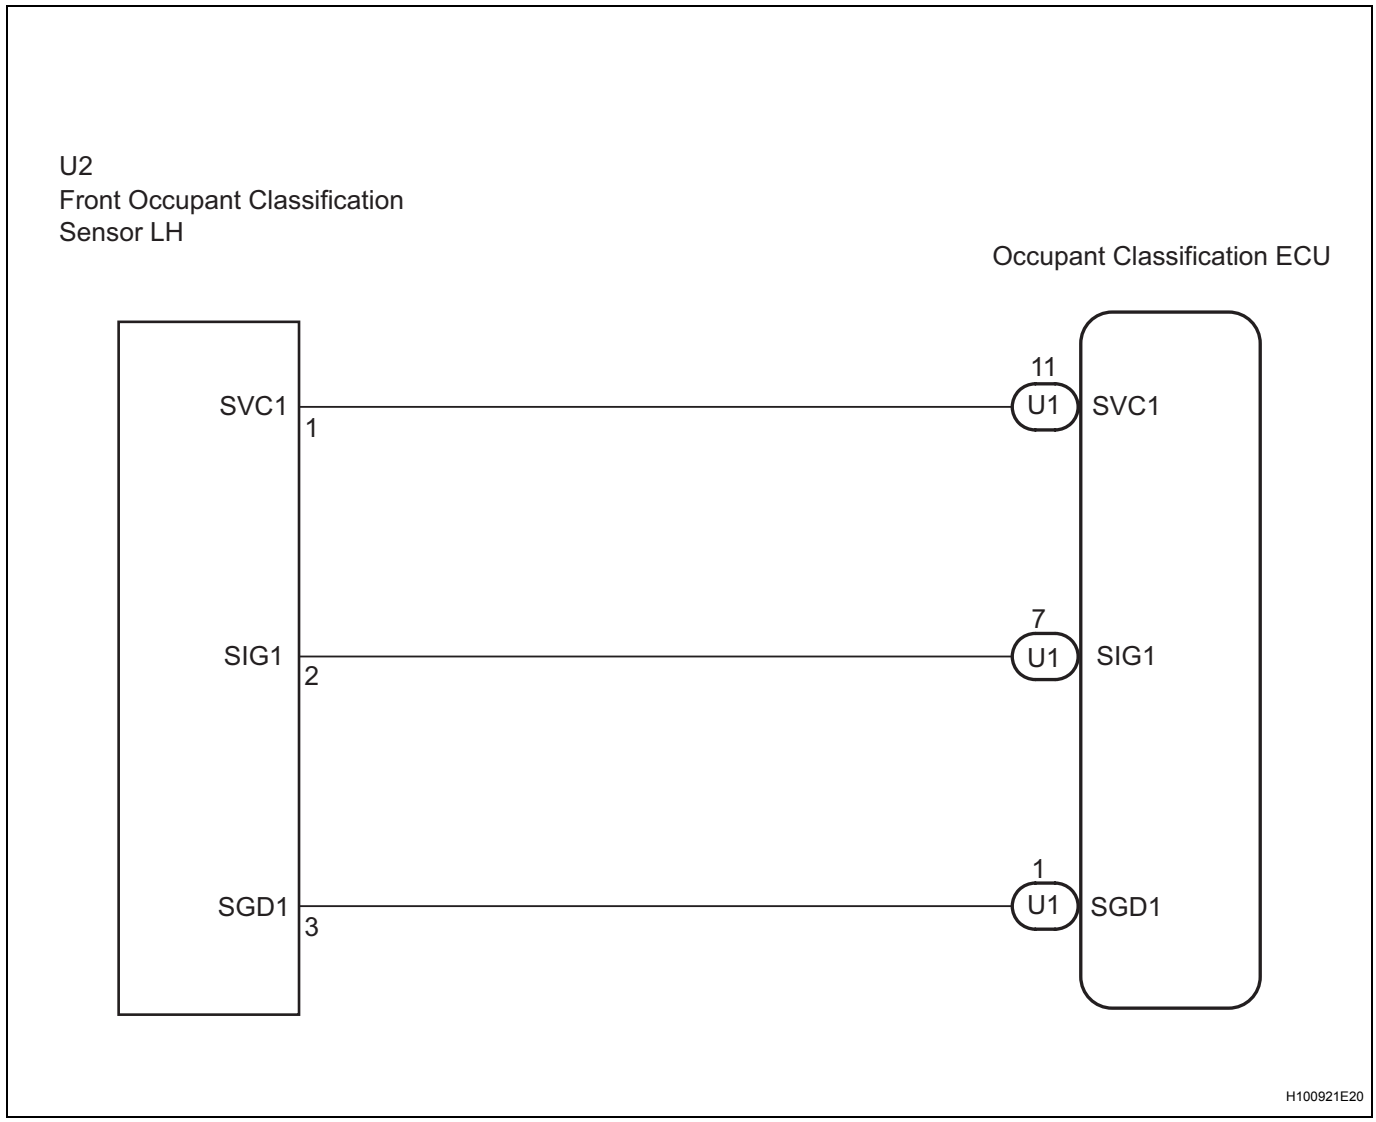
RS

The front occupant classification sensor LH circuit consists of the occupant classification ECU and the front occupant classification sensor LH.

DTC B1780 is recorded when a malfunction is detected in the front occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1780	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in front occupant classification sensor LH circuit for 2 seconds • Front occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat assembly RH (Front occupant classification sensor LH) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1780 is not output.
HINT:
Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

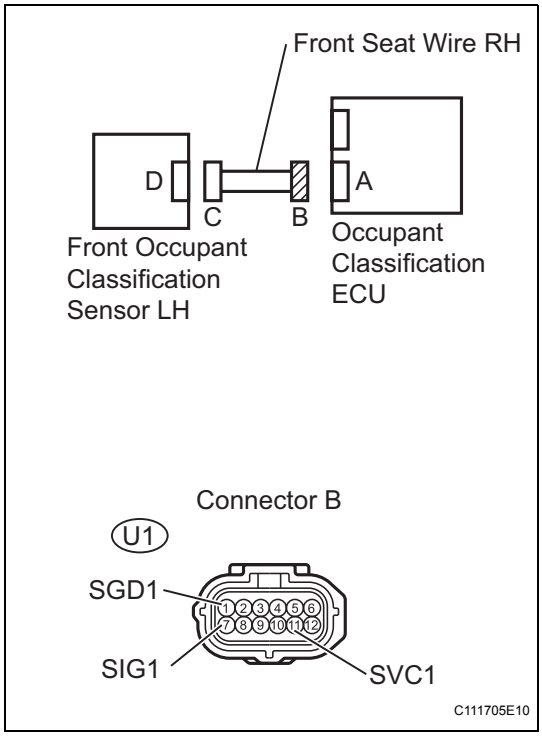
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3 CHECK FRONT SEAT WIRE RH (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

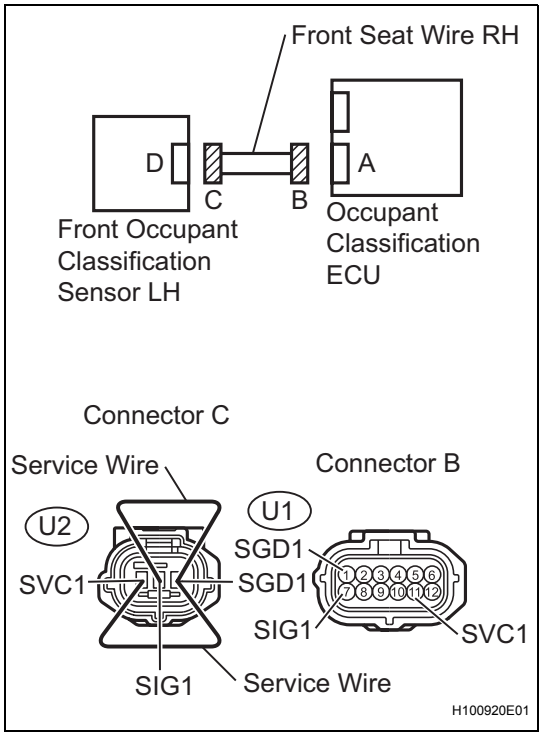
Standard voltage

Tester connection	Condition	Specified condition
U1-1 (SGD1) - Body ground	Ignition switch on	Below 1 V
U1-7 (SIG1) - Body ground	Ignition switch on	Below 1 V
U1-11 (SVC1) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4 CHECK FRONT SEAT WIRE RH (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect U2-1 (SVC1) and U2-3 (SGD1), and connect U2-2 (SIG1) and U2-3 (SGD1) of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

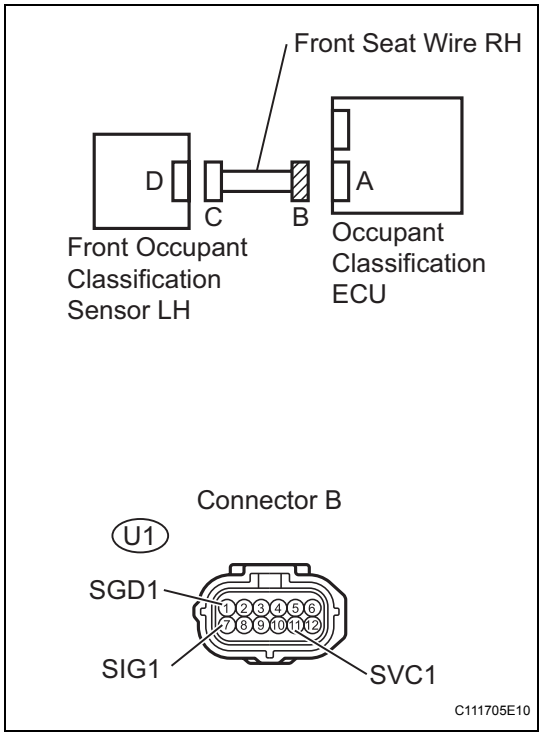
Standard resistance

Tester connection	Condition	Specified condition
U1-7 (SIG1) - U1-1 (SGD1)	Always	Below 1 Ω
U1-11 (SVC1) - U1-1 (SGD1)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)



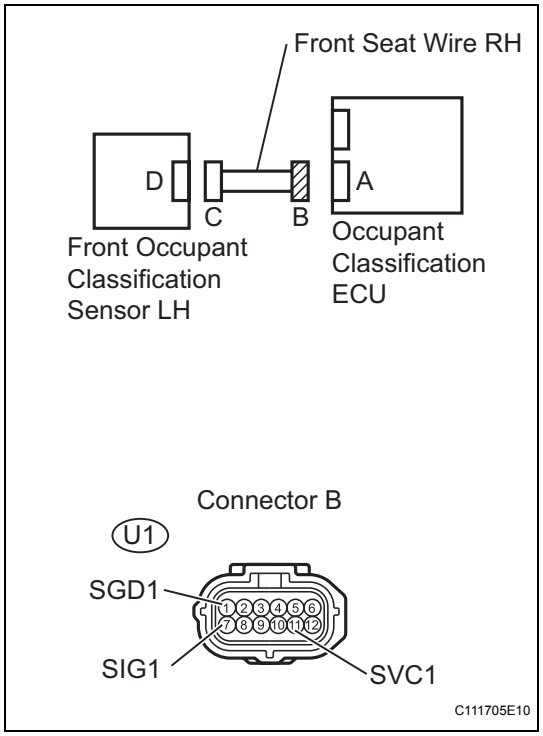
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-7 (SIG1) - U1-1 (SGD1)	Always	1 MΩ or higher
U1-11 (SVC1) - U1-1 (SGD1)	Always	1 MΩ or higher
U1-7 (SIG1) - U1-11 (SVC1)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-1 (SGD1) - Body ground	Always	1 MΩ or higher
U1-7 (SIG1) - Body ground	Always	1 MΩ or higher
U1-11 (SVC1) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1780 is not output.
HINT:
Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-223).
  OK:
  DTC B1780 is not output.
  HINT:
  Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.

for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)

NEXT

RS

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

DTC	B1781	Front Occupant Classification Sensor RH Circuit Malfunction

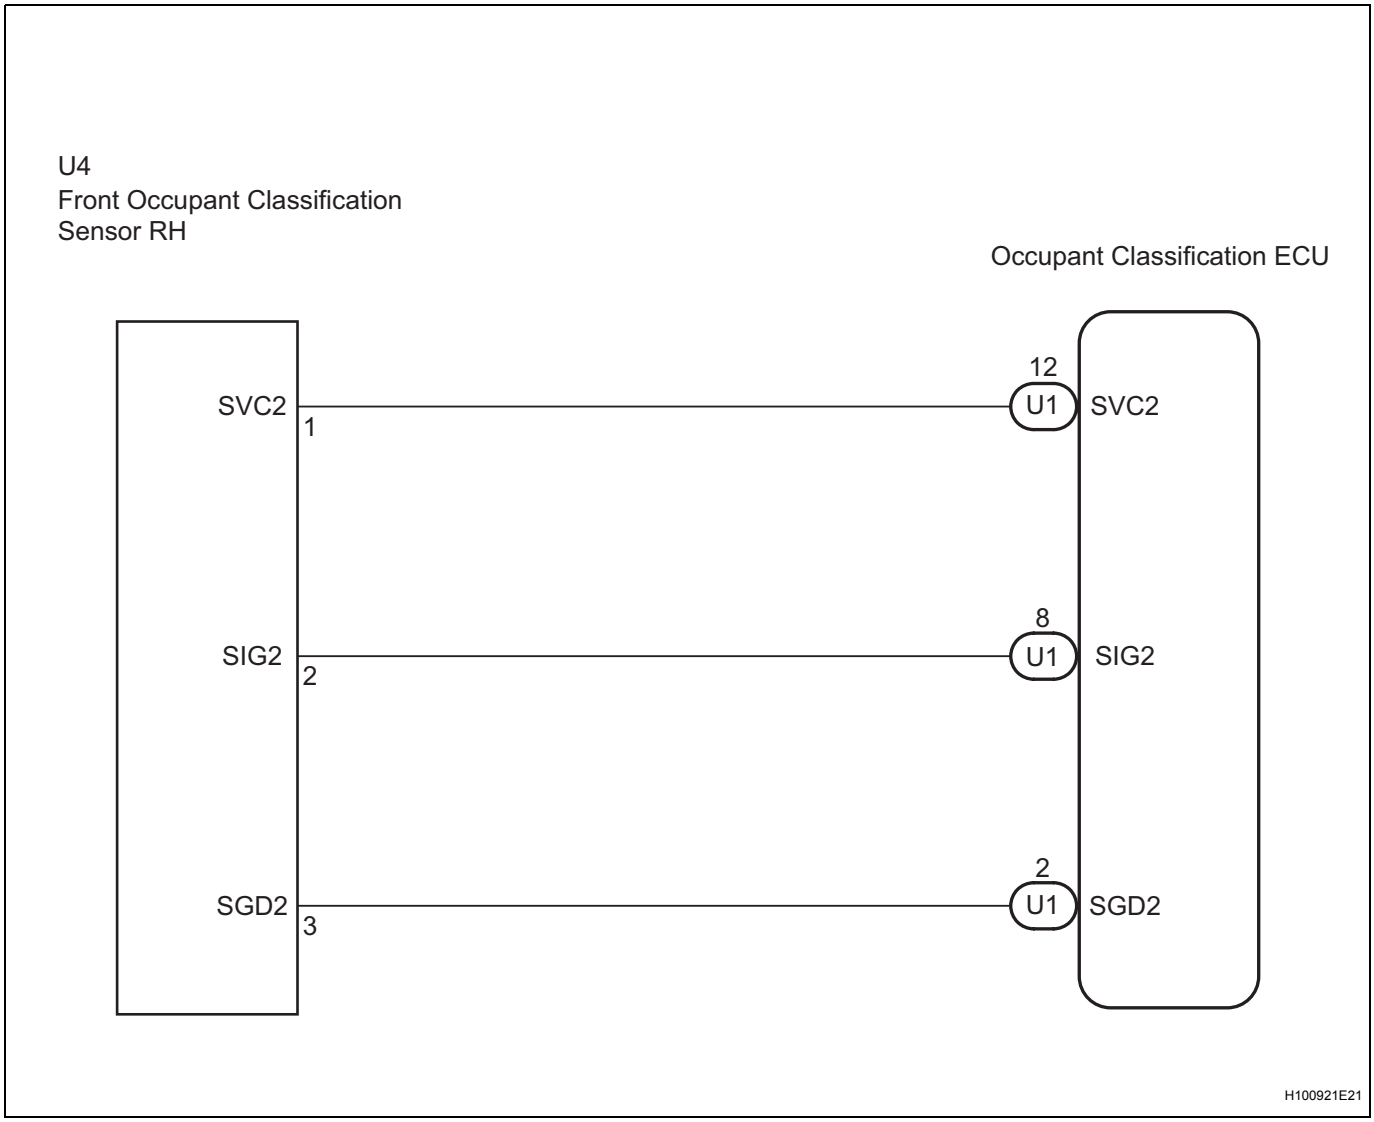
DESCRIPTION

The front occupant classification sensor RH circuit consists of the occupant classification ECU and the front occupant classification sensor RH.

DTC B1781 is recorded when a malfunction is detected in the front occupant classification sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1781	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in front occupant classification sensor RH circuit for 2 seconds • Front occupant classification sensor RH malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat assembly RH (Front occupant classification sensor RH) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1781 is not output.
HINT:
Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

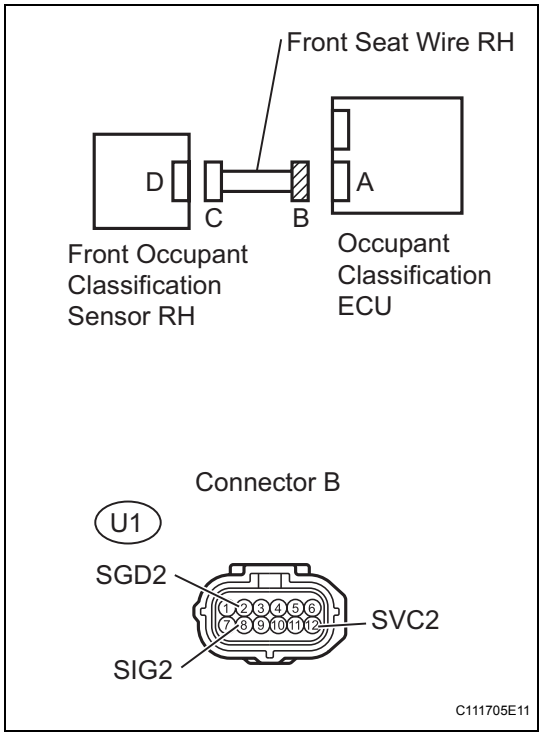
2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3 CHECK FRONT SEAT WIRE RH (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

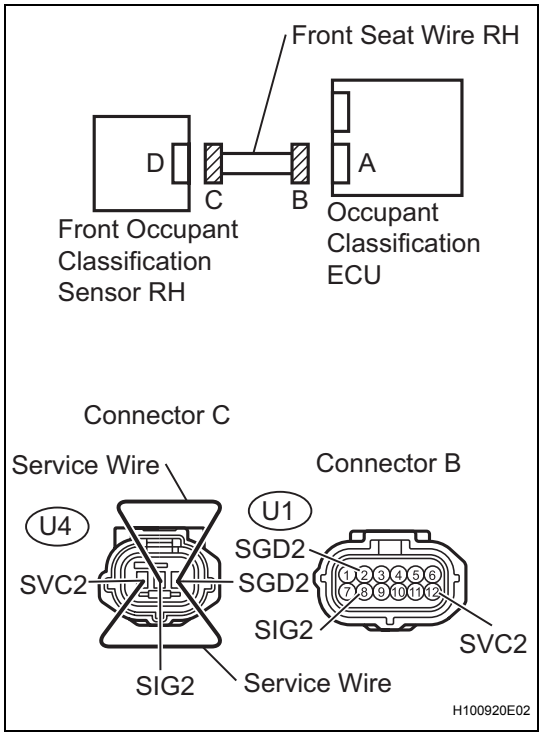
Standard voltage

Tester connection	Condition	Specified condition
U1-2 (SGD2) - Body ground	Ignition switch on	Below 1 V
U1-8 (SIG2) - Body ground	Ignition switch on	Below 1 V
U1-12 (SVC2) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4 CHECK FRONT SEAT WIRE RH (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect U4-1 (SVC2) and U4-3 (SGD2), and connect U4-2 (SIG2) and U4-3 (SGD2) of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

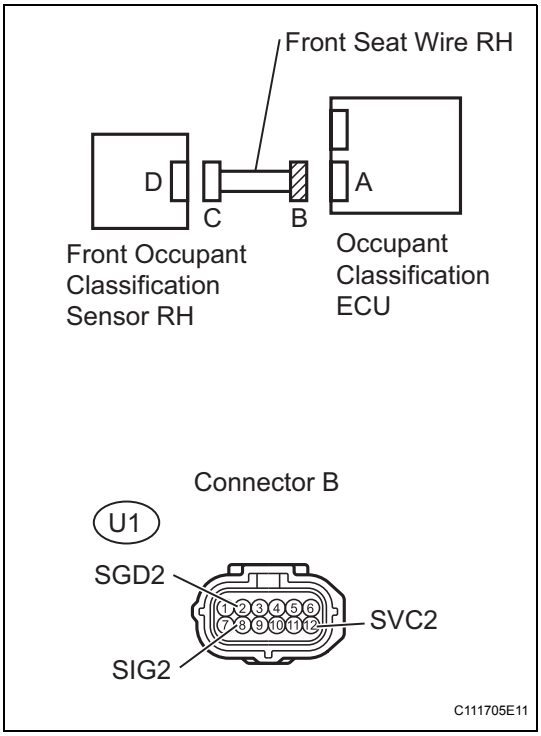
Tester connection	Condition	Specified condition
U1-8 (SIG2) - U1-2 (SGD2)	Always	Below 1 Ω
U1-12 (SVC2) - U1-2 (SGD2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)



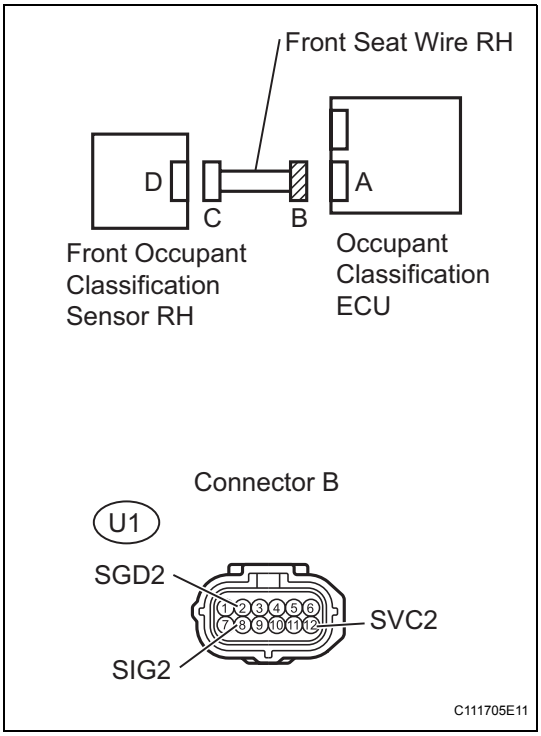
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-8 (SIG2) - U1-2 (SGD2)	Always	1 MΩ or higher
U1-12 (SVC2) - U1-2 (SGD2)	Always	1 MΩ or higher
U1-8 (SIG2) - U1-12 (SVC2)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-2 (SGD2) - Body ground	Always	1 MΩ or higher
U1-8 (SIG2) - Body ground	Always	1 MΩ or higher
U1-12 (SVC2) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1781 is not output.
HINT:
Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
   (1) Confirm that nothing is placed on the passenger seat.
   (2) Confirm that the beginning sensor reading is within the standard range.
   Standard range:
   -3.2 to 3.2 kg (-7 to 7 lb)
   (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
   (4) Confirm that the sensitivity is within the standard range.
   Standard range:
   27 to 33 kg (59.52 to 72.75 lb)
   HINT:
   When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-223).
   HINT:
   First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-223).
   OK:
   DTC B1781 is not output.
   HINT:
   Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.

for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)

NEXT

13	PERFORM ZERO POINT CALIBRATION

RS

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

DTC	B1782	Rear Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

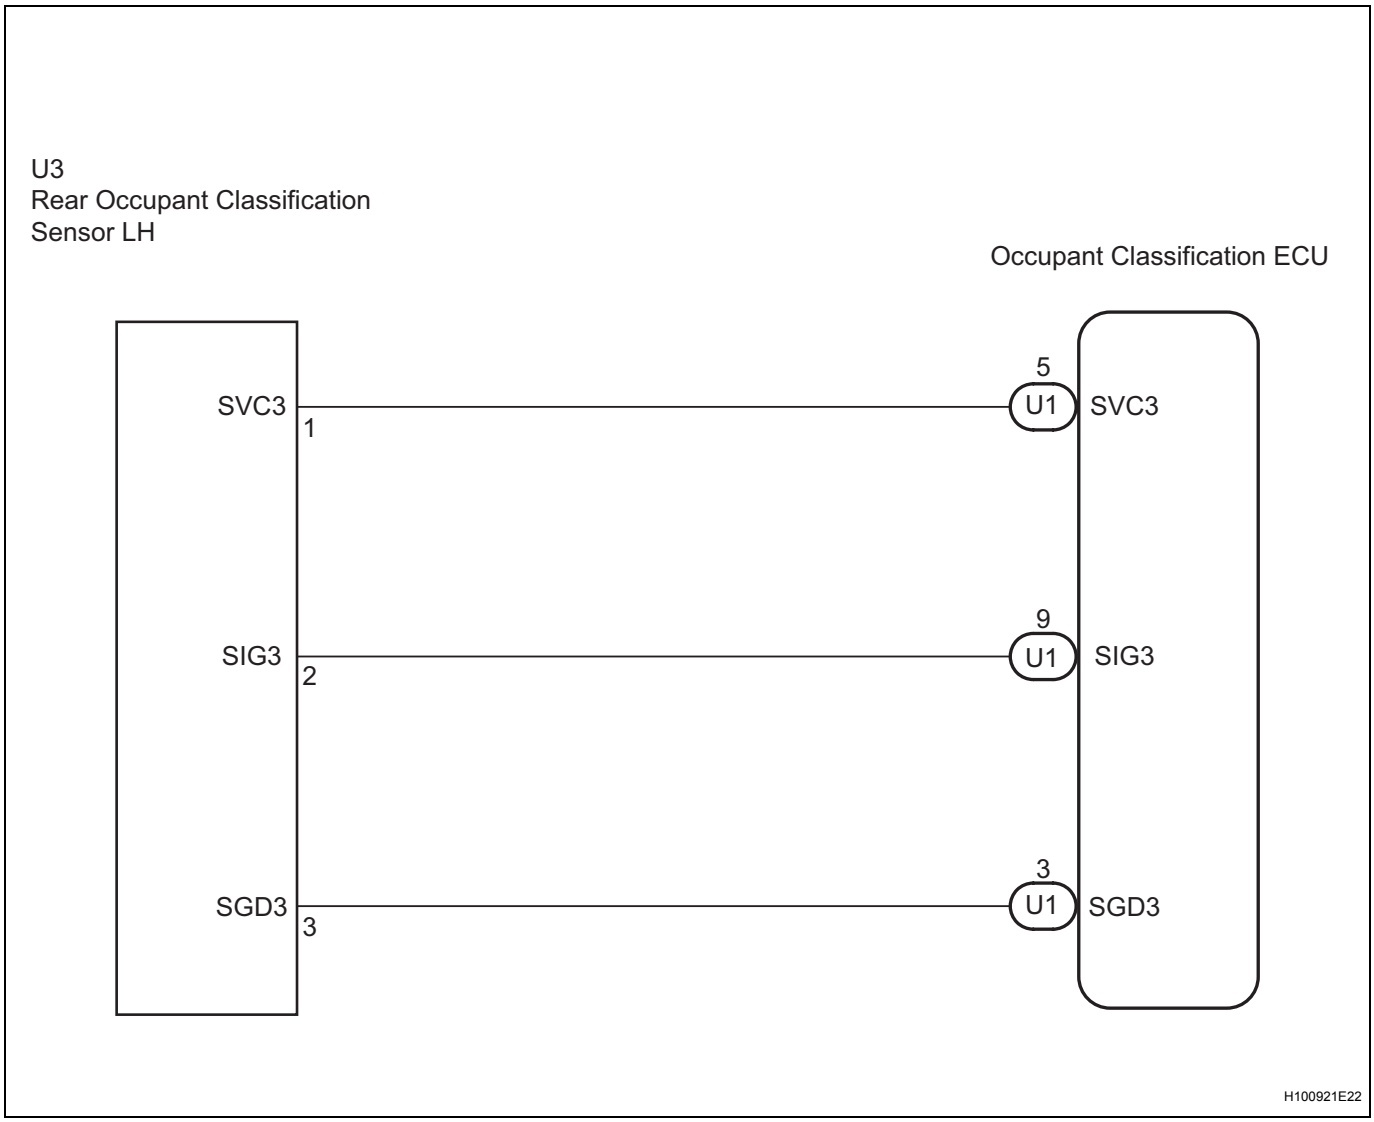
RS

The rear occupant classification sensor LH circuit consists of the occupant classification ECU and the rear occupant classification sensor LH.

DTC B1782 is recorded when a malfunction is detected in the rear occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1782	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in rear occupant classification sensor LH circuit for 2 seconds • Rear occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat assembly RH (Rear occupant classification sensor LH) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1782 is not output.
HINT:
Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

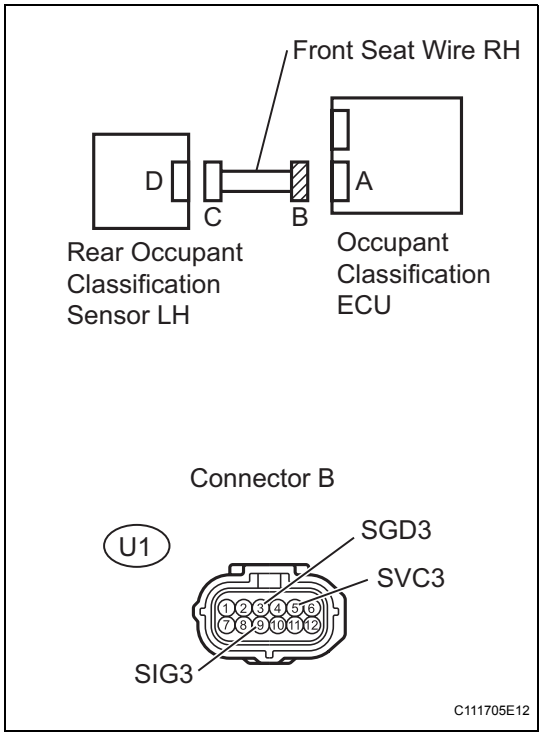
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3	CHECK FRONT SEAT WIRE RH (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

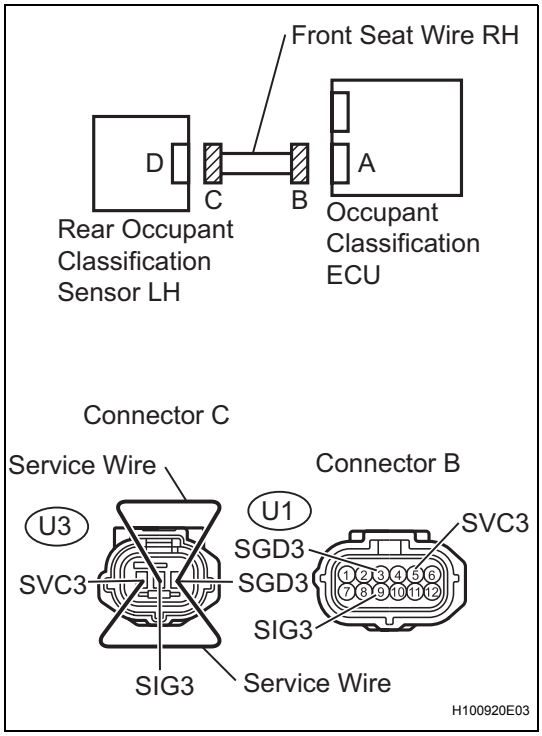
Standard voltage

Tester connection	Condition	Specified condition
U1-3 (SGD3) - Body ground	Ignition switch on	Below 1 V
U1-5 (SVC3) - Body ground	Ignition switch on	Below 1 V
U1-9 (SIG3) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect U3-1 (SVC3) and U3-3 (SGD3), and connect U3-2 (SIG3) and U3-3 (SGD3) of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

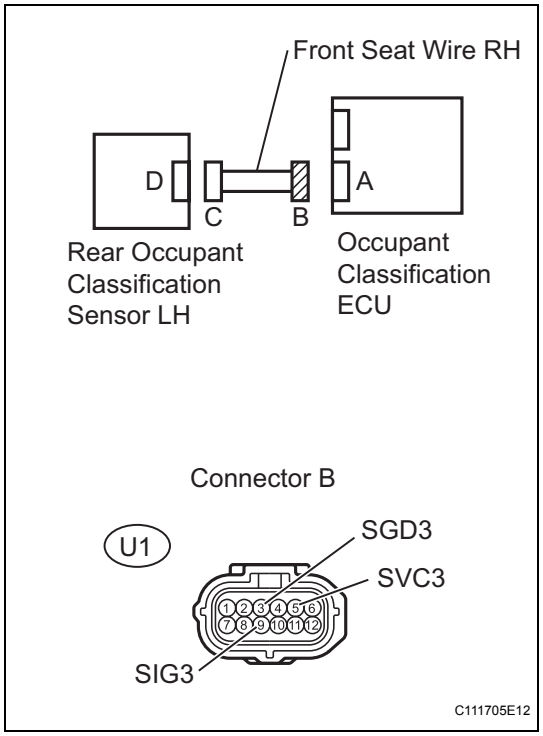
Standard resistance

Tester connection	Condition	Specified condition
U1-5 (SVC3) - U1-3 (SGD3)	Always	Below 1 Ω
U1-9 (SIG3) - U1-3 (SGD3)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)



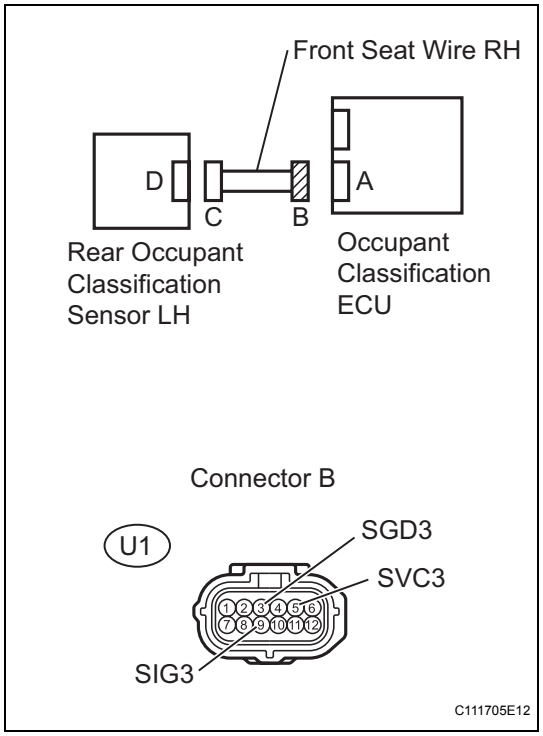
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-5 (SVC3) - U1-3 (SGD3)	Always	1 MΩ or higher
U1-9 (SIG3) - U1-3 (SGD3)	Always	1 MΩ or higher
U1-5 (SVC3) - U1-9 (SIG3)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-3 (SGD3) - Body ground	Always	1 MΩ or higher
U1-5 (SVC3) - Body ground	Always	1 MΩ or higher
U1-9 (SIG3) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1782 is not output.
HINT:
Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-223).
  OK:
  DTC B1782 is not output.
  HINT:
  Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.

for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)

NEXT

RS

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

DTC	B1783	Rear Occupant Classification Sensor RH Circuit Malfunction

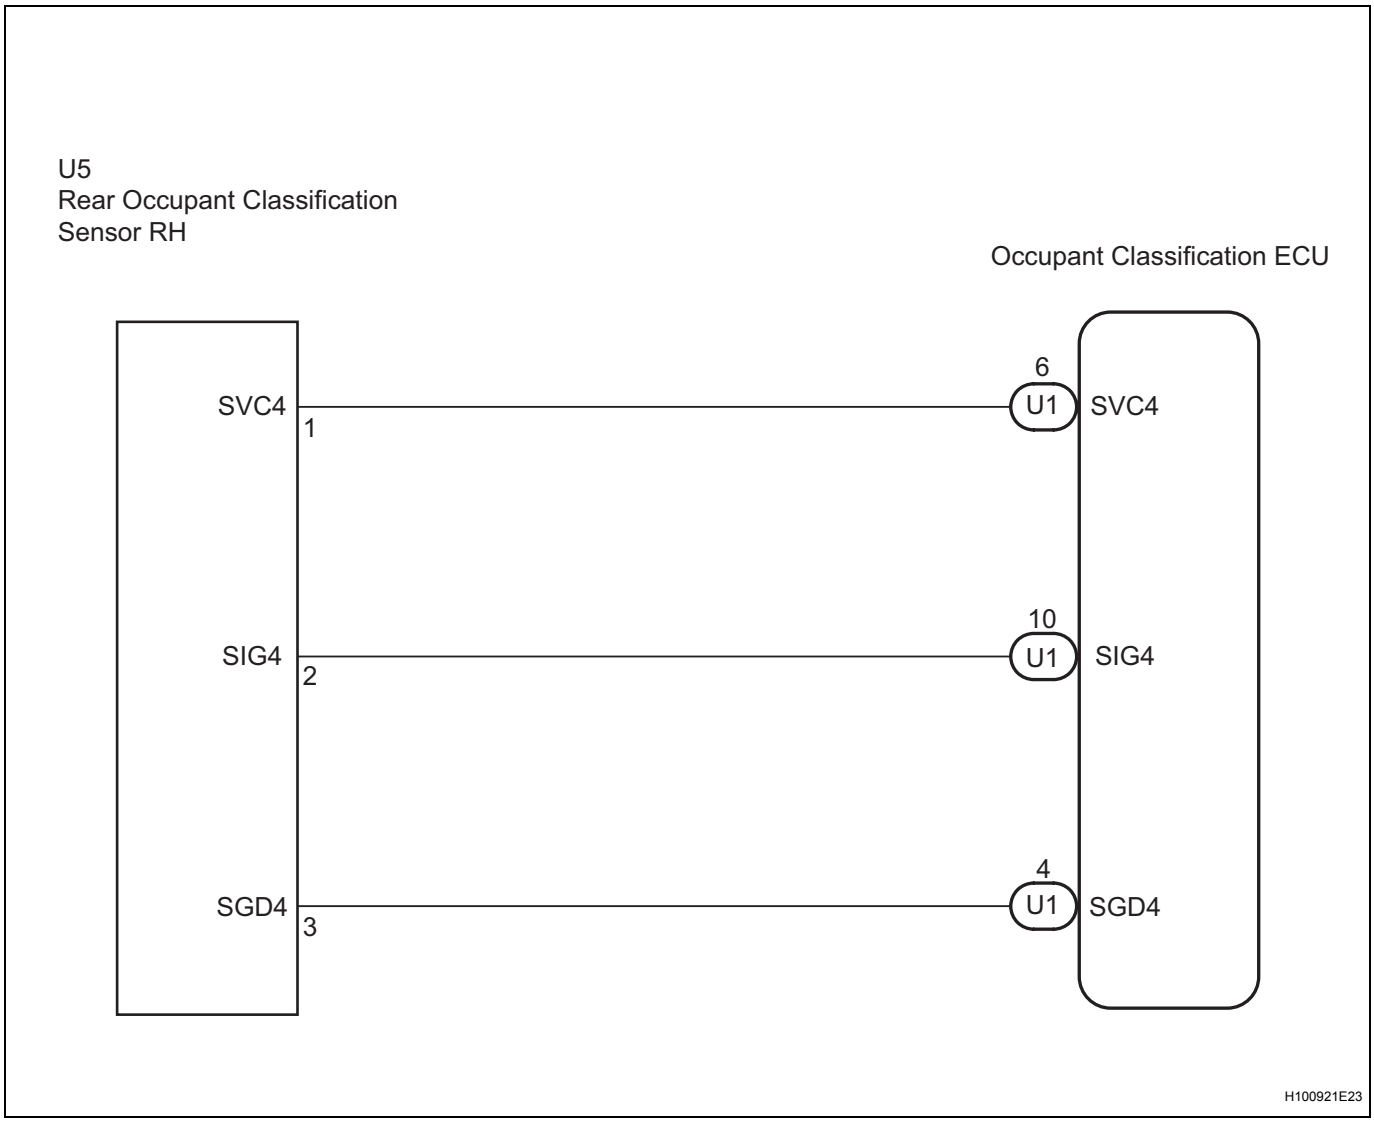
DESCRIPTION

The rear occupant classification sensor RH circuit consists of the occupant classification ECU and the rear occupant classification sensor RH.

DTC B1783 is recorded when a malfunction is detected in the rear occupant classification sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1783	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in rear occupant classification sensor RH circuit for 2 seconds • Rear occupant classification sensor RH malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat assembly RH (Rear occupant classification sensor RH) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1783 is not output.
HINT:
Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

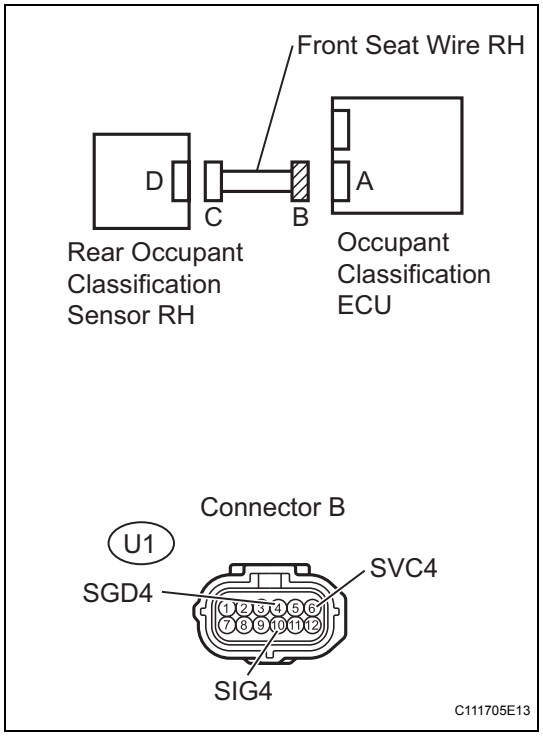
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3 CHECK FRONT SEAT WIRE RH (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

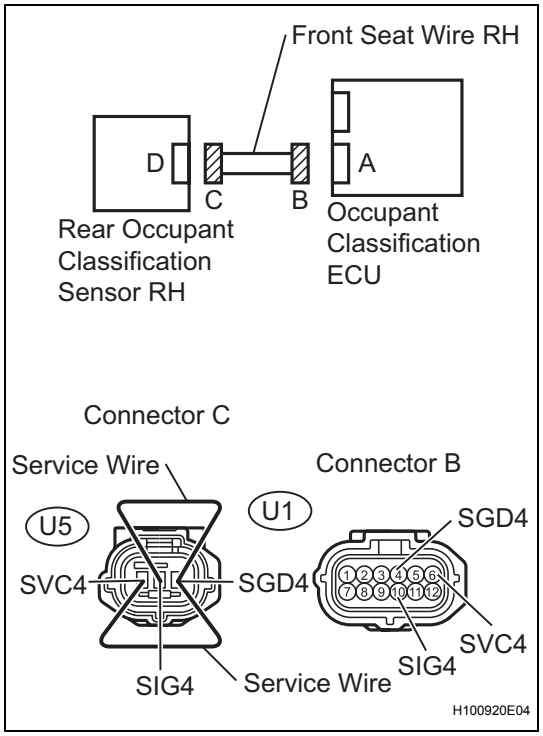
Standard voltage

Tester connection	Condition	Specified condition
U1-4 (SGD4) - Body ground	Ignition switch on	Below 1 V
U1-6 (SVC4) - Body ground	Ignition switch on	Below 1 V
U1-10 (SIG4) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4 CHECK FRONT SEAT WIRE RH (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect U5-1 (SVC4) and U5-3 (SGD4), and connect U5-2 (SIG4) and U5-3 (SGD4) of connector C.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

Standard resistance

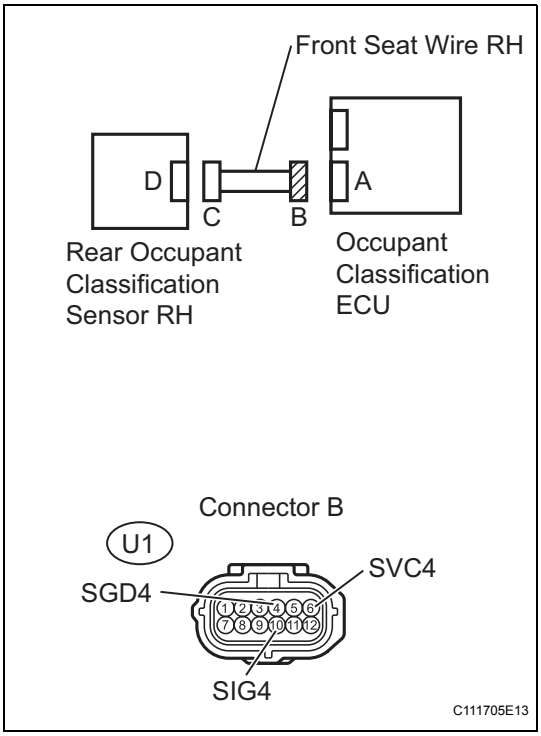
Tester connection	Condition	Specified condition
U1-6 (SVC4) - U1-4 (SGD4)	Always	Below 1 Ω
U1-10 (SIG4) - U1-4 (SGD4)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)



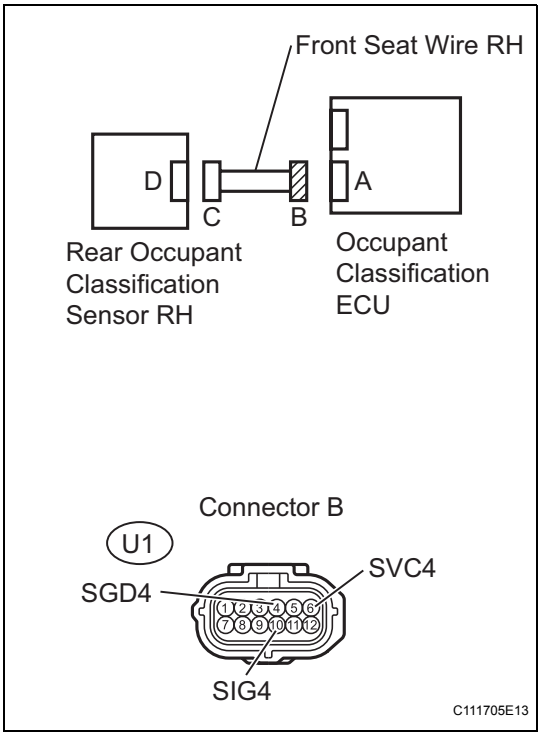
(a) Disconnect the service wire from connector C.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-6 (SVC4) - U1-4 (SGD4)	Always	1 MΩ or higher
U1-10 (SIG4) - U1-4 (SGD4)	Always	1 MΩ or higher
U1-6 (SVC4) - U1-10 (SIG4)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
U1-4 (SGD4) - Body ground	Always	1 MΩ or higher
U1-6 (SVC4) - Body ground	Always	1 MΩ or higher
U1-10 (SIG4) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1783 is not output.
HINT:
Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
   (1) Confirm that nothing is placed on the passenger seat.
   (2) Confirm that the beginning sensor reading is within the standard range.
   Standard range:
   -3.2 to 3.2 kg (-7 to 7 lb)
   (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
   (4) Confirm that the sensitivity is within the standard range.
   Standard range:
   27 to 33 kg (59.52 to 72.75 lb)
   HINT:
   When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-223).
   HINT:
   First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-223).
   OK:
   DTC B1783 is not output.
   HINT:
   Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.

for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:

DTC	B1785	Front Occupant Classification Sensor LH Collision Detection

DESCRIPTION

RS

DTC B1785 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor LH when an accident occurs.
DTC B1785 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the front occupant classification sensor LH outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1785 can be cleared by performing the zero point calibration and sensitivity check.
Therefore, when DTC B1785 is output, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detecting Condition	Trouble Area
B1785	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor LH detects large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor LH)

WIRING DIAGRAM

See page RS-234.

INSPECTION PROCEDURE

1	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → **Go to step 4**

OK

2	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 4**

OK

3	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1785 is not output.
HINT:
Codes other than DTC B1785 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.
for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → Go to step 8

OK

RS

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → Go to step 8

OK

7	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
  OK:
  DTC B1785 is not output.
  HINT:
  Codes other than DTC B1785 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

DTC	B1786	Front Occupant Classification Sensor RH Collision Detection

DESCRIPTION

RS

DTC B1786 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor RH when an accident occurs.
DTC B1786 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the front occupant classification sensor RH outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1786 can be cleared by performing the zero point calibration and sensitivity check.
Therefore, when DTC B1786 is output, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detection Condition	Trouble Area
B1786	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor RH detects large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor RH)

WIRING DIAGRAM

See page RS-241.

INSPECTION PROCEDURE

1	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → **Go to step 4**

OK

2	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → Go to step 4

OK

3	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1786 is not output.
HINT:
Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.
for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → Go to step 8

OK

RS

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → Go to step 8

OK

7	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
  OK:
  DTC B1786 is not output.
  HINT:
  Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

NEXT

RS

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-223).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

END

DTC	B1787	Rear Occupant Classification Sensor LH Collision Detection

DESCRIPTION

RS

DTC B1787 is output when the occupant classification ECU receives a collision detection signal sent by the rear occupant classification sensor LH when an accident occurs.
DTC B1787 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the rear occupant classification sensor LH outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1787 can be cleared by performing the zero point calibration and sensitivity check.
Therefore, when DTC B1787 is output, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detecting Condition	Trouble Area
B1787	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Rear occupant classification sensor LH detects large load	• Occupant classification ECU • Front seat assembly RH (Rear occupant classification sensor LH)

WIRING DIAGRAM

See page RS-248.

INSPECTION PROCEDURE

1	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → **Go to step 4**

OK

2	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 4**

OK

3	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1787 is not output.
HINT:
Codes other than DTC B1787 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.
for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → Go to step 8

OK

RS

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → Go to step 8

OK

7	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
  OK:
  DTC B1787 is not output.
  HINT:
  Codes other than DTC B1787 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

NEXT

RS

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.

DTC	B1788	Rear Occupant Classification Sensor RH Collision Detection

DESCRIPTION

RS

DTC B1788 is output when the occupant classification ECU receives a collision detection signal sent by the rear occupant classification sensor RH when an accident occurs.
DTC B1788 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the rear occupant classification sensor RH outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1788 can be cleared by performing the zero point calibration and sensitivity check.
Therefore, when DTC B1788 is output, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detection Condition	Trouble Area
B1788	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Rear occupant classification sensor RH detects large load	• Occupant classification ECU • Front seat assembly RH (Rear occupant classification sensor RH)

WIRING DIAGRAM

See page RS-255.

INSPECTION PROCEDURE

1	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → **Go to step 4**

OK

2	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 4**

OK

3	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1788 is not output.
HINT:
Codes other than DTC B1788 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.
for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NG → Go to step 8

OK

RS

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → Go to step 8

OK

7	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
  OK:
  DTC B1788 is not output.
  HINT:
  Codes other than DTC B1788 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

NEXT

RS

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

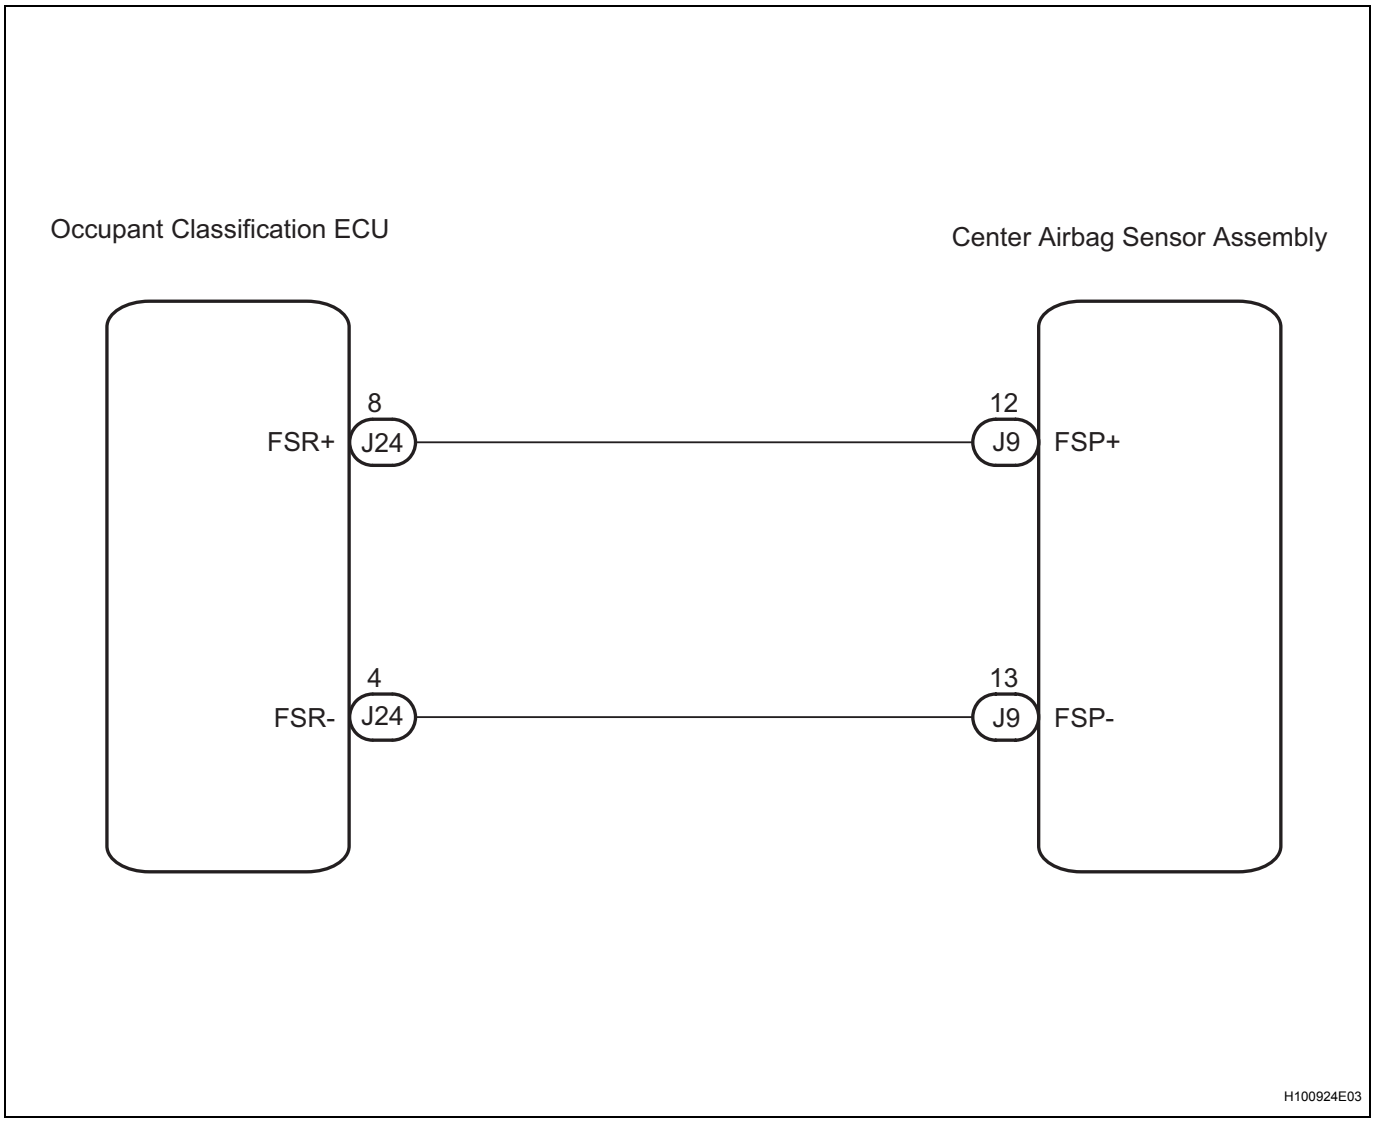
RS

The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.

DTC B1790 is recorded when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1790	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in center airbag sensor assembly communication circuit for 2 seconds • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• Floor wire • Occupant classification ECU • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTORS

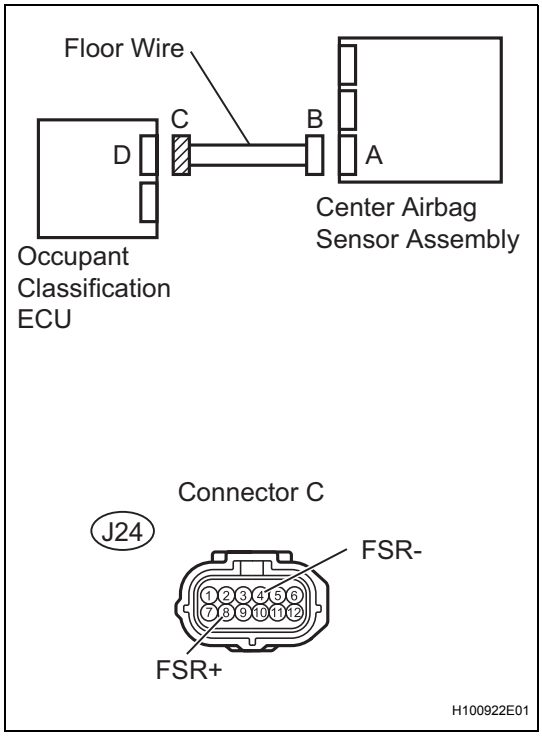
(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

RS

3	CHECK FLOOR WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

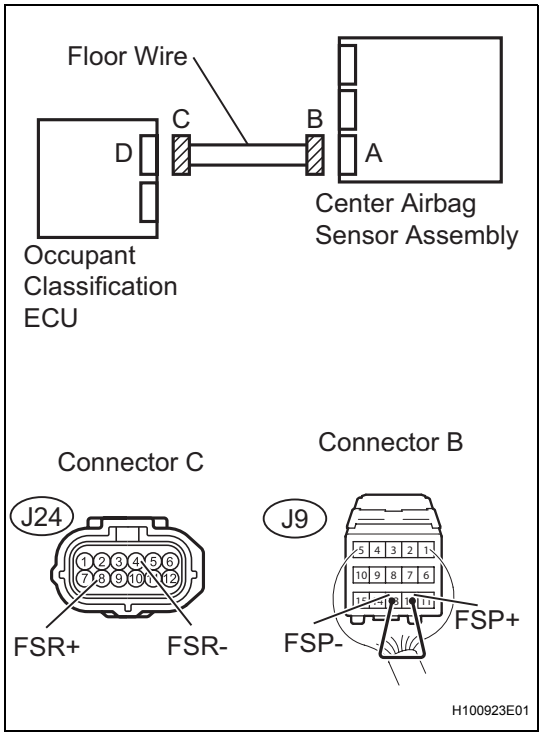
Standard voltage

Tester connection	Condition	Specified condition
J24-8 (FSR+) - Body ground	Ignition switch on	Below 1 V
J24-4 (FSR-) - Body ground	Ignition switch on	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4	CHECK FLOOR WIRE (FOR OPEN)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect J9-12 (FSP+) and J9-13 (FSP-) of connector B.

NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(d) Measure the resistance.

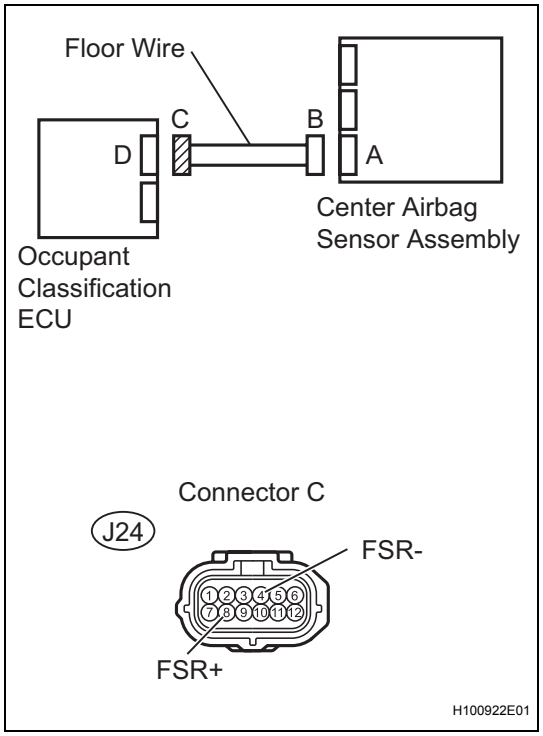
Standard resistance

Tester connection	Condition	Specified condition
J24-8 (FSR+) - J24-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

5 CHECK FLOOR WIRE (FOR SHORT)



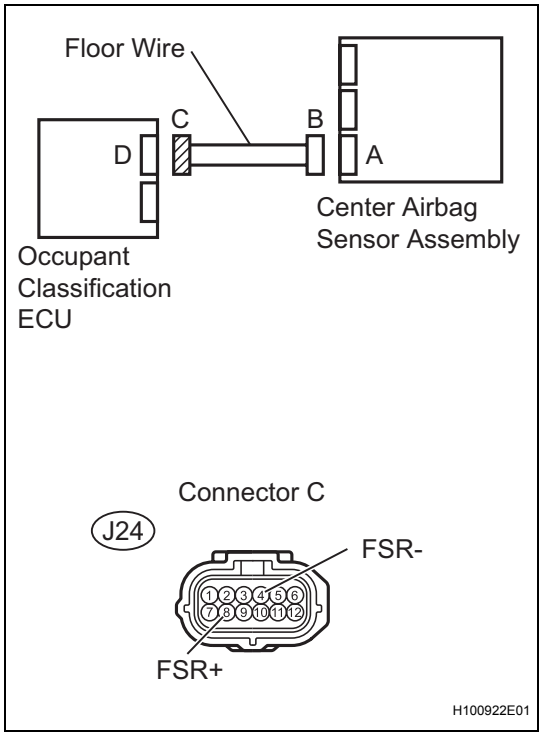
(a) Disconnect the service wire from connector B.
(b) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
J24-8 (FSR+) - J24-4 (FSR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
J24-8 (FSR+) - Body ground	Always	1 MΩ or higher
J24-4 (FSR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
  (1) Confirm that nothing is placed on the passenger seat.
  (2) Confirm that the beginning sensor reading is within the standard range.
  Standard range:
  -3.2 to 3.2 kg (-7 to 7 lb)
  (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
  (4) Confirm that the sensitivity is within the standard range.
  Standard range:
  27 to 33 kg (59.52 to 72.75 lb)
  HINT:
  When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

11	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
  HINT:
  First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
  OK:
  DTC B1790 is not output.
  HINT:
  Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

DTC	B1793	Occupant Classification Sensor Power Supply Circuit Malfunction

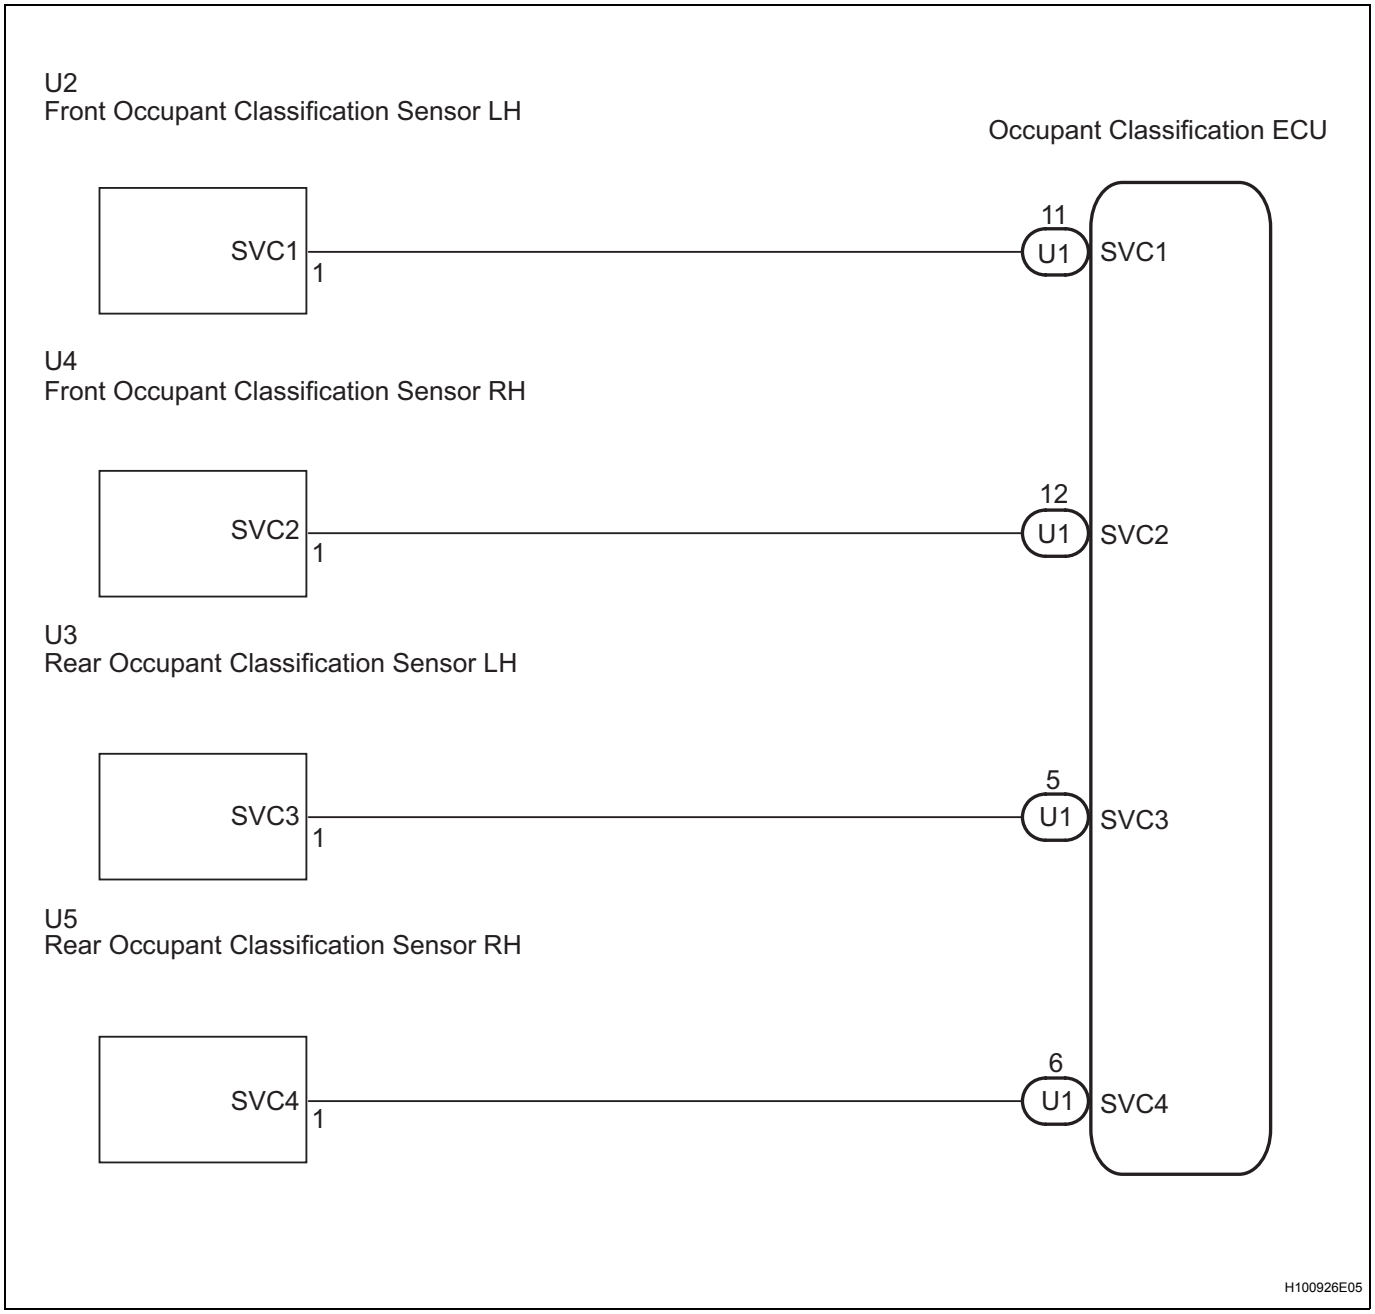
DESCRIPTION

The occupant classification sensor power supply circuit consists of the occupant classification ECU and the occupant classification sensors.

