HOW TO USE THIS MANUAL

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.
  (1) Diagnosis
  (2) Removing/Installing, Replacing, Disassembling/ Reassembling, Checking and Adjusting
  (3) Final Inspection

(b) The following procedures are omitted from this manual. However, these procedures must be performed.
  (1) Use a jack or lift to perform operations
  (2) Clean all removed parts
  (3) Perform a visual check

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help you find the item to be repaired.

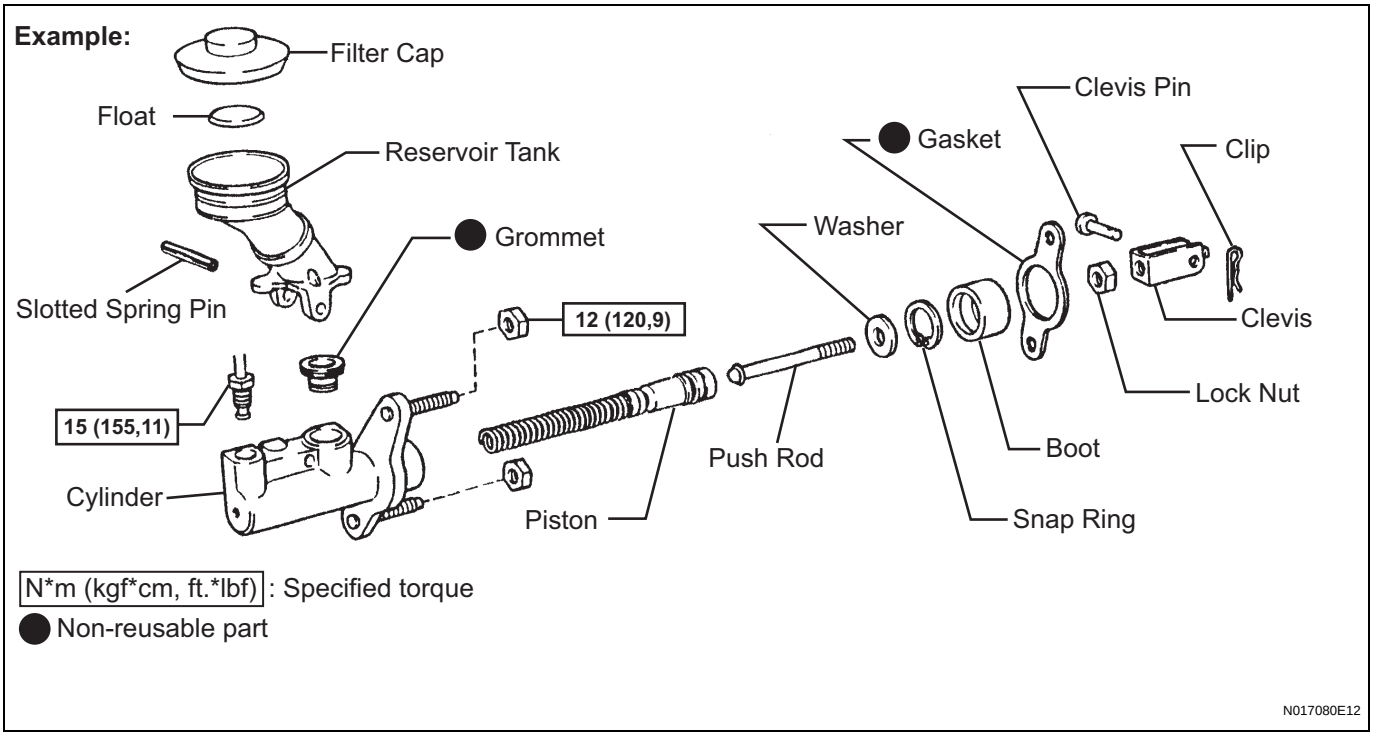
3. PREPARATION

(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
Following illustration is example



(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.
HINT:
There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do
Task heading	What work will be performed
Explanation text	How to perform the task Also has information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

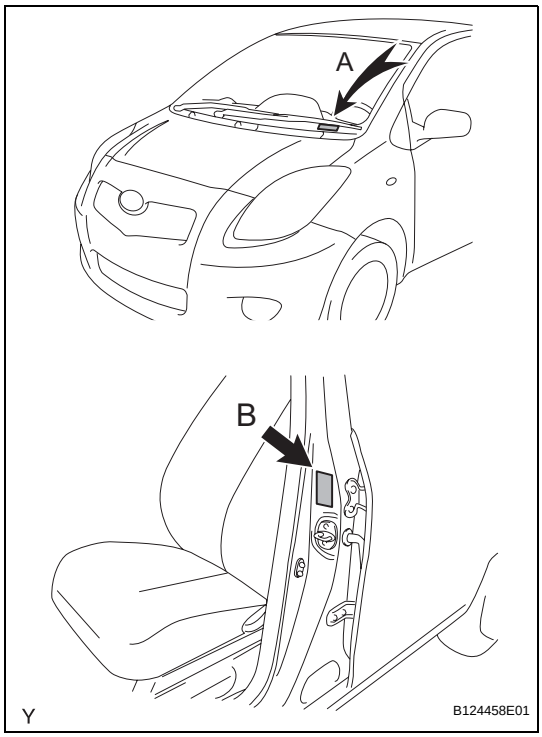
6. TERMS DEFINITION

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Units from the metric system and the English system are also provided.
Example is as follow.
Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)

IN



IDENTIFICATION INFORMATION

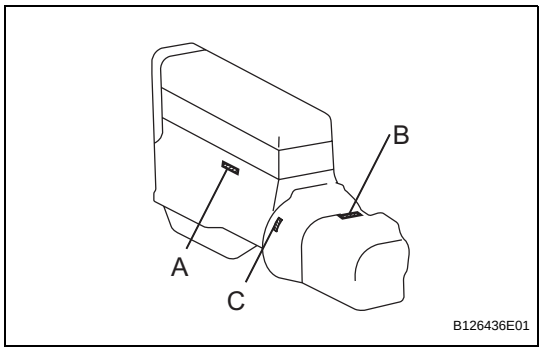
VEHICLE IDENTIFICATION AND SERIAL NUMBERS

1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle body and on the certification label, as shown in the illustration.

A:
Vehicle Identification Number

B:
Certification Label



2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine and the transaxle serial number is stamped on the housing as shown in the illustration.

A:
1NZ-FE

B:
U340E

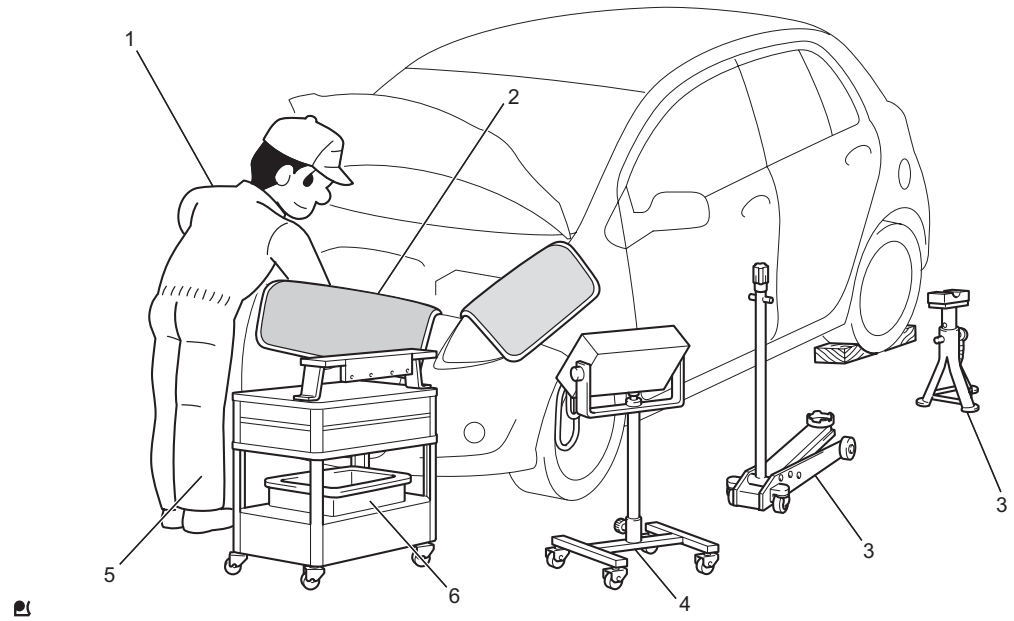
C:
C50

REPAIR INSTRUCTION

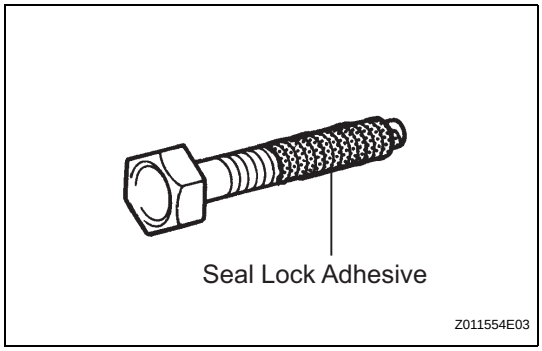
PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS



1	Attire	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting the operation.
3	Safe operation	• When working with 2 or more persons, be sure to check safety for one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring gauge	Before starting operation, prepare a tool stand, SST, gauge, oil and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing the parts, check the general condition of the assembly and for deformation and damage. • When the assembly is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to insure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	• Place the removed parts in a separate box to avoid mixing them up with the new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.

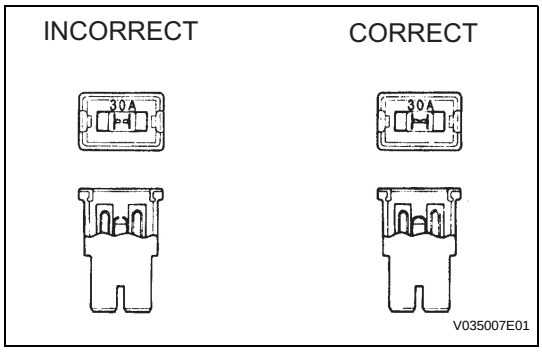


(b) JACKING UP AND SUPPORTING VEHICLE
(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.

(c) PRECOATED PARTS
(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.
(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriate to that part.
(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS
(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.



(f) FUSES
(1) When inspecting a fuse, check that the wire of the fuse is not broken.
(2) When replacing fuses, be sure that the new fuse has the correct amperage rating. Do not exceed the rating or use one with a lower rating.

Illustration	Symbol	Part Name	Abbreviation
 N	N	FUSE	FUSE

Illustration	Symbol	Part Name	Abbreviation
 N	 N	MEDIUM CURRENT FUSE	M-FUSE
 N	N	HIGH CURRENT FUSE	H-FUSE
N	N	FUSIBLE LINK	FL
 N	N	CIRCUIT BREAKER	CB

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

HINT:

If clips are damaged during a procedure, always replace the damaged clip with a new clip.

IN

Shape (Example)	Illustration	Procedures
 N	 N	1. Remove clips with clip remover or pliers.
 N	 N	1. Remove the clips with clip remover or screwdriver.
 N	 N	1. Remove clips with wide scraper to prevent panel damage.
 N	 N	1. Remove clips by pushing center pin through and prying out the shell.

Shape (Example)	Illustration	Procedures
 N	 N	1. Remove clips by unscrewing the center pin and prying out the shell.
 N	 N	1. Remove clips by prying out the pin and then prying out the shell.

(h) CLAWS

(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

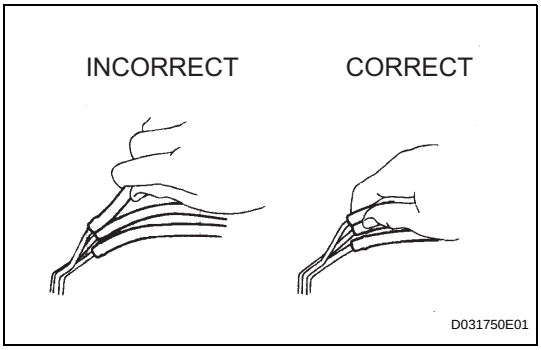
HINT:

If claws are damaged during a procedure, always replace the damaged claws with new caps or covers.

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.
		1. Using a screwdriver, detach the claws and remove the cap or covers.

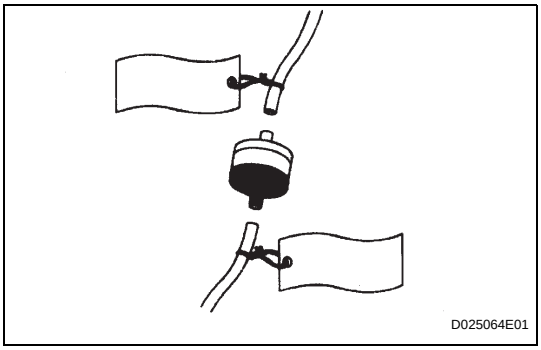
IN

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.



(i) REMOVAL AND INSTALLATION OF VACUUM HOSES

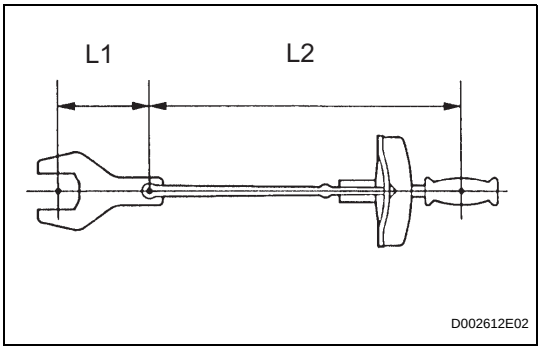
(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may cause damage.



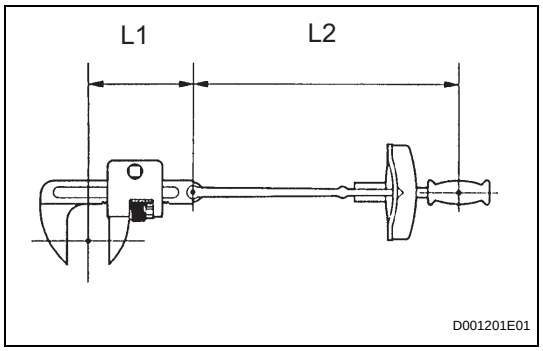
(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, it may leak air. Use a step-down adapter if necessary.



(j) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL



(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with the torque wrench.

Formula:

T' = L2/(L1 + L2) * T

T'	**Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}**
T	**Torque {N*m (kgf*cm, ft.*lbf)}**
L1	**Length of SST or extension tool {cm (in.)}**
L2	**Length of torque wrench {cm (in.)}**

NOTICE:

If an extension tool or SST is combined with a torque wrench and the wrench is used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

The YARIS is equipped with a Supplemental Restraint System (SRS).

CAUTION:

Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check the DTCs before disconnecting the battery.

(2) Work must be started at least 90 seconds after the engine switch is turned off and after the cable is disconnected from the negative (-) battery terminal.
The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the engine switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.
When the cable is disconnected from the negative (-) battery terminal, clock and audio system memory is erased. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.
CAUTION:
Never use a back-up power source (battery or other) to avoid erasing system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

(3) In minor collisions where the SRS does not deploy, the steering pad, front passenger airbag assembly, curtain shield airbag assembly, front seat airbag assembly and front seat outer belt assembly should be inspected before further use of the vehicle.

(4) Never use SRS parts from another vehicle. When replacing parts, use new parts.

(5) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.

(6) Never disassemble and attempt to repair all airbag sensor assemblies, all airbag assemblies.
1. Steering pad
2. Front passenger airbag assembly
3. Curtain shield airbag assembly
4. Front seat airbag assembly
5. Front seat outer belt assembly

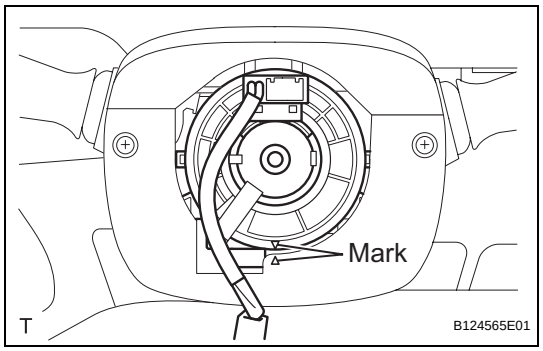
(7) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.

(8) Do not directly expose the airbag sensor assembly or airbag assembly to hot air or flames.

(9) Use a voltmeter / ohmmeter with high impedance (minimum=10 kΩ) for troubleshooting electrical circuits.

(10) Information labels are attached to the SRS components. Follow the instructions on the labels.

(11) After work on the SRS is completed, check the SRS warning light.

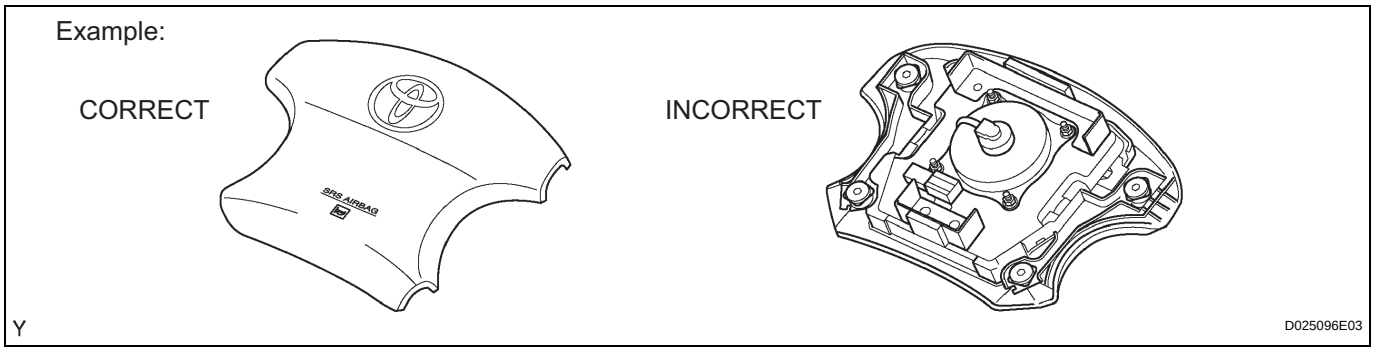


(b) SPIRAL CABLE

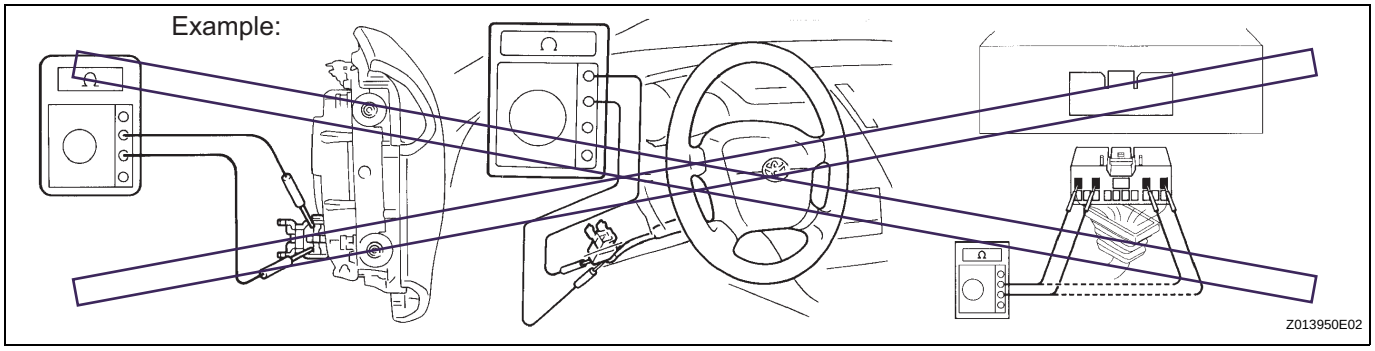
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel.

(c) STEERING PAD

(1) Always place a removed or new steering pad surface upward as shown in the illustration. Placing the horn button with the pad surface facing down could cause a serious accident if the airbag inflates. Also, do not place anything on top of the horn button.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the horn button.

(4) Store the horn button assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

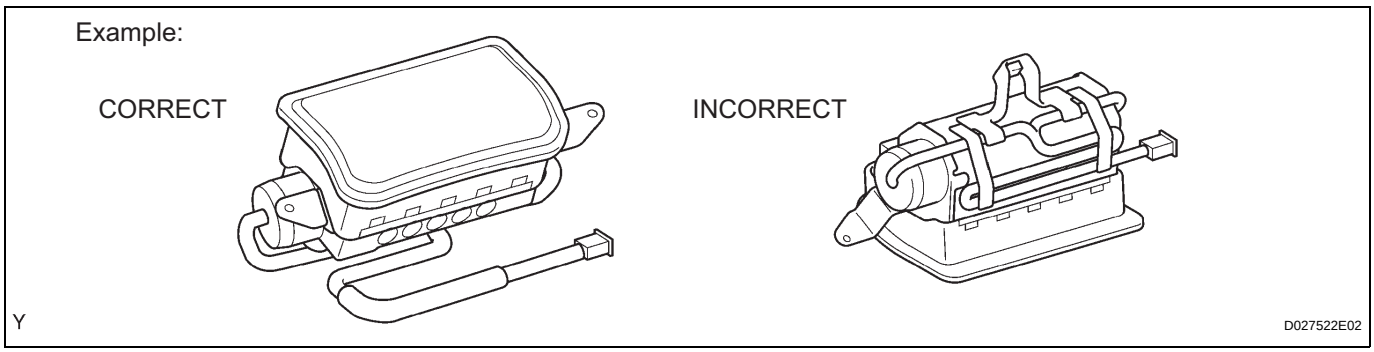
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

IN

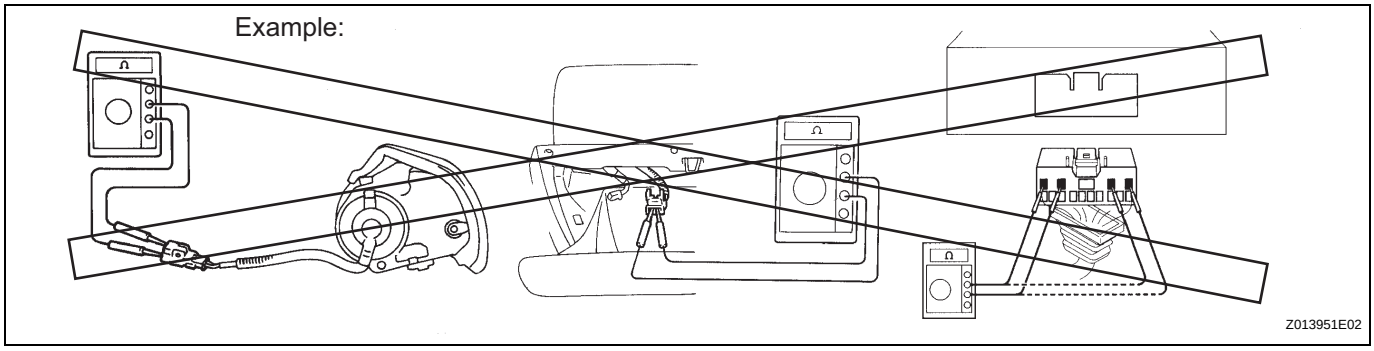
(6) When disposing of the vehicle or the horn button assembly by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag inflation direction facing down could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.

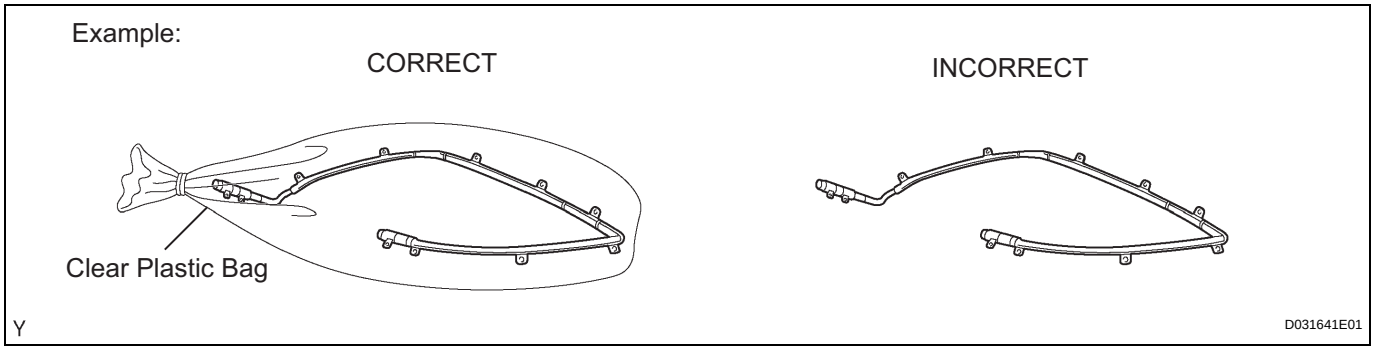
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C(200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate in a safe place, away from electrical noise.

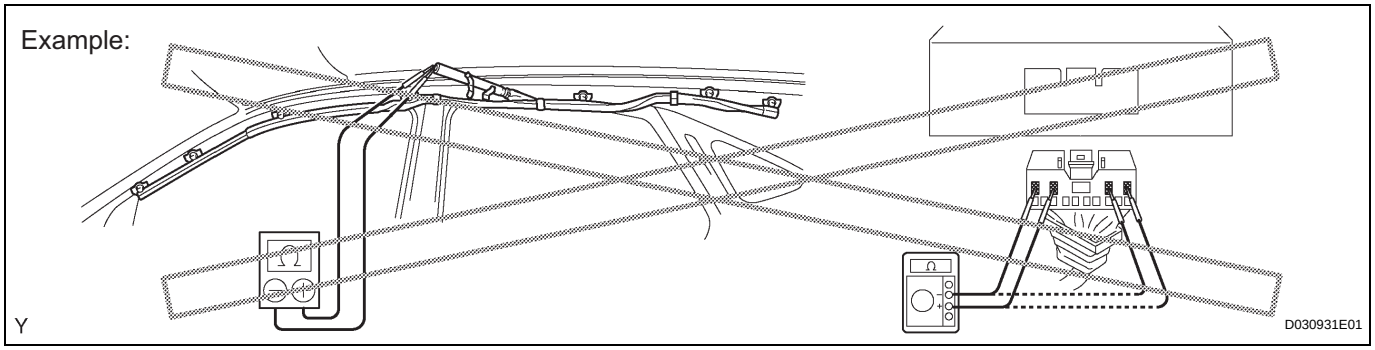
(e) CURTAIN SHIELD AIRBAG ASSEMBLY

(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.



CAUTION:
The plastic bag is not reusable.
NOTICE:
Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

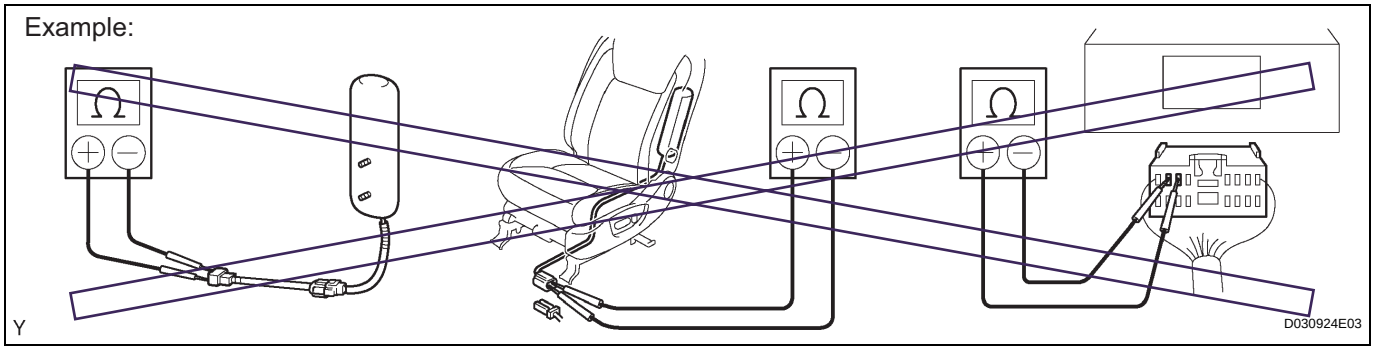
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate in a safe place, away from electrical noise.

(f) FRONT SEAT AIRBAG ASSEMBLY

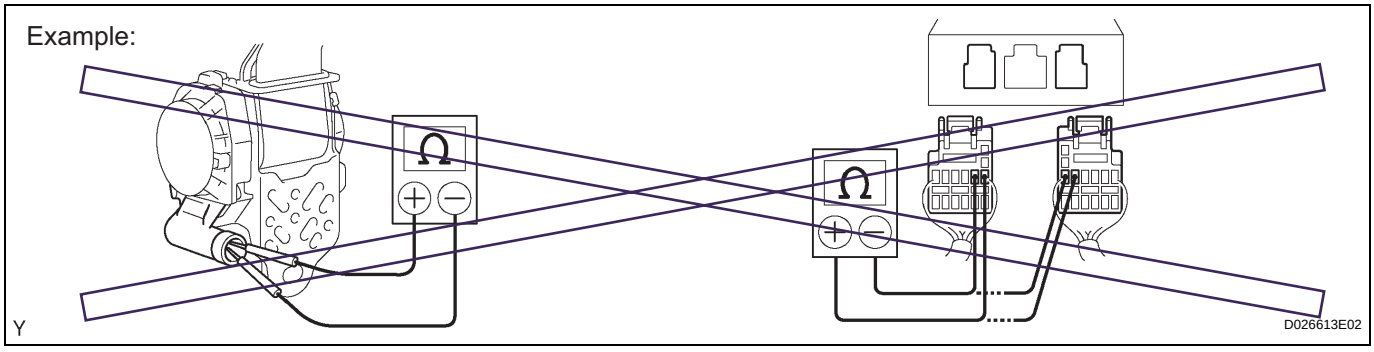
(1) Always place removed or new front seat airbag assembly with the airbag inflation direction facing up.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the front seat airbag assembly.
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.
(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal. Activate in a safe place, away from electrical noise.

(g) FRONT SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)
(1) Never measure the resistance of the seat outer belt. This may cause the pretensioner of the seat belt to activate, which could cause serious injury.

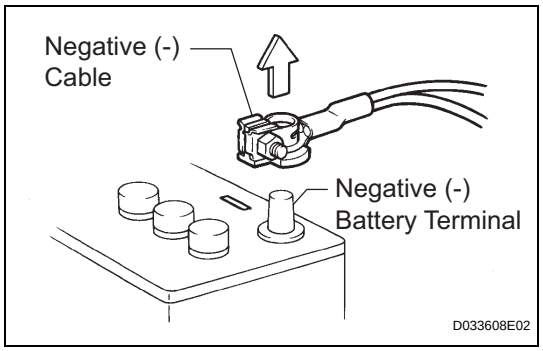


(2) Never disassemble the seat outer belt.
(3) Never install the seat outer belt on another vehicle.
(4) Store the seat outer belt in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.
(6) When disposing of a vehicle or the seat outer belt unit by itself, the seat outer belt should be activated before disposal. Activate in a safe place, away from electrical noise.
(7) As the seat outer belt is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to try to cool down the seat outer belt.
(8) Grease, detergents, oil or water should not be applied to the front seat outer belt.

(h) AIRBAG SENSOR ASSEMBLY
(1) Never reuse an airbag sensor assembly that has been involved in a collision where the SRS has deployed.
(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor placed on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not placed on the floor, the SRS may activate.
(3) Work must be started at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the set bolts of the airbag sensor assembly.

(i) WIRE HARNESS AND CONNECTOR
(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are a standard yellow color. If the SRS wire harness becomes disconnected or the connector becomes broken, repair or replace it.



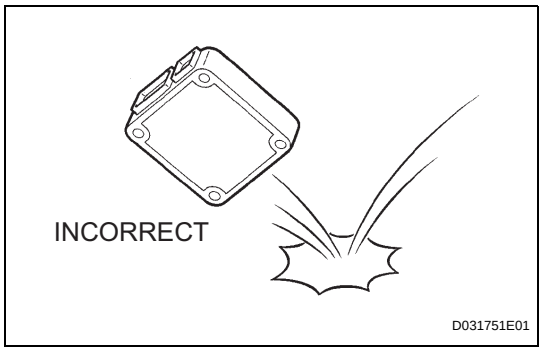
3. ELECTRONIC CONTROL

(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

NOTICE:

Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.

(1) Before performing electronic work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.
(2) When disconnecting the cable, turn the engine switch and headlight dimmer switch OFF and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.



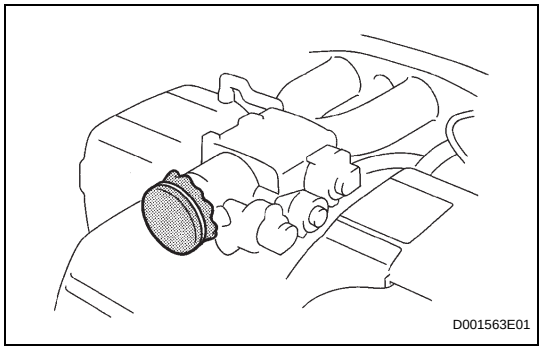
(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.

(b) HANDLING OF ELECTRONIC PARTS
(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.
(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector itself.
(3) Be careful not to drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.
(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.
(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
(6) When measuring the resistance of a wire connector, insert the tester probe carefully to prevent terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources.
(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.

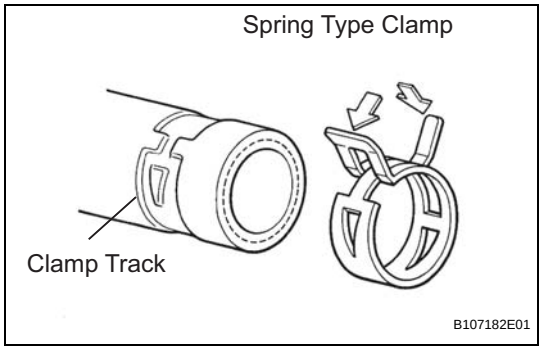
(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Prepare a fire extinguisher before starting the operation.
(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, and do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.
(3) Avoid using electric motors, working lights and other electric equipment that can cause sparks or high temperatures.
(4) Avoid using iron hammers as they may create sparks.
(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.



D001563E01

5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

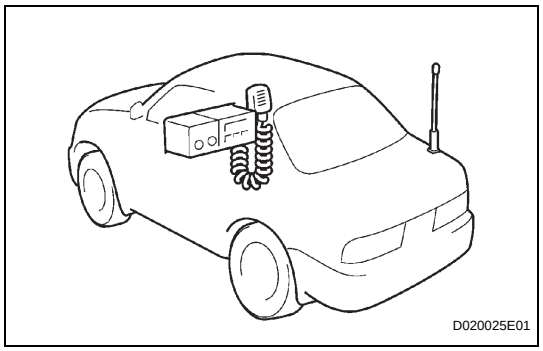
(a) If any metal particles enter inlet system parts, this may damage the engine.
(b) When removing and installing inlet system parts, cover the openings of the removed parts and engine openings. Use gummed tape or other suitable materials.
(c) When installing inlet system parts, check that no metal particles have entered the engine or the installed parts.



B107182E01

6. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the clamp position so that it can be reinstalled in the same position.
(b) Replace any deformed or dented clamps with new ones.
(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.
(d) For a spring type clamp, you may want to spread the tabs slightly after installation by pushing in the direction of the arrows as shown in the illustration.



D020025E01

7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna far away from the ECU and sensors of the vehicle electronic systems as possible.
(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensors locations, refer to the section on the applicable components.
(c) Keep the antenna and feeder separate from other wirings as much as possible. This will prevent signals from the communication equipment from affecting vehicle equipment and vice-versa.
(d) Check that the antenna and feeder are correctly adjusted.
(e) Do not install any high-powered mobile communication system.

8. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause overheating and create a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.
(b) Avoid idling the engine for more than 20 minutes.
(c) Avoid performing unnecessary spark jump tests.
  (1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.
  (2) While testing, never race the engine.

IN

(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.
(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP THE VEHICLE

(a) The vehicle must be unloaded before jacking up/lifting up the vehicle. Never jack up/lift up a heavily loaded vehicle.

(b) When removing heavy parts such as the engine and transaxle, the center of gravity of the vehicle may shift. To stabilize the vehicle, place a balance weight in a location where it will not roll or shift, or use a mission jack to hold the jacking support.

2. NOTICE FOR USING 4 POST LIFT

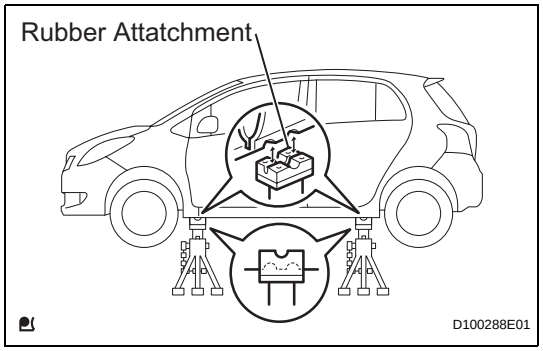
(a) Follow the safety procedures outlined in the lift instruction manual.

(b) Use precautionary measures to prevent the free wheel beam from damaging tires or wheels.

(c) Using a wheel stopper, secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in a flat area and use a wheel stopper at all times.



(b) Use safety stand with a rubber attachment, as shown in the illustration.

(c) Apply the jack and rigid rack to the specified location on the vehicle. The jack should not be used without the rigid rack.

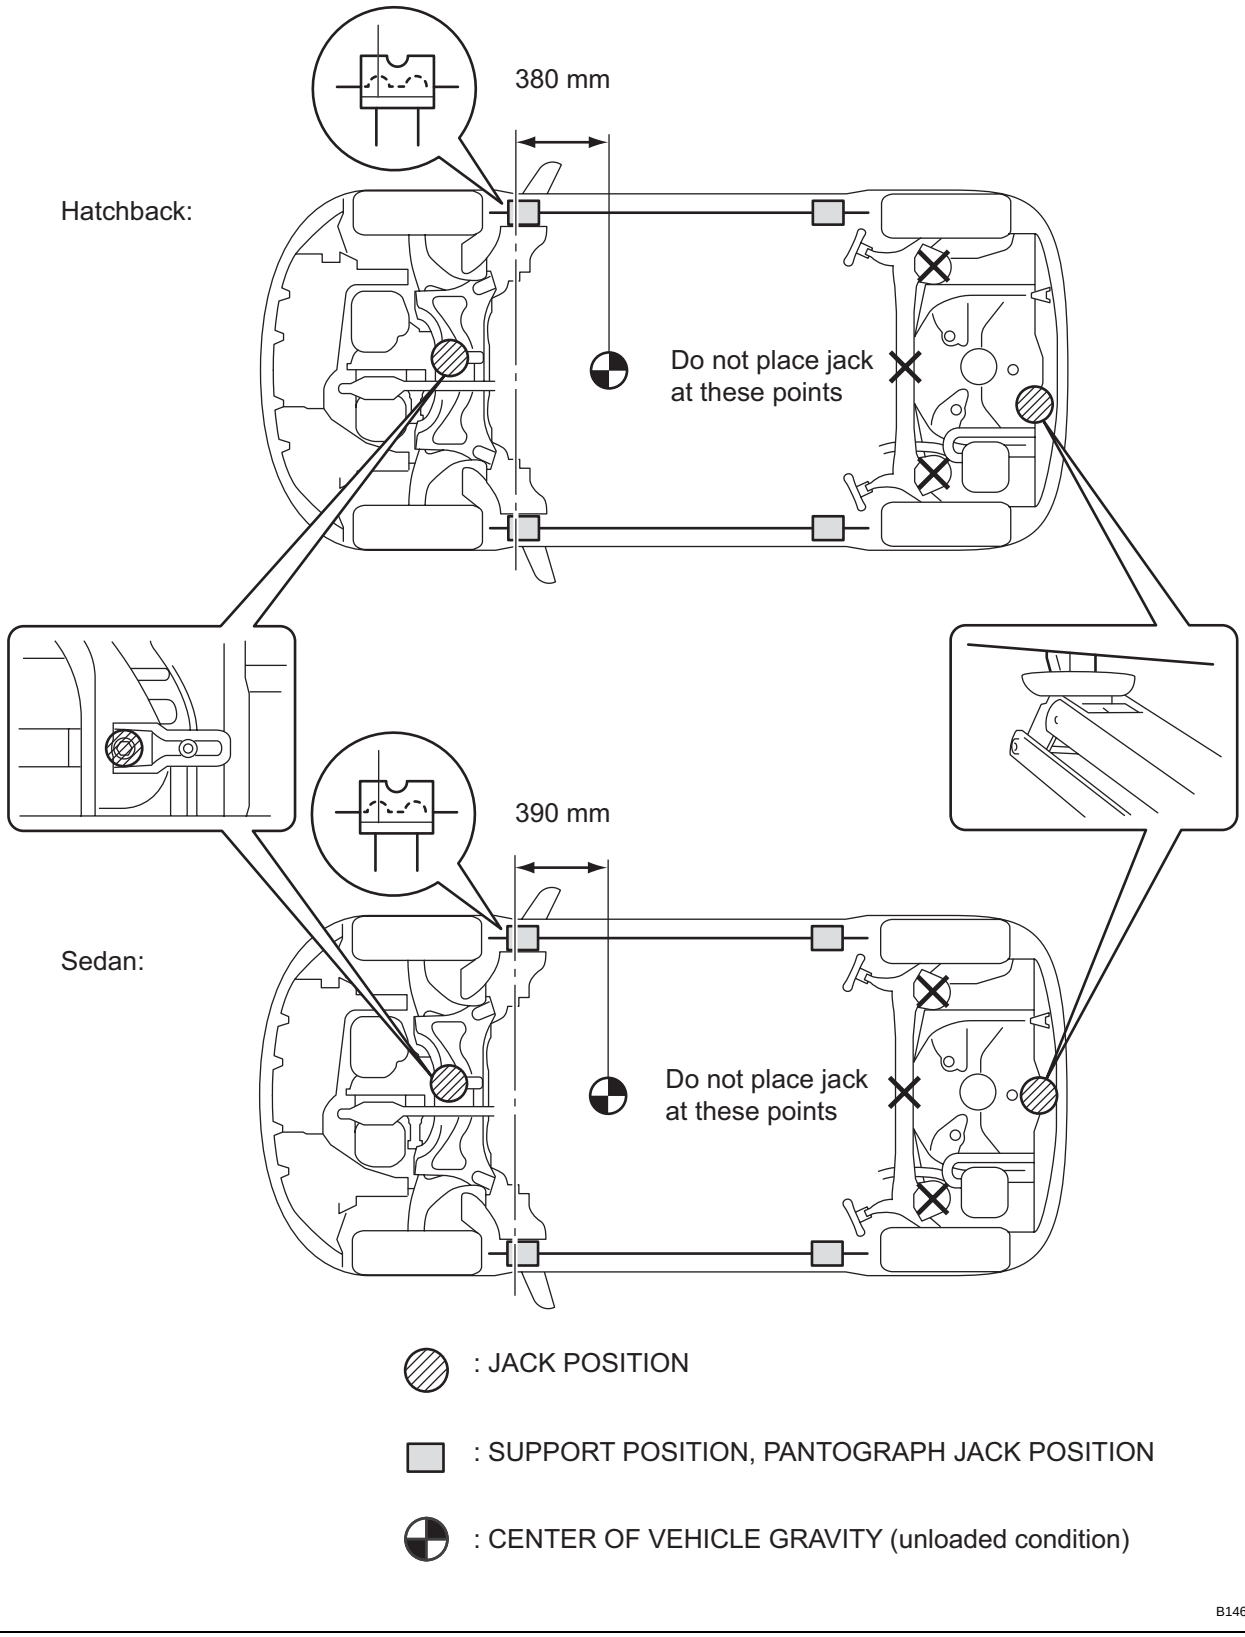
(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) When jacking up only the front wheels or only the rear wheels, place wheel stoppers on both sides of the wheels touching the ground.

(f) When lowering a vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When lowering a vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.

NOTICE:

Use the correct jack-up points. Do not use any other part of the vehicle as a jack-up point.



4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow the safety procedures outlined in its instruction manual.

(b) Use cradle with a rubber attachment as shown in the illustration.

(c) When using the lift, its center should be as close to the vehicle's center of gravity as possible. (L becomes short.)

(d) Set the vehicle on the cradle as level as possible. Then match the groove of the cradle to the safety stand support location.
NOTICE:
Do not raise the vehicle too high because the vehicle may become unstable.

(e) Be sure to lock the swing arm during the operation.

(f) Lift the vehicle up off the ground and shake it to make sure that it is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

(a) Follow safety procedures outlined in its instruction manual.

(b) Use a plate lift attachment.

(c) Refer to the table below to determine how to properly set the vehicle.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the bottom edge of the attachments with the cushion gum ends of the plate (A and C). • Align the upper edge of one of the attachments (B) with the rocker flange front side notch.

(d) Lift the vehicle up off the ground, and shake it to make sure that the it is stable.

CUSTOMIZE PARAMETERS

HINT:
The following can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

1. THEFT DETERRENT SYSTEM

Theft Deterrent System

Display (Item)	Default	Contents	Setting
PASSIVE MODE (Passive Arming Mode)	OFF	In passive arming mode, theft deterrent system switched from arming preparation state to armed state 30 seconds after both of following operations performed. • Key removed from ignition key cylinder • All doors closed (not locked) In passive arming mode, if following operations are not performed within 14 seconds of door being opened while in armed state, theft deterrent system determines that condition as theft and switches to alarm arming sounding state. • Battery reconnected • Key inserted into ignition key cylinder and ignition switch turned from OFF to ON • Any door unlocked using key	ON/OFF
WARNING (HORN) (Warning horn)	ON	Allows vehicle horn and security horn to be used as warning devices	ON/OFF
ENTRY DELAY (Entry delay time)	14 seconds	Changes entry delay time (time before warning starts) for passive arming mode	0 /14 /30 (seconds)

HINT:
Sensitivity adjustments are difficult to confirm. Check by driving the customer's vehicle.

2. LIGHTING SYSTEM

Illuminated Entry

Display (Item)	Default	Contents	Setting
LIGHTING TIME (Lighting Time)	15 seconds	Changes illumination duration after door closure. (It will quickly fade out in case of turning the ignition switch ON.)	7.5 seconds / 15 seconds / 30seconds
I/L ON /ACC OFF (Room light illuminates when ignition switch turned off)	ON	Illuminates light when ignition switch turned on (ACC). (Room light illuminated when interior light switch in DOOR position)	ON / OFF
I/L ON / UNLOCK (Room light illuminates when door key unlocked.)	ON	Function to light up the room light, when unlocking with the door key cylinder. (Room light illuminated when interior light switch in DOOR position)	ON/OFF

HINT:
Sensitivity adjustments are difficult to confirm. Check by driving the customer's vehicle.

3. POWER DOOR LOCK CONTROL SYSTEM

Power Door Lock Control System

Display (Item)	Default	Contents	Setting
UNLK/KEY TWICE	ON	Unlocks only driver side door when driver side door key cylinder turned to unlocks once, and unlocks all doors when turned to unlock twice. For OFF setting, turning it once unlocks all doors	ON / OFF

4. WIRELESS DOOR LOCK CONTROL SYSTEM

Wireless Door Lock Control System

Display (Item)	Default	Contents	Setting
HAZARD ANS BACK	ON	When wireless lock switch on transmitter pressed, illuminates all hazard warning lights once. When unlock switch pressed, all hazard warning lights illuminate twice	ON / OFF
WIRELESS OPER	ON	ON /OFF of wireless door lock function	ON / OFF
ALARM FUNCTION	ON	Operates security alarm when panic switch on transmitter continuously pressed for 1 second	ON / OFF
UNLOCK/2 OPER	All door	Function that unlocks driver side door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. if setting is OFF, pressing unlock switch once makes all doors unlock.	ON / OFF
AUTO LOCK DELAY	30 seconds	Time until relocking after unlocking with wireless door lock function	60 seconds / 30 seconds

5. GAUGE SYSTEM

Combination Meter Assembly

Display (Item)	Default	Contents	Setting
KEY REMIND SOUND	NORMAL	Changes key reminder buzzer intervals	FAST / NORMAL / SLOW
LIGHT REMIND	ON	Turns key reminder light ON and OFF	ON / OFF
SEAT BELT WARN	D/P ON	Turns seat belt warning buzzer ON and OFF	D/P ON / D ON / P ON / D/P OFF
UNITS BY REGION	Different every region	Changes drive monitor display units	KM/L JP / KM/L / ML/G US / ML/G UK / KM/G

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

GENERAL INFORMATION

A large number of ECU controlled systems are used in the YARIS. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system's circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnoses and necessary repairs.

FOR USING INTELLIGENT TESTER

- Before using the intelligent tester, read the tester operator's manual thoroughly.
- If the tester cannot communicate with the ECU controlled systems when the tester is connected to the DLC3 with the engine switch on (IG) and the tester turned ON, there is a problem on the vehicle side or tester side.
  (a) If communication is normal when the tester is connected to another vehicle, inspect the diagnosis data link line (Bus (+) line) or ECU power circuit of the vehicle.
  (b) If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Perform the Self Test procedures outlined in the tester operator's manual.

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:

Perform troubleshooting in accordance with the procedures below. The following is an outline of basic troubleshooting procedures. Confirm the troubleshooting procedures for the circuit you are working on before beginning troubleshooting.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.

(b) Warm up the engine to the normal operating temperature.

(c) Confirm the problem symptoms and conditions, and check for DTCs

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **Go to step 6**

A

4	DTC CHART

(a) Check the results obtained in step 4. Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT → **Go to step 7**

5	PROBLEM SYMPTOMS CHART

(a) Check the results obtained in step 4. Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT

6	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Confirm the malfunctioning circuit or part.

NEXT

7	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

8	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction occurred the first time.

NEXT

END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions

Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in the YARIS has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly. By using these functions, the problem areas can be narrowed down and troubleshooting is more effective. Diagnostic functions are incorporated in the following system in the YARIS.

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze-frame Data	Sensor Check/ Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
1NZ-FE SFI SYSTEM	○	○	○	-	○	○	-
U340E AUTOMATIC TRANSAXLE SYSTEM	○	○	-	-	○	○	-
ANTI-LOCK BRAKE SYSTEM	○	-	○	○	○	○	-
ELECTRONIC POWER STEERING SYSTEM	○	-	-	-	○	-	-
AIR CONDITIONING SYSTEM	○	-	-	-	○	○	-
AIRBAG SYSTEM	○	○	-	-	○	-	-
OCCUPANT CLASSIFICATION SYSTEM	○	○	-	-	○	-	-
SEAT BELT WARNING SYSTEM	-	-	-	-	○	○	○

METER / GAUGE SYSTEM	○	-	-	-	○	○	○
CAN COMMUNICATION SYSTEM	○	-	-	-	-	-	-

- In the DTC check, it is very important to determine whether the problem indicated by the DTC is either: 1) still occurring, or 2) occurred in the past but has since returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedures listed in the flowchart in the correct order.
- The following flowchart show how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1	**DTC CHECK**

NEXT

2	**MAKE A NOTE OF DTCS DISPLAYED AND THEN CLEAR THE MEMORY**

NEXT

3	SYMPTOM CONFIRMATION

Result:

Result	Proceed to
No symptoms exist	A
Symptoms exist	B

a → **Go to step 5**

b

4	SIMULATION TEST USING THE SYMPTOM SIMULATION METHODS

NEXT

5	DTC CHECK

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Troubleshooting of problem indicated by DTC**

A

6	SYMPTOM CONFIRMATION

Result:

Result	Proceed to
Symptoms exist	A
No symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.
IN-34

B → **System normal**

A

TROUBLESHOOTING OF EACH PROBLEM SYMPTOM

The problem is still occurring in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

IN

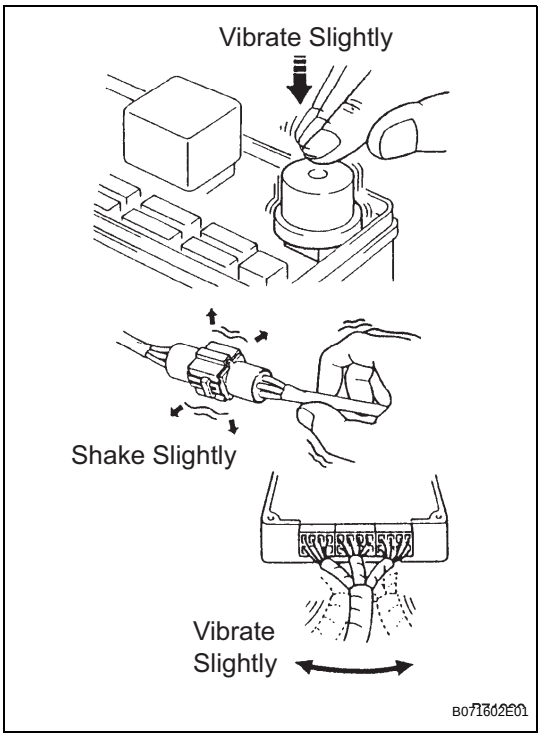
4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied on a stationary vehicle. Important points in the symptom simulation test: In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.



(a) VIBRATION METHOD: When malfunction seems to occur as a result of vibration.

(1) PART AND SENSOR

Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether or not the malfunction occurs.

NOTICE:

Applying strong vibration to relays may open relays

(2) CONNECTORS

Slightly shake the connector vertically and horizontally.

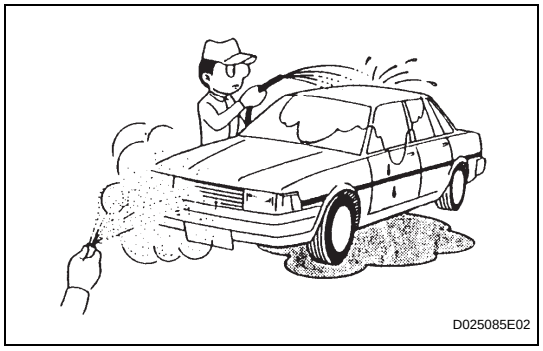
(3) WIRE HARNESS

Slightly shake the wire harness vertically and horizontally.

HINT:

The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

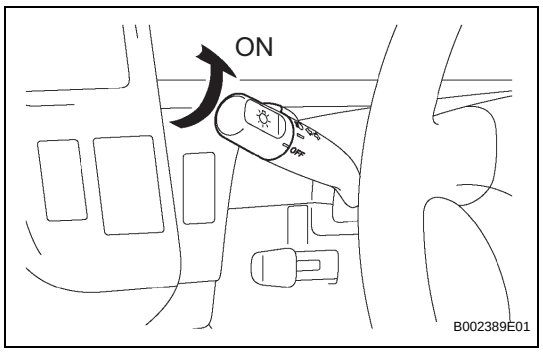
(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.
(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.
NOTICE:
- **Do not heat to more than 60°C (140°F). Exceeding this temperature may damage components.**
- **Do not apply heat directly to the parts in the ECU.**



D025085E02

(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.
(1) Sprinkle water onto the vehicle and check if the malfunction occurs.
NOTICE:
- **Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **Never apply water directly onto the electronic components.**

HINT:
If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.



B002389E01

(d) HIGH ELECTRICAL LOAD METHOD: When a malfunction seems to occur when electrical load is excessive.
(1) Turn on the heater blower, headlight, rear window defogger and all other electrical loads. Check if the malfunction reoccurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns are below.

Item	Description
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspect areas of the problem
See Page	Indicates the page where the inspection procedures for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When a "Normal" code is output during a DTC check but the problem is still occurring, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptoms are in the table. The suspected areas are listed in order of probability. A description of each of the chart's columns are below.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom is present. It is possible that the problem is occurring outside the detection range of the diagnostic system, or that the problem is occurring in a completely different system.

Item	Description
Problem Symptom	-
Circuit Inspection, Inspection Order	Indicates the order in which the circuits need to be checked
Circuit or Part Name	Indicates the circuit or part which needs to be checked
See Page	Indicates the page where the flowchart for each circuit is located

7. CIRCUIT INSPECTION

A description of the main areas of each circuit inspection is below.

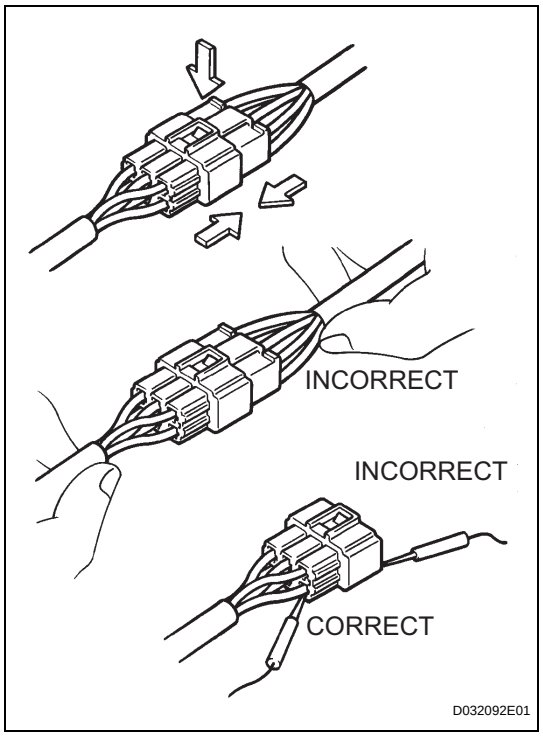
Item	Description
Circuit Description	The major role, operation of the circuit and its component parts are explained.
Diagnostic Trouble Code No. and Detection item	Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspected areas for a problem
Wiring diagram	This shows a wiring diagram of the circuit. Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit. Wire colors are indicated by an alphabetical code. B = Black L = Blue R = Red BR = Brown LG = Light Green V = Violet G = Green O = Orange W = White GR = Gray P = Pink Y = Yellow SB = Sky Blue The first letter indicates the basic wire color and the second letter indicates the color of the stripe.
Inspection Procedures	Use the inspection procedures to determine if the circuit is normal or abnormal. If abnormal, use the inspection procedures to determine whether the problem is located in the sensors, actuators, wire harnesses or ECU.
Indicates the condition of the connector of the ECU during the check	Connector being checked is connected. Connections of tester are indicated by (+) or (-) after the terminal name. Connector being checked is disconnected. The inspections between a connector and body ground, information about the body ground is not shown in the illustration.

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements should be made at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.



(b) HANDLING CONNECTORS

(1) When disconnecting a connector, first squeeze the mating halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

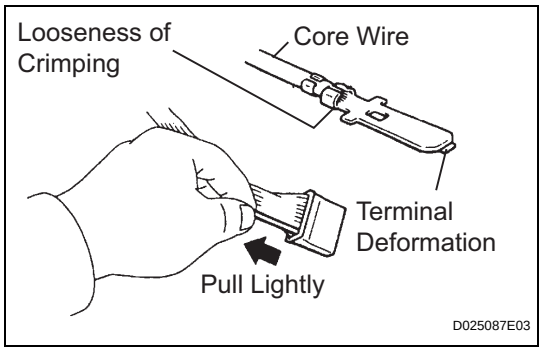
(3) Before connecting a connector, check that there are no deformed, damaged, loose or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.

NOTICE:

- **As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.**
- **Do not damage the terminals by moving the inserted tester needle.**



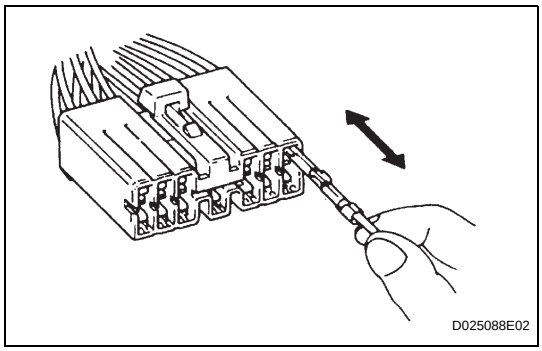
(c) CHECKING CONNECTORS

(1) Checking when a connector is disconnected: Squeeze the connector together to confirm that they are fully connected and locked.

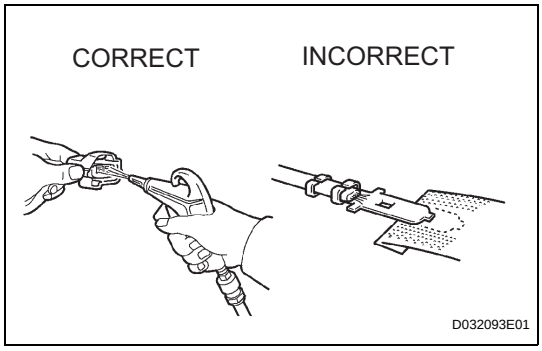
(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Check visually for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated, or deformed terminals.

NOTICE:

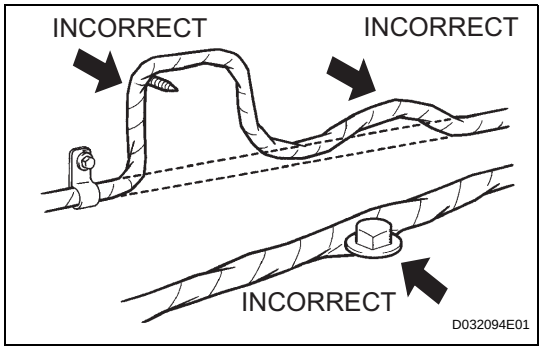
When testing a gold-plated female terminal, always use a gold-plated male terminal.



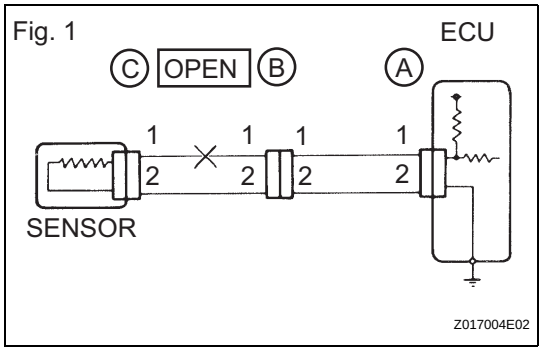
(3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.
NOTICE:
When testing a gold-plated female terminal, always use a gold-plated male terminal.



(d) REPAIR METHOD OF CONNECTOR TERMINAL
(1) If there is any foreign matter on the terminal, clean the contact point using an air gun or cloth. Never rub the contact point using sandpaper as the plating may come off.
(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.
(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.



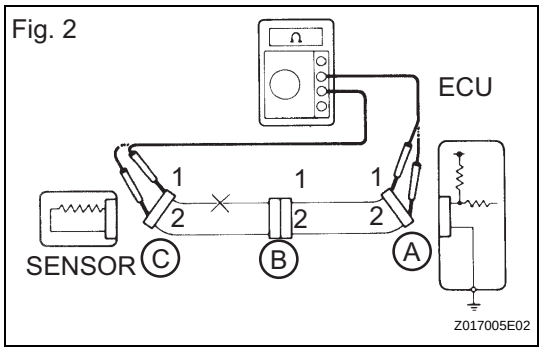
(e) HANDLING OF WIRE HARNESS
(1) If removing a wire harness, check the wiring and clamping before proceeding so that it can be restored in the same way.
(2) Never twist, pull or slacken the wire harness more than necessary.
(3) The wire harness should never come into contact with a high temperature part, or rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
(4) When installing parts, never pinch the wire harness.
(5) Never cut or break the cover of the wire harness. If it is cut or broken, replace it or repair it with vinyl tape.



2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, check the resistance or voltage, as described below.

Fig. 2



(b) Check the resistance.

(1) Disconnect connectors A and C and measure the resistance between them.

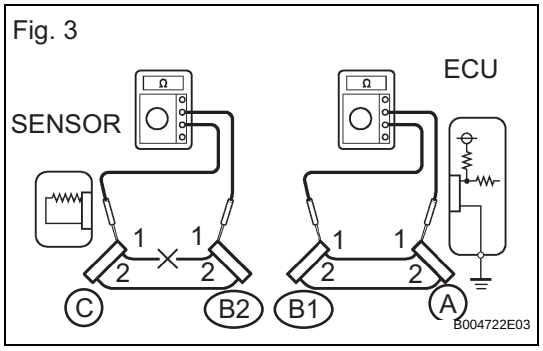
Standard resistance (Fig. 2)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3



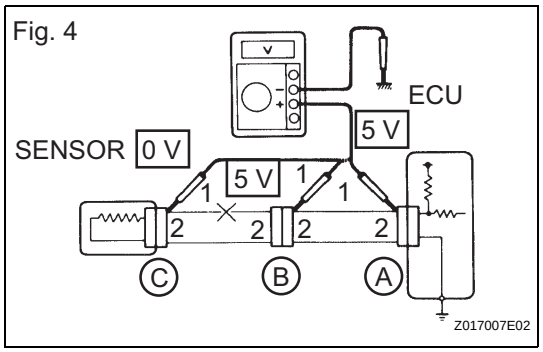
(2) Disconnect connector B and measure the resistance between the connectors.

Standard resistance (Fig. 3)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 2 - Connector C terminal 2	10 kΩ or higher

If the results match the examples above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

Fig. 4



(c) Check the voltage.

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check. With each connector still connected, measure the voltage between the body ground and these terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard voltage (Fig. 4)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the examples above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

IN

Fig. 5

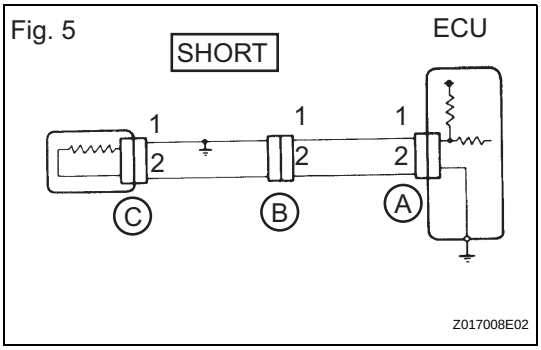


Fig. 6

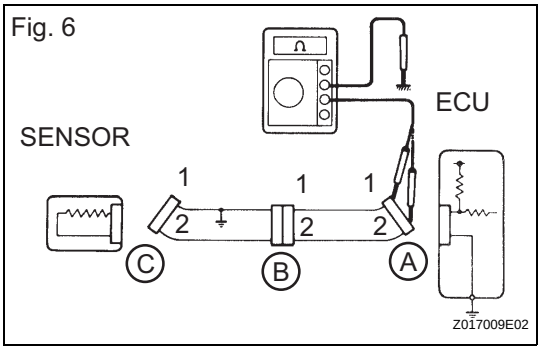

Fig. 7

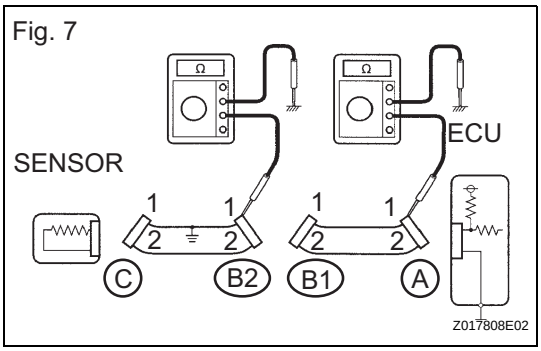


3. CHECK FOR SHORT CIRCUIT

(a) If the wire harness is ground shorted (Fig. 5), locate the section by conducting a resistance check with the body ground (below).

(b) Check the resistance with the body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard resistance (Fig. 6)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If your results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard resistance (Fig. 7)

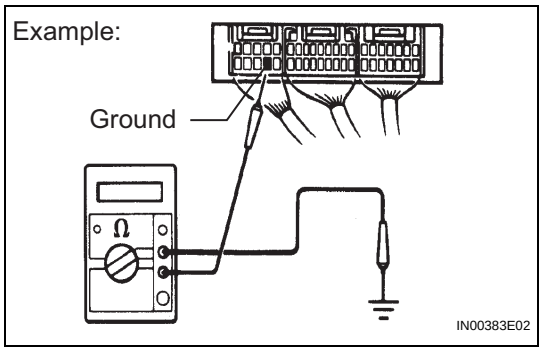
Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 2 - Body ground	Below 1 Ω

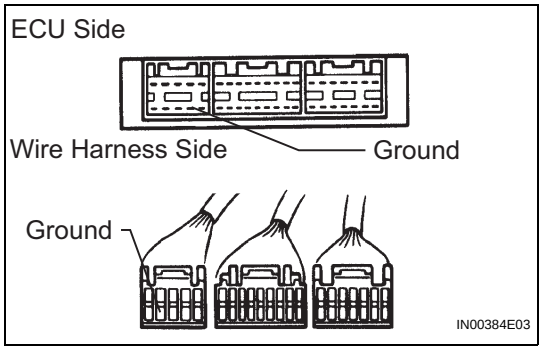
If the results match the examples above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- **The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.**
- **When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch ON.**
- **Check that the connectors are fully seated. Check for loose, corroded or broken wires.**





(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.
Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bending, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Light	Check Engine Light
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC_{RO}

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
TWC+OC	Three-Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-
3GR	Third Gear	-
4GR	Fourth Gear	-

HOW TO DETERMINE NUT STRENGTH

Nut Type

Present Standard Hexagon Nut	Old Standard Hexagon Nut		Class
	Cold Forging Nut	Cutting Processed Nut	
No Mark			4N
No Mark (w/ Washer)	No Mark (w/ Washer)	No Mark	5N (4T)
			6N
 			7N (5T)
			8N
		No Mark	10N (7T)
			11N
			12N

HINT:

- *: Nut with 1 or more marks on one side surface of the nut.
- Use the nut with the same number of the nut strength classification or greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example:

- Bolt = 4T
- Nut = 4N or more

1NZ-FE ENGINE CONTROL SYSTEM

SERVICE DATA

Camshaft timing oil control valve assembly	Standard resistance	6.9 to 7.9 Ω at 20 °C (68°F)
Camshaft position sensor	Standard resistance	1,630 to 2,740 Ω at cold 2,065 to 3,225 Ω at hot
Crankshaft position sensor	Standard resistance	985 to 1,600 Ω at cold 1,265 to 1,890 Ω at hot
Engine coolant temperature sensor	Standard resistance	2.32 to 2.59 kΩ Approximately 20°C (68°F) 0.310 to 0.326 kΩ Approximately 80°C (176°F)
Throttle with motor body assembly	Standard resistance 1 (M-) - 2 (M+)	0.3 to 100 Ω at 20°C (68°F)
EFI (20A) fuse	Standard resistance 1 - 2	Below 1 Ω
Knock sensor	Standard resistance	120 to 280 kΩ at 20°C (68°F)
Integration relay	A1 - C1	Below 1 Ω
	A1 - A4	10 kΩ or higher
	A4-C1	10 kΩ or higher
	A1 - A4	Below 1 Ω (Apply battery voltage between terminals A2 and A3)
	A4 - C1	Below 1 Ω (Apply battery voltage between terminals A2 and A3)
Accelerator pedal position No. 1 standard voltage	Standard resistance Accelerator pedal released Accelerator pedal depressed	0.5 to 1.1 V 2.6 to 4.5 V
Accelerator pedal position No. 2 standard voltage	Standard resistance Accelerator pedal released Accelerator pedal depressed	1.2 to 2.0 V 3.4 to 5.0 V

1NZ-FE ENGINE MECHANICAL

SERVICE DATA

New V belt deflection		7.0 to 8.5 mm (0.28 to 0.33 in.)
Used V belt deflection		11.0 to 13.0 mm (0.43 to 0.51 in.)
New V belt tension		539 to 637 N (55 to 65 kgf, 121 to 143 lb)
Used V belt tension		245 to 392 N (25 to 40 kgf, 55 to 88 lb)
Ignition timing		8 to 12 °BTDC
Idle speed	Manual transaxle Automatic transaxle	600 +- 50 rpm 700 +- 50 rpm
Compression pressure		1,471 kPa (15.0 kgf/cm 2213 psi)
Minimum pressure		1,079 kPa (11.0 kgf/cm 2156 psi)
Difference between each cylinder		98 kPa (1.0 kgf/cm 214 psi)
Valve clearance (cold)	Intake Exhaust	0.15 to 0.25 mm (0.006 to 0.010 in.) 0.25 to 0.35 mm (0.010 to 0.014 in.)
Chain elongation	Maximum	123.2 mm (4.850 in.)
Camshaft timing gear diameter (w/ chain)	Minimum	96.2 mm (3.787 in.)
Camshaft timing sprocket diameter (w/ chain)	Minimum	96.2 mm (3.787 in.)
Chain tensioner slipper thickness	Maximum	1.0 mm (0.039 in.)
Chain vibration damper thickness	Maximum	1.0 mm (0.039 in.)
Cylinder head set bolt length	Standard Maximum	143.5 mm (5.6496 in.) 144.2 mm (5.6772 in.)
Cylinder head warpage	Maximum cylinder block surface Intake manifold surface Exhaust manifold surface	0.05 mm (0.0020 in.) 0.10 mm (0.0039 in.) 0.10 mm (0.0039 in.)
Intake valve overall length	Standard Minimum	89.25 mm (3.5138 in.) 88.75 mm (3.4941 in.)
Intake valve stem diameter		4.970 to 4.985 mm (0.1957 to 0.1963 in.)
Intake valve margin thickness	Standard Minimum	1.0 mm (0.039 in.) 0.5 mm (0.020 in.)
Exhaust valve overall length	Standard Minimum	87.90 mm (3.4606 in.) 87.40 mm (3.4409 in.)
Exhaust valve stem diameter		4.965 to 4.980 mm (0.1955 to 0.1961 in.)
Exhaust valve margin thickness	Standard Minimum	1.15 mm (0.045 in.) 0.5 mm (0.020 in.)
Valve spring free length		45.05 to 45.15 mm (1.774 to 1.778 in.)
Valve spring deviation	Maximum	1.6 mm (0.063 in.)
Valve spring angle (reference)	Maximum	2°
Valve spring installed tension at 32.5 mm (1.280 in.)		149 to 165 N (15.2 to 16.8 kgf, 33.5 to 37.1 lbf)
Valve spring working tension at 23.9 mm (0.941 in.)	Maximum	286 to 316N (29.1 to 32.2 kgf, 64.2 to 71.0 lbf)
Bushing inside diameter		5.010 to 5.030 mm (0.1972 to 0.1980 in.)
Valve guide bushing oil clearance	Standard intake Standard exhaust	0.025. to 0.060 mm (0.0010 to 0.0024 in.) 0.030. to 0.065 mm (0.0012 to 0.0026 in.)
	Maximum intake Maximum exhaust	0.08 mm (0.0032 in.) 0.10 mm (0.039 in.)
Valve guide bush diameter	Standard O/S	9.685 to 9.706 mm (0.3813 to 0.3821 in.) 9.735 to 9.755 mm (0.3833 to 0.3841 in.)
Bushing Protrusion height		9.0 to 9.4 mm (0.354 to 0.370 in.)
Lifter diameter		30.966 to 30.976 mm (1.291 to 1.2195 in.)

Lifter bore diameter		31.000 to 31.025 mm (1.2205 to 1.2215 in.)
Lifter oil clearance	Standard Maximum	0.024 to 0.059 mm (0.0009 to 0.0023 in.) 0.1 mm (0.0039 in.)
Camshaft circle runout	Maximum	0.03 mm (0.0012 in.)
Camshaft cam lobe height	Standard Minimum	44.617 to 44.717 mm (1.7566 to 1.7605 in.) 43.16 mm (1.6992 in.)
Camshaft No. 1 journal diameter		34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Camshaft other journals diameter		22.949 to 22.965 mm (0.9035 to 0.9041 in.)
No. 2 camshaft circle runout	Maximum	0.03 mm (0.0012 in.)
No. 2 camshaft cam lobe height	Standard Minimum	44.666 to 44.766 mm (1.7585 to 1.7624 in.) 44.52 mm (1.7528 in.)
No. 2 camshaft No. 1 journal diameter		34.449 to 34.465 mm (1.3563 to 1.3569 in.)
No. 2 camshaft other journal diameter		22.949 to 22.965 mm (0.9035 to 0.9041 in.)
Camshaft thrust clearance	Standard Maximum	0.040 to 0.095 mm (0.0016 to 0.0037 in.) 0.11 mm (0.0043 in.)
Camshaft oil clearance	Standard Maximum	0.035 to 0.072mm (0.0014 to 0.0028 in.) 0.08 mm (0.0031 in.)
Camshaft bearing cap setting ring pin protrusion height		8.5 to 9.5 mm (0.335 to 0.374 in.)
Connection rod thrust clearance	Standard Maximum	0.16 to 0.36 mm (0.0063 to 0.0142 in.) 0.36 mm (0.0142 in.)
Connecting rod oil clearance	Standard Maximum	0.012 to 0.038 mm (0.00047 to 0.0015 in.) 0.058 mm (0.0028 in.)
Crankshaft thrust clearance	Standard Maximum	0.09 to 0.19 mm (0.0035 to 0.0075 in.) 0.03 mm (0.0118 in.)
Cylinder block warpage	Maximum	0.05 mm (0.0020 in.)
Cylinder bore diameter	Standard Difference limit	75.000 to 75.013 mm (2.9528 to 2.9533 in.) 0.10 mm (0.0039 in.)
Piston diameter		74.935 to 74.945 mm (2.9502 to 2.9506 in.)
Piston pin hole diameter at 20°C (68°F)		18.013 to 18.016 mm (0.7092 to 0.7093 in.)
Piston pin diameter		18.001 to 18.004 mm (0.7087 to 0.7088 in.)
Piston pin oil clearance	Standard Maximum	0.009 to 0.015 mm (0.0004 to 0.0006 in.) 0.050 mm (0.0020 in.)
Piston clearance	Standard	0.045 to 0.068 mm (0.0018 to 0.0027 in.)
Connecting misalignment	Maximum	0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
Connecting rod twist	Maximum	0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
Piston ring groove clearance	No. 1 No. 2	0.03 to 0.07 mm (0.0012 to 0.0028 in.) 0.02 to 0.06 mm (0.0008 to 0.0024 in.)
Piston ring end gap	Standard No. 1 No. 2 Oil (Side rail) Maximum No. 1 No. 2 Oil (Side rail)	0.25 to 0.35 mm (0.0098 to 0.0138 in.) 0.35 to 0.50 mm (0.0138 to 0.0197 in.) 0.10 to 0.35 mm (0.0039 to 0.0138 in.) 0.91 mm (0.0358 in.) 1.60 mm (0.0417 in.) 0.82 mm (0.0323 in.)
Connecting rod bolt diameter	Standard Maximum	6.6 to 6.7 mm (0.260 to 0.264 in.) 6.4 mm (0.252 in.)
Crankshaft circle runout	Maximum	0.03 mm (0.0012 in.)
Crankshaft main journal diameter		45.988 to 46.000 mm (1.8106 to 1.8110 in.)
Crankshaft main journal taper and out-of-round	Maximum	0.02 mm (0.0008 in.)
Crank pin diameter		39.992 to 40.000 mm (1.5745 to 1.5748 in.)
Crank pin taper and out-of- round	Maximum	0.02 mm (0.0008 in.)
Crankshaft timing sprocket diameter (w/ chain)	Standard Minimum	51.72 mm (2.0362 in.) 50.5 mm (1.988 in.)
Crankshaft bearing cap set bolt diameter	Standard Minimum	7.3 to 7.5 mm (0.287 to 0.295 in.) 7.2 mm (0.283 in.)

Crankshaft oil clearance	Standard Maximum	0.01 to 0.023 mm (0.0004 to 0.0009 in.) 0.07 mm (0.0028 in.)

1NZ-FE FUEL

SERVICE DATA

Fuel pressure	Standard fuel pressure	304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)
Fuel pressure : at fuel while the engine idles	Standard fuel pressure	304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)
Fuel pressure : at fuel pressure remains for 5 minutes after engine has stopped	Standard fuel pressure	147 kPa (1.5 kgf/cm^2, 21 psi) or more
Fuel injector assembly	Standard resistance	11.6 to 12.4 Ωat 20°C (68°F)
	Injection volume	47 to 58 cm^3(2.9 to 3.5 cu in.) per 15 seconds Connect
	Difference between each injector	11 cm^3(0.6 cu in.) or less
	Fuel drop	1 drop or less every 12 minutes
Fuel pump	Standard resistance	0.2 to 3.0 Ω at 20°C (68°F)

TORQUE SPECIFICATIONS

1NZ-FE STARTING

SERVICE DATA

for 0.8 kW

Starter assembly	Standard current	90 A or less at 11.5 V
Starter relay	Standard resistance 3 - 5	Below 1 Ω(when battery voltage applied to terminals 1 and 2)
		10 kΩ or higher
ACC cut relay	Standard resistance 3 - 4	Below 1 Ω
		10 kΩ or higher (when battery voltage applied to terminals 1 and 2)
	Standard resistance 3 - 5	Below 1 Ω(when battery voltage applied to terminals 1 and 2)
		10 kΩ or higher
AM2 fuse	Standard resistance 1 - 2	Below 1 Ω
IG2 relay	Standard resistance B1 - C1	Below 1 Ω
	Standard resistance B4 - C1	10 kΩ or higher
		Below 1 Ω (Apply battery voltage between terminals B2 and B3)
Ignition relay	Standard resistance 3 - 5	Below 1 Ω(when battery voltage applied to terminals 1 and 2)
		10 kΩ or higher
Ignition or starter switch assembly.	Standard resistance Between all terminals	10 kΩ or higher (LOCK)
	Standard resistance 2 - 4	Below 1 Ω (ACC)
	Standard resistance 1 - 2 - 4	Below 1 Ω (ON)
	Standard resistance 5 - 6	
	Standard resistance 1 - 3 - 4	Below 1 Ω (START)
	Standard resistance 5 - 6 - 7	
Starter armature assembly resistance	Segments	Below 1 Ω
	Commutator - Armature coil	10kΩ or higher
Starter armature assembly commutator circumference runout	Maximum runout	0.05 mm (0.0020 in.)
Starter armature assembly commutator diameter	Standard diameter	28.0 mm (1.1024 in.)
	Minimum diameter	27.0 mm (1.0630 in.)
Starter armature assembly undercut portion	Standard undercut depth	0.6 mm (0.0236 in.)
	Minimum undercut depth	0.2 mm (0.0079 in.)
Starter yoke assembly resistance	Terminal C - Field coil brush lead	Below 1 Ω
	Brush lead - starter yoke	10 kΩ or higher
Brush length	Standard length	14 mm (0.5511 in.)
	Minimum length	9 mm (0.3543 in.)
Starter brush holder assembly resistance	Standard resistance	10kΩ or higher
Magnet starter switch assembly resistance	Terminal C - Terminal 50	Below 1 Ω
	Terminal 50 - Magnet starter switch assembly	Below 2 Ω

for 1.6 kW

Starter assembly	Standard current	90 A or less at 11.5 V

Starter relay	Standard resistance 3 - 5	Below 1 Ω(when battery voltage applied to terminals 1 and 2)
		10 kΩ or higher
ACC cut relay	Standard resistance 3 - 4	Below 1 Ω
		10 kΩ or higher (when battery voltage applied to terminals 1 and 2)
	Standard resistance 3 - 5	Below 1 Ω(when battery voltage applied to terminals 1 and 2)
		10 kΩ or higher

1NZ-FE CHARGING

SERVICE DATA

Battery	Standard specific gravity:	1.25 to 1.29 at 20°C (68°F)
Charging circuit without load	Standard amperage	10 A or less
	Standard voltage	13.2 to 14.8 V
Charging circuit with load	Standard amperage	30 A or more
Generator brush holder assembly brush exposed length	Standard exposed length	9.5 to 11.5mm (0.374 to 0.453 in.)
	Minimum exposed length	1.5mm (0.059 in.)
Generator regulator assembly resistance	F-B	When the positive and negative poles between terminals F and B are exchanged, there is continuity in one direction but no continuity in the other direction.
	F-E	When the positive and negative poles between terminals F and E are exchanged, there is continuity in one direction but no continuity in the other direction.
Generator drive end frame resistance	Coil wires	Below 1Ω
	Coil wire and body	10kΩ or higher
Generator holder with rectifier resistance	P1, P2, P3 -B	When the positive and negative poles among terminals P1, P2, P3 and B are exchanged, there is continuity in one direction but on continuity in the other direction.
	P1, P2, P3 -E	When the positive and negative poles among terminals P1, P2, P3 and E are exchanged, there is continuity in one direction but on continuity in the other direction.
Generator rotor assembly resistance	Slip rings	1.7 to 2.1Ω at 20°C (68°F)
	Slip ring and rotor	10kΩ or higher
Generator rotor assembly slip ring diameter	Standard diameter	14.2 to 14.4mm (0.559 to 0.564 in.)
	Minimum diameter	12.8 mm (0.5.4 in.)

U340E AUTOMATIC TRANSAXLE

SERVICE DATA

AUTOMATIC TRANSAXLE

Line pressure (Wheel locked)		
Engine idling	D position	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)
	R position	553 to 623 kPa (5.6 to 6.4 kgf/cm^2, 80 to 90 psi)
AT stall (Throttle valve fully opened)	D position	1,126 to 1,226 kPa (11.5 to 12.5 kgf/cm^2, 163 to 178 psi)
	R position	1,664 to 1,864 kPa (17.0 to 19.0 kgf/cm^2, 241 to 270 psi)
Engine stall revolution	D position	1,850 to 2,450 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.5 seconds
Engine idle speed (A/C OFF)	N position	650 to 750 rpm
Shift schedule (Tire size: 175/65R14)		
Throttle valve fully opened	1 → 2	30 to 33 mph (48 to 53 km/h)
	2 → 3	57 to 62 mph (91 to 99 km/h)
	3 → 4	88 to 94 mph (142 to 151 km/h)
	4 → 3	85 to 90 mph (137 to 145 km/h)
	3 → 2	53 to 58 mph (86 to 93 km/h)
	2 → 1	25 to 27 mph (40 to 44 km/h)
Throttle valve fully closed	3 → 4	24 to 27 mph (39 to 43 km/h)
	4 → 3	18 to 21 mph (29 to 33 km/h)
2 position		
Throttle valve fully opened	1 → 2	30 to 33 mph (48 to 53 km/h)
	3 → 2	53 to 58 mph (86 to 93 km/h)
	2 → 1	25 to 27 mph (40 to 44 km/h)
L position		
Throttle valve fully opened	3 → 2	53 to 58 mph (86 to 93 km/h)
	2 → 1	27 to 30 mph (43 to 47 km/h)
Lock-up point (Throttle valve opening 5 %)		
D position		
4th gear	Lock-up ON	33 to 35 mph (53 to 57 km/h)
	Lock-up OFF	31 to 34 mph (50 to 54 km/h)
3 position		
3rd gear	Lock-up ON	57 to 62 mph (91 to 99 km/h)
	Lock-up OFF	53 to 58 mph (86 to 93 km/h)
Flex lock-up point (Throttle valve opening 5 %) D position		
4th gear	Lock-up ON	24 to 27 mph (39 to 43 km/h)
	Lock-up OFF	23 to 26 mph (37 to 42 km/h)
3rd gear	Lock-up ON	17 to 20 mph (28 to 32 km/h)
	Lock-up OFF	17 to 19 mph (27 to 31 km/h)
Shift schedule (Tire size: 185/60R15)		
D position		

Throttle valve fully opened	1 → 2	30 to 34 mph (49 to 55 km/h)
	2 → 3	58 to 63 mph (93 to 101 km/h)

Curtain shield airbag x Body	14	143	10
Center airbag sensor assembly x Body	18	180	13
Front airbag sensor x Body	9.0	90	80 in.*lbf
Side airbag sensor x Body	9.0	90	80 in.*lbf
Rear airbag sensor x Body	9.0	90	80 in.*lbf

SEAT BELT

SERVICE DATA

FRONT SEAT INNER BELT ASSEMBLY (for Sedan):

Item	Position	Tester Connection	Condition	Specified Condition
Standard resistance	Driver side	3 - 4	Tongue plate fastened	10 kΩ or higher
			Tongue plate released	Below 1 Ω
	Front passenger side	1 - 2	Tongue plate fastened	10 kΩ or higher
			Tongue plate released	Below 1 Ω

FRONT SEAT INNER BELT ASSEMBLY (for Hatchback):

Item	Position	Tester Connection	Condition	Specified Condition
Standard resistance	Driver side	3 - 4	Tongue plate fastened	10 kΩ or higher
			Tongue plate released	Below 1 Ω
	Front passenger side	1 - 2	Tongue plate fastened	10 kΩ or higher
			Tongue plate released	Below 1 Ω

TORQUE SPECIFICATIONS

FRONT PASSENGER SEAT BELT WARNING LIGHT (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT PASSENGER SEAT BELT WARNING LIGHT (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT SEAT INNER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front seat inner belt assembly x Front seat adjuster frame assembly	42	43	31
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT SEAT INNER BELT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front seat inner belt assembly x Front seat adjuster frame assembly	42	43	31
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT SEAT OUTER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front shoulder belt anchor adjuster assembly x Body	42	43	31
Front seat outer belt assembly (for Retractor Upper) x Body	4.9	50	43 in.*lbf
Front seat outer belt assembly (for Retractor Lower) x Body	42	430	31
Front seat outer belt assembly (for Through Anchor) x Body	42	430	31
Front seat outer belt assembly (for Anchor Plate) x Body	42	430	31
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT SEAT OUTER BELT ASSEMBLY (for Hatchback 5 Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front shoulder belt anchor adjuster assembly x Body	42	43	31
Front seat outer belt assembly (for Retractor Upper) x Body	4.9	50	43 in.*lbf
Front seat outer belt assembly (for Retractor Lower) x Body	42	430	31
Front seat outer belt assembly (for Through Anchor) x Body	42	430	31
Front seat outer belt assembly (for Anchor Plate) x Body	42	430	31
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT SEAT OUTER BELT ASSEMBLY (for Hatchback 3 Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front seat outer belt assembly (for Retractor Upper) x Body	4.9	50	43 in.*lbf
Front seat outer belt assembly (for Retractor Lower) x Body	42	430	31
Front seat outer belt assembly (for Through Anchor) x Body	42	430	31
Front seat outer belt assembly (for Anchor Plate) x Body	42	430	31
Negative battery terminal x Battery	5.4	55	48 in.*lbf

REAR SEAT INNER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat inner belt assembly x Body	42	430	31

REAR SEAT INNER BELT ASSEMBLY (for Hatchback LH Side):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat inner belt assembly x Rear seat back frame sub-assembly (for 60/40 Split Seat Type)	42	430	31
Rear seat inner belt assembly x Body (for Hold Down Seat Type)	42	430	31

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat cushion assembly x Body (for 60/40 Split Seat Type)	37	375	27

REAR SEAT INNER BELT ASSEMBLY (for Hatchback RH Side):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat inner belt assembly x Rear seat back frame sub-assembly (for 60/40 Split Seat Type)	42	430	31
Rear seat inner belt assembly x Body (for Hold Down Seat Type)	42	430	31

REAR SEAT OUTER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat outer belt assembly (for Retractor) x Body	42	430	31
Rear seat outer belt assembly (for Anchor Plate) x Body	42	430	31

REAR SEAT OUTER BELT ASSEMBLY (for 5 Hatchback Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat outer belt assembly (for Retractor) x Body	42	430	31
Rear seat outer belt assembly (for Through Anchor) x Body	42	430	31
Rear seat outer belt assembly (for Anchor Plate) x Body	42	430	31
Negative battery terminal x Battery (for LH Side)	5.4	55	48 in.*lbf

REAR SEAT OUTER BELT ASSEMBLY (for Hatchback 3 Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear seat outer belt assembly (for Retractor) x Body	42	430	31
Rear seat outer belt assembly (for Through Anchor) x Body	42	430	31
Rear seat outer belt assembly (for Anchor Plate) x Body	42	430	31
Negative battery terminal x Battery (for LH Side)	5.4	55	48 in.*lbf

REAR CENTER SEAT INNER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear center seat inner belt assembly x Body	42	430	31

REAR CENTER SEAT INNER BELT ASSEMBLY (for Hatchback LH Side):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear center seat inner belt assembly x Rear seat back frame sub-assembly (for 60/40 Split Seat Type)	42	430	31
Rear center seat inner belt assembly x Body (for Hold Down Seat Type)	42	430	31
Rear seat cushion assembly x Body (for 60/40 Split Seat Type)	37	375	27

REAR CENTER SEAT INNER BELT ASSEMBLY (for Hatchback RH Side):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear center seat inner belt assembly x Rear seat back frame sub-assembly (for 60/40 Split Seat Type)	42	430	31
Rear center seat inner belt assembly x Body (for Hold Down Seat Type)	42	430	31

REAR CENTER SEAT OUTER BELT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear center seat outer belt assembly (for Retractor) x Body	42	430	31
Rear center seat outer belt assembly (for Anchor Plate) x Body (for Hold Down Seat Type)	42	430	31

REAR CENTER SEAT OUTER BELT ASSEMBLY (for 5 Hatchback Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear center seat outer belt assembly (for Retractor) x Body	42	430	31
Rear center seat outer belt assembly (for Bracket) x Body	42	430	31
Rear center seat outer belt assembly (for Through Anchor) x Body	42	430	31

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery (for LH Side)	5.4	55	48 in.*lbf

REAR CENTER SEAT OUTER BELT ASSEMBLY (for Hatchback 3 Door):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery (for LH Side)	5.4	55	48 in.*lbf

THEFT DETERRENT SYSTEM

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Hood lock assembly x Radiator support	7.5	76	66 in.*lbf
Security horn x Body	8.0	82	71 in.*lbf
Luggage compartment lock cylinder x Back door panel	4.9	50	43 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

CRUISE CONTROL

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbft.*lbf
Cruise control main switch x Steering wheel	2.4	24	21 in.*lbf
Clutch switch assembly x Clutch pedal	16	160	12
Negative battery terminal x Battery	5.4	55	48 in.*lbf

LIGHTING

SERVICE DATA

Turn signal flasher relay	7 - Body ground: Below 1Ω
Headlight relay	3 - 5: 10 kΩ higher 3 - 5: Below 1 Ω (Battery voltage applied to terminals 1 and 2)
Fog light relay (for Sedan)	3 - 5: 10 kΩ higher 3 - 5: Below 1 Ω (Battery voltage applied to terminals 1 and 2)
Fog light relay (for Hatchback)	3 - 5: 10 kΩ higher 3 - 5: Below 1 Ω (Battery voltage applied to terminals 1 and 2)

TORQUE SPECIFICATIONS

HEADLIGHT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Headlight assembly x Body	5.9	60	52 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HEADLIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

SIDE TURN SIGNAL LIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FOG LIGHT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FOG LIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

REAR COMBINATION LIGHT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear combination light assembly x Body	4.9	50	43 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

REAR COMBINATION LIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear combination light assembly x Body	5.4	55	48 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

LICENSE LIGHT ASSEMBLY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Luggage compartment door outside garnish x Back door panel	4.9	50	43 in.*lbf
Luggage compartment door lock cylinder x Back door panel	4.9	50	43 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

LICENSE LIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HIGH MOUNTED STOP LIGHT ASSEMBLY (for Sedan with Rear Spoiler):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HIGH MOUNTED STOP LIGHT ASSEMBLY (for Sedan without Rear Spoiler):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HIGH MOUNTED STOP LIGHT ASSEMBLY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

MAP LIGHT:

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

ROOM LIGHT:

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

LUGGAGE COMPARTMENT ROOM LIGHT (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

LUGGAGE COMPARTMENT ROOM LIGHT (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HEADLIGHT DIMMER SWITCH:

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HAZARD WARNING SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

HAZARD WARNING SWITCH (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

STOP LIGHT SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

STOP LIGHT SWITCH (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT DOOR COURTESY SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front door courtesy switch x Body	3.7	38	33 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT DOOR COURTESY SWITCH (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front door courtesy switch x Body	3.7	38	33 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

REAR DOOR COURTESY SWITCH:

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear door courtesy switch x Body	3.7	38	33 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

BACK DOOR COURTESY SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Luggage compartment door lock assembly x Back door panel	7.5	76	66 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

BACK DOOR COURTESY SWITCH (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Back door lock assembly x Back door panel	7.5	76	66 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FOG LIGHT RELAY (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FOG LIGHT RELAY (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WIPER AND WASHER

TORQUE SPECIFICATIONS

FRONT WIPER MOTOR (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front wiper motor x Front wiper link	5.5	56	49 in.*lbf
Front wiper motor and link x Cowl top panel outer	5.5	56	49 in.*lbf
Front wiper arm and blade assembly x Front wiper motor and link	26	265	19
Negative battery terminal x Battery	5.4	55	48 in.*lbf

FRONT WIPER MOTOR (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Front wiper motor x Front wiper link	5.4	55	48 in.*lbf
Front wiper motor and link x Cowl top panel outer	5.5	56	49 in.*lbf
Front wiper arm and blade assembly x Front wiper motor and link	26	265	19
Negative battery terminal x Battery	5.4	55	48 in.*lbf

REAR WIPER MOTOR (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Rear wiper motor x Back door panel	5.5	56	49 in.*lbf
Rear wiper arm and blade assembly x Rear wiper motor	5.5	56	49 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WIPER SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WIPER SWITCH (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WASHER MOTOR (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Windshield washer jar assembly x Batter	5.5	56	49 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WASHER MOTOR (for Hatchback):

Part Tightened	N*m	kgf*cm	ft.*lbf
Windshield washer jar assembly x Batter	5.5	56	49 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

WASHER LEVEL WARNING SWITCH (for Sedan):

Part Tightened	N*m	kgf*cm	ft.*lbf
Windshield washer jar assembly x Batter	5.5	56	49 in.*lbf
Negative battery terminal x Battery	5.4	55	48 in.*lbf

DOOR LOCK

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Front door lock assembly x Front door panel	5.0	51	44 in.*lbf

OUTSIDE VEHICLE

GENERAL MAINTENANCE

Performing the following maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center. Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner performs these checks. The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or months elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire inflation pressure with a gauge. Make adjustments if necessary.

(b) Check the surfaces of the tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION (See page TW-2)

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks whenever they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.

NOTICE:

If you smell gasoline fumes or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

(a) Check that all of the doors and the hood operate smoothly and that all the latches lock securely.

(b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

INSIDE VEHICLE

GENERAL MAINTENANCE

Performing the following maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center. Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner performs these checks. The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or months elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink properly. Also, check if they have enough brightness.

(b) Check that the headlights are aimed properly.

3. WARNING LIGHTS AND BUZZERS

(a) Check that all the warning lights and buzzers are working.

4. HORNS

(a) Check that the horn is working.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPERS AND WASHER

(a) Check that the windshield washers are aimed properly. Also, check that the center stream of washer fluid sprays on the windshield within the operating range of the wipers.

(b) Check if the wipers streak or not.

7. WINDSHIELD DEFROSTER

(a) When the heater or air conditioning is on the defroster setting, check if air comes out of the defroster outlet.

8. REAR VIEW MIRROR

(a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check that the steering wheel has the proper amount of free play. Also check for steering difficulty, free play in the steering wheel and unusual noises.

11. SEATS

(a) Check that the seat adjusters, seatback recliner and other front seat controls operate smoothly.
(b) Check that all the latches lock securely in all positions.
(c) Check that the locks hold securely in all latched positions.
(d) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.
(e) When the rear seatbacks are folded down, check that the latches lock securely.

12. SEAT BELTS

(a) Check that the seat belt system such as the buckles, retractors and anchors operate properly and smoothly.
(b) Check that the belt webbing is not cut, frayed, worn or damaged. Replace if necessary.

13. ACCELERATOR PEDAL

(a) Check that the accelerator pedal operates smoothly. In other words, check that the pedal does not have uneven pedal resistance or become stuck in certain positions.

14. BRAKE PEDAL

(a) Check that the brake pedal operates smoothly.
(b) Check that the pedal has the proper reserve distance and free play.
(c) Start the engine and check the brake booster function.

15. BRAKES

(a) In a safe place, check that the vehicle remains straight when applying the brakes.

16. PARKING BRAKE

(a) Check that the parking brake lever has the proper amount of travel (see page PB-1).
(b) On a safe incline, check that the vehicle is held securely with only the parking brake applied.

17. AUTOMATIC TRANSAXLE "PARK" MECHANISM

(a) Check the lock release button of the shift lever for proper and smooth operation.
(b) When the shift lever is in the P position and all brakes are released on a low incline, check that the vehicle is stable.

UNDER HOOD

GENERAL MAINTENANCE

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check that the front of the radiator is clean and not blocked by leaves, dirt or bugs.

(b) Check the hoses for cracks, kinks, rot or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check that the electrolyte level of all the battery cells is between the upper and lower level lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

(a) Check that the brake fluid levels are near the upper level lines on the see-through reservoirs.

7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oiliness.

8. ENGINE OIL LEVEL

(a) Check the level on the dipstick with the engine stopped.

9. AUTOMATIC TRANSMISSION FLUID (See page AX-93)

10. EXHAUST SYSTEM

(a) Check for unusual exhaust sounds or abnormal exhaust fumes. Inspect the cause and repair it.

ENGINE

GENERAL MAINTENANCE

1. INSPECT DRIVE BELT

2. INSPECT SPARK PLUGS (See page IG-5)

3. INSPECT AIR CLEANER FILTER

(a) Remove the air filter.

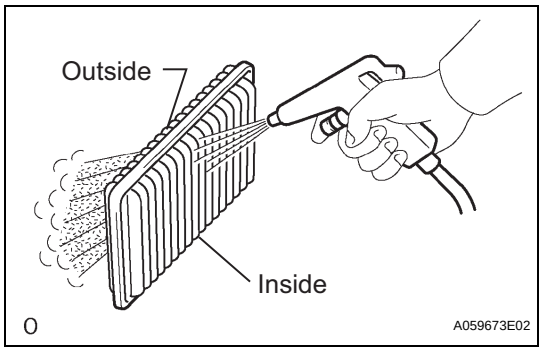
(b) Visually check that the air filter is not excessively damaged or oily. If necessary, replace the air filter.

(c) Reinstall the air filter.

(d) Clean the filter with compressed air.

HINT:

First blow from the inside of the filter thoroughly then repeat from the outside.



4. REPLACE AIR CLEANER FILTER

(a) Replace the air filter with a new one.

5. REPLACE ENGINE OIL AND OIL FILTER (See page LU-4)

6. REPLACE ENGINE COOLANT (See page CO-8)

7. INSPECT GASKET IN FUEL TANK CAP (See page EC-24)

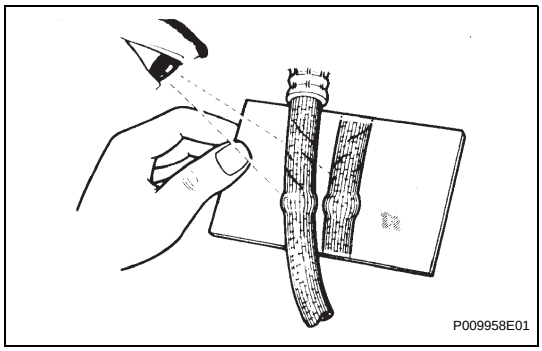
8. INSPECT FUEL LINES AND CONNECTIONS, FUEL TANK VAPOR VENT SYSTEM HOSES AND FUEL TANK BANDS

(a) Visually check the fuel lines for cracks, leakage, loose connections, deformation and tank band looseness.

9. INSPECT EXHAUST PIPES AND MOUNTINGS

(a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

10. INSPECT VALVE CLEARANCE (See page EM-9)



MA

BRAKE

GENERAL MAINTENANCE

1. INSPECT BRAKE LINES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:
- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all the clamps for tightness and the connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

2. INSPECT BRAKE LININGS AND DRUMS

(a) Check the brake linings and drums. Also check the brake linings of parking brake.

3. INSPECT FRONT BRAKE

(a) Check the front brake pads (see page BR-51).

(b) Check the front brake discs (see page BR-51).

4. INSPECT REAR BRAKE

(a) Check the rear brake drums (see page BR-62).

(b) Check the rear brake shoe linings (see page BR-62).

CHASSIS

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

(a) Check the steering wheel free play.

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

(4) Check that the steering gear housing is not damaged.

(5) Check that the connectors are properly connected to the steering gear housing.

2. INSPECT BALL JOINTS AND DUST COVERS

(a) Inspect the ball joints for excessive looseness.

(1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.

(2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.

(3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.

(4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

(b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

(a) Check the drive shaft boots for loose clamps, grease leakage, kinks or damage.

4. INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-93)

5. INSPECT MANUAL TRANSAXLE OIL (See page MX-2)

MA

BODY

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS

(a) Tighten the bolts and nuts on the chassis parts listed below, if necessary.
- Front axle and suspension
- Drive train
- Rear axle and suspension
- Brake system
- Engine mounting
- Other chassis parts

(b) Tighten the bolts and nuts on the body parts listed below, if necessary.
- Seat belt system
- Seats
- Doors and hood
- Body mountings
- Fuel tank
- Exhaust pipe system
- Other body parts

2. CLEAN AIR CONDITIONING FILTER

(a) Visually inspect the surface of the filter.

(b) If the filter is contaminated with foreign matter, clean or replace the filter.

3. TIRE ROTATION (See page TW-2)

SFI SYSTEM

PRECAUTION

NOTICE:

- **Perform RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AX-14).**
- **Perform REGISTRATION (VIN registration) when replacing the ECM (See page ES-13).**

HINT:

Initialization cannot be completed by only removing the battery.

DEFINITION OF TERMS

Terms	Definition
Monitor Description	Description of what ECM monitors and how detects malfunctions (monitoring purpose and details).
Related DTCs	Group of diagnostic trouble codes that are output by ECM based on same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components involved in single malfunction detection process. Each sensor and component monitored in turn, when previous detection operation completed.
Required Sensor/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions met.
Malfunction Thresholds	Value, beyond which, ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after defected. "Immediate" means ECM illuminates MIL as soon as malfunction detected. "2 driving cycle" means ECM illuminates MIL if same malfunction detected second time during next sequential driving cycle.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO DLC3*

HINT:
If the display indicates a communication fault in the tester, inspect the DLC3.

NEXT

4	CHECK DTC AND FREEZE FRAME DATA*

HINT:
Record or print DTCs and freeze frame data, if necessary.

NEXT

5	CLEAR DTC AND FREEZE FRAME DATA*

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	SET CHECK MODE DIAGNOSIS*

NEXT

8	CONFIRM PROBLEM SYMPTOMS

HINT:
If the engine does not start, perform steps 10 and 12 first.

Result	Proceed to
Malfunction does not occur	A
Malfunction occurs	B

B → GO TO STEP 10

A

9	SIMULATE SYMPTOMS

NEXT

10	CHECK DTC*

Result	Proceed to
Malfunction code	A
No code	B

B → GO TO STEP 12

A

11	REFER TO DTC CHART

NEXT

GO TO STEP 14

12	CONDUCT BASIC INSPECTION

Result	Proceed to
Malfunctioning parts not confirmed	A
Malfunctioning parts confirmed	B

B → GO TO STEP 17

A

13 **REFER TO PROBLEM SYMPTOMS TABLE**

Result	Proceed to
Malfunctioning circuit confirmed	A

20	CONDUCT CONFIRMATION TEST

NEXT

END

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with an intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear the DTCs (See page ES-34).
2. Switch the ECM from normal mode to check mode using an intelligent tester (See page ES-37).
3. Perform a simulation test.
4. Check and wiggle the harness(es), connector(s) and terminal(s).

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

ES

1 CHECK BATTERY VOLTAGE

NOTICE:
Conduct this check with the engine stopped and ignition switch OFF.

Result	Proceed to
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK ↓

2 CHECK WHETHER ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK ↓

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK ↓

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK ↓

5 CHECK IDLING SPEED

NG → **TROUBLESHOOT IDLING SPEED AND PROCEED TO NEXT STEP**

OK

6	CHECK FUEL PRESSURE

NG → TROUBLESHOOT FUEL PRESSURE AND PROCEED TO NEXT STEP

OK

7	CHECK FOR SPARK

NG → TROUBLESHOOT SPARK AND PROCEED TO NEXT STEP

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement ECM.
HINT:
The VIN is a 17-digit alphanumeric number. An intelligent tester is required to register the VIN.

1. DESCRIPTION

This registration section consists of three parts, Input Instructions, Read VIN and Write VIN.

(a) Input Instructions: Explains the general VIN input instructions for when using an intelligent tester.

(b) Read VIN: Explains the VIN reading process in a flowchart. This process allows the VIN stored in the ECM to be read, in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(c) Write VIN: Explains the VIN writing process in a flowchart. This process allows the VIN to be input into the ECM. If the ECM is changed, or the VIN and VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.

2. INPUT INSTRUCTIONS

(a) Intelligent tester
The arrow buttons (UP, DOWN, RIGHT and LEFT) and numerical buttons (0 to 9) are used to input the VIN.

(b) Cursor Operation
To move the cursor around the tester screen, press the RIGHT and LEFT buttons.

(c) Alphabetical Character Input
(1) Press the UP and DOWN buttons to select the desired alphabetical character.
(2) After selection, the cursor should move.

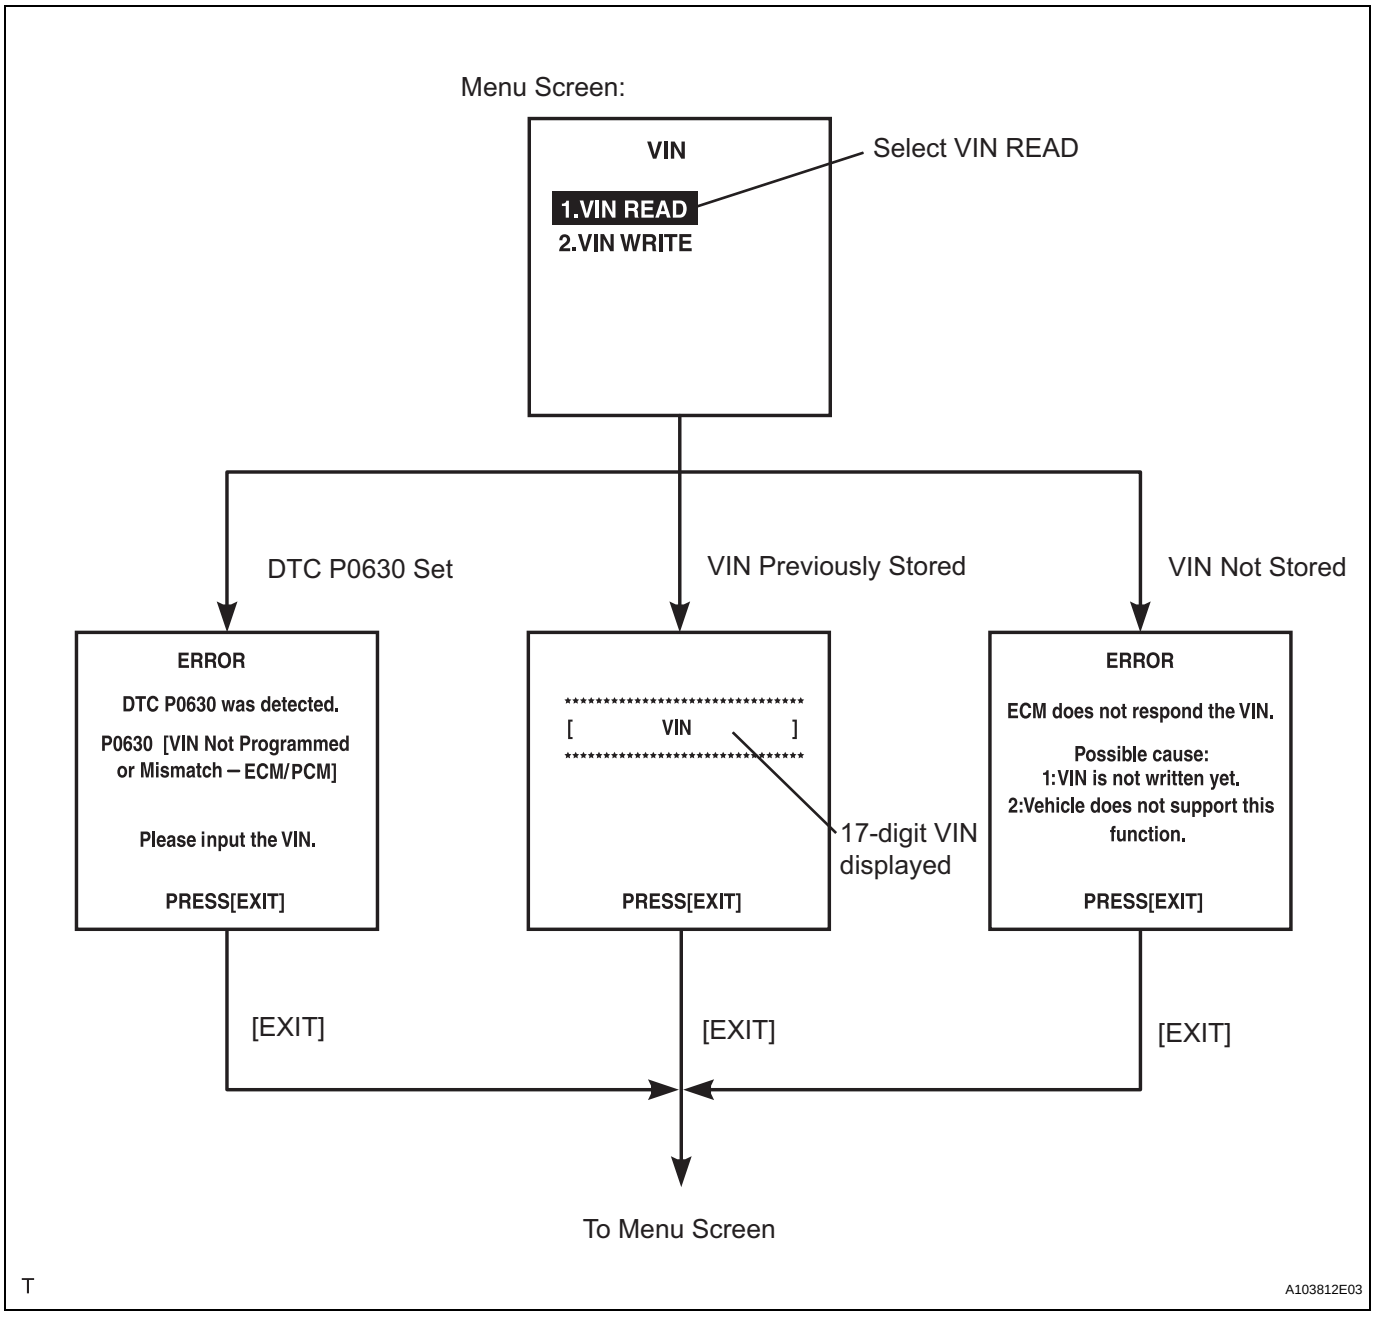
(d) Numeric Character Input
(1) Press the numerical button corresponding to the number that you want to input.
(2) After input, the cursor should move.
HINT:
Numerical characters can also be selected by using the UP and DOWN buttons.

(e) Correction
(1) When correcting the input character(s), put the cursor onto the character using the RIGHT and LEFT buttons.
(2) Select or input the correct character using the UP/DOWN buttons, or the numerical buttons.

(f) Finishing Input Operation
(1) Make sure that the input VIN matches the vehicle VIN after input.
(2) Press the ENTER button on the tester.

3. READ VIN

(a) Confirm the vehicle VIN.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the tester ON.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / VIN.



4. WRITE VIN

(a) Confirm the vehicle VIN.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the tester ON.

(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / VIN.

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results of on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalysts, evaporative emissions (EVAP) and thermostats.

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum and maximum test limits, the ECM (PCM) interprets this as a malfunction. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.

Perform the following instruction to view the monitor status. Although this instruction refers to the Lexus/Toyota diagnostic tester, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedural information.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch and the tester ON.

(c) Clear the DTCs (See page ES-34).

(d) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (See page ES-19). Do not turn the ignition switch OFF.

NOTE:

The test results will be lost if the ignition switch is turned OFF.

2. ACCESS MONITOR RESULT

(a) Select the following items from the intelligent tester menus: DIAGNOSIS, ENHANCED OBD II, MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.

- INCMP: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum and maximum test limits, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limits. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.
HINT:
The monitor result might on rare occasions be PASS even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the test value by the scaling value listed below.

A/F Sensor (Sensor 1)

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.001	V	A/F sensor deterioration level
$01	$91	Multiply by 0.004	mA	A/F sensor current

HO2 Sensor (Sensor 2)

Monitor ID	Test ID	Scaling	Unit	Description
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8F	Multiply by 0.0003	g	Maximum oxygen storage capacity

Catalyst

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst

EVAP

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump stuck OFF (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump stuck ON (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Rear Oxygen Sensor Heater

Monitor ID	Test ID	Scaling	Unit	Description
$42	$91	Multiply by 0.001	Ohm	Oxygen sensor heater resistance

Misfire

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last ten driving cycles - Total
$A1	$0C	Multiply by 1	Time	Ignition switch ON: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - all cylinders
$A2	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 1: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last ten driving cycles - Total
$A2	$0C	Multiply by 1	Time	Ignition switch ON: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 1
$A3	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 2: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last ten driving cycles - Total
$A3	$0C	Multiply by 1	Time	Ignition switch ON: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 2
$A4	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 3: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last ten driving cycles - Total
$A4	$0C	Multiply by 1	Time	Ignition switch ON: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 3
$A5	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 4: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last ten driving cycles - Total
$A5	$0C	Multiply by 1	Time	Ignition switch ON: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 4

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTC (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester's software must be version 9.0 or newer to view the Readiness Monitor Status. To view the status, select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD ll scan tool can also be used to view the Readiness Monitor status.

HINT:

Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.

The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

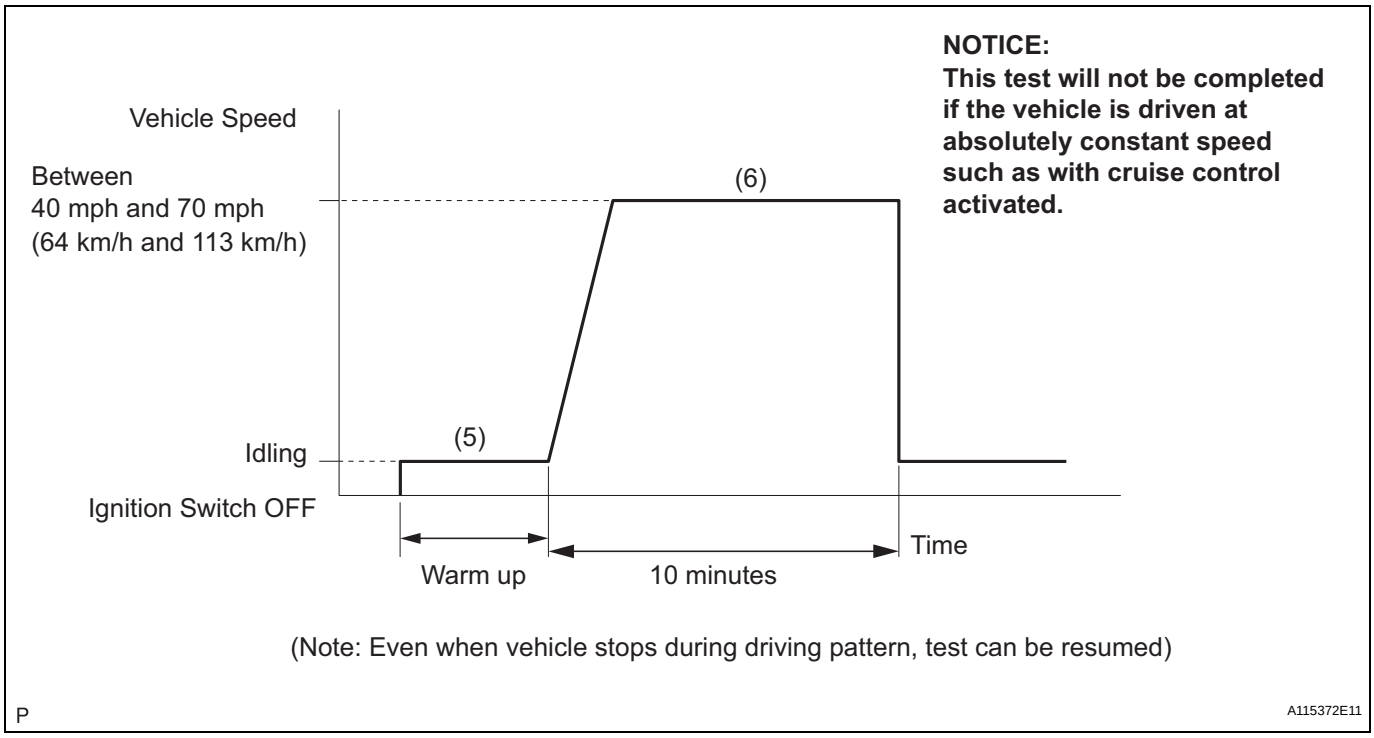
NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF.

(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester ON.
(4) Clear DTCs (where set) (See page ES-34).
(5) Start the engine and warm it up.
(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status
Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), extend the driving time.

3. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Preconditions
The monitor will not run unless:
– The fuel tank is less than 90 % full.
– The altitude is less than 8,000 ft (2,450 m).
– The vehicle is stationary.
– The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F).
– The intake air temperature is between 4.4°C and 35°C (40°F and 95°F).
– Vehicle was driven in the city area (or on free-way) for 10 minutes or more.

(b) Monitor Conditions
(1) Turn the ignition switch to OFF and wait for 6 hours.
HINT:
Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester ON.
(4) Check the Readiness Monitor status displayed on the tester.

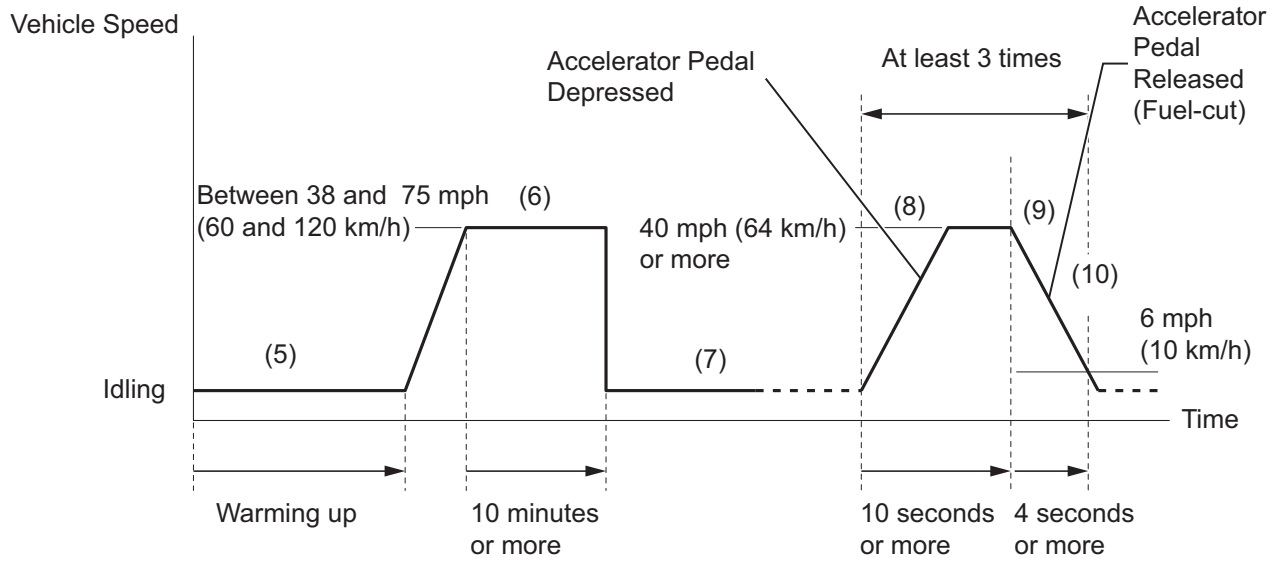
ES

If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

4. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

Monitor Drive Pattern

ECT: 75°C (167°F) or more



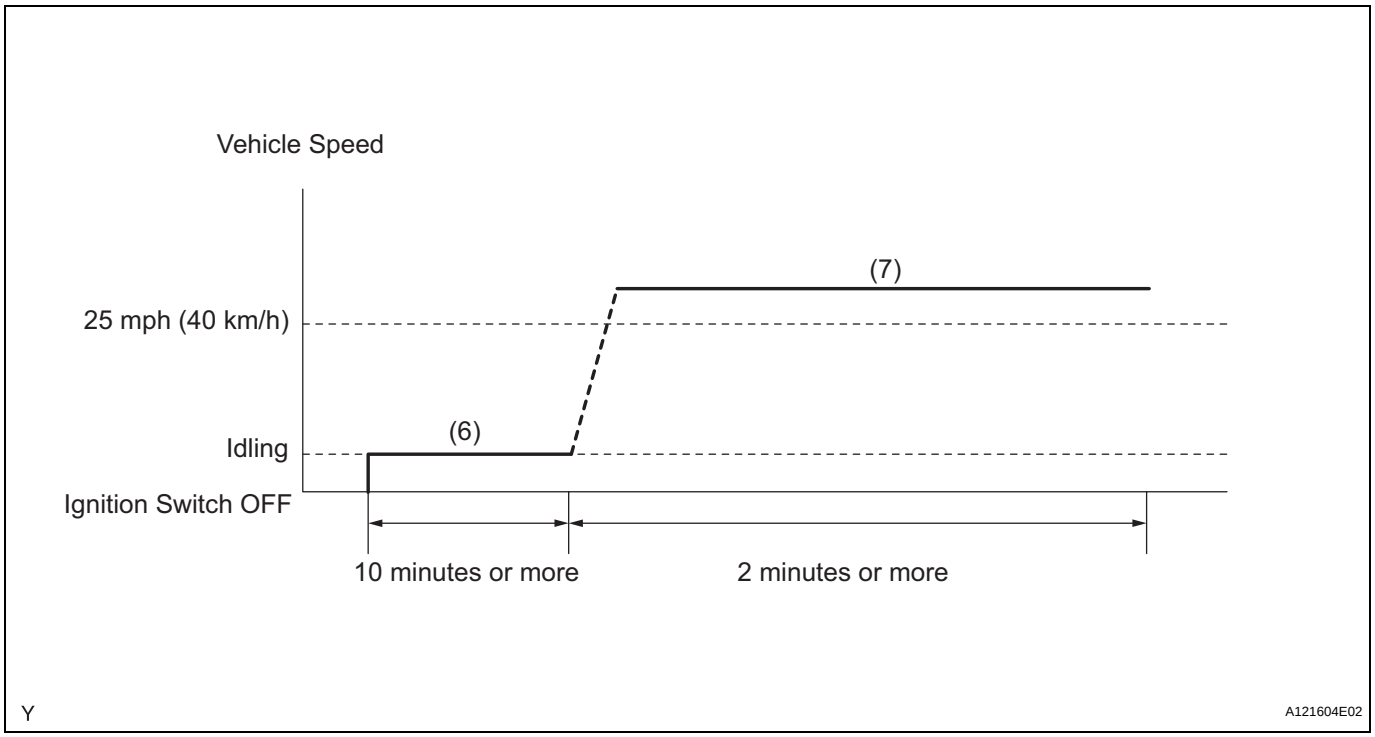
(a) Preconditions
The monitor will not run unless:
– 2 minutes or more have elapsed since the engine was started.
– The Engine Coolant Temperature (ECT) is 75°C (167°F) or more.
– Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.

– Air-fuel ratio feedback control is performed.

(b) Drive Pattern for front A/F sensor and HO2 sensor
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester ON.
(4) Clear DTCs (See page ES-34).
(5) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(6) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(7) Change the transmission to 2nd gear.
(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
(9) Soon after performing step (8) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and then perform steps from (5) through (11) in Drive Pattern above.

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
– The MIL is OFF.

(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the tester ON.
(4) Clear DTCs (where set) (See page ES-34).
(5) Start the engine.
(6) Allow the engine to idle for 10 minutes or more.
(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat steps through (5) to (7) described in the Drive Pattern above.

PROBLEM SYMPTOMS TABLE

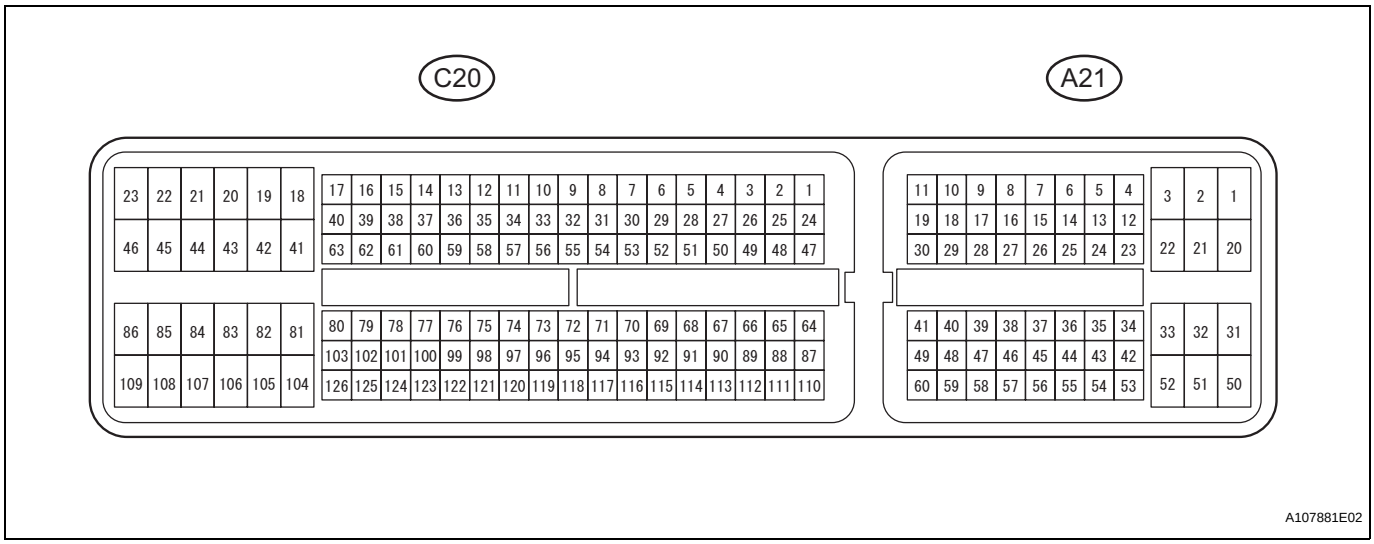
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

SFI SYSTEM

Symptom	Suspected area	See page
Engine does not crank (Does not start)	1. Battery	CH-4
	2. Starter for standard	ST-11
	3. Starter for cold area	ST-23
	4. Cranking holding function circuit	ES-373
	5. Starter relay	ST-32
	6. Park/neutral position switch	AX-107
	7. Clutch start switch	CL-20
	8. Immobiliser System	EI-1
No initial combustion (Does not start)	1. ECM power source circuit	ES-352
	2. Crankshaft position sensor	ES-403
	3. Camshaft position sensor	ES-400
	4. Ignition system	IG-3
	5. Fuel pump control circuit	ES-365
	6. ECM	ES-26
	7. VC output circuit	ES-360
Engine cranks normally but difficult to start	1. Fuel pump control circuit	ES-365
	2. Compression	EM-3
Difficult to start with cold engine	1. Ignition system	IG-3
	2. Spark plug	IG-5
	3. Fuel pump control circuit	ES-365
	4. Injector	FU-16
Difficult to start with warm engine	1. Injector	FU-16
	2. Ignition system	IG-3
	3. Spark plug	IG-5
	4. Fuel pump control circuit	ES-365
High engine idle speed	1. Electronic throttle control system	ES-104
	2. A/C signal circuit	-
	3. ECM power source circuit	ES-352
Low engine idle speed (Poor idling)	1. Electronic throttle control system	ES-104
	2. A/C signal circuit	-
	3. Fuel pump control circuit	ES-365
	4. Air induction system	EC-3
	5. PCV hose	-

Symptom	Suspected area	See page
Rough idling	1. Compression	EM-3
	2. Spark plug	IG-5
	3. Injector	FU-16
	4. Ignition system	IG-3
	5. Fuel pump control circuit	ES-365
	6. Electronic throttle control system	ES-104
	7. Air induction system	EC-3
	8. PCV hose	-
	9. Mass air flow meter	ES-389
Idle hunting	1. Electronic throttle control system	ES-104
	2. Air induction system	EC-3
	3. ECM power source circuit	ES-352
Hesitation/ Poor acceleration	1. Fuel pump control circuit	ES-365
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-16
	5. Mass air flow meter	ES-389
	6. Electronic throttle control system	ES-104
	7. Air induction system	EC-3
	8. Compression	EM-3
Surging (Poor driveability)	1. Spark plug	IG-5
	2. Fuel pump control circuit	ES-365
	3. Ignition system	IG-3
	4. Injector	FU-16
	5. Mass air flow meter	ES-389
	6. Variable valve timing system	ES-56
	7. Compression	EM-3
Engine stalls soon after starting	1. Fuel pump control circuit	ES-365
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-16
	5. Variable valve timing system	ES-56
	6. Electronic throttle control system	ES-104
	7. Air induction system	EC-3
	8. PCV hose	-
	9. Compression	EM-3
Engine stalls only during A/C operation	1. A/C signal circuit	-
	2. ECM	ES-26
Unable/difficult to refuel	1. Refueling valve (canister)	-

TERMINALS OF ECM



A107881E02

ES

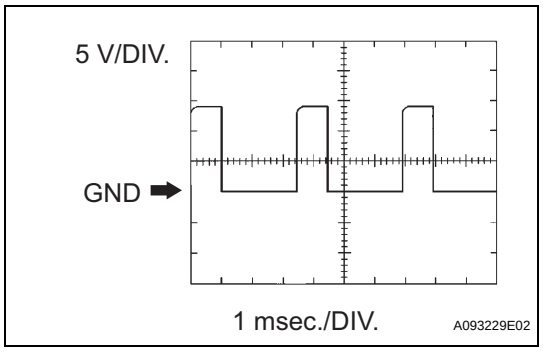
HINT:
The standard normal voltage between each pair of ECM terminals is shown in the table below. The appropriate conditions for checking each pair of terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of terminals, displayed in the Specified Condition column. The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
BATT (A21-20) - E1 (C20-104)	Y - W	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
+BM (A21-3) - ME01 (C20-43)	GR - BR	Power source of throttle actuator	Always	11 to 14 V
IGSW (A21-28) - E1 (C20-104)	R - W	Ignition switch	Ignition switch ON	11 to 14 V
+B (A21-2) - E1 (C20-104)	B - W	Power source of ECM	Ignition switch ON	11 to 14 V
+B2 (A21-1) - E1 (C20-104)	B - W	Power source of ECM	Ignition switch ON	11 to 14 V
OC1+ (C20-100) - OC1- (C20-123)	BR - R	Camshaft timing oil control valve (OCV)	Idling	Pulse generation (see waveform 1)
MREL (A21-44) - E1 (C20-104)	GR - W	EFI relay	Ignition switch ON	11 to 14 V
VG (C20-118) - E2G (C20-116)	GR - LG	Mass air flow meter	Idling, Shift lever position P or N, A/C switch OFF	0.5 to 3.0 V
THA (C20-65) - ETHA (C20-88)	P - O	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (C20-97) - ETHW (C20-96)	L - P	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
VCTA (C20-67) - ETA (C20-91)	W - V	Power source of throttle position sensor (specific voltage)	Ignition switch ON	4.5 to 5.5 V
VTA1 (C20-115) - ETA (C20-91)	Y - V	Throttle position sensor (for engine control)	Ignition switch ON, Throttle valve fully closed	0.5 to 1.1 V
			Ignition switch ON, Throttle valve fully open	3.3 to 4.9 V
VTA2 (C20-114) - ETA (C20-91)	GR - V	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Throttle valve fully closed	2.1 to 3.1 V
			Ignition switch ON, Throttle valve fully open	4.6 to 5.0 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
VPA (A21-55) - EPA (A21-59)	R - G	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal released	0.5 to 1.1 V
			Ignition switch ON, Accelerator pedal fully depressed	2.6 to 4.5 V
VPA2 (A21-56) - EPA2 (A21-60)	L - BR	Accelerator pedal position sensor (for sensor malfunctioning detection)	Ignition switch ON, Accelerator pedal released	1.2 to 2.0 V
			Ignition switch ON, Accelerator pedal fully depressed	3.4 to 5.0 V
VCPA (A21-57) - EPA (A21-59)	B - G	Power source of accelerator pedal position sensor (for VPA)	Ignition switch ON	4.5 to 5.5 V
VCP2 (A21-58) - EPA2 (A21-60)	W - BR	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch ON	4.5 to 5.5 V
HA1A (C20-109) - E04 (C20-46)	G - W-B	A/F sensor heater	Idling	Below 3.0 V
			Ignition switch ON	11 to 14 V
A1A+ (C20-112) - E1 (C20-104)	V -W	A/F sensor	Ignition switch ON	3.3 V*
A1A- (C20-113) - E1 (C20-104)	LG - W	A/F sensor	Ignition switch ON	3.0 V*
HT1B (C20-47) - E03 (C20-86)	LG - W-B	Heated oxygen sensor heater	Idling	Below 3.0 V
			Ignition switch ON	11 to 14 V
OX1B (C20-64) - EX1B (C20-87)	G - GR	Heated oxygen sensor	Engine speed maintained at 2,500 rpm for 2 minutes after warming up sensor	Pulse generation (see waveform 2)
#10 (C20-108) - E01 (C20-45) #20 (C20-107) - E01 (C20-45) #30 (C20-106) - E01 (C20-45) #40 (C20-105) - E01 (C20-45)	SB - BR GR - BR P - BR L - BR	Injector	Ignition switch ON	11 to 14 V
			Idling	Pulse generation (see waveform 3)
KNK1 (C20-110) - EKNK (C20-111)	R - G	Knock sensor	Engine speed maintained at 4,000 after warming up engine	Pulse generation (see waveform 4)
G2+ (C20-99) - NE- (C20-121)	B - P	Camshaft position sensor	Idling	Pulse generation (see waveform 5)
NE+ (C20-122) - NE- (C20-121)	L - P	Crankshaft position sensor	Idling	Pulse generation (see waveform 5)
IGT1 (C20-85) - E1 (C20-104) IGT2 (C20-84) - E1 (C20-104) IGT3 (C20-83) - E1 (C20-104) IGT4 (C20-82) - E1 (C20-104)	W - W O - W G - W LG - W	Ignition coil (ignition signal)	Idling	Pulse generation (see waveform 6)
IGF1 (C20-81) - E1 (C20-104)	Y - W	Ignition coil (ignition confirmation signal)	Ignition switch ON	4.5 to 5.5 V
			Idling	Pulse generation (see waveform 6)
PRG (C20-49) - E01 (C20-45)	L - BR	Purge VSV	Ignition switch ON	11 to 14 V
			Idling	Pulse generation (see waveform 7)
SPD (A21-8) - E1 (C20-104)	V - W	Speed signal from combination meter	Driving at 12 mph (20 km/h)	Pulse generation (see waveform 8)
STA (A21-48) - E1 (C20-104)	BR - W	Starter signal	Cranking	11 to 14 V
STAR (C20-52) - E1 (C20-104)	O - W	Starter relay control	Ignition switch ON	Below 1.5 V
			Cranking	6.0 V or more
ACCR (A21-13) - E01 (C20-45)	G - BR	ACC (Accessory) relay control signal	Cranking	Below 1.5 V
STSW (A21-14) - E1 (C20-104)	B - W	Ignition switch signal	Ignition switch START	6.0 V or more
STP (A21-36) - E1 (C20-104)	G - W	Stop light switch	Brake pedal depressed	7.5 to 14 V
			Brake pedal released	Below 1.5 V

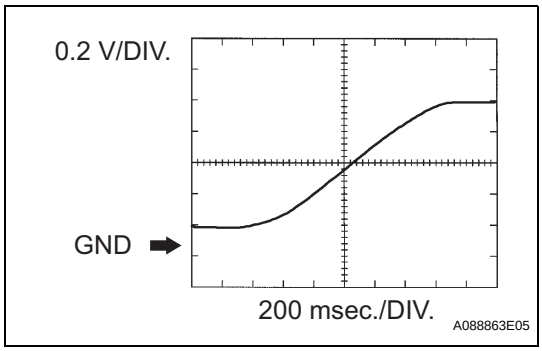
Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
ST1- (A21-35) - E1 (C20-104)	Y - W	Stop light switch (opposite to STP terminal)	Ignition switch ON, Brake pedal depressed	Below 1.5 V
			Ignition switch ON, Brake pedal released	7.5 to 14 V
M+ (C20-42) - ME01 (C20-43)	G - BR	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 9)
M- (C20-41) - ME01 (C20-43)	R - BR	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 10)
FC (A21-7) - E01 (C20-45)	V - BR	Fuel pump control	Ignition switch ON	11 to 14 V
			Idling	Below 1.5 V
W (A21-24) - E1 (C20-104)	B - W	MIL	Ignition switch ON	Below 1.5V
			Idling	11 to 14 V
TC (A21-27) - E1 (C20-104)	P - W	Terminal TC of DLC 3	Ignition switch ON	11 to 14 V
TACH (A21-15) - E1 (C20-104)	LG - W	Engine speed	Idling	Pulse generation (see waveform 11)
VPMP (A21-42) - E1 (C20-104)	P - W	Vent valve (built into canister pump module)	Ignition switch ON	11 to 14 V
MPMP (A21-34) - E1 (C20-104)	V - W	Leak detection pump (built into canister pump module)	Leak detection pump OFF	Below 3 V
			Leak detection pump ON	11 to 14 V
VCPP (C20-70) - EPPM (C20-94)	V - O	Power source for canister pressure sensor (specific voltage)	Ignition switch ON	4.5 to 5.5 V
PPMP (C20-71) - EPPM (C20-94)	L - O	Canister pressure sensor (built into canister pump module)	Ignition switch ON	3 to 3.6 V
ELS (A21-31) - E1 (C20-104)	G - W	Electric load	Tail light switch ON	7.5 to 14 V
			Tail light switch OFF	Below 1.5 V
ELS3 (A21-33) - E1 (C20-104)	V - W	Electric load	Defogger switch ON	7.5 to 14 V
			Defogger switch OFF	Below 1.5 V
FAN (A21-21) - E1 (C20-104)	O - W	Fan No. 1 relay	Ignition switch ON	11 to 14 V
			Idling with A/C ON, or high engine coolant temperature	Below 1.5 V
FAN2 (A21-22) - E1 (C20-104)	LG - W	Fan No. 2 relay	Idling with high engine coolant temperature	Below 1.5 V
ALT (C20-50) - E1 (C20-104)	P - W	Generator	Ignition switch ON	11 to 14 V
CANH (A21-41) - E1 (C20-104)	L - W	CAN communication line	Ignition switch ON	Pulse generation (see waveform 12)
CANL (A21-49) - E1 (C20-104)	W - W	CAN communication line	Ignition switch ON	Pulse generation (see waveform 13)

HINT:
*: The ECM terminal voltage is constant regardless of the output voltage from the sensor.



1. WAVEFORM 1
Camshaft timing oil control valve (OCV)

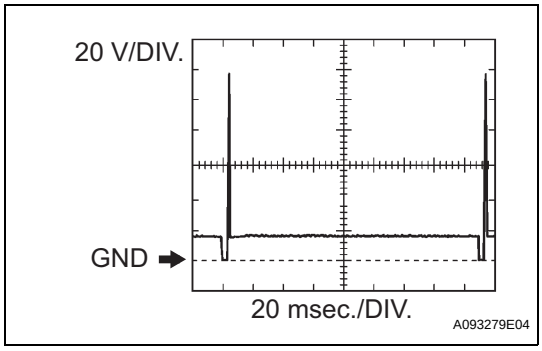
ECM Terminal Names	Between OC1+ and OC1-
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling



2. WAVEFORM 2
Heated oxygen sensor

ECM Terminal Names	Between OX1B and EX1B
Tester Ranges	0.2 V/DIV, 200 msec./DIV
Conditions	Engine speed maintained at 2,500 rpm for 2 minutes after warming up sensor

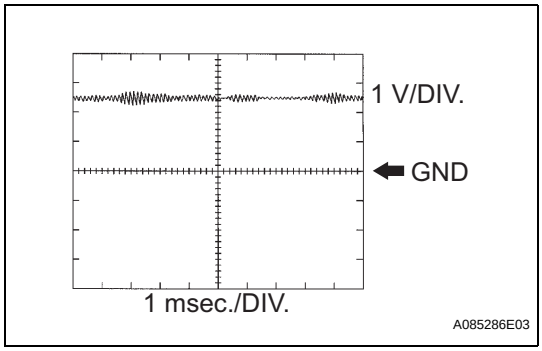
HINT:
In DATA LIST, item O2S B1 S2 shows the ECM input values from the heated oxygen sensor.



3. WAVEFORM 3
Injector No. 1 (to No. 4) injection signal

ECM Terminal Names	Between #10 (to #40) and E01
Tester Ranges	20 V/DIV, 20 msec./DIV
Conditions	Idling

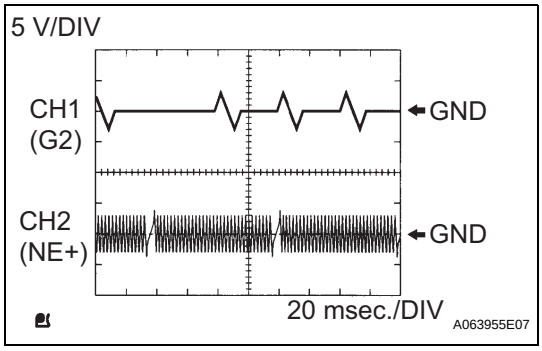
HINT:
The wavelength becomes shorter as the engine rpm increases.



4. WAVEFORM 4
Knock sensor

ECM Terminal Names	Between KNK1 and EKNK1
Tester Ranges	1 V/DIV, 1 msec./DIV
Conditions	Engine speed maintained at 4,000 rpm after warming up engine

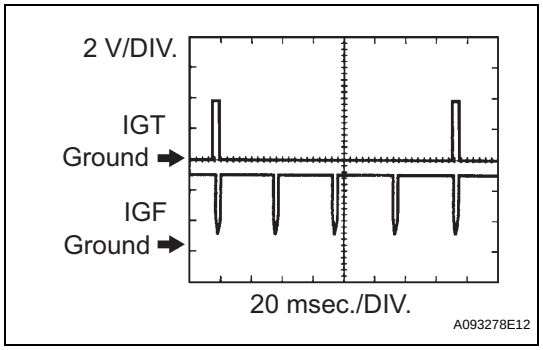
HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.



5. WAVEFORM 5
Crankshaft position sensor and Camshaft position sensor

ECM Terminal Names	CH1: Between G2+ and NE- CH2: Between NE+ and NE-
Tester Ranges	5 V/DIV, 20 msec./DIV
Conditions	Idling

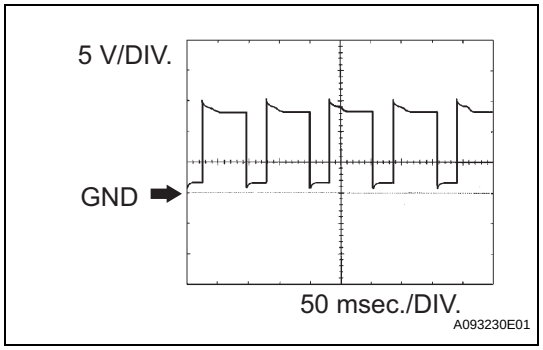
HINT:
The wavelength becomes shorter as the engine rpm increases.



6. WAVEFORM 6
Igniter IGT signal (from ECM to igniter) and Igniter IGF signal (from igniter to ECM)

ECM Terminal Names	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Ranges	2 V/DIV, 20 msec./DIV
Conditions	Idling

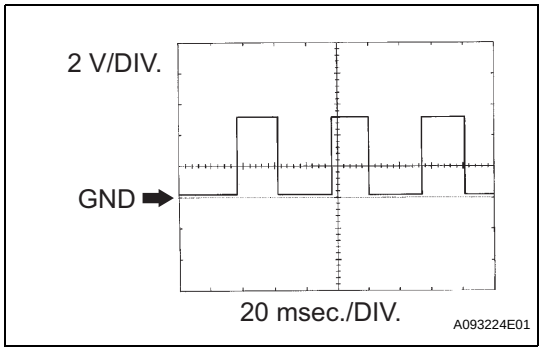
HINT:
The wavelength becomes shorter as the engine rpm increases.



7. WAVEFORM 7
Purge VSV

ECM Terminal Names	Between PRG and E1
Tester Ranges	5 V/DIV, 50 msec./DIV
Conditions	Idling

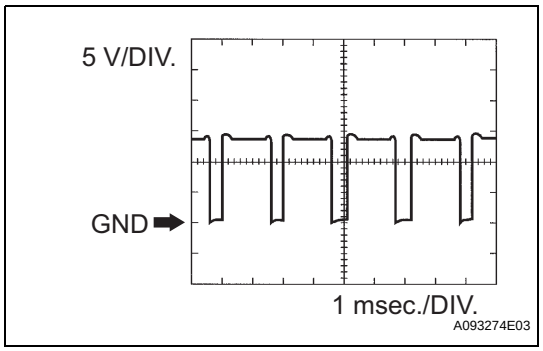
HINT:
If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.



8. WAVEFORM 8
Vehicle speed signal

ECM Terminal Names	Between SPD and E1
Tester Ranges	2 V/DIV, 20 msec./DIV
Conditions	Driving at 12 mph (20 km/h)

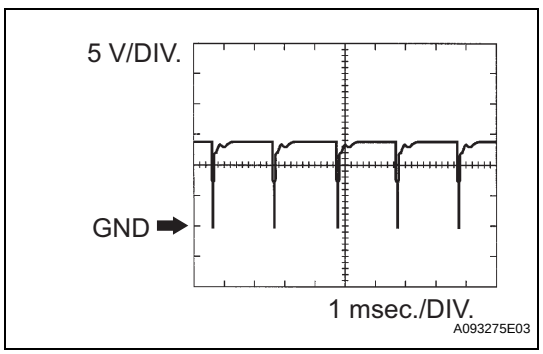
HINT:
The wavelength becomes shorter as the vehicle speed increases.



9. WAVEFORM 9
Throttle actuator positive terminal

ECM Terminal Names	Between M+ and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

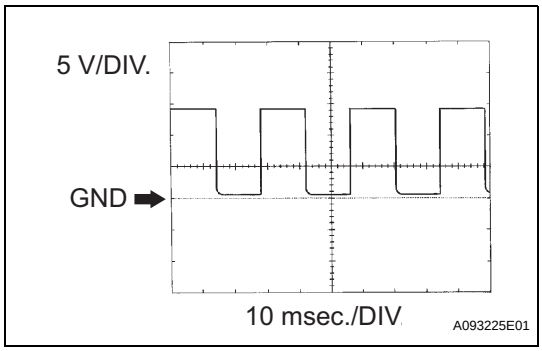
HINT:
The duty ratio varies depending on the throttle actuator operation.



10. WAVEFORM 10
Throttle actuator negative terminal

ECM Terminal Names	Between M- and ME01
Tester Ranges	5 V/DIV, 1 msec./DIV
Conditions	Idling with warm engine

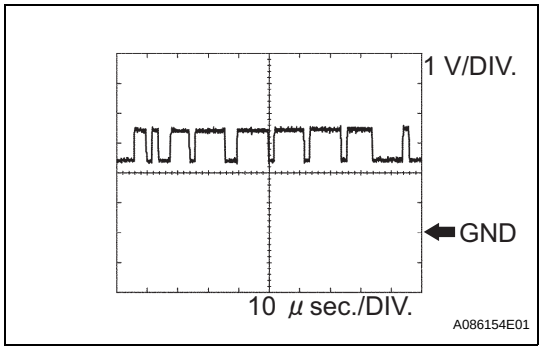
HINT:
The duty ratio varies depending on the throttle actuator operation.



11. WAVEFORM 11
Engine speed signal

ECM Terminal Names	Between TACH and E1
Tester Ranges	5 V/DIV, 10 msec./DIV
Conditions	Idling

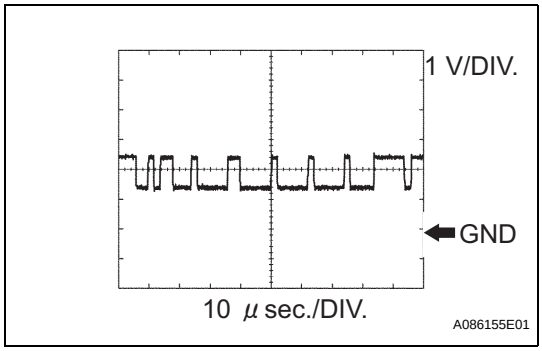
HINT:
The wavelength becomes shorter as the engine rpm increases.



12. WAVEFORM 12
Reference: CAN communication signal

ECM Terminal Names	Between CANH and E1
Tester Ranges	1 V/DIV, 10 μs/DIV
Conditions	Engine stops and ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.



13. WAVEFORM 13
Reference: CAN communication signal

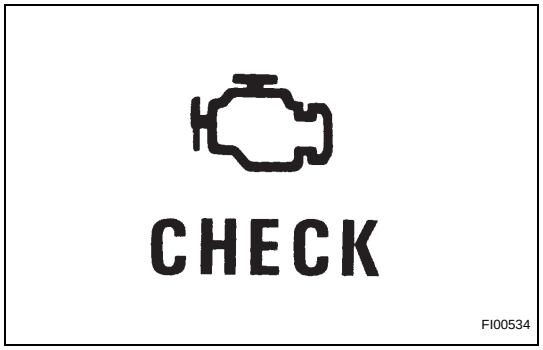
ECM Terminal Names	Between CANL and E1
Tester Ranges	1 V/DIV, 10 μs/DIV
Conditions	Engine stops and ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.

ES

DIAGNOSIS SYSTEM

1. DESCRIPTION

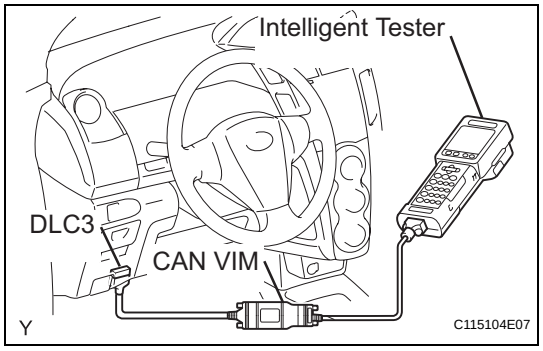


When troubleshooting OBD II (On-Board Diagnostics) vehicles, an intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

OBD ll regulations require that the vehicle's on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control system components.
(b) The power train control components (which affect vehicle emissions).
(c) The computer itself.

In addition, if the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are not recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.



To check DTCs, connect the intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the tester (See page ES-34).

In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication is introduced in this system (CAN: Controller Area Network). It minimizes the gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and simplifies the wire harness connection.

Since this system is equipped with the CAN communication, connecting the CAN VIM (VIM: Vehicle Interface Module) to the intelligent tester is necessary to display any information from the ECM. (Also the communication between the intelligent tester and the ECM uses CAN communication signals). When confirming the DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only) (See page ES-37).

ES

3. 2 TRIP DETECTION LOGIC

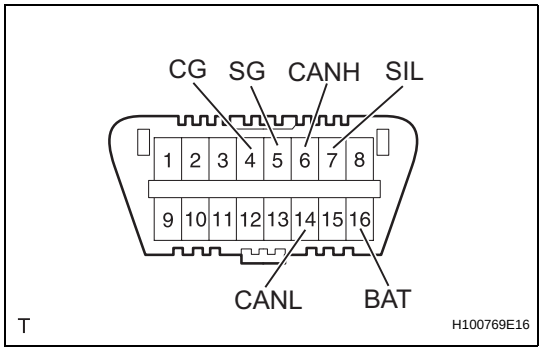
When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

Freeze frame data record the engine conditions (fuel system, calculated engine load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

5. DLC3 (Data Link Connector 3)

(a) The ECM uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbol (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off *	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off *	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off *	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off *	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off *	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

HINT:

The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of an intelligent tester to the CAN VIM, turn the ignition switch to ON and turn the tester ON. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

If communication is normal: Inspect the DLC3 on the original vehicle.
If communication is still not possible: The problem is probably in the tester itself. Consult the Service Department listed in the instruction manual.

6. BATTERY VOLTAGE

Standard battery voltage:

11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the ignition switch is first turned on (the engine is not running).

(b) The MIL should turn OFF when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.
HINT:
If the MIL is not illuminated when the ignition switch is first turned on, check the MIL circuit (See page ES-384).

8. ALL READINESS

For the vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been complete, readiness codes are set. Select the following menu items: ENHANCED OBD II / MONITOR INFO on the intelligent tester.

DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of any DTCs and freeze frame data.

HINT:

- DTCs which are stored in the ECM can be displayed on an intelligent tester. An intelligent tester can display current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- The pending DTCs are set when the malfunction is detected once.

1. CHECK DTC (Using an intelligent tester)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES or PENDING CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) Check the details of the DTC(s) (See page ES-48).

2. CLEAR DTC (Using an intelligent tester)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(e) Press the YES button.

3. CLEAR DTC (Without using an intelligent tester)

(a) Perform either of the following operations.
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the EFI and ETCS fuses from the engine room relay block located inside the engine compartment for more than 1 minute.

FREEZE FRAME DATA

1. DESCRIPTION

Freeze frame data record the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it can help determine if the vehicle was running or stopped, the engine was warmed up or not, the air-fuel ratio was Lean or Rich, and other data from the time the malfunction occurred.

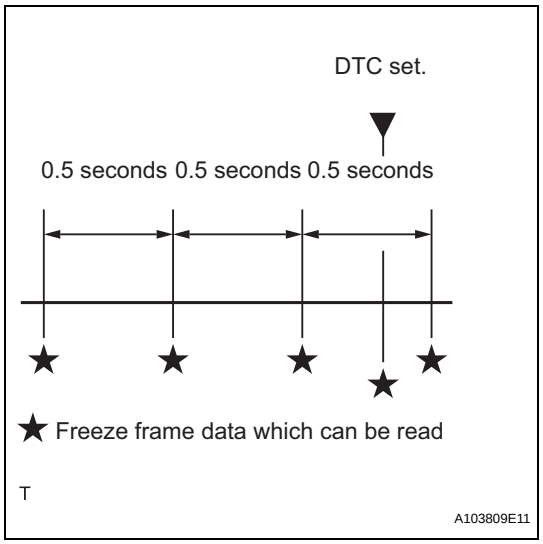
HINT:

If it is impossible to duplicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

– 3 data sets before the DTC was set.
– 1 data set when the DTC was set.
– 1 data set after the DTC was set.

These data sets can be used to simulate the condition of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying the cause of the malfunction, and in judging whether it was temporary or not.



2. LIST OF FREEZE FRAME DATA

LABEL (Intelligent Tester Display)	Measure Item	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder	-
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculated load	Calculated load by ECM
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If approximately 0.0 g/sec: • Mass air flow meter power source circuit open or short • VG circuit open or short If 160.0 g/sec or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If -40°C, sensor circuit open If 140°C or more, sensor circuit shorted
INTAKE AIR	Intake air temperature	If -40°C, sensor circuit open If 140°C or more, sensor circuit shorted
AIR-FUEL RATIO	Ratio compared to stoichiometric level	-
PURGE DENSITY	Learning value of purge density	-
EVAP PURGE FLOW	Ratio of evaporative purge flow to intake air volume	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
KNOCK CRRT VAL	Correction learning value of knocking	-
KNOCK FB VAL	Feedback value of knocking	-

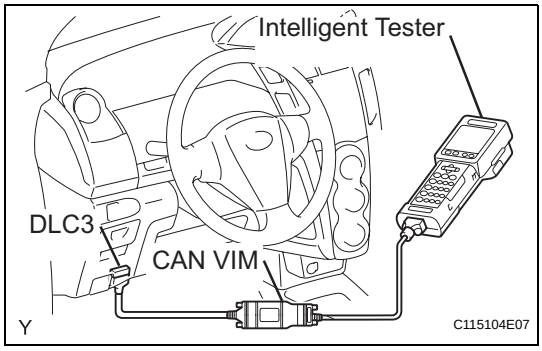
LABEL (Intelligent Tester Display)	Measure Item	Diagnostic Note
EVAP VAPOR PRES	EVAP vapor pressure	-
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No.1	-
ACCEL POS #2	Absolute APP No. 2	-
THROTTLE POS	Throttle sensor positioning	-
THROTTLE POS	Throttle position	-
THROTTLE POS #2	Throttle sensor positioning #2	-
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate a continual deviation of short-term fuel trim from central valve
FUEL SYS #1	Fuel system status	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	-
AF FT B1 S1	Fuel trim at A/F sensor	-
AFS B1 S1	A/F sensor output current for sensor 1	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check current output of sensor
CAT TEMP B1S1	Estimated catalyst temperature (sensor 1)	-
CAT TEMP B1S2	Estimated catalyst temperature (sensor 2)	-
S O2S B1 S2	Sub oxygen sensor impedance (sensor 2)	-
INI COOL TEMP	Engine coolant temperature at engine start	-
INI INTAKE TEMP	Intake air temperature at engine start	-
INJ VOL	Injection volume	-
ACC RELAY	ACC (Accessory) relay	-
STARTER RELAY	Starter relay (STA) signal	-
STARTER SIG	Starter switch (STSW) signal	-
STARTER CONTROL	Starter control (STAR) signal	-
PS SW	Power steering signal	-
PS SIGNAL	Power steering signal (history)	Signal status usually ON until ignition switch turned to OFF
CTP SW	Closed throttle position switch	-
A/C SIGNAL	A/C signal	-
PNP SW (NSW)	Park/Neutral Position (PNP) switch signal	-
ELECT LOAD SIG	Electrical load signal	-
STOP LIGHT SW	Stop light switch	-
BATTERY VOLTAGE	Battery voltage	-

LABEL (Intelligent Tester Display)	Measure Item	Diagnostic Note
EVAP (Purge) VSV	EVAP Purge VSV	-
FUEL PUMP/SPD	Fuel pump/speed status	-
VVT CTRL B1	VVT control status	-
VACUUM PUMP	Key-off EVAP system leak detection pump status	See page ES-317
EVAP VENT VAL	Key-off EVAP system vent valve status	-
FAN MOTOR	Electric fan motor	-
TC/TE1	TC and CG (TE1) terminals of DLC3	-
VVTL AIM ANGL#1	VVT aim angle	-
VVT CHNG ANGL#1	VVT angle	-
VVT OCV DUTY B1	VVT OCV operation duty	-
FC IDL	Fuel cut idle	ON: when throttle valve fully closed and engine speed over 3,500 rpm
FC TAU	Fuel cut during very light load	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
IGNITION	Ignition counter	-
CYL #1	Cylinder #1 misfire	Only displayed during idling
CYL #2	Cylinder #2 misfire	Only displayed during idling
CYL #3	Cylinder #3 misfire	Only displayed during idling
CYL #4	Cylinder #4 misfire	Only displayed during idling
CYL ALL	All cylinders misfire	Only displayed during idling
MISFIRE RPM	Engine speed when misfire occurred	-
MISFIRE LOAD	Engine load when misfire occurred	-
MISFIRE MARGIN	Margin to detect engine misfire	-
ENG RUN TIME	Accumulated engine running time	-
TIME DTC CLEAR	Cumulative time after DTC cleared	-
DIST DTC CLEAR	Accumulated distance from DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-

CHECK MODE PROCEDURE

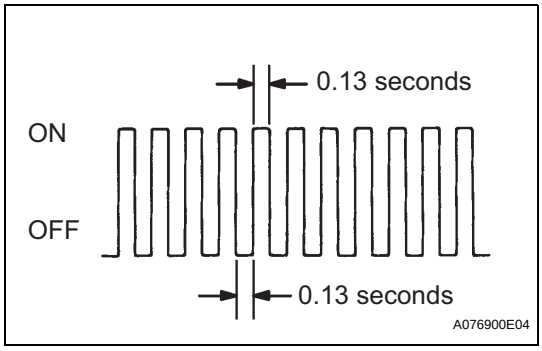
HINT:
Intelligent tester only:
Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected by normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or OFF while in check mode. Before changing modes, always check and make a note of any DTCs and freeze frame data.

ES



1. CHECK MODE PROCEDURE (Using an intelligent tester)

(a) Check and ensure the following conditions:
  (1) Battery positive voltage 11 V or more.
  (2) Throttle valve fully closed.
  (3) Transmission in the P or N positions.
  (4) A/C switch OFF.
(b) Turn the ignition switch to OFF.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.
(g) Switch the ECM from normal mode to check mode.
(h) Make sure the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure the MIL turns off.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check DTCs and freeze frame data using the tester.



FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily.

DTCs	Components	Fail-Safe Operations	Fail Safe Deactivation Conditions
P0031 and P0032	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater.	Ignition switch OFF
P0037 and P0038	Heated Oxygen (HO2) Sensor Heater	ECM turns off HO2 sensor heater.	Ignition switch OFF
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position.	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F).	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F).	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and throttle valve returned to 6° throttle position by return spring. ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle to allow vehicle to continue at minimal speed*.	Pass condition detected and then ignition switch turned OFF
P0327 and P0328	Knock Sensor	ECM sets ignition timing to maximum retard.	Ignition switch OFF
P0351 to P0354	Igniter	ECM cuts fuel.	Pass condition detected
P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138	Accelerator Pedal Position (APP) Sensor	APP sensor has 2 sensor circuits: Main and Sub. If either circuit malfunctions, ECM controls engine using other circuit. If both circuits malfunction, ECM regards accelerator pedal as being released. As result, throttle valve closed and engine idles.	Pass condition detected and then ignition switch turned OFF

*: The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By reading the DATA LIST displayed on an intelligent tester, values can be checked, including those of the switches, sensors, and actuators, without removing any parts. Reading the DATA LIST as the first step of troubleshooting is one method of shortening diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are for reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Warm up the engine.
(b) Turn the ignition switch to OFF.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(g) Check the values by referring to the table below.

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder: Min.: 0 ms, Max.: 32.64 ms	1.0 to 3.0 ms: Idling	-
IGN ADVANCE	Ignition timing advance for No. 1 cylinder: Min.: -64 deg, Max.: 63.5 deg	BTDC 0 to 14 deg: Idling	-
CALC LOAD	Calculated load by ECM: Min.: 0 %, Max.: 100 %	• 10 to 30 %: Idling • 10 to 30 %: Running without load at 2,500 rpm	-
VEHICLE LOAD	Vehicle load: Min.: 0 %, Max.: 25,700 %	Actual vehicle load	-
MAF	Air flow rate from Mass Air Flow (MAF) meter: Min.: 0 g/sec, Max.: 655.35 g/sec	1 to 3 g/sec: Idling 2 to 6 g/sec: Running without load at 2,500 rpm	If value approximately 0.0 g/sec: • MAF meter power source circuit open • VG circuit open or short If value 160.0 g/sec or more: • E2G circuit open
ENGINE SPD	Engine speed: Min.: 0 rpm, Max.: 16,383.75 rpm	• 550 to 650 rpm: Idling (M/T) • 650 to 750 rpm: Idling (A/T)	-
VEHICLE SPD	Vehicle speed: Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature: Min.: -40°C, Max.: 140°C	80 to 100°C (176 to 212°F): After warming up	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted
INTAKE AIR	Intake air temperature: Min.: -40°C, Max.: 140°C	Equivalent to ambient air temperature	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted
AIR-FUEL RATIO	Ratio compared to stoichiometric level: Min.: 0, Max.: 1.999	0.8 to 1.2: Idling	• Less than 1 (0 to 0.999) = Lean • Stoichiometric air-fuel ratio = 1 • Greater than 1 (1.001 to 1.999) = Rich
PURGE DENSITY	Learning value of purge density: Min.: -50, Max.: 350	-40 to 10: Idling	-

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
EVAP PURGE FLOW	Ratio of evaporative purge flow to intake air volume: Min.: 0 %, Max.: 102.4 %	0 to 10 %: Idling	-
EVAP PURGE VSV	EVAP (PURGE) VSV control duty: Min.: 0 %, Max.: 100 %	10 to 50 %: Idling	Order signal from ECM
VAPOR PRES PUMP	Vapor pressure: Min.: 33.853 kPa, Max.: 125.596 kPa	Approximately 100 kPa: Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
VAPOR PRES CALC	Vapor pressure (calculated): Min.: -5.632 kPa, Max.: 7,153.264 kPa	Approximately 100 kPa: Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
KNOCK CRRT VAL	Knock correction learning value: Min: -64 °CA, Max.: 1,984 °CA	0 to 20°CA: Driving at 44 mph (70 km/h)	Service data
KNOCK FB VAL	Knock feedback value: Min: -64 °CA, Max.: 1,984 °CA	-20 to 0°CA: Driving at 44 mph (70 km/h)	Service data
CLUTCH	Clutch current: Min.: 0 A, Max.: 2.49 A	-	-
EVAP VAPOR PRES	EVAP vapor pressure: Min.: 0 kPa, Max.: 327.675 kPa	Approximately 100 kPa: Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1: Min.: 0 %, Max.: 100 %	10 to 22 %: Accelerator pedal released 52 to 90 %: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #2	Absolute APP No. 2: Min.: 0 %, Max.: 100 %	24 to 40 %: Accelerator pedal released 68 to 100 %: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #1	APP sensor No. 1 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze data
ACCEL POS #2	APP sensor No. 2 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze data
ACCEL POS #1	APP sensor No. 1 voltage: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Accelerator pedal released 2.6 to 4.5 V: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #2	APP sensor No. 2 voltage: Min.: 0 V, Max.: 5 V	1.2 to 2.0 V: Accelerator pedal released 3.4 to 5.0 V: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL IDL POS	Whether or not accelerator pedal position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL LEARN VAL	Throttle valve fully closed (learned value): Min.: 0 V, Max.: 5 V	0.4 to 0.8 V	-
ACCEL SSR #1 AD	APP sensor No. 1 voltage (AD): Min.: 0 V, Max.: 4.98 V	-	ETCS service data
ACCEL LRN VAL#1	Accelerator fully closed learning value No. 1: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
ACCEL LRN VAL#2	Accelerator fully closed learning value No. 2: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
FAIL #1	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-
FAIL #2	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-
ST1	Brake pedal signal: ON or OFF	ON: Brake pedal depressed	-

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
SYS GUARD JUDGE	System guard: ON or OFF	-	ETCS service data
OPN MALFUNCTION	Open side malfunction: ON or OFF	-	ETCS service data
THROTTLE POS	Throttle position sensor: Min.: 0%, Max.: 100 %	• 10 to 22 %: Throttle fully closed • 66 to 98 %: Throttle fully open	• Calculated value based on VTA1 • Read value with ignition switch ON (Do not start engine)
THROTTL IDL POS	Whether or not throttle position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL REQ POS	Throttle requirement position: Min.: 0 V, Max.: 5 V	0.5 to 1.0 V: Idling	-
THROTTLE POS	Throttle position: Min.: 0 %, Max.: 100 %	• 0 %: Throttle fully closed • 50 to 80 %: Throttle fully open	• Recognition value for throttle opening angle on ECM • Read value with ignition switch ON (Do not start engine)
THROTTLE POS #2	Throttle position No. 2 sensor: Min.: 0 %, Max.: 100 %	• 42 to 62 %: Throttle fully closed • 92 to 100 %: Throttle fully open	• Calculated value based on VTA2 • Read value with ignition switch ON (Do not start engine)
THROTTLE POS #1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze data
THROTTLE POS #2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze data
THROTTLE POS #1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 5 V	• 0.5 to 1.1 V: Throttle fully closed • 3.3 to 4.9 V: Throttle fully open	Read value with ignition switch ON (Do not start engine)
THROTTLE POS #2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 5 V	• 2.1 to 3.1 V: Throttle fully closed • 4.6 to 5.0 V: Throttle fully open	Read value with ignition switch ON (Do not start engine)
THRTL COMND VAL	Throttle position command value: Min.: 0 V, Max.: 4.9804 V	0.5 to 4.9 V	Read value with ignition switch ON (Do not start engine)
THROTTLE SSR #1	Throttle sensor opener position No. 1: Min.: 0 V, Max.: 4.9804 V	-	ETCS service data
THROTTLE SSR #2	Throttle sensor opener position No. 2: Min.: 0 V, Max.: 4.9804 V	-	ETCS service data
THRTL SSR #1 AD	Throttle position sensor No. 1 output voltage (AD): Min.: 0 V, Max.: 4.9804 V	0.5 to 4.9 V	Read value with ignition switch ON (Do not start engine)
THROTTLE MOT	Whether or not throttle actuator control permitted: ON or OFF	ON: Idling	Read value with ignition switch ON (Do not start engine)
THROTTLE MOT	Throttle actuator current: Min.: 0 A, Max.: 80 A	0 to 3.0 A: Idling	-
THROTTLE MOT	Throttle actuator: Min.: 0 %, Max.: 100 %	0.5 to 40 %: Idling	-
THROTTLE MOT	Throttle actuator current: Min.: 0 A, Max.: 19.92 A	0 to 3.0 A: Idling	-
THROTL OPN DUTY	Throttle actuator opening duty ratio: Min.: 0 %, Max.: 100 %	0 to 40 %: During idling	• When accelerator pedal depressed, duty ratio increased • Read value with ignition switch ON (Do not start engine)

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
THROTL CLS DUTY	Throttle actuator closed duty ratio: Min.: 0 %, Max.: 100 %	0 to 40 %: During idling	• When accelerator pedal released quickly, duty ratio increased • Read value with ignition switch ON (Do not start engine)
THRTL MOT (OPN)	Throttle actuator duty ratio (open): Min.: 0 %, Max.: 100 %	0 to 40 %: During idling	ETCS service data
THRTL MOT (CLS)	Throttle actuator duty ratio (closed): Min.: 0 %, Max.: 100 %	0 to 40 %: During idling	ETCS service data
O2S B1 S2	Heated oxygen sensor output voltage for sensor 2: Min.: 0 V Max.: 1.275 V	0.1 to 0.9 V: Driving at 44 mph (70 km/h)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B1 S1	A/F sensor output voltage for sensor 1: Min.: 0 V Max.: 7.999 V	2.8 to 3.8 V: Idling	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim value for fuel system: Min.: -0.5, Max.: 0.496	-0.2 to 0.2	-
SHORT FT #1	Short-term fuel trim: Min.: -100 %, Max.: 99.2 %	-20 to 20 %	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim: Min.: -100 %, Max.: 99.2 %	-20 to 20 %	Overall fuel compensation carried out in long-term to compensate continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status: OL or CL or OL DRIVE or OL FAULT or CL FAULT	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control malfunctioning
O2FT B1 S2	Short-term fuel trim associated with sensor 2: Min.: -100 %, Max.: 99.2 %	-	-
AF FT B1 S1	Short-term fuel trim associated with sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) =Lean • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AFS B1 S1	A/F sensor output current for sensor 1: Min.: -128 mA, Max.: 127.99 mA	-	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check current output of sensor
CAT TEMP B1S1	Estimated catalyst temperature (sensor 1): Min.: -40°C, Max.: 6,513.5°C	-	-
CAT TEMP B1S2	Estimated catalyst temperature (sensor 2): Min.: -40°C, Max.: 6,513.5°C	-	-

ES

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
S O2S B1 S2	Sub oxygen sensor impedance (sensor 2): Min.: 0 Ω, Max.: 21,247.68 Ω	5 to 15,000 Ω: While vehicle is driving and engine is warmed up	-
INI COOL TEMP	Engine coolant temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INI INTAKE TEMP	Intake air temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INJ VOL	Injection volume (Cylinder 1): Min.: 0 ml, Max.: 2.048 ml	0 to 0.15 ml: Idling	Quantity of fuel injection volume for 10 times
ACC RELAY	ACC (Accessory) relay: ON or OFF	ON: Cranking	-
STARTER RELAY	Starter relay (STA) signal: ON or OFF	ON: Cranking	-
STARTER SIG	Starter switch (STSW) signal: ON or OFF	ON: Cranking	-
STARTER CONTROL	Starter control (STAR) signal: ON or OFF	ON: Cranking	-
PS SW	Power steering signal: ON or OFF	ON: Power steering operation	-
PS SIGNAL	Power steering signal (history): ON or OFF	ON: When steering wheel first turned after battery terminals connected	Signal status usually ON until battery terminals disconnected
CTP SW	Closed throttle position switch: ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-
A/C SIGNAL	A/C signal: ON or OFF	ON: A/C ON	-
PNP SW [NSW]	PNP switch status: ON or OFF	ON: P or N position	-
ELECT LOAD SIG	Electrical load signal: ON or OFF	ON: Headlights or defogger turned ON	-
STOP LIGHT SW	Stop light switch: ON or OFF	ON: Brake pedal depressed	-
+BM	Whether or not electric throttle control system power inputted: ON or OFF	ON: Ignition switch ON and system normal	-
+BM VOLTAGE	+BM voltage: Min.: 0, Max.: 19.922	11 to 14 (V): Ignition switch ON and system normal	ETCS service data
BATTERY VOLTAGE	Battery voltage: Min.: 0 V, Max.: 65.535 V	11 to 14 V: Ignition switch ON	-
ACTUATOR POWER	Actuator power supply: ON or OFF	ON: Idling	ETCS service data
ATM PRESSURE	Atmospheric pressure: Min.: 0 kPa, Max.: 255 kPa	Approximately 100 kPa: Ignition switch ON	-
EVAP (Purge) VSV	Purge VSV status: ON or OFF	-	-
FUEL PUMP / SPD	Fuel pump status: ON or OFF	ON: Engine running	Active Test support data
VVT CTRL B1	VVT control (bank 1) status: ON or OFF	-	-
VACUUM PUMP	Key-off EVAP system leak detection pump status: ON or OFF	-	Active Test support data
EVAP VENT VAL	Key-off EVAP system vent valve status: ON or OFF	-	Active Test support data
FAN MOTOR	Electric fan motor: ON or OFF	ON: Electric fan motor operating	-

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
TC/TE1	TC and CG (TE1) terminal of DLC3: ON or OFF	-	Active Test support data
VVTL AIM ANGL#1*2	VVT aim angle: Min.: 0 %, Max.: 100 %	0 to 100 %	VVT duty signal value during intrusive operation
VVT CHNG ANGL#1*2	VVT angle: Min.: 0°FR, Max.: 60°FR	0 to 56° FR	Displacement angle during intrusive operation
VVT OCV DUTY B1*2	VVT OCV operation duty: Min.: 0 %, Max.: 100 %	0 to 100 %	Requested duty value for intrusive operation
FC IDL	Fuel cut idle: ON or OFF	ON: Fuel cut operation	FC IDL = "ON" when throttle valve fully closed and engine speed over 3,500 rpm
FC TAU	Fuel cut TAU (Fuel cut during very light load): ON or OFF	ON: Fuel cut operating	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
IGNITION	Ignition counter: Min.: 0, Max.: 400	0 to 400	-
CYL #1, #2, #3, #4	Misfire of cylinder 1 to 4: Min.: 0, Max.: 255	0	-
CYL ALL	All cylinders misfire: Min.: 0, Max.: 255	0	-
MISFIRE RPM	Engine speed when misfire occur: Min.: 0 rpm, Max.: 6,375 rpm	-	-
MISFIRE LOAD	Engine load when misfire occur: Min.: 0 g/rev, Max.: 3.98 g/rev	-	-
MISFIRE MARGIN	Margin to detect engine misfire: Min.: -100 %, Max.: 99.22 %	-100 to 99.22 %	Misfire detecting margin
#CODES	Number of detected DTCs: Min.: 0, Max.: 255	-	-
CHECK MODE	Check mode: ON or OFF	ON: Check mode ON	See page ES-37
SPD TEST	Check mode result for vehicle speed sensor: COMPL or INCMPL	-	-
MISFIRE TEST	Check mode result for misfire monitor: COMPL or INCMPL	-	-
OXS1 TEST	Check mode result for HO2 sensor: COMPL or INCMPL	-	-
A/F SSR TEST B1	Check mode result for air-fuel ratio sensor: COMPL or INCMPL	-	-
MIL	MIL status: ON or OFF	ON: MIL ON	-
MIL ON RUN DIST	MIL ON Run Distance: Min.: 0 km, Max.: 65,535 km	Distance after DTC detected	-
MIL ON RUN TIME	Running time from MIL ON: Min.: 0 minute, Max.: 65,535 minutes	Equivalent to running time after MIL ON	-
ENG RUN TIME	Engine run time: Min.: 0 second, Max.: 65,535 seconds	Time after engine start	-
TIME DTC CLEAR	Time after DTC cleared: Min.: 0 minute, Max.: 65,535 minutes	Equivalent to time after DTCs erased	-
DIST DTC CLEAR	Number of warm-up cycles after DTC cleared: Min.: 0 km, Max.: 65,535 km	Equivalent to drive distance after DTCs erased	-

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared: Min.: 0, Max.: 255	-	-
OBD CERT	OBD requirement	OBD2	-
#CARB CODES	Number of emission related DTCs	-	-
COMP MON	Comprehensive component monitor: NOT AVL or AVAIL	-	-
FUEL MON	Fuel system monitor: NOT AVL or AVAIL	-	-
MISFIRE MON	Misfire monitor: NOT AVL or AVAIL	-	-
O2S (A/FS) HTR	O2S (A/FS) heater monitor: NOT AVL or AVAIL	-	-
O2S (A/FS) HTR	O2S (A/FS) heater monitor: COMPL or INCMPL	-	-
O2S (A/FS) MON	O2S (A/FS) monitor: NOT AVL or AVAIL	-	-
O2S (A/FS) MON	O2S (A/FS) monitor: COMPL or INCMPL	-	-
EVAP MON	EVAP monitor: NOT AVL or AVAIL	-	-
EVAP MON	EVAP monitor: COMPL or INCMPL	-	-
CAT MON	Catalyst monitor: NOT AVL or AVAIL	-	-
CAT MON	Catalyst monitor: COMPL or INCMPL	-	-
CCM ENA	Comprehensive component monitor: UNABLE or ENABLE	-	-
CCM CMPL	Comprehensive component monitor: COMPL or INCMPL	-	-
FUEL ENA	Fuel system monitor: UNABLE or ENABLE	-	-
FUEL CMPL	Fuel system monitor: COMPL or INCMPL	-	-
MISFIRE ENA	Misfire monitor: UNABLE or ENABLE	-	-
MISFIRE CMPL	Misfire monitor: COMPL or INCMPL	-	-
HTR ENA	O2S (A/FS) heater monitor: UNABLE or ENABLE	-	-
HTR CMPL	O2S (A/FS) heater monitor: COMPL or INCMPL	-	-
O2S (A/FS) ENA	O2S (A/FS) monitor: UNABLE or ENABLE	-	-
O2S (A/FS) CMPL	O2S (A/FS) monitor: COMPL or INCMPL	-	-
EVAP ENA	EVAP monitor: UNABLE or ENABLE	-	-
EVAP CMPL	EVAP monitor: COMPL or INCMPL	-	-
CAT ENA	Catalyst monitor: UNABLE or ENABLE	-	-
CAT CMPL	Catalyst monitor: COMPL or INCMPL	-	-
MODEL CODE	Identifying model code	NCP9#	-

Intelligent Tester Display	Measurement: Range (Display)	Normal Condition*1	Diagnostic Note
ENGINE TYPE	Identifying engine type	1NZFE	-
CYLINDER NUMBER	Identifying cylinder number: Min.: 0, Max.: 255	4	-
TRANSMISSION	Identifying transmission type	MT or ECT (4AT)	-
DESTINATION	Identifying destination	A (America)	-
MODEL YEAR	Identifying model year: Min.: 1900, Max.: 2155	200#	-
SYSTEM	Identifying engine system	GASLIN (gasoline engine)	-

HINT:

- *1: If no idling conditions are specified, the transmission gear selector lever should be in the N or P position, and the A/C switch and all accessory switches should be OFF.
- *2: DATA LIST values are only displayed when performing the following ACTIVE TESTs: VVT B1. For other ACTIVE TESTs, the DATA LIST value will be 0.

ES

2. ACTIVE TEST

HINT:

Performing an ACTIVE TEST enables components including the relays, VSV (Vacuum Switching Valve) and actuators, to be operated without removing any parts. The ACTIVE TEST can be performed with an intelligent tester. Performing an ACTIVE TEST as the first step of troubleshooting is one method of shortening diagnostic time.

DATA LIST can be displayed during ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(e) Perform the ACTIVE TEST by referring to the table below.

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Notes
INJ VOL	Change injection volume	Between -12.5 and 24.8 %	• All injectors tested at same time • Perform test at less than 3,000 rpm • Injection volume can be changed in 0.1 % graduations within control range
A/F CONTROL	Change injection volume	Decrease by 12.5 % or increase by 25 %	• Perform test at less than 3,000 rpm • A/F CONTROL enables checking and graphing of A/F (Air Fuel Ratio) sensor and Heated Oxygen (HO2) sensor voltage outputs • To conduct test, select following menu items: ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2, and press YES and ENTER followed by F4
EVAP VSV (ALONE)	Activate purge VSV control	ON/OFF	-
FUEL PUMP / SPD	Activate fuel pump (C/OPN Relay)	ON/OFF	Test possible when engine stopped

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Notes
TC/TE1	Turn on and off TC and CG (TE1) connection	ON/OFF	• ON: TC and CG (TE1) connected • OFF: TC and CG (TE1) disconnected
FC IDL PROHBT	Prohibit idling fuel cut control	ON/OFF	-
COOLING FAN	Control Electric Cooling Fan	ON/OFF	-
STARTER	Starter	ON/OFF	Test possible when engine stopped
ACC CUT	Active ACC (Accessory) relay	ON/OFF	Test possible when engine stopped
ETCS OPEN SLOW	Throttle actuator	ON: Throttle valve opens slowly	Test possible when following conditions met: • Engine stopped • Shift position in P • Fully depressing accelerator pedal (APP: 59 degrees or more)
ETCS CLOSE SLOW	Throttle actuator	ON: Throttle valve closes slowly	
ETCS OPEN FAST	Throttle actuator	ON: Throttle valve opens fast	
ETCS CLOSE FAST	Throttle actuator	ON: Throttle valve closes fast	
VVT B1	Control VVT (bank 1)	-128 to 127 % This value added to present OCV control duty 100 %: Maximum advance -100 %: Maximum retard	Engine stall or rough idle when VVT actuator operated by 100 %. Test possible while vehicle stopped and engine idling
VVT CTRL B1	Turn on and off OCV (Oil Control Valve)	ON/OFF	• Engine stalls or idles roughly when OCV turned ON • Normal engine running or idling when OCV OFF • Test possible while vehicle stopped and engine idling
VACUUM PUMP	Leak detection pump	ON/OFF	-
VENT VALVE	Vent valve	ON/OFF	-
FUEL CUT #1	Cylinder #1 injector fuel cut	ON/OFF	Test possible during vehicle stopping and engine idling
FUEL CUT #2	Cylinder #2 injector fuel cut	ON/OFF	
FUEL CUT #3	Cylinder #3 injector fuel cut	ON/OFF	
FUEL CUT #4	Cylinder #4 injector fuel cut	ON/OFF	

3. SYSTEM CHECK

HINT:

Performing a SYSTEM CHECK enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system. The SYSTEM CHECK can be performed with an intelligent tester.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK.
(e) Perform the SYSTEM CHECK by referring to the table below.

Intelligent Tester Display	Test Detail	Recommended Fuel Temperature	Diagnostic Note
EVAP SYS CHECK (AUTO OPERATION)	Perform 5 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs in PENDING CODE after performing this test, system functioning normally • Refer to EVAP system

Intelligent Tester Display	Test Detail	Recommended Fuel Temperature	Diagnostic Note
EVAP SYS CHECK (MANUAL OPERATION)	Perform 5 steps in order to operate EVAP key-off monitor manually	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP system

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- *1: MIL flashes when a catalyst damaging misfire is detected.
- *2: A/T denotes Automatic Transaxle models and M/T denotes Manual Transaxle models.
- *3: Only for vehicles except those with Mexico specifications.

DTC No.	Detection Item	Trouble Areas	MIL	Memory	See page
P0010	Camshaft Position "A" Actuator Circuit (Bank 1)	- Open or short in Oil Control Valve (OCV) circuit - OCV - ECM	Comes on	DTC stored	ES-56
P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)	- Valve timing - OCV - OCV filter - Camshaft timing gear assembly - ECM	Comes on	DTC stored	ES-60
P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)	- Same as DTC P0011	Comes on	DTC stored	ES-60
P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)	- Mechanical system (Timing chain has jumped tooth or chain stretched) - ECM	Comes on	DTC stored	ES-66
P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	- Open in Air-Fuel Ratio (A/F) sensor heater circuit - A/F sensor heater (sensor 1) - Integration relay (EFI relay) - ECM	Comes on	DTC stored	ES-68
P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)	- Short in A/F sensor heater circuit - A/F sensor heater (sensor 1) - Integration relay (EFI relay) - ECM	Comes on	DTC stored	ES-68
P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)	- Open in Heated Oxygen (HO2) sensor heater circuit - HO2 sensor heater (sensor 2) - Integration relay (EFI relay) - ECM	Comes on	DTC stored	ES-74
P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)	- Short in HO2 sensor heater circuit - HO2 sensor heater (sensor 2) - Integration relay (EFI relay) - ECM	Comes on	DTC stored	ES-74
P0100	Mass or Volume Air Flow Circuit	- Open or short in Mass Air Flow (MAF) meter circuit - MAF meter - ECM	Comes on	DTC stored	ES-80
P0101 *3	Mass Air Flow Circuit Range / Performance Problem	- MAF meter - Air induction system - PCV hose connections	Comes on	DTC stored	ES-87
P0102	Mass or Volume Air Flow Circuit Low Input	- Open or short in MAF meter circuit - MAF meter - ECM	Comes on	DTC stored	ES-80
P0103	Mass or Volume Air Flow Circuit High Input	- Open or short in MAF meter circuit - MAF meter - ECM	Comes on	DTC stored	ES-80
P0110	Intake Air Temperature Circuit Malfunction	- Open or short in Intake Air Temperature (IAT) sensor circuit - IAT sensor (built into MAF meter) - ECM	Comes on	DTC stored	ES-90
P0112	Intake Air Temperature Circuit Low Input	- Short in IAT sensor circuit - IAT sensor (built into MAF meter) - ECM	Comes on	DTC stored	ES-90

DTC No.	Detection Item	Trouble Areas	MIL	Memory	See page
P0113	Intake Air Temperature Circuit High Input	- Open in IAT sensor circuit - IAT sensor (built into MAF meter) - ECM	Comes on	DTC stored	ES-90
P0115	Engine Coolant Temperature Circuit Malfunction	- Open or short in Engine Coolant Temperature (ECT) sensor circuit - ECT sensor - ECM	Comes on	DTC stored	ES-95
P0116 *3	Engine Coolant Temperature Circuit Range / Performance Problem	- Thermostat - ECT sensor	Comes on	DTC stored	ES-101
P0117	Engine Coolant Temperature Circuit Low Input	- Short in ECT sensor circuit - ECT sensor - ECM	Comes on	DTC stored	ES-95
P0118	Engine Coolant Temperature Circuit High Input	- Open in ECT sensor circuit - ECT sensor - ECM	Comes on	DTC stored	ES-95
P0120	Throttle Pedal Position Sensor / Switch "A" Circuit Malfunction	- Throttle Position (TP) sensor (built into throttle body) - ECM	Comes on	DTC stored	ES-104
P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem	- TP sensor (built into throttle body)	Comes on	DTC stored	ES-111
P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input	- TP sensor (built into throttle body) - Short in VTA1 circuit - Open in VC circuit - ECM	Comes on	DTC stored	ES-104
P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input	- TP sensor (built into throttle body) - Open in VTA1 circuit - Open in E2 circuit - Short between VC and VTA1 circuits - ECM	Comes on	DTC stored	ES-104
P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control	- Cooling system - ECT sensor - Thermostat	Comes on	DTC stored	ES-113
P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)	- Thermostat - Cooling system - ECT sensor - ECM	Comes on	DTC stored	ES-116
P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)	- Open or short in HO2 sensor (sensor 2) circuit - HO2 sensor (sensor 2) - HO2 sensor heater (sensor 2) - Air-Fuel Ratio (A/F) sensor (sensor 1) - Integration relay (EFI relay) - Gas leakage from exhaust system	Comes on	DTC stored	ES-119
P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)	- Open in HO2 sensor (sensor 2) circuit - HO2 sensor (sensor 2) - HO2 sensor heater (sensor 2) - Integration relay (EFI relay) - Gas leakage from exhaust system	Comes on	DTC stored	ES-119
P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)	- Short in HO2 sensor (sensor 2) circuit - HO2 sensor (sensor 2) - ECM internal circuit malfunction	Comes on	DTC stored	ES-119
P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)	- Open or short in HO2 sensor heater circuit - HO2 sensor heater (sensor 2) - Integration relay (EFI relay) - ECM	Comes on	DTC stored	ES-74

DTC No.	Detection Item	Trouble Areas	MIL	Memory	See page
P0171	System Too Lean (Bank 1)	- Air induction system - Injector blockage - MAF meter - ECT sensor - Fuel pressure - Gas leakage from exhaust system - Open or short in A/F sensor (sensor 1) circuit - A/F sensor (sensor 1) - A/F sensor heater (sensor 1) - Integration relay (EFI relay) - A/F sensor heater and EFI relay circuits - PCV hose connections - PCV valve and hose - ECM	Comes on	DTC stored	ES-136
P0172	System Too Rich (Bank 1)	- Injector leakage or blockage - MAF meter - ECT sensor - Ignition system - Fuel pressure - Gas leakage from exhaust system - Open or short in A/F sensor (sensor 1) circuit - A/F sensor (sensor 1) - A/F sensor heater (sensor 1) - Integration relay (EFI relay) - A/F sensor heater and EFI relay circuits - ECM	Comes on	DTC stored	ES-136
P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit	- TP sensor (built into throttle body) - ECM	Comes on	DTC stored	ES-104
P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input	- TP sensor (built into throttle body) - Short in VTA2 circuit - Open in VC circuit - ECM	Comes on	DTC stored	ES-104
P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input	- TP sensor (built into throttle body) - Open in VTA2 circuit - Open in E2 circuit - Short between VC and VTA2 circuits - ECM	Comes on	DTC stored	ES-104
P0300	Random / Multiple Cylinder Misfire Detected	- Open or short in engine wire harness - Connector connection - Vacuum hose connection - Ignition system - Injector - Fuel pressure - MAF meter - ECT sensor - Compression pressure - Valve clearance - Valve timing - PCV valve and hose - PCV hose connections - Air induction system - ECM	Comes on/ Blinks *1	DTC stored	ES-145
P0301	Cylinder 1 Misfire Detected	- Same as DTC P0300	Comes on/ Blinks *1	DTC stored	ES-145
P0302	Cylinder 2 Misfire Detected	- Same as DTC P0300	Comes on/ Blinks *1	DTC stored	ES-145
P0303	Cylinder 3 Misfire Detected	- Same as DTC P0300	Comes on/ Blinks *1	DTC stored	ES-145
P0304	Cylinder 4 Misfire Detected	- Same as DTC P0300	Comes on/ Blinks *1	DTC stored	ES-145
P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	- Short in knock sensor circuit - Knock sensor - ECM	Comes on	DTC stored	ES-157

DTC No.	Detection Item	Trouble Areas	MIL	Memory	See page
P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	- Open in knock sensor circuit - Knock sensor - ECM	Comes on	DTC stored	ES-157
P0335	Crankshaft Position Sensor "A" Circuit	- Open or short in Crankshaft Position (CKP) sensor circuit - CKP sensor - CKP sensor plate - ECM	Comes on	DTC stored	ES-161
P0339	Crankshaft Position Sensor "A" Circuit Intermittent	- Same as DTC P0335	-	DTC stored	ES-161
P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)	- Open or short in Camshaft Position (CMP) sensor circuit - CMP sensor - Camshaft - Jumped tooth of timing chain - ECM	Comes on	DTC stored	ES-167
P0351	Ignition Coil "A" Primary / Secondary Circuit	- Ignition system - Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and ECM - No. 1 to No. 4 ignition coils with igniters - ECM	Comes on	DTC stored	ES-172
P0352	Ignition Coil "B" Primary / Secondary Circuit	- Same as DTC P0351	Comes on	DTC stored	ES-172
P0353	Ignition Coil "C" Primary / Secondary Circuit	- Same as DTC P0351	Comes on	DTC stored	ES-172
P0354	Ignition Coil "D" Primary / Secondary Circuit	- Same as DTC P0351	Comes on	DTC stored	ES-172
P0420	Catalyst System Efficiency Below Threshold (Bank 1)	- Front exhaust pipe (with Three-Way Catalytic Converter) - Gas leakage from exhaust system - A/F sensor (sensor 1) - HO2 sensor (sensor 2)	Comes on	DTC stored	ES-180
P043E *3	Evaporative Emission System Reference Orifice Clog Up	- Canister pump module (Reference orifice, leak detection pump, vent valve) - Connector/wire harness (Canister pump module - ECM) - EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) - ECM	Comes on	DTC stored	ES-187
P043F *3	Evaporative Emission System Reference Orifice High Flow	- Same as DTC P043E	Comes on	DTC stored	ES-187
P0441 *3	Evaporative Emission Control System Incorrect Purge Flow	- Purge VSV - Connector/wire harness (Purge VSV - ECM) - Canister pump module - Leakage from EVAP system - Leakage from EVAP line (Purge VSV - Intake manifold) - ECM	Comes on	DTC stored	ES-192
P0450 *3	Evaporative Emission Control System Pressure Sensor / Switch	- Canister pump module - EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) - ECM	Comes on	DTC stored	ES-199
P0451 *3	Evaporative Emission Control System Pressure Sensor Range / Performance	- Canister pump module - Connector/wire harness (Canister pump module - ECM) - EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) - ECM	Comes on	DTC stored	ES-199

DTC No.	Detection Item	Trouble Areas	MIL	Memory	See page
P0452 *3	Evaporative Emission Control System Pressure Sensor / Switch Low Input	- Same as DTC P0451	Comes on	DTC stored	ES-199
P0453 *3	Evaporative Emission Control System Pressure Sensor / Switch High Input	- Same as DTC P0451	Comes on	DTC stored	ES-199
P0455 *3	Evaporative Emission Control System Leak Detected (Gross Leak)	- Fuel cap (loose) - Leakage from EVAP line (Canister - Fuel tank) - Leakage from EVAP line (Purge VSV - Canister) - Canister pump module - Leakage from fuel tank - Leakage from canister	Comes on	DTC stored	ES-209
P0456 *3	Evaporative Emission Control System Leak Detected (Very Small Leak)	- Same as DTC P0455	Comes on	DTC stored	ES-209
P0500	Vehicle Speed Sensor "A"	- Open or short in speed signal circuit - Vehicle speed sensor - Combination meter - ECM - Skid control ECU	Comes on	DTC stored	ES-213
P0504	Brake Switch "A" / "B" Correlation	- Short in stop light switch signal circuit - STOP fuse - IGN fuse - Stop light switch - ECM	-	DTC stored	ES-218
P0505	Idle Control System Malfunction	- ETCS (Electronic Throttle Control System) - Air induction system - PCV hose connections - ECM	Comes on	DTC stored	ES-222

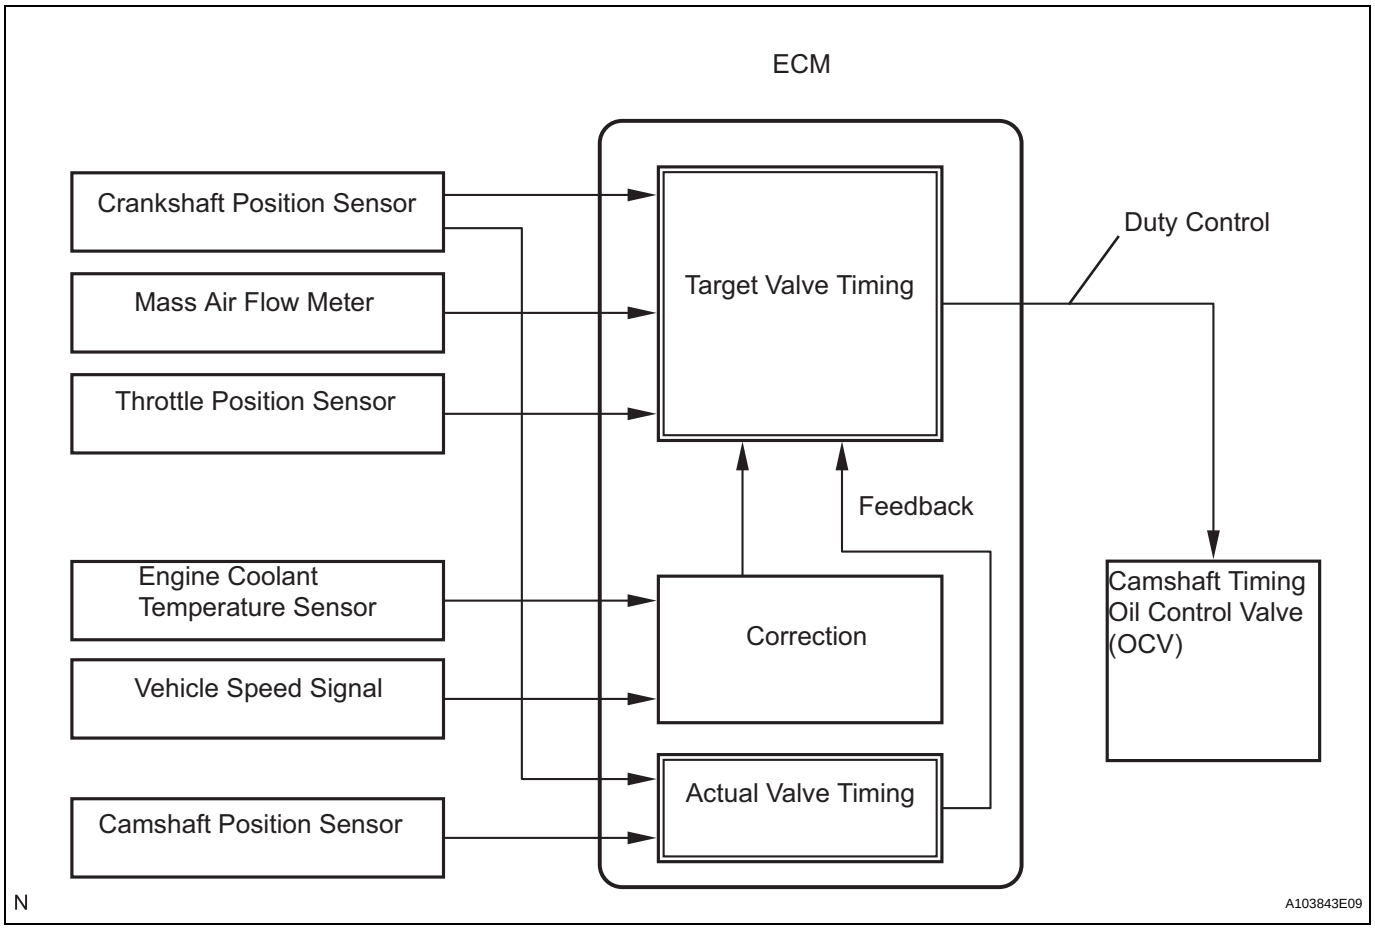
DTC	P0010	Camshaft Position "A" Actuator Circuit (Bank 1)

HINT:
This DTC relates to the Oil Control Valve (OCV).

DESCRIPTION

This DTC is designed to detect opens or shorts in the camshaft oil control valve (OCV) circuit. If the OCV's duty-cycle is excessively high or low while the engine running, the ECM will illuminate the MIL and set the DTC.
The VVT (variable valve timing) system adjusts the intake valve timing to improve the driveability. The engine oil pressure turns the camshaft actuator to adjust the valve timing. The OCV is a solenoid valve and switches the engine oil line. The valve moves when the ECM applies the 12volts to the solenoid. The ECM changes the energizing time to the solenoid (duty-cycle) in accordance with the camshaft position, crankshaft position,, throttle position etc.



DTC No.	DTC Detection Conditions	Trouble Areas
P0010	Open or short in OCV circuit (1 trip detection logic)	• Open or short in OCV circuit • OCV • ECM

MONITOR DESCRIPTION

This DTC is designed to detect opens or shorts in the camshaft oil control valve (OCV) circuit. If the OCV's duty-cycle is excessively high or low while the engine running, the ECM will illuminate the MIL and set the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**CHECK DTC (OPERATE OCV)**

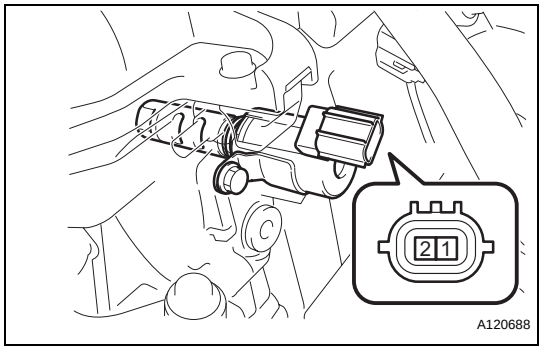
(a) Connect an intelligent tester to the DLC3.

(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs after recording the freeze frame data and DTCs.
(d) Start the engine.
(e) Allow the engine to idle and check for DTCs.
(f) Check that P0010 is present.
OK:
P0010 is present.

NG → **CHECK FOR INTERMITTENT PROBLEMS**

OK

2 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

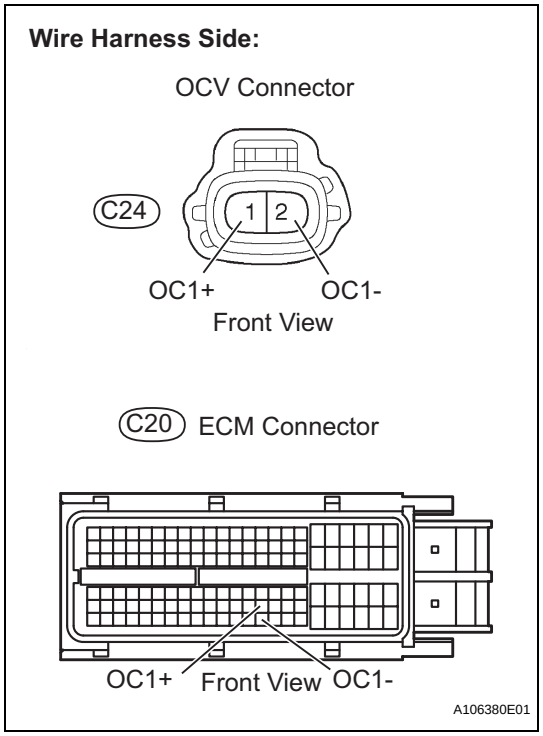


(a) Disconnect the C24 OCV connector.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)
(c) Reconnect the OCV connector.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (OCV - ECM)



(a) Disconnect the C24 OCV connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance (check for open)

Tester Connections	Specified Conditions
OC1+ (C24-1) - OC1+ (C20-100)	Below 1 Ω
OC1- (C24-2) - OC1- (C20-123)	

Standard resistance (check for short)

Tester Connections	Specified Conditions
OC1+ (C24-1) or OC1+ (C20-100) - Body ground	10 kΩ or higher
OC1- (C24-2) or OC1- (C20-123) - Body ground	

(d) Reconnect the OCV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

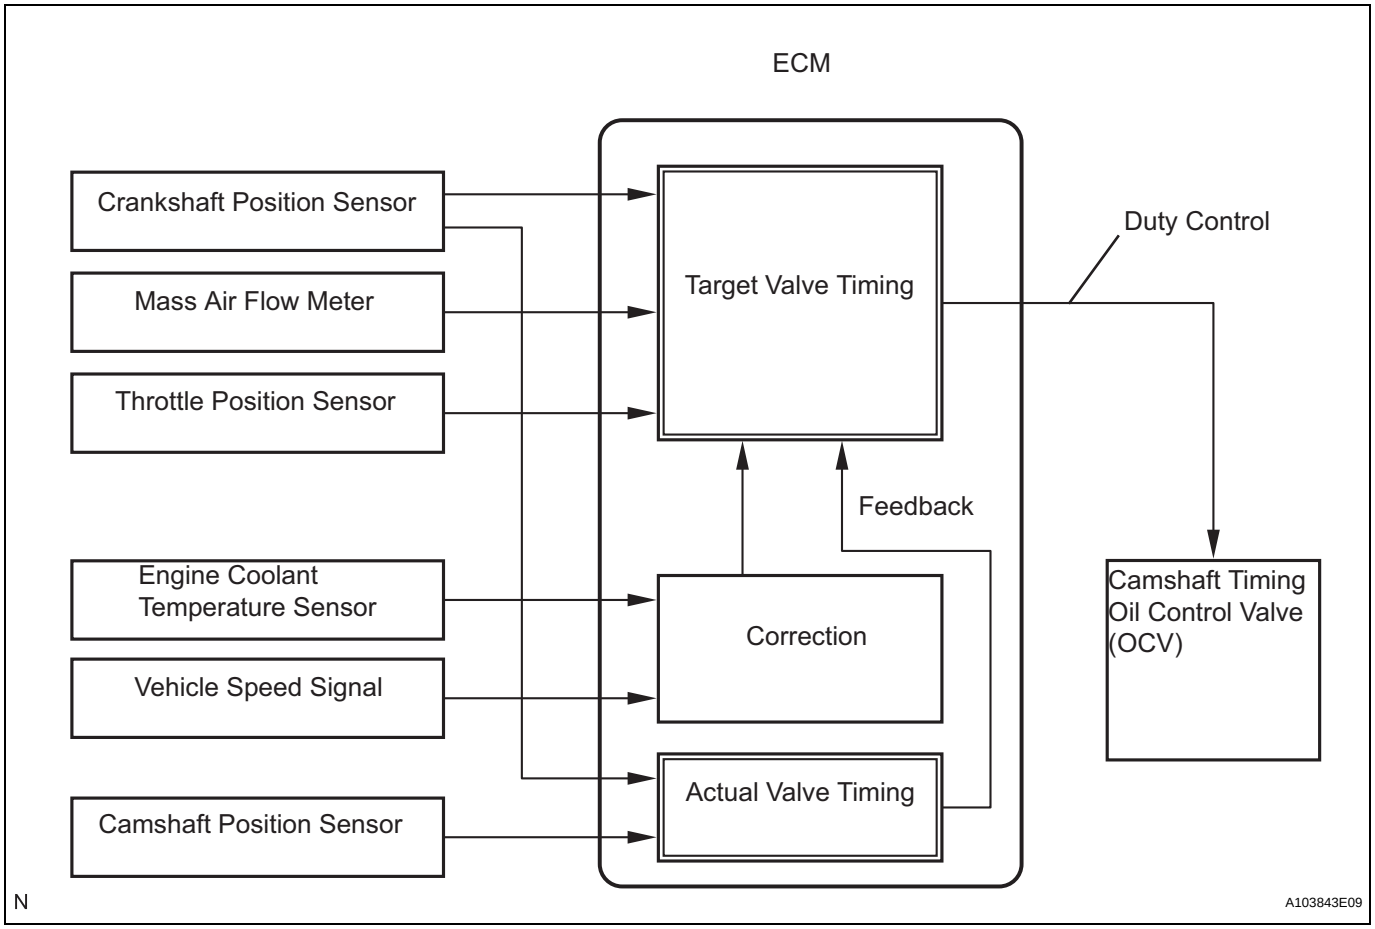
DTC	P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)

DTC	P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)

HINT:
If DTC P0011 or P0012 is present, check the VVT (Variable Valve Timing) system.

DESCRIPTION

The VVT system includes the ECM, Oil Control Valve (OCV) and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Conditions	Trouble Areas
P0011	Advanced camshaft timing: With warm engine and engine speed of between 450 rpm and 4,000 rpm, all conditions (1), (2) and (3) met (1 trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing more than 19°CA of maximum delayed timing (malfunction in advance timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • ECM
P0012	Retarded camshaft timing: With warm engine and engine speed of between 450 rpm and 4,000 rpm, all conditions (1), (2) and (3) met (2 trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing 19°CA or less of maximum delayed timing (malfunction in retarded timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • ECM

ES

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft. If the difference between the target and actual intake valve timings is large, and changes in the actual intake valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and sets a DTC.

Example:

A DTC is set when the following conditions 1, 2 and 3 are met:

1. The difference between the target and actual intake valve timing is more than 5°CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds.
2. It takes 5 seconds or more to change the valve timing by 5°CA.
3. After above conditions 1 and 2 are met, the OCV is forcibly activated 63 times or more.

DTC P0011 (Advanced Cam Timing) is subject to 1 trip detection logic.

DTC P0012 (Retarded Cam Timing) is subject to 2 trip detection logic.

These DTCs indicate that the VVT controller cannot operate properly due to OCV malfunctions or the presence of foreign objects in the OCV.

The monitor will run if all of the following conditions are met:

– The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
– The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
– The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing P0012: Retarded camshaft timing
Required Sensors/Components (Main)	VVT OCV and VVT Actuator
Required Sensors/Components (Related)	Crankshaft position sensor, camshaft position sensor and Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds
MIL Operation	Advanced camshaft timing: Immediate Retarded camshaft timing: 2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter)
Battery voltage	11 V or more
Engine RPM	450 to 4,000 rpm
ECT	75°C (167°F) to 100°C (212°F)

TYPICAL MALFUNCTION THRESHOLDS

All of following conditions met	-
Deviation of valve timing	More than 5°CA (Crankshaft Angle)
Valve timing	No change

If the difference between the target and actual camshaft timings is greater than the specified value, the ECM operates the VVT actuator.
Then, the ECM monitor the camshaft timing change for 5 seconds.

WIRING DIAGRAM

Refer to DTC P0010 (See page ES-57).

INSPECTION PROCEDURE

NOTICE:
DTC P0011 or P0012 may be set when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain set even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.
HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011 OR P0012)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0011 or P0012	A
P0011 or P0012 and other DTCs	B

HINT:
If any DTCs other than P0011 or P0012 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

ES

OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 4**

OK

3	CHECK WHETHER DTC OUTPUT RECURS (DTC P0011 OR P0012)

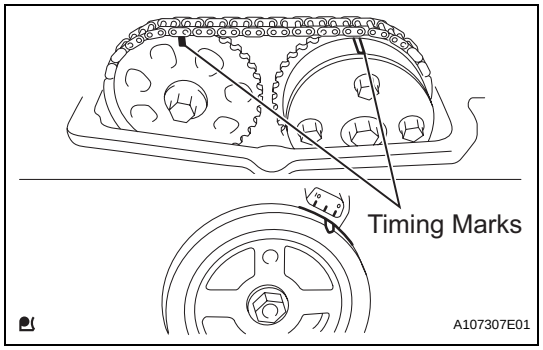
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Drive the vehicle for more than 10 minutes.
(g) Read DTCs using the tester.
OK:
No DTC output.

NG → **Go to step 4**

OK

END

4 CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TEETH ON TIMING CHAIN)

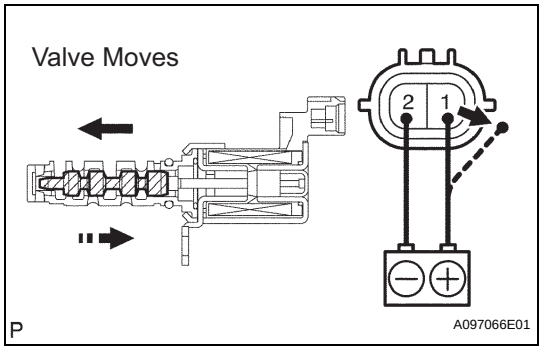


(a) Remove the cylinder head cover.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" on the timing chain cover.
(c) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head cover.

NG → **ADJUST VALVE TIMING**

OK

5 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV)

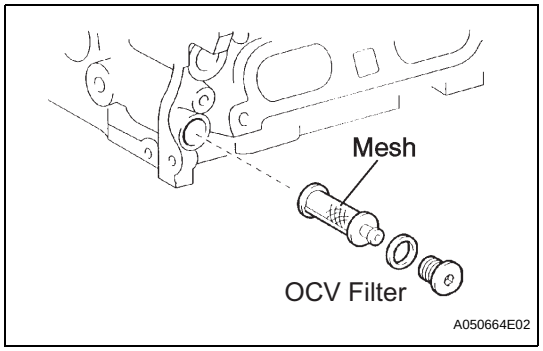


(a) Remove the OCV.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)
(c) Apply the positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.
OK:
Valve moves quickly.
(d) Reinstall the OCV.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

6 INSPECT OIL CONTROL VALVE FILTER



(a) Remove the generator.
(b) Remove the OCV filter.
(c) Check that the filter is not clogged.
OK:
Filter is not clogged.
(d) Reinstall the OCV filter.
(e) Reinstall the generator.

NG → **CLEAN OIL CONTROL VALVE FILTER**

ES

OK

7	REPLACE CAMSHAFT TIMING GEAR ASSEMBLY

NEXT

8	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Driver the vehicle for more than 10 minutes.
(g) Read output DTCs using the tester.
Standard:
No DTC output.
HINT:
DTC P0011 or P0012 is output when foreign objects in engine oil are caught in some parts of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → **SYSTEM OK**

NG

REPLACE ECM

DTC	P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)

DESCRIPTION

In the VVT (Variable Valve Timing) system, the appropriate intake valve open and close timing is controlled by the ECM. The ECM performs intake valve control by performing the following: 1) controlling the camshaft and camshaft timing oil control valve, and operating the camshaft timing gear; and 2) changing the relative positions of the gaps between the camshaft and crankshaft.

DTC No.	DTC Detection Conditions	Trouble Areas
P0016	Deviation in crankshaft and camshaft position sensor signals (2 trip detection logic)	• Mechanical system (Timing chain has jumped tooth or chain stretched) • ECM

ES

MONITOR DESCRIPTION

The ECM optimizes the valve timing by using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller.
The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.
The ECM calibrates the intake valve timing by setting the intake camshaft to the most retarded angle while the engine is idling. The ECM closes the OCV to retard the cam. The ECM stores this value as the VVT learning value. When the difference between the target and actual intake valve timings is 5°CA (Crankshaft Angle) or less, the ECM stores it.
If the VVT learning value matches the following conditions, the ECM determines the existence of a malfunction in the VVT system, and sets the DTC.

- VVT learning value: Less than 25°CA, or more than 51°CA.
- Above condition continues for 18 seconds or more.

This DTC indicates that the angle between the intake camshaft and the crankshaft is incorrect due to factors such as the timing chain having jumped a tooth.
This monitor begins to run after the engine has idled for 5 minutes.

MONITOR STRATEGY

Related DTCs	P0016: Camshaft timing misalignment at idling
Required Sensors/Components	VVT actuator
Required Sensors/Components	Camshaft position sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	Within 1 minute
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0011 (VVT system 1 - advance) P0012 (VVT system 1 - retarded) P0115 - P0118 (ECT sensor)
Engine RPM	450 to 1,000 rpm

TYPICAL MALFUNCTION THRESHOLDS

One of following conditions met	-
VVT learning value when camshaft maximum retarded	Less than 25°CA
VVT learning value when camshaft maximum retarded	More than 51°CA

WIRING DIAGRAM

Refer to DTC P0335 (See page ES-163).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1	**CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TOOTH OF TIMING CHAIN) (See page ES-71)**

NG → **Go to step 3**

OK

2	**REPLACE ECM**

NEXT → **Go to step 4**

3	**ADJUST VALVE TIMING**

NEXT

4	**CHECK WHETHER DTC OUTPUT RECURS**

NOTICE:

After replacing the ECM or adjusting intake valve timing, confirm that the DTC output does not recur.

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-37).
(f) Start the engine and warm it up.
(g) Allow the engine to idle for 1 minute or more, and then drive the vehicle for 1 minute or more.
(h) Confirm that no DTC is set, using the tester.