DTC B1793 is recorded when a malfunction is detected in the occupant classification sensor power supply circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1793	• Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in occupant classification sensor power supply circuit for 2 seconds • Occupant classification ECU malfunction	• Front seat wire RH • Front seat assembly RH (Occupant classification sensors) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	**CHECK DTC**

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).

HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.

(c) Turn the ignition switch to the lock position.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK	**USE SIMULATION METHOD TO CHECK**

NG

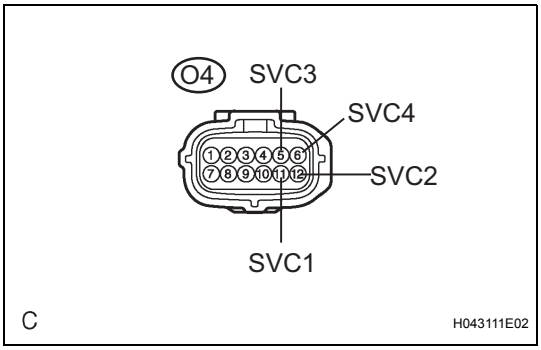
2	**CHECK CONNECTION OF CONNECTORS**

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensors.
OK:
The connectors are properly connected.

NG	**CONNECT CONNECTORS**

OK

3	**CHECK FRONT SEAT WIRE RH (TO B+)**



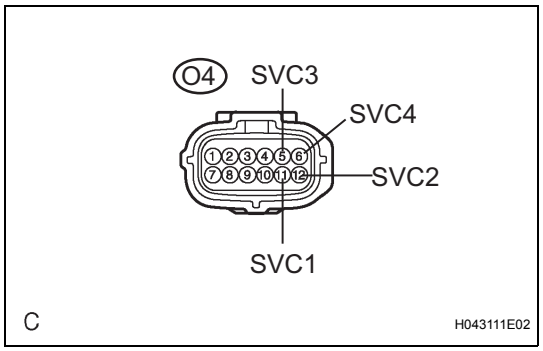
(a) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.
Standard voltage

Tester connection	Condition	Specified condition
O4-11 (SVC1) - Body ground	Ignition switch on	Below 1 V
O4-12 (SVC2) - Body ground	Ignition switch on	Below 1 V
O4-5 (SVC3) - Body ground	Ignition switch on	Below 1 V
O4-6 (SVC4) - Body ground	Ignition switch on	Below 1 V

NG	**REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (TO GROUND)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance.

Standard resistance

Tester connection	Condition	Specified condition
O4-11 (SVC1) - Body ground	Always	1 MΩ or higher
O4-12 (SVC2) - Body ground	Always	1 MΩ or higher
O4-5 (SVC3) - Body ground	Always	1 MΩ or higher
O4-6 (SVC4) - Body ground	Always	1 MΩ or higher

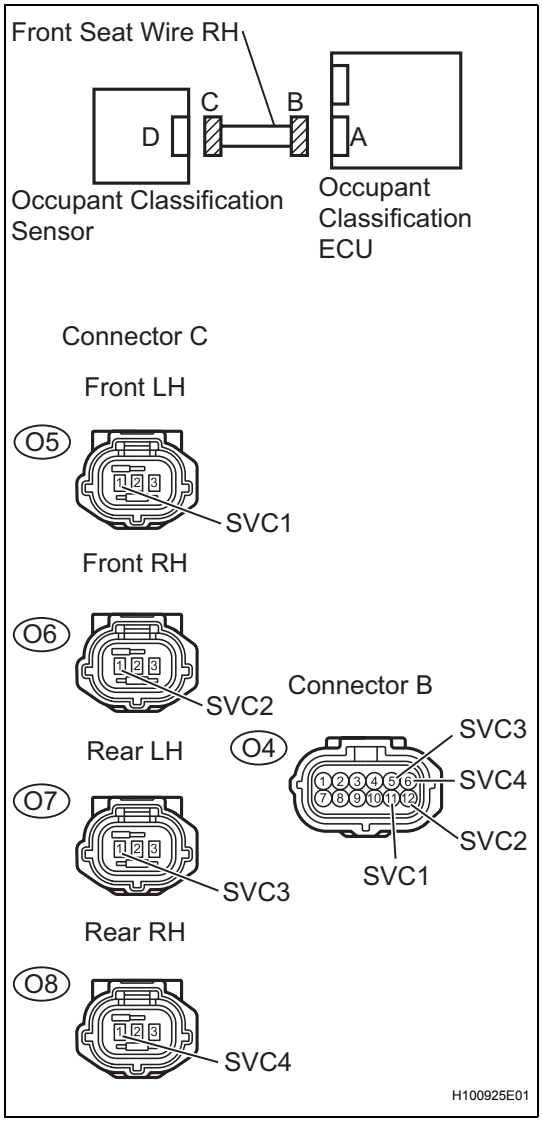
NG → REPAIR OR REPLACE FRONT SEAT WIRE RH

OK

RS

RS

5 CHECK FRONT SEAT WIRE RH (FOR OPEN)



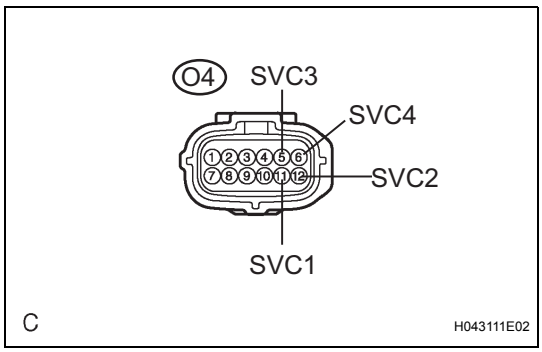
(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O4-11 (SVC1) - O5-1 (SVC1)	Always	Below 1 Ω
O4-12 (SVC2) - O6-1 (SVC2)	Always	Below 1 Ω
O4-5 (SVC3) - O7-1 (SVC3)	Always	Below 1 Ω
O4-6 (SVC4) - O8- 1 (SVC4)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (FOR SHORT)



(a) Measure the resistance.
Standard resistance

Tester connection	Condition	Specified condition
O4-5 (SVC3) - O4-6 (SVC4)	Always	1 MΩ or higher
O4-6 (SVC4) - O4-11 (SVC1)	Always	1 MΩ or higher
O4-11 (SVC1) - O4-12 (SVC2)	Always	1 MΩ or higher
O4-12 (SVC2) - O4-5 (SVC3)	Always	1 MΩ or higher
O4-12 (SVC2) - O4-6 (SVC4)	Always	1 MΩ or higher

Tester connection	Condition	Specified condition
O4-11 (SVC1) - O4-5 (SVC3)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FRONT SEAT WIRE RH

OK

7 CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-223).
OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

8 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).

OK:
COMPLETED is displayed.

NG → **Go to step 12**

OK

RS

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-223).
OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH.
for Hatchback: (See page SE-28)
for Sedan: (See page SE-5)

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-223).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

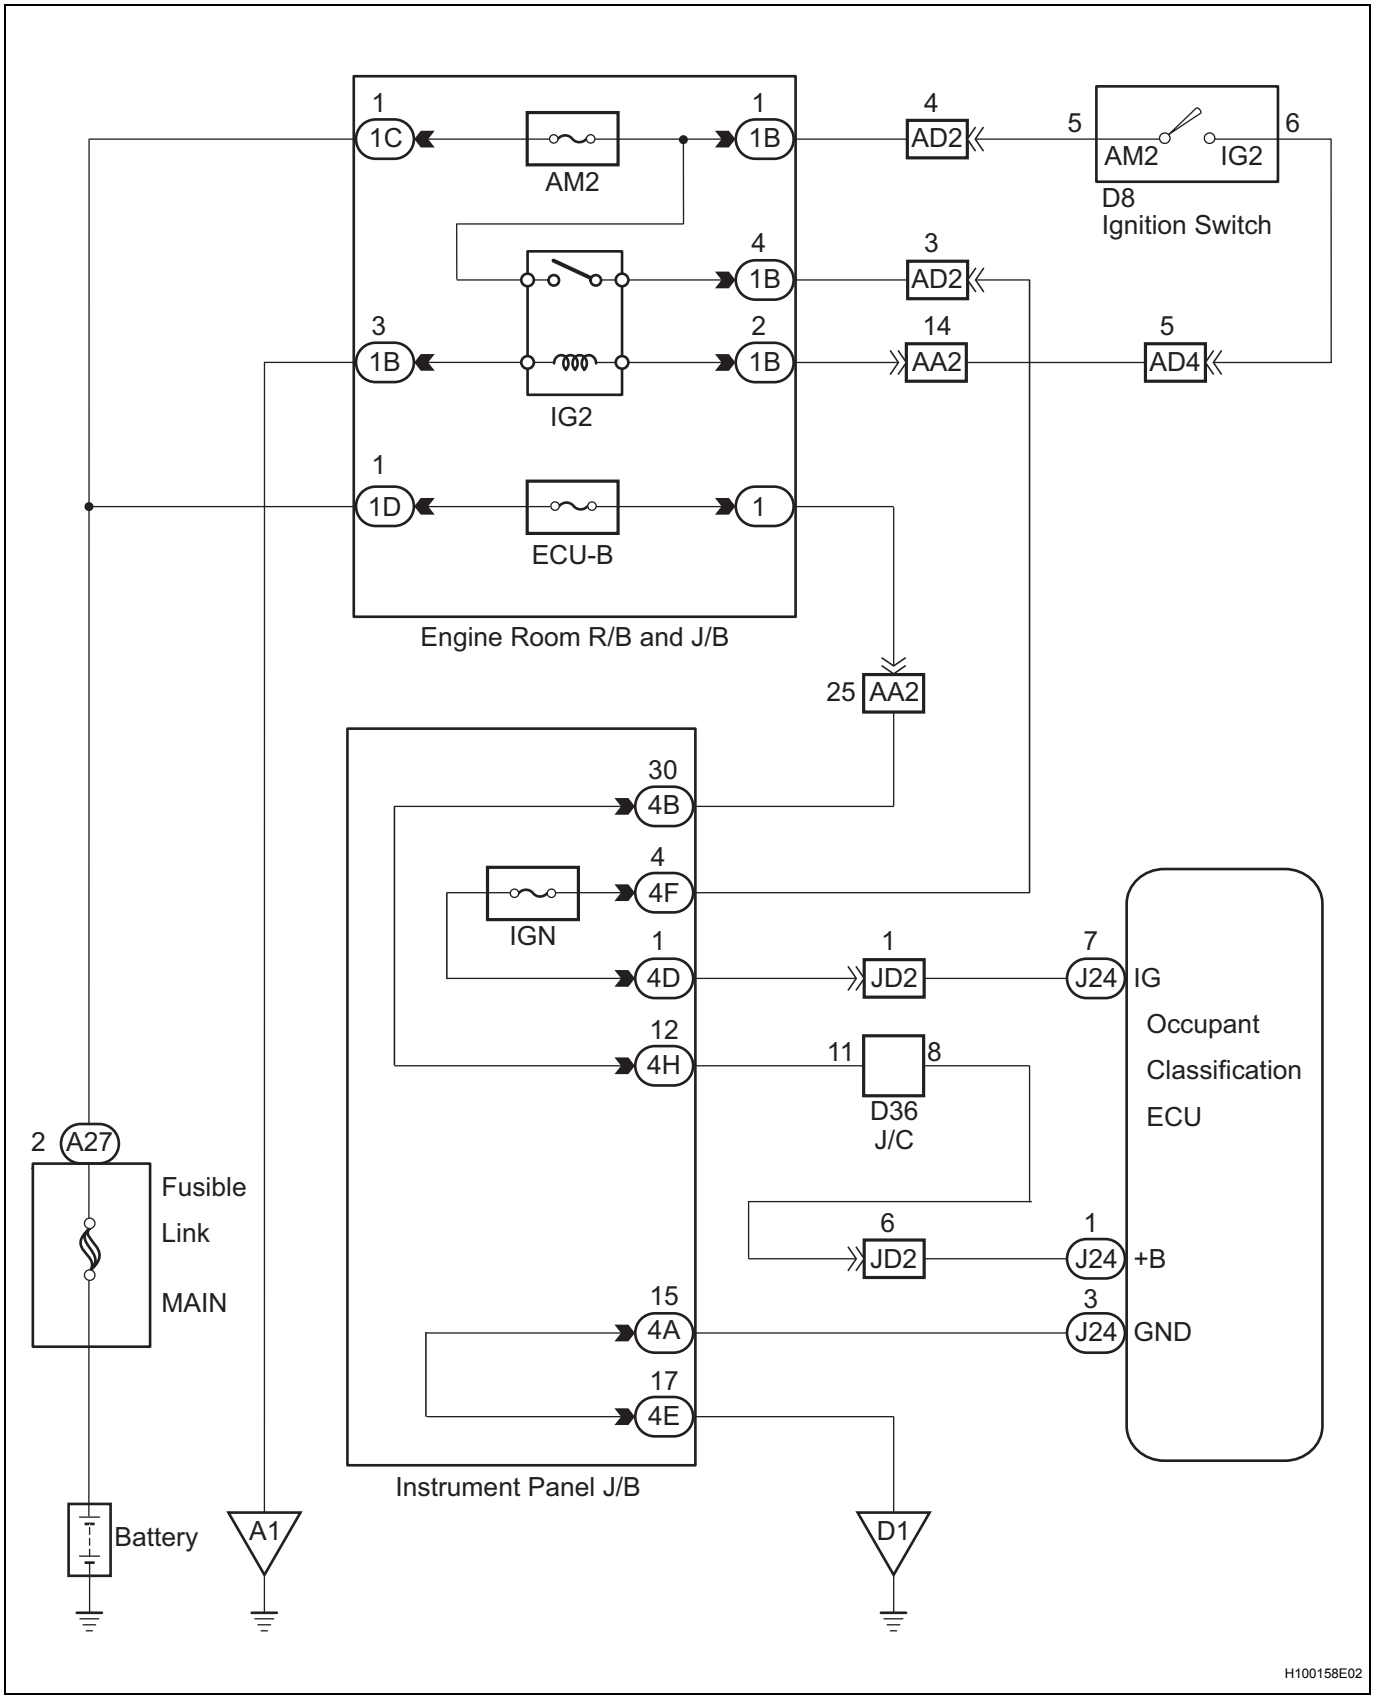
DTC	B1794	Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

DTC B1794 is set when a malfunction is detected in the occupant classification ECU battery positive line.

DTC No.	DTC Detecting Conditions	Trouble Areas
B1794	• Occupant classification ECU circuit malfunction • Occupant classification ECU malfunction • Occupant classification ECU detects short circuit to ground signal in passenger side buckle switch circuit for 2 seconds	• Wire harness • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

RS

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position, and wait for at least 10 seconds.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1794 is not output.
HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

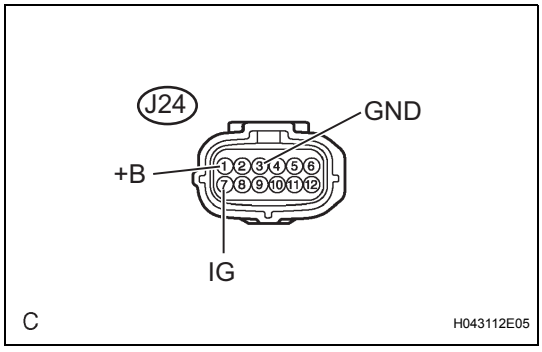
2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS**

OK

3	CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the J24 connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the on position.
(f) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
J24-1 (+B) - Body ground	Ignition switch on	11 to 14 V

Tester Connection	Condition	Specified Condition
J24-7 (IG) - Body ground	Ignition switch on	11 to 14 V

(g) Measure the resistance.
Standard resistance

Tester Connection	Condition	Specified Condition
J24-3 (GND) - Body ground	Always	Below 1 Ω

RS

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - OCCUPANT CLASSIFICATION ECU)**

OK

4	CHECK DTC

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch to the on position.
(f) Clear any DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch to the lock position, and wait for at least 10 seconds.
(h) Turn the ignition switch to the on position.
(i) Using the intelligent tester, check for DTCs of the occupant classification ECU (See page RS-223).
OK:
DTC B1794 is not output.
HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

5	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).

HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

RS

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed on the tester.

NEXT

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

END

DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is recorded when a malfunction is detected in the occupant classification ECU.

DTC No.	DTC Detecting Condition	Trouble Area
B1795	• Occupant classification ECU malfunction	• Occupant classification ECU

RS

INSPECTION PROCEDURE

1	CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position and wait for at least 10 seconds.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1795 is not output.
HINT:
Codes other than DTC B1795 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

3	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).

OK:
COMPLETED is displayed.

NEXT

RS

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

END

DTC	B1796	Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

During sleep mode, the occupant classification ECU reads the condition of each sensor while the ignition switch is off.
In this mode, if the occupant classification ECU detects an internal malfunction, DTC B1796 is output.

DTC No.	DTC Detecting Condition	Trouble Area
B1796	• Occupant classification ECU malfunction	• Occupant classification ECU

INSPECTION PROCEDURE

1 CHECK DTC

(a) Turn the ignition switch to the on position.
(b) Clear the DTCs stored in the memory (See page RS-223).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch to the lock position, and wait for at least 2 seconds.
(d) Turn the ignition switch to the on position.
(e) Check the DTCs (See page RS-223).
OK:
DTC B1796 is not output.
HINT:
Codes other than DTC B1796 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

3 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETED is displayed.

RS

NEXT

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NEXT

END

Trouble in Passenger Airbag ON / OFF Indicator

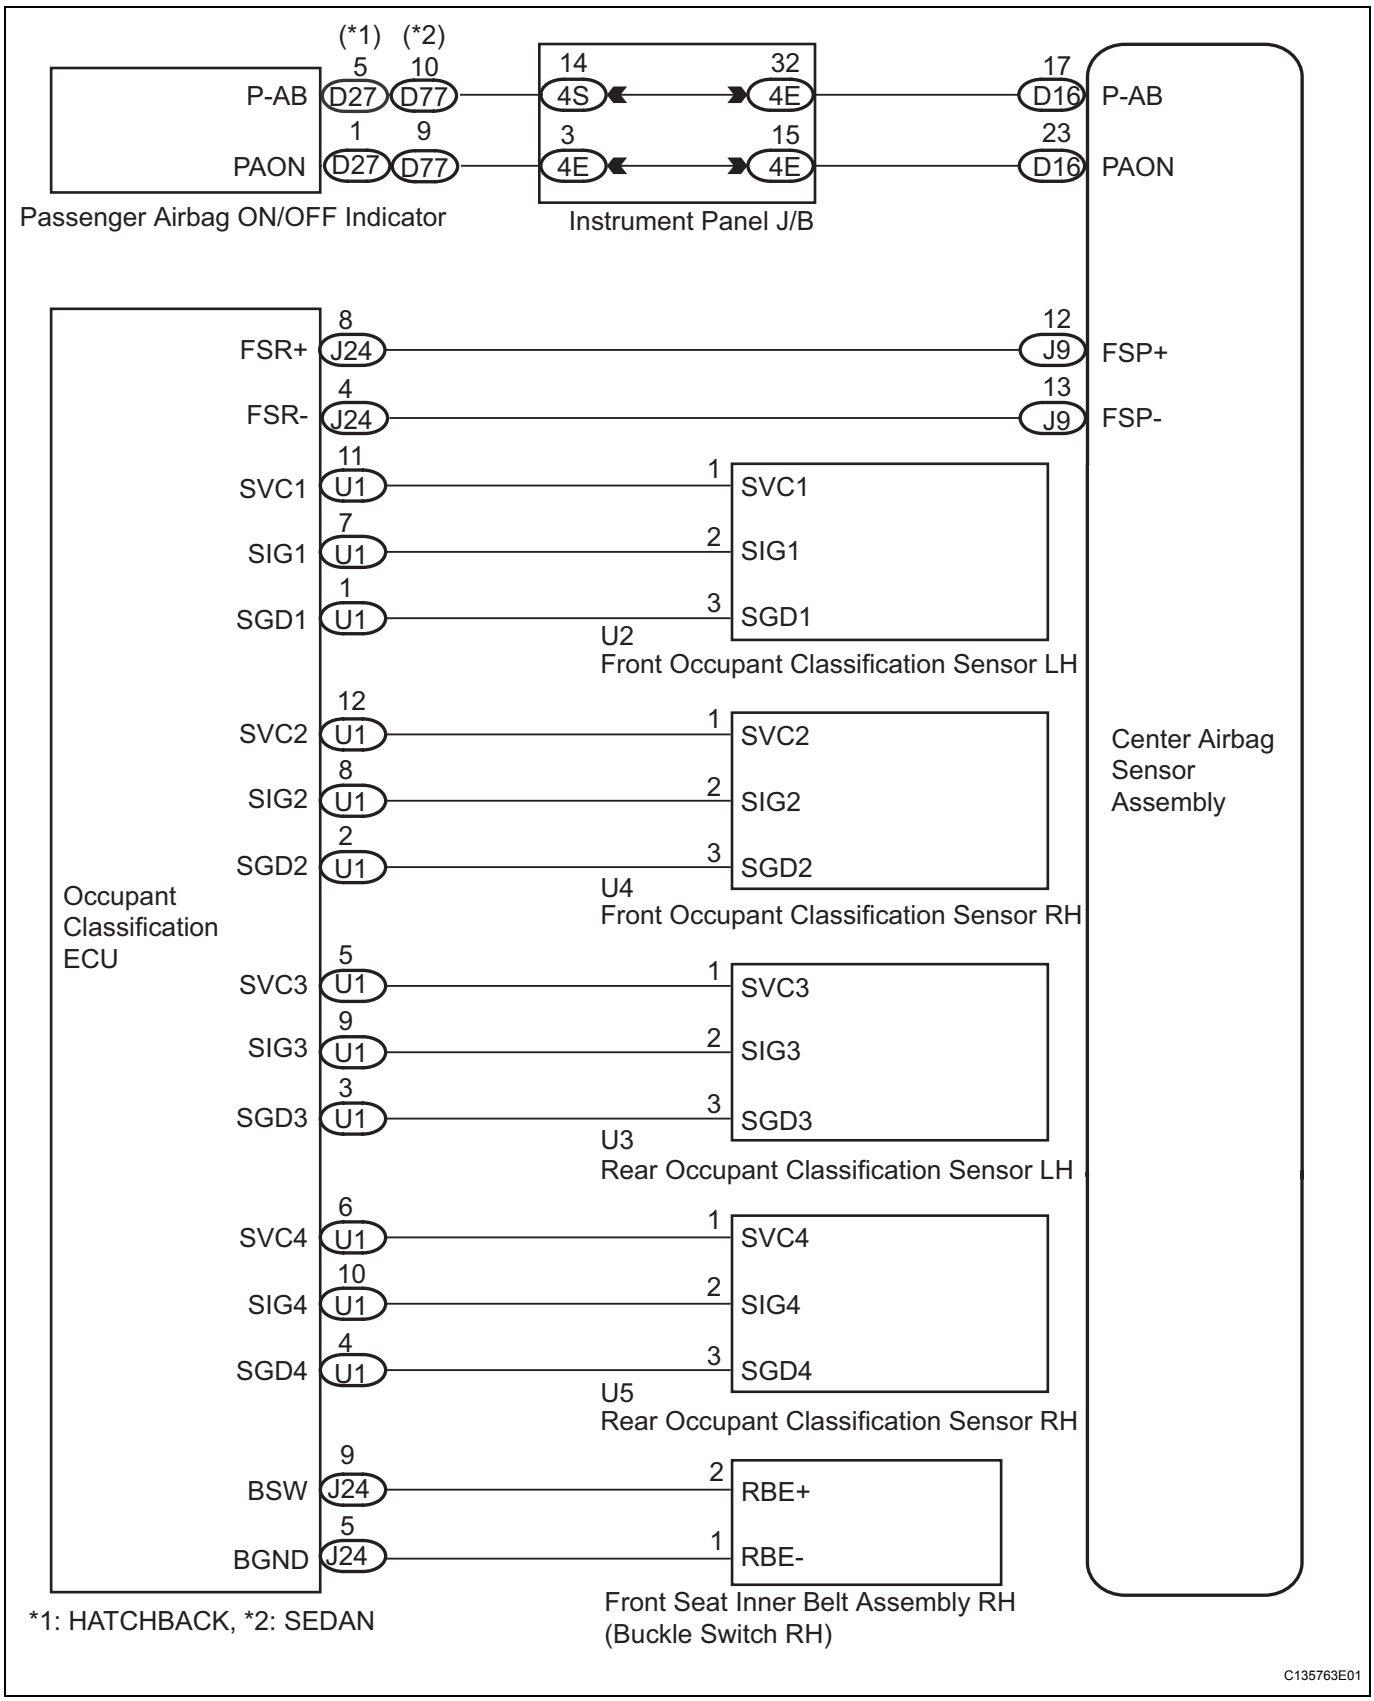
DESCRIPTION

The occupant classification system detects the front passenger seat condition and then indicates whether the front passenger airbag is activated or not through the passenger airbag ON/OFF indicator illumination. The passenger airbag ON/OFF indicator illumination changes depending on the front passenger seat condition as shown in the table below.

Front passenger seat condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated	ON	OFF
Child is seated	OFF	ON
Child restraint system is set	OFF	ON
Front passenger occupant classification system failure	OFF	ON

RS

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch to the on position, and check the SRS warning light condition.
OK:
The SRS warning light does not come on.

NG → **Go to step 9**

OK

2	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

(a) Turn the ignition switch to the on position.
(b) Check if the passenger airbag ON/OFF indicator correctly indicates the front passenger seat condition.

OK

Front passenger seat condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated	ON	OFF
Child is seated	OFF	ON
Child restraint system is set	OFF	ON
Front passenger occupant classification system failure	OFF	ON

OK → **END**

NG

3	PERFORM ZERO POINT CALIBRATION

(a) Turn the ignition switch to the lock position.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETE is displayed.

NG → **Go to step 5**

OK

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.

(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)

(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.

(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG → **Go to step 5**

OK

END

5	RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT

(a) Turn the ignition switch to the lock position.
(b) Loosen the 4 installation bolts of the front seat assembly RH.
(c) Tighten the 4 installation bolts of the front seat assembly RH to the specified torque.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

NG → **Go to step 8**

OK

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the on position.
(c) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETE is displayed.

NG → **Go to step 8**

OK

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.

(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

RS

NG → **Go to step 8**

OK

8	CHECK CONNECTORS

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the 4 occupant classification sensors.
OK:
The connectors are connected.
(d) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(e) Check that the connectors are not damaged or deformed.
OK:
The connectors are normal.

NG → **REPAIR OR REPLACE WIRE HARNESS AND CONNECTOR**

OK

9	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position, and wait for at least 60 seconds.
(d) Turn the ignition switch to the lock position.
(e) Clear the DTCs stored in the memory (See page RS-223).
(f) Turn the ignition switch to the on position, and wait for at least 60 seconds.

(g) Check the DTCs (See page RS-223).
OK:
DTC is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

RS

OK

10	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-493).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

11	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-215).
OK:
COMPLETE is displayed.

NEXT

12	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-215).
(1) Confirm that nothing is placed on the passenger seat.
(2) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(4) Confirm that the sensitivity is within the standard range.
Standard range:
27 to 33 kg (59.52 to 72.75 lb)
HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

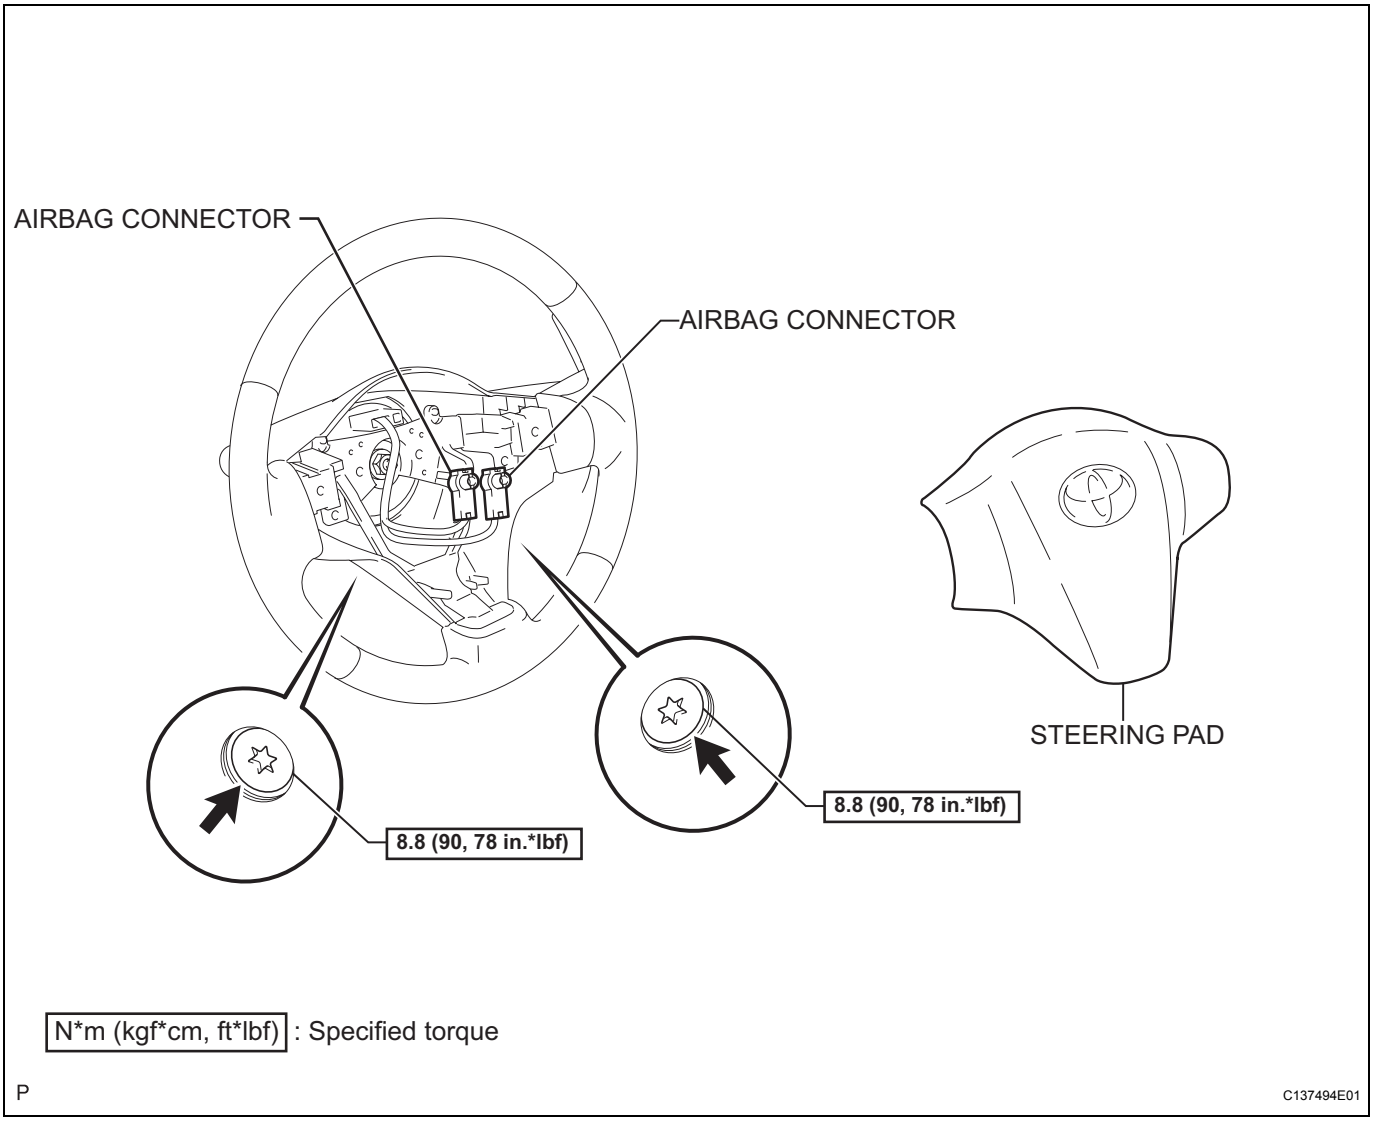
NEXT

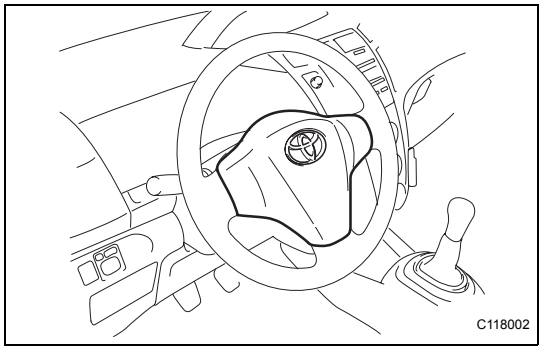
END

STEERING PAD

COMPONENTS

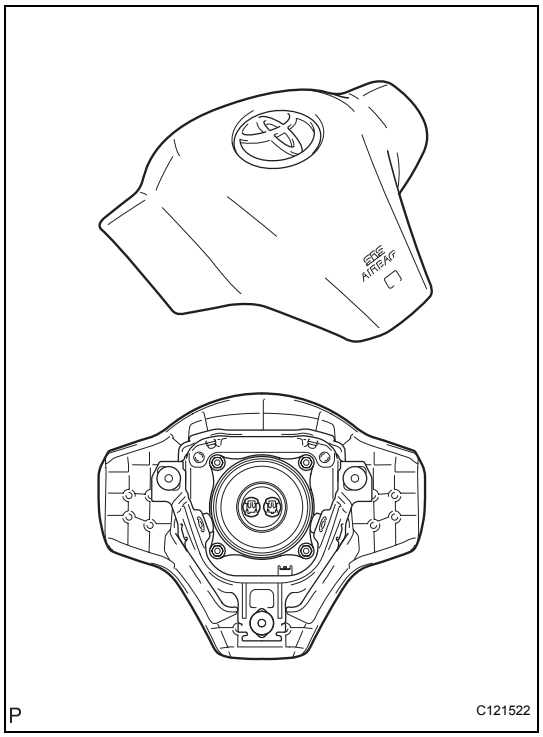
RS

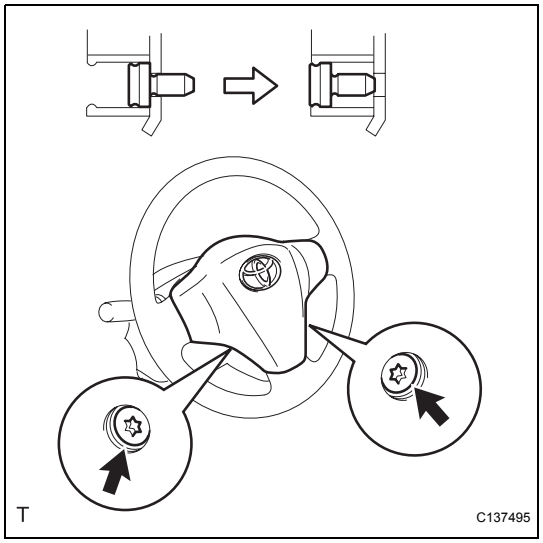




ON-VEHICLE INSPECTION

1. **INSPECT STEERING PAD (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the steering pad installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the steering pad with a new one:
   Any cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.





2. INSPECT STEERING PAD (for Vehicle Involved in Collision and Airbag not Deployed)

CAUTION:

For steering pad removal and installation procedures, see pages RS-309 and RS-310, and carefully follow the correct procedure.

(a) Perform a diagnostic system check (See page RS-38).

(b) With the steering pad removed from the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the steering pad or steering wheel with a new one:

- Any cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.
- Any cracks or other damage to the connectors.
- Deformation of the steering wheel.
- Deformation of the horn button contact plate of the steering pad.

- There should be no interference between the steering pad and steering wheel, and the clearance should be uniform all the way around when a new steering pad is installed on the steering wheel.

RS

RS

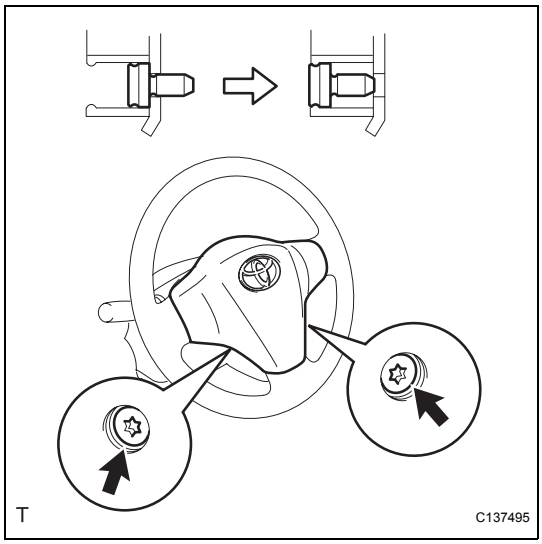
REMOVAL

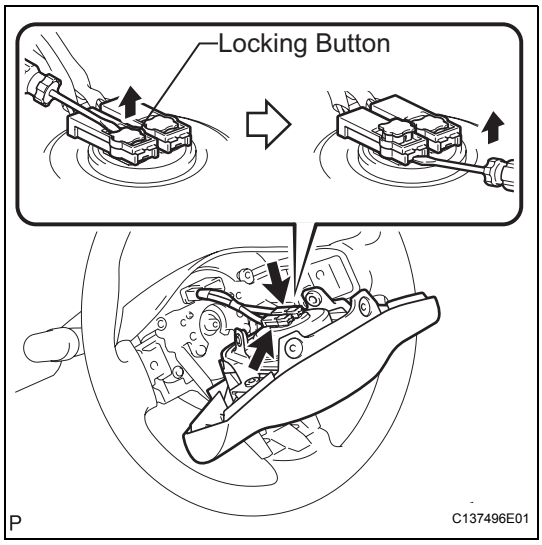
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STEERING PAD

(a) Using "Torx" socket wrench T30, loosen the 2 bolts completely.
(b) Pull the steering pad toward you.

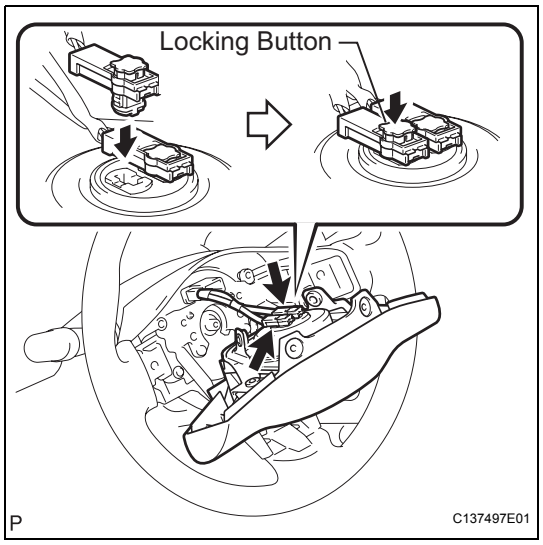




(c) Using a thin-bladed screwdriver, release the locking button.
(d) Using a thin-bladed screwdriver, disconnect the 2 connectors.
(e) Detach the horn terminal.

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



1. **INSTALL STEERING PAD**
   NOTICE:
   Do not use a steering pad that has been dropped.
   (a) Confirm that the ignition switch is turned to OFF.
   (b) Confirm that the negative battery terminal is detached.
   CAUTION:
   Do not begin the operation for at least 90 seconds after the negative battery terminal is detached.
   (c) Connect the horn terminal.
   (d) Connect the airbag connector.
   NOTICE:
   - **Match the color of the airbag connector with that of the steering pad assembly, and install the airbag connector.**
   - **Securely lock the locking button.**

   (e) Install the steering pad.
   (f) Using "Torx" socked wrench T30, tighten the 2 bolts.
   Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)
   NOTICE:
   Tighten the 2 bolts while holding the steering pad to prevent it moving upward.

2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. **INSPECT SRS WARNING LIGHT**
   (See page RS-31)

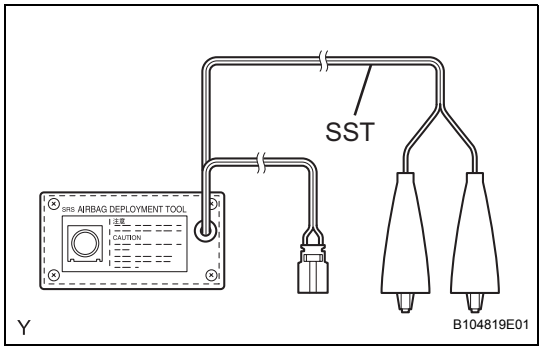
RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of a steering pad, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

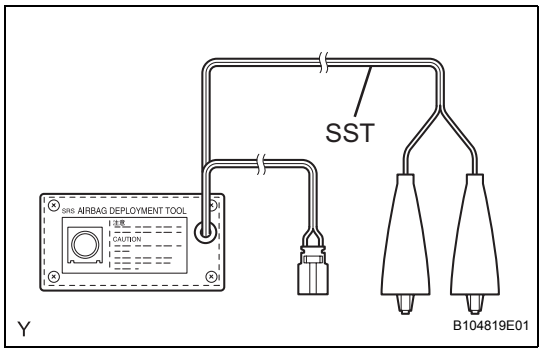
- **Never dispose of a steering pad that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors, and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the steering pad.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**



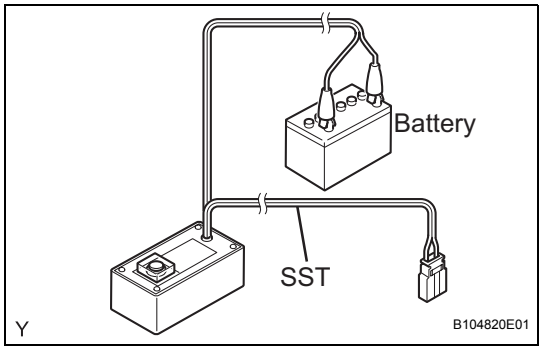
1. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

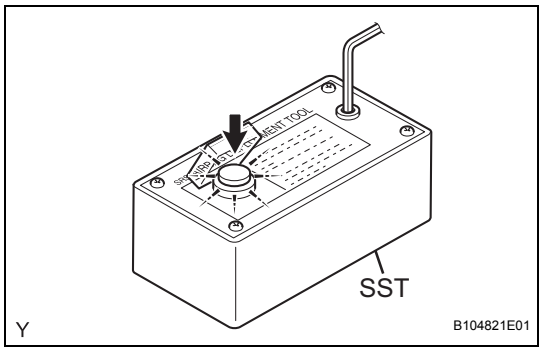
HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

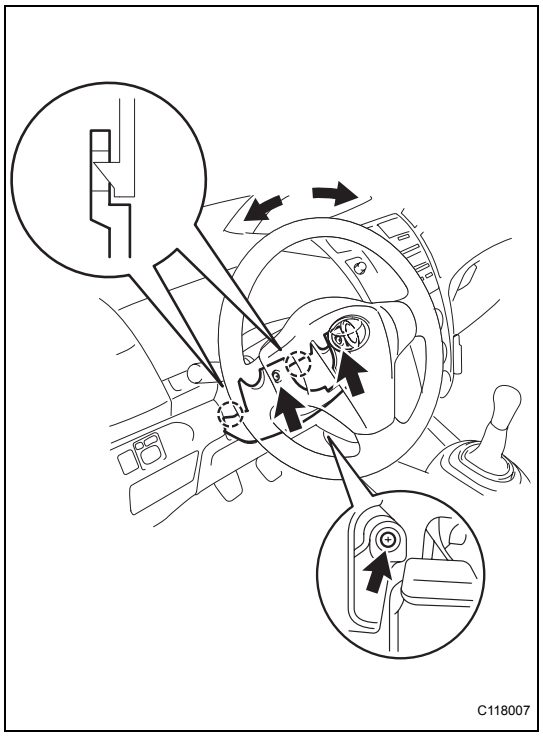




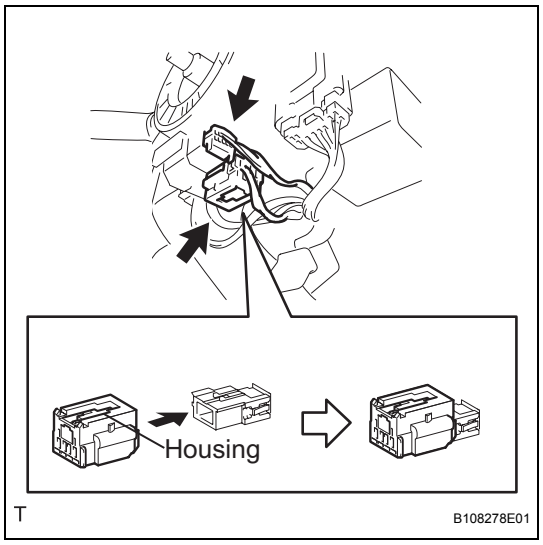
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

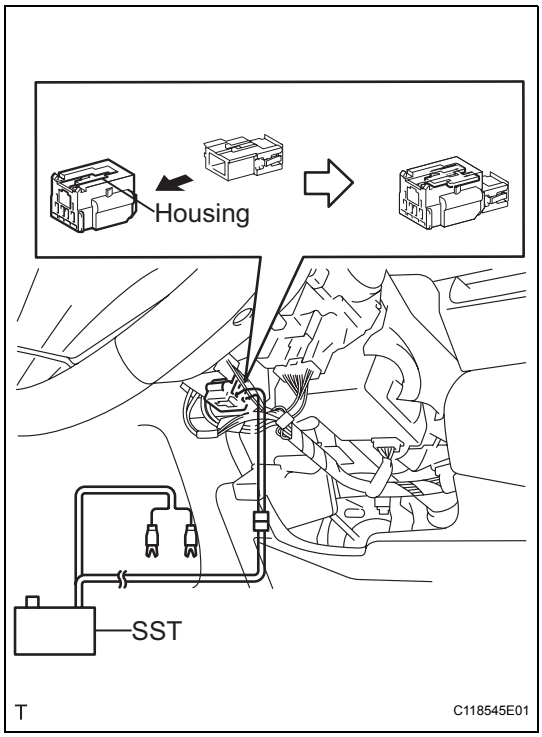


(c) Remove the steering column cover.
(1) Turn the steering wheel 90 degrees in both directions and remove the 2 screws.
(2) Remove the screw from the lower portion of the steering cover lower.
(3) Remove the steering column cover lower.

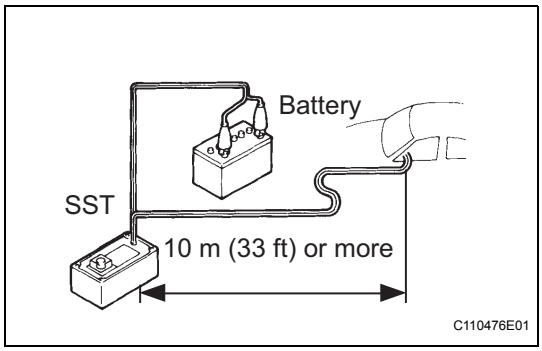


(d) Connect SST.
CAUTION:
Check that there is no slack in the steering wheel and steering pad.
(1) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.

RS



(2) Connect SST.
SST 09082-00700, 09082-00780
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(3) Move SST to at least 10 m (33 ft) away from the vehicle front side window.
(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Do not damage SST wire harness.
(5) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(e) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **Make sure that no one is near the vehicle when deploying the airbag.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**

HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.

2. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **Never use the customer's vehicle to deploy the airbag when disposing of the steering pad.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:

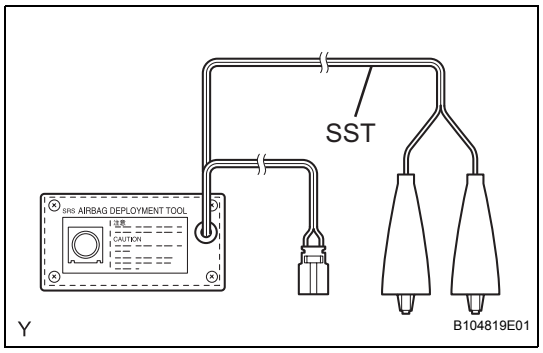
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.

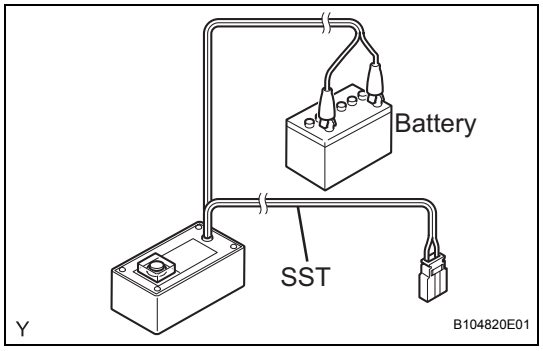
SST 09082-00700

CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



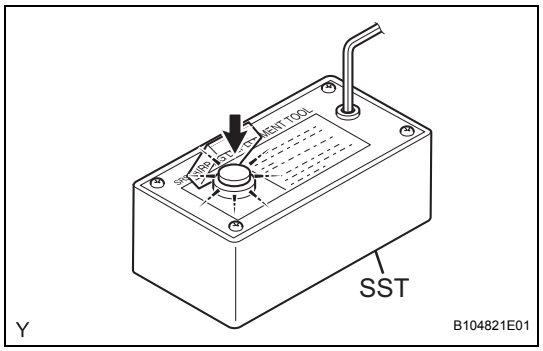
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.

CAUTION:

- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**



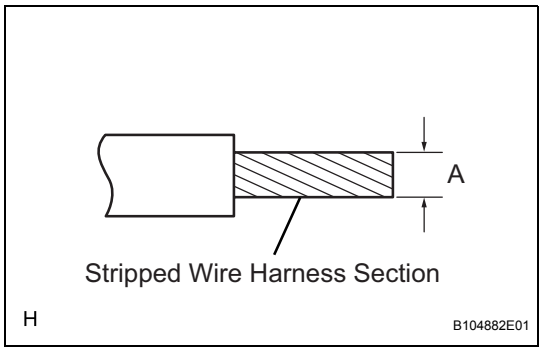
(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

(c) Remove the steering pad (See page RS-309).

CAUTION:

- **When removing the steering pad, work must be started at least 90 seconds after the power switch is turned off and the cable is disconnected from the negative battery terminal.**
- **When storing the steering pad, keep the upper surface of the airbag deployment side facing upward.**



(d) Using a service-purpose wire harness for the vehicle, tie the steering pad to the disc wheel.

Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

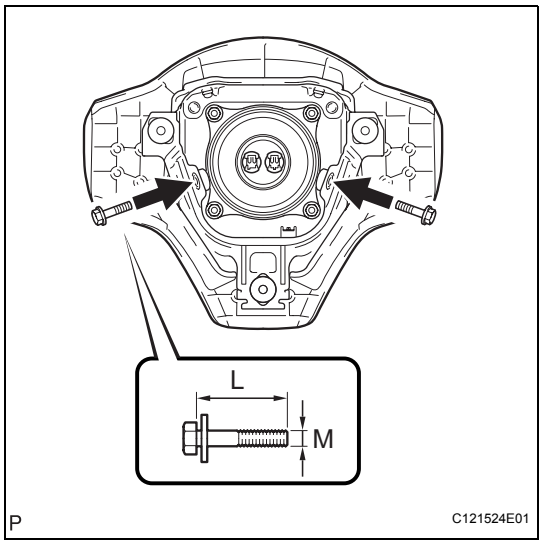
CAUTION:

Do not use wire harness that is too thin or any other object to tie the steering pad because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:

To calculate the area of the stripped wire harness cross section:

Area = 3.14 x $(Diameter)^2$ divided by 4



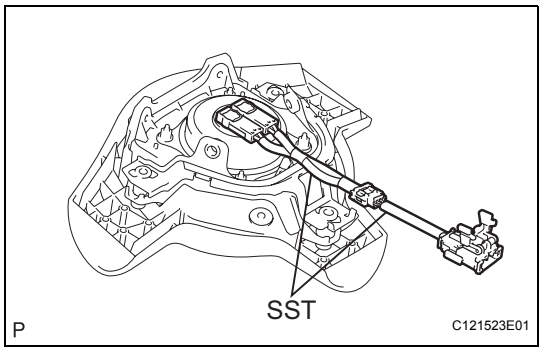
(1) Install the 2 bolts with washers into the 2 bolt holes in the steering pad.

Bolt size:

Area	Specification
L	35.0 mm (1.378 in.)
M	6.0 mm (0.236 in.)
Pitch	1.0 mm (0.039 in.)

NOTICE:

- **Tighten the bolts by hand until they become difficult to turn.**
- **Do not tighten the bolts excessively.**

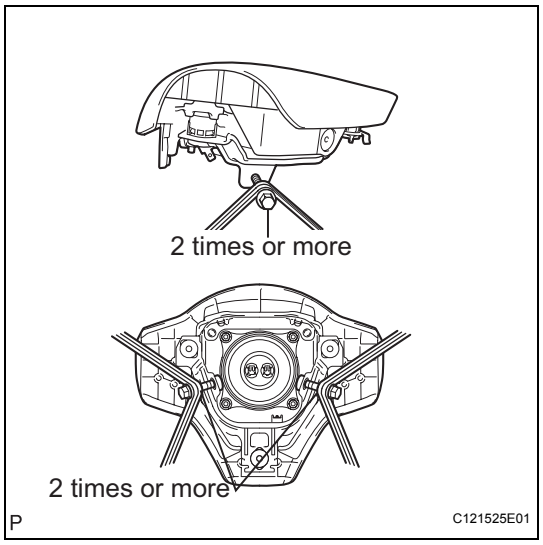


(2) After connecting SST, connect it to the horn button.

SST 09082-00802 (09082-10801, 09082-30801)

NOTICE:

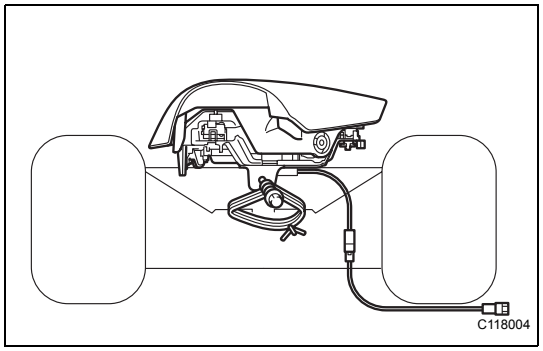
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(3) Using 3 wire harnesses, wind the wire harnesses at least 2 times each around the bolts installed on the left and right sides of the steering pad.

CAUTION:

- **Tightly wind the wire harnesses around the bolts so that there is no slack.**
- **Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**



(4) Face the airbag deployment side of the steering pad upward. Using wire harnesses, separately tie the left and right sides of the steering pad to the disc wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole in the disc wheel.

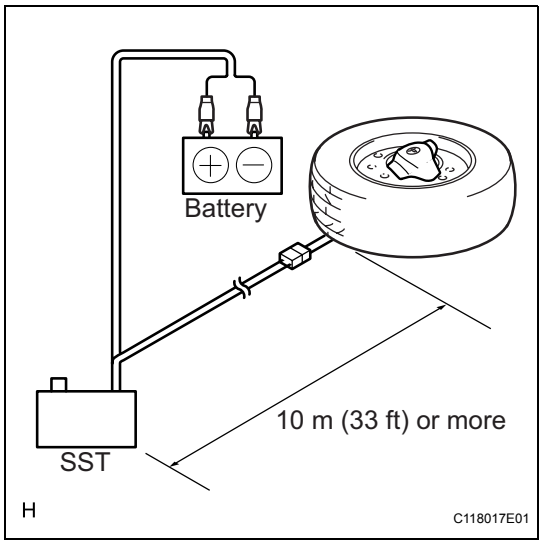
CAUTION:

- **Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**
- **Always tie the steering pad with the airbag deployment side facing upward. It is highly dangerous if the steering pad is tied with the airbag deployment side facing downward as the wire harnesses will be cut by the shock caused by the airbag deployment and the steering pad will be thrown into the air.**

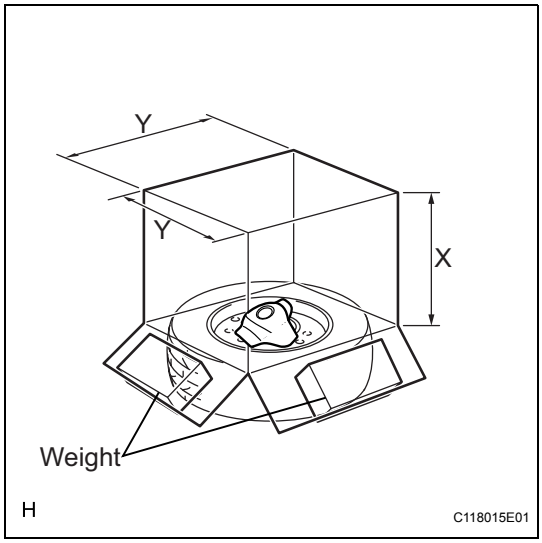
NOTICE:

The disc wheel will be marked by the airbag deployment, so use a waste disc wheel.

RS



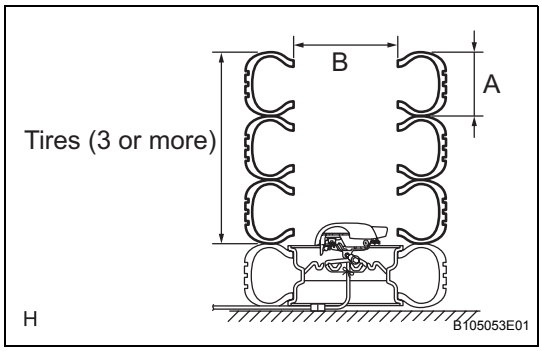
(e) Connect SST.
SST 09082-00700
CAUTION:
Place the disc wheel on a level ground.
(1) Connect the SST connector.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness. Also, secure some slack for the SST wire harness inside the disc wheel.
(2) Move SST to at least 10 m (33 ft) away from the steering pad tied to the disc wheel.



(f) Cover the steering pad with a cardboard box or tires.
(1) Covering method using a cardboard box:
Cover the steering pad with the cardboard box and place weights of at least 190 N (19 kg, 43 lb) on the cardboard box in 4 places.
Cardboard box size:

Area	Measurement
X	460 mm (18.11 in.)
Y	650 mm (25.59 in.)

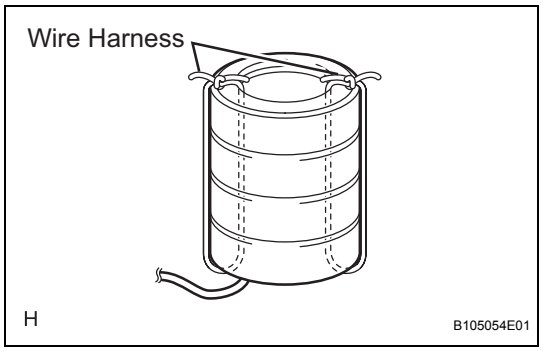
NOTICE:
- **When dimension Y of the cardboard box exceeds the diameter of the disc wheel and tire to which the steering pad is tied, X should be the following size.**
X = 460 mm (18.11 in.) + width of tire
- **If a cardboard box which is smaller than the specified size is used, the cardboard box will be broken by the shock from the airbag deployment.**



(2) Covering method using tires:
Place at least 3 tires without disc wheels on top of the tire with a disc wheel to which the steering pad is tied.
Tire size:

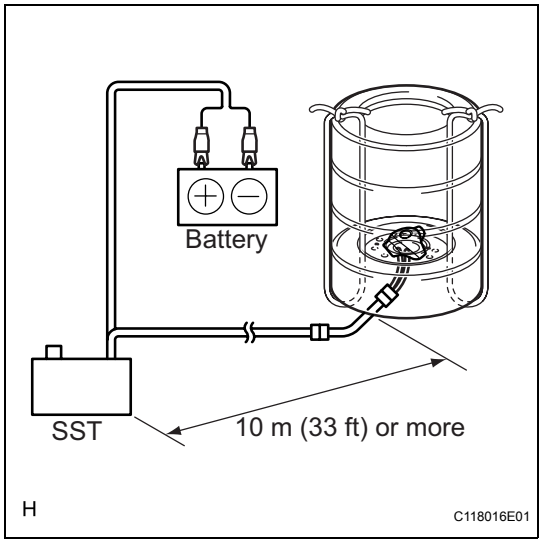
Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:
Do not use tires with disc wheels.
NOTICE:
- **The tires may be marked by the airbag deployment, so use waste tires.**
- **Do not place the SST connector under the tire because it could be damaged.**

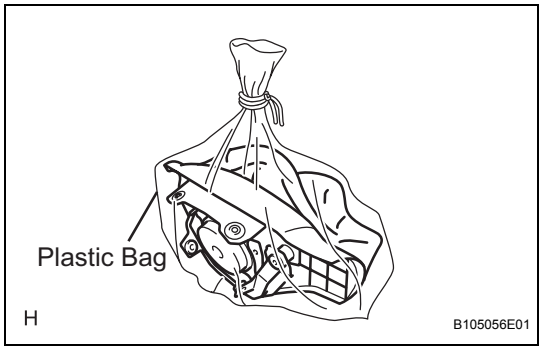


(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.

RS



(g) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the disc wheel to which the steering pad is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tires when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.

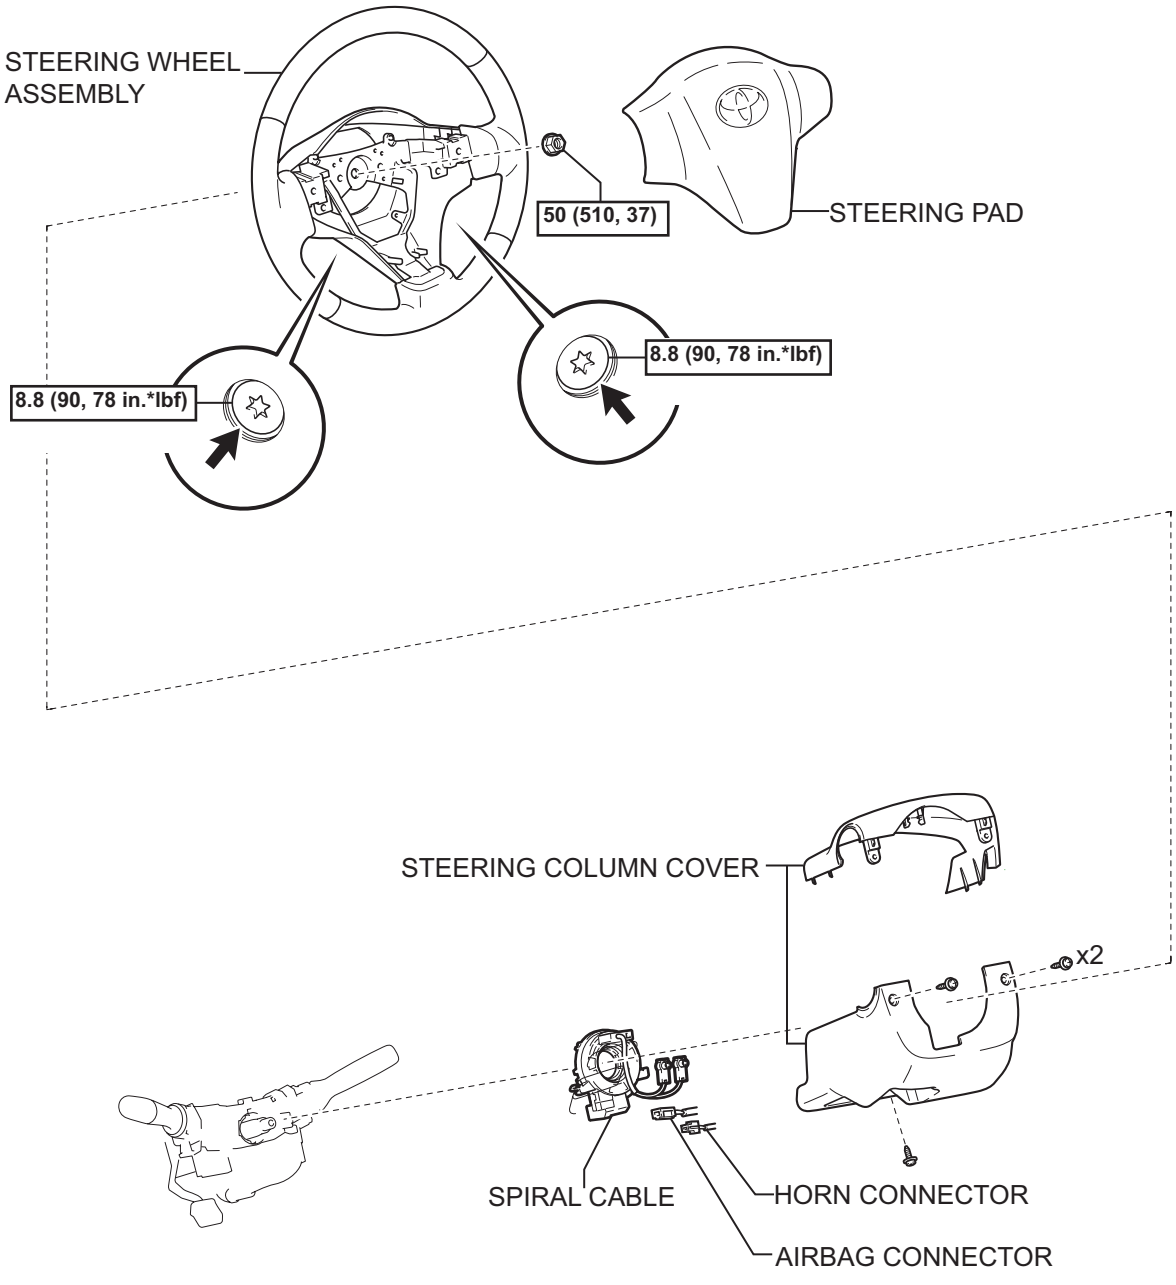


(h) Dispose of the steering pad.
CAUTION:
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a horn button with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the steering pad from the disc wheel.
(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

SPIRAL CABLE

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

P

C139118E01

RS

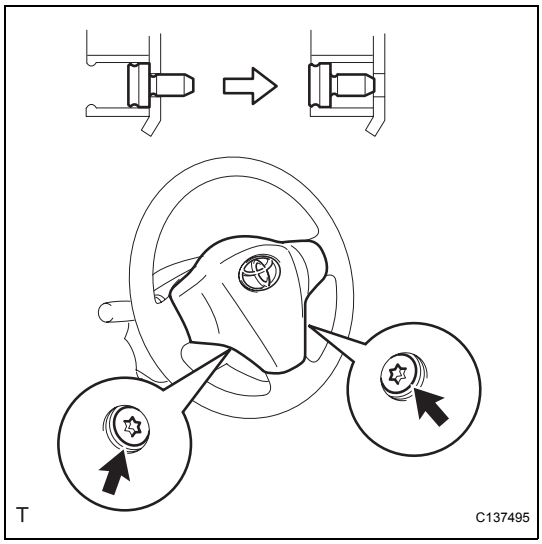
REMOVAL

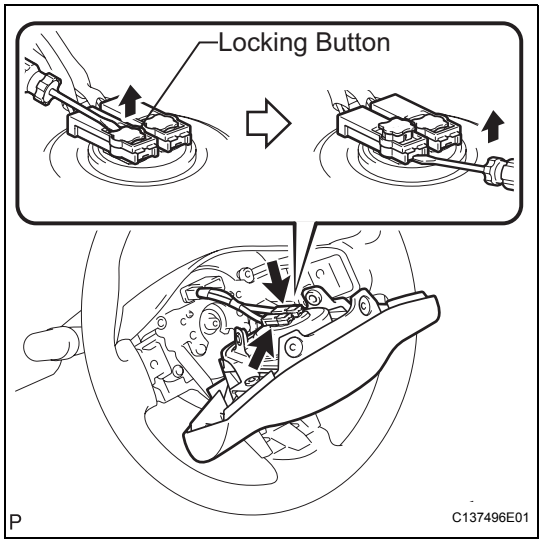
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STEERING PAD

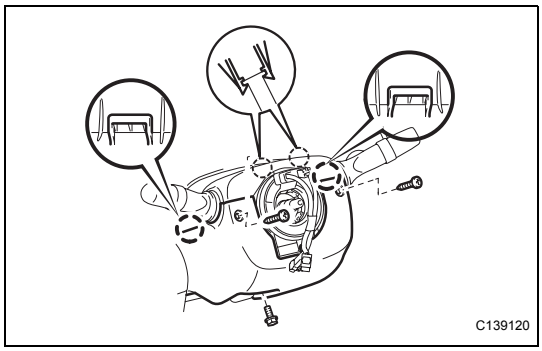
(a) Using "Torx" socket wrench T30, loosen the 2 bolts completely.
(b) Pull the steering pad toward you.





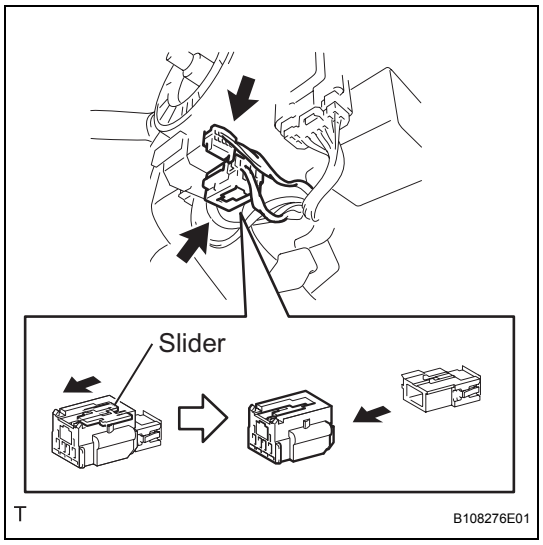
(c) Using a thin-bladed screwdriver, release the locking button.
(d) Using a thin-bladed screwdriver, disconnect the 2 airbag connectors.
(e) Detach the horn connector.

3. REMOVE STEERING WHEEL ASSEMBLY (See page SR-30)



4. REMOVE STEERING COLUMN COVER

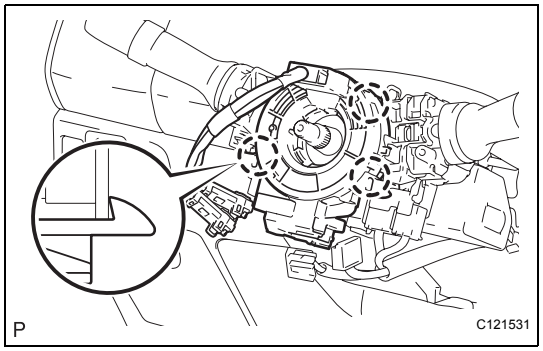
(a) Remove the 3 screws.
(b) Disengage the 2 claws and remove the steering column cover (lower).
(c) Disengage the 2 claws and remove the steering column cover (upper).



5. REMOVE SPIRAL CABLE

(a) Detach the horn connector.

(b) Slide the slider and detach the airbag connector.



(c) Disengage the 3 claws and remove the spiral cable.

INSPECTION

1. INSPECT SPIRAL CABLE

(a) Check the spiral cable.

(1) Using an ohmmeter, measure the resistance between the terminals.

SST 09082-00030

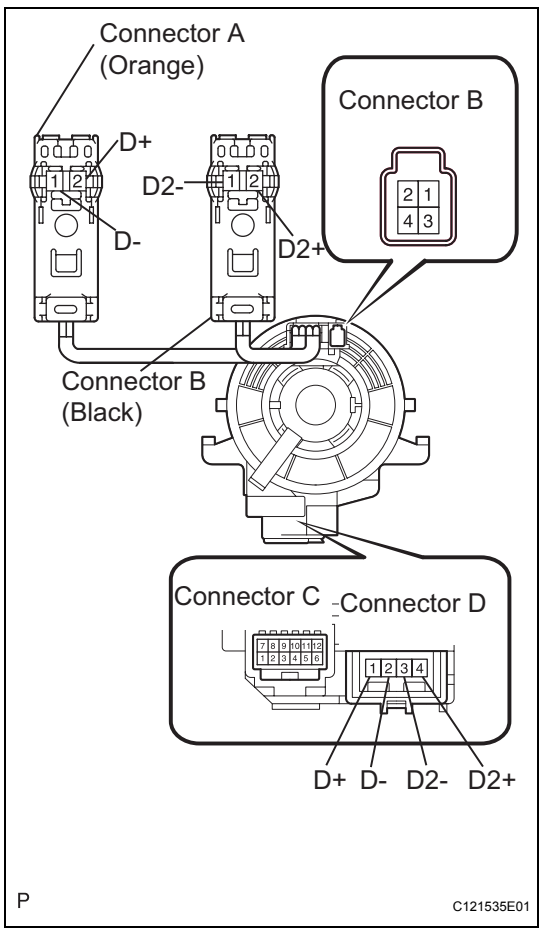
1. Set the spiral cable in the center, and measure the resistance in each position where the spiral cable is turned 2.5 times clockwise and counterclockwise.
2. Turn the spiral cable 2.5 times clockwise from its original position and measure the resistance while turning it 5 times counterclockwise.

Standard resistance

Tester Connection	Specified Condition
A1(D-) - D2(D-)	Below 1 Ω
A2(D+) - D1(D+)	Below 1 Ω
B1(D2-) - D3(D2-)	Below 1 Ω
A2(D2+) - D4(D2+)	Below 1 Ω

NOTICE:

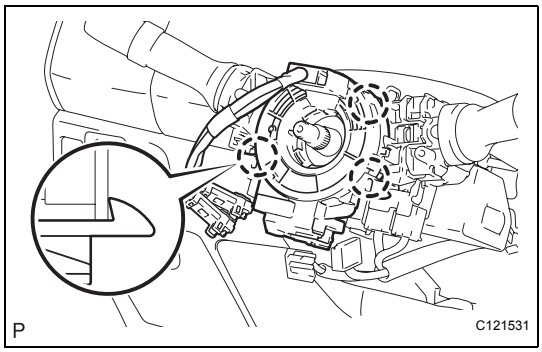
To avoid breakage of the spiral cable, do not turn the spiral cable more than necessary. If the result is not as specified, replace the spiral cable.



RS

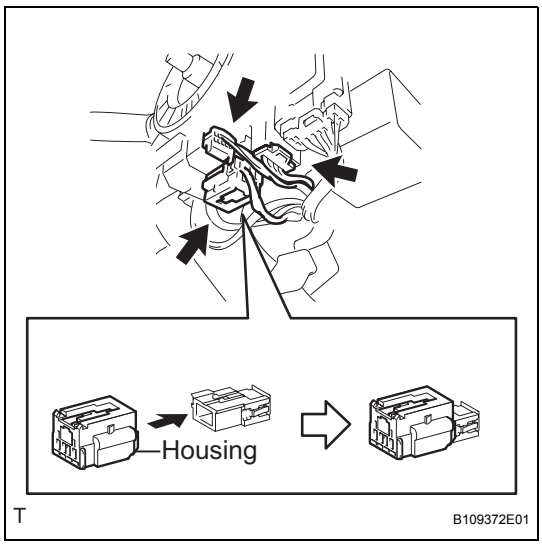
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

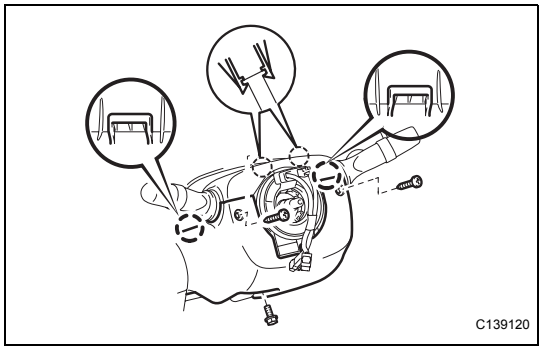


1. INSTALL SPIRAL CABLE

(a) Check that the ignition switch is turned to OFF.
(b) Confirm that the negative battery terminal is detached.
CAUTION:
Do not begin the operation for at least 90 seconds after the negative battery terminal is detached.
(c) Confirm that the front tires face straight forward.
(d) Confirm that the turn signal switch is in the neutral position.
NOTICE:
Perform the operation when the turn signal switch is in the neutral position. Otherwise, the pin of the turn signal will break.
(e) Engage the 3 claws and install the spiral cable.
NOTICE:
Pull the lock pin out before installing the steering wheel, when replacing the spiral cable with a new one.

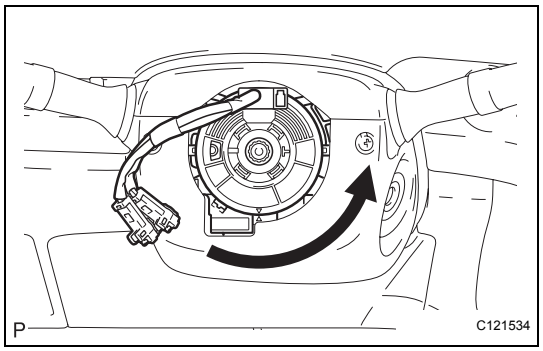


(f) Connect the airbag connector.
(g) Connect the horn connector.



2. INSTALL STEERING COLUMN COVER

(a) Engage the 2 claws and install the steering column cover (upper).
(b) Engage the 2 claws and install the steering column cover (lower).
(c) Tighten the 3 screws.



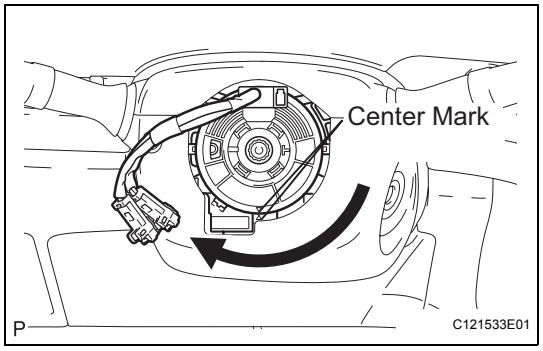
3. ADJUST SPIRAL CABLE

(a) Center the spiral cable.

(1) Turn the spiral cable counterclockwise until it locks.

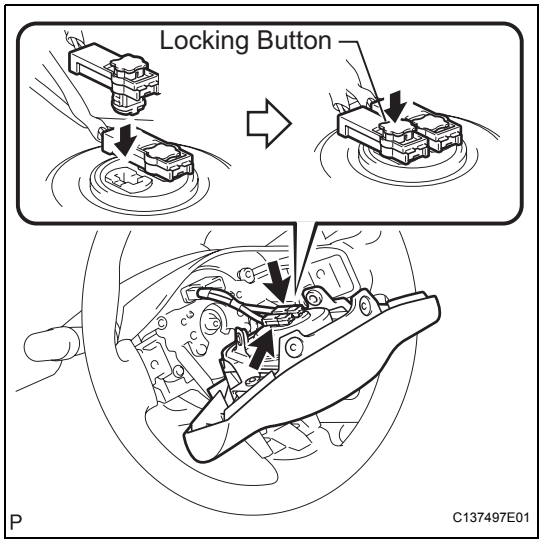
HINT:

The spiral cable turns a maximum of approximately 5 times.



(2) Turn the spiral cable 2.5 times clockwise from its locked position and align the center marks.

4. INSTALL STEERING WHEEL ASSEMBLY (See page SR-41)



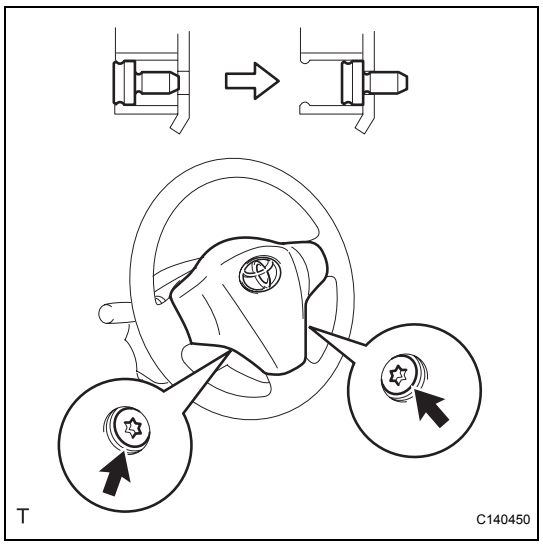
5. INSTALL STEERING PAD

(a) Connect the horn connector.

(b) Connect the airbag connector.

NOTICE:

- **Align the color of the airbag connector with that of the steering pad assembly, and install the airbag connector.**
- **Securely lock the locking button.**



(c) Install the steering pad.

(d) Using "Torx" socket wrench T30, tighten the 2 bolts.

Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

7. INSPECT SRS WARNING LIGHT

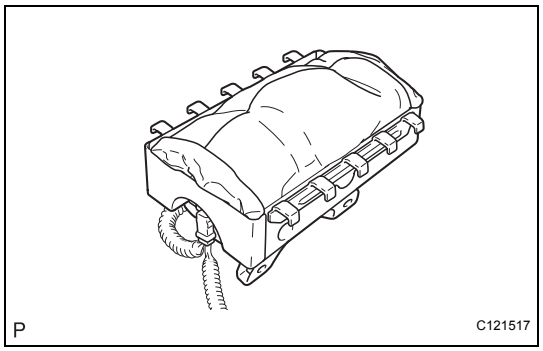
ON-VEHICLE INSPECTION

1. **INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the front passenger airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the instrument panel with a new one:
   Any cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag.



2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

CAUTION:

For front passenger airbag removal and installation procedures, see pages RS-327 and ,RS-328 and carefully follow the correct procedure.

(a) Perform a diagnostic system check (See page RS-38).

(b) With the front passenger airbag removed from the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front passenger airbag, instrument panel or instrument panel reinforcement with new ones:

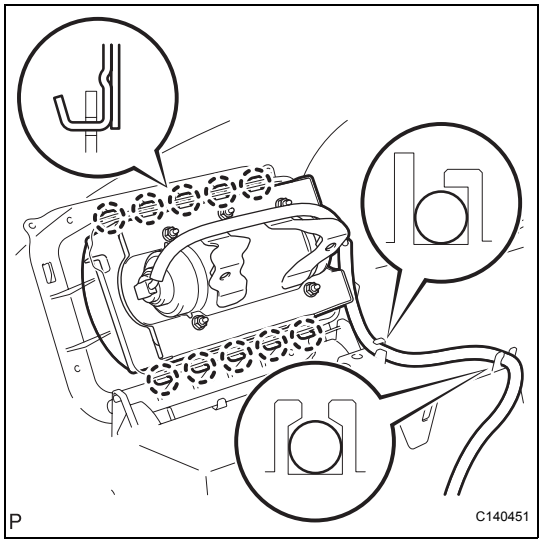
- Any cuts, minute cracks or marked discoloration on the front passenger airbag.
- Any cracks or other damage to the connector.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

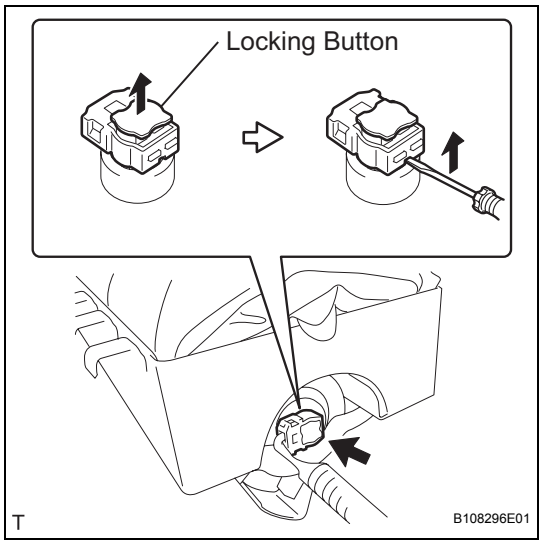
RS

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   (a) Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
5. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
6. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
7. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-5)**
8. **SEPARATE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-5)**
9. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
10. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
11. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
12. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**
13. **REMOVE FRONT PASSENGER AIRBAG ASSEMBLY**
    (a) Remove the wire harness from the 2 claws of the instrument panel.
    (b) Disengage the 10 hooks and remove the instrument panel passenger airbag.





14. REMOVE INSTRUMENT PANEL WIRE ASSEMBLY

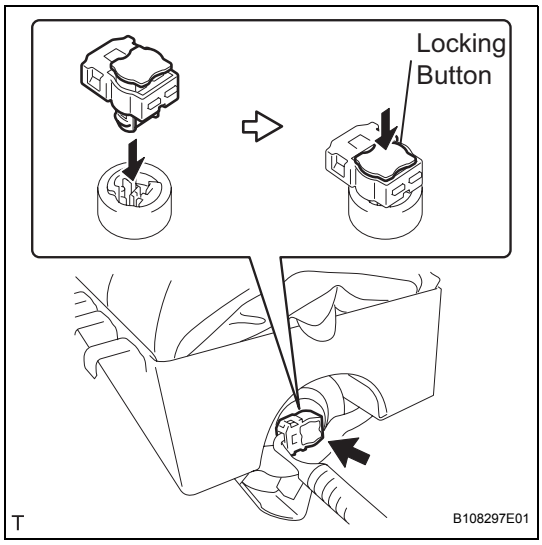
(a) Using a thin-bladed screwdriver, release the locking button.

(b) Using a thin-bladed screwdriver, disconnect the 2 airbag connectors and remove the instrument panel wire.

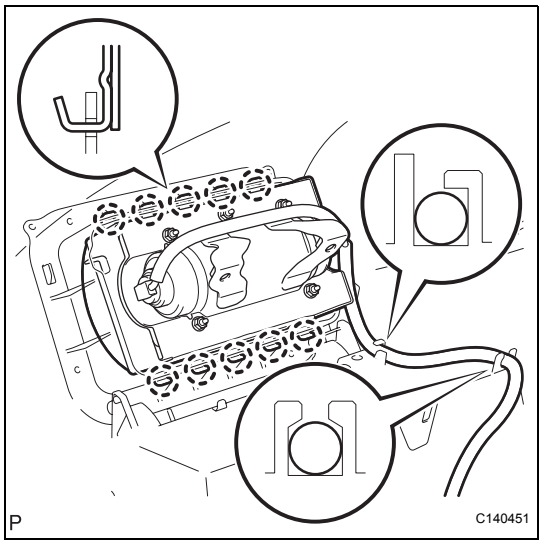
RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



1. **REMOVE INSTRUMENT PANEL WIRE ASSEMBLY**
   (a) Connect the 2 airbag connectors to install the instrument panel wire.
   NOTICE:
   Lock the locking button securely.



2. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (w/ Front Passenger Airbag)**
   (a) Engage the 10 hooks so that the connector side faces the outside of the vehicle, and install the instrument panel passenger airbag.
   (b) Install the wire harness onto the 2 claws of the instrument panel.
3. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)**
4. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
5. **INSTALL FRONT PILLAR GARNISH RH (See page IR-29)**
6. **INSTALL FRONT PILLAR GARNISH LH (See page IR-30)**
7. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-14)**
8. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-14)**
9. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**
10. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**

13. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

15. **CHECK SRS WARNING LIGHT**
(See page RS-31)

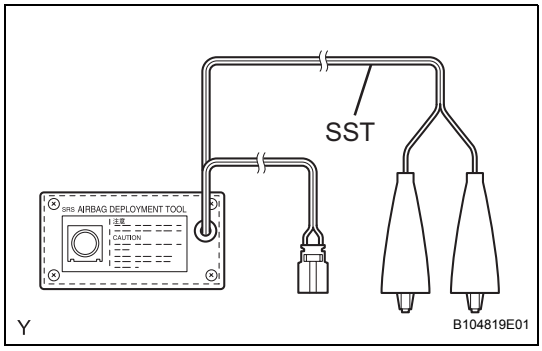
RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of an instrument panel passenger airbag, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

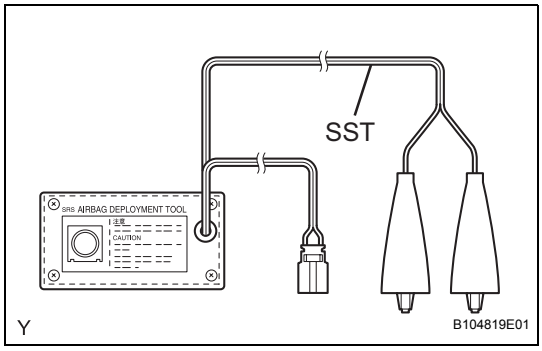
- **Never dispose of a front passenger airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag.**
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

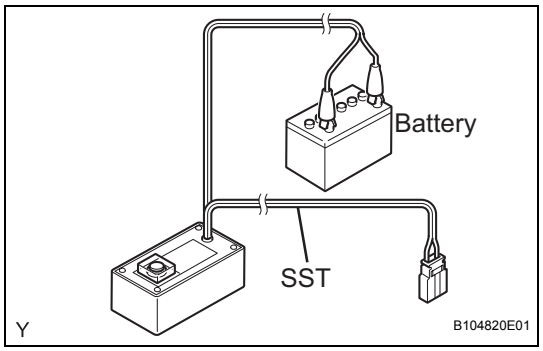


1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.

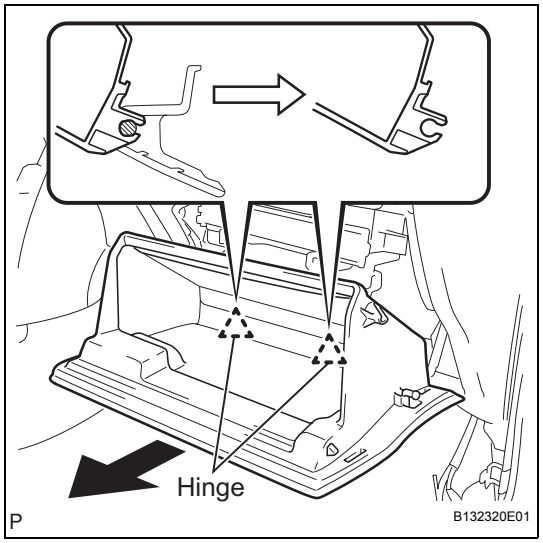




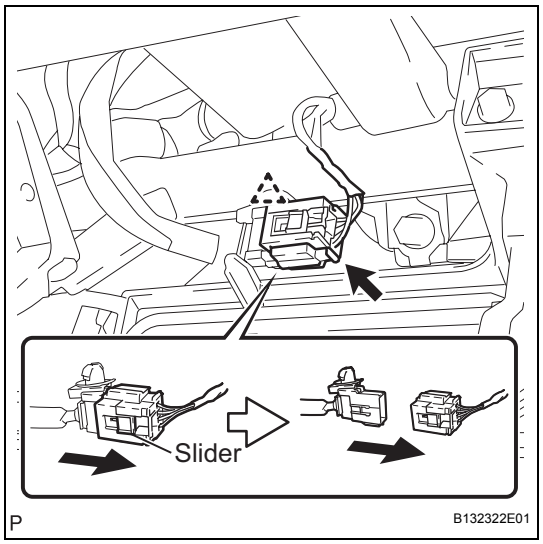
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

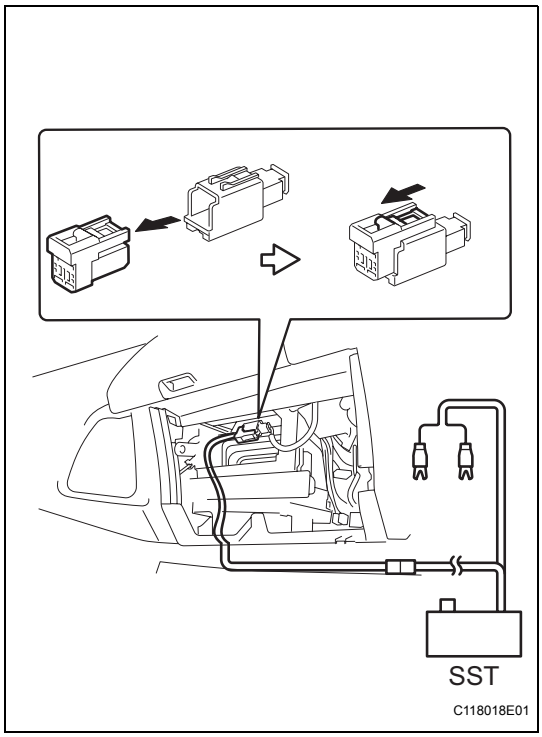
(b) Disconnect the cable from the negative battery terminal.



(c) Disengage the 2 claws and open the cover.



(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.



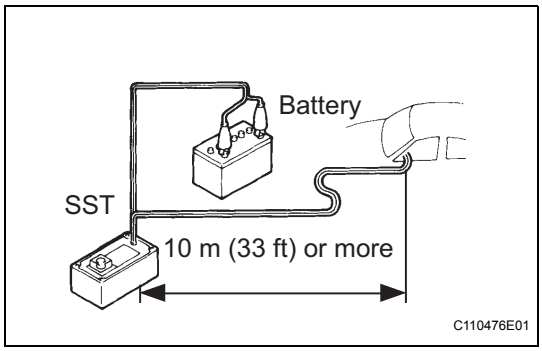
(e) Connect SST.

(1) Connect the SST connector to the front passenger airbag.

SST 09082-00700, 09082-00780

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.

(3) Close all doors and windows of the vehicle.

NOTICE:

Do not damage the SST wire harness.

(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **Make sure that no one is near the vehicle when deploying the airbag.**
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of the SST activation switch illuminates.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **Never use the customer's vehicle to deploy the airbag when disposing of the front passenger airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:

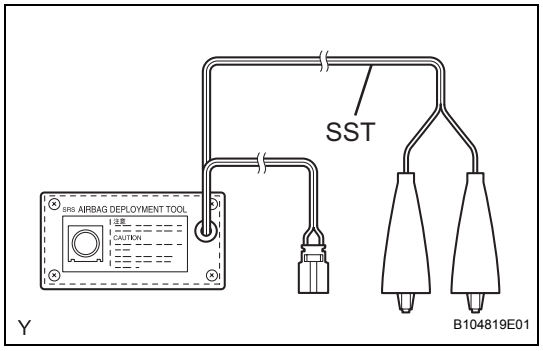
Prepare a battery as the power source to deploy the airbag.

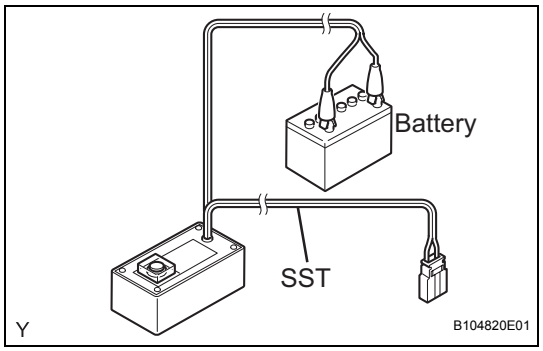
(a) Check the function of SST.

SST 09082-00700

CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.

CAUTION:

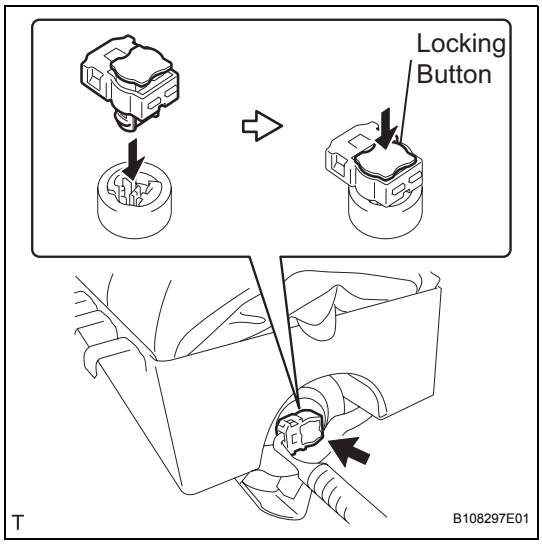
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

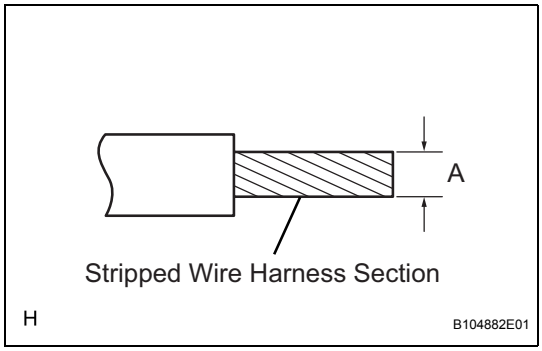
(b) Remove the front passenger airbag (see page RS-327).

CAUTION:

- **When removing the front passenger airbag, work must be started at least 90 seconds after the ignition switch is turned to OFF and the cable is disconnected from the negative battery terminal.**
- **When storing the front passenger airbag, keep the upper surface of the airbag deployment side facing upward.**



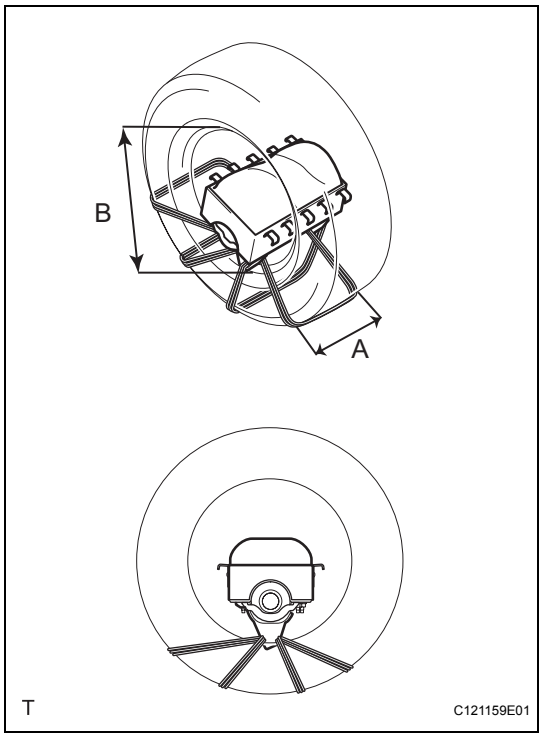
(c) Connect SST.
SST 09082-00802 (09082-10801, 09082-30801)
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(d) Using a service-purpose wire harness for the vehicle, tie the front passenger airbag to the tire.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
Do not use wire harness that is too thin or any other object to tie the front passenger airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4



(1) Position the front passenger airbag inside the tire, as shown in the illustration.

Tire size:

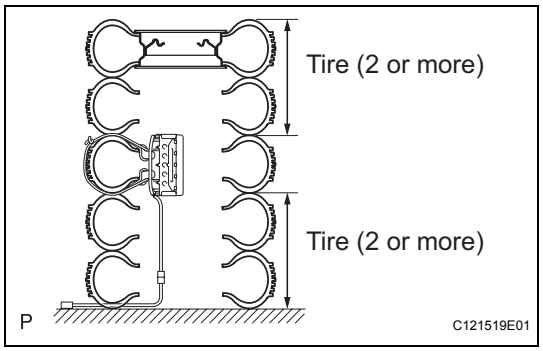
Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:

- **Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the front passenger airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie the front passenger airbag with the airbag deployment side facing inside the tire.**

NOTICE:

The tire will be marked by the airbag deployment, so use a waste tire.



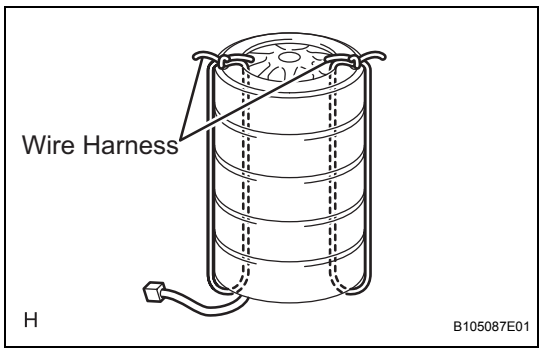
(e) Place the tires.

(1) Place at least 2 tires under the tire to which the front passenger airbag is tied.

(2) Place at least 2 tires over the tire to which the front passenger airbag is tied. The disc wheel should be installed onto the top tire.

NOTICE:

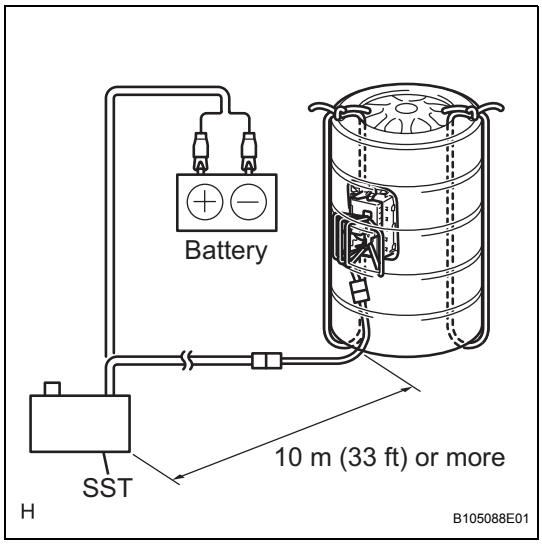
Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with 2 wire harnesses.

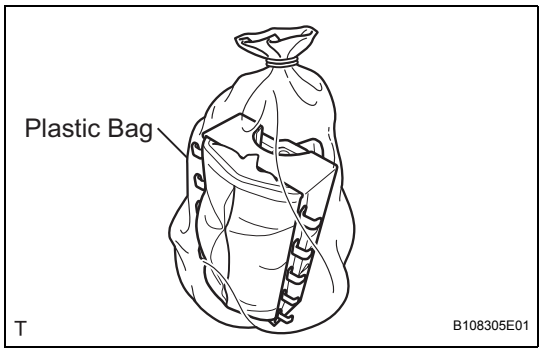
CAUTION:

Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.



(f) Connect SST.
SST 09082-00700
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness. Also, secure some slack for SST wire harness inside the tire.

(g) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front passenger airbag is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tires when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.



(h) Dispose of the front passenger airbag.
CAUTION:
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the front passenger airbag from the tire.
(2) Place the front passenger airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

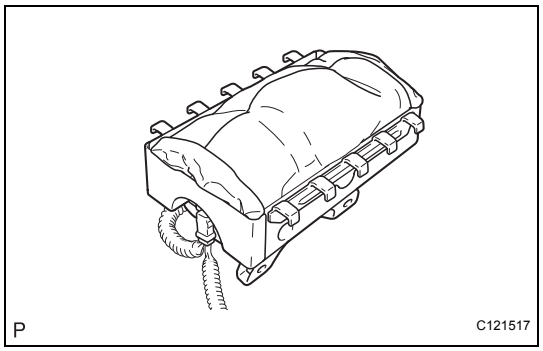
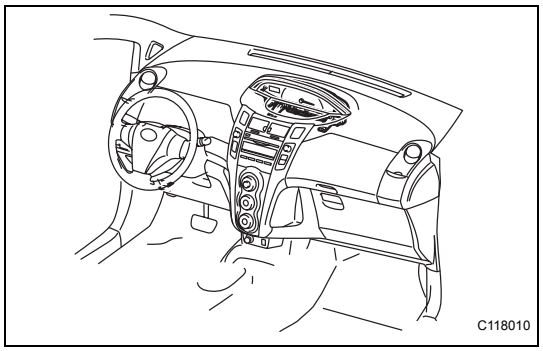
ON-VEHICLE INSPECTION

1. **INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the front passenger airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the instrument panel with a new one:
   Any cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag.





2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

CAUTION:

For front passenger airbag removal and installation procedures, see pages RS-339 and RS-340, and carefully follow the correct procedure.

(a) Perform a diagnostic system check (See page RS-38).

(b) With the front passenger airbag removed from the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front passenger airbag, instrument panel or instrument panel reinforcement with new ones:

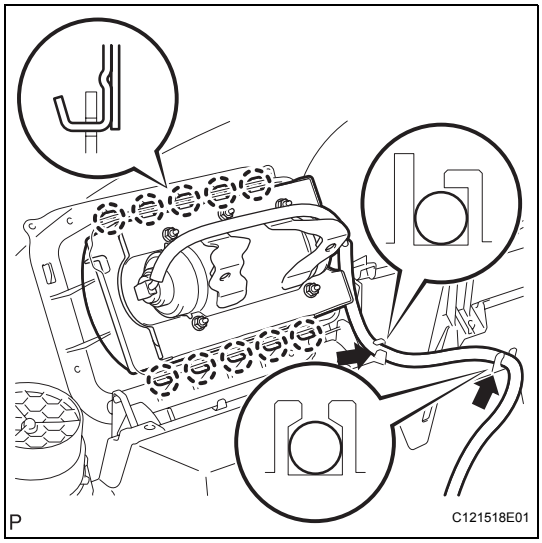
- Any cuts, minute cracks or marked discoloration on the front passenger airbag.
- Any cracks or other damage to the connector.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

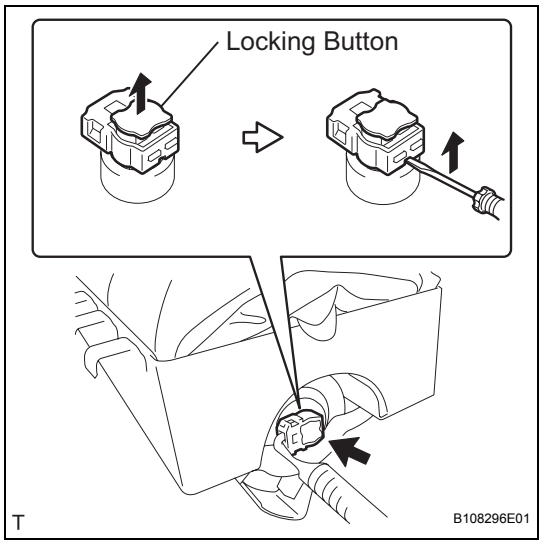
RS

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
4. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
5. **REMOVE COMBINATION METER ASSEMBLY (See page ME-146)**
6. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
7. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)**
8. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
9. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**
10. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)**
11. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
12. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)**
13. **REMOVE FRONT PASSENGER AIRBAG ASSEMBLY**
    (a) Remove the wire harness from the 2 claws of the instrument panel.
    (b) Disengage the 10 hooks and remove the instrument panel passenger airbag.





14. REMOVE INSTRUMENT PANEL WIRE ASSEMBLY

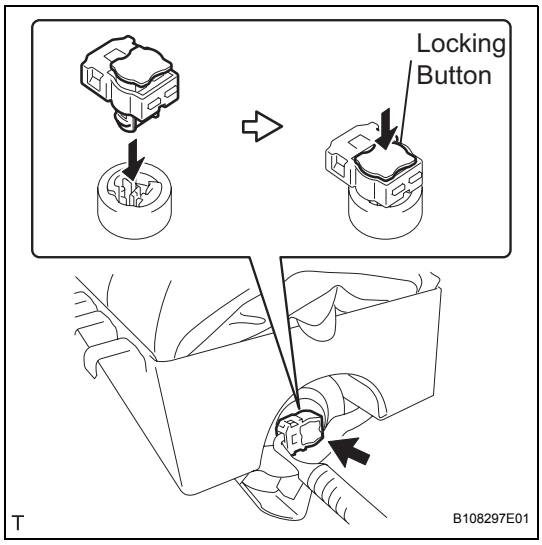
(a) Using a thin-bladed screwdriver, release the locking button.

(b) Using a thin-bladed screwdriver, disconnect the 2 airbag connectors and remove the instrument panel wire assembly.

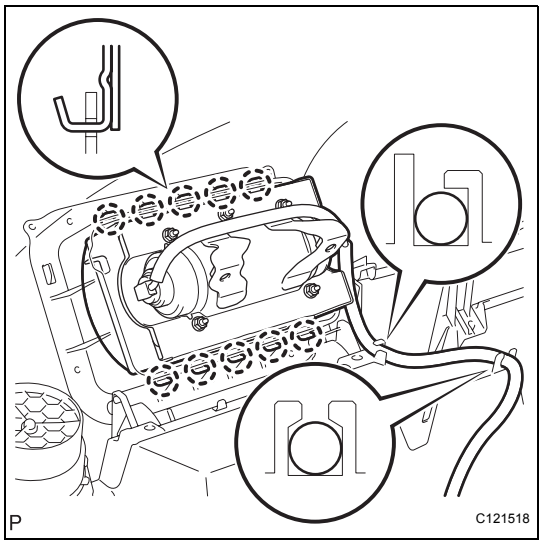
RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



1. **INSTALL INSTRUMENT PANEL WIRE ASSEMBLY**
   (a) Connect the airbag connector to install the instrument panel wire.
   NOTICE:
   - **Match the color of the connector of the instrument panel wire assembly with that of the connector of the front passenger assembly and install the airbag connector.**
   - **Lock the locking button securely.**



2. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY**
   (a) Engage the 10 hooks so that the connector side faces the outside of the vehicle, and install the instrument panel passenger airbag.
   (b) Install the wire harness onto the 2 claws of the instrument panel.
3. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**
4. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
5. **INSTALL FRONT PILLAR GARNISH LH (See page ME-149)**
6. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
7. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)**
8. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
9. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
10. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
11. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**

13. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

15. **INSPECT SRS WARNING LIGHT**
(See page RS-31)

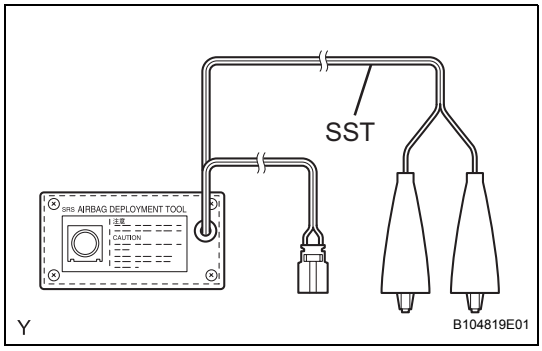
RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of an instrument panel passenger airbag, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

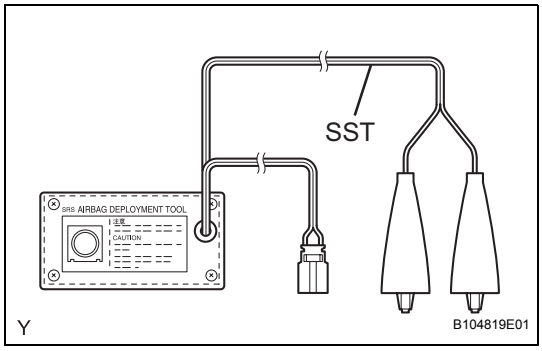
- **Never dispose of a front passenger airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag.**
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

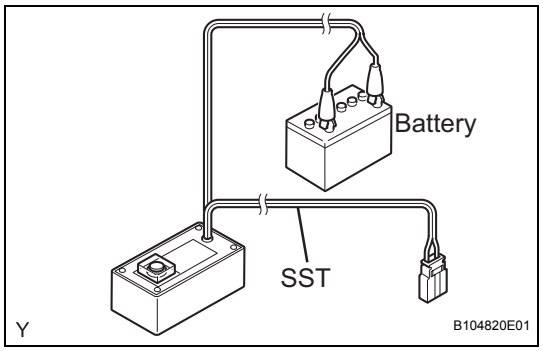


1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



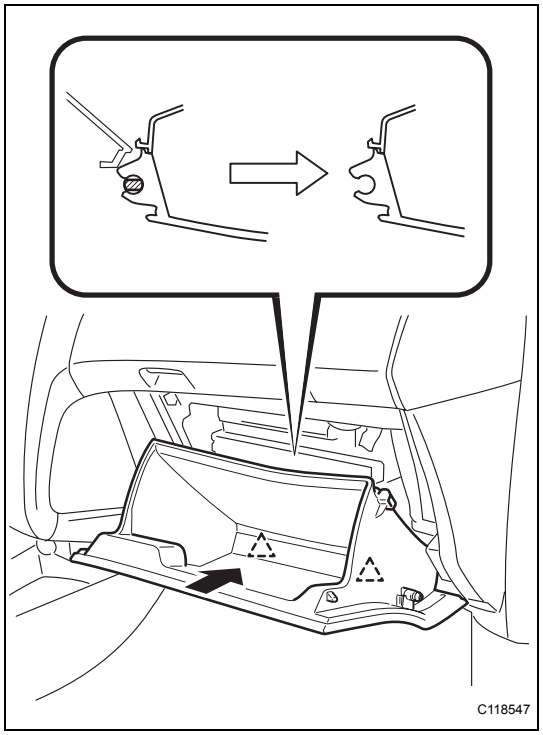


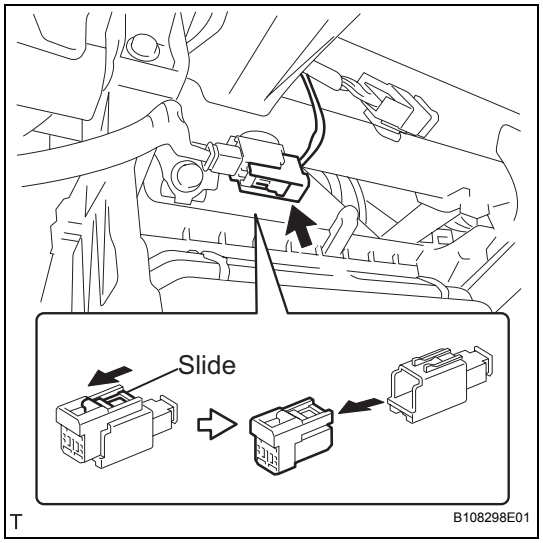
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

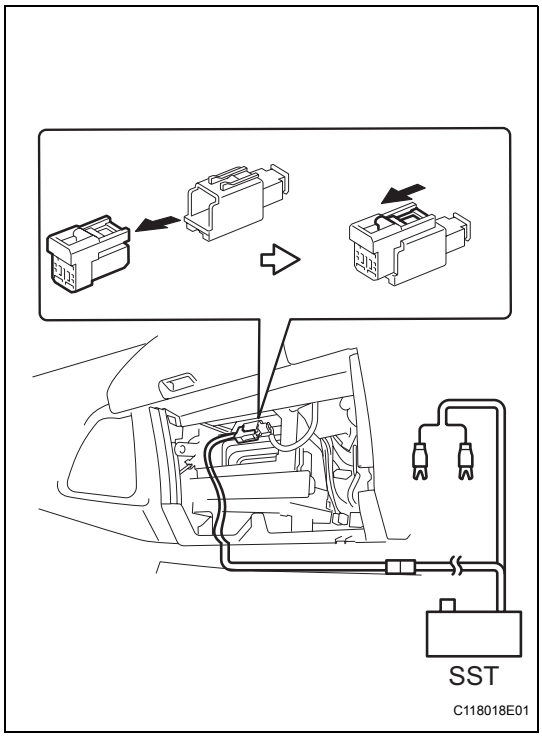
(b) Disconnect the cable from the negative battery terminal.

(c) Disengage the 2 claws and open the cover.





(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.



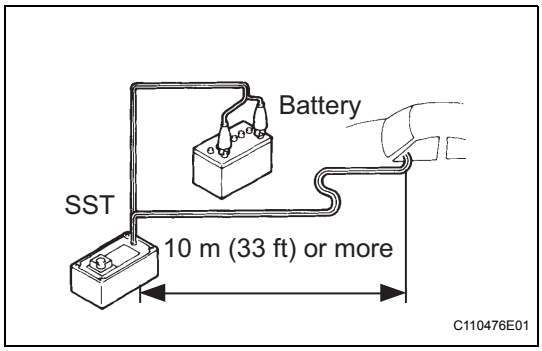
(e) Connect SST.

(1) Connect the SST connector to the front passenger airbag.

SST 09082-00700, 09082-00780

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.

(3) Close all doors and windows of the vehicle.

NOTICE:

Do not damage the SST wire harness.

(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **Make sure that no one is near the vehicle when deploying the airbag.**
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of the SST activation switch illuminates.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **Never use the customer's vehicle to deploy the airbag when disposing of the front passenger airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:

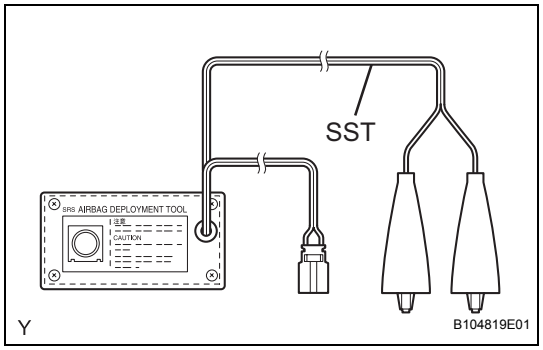
Prepare a battery as the power source to deploy the airbag.

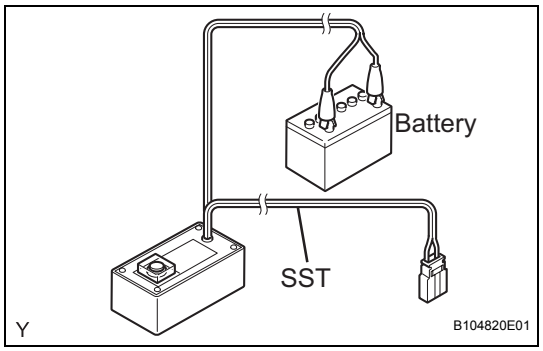
(a) Check the function of SST.

SST 09082-00700

CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.

CAUTION:

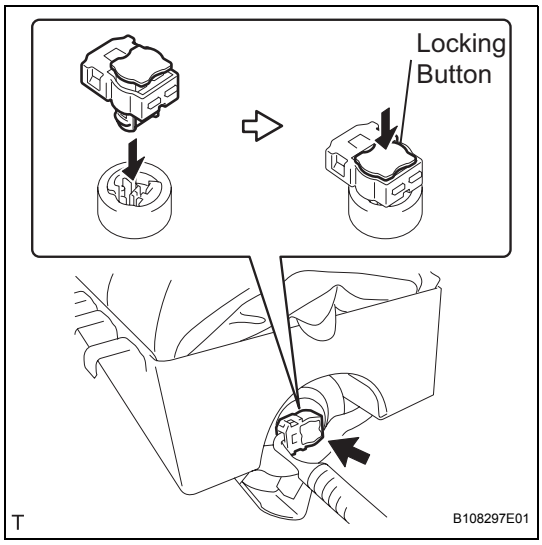
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

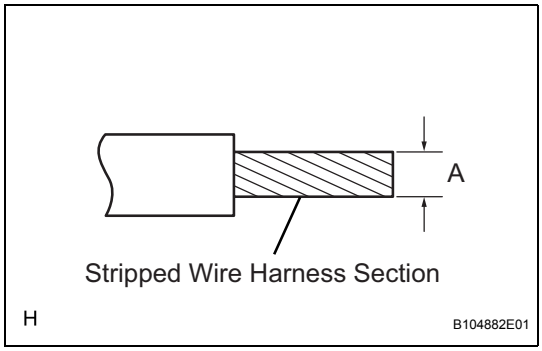
(b) Remove the front passenger airbag (see page RS-339).

CAUTION:

- **When removing the front passenger airbag, work must be started at least 90 seconds after the ignition switch is turned to OFF and the cable is disconnected from the negative battery terminal.**
- **When storing the front passenger airbag, keep the upper surface of the airbag deployment side facing upward.**



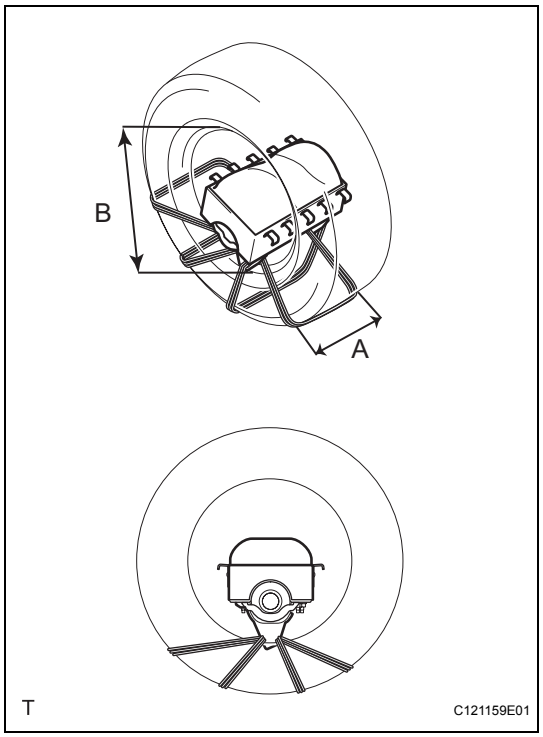
(c) Connect SST.
SST 09082-00802 (09082-10801, 09082-30801)
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(d) Using a service-purpose wire harness for the vehicle, tie the front passenger airbag to the tire.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
Do not use wire harness that is too thin or any other object to tie the front passenger airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4



(1) Position the front passenger airbag inside the tire, as shown in the illustration.

Tire size:

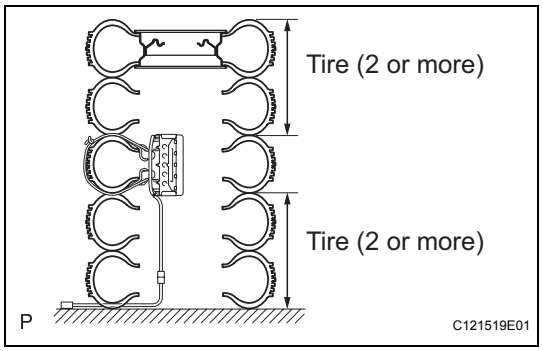
Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:

- **Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the front passenger airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie the front passenger airbag with the airbag deployment side facing inside the tire.**

NOTICE:

The tire will be marked by the airbag deployment, so use a waste tire.



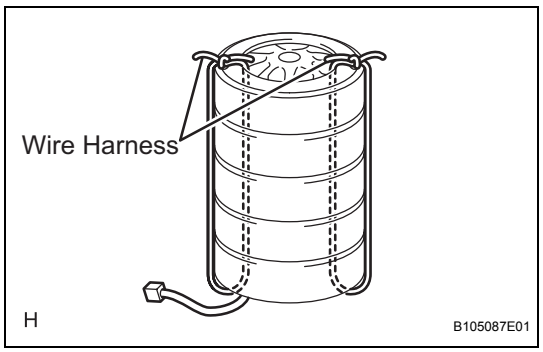
(e) Place the tires.

(1) Place at least 2 tires under the tire to which the front passenger airbag is tied.

(2) Place at least 2 tires over the tire to which the front passenger airbag is tied. The disc wheel should be installed onto the top tire.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

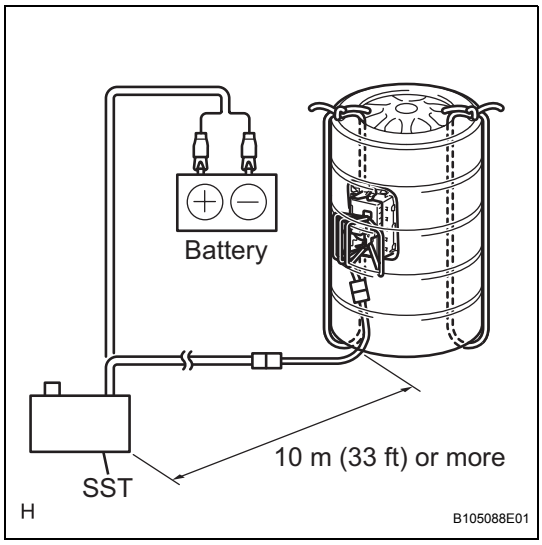


(3) Tie the tires together with 2 wire harnesses.

CAUTION:

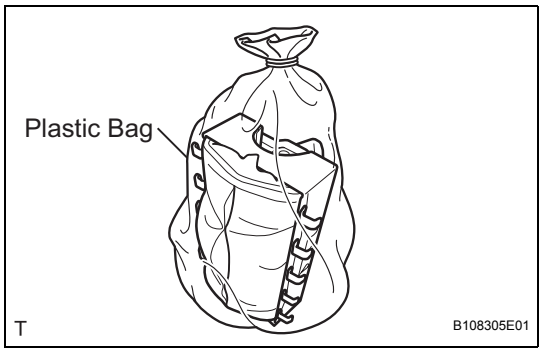
Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.

RS



(f) Connect SST.
SST 09082-00700
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness. Also, secure some slack for SST wire harness inside the tire.

(g) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front passenger airbag is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tires when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.



(h) Dispose of the front passenger airbag.
CAUTION:
- **The front passenger airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag which has been deployed.**
- **Do not apply water, etc. to a front passenger airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the front passenger airbag from the tire.
(2) Place the front passenger airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

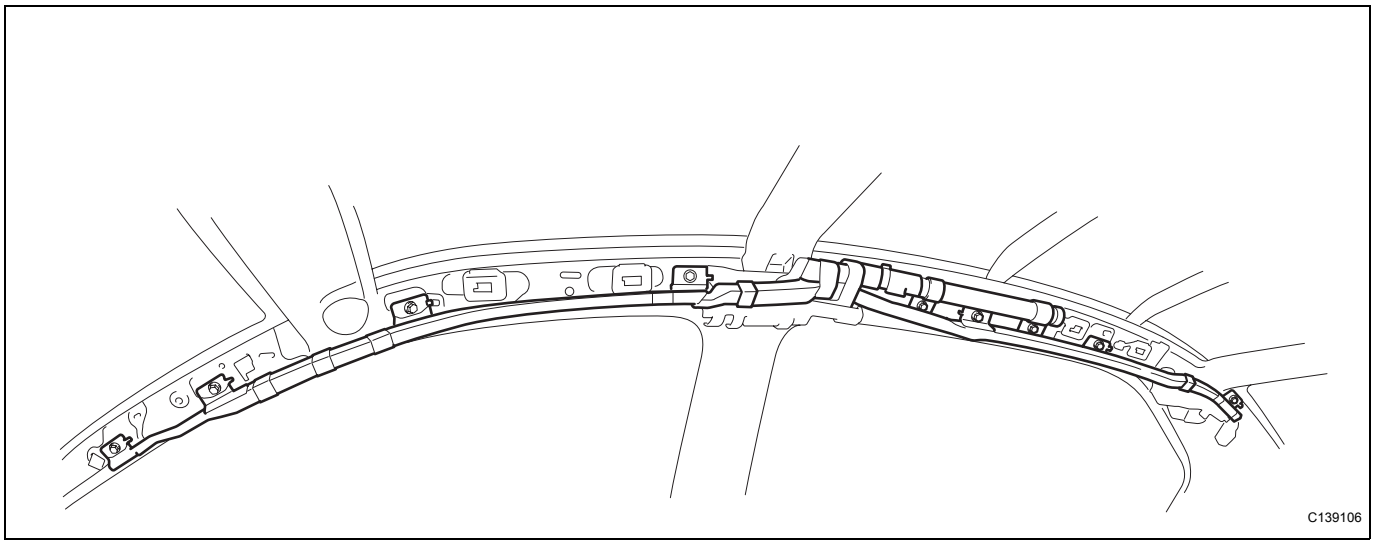
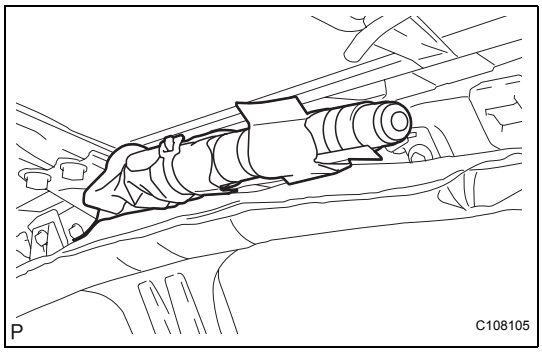
ON-VEHICLE INSPECTION

1. **INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the curtain shield airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front pillar garnish or roof headlining with a new one:
   Any cuts, minute cracks or marked discoloration on the front pillar garnish and roof headlining around the curtain shield airbag.





2. **INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For curtain shield airbag removal and installation procedures, see pages RS-362 and ,RS-366 and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the curtain shield airbag removed from the vehicle, as mentioned below, replace the curtain shield airbag with a new one:
   - Any cuts, minute cracks or marked discoloration on the curtain shield airbag.
   - Any cracks or other damage to the connector.

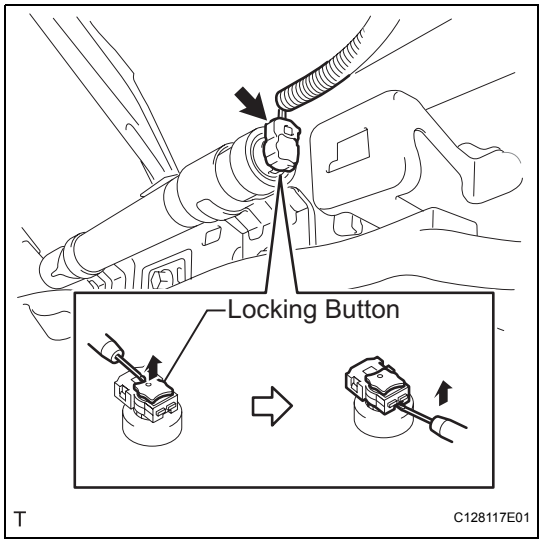
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

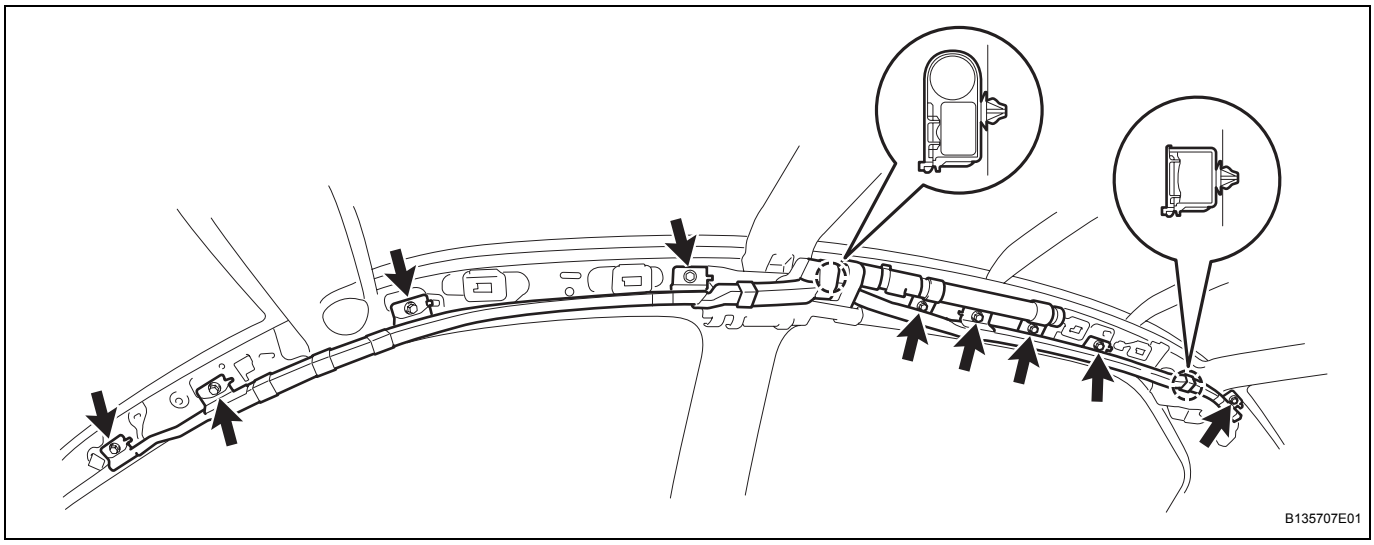
1. **DISCONNECT BATTERY NEGATIVE TERMINAL**
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (See page IR-13)**
3. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-5)**
4. **REMOVE FRONT SEAT ASSEMBLY RH (See page IR-13)**
5. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (See page IR-13)**
6. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
7. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-46)**
8. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
9. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
10. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
11. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)**
13. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-14)**
14. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-14)**
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-14)**
16. **REMOVE COWL SIDE TRIM BOARD RH (See page IR-15)**
17. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-15)**
18. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-15)**

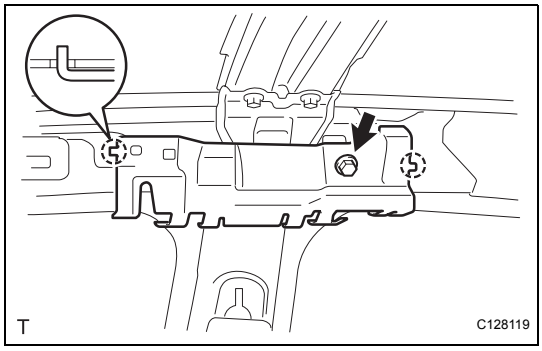
19. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-15)**
20. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
21. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-15)**
22. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-15)**
23. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-15)**
24. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
25. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
26. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**
27. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)**
28. **REMOVE CENTER PILLAR LOWER GARNISH RH (See page IR-16)**
29. **REMOVE CENTER PILLAR LOWER GARNISH LH (See page IR-16)**
30. **REMOVE SEAT BELT ANCHOR COVER CAP (See page IR-17)**
31. **REMOVE FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-17)**
32. **REMOVE FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-17)**
33. **REMOVE CENTER PILLAR UPPER GARNISH RH (See page IR-17)**
34. **REMOVE CENTER PILLAR UPPER GARNISH LH (See page IR-17)**
35. **REMOVE FRONT PILLAR GARNISH RH (See page IR-18)**
36. **REMOVE FRONT PILLAR GARNISH LH (See page IR-19)**
37. **REMOVE INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-138)**
38. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)**
39. **REMOVE REAR CONSOLE BOX UPPER FRONT PANEL SUB-ASSEMBLY (See page IP-84)**
40. **REMOVE REAR CONSOLE BOX UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)**

41. **REMOVE REAR CONSOLE BOX CARPET (See page IP-85)**
42. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)**
43. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-138)**
44. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
45. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-139)**
46. **REMOVE COMBINATION METER ASSEMBLY (See page ME-139)**
47. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-6)**
48. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)**
49. **REMOVE INSTRUMENT PANEL BOX (See page IP-45)**
50. **REMOVE ASSIST GRIP COVER (See page IR-21)**
51. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-21)**
52. **REMOVE VISOR ASSEMBLY RH (See page IR-21)**
53. **REMOVE VISOR ASSEMBLY LH (See page IR-22)**
54. **REMOVE VISOR HOLDER RH (See page IR-22)**
55. **REMOVE VISOR HOLDER LH (See page IR-22)**
56. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-22)**
57. **REMOVE MAP LIGHT ASSEMBLY (See page IR-23)**
58. **REMOVE ROOF HEADLINING ASSEMBLY (See page IR-24)**
59. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH**
    (a) Using a thin-bladed screwdriver, release the locking button.
    (b) Using a thin-bladed screwdriver, detach the airbag connector.



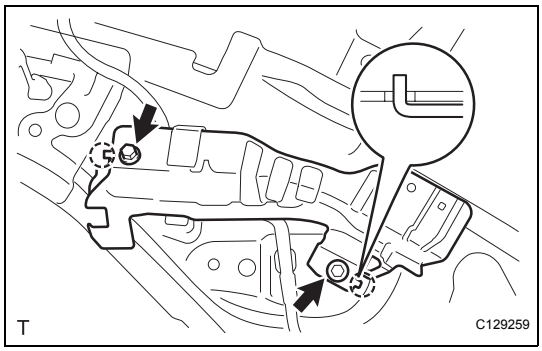
(c) Remove the 9 bolts, disengage the 3 hooks and remove the curtain shield airbag.