OK:

No DTC output

NEXT

END

DTC	P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)

DTC	P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)

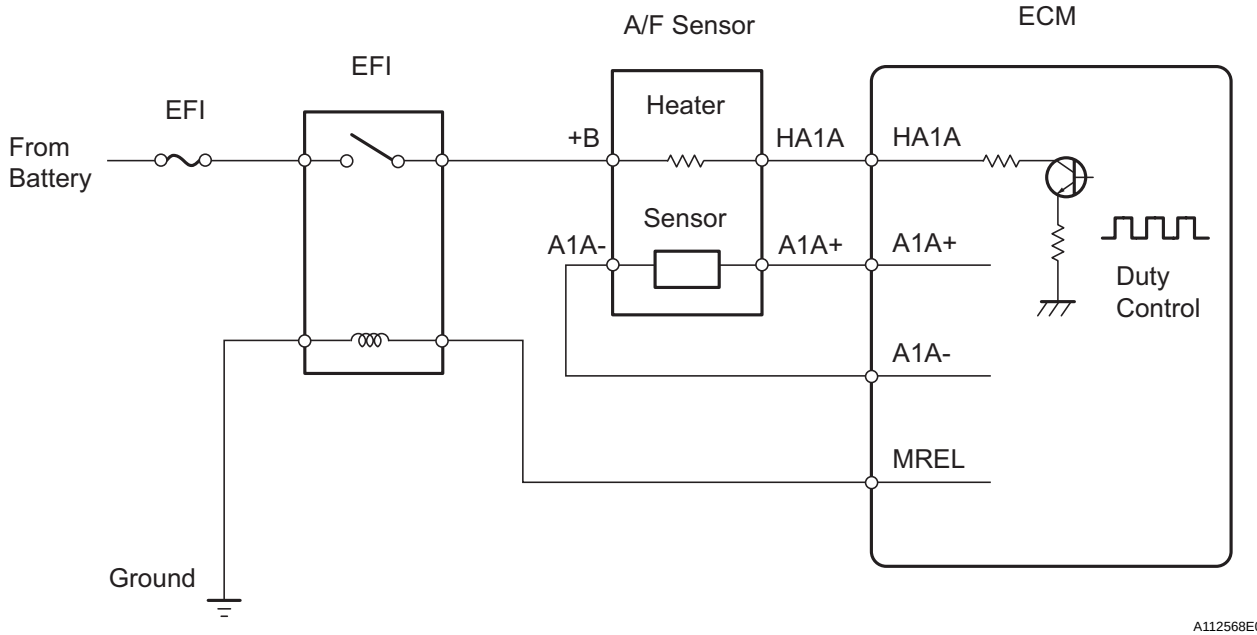
HINT:
- Although the DTC titles say the oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

DESCRIPTION

Refer to DTC P2195 (See page ES-276).
HINT:
- When either of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the A/F sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned to OFF.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The A/F sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Sensor 1):



DTC No.	DTC Detection Conditions	Trouble Areas
P0031	Air-Fuel Ratio (A/F) sensor heater current less than 0.8 A (1 trip detection logic)	• Open in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • ECM
P0032	Air-Fuel Ratio (A/F) sensor heater current more than 10 A (1 trip detection logic)	• Short in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • ECM

MONITOR DESCRIPTION

The ECM uses information from the Air-Fuel Ratio (A/F) sensor to regulate the air-fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the Three-Way Catalytic Converter (TWC) to purify the exhaust gases.

The A/F sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The A/F sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the A/F sensor becomes inaccurate, as a result, the ECM is unable to regulate air-fuel ratio properly.

When the current in the A/F sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

Example:

The ECM sets DTC P0032 when the current in the A/F sensor heater is more than 10 A. Conversely, when the heater current is less than 0.8 A, DTC P0031 is set.

MONITOR STRATEGY

Related DTCs	P0031: A/F sensor heater open/short (Low electrical current) P0032: A/F sensor heater open/short (High electrical current)
Required Sensors/Components (Main)	A/F sensor heater

A/F sensor heater current	0.9 to 9.9 A

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-280).

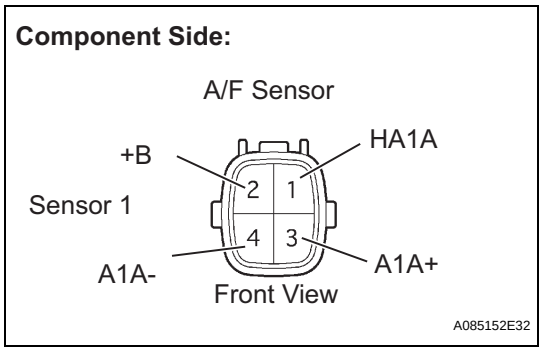
INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1 INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)



(a) Disconnect the C23 A/F sensor connector.

(b) Measure the resistance of the A/F sensor connector.

Standard resistance

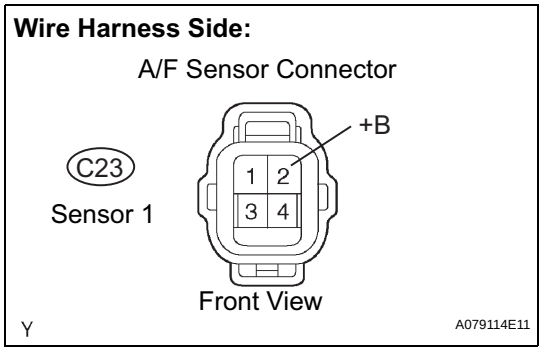
Tester Connections	Specified Conditions
HA1A (1) - +B (2)	1.8 Ω to 3.4 Ω at 20°C (68°F)
HA1A (1) - A1A- (4)	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

2 CHECK TERMINAL VOLTAGE (+B OF A/F SENSOR)



(a) Disconnect the C23 A/F sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage between the terminals of the C23 A/F sensor connector and body ground.

Standard voltage

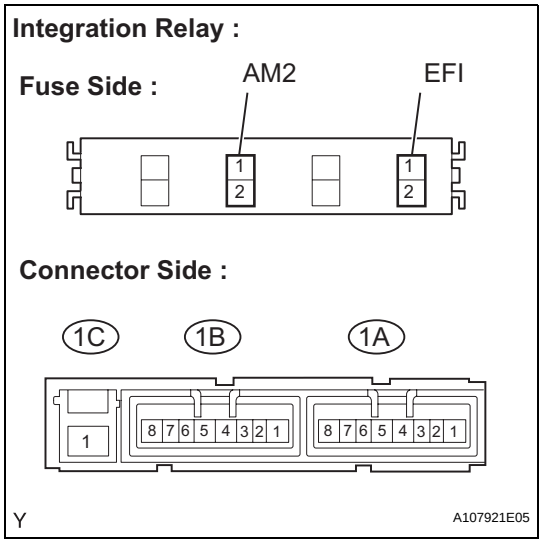
Tester Connections	Specified Conditions
+B (C23-2) - Body ground	11 to 14 V

(d) Reconnect the A/F sensor connector.

OK → **Go to step 5**

NG

3	INSPECT INTEGRATION RELAY (EFI RELAY)



(a) Remove the integration relay from the engine room relay block.
(b) Inspect the EFI fuse.
  (1) Remove the EFI fuse from the integration relay.
  (2) Measure the EFI fuse resistance.
    Standard resistance:
      Below 1 Ω
  (3) Reinstall the EFI fuse.
(c) Inspect the EFI relay.
  (1) Measure the EFI relay resistance.
    Standard resistance

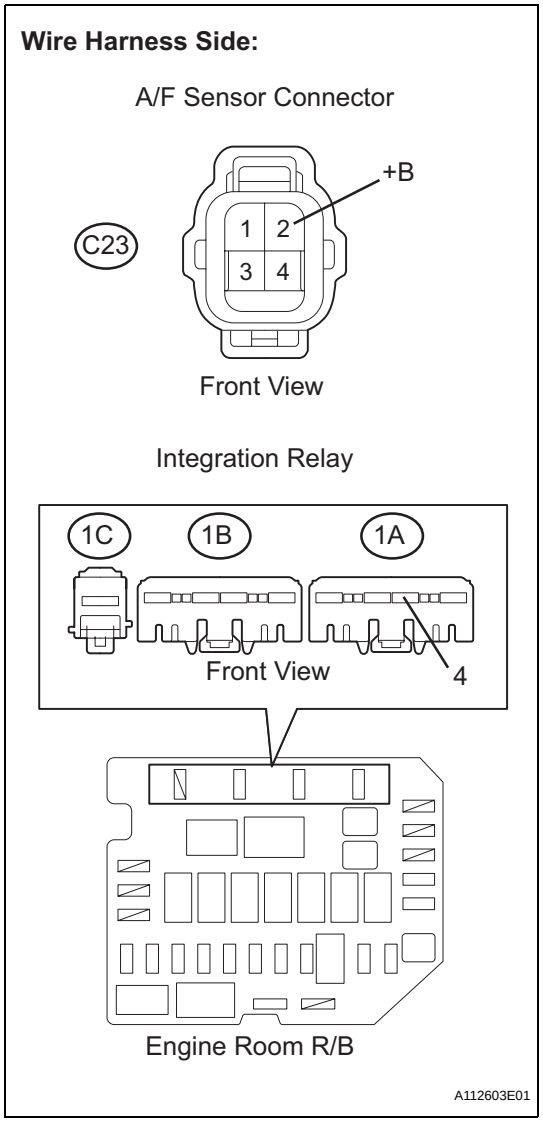
Tester Connections	Specified Conditions
1C-1 - 1A-4	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1A-2 and 1A-3)

(d) Reinstall the integration relay.

NG → **REPLACE INTEGRATION RELAY**

OK

4	CHECK HARNESS AND CONNECTOR (A/F SENSOR - EFI RELAY)



(a) Disconnect the C23 A/F sensor connector.
(b) Remove the integration relay from the engine room Relay Block (R/B).
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
+B (C23-2) - Engine room R/B (1A-4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
+B (C23-2) or Engine room R/B (1A-4) - Body ground	10 kΩ or higher

(d) Reconnect the A/F sensor connector.
(e) Reinstall the integration relay.

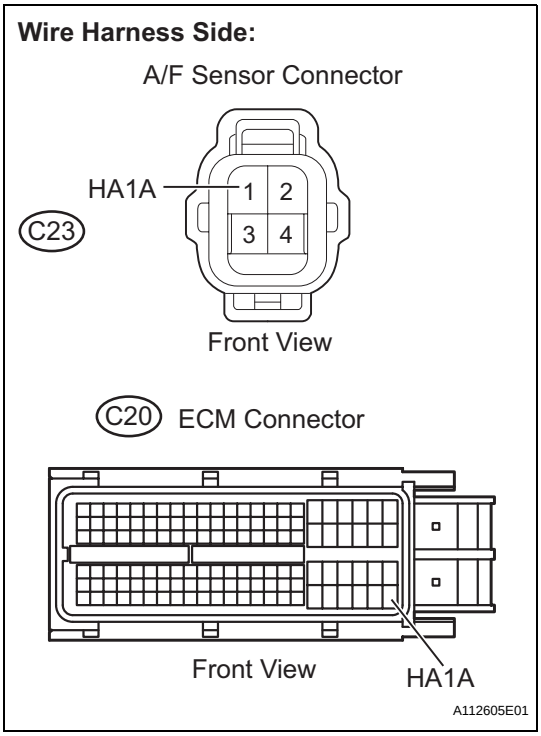
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

ES

5 CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)



(a) Disconnect the C23 A/F sensor connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
HA1A (C23-1) - HA1A (C20-109)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
HA1A (C23-1) or HA1A (C20-109) - Body ground	10 kΩ or higher

(d) Reconnect the A/F sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine.
(f) Allow the engine to idle for 1 minute or more.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read DTCs.

Result

Display (DTC Output)	Proceed To
No output	A
P0031 or P0032	B

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)

DTC	P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)

DTC	P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)

HINT:
Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.

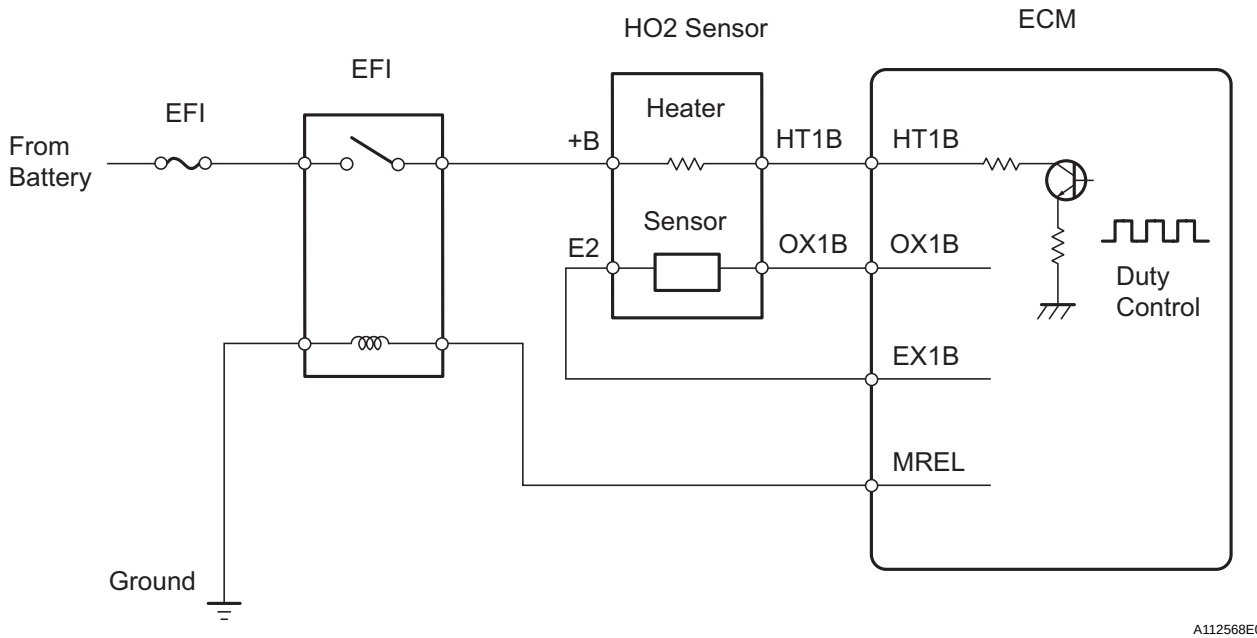
ES

DESCRIPTION

Refer to DTC P0136 (See page ES-119).
HINT:

- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the Heated Oxygen (HO2) Sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned to OFF.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The HO2 sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Sensor 2):



DTC No.	DTC Detection Conditions	Trouble Areas
P0037	Heated Oxygen (HO2) sensor heater current less than 0.3 A (1 trip detection logic)	• Open in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Integration relay (EFI relay) • ECM
P0038	Heated Oxygen (HO2) sensor heater current more than 2 A (1 trip detection logic)	• Short in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Integration relay (EFI relay) • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P0141	Cumulative heater resistance correction value exceeds threshold (2 trip detection logic)	• Open or short in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Integration relay (EFI relay) • ECM

MONITOR DESCRIPTION

The sensing position of the Heated Oxygen (HO2) sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

ES

Heated oxygen sensor heater range check (P0037 and P0038):

The ECM monitors the current applied to the O2 sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM determines that there is an open circuit in the heater. If the current is above the threshold value, the ECM determines that there is a short circuit in the heater.

The ECM constantly monitors the current applied to the heater. If the ECM detects an open or short circuit, the ECM turns the MIL on and sets a DTC.

If a malfunction is detected, the ECM cuts off the current applied to the heater.

Example:

The ECM sets DTC P0038 when the current in the HO2 sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 is set.

Heated oxygen sensor heater performance (P0141):

After the accumulated heater ON time exceeds 100 seconds, the ECM calculates the heater resistance using the battery voltage and the current applied to the heater.

If the resistance is above the threshold value, the ECM determines that there is a malfunction in the HO2 sensor heater and sets DTC P0141.

MONITOR STRATEGY

Related DTCs	P0037: Heated oxygen sensor heater range check (Low electrical current) P0038: Heated oxygen sensor heater range check (High electrical current) P0141: Heated oxygen sensor heater performance
Required Sensors/Components (Main)	Heated oxygen sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous: P0037 and P0038 Once per driving cycle: P0141
Duration	1 second: P0037 and P0038 10 seconds: P0141
MIL Operation	Immediate: P0037 and P0038 2 driving cycles: P0141
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

P0037:

Battery voltage	10.5 to 20 V

P0038:

Battery voltage	10.5 to 20 V

P0141 (Heater performance monitor check):

All of following conditions met:	-
Battery voltage	10.5 V or more
Fuel cut	OFF
Time after fuel cut ON to OFF	30 seconds or more
Accumulated heater ON time	100 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0037:

Heater current	Less than 0.3 A

P0038:

Heater current	2 A or more

P0141 (Heater performance monitor check):

Accumulated heater resistance	Varies with sensor element temperature (Example: More than 23 ohm)

COMPONENT OPERATING RANGE

Heated Oxygen (HO2) sensor heater current	0.4 to 1 A (when engine idles, HO2 sensor warmed up and battery voltage 11 to 14 V)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

WIRING DIAGRAM

Refer to DTC P0136 (See page ES-126).

CONFIRMATION DRIVING PATTERN

These DTCs are detected when the engine idles for 110 seconds or more.

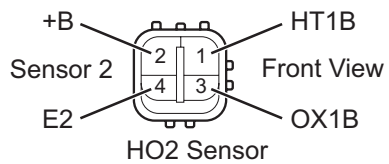
INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1 INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

Component Side :



A115661E02

(a) Disconnect the D28 Heated Oxygen (HO2) sensor connector.

(b) Measure the resistance of the HO2 sensor connector.

Standard resistance

Tester Connections	Specified Conditions
HT1B (1) - +B (2)	11 to 16 Ω at 20°C (68°F)
HT1B (1) - E2 (4)	10 kΩ or higher

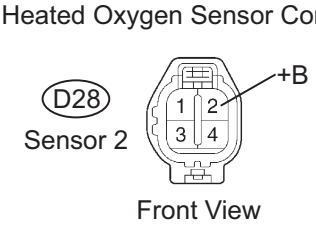
(c) Reconnect the HO2 sensor connector.

NG → **REPLACE HEATED OXYGEN SENSOR**

OK

2	CHECK TERMINAL VOLTAGE (+B OF HO2 SENSOR)

Wire Harness Side:



A072895E03

(a) Disconnect the D28 HO2 sensor connector.
(b) Measure the voltage between the terminals of the D28 HO2 sensor connector and body ground.
Standard voltage

Tester Connections	Specified Conditions
+B (D28-2) - Body ground	11 to 14 V

(c) Reconnect the HO2 sensor connector.

OK → **Go to step 5**

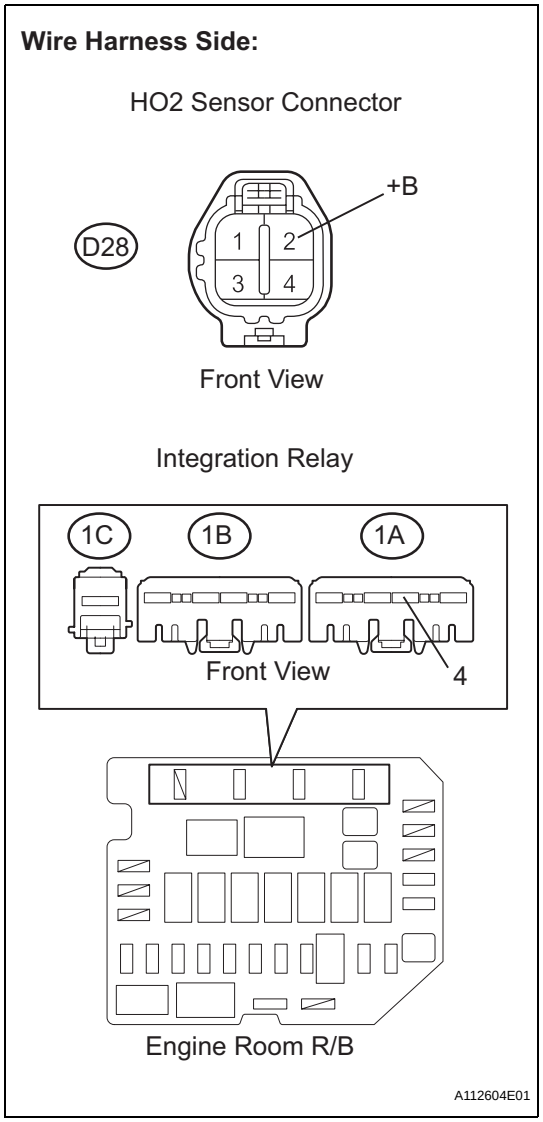
NG

3	INSPECT INTEGRATION RELAY (EFI RELAY) (See page ES-78)

NG → **REPLACE INTEGRATION RELAY**

OK

4	CHECK HARNESS AND CONNECTOR (HO2 SENSOR - EFI RELAY)



(a) Disconnect the D28 HO2 sensor connector.
(b) Remove the integration relay from the engine room Relay Block (R/B).
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
+B (D28-2) - Engine room R/B (1A-4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
+B (D28-2) or Engine room R/B (1A-4) - Body ground	10 kΩ or higher

(d) Reconnect the HO2 sensor connector.
(e) Reinstall the integration relay.

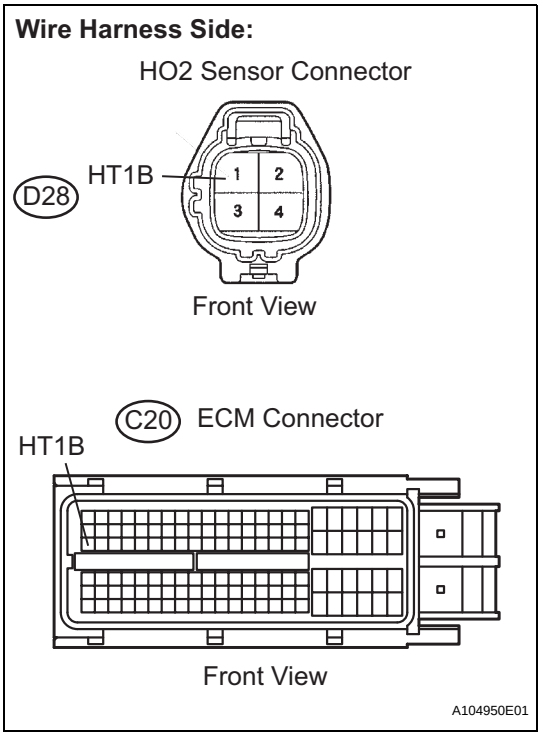
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

ES

5 CHECK HARNESS AND CONNECTOR (HO2 SENSOR - ECM)



(a) Disconnect the D28 HO2 sensor connector.
(b) Disconnect the C20 ECM connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
HT1B (D28-1) - HT1B (C20-47)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
HT1B (D28-1) or HT1B (C20-47) - Body ground	10 kΩ or higher

(d) Reconnect the HO2 sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine.
(f) Allow the engine to idle for 2 minutes or more.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read DTCs.

Result

Display (DTC Output)	Proceed To
No output	A
P0037, P0038 and/or P0141	B

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0100	Mass or Volume Air Flow Circuit

DTC	P0102	Mass or Volume Air Flow Circuit Low Input

DTC	P0103	Mass or Volume Air Flow Circuit High Input

DESCRIPTION

The Mass Air Flow (MAF) meter is a sensor that measures the amount of air flowing through the throttle valve.

The ECM uses this information to determine the fuel injection time and to provide the appropriate air-fuel ratio.

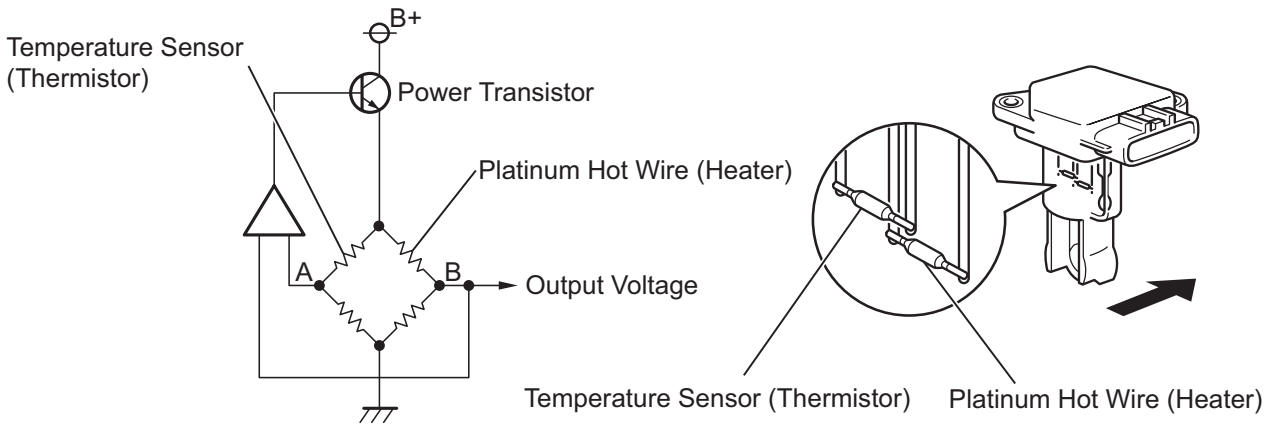
Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air.

By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.



DTC No.	DTC Detection Conditions	Trouble Areas
P0100	MAF meter voltage less than 0.2 V, or more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM
P0102	MAF meter voltage less than 0.2 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM
P0103	MAF meter voltage more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM

HINT:
When any of these DTCs are set, check the air-flow rate by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD ll / DATA LIST / PRIMARY / MAF.

Mass Air Flow Rate (g/sec)	Malfunctions
Approximately 0.0	• Open in Mass Air Flow (MAF) meter power source circuit • Open or short in VG circuit
271.0 or more	• Open in EVG circuit

MONITOR DESCRIPTION

If there is a defect in the MAF meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the MAF meter and sets a DTC.
Example:
When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0100: MAF meter range check (Fluctuating) P0102: MAF meter range check (Low voltage) P0103: MAF meter range check (High voltage)
Required Sensors/Components (Main)	MAF meter

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (MASS AIR FLOW RATE)

(a) Connect an intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.
(e) Read the values displayed on the tester.

Result

Mass Air Flow Rate (g/sec)	Proceed To
0.0	A
271.0 or more	B
Between 1.0 and 270.0 (*1)	C

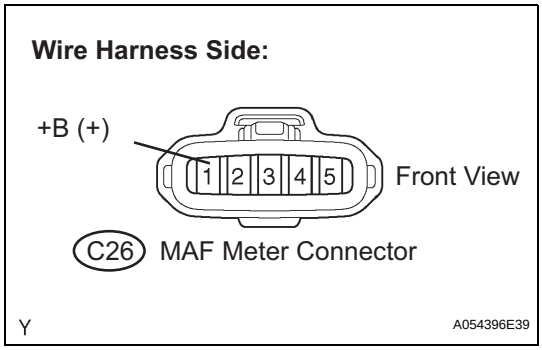
*1: The value must be changed when the throttle valve is open or closed with the engine running.

B → Go to step 6

C → CHECK FOR INTERMITTENT PROBLEMS

A

2 INSPECT MASS AIR FLOW METER (POWER SOURCE VOLTAGE)



(a) Disconnect the C26 Mass Air Flow (MAF) meter connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminal of the wire harness side connector and body ground.
Standard voltage

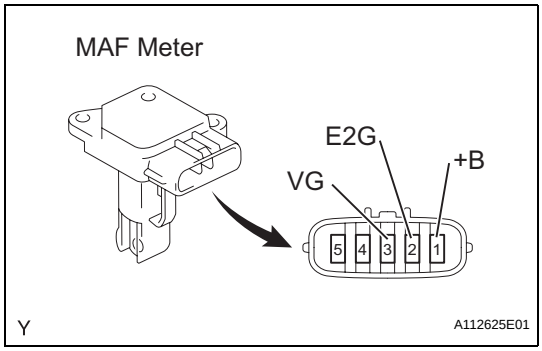
Tester Connections	Specified Conditions
+B (C26-1) - Body ground	11 to 14 V

(d) Reconnect the MAF meter connector.

NG → **Go to step 5**

OK

3 INSPECT MASS AIR FLOW METER (VG VOLTAGE)



(a) Output voltage inspection.
(1) Apply battery voltage across terminals +B and E2G.
(2) Connect the positive (+) tester prove to terminal VG, and negative (-) tester prove to terminal E2G.
(3) Check the voltage.
Standard voltage

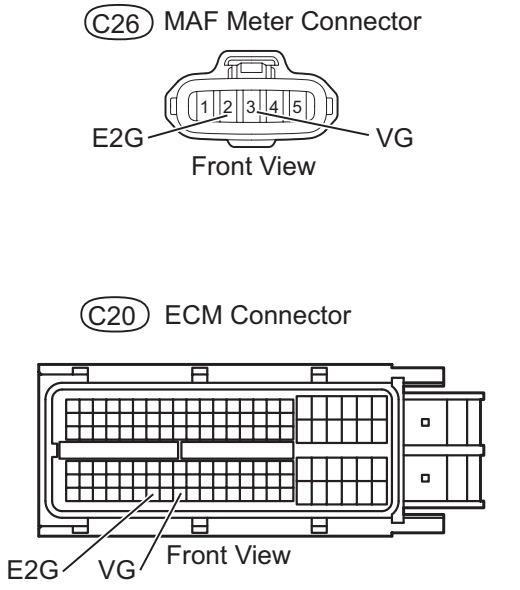
Tester Connections	Specified Conditions
VG (3) - E2G (2)	0.2 to 4.9 V

NG → **REPLACE MASS AIR FLOW METER**

OK

4	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

Wire Harness Side:



(a) Disconnect the C26 MAF meter connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
VG (C26-3) - VG (C20-118)	Below 1 Ω
E2G (C26-2) - E2G (C20-116)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
VG(C26-3) or VG (C20-118) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

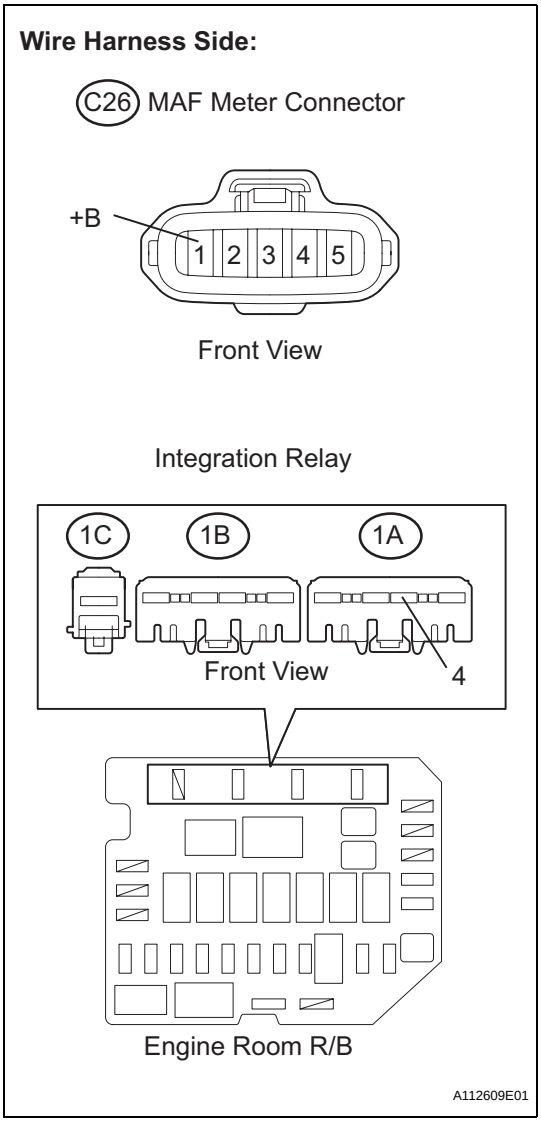
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

ES

5	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - INTEGRATION RELAY)



(a) Disconnect the C26 MAF meter connector.
(b) Remove the integration relay from the engine room Relay Block (R/B).
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
+B (C26-1) - 1A-4	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
+B (C26-1) or 1A-4 - Body ground	10 kΩ or higher

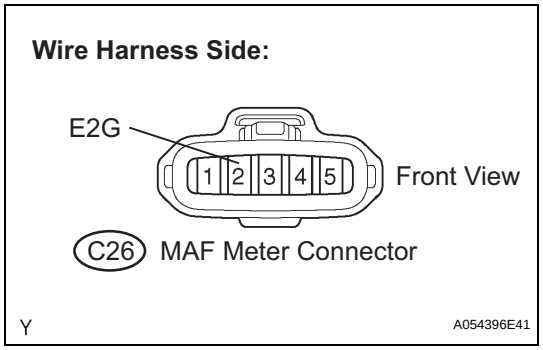
(d) Reconnect the MAF meter connector.
(e) Reinstall the integration relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

6 CHECK HARNESS AND CONNECTOR (SENSOR GROUND)



(a) Disconnect the C26 MAF meter connector.
(b) Check the resistance.
Standard resistance

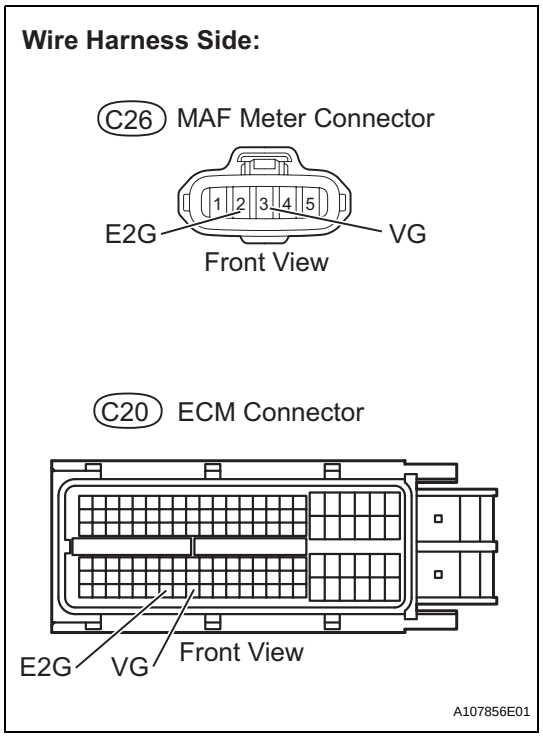
Tester Connections	Specified Conditions
E2G (C26-2) - Body ground	Below 1 Ω

(c) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER**

NG

7 CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C26 MAF meter connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
VG (C26-3) - VG (C20-118)	Below 1 Ω
E2G (C26-2) - E2G (C20-116)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
VG (C26-3) or VG (C20-118) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

ES

DTC	P0101	Mass Air Flow Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0100 (See page ES-80).

DTC No.	DTC Detection Conditions	Trouble Areas
P0101	Conditions (a), (b), (c), (d) and (e) continue for more than 10 seconds(2 trip detection logic): (a) Engine running (b) Engine coolant temperature 70°C (158°F) or higher (c) Throttle Position (TP) sensor voltage 0.24 V or more (d) Average engine load value ratio less than 0.80, or more than 1.23 (varies with estimated engine load) Average engine load value ratio = Average engine load based on MAF meter output / Average engine load estimated from driving conditions (e) Average air-fuel ratio less than -20 %, or more than 20 %	• Mass Air Flow (MAF) meter • Air induction system • PCV hose connections

ES

MONITOR DESCRIPTION

The MAF meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components of the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.
The ECM monitors the average engine load value ratio to check the MAF meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the MAF meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.
If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0101: Mass air flow meter rationality
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Crankshaft Position (CKP) sensor, Engine Coolant Temperature (ECT) sensor and Throttle Position (TP) sensor
Frequency of Operation	Continuous
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340 (CMP sensor)
Throttle position (TP sensor voltage)	0.24 V or more
Engine	Running
Battery voltage	10.5 V or more

Engine coolant temperature	70°C (158°F) or more
IAT sensor circuit	OK
ECT sensor circuit	OK
CKP sensor circuit	OK
TP sensor circuit	OK
Canister pressure sensor circuit	OK
EVAP leak detection pump	OK
EVAP vent valve	OK

TYPICAL MALFUNCTION THRESHOLDS

Both of following conditions 1 and 2 met	-
1. Averaged engine load value ratio	Less than 0.80, or more than 1.23 (varies with estimated engine load)
2. Averaged air-fuel ratio	Less than -20 %, or more than 20 %

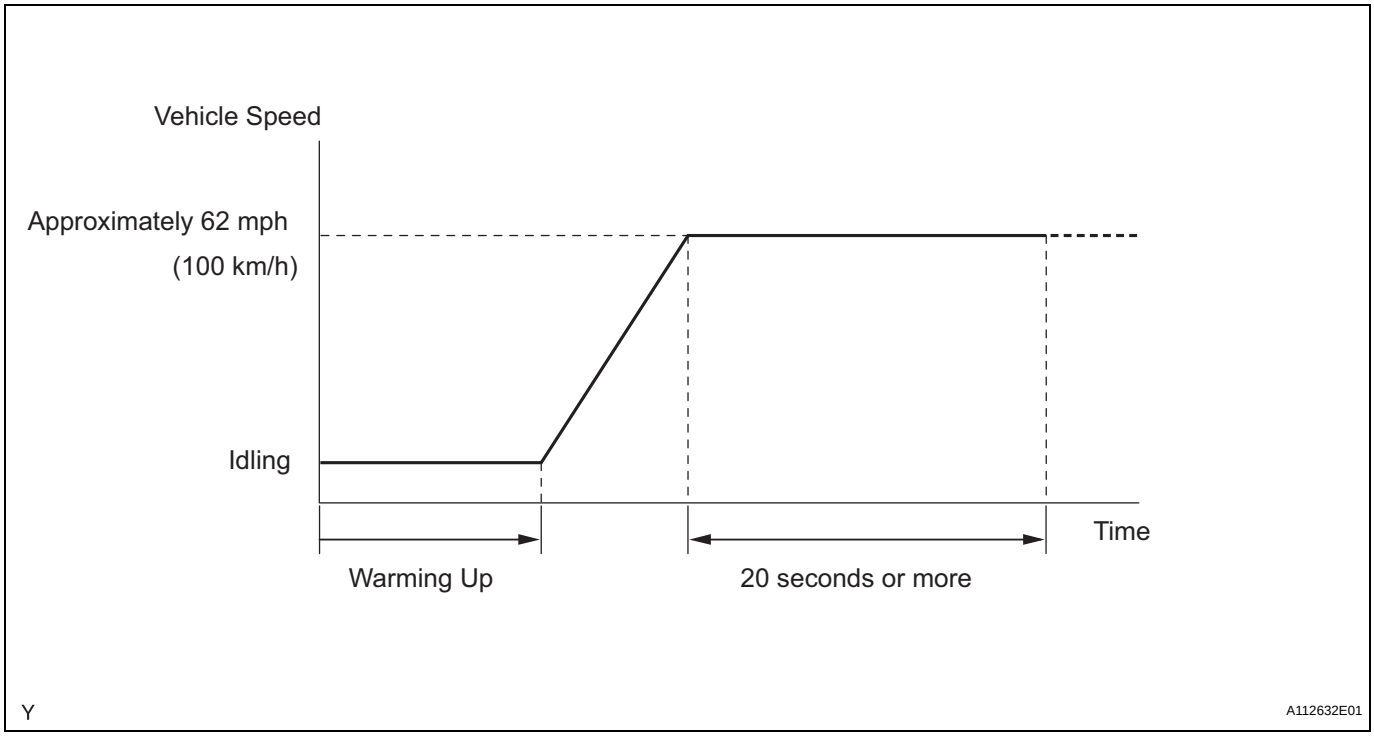
ES

WIRING DIAGRAM

Refer to DTC P0100 (See page ES-82).

CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the mass air flow performance monitor.



1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the tester ON.
4. Clear DTCs (See page ES-34).
5. Start the engine, and warm it up until the engine coolant temperature reaches 70°C (158°F) or higher.
6. Drive the vehicle at approximately 62 mph (100 km/h) for 20 seconds or more.
7. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0101)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0101	A
P0101 and other DTCs	B

HINT:
If any DTCs other than P0101 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

3 CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

REPLACE MASS AIR FLOW METER

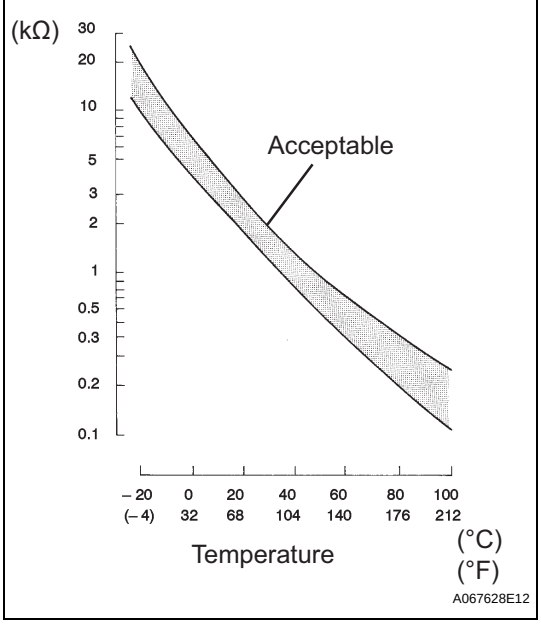
DTC	P0110	Intake Air Temperature Circuit Malfunction

DTC	P0112	Intake Air Temperature Circuit Low Input

DTC	P0113	Intake Air Temperature Circuit High Input

DESCRIPTION

Fig. 1



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT is low, the resistance of the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (see Fig. 1).

The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.

Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When any of DTCs P0110, P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the IAT is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	Proceed To	DTC Detection Conditions	Trouble Areas
P0110	Step 1	Open or short in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0112	Step 4	Short in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0113	Step 2	Open in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM

HINT:
When any of these DTCs are set, check the IAT by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the IAT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the IAT sensor and sets a DTC.

ES

Example:
If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the IAT sensor circuit, and sets DTC P0113. Conversely, if the output voltage is less than 0.18 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.
If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0110: IAT sensor range check (Fluctuating) P0112: IAT sensor range check (Low voltage) P0113: IAT sensor range check (High voltage)

(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(e) Read the value displayed on the tester.
Standard:
Same as actual Intake Air Temperature (IAT).

Result

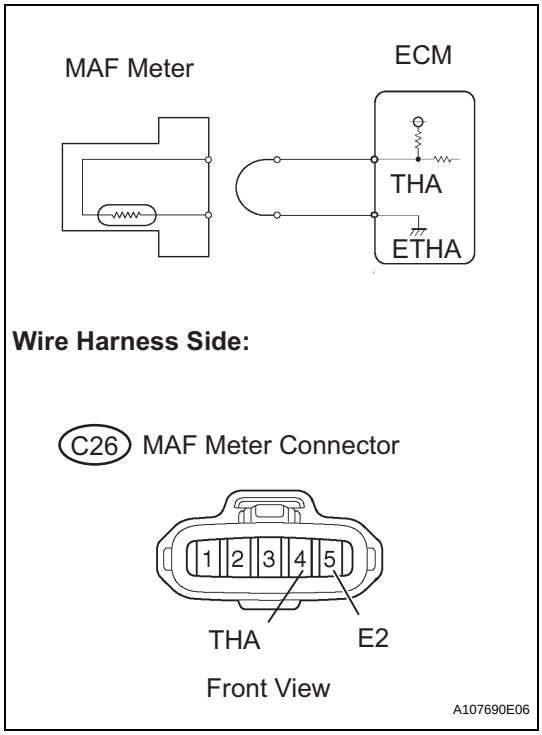
Temperature Displayed	Proceed To
-40 °C (-40°F)	A
140°C (284°F) or higher	B
Same as actual IAT	C

HINT:
- If there is an open circuit, the intelligent tester indicates -40°C (-40°F).
- If there is a short circuit, the intelligent tester indicates 140°C (284°F) or higher.

B	Go to step 4
C	CHECK FOR INTERMITTENT PROBLEMS

A

2	READ VALUE USING INTELLIGENT TESTER (CHECK FOR OPEN IN WIRE HARNESS)

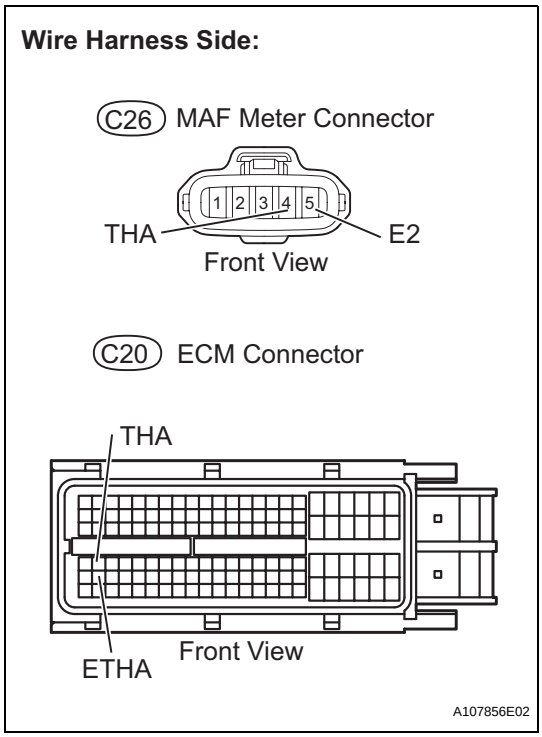


(a) Disconnect the C26 Mass Air Flow (MAF) meter connector.
(b) Connect terminals THA and E2 of the MAF meter wire harness side connector.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(g) Read the value displayed on the tester.
Standard:
140°C (284°F) or higher
(h) Reconnect the MAF meter connector.

OK → **CONFIRM GOOD CONNECTION TO SENSOR. IF OK, REPLACE MASS AIR FLOW METER**

NG

3	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C26 MAF meter connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance

Tester Connections	Specified Conditions
THA (C26-4) - THA (C20-65)	Below 1 Ω
E2 (C26-5) - ETHA (C20-88)	

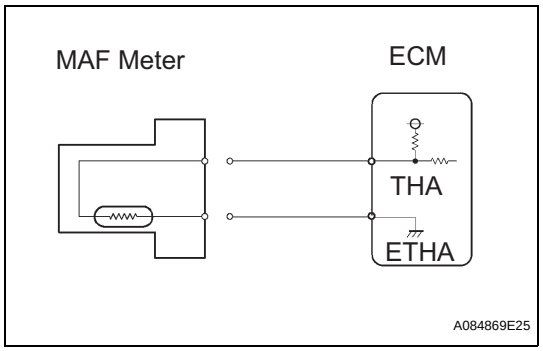
(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CONFIRM GOOD CONNECTION TO ECM. IF OK, REPLACE ECM

4 READ VALUE USING INTELLIGENT TESTER (CHECK FOR SHORT IN WIRE HARNESS)

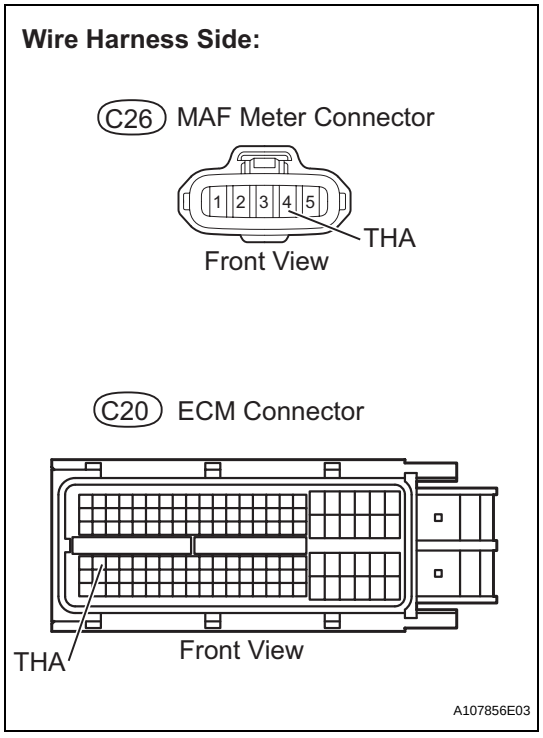


(a) Disconnect the C26 MAF meter connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the tester ON.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(f) Read the value displayed on the tester.
Standard:
-40°C (-40°F)
(g) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER**

NG

5 CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C26 MAF meter connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance

Tester Connections	Specified Conditions
THA (C26-4) or THA (C20-65) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

ES

DTC	P0115	Engine Coolant Temperature Circuit Malfunction

DTC	P0117	Engine Coolant Temperature Circuit Low Input

DTC	P0118	Engine Coolant Temperature Circuit High Input

DESCRIPTION

A thermistor is built into the Engine Coolant Temperature (ECT) sensor, of which the resistance value varies according to the ECT.

ES

The structure of the sensor and its connection to the ECM are the same as those of the Intake Air Temperature (IAT) sensor.

HINT:

When any of DTCs P0115, P0117 and P0118 are set, the ECM enters fail-safe mode. During fail-safe mode, the ECT is estimated to be 80°C (176°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	Proceed To	DTC Detection Conditions	Trouble Areas
P0115	Step 1	Open or short in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in ECT sensor circuit • ECT sensor • ECM
P0117	Step 4	Short in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in ECT sensor • ECT sensor • ECM
P0118	Step 2	Open in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in ECT sensor circuit • ECT sensor • ECM

HINT:

When any of these DTCs are set, check the ECT by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The Engine Coolant Temperature (ECT) sensor is used to monitor the ECT. The ECT sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature is low, the resistance in the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the ECT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the ECT sensor and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the ECT sensor circuit, and sets DTC P0118. Conversely, if the voltage output is less than 0.14 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0115: ECT sensor range check (Fluctuating) P0117: ECT sensor range check (Low voltage) P0118: ECT sensor range check (High voltage)
Required Sensors/Components (Main)	ECT sensor

DTC	P0116	Engine Coolant Temperature Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0115 (See page ES-95).

DTC No.	DTC Detection Conditions	Trouble Areas
P0116	When either of following conditions met (2 trip detection logic): • When cold engine started and engine warmed up, Engine Coolant Temperature (ECT) sensor value does not change. • After warmed up engine started, if ECT sensor value does not change when engine stopped and then next cold engine start performed, it determined that malfunction has occurred.	• Thermostat • ECT sensor

ES

MONITOR DESCRIPTION

Engine coolant temperature (ECT) sensor cold start monitor

When a cold engine start is performed and then the engine is warmed up, if the ECT sensor value does not change, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

ECT sensor soak monitor

After a warmed up engine is started, if the ECT sensor value does not change when the engine is stopped and then the next cold engine start is performed, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature (ECT) sensor cold start monitor P0116: ECT sensor soak monitor
Required Sensors/Components (Main)	ECT sensor
Required Sensors/Components (Related)	None
Frequency of Operation	Once per driving cycle
Duration	180 seconds or more
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

ECT Sensor cold start monitor:

Monitor runs whenever following DTCs not present	P0100 to P0103: Mass Air Flow (MAF) meter P0110 to P0113: Intake Air Temperature (IAT) sensor
Battery voltage	10.5 V or more
Time after engine start	1 second or more
ECT at engine start	Less than 60°C (140°F)
IAT sensor circuit	OK
Soak time	5 hours or more
Accumulated MAF	498.77 g or more
Engine	Running
Fuel cut	OFF
Difference between ECT at engine start and IAT	Less than 40°C (72°F)

ECT Sensor soak monitor:

Monitor runs whenever following DTCs not present	P0100 to P0103: MAF meter P0110 to P0113: IAT sensor
Battery voltage	10.5 V or more
Engine	Running
Soak time	5 hours or more
Either (a) or (b) condition met	-
(a) ECT	60°C (140°F) or more
(b) Accumulated MAF	862.59 g or more

TYPICAL MALFUNCTION THRESHOLDS

ECT Sensor cold start monitor:

ECT sensor value change	Less than 5°C (9°F)

ECT Sensor soak monitor:

Difference between current ECT sensor value and previous ECT sensor value when engine stopped	Less than 5°C (9°F)

COMPONENT OPERATING RANGE

ECT	ECT sensor value changes in accordance with actual ECT

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the ECT sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)**

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTC.

Result

Display (DTC Output)	Proceed To
P0116	A
P0116 and other DTCs	B

B → GO TO DTC CHART

A

2	**INSPECT THERMOSTAT**

(a) Remove the thermostat (See page CO-18).

(b) Check the valve opening temperature of the thermostat.
Standard:
80°C to 84°C (176°F to 183°F)
HINT:
In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat (See page CO-19).

NG → **REPLACE THERMOSTAT**

OK

ES

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0120	Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction
DTC	P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input
DTC	P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input
DTC	P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit
DTC	P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input
DTC	P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input
DTC	P2135	Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation

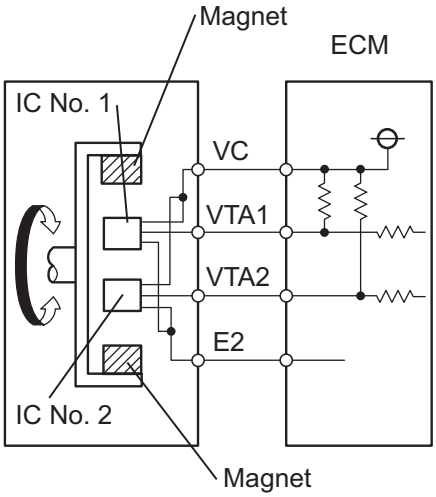
HINT:
These DTCs relate to the Throttle Position (TP) sensor.

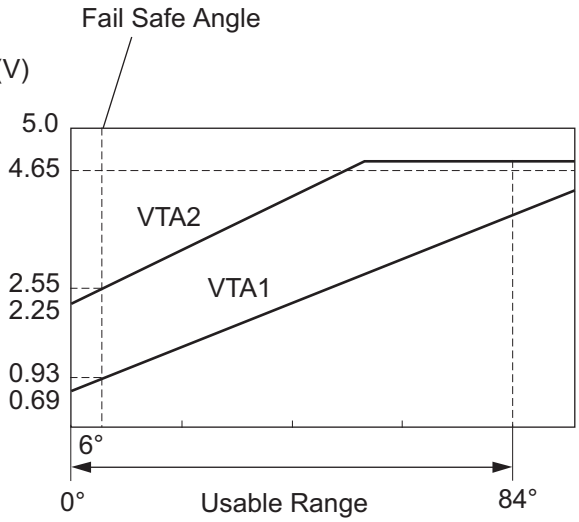
DESCRIPTION

The TP sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds.
The TP sensor has two sensor circuits which each transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.
As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power increase correction and fuel-cut control.

ES

Throttle Position Sensor





Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as a percentage.

Between 10 % and 22 %: Throttle valve fully closed

Between 66 % and 98 %: Throttle valve fully open

Approximately 19 %: Fail-safe angle (6°)

Y

A122559E02

DTC No.	DTC Detection Conditions	Trouble Areas
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• Throttle Position (TP) sensor (built into throttle body) • ECM
P0122	Output voltage of VTA1 0.2 V or less for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123	Output voltage of VTA1 4.535 V or more for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA1 circuit • Open in E2 circuit • Short between VC and VTA1 circuits • ECM
P0220	Output voltage of VTA2 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • ECM

DTC No.	DTC Detection Conditions	Trouble Areas
P0222	Output voltage of VTA2 1.75 V or less for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM
P0223	Output voltage of VTA2 4.8 V or more, and VTA1 between 0.2 V and 2.02 V for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA2 circuit • Open in E2 circuit • Short between VC and VTA2 circuits • ECM
P2135	Either condition (a) or (b) met (1 trip detection logic): (a) Difference between output voltages of VTA1 and VTA2 0.02 V or less for 0.5 seconds or more (b) Output voltage of VTA1 0.2 V or less, and VTA2 1.75 V or less, for 0.4 seconds or more	• Short between VTA1 and VTA2 circuits • TP sensor (built into throttle body) • ECM

ES

HINT:
- When any of these DTCs are set, check the throttle valve opening angle by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD ll / DATA LIST / ETCS / THROTTLE POS #1 AND THROTTLE POS #2.
- THROTTLE POS #1 denotes the VTA1 signal, and THROTTLE POS #2 denotes the VTA2 signal.

Reference (Normal Condition)

Tester Display	Accelerator Pedal Fully Released	Accelerator Pedal Fully Depressed
THROTTLE POS #1	**0.5 to 1.1 V**	**3.3 to 4.9 V**
THROTTLE POS #2	**2.1 to 3.1 V**	**4.6 to 5.0 V**

MONITOR DESCRIPTION

The ECM uses the Throttle Position (TP) sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the TP sensor.
- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor, and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

TYPICAL MALFUNCTION THRESHOLDS

P0120:

VTA1 voltage	0.2 V or less, or 4.535 V or more

ES

P0122:

VTA1 voltage	0.2 V or less

P0123:

VTA1 voltage	4.535 V or more

P0220:

VTA2 voltage	1.75 V or less, or 4.8 V or more

P0222:

VTA2 voltage	1.75 V or less

P0223:

VTA2 voltage when VTA1 0.2 V or more, and 2.02 V or less	4.8 V or more

P2135 Case 1:

Difference between VTA1 and VTA2 voltages	0.02 V or less

P2135 Case 2:

VTA1 voltage	0.2 V or less
VTA2 voltage	1.75 V or less

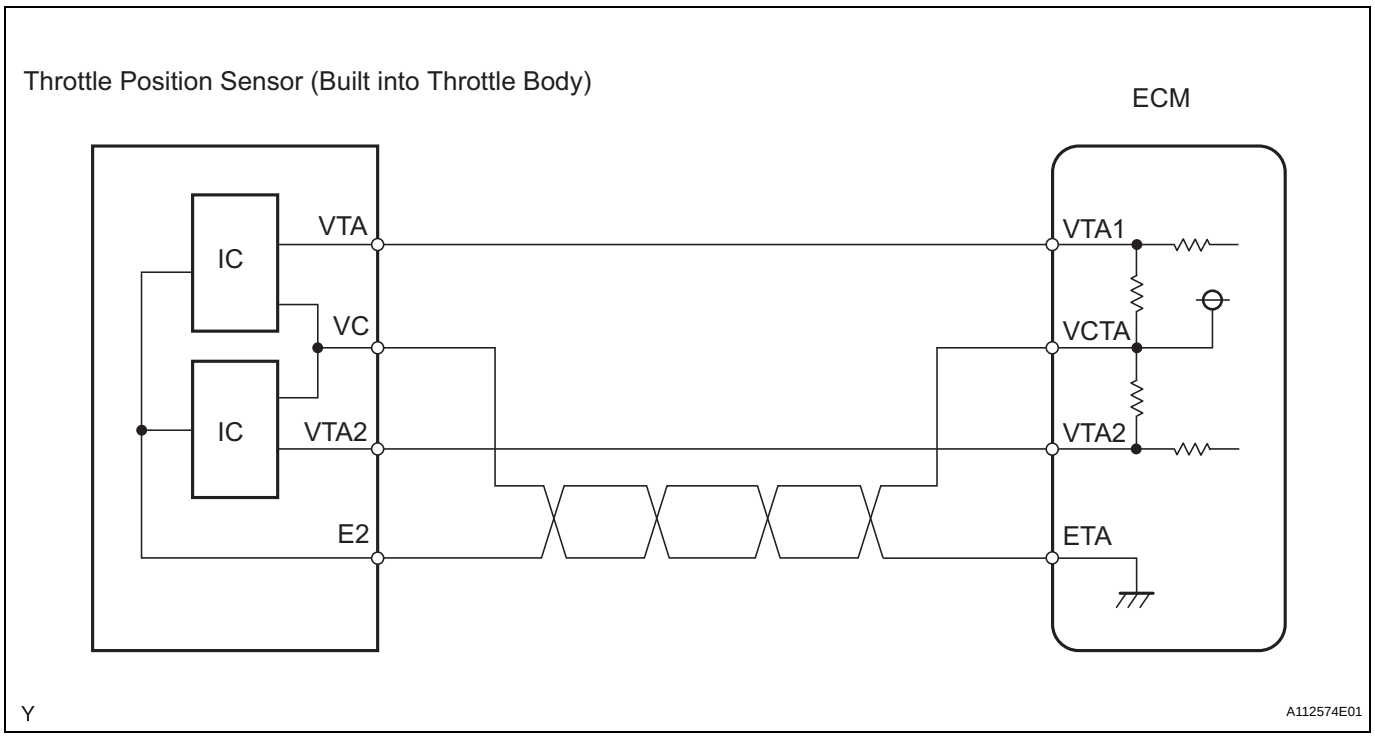
COMPONENT OPERATING RANGE

VTA1 voltage	0.69 to 4.05 V
VTA2 voltage	2.25 to 4.8 V

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (THROTTLE POS #1 AND THROTTLE POS #2)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1 and THROTTLE POS #2.
(d) Check the values displayed on the tester.

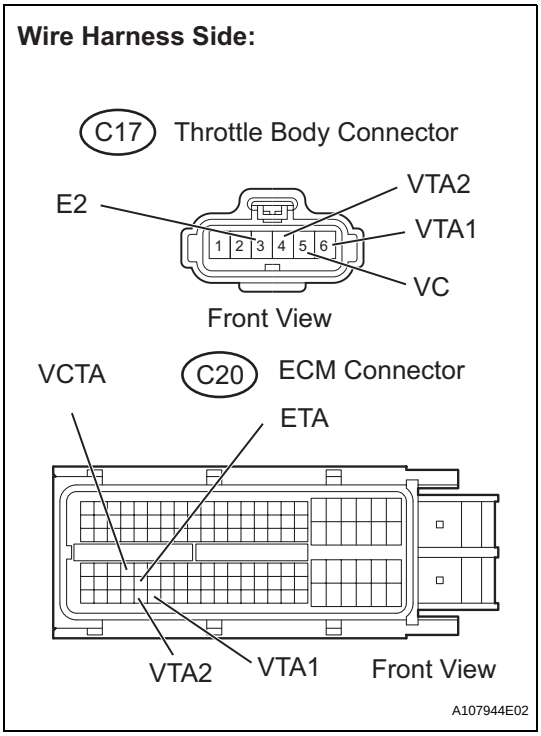
2 CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)



(a) Disconnect the C17 throttle body connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
VC (C17-5) - VCTA (C20-67)	Below 1 Ω
VTA (C17-6) - VTA1 (C20-115)	
VTA2 (C17-4) - VTA2 (C20-114)	
E2 (C17-3) - ETA (C20-91)	

Standard resistance (Check for short)

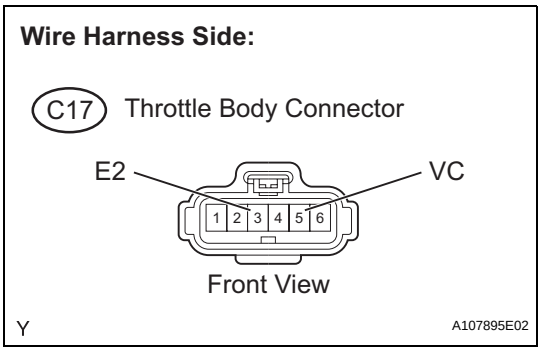
Tester Connections	Specified Conditions
VC (C17-5) or VCTA (C20-67) - Body ground	10 kΩ or higher
VTA (C17-6) or VTA1 (C20-115) - Body ground	
VTA2 (C17-4) or VTA2 (C20-114) - Body ground	

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 INSPECT ECM (VC VOLTAGE)



(a) Disconnect the C17 throttle body connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the throttle body connector.

Standard voltage

Tester Connections	Specified Conditions
VC (C17-5) - E2 (C17-3)	4.5 to 5.5 V

(d) Reconnect the throttle body connector.

NG → REPLACE ECM

OK

4	REPLACE THROTTLE BODY ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds or more.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read DTCs.

ES

Result

REPLACE ECM

DTC	P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem

HINT:
This DTC relates to the Throttle Position (TP) sensor.

DESCRIPTION

Refer to DTC P0120 (See page ES-104).

DTC No.	DTC Detection Conditions	Trouble Areas
P0121	Difference between VTA1 and VTA2 voltages less than 0.8 V, or more than 1.6 V for 2 seconds (1 trip detection logic)	TP sensor (built into throttle body)

MONITOR DESCRIPTION

The ECM uses the TP sensor to monitor the throttle valve opening angle.
This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM performs several checks to confirm the proper operation of the TP sensor and VTA1.
For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal operating range, the ECM interprets this as a malfunction of the TP sensor. The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0121: TP sensor rationality
Required Sensors/Components (Main)	TP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 2 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0120 - P0223, P2135 (TP sensor)
Either of following conditions A or B set	-
A. Ignition switch	ON
B. Electric throttle motor power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference in voltage between VAT1 and VTA2 TP sensor 1 - [TP sensor 2 x 0.8 (corrected by learning value)]	Less than 0.8 V, or more than 1.6 V

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0121)

REPLACE THROTTLE BODY ASSEMBLY

DTC	P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control

DESCRIPTION

Refer to DTC P0115 (See page ES-95).

DTC No.	DTC Detection Conditions	Trouble Areas
P0125	Engine Coolant Temperature (ECT) does not reach closed-loop enabling temperature for 20 minutes (this period varies with engine start ECT) (2 trip detection logic)	• ECT sensor • Cooling system • Thermostat

ES

MONITOR DESCRIPTION

The resistance of the ECT sensor varies in proportion to the actual ECT. The ECT supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal voltage output varies according to the changing resistance of the sensor. After the engine is started, the ECT is monitored through this signal. If the ECT sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.
Example:
The ECT is 0°C (32°F) at engine start. After about 1 minute running time, the ECT sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air-fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Thermostat, cooling system
Required Sensors/Components (Related)	Engine coolant temperature sensor and mass air flow meter
Frequency of Operation	Once per driving cycle
Duration	62 seconds: Engine coolant temperature at engine start -3.3°C (26°F) or more 112 seconds: Engine coolant temperature at engine start -14.5° to -3.3°C (5.9° to 26°F) 20 minutes: Engine coolant temperature at engine start less than -14.5°C (5.9°F)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor)
Thermostat fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	62 seconds or more: Engine coolant temperature at engine start -3.3°C (26°F) or more 112 seconds or more: Engine coolant temperature at engine start -14.5° to -3.3°C (5.9° to 26°F) 20 minutes or more: Engine coolant temperature at engine start less than -14.5°C (5.9°F)

WIRING DIAGRAM

Refer to DTC P0115 (See page ES-96).

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the Engine Coolant Temperature (ECT) sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)

(a) Connect an intelligent tester to the DLC3.

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)

HINT:
This DTC relates to the thermostat.

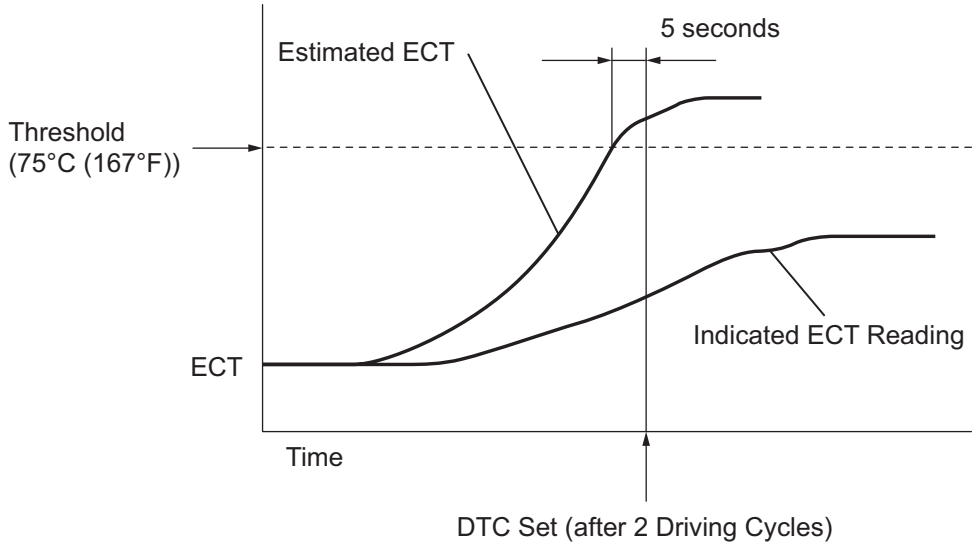
DESCRIPTION

This DTC is set when the Engine Coolant Temperature (ECT) does not reach 75°C (167°F) despite sufficient engine warm-up time having elapsed.

DTC No.	DTC Detection Conditions	Trouble Areas
P0128	Conditions (a), (b) and (c) met for 5 seconds (2 rip detection logic): (a) Cold start (b) Engine warmed up (c) ECT less than 75°C (167°F)	• Thermostat • Cooling system • ECT sensor • ECM

ES

MONITOR DESCRIPTION



Y A121605E02

The ECM estimates the ECT based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual ECT. When the estimated ECT reaches 75°C (167°F), the ECM checks the actual ECT. If the actual ECT is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat
Required Sensors/Components (Main)	Thermostat

Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, Intake Air Temperature (IAT) sensor, Vehicle speed sensor

REPLACE ECM

ES

DTC	P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)

DTC	P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)

DTC	P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)

ES

HINT:
Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.

DESCRIPTION

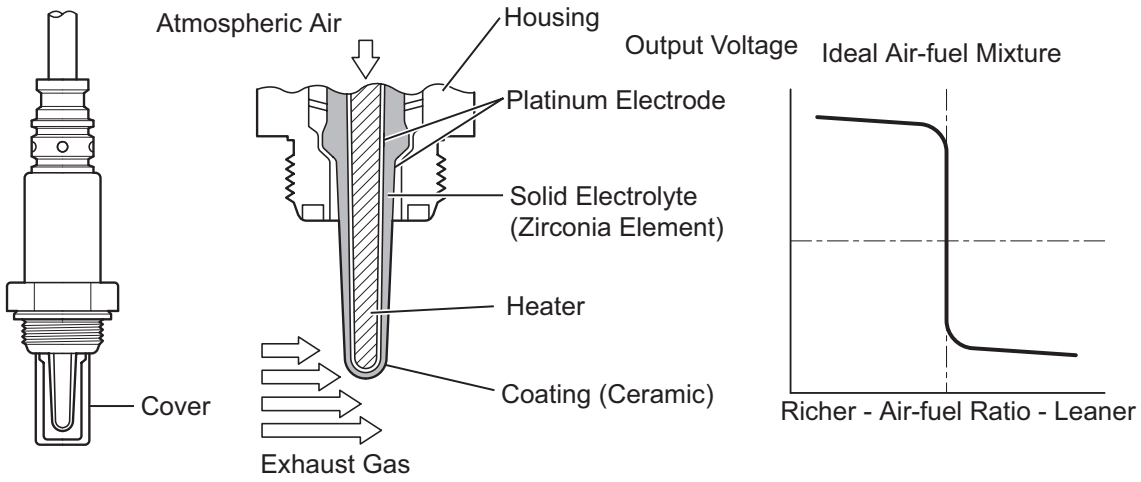
In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a TWC is used. For the most efficient use of the TWC, the air-fuel ratio must be precisely controlled so that it is always close to the stoichiometric air-fuel level. For the purpose of helping the ECM to deliver accurate air-fuel ratio control, a Heated Oxygen (HO2) sensor is used.

The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).

When the air-fuel ratio becomes lean, the oxygen concentration in the exhaust gas is rich. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is lean (low voltage, i.e. less than 0.45 V).

Conversely, when the air-fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air-fuel ratio is close to the stoichiometric level.

The ECM uses the supplementary information from the HO2 sensor to determine whether the air-fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air-fuel ratio control.



DTC No.	DTC Detection Conditions	Trouble Areas
P0136	• Abnormal voltage output: During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic): (a) Heated Oxygen (HO2) sensor voltage does not decrease to less than 0.21 V (b) HO2 sensor voltage does not increase to more than 0.59 V • Low impedance*: Sensor impedance less than 5 Ωfor more than 30 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open or short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Air-fuel Ratio (A/F) sensor (sensor 1) • Integration relay (EFI relay) • Gas leakage from exhaust system
P0137	• Low voltage (open): During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic): (a) HO2 sensor voltage output less than 0.21 V (b) Target air-fuel ratio rich • High impedance*: Sensor impedance 15 kΩ or more for more than 90 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Integration relay (EFI relay) • Gas leakage from exhaust system
P0138	• High voltage (short): During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic): (a) HO2 sensor voltage output 0.59 V or more (b) Target air-fuel ratio lean • Extremely high voltage (short)*: HO2 sensor voltage output exceeds 1.2 V for more than 10 seconds (2 trip detection logic)	• Short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • ECM internal circuit malfunction

*: Only for vehicles except those with Mexico specifications.

MONITOR DESCRIPTION

Active Air-Fuel Ratio Control

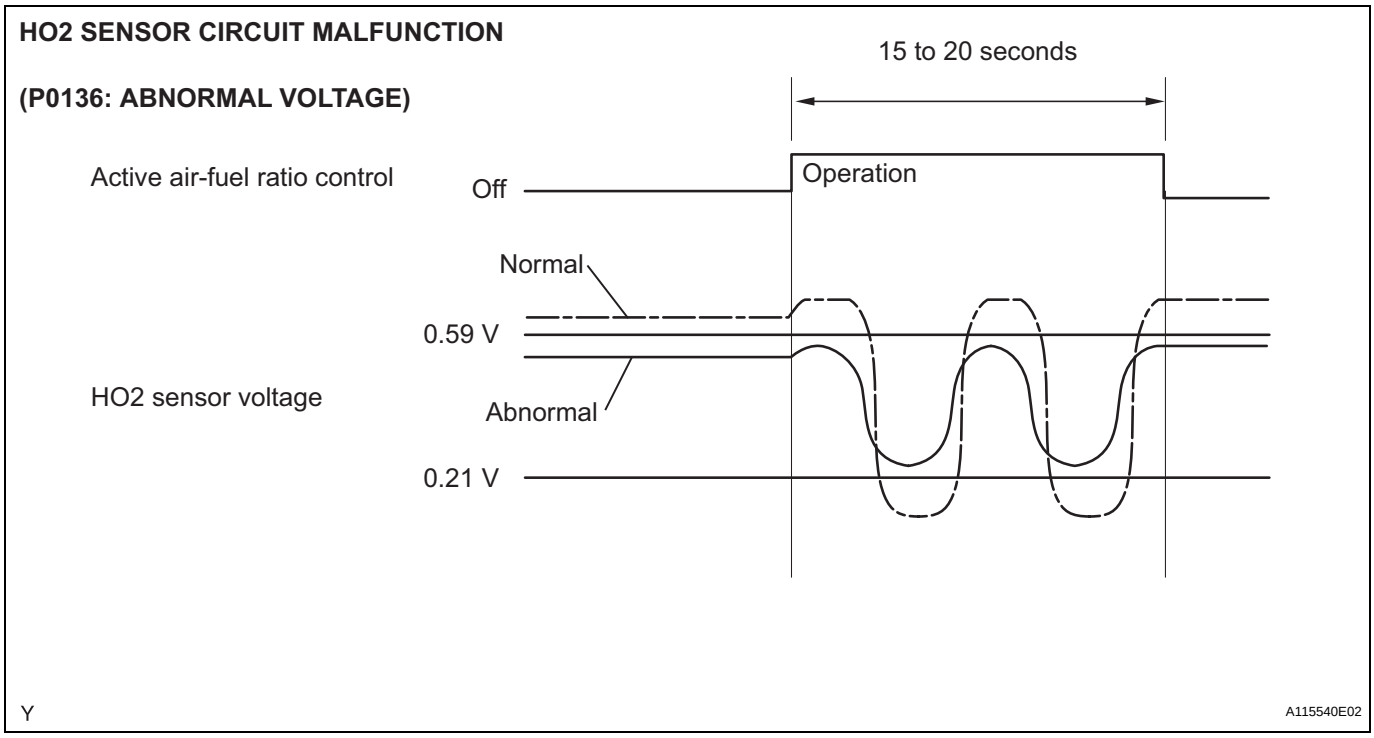
The ECM usually performs air-fuel ratio feedback control so that the Air-Fuel Ratio (A/F) sensor output indicates a near stoichiometric air-fuel level. This vehicle includes active air-fuel ratio control in addition to regular air-fuel ratio control. The ECM performs active air-fuel ratio control to detect any deterioration in the Three-Way Catalytic Converter (TWC) and Heated Oxygen (HO2) sensor malfunctions (refer to the diagram below).

Active air-fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, one of the following DTCs is set: DTC P0136 (abnormal voltage output), P0137 (open circuit) and P0138 (short circuit).

Abnormal Voltage Output of HO2 Sensor (DTC P0136)

ES

While the ECM is performing active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the HO2 sensor voltage does not decrease to less than 0.21 V and does not increase to more than 0.59 V during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTC P0136.



Open or Short in Heated Oxygen (HO2) Sensor Circuit (DTC P0137 or P0138)

During active air-fuel ratio control, the ECM calculates the Oxygen Storage Capacity (OSC)* of the Three-Way Catalytic Converter (TWC) by forcibly regulating the air-fuel ratio to become rich or lean. If the HO2 sensor has an open or short, or the voltage output of the sensor decreases significantly, the OSC indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air-fuel ratio to become rich or lean, the HO2 sensor output does not change.

While performing active air-fuel ratio control, when the target air-fuel ratio is rich and the HO2 sensor voltage output is 0.21 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137. When the target air-fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138.

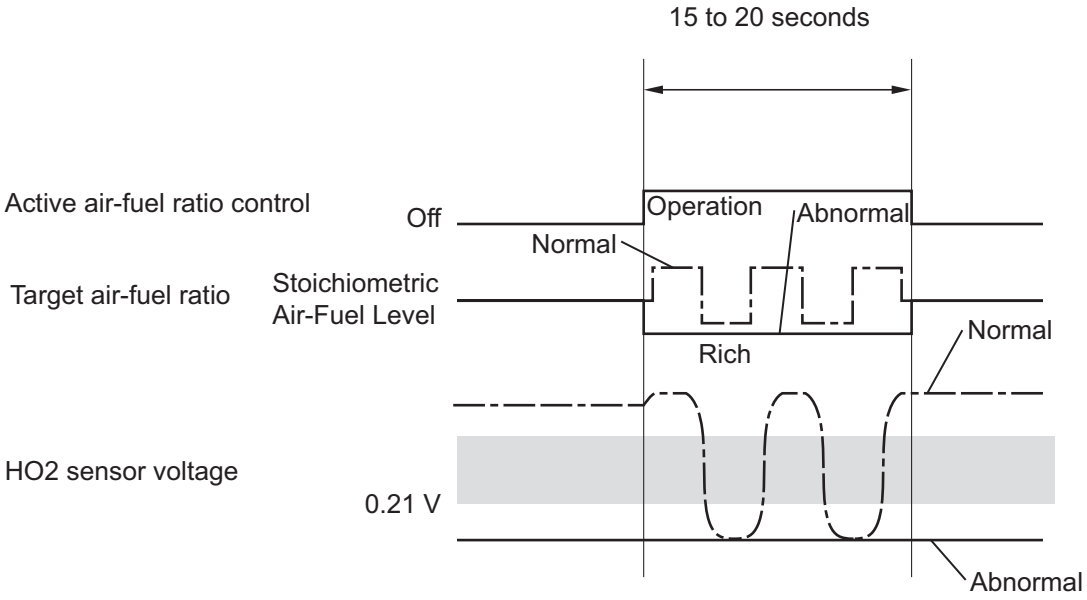
HINT:

DTC P0138 is also set if the HO2 sensor voltage output is more than 1.2 V for 10 seconds or more.

*: The TWC has the capability to store oxygen. The OSC and the emission purification capacity of the TWC are mutually related. The ECM determines whether the catalyst has deteriorated, based on the calculated OSC value (See page ES-180).

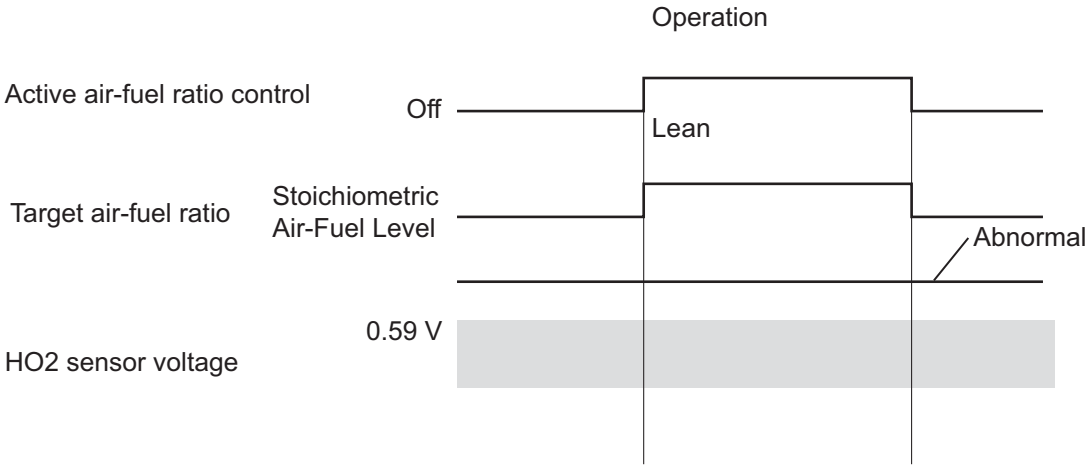
HO2 SENSOR CIRCUIT LOW VOLTAGE

(P0137: OPEN)



HO2 SENSOR CIRCUIT HIGH VOLTAGE

(P0138: SHORT)

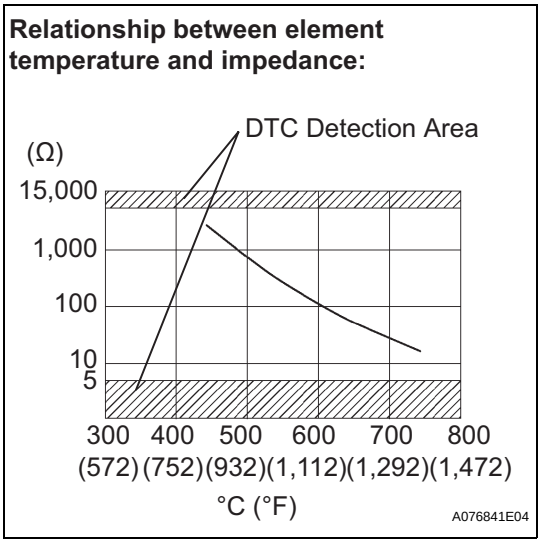


Y

A115541E02

ES

High or Low Impedance of Heated Oxygen (HO2) Sensor (DTC P0136 or P0137)



During normal air-fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variations in the HO2 sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.

*: The effective resistance in an alternating current electrical circuit.

HINT:

- The impedance cannot be measured using an ohmmeter.
- DTC P0136 indicates the deterioration of the HO2 sensor. The ECM sets this DTC by calculating the impedance of the sensor when the typical enabling conditions are satisfied (2 driving cycle).
- DTC P0137 indicates an open or short circuit in the HO2 sensor (2 driving cycle). The ECM sets this DTC when the impedance of the sensor exceeds the threshold 15 kΩ.

MONITOR STRATEGY

ES

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output, High Voltage and Low Voltage):

Active air-fuel ratio control	Executing
Active air-fuel ratio control begins when all of following conditions met:	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Fuel cut	OFF
Engine load	10 to 80 %
Shift position	4th or 5th (M/T) 3rd or 4th (A/T)

Heated Oxygen Sensor Impedance (Low):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	Less than 700°C (1,292°F)
ECM monitor	Completed
DTC P0606	Not set

Heated Oxygen Sensor Impedance (High):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	450°C (842°F) or more
ECM monitor	Completed
DTC P0606	Not set

Heated Oxygen Sensor Output Voltage (Extremely High):

Battery voltage	11 V or more
Time after engine start	2 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output):

Either of following conditions met:	1 or 2
1. All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	0.21 to 0.59 V
(c) OSC (Oxygen Storage Capacity of Catalyst)	1.7 g or more
2. All of following conditions (d), (e) and (f) met	-

(d) Commanded air-fuel ratio	14.9 or more
(e) Rear HO2 sensor voltage	0.21 to 0.59 V
(f) OSC	1.7 g or more

Heated Oxygen Sensor Output Voltage (Low):

All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	Less than 0.21 V
(c) OSC	1.7 g or more

Heated Oxygen Sensor Output Voltage (High):

All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.9 or more
(b) Rear HO2 sensor voltage	More than 0.59 V
(c) OSC	1.7 g or more

Heated Oxygen Sensor Impedance (Low):

Duration of following condition met	30 seconds or more
Heated oxygen sensor impedance	Less than 5 Ω

Heated Oxygen Sensor Impedance (High):

Duration of following condition met	90 seconds or more
Heated oxygen sensor impedance	15 kΩ or more

Heated Oxygen Sensor Output Voltage (Extremely High):

Duration of following condition met	10 seconds or more
Heated oxygen sensor voltage	1.2 V or more

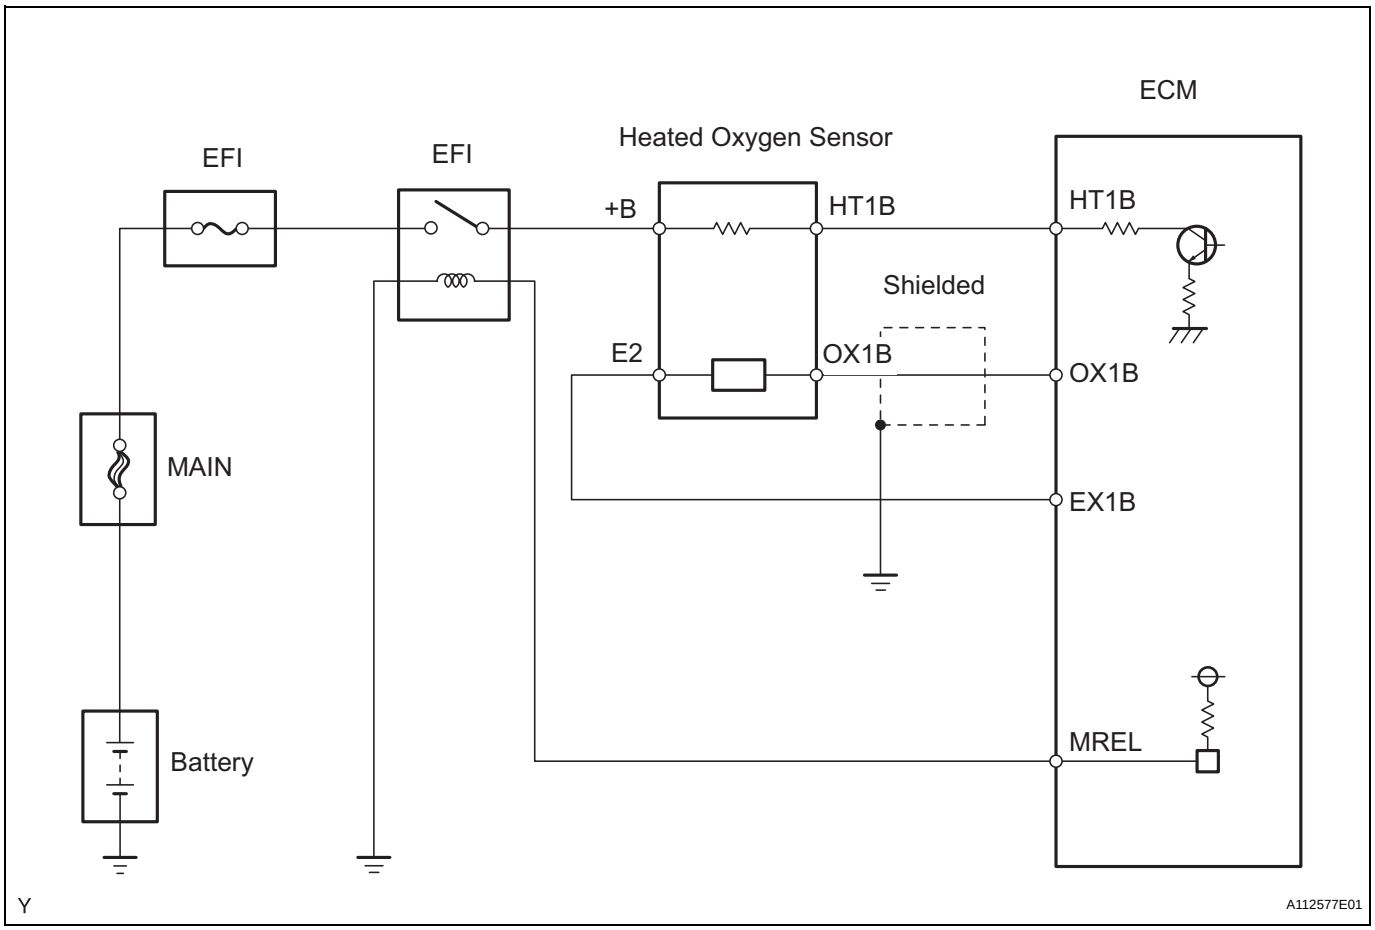
COMPONENT OPERATING RANGE

Duration of following condition met	30 seconds or more
Heated oxygen sensor voltage	Varies between 0.1 and 0.9 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

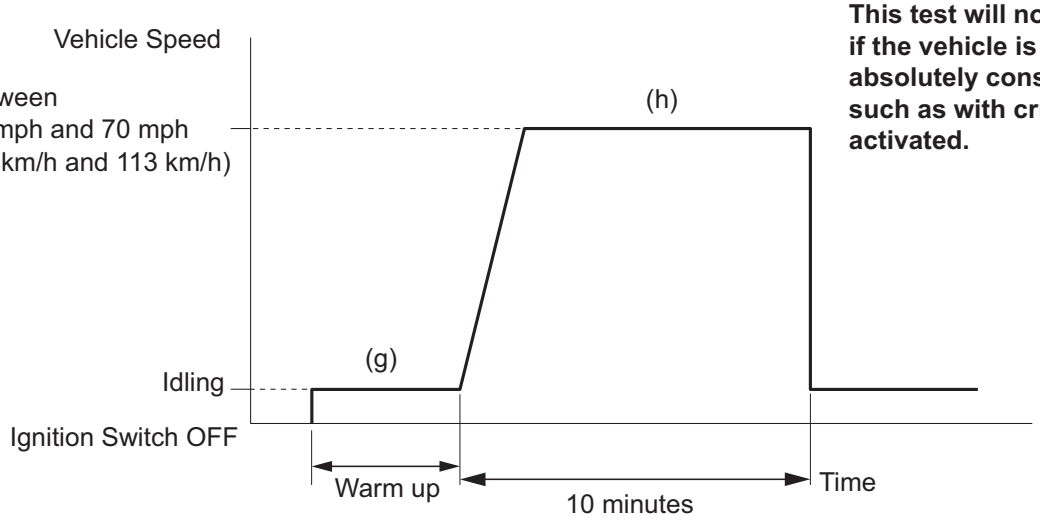
WIRING DIAGRAM



CONFIRMATION DRIVING PATTERN

HINT:

- This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.
- Performing this confirmation pattern will activate the Heated Oxygen (HO2) sensor monitor. (The catalyst monitor is performed simultaneously.) This is very useful for verifying the completion of a repair.

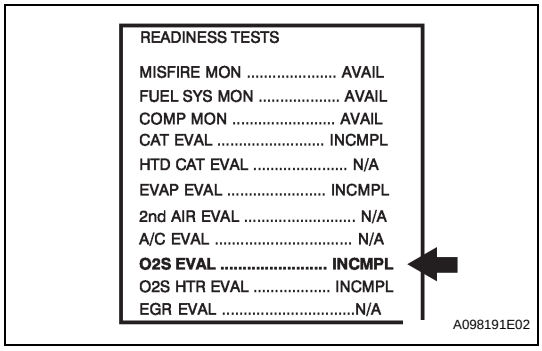


NOTICE:
This test will not be completed if the vehicle is driven at absolutely constant speed such as with cruise control activated.

(Note: Even if vehicle stops during driving pattern, test can be resumed)

P

A115372E13



A098191E02

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (where set) (See page ES-34).
(e) Select the following menu items: DIAGNOSIS / CARB OBD II / READINESS TESTS.
(f) Check that O2S EVAL is INCMPL (incomplete).
(g) Start the engine and warm it up.
(h) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.
(i) Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as the O2S EVAL monitor operates.
(j) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.
HINT:
If O2S EVAL does not change to COMPL, and any pending DTCs fail to set, extend the driving time.

INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using an intelligent tester.

(a) Connect an intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

ES

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.
HINT:

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- If the OX1B wire from the ECM connector is short-circuited to the +B wire, DTC P0138 will be set.

ES

1	READ OUTPUT DTC

(a) Connect an intelligent tester to the DLC3.

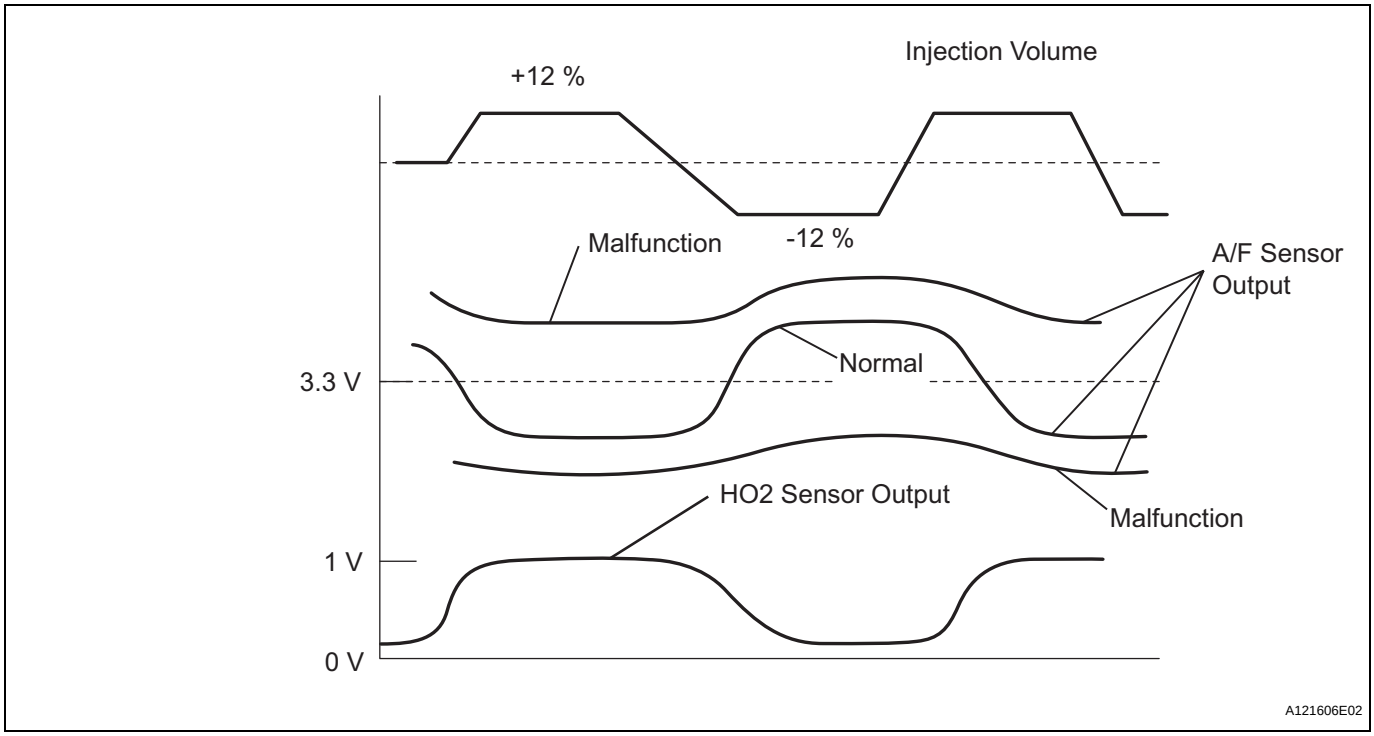
13	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (INJECTION VOLUME)



(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INJ VOL.
(e) Change the fuel injection volume using the tester, monitoring the voltage output of Air-Fuel Ratio (A/F) and HO2 sensors displayed on the tester.

HINT:

- Change the fuel injection volume within the range of -12 % and +12 %. The injection volume can be changed in 1 % graduations within the range.
- The A/F sensor is displayed as AFS B1 S1, and the HO2 sensor is displayed as O2S B1 S2, on intelligent testers.

ES

Result

Tester Display (Sensor)	Voltage Variations	Proceed To
AFS B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:
A normal HO2 sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the A/F sensor voltage remains at either less or more than 3.3 V despite the HO2 sensor indicating a normal reaction, the A/F sensor is malfunctioning.

REPLACE HEATED OXYGEN SENSOR

DTC	P0171	System Too Lean (Bank 1)

DTC	P0172	System Too Rich (Bank 1)

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim consists of both the short-term and the long-term fuel trims.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air-fuel ratio at stoichiometric levels. The signal from the Air-Fuel Ratio (A/F) sensor indicates whether the air-fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air-fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short-term fuel trim compensation.

If both the short-term and long-term fuel trims are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0171	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to lean side (2 trip detection logic)	• Air induction system • Injector blockage • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • PCV valve and hose • PCV hose connections • ECM
P0172	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to rich side (2 trip detection logic)	• Injector leakage or blockage • MAF meter • ECT sensor • Ignition system • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM

HINT:

- When DTC P0171 is set, the actual air-fuel ratio is on the lean side. When DTC P0172 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When the total of the short-term and long-term fuel trim values is within 20 % (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air-fuel ratio). If the average fuel trim learning value exceeds the malfunction threshold, the ECM interprets this a fault in the fuel system and sets a DTC.
Example:
The average fuel trim learning value is +35 % or more or -35 % or less, the ECM interprets this as a fuel system malfunction.

2. Average of short-term fuel trim and long-term fuel trim	-35 % or less (varies with ECT)

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-280).

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171 OR P0172)**

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0171 or P0172	A
P0171 or P0172 and other DTCs	B

HINT:
If any DTCs other than P0171 or P0172 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2	**PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)**

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the outputs voltages of A/F and HO2 sensors (AFS B1S1 and O2S B1S2) displayed on the tester.

Result:

The A/F sensor reacts in accordance with increases and decreases in the fuel injection volume:
+25 % = Rich output:
Less than 3.0 V
-12.5 % = Lean output:
More than 3.35 V

NOTICE:

The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		Extremely rich or lean actual air-fuel ratio • Injector leakage or blockage • Gas leakage from exhaust system • Fuel pressure • MAF meter • ECT sensor • Air induction system • PCV hose connections
Output Voltage Almost no reaction ——— NG		Output Voltage Almost no reaction		——— NG	

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2, and press the YES button and then the ENTER button followed by the F4 button.

3 READ VALUE USING INTELLIGENT TESTER (MAF)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF and COOLANT TEMP.
(d) Allow the engine to idle until the COOLANT TEMP reaches 75°C (167°F) or more.
(e) Read the MAF with the engine in an idling condition and at an engine speed of 2,500 rpm.
Standard:
MAF while engine idling: 1 to 3 g/sec (shift position: N, A/C: OFF).
MAF at engine speed of 2,500 rpm: 2 to 6 g/sec (shift position: N, A/C: OFF).

NG → **REPLACE MASS AIR FLOW METER**

OK

4	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(d) Read the COOLANT TEMP twice, when the engine is both cold and warmed up.
Standard:
With cold engine: Same as ambient air temperature.
With warm engine: 75°C to 100°C (167°F to 212°F).

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

5	CHECK PCV HOSE CONNECTIONS

(a) Check for PCV hose connections.
OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

6	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

7	CHECK FOR SPARKS AND IGNITION (See page ES-160)

NG → **REPAIR OR REPLACE IGNITION SYSTEM**

OK

8	CHECK FOR EXHAUST GAS LEAK

(a) Check for exhaust gas leakage.

OK:
No gas leakage.

NG → **REPAIR OR REPLACE EXHAUST SYSTEM**

OK

9	CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-7).
Standard:
304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

NG → **REPAIR OR REPLACE FUEL SYSTEM**

OK

10	INSPECT FUEL INJECTOR (INJECTION AND VOLUME)

(a) Check the injection volume (See page FU-16).
Standard:
45 to 58 cm^3 (2.9 to 3.5 cu in.) per 15 seconds

NG → **REPLACE FUEL INJECTOR**

OK

11	INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE) (See page ES-77)

NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

12	INSPECT INTEGRATION RELAY (EFI RELAY) (See page ES-78)

NG → **REPLACE INTEGRATION RELAY**

OK

13	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM) (See page ES-294)

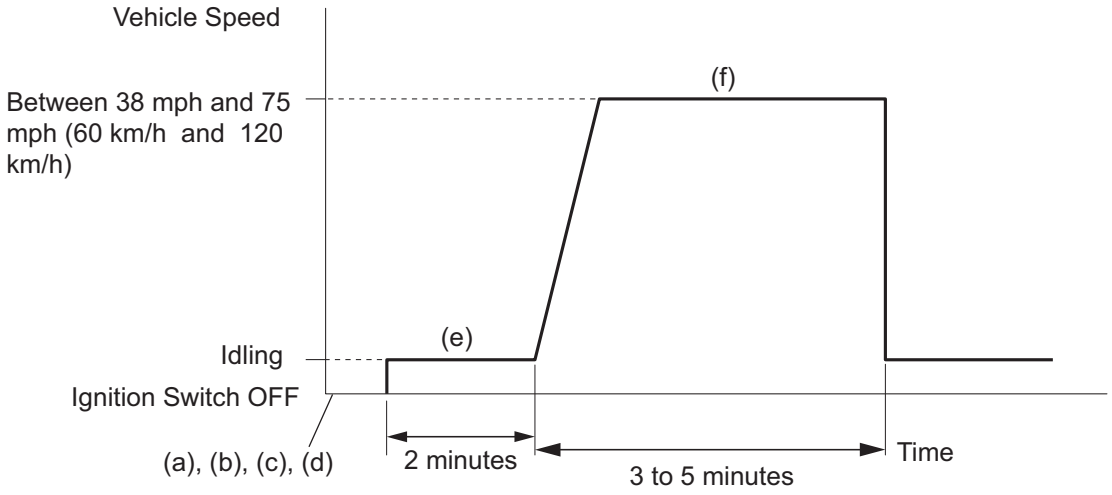
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14	REPLACE AIR FUEL RATIO SENSOR

NEXT

15	PERFORM CONFIRMATION DRIVING PATTERN



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Switch the ECM from normal mode to check mode using the tester (See page ES-37).
(e) Start the engine and warm it up with all the accessories switched OFF.
(f) Drive the vehicle at between 38 mph and 75 mph (60 km/h and 120 km/h) and at an engine speed of between 1,400 rpm and 3,200 rpm for 3 to 5 minutes.
HINT:
If the system is still malfunctioning, the MIL will be illuminated during step (f).
NOTICE:
If the conditions in this test are not strictly followed, no malfunction will be detected.

NEXT

16	CHECK WHETHER DTC OUTPUT RECURS (DTC P0171 OR P0172)

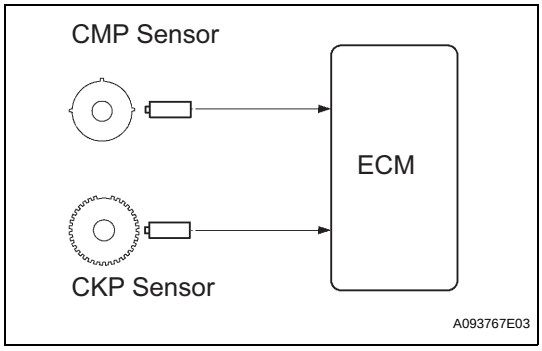
DTC	P0302	Cylinder 2 Misfire Detected

DTC	P0303	Cylinder 3 Misfire Detected

DTC	P0304	Cylinder 4 Misfire Detected

ES

DESCRIPTION



When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. Extremely high HC concentration levels can cause increases in exhaust emission levels. High concentrations of HC can also cause increases in the Three-Way Catalytic Converter (TWC) temperature, which may cause damage to the TWC. To prevent these increases in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the TWC reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the Camshaft Position (CMP) sensor and the Crankshaft Position (CKP) sensor. The CMP sensor is used to identify any misfiring cylinders and the CKP sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted as when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire rate exceeds the threshold level, and could cause emission deterioration, the ECM illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0300	Simultaneous misfiring of several cylinders detected (2 trip detection logic)	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Injector • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Air induction system • ECM
P0301 P0302 P0303 P0304	Misfiring of specific cylinder detected (2 trip detection logic)	

When DTCs for misfiring cylinders are randomly set, but DTC P0300 is not set, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and sets a DTC when either of the following conditions, which could cause emission deterioration, is detected (2 trip detection logic).

- Within the first 1,000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs once.
- After the first 1,000 crankshaft revolutions, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs 4 times in sequential crankshaft revolutions.

The ECM flashes the MIL and sets a DTC when either of the following conditions, which could cause Three-Way Catalytic Converter (TWC) damage, is detected (2 trip detection logic).

- In every 200 crankshaft revolutions at a high engine rpm, the threshold misfiring percentage is recorded once.
- In every 200 crankshaft revolutions at a normal engine rpm, the threshold misfiring percentage is recorded 3 times.

ES

MONITOR STRATEGY

Related DTCs	P0300: Multiple cylinder misfire P0301: Cylinder 1 misfire P0302: Cylinder 2 misfire P0303: Cylinder 3 misfire P0304: Cylinder 4 misfire
Required Sensors/Components (Main)	Crankshaft position sensor and Camshaft position sensor
Required Sensors/Components (Related)	Engine coolant temperature and intake air temperature sensors and Mass air flow meter
Frequency of Operation	Continuous
Duration	1,000 to 4,000 crankshaft revolutions: Emission related misfire 200 to 600 crankshaft revolutions: Catalyst damaged misfire
MIL Operation	2 driving cycles: Emission related misfire MIL flashes immediately: Catalyst damaged misfire
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Misfire:

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0327, P0328 (Knock sensor) P0335 (CKP sensor) P0340 (CMP sensor) P0500 (VSS)
Battery voltage	8 V or more
VVT system	Not operated by scan tool
Engine RPM	450 to 6,600 rpm
Either of following conditions (a) or (b) met	-
(a) ECT at engine start	More than -7°C (19°F)
(b) ECT	More than 20°C (68°F)
Fuel cut	OFF

Monitor period of emission-related-misfire:

First 1,000 revolutions after engine start, or Check Mode	Crankshaft 1,000 revolutions
Except above	Crankshaft 1,000 revolutions x 4

Monitor period of catalyst-damaged-misfire (MIL blinks):

All of following conditions 1, 2 and 3 met	Crankshaft 200 revolutions x 3
1. Driving cycles	1st

2. Check mode	OFF
3. Engine RPM	Less than 2,800 rpm
Except above	Crankshaft 200 revolutions

TYPICAL MALFUNCTION THRESHOLDS

Monitor period of emission-related-misfire:

Misfire rate	1.63 % or more

Monitor period of catalyst-damage-misfire (MIL blinks):

Number of misfire per 200 revolutions	101 or more (varies with intake air amount and RPM)

MONITOR RESULT

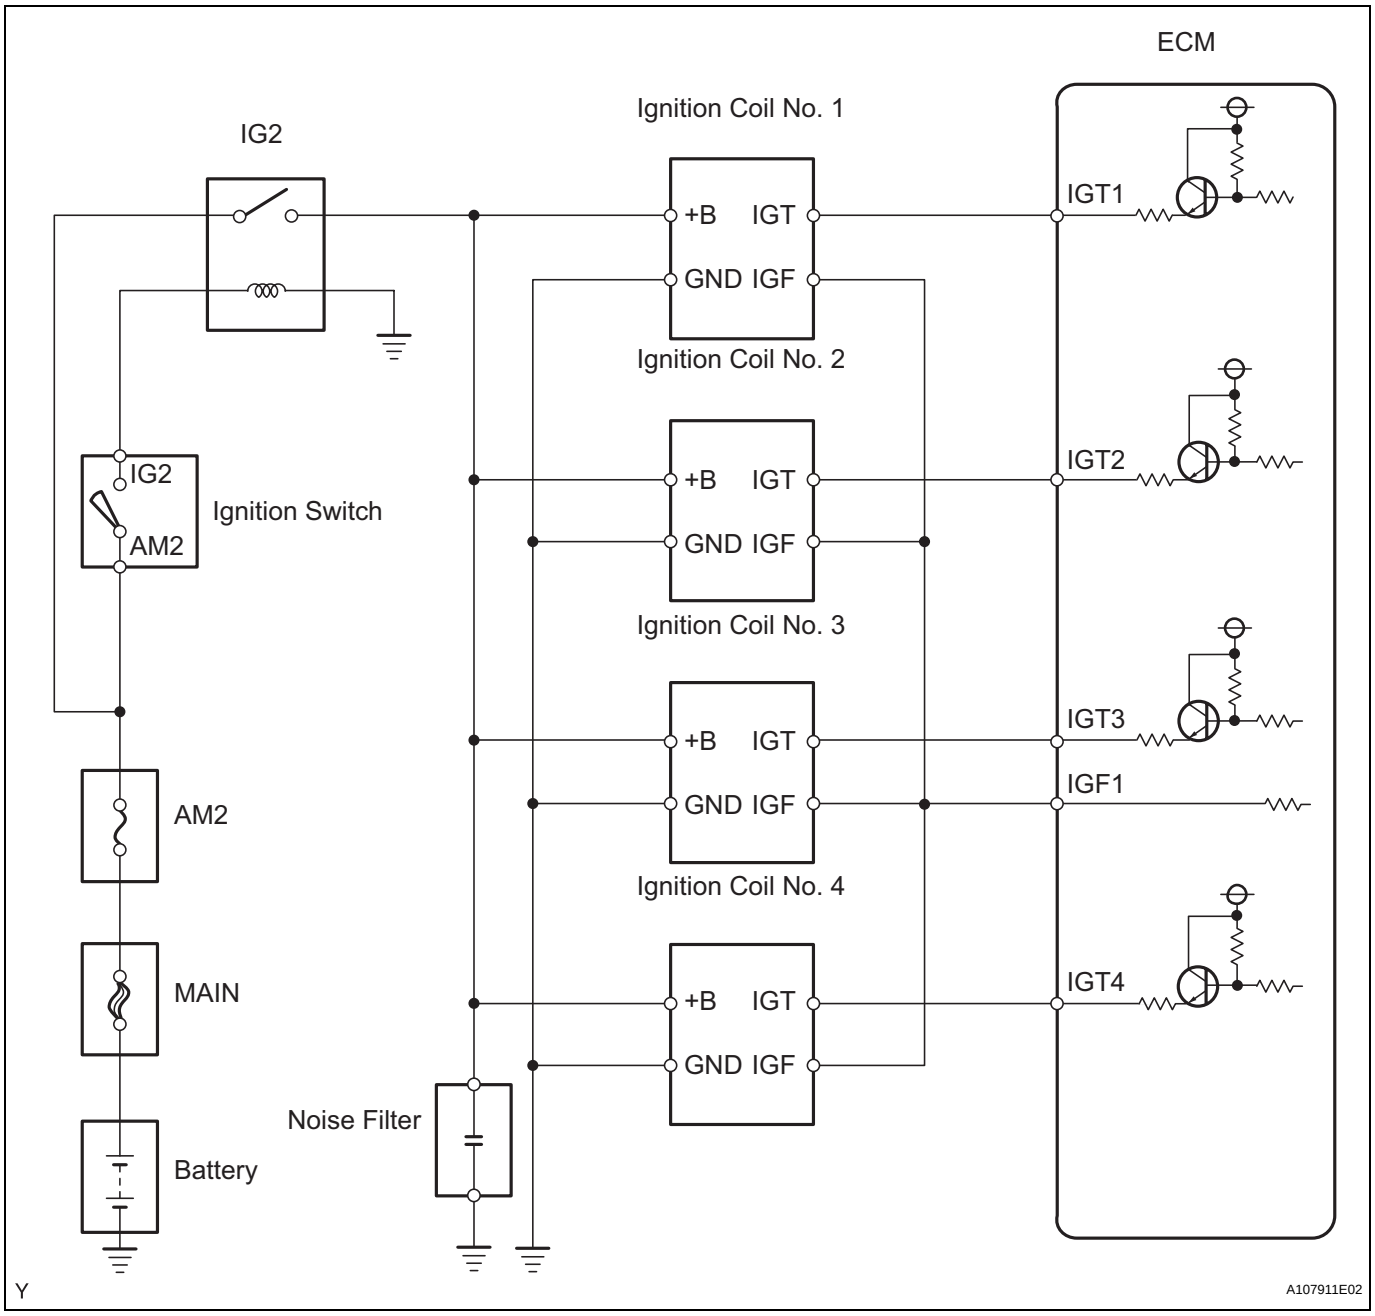
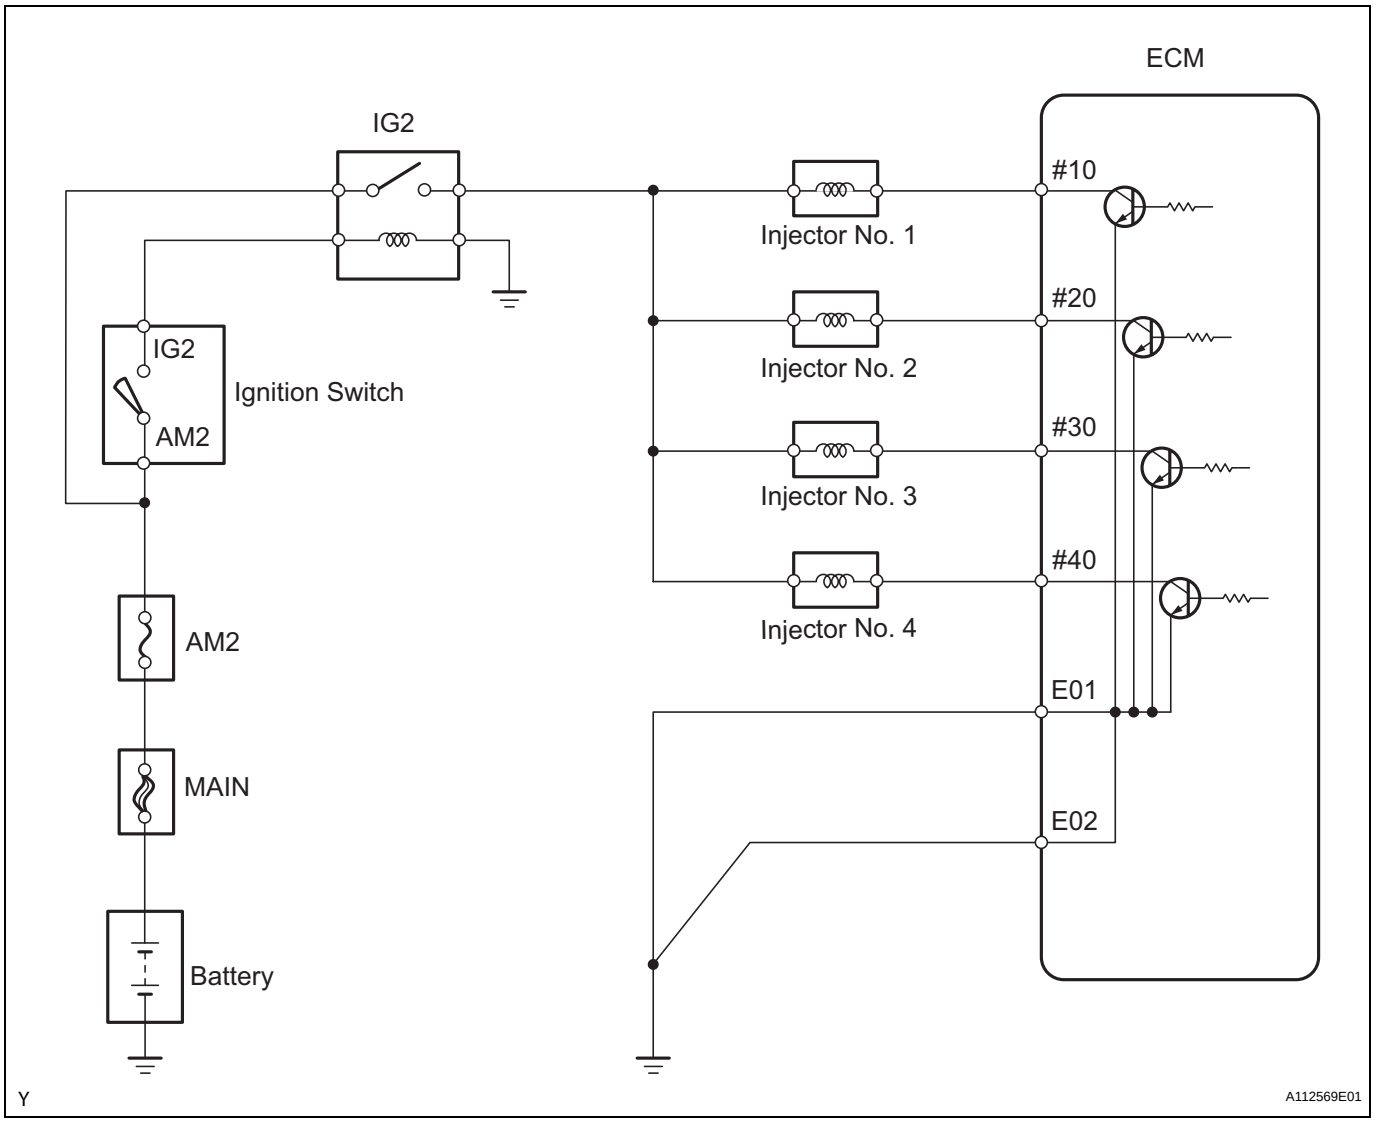
WIRING DIAGRAM

Wiring diagram of the ignition system.



Wiring diagram of the injector circuit.



CONFIRMATION DRIVING PATTERN

1. Connect an intelligent tester to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the tester ON.
4. Record the DTC(s) and freeze frame data.
5. Using the tester, switch the ECM from normal mode to check mode (See page ES-37).
6. Read the misfire counts of each cylinder (CYL #1 to #4) with the engine in an idling condition. If any misfire count is displayed, skip the following confirmation driving pattern.
7. Drive the vehicle several times with the conditions, such as engine rpm and engine load, shown in MISFIRE RPM and MISFIRE LOAD in the DATA LIST.
   HINT:
   In order to store misfire DTCs, it is necessary to drive the vehicle for the period of time shown in the table below, with the MISFIRE RPM and MISFIRE LOAD in the DATA LIST.

Engine RPM	Duration
Idling	3.5 minutes or more
1,000	3 minutes or more
2,000	1.5 minutes or more
3,000	1 minute or more

8. Check whether misfires have occurred by checking DTCs and freeze frame data.
   HINT:
   Do not turn the ignition switch to OFF until the stored DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data will be erased.
9. Record the DTC(s), freeze frame data and misfire counts.
10. Turn the ignition switch to OFF and wait for at least 5 seconds.

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the freeze frame data have been duplicated, one of the following factors is considered to be a possible cause of the problem:
  (a) The fuel level is low.
  (b) Improper fuel is used.
  (c) The spark plugs are dirty.
  (d) The problem is complex due to multiple factors.
- After finishing repairs, check that no misfires occur in each cylinder (CYL #1, #2, #3 and #4).
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern, after the repairs.
- For 6 and 8 cylinder engines, the ECM intentionally does not set the specific misfiring cylinder DTCs at high engine RPM. If misfires only occur during high engine RPM driving, only DTC P0300 is set.
  In the event of DTC P0300 being present, perform the following operations:
  (a) Clear the DTC (See page ES-34).
  (b) Start the engine and conduct the confirmation driving pattern.
  (c) Read the misfiring rates of each cylinder or DTC(s) using the tester.
  (d) Repair the cylinder(s) that has a high misfiring rate or is indicated by the DTC.
  (e) After finishing repairs, conduct the confirmation driving pattern again, in order to verify that DTC P0300 is not set.
- When either SHORT FT #1 or LONG FT #1 in the freeze frame data is outside the range of +-20 %, the air-fuel ratio may be rich (-20 % or less) or lean (+20 % or more).
- When the COOLANT TEMP in the freeze frame data is less than 75°C (167°F), the misfires occurred only while warming up the engine.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0300, P0301, P0302, P0303 and/or P0304	A
P0300, P0301, P0302, P0303 and/or P0304 and other DTCs	B

HINT:
If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2 READ VALUE USING INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / MISFIRE RPM and MISFIRE LOAD.
(d) Read and note the MISFIRE RPM and MISFIRE LOAD (engine load) values.
HINT:
The MISFIRE RPM and MISFIRE LOAD indicate the vehicle conditions under which the misfire occurred.

NEXT

3 CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

4 CHECK MISFIRE COUNT (CYL #1, #2, #3 AND #4)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / CYL #1, #2, #3 and #4.
(f) Allow the engine to idle.
(g) Read each value for CYL #1 to #4 displayed on the tester. If no misfire counts occur in any cylinders, perform the following conditions:
(1) Shift the gear selector lever to the D position.
(2) Check the CYL #1 to #4.
(3) If misfire counts are still not displayed, perform steps (h) and (i) and then check the misfire counts again.
(h) Drive the vehicle with the MISFIRE RPM and MISFIRE LOAD noted in step 2.

(i) Read the CYL #1 to #4 or DTCs displayed on the tester.

Result

Misfire Count	Proceed To
Most misfires occur in only one or two cylinders	A
Three cylinders or more have equal misfire counts	B

HINT:

- If it is difficult to reproduce misfires for each cylinder, check the DATA LIST item called MISFIRE MARGIN. Try to find vehicle driving conditions that lower the MISFIRE MARGIN value. Values above 30 % are considered normal.
- If the freeze frame data's record of the ECT is below 75°C (167°F), the misfire may be detected only when the engine is cold.
- If the freeze frame data's record of the ENGINE RUN TIME is below 120 seconds, the misfire may be detected immediately after the engine is started.

ES

B → **Go to step 14**

A

5 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (FUEL CUT #1 TO #4)

(a) Allow the engine to idle.
(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL CUT#1 (to #4).
(c) If a cylinder has a high misfire count, cut fuel to that cylinder. Compare the misfire count of the cylinder before fuel cut and after fuel cut.

Result

Misfire Count in Each Cylinder	Proceed To
Misfire count of cylinder before fuel cut and after fuel cut roughly same	A
Misfire count of cylinder before fuel cut lower than after fuel cut	B

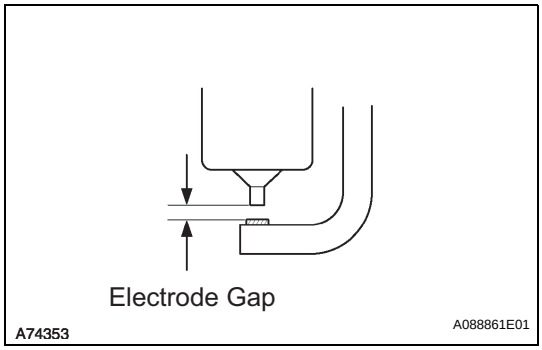
NOTICE:
This ACTIVE TEST cannot be performed while the vehicle is being driven.

HINT:
If the misfire count of the cylinder before and after the fuel cut are roughly the same, the cylinder is misfiring.
If the misfire count of the cylinder before the fuel cut is lower than after the fuel cut, the cylinder misfires sometimes.

B → **Go to step 11**

A

6	CHECK SPARK PLUG



(a) Remove the ignition coil and the spark plug of the misfiring cylinder.
(b) Measure the spark plug electrode gap.
Standard:
1.0 to 1.1 mm (0.039 to 0.043 in.)
(c) Check the electrode for carbon deposits.
Recommended spark plug:

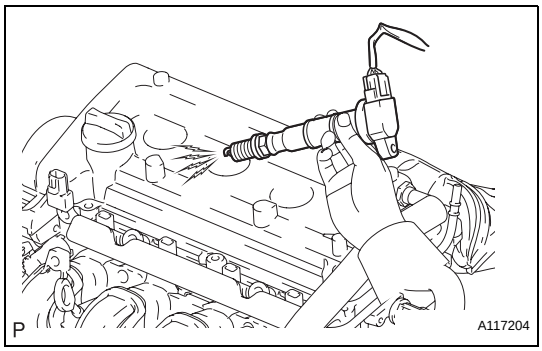
Manufactures	Products
DENSO	SK16R11
NGK	IFR5A11

NOTICE:
If the electrode gap is larger than standard, replace the spark plug. Do not adjust the electrode gap.

NG → **REPLACE SPARK PLUG**

OK

7	CHECK FOR SPARKS AND IGNITION



(a) Disconnect the injector connectors, in order to prevent the engine from starting.
(b) Install the spark plug onto the ignition coil.
(c) Attach the spark plug assembly to the cylinder head.
(d) Crank the engine for less than 2 seconds and check the spark.
OK:
Sparks jump across electrode gap.
(e) Reconnect the injector connectors.

NG → **Go to step 9**

OK

8	CHECK CYLINDER COMPRESSION PRESSURE OF MISFIRING CYLINDER

(a) Measure the cylinder compression pressure of the misfiring cylinder.

OK → **Go to step 10**

NG

CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

9	CHANGE NORMAL SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER

(a) Change the installed spark plug to a spark plug that functions normally.
(b) Perform a spark test.
CAUTION:
Always disconnect all injector connectors.
NOTICE:
Do not crank the engine for more than 2 seconds.
(1) Install the spark plug to the ignition coil and connect the ignition coil connector.
(2) Disconnect the injector connector.
(3) Ground the spark plug.
(4) Check if sparks occur while the engine is being cranked.
OK:
Sparks jump across electrode gap.

ES

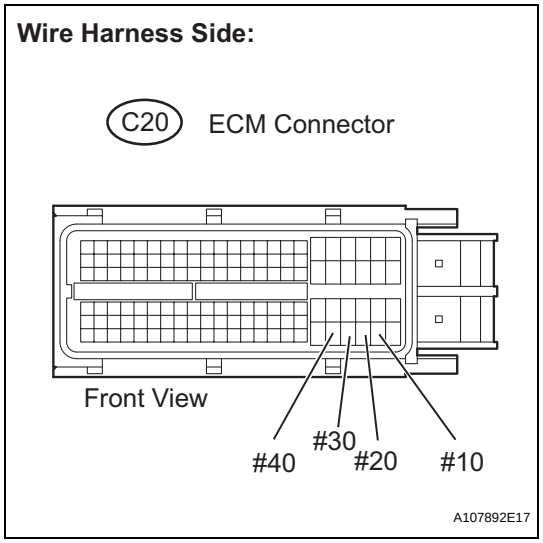
NG → **REPLACE IGNITION COIL ASSEMBLY THEN CONFIRM THAT THERE IS NO MISFIRE**

OK

REPLACE SPARK PLUG

10	INSPECT ECM TERMINAL OF MISFIRING CYLINDER (#10, #20, #30, AND /OR #40 VOLTAGE)

Wire Harness Side:



(a) Disconnect the C20 ECM connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the ECM connector.
Standard voltage

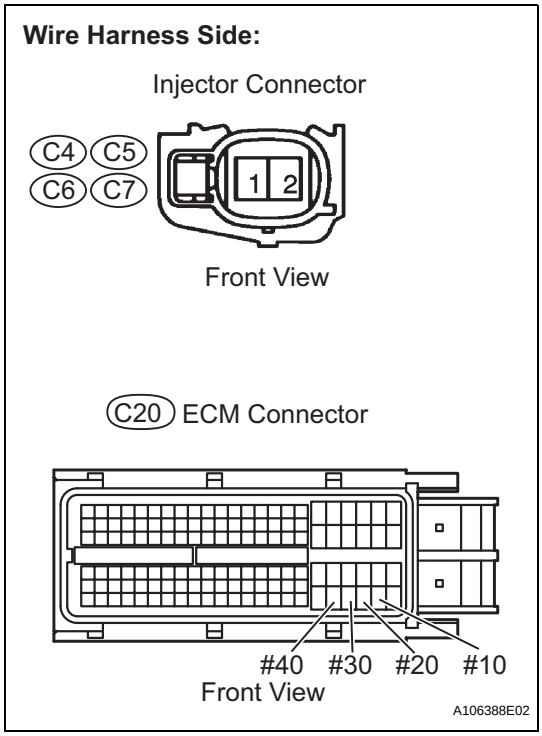
Tester Connections	Specified Conditions
#10 (C20-108) - E01 (C20-45)	11 to 14 V
#20 (C20-107) - E01 (C20-45)	
#30 (C20-106) - E01 (C20-45)	
#40 (C20-105) - E01 (C20-45)	

(d) Reconnect the ECM connector.

OK → **Go to step 12**

NG

11	CHECK HARNESS AND CONNECTOR (INJECTOR - ECM)



(a) Disconnect the injector connector (of the misfiring cylinder).
(b) Disconnect the C20 ECM connector.
(c) Turn the ignition switch to ON.
(d) Measure the resistance and voltage between the injector and the ECM connector terminals.

Standard voltage

Cylinder	Tester Connections	Specified Conditions
No. 1	C4-1 - Ground	11 to 14 V
No. 2	C5-1 - Ground	
No. 3	C6-1 - Ground	
No. 4	C7-1 - Ground	

Standard resistance

Cylinder	Tester Connections	Specified Conditions
No. 1	C4-2 - Ground	10 kΩ or higher
	C4-2 - C20-108 (#10)	Below 1 Ω
No. 2	C5-2 - Ground	10 kΩ or higher
	C5-2 - C20-107 (#20)	Below 1 Ω
No. 3	C6-2 - Ground	10 kΩ or higher
	C6-2 - C20-106 (#30)	Below 1 Ω
No. 4	C7-2 - Ground	10 kΩ or higher
	C7-2 - C20-105 (#40)	Below 1 Ω

(e) Reconnect the injector connector.
(f) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ↓

12	CHECK FUEL INJECTOR OF MISFIRING CYLINDER

(a) Check the injector injection (whether fuel volume is high or low, and whether injection pattern is poor).

NG → **REPLACE FUEL INJECTOR ASSEMBLY**

OK ↓

13	CHECK VALVE CLEARANCE OF MISFIRING CYLINDER

NG → **ADJUST VALVE CLEARANCE**

OK ↓

14	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK ↓

15	CHECK VALVE TIMING (See page ES-71)

NG → **ADJUST VALVE TIMING**

OK ↓

16	CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-7).

NG → **CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER**

OK ↓

17	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP) (See page ES-148)

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK ↓

18	READ VALUE USING INTELLIGENT TESTER (MAF) (See page ES-147)

NG → **REPLACE MASS AIR FLOW METER**

OK ↓

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)

DTC	P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)

DESCRIPTION

Flat type knock sensors (non-resonant type) have structures that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.

A knock sensor is fitted onto the engine block to detect engine knocking.

ES

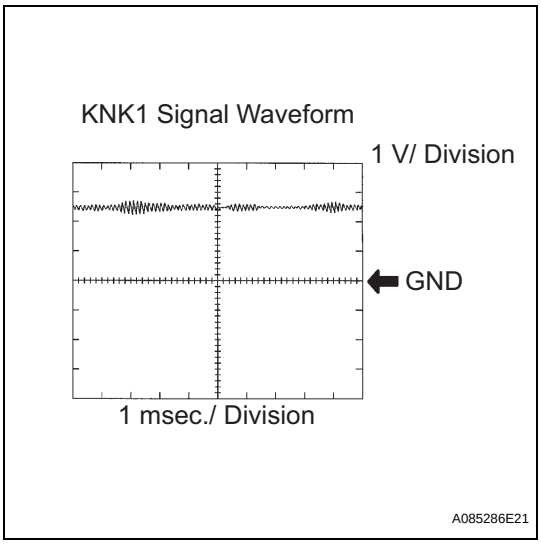
The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed. The voltage is generated when the engine block vibrates due to knocking. Any occurrence of engine knocking can be suppressed by delaying the ignition timing.

DTC No.	DTC Detection Conditions	Trouble Areas
P0327	Output voltage of knock sensor 0.5 V or less (1 trip detection logic)	• Short in knock sensor circuit • Knock sensor • ECM
P0328	Output voltage of knock sensor 4.5 V or more (1 trip detection logic)	• Open in knock sensor circuit • Knock sensor • ECM

HINT:

When any of DTCs P0327 and P0328 are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the ignition switch is turned to OFF.

Reference: Inspection using an oscilloscope



The correct waveform is as shown.

Items	Contents
Terminals	KNK1 - EKNK
Equipment Settings	1 V/Division 1 msec./Division
Conditions	Keep engine speed at 4,000 rpm with warm engine

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.
The monitor for DTCs P0327 and P0328 begins to run when 5 seconds have elapsed since the engine was started.
If the malfunction is not repaired successfully, either DTC P0327 or P0328 is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0327: Knock sensor range check (Low voltage) P0328: Knock sensor range check (High voltage)
Required Sensors/Components (Main)	Knock sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

ES

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Battery voltage	10.5 V or more
Time after engine start	5 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

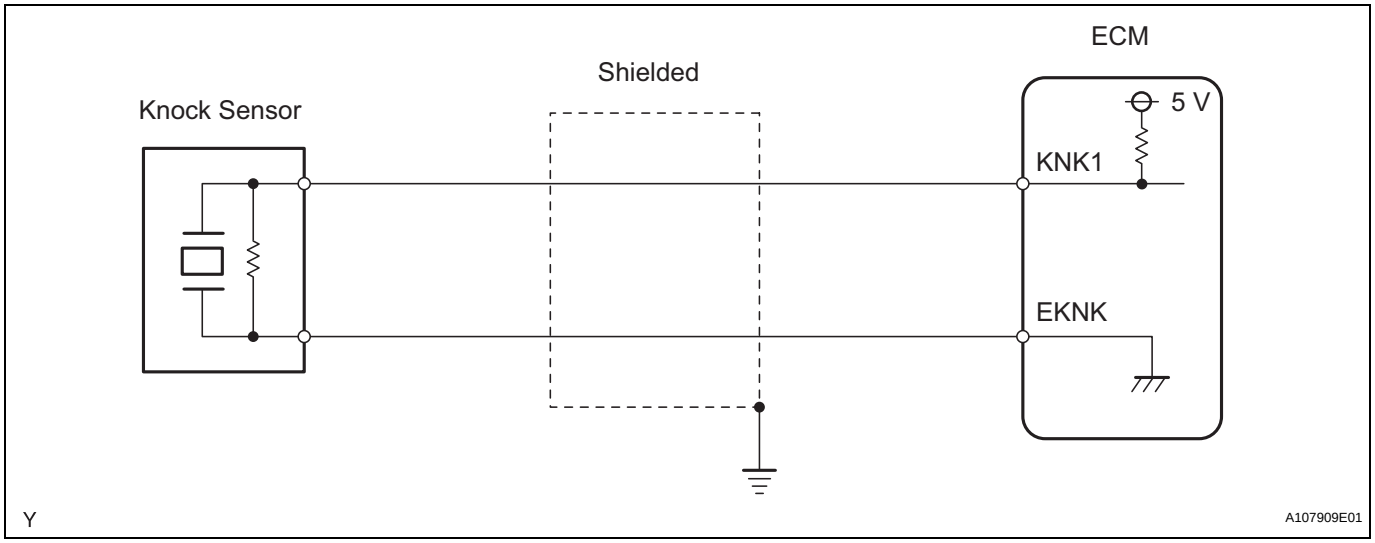
Knock Sensor Range Check (Low voltage) P0327:

Knock sensor voltage	Less than 0.5 V

Knock Sensor Range Check (High voltage) P0328:

Knock sensor voltage	More than 4.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (KNOCK FB VAL)

(a) Connect an intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / KNOCK FB VAL.
(e) Read the values displayed on the tester while driving the vehicle.
Standard:
The values change.
HINT

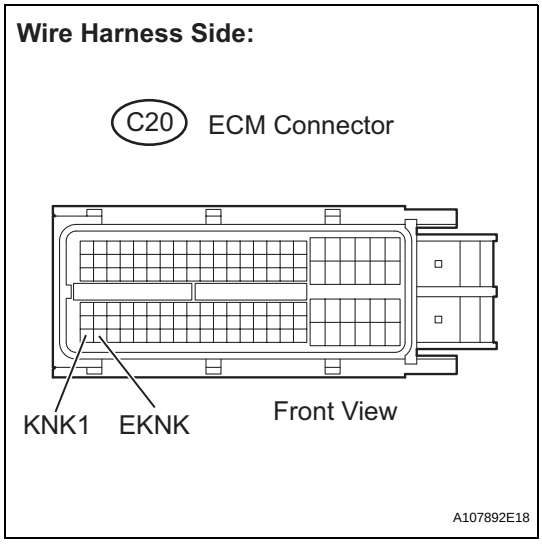
Malfunction does not occur	Knock Feedback Values change
Malfunctions occur	Knock Feedback Values do not change

HINT:
The knock feedback value change can be confirmed by running the engine at high load, for example, by activating the air conditioning system and revving up the engine.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

2	CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)



(a) Disconnect the C20 ECM connector.
(b) Measure the resistance between the terminals.
Standard resistance

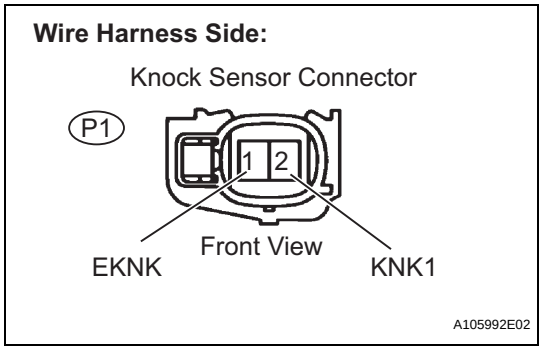
Tester Connections	Specified Conditions
KNK1 (C20-110) - EKNK (C20-111)	120 to 280 kΩ at 20°C (68°F)

(c) Reconnect the ECM connector.

NG → **Go to step 4**

OK

3 **INSPECT ECM (KNK1 VOLTAGE)**



(a) Disconnect the P1 knock sensor connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the knock sensor terminals.
Standard voltage

Tester Connections	Specified Conditions
KNK1 (P1-2) - EKNK (P1-1)	4.5 to 5.5 V

(d) Reconnect the knock sensor connector.

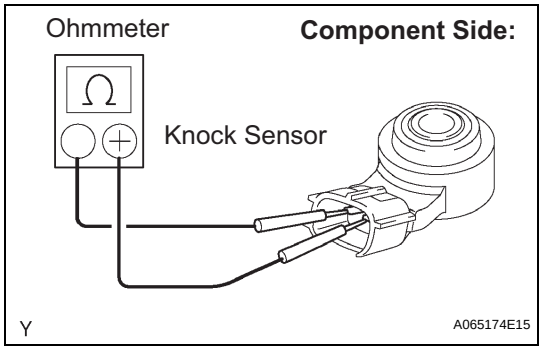
NOTICE:
Fault may be intermittent. Check the wire harness and connectors carefully and retest.

NG → **REPLACE ECM**

OK

CHECK FOR INTERMITTENT PROBLEMS

4 **INSPECT KNOCK SENSOR**



(a) Remove the knock sensor.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connections	Specified Conditions
KNK1 (2) - EKNK (1)	120 to 280 kΩ at 20°C (68°F)

(c) Reinstall the knock sensor.

NG → **REPLACE KNOCK SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

ES

DTC	P0335	Crankshaft Position Sensor "A" Circuit

DTC	P0339	Crankshaft Position Sensor "A" Circuit Intermittent

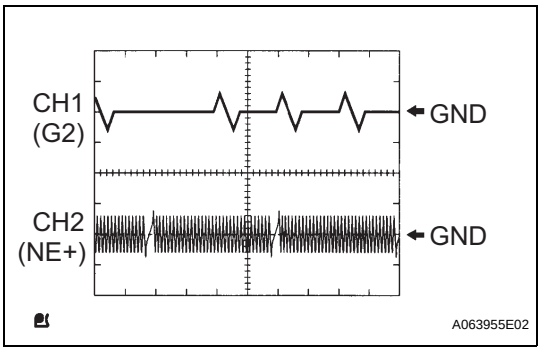
DESCRIPTION

The Crankshaft Position (CKP) sensor system consists of a CKP sensor plate and a pickup coil.
The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of wound copper wire, an iron core and magnet. The sensor plate rotates and, as each tooth passes through the pickup coil, a pulse signal is created. The pickup coil generates 34 signals per engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P0335	• No CKP sensor signal to ECM while cranking (1 trip detection logic) • No CKP sensor signal to ECM at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM
P0339	Under conditions (a), (b) and (c), no CKP sensor signal to ECM for 0.05 seconds or more (1 trip detection logic): (a) Engine speed 1,000 rpm or more (b) Starter signal OFF (c) 3 seconds or more have elapsed since starter signal switched from ON to OFF	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM

Reference: Inspection using an oscilloscope.



HINT:
- The correct waveform is as shown.
- G2+ stands for the Camshaft Position (CMP) sensor signal, and NE+ stands for the CKP sensor signal.
- Failure grounding of the shielded wire may causes noise in waveforms.

Items	Contents
Terminals	CH1: G2+ - NE- CH2: NE+ - NE-
Equipment Settings	5 V/Division, 20 msec./Division
Conditions	Cranking or idling

MONITOR DESCRIPTION

If there is no signal from the CKP sensor despite the engine revolving, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: CKP sensor range check or rationality
Required Sensors/Components (Main)	CKP sensor
Required Sensors/Components (Related)	CMP sensor
Frequency of Operation	Continuous
Duration	3 times
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

Case 1:

Time after starter OFF to ON	0.3 seconds or more
Number of CMP sensor signal pulse	6 times
Battery voltage	7 V or more
CMP sensor circuit fail	Not detected
Ignition switch	ON

Case 2:

Starter	OFF
Engine speed	More than 600 rpm
Time after starter from ON to OFF	3 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Number of CKP sensor signal pulse	132 or less, and 174 or more

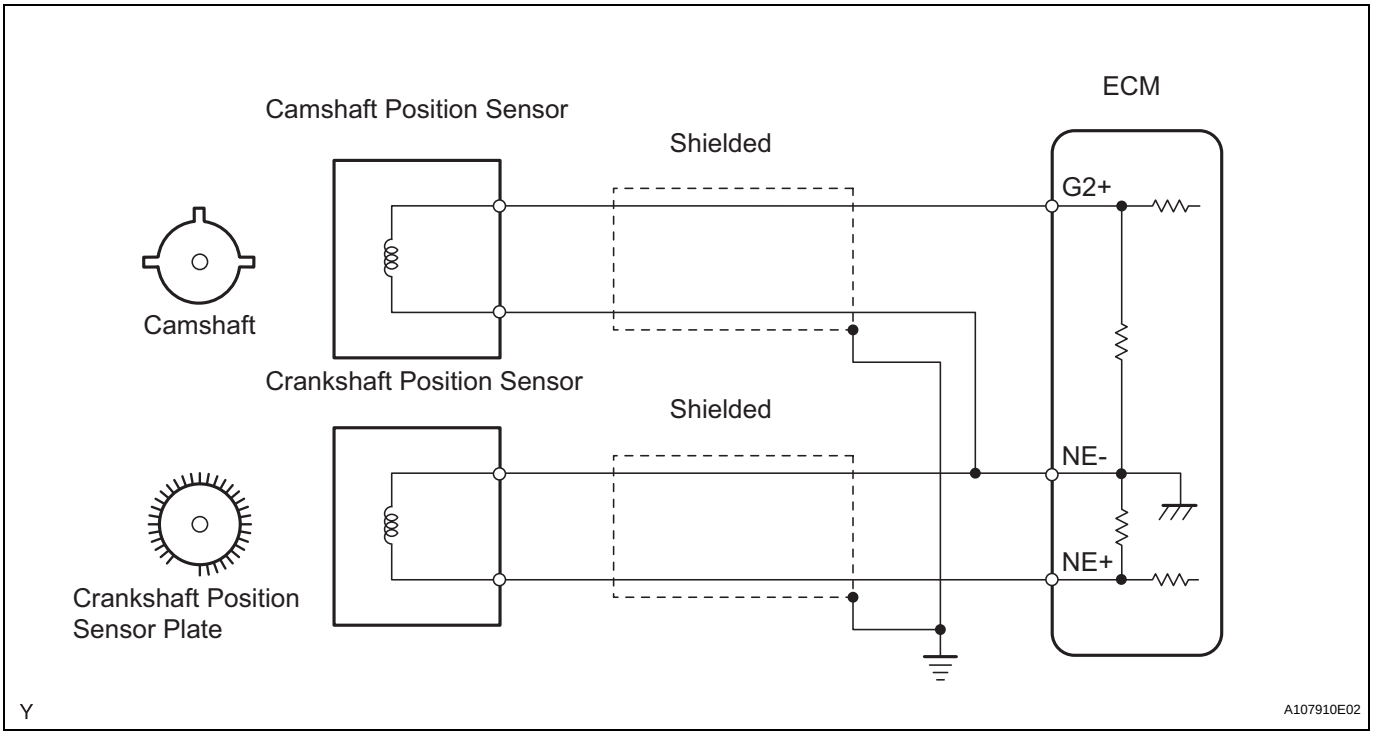
Case 2:

Engine speed signal	No signal

COMPONENT OPERATING RANGE

CKP sensor	• CKP sensor output voltage fluctuates while crankshaft revolving • 34 CKP sensor signals per crankshaft revolution

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

- If no problem is found through this diagnostic troubleshooting procedure, troubleshooting the engine mechanical systems.
- Check the engine speed. The engine speed can be checked by using an intelligent tester. To check, follow the operation below:
  (a) Connect the intelligent tester to the DLC3.
  (b) Start the engine.
  (c) Turn the tester ON
  (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
  The engine speed may be indicated as zero despite the engine revolving normally. This is caused by a lack of NE signals from the Crankshaft Position (CKP) sensor. Alternatively, the engine speed may be indicated as lower than the actual engine speed, if the CKP sensor output voltage is insufficient.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (ENGINE SPD)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
(e) Start the engine.

(f) Read the values displayed on the tester while the engine is running.
Standard:
Correct values are displayed.
HINT:
- To check the engine speed change, display the graph on the tester.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the tester remains zero (0), there may be an open or short in the Crankshaft Position (CKP) sensor circuit.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

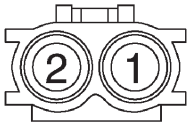
ES

NG

2 INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)

Component Side:

CKP Sensor



Front View

A078431E08

(a) Disconnect the C2 CKP sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance

Tester Connections	Conditions	Specified Conditions
1 - 2	Cold	985 to 1,600 Ω
1 - 2	Hot	1,265 to 1,890 Ω

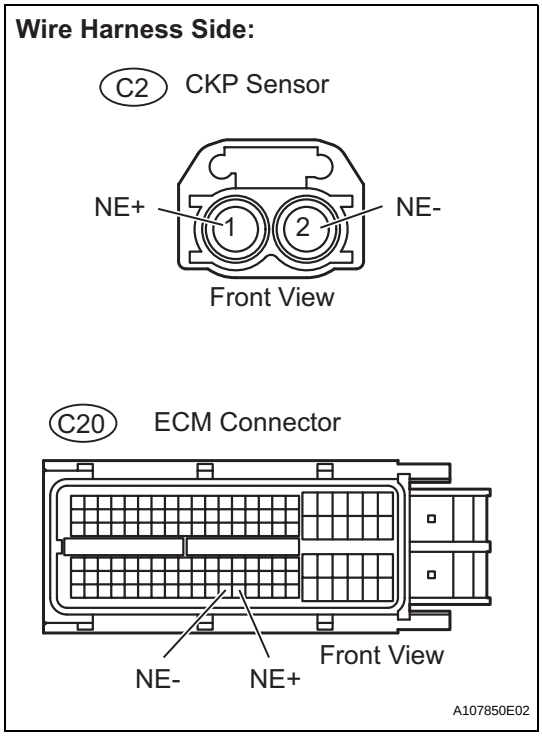
HINT:
Terms cold and hot refer to the temperature of the coils.
Cold means approximately -10 to 50°C (14 to 122°F).
Hot means approximately 50 to 100°C (122 to 212°F).

(c) Reconnect the CKP sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

3	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)



(a) Disconnect the C2 CKP sensor connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
NE+ (C2-1) - NE+ (C20-122)	Below 1 Ω
NE- (C2-2) - NE- (C20-121)	

Standard resistance (Check for short)

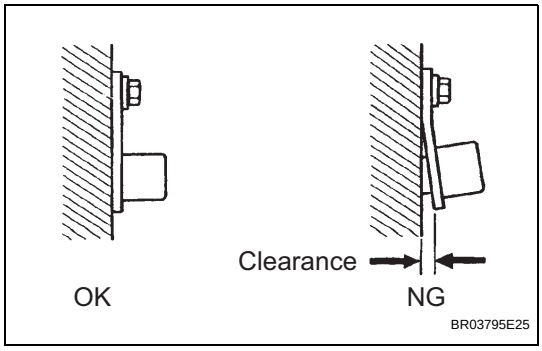
Tester Connections	Specified Conditions
NE+ (C2-1) or NE+ (C20-122) - Body ground	10 kΩor higher
NE- (C2-2) or NE- (C20-121) - Body ground	

(d) Reconnect the ECM connector.
(e) Reconnect the CKP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK SENSOR INSTALLATION (CRANKSHAFT POSITION SENSOR)



(a) Check the CKP sensor installation.

OK:

Sensor is installed correctly.

NG → **SECURELY REINSTALL SENSOR**

OK

5	CHECK CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate.

OK:

Sensor plate does not have any cracks or deformation.

NG → **REPLACE CRANKSHAFT POSITION SENSOR PLATE**

OK

6	REPLACE CRANKSHAFT POSITION SENSOR

NEXT

7	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read DTCs.

ES

Result

Display (DTC Output)	Proceed To
No output	A
P0335 or P0339	B

HINT:
If the engine does not start, replace the ECM.

B → REPLACE ECM

A

END

DTC	P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)

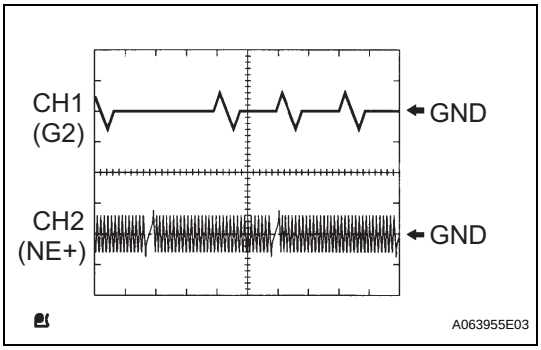
DESCRIPTION

The Camshaft Position (CMP) sensor consists of a magnet and an iron core which is wrapped with copper wire, and is installed onto the cylinder head. When the camshaft rotates, each of 3 teeth on the camshaft passes through the CMP sensor. This activates the internal magnet in the sensor, generating a voltage in the copper wire. The camshaft rotation is synchronized with the crankshaft rotation. When the crankshaft turns twice, the voltage is generated 3 times in the CMP sensor. The generated voltage in the sensor acts as a signal, allowing the ECM to locate the camshaft position. This signal is then used to control ignition timing, fuel injection timing, and the VVT system.

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P0340	Case 1 • No Camshaft Position (CMP) sensor signal to ECM while cranking (2 trip detection logic) Case 2 • Camshaft/Crankshaft misalignment detected at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CMP sensor circuit • CMP sensor • Camshaft • Jumped tooth of timing chain • ECM

HINT:
DTC P0340 indicates a malfunction relating to the CMP sensor (+) circuit (the wire harness between the ECM and CMP sensor, and the CMP sensor itself).
Reference: Inspection using an oscilloscope



HINT:
- The correct waveform is as shown in the illustration.
- G2 stands for the CMP sensor signal, and NE+ stands for the Crankshaft Position (CKP) sensor signal.
- Grounding failure of the shielded wire may cause noise in waveforms.

Items	Contents
Terminals	CH1: G2 - NE- CH2: NE+ - NE-
Equipment Settings	5 V/Division, 20 ms/Division
Conditions	Cranking or idling

MONITOR DESCRIPTION

If no signal is transmitted by the CMP sensor despite the engine revolving, or the rotation of the camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0340: Camshaft position sensor range check P0340: Camshaft position/crankshaft position misalignment

Duration	4 seconds: CMP sensor range check 5 seconds: Camshaft position/crankshaft position misalignment
MIL Operation	2 driving cycles: CMP sensor range check Immediate: Camshaft position/crankshaft position misalignment
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

Camshaft Position Sensor Range Check:

Starter	ON
Minimal battery voltage while starter ON	Less than 11 V

Camshaft Position/Crankshaft Position Misalignment:

Engine speed	600 rpm or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Camshaft Position Sensor Range Check:

CMP sensor signal	No signal

Camshaft Position/Crankshaft Position Misalignment:

Camshaft position and crankshaft position phase	Misaligned

COMPONENT OPERATING RANGE

CMP sensor	• CMP sensor output voltage fluctuates while camshaft revolving • 3 CMP sensor signals per 2 crankshaft revolutions

WIRING DIAGRAM

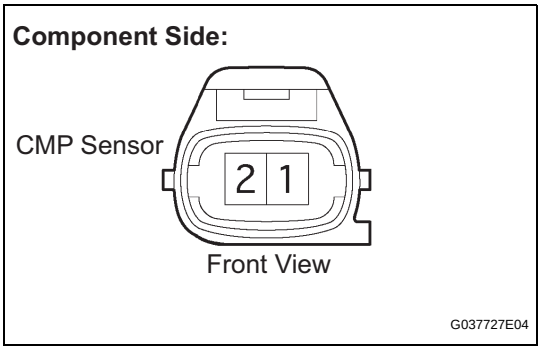
Refer to DTC P0335 (See page ES-163).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1 INSPECT CAMSHAFT POSITION SENSOR (RESISTANCE)



(a) Disconnect the C18 Camshaft Position (CMP) sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance

Tester Connections	Conditions	Specified Conditions
1 - 2	Cold	1,630 to 2,740 Ω
1 - 2	Hot	2,065 to 3,225 Ω

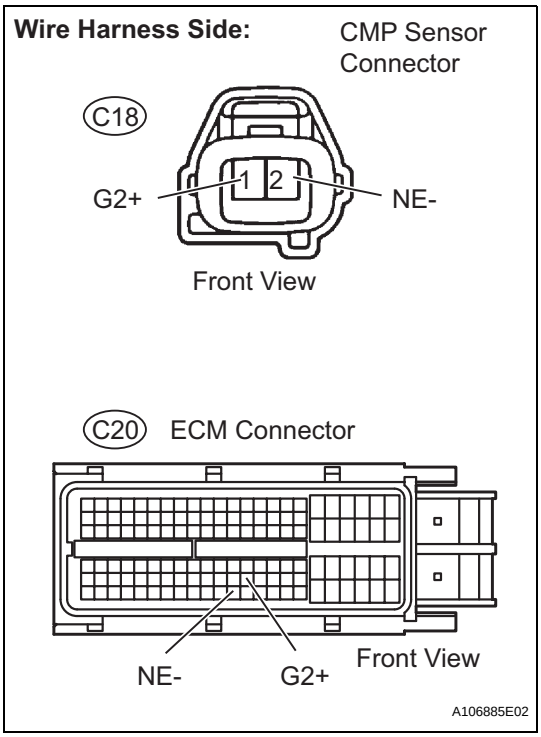
HINT:
Terms cold and hot refer to the temperature of the coils.
Cold means approximately -10° to 50°C (14 °to 122°F).
Hot means approximately 50° to 100°C (122°to 212°F).

(c) Reconnect the CMP sensor connector.

NG → **REPLACE CAMSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR (CAMSHAFT POSITION SENSOR - ECM)



(a) Disconnect the C18 CMP sensor connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
G2+ (C18-1) - G2+ (C20-99)	Below 1 Ω
NE- (C18-2) - NE- (C20-121)	

Standard resistance (Check for short)

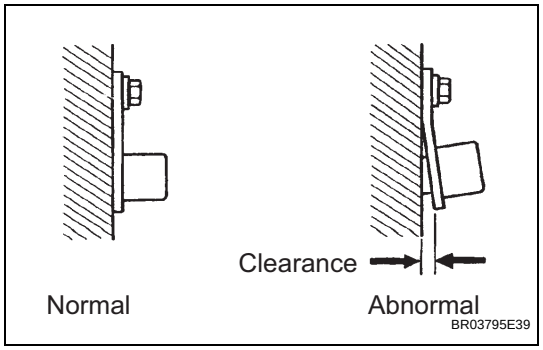
Tester Connections	Specified Conditions
G2+ (C18-1) or G2+ (C20-99) - Body ground	10 kΩ or higher
NE- (C18-2) or NE- (C20-121) - Body ground	

(d) Reconnect the ECM connector.
(e) Reconnect the CMP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION (CAMSHAFT POSITION SENSOR)



(a) Check the CMP sensor installation.
OK:
Sensor is installed correctly.

NG → **SECURELY REINSTALL SENSOR**

OK

4 CHECK VALVE TIMING (See page ES-71)

NG → **ADJUST VALVE TIMING**

OK

5 CHECK CAMSHAFT

(a) Check the teeth of the camshaft.
OK:
Camshaft teeth do not have any cracks or deformation.

NG → **REPLACE CAMSHAFT**

OK

6 REPLACE CAMSHAFT POSITION SENSOR

NEXT

7 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(g) Read DTCs.

Result

END

DTC	P0351	Ignition Coil "A" Primary / Secondary Circuit

DTC	P0352	Ignition Coil "B" Primary / Secondary Circuit

DTC	P0353	Ignition Coil "C" Primary / Secondary Circuit

DTC	P0354	Ignition Coil "D" Primary / Secondary Circuit

DESCRIPTION

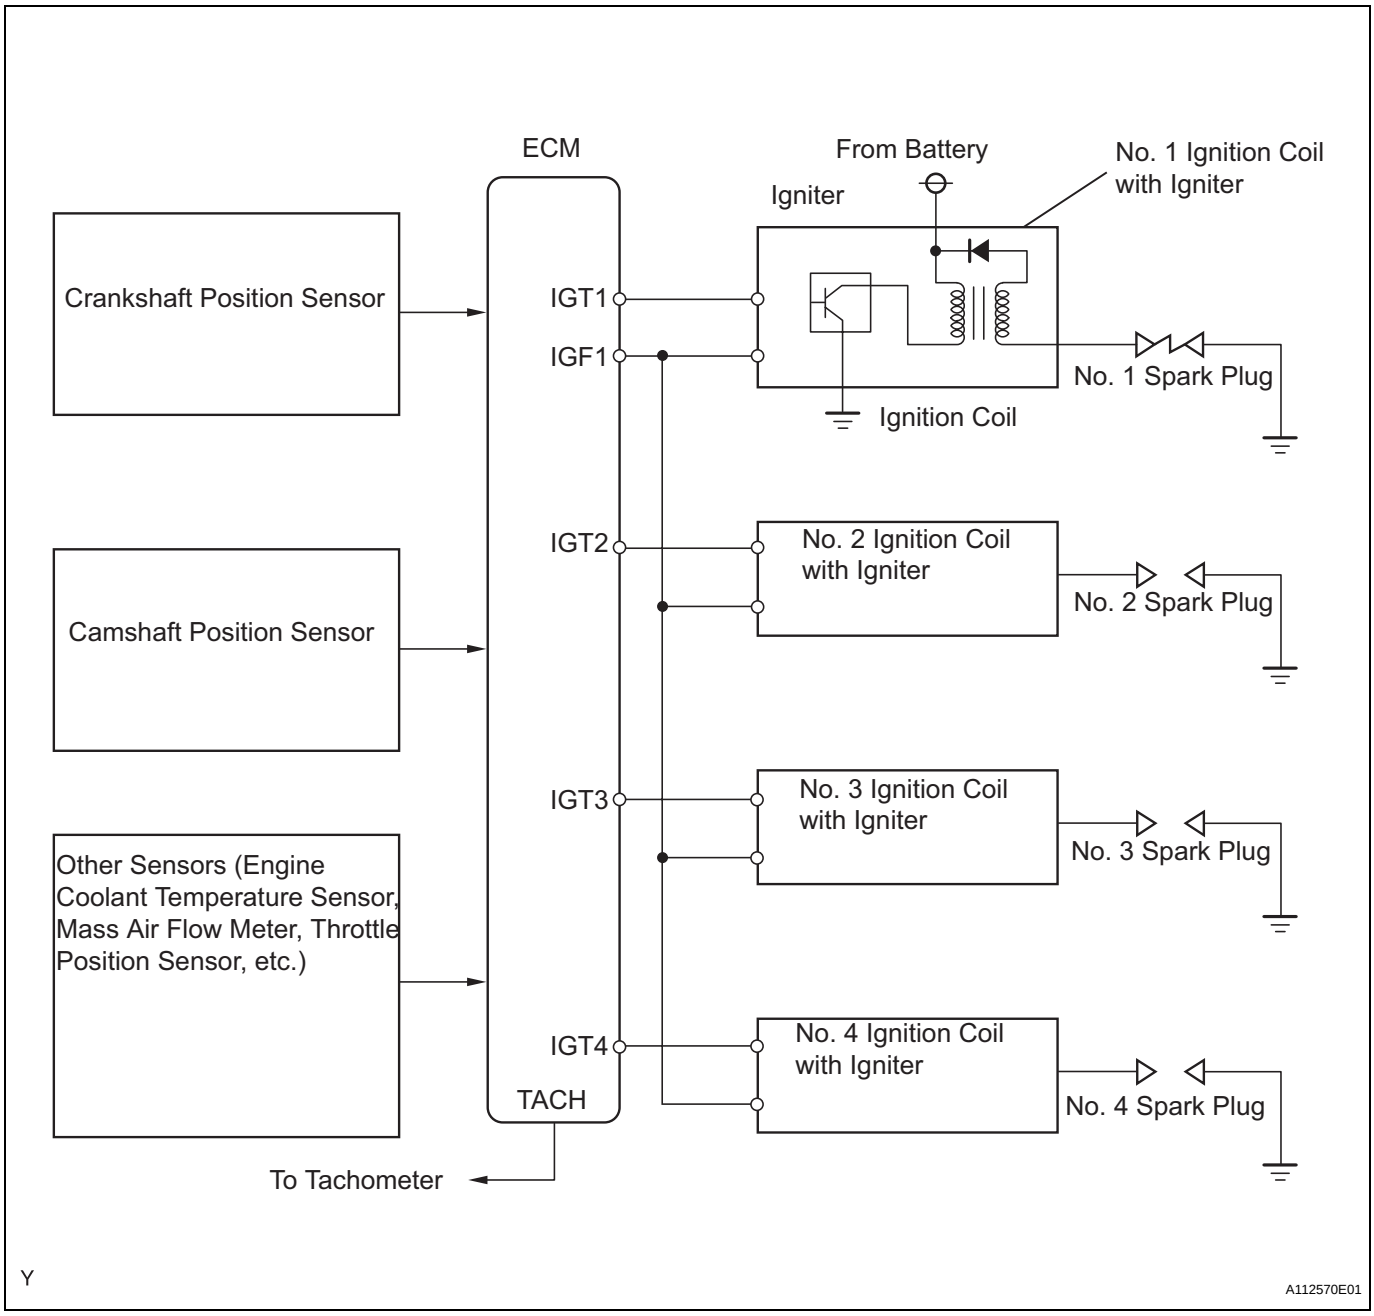
HINT:

- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check No. 1 ignition coil with igniter circuit.
- If DTC P0352 is set, check No. 2 ignition coil with igniter circuit.
- If DTC P0353 is set, check No. 3 ignition coil with igniter circuit.
- If DTC P0354 is set, check No. 4 ignition coil with igniter circuit.

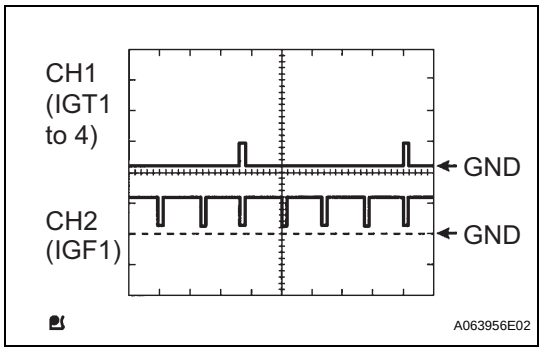
A Direct Ignition System (DIS) is used on this vehicle.

The DIS is a 1-cylinder ignition system in which each cylinder is ignited by one ignition coil and one spark plug is connected to the end of each secondary wiring. A powerful voltage, generated in the secondary wiring, is applied directly to each spark plug. The sparks of the spark plugs pass from the center electrode to the ground electrodes.

The ECM determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil, the igniter sends back an ignition confirmation (IGF) signal to the ECM, for each cylinder ignition.



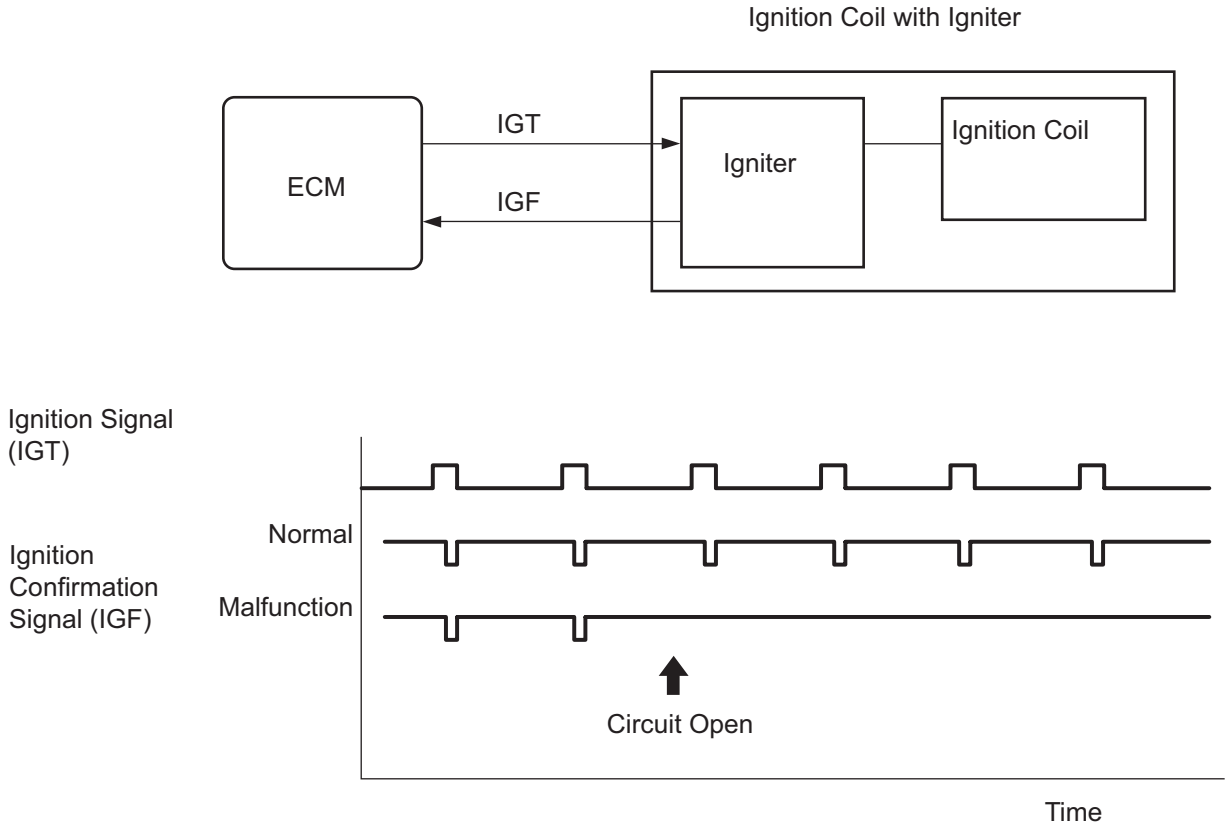
DTC No.	DTC Detection Conditions	Trouble Areas
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine running (1 trip detection logic)	• Ignition system • Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and ECM • No. 1 to No. 4 ignition coils with igniters • ECM



Reference: Inspection using an oscilloscope.
While cranking or idling the engine, check the waveform between terminals IGT (1 to 4) and E1, and IGF1 and E1 of the ECM connector.

Items	Contents
Terminals	CH1: IGT1, IGT2, IGT3, IGT4 - E1 CH2: IGF1 - E1
Equipment Settings	2 V/Division 20 msec./Division
Conditions	Cranking or idling

MONITOR DESCRIPTION



If the ECM does not receive any IGF signals despite transmitting the IGT signal, it interprets this as a fault in the igniter and sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 1 second after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0351: Igniter (cylinder 1) malfunction P0352: Igniter (cylinder 2) malfunction P0353: Igniter (cylinder 3) malfunction P0354: Igniter (cylinder 4) malfunction

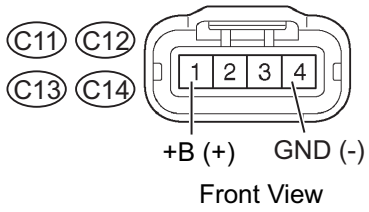
Ignition Coil with Igniter Connector



Y

A054393E33

(a) Disconnect the ignition coil with igniter connector.
(b) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
GND (C11-4) - Body ground	Below 1 Ω
GND (C12-4) - Body ground	
GND (C13-4) - Body ground	
GND (C14-4) - Body ground	

(c) Turn the ignition switch to ON.
(d) Measure the voltage between the terminals of the wire harness side connector.

Standard voltage

Tester Connections	Specified Conditions
+B (C11-1) - GND (C11-4)	11 to 14 V
+B (C12-1) - GND (C12-4)	
+B (C13-1) - GND (C13-4)	
+B (C14-1) - GND (C14-4)	

(e) Reconnect the ignition coil with igniter connector.

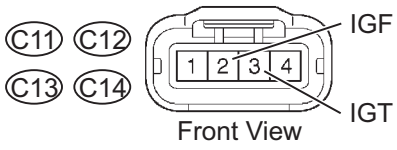
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

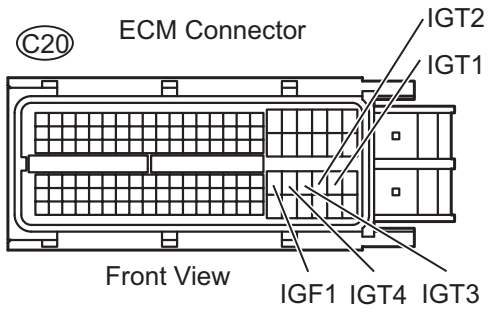
OK

2 CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM)

Wire Harness Side:

Ignition Coil with Igniter Connector





A105983E02

(a) Disconnect the ignition coil with connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
IGF (C11-2) - IGF1 (C20-81)	Below 1 Ω
IGF (C12-2) - IGF1 (C20-81)	
IGF (C13-2) - IGF1 (C20-81)	
IGF (C14-2) - IGF1 (C20-81)	

Standard resistance (Check for open)

Tester Connections	Specified Conditions
IGT (C11-3) - IGT1 (C20-85)	Below 1 Ω
IGT (C12-3) - IGT2 (C20-84)	
IGT (C13-3) - IGT3 (C20-83)	
IGT (C14-3) - IGT4 (C20-82)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
IGF (C11-2) or IGF1 (C20-81) - Body ground	10 kΩ or higher
IGF (C12-2) or IGF1 (C20-81) - Body ground	
IGF (C13-2) or IGF1 (C20-81) - Body ground	
IGF (C14-2) or IGF1 (C20-81) - Body ground	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
IGT (C11-3) or IGT1 (C20-85) - Body ground	10 kΩ or higher
IGT (C12-3) or IGT2 (C20-84) - Body ground	
IGT (C13-3) or IGT3 (C20-83) - Body ground	
IGT (C14-3) or IGT4 (C20-82) - Body ground	

(d) Reconnect the ECM connector.
(e) Reconnect the ignition coil with igniter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK WHETHER DTC OUTPUT RECURS (DTC P0351, P0352, P0353 OR P0354)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Shuffle arrangement of the ignition coils with igniters (among No. 1 to No. 4 cylinders).
NOTICE:
Do not shuffle the connectors.
(e) Perform a simulation test.
(f) Check DTCs displayed on the tester.

Result

Display (DTC Output)	Proceed To
Same DTC output	A
Different ignition coil DTC output	B

REPLACE ECM

DTC	P0420	Catalyst System Efficiency Below Threshold (Bank 1)

MONITOR DESCRIPTION

The ECM uses sensors mounted in front of and behind the Three-Way Catalytic Converter (TWC) to monitor its efficiency.
The first sensor, the Air-Fuel Ratio (A/F) sensor, sends pre-catalyst information to the ECM. The second sensor, the Heated Oxygen (HO2) sensor, sends post-catalyst information to the ECM.
In order to detect any deterioration in the TWC, the ECM calculates the Oxygen Storage Capacity (OSC) of the TWC. This calculation is based on the voltage output of the HO2 sensor while performing active air-fuel ratio control, rather than the conventional detecting method, which uses the locus ratio.
The OSC value is an indication of the oxygen storage capacity of the TWC. When the vehicle is being driven with a warm engine, active air-fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air-fuel ratio to lean or rich levels. If the rich-lean cycle of the HO2 sensor is long, the OSC becomes greater. There is a direct correlation between the OSCs of the HO2 sensor and the TWC.
The ECM uses the OSC value to determine the state of the TWC. If any deterioration has occurred, it illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0420	OSC value smaller than standard value under active air-fuel ratio control (2 trip detection logic)	• Front exhaust pipe (with TWC) • Gas leakage from exhaust system • Air-Fuel Ratio (A/F) sensor (sensor 1) • Heated Oxygen (HO2) sensor (sensor 2)

MONITOR STRATEGY

Related DTCs	P0420: Catalyst Deterioration
Required Sensors/Components (Main)	A/F sensor and HO2 sensor
Required Sensors/Components (Related)	Intake air temperature sensor, mass air flow meter, crankshaft position sensor and engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	About 30 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0031, 32 (A/F Sensor heater - Sensor 1) P0037, 38 (O2 Sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136 (O2 Sensor - Sensor 2) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS) P2196 (A/F Sensor - rationality) P2A00 (A/F Sensor - slow response)
Battery voltage	11 V or more
Intake air temperature	-10°C (14°F) or more

Engine coolant temperature	75°C (167°F) or more
Atmospheric pressure	76 kPa (570 mmHg) or more
Idling	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Engine load	10 to 80 %
All of following conditions (a), (b) and (c) met	-
(a) Mass air flow rate	2.5 to 27 g/sec
(b) Estimated front catalyst temperature	620° to 800°C (1,148° to 1,472°F)
(c) Estimated rear catalyst temperature	400° to 900°C (752° to 1,652°F)
Rear HO2 sensor heater monitor	Completed
Shift position	4th or 5th (M/T) 3rd or 4th (A/T)

ES

TYPICAL MALFUNCTION THRESHOLDS

Oxygen Storage Capacity (OSC) of Three-Way Catalytic Converter (TWC)	Less than 0.046875 g

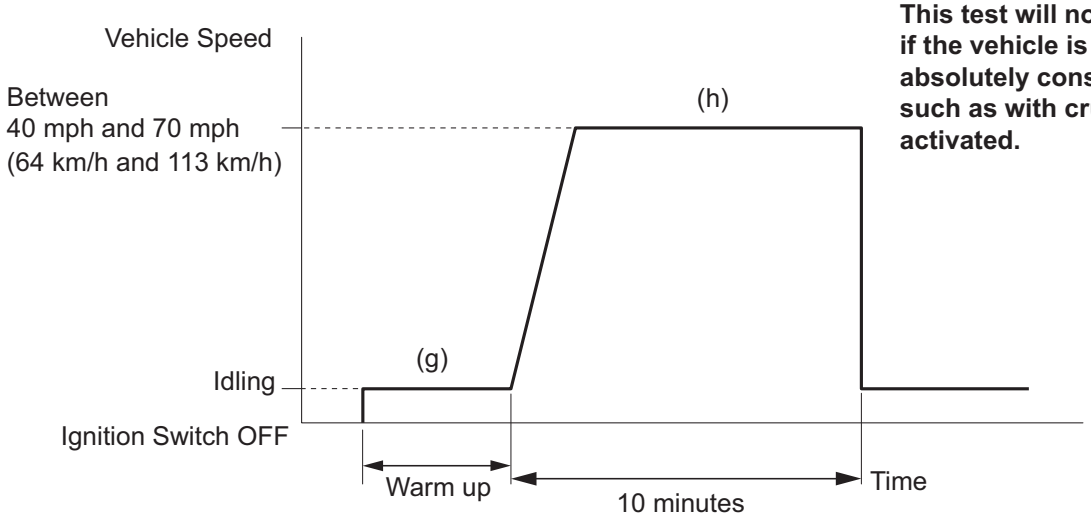
MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the catalyst monitor. This is very useful for verifying the completion of a repair.

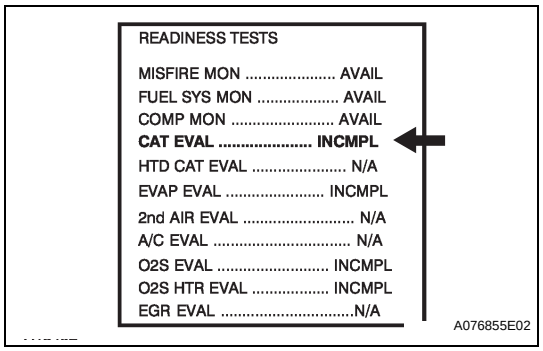


NOTICE:
This test will not be completed if the vehicle is driven at absolutely constant speed such as with cruise control activated.

(Note: Even if vehicle stops during driving pattern, test can be resumed)

P

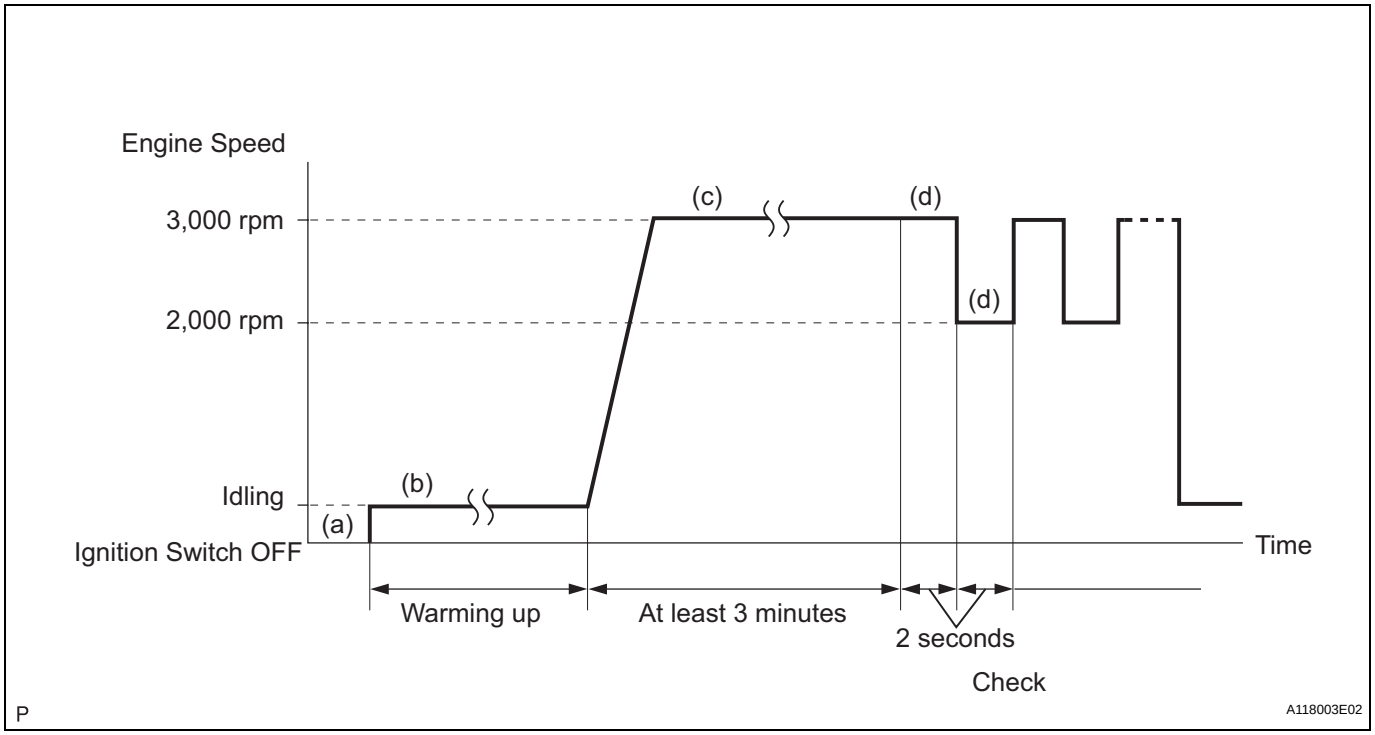
A115372E13



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (where set) (See page ES-34).
(e) Select the following menu items: DIAGNOSIS / CARB OBD II / READINESS TESTS.
(f) Check that CAT EVAL is INCMPL (incomplete).
(g) Start the engine and warm it up.
(h) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.
(i) Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as CAT EVAL monitor operates.
(j) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.
HINT:
If CAT EVAL does not change to COMPL, and any pending DTCs fail to set, extend the driving time.

CONDITIONING FOR SENSOR TESTING

HINT:
Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the A/F and HO2 sensors. This is in order to activate the sensors sufficiently to obtain the appropriate inspection results.



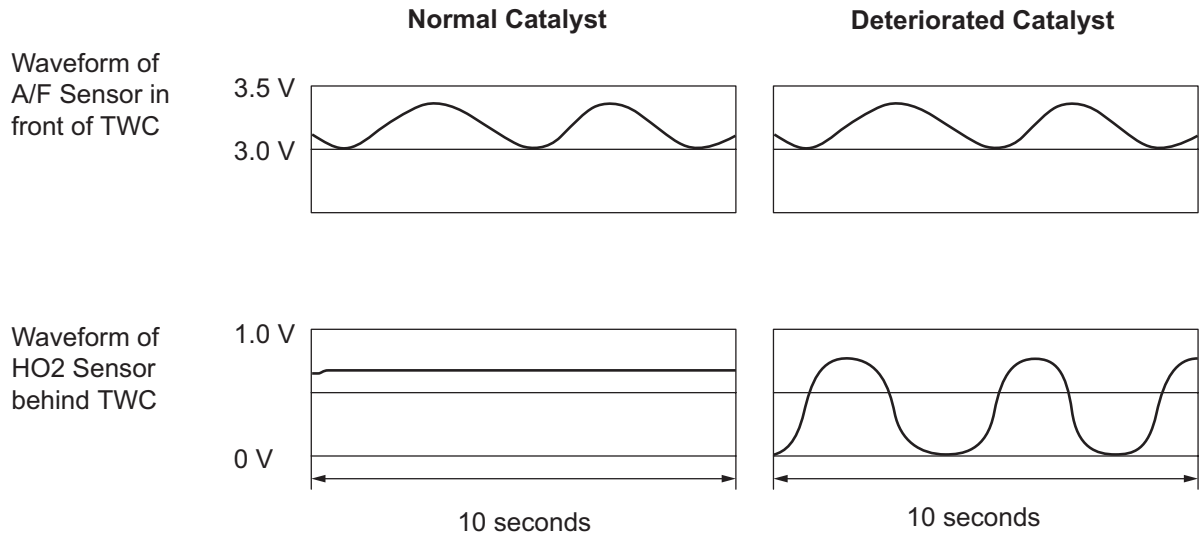
(a) Connect an intelligent tester to the DLC3.

(b) Start the engine and warm it up with all the accessories switched OFF, until the engine coolant temperature stabilizes.
(c) Run the engine at an engine speed of between 2,500 rpm and 3,000 rpm for at least 3 minutes.
(d) While running the engine at 3,000 rpm and 2,000 rpm alternating at 2 second intervals, check the waveforms of the A/F and HO2 sensors using the tester.
HINT:

- If either voltage output of the Air-Fuel Ratio (A/F) or Heated Oxygen (HO2) sensor does not fluctuate, or there is a noise in the waveform of either sensor the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air-fuel ratio may be extremely lean or rich. In such cases, perform the following A/F CONTROL using an intelligent tester.
- If the Three-Way Catalytic Converter (TWC) has deteriorated, the HO2 sensor (located behind the TWC) voltage output fluctuates up and down frequently, even under normal driving conditions (active air-fuel ratio control is not performed).

ES

Voltage output when active air-fuel ratio control not performed:



Y
A121610E02

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0420	A

Display (DTC Output)	Proceed To
P0420 and other DTCs	B

HINT:
If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

Result:

A/F sensor reacts in accordance with increases and decreases in fuel injection volume:
+25 % = Rich output:
Less than 3.0 V
-12.5 % = Lean output:
More than 3.35 V

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Catalyst • Exhaust gas leakage
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		Extremely rich or lean actual air-fuel ratio • Injector • Fuel pressure • Gas leakage from exhaust system
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.

DTC	P043E	Evaporative Emission System Reference Orifice Clog Up

DTC	P043F	Evaporative Emission System Reference Orifice High Flow

DTC SUMMARY

DTCs	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P043E	Reference orifice clogged	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • EVAP pressure just after reference pressure measurement greater than -1 kPa-g (-7.5 mmHg-g) • Reference pressure less than -4.85 kPa-g (-36.4 mmHg-g) • Reference pressure greater than -1.057 kPa-g (-7.93 mmHg-g) • Reference pressure not saturated • Reference pressure difference between first and second 0.7 kPa-g (5.25 mmHg-g) or more HINT: Typical example values	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch OFF	2 trip
P043F	Reference orifice high-flow		• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch OFF	2 trip

HINT:
The reference orifice is located inside the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-324).

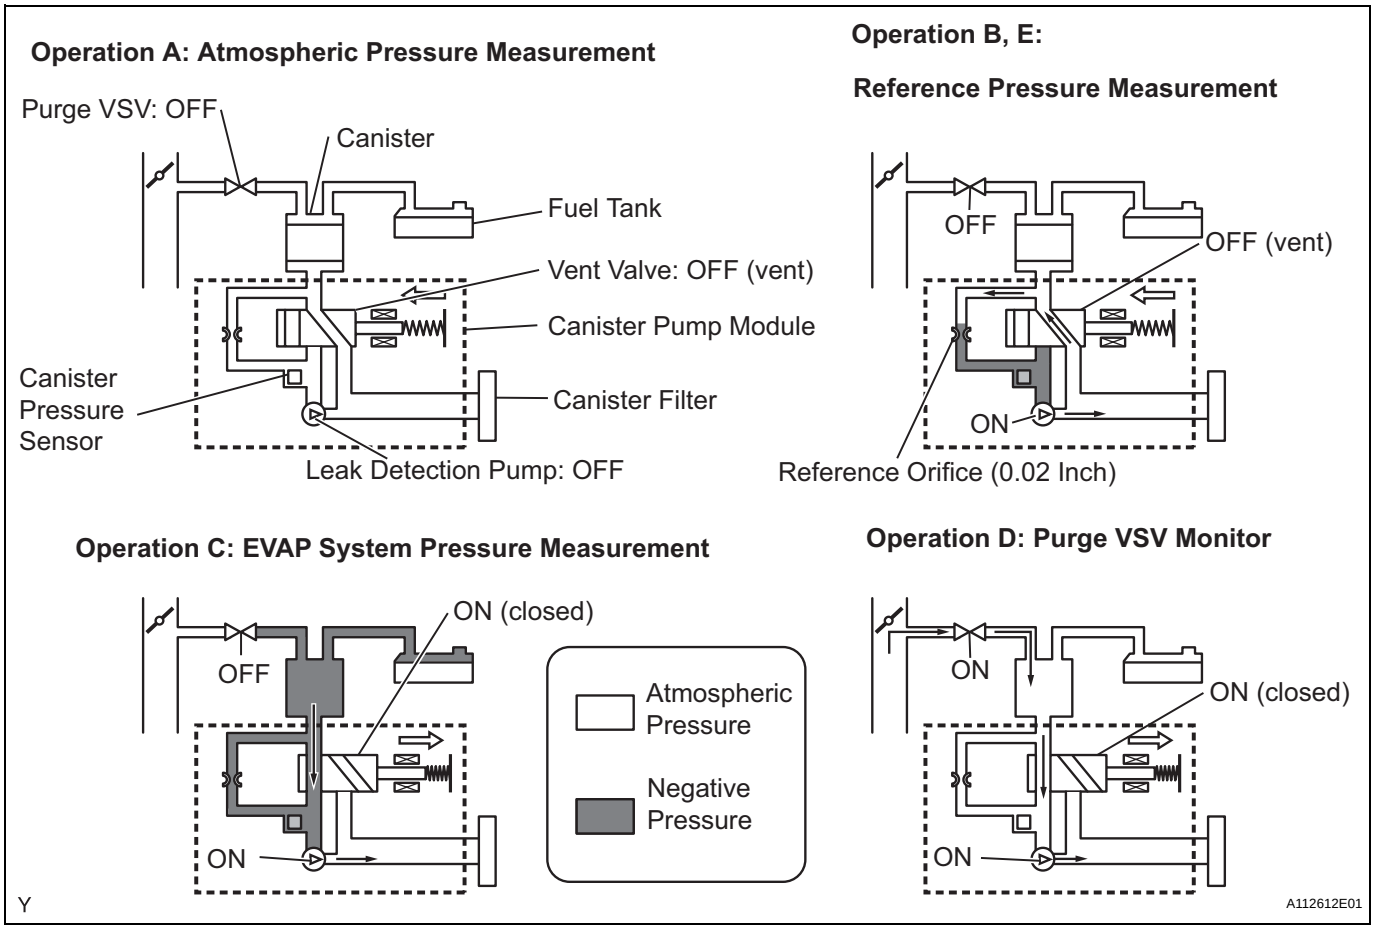
MONITOR DESCRIPTION

5 hours* after the ignition switch is turned to OFF, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to OFF, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned to OFF.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

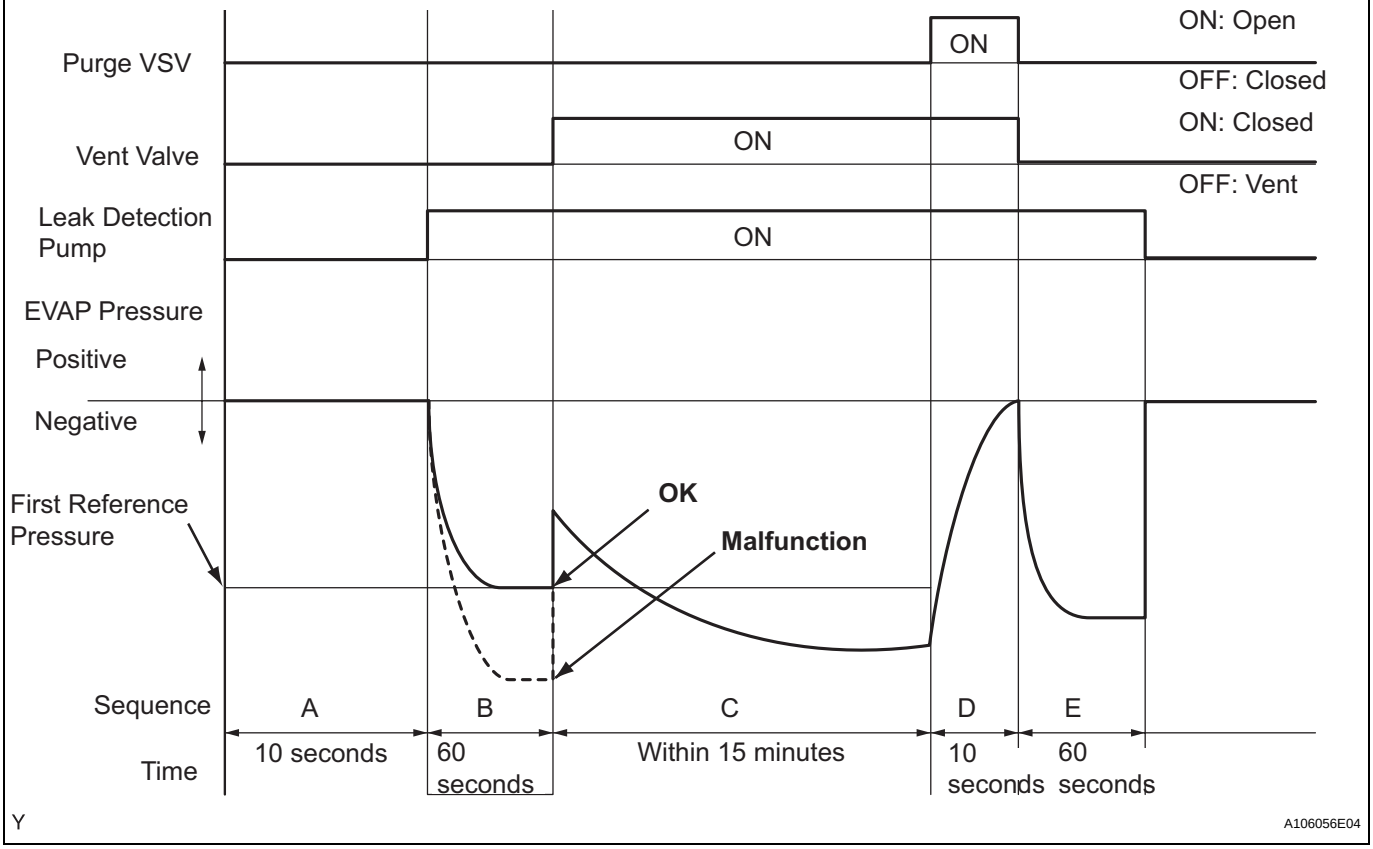
* If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



(a) P043E: Reference orifice clogged

In operation B, the leak detection pump creates negative pressure (vacuum) through the reference orifice. The EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to determine the reference pressure. If the pressure is lower than -4.85 kPa-g (-36.4 mmHg-g), the ECM interprets this as a clog malfunction in the reference orifice, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (2 trip detection logic).

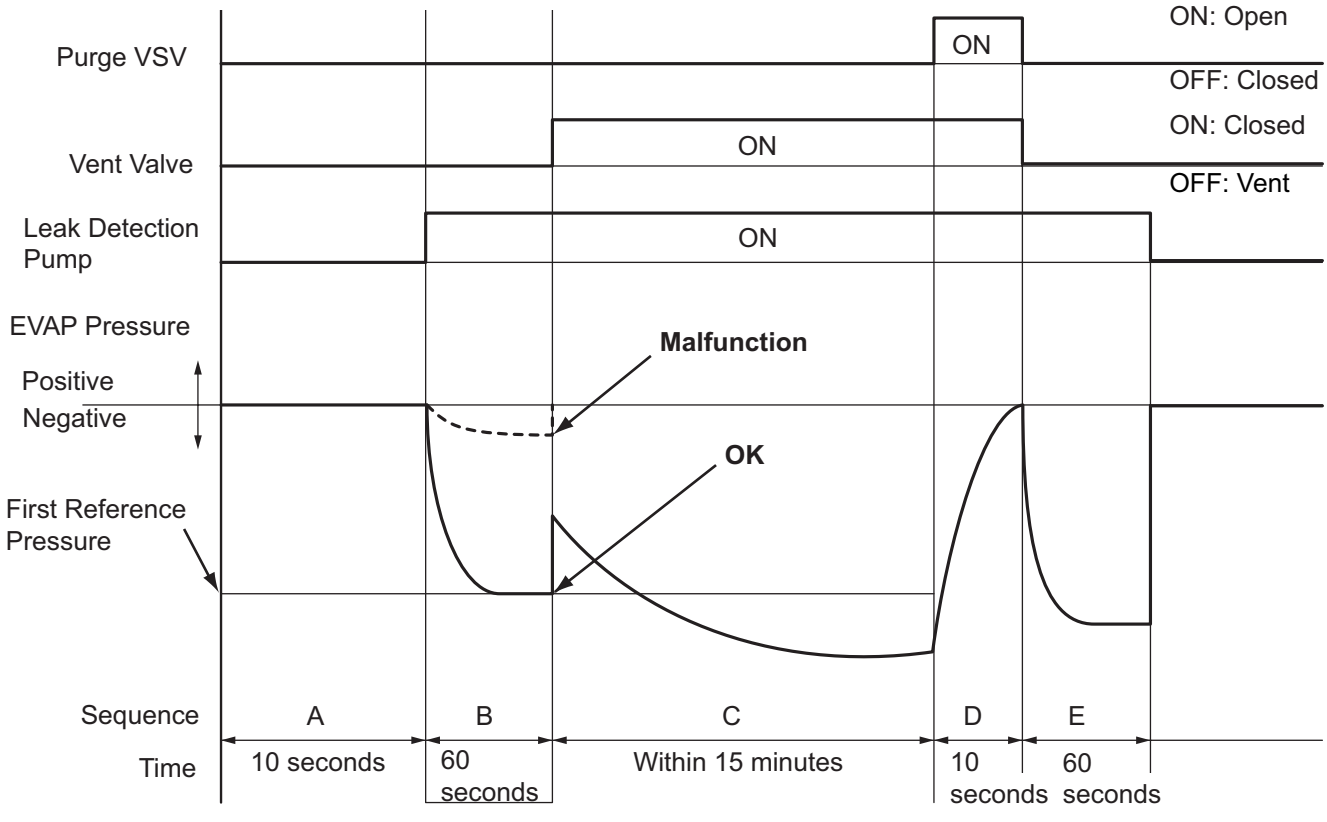
EVAP Pressure when Reference Orifice Clogged:



(b) P043F: Reference orifice high-flow

In operation B, the leak detection pump creates negative pressure (vacuum) through the reference orifice. The EVAP system pressure is then measured by the ECM using the canister pressure sensor to determine the reference pressure. If the pressure is higher than -1.057 kPa-g (-7.93 mmHg-g), the ECM interprets this as a high-flow malfunction in the reference orifice, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Reference Orifice High-flow Malfunction:



MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed

ECT	4.4° to 35°C (40° to 95°F)
IAT	4.4°to 35°C (40° to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence run if following condition set	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after vent valve ON (closed)	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence run if following condition set	-
EVAP pressure	Saturated within 15 minutes

5. Purge VSV stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after purge VSV ON (open)	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Reference pressure difference between first and second	Less than 0.7 kPa-g (5.25 mmHg-g)

7. Leak check

Next sequence run if following condition set	-
EVAP pressure when vacuum introduction complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition set	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

One of following conditions met	-
EVAP pressure just after reference pressure measurement start	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds
Reference pressure difference between first and second	0.7 kPa-g (5.25 mmHg-g) or more

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

DTC	P0441	Evaporative Emission Control System Incorrect Purge Flow

DTC SUMMARY

DTC	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P0441	Purge VSV (Vacuum Switching Valve) stuck open	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.2], ECM determines that purge VSV stuck open	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leakage from EVAP system	While ignition switch OFF	2 trip
	Purge VSV stuck closed	After EVAP leak check performed, purge VSV turned ON (open), and atmospheric air introduced into EVAP system. Reference pressure measured at start and at end of check. If pressure does not return to near atmospheric pressure, ECM determines that purge VSV stuck closed	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leakage from EVAP system	While ignition switch OFF	2 trip
	Purge flow	While engine running, following conditions successively met: • Negative pressure not created in EVAP system when purge VSV turned ON (open) • EVAP system pressure change less than 0.5 kPa-g (3.75 mmHg-g) when vent valve turned ON (closed) • Atmospheric pressure change before and after purge flow monitor less than 0.1 kPa-g (0.75 mmHg-g)	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • Leakage from EVAP line (Purge VSV - Intake manifold) • ECM	While engine running	2 trip

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-324).

MONITOR DESCRIPTION

The two monitors, Key-Off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The Key-Off monitor is initiated by the ECM internal timer, known as the soak timer, 5 hours* after the ignition switch is turned to OFF. The purge flow monitor runs while the engine is running.

1. KEY-OFF MONITOR

   5 hours* after the ignition switch is turned to OFF, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

   HINT:

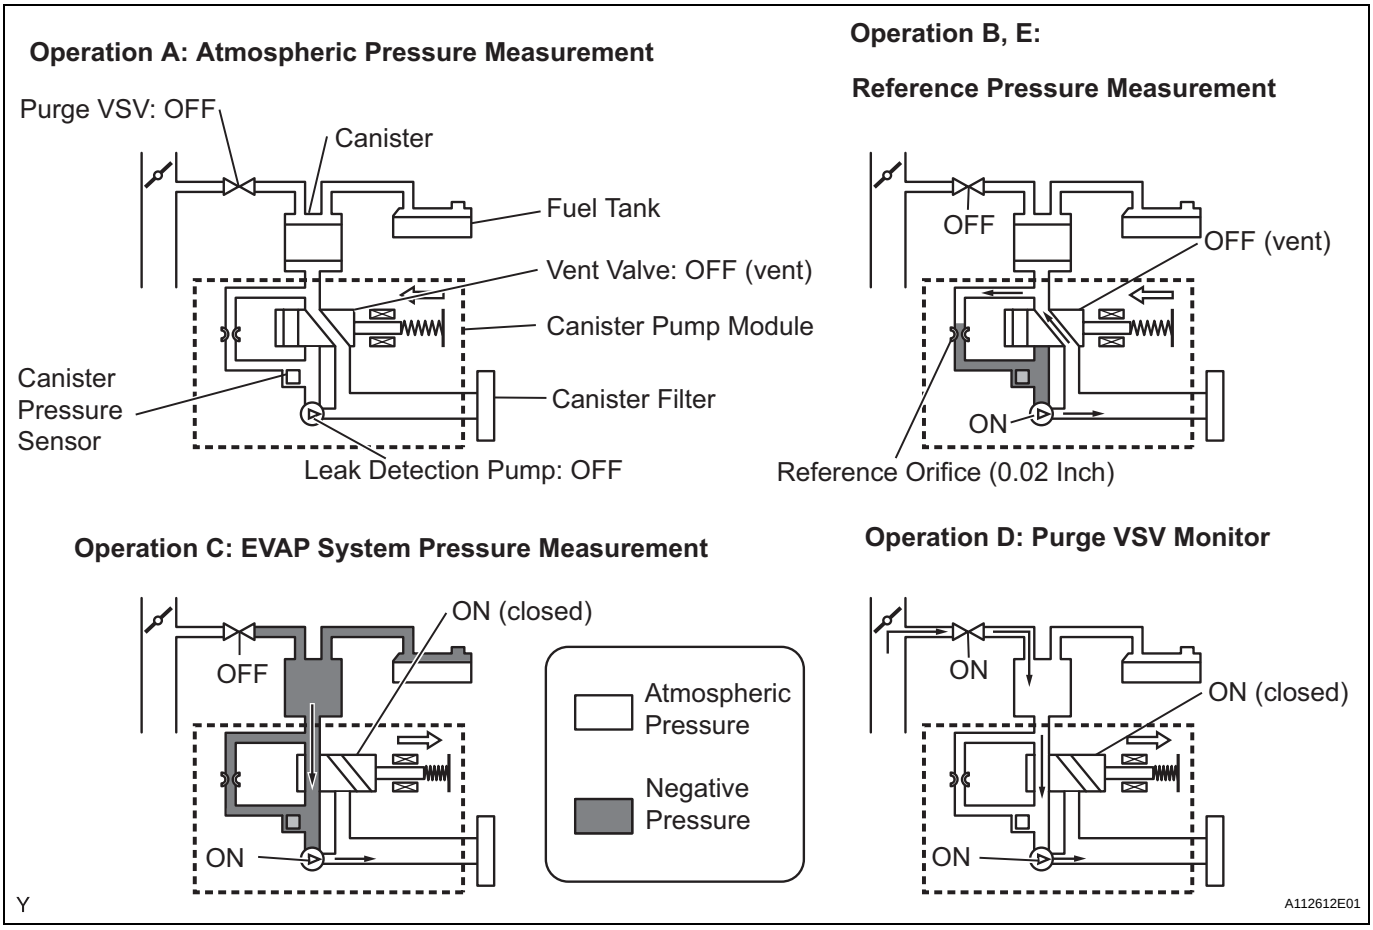
   *: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to OFF, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned to OFF.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

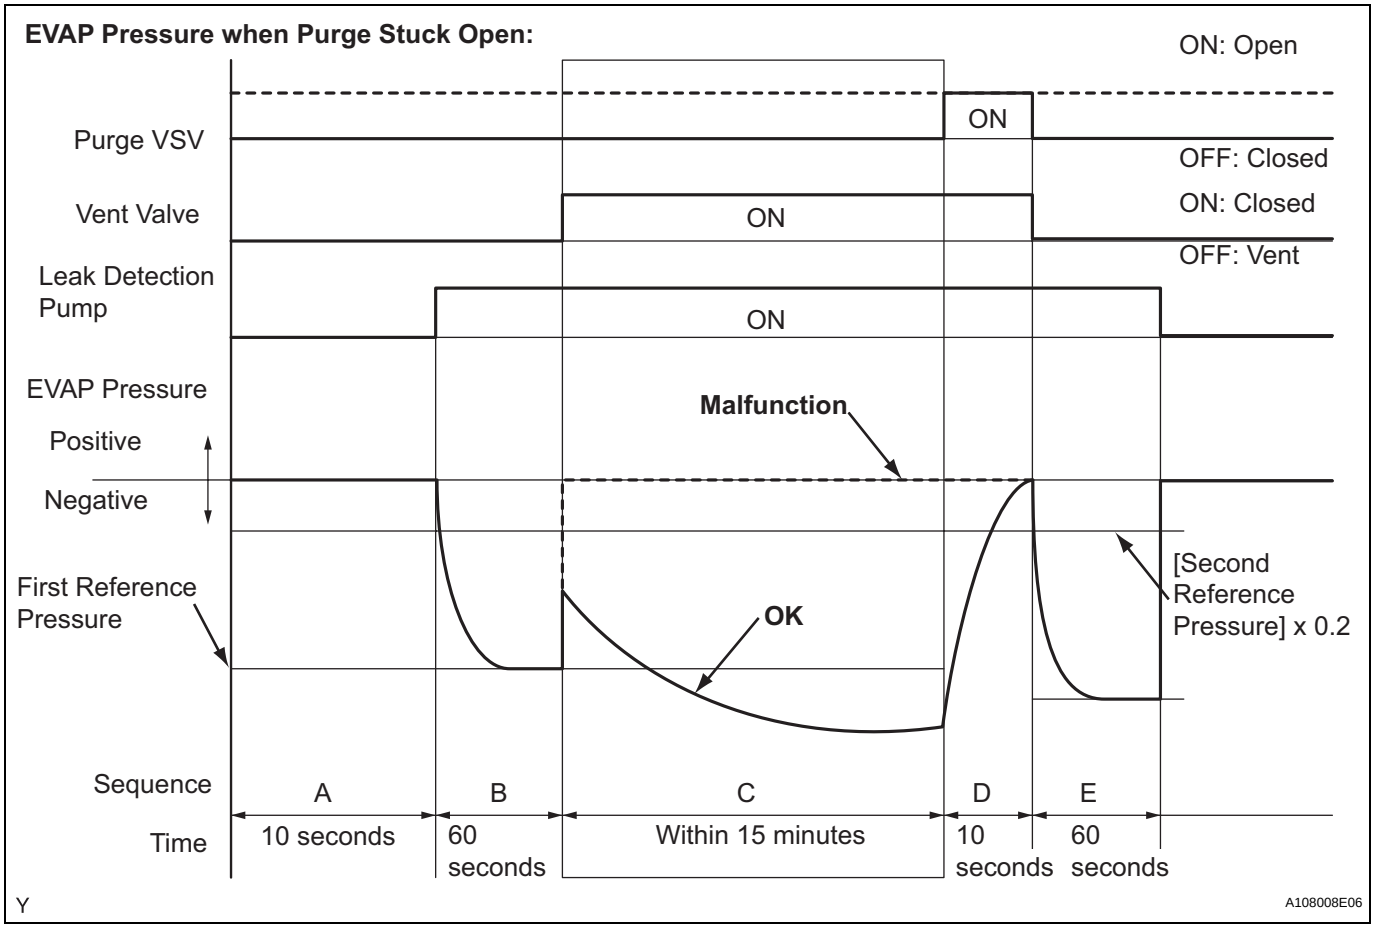
ES

* If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



(a) Purge VSV stuck open

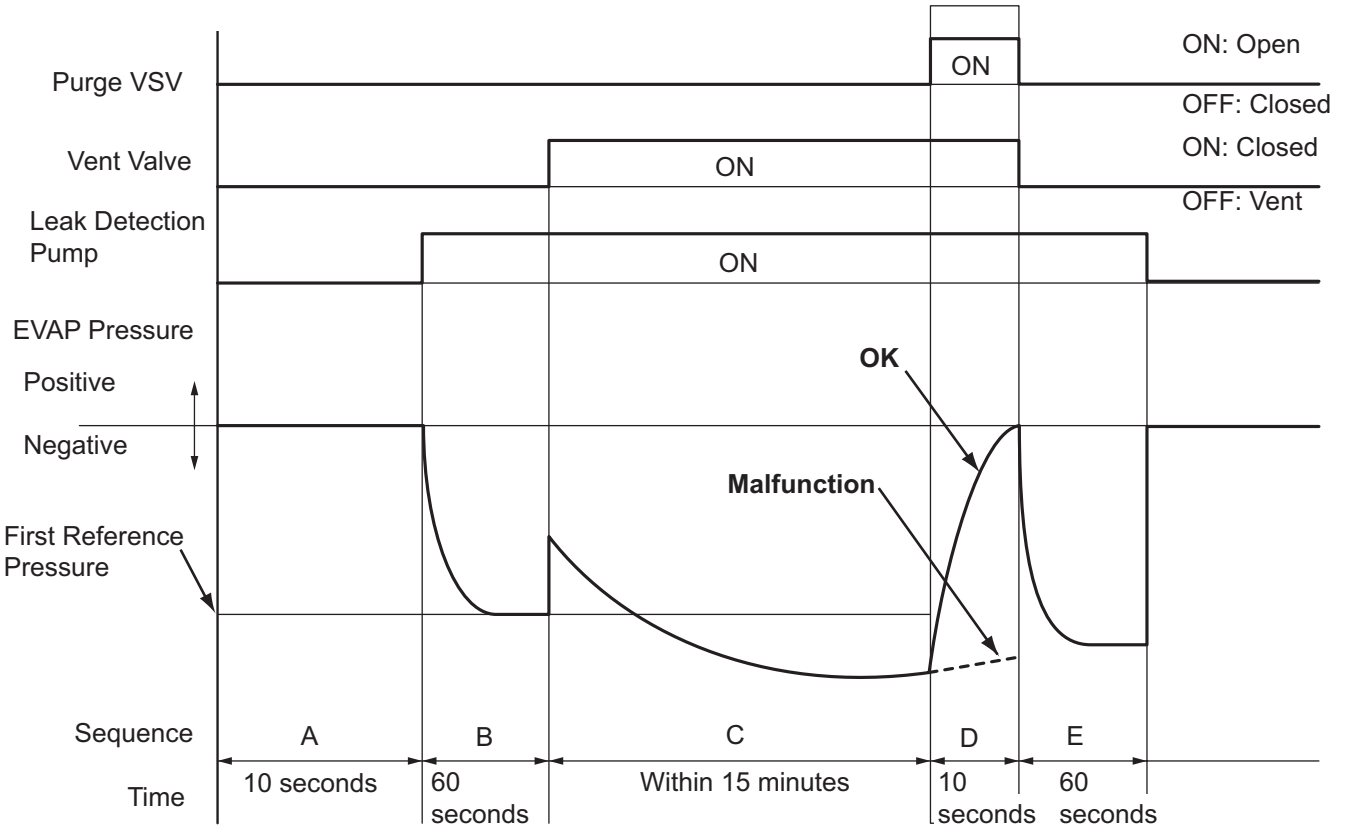
In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The EVAP system pressure is then measured by the ECM using the canister pressure sensor. If the stabilized system pressure is higher than [second reference pressure x 0.2], the ECM interprets this as the purge VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).



(b) Purge VSV stuck closed

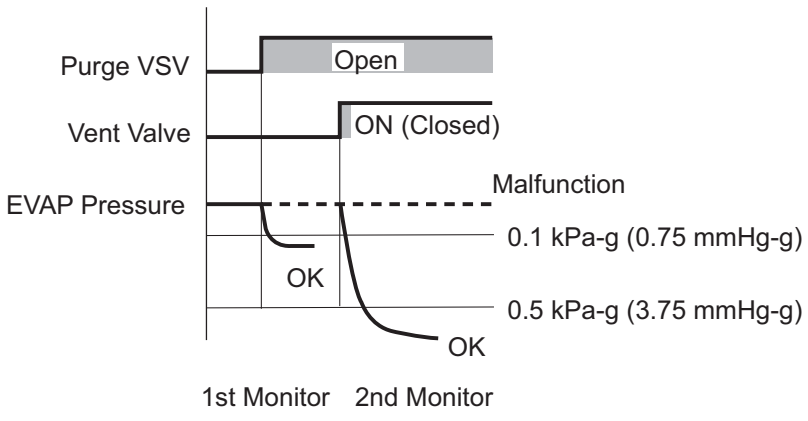
In operation D, the canister pressure sensor measures the EVAP system pressure. The pressure measurement for purge VSV monitor is begun when the purge VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa-g (2.25 mmHg-g) or more, the purge VSV is functioning normally. If the pressure does not increase, the ECM interprets this as the purge VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Purge VSV Stuck Closed:



2. PURGE FLOW MONITOR

EVAP Pressure During Purge Flow Monitor:



The purge flow monitor consists of the two step monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the purge VSV is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor
  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.5 kPa-g (3.75 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:
In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after conduction of the purge flow monitor, is measured by the ECM.

OBD II MONITOR SPECIFICATIONS

1. Key-off Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4° to 35°C (40° to 95°F)
IAT	4.4°to 35°C (40° to 95°F)

2. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence run if following condition set	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after vent valve ON (closed)	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence run if following condition set	-
EVAP pressure	Saturated within 15 minutes

5. Purge VSV stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after purge VSV ON (open)	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Reference pressure difference between first and second	Less than 0.7 kPa-g (5.25 mmHg-g)

7. Leak check

Next sequence run if following condition set	-
EVAP pressure when vacuum introduction complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition set	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

Typical Malfunction Thresholds

Purge VSV stuck open:	-
EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.2

Purge VSV stuck closed:	-
EVAP pressure change after purge VSV ON (open)	Less than 0.3 kPa-g (2.25 mmHg-g)

OBD II MONITOR SPECIFICATIONS

1. Purge Flow Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 30 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

Monitor runs whenever following DTCs not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0450 - P0453 (EVAP press sensor) P0500 (VSS)
Engine	Running
ECT	4.4°C (40°F) or more
IAT	4.4°C (40°F) or more

Canister pressure sensor malfunction	Not detected
Purge VSV	Not operated by scan tool
EVAP system check	Not operated by scan tool
Battery voltage	10 V or more
Purge duty cycle	8 % or more

Typical Malfunction Thresholds

Both of following conditions met	Conditions 1 and 2
1. EVAP pressure change when purge operation started	Less than 0.1 kPa-g (0.75 mmHg-g)
2. EVAP pressure change during purge operation when vent valve closed	Less than 0.5 kPa-g (3.75 mmHg-g)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

DTC	P0450	Evaporative Emission Control System Pressure Sensor / Switch

DTC	P0451	Evaporative Emission Control System Pressure Sensor Range / Performance

DTC SUMMARY

DTC	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P0450	Canister pressure sensor voltage fluctuation abnormal	Sensor output voltage rapidly fluctuates beyond upper and lower malfunction thresholds for 0.5 seconds.	• Canister pump module • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition OFF) • Ignition ON	1 trip
P0451	Canister pressure sensor noise	Sensor output voltage fluctuates frequently within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition OFF) • Engine running	2 trip
	Canister pressure sensor signal becomes fixed/flat	Sensor output voltage does not vary within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition OFF)	2 trip
P0452	Canister pressure sensor voltage low	Sensor output voltage less than 0.45 V for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition ON • EVAP monitoring (ignition OFF)	1 trip

DTC	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P0453	Canister pressure sensor voltage high	Sensor output voltage more than 4.9 V for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition ON • EVAP monitoring (ignition OFF)	1 trip

HINT:
The canister pressure sensor is built into the canister pump module.