60. REMOVE CURTAIN SHIELD AIRBAG BRACKET RH

(a) Remove the bolt, disengage the 2 hooks and remove the curtain shield airbag bracket.

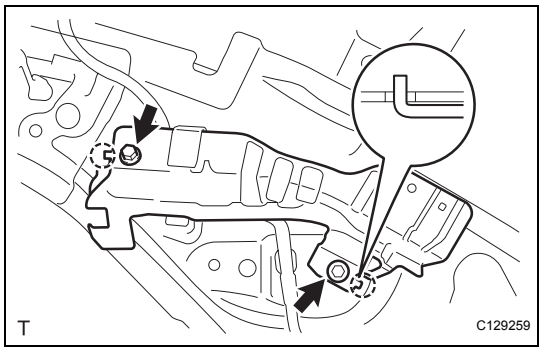


61. REMOVE ROOF SIDE RAIL BRACKET RH

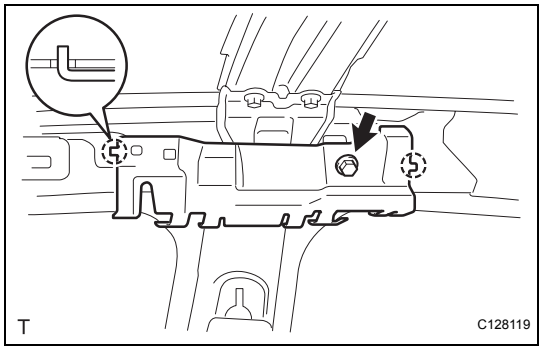
(a) Remove the 2 bolts, disengage the 2 hooks and remove the roof side rail bracket.

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

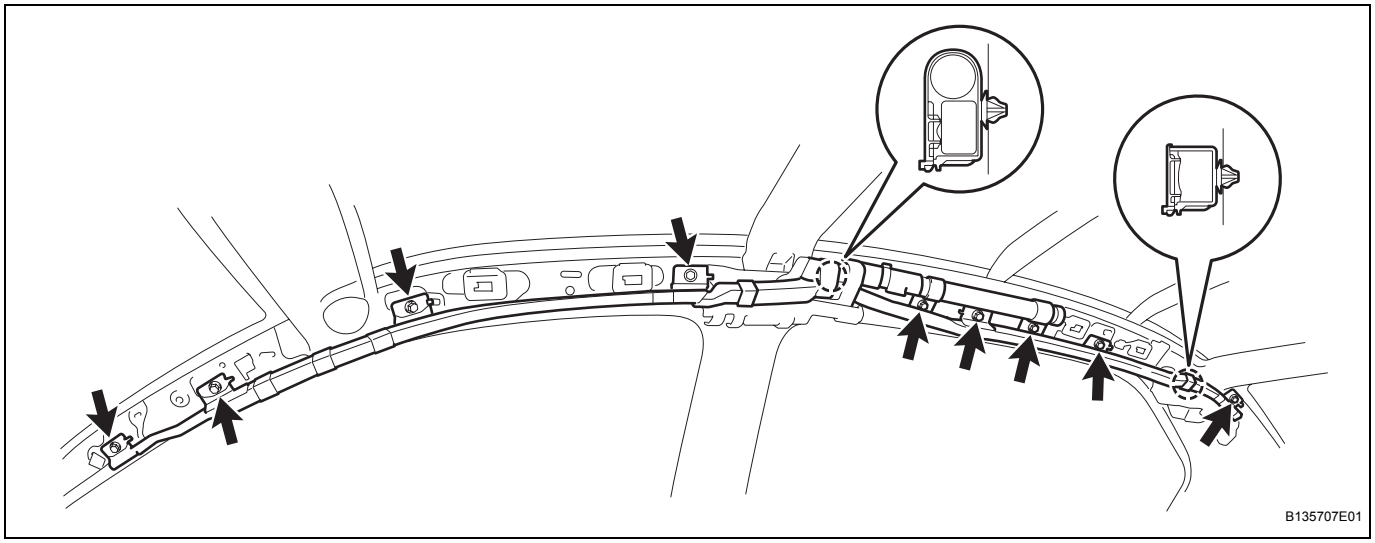


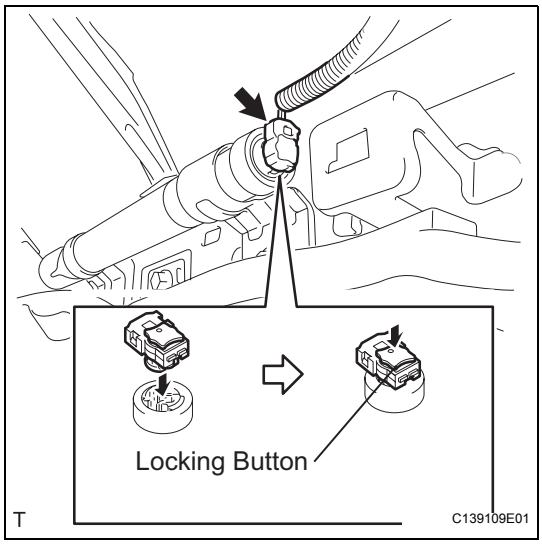
1. **INSTALL ROOF SIDE RAIL BRACKET RH**
   (a) Insert the 2 hooks into the body holes and install the roof side rail bracket and tighten 2 the bolts.
   Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)



2. **INSTALL CURTAIN SHIELD AIRBAG BRACKET RH**
   (a) Insert the 2 hooks into the body holes and install the curtain shield back bracket and tighten 1 the bolt.
   Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

3. **INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH**
   (a) Insert the 3 hooks into the body holes and install the curtain shield back bracket and tighten 9 the bolts.
   Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)





(b) Connect the airbag connector.
NOTICE:
Lock the locking button securely.

4. **INSTALL ROOF HEADLINING ASSEMBLY (See page IR-25)**
5. **INSTALL MAP LIGHT ASSEMBLY (See page IR-26)**
6. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-27)**
7. **INSTALL VISOR HOLDER RH (See page IR-28)**
8. **INSTALL VISOR HOLDER LH (See page IR-28)**
9. **INSTALL VISOR ASSEMBLY RH (See page IR-28)**
10. **INSTALL VISOR ASSEMBLY LH (See page IR-28)**
11. **INSTALL ASSIST GRIP COVER (See page IR-29)**
12. **INSTALL INSTRUMENT PANEL BOX (See page IP-53)**
13. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-11)**
14. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-13)**
15. **INSTALL COMBINATION METER ASSEMBLY (See page ME-140)**
16. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-140)**
17. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-141)**
18. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
19. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)**
20. **INSTALL REAR CONSOLE BOX CARPET (See page IP-88)**
21. **INSTALL REAR CONSOLE BOX UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)**
22. **INSTALL REAR CONSOLE BOX UPPER FRONT PANEL SUB-ASSEMBLY (See page IP-89)**
23. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-89)**
24. **INSTALL INSTRUMENT PANEL LOWER CENTER FINISH PANEL (See page ME-142)**
25. **INSTALL FRONT PILLAR GARNISH RH (See page IR-29)**
26. **INSTALL FRONT PILLAR GARNISH LH (See page IR-30)**
27. **INSTALL CENTER PILLAR UPPER GARNISH RH (See page IR-31)**

28. **INSTALL CENTER PILLAR UPPER GARNISH LH (See page IR-31)**
29. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-31)**
30. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-31)**
31. **INSTALL SEAT BELT ANCHOR COVER CAP (See page IR-32)**
32. **INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-32)**
33. **INSTALL CENTER PILLAR LOWER GARNISH LH (See page IR-32)**
34. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)**
35. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)**
36. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
37. **INSTALL REAR SEAT SIDE COVER LH (See page IR-33)**
38. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-33)**
39. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-33)**
40. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
41. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**
42. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-34)**
43. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-34)**
44. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-34)**
45. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-34)**
46. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-35)**
47. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-35)**
48. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-35)**
49. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-35)**

50. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
51. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
52. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**
53. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**
54. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**
55. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**
56. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (See page IR-36)**
57. **INSTALL FRONT SEAT ASSEMBLY LH (See page SE-20)**
58. **INSTALL FRONT SEAT ASSEMBLY RH (See page IR-36)**
59. **INSTALL FRONT SEAT HEADREST ASSEMBLY (See page IR-36)**
60. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
61. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

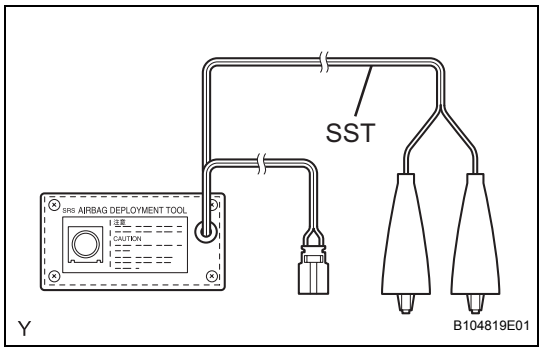
DISPOSAL

HINT:

- Disposal procedure for the RH side is the same as that for the LH side.
- The procedures described below are for the RH side.
- When scrapping a vehicle equipped with the SRS or disposing of a curtain shield airbag, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

- **Never dispose of a curtain shield airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**



1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

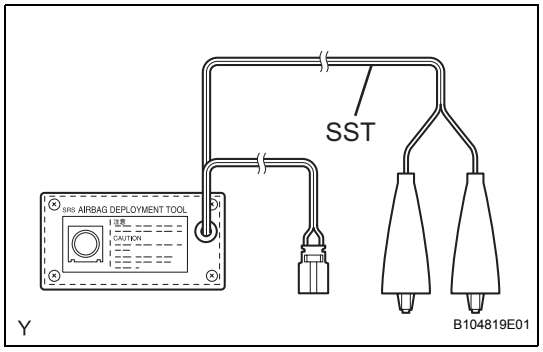
Prepare a battery as the power source to deploy the airbag.

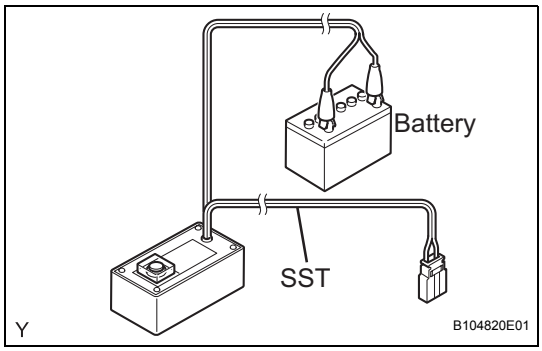
(a) Check the function of SST.

SST 09082-00700

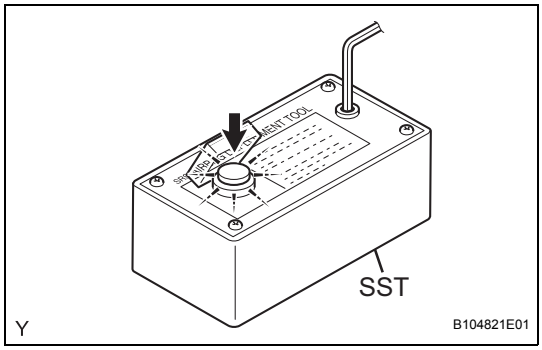
CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



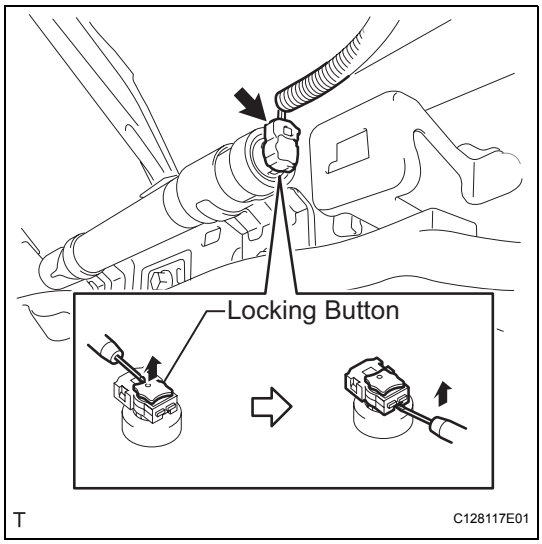
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

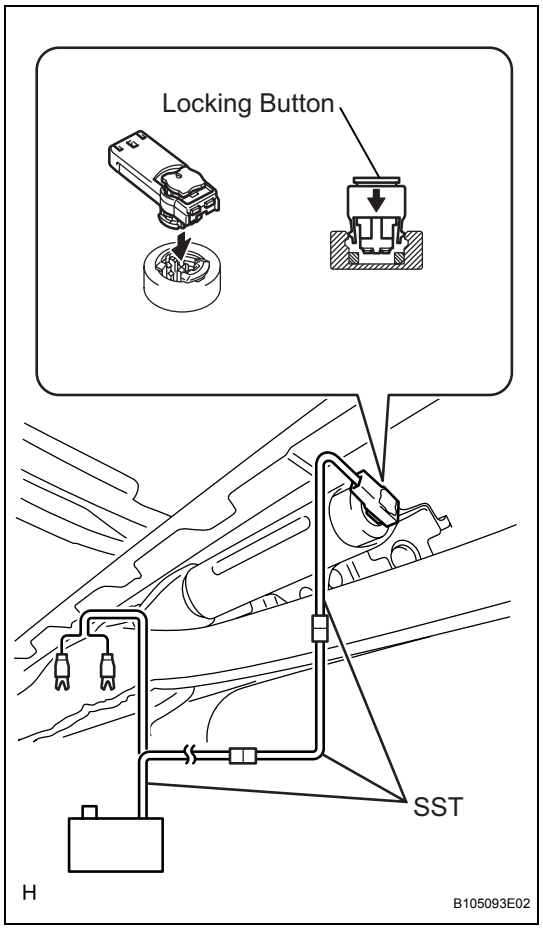
(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

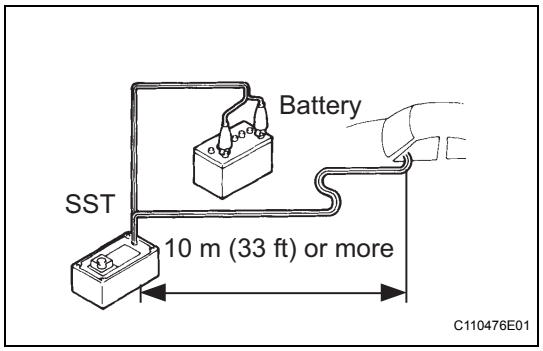
(c) Remove the roof headlining (See page IR-13).

(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.





(e) Connect SST.
SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)
(1) After connecting SST, connect it to the curtain shield airbag.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.
(3) Close all doors and windows of the vehicle.
NOTICE:
Do not damage the SST wire harness.
(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

RS

HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.

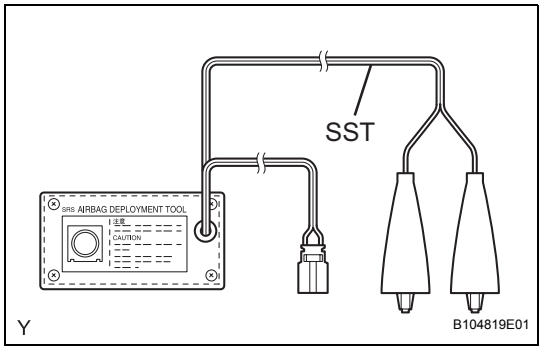
2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

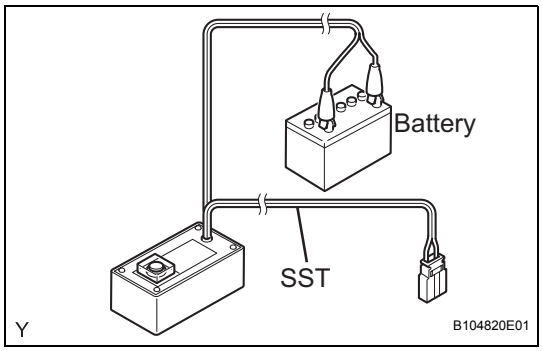
- **Never use the customer's vehicle to deploy the airbag when only disposing of the curtain shield airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

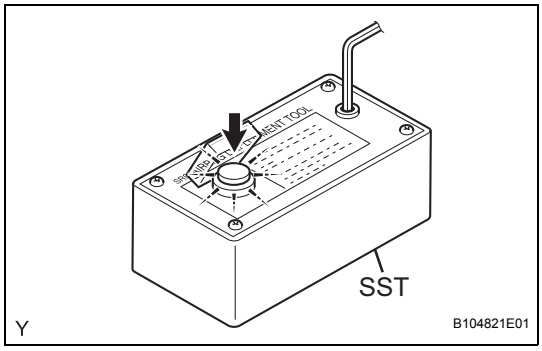
(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

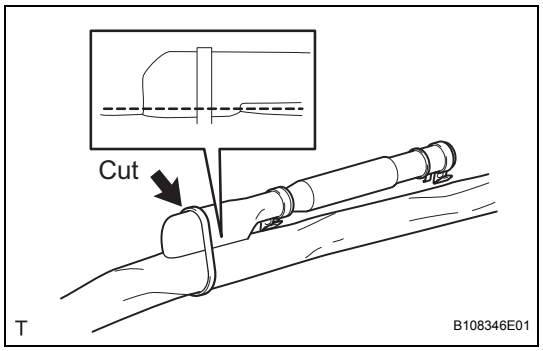


(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

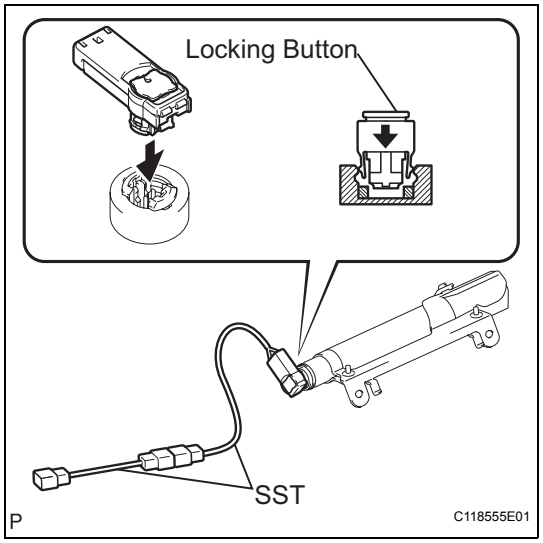


(3) Disconnect SST from the battery.

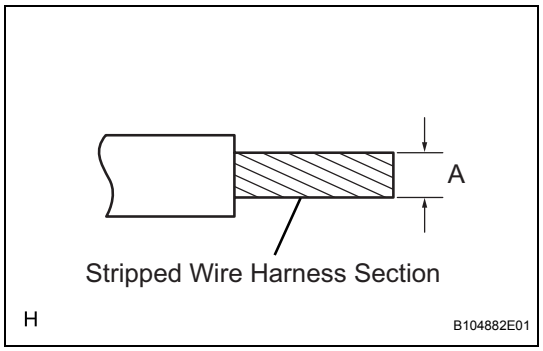
(b) Remove the curtain shield airbag (See page RS-362).



(c) Cut off the deployment section of the curtain shield airbag.



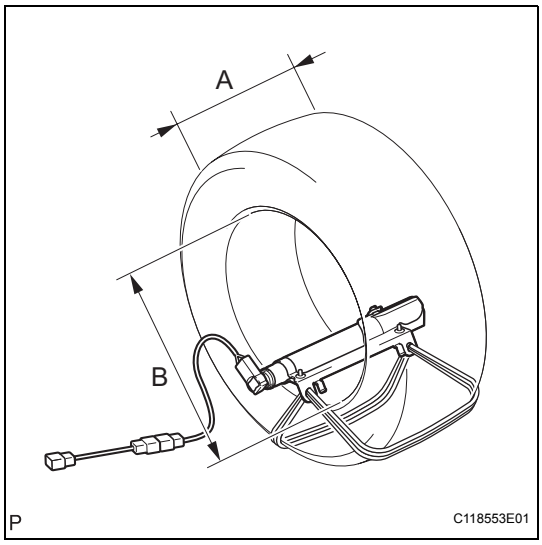
(d) Connect SST.
SST 09082-00802 (09082-10801, 09082-20801)
(1) After connecting SST, connect it to the curtain shield airbag.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(e) Using a service-purpose wire harness for the vehicle, tie the curtain shield airbag to the tire.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
Do not use wire harness is too thin or any other object to tie the curtain shield airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross sectionof at least 1.25 mm^2 (0.0019 in^2).
HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4

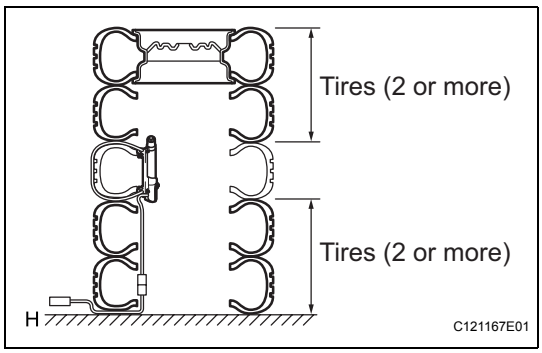


(1) Position the curtain shield airbag inside the tire, as shown in the illustration.

Tire size:

Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:
Make sure that the wire harnesses are tight. If there is any slack in the wire harness, the curtain shield airbag may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airbag deployment, so use a waste tire.



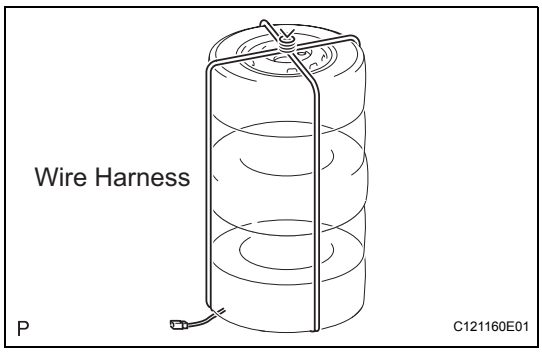
(f) Place the tires.

CAUTION:
Do not place the curtain shield airbag with the deployment direction facing toward the ground.

(1) Place at least 2 tires under the tire to which the curtain shield airbag is tied.

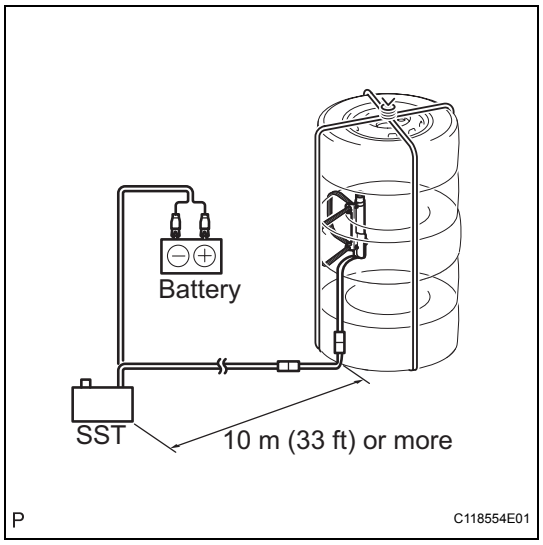
(2) Place at least 2 tires over the tire to which the curtain shield airbag is tied. The disc wheel should be installed onto the top tire.

NOTICE:
Do not place the SST connector under the tire because it could be damaged.



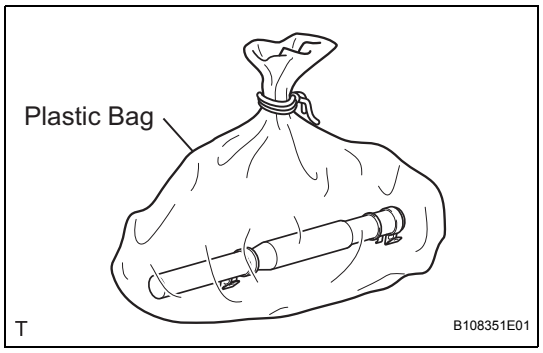
(3) Tie the tires together with 2 wire harnesses.

CAUTION:
Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.



(g) Connect SST.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(h) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tire when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.



(i) Dispose of the curtain shield airbag.
CAUTION:
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**

(1) Remove the curtain shield airbag from the tire.
(2) Place the curtain shield airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

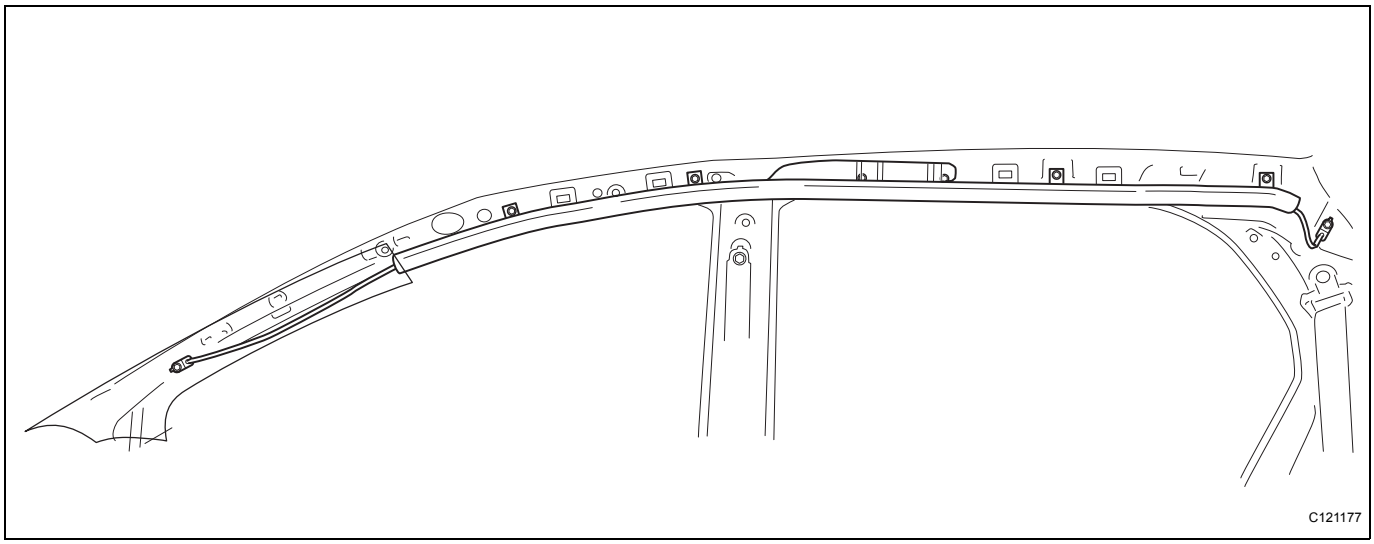
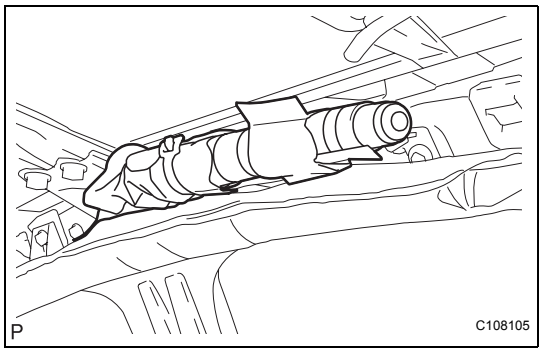
ON-VEHICLE INSPECTION

1. **INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the curtain shield airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front pillar garnish or roof headlining with a new one:
   Any cuts, minute cracks or marked discoloration on the front pillar garnish and roof headlining around the curtain shield airbag.





2. **INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For curtain shield airbag removal and installation procedures, see pages RS-386 and RS-390, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the curtain shield airbag removed from the vehicle, as mentioned below, replace the curtain shield airbag with a new one:
   - Any cuts, minute cracks or marked discoloration on the curtain shield airbag.
   - Any cracks or other damage to the connector.

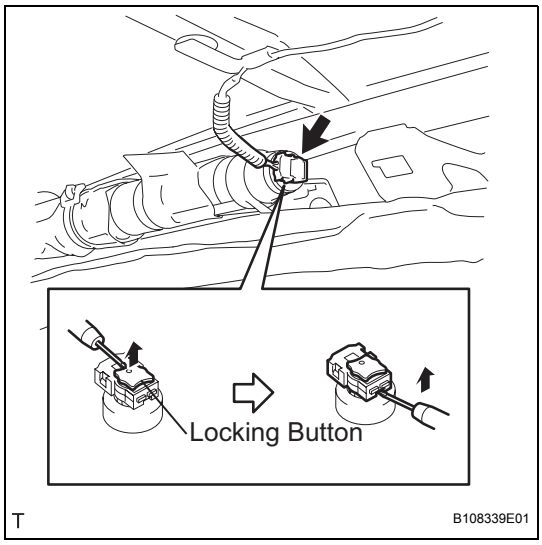
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-48)**
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Bench Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Bench Seat Type) (See page SE-115)**
12. **REMOVE REAR DECK TRIM COVER (See page IR-49)**
13. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)**
14. **REMOVE FRONT DOOR SCUFF PLATE LH**
    HINT:
    Use the same procedure as for the RH side.
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)**
16. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)**
17. **REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)**
18. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)**

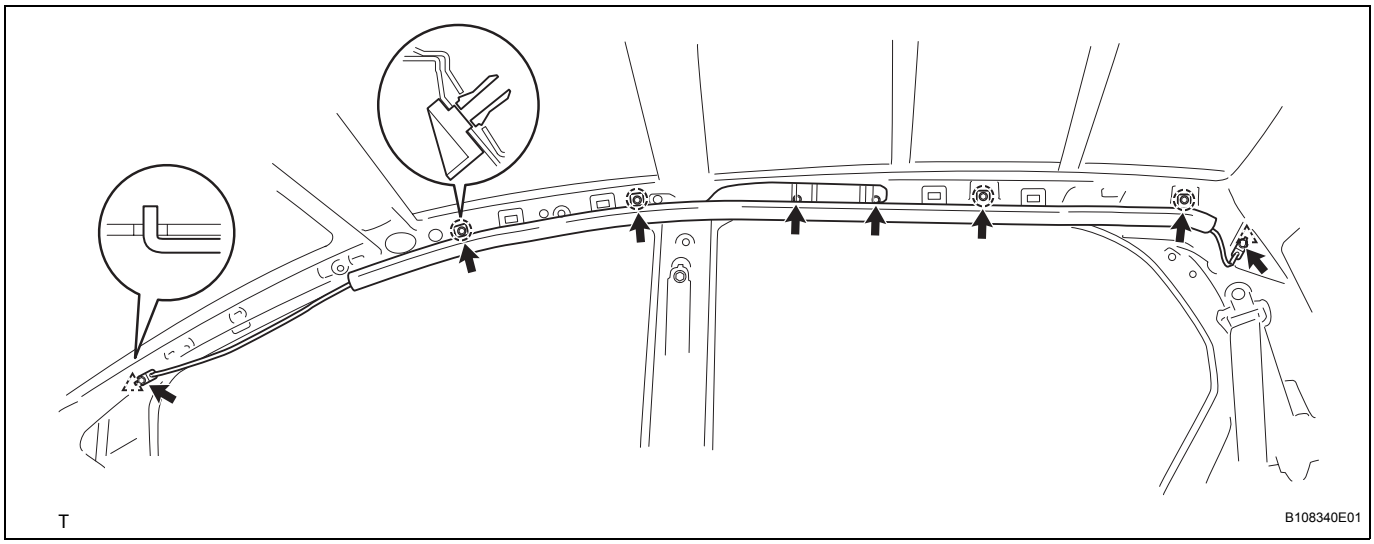
19. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
20. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-50)**
21. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-51)**
22. **REMOVE REAR DOOR SCUFF PLATE LH**
    HINT:
    Use the same procedure as for the RH side.
23. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-51)**
24. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    HINT:
    Use the same procedure as for the RH side.
25. **REMOVE REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-51)**
26. **REMOVE REAR SEAT OUTER BELT ASSEMBLY LH**
    HINT:
    Use the same procedure as for the RH side.
27. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-52)**
28. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-52)**
29. **REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-52)**
30. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-53)**
31. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-54)**
32. **REMOVE SEAT BELT ANCHOR COVER CAP (See page IR-54)**
33. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-51)**
34. **REMOVE FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-55)**
35. **REMOVE CENTER PILLAR LOWER GARNISH RH (See page IR-55)**
36. **REMOVE CENTER PILLAR LOWER GARNISH LH**
    HINT:
    Use the same procedure as for the RH side.
37. **REMOVE CENTER PILLAR UPPER GARNISH RH (See page IR-55)**
38. **REMOVE CENTER PILLAR UPPER GARNISH LH**
    HINT:
    Use the same procedure as for the RH side.

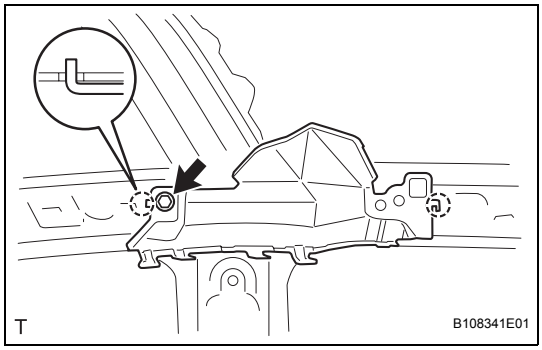
39. **REMOVE SEAT BELT ANCHOR COVER (See page SB-159)**
40. **REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-56)**
41. **REMOVE VISOR ASSEMBLY RH (See page IR-56)**
42. **REMOVE VISOR ASSEMBLY LH**
    HINT:
    Use the same procedure as for the RH side.
43. **REMOVE VISOR HOLDER RH (See page IR-56)**
44. **REMOVE VISOR HOLDER LH**
    HINT:
    Use the same procedure as for the RH side.
45. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-57)**
46. **REMOVE MAP LIGHT ASSEMBLY (See page IR-58)**
47. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
48. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**
49. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
50. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
51. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
52. **REMOVE COMBINATION METER ASSEMBLY (See page ME-146)**
53. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
54. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)**
55. **REMOVE INSTRUMENT UPPER PANEL SUB-ASSEMBLY (See page IP-21)**
56. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
57. **REMOVE ROOF HEADLINING ASSEMBLY (See page IR-61)**



58. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH

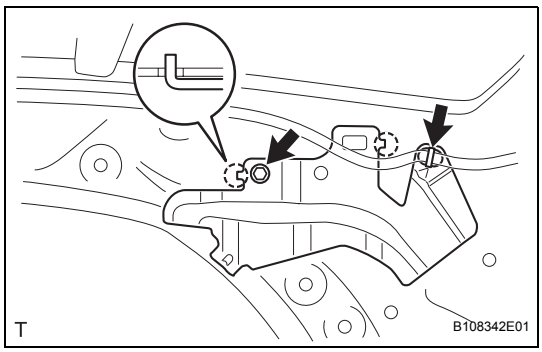
(a) Using a thin-bladed screwdriver, release the locking button.
(b) Using a thin-bladed screwdriver, detach the airbag connector.
(c) Loosen the 2 bolts.
(d) Disengage the 2 hooks.
(e) Remove the 2 bolts and 4 screws.





59. REMOVE CURTAIN SHIELD AIRBAG BRACKET RH

(a) Using a screwdriver, disengage the 2 hooks and remove the curtain shield airbag bracket.

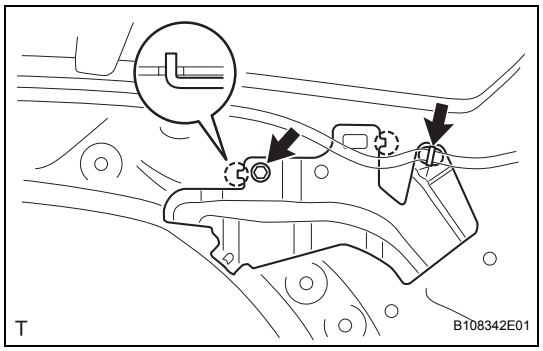


60. REMOVE ROOF SIDE RAIL BRACKET RH

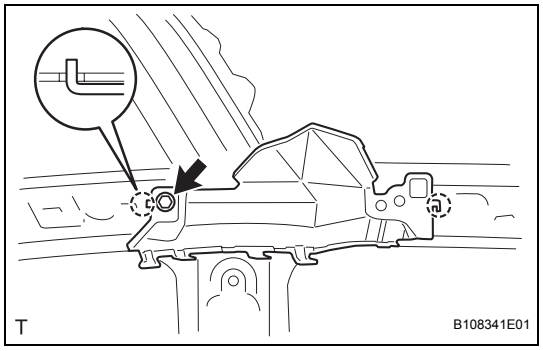
(a) Remove the wire harness clamp.
(b) Remove the bolt, disengage the 2 hooks and remove the roof side rail bracket.

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

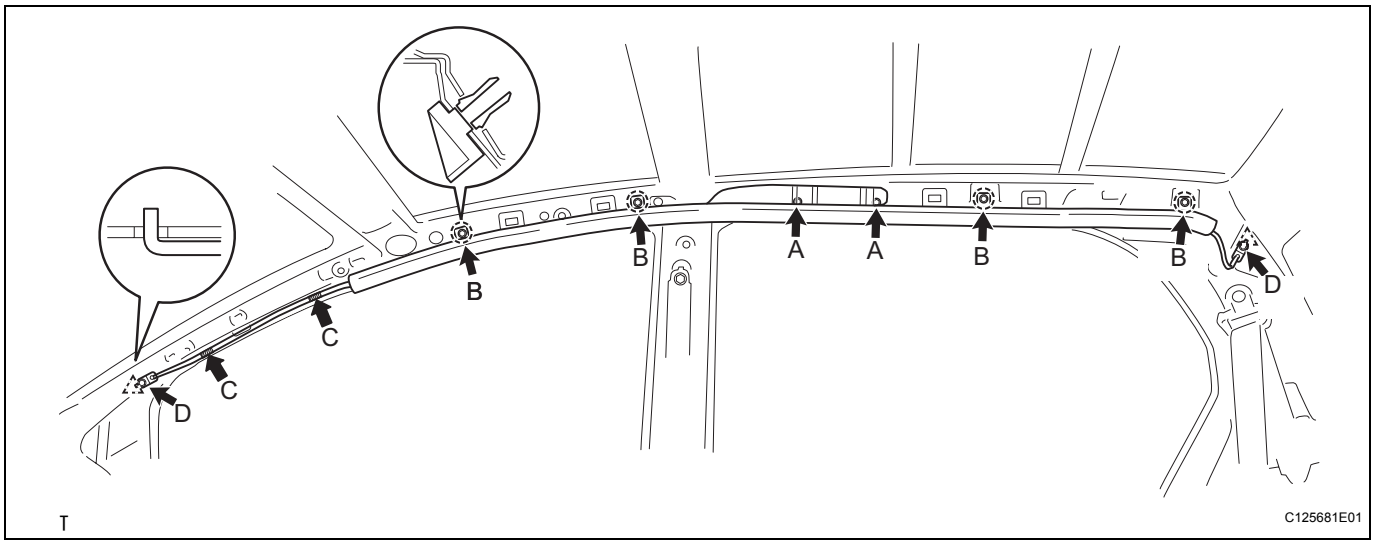


1. **INSTALL ROOF SIDE RAIL BRACKET RH**
   (a) Insert the 2 hooks into the body holes and install the roof side rail bracket.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
   (b) Install the wire harness clamp.

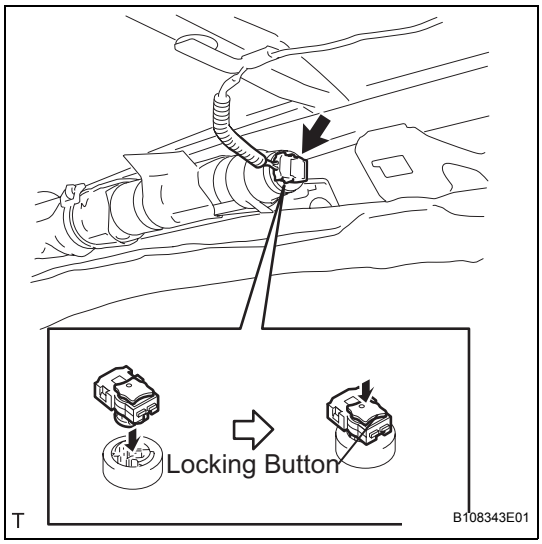


2. **INSTALL CURTAIN SHIELD AIRBAG BRACKET RH**
   (a) Insert the 2 hooks into the body holes and install the curtain shield back bracket.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

3. **INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH**
   (a) Tighten the 2 bolts A.
   Torque: 14 N*m (145 kgf*cm, 10 ft.*lbf)
   (b) Tighten the 4 screws B.



RS



(c) Install the front strap.
NOTICE:
Attach double sided tape to the indicated area, with the strap pulled downward. When installing the strap, make sure that the front pillar garnish installation holes are not hidden by the strap of the curtain shield airbag.

(d) Tighten the 2 bolts D.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

(e) Connect the airbag connector.
NOTICE:
Securely lock the locking button.

4. **INSTALL ROOF HEADLINING ASSEMBLY (See page IR-69)**
5. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
6. **INSTALL INSTRUMENT UPPER PANEL SUB-ASSEMBLY (See page IP-29)**
7. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
8. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
9. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
10. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
13. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
14. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
15. **INSTALL MAP LIGHT ASSEMBLY (See page IR-73)**
16. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-74)**
17. **INSTALL VISOR HOLDER RH (See page IR-75)**
18. **INSTALL VISOR HOLDER LH (See page IR-75)**
19. **INSTALL VISOR ASSEMBLY RH (See page IR-75)**
20. **INSTALL VISOR ASSEMBLY LH (See page IR-75)**
21. **INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-75)**
22. **INSTALL SEAT BELT ANCHOR COVER (See page IR-75)**
23. **INSTALL CENTER PILLAR UPPER GARNISH RH (See page IR-76)**

24. **INSTALL CENTER PILLAR UPPER GARNISH LH (See page IR-76)**
25. **INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-76)**
26. **INSTALL CENTER PILLAR LOWER GARNISH LH (See page IR-76)**
27. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-76)**
28. **INSTALL FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-76)**
29. **INSTALL SEAT BELT ANCHOR COVER CAP (See page IR-76)**
30. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-77)**
31. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-77)**
32. **INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-78)**
33. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (See page IR-79)**
34. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (See page IR-79)**
35. **INSTALL REAR SEAT OUTER BELT ASSEMBLY RH (See page IR-76)**
36. **INSTALL REAR SEAT OUTER BELT ASSEMBLY LH (See page IR-80)**
37. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-80)**
38. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-80)**
39. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)**
40. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-80)**
41. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)**
42. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-81)**
43. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-81)**
44. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-81)**
45. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-81)**

46. **INSTALL INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-82)**
47. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)**
48. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-82)**
49. **INSTALL REAR DECK TRIM COVER (See page IR-82)**
50. **INSTALL REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-84)**
51. **INSTALL REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-102)**
52. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
53. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)**
54. **INSTALL REAR SEATBACK ASSEMBLY (for Bench Seat Type) (See page SE-122)**
55. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Bench Seat Type) (See page SE-123)**
56. **INSTALL DECK FLOOR BOX RH (See page IR-83)**
57. **INSTALL DECK FLOOR BOX LH (See page IR-83)**
58. **INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)**
59. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)**
60. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
61. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

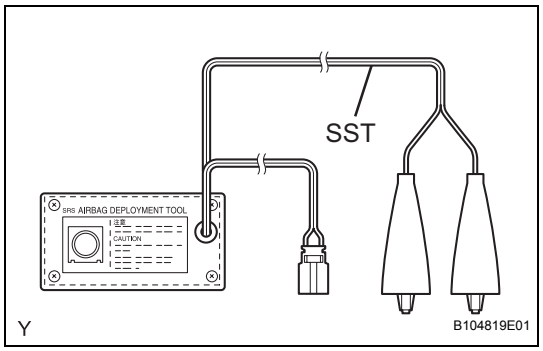
DISPOSAL

HINT:

- Disposal procedure for the RH side is the same as that for the LH side.
- The procedure described below are for the RH side.
- When scrapping a vehicle equipped with the SRS or disposing of a curtain shield airbag, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

- **Never dispose of a curtain shield airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**



1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

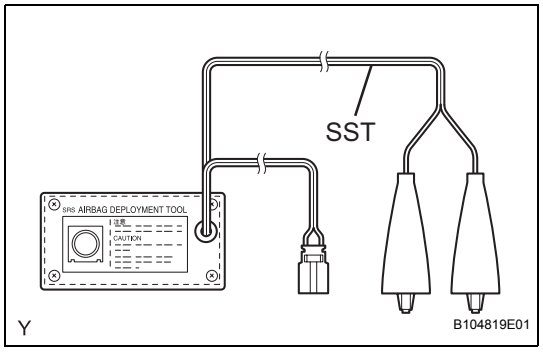
Prepare a battery as the power source to deploy the airbag.

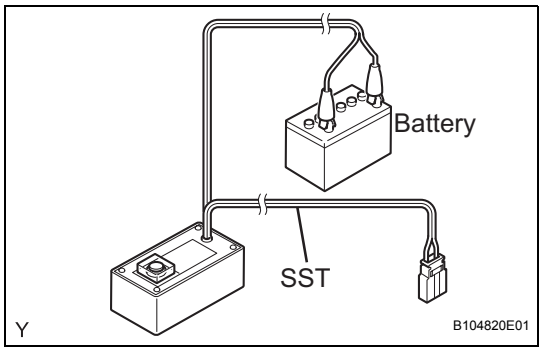
(a) Check the function of SST.

SST 09082-00700

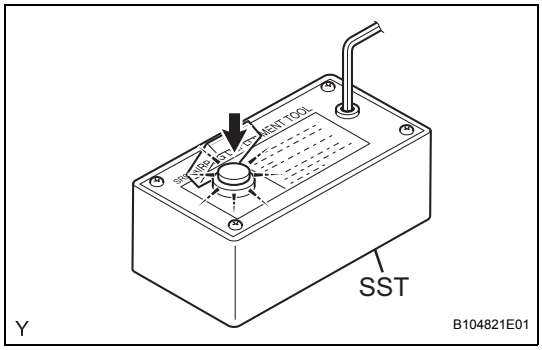
CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



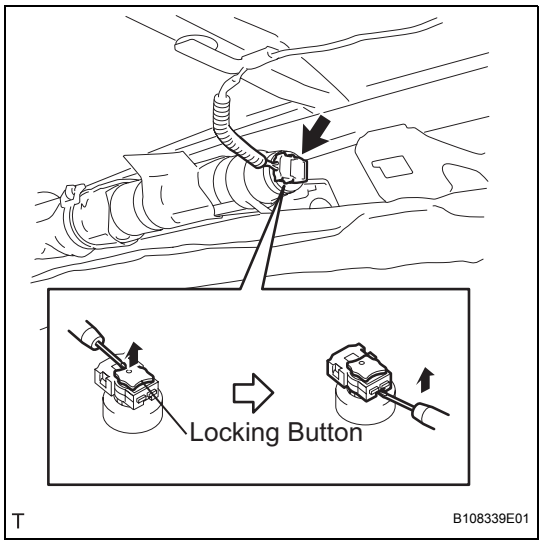
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

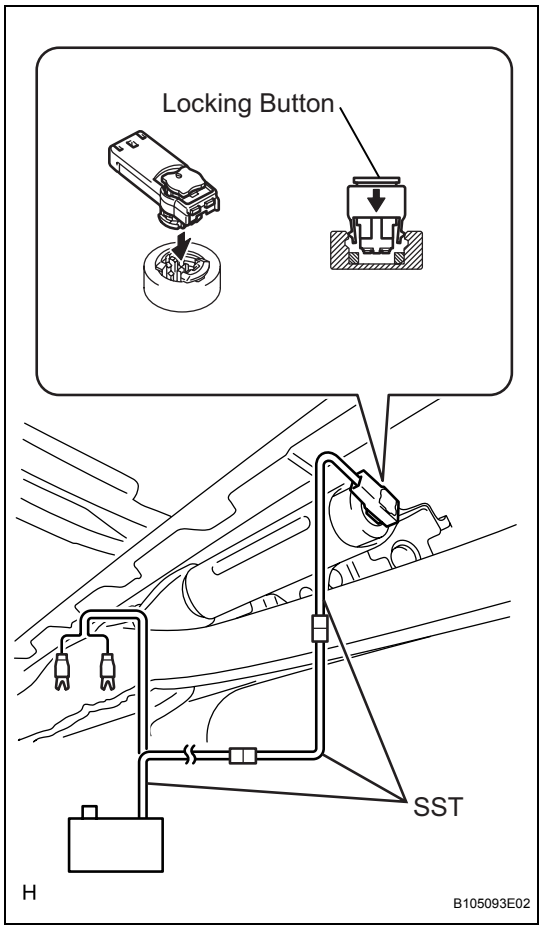
(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

(c) Remove the roof headlining (See page RS-386).

(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.





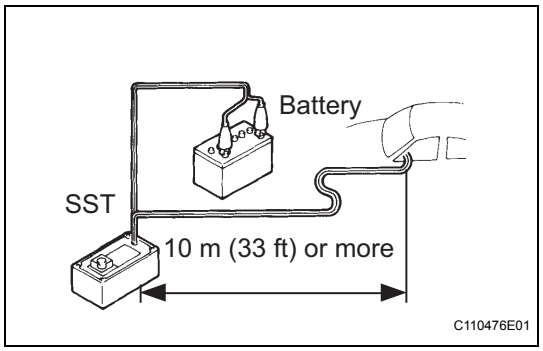
(e) Connect SST.

SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)

(1) After connecting SST, connect it to the curtain shield airbag.

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.

(3) Close all doors and windows of the vehicle.

NOTICE:

Do not damage the SST wire harness.

(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.

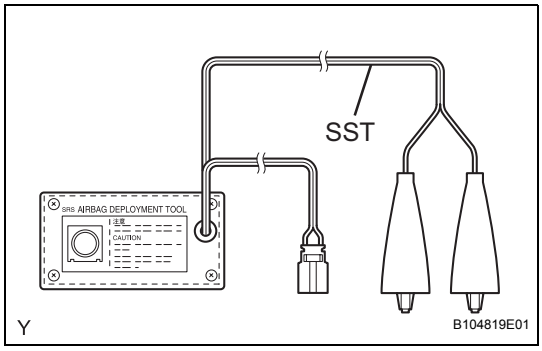
2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

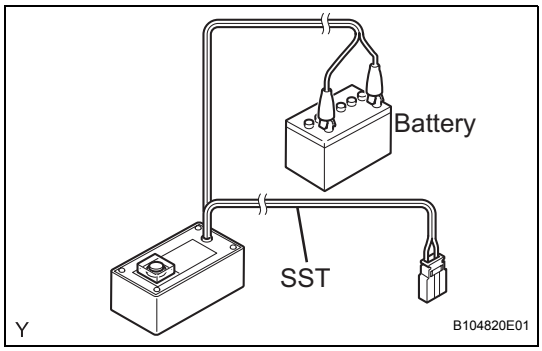
- **Never use the customer's vehicle to deploy the airbag when only disposing of the curtain shield airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

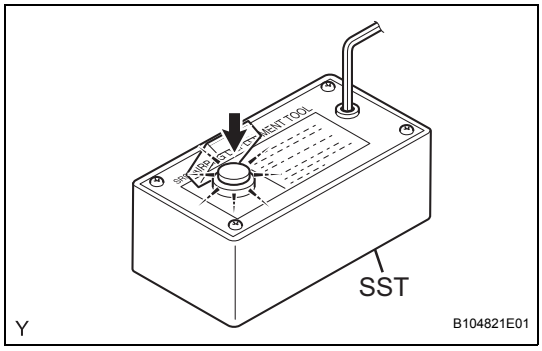
(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

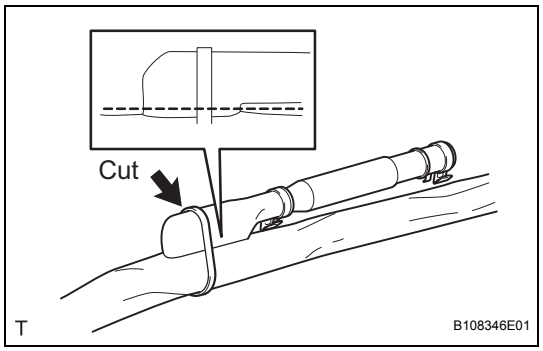


(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

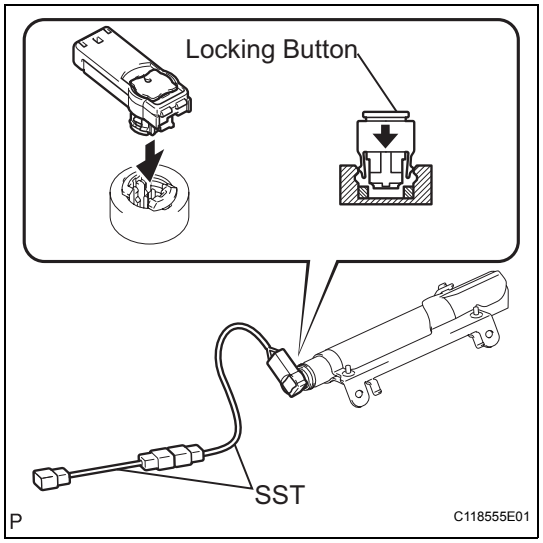


(3) Disconnect SST from the battery.

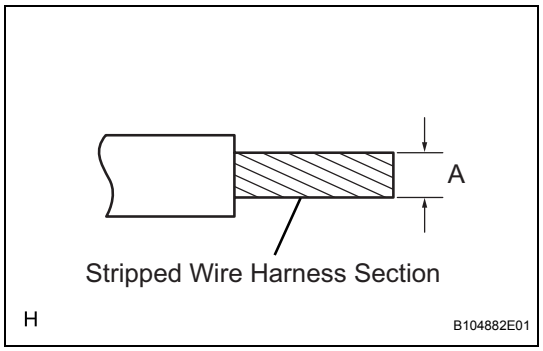
(b) Remove the curtain shield airbag (See page RS-386).



(c) Cut off the deployment section of the curtain shield airbag.



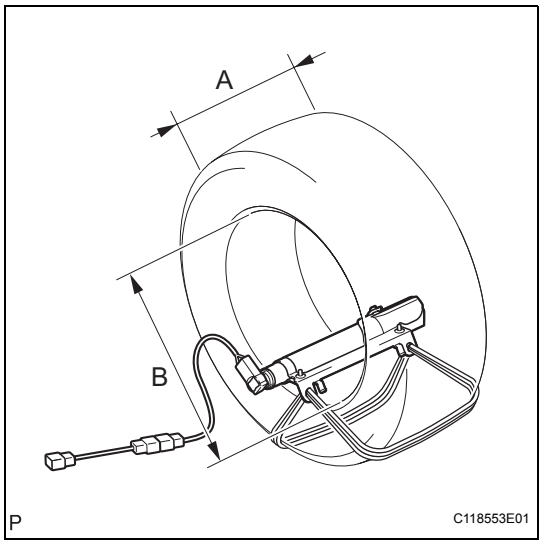
(d) Connect SST.
SST 09082-00802 (09082-10801, 09082-20801)
(1) After connecting SST, connect it to the curtain shield airbag.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(e) Using a service-purpose wire harness for the vehicle, tie the curtain shield airbag to the tire.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
Do not use wire harness that is too thin or any other object to tie the curtain shield airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 in^2).
HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4

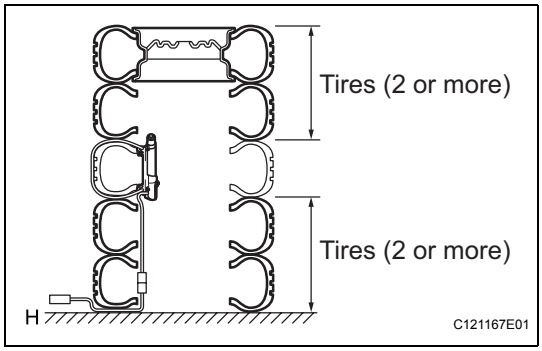


(1) Position the curtain shield airbag inside the tire, as shown in the illustration.

Tire size:

Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:
Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the curtain shield airbag may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airbag deployment, so use a waste tire.

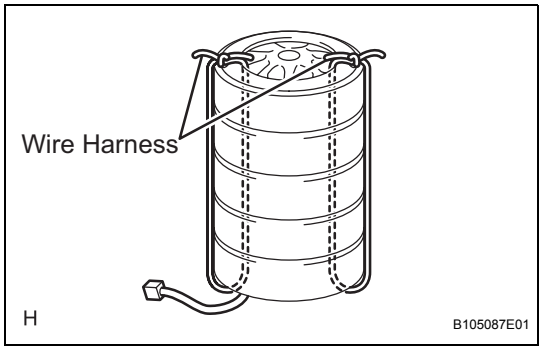


(f) Place the tires.

CAUTION:
Do not place the curtain shield airbag with the deployment direction facing toward the ground.

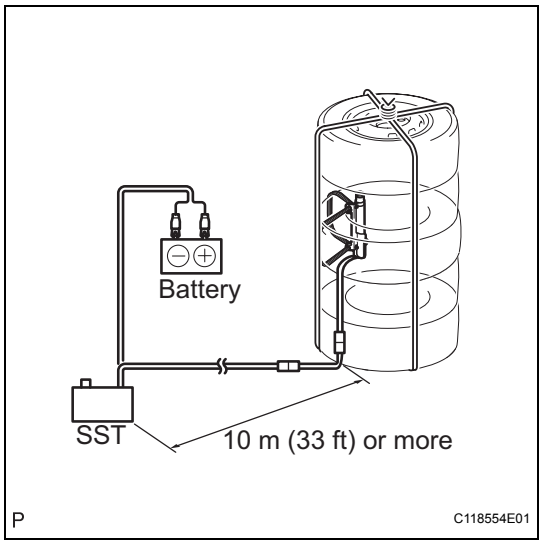
(1) Place at least 2 tires under the tire to which the curtain shield airbag is tied.
(2) Place at least 2 tires over the tire to which the curtain shield airbag is tied. The disc wheel should be installed onto the top tire.

NOTICE:
Do not place the SST connector under the tire because it could be damaged.



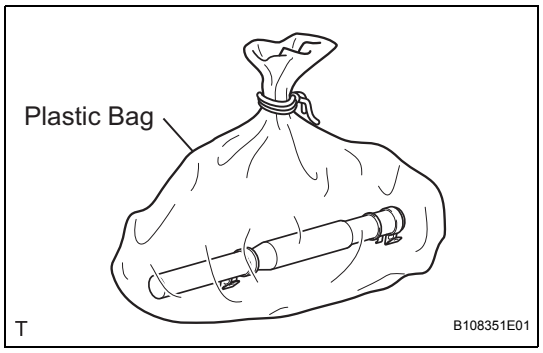
(3) Tie the tires together with 2 wire harnesses.

CAUTION:
Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.



(g) Connect SST.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(h) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tire when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.



(i) Dispose of the curtain shield airbag.
CAUTION:
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**

(1) Remove the curtain shield airbag from the tire.
(2) Place the curtain shield airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

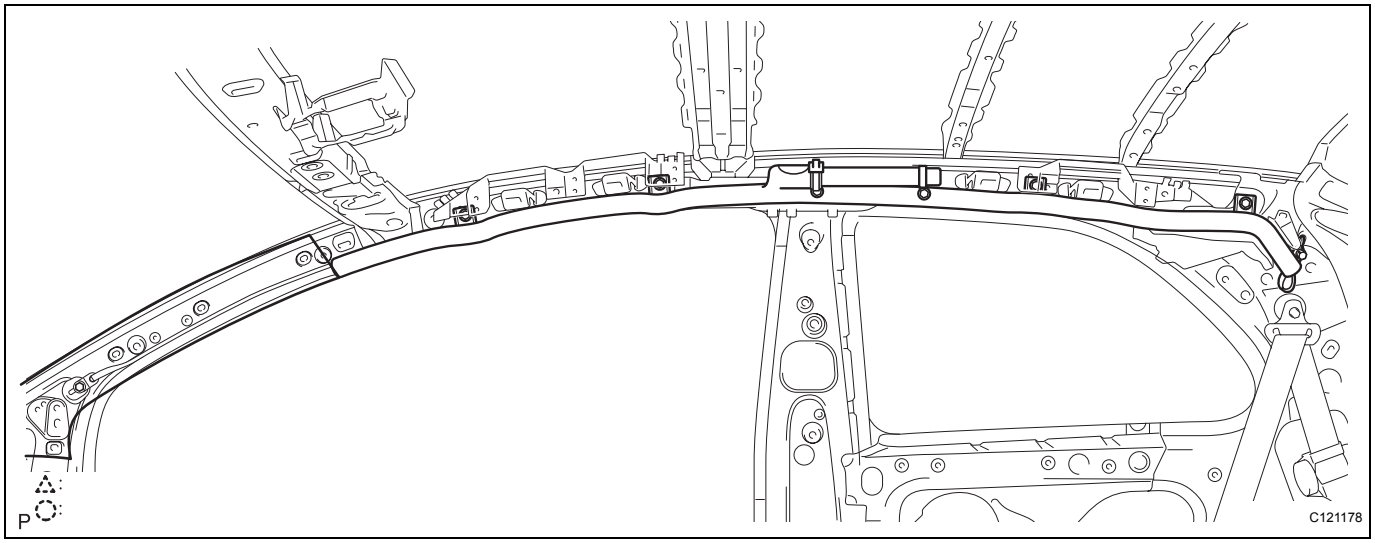
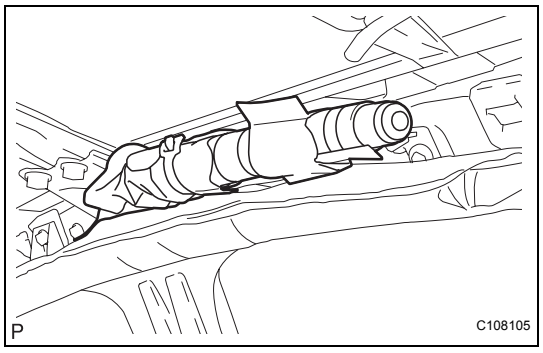
ON-VEHICLE INSPECTION

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)



(a) Perform a diagnostic system check (See page RS-38).

(b) With the curtain shield airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front pillar garnish or roof headlining with a new one:
Any cuts, minute cracks or marked discoloration on the front pillar garnish and roof headlining around the curtain shield airbag.



2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

CAUTION:
For curtain shield airbag removal and installation procedures, see pages RS-409 and RS-413, and carefully follow the correct procedure.

(a) Perform a diagnostic system check (See page RS-38).

(b) With the curtain shield airbag removed from the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the curtain shield airbag with a new one:
- Any cuts, minute cracks or marked discoloration on the curtain shield airbag.
- Any cracks or other damage to the connector.

RS

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-96)**
7. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-97)**
13. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-97)**
14. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY RH (See page IR-50)**
15. **REMOVE INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY LH (See page IR-50)**
16. **REMOVE COWL SIDE TRIM BOARD RH (See page IR-50)**
17. **REMOVE COWL SIDE TRIM BOARD LH (See page IR-50)**

18. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-97)
19. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-97)
20. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-97)
21. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH (See page IR-97)

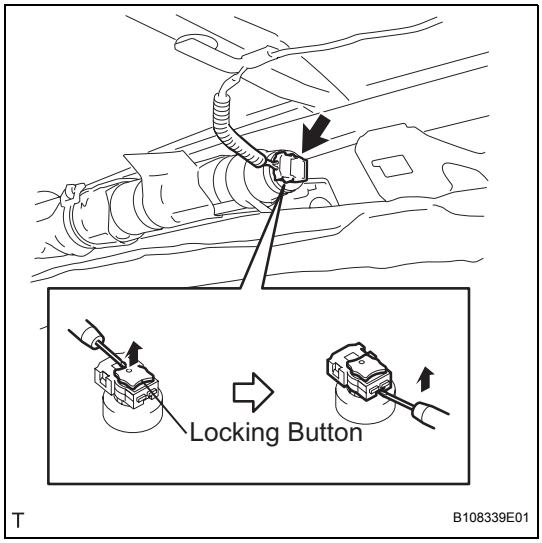
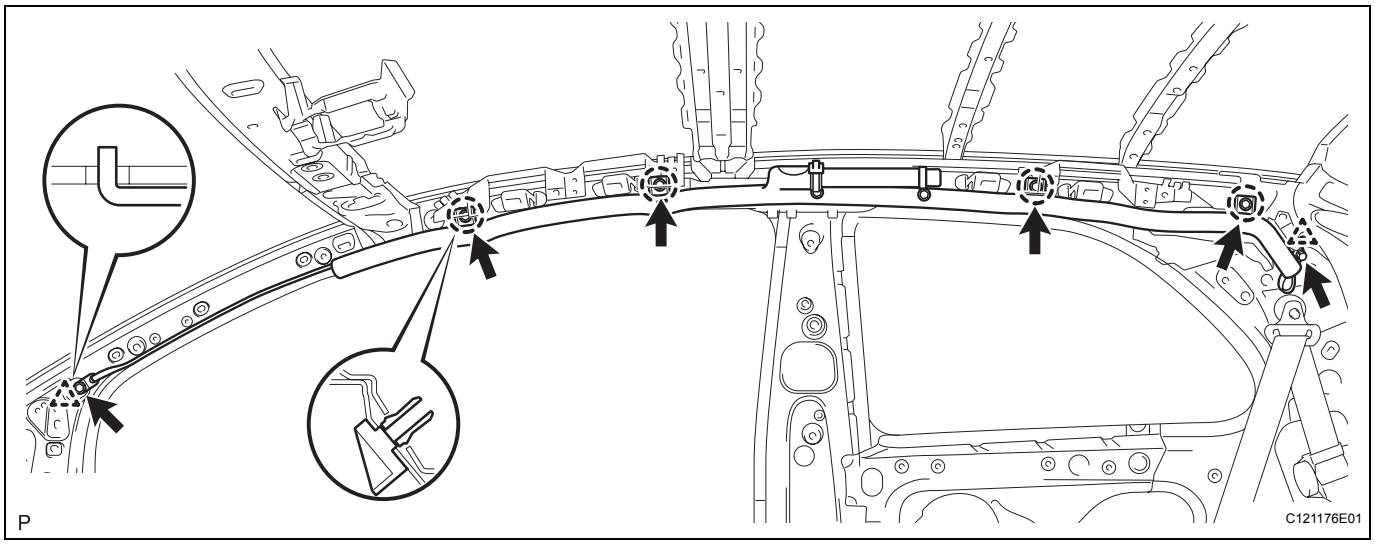
26. REMOVE DECK SIDE TRIM PANEL ASSEMBLY LH (See page IR-98)
27. REMOVE SEAT BELT ANCHOR COVER CAP (See page IR-99)
28. REMOVE FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-99)
29. REMOVE FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-99)
30. REMOVE CENTER PILLAR UPPER GARNISH RH (See page IR-99)
31. REMOVE CENTER PILLAR UPPER GARNISH LH (See page IR-99)
32. REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY (See page IR-52)
33. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-99)
34. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-100)
35. REMOVE REAR ROOF SIDE RAIL GARNISH RH (See page IR-100)
36. REMOVE REAR ROOF SIDE RAIL GARNISH LH (See page IR-100)
37. REMOVE SEAT BELT ANCHOR COVER (See page SB-159)
38. REMOVE ASSIST GRIP COVER (See page IR-55)
39. REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-56)
40. REMOVE VISOR ASSEMBLY RH (See page IR-56)
41. REMOVE VISOR ASSEMBLY LH (See page IR-56)

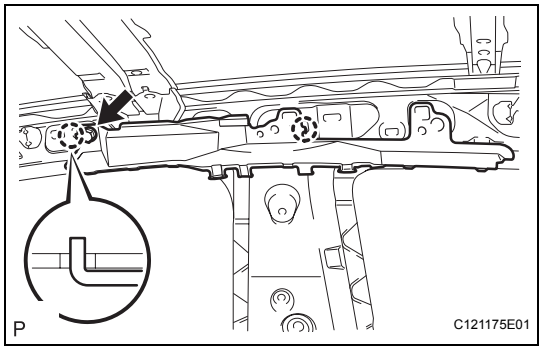
RS

42. **REMOVE VISOR HOLDER RH (See page IR-56)**
43. **REMOVE VISOR HOLDER LH (See page IR-56)**
44. **REMOVE ROOM LIGHT ASSEMBLY (See page IR-57)**
45. **REMOVE MAP LIGHT ASSEMBLY (See page IR-58)**
46. **REMOVE FRONT PILLAR GARNISH RH (See page IR-58)**
47. **REMOVE FRONT PILLAR GARNISH LH (See page IR-59)**
48. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-145)**
49. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page ME-145)**
50. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-145)**
51. **REMOVE COMBINATION METER ASSEMBLY (See page ME-146)**
52. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
53. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-20)**
54. **REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-21)**
55. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
56. **REMOVE ROOF HEADLINING ASSEMBLY (See page IR-101)**
57. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH**
    (a) Using a thin-bladed screwdriver, release the locking button.
    (b) Using a thin-bladed screwdriver, detach the airbag connector.
    (c) Loosen the 2 bolts.
    (d) Disengage the 2 hooks.
    (e) Remove the 2 bolts and 4 screws.