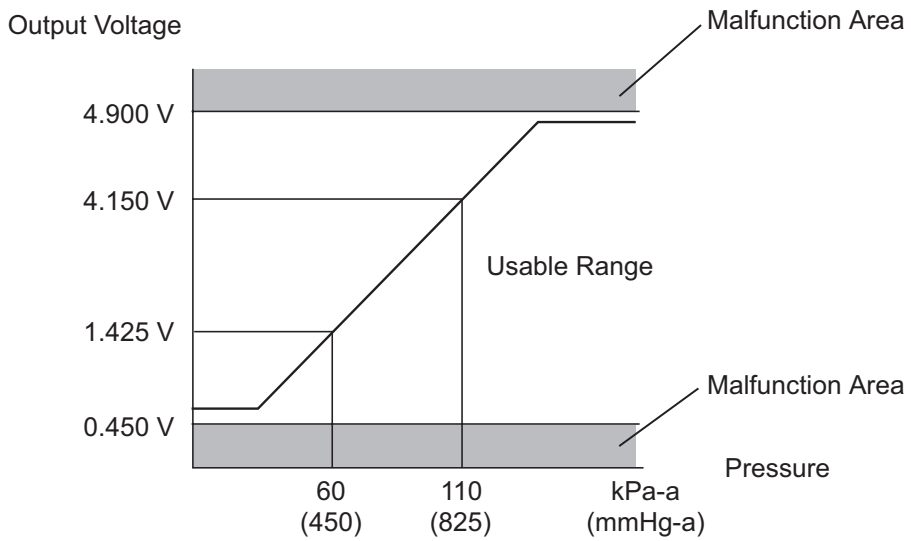
ES

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

MONITOR DESCRIPTION

Canister Pressure Sensor Specification:



HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

A115543E05

1. DTC P0450: Canister pressure sensor voltage abnormal fluctuation
   If the canister pressure sensor voltage output [pressure] rapidly fluctuates between less than 0.45 V [42.1 kPa-a (315.9 mmHg-a)] and more than 4.9 V [123.8 kPa-a (928.4 mmHg-a)], the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP (Evaporative Emission) system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

2. DTC P0451: Canister pressure sensor noise or fixed/flat
   If the canister pressure sensor voltage output fluctuates rapidly for 10 seconds, the ECM stops the EVAP system monitor. The ECM interprets this as noise from the canister pressure sensor, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.
   Alternatively, if the sensor voltage output does not change for 10 seconds, the ECM interprets this as the sensor being fixed/flat, and stops the monitor. The ECM then illuminates the MIL and sets the DTC. (Both the malfunctions are detected by 2 trip detection logic).
3. DTC P0452: Canister pressure sensor voltage low
   If the canister pressure sensor voltage output [pressure] is below 0.45 V [42.1 kPa-a (315.9 mmHg-a)], the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).
4. DTC P0453: Canister pressure sensor voltage high
   If the canister pressure sensor voltage output [pressure] is 4.9 V [123.8 kPa-a (928.4 mmHg-a)] or more, the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle: P0451 sensor fixed/flat Continuous: P0451 sensor noise, P0450, P0452 and P0453
Duration	0.5 seconds: P0450, P0452 and P0453 10 seconds: P0451
MIL Operation	Immediate: P0450, P0452 and P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0451 (Noise monitor):

Monitor runs whenever following DTCs not present	None
Atmospheric pressure (absolute pressure)	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more
Intake air temperature	4.4°to 35°C (40° to 95°F)
Canister pressure sensor malfunction (P0450, P0452, 0453)	Not detected
Either of following conditions met	A or B
A. Engine condition	Running
B. Time after key off	5 or 7 or 9.5 hours

P0451 (Fixed/flat monitor):

Monitor runs whenever following DTCs not present	None
Battery voltage	10.5 V or more
Intake air temperature	4.4°to 35°C (40° to 95°F)
Canister pressure sensor malfunction (P0450, P0452, 0453)	Not detected
Atmospheric pressure (absolute pressure)	76 to 110 kPa-a (570 to 825 mmHg-a)
Time after key off	5 or 7 or 9.5 hours

P0450, P0452 and P0453:

Monitor runs whenever following DTCs not present	None
Either of following conditions met	(a) or (b)
(a) Ignition switch	ON
(b) Soak timer	ON

TYPICAL MALFUNCTION THRESHOLDS

P0450: Canister pressure sensor chattering

EVAP pressure	Less than 42.1 kPa-a (315.9 mmHg-a), or more than 123.8 kPa-a (928.4 mmHg-a)

P0451: Canister pressure sensor noise

Frequency that EVAP pressure change 0.3 kPa-g (2.25 mmHg-g) or more	10 times or more in 10 seconds

P0451: Canister pressure sensor fixed/flat

EVAP pressure change during reference pressure	Less than 0.65 kPa-g (4.87 mmHg-g)

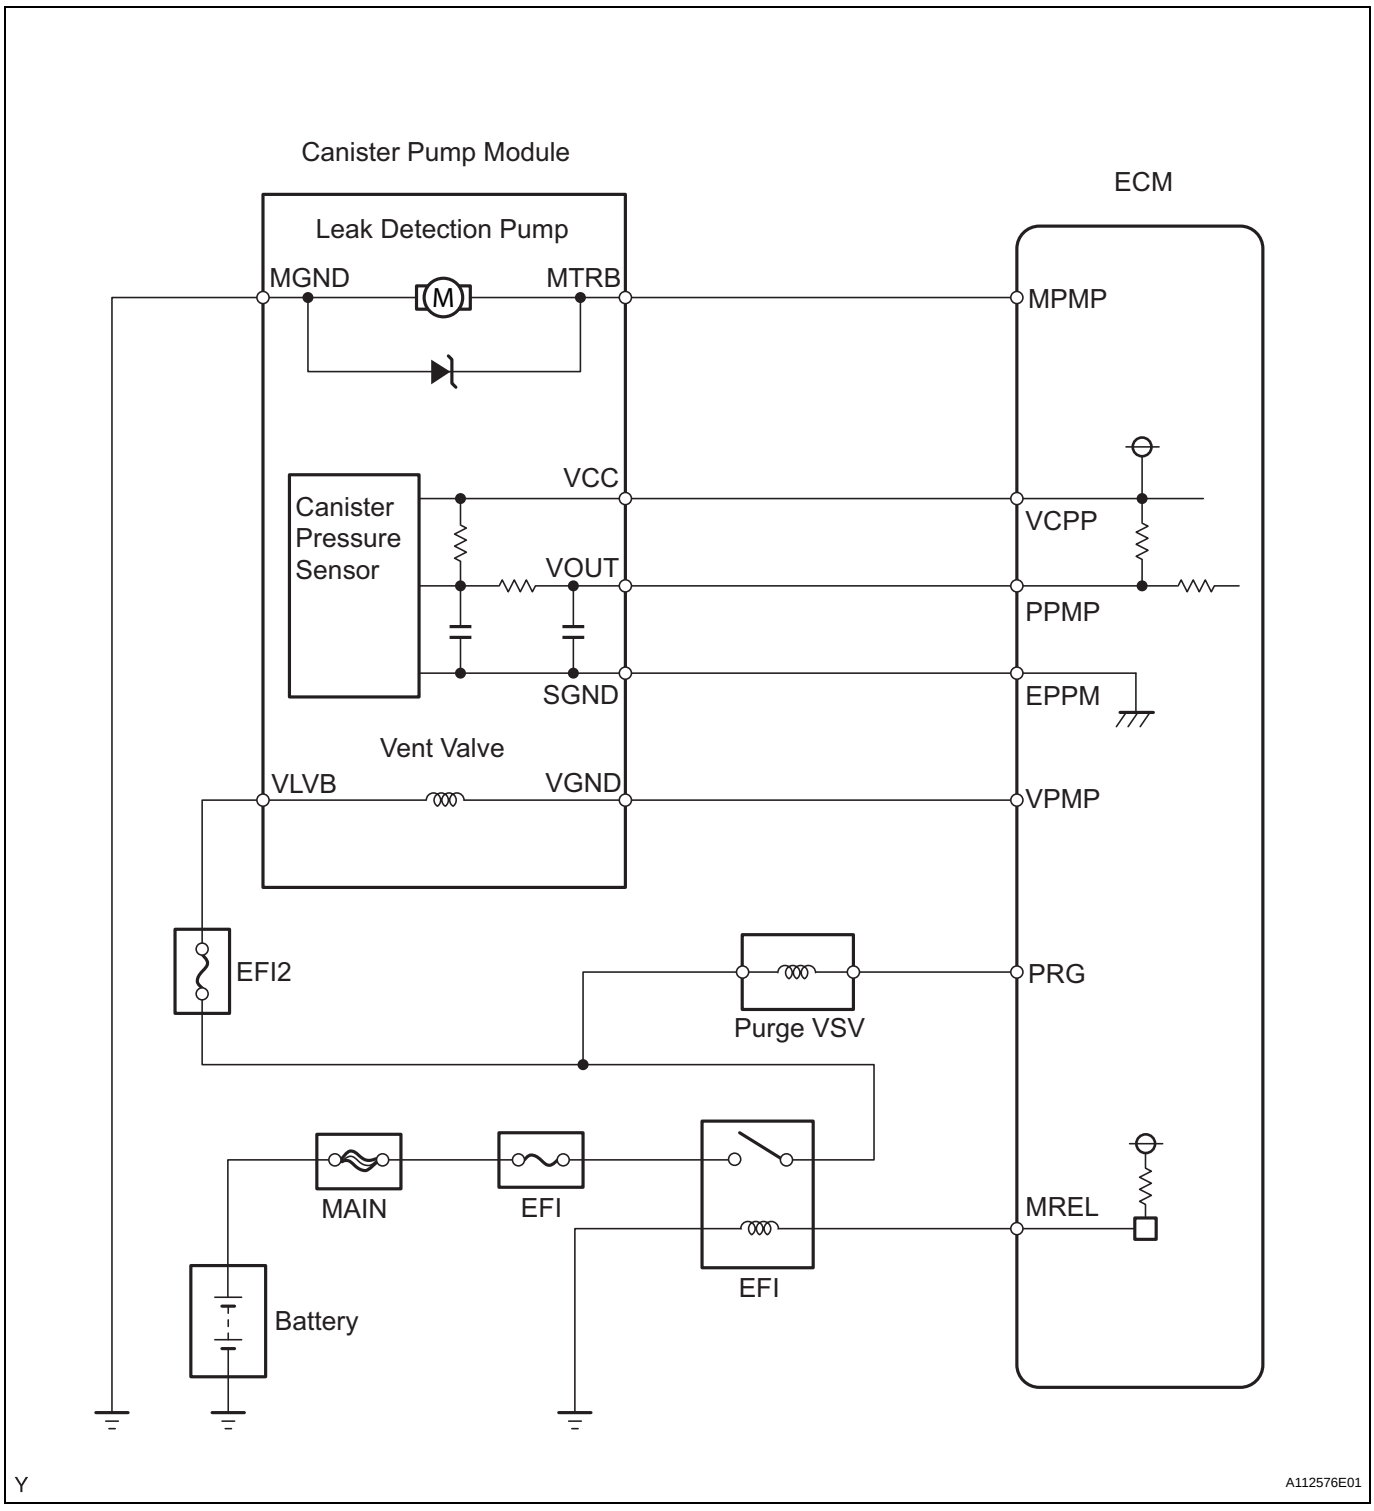
P0452: Canister pressure sensor low voltage

EVAP pressure	Less than 42.1 kPa-a (315.9 mmHg-a)

P0453: Canister pressure sensor high voltage

EVAP pressure	More than 123.8 kPa-a (928.4 mmHg-a)

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel cap.**
- **Do not disassemble the canister pump module.**
- **An intelligent tester is required to conduct the following diagnostic troubleshooting procedure.**

1	CONFIRM DTC AND EVAP PRESSURE

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON (do not start the engine).
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / EVAP / VAPOR PRESS.
(g) Read the EVAP (Evaporative Emission) pressure displayed on the tester.

ES

Result

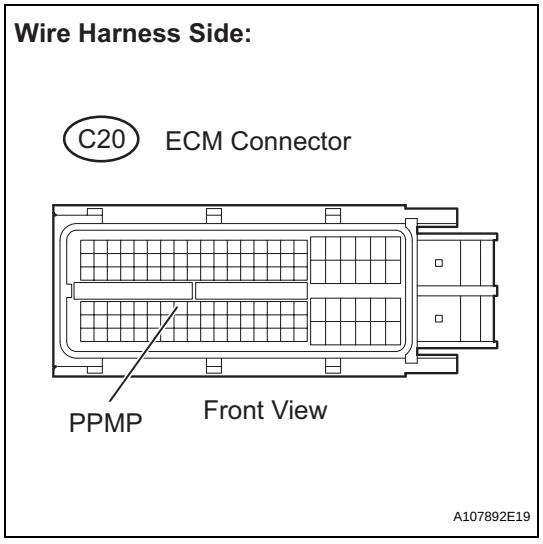
Display (DTC Output)	Test Results	Suspected Trouble Areas	Proceed To
P0451	-	Canister pressure sensor	C
P0452	Less than 45 kPa-a (430 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor • Short in ECM circuit	A
P0453	More than 120 kPa-a (900 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor • Open in ECM circuit	B

B → Go to step 4

C → GO TO EVAP SYSTEM

A

2	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)



(a) Turn the ignition switch to OFF.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance between PPMP terminal of the ECM connector and the body ground.

Result

Test Results	Suspected Trouble Areas	Proceed To
10 Ω or less	• Wire harness/connector (ECM - Canister pressure sensor) • Short in canister pressure sensor circuit	A
10 kΩ or more	• Wire harness/connector (ECM - Canister pressure sensor) • Short in ECM circuit	B

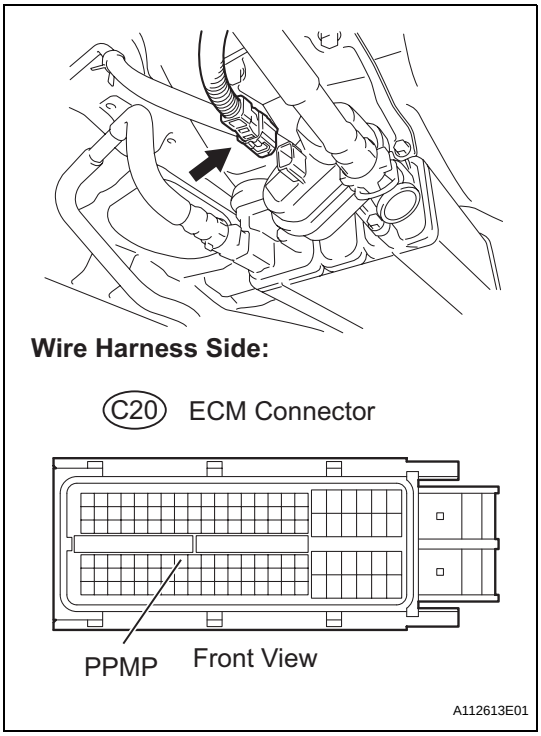
(d) Reconnect the ECM connector.

B → **Go to step 7**

A

ES

3 CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)



(a) Disconnect the J25 canister pump module connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance between PPMP terminal of the ECM connector and the body ground.

Result

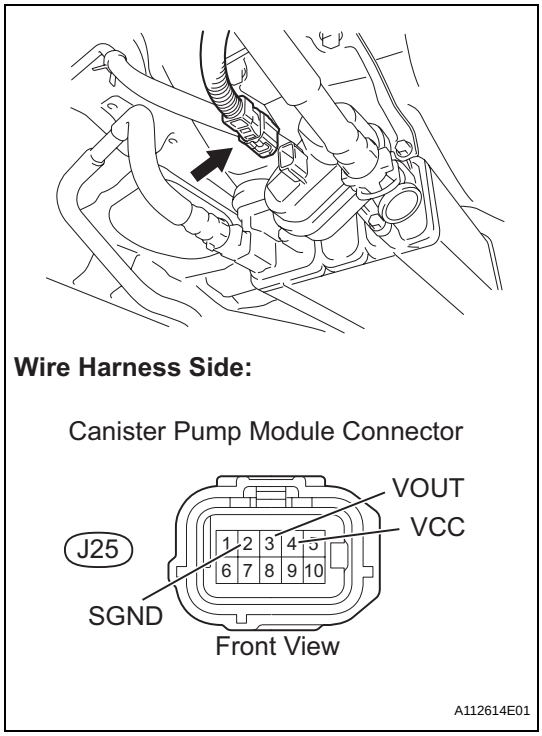
Test Results	Suspected Trouble Areas	Proceed To
10 kΩ or more	Short in canister pressure sensor circuit	A
10 Ω or less	Short in wire harness/connector (ECM - Canister pressure sensor)	B

(d) Reconnect the canister pump module connector.
(e) Reconnect the ECM connector.

A → **Go to step 5**

B → **Go to step 6**

4 CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)



(a) Disconnect the J25 canister pump module connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage and resistance of the canister connector.

Standard

Tester Connections	Specified Conditions
VCC (J25-4) - Body ground	4.5 to 5.5 V
VOUT (J25-3) - Body ground	
SGND (J25-2) - Body ground	100 Ω or less

ES

Result

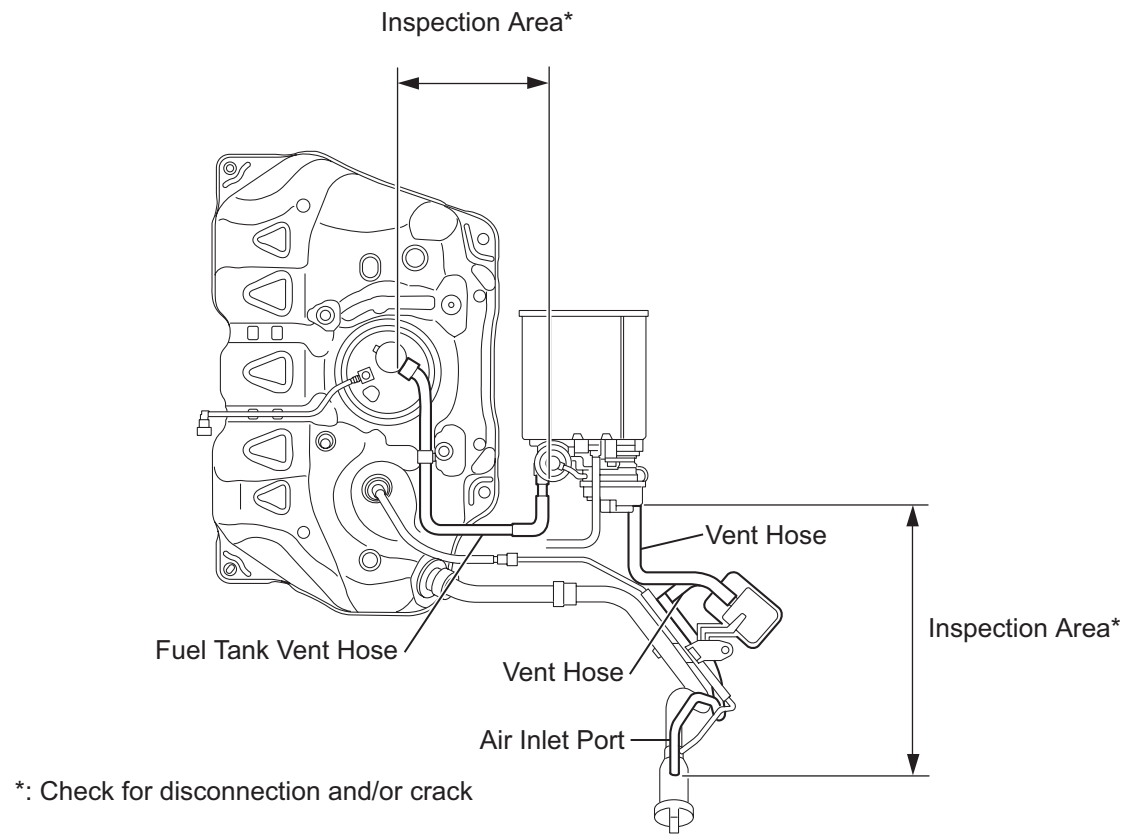
Test Results	Suspected Trouble Areas	Proceed To
Voltage and resistance within standard ranges	Open in canister pressure sensor circuit	A
Voltage and resistance outside standard ranges	Open in wire harness/connector (ECM - Canister pressure sensor)	B

(d) Reconnect the canister pump module connector.

A	Go to step 5
B	Go to step 6

5 REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-7).
NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.



NEXT → Go to step 8

6	REPAIR OR REPLACE HARNESS OR CONNECTOR

HINT:
If the exhaust tail pipe has been removed, go to the next step before reinstalling it.

NEXT → Go to step 8

7	REPLACE ECM

(a) Replace the ECM (See page ES-431).

NEXT → Go to step 8

8	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Wait for at least 60 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.

HINT:
If no pending DTCs are displayed on the tester, the repair has been successfully completed.

NEXT

COMPLETED

DTC	P0455	Evaporative Emission Control System Leak Detected (Gross Leak)

DTC	P0456	Evaporative Emission Control System Leak Detected (Very Small Leak)

DTC SUMMARY

DTCs	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P0455	EVAP gross leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.2], ECM determines that EVAP system has large leak.	• Fuel cap (loose) • Leakage from EVAP line (Canister - Fuel tank) • Leakage from EVAP line (Purge VSV - Canister) • Canister pump module • Leakage from fuel tank • Leakage from canister	While ignition switch OFF	2 trip
P0456	EVAP small leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than second reference pressure, ECM determines that EVAP system has small leak.	• Fuel cap (loose) • Leakage from EVAP line (Canister - Fuel tank) • Leakage from EVAP line (Purge VSV - Canister) • Canister pump module • Leakage from fuel tank • Leakage from canister	While ignition switch OFF	2 trip

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-324).

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned to OFF, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

HINT:

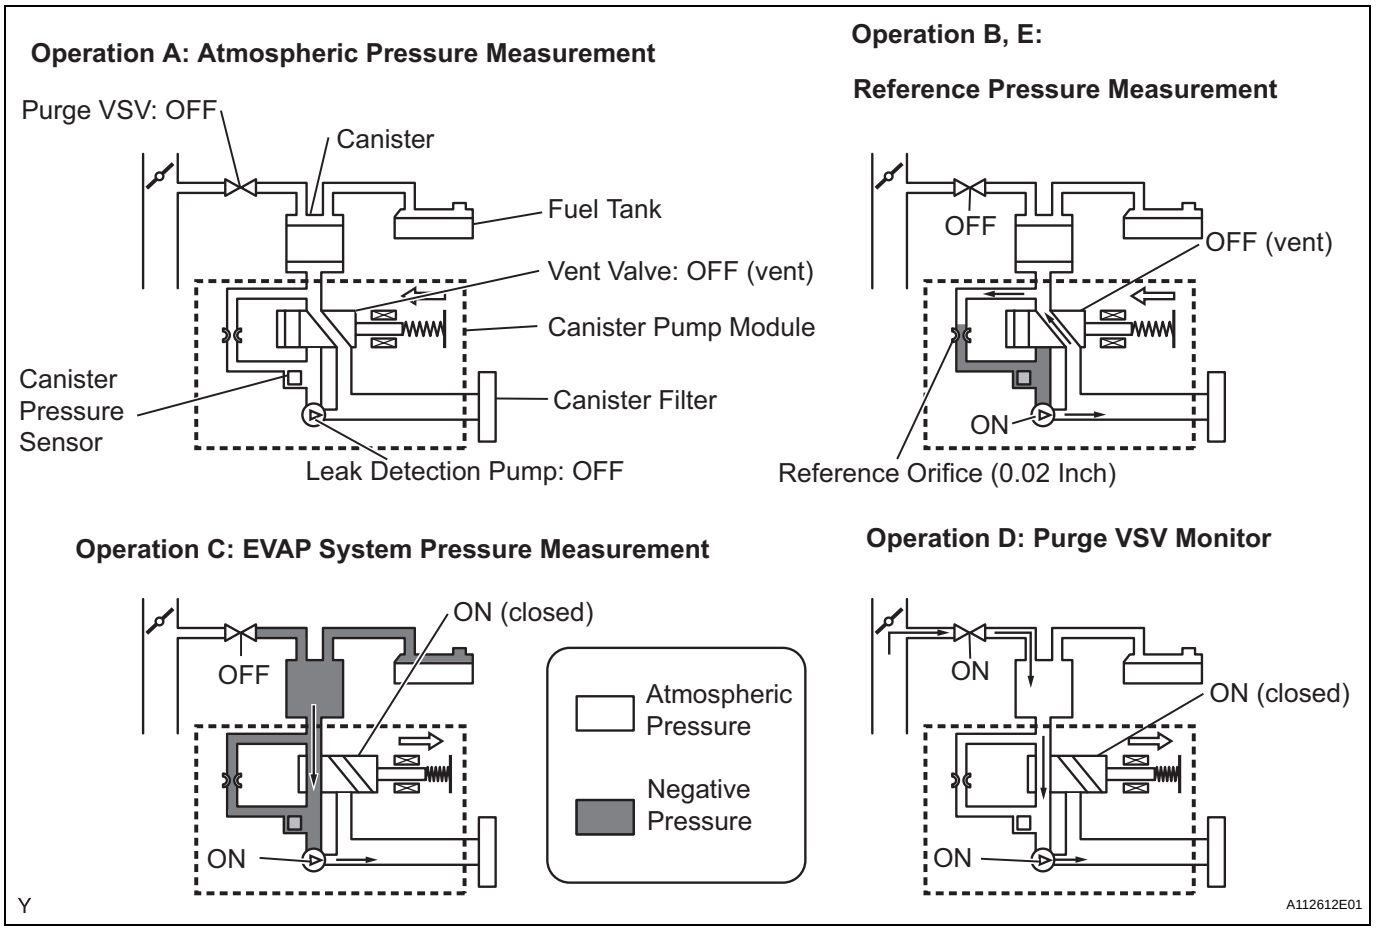
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to OFF, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned to OFF.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds

Sequence	Operations	Descriptions	Duration
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

* If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

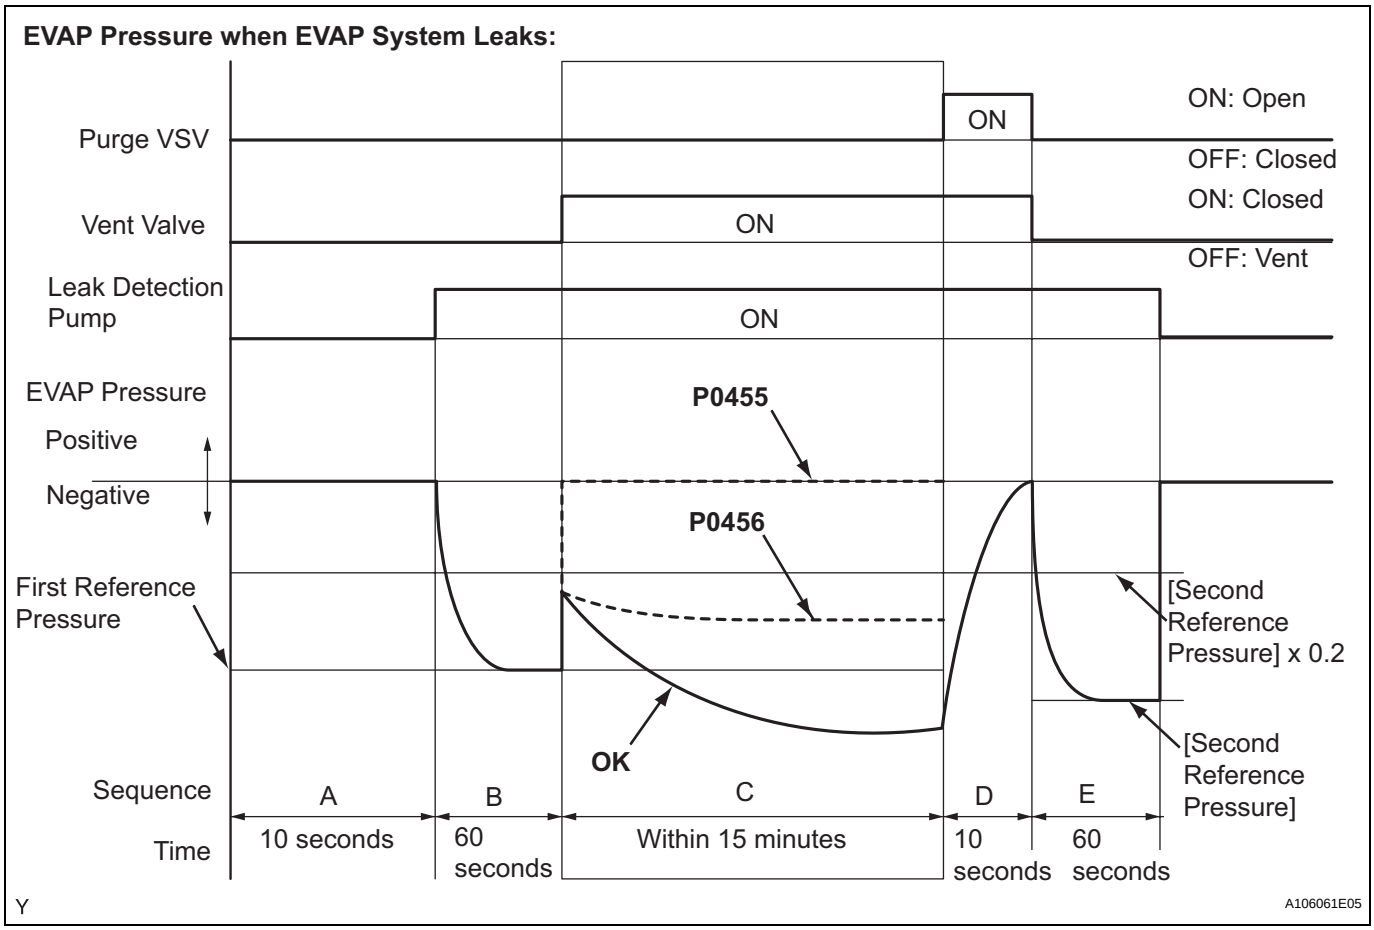
ES



(a) P0455: EVAP gross leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second reference pressure x 0.2] (near atmospheric pressure), the ECM determines that the EVAP system has a large leakage, illuminates the MIL and sets the DTC (2 trip detection logic).

(b) P0456: EVAP very small leak
In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system has a small leakage, illuminates the MIL and sets the DTC (2 trip detection logic).



MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool

Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4° to 35°C (40° to 95°F)
IAT	4.4°to 35°C (40° to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence run if following condition set	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after vent valve ON (closed)	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence run if following condition set	-
EVAP pressure	Saturated within 15 minutes

5. Purge VSV stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after purge VSV ON (open)	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Reference pressure difference between first and second	Less than 0.7 kPa-g (5.25 mmHg-g)

7. Leak check

Next sequence run if following condition set	-
EVAP pressure when vacuum introduction complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition set	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

P0455: EVAP gross leak

EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.2

P0456: EVAP small leak

EVAP pressure when vacuum introduction complete	Between reference pressure and reference pressure x 0.2

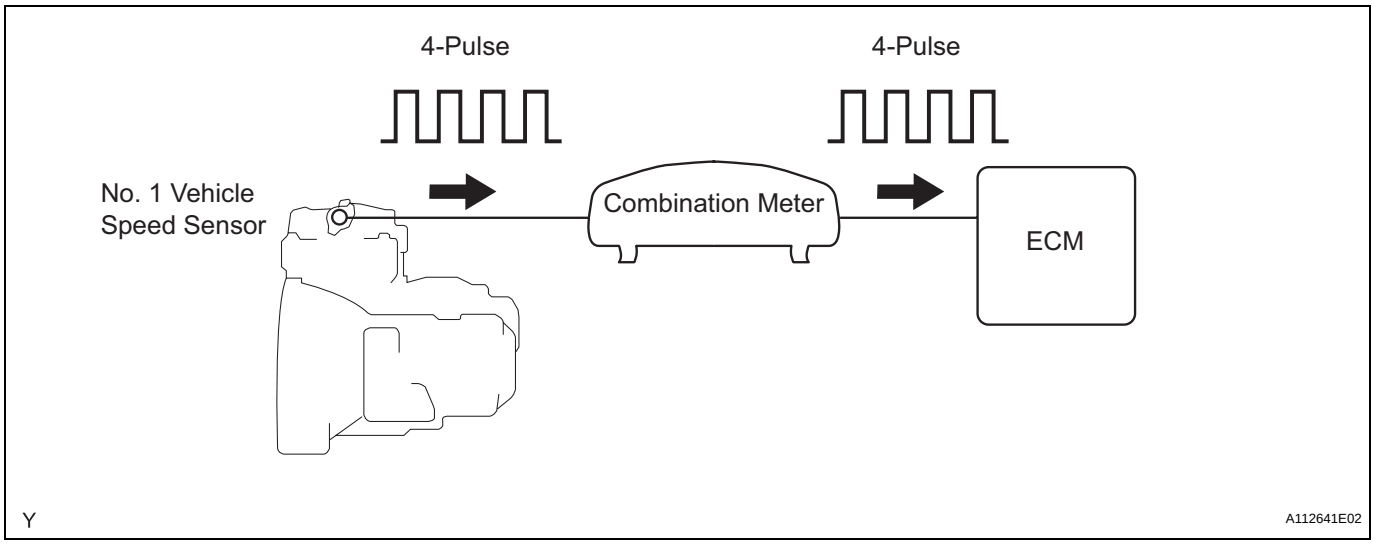
MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

DTC	P0500	Vehicle Speed Sensor "A"

DESCRIPTION

The vehicle speed is detected using the No. 1 vehicle speed sensor. The No. 1 vehicle speed sensor transmits a 4-pluse signal for every revolution of the rotor shaft, which is rotated by the transaxle output shaft via the driven gear. The 4-pluse signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter. The signal is then transmitted to the ECM. The ECM determines the vehicle speed based on the frequency of the pulse signal.



DTC No.	DTC Detection Conditions	Trouble Areas
P0500	While vehicle being driven, no vehicle speed sensor signal transmitted to ECM (1 trip detection logic: Automatic transaxle) (2 trip detection logic: Manual transaxle)	• Open or short in speed signal circuit • Vehicle speed sensor • Combination meter • ECM • Skid control ECU

MONITOR DESCRIPTION

Automatic Transaxle Models

The ECM assumes that the vehicle is being driven, when the indicated engine speed is more than 2,300 rpm and 30 seconds have elapsed since the Park/Neutral Position (PNP) switch was turned OFF. If there is no speed signal from the combination meter, despite these conditions being met, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

Manual Transaxle Models

The ECM assumes that the vehicle is being driven, when a high engine load or fuel-cut with the accelerator pedal released continues for 5 seconds or more. If there is no speed signal from the combination meter, despite this condition being met, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle speed sensor "A" pulse input error
Required Sensors/Components (Main)	Vehicle Speed Sensor (VSS), Combination meter and Skid control ECU
Required Sensors/Components (Related)	Park/Neutral Position (PNP) switch, Engine Coolant Temperature (ECT) sensor, Crankshaft Position (CKP) sensor, Throttle Position (TP) sensor and Mass Air Flow (MAF) meter
Frequency of Operation	Continuous

Duration	2 seconds: Automatic transaxle, Intake air temperature -10°C (14°F) or more 8 seconds: Automatic transaxle, Intake air temperature less than -10°C (14°F) 8 seconds: Manual transaxle Case 1 4.25 seconds: Manual transaxle Case 2
MIL Operation	Immediate: Automatic transaxle 2 driving cycles: Manual transaxle
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

M/T Case 1:

Monitor runs whenever following DTCs not present	P0100 - P0113 (MAF meter) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for Closed Loop)
Engine coolant temperature	70°C (158°F) or more
Engine speed	2,000 to 5,000 rpm
Engine load	34.9 % or more
Fuel cut at high engine speed	Not executing

M/T Case 2:

Monitor runs whenever following DTCs not present	P0100 - P0113 (MAF meter) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for Closed Loop)
Idle	ON
Fuel cut	ON

A/T:

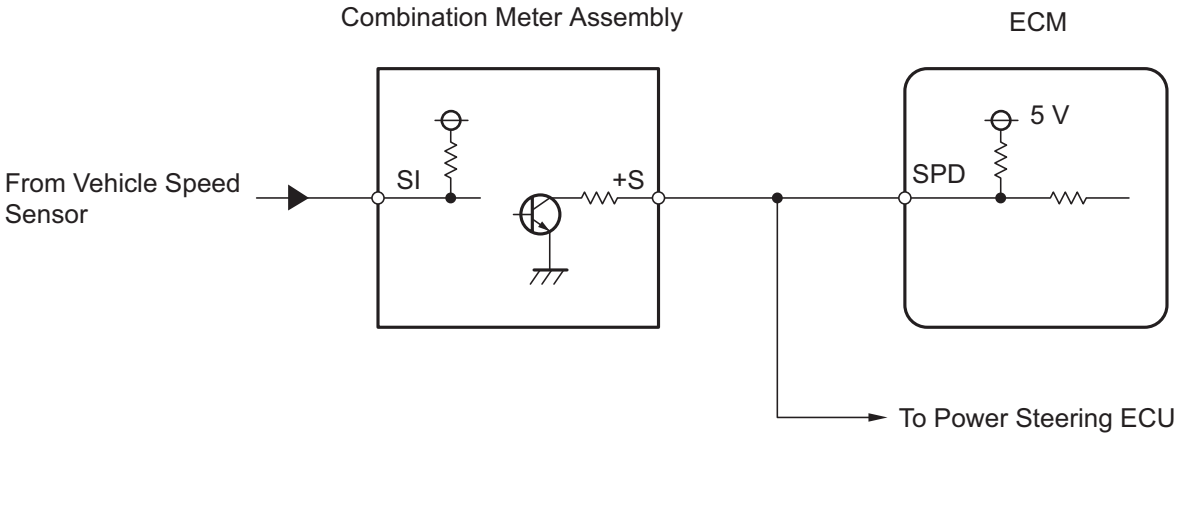
Monitor runs whenever following DTCs not present	P0120 - P0223, P2135 (TP sensor)
Either of following condition (a) or (b) met:	-
(a) Following conditions 1 and 2 met:	-
1. ECT and ECT sensor	20°C (68°F) or more, and sensor does not malfunction (P0115 or P0116)
2. Time after PNP switch turned OFF	10 seconds or more
(b) Following conditions 1 and 2 met:	-
1. ECT and ECT sensor	Less than 20°C (68°F), and sensor malfunction (P0115 or P0116)
2. Time after PNP switch turned OFF	30 seconds or more
Engine speed	2,080 rpm or more (varies with throttle valve opening angle)
Fuel cut at high engine speed	Not executing
Time after ignition switch turned to ON	0.5 seconds or more
TP sensor learning	Completed

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed sensor signal	No pulse input

ES

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check whether the operation of the speedometer in the combination meter is normal.
HINT:
- The vehicle speed sensor is operating normally if the speedometer reading is normal.
- If the speedometer does not operate, check it by following the procedure described in Speedometer Malfunction for Hatchback (See page ME-100) or Sedan (See page ME-36).

NG → GO TO MALFUNCTION IN SPEEDOMETER

OK

2	READ VALUE USING INTELLIGENT TESTER (VEHICLE SPD)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.

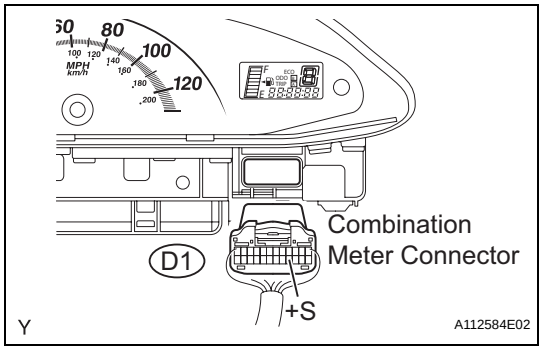
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / VEHICLE SPD.
(e) Drive the vehicle.
(f) Read the value displayed on the tester.
OK:
Vehicle speeds displayed on tester and speedometer display are equal.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

ES

3 CHECK COMBINATION METER ASSEMBLY (+S VOLTAGE)



(a) Disconnect the D1 combination meter connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminal of the combination meter and the body ground.
Standard voltage

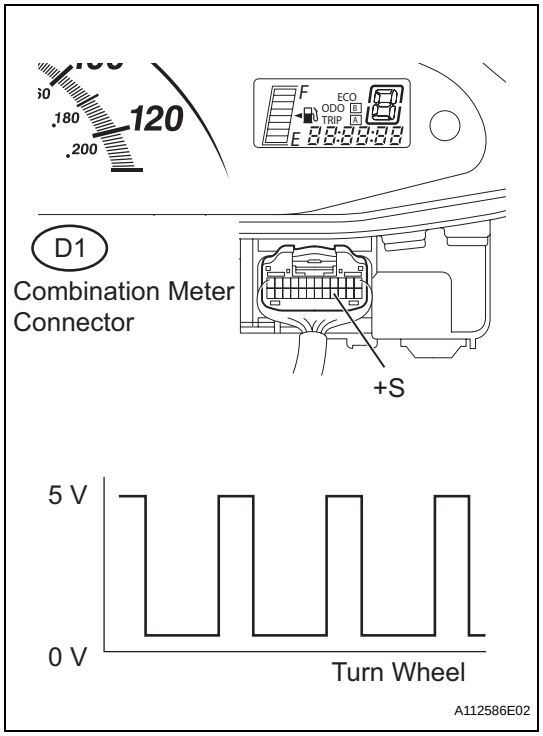
Tester Connections	Specified Conditions
+S (D1-16) - Body ground	4.5 to 5.5 V

(d) Reconnect the combination meter connector.

NG → **Go to step 5**

OK

4 CHECK COMBINATION METER ASSEMBLY (SPD SIGNAL WAVEFORM)



(a) Shift the transmission gear selector lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch to ON.
(d) Check the voltage between the terminal of the combination meter and the body ground while the wheel is turned slowly.
Standard voltage

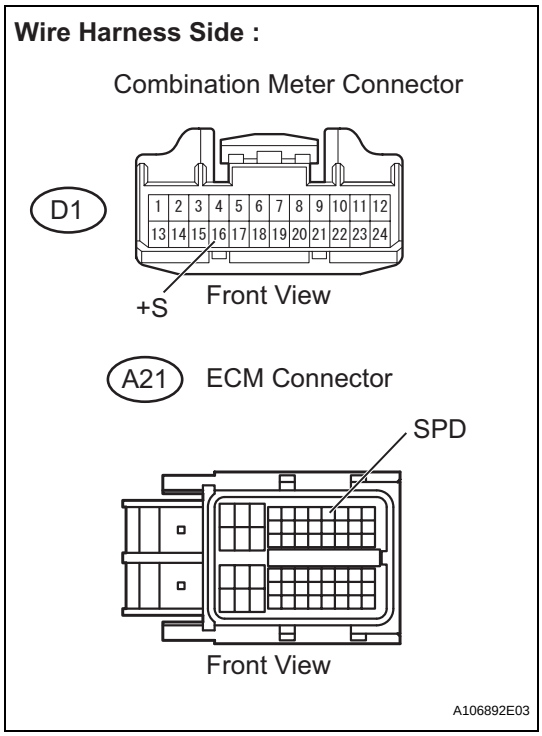
Tester Connections	Specified Conditions
+S (D1-16) - Body ground	Voltage generated intermittently

HINT:
The output voltage should fluctuate up and down, similarly to the diagram, when the wheel is turned slowly.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

5	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - ECM)



(a) Disconnect the D1 combination meter connector.
(b) Disconnect the A21 ECM connector.
(c) Check the resistance.

Standard resistance (check for open)

Tester Connections	Specified Conditions
+S (D1-16) - SPD (A21-8)	Below 1 Ω

Standard resistance (check for short)

Tester Connections	Specified Conditions
+S (D1-16) or SPD (A21-8) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0504	Brake Switch "A" / "B" Correlation

DESCRIPTION

The stop light switch is a duplex system that transmits two signals: STP and ST1-. These two signals are used by the ECM to monitor whether or not the brake system is working properly. If the signals, which indicate the brake pedal is being depressed and released, are detected simultaneously, the ECM interprets this as a malfunction in the stop light switch and sets the DTC.

HINT:

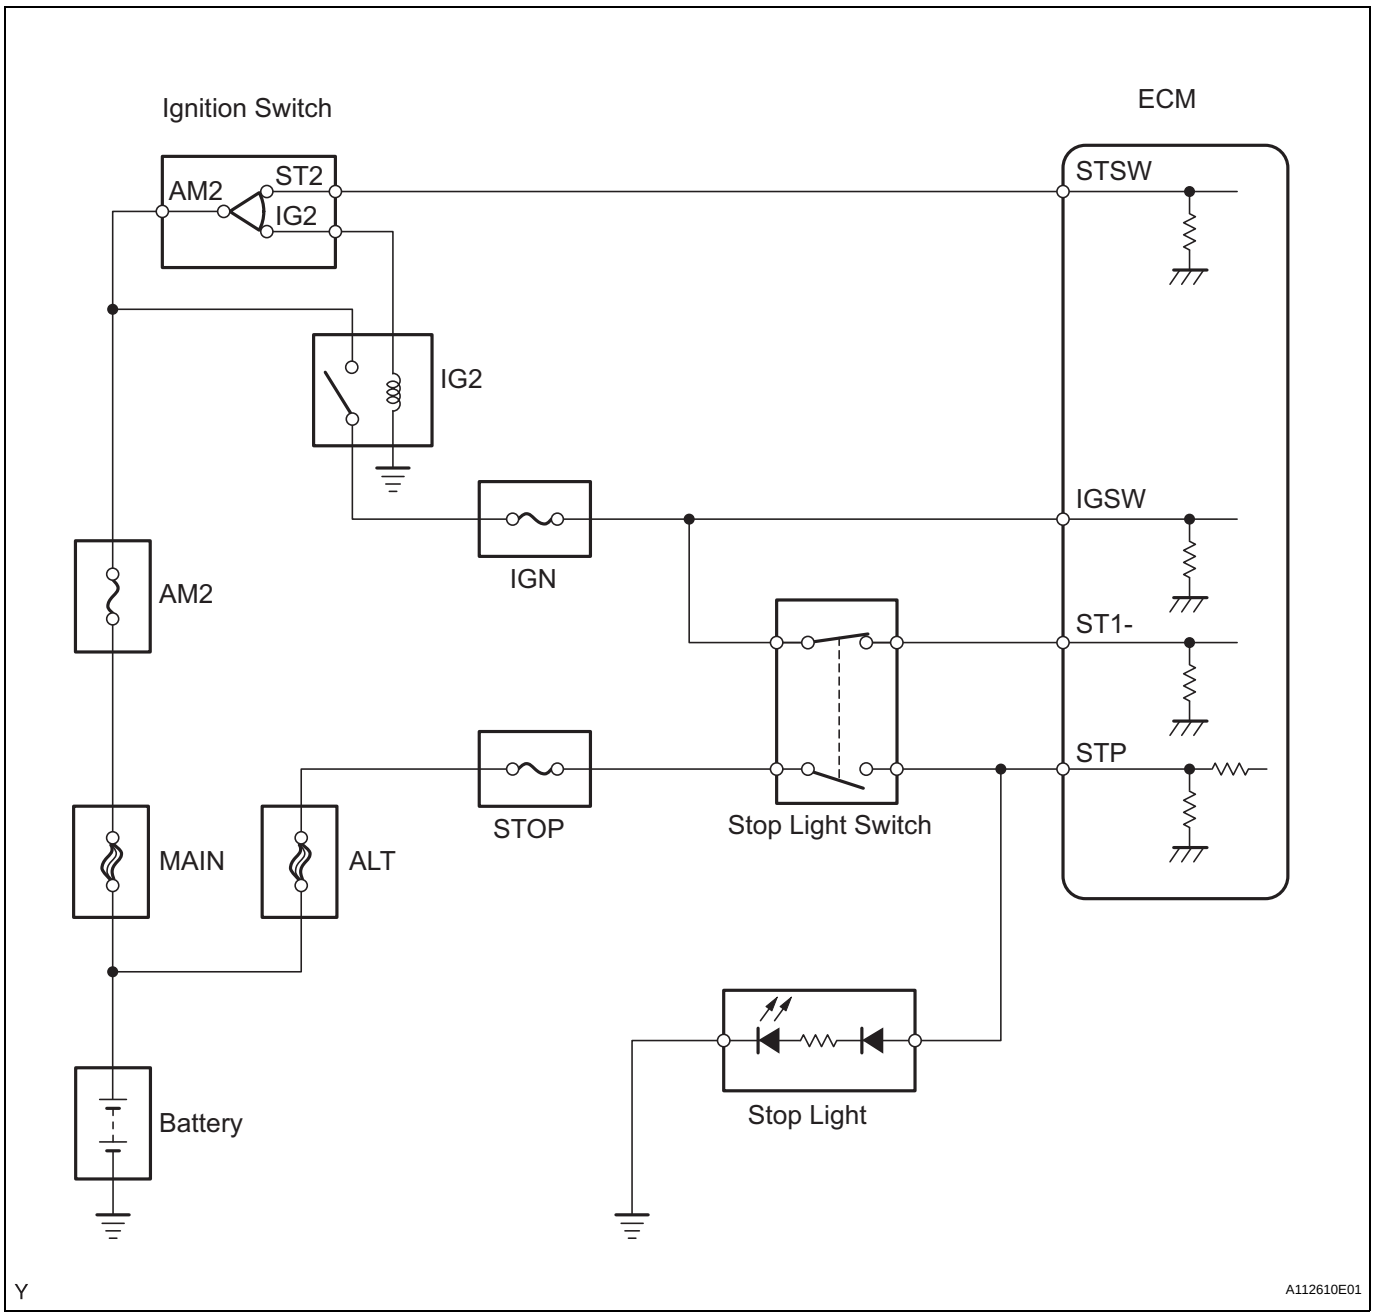
The normal conditions are as shown in the table below. The signals can be read using an intelligent tester.

Signals	Brake Pedal Released	In Transition	Brake Pedal Depressed
STP	OFF	ON	ON
ST1-	ON	ON	OFF

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P0504	Conditions (a), (b) and (c) continue for 0.5 seconds or more (1 trip detection logic): (a) Ignition switch ON (b) Brake pedal released (c) STP signal OFF when ST1- signal OFF	• Short in stop light switch signal circuit • STOP fuse • IGN fuse • Stop light switch • ECM

WIRING DIAGRAM



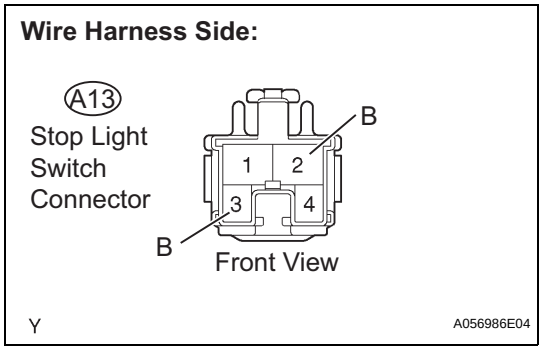
INSPECTION PROCEDURE

HINT:

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- STP signal conditions can be checked using an intelligent tester.
  (a) Connect the intelligent tester to the DLC3.
  (b) Turn the ignition switch to ON.
  (c) Turn the tester ON.
  (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STOP LIGHT SW.
  (e) Check the STP signal when the brake pedal is depressed and released.

Brake Pedal Operation	Specified Conditions
Depressed	STP signal ON
Released	STP signal OFF

1 CHECK STOP LIGHT SWITCH ASSEMBLY (TERMINAL B VOLTAGE)



(a) Disconnect the A13 stop light switch connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the A13 stop light switch connector and body ground.

Standard voltage

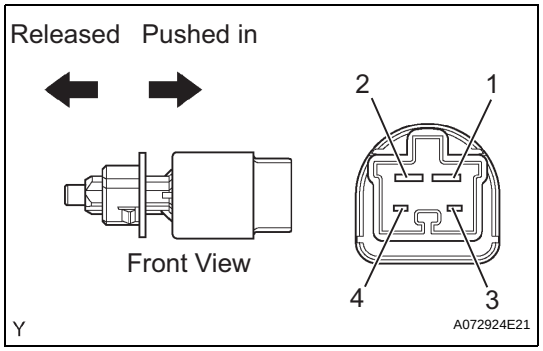
Tester Connections	Specified Conditions
B (A13-2) - Body ground	11 to 14 V
B (A13-3) - Body ground	

(d) Reconnect the stop light switch connector.

NG → **Go to step 4**

OK

2 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Remove the stop light switch assembly.
(b) Check the resistance.

Standard resistance

Tester Connections	Switch Positions	Specified Conditions
1 - 2	Switch pin released	Below 1 Ω
	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin released	10 kΩ or higher
	Switch pin pushed in	Below 1 Ω

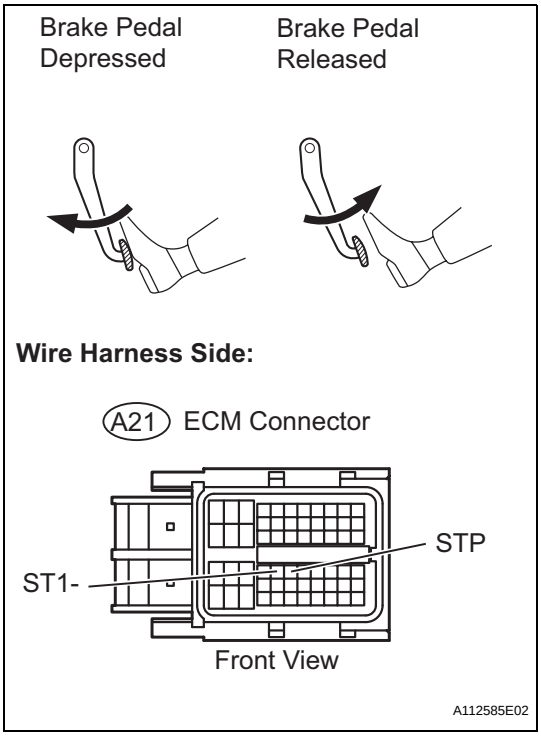
(c) Reinstall the stop light switch assembly.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

ES

3	CHECK ECM (STP AND ST1 - VOLTAGE)



(a) Disconnect the A21 ECM connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals ST1- and STP of the A21 ECM connector and body ground.
Standard voltage

Tester Connections	Brake Pedal Operations	Specified Conditions
ST1- (A21-35) - Body ground	Released	11 to 14 V
	Depressed	0 to 3 V
STP (A21-36) - Body ground	Released	0 to 3 V
	Depressed	11 to 14 V

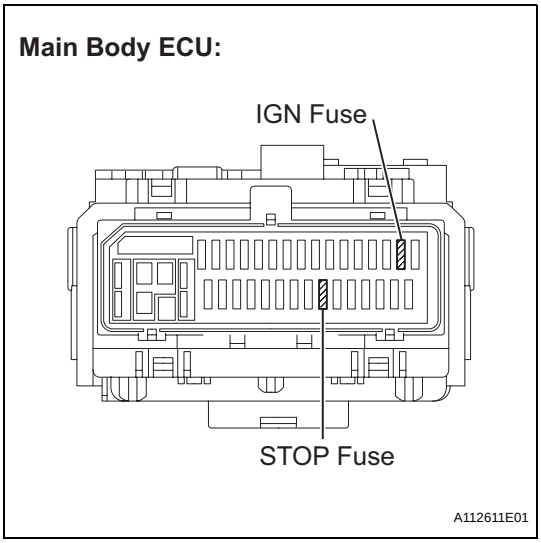
(d) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

4	INSPECT FUSE (STOP AND IGN FUSE)



(a) Remove the STOP and IGN fuses from the main body ECU.
(b) Check the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the STOP and IGN fuses.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

DTC	P0505	Idle Control System Malfunction

DESCRIPTION

The idling speed is controlled by the ETCS (Electronic Throttle Control System). The ETCS is comprised of: 1) the one valve type throttle body; 2) the throttle actuator, which operates the throttle valve; 3) the Throttle Position (TP) sensor, which detects the opening angle of the throttle valve; 4) the Accelerator Pedal Position (APP) sensor, which detects the accelerator pedal position; and 5) the ECM, which controls the ETCS. Based on the target idling speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC No.	DTC Detection Conditions	Trouble Areas
P0505	Idling speed continues to vary greatly from target idling speed (2 trip detection logic)	• ETCS • Air induction system • PCV hose connections • ECM

MONITOR DESCRIPTION

The ECM monitors the idling speed and idling air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the ISC system is malfunctioning if the following conditions apply:

- The learned idling air flow volume remains at the maximum or minimum volume 5 times or more during a drive cycle.
- After driving at 6.25 mph (10 km/h) or more, the actual engine idling speed varies from the target idling speed by between 100 rpm and 200 rpm, 5 times or more during a drive cycle.

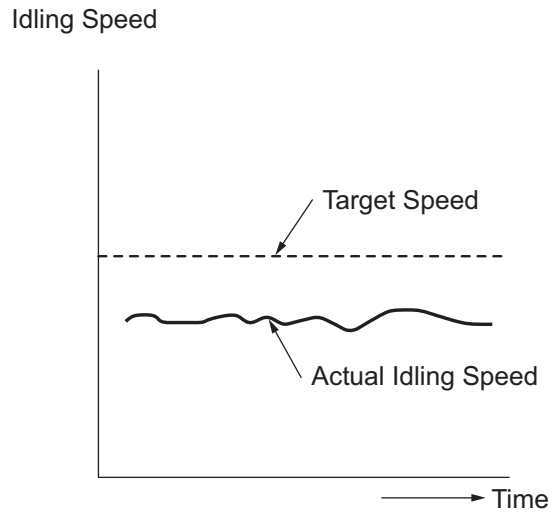
Example:

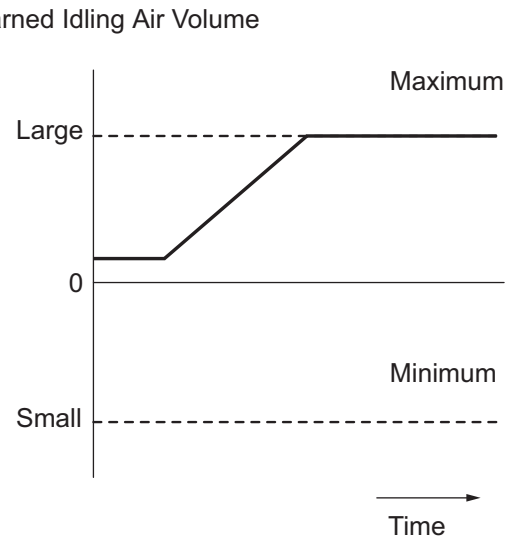
If the actual idling speed varies from the target idling speed by more than 200 rpm* 5 times during a drive cycle, the ECM illuminates the MIL and sets the DTC.

HINT:

*: Threshold idling speed varies with engine load.

Example:





Y

A121611E02

MONITOR STRATEGY

Related DTCs	P0505: ISC function
Required Sensors/Components (Main)	ETCS
Required Sensors/Components (Related)	Crankshaft position sensor, Engine coolant temperature sensor, and Vehicle speed sensor
Frequency of Operation	Once per driving cycle: Functional check Continuous: Range check
Duration	10 minutes: Functional check 10 seconds: Range check
MIL Operation	2 driving cycles: Functional check Immediate: Range check
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Functional check:

Engine	Running

Range check:

Time after first missing voltage change	10 seconds or more
Output signal duty	10 to 90 %
Battery voltage	11 V or more

TYPICAL MALFUNCTION THRESHOLDS

Functional check:

Either of following conditions 1 or 2 met	-
1. Frequency that both of following conditions (a) and (b) set	5 times or more
(a) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm
(b) Vehicle condition	Stop after vehicle was driven by 6.25 mph (10 km/h) or more
2. Frequency that both of following conditions (c) and (d) set	Once
(c) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm
(d) IAC flow rate learning value	0.55 L/sec or less, or 3.82 L/sec

Range check:

Number of missing output voltage changes	2,000 times or more

ES

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
  (a) The floor carpet overlapping slightly onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
  (b) The accelerator pedal being not fully released.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0505	A
P0505 and other DTCs	B

HINT:
If any DTCs other than P0505 are output, troubleshoot those DTCs first.

4	CHECK THROTTLE VALVE

(a) Check the throttle valve condition.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

REPLACE ECM

DTC	P050A	Cold Start Idle Air Control System Performance

DTC	P050B	Cold Start Ignition Timing Performance

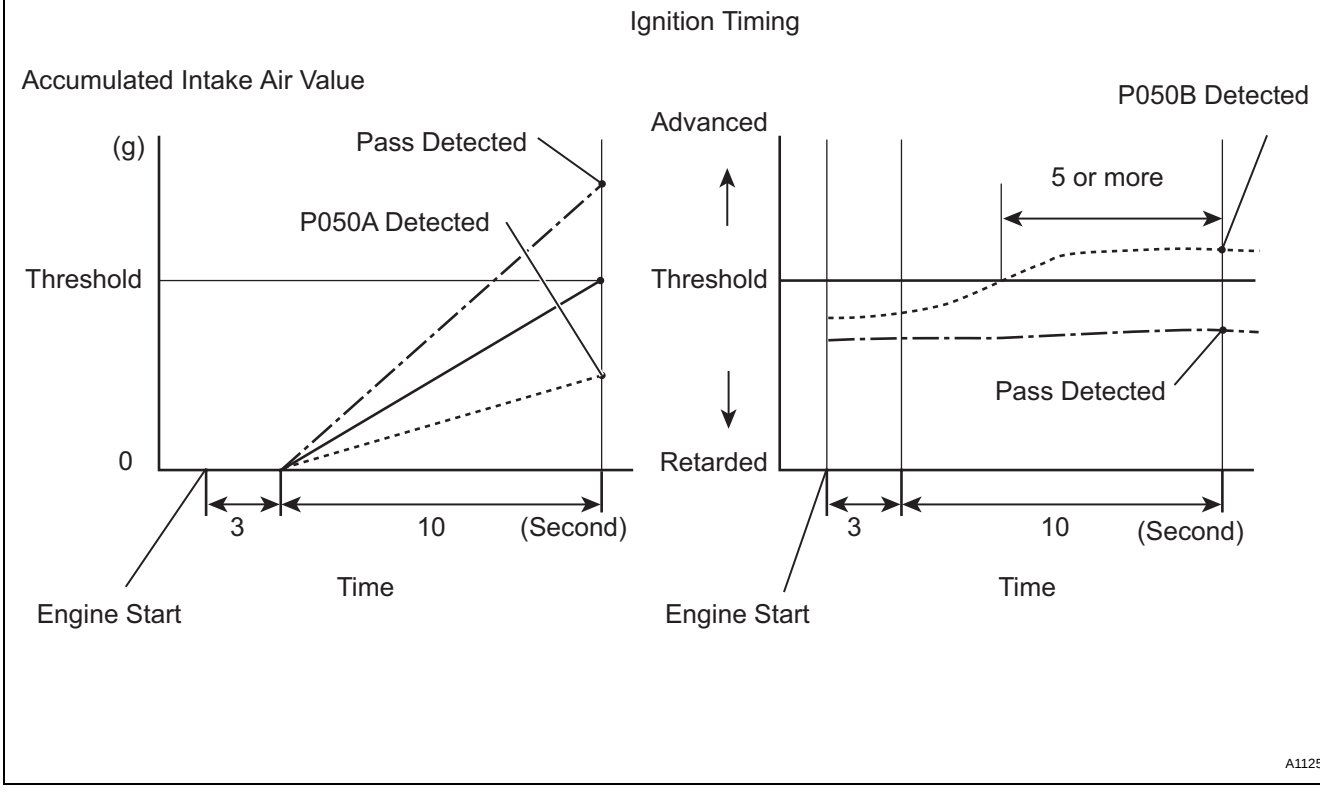
DESCRIPTION

The Electronic Throttle Control System (ETCS) controls the engine idling speed. The ETCS operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idling speed.
In addition, the ECM retards the ignition timing and the ETCS increases the intake air amount to quickly increase the catalyst temperature at cold start to reduce emissions.

DTC No.	DTC Detection Conditions	Trouble Areas
P050A	Accumulated intake air amount during 10 seconds of idling after cold start, less than threshold (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM
P050B	Ignition timing retard value insufficient for 5 seconds or more during 10 seconds of P050A monitoring duration at cold start (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM

ES

MONITOR DESCRIPTION



The ECM monitors the intake air amount during idling and the ignition timing.
When the Engine Coolant Temperature (ECT) is between -10°C and 50 °C (14°F and 122°F), the ECM calculates the idling intake air amount for 10 seconds, beginning 3 seconds after the engine starts.
When the accumulated value is below the threshold, the ECM interprets this as a malfunction in the Idle Speed Control (ISC) system at cold start.
The ECM also monitors the ignition timing at cold start, and judges it to be incorrect when it is advanced to the same value for a warm engine for 5 seconds or more of the 10 second monitoring period.
Example:
P050A is detected when all conditions below are met (2 trip detection logic).
1. The ECT is between -10°C and 50 °C (14°F and 122°F) when the engine starts.
2. The engine idles for 13 seconds after engine start.
3. The accumulated intake air amount is below the threshold.

The ECM sets the DTC and illuminates the MIL 13 seconds after the engine is next started.

NOTICE:
When the negative battery terminal is disconnected during inspection or repairs, the ISC learning values are cleared. The ISC learning must be performed by warming up the engine and idling for 5 minutes with the ECT at 75°C (167°F) or more because DTCs cannot be detected with the ISC learning values cleared.

MONITOR STRATEGY

Related DTCs	P050A: Idle speed control problem at cold P050B: Idle ignition timing problem at cold
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, Throttle position sensor, Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P050A:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)
Time after shift position changed (A/T)	1 second or more
Atmospheric pressure	76 kPa (570 mmHg) or more

P050B:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

P050A:

Accumulated air flow amount (M/T)	Varies with ECT (Example: Less than 13.75 g)
Accumulated air flow amount (A/T)	Varies with ECT (Example: Less than 17.5 g)

P050B:

Accumulated time when ignition timing retard value insufficient	5 seconds or more

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A AND/OR P050B)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed To
P050A and/or P050B	A
P050A and/or P050B and other DTCs	B

HINT:
If any DTCs other than P050A and P050B are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	READ VALUE USING INTELLIGENT TESTER (FUEL TRIM)

HINT:
Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / SHORT FT #1 and LONG FT #1.
(e) Read the values displayed on the tester.
(f) Add together the SHORT FT #1 and LONG FT #1 values to obtain the total FUEL TRIM.

OK:
Total of SHORT FT #1 and LONG FT #1 values is between -20 % and 20 %.

OK → **Go to step 12**

NG

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 8**

OK

4	CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **Go to step 9**

OK

5	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **Go to step 10**

OK

6	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.
OK:
Air cleaner filter element is not excessively contaminated with dirt or oil.

NG → Go to step 11

OK

7	REPLACE MASS AIR FLOW METER

NEXT → Go to step 15

8	CHECK AND REPAIR VVT SYSTEM

NEXT → Go to step 15

9	REPAIR OR REPLACE PCV HOSE

NEXT → Go to step 15

10	REPAIR OR REPLACE AIR INDUCTION SYSTEM

NEXT → Go to step 15

11	REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

NEXT → Go to step 15

12	CHECK THROTTLE VALVE

(a) Check for deposits around the throttle valve and throttle valve condition.

OK:

No deposits around throttle valve and throttle valve moves smoothly.

NG → Go to step 14

OK

13	REPLACE ECM

NEXT → Go to step 15

14	REPAIR OR REPLACE THROTTLE BODY ASSEMBLY

NEXT → Go to step 15

15	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A AND/OR P050B)

NOTICE:
In this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-37).
(f) Start the engine to idle for a minute.
OK:
Stable fast idling.
(g) Read DTCs.
OK:
No DTC output.

NEXT

END

DTC	P0560	System Voltage

DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is in the OFF position. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, these memories are cleared and the ECM determines that there is a malfunction in the power supply circuit. When the engine is next started, the ECM illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0560	Open in ECM back up power source circuit (1 trip detection logic)	• Open in back up power source circuit • Battery • Battery terminals • EFI fuse • ECM

ES

HINT:
If DTC P0560 is set, the ECM does not store other DTCs or the data stored in the ECM are partly eraced.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None

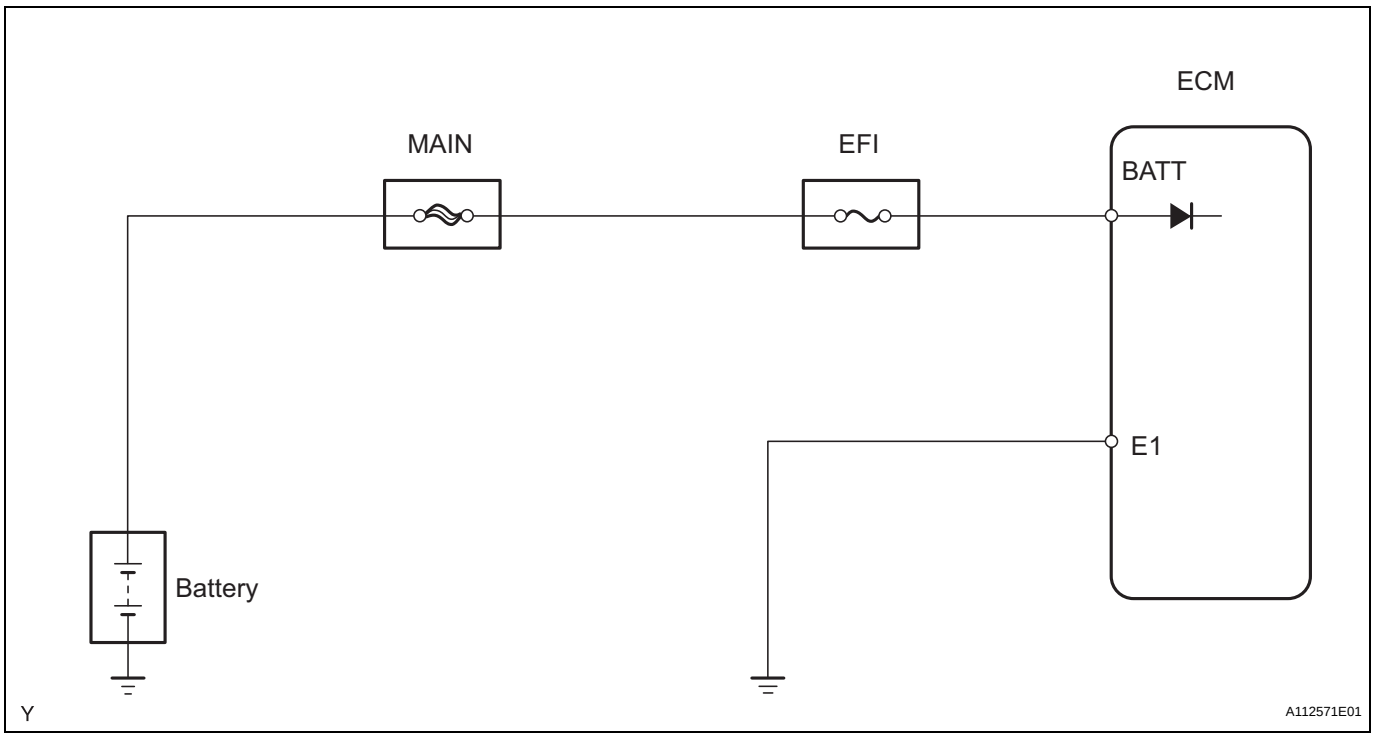
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

WIRING DIAGRAM

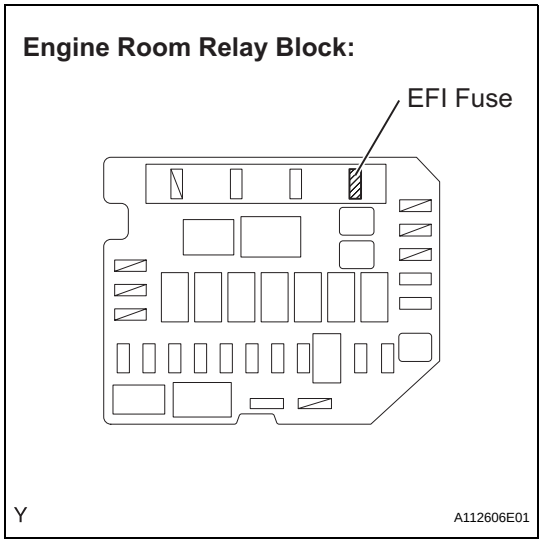


ES

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK FUSE (EFI FUSE)



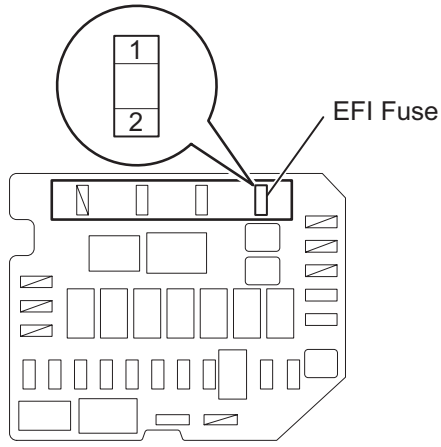
(a) Remove the EFI fuse from the engine room relay block.
(b) Check the resistance of the EFI fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

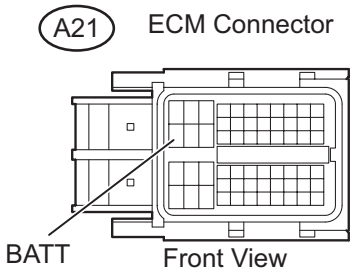
OK

2	CHECK HARNESS AND CONNECTOR (ECM - EFI FUSE, EFI FUSE - BATTERY)

Engine Room Relay Block :



Wire Harness Side :



A107903E02

(a) Check the harness and the connector between the EFI fuse and ECM.
  (1) Remove the EFI fuse from the engine room relay block.
  (2) Disconnect the A21 ECM connector.
  (3) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
EFI fuse (2) - BATT (A21-20)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
EFI fuse (2) or BATT (A21-20) - Body ground	10 kΩ or higher

  (4) Reconnect the ECM connector.
  (5) Reinstall the EFI fuse.

(b) Check the harness and the connector between the EFI fuse and battery.
  (1) Remove the EFI fuse from the engine room relay block.
  (2) Disconnect the positive battery terminal.
  (3) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Battery positive terminal - EFI fuse (1)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Battery positive terminal or EFI fuse (1) - Body ground	10 kΩ or higher

  (4) Reconnect the positive battery terminal.
  (5) Reinstall the EFI fuse.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT BATTERY

(a) Check that the battery is not depleted.

OK:

Battery is not depleted

NG → **REPLACE BATTERY**

OK

4	CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.
OK:
Battery terminals are not loose or corroded

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

REPLACE ECM

DTC	P0604	Internal Control Module Random Access Memory (RAM) Error

DTC	P0606	ECM / PCM Processor

DTC	P0607	Control Module Performance

DTC	P0657	Actuator Supply Voltage Circuit / Open

DESCRIPTION

The ECM continuously monitors its own internal memory status, internal circuits, and output signals transmitted to the throttle actuator. This self-check ensures that the ECM is functioning properly. If any malfunction is detected, the ECM sets the appropriate DTC and illuminates the MIL.
The ECM memory status is diagnosed by internal mirroring of the main CPU and the sub CPU to detect Random Access Memory (RAM) errors. The two CPUs also perform continuous mutual monitoring. The ECM illuminates the MIL and sets a DTC if: 1) outputs from the two CPUs are different or deviate from the standards, 2) the signals sent to the throttle actuator deviate from the standards, 3) a malfunction is found in the throttle actuator supply voltage, and 4) any other ECM malfunction is found.

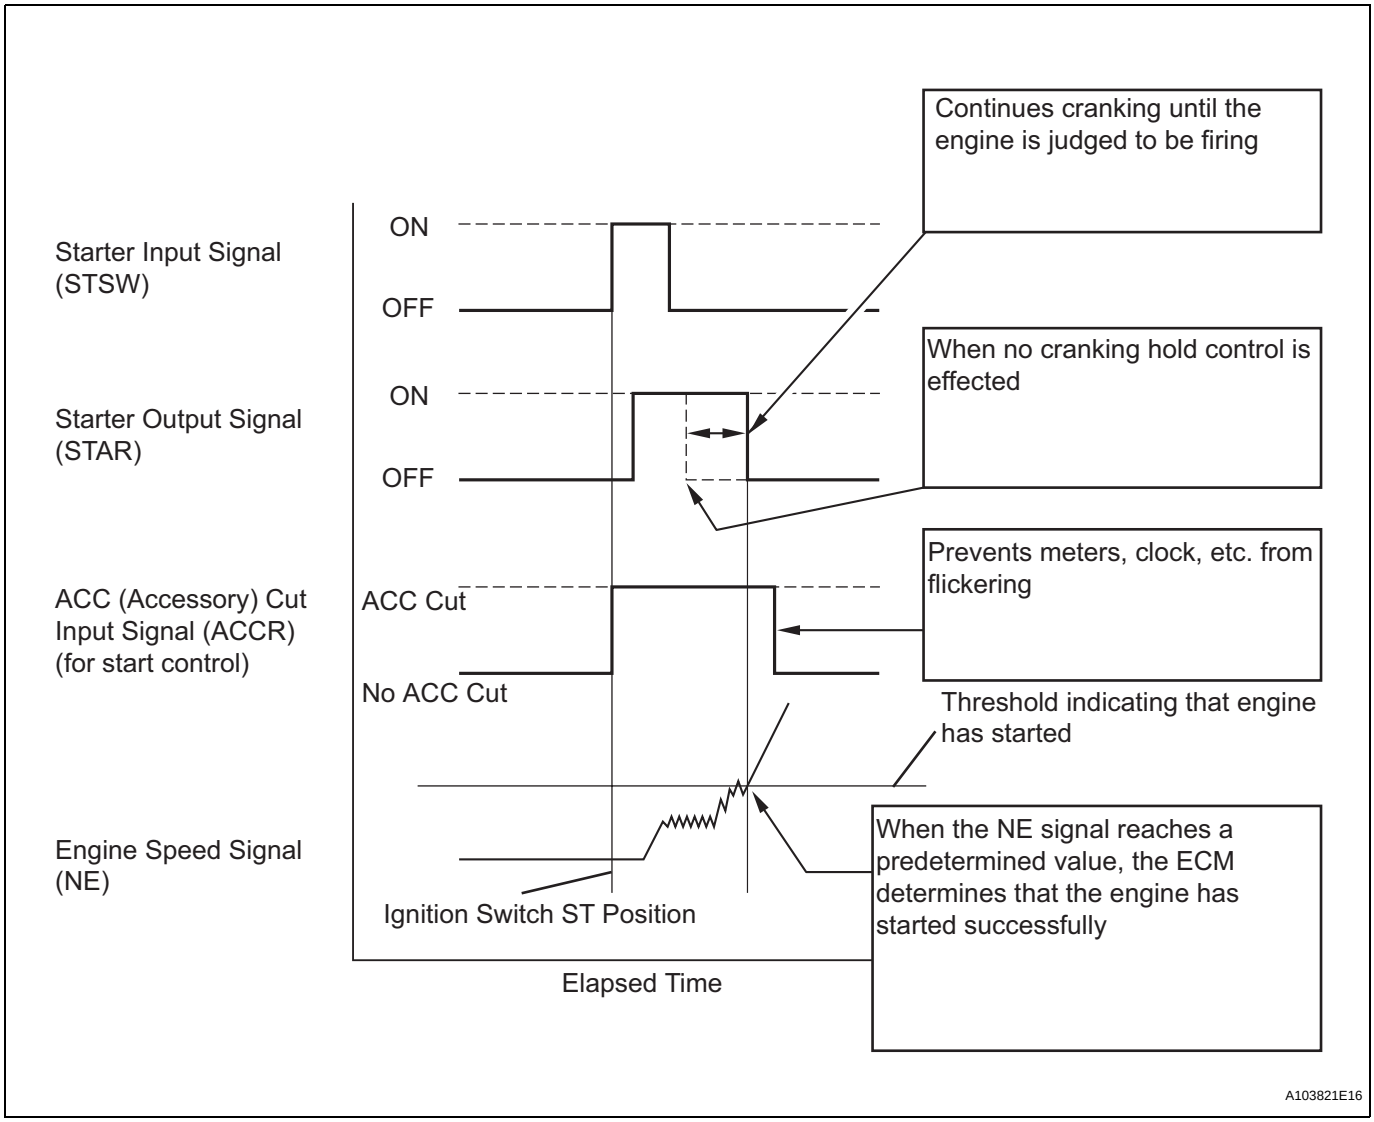
REPLACE ECM

DTC	P0617	Starter Relay Circuit High

DESCRIPTION

The cranking holding control system provides a current to the starter when the ECM detects the ignition switch's start signal (STSW). When the ECM judges that the engine has started, the system cuts the current to the starter. When the ECM receives the STSW signal, it turns on the ACC (Accessory) relay, which prevents flickering of the combination meter, clock and audio system. Also, the ECM sends a signal to the ECM's STAR terminal. Then the STAR output signal travels through the Park/Neutral Position (PNP) switch to the ST relay, causing the starter to activate. When the engine is cranking, the starter operation signal is sent to the ECM's STA terminal.



While the engine is being cranked, the positive battery voltage is applied to terminal STA of the ECM. If the ECM detects the Starter Control (STA) signal while the vehicle is being driven, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and sets the DTC.
This monitor runs when the vehicle is driven at 12.43 mph (20 km/h) for over 20 seconds.

DTC No.	DTC Detection Conditions	Trouble Areas
P0617	When conditions (a), (b) and (c) met for 20 seconds (1 trip detection logic): (a) Vehicle speed more than 12.43 mph (20 km/h) (b) Engine speed more than 1,000 rpm (c) STA signal ON	• Park/Neutral Position (PNP) switch (A/T*) • Clutch start switch (M/T*) • Starter relay circuit • Ignition switch • ECM

*: A/T denotes Automatic Transaxle models and M/T denotes Manual Transaxle models.

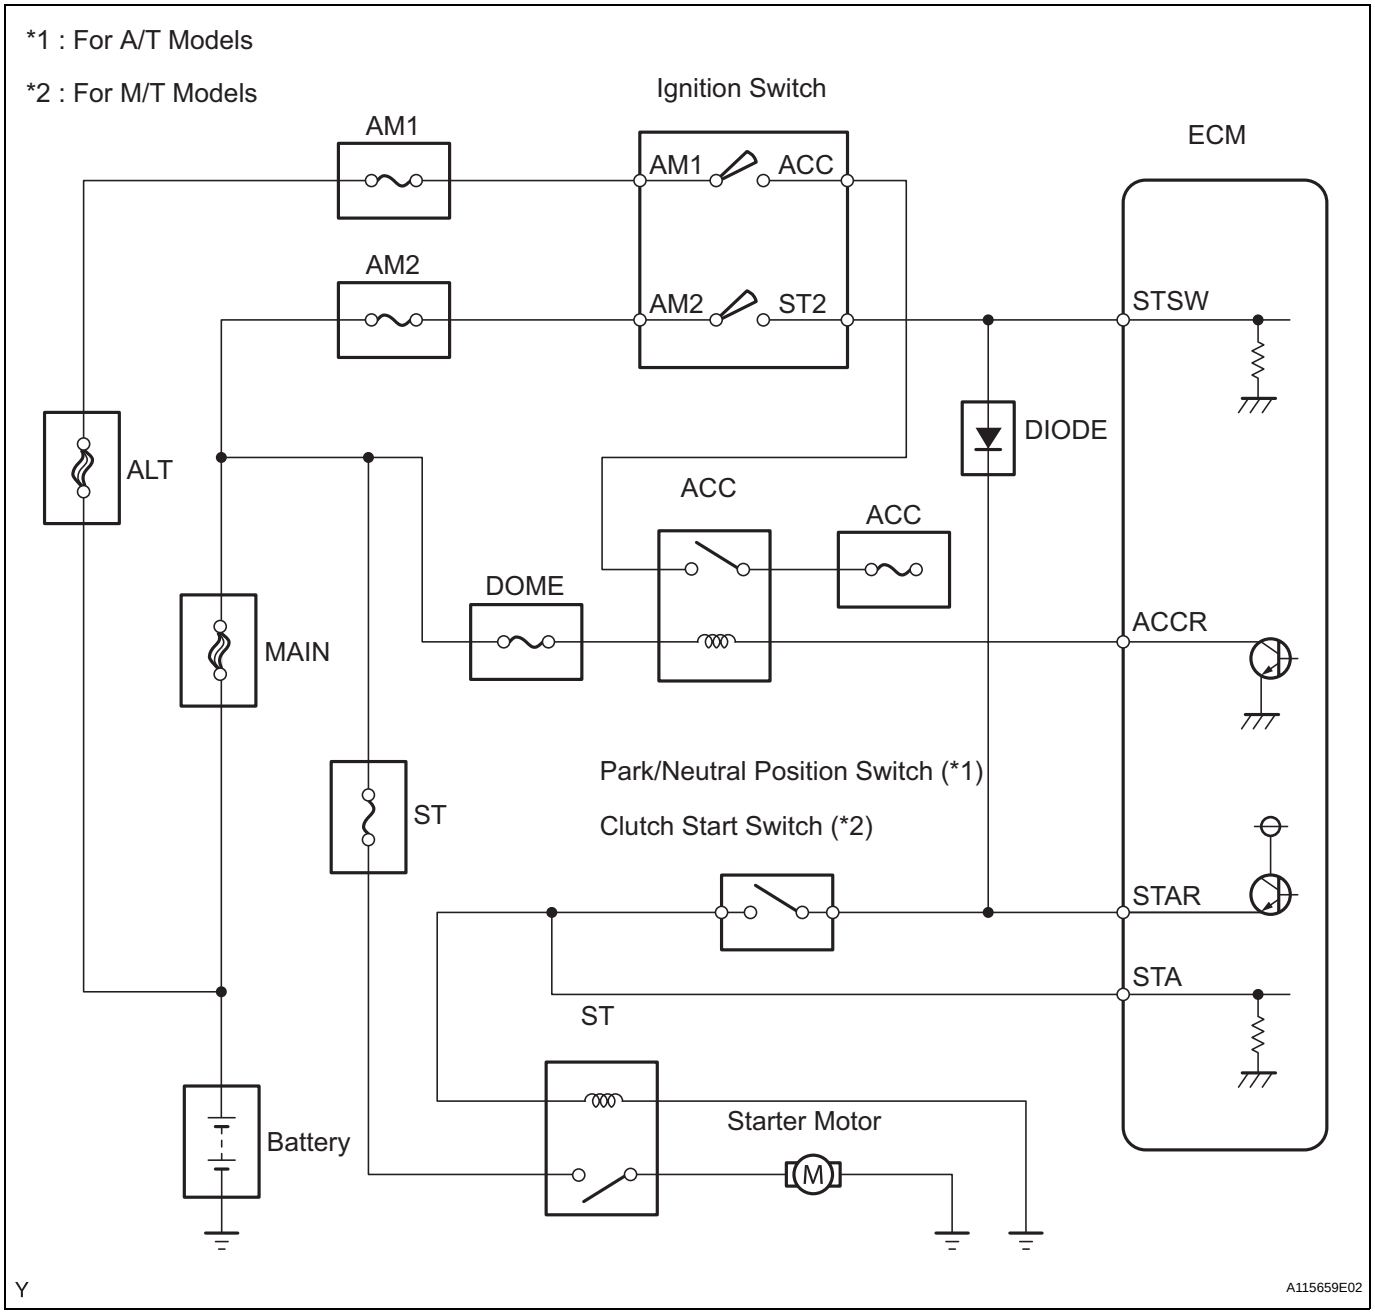
Engine speed	1,000 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

Starter signal	ON

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- The following troubleshooting flowchart is based on the premise that the engine is cranked normally. If the engine will not crank, proceed to the problem symptoms table (See page ES-24).
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.

(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.
(d) Check the value displayed on the tester when the ignition switch is turned to the ON and START positions.

OK

Ignition Switch Positions	STARTER SIG
ON	OFF
START	ON

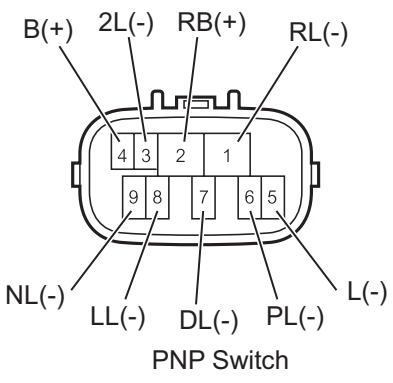
OK → **CHECK FOR INTERMITTENT PROBLEMS**

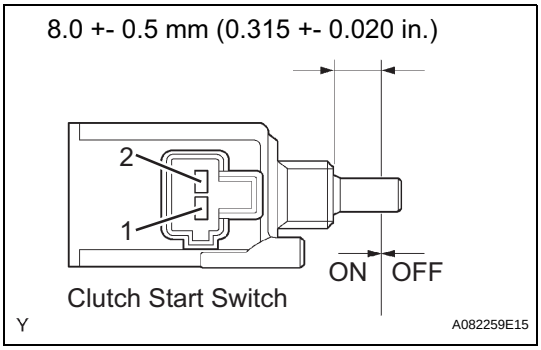
NG

ES

2 INSPECT PARK / NEUTRAL POSITION SWITCH (A/T) OR CLUTCH SWITCH ASSEMBLY (M/T)

Component Side:





(a) Inspect the Park/Neutral Position (PNP) switch (for A/T models).
(1) Disconnect the C27 PNP switch connector.
(2) Check the resistance when the transmission gear selector lever is moved to each position.

Standard resistance

Gear Selector Lever Positions	Tester Connections	Specified Conditions
P	2 - 6, 4 - 5	Below 1 Ω
R	1 - 2	
N	2 - 9, 4 - 5	
D	2 - 7	
2	2 - 3	
L	2 - 8	

(3) Reconnect the PNP switch connector.
(b) Inspect the clutch start switch (for M/T models).
(1) Disconnect the A16 clutch start switch connector.
(2) Check the resistance when the clutch start switch is ON and OFF.

Standard resistance

Switch Positions	Tester Connections	Specified Conditions
ON (pushed)	1 - 2	Below 1 Ω
OFF (free)	1 - 2	10 kΩ or higher

(3) Reconnect the clutch start switch connector.

OK → **Go to step 5**

NG

3 REPLACE PARK / NEUTRAL POSITION SWITCH (A/T) OR CLUTCH SWITCH ASSEMBLY (M/T)

NEXT

4 READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.
(d) Check the value displayed on the tester when the ignition switch is turned to the ON and START positions.

OK

Ignition Switch Positions	STARTER SIG
ON	OFF
START	ON

REPLACE ECM

DTC	P0630	VIN not Programmed or Mismatch - ECM / PCM

DESCRIPTION

DTC P0630 is set when the Vehicle Identification Number (VIN) is not stored in the Engine Control Module (ECM) or the input VIN is incorrect. Input the VIN with the intelligent tester.

DTC No.	DTC Detection Conditions	Trouble Areas
P0630	• VIN not stored in ECM • Input VIN incorrect	ECM

MONITOR STRATEGY

Related DTCs	P0630: VIN not programmed
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.325 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

VIN code	Not programmed

COMPONENT OPERATING RANGE

VIN code	Programmed

INSPECTION PROCEDURE

1	READ CURRENT DTC

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read DTCs.

Result

Display (DTC Output)	Proceed To
P0630	**A**
P0630 and other DTCs	**B**

If any DTCs other than P0630 are output, troubleshoot those DTCs first.

NOTICE:
If P0630 is set, the VIN must be input to the ECM using the intelligent tester. However, all DTCs are cleared automatically by the tester when the VIN is input. If DTCs other than P0630 are set, check them first.

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling when brakes are suddenly applied while driving in lock-up condition.
When the brake pedal is depressed, this switch sends a signal to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detection Conditions	Trouble Areas
P0724	Stop light switch remains ON even when vehicle repeats 5 cycles of STOP (less than 1.86 mph (3 km/h)) and GO (18.65 mph (30 km/h)or more) (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 1.86 mph (3 km/h)) and go (18.65 mph (30 km/h) or more) 5 times during 2 driving cycles, in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components (Main)	Stop light switch
Required sensors/Components (Related)	Speed sensor
Frequency of Operation	Continuous
Duration	5 times
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

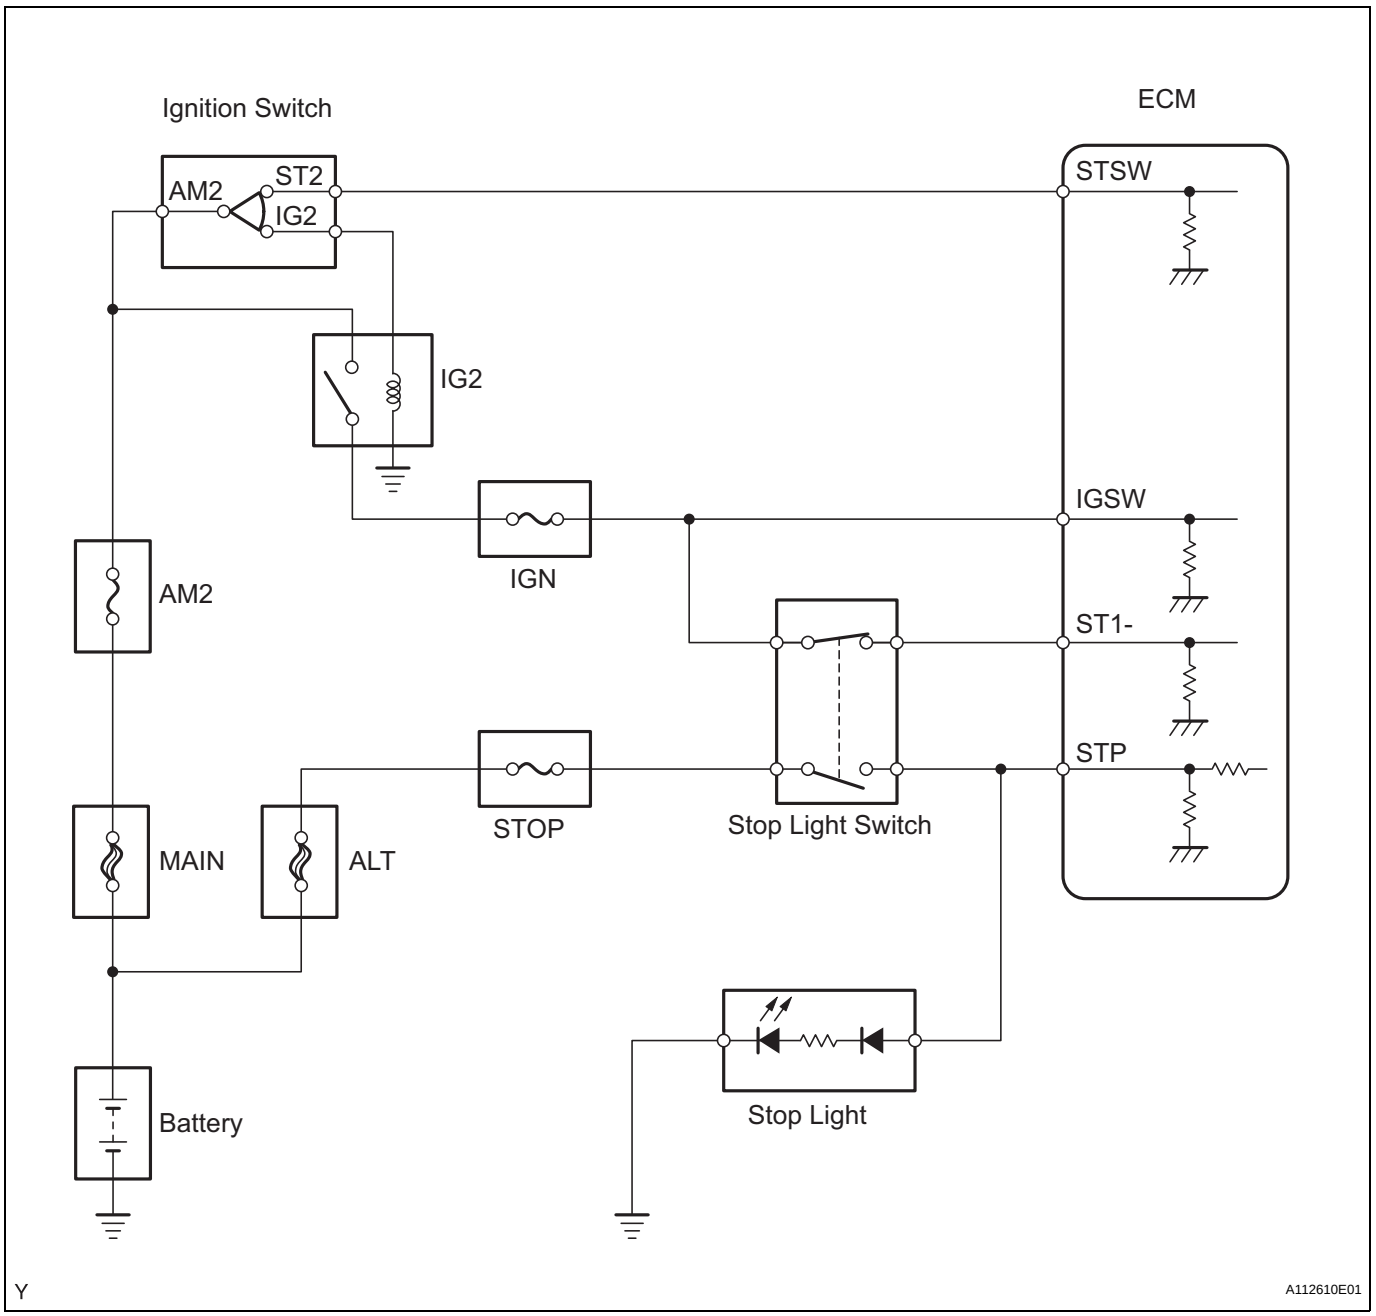
The stop light switch remains ON during GO and STOP 5 times.
GO and STOP are defined as follows;

Monitor runs whenever following DTCs not present	None
GO: Vehicle speed	18.65 mph (30 km/h) or more
STOP: Vehicle speed	Less than 1.86 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Stop light switch status	Stuck ON

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**READ VALUE USING INTELLIGENT TESTER (STOP LIGHT SW)**

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.

(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STOP LIGHT SW.
(d) Read the values displayed on the tester.

OK

Item	Measurement Item: Range (display)	Normal Condition
STOP LIGHT SW	Stop light switch status: ON or OFF	• ON: Brake pedal is depressed • OFF: Brake pedal is released

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

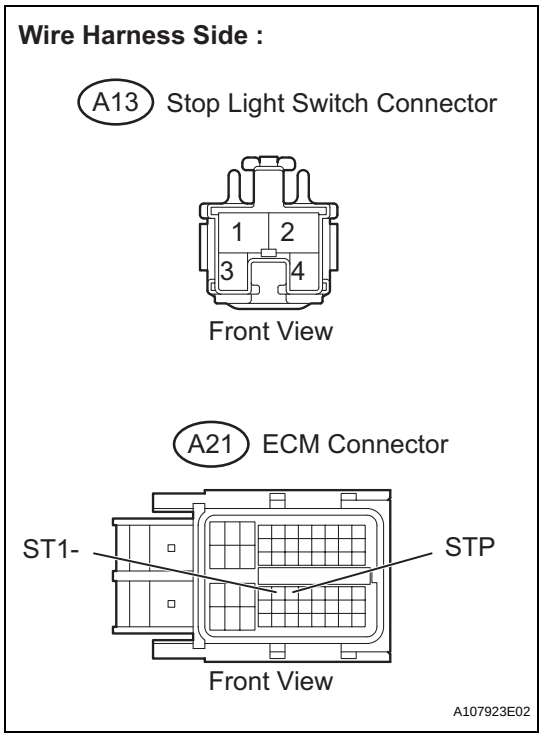
ES

2 **INSPECT STOP LIGHT SWITCH ASSEMBLY (See page ES-227)**

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

3 **CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - ECM)**



(a) Disconnect the A21 ECM connector.
(b) Disconnect the A13 stop light switch connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
STP (A21-36) - Stop light switch (A13-1)	Below 1Ω
ST1- (A21-35) - Stop light switch (A13-4)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
STP (A21-36) or Stop light switch (A13-1) - Body ground	10 kΩ or higher
ST1- (A21-35) or Stop light switch (A13-4) - Body ground	

(d) Reconnect the ECM connector.
(e) Reconnect the stop light switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P2102	Throttle Actuator Control Motor Circuit Low

DTC	P2103	Throttle Actuator Control Motor Circuit High

DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using gears.
The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.
HINT:
This ETCS (Electronic Throttle Control System) does not use a throttle cable.

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P2102	Conditions (a) and (b) continue for 2.0 seconds (1 trip detection logic): (a) Throttle actuator duty ratio 80 % or more (b) Throttle actuator current 0.5 A or less	• Open in throttle actuator circuit • Throttle actuator • ECM
P2103	Either of following conditions met (1 trip detection logic): • Throttle actuator current 10 A or more for 0.1 seconds • Throttle actuator current 7 A or more for 0.6 seconds	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body assembly • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and open circuits in the throttle actuator based on this value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.
Example:
When the electrical current is more than 10 A, or less than 0.5 A and the throttle actuator duty ratio exceeds 80 %, the ECM interprets this as the current being outside the standard range, and illuminates the MIL and sets a DTC.
If the malfunction is not repaired successfully, a DTC is set when the engine is quickly revved to a high rpm several times after the engine has idled for 5 seconds after engine start.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	2 seconds: P2102 0.1 seconds or 0.6 seconds: P2103
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

P2102:

Throttle actuator	Activated

Duty-cycle ratio to open throttle actuator	80 % or more
Throttle actuator power supply	8 V or more

P2103:

Throttle actuator	Activated
Throttle actuator power supply	8 V or more
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P2102:

Throttle actuator current	Less than 0.5 A

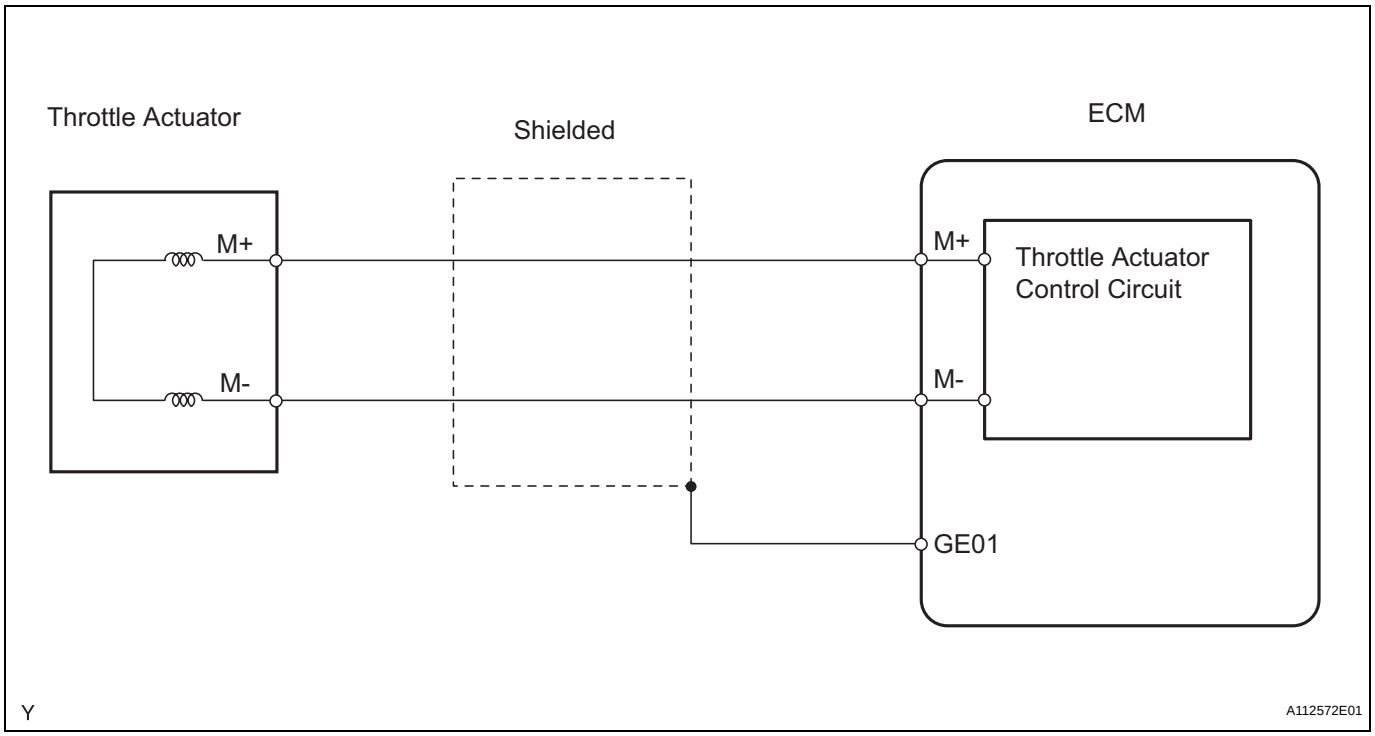
P2103:

Hybrid IC current limiter port	Fail

FAIL-SAFE

When either of these DTCs, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

WIRING DIAGRAM



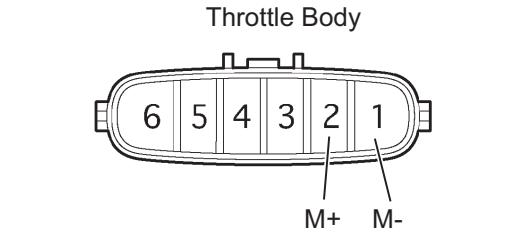
INSPECTION PROCEDURE

HINT:

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- The throttle actuator current (THROTTLE MOT) and the throttle actuator duty ratio (THROTTLE OPN / THROTTLE CLS) can be read using the intelligent tester. However the ECM shuts off the throttle actuator current when the ETCS malfunctions.

1 INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)

Component Side:



(a) Disconnect the C17 throttle body connector.
(b) Measure the resistance of the throttle actuator.
Standard resistance

Tester Connections	Specified Conditions
M+ (2) - M- (1)	0.3 to 100 Ω at 20°C (68°F)

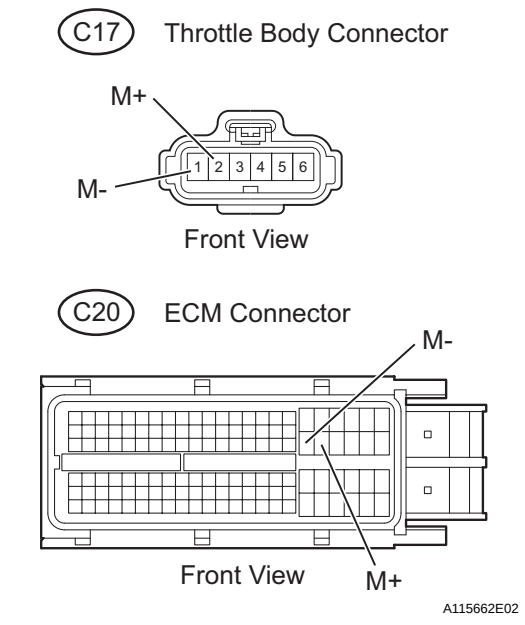
(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

2 CHECK HARNESS AND CONNECTOR (THROTTLE ACTUATOR - ECM)

Wire Harness Side:



(a) Disconnect the C17 throttle body connector.
(b) Disconnect the C20 ECM connector.
(c) Check the resistance.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
M+ (C17-2) - M+ (C20-42)	Below 1 Ω
M- (C17-1) - M- (C20-41)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
M+ (C17-2) or M+ (C20-42) - Body ground	10 kΩ or higher
M- (C17-1) or M- (C20-41) - Body ground	

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT THROTTLE BODY ASSEMBLY

(a) Check for foreign objects between the throttle valve and the housing.
OK:
No foreign objects between throttle valve and housing.

NG → **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK

4	INSPECT THROTTLE VALVE

(a) Check if the throttle valve opens and closes smoothly.
OK:
Throttle valve opens and closes smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

REPLACE ECM

DTC	P2111	Throttle Actuator Control System - Stuck Open

DTC	P2112	Throttle Actuator Control System - Stuck Closed

DESCRIPTION

The throttle actuator is operated by the ECM, and opens and closes the throttle valve using gears. The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM in order that it can control the throttle actuator, and therefore the throttle valve, appropriately in response to driver inputs.

HINT:

This ETCS (Electronic Throttle Control System) does not use a throttle cable.

DTC No.	DTC Detection Conditions	Trouble Areas
P2111	Throttle actuator does not close when signaled by ECM (1 trip detection logic)	• Throttle actuator • Throttle body assembly • Throttle valve
P2112	Throttle actuator does not open when signaled by ECM (1 trip detection logic)	• Throttle actuator • Throttle body assembly • Throttle valve

MONITOR DESCRIPTION

The ECM determines that there is a malfunction in the ETCS when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2111: Throttle actuator stuck open P2112: Throttle actuator stuck closed
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

P2111 (Throttle actuator stuck open):

All of following conditions met	-
Throttle actuator current	2 A or more
Duty cycle to close throttle	80 % or more

P2112 (Throttle actuator stuck closed):

All of following conditions met	-
Throttle actuator current	2 A or more
Duty cycle to open throttle	80 % or more

TYPICAL MALFUNCTION THRESHOLDS

P2111 (Throttle actuator stuck open):

TP sensor voltage change	No change

P2112 (Throttle actuator stuck closed):

TP sensor voltage change	No change

FAIL-SAFE

When either of these DTCs, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-250).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2111 OR P2112)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

A

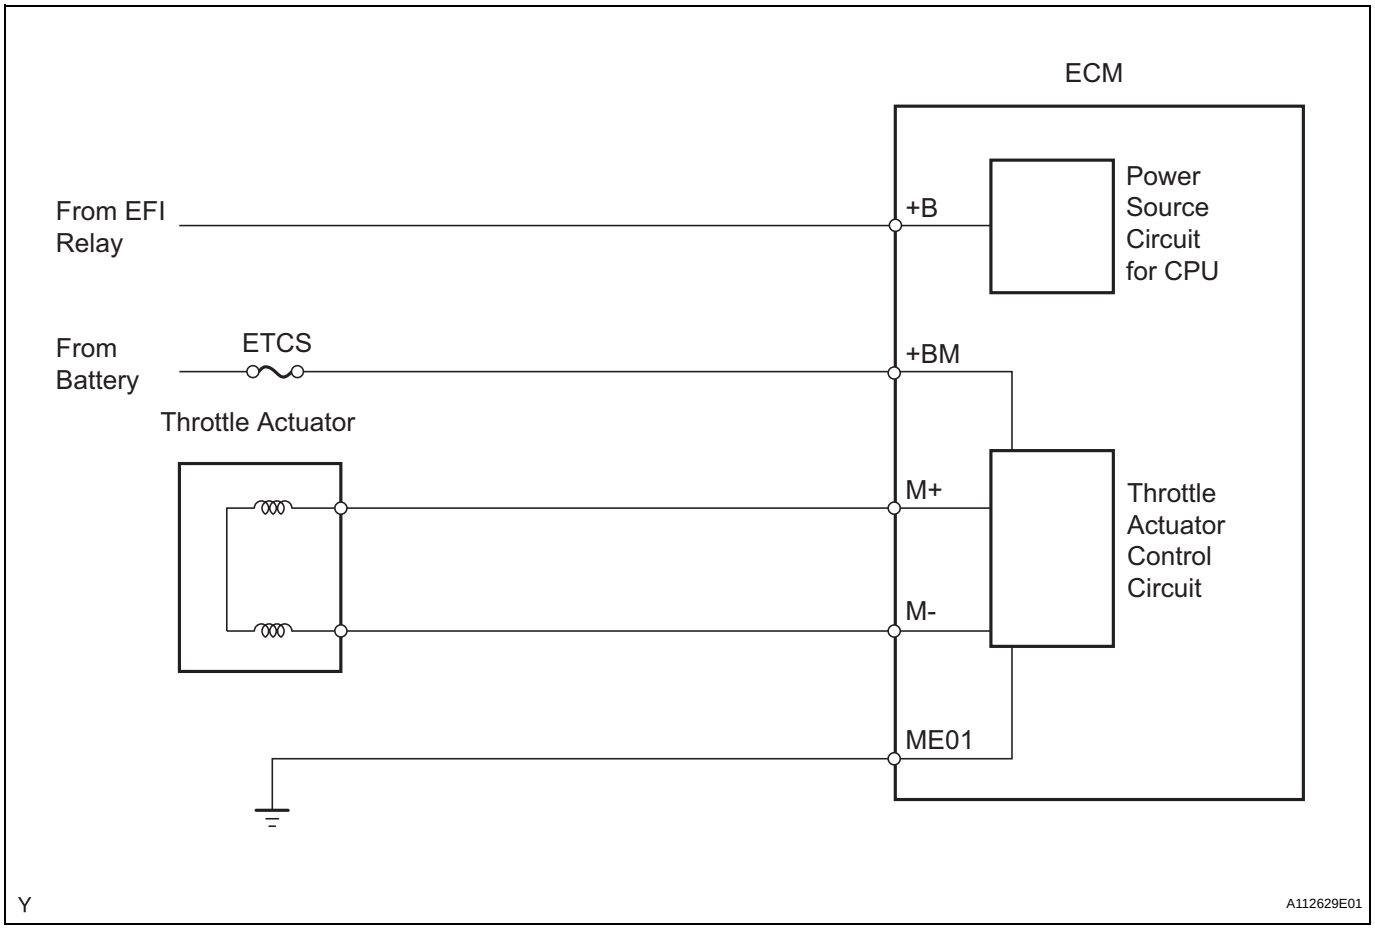
CHECK FOR INTERMITTENT PROBLEMS

DTC	P2118	Throttle Actuator Control Motor Current Range / Performance

DESCRIPTION

The ETCS (Electronic Throttle Control System) has a dedicated power supply circuit. The voltage (+BM) is monitored and when it is low (less than 4 V), the ECM determines that there is a malfunction in the ETCS and cuts off the current to the throttle actuator.
When the voltage becomes unstable, the ETCS itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the ignition switch to OFF. The ECM then allows the current to flow to the throttle actuator so that it can be restarted.
HINT:
The ETCS does not use a throttle cable.



DTC No.	DTC Detection Conditions	Trouble Areas
P2118	Open in ETCS power source (+BM) circuit (1 trip detection logic)	• Open in ETCS power source circuit • Battery • Battery terminals • ETCS fuse • ECM

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.
When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve, ETCS fuse
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	0.8 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Battery voltage	8 V or more
Electronic throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

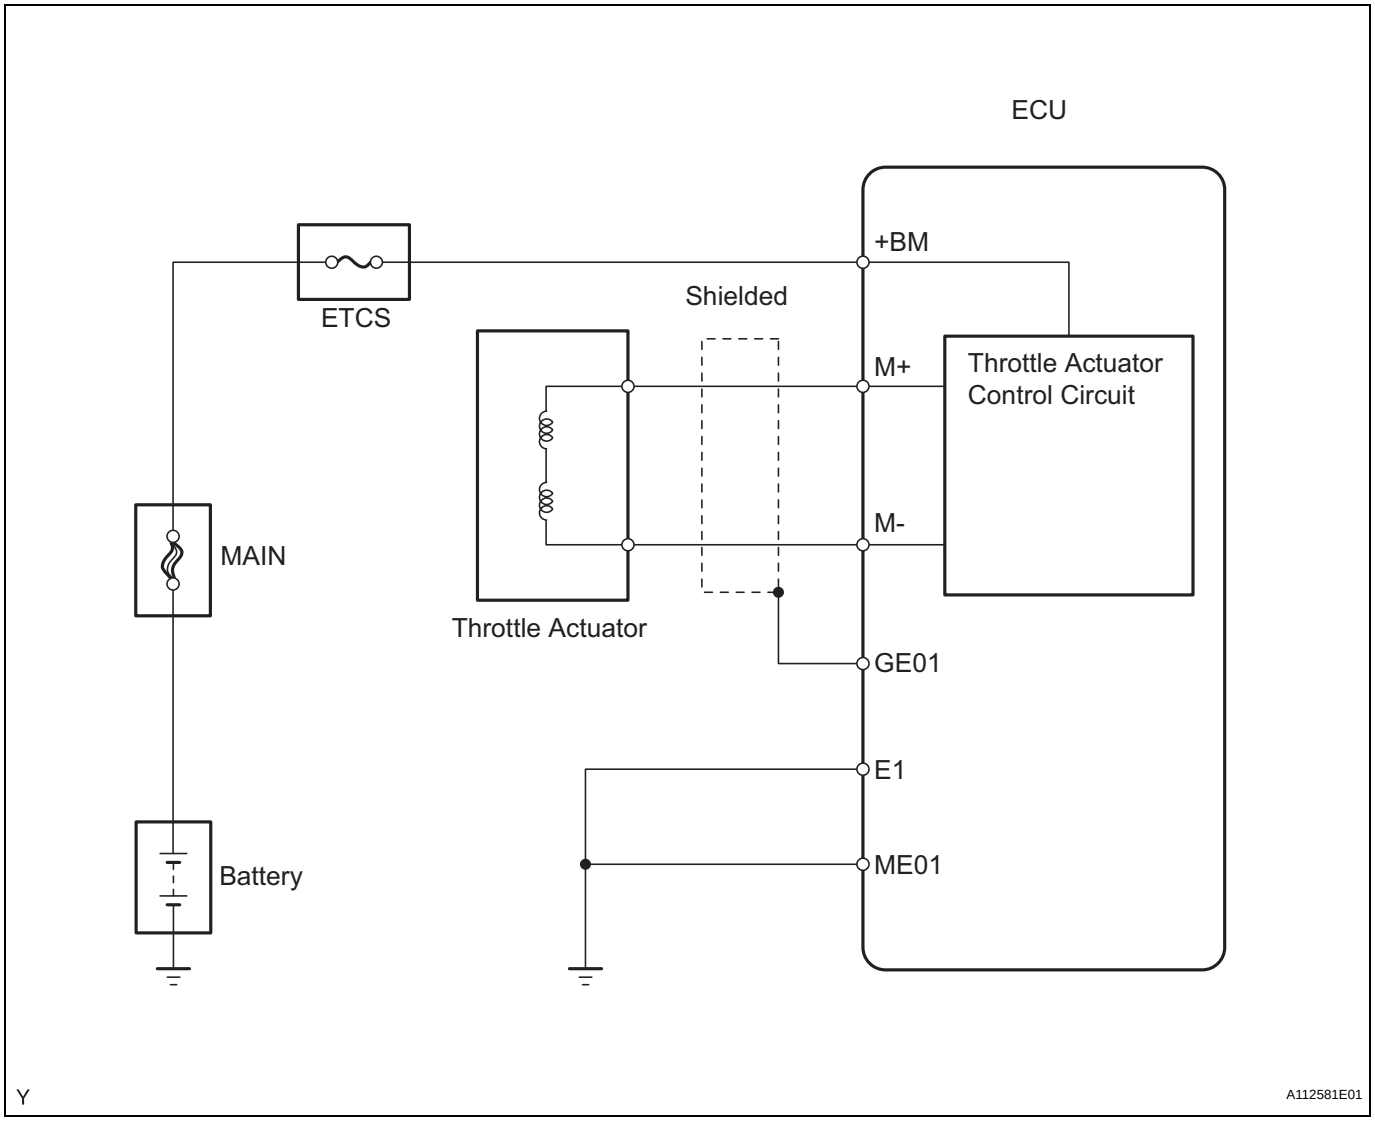
COMPONENT OPERATING RANGE

Throttle actuator power supply voltage (+BM)	11 to 14 V

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (+BM VOLTAGE)

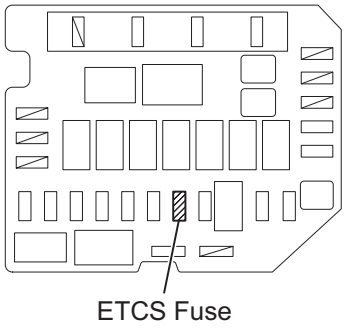
(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / +BM VOLTAGE.
(e) Read the value displayed on the tester.
Standard voltage:
11 to 14 V

OK → Go to step 5

NG

2	CHECK FUSE (ETCS FUSE)

Engine Room Relay Block:



A112591E01

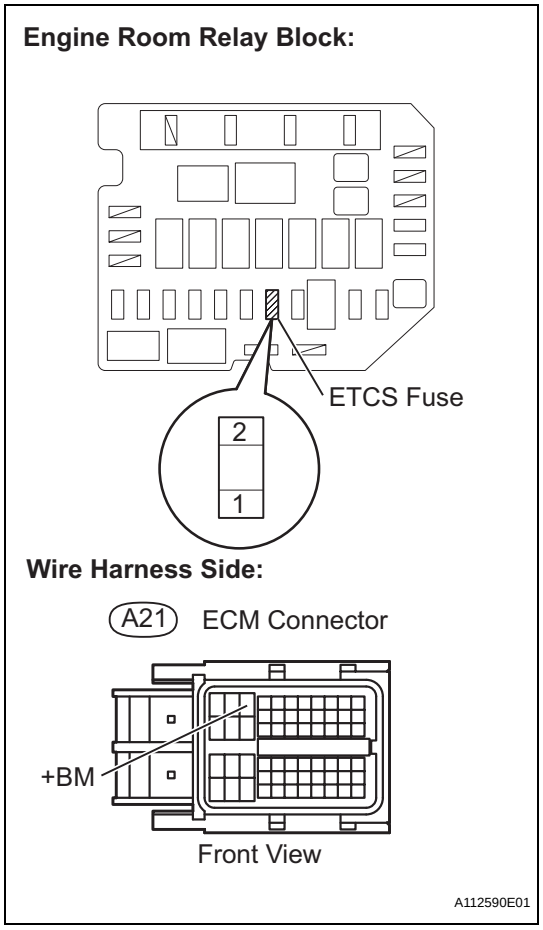
(a) Remove the ETCS fuse from the engine room relay block.
(b) Check the ETCS fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ETCS fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

ES

3	CHECK HARNESS AND CONNECTOR (ECM - ETCS FUSE, ETCS FUSE - BATTERY)



(a) Check the harness and connector between the ETCS fuse and ECM.
  (1) Remove the ETCS fuse from the engine room relay block.
  (2) Disconnect the A21 ECM connector.
  (3) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
ETCS fuse (2) - +BM (A21-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
ETCS fuse (2) or +BM (A21-3) - Body ground	10 kΩ or higher

  (4) Reinstall the ETCS fuse.
  (5) Reconnect the ECM connector.

(b) Check the harness and connector between the ETCS fuse and positive battery cable.
  (1) Remove the ETCS fuse from the engine room relay block.
  (2) Disconnect the positive battery cable.
  (3) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Positive battery cable - ETCS fuse (1)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Positive battery cable or ETCS fuse (1) - Body ground	10 kΩ or higher

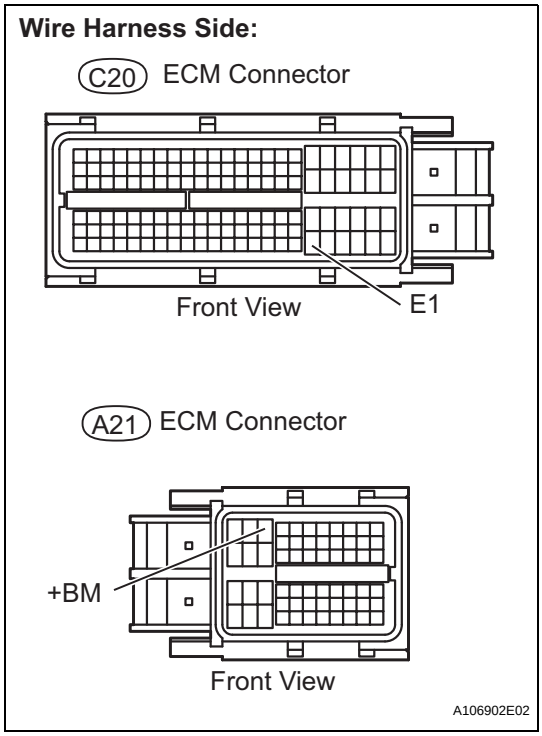
  (4) Reinstall the ETCS fuse.
  (5) Reconnect the positive battery cable.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ES

4	INSPECT ECM (+BM VOLTAGE)



(a) Disconnect the A21 and C20 ECM connectors.
(b) Measure the voltage between the terminals of the A21 and C20 ECM connectors.
Standard voltage

Tester Connections	Specified Conditions
+BM (A21-3) - E1 (C20-104)	11 to 14 V

(c) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TERMINAL E1 - BODY GROUND)**

OK

REPLACE ECM

5	INSPECT BATTERY

(a) Check that the battery is not depleted.
OK:
Battery is not depleted

NG → **REPLACE BATTERY**

OK

6	CHECK BATTERY TERMINAL

(a) Check that the battery terminals and ECM ground are not loose or corroded.
OK:
Battery terminals and ECM ground are not loose or corroded

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

CHECK FOR INTERMITTENT PROBLEMS

DTC	P2119	Throttle Actuator Control Throttle Body Range / Performance

DESCRIPTION

The Electronic Throttle Control System (ETCS) is composed of the throttle actuator, Throttle Position (TP) sensor, Accelerator Pedal Position (APP) sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The TP sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC No.	DTC Detection Conditions	Trouble Areas
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1 trip detection logic)	• ETCS • ECM

ES

MONITOR DESCRIPTION

The ECM determines the actual opening angle of the throttle valve from the TP sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the ETCS. The ECM then illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5,000 rpm by the accelerator pedal being fully depressed (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: ETCS malfunction
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions A or B met	-
A. Difference between commanded closed throttle position and current closed throttle position	0.3 V or more for 1 second
B. Difference between commanded open throttle position and current open throttle position	0.3 V or more for 0.6 seconds

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to OFF.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-250).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

ES

1 **CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)**

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To

OK

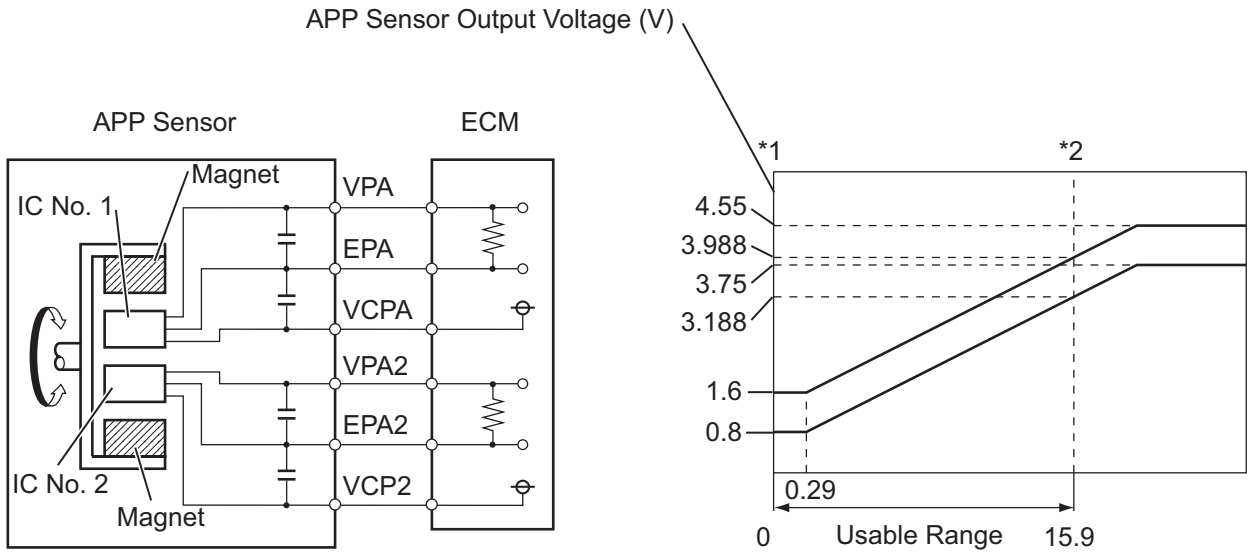
CHECK FOR INTERMITTENT PROBLEMS

DTC	P2120	Throttle / Pedal Position Sensor / Switch "D" Circuit
DTC	P2122	Throttle / Pedal Position Sensor / Switch "D" Circuit Low Input
DTC	P2123	Throttle / Pedal Position Sensor / Switch "D" Circuit High Input
DTC	P2125	Throttle / Pedal Position Sensor / Switch "E" Circuit
DTC	P2127	Throttle / Pedal Position Sensor / Switch "E" Circuit Low Input
DTC	P2128	Throttle / Pedal Position Sensor / Switch "E" Circuit High Input
DTC	P2138	Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation

HINT:
These DTCs relate to the Accelerator Pedal Position (APP) sensor.

DESCRIPTION

HINT:
This ETCS (Electronic Throttle Control System) does not use a throttle cable.
The APP sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds. The voltage, which is applied to terminals VPA and VPA2 of the ECM, varies between 0 V and 5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the APP sensor itself.
The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.



Y

A112620E01

DTC No.	DTC Detection Conditions	Trouble Areas
P2120	VPA fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• APP sensor • ECM
P2122	VPA 0.4 V or less for 0.5 seconds or more when accelerator pedal fully released (1 trip detection logic)	• APP sensor • Open in VCP1 circuit • Open or ground short in VPA circuit • ECM
P2123	VPA 4.8 V or more for 2.0 seconds or more (1 trip detection logic)	• APP sensor • Open in EPA circuit • ECM
P2125	VPA2 fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• APP sensor • ECM
P2127	VPA2 1.2 V or less for 0.5 seconds or more when accelerator pedal fully released (1 trip detection logic)	• APP sensor • Open in VCP2 circuit • Open or ground short in VPA2 circuit • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more (1 trip detection logic): (a) VPA2 4.8 V or more (b) VPA between 0.4 V and 3.45 V	• APP sensor • Open in EPA2 circuit • ECM
P2138	Condition (a) or (b) continues for 2.0 seconds or more (1 trip detection logic): (a) Difference between VPA and VPA2 0.02 V or less (b) VPA 0.4 V or less and VPA2 1.2 V or less	• Short between VPA and VPA2 circuits • APP sensor • ECM

HINT:
When any of these DTCs are set, check the APP sensor voltage by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ACCEL POS #1 and ACCEL POS #2.

Trouble Areas	ACCEL POS #1 When AP Released	ACCEL POS #2 When AP Released	ACCEL POS #1 When AP Depressed	ACCEL POS #2 When AP Depressed
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V
Open or ground short in VPA circuit	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.0 V
Open or ground short in VPA2 circuit	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EPA circuit open	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.0 V

HINT:
- Accelerator pedal positions are expressed as voltages.
- AP denotes for Accelerator Pedal.

ES

MONITOR DESCRIPTION

When either output voltage of VPA or VPA2 deviates from the standard range, or the difference between the output voltages of the 2 sensor circuits is less than the threshold, the ECM determines that there is a malfunction in the APP sensor. The ECM then illuminates the MIL and sets a DTC.
Example:
When the output voltage of VPA drops below 0.4 V for more than 0.5 seconds when the accelerator pedal is fully depressed, DTC P2122 is set.
If the malfunction is not repaired successfully, a DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2120: APP sensor 1 range check (fluctuating) P2122: APP sensor 1 range check (low voltage) P2123: APP sensor 1 range check (high voltage) P2125: APP sensor 2 range check (fluctuating) P2127: APP sensor 2 range check (low voltage) P2128: APP sensor 2 range check (high voltage) P2138: APP sensor range check (correlation)

MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Either of following conditions 1 or 2 met:	-
1. Ignition switch	ON
2. Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

P2120:

Either of following conditions 1 or 2 met:	-
1. VPA voltage when VPA2 voltage 0.04 V or more	0.4 V or less
2. VPA voltage	4.8 V or more

P2122:

VPA voltage when VPA2 voltage 0.04 V or more	0.4 V or less

P2123:

VPA voltage	4.8 V or more

P2125:

Either of following conditions 1 or 2 met:	-
1. VPA2 voltage when VPA voltage 0.04 V or more	1.2 V or less
2. VPA2 voltage when VPA 0.4 to 3.45 V	4.8 V or more

P2127:

VPA2 voltage when VPA voltage 0.04 V or more	1.2 V or less

ES

P2128:

VPA2 voltage when VPA 0.4 to 3.45 V	4.8 V or more

P2138:

Either of following conditions A or B met:	-
Condition A	-
Difference between VPA and VPA 2 voltages	0.02 V or less
Condition B	-
VPA voltage	0.4 V or less
VPA2 voltage	1.2 V or less

COMPONENT OPERATING RANGE

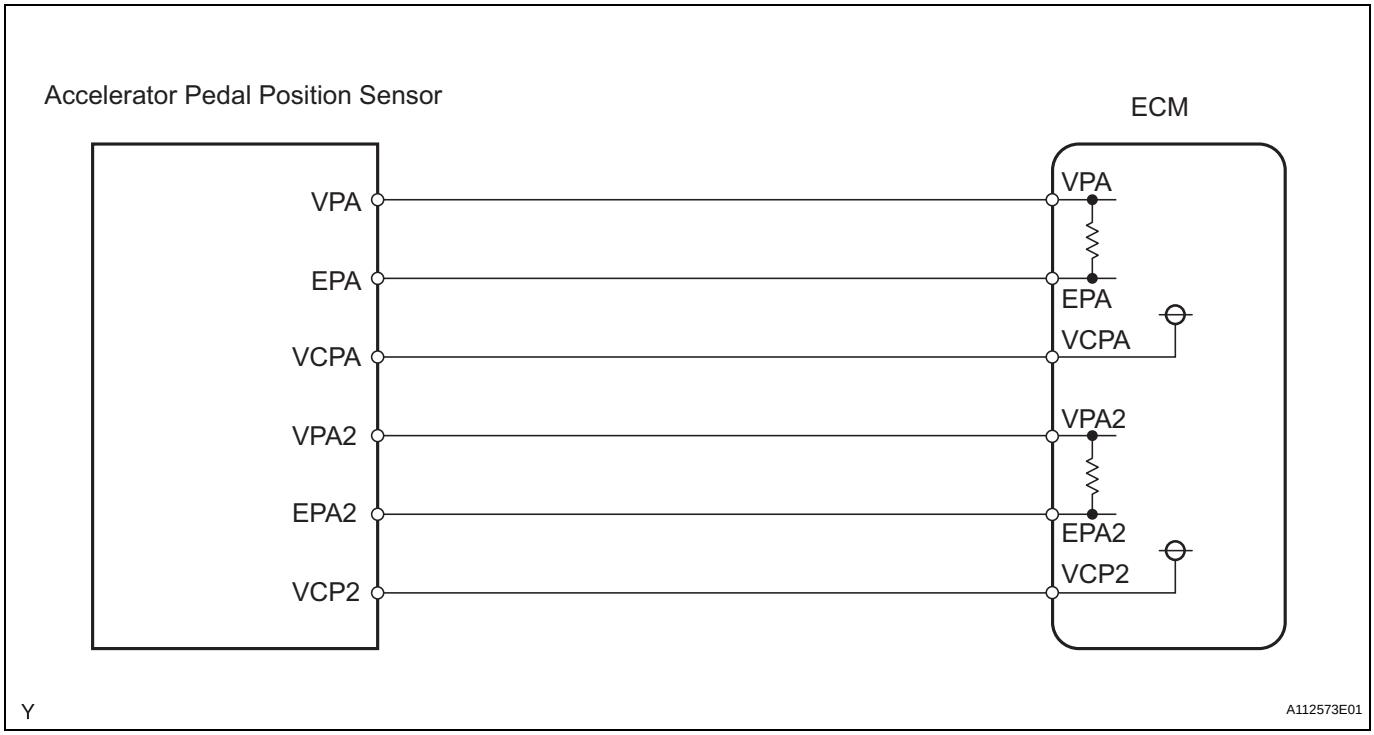
VPA voltage	0.5 V to 4.5 V
VPA2 voltage	1.2 V to 5.0 V
Difference between VPA and VPA2 voltages	More than 0.02 V

FAIL-SAFE

When any of DTCs P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138 are set, the ECM enters fail-safe mode. If either of the 2 sensor circuit malfunctions, the ECM uses the remaining circuit to calculate the accelerator pedal position to allow the vehicle to continue driving. If both of the circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is turned to OFF.

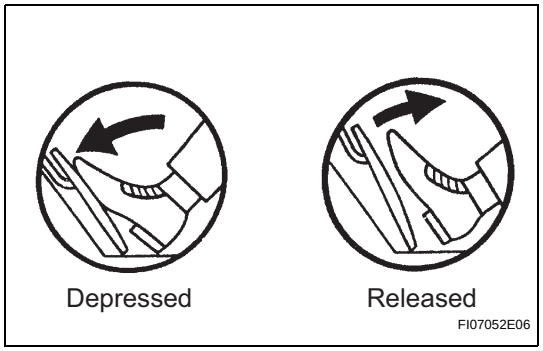
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (ACCEL POS #1 AND ACCEL POS #2)



(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / ACCEL POS #1 and ACCEL POS #2.
(d) Read the value displayed on the tester.

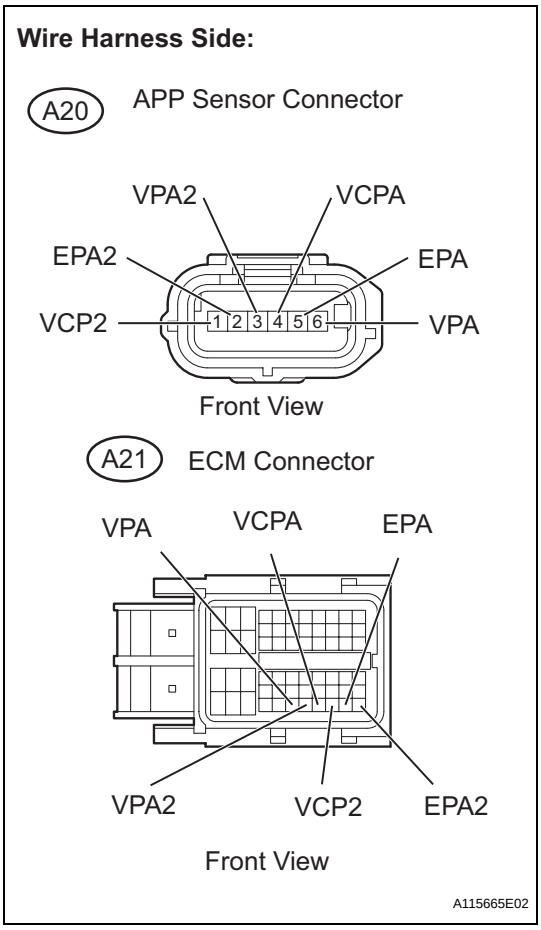
Standard voltage

Accelerator Pedal Operations	ACCEL POS #1	ACCEL POS #2
Released → Depressed → Released	0.5 to 4.5 V	1.2 to 5.0 V
	Difference between ACCEL POS #1 and ACCEL POS #2 is greater than 0.02 V	Difference between ACCEL POS #1 and ACCEL POS #2 is greater than 0.02 V

OK → **Go to step 5**

NG

2	CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)



(a) Disconnect the A20 Accelerator Pedal Position (APP) sensor connector.
(b) Disconnect the A21 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
VPA (A20-6) - VPA (A21-55)	Below 1 Ω
EPA (A20-5) - EPA (A21-59)	
VCPA (A20-4) - VCPA (A21-57)	
VPA2 (A20-3) - VPA2 (A21-56)	
EPA2 (A20-2) - EPA2 (A21-60)	
VCP2 (A20-1) - VCP2 (A21-58)	

Standard resistance (Check for short)

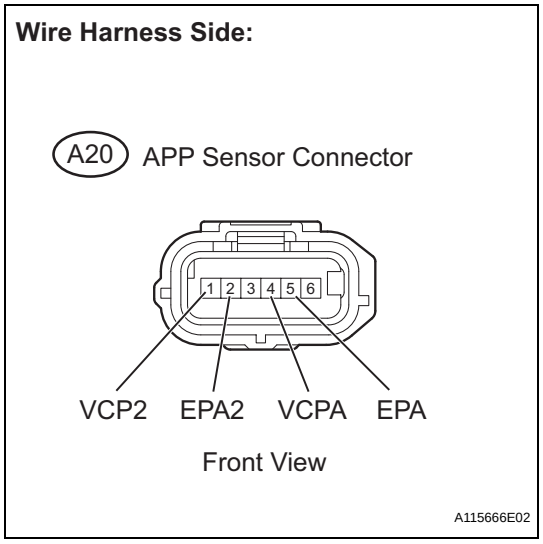
Tester Connections	Specified Conditions
VPA (A20-6) or VPA (A21-55) - body ground	10 kΩ or higher
EPA (A20-5) or EPA (A21-59) - body ground	
VCPA (A20-4) or VCPA (A21-57) - body ground	
VPA2 (A20-3) or VPA2 (A21-56) - body ground	
EPA2 (A20-2) or EPA2 (A21-60) - body ground	
VCP2 (A20-1) or VCP2 (A21-58) - body ground	

(d) Reconnect the APP sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT ECM (VCPA AND VCP2 VOLTAGE)



(a) Disconnect the A20 APP sensor connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the A20 APP sensor connector.

Standard voltage

Tester Connections	Specified Conditions
VCPA (A20-4) - EPA (A20-5)	4.5 to 5.5 V
VCP2 (A20-1) - EPA2 (A20-2)	

(d) Reconnect the APP sensor connector.

NG → **REPLACE ECM**

OK

4	REPLACE ACCELERATOR PEDAL ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (ACCELERATOR PEDAL POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read DTCs.

Result

Display (DTC Output)	Proceed To
P2120, P2122, P2123, P2125, P2127, P2128, and/or P2138	A
No output	B

B → **SYSTEM OK**

A

REPLACE ECM

DTC	P2121	Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance

DESCRIPTION

HINT:

Refer to DTC P2120 (See page ES-266).

DTC No.	DTC Detection Conditions	Trouble Areas
P2121	Difference between VPA and VPA2 less than 0.4 V, or more than 1.2 V for 0.5 seconds (1 trip detection logic)	• Accelerator Pedal Position (APP) sensor • ECM

MONITOR DESCRIPTION

When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the Accelerator Pedal Position (APP) sensor is malfunctioning. The ECM turns on the MIL and the DTC is set.

MONITOR STRATEGY

Related DTCs	P2121: APP sensor rationality
Required Sensors/Components (Main)	APP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Either of following conditions 1 or 2 met:	-
1. Ignition switch	ON
2. Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference between VPA voltage (learned value) and VPA2 voltage (learned value)	Less than 0.4 V, or more than 1.2 V

FAIL-SAFE

The APP sensor has two (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the two sensor circuits and switches to limp mode. In limp mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.

If a pass condition is detected and then the ignition switch is turned to OFF, the fail-safe operation stops and the system returns to a normal condition.

WIRING DIAGRAM

Refer to DTC P2120 (See page ES-270).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2121)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

ES

Result

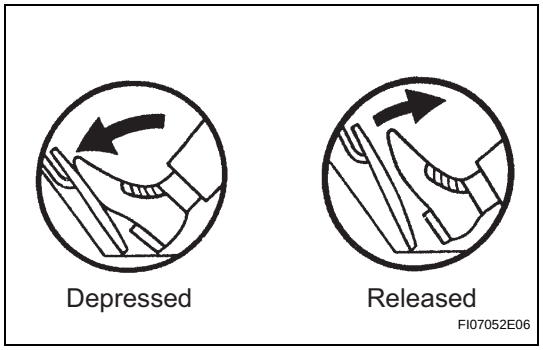
Display (DTC Output)	Proceed To
P2121	A
P2121 and other DTCs	B

HINT:
If any DTCs other than P2121 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2 READ VALUE USING INTELLIGENT TESTER (ACCEL POS #1 AND ACCEL POS #2)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ACCEL POS #1 and ACCEL POS #2.
(d) Read the values displayed on the tester.

Standard voltage

Accelerator Pedal Operations	ACCEL POS #1	ACCEL POS #2
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.6 to 4.5 V	3.4 to 5.0 V

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

3 REPLACE ACCELERATOR PEDAL ASSEMBLY

NEXT

4	CHECK WHETHER DTC OUTPUT RECURS (DTC P2121)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read DTCs.

Display (DTC Output)	Proceed To
P2121	A
No output	B

B → SYSTEM OK

A → REPLACE ECM

DTC	P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)

DTC	P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)

HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

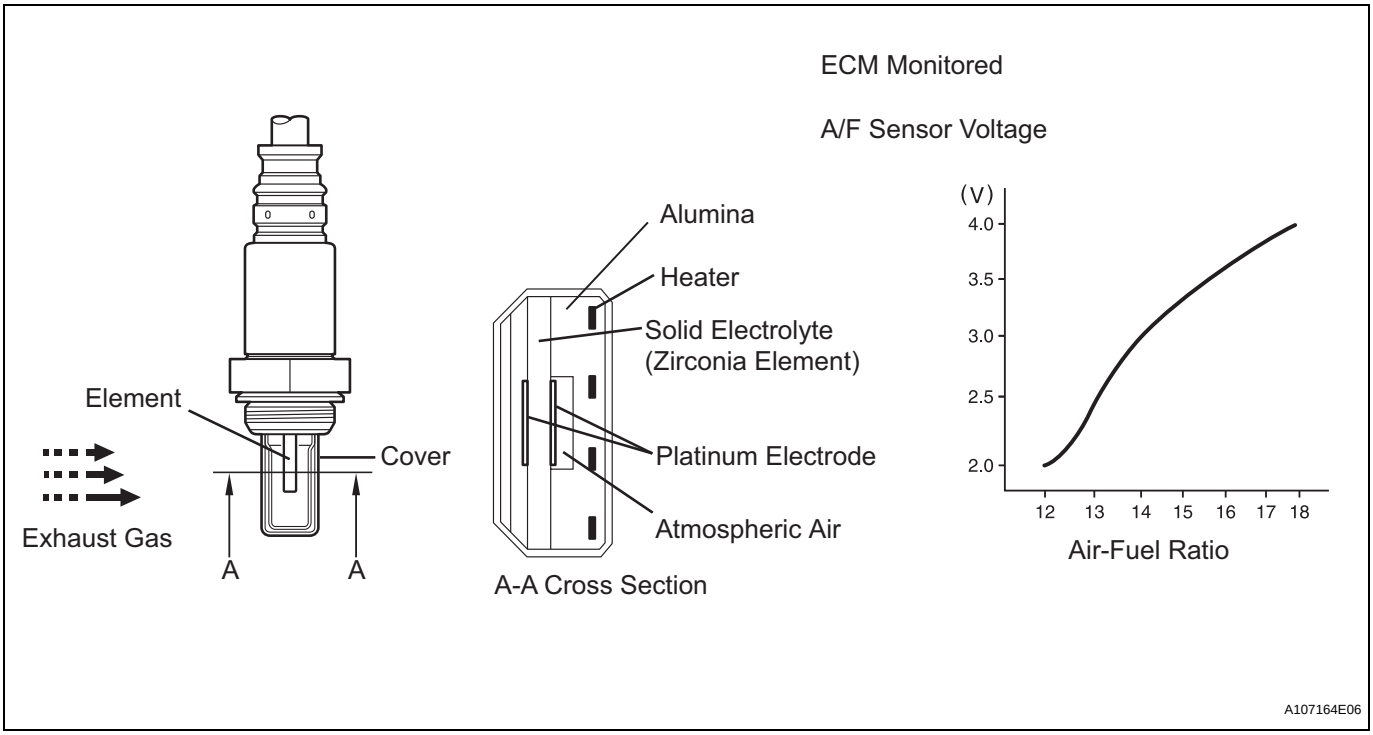
DESCRIPTION

The A/F sensor generates a voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is of the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate air-fuel ratio detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a TWC is used. For the most efficient use of the TWC, the air-fuel ratio must be precisely controlled so that it is always close to the stoichiometric level.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted into a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.



DTC No.	DTC Detection Conditions	Trouble Areas
P2195	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic): (a) A/F sensor voltage more than 3.8 V (b) Heated Oxygen (HO2) sensor voltage 0.15 V or more	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
	While fuel-cut operation performed (during vehicle deceleration), A/F sensor current 3.6 mA or more for 3 seconds (2 trip detection logic)	• A/F sensor • ECM
P2196	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic): (a) A/F sensor voltage less than 2.8 V for 10 seconds (b) HO2 sensor voltage less than 0.6 V	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
	While fuel-cut operation performed (during vehicle deceleration), A/F sensor current less than 1.0 mA for 3 seconds (2 trip detection logic)	• A/F sensor • ECM

ES

HINT:
- When either of these DTCs is set, check the A/F sensor output voltage by selecting the following menu items on an intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / AFS B1 S1.
- Short-term fuel trim values can also be read using an intelligent tester.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the A/F sensor output voltage cannot be confirmed without using an intelligent tester.
- If the A/F sensor is malfunctioning, the ECM sets the DTC P2195 or P2196.

MONITOR DESCRIPTION

Sensor voltage detection monitor

Under the air-fuel ratio feedback control, if the A/F sensor output voltage indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the A/F sensor. The ECM illuminates the MIL and sets a DTC.

Example:

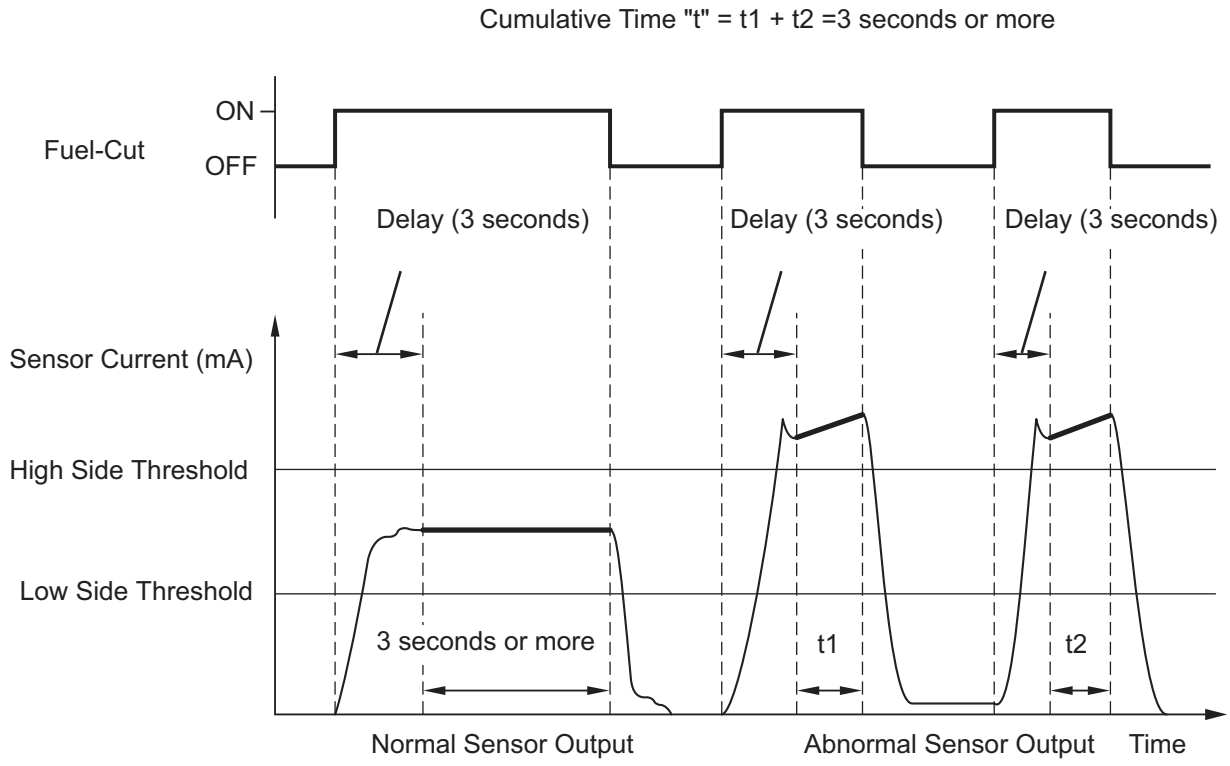
If the A/F sensor output voltage is less than 2.8 V (very rich condition) for 10 seconds, despite the rear HO2 sensor output voltage being less than 0.6 V, the ECM sets DTC P2196. Alternatively, if the A/F sensor output voltage is more than 3.8 V (very lean condition) for 10 seconds, despite the rear HO2 sensor output voltage being 0.15 V or more, DTC P2195 is set.

Sensor current detection monitor

A rich air-fuel mixture causes a low A/F sensor current, and a lean air-fuel mixture causes a high A/F sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the A/F sensor current during fuel-cut and detects any abnormal current values.

If the A/F sensor output is 3.6 mA or more for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the A/F sensor and sets DTC P2195 (high-side stuck). If the A/F sensor output is less than 1.0 mA for more than 3 seconds of cumulative time, the ECM sets DTC P2196 (low-side stuck).

A/F Sensor Current Monitor:



MONITOR STRATEGY

Related DTCs	P2195: A/F sensor signal stuck lean P2196: A/F sensor signal stuck rich
Required Sensors/Components (Main)	A/F sensor

Monitor runs whenever following DTCs not present	P0031, P0032 (A/F sensor heater - Sensor 1) P0037, P0038 (O2 sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136 (O2 Sensor - Sensor 2) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0455, P0456 (EVAP system) P0500 (VSS)

Sensor voltage detection monitor (Lean side malfunction P2195):

Duration while all of following conditions met	2 seconds or more
Rear HO2 sensor voltage	0.15 V or more
Time after engine start	30 seconds or more
A/F sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor voltage detection monitor (Rich side malfunction P2196):

Duration while all of following conditions met	2 seconds or more
Rear HO2 sensor voltage	Below 0.6 V
Time after engine start	30 seconds or more
A/F sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor current detection monitor P2195 and P2196

Battery voltage	11 V or more
Atmospheric pressure	76 kPa (570 mmHg) or more
A/F sensor status	Activated
Continuous time of fuel cut	3 to 10 seconds
ECT	75°C (167°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Sensor voltage detection monitor (Lean side malfunction P2195):

A/F sensor voltage	More than 3.8 V for 10 seconds

Sensor voltage detection monitor (Rich side malfunction P2196):

A/F sensor voltage	Less than 2.8 V for 10 seconds

Sensor current detection monitor (High side malfunction P2195):

A/F sensor current during fuel cut	3.6 mA or more

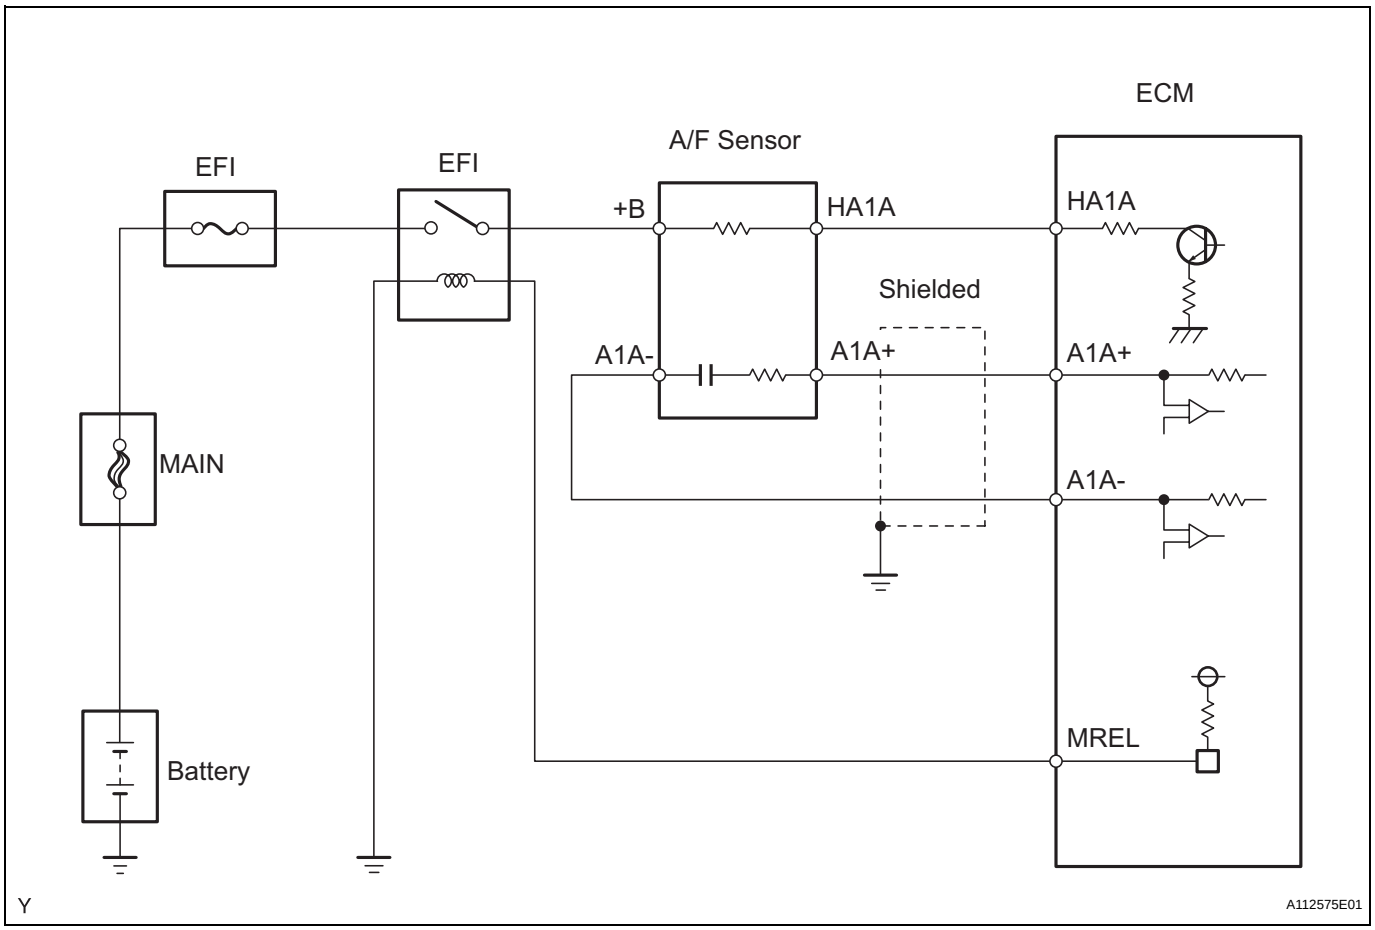
Sensor current detection monitor (Rich side malfunction P2196):

A/F sensor current during fuel cut	Less than 1 mA

MONITOR RESULT

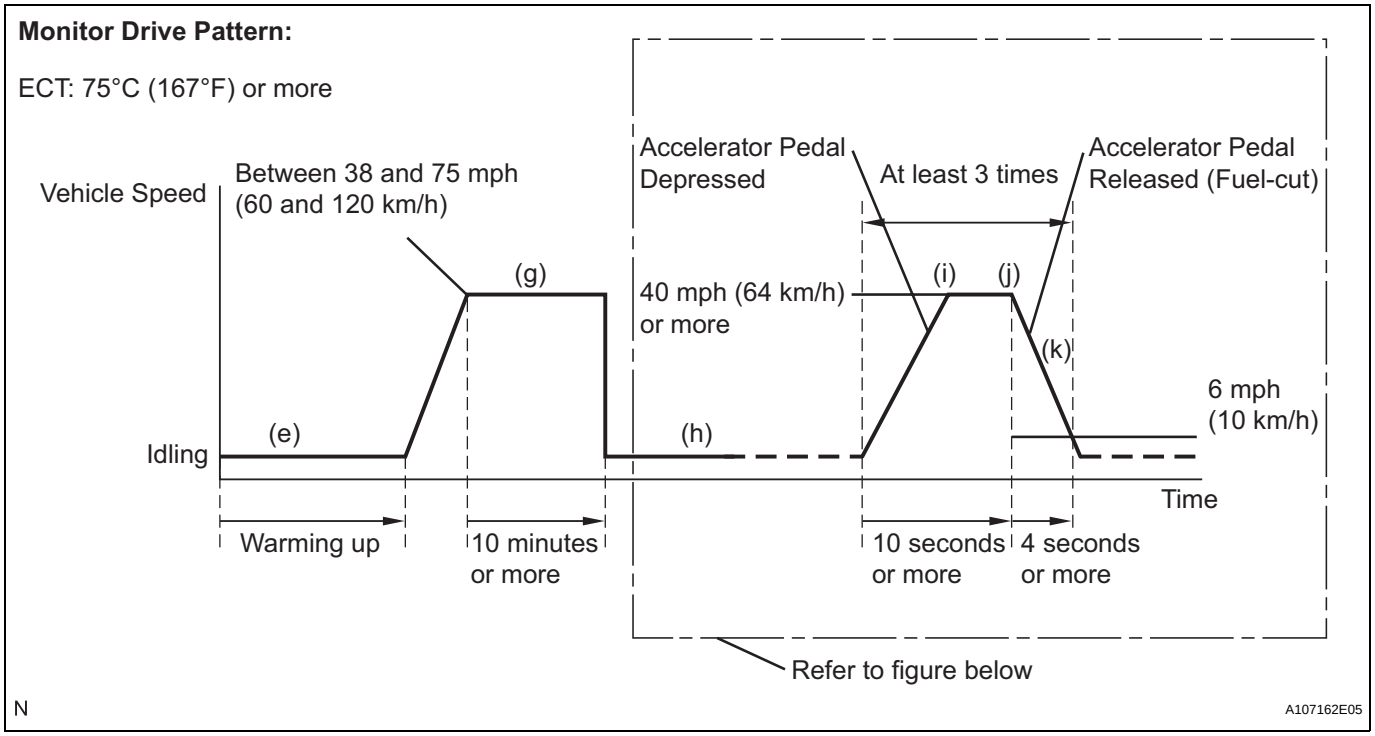
Refer to CHECKING MONITOR STATUS (See page ES-17).

WIRING DIAGRAM

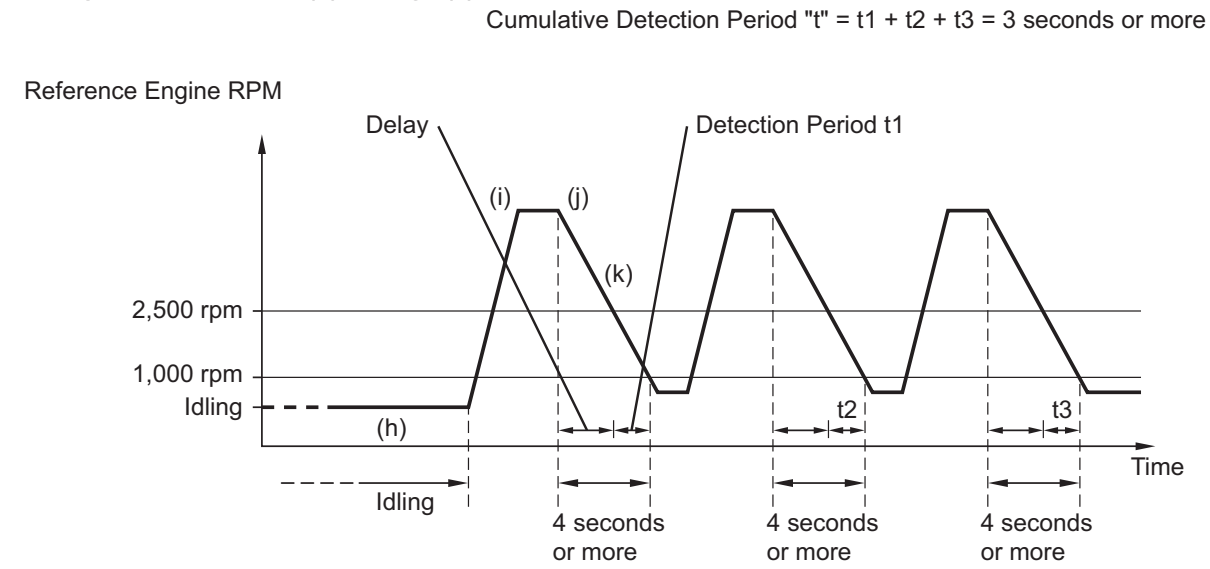


CONFIRMATION DRIVING PATTERN

This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.



Driving Pattern Detail for (h) through (k):



(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(f) On the intelligent tester, select the following menu items to check the fuel-cut status: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / FC IDLE.
(g) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(h) Change the transmission to 2nd gear.
(i) Drive the vehicle at proper vehicle speed to perform fuel-cut operation (refer to the following HINT).
HINT:
Fuel-cut is performed when the following conditions are met:
- Accelerator pedal fully released.
- Engine speed is 2,500 rpm or more (fuel injection returns at 1,000 rpm).

(j) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
(k) Soon after performing step (j) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(l) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(m) Repeat steps from (h) through (k) above at least 3 times in one driving cycle.
HINT:
Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor (sensor 2) output has a maximum output delay of approximately of 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.
HINT:

- DTC P2A00 may be set, when the air-fuel ratio is stuck rich or lean.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To
P2195 or P2196	A
P2195 or P2196 and other DTCs	B

HINT:
If any DTCs relating to the A/F sensor (DTCs for the A/F sensor heater or A/F sensor admittance) are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	READ VALUE USING INTELLIGENT TESTER (TEST VALUE OF A/F SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Clear DTCs (See page ES-34).
(d) Drive the vehicle in accordance with the drive pattern described in the CONFIRMATION DRIVING PATTERN.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
(f) Check that the status of O2S MON is COMPL.
If the status is still INCMPL, drive the vehicle according to the driving pattern again.
HINT:
- AVAIL indicates that the component has not been monitored yet.

- COMPL indicates that the component is functioning normally.
- INCMPL indicates that the component is malfunctioning.

(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT / RANGE B1 S1, then press the ENTER button.
(h) Check the test value of the A/F sensor output current during fuel-cut.

Result

Test Value	Proceed To
Within normal range (1.0 mA or more, and less than 3.6 mA)	A
Outside normal range (Less than 1.0 mA, or 3.6 mA or more)	B

ES

B → Go to step 12

A

3	READ VALUE USING INTELLIGENT TESTER (OUTPUT VOLTAGE OF A/F SENSOR)

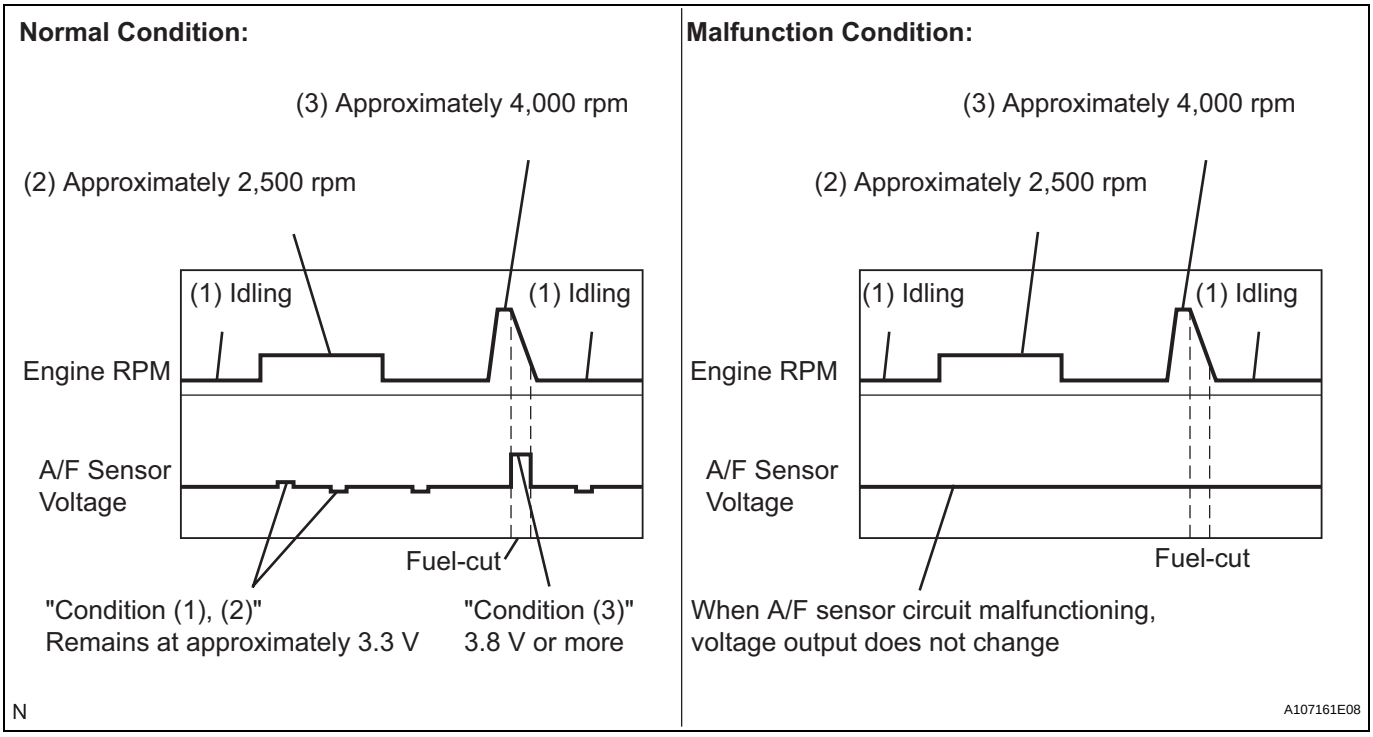
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the tester ON.
(d) Warm up the A/F sensor at an engine speed of 2,500 rpm for 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SNAPSHOT / MANUAL SNAPSHOT / USER DATA / AFS B1 S1 and ENGINE SPD.
(f) Check the A/F sensor voltage three times, when the engine is in each of the following conditions:
(1) While idling (check for at least 30 seconds)
(2) At an engine speed of approximately 2,500 rpm (without any sudden changes in engine speed)
(3) Raise the engine speed to 4,000 rpm and then quickly release the accelerator pedal so that the throttle valve is fully closed.

Standard voltage

Conditions	A/F Sensor Voltage Variations	Reference
(1) and (2)	Remains at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or more	This occurs during engine deceleration (when fuel-cut performed)

HINT:

- For more information, see the diagrams below.



- If the output voltage of the A/F sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have an open circuit. (This will also happen if the A/F sensor heater has an open circuit.)
- If the output voltage of the A/F sensor remains at either approximately 3.8 V or more, or 2.8 V or less (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have a short circuit.
- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and result in a momentary increase in the A/F sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:
  The output voltage of the A/F sensor may be below 2.8 V during fuel enrichment. For the vehicle, this translates to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The A/F sensor is functioning normally.
- The A/F sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the A/F sensor or ECM will show a constant voltage result.

HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

DESCRIPTION

Refer to DTC P2195 (See page ES-276).

DTC No.	DTC Detection Conditions	Trouble Areas
P2238	• Case 1: Condition (a) or (b) continues for 5.0 seconds or more (2 trip detection logic): (a) AF+ voltage 0.5 V or less (b) (AF+) - (AF-) = 0.1 V or less • Case 2: A/F sensor admittance: Less than 0.022 1/Ω (2 trip detection logic)	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
P2239	AF+ voltage more than 4.5 V for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
P2252	AF- voltage 0.5 V or less for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
P2253	AF- voltage more than 4.5 V for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI realy) • A/F sensor heater and EFI relay circuits • ECM

MONITOR DESCRIPTION

The Air-Fuel Ratio (A/F) sensor varies its output voltage in proportion to the air-fuel ratio. If the A/F sensor impedance (alternating current resistance) or output voltage deviates greatly from the standard range, the ECM determines that there is an open or short in the A/F sensor circuit.

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0031, P0032 (A/F sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0455, P0456 (EVAP system) P0500 (VSS)

P2238 (open circuit between AF+ and AF-):

AF+ terminal voltage	0.5 to 4.5 V
AF- terminal voltage	0.5 to 4.5 V
Difference between AF+ and AF- terminal voltages	0.1 to 0.8 V
ECT	5°C (41°F) or more (varies with ECT at engine start)
Engine	Running
Fuel-cut	OFF
Time after fuel-cut OFF	5 seconds or more
A/F sensor heater	ON
Battery voltage	11 V or more
Ignition switch	ON
Time after ignition switch is OFF to ON	5 seconds or more

Others:

Battery voltage	11 V or more
Ignition switch	ON
Time after ignition switch is OFF to ON	5 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P2238 (Open circuit between AF+ and AF-):

A/F sensor admittance	Below 0.022 1/Ω

P2238 (Short circuit between AF+ and GND):

AF+ terminal voltage	0.5 V or less

P2238 (Short circuit between AF+ and AF-):

Difference between AF+ and AF- terminal voltages	0.1 V or less

P2239 (Short circuit between AF+ and +B):

AF+ terminal voltage	More than 4.5 V

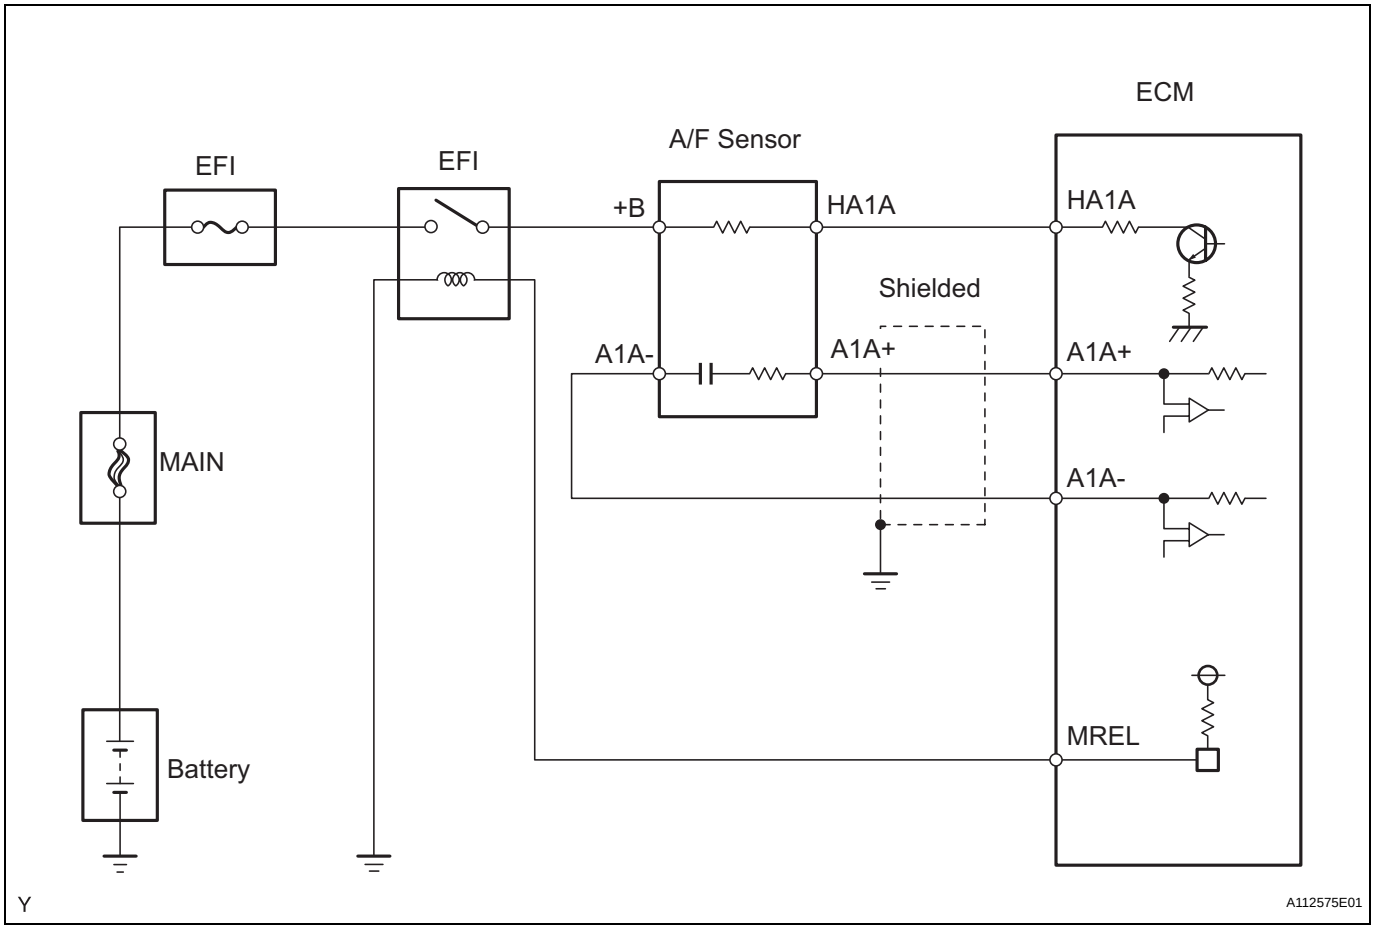
P2252 (Short circuit between AF- and GND):

AF- terminal voltage	0.5 V or less

P2253 (Short circuit between AF- and +B):

AF- terminal voltage	More than 4.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).

(f) Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

ES

NOTICE:

The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the output voltages of both the A/F and HO2 sensors.

To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.

HINT:
Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

DTC	P2401	Evaporative Emission Leak Detection Pump Stuck OFF

DTC	P2402	Evaporative Emission Leak Detection Pump Stuck ON

DTC SUMMARY

DTCs	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P2401	Leak detection pump stuck OFF	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • EVAP pressure just after reference pressure measurement greater than -1 kPa-g (-7.5 mmHg-g) • Reference pressure less than -4.85 kPa-g (-36.4 mmHg-g) • Reference pressure greater than -1.057 kPa-g (-7.93 mmHg-g) • Reference pressure not saturated • Reference pressure difference between first and second 0.7 kPa-g (5.25 mmHg-g) or more HINT: Typical example values	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch OFF	2 trip
P2402	Leak detection pump stuck ON		• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch OFF	2 trip

HINT:
The leak detection pump is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-324).

MONITOR DESCRIPTION

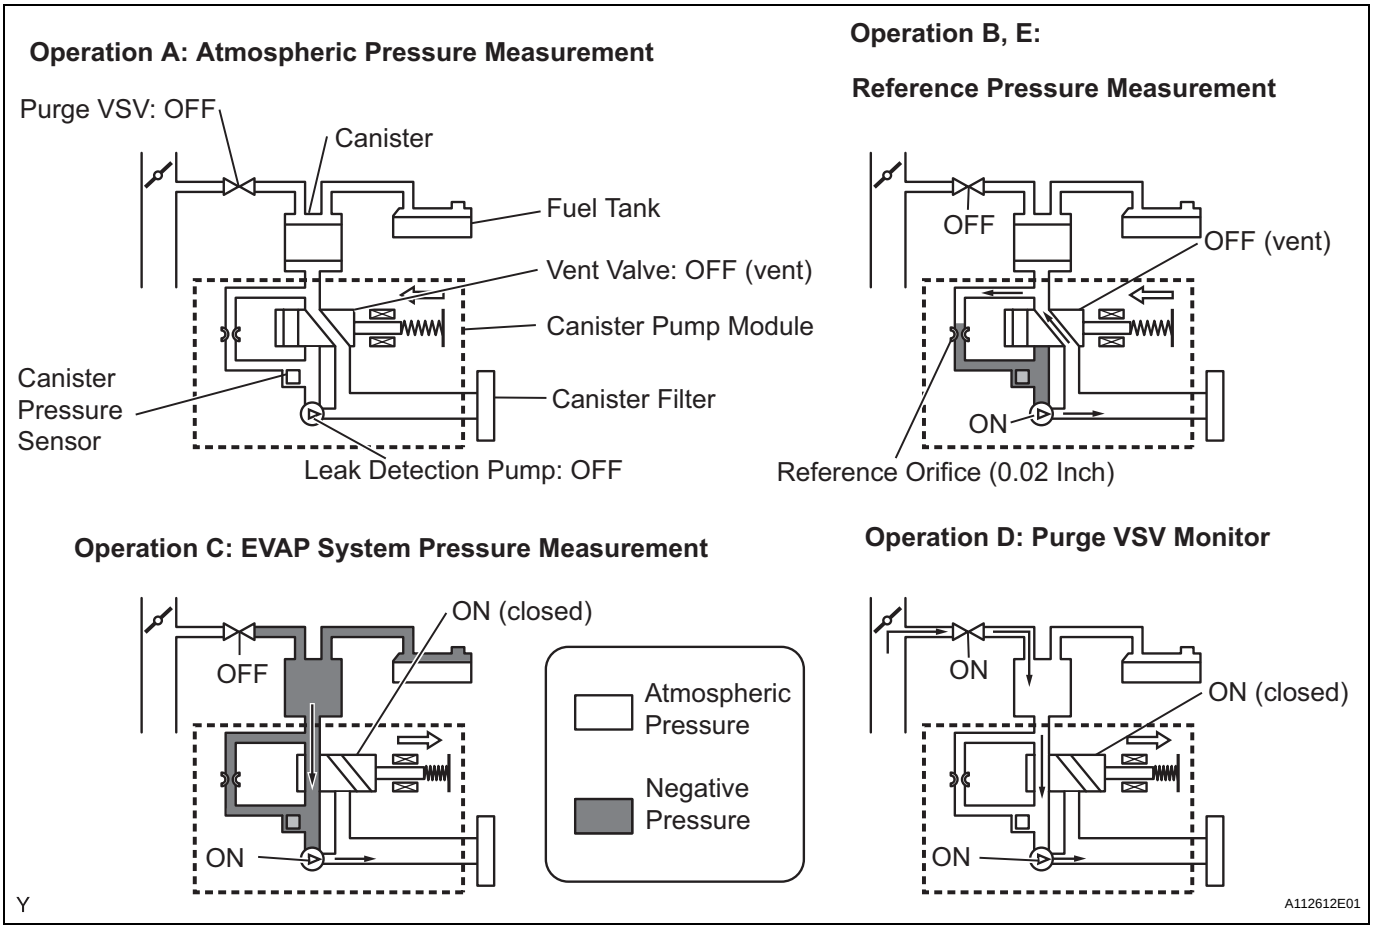
5 hours* after the ignition switch is turned to OFF, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to OFF, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned to OFF.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

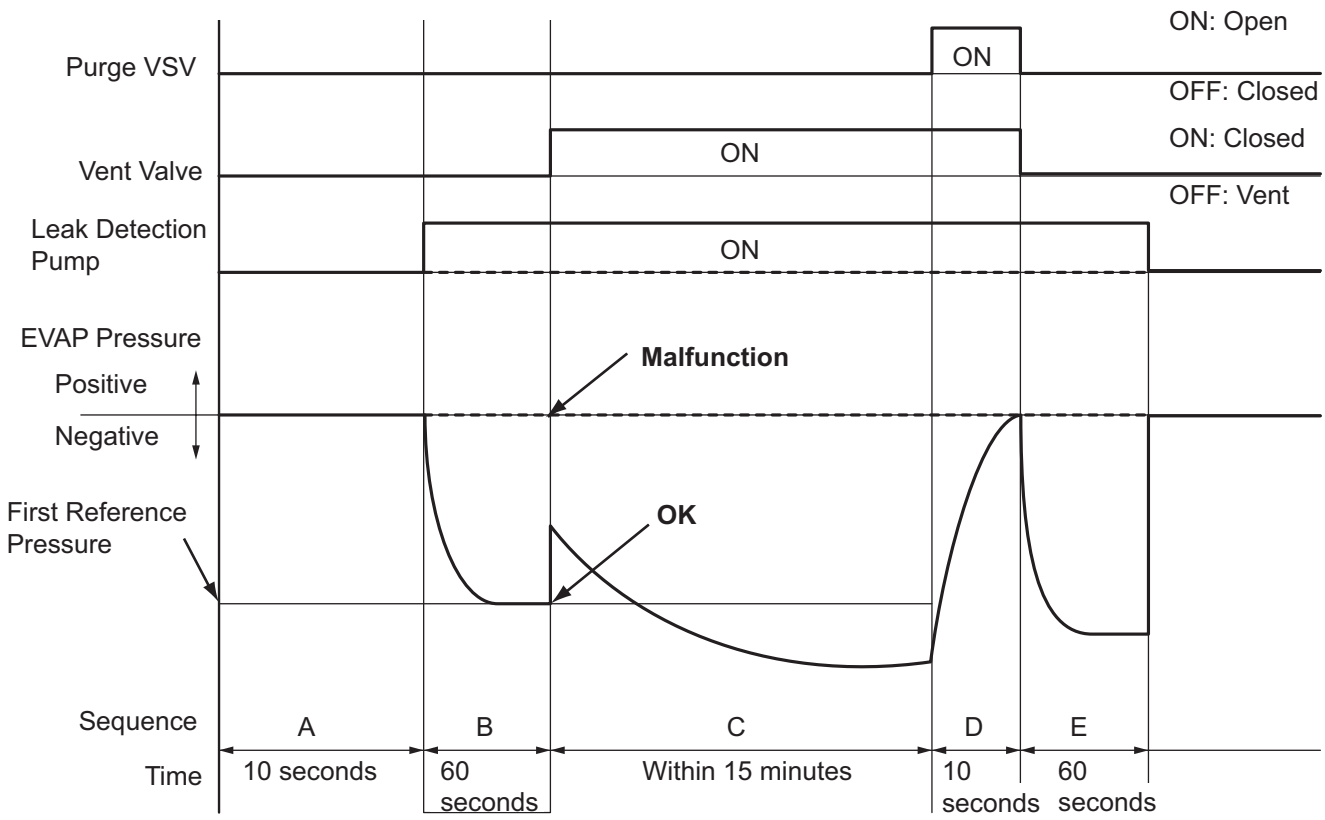
ES

* If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



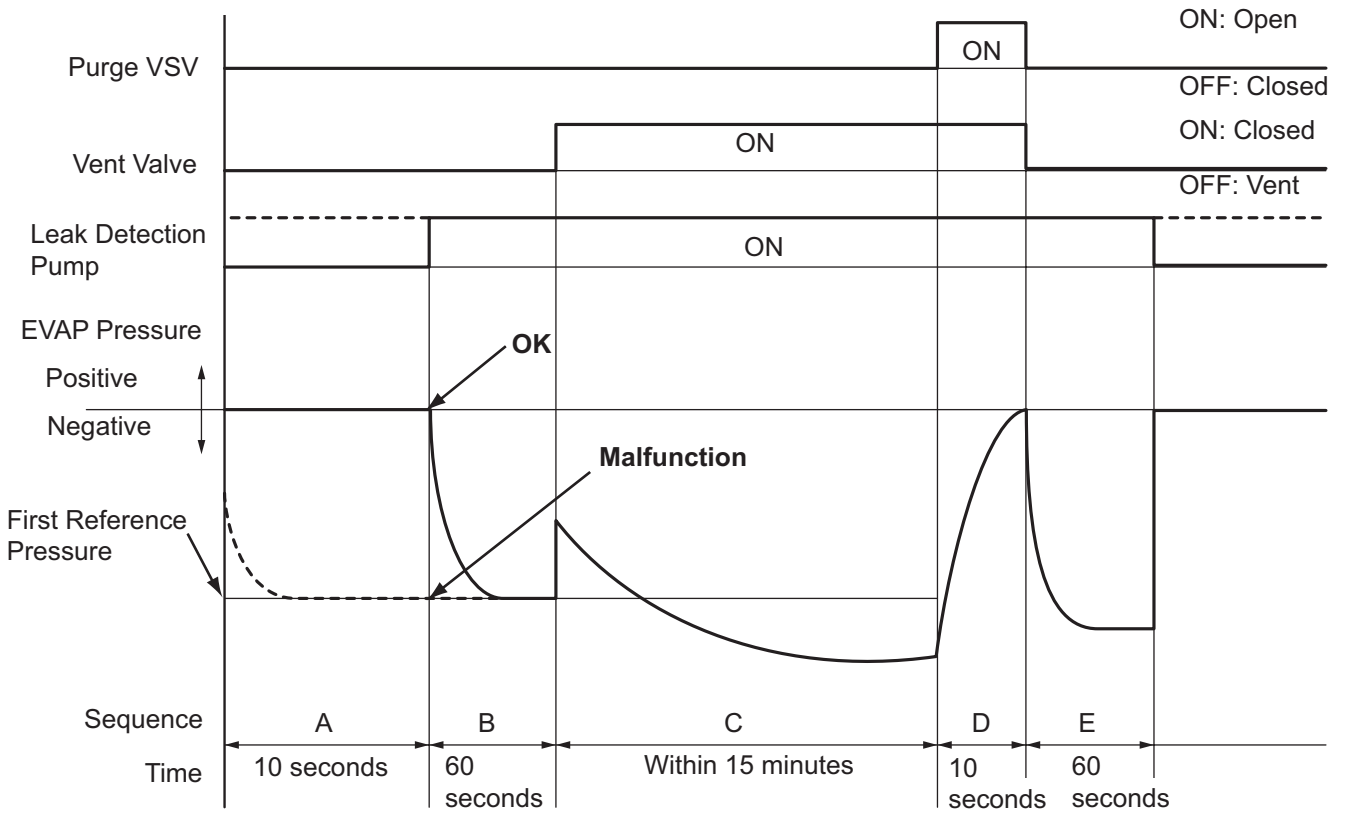
1. P2401: Leak detection pump stuck OFF
   In operation B, the leak detection pump creates negative pressure (a vacuum) through the reference orifice. The EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to determine the reference pressure. If the pressure is higher than -1.057 kPa-g (-7.93 mmHg-g), or lower than -4.85 kPa-g (-36.4 mmHg-g), the ECM interprets this as the leak detection pump being stuck OFF (not operating). The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Leak Detection Pump Stuck OFF:



2. P2402: Leak detection pump stuck ON
In operation B, the leak detection pump creates negative pressure (a vacuum) through the reference orifice. The EVAP (Evaporative Emission) system pressure is then measured by the ECM, using the canister pressure sensor, to determine the reference pressure. If the pressure is higher than -1.057 kPa-g (-7.93 mmHg-g), or lower than -4.85 kPa-g (-36.4 mmHg-g), the ECM interprets this as the leak detection pump being stuck ON (remaining ON all the time). The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Leak Detection Pump Stuck ON:



HINT:
The detection logic of DTCs P2401 and P2402 is the same because in both cases the reference pressure measured in operation B is compared to the atmospheric pressure registered in operation A. The ECM calculates the difference between these pressures by deducting [the reference pressure] from [the stored atmospheric pressure], and uses this to monitor the EVAP system pressure change.

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more

Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4° to 35°C (40° to 95°F)
IAT	4.4°to 35°C (40° to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence run if following condition set	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after vent valve ON (closed)	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence run if following condition set	-
EVAP pressure	Saturated within 15 minutes

5. Purge VSV stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after purge VSV ON (open)	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Reference pressure difference between first and second	Less than 0.7 kPa-g (5.25 mmHg-g)

7. Leak check

Next sequence run if following condition set	-
EVAP pressure when vacuum introduction complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition set	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

One of following conditions met	-
EVAP pressure just after reference pressure measurement start	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds
Reference pressure difference between first and second	0.7 kPa-g (5.25 mmHg-g) or more

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

DTC	P2419	Evaporative Emission System Switching Valve Control Circuit Low

DTC	P2420	Evaporative Emission System Switching Valve Control Circuit High

DTC SUMMARY

DTCs	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P2419	Vent valve stuck closed	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • EVAP pressure just after reference pressure measurement greater than -1 kPa-g (-7.5 mmHg-g) • Reference pressure less than -4.85 kPa-g (-36.4 mmHg-g) • Reference pressure greater than -1.057 kPa-g (-7.93 mmHg-g) • Reference pressure not saturated • Reference pressure difference between first and second 0.7 kPa-g (5.25 mmHg-g) or more HINT: Typical example values	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch OFF	2 trip
P2420	Vent valve stuck open (vent)	Following condition met during key-off EVAP monitor: • EVAP pressure change when vent valve closed (ON) less than 0.3 kPa-g (2.25 mmHg-g)	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • ECM	While ignition switch OFF	2 trip

HINT:
The vent valve is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-319).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-324).

MONITOR DESCRIPTION

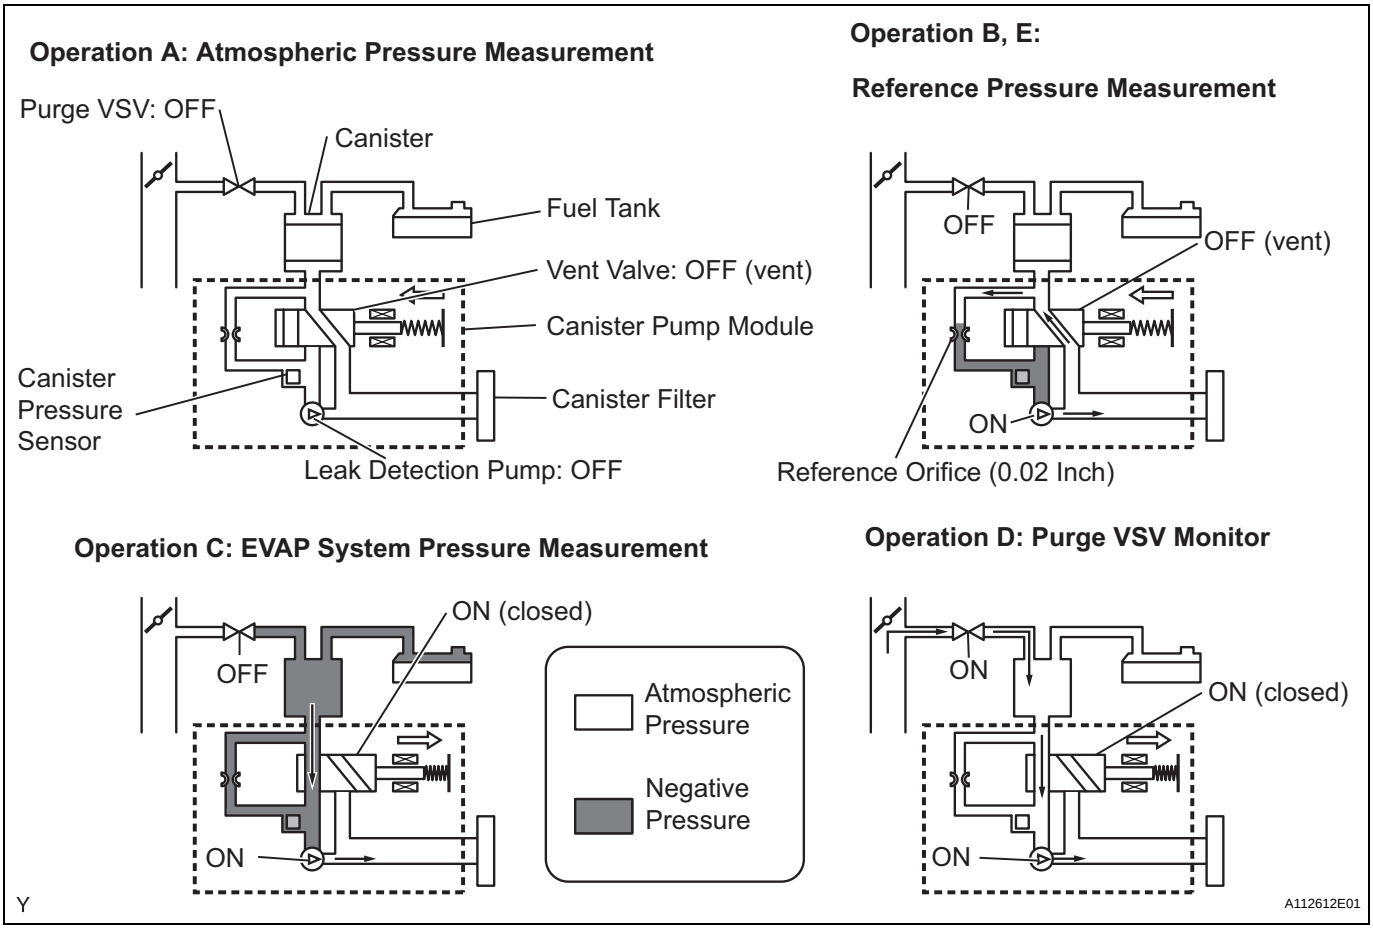
5 hours* after the ignition switch is turned to OFF, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to OFF, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned to OFF.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

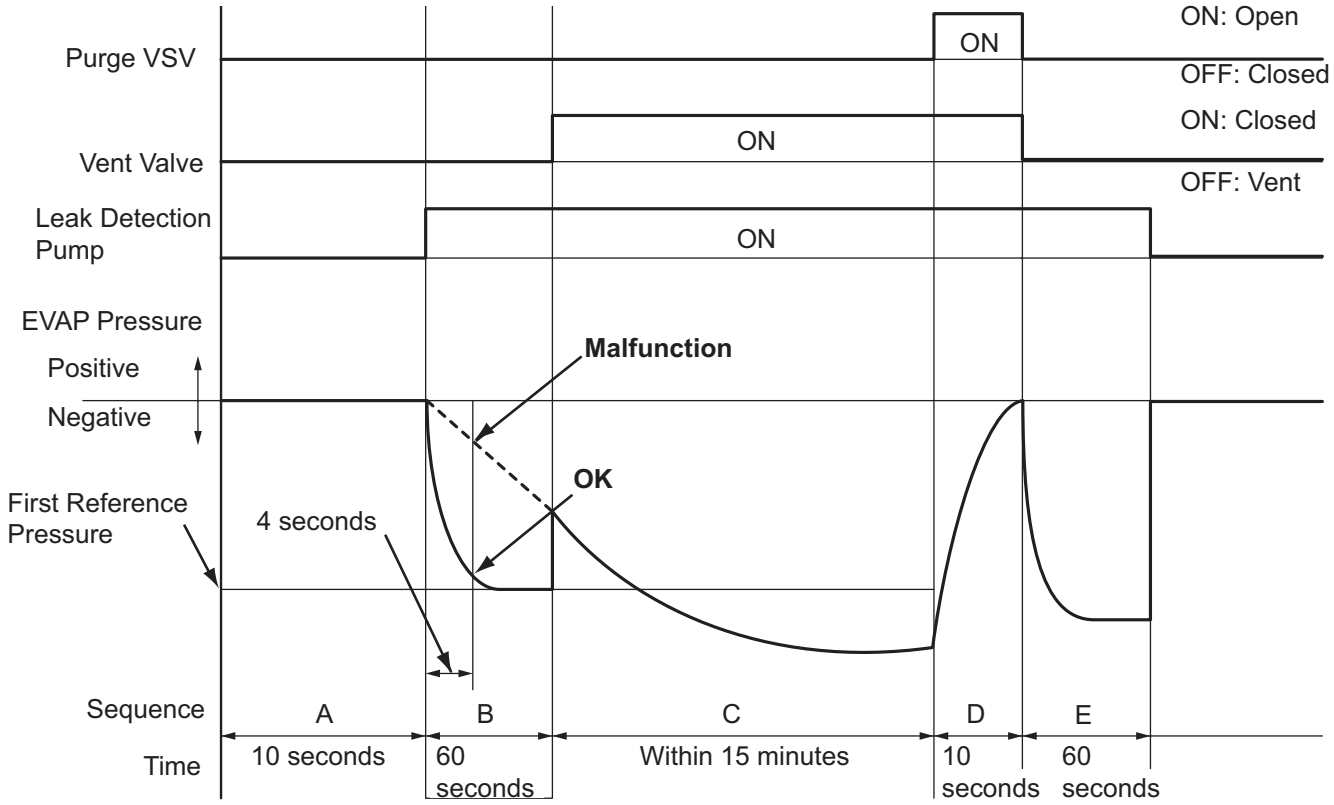
ES

* If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



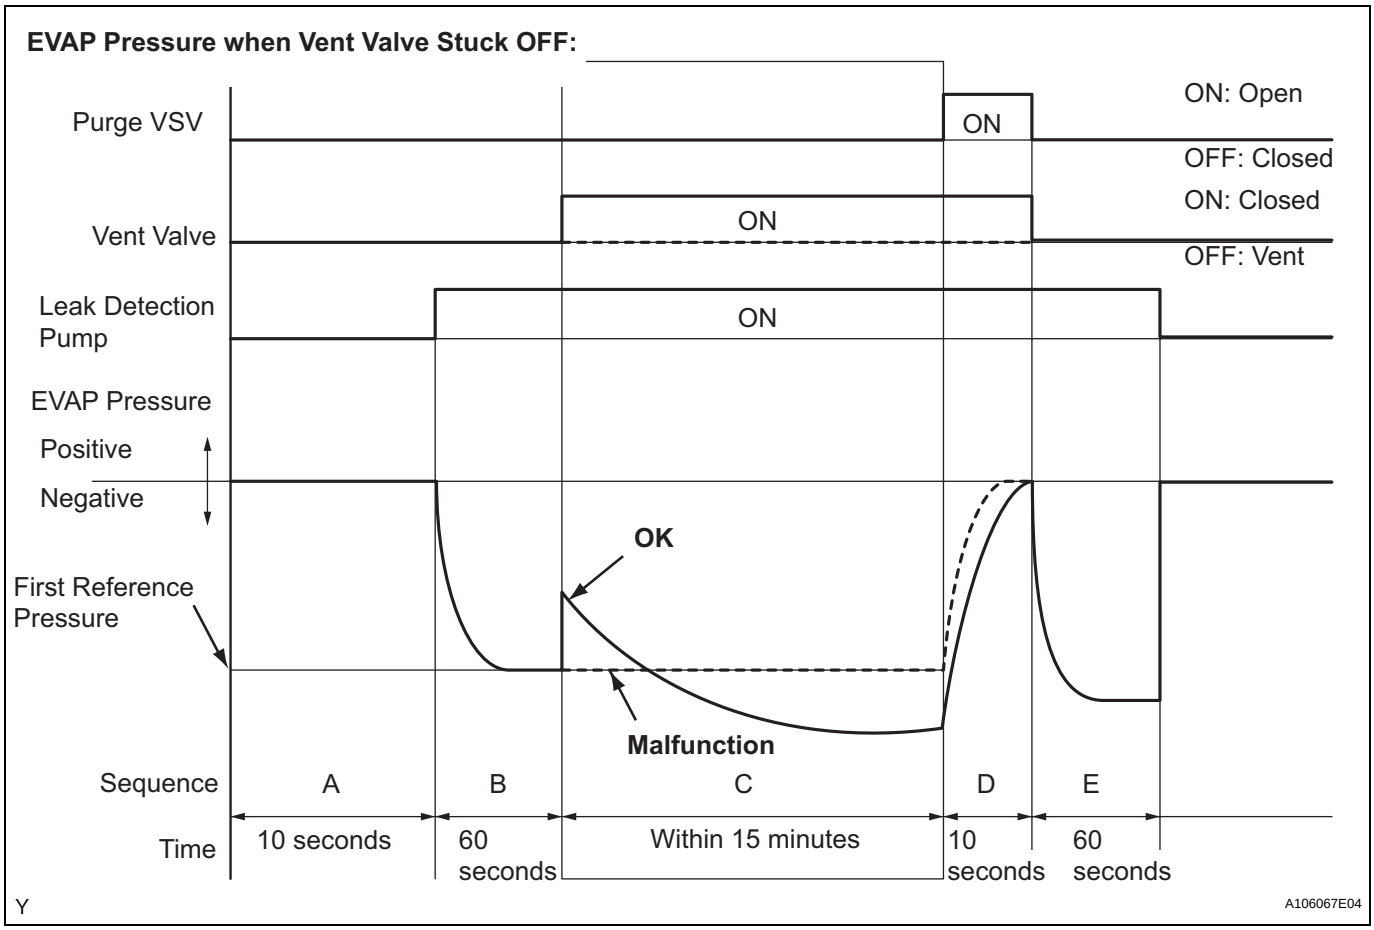
1. P2419: Vent valve stuck closed
   In operation B, the leak detection pump creates negative pressure (a vacuum) through the reference orifice. The EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to determine the reference pressure. If the pressure exceeds -1.057 kPa-g (-7.93 mmHg-g) 4 seconds after the leak detection pump is turned ON, the ECM interprets this as the vent valve being stuck closed.
   The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Vent Valve Stuck ON:



ES

2. P2420: Vent valve stuck open (vent)
In operation C, the vent valve turns ON (closes) and the EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.



MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	76 to 110 kPa-a (570 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool

Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4° to 35°C (40° to 95°F)
IAT	4.4°to 35°C (40° to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence run if following condition set	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after vent valve ON (closed)	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence run if following condition set	-
EVAP pressure	Saturated within 15 minutes

5. Purge VSV stuck closed check

Next sequence run if following condition set	-
EVAP pressure change after purge VSV ON (open)	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence run if all of following conditions set	Condition 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Reference pressure difference between first and second	Less than 0.7 kPa-g (5.25 mmHg-g)

7. Leak check

Next sequence run if following condition set	-
EVAP pressure when vacuum introduction complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition set	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

P2419: Vent valve stuck closed

One of following conditions set	-
EVAP pressure just after reference pressure measurement start	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds

Reference pressure difference between first and second	0.7 kPa-g (5.25 mmHg-g) or more

P2420: Vent valve stuck open (vent)

EVAP pressure change after EVAP canister vent valve ON	Less than 0.3 kPa-g (2.25 mmHg-g)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

DTC	P2610	ECM / PCM Internal Engine Off Timer Performance

DTC SUMMARY

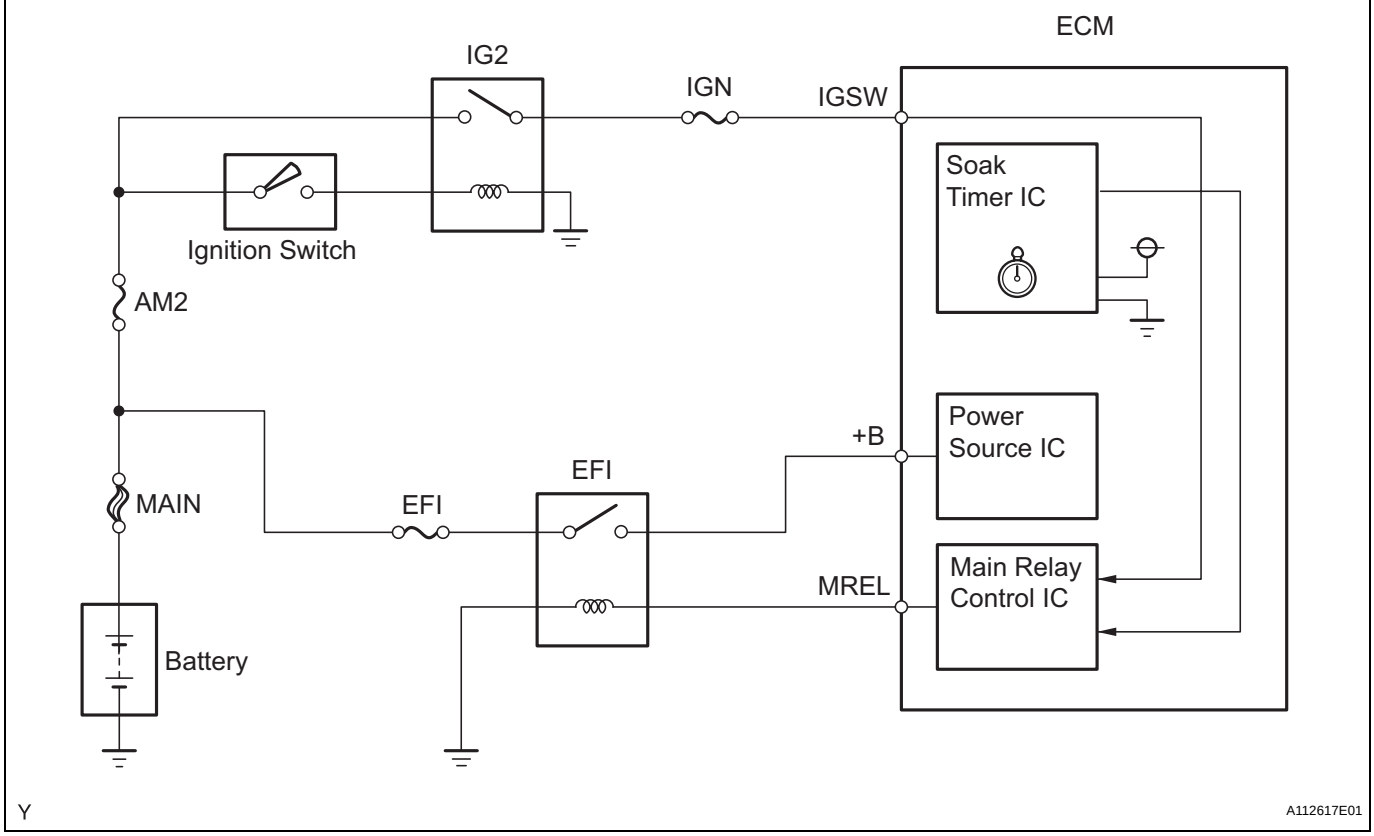
DTC	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P2610	Soak timer (built into ECM)	ECM internal malfunction	ECM	Engine running	2 trip

DESCRIPTION

To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM, measures 5 hours (+-15 minutes) from when the ignition switch is turned to OFF, before the monitor is run. This allows the fuel to cool down, which stabilizes the EVAP pressure. When 5 hours have elapsed, the ECM turns on.

ES

Soak Timer Circuit:



MONITOR DESCRIPTION

5 hours after the ignition switch is turned to OFF, the soak timer activates the ECM to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	ECM
Frequency of Operation	Once per driving cycle

Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTC not present	None
Ignition switch	ON
Engine	Running
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Soak timer measurement when ECM CPU clock counts 10 minutes	Less than 7 minutes, or more than 13 minutes

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM problem is detected. Diagnostic procedures are not required. ECM replacement is necessary.
- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**REPLACE ECM**

(a) Replace the ECM (See page ES-431).

NEXT

2	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (See page ES-34).
(e) Start the engine and wait for 10 minutes or more.
(f) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(g) If no pending DTC is displayed, the repair has been successfully completed.

NEXT

END

DTC	P2A00	A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)

HINT:
Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

DESCRIPTION

Refer to DTC P2195 (See page ES-276).

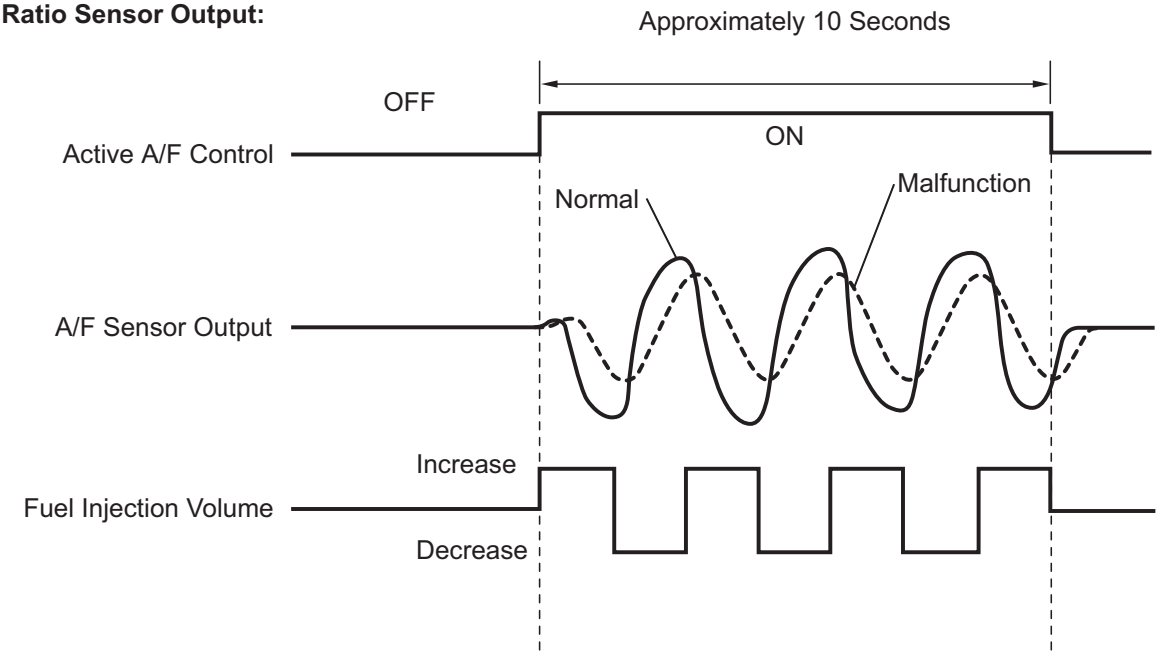
DTC No.	DTC Detection Conditions	Trouble Areas
P2A00	Calculated value of air-fuel ratio (A/F) sensor response rate deterioration level less than threshold (2 trip detection logic)	• Open or short in A/F sensor circuit • A/F sensor • ECM

ES

MONITOR DESCRIPTION

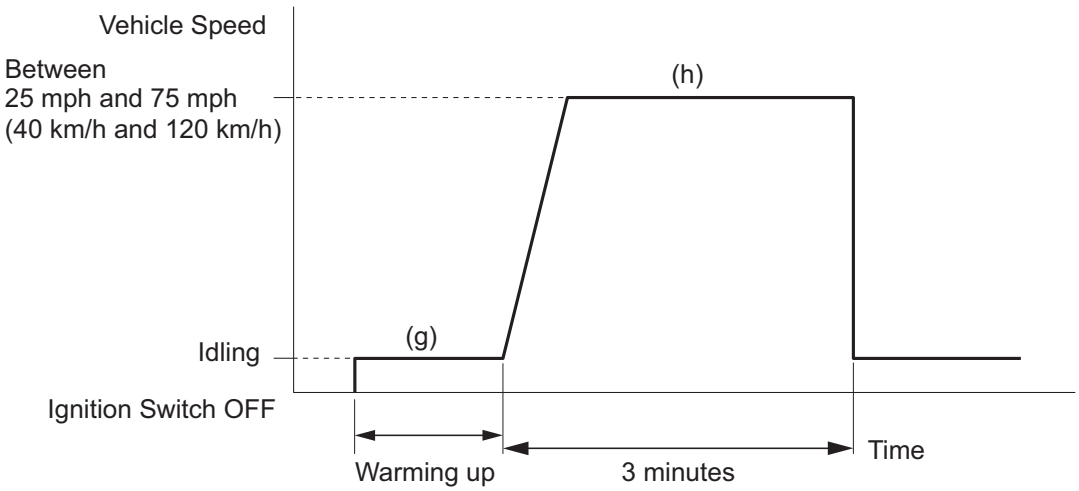
After the engine is warmed up, the ECM performs air-fuel ratio feedback control to maintain the air-fuel ratio at the stoichiometric level. In addition, active A/F control is performed for approximately 10 seconds after the preconditions are met in order to measure the A/F sensor response rate. During active A/F control, the ECM forcibly increases and decreases the injection volume a certain amount, based on the stoichiometric air-fuel ratio learned during normal air-fuel ratio control, and measures the A/F sensor response rate. The ECM receives a signal from the A/F sensor while performing active A/F control and uses it to calculate the A/F sensor response rate deterioration level.
If the A/F sensor response rate deterioration level is less than the threshold, the ECM interprets this as a malfunction and sets the DTC.

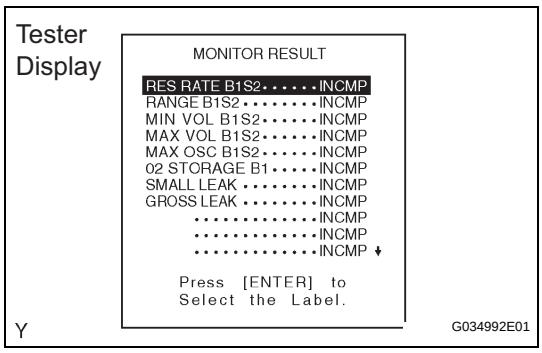
Air-Fuel Ratio Sensor Output:



CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the A/F sensor response monitor.





(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Clear DTCs (where set) (See page ES-34).
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR RESULT.
(f) Check that RES RATE B1S1 is INCOMP.
(g) Start the engine and warm it up.
(h) Drive the vehicle at a constant speed of between 25 mph and 75 mph (40 km/h and 120 km/h) for 3 minutes.
(i) Check the monitor result values on the intelligent tester by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR RESULT / RES RATE B1S1.
(j) If the values indicated on the tester do not change, perform READINESS MONITOR DRIVE PATTERN for the A/F sensor and the heated oxygen sensor (See page ES-19).
HINT:
Completion of all A/F sensor monitors is required to change the value in RES RATE B1S1.
(k) Note the value of the RES RATE B1S1.
(l) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(m) Check if any DTCs (any pending DTCs) are set.

MONITOR STRATEGY

Related DTCs	P2A00: Air-Fuel Ratio (A/F) sensor slow response
Required Sensors/Components (Main)	A/F sensor
Required Sensors/Components (Related)	Vehicle speed sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	10 to 15 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0031, 32 (A/F Sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0455, P0456 (EVAP system) P0500 (VSS) P2196 (A/F Sensor - rationality)
Active A/F control	Performing
Active A/F control performed when following conditions met	-
Engine coolant temperature	75°C (167°F) or more
Battery voltage	11 V or more
Idle	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel-cut	OFF
Engine load	10 to 70 %
Shift position	2 or more
Catalyst monitor	Not yet
Intake air amount	4 to 17 g/sec

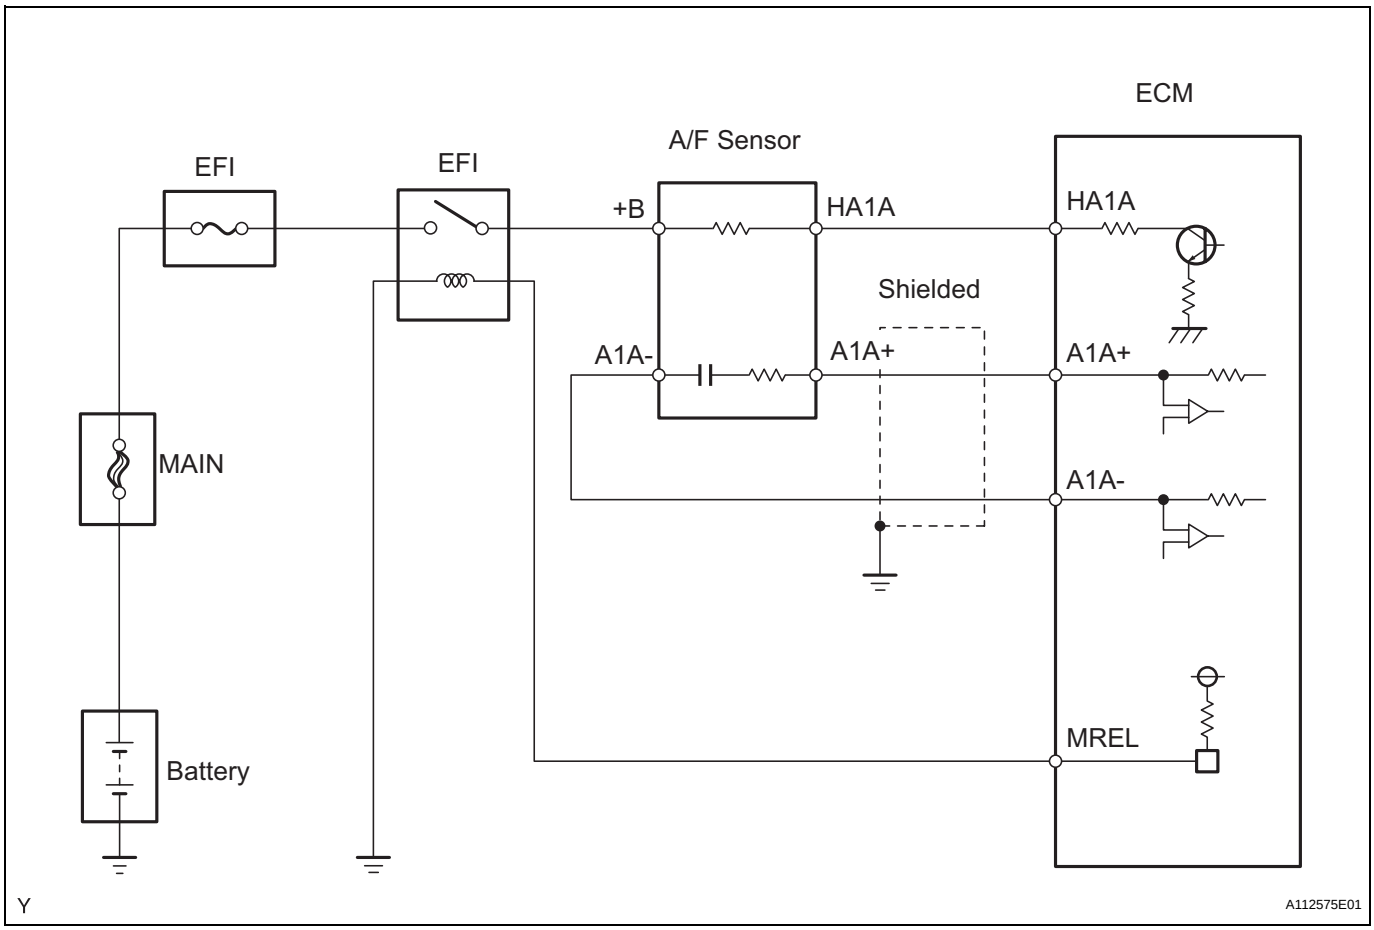
TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.15 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using an intelligent tester.
(a) Connect an intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.

- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.
HINT:

- DTC P2A00 may be set, when the air-fuel ratio is stuck rich or lean.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read DTCs.

Result

Display (DTC Output)	Proceed To
P2A00	A
P2A00 and other DTCs	B

If any DTCs relating to the A/F sensor (DTCs for the A/F sensor heater or A/F sensor admittance) are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE) (See page ES-77)

NG → REPLACE AIR FUEL RATIO SENSOR

OK

3	CHECK HARNESS AND CONNECTOR (ECM - AIR FUEL RATIO SENSOR) (See page ES-294)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (DTC P2A00)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.

(d) Read pending DTCs.

Result

Display (DTC Output)	Proceed To
P2A00	A
No output	B

B → CHECK FOR INTERMITTENT PROBLEMS

A

6 REPLACE AIR FUEL RATIO SENSOR

NEXT

7 PERFORM CONFIRMATION DRIVING PATTERN

NEXT

8 CHECK WHETHER DTC OUTPUT RECURS (DTC P2A00)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(d) Read pending DTCs.

Result

Display (DTC Output)	Proceed To
No output	A
P2A00	B

B → REPLACE ECM

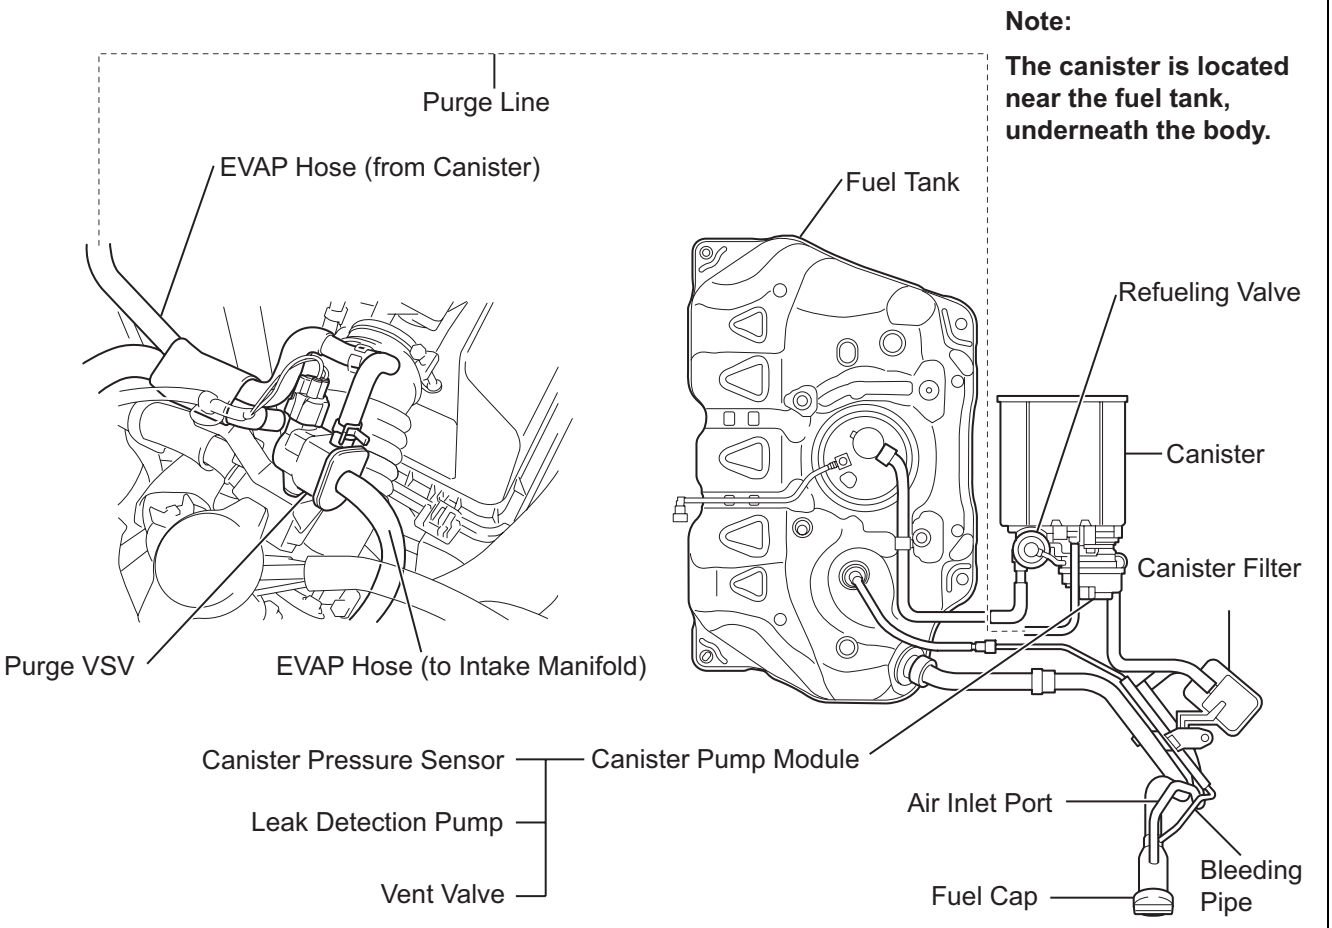
A106731E11

NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

DESCRIPTION

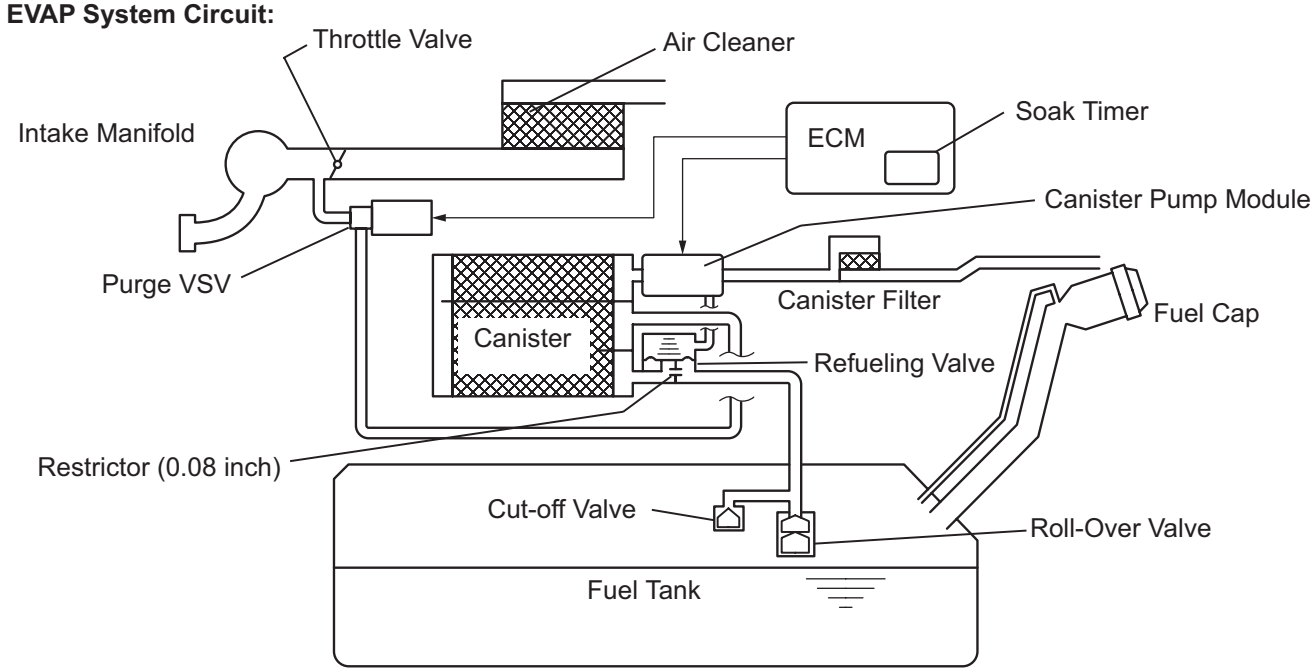
Location of EVAP (Evaporative Emission) System:



Y

A112623E01

EVAP System Circuit:



NOTICE:

In this vehicle's EVAP system, turning ON the vent valve does not seal off the EVAP system. To check for leaks in the EVAP system, disconnect the air inlet vent hose and apply pressure from the atmospheric side of the canister.

While the engine is running, if a predetermined condition (closed-loop etc.) is met, the purge VSV is opened by the ECM and stored fuel vapors in the canister are purged into the intake manifold. The ECM changes the duty cycle ratio of the purge VSV to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that the purge flow is maintained when the negative pressure (vacuum) is applied to the canister.

The following two monitors run to confirm the appropriate EVAP system operation.

1. Key-off monitor

This monitor checks for EVAP (Evaporative Emission) system leaks and canister pump module malfunctions. The monitor starts 5 hours* after the ignition switch is turned to OFF. At least 5 hours are required for the fuel to cool down to stabilize the EVAP pressure, thus making the EVAP system monitor more accurate.

The leak detection pump creates negative pressure (vacuum) in the EVAP system and the pressure is measured. Finally, the ECM monitors for leaks from the EVAP system, and malfunctions in both the canister pump module and purge VSV, based on the EVAP pressure.

HINT:

*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

2. Purge flow monitor

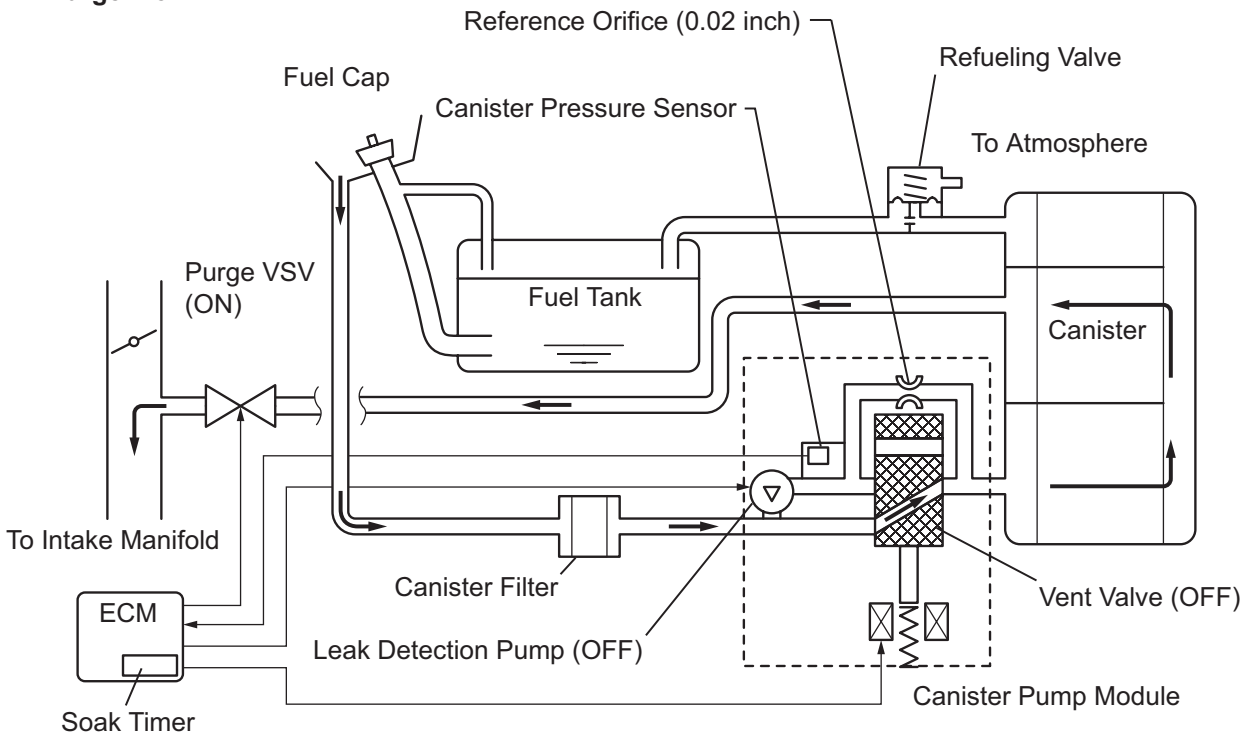
The purge flow monitor consists of the two monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the purge VSV (Vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.

- The 2nd monitor
  The vent valve is turned OFF (open) and the EVAP pressure is measured. If the variation in the pressure is less than 0.5 kPa-g (3.75 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:
In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after conduction of the purge flow monitor, is measured by the ECM.

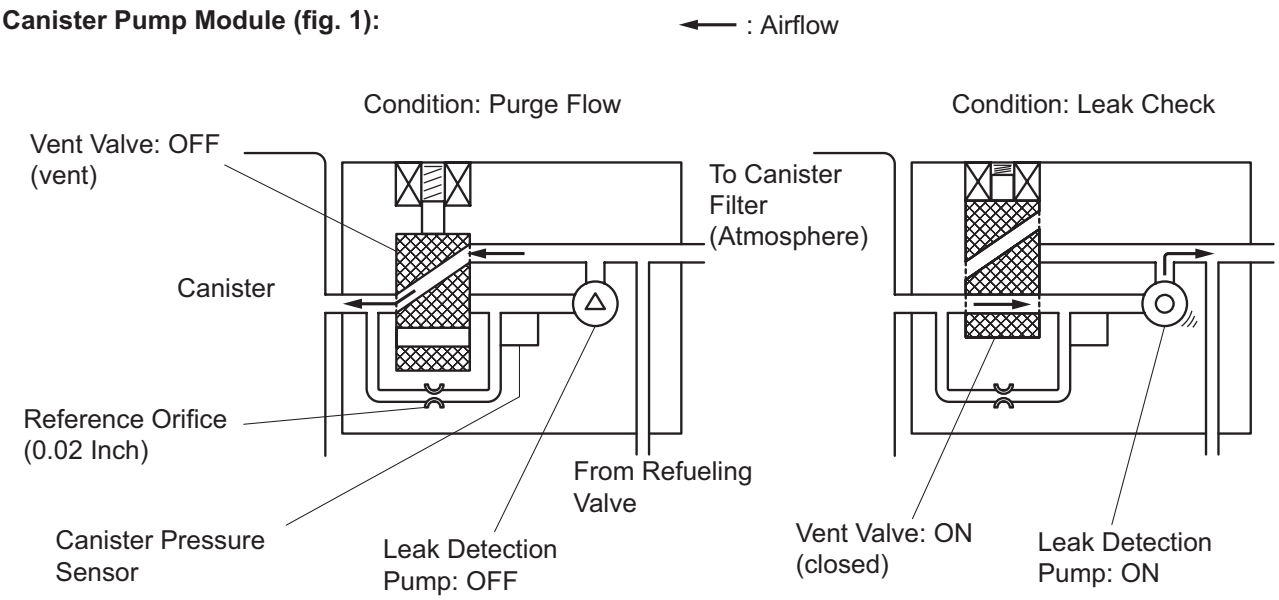
EVAP Purge Flow:



Components	Operations
Canister	Contains activated charcoal to absorb EVAP (Evaporative Emissions) generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve floats and closes when fuel tank 100 % full.
Purge VSV (Vacuum Switching Valve)	Opens or closes line between canister and intake manifold. ECM uses purge VSV to control EVAP purge flow. In order to discharge EVAP absorbed by canister to intake manifold, ECM opens purge VSV. EVAP discharge volume to intake manifold controlled by purge VSV duty cycle ratio (current-carrying time). (Open: ON, Closed: OFF)
Refueling valve	Controls EVAP pressure from fuel tank to canister. Valve consists of diaphragm, spring and restrictor (diameter: 0.08 inch). When fuel vapor and pressure inside fuel tank increase, valve opens. While EVAP purged, valve closes and restrictor prevents large amount of vacuum from affecting pressure in fuel tank. Valve opened while refueling.
Roll-over valve	Located in fuel tank. Valve closed by its own weight when vehicle overturns to prevent fuel from spilling out.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+- 15 min) after ignition switch turned to OFF. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM activates (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system closed. When, ECM turns valve OFF, EVAP system vented. Negative pressure (vacuum) created in EVAP system to check for EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating leak detection pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to canister pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).

Components	Operations
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum produced through orifice by closing purge VSV, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates small leak of EVAP.

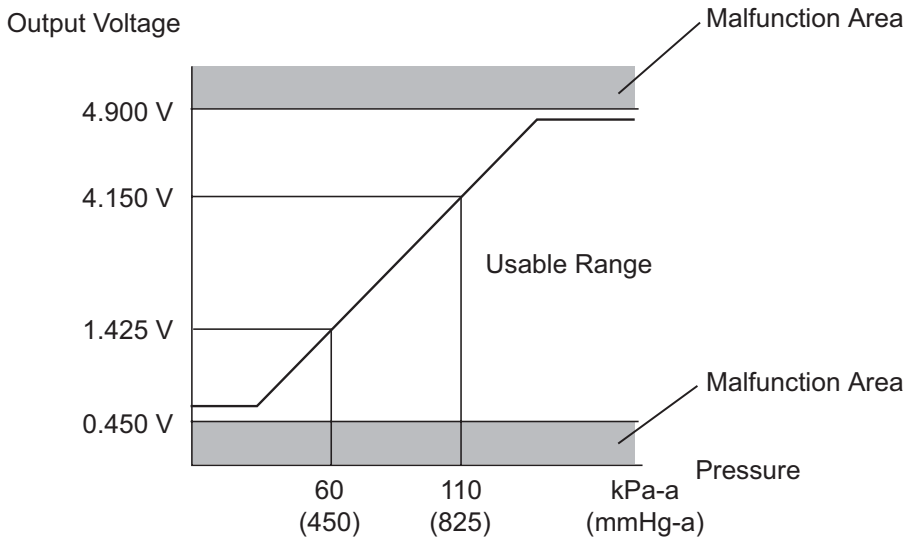
Canister Pump Module (fig. 1):



Y

A115902E02

Canister Pressure Sensor Specification (fig. 2):



HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

INSPECTION PROCEDURE

NOTICE:

An intelligent tester is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using intelligent tester monitor results enables the EVAP (Evaporative Emission) system to be confirmed.

- Read freeze frame data using an intelligent tester. Freeze frame data record the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**CONFIRM DTC**

(a) Turn the ignition switch to OFF and wait for 10 seconds.
(b) Turn the ignition switch to ON.
(c) Turn the ignition switch to OFF and wait for 10 seconds.
(d) Connect an intelligent tester to the DLC3.
(e) Turn the ignition switch to ON and turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Confirm DTCs and freeze frame data.
If any EVAP system DTCs are set, the malfunctioning area can be determined using the table below.
NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

2	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of five steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

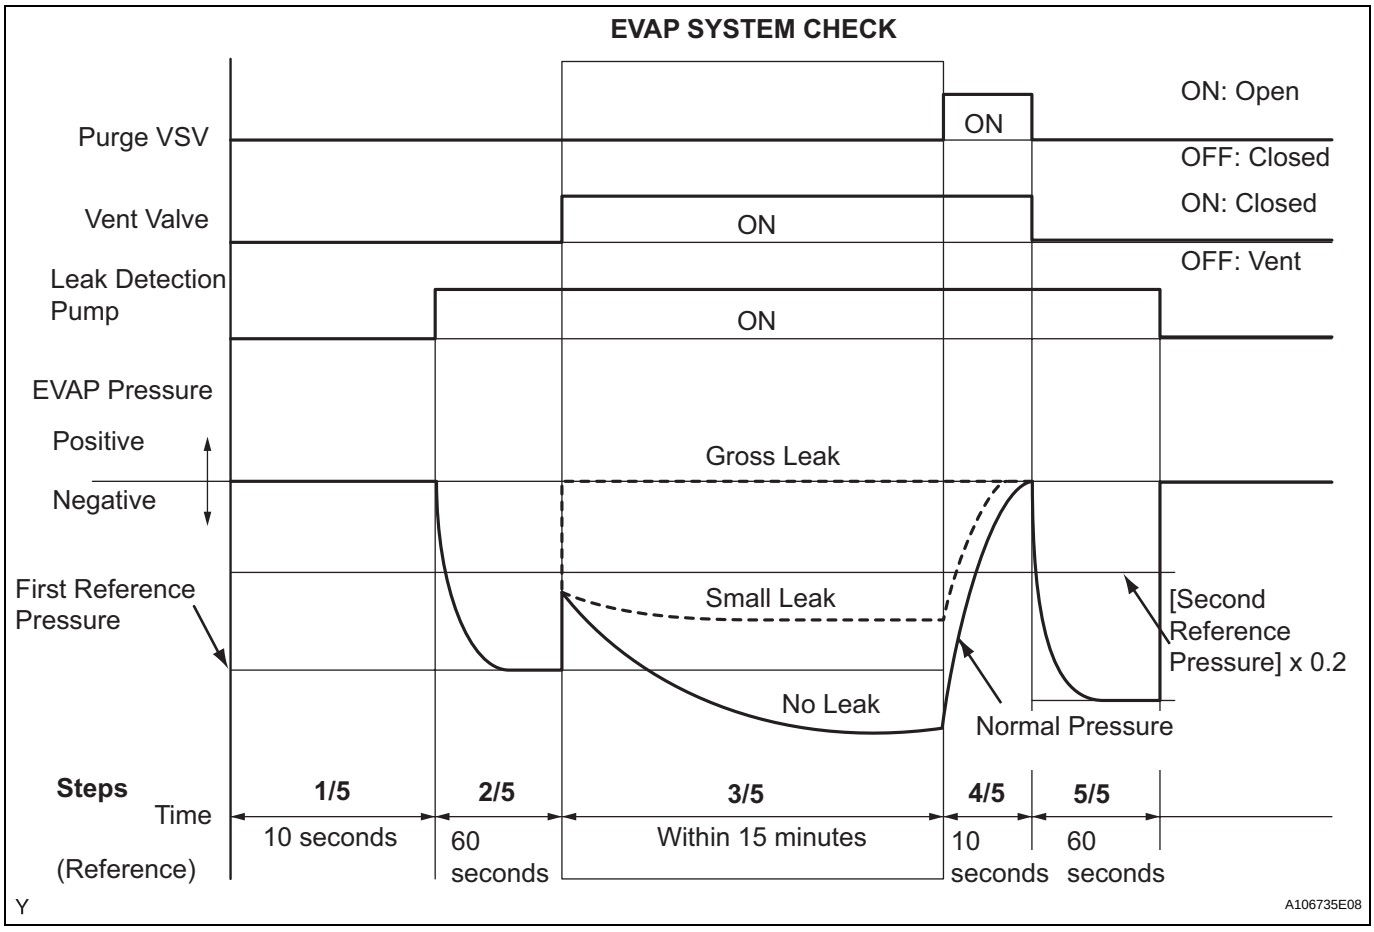
(a) Clear DTCs (See page ES-34).

(b) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.
(c) After the EVAP SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are displayed, perform the MONITOR CONFIRMATION (see "Diagnostic Help" menu). After this confirmation, check for pending DTCs. If no DTCs are displayed, the EVAP system is normal.

ES

NEXT

3	PERFORM EVAP SYSTEM CHECK (MANUAL OPERATION)



NOTICE:

- **In the EVAP SYSTEM CHECK (MANUAL OPERATION), perform the series of 5 EVAP SYSTEM CHECK steps manually using the intelligent tester.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**

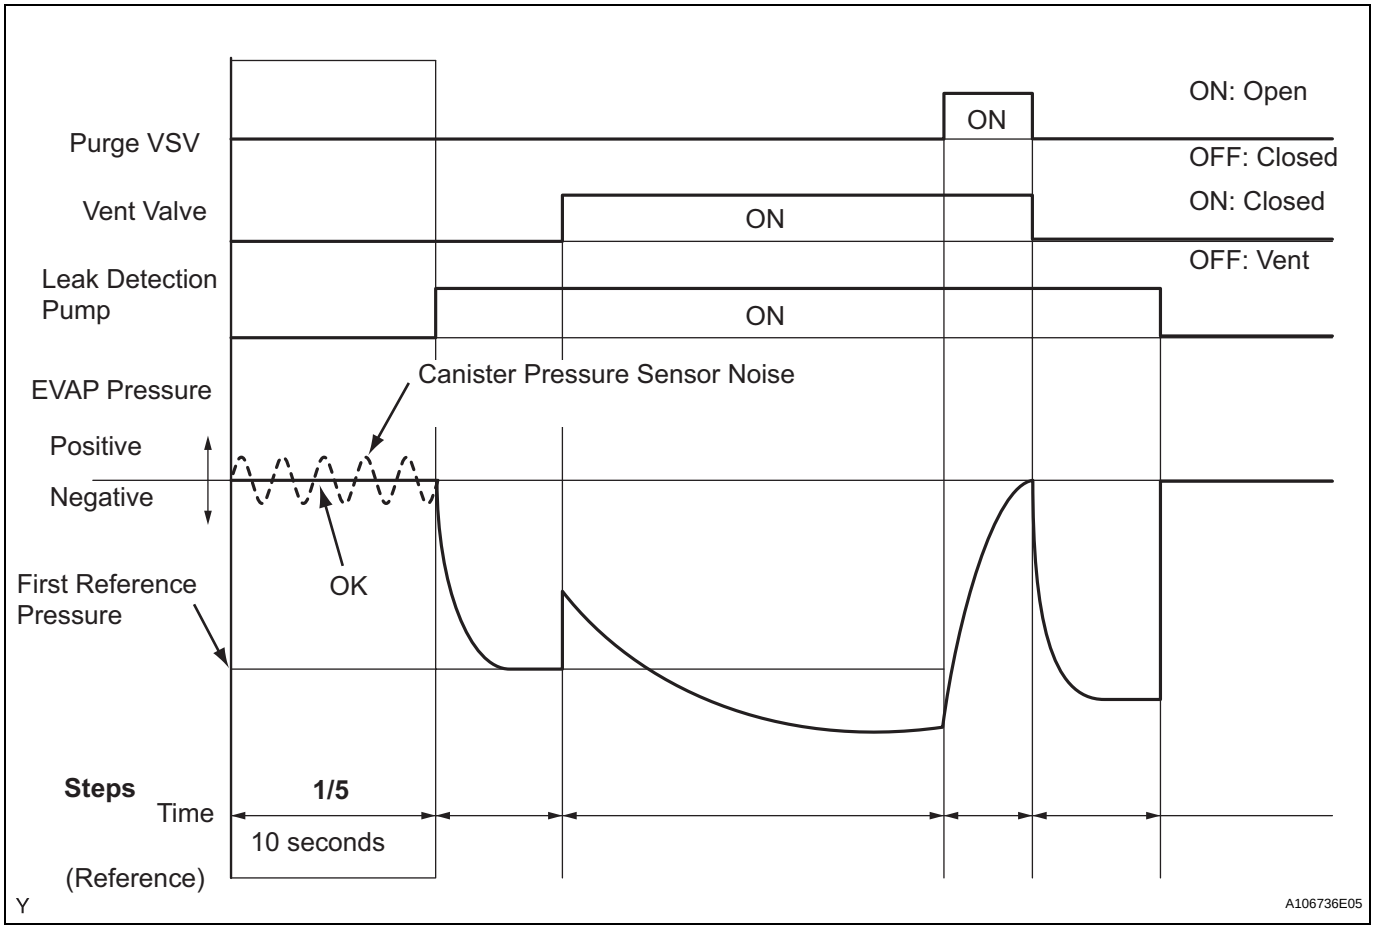
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear DTCs (See page ES-34).

(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / MANUAL OPERATION.

NEXT

4	PERFORM EVAP SYSTEM CHECK (STEP 1/5)



(a) Check the EVAP pressure in step 1/5.

Result

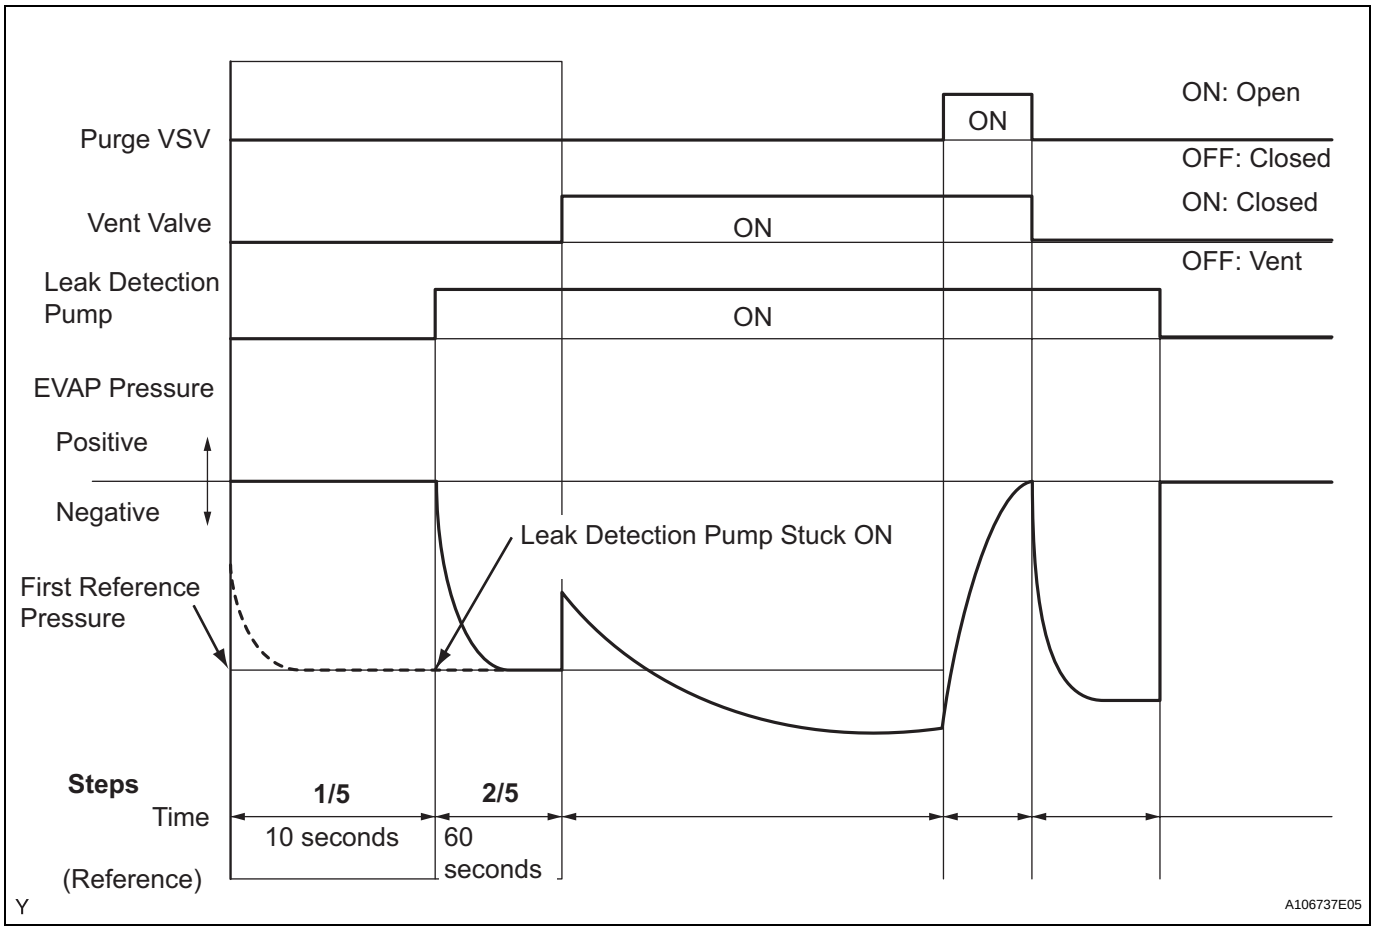
DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	Virtually no variation in EVAP pressure	Not yet determined	A
P0451	EVAP pressure fluctuates by +-0.3 kPa-g (2.25 mmHg-g) or more	Canister pressure sensor noise	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.

B	Go to step 29

A

5	PERFORM EVAP SYSTEM CHECK (STEP 1/5 TO 2/5)



(a) Check the EVAP pressure in steps 1/5 and 2/5.

Result

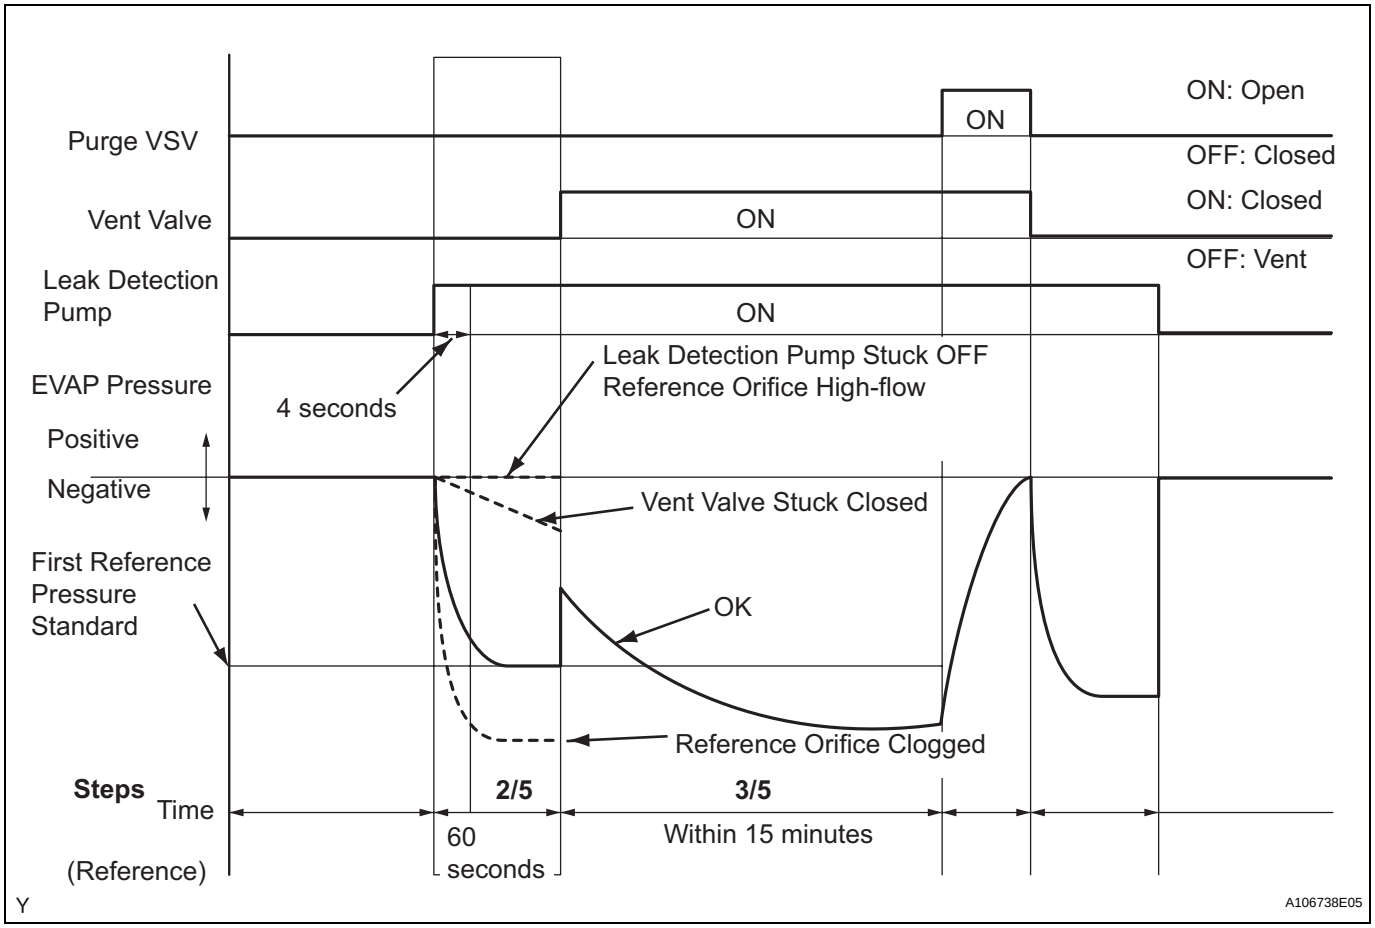
DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	Virtually no variation in EVAP pressure during step 1/5. Then decreases to reference pressure	Not yet determined	A
P2402	Small difference between EVAP pressures during steps 1/5 and 2/5	Leak detection pump stuck ON	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.
HINT:
The first reference pressure is the value determined in step 2/5.

B → Go to step 22

A

6	PERFORM EVAP SYSTEM CHECK (STEP 2/5)



HINT:
Make a note of the pressures checked in steps (a) and (b) below.
(a) Check the EVAP pressure 4 seconds after the leak detection pump is activated*.
*: The leak detection pump begins to operate as step 1/5 finishes and step 2/5 starts.
(b) Check the EVAP pressure again when it has stabilized. This pressure is the reference pressure.

Result

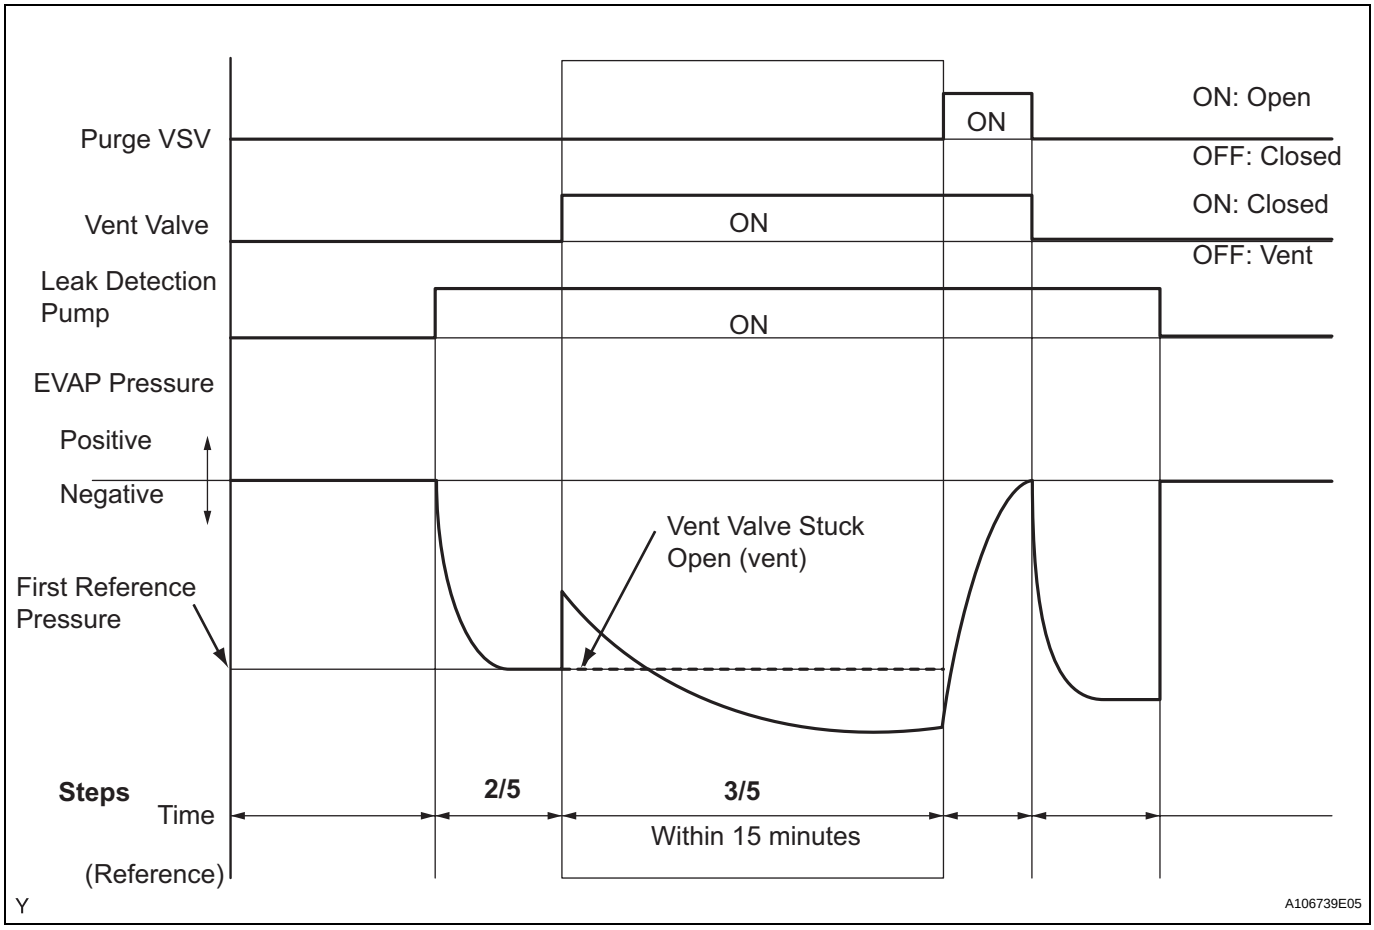
DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	EVAP pressure in step (b) between -4.85 kPa-g and -1.057 kPa-g (-36.4 mmHg-g and -7.93 mmHg-g)	Not yet determined	A
P043F and P2401	EVAP pressure in step (b) -1.057 kPa-g (-7.93 mmHg-g) or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B
P043E	EVAP pressure in step (b) below -4.85 kPa-g (-36.4 mmHg-g)	Reference orifice clogged	C
P2419	EVAP pressure in step (a) more than -1.057 kPa-g (-7.93 mmHg-g)	Vent valve stuck closed	D

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.

B	Go to step 11
C	Go to step 29
D	Go to step 20

A

7	PERFORM EVAP SYSTEM CHECK (STEP 2/5 TO 3/5)



(a) Check the EVAP pressure increase in step 3/5.

Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 2/5 to step 3/5	Not yet determined	A
P2420	No variation in EVAP pressure despite proceeding from step 2/5 to step 3/5	Vent valve stuck open (vent)	B
P0451	No variation in EVAP pressure during steps 1/5 through 3/5	Canister pressure sensor malfunction fixed	C

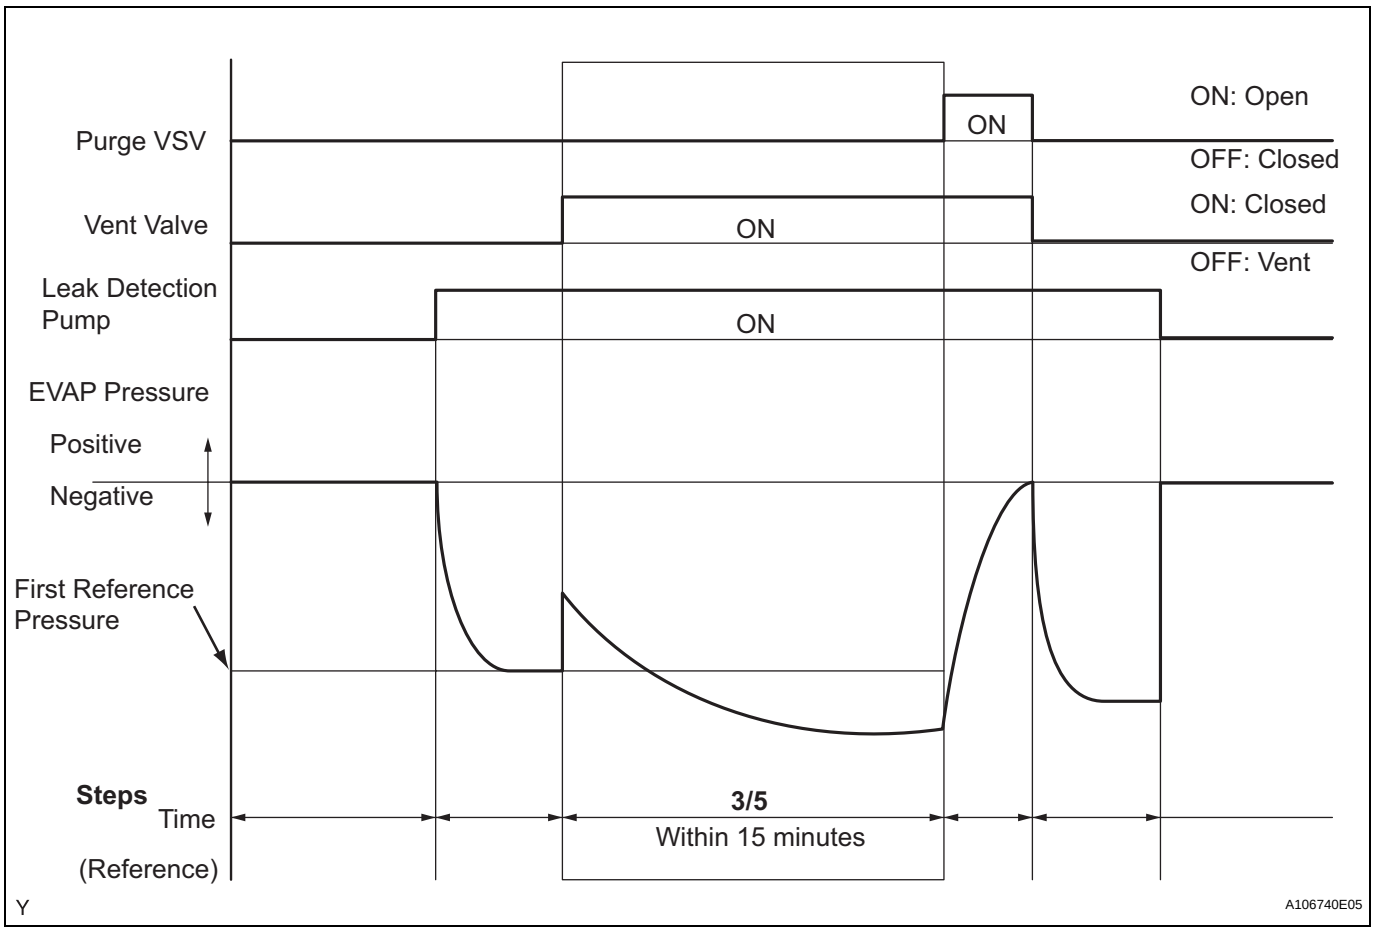
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.

B	Go to step 19

C	Go to step 29

A

8	PERFORM EVAP SYSTEM CHECK (STEP 3/5)



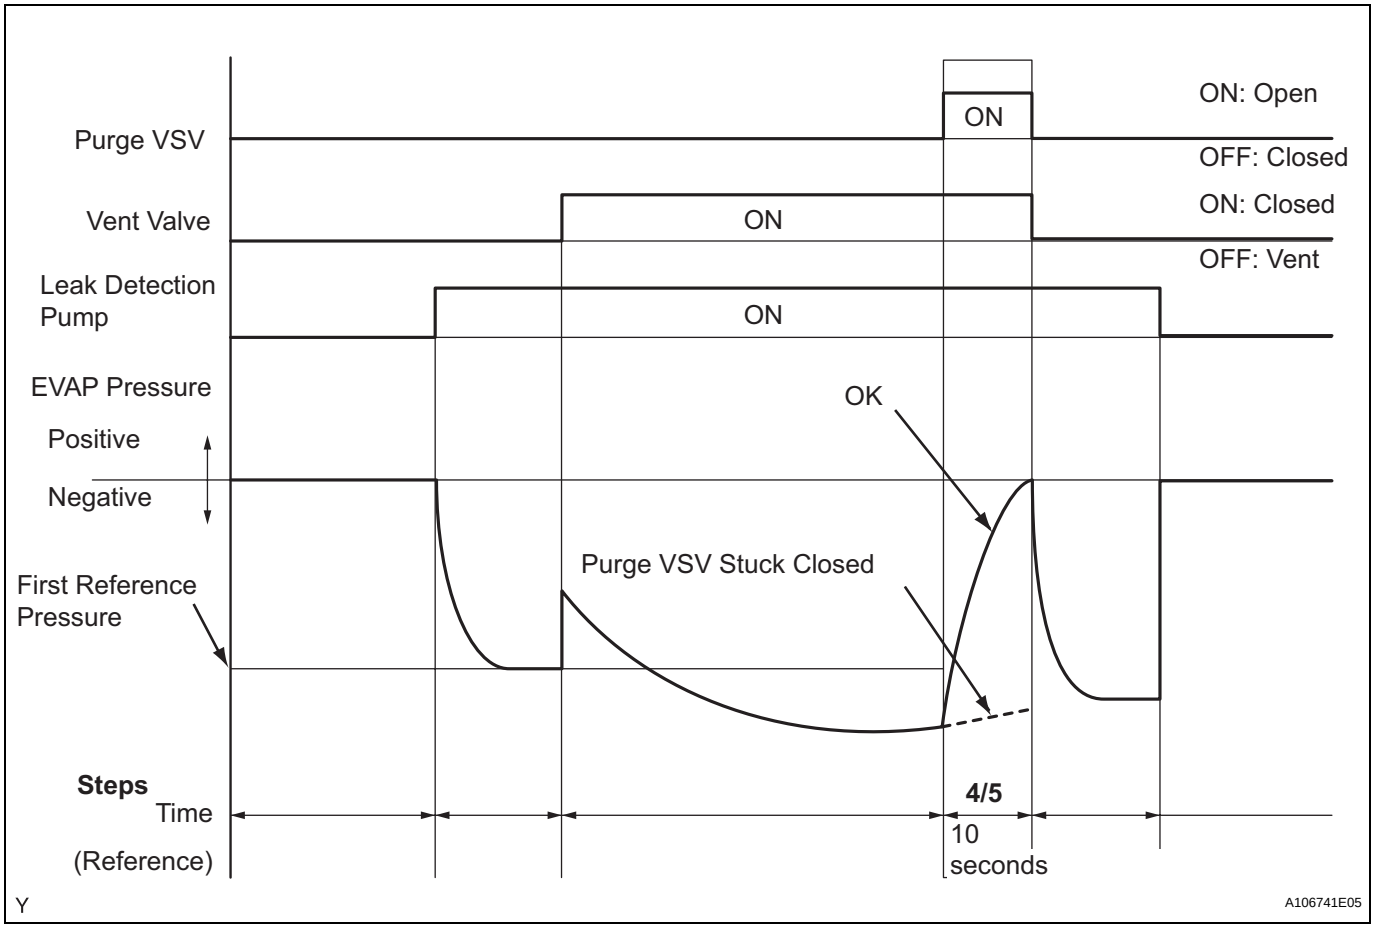
(a) Wait until the EVAP pressure change is less than 0.1 kPa-g (0.75 mmHg-g) for 30 seconds.

(b) Measure the EVAP pressure and record it.
HINT:
A few minutes are required for the EVAP pressure to become saturated. When there is little fuel in the fuel tank, it takes up to 15 minutes.

NEXT

ES

9	PERFORM EVAP SYSTEM CHECK (STEP 4/5)



(a) Check the EVAP pressure in step 4/5.

Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Not yet determined	A
P0441	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Problems in EVAP hose between purge VSV and intake manifold	B
P0441	Variation in EVAP pressure less than 0.3 kPa-g (2.25 mmHg-g) for 10 seconds, after proceeding from step 3/5 to step 4/5	Purge VSV stuck closed	C

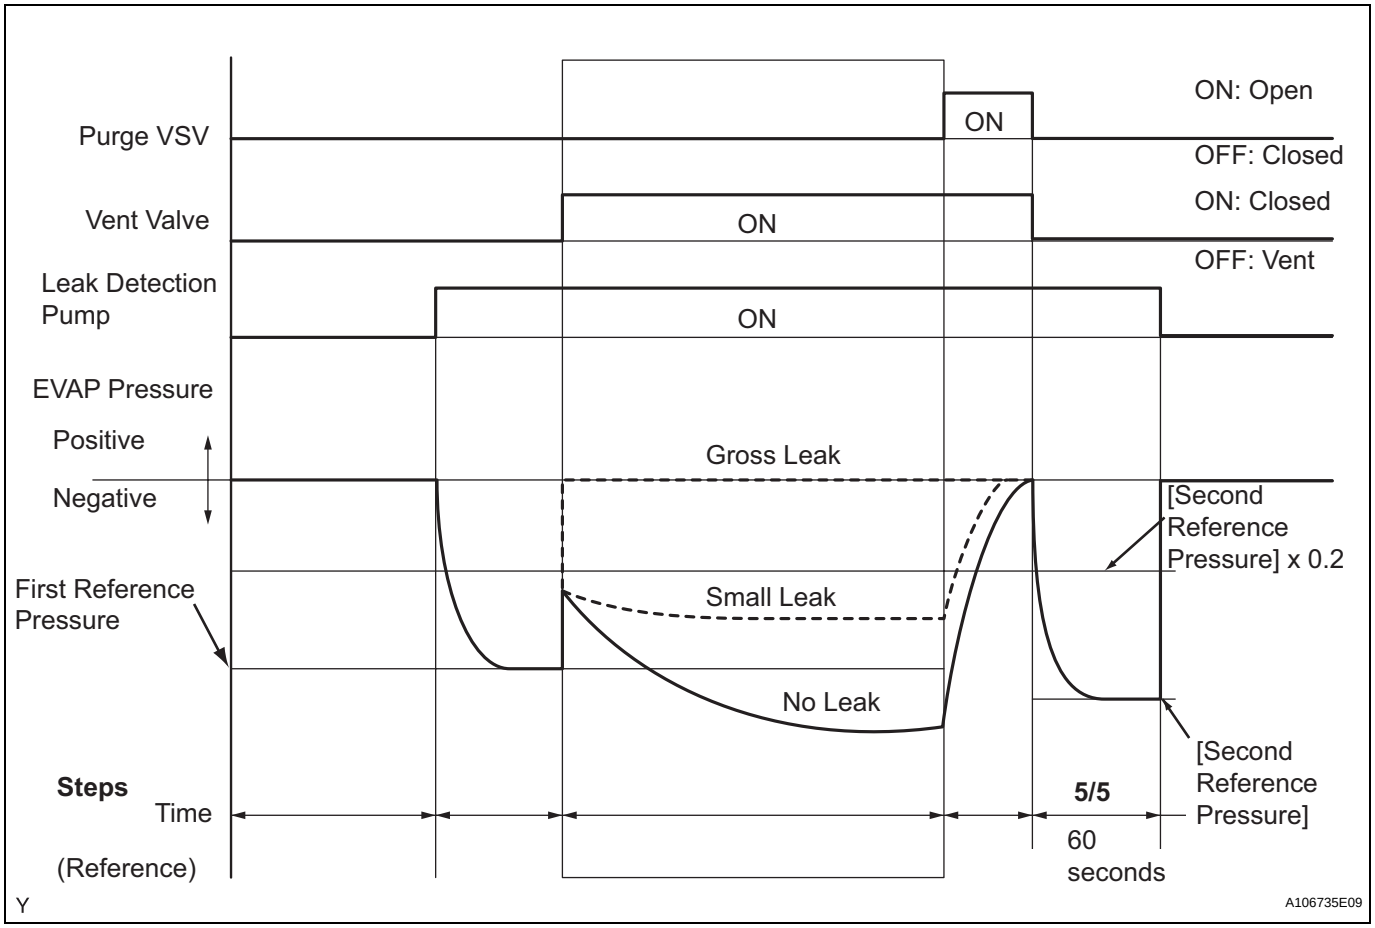
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.

B → Go to step 15

C → Go to step 12

A

10	PERFORM EVAP SYSTEM CHECK (STEP 5/5)



(a) Check the EVAP pressure in step 5/5.
(b) Compare the EVAP pressure in step 3/5 and the second reference pressure (step 5/5).

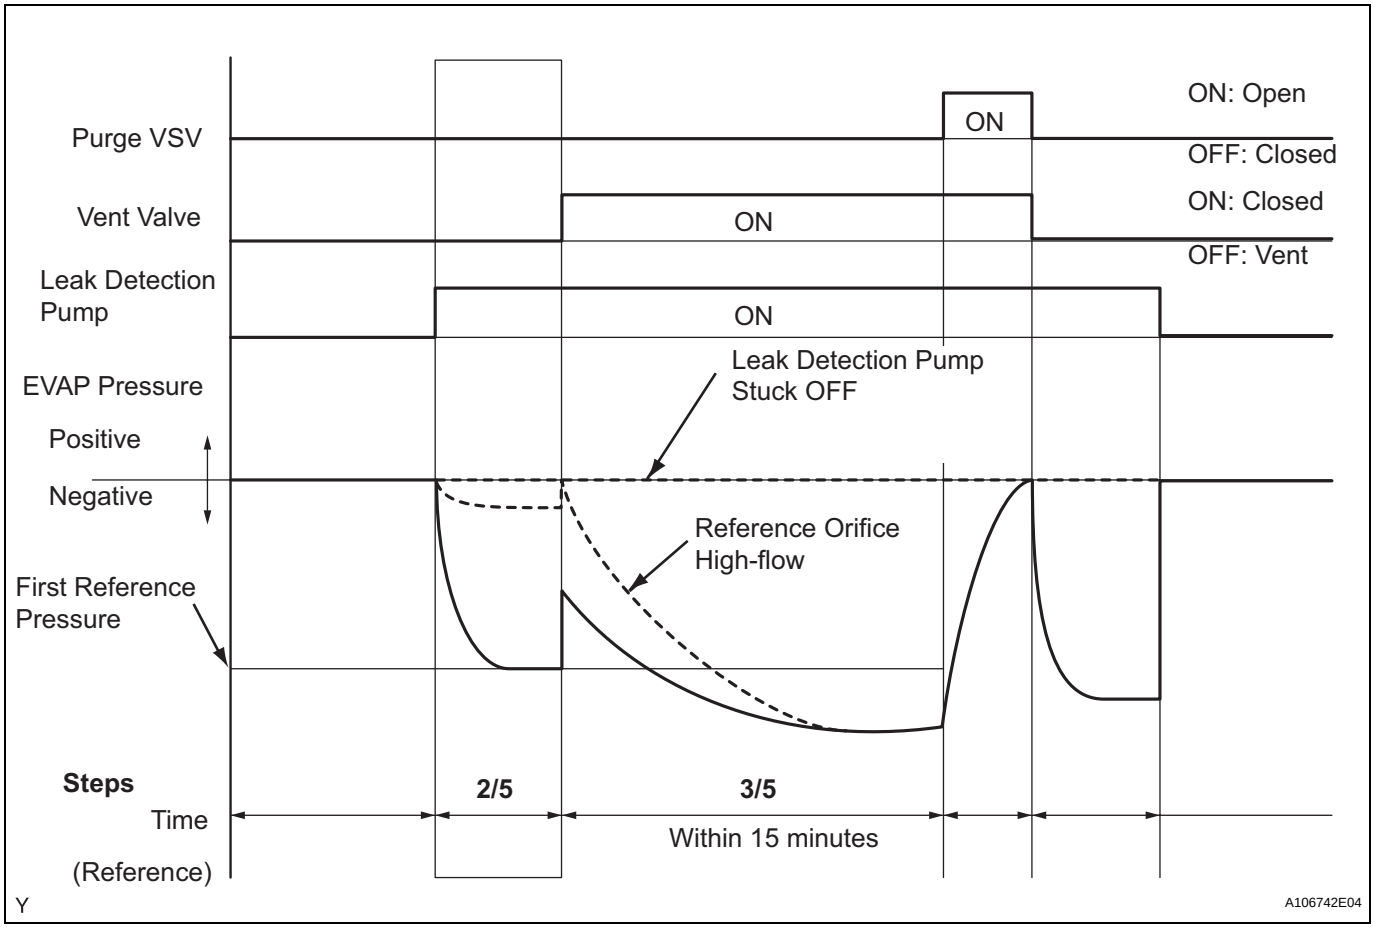
Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed To
-	EVAP pressure (step 3/5) lower than second reference pressure (step 5/5)	Not yet determined (no leakage from EVAP system)	A
P0441 and P0455	EVAP pressure (step 3/5) higher than [second reference pressure (step 5/5) x 0.2]	• Purge VSV stuck open • EVAP gross leak	B
P0456	EVAP pressure (step 3/5) higher than second reference pressure (step 5/5)	EVAP small leak	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.

A	Go to step 35
B	Go to step 12

11	PERFORM EVAP SYSTEM CHECK (STEP 3/5)



(a) Check the EVAP pressure in step 3/5.

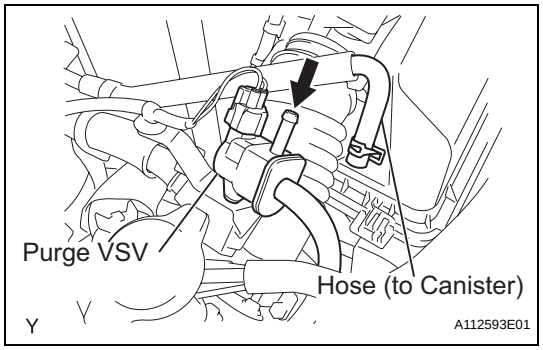
Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed To
P043F	EVAP pressure less than [reference pressure] measured at 2/5	Reference orifice high-flow	A
P2401	EVAP pressure almost same as [reference pressure] measured at 2/5	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in step 1.
HINT:
The first reference pressure is the value determined in step 2/5.

A	Go to step 29
B	Go to step 22

12 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (PURGE VSV)



(a) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / EVAP VSV.
(b) Disconnect the hose (connected to the canister) from the purge VSV.
(c) Start the engine.
(d) Using the tester, turn off the purge VSV (EVAP VSV: OFF).
(e) Use your finger to confirm that the purge VSV has no suction.
(f) Using the tester, turn on the purge VSV (EVAP VSV: ON).
(g) Use your finger to confirm that the purge VSV has suction.

ES

Result

Test Results	Suspected Trouble Areas	Proceed To
No suction when purge VSV turned OFF, and suction applied when turned ON	Purge VSV normal	A
Suction applied when purge VSV turned OFF	Purge VSV stuck open	B
No suction when purge VSV turned ON	• Purge VSV stuck closed • Problems with EVAP hose between purge VSV and intake manifold	C

(h) Reconnect the hose.

B	Go to step 14
C	Go to step 15

A

13 CHECK FUEL CAP ASSEMBLY

(a) Check that the fuel cap is correctly installed and confirm the fuel cap meets OEM specifications.
  (1) Tighten the fuel cap until a few click sounds are heard.
  HINT:
  If an EVAP tester is available, check the fuel cap using the tester.
(b) Remove the fuel cap and install it onto a fuel cap adapter.
(c) Connect an EVAP tester pump hose to the adapter, and pressurize the cap to 3.2 to 3.7 kPa (24 to 28 mmHg) using an EVAP tester pump.
(d) Seal the adapter and wait for 2 minutes.
(e) Check the pressure. If the pressure is 2 kPa (15 mmHg) or more, the fuel cap is normal.

Result

Test Results	Suspected Trouble Areas	Proceed To
Fuel cap correctly installed	-	A

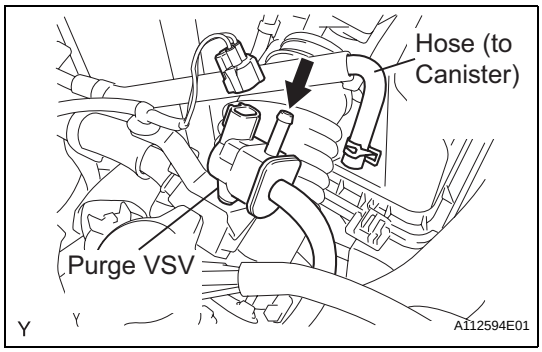
Test Results	Suspected Trouble Areas	Proceed To
Fuel cap loose	• Fuel cap improperly installed • Defective fuel cap • Fuel cap does not meet OEM specifications	B
No fuel cap	-	C

(f) Reinstall the fuel cap.

A	Go to step 28
B	Go to step 26
C	Go to step 27

ES

14 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Turn the ignition switch to OFF.
(b) Disconnect the C3 purge VSV connector.
(c) Disconnect the hose (connected to the canister) from the purge VSV.
(d) Start the engine.
(e) Use your finger to confirm that the purge VSV has no suction.

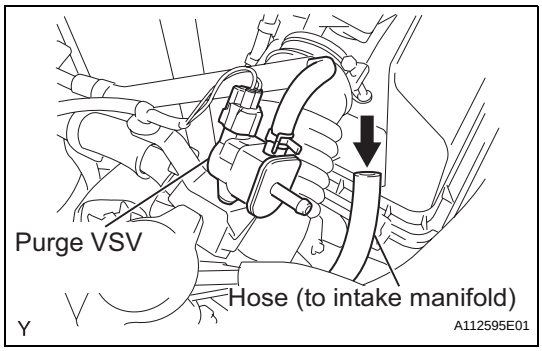
Result

Test Results	Suspected Trouble Areas	Proceed To
No suction	ECM	A
Suction applied	Purge VSV	B

(f) Reconnect the purge VSV connector.
(g) Reconnect the hose.

A	Go to step 34
B	Go to step 30

15 CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)



(a) Disconnect the hose (connected to the intake manifold) from the purge VSV.
(b) Start the engine.
(c) Use your finger to confirm that the hose has suction.

Result

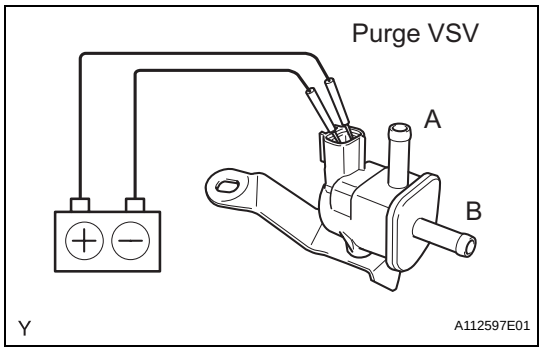
Test Results	Suspected Trouble Areas	Proceed To
Suction applied	EVAP hose between purge VSV and intake manifold normal	A
No suction	• Intake manifold port • EVAP hose between purge VSV and intake manifold	B

(d) Reconnect the hose.

B → Go to step 25

A

16 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Remove the purge VSV.
(b) Apply the battery voltage to the terminals of the purge VSV.
(c) Using an air gun, confirm that air flows from port A to port B.

Result

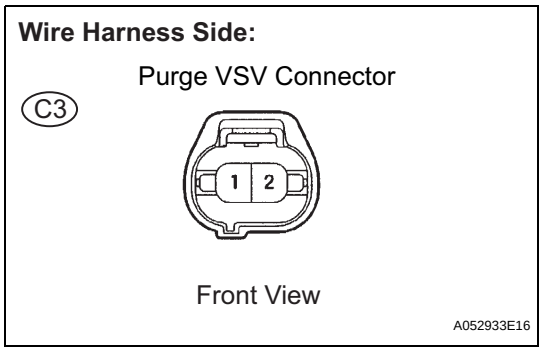
Test Results	Suspected Trouble Areas	Proceed To
Air flows	Purge VSV normal	A
No air flow	Purge VSV	B

(d) Install the purge VSV.

B → Go to step 30

A

17 CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PURGE VSV)



(a) Disconnect the C3 purge VSV connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between terminal 2 of the purge VSV connector and the body ground.

Result

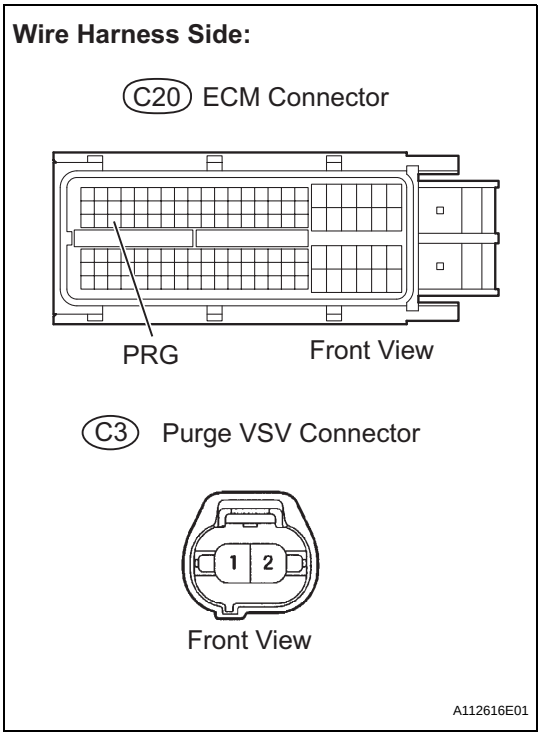
Test Results	Suspected Trouble Areas	Proceed To
11 to 14 V	Normal	A
Other than result above	Wire harness or connectors between purge VSV and ECM	B

(d) Reconnect the purge VSV connector.

B	Go to step 31

A

18 CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)



(a) Disconnect the C20 ECM connector and the C3 purge VSV connector.
(b) Check the resistance.

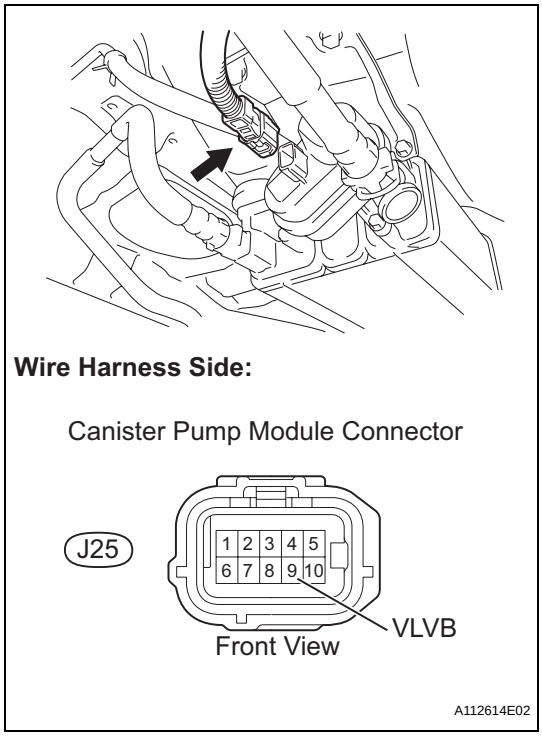
Standard resistance

Tester Connections	Specified Conditions
PRG (C20-49) - Purge VSV (C3-1)	Below 1 Ω
PRG (C20-49) - Body ground	10 kΩ or higher
Purge VSV (C3-1) - Body ground	

(c) Reconnect the purge VSV connector.
(d) Reconnect the ECM connector.

OK	Go to step 34
NG	Go to step 31

19 INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)



(a) Turn the ignition switch to OFF.
(b) Disconnect the J25 canister pump module connector.
(c) Turn the ignition switch to ON.
(d) Measure the voltage between VLVB terminal of the canister pump module connector and the body ground.

Result

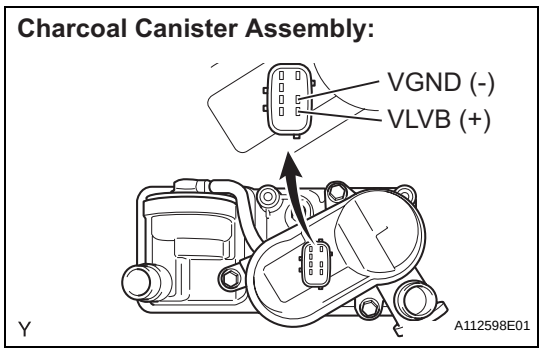
Test Results	Suspected Trouble Areas	Proceed To
11 to 14 V	1. Wire harness between vent valve and ECM 2. Vent valve 3. ECM	A
Below 3 V	Power source wire harness of vent valve	B

(e) Reconnect the canister pump module connector.

B → Go to step 31

A

20 INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)



(a) Turn the ignition switch to OFF.
(b) Disconnect the J25 canister pump module connector.
(c) Apply the battery voltage to VLVB and VGND terminals of the canister pump module.
(d) Touch the canister pump module to confirm the vent valve operation.

Result

Test Results	Suspected Trouble Areas	Proceed To
Operating	1. Wire harness between vent valve and ECM 2. ECM	A

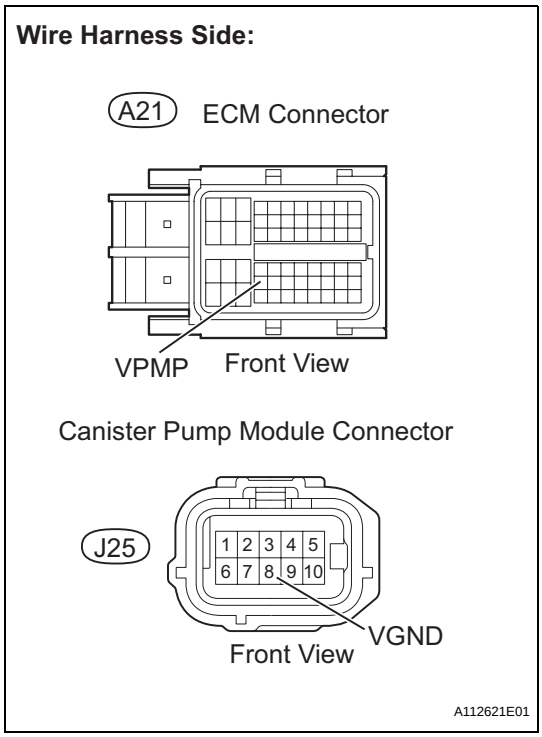
Test Results	Suspected Trouble Areas	Proceed To
Not operating	Vent valve	B

(e) Reconnect the canister connector.

B	Go to step 29

A

21 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Disconnect the A21 ECM connector.
(b) Disconnect the J25 canister pump module connector.
(c) Check the resistance between VPMP terminal of the ECM connector and VGND terminal of the canister pump module connector.

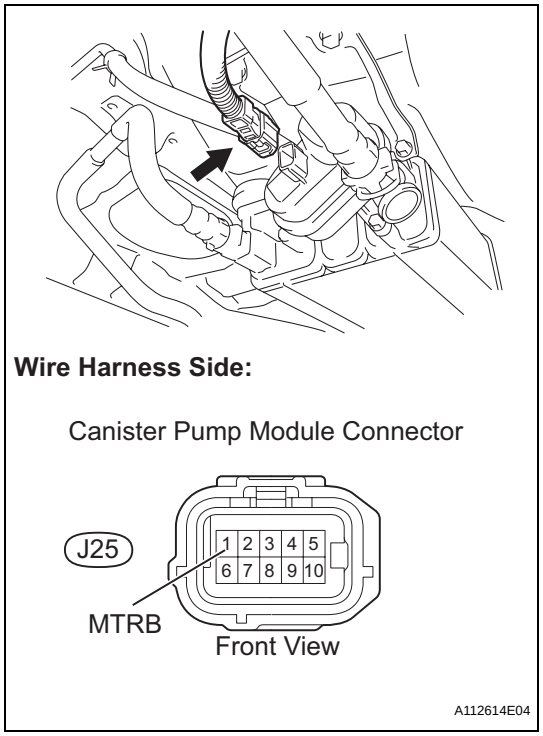
Result

Test Results	Suspected Trouble Areas	Proceed To
Below 1 Ω	ECM	A
10 kΩ or higher	Wire harness between ECM and canister pump module	B

(d) Reconnect the ECM connector.
(e) Reconnect the canister pump module connector.

A	Go to step 34
B	Go to step 31

22	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (VACUUM PUMP (ALONE))



(a) Turn the ignition switch to OFF.
(b) Disconnect the J25 canister pump module connector.
(c) Turn the ignition switch to ON.
(d) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VACUUM PUMP (ALONE).
(e) Measure the voltage between MTRB terminal 1 of the canister pump module connector and the body ground when the leak detection pump is turned ON and OFF using the tester.

ES

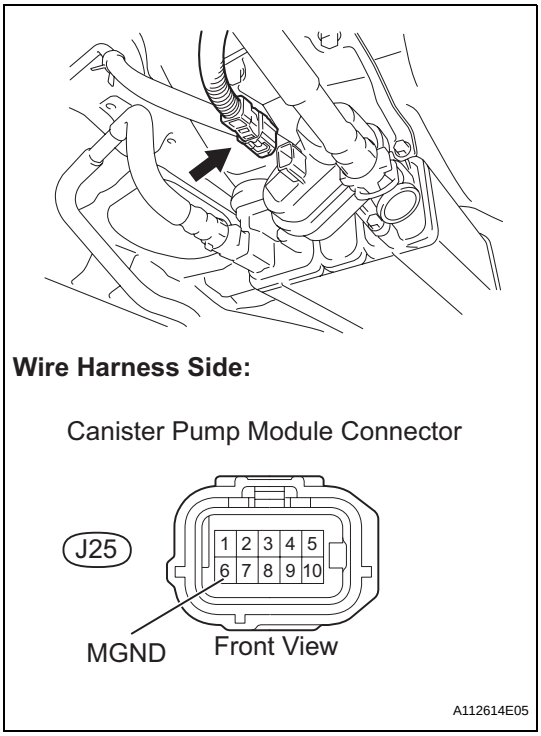
Result

Test Results	Suspected Trouble Areas	Proceed To
Below 3 V when OFF 11 to 14 V when ON	1. Wire harness between leak detection pump and body ground 2. Leak detection pump	A
Below 3 V when OFF and ON	1. Wire harness between leak detection pump and ECM 2. ECM	B

B → Go to step 24

A

23	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)



(a) Turn the ignition switch to OFF.
(b) Disconnect the J25 canister pump module connector.
(c) Check the resistance between MGND terminal of the canister pump module connector and the body ground.

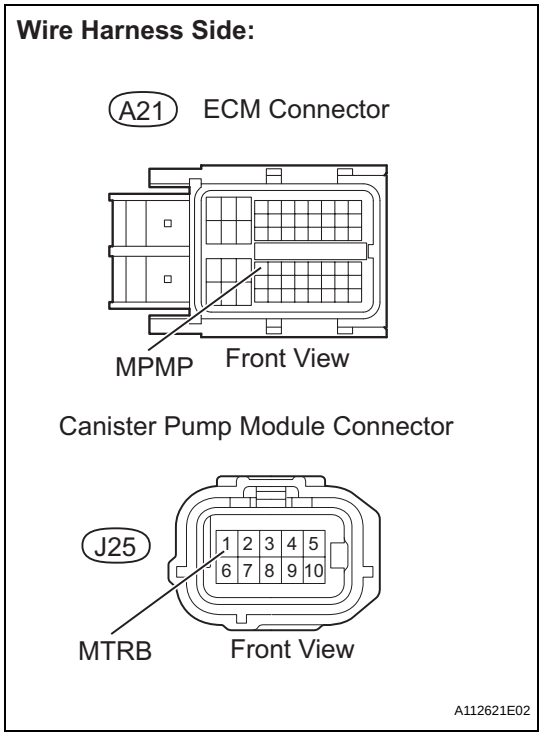
Result

Test Results	Suspected Trouble Areas	Proceed To
Below 1 Ω	**Leak detection pump**	**A**
10 kΩ or higher	**Wire harness between canister pump module and body ground**	**B**

(d) Reconnect the canister pump module connector.

A	**Go to step 29**
B	**Go to step 31**

24 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Turn the ignition switch to OFF.
(b) Disconnect the J25 canister pump module connector.
(c) Disconnect the A21 ECM connector.
(d) Check the resistance between MPMP terminal of the ECM connector and MTRB terminal of the canister pump module connector.

ES

Result

Test Results	Suspected Trouble Areas	Proceed To
Below 1 Ω	ECM	A
10 kΩ or higher	Wire harness between ECM and canister pump module	B

(e) Reconnect the canister pump module connector.
(f) Reconnect the ECM connector.

A	Go to step 34
B	Go to step 31

25 INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Stop the engine.
(b) Disconnect the EVAP hose from the intake manifold.
(c) Start the engine.
(d) Use your finger to confirm that the port of the intake manifold has suction.

Result

Test Results	Suspected Trouble Areas	Proceed To
Suction applied	EVAP hose between intake manifold and purge VSV	A
No suction	Intake manifold	B

(e) Reconnect the EVAP hose.

A	Go to step 32
B	Go to step 33

26	CORRECTLY REINSTALL OR REPLACE FUEL CAP

HINT:
- When reinstalling the fuel cap, tighten it until a few click sounds are heard.
- When replacing the fuel cap, use a fuel cap that meets OEM specifications, and install it until a few click sounds are heard.

NEXT	Go to step 36

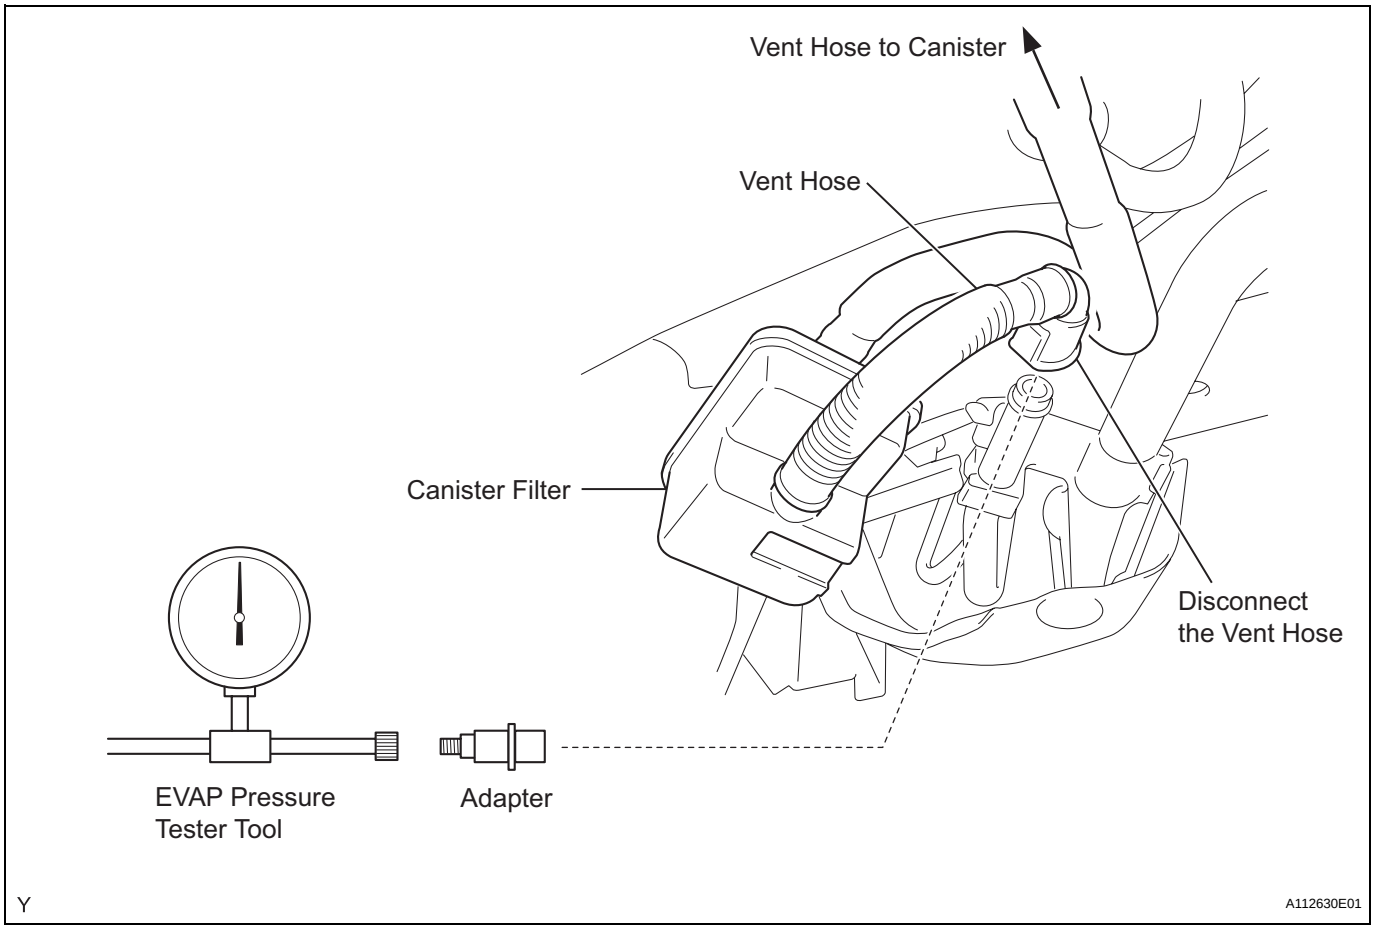
ES

27	REPLACE FUEL CAP

HINT:
When installing the fuel cap, tighten it until a few click sounds are heard.

NEXT	Go to step 36

28	LOCATE EVAP LEAK PART



(a) Disconnect the vent hose.
(b) Connect the EVAP pressure tester tool to the vent hose with the adapter.

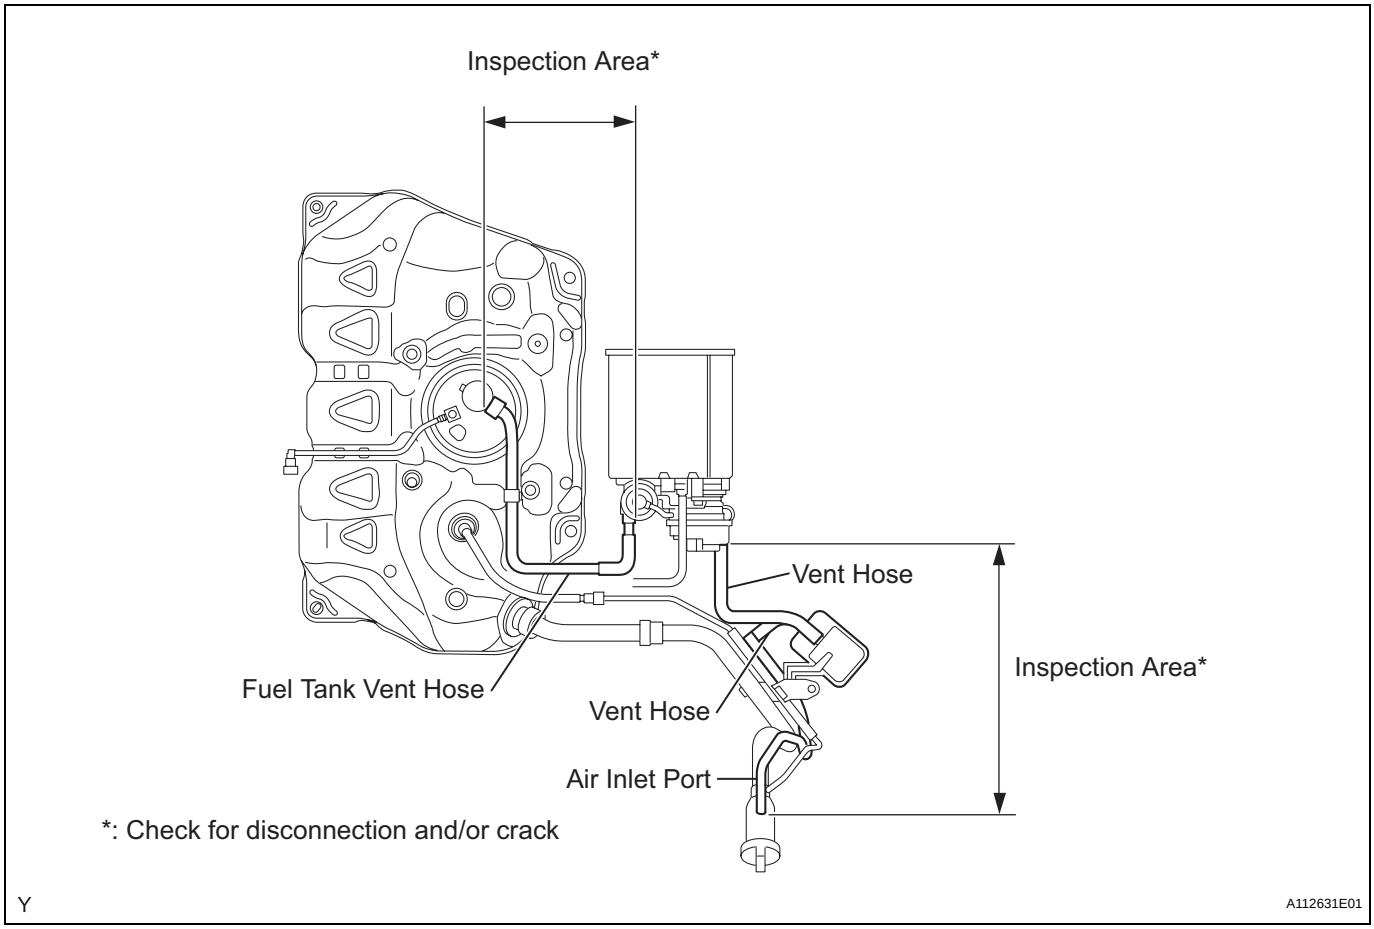
(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).
(d) Apply soapy water to the piping and connecting parts of the EVAP system.
(e) Look for areas where bubbles appear. This indicates the leak point.
(f) Repair or replace the leak point.
HINT:
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.

NEXT	Go to step 36

ES

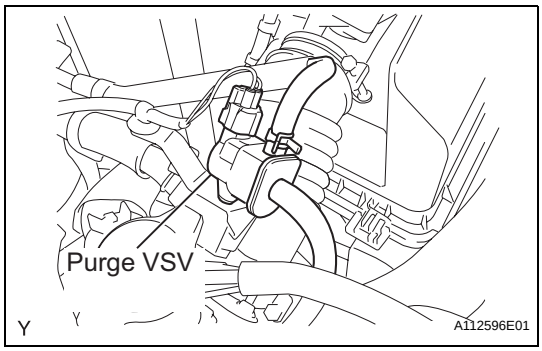
29	REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-7).
NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.



NEXT → Go to step 36

30	REPLACE DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Disconnect the connector and the hoses from the purge VSV.
(b) Remove the purge VSV.
(c) Install a new purge VSV.
(d) Reconnect the connector and hoses.

NEXT → Go to step 36

31	REPAIR OR REPLACE HARNESS OR CONNECTOR

NEXT → Go to step 36

32	REPLACE EVAP HOSE (INTAKE MANIFOLD - PURGE VSV)

NEXT → Go to step 36

33	INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Check that the EVAP purge port of the intake manifold is not clogged. If necessary, replace the intake manifold.

NEXT → Go to step 36

34	REPLACE ECM

(a) Replace the ECM (See page ES-431).

NEXT → Go to step 36

35	REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS

(a) Repair the malfunctioning areas indicated by the DTCs that had been confirmed when the vehicle was brought in.

NEXT → Go to step 36

36	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of five steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine in this step.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear DTCs (See page ES-34).

(b) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.

(c) After the SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are found, the repair has been successfully completed.

ES

NEXT

COMPLETED

CONFIRMATION DRIVING PATTERN

HINT:
After a repair, check Monitor Status by performing the Key-Off Monitor Confirmation and Purge Flow Monitor Confirmation described below.

1. KEY-OFF MONITOR CONFIRMATION

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a free way)
- The fuel tank is less than 90 % full
- The altitude is less than 8,000 ft (2,400 m)
- The Engine Coolant Temperature (ECT) is between 4.4°C and 35°C (40°F and 95°F)
- The Intake Air Temperature (IAT) is between 4.4°C and 35°C (40°F and 95°F)
- The vehicle remains stationary (the vehicle speed is 0 mph [0 km/h])

(b) Monitor Conditions
1. Allow the engine to idle for at least 5 minutes.
2. Turn the ignition switch to OFF and wait for 6 hours (8 or 10.5 hours).
HINT:
Do not start the engine until checking MONITOR STATUS. If the engine is started, the steps described above must be repeated.

(c) Monitor Status
1. Connect an intelligent tester to the DLC3.
2. Turn the ignition switch to ON and turn the tester ON.
3. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
4. Check the Monitor Status displayed on the tester.
HINT:
If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

2. PURGE FLOW MONITOR CONFIRMATION (P0441)

HINT:
Perform this monitor confirmation after the Key-Off Monitor Confirmation shows COMPL (complete).

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a free way)
- The ECT is between 4.4°C and 35°C (40°F and 95°F)
- The IAT is between 4.4°C and 35°C (40°F and 95°F)

(b) Monitor Conditions
1. Release the pressure from the fuel tank by removing and reinstalling the fuel cap.
2. Warm the engine up until the ECT reaches more than 75°C (167°F).
3. Increase the engine speed to 3,000 rpm once.
4. Allow the engine to idle and turn A/C ON for 1 minute.

(c) Monitor Status
1. Turn the ignition switch to OFF (where ON or the engine is running).
2. Connect an intelligent tester to the DLC3.
3. Turn the ignition switch to ON and turn the tester ON.
4. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
5. Check the Monitor Status displayed on the tester.
HINT:
If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-17).

The test value and test limit information are described in the following table. This information is included under MONITOR RESULT in the emissions-related DTC sections:
- MID (Monitor Identification Data) is assigned to each emissions-related component.
- TID (Test Identification Data) is assigned to each test value.
- Scaling is used to calculate the test value indicated on generic OBD II scan tools.

EVAP - Key-off Type

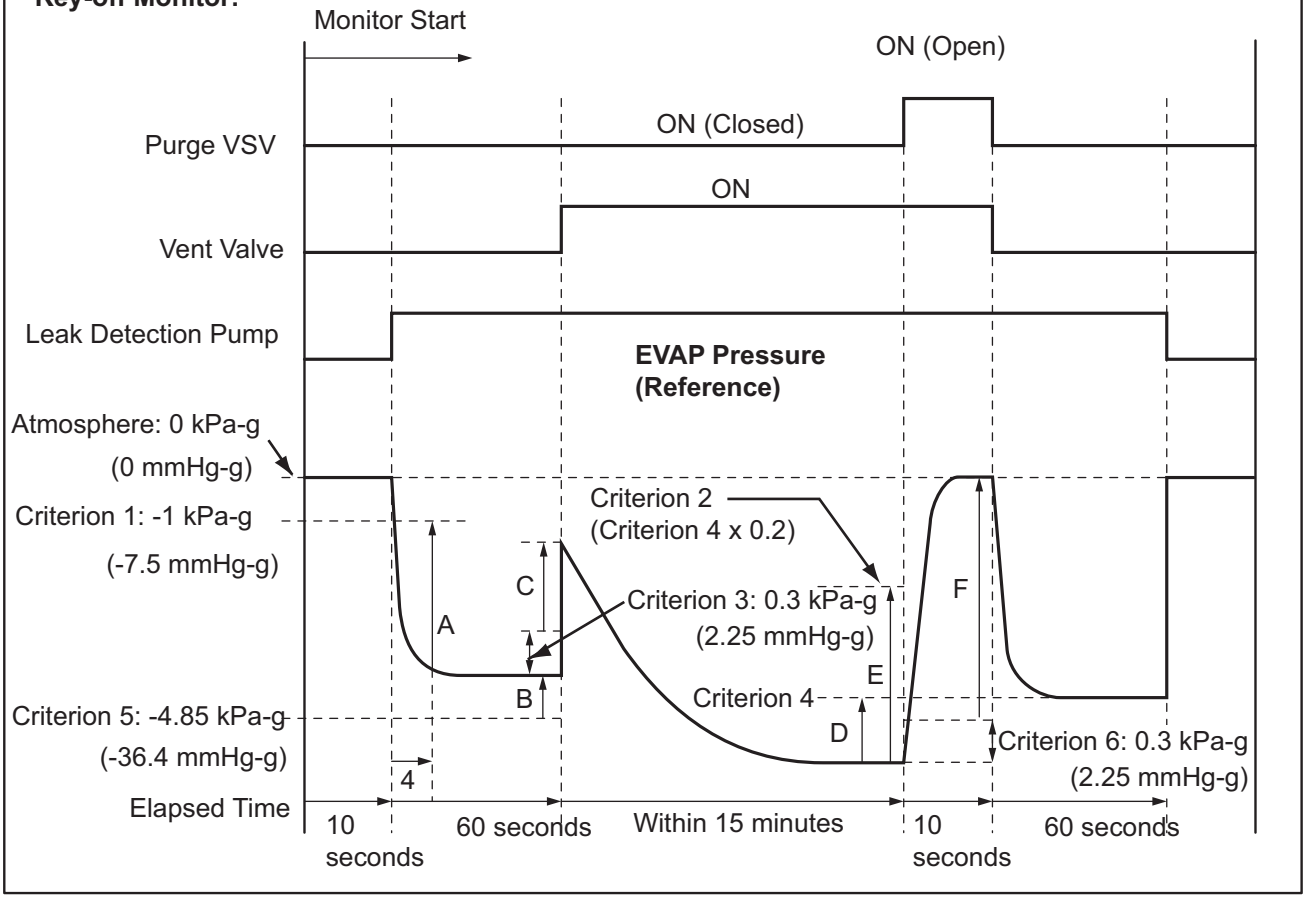
MID	TID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456) Refer to pressure D*
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455) Refer to pressure E*
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump stuck OFF (P2401) Refer to pressure A*
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump stuck ON (P2402) Refer to pressure A*
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (vent) (P2420) Refer to pressure C*
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419) Refer to pressure A*
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E) Refer to pressure B*

MID	TID	Scaling	Unit	Description
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F) Refer to pressure A*
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441) Refer to pressure F*
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441) Refer to pressure E*
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441) Refer to pressure G*

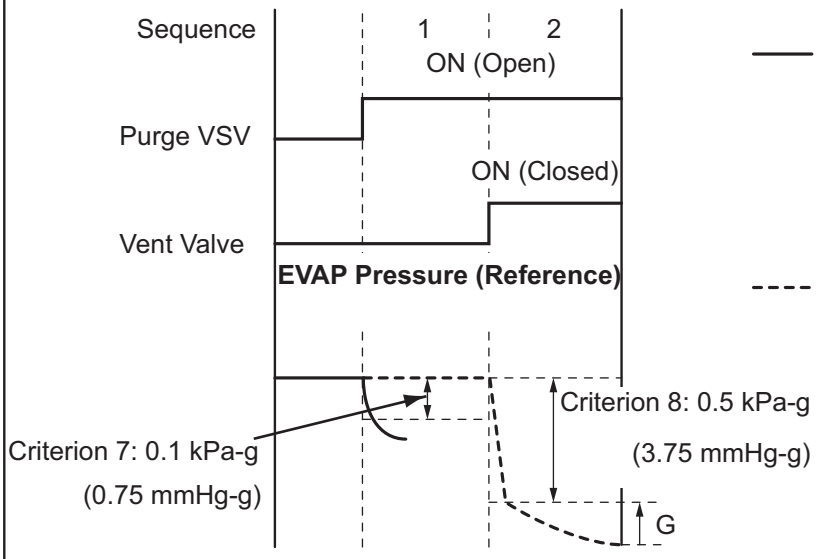
* Pressures A to G are indicated in the diagram below.

ES

Key-off Monitor:



Purge Flow Monitor:



——— If pressure change in sequence 1 is greater than criterion 7, purge flow monitor is completed (functioning normally).

- - - - If pressure change in sequence 1 is smaller than criterion 7 and pressure change in sequence 2 is smaller than criterion 8, purge flow is insufficient.

Y

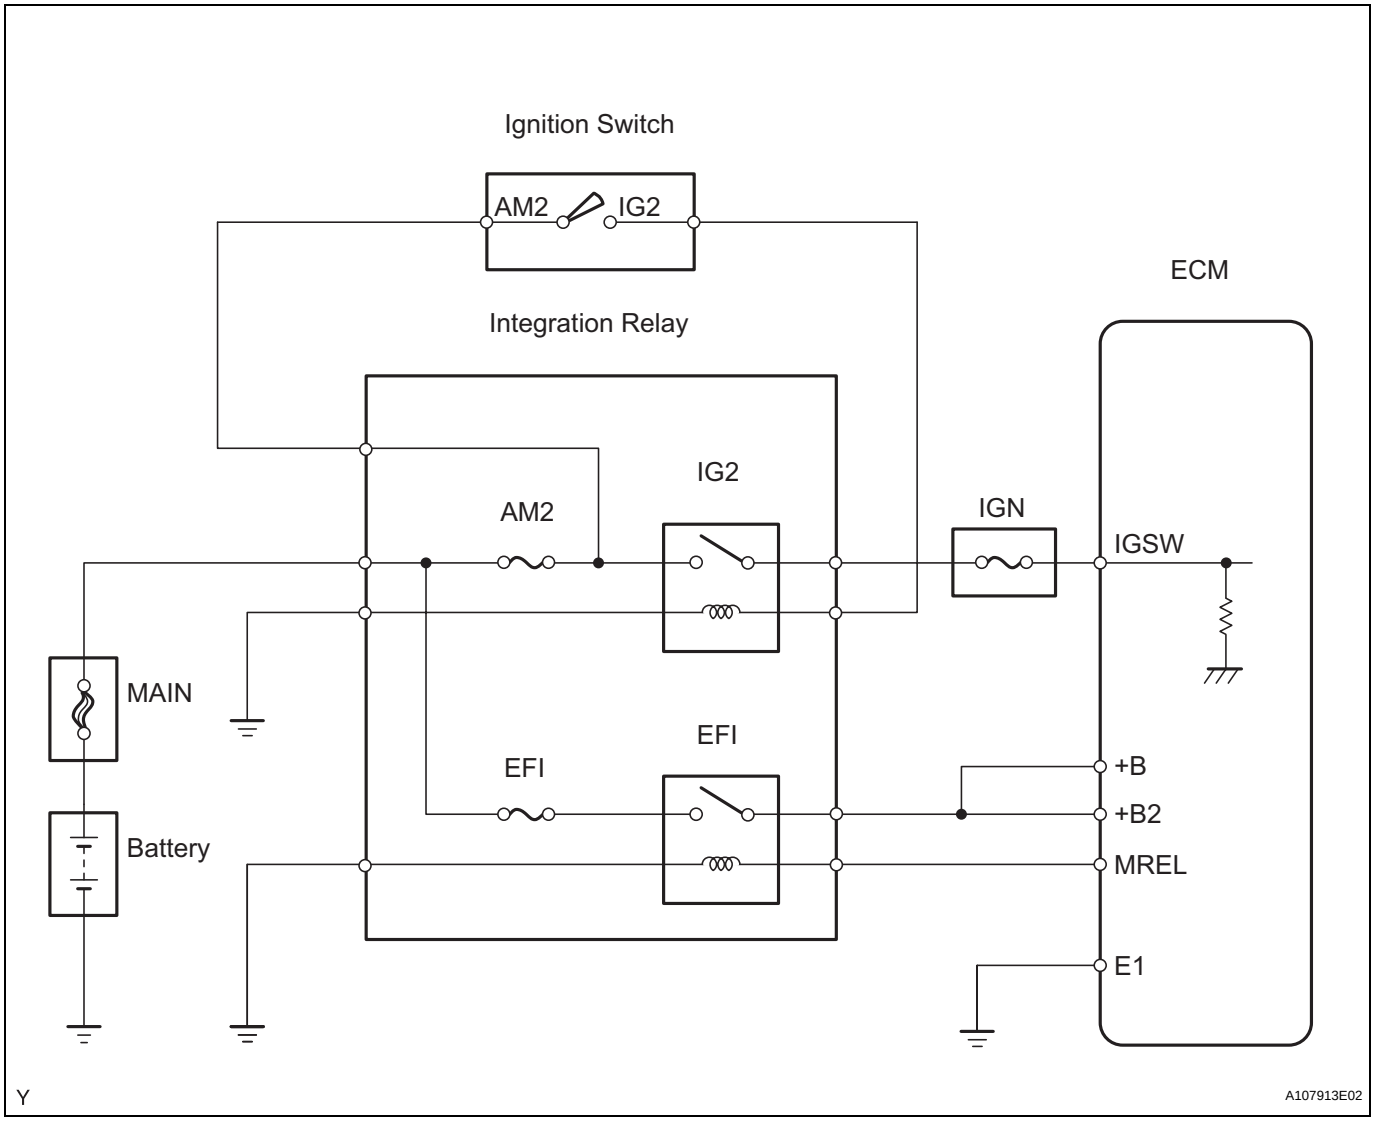
A106747E07

ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned to ON, the battery voltage is applied to the IGSW of the ECM. The output signal from the MREL terminal of the ECM causes a current to flow to the coil, closing the contacts of the integration relay (EFI relay) and supplying power to either terminal +B or +B2 of the ECM.

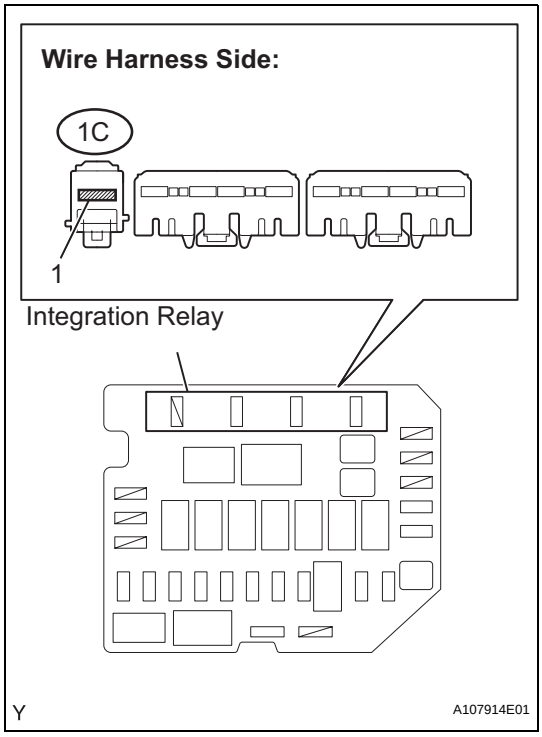
WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1 INSPECT INTEGRATION RELAY (INTEGRATION RELAY - BODY GROUND)



(a) Remove the integration relay from the engine room relay block.

(b) Measure the voltage between the terminal of the integration relay and body ground.

Standard voltage

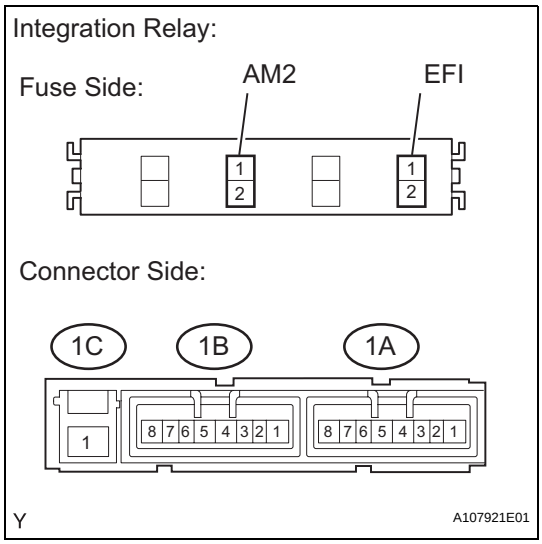
Tester Connections	Specified Conditions
Engine room relay block (1C-1) - Body ground	11 to 14 V

(c) Reinstall the integration relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT INTEGRATION RELAY (EFI RELAY AND IG2 RELAY)



(a) Remove the integration relay from the engine room relay block.

(b) Inspect the EFI fuse and the AM2 fuse.

(1) Remove the EFI fuse and AM2 fuse from the integration relay.

(2) Check the resistance of the EFI fuse and AM2 fuse.

Standard resistance:

Below 1 Ω

(3) Reinstall the EFI fuse and the AM2 fuse.

(c) Inspect the EFI relay and the IG2 relay.

(1) Check the resistance between the terminals shown below.

Standard resistance

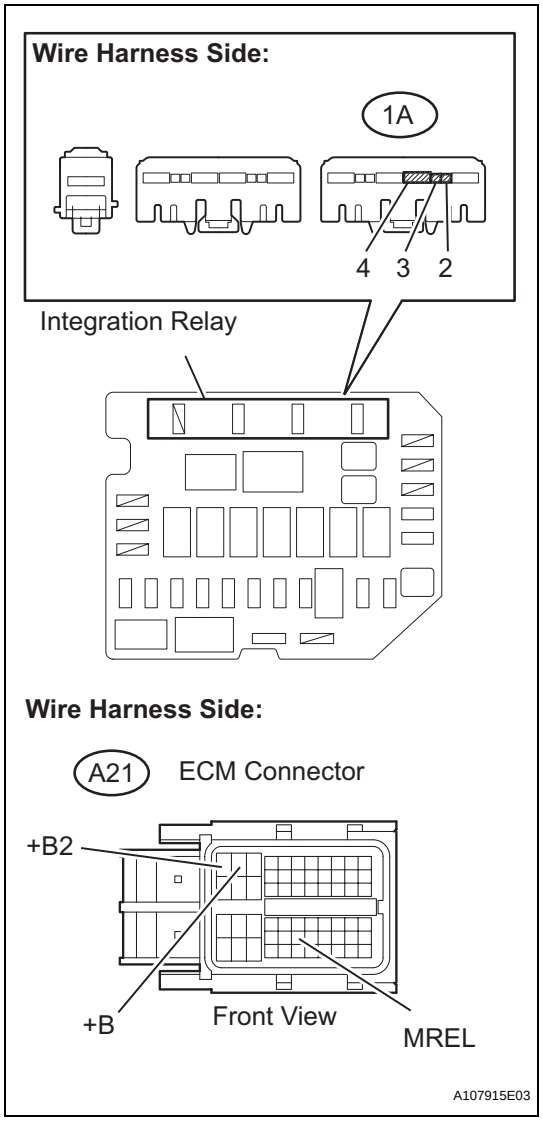
Tester Connections	Specified Conditions
1C-1 - 1A-4	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1A-2 and 1A-3)
1C-1 - 1B-4	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1A-2 and 1A-3)
1C-1 - 1B-1	Below 1 Ω

(2) Reinstall the integration relay.

NG → REPLACE INTEGRATION RELAY

OK

3 CHECK HARNESS AND CONNECTOR (+B, +B2 AND MREL CIRCUIT)



(a) Check the harness and the connectors between the integration relay and the ECM.
(1) Remove the integration relay from the engine room relay block.
(2) Disconnect the A21 ECM connector.
(3) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
MREL (A21-44) - Engine room relay block (1A-2)	Below 1 Ω
+B (A21-2) - Engine room relay block (1A-4)	
+B2 (A21-1) - Engine room relay block (1A-4)	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
MREL (A21-44) or Engine room relay block (1A-2) - Body ground	10 kΩ or higher
+B (A21-2) or Engine room relay block (1A-4) - Body ground	
+B2 (A21-1) or Engine room relay block (1A-4) - Body ground	

(b) Check the harness and the connectors between the integration relay and body ground.
(1) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Engine room relay block (1A-3) - Body ground	Below 1 Ω

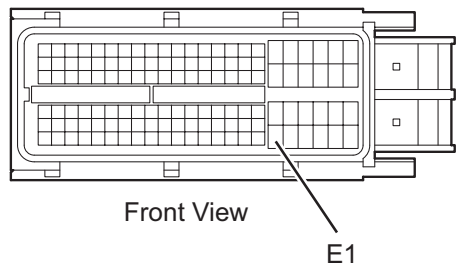
(c) Reinstall the integration relay.
(d) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4	CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)

Wire Harness Side:



A107892E01

(a) Disconnect the C20 ECM connector.
(b) Check the resistance.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
E1 (C20-104) - Body ground	Below 1 Ω

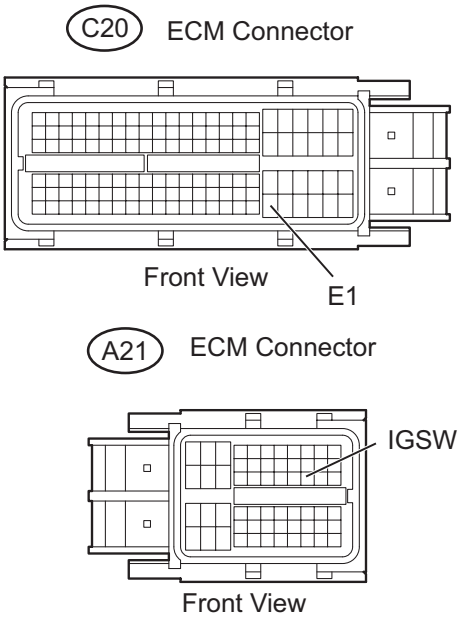
(c) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	INSPECT ECM (IGSW VOLTAGE)

Wire Harness Side:



A107934E01

(a) Disconnect the C20 and A21 ECM connectors.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the C20 and A21 ECM connectors.
Standard voltage

Tester Connections	Specified Conditions
IGSW (A21-28) - E1 (C20-104)	11 to 14 V

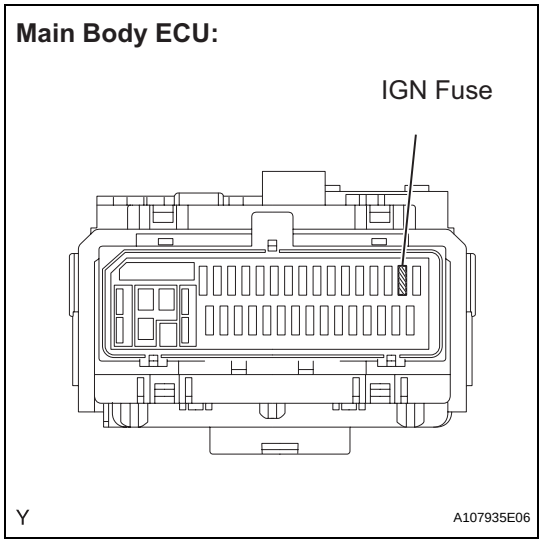
(d) Reconnect the ECM connectors.

OK → **REPLACE ECM**

NG

6	INSPECT FUSE (IGN FUSE)

Main Body ECU:



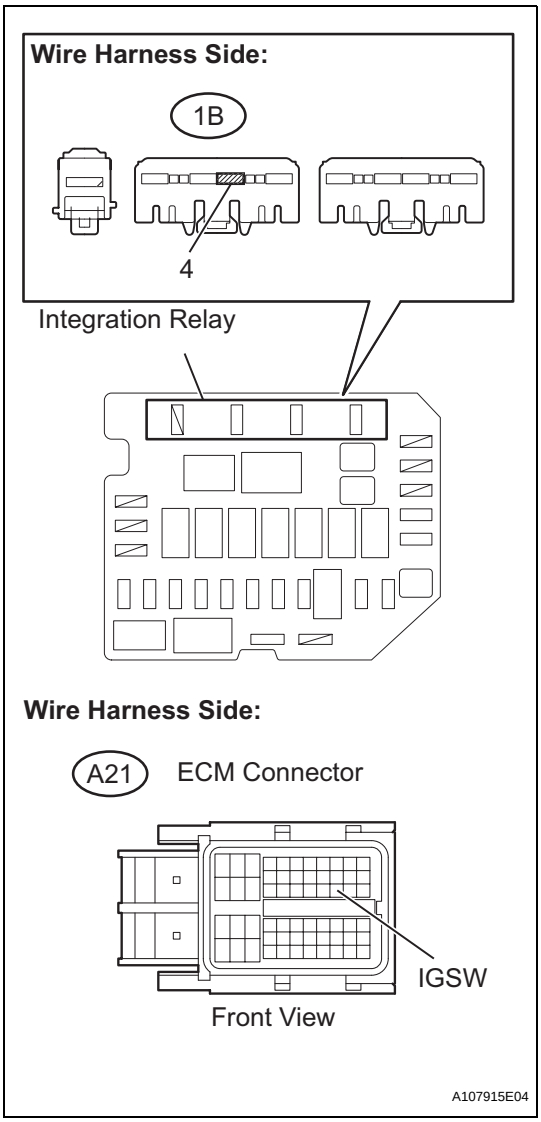
(a) Remove the IGN fuse from the main body ECU.
(b) Check the IGN fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the IGN fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

ES

7	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - ECM, INTEGRATION RELAY - BODY GROUND)



(a) Remove the integration relay from the engine room relay block.
(b) Disconnect the A21 ECM connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Engine room relay block (1B-4) - IGSW (A21-28)	Below 1 Ω

Standard resistance (Check for short)

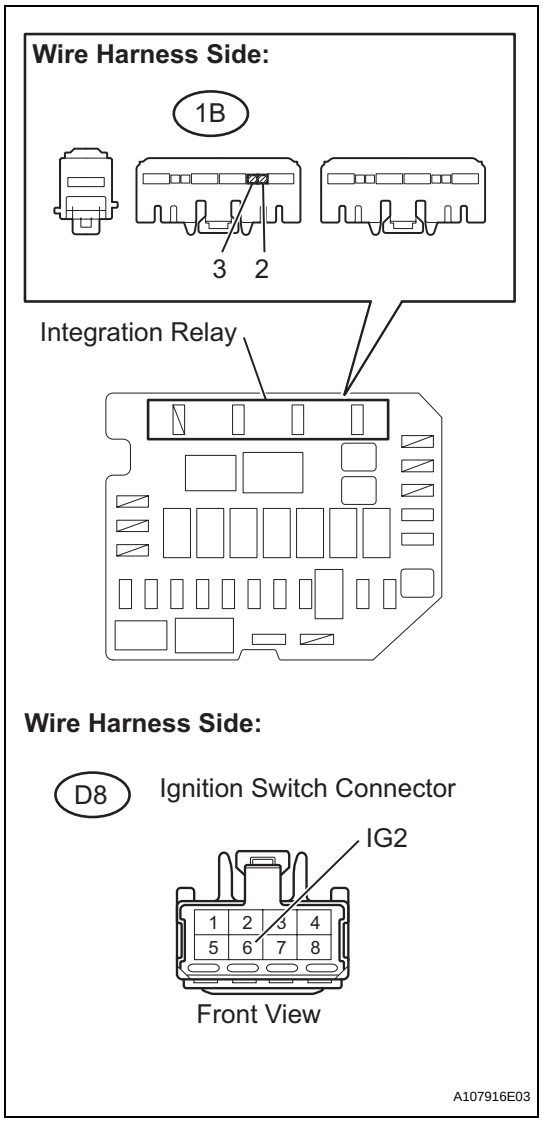
Tester Connections	Specified Conditions
Engine room relay block (1B-4) or IGSW (A21-28) - Body ground	10 kΩ or higher

(d) Reinstall the integration relay.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - IGNITION SWITCH ASSEMBLY)



(a) Check the harness and the connectors between the integration relay and the ignition switch.
  (1) Remove the integration relay from the engine room relay block.
  (2) Disconnect the D8 ignition switch connector.
  (3) Check the resistance.
    Standard resistance (Check for open)

Tester Connections	Specified Conditions
Engine room relay block (1B-2) - IG2 (D8-6)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Engine room relay block (1B-2) or IG2 (D8-6) - Body ground	10 kΩ or higher

(b) Check the harness and the connectors between the integration relay and body ground.
  (1) Check the resistance.
    Standard resistance (Check for open)

Tester Connections	Specified Conditions
Engine room relay block (1B-3) - Body ground	Below 1 Ω

(c) Reinstall the integration relay.
(d) Reconnect the ignition switch connector.

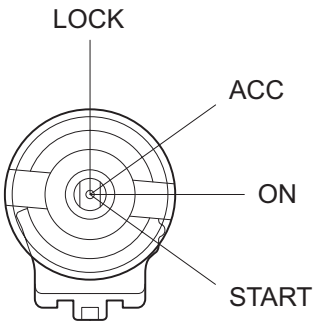
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

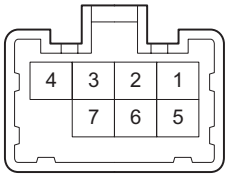
ES

9	INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

Component Side :



Ignition Switch



Front View

Y A107906E01

(a) Disconnect the D8 ignition switch connector.
(b) Check the resistance between the terminals shown below.

Standard resistance

Key Positions	Tester Connections	Specified Conditions
LOCK	-	10 kΩ or higher

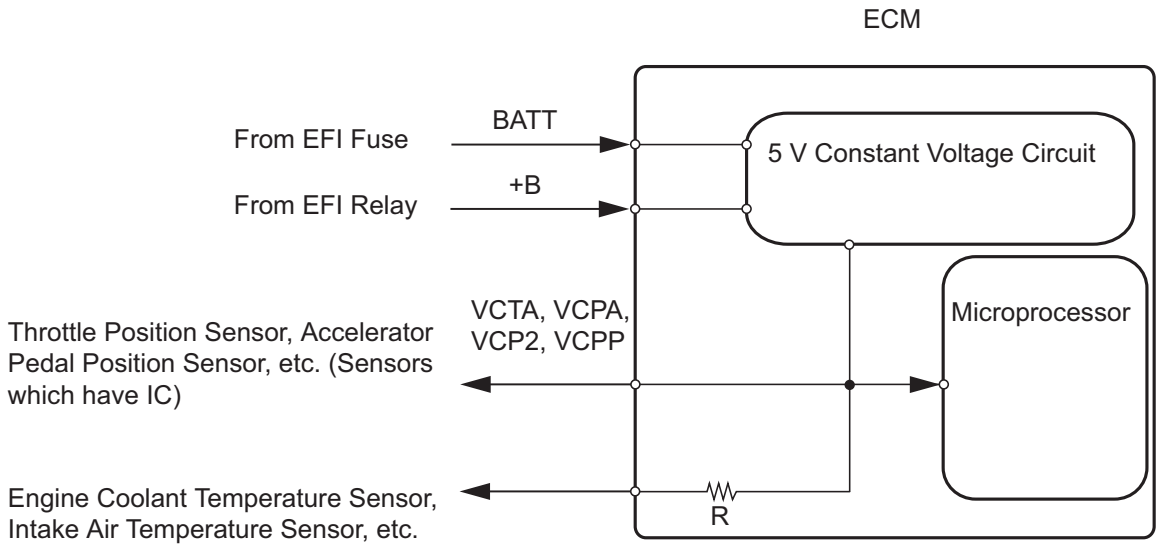
REPAIR OR REPLACE HARNESS OR CONNECTOR

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltages supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.

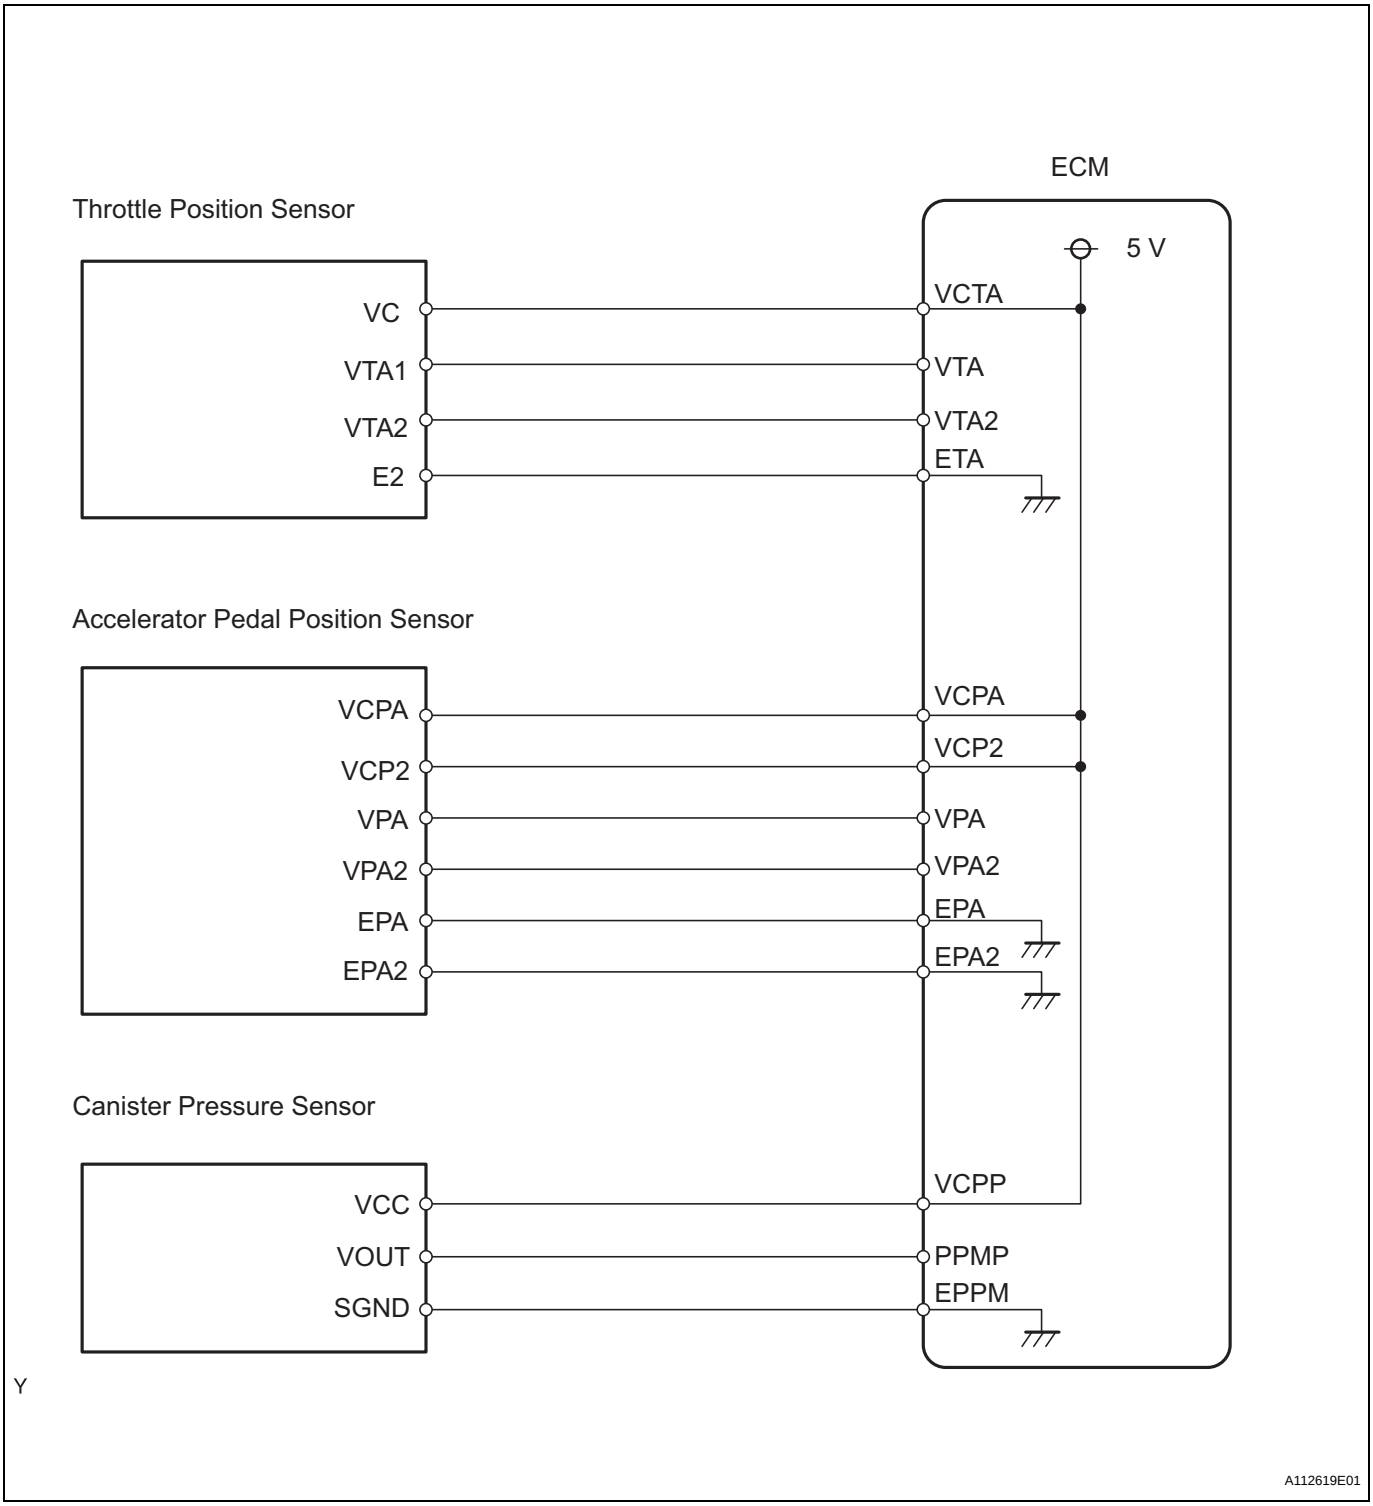


When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned to ON. The MIL goes off when the engine is started.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**CHECK MIL**

(a) Check that Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch ON.

OK:
MIL lights up

OK → **SYSTEM OK**

NG

2	CHECK COMMUNICATION BETWEEN INTELLIGENT TESTER AND ECM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and tester ON.
(c) Check the communication between the tester and ECM.

Result

Result	Proceed To
Communication is possible	A
Communication is not possible	B

A → **GO TO MIL CIRCUIT**

B

3	CHECK MIL (THROTTLE POSITION SENSOR)

(a) Disconnect the C17 throttle body connector.
(b) Turn the ignition switch to ON.
(c) Check the MIL.

Result

Result	Proceed To
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the throttle body connector.

A → **REPLACE THROTTLE BODY ASSEMBLY**

B

4	CHECK MIL (ACCELERATOR PEDAL POSITION SENSOR)

(a) Disconnect the A20 accelerator pedal position sensor connector.
(b) Turn the ignition switch to ON.
(c) Check the MIL.

Result

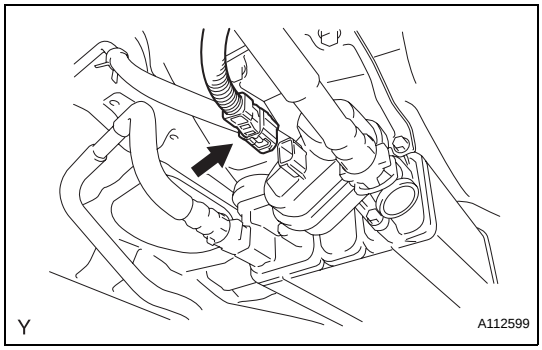
Result	Proceed To
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the accelerator pedal position sensor connector.

A → **REPLACE ACCELERATOR PEDAL POSITION SENSOR**

B

5	CHECK MIL (CANISTER PUMP MODULE)



(a) Disconnect the J25 canister pump module connector.
(b) Turn the ignition switch to ON.
(c) Check the MIL.

ES

Result

Result	Proceed To
MIL illuminates	A
MIL does not illuminate	B

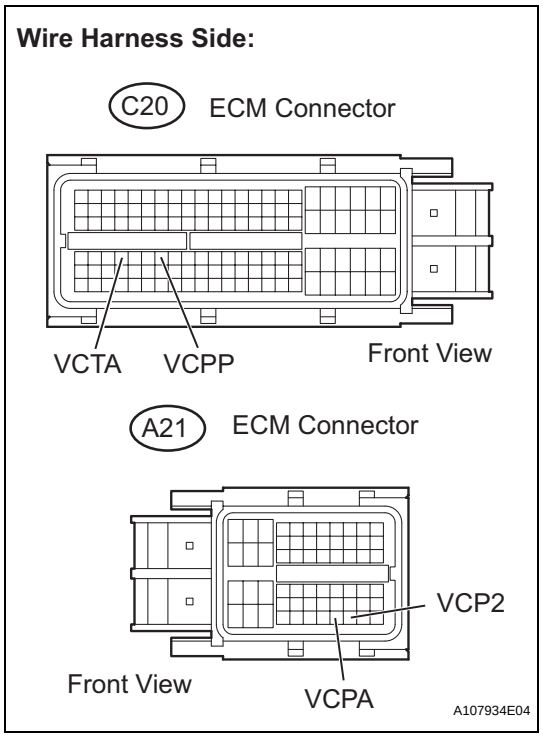
(d) Reconnect the canister pump module connector.

A → **REPLACE CHARCOAL CANISTER ASSEMBLY**

B

6	CHECK HARNESS AND CONNECTOR

(a) Disconnect the C17 throttle body connector.
(b) Disconnect the A20 accelerator pedal position sensor connector.
(c) Disconnect the J25 canister pump module connector.



(d) Disconnect the A21 and C20 ECM connectors.
(e) Check the resistance.

Standard resistance (Check for short)

Tester Connections	Specified Conditions
VCTA (C20-67) - Body ground	10 kΩ or higher
VCPA (A21-57) - Body ground	
VCP2 (A21-58) - Body ground	
VCPP (C20-70) - Body ground	

(f) Reconnect the throttle body connector.
(g) Reconnect the accelerator pedal position sensor connector.
(h) Reconnect the canister pump module connector.
(i) Reconnect the ECM connectors.

ES

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

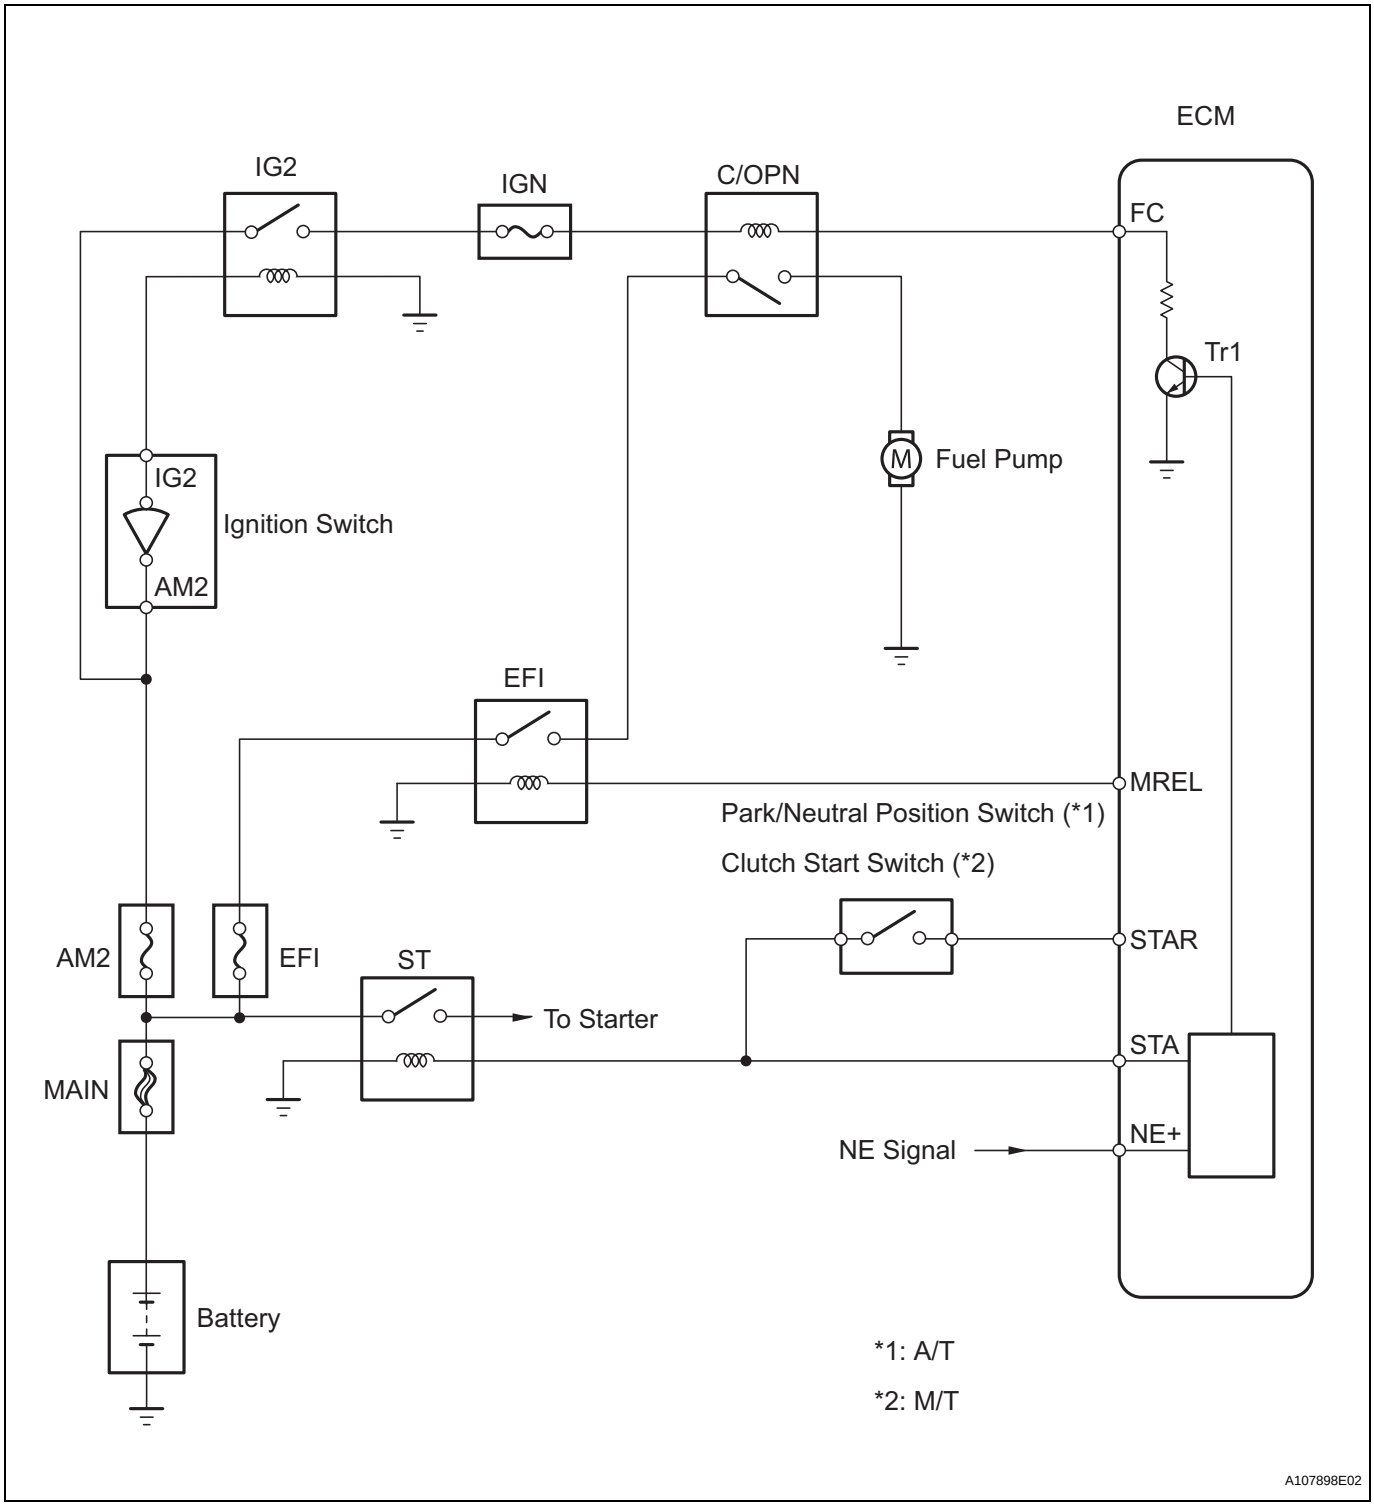
OK

REPLACE ECM

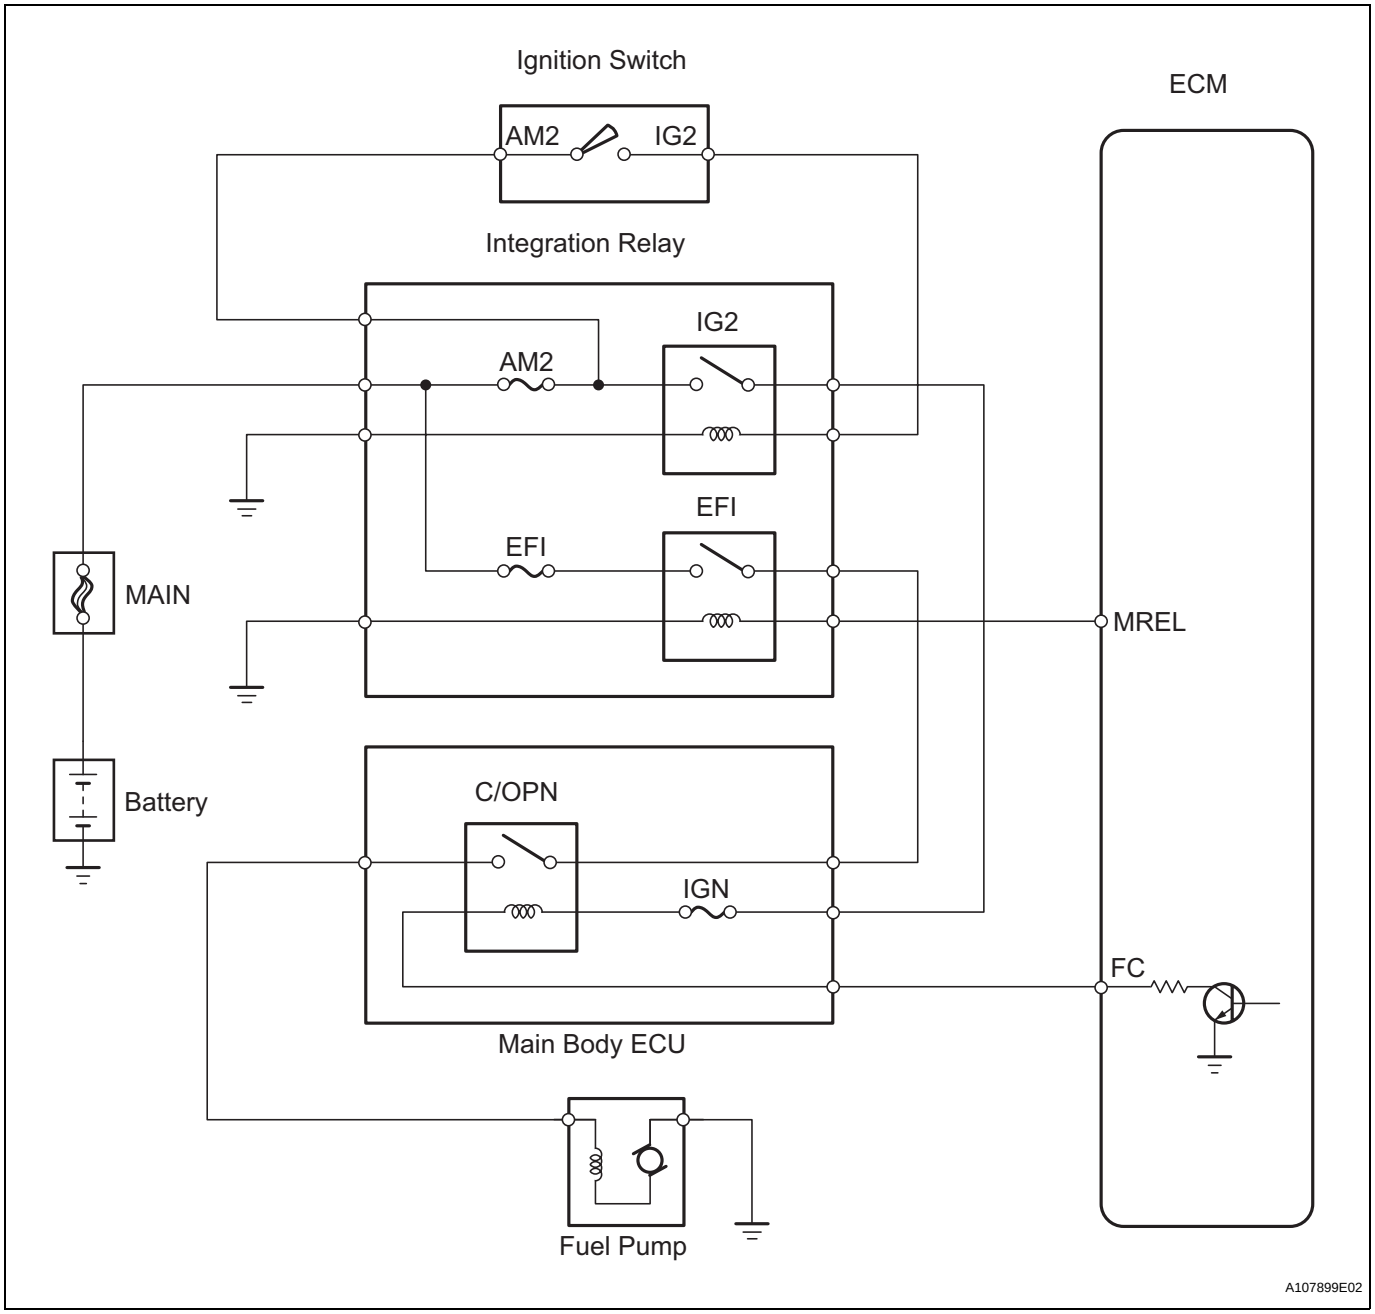
Fuel Pump Control Circuit

DESCRIPTION

When the engine is cranked, the starter relay drive signal output from the STAR terminal of the ECM is input into the STA terminal of the ECM, and NE signal generated by the crankshaft position sensor is also input into the NE+ terminal. Thus, the ECM interprets that the engine is cranked, and turns the transistor Tr1 in the ECM internal circuit ON. The current flows to the C/OPN (Circuit Opening) relay by turning the Tr1 ON. Then, the fuel pump operates.
While the NE signal is input into the ECM, when engine is running, the ECM turns the Tr1 on continuously.



WIRING DIAGRAM



INSPECTION PROCEDURE

1	**PERFORM ACTIVE TEST USING INTELLIGENT TESTER (FUEL PUMP/SPD)**

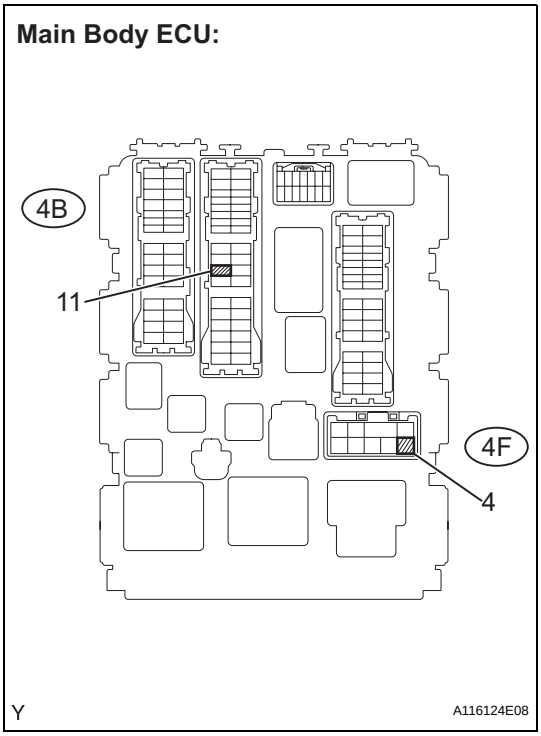
(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP/ SPD.
(d) Check whether the fuel pump operating sound occurs when perform the Active Test on the tester.
OK:
Fuel pump operating sound occurs.

OK → Go to step 8

NG

2 INSPECT MAIN BODY ECU (C/OPN RELAY INPUT VOLTAGE)

Main Body ECU:



(a) Measure the voltage between the terminal of the main body ECU and the body ground when the ignition switch is turned to ON and OFF.

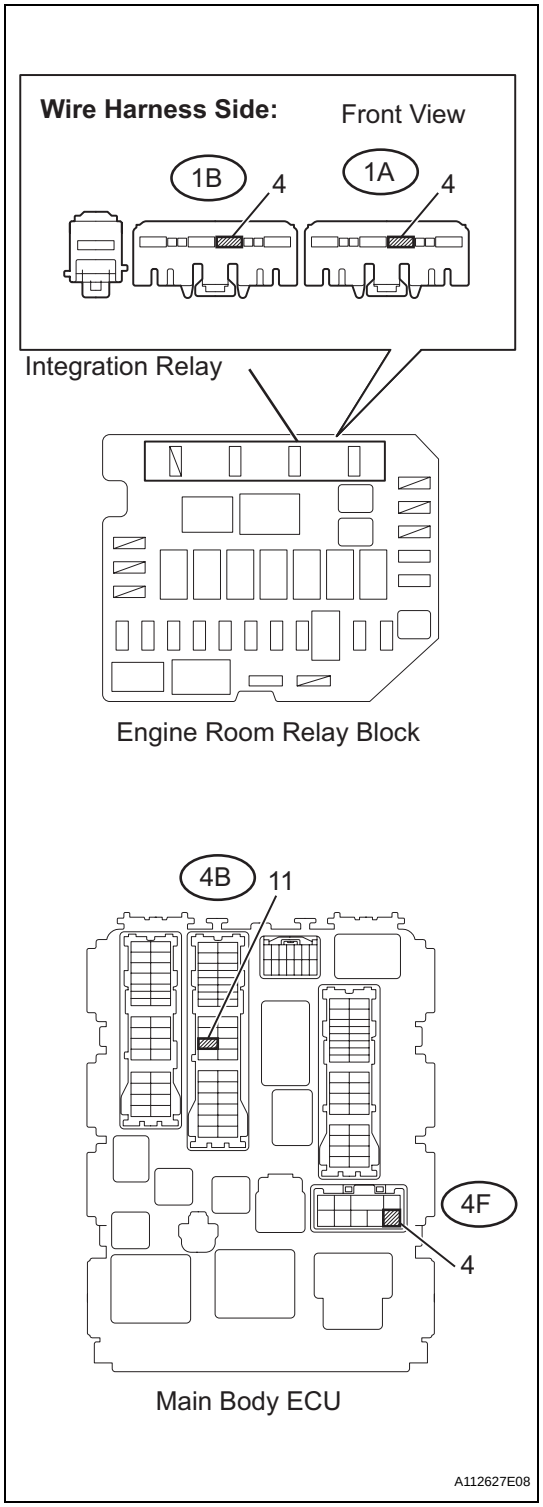
Standard voltage

Tester Connections	Ignition Switch Conditions	Specified Conditions
4B-11 - Body ground	OFF	Below 1 V
4F-4 - Body ground		
4B-11 - Body ground	ON	11 to 14 V
4F-4 - Body ground		

OK → Go to step 4

NG

3	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY)



(a) Remove the integration relay from the engine room relay block.
(b) Disconnect the main body ECU connector.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
1B-4 - 4F-4	Below 1 Ω
1A-4 - 4B-11	

Standard resistance (Check for short)

Tester Connections	Specified Conditions
4F-4 - Body ground	10 kΩ or higher
4B-11 - Body ground	

(d) Reinstall the integration relay.
(e) Reconnect the main body ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

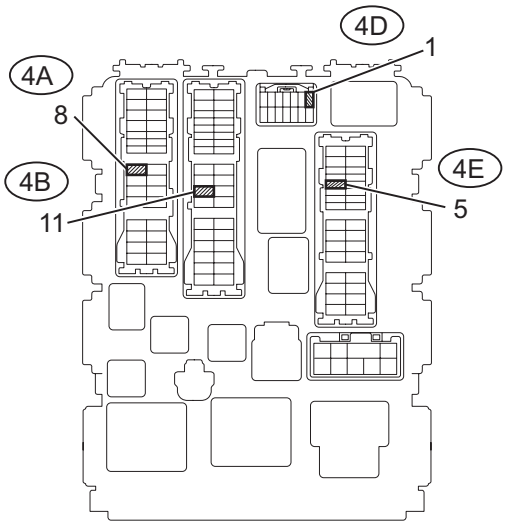
OK

GO TO ECM POWER SOURCE CIRCUIT

ES

4	INSPECT MAIN BODY ECU (C/OPN RELAY)

Main Body ECU:



(a) Remove the main body ECU.
(b) Check the C/OPN relay resistance.
Standard resistance

Tester Connections	Specified Conditions
4B-11 - 4A-8	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 4D-1 and 4E-5)

HINT:
Relay coil circuit between 4D-1 and 4E-5 is not through IGN fuse.
(c) Reinstall the main body ECU.

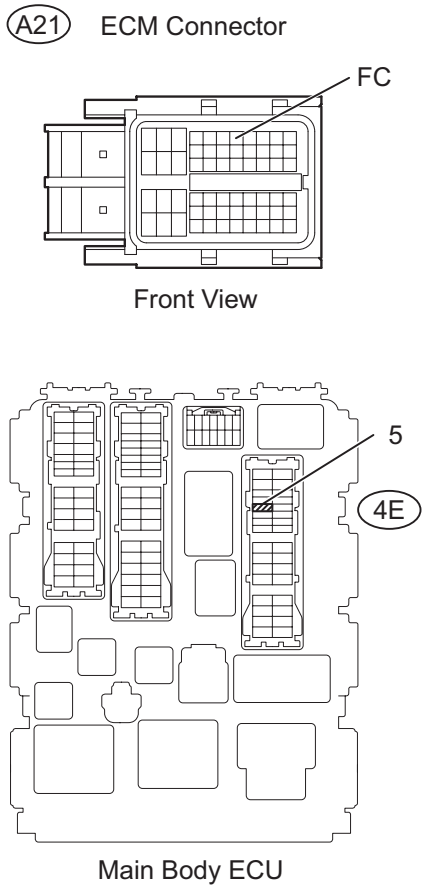
NG → **REPLACE MAIN BODY ECU**

OK

ES

5	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ECM)

Wire Harness Side:



A115687E03

(a) Disconnect the A21 ECM connector.
(b) Disconnect the 4E connector from main body ECU.
(c) Check the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Main Body ECU (4E-5) - FC (A21-7)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Main body ECU (4E-5) or FC (A21-7) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU and the ECM connectors.

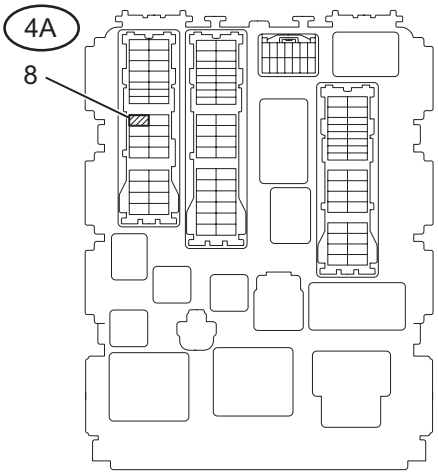
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

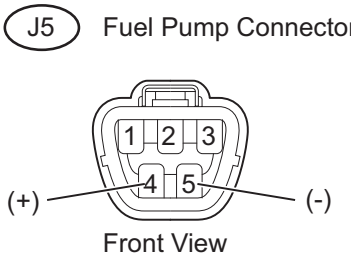
ES

6 CHECK HARNESS AND CONNECTOR (C/OPN RELAY - FUEL PUMP - BODY GROUND)

Wire Harness Side:



Wire Harness Side:



A107901E04

(a) Check the harness and the connectors between the main body ECU and the fuel pump.
 (1) Disconnect the 4A main body ECU connector.
 (2) Disconnect the J5 fuel pump connector.
 (3) Check the resistance.
 Standard resistance (Check for open)

Tester Connections	Specified Conditions
Main body ECU (4A-8) - Fuel pump (J5-4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Main body ECU (4A-8) or Fuel pump (J5-4) - Body ground	10 kΩ or higher

(b) Check the harness and the connectors between the fuel pump and the body ground.
 (1) Disconnect the J5 fuel pump connector.
 (2) Check the resistance.
 Standard resistance (Check for open)

Tester Connections	Specified Conditions
Fuel pump (J5-5) - Body ground	Below 1 Ω

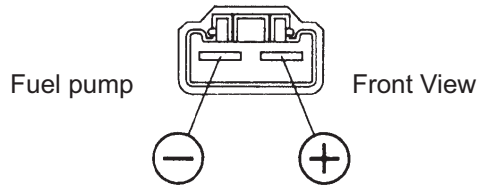
(c) Reconnect the main body ECU connector.
(d) Reconnect the fuel pump connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT FUEL PUMP

Component Side :



A095616E03

(a) Inspect fuel pump resistance.
 (1) Measure the resistance between the terminals.
 Standard resistance:
 0.2 to 3.0 Ω at 20°C (68°F)
(b) Inspect fuel pump operation.
 (1) Apply the battery voltage to both the terminals. Check that the pump operates.
 NOTICE:
 - **These tests must be done quickly (within 10 seconds) to prevent the coil from burning out.**
 - **Keep the fuel pump as far away from the battery as possible.**

- **Always switch at the battery side.**

NG → **REPLACE FUEL PUMP**

OK

REPLACE ECM

8	READ VALUE USING INTELLIGENT TESTER (STARTER SIG)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.
(d) Check the result when the ignition switch is turned to ON and START.
Standard

Ignition Switch Position	ON	START
Starter Signal	OFF	ON

NG → **REPAIR OR REPLACE STARTING SYSTEM**

OK

9	READ VALUE USING INTELLIGENT TESTER (ENGINE SPD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
(d) Read the values displayed on the tester while cranking.
Standard:
Values are displayed continuously.

NG → **REPAIR OR REPLACE CRANKSHAFT POSITION SENSOR CIRCUIT**

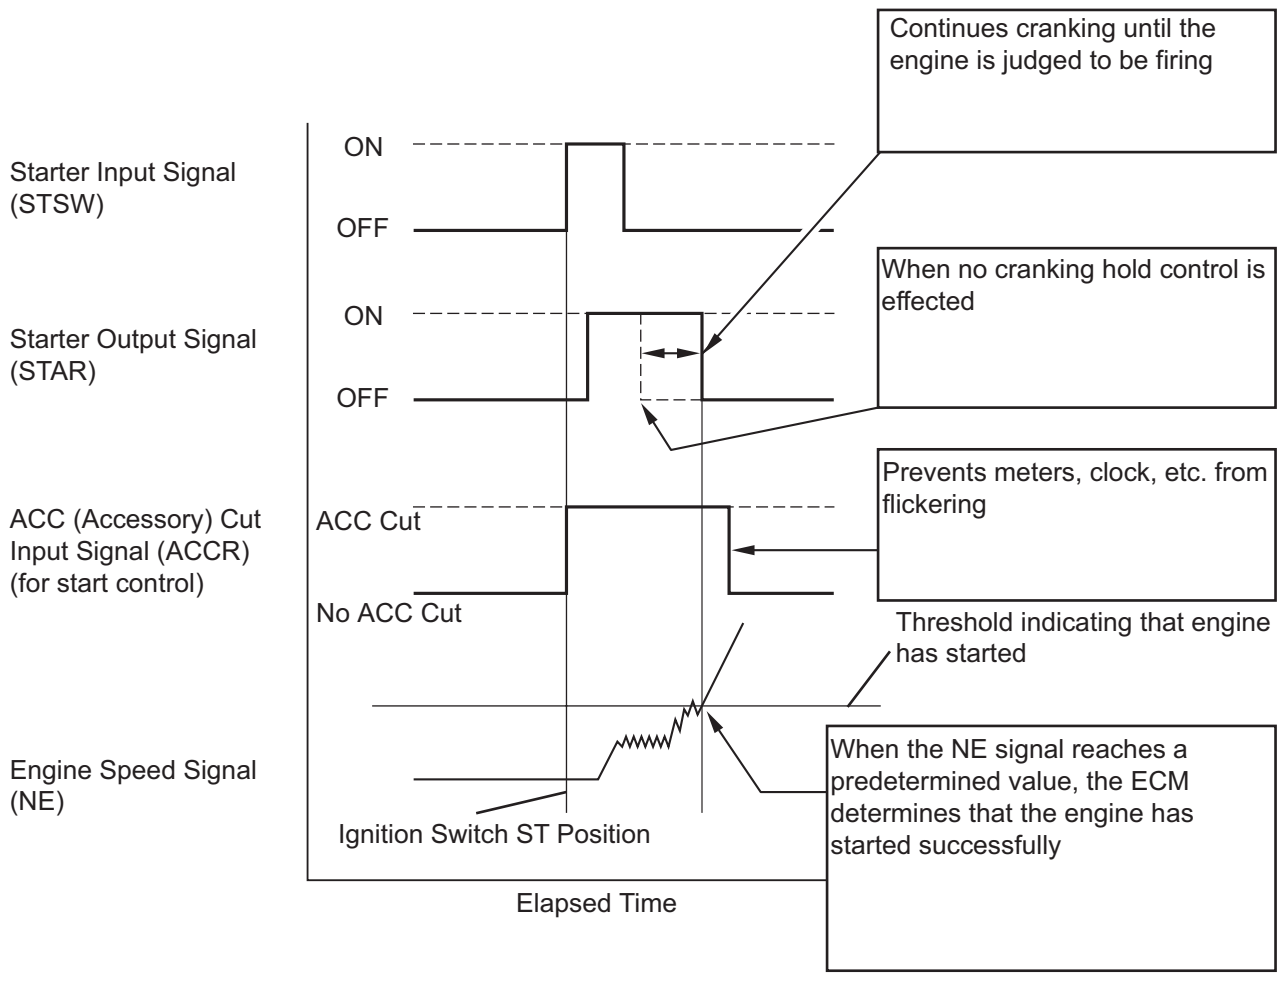
OK

REPLACE ECM

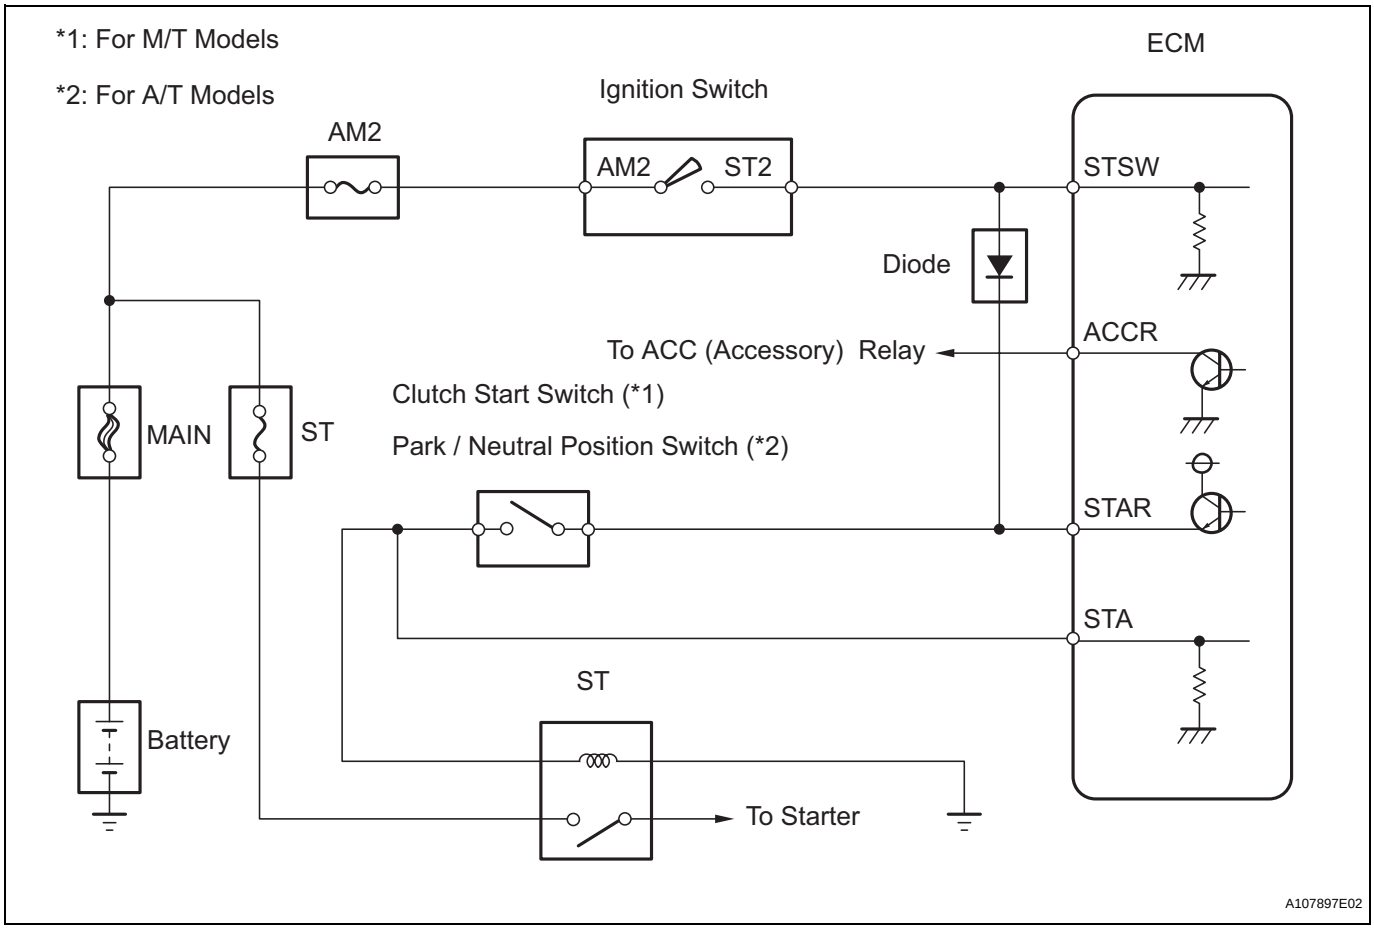
Cranking Holding Function Circuit

DESCRIPTION

The cranking holding control system provides a current to the starter when the ECM detects the ignition switch's start signal (STSW). When the ECM judges that the engine has started, the system cuts the current to the starter. When the ECM receives the STSW signal, it turns on the ACC (Accessory) relay, which prevents flickering of the combination meter, clock and audio system. Also, the ECM sends a signal to the ECM's STAR terminal. Then the STAR output signal travels through the Park/Neutral Position (PNP) switch to the ST relay, causing the starter to activate. When the engine is cranking, the starter operation signal is sent to the ECM's STA terminal.



WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1	READ VALUE USING INTELLIGENT TESTER (STARTER SIG)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.

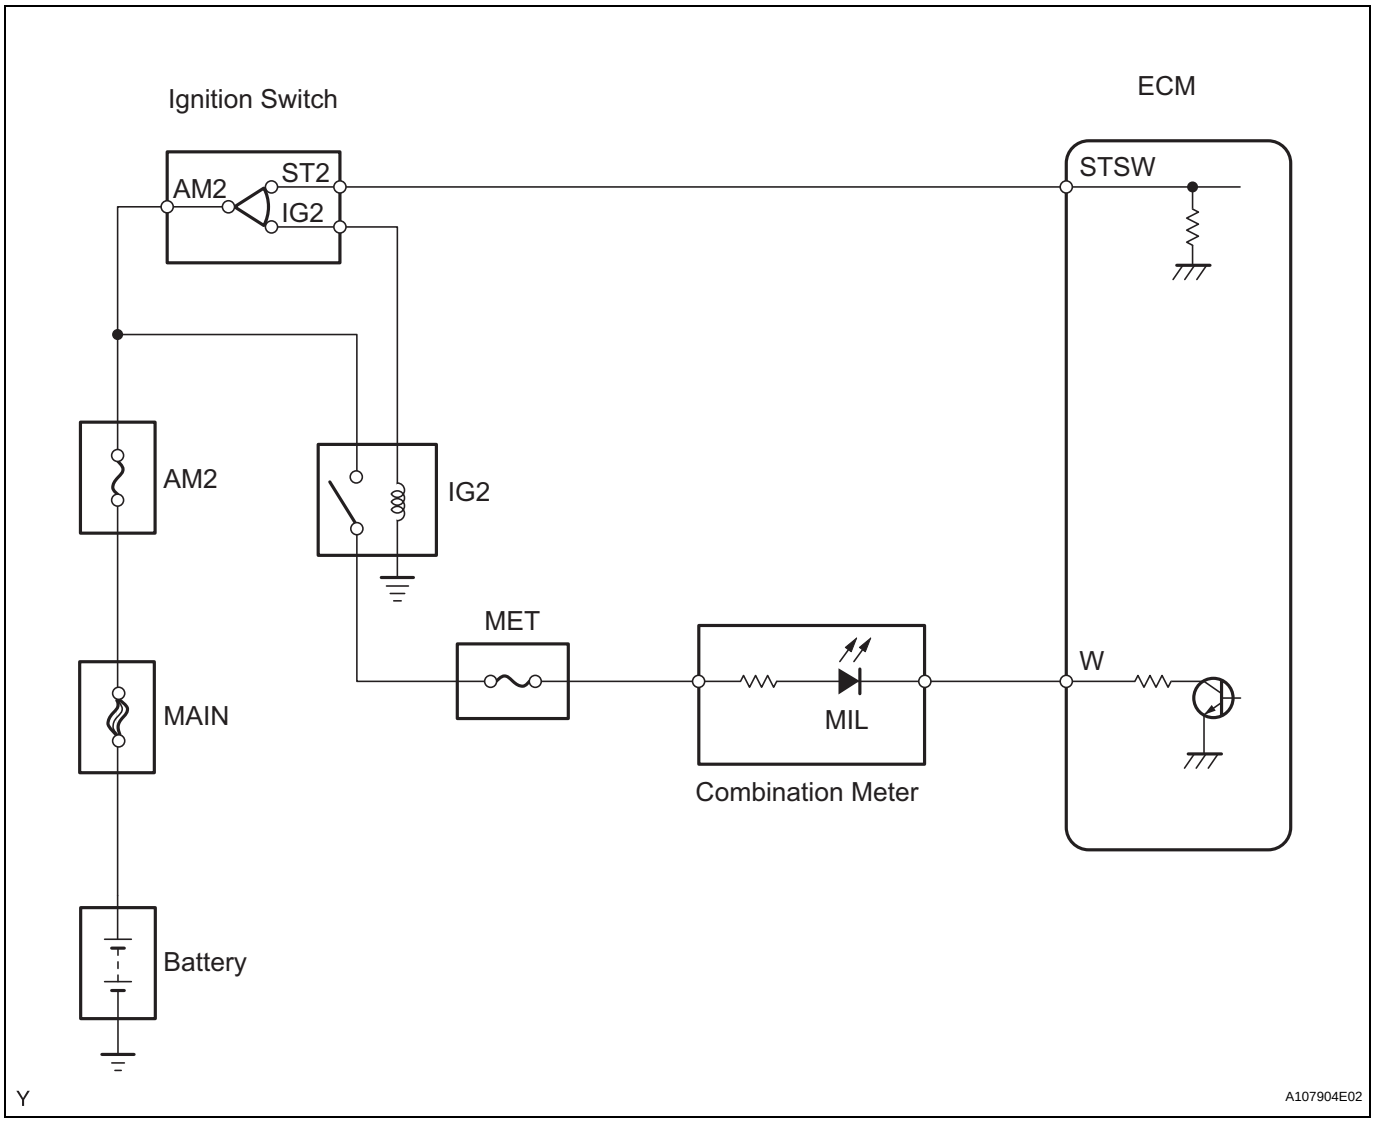
CHECK AND REPLACE STARTER RELAY AND STARTER

MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunction detections by the ECM. When the ignition switch is turned to ON, power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.
The MIL operation can be checked visually: When the ignition switch is first turned to ON, the MIL should be illuminated and should then turn off. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using an intelligent tester.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK THAT MIL IS ILLUMINATED

(a) Perform troubleshooting in accordance with the table below.

Conditions	Proceed To
MIL remains ON	A
MIL does not illuminate	B

B → **Go to step 5**

ES

A

2	CHECK WHETHER MIL TURNS OFF

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Check if any DTCs have been stored. Note down any DTCs.
(e) Clear DTCs (See page ES-34).
(f) Check if the MIL goes off.
Standard:
MIL should go off.

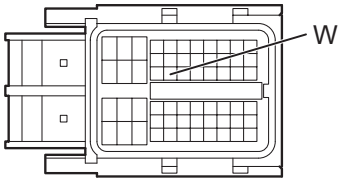
OK → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

NG

3	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

Wire Harness Side:

A21 ECM Connector



Front View

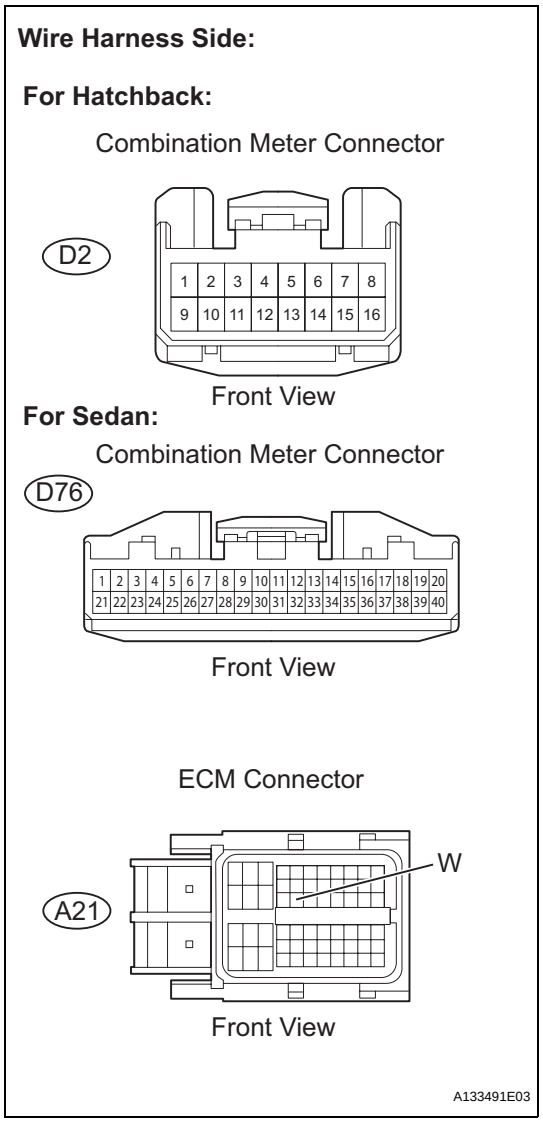
A115671E03

(a) Disconnect the A21 ECM connector.
(b) Turn the ignition switch to ON.
(c) Check that the MIL is not illuminated.
OK:
MIL is not illuminated.
(d) Reconnect the ECM connector.

OK → **REPLACE ECM**

NG

4 CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)



(a) Disconnect the A21 ECM connector.
(b) Disconnect the D2 combination meter connector (for Hatchback).
(c) Disconnect the D76 combination meter connector (for Sedan).
(d) Check the resistance.
Standard resistance (Check for short)

Tester Connections	Specified Conditions
W (A21-24) or combination meter (D2-4) - Body ground	10 kΩ or higher
W (A21-24) or combination meter (D76-4) - Body ground	

(e) Reconnect the ECM connector.
(f) Reconnect the combination meter connector.

OK → **REPAIR OR REPLACE COMBINATION METER ASSEMBLY**

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR

5 CHECK THAT MIL IS ILLUMINATED

(a) Check if the MIL is illuminated when the ignition switch is turned to ON.
OK:
MIL should be illuminated.

OK → **SYSTEM OK**

ES

NG

6	CHECK THAT ENGINE STARTS

(a) Turn the ignition switch to ON.
(b) Start the engine.

Result	Proceed To
Engine starts	A
Engine does not start*	B

HINT:
*: The intelligent tester cannot communicate with the ECM.

B → GO TO VC OUTPUT CIRCUIT

A

7	INSPECT COMBINATION METER ASSEMBLY (MIL CIRCUIT)

- Check the MIL circuit for Hatchback (See page ME-76).
- Check the MIL circuit for Sedan (See page ME-12).

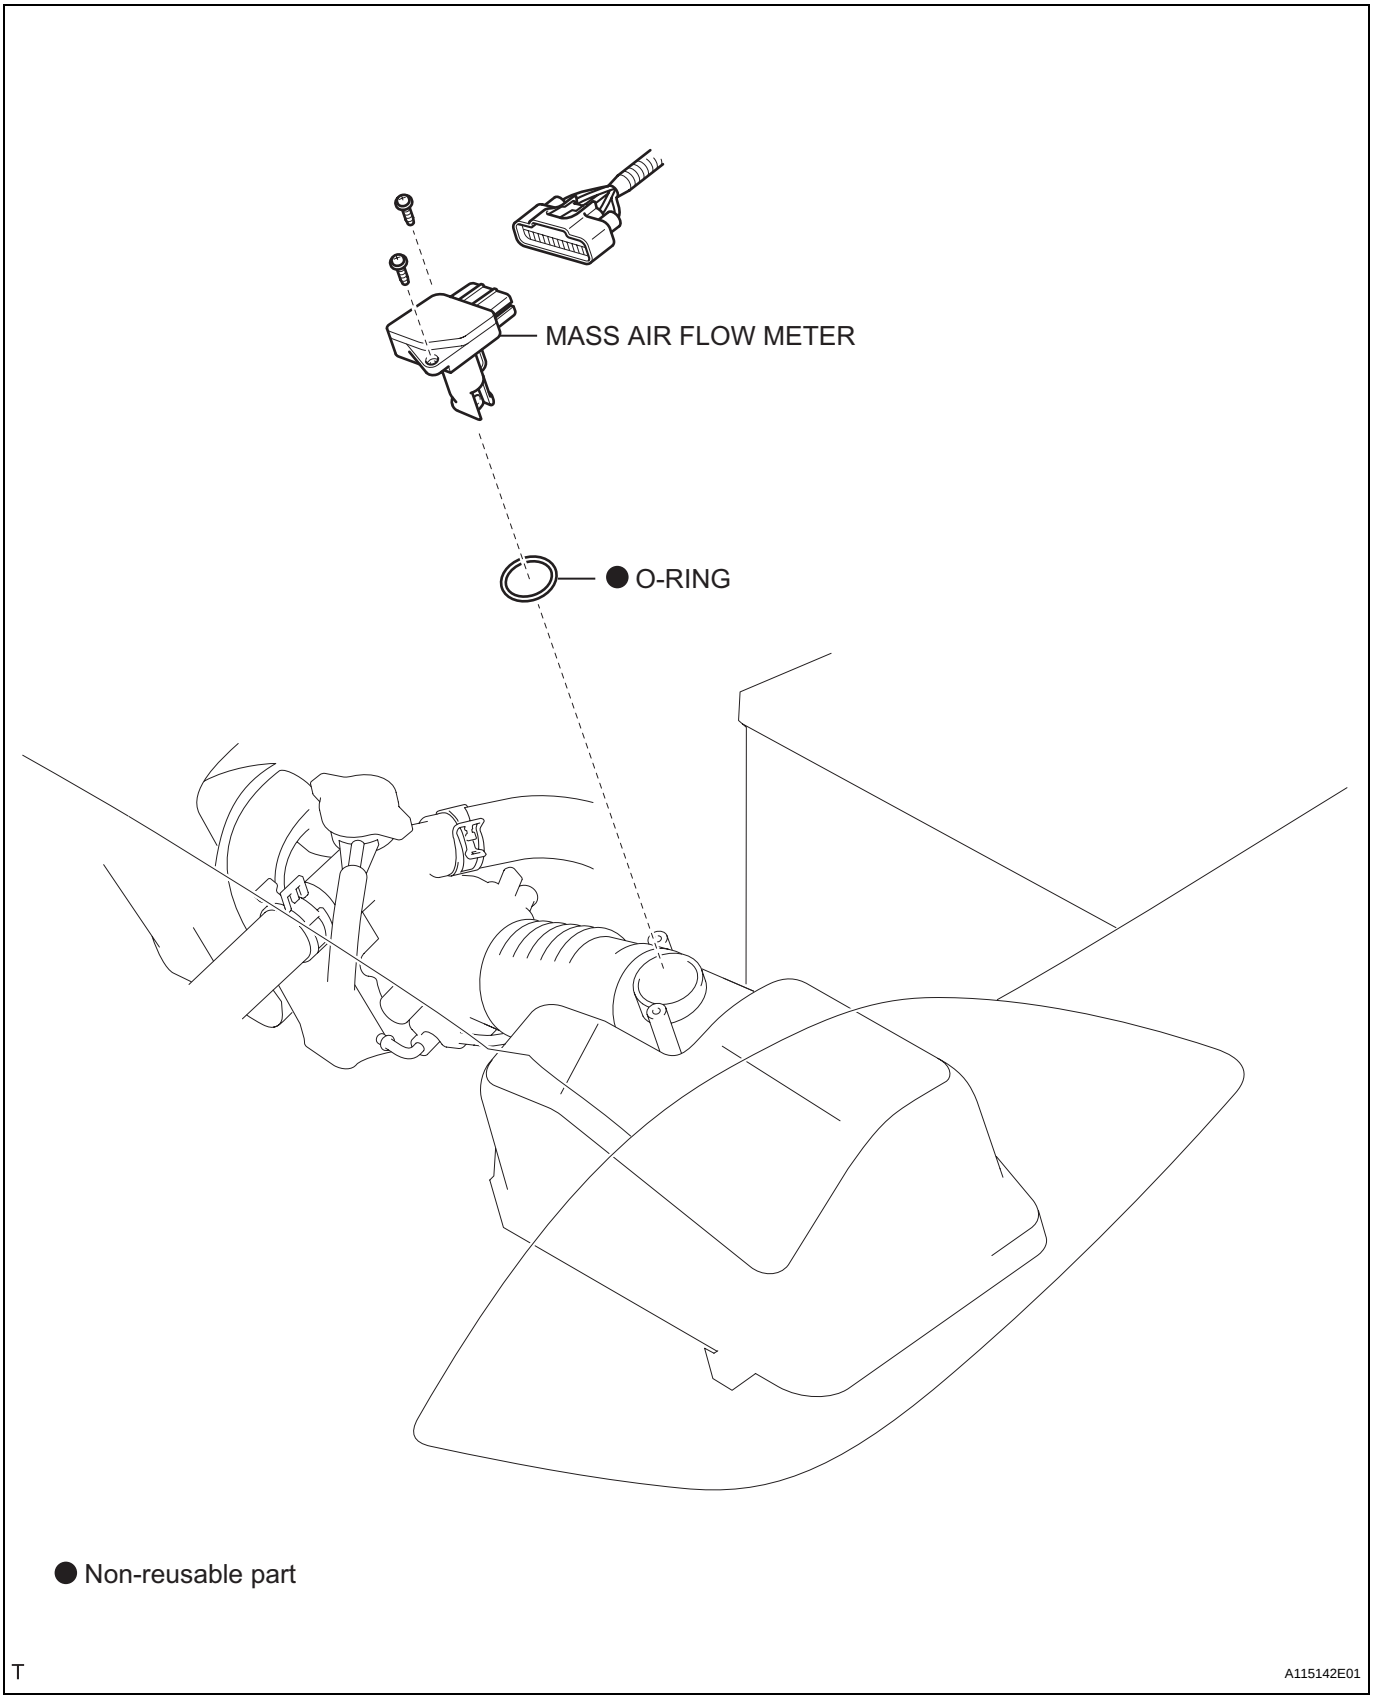
NG → REPAIR OR REPLACE COMBINATION METER ASSEMBLY

OK

CHECK AND REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)

MASS AIR FLOW METER

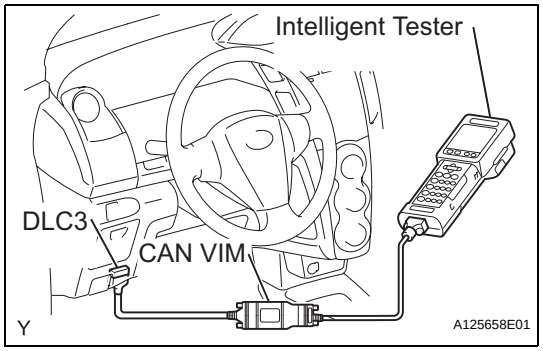
COMPONENTS



ON-VEHICLE INSPECTION

NOTICE:

- **Perform the mass air flow meter inspection according to the procedures below.**
- **Only replace the mass air flow meter when both the LONG FT#1 value and MAF value in the DATA LIST (with the engine stopped) are not within the normal operating range.**



1. INSPECT MASS AIR FLOW METER

(a) Perform confirmation driving pattern.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the tester ON.

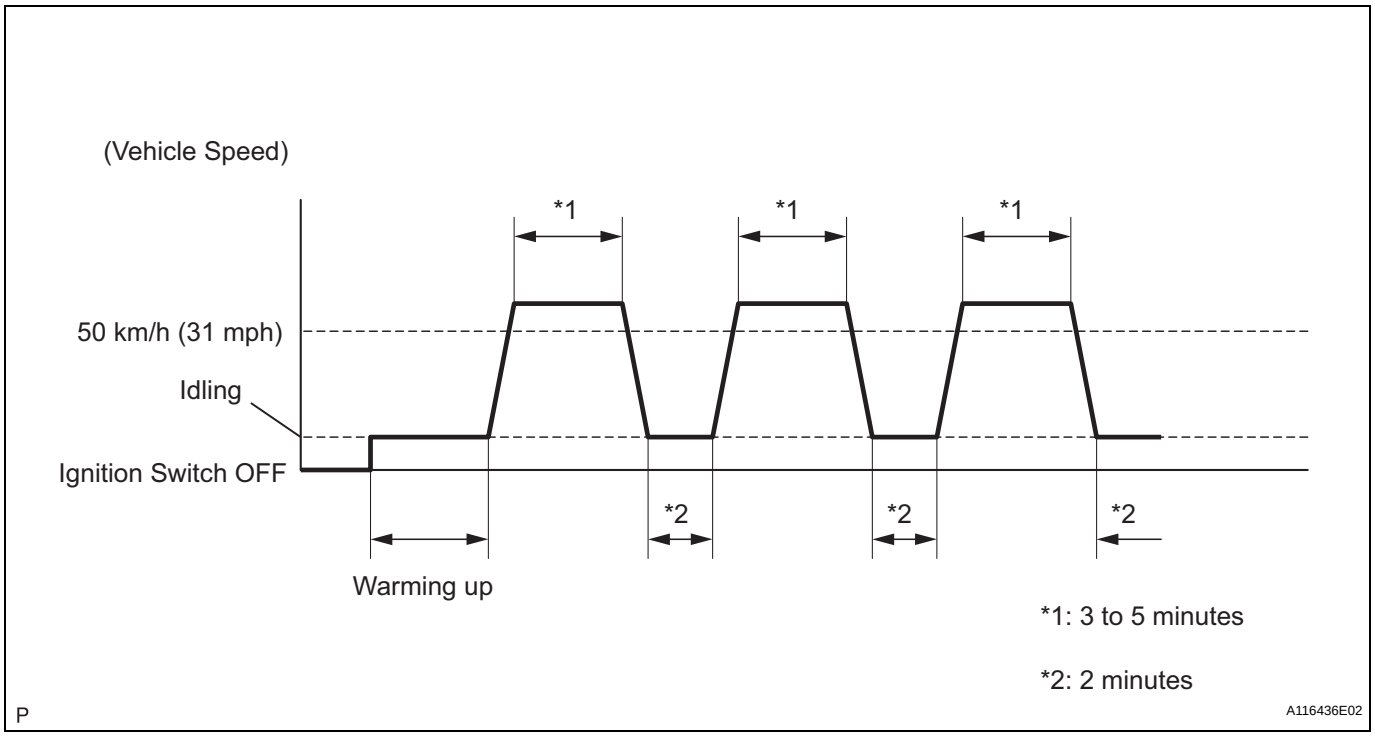
(4) Clear the DTCs (see page ES-34).

(5) Start the engine and warm it up with all the accessory switches OFF (until the engine coolant temperature is 75°C (167°F) or more).

(6) Drive the vehicle at 50 km/h (31 mph) or more for 3 to 5 minutes *1.

(7) Allow the engine to idle for 2 minutes *2.

(8) Perform steps *1 and *2 at least 3 times.



(b) Read the value using the intelligent tester (LONG FT#1).

(1) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / LONG FT #1.

(2) Read the values displayed on the tester.

Standard value:

Within -15 to +15 %

If the result is not within the specified range, perform the inspection below.

(c) Read the value using the intelligent tester (MAF).
NOTICE:
- **Turn off the engine.**
- **Perform the inspection with the vehicle indoors and on a level surface.**
- **Perform the inspection of the mass air flow meter while it is installed into the air cleaner case (installed on the vehicle).**
- **During the test, do not use the exhaust air duct to perform suction on the exhaust pipe.**

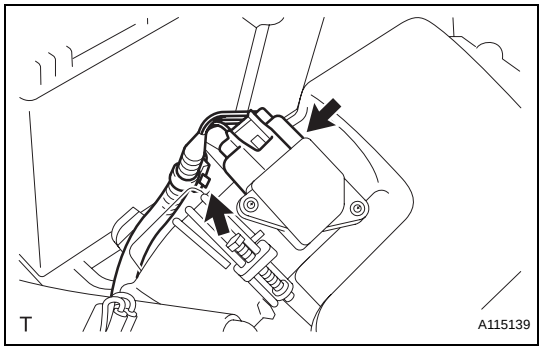
(1) Turn the ignition switch to ACC.
(2) Turn the ignition switch ON (do not run the engine).
(3) Turn the tester ON.
(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.
(5) Wait 30 seconds, and read the values on the intelligent tester.
Standard condition:
Less than 0.28g/sec
- If the result is not as specified, replace the mass air flow meter.
- If the result is within the specified range, investigate the cause of the extremely rich or lean air fuel ratio (see page ES-136).

REMOVAL

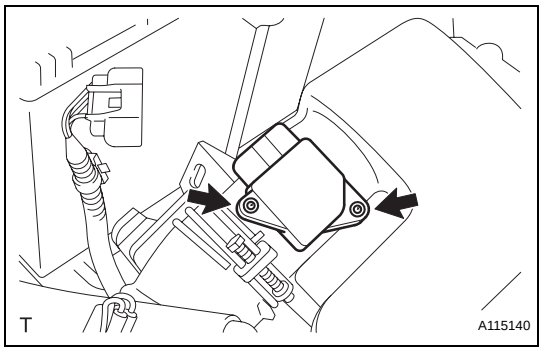
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE MASS AIR FLOW METER

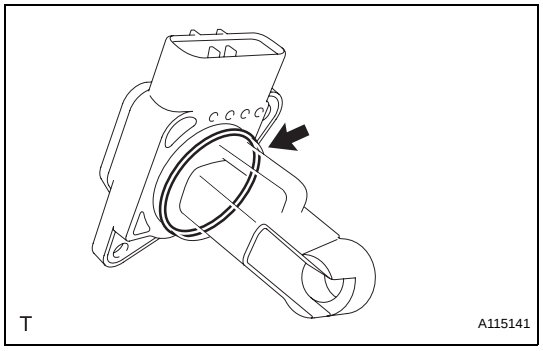
(a) Disconnect the wire harness clamp and mass air flow meter connector.



(b) Remove the 2 screws and the mass air flow meter.



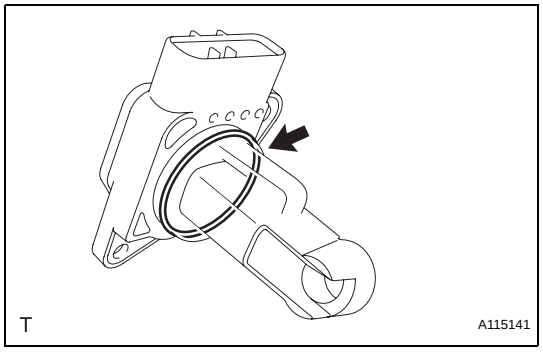
(c) Remove the O-ring from the mass air flow meter.



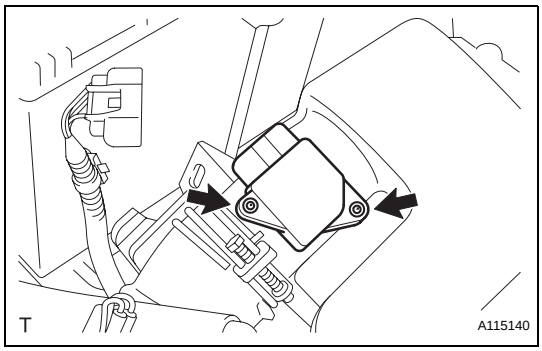
INSTALLATION

1. INSTALL MASS AIR FLOW METER

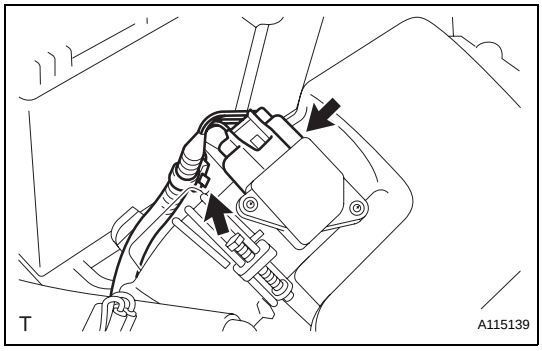
(a) Install a new O-ring onto the mass air flow meter.



ES



(b) Install the mass air flow meter with the 2 screws.



(c) Connect the wire harness clamp and mass air flow meter connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

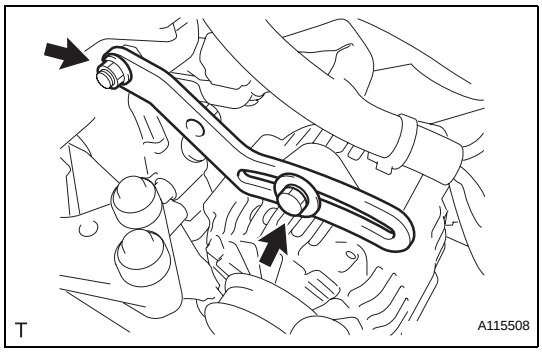
REMOVAL

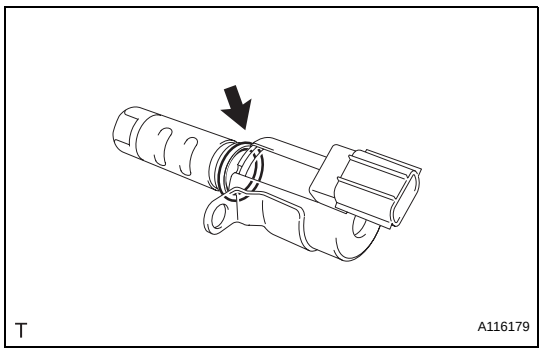
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
5. **REMOVE FAN BELT ADJUSTING BAR**
   (a) Remove the bolt and nut and remove the fan belt adjusting bar.

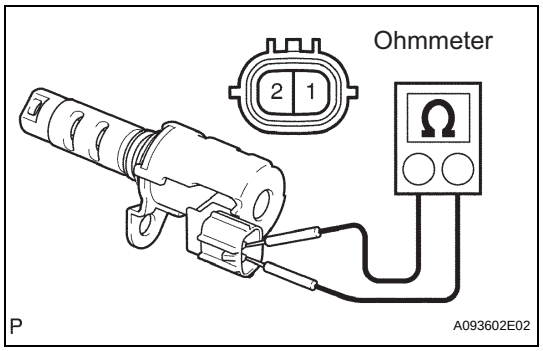


6. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**
   (a) Disconnect the camshaft timing oil control valve assembly connector.

   (b) Remove the bolt and nut and remove the camshaft timing oil control valve assembly.

   (c) Remove the O-ring from the camshaft timing oil control valve assembly.





INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

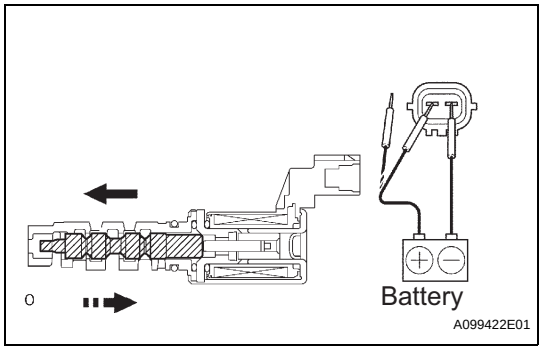
(a) Check the resistance.

(1) Measure the resistance between the terminals.

Standard resistance:

6.9 to 7.9 Ω at 20 °C (68°F)

If the result is not as specified, replace the oil control valve assembly.



(b) Check the operation.

(1) Connect the positive (+) battery lead to terminal 1 and the negative (-) lead to terminal 2, and check the movement of the valve.

Standard

Condition	Specified Condition
Battery positive (+) voltage applied	Valve moves to the left as shown in the illustration
Battery positive (+) voltage cut off	Valve moves to the right as shown in the illustration

If the result is not as specified, replace the oil control valve.

NOTICE:

If the valve does not return properly because of foreign matter intrusion, a small amount of leakage in the advanced direction may occur and a DTC may be output.

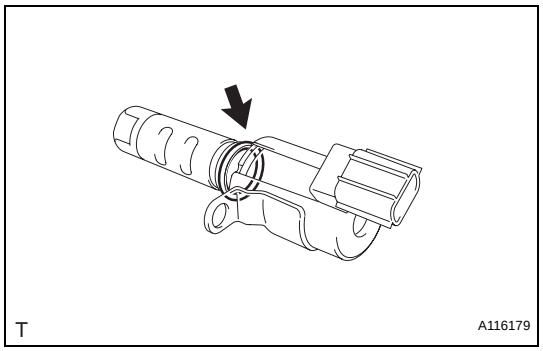
INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Apply a light coat of engine oil to a new O-ring and install it onto the camshaft timing oil control valve assembly.

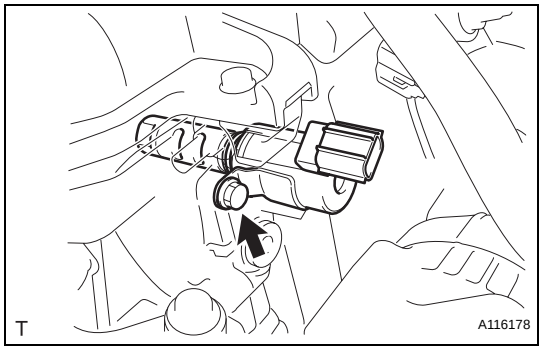
NOTICE:

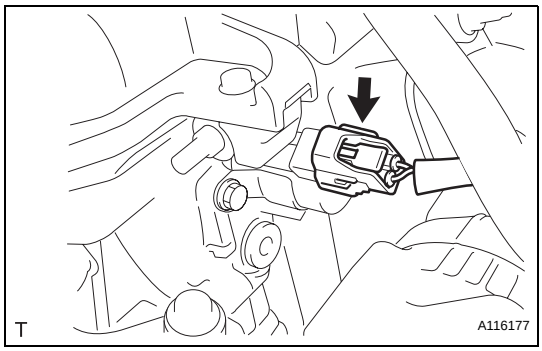
Do not twist the O-ring.



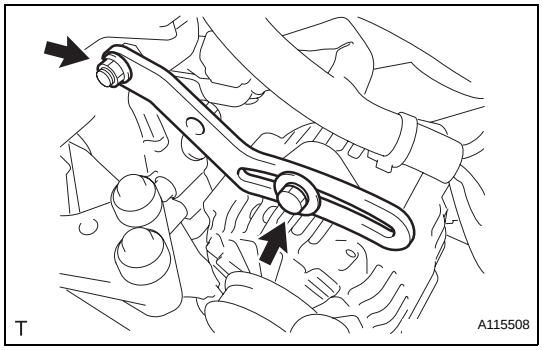
(b) Install the camshaft timing oil control valve assembly with the bolt.

Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)





(c) Connect the camshaft timing oil control valve assembly connector.



2. INSTALL FAN BELT ADJUSTING BAR

(a) Provisionally install the fan belt adjusting bar with the bolt and nut.

(b) Tighten the nut to the specified torque.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)

3. INSTALL FAN AND GENERATOR V BELT (See page EM-7)

4. ADJUST FAN AND GENERATOR V BELT (See page EM-7)

5. INSPECT FAN AND GENERATOR V BELT (See page EM-8)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

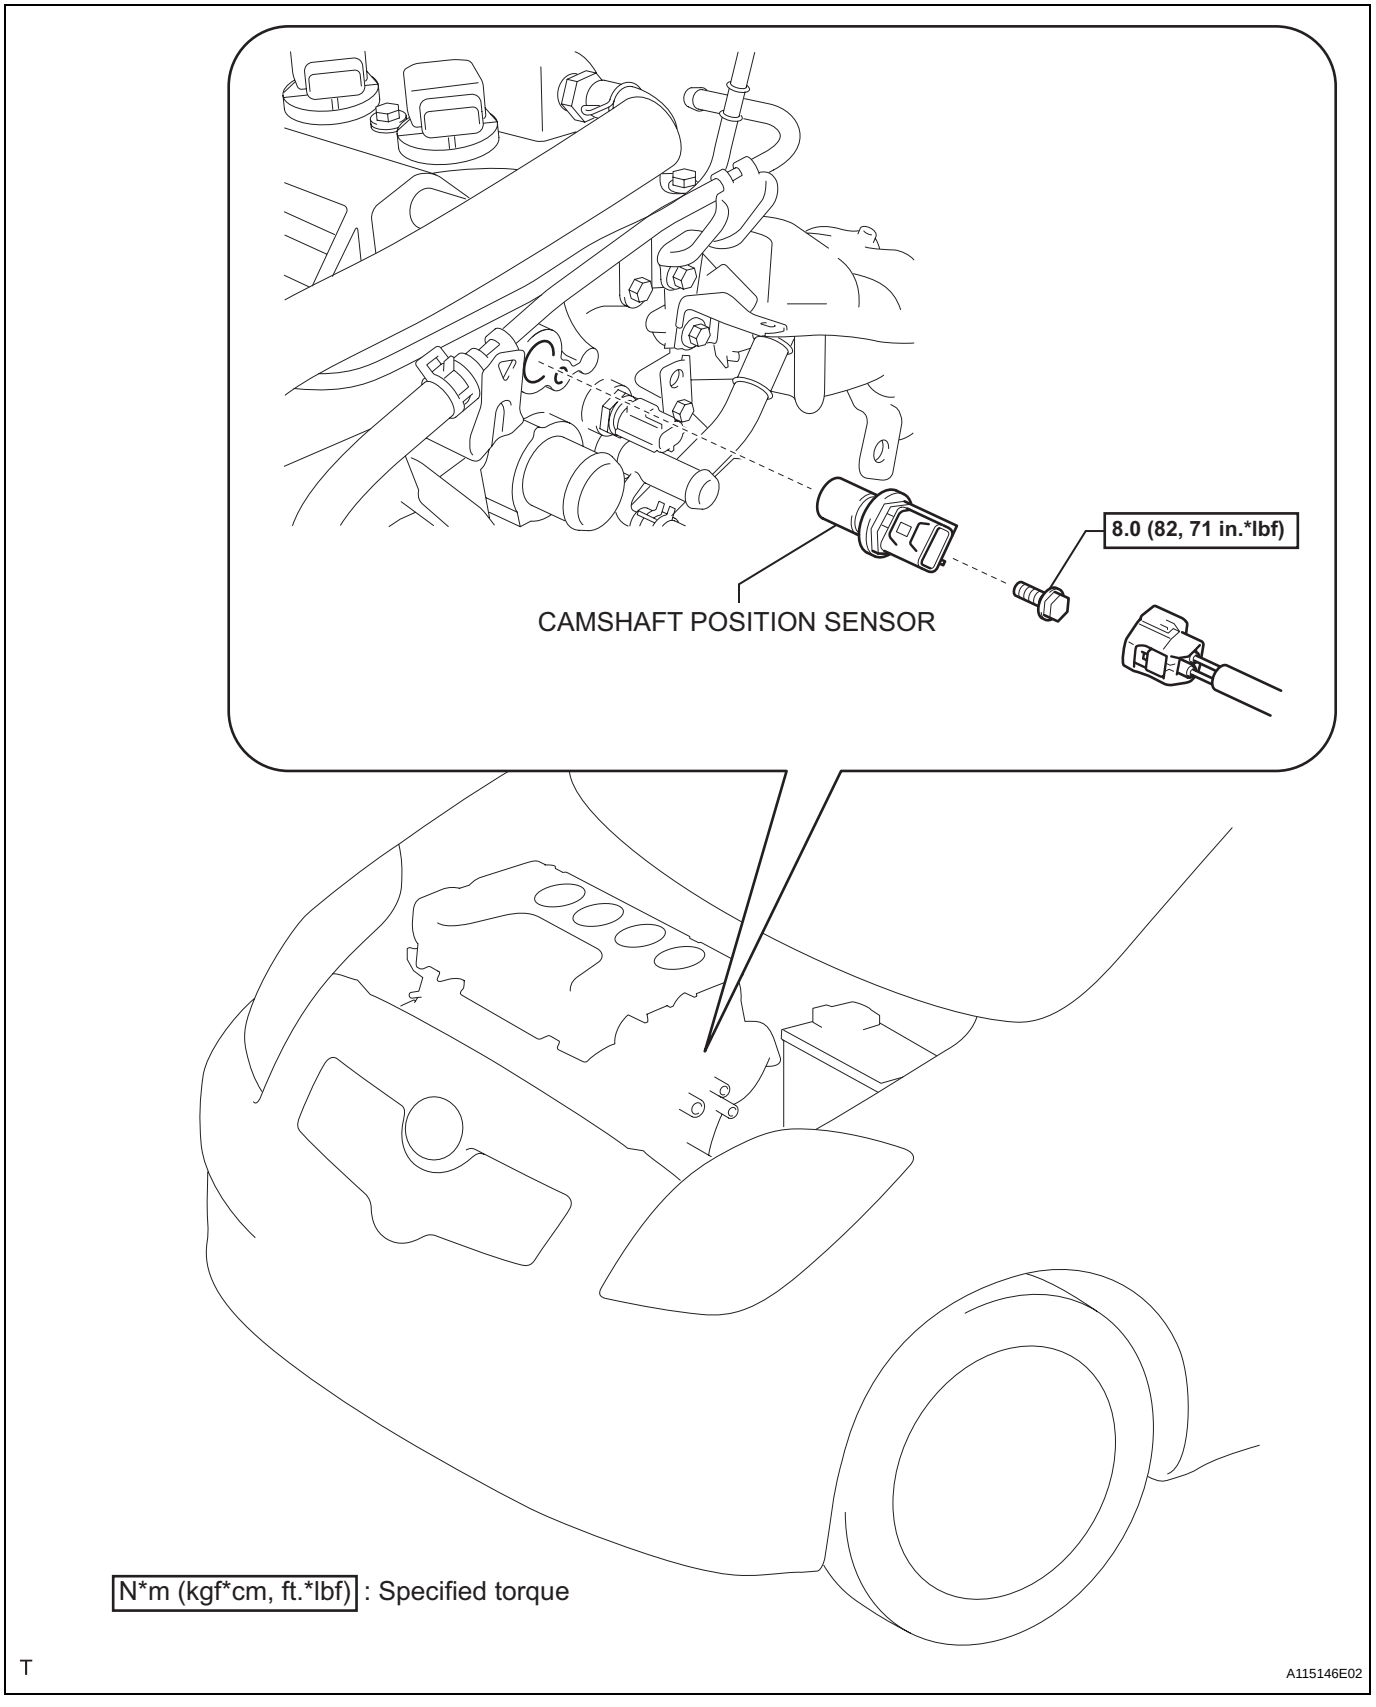
7. CHECK FOR ENGINE OIL LEAKAGE

8. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

9. INSTALL ENGINE UNDER COVER RH

CAMSHAFT POSITION SENSOR

COMPONENTS



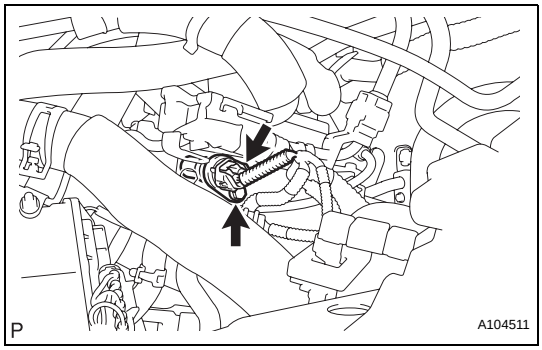
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CAMSHAFT POSITION SENSOR

(a) Disconnect the camshaft position sensor connector.

(b) Remove the bolt and remove the camshaft position sensor.



INSPECTION

1. INSPECT CAMSHAFT POSITION SENSOR

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

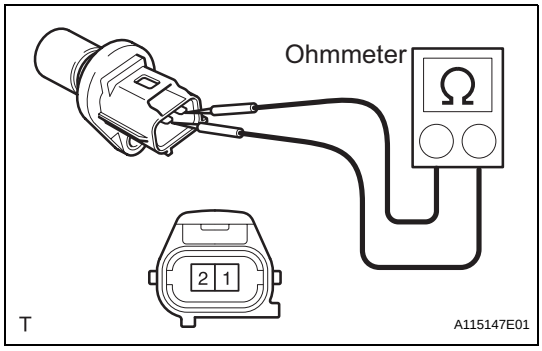
Standard resistance

Temperature	Specified Condition
Cold	1,630 to 2,740 Ω
Hot	2,065 to 3,225 Ω

HINT:

In the table above, the terms Cold and Hot refer to the temperature of the coils. Cold means approximately -10 to 50 °C (14 to 122 °F). Hot means approximately 50 to 100 °C (122 to 212 °F).

If the resistance is not as specified, replace the camshaft position sensor.



INSTALLATION

1. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring on the camshaft position sensor.

(b) Install the camshaft position sensor with the bolt.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NOTICE:

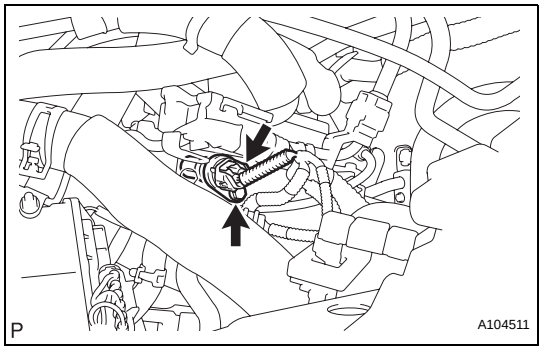
Do not twist the O-ring.

(c) Connect the camshaft position sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

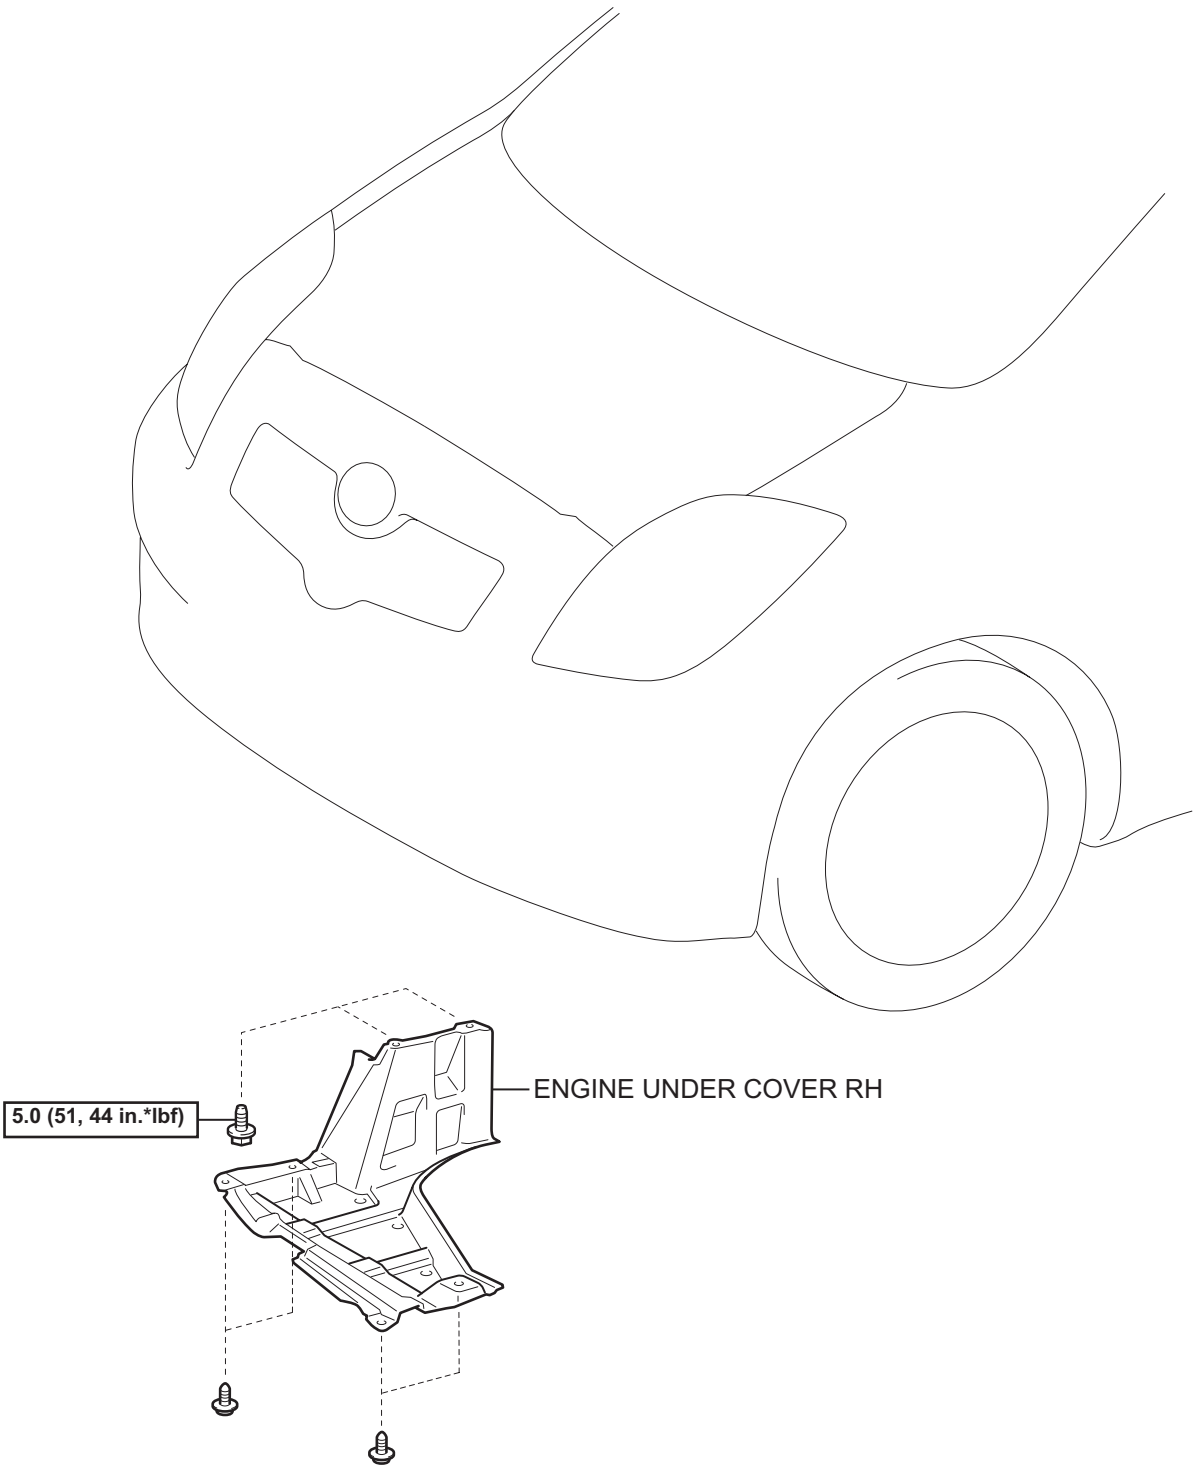
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. CHECK FOR ENGINE OIL LEAKAGE



CRANKSHAFT POSITION SENSOR

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

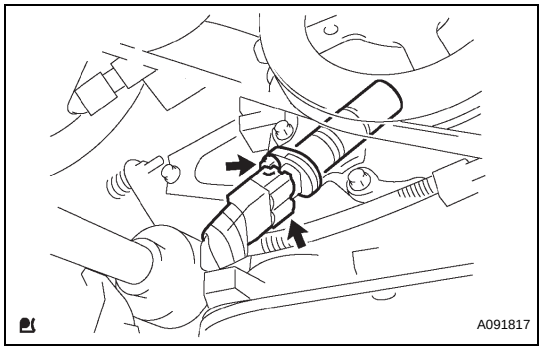
REMOVAL

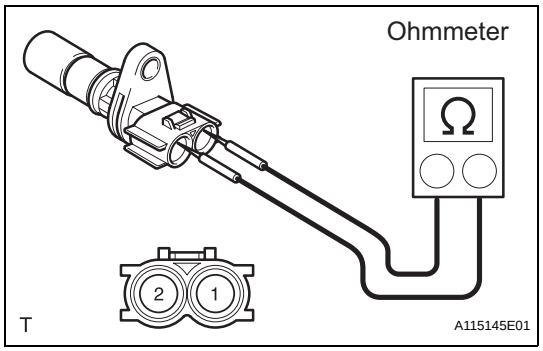
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Disconnect the crankshaft position sensor connector.
   (b) Remove the bolt and remove the crankshaft position sensor.



INSPECTION

1. **INSPECT CRANKSHAFT POSITION SENSOR**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance

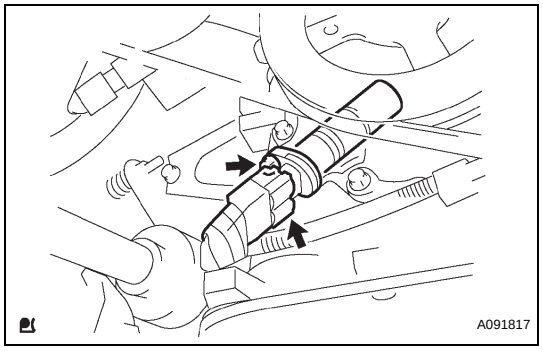
Temperature	Specified Condition
Cold	985 to 1,600 Ω
Hot	1,265 to 1,890 Ω



HINT:
In the table above, the terms Cold and Hot refer to the temperature of the coils. Cold means approximately -10 to 50 °C (14 to 122 °F). Hot means approximately 50 to 100 °C (122 to 212 °F).
If the resistance is not as specified, replace the crankshaft position sensor.

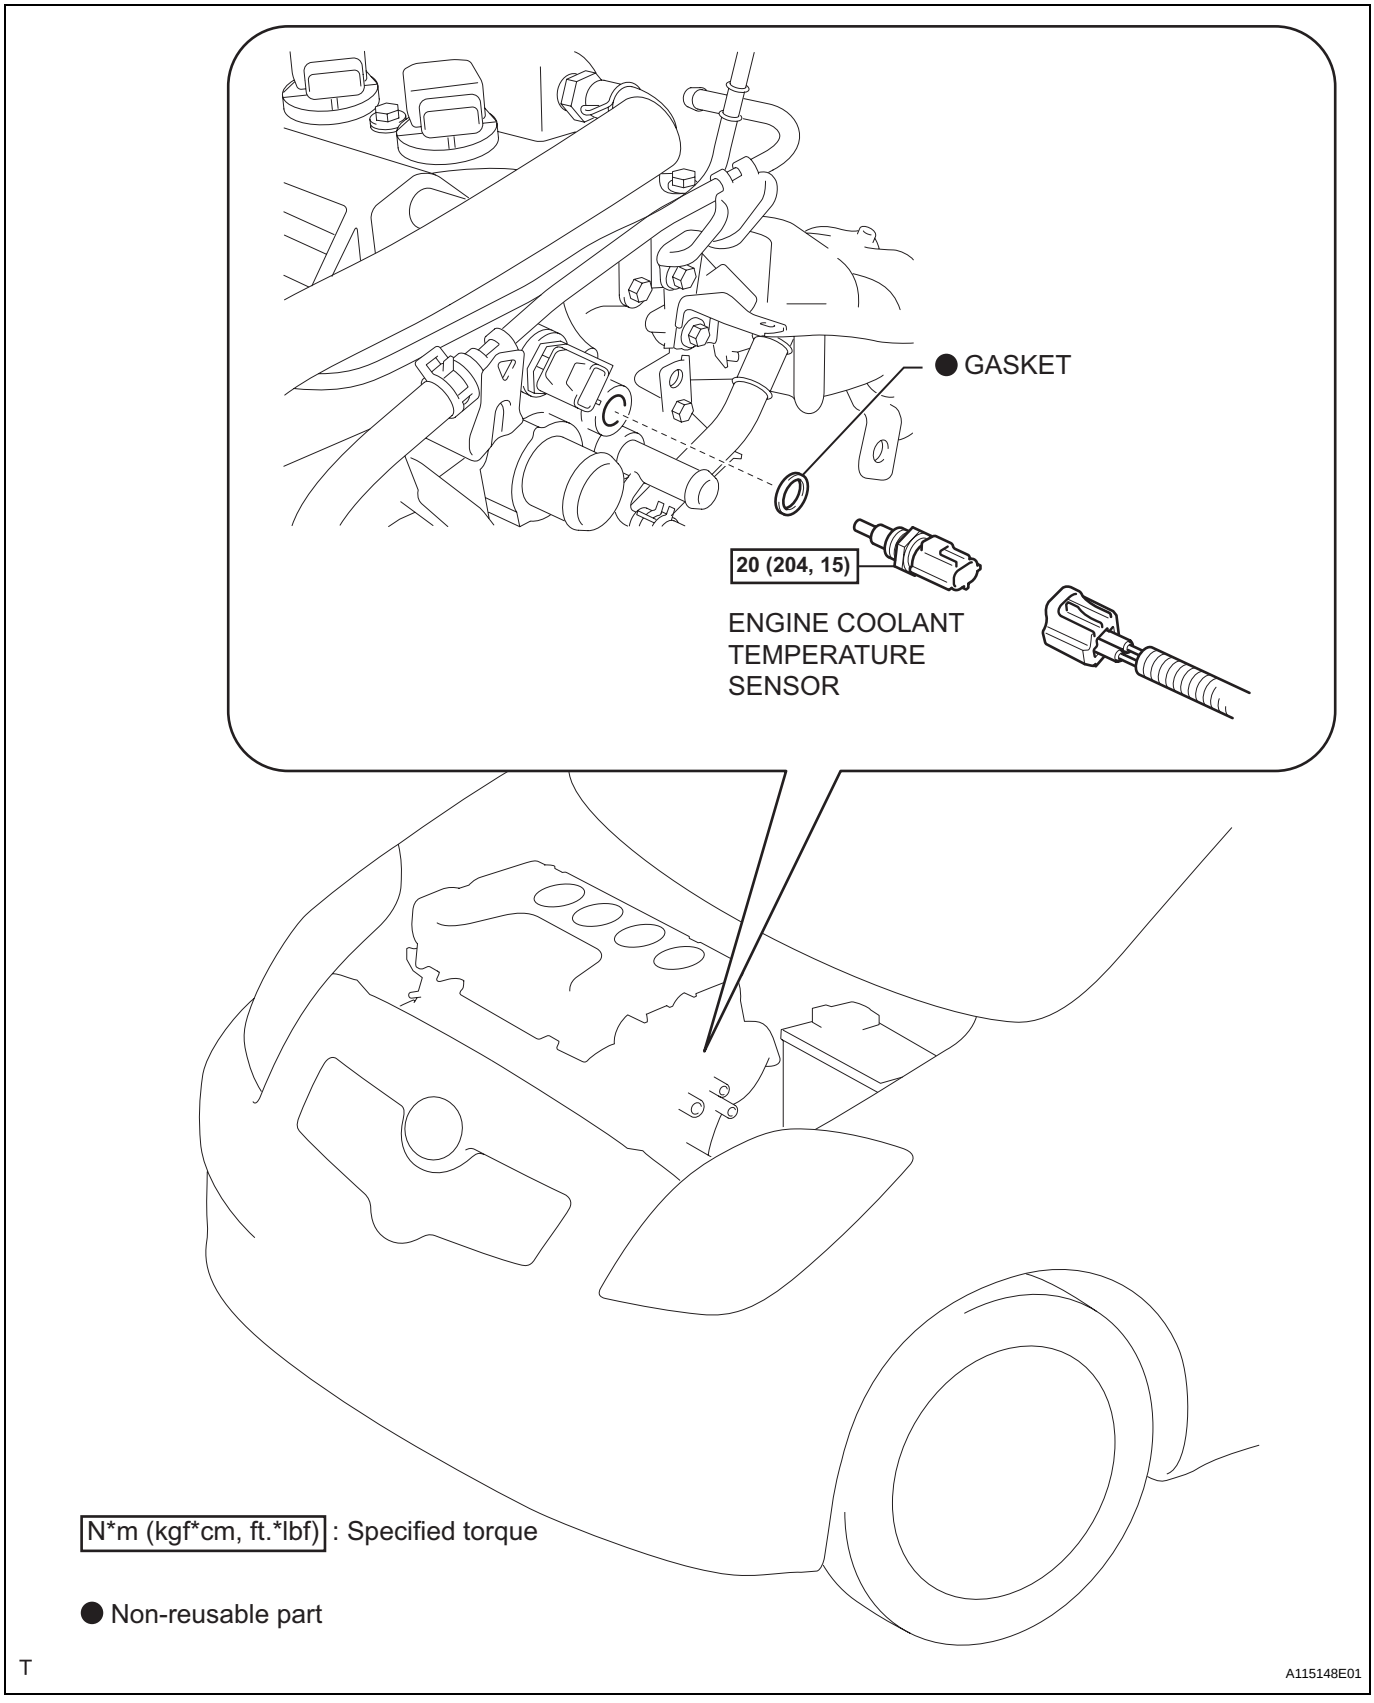
INSTALLATION

1. **INSTALL CRANKSHAFT POSITION SENSOR**
   (a) Apply a light coat of engine oil to the O-ring on the crankshaft position sensor.
   (b) Install the crankshaft position sensor with the bolt.
   Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
   NOTICE:
   Do not twist the O-ring.
   (c) Connect the crankshaft position sensor connector.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
3. **CHECK FOR ENGINE OIL LEAKAGE**
4. **INSTALL ENGINE UNDER COVER RH**



ENGINE COOLANT TEMPERATURE SENSOR

COMPONENTS



REMOVAL

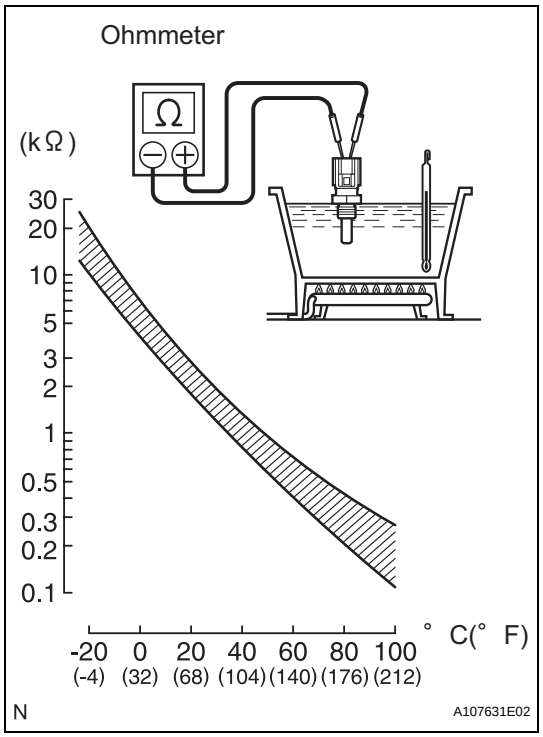
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-8)**
3. **REMOVE ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Disconnect the engine coolant temperature sensor connector.