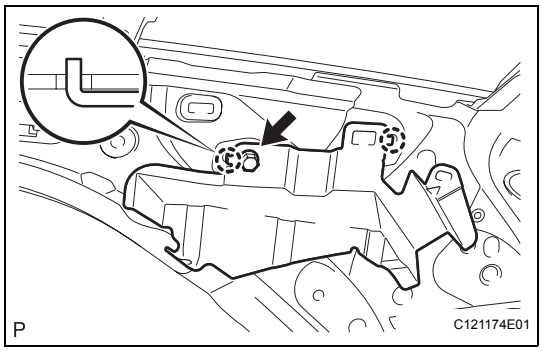
(f) Using a screwdriver, disengage the 4 clips and remove the curtain airbag.





58. REMOVE CURTAIN SHIELD AIRBAG BRACKET RH

(a) Remove the bolt, disengage the 2 hooks and remove the curtain shield airbag bracket.



59. REMOVE ROOF SIDE RAIL BRACKET RH

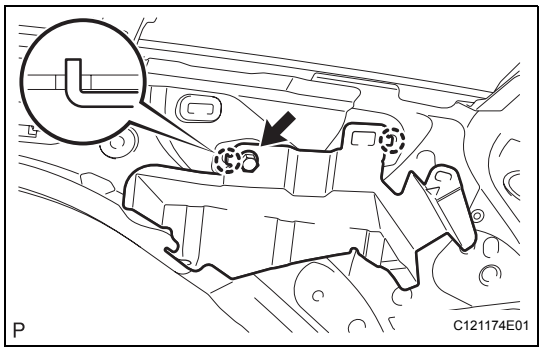
(a) Remove the wire harness clamp.

(b) Remove the bolt, disengage the 2 hooks and remove the roof side rail bracket.

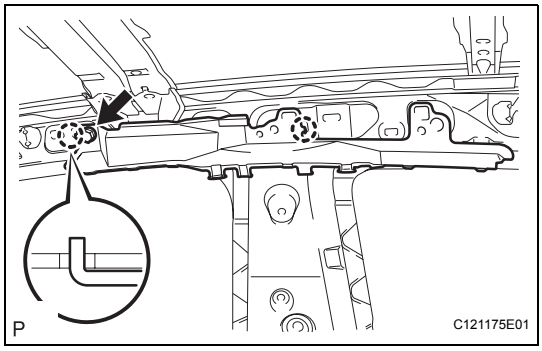
RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

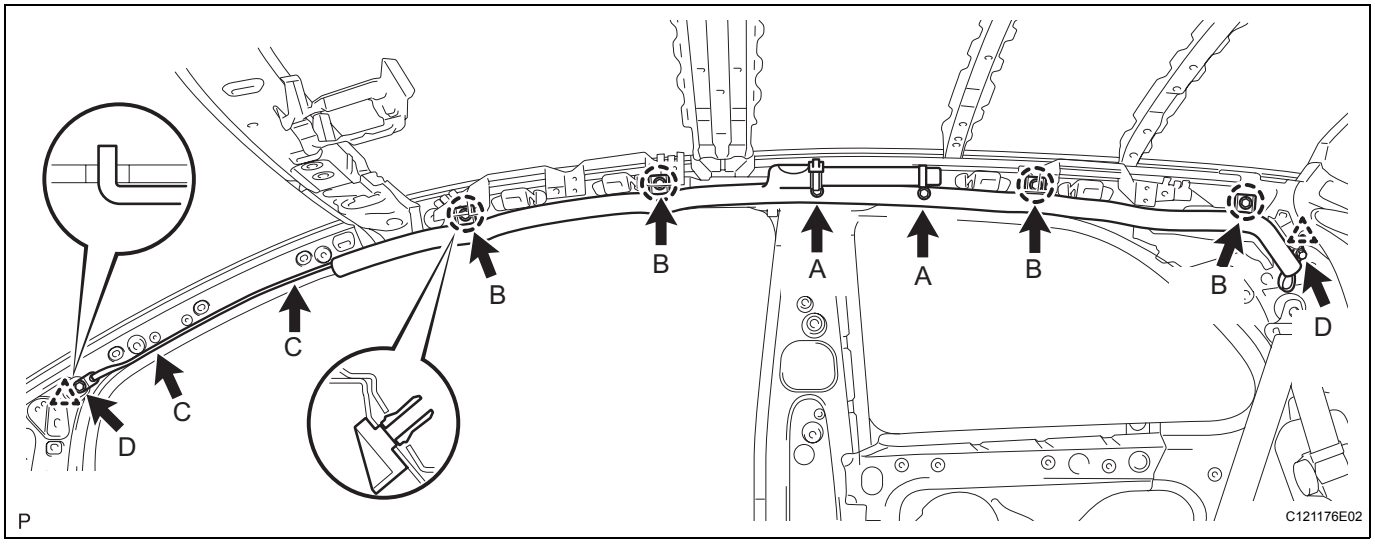


1. INSTALL ROOF SIDE RAIL BRACKET RH
(a) Insert the 2 hooks into the body holes and install the roof side rail bracket.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(b) Install the wire harness clamp.



2. INSTALL CURTAIN SHIELD AIRBAG BRACKET RH
(a) Insert the 2 hooks into the body holes and install the curtain shield airbag bracket.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

3. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH
(a) Tighten the 2 bolts A.
Torque: 14 N*m (145 kgf*cm, 10 ft.*lbf)
(b) Tighten the 4 screws B.
(c) Install front strap C.
NOTICE:
Attach double sided tape to the indicated area, with the strap pulled downward. When installing the strap, make sure that the front pillar garnish installation holes are not hidden by the strap of the curtain shield airbag.



(d) Tighten the 2 bolts D.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

(e) Connect the airbag connector.
NOTICE:
Lock the locking button securely.

4. **INSTALL ROOF HEADLINING ASSEMBLY (See page IR-113)**
5. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
6. **INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-29)**
7. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-32)**
8. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-32)**
9. **INSTALL COMBINATION METER ASSEMBLY (See page ME-148)**
10. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-148)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page ME-149)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page ME-149)**
13. **INSTALL FRONT PILLAR GARNISH RH (See page IR-71)**
14. **INSTALL FRONT PILLAR GARNISH LH (See page IR-72)**
15. **INSTALL MAP LIGHT ASSEMBLY (See page IR-73)**
16. **INSTALL ROOM LIGHT ASSEMBLY (See page IR-74)**
17. **INSTALL VISOR HOLDER RH (See page IR-75)**
18. **INSTALL VISOR HOLDER LH (See page IR-75)**
19. **INSTALL VISOR ASSEMBLY RH (See page IR-75)**

20. **INSTALL VISOR ASSEMBLY LH (See page IR-75)**
21. **INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-75)**
22. **INSTALL SEAT BELT ANCHOR COVER (See page IR-75)**
23. **INSTALL REAR ROOF SIDE RAIL GARNISH RH (See page IR-115)**
24. **INSTALL REAR ROOF SIDE RAIL GARNISH LH (See page IR-115)**

RS

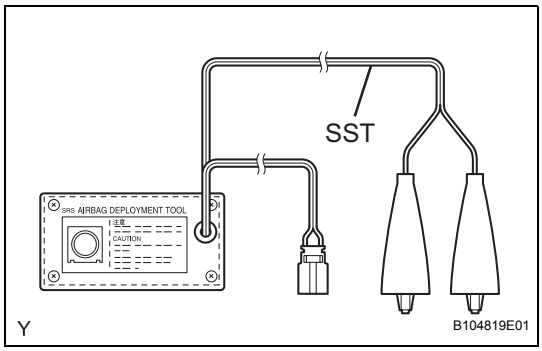
DISPOSAL

HINT:

- Disposal procedure for the RH side is the same as that for the LH side.
- The procedure described below is for the RH side.
- When scrapping a vehicle equipped with the SRS or disposing of a curtain shield airbag, deploy the airbag first, in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

- **Never dispose of a curtain shield airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**



1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

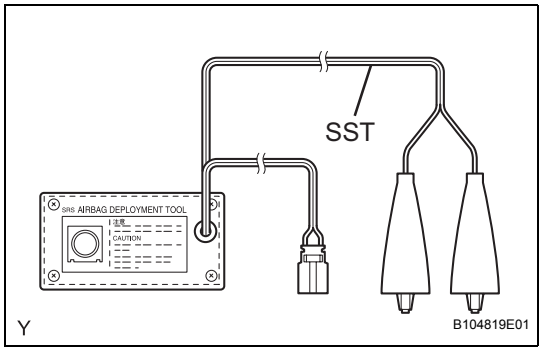
Prepare a battery as the power source to deploy the airbag.

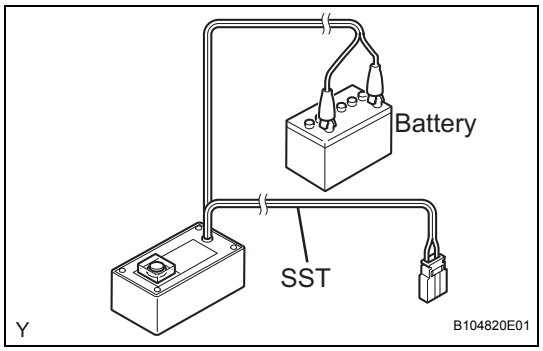
(a) Check the function of SST.

SST 09082-00700

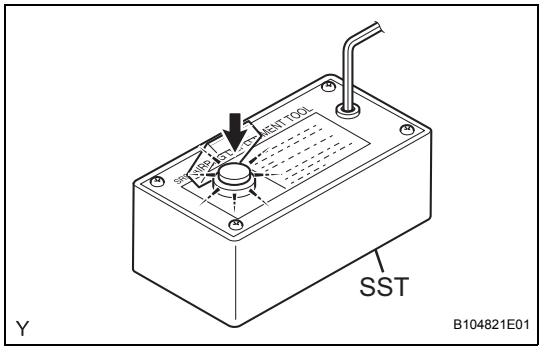
CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



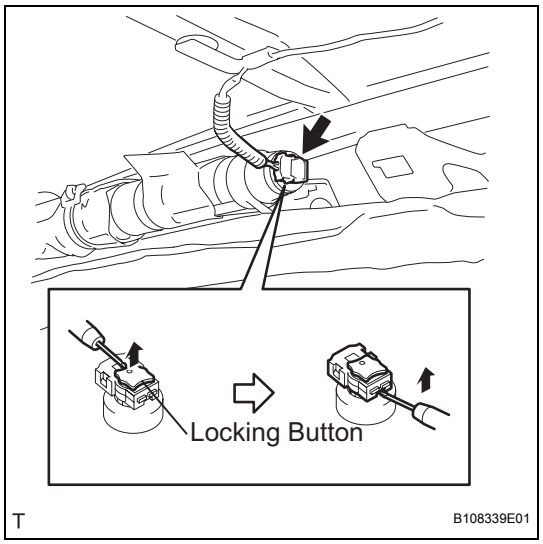
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
NOTICE:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

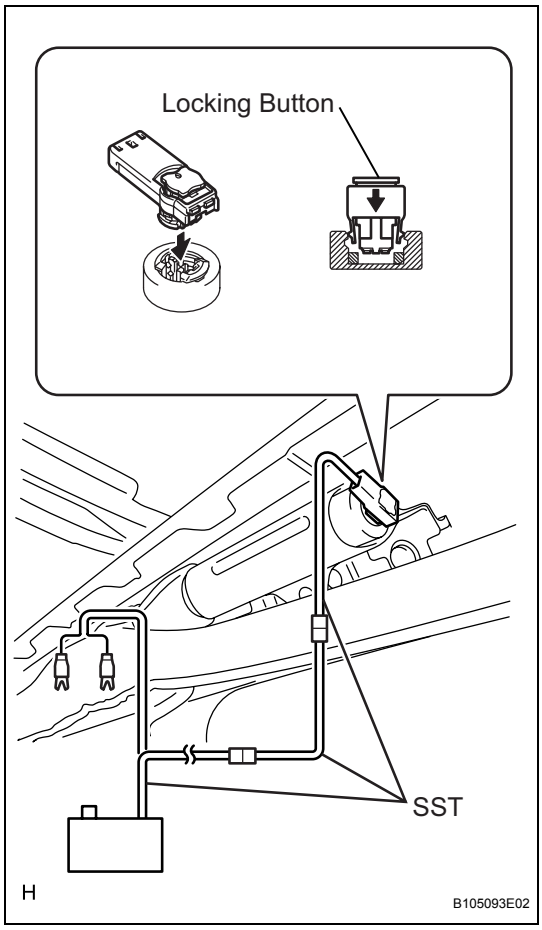
(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

(c) Remove the roof headlining (See page IR-96).

(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.





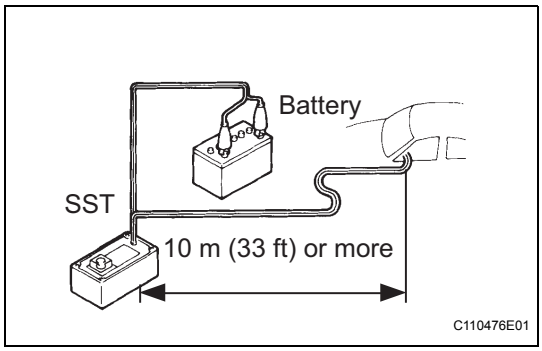
(e) Connect SST.

SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)

(1) After connecting SST, connect it to the curtain shield airbag.

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.

(3) Close all doors and windows of the vehicle.

NOTICE:

Do not damage the SST wire harness.

(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.

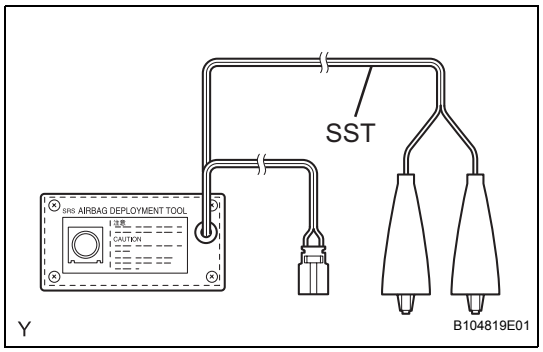
2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

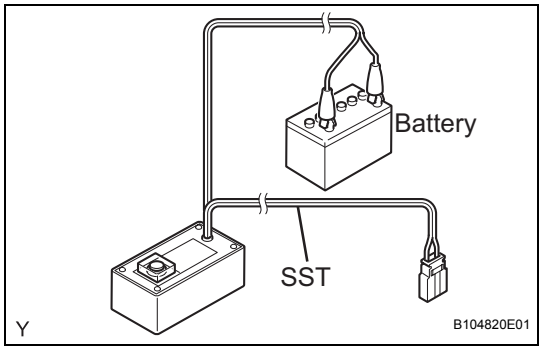
- **Never use the customer's vehicle to deploy the airbag when disposing of a curtain shield airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.

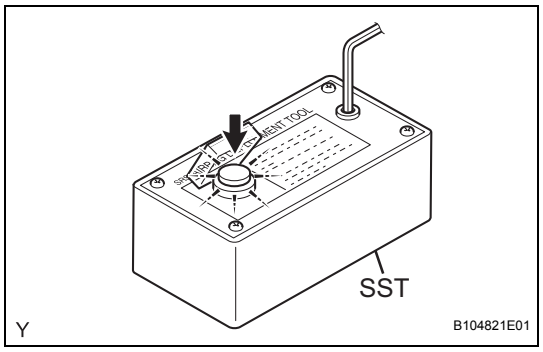


(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



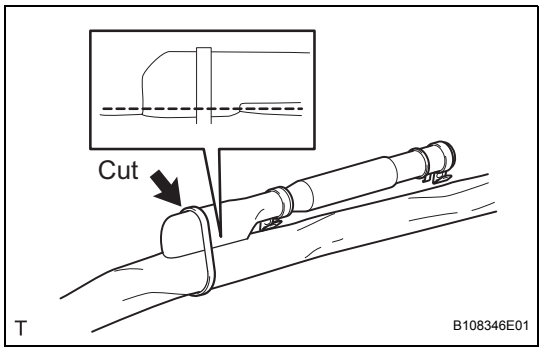
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
NOTICE:

- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not pressed, SST may be malfunctioning. Do not use SST.**

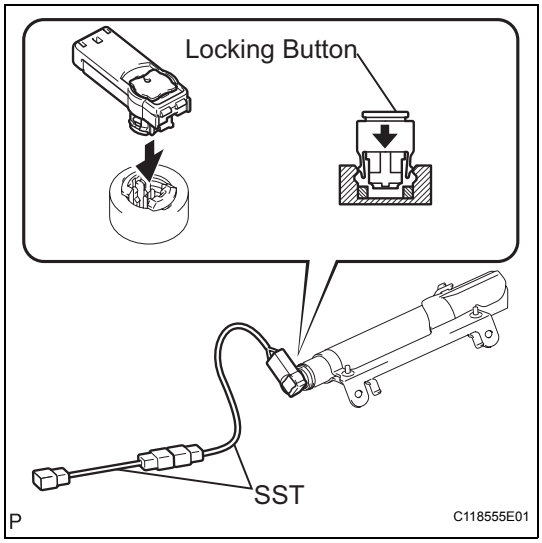


(3) Disconnect SST from the battery.

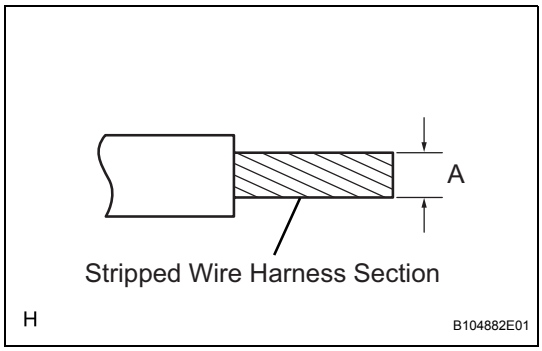
(b) Remove the curtain shield airbag (see page RS-409).



(c) Cut off the deployment section of the curtain shield airbag.



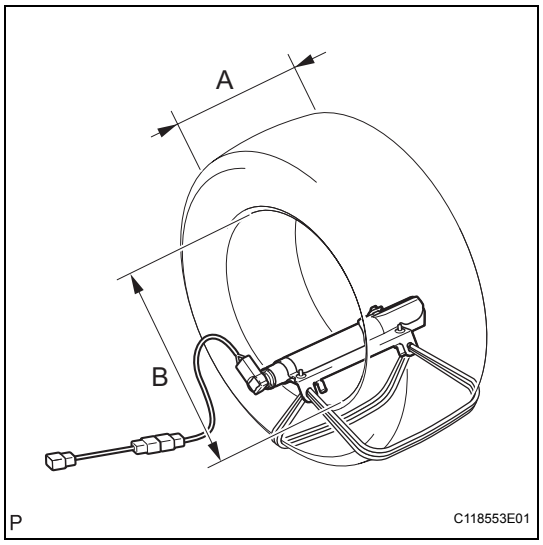
(d) Connect SST.
SST 09082-00802 (09082-10801, 09082-20801)
(1) After connecting SST, connect it to the curtain shield airbag.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(e) Using a service-purpose wire harness for the vehicle, tie the curtain shield airbag to the tire.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
Do not use wire harness that is too thin or any other object to tie the curtain shield airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4

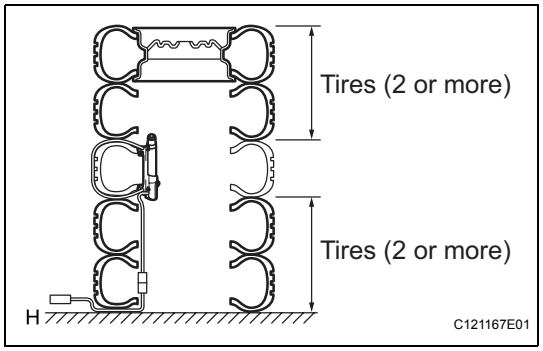


(1) Position the curtain shield airbag inside the tire, as shown in the illustration.

Tire size:

Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:
Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the curtain shield airbag may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airgbag deployment, so use a waste tire.

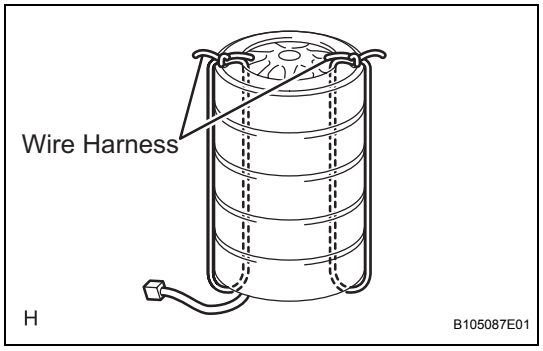


(f) Place the tires.

CAUTION:
Do not place the curtain shield airbag with the deployment direction facing toward the ground.

(1) Place at least 2 tires under the tire to which the curtain shield airbag is tied.
(2) Place at least 2 tires over the tire to which the curtain shield airbag is tied. The disc wheel should be installed on the top tire.

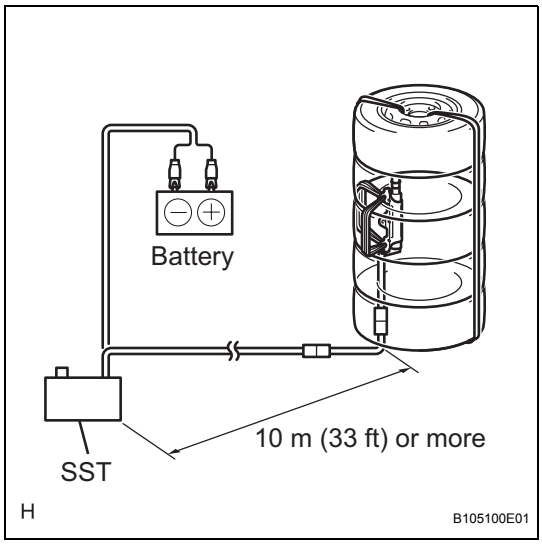
NOTICE:
Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with 2 wire harnesses.

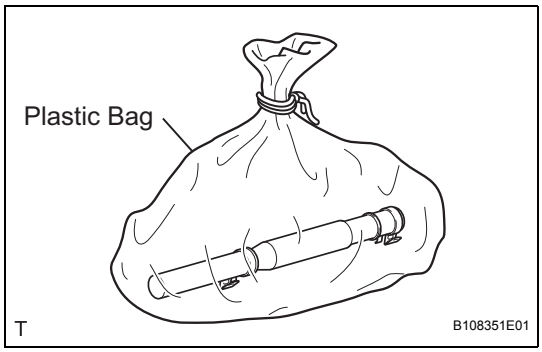
CAUTION:
Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.

RS



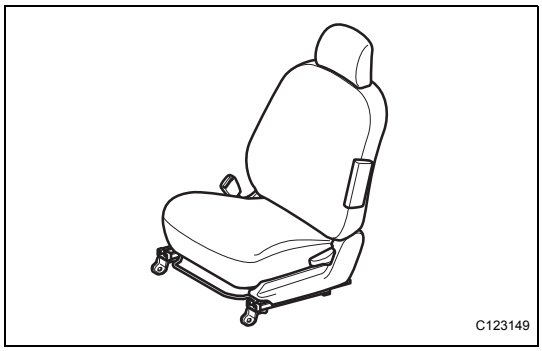
(g) Connect SST.
SST 09082-00700
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness. Also, secure some slack for the SST wire harness inside the tire.

(h) Deploy the airbag.
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag is tied.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
Make sure that no one is near the tire when deploying the airbag.
HINT:
The airbag is deployed as the LED of the SST activation switch illuminates.



(i) Dispose of the curtain shield airbag.
CAUTION:
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a curtain shield airbag which has been deployed.**

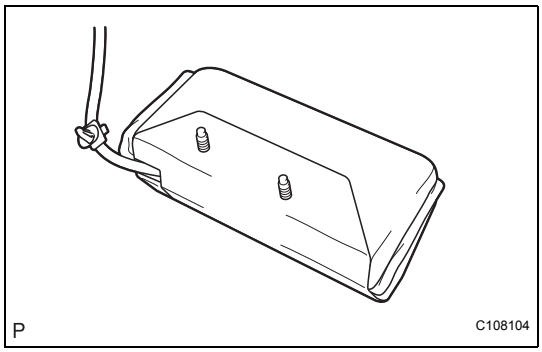
(1) Remove the curtain shield airbag from the tire.
(2) Place the curtain shield airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.



FRONT SEAT SIDE AIRBAG ASSEMBLY

ON-VEHICLE INSPECTION

1. **INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the front seat side airbag installed on the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front seat side airbag with a new one:
   Any cuts, minute cracks or marked discoloration on the front seat airbag.



2. **INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (See page RS-38).
   (b) With the front seat side airbag removed from the vehicle, perform a visual check. If there are any defects, such as those mentioned below, replace the front seat side airbag with a new one:
   - Any cuts, minute cracks or marked discoloration on the front seat airbag.
   - Any cracks or other damage to the wire harness or connector.

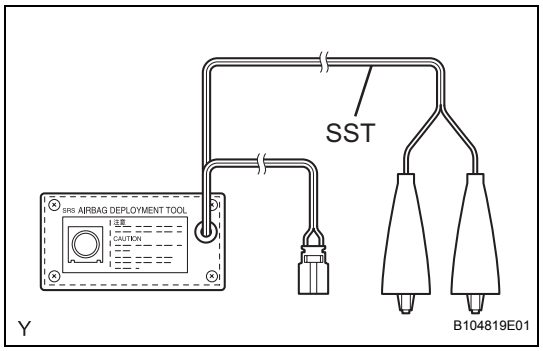
DISPOSAL

HINT:

- Disposal procedure for the RH side is the same as that for the LH side.
- The procedure described below is for the LH side.
- When scrapping a vehicle equipped with the SRS or disposing of the front seat side airbag, deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR.

CAUTION:

- **Never dispose of a front seat side airbag that has an undeployed airbag.**
- **The airbag emits an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the airbag.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat airbag which has been deployed.**



1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

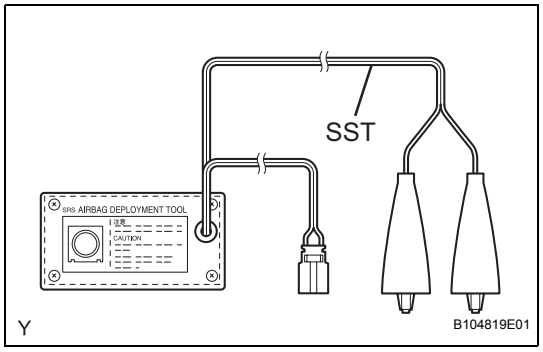
Prepare a battery as the power source to deploy the airbag.

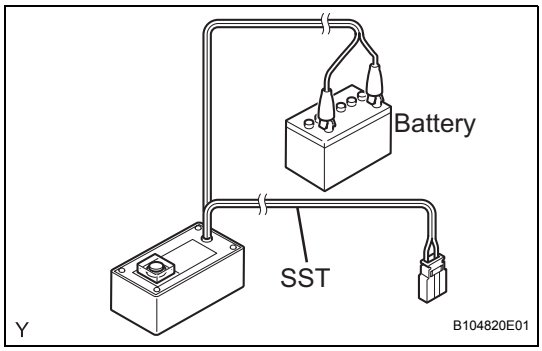
(a) Check the function of SST.

SST 09082-00700

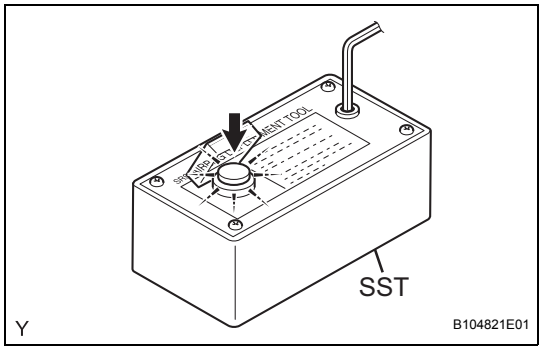
CAUTION:

Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.





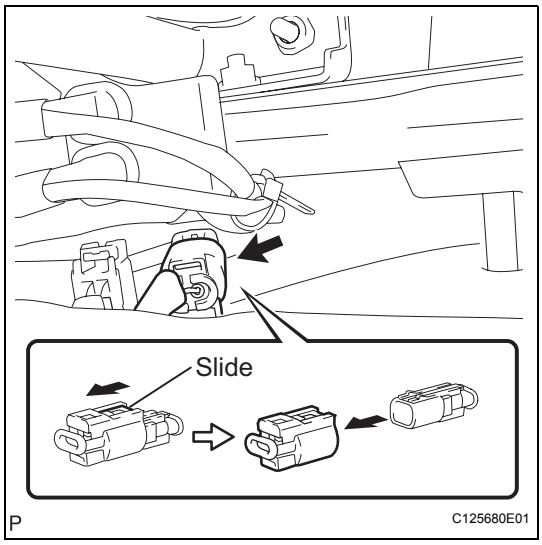
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not to use SST.**

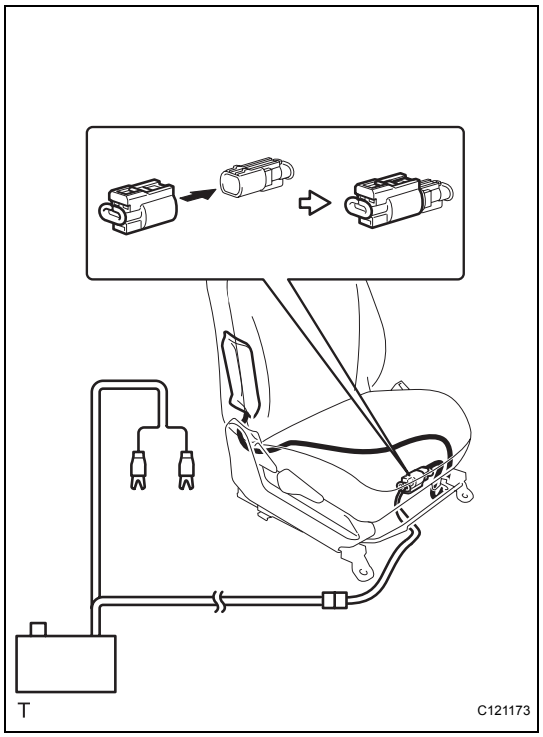
(3) Disconnect SST from the battery.

(b) Disconnect the cable from the negative battery terminal.

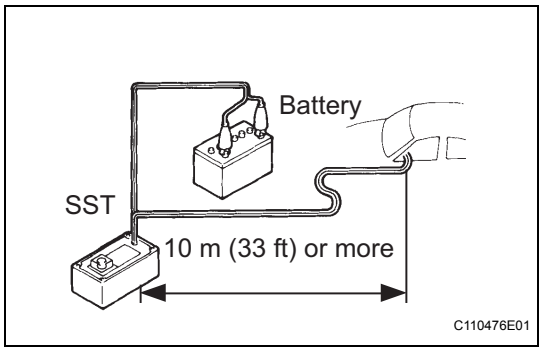


(c) Remove the connector clamp.

(d) Disconnect the airbag connector, as shown in the illustration.
NOTICE:
Do not damage the airbag wire harness when handling the airbag connector.



(e) Connect SST.
SST 09082-00700, 09082-00810
(1) Connect the SST connector to the front seat side airbag.
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging SST connector and wire harness.



(2) Move SST to at least 10 m (33 ft) away from the vehicle.
(3) Close all doors and windows of the vehicle.
NOTICE:
Do not damage the SST wire harness.
(4) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.

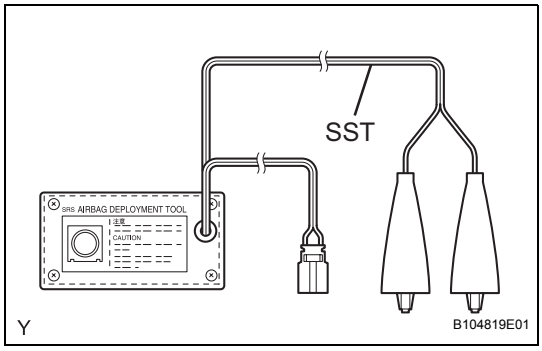
(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **Make sure that no one is near the vehicle when deploying the airbag.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag which has been deployed.**
- **Do not apply water, etc. to a front seat side airbag which has been deployed.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch illuminations.

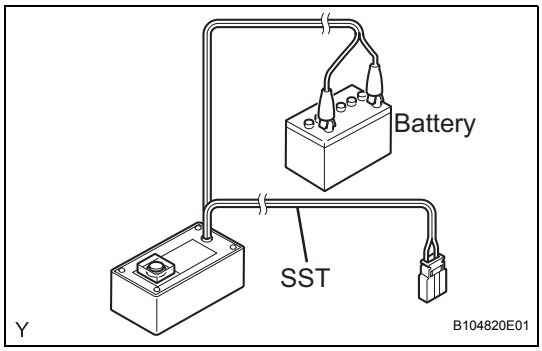
RS

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)
SST 09082-00700, 09082-00760
NOTICE:
- **Never use the customer's vehicle to deploy the airbag when disposing of a front seat side airbag.**
- **Follow the procedure detailed below when deploying the airbag.**

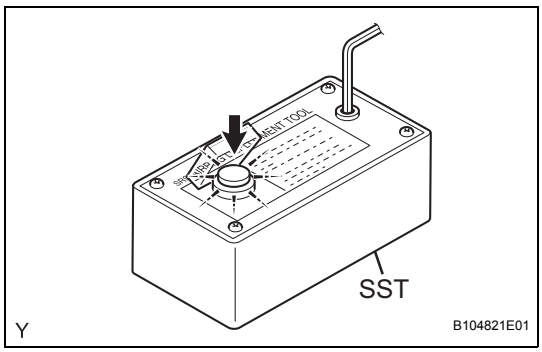
HINT:
Prepare a battery as the power source to deploy the airbag.



(a) Check the function of SST.
SST 09082-00700
CAUTION:
Always use the specified SST (SRS Airbag Deployment Tool) when deploying the airbag.



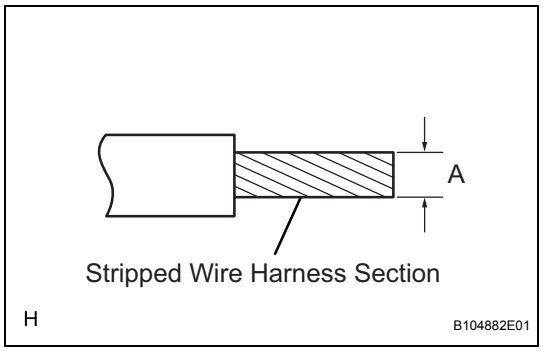
(1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.



(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.**

(3) Disconnect SST from the battery.

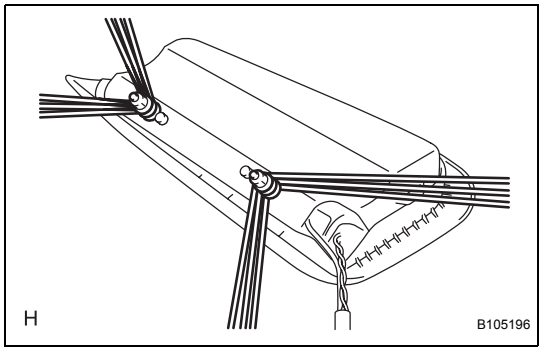
(b) Remove the front seat side airbag (See page SE-29).



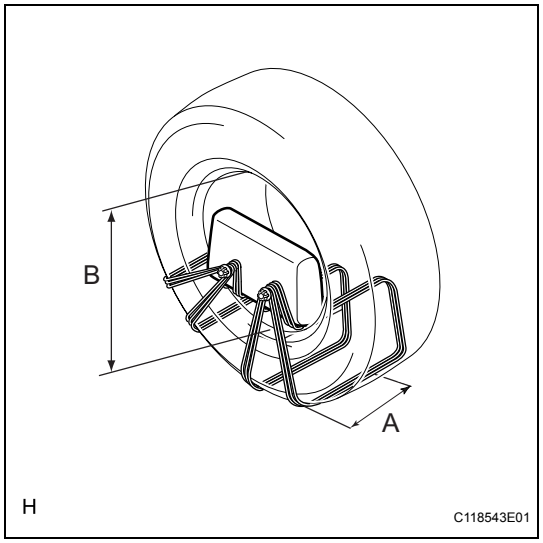
(c) Using a service-purpose wire harness for the vehicle, tie the front seat side airbag.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 $in.^2$ or more)

HINT:
To calculate the area of the stripped wire harness cross section:
Area = 3.14 x $(Diameter)^2$ divided by 4
CAUTION:
Do not use wire harness that is too thin or any other object to tie the front seat side airbag because it may snap due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross section of at least 1.25 mm^2 (0.0019 in^2).



(1) Install the 2 nuts onto the front seat side airbag.
(2) Wind the wire harnesses around the stud bolts of the front seat side airbag, as shown in the illustration.

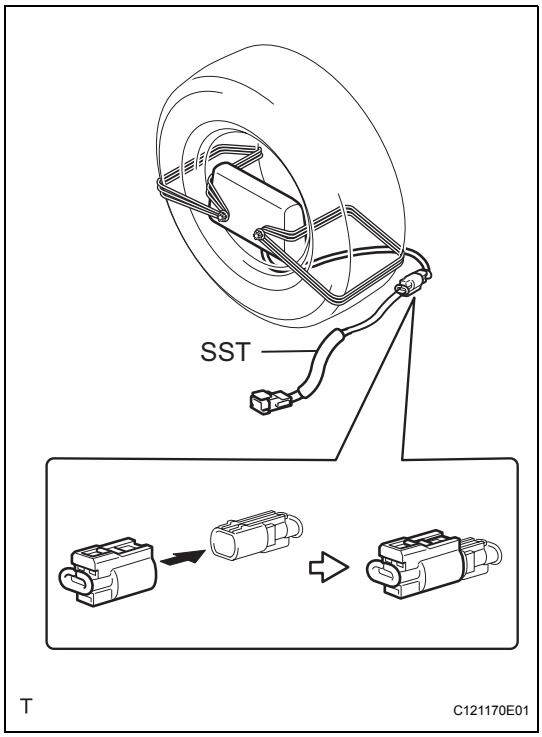


(3) Position the front seat side airbag inside the tire, as shown in the illustration.
Tire size:

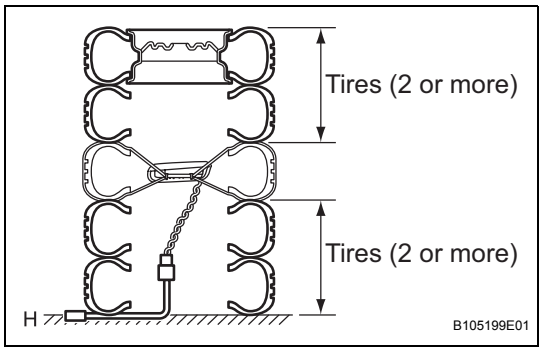
Area	Measurement
A	185 mm (7.28 in.)
B	360 mm (14.17 in.)

CAUTION:
- **Make sure that the wire harnesses are tight. If there is any slack in the wire harnesses, the front seat side airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie the front seat side airbag with the airbag deployment direction facing inside the tire.**

NOTICE:
The tire will be marked by the airbag deployment, so use a waste tire.

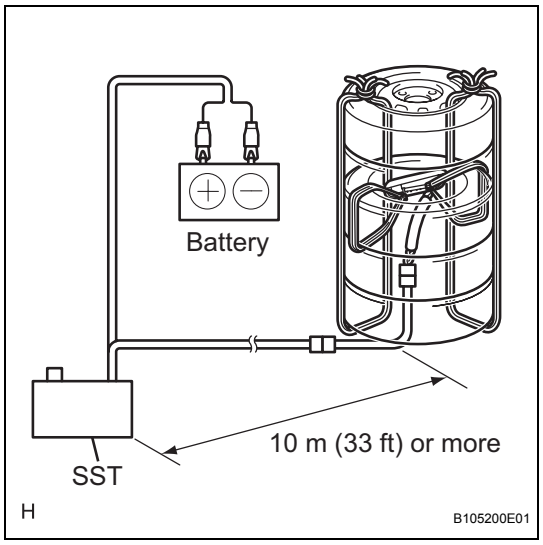


(d) Connect SST.
  (1) Connect the SST connector to the front seat side airbag connector.



(e) Place the tires.
  (1) Place at least 2 tires under the tire to which the front seat side airbag is tied.
  (2) Place at least 2 tires over the tire to which the front seat side airbag is tied. The disc wheel should be installed onto the top tire.
  NOTICE:
  Do not place the SST connector under the tire because it could be damaged.

  (3) Tie the tires together with 2 wire harnesses.
  CAUTION:
  Make sure that the wire harnesses are tight. It is highly dangerous when a loose wire harness results in the tires coming free due to the shock when the airbag is deployed.



(f) Install SST.
  (1) Connect the SST connector.
  NOTICE:
  Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness. Also, secure some slack for the SST wire harness inside the tire.

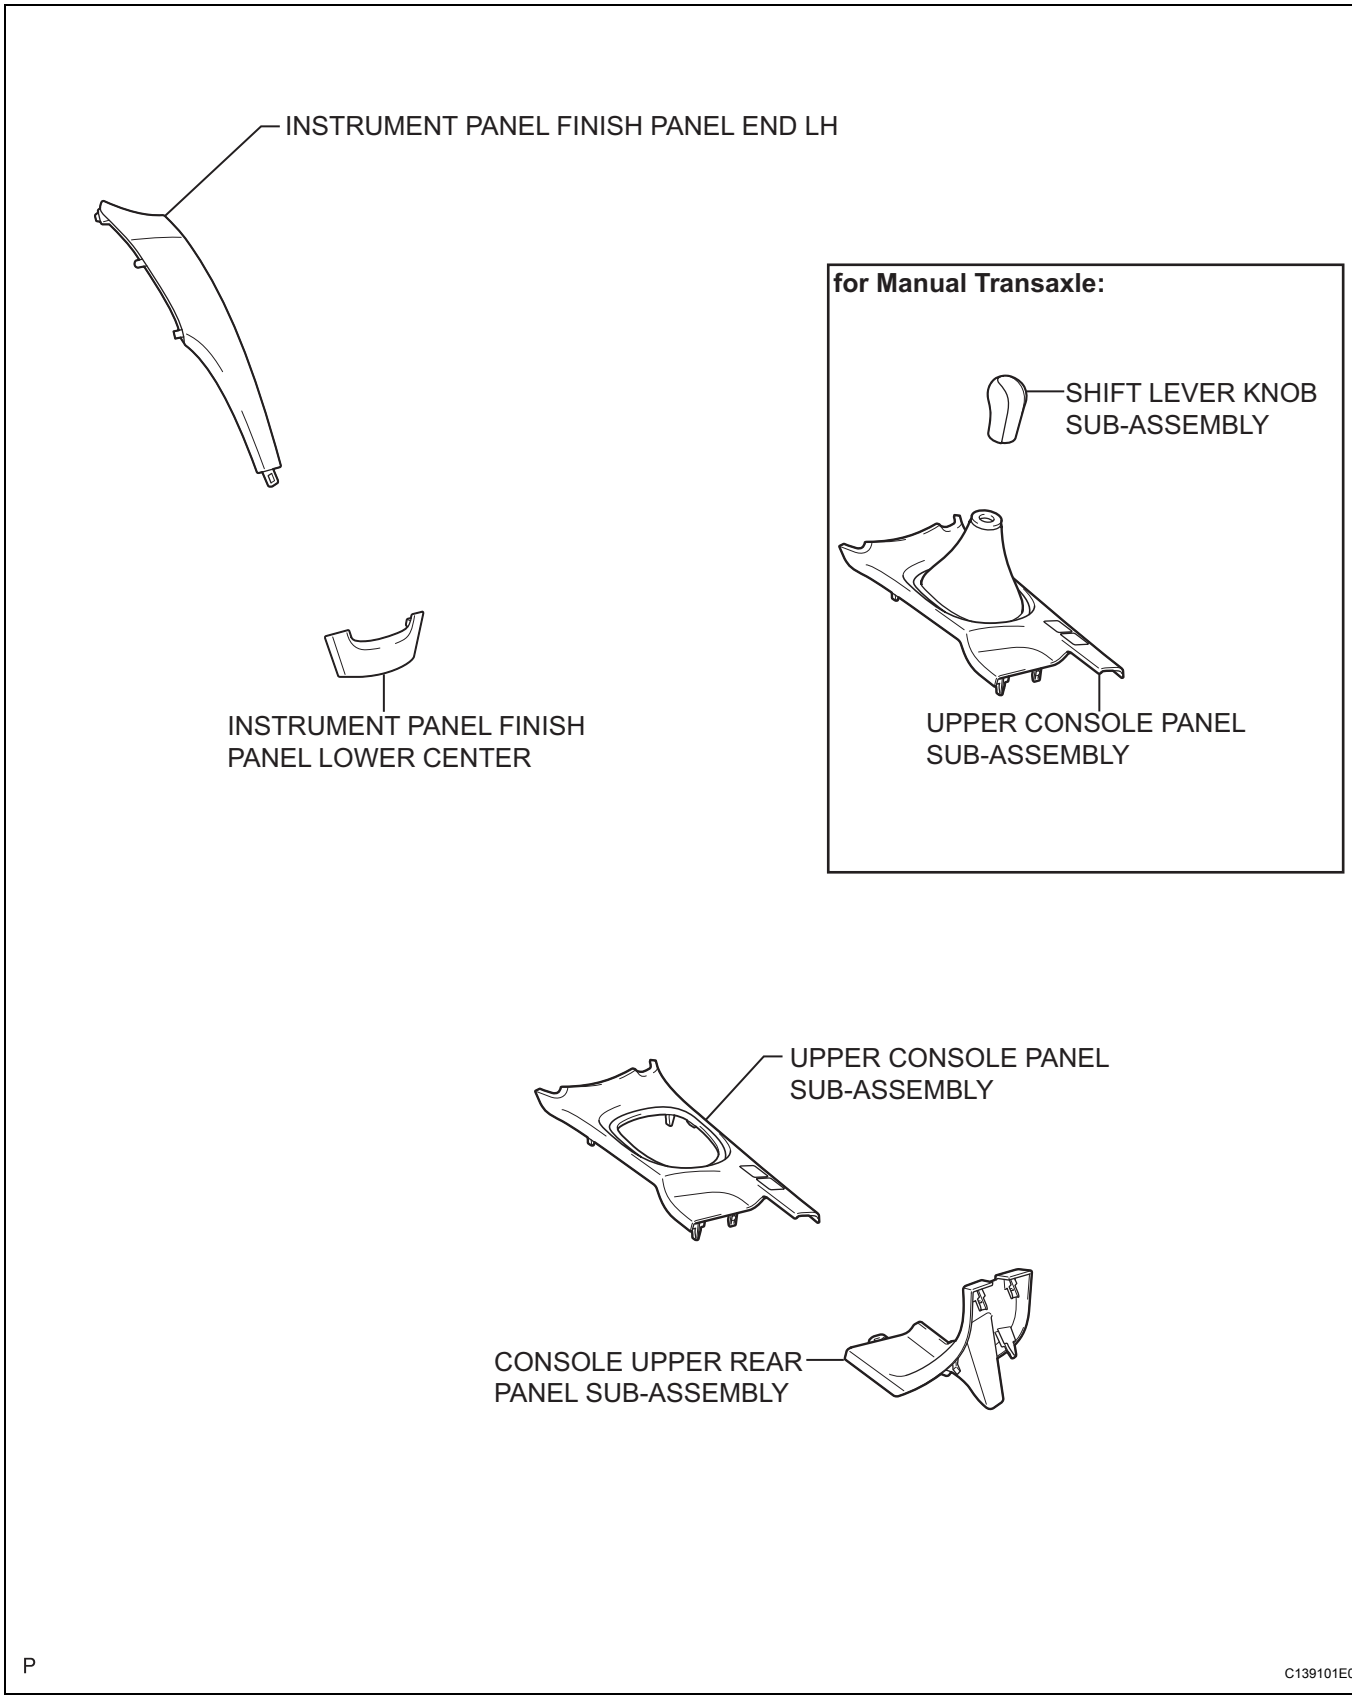
(g) Deploy the airbag.
  (1) Connect the red clip of SST to the positive battery terminal and the black clip of SST to the negative battery terminal.
  (2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front seat side airbag is tied.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  Make sure that no one is near the tires when deploying the airbag.
  HINT:
  The airbag is deployed as the LED of the SST activation switch illuminates.

(h) Dispose of the front seat side airbag.
  CAUTION:
  - **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
  - **Use gloves and safety glasses when handling a front seat side airbag which has been deployed.**
  - **Always wash your hands with water after completing the operation.**
  - **Do not apply water, etc. to a front seat side airbag which has been deployed.**
  (1) Remove the front seat side airbag from the tire.
  (2) Place the front seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

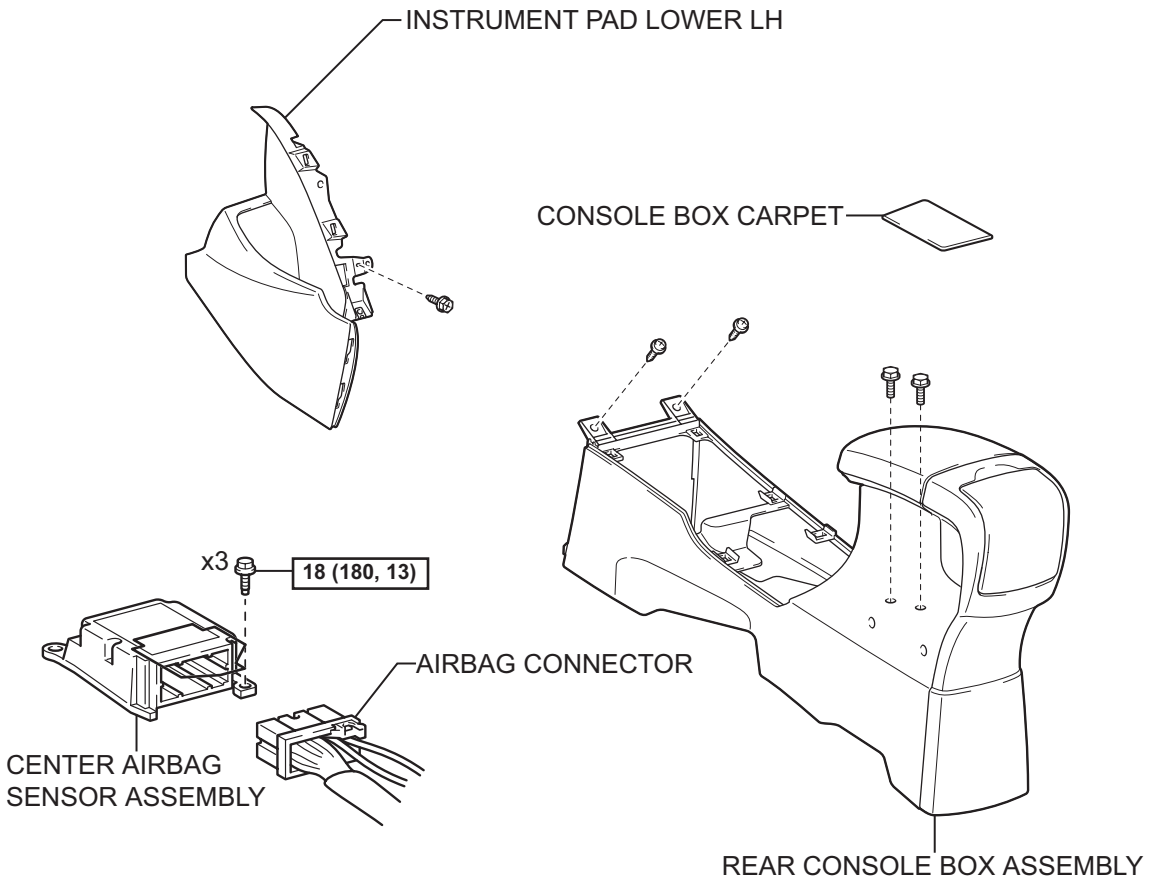
RS

CENTER AIRBAG SENSOR ASSEMBLY (for Sedan)

COMPONENTS



RS



N*m (kgf*cm, ft*lbf) : Specified torque

P

C139102E01

ON-VEHICLE INSPECTION

1. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (See page RS-38).

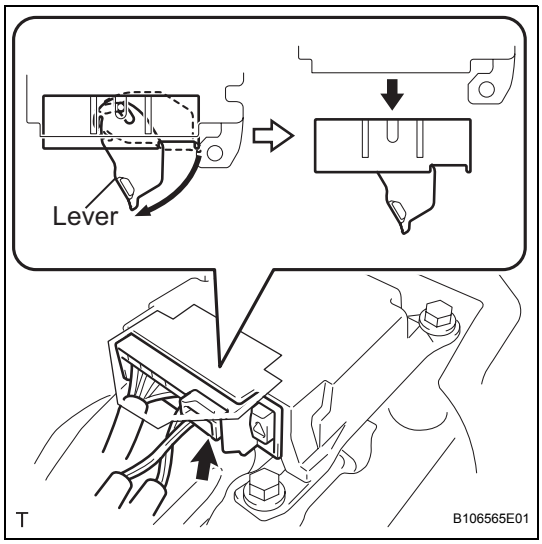
3. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For center airbag sensor assembly removal and installation procedure, see pages RS-433 and RS-434, and follow the correct procedure.
   (a) Replace the center airbag sensor assembly.

RS

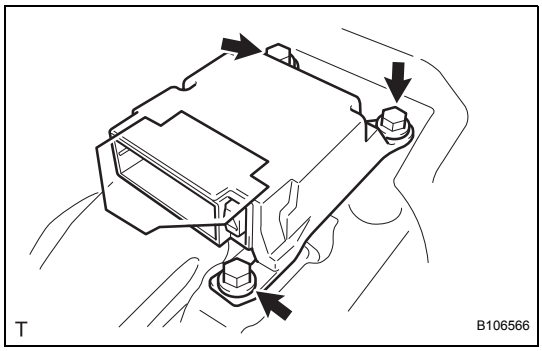
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-138)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-138)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-84)**
4. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-84)**
5. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-84)**
6. **REMOVE CONSOLE BOX CARPET (See page IP-85)**
7. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-85)**
8. **REMOVE INSTRUMENT PAD LOWER LH (See page IP-44)**
9. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY**
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
   (a) Pull the lever down and detach the connector holder.

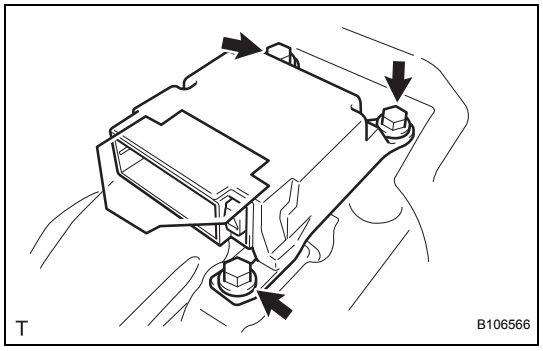


(b) Remove the 3 bolts and remove the airbag sensor.



INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Be sure to read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



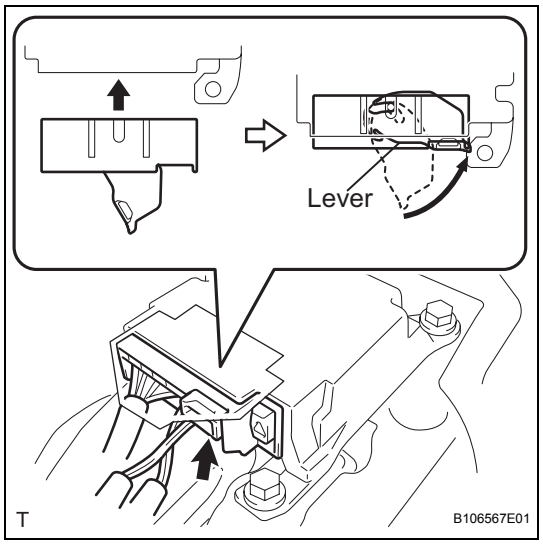
1. INSTALL CENTER AIRBAG SENSOR ASSEMBLY

(a) Confirm that the ignition switch is turned to off.

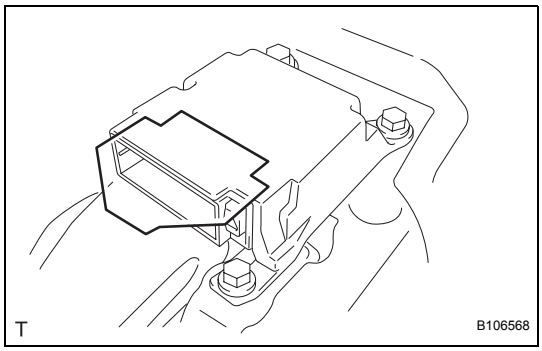
(b) Confirm that the negative battery terminal is detached.
CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**
- **Do not start the operation for at least 90 seconds after disconnecting the negative battery terminal.**

(c) Remove the 3 bolts and remove the airbag sensor.
Torque: 18 N*m (180 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Do not use an airbag sensor that has been dropped.**
- **Do not subject the airbag sensor to any impact or force.**
- **Confirm that the carpet does not interfere with the installation plane.**

(d) Confirm that there is no looseness by shaking the front airbag sensor.



(e) Connect the connector holder to lock the lever.
NOTICE:
Confirm that the lever is locked.



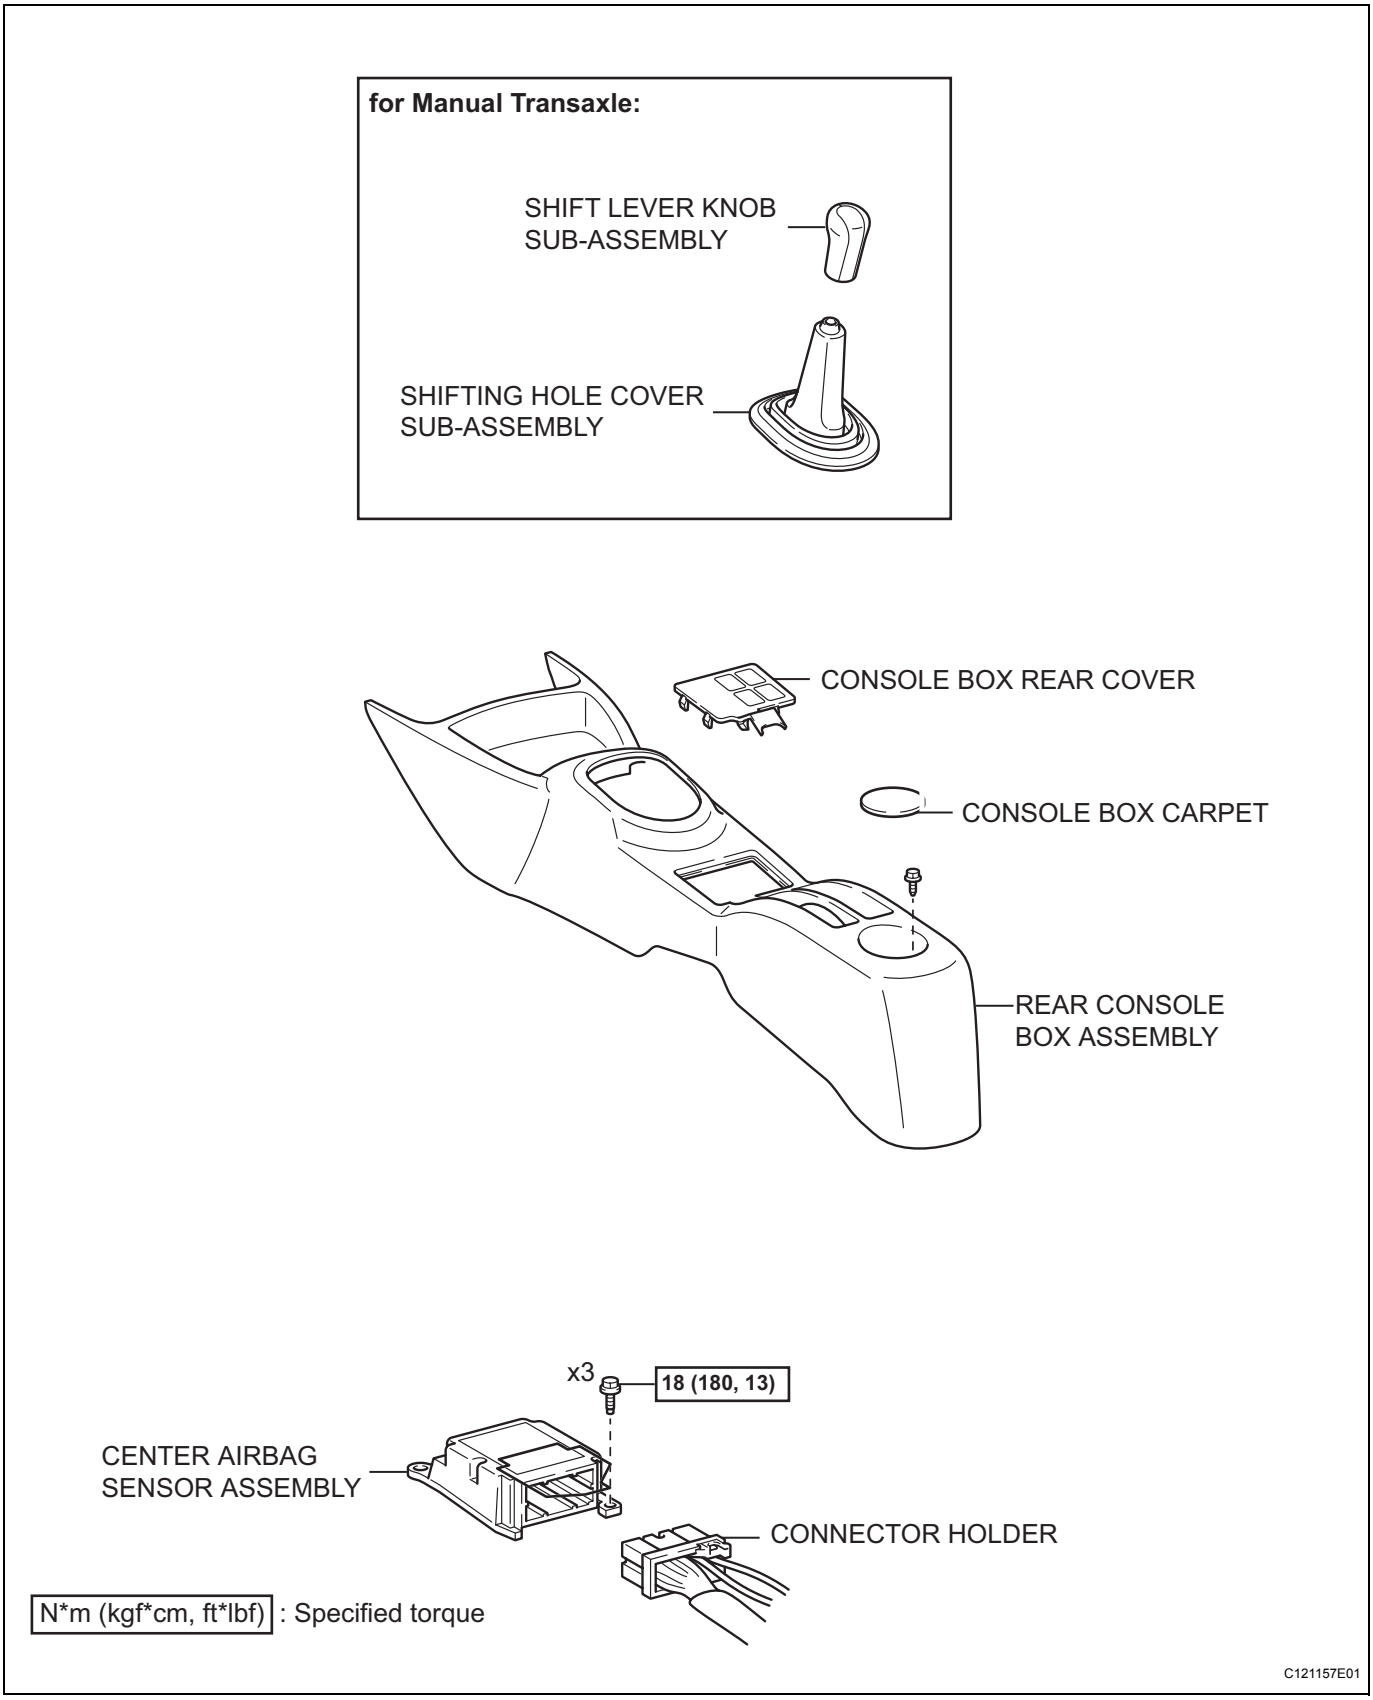
(f) Confirm that the drip-proof sheet has not been removed and does not cut into the connectors.

2. **INSTALL INSTRUMENT PAD LOWER LH (See page IP-55)**
3. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-88)**
4. **INSTALL CONSOLE BOX CARPET (See page IP-88)**
5. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-89)**
6. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-89)**
7. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-89)**
8. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page ME-141)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (See page ME-142)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
11. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

CENTER AIRBAG SENSOR ASSEMBLY (for Hatchback)

COMPONENTS

RS



ON-VEHICLE INSPECTION

1. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   (a) Perform a diagnostic system check (See page RS-38).

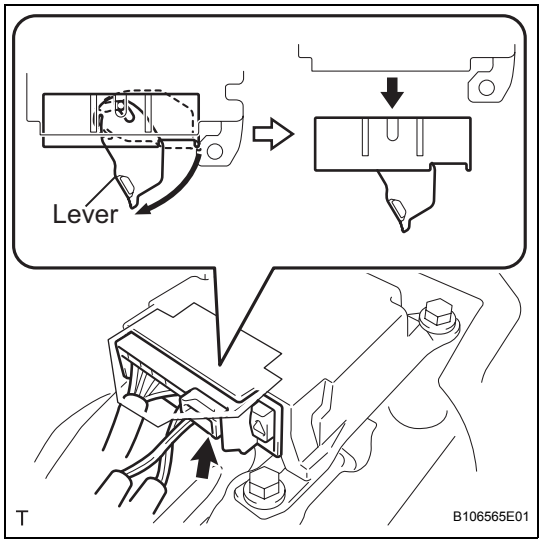
3. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For center airbag sensor removal and installation procedures, see pages RS-437 and RS-438 , and follow the correct procedure.
   (a) Replace the center airbag sensor.

RS

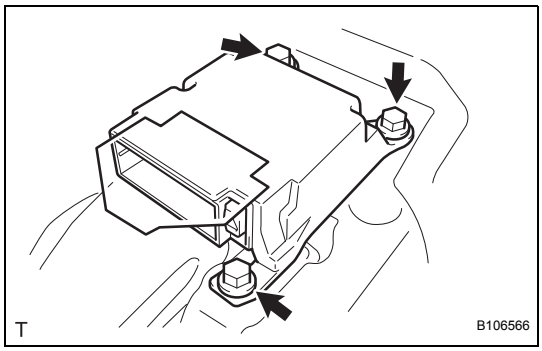
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
3. **REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-6)**
4. **REMOVE CONSOLE BOX REAR COVER (See page PB-6)**
5. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
6. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
7. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY**
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
   (a) Pull the lever down and detach the connector holder.