   (b) Using SST, remove the engine coolant temperature sensor.
   SST 09817-33190

INSPECTION

1. **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance

Condition	Specified Condition
Approximately 20°C (68°F)	2.32 to 2.59 kΩ
Approximately 80°C (176°F)	0.310 to 0.326 kΩ



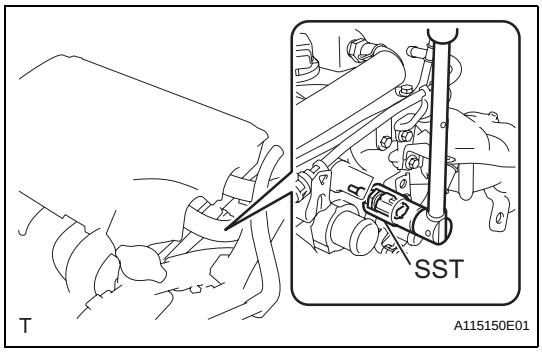
NOTICE:
When checking the engine coolant temperature sensor in water, keep the terminals dry. After the check, wipe the sensor dry.
If the resistance is not as specified, replace the engine coolant temperature sensor.

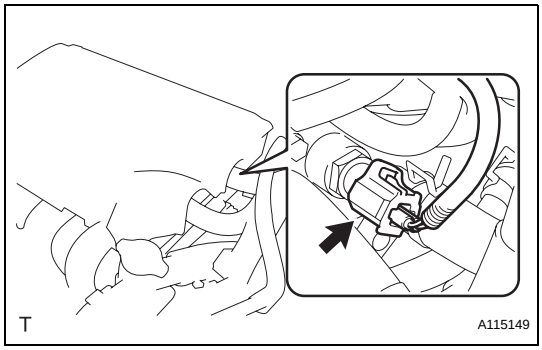
INSTALLATION

1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Provisionally install the engine coolant temperature sensor through a new gasket.

(b) Using SST, tighten the engine coolant temperature sensor.
SST 09817-33190
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)





(c) Connect the engine coolant temperature sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. ADD ENGINE COOLANT (See page CO-8)

4. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

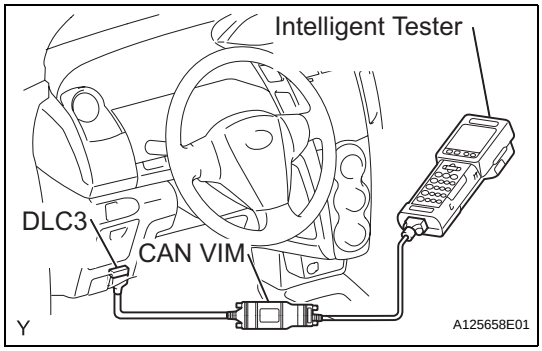
ON-VEHICLE INSPECTION

1. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Check the throttle control motor operating sounds.
  (1) Turn the ignition switch to ON.
  (2) When pressing the accelerator pedal, listen for sounds of the motor running. Make sure no friction noise comes from the motor.



(b) Check the throttle position sensor.
  (1) Connect an intelligent tester to the DLC3.
  (2) Turn the ignition switch to ON.
  (3) Push the intelligent tester main switch ON.
  (4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / THROTTLE POS.
  (5) Depress the accelerator pedal. When the throttle valve is fully open, check that the value of the "THROTTLE POS" is within the specifications.

Standard throttle valve opening percentage: 60 % or more

NOTICE:

When checking the standard throttle valve opening percentage, the shift lever should be in the neutral position.

If the percentage is less than 60 %, replace the throttle with motor body assembly.

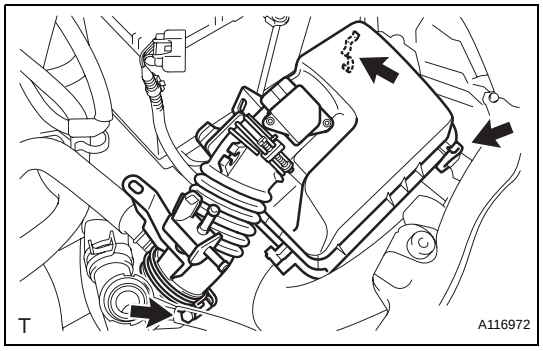
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-8)**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1**
   (a) Disconnect fuel vapor feed hose No. 1 and fuel vapor feed hose No. 2 from the vacuum switching valve assembly.
   (b) Disconnect the vacuum switching valve assembly connector and wire harness clamp.

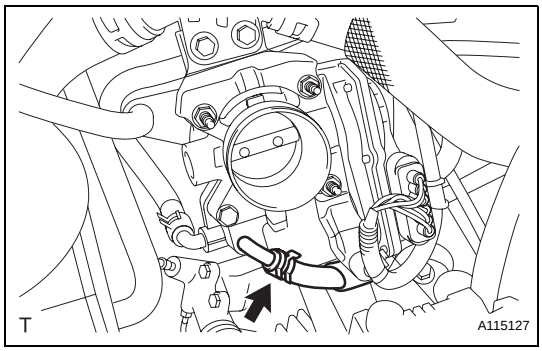
   (c) Disconnect ventilation hose No. 2.

   (d) Disconnect the wire harness clamp and mass air flow meter connector.

   (e) Loosen the hose clamp, unlock the air cleaner assembly clamp and remove air cleaner cap sub-assembly with air cleaner hose No. 1.

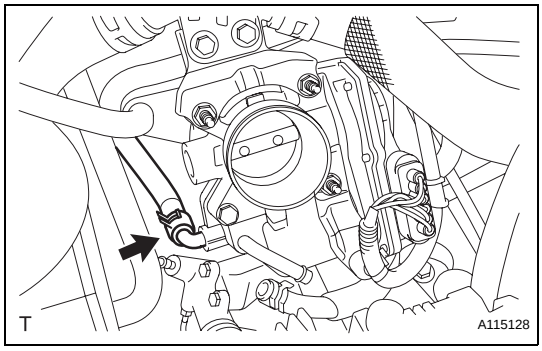


ES



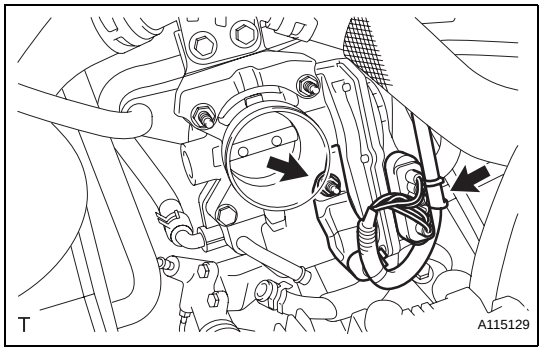
5. DISCONNECT WATER BY-PASS HOSE

(a) Disconnect the water by-pass hose.



6. DISCONNECT WATER BY-PASS HOSE NO. 2

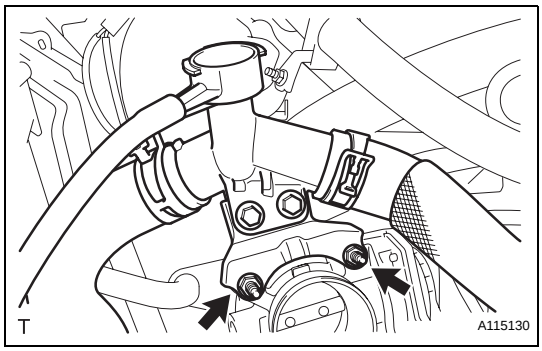
(a) Disconnect water by-pass hose No. 2.



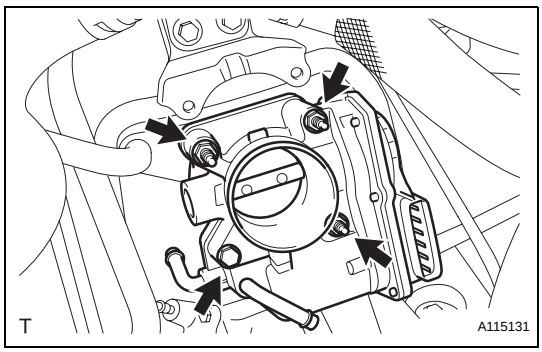
7. REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Disconnect the throttle with motor body assembly connector.

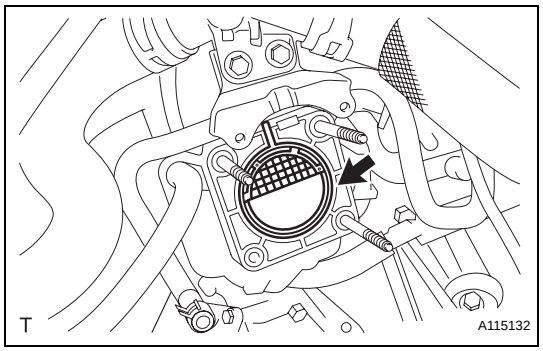
(b) Remove the nut and remove the wire harness with bracket.



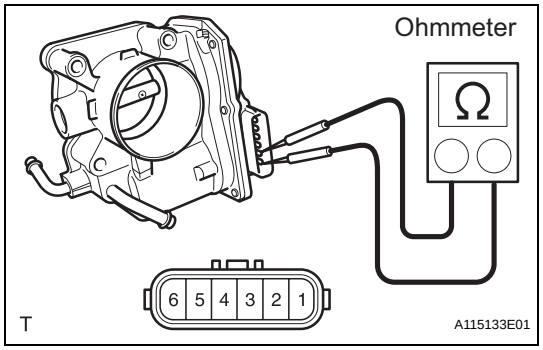
(c) Remove the 2 nuts and remove the water filler sub-assembly with hose.



(d) Remove the bolt and 3 nuts and remove the throttle with motor body assembly.



(e) Remove the gasket from the intake manifold.



INSPECTION

1. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

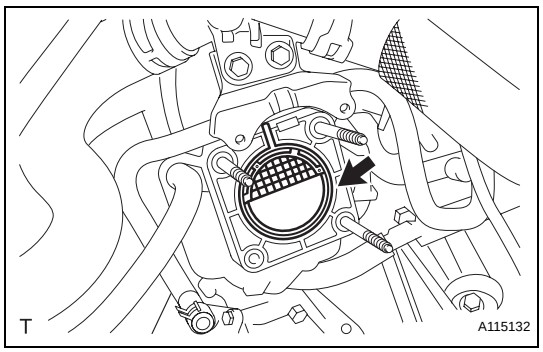
Tester Connection	Specified Condition
1 (M-) - 2 (M+)	0.3 to 100 Ω at 20°C (68°F)

If the result is not as specified, replace the throttle with motor body assembly.

INSTALLATION

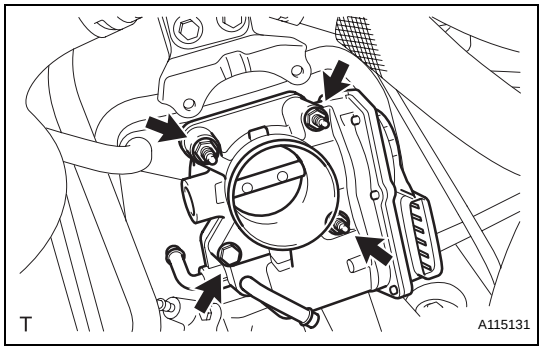
1. INSTALL THROTTLE WITH MOTOR BODY ASSEMBLY

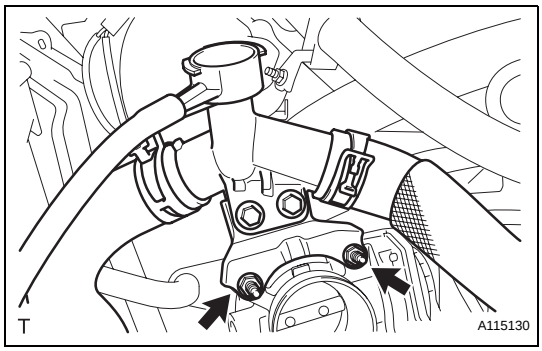
(a) Install a new gasket onto the intake manifold.



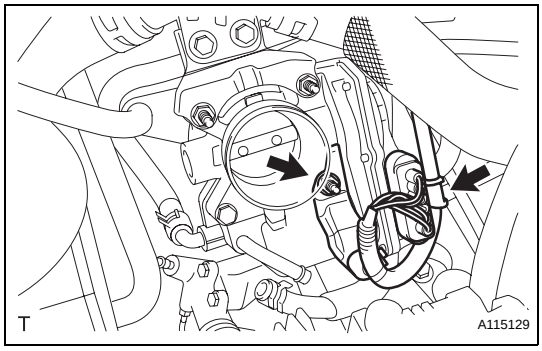
(b) Install the throttle with motor body assembly using the bolt and 3 nuts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

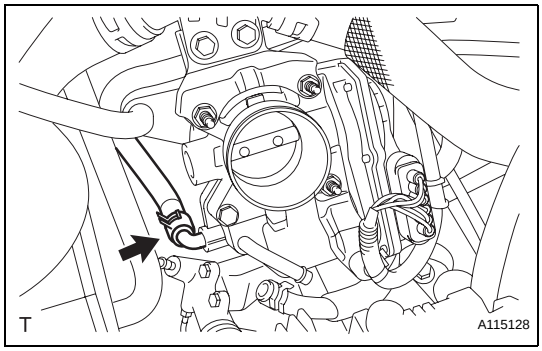




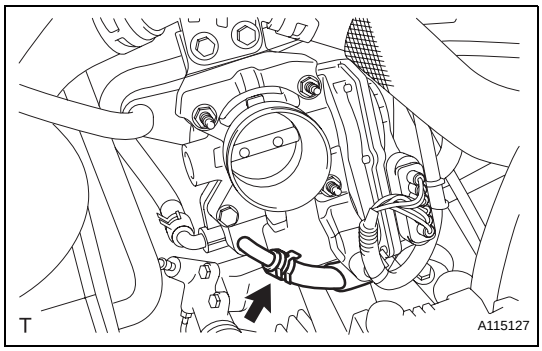
(c) Install the water filler sub-assembly with hose using the 2 nuts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



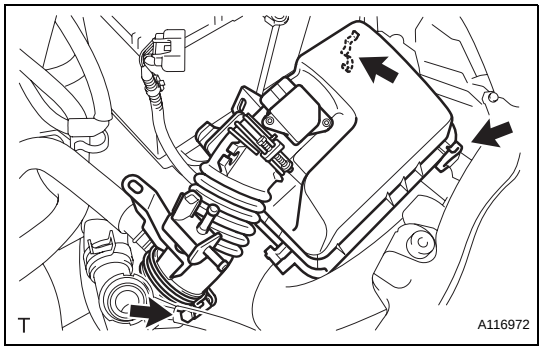
(d) Install the wire harness with bracket using the nut.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(e) Connect the throttle with motor body assembly connector.



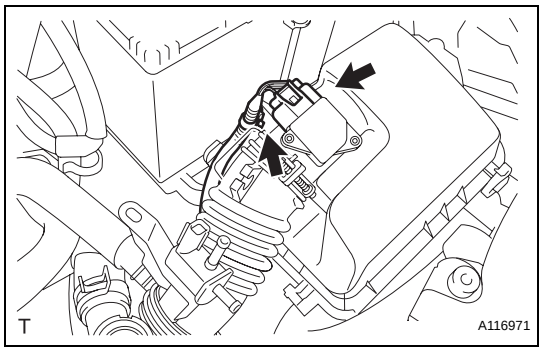
2. CONNECT WATER BY-PASS HOSE NO. 2
(a) Connect water by-pass hose No. 2.



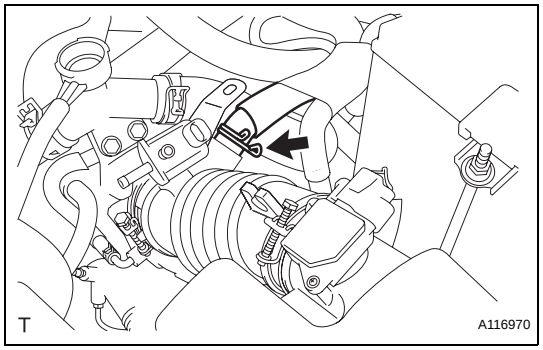
3. CONNECT WATER BY-PASS HOSE
(a) Connect the water by-pass hose.



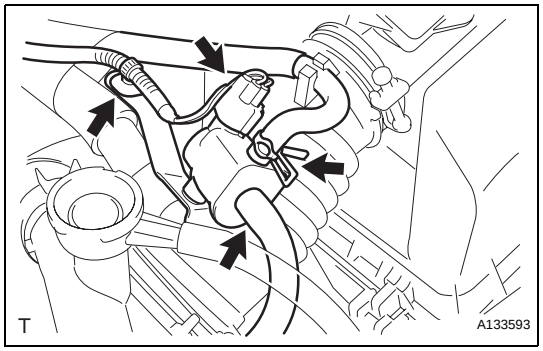
4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1
(a) Install air cleaner cap sub-assembly with air cleaner hose No. 1.
(b) Tighten the hose clamp to the specified torque.
Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf)



(c) Connect the wire harness clamp and mass air flow meter connector.



(d) Connect ventilation hose No. 2.



(e) Connect the vacuum switching valve assembly connector and wire harness clamp.
(f) Connect fuel vapor feed hose No. 1 and fuel vapor feed hose No. 2 to the vacuum switching valve assembly.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

6. ADD ENGINE COOLANT (See page CO-8)

7. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

8. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

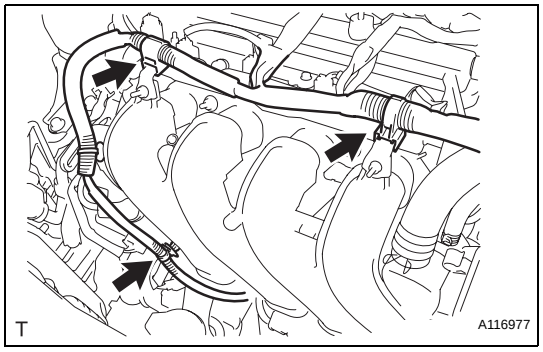
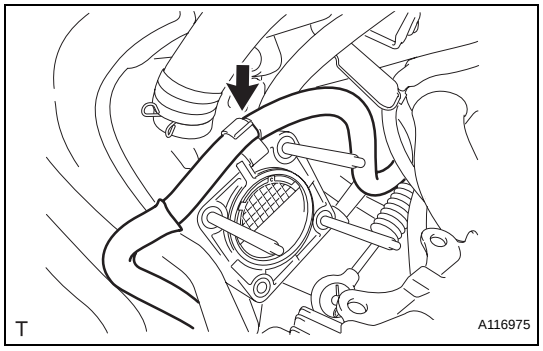
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-8)**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-410)**
5. **DISCONNECT WATER BY-PASS HOSE (See page ES-411)**
6. **DISCONNECT WATER BY-PASS HOSE NO. 2 (See page ES-411)**
7. **REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-412)**
8. **REMOVE INTAKE MANIFOLD**

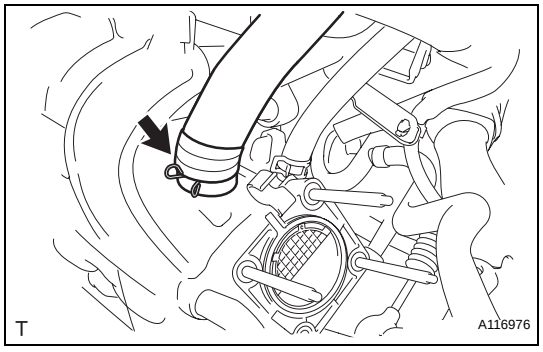
(a) Separate the engine wire harness from the intake manifold.



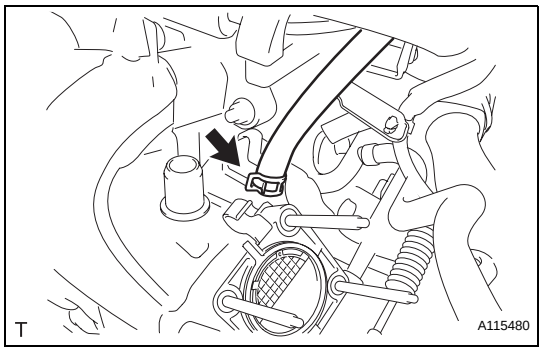
(b) Separate water by-pass hose No. 2.



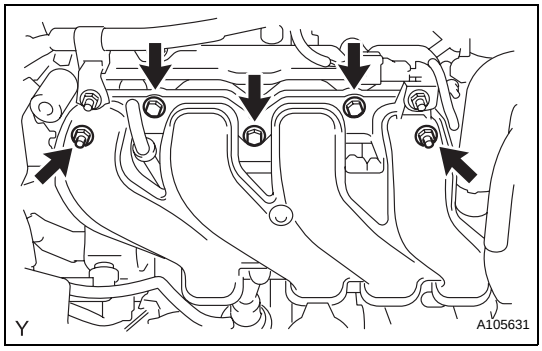
(c) Disconnect the ventilation hose.



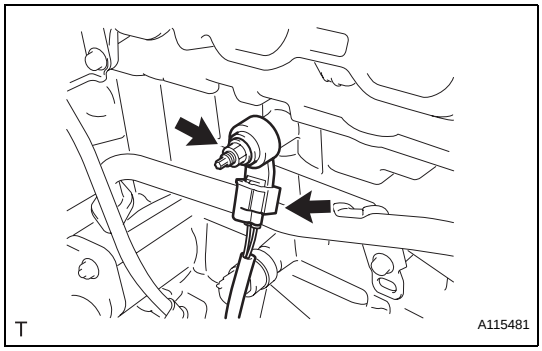
ES



(d) Disconnect the union to connector tube hose.



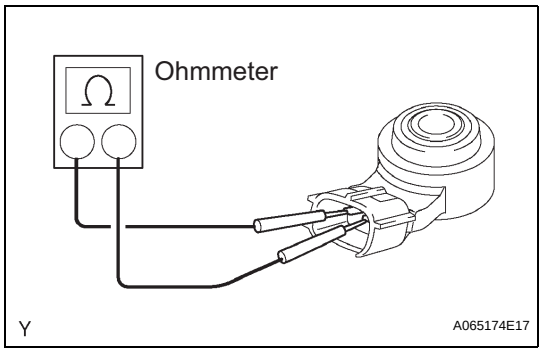
(e) Remove the 3 bolts and 2 nuts and remove the intake manifold.
(f) Remove the gasket from the intake manifold.



9. REMOVE KNOCK SENSOR
(a) Disconnect the knock sensor connector.
(b) Remove the nut and remove the knock sensor.

INSPECTION

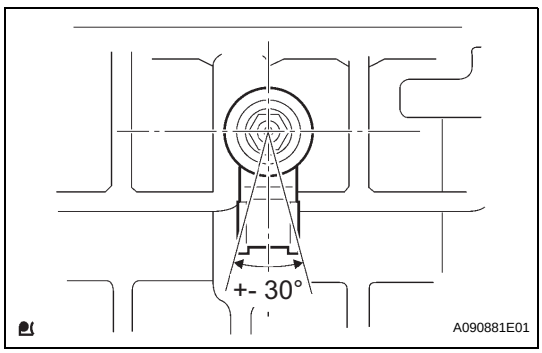
1. INSPECT KNOCK SENSOR
(a) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the terminals.
Standard resistance:
120 to 280 kΩ at 20°C (68°F)
If the result is not as specified, replace the knock sensor.

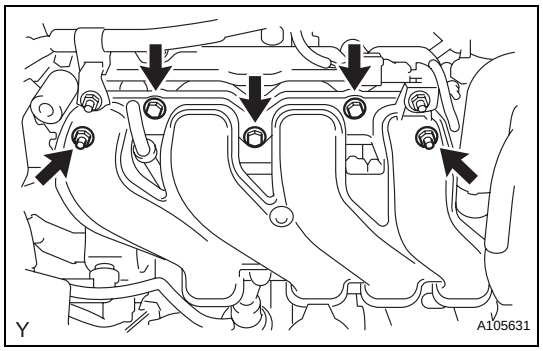


INSTALLATION

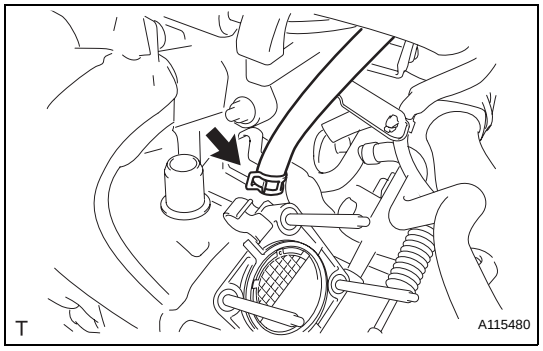
1. INSTALL KNOCK SENSOR
(a) Install the knock sensor with the nut as shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
(b) Connect the knock sensor connector.

2. INSTALL INTAKE MANIFOLD
(a) Install a new gasket onto the intake manifold.

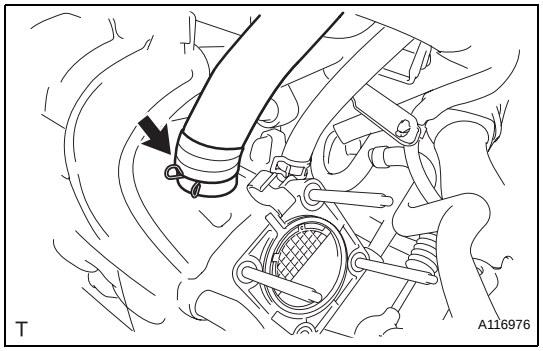




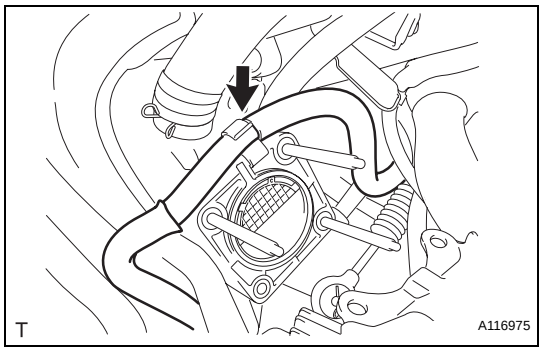
(b) Install the intake manifold with the 3 bolts and 2 nuts.
Torque: 30 N*m (304 kgf*cm, 22 ft.*lbf)



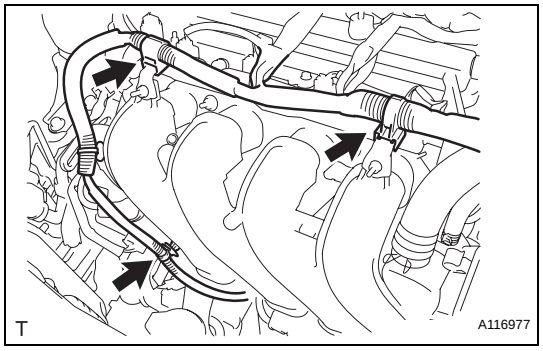
(c) Connect the union to connector tube hose.



(d) Connect the ventilation hose.



(e) Install water by-pass hose No. 2.



(f) Install the engine wire harness onto the intake manifold.

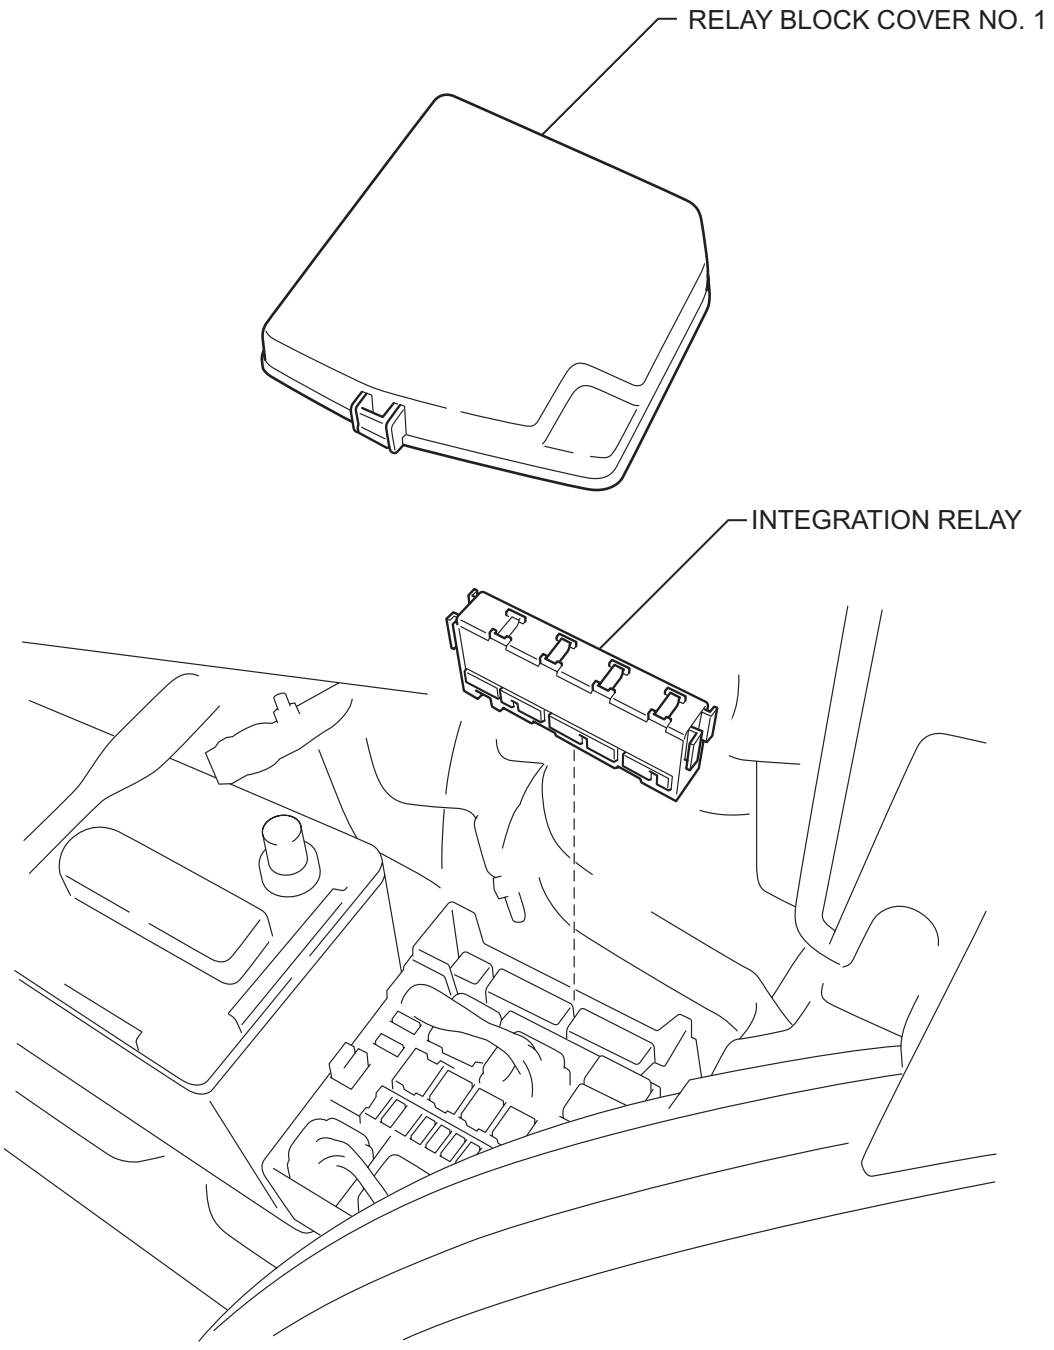
3. **INSTALL THROTTLE WITH MOTOR BODY ASSEMBLY (See page ES-413)**
4. **CONNECT WATER BY-PASS HOSE NO. 2 (See page ES-414)**
5. **CONNECT WATER BY-PASS HOSE (See page ES-414)**

ES

6. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-414)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
8. **ADD ENGINE COOLANT (See page CO-8)**
9. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)**
10. **INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)**

INTEGRATION RELAY

COMPONENTS



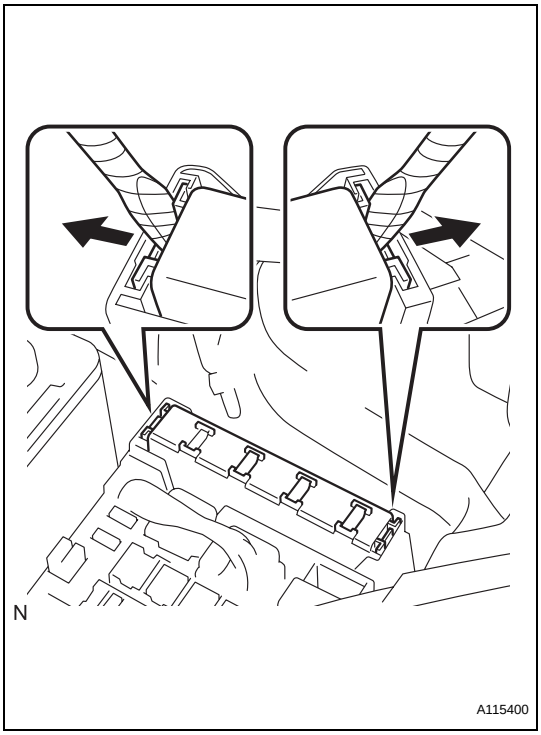
N

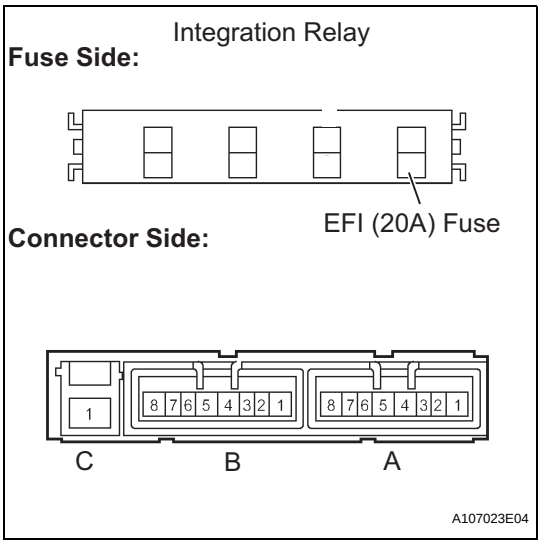
A115401E01

ES

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE RELAY BLOCK COVER NO. 1**
3. **REMOVE INTEGRATION RELAY**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and disconnect the integration relay.
   (b) Disconnect the 3 connectors.





INSPECTION

1. **INSPECT INTEGRATION RELAY**
   (a) Inspect the EFI (20A) fuse.
      (1) Disconnect the fuse.
      (2) Using an ohmmeter, measure the resistance of the fuse.
      Standard resistance

Tester Connection	Specified Condition
1 - 2	Below 1 Ω

   (b) Inspect the EFI relay.
      (1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
A4 - C1	10 kΩor higher
	Below 1 Ω (Battery voltage applied between terminals A2 and A3)

NOTICE:
While using the battery for the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

INSTALLATION

1. INSTALL INTEGRATION RELAY

(a) Connect the 3 connectors.

(b) Attach the integration relay to the engine room relay block.

2. INSTALL RELAY BLOCK COVER NO. 1

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

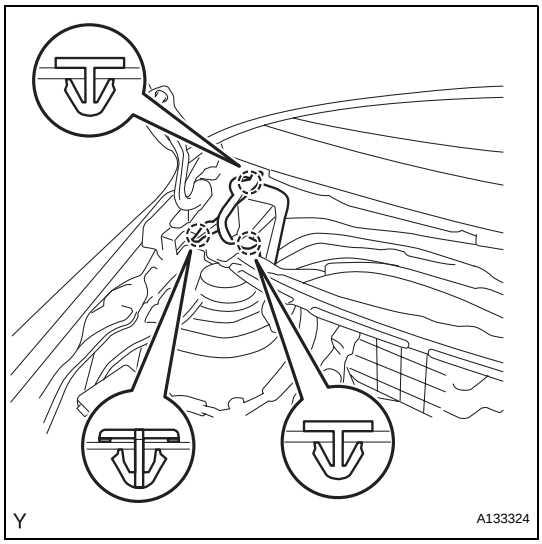
REMOVAL

NOTICE:
Replace the ECM with a new one if necessary.

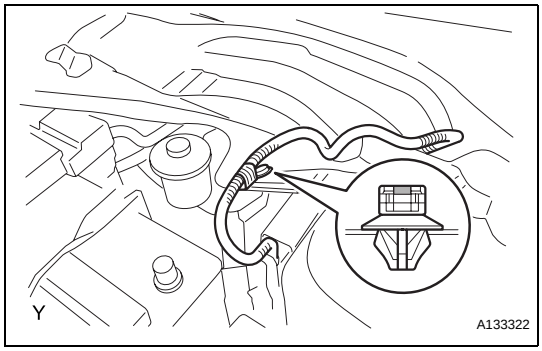
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WIPER ARM HEAD CAP (for Hatchback) (See page WW-17)**
3. **REMOVE FRONT WIPER ARM HEAD CAP (for Sedan) (See page WW-9)**
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Hatchback) (See page WW-17)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Sedan) (See page WW-9)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Hatchback) (See page WW-17)**
7. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Sedan) (See page WW-9)**
8. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
9. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
10. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
11. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
12. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-18)**
13. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan LHD) (See page WW-10)**
14. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (for Hatchback) (See page WW-19)**
15. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (for Sedan) (See page WW-10)**
16. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-122)**



17. REMOVE FRONT AIR SHUTTER SEAL (for Sedan)

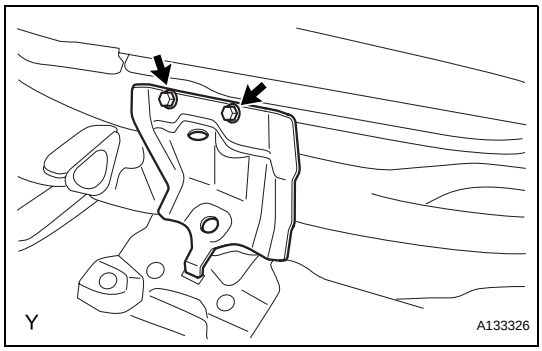
(a) Disengage the 3 claws and remove the front air shutter seal.

18. REMOVE COWL TOP PANEL OUTER (for Hatchback) (See page EM-123)

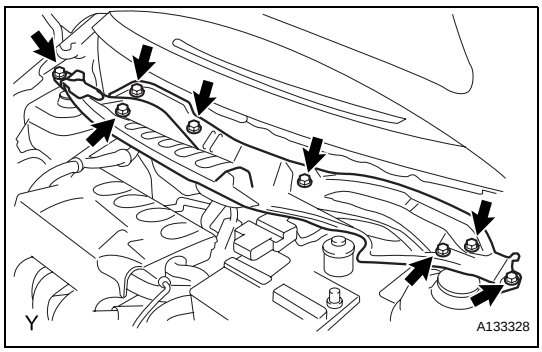


19. REMOVE COWL TOP PANEL OUTER (for Sedan)

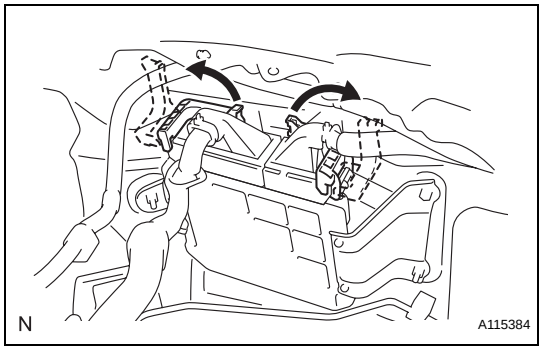
(a) Disengage the claw and disconnect the wire harness.



(b) Remove the 2 bolts and remove the cowl top panel outer center bracket.

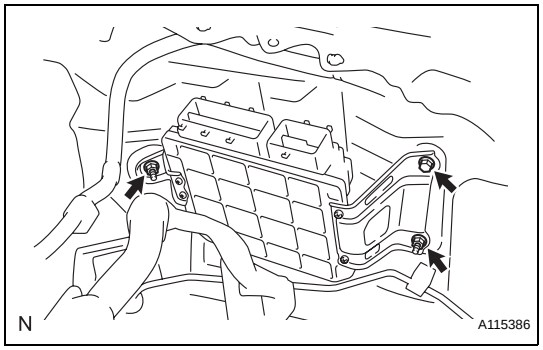


(c) Remove the 8 bolts and remove the cowl top panel outer.



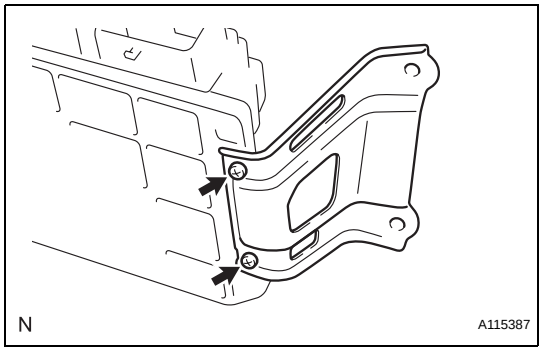
20. REMOVE ECM

(a) Remove the 2 lock knobs and harness clamp.



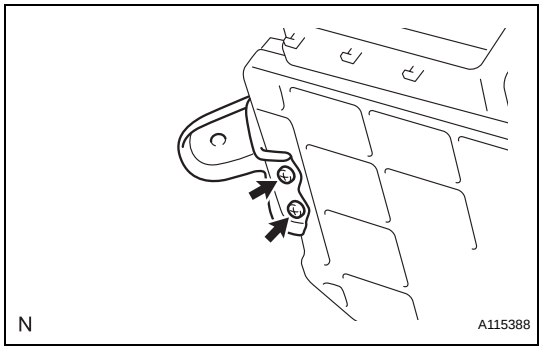
(b) Disconnect the 2 ECM connectors.

(c) Remove the bolt and 2 nuts and remove the ECM.



21. REMOVE ECM BRACKET

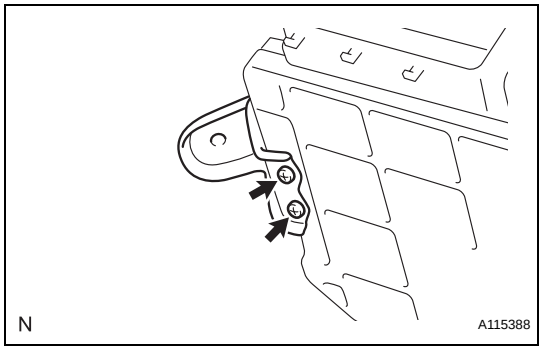
(a) Remove the 2 screws and the ECM bracket.



22. REMOVE ECM BRACKET NO. 2

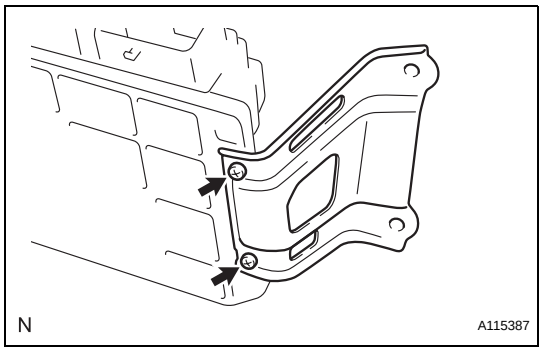
(a) Remove the 2 screws and ECM bracket No. 2.

INSTALLATION



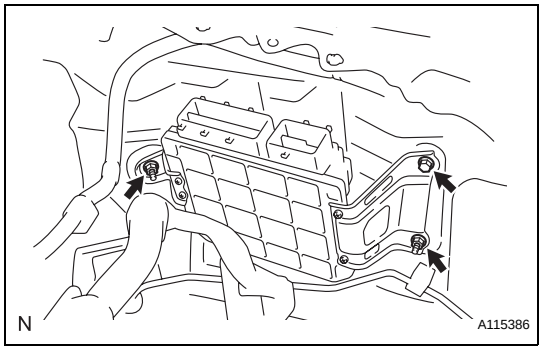
1. INSTALL ECM BRACKET NO. 2

(a) Install ECM bracket No. 2 with the 2 screws.



2. INSTALL ECM BRACKET

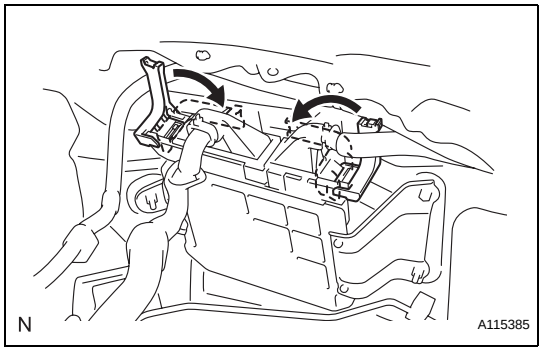
(a) Install the ECM bracket with the 2 screws.



3. INSTALL ECM

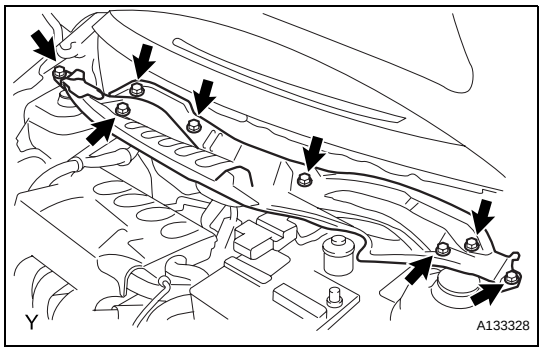
(a) Install the ECM with the bolt and 2 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(b) Connect the 2 ECM connectors.



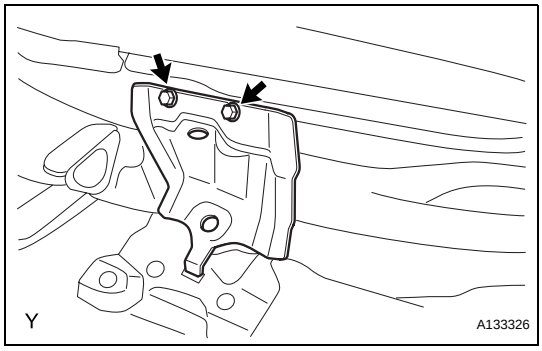
(c) Install the 2 lock knobs and harness clamp.

4. INSTALL COWL TOP PANEL OUTER (for Hatchback) (See page EM-146)

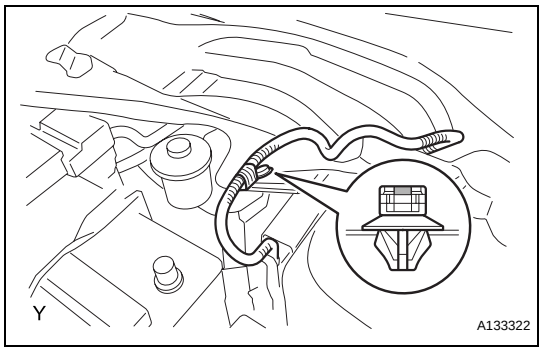


5. INSTALL COWL TOP PANEL OUTER (for Sedan)

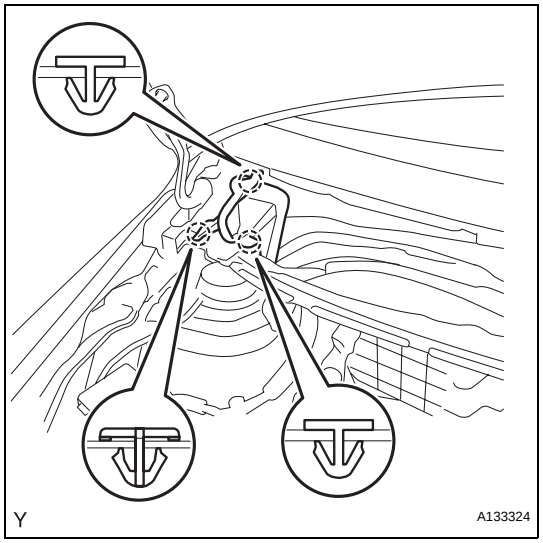
(a) Install the cowl top panel outer and install the 8 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(b) Install the cowl top panel outer center bracket and install the 2 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(c) Connect the wire harness and engage the claw.

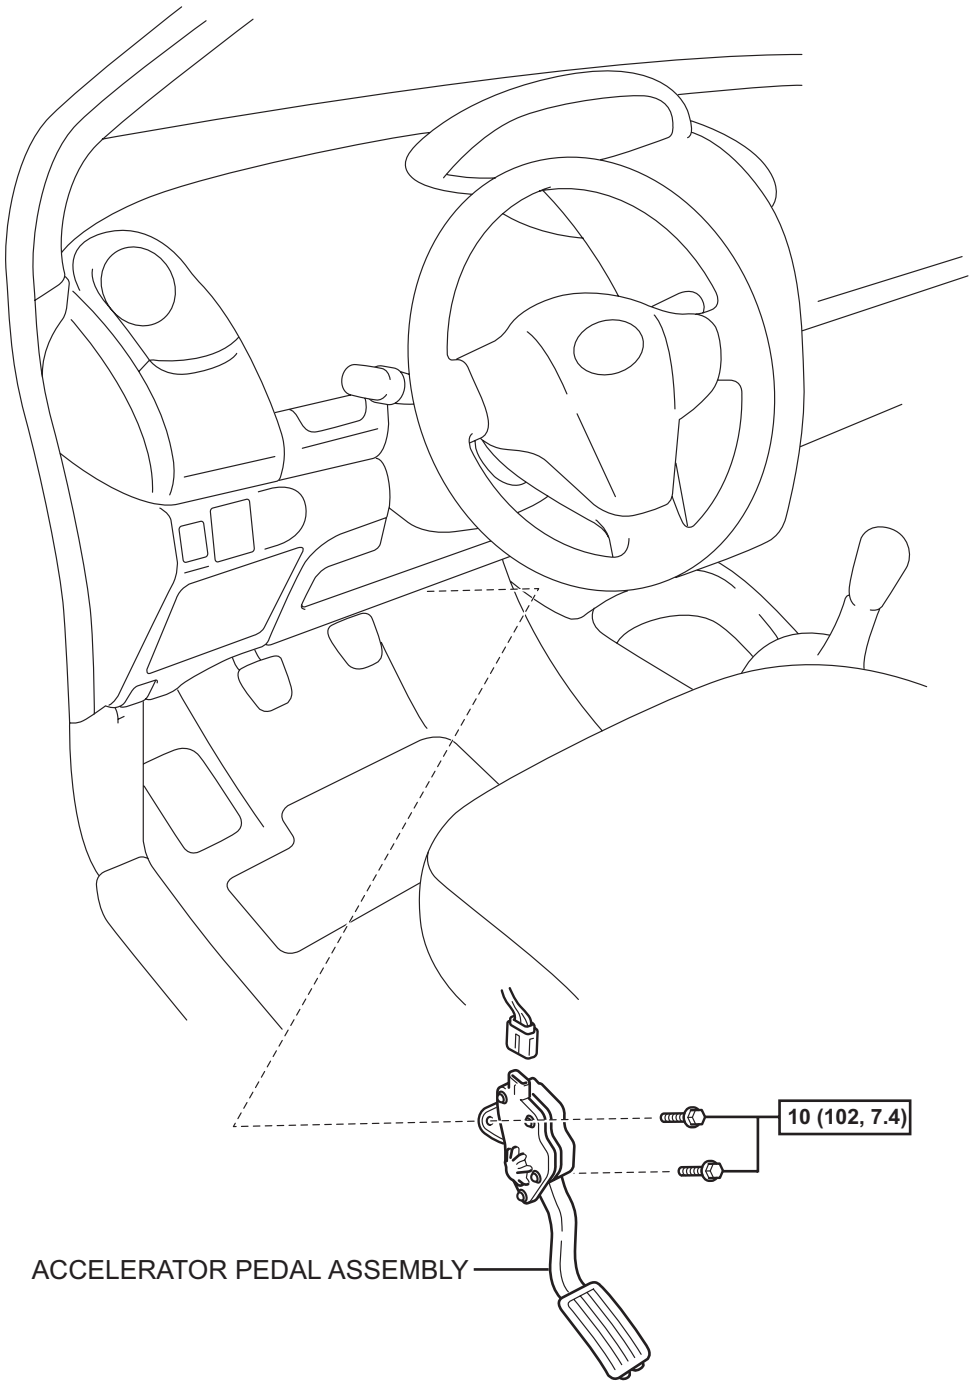


6. **INSTALL FRONT AIR SHUTTER SEAL (for Sedan)**
   (a) Install the front air shutter seal and engage the 3 claws.
7. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-147)**
8. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (for Hatchback) (See page WW-21)**
9. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (for Sedan) (See page WW-12)**
10. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**
11. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-21)**
12. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-12)**
13. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**
14. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**
15. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**
16. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Hatchback) (See page WW-22)**
17. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Sedan) (See page WW-13)**
18. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Hatchback) (See page WW-23)**
19. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Sedan) (See page WW-14)**
20. **INSTALL FRONT WIPER ARM HEAD CAP (for Hatchback) (See page WW-23)**
21. **INSTALL FRONT WIPER ARM HEAD CAP (for Sedan) (See page WW-15)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ACCELERATOR PEDAL

COMPONENTS

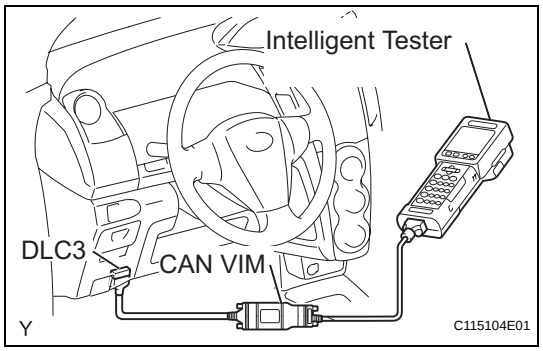
ES



N*m (kgf*cm, ft.*lbf) : Specified torque

N

A115380E04



ON-VEHICLE INSPECTION

1. INSPECT ACCELERATOR PEDAL ASSEMBLY

(a) Connect an intelligent tester to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.

(c) Select the following menu items: Powertrain / Engine and ECT / Data List / Accelerator Pedal Position No. 1 and Accelerator Pedal Position No. 2.

(d) While the accelerator pedal is depressed or released, check that the values of accelerator pedal position No. 1 and accelerator pedal position No. 2 are within the specifications.

Accelerator Pedal Position No. 1 Standard Voltage

Condition	Specified Condition
Accelerator pedal released	0.5 to 1.1 V
Accelerator pedal depressed	2.6 to 4.5 V

Accelerator Pedal Position No. 2 Standard Voltage

Condition	Specified Condition
Accelerator pedal released	1.2 to 2.0 V
Accelerator pedal depressed	3.4 to 5.0 V

HINT:
If the results are not as specified, check the accelerator pedal, wire harness or ECM.

ES

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

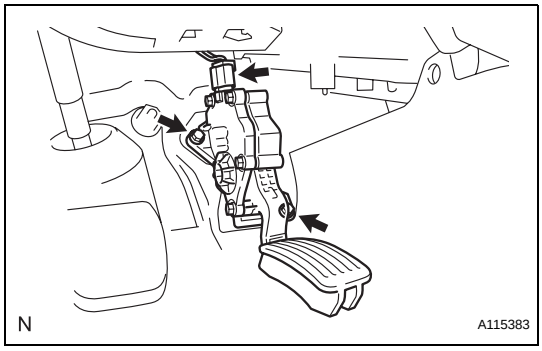
2. REMOVE ACCELERATOR PEDAL ASSEMBLY

(a) Disconnect the accelerator pedal connector.

(b) Remove the 2 bolts and the accelerator pedal.

NOTICE:

- **Do not drop or strike the accelerator pedal.**
- **Do not disassemble the accelerator pedal.**

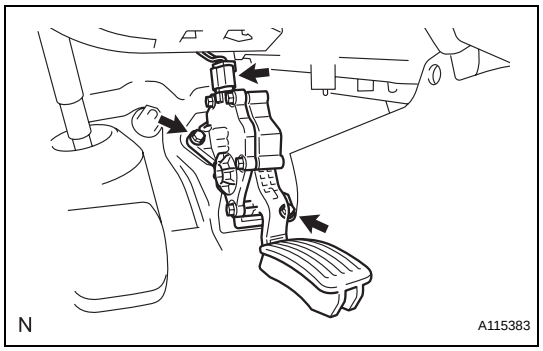


ES

INSTALLATION

NOTICE:

- **Avoid any physical shock to the accelerator pedal.**
- **Do not disassemble the accelerator pedal.**



1. INSTALL ACCELERATOR PEDAL ASSEMBLY

(a) Install the accelerator pedal with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

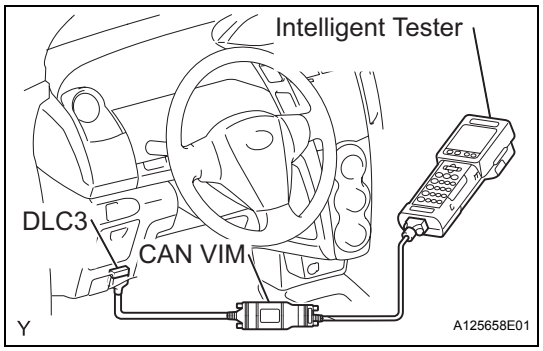
(b) Connect the accelerator pedal connector.

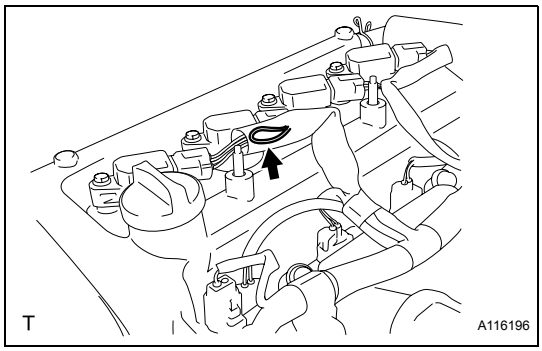
2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

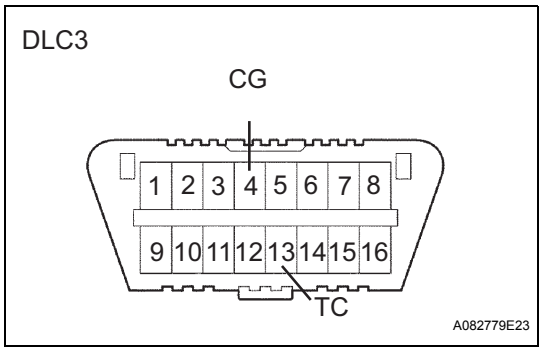
ENGINE

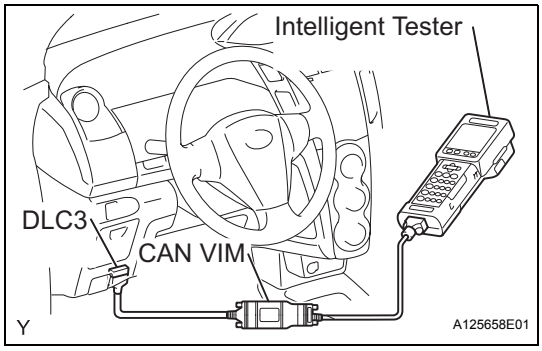
ON-VEHICLE INSPECTION

1. **INSPECT ENGINE COOLANT (See page CO-1)**
2. **INSPECT ENGINE OIL (See page LU-1)**
3. **INSPECT BATTERY (See page CH-4)**
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
   (a) Remove the air cleaner filter element sub-assembly.
   (b) Visually check that there is no dirt, blockage, or damage to the air cleaner filter element.
   HINT:
   - If there is any dirt or a blockage in the air cleaner filter element, clean it with compressed air.
   - If any dirt or a blockage remains even after cleaning the air cleaner filter element with compressed air, replace it.
5. **INSPECT SPARK PLUG (See page IG-5)**
6. **INSPECT IGNITION TIMING**
   (a) When using an intelligent tester:
      (1) Warm up and stop the engine.
      (2) Connect the intelligent tester to the DLC3.
      (3) Turn the ignition switch ON.
      (4) Select the following menu items:
      DIAGNOSIS / ENHANCED OBD II/ ACTIVE TEST / TC (TE1) / ON.
      HINT:
      Refer to the intelligent tester operator's manual for further details.
      (5) Inspect the ignition timing during idling.
      Ignition timing:
      8 to 12 degrees BTDC
      NOTICE:
      - **Turn all the electrical systems and the A/C off.**
      - **Inspect the ignition timing with the cooling fan off.**
      - **When checking the ignition timing, shift the transmission to the neutral position.**
      (6) Select the following menu items: TC (TE1) / OFF.
      (7) Turn the ignition switch OFF.
      (8) Disconnect the intelligent tester from the DLC3.
   (b) When not using an intelligent tester:
      (1) Remove cylinder head cover No. 2 (see page IG-9).









(2) Pull out the wire harness (brown) shown in the illustration.
NOTICE:
After checking, wrap the wire harness with tape.
(3) Warm up and stop the engine.
(4) Connect the clip of the timing light to the wire harness.
NOTICE:
Use a timing light that detects the first signal.
(5) Turn the ignition switch ON.
(6) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
Examine the terminal numbers before connecting them. Connecting the wrong terminals could damage the engine.
(7) Inspect the ignition timing during idling.
Ignition timing:
8 to 12 degrees BTDC
NOTICE:
- **Turn all the electrical systems and the A/C off.**
- **Inspect the ignition timing with the cooling fan off.**
- **When checking the ignition timing, shift the transmission to the neutral position.**

(8) Disconnect terminals 13 (TC) and 4 (CG) of the DLC3.
(9) Turn the ignition switch OFF.
(10) Remove the timing light.
(11) Install cylinder head cover No. 2 (see page IG-10).

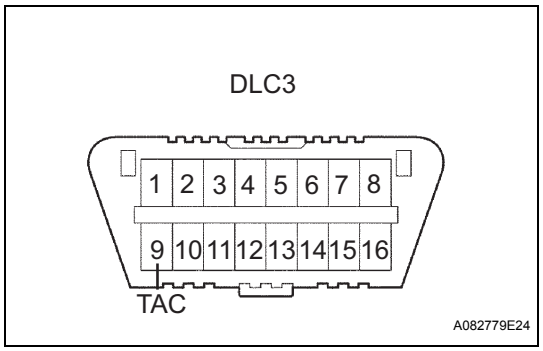
7. INSPECT ENGINE IDLING SPEED

(a) When using an intelligent tester:
(1) Warm up and stop the engine.
(2) Connect the intelligent tester to the DLC3.
(3) Turn the ignition switch ON.
(4) Select the following menu items:
DIAGNOSIS / ENHANCED OBD II/ DATA LIST / PRIMARY / ENGINE SPD.
HINT:
Refer to the intelligent tester operator's manual for further details.
(5) Inspect the engine idling speed.
Idling speed:
550 to 650 rpm for manual transaxle
650 to 750 rpm for automatic transaxle
NOTICE:
- **Turn all the electrical systems and the A/C off.**

- **Inspect the idling speed with the cooling fan off.**
- **When checking the idling speed, shift the transmission to either the neutral position or the parking position.**

(6) Turn the ignition switch OFF.
(7) Disconnect the intelligent tester from the DLC3.

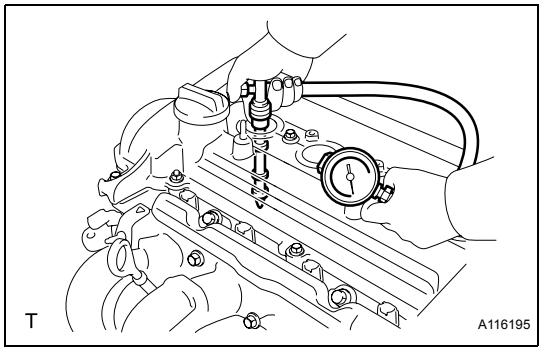
(b) When not using an intelligent tester.
(1) Warm up and stop the engine.



(2) Install SST to terminal 9 (TAC) of the DLC3, then connect a tachometer.
SST 09843-18040
NOTICE:
Examine the terminal numbers before connecting them. Connecting the wrong terminals could damage the engine.
(3) Turn the ignition switch ON.
(4) Inspect the engine idling speed.
Idling speed:
550 to 650 rpm for manual transaxle
650 to 750 rpm for automatic transaxle
(5) Turn the ignition switch OFF.
(6) Disconnect the tachometer.
(7) Remove SST from terminal 9 (TAC).

8. INSPECT COMPRESSION

(a) Warm up and stop the engine.
(b) Remove cylinder head cover No. 2 (see page IG-9).
(c) Remove the 4 ignition coils (see page IG-9).
(d) Remove the 4 spark plugs.
(e) Disconnect the 4 fuel injector connectors.



(f) Inspect the cylinder compression pressure.
(1) Insert a compression gauge into the spark plug hole.
(2) Fully open the throttle.
(3) While cranking the engine, measure the compression pressure.
Compression:
1,471kPa (15.0 kgf/cm^2, 213 psi)
Minimum pressure:
1,079 kPa (11.0 kgf/cm^2, 156 psi)
Difference between each cylinder:
98 kPa (1.0 kgf/cm^2, 14 psi) or less
NOTICE:
- **Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.**
- **Inspect the other cylinders in the same way.**
- **Measure the compression in as short a time as possible.**

(4) If the cylinder compression is low, pour a light coat of engine oil into the cylinder through the spark plug hole, then inspect it again.
HINT:
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If the pressure stays low, the valve may be stuck or seated improperly, or there may be leakage from the gasket.

(g) Connect the 4 fuel injector connectors.
(h) Install the 4 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
(i) Install the 4 ignition coils (see page IG-9).
(j) Install cylinder head cover No. 2 (see page IG-10).

EM

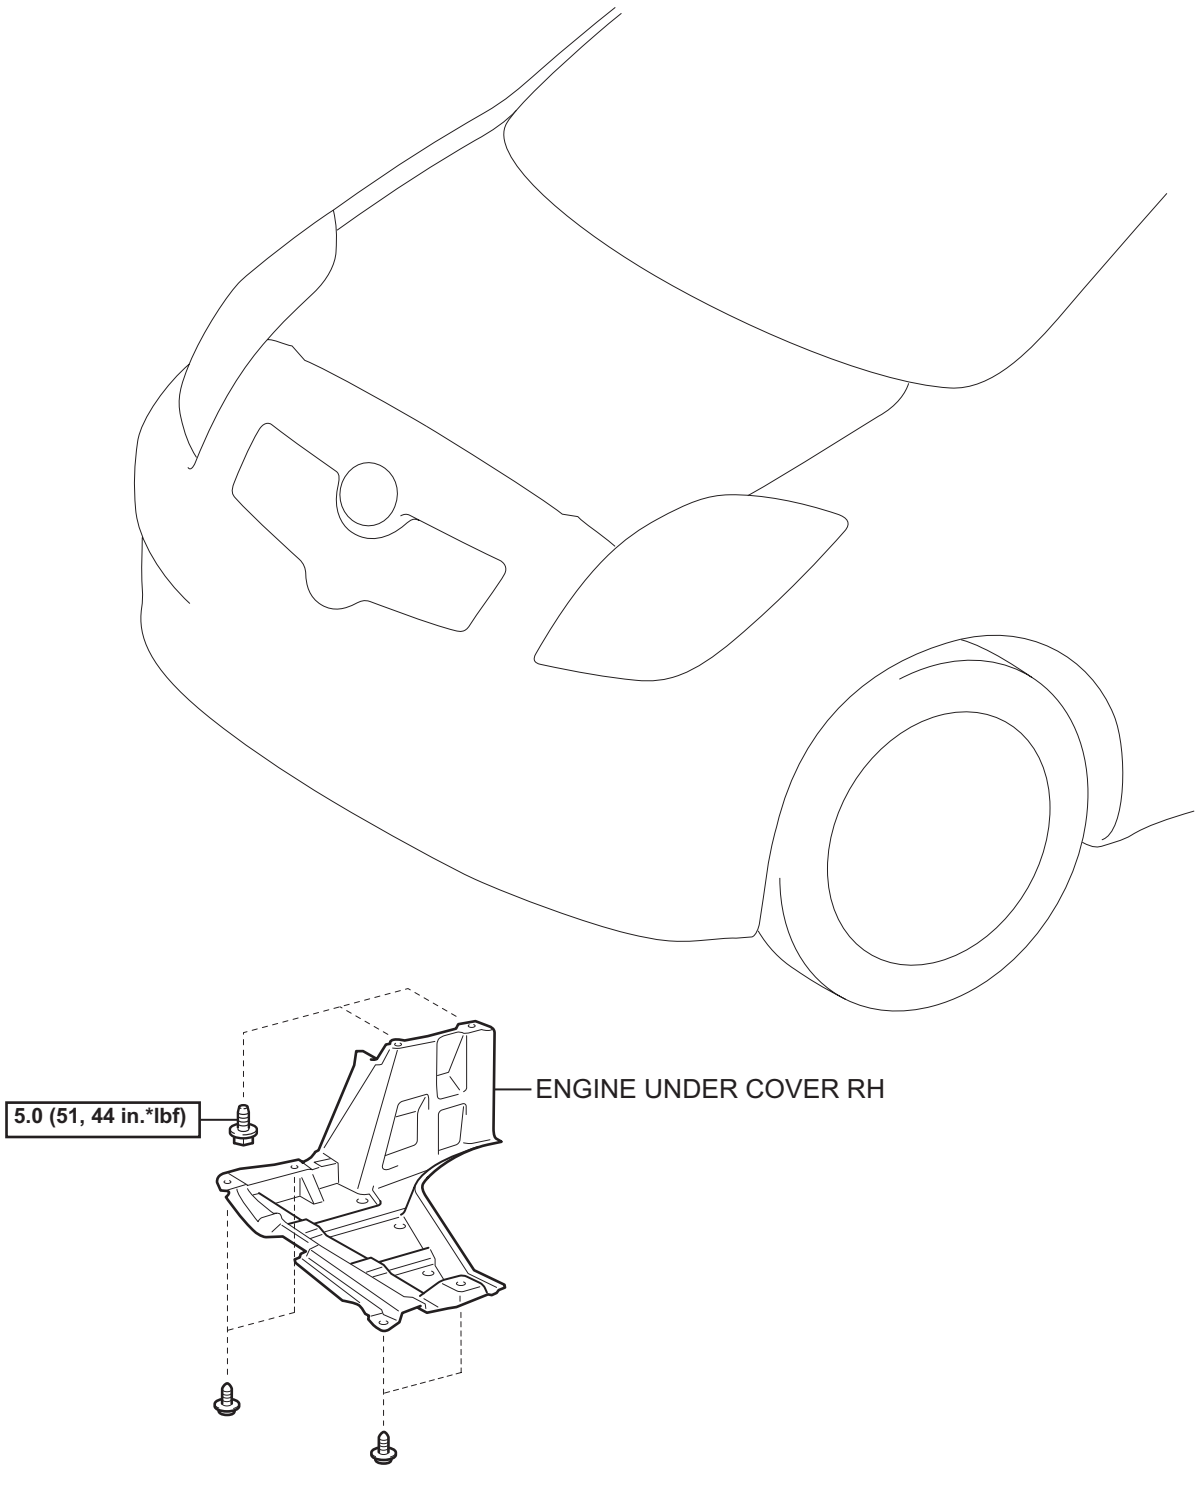
9. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe while idling.
(d) Check the CO/HC concentration during idling and when running at 2,500 rpm.
HINT:
When doing the 2 mode (with the engine idling/ running at 2,500 rpm) test, the measuring procedures are determined by applicable local regulations.
If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.
(1) Check the heated oxygen sensor operation (see page ES-276).
(2) See the table below for possible causes, then inspect the applicable parts and repair them if necessary.

CO	HC	Problems	Possible Causes
Normal	High	Rough idling	1. Faulty ignition: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leakage from intake and exhaust valves 4. Leakage from cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: – PCV hoses – Intake manifold – Throttle body – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idling (Black smoke from exhaust)	1. Restricted air cleaner filter element 2. Plugged PCV valve 3. Faulty EFI systems: – Faulty pressure regulator – Faulty engine coolant temperature sensor – Faulty mass air flow meter – Faulty ECM – Faulty injectors – Throttle body

DRIVE BELT

COMPONENTS



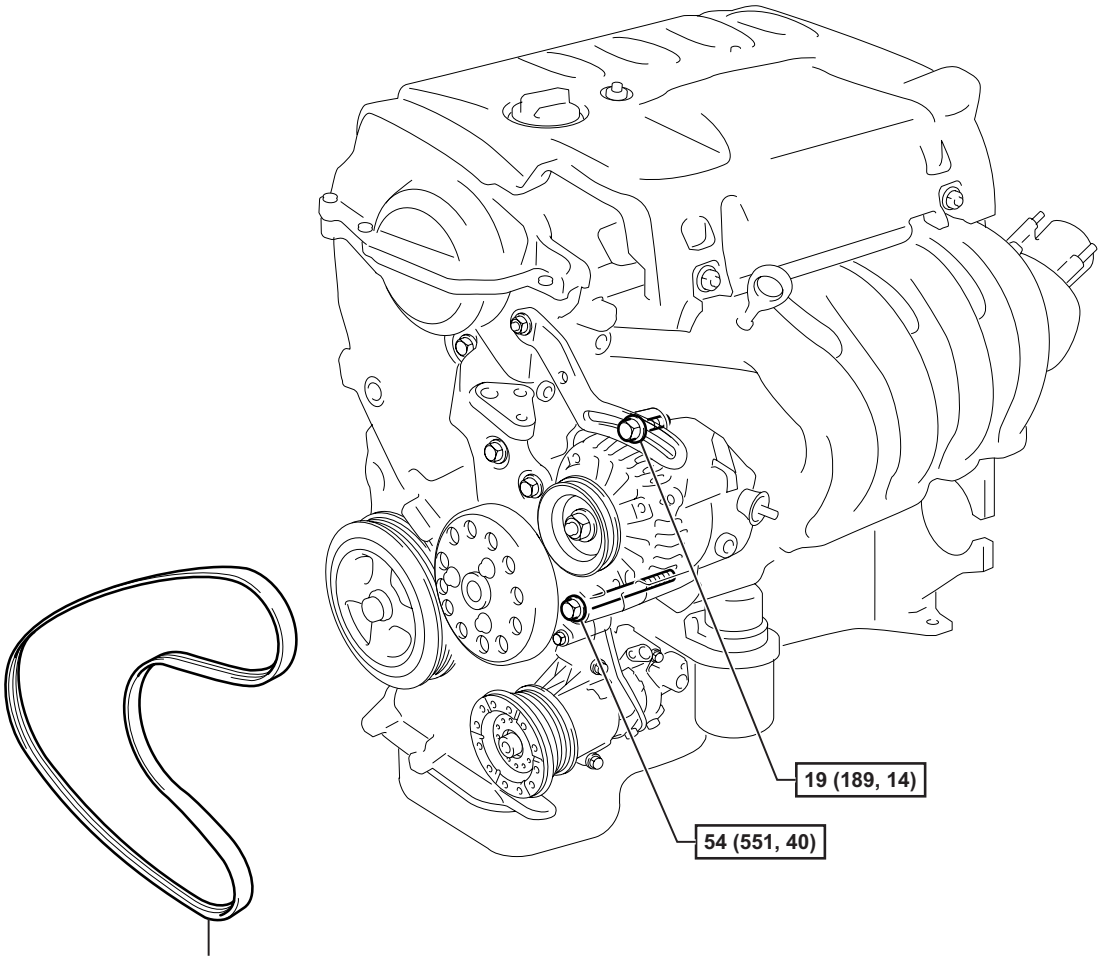
N*m (kgf*cm, ft.*lbf) : Specified torque

T

A115143E01

EM

EM



N*m (kgf*cm, ft.*lbf) : Specified torque

T

A116199E01

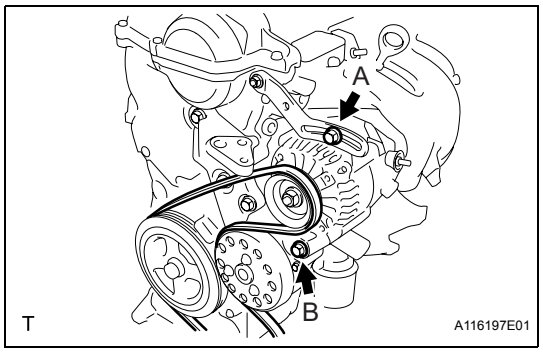
REMOVAL

1. REMOVE ENGINE UNDER COVER RH

2. REMOVE FAN AND GENERATOR V BELT

(a) Loosen bolts A and B.

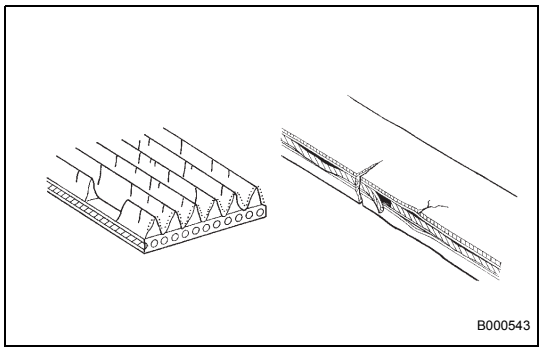
(b) Release the fan and generator V belt tension and remove the fan and generator V belt.



INSPECTION

1. INSPECT FAN AND GENERATOR V BELT

(a) Visually check the belt for excessive wear, frayed cords etc. If any defects are found, replace the belt.
HINT:
- If any defects are found, replace the belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has pieces missing from the ribs, it should be replaced.



EM

INSTALLATION

1. INSTALL FAN AND GENERATOR V BELT

(a) Provisionally install the fan and generator V belt onto each pulley.

NOTICE:

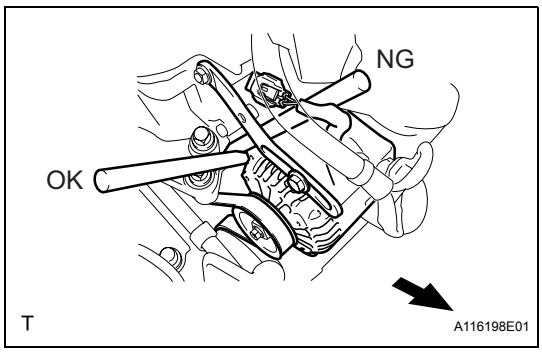
Make sure that the V-belt is securely fitted into the rib groove of the pulley.

2. ADJUST FAN AND GENERATOR V BELT

(a) Insert an adjusting bar between the engine mounting bracket and generator assembly. Push the adjusting bar toward the vehicle front to adjust the generator V belt tension.

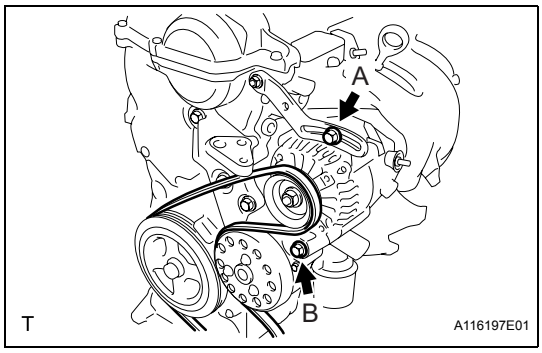
NOTICE:

Do not insert the adjusting bar between the camshaft timing oil control valve assembly and generator assembly. It could damage the camshaft timing oil control valve assembly.



(b) First tighten bolt A, then tighten bolt B.

Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf) for bolt A
54 N*m (551 kgf*cm, 40 ft.*lbf) for bolt B



3. INSPECT FAN AND GENERATOR V BELT

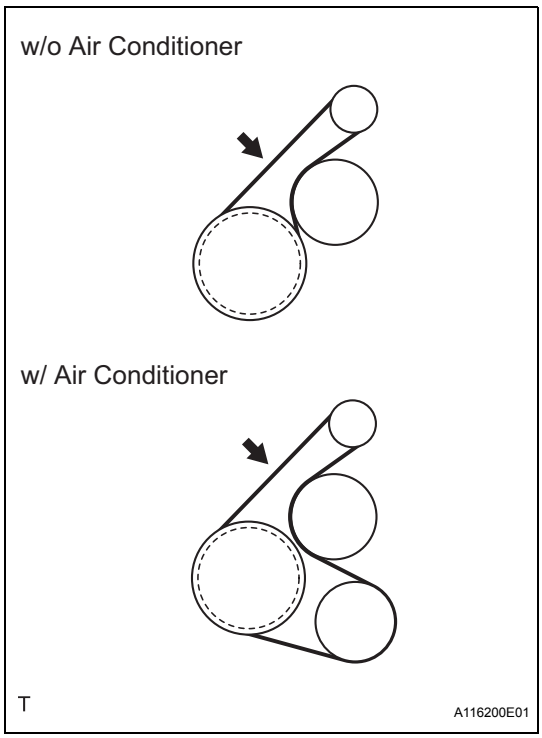
(a) Check the V belt deflection and tension.

Deflection

Item	Specified Condition
New belt	7.0 to 8.5 mm (0.28 to 0.33 in)
Used belt	11 to 13 mm (0.43 to 0.51 in)

Tension

Item	Specified Condition
New belt	539 to 637 N (55 to 65 kg, 121 to 143 ld)
Used belt	245 to 392 N (25 to 40 kg, 55 to 88 ld)



If the belt deflection is not as specified, adjust it.

HINT:

- Check the V belt deflection at the specified point.
- Check the drive belt deflection at the specified point.
- When installing a new belt, set its tension to the specified value.
- When inspecting a belt which has been used for over 5 minutes, apply the used belt specifications.

- When reinstalling a belt which has been used for over 5 minutes, adjust its deflection and tension to the intermediate values of each used belt specification.
- V-ribbed belt tension and deflection should be checked after 2 revolutions of engine cranking.
- When using a belt tension gauge, confirm its accuracy by using a master gauge first.

4. INSTALL ENGINE UNDER COVER RH

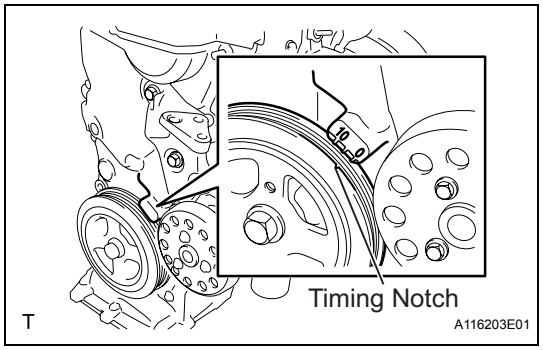
VALVE CLEARANCE

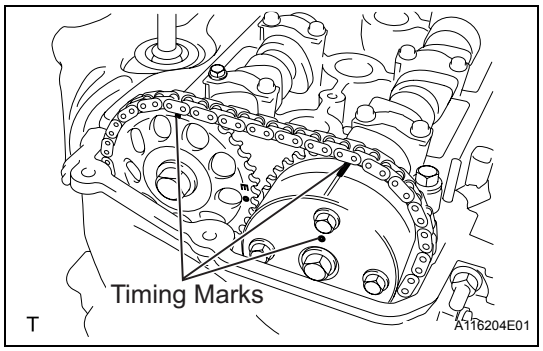
ADJUSTMENT

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
5. **DISCONNECT VENTILATION HOSE (See page FU-13)**
6. **DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
8. **INSPECT VALVE CLEARANCE**

HINT:
Inspect the valve clearance when the engine is cold.

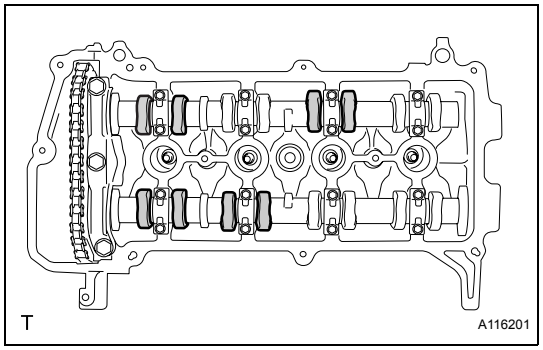
(a) Set the No. 1 cylinder to TDC/compression.
(1) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.





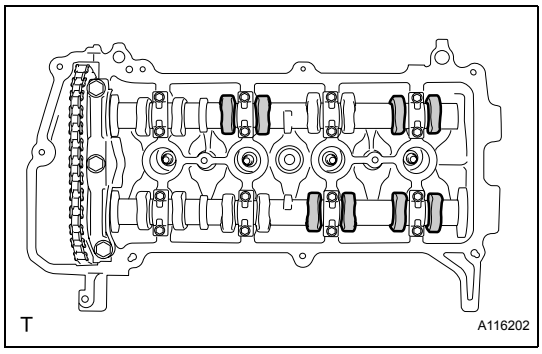
(2) Check that both timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward, as shown in the illustration.
HINT:
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

(b) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)



(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

(c) Turn the crankshaft 1 complete revolution (360°) and align its timing notch with the timing mark "0" of the oil pump.

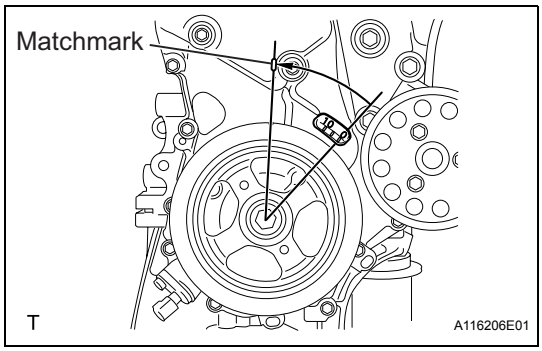


(d) Check the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to0.35 mm (0.010 to 0.014 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.



9. ADJUST VALVE CLEARANCE

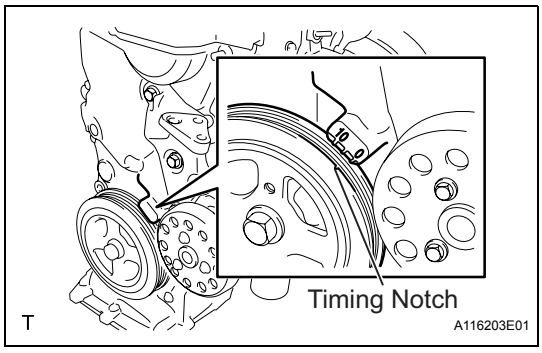
NOTICE:
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.

(a) Remove the fan and generator V belt (See page EM-7).

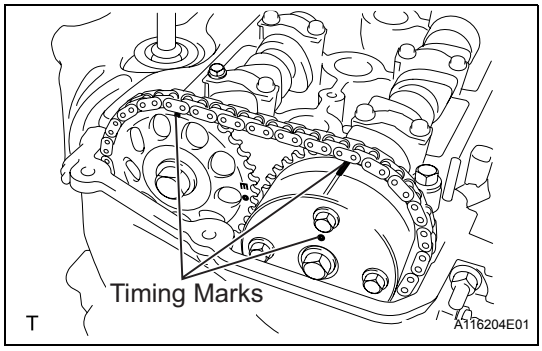
(b) Remove the engine mounting insulator sub-assembly RH (See page LU-17).

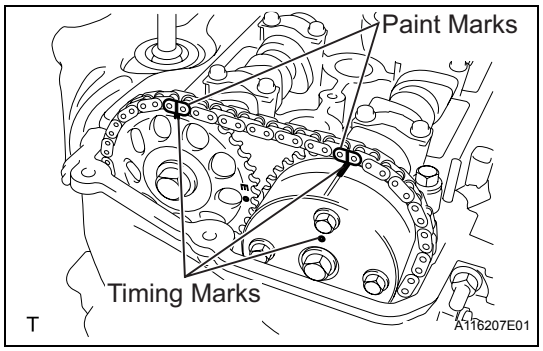
(c) Set the No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.

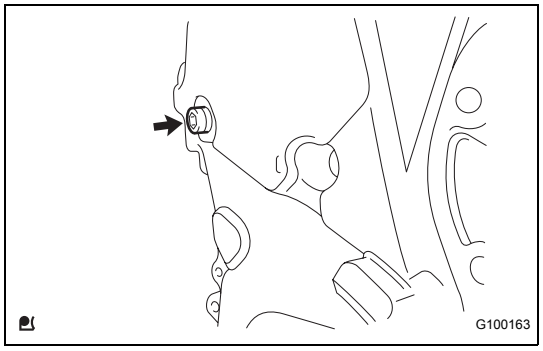


(2) Check that both timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward, as shown in the illustration.
HINT:
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

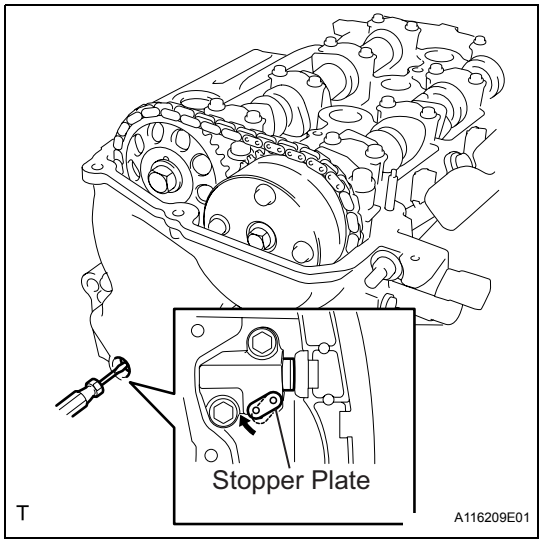




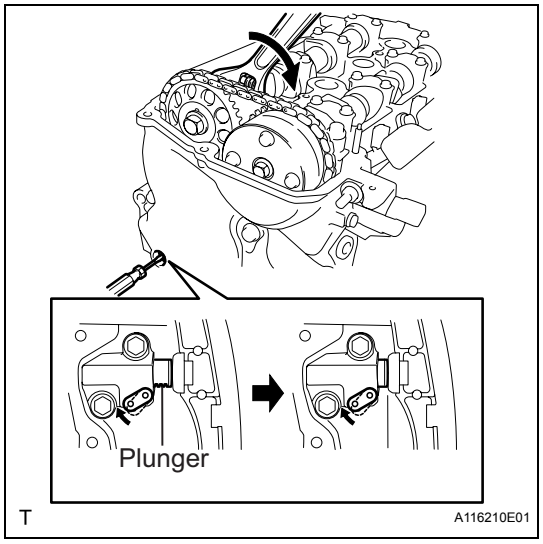
(d) Place paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



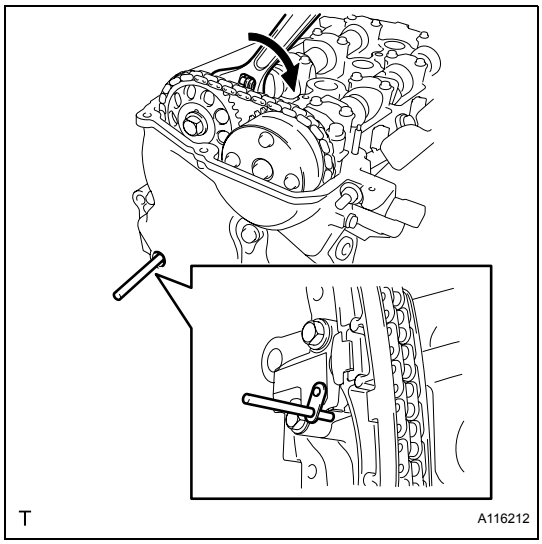
(e) Using an 8 mm hexagon wrench, remove the screw plug.



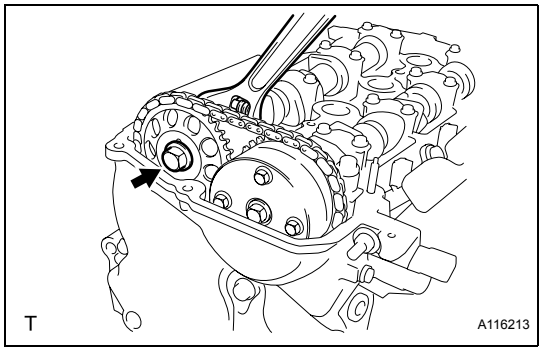
(f) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



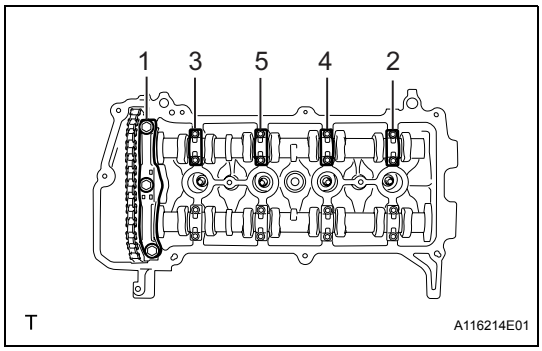
(g) Using a wrench, rotate camshaft No. 2 clockwise to push in the plunger of the chain tensioner.



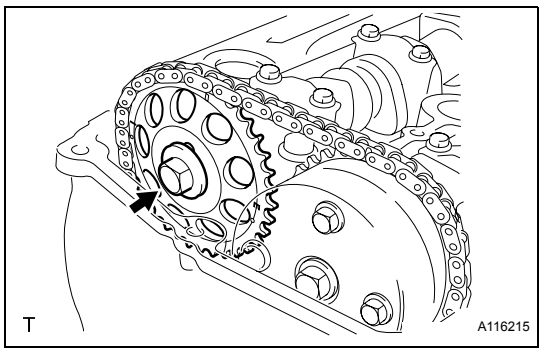
(h) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that the bar does not come off.



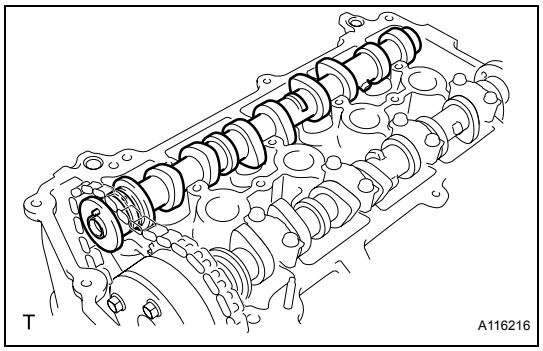
(i) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and remove the fringe bolt.



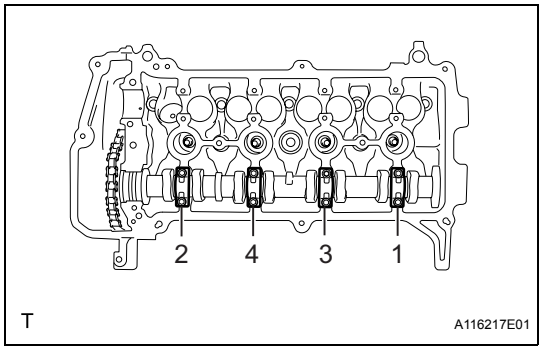
(j) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
Loosen each bolt uniformly while keeping the camshaft level.



(k) Remove the fringe bolt and remove the camshaft timing sprocket.

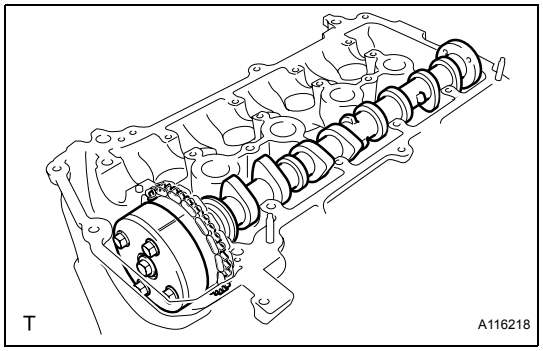


(l) Remove camshaft No. 2.

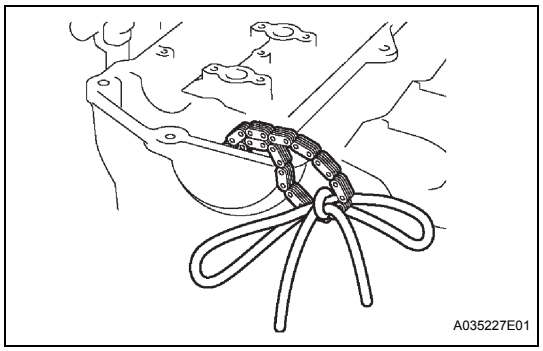


(m) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.
NOTICE:
Loosen each bolt uniformly while keeping the camshaft level.

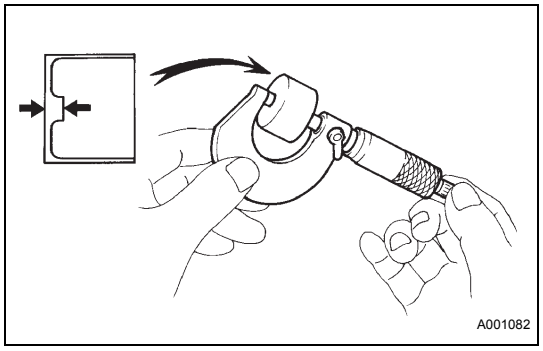
EM



(n) Hold the chain by hand and remove the camshaft and the camshaft timing gear assembly.



(o) Tie the chain with a piece of string as shown in the illustration.
(p) Remove the 16 valve lifters.



(q) Using a micrometer, measure the thickness of the removed lifter.
(r) Calculate the thickness of a new lifter so that the valve clearance comes to within the specified values.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C - 0.20 mm (0.008 in.))
Exhaust A = B + (C - 0.30 mm (0.012 in.))

(s) Select a new lifter with a thickness as close to the calculated values as possible.
HINT:
Lifters are available in 35 sizes in increments of 0.020mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

Measured clearance mm(in.) / Installed lifter thickness mm(in.)	0.000 - 0.030 (0.0000 - 0.0012)	0.031 - 0.050 (0.0012 - 0.0020)	0.051 - 0.070 (0.0020 - 0.0028)	0.071 - 0.090 (0.0028 - 0.0035)	0.091 - 0.110 (0.0036 - 0.0043)	0.111 - 0.130 (0.0044 - 0.0051)	0.131 - 0.149 (0.0052 - 0.0059)	0.150 - 0.250 (0.0059 - 0.0098)	0.251 - 0.270 (0.0099 - 0.0106)	0.271 - 0.290 (0.0107 - 0.0114)	0.291 - 0.310 (0.0115 - 0.0122)	0.311 - 0.330 (0.0122 - 0.0130)	0.331 - 0.350 (0.0130 - 0.0138)	0.351 - 0.370 (0.0138 - 0.0146)	0.371 - 0.390 (0.0146 - 0.0154)	0.391 - 0.410 (0.0154 - 0.0161)	0.411 - 0.430 (0.0162 - 0.0169)	0.431 - 0.450 (0.0170 - 0.0177)	0.451 - 0.470 (0.0178 - 0.0185)	0.471 - 0.490 (0.0185 - 0.0193)	0.491 - 0.510 (0.0193 - 0.0201)	0.511 - 0.530 (0.0201 - 0.0209)	0.531 - 0.550 (0.0209 - 0.0217)	0.551 - 0.570 (0.0217 - 0.0224)	0.571 - 0.590 (0.0225 - 0.0232)	0.591 - 0.610 (0.0233 - 0.0240)	0.611 - 0.630 (0.0241 - 0.0248)	0.631 - 0.650 (0.0248 - 0.0256)	0.651 - 0.670 (0.0256 - 0.0264)	0.671 - 0.690 (0.0264 - 0.0272)	0.691 - 0.710 (0.0272 - 0.0280)	0.711 - 0.730 (0.0280 - 0.0287)	0.731 - 0.750 (0.0288 - 0.0295)	0.751 - 0.770 (0.0296 - 0.0303)	0.771 - 0.790 (0.0304 - 0.0311)	0.791 - 0.810 (0.0311 - 0.0319)	0.811 - 0.830 (0.0319 - 0.0327)	0.831 - 0.850 (0.0327 - 0.0335)	0.851 - 0.870 (0.0335 - 0.0343)	0.871 - 0.890 (0.0343 - 0.0350)	0.891 - 0.910 (0.0351 - 0.0358)	0.911 - 0.930 (0.0359 - 0.0366)

T

A117457

EM

Intake valve clearance (cold):
0.15 to 0.25 mm (0.006 to 0.010 in.)
EXAMPLE:
A 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0158 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 46 lifter.

New Shim Thickness

EM

Exhaust valve clearance (Cold):
0.25 to 0.35 mm (0.010 to 0.014 in.)
EXAMPLE:
A 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.). Replace the 5.340 mm (0.2102 in.) lifter with a new No. 48 lifter.

New Shim Thickness

Shim No.	Thickness	Shim No.	Thickness	Shim No.	Thickness
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)
20	5.200 (0.2047)	44	5.440 (0.2142)	68	5.680 (0.2236)

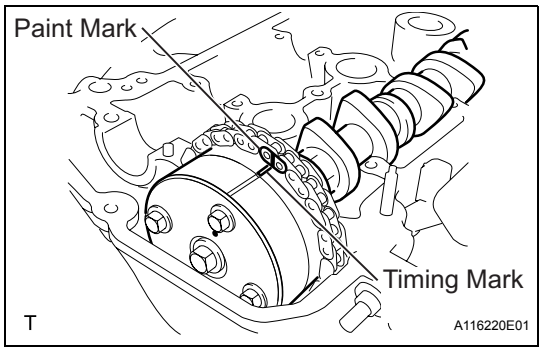
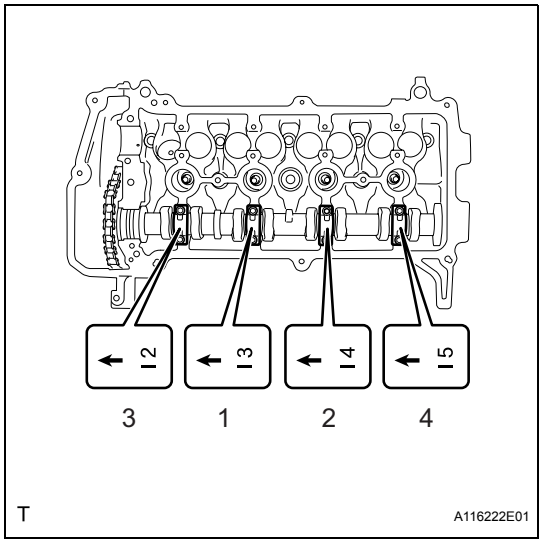
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)		

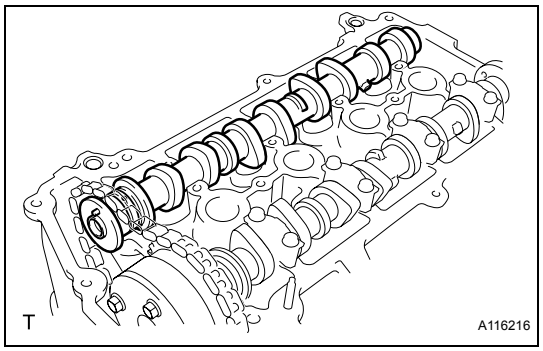
(t) Install the selected valve lifter.
(u) Apply a light coat of engine oil to the camshaft and camshaft journals.



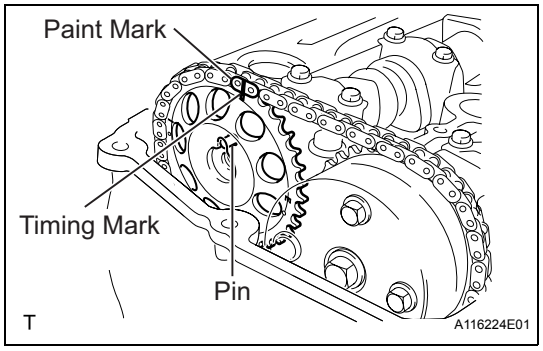
(v) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned as shown in the illustration.



(w) Examine the front marks and the numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
Tighten each bolt uniformly while keeping the camshaft level.



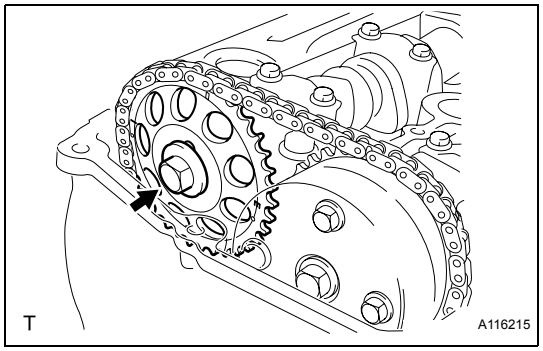
(x) Install camshaft No. 2.



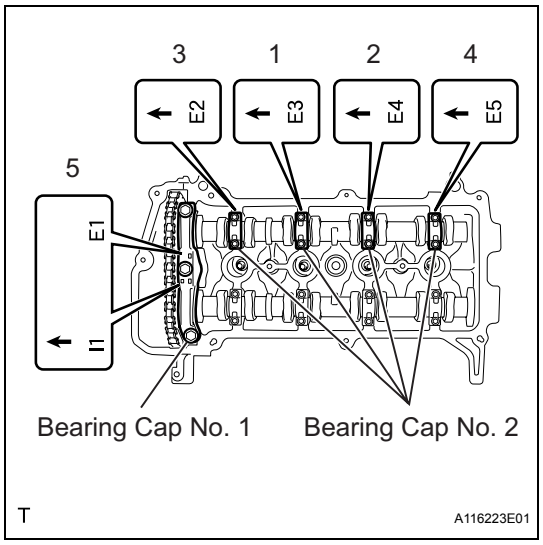
(y) Hold the chain, and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.

(z) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.

EM



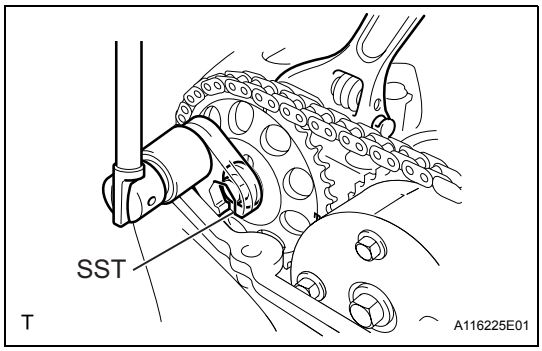
(aa) Provisionally install the flange bolt.



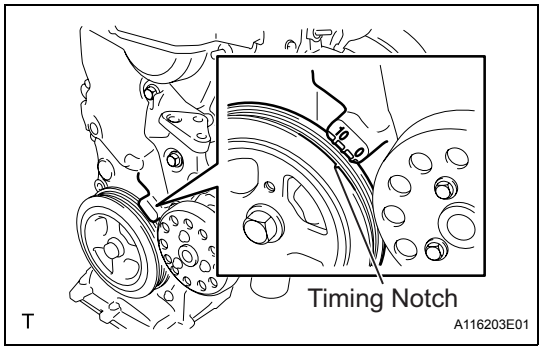
(ab) Examine the front marks and the numbers of camshaft bearing cap No. 1 and camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps, in the sequence shown in the illustration.

Torque: for bearing cap No. 2
13 N*m (129 kgf*cm, 9.4 ft.*lbf)
for bearing cap No. 1
23 N*m (235 kgf*cm, 17 ft.*lbf)

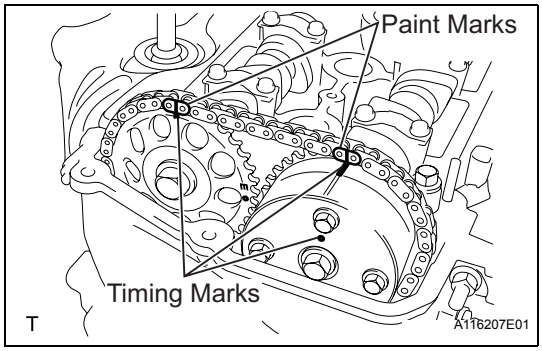
NOTICE:
Tighten each bolt uniformly while keeping the camshaft level.



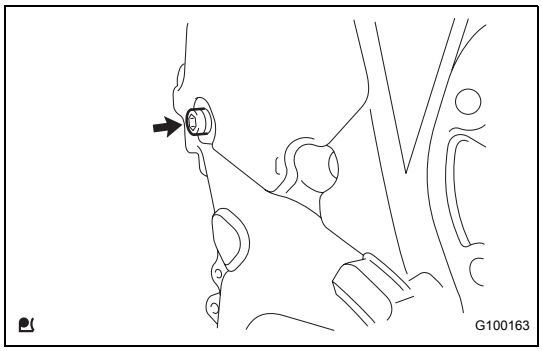
(ac) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and install the flange bolt.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
SST 09023-38400
(ad) Remove the bar from the timing chain tensioner.



(ae) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.



(af) Check that all the pairs of timing marks are aligned.
(ag) Apply adhesive to the 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(ah) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
(ai) Install the engine mounting insulator sub-assembly RH (See page LU-26). (for Hatchback)
(aj) Install the engine mounting insulator sub-assembly RH (See page LU-26). (for Sedan)
(ak) Install the fan and generator V belt (See page EM-7).
(al) Adjust the fan and generator V belt (See page EM-7).
(am) Inspect the fan and generator V belt (See page EM-8).

10. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)**
11. **CONNECT VENTILATION HOSE NO. 2 (See page FU-20)**
12. **CONNECT VENTILATION HOSE (See page FU-20)**
13. **INSTALL IGNITION COIL NO. 1 (See page IG-9)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
15. **CHECK FOR ENGINE OIL LEAKAGE**
16. **INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)**
17. **INSTALL ENGINE UNDER COVER RH**

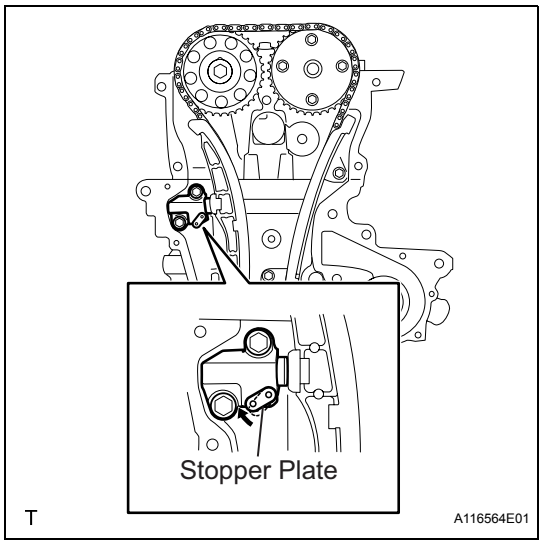
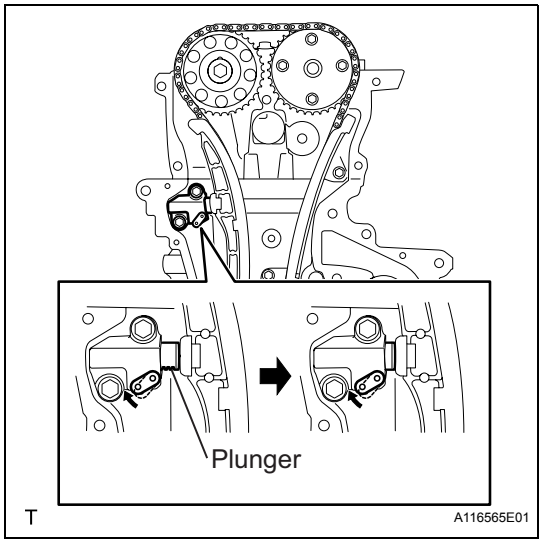
REMOVAL

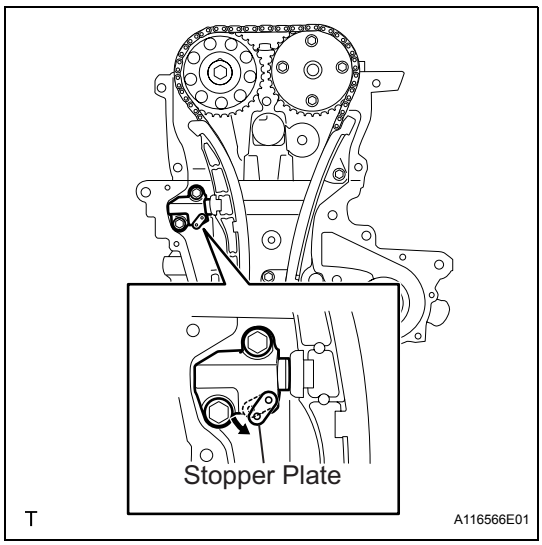
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE FRONT WHEEL RH
3. REMOVE ENGINE UNDER COVER RH
4. DRAIN ENGINE OIL
5. DRAIN ENGINE COOLANT (See page CO-8)
6. REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)
7. REMOVE FAN AND GENERATOR V BELT (See page EM-7)
8. REMOVE GENERATOR ASSEMBLY (See page CH-10)
9. REMOVE IGNITION COIL NO. 1 (See page IG-9)
10. DISCONNECT VENTILATION HOSE (See page FU-13)
11. DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)
12. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)
13. REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)
14. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-18)
15. REMOVE CRANKSHAFT POSITION SENSOR (See page ES-403)
16. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-396)
17. REMOVE WATER PUMP PULLEY (See page CO-15)
18. REMOVE WATER PUMP ASSEMBLY (See page CO-15)
19. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-18)
20. REMOVE OIL PUMP ASSEMBLY (See page LU-19)
21. REMOVE OIL PUMP SEAL (See page LU-21)
22. REMOVE CHAIN TENSIONER ASSEMBLY NO. 1
    NOTICE:
    - Do not rotate the crankshaft with the chain tensioner removed.
    - When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



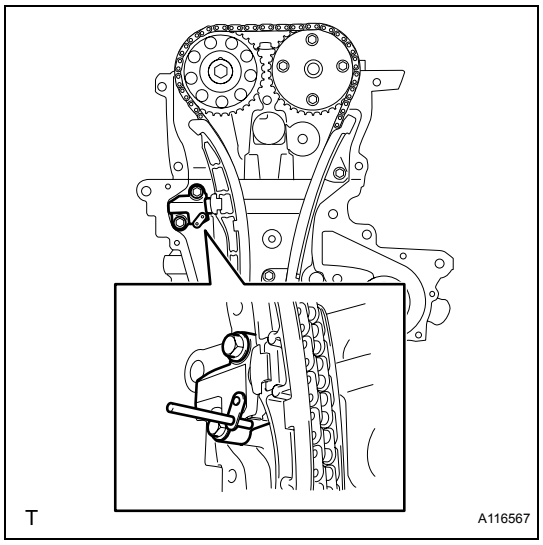
(a) Pull up the stopper plate and hold it with its lock released.



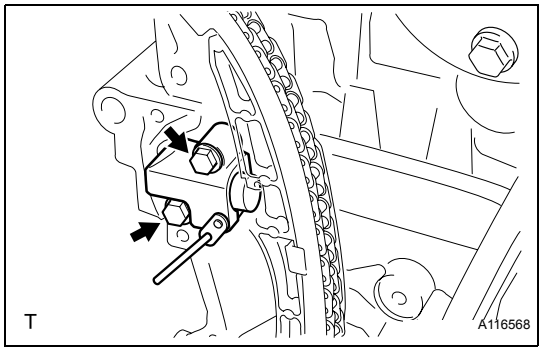
(b) Unlock the plunger of the tensioner and push it in to the end.



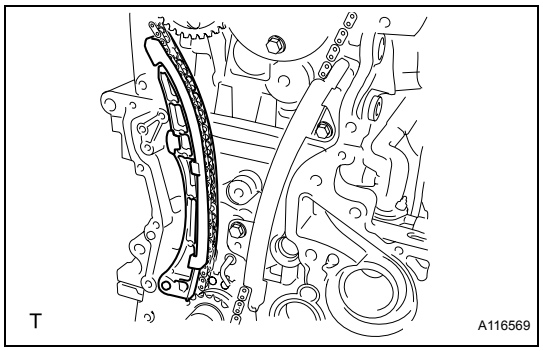
(c) Pull down the stopper plate with the plunger pushed to the end and lock the plunger.



(d) Insert a 3 mm (0.12 in.) diameter bar into the hole in the stopper plate and lock the plunger.

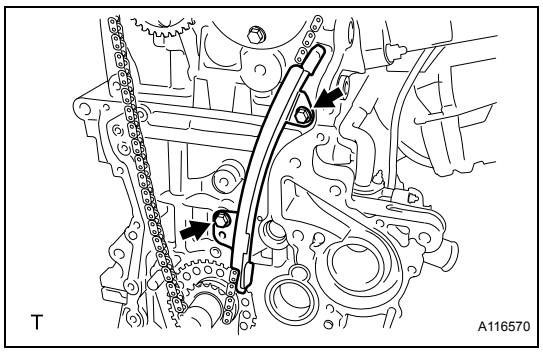


(e) Remove the 2 bolts and remove chain tensioner assembly No. 1.



23. REMOVE CHAIN TENSIONER SLIPPER

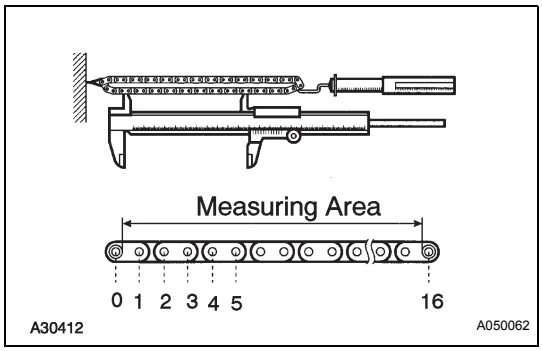
(a) Remove the chain tensioner slipper.



24. REMOVE CHAIN VIBRATION DAMPER NO. 1

(a) Remove the 2 bolts and remove chain vibration damper No. 1.

25. REMOVE CHAIN SUB-ASSEMBLY



INSPECTION

1. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, apply 140 N (14.3 kgf, 31.5 lb) to the timing chain and measure its length.

Maximum chain elongation:

123.2 mm (4.850 in.)

If the elongation is greater than the maximum, replace the chain.

HINT:

Perform the same measurement at 3 or more random places and calculate the average length.

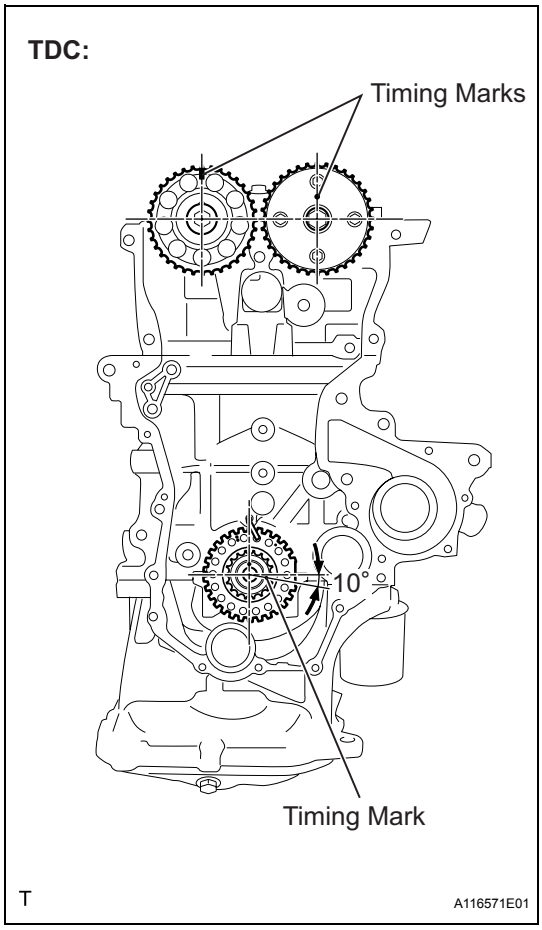
INSTALLATION

1. INSTALL CHAIN SUB-ASSEMBLY

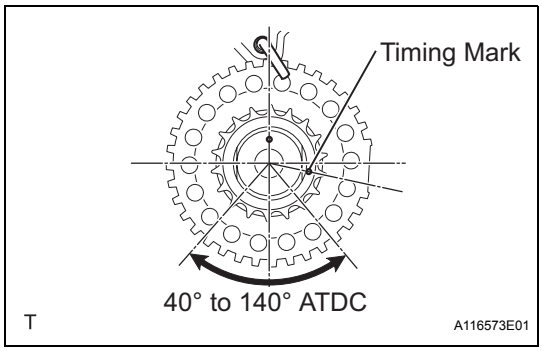
(a) Make sure that all the timing marks are in the positions (TDC) shown in the illustration.

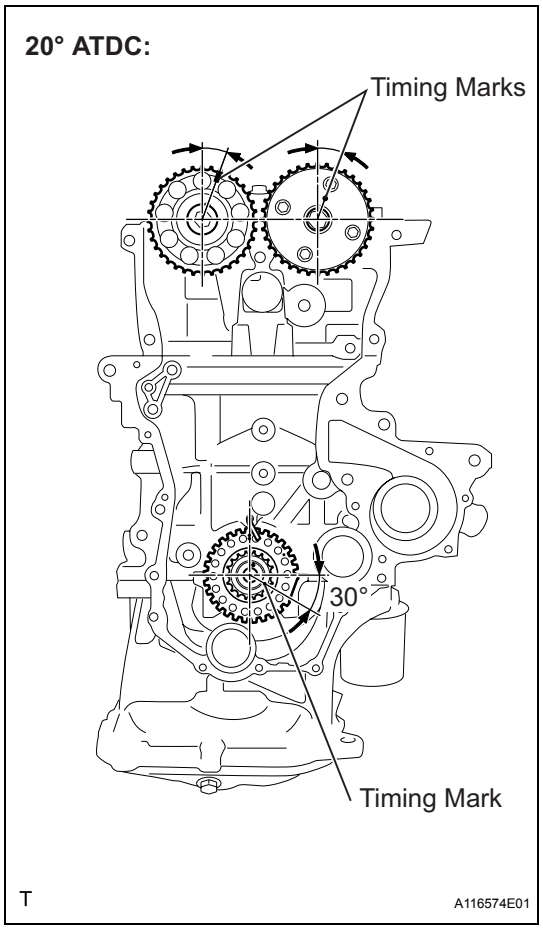
HINT:

The positions of the timing marks may differ from the predetermined positions due to the force of the valve spring.



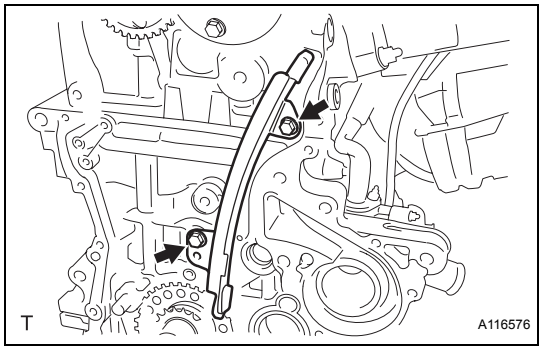
(b) Set the timing mark of the crankshaft in a position between 40 and 140°ATDC as illustrated.





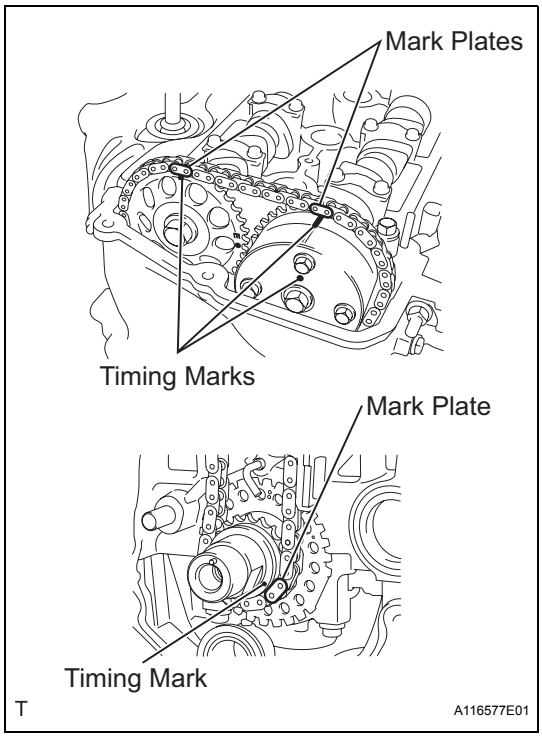
(c) Set the camshaft timing gear and the camshaft timing sprocket in the positions (20°ATDC) shown in the illustration.

(d) Set the crankshaft in the position (20°ATDC) shown in the illustration.

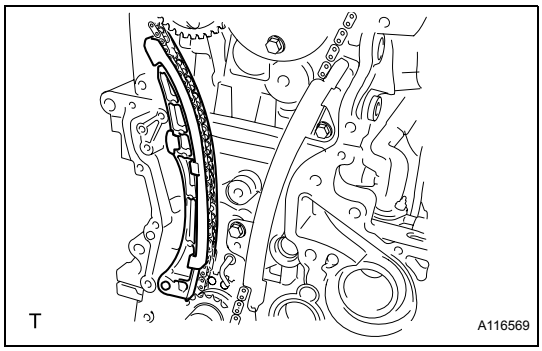


(e) Install chain vibration damper No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

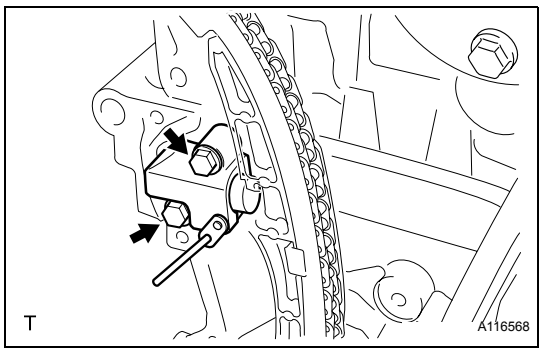
EM



(f) Align the timing marks of the camshaft with the mark plates of the timing chain and install the timing chain.
HINT:
Align the timing marks with the mark plates while turning the hexagonal service portion of the camshaft using a wrench.



2. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper.



3. INSTALL CHAIN TENSIONER ASSEMBLY NO. 1
(a) Install chain tensioner assembly No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(b) Remove the bar from chain tensioner assembly No. 1.

4. INSTALL OIL PUMP SEAL (See page LU-21)

5. INSTALL OIL PUMP ASSEMBLY (See page LU-22)

6. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-26)

7. INSTALL WATER PUMP ASSEMBLY (See page CO-16)

8. INSTALL WATER PUMP PULLEY (See page CO-16)

9. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-397)

10. INSTALL CRANKSHAFT POSITION SENSOR (See page ES-403)

11. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-26)
12. INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)
13. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)
14. CONNECT VENTILATION HOSE NO. 2 (See page FU-20)
15. CONNECT VENTILATION HOSE (See page FU-20)
16. INSTALL IGNITION COIL NO. 1 (See page IG-9)
17. INSTALL GENERATOR ASSEMBLY (See page CH-17)
18. INSTALL FAN AND GENERATOR V BELT (See page EM-7)
19. ADJUST FAN AND GENERATOR V BELT (See page EM-7)
20. INSPECT FAN AND GENERATOR V BELT (See page EM-8)
21. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
22. ADD ENGINE OIL
23. ADD ENGINE COOLANT (See page CO-8)
24. CHECK ENGINE OIL LEVEL (See page LU-1)
25. CHECK FOR ENGINE OIL LEAKAGE
26. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)
27. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)
28. INSTALL ENGINE UNDER COVER RH
29. INSTALL FRONT WHEEL RH
    Torque: 103 N*m (1050 kgf*cm, 76 ft.*lbf)

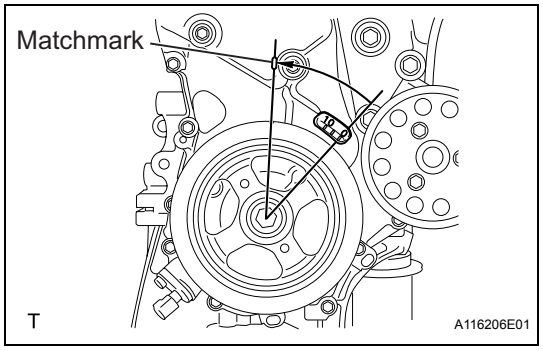
REMOVAL

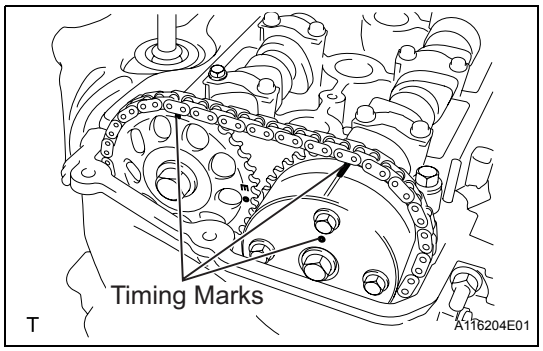
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
5. **DISCONNECT VENTILATION HOSE (See page FU-13)**
6. **DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
8. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
9. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)**
10. **REMOVE NO. 2 CAMSHAFT**

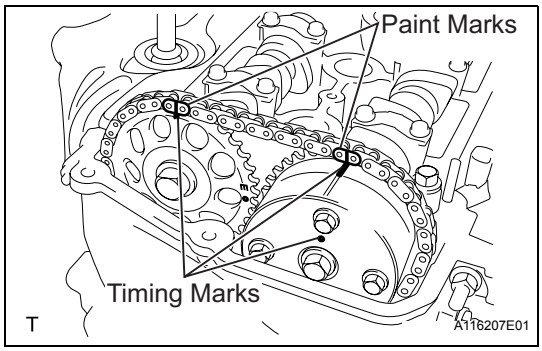
NOTICE:
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40 ° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.



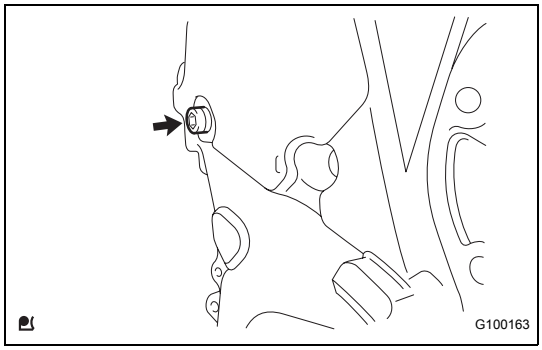
(a) Set the No. 1 cylinder to TDC / compression.
  (1) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.

  (2) Check that the timing marks on both the camshaft timing sprocket and the camshaft timing gear are facing upward, as shown in the illustration.
  HINT:
  If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

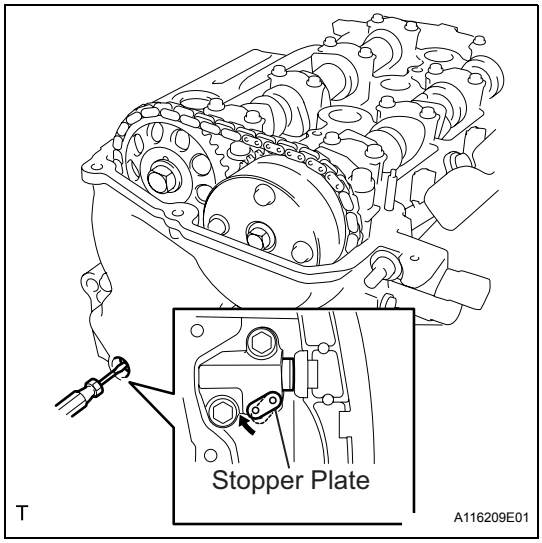




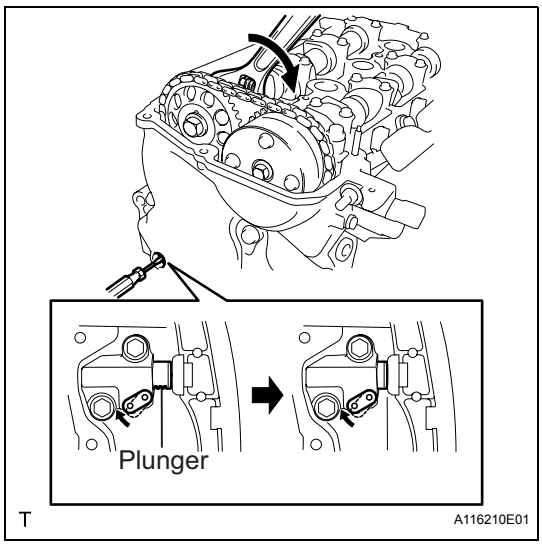
(b) Place paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



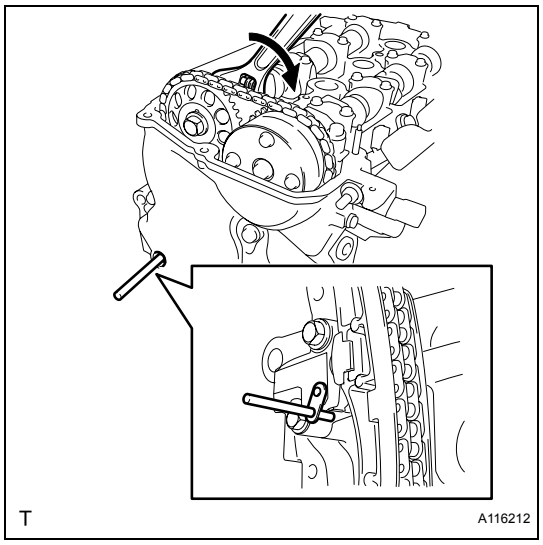
(c) Using an 8 mm hexagon wrench, remove the screw plug.



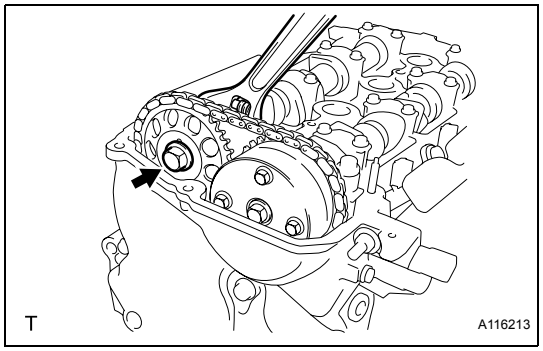
(d) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



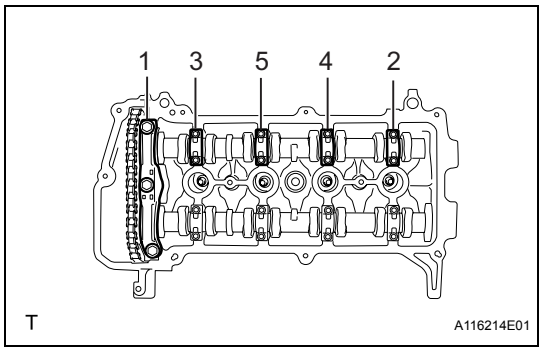
(e) Using a wrench, rotate camshaft No. 2 clockwise to push in the plunger of the chain tensioner.



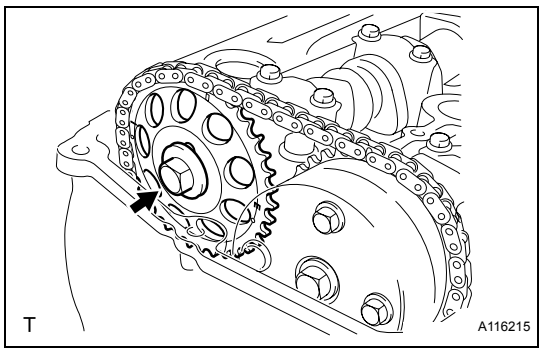
(f) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that it does not come off.



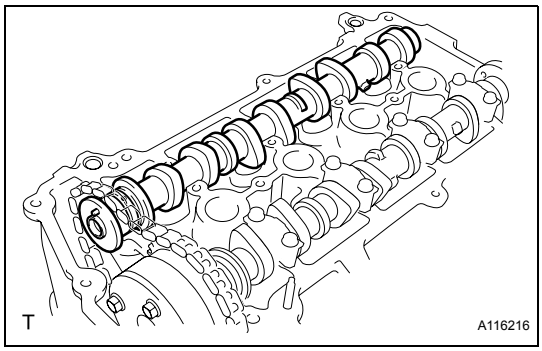
(g) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and remove the flange bolt.



(h) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing caps No. 1 and No. 2.
NOTICE:
Loosen the bolts uniformly while keeping the camshaft level.



(i) Remove the flange bolt and remove the camshaft timing sprocket.

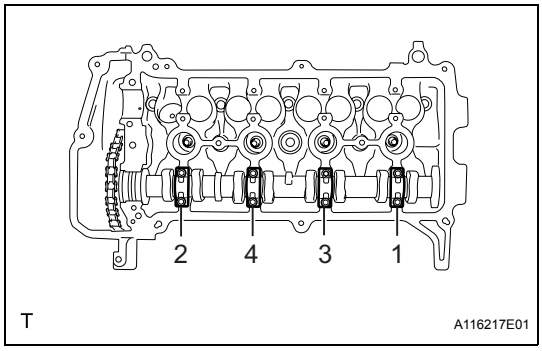


(j) Remove camshaft No. 2.

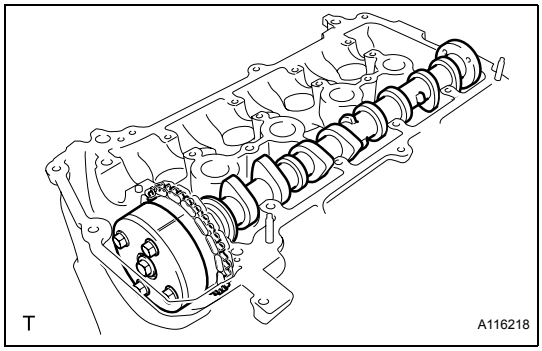
11. REMOVE CAMSHAFT

(a) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.

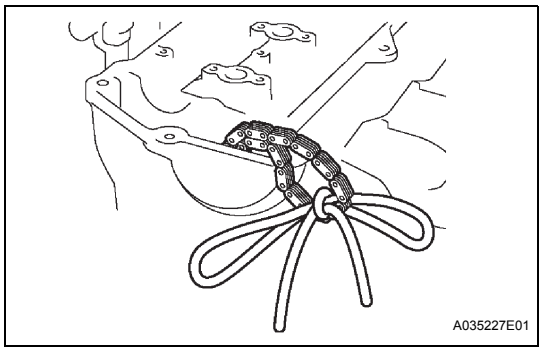
NOTICE:
Loosen each bolt uniformly while keeping the camshaft level.



(b) Hold the chain by hand, and remove the camshaft and the camshaft timing gear assembly.



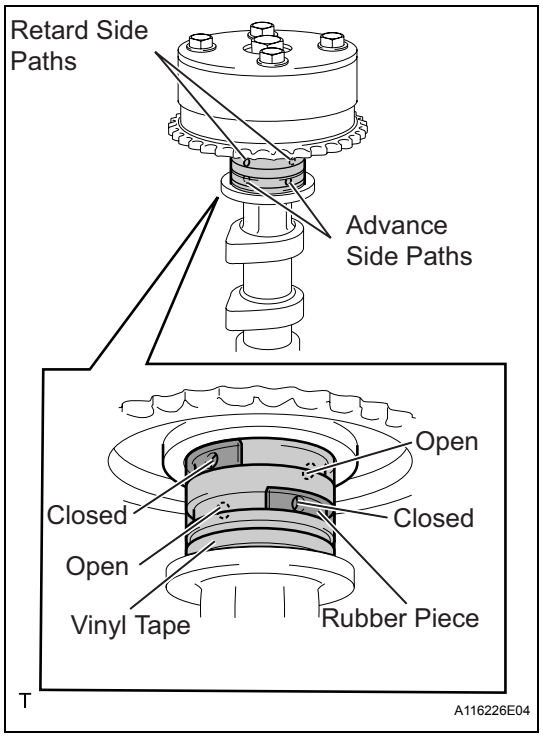
(c) Tie the chain with a piece of string as shown in the illustration.



12. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

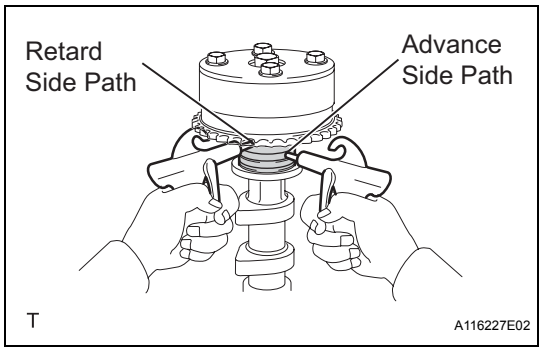
(a) Clamp the camshaft in a vise and confirm that it is locked.

NOTICE:
Do not damage the camshaft.

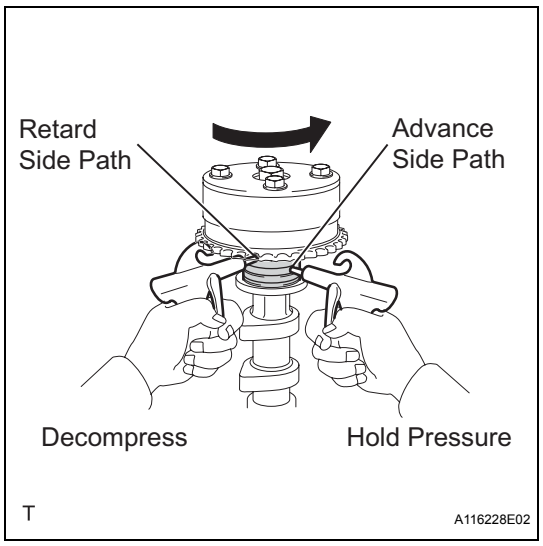


(b) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.
HINT:
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(c) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



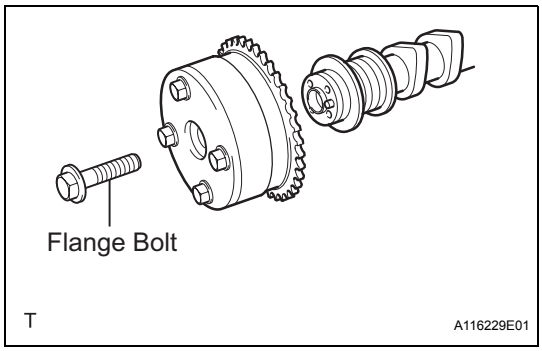
(d) Apply air at about 150 kPa (1.5 kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).
NOTICE:
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.



(e) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released, and the camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
The camshaft timing gear assembly occasionally shifts to the retard side abruptly, if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

EM



(g) Remove the flange bolt and remove the camshaft timing gear assembly.
NOTICE:
- **Do not remove the other 4 bolts.**
- **When reusing the camshaft timing gear, unlock the lock pin inside the camshaft timing gear first.**

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of camshaft timing gear.

(1) Clamp the camshaft in a vice, and check that the camshaft timing gear is locked.

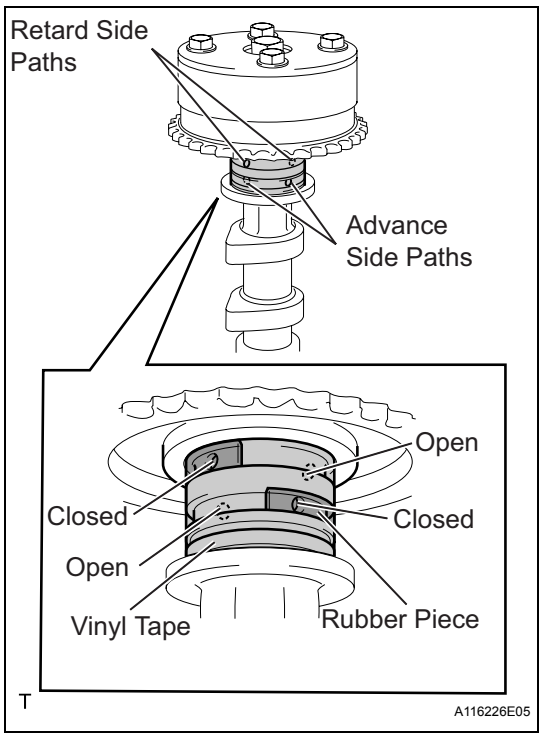
NOTICE:
Do not damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.

HINT:
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(2) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(3) Apply air at about 150 kPa (1.5kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).

NOTICE:
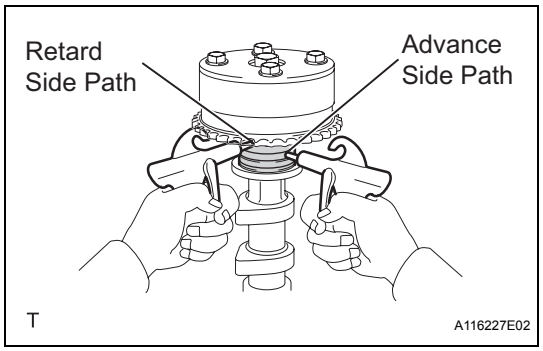
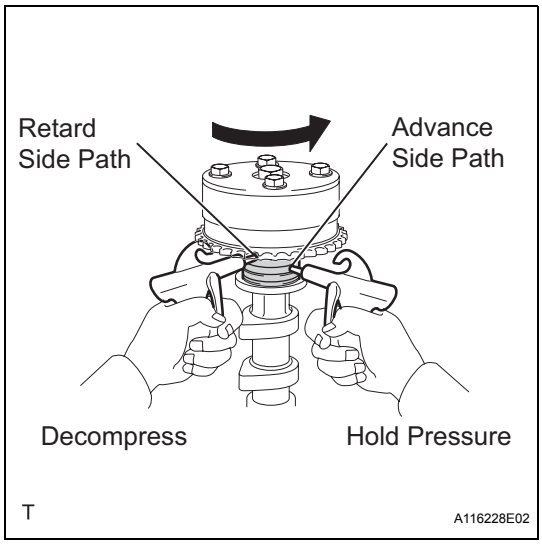
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.





(4) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(5) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

(c) Check the revolution.

(1) Rotate the valve timing assembly back and forth several times, except where the lock pin meets it at the most retarded angle. Check the movable range and that it rotates smoothly.
Standard:
Smooth movable range is about 22.5°
NOTICE:
Perform this check by hand, instead of using air pressure.

(d) Check that the gear locks in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked in the most retarded position.

INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

NOTICE:

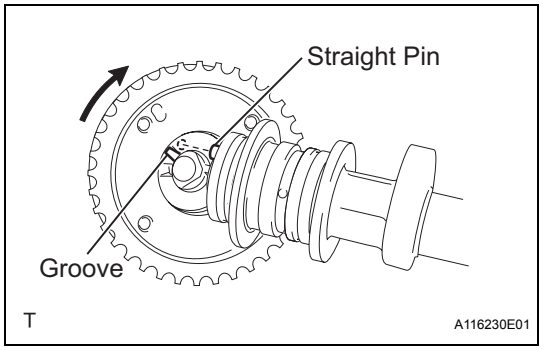
Install the camshaft timing gear assembly onto the camshaft with the lock pin of the camshaft timing gear assembly released.



(a) Put the camshaft timing gear assembly and camshaft together with the straight pin of the groove.

(b) Turn the camshaft timing gear assembly clockwise while pushing it gently toward the camshaft. When the pin fits the groove, push to ensure a good fit.

NOTICE:

Do not turn the camshaft timing gear in the retard direction (clockwise).

(c) Check that there is no clearance between the gear flange and the camshaft.

(d) Tighten the flange bolt with the camshaft timing gear fixed.

Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

NOTICE:

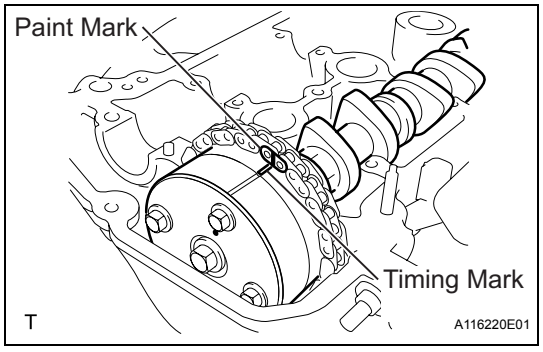
- **Do not lock the camshaft timing gear assembly when tightening the bolt.**
- **Release the lock pin of the camshaft timing gear assembly first, and tighten the bolt when the lock pin is locked in the most retarded position.**
- **Tightening the bolts with the lock pin locked could cause breakage of the lock pin.**

(e) Check that the camshaft timing gear assembly moves smoothly in the retard direction (clockwise) and is locked in the most retarded position.

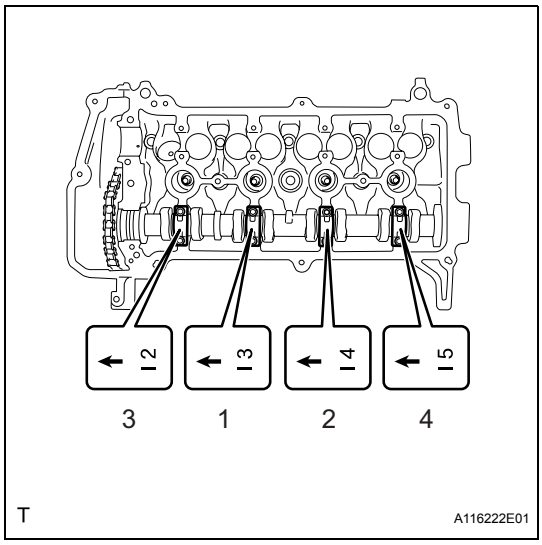
2. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft and camshaft journals.

(b) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned as shown in the illustration.



EM



(c) Examine the front marks and numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
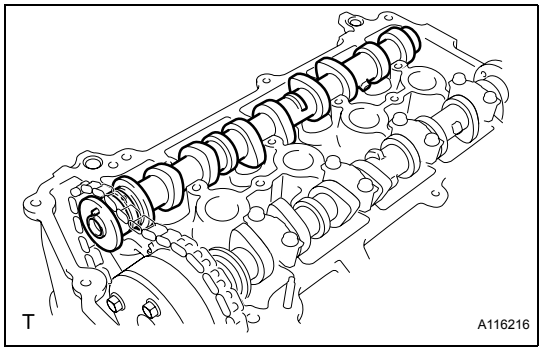
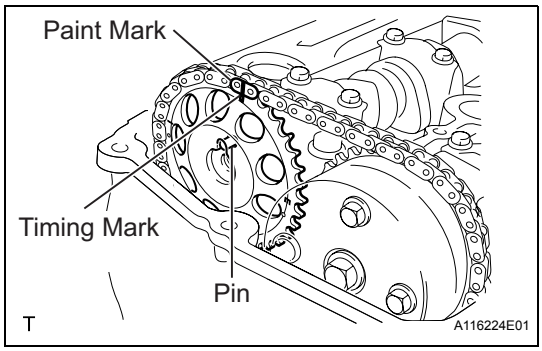
Tighten each bolt uniformly while keeping the camshaft level.



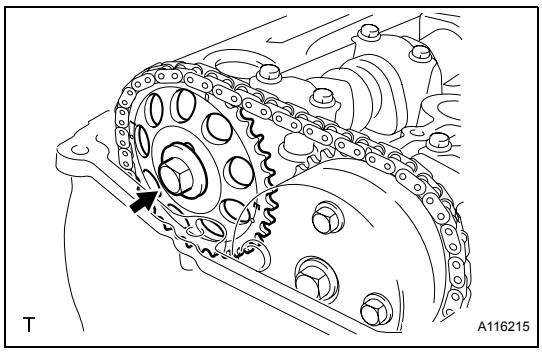
3. INSTALL NO. 2 CAMSHAFT

(a) Install camshaft No. 2.

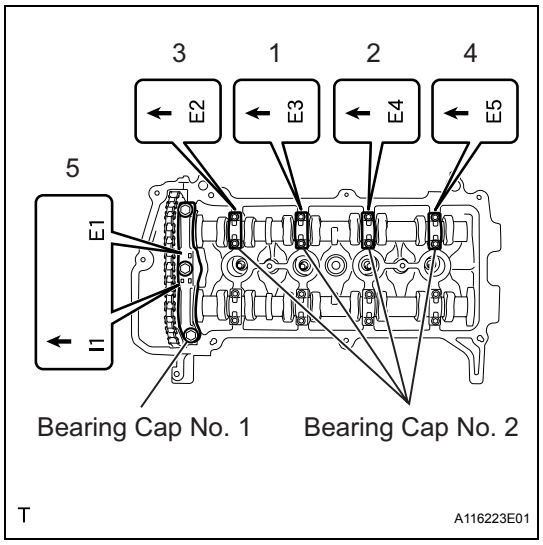


(b) Hold the chain and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.

(c) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.



(d) Provisionally install the flange bolt.



(e) Examine the front marks and numbers on camshaft bearing caps No. 1 and No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: for bearing cap No. 2
13 N*m (129 kgf*cm, 9.4 ft.*lbf)
for bearing cap No. 1
23 N*m (235 kgf*cm, 17 ft.*lbf)
NOTICE:
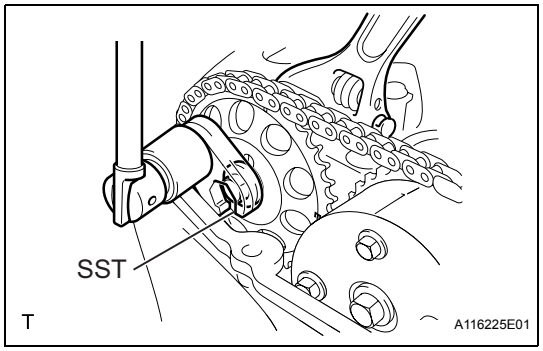
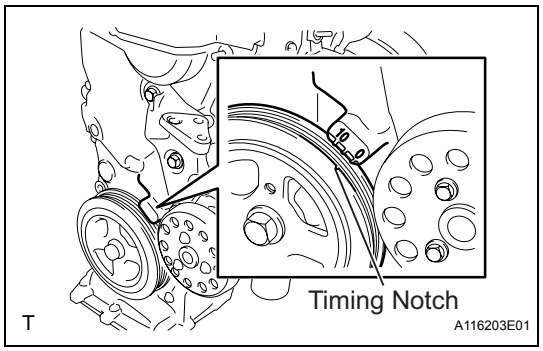
Tighten each bolt uniformly while keeping the camshaft level.

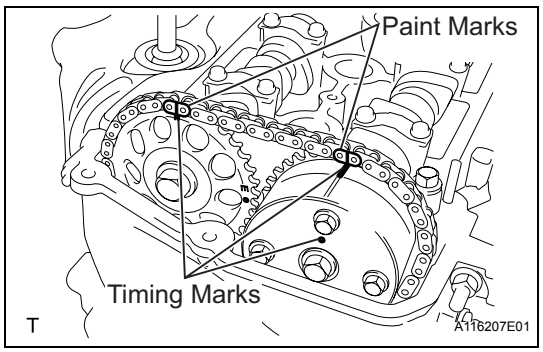
EM



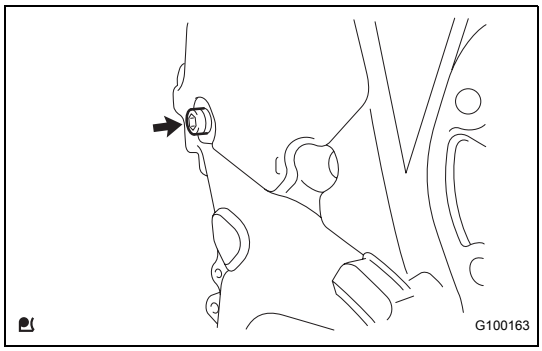
(f) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and install the flange bolt.
SST 09023-38400
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
(g) Remove the bar from the timing chain tensioner.



(h) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.



(i) Check that all the pairs of timing marks are aligned.
(j) Apply adhesive to the end 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(k) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

4. **INSPECT VALVE CLEARANCE (See page EM-9)**
5. **ADJUST VALVE CLEARANCE (See page EM-10)**
6. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)**
7. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**
8. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**
9. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE** (See Page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE FRONT WIPER ARM HEAD CAP (for Hatchback) (See page WW-17)**
4. **REMOVE FRONT WIPER ARM HEAD CAP (for Sedan) (See page WW-9)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Hatchback) (See page WW-17)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Sedan) (See page WW-9)**
7. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Hatchback) (See page WW-17)**
8. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Sedan) (See page WW-9)**
9. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
10. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-18)**
11. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
12. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
13. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
14. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-10)**
15. **REMOVE FRONT WIPER MOTOR AND LINK (for Hatchback) (See page WW-19)**
16. **REMOVE FRONT WIPER MOTOR AND LINK (for Sedan) (See page WW-10)**
17. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-122)**
18. **REMOVE FRONT AIR SHUTTER SEAL RH (for Sedan) (See page ES-432)**
19. **REMOVE COWL TOP PANEL OUTER (for Hatchback) (See page EM-123)**
20. **REMOVE COWL TOP PANEL OUTER (for Sedan) (See page ES-432)**
21. **REMOVE BATTERY**
22. **REMOVE BATTERY TRAY**
23. **REMOVE FRONT WHEEL RH**

24. REMOVE ENGINE UNDER COVER RH

25. DRAIN ENGINE OIL

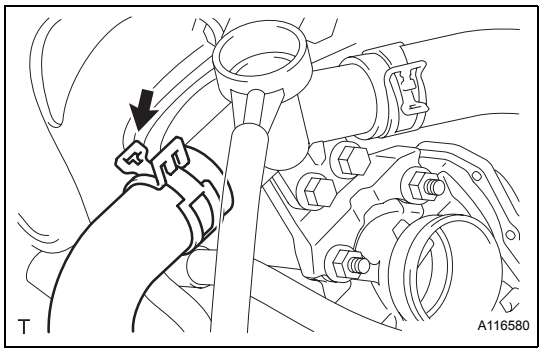
26. DRAIN ENGINE COOLANT (See page CO-8)

27. REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)

28. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-410)

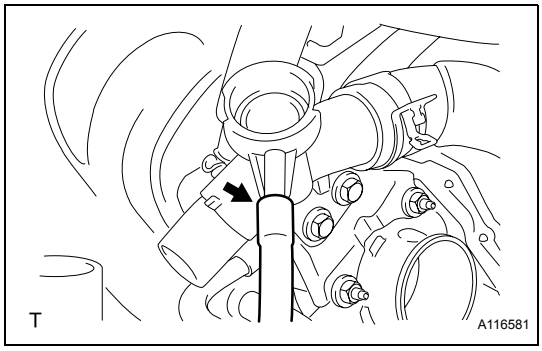
29. DISCONNECT RADIATOR HOSE NO. 3

(a) Disconnect radiator hose No. 3.



30. DISCONNECT RESERVE TANK HOSE

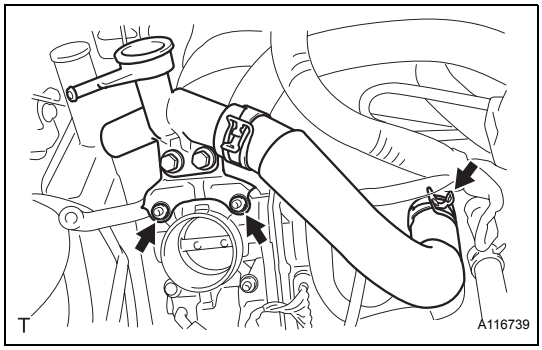
(a) Disconnect the reserve tank hose.



31. REMOVE WATER FILLER SUB-ASSEMBLY

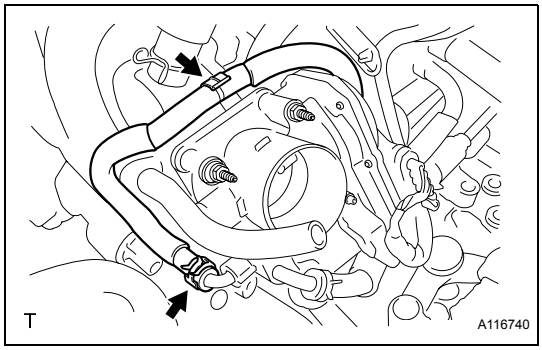
(a) Separate radiator hose No. 1 from the cylinder head.

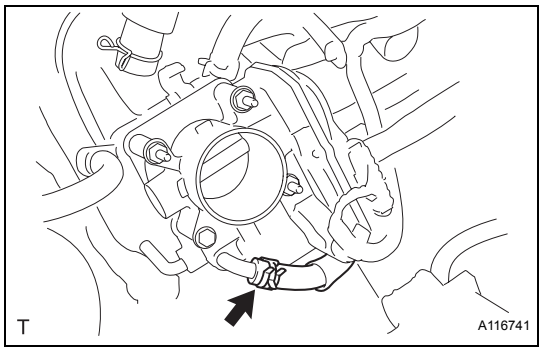
(b) Remove the 2 nuts and remove the water filler sub-assembly.



32. DISCONNECT WATER BY-PASS HOSE NO. 2

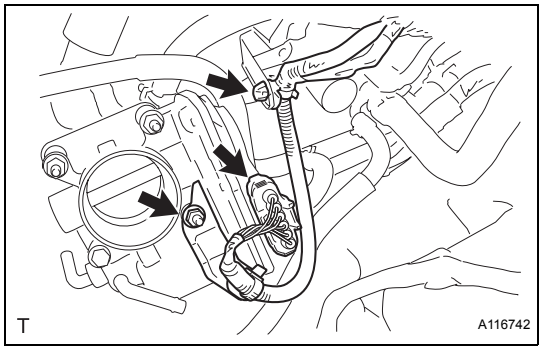
(a) Disconnect water by-pass hose No. 2.





33. DISCONNECT WATER BY-PASS HOSE

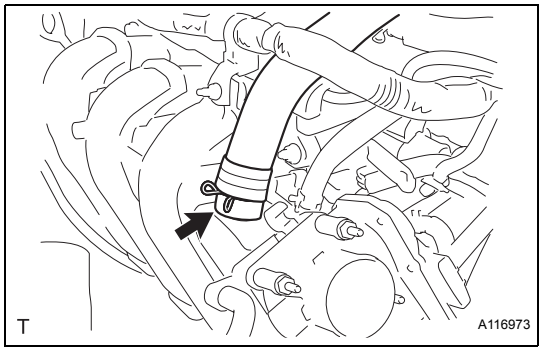
(a) Disconnect the water by-pass hose.



34. DISCONNECT THROTTLE WITH MOTOR BODY CONNECTOR

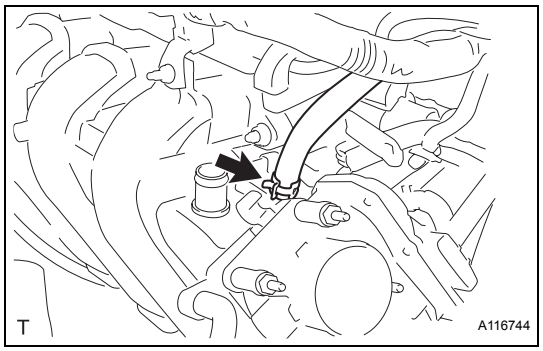
(a) Separate the wire harness clamp.

(b) Remove the nut and separate the throttle with motor body connector.



35. DISCONNECT VENTILATION HOSE

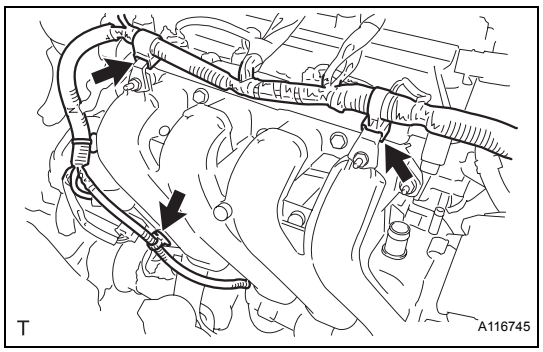
(a) Disconnect the ventilation hose.



36. DISCONNECT UNION TO CONNECTOR TUBE HOSE

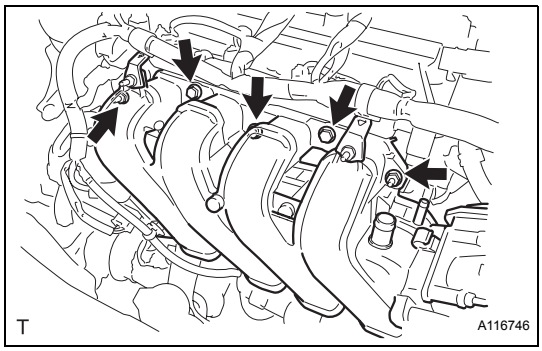
(a) Disconnect the union to connector tube hose.

37. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

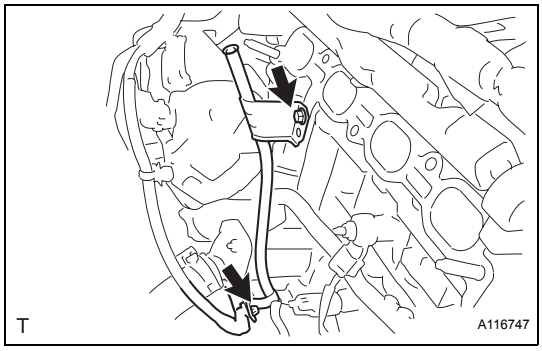


38. REMOVE INTAKE MANIFOLD

(a) Separate the 3 wire harness clamps shown in the illustration.



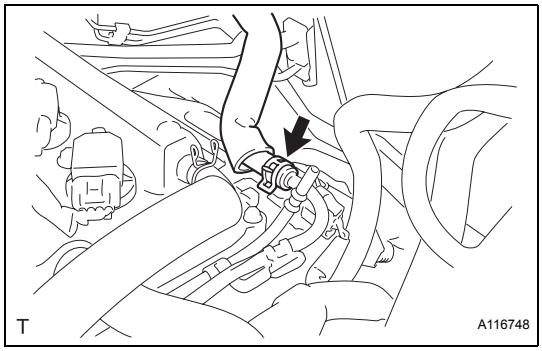
(b) Remove the 3 bolts and 2 nuts and remove the intake manifold.



39. REMOVE OIL LEVEL GAUGE GUIDE

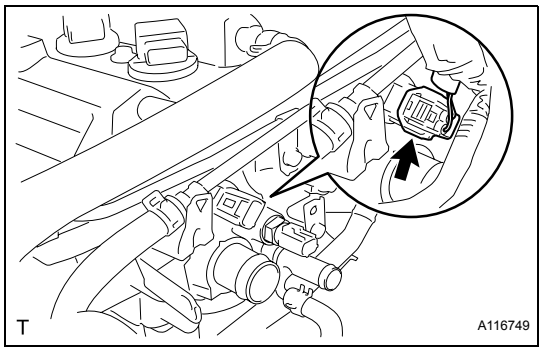
(a) Remove the wire harness clamp and the bolt and remove the oil level gauge guide.

40. DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-14)



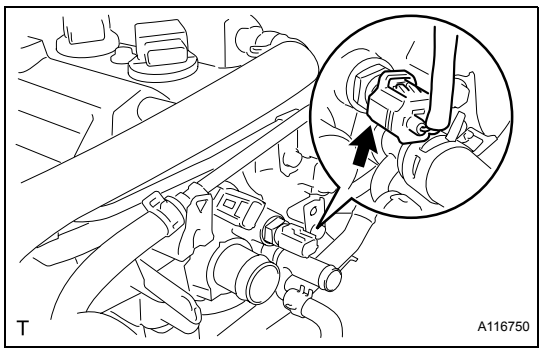
41. DISCONNECT BOOSTER VACUUM TUBE

(a) Disconnect the booster vacuum tube.



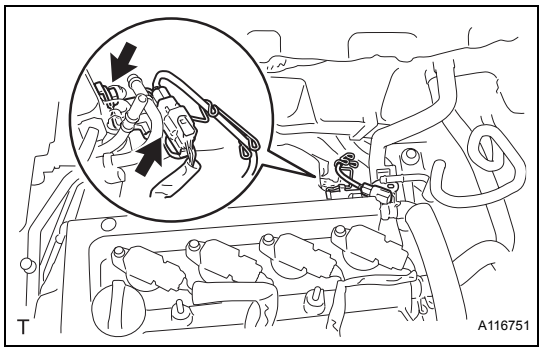
42. DISCONNECT CAMSHAFT POSITION SENSOR CONNECTOR

(a) Disconnect the camshaft position sensor connector.



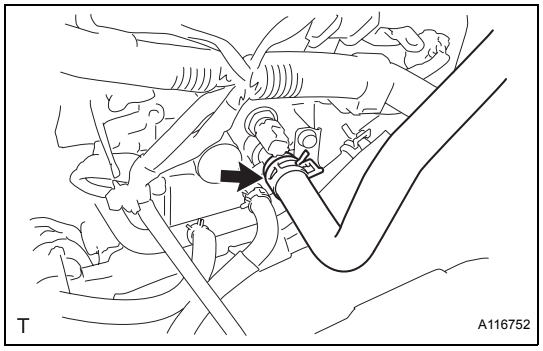
43. DISCONNECT ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR

(a) Disconnect the engine coolant temperature sensor connector.



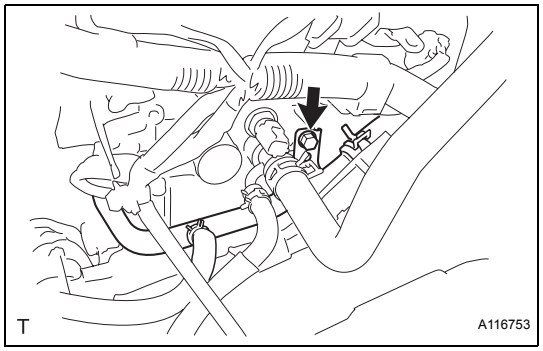
44. DISCONNECT HEATED OXYGEN SENSOR CONNECTOR

(a) Remove the bolts and separate the sensor bracket.
(b) Disconnect the heated oxygen sensor connector.



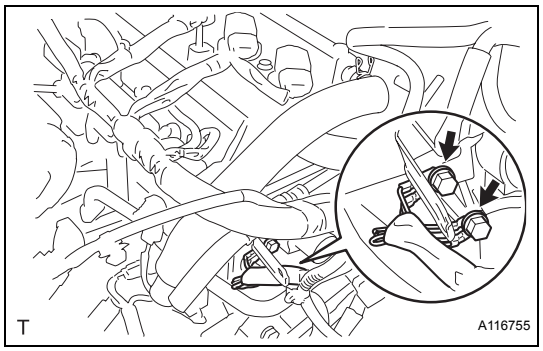
45. DISCONNECT HEATER WATER INLET HOSE A

(a) Disconnect heater water inlet hose A.



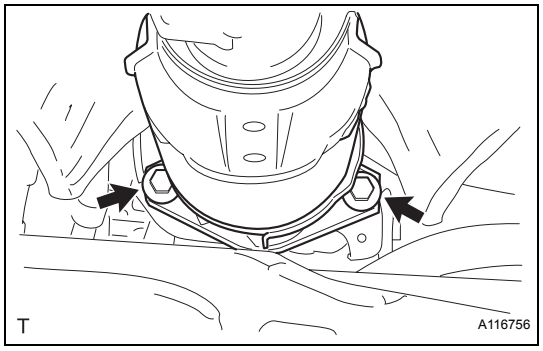
46. SEPARATE WATER BY-PASS PIPE NO. 1

(a) Remove the bolt and separate water by-pass pipe No. 1.



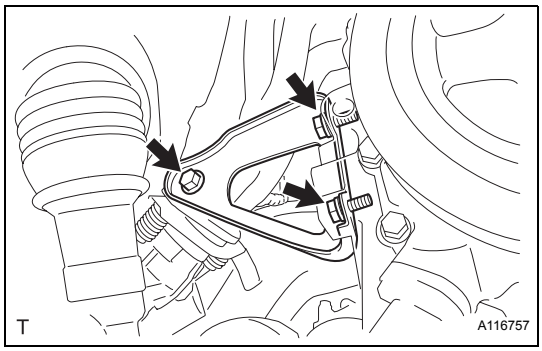
47. DISCONNECT WIRE HARNESS

(a) Remove the 2 bolts and disconnect the wire harness.



48. SEPARATE EXHAUST PIPE ASSEMBLY FRONT

(a) Remove the 2 bolts and 2 compression springs and separate the exhaust pipe assembly front.



49. **REMOVE MANIFOLD SUPPORT BRACKET**
    (a) Remove the 3 bolts and remove the manifold support bracket.
50. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
51. **REMOVE GENERATOR ASSEMBLY (See page CH-10)**
52. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
53. **REMOVE VENTILATION HOSE (See page FU-13)**
54. **REMOVE VENTILATION HOSE NO. 2 (See page FU-13)**
55. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
56. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)**
57. **REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-18)**
58. **REMOVE CRANKSHAFT POSITION SENSOR (See page ES-403)**
59. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-396)**
60. **REMOVE WATER PUMP PULLEY (See page CO-15)**
61. **REMOVE WATER PUMP ASSEMBLY (See page CO-15)**
62. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-17)**
63. **REMOVE OIL PUMP ASSEMBLY (See page LU-19)**
64. **REMOVE OIL PUMP SEAL (See page LU-21)**
65. **REMOVE CHAIN TENSIONER ASSEMBLY NO. 1 (See page EM-33)**
66. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-35)**
67. **REMOVE CHAIN VIBRATION DAMPER NO. 1 (See page EM-35)**
68. **REMOVE CHAIN SUB-ASSEMBLY**
69. **REMOVE CAMSHAFT**
    NOTICE:
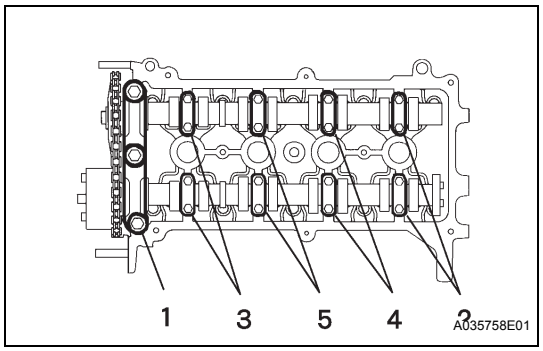
    When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



(a) Using several steps, uniformly loosen and remove the 19 bearing cap bolts in the sequence shown in the illustration, and then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
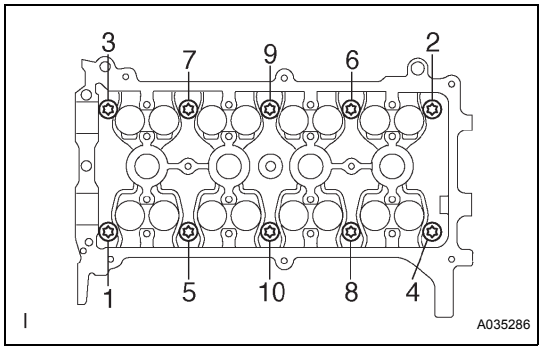
Loosen each bolt uniformly while keeping the camshaft level.
(b) Remove the camshaft and camshaft No. 2.



70. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts with an 8 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 10 plate washers.
NOTICE:
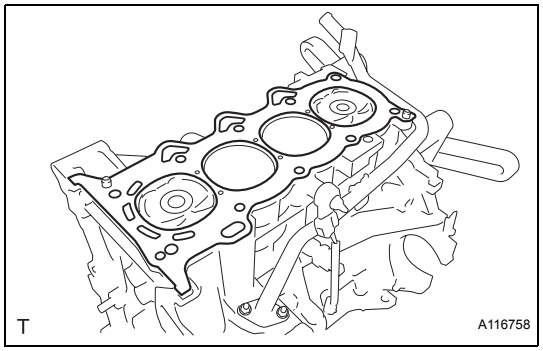
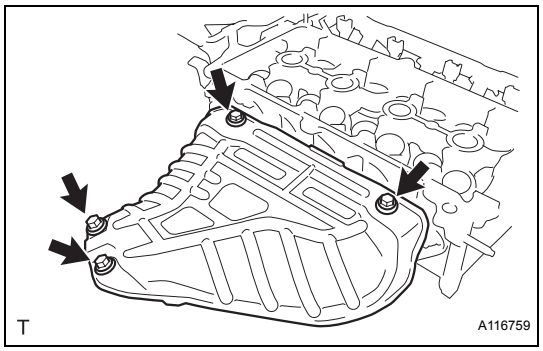
- **Do not drop the washers into the cylinder head.**
- **Head warpage or cracking could result from removing the bolts in the wrong order.**



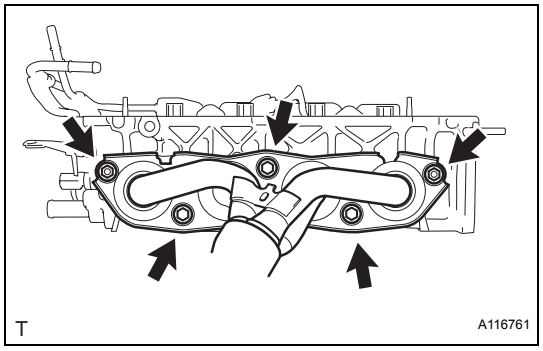
71. REMOVE CYLINDER HEAD GASKET

(a) Remove the cylinder head gasket.



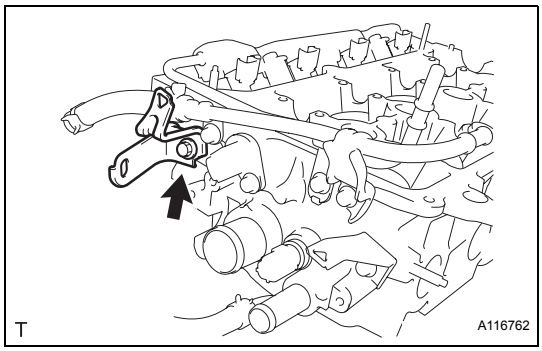
72. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO. 1

(a) Remove the 4 bolts and remove exhaust manifold heat insulator No. 1.



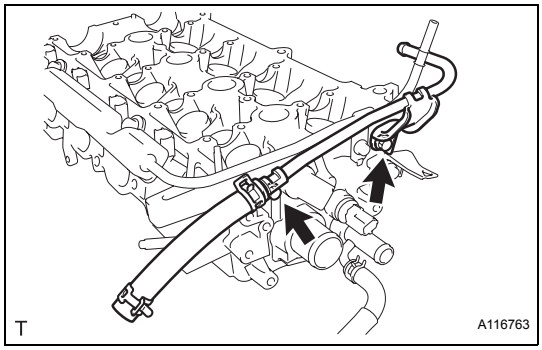
73. REMOVE EXHAUST MANIFOLD

(a) Remove the 3 bolts and 2 nuts and remove the exhaust manifold.



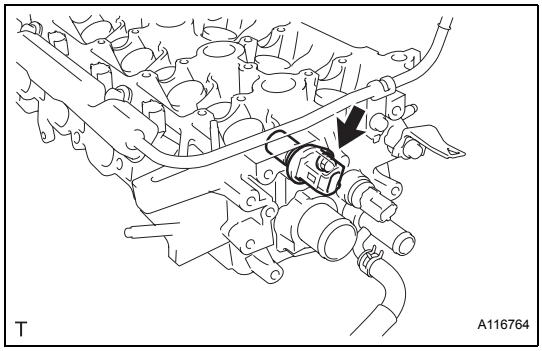
74. REMOVE HARNESS BRACKET

(a) Remove the bolt and remove the harness bracket.



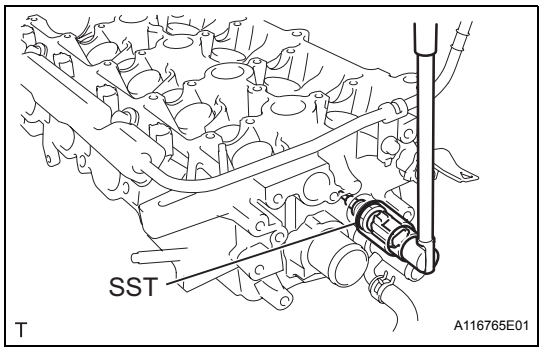
75. REMOVE BOOSTER VACUUM TUBE

(a) Remove the 2 bolts and remove the booster vacuum tube.



76. REMOVE CAMSHAFT POSITION SENSOR

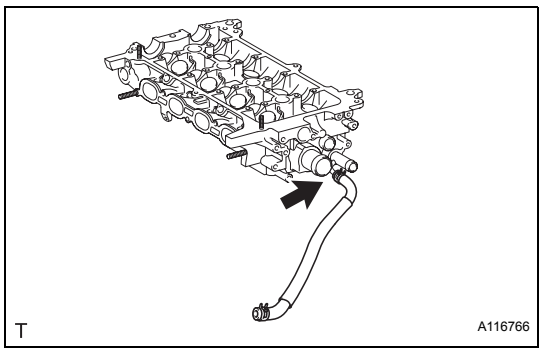
(a) Remove the bolt and remove the camshaft position sensor.



77. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

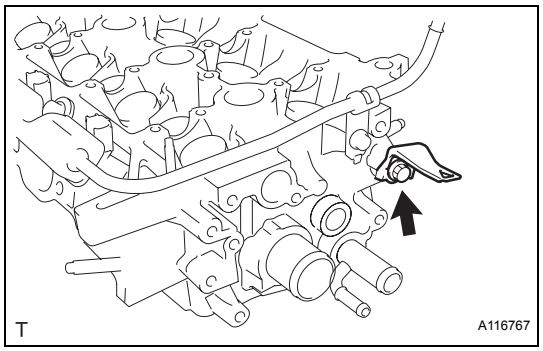
(a) Using SST, remove the engine coolant temperature sensor connector.

SST 09817-33190



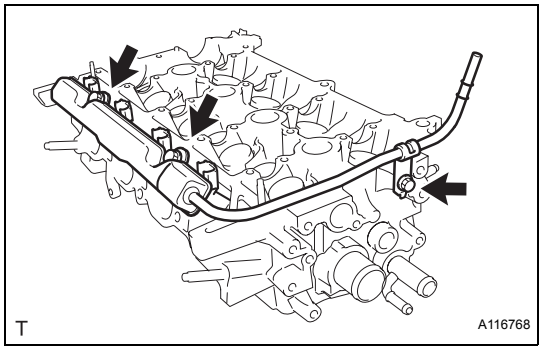
78. REMOVE WATER BY-PASS HOSE

(a) Remove the water by-pass hose.



79. REMOVE HARNESS BRACKET

(a) Remove the bolt and remove the harness bracket.



80. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Remove the 3 bolts and remove the fuel delivery pipe sub-assembly with 4 fuel injectors.

NOTICE:
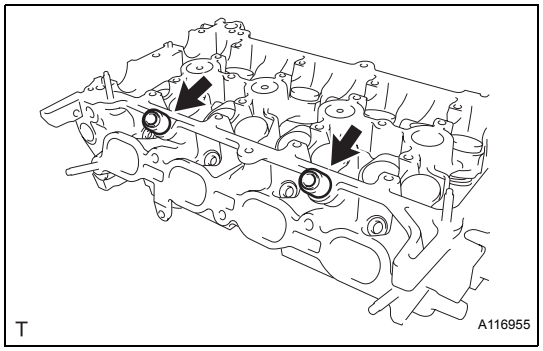
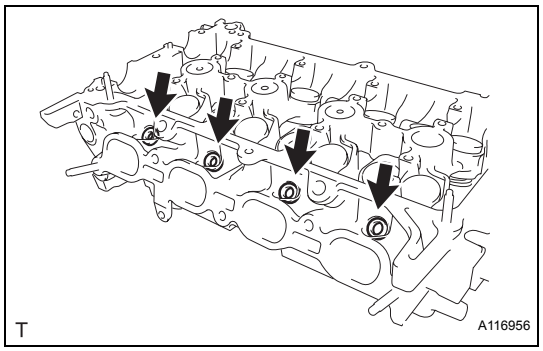
Do not drop the fuel injectors when removing the fuel delivery pipe sub-assembly.

81. REMOVE FUEL INJECTOR ASSEMMBLY (See page FU-16)



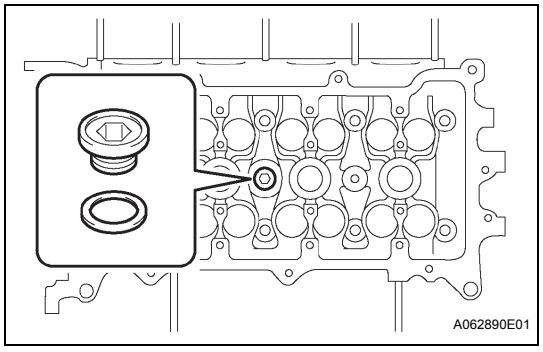
82. REMOVE DELIVERY PIPE NO. 1 SPACER

(a) Remove the 2 delivery pipe No. 1 spacers.



83. REMOVE INJECTOR VIBRATION INSULATOR

(a) Remove the 4 injector vibration insulators.



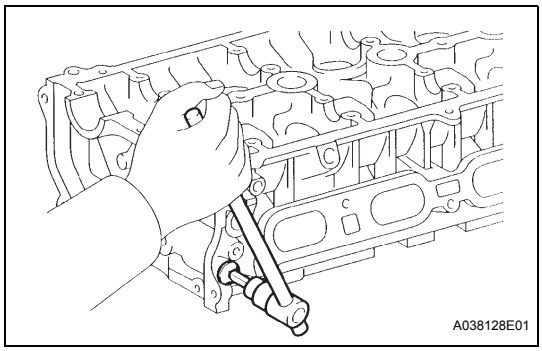
DISASSEMBLY

1. REMOVE WITH HEAD TAPER SCREW PLUG NO. 1

(a) Using a 10 mm socket hexagon wrench, remove the taper screw plug and the gasket.

2. REMOVE VALVE LIFTER

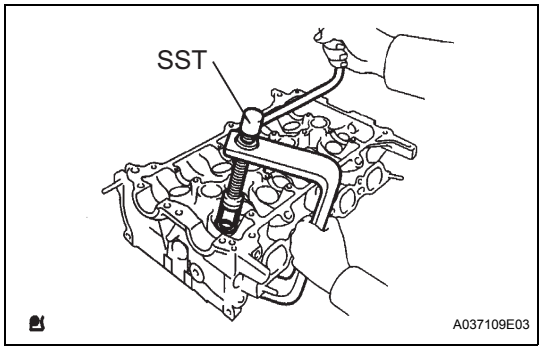
HINT:
Keep the valve lifters in the correct order so that they can be returned to their original locations when reassembled.



3. REMOVE WITH HEAD TAPER SCREW PLUG NO. 2

(a) Using an 8 mm hexagon wrench, remove the taper screw plug.

4. REMOVE OIL CONTROL VALVE FILTER

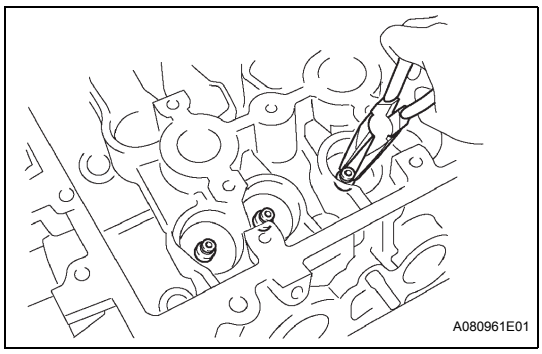


5. REMOVE INTAKE VALVE

(a) Using SST, compress the valve spring and remove the 2 retainer locks, retainer and valve spring.
SST 09202-70020 (09202-00010)
HINT:
Keep the valves, valve springs, spring seats and spring retainers in the correct order so that they can be returned to their original locations when reassembled.

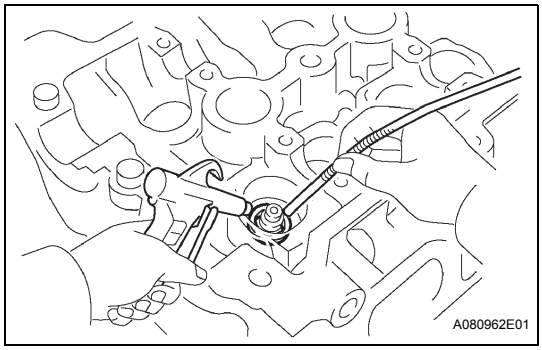
6. REMOVE EXHAUST VALVE

(a) Using SST, compress the valve spring and remove the 2 retainer locks, retainer and valve spring.
SST 09202-70020 (09202-00010)
HINT:
Keep the valves, valve springs, spring seats and spring retainers in the correct order so that they can be returned to their original locations when reassembled.



7. REMOVE VALVE STEM OIL SEAL

(a) Using needle-nose pliers, remove the oil seal.



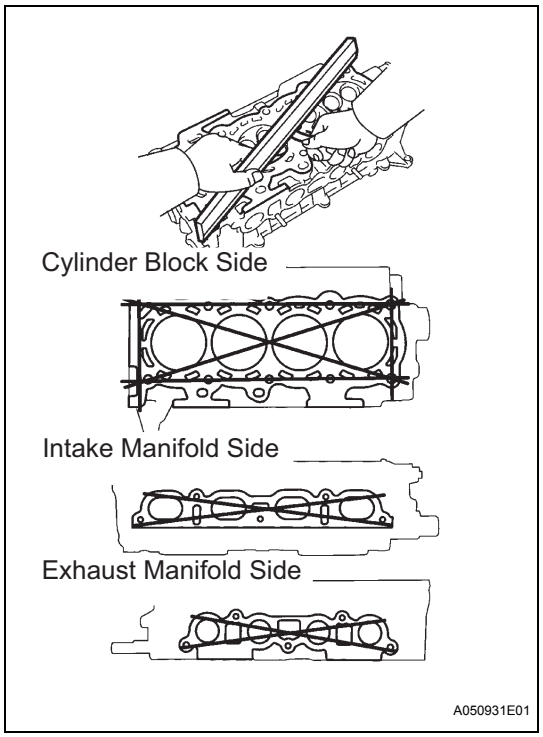
8. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seats.

9. REMOVE STUD BOLT

(a) Using "Torx" socket wrenches E5 and E7, remove the 7 stud bolts.

10. REMOVE CAMSHAFT BEARING CAP SETTING RING PIN



INSPECTION

1. INSPECT CYLINDER HEAD FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder block and the manifolds.

Maximum warpage

Surface	Specified Condition
Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.10 mm (0.0039 in.)
Exhaust manifold side	0.10 mm (0.0039 in.)

If the warpage is greater than the maximum, replace the cylinder head.

EM

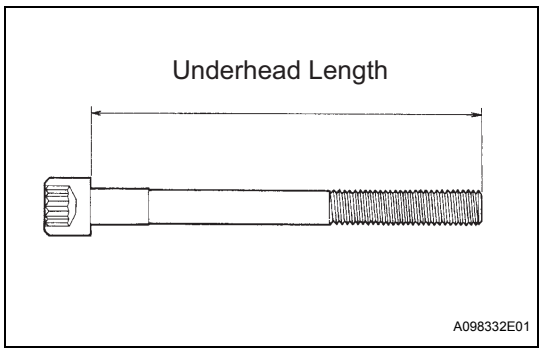
2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrate, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.

If cracked, replace the cylinder head.

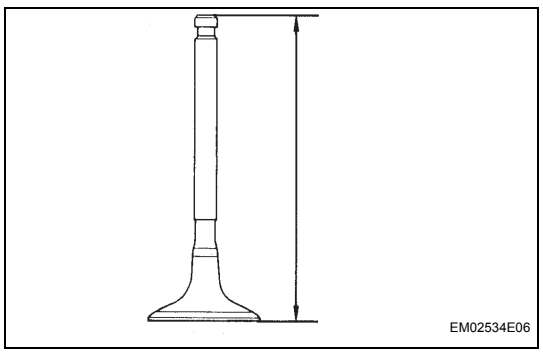


3. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of the head bolts from the seat to the end.

Standard length:
142.8 to 144.2 mm (5.622 to 5.677 in.)
Maximum length:
147.1 mm (5.791 in.)

If the length is greater than the maximum, replace the bolt.

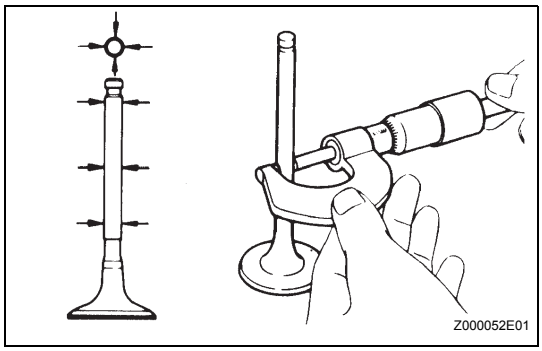


4. INSPECT INTAKE VALVE

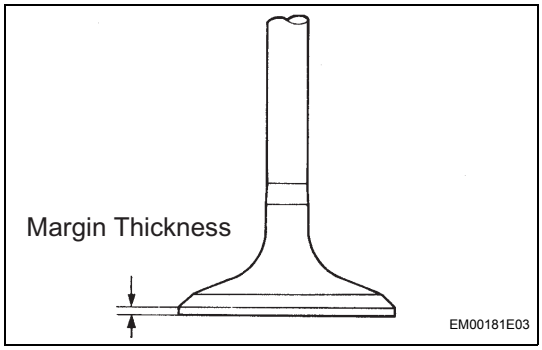
(a) Check the overall valve length.

Standard overall length:
89.25 mm (3.5138 in.)
Minimum overall length:
88.75 mm (3.4941 in.)

If the overall length is less than the minimum, replace the valve.



(b) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
4.970 to 4.985 mm (0.1957 to 0.1963 in.)



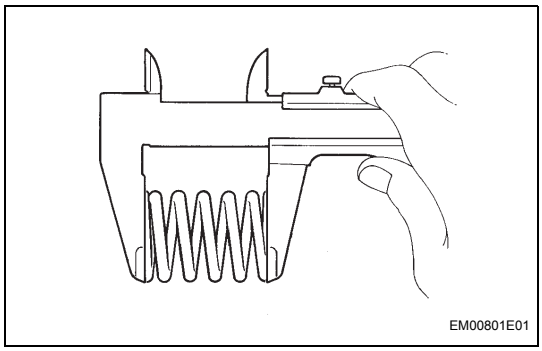
(c) Check the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.039 in.)
Minimum margin thickness:
0.5 mm (0.020 in.)
If the margin thickness is less than the minimum, replace the valve.

5. INSPECT EXHAUST VALVE

(a) Check the overall valve length.
Standard overall length:
87.90 mm (3.4606 in.)
Minimum overall length:
87.40 mm (3.4409 in.)
If the overall length is less than the minimum, replace the valve.

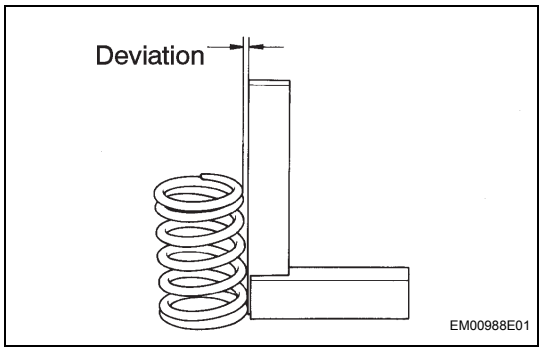
(b) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
4.965 to 4.980 mm (0.1955 to 0.1961 in.)

(c) Check the valve head margin thickness.
Standard margin thickness:
1.15 mm (0.045 in.)
Minimum margin thickness:
0.5 mm (0.020 in.)
If the margin thickness is less than the minimum, replace the valve.

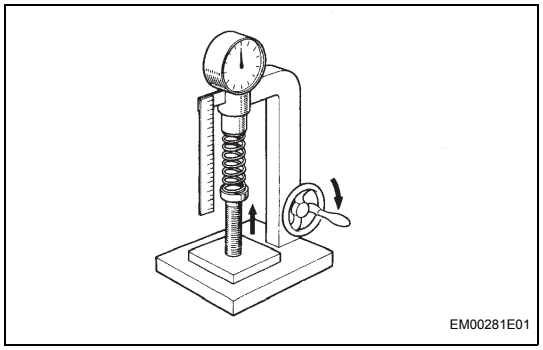


6. INSPECT VALVE SPRING

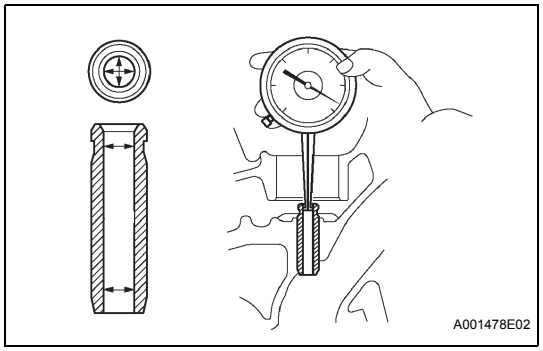
(a) Using vernier calipers, measure the free length of the valve spring.
Standard free length:
45.05 to 45.15 mm (1.774 to 1.778 in.)
If the free length is not as specified, replace the spring.



(b) Using a steel square, measure the deviation of the valve spring.
Maximum deviation:
1.6 mm (0.063 in.)
Maximum angle (reference):
2°
If the deviation is greater than the maximum, replace the spring.



(c) Using a spring tester, measure the tension of the valve spring at the specified installed length.
Standard installed tension:
149 to 165 N (15.2 to 16.8 kgf, 33.5 to 37.1 lbf) at 32.5 mm (1.280 in.)
Maximum working tension:
286 to 316 N (29.1 to 32.2 kgf, 64.2 to 71.0 lbf) at 23.9 mm (0.941 in.)
If the installed tension is not as specified, replace the valve spring.



7. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bush inside diameter:
5.010 to 5.030 mm (0.1972 to 0.1980 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement to calculate the oil clearance.
Standard oil clearance

Guide Bush	Specified Condition
Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

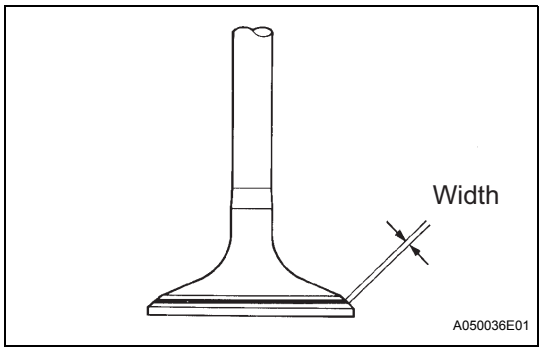
Maximum oil clearance

Guide Bush	Specified Condition
Intake	0.08 mm (0.0032 in.)
Exhaust	0.10 mm (0.0039 in.)

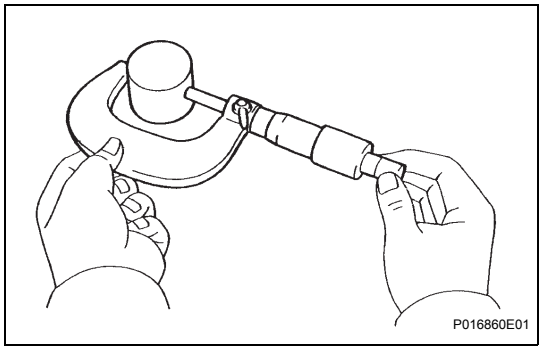
If the clearance is greater than the maximum, replace the valve and guide bush (see page EM-92).

8. INSPECT INTAKE VALVE SEAT

(a) Apply a light coat of prussian blue to the valve face.
(b) Lightly press the valve against the seat.

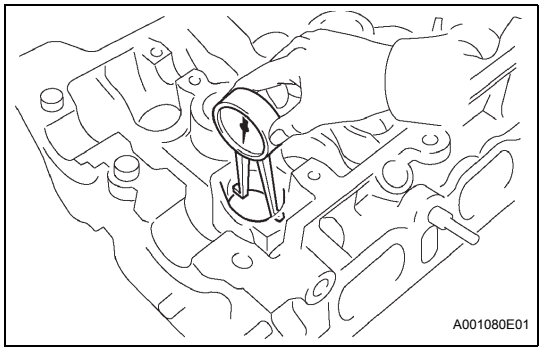


(c) Check the valve face and seat in accordance with the following procedure.
  (1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.
  (2) If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.
  (3) Check that the seat contact is in the middle of the valve face with the width between 1.0 to 1.4 mm (0.039 to 0.055 in.).



9. INSPECT VALVE LIFTER

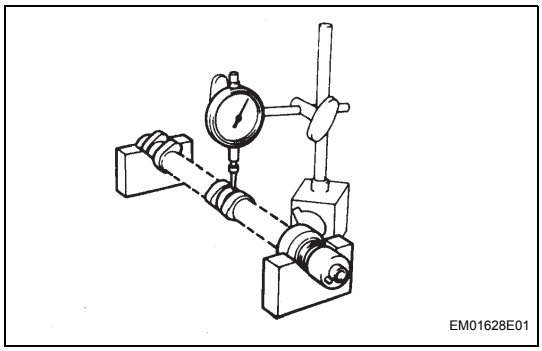
(a) Using a micrometer, measure the lifter diameter.
Standard lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



10. INSPECT VALVE LIFTER OIL CLEARANCE

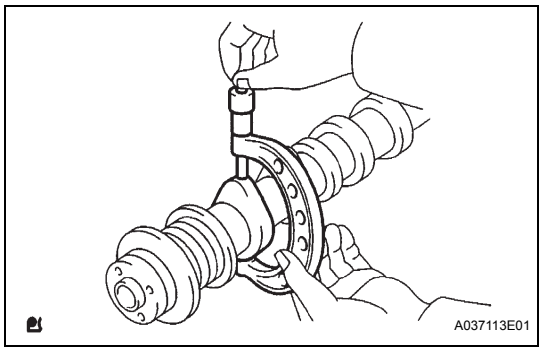
(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Standard lifter bore diameter:
31.000 to 31.025 mm (1.2205 to 1.2215 in.)

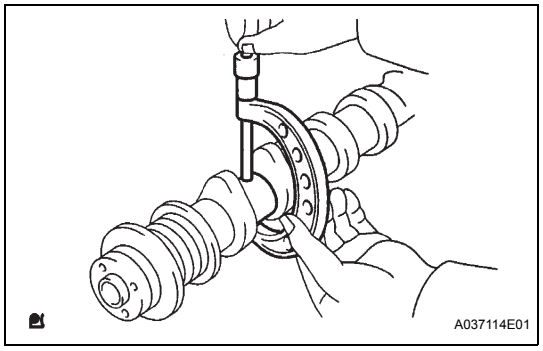
(b) Subtract the lifter diameter measurement from the lifter bore diameter measurement to calculate the oil clearance.
Standard oil clearance:
0.024 to 0.059 mm (0.0009 to 0.0023 in.)
Maximum oil clearance:
0.1 mm (0.0039 in.)
If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.



11. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.
  (1) Place the camshaft on V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.03 mm (0.0012 in.)
  If the circle runout is greater than the maximum, replace the camshaft.





(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
44.617 to 44.717 mm (1.7566 to 1.7605 in.)
Minimum cam lobe height:
43.16 mm (1.6992 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal	Specified Condition
No. 1 journal	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other journals	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance.

12. INSPECT NO. 2 CAMSHAFT

(a) Inspect the camshaft for runout.
(1) Place the camshaft on V-blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.03 mm (0.0012 in.)
If the circle runout is greater than the maximum, replace the camshaft.

(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
44.666 to 44.766 (1.7585 to 1.7624 in.)
Minimum cam lobe height:
44.52 mm (1.7528 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal	Specified Condition
No. 1 journal	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other journals	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance.

EM

13. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.
Standard thrust clearance:
0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Maximum thrust clearance:
0.11 mm (0.0043 in.)
If the thrust clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and the cylinder head together.

14. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and the camshaft journals.

(b) Place the camshafts on the cylinder head.

(c) Lay a strip of Plastigage across each of the camshaft journals.

(d) Install the bearing caps (see page EM-97).
NOTICE:
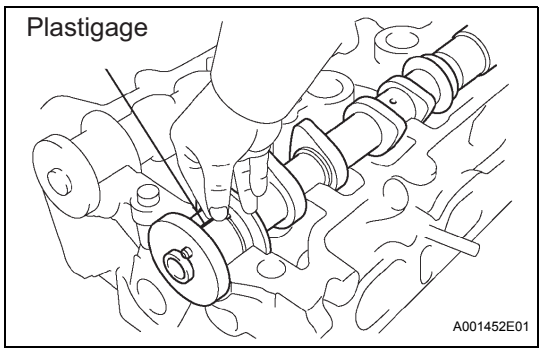
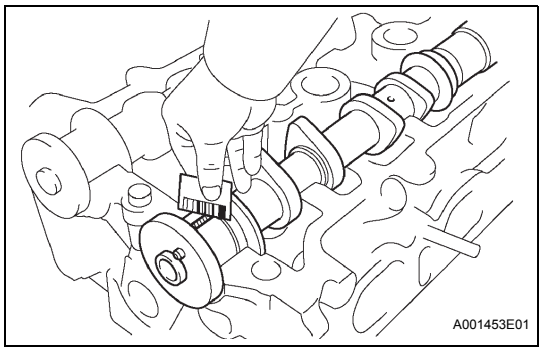
Do not turn the camshaft.

(e) Remove the bearing caps.





(f) Measure the Plastigage at its widest point.
Standard oil clearance:
0.035 to 0.072 mm (0.0014 to 0.0028 in.)
Maximum oil clearance:
0.08 mm (0.0031 in.)
If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and the cylinder head together.
NOTICE:
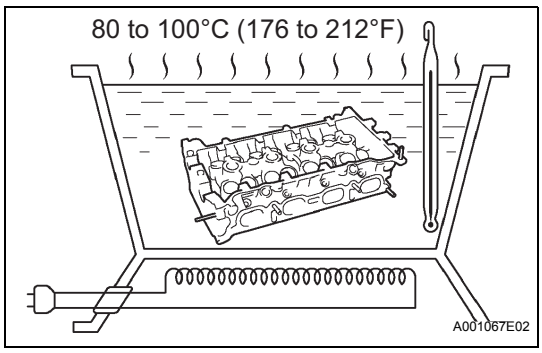
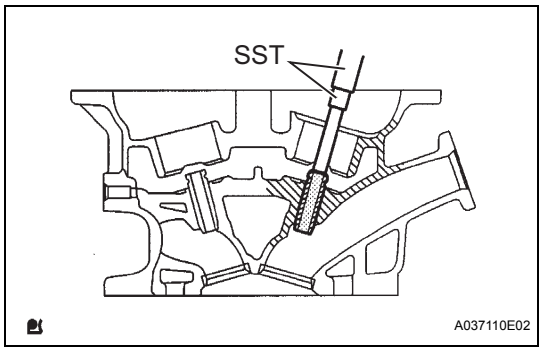
Completely remove the Plastigage after the measurement.

REPLACEMENT

1. REMOVE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).



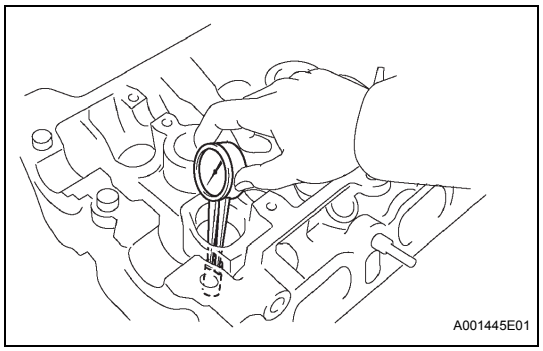


(b) Using SST and a hammer, tap out the guide bushing.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

2. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Using SST and a hammer, tap out the guide bushing.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

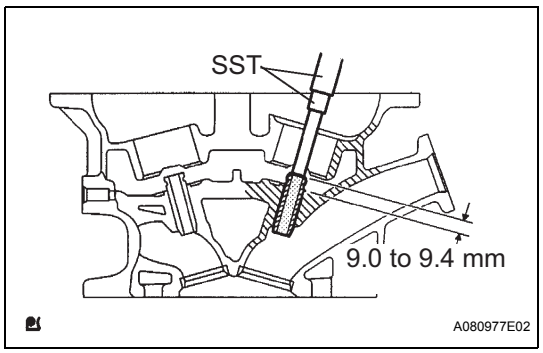


3. INSTALL INTAKE VALVE GUIDE BUSH

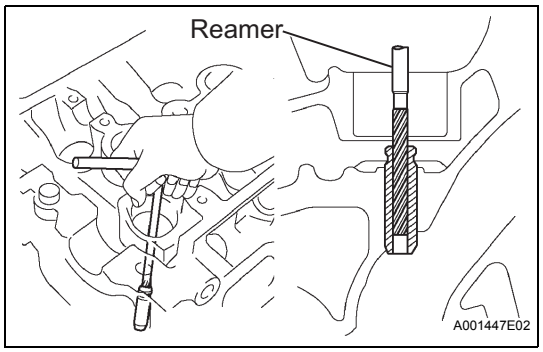
(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Inside Diameter:
9.685 to 9.706 mm (0.3813 to 0.3821 in.)
If the bushing bore diameter of the cylinder head is greater than 9.706 mm (0.3821 in.), machine the bushing bore to the dimension of 9.735 to 9.755 mm (0.3833 to 0.3841 in.).

Bushing bore diameter mm (in.)	Bushing size
9.685 to 9.706 (0.3813 to 0.3821)	STD
9.735 to 9.755 (0.3833 to 0.3841)	O/S 0.05

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).



(c) Using SST and a hammer, tap a new guide bushing in to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.0 to 9.4 mm (0.354 to 0.370 in.)



(d) Using a sharp 5 mm reamer, ream the guide bushing to obtain the standard oil clearance between the guide bushing and valve stem.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)

4. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Inside Diameter:
9.685 to 9.706 mm (0.3813 to 0.3821 in.)

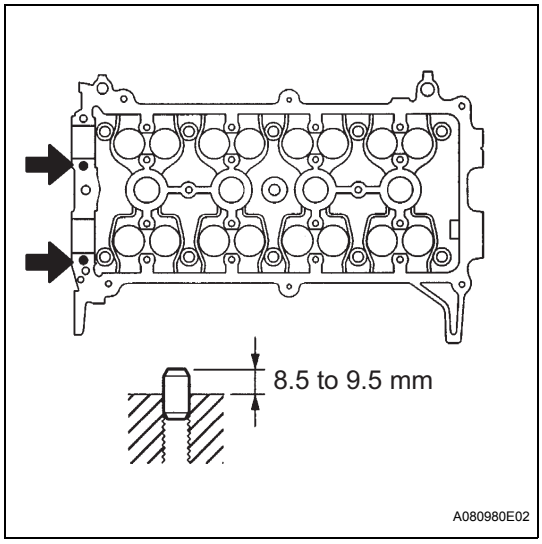
If the bushing bore diameter of the cylinder head is greater than 9.706 mm (0.3821 in.), machine the bushing bore to the dimension of 9.735 to 9.755 mm (0.3833 to 0.3841 in.).

Bushing bore diameter mm (in.)	Bushing size
9.685 to 9.706 (0.3813 to 0.3821)	STD
9.735 to 9.755 (0.3833 to 0.3841)	O/S 0.05

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(c) Using SST and a hammer, tap a new guide bushing in to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.0 to 9.4 mm (0.354 to 0.370 in.)

(d) Using a sharp 5 mm reamer, ream the guide bushing to obtain the standard oil clearance between the guide bushing and valve stem.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)



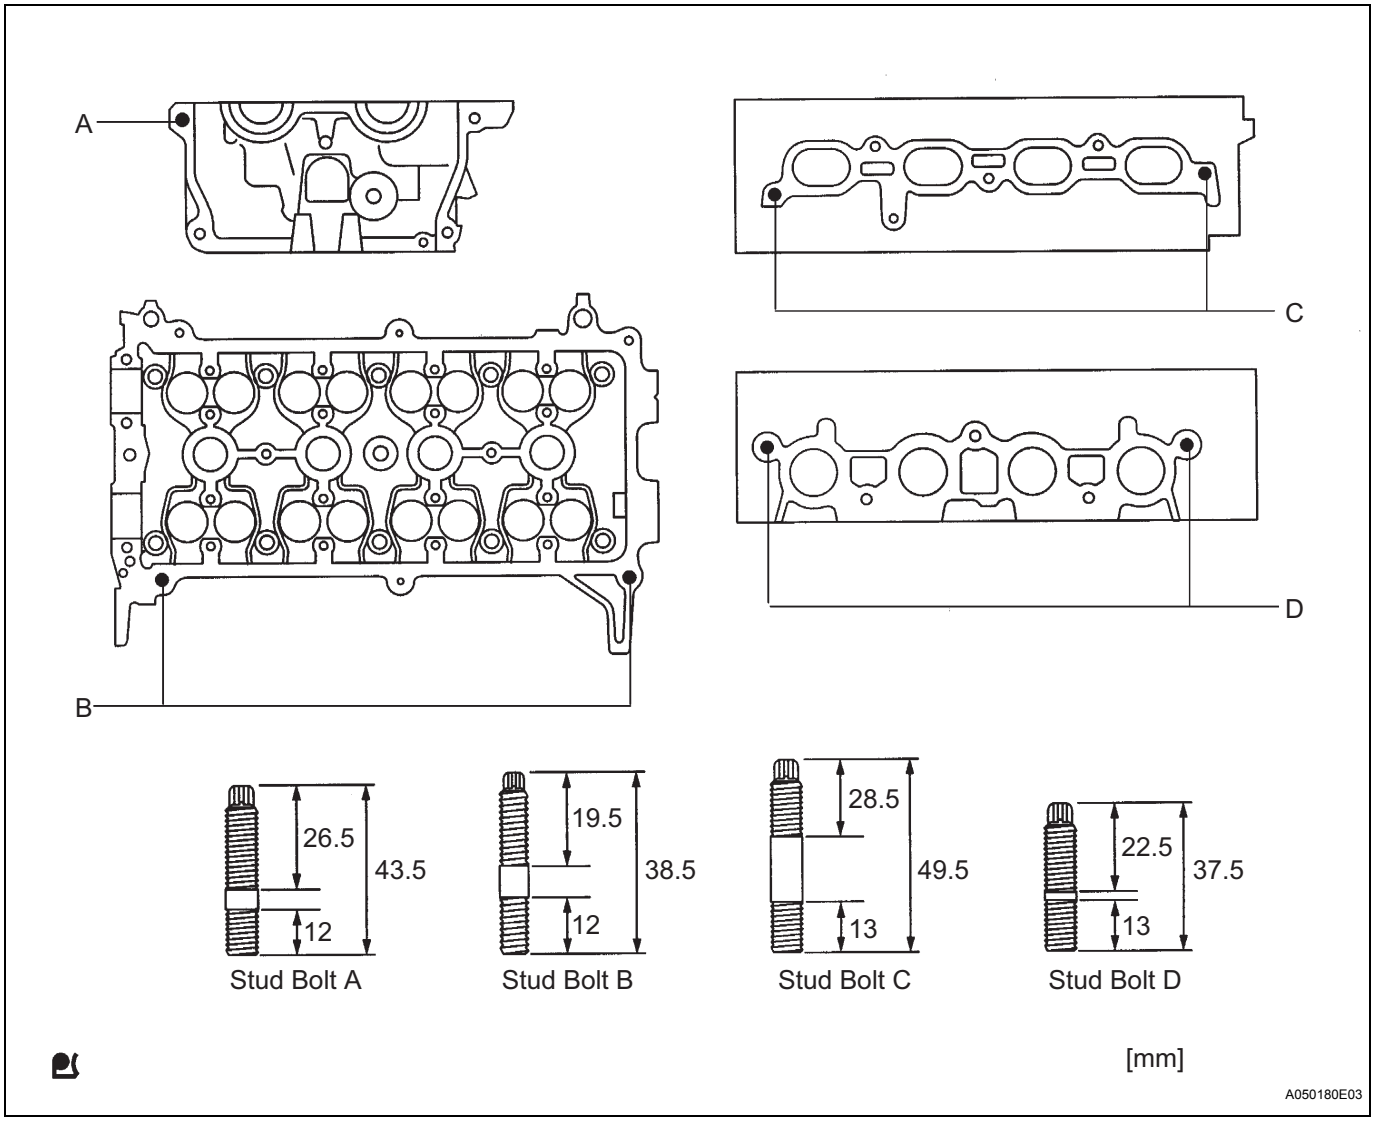
REASSEMBLY

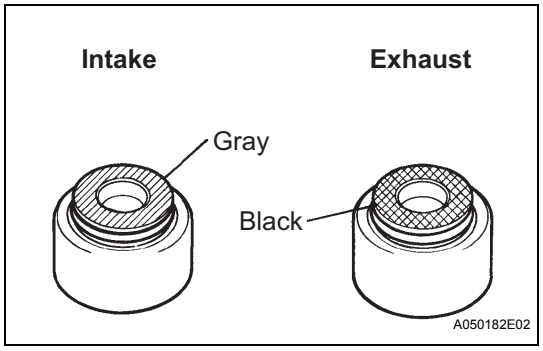
1. INSTALL CAMSHAFT BEARING CAP SETTING RING PIN

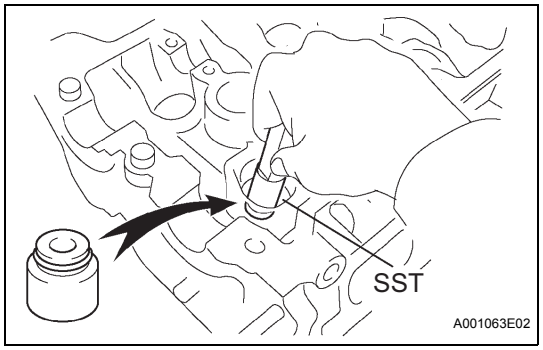
(a) Using a plastic-faced hammer, tap a new ring pin in to the specified protrusion height.
Protrusion height:
8.5 to 9.5 mm (0.335 to 0.374 in.)

2. INSTALL STUD BOLT

(a) Using "Torx" socket wrenches E5 and E7, install the 7 stud bolts.
Torque:
Stud bolt A:
10 N*m (102 kgf*cm, 7.4 ft.*lbf)
Stud bolt B:
4.0 N*m (41 kgf*cm, 35 in.*lbf)
Stud bolt C:
10 N*m (102 kgf*cm, 7.4 ft.*lbf)
Stud bolt D:
9.0 N*m (92 kgf*cm, 80 in.*lbf)







3. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new valve stem oil seals.

NOTICE:

Installing the oil seals for the intake and exhaust onto the opposite valve guide bush as may cause failures.

HINT:

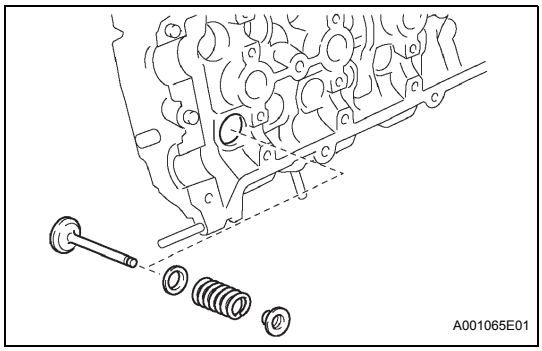
The intake valve oil seal is gray and the exhaust valve oil seal is black.

(b) Using SST, push in the oil seals.

SST 09201-41020



4. INSTALL INTAKE VALVE

(a) Install the valve, spring seat, valve spring, and spring retainer.
NOTICE:
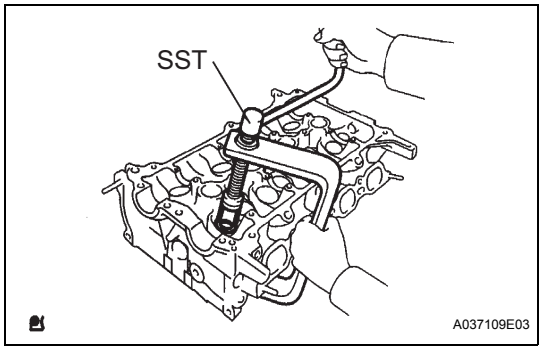
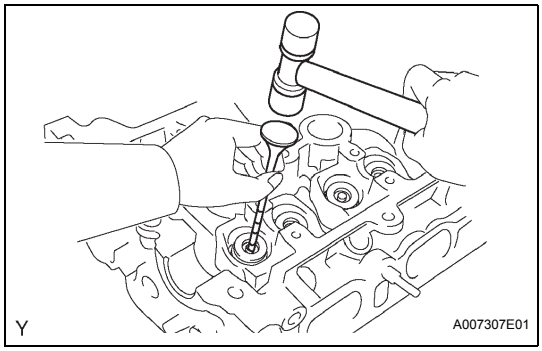
Install the parts in their original locations in the original order.



(b) Using SST, compress the valve spring and place the 2 retainer locks around the valve stem.
SST 09202-70020 (09202-00010)



(c) Using a plastic-faced hammer and the valve stem (not in use) with its tip wrapped in tape, gently tap the valve stem tip to ensure a proper fit.
NOTICE:
Do not damage the valve stem tip.

5. INSTALL EXHAUST VALVE

(a) Install the valve, spring seat, valve spring, and spring retainer.
(b) Using SST, compress the valve spring and place the 2 retainer locks around the valve stem.
SST 09202-70020 (09202-00010)
(c) Using a plastic-faced hammer and the valve stem (not in use) with its tip wrapped in tape, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
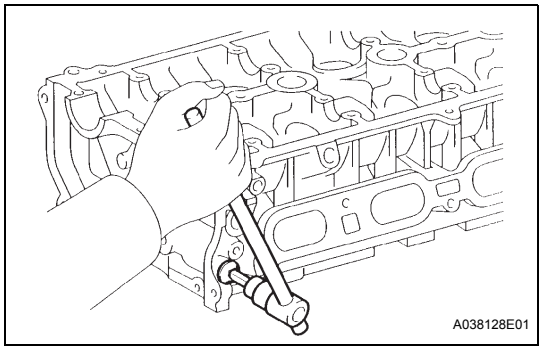
Do not damage the valve stem tip.

6. INSTALL OIL CONTROL VALVE FILTER

(a) Install the oil control valve filter.

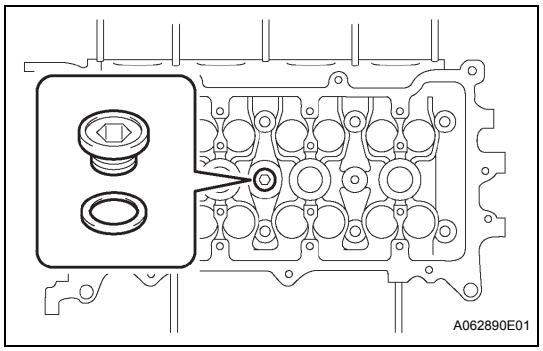


7. INSTALL WITH HEAD TAPER SCREW PLUG NO. 2

(a) Using an 8 mm hexagon wrench, install the taper screw plug and a new gasket.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

8. INSTALL VALVE LIFTER

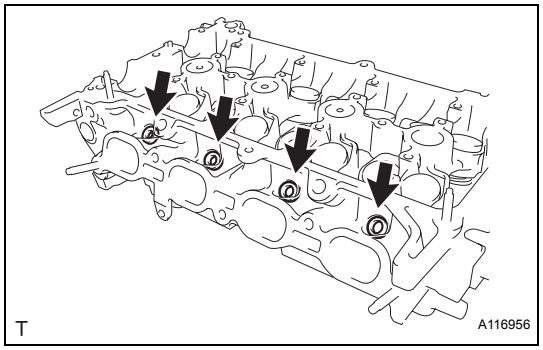
(a) Apply a light coat of engine oil to the 16 valve lifters.
(b) Install the 16 valve lifters.
(c) Check that the valve lifters rotate smoothly by hand.



9. INSTALL WITH HEAD TAPER SCREW PLUG NO. 1

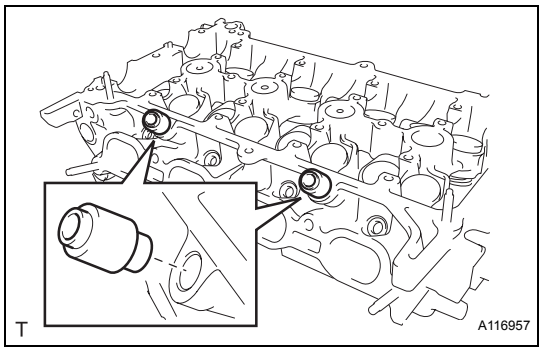
(a) Using a 10 mm socket hexagon wrench, install the taper screw plug with a new gasket.
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)

INSTALLATION



1. INSTALL INJECTOR VIBRATION INSULATOR

(a) Install 4 new injector vibration insulators onto the cylinder head.



2. INSTALL DELIVERY PIPE NO. 1 SPACER

(a) Install the 2 delivery pipe No. 1 spacers onto the cylinder head.
NOTICE:
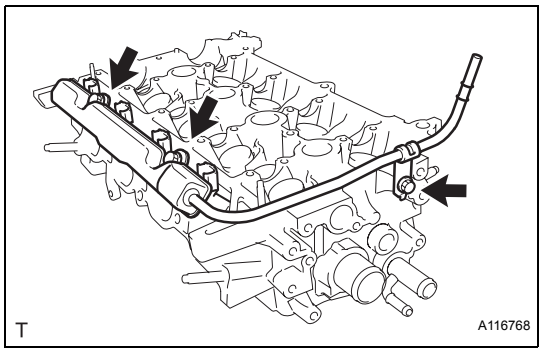
Install the delivery pipe No. 1 spacer in the correct direction.

3. INSTALL FUEL INJECTOR ASSEMBLY (See page FU-17)



4. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Provisionally install the fuel delivery pipe sub-assembly with the 4 fuel injectors using the 3 bolts.
NOTICE:
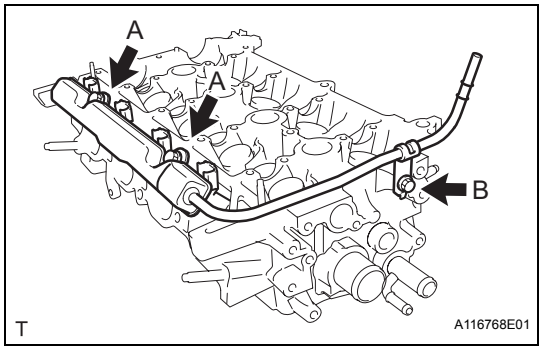
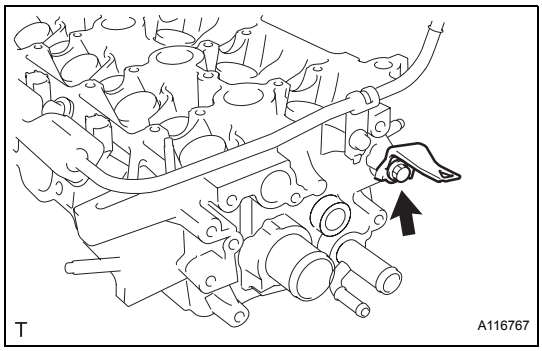
- **Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.**
- **Check that the fuel injectors rotate smoothly after installing the fuel delivery pipe sub-assembly.**

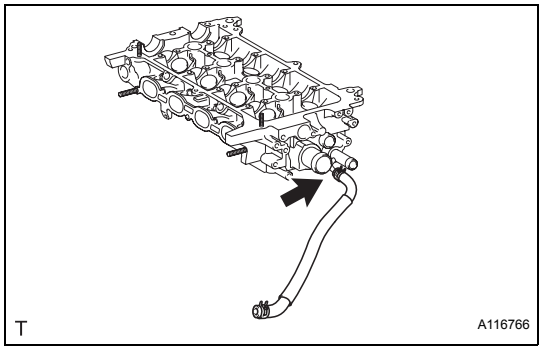


(b) Tighten the 3 bolts to the specified torque.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B



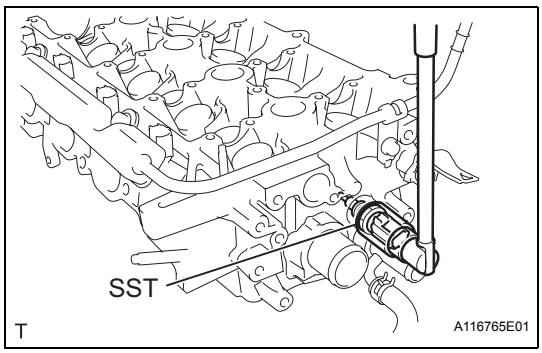
5. INSTALL HARNESS BRACKET

(a) Install the harness bracket with the bolt.
Torque: 13 N*m (131 kgf*cm, 9.5 ft.*lbf)



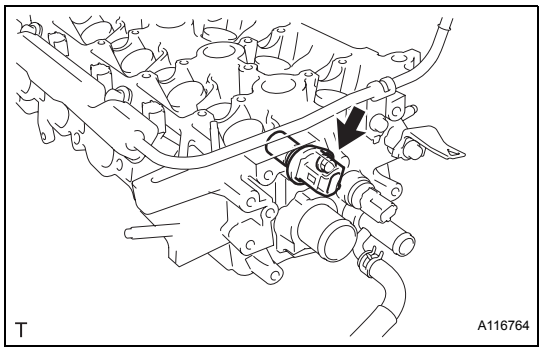
6. INSTALL WATER BY-PASS HOSE

(a) Install the water by-pass hose.



7. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Provisionally install the engine coolant temperature sensor through a new gasket.
(b) Using SST, tighten the engine coolant temperature sensor.
SST 09817-33190
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



8. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring on the camshaft position sensor.
(b) Install the camshaft position sensor with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
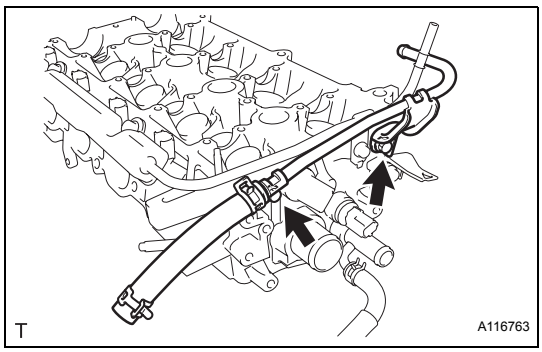
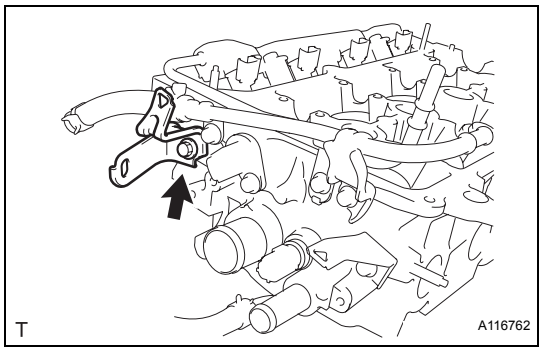
Do not twist the O-ring.



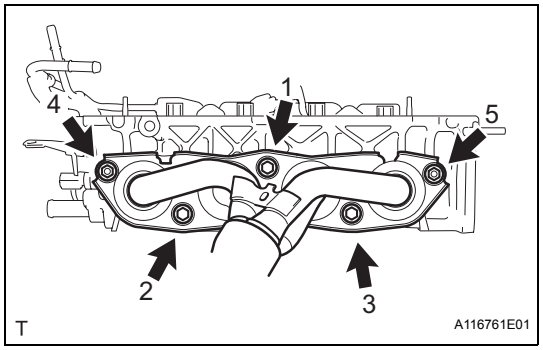
9. INSTALL BOOSTER VACUUM TUBE

(a) Install the booster vacuum tube with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



10. INSTALL HARNESS BRACKET

(a) Install the harness bracket with the bolt.
Torque: 13 N*m (131 kgf*cm, 9.5 ft.*lbf)



11. INSTALL EXHAUST MANIFOLD

(a) Using several steps, install a new exhaust manifold gasket and the exhaust manifold with the 3 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

EM

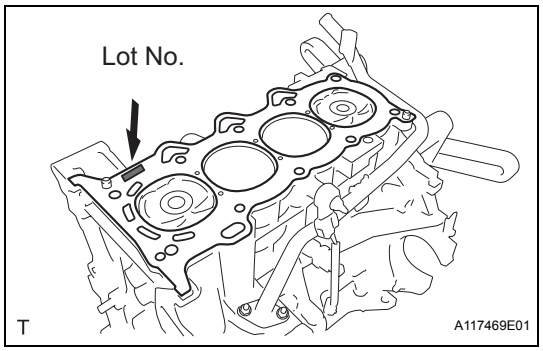
12. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO. 1

(a) Install exhaust manifold heat insulator No. 1 with the 4 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



13. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surfaces.**
- **Check the mounting orientation of the cylinder head gasket.**
- **Place the cylinder head on the cylinder head gently in order not to damage the gasket.**

14. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
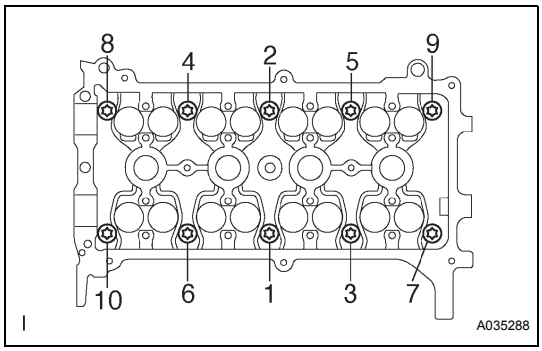
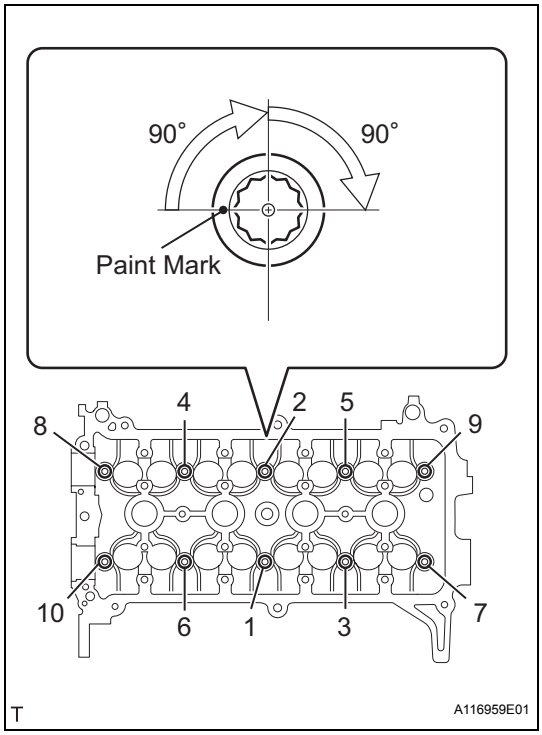
The cylinder head bolts are tightened in 2 successive steps.

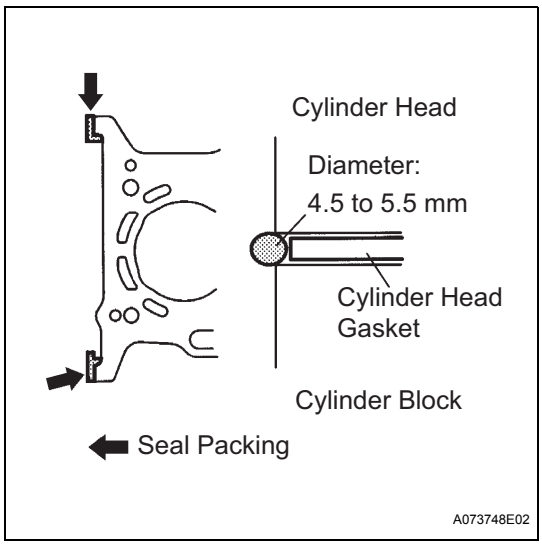
(a) Apply a light coat of engine oil to the threads of the cylinder head bolts.



(b) Using several steps, install and tighten the 10 cylinder head bolts and plate washers uniformly with an 8 mm bi-hexagon wrench, in the sequence shown in the illustration.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
(c) Mark the front of the cylinder head bolt with paint.



(d) Retighten the cylinder head bolts 90° and then an additional by 90° as shown in the illustration.
(e) Check that the paint mark is now at a 180° angle from the front.



(f) Apply a continuous bead of seal packing (Diameter 4.5 to 5.5 mm (0.177 to 0.217 in.)) as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
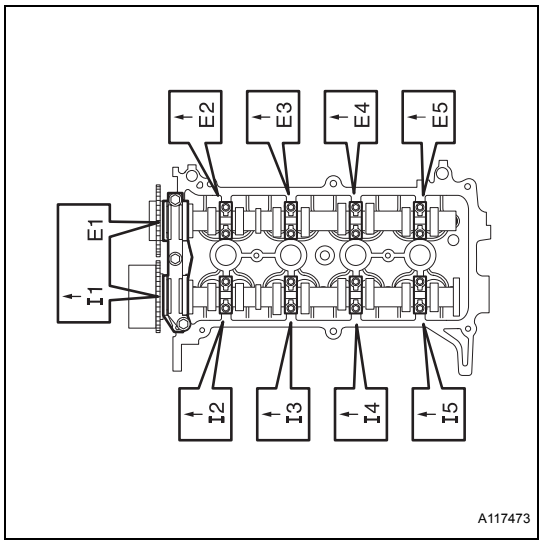
- **Remove any oil from the contact surfaces.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts within 15 minutes of applying the seal packing.**



15. **INSTALL CAMSHAFT**
    (a) Examine the front marks and numbers and check that the sequence is as shown in the illustration. Then provisionally tighten the 19 bolts.

    (b) Uniformly tighten the bolts in several steps in the sequence shown in the illustration and install camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
    Torque: Camshaft bearing cap No. 1
    23 N*m (235 kgf*cm, 17 ft.*lbf)
    Camshaft bearing cap No. 2
    13 N*m (129 kgf*cm, 9.4 ft.*lbf)
    NOTICE:
    Tighten each bolt uniformly while keeping the camshaft level.

16. **INSTALL CHAIN SUB-ASSEMBLY (See page EM-36)**
17. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-38)**
18. **INSTALL CHAIN TENSIONER ASSEMBLY NO. 1 (See page EM-38)**
19. **INSTALL OIL PUMP SEAL (See page LU-21)**
20. **INSTALL OIL PUMP ASSEMBLY (See page LU-22)**
21. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-26)**
22. **INSTALL WATER PUMP ASSEMBLY (See page CO-16)**
23. **INSTALL WATER PUMP PULLEY (See page CO-16)**
24. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-397)**
25. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-403)**
26. **INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-26)**
27. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)**

EM

28. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)**
29. **INSTALL VENTILATION HOSE NO. 2 (See page FU-20)**
30. **INSTALL VENTILATION HOSE (See page FU-20)**
31. **INSTALL IGNITION COIL NO. 1 (See page IG-9)**
32. **INSTALL GENERATOR ASSEMBLY (See page CH-17)**
33. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**
34. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**

EM

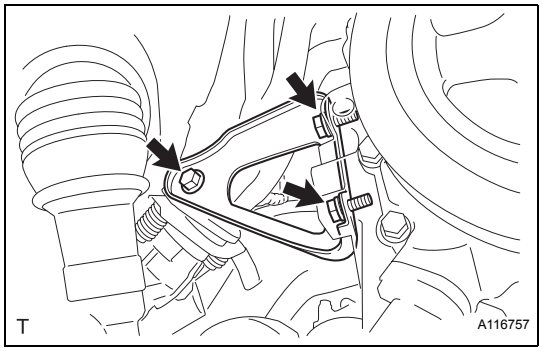
35. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**
36. **INSTALL MANIFOLD SUPPORT BRACKET**
    (a) Install the manifold support bracket with the 3 bolts.
    Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)



37. **INSTALL EXHAUST PIPE ASSEMBLY FRONT**
    (a) Using vernier calipers, measure the free length of the compression spring.
    Minimum length:
    40.5 mm (1.594 in.)
    If the length is not as specified, replace the compression spring.

    (b) Using a plastic hammer and a wooden block, tap in a new exhaust pipe gasket until its surface is flush with the exhaust manifold.
    NOTICE:
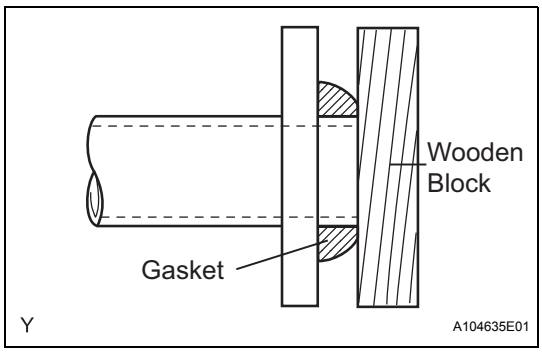
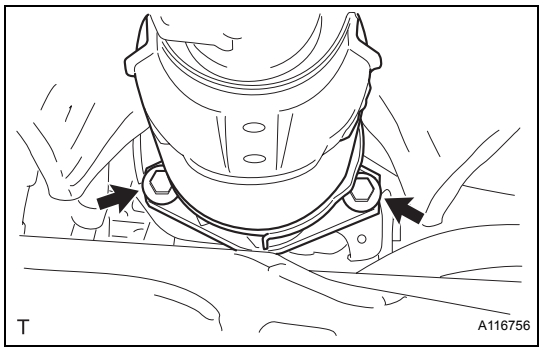
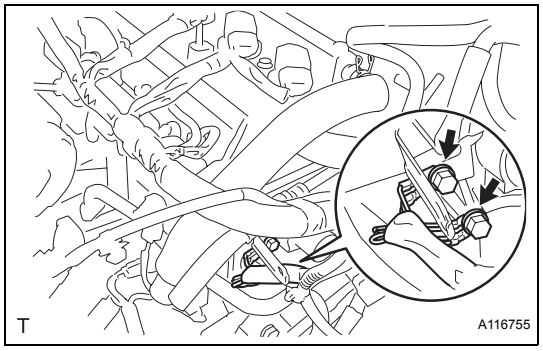
    - **Install the exhaust pipe gasket in the correct direction.**
    - **Do not damage the outer surface of the exhaust pipe gasket.**
    - **Do not reuse the exhaust pipe gasket.**
    - **Do not push in the gasket with the exhaust pipe when installing.**



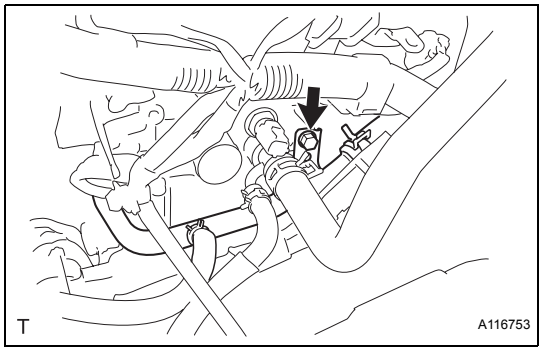


(c) Install the exhaust front pipe assembly with the 2 compression springs and 2 bolts.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)



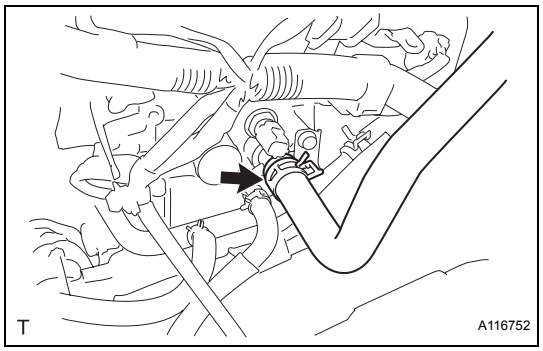
38. CONNECT WIRE HARNESS

(a) Connect the wire harness with the 2 bolts.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



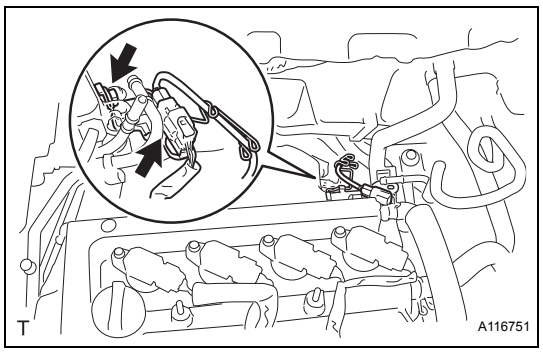
39. INSTALL WATER BY-PASS HOSE NO. 1

(a) Install water by-pass pipe No. 1 with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



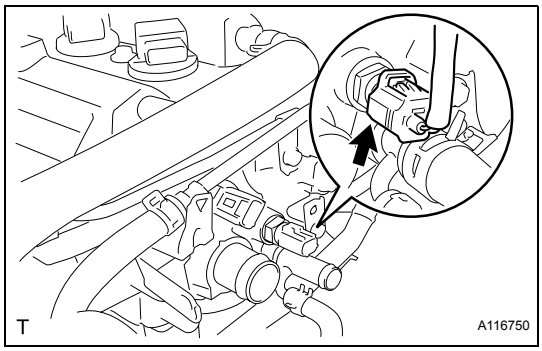
40. CONNECT HEATER WATER INLET HOSE A

(a) Connect heater water inlet hose A.



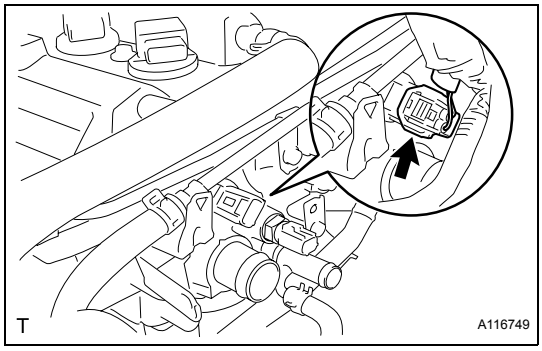
41. CONNECT HEATED OXYGEN SENSOR CONNECTOR

(a) Connect the heated oxygen sensor connector.
(b) Install the sensor bracket with the bolt.



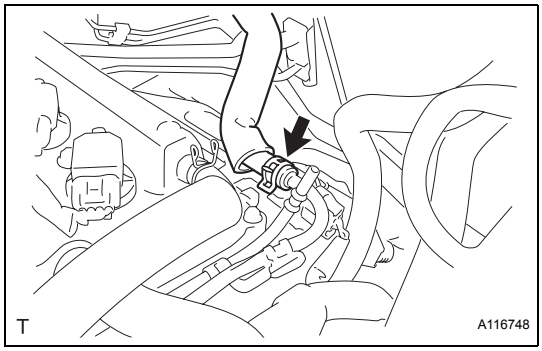
42. CONNECT ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR

(a) Connect the engine coolant temperature sensor connector.



43. CONNECT CAMSHAFT POSITION SENSOR CONNECTOR

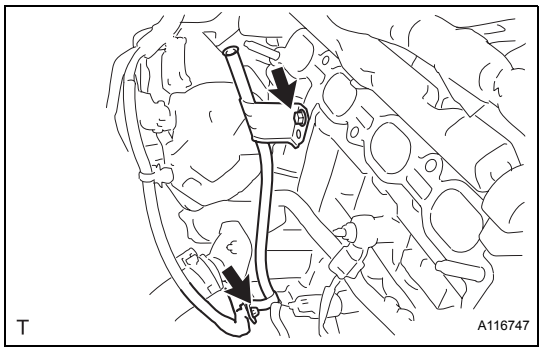
(a) Connect the camshaft position sensor connector.



44. CONNECT BOOSTER VACUUM TUBE

(a) Connect the booster vacuum tube.

45. CONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-18)



46. INSTALL OIL LEVEL GAUGE GUIDE

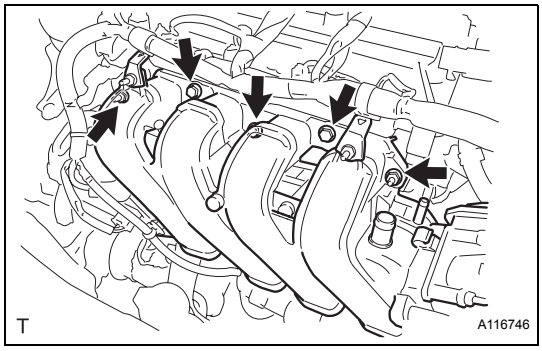
(a) Apply engine oil to a new O-ring.

(b) Install the oil level gauge guide with the bolt through a new O-ring.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

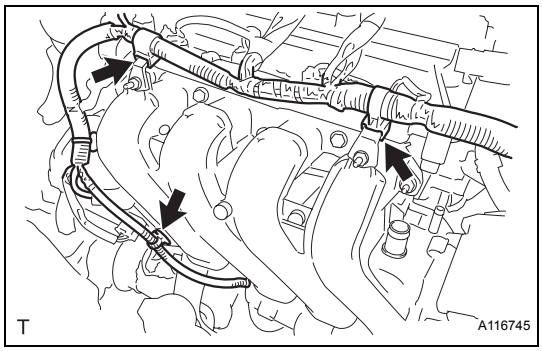
(c) Install the wire harness.

47. INSTALL INTAKE MANIFOLD

(a) Install a new gasket onto the intake manifold.

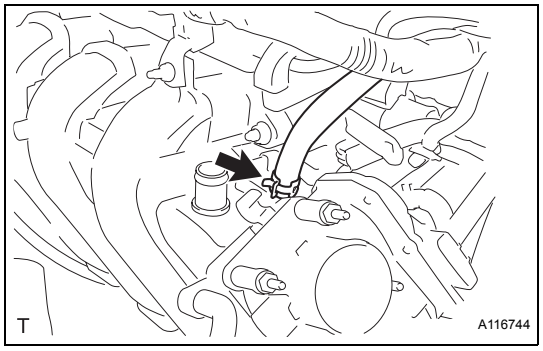


(b) Install the intake manifold with the 3 bolts and 2 nuts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



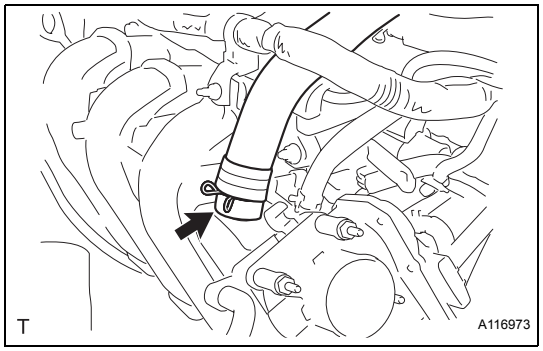
(c) Connect the 3 wire harness clamps shown in the illustration.

48. INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY



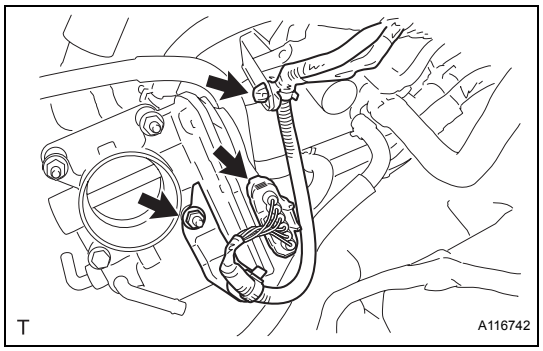
49. CONNECT UNION TO CONNECTOR TUBE HOSE

(a) Connect the union to connector tube hose.



50. CONNECT VENTILATION HOSE

(a) Connect the ventilation hose.

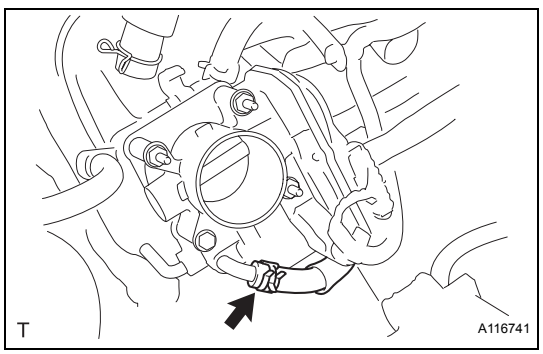


51. CONNECT THROTTLE WITH MOTOR BODY CONNECTOR

(a) Install the throttle with motor body connector bracket with the nut.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(b) Connect the throttle with motor body connector.

(c) Connect the wire harness clamp.



52. CONNECT WATER BY-PASS HOSE

(a) Connect the water by-pass hose.

EM

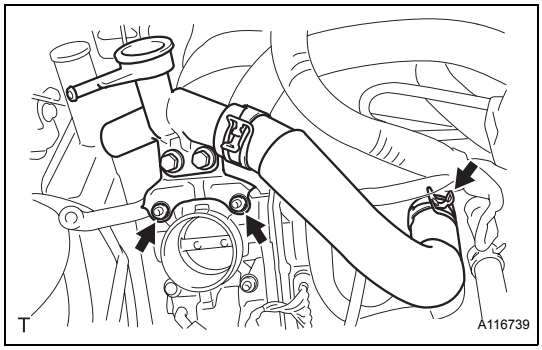
53. CONNECT WATER BY-PASS HOSE NO. 2

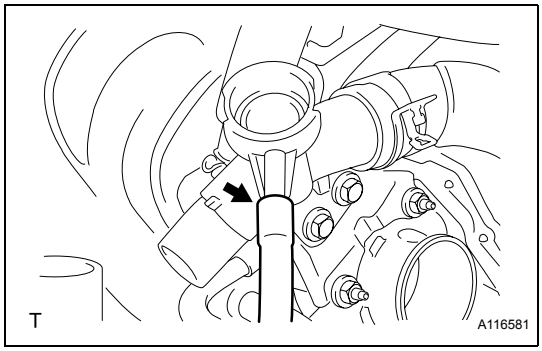
(a) Connect water by-pass hose No. 2.



54. INSTALL WATER FILLER SUB-ASSEMBLY

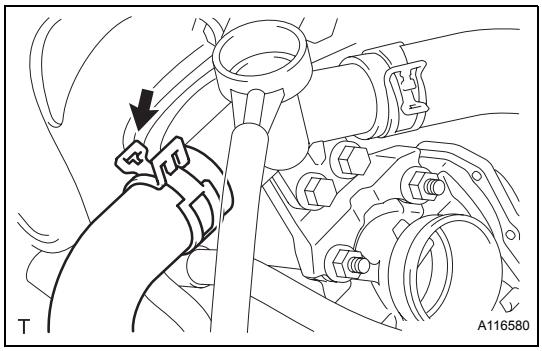
(a) Install the water filler sub-assembly with the 2 nuts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

(b) Connect radiator hose No. 1 to the cylinder head.



55. CONNECT RESERVE TANK HOSE

(a) Connect the reserve tank hose.



56. CONNECT RADIATOR HOSE NO. 3

(a) Connect radiator hose No. 3.

57. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-414)

58. INSTALL BATTERY TRAY

59. INSTALL BATTERY

60. ADD ENGINE OIL

61. ADD ENGINE COOLANT (See page CO-8)

62. CHECK ENGINE OIL LEVEL (See page LU-1)

63. CHECK FOR ENGINE OIL LEAKAGE

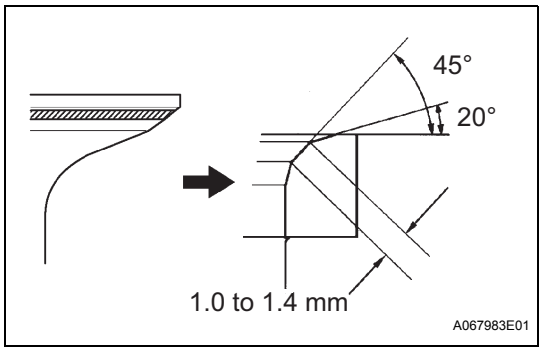
64. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

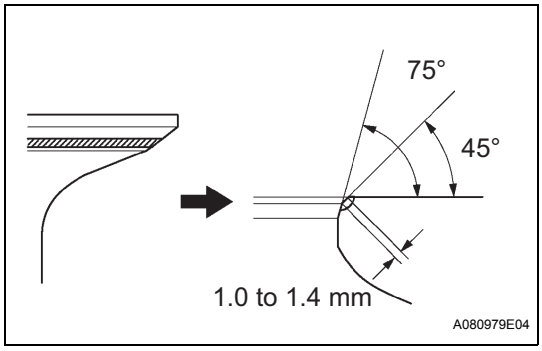
65. CHECK FOR EXHAUST GAS LEAKAGE

66. CHECK FOR FUEL LEAKAGE (See page FU-7)

67. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

68. INSTALL ENGINE UNDER COVER RH
69. INSTALL FRONT WHEEL RH
70. INSTALL COWL TOP PANEL OUTER (for Hatchback) (See page EM-146)
71. INSTALL COWL TOP PANEL OUTER (for Sedan) (See page ES-434)
72. INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-147)
73. INSTALL FRONT AIR SHUTTER SEAL RH (for Sedan) (See page ES-435)
74. INSTALL FRONT WIPER MOTOR AND LINK (for Hatchback) (See page WW-21)
75. INSTALL FRONT WIPER MOTOR AND LINK (for Sedan) (See page WW-12)
76. INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)
77. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-21)
78. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-12)
79. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)
80. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)
81. INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)
82. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Hatchback) (See page WW-22)
83. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Sedan) (See page WW-13)
84. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Hatchback) (See page WW-23)
85. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Sedan) (See page WW-14)
86. INSTALL FRONT WIPER ARM HEAD CAP (for Hatchback) (See page WW-23)
87. INSTALL FRONT WIPER ARM HEAD CAP (for Sedan) (See page WW-15)





REPAIR

1. REPAIR INTAKE VALVE

(a) Repair the intake valve seat.
NOTICE:
Releasing the seat-cutter pressure gradually helps to make the valve seat face smoother.

(b) If the seating is too high on the valve face, use 20° and 45° cutters to correct the seat.

(c) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(d) Hand-lap the valve and valve seat with an abrasive compound.

(e) Recheck the valve seating position.

2. REPAIR EXHAUST VALVE
NOTICE:
Releasing the seat-cutter pressure gradually helps to make the valve seat face smoother.

(a) If the seating is too high on the valve face, use 20° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Recheck the valve seating position.

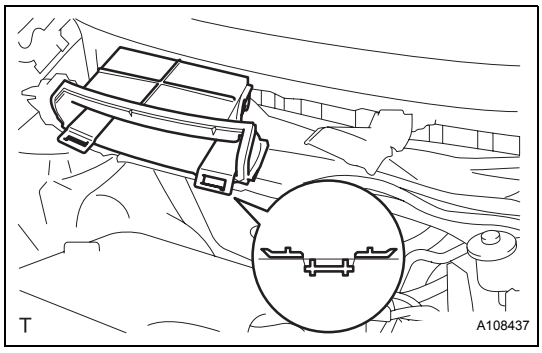
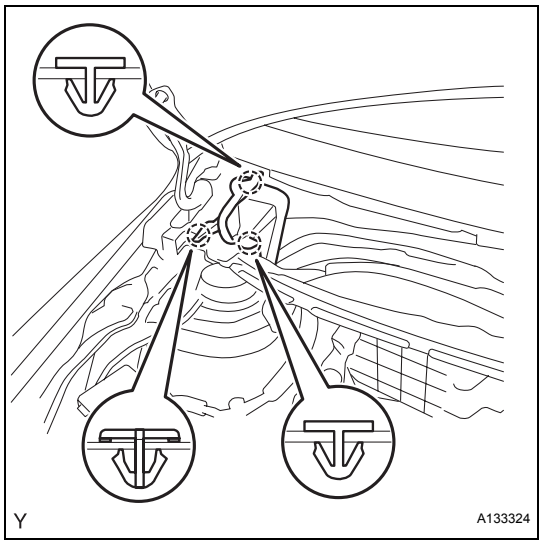
REMOVAL

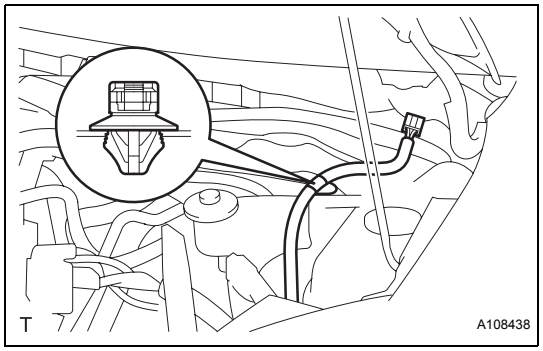
1. **DISCHARGE FUEL SYSTEM PRESSURE**
2. **REMOVE BATTERY**
   (a) Disconnect the cable from the battery terminal.
   (b) Loosen the nut and remove the battery clamp.
   (c) Remove the battery.
3. **REMOVE BATTERY TRAY**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **DRAIN ENGINE COOLANT (See page CO-8)**
8. **DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-158)**
9. **DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-26)**
10. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-9)**
11. **REMOVE FRONT WIPER ARM LH (See page WW-9)**
12. **REMOVE FRONT WIPER ARM RH (See page WW-9)**
13. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
14. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-18)**
15. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
16. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
17. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
18. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-10)**
19. **REMOVE FRONT WIPER MOTOR AND LINK (See page WW-19)**
20. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback)**
    (a) Disengage the claw and remove cowl to register duct sub-assembly No. 2.





21. REMOVE FRONT AIR SHUTTER SEAL RH (for Sedan)

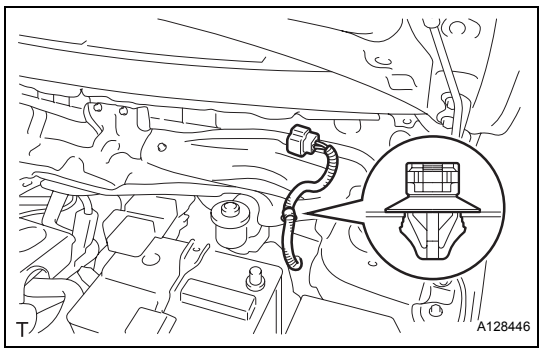
(a) Disengage the 3 claws and remove the front air shutter seal RH.



22. REMOVE COWL TOP PANEL OUTER (for Hatchback)

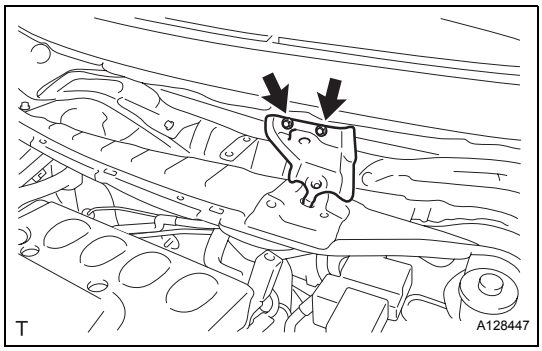
(a) Disengage the wire harness clamp.

(b) Remove the 9 bolts and remove the cowl top panel outer.

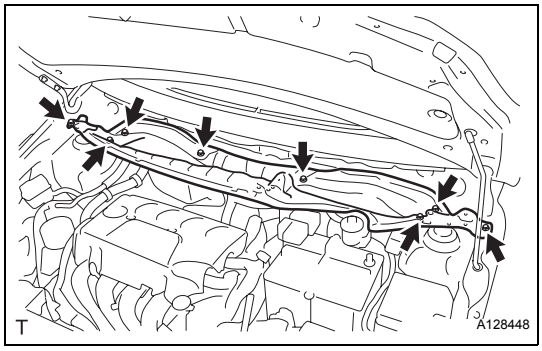


23. REMOVE COWL TOP PANEL OUTER (for Sedan)

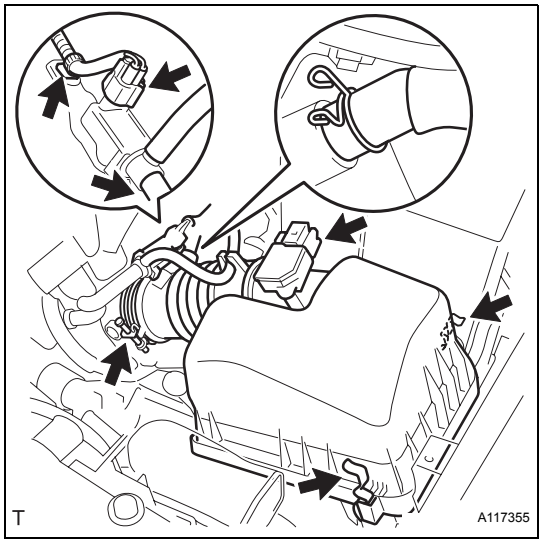
(a) Disengage the wire harness clamp.



(b) Remove the 2 bolts and remove the cowl top to cowl inner brace.

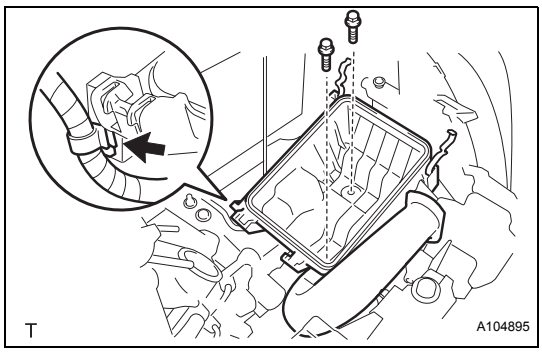


(c) Remove the 8 bolts and remove the cowl top panel outer.

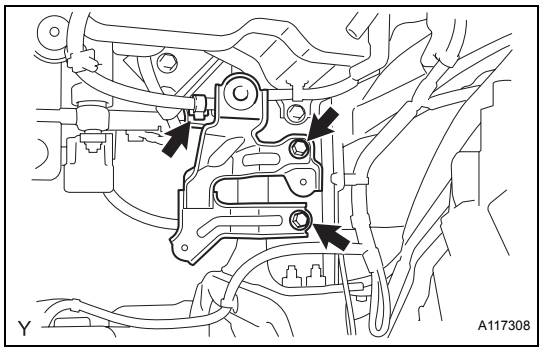


24. REMOVE AIR CLEANER ASSEMBLY

(a) Separate the intake air flow meter connector and the wire harness clamp.
(b) Separate the fuel vapor feed hose and fuel vapor feed hose No. 1 from the vacuum switching valve assembly.
(c) Separate the vacuum switching valve connector and the wire harness clamp.
(d) Separate the ventilation hose from the air cleaner hose.
(e) Release the air cleaner cap sub-assembly with air cleaner hose No. 1.
(f) Loosen the air cleaner hose clamp on the throttle body side and remove the air cleaner cap and the air cleaner hose.
(g) Remove the air cleaner element.



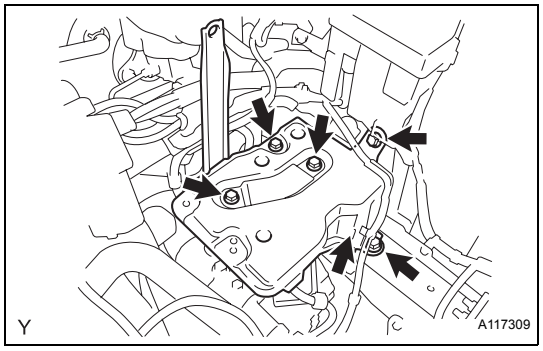
(h) Separate the wire harness clamp from the air cleaner case.
(i) Remove the 2 bolts and remove the air cleaner case with air cleaner inlet No. 1.



25. REMOVE AIR CLEANER BRACKET

(a) Separate the wire harness clamp from the air cleaner bracket.

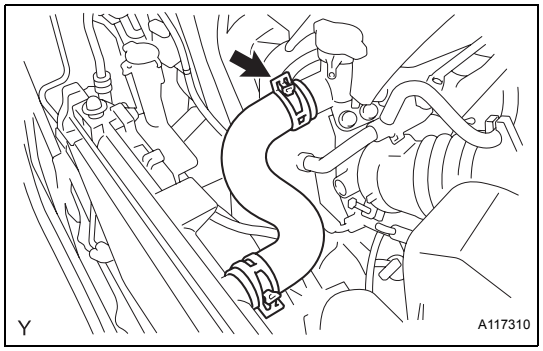
(b) Remove the 2 bolts and remove the air cleaner bracket.



26. REMOVE BATTERY CARRIER

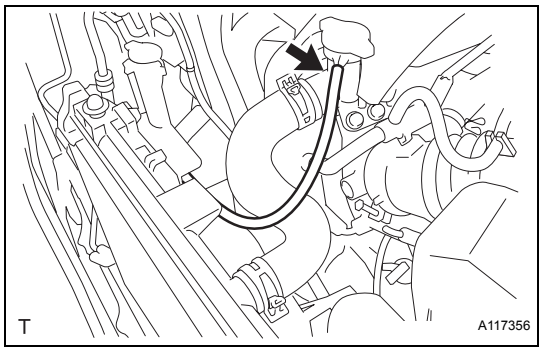
(a) Separate the wire harness clamp from the battery carrier.

(b) Remove the 5 bolts and remove the battery carrier.



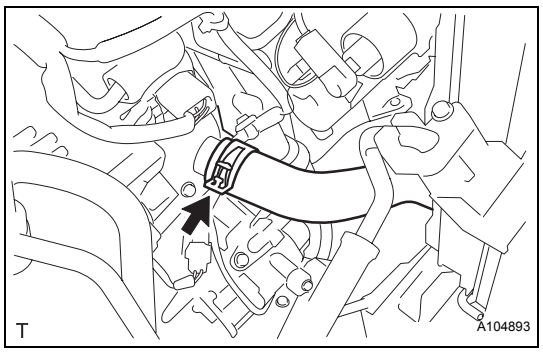
27. DISCONNECT RADIATOR HOSE NO. 3

(a) Disconnect radiator hose No. 3 from the water filler.



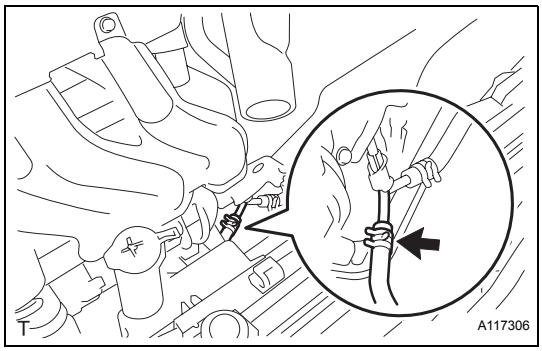
28. DISCONNECT RADIATOR RESERVOIR TANK HOSE

(a) Disconnect the radiator reservoir tank hose from the water filler.

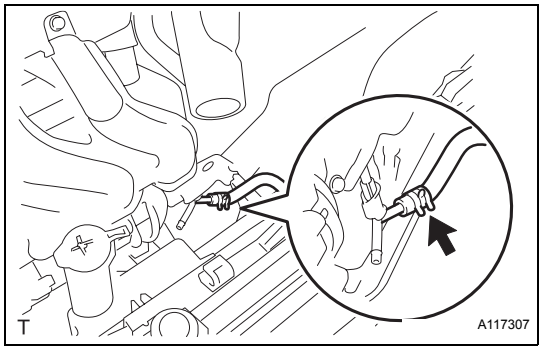


29. DISCONNECT RADIATOR HOSE NO. 2

(a) Disconnect radiator hose No. 2 from the water inlet.



30. **DISCONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)**
    (a) Loosen the clip and disconnect the oil cooler outlet hose.



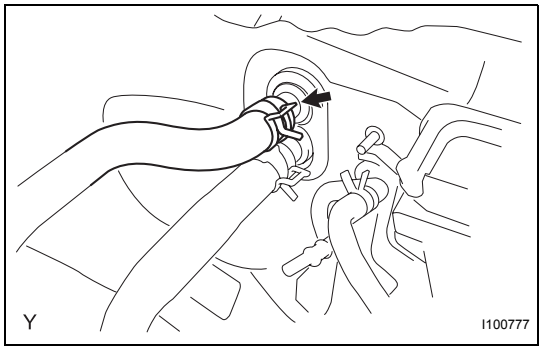
31. **DISCONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)**
    (a) Loosen the clip and disconnect the oil cooler inlet hose.

32. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**

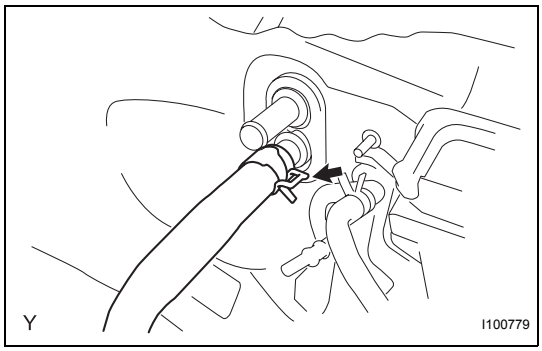
33. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle) (See page AX-106)**

34. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle) (See page MX-27)**

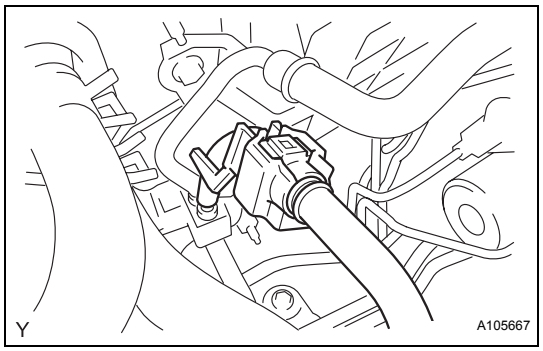
35. **DISCONNECT UNION TO CHECK VALVE HOSE**
    (a) Disconnect the union to check valve hose from the booster vacuum tube.



36. **DISCONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)**
    (a) Disconnect heater water outlet hose A from the heater unit.

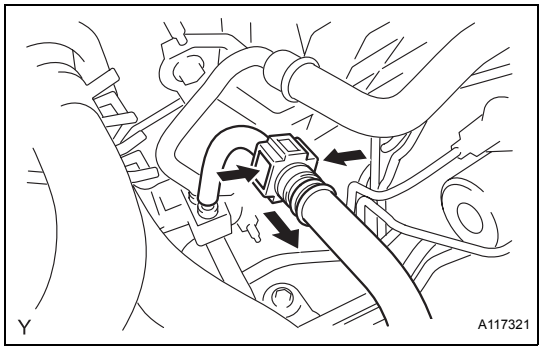


37. **DISCONNECT HEATER WATER INLET HOSE A**
    (a) Disconnect heater water inlet hose A from the heater unit.



38. DISCONNECT FUEL TUBE SUB-ASSEMBLY

(a) Remove fuel pipe clamp No. 1.



(b) Pinch the retainer as illustrated, then pull the fuel tube connector out of the pipe.

NOTICE:

- **Remove any dirt and foreign matter from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-rings that seal the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

39. REMOVE FAN AND GENERATOR V BELT (See page EM-7)

40. SEPARATE WITH PULLEY COMPRESSOR ASSEMBLY (w/ Air Conditioning System)

(a) Disconnect the connector.

(b) Remove the 4 bolts and separate the with pulley compressor assembly.

HINT:

Remove the compressor assembly together with the low and high pressure hoses, then suspend them from the body with a piece of rope.

41. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle) (See page MX-27)

EM

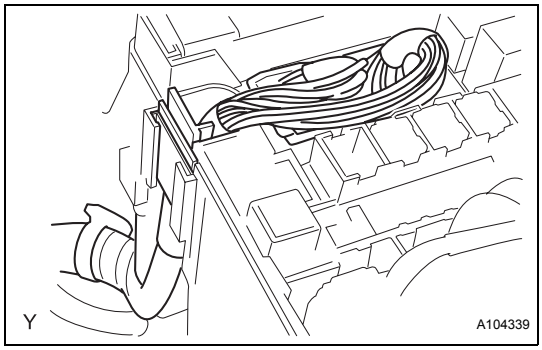
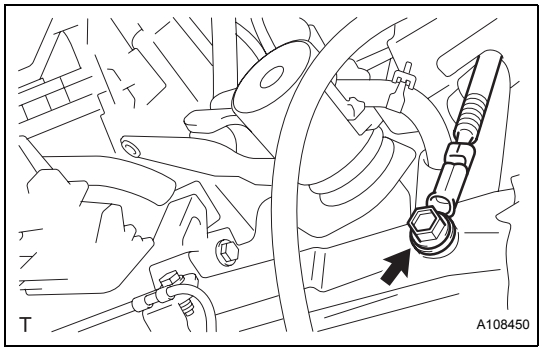
42. DISCONNECT ENGINE WIRE

(a) Pull up the lever and disconnect the connector of the engine control computer.



(b) Remove the 2 connectors and the clamp from the engine room junction block and disconnect the wire harness.



(c) Remove the bolt and separate the earth wire of the engine room wire harness.

(d) Disconnect all the wire harnesses and connectors. Make sure that no wire harness is connected between the body and engine.

43. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page PS-74)

44. SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-74)

45. REMOVE STEERING COLUMN HOLE COVER SUB-ASSEMBLY NO. 1 (See page PS-75)

46. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

47. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-6)

48. REMOVE CONSOLE BOX REAR COVER (for Hatchback) (See page PB-6)

49. REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-138)

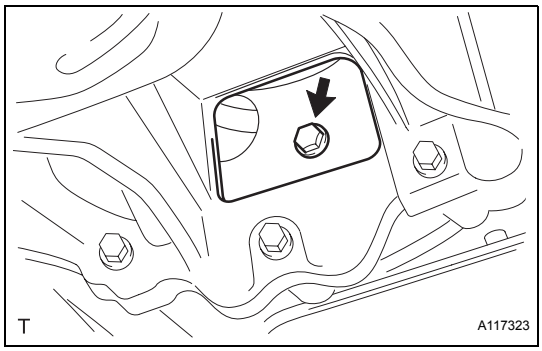
50. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-138)

51. REMOVE INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-44)

52. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)

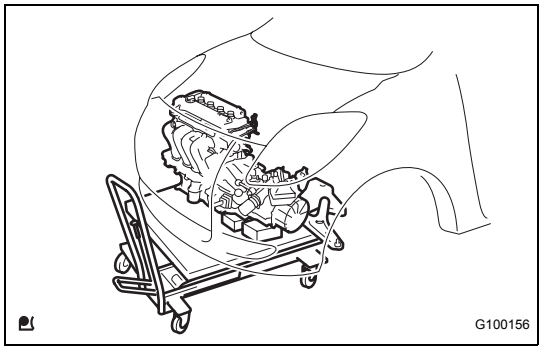
53. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)

54. REMOVE CONSOLE BOX CARPET (for Sedan) (See page PB-7)
55. REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)
56. REMOVE HEATED OXYGEN SENSOR (See page EC-22)
57. REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-5)
58. REMOVE FRONT AXLE HUB LH NUT (See page DS-3)
59. REMOVE FRONT AXLE HUB RH NUT (See page AX-159)
60. SEPARATE SPEED SENSOR FRONT LH (w/ ABS) (See page DS-3)
61. SEPARATE SPEED SENSOR FRONT RH (w/ ABS) (See page AX-159)
62. SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)
63. SEPARATE TIE ROD END SUB-ASSEMBLY RH (See page AX-160)
64. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)
65. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH (See page AX-160)
66. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 LH (See page DS-4)
67. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 RH (See page AX-160)
68. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-4)
69. SEPARATE FRONT AXLE ASSEMBLY RH (See page MX-29)
70. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)
71. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)
72. REMOVE FLYWHEEL HOUSING UNDER COVER (for Automatic Transaxle)



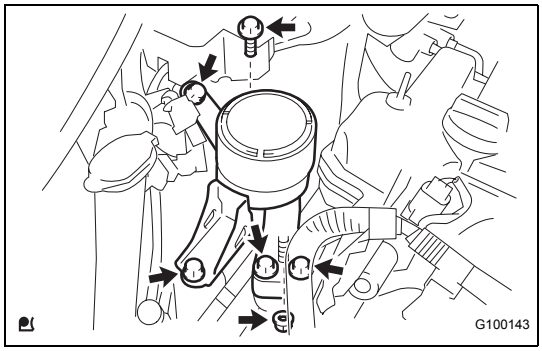
73. REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)

(a) Remove the 6 torque converter set bolts.

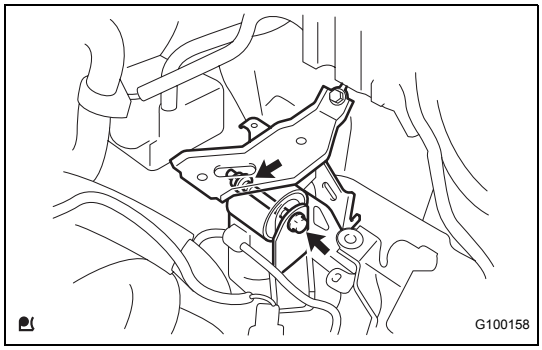


74. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

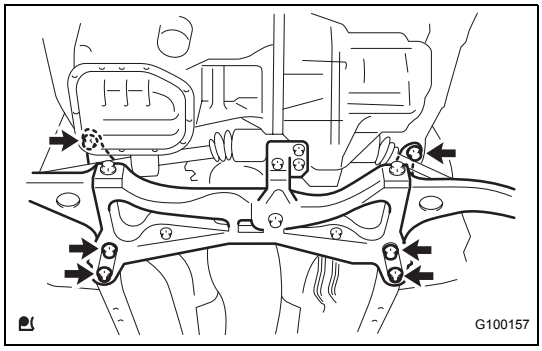
(a) Set the engine lifter.



(b) Remove the 5 bolts and the nut and remove the engine mounting insulator RH.



(c) Remove the through bolt and the nut and separate the engine mounting insulator LH.

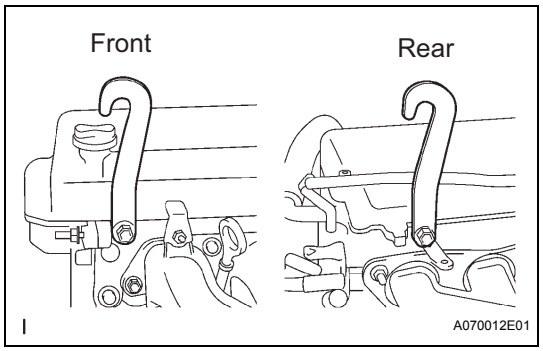


(d) Remove the 6 bolts, and remove the engine assembly with transaxle and the front suspension crossmember from the vehicle.

75. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Remove the bolt and remove the radio setting condenser.

(b) Remove the bolt and remove the oxygen sensor wiring bracket.



(c) Install the engine hangers with the bolts, as shown in the illustration.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
Part No.:
12281-21010 for engine hanger
91642-81025 for bolt

(d) Using an engine sling device and a chain block, suspend the engine assembly with transaxle and front suspension crossmember.

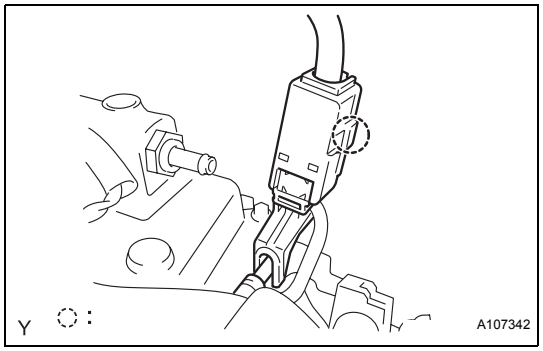
(e) Remove the through bolt from the engine moving control rod and remove the front suspension crossmember.

76. REMOVE VENTILATION HOSE

(a) Loosen the 2 clips and remove the ventilation hose.

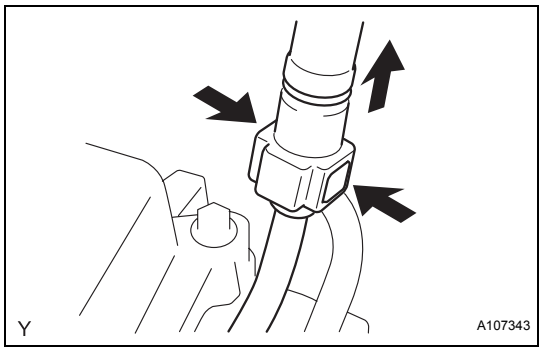
77. REMOVE VENTILATION HOSE NO. 2

(a) Loosen the clips and remove ventilation hose No. 2.



78. REMOVE FUEL TUBE SUB-ASSEMBLY

(a) Disengage the claw and remove fuel pipe clamp No. 2.



(b) Pinch the fuel tube connector retainer from both sides, disconnect the fuel tube connector and separate the fuel tube from the pipe.
NOTICE:
- **Remove any dirt and foreign matter from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-rings that seal the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

79. REMOVE WATER FILLER SUB-ASSEMBLY

(a) Disconnect radiator hose No. 1 from the cylinder head.

(b) Remove the 2 nuts and remove the water filler sub-assembly.

80. REMOVE HEATER WATER INLET HOSE A

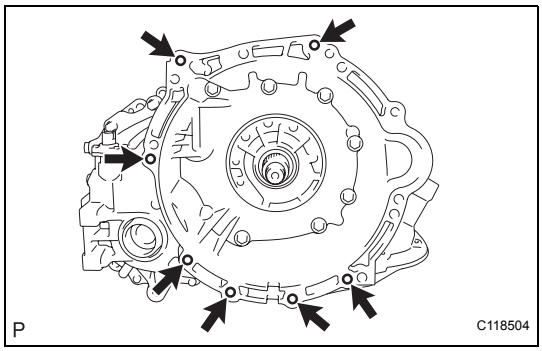
(a) Disconnect heater water inlet hose A from the cylinder head.

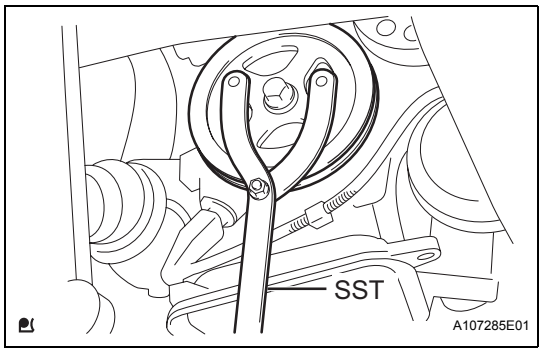
81. REMOVE FLYWHEEL HOUSING SIDE COVER (See page ST-9)

82. REMOVE STARTER ASSEMBLY (See page ST-9)

83. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

(a) Remove the 7 bolts and remove the automatic transaxle with torque converter.





84. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

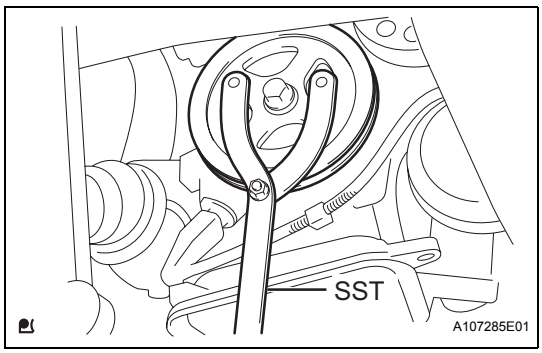
(b) Remove the 6 bolts, drive plate spacer FR, drive plate and ring gear sub-assembly and drive plate spacer RR.

85. REMOVE CONTROL CABLE BRACKET (for Manual Transaxle) (See page MX-28)

86. REMOVE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle) (See page MX-30)

87. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-15)

88. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle)



89. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

(b) Remove the 6 bolts and flywheel.

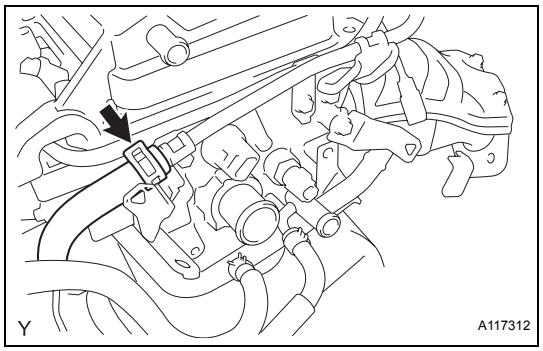
90. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

91. REMOVE IGNITION COIL NO. 1

(a) Disconnect the connectors of the ignition coils.

(b) Remove the bolt and remove all the ignition coils.

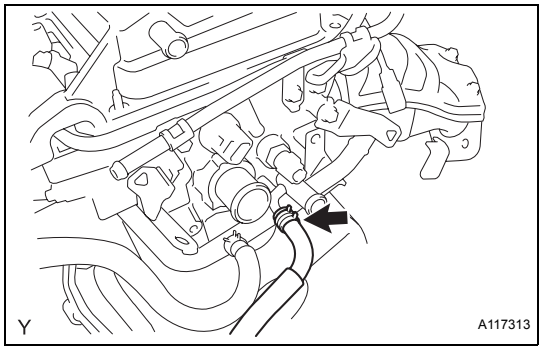
92. REMOVE GENERATOR ASSEMBLY (See page CH-10)



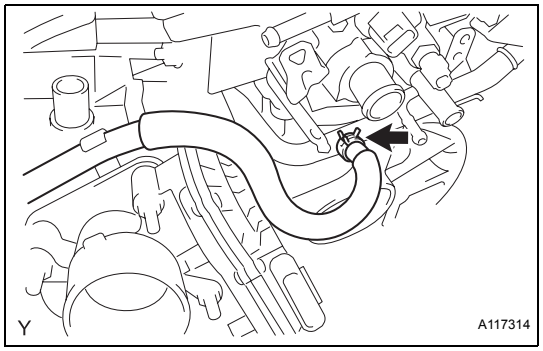
93. REMOVE INTAKE MANIFOLD

(a) Disconnect the union to connector tube hose from the booster vacuum tube.

(b) Disconnect the engine wire from the intake manifold.

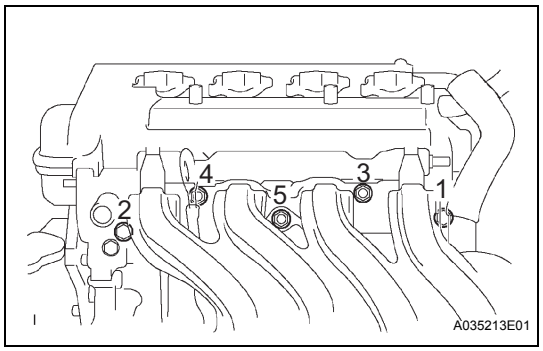


(c) Disconnect the water by-pass hose from the cylinder head.



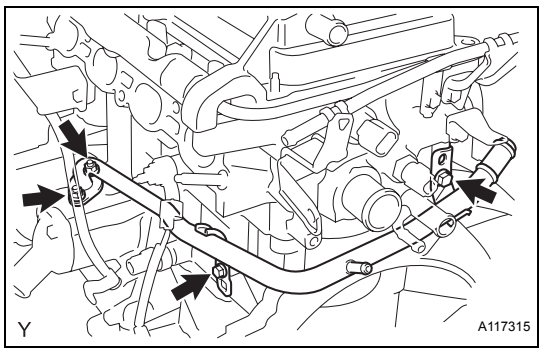
(d) Disconnect the water by-pass hose from water bypass pipe No. 1.

(e) Disconnect the throttle with motor body assembly connector.



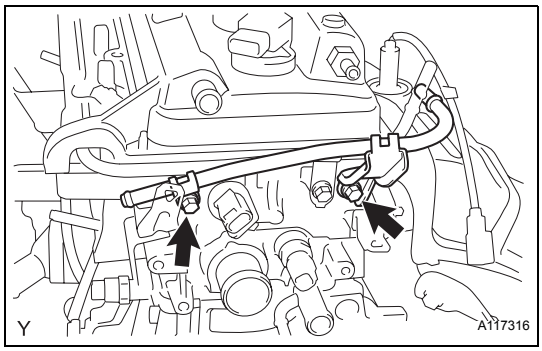
(f) Remove the 3 bolts and 2 nuts in the order shown in the illustration and remove the intake manifold.

(g) Remove the gasket from the intake manifold.



94. REMOVE WATER BY-PASS PIPE NO. 1

(a) Remove the 2 bolts and 2 nuts and remove water by-pass pipe No. 1.

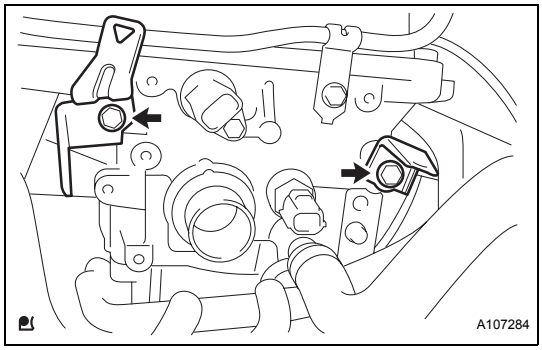


95. REMOVE BOOSTER VACUUM TUBE

(a) Remove the 2 bolts and remove the booster vacuum tube.

96. REMOVE ENGINE WIRE

(a) Disconnect all the sensor connectors and wire harness clamps from the engine assembly and remove the engine wire harness.



97. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the 2 bolts and remove the 2 wire harness clamp brackets.

98. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO. 1

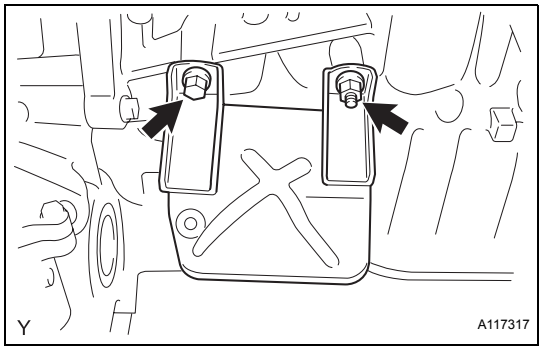
(a) Remove the 4 bolts and remove the exhaust manifold heat insulator.

99. REMOVE MANIFOLD SUPPORT BRACKET

(a) Remove the 3 bolts and remove the manifold support bracket.

100. REMOVE EXHAUST MANIFOLD

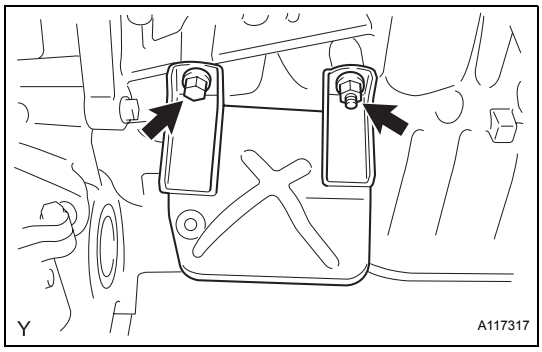
(a) Remove the 3 bolts and 2 nuts and remove the exhaust manifold.



101. REMOVE DRIVE SHAFT HEAT INSULATOR SUB-ASSEMBLY

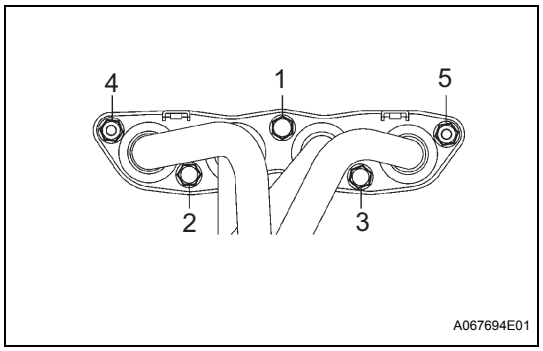
(a) Remove the bolt and nut and remove the drive shaft heat insulator.

INSTALLATION



1. INSTALL DRIVE SHAFT HEAT INSULATOR SUB-ASSEMBLY

(a) Install the drive shaft heat insulator sub-assembly with the bolt and nut.
Torque: 18 N*m (183 kgf*cm, 13 ft.*lbf)



2. INSTALL EXHAUST MANIFOLD

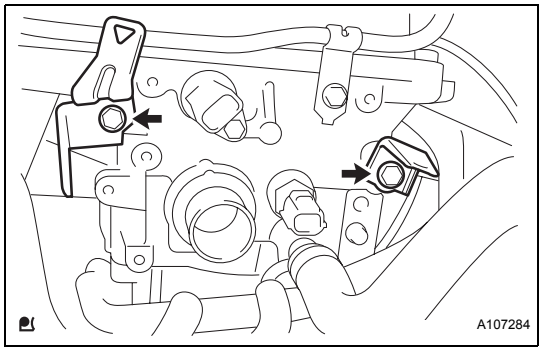
(a) Tighten the exhaust manifold nuts and bolts, in the order shown in the illustration, through a new gasket.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

3. INSTALL MANIFOLD SUPPORT BRACKET

(a) Install the manifold bracket with the 3 bolts.
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)

4. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1

(a) Install the exhaust manifold insulator with the 4 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

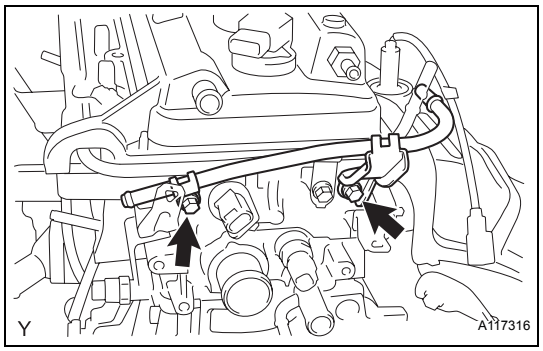


5. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the 2 wire harness clamp brackets with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 89 in.*lbf)

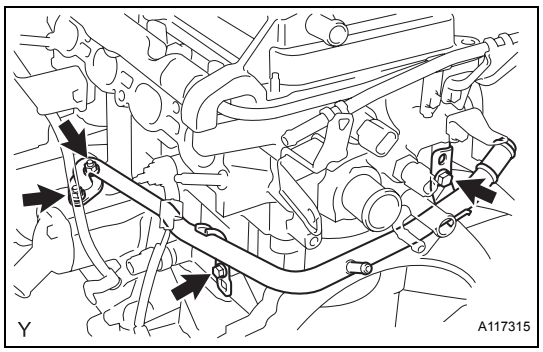
6. INSTALL ENGINE WIRE

(a) Connect all the sensor connectors and wire harness clamps to the engine assembly and install the engine wire harness.



7. INSTALL BOOSTER VACUUM TUBE

(a) Install the booster vacuum tube with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



8. INSTALL WATER BY-PASS PIPE NO. 1

(a) Install water by-pass pipe No. 1 through a new gasket with the 2 bolts and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

9. INSTALL INTAKE MANIFOLD

(a) Install a new gasket onto the intake manifold.

EM

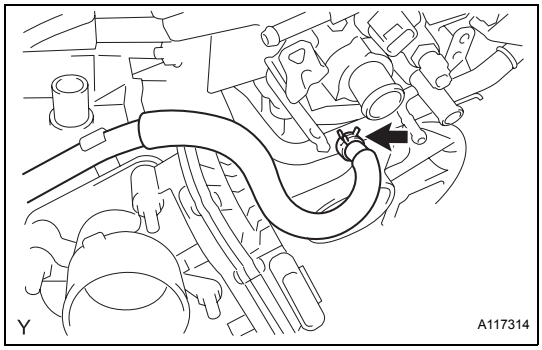
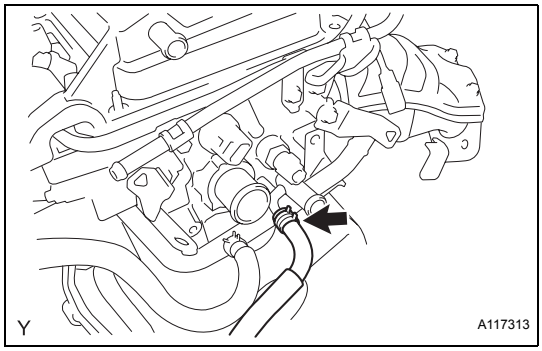
(b) Provisionally tighten the intake manifold nuts and bolts in the order shown in the illustration, and then tighten them to the specified torque.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

(c) Connect the engine wire to the intake manifold.



(d) Connect the water by-pass hose to water bypass pipe No. 1.



(e) Connect the water by-pass hose to the cylinder head.

(f) Connect the union to connector tube hose to the booster vacuum tube.

(g) Connect the throttle with motor body assembly connector.

10. INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY

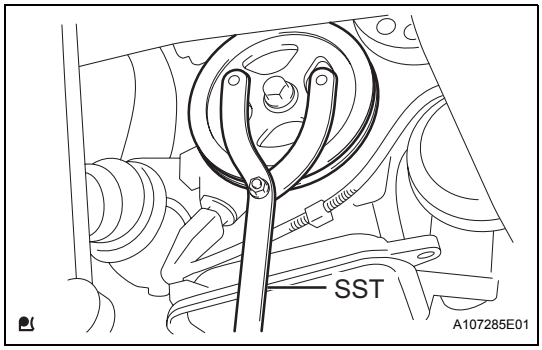
11. INSTALL GENERATOR ASSEMBLY (See page CH-17)

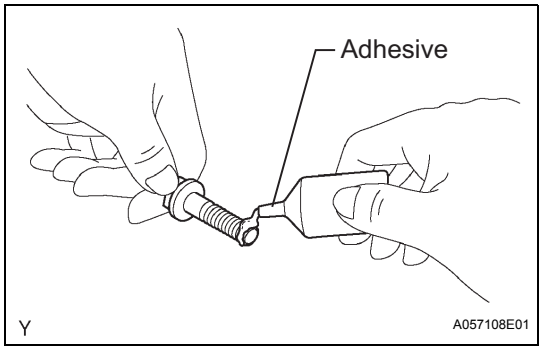
12. INSTALL IGNITION COIL NO.1 (See page IG-9)

13. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

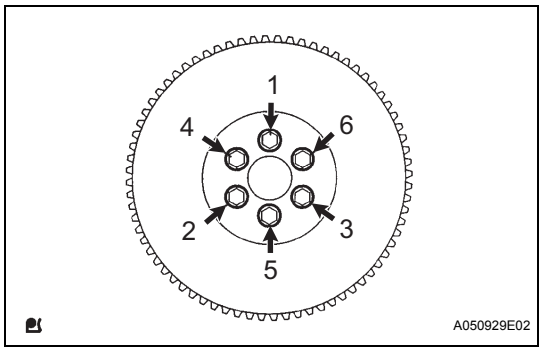
(b) Clean the 6 bolts and their holes.





(c) Apply adhesive to the end 2 or 3 threads of the bolts.
Adhesive:
Part No. 08833-0070, three bond 1324 or the equivalent.

(d) Install the drive plate spacer RR, drive plate and ring gear sub-assembly and drive plate spacer FR.



(e) Install and uniformly tighten the 6 bolts in several steps, in the sequence shown in the illustration.
Torque: 88 N*m (900 kgf*cm, 65 ft.*lbf)
NOTICE:
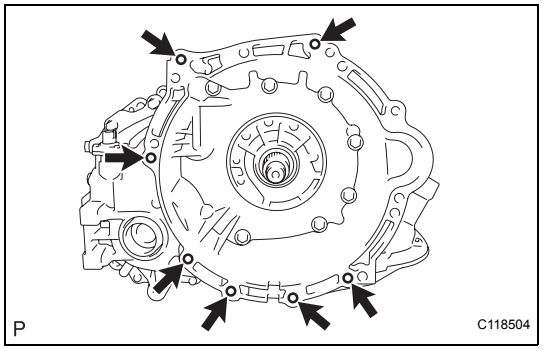
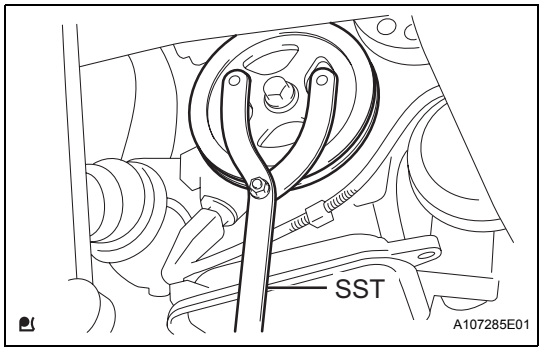
Do not start the engine for at least 1 hour after performing the installation.



14. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

(a) Make sure that the knock pin is installed on the engine side.

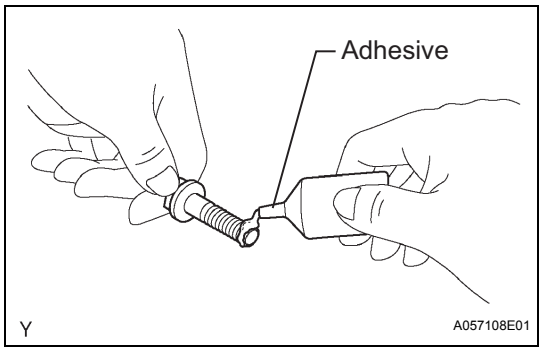
(b) Install the automatic transaxle with torque converter with the 7 bolts.
Torque: 30 N*m (301 kgf*cm, 22 ft.*lbf)
CAUTION:
Make sure that the torque converter rotates.



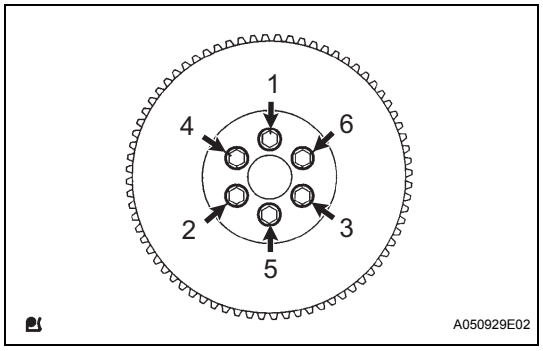
15. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

(b) Clean the 6 bolts and their holes.

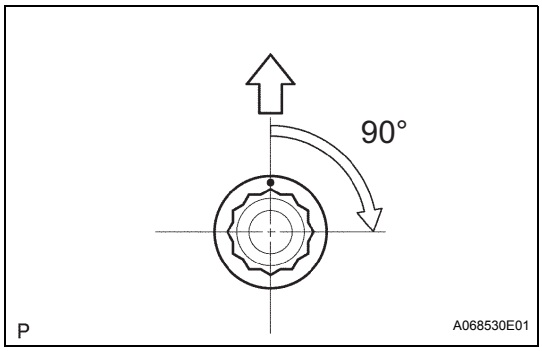


(c) Apply adhesive to the end 2 or 3 threads of new bolts.
Adhesive:
Part No. 08833-0070, three bond 1324 or the equivalent.



(d) Install the flywheel with the 6 bolts in the order shown in the illustration.
Torque: 49 N*m (500 kgf*cm, 38 ft.*lbf)

(e) Mark a paint mark on each bolt head on the engine upper side.



(f) Tighten the bolts 90° in the sequence shown in the illustration.
NOTICE:
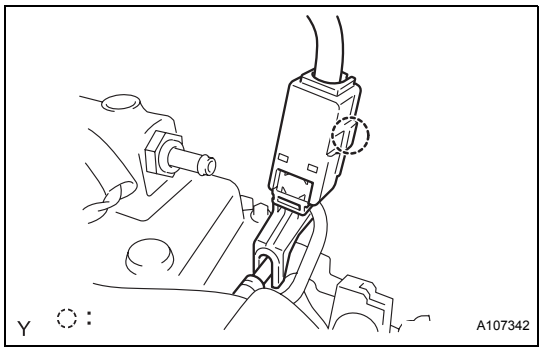
Do not start the engine for at least 1 hour after performing the installation.

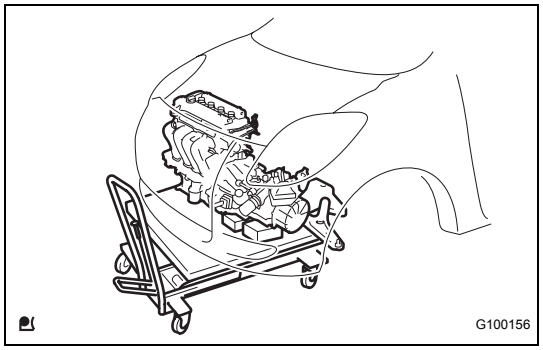
16. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-16)**
17. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-17)**
18. **INSPECT AND ADJUST CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-17)**
19. **INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle) (See page MX-30)**
20. **INSTALL CONTROL CABLE BRACKET (for Manual Transaxle) (See page MX-32)**
21. **INSTALL STARTER ASSEMBLY (See page ST-17)**
22. **INSTALL FLYWHEEL HOUSING SIDE COVER (See page ST-17)**
23. **CONNECT HEATER WATER INLET HOSE A**
    (a) Connect heater water inlet hose A to the cylinder head.
24. **INSTALL WATER FILLER SUB-ASSEMBLY**
    (a) Connect radiator hose No. 1 to the cylinder head.
    (b) Install the water filler sub-assembly with the 2 nuts.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
    (c) Connect radiator hose No. 1 to the water filler.



25. **INSTALL FUEL TUBE SUB-ASSEMBLY**
    (a) Connect the fuel tube connector and pipe and install fuel pipe clamp No. 2.
    CAUTION:
    Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a click sound. If the connection is tight, apply a small amount of engine oil to the the tip of the pipe. After connecting, pull the pipe and connector to make sure that they are securely connected.
26. **INSTALL VENTILATION HOSE NO. 2**
    (a) Install ventilation hose No. 2 with the clip.
27. **INSTALL VENTILATION HOSE**
    (a) Install the ventilation hose with the clip.
28. **INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY**
    (a) Install the engine moving control rod with the through bolt.
    Torque: 120 N*m (1,224 kgf*cm, 89 ft.*lbf)
    (b) Remove the 2 bolts and remove the 2 engine hangers.

(c) Install the oxygen sensor wiring bracket with the bolt.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

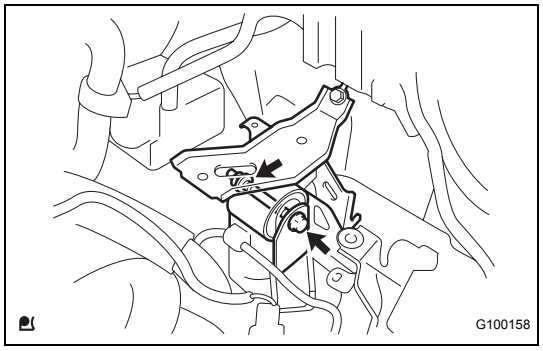
(d) Install the radio setting condenser with the bolt.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



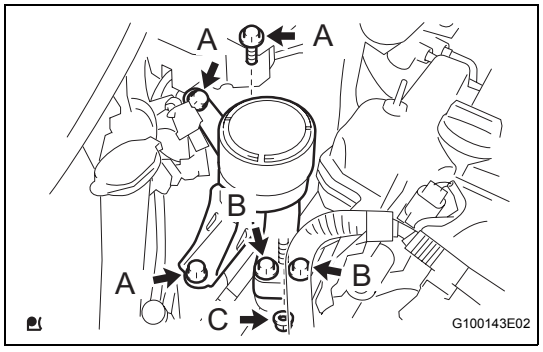
29. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (for Hatchback)

(a) Set the engine assembly with transaxle and front suspension crossmember on the engine lifter.

(b) Operate the engine lifter and lift the engine assembly with transaxle and front suspension crossmember to the position where the engine mounting insulators RH and LH can be installed.

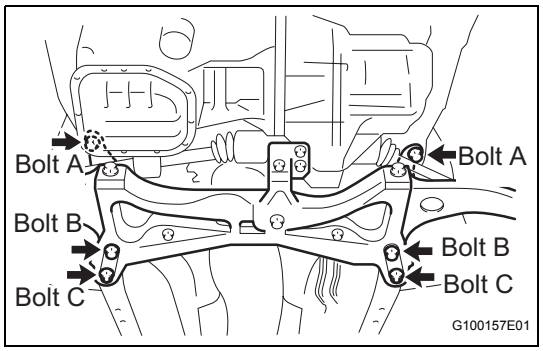


(c) Install the engine mounting insulator LH with the through bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)

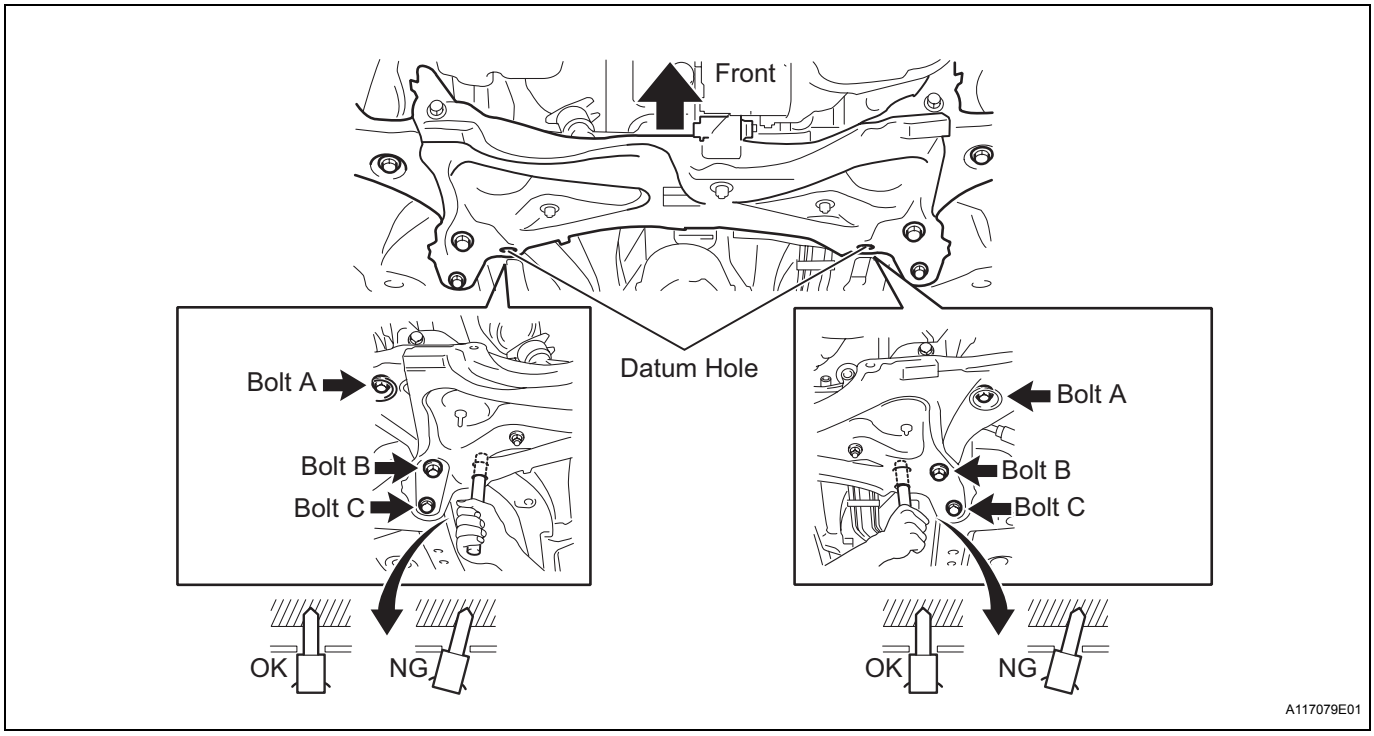


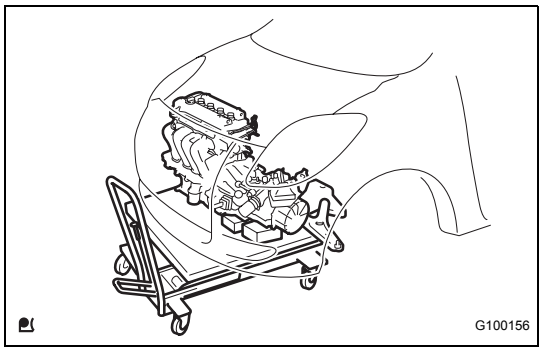
(d) Install the engine mounting insulator RH with the 5 bolts and nut.
Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf) for Bolt A
52 N*m (530 kgf*cm, 38 ft.*lbf) for Bolt B
52 N*m (530 kgf*cm, 38 ft.*lbf) for Nut C

(e) Operate the engine lifter and provisionally install the front suspension crossmember onto the vehicle with the 6 bolts.



(f) Insert SST into the datum holes in the front suspension crossmembers RH and LH alternately and tighten bolts A, B and C on both sides in several sequences.
SST 09670-00010
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C
CAUTION:
- **Insert SST into the datum hole vertically.**
- **If impossible to insert SST vertically, loosen all the bolts and then insert SST again.**

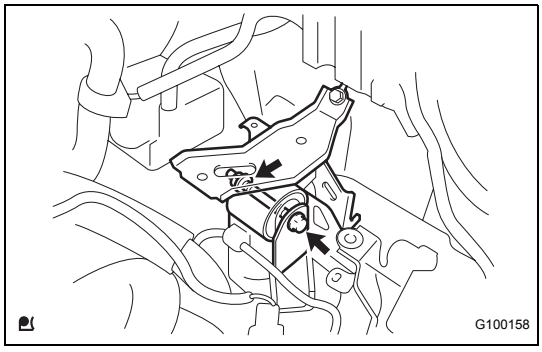




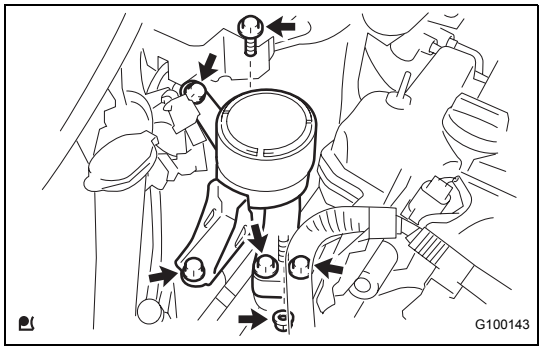
30. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE (for Sedan)

(a) Set the engine assembly with transaxle and front suspension crossmember on the engine lifter.

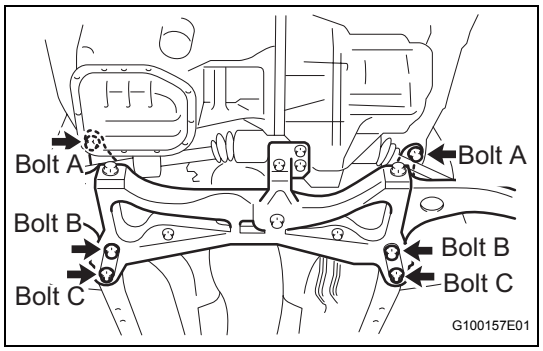
(b) Operate the engine lifter and lift the engine assembly with transaxle and front suspension crossmember to the position where the engine mounting insulators RH and LH can be installed.



(c) Install the engine mounting insulator LH with the through bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)



(d) Install the engine mounting insulator RH with the 5 bolts and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)



(e) Operate the engine lifter and provisionally install the engine assembly with transaxle and front suspension crossmember onto the vehicle with the 6 bolts.

(f) Insert SST into the datum holes of the front suspension crossmembers RH and LH alternately and tighten bolts A, B and C on both sides in several sequences.

SST 09670-00010

Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C

CAUTION:

- **Insert SST into the datum hole vertically.**
- **If impossible to insert SST vertically, loosen all the bolts and then insert SST again.**

EM

31. **INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)**
    (a) Tighten the 6 torque converter set bolts.
    Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
32. **INSTALL FLYWHEEL HOUSING UNDER COVER**
33. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**
34. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**
35. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-14)**
36. **INSTALL FRONT AXLE ASSEMBLY RH (See page DS-14)**

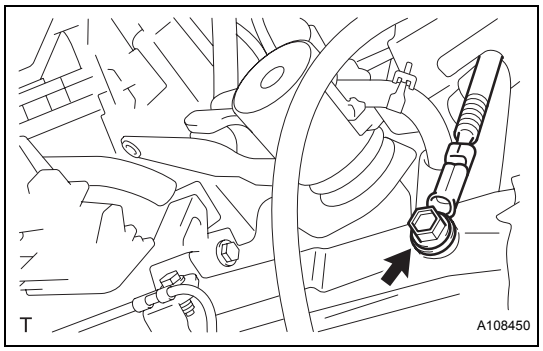
37. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)
38. INSTALL FRONT STABILIZER LINK ASSEMBLY RH (See page MX-31)
39. INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 LH (See page DS-14)
40. INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 RH (See page MX-31)
41. INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)
42. INSTALL TIE ROD END SUB-ASSEMBLY RH (See page MX-31)
43. INSTALL SPEED SENSOR FRONT LH (w/ ABS) (See page DS-15)
44. INSTALL SPEED SENSOR FRONT RH (w/ ABS) (See page MX-31)
45. INSTALL FRONT AXLE HUB LH NUT (See page DS-15)
46. INSTALL FRONT AXLE HUB RH NUT (See page MX-31)
47. INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-8)
48. INSTALL HEATED OXYGEN SENSOR (See page EC-23)
49. INSTALL CONSOLE BOX ASSEMBLY REAR (See page PB-10)
50. INSTALL CONSOLE BOX REAR COVER (for Hatchback) (See page PB-11)
51. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-12)
52. INSTALL CONSOLE BOX CARPET (for Sedan) (See page PB-11)
53. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)
54. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)
55. INSTALL INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-55)
56. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-141)
57. INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)
58. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

59. **INSTALL STEERING COLUMN HOLE COVER SUB-ASSEMBLY NO. 1 (See page PS-79)**

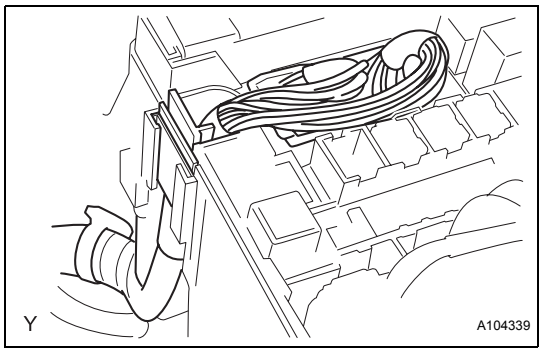
60. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-79)**

61. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page PS-79)**

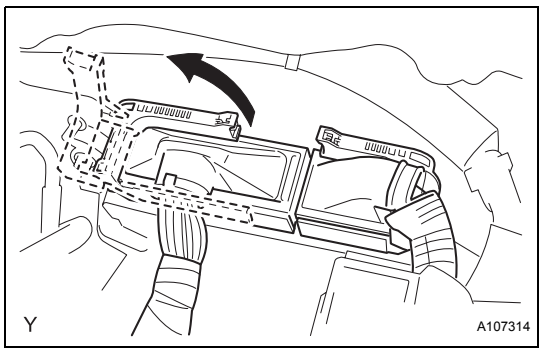
62. **CONNECT ENGINE WIRE**



(a) Install the earth wire of the engine room wire harness with the bolt.



(b) Connect the 2 engine wire harness connectors and wire harness clamp to the engine room junction block.



(c) Connect the engine wire harness connector to the ECM.

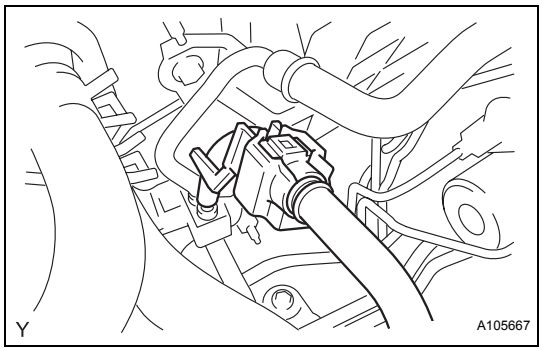
63. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle) (See page MX-32)**

64. **INSTALL WITH PULLEY COMPRESSOR ASSEMBLY (w/ Air Conditioning System) (See page AC-209)**

65. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**

66. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**

67. **CONNECT FUEL TUBE SUB-ASSEMBLY**



(a) Connect the fuel tube connector and fuel pipe, and install fuel pipe clamp No. 1.

CAUTION:

Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a click sound. If the connection is tight, apply a small amount of engine oil to the the tip of the pipe. After connecting, pull the pipe and connector to make sure that they are securely connected.

EM

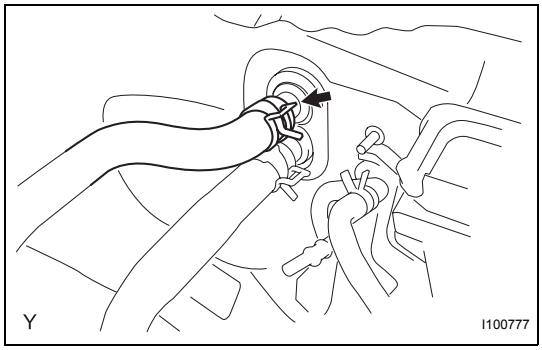
68. CONNECT HEATER WATER INLET HOSE A

(a) Connect heater water inlet hose A to the heater unit.



69. CONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)

(a) Connect heater water outlet hose A to the heater unit.

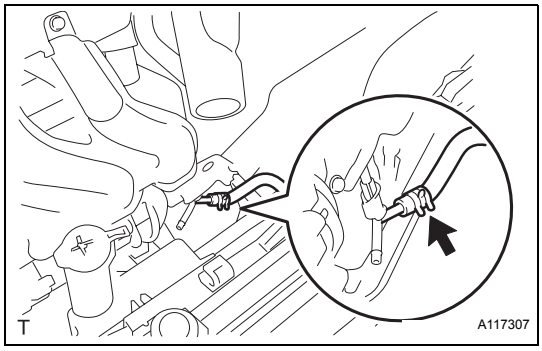
70. CONNECT UNION TO CHECK VALVE HOSE

(a) Connect the union to check valve hose to the booster vacuum tube.

71. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle) (See page AX-109)

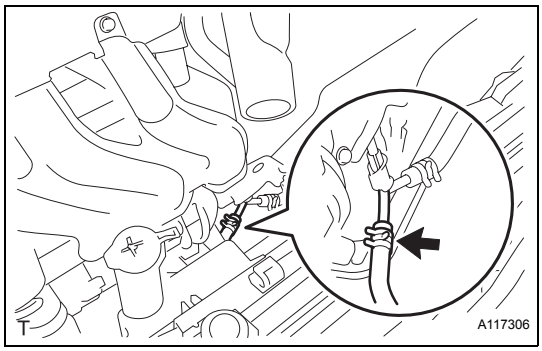
72. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle) (See page MX-32)

73. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)



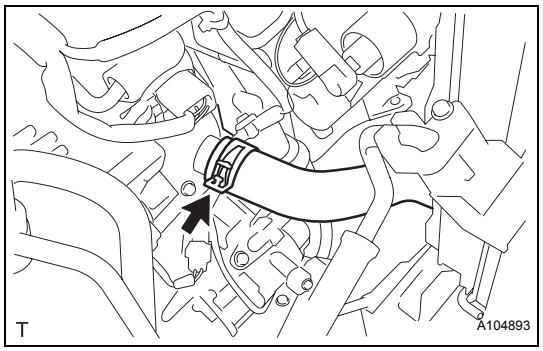
74. CONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Connect the oil cooler inlet hose with the clip.



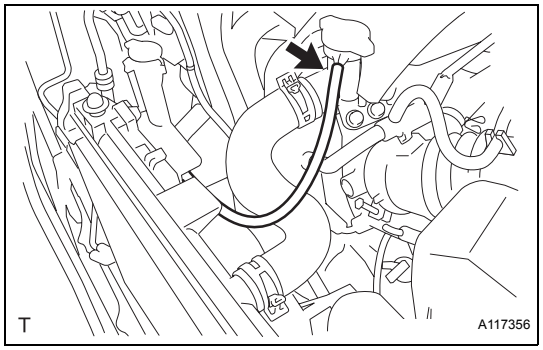
75. CONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)

(a) Connect the oil cooler outlet hose with the clip.



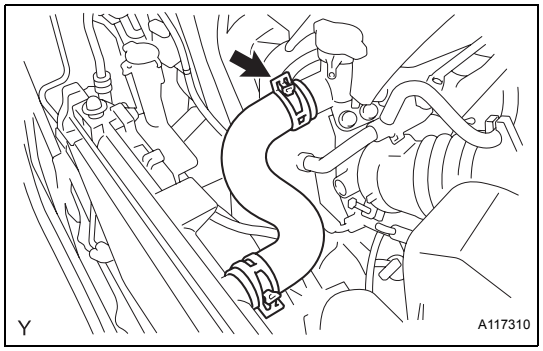
76. CONNECT RADIATOR HOSE NO. 2

(a) Connect radiator hose No. 2 to the water inlet.



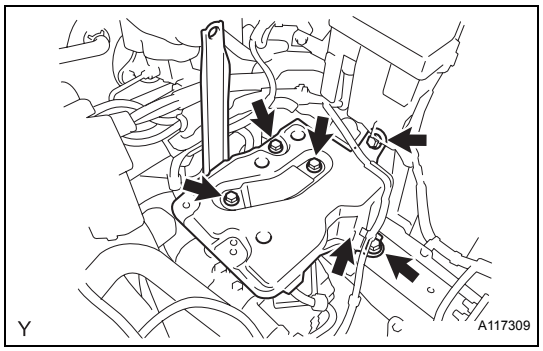
77. CONNECT RADIATOR RESERVOIR TANK HOSE

(a) Connect the radiator reservoir tank hose to the water filler.



78. CONNECT RADIATOR HOSE NO. 3

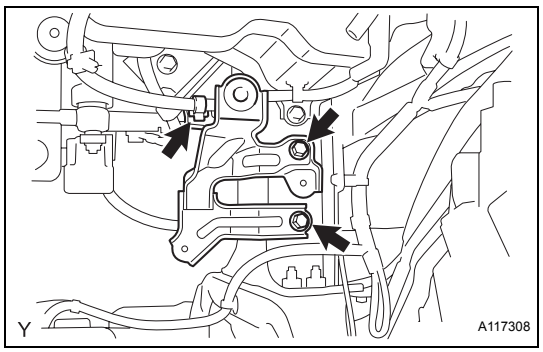
(a) Connect radiator hose No. 3 to the water filler.



79. INSTALL BATTERY CARRIER

(a) Install the battery carrier with the 5 bolts.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)

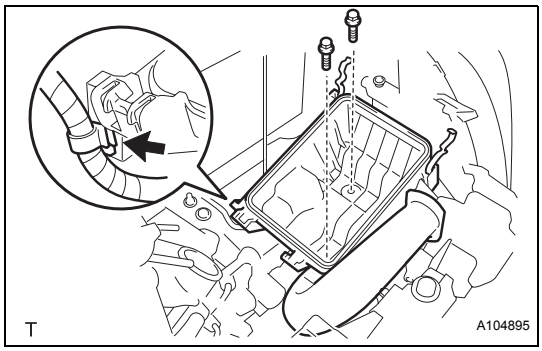
(b) Install the clamp.



80. INSTALL AIR CLEANER BRACKET

(a) Install the air cleaner bracket with the 2 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

(b) Connect the wire harness clamp to the air cleaner bracket.

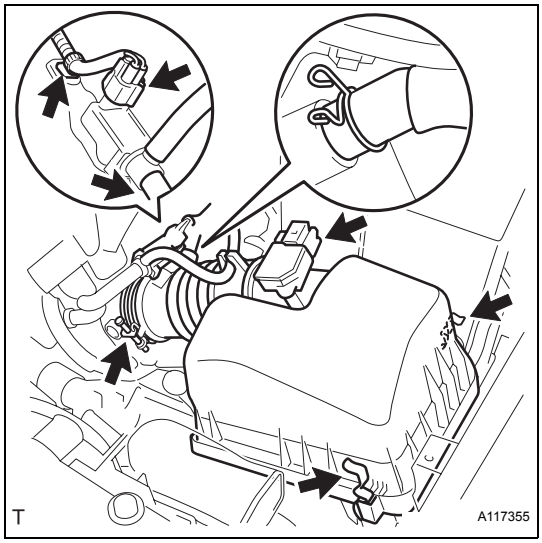


81. INSTALL AIR CLEANER ASSEMBLY

(a) Install the air cleaner case with air cleaner inlet No. 1 with the 2 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

(b) Connect the wire harness to the air cleaner case.

(c) Install the air cleaner element.



(d) Install and lock the air cleaner cap and the air cleaner hose and then tighten the air cleaner hose clamp.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(e) Connect the ventilation hose to the air cleaner hose.

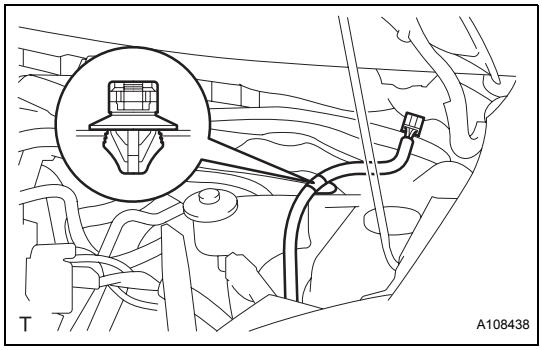
(f) Connect the vacuum switching valve connector and the wire harness clamp.

(g) Connect the fuel vapor feed hose and fuel vapor feed hose No. 1 to the vacuum switching valve assembly.

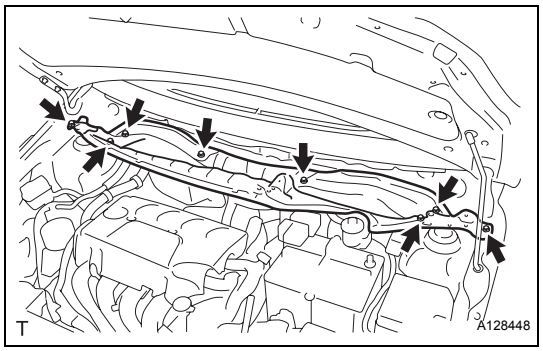
(h) Connect the intake air flow meter connector and the wire harness clamp.

82. INSTALL COWL TOP PANEL OUTER (for Hatchback)

(a) Install the cowl top panel with the 9 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 ft.*lbf)

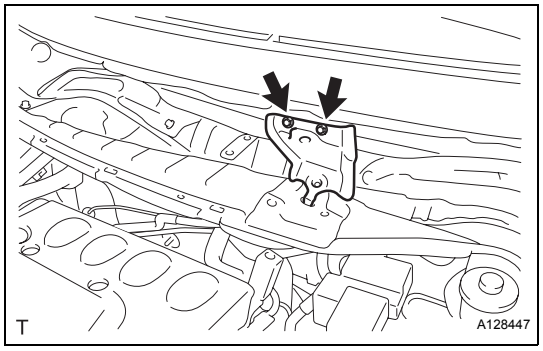


(b) Connect the wire harness clamp.

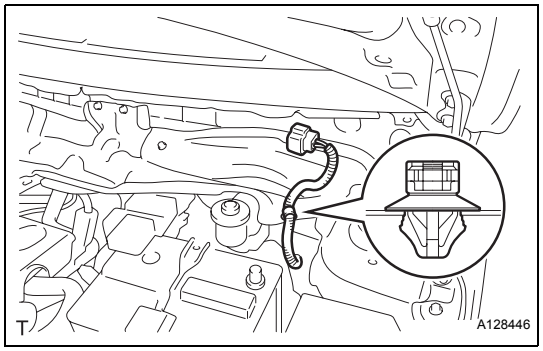


83. INSTALL COWL TOP PANEL OUTER (for Sedan)

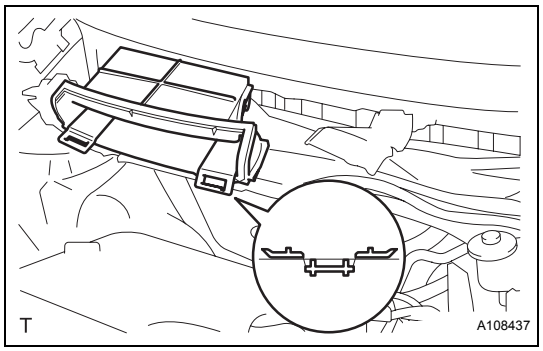
(a) Install the cowl top panel outer with the 8 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(b) Install the cowl top to cowl inner brace with the 2 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(c) Connect the wire harness clamp.



84. INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback)

(a) Engage the claw and install cowl to register duct No. 2.

EM

EM

85. **INSTALL FRONT AIR SHUTTER SEAL RH (for Sedan)**
    (a) Engage the 3 claws to install the front air shutter seal RH.
86. **INSTALL FRONT WIPER MOTOR AND LINK (See page WW-21)**
87. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**
88. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-21)**
89. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**
90. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-12)**
91. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**
92. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**
93. **INSTALL FRONT WIPER ARM LH (See page WW-22)**
94. **INSTALL FRONT WIPER ARM RH (See page WW-23)**
95. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**
96. **INSTALL BATTERY TRAY**
97. **INSTALL BATTERY**
    (a) Install the battery onto the vehicle with the battery clamp.
    Torque: 3.5 N*m (36 kgf*cm, 31 in.*lbf)
    (b) Connect the cable to the battery terminal.
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
98. **ADD ENGINE COOLANT (See page CO-8)**
99. **ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-169)**
100. **INSPECT AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-93)**
101. **ADD MANUAL TRANSAXLE OIL (for Manual Transaxle)**
102. **INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-2)**
103. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**
104. **CHECK FOR FUEL LEAKAGE (See page FU-7)**
105. **CHECK FOR ENGINE OIL LEAKAGE**
106. **CHECK FOR EXHAUST GAS LEAKAGE**
107. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)**

108. INSTALL ENGINE UNDER COVER RH
109. INSTALL ENGINE UNDER COVER LH
110. INSTALL FRONT WHEELS
     Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
111. INSPECT IGNITION TIMING (See page EM-1)
112. INSPECT ENGINE IDLING SPEED (See page EM-2)
113. INSPECT CO/HC (See page EM-4)
114. INSPECT FRONT WHEEL ALIGNMENT
115. INSPECT ABS SENSOR SIGNAL (w/ ABS)

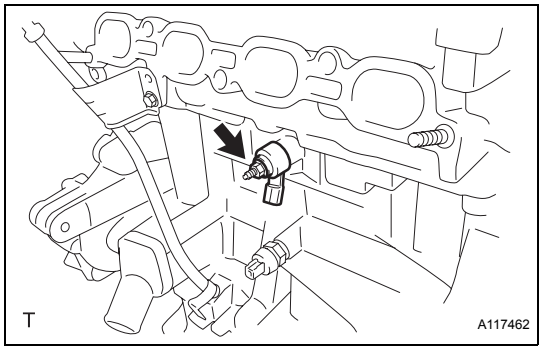
DISASSEMBLY

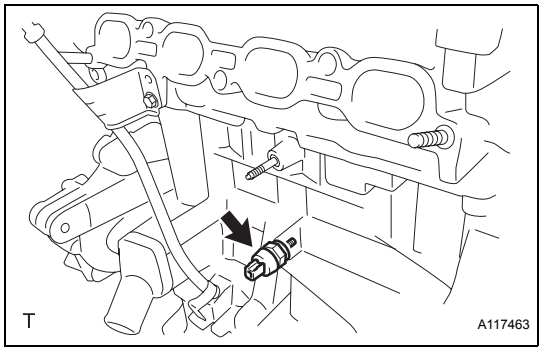
1. REMOVE SPARK PLUG

(a) Using a spark plug wrench, remove the 4 spark plugs.



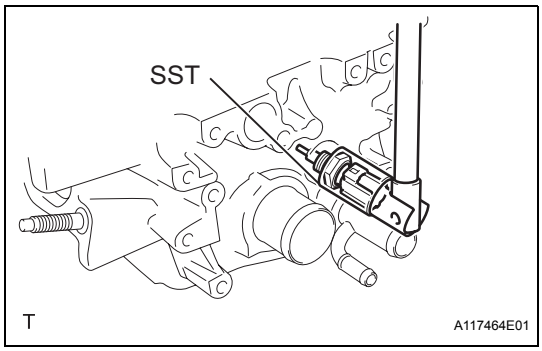
2. REMOVE KNOCK SENSOR

(a) Remove the nut and remove the knock sensor.



3. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

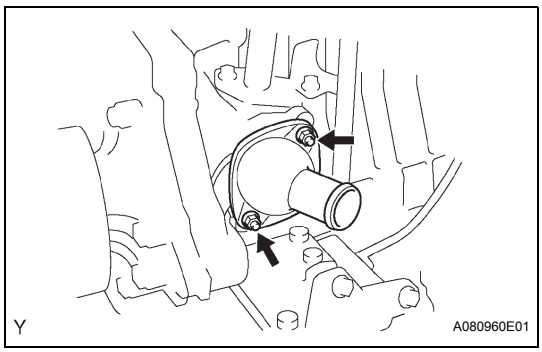
(a) Using a 24 mm deep socket wrench, remove the oil pressure switch.



4. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

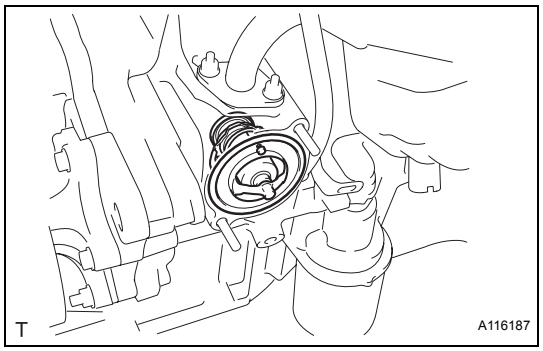
(a) Using SST, remove the engine coolant temperature sensor.

SST 09817-33190



5. REMOVE WATER INLET

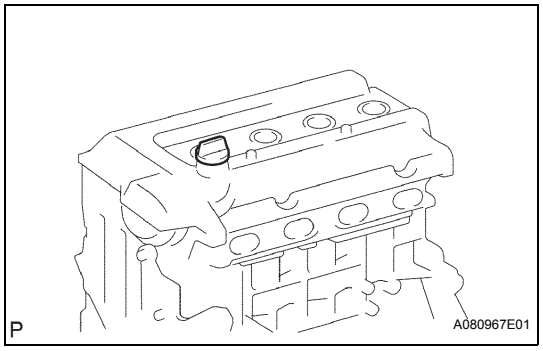
(a) Remove the 2 nuts and remove the water inlet.



6. REMOVE THERMOSTAT

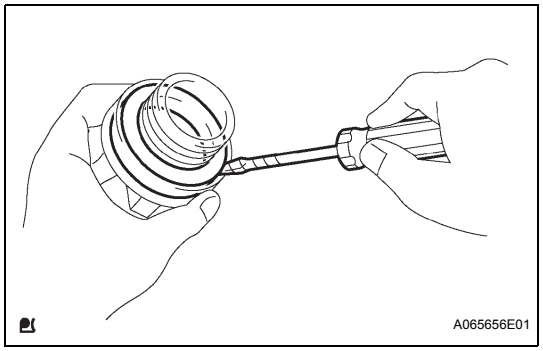
(a) Remove the thermostat.

(b) Remove the gasket from the thermostat.



7. REMOVE OIL FILLER CAP SUB-ASSEMBLY

(a) Remove the oil filler cap from the cylinder head cover.

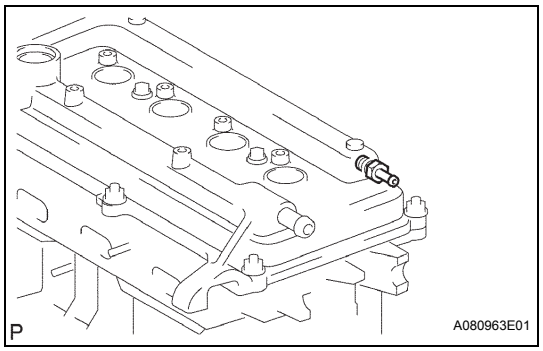


8. REMOVE OIL FILLER CAP GASKET

(a) Using a screwdriver, remove the gasket from the oil filler cap.

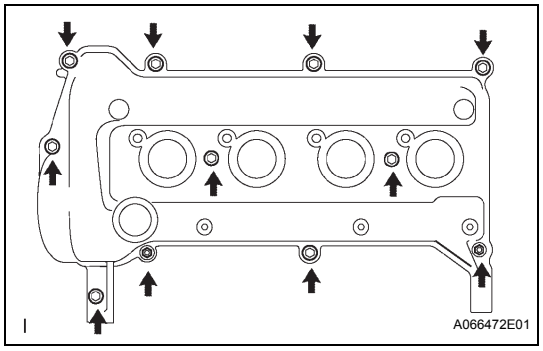
9. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and the crankshaft position sensor.



10. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve from the cylinder head cover.

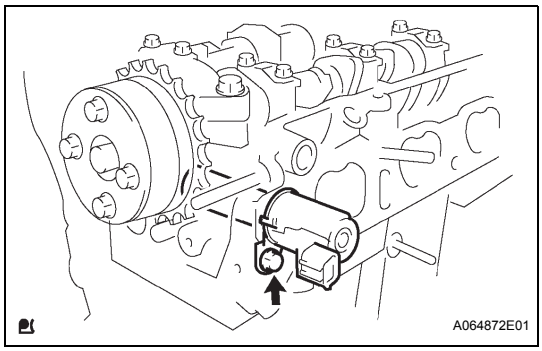


11. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 9 bolts, 2 nuts and 2 seal washers and then remove the cylinder head cover sub-assembly.

12. REMOVE CYLINDER HEAD COVER GASKET

(a) Remove the gasket from the cylinder head cover.

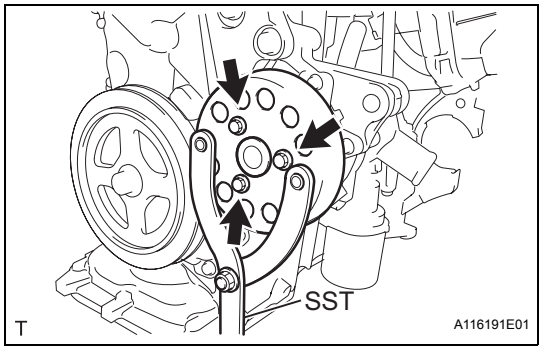


13. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Remove the bolt and the camshaft timing oil control valve.

14. REMOVE OIL LEVEL GAUGE GUIDE

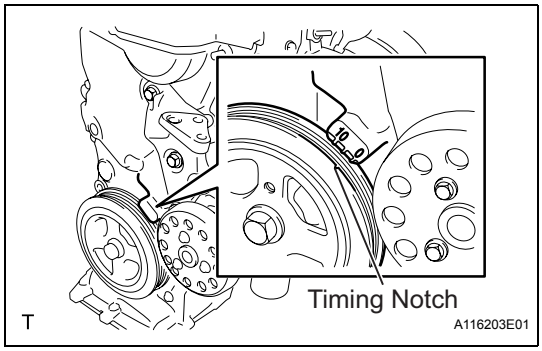
(a) Remove the bolt and the oil level gauge guide.



15. REMOVE WATER PUMP PULLEY

(a) Using SST, hold the pump pulley.
SST 09960-10010 (09962-01000, 09963-00700)

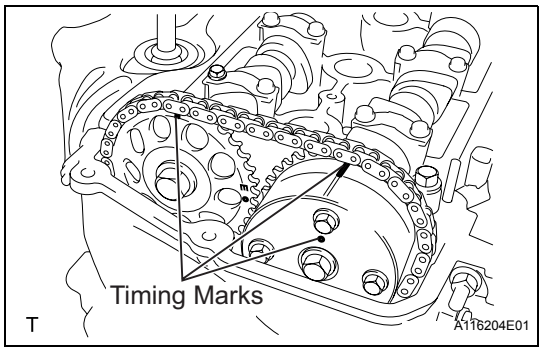
(b) Remove the 3 bolts and the pump pulley.



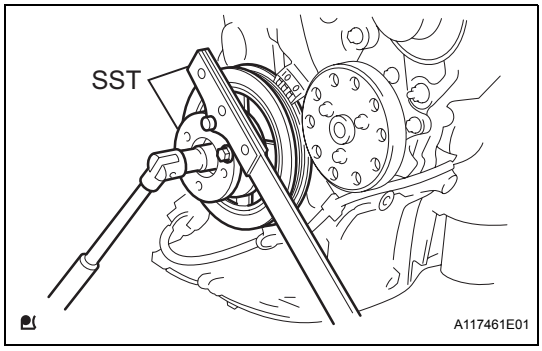
16. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

(a) Set cylinder No. 1 to TDC/compression.

(1) Turn the crankshaft damper sub-assembly, and align its timing notch with timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and the camshaft timing gear are all facing upward, as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.



(b) Using 2 SSTs, loosen the bolt while holding the crankshaft damper sub-assembly.
SST 09213-14010 (91651-60865), 09330-00021
NOTICE:
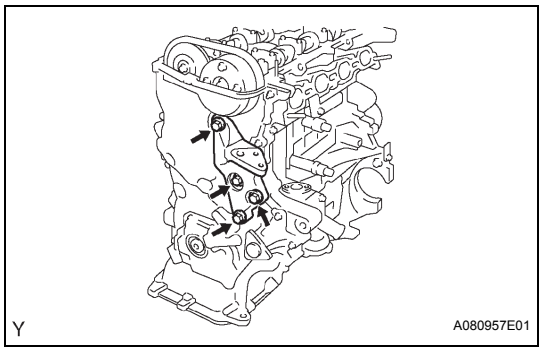
Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.

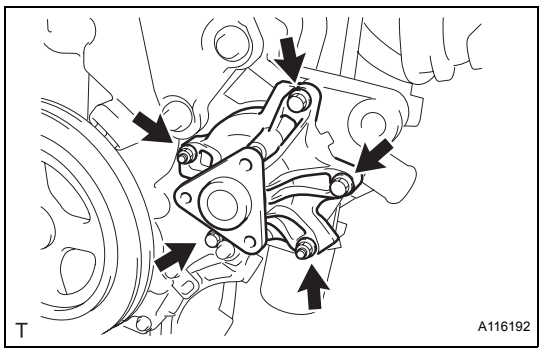
(c) Remove the SSTs and the bolt.

(d) Remove the crankshaft damper sub-assembly.



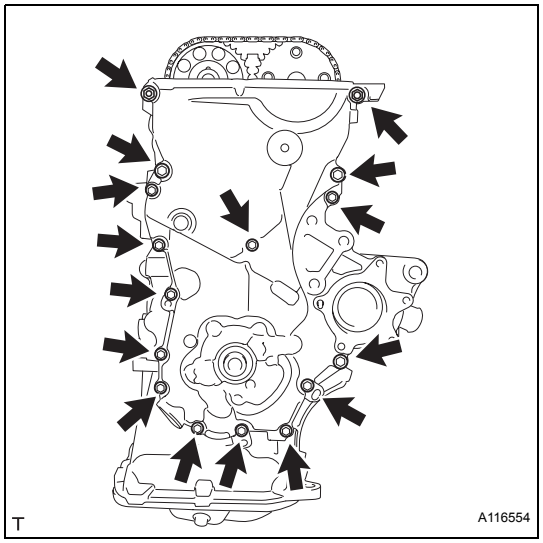
17. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and remove the transverse engine mounting bracket.



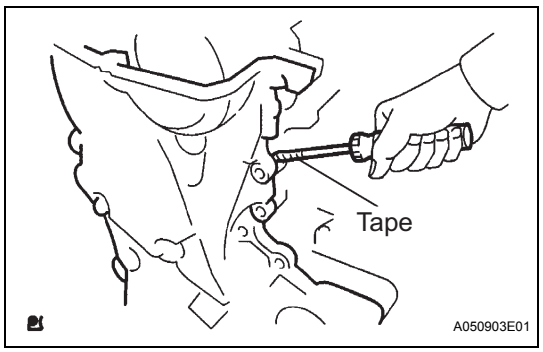
18. REMOVE WATER PUMP ASSEMBLY

(a) Remove the 3 bolts and the 2 nuts and remove the water pump and the gasket.



19. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 15 bolts and the nut.



(b) Using a screwdriver with its tip wrapped in protective tape, prize the oil pump assembly to remove it.

NOTICE:

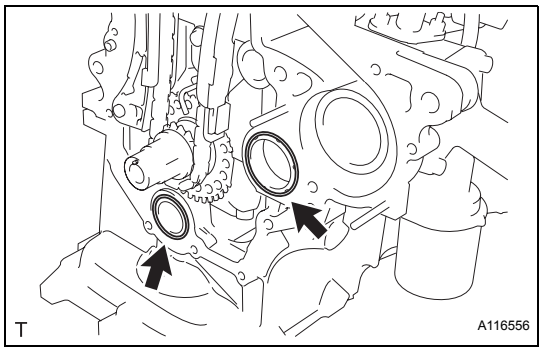
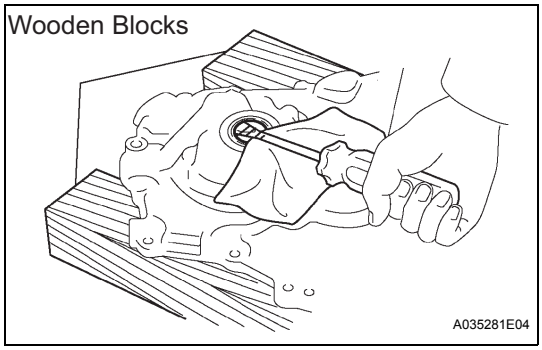
Do not damage the contact surface of the oil pump assembly and oil pan sub-assembly.



(c) Remove the 2 O-rings from the cylinder block and oil pan sub-assembly.



20. REMOVE OIL PUMP SEAL

(a) Using a screwdriver with its tip wrapped in tape, remove the oil seal.

21. REMOVE CHAIN TENSIONER ASSEMBLY NO. 1

NOTICE:

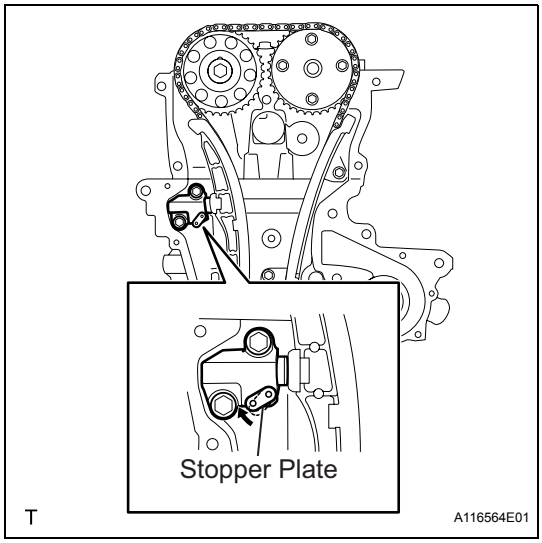
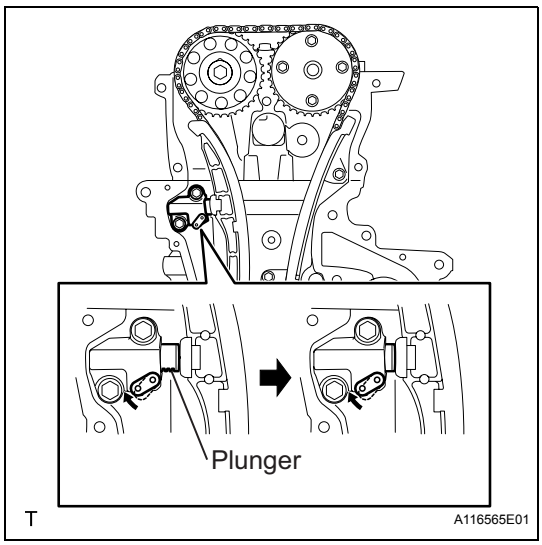
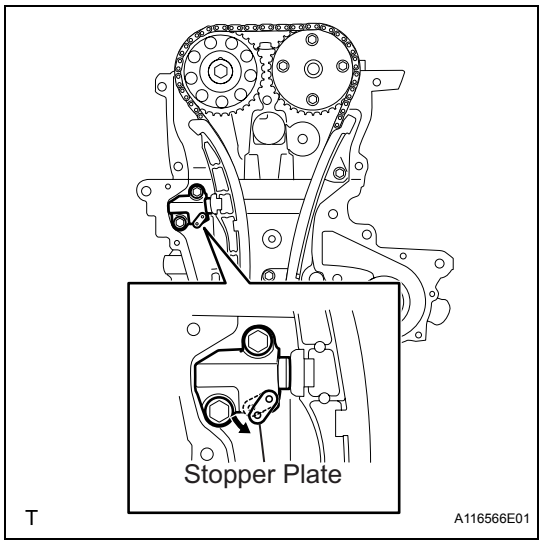
- **Do not rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**

(a) Pull up the stopper plate and hold it with its lock released.

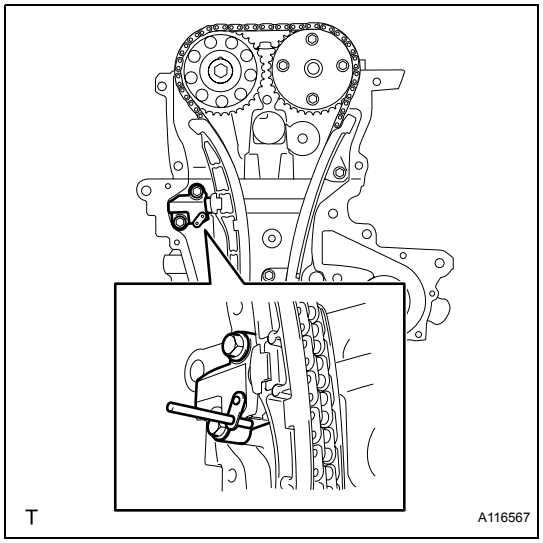


(b) Unlock the plunger of the tensioner and push it in to the end.

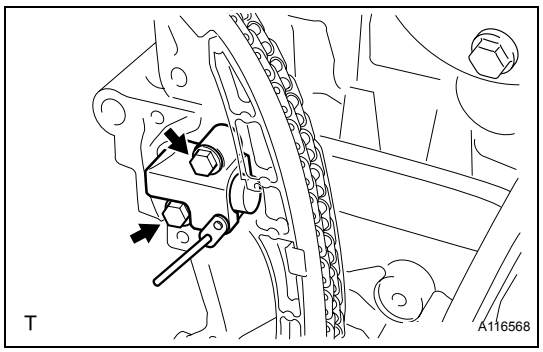




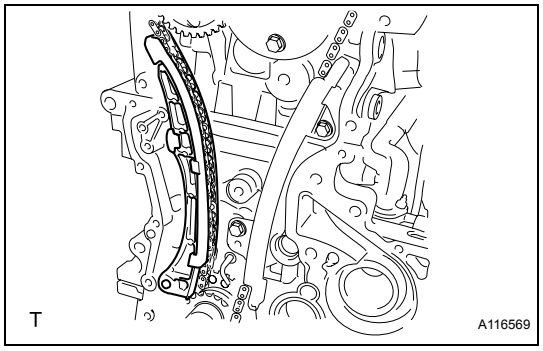
(c) Pull down the stopper plate with the plunger pushed to the end and lock the plunger.



(d) Insert a 3 mm (0.12 in.) diameter bar into the hole in the stopper plate and lock the plunger.

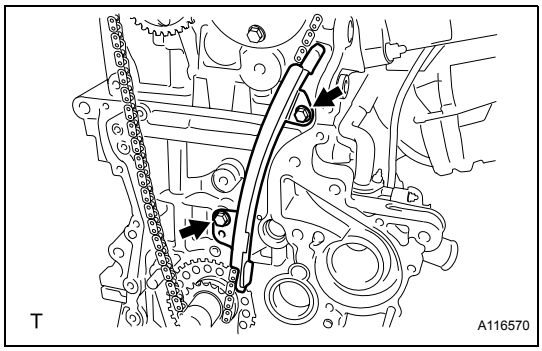


(e) Remove the 2 bolts and remove chain tensioner assembly No. 1.



22. REMOVE CHAIN TENSIONER SLIPPER

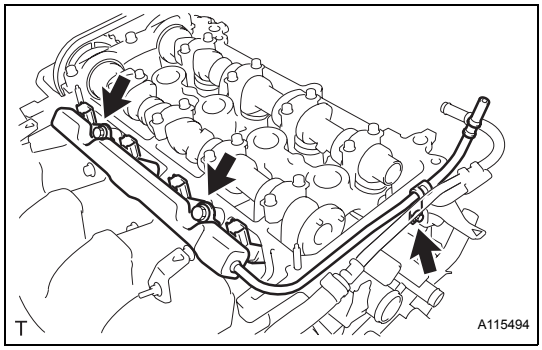
(a) Remove the chain tensioner slipper.



23. REMOVE CHAIN VIBRATION DAMPER NO. 1

(a) Remove the 2 bolts and remove chain vibration damper No. 1.

24. REMOVE CHAIN SUB-ASSEMBLY



25. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Remove the 3 bolts and remove the fuel delivery pipe sub-assembly with 4 fuel injectors.

NOTICE:

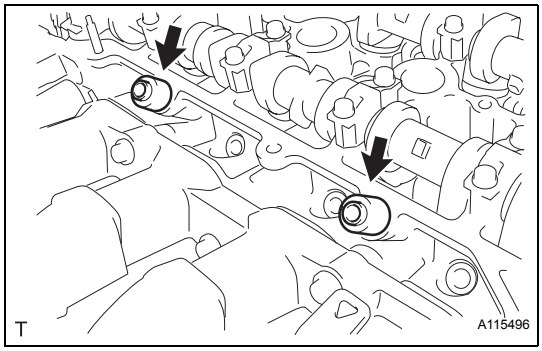
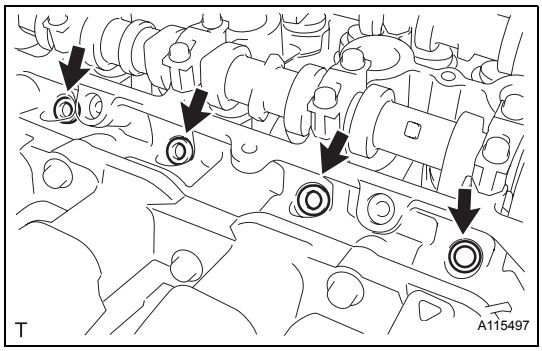
Do not drop the fuel injectors when removing the fuel delivery pipe sub-assembly.



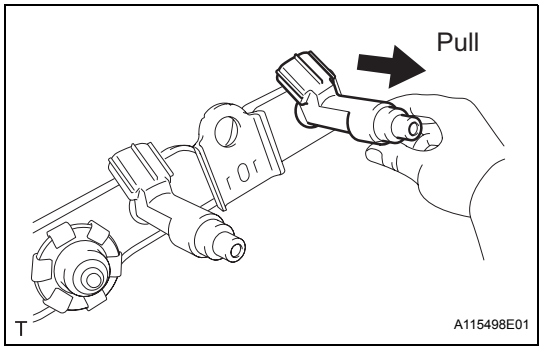
26. REMOVE DELIVERY PIPE NO. 1 SPACER

(a) Remove the 2 delivery pipe No. 1 spacers.



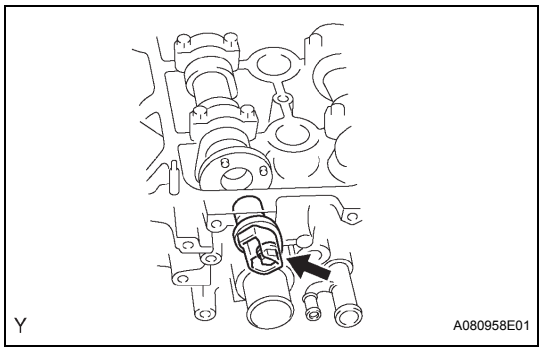
27. REMOVE INJECTOR VIBRATION INSULATOR

(a) Remove the 4 injector vibration insulators.



28. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull the 4 fuel injector assemblies out of the fuel delivery pipe sub-assembly.



29. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and the camshaft position sensor.

30. REMOVE NO. 2 CAMSHAFT

NOTICE:

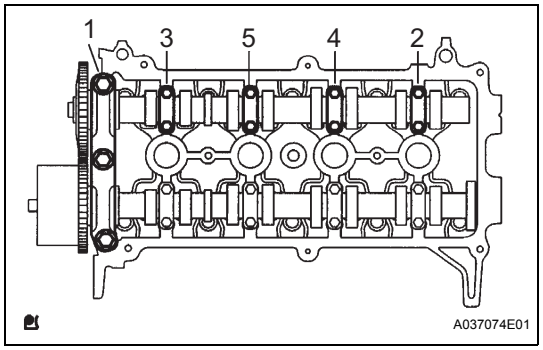
When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



(a) Using several steps, uniformly loosen and remove the 11 bearing cap bolts in the sequence shown in the illustration, then remove camshaft bearing cap No. 1, camshaft bearing cap No. 2 and camshaft No. 2.

NOTICE:

Loosen each bolt uniformly while keeping the camshaft level.

EM

31. REMOVE CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vice.

(b) Remove the flange bolt and the camshaft timing sprocket.

NOTICE:

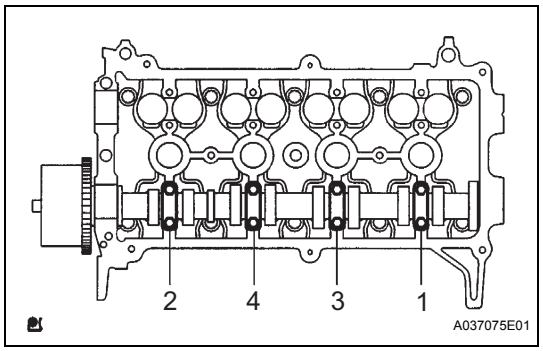
Do not damage the camshaft.



32. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration, then remove camshaft bearing cap No. 2 and the camshaft.

NOTICE:

Loosen each bolt uniformly while keeping the camshaft level.

33. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise, and confirm that it is locked.

NOTICE:

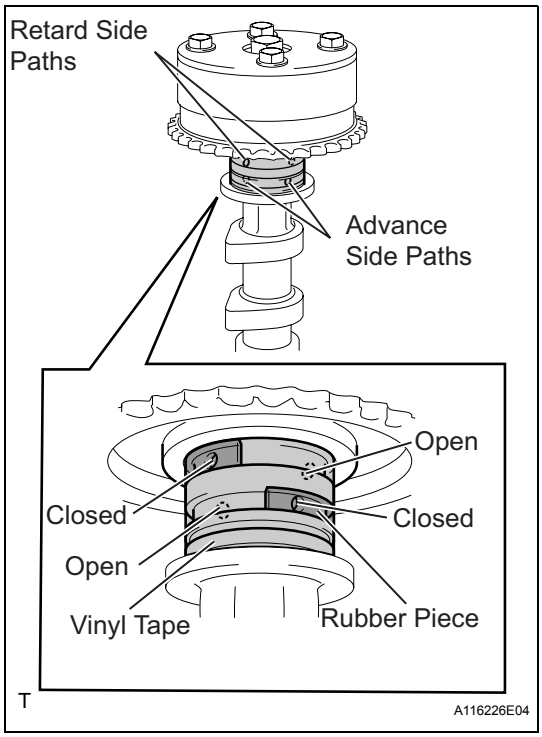
Do not damage the camshaft.



(b) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.
HINT:
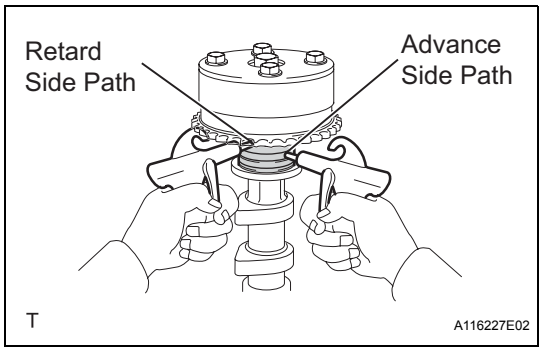
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(c) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(d) Apply about 150 kPa (1.5 kgf*cm^2) air pressure into the 2 broken paths (the advance side path and the retard side path).
NOTICE:
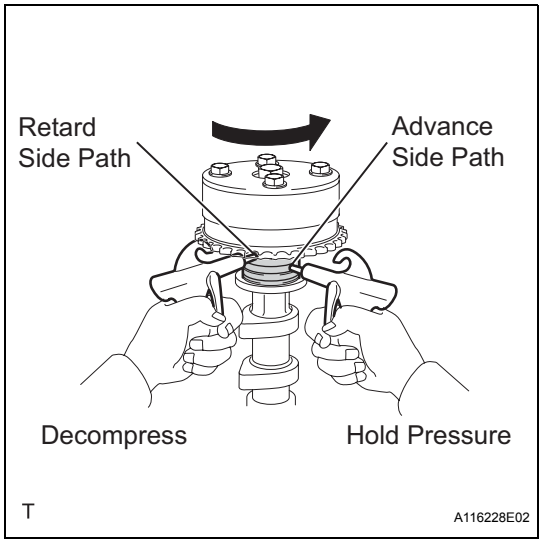
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.



(e) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
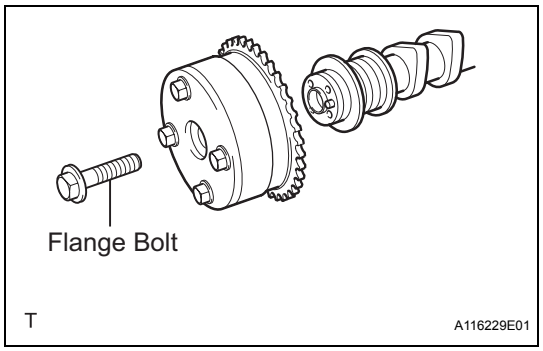
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.



(g) Remove the flange bolt and remove the camshaft timing gear assembly.
NOTICE:
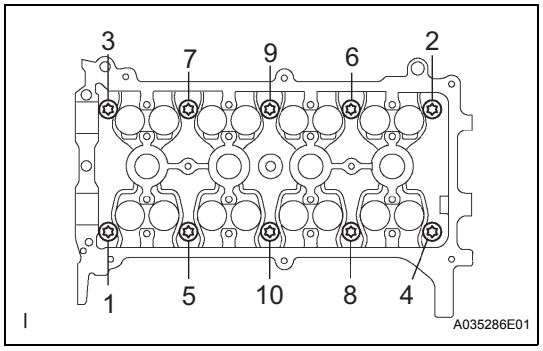
- **Do not remove the other 4 bolts.**
- **When reusing the camshaft timing gear, unlock the lock pin inside the camshaft timing gear first.**



34. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts with an 8 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 10 cylinder head bolts and the plate washers.
NOTICE:
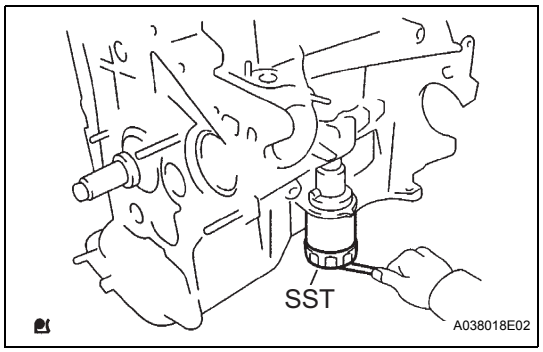
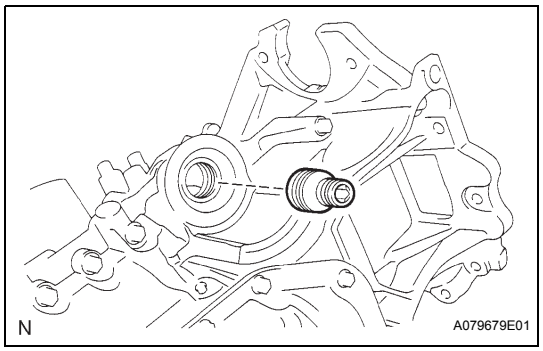
- **Do not drop the washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in the wrong order.**

35. REMOVE CYLINDER HEAD GASKET



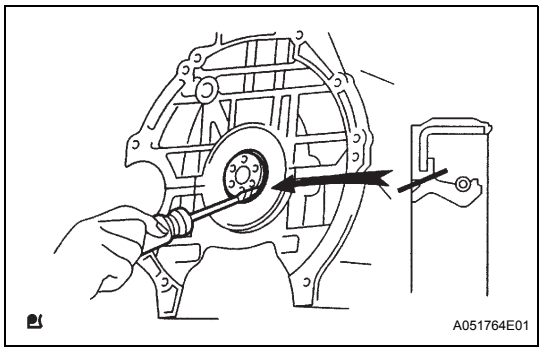
36. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.
SST 09228-06501



37. REMOVE OIL FILTER UNION

(a) Using a 12 mm hexagon wrench, remove the oil filter union.



38. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip wrapped in protective tape, pry out the oil seal.

NOTICE:

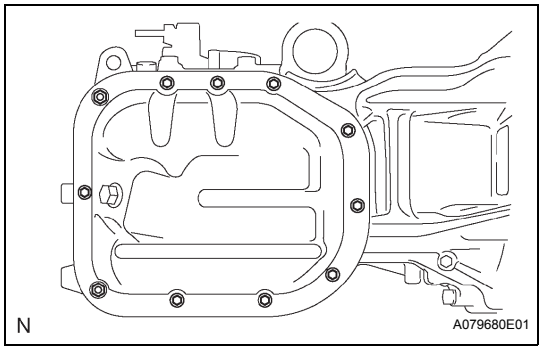
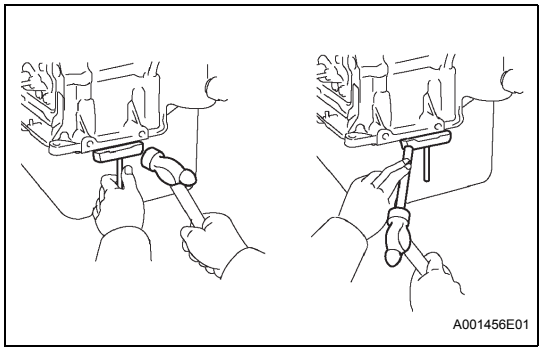
After removal, check the crankshaft for any damage. If damaged, smooth the surface with 400-grit sandpaper.

39. REMOVE OIL PAN SUB-ASSEMBLY NO. 2

(a) Remove the oil pan drain plug and gasket.

(b) Remove the 9 bolts and 2 nuts.





(c) Insert the blade of SST between oil pan No. 1 and oil pan No. 2, and cut off the applied sealer and remove oil pan No. 2.

SST 09032-00100

NOTICE:

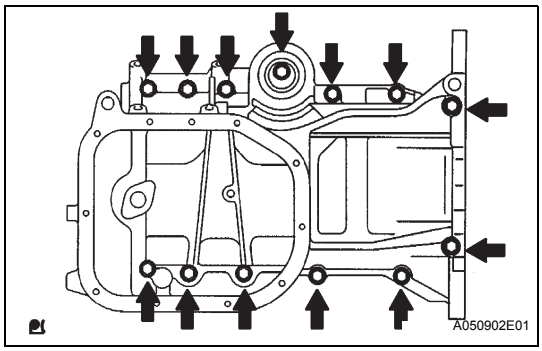
Do not damage oil pan No. 1 or oil pan No. 2.

40. REMOVE OIL STRAINER SUB-ASSEMBLY

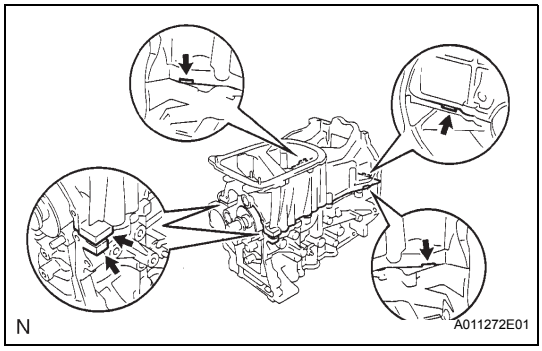
(a) Remove the bolt and 2 nuts.

(b) Remove the oil strainer and the gasket.



41. REMOVE OIL PAN SUB-ASSEMBLY

(a) Loosen and remove the 13 bolts uniformly in several steps.



(b) Using a screwdriver, remove oil pan No. 1 by prying between the cylinder block and oil pan No. 1.

NOTICE:

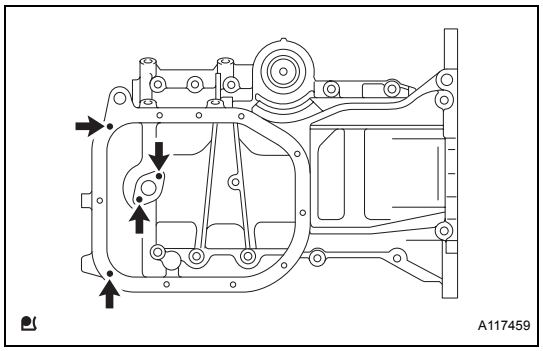
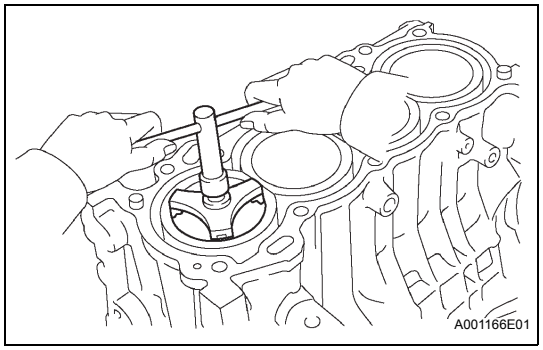
Do not damage the contact surfaces of oil pan No. 1 or the cylinder block.

(c) Remove the 2 O-rings from the cylinder block.



42. REMOVE STUD BOLT

(a) Remove the 4 stud bolts.



43. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod assembly and upper bearing down through the top of the cylinder block to remove them.
HINT:
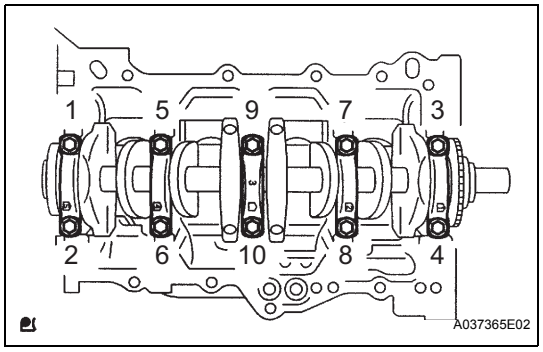
- Keep the bearing, connecting rod and cap together.
- Keep the piston and the connecting rod assemblies in the correct order so that they can be returned to their original locations when reassembled.

44. REMOVE CONNECTING ROD BEARING

45. REMOVE CRANKSHAFT



(a) Using several steps, loosen and remove the 10 bearing cap sub-assembly bolts uniformly with SST in the sequence shown in the illustration.
SST 09011-38121

(b) Remove the bearing cap and the crankshaft.

46. REMOVE CRANKSHAFT BEARING

47. REMOVE CRANKSHAFT THRUST WASHER UPPER

48. REMOVE PISTON RING SET

NOTICE:
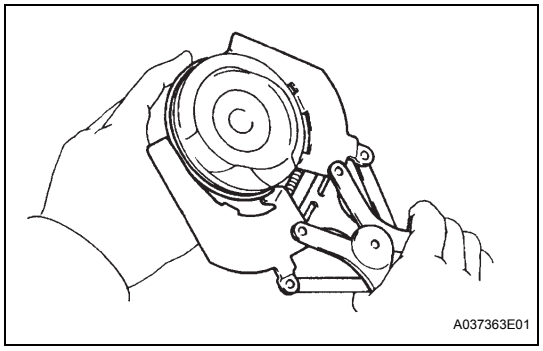
Keep the piston rings in the correct combination and correct order so that they can be returned to their original locations when reassembled.



(a) Using a piston ring expander, remove the 2 compression rings.

(b) Remove the 2 side rails and the oil ring by hand.

EM

49. REMOVE WITH PIN PISTON SUB-ASSEMBLY

(a) Using SST, press the piston pin out of the piston.

SST 09221-25026 (09221-00021, 09221-00030, 09221-00090, 09221-00150, 09221-00100)

NOTICE:

Keep the pistons, pins, rings, connecting rods and bearings in the correct order so that they can be returned to their original locations when reassembled.

50. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

51. REMOVE STUD BOLT

(a) Using "Torx" socket wrench E5, remove the 7 stud bolts.

52. REMOVE RING PIN

53. REMOVE STRAIGHT PIN

EM

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of camshaft timing gear.

(1) Clamp the camshaft in a vice, and check that the camshaft timing gear is locked.

NOTICE:

Do not damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.

HINT:

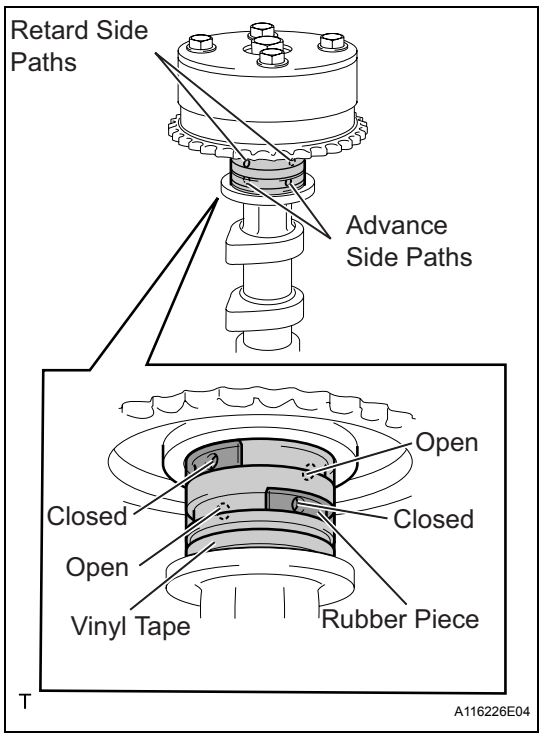
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(2) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(3) Apply air at about 150 kPa (1.5 kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).

NOTICE:

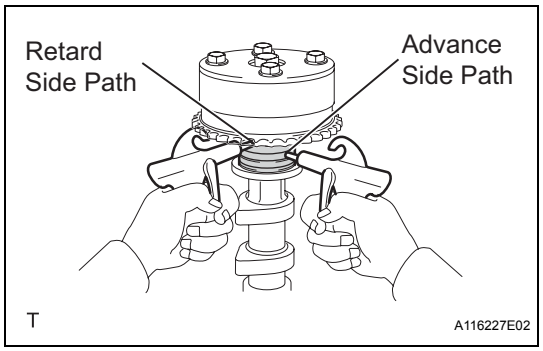
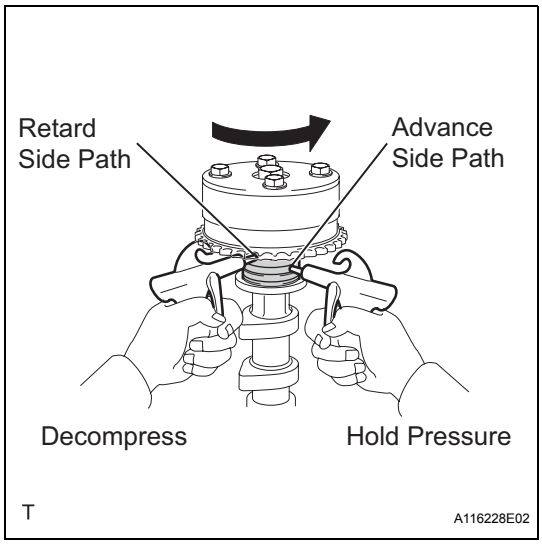
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.





(4) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(5) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

(c) Check that the revolution is smooth.

(1) Rotate the valve timing assembly back and forth several times, except where the lock pin meets it at the most retarded angle. Check the movable range and that it rotates smoothly.
Standard:
Smooth movable range is about 22.5°
NOTICE:
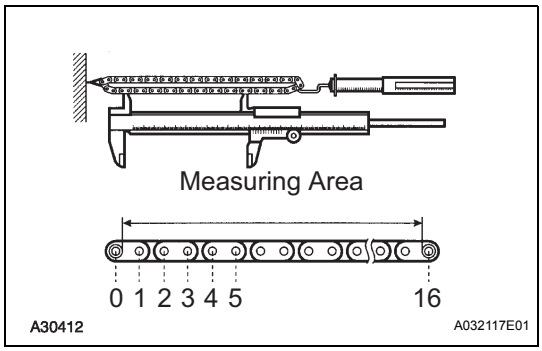
Perform this check by hand, instead of using air pressure.

(d) Check that the gear locks in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked in the most retarded position.



2. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, apply 140 N (14.3 kgf, 31.5 lb) to the timing chain and measure its length.
Maximum chain elongation:
123.2 mm (4.850 in.)
If the elongation is greater than the maximum, replace the chain.
HINT:
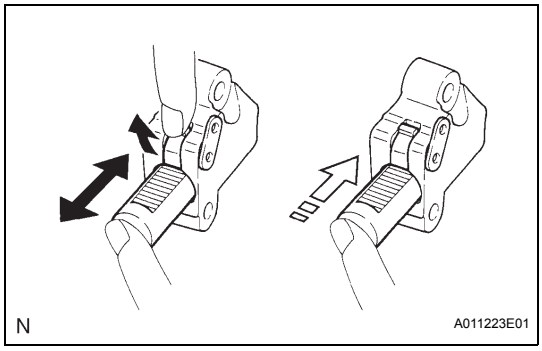
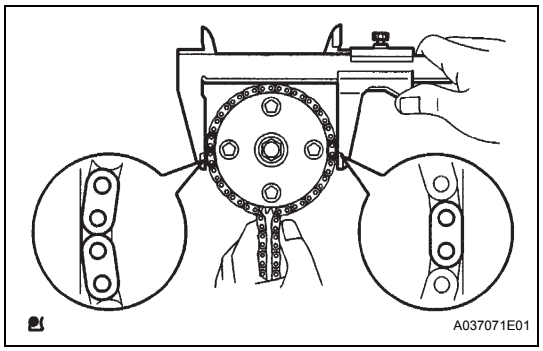
Perform the same measurement at 3 or more random places and calculate the average length.



3. INSPECT CHAIN TENSIONER ASSEMBLY NO. 1

(a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.

(b) Release the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.



4. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the diameter of the timing gear with the chain.

Minimum gear diameter (with chain):
96.2 mm (3.787 in.)

If the diameter is less than the minimum, replace the camshaft timing gear.

NOTICE:
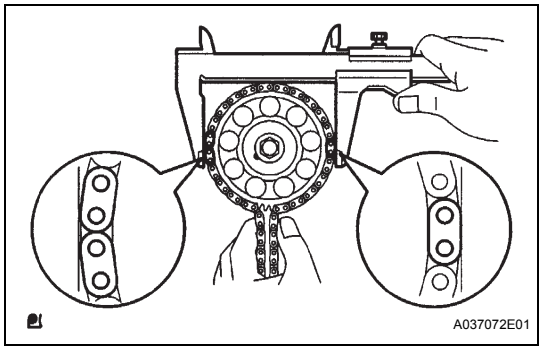
Make sure that the vernier calipers are in contact with the chain link when measuring.



5. INSPECT CAMSHAFT TIMING SPROCKET

(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the diameter of the timing gear with the chain.

Minimum gear diameter (with chain):
96.2 mm (3.787 in.)

If the diameter is less than the minimum, replace the camshaft timing sprocket.

NOTICE:
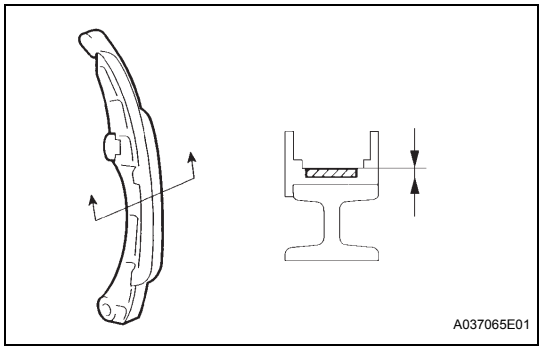
Make sure that the vernier calipers are in contact with the chain link when measuring.

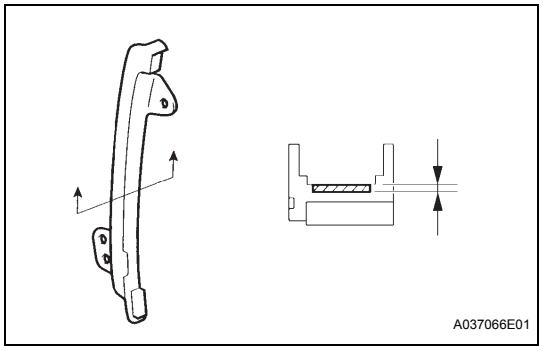


6. INSPECT CHAIN TENSIONER SLIPPER

(a) Check the chain tensioner slipper.

Minimum thickness:
1.0 mm (0.039 in.)

If the thickness is less than the minimum, replace the chain tensioner slipper.



7. INSPECT CHAIN VIBRATION DAMPER NO. 1

(a) Check the vibration damper.

Minimum thickness:
1.0 mm (0.039 in.)

If the thickness is less than the minimum, replace the chain vibration damper.

EM

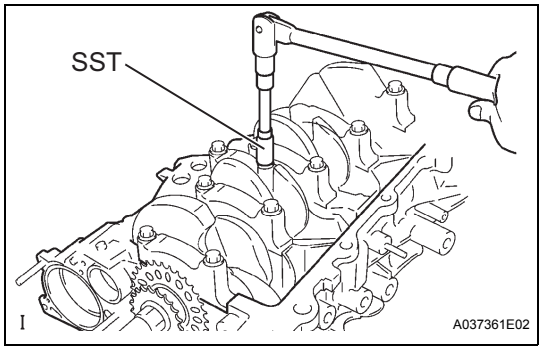
8. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.16 to 0.36 mm (0.0063 to 0.0142 in.)
Maximum thrust clearance:
0.36 mm (0.0142 in.)

9. INSPECT CONNECTING ROD OIL CLEARANCE

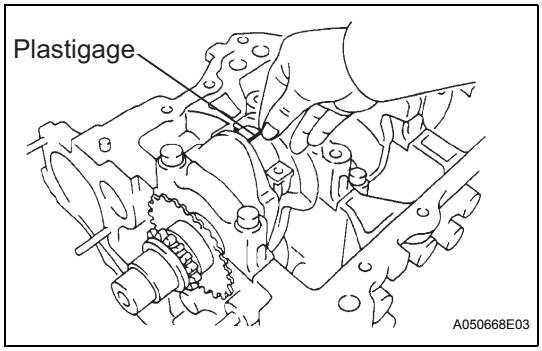
(a) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.



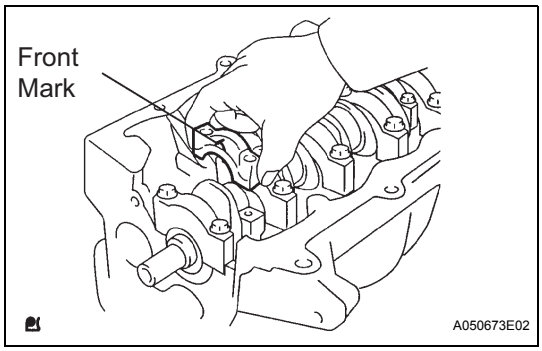
(b) Using SST, remove the 2 connecting rod cap bolts.
SST 09205-16010

(c) Clean the crank pin and bearing.

(d) Check the crank pin and bearing for pitting and scratches.

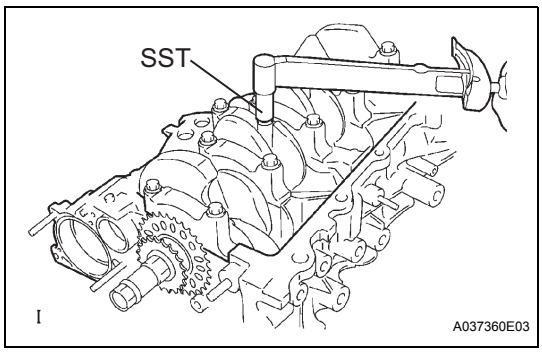


(e) Lay a strip of Plastigage across the crank pin.

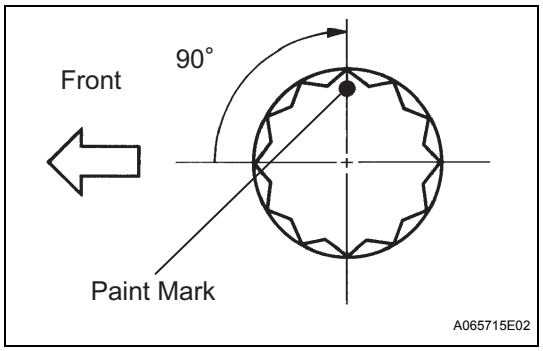


(f) Make sure that the connecting rod and its cap are in the correct combination and that the front mark of the cap is facing in the correct mounting orientation, then install the cap onto the connecting rod.

(g) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



(h) Using SST, tighten the bolts in several steps to the specified torque.
SST 09205-16010
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



(i) Mark the front of the connecting cap bolts with paint.
(j) Retighten the cap bolts by 90° as shown in the illustration.
NOTICE:
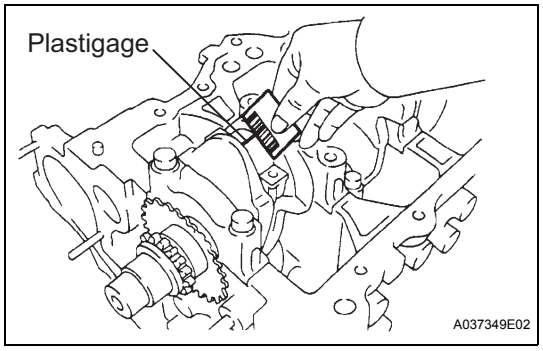
Do not turn the crankshaft.
(k) Remove the 2 bolts, connecting rod cap and lower bearing.



(l) Measure the Plastigage at its widest point.
Standard oil clearance:
0.012 to 0.038 mm (0.00047 to 0.00015 in.)
Maximum oil clearance:
0.058 mm (0.0028in.)
NOTICE:
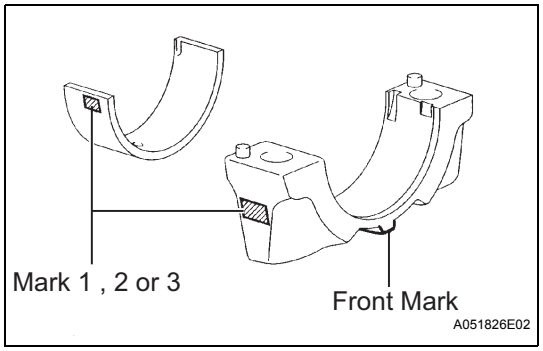
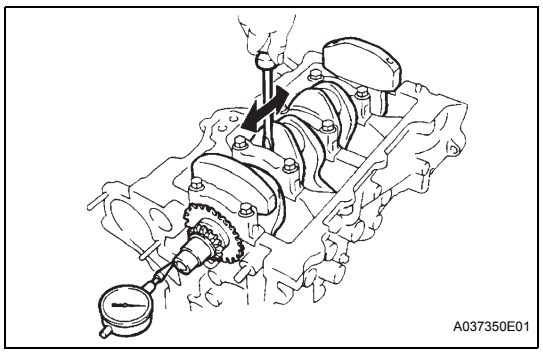
Completely remove the Plastigage after the measurement.



(m) When replacing a bearing, replace it with one with the same number as marked on the connecting rod. There are 3 sizes of standard bearings, marked 1, 2 and 3 accordingly.
Standard bearing center wall thickness

Mark	mm (in.)
1	1.491 to 1.494 (0.0587 to 0.0588)
2	1.494 to 1.497 (0.0588 to 0.0589)
3	1.497 to 1.500 (0.0589 to 0.0591)



10. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.09 to 0.19 mm (0.0035 to 0.0075 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)
If the thrust clearance is greater than the maximum, replace the thrust washers as a set. Check the crankshaft and block for wear. Repair or replace the parts if necessary.
HINT:
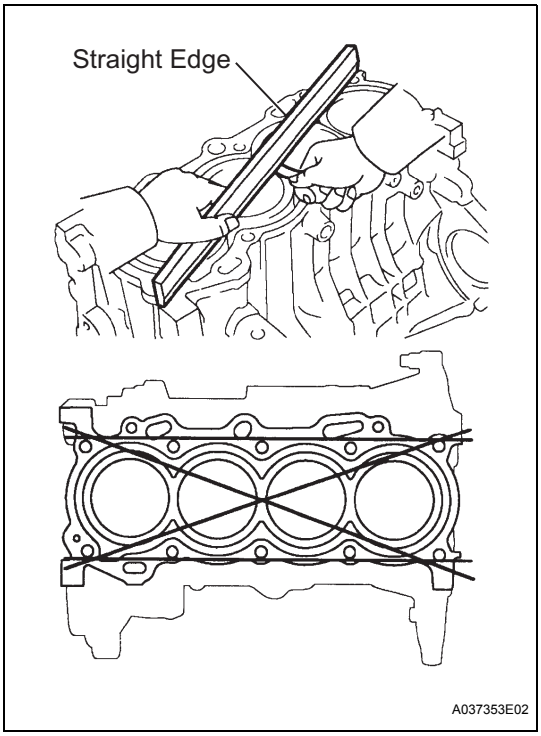
Thrust washer thickness: 2.43 to 2.48 mm (0.0957 to 0.976 in.)

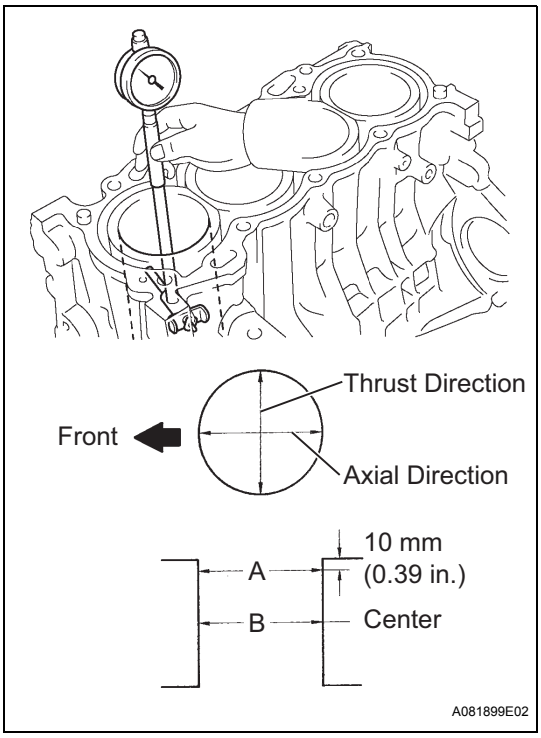


11. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straight edge and feeler gauge, measure the warpage of the surface which is in contact with the cylinder head gasket.

Maximum warpage:

0.05 mm (0.0020 in.)



12. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in both the thrust and axial directions.

Standard Inside diameter:

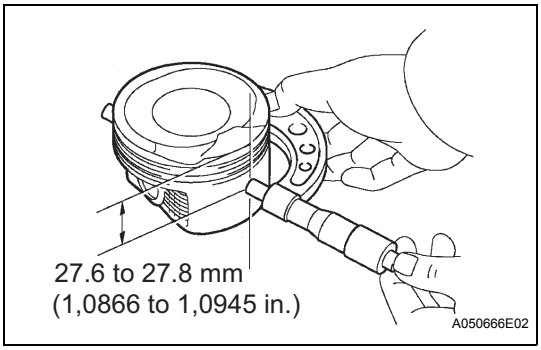
75.000 to 75.013 mm (2.9528 to 2.9533 in.)

(b) Calculate the difference between the maximum diameter and the minimum diameter of the 4 measured values.

Difference limit:

0.10 mm (0.0039 in.)

If the difference is greater than the limit, replace the cylinder block.



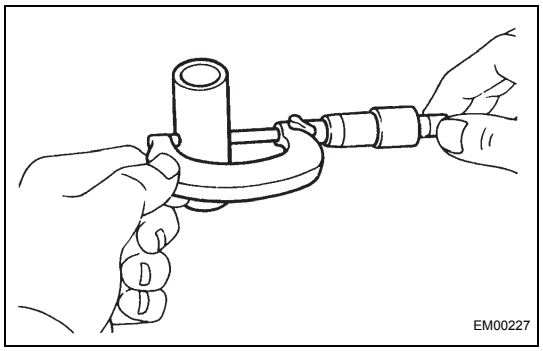
13. INSPECT WITH PIN PISTON SUB-ASSEMBLY

(a) Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, and at the position 27.6 to 27.8 mm (1.0866 to 1.0945 in.) from the top of the piston head.

Piston diameter:

74.935 to 74.945 mm (2.9502 to 2.9506 in.)

(b) Using a caliper gauge, measure the piston pin hole diameter.
Piston pin hole diameter:
18.013 to 18.016 mm (0.7092 to 0.7093 in.) at 20°C (68°F)



(c) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
18.001 to 18.004 mm (0.7087 to 0.7088 in.)

(d) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement to calculate the oil clearance.
Standard oil clearance:
0.009 to 0.015 mm (0.0004 to 0.0006 in.)
Maximum oil clearance:
0.050 mm (0.0020 in.)
If necessary, replace the piston and piston pin together.

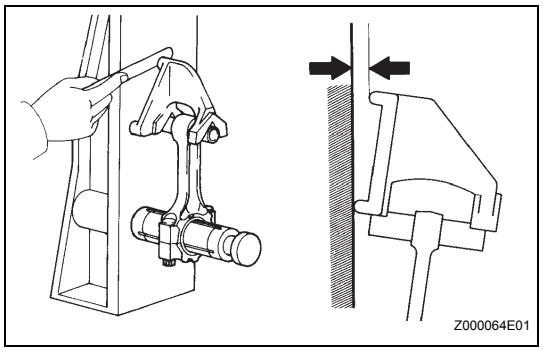
14. INSPECT PISTON CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
0.045 to 0.068 mm (0.0018 to 0.0027 in.)
Maximum oil clearance:
0.08 mm (0.0032 in.)

15. INSPECT CONNECTING ROD SUB-ASSEMBLY

(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.
Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the misalignment is greater than the maximum, replace the connecting rod assembly.



(2) Check for twist.
Maximum twist:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the twist is greater than the maximum, replace the connecting rod assembly.

EM

16. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

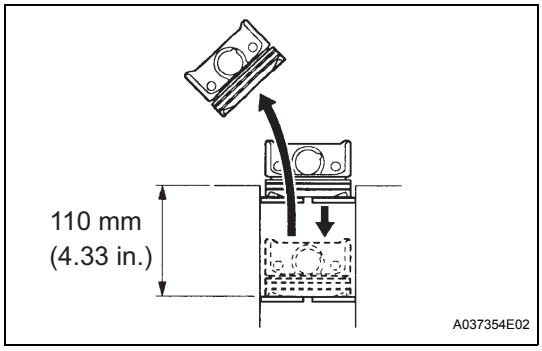
Ring groove clearance:

No. 1:

0.03 to 0.07 mm (0.0012 to 0.0028 in.)

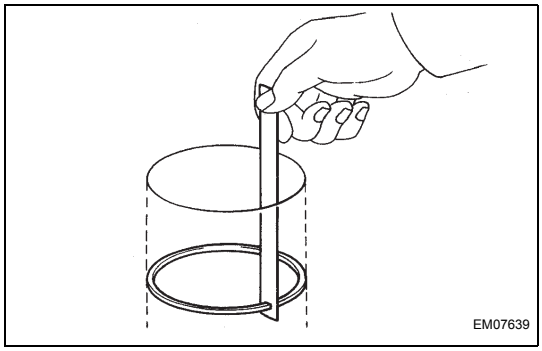
No. 2:

0.02 to 0.06 mm (0.0008 to 0.0024 in.)



17. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring, a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.

Standard end gap:

No. 1:

0.25 to 0.35 mm (0.0098 to 0.0138 in.)

No. 2:

0.35 to 0.50 mm (0.0138 to 0.0197 in.)

Oil (Side Rail):

0.10 to 0.35 mm (0.0039 to 0.0138 in.)

Maximum end gap:

No. 1:

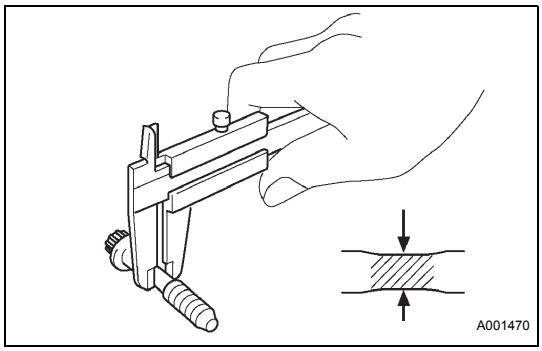
0.91 mm (0.0358 in.)

No. 2:

1.06 mm (0.0417 in.)

Oil (Side Rail):

0.82 mm (0.323 in.)



18. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the diameter of the bolt at the elongated portion.

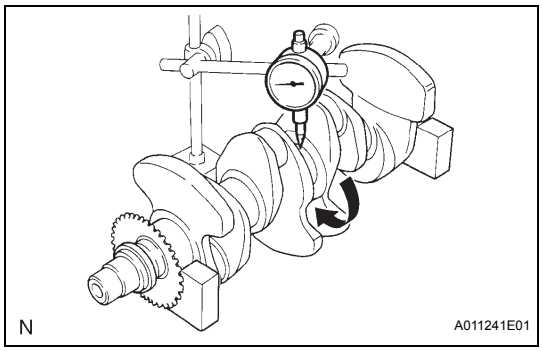
Standard diameter:

6.6 to 6.7 mm (0.260 to 0.264 in.)

Minimum diameter:

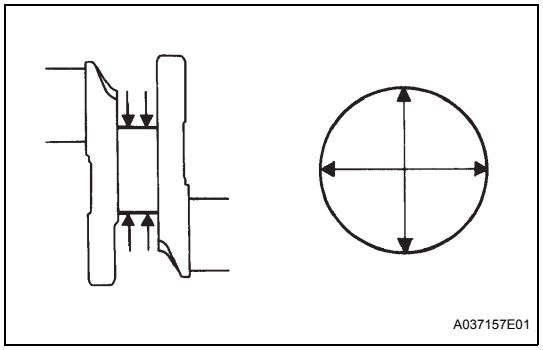
6.4 mm (0.252 in.)

If the diameter is less than the minimum, replace the bolt.



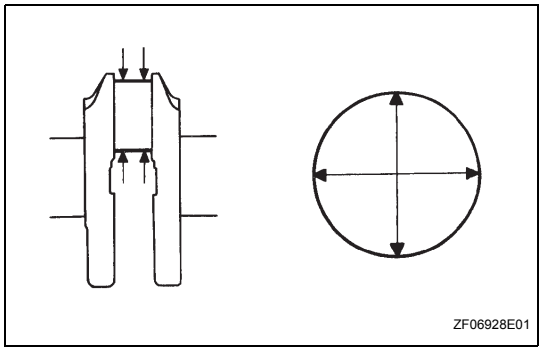
19. INSPECT CRANKSHAFT

(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.
Maximum circle runout:
0.03 mm (0.0012 in.)



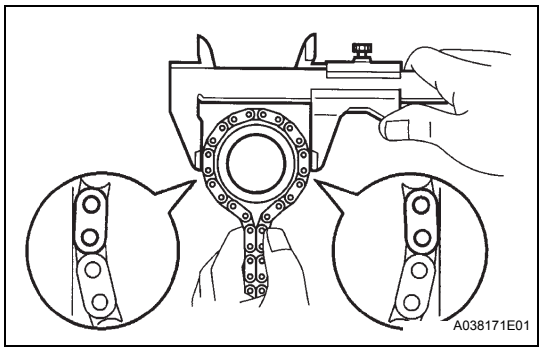
(b) Using a micrometer, measure the diameter of each main journal.
Outside diameter:
45.988 to 46.000 mm (1.8106 to 1.8110 in.)

(c) Check each main journal for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



(d) Using a micrometer, measure the diameter of each crank pin.
Outside diameter:
39.992 to 40.000 mm (1.5745 to 1.5748 in.)

(e) Check each crank pin for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



(f) Wrap the chain around the timing sprocket.

(g) Using vernier calipers, measure the timing sprocket diameter with the chain.
Standard sprocket diameter (with chain):
51.72 mm (2.0362 in.)
Minimum sprocket diameter (with chain):
50.5 mm (1.988 in.)
NOTICE:
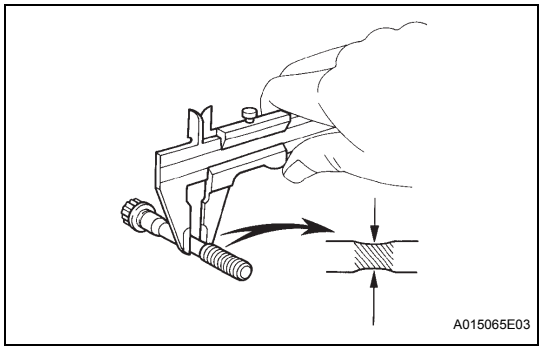
Make sure that the vernier calipers are in contact with the chain rollers when measuring.



20. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the tension portion diameter of the elongated portion.
Standard diameter:
7.3 to 7.5 mm (0.287 to 0.295 in.)
Minimum diameter:
7.2 mm (0.283 in.)
If the diameter is less than the minimum, replace the bolt.

EM

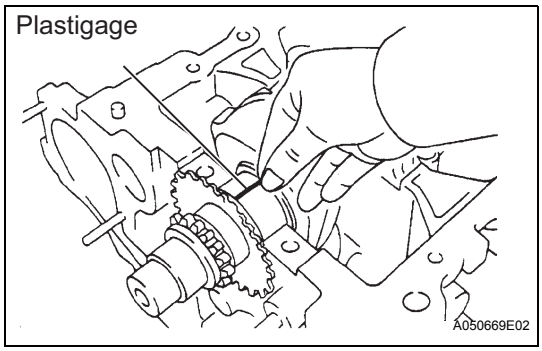
21. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Clean each main journal and bearing.

(b) Install the bearing onto the cylinder block and bearing cap. (See page EM-183)

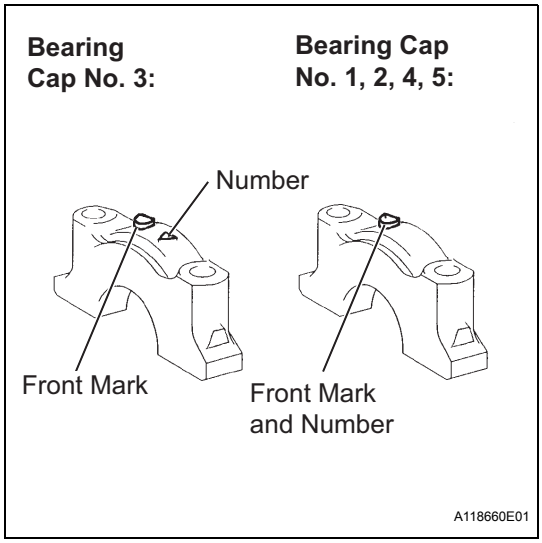
(c) Place the crankshaft onto the cylinder block.

(d) Lay a strip of Plastigage across each journal.

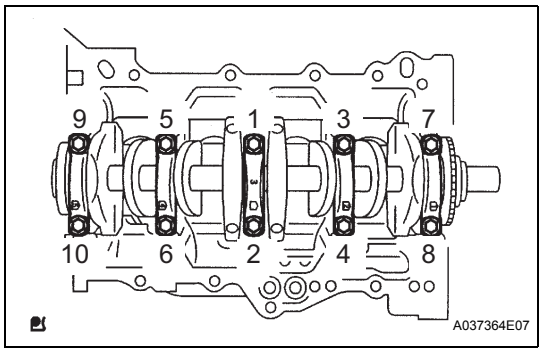


(e) Examine the front marks and numbers and install the bearing cap onto the cylinder block.

(f) Apply a light coat of engine oil to the threads of the bearing cap bolts.



(g) Using SST, tighten the bolts in several steps to the specified torque in the sequence shown in the illustration. (*1)
SST 09011-38121
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



(h) Mark the front of the bearing cap bolts with paint.

(i) Retighten the bearing cap bolts by 90° in the same sequence as step (*1).

(j) Check that the painted mark is now at a 90° angle from the front.
NOTICE:
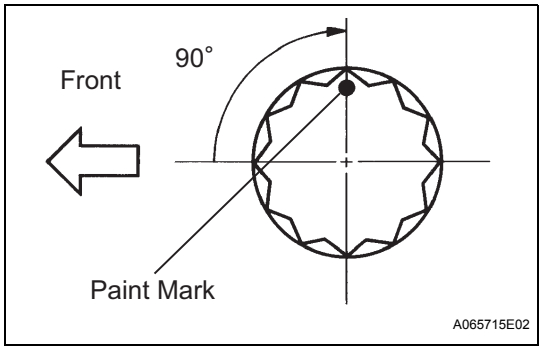
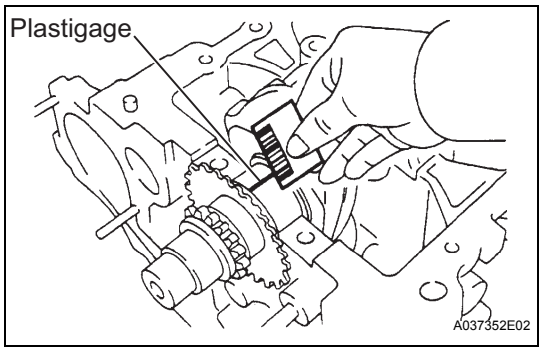
Do not turn the crankshaft.

(k) Remove the bearing cap sub-assembly.





(l) Measure the Plastigage at its widest point.
Standard oil clearance:
0.01 to 0.023 mm (0.0004 to 0.0009 in.)
Maximum oil clearance:
0.07 mm (0.0028 in.)
NOTICE:
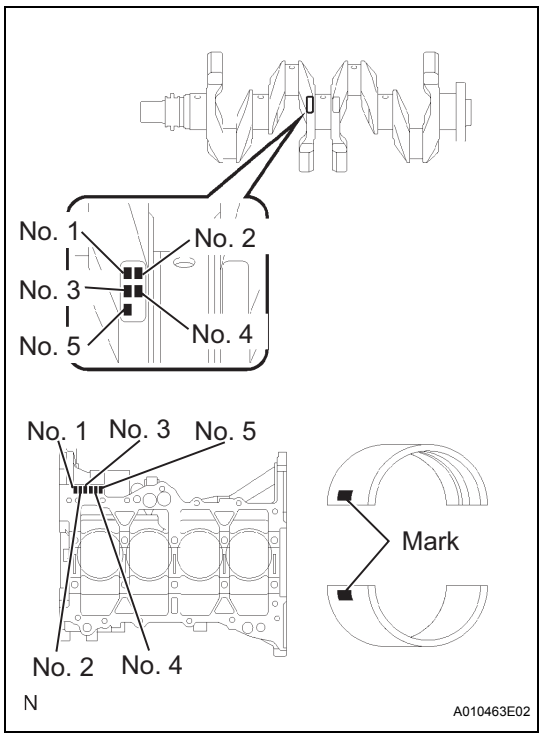
Completely remove the Plastigage after the mesurement.



(m) When replacing a standard bearing, replace it with one with the same number. If the number of the bearing cannot be found, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then select the bearing with the same number as the total. There are 4 sizes of standard bearings, marked 1, 2, 3 and 4 accordingly.
EXAMPLE: Cylinder Block 4 (A) + Crankshaft 3 (B) = Total 7 (Use Bearing 3)

Cylinder Block (A) + Crankshaft (B)	0 to 2	3 to 5	6 to 8	9 to 11
Use Bearing	1	2	3	4

EM

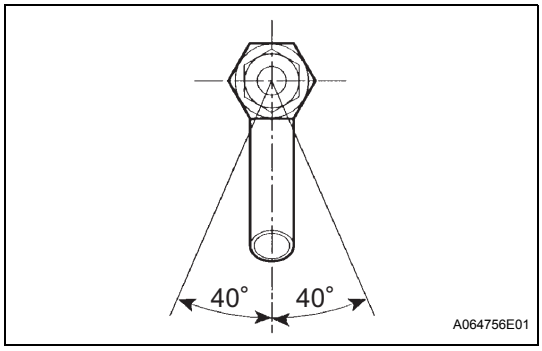
Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	0	50.000 to 50.003 (1.96850 to 1.96862)
	1	50.003 to 50.005 (1.96862 to 1.96870)
	2	50.005 to 50.007 (1.96870 to 1.96878)
	3	50.007 to 50.010 (1.96878 to 1.96890)
	4	50.010 to 50.012 (1.96890 to 1.96898)
	5	50.012 to 50.014 (1.96898 to 1.96906)
	6	50.014 to 50.016 (1.96906 to 1.96913)
Crankshaft main journal diameter (B)	0	45.998 to 46.000 (1.81094 to 1.81102)
	1	45.996 to 45.998 (1.81087 to 1.81094)
	2	45.994 to 45.996 (1.81079 to 1.81087)
	3	45.992 to 45.994 (1.81071 to 1.81079)
	4	45.990 to 45.992 (1.81063 to 1.81071)
	5	45.988 to 45.990 (1.81055 to 1.81063)
Standard bearing center wall thickness	1	1.992 to 1.995 (0.07843 to 0.07854)
	2	1.995 to 1.998 (0.07854 to 0.07866)
	3	1.998 to 2.001 (0.07866 to 0.07878)
	4	2.001 to 2.004 (0.07878 to 0.07890)

REASSEMBLY

1. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads of the drain union and install the water drain cock within 3 minutes of applying the adhesive.



(b) After applying the specified torque, rotate the drain union clockwise until its drain port faces downward.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)
NOTICE:
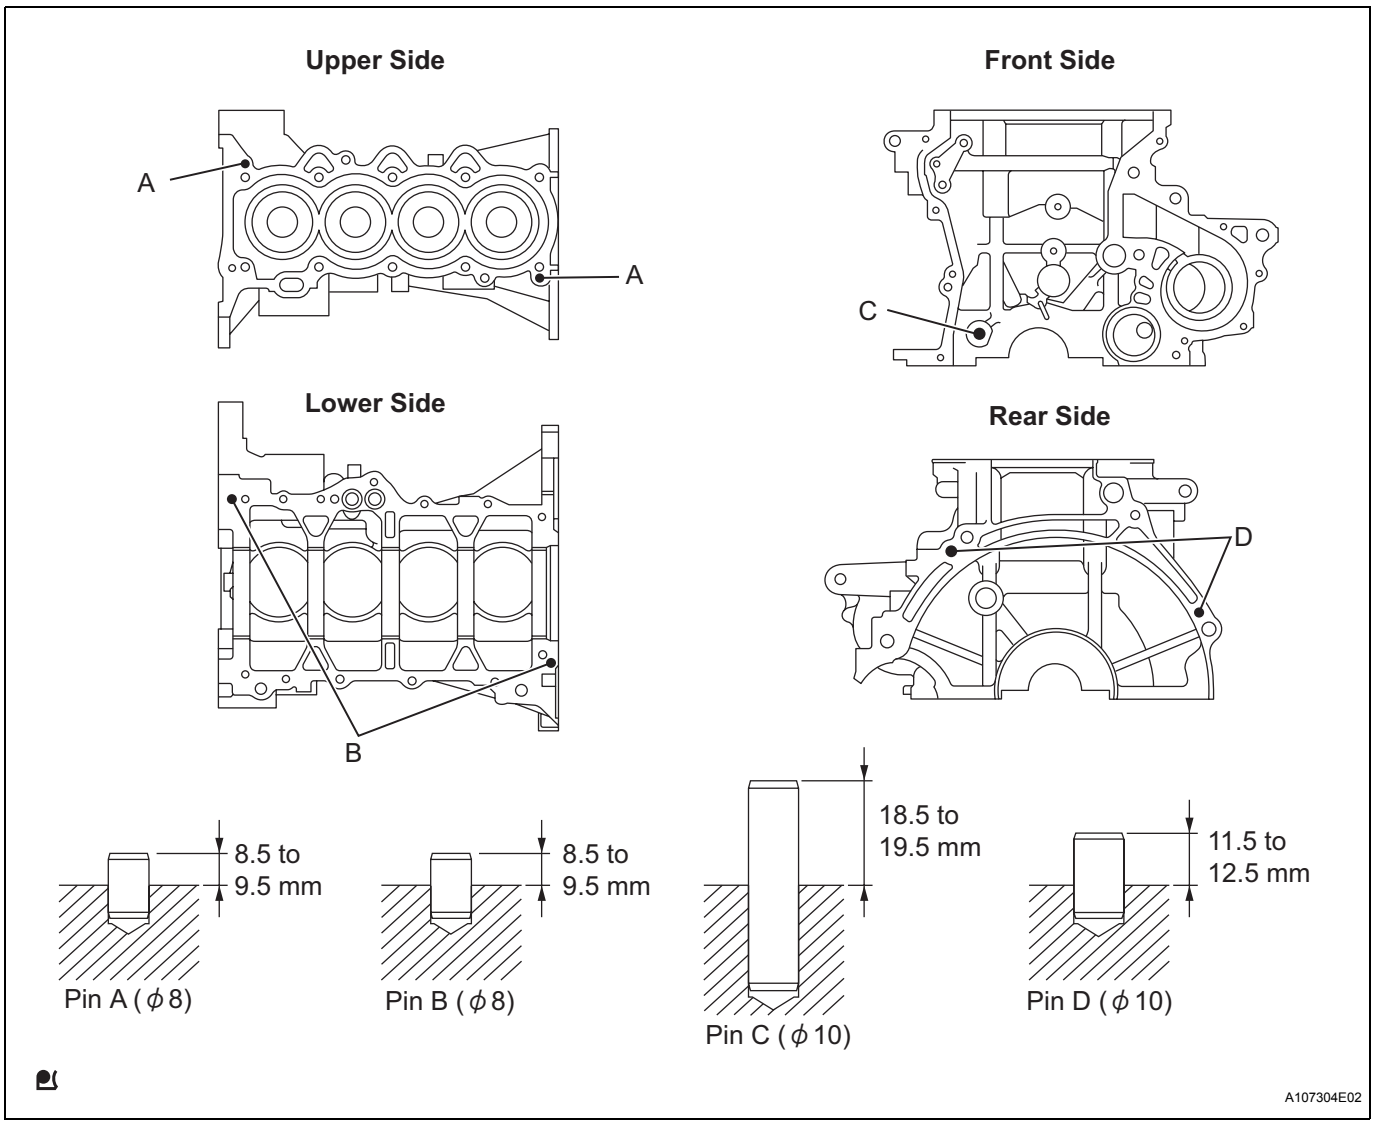
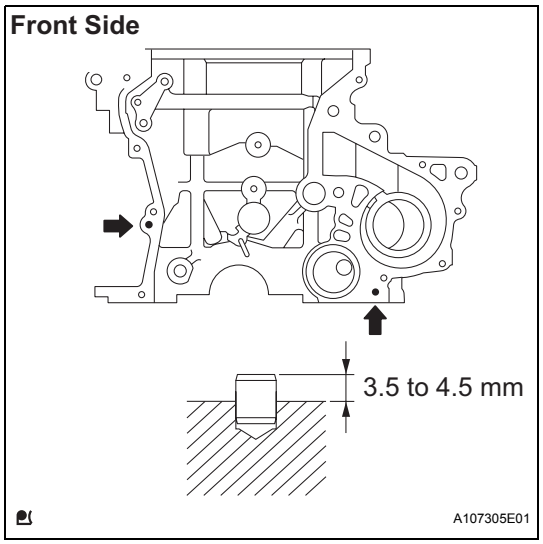
- **Do not add coolant within 1 hour of installation.**
- **Do not rotate the drain union more than 360° in step (b), and never loosen it after setting the union correctly.**

2. INSTALL STRAIGHT PIN



(a) Using a plastic-faced hammer, tap in the straight pin.
Standard protrusion:
Pin A:

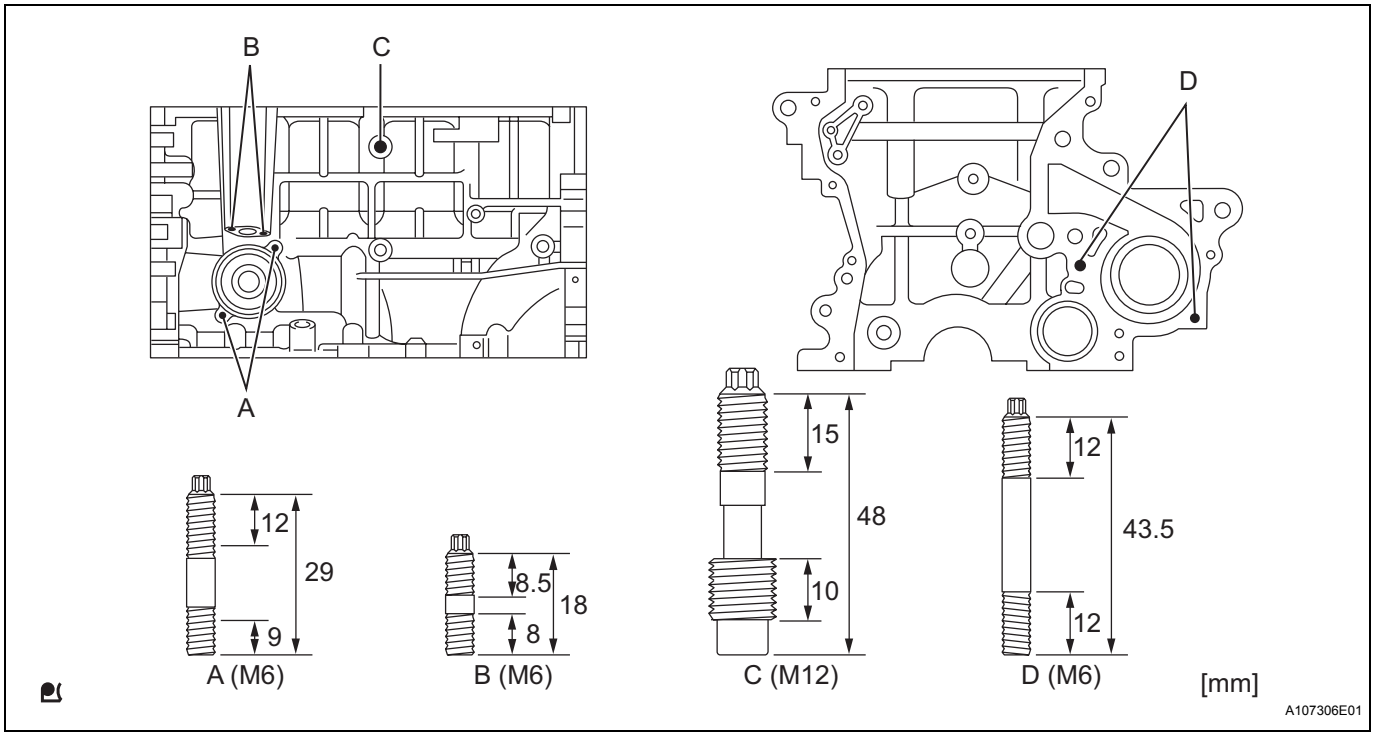
8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin B:
8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin C:
18.5 to 19.5 mm (0.728 to 0.768 in.)
Pin D:
11.5 to 12.5 mm (0.453 to 0.492 in.)



3. INSTALL OIL PUMP SET RING PIN

(a) Using a plastic-faced hammer, tap in a new ring pin.
Standard protrusion:
3.5 to 4.5 mm (0.138 to 0.177 in.)

4. INSTALL STUD BOLT



(a) Using "Torx" socket wrench E5, install the 7 stud bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf) (for Stud bolt A, B and D)
11 N*m (112 kgf*cm, 8.1 ft.*lbf) (for Stud bolt C)
NOTICE:
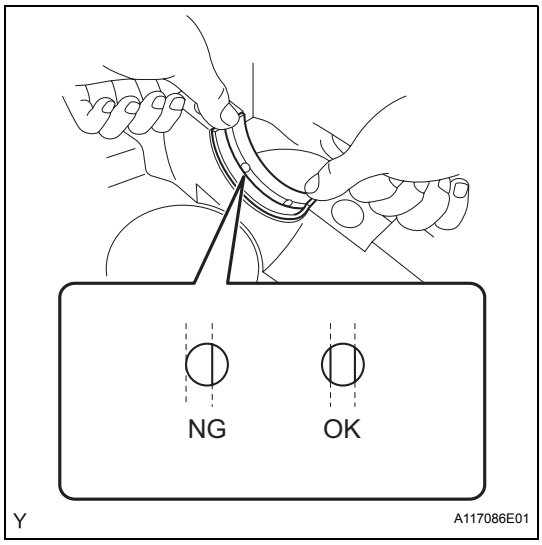
The lower threads of the bolt are installed into the cylinder block.



5. INSTALL CRANKSHAFT BEARING

(a) Align the crankshaft bearing (upper) with the oil hole of the cylinder block and install the bearing.
NOTICE:
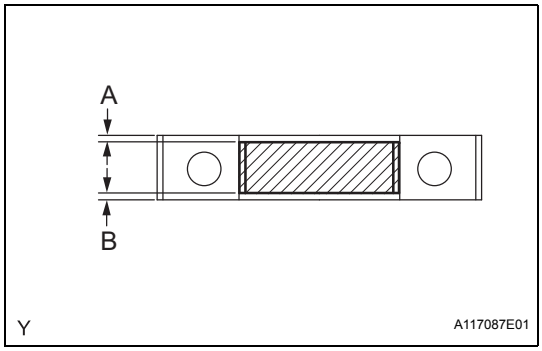
Do not apply engine oil to the bearing or its contact surface.



(b) Align the crankshaft bearing (lower) with the bearing cap and install the crankshaft bearing cap.
NOTICE:
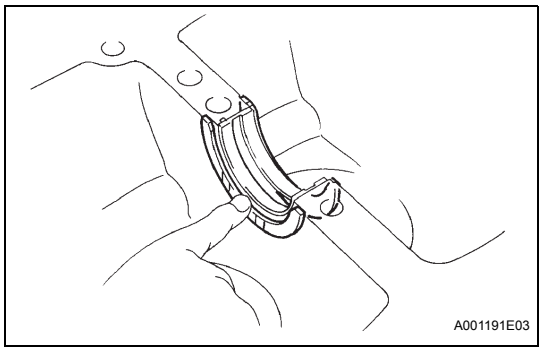
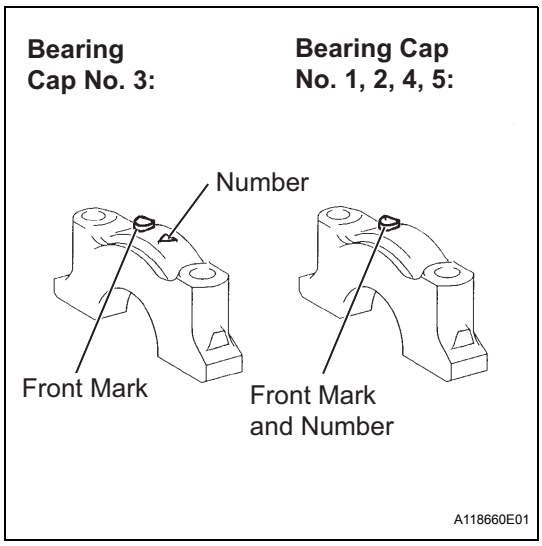
- **Install the bearing cap so that the gap between A and B is less than 0.7 mm (0.028 in.).**
- **Do not apply engine oil to the bearing or its contact surface.**



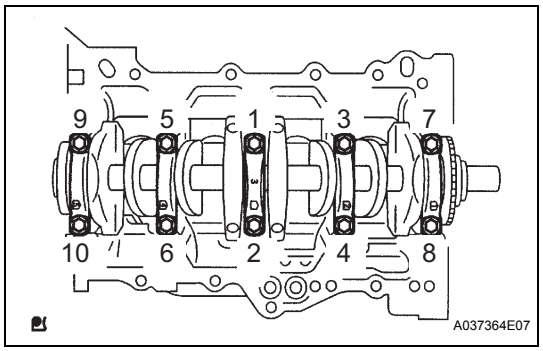
6. INSTALL CRANKSHAFT THRUST WASHER UPPER

(a) Install the 2 thrust washers onto the No. 3 journal position of the cylinder block with the oil grooves facing outward.
(b) Apply engine oil to the upper bearing and install the crankshaft onto the cylinder block.



7. INSTALL CRANKSHAFT

(a) Examine the front marks and numbers and install the bearing caps onto the cylinder block.
(b) Apply a light coat of engine oil to the threads of the bearing cap bolts.



(c) Using SST, tighten the bolts in several steps to the specified torque in the sequence shown in the illustration (*1).
SST 09011-38121
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)
NOTICE:
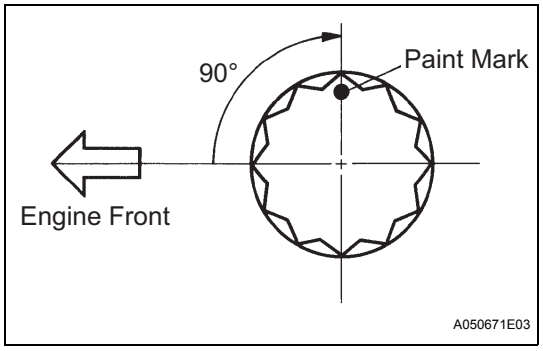
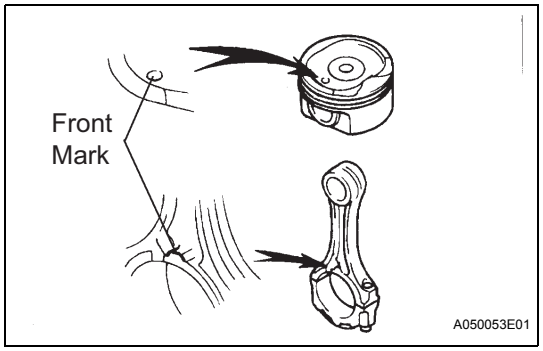
Check that the crankshaft turns smoothly.



(d) Mark the front of the bearing cap bolts with paint.
(e) Retighten the bearing cap bolts by 90° in the same sequence as step (*1).
(f) Check that the painted mark is now at a 90° angle from the front.

8. INSPECT CRANKSHAFT THRUST CLEARANCE (See page EM-174)

9. INSPECT CRANKSHAFT OIL CLEARANCE (See page EM-179)



10. INSTALL WITH PIN PISTON SUB-ASSEMBLY
(a) Coat the piston pin and pin holes in the piston with engine oil.
(b) Align the cavity of the piston with the protruding portion on the connecting rod.

EM

(c) Using SST, press in the piston pin.
SST 09221-25026 (09221-00021, 09221-00030, 09221-00090, 09221-00150, 09221-00100)
NOTICE:
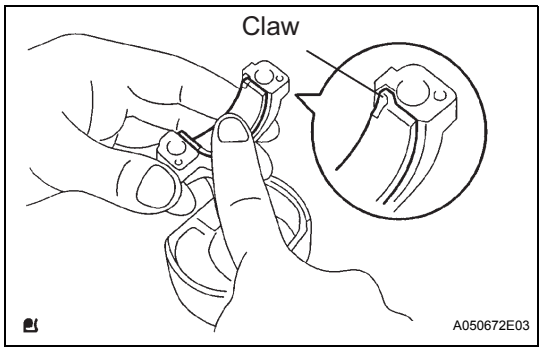
Keep the pistons, pins, rings, connecting rods and bearings in the correct order so that they can be returned to the original locations when reassembled.



11. INSTALL CONNECTING ROD BEARING
(a) Align the bearing claw with the groove of the connecting rod or connecting cap.
NOTICE:
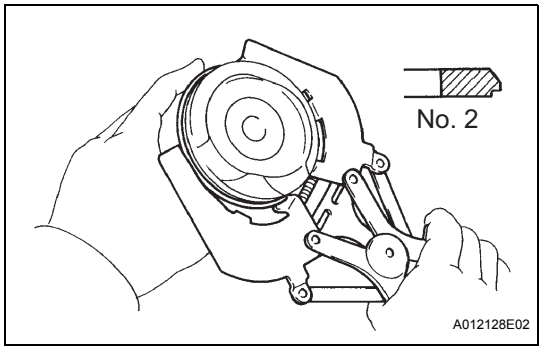
Clean the back side of the bearing and the bearing surface of the connecting rod and keep them free of oil.



12. INSTALL PISTON RING SET
HINT:
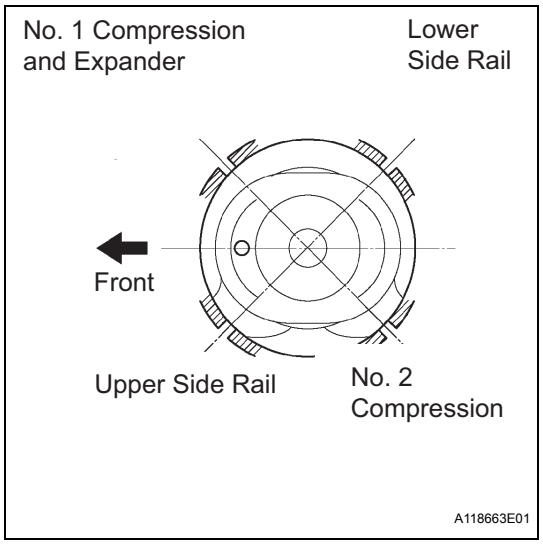
When reusing the piston rings, install them onto the matched pistons with the surfaces facing correctly.
(a) Install the oil ring expander and 2 side rails by hand.
(b) Using a piston ring expander, install the 2 compression rings.

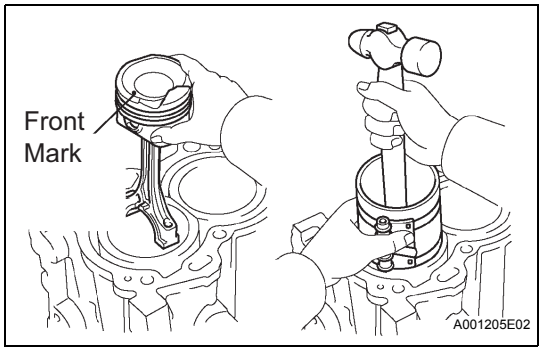


(c) Position the piston rings so that the ring ends are as shown.

13. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

(b) Check the position of the piston ring ends.



(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark on the piston facing forward.

NOTICE:

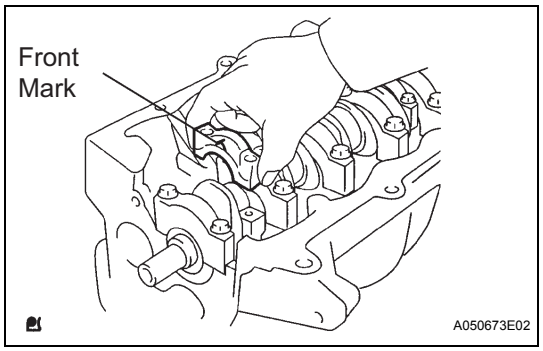
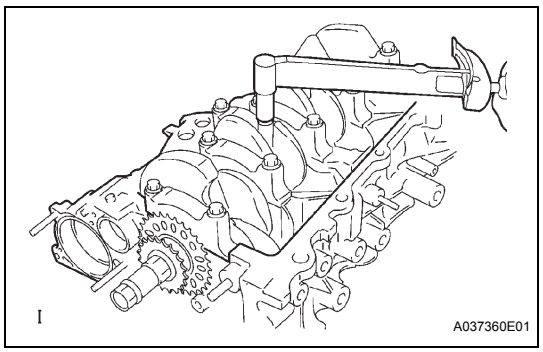
- **Clean the back side of the bearing and the bearing surface of the connecting rod cap and keep them free of oil.**
- **Match the numbered connecting rod cap with the connecting rod.**



(d) Make sure that the connecting rod and its cap are in the correct combination and that the front mark of the cap is facing in the correct mounting orientation, then install the cap onto the connecting rod.

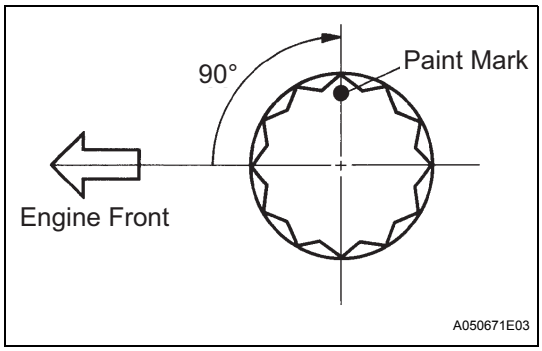
(e) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



(f) Using SST, tighten the bolts in several steps to the specified torque.

SST 09205-16010

Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



(g) Mark the front of the connecting cap bolts with paint.
(h) Retighten the cap bolts by 90° as shown.
(i) Check that the crankshaft turns smoothly.

14. INSPECT CONNECTING ROD THRUST CLEARANCE (See page EM-173)

15. INSPECT CONNECTING ROD OIL CLEARANCE (See page EM-173)

16. INSTALL STUD BOLT

(a) Using "Torx" socket wrench E5, install the 4 stud bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

EM

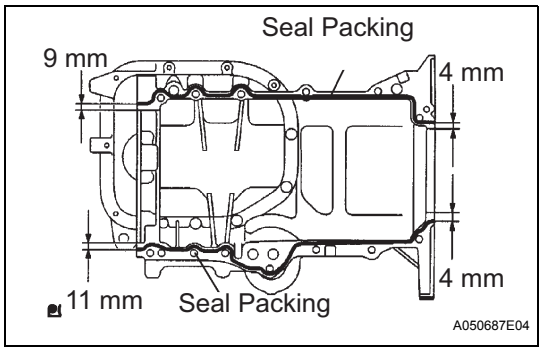
17. INSTALL OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material from the contact surface.