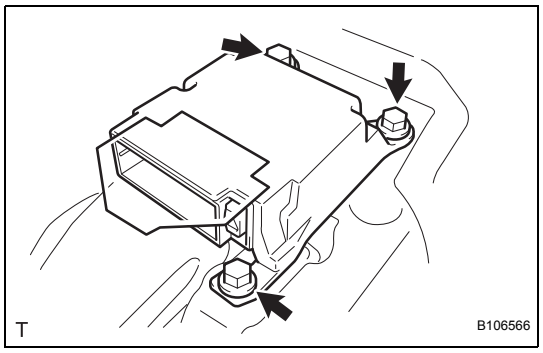


(b) Remove the 3 bolts and remove the airbag sensor.



INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).



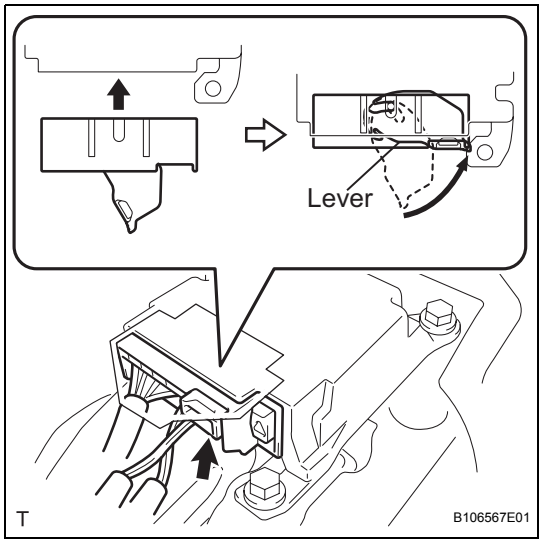
1. INSTALL CENTER AIRBAG SENSOR ASSEMBLY

(a) Confirm that the ignition switch is turned to OFF.

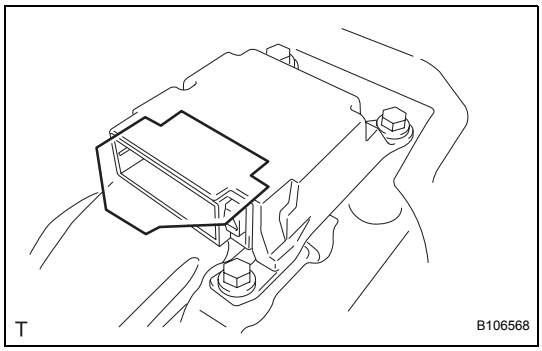
(b) Confirm that the negative battery terminal is detached.
CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**
- **Do not start the operation for at least 90 seconds after disconnecting the negative battery terminal.**

(c) Remove the 3 bolts and remove the airbag sensor.
Torque: 18 N*m (180 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Do not use an airbag sensor that has been dropped.**
- **Do not subject the airbag sensor to any impact or force.**
- **Confirm that the carpet does not interfere with the installation plane.**

(d) Confirm that there is no looseness by shaking the front airbag sensor.



(e) Connect the connector holder to lock the lever.
NOTICE:
Confirm that the lever is locked.



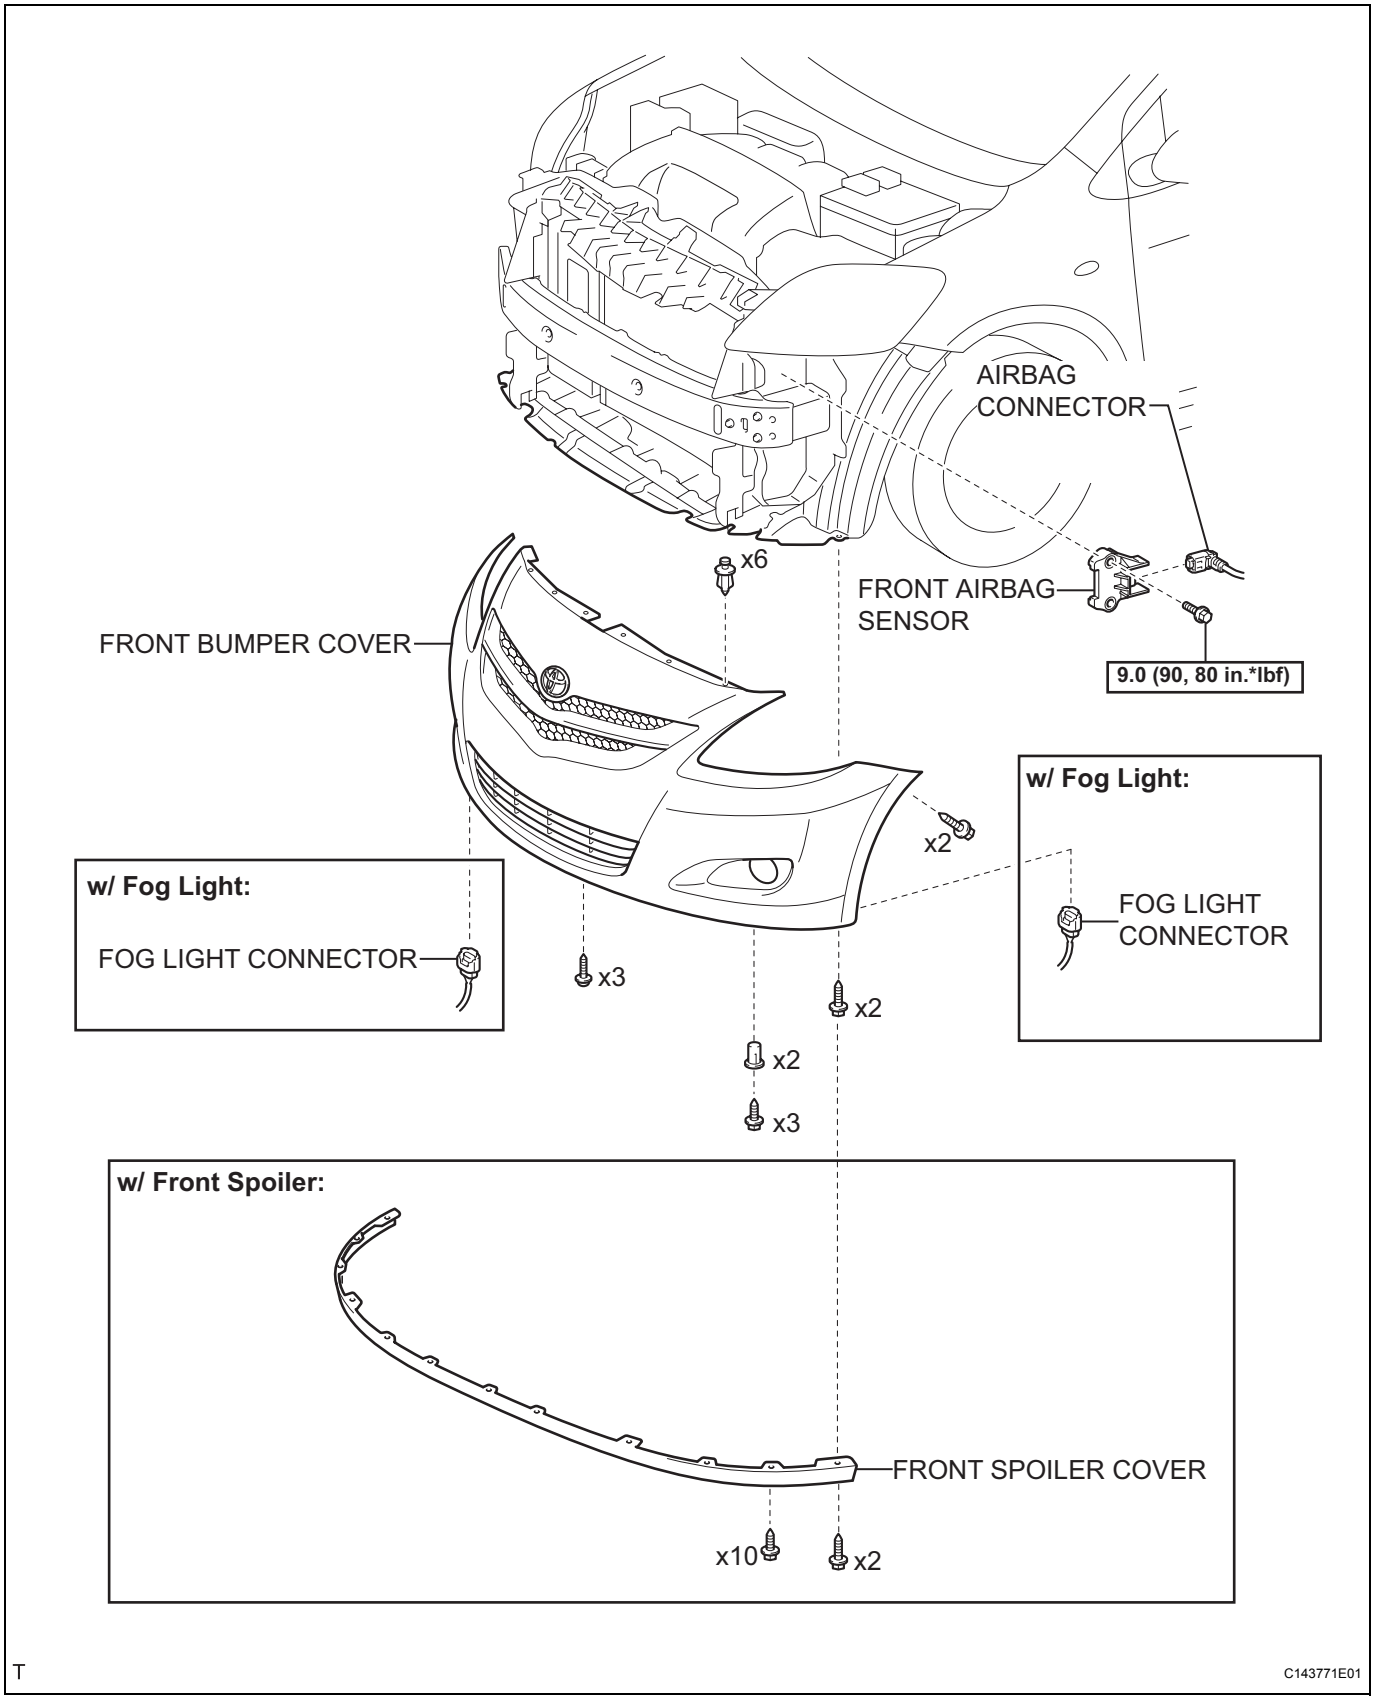
(f) Confirm that the drip-proof sheet has not been removed and does not cut into the connectors.

2. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
3. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
4. **INSTALL CONSOLE BOX REAR COVER (See page PB-11)**
5. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-12)**
6. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
8. **INSPECT SRS WARNING LIGHT**
   (See page RS-31)

FRONT AIRBAG SENSOR (for Sedan)

COMPONENTS

RS



T

C143771E01

ON-VEHICLE INSPECTION

1. **INSPECT FRONT AIRBAG SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT FRONT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For front airbag sensor removal and installation procedures, see pages RS-441 and RS-442, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center front bumper or its periphery is damaged, check whether there is any damage to the front airbag sensor. If there are any defects, such as those mentioned below, replace the front airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

3. **INSPECT FRONT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For front airbag sensor removal and installation procedures, see pages RS-441 and RS-442, and carefully follow the correct procedure.
   (a) Replace the front airbag sensor.

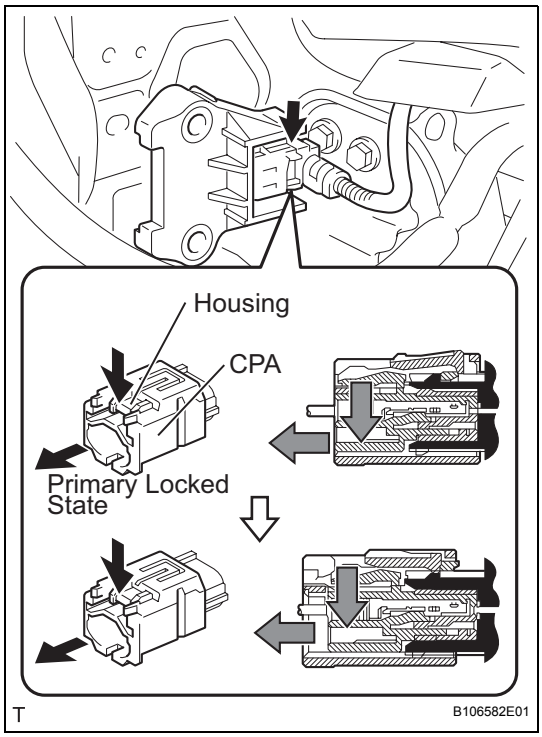
RS

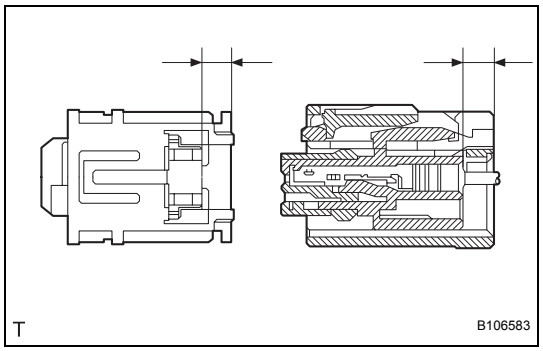
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-6)**
3. **REMOVE FRONT BUMPER COVER (See page ET-6)**
4. **REMOVE FRONT AIRBAG SENSOR**
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
   (a) Remove the 2 bolts.
   (b) Disengage the 2 claws and remove the front airbag sensor.

   (c) Disconnect the airbag connector.
   NOTICE:
   - **Do not disconnect the airbag connector by pulling the wire harness.**
   - **Release the lock without holding the upper side of CPA.**
   (1) While pushing the housing, slide only the CPA backward (from a provisionally locked state).
   (2) Detach the connector while pushing the housing in the provisionally locked state.
   NOTICE:
   - **Do not disconnect the airbag connector by pulling the wire harness.**
   - **Release the lock without holding the upper side of CPA.**





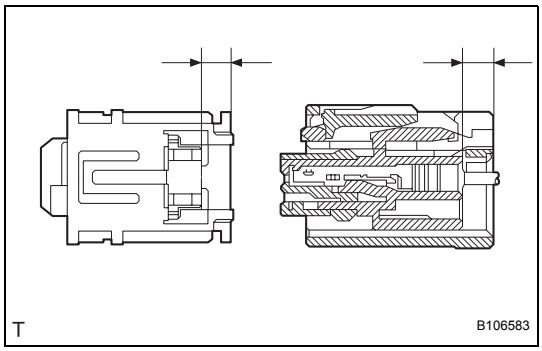
(3) After detaching the connector, confirm that the CPA protrudes beyond the rear of the housing.

RS

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

HINT:
The procedure described below is for the LH side. Use the same procedure for both the LH and RH sides, unless otherwise specified.



1. INSTALL FRONT AIRBAG SENSOR

NOTICE:
- **Do not use a front airbag sensor that has been dropped.**
- **Do not subject the front airbag sensor any impact or force.**

(a) Confirm that the ignition switch is turned to off.

(b) Confirm that the negative battery terminal is detached.

CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**
- **Do not start the operation for at least 90 seconds after disconnecting the negative battery terminal.**

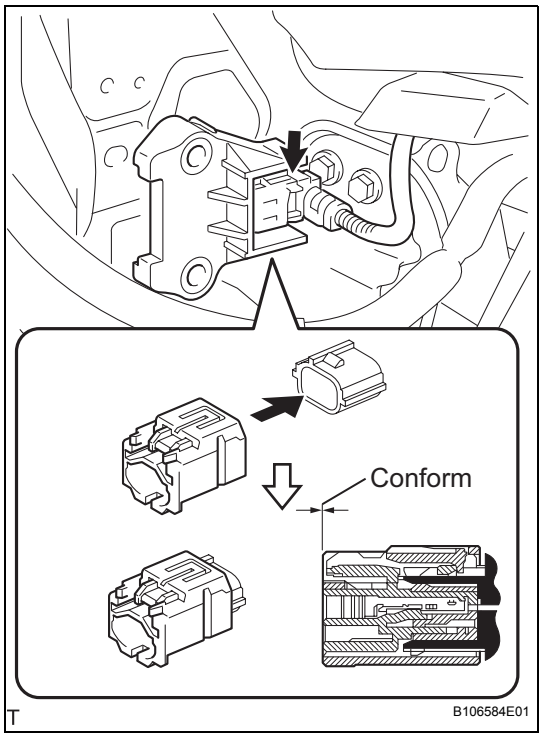
(c) Connect the airbag connector.

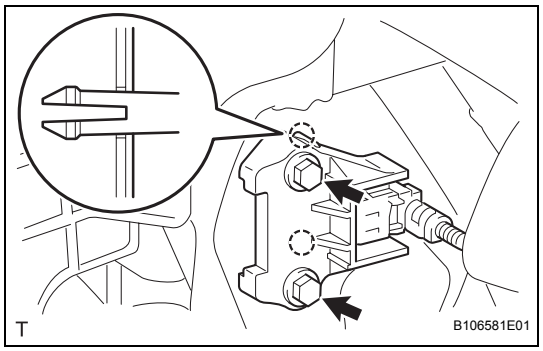
(1) Check that the CPA is in the provisionally locked condition.

(2) Push the CPA until it makes a click sound.

NOTICE:
- **Engage the connector by pushing it straight.**
- **Hold the CPA when engaging the connector.**
- **Do not engage the CPA while pressing the CPA upper portion, otherwise, the half connection prevention mechanism will not function.**

(3) Confirm that the rear side of the housing and the CPA rear surface are tightly fitted together.





(d) Install the front airbag sensor with the 2 bolts.
Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)

(e) Confirm that there is no looseness by shaking the front airbag sensor.

2. **INSTALL FRONT BUMPER COVER (See page ET-16)**

3. **INSTALL FRONT SPOILER COVER (w/ Front Spoiler) (See page ET-19)**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

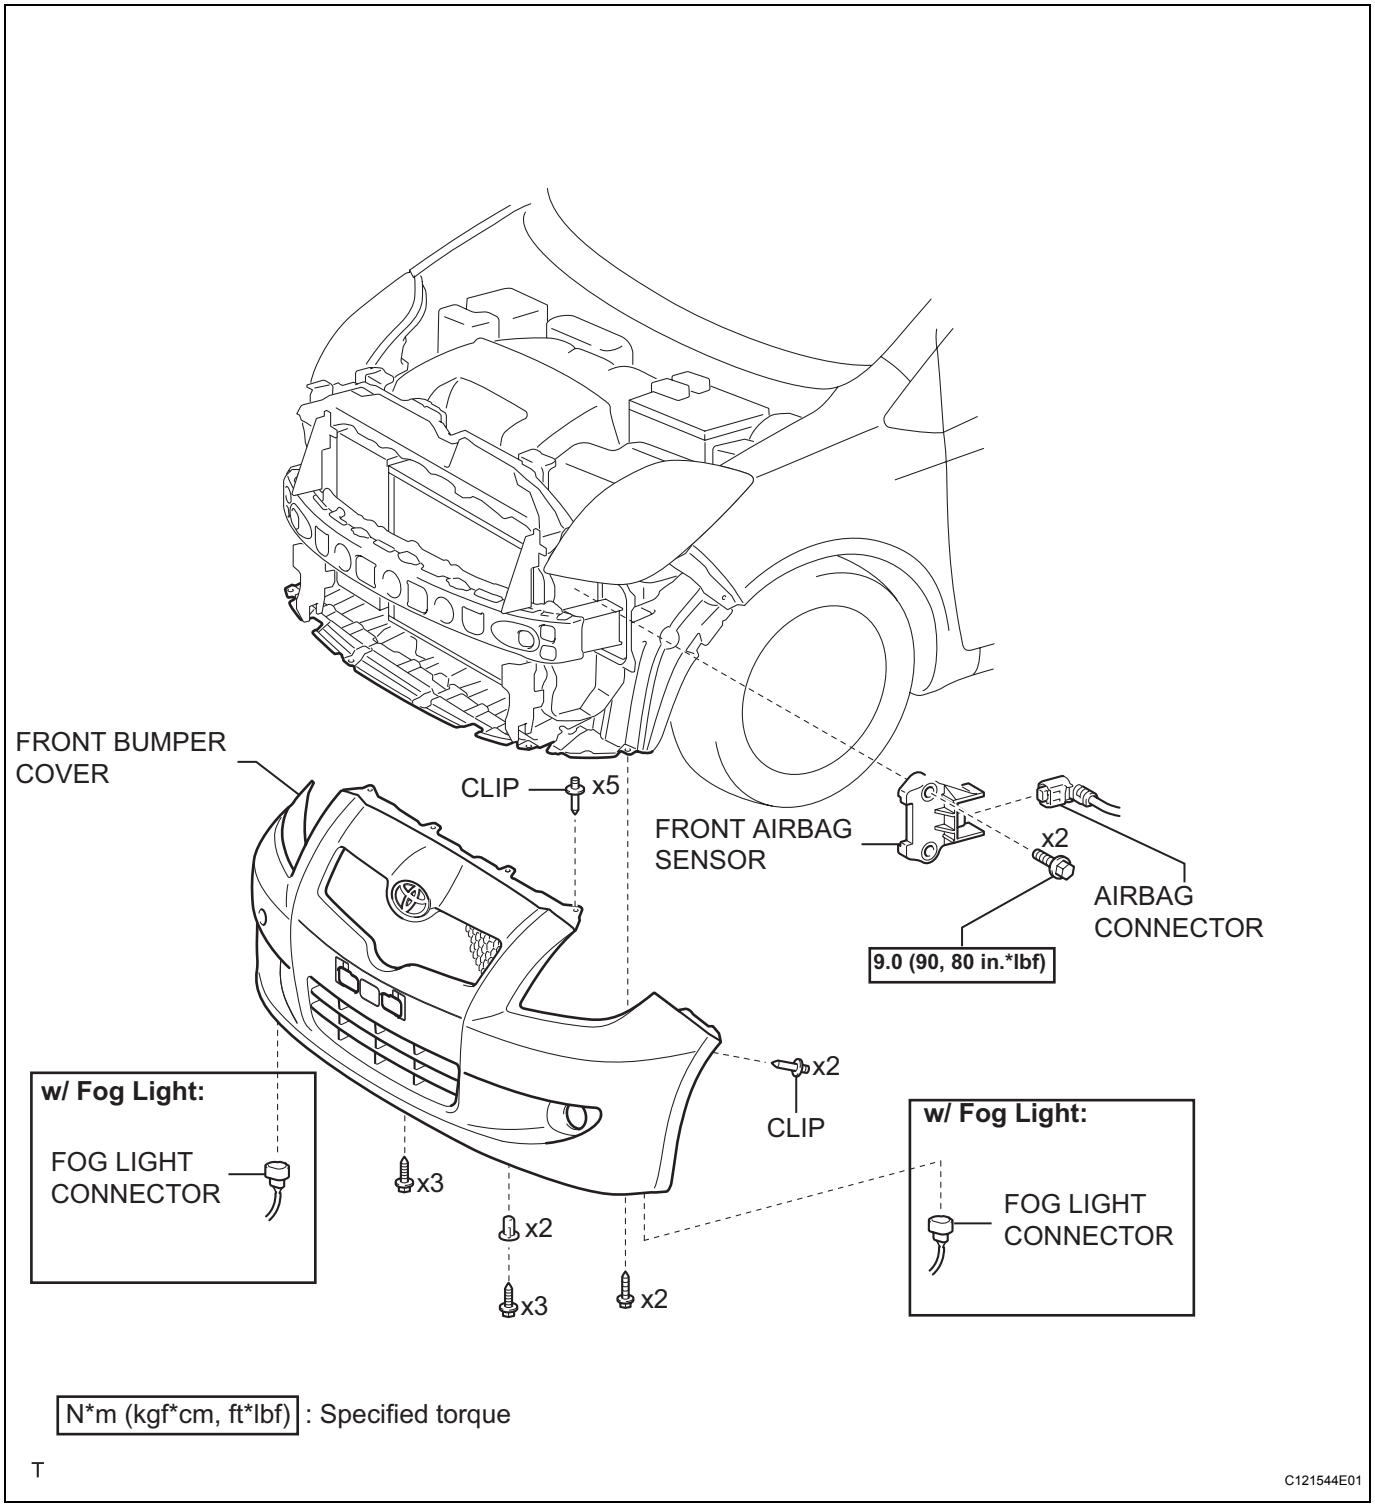
5. **INSPECT SRS WARNING LIGHT**
(See page RS-31)

RS

FRONT AIRBAG SENSOR (for Hatchback)

COMPONENTS

RS



ON-VEHICLE INSPECTION

1. **INSPECT FRONT AIRBAG SENSOR (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT FRONT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For front airbag sensor removal and installation procedures, see pages RS-446 and RS-447, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center front bumper or its periphery is damaged, check whether there is any damage to the front airbag sensor. If there are any defects, such as those mentioned below, replace the front airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

3. **INSPECT FRONT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For front airbag sensor removal and installation procedures, see pages RS-446 and RS-447, and carefully follow the correct procedure.
   (a) Replace the front airbag sensor.

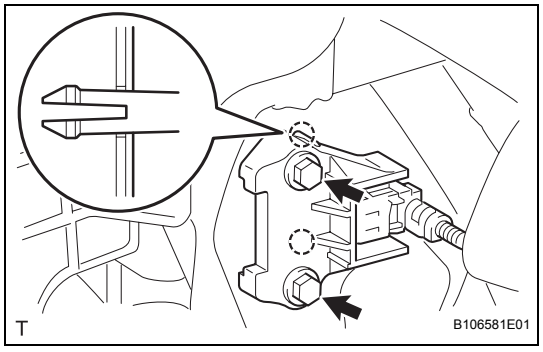
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the LH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

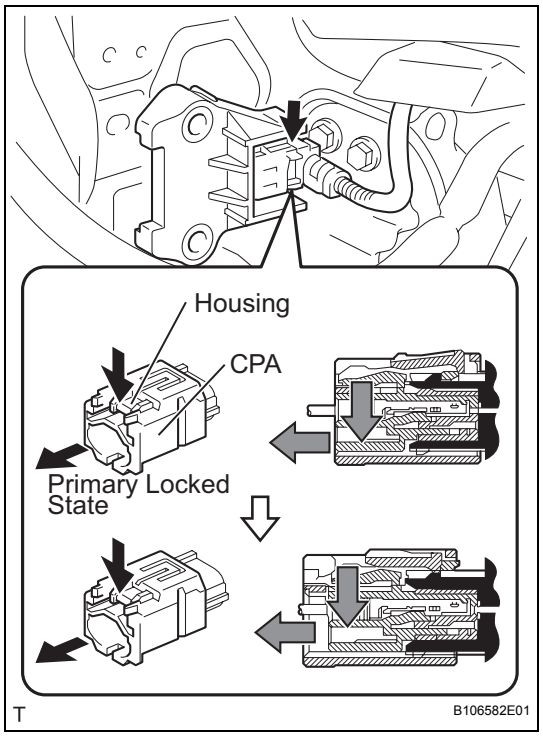
2. **REMOVE FRONT BUMPER COVER (See page ET-24)**

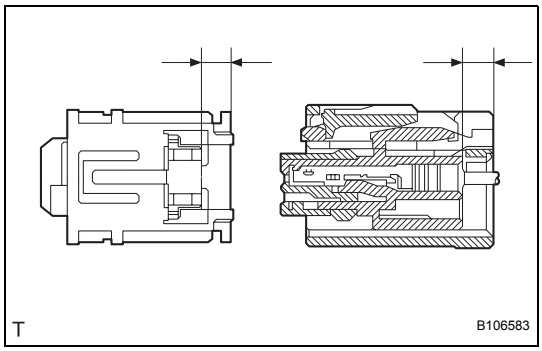
3. **REMOVE FRONT AIRBAG SENSOR**
CAUTION:
Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
(a) Remove the 2 bolts.
(b) Disengage the 2 claws and remove the front airbag sensor.



(c) Disconnect the airbag connector.
NOTICE:
- **Do not disconnect the airbag connector by pulling the wire harness.**
- **Release the lock without holding the upper side of CPA.**

(1) While pushing the housing, slide only the CPA backward (from its provisionally locked state).
(2) Detach the connector while pushing the housing in the provisionally locked state.



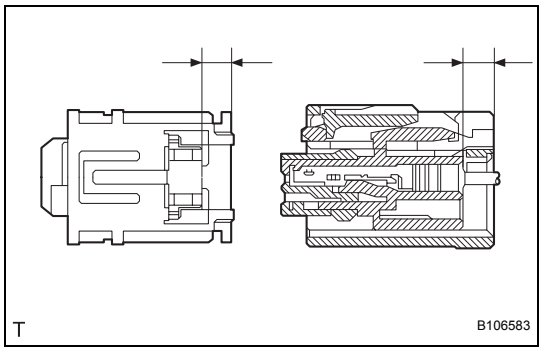


(3) After detaching the connector, confirm that the CPA protrudes beyond the rear of the housing.

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

HINT:
The procedure described below is for the LH side. Use the same procedure for both the LH and RH sides, unless otherwise specified.



1. INSTALL FRONT AIRBAG SENSOR

NOTICE:
- **Do not use a front airbag sensor that has been dropped.**
- **Do not subject the front airbag sensor to any impact or force.**

(a) Confirm that the ignition switch is turned to OFF.

(b) Confirm that the negative battery terminal is detached.

CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**
- **Do not start the operation for at least 90 seconds after disconnecting the negative battery terminal.**

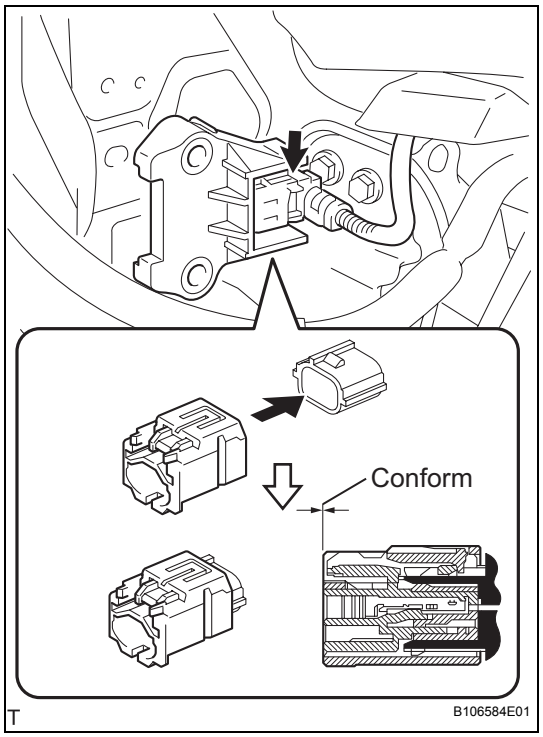
(c) Connect the airbag connector.

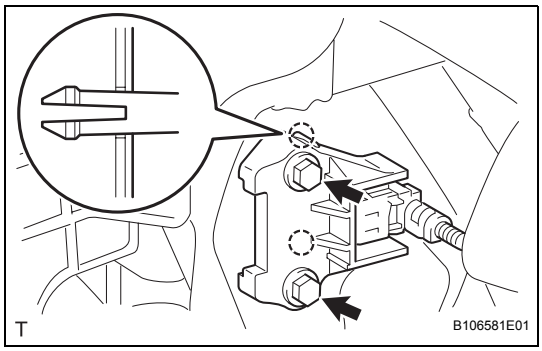
(1) Check that the CPA is in the provisionally locked state.

(2) Push the CPA until it makes a click sound.

NOTICE:
- **Engage the connector by pushing it straight.**
- **Hold the CPA when engaging the connector.**
- **Do not engage the CPA while pressing the CPA upper portion, otherwise, the half connection prevention mechanism will not function.**

(3) Confirm that the rear side of the housing and the CPA rear surface are tightly fitted together.





(d) Install the front airbag sensor with the 2 bolts.
Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)

(e) Confirm that there is no looseness by shaking the front airbag sensor.

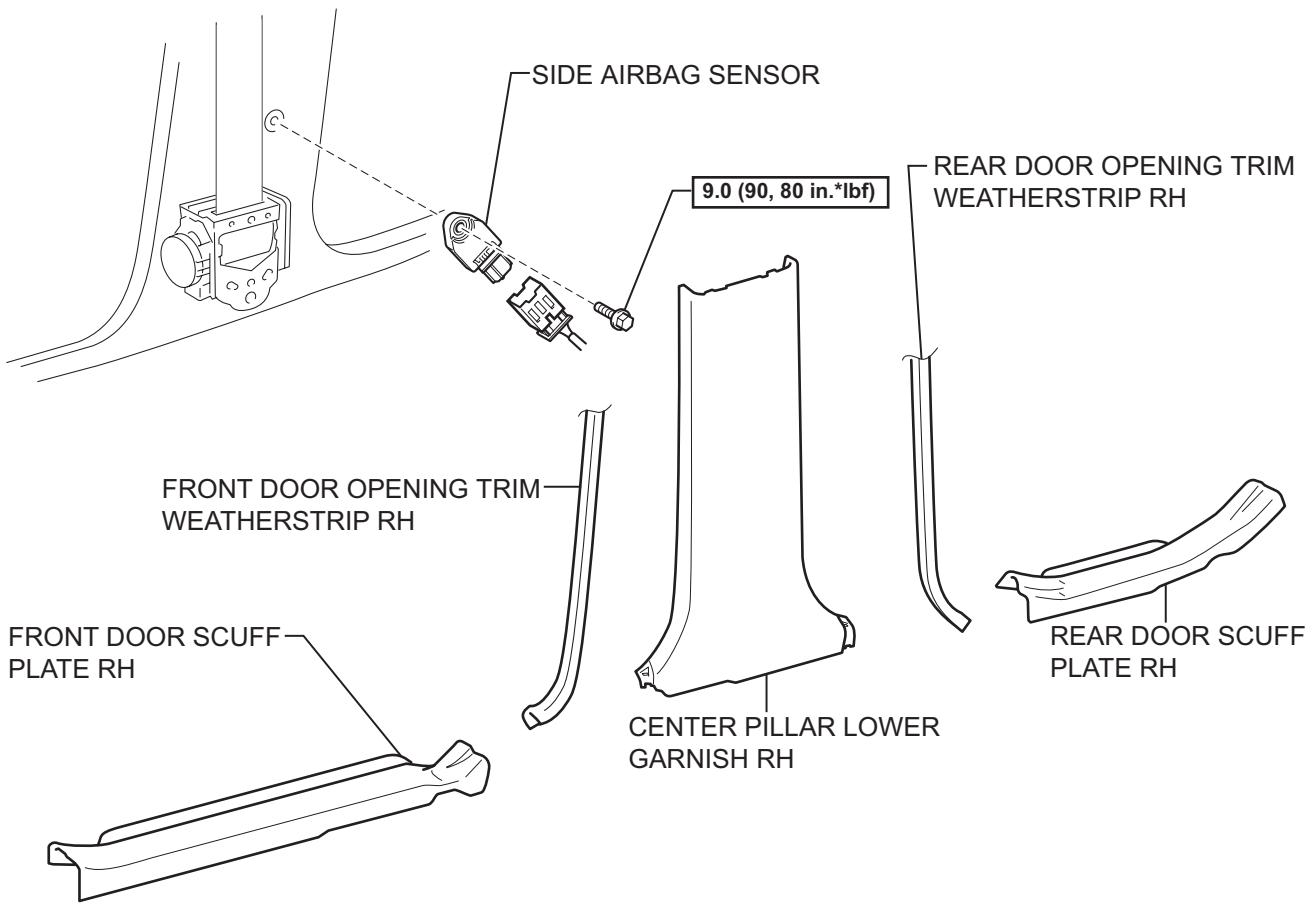
2. **INSTALL FRONT BUMPER COVER (See page ET-33)**

3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

4. **INSPECT SRS WARNING LIGHT**
(See page RS-31)

SIDE AIRBAG SENSOR (for Sedan)

COMPONENTS



ON-VEHICLE INSPECTION

1. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

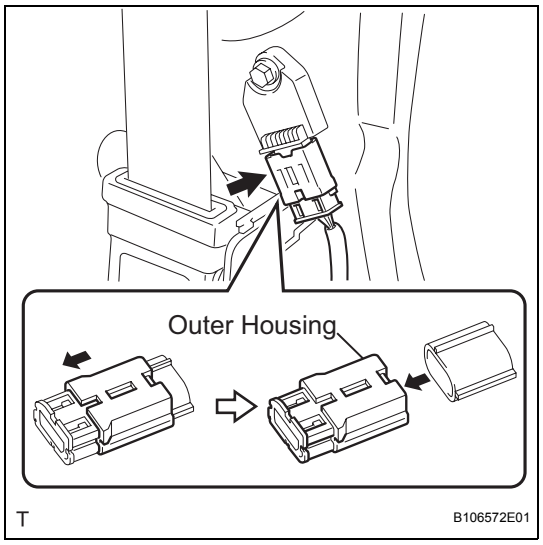
2. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-450 and RS-451, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center pillar of the vehicle or its periphery is damaged, check whether there is any damage to the side airbag sensor. If there are any defects, such as those mentioned below, replace the side airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

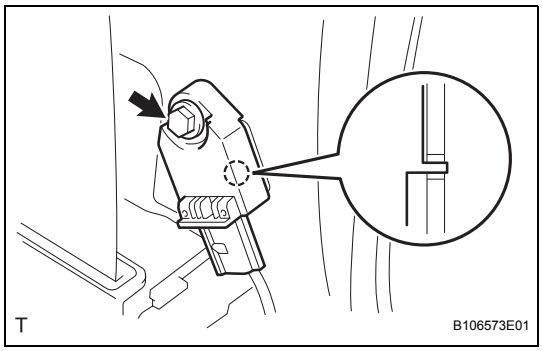
3. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-450 and RS-451, and carefully follow the correct procedure.
   (a) Replace the side airbag sensor.

REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-14)**
2. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-15)**
3. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
4. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-15)**
5. **REMOVE CENTER PILLAR LOWER GARNISH RH (See page IR-16)**
6. **REMOVE SIDE AIRBAG SENSOR**
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
   (a) Slide the outer housing and detach the airbag connector.





(b) Remove the bolt, disengage the hook and remove the side airbag sensor.

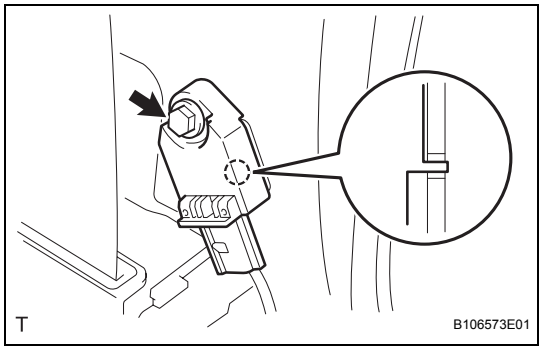
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. INSTALL SIDE AIRBAG SENSOR

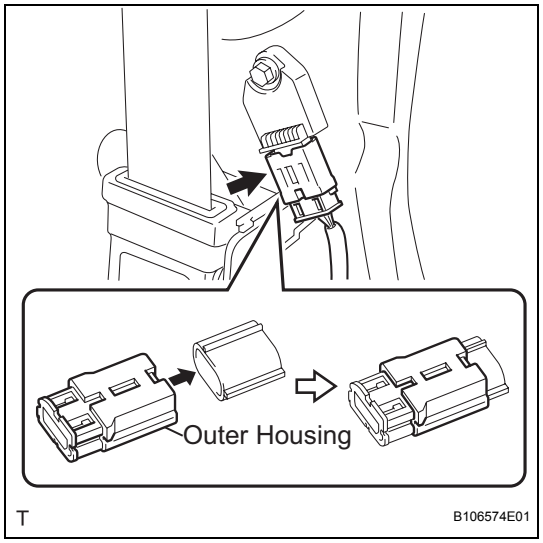
(a) Confirm that the ignition switch is turned to off.

(b) Confirm that the negative battery terminal is detached.
CAUTION:
Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.



(c) Insert the hook into the body hole and install the airbag sensor with the bolt.
Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
NOTICE:
- **Do not use a side airbag sensor that has been dropped.**
- **Do not subject the side airbag sensor to any impact or force.**

(d) Confirm that there is no looseness by shaking the side airbag sensor.



(e) Connect the airbag connector.

2. INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-32)

3. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-33)

4. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)

5. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-34)

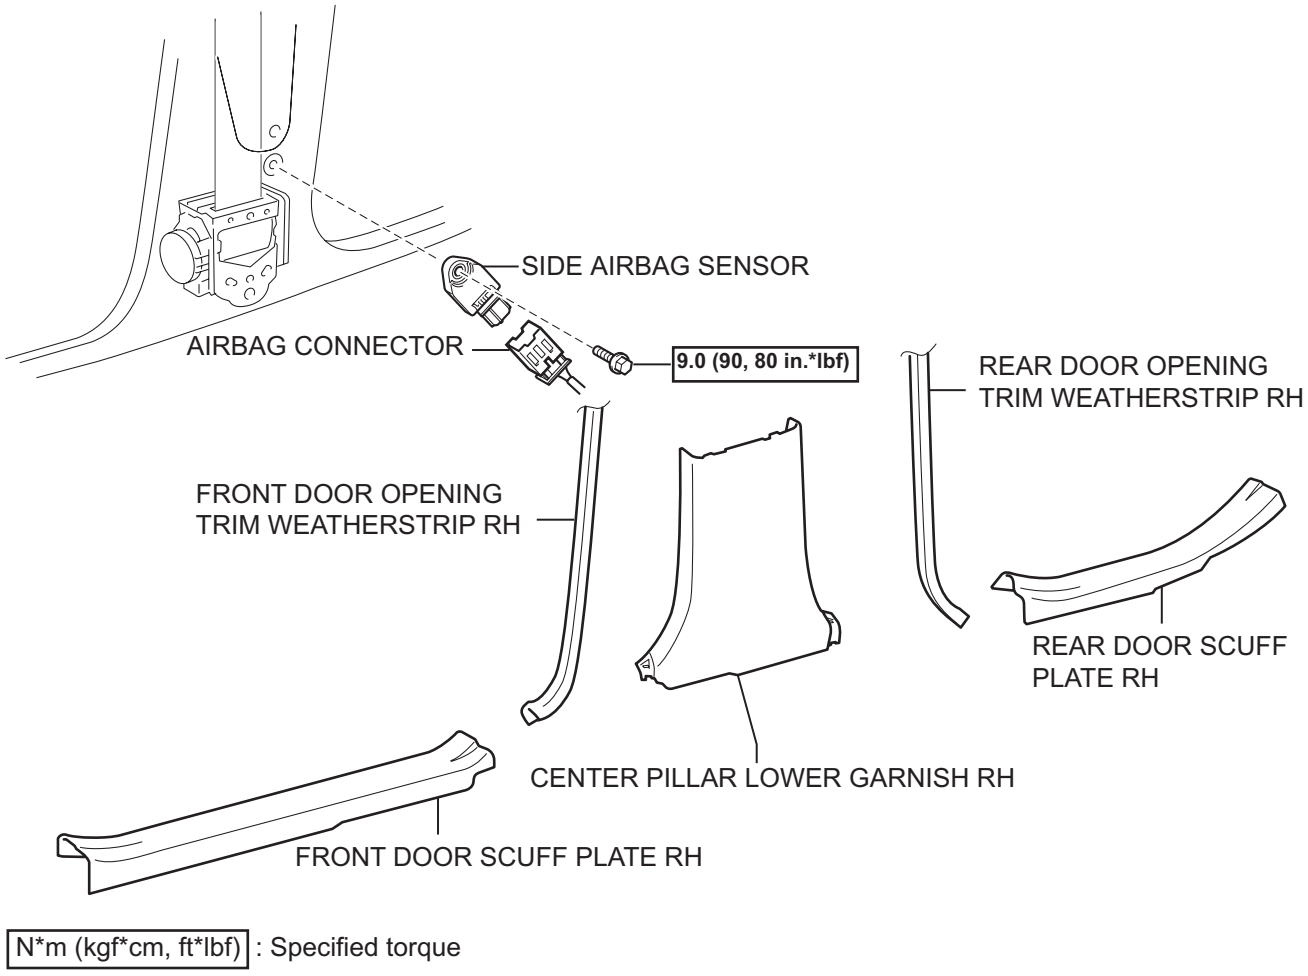
6. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-34)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

8. INSPECT SRS WARNING LIGHT
(See page RS-31)

SIDE AIRBAG SENSOR (for 5 Door)

COMPONENTS



ON-VEHICLE INSPECTION

1. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

2. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-454 and RS-455, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center pillar of the vehicle or its periphery is damaged, check whether there is any damage to the side airbag sensor. If there are any defects, such as those mentioned below, replace the side airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

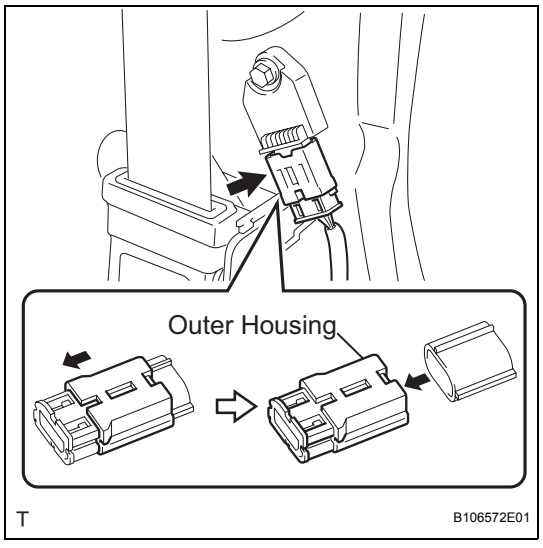
3. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-454 and RS-455, and carefully follow the correct procedure.
   (a) Replace the side airbag sensor.

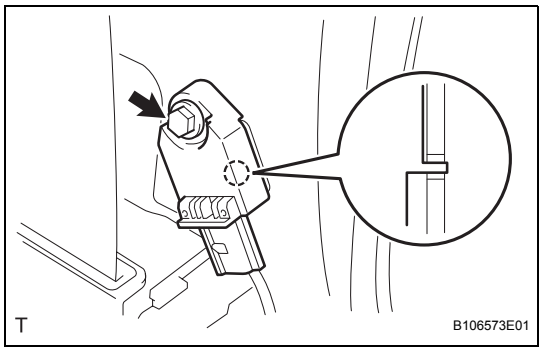
REMOVAL

CAUTION:
Some of the these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-49)**
3. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-51)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-50)**
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-51)**
6. **REMOVE CENTER PILLAR LOWER GARNISH RH (See page IR-55)**
7. **REMOVE SIDE AIRBAG SENSOR**
   CAUTION:
   Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.
   (a) Slide the outer housing and detach the airbag connector.





(b) Remove the bolt, disengage the hook and remove the side airbag sensor.

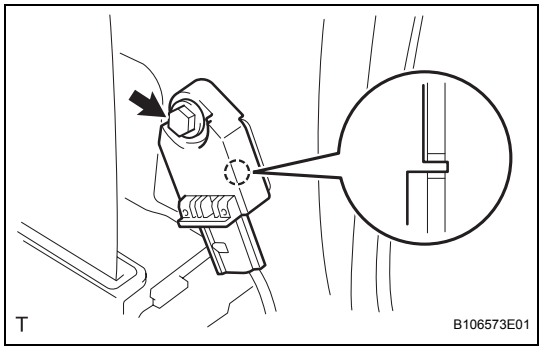
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. INSTALL SIDE AIRBAG SENSOR

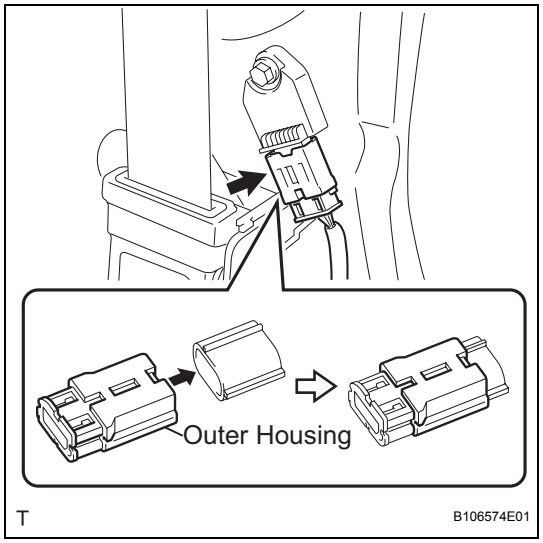
(a) Confirm that the ignition switch is turned to OFF.

(b) Confirm that the negative battery terminal is detached.
CAUTION:
- **Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.**



(c) Insert the hook into the body hole and install the airbag sensor with the bolt.
Torque: 9.0 N*m (90 kgf*cm, 80 ft.*lbf)
NOTICE:
- **Do not use a side airbag sensor that has been dropped.**
- **Do not subject the side airbag sensor to any impact or force.**

(d) Confirm that there is no looseness by shaking the side airbag sensor.



(e) Connect the airbag connector.

2. INSTALL CENTER PILLAR LOWER GARNISH RH (See page IR-76)

3. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-80)

4. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-81)

5. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-80)

6. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-82)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

8. INSPECT SRS WARNING LIGHT

ON-VEHICLE INSPECTION

1. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)**
   (a) Perform a diagnostic system check (See page RS-38).

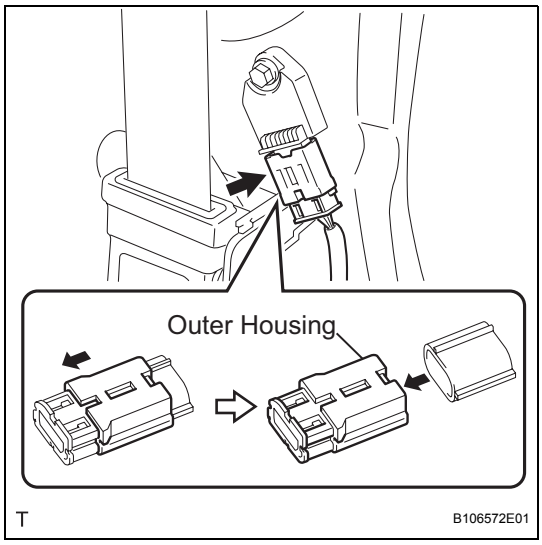
2. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-460 and RS-462, and carefully follow the correct procedure.
   (a) Perform a diagnostic system check (See page RS-38).
   (b) When the center pillar of the vehicle or its periphery is damaged, check whether there is any damage to the side airbag sensor. If there are any defects, such as those mentioned below, replace the side airbag sensor with a new one:
   - Any cracks, dents or chips in the case.
   - Any cracks or other damage to the connector.
   - Peeling of the label or damage to the serial number.

3. **INSPECT SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision)**
   CAUTION:
   For side airbag sensor removal and installation procedures, see pages RS-460 and RS-462, and carefully follow the correct procedure.
   (a) Replace the side airbag sensor.

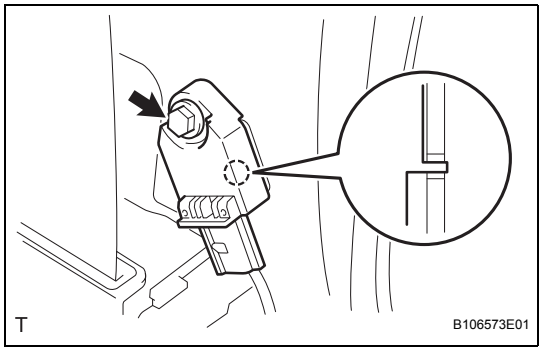
REMOVAL

CAUTION:
Some of the these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX RH (See page IR-48)**
5. **REMOVE DECK FLOOR BOX LH (See page IR-48)**
6. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page IR-96)**
7. **REMOVE NO. 2 REAR SEAT LEG COVER (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-89)**
9. **REMOVE REAR SEAT ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-71)**
10. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
11. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**
12. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-97)**
13. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-97)**
14. **REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH (See page IR-97)**
15. **REMOVE SIDE AIRBAG SENSOR**
    CAUTION:
    Confirm that the negative battery terminal is disconnected before performing the operation. Even an impact to only the airbag sensor will cause the airbag to deploy.



(a) Slide the outer housing and detach the airbag connector.



(b) Remove the bolt, disengage the hook and remove the side airbag sensor.

FRONT PASSENGER SEAT BELT WARNING LIGHT (for Sedan)

COMPONENTS

SYSTEM DESCRIPTION

1. SEAT BELT WARNING SYSTEM DESCRIPTION

If a seat belt is not fastened, this system flashes the seat belt warning light and sounds the seat belt warning buzzer as a reminder.

2. FUNCTIONS OF MAIN COMPONENTS

SB

Components	Function
Front Seat Inner Belt Assembly LH	Informs center airbag sensor assembly of front driver seat belt condition (fastened or unfastened)
Front Seat Inner Belt Assembly RH	Informs occupant classification ECU of front passenger seat belt condition (fastened or unfastened)
Occupant Classification ECU	Informs center airbag sensor assembly of front passenger seat condition (occupied or unoccupied) Informs center airbag sensor assembly of front passenger seat belt condition (fastened or unfastened)
Occupant Classification Sensor	Informs occupant classification ECU of front passenger seat condition (occupied or unoccupied)
Main Body ECU	Informs combination meter assembly of front driver and front passenger seat belt condition (fastened or unfastened) Informs combination meter assembly of front passenger seat condition (occupied or unoccupied)
Front Driver Seat Belt Warning Light	If front driver seat belt is unfastened and ignition switch is ON, combination meter assembly flashes seat belt warning light of combination meter assembly as reminder
Front Passenger Seat Belt Warning Light	Hatchback: When front passenger seat is occupied and ignition switch is ON, if passenger seat belt is unfastened, combination meter assembly flashes front passenger seat belt warning light of instrument panel finish panel end RH as reminder Sedan: When front passenger seat is occupied and ignition switch is ON, if passenger seat belt is unfastened, combination meter assembly flashes front passenger seat belt warning light of hazard warning signal switch assembly as reminder
Seat Belt Warning Buzzer for Front Driver Side and Front Passenger Side	If front driver or front passenger seat belt is unfastened and ignition switch is ON, combination meter assembly sounds buzzer as reminder

3. SYSTEM OPERATION

- When the ignition switch is ON, this system detects the condition of the seat belts based on signals from the front seat inner belt switches (for driver and front passenger seats) and the occupant classification sensor (front passenger side only).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the seat belt warning system.
- *: Use the intelligent tester.

CUSTOMIZE PARAMETERS

HINT:
The following item can be customized.

Combination Meter Assembly

Display (Item)	Default	Function	Setting
SEAT BELT WARN	D/P ON	Changes seat belt warning buzzer setting	D/P ON / D ON / P ON / D/P OFF

NOTICE:

- **When the customer requests the modification of a function, first make sure that the function(s) can be customized.**
- **Record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

SB

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

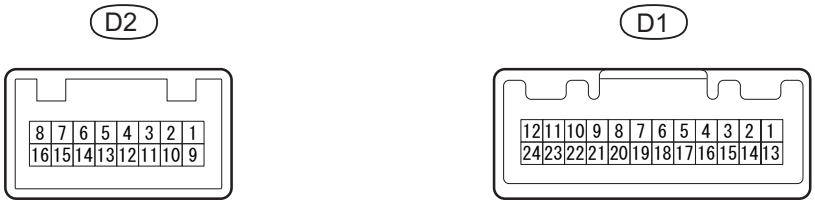
Seat belt warning system

Symptom	Suspected area	See page
Front driver seat belt warning light does not operate	Front seat inner belt assembly LH (for Hatchback)	SB-40
	Front seat inner belt assembly LH (for Sedan)	SB-34
	Wire harness	SB-22
	Center airbag sensor assembly	SB-22
	Main body ECU	SB-22
	Combination meter assembly	SB-22
Front passenger seat belt warning light does not operate	Fuse	SB-24
	Front passenger seat belt warning light (for Hatchback)	SB-6
	Front passenger seat belt warning light (for Sedan)	SB-3
	Front seat inner belt assembly RH (for Hatchback)	SB-40
	Front seat inner belt assembly RH (for Sedan)	SB-34
	Occupant classification sensor	RS-226
	Wire harness	SB-24
	Occupant classification ECU	SB-24
	Center airbag sensor assembly	SB-24
	Main body ECU	SB-24
	Combination meter assembly	SB-24
Seat belt warning buzzer does not sound (Front driver and front passenger seat belt warning lights operate normally)	Combination meter assembly (for Hatchback)	ME-73
	Combination meter assembly (for Sedan)	ME-10

TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY

Hatchback:



Sedan:

(a) Disconnect the D1 combination meter assembly connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D1-1 - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF → ON	Below 1 V → 11 to 14 V
D1-2 - Body ground	L - Body ground	Battery	Always	11 to 14 V
D1-24 - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the combination meter assembly connector.
(d) Measure the voltage of the wire harness side connector.

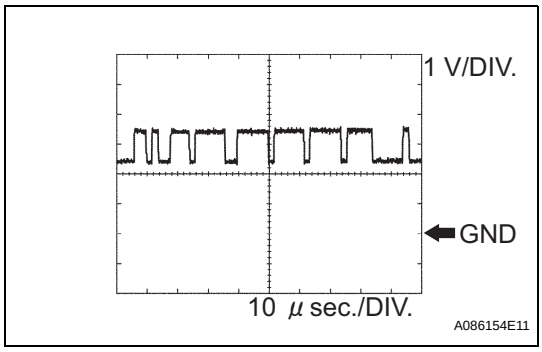
Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D1-20 - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation (See waveform 1)
D1-21 - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation (See waveform 2)
D2-9*1 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is unfastened	Alternating between 11 to 14 V and below 1 V
D2-9*1 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is fastened	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D76-9*2 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is unfastened	Alternating between 11 to 14 V and below 1 V
D76-9*2 - Body ground	O - Body ground	Seat belt warning light signal (Front passenger side)	Ignition switch ON Front passenger seat is occupied and its seat belt is fastened	Below 1 V

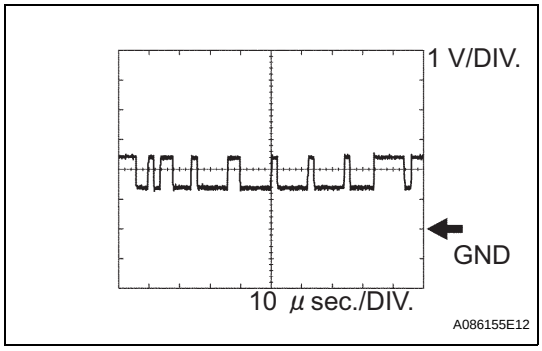
SB

*1: Hatchback
*2: Sedan
If the result is not as specified, the combination meter may have a malfunction.



(e) Waveform 1 (Reference): Using an oscilloscope
CAN communication signal

Terminal Name	D1-21 (CANL) - D1-24 (ET)
Tester Range	1V/DIV, 10μs/DIV
Condition	Ignition switch ON

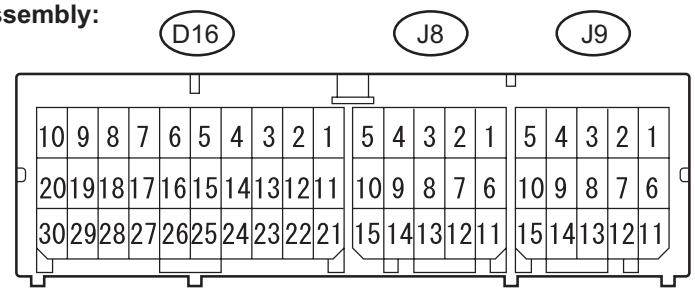


(f) Waveform 2 (Reference): Using an oscilloscope
CAN communication signal

Terminal Name	D1-21 (CANL) - D1-24 (ET)
Tester Range	1V/DIV, 10μs/DIV
Condition	Ignition switch ON

2. CENTER AIRBAG SENSOR ASSEMBLY

Center Airbag Sensor Assembly:

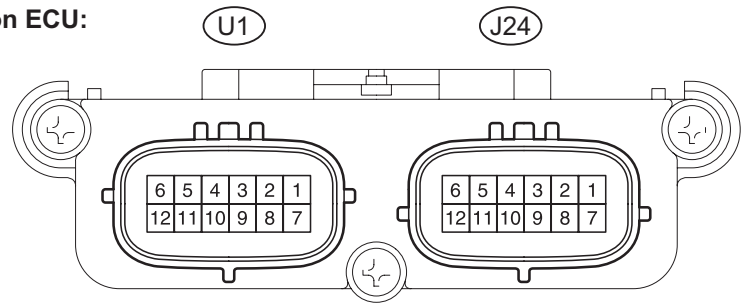


Terminal No.	Terminal Symbol	Destination
D16-13	CANH	CAN communication line
D16-21	IG2	IGN fuse
D16-22	CANL	CAN communication line
D16-25	E1	Ground
D16-26	E2	Ground
J8-11	DBE+	Front seat inner belt assembly LH
J8-12	DBE-	Front seat inner belt assembly LH
J9-12	FSP+	Occupant Classification ECU

Terminal No.	Terminal Symbol	Destination
J9-13	FSP-	Occupant Classification ECU

3. OCCUPANT CLASSIFICATION ECU

Occupant Classification ECU:



P H100909E04

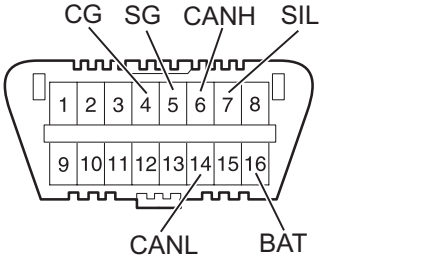
(a) Disconnect the J24 occupant classification ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
J24-7 (IG) - J24-3 (GND)	O - W-B	Power source (IG2 Fuse)	Ignition switch OFF	Below 1 V
J24-7 (IG) - J24-3 (GND)	O - W-B	Power source (IG2 Fuse)	Ignition switch ON	11 to 14 V
J24-1 (+B) - Body ground	V - Body ground	Power source (ECU-B Fuse)	Always	11 to 14 V
J24-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the occupant classification ECU connector.
(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BSW (J24-9) - BGND (J24-5)	O - P	Passenger side buckle switch line	Buckle switch ON Buckle switch OFF	Pulse generation
FSR+ (J24-8) - FSR- (J24-4)	GR - Y	Center airbag sensor assembly communication line	Ignition switch ON	Pulse generation

If the result is not as specified, the combination meter may have a malfunction.



T H100769E16

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus " +" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

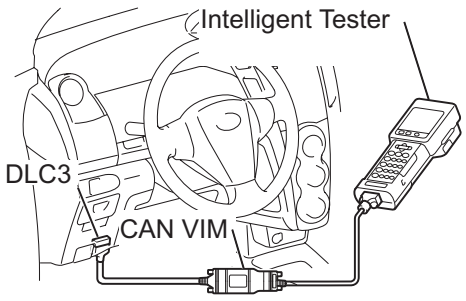
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

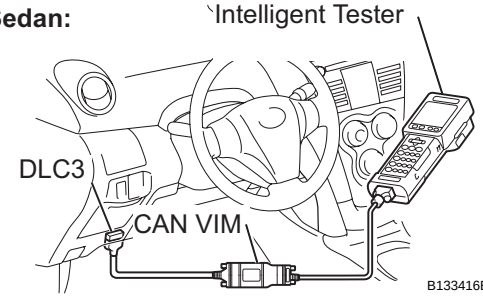
Connect the cable of the intelligent tester to the CAN VIM, connect the CAN VIM to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Hatchback:



Sedan:



2. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

3. INSPECT FRONT DRIVER SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the driver seat belt is not fastened, check that the combination meter assembly driver seat belt warning light blinks.

(c) When the seat belt is fastened, check that the combination meter assembly driver side seat belt warning light turns off.

4. INSPECT FRONT PASSENGER SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the front passenger seat is occupied, but the seat belt is not fastened, check that the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2 blinks.
*1: Hatchback
*2: Sedan

(c) When the front passenger seat belt is fastened, check that the front passenger seat belt warning light turns off.

5. INSPECT SEAT BELT WARNING BUZZER USING DRIVER SEAT BELT

(a) Turn the ignition switch ON.

(b) When the driver seat belt is not fastened within 1.8 seconds of the ignition switch being turned ON, check that the seat belt warning buzzer sounds at 1.2 second intervals for 6 seconds.

(c) When the driver seat belt is not fastened within 13.8 seconds of the ignition switch being turned ON and the vehicle speed reaches 12.4 mph (20 km/h) or more, check that the buzzer sounds at 1.2 second intervals for 9.6 seconds.

(d) After the buzzer has sounded for 9.6 seconds, check that the buzzer sounds at 0.4 second intervals for a further 20 seconds.

(e) When 29.6 seconds have elapsed since the buzzer started sounding in step (c) above, check that the buzzer stops sounding.

(f) After the buzzer has stopped sounding, turn the ignition switch OFF and then start the engine again. With the driver seat belt unfastened, drive the vehicle at 12.4 mph (20 km/h) or more. Check that the buzzer sounds.

(g) After the buzzer has stopped sounding, fasten the driver seat belt, drive the vehicle at 12.4 mph (20 km/h) or more, and then unfasten the seat belt. Check that the buzzer sounds.

(h) After the buzzer has stopped sounding, move the shift lever to R. Then move the shift lever to D (for A/T only). With the driver seat belt unfastened, drive the vehicle at 12.4 mph (20km/h) or more. Check that the buzzer sounds.

6. INSPECT SEAT BELT WARNING BUZZER USING FRONT PASSENGER SEAT BELT

HINT:
If the following inspection is conducted by one person, since the front passenger seat belt warning buzzer function uses signals from the occupant classification sensors, place an object with a weight of 36 kg (79.37 lb) or more on the front passenger seat.

(a) Turn the ignition switch ON.

(b) When the front passenger seat belt is not fastened within 1.8 seconds of the ignition switch being turned ON, check that the seat belt warning buzzer sounds at 1.2 second intervals for 6 seconds.

(c) When the front passenger seat belt is not fastened within 13.8 seconds of the ignition switch being turned ON and the vehicle speed reaches 12.4 mph (20 km/h) or more, check that the buzzer sounds at 1.2 second intervals for 9.6 seconds.

(d) After the buzzer has sounded for 9.6 seconds, check that the buzzer sounds at 0.4 second intervals for a further 20 seconds.

(e) When 29.6 seconds have elapsed since the buzzer started sounding in step (c) above, check that the buzzer stops sounding.

(f) After the buzzer has stopped sounding, turn the ignition switch OFF and then start the engine again. With the front passenger seat belt unfastened, drive the vehicle at 12.4 mph (20 km/h) or more. Check that the buzzer sounds.

(g) After the buzzer has stopped sounding, fasten the front passenger seat belt, drive the vehicle at 12.4 mph (20 km/h) or more, and then unfasten the front passenger seat belt. Check that the buzzer sounds.

(h) After the buzzer has stopped sounding, move the shift lever to R. Then move the shift lever to D. With the front passenger seat belt unfastened, drive the vehicle at 12.4 mph (20km/h) or more. Check that the buzzer sounds.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

By accessing the DATA LIST using the intelligent tester, values of the switches and sensors can be read without removing any parts. Reading the DATA LIST is the first step of troubleshooting and is one method of shortening labor time.

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.

(c) Enter the DATA LIST by following the prompts displayed on the tester screen.

Center Airbag Sensor Assembly

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
D BUCKLE SW	Buckle switch (Driver side)/ UNSET: Seat belt not fastened SET: Seat belt fastened NG: Data not determined	UNSET/SET	-
P BUCKLE SW	Buckle switch (Passenger side)/ UNSET: Seat belt not fastened SET: Seat belt fastened NG: Data not determined	UNSET/SET	-

Occupant Classification ECU

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
P BUCKLE SW	Buckle switch (Front passenger side)/ UNSET: Front passenger side seat belt is unfastened SET: Front passenger side seat belt is fastened NG: Front passenger side seat belt is malfunctioning	UNSET/SET	-
PASSENGER CLASS	Front passenger classification/ AF05: Adult (36 to 54 kg (79.37 to 119.05 lb)) is seated AM50: Adult more than 54 kg (119.05 lb) is seated CHILD: Child (less than 36 kg (79.37 lb)) is seated CRS: Child restraint system (less than 7 kg (15.43 lb)) and front passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set OFF: Vacant	AF05/AM50/CHILD/CRS/OFF	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester with the CAN VIM to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the ACTIVE TEST by following the prompts displayed on the tester screen.