(b) Apply a continuous bead of seal packing (Diameter 2.0 mm to 3.0 mm (0.079 to 0.118 in.)) to the oil pan mating surface as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
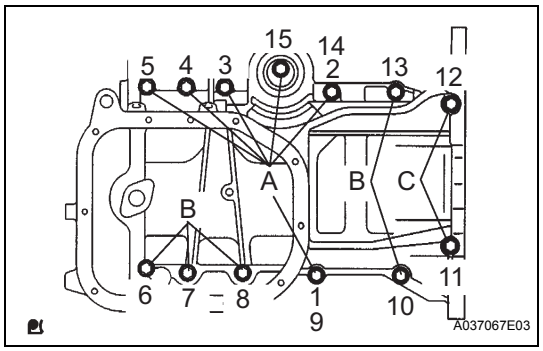
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes of applying the seal packing.**
- **Do not expose the seal to engine oil for at least within 2 hours after the installation.**

(c) Install 2 new O-rings onto the cylinder block.



(d) Using several steps, install and tighten the 13 bolts uniformly in the sequence shown in the illustration.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)
HINT:
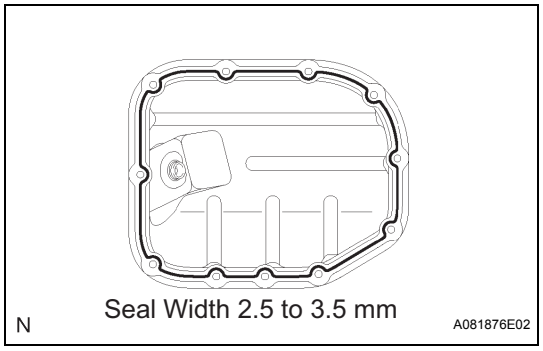
Each bolt length is as follows:
Bolt A 49 mm (1.93 in.)
Bolt B 88 mm (3.47 in.)
Bolt C 144 mm (5.67 in.)

18. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket and the oil strainer with the 2 nuts and the bolt.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)

19. INSTALL OIL PAN SUB-ASSEMBLY NO. 2

(a) Remove any old packing material from the contact surface.



(b) Apply a continuous bead of seal packing (Diameter 2.5 to 3.5 mm (0.0984 to 0.1378 in.)) to the oil pan mating surface as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
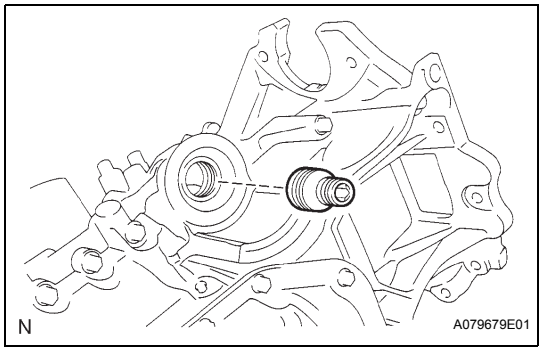
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes of applying the seal packing.**
- **Do not expose the seal to engine oil for at least 2 hours after the installation.**
- **Do not start the engine for at least 2 hours after the installation.**

(c) Install oil pan No. 2 with the 9 bolts and the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Install the drain plug with a new gasket.
Torque: 38 N*m (382 kgf*cm, 28 ft.*lbf)



20. INSTALL OIL FILTER UNION

(a) Using a 12 mm hexagon wrench, install the oil filter union.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

21. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Gently screw the oil filter into place, and tighten it until the gasket comes into contact with the seat.

EM

(d) Using SST, tighten it an additional 3/4 turn.
SST 09228-06501
HINT:
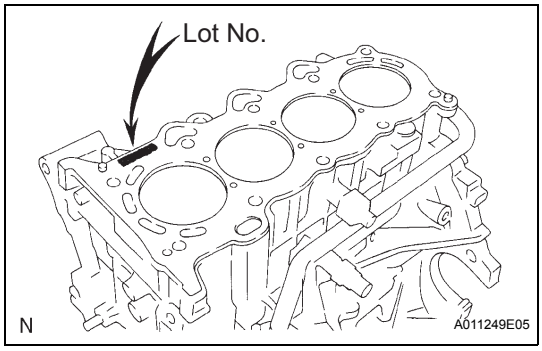
When using a torque wrench, tighten it to the specified torque.
Torque: 13 N*m (133 kgf*cm, 9.5 ft.*lbf)



22. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surface.**
- **Pay attention to the mounting orientation of the cylinder head gasket.**
- **Place the cylinder head on the cylinder head gently in order not to damage the gasket.**

23. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
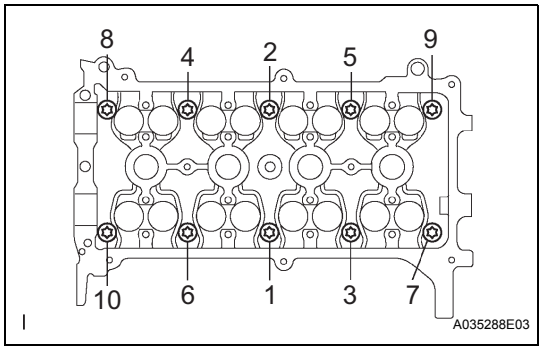
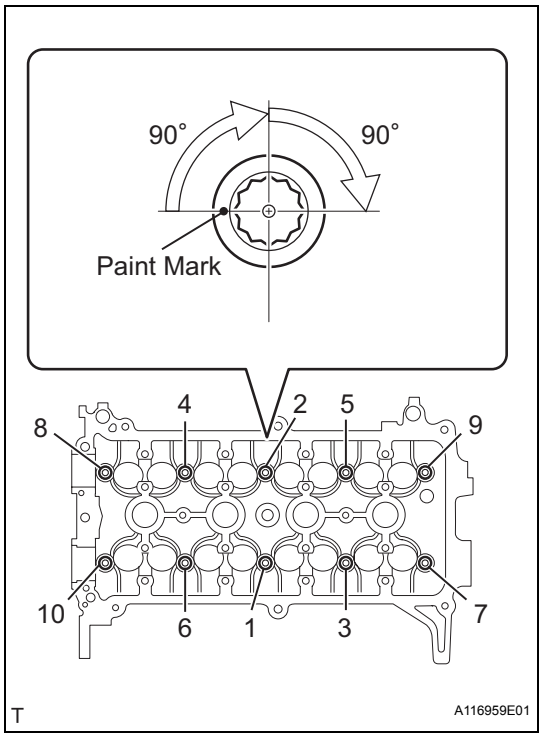
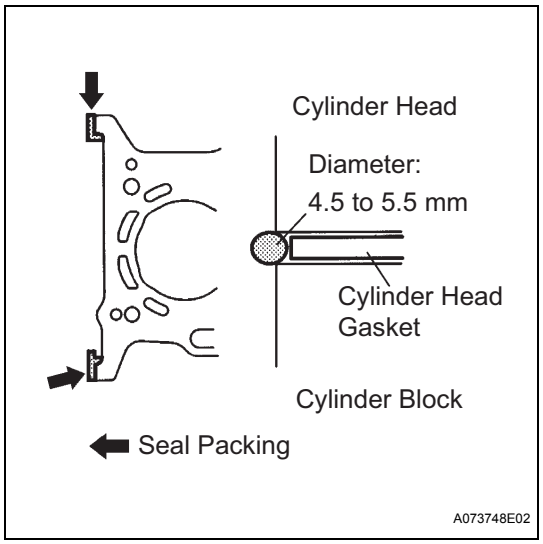
The cylinder head bolts are tightened in 2 successive steps.



(a) Apply a light coat of engine oil to the threads of the cylinder head bolts.
(b) Using several steps, install and tighten the 10 cylinder head bolts and plate washers uniformly with an 8 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
(c) Mark the front of the cylinder head bolt with paint.



(d) Retighten the cylinder head bolts by 90° and then an additional 90° as shown in the illustration.
(e) Check that the paint mark is now at a 180° angle from the front.



(f) Apply a continuous bead of seal packing (Diameter 4.5 to 5.5 mm (0.177 to 0.217 in.)) as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts within 15 minutes of applying seal packing.**

24. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.
NOTICE:
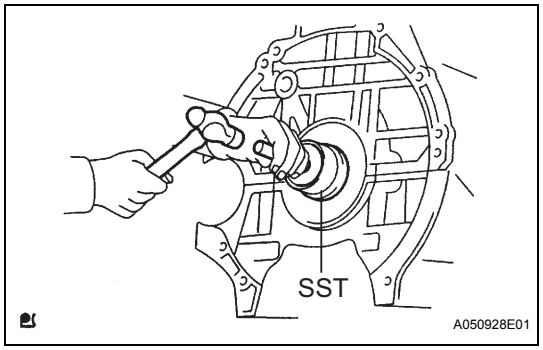
Keep the seal lip free of foreign matter.



(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-56010
NOTICE:
- **Do not tap the oil seal at an angle.**
- **Wipe any extra grease off the crankshaft.**

25. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY
NOTICE:
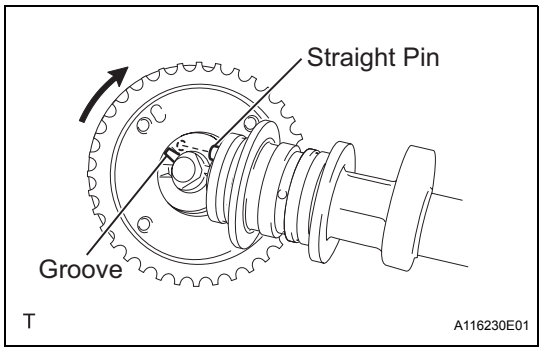
Install the camshaft timing gear assembly onto the camshaft with the lock pin of the camshaft timing gear assembly released.



(a) Put the camshaft timing gear assembly and camshaft together with the straight pin of the groove.
(b) Turn the camshaft timing gear assembly clockwise while pushing it gently toward the camshaft. When the pin fits into the groove, push to ensure a good fit.
NOTICE:
Do not turn the camshaft timing gear in the retard direction (clockwise).
(c) Check that there is no clearance between the gear fringe and the camshaft.
(d) Tighten the flange bolt with the camshaft timing gear fixed.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
NOTICE:
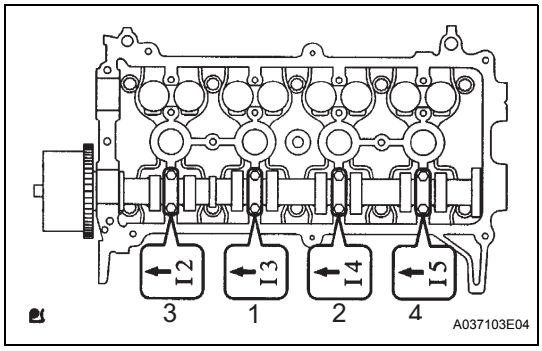
- **Do not lock the camshaft timing gear assembly when tightening the bolt.**
- **Release the lock pin of the camshaft timing gear assembly first, and tighten the bolt when the lock pin is locked in the most retarded position.**
- **Tightening the bolts with the lock pin locked could cause breakage of the lock pin.**

(e) Check that the camshaft timing gear assembly moves smoothly in the retard direction (clockwise) and is locked in the most retarded position.

26. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft journals.
(b) Place the camshaft on the cylinder head with the timing mark on the camshaft timing gear facing upward.



(c) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
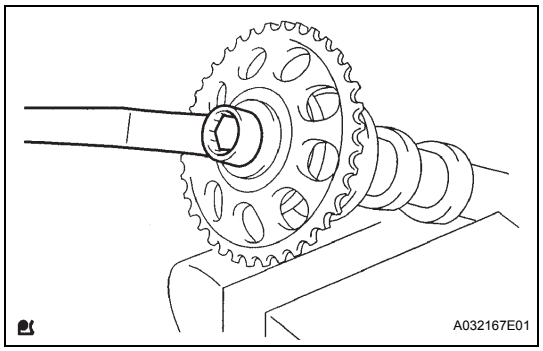
Tighten each bolt uniformly while keeping the camshaft level.



27. INSTALL CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vice.

(b) Align the knock pin hole in the camshaft timing sprocket with the knock pin of the camshaft, and install the camshaft timing sprocket.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
NOTICE:
Do not damage the camshaft.

28. INSTALL NO. 2 CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft journals.

(b) Place the camshaft on the cylinder head with the timing mark on the camshaft timing gear facing upward.

(c) Examine the front marks and numbers on camshaft bearing caps No. 1 and No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf) for bearing cap No. 2
23 N*m (235 kgf*cm, 17 ft.*lbf) for bearing cap No. 1
NOTICE:
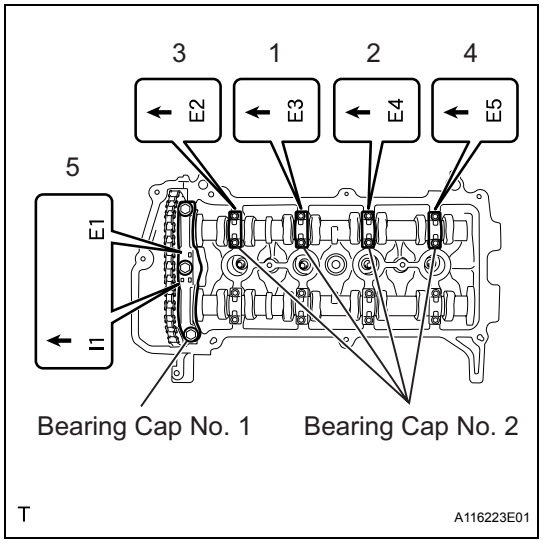
Tighten each bolt uniformly while keeping the camshaft level.



29. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply engine oil to the O-ring.
NOTICE:
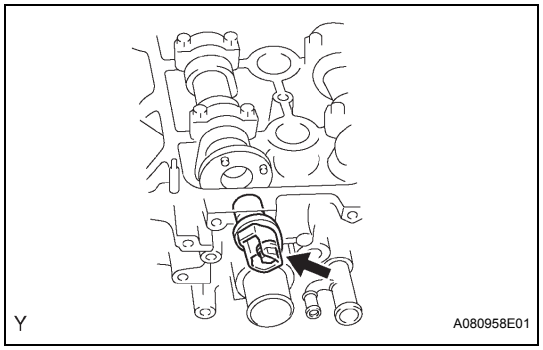
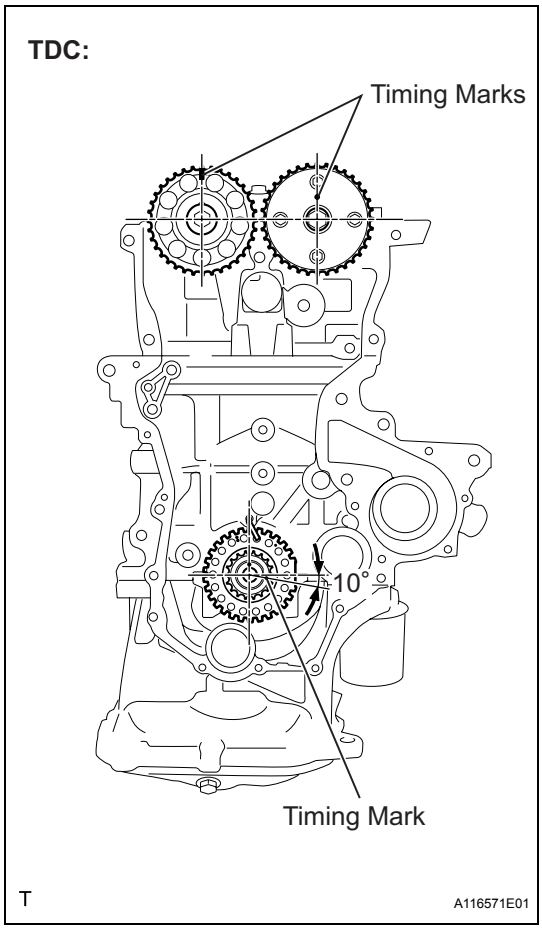
If the O-ring is damaged, replace the camshaft position sensor.

(b) Install the camshaft position sensor with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)





30. INSTALL CHAIN SUB-ASSEMBLY

(a) Make sure that all the timing marks are in the positions (TDC) shown in the illustration.
HINT:
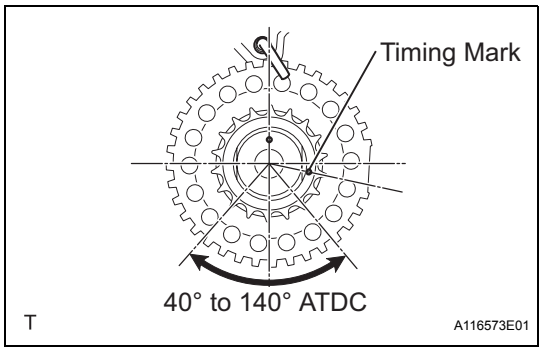
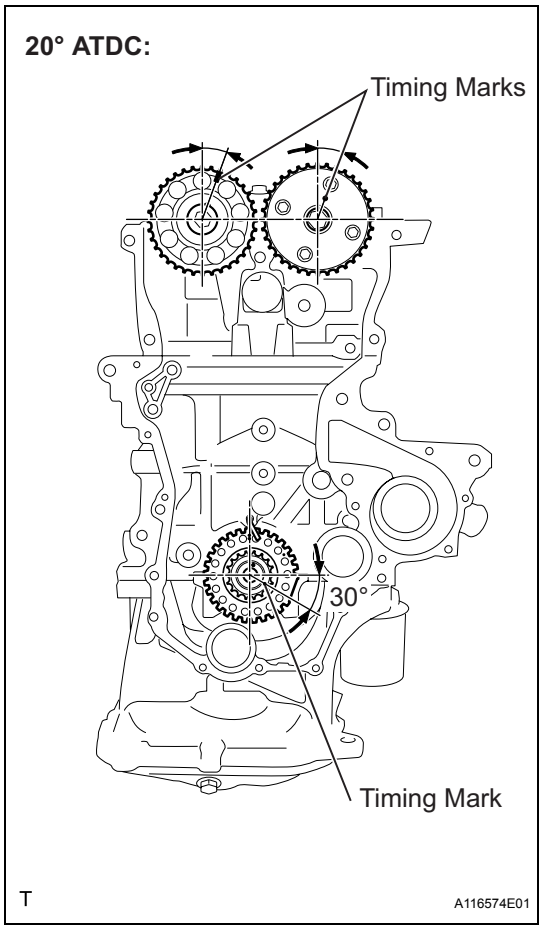
The positions of the timing marks may differ from the predetermined positions due to the force of the valve spring.

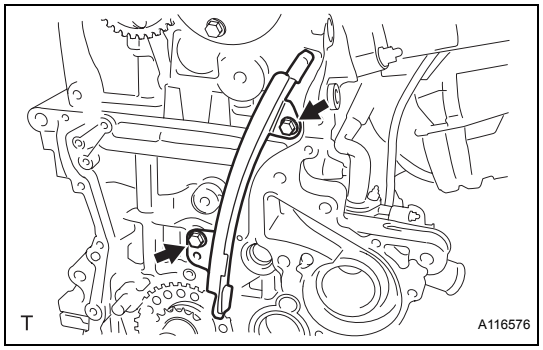


(b) Set the timing mark of the crankshaft in a position between 40 and 140°ATDC, as illustrated.



(c) Set the camshaft timing gear and the camshaft timing sprocket in the positions (20°ATDC) shown in the illustration.

(d) Set the crankshaft in the position (20°ATDC) shown in the illustration.



(e) Install chain vibration damper No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

(f) Align the timing marks of the camshaft with the mark plates of the timing chain and install the timing chain.
HINT:
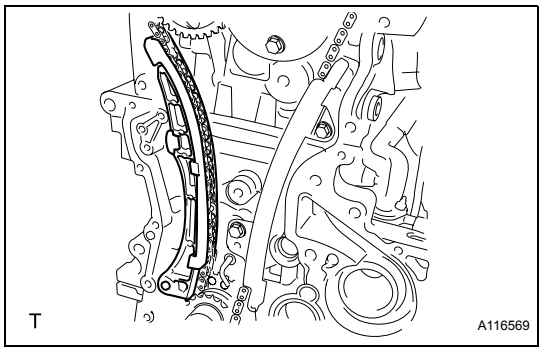
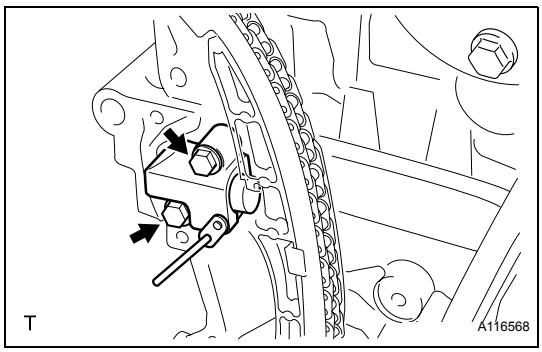
Align the timing marks with the mark plates while turning the hexagonal service portion of the camshaft using a wrench.



31. INSTALL CHAIN TENSIONER SLIPPER

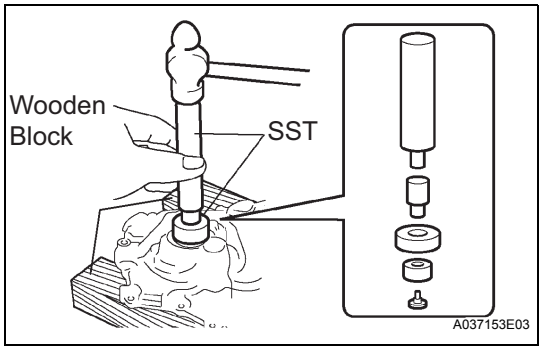
(a) Install the chain tensioner slipper.



32. INSTALL CHAIN TENSIONER ASSEMBLY NO. 1

(a) Install chain tensioner assembly No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(b) Remove the bar from chain tensioner assembly No. 1.



33. INSTALL OIL PUMP SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09950-60010 (09951-00250, 09951-00380, 09952-06010), 09950-70010 (09951-07100)
NOTICE:
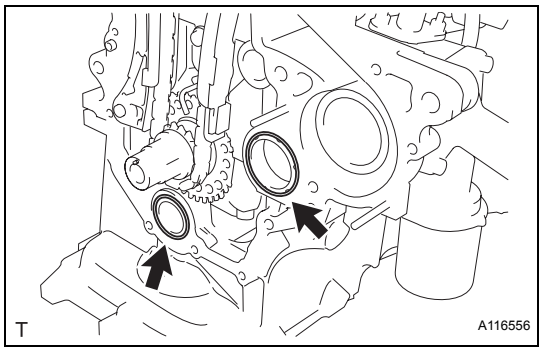
- **Do not tap the oil seal at an angle.**
- **Keep the seal lip free of foreign matter.**

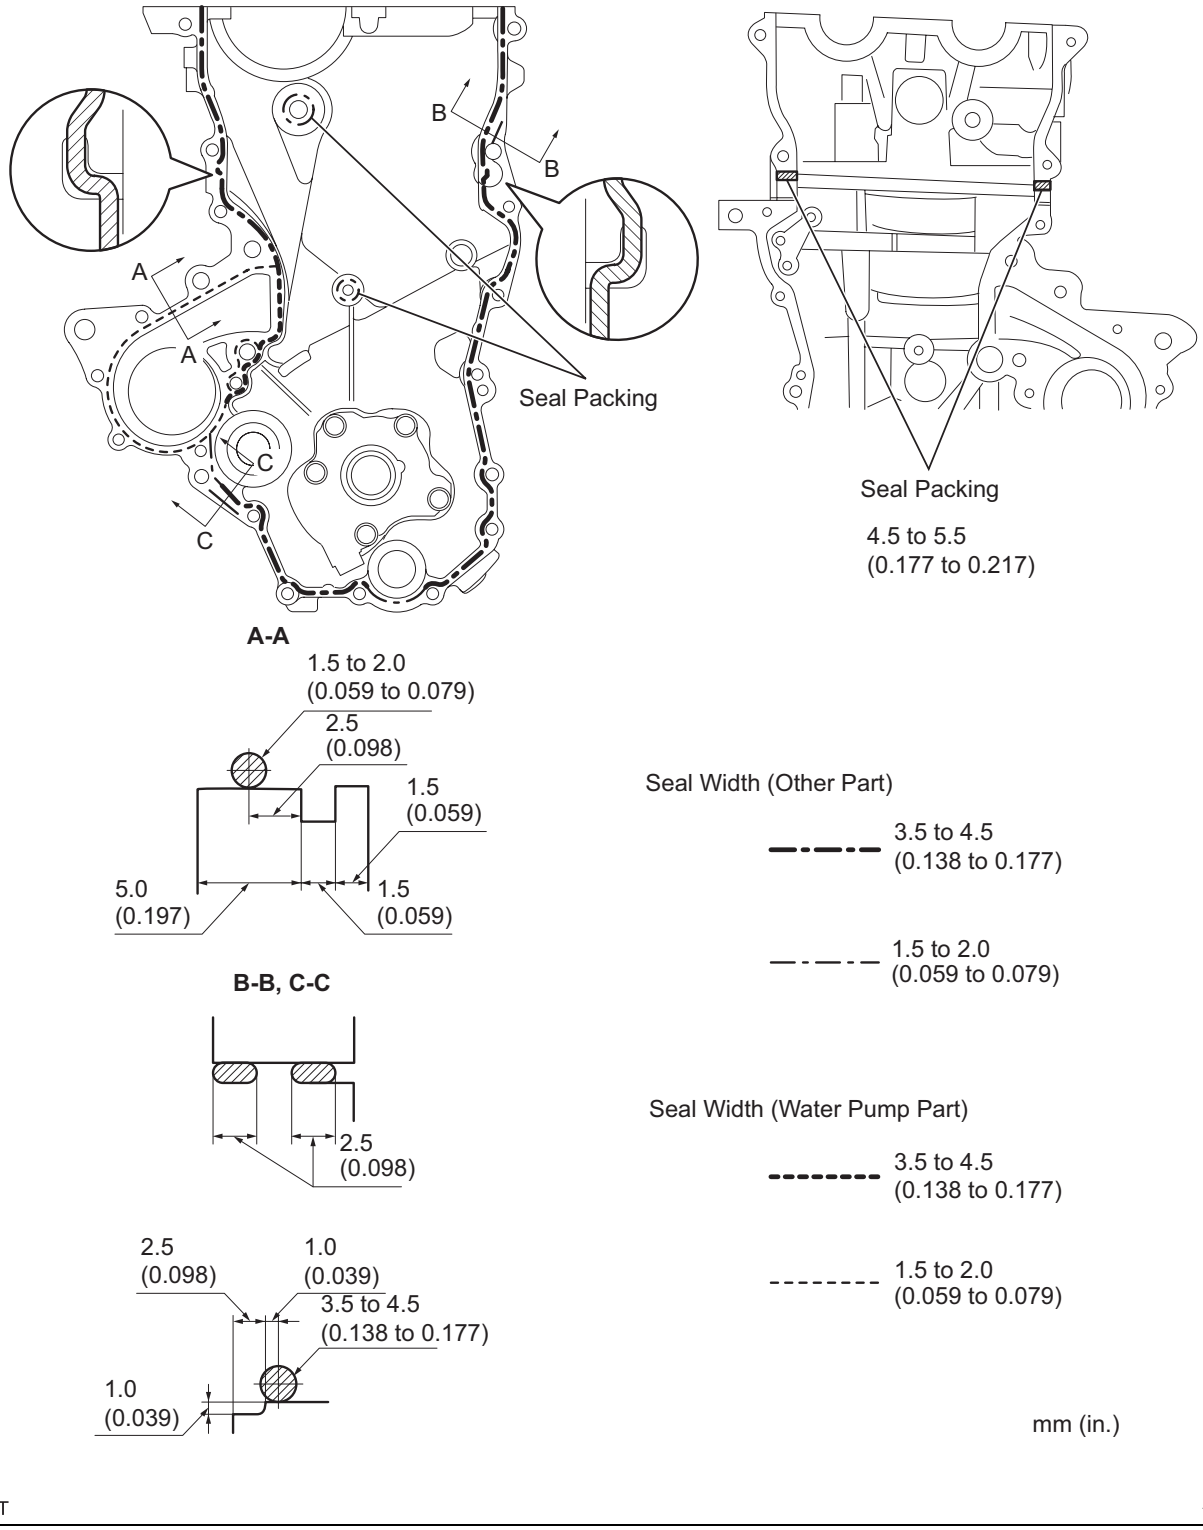
(b) Apply MP grease to the oil seal lip.



34. INSTALL OIL PUMP ASSEMBLY

(a) Install 2 new O-rings in the 2 locations shown in the illustration.

(b) Apply seal packing to the oil pump assembly, cylinder head and cylinder block as shown in the illustration.



Seal packing:
Water pump part Toyota Genuine Seal Packing 1282B, Three Bond 1282B or Equivalent
Other part Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

NOTICE:
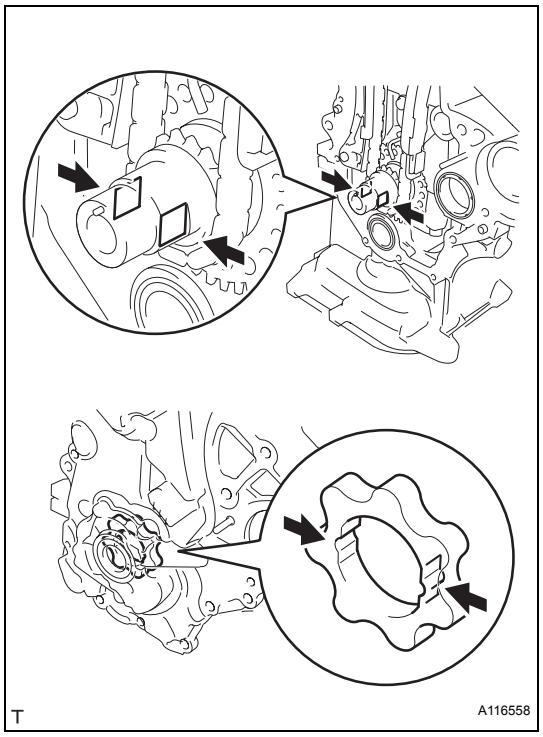
- **Remove any oil from the contact surface.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts and nut within 15 minutes of applying the the seal packing.**
- **Do not expose the seal to engine oil for at least 2 hours after the installation.**

(c) Align the keyway of the oil pump rotor with the rectangular portion of the crankshaft, and slide the oil pump into place.



(d) Install the oil pump assembly with the 15 bolts and nut. Tighten the bolts and nut uniformly in several steps.

Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf) for bolt A
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt B
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt C
24 N*m (245 kgf*cm, 18 ft.*lbf) for nut D
24 N*m (245 kgf*cm, 18 ft.*lbf) for bolt E

NOTICE:
Install the mounting bracket and water pump within 15 minutes of installing the oil pump assembly.

HINT:
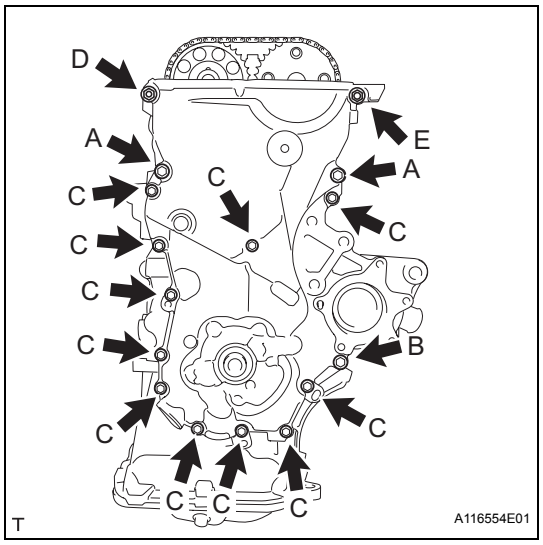
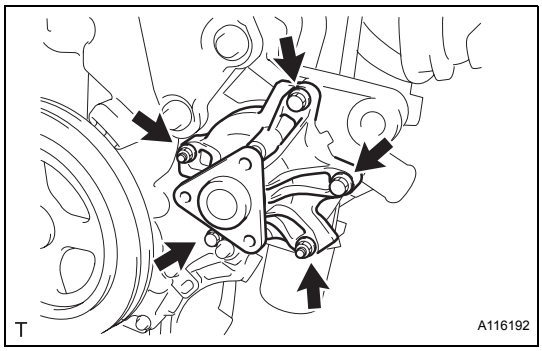
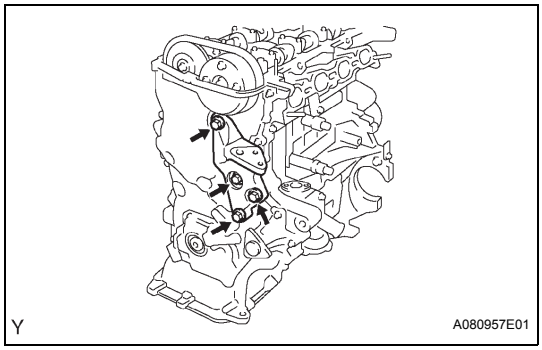
Each bolt length is as follows.
A: 30 mm (1.181 in.)
B: 35 mm (1.378 in.)
C: 20 mm (0.787 in.)
E: 20 to 14 mm (0.787 to 0.551 in.) Double ended bolt





35. INSTALL WATER PUMP ASSEMBLY

(a) Install the water pump and a new gasket with the 3 bolts and 2 nuts.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)



36. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the transverse engine mounting bracket with the 4 bolts.
Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

37. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY

(a) Align the pin hole in the crankshaft damper with the pin position and install the crankshaft damper sub-assembly.

(b) Provisionally install the bolt.

(c) Using 2 SSTs, tighten the bolt while holding the crankshaft damper sub-assembly.
SST 09213-14010 (91651-60865), 09330-00021
Torque: 128 N*m (1305 kgf*cm, 95 ft.*lbf)
NOTICE:
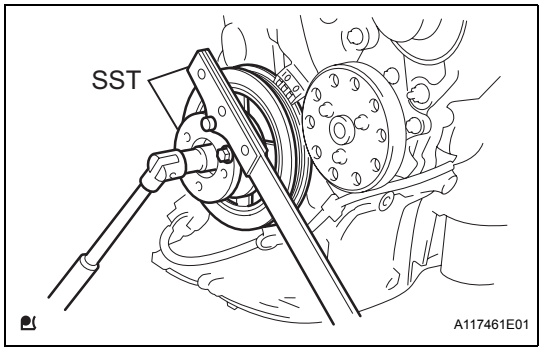
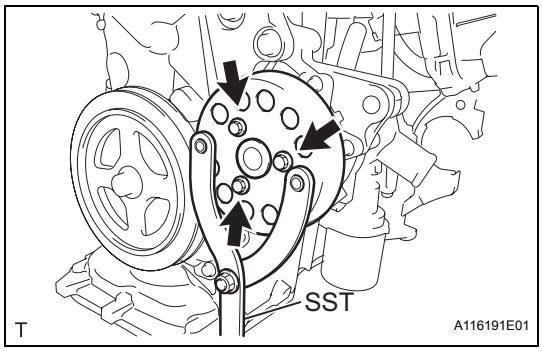
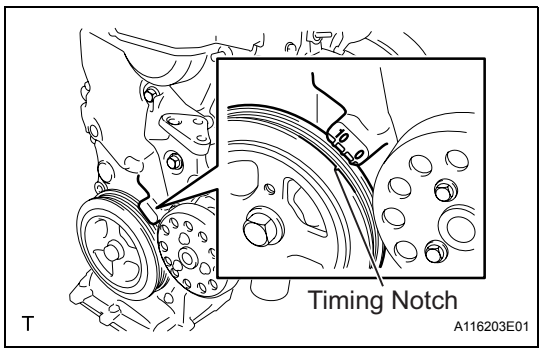
Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.





38. INSTALL WATER PUMP PULLEY

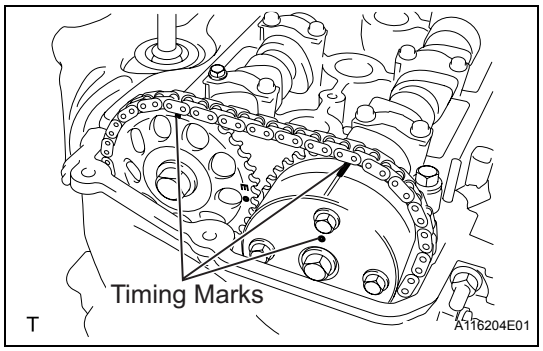
(a) Using SST, install the pump pulley with the 3 bolts.
SST 09960-10010 (09962-01000, 09963-00700)
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



39. INSPECT VALVE CLEARANCE

(a) Set the No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are all facing upward, as shown in the illustration.
HINT:
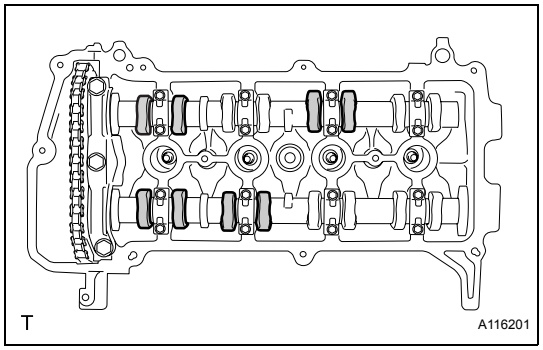
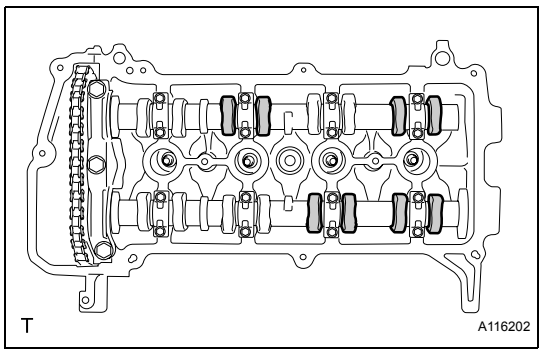
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

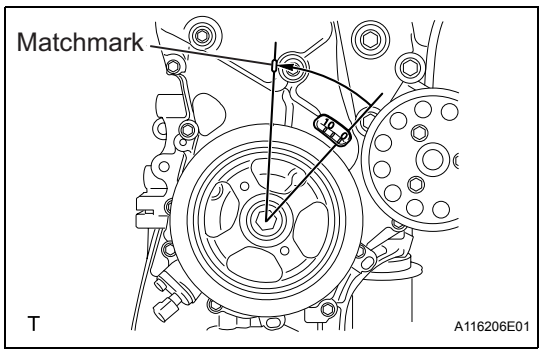


(b) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)
(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

(c) Turn the crankshaft 1 complete revolution (360°) and align its timing notch with timing mark "0" of the oil pump.



(d) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for Intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for Exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)
(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.



40. ADJUST VALVE CLEARANCE
NOTICE:
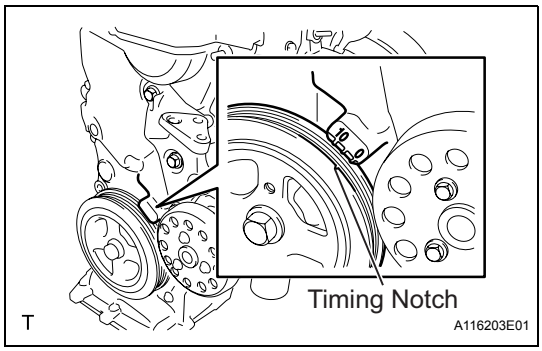
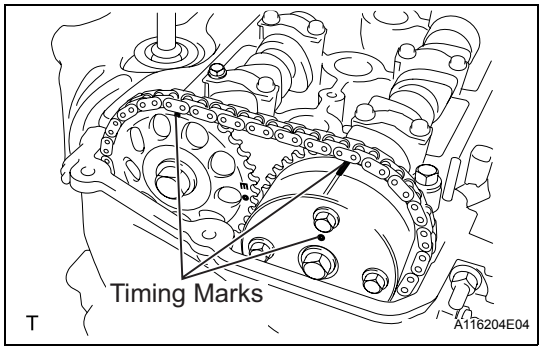
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.



(a) Set the No. 1 cylinder to TDC/compression.
(1) Turn the crankshaft damper, and align its timing notch with timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are all facing upward as shown in the illustration.
HINT:
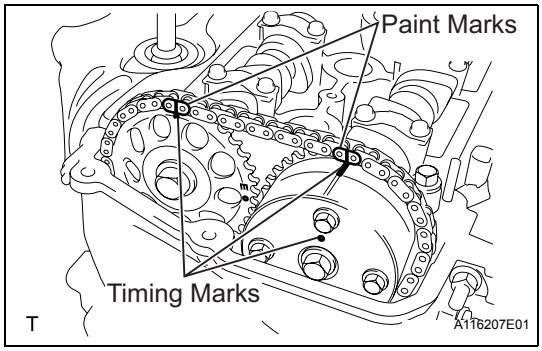
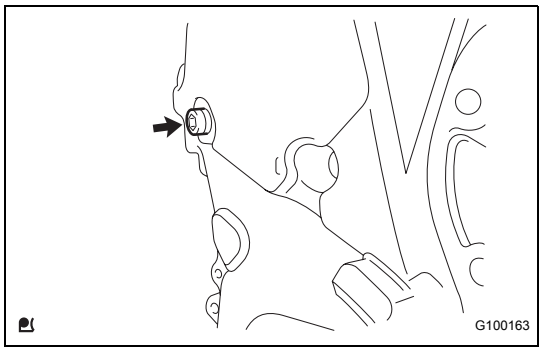
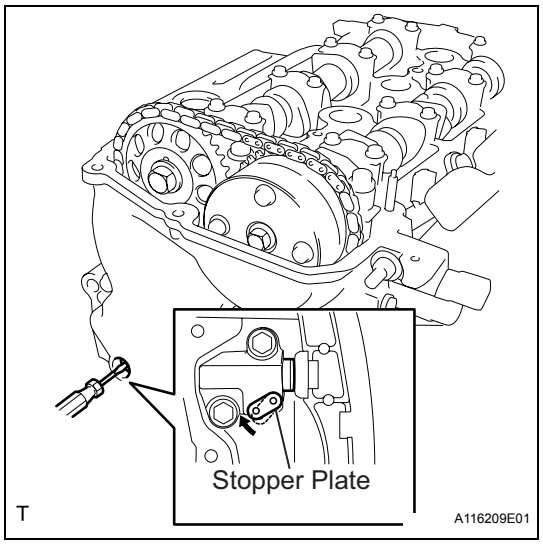
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.



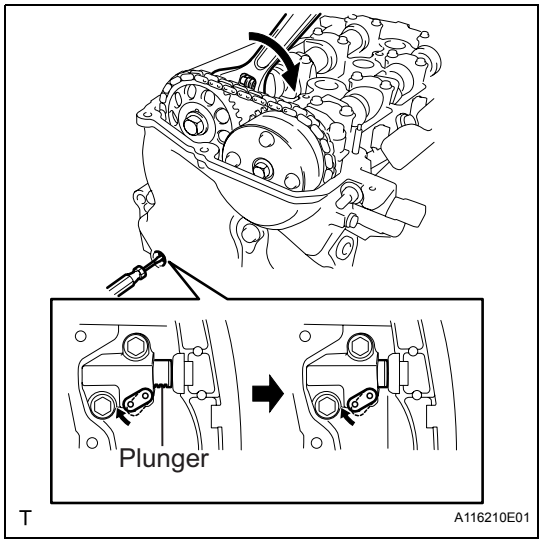
(b) Put paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



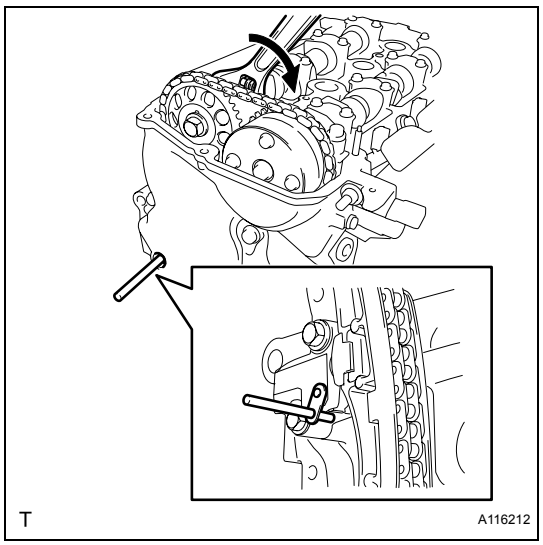
(c) Using an 8 mm hexagon wrench, remove the screw plug.



(d) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



(e) Using a wrench, rotate the No. 2 camshaft clockwise to push in the plunger of the chain tensioner.



(f) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
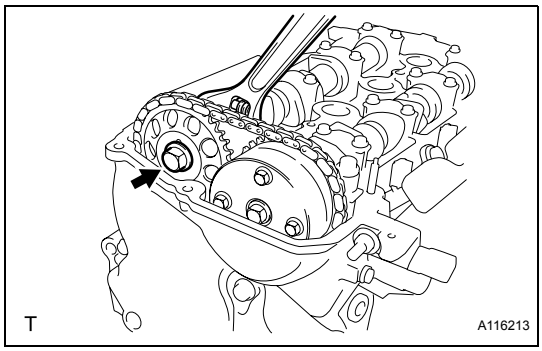
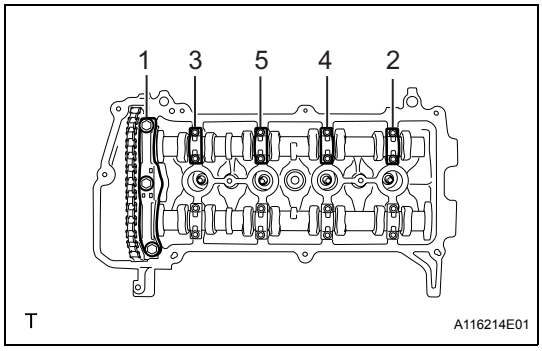
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that it does not come out.



(g) Using a wrench, hold the hexagonal lobe of No. 2 camshaft and remove the flange bolt.



(h) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
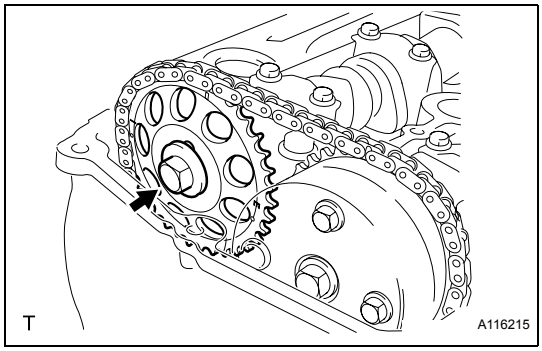
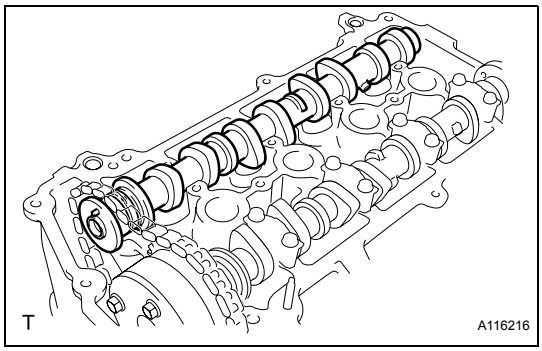
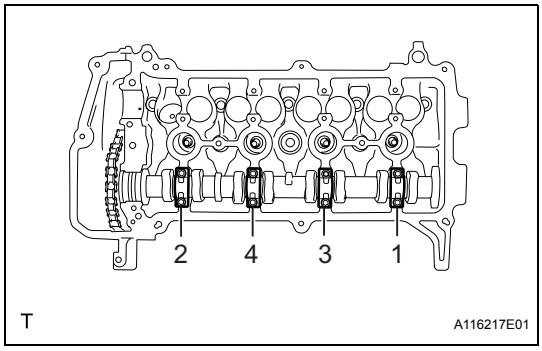
Loosen each bolt uniformly while keeping the camshaft level.



(i) Remove the flange bolt and remove the camshaft timing sprocket.



(j) Remove the No. 2 camshaft.



(k) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.
NOTICE:
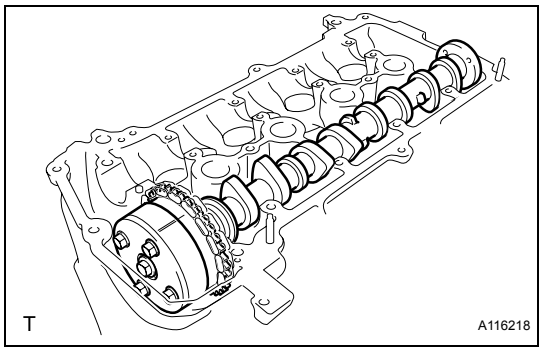
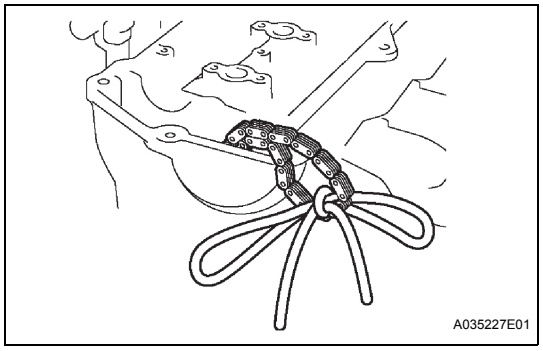
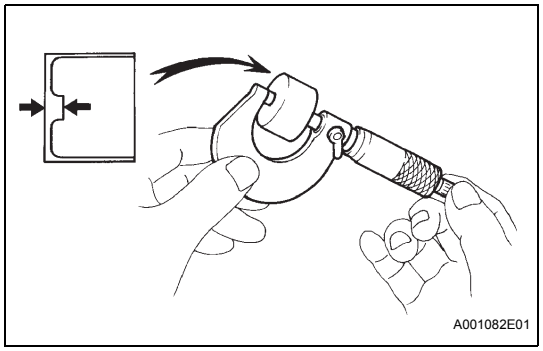
Loosen the bolts uniformly while keeping the camshaft level.



(l) Hold the chain by hand, and remove the camshaft and the camshaft timing gear assembly.



(m) Tie the chain with a piece of string as shown in the illustration.
(n) Remove the valve lifters.



(o) Using a micrometer, measure the thickness of the removed lifter.
(p) Calculate the thickness of the new lifter so that the valve clearance comes to within the specified values.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C - 0.20 mm (0.008 in.))
Exhaust A = B + (C - 0.30 mm (0.012 in.))

(q) Select a new lifter with a thickness as close to the calculated values as possible.
HINT:
Lifters are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

T

A117457

Intake valve clearance (cold):
0.15 to 0.25 mm (0.006 to 0.010 in.)
EXAMPLE:
A 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0158 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 46 lifter.

T

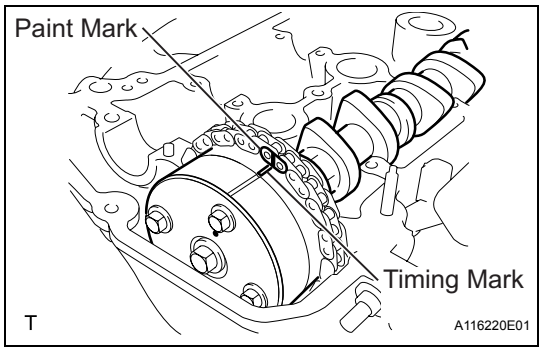
A117458

Exhaust valve clearance (cold):
0.25 to 0.35 mm (0.010 to 0.014 in.)
EXAMPLE:
A 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.). Replace the 5.340 mm (0.2102 in.) lifter with a new No. 48 lifter.

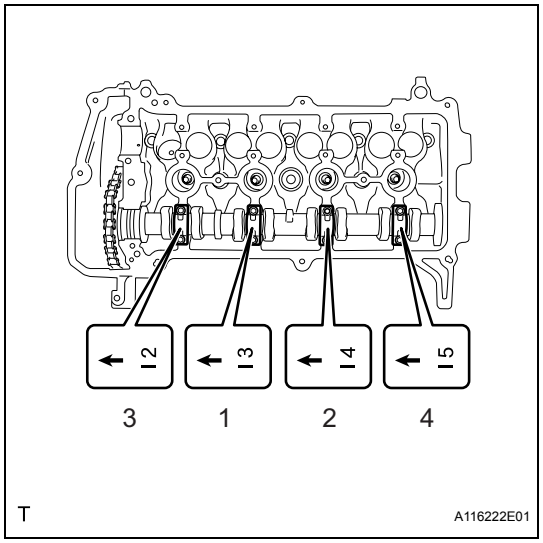
New Shim Thickness

Shim No.	Thickness	Shim No.	Thickness	Shim No.	Thickness
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)
20	5.200 (0.2047)	44	5.440 (0.2142)	68	5.680 (0.2236)
22	5.220 (0.2055)	46	5.460 (0.2150)	70	5.700 (0.2244)
24	5.240 (0.2063)	48	5.480 (0.2157)	72	5.720 (0.2252)
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)		

(r) Install the selected valve lifter.
(s) Apply a light coat of engine oil to the camshaft and camshaft journals.



(t) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned, as shown in the illustration.



(u) Examine the front marks and the numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
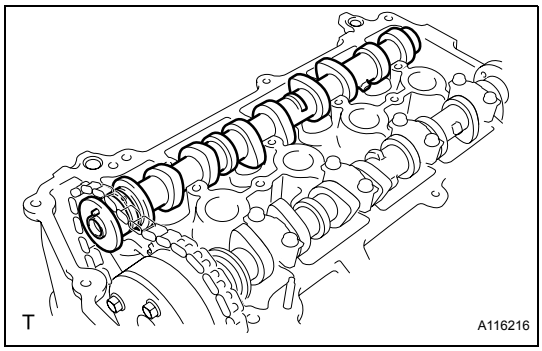
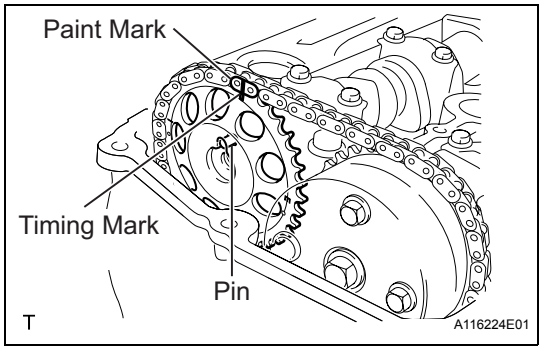
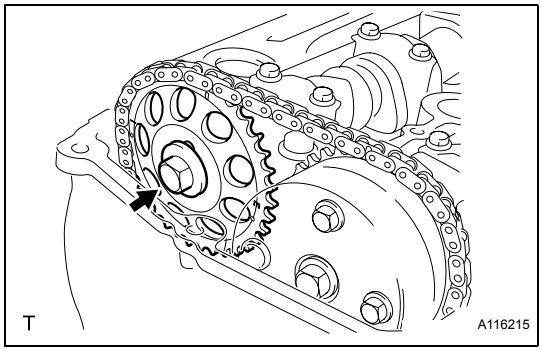
Tighten the bolts uniformly while keeping the camshaft level.



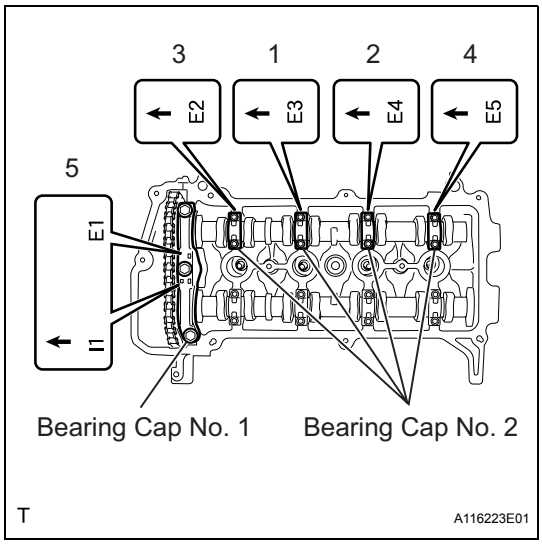
(v) Install camshaft No. 2.



(w) Hold the chain, and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.
(x) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.



(y) Provisionally install the flange bolt.



(z) Examine the front marks and the numbers of camshaft bearing cap No. 1 and camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.

Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf) for bearing cap No. 2
23 N*m (235 kgf*cm, 17 ft.*lbf) for bearing cap No. 1

NOTICE:
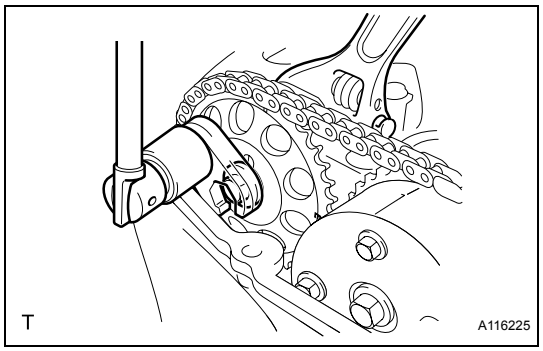
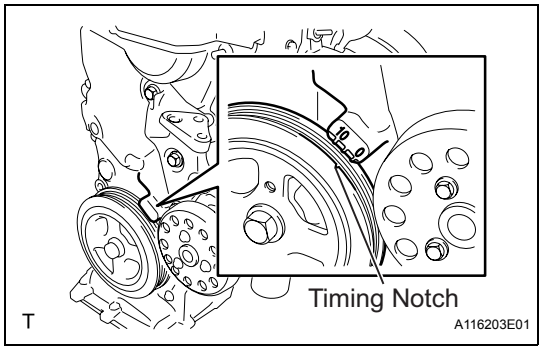
Tighten the bolts uniformly while keeping the camshaft level.



(aa) Using a wrench, hold the hexagonal lobe of camshaft No. 2, and install the flange bolt.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
SST 09023-38400
(ab) Remove the bar from the timing chain tensioner.



(ac) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.

EM

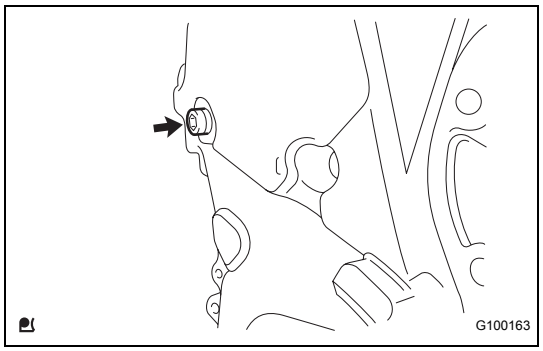
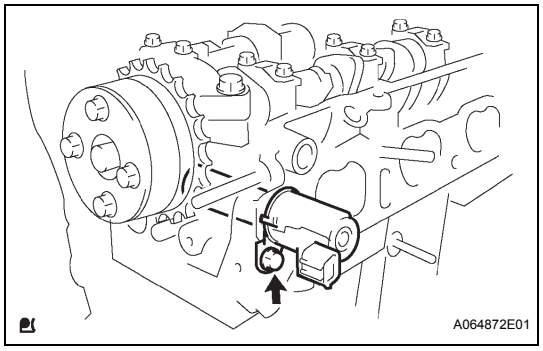
(ad) Check that all the pairs of timing marks are aligned.
(ae) Apply adhesive to the end 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(af) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



41. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY
(a) Apply a light coat of engine oil to a new O-ring, and install it onto the camshaft timing oil control valve.
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
NOTICE:
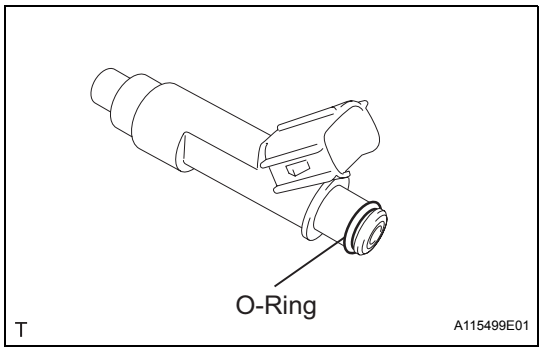
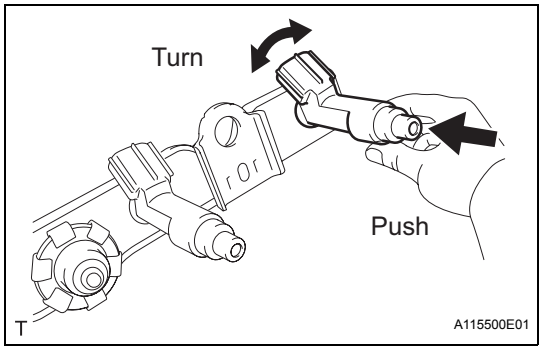
Do not twist the O-ring.



42. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each fuel injector.

(b) Apply a light coat of gasoline or spindle oil to the contact surfaces of the fuel delivery pipe and the O-ring of the fuel injector.



(c) While turning the fuel injector left and right, install it onto the fuel delivery pipe.

NOTICE:

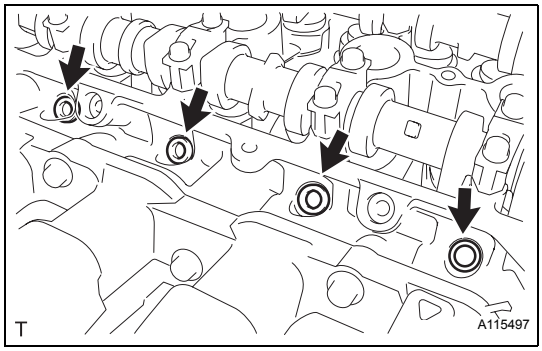
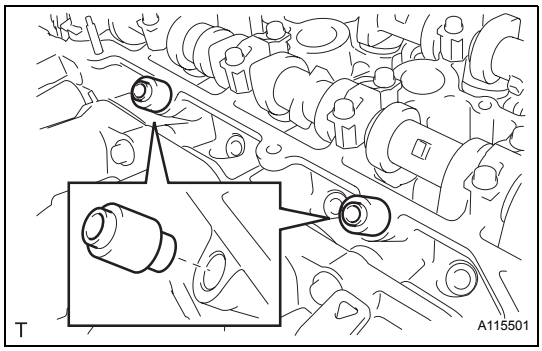
- **Do not twist the O-ring.**
- **After installing the fuel injectors, check that they turn smoothly. If not, replace the O-ring with a new one.**



43. INSTALL INJECTOR VIBRATION INSULATOR

(a) Install 4 new injector vibration insulators onto the cylinder head.



44. INSTALL DELIVERY PIPE NO. 1 SPACER

(a) Install the 2 delivery pipe No. 1 spacers onto the cylinder head.

NOTICE:

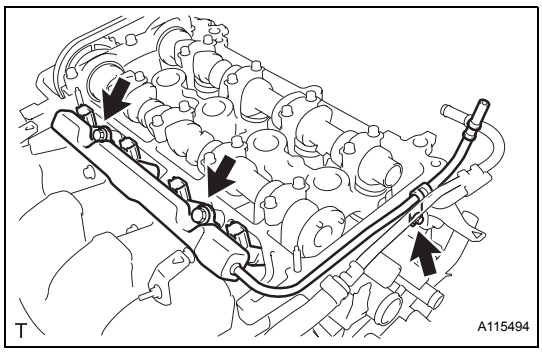
Install delivery pipe No. 1 spacer in the correct direction.



45. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Provisionally install the fuel delivery pipe sub-assembly and 4 fuel injectors with the 3 bolts.

NOTICE:

- **Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.**
- **Check that the fuel injectors rotate smoothly after installing the fuel delivery pipe sub-assembly.**

EM

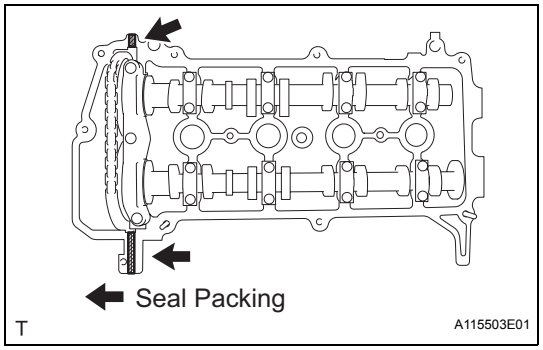
(b) Tighten the 3 bolts to the specified torque.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B



46. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Install the gasket onto the cylinder head cover.

(b) Apply seal packing to the cylinder head, as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
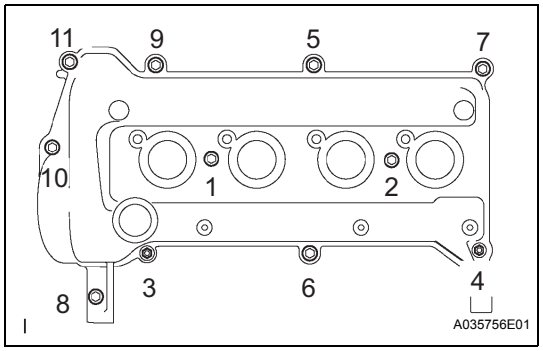
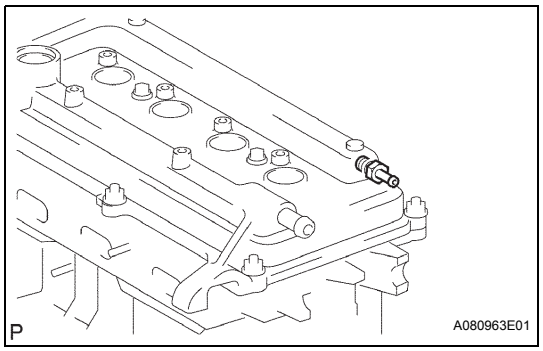
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover sub-assembly within 3 minutes of applying the seal packing.**
- **Do not start engine for at least 2 hours after the installation.**

(c) Install the cylinder head cover sub-assembly with the 9 bolts, 2 nuts and 2 seal washers.



(d) Tighten the 9 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7.0 ft.*lbf)



47. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Install the ventilation valve onto the cylinder head cover.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

48. INSTALL OIL LEVEL GAUGE GUIDE

(a) Apply engine oil to a new O-ring.

(b) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

49. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring on the crankshaft position sensor.
NOTICE:
If the O-ring is damaged, replace the crankshaft position sensor.

(b) Install the crankshaft position sensor with the bolt.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

50. INSTALL OIL FILLER CAP GASKET

(a) Install the oil filler cap gasket onto the oil filler cap.

51. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install the oil filler cap onto the cylinder head cover.

52. INSTALL THERMOSTAT

(a) Install a new gasket onto the thermostat.

(b) Install the thermostat with the jiggle valve facing upward.
HINT:
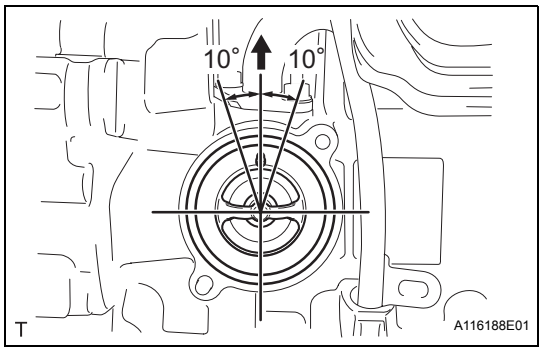
The jiggle valve may be set within 10°either side as shown in the illustration.

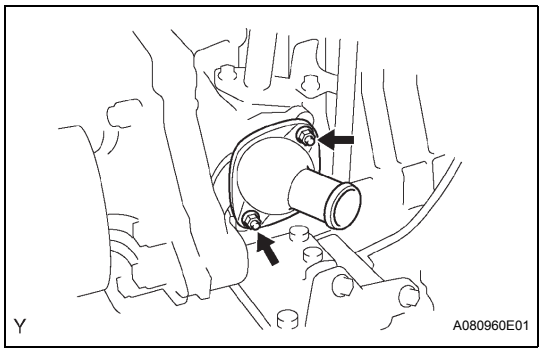


53. INSTALL WATER INLET

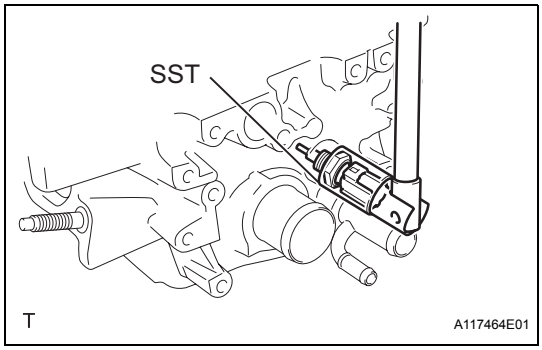
(a) Install the water inlet with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

54. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Provisionally install the engine coolant temperature sensor through a new gasket.

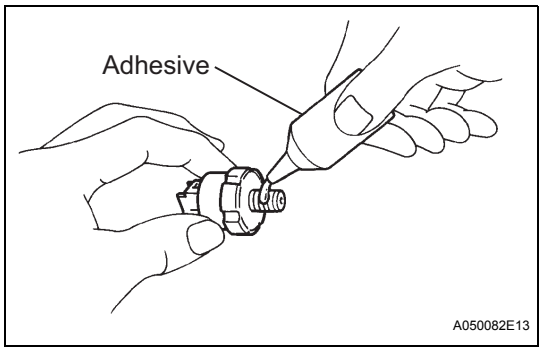


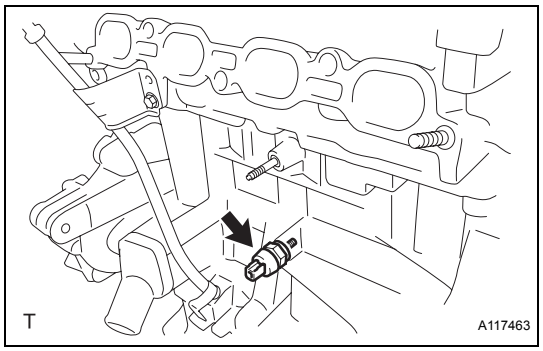
(b) Using SST, tighten the engine coolant temperature sensor.
SST 09817-33190
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



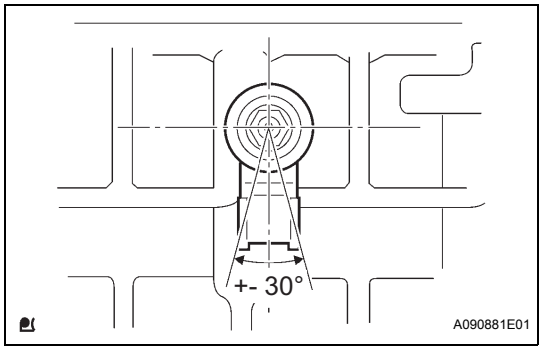
55. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads of the oil pressure switch.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



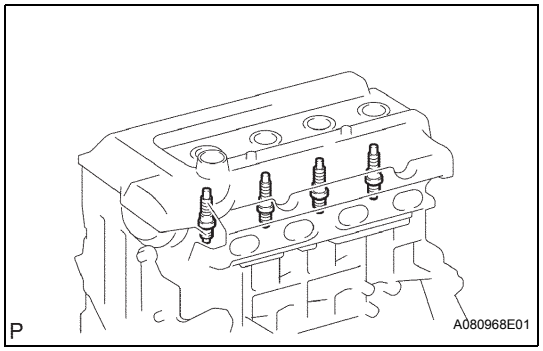


(b) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



56. INSTALL KNOCK SENSOR

(a) Install the knock sensor with the nut as shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



57. INSTALL SPARK PLUG

(a) Using a spark plug wrench, install the spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

EM

ENGINE

ON-VEHICLE INSPECTION

1. **INSPECT ENGINE COOLANT (See page CO-1)**
2. **INSPECT ENGINE OIL (See page LU-1)**
3. **INSPECT BATTERY (See page CH-4)**
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
   (a) Remove the air cleaner filter element sub-assembly.
   (b) Visually check that there is no dirt, blockage, or damage to the air cleaner filter element.
   HINT:
   - If there is any dirt or a blockage in the air cleaner filter element, clean it with compressed air.
   - If any dirt or a blockage remains even after cleaning the air cleaner filter element with compressed air, replace it.
5. **INSPECT SPARK PLUG (See page IG-5)**
6. **INSPECT IGNITION TIMING**
   (a) When using an intelligent tester:
      (1) Warm up and stop the engine.
      (2) Connect the intelligent tester to the DLC3.
      (3) Turn the ignition switch ON.
      (4) Select the following menu items:
      DIAGNOSIS / ENHANCED OBD II/ ACTIVE TEST / TC (TE1) / ON.
      HINT:
      Refer to the intelligent tester operator's manual for further details.
      (5) Inspect the ignition timing during idling.
      Ignition timing:
      8 to 12 degrees BTDC
      NOTICE:
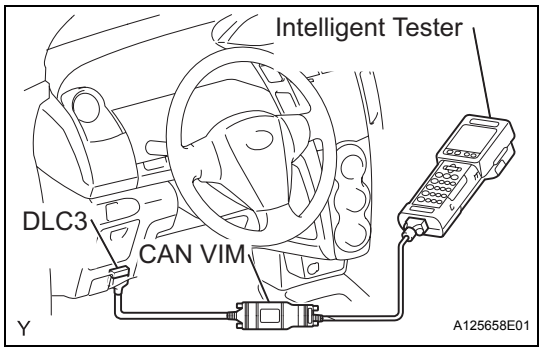
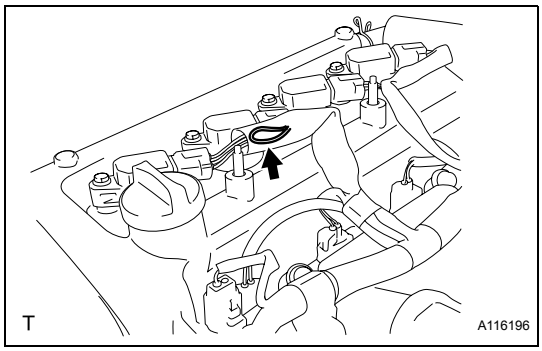
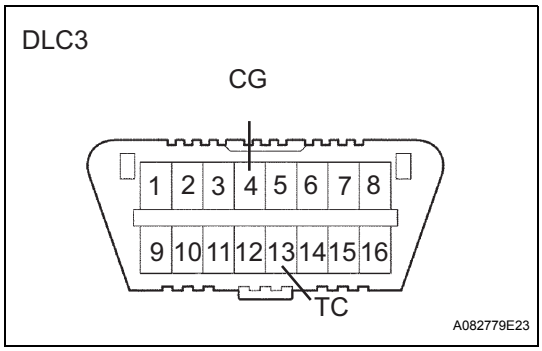
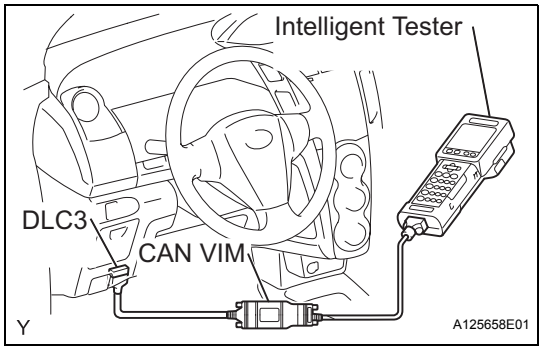
      - **Turn all the electrical systems and the A/C off.**
      - **Inspect the ignition timing with the cooling fan off.**
      - **When checking the ignition timing, shift the transmission to the neutral position.**
      (6) Select the following menu items: TC (TE1) / OFF.
      (7) Turn the ignition switch OFF.
      (8) Disconnect the intelligent tester from the DLC3.
   (b) When not using an intelligent tester:
      (1) Remove cylinder head cover No. 2 (see page IG-9).









(2) Pull out the wire harness (brown) shown in the illustration.
NOTICE:
After checking, wrap the wire harness with tape.
(3) Warm up and stop the engine.
(4) Connect the clip of the timing light to the wire harness.
NOTICE:
Use a timing light that detects the first signal.
(5) Turn the ignition switch ON.
(6) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
Examine the terminal numbers before connecting them. Connecting the wrong terminals could damage the engine.
(7) Inspect the ignition timing during idling.
Ignition timing:
8 to 12 degrees BTDC
NOTICE:
- **Turn all the electrical systems and the A/C off.**
- **Inspect the ignition timing with the cooling fan off.**
- **When checking the ignition timing, shift the transmission to the neutral position.**

(8) Disconnect terminals 13 (TC) and 4 (CG) of the DLC3.
(9) Turn the ignition switch OFF.
(10) Remove the timing light.
(11) Install cylinder head cover No. 2 (see page IG-10).

7. INSPECT ENGINE IDLING SPEED

(a) When using an intelligent tester:
(1) Warm up and stop the engine.
(2) Connect the intelligent tester to the DLC3.
(3) Turn the ignition switch ON.
(4) Select the following menu items:
DIAGNOSIS / ENHANCED OBD II/ DATA LIST / PRIMARY / ENGINE SPD.
HINT:
Refer to the intelligent tester operator's manual for further details.
(5) Inspect the engine idling speed.
Idling speed:
550 to 650 rpm for manual transaxle
650 to 750 rpm for automatic transaxle
NOTICE:
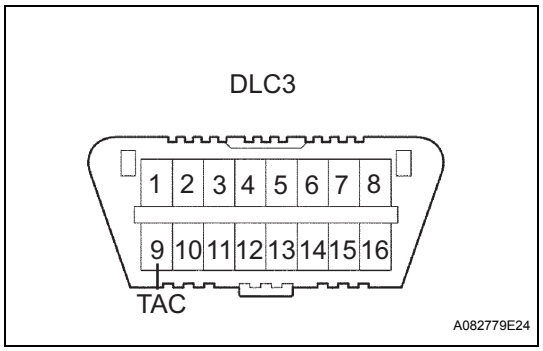
- **Turn all the electrical systems and the A/C off.**

- **Inspect the idling speed with the cooling fan off.**
- **When checking the idling speed, shift the transmission to either the neutral position or the parking position.**

(6) Turn the ignition switch OFF.
(7) Disconnect the intelligent tester from the DLC3.

(b) When not using an intelligent tester.
(1) Warm up and stop the engine.



(2) Install SST to terminal 9 (TAC) of the DLC3, then connect a tachometer.
SST 09843-18040
NOTICE:
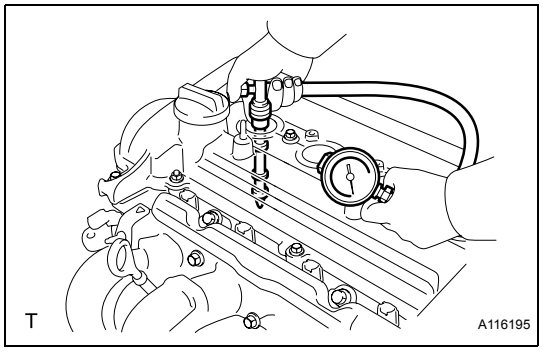
Examine the terminal numbers before connecting them. Connecting the wrong terminals could damage the engine.
(3) Turn the ignition switch ON.
(4) Inspect the engine idling speed.
Idling speed:
550 to 650 rpm for manual transaxle
650 to 750 rpm for automatic transaxle
(5) Turn the ignition switch OFF.
(6) Disconnect the tachometer.
(7) Remove SST from terminal 9 (TAC).

8. INSPECT COMPRESSION

(a) Warm up and stop the engine.
(b) Remove cylinder head cover No. 2 (see page IG-9).
(c) Remove the 4 ignition coils (see page IG-9).
(d) Remove the 4 spark plugs.
(e) Disconnect the 4 fuel injector connectors.



(f) Inspect the cylinder compression pressure.
(1) Insert a compression gauge into the spark plug hole.
(2) Fully open the throttle.
(3) While cranking the engine, measure the compression pressure.
Compression:
1,471kPa (15.0 kgf/cm^2, 213 psi)
Minimum pressure:
1,079 kPa (11.0 kgf/cm^2, 156 psi)
Difference between each cylinder:
98 kPa (1.0 kgf/cm^2, 14 psi) or less
NOTICE:
- **Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.**
- **Inspect the other cylinders in the same way.**
- **Measure the compression in as short a time as possible.**

(4) If the cylinder compression is low, pour a light coat of engine oil into the cylinder through the spark plug hole, then inspect it again.
HINT:
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If the pressure stays low, the valve may be stuck or seated improperly, or there may be leakage from the gasket.

(g) Connect the 4 fuel injector connectors.
(h) Install the 4 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
(i) Install the 4 ignition coils (see page IG-9).
(j) Install cylinder head cover No. 2 (see page IG-10).

EM

9. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe while idling.
(d) Check the CO/HC concentration during idling and when running at 2,500 rpm.
HINT:
When doing the 2 mode (with the engine idling/ running at 2,500 rpm) test, the measuring procedures are determined by applicable local regulations.
If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.
(1) Check the heated oxygen sensor operation (see page ES-276).
(2) See the table below for possible causes, then inspect the applicable parts and repair them if necessary.

CO	HC	Problems	Possible Causes
Normal	High	Rough idling	1. Faulty ignition: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leakage from intake and exhaust valves 4. Leakage from cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: – PCV hoses – Intake manifold – Throttle body – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idling (Black smoke from exhaust)	1. Restricted air cleaner filter element 2. Plugged PCV valve 3. Faulty EFI systems: – Faulty pressure regulator – Faulty engine coolant temperature sensor – Faulty mass air flow meter – Faulty ECM – Faulty injectors – Throttle body

DRIVE BELT

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

T

A115143E01

EM

EM

N*m (kgf*cm, ft.*lbf) : Specified torque

T

A116199E01

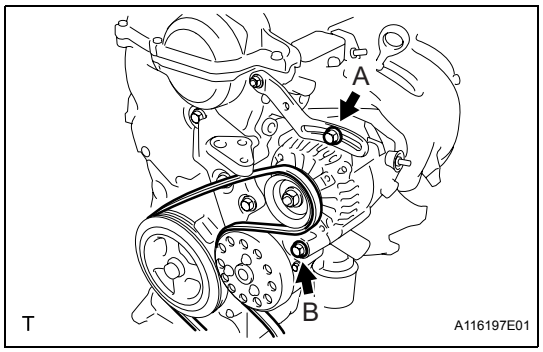
REMOVAL

1. REMOVE ENGINE UNDER COVER RH

2. REMOVE FAN AND GENERATOR V BELT

(a) Loosen bolts A and B.

(b) Release the fan and generator V belt tension and remove the fan and generator V belt.



INSPECTION

1. INSPECT FAN AND GENERATOR V BELT

(a) Visually check the belt for excessive wear, frayed cords etc. If any defects are found, replace the belt.
HINT:
- If any defects are found, replace the belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has pieces missing from the ribs, it should be replaced.

EM

INSTALLATION

1. INSTALL FAN AND GENERATOR V BELT

(a) Provisionally install the fan and generator V belt onto each pulley.

NOTICE:

Make sure that the V-belt is securely fitted into the rib groove of the pulley.

2. ADJUST FAN AND GENERATOR V BELT

(a) Insert an adjusting bar between the engine mounting bracket and generator assembly. Push the adjusting bar toward the vehicle front to adjust the generator V belt tension.

NOTICE:

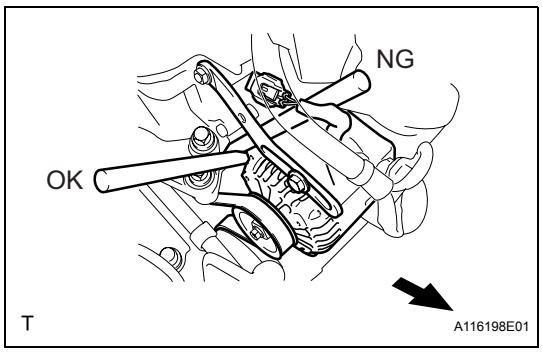
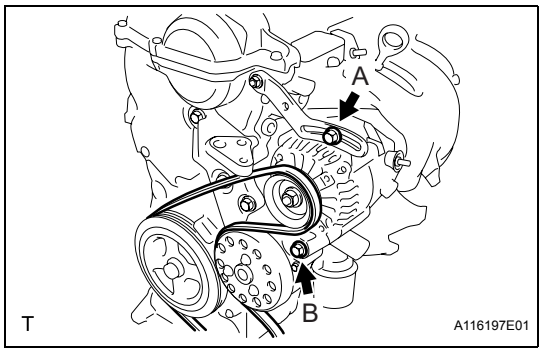
Do not insert the adjusting bar between the camshaft timing oil control valve assembly and generator assembly. It could damage the camshaft timing oil control valve assembly.



(b) First tighten bolt A, then tighten bolt B.

Torque: 19 N*m (189 kgf*cm, 14 ft.*lbf) for bolt A
54 N*m (551 kgf*cm, 40 ft.*lbf) for bolt B



3. INSPECT FAN AND GENERATOR V BELT

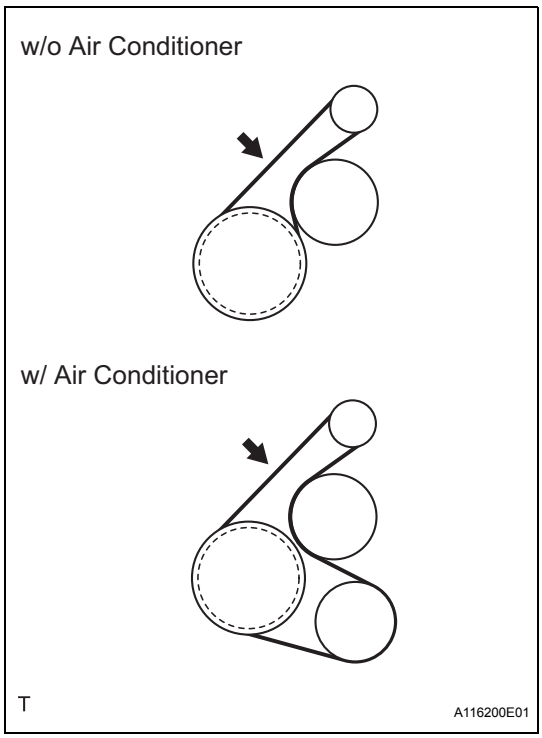
(a) Check the V belt deflection and tension.

Deflection

Item	Specified Condition
New belt	7.0 to 8.5 mm (0.28 to 0.33 in)
Used belt	11 to 13 mm (0.43 to 0.51 in)

Tension

Item	Specified Condition
New belt	539 to 637 N (55 to 65 kg, 121 to 143 ld)
Used belt	245 to 392 N (25 to 40 kg, 55 to 88 ld)



If the belt deflection is not as specified, adjust it.

HINT:

- Check the V belt deflection at the specified point.
- Check the drive belt deflection at the specified point.
- When installing a new belt, set its tension to the specified value.
- When inspecting a belt which has been used for over 5 minutes, apply the used belt specifications.

- When reinstalling a belt which has been used for over 5 minutes, adjust its deflection and tension to the intermediate values of each used belt specification.
- V-ribbed belt tension and deflection should be checked after 2 revolutions of engine cranking.
- When using a belt tension gauge, confirm its accuracy by using a master gauge first.

4. INSTALL ENGINE UNDER COVER RH

VALVE CLEARANCE

ADJUSTMENT

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
5. **DISCONNECT VENTILATION HOSE (See page FU-13)**
6. **DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
8. **INSPECT VALVE CLEARANCE**

HINT:
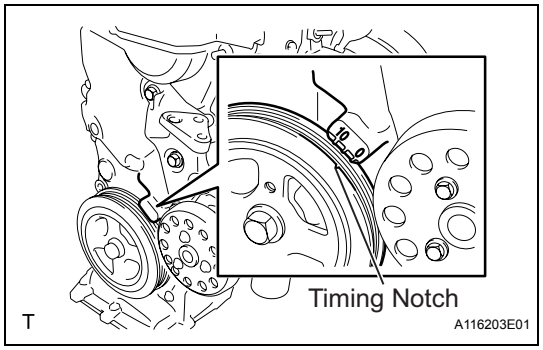
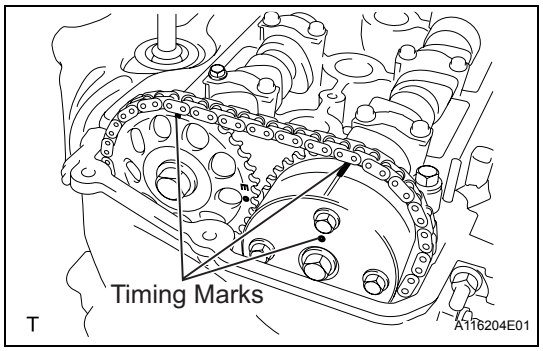
Inspect the valve clearance when the engine is cold.

(a) Set the No. 1 cylinder to TDC/compression.
(1) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.





(2) Check that both timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward, as shown in the illustration.
HINT:
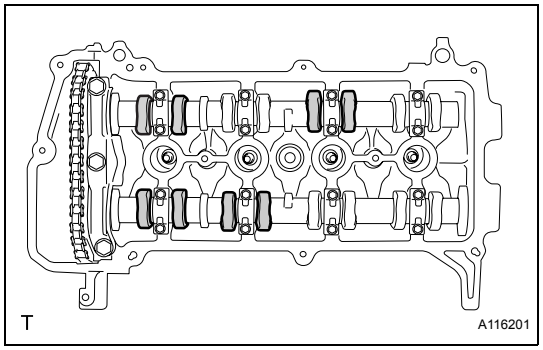
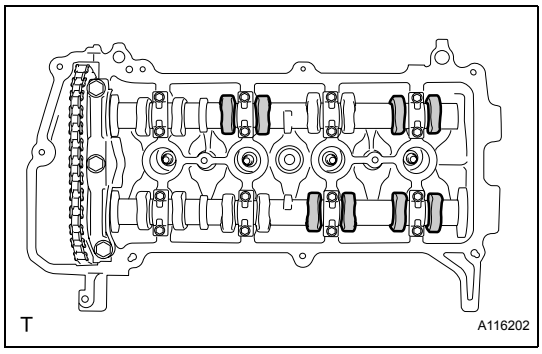
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

(b) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)



(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

(c) Turn the crankshaft 1 complete revolution (360°) and align its timing notch with the timing mark "0" of the oil pump.

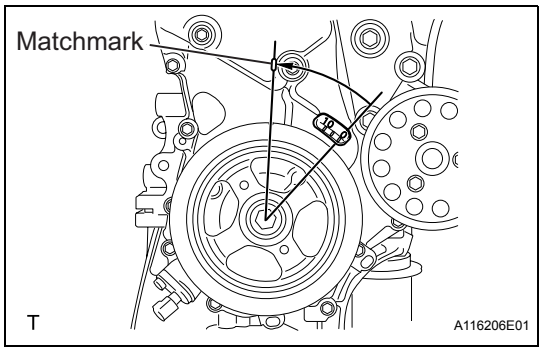


(d) Check the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to0.35 mm (0.010 to 0.014 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.



9. ADJUST VALVE CLEARANCE

NOTICE:
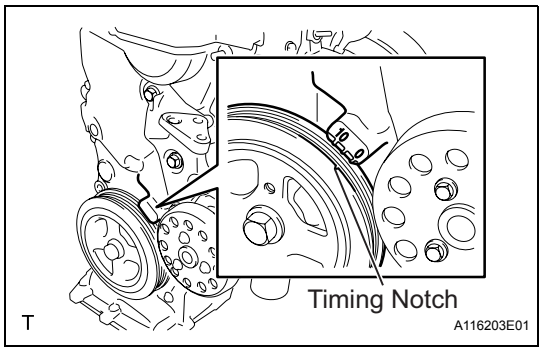
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.

(a) Remove the fan and generator V belt (See page EM-7).

(b) Remove the engine mounting insulator sub-assembly RH (See page LU-17).

(c) Set the No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.



(2) Check that both timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward, as shown in the illustration.
HINT:
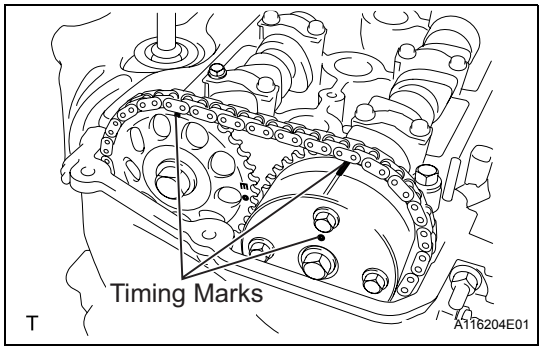
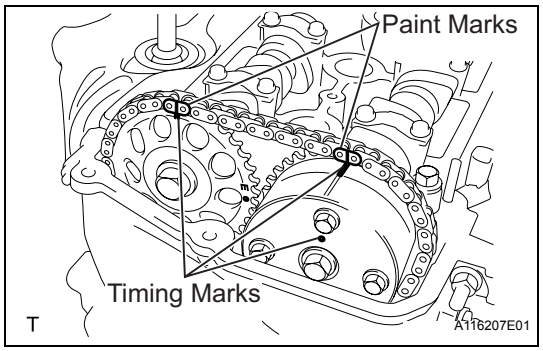
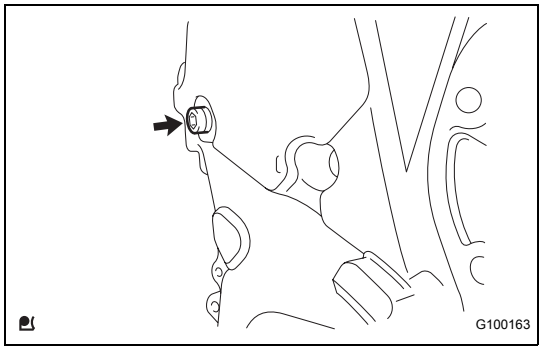
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

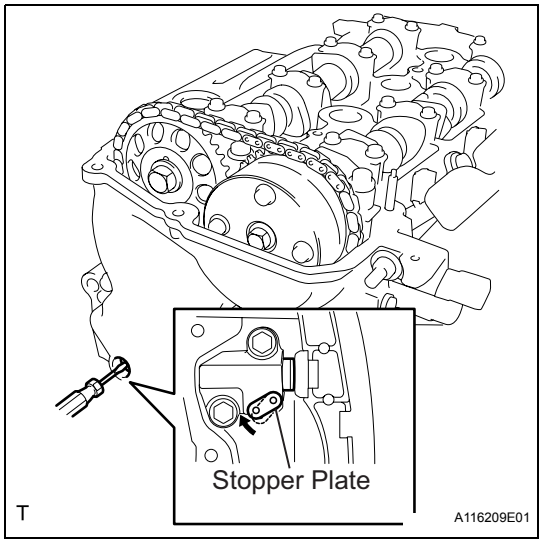




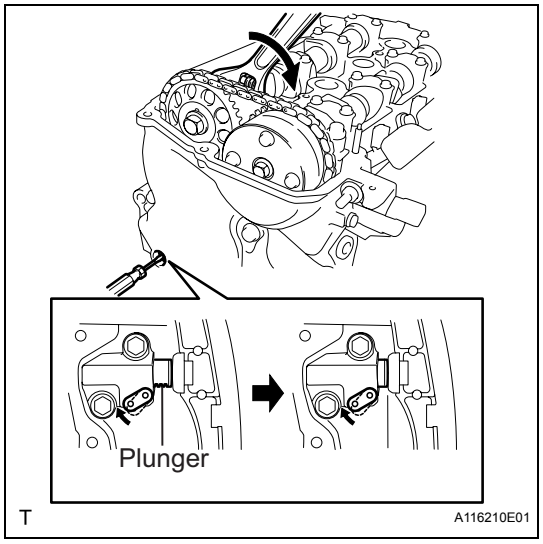
(d) Place paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



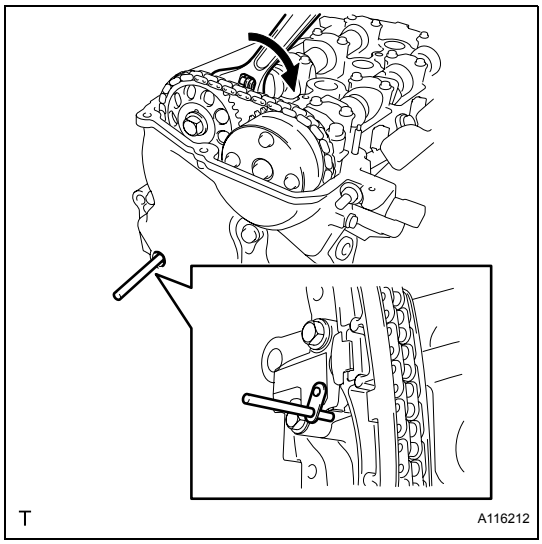
(e) Using an 8 mm hexagon wrench, remove the screw plug.



(f) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



(g) Using a wrench, rotate camshaft No. 2 clockwise to push in the plunger of the chain tensioner.



(h) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
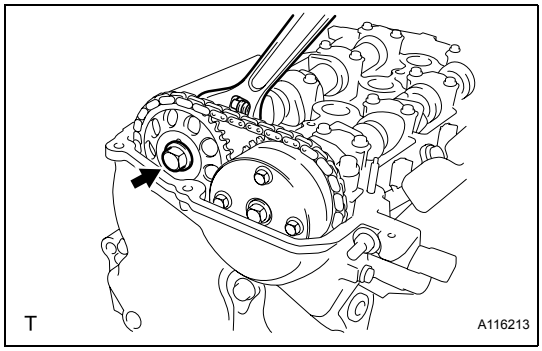
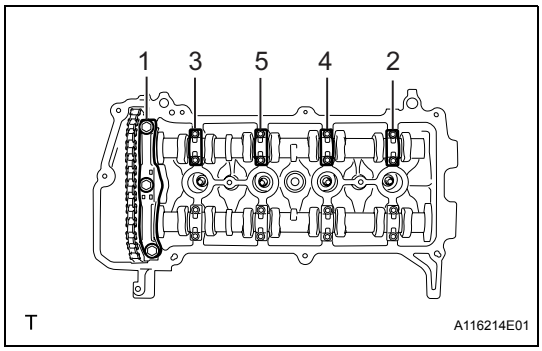
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that the bar does not come off.



(i) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and remove the fringe bolt.



(j) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
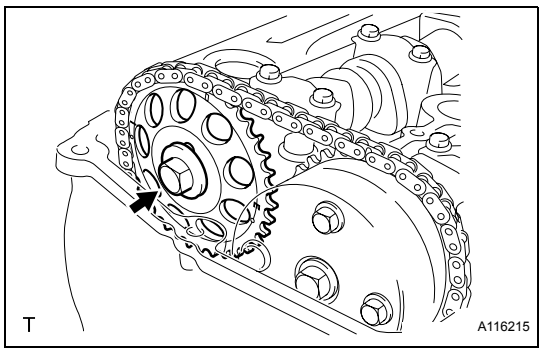
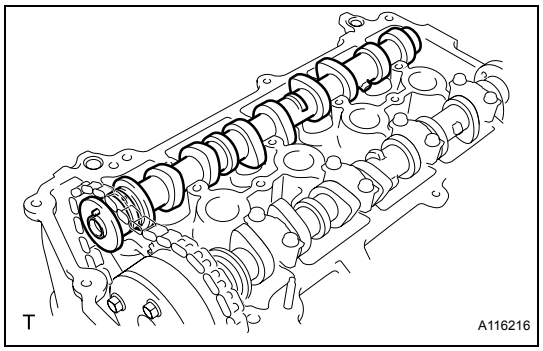
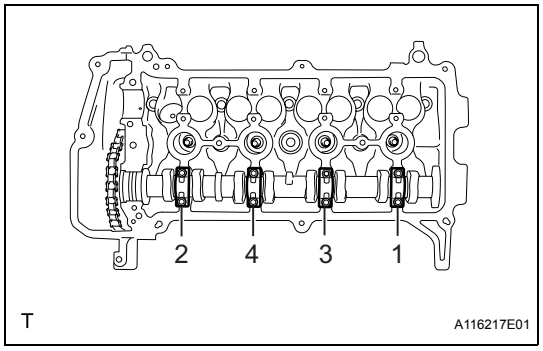
Loosen each bolt uniformly while keeping the camshaft level.



(k) Remove the fringe bolt and remove the camshaft timing sprocket.



(l) Remove camshaft No. 2.



(m) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.
NOTICE:
Loosen each bolt uniformly while keeping the camshaft level.

EM

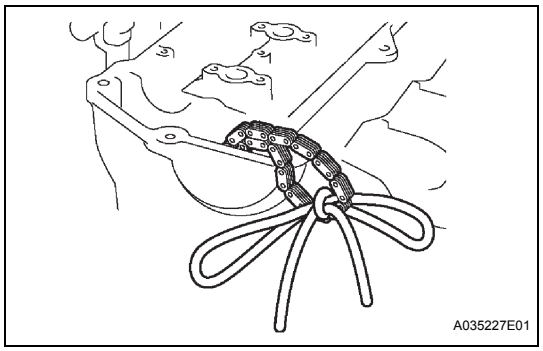
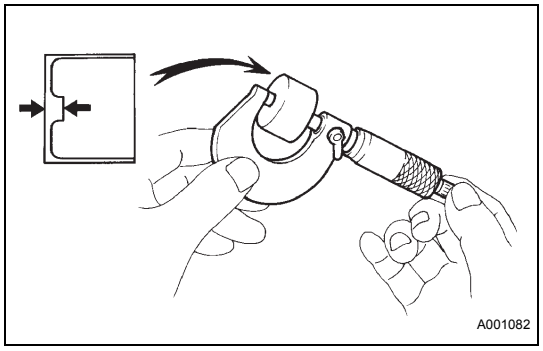
(n) Hold the chain by hand and remove the camshaft and the camshaft timing gear assembly.



(o) Tie the chain with a piece of string as shown in the illustration.
(p) Remove the 16 valve lifters.



(q) Using a micrometer, measure the thickness of the removed lifter.
(r) Calculate the thickness of a new lifter so that the valve clearance comes to within the specified values.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C - 0.20 mm (0.008 in.))
Exhaust A = B + (C - 0.30 mm (0.012 in.))

(s) Select a new lifter with a thickness as close to the calculated values as possible.
HINT:
Lifters are available in 35 sizes in increments of 0.020mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

Measured clearance mm(in.) / Installed lifter thickness mm(in.)	0.000 - 0.030 (0.0000 - 0.0012)	0.031 - 0.050 (0.0012 - 0.0020)	0.051 - 0.070 (0.0020 - 0.0028)	0.071 - 0.090 (0.0028 - 0.0035)	0.091 - 0.110 (0.0036 - 0.0043)	0.111 - 0.130 (0.0044 - 0.0051)	0.131 - 0.149 (0.0052 - 0.0059)	0.150 - 0.250 (0.0059 - 0.0098)	0.251 - 0.270 (0.0099 - 0.0106)	0.271 - 0.290 (0.0107 - 0.0114)	0.291 - 0.310 (0.0115 - 0.0122)	0.311 - 0.330 (0.0122 - 0.0130)	0.331 - 0.350 (0.0130 - 0.0138)	0.351 - 0.370 (0.0138 - 0.0146)	0.371 - 0.390 (0.0146 - 0.0154)	0.391 - 0.410 (0.0154 - 0.0161)	0.411 - 0.430 (0.0162 - 0.0169)	0.431 - 0.450 (0.0170 - 0.0177)	0.451 - 0.470 (0.0178 - 0.0185)	0.471 - 0.490 (0.0185 - 0.0193)	0.491 - 0.510 (0.0193 - 0.0201)	0.511 - 0.530 (0.0201 - 0.0209)	0.531 - 0.550 (0.0209 - 0.0217)	0.551 - 0.570 (0.0217 - 0.0224)	0.571 - 0.590 (0.0225 - 0.0232)	0.591 - 0.610 (0.0233 - 0.0240)	0.611 - 0.630 (0.0241 - 0.0248)	0.631 - 0.650 (0.0248 - 0.0256)	0.651 - 0.670 (0.0256 - 0.0264)	0.671 - 0.690 (0.0264 - 0.0272)	0.691 - 0.710 (0.0272 - 0.0280)	0.711 - 0.730 (0.0280 - 0.0287)	0.731 - 0.750 (0.0288 - 0.0295)	0.751 - 0.770 (0.0296 - 0.0303)	0.771 - 0.790 (0.0304 - 0.0311)	0.791 - 0.810 (0.0311 - 0.0319)	0.811 - 0.830 (0.0319 - 0.0327)	0.831 - 0.850 (0.0327 - 0.0335)	0.851 - 0.870 (0.0335 - 0.0343)	0.871 - 0.890 (0.0343 - 0.0350)	0.891 - 0.910 (0.0351 - 0.0358)	0.911 - 0.930 (0.0359 - 0.0366)

EM

Intake valve clearance (cold):
0.15 to 0.25 mm (0.006 to 0.010 in.)
EXAMPLE:
A 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0158 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 46 lifter.

26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)		

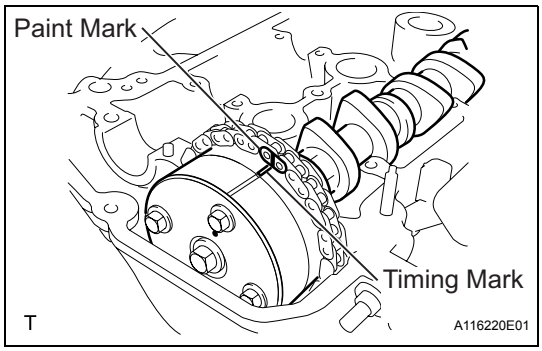
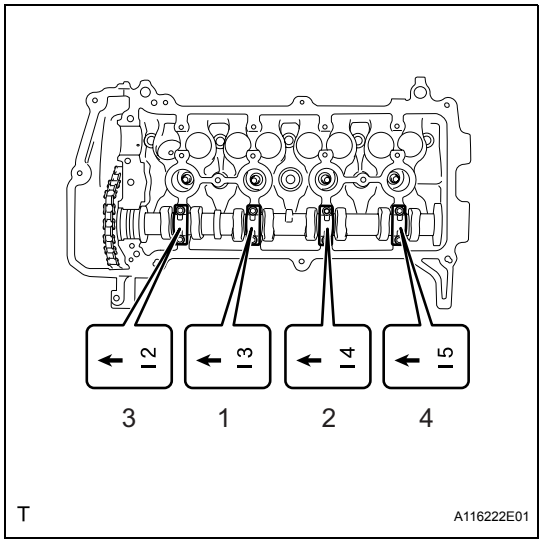
(t) Install the selected valve lifter.
(u) Apply a light coat of engine oil to the camshaft and camshaft journals.



(v) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned as shown in the illustration.



(w) Examine the front marks and the numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
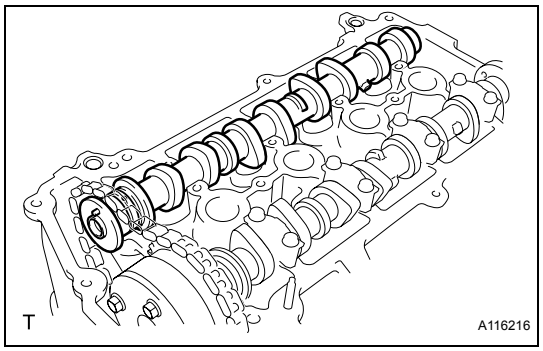
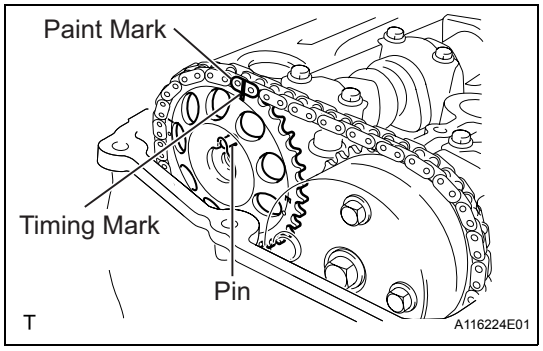
Tighten each bolt uniformly while keeping the camshaft level.



(x) Install camshaft No. 2.



(y) Hold the chain, and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.

(z) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.

EM

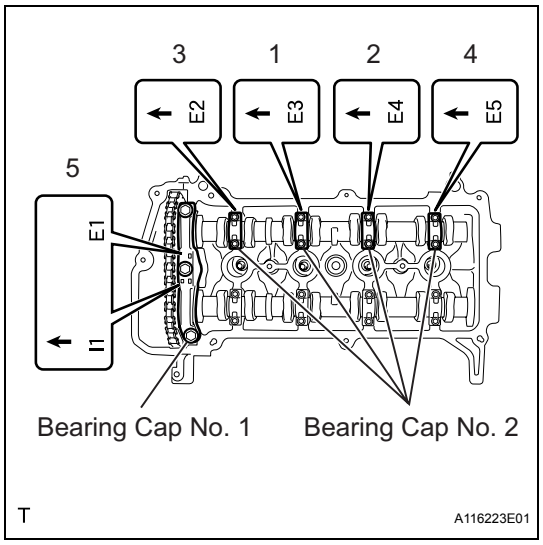
(aa) Provisionally install the flange bolt.



(ab) Examine the front marks and the numbers of camshaft bearing cap No. 1 and camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps, in the sequence shown in the illustration.

Torque: for bearing cap No. 2
13 N*m (129 kgf*cm, 9.4 ft.*lbf)
for bearing cap No. 1
23 N*m (235 kgf*cm, 17 ft.*lbf)

NOTICE:
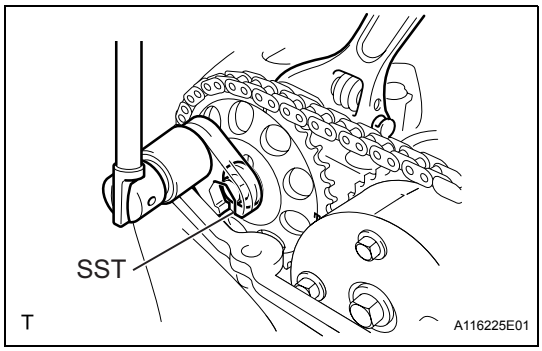
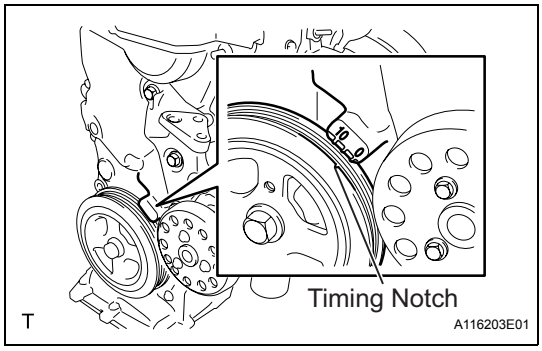
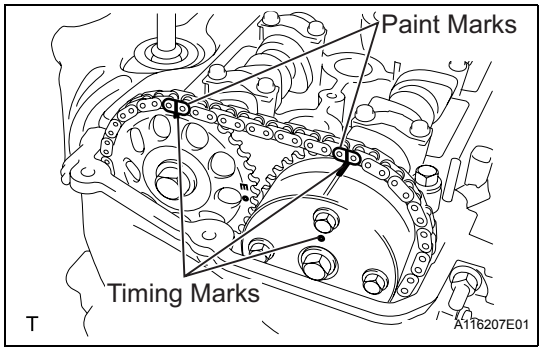
Tighten each bolt uniformly while keeping the camshaft level.



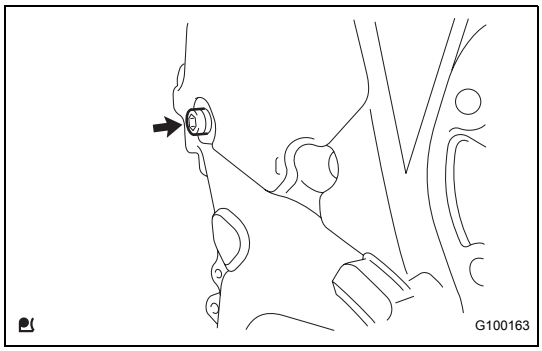
(ac) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and install the flange bolt.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
SST 09023-38400
(ad) Remove the bar from the timing chain tensioner.



(ae) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.



(af) Check that all the pairs of timing marks are aligned.
(ag) Apply adhesive to the 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(ah) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
(ai) Install the engine mounting insulator sub-assembly RH (See page LU-26). (for Hatchback)
(aj) Install the engine mounting insulator sub-assembly RH (See page LU-26). (for Sedan)
(ak) Install the fan and generator V belt (See page EM-7).
(al) Adjust the fan and generator V belt (See page EM-7).
(am) Inspect the fan and generator V belt (See page EM-8).

10. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)**
11. **CONNECT VENTILATION HOSE NO. 2 (See page FU-20)**
12. **CONNECT VENTILATION HOSE (See page FU-20)**
13. **INSTALL IGNITION COIL NO. 1 (See page IG-9)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
15. **CHECK FOR ENGINE OIL LEAKAGE**
16. **INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)**
17. **INSTALL ENGINE UNDER COVER RH**

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE FRONT WHEEL RH
3. REMOVE ENGINE UNDER COVER RH
4. DRAIN ENGINE OIL
5. DRAIN ENGINE COOLANT (See page CO-8)
6. REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)
7. REMOVE FAN AND GENERATOR V BELT (See page EM-7)
8. REMOVE GENERATOR ASSEMBLY (See page CH-10)
9. REMOVE IGNITION COIL NO. 1 (See page IG-9)
10. DISCONNECT VENTILATION HOSE (See page FU-13)
11. DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)
12. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)
13. REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)
14. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-18)
15. REMOVE CRANKSHAFT POSITION SENSOR (See page ES-403)
16. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-396)
17. REMOVE WATER PUMP PULLEY (See page CO-15)
18. REMOVE WATER PUMP ASSEMBLY (See page CO-15)
19. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-18)
20. REMOVE OIL PUMP ASSEMBLY (See page LU-19)
21. REMOVE OIL PUMP SEAL (See page LU-21)
22. REMOVE CHAIN TENSIONER ASSEMBLY NO. 1
    NOTICE:
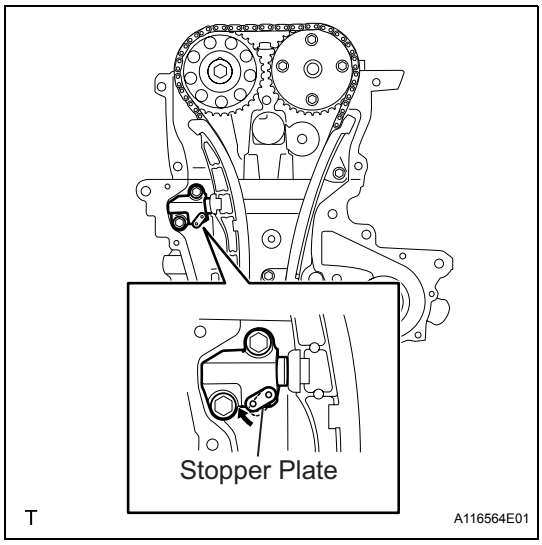
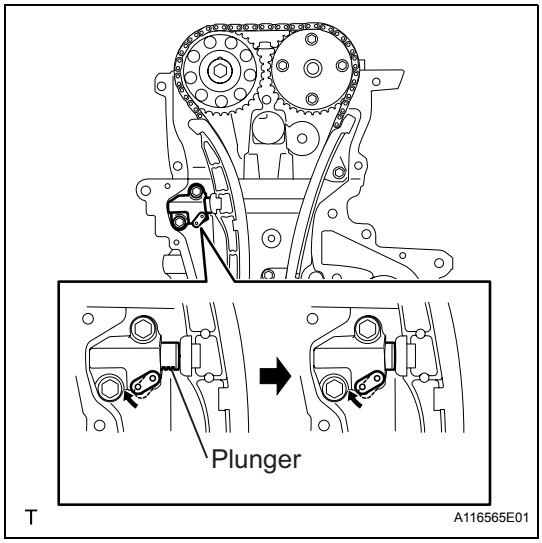
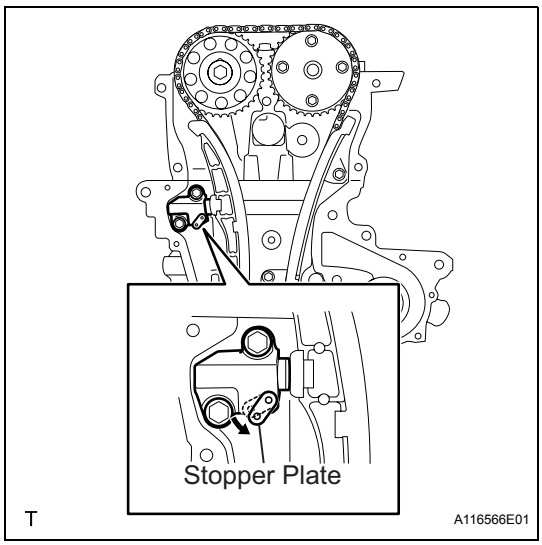
    - Do not rotate the crankshaft with the chain tensioner removed.
    - When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



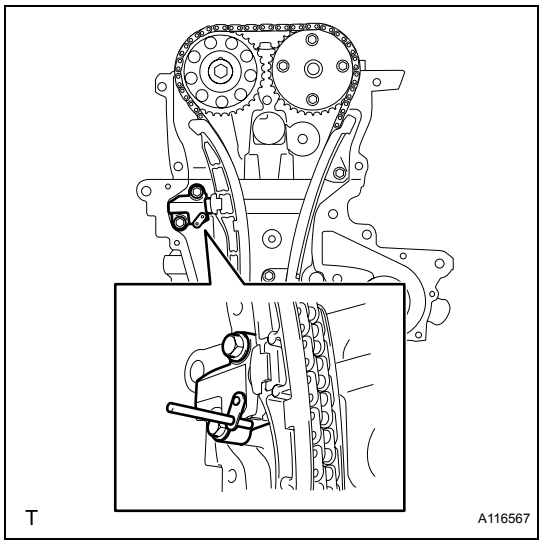
(a) Pull up the stopper plate and hold it with its lock released.



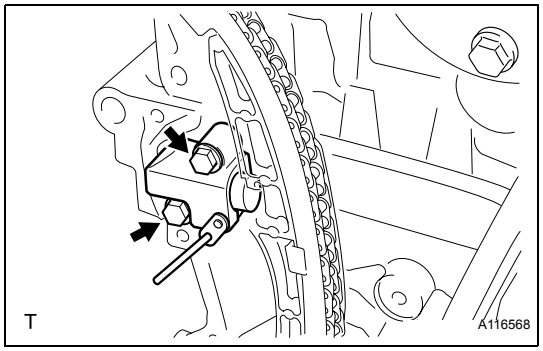
(b) Unlock the plunger of the tensioner and push it in to the end.



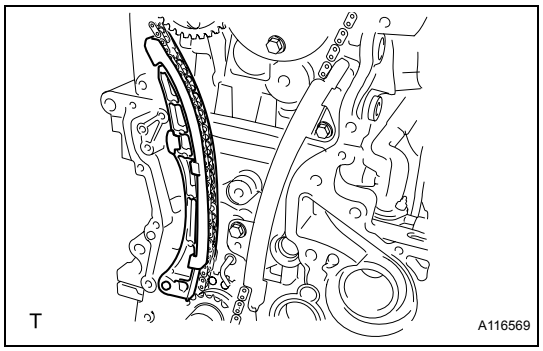
(c) Pull down the stopper plate with the plunger pushed to the end and lock the plunger.



(d) Insert a 3 mm (0.12 in.) diameter bar into the hole in the stopper plate and lock the plunger.

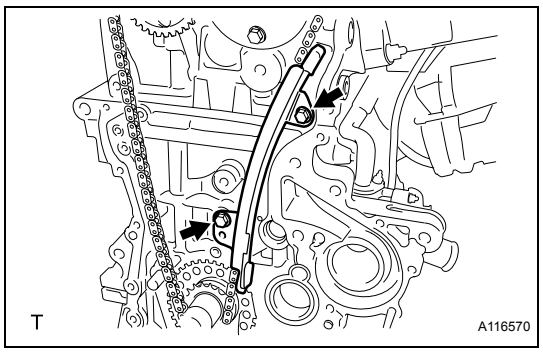


(e) Remove the 2 bolts and remove chain tensioner assembly No. 1.



23. REMOVE CHAIN TENSIONER SLIPPER

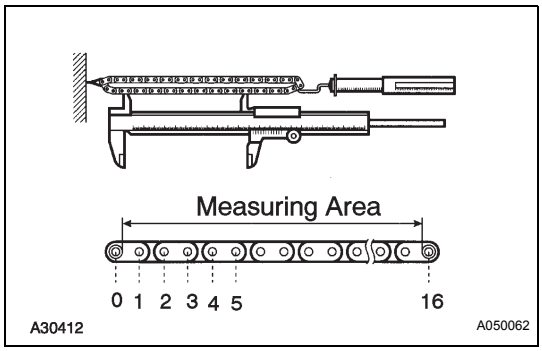
(a) Remove the chain tensioner slipper.



24. REMOVE CHAIN VIBRATION DAMPER NO. 1

(a) Remove the 2 bolts and remove chain vibration damper No. 1.

25. REMOVE CHAIN SUB-ASSEMBLY



INSPECTION

1. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, apply 140 N (14.3 kgf, 31.5 lb) to the timing chain and measure its length.

Maximum chain elongation:

123.2 mm (4.850 in.)

If the elongation is greater than the maximum, replace the chain.

HINT:

Perform the same measurement at 3 or more random places and calculate the average length.

INSTALLATION

1. INSTALL CHAIN SUB-ASSEMBLY

(a) Make sure that all the timing marks are in the positions (TDC) shown in the illustration.

HINT:

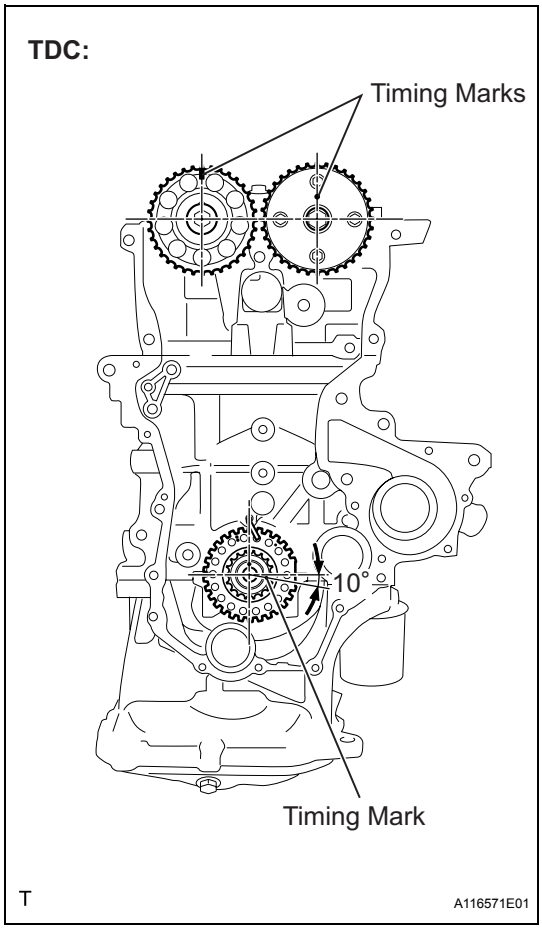
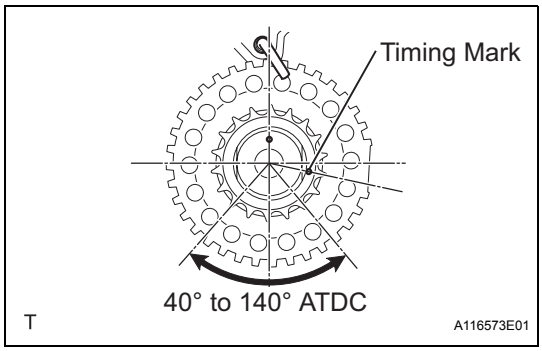
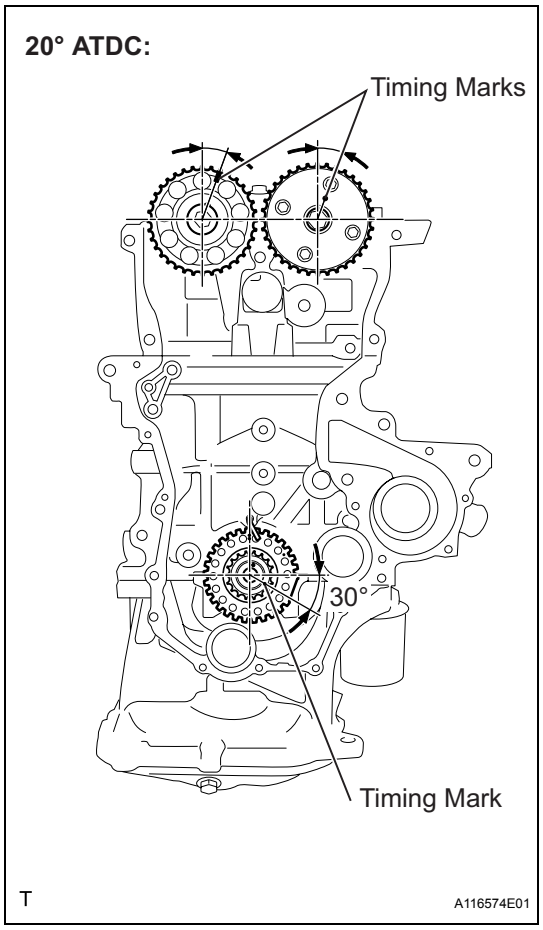
The positions of the timing marks may differ from the predetermined positions due to the force of the valve spring.



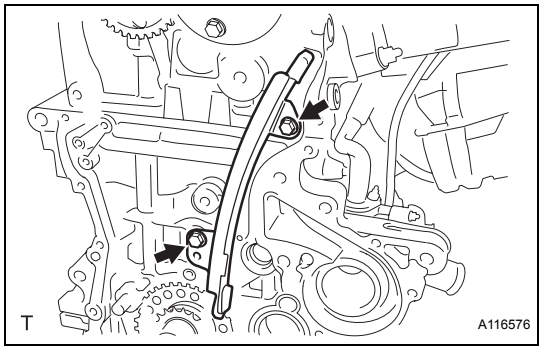
(b) Set the timing mark of the crankshaft in a position between 40 and 140°ATDC as illustrated.





(c) Set the camshaft timing gear and the camshaft timing sprocket in the positions (20°ATDC) shown in the illustration.

(d) Set the crankshaft in the position (20°ATDC) shown in the illustration.



(e) Install chain vibration damper No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

(f) Align the timing marks of the camshaft with the mark plates of the timing chain and install the timing chain.
HINT:
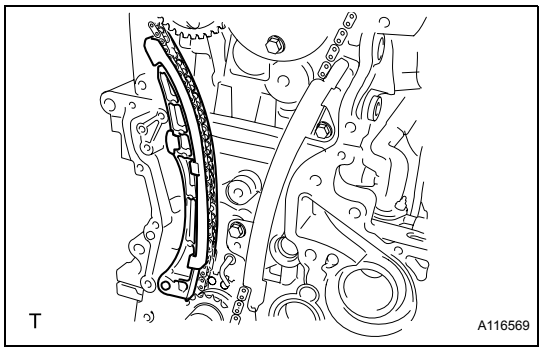
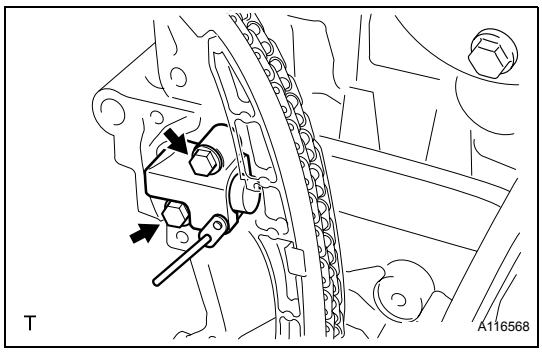
Align the timing marks with the mark plates while turning the hexagonal service portion of the camshaft using a wrench.



2. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper.



3. INSTALL CHAIN TENSIONER ASSEMBLY NO. 1
(a) Install chain tensioner assembly No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(b) Remove the bar from chain tensioner assembly No. 1.

4. INSTALL OIL PUMP SEAL (See page LU-21)

5. INSTALL OIL PUMP ASSEMBLY (See page LU-22)

6. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-26)

7. INSTALL WATER PUMP ASSEMBLY (See page CO-16)

8. INSTALL WATER PUMP PULLEY (See page CO-16)

9. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-397)

10. INSTALL CRANKSHAFT POSITION SENSOR (See page ES-403)

11. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-26)
12. INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)
13. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)
14. CONNECT VENTILATION HOSE NO. 2 (See page FU-20)
15. CONNECT VENTILATION HOSE (See page FU-20)
16. INSTALL IGNITION COIL NO. 1 (See page IG-9)
17. INSTALL GENERATOR ASSEMBLY (See page CH-17)
18. INSTALL FAN AND GENERATOR V BELT (See page EM-7)
19. ADJUST FAN AND GENERATOR V BELT (See page EM-7)
20. INSPECT FAN AND GENERATOR V BELT (See page EM-8)
21. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
22. ADD ENGINE OIL
23. ADD ENGINE COOLANT (See page CO-8)
24. CHECK ENGINE OIL LEVEL (See page LU-1)
25. CHECK FOR ENGINE OIL LEAKAGE
26. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)
27. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)
28. INSTALL ENGINE UNDER COVER RH
29. INSTALL FRONT WHEEL RH
    Torque: 103 N*m (1050 kgf*cm, 76 ft.*lbf)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
5. **DISCONNECT VENTILATION HOSE (See page FU-13)**
6. **DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
8. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
9. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)**
10. **REMOVE NO. 2 CAMSHAFT**

NOTICE:
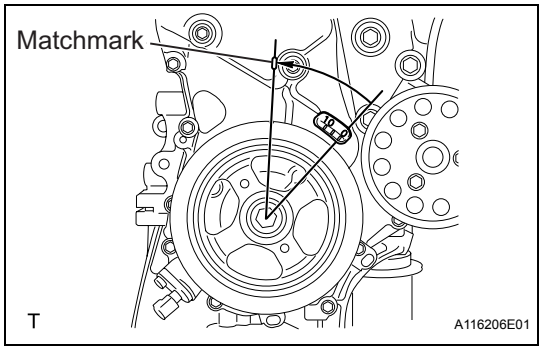
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40 ° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.



(a) Set the No. 1 cylinder to TDC / compression.
  (1) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.

  (2) Check that the timing marks on both the camshaft timing sprocket and the camshaft timing gear are facing upward, as shown in the illustration.
  HINT:
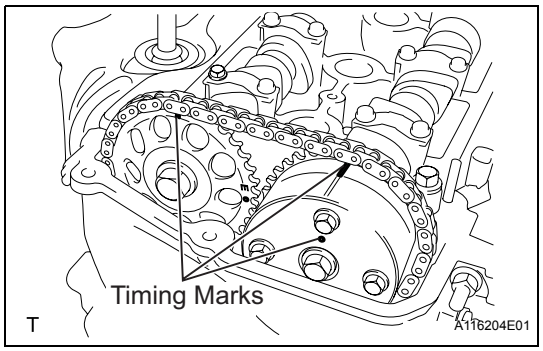
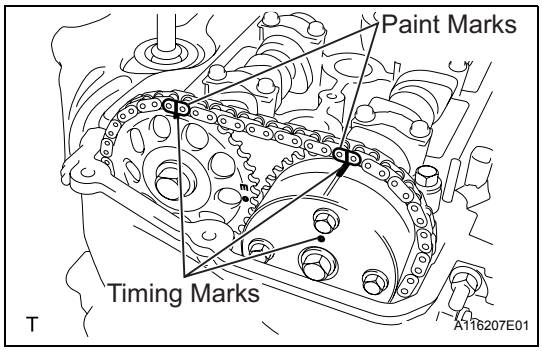
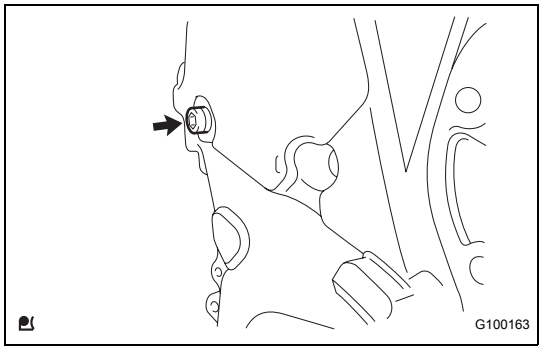
  If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

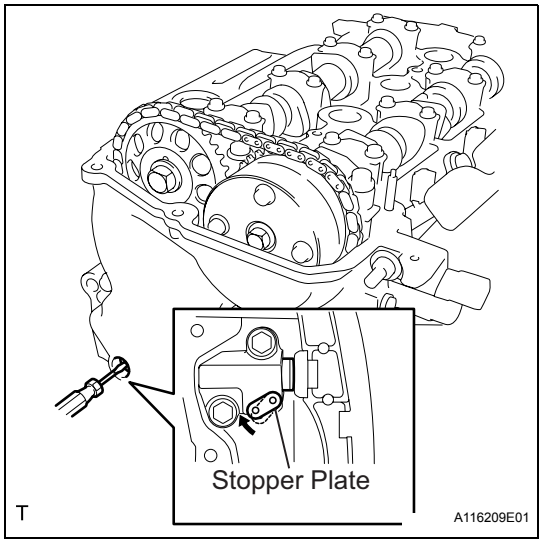




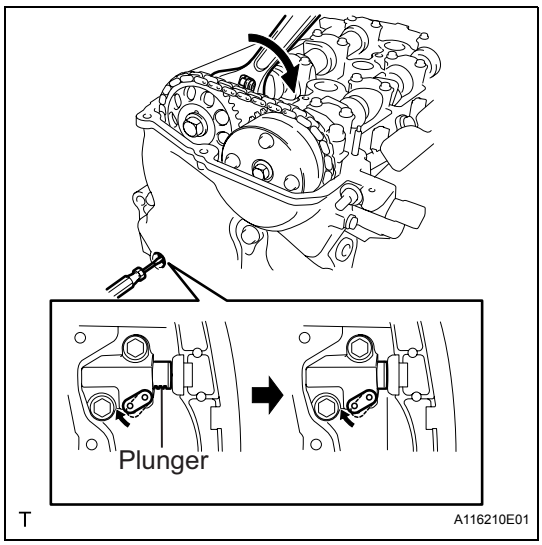
(b) Place paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



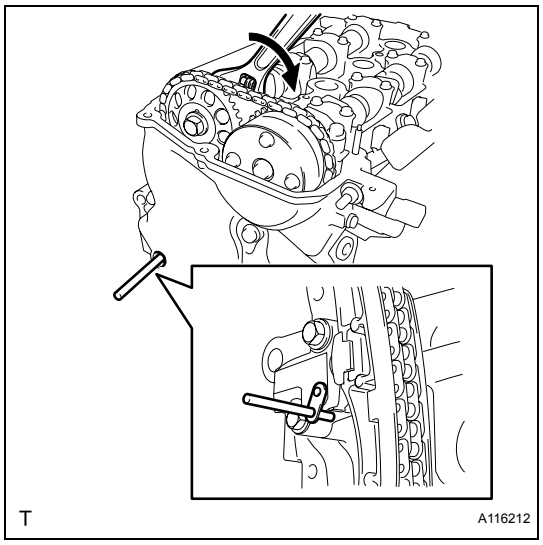
(c) Using an 8 mm hexagon wrench, remove the screw plug.



(d) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



(e) Using a wrench, rotate camshaft No. 2 clockwise to push in the plunger of the chain tensioner.



(f) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
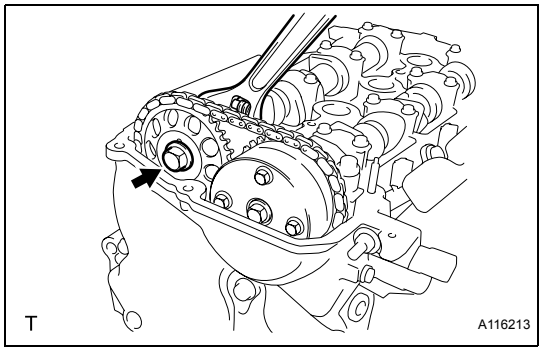
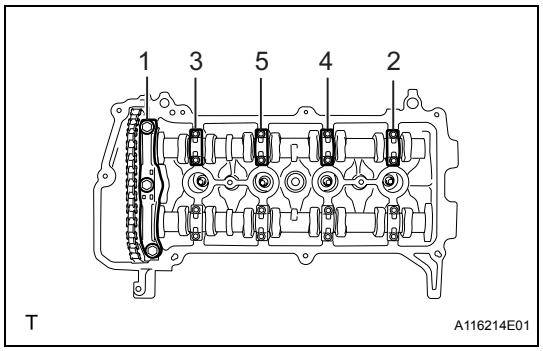
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that it does not come off.



(g) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and remove the flange bolt.



(h) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing caps No. 1 and No. 2.
NOTICE:
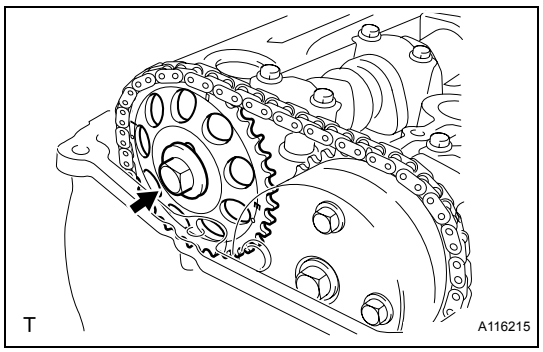
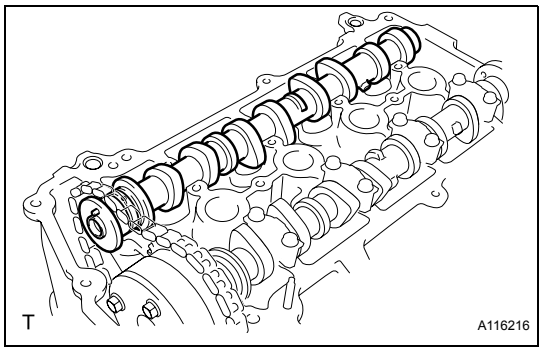
Loosen the bolts uniformly while keeping the camshaft level.



(i) Remove the flange bolt and remove the camshaft timing sprocket.



(j) Remove camshaft No. 2.

11. REMOVE CAMSHAFT

(a) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.

NOTICE:
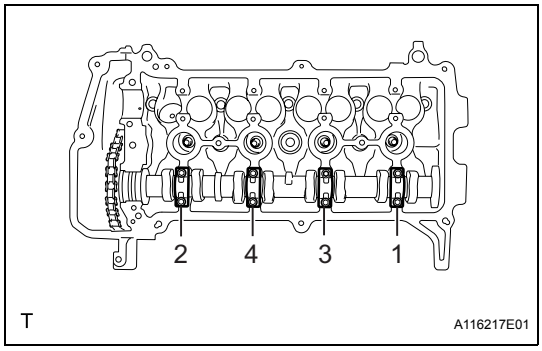
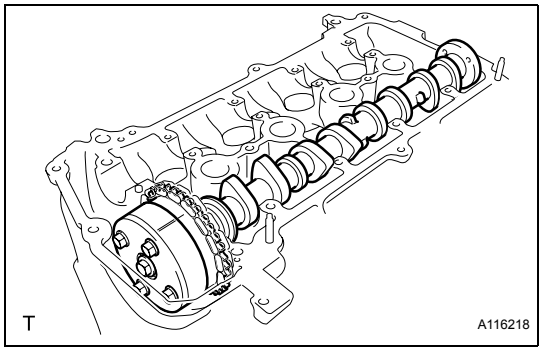
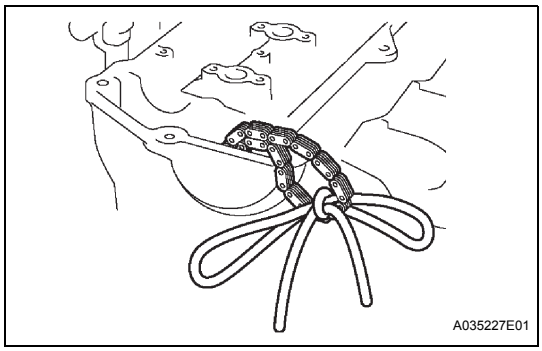
Loosen each bolt uniformly while keeping the camshaft level.



(b) Hold the chain by hand, and remove the camshaft and the camshaft timing gear assembly.



(c) Tie the chain with a piece of string as shown in the illustration.



12. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise and confirm that it is locked.

NOTICE:
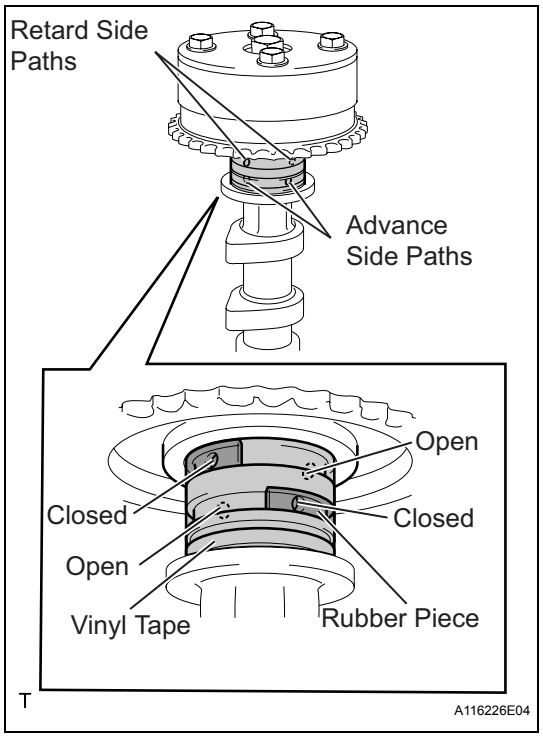
Do not damage the camshaft.



(b) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.
HINT:
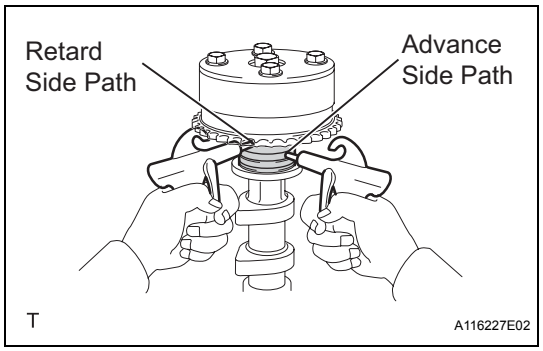
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(c) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(d) Apply air at about 150 kPa (1.5 kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).
NOTICE:
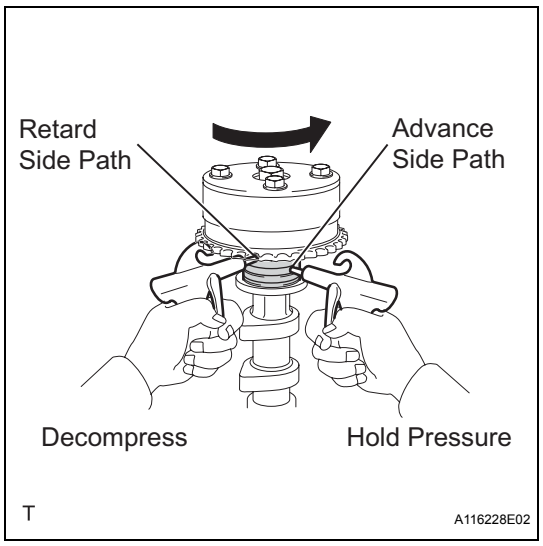
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.



(e) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released, and the camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
The camshaft timing gear assembly occasionally shifts to the retard side abruptly, if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

EM

(g) Remove the flange bolt and remove the camshaft timing gear assembly.
NOTICE:
- **Do not remove the other 4 bolts.**
- **When reusing the camshaft timing gear, unlock the lock pin inside the camshaft timing gear first.**

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of camshaft timing gear.

(1) Clamp the camshaft in a vice, and check that the camshaft timing gear is locked.

NOTICE:
Do not damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.

HINT:
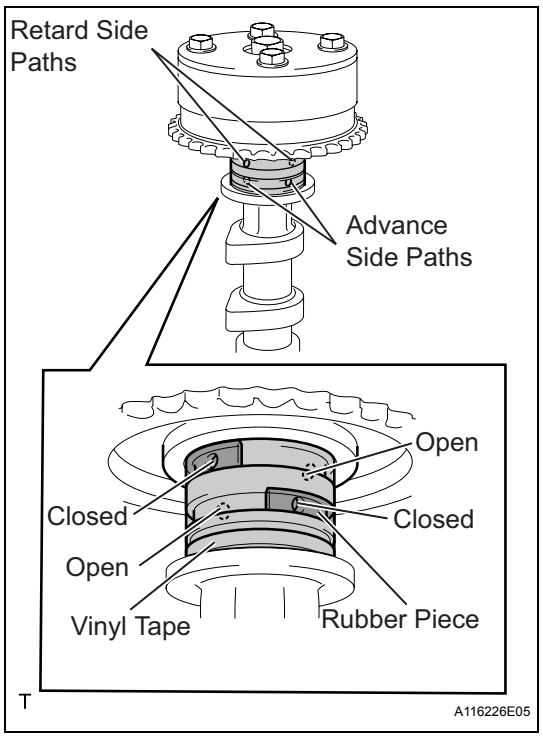
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(2) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(3) Apply air at about 150 kPa (1.5kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).

NOTICE:
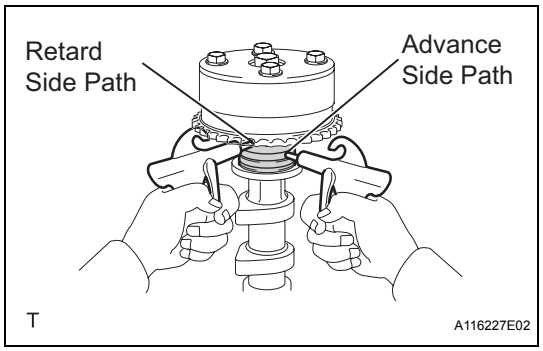
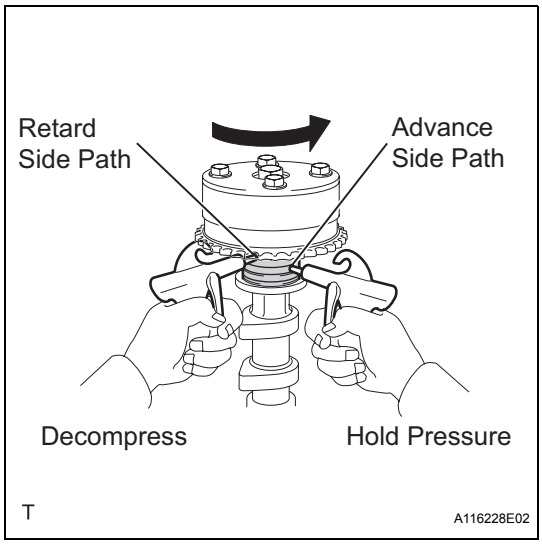
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.





(4) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(5) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

(c) Check the revolution.

(1) Rotate the valve timing assembly back and forth several times, except where the lock pin meets it at the most retarded angle. Check the movable range and that it rotates smoothly.
Standard:
Smooth movable range is about 22.5°
NOTICE:
Perform this check by hand, instead of using air pressure.

(d) Check that the gear locks in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked in the most retarded position.

INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

NOTICE:

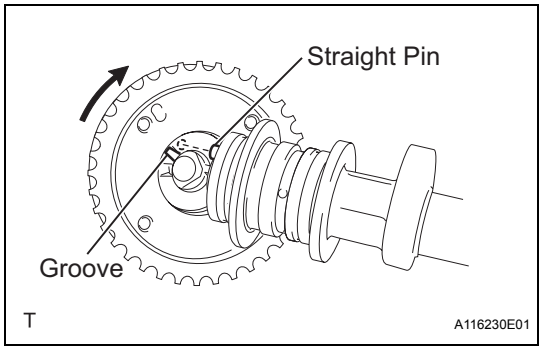
Install the camshaft timing gear assembly onto the camshaft with the lock pin of the camshaft timing gear assembly released.



(a) Put the camshaft timing gear assembly and camshaft together with the straight pin of the groove.

(b) Turn the camshaft timing gear assembly clockwise while pushing it gently toward the camshaft. When the pin fits the groove, push to ensure a good fit.

NOTICE:

Do not turn the camshaft timing gear in the retard direction (clockwise).

(c) Check that there is no clearance between the gear flange and the camshaft.

(d) Tighten the flange bolt with the camshaft timing gear fixed.

Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

NOTICE:

- **Do not lock the camshaft timing gear assembly when tightening the bolt.**
- **Release the lock pin of the camshaft timing gear assembly first, and tighten the bolt when the lock pin is locked in the most retarded position.**
- **Tightening the bolts with the lock pin locked could cause breakage of the lock pin.**

(e) Check that the camshaft timing gear assembly moves smoothly in the retard direction (clockwise) and is locked in the most retarded position.

2. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft and camshaft journals.

(b) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned as shown in the illustration.

EM

(c) Examine the front marks and numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
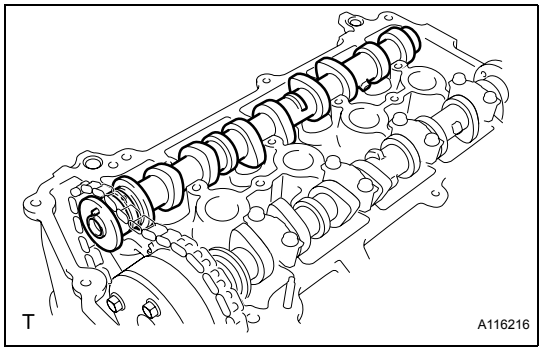
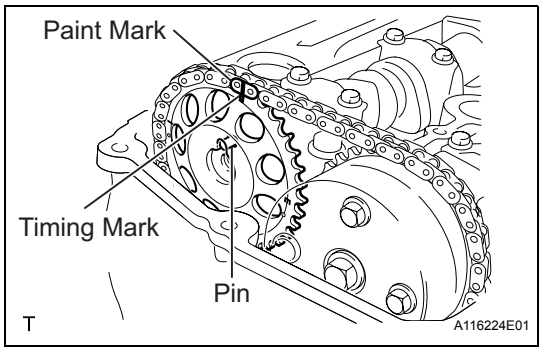
Tighten each bolt uniformly while keeping the camshaft level.



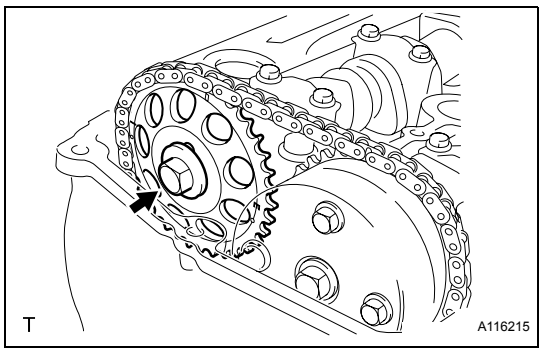
3. INSTALL NO. 2 CAMSHAFT

(a) Install camshaft No. 2.

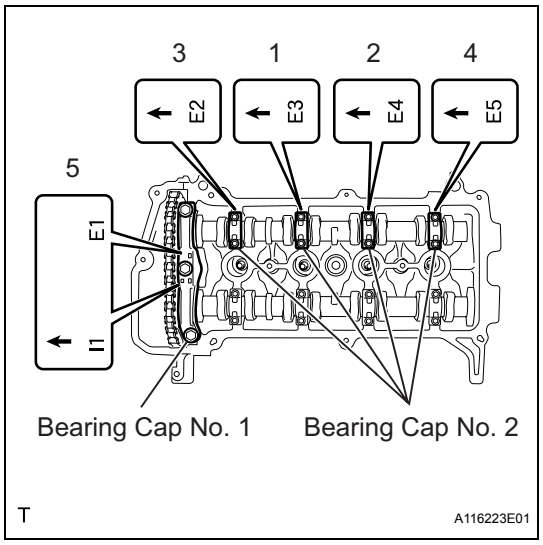


(b) Hold the chain and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.

(c) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.



(d) Provisionally install the flange bolt.



(e) Examine the front marks and numbers on camshaft bearing caps No. 1 and No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: for bearing cap No. 2
13 N*m (129 kgf*cm, 9.4 ft.*lbf)
for bearing cap No. 1
23 N*m (235 kgf*cm, 17 ft.*lbf)
NOTICE:
Tighten each bolt uniformly while keeping the camshaft level.

EM

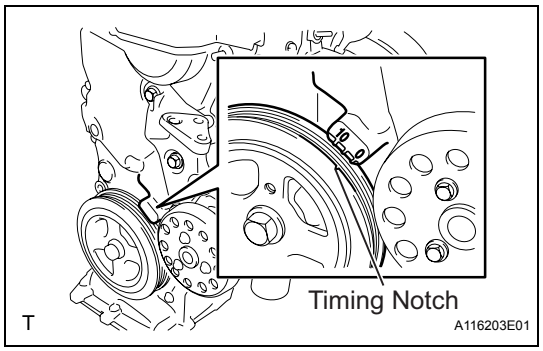
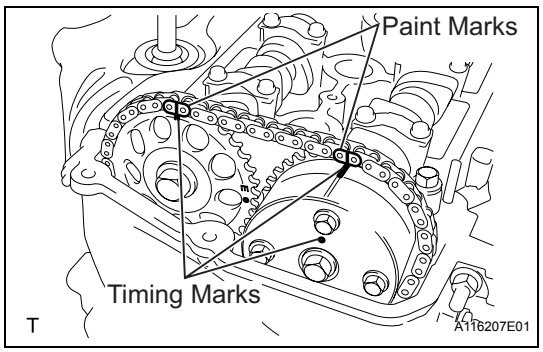
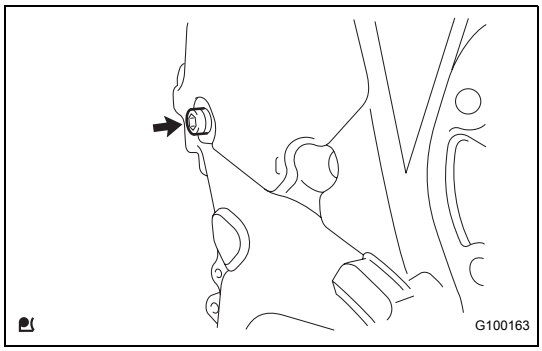
(f) Using a wrench, hold the hexagonal lobe of camshaft No. 2 and install the flange bolt.
SST 09023-38400
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
(g) Remove the bar from the timing chain tensioner.



(h) Turn the crankshaft damper and align its timing notch with the timing mark "0" of the oil pump.



(i) Check that all the pairs of timing marks are aligned.
(j) Apply adhesive to the end 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(k) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

4. **INSPECT VALVE CLEARANCE (See page EM-9)**
5. **ADJUST VALVE CLEARANCE (See page EM-10)**
6. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)**
7. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**
8. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**
9. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**

9. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
10. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-18)**
11. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
12. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
13. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
14. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-10)**
15. **REMOVE FRONT WIPER MOTOR AND LINK (for Hatchback) (See page WW-19)**
16. **REMOVE FRONT WIPER MOTOR AND LINK (for Sedan) (See page WW-10)**
17. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-122)**
18. **REMOVE FRONT AIR SHUTTER SEAL RH (for Sedan) (See page ES-432)**
19. **REMOVE COWL TOP PANEL OUTER (for Hatchback) (See page EM-123)**
20. **REMOVE COWL TOP PANEL OUTER (for Sedan) (See page ES-432)**
21. **REMOVE BATTERY**
22. **REMOVE BATTERY TRAY**
23. **REMOVE FRONT WHEEL RH**

24. REMOVE ENGINE UNDER COVER RH

25. DRAIN ENGINE OIL

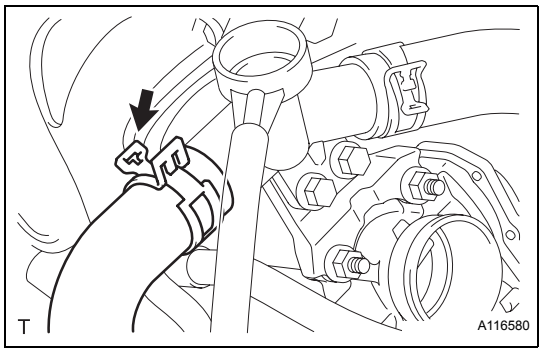
26. DRAIN ENGINE COOLANT (See page CO-8)

27. REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)

28. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-410)

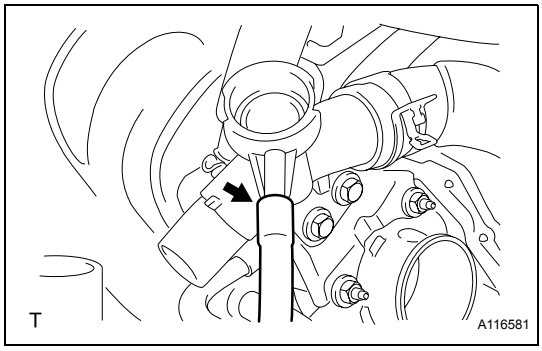
29. DISCONNECT RADIATOR HOSE NO. 3

(a) Disconnect radiator hose No. 3.



30. DISCONNECT RESERVE TANK HOSE

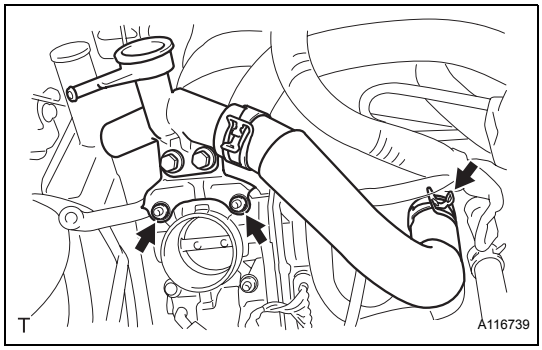
(a) Disconnect the reserve tank hose.



31. REMOVE WATER FILLER SUB-ASSEMBLY

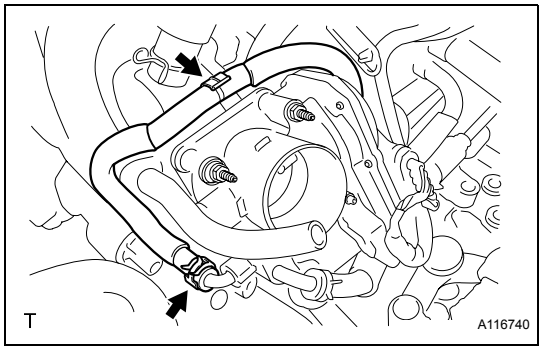
(a) Separate radiator hose No. 1 from the cylinder head.

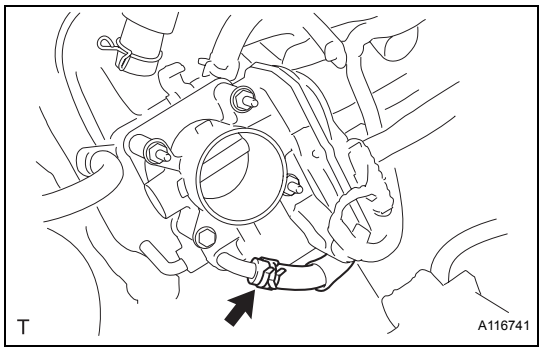
(b) Remove the 2 nuts and remove the water filler sub-assembly.



32. DISCONNECT WATER BY-PASS HOSE NO. 2

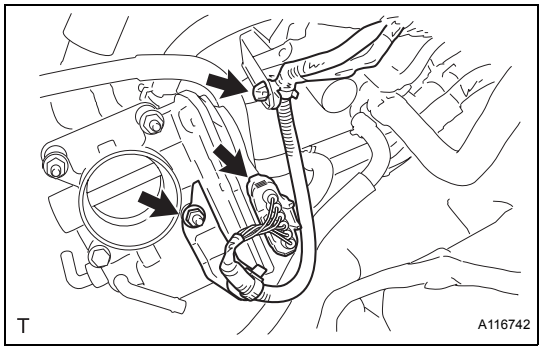
(a) Disconnect water by-pass hose No. 2.





33. DISCONNECT WATER BY-PASS HOSE

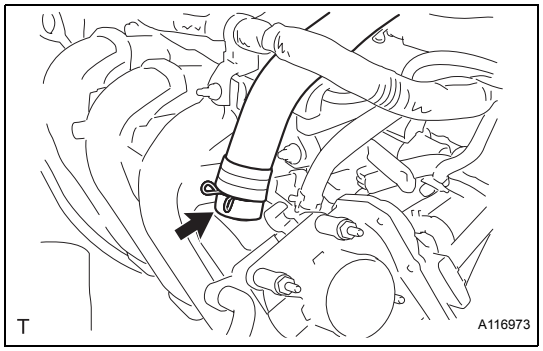
(a) Disconnect the water by-pass hose.



34. DISCONNECT THROTTLE WITH MOTOR BODY CONNECTOR

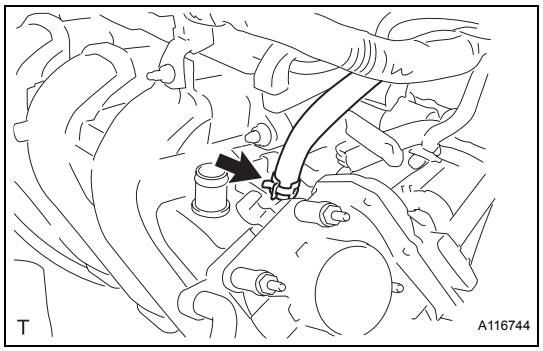
(a) Separate the wire harness clamp.

(b) Remove the nut and separate the throttle with motor body connector.



35. DISCONNECT VENTILATION HOSE

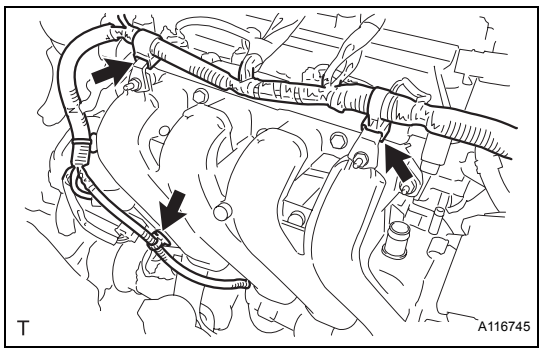
(a) Disconnect the ventilation hose.



36. DISCONNECT UNION TO CONNECTOR TUBE HOSE

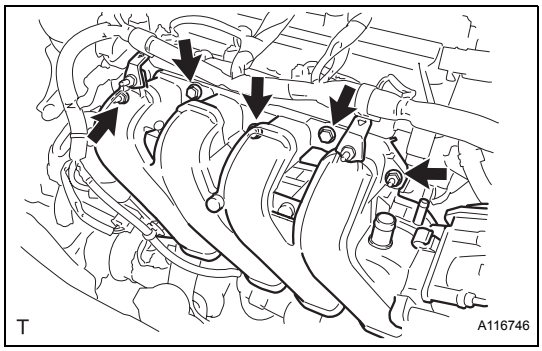
(a) Disconnect the union to connector tube hose.

37. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

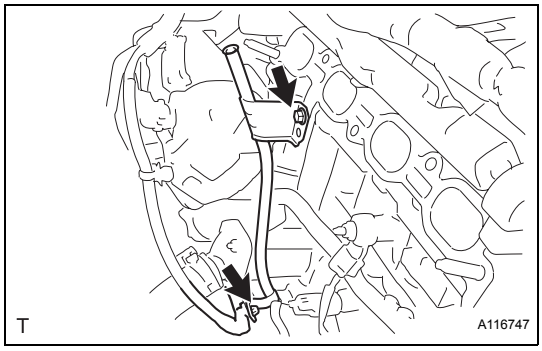


38. REMOVE INTAKE MANIFOLD

(a) Separate the 3 wire harness clamps shown in the illustration.



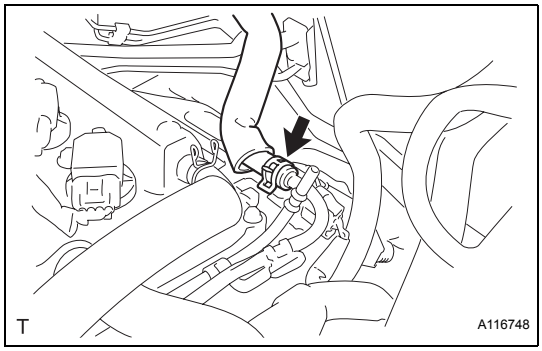
(b) Remove the 3 bolts and 2 nuts and remove the intake manifold.



39. REMOVE OIL LEVEL GAUGE GUIDE

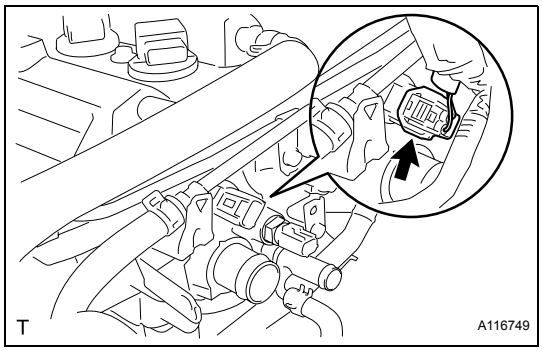
(a) Remove the wire harness clamp and the bolt and remove the oil level gauge guide.

40. DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-14)



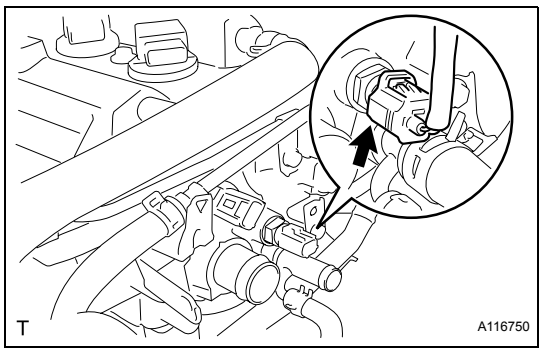
41. DISCONNECT BOOSTER VACUUM TUBE

(a) Disconnect the booster vacuum tube.



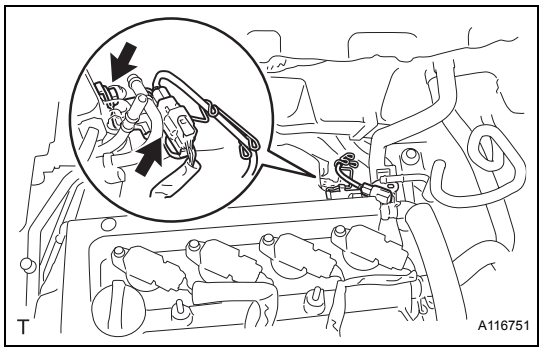
42. DISCONNECT CAMSHAFT POSITION SENSOR CONNECTOR

(a) Disconnect the camshaft position sensor connector.



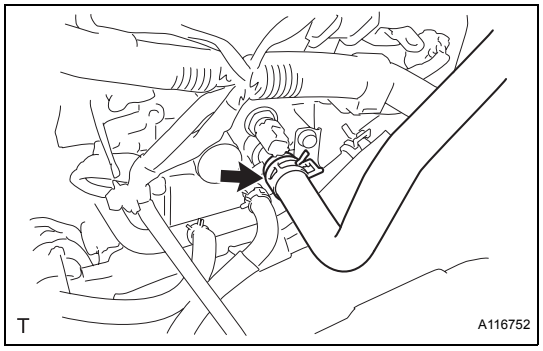
43. DISCONNECT ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR

(a) Disconnect the engine coolant temperature sensor connector.



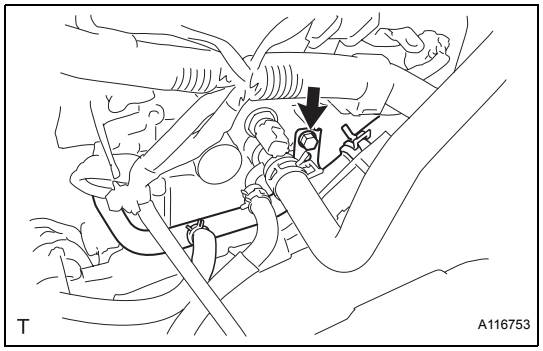
44. DISCONNECT HEATED OXYGEN SENSOR CONNECTOR

(a) Remove the bolts and separate the sensor bracket.
(b) Disconnect the heated oxygen sensor connector.



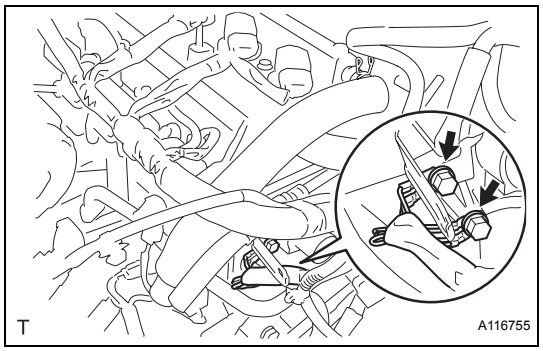
45. DISCONNECT HEATER WATER INLET HOSE A

(a) Disconnect heater water inlet hose A.



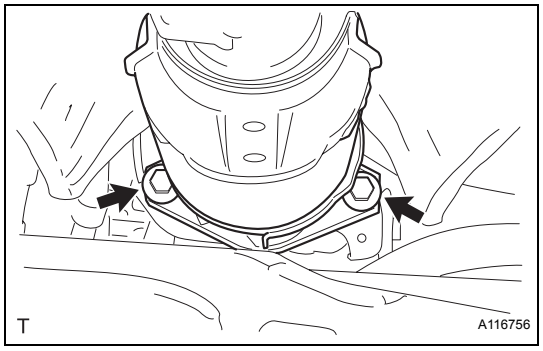
46. SEPARATE WATER BY-PASS PIPE NO. 1

(a) Remove the bolt and separate water by-pass pipe No. 1.



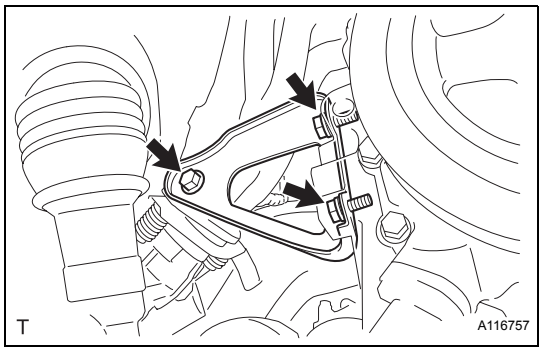
47. DISCONNECT WIRE HARNESS

(a) Remove the 2 bolts and disconnect the wire harness.



48. SEPARATE EXHAUST PIPE ASSEMBLY FRONT

(a) Remove the 2 bolts and 2 compression springs and separate the exhaust pipe assembly front.



49. **REMOVE MANIFOLD SUPPORT BRACKET**
    (a) Remove the 3 bolts and remove the manifold support bracket.
50. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
51. **REMOVE GENERATOR ASSEMBLY (See page CH-10)**
52. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
53. **REMOVE VENTILATION HOSE (See page FU-13)**
54. **REMOVE VENTILATION HOSE NO. 2 (See page FU-13)**
55. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
56. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)**
57. **REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-18)**
58. **REMOVE CRANKSHAFT POSITION SENSOR (See page ES-403)**
59. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-396)**
60. **REMOVE WATER PUMP PULLEY (See page CO-15)**
61. **REMOVE WATER PUMP ASSEMBLY (See page CO-15)**
62. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-17)**
63. **REMOVE OIL PUMP ASSEMBLY (See page LU-19)**
64. **REMOVE OIL PUMP SEAL (See page LU-21)**
65. **REMOVE CHAIN TENSIONER ASSEMBLY NO. 1 (See page EM-33)**
66. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-35)**
67. **REMOVE CHAIN VIBRATION DAMPER NO. 1 (See page EM-35)**
68. **REMOVE CHAIN SUB-ASSEMBLY**
69. **REMOVE CAMSHAFT**
    NOTICE:
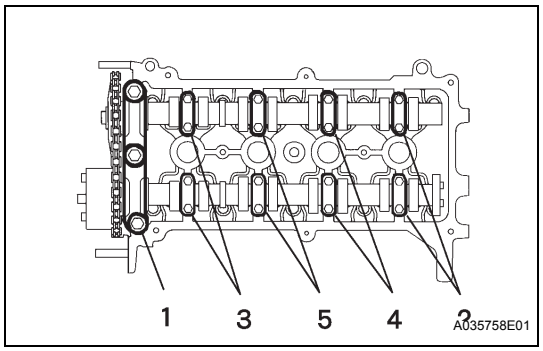
    When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



(a) Using several steps, uniformly loosen and remove the 19 bearing cap bolts in the sequence shown in the illustration, and then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
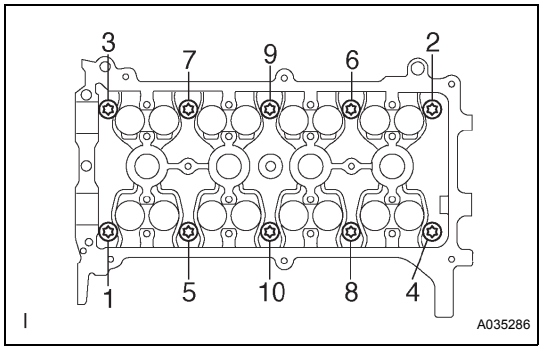
Loosen each bolt uniformly while keeping the camshaft level.
(b) Remove the camshaft and camshaft No. 2.



70. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts with an 8 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 10 plate washers.
NOTICE:
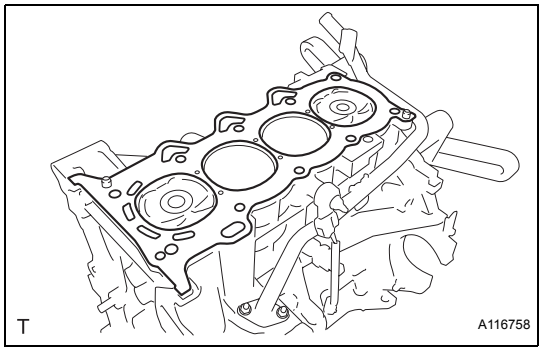
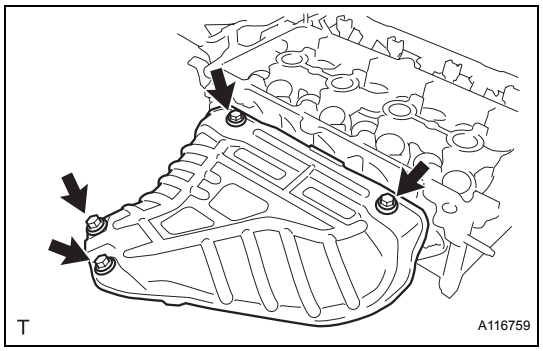
- **Do not drop the washers into the cylinder head.**
- **Head warpage or cracking could result from removing the bolts in the wrong order.**



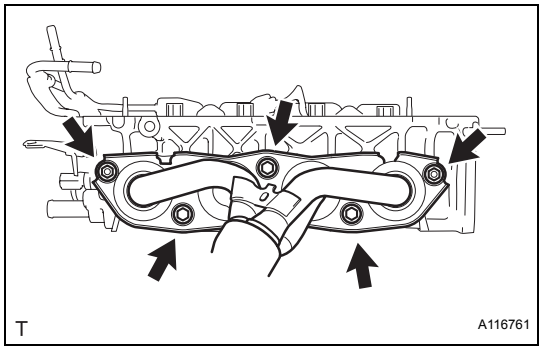
71. REMOVE CYLINDER HEAD GASKET

(a) Remove the cylinder head gasket.



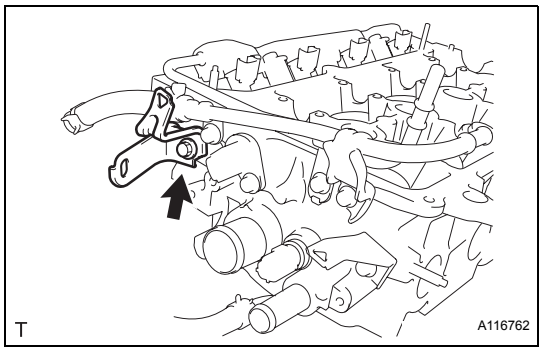
72. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO. 1

(a) Remove the 4 bolts and remove exhaust manifold heat insulator No. 1.



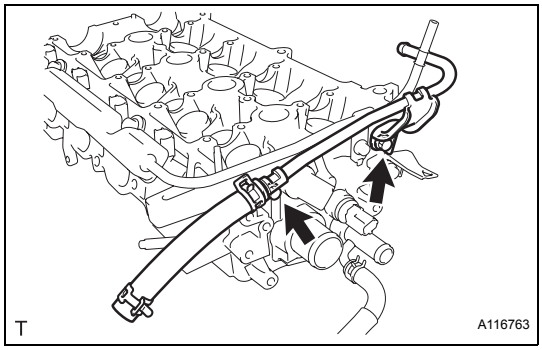
73. REMOVE EXHAUST MANIFOLD

(a) Remove the 3 bolts and 2 nuts and remove the exhaust manifold.



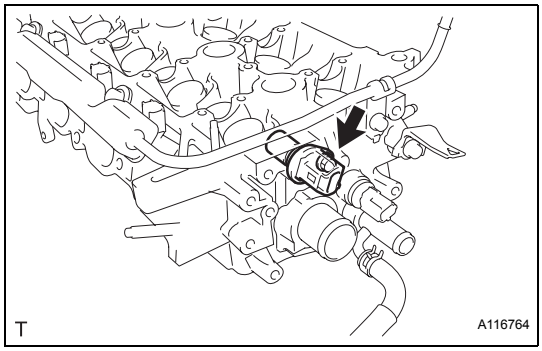
74. REMOVE HARNESS BRACKET

(a) Remove the bolt and remove the harness bracket.



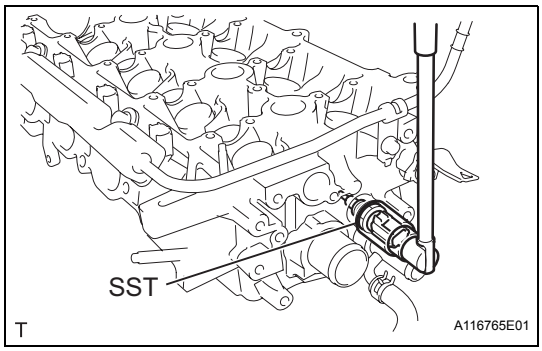
75. REMOVE BOOSTER VACUUM TUBE

(a) Remove the 2 bolts and remove the booster vacuum tube.



76. REMOVE CAMSHAFT POSITION SENSOR

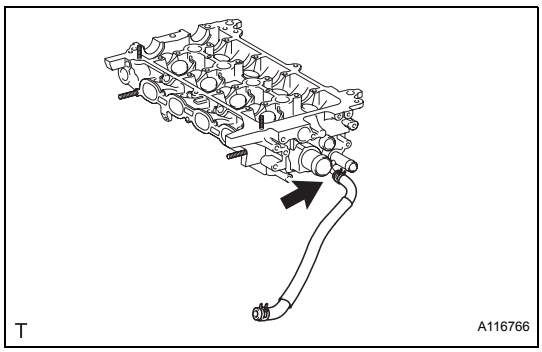
(a) Remove the bolt and remove the camshaft position sensor.



77. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

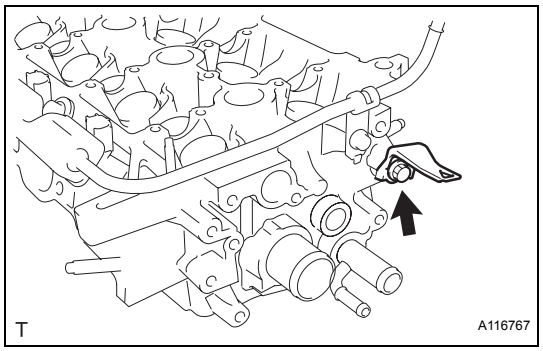
(a) Using SST, remove the engine coolant temperature sensor connector.

SST 09817-33190



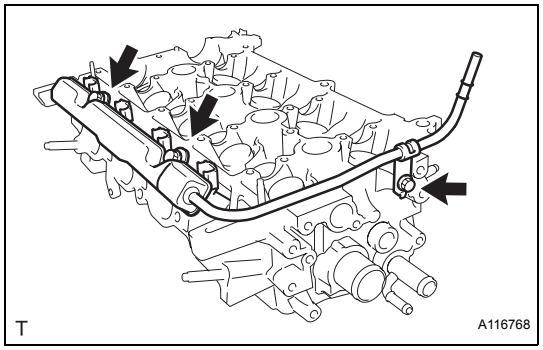
78. REMOVE WATER BY-PASS HOSE

(a) Remove the water by-pass hose.



79. REMOVE HARNESS BRACKET

(a) Remove the bolt and remove the harness bracket.



80. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Remove the 3 bolts and remove the fuel delivery pipe sub-assembly with 4 fuel injectors.

NOTICE:
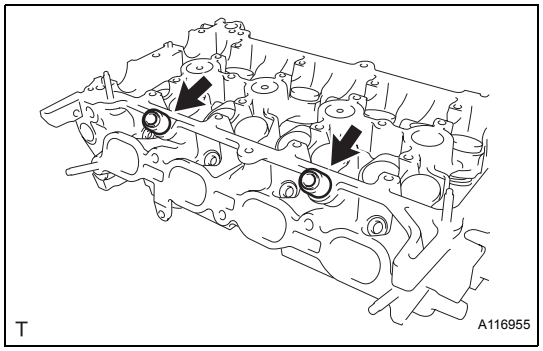
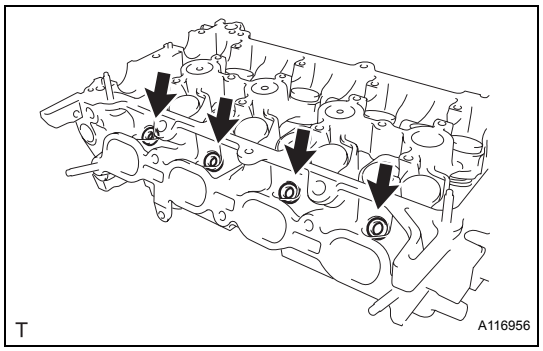
Do not drop the fuel injectors when removing the fuel delivery pipe sub-assembly.

81. REMOVE FUEL INJECTOR ASSEMMBLY (See page FU-16)



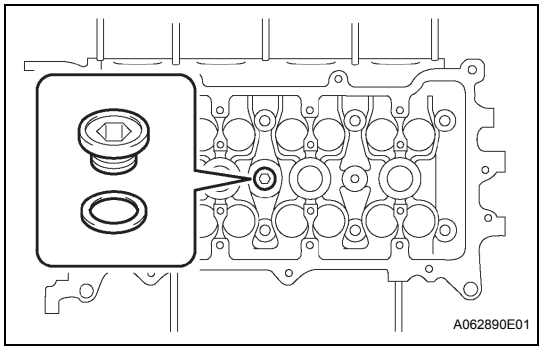
82. REMOVE DELIVERY PIPE NO. 1 SPACER

(a) Remove the 2 delivery pipe No. 1 spacers.



83. REMOVE INJECTOR VIBRATION INSULATOR

(a) Remove the 4 injector vibration insulators.



DISASSEMBLY

1. REMOVE WITH HEAD TAPER SCREW PLUG NO. 1

(a) Using a 10 mm socket hexagon wrench, remove the taper screw plug and the gasket.

2. REMOVE VALVE LIFTER

HINT:
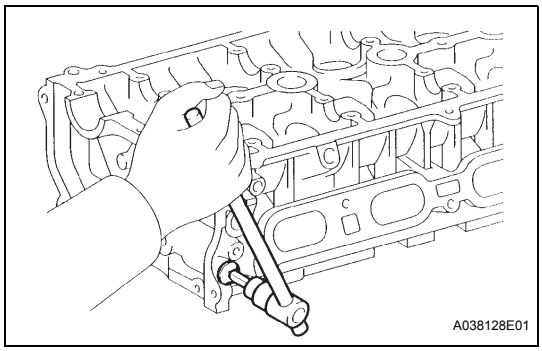
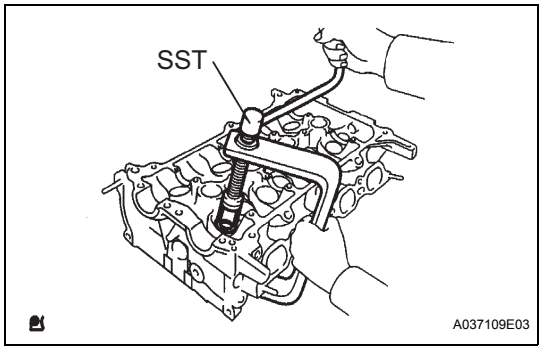
Keep the valve lifters in the correct order so that they can be returned to their original locations when reassembled.



3. REMOVE WITH HEAD TAPER SCREW PLUG NO. 2

(a) Using an 8 mm hexagon wrench, remove the taper screw plug.

4. REMOVE OIL CONTROL VALVE FILTER



5. REMOVE INTAKE VALVE

(a) Using SST, compress the valve spring and remove the 2 retainer locks, retainer and valve spring.
SST 09202-70020 (09202-00010)
HINT:
Keep the valves, valve springs, spring seats and spring retainers in the correct order so that they can be returned to their original locations when reassembled.

6. REMOVE EXHAUST VALVE

(a) Using SST, compress the valve spring and remove the 2 retainer locks, retainer and valve spring.
SST 09202-70020 (09202-00010)
HINT:
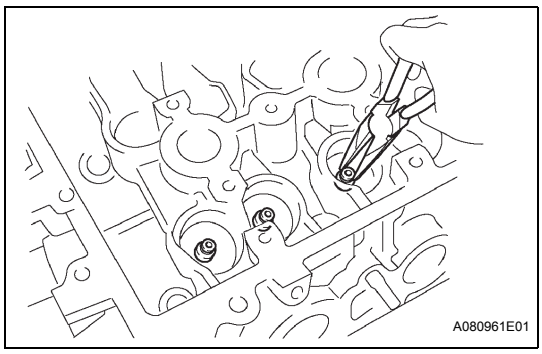
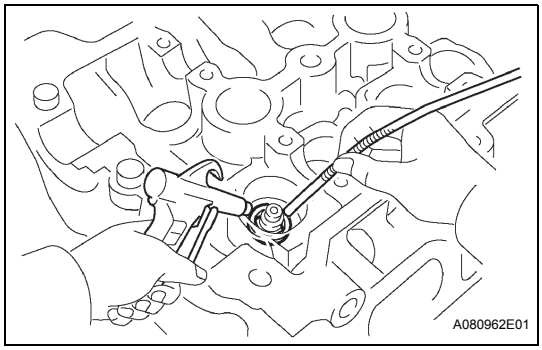
Keep the valves, valve springs, spring seats and spring retainers in the correct order so that they can be returned to their original locations when reassembled.



7. REMOVE VALVE STEM OIL SEAL

(a) Using needle-nose pliers, remove the oil seal.



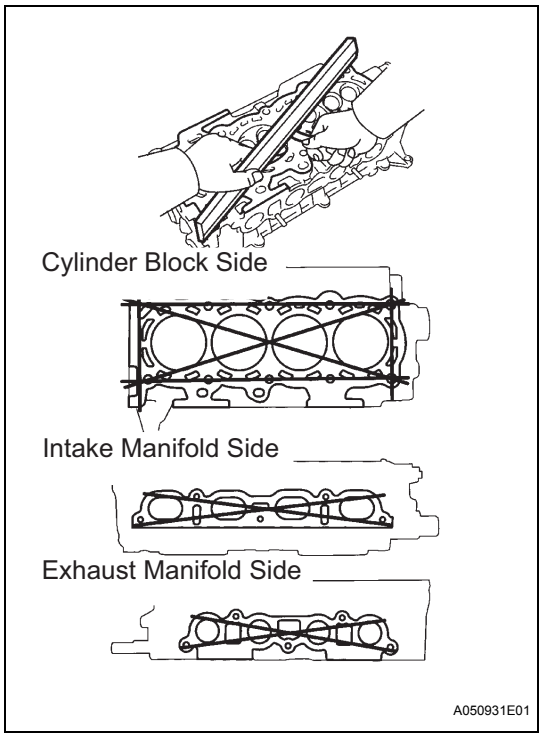
8. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seats.

9. REMOVE STUD BOLT

(a) Using "Torx" socket wrenches E5 and E7, remove the 7 stud bolts.

10. REMOVE CAMSHAFT BEARING CAP SETTING RING PIN



INSPECTION

1. INSPECT CYLINDER HEAD FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder block and the manifolds.

Maximum warpage

Surface	Specified Condition
Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.10 mm (0.0039 in.)
Exhaust manifold side	0.10 mm (0.0039 in.)

If the warpage is greater than the maximum, replace the cylinder head.

EM

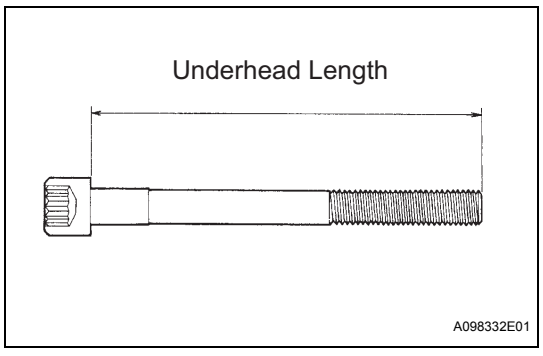
2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrate, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.

If cracked, replace the cylinder head.

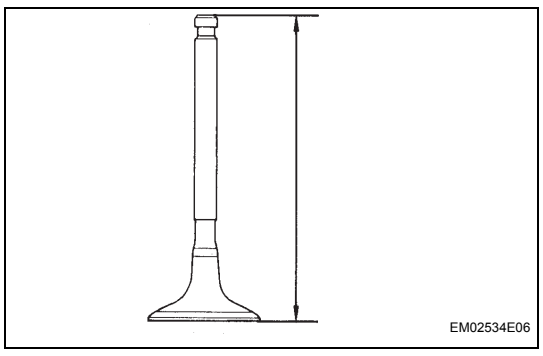


3. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of the head bolts from the seat to the end.

Standard length:
142.8 to 144.2 mm (5.622 to 5.677 in.)
Maximum length:
147.1 mm (5.791 in.)

If the length is greater than the maximum, replace the bolt.

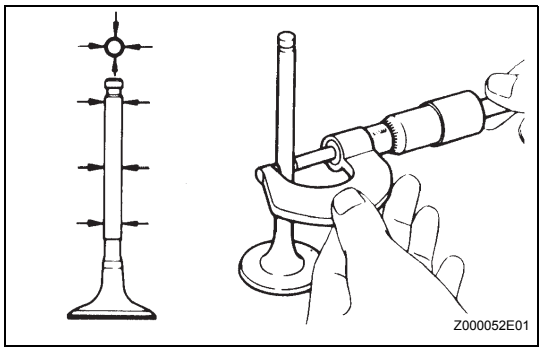


4. INSPECT INTAKE VALVE

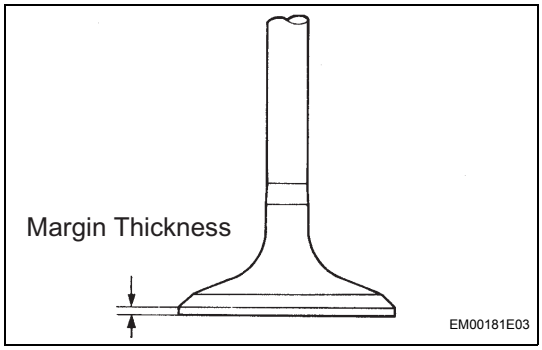
(a) Check the overall valve length.

Standard overall length:
89.25 mm (3.5138 in.)
Minimum overall length:
88.75 mm (3.4941 in.)

If the overall length is less than the minimum, replace the valve.



(b) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
4.970 to 4.985 mm (0.1957 to 0.1963 in.)



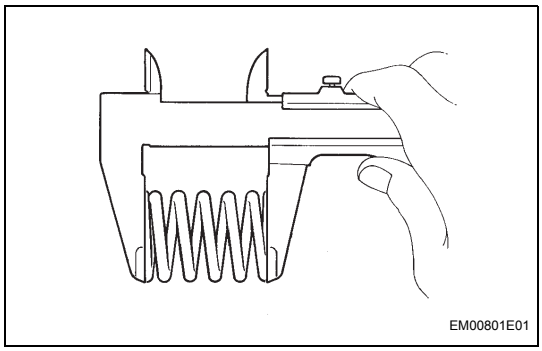
(c) Check the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.039 in.)
Minimum margin thickness:
0.5 mm (0.020 in.)
If the margin thickness is less than the minimum, replace the valve.

5. INSPECT EXHAUST VALVE

(a) Check the overall valve length.
Standard overall length:
87.90 mm (3.4606 in.)
Minimum overall length:
87.40 mm (3.4409 in.)
If the overall length is less than the minimum, replace the valve.

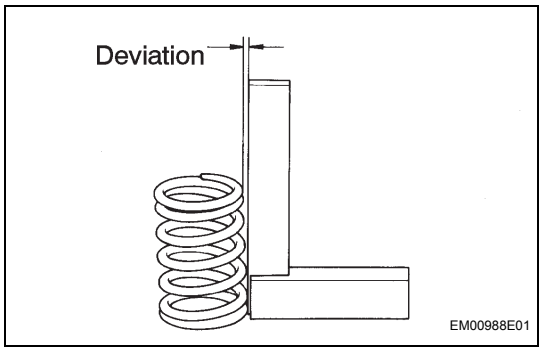
(b) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
4.965 to 4.980 mm (0.1955 to 0.1961 in.)

(c) Check the valve head margin thickness.
Standard margin thickness:
1.15 mm (0.045 in.)
Minimum margin thickness:
0.5 mm (0.020 in.)
If the margin thickness is less than the minimum, replace the valve.

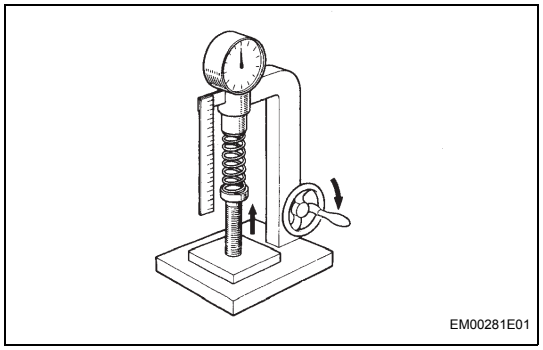


6. INSPECT VALVE SPRING

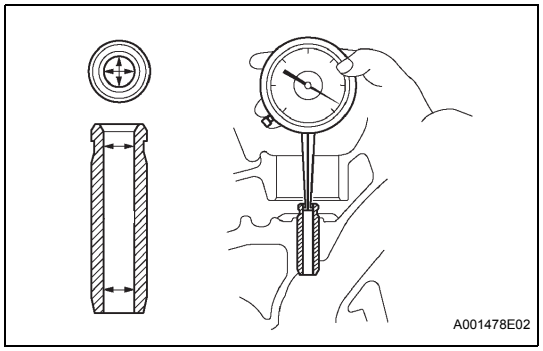
(a) Using vernier calipers, measure the free length of the valve spring.
Standard free length:
45.05 to 45.15 mm (1.774 to 1.778 in.)
If the free length is not as specified, replace the spring.



(b) Using a steel square, measure the deviation of the valve spring.
Maximum deviation:
1.6 mm (0.063 in.)
Maximum angle (reference):
2°
If the deviation is greater than the maximum, replace the spring.



(c) Using a spring tester, measure the tension of the valve spring at the specified installed length.
Standard installed tension:
149 to 165 N (15.2 to 16.8 kgf, 33.5 to 37.1 lbf) at 32.5 mm (1.280 in.)
Maximum working tension:
286 to 316 N (29.1 to 32.2 kgf, 64.2 to 71.0 lbf) at 23.9 mm (0.941 in.)
If the installed tension is not as specified, replace the valve spring.



7. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bush inside diameter:
5.010 to 5.030 mm (0.1972 to 0.1980 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement to calculate the oil clearance.
Standard oil clearance

Guide Bush	Specified Condition
Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

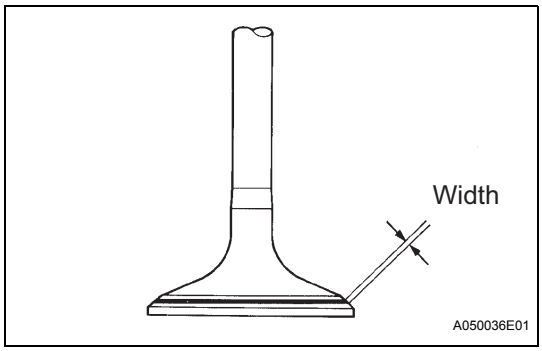
Maximum oil clearance

Guide Bush	Specified Condition
Intake	0.08 mm (0.0032 in.)
Exhaust	0.10 mm (0.0039 in.)

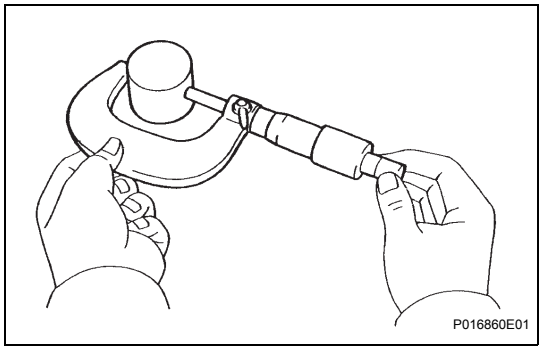
If the clearance is greater than the maximum, replace the valve and guide bush (see page EM-92).

8. INSPECT INTAKE VALVE SEAT

(a) Apply a light coat of prussian blue to the valve face.
(b) Lightly press the valve against the seat.

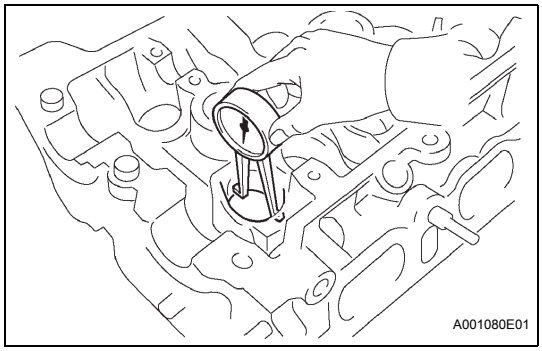


(c) Check the valve face and seat in accordance with the following procedure.
  (1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.
  (2) If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.
  (3) Check that the seat contact is in the middle of the valve face with the width between 1.0 to 1.4 mm (0.039 to 0.055 in.).



9. INSPECT VALVE LIFTER

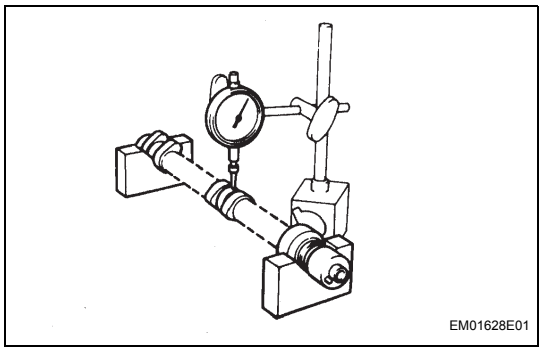
(a) Using a micrometer, measure the lifter diameter.
Standard lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



10. INSPECT VALVE LIFTER OIL CLEARANCE

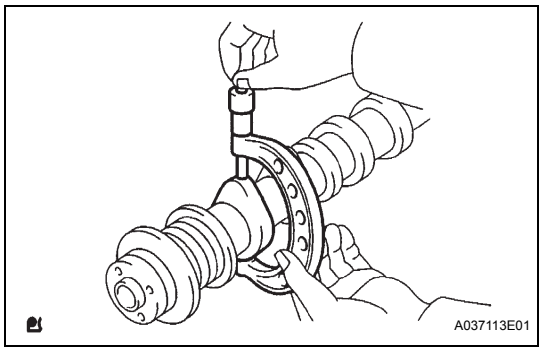
(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Standard lifter bore diameter:
31.000 to 31.025 mm (1.2205 to 1.2215 in.)

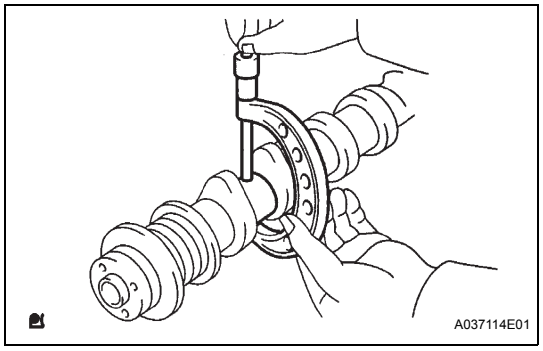
(b) Subtract the lifter diameter measurement from the lifter bore diameter measurement to calculate the oil clearance.
Standard oil clearance:
0.024 to 0.059 mm (0.0009 to 0.0023 in.)
Maximum oil clearance:
0.1 mm (0.0039 in.)
If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.



11. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.
  (1) Place the camshaft on V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.03 mm (0.0012 in.)
  If the circle runout is greater than the maximum, replace the camshaft.





(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
44.617 to 44.717 mm (1.7566 to 1.7605 in.)
Minimum cam lobe height:
43.16 mm (1.6992 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal	Specified Condition
No. 1 journal	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other journals	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance.

12. INSPECT NO. 2 CAMSHAFT

(a) Inspect the camshaft for runout.
(1) Place the camshaft on V-blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.03 mm (0.0012 in.)
If the circle runout is greater than the maximum, replace the camshaft.

(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
44.666 to 44.766 (1.7585 to 1.7624 in.)
Minimum cam lobe height:
44.52 mm (1.7528 in.)
If the cam lobe height is less than the minimum, replace the camshaft.

(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal	Specified Condition
No. 1 journal	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other journals	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance.

EM

13. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.
Standard thrust clearance:
0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Maximum thrust clearance:
0.11 mm (0.0043 in.)
If the thrust clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and the cylinder head together.

14. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and the camshaft journals.

(b) Place the camshafts on the cylinder head.

(c) Lay a strip of Plastigage across each of the camshaft journals.

(d) Install the bearing caps (see page EM-97).
NOTICE:
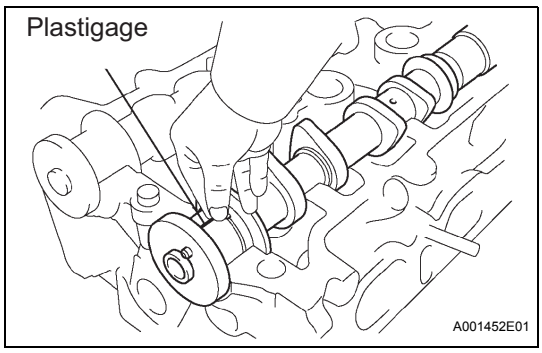
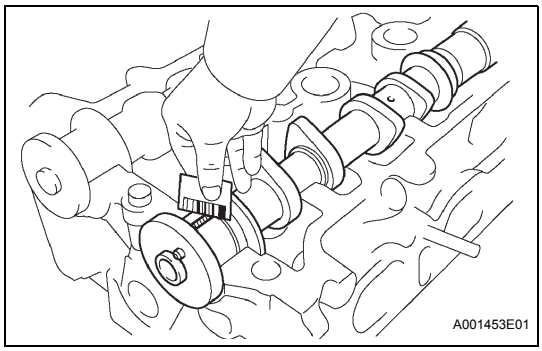
Do not turn the camshaft.

(e) Remove the bearing caps.





(f) Measure the Plastigage at its widest point.
Standard oil clearance:
0.035 to 0.072 mm (0.0014 to 0.0028 in.)
Maximum oil clearance:
0.08 mm (0.0031 in.)
If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and the cylinder head together.
NOTICE:
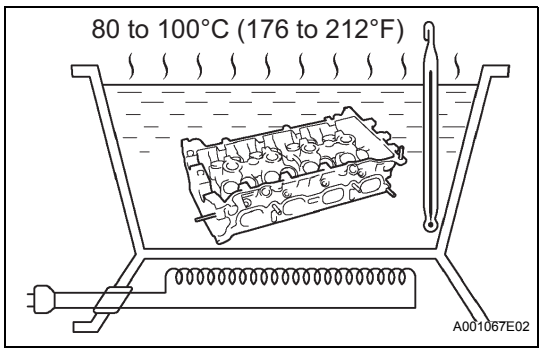
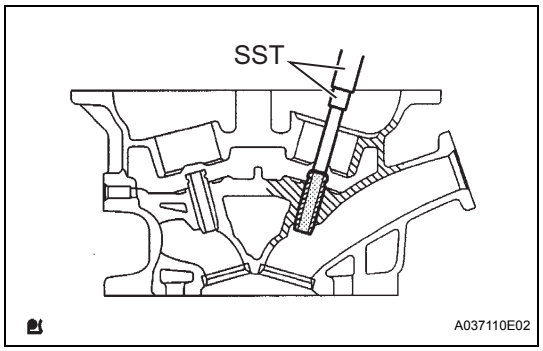
Completely remove the Plastigage after the measurement.

REPLACEMENT

1. REMOVE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).



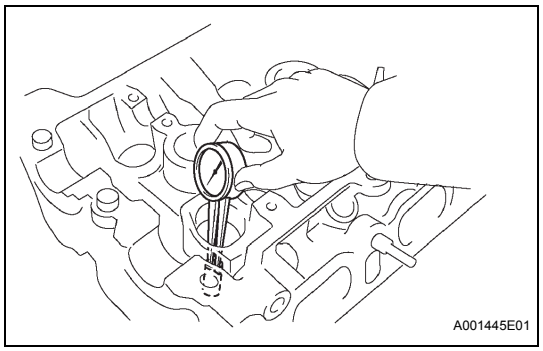


(b) Using SST and a hammer, tap out the guide bushing.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

2. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Using SST and a hammer, tap out the guide bushing.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

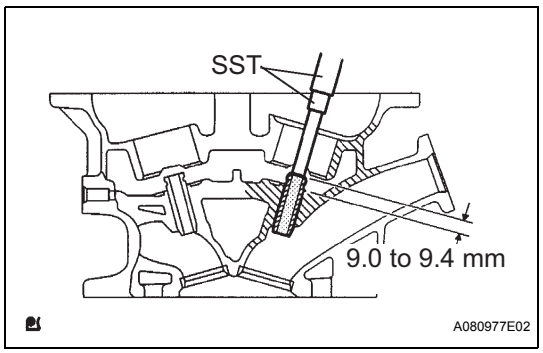


3. INSTALL INTAKE VALVE GUIDE BUSH

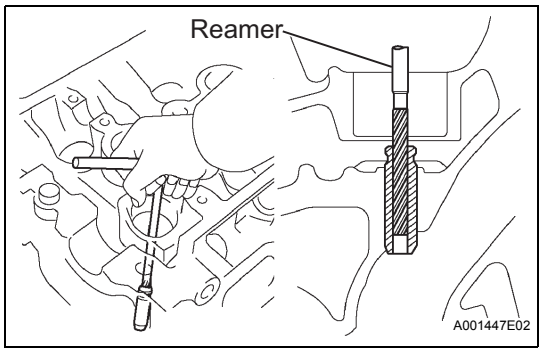
(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Inside Diameter:
9.685 to 9.706 mm (0.3813 to 0.3821 in.)
If the bushing bore diameter of the cylinder head is greater than 9.706 mm (0.3821 in.), machine the bushing bore to the dimension of 9.735 to 9.755 mm (0.3833 to 0.3841 in.).

Bushing bore diameter mm (in.)	Bushing size
9.685 to 9.706 (0.3813 to 0.3821)	STD
9.735 to 9.755 (0.3833 to 0.3841)	O/S 0.05

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).



(c) Using SST and a hammer, tap a new guide bushing in to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.0 to 9.4 mm (0.354 to 0.370 in.)



(d) Using a sharp 5 mm reamer, ream the guide bushing to obtain the standard oil clearance between the guide bushing and valve stem.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)

4. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Inside Diameter:
9.685 to 9.706 mm (0.3813 to 0.3821 in.)

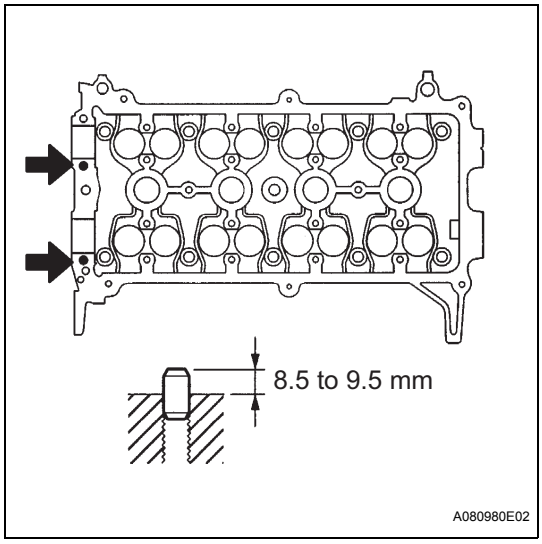
If the bushing bore diameter of the cylinder head is greater than 9.706 mm (0.3821 in.), machine the bushing bore to the dimension of 9.735 to 9.755 mm (0.3833 to 0.3841 in.).

Bushing bore diameter mm (in.)	Bushing size
9.685 to 9.706 (0.3813 to 0.3821)	STD
9.735 to 9.755 (0.3833 to 0.3841)	O/S 0.05

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(c) Using SST and a hammer, tap a new guide bushing in to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.0 to 9.4 mm (0.354 to 0.370 in.)

(d) Using a sharp 5 mm reamer, ream the guide bushing to obtain the standard oil clearance between the guide bushing and valve stem.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)



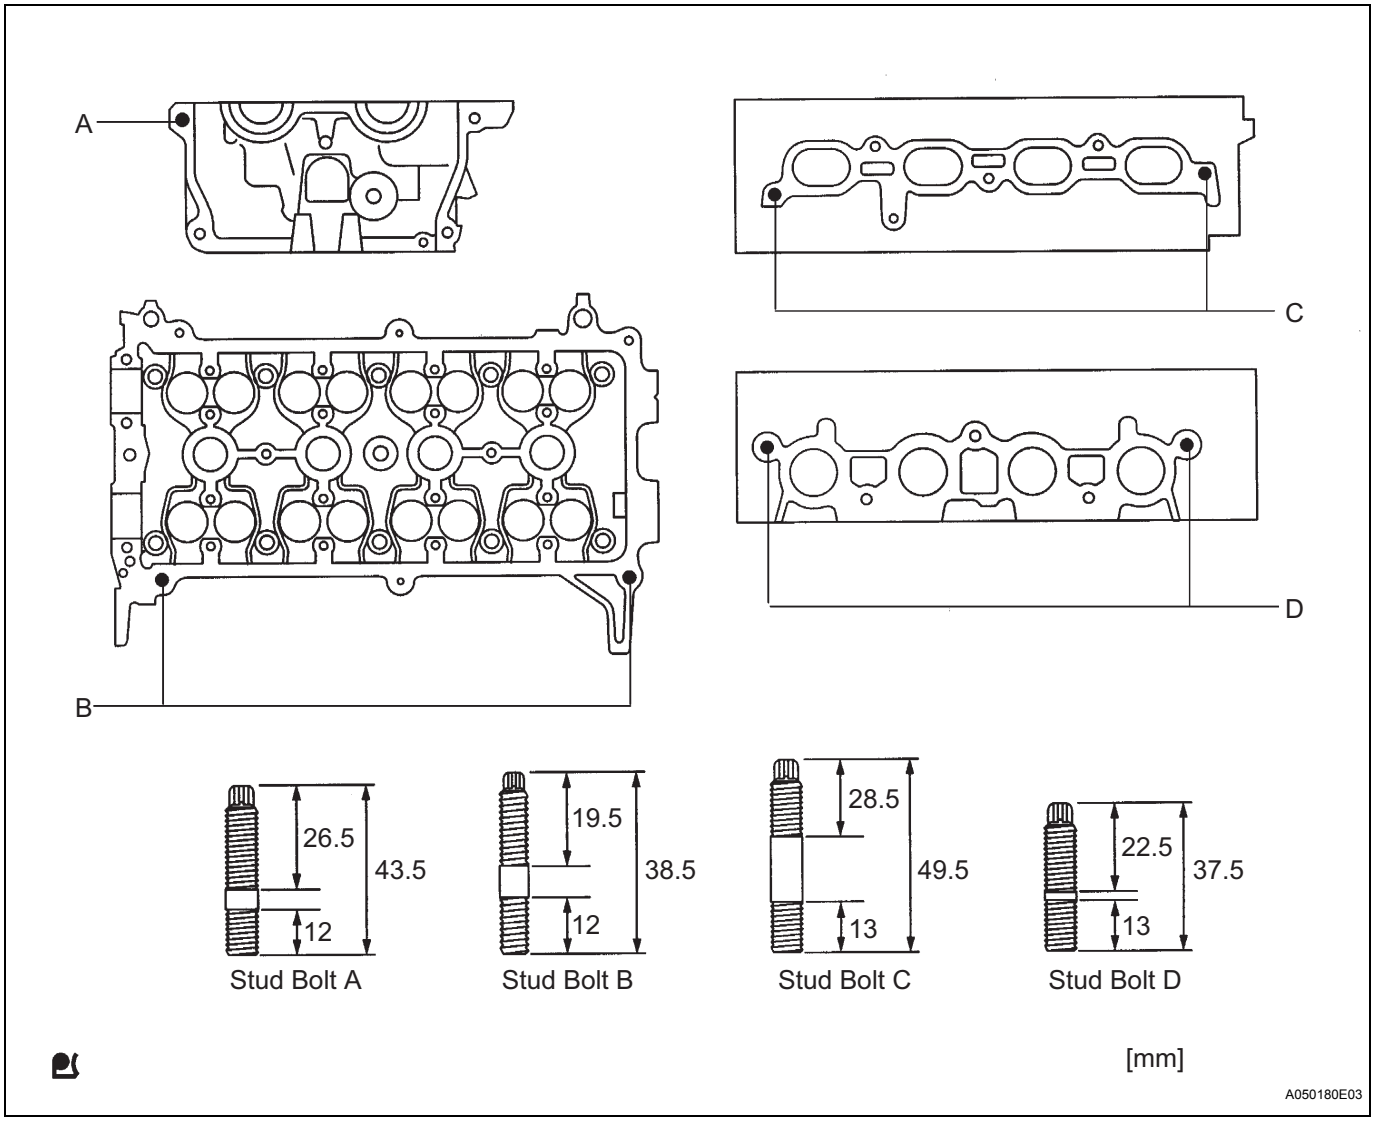
REASSEMBLY

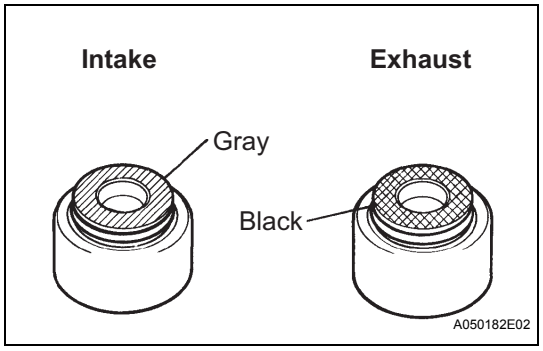
1. INSTALL CAMSHAFT BEARING CAP SETTING RING PIN

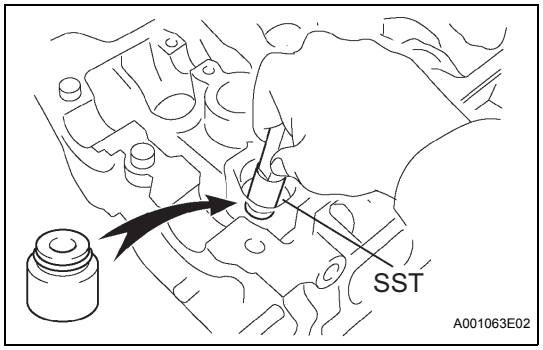
(a) Using a plastic-faced hammer, tap a new ring pin in to the specified protrusion height.
Protrusion height:
8.5 to 9.5 mm (0.335 to 0.374 in.)

2. INSTALL STUD BOLT

(a) Using "Torx" socket wrenches E5 and E7, install the 7 stud bolts.
Torque:
Stud bolt A:
10 N*m (102 kgf*cm, 7.4 ft.*lbf)
Stud bolt B:
4.0 N*m (41 kgf*cm, 35 in.*lbf)
Stud bolt C:
10 N*m (102 kgf*cm, 7.4 ft.*lbf)
Stud bolt D:
9.0 N*m (92 kgf*cm, 80 in.*lbf)







3. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new valve stem oil seals.

NOTICE:

Installing the oil seals for the intake and exhaust onto the opposite valve guide bush as may cause failures.

HINT:

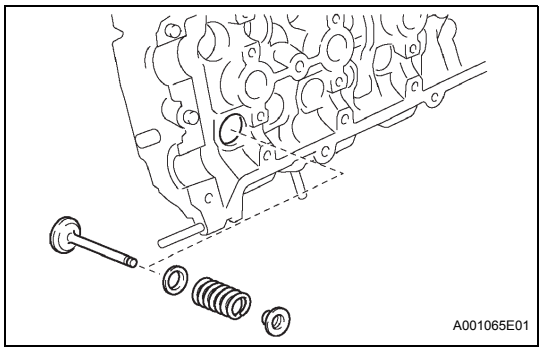
The intake valve oil seal is gray and the exhaust valve oil seal is black.

(b) Using SST, push in the oil seals.

SST 09201-41020



4. INSTALL INTAKE VALVE

(a) Install the valve, spring seat, valve spring, and spring retainer.
NOTICE:
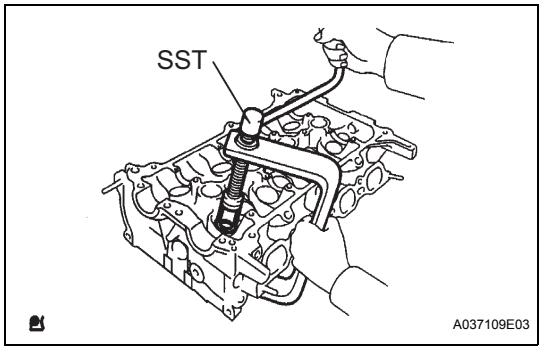
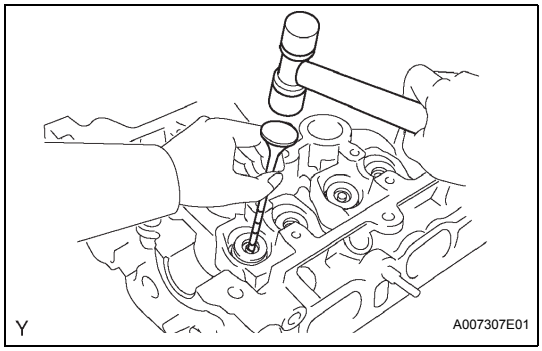
Install the parts in their original locations in the original order.



(b) Using SST, compress the valve spring and place the 2 retainer locks around the valve stem.
SST 09202-70020 (09202-00010)



(c) Using a plastic-faced hammer and the valve stem (not in use) with its tip wrapped in tape, gently tap the valve stem tip to ensure a proper fit.
NOTICE:
Do not damage the valve stem tip.

5. INSTALL EXHAUST VALVE

(a) Install the valve, spring seat, valve spring, and spring retainer.
(b) Using SST, compress the valve spring and place the 2 retainer locks around the valve stem.
SST 09202-70020 (09202-00010)
(c) Using a plastic-faced hammer and the valve stem (not in use) with its tip wrapped in tape, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
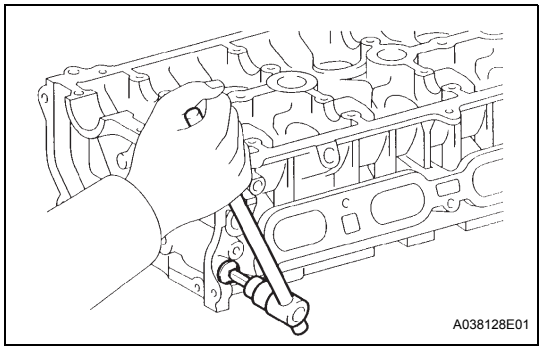
Do not damage the valve stem tip.