Combination Meter Assembly:

Item	Test Details	Diagnostic Note
D-BELT REMIND	Front driver seat belt warning light / OFF or ON	-
P-BELT REMIND	Front passenger seat belt warning light / OFF or ON	-

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is ON, the center airbag sensor assembly communicates the status of the front seat inner belt assembly LH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the driver seat belt warning light in the combination meter assembly. When the seat belt is fastened, the combination meter assembly stops flashing the front driver seat belt warning light.

REPLACE COMBINATION METER ASSEMBLY

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

When the ignition switch is ON and the front passenger seat is occupied, the center airbag sensor assembly communicates the status of the front seat inner belt assembly RH to the main body ECU using the CAN communication line. The main body ECU receives signals from the center airbag sensor assembly and transmits them to the combination meter assembly. When the seat belt is unfastened, the combination meter assembly flashes the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2. When the seat belt is fastened, the combination meter assembly stops flashing the front passenger seat belt warning light on the instrument panel finish panel end RH*1 or hazard warning signal switch assembly*2.

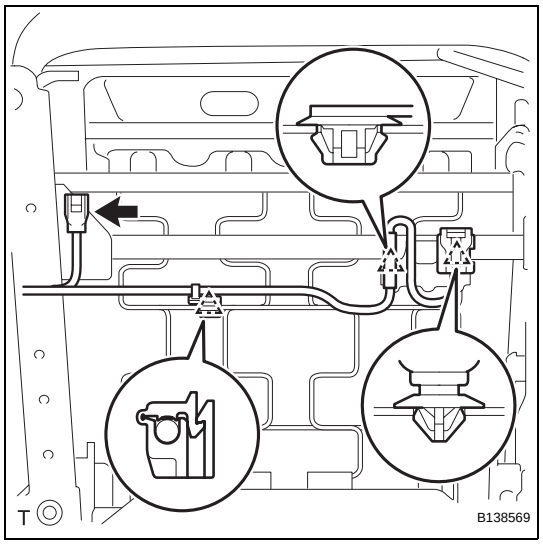
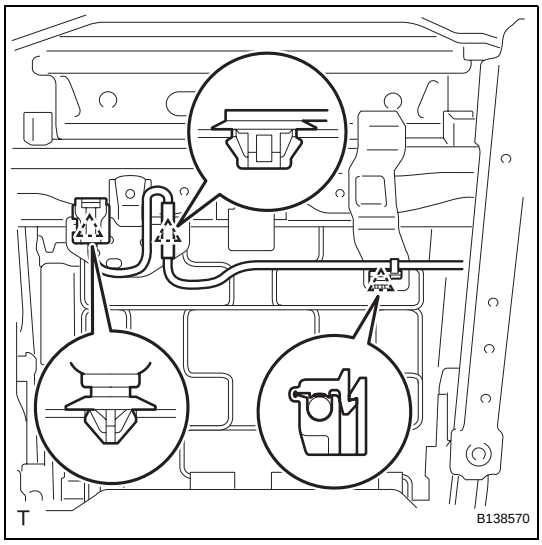
REMOVAL

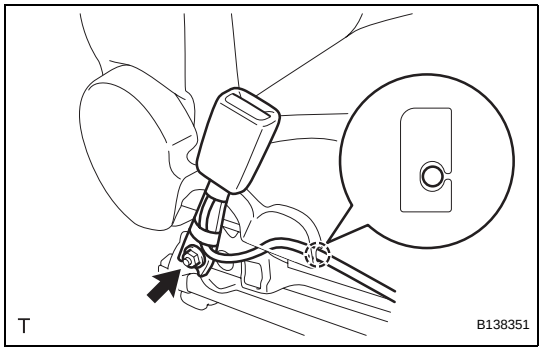
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and driver sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working (w/ Front Seat Side Airbag).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (See page SE-5)**
3. **REMOVE FRONT SEAT ASSEMBLY (See page SE-5)**
4. **REMOVE FRONT SEAT INNER BELT ASSEMBLY**
   (a) for Driver Side:
      (1) Disconnect the seat position sensor connector.
      (2) Using a clip remover, remove the connector.
      (3) Using a clip remover, remove the clamp.
      (4) Remove the clamp.

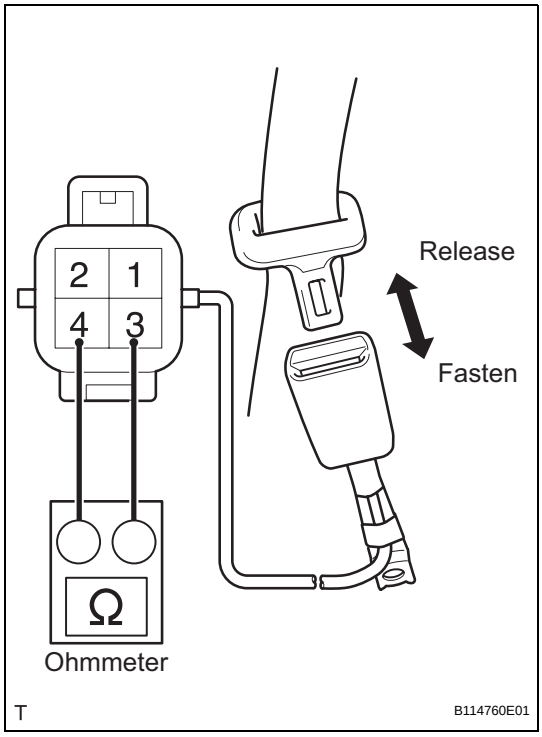




(b) for Front Passenger Seat:
  (1) Using a clip remover, remove the connector.
  (2) Using a clip remover, remove the clamp.
  (3) Remove the clamp.



(c) Remove the wire harness from the claw of the front seat cushion inner shield.
(d) Remove the nut and the front seat inner belt.



INSPECTION

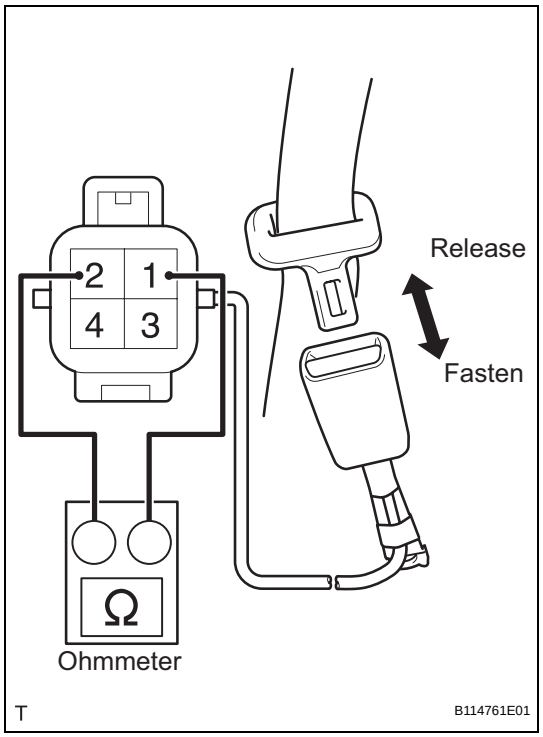
1. INSPECT FRONT SEAT INNER BELT ASSEMBLY

(a) for Driver Side:
  (1) Check the resistance.
    1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
3 - 4	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

If the result is not as specified, replace the front seat inner belt.



(b) for Front Passenger Side:

(1) Check the resistance.

1. Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Tongue plate fastened	10 kΩ or higher
	Tongue plate released	Below 1 Ω

If the result is not as specified, replace the front seat inner belt.

SB

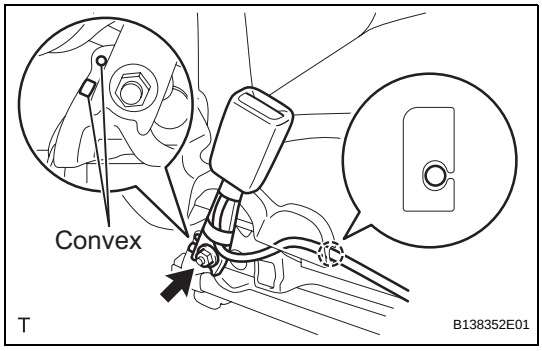
INSTALLATION

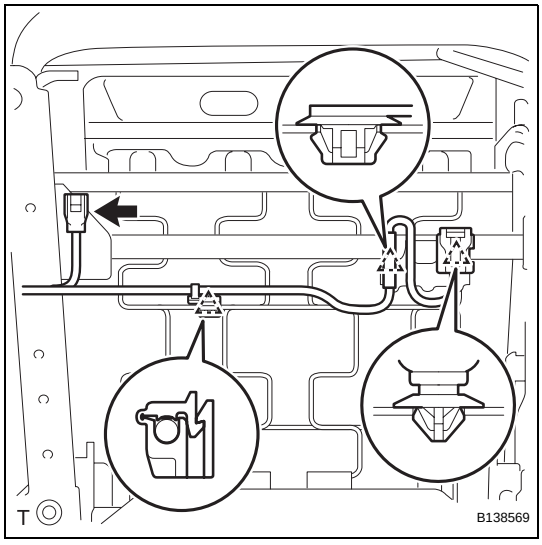
CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary concerning the SRS airbag system before servicing (w/ Front Seat Side Airbag) (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the front seat.
HINT:
The procedure described below is for the driver side. Use the same procedure for both the front passenger and drive sides, unless otherwise specified.



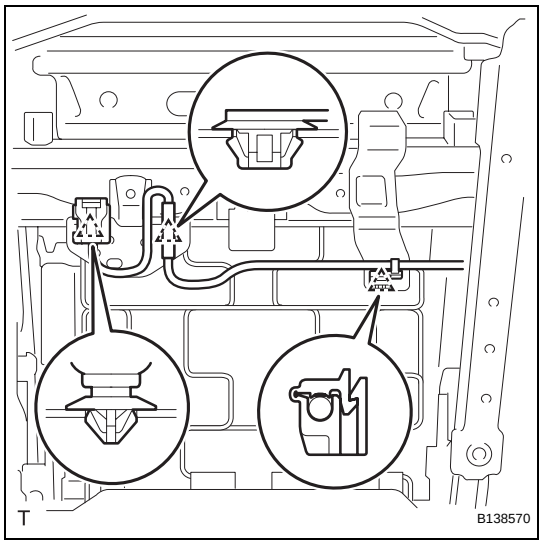
1. INSTALL FRONT SEAT INNER BELT ASSEMBLY

(a) Install the front seat inner belt with the nut.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the front seat inner belt over the convex areas of the front seat adjuster frame.

(b) Install the wire harness into the claw of the front seat cushion inner shield.



(c) for Driver Side:
(1) Install the 2 clamps.
(2) Install the connector.
(3) Connect the seat position sensor connector.



(d) for Front Passenger Side:
  (1) Install the 2 clamps.
  (2) Install the connector.

2. **INSTALL FRONT SEAT ASSEMBLY (See page SE-20)**

3. **INSTALL FRONT SEAT HEADREST ASSEMBLY (See page SE-21)**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

5. **INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)**
   (See page RS-31)

REMOVAL

CAUTION:
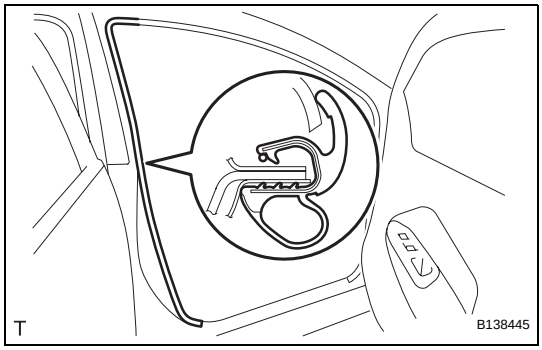
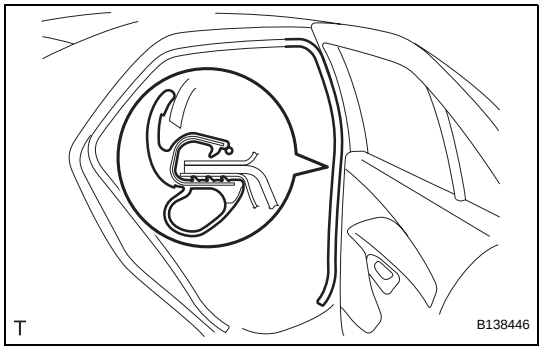
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

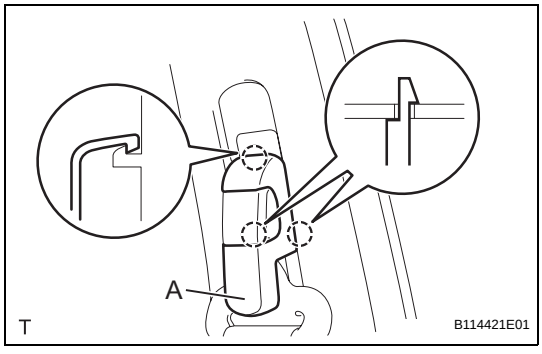
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-14)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-15)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.

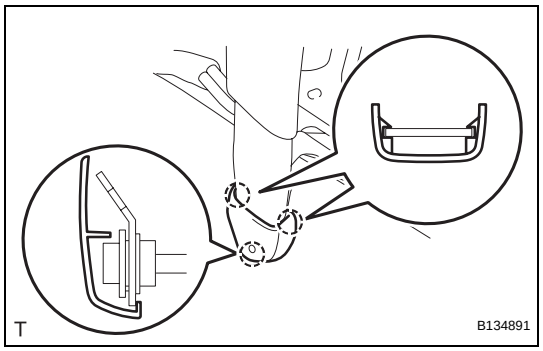


5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the rear door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.
6. **REMOVE CENTER PILLAR LOWER GARNISH (See page IR-16)**



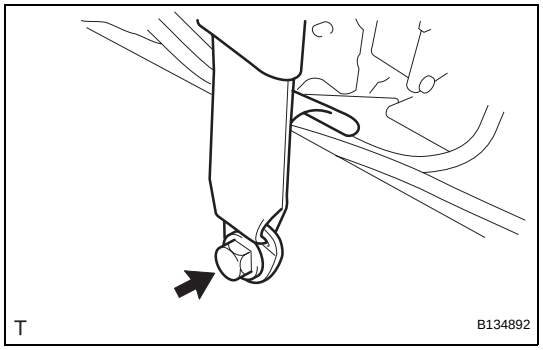
7. **REMOVE SEAT BELT ANCHOR COVER CAP**
   (a) Pull portion A, shown in the illustration, toward you, remove the 2 claws on the lower side followed by the claw on the upper side. Then remove the seat belt anchor cover cap.





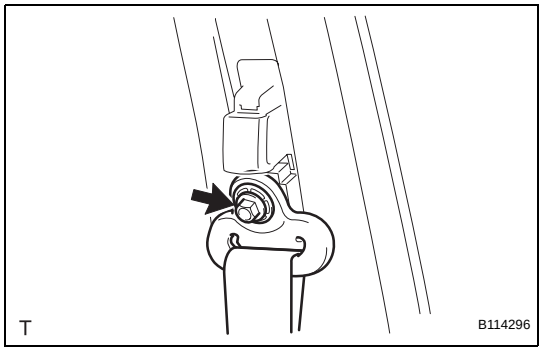
8. REMOVE LAP BELT OUTER ANCHOR COVER

(a) Disengage the 3 claws and remove the lap belt outer anchor cover.

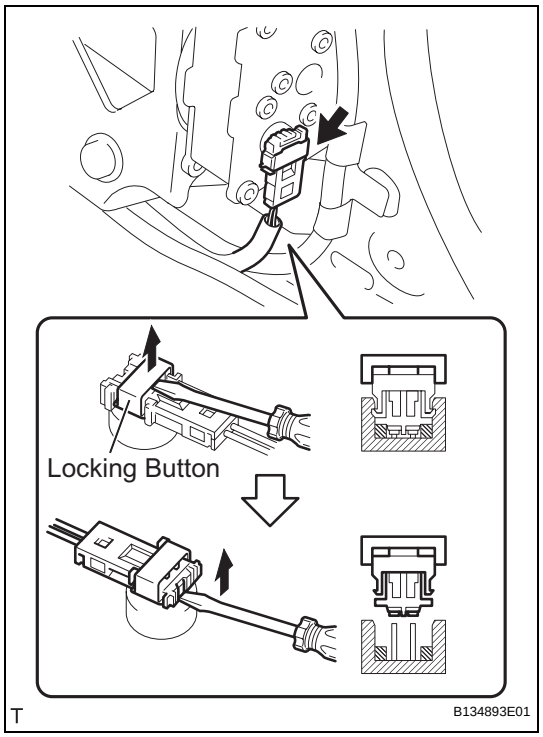


9. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

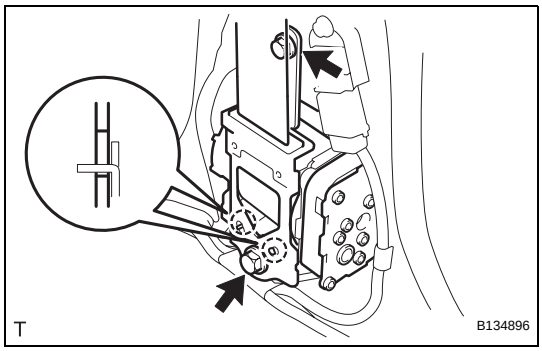
(a) Remove the bolt and the anchor plate.



(b) Remove the bolt and the shoulder anchor.

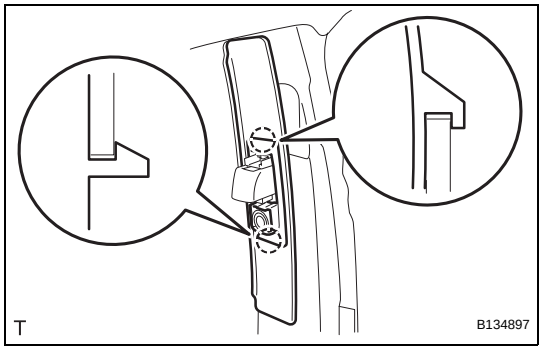


(c) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.



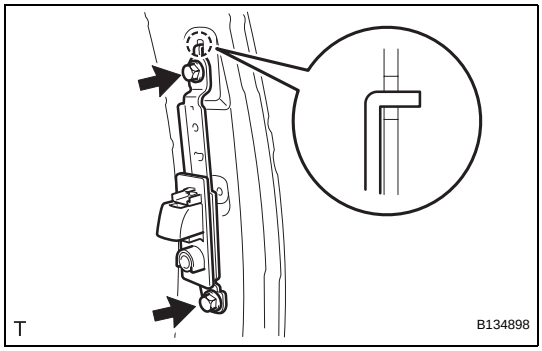
(d) Remove the 2 bolts, the 2 hooks and the retractor.

10. REMOVE CENTER PILLAR UPPER GARNISH (See page IR-17)



11. REMOVE SHOULDER BELT ANCHORAGE PLATE COVER

(a) Disengage the 2 claws and remove the shoulder belt anchorage plate cover.

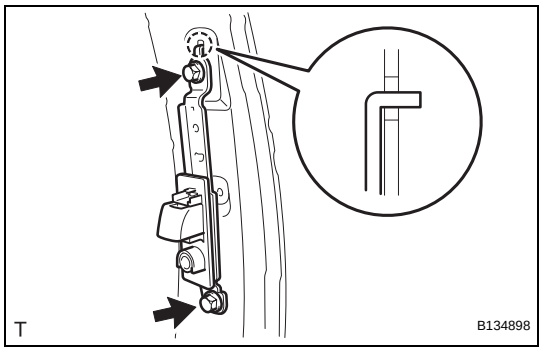


12. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts, the hook and the front shoulder belt anchor adjuster.

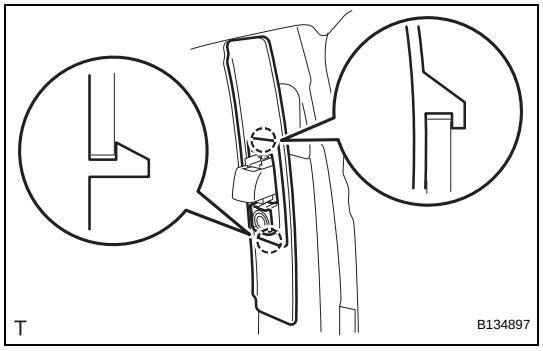
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

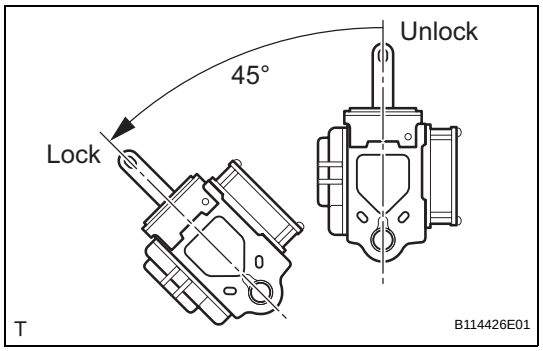
(a) Insert the hook into the body hole and install the shoulder belt anchor adjuster with the 2 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



2. INSTALL SHOULDER BELT ANCHORAGE PLATE COVER

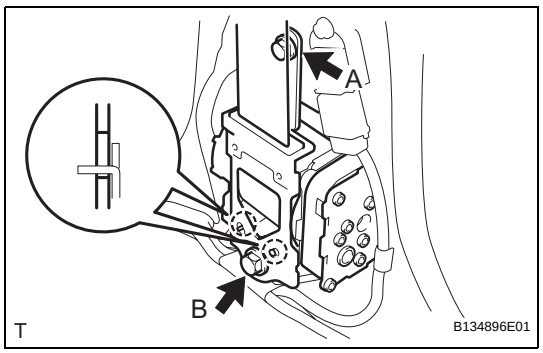
(a) Engage the 2 claws and install the shoulder belt anchorage plate cover.

3. INSTALL CENTER PILLAR UPPER GARNISH (See page IR-31)

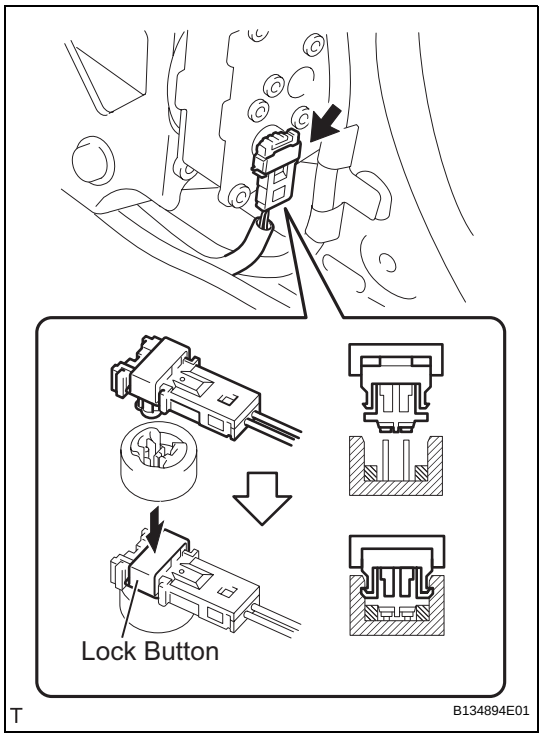


4. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

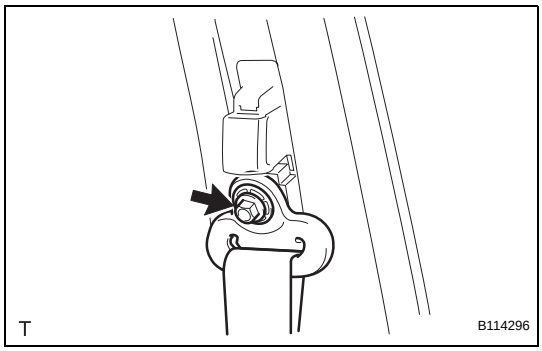
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15 ° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45 ° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the front seat outer belt.



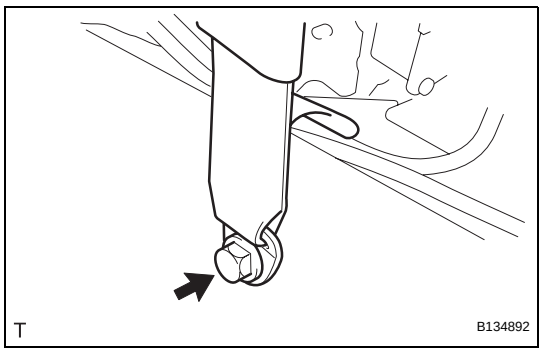
(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B



(d) Connect the pretensioner connector.
  (1) Connect the pretensioner connector.
  (2) Lock the locking button.
  NOTICE:
  Securely lock the locking button.



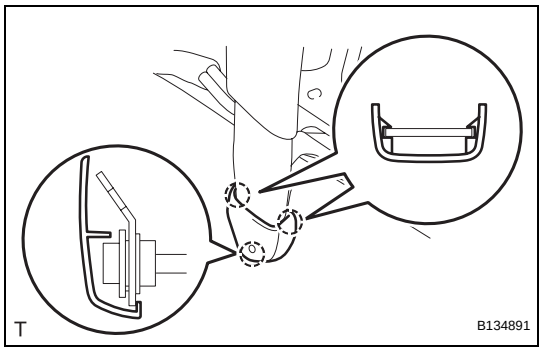
(e) Install the shoulder anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



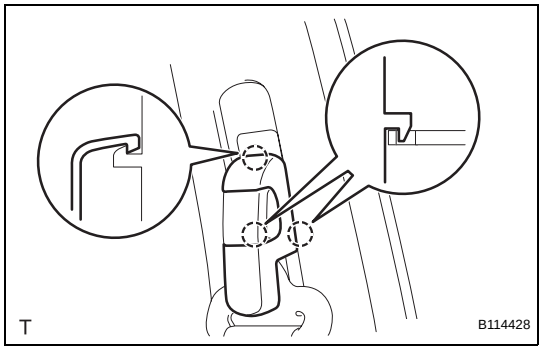
(f) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

(g) Check that the ELR locks.
NOTICE:
- **The check should be performed with the front seat outer belt installed.**
- **Do not allow the anchor part of the front seat outer belt and the protruding parts of the floor panel to overlap.**

  (1) With the belt installed, check that the belt locks when it is pulled out quickly.
  If the operation is not as specified, replace the front seat outer belt.

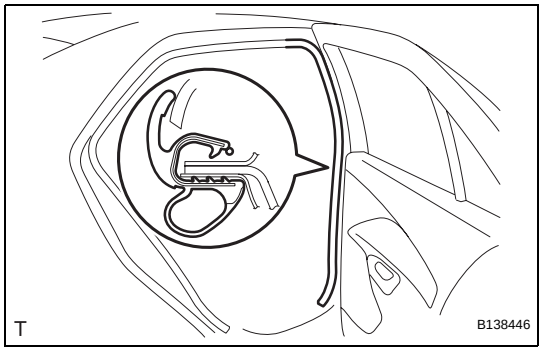


5. INSTALL LAP BELT OUTER ANCHOR COVER
(a) Engage the 3 claws and install the lap belt outer anchor cover.

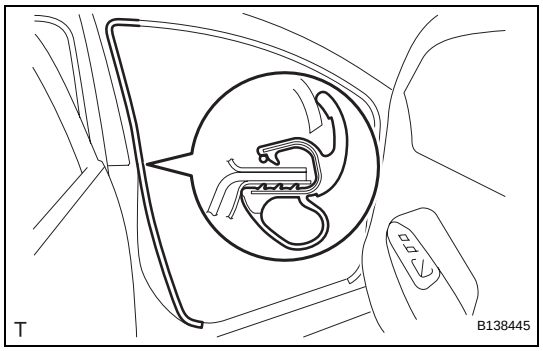


6. INSTALL SEAT BELT ANCHOR COVER CAP
(a) Engage the 3 claws and install the seat belt anchor cover cap.

7. INSTALL CENTER PILLAR LOWER GARNISH (See page IR-32)



8. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP
(a) Install the rear door opening trim weatherstrip.



9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP
(a) Install the front door opening trim weatherstrip.

10. INSTALL REAR DOOR SCUFF PLATE (See page IR-34)

11. INSTALL FRONT DOOR SCUFF PLATE (See page IR-35)

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

13. INSPECT SRS WARNING LIGHT
(See page RS-31)

SB

SB

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **When activating a front seat outer belt (with seat belt pretensioner), stand at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing the activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **When activating the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool).**
- **Perform the operation in a place away from electrical interference.**

HINT:

The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

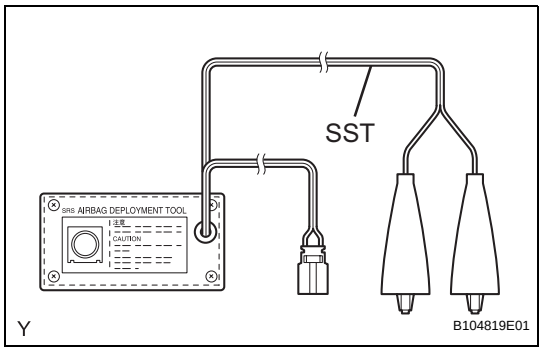
Prepare a battery as the power source to activate the seat belt pretensioner.

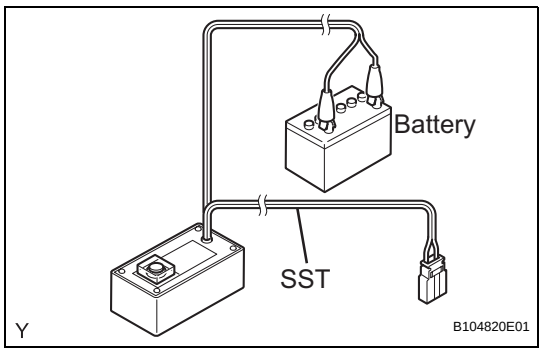
(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.

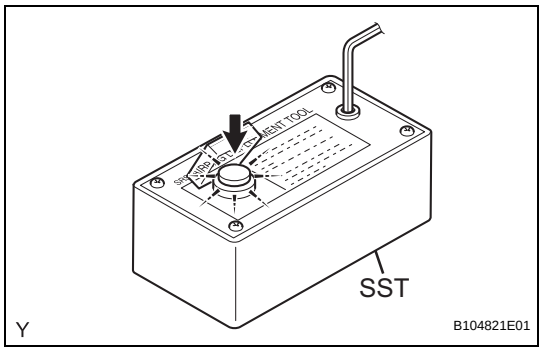




(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

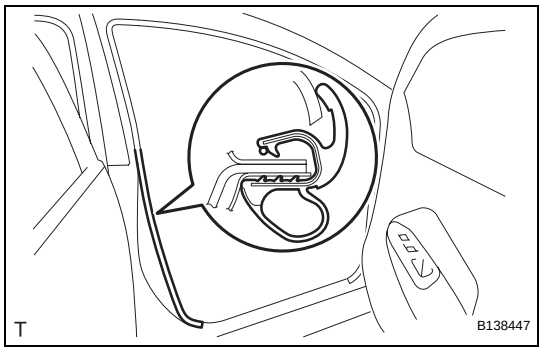
(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from the negative battery terminal.

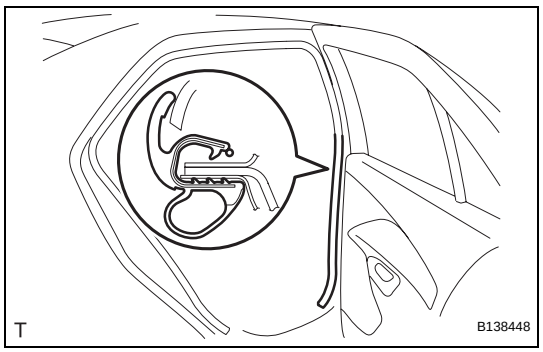
(2) Remove the front door scuff plate (See page IR-14).

(3) Remove the rear door scuff plate (See page IR-15).



(4) Remove the front door opening trim weatherstrip.

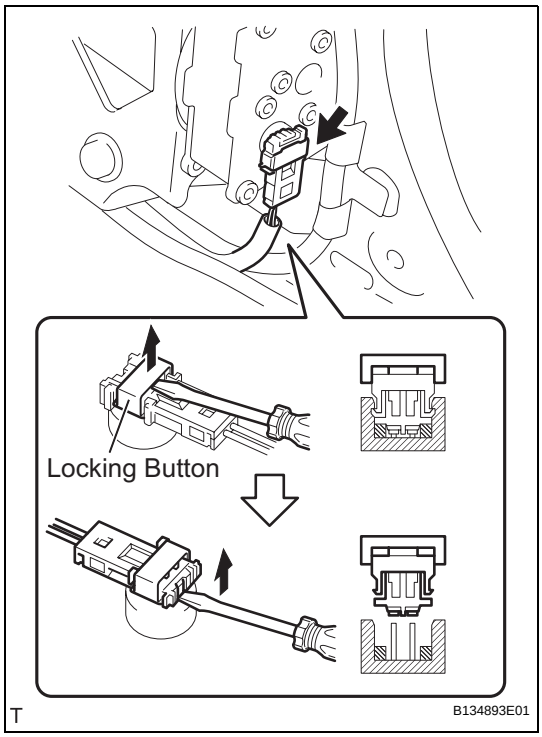
1. Remove the front door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.



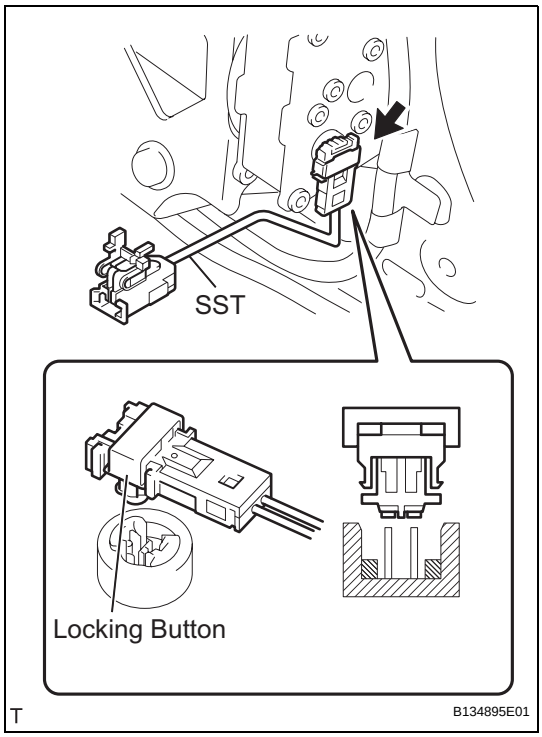
(5) Remove the rear door opening trim weatherstrip.

1. Remove the rear door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.

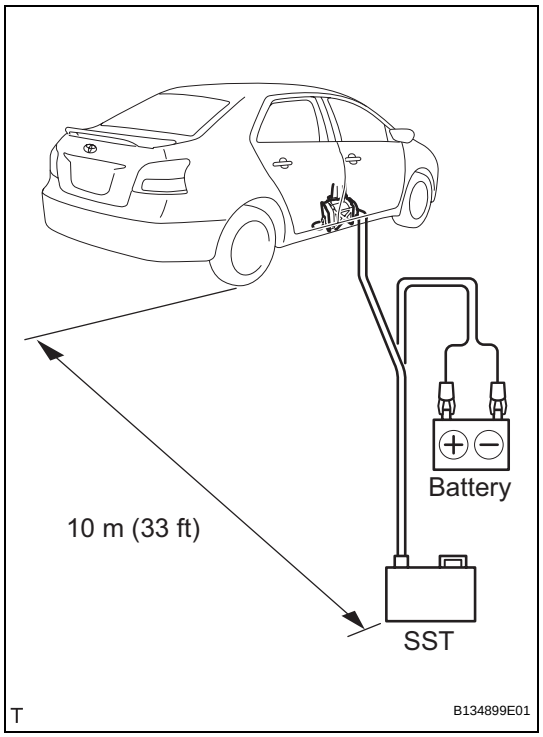
(6) Remove the center pillar lower garnish (See page IR-16).



(7) Disconnect the pretensioner connector.
1. Using a screwdriver, release the locking button.
2. Using a screwdriver, disconnect the pretensioner connector.



(d) Connect SST.
(1) Connect SST, then the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700

(3) Close the doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.

(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.

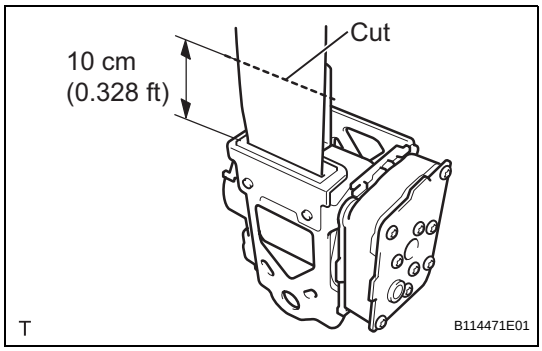
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

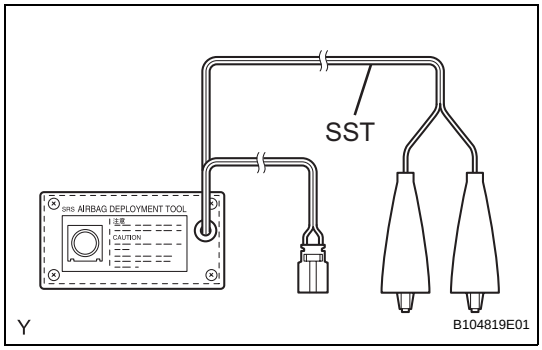
2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)
HINT:
Prepare a battery as the power source to activate the seat belt pretensioner.
NOTICE:
- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Be sure to follow the procedures described below when activating the seat belt pretensioner.**

(a) Remove the front seat outer belt (See page SB-44).

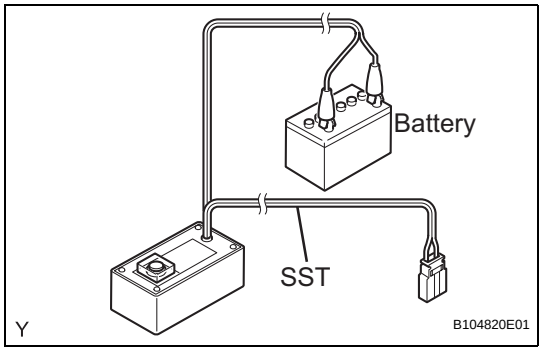


(b) Wind the seat belt with the retractor.

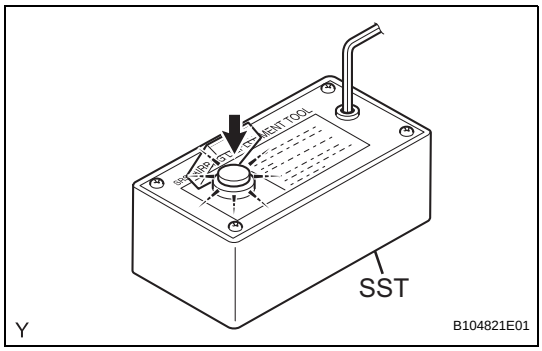
(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.
HINT:
The retractor resistance increases in correlation with how much the seat belt is wound.



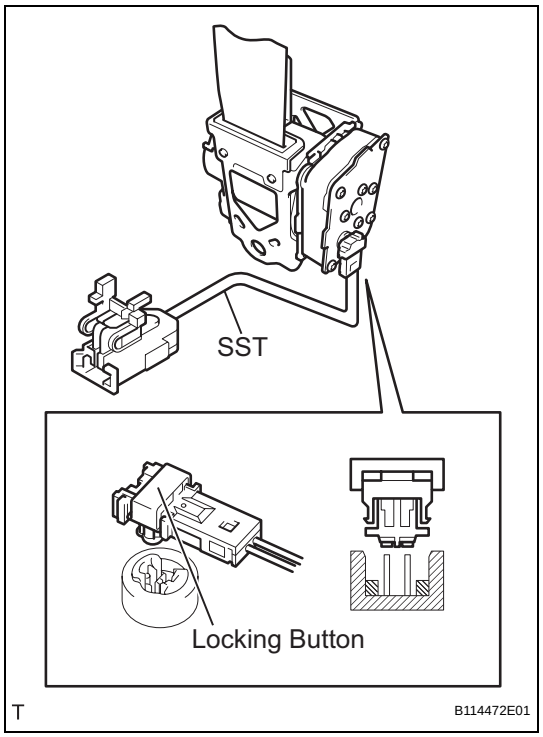
(d) Check whether SST is functioning.
SST 09082-00700
CAUTION:
Always use the specified SST when activating the seat belt pretensioner.



(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.



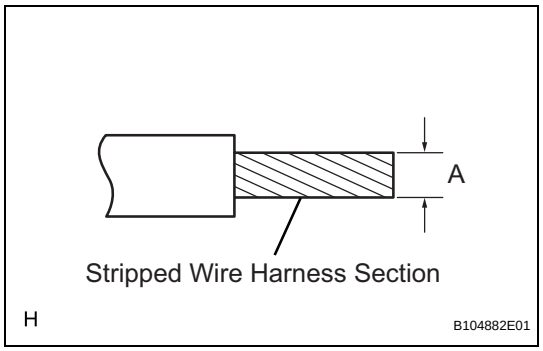
(e) Connect SST.

(1) Connect SST, then the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.

Stripped wire harness section

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)

CAUTION:

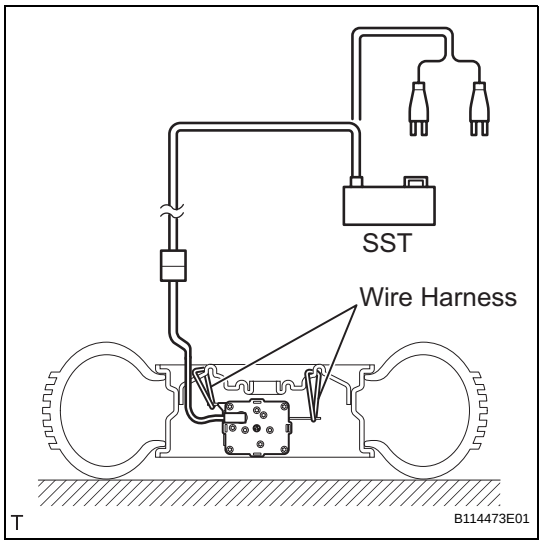
- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

HINT:

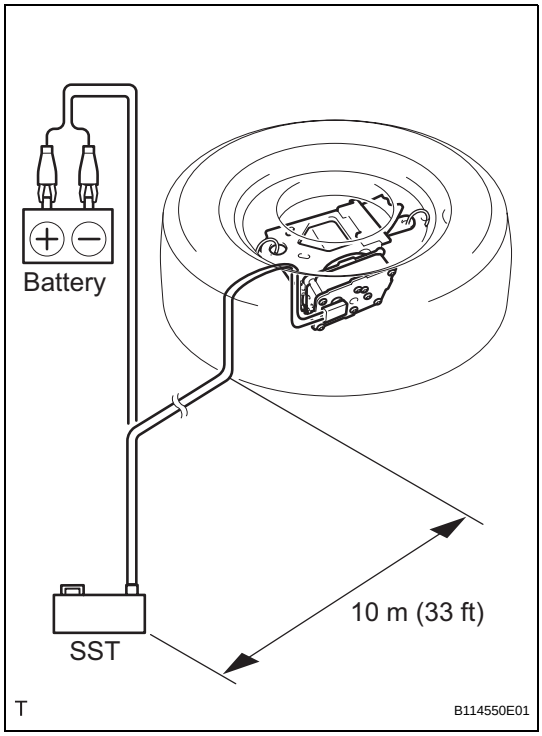
To calculate the area of the stripped wire harness cross section:

Area = 3.14 x $(Diameter)^2$ divided by 4

SB



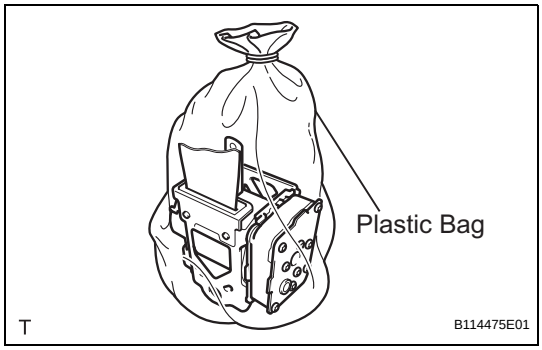
(3) Connect SST.
SST 09082-00700
NOTICE:
- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt, as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Take care not to damage the SST wire harness.

(f) Activate the seat belt pretensioner.
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.



(h) Dispose of the front seat outer belt (with the seat belt pretensioner).
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling an front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

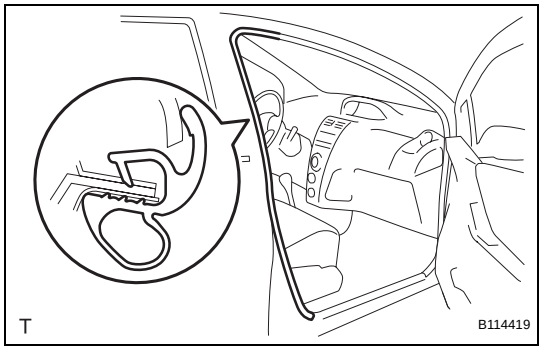
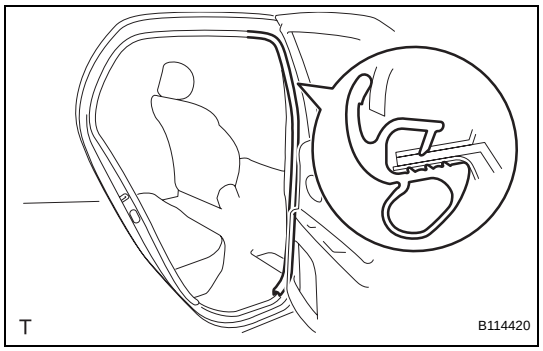
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

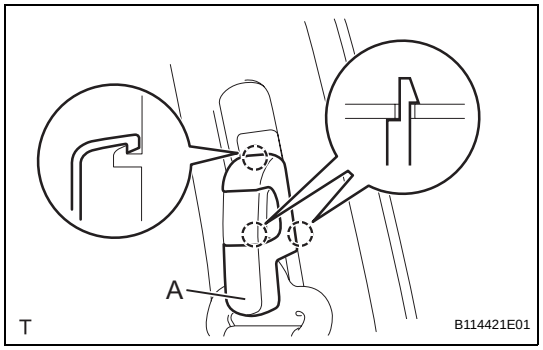
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-49)**
3. **REMOVE REAR DOOR SCUFF PLATE (See page IR-51)**
4. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the front door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.



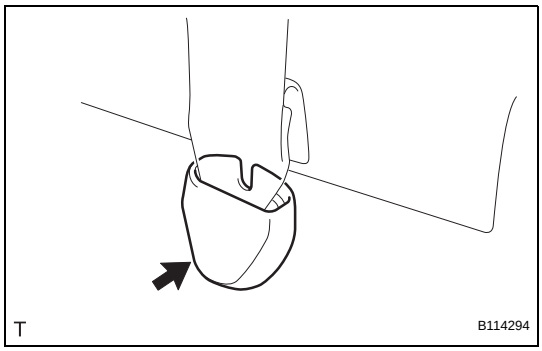
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Remove the rear door opening trim weatherstrip to the extent that the center pillar upper and lower garnishes can be removed.
6. **REMOVE CENTER PILLAR LOWER GARNISH (See page IR-55)**



7. **REMOVE SEAT BELT ANCHOR COVER CAP**
   (a) Pull portion A, shown in the illustration, toward you, remove the 2 claws on the lower side followed by the claw on the upper side. Then remove the seat belt anchor cover cap.

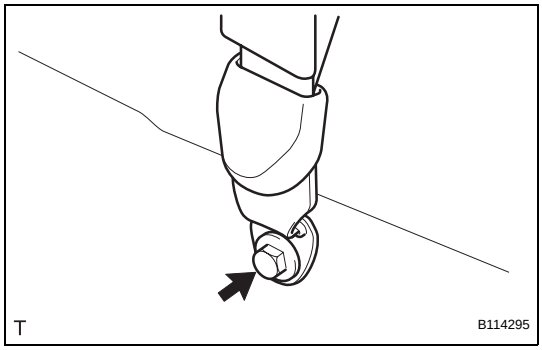


SB

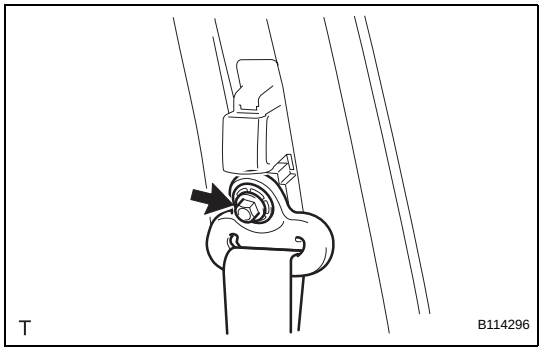


8. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

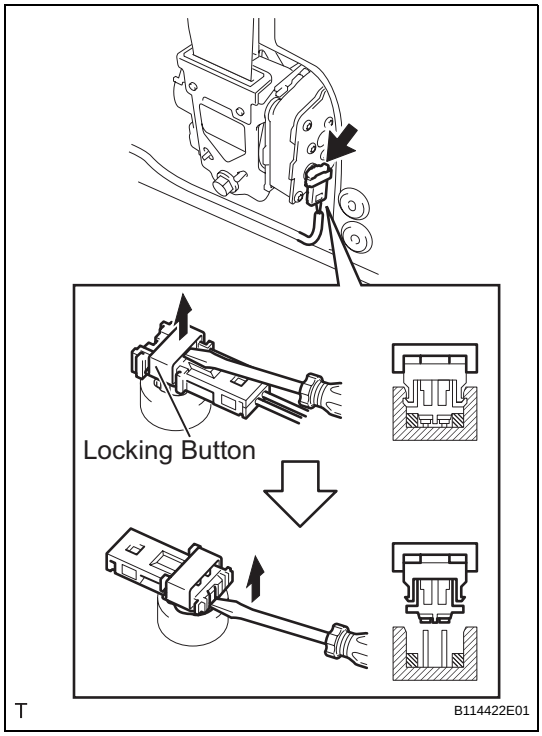
(a) Remove the anchor plate cover.



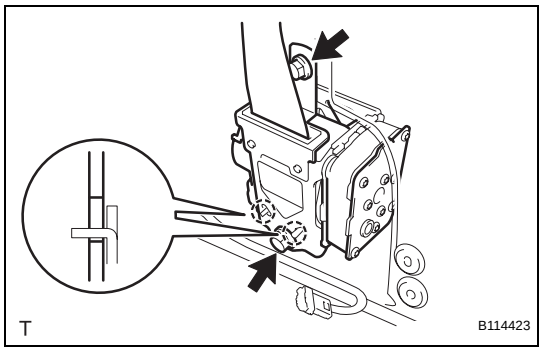
(b) Remove the bolt and the anchor plate.



(c) Remove the bolt and the through anchor.

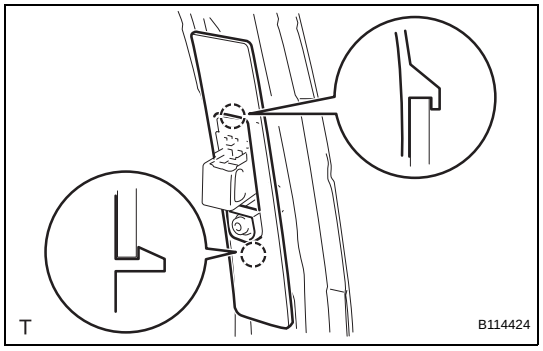


(d) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.



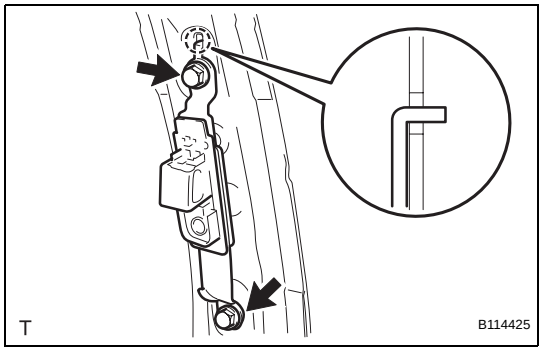
(e) Remove the 2 bolts, the 2 hooks and the retractor.

9. REMOVE CENTER PILLAR UPPER GARNISH (See page IR-55)



10. REMOVE SHOULDER BELT ANCHOR COVER

(a) Disengage the 2 claws and remove the shoulder belt anchor cover.



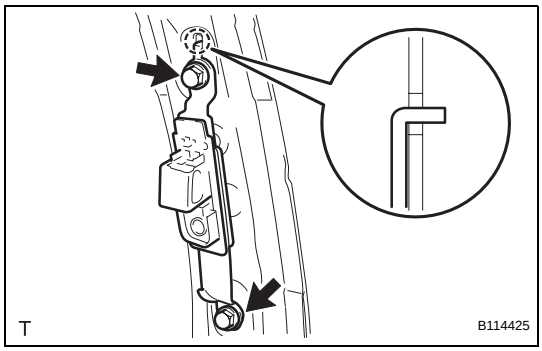
11. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts, the hook and the front shoulder belt anchor adjuster.

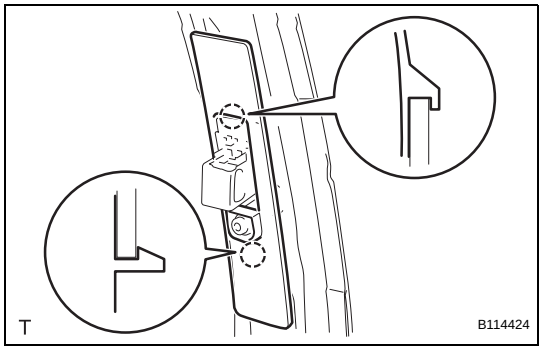
SB

INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

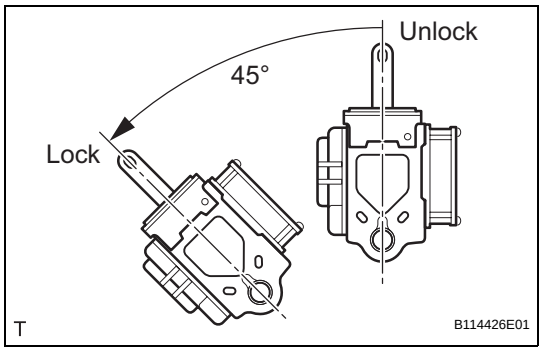


1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY
(a) Insert the hook into the body hole and install the shoulder belt anchor adjuster with the 2 bolts.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

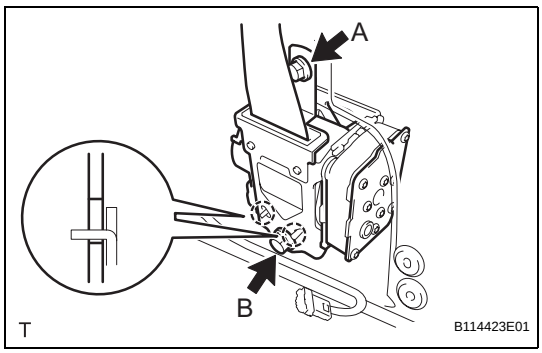


2. INSTALL SHOULDER BELT ANCHOR COVER
(a) Engage the 2 claws and install the shoulder belt anchor cover.

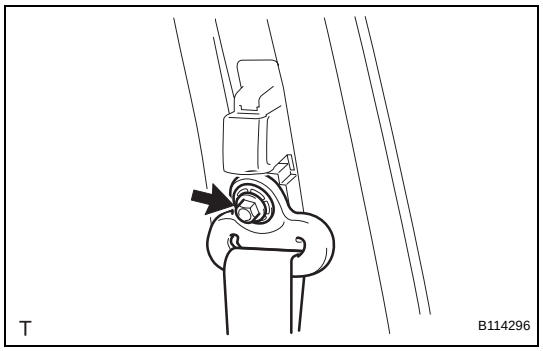
3. INSTALL CENTER PILLAR UPPER GARNISH (See page IR-76)



4. INSTALL FRONT SEAT OUTER BELT ASSEMBLY
(a) Check the angle of inclination required to lock the retractor.
(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the front seat outer belt.

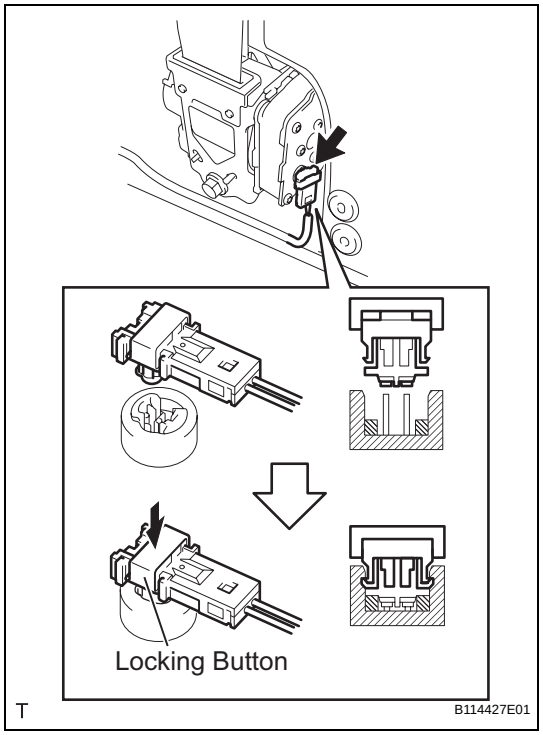


(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B

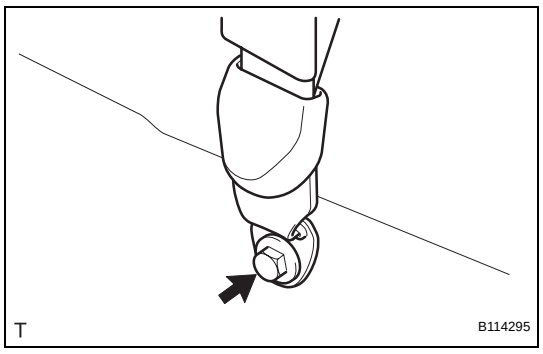


(d) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

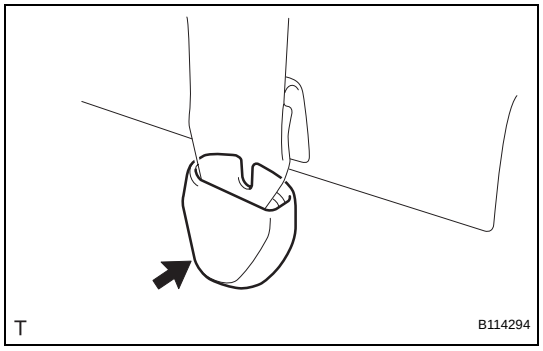
(e) Check that the ELR locks.
NOTICE:
Perform the check with the front seat outer belt installed.
(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the front seat outer belt.



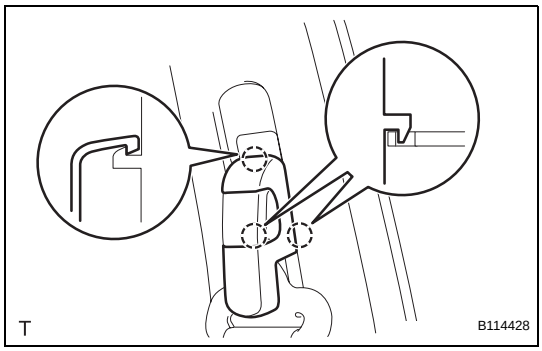
(f) Connect the pretensioner connector.
(1) Connect the pretensioner connector.
(2) Lock the locking button.
NOTICE:
Securely lock the locking button.



(g) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)

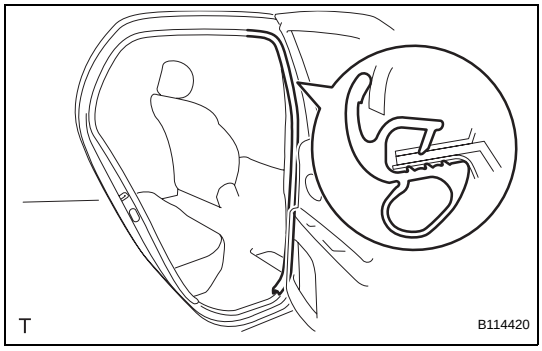


(h) Install the anchor plate cover.

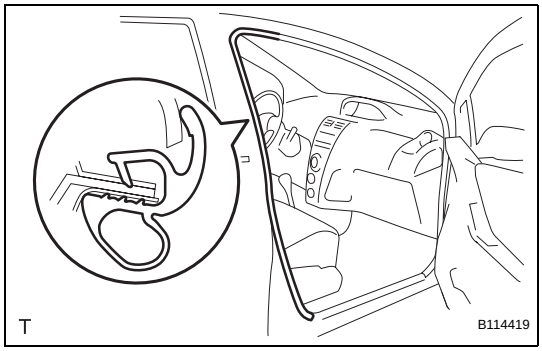


5. **INSTALL SEAT BELT ANCHOR COVER CAP**
   (a) Engage the 3 claws and install the seat belt anchor cover cap.

6. **INSTALL CENTER PILLAR LOWER GARNISH (See page IR-76)**



7. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the rear door opening trim weatherstrip.



8. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.

9. **INSTALL REAR DOOR SCUFF PLATE (See page IR-80)**

10. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-82)**

11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

12. **INSPECT SRS WARNING LIGHT**
    (See page RS-31)

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **Stand at least 10 m (33 ft) away when activating a front seat outer belt (with seat belt pretensioner).**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing an activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **Always use the specified SST (SRS airbag deployment tool) when activating the seat belt pretensioner.**
- **Perform the operation in a place away from electrical interference.**

HINT:

The procedure described below is for the RH side. Use the same procedure for the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

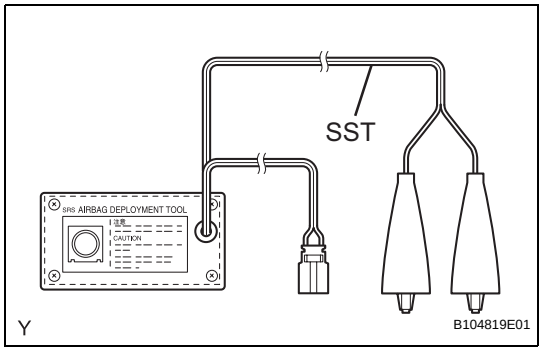
Prepare a battery as the power source to activate the seat belt pretensioner.

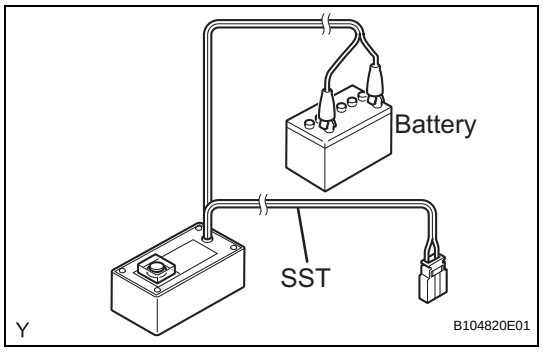
(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.

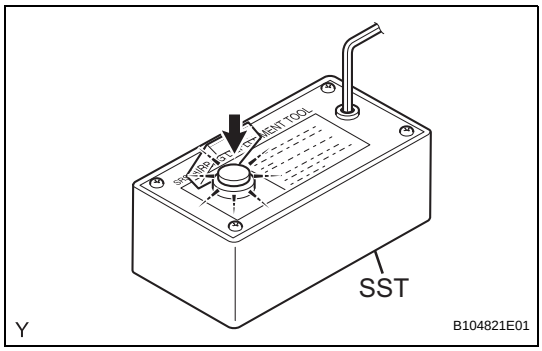




(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

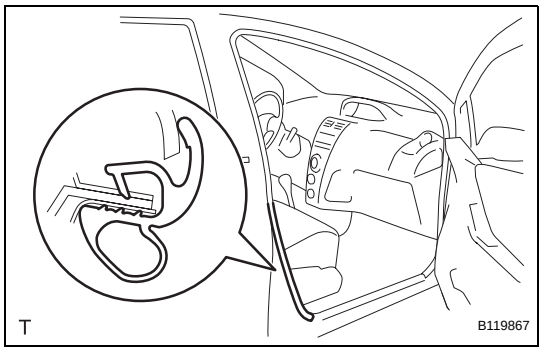
(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from negative battery terminal.

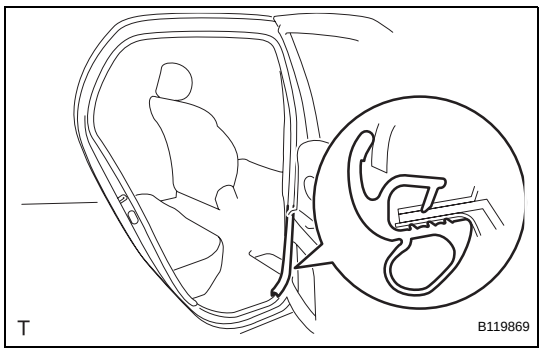
(2) Remove the front door scuff plate (See page IR-49).

(3) Remove the rear door scuff plate (See page IR-51).



(4) Remove the front door opening trim weatherstrip.

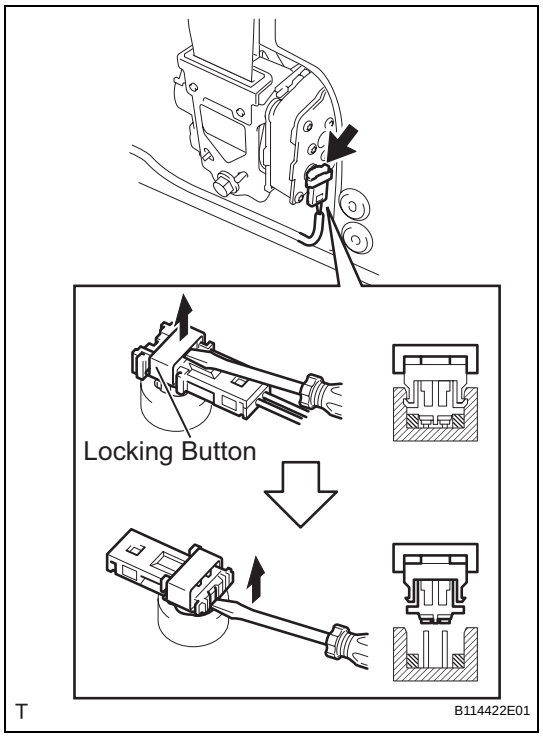
1. Remove the front door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.



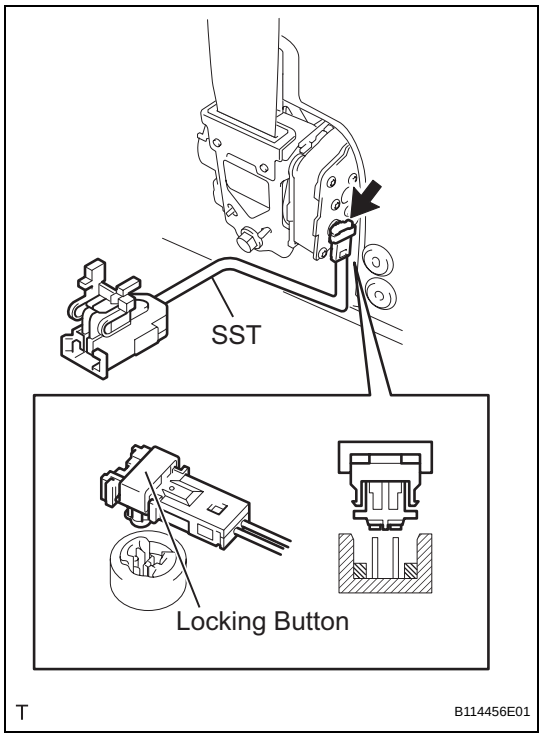
(5) Remove the rear door opening trim weatherstrip.

1. Remove the rear door opening trim weatherstrip to the extent that the center pillar lower garnish can be removed.

(6) Remove the center pillar lower garnish (See page IR-55).



(7) Disconnect the pretensioner connector as shown in the illustration.



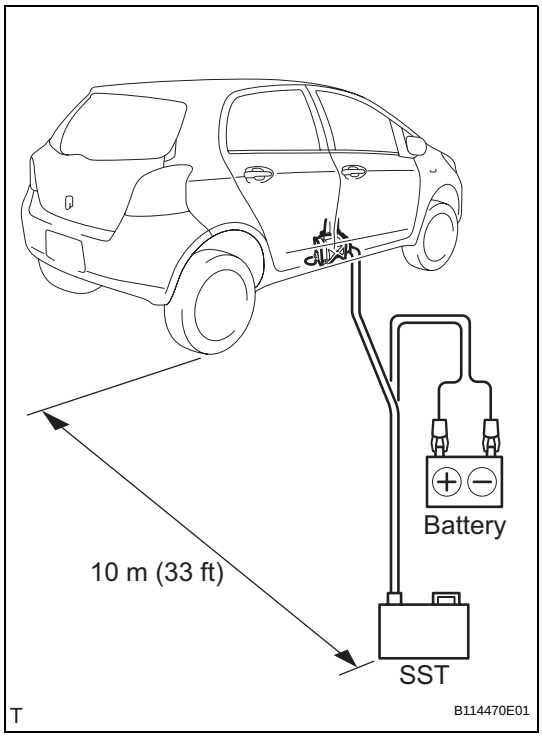
(d) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness



(2) Move SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700

(3) Close the doors and windows of the vehicle.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.
NOTICE:
Do not damaging the SST wire harness.

(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.

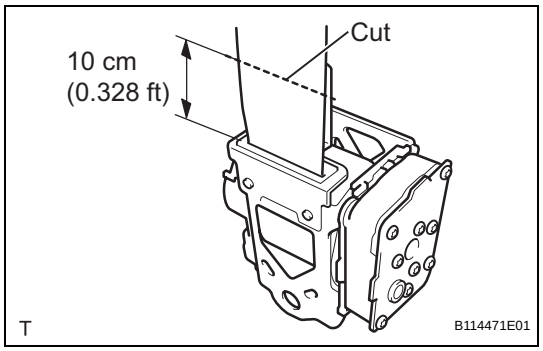
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

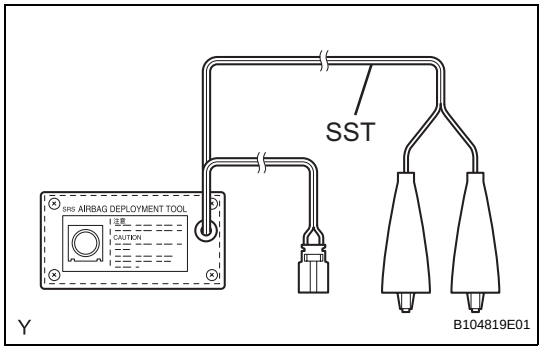
(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)
HINT:
Prepare a battery as the power source to activate the seat belt pretensioner.
NOTICE:
- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Follow the procedure described below when activating the seat belt pretensioner.**

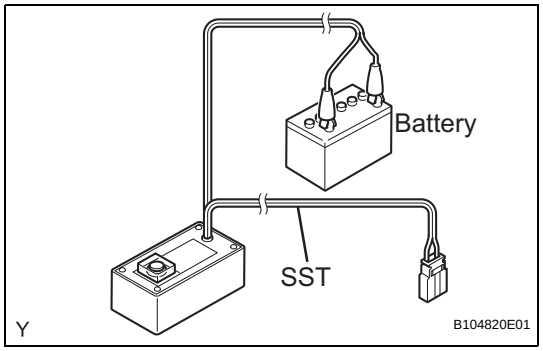
(a) Remove the front seat outer belt assembly (See page SB-59).



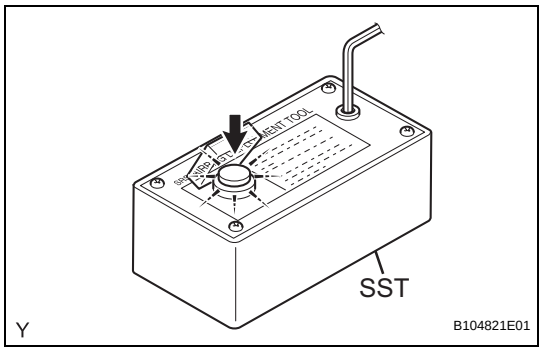
(b) Wind the seat belt with the retractor.
(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.
HINT:
The retractor resistance increases in correlation with how much the seat belt is wound.



(d) Check whether SST is functioning.
SST 09082-00700
CAUTION:
Always use the specified SST when activating the seat belt pretensioner.

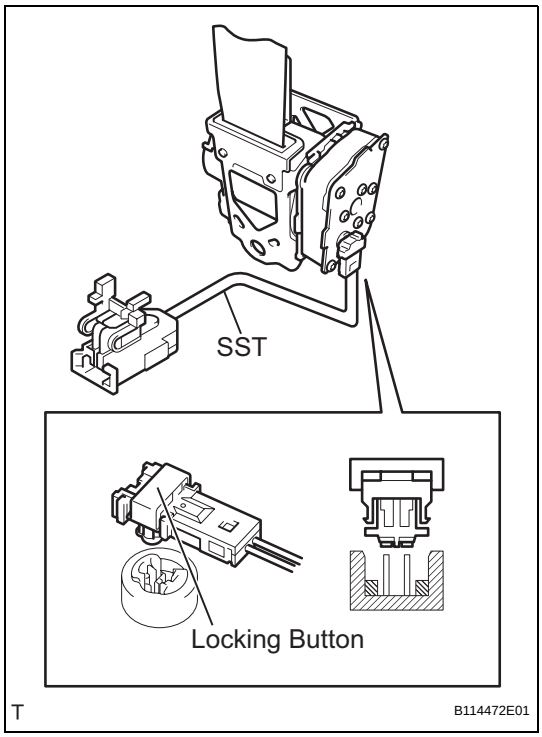


(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

SB



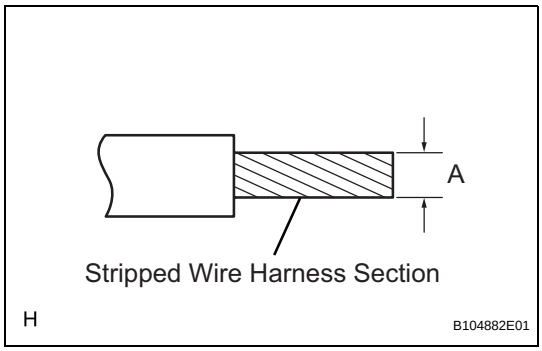
(e) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.

SST 09082-00770

NOTICE:

Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.

Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)

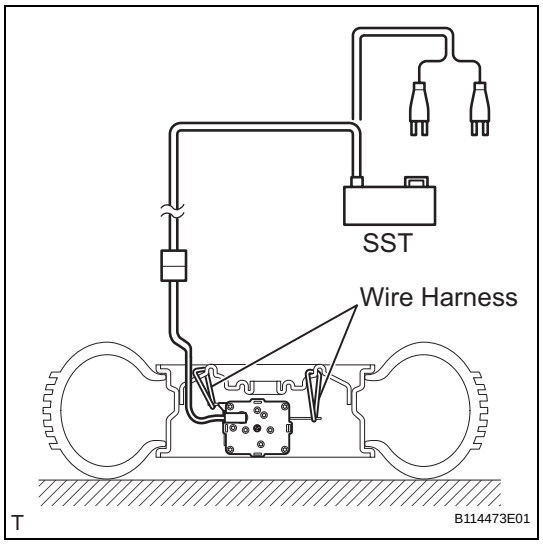
CAUTION:

- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

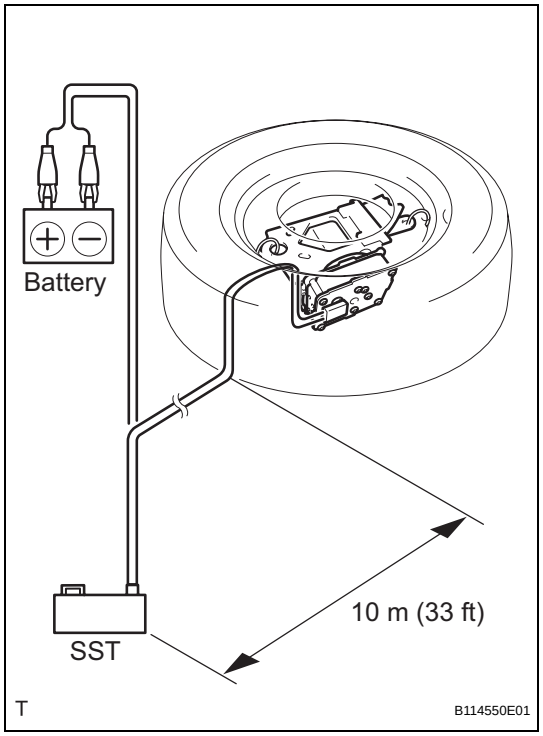
HINT:

To calculate the area of the stripped wire harness cross section:

Area = 3.14 x $(Diameter)^2$ divided by 4



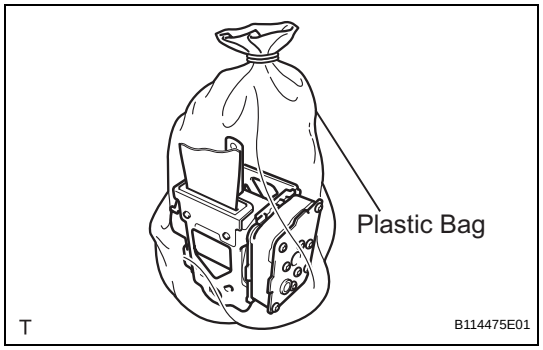
(3) Connect SST.
SST 09082-00700
NOTICE:
- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt, as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Do not damage the SST wire harness.

(f) Activate the seat belt pretensioner.
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.



(h) Dispose of the front seat outer belt (with the seat belt pretensioner).
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

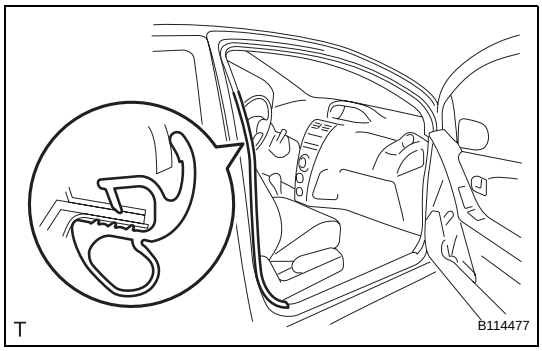
REMOVAL

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for at least 90 seconds after disconnecting the cable to prevent the airbag from working.
2. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-48)**
3. **REMOVE DECK BOARD SUB-ASSEMBLY (See page IR-48)**
4. **REMOVE DECK FLOOR BOX**
   (a) for RH Side:
   (1) Remove the deck floor box (See page IR-48).
   (b) for LH Side:
   HINT:
   Use the same procedure as for the RH side.
5. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
   (1) Remove the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
   (1) Remove the No. 1 rear seat leg cover (See page SE-70).
6. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-70)**
7. **REMOVE REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
   (1) Remove the rear seat assembly (See page SE-89).
   (b) for LH Side:
   (1) Remove the rear seat assembly (See page SE-71).
8. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
9. **REMOVE REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-115)**

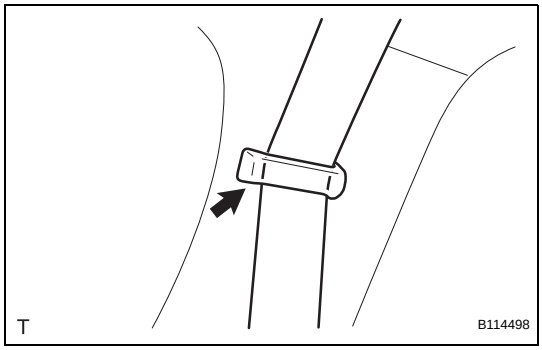
SB

10. REMOVE FRONT DOOR SCUFF PLATE (See page IR-97)



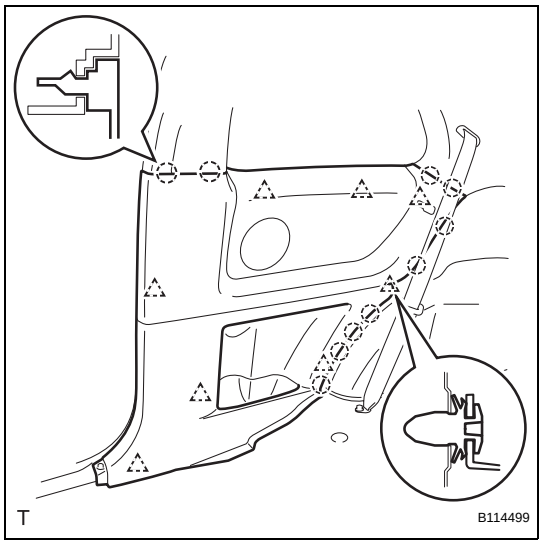
11. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP

(a) Remove the front door opening trim weatherstrip to the extent that the front quarter trim panel can be removed.



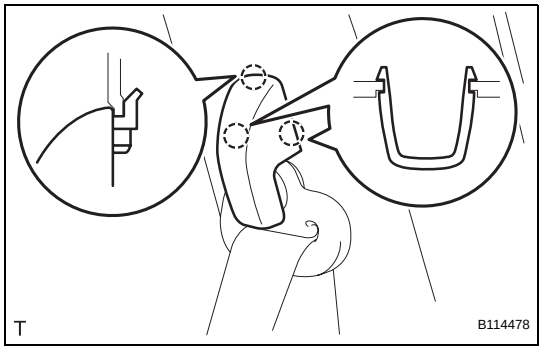
12. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the belt.



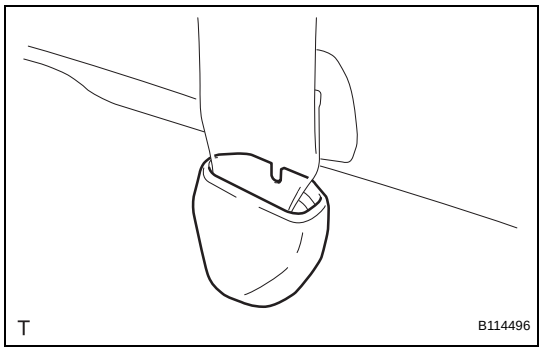
13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY

(a) Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.



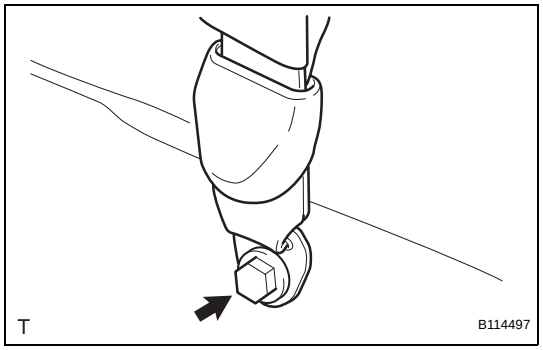
14. REMOVE SEAT BELT ANCHOR COVER CAP

(a) Disengage the 3 claws and remove the seat belt anchor cover cap.

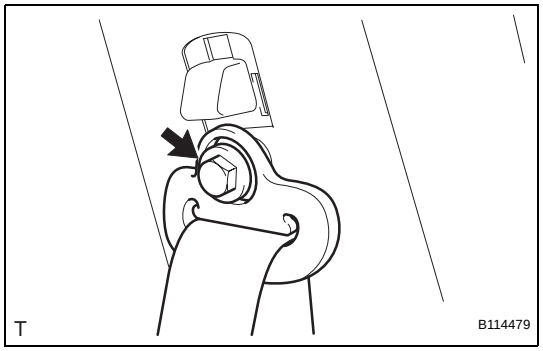


15. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

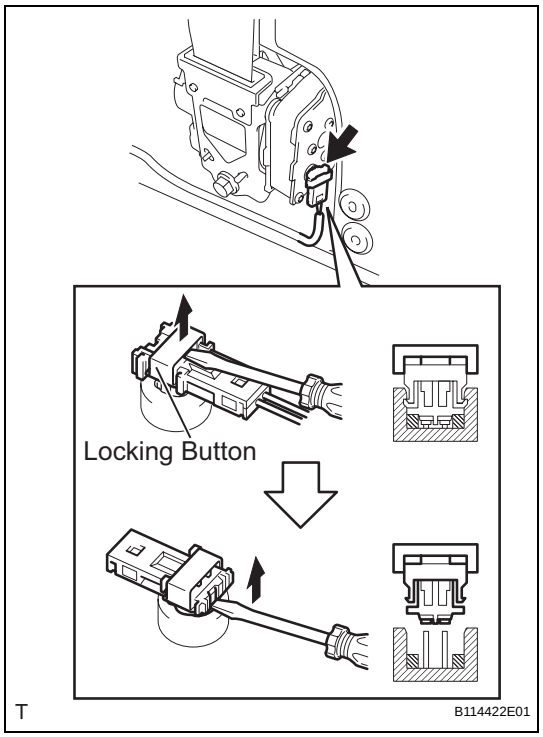
(a) Remove the anchor plate cover.



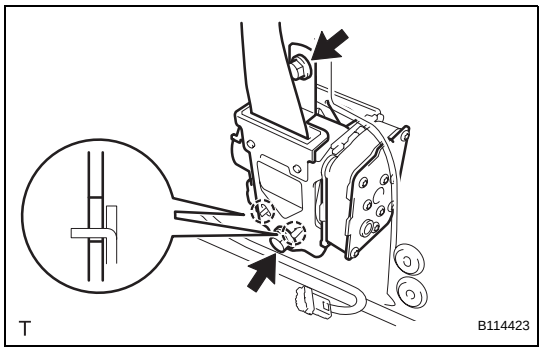
(b) Remove the bolt and the anchor plate.



(c) Remove the bolt and the through anchor.



(d) Disconnect the pretensioner connector.
   (1) Using a screwdriver, release the locking button.
   (2) Using a screwdriver, disconnect the pretensioner connector.

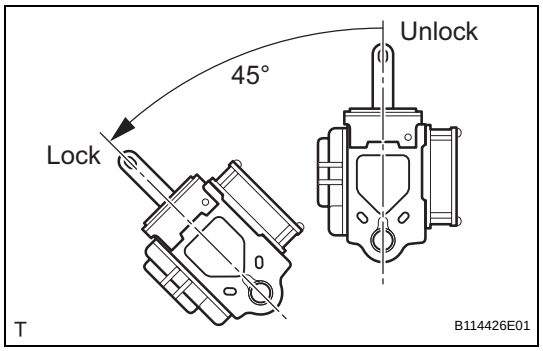


(e) Remove the 2 bolts, the 2 hooks and the retractor.

SB

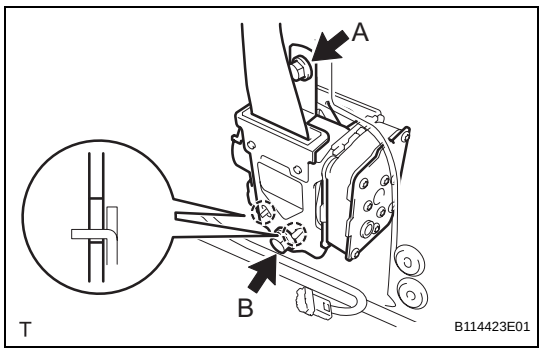
INSTALLATION

CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing (See page RS-1).
NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

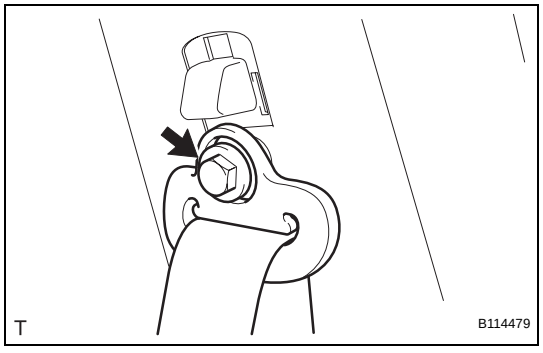


1. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

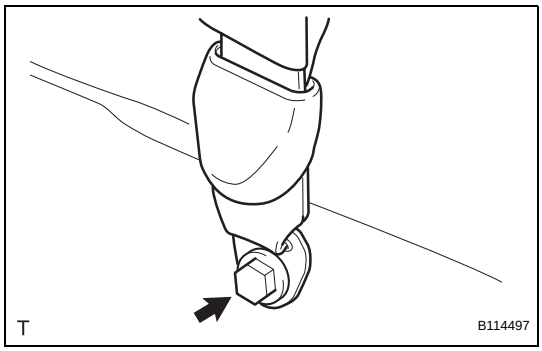
(a) Check the angle of inclination required to lock the retractor.
  (1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction. Also, check that the belt locks when the inclination of the retractor is 45° or more.
  NOTICE:
  Do not disassemble the retractor.
  If the operation is not as specified, replace the front seat outer belt.



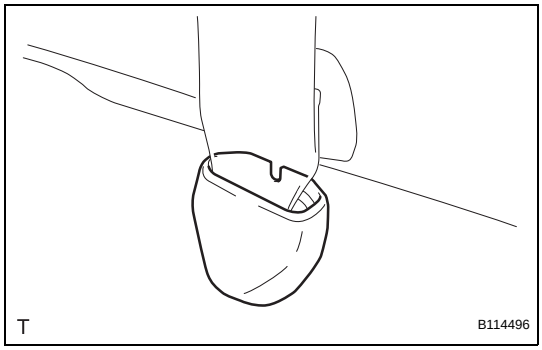
(b) Hook the lower stay of the retractor onto the 2 body hooks and provisionally install the retractor with the 2 bolts.
(c) Tighten bolt A and then bolt B.
Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf) for bolt A
42 N*m (430 kgf*cm, 31 ft.*lbf) for bolt B



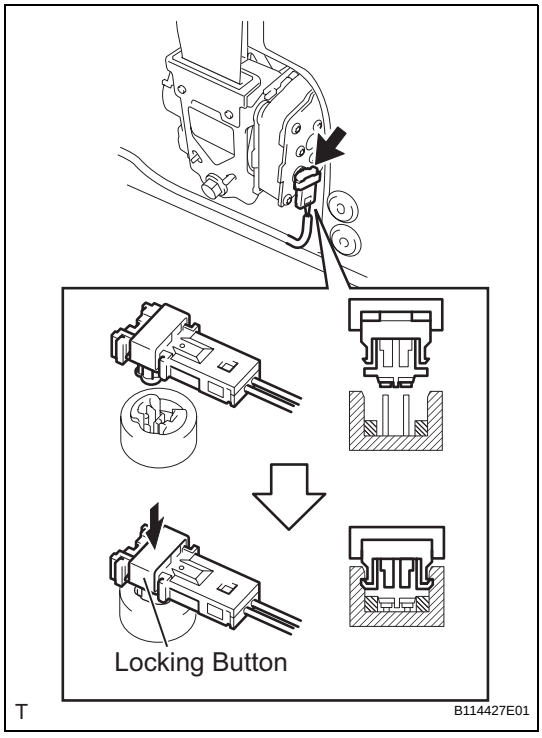
(d) Install the through anchor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the ELR locks.
NOTICE:
Perform the check with the front seat outer belt installed
  (1) With the belt installed, check that the belt locks when it is pulled out quickly.
  If the operation is not as specified, replace the front seat outer belt.



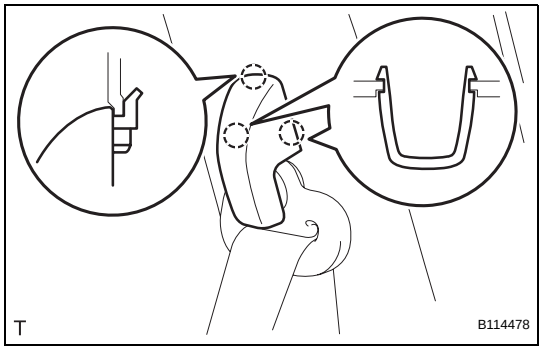
(f) Install the anchor plate with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(g) Install the anchor plate cover.

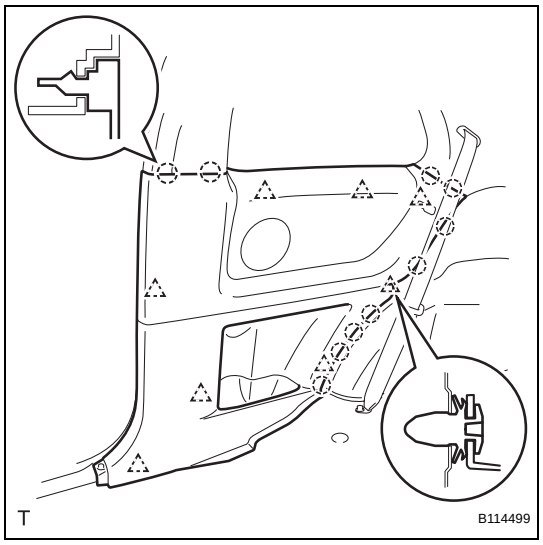


(h) Connect the pretensioner connector.
(1) Connect the pretensioner connector.
(2) Lock the locking button.
NOTICE:
Securely lock the locking button.

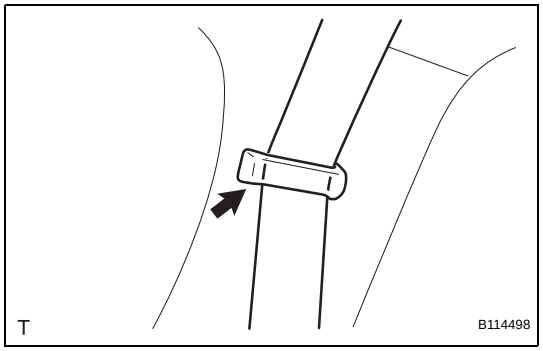


2. INSTALL SEAT BELT ANCHOR COVER CAP

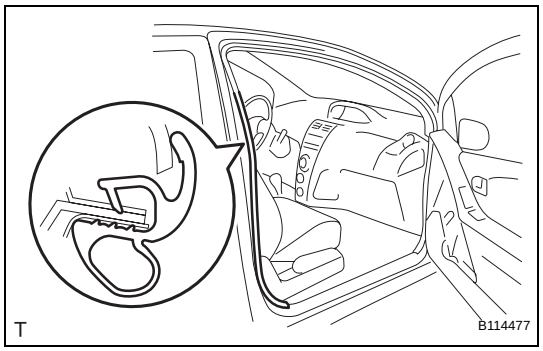
(a) Engage the 3 claws and install the seat belt anchor cover cap.



3. **INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY**
   (a) Engage the 8 clips, the retainer and the 10 claws and install the front quarter trim panel.



4. **INSTALL REAR SEAT OUTER BELT ASSEMBLY**
   (a) Install the belt.



5. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
   (a) Install the front door opening trim weatherstrip.
6. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-119)**
7. **INSTALL REAR SEAT ASSEMBLY (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the rear seat assembly (See page SE-102).
   (b) for LH Side:
      (1) Install the rear seat assembly (See page SE-84).
8. **INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type LH Side) (See page SE-85)**
9. **INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type)**
   (a) for RH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-89).
   (b) for LH Side:
      (1) Install the No. 1 rear seat leg cover (See page SE-85).
10. **INSTALL REAR SEATBACK ASSEMBLY (for Hold Down Seat Type) (See page SE-122)**

11. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

12. INSTALL DECK FLOOR BOX

(a) for RH side:

(1) Install the deck floor box (See page IR-83).

(b) for LH Side:

HINT:

Use the same procedure as for the RH side.

13. INSTALL DECK BOARD SUB-ASSEMBLY (See page IR-83)

14. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page IR-83)

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

16. INSPECT SRS WARNING LIGHT

(See page RS-31)

DISPOSAL

CAUTION:

- **Never dispose of a front seat outer belt that has an inactivated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation outside and where it will not be a nuisance to persons nearby.**
- **Stand at least 10 m (33 ft) away when activating a front seat outer belt (with seat belt pretensioner).**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing an activation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **Always use the specified SST (SRS airbag deployment tool) when activating the seat belt pretensioner.**
- **Perform the operation in a place away from electrical interference.**

NOTICE:

Always use "Torx" socket wrench E10 when removing the rear seat.

HINT:

The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

HINT:

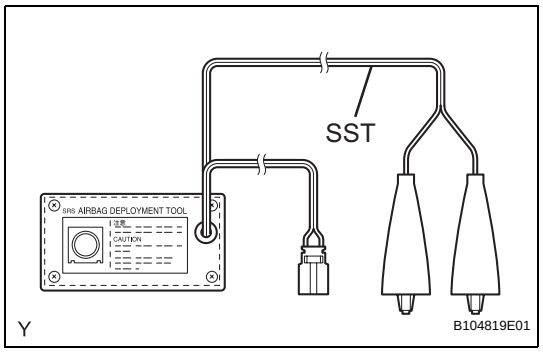
Prepare a battery as the power source to activate the seat belt pretensioner.

(a) Check whether SST is functioning.

SST 09082-00700

CAUTION:

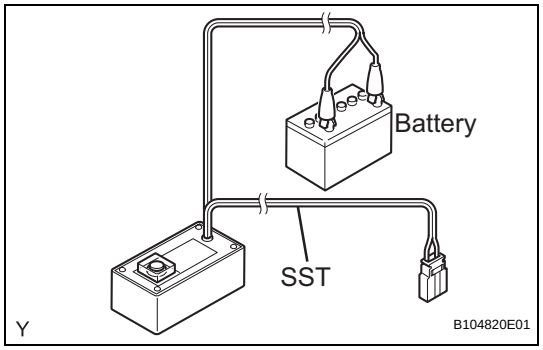
Always use the specified SST when activating the seat belt pretensioner.



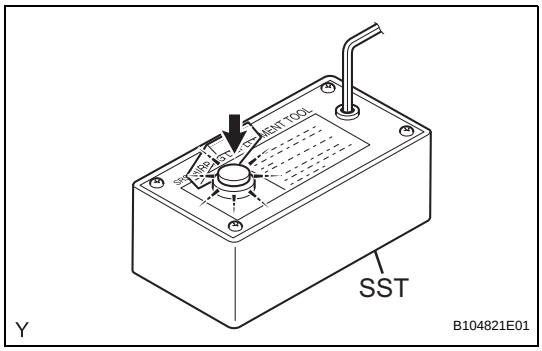
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

HINT:

Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



SB



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.

(1) Disconnect the cable from the negative battery terminal.

(2) Remove the package tray trim panel assembly (See page IR-48).

(3) Remove the deck board sub-assembly (See page IR-48).

(4) Remove the deck floor box RH (See page IR-48).

(5) Remove the deck floor box LH (for 60/40 Split Seat Type and Bench Seat Type).
HINT:
Use the same procedure as for the RH side.

(6) Remove the rear seat No. 1 leg cover (for 60/40 Split Seat Type) (See page SB-75).

(7) Remove the rear seat No. 2 leg cover (for 60/40 Split Seat Type LH Side) (See page SE-70).

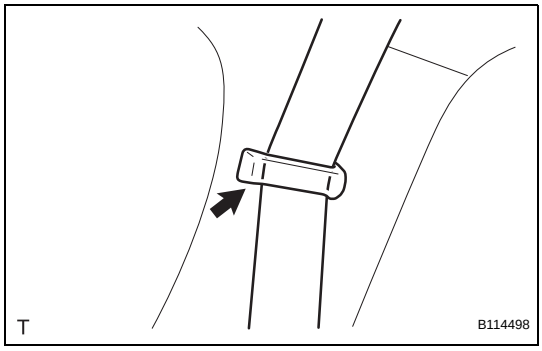
(8) Remove the rear seat assembly (for 60/40 Split Seat Type) (See page SB-75).

(9) Remove the rear seat cushion cover pad sub-assembly (for Bench Seat Type) (See page SE-114).

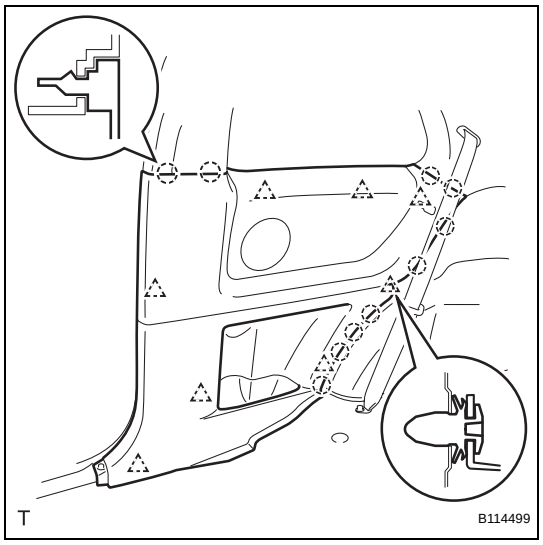
(10) Remove the rear seatback assembly (for Bench Seat Type) (See pageSE-115).

(11) Remove the front door scuff plate (See page IR-97).

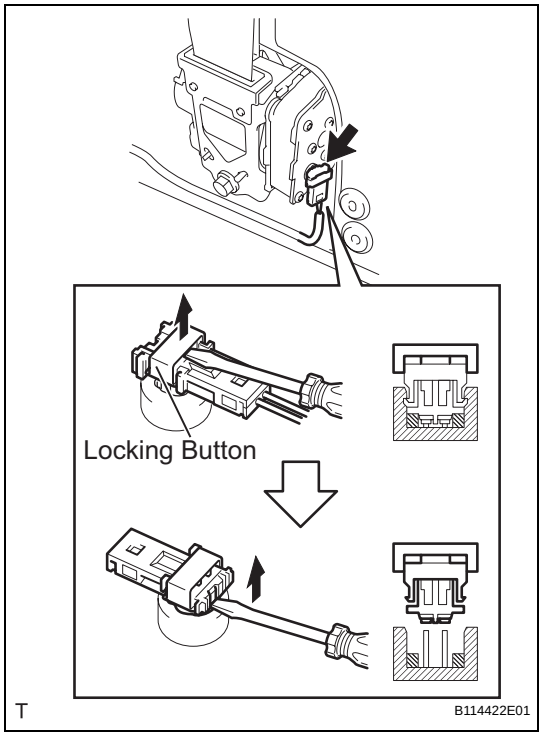
(12) Remove the front door opening trim weatherstrip (See page SB-76).



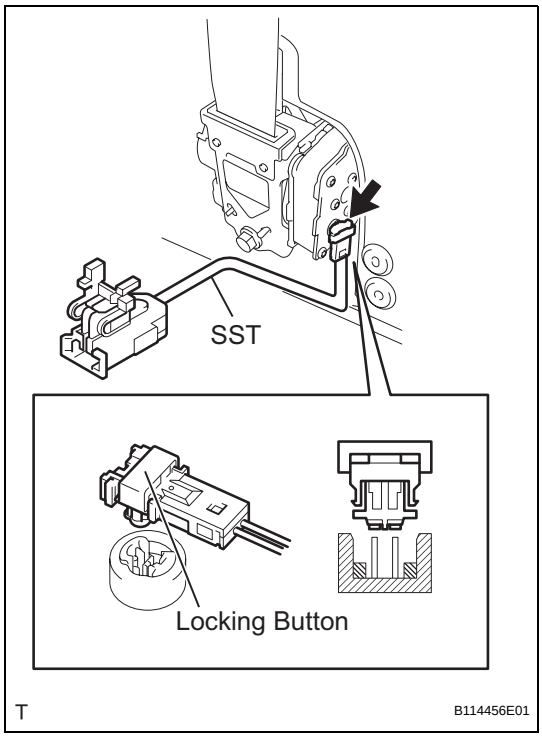
(13) Remove the rear seat outer belt assembly.
1. Remove the belt.



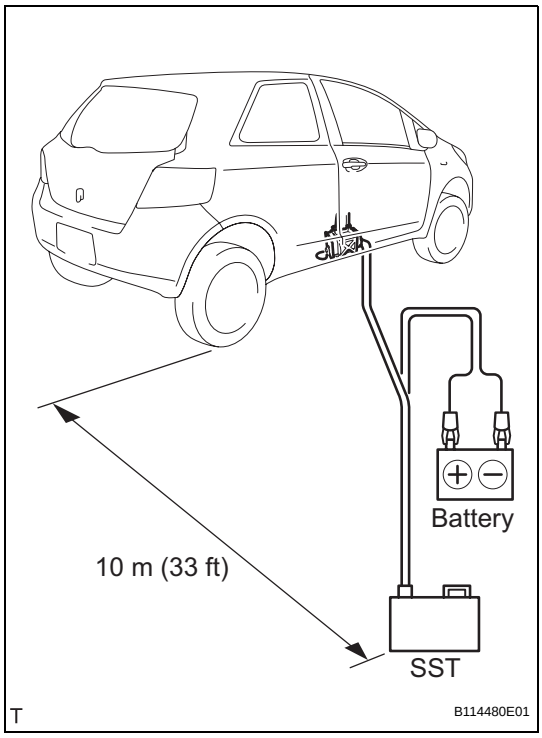
(14) Remove the front quarter trim panel assembly.
1. Disengage the 8 clips, the retainer and the 10 claws and remove the front quarter trim panel.



(15) Disconnect the pretensioner connector as shown in the illustration.



(d) Connect SST.
(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Move the SST at least 10 m (33 ft) away from the front of the vehicle.
SST 09082-00700
(3) Close the doors and windows of the vehicle.
HINT:
Do not close the windows fully. Leave a gap for inserting the SST wire harness.
NOTICE:
Do not damage the SST wire harness.
(4) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

(e) Activate the seat belt pretensioner.
(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.
(2) Press the SST activation switch and activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(f) Disconnect SST.

(g) Dispose of the front seat outer belt (with the seat belt pretensioner).
HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt still installed.

CAUTION:

- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling an front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)

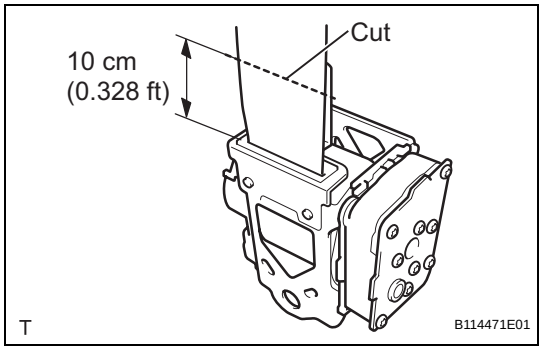
HINT:

Prepare a battery as the power source to activate the seat belt pretensioner.

NOTICE:

- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Follow the procedure described below when activating the seat belt pretensioner.**

(a) Remove the front seat outer belt assembly (See page SB-75).

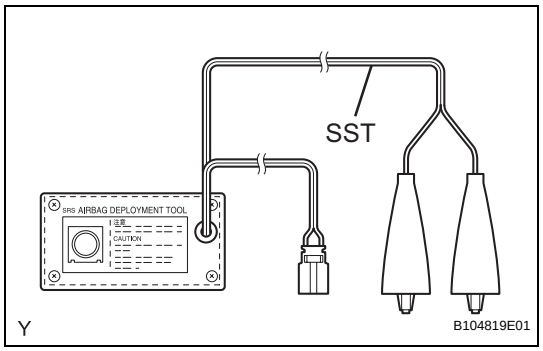


(b) Wind the seat belt with the retractor.

(c) When the seat belt is sufficiently wound, cut the seat belt approximately 10 cm (0.328 ft) from the retractor, as shown in the illustration.

HINT:

The retractor resistance increases in correlation with how much the seat belt is wound.

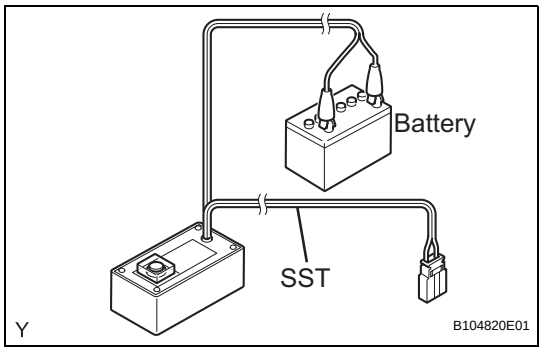


(d) Check whether SST is functioning.

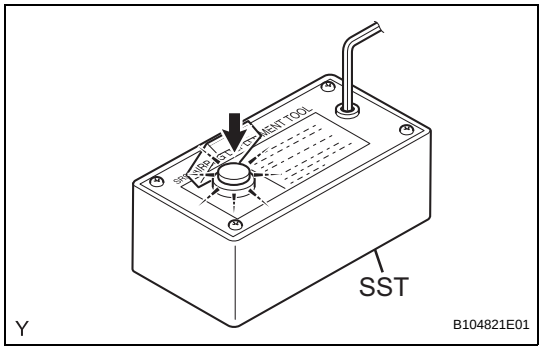
SST 09082-00700

CAUTION:

Always use the specified SST when activating the seat belt pretensioner.



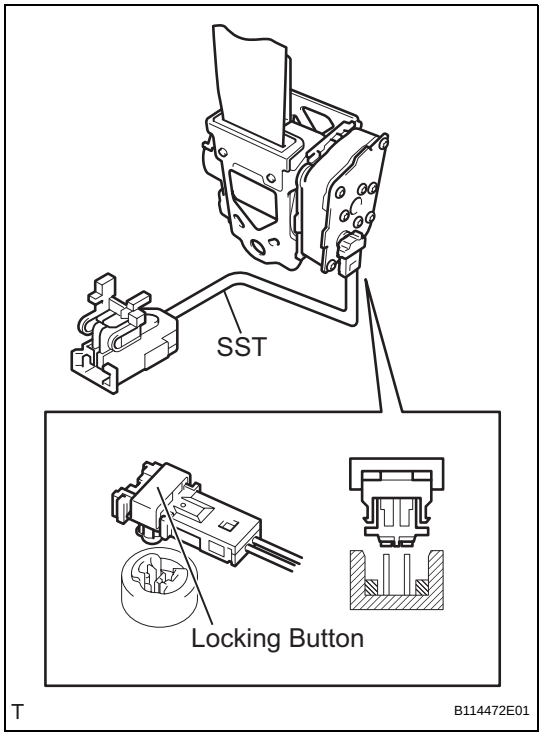
(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.
HINT:
Do not connect the yellow connector. The yellow connector is for connections to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch turns on.
CAUTION:
If the LED turns on when the activation switch is not being pressed, SST may be malfunctioning. Do not use SST.

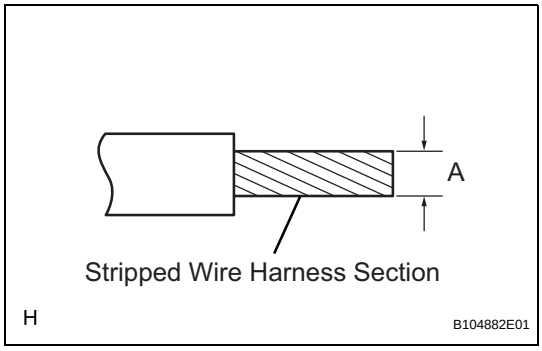
(e) Connect SST.

(1) Connect SST, then connect the yellow connector to the seat belt pretensioner.
SST 09082-00770
NOTICE:
Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.



(2) Using a service-purpose wire harness for the vehicle, tie the seat belt pretensioner to the tire with a wheel attached.
Stripped wire harness section:

Area	Measurement
A	1.25 mm^2 or more (0.0019 in^2 or more)



CAUTION:

- **Do not use wire harnesses that are too thin or any other object to tie the seat belt pretensioner because they may snap due to the shock when the pretensioner is deployed.**
- **Always use a wire harness for vehicle use, with a cross section of at least 1.25 mm^2 (0.0019 in^2).**

HINT:

To calculate the area of the stripped wire harness cross section:

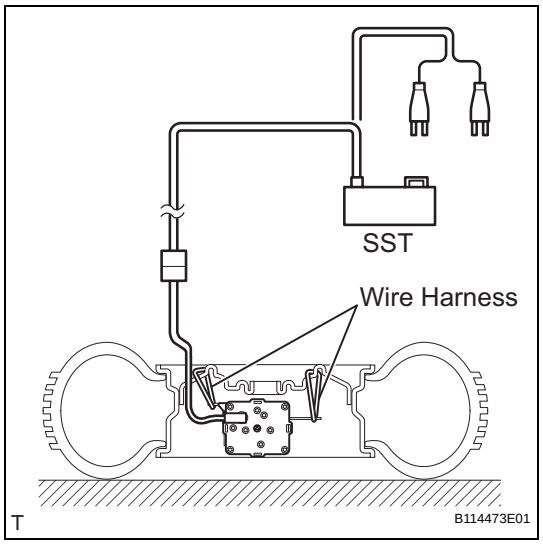
Area = 3.14 x (Diameter)^2 divided by 4

(3) Connect SST.

SST 09082-00700

NOTICE:

- **Do not lock the secondary lock of the twin lock to avoid damaging the SST connector and wire harness.**
- **Set up the front seat outer belt as shown in the illustration.**



(4) Move SST at least 10 m (33 ft) away from the wheel.

NOTICE:

Do not damage the SST wire harness.

(f) Activate the seat belt pretensioner.

(1) Connect the SST red clip to the positive battery terminal and the black clip to the negative battery terminal.

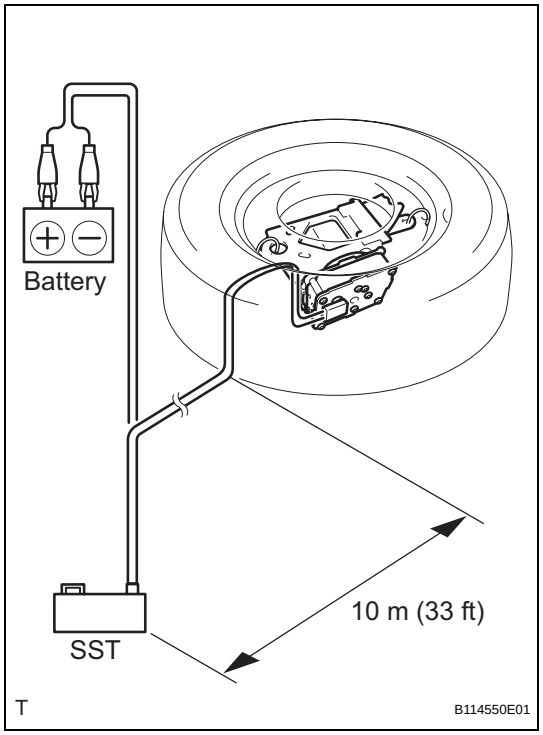
(2) Check that no one is within 10 m (33 ft) of the wheel.

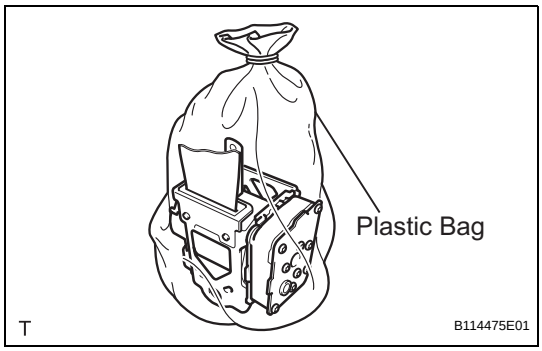
(3) Press the SST activation switch and activate the seat belt pretensioner.

HINT:

The seat belt pretensioner operates simultaneously with the SST activation switch LED light.

(g) Disconnect SST.





(h) Dispose of the front seat outer belt (with the seat belt pretensioner).

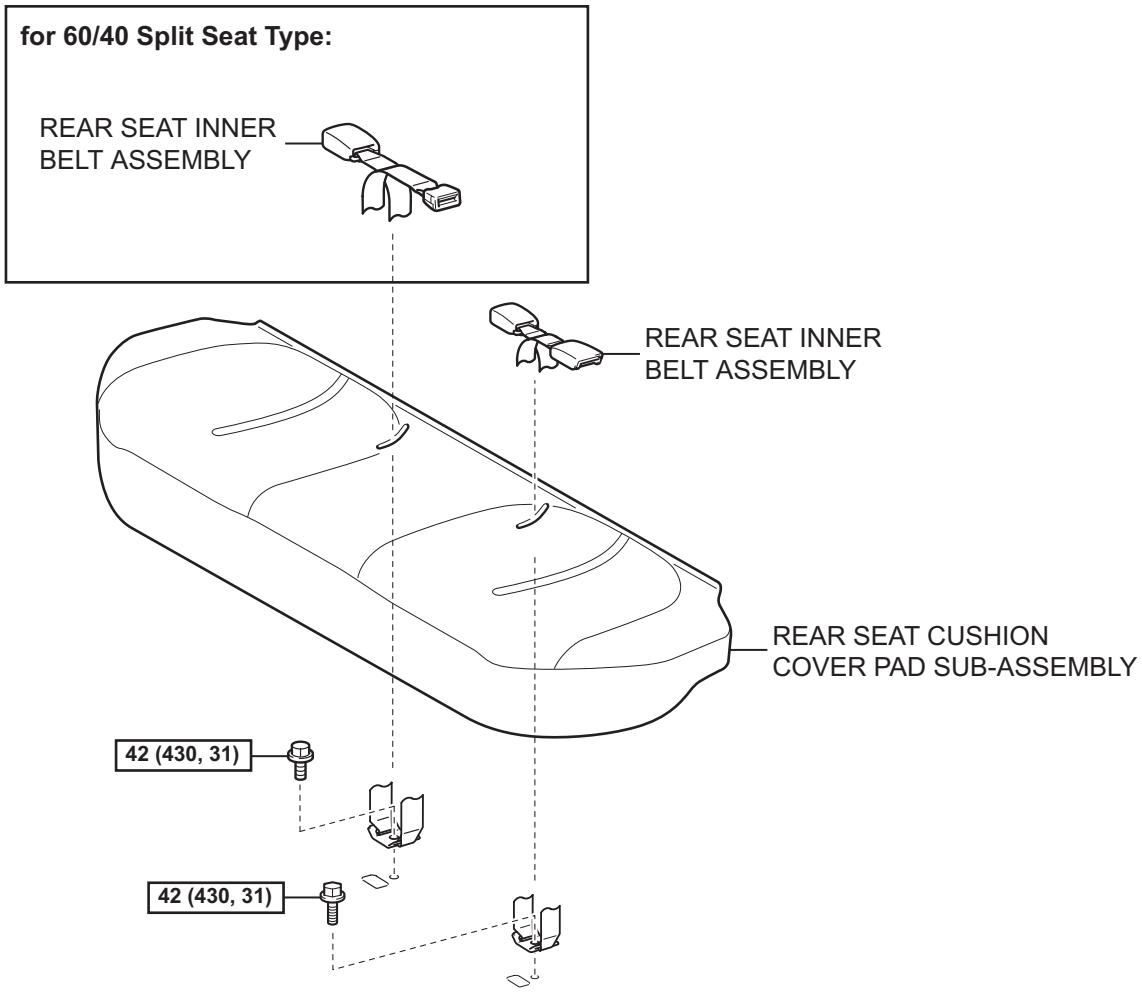
CAUTION:

- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

REAR SEAT INNER BELT ASSEMBLY (for Sedan)

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

T

B138566E01

SB

REMOVAL

1. REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-46).

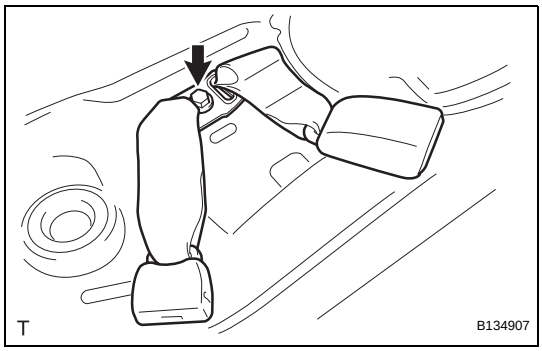
(b) for Fixed Seat Type:

(1) Remove the rear seat cushion cover pad (See page SE-106).

2. REMOVE REAR SEAT INNER BELT ASSEMBLY

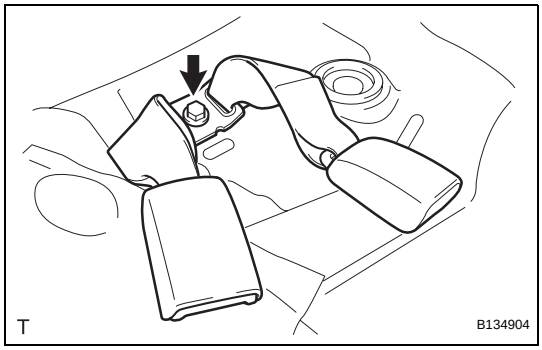
(a) for RH Side (for 60/40 Split Seat Type):

(1) Remove the bolt and the rear seat inner belt.



(b) LH Side:

(1) Remove the bolt and the rear seat inner belt.



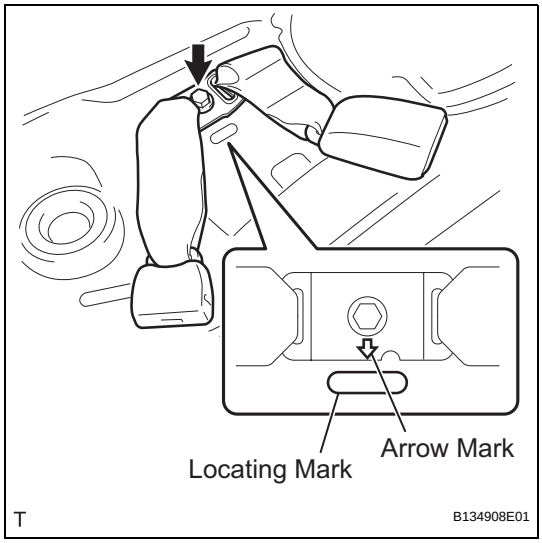
INSTALLATION

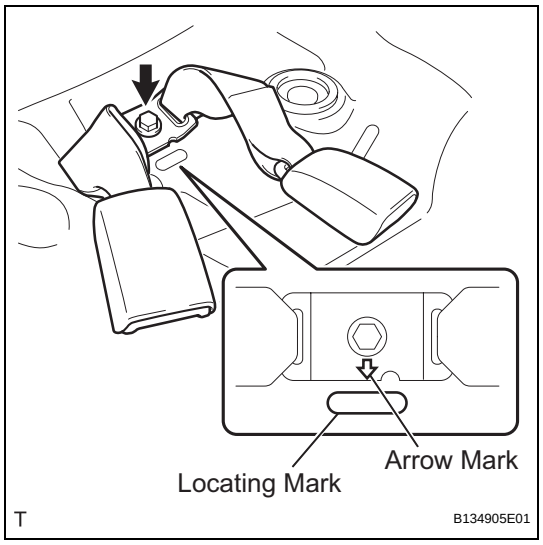
1. INSTALL REAR SEAT INNER BELT ASSEMBLY

(a) for RH Side (60/40 Split Seat Type):

(1) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:

- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**





(b) for LH Side:
  (1) Install the rear seat inner belt with the bolt.
  Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
  NOTICE:
  - **Install the anchor plate with the arrow mark facing forward.**
  - **Do not place the anchor plate over the locating mark area of the floor panel.**

2. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY

(a) for 60/40 Split Seat Type:
  (1) Install the rear seat cushion cover pad (See page SE-53).

(b) for Fixed Seat Type:
  (1) Install the rear seat cushion cover pad (See page SE-109).

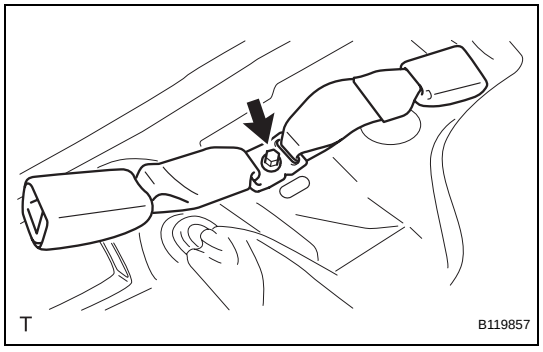
REMOVAL

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **REMOVE NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-71)**
2. **REMOVE NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-70)**
3. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-114)**
4. **REMOVE REAR SEAT INNER BELT ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Using "Torx" socket wrench E10, remove the 3 bolts and pull up the rear seat cushion.

      (2) Remove the belt from the band.
      (3) Remove the bolt and the rear seat inner belt.

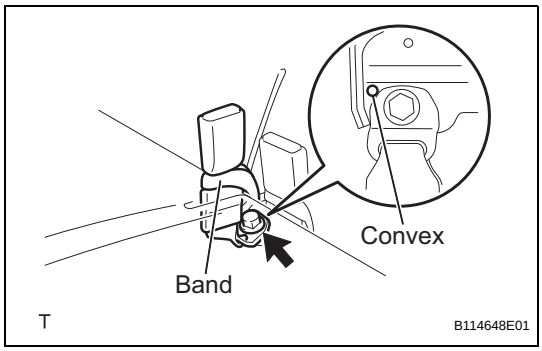
   (b) for Hold Down Seat Type:
      (1) Remove the bolt and the rear seat inner belt.



SB

INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.

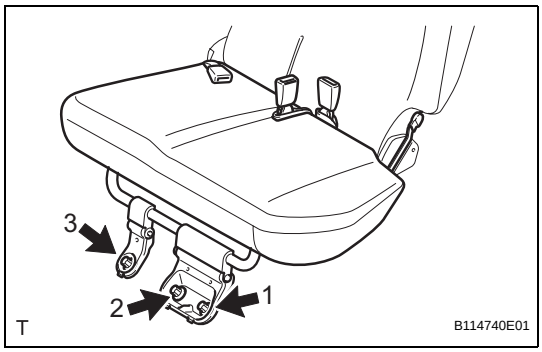


1. INSTALL REAR SEAT INNER BELT ASSEMBLY

(a) for 60/40 Split Seat Type:

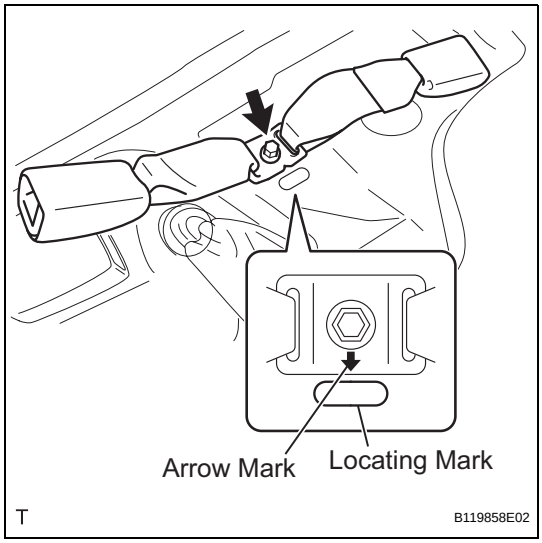
(1) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not place the anchor plate over the convex area of the rear seat back frame.

(2) Install the belt into the band.



(3) Install the rear seat cushion.

(4) Using "Torx" socket wrench E10, tighten the 3 bolts in the sequence shown in the illustration.
Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)



(b) for Hold Down Seat Type:

(1) Install the rear seat inner belt with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
NOTICE:
- **Install the anchor plate with the arrow mark facing forward.**
- **Do not place the anchor plate over the locating mark area of the floor panel.**

2. INSTALL NO. 2 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

3. INSTALL NO. 1 REAR SEAT LEG COVER (for 60/40 Split Seat Type) (See page SE-85)

4. INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY (for Hold Down Seat Type) (See page SE-123)

REMOVAL

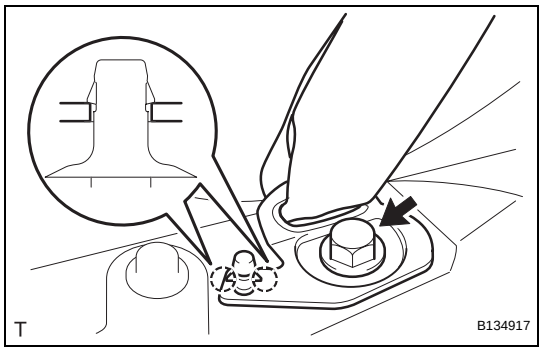
HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/o Rear Spoiler)**
2. **REMOVE REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
   (a) for 60/40 Split Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-46).
   (b) for Fixed Seat Type:
      (1) Remove the rear seat cushion cover pad (See page SE-106).
3. **REMOVE REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-57)**
4. **REMOVE REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-46)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-106)**
6. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-133)**
7. **REMOVE SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-133)**
8. **REMOVE LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-134)**
9. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-15)**
10. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-15)**
11. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-173)**
12. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-173)**
13. **REMOVE REAR SEAT SIDE COVER RH (See page IR-16)**
14. **REMOVE REAR SEAT SIDE COVER LH (See page IR-16)**
15. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-16)**
16. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-16)**
17. **REMOVE HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-141)**

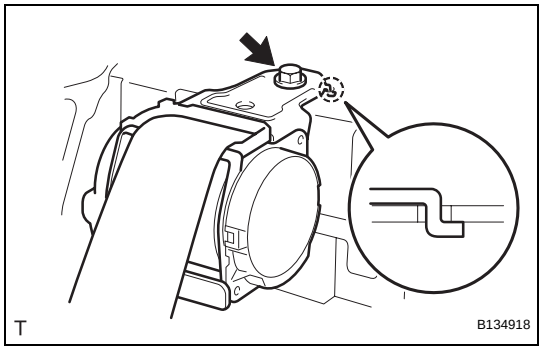
18. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-173)



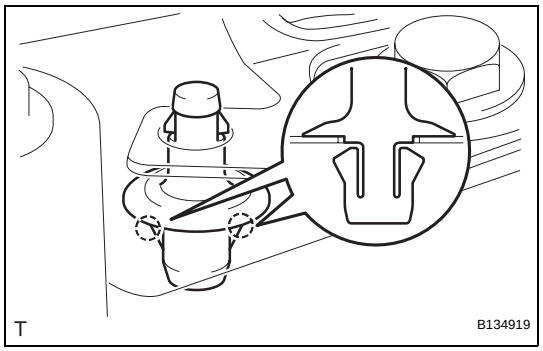
19. REMOVE REAR SEAT OUTER BELT ASSEMBLY

(a) Remove the bolt.

(b) Disengage the 2 claws and remove the anchor plate.



(c) Remove the bolt, the hook and the retractor.



20. REMOVE SEAT BELT HOLE SEAL

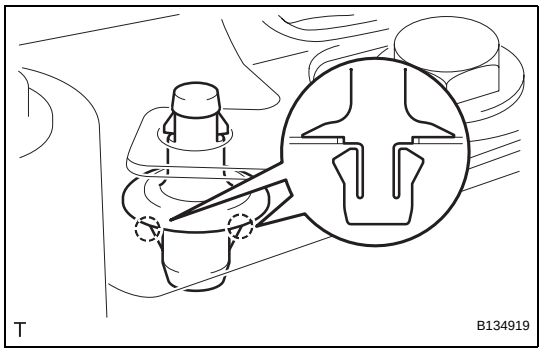
(a) Disengage the 2 claws and remove the seat belt hole seal.

SB

SB

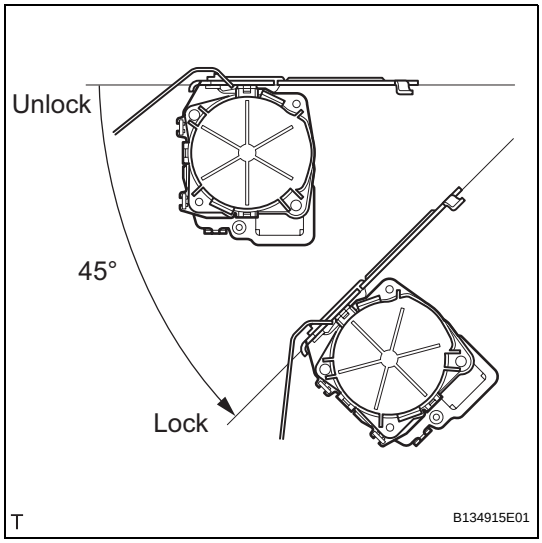
INSTALLATION

HINT:
The procedure described below is for the RH side. Use the same procedure for both the RH and LH sides, unless otherwise specified.



1. INSTALL SEAT BELT HOLE SEAL

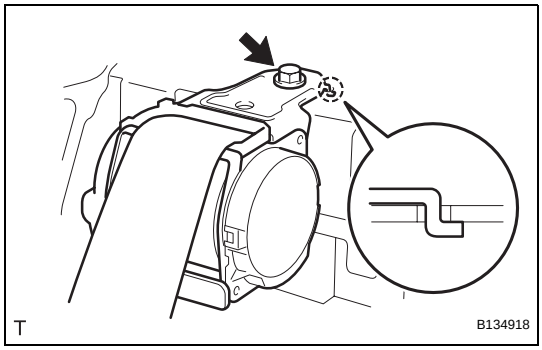
(a) Engage the 2 claws and install the seat belt hole seal.



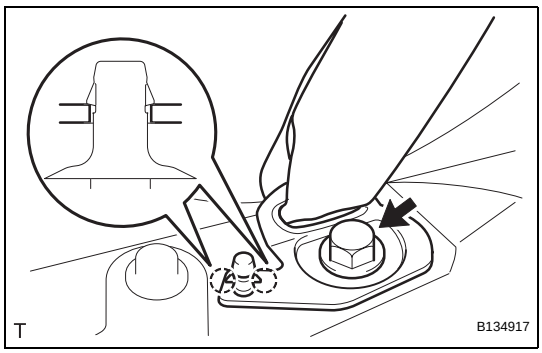
2. INSTALL REAR SEAT OUTER BELT ASSEMBLY

(a) Check the angle of inclination required to lock the retractor.

(1) Gently incline the retractor from its initial position. Check that the belt does not lock when the retractor is inclined 15° or less in any direction.
Also, check that the belt locks when the inclination of the retractor is 45° or more.
NOTICE:
Do not disassemble the retractor.
If the operation is not as specified, replace the rear seat outer belt.



(b) Insert the hook into the body hole and install the retractor with the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)



(c) Engage the 2 claws and install the anchor plate.
(d) Tighten the bolt.
Torque: 42 N*m (430 kgf*cm, 31 ft.*lbf)
(e) Check that the ELR locks.
NOTICE:
- **The check should be performed with the rear seat outer belt installed.**
- **Do not allow the anchor part of the rear seat outer belt and the protruding parts of the floor panel to overlap.**

(1) With the belt installed, check that the belt locks when it is pulled out quickly.
If the operation is not as specified, replace the rear seat outer belt.

3. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page AV-174)**
4. **INSTALL HIGH MOUNTED STOP LIGHT ASSEMBLY (w/o Rear Spoiler) (See page LI-142)**
5. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-32)**
6. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-33)**
7. **INSTALL REAR SEAT SIDE COVER RH (See page IR-33)**
8. **INSTALL REAR SEAT SIDE COVER LH (See page IR-33)**
9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page AV-175)**
10. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page AV-175)**
11. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-34)**
12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-34)**
13. **INSTALL LUGGAGE COMPARTMENT TRIM INNER PAD (for 60/40 Split Seat Type) (See page ED-136)**
14. **INSTALL SPARE WHEEL COVER ASSEMBLY (for 60/40 Split Seat Type) (See page ED-137)**
15. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for 60/40 Split Seat Type) (See page ED-137)**
16. **INSTALL REAR SEATBACK ASSEMBLY RH (for 60/40 Split Seat Type) (See page SE-65)**
17. **INSTALL REAR SEATBACK ASSEMBLY LH (for 60/40 Split Seat Type) (See page SE-52)**
18. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-108)**
19. **INSTALL REAR SEAT CUSHION COVER PAD SUB-ASSEMBLY**
    (a) for 60/40 Split Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-53).
    (b) for Fixed Seat Type:
        (1) Install the rear seat cushion cover pad (See page SE-109).