6. INSTALL OIL CONTROL VALVE FILTER

(a) Install the oil control valve filter.

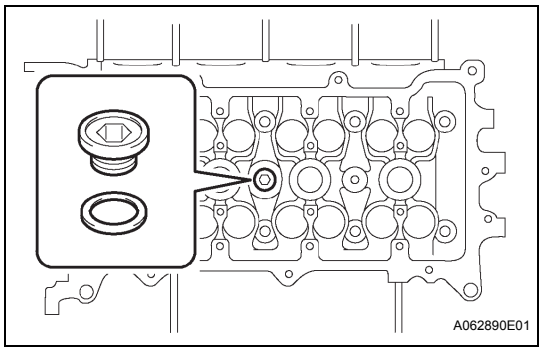


7. INSTALL WITH HEAD TAPER SCREW PLUG NO. 2

(a) Using an 8 mm hexagon wrench, install the taper screw plug and a new gasket.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

8. INSTALL VALVE LIFTER

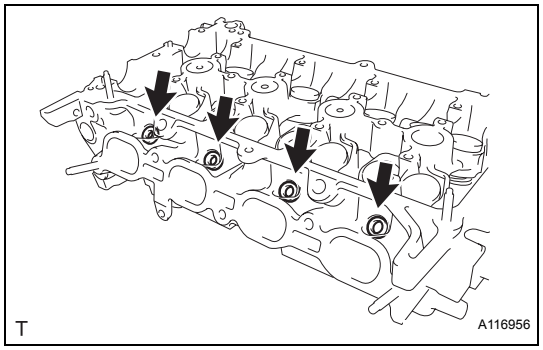
(a) Apply a light coat of engine oil to the 16 valve lifters.
(b) Install the 16 valve lifters.
(c) Check that the valve lifters rotate smoothly by hand.



9. INSTALL WITH HEAD TAPER SCREW PLUG NO. 1

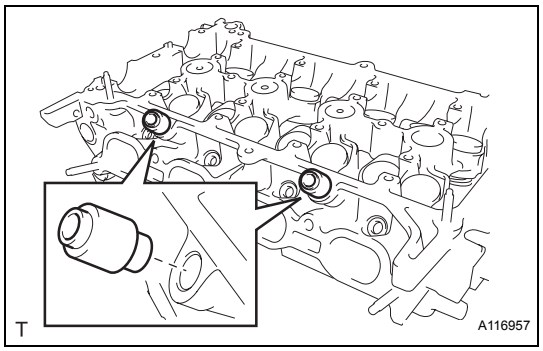
(a) Using a 10 mm socket hexagon wrench, install the taper screw plug with a new gasket.
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)

INSTALLATION



1. INSTALL INJECTOR VIBRATION INSULATOR

(a) Install 4 new injector vibration insulators onto the cylinder head.



2. INSTALL DELIVERY PIPE NO. 1 SPACER

(a) Install the 2 delivery pipe No. 1 spacers onto the cylinder head.
NOTICE:
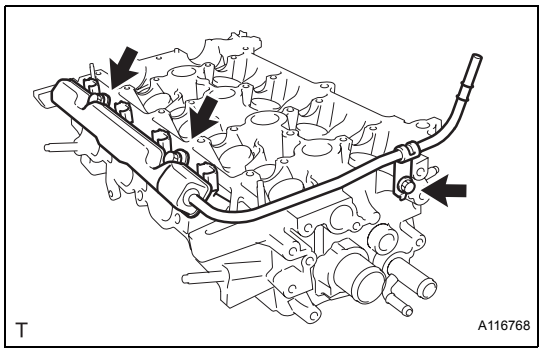
Install the delivery pipe No. 1 spacer in the correct direction.

3. INSTALL FUEL INJECTOR ASSEMBLY (See page FU-17)



4. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Provisionally install the fuel delivery pipe sub-assembly with the 4 fuel injectors using the 3 bolts.
NOTICE:
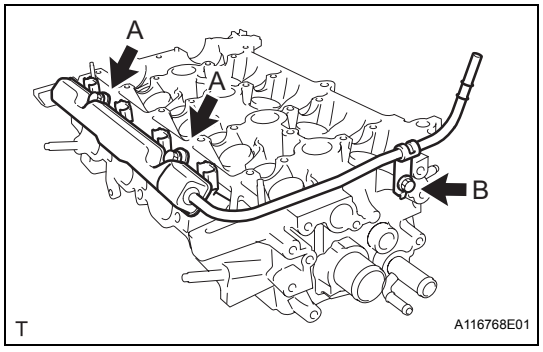
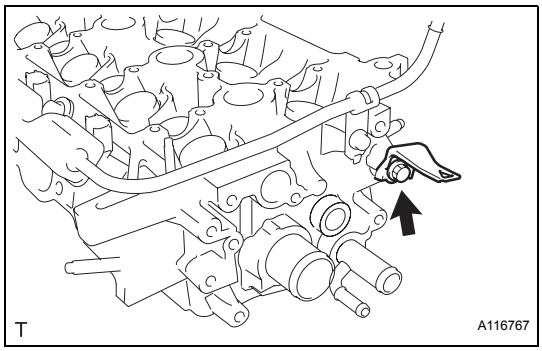
- **Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.**
- **Check that the fuel injectors rotate smoothly after installing the fuel delivery pipe sub-assembly.**

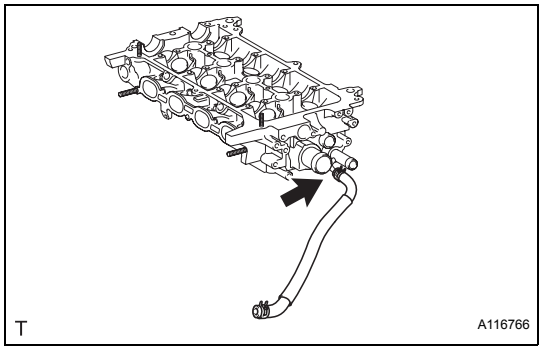


(b) Tighten the 3 bolts to the specified torque.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B



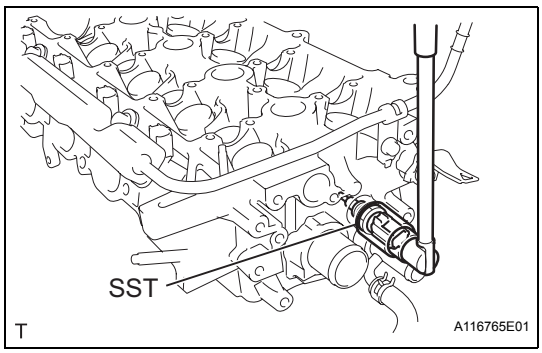
5. INSTALL HARNESS BRACKET

(a) Install the harness bracket with the bolt.
Torque: 13 N*m (131 kgf*cm, 9.5 ft.*lbf)



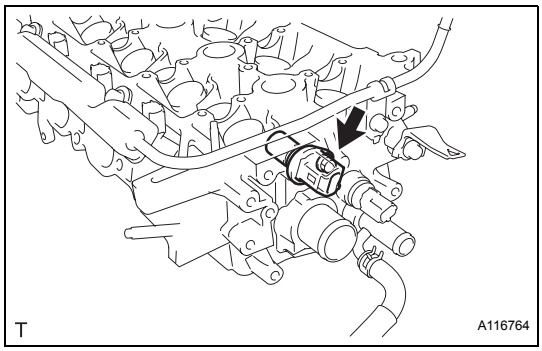
6. INSTALL WATER BY-PASS HOSE

(a) Install the water by-pass hose.



7. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Provisionally install the engine coolant temperature sensor through a new gasket.
(b) Using SST, tighten the engine coolant temperature sensor.
SST 09817-33190
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



8. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring on the camshaft position sensor.
(b) Install the camshaft position sensor with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
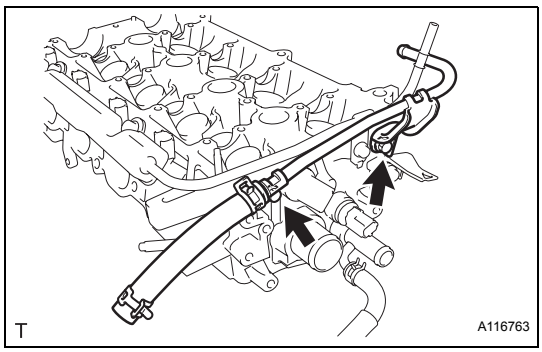
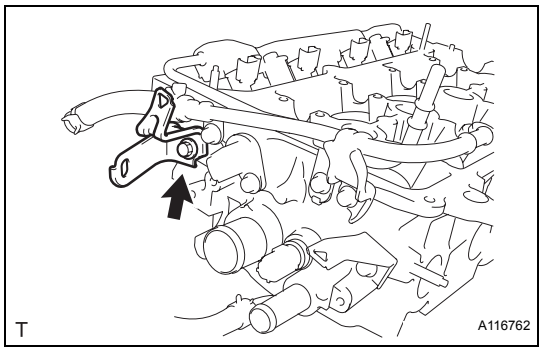
Do not twist the O-ring.



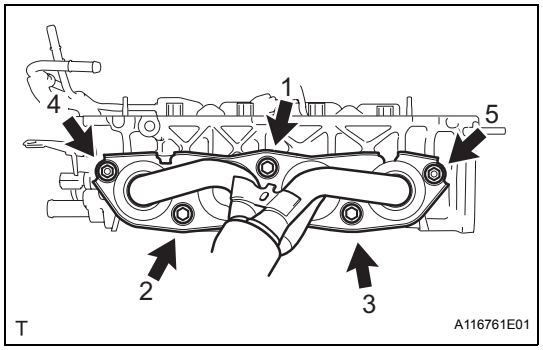
9. INSTALL BOOSTER VACUUM TUBE

(a) Install the booster vacuum tube with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



10. INSTALL HARNESS BRACKET

(a) Install the harness bracket with the bolt.
Torque: 13 N*m (131 kgf*cm, 9.5 ft.*lbf)



11. INSTALL EXHAUST MANIFOLD

(a) Using several steps, install a new exhaust manifold gasket and the exhaust manifold with the 3 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

EM

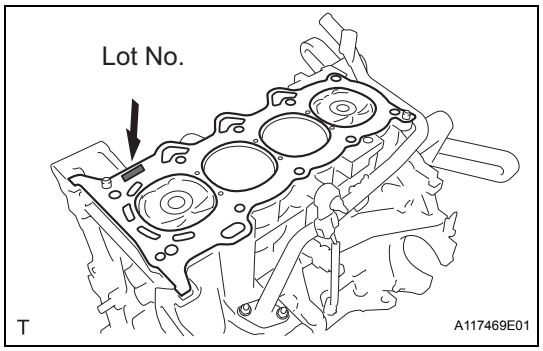
12. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO. 1

(a) Install exhaust manifold heat insulator No. 1 with the 4 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



13. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surfaces.**
- **Check the mounting orientation of the cylinder head gasket.**
- **Place the cylinder head on the cylinder head gently in order not to damage the gasket.**

14. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
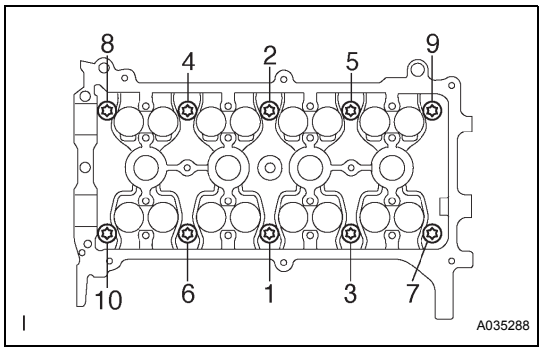
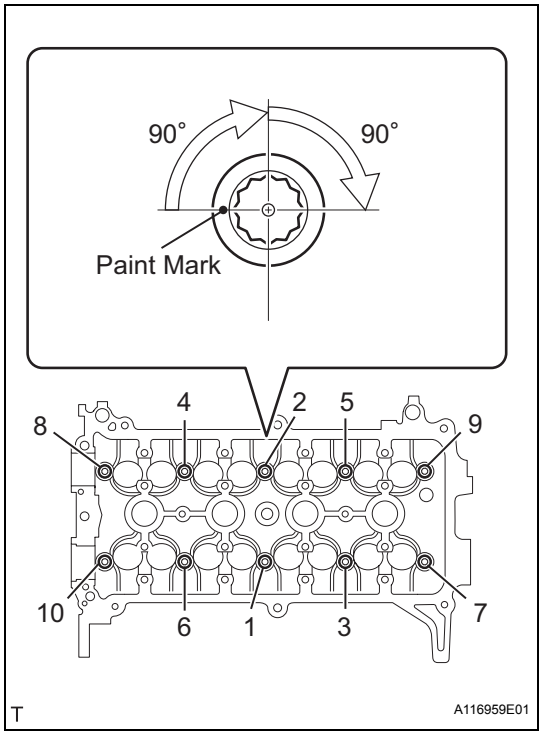
The cylinder head bolts are tightened in 2 successive steps.

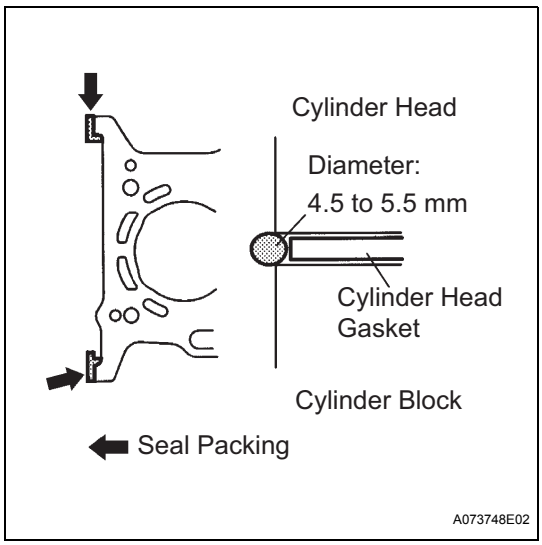
(a) Apply a light coat of engine oil to the threads of the cylinder head bolts.



(b) Using several steps, install and tighten the 10 cylinder head bolts and plate washers uniformly with an 8 mm bi-hexagon wrench, in the sequence shown in the illustration.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
(c) Mark the front of the cylinder head bolt with paint.



(d) Retighten the cylinder head bolts 90° and then an additional by 90° as shown in the illustration.
(e) Check that the paint mark is now at a 180° angle from the front.



(f) Apply a continuous bead of seal packing (Diameter 4.5 to 5.5 mm (0.177 to 0.217 in.)) as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
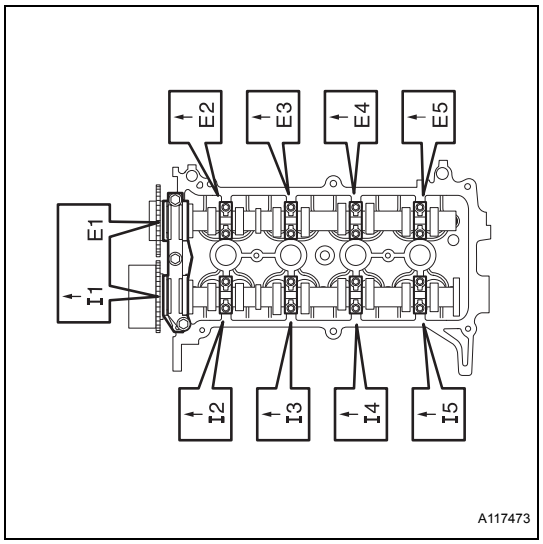
- **Remove any oil from the contact surfaces.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts within 15 minutes of applying the seal packing.**



15. **INSTALL CAMSHAFT**
    (a) Examine the front marks and numbers and check that the sequence is as shown in the illustration. Then provisionally tighten the 19 bolts.

    (b) Uniformly tighten the bolts in several steps in the sequence shown in the illustration and install camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
    Torque: Camshaft bearing cap No. 1
    23 N*m (235 kgf*cm, 17 ft.*lbf)
    Camshaft bearing cap No. 2
    13 N*m (129 kgf*cm, 9.4 ft.*lbf)
    NOTICE:
    Tighten each bolt uniformly while keeping the camshaft level.

16. **INSTALL CHAIN SUB-ASSEMBLY (See page EM-36)**
17. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-38)**
18. **INSTALL CHAIN TENSIONER ASSEMBLY NO. 1 (See page EM-38)**
19. **INSTALL OIL PUMP SEAL (See page LU-21)**
20. **INSTALL OIL PUMP ASSEMBLY (See page LU-22)**
21. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page LU-26)**
22. **INSTALL WATER PUMP ASSEMBLY (See page CO-16)**
23. **INSTALL WATER PUMP PULLEY (See page CO-16)**
24. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-397)**
25. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-403)**
26. **INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY (See page LU-26)**
27. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-26)**

EM

28. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)**
29. **INSTALL VENTILATION HOSE NO. 2 (See page FU-20)**
30. **INSTALL VENTILATION HOSE (See page FU-20)**
31. **INSTALL IGNITION COIL NO. 1 (See page IG-9)**
32. **INSTALL GENERATOR ASSEMBLY (See page CH-17)**
33. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**
34. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**

EM

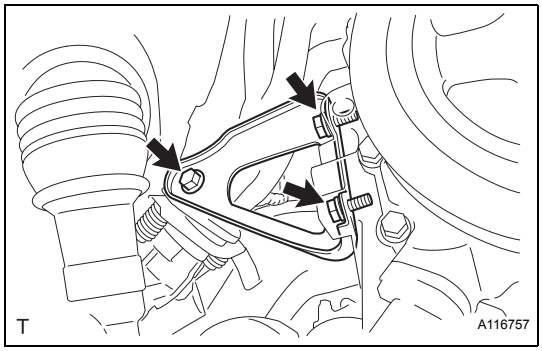
35. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**
36. **INSTALL MANIFOLD SUPPORT BRACKET**
    (a) Install the manifold support bracket with the 3 bolts.
    Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)



37. **INSTALL EXHAUST PIPE ASSEMBLY FRONT**
    (a) Using vernier calipers, measure the free length of the compression spring.
    Minimum length:
    40.5 mm (1.594 in.)
    If the length is not as specified, replace the compression spring.

    (b) Using a plastic hammer and a wooden block, tap in a new exhaust pipe gasket until its surface is flush with the exhaust manifold.
    NOTICE:
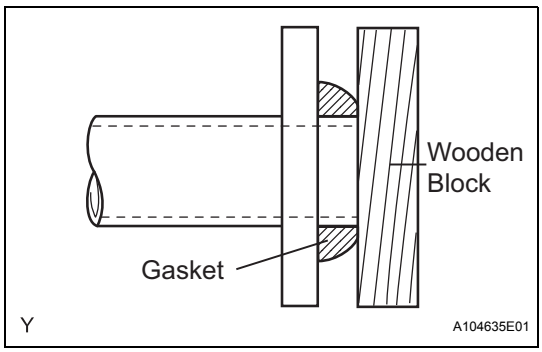
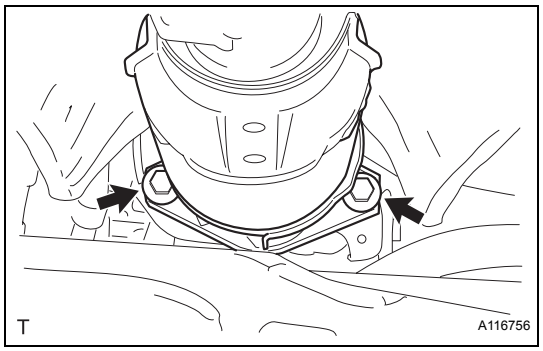
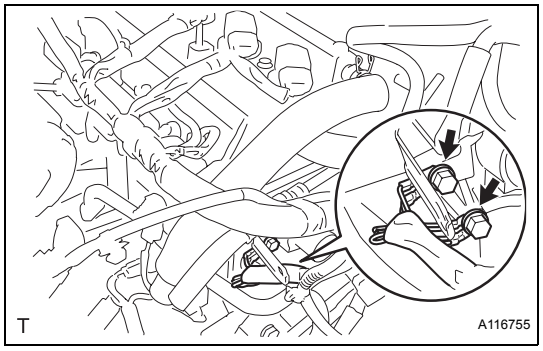
    - **Install the exhaust pipe gasket in the correct direction.**
    - **Do not damage the outer surface of the exhaust pipe gasket.**
    - **Do not reuse the exhaust pipe gasket.**
    - **Do not push in the gasket with the exhaust pipe when installing.**



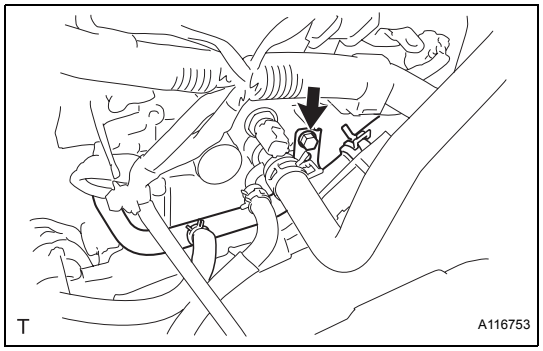


(c) Install the exhaust front pipe assembly with the 2 compression springs and 2 bolts.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)



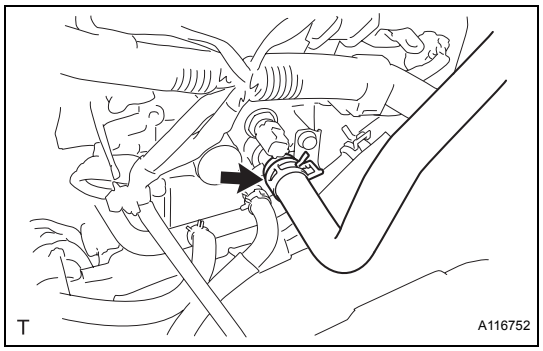
38. CONNECT WIRE HARNESS

(a) Connect the wire harness with the 2 bolts.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



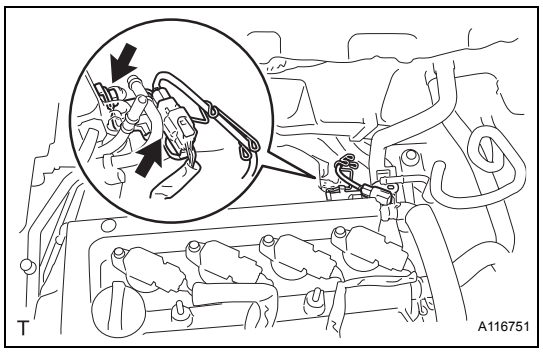
39. INSTALL WATER BY-PASS HOSE NO. 1

(a) Install water by-pass pipe No. 1 with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



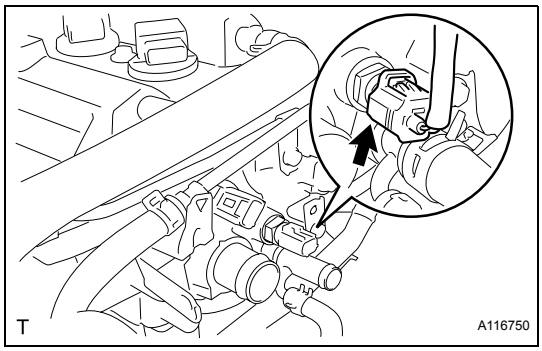
40. CONNECT HEATER WATER INLET HOSE A

(a) Connect heater water inlet hose A.



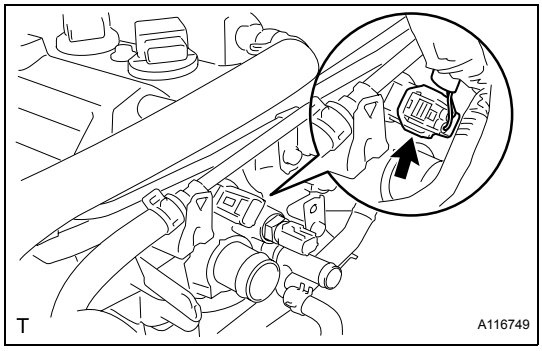
41. CONNECT HEATED OXYGEN SENSOR CONNECTOR

(a) Connect the heated oxygen sensor connector.
(b) Install the sensor bracket with the bolt.



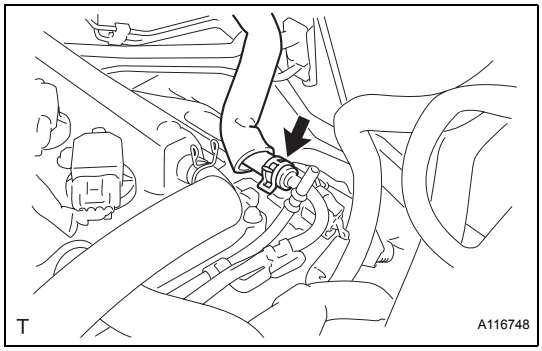
42. CONNECT ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR

(a) Connect the engine coolant temperature sensor connector.



43. CONNECT CAMSHAFT POSITION SENSOR CONNECTOR

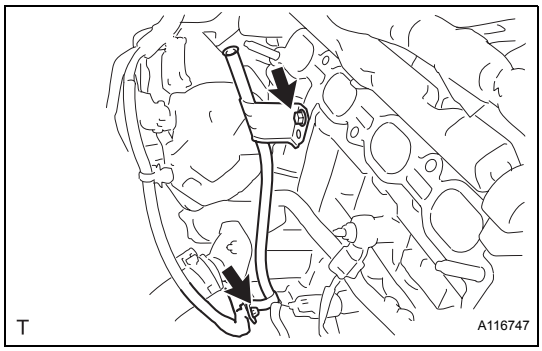
(a) Connect the camshaft position sensor connector.



44. CONNECT BOOSTER VACUUM TUBE

(a) Connect the booster vacuum tube.

45. CONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-18)



46. INSTALL OIL LEVEL GAUGE GUIDE

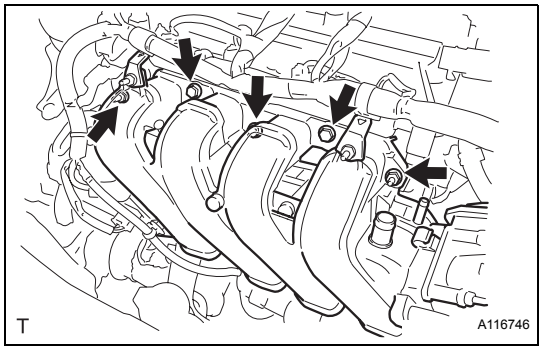
(a) Apply engine oil to a new O-ring.

(b) Install the oil level gauge guide with the bolt through a new O-ring.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

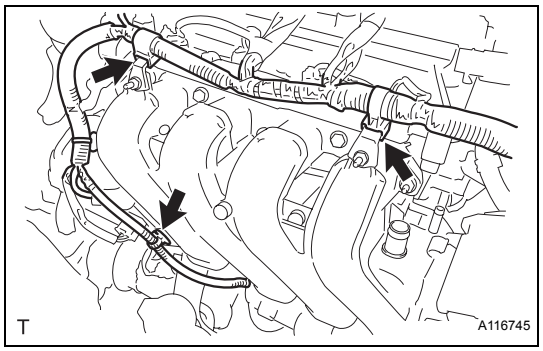
(c) Install the wire harness.

47. INSTALL INTAKE MANIFOLD

(a) Install a new gasket onto the intake manifold.

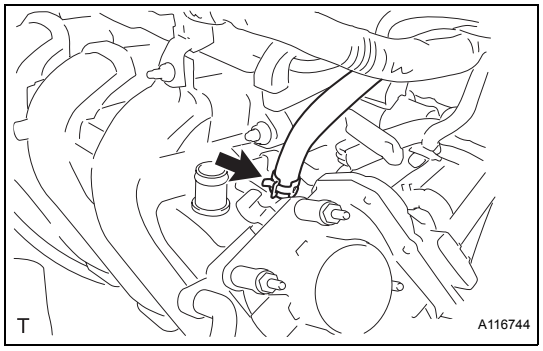


(b) Install the intake manifold with the 3 bolts and 2 nuts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)



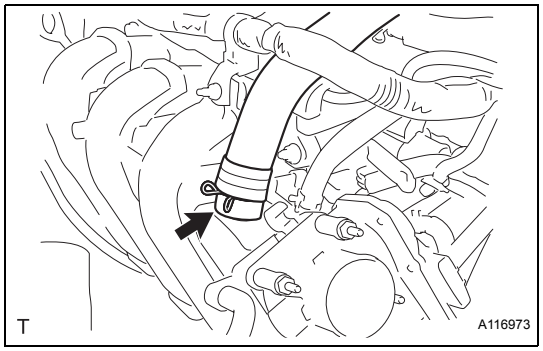
(c) Connect the 3 wire harness clamps shown in the illustration.

48. INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY



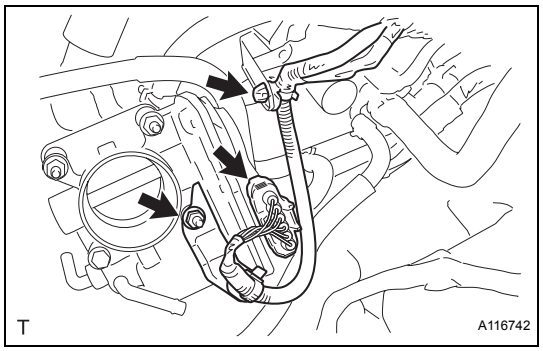
49. CONNECT UNION TO CONNECTOR TUBE HOSE

(a) Connect the union to connector tube hose.



50. CONNECT VENTILATION HOSE

(a) Connect the ventilation hose.

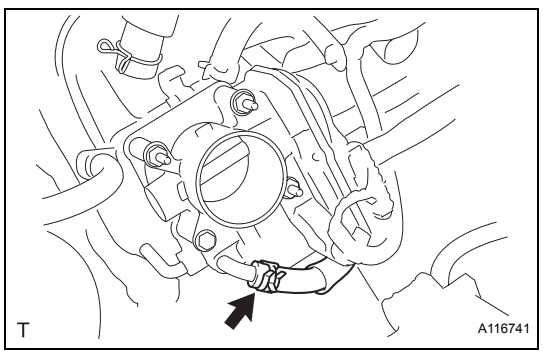


51. CONNECT THROTTLE WITH MOTOR BODY CONNECTOR

(a) Install the throttle with motor body connector bracket with the nut.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(b) Connect the throttle with motor body connector.

(c) Connect the wire harness clamp.



52. CONNECT WATER BY-PASS HOSE

(a) Connect the water by-pass hose.

EM

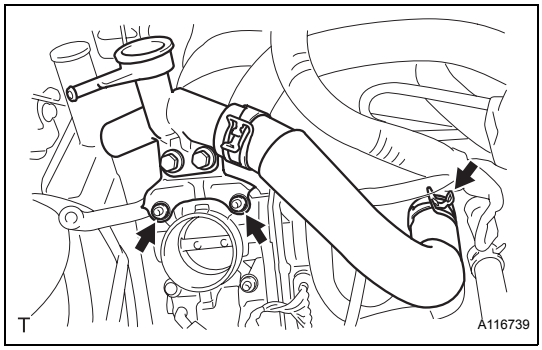
53. CONNECT WATER BY-PASS HOSE NO. 2

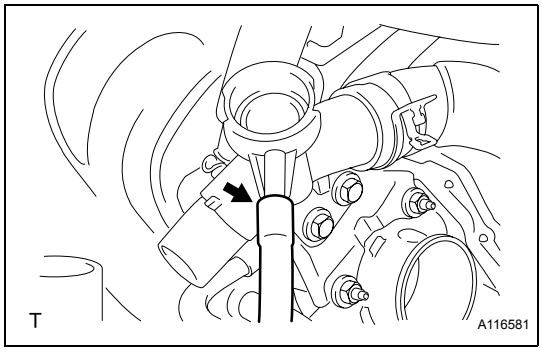
(a) Connect water by-pass hose No. 2.



54. INSTALL WATER FILLER SUB-ASSEMBLY

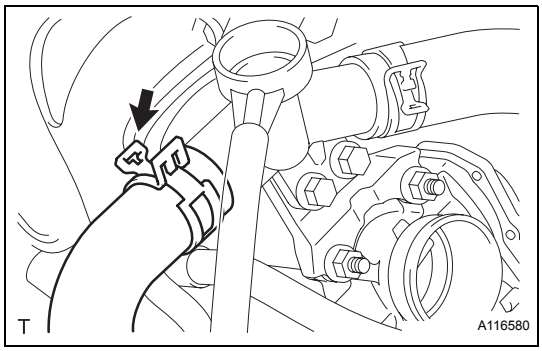
(a) Install the water filler sub-assembly with the 2 nuts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

(b) Connect radiator hose No. 1 to the cylinder head.



55. CONNECT RESERVE TANK HOSE

(a) Connect the reserve tank hose.



56. CONNECT RADIATOR HOSE NO. 3

(a) Connect radiator hose No. 3.

57. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH AIR CLEANER HOSE NO. 1 (See page ES-414)

58. INSTALL BATTERY TRAY

59. INSTALL BATTERY

60. ADD ENGINE OIL

61. ADD ENGINE COOLANT (See page CO-8)

62. CHECK ENGINE OIL LEVEL (See page LU-1)

63. CHECK FOR ENGINE OIL LEAKAGE

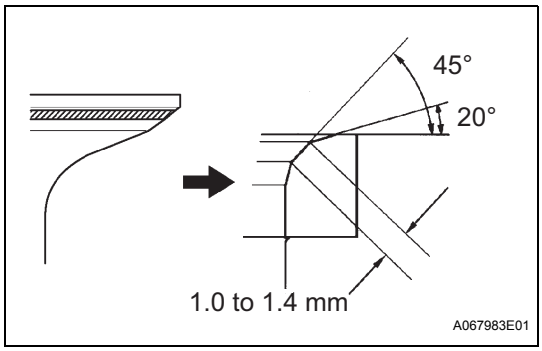
64. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

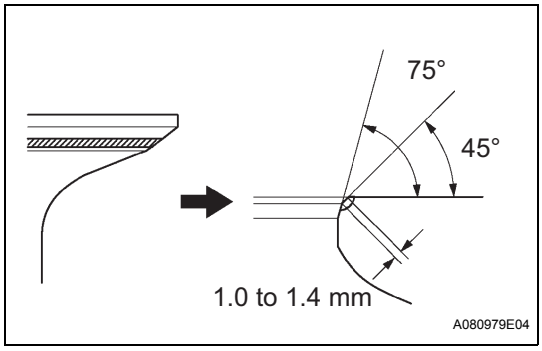
65. CHECK FOR EXHAUST GAS LEAKAGE

66. CHECK FOR FUEL LEAKAGE (See page FU-7)

67. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

68. INSTALL ENGINE UNDER COVER RH
69. INSTALL FRONT WHEEL RH
70. INSTALL COWL TOP PANEL OUTER (for Hatchback) (See page EM-146)
71. INSTALL COWL TOP PANEL OUTER (for Sedan) (See page ES-434)
72. INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback) (See page EM-147)
73. INSTALL FRONT AIR SHUTTER SEAL RH (for Sedan) (See page ES-435)
74. INSTALL FRONT WIPER MOTOR AND LINK (for Hatchback) (See page WW-21)
75. INSTALL FRONT WIPER MOTOR AND LINK (for Sedan) (See page WW-12)
76. INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)
77. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-21)
78. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-12)
79. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)
80. INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)
81. INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)
82. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Hatchback) (See page WW-22)
83. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (for Sedan) (See page WW-13)
84. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Hatchback) (See page WW-23)
85. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (for Sedan) (See page WW-14)
86. INSTALL FRONT WIPER ARM HEAD CAP (for Hatchback) (See page WW-23)
87. INSTALL FRONT WIPER ARM HEAD CAP (for Sedan) (See page WW-15)





REPAIR

1. REPAIR INTAKE VALVE

(a) Repair the intake valve seat.
NOTICE:
Releasing the seat-cutter pressure gradually helps to make the valve seat face smoother.

(b) If the seating is too high on the valve face, use 20° and 45° cutters to correct the seat.

(c) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(d) Hand-lap the valve and valve seat with an abrasive compound.

(e) Recheck the valve seating position.

2. REPAIR EXHAUST VALVE
NOTICE:
Releasing the seat-cutter pressure gradually helps to make the valve seat face smoother.

(a) If the seating is too high on the valve face, use 20° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Recheck the valve seating position.

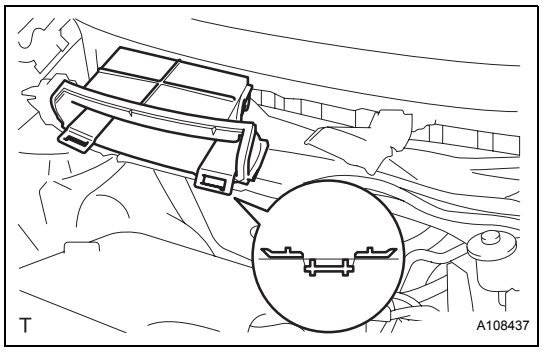
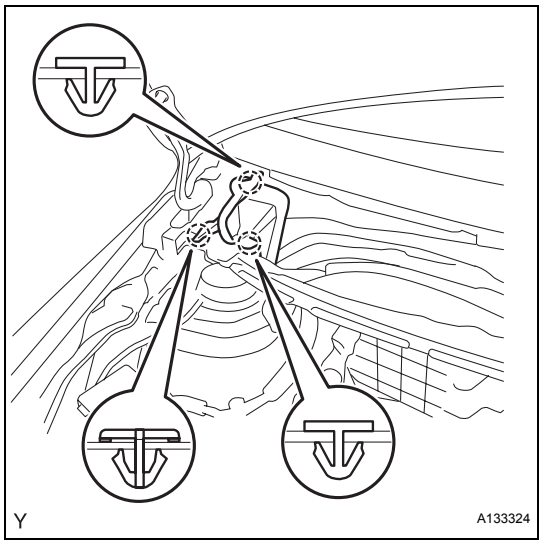
REMOVAL

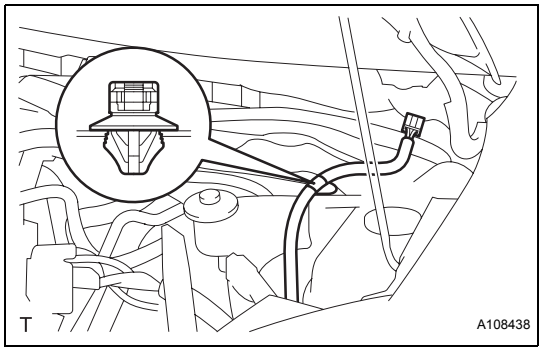
1. **DISCHARGE FUEL SYSTEM PRESSURE**
2. **REMOVE BATTERY**
   (a) Disconnect the cable from the battery terminal.
   (b) Loosen the nut and remove the battery clamp.
   (c) Remove the battery.
3. **REMOVE BATTERY TRAY**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **DRAIN ENGINE COOLANT (See page CO-8)**
8. **DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-158)**
9. **DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-26)**
10. **REMOVE FRONT WIPER ARM HEAD CAP (See page WW-9)**
11. **REMOVE FRONT WIPER ARM LH (See page WW-9)**
12. **REMOVE FRONT WIPER ARM RH (See page WW-9)**
13. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
14. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-18)**
15. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
16. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
17. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
18. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-10)**
19. **REMOVE FRONT WIPER MOTOR AND LINK (See page WW-19)**
20. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback)**
    (a) Disengage the claw and remove cowl to register duct sub-assembly No. 2.





21. REMOVE FRONT AIR SHUTTER SEAL RH (for Sedan)

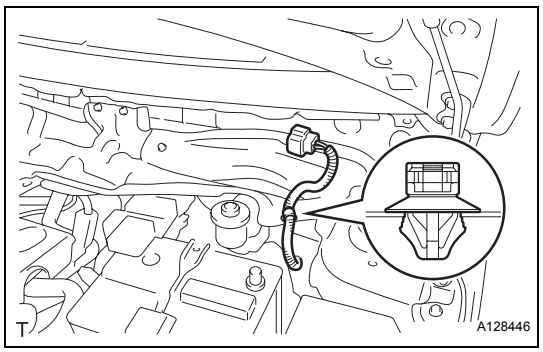
(a) Disengage the 3 claws and remove the front air shutter seal RH.



22. REMOVE COWL TOP PANEL OUTER (for Hatchback)

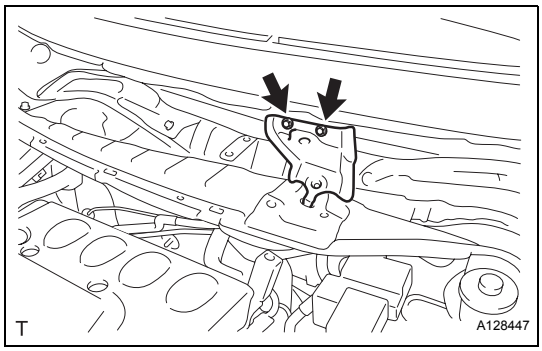
(a) Disengage the wire harness clamp.

(b) Remove the 9 bolts and remove the cowl top panel outer.

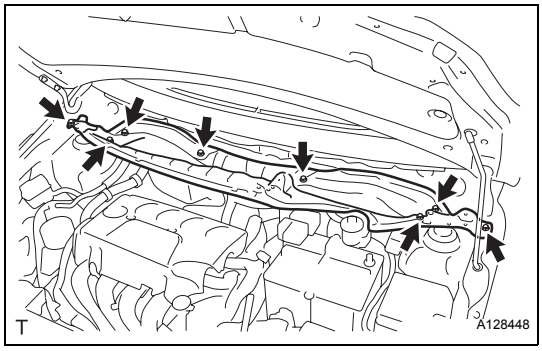


23. REMOVE COWL TOP PANEL OUTER (for Sedan)

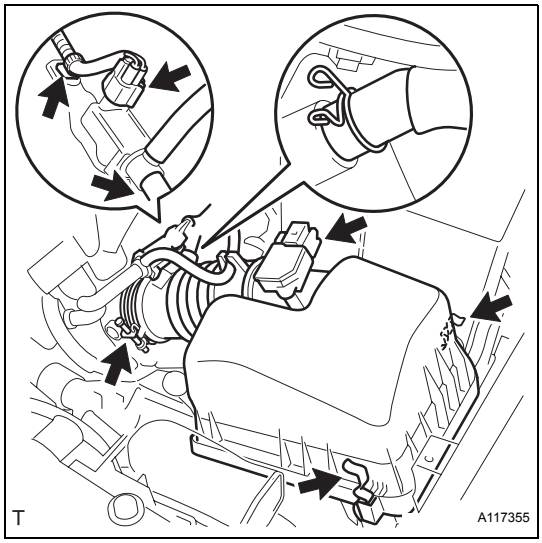
(a) Disengage the wire harness clamp.



(b) Remove the 2 bolts and remove the cowl top to cowl inner brace.

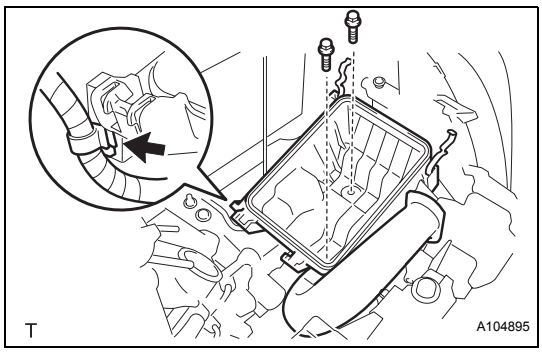


(c) Remove the 8 bolts and remove the cowl top panel outer.

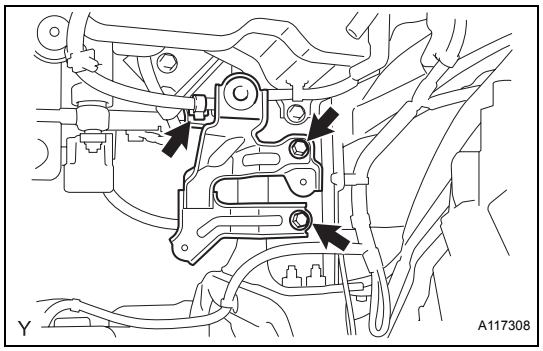


24. REMOVE AIR CLEANER ASSEMBLY

(a) Separate the intake air flow meter connector and the wire harness clamp.
(b) Separate the fuel vapor feed hose and fuel vapor feed hose No. 1 from the vacuum switching valve assembly.
(c) Separate the vacuum switching valve connector and the wire harness clamp.
(d) Separate the ventilation hose from the air cleaner hose.
(e) Release the air cleaner cap sub-assembly with air cleaner hose No. 1.
(f) Loosen the air cleaner hose clamp on the throttle body side and remove the air cleaner cap and the air cleaner hose.
(g) Remove the air cleaner element.



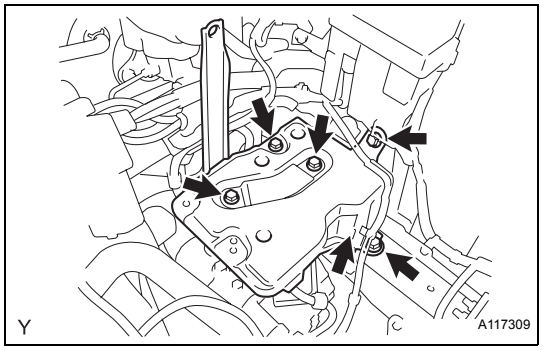
(h) Separate the wire harness clamp from the air cleaner case.
(i) Remove the 2 bolts and remove the air cleaner case with air cleaner inlet No. 1.



25. REMOVE AIR CLEANER BRACKET

(a) Separate the wire harness clamp from the air cleaner bracket.

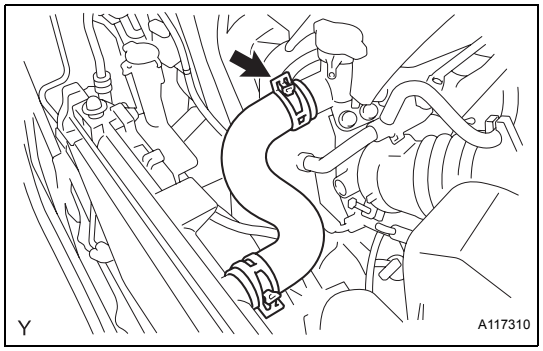
(b) Remove the 2 bolts and remove the air cleaner bracket.



26. REMOVE BATTERY CARRIER

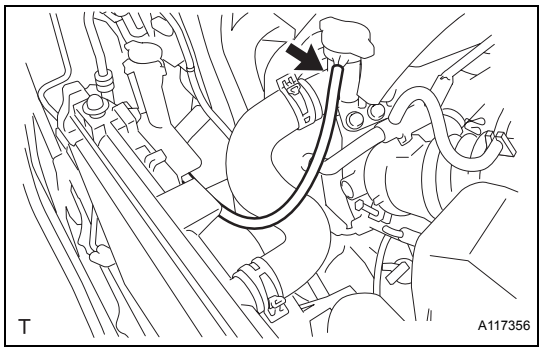
(a) Separate the wire harness clamp from the battery carrier.

(b) Remove the 5 bolts and remove the battery carrier.



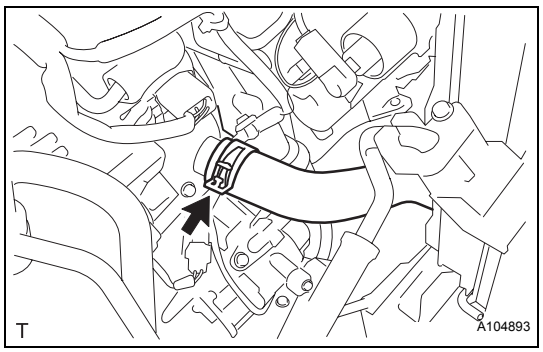
27. DISCONNECT RADIATOR HOSE NO. 3

(a) Disconnect radiator hose No. 3 from the water filler.



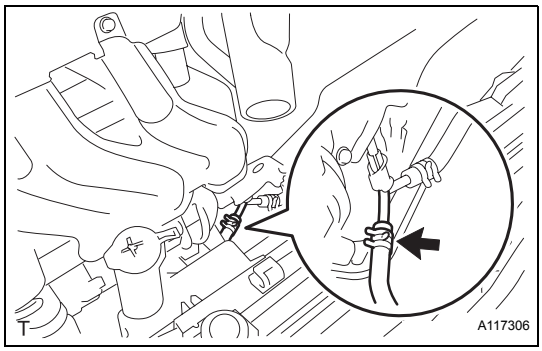
28. DISCONNECT RADIATOR RESERVOIR TANK HOSE

(a) Disconnect the radiator reservoir tank hose from the water filler.

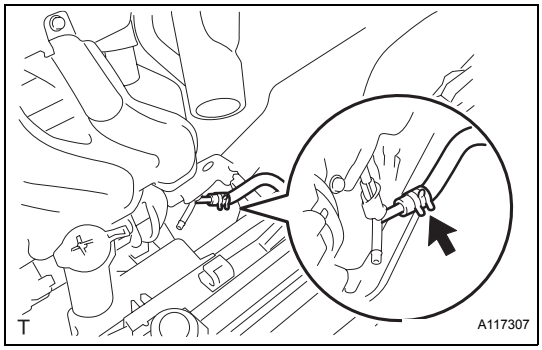


29. DISCONNECT RADIATOR HOSE NO. 2

(a) Disconnect radiator hose No. 2 from the water inlet.



30. **DISCONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)**
    (a) Loosen the clip and disconnect the oil cooler outlet hose.



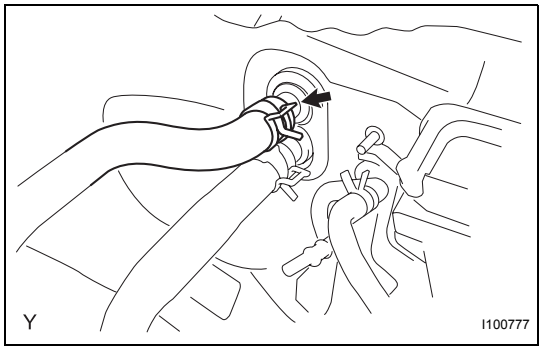
31. **DISCONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)**
    (a) Loosen the clip and disconnect the oil cooler inlet hose.

32. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**

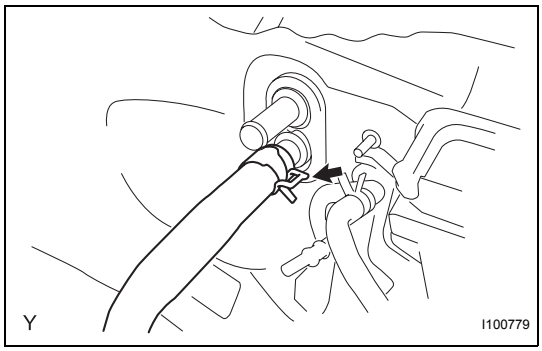
33. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle) (See page AX-106)**

34. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle) (See page MX-27)**

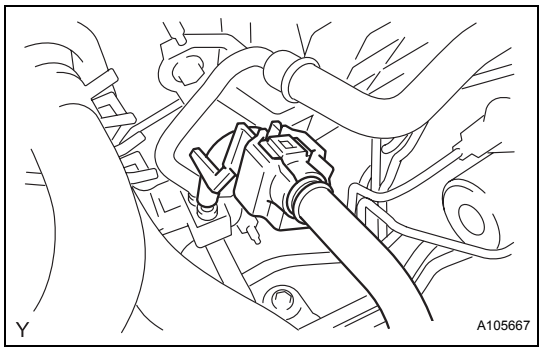
35. **DISCONNECT UNION TO CHECK VALVE HOSE**
    (a) Disconnect the union to check valve hose from the booster vacuum tube.



36. **DISCONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)**
    (a) Disconnect heater water outlet hose A from the heater unit.

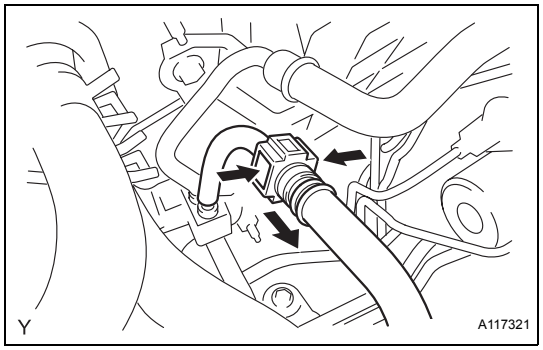


37. **DISCONNECT HEATER WATER INLET HOSE A**
    (a) Disconnect heater water inlet hose A from the heater unit.



38. DISCONNECT FUEL TUBE SUB-ASSEMBLY

(a) Remove fuel pipe clamp No. 1.



(b) Pinch the retainer as illustrated, then pull the fuel tube connector out of the pipe.

NOTICE:

- **Remove any dirt and foreign matter from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-rings that seal the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

39. REMOVE FAN AND GENERATOR V BELT (See page EM-7)

40. SEPARATE WITH PULLEY COMPRESSOR ASSEMBLY (w/ Air Conditioning System)

(a) Disconnect the connector.

(b) Remove the 4 bolts and separate the with pulley compressor assembly.

HINT:

Remove the compressor assembly together with the low and high pressure hoses, then suspend them from the body with a piece of rope.

41. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle) (See page MX-27)

EM

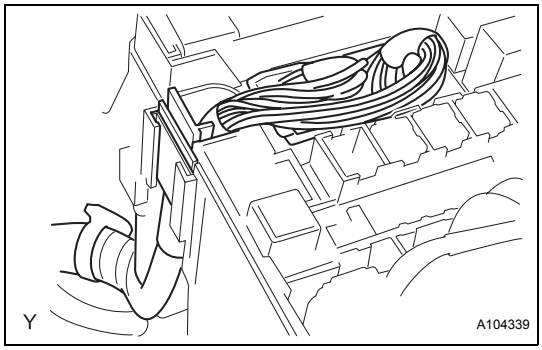
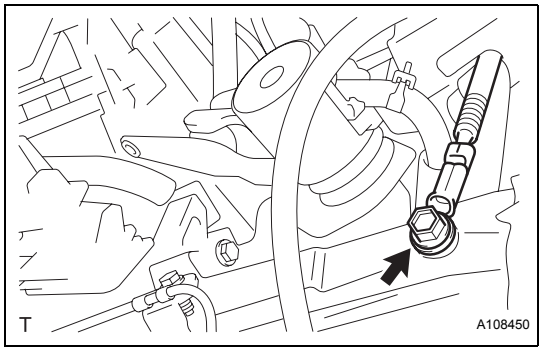
42. DISCONNECT ENGINE WIRE

(a) Pull up the lever and disconnect the connector of the engine control computer.



(b) Remove the 2 connectors and the clamp from the engine room junction block and disconnect the wire harness.



(c) Remove the bolt and separate the earth wire of the engine room wire harness.

(d) Disconnect all the wire harnesses and connectors. Make sure that no wire harness is connected between the body and engine.

43. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page PS-74)

44. SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-74)

45. REMOVE STEERING COLUMN HOLE COVER SUB-ASSEMBLY NO. 1 (See page PS-75)

46. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

47. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-6)

48. REMOVE CONSOLE BOX REAR COVER (for Hatchback) (See page PB-6)

49. REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-138)

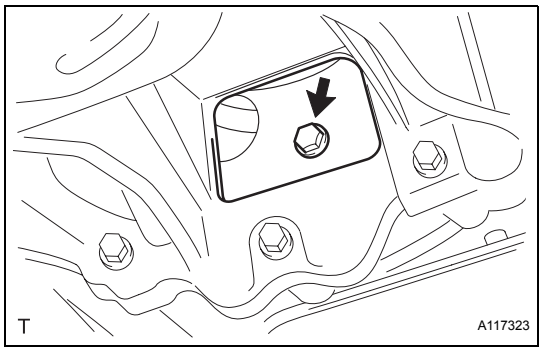
50. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-138)

51. REMOVE INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-44)

52. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)

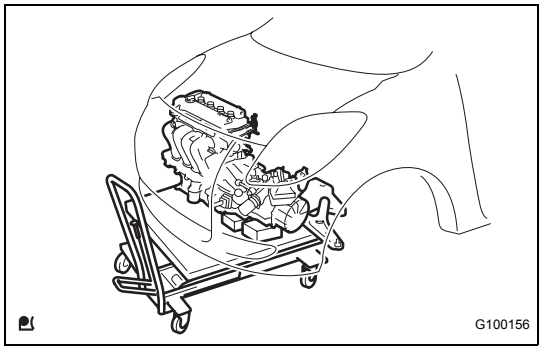
53. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)

54. REMOVE CONSOLE BOX CARPET (for Sedan) (See page PB-7)
55. REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)
56. REMOVE HEATED OXYGEN SENSOR (See page EC-22)
57. REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-5)
58. REMOVE FRONT AXLE HUB LH NUT (See page DS-3)
59. REMOVE FRONT AXLE HUB RH NUT (See page AX-159)
60. SEPARATE SPEED SENSOR FRONT LH (w/ ABS) (See page DS-3)
61. SEPARATE SPEED SENSOR FRONT RH (w/ ABS) (See page AX-159)
62. SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)
63. SEPARATE TIE ROD END SUB-ASSEMBLY RH (See page AX-160)
64. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)
65. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH (See page AX-160)
66. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 LH (See page DS-4)
67. SEPARATE FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 RH (See page AX-160)
68. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-4)
69. SEPARATE FRONT AXLE ASSEMBLY RH (See page MX-29)
70. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)
71. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)
72. REMOVE FLYWHEEL HOUSING UNDER COVER (for Automatic Transaxle)



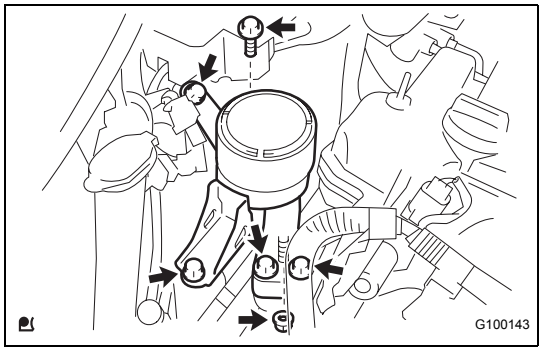
73. REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)

(a) Remove the 6 torque converter set bolts.

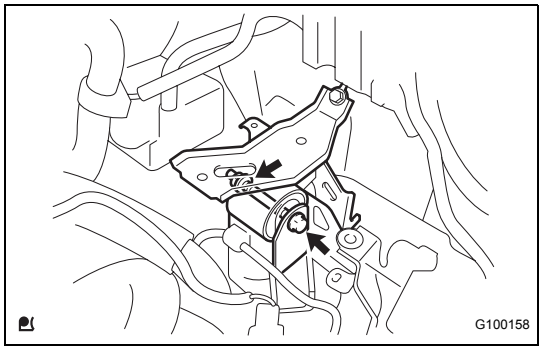


74. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

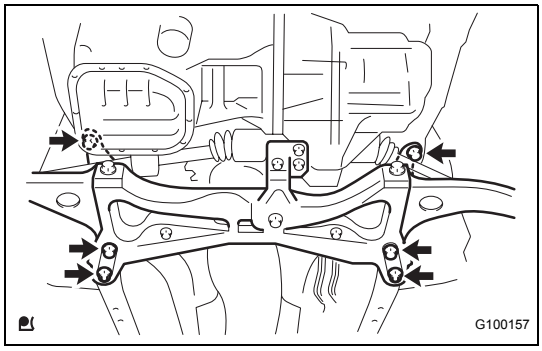
(a) Set the engine lifter.



(b) Remove the 5 bolts and the nut and remove the engine mounting insulator RH.



(c) Remove the through bolt and the nut and separate the engine mounting insulator LH.

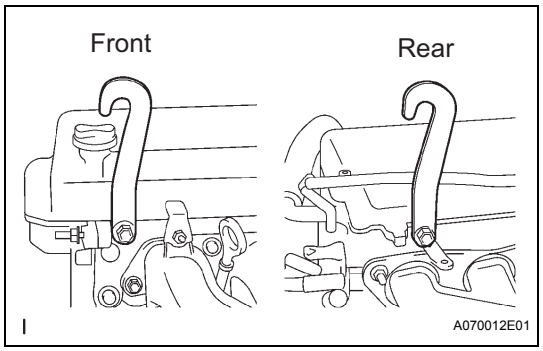


(d) Remove the 6 bolts, and remove the engine assembly with transaxle and the front suspension crossmember from the vehicle.

75. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Remove the bolt and remove the radio setting condenser.

(b) Remove the bolt and remove the oxygen sensor wiring bracket.



(c) Install the engine hangers with the bolts, as shown in the illustration.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
Part No.:
12281-21010 for engine hanger
91642-81025 for bolt

(d) Using an engine sling device and a chain block, suspend the engine assembly with transaxle and front suspension crossmember.

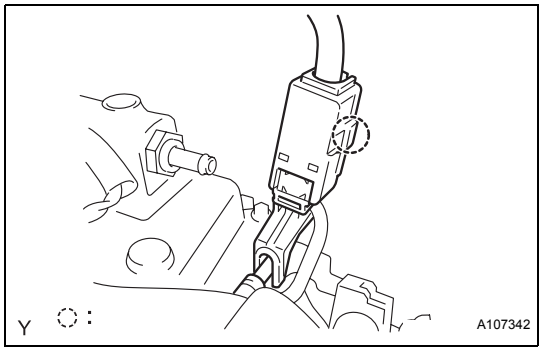
(e) Remove the through bolt from the engine moving control rod and remove the front suspension crossmember.

76. REMOVE VENTILATION HOSE

(a) Loosen the 2 clips and remove the ventilation hose.

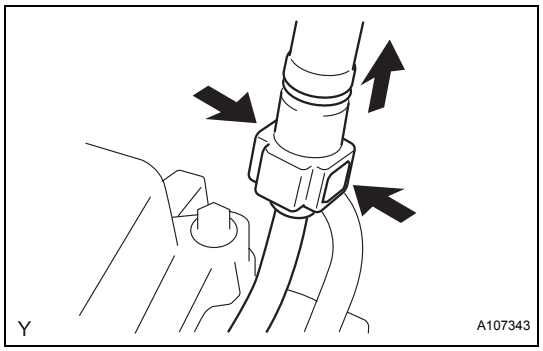
77. REMOVE VENTILATION HOSE NO. 2

(a) Loosen the clips and remove ventilation hose No. 2.



78. REMOVE FUEL TUBE SUB-ASSEMBLY

(a) Disengage the claw and remove fuel pipe clamp No. 2.



(b) Pinch the fuel tube connector retainer from both sides, disconnect the fuel tube connector and separate the fuel tube from the pipe.
NOTICE:
- **Remove any dirt and foreign matter from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-rings that seal the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

79. REMOVE WATER FILLER SUB-ASSEMBLY

(a) Disconnect radiator hose No. 1 from the cylinder head.

(b) Remove the 2 nuts and remove the water filler sub-assembly.

80. REMOVE HEATER WATER INLET HOSE A

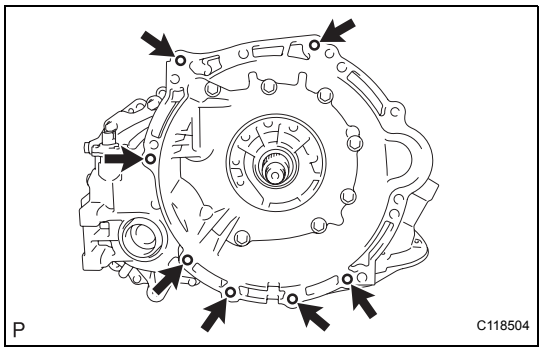
(a) Disconnect heater water inlet hose A from the cylinder head.

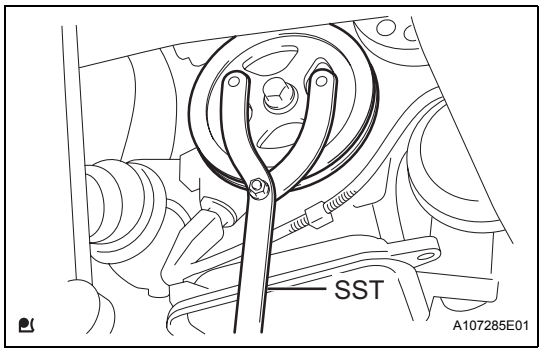
81. REMOVE FLYWHEEL HOUSING SIDE COVER (See page ST-9)

82. REMOVE STARTER ASSEMBLY (See page ST-9)

83. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

(a) Remove the 7 bolts and remove the automatic transaxle with torque converter.





84. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

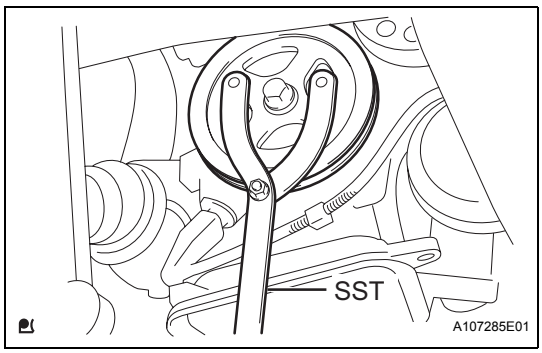
(b) Remove the 6 bolts, drive plate spacer FR, drive plate and ring gear sub-assembly and drive plate spacer RR.

85. REMOVE CONTROL CABLE BRACKET (for Manual Transaxle) (See page MX-28)

86. REMOVE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle) (See page MX-30)

87. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-15)

88. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle)



89. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

(b) Remove the 6 bolts and flywheel.

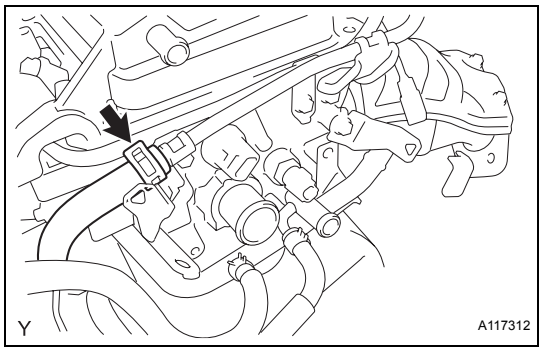
90. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

91. REMOVE IGNITION COIL NO. 1

(a) Disconnect the connectors of the ignition coils.

(b) Remove the bolt and remove all the ignition coils.

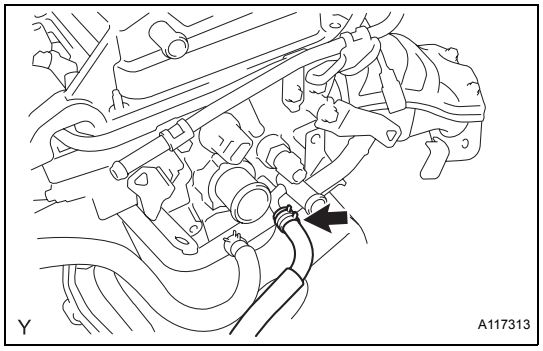
92. REMOVE GENERATOR ASSEMBLY (See page CH-10)



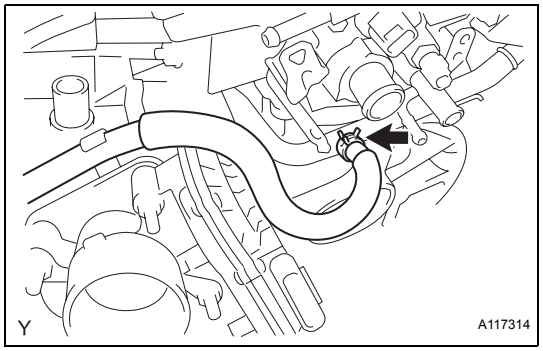
93. REMOVE INTAKE MANIFOLD

(a) Disconnect the union to connector tube hose from the booster vacuum tube.

(b) Disconnect the engine wire from the intake manifold.

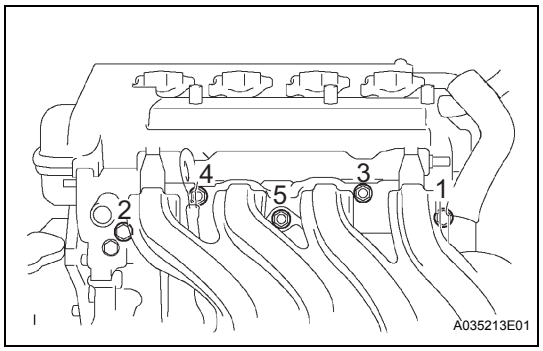


(c) Disconnect the water by-pass hose from the cylinder head.



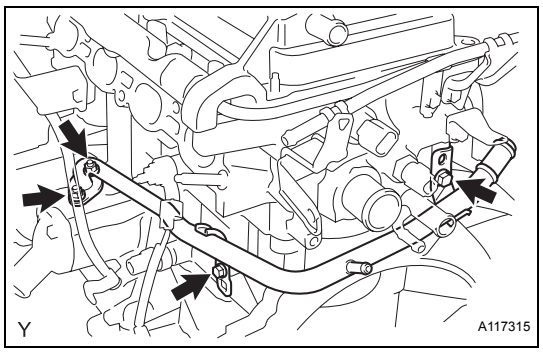
(d) Disconnect the water by-pass hose from water bypass pipe No. 1.

(e) Disconnect the throttle with motor body assembly connector.



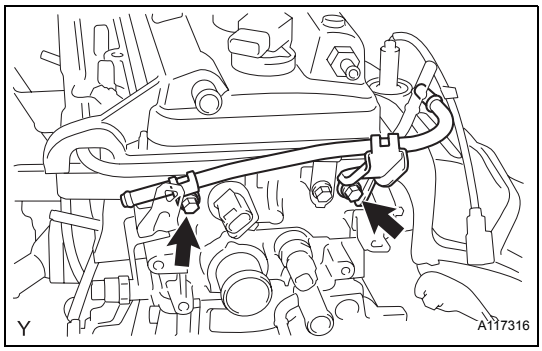
(f) Remove the 3 bolts and 2 nuts in the order shown in the illustration and remove the intake manifold.

(g) Remove the gasket from the intake manifold.



94. REMOVE WATER BY-PASS PIPE NO. 1

(a) Remove the 2 bolts and 2 nuts and remove water by-pass pipe No. 1.

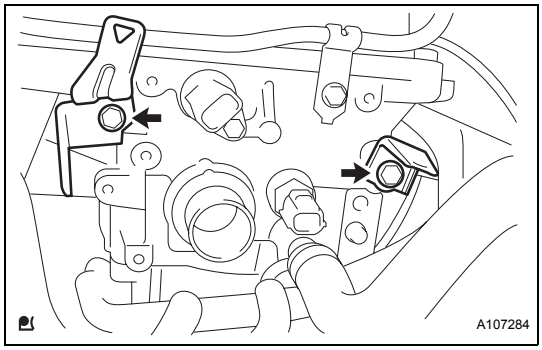


95. REMOVE BOOSTER VACUUM TUBE

(a) Remove the 2 bolts and remove the booster vacuum tube.

96. REMOVE ENGINE WIRE

(a) Disconnect all the sensor connectors and wire harness clamps from the engine assembly and remove the engine wire harness.



97. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the 2 bolts and remove the 2 wire harness clamp brackets.

98. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO. 1

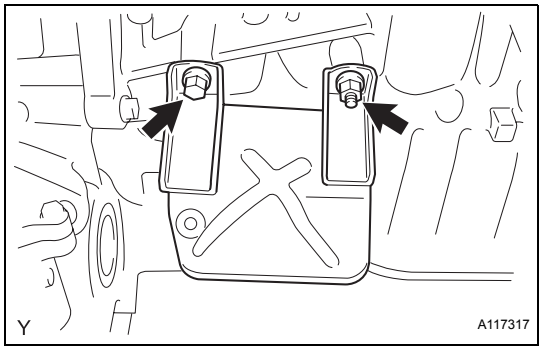
(a) Remove the 4 bolts and remove the exhaust manifold heat insulator.

99. REMOVE MANIFOLD SUPPORT BRACKET

(a) Remove the 3 bolts and remove the manifold support bracket.

100. REMOVE EXHAUST MANIFOLD

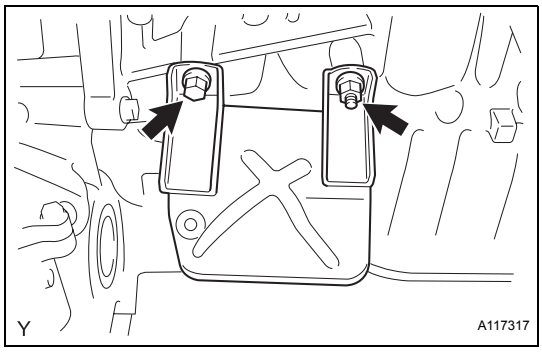
(a) Remove the 3 bolts and 2 nuts and remove the exhaust manifold.



101. REMOVE DRIVE SHAFT HEAT INSULATOR SUB-ASSEMBLY

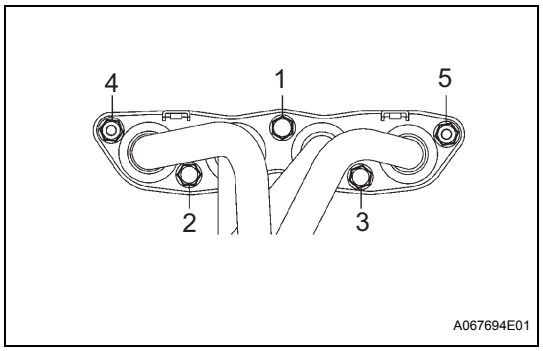
(a) Remove the bolt and nut and remove the drive shaft heat insulator.

INSTALLATION



1. INSTALL DRIVE SHAFT HEAT INSULATOR SUB-ASSEMBLY

(a) Install the drive shaft heat insulator sub-assembly with the bolt and nut.
Torque: 18 N*m (183 kgf*cm, 13 ft.*lbf)



2. INSTALL EXHAUST MANIFOLD

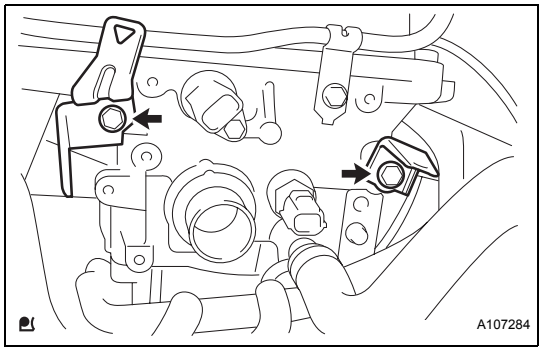
(a) Tighten the exhaust manifold nuts and bolts, in the order shown in the illustration, through a new gasket.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

3. INSTALL MANIFOLD SUPPORT BRACKET

(a) Install the manifold bracket with the 3 bolts.
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf)

4. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1

(a) Install the exhaust manifold insulator with the 4 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

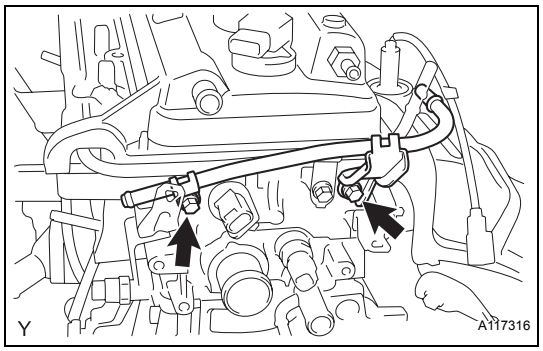


5. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the 2 wire harness clamp brackets with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 89 in.*lbf)

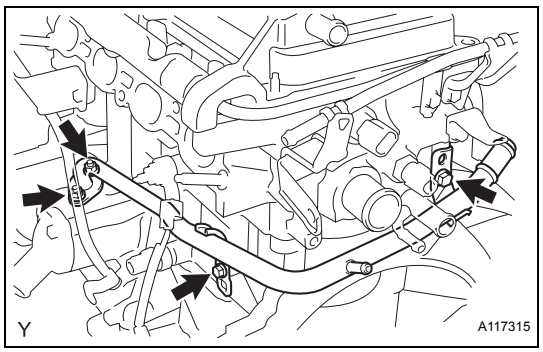
6. INSTALL ENGINE WIRE

(a) Connect all the sensor connectors and wire harness clamps to the engine assembly and install the engine wire harness.



7. INSTALL BOOSTER VACUUM TUBE

(a) Install the booster vacuum tube with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



8. INSTALL WATER BY-PASS PIPE NO. 1

(a) Install water by-pass pipe No. 1 through a new gasket with the 2 bolts and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

9. INSTALL INTAKE MANIFOLD

(a) Install a new gasket onto the intake manifold.

EM

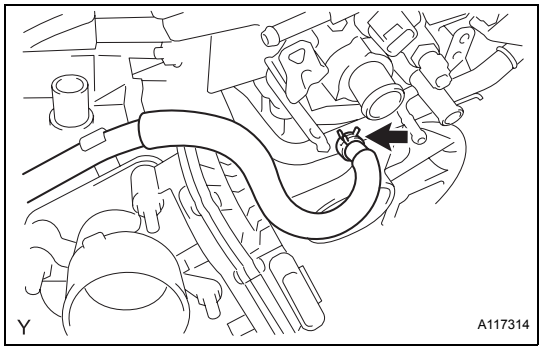
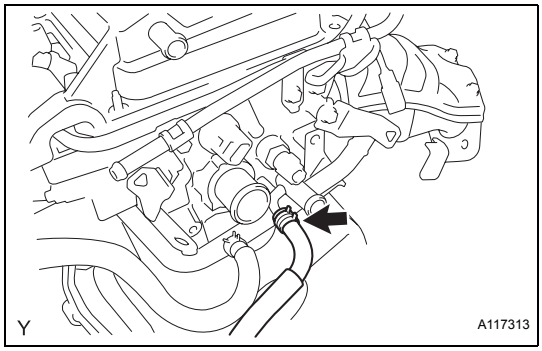
(b) Provisionally tighten the intake manifold nuts and bolts in the order shown in the illustration, and then tighten them to the specified torque.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

(c) Connect the engine wire to the intake manifold.



(d) Connect the water by-pass hose to water bypass pipe No. 1.



(e) Connect the water by-pass hose to the cylinder head.

(f) Connect the union to connector tube hose to the booster vacuum tube.

(g) Connect the throttle with motor body assembly connector.

10. INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY

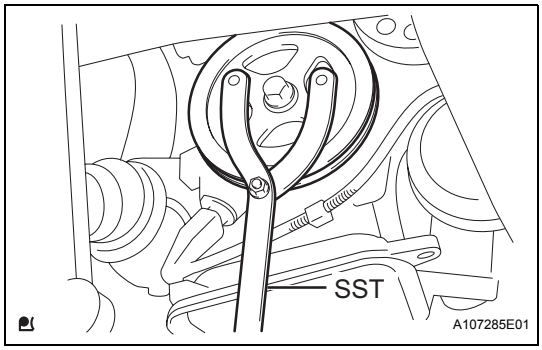
11. INSTALL GENERATOR ASSEMBLY (See page CH-17)

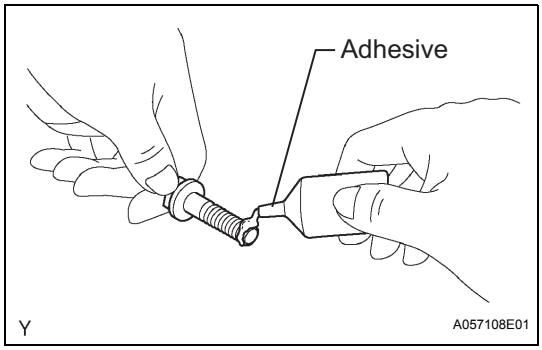
12. INSTALL IGNITION COIL NO.1 (See page IG-9)

13. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

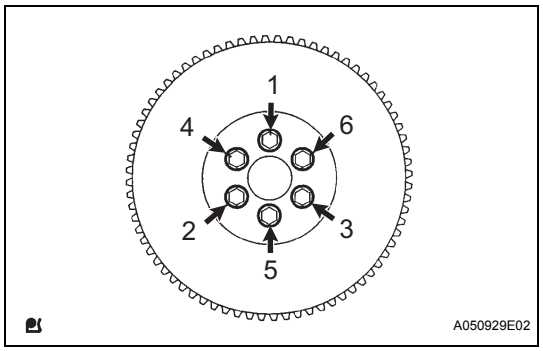
(b) Clean the 6 bolts and their holes.





(c) Apply adhesive to the end 2 or 3 threads of the bolts.
Adhesive:
Part No. 08833-0070, three bond 1324 or the equivalent.

(d) Install the drive plate spacer RR, drive plate and ring gear sub-assembly and drive plate spacer FR.



(e) Install and uniformly tighten the 6 bolts in several steps, in the sequence shown in the illustration.
Torque: 88 N*m (900 kgf*cm, 65 ft.*lbf)
NOTICE:
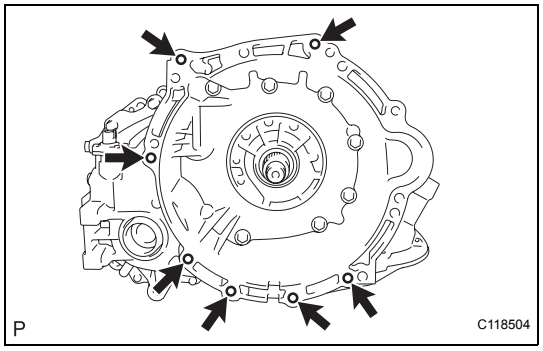
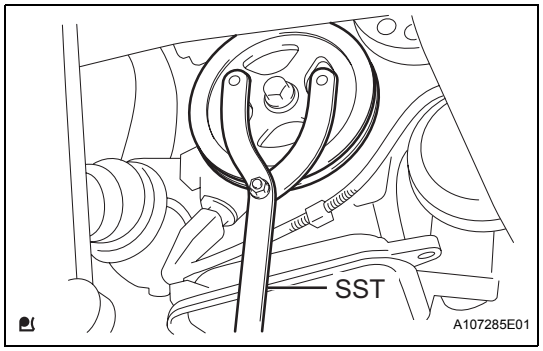
Do not start the engine for at least 1 hour after performing the installation.



14. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

(a) Make sure that the knock pin is installed on the engine side.

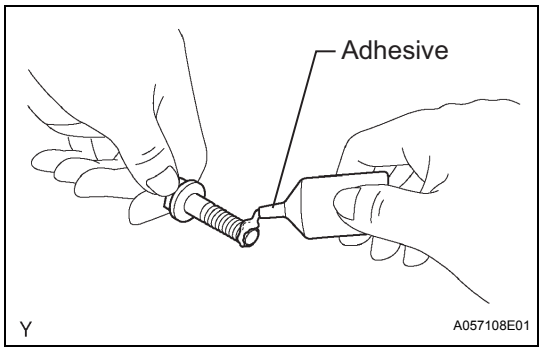
(b) Install the automatic transaxle with torque converter with the 7 bolts.
Torque: 30 N*m (301 kgf*cm, 22 ft.*lbf)
CAUTION:
Make sure that the torque converter rotates.



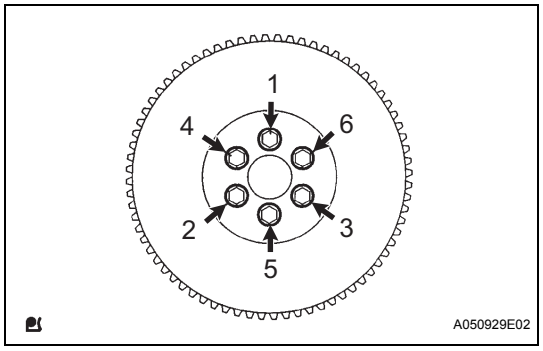
15. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Hold the crankshaft with SST.
SST 09960-10010 (09962-01000, 09963-01000)

(b) Clean the 6 bolts and their holes.

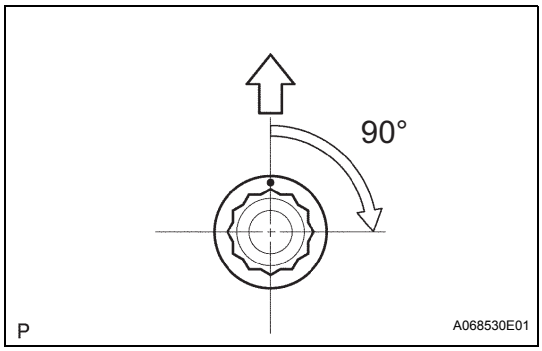


(c) Apply adhesive to the end 2 or 3 threads of new bolts.
Adhesive:
Part No. 08833-0070, three bond 1324 or the equivalent.



(d) Install the flywheel with the 6 bolts in the order shown in the illustration.
Torque: 49 N*m (500 kgf*cm, 38 ft.*lbf)

(e) Mark a paint mark on each bolt head on the engine upper side.



(f) Tighten the bolts 90° in the sequence shown in the illustration.
NOTICE:
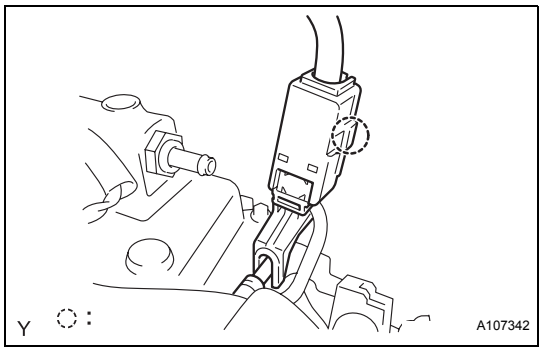
Do not start the engine for at least 1 hour after performing the installation.

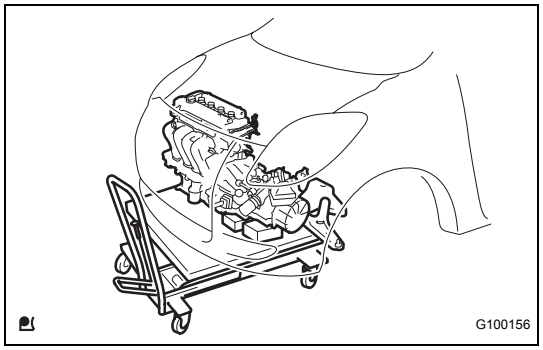
16. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-16)**
17. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-17)**
18. **INSPECT AND ADJUST CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-17)**
19. **INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle) (See page MX-30)**
20. **INSTALL CONTROL CABLE BRACKET (for Manual Transaxle) (See page MX-32)**
21. **INSTALL STARTER ASSEMBLY (See page ST-17)**
22. **INSTALL FLYWHEEL HOUSING SIDE COVER (See page ST-17)**
23. **CONNECT HEATER WATER INLET HOSE A**
    (a) Connect heater water inlet hose A to the cylinder head.
24. **INSTALL WATER FILLER SUB-ASSEMBLY**
    (a) Connect radiator hose No. 1 to the cylinder head.
    (b) Install the water filler sub-assembly with the 2 nuts.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
    (c) Connect radiator hose No. 1 to the water filler.



25. **INSTALL FUEL TUBE SUB-ASSEMBLY**
    (a) Connect the fuel tube connector and pipe and install fuel pipe clamp No. 2.
    CAUTION:
    Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a click sound. If the connection is tight, apply a small amount of engine oil to the the tip of the pipe. After connecting, pull the pipe and connector to make sure that they are securely connected.
26. **INSTALL VENTILATION HOSE NO. 2**
    (a) Install ventilation hose No. 2 with the clip.
27. **INSTALL VENTILATION HOSE**
    (a) Install the ventilation hose with the clip.
28. **INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY**
    (a) Install the engine moving control rod with the through bolt.
    Torque: 120 N*m (1,224 kgf*cm, 89 ft.*lbf)
    (b) Remove the 2 bolts and remove the 2 engine hangers.

(c) Install the oxygen sensor wiring bracket with the bolt.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

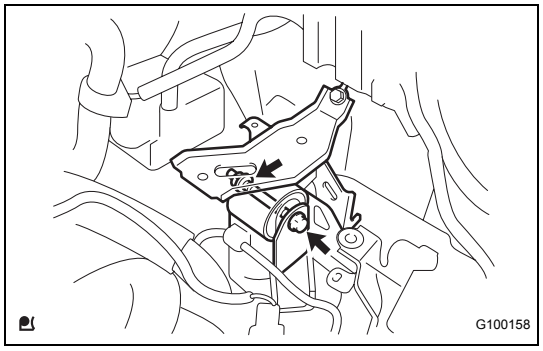
(d) Install the radio setting condenser with the bolt.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



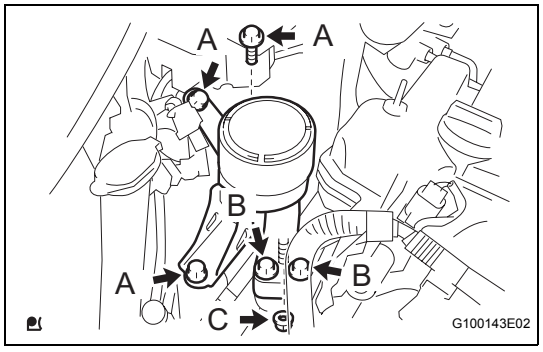
29. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (for Hatchback)

(a) Set the engine assembly with transaxle and front suspension crossmember on the engine lifter.

(b) Operate the engine lifter and lift the engine assembly with transaxle and front suspension crossmember to the position where the engine mounting insulators RH and LH can be installed.

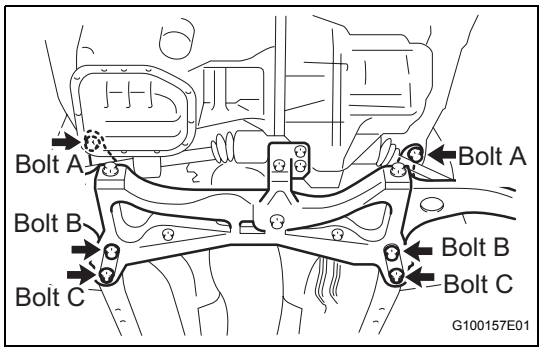


(c) Install the engine mounting insulator LH with the through bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)

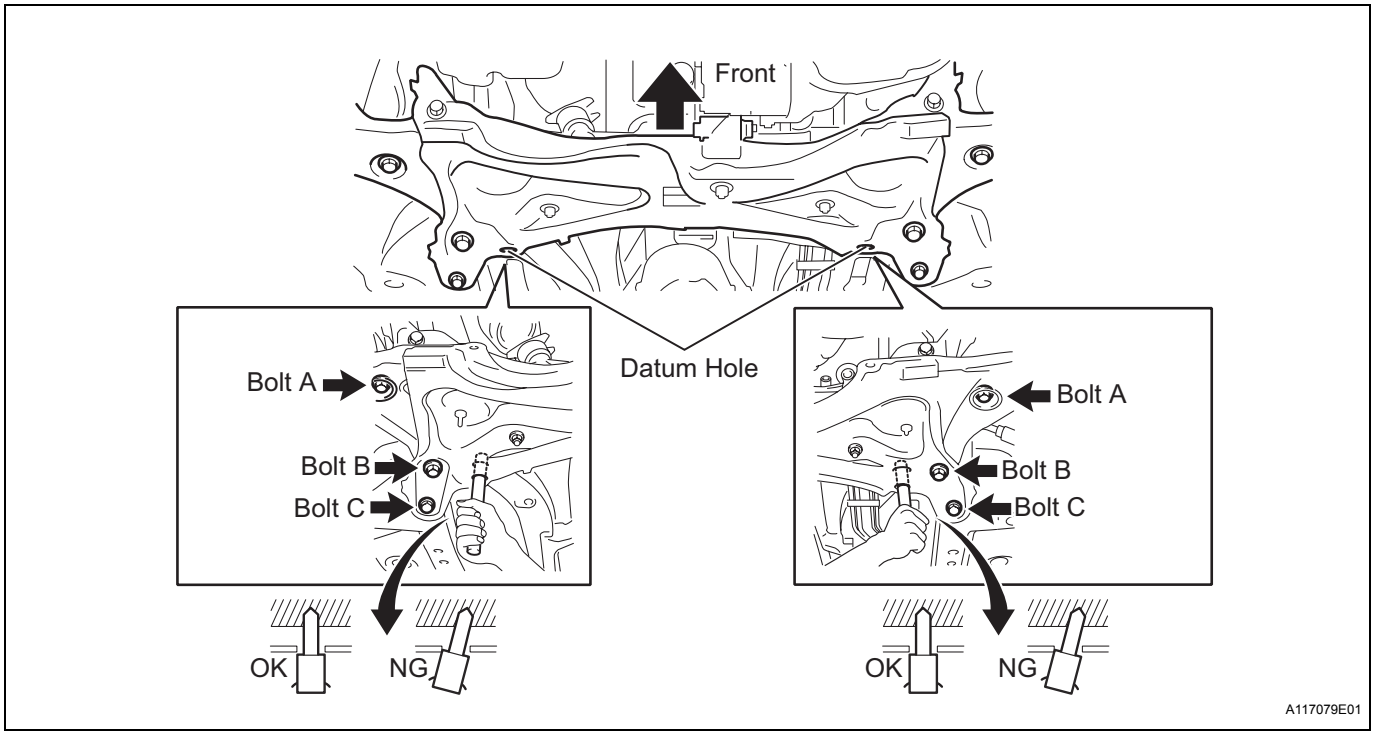


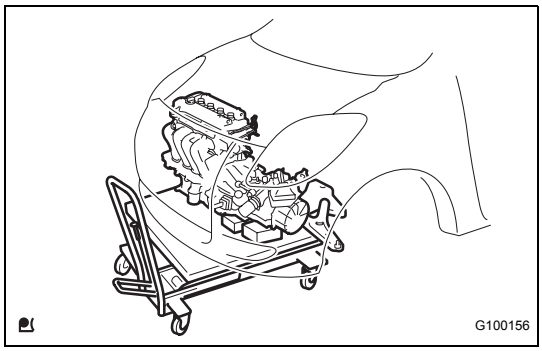
(d) Install the engine mounting insulator RH with the 5 bolts and nut.
Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf) for Bolt A
52 N*m (530 kgf*cm, 38 ft.*lbf) for Bolt B
52 N*m (530 kgf*cm, 38 ft.*lbf) for Nut C

(e) Operate the engine lifter and provisionally install the front suspension crossmember onto the vehicle with the 6 bolts.



(f) Insert SST into the datum holes in the front suspension crossmembers RH and LH alternately and tighten bolts A, B and C on both sides in several sequences.
SST 09670-00010
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C
CAUTION:
- **Insert SST into the datum hole vertically.**
- **If impossible to insert SST vertically, loosen all the bolts and then insert SST again.**

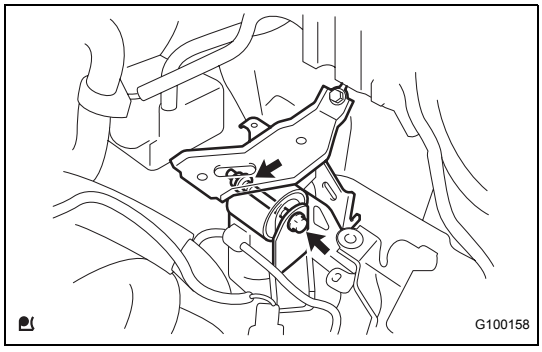




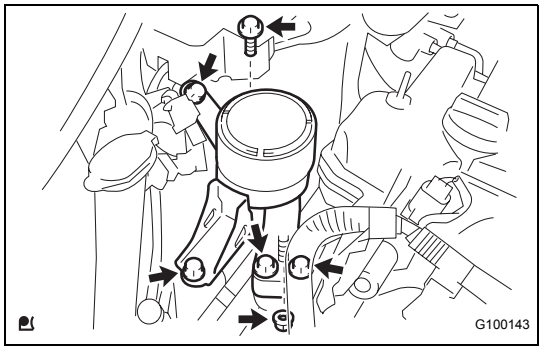
30. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE (for Sedan)

(a) Set the engine assembly with transaxle and front suspension crossmember on the engine lifter.

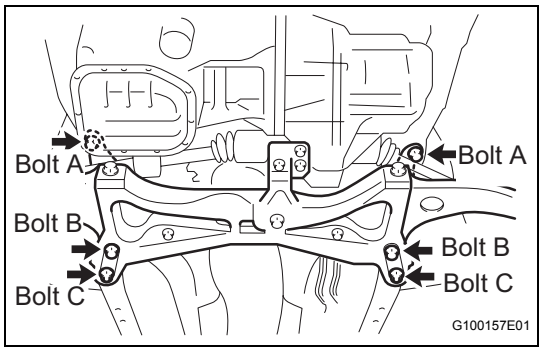
(b) Operate the engine lifter and lift the engine assembly with transaxle and front suspension crossmember to the position where the engine mounting insulators RH and LH can be installed.



(c) Install the engine mounting insulator LH with the through bolt and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)



(d) Install the engine mounting insulator RH with the 5 bolts and nut.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)



(e) Operate the engine lifter and provisionally install the engine assembly with transaxle and front suspension crossmember onto the vehicle with the 6 bolts.

(f) Insert SST into the datum holes of the front suspension crossmembers RH and LH alternately and tighten bolts A, B and C on both sides in several sequences.

SST 09670-00010

Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf) for Bolt A
160 N*m (1,631 kgf*cm, 118 ft.*lbf) for Bolt B
95 N*m (969 kgf*cm, 70 ft.*lbf) for Bolt C

CAUTION:

- **Insert SST into the datum hole vertically.**
- **If impossible to insert SST vertically, loosen all the bolts and then insert SST again.**

EM

31. **INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)**
    (a) Tighten the 6 torque converter set bolts.
    Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
32. **INSTALL FLYWHEEL HOUSING UNDER COVER**
33. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**
34. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**
35. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-14)**
36. **INSTALL FRONT AXLE ASSEMBLY RH (See page DS-14)**

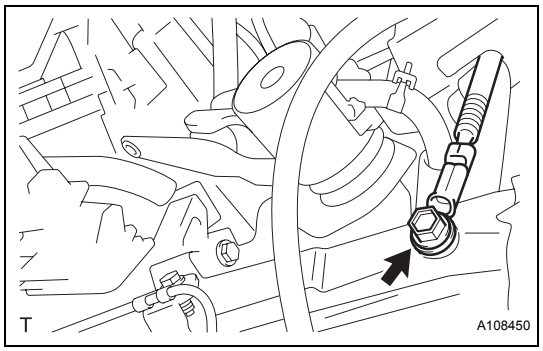
37. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)
38. INSTALL FRONT STABILIZER LINK ASSEMBLY RH (See page MX-31)
39. INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 LH (See page DS-14)
40. INSTALL FRONT SUSPENSION ARM SUB-ASSEMBLY LOWER NO. 1 RH (See page MX-31)
41. INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)
42. INSTALL TIE ROD END SUB-ASSEMBLY RH (See page MX-31)
43. INSTALL SPEED SENSOR FRONT LH (w/ ABS) (See page DS-15)
44. INSTALL SPEED SENSOR FRONT RH (w/ ABS) (See page MX-31)
45. INSTALL FRONT AXLE HUB LH NUT (See page DS-15)
46. INSTALL FRONT AXLE HUB RH NUT (See page MX-31)
47. INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-8)
48. INSTALL HEATED OXYGEN SENSOR (See page EC-23)
49. INSTALL CONSOLE BOX ASSEMBLY REAR (See page PB-10)
50. INSTALL CONSOLE BOX REAR COVER (for Hatchback) (See page PB-11)
51. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transaxle) (See page PB-12)
52. INSTALL CONSOLE BOX CARPET (for Sedan) (See page PB-11)
53. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)
54. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)
55. INSTALL INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-55)
56. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-141)
57. INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)
58. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

59. **INSTALL STEERING COLUMN HOLE COVER SUB-ASSEMBLY NO. 1 (See page PS-79)**

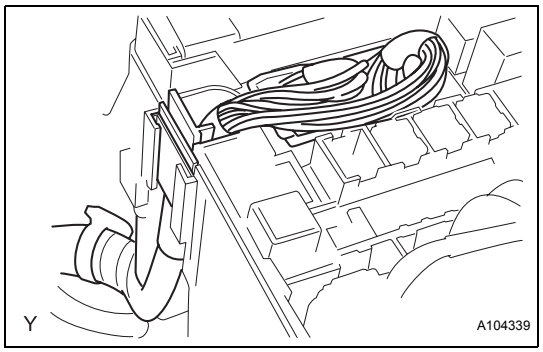
60. **INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY (See page PS-79)**

61. **INSTALL COLUMN HOLE COVER SILENCER SHEET (See page PS-79)**

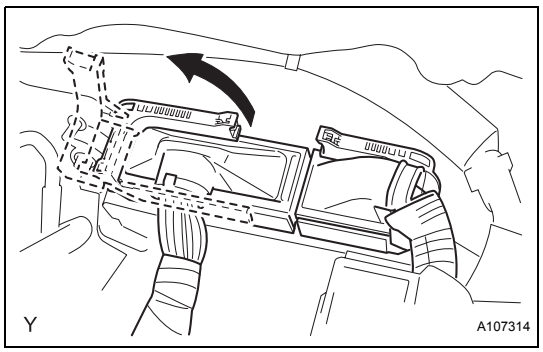
62. **CONNECT ENGINE WIRE**



(a) Install the earth wire of the engine room wire harness with the bolt.



(b) Connect the 2 engine wire harness connectors and wire harness clamp to the engine room junction block.



(c) Connect the engine wire harness connector to the ECM.

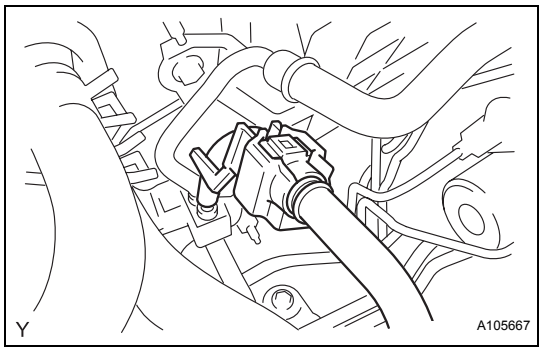
63. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle) (See page MX-32)**

64. **INSTALL WITH PULLEY COMPRESSOR ASSEMBLY (w/ Air Conditioning System) (See page AC-209)**

65. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**

66. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**

67. **CONNECT FUEL TUBE SUB-ASSEMBLY**



(a) Connect the fuel tube connector and fuel pipe, and install fuel pipe clamp No. 1.

CAUTION:

Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a click sound. If the connection is tight, apply a small amount of engine oil to the the tip of the pipe. After connecting, pull the pipe and connector to make sure that they are securely connected.

EM

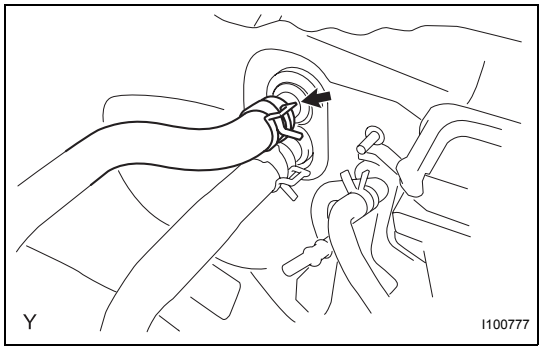
68. CONNECT HEATER WATER INLET HOSE A

(a) Connect heater water inlet hose A to the heater unit.



69. CONNECT HEATER WATER OUTLET HOSE A (FROM HEATER UNIT)

(a) Connect heater water outlet hose A to the heater unit.

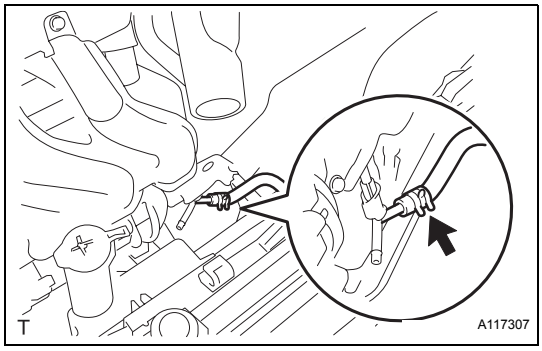
70. CONNECT UNION TO CHECK VALVE HOSE

(a) Connect the union to check valve hose to the booster vacuum tube.

71. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle) (See page AX-109)

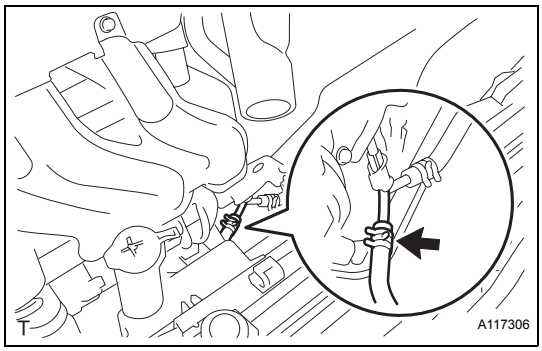
72. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle) (See page MX-32)

73. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)



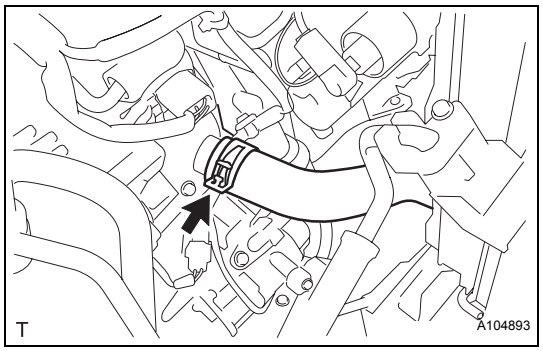
74. CONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Connect the oil cooler inlet hose with the clip.



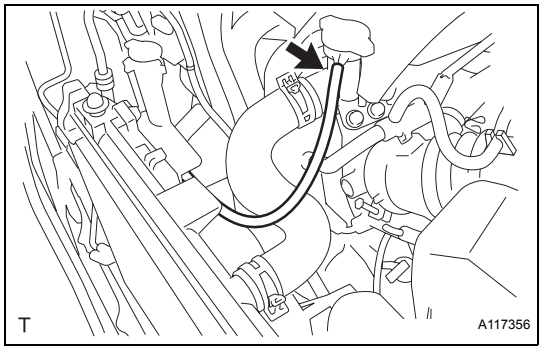
75. CONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)

(a) Connect the oil cooler outlet hose with the clip.



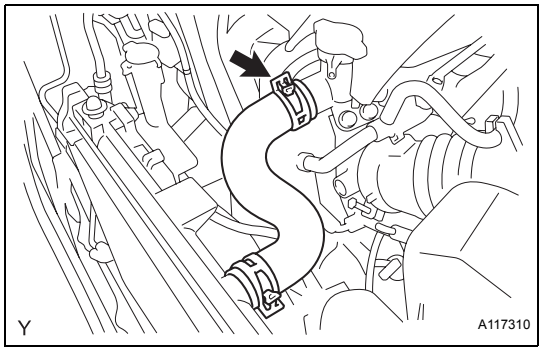
76. CONNECT RADIATOR HOSE NO. 2

(a) Connect radiator hose No. 2 to the water inlet.



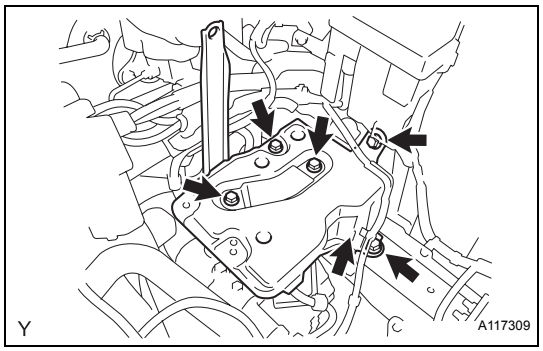
77. CONNECT RADIATOR RESERVOIR TANK HOSE

(a) Connect the radiator reservoir tank hose to the water filler.



78. CONNECT RADIATOR HOSE NO. 3

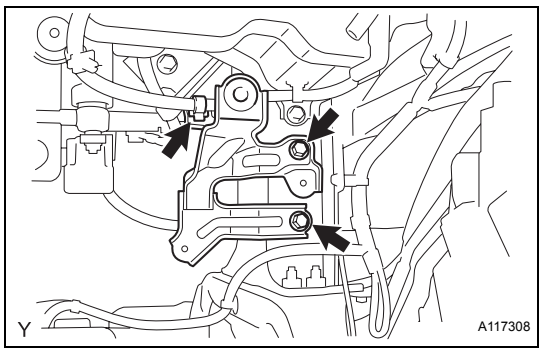
(a) Connect radiator hose No. 3 to the water filler.



79. INSTALL BATTERY CARRIER

(a) Install the battery carrier with the 5 bolts.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)

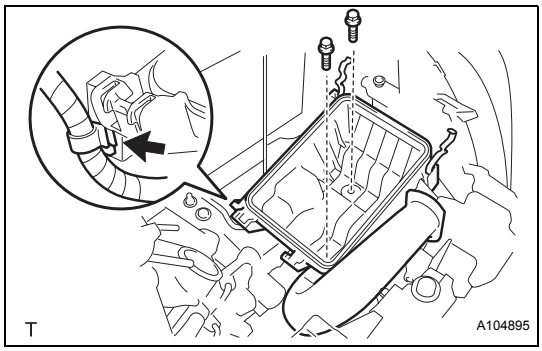
(b) Install the clamp.



80. INSTALL AIR CLEANER BRACKET

(a) Install the air cleaner bracket with the 2 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

(b) Connect the wire harness clamp to the air cleaner bracket.

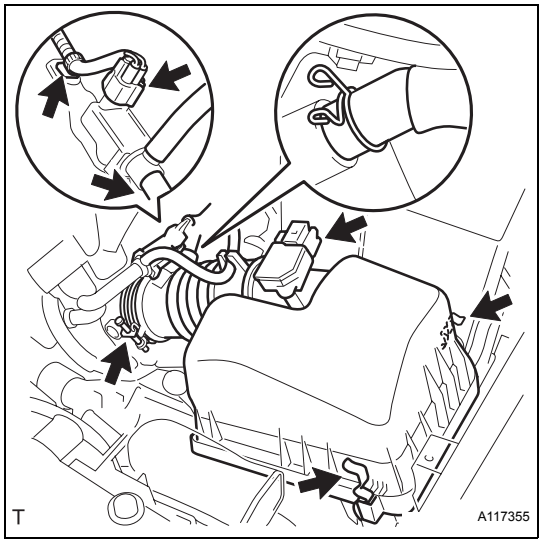


81. INSTALL AIR CLEANER ASSEMBLY

(a) Install the air cleaner case with air cleaner inlet No. 1 with the 2 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

(b) Connect the wire harness to the air cleaner case.

(c) Install the air cleaner element.



(d) Install and lock the air cleaner cap and the air cleaner hose and then tighten the air cleaner hose clamp.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(e) Connect the ventilation hose to the air cleaner hose.

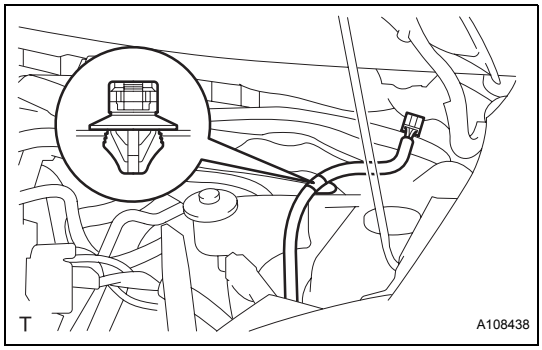
(f) Connect the vacuum switching valve connector and the wire harness clamp.

(g) Connect the fuel vapor feed hose and fuel vapor feed hose No. 1 to the vacuum switching valve assembly.

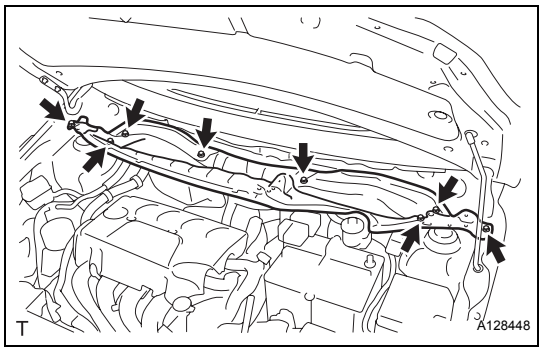
(h) Connect the intake air flow meter connector and the wire harness clamp.

82. INSTALL COWL TOP PANEL OUTER (for Hatchback)

(a) Install the cowl top panel with the 9 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 ft.*lbf)

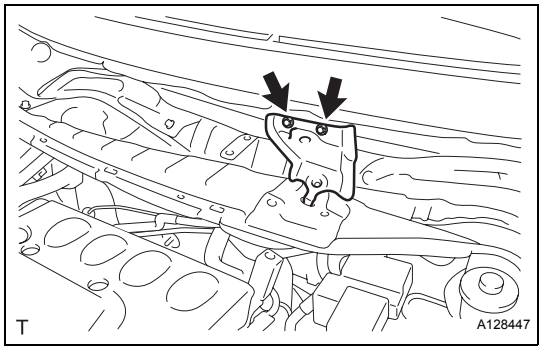


(b) Connect the wire harness clamp.

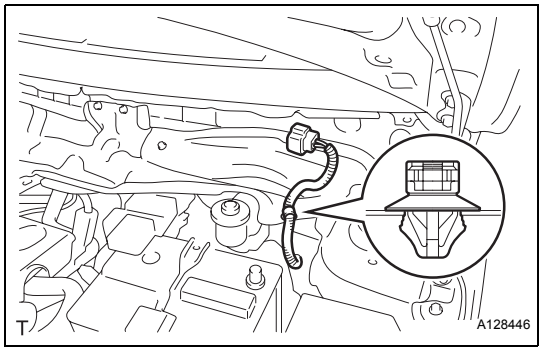


83. INSTALL COWL TOP PANEL OUTER (for Sedan)

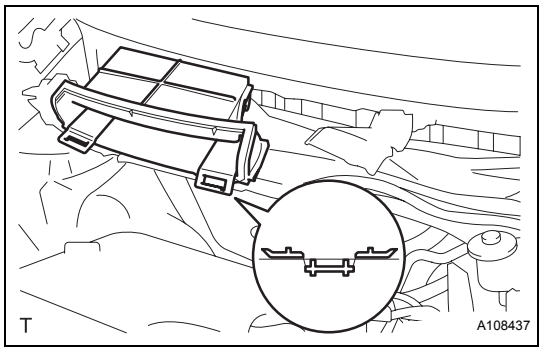
(a) Install the cowl top panel outer with the 8 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(b) Install the cowl top to cowl inner brace with the 2 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)



(c) Connect the wire harness clamp.



84. INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY NO. 2 (for Hatchback)

(a) Engage the claw and install cowl to register duct No. 2.

EM

EM

85. **INSTALL FRONT AIR SHUTTER SEAL RH (for Sedan)**
    (a) Engage the 3 claws to install the front air shutter seal RH.
86. **INSTALL FRONT WIPER MOTOR AND LINK (See page WW-21)**
87. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**
88. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Hatchback) (See page WW-21)**
89. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**
90. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (for Sedan) (See page WW-12)**
91. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**
92. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**
93. **INSTALL FRONT WIPER ARM LH (See page WW-22)**
94. **INSTALL FRONT WIPER ARM RH (See page WW-23)**
95. **INSTALL FRONT WIPER ARM HEAD CAP (See page WW-23)**
96. **INSTALL BATTERY TRAY**
97. **INSTALL BATTERY**
    (a) Install the battery onto the vehicle with the battery clamp.
    Torque: 3.5 N*m (36 kgf*cm, 31 in.*lbf)
    (b) Connect the cable to the battery terminal.
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
98. **ADD ENGINE COOLANT (See page CO-8)**
99. **ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-169)**
100. **INSPECT AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-93)**
101. **ADD MANUAL TRANSAXLE OIL (for Manual Transaxle)**
102. **INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-2)**
103. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**
104. **CHECK FOR FUEL LEAKAGE (See page FU-7)**
105. **CHECK FOR ENGINE OIL LEAKAGE**
106. **CHECK FOR EXHAUST GAS LEAKAGE**
107. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)**

108. INSTALL ENGINE UNDER COVER RH
109. INSTALL ENGINE UNDER COVER LH
110. INSTALL FRONT WHEELS
     Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
111. INSPECT IGNITION TIMING (See page EM-1)
112. INSPECT ENGINE IDLING SPEED (See page EM-2)
113. INSPECT CO/HC (See page EM-4)
114. INSPECT FRONT WHEEL ALIGNMENT
115. INSPECT ABS SENSOR SIGNAL (w/ ABS)

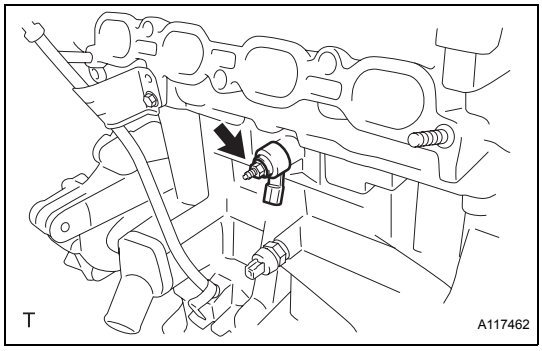
DISASSEMBLY

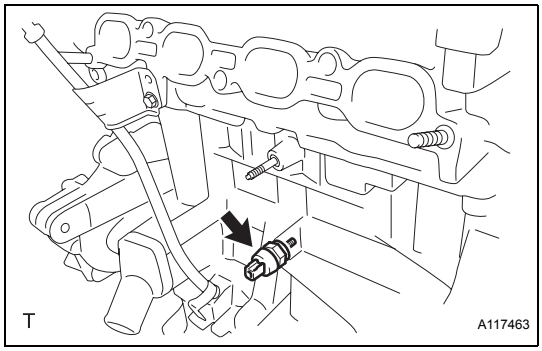
1. REMOVE SPARK PLUG

(a) Using a spark plug wrench, remove the 4 spark plugs.



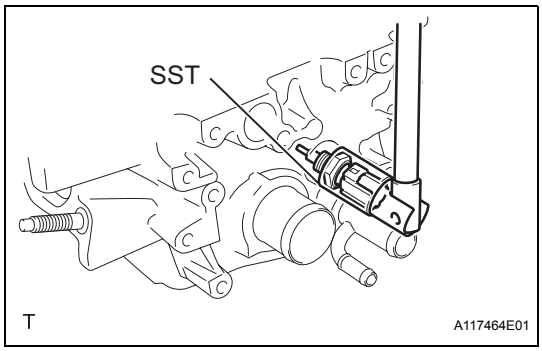
2. REMOVE KNOCK SENSOR

(a) Remove the nut and remove the knock sensor.



3. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

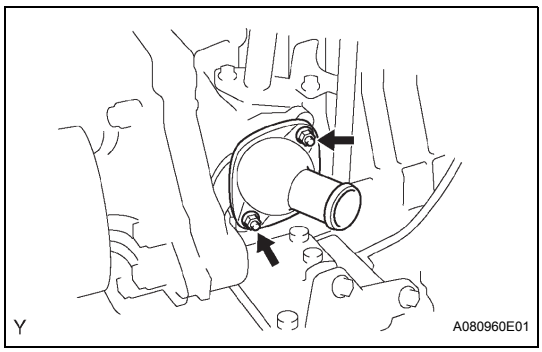
(a) Using a 24 mm deep socket wrench, remove the oil pressure switch.



4. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

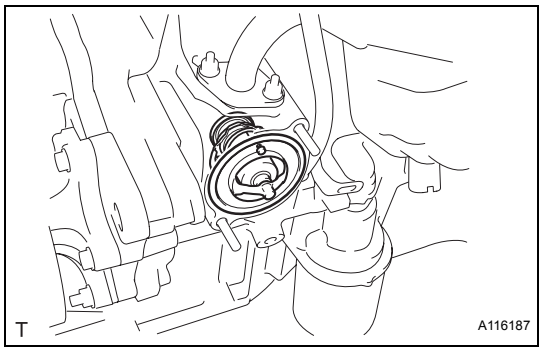
(a) Using SST, remove the engine coolant temperature sensor.

SST 09817-33190



5. REMOVE WATER INLET

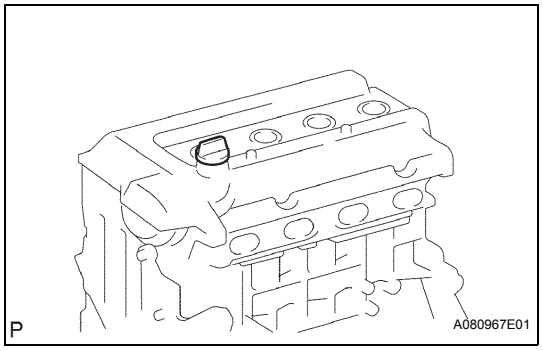
(a) Remove the 2 nuts and remove the water inlet.



6. REMOVE THERMOSTAT

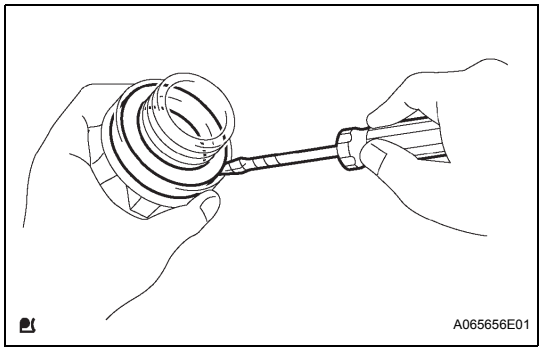
(a) Remove the thermostat.

(b) Remove the gasket from the thermostat.



7. REMOVE OIL FILLER CAP SUB-ASSEMBLY

(a) Remove the oil filler cap from the cylinder head cover.

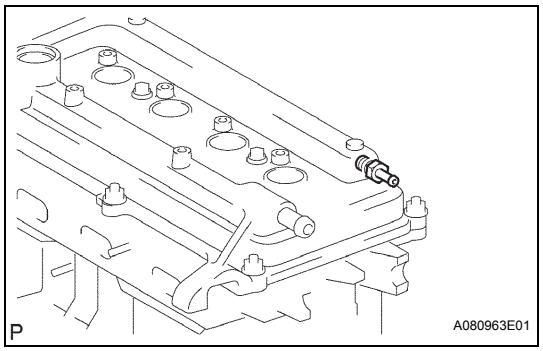


8. REMOVE OIL FILLER CAP GASKET

(a) Using a screwdriver, remove the gasket from the oil filler cap.

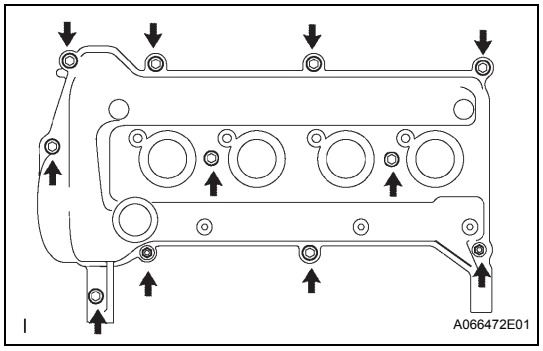
9. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and the crankshaft position sensor.



10. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve from the cylinder head cover.

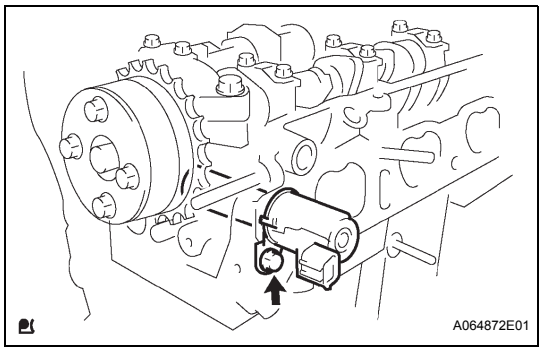


11. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 9 bolts, 2 nuts and 2 seal washers and then remove the cylinder head cover sub-assembly.

12. REMOVE CYLINDER HEAD COVER GASKET

(a) Remove the gasket from the cylinder head cover.

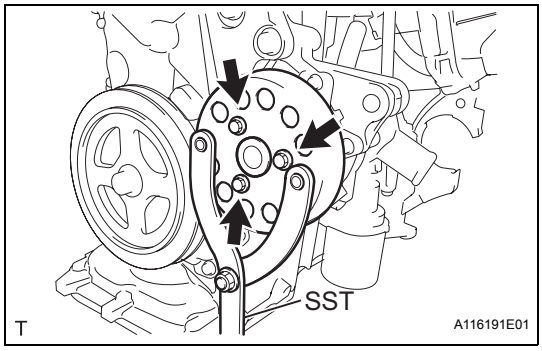


13. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Remove the bolt and the camshaft timing oil control valve.

14. REMOVE OIL LEVEL GAUGE GUIDE

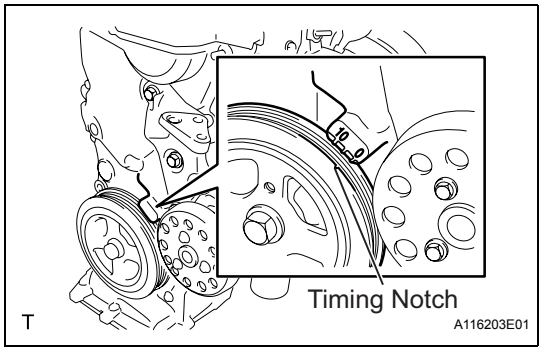
(a) Remove the bolt and the oil level gauge guide.



15. REMOVE WATER PUMP PULLEY

(a) Using SST, hold the pump pulley.
SST 09960-10010 (09962-01000, 09963-00700)

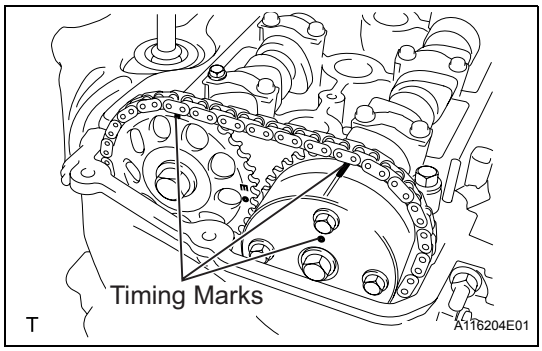
(b) Remove the 3 bolts and the pump pulley.



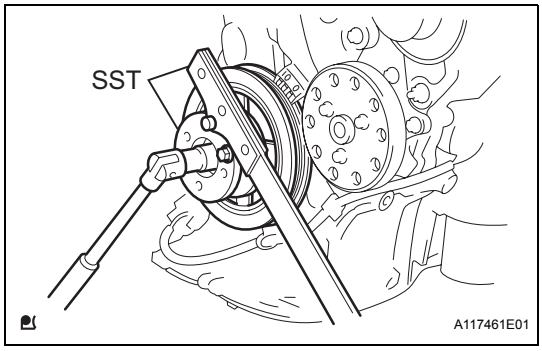
16. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

(a) Set cylinder No. 1 to TDC/compression.

(1) Turn the crankshaft damper sub-assembly, and align its timing notch with timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and the camshaft timing gear are all facing upward, as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.



(b) Using 2 SSTs, loosen the bolt while holding the crankshaft damper sub-assembly.
SST 09213-14010 (91651-60865), 09330-00021
NOTICE:
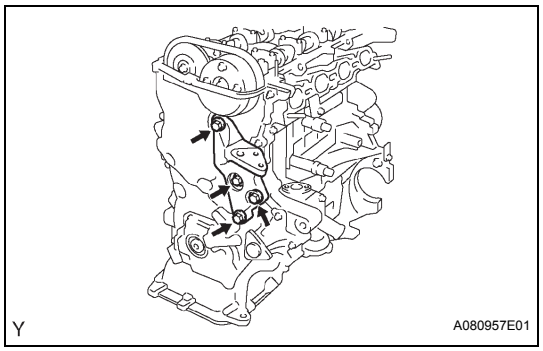
Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.

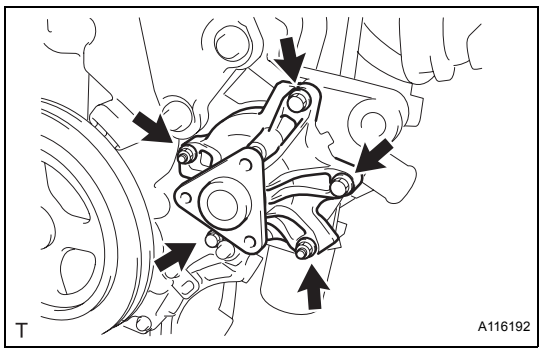
(c) Remove the SSTs and the bolt.

(d) Remove the crankshaft damper sub-assembly.



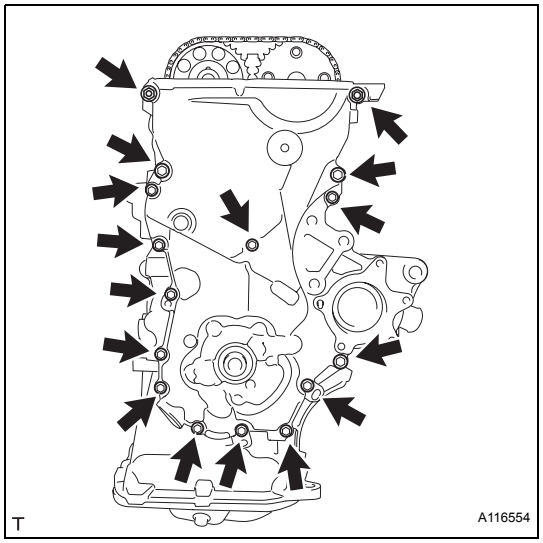
17. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and remove the transverse engine mounting bracket.



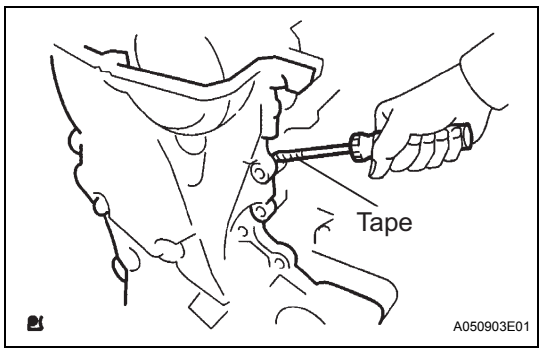
18. REMOVE WATER PUMP ASSEMBLY

(a) Remove the 3 bolts and the 2 nuts and remove the water pump and the gasket.



19. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 15 bolts and the nut.



(b) Using a screwdriver with its tip wrapped in protective tape, prize the oil pump assembly to remove it.

NOTICE:

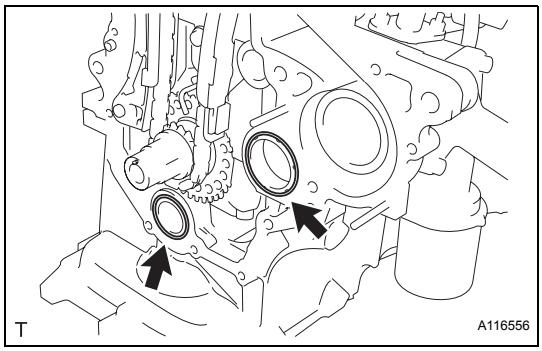
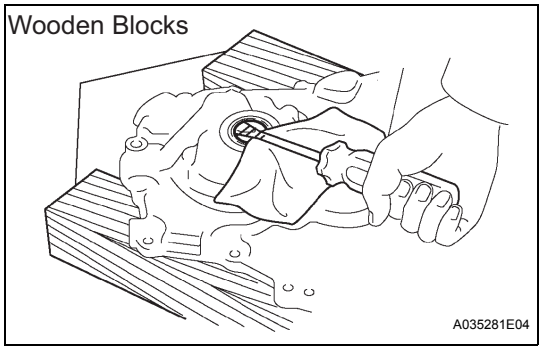
Do not damage the contact surface of the oil pump assembly and oil pan sub-assembly.



(c) Remove the 2 O-rings from the cylinder block and oil pan sub-assembly.



20. REMOVE OIL PUMP SEAL

(a) Using a screwdriver with its tip wrapped in tape, remove the oil seal.

21. REMOVE CHAIN TENSIONER ASSEMBLY NO. 1

NOTICE:

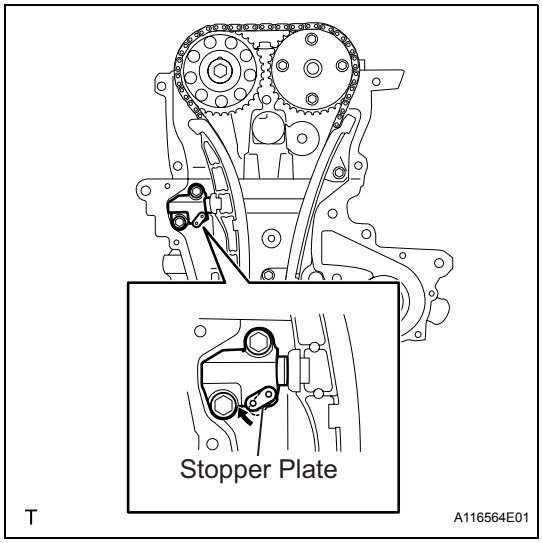
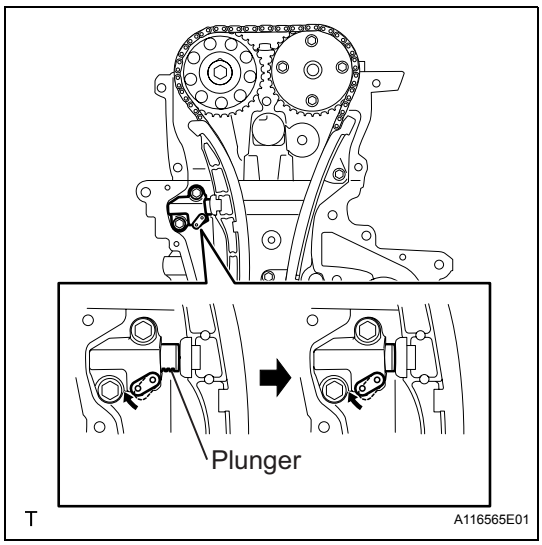
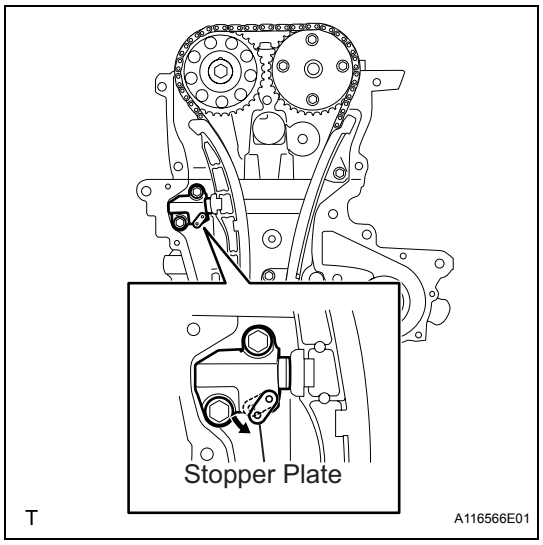
- **Do not rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**

(a) Pull up the stopper plate and hold it with its lock released.

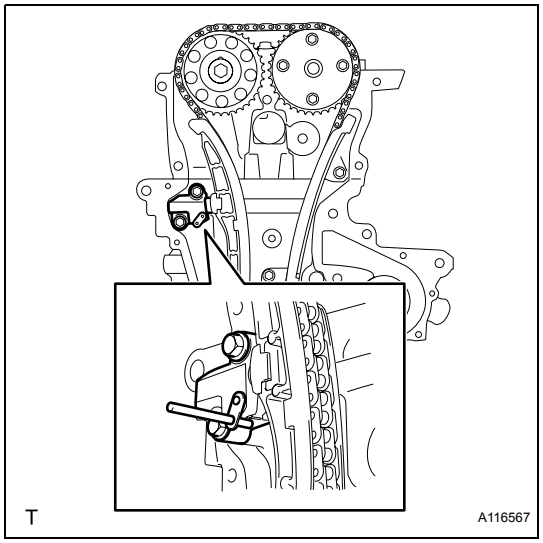


(b) Unlock the plunger of the tensioner and push it in to the end.

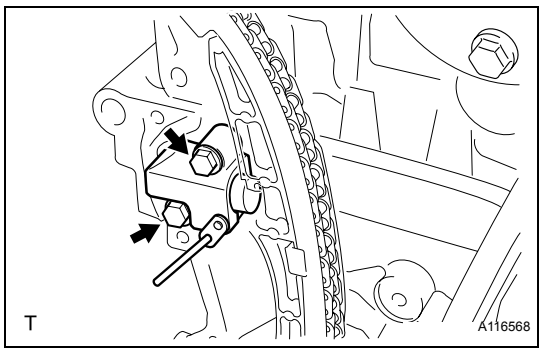




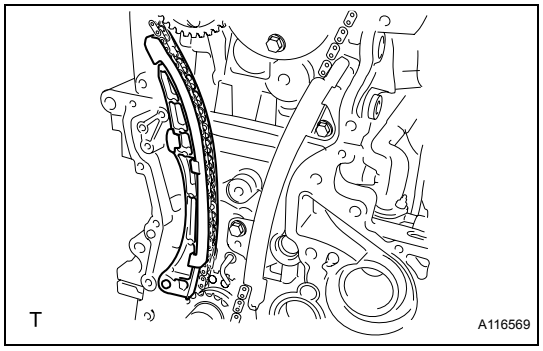
(c) Pull down the stopper plate with the plunger pushed to the end and lock the plunger.



(d) Insert a 3 mm (0.12 in.) diameter bar into the hole in the stopper plate and lock the plunger.

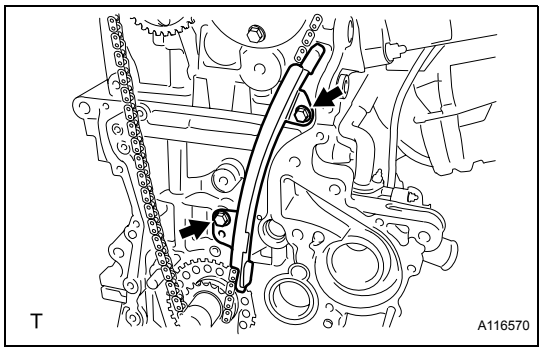


(e) Remove the 2 bolts and remove chain tensioner assembly No. 1.



22. REMOVE CHAIN TENSIONER SLIPPER

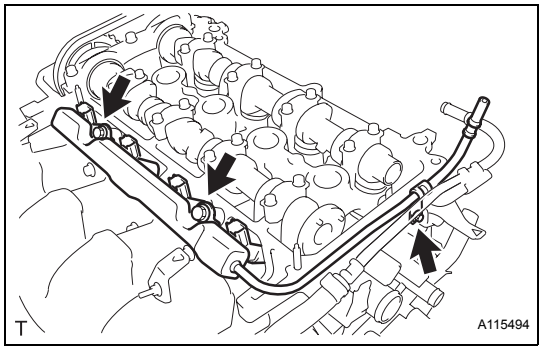
(a) Remove the chain tensioner slipper.



23. REMOVE CHAIN VIBRATION DAMPER NO. 1

(a) Remove the 2 bolts and remove chain vibration damper No. 1.

24. REMOVE CHAIN SUB-ASSEMBLY



25. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Remove the 3 bolts and remove the fuel delivery pipe sub-assembly with 4 fuel injectors.

NOTICE:

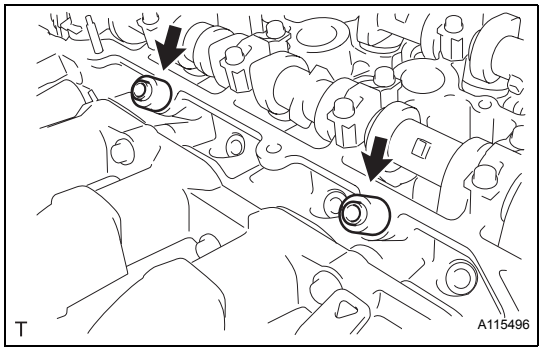
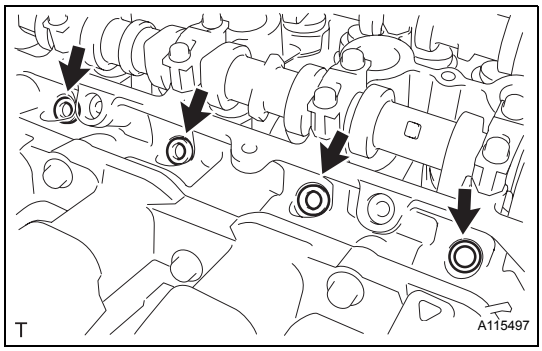
Do not drop the fuel injectors when removing the fuel delivery pipe sub-assembly.



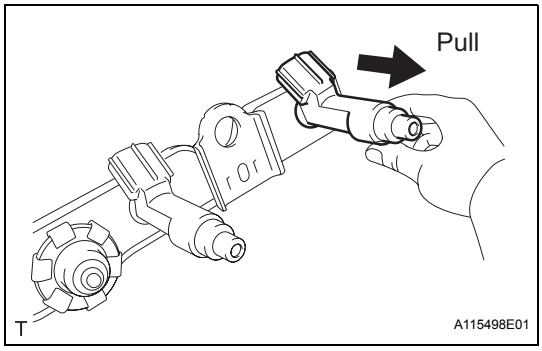
26. REMOVE DELIVERY PIPE NO. 1 SPACER

(a) Remove the 2 delivery pipe No. 1 spacers.



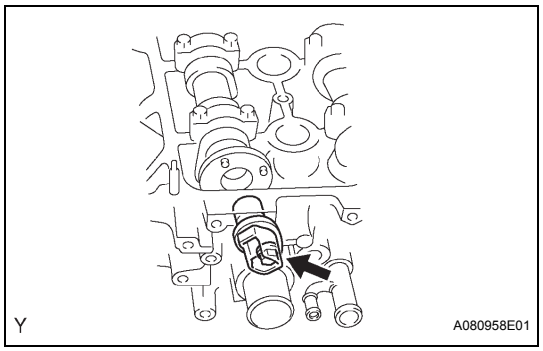
27. REMOVE INJECTOR VIBRATION INSULATOR

(a) Remove the 4 injector vibration insulators.



28. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull the 4 fuel injector assemblies out of the fuel delivery pipe sub-assembly.



29. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and the camshaft position sensor.

30. REMOVE NO. 2 CAMSHAFT

NOTICE:

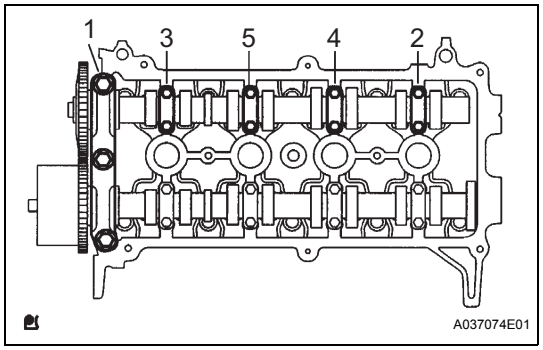
When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.



(a) Using several steps, uniformly loosen and remove the 11 bearing cap bolts in the sequence shown in the illustration, then remove camshaft bearing cap No. 1, camshaft bearing cap No. 2 and camshaft No. 2.

NOTICE:

Loosen each bolt uniformly while keeping the camshaft level.

EM

31. REMOVE CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vice.

(b) Remove the flange bolt and the camshaft timing sprocket.

NOTICE:

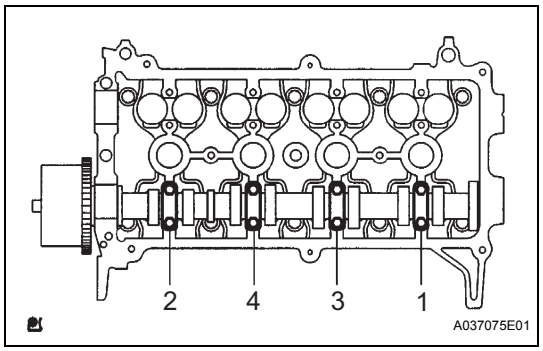
Do not damage the camshaft.



32. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration, then remove camshaft bearing cap No. 2 and the camshaft.

NOTICE:

Loosen each bolt uniformly while keeping the camshaft level.

33. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise, and confirm that it is locked.

NOTICE:

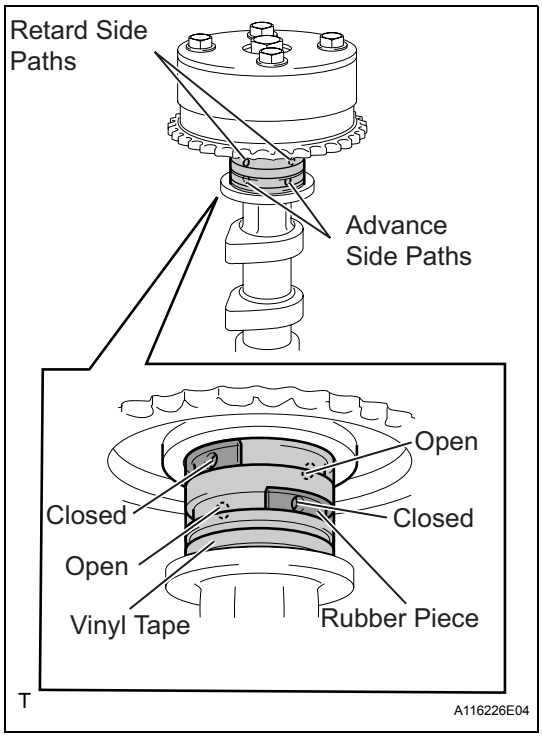
Do not damage the camshaft.



(b) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.
HINT:
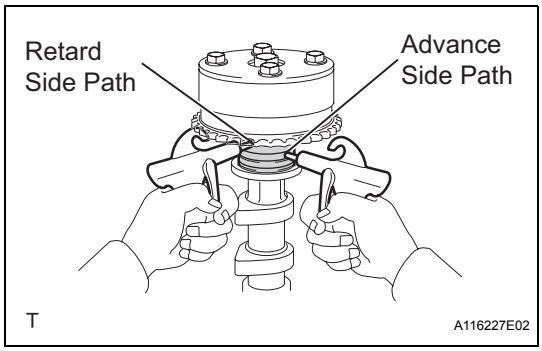
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(c) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(d) Apply about 150 kPa (1.5 kgf*cm^2) air pressure into the 2 broken paths (the advance side path and the retard side path).
NOTICE:
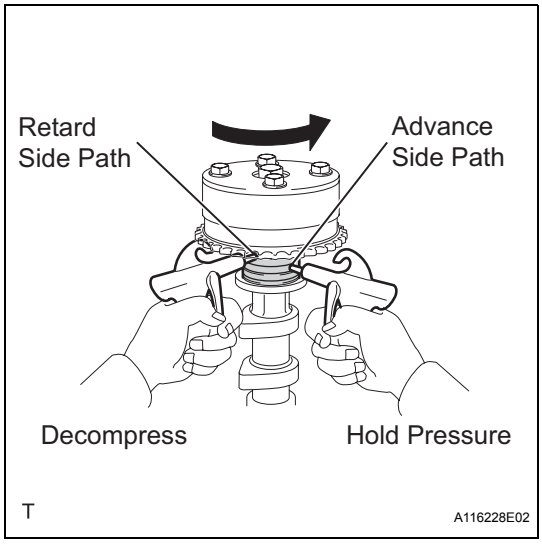
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.



(e) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
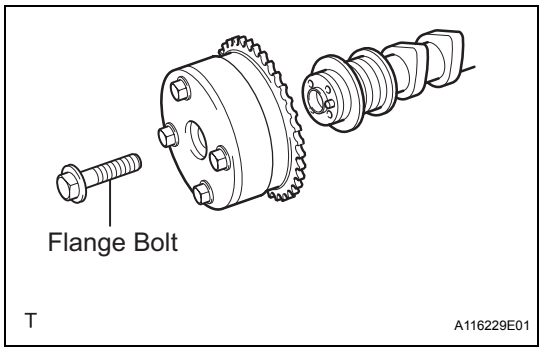
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.



(g) Remove the flange bolt and remove the camshaft timing gear assembly.
NOTICE:
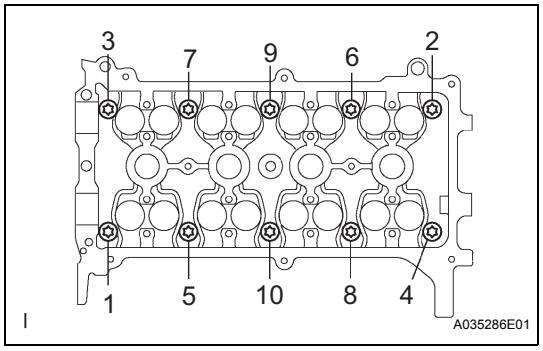
- **Do not remove the other 4 bolts.**
- **When reusing the camshaft timing gear, unlock the lock pin inside the camshaft timing gear first.**



34. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts with an 8 mm bi-hexagon wrench in the sequence shown in the illustration. Remove the 10 cylinder head bolts and the plate washers.
NOTICE:
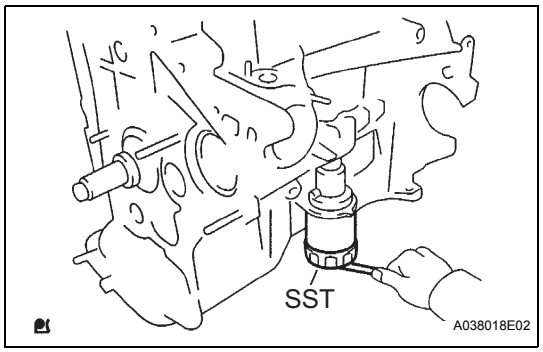
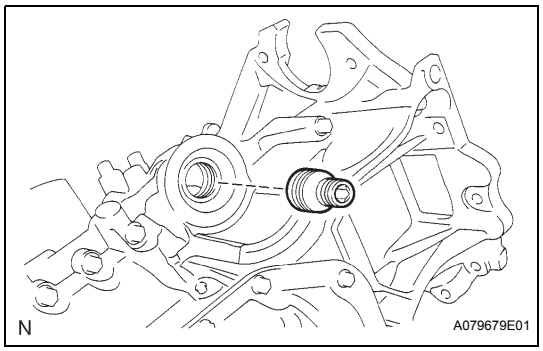
- **Do not drop the washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in the wrong order.**

35. REMOVE CYLINDER HEAD GASKET



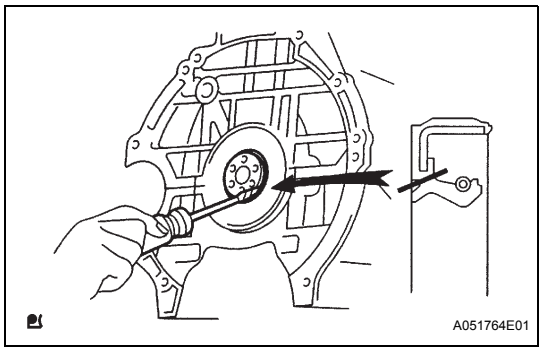
36. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.
SST 09228-06501



37. REMOVE OIL FILTER UNION

(a) Using a 12 mm hexagon wrench, remove the oil filter union.



38. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip wrapped in protective tape, pry out the oil seal.

NOTICE:

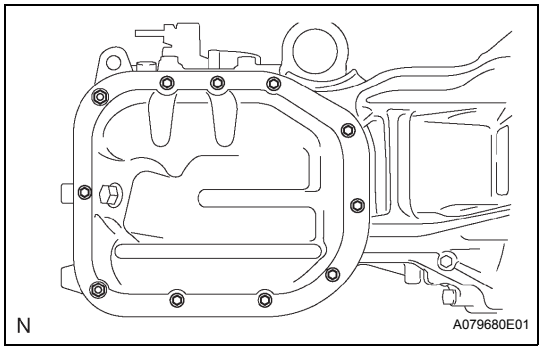
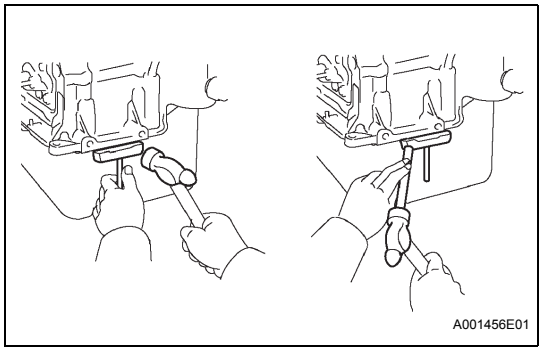
After removal, check the crankshaft for any damage. If damaged, smooth the surface with 400-grit sandpaper.

39. REMOVE OIL PAN SUB-ASSEMBLY NO. 2

(a) Remove the oil pan drain plug and gasket.

(b) Remove the 9 bolts and 2 nuts.





(c) Insert the blade of SST between oil pan No. 1 and oil pan No. 2, and cut off the applied sealer and remove oil pan No. 2.

SST 09032-00100

NOTICE:

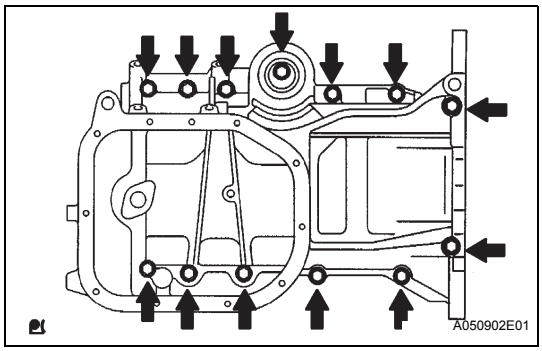
Do not damage oil pan No. 1 or oil pan No. 2.

40. REMOVE OIL STRAINER SUB-ASSEMBLY

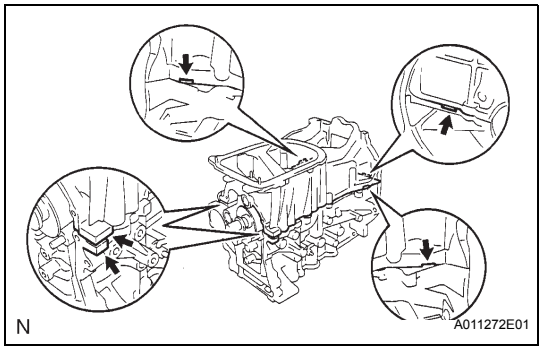
(a) Remove the bolt and 2 nuts.

(b) Remove the oil strainer and the gasket.



41. REMOVE OIL PAN SUB-ASSEMBLY

(a) Loosen and remove the 13 bolts uniformly in several steps.



(b) Using a screwdriver, remove oil pan No. 1 by prying between the cylinder block and oil pan No. 1.

NOTICE:

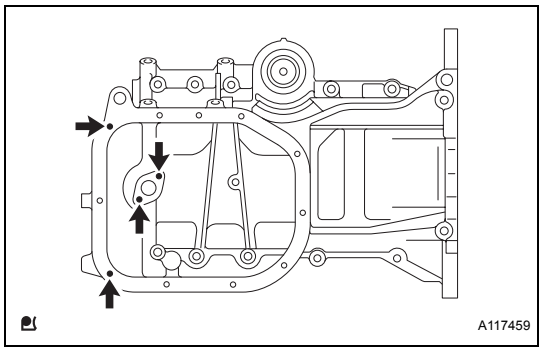
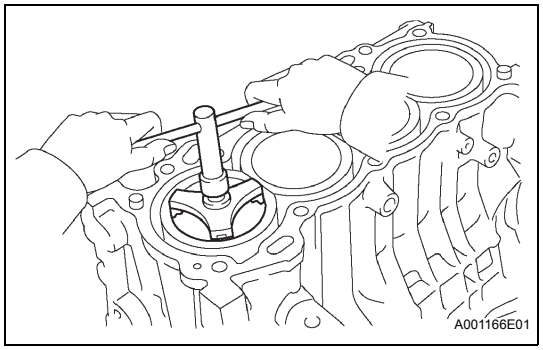
Do not damage the contact surfaces of oil pan No. 1 or the cylinder block.

(c) Remove the 2 O-rings from the cylinder block.



42. REMOVE STUD BOLT

(a) Remove the 4 stud bolts.



43. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod assembly and upper bearing down through the top of the cylinder block to remove them.
HINT:
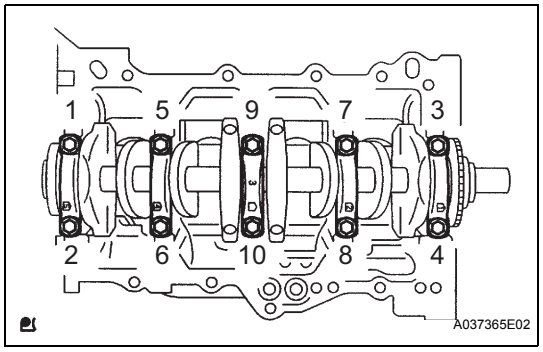
- Keep the bearing, connecting rod and cap together.
- Keep the piston and the connecting rod assemblies in the correct order so that they can be returned to their original locations when reassembled.

44. REMOVE CONNECTING ROD BEARING

45. REMOVE CRANKSHAFT



(a) Using several steps, loosen and remove the 10 bearing cap sub-assembly bolts uniformly with SST in the sequence shown in the illustration.
SST 09011-38121

(b) Remove the bearing cap and the crankshaft.

46. REMOVE CRANKSHAFT BEARING

47. REMOVE CRANKSHAFT THRUST WASHER UPPER

48. REMOVE PISTON RING SET

NOTICE:
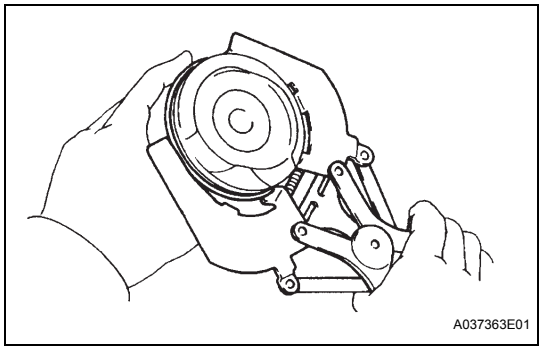
Keep the piston rings in the correct combination and correct order so that they can be returned to their original locations when reassembled.



(a) Using a piston ring expander, remove the 2 compression rings.

(b) Remove the 2 side rails and the oil ring by hand.

EM

49. REMOVE WITH PIN PISTON SUB-ASSEMBLY

(a) Using SST, press the piston pin out of the piston.

SST 09221-25026 (09221-00021, 09221-00030, 09221-00090, 09221-00150, 09221-00100)

NOTICE:

Keep the pistons, pins, rings, connecting rods and bearings in the correct order so that they can be returned to their original locations when reassembled.

50. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

51. REMOVE STUD BOLT

(a) Using "Torx" socket wrench E5, remove the 7 stud bolts.

52. REMOVE RING PIN

53. REMOVE STRAIGHT PIN

EM

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of camshaft timing gear.

(1) Clamp the camshaft in a vice, and check that the camshaft timing gear is locked.

NOTICE:

Do not damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with tape as shown in the illustration.

HINT:

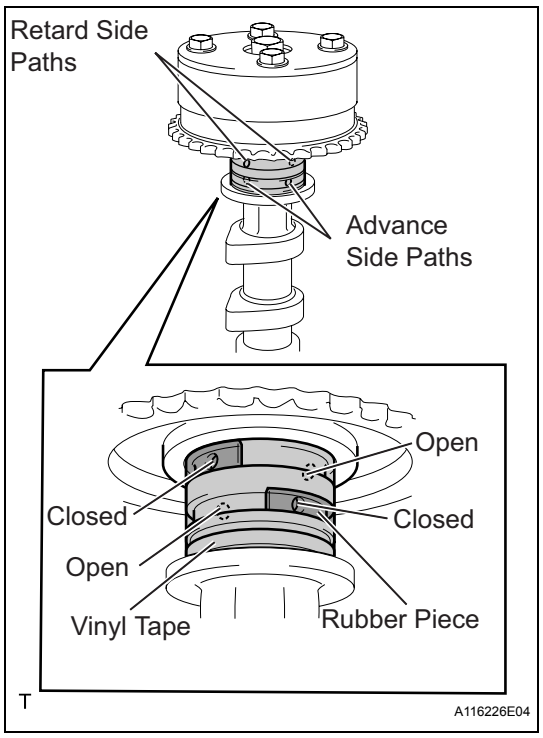
One of the 2 grooves located on the cam journal is for retarding cam timing (upper) and the other is for advancing cam timing (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with a piece of rubber before wrapping the cam journal with the tape.

(2) Puncture the tape covering the advance oil path and the retard oil path on the opposite side from the advance oil path.



(3) Apply air at about 150 kPa (1.5 kgf*cm^2) pressure into the 2 broken paths (the advance side path and the retard side path).

NOTICE:

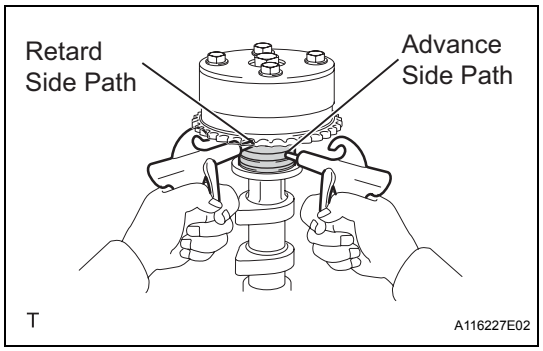
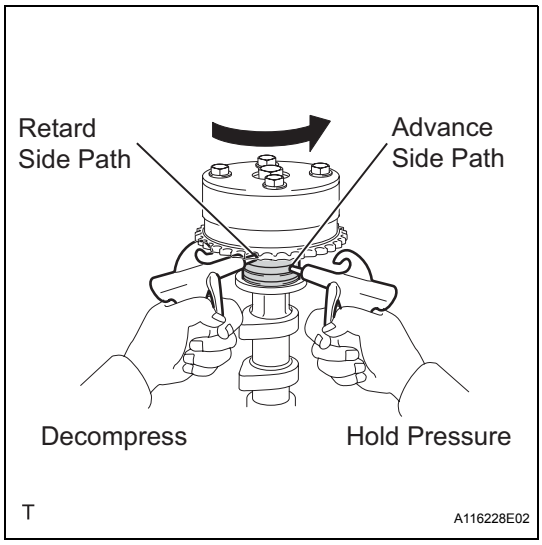
Cover the paths with a shop rag or piece of cloth to prevent oil splashes.





(4) Confirm that the camshaft timing gear assembly revolves in the timing advance direction when the air pressure on the timing retard path is reduced.
HINT:
The lock pin is released and the camshaft timing gear revolves in the advance direction.

(5) When the camshaft timing gear reaches the most advanced position, release the air pressure on the timing retard side path, and then release the air pressure on the timing advance side path.
NOTICE:
Camshaft timing gear assembly occasionally shifts to the retard side abruptly if the air pressure on the advance side path is released first. This often results in breakage of the lock pin.

(c) Check that the revolution is smooth.

(1) Rotate the valve timing assembly back and forth several times, except where the lock pin meets it at the most retarded angle. Check the movable range and that it rotates smoothly.
Standard:
Smooth movable range is about 22.5°
NOTICE:
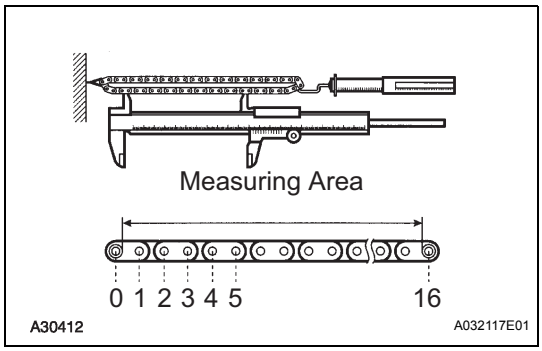
Perform this check by hand, instead of using air pressure.

(d) Check that the gear locks in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked in the most retarded position.



2. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, apply 140 N (14.3 kgf, 31.5 lb) to the timing chain and measure its length.
Maximum chain elongation:
123.2 mm (4.850 in.)
If the elongation is greater than the maximum, replace the chain.
HINT:
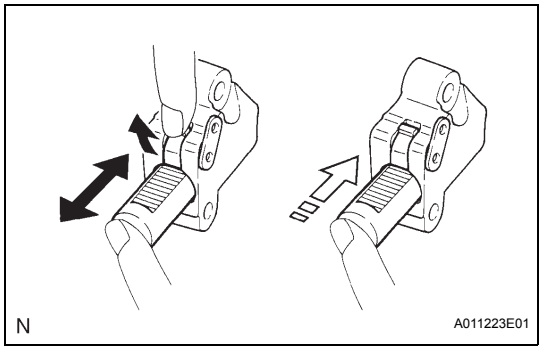
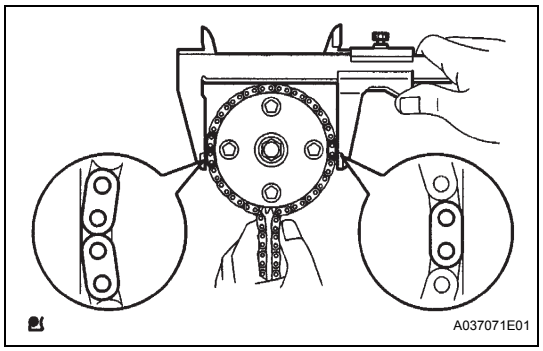
Perform the same measurement at 3 or more random places and calculate the average length.



3. INSPECT CHAIN TENSIONER ASSEMBLY NO. 1

(a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.

(b) Release the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.



4. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the diameter of the timing gear with the chain.

Minimum gear diameter (with chain):
96.2 mm (3.787 in.)

If the diameter is less than the minimum, replace the camshaft timing gear.

NOTICE:
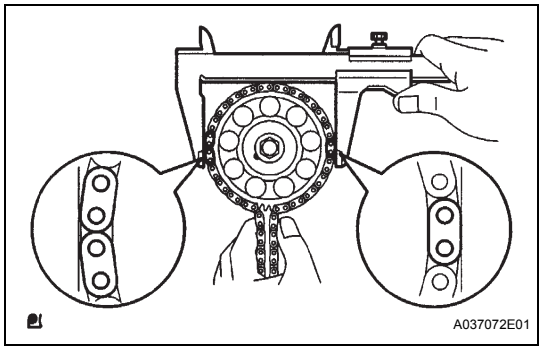
Make sure that the vernier calipers are in contact with the chain link when measuring.



5. INSPECT CAMSHAFT TIMING SPROCKET

(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the diameter of the timing gear with the chain.

Minimum gear diameter (with chain):
96.2 mm (3.787 in.)

If the diameter is less than the minimum, replace the camshaft timing sprocket.

NOTICE:
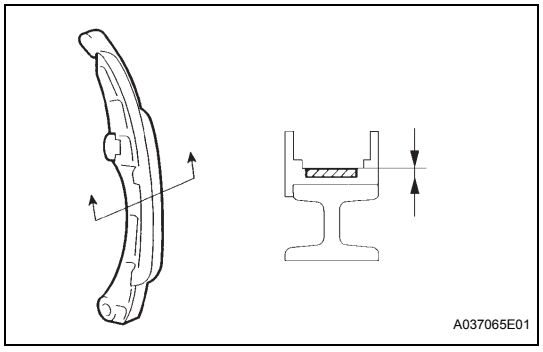
Make sure that the vernier calipers are in contact with the chain link when measuring.

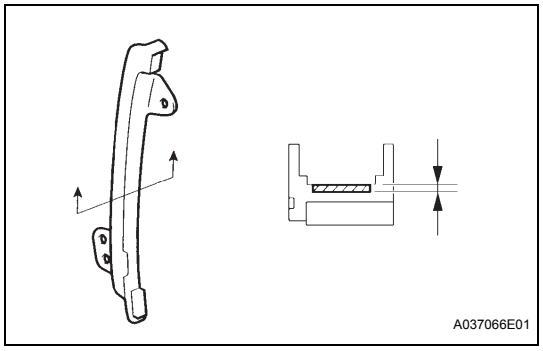


6. INSPECT CHAIN TENSIONER SLIPPER

(a) Check the chain tensioner slipper.

Minimum thickness:
1.0 mm (0.039 in.)

If the thickness is less than the minimum, replace the chain tensioner slipper.



7. INSPECT CHAIN VIBRATION DAMPER NO. 1

(a) Check the vibration damper.

Minimum thickness:
1.0 mm (0.039 in.)

If the thickness is less than the minimum, replace the chain vibration damper.

EM

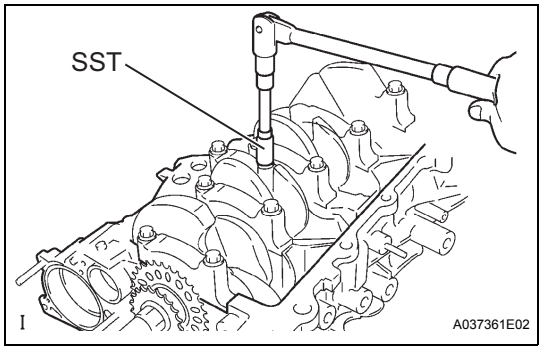
8. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.16 to 0.36 mm (0.0063 to 0.0142 in.)
Maximum thrust clearance:
0.36 mm (0.0142 in.)

9. INSPECT CONNECTING ROD OIL CLEARANCE

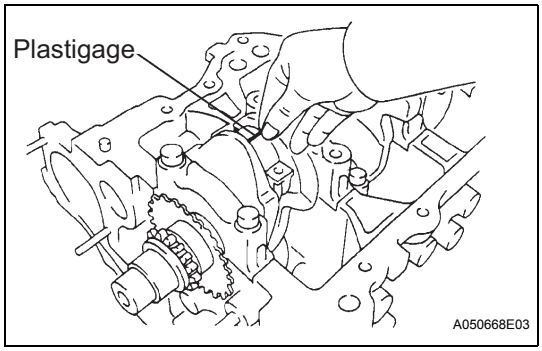
(a) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.



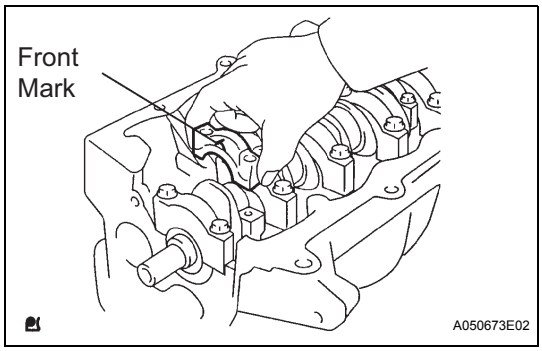
(b) Using SST, remove the 2 connecting rod cap bolts.
SST 09205-16010

(c) Clean the crank pin and bearing.

(d) Check the crank pin and bearing for pitting and scratches.

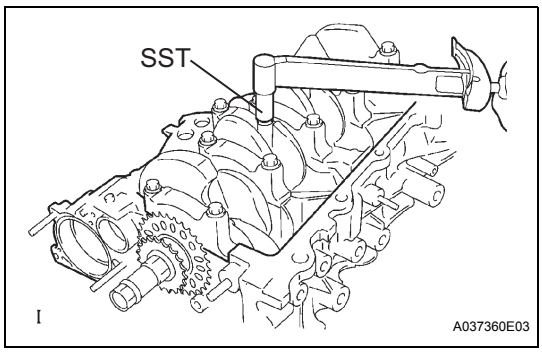


(e) Lay a strip of Plastigage across the crank pin.

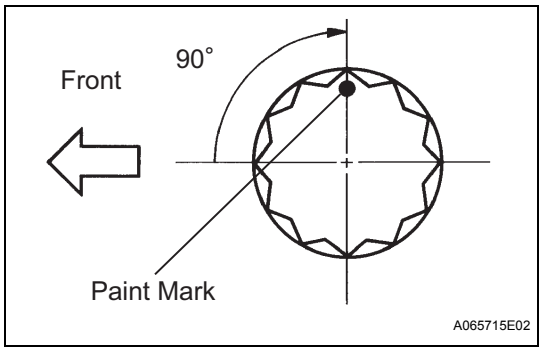


(f) Make sure that the connecting rod and its cap are in the correct combination and that the front mark of the cap is facing in the correct mounting orientation, then install the cap onto the connecting rod.

(g) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



(h) Using SST, tighten the bolts in several steps to the specified torque.
SST 09205-16010
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



(i) Mark the front of the connecting cap bolts with paint.
(j) Retighten the cap bolts by 90° as shown in the illustration.
NOTICE:
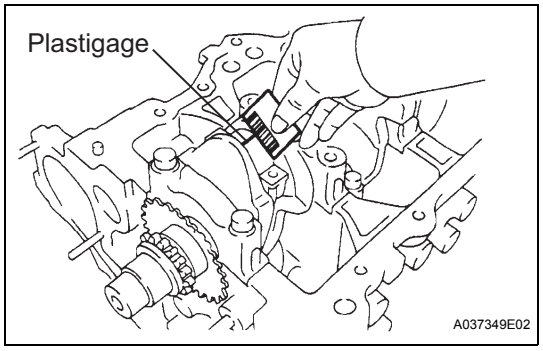
Do not turn the crankshaft.
(k) Remove the 2 bolts, connecting rod cap and lower bearing.



(l) Measure the Plastigage at its widest point.
Standard oil clearance:
0.012 to 0.038 mm (0.00047 to 0.00015 in.)
Maximum oil clearance:
0.058 mm (0.0028in.)
NOTICE:
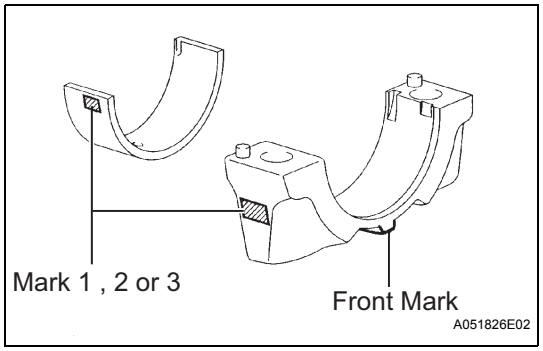
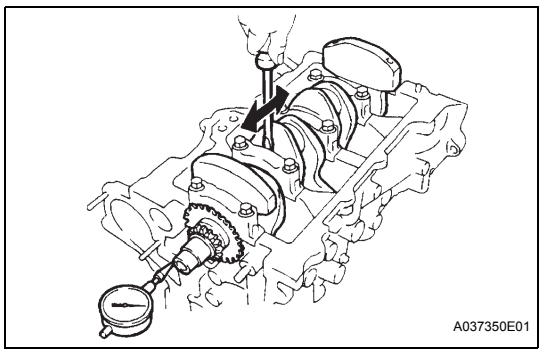
Completely remove the Plastigage after the measurement.



(m) When replacing a bearing, replace it with one with the same number as marked on the connecting rod. There are 3 sizes of standard bearings, marked 1, 2 and 3 accordingly.
Standard bearing center wall thickness

Mark	mm (in.)
1	1.491 to 1.494 (0.0587 to 0.0588)
2	1.494 to 1.497 (0.0588 to 0.0589)
3	1.497 to 1.500 (0.0589 to 0.0591)



10. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.09 to 0.19 mm (0.0035 to 0.0075 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)
If the thrust clearance is greater than the maximum, replace the thrust washers as a set. Check the crankshaft and block for wear. Repair or replace the parts if necessary.
HINT:
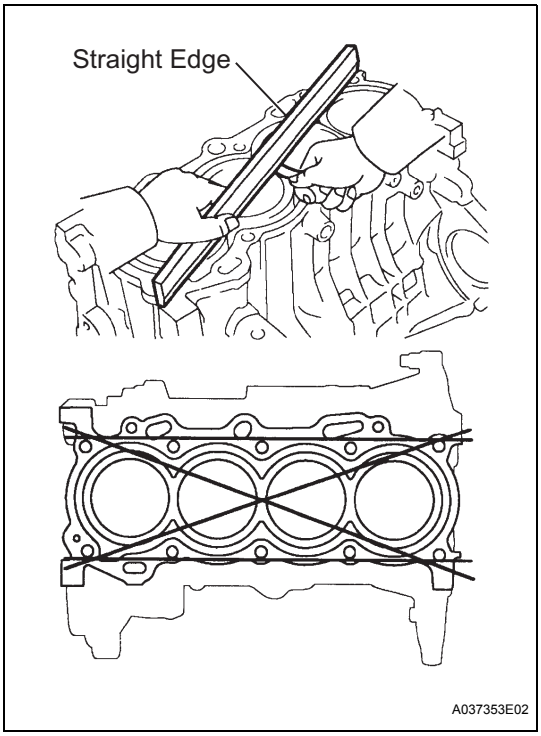
Thrust washer thickness: 2.43 to 2.48 mm (0.0957 to 0.976 in.)

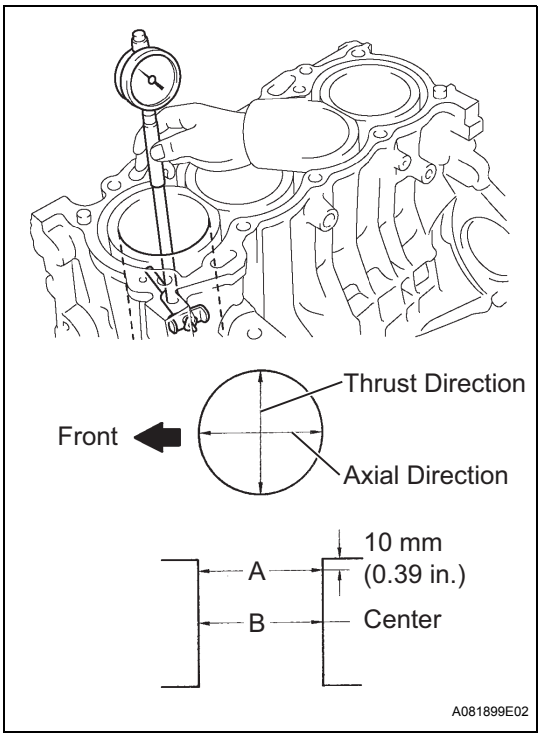


11. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straight edge and feeler gauge, measure the warpage of the surface which is in contact with the cylinder head gasket.

Maximum warpage:

0.05 mm (0.0020 in.)



12. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in both the thrust and axial directions.

Standard Inside diameter:

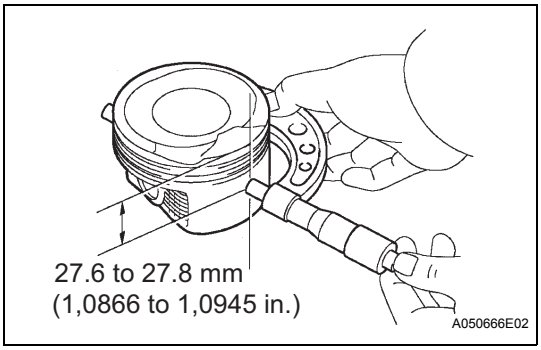
75.000 to 75.013 mm (2.9528 to 2.9533 in.)

(b) Calculate the difference between the maximum diameter and the minimum diameter of the 4 measured values.

Difference limit:

0.10 mm (0.0039 in.)

If the difference is greater than the limit, replace the cylinder block.



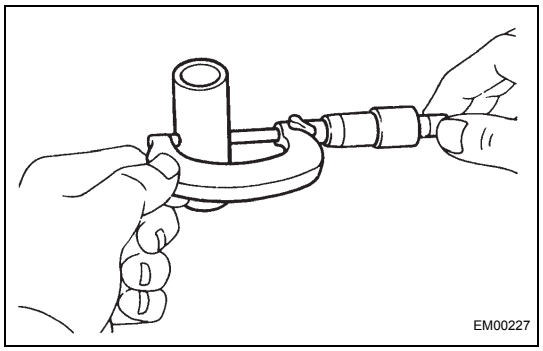
13. INSPECT WITH PIN PISTON SUB-ASSEMBLY

(a) Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, and at the position 27.6 to 27.8 mm (1.0866 to 1.0945 in.) from the top of the piston head.

Piston diameter:

74.935 to 74.945 mm (2.9502 to 2.9506 in.)

(b) Using a caliper gauge, measure the piston pin hole diameter.
Piston pin hole diameter:
18.013 to 18.016 mm (0.7092 to 0.7093 in.) at 20°C (68°F)



(c) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
18.001 to 18.004 mm (0.7087 to 0.7088 in.)

(d) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement to calculate the oil clearance.
Standard oil clearance:
0.009 to 0.015 mm (0.0004 to 0.0006 in.)
Maximum oil clearance:
0.050 mm (0.0020 in.)
If necessary, replace the piston and piston pin together.

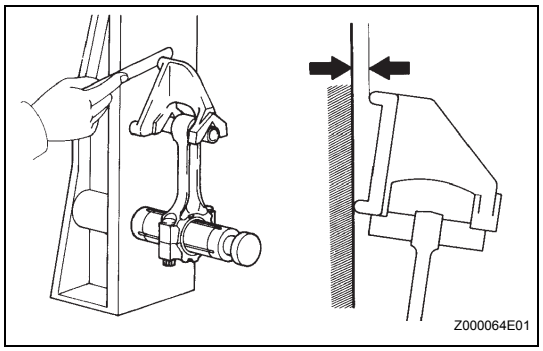
14. INSPECT PISTON CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
0.045 to 0.068 mm (0.0018 to 0.0027 in.)
Maximum oil clearance:
0.08 mm (0.0032 in.)

15. INSPECT CONNECTING ROD SUB-ASSEMBLY

(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.
Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the misalignment is greater than the maximum, replace the connecting rod assembly.



(2) Check for twist.
Maximum twist:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the twist is greater than the maximum, replace the connecting rod assembly.

EM

16. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

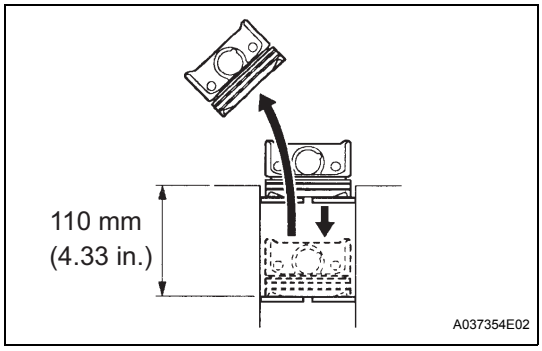
Ring groove clearance:

No. 1:

0.03 to 0.07 mm (0.0012 to 0.0028 in.)

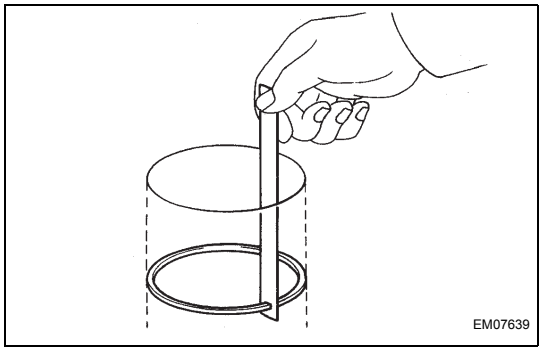
No. 2:

0.02 to 0.06 mm (0.0008 to 0.0024 in.)



17. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring, a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.

Standard end gap:

No. 1:

0.25 to 0.35 mm (0.0098 to 0.0138 in.)

No. 2:

0.35 to 0.50 mm (0.0138 to 0.0197 in.)

Oil (Side Rail):

0.10 to 0.35 mm (0.0039 to 0.0138 in.)

Maximum end gap:

No. 1:

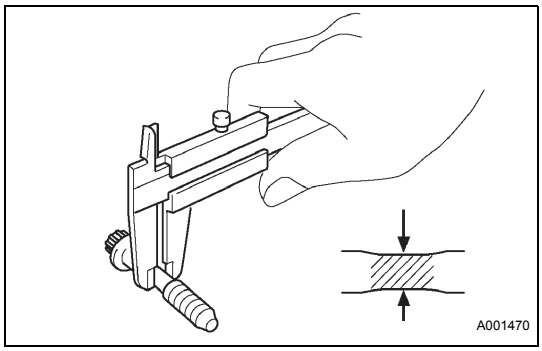
0.91 mm (0.0358 in.)

No. 2:

1.06 mm (0.0417 in.)

Oil (Side Rail):

0.82 mm (0.323 in.)



18. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the diameter of the bolt at the elongated portion.

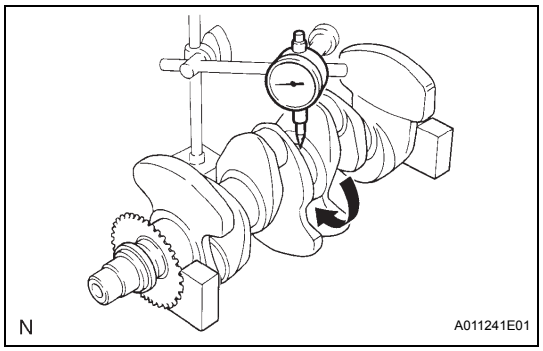
Standard diameter:

6.6 to 6.7 mm (0.260 to 0.264 in.)

Minimum diameter:

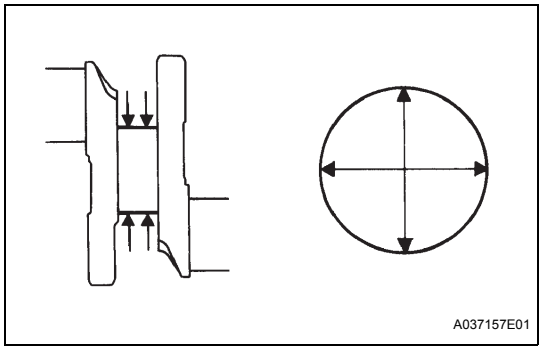
6.4 mm (0.252 in.)

If the diameter is less than the minimum, replace the bolt.



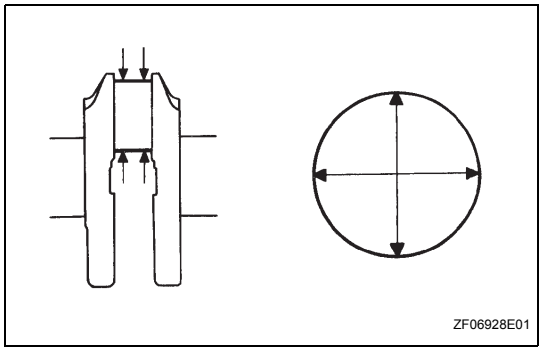
19. INSPECT CRANKSHAFT

(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.
Maximum circle runout:
0.03 mm (0.0012 in.)



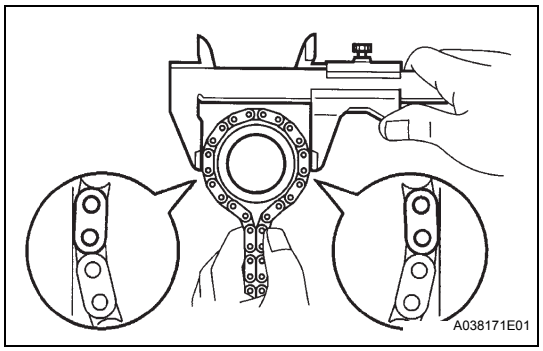
(b) Using a micrometer, measure the diameter of each main journal.
Outside diameter:
45.988 to 46.000 mm (1.8106 to 1.8110 in.)

(c) Check each main journal for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



(d) Using a micrometer, measure the diameter of each crank pin.
Outside diameter:
39.992 to 40.000 mm (1.5745 to 1.5748 in.)

(e) Check each crank pin for taper and out-of-roundness as shown.
Maximum taper and out-of-roundness:
0.02 mm (0.0008 in.)



(f) Wrap the chain around the timing sprocket.

(g) Using vernier calipers, measure the timing sprocket diameter with the chain.
Standard sprocket diameter (with chain):
51.72 mm (2.0362 in.)
Minimum sprocket diameter (with chain):
50.5 mm (1.988 in.)
NOTICE:
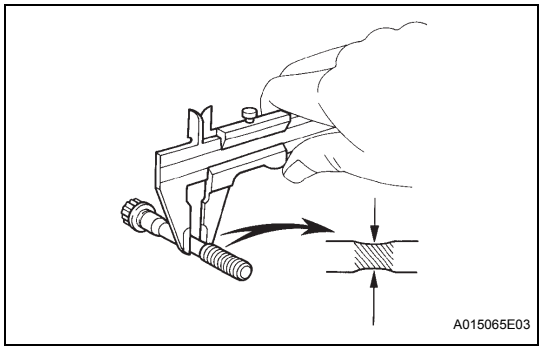
Make sure that the vernier calipers are in contact with the chain rollers when measuring.



20. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the tension portion diameter of the elongated portion.
Standard diameter:
7.3 to 7.5 mm (0.287 to 0.295 in.)
Minimum diameter:
7.2 mm (0.283 in.)
If the diameter is less than the minimum, replace the bolt.

EM

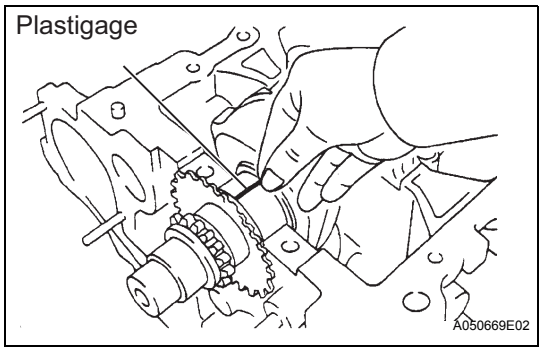
21. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Clean each main journal and bearing.

(b) Install the bearing onto the cylinder block and bearing cap. (See page EM-183)

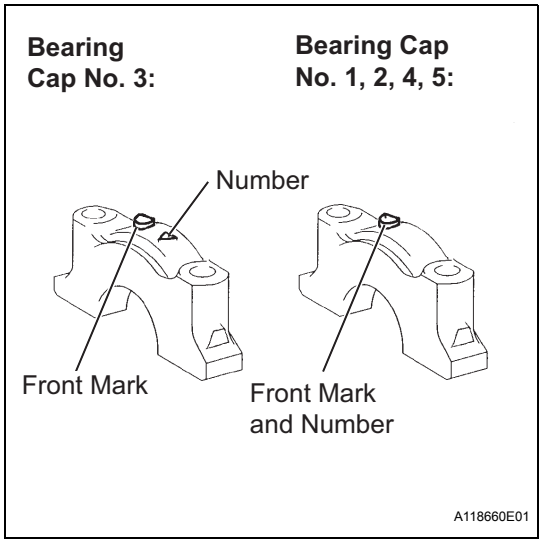
(c) Place the crankshaft onto the cylinder block.

(d) Lay a strip of Plastigage across each journal.

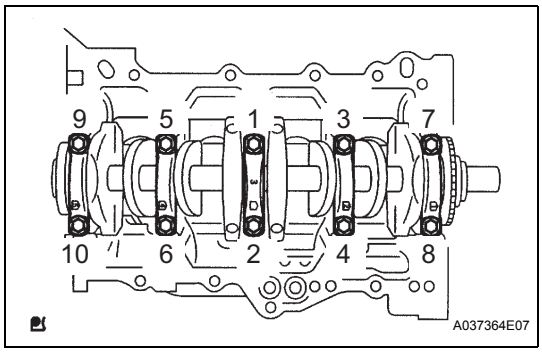


(e) Examine the front marks and numbers and install the bearing cap onto the cylinder block.

(f) Apply a light coat of engine oil to the threads of the bearing cap bolts.



(g) Using SST, tighten the bolts in several steps to the specified torque in the sequence shown in the illustration. (*1)
SST 09011-38121
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)



(h) Mark the front of the bearing cap bolts with paint.

(i) Retighten the bearing cap bolts by 90° in the same sequence as step (*1).

(j) Check that the painted mark is now at a 90° angle from the front.
NOTICE:
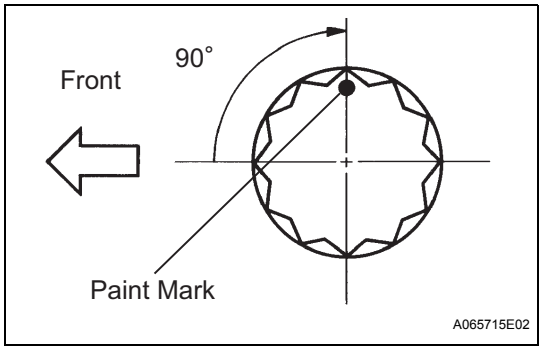
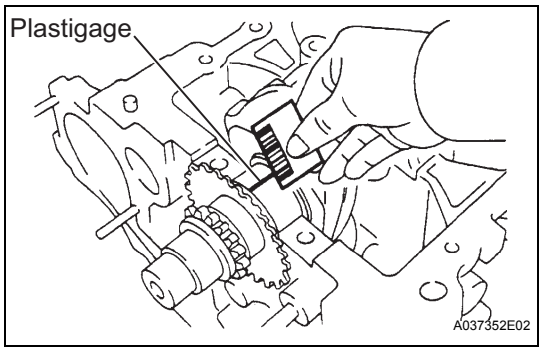
Do not turn the crankshaft.

(k) Remove the bearing cap sub-assembly.





(l) Measure the Plastigage at its widest point.
Standard oil clearance:
0.01 to 0.023 mm (0.0004 to 0.0009 in.)
Maximum oil clearance:
0.07 mm (0.0028 in.)
NOTICE:
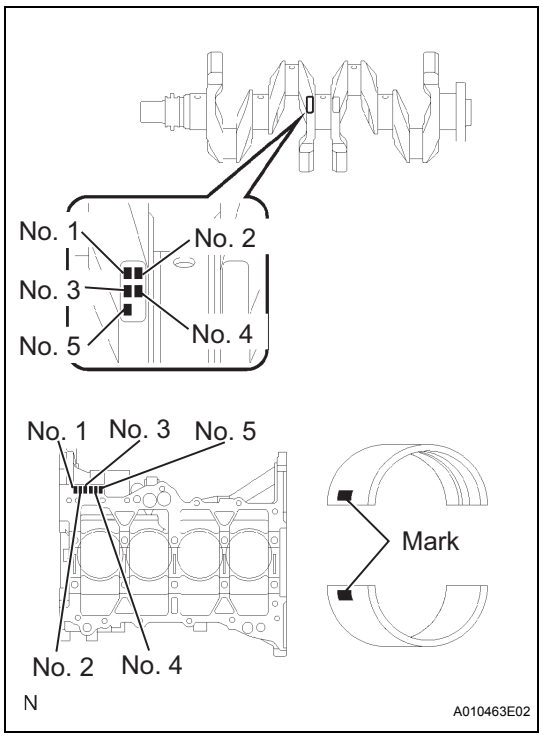
Completely remove the Plastigage after the mesurement.



(m) When replacing a standard bearing, replace it with one with the same number. If the number of the bearing cannot be found, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then select the bearing with the same number as the total. There are 4 sizes of standard bearings, marked 1, 2, 3 and 4 accordingly.
EXAMPLE: Cylinder Block 4 (A) + Crankshaft 3 (B) = Total 7 (Use Bearing 3)

Cylinder Block (A) + Crankshaft (B)	0 to 2	3 to 5	6 to 8	9 to 11
Use Bearing	1	2	3	4

EM

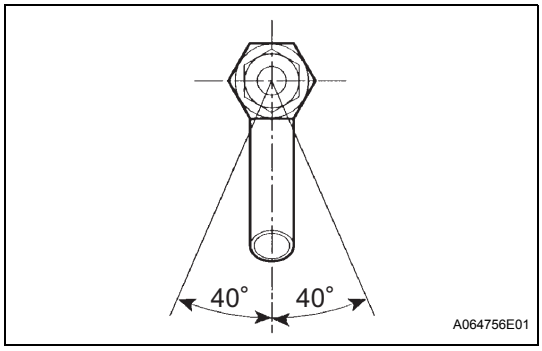
Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	0	50.000 to 50.003 (1.96850 to 1.96862)
	1	50.003 to 50.005 (1.96862 to 1.96870)
	2	50.005 to 50.007 (1.96870 to 1.96878)
	3	50.007 to 50.010 (1.96878 to 1.96890)
	4	50.010 to 50.012 (1.96890 to 1.96898)
	5	50.012 to 50.014 (1.96898 to 1.96906)
	6	50.014 to 50.016 (1.96906 to 1.96913)
Crankshaft main journal diameter (B)	0	45.998 to 46.000 (1.81094 to 1.81102)
	1	45.996 to 45.998 (1.81087 to 1.81094)
	2	45.994 to 45.996 (1.81079 to 1.81087)
	3	45.992 to 45.994 (1.81071 to 1.81079)
	4	45.990 to 45.992 (1.81063 to 1.81071)
	5	45.988 to 45.990 (1.81055 to 1.81063)
Standard bearing center wall thickness	1	1.992 to 1.995 (0.07843 to 0.07854)
	2	1.995 to 1.998 (0.07854 to 0.07866)
	3	1.998 to 2.001 (0.07866 to 0.07878)
	4	2.001 to 2.004 (0.07878 to 0.07890)

REASSEMBLY

1. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads of the drain union and install the water drain cock within 3 minutes of applying the adhesive.



(b) After applying the specified torque, rotate the drain union clockwise until its drain port faces downward.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)
NOTICE:
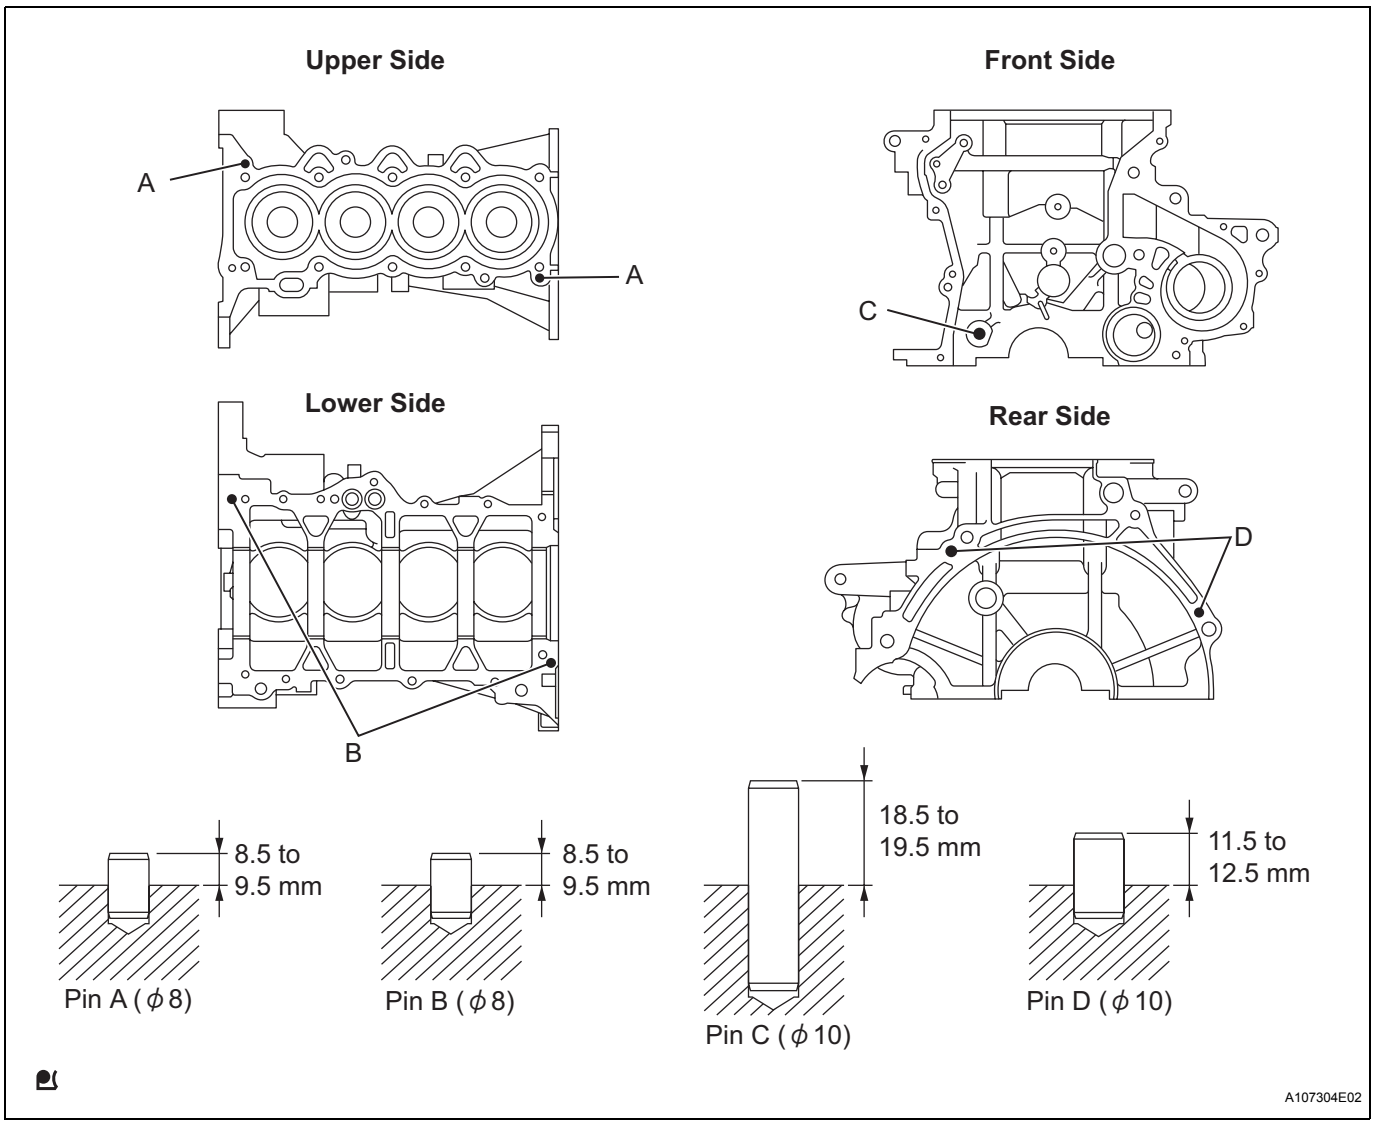
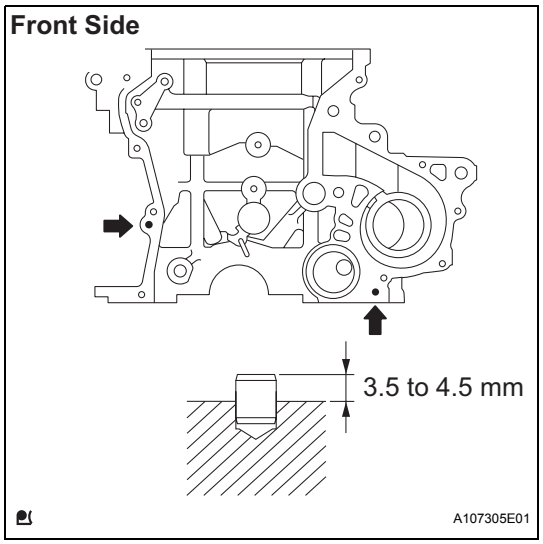
- **Do not add coolant within 1 hour of installation.**
- **Do not rotate the drain union more than 360° in step (b), and never loosen it after setting the union correctly.**

2. INSTALL STRAIGHT PIN



(a) Using a plastic-faced hammer, tap in the straight pin.
Standard protrusion:
Pin A:

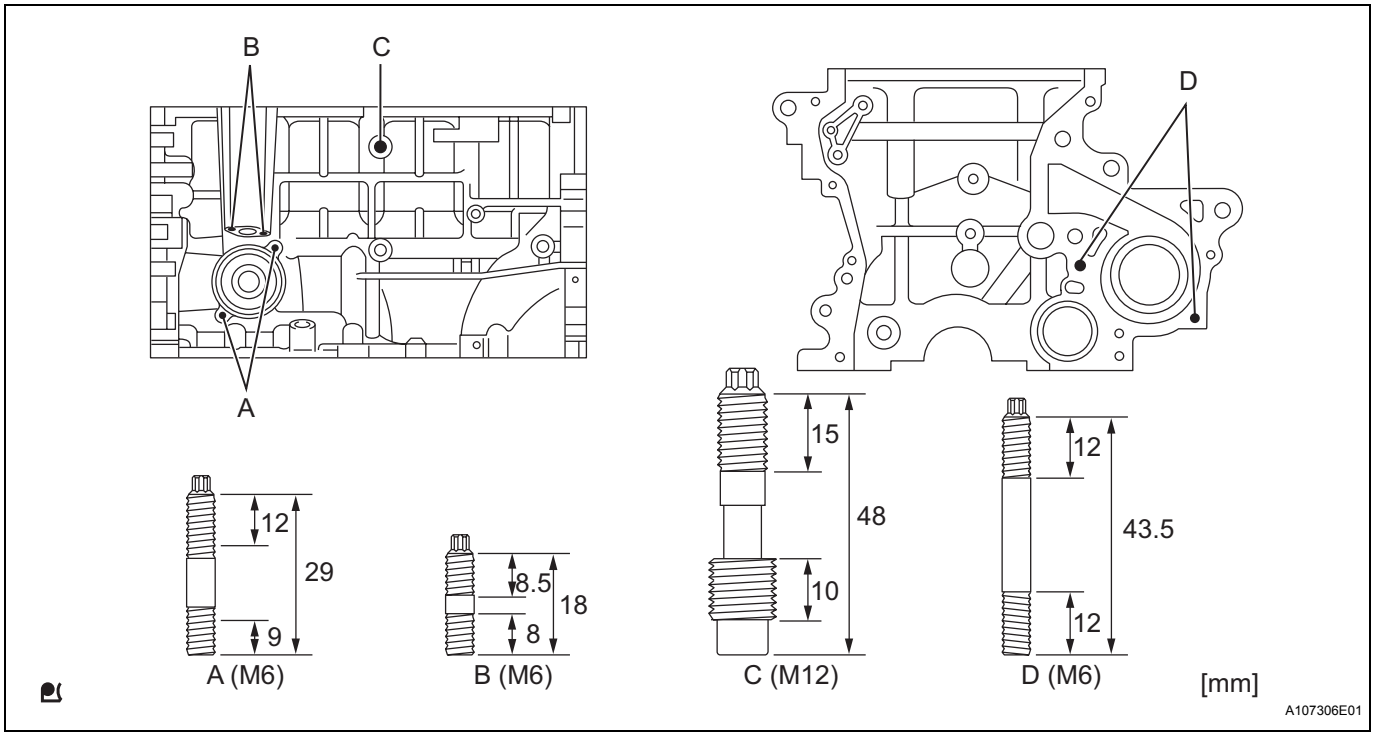
8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin B:
8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin C:
18.5 to 19.5 mm (0.728 to 0.768 in.)
Pin D:
11.5 to 12.5 mm (0.453 to 0.492 in.)



3. INSTALL OIL PUMP SET RING PIN

(a) Using a plastic-faced hammer, tap in a new ring pin.
Standard protrusion:
3.5 to 4.5 mm (0.138 to 0.177 in.)

4. INSTALL STUD BOLT



(a) Using "Torx" socket wrench E5, install the 7 stud bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf) (for Stud bolt A, B and D)
11 N*m (112 kgf*cm, 8.1 ft.*lbf) (for Stud bolt C)
NOTICE:
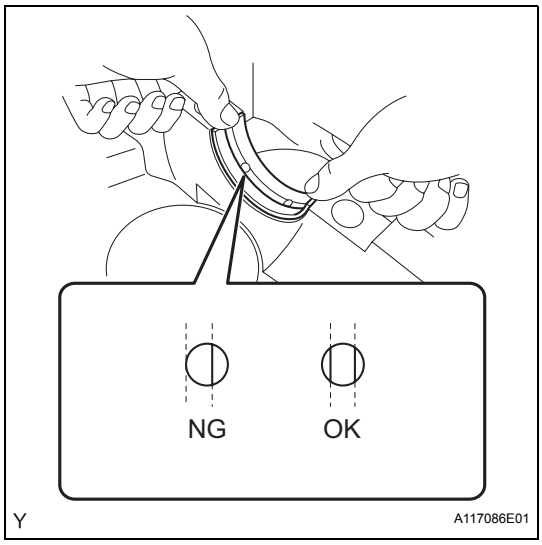
The lower threads of the bolt are installed into the cylinder block.



5. INSTALL CRANKSHAFT BEARING

(a) Align the crankshaft bearing (upper) with the oil hole of the cylinder block and install the bearing.
NOTICE:
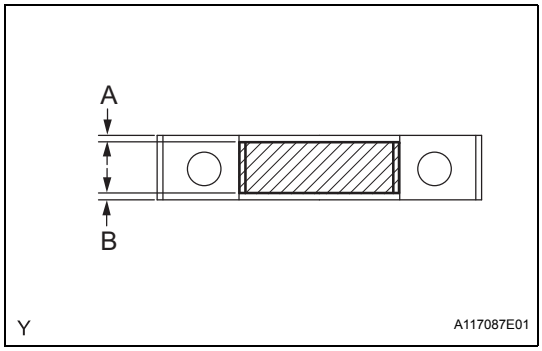
Do not apply engine oil to the bearing or its contact surface.



(b) Align the crankshaft bearing (lower) with the bearing cap and install the crankshaft bearing cap.
NOTICE:
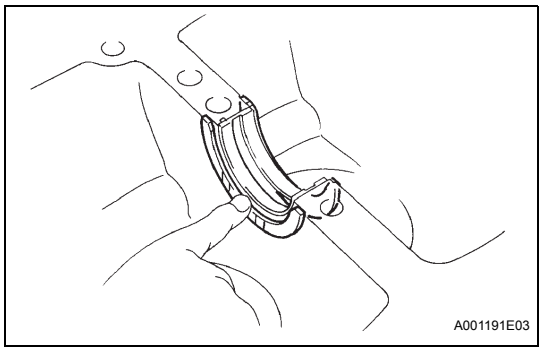
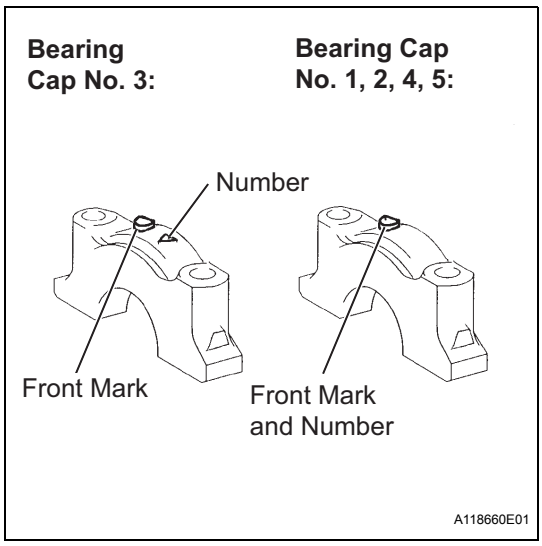
- **Install the bearing cap so that the gap between A and B is less than 0.7 mm (0.028 in.).**
- **Do not apply engine oil to the bearing or its contact surface.**



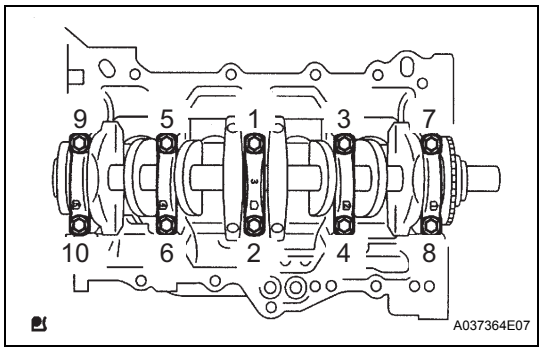
6. INSTALL CRANKSHAFT THRUST WASHER UPPER

(a) Install the 2 thrust washers onto the No. 3 journal position of the cylinder block with the oil grooves facing outward.
(b) Apply engine oil to the upper bearing and install the crankshaft onto the cylinder block.



7. INSTALL CRANKSHAFT

(a) Examine the front marks and numbers and install the bearing caps onto the cylinder block.
(b) Apply a light coat of engine oil to the threads of the bearing cap bolts.



(c) Using SST, tighten the bolts in several steps to the specified torque in the sequence shown in the illustration (*1).
SST 09011-38121
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)
NOTICE:
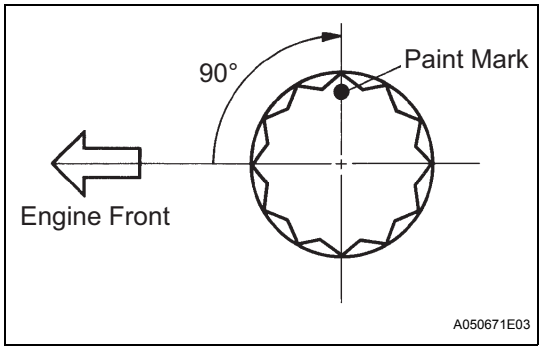
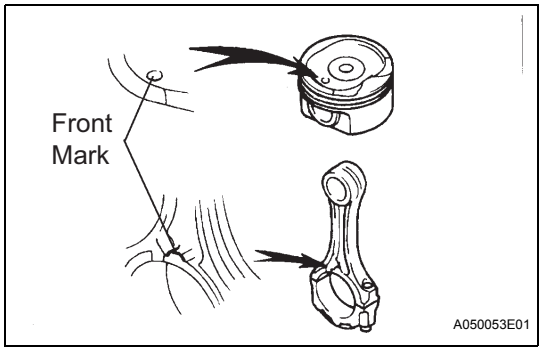
Check that the crankshaft turns smoothly.



(d) Mark the front of the bearing cap bolts with paint.
(e) Retighten the bearing cap bolts by 90° in the same sequence as step (*1).
(f) Check that the painted mark is now at a 90° angle from the front.

8. INSPECT CRANKSHAFT THRUST CLEARANCE (See page EM-174)

9. INSPECT CRANKSHAFT OIL CLEARANCE (See page EM-179)



10. INSTALL WITH PIN PISTON SUB-ASSEMBLY
(a) Coat the piston pin and pin holes in the piston with engine oil.
(b) Align the cavity of the piston with the protruding portion on the connecting rod.

EM

(c) Using SST, press in the piston pin.
SST 09221-25026 (09221-00021, 09221-00030, 09221-00090, 09221-00150, 09221-00100)
NOTICE:
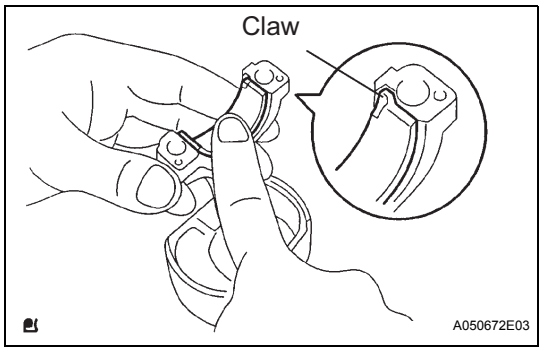
Keep the pistons, pins, rings, connecting rods and bearings in the correct order so that they can be returned to the original locations when reassembled.



11. INSTALL CONNECTING ROD BEARING
(a) Align the bearing claw with the groove of the connecting rod or connecting cap.
NOTICE:
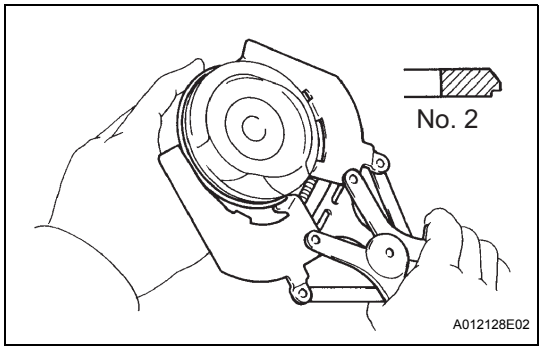
Clean the back side of the bearing and the bearing surface of the connecting rod and keep them free of oil.



12. INSTALL PISTON RING SET
HINT:
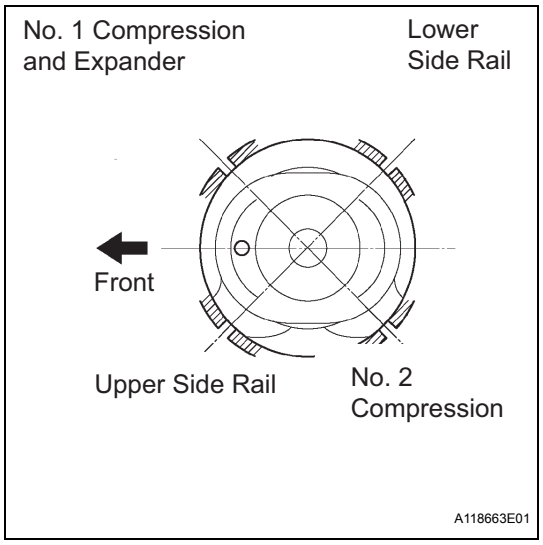
When reusing the piston rings, install them onto the matched pistons with the surfaces facing correctly.
(a) Install the oil ring expander and 2 side rails by hand.
(b) Using a piston ring expander, install the 2 compression rings.

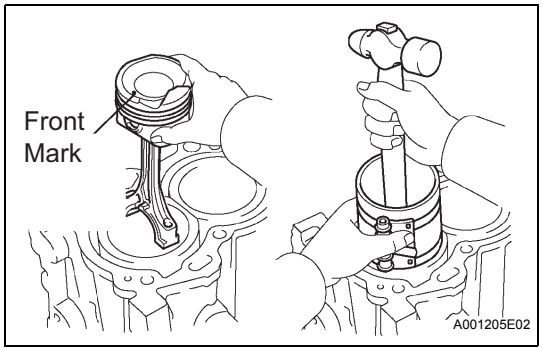


(c) Position the piston rings so that the ring ends are as shown.

13. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

(b) Check the position of the piston ring ends.



(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark on the piston facing forward.

NOTICE:

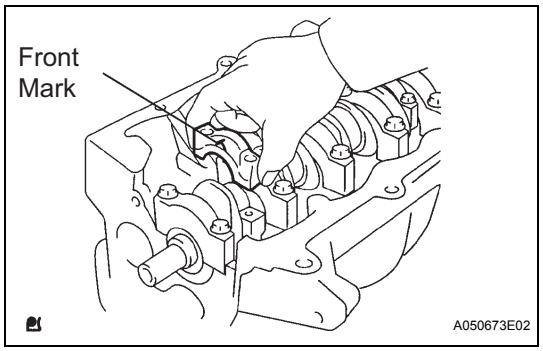
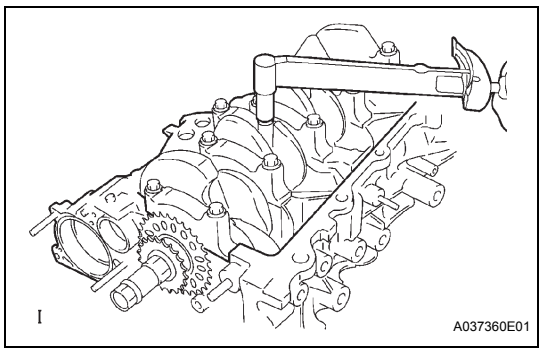
- **Clean the back side of the bearing and the bearing surface of the connecting rod cap and keep them free of oil.**
- **Match the numbered connecting rod cap with the connecting rod.**



(d) Make sure that the connecting rod and its cap are in the correct combination and that the front mark of the cap is facing in the correct mounting orientation, then install the cap onto the connecting rod.

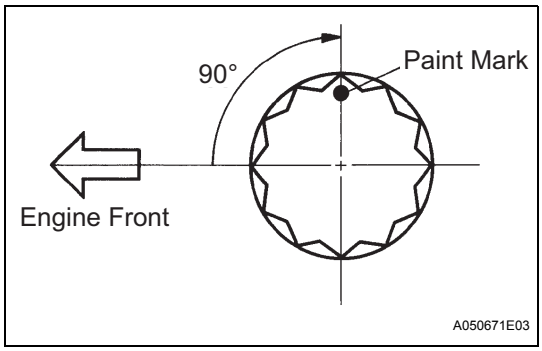
(e) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



(f) Using SST, tighten the bolts in several steps to the specified torque.

SST 09205-16010

Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



(g) Mark the front of the connecting cap bolts with paint.
(h) Retighten the cap bolts by 90° as shown.
(i) Check that the crankshaft turns smoothly.

14. INSPECT CONNECTING ROD THRUST CLEARANCE (See page EM-173)

15. INSPECT CONNECTING ROD OIL CLEARANCE (See page EM-173)

16. INSTALL STUD BOLT

(a) Using "Torx" socket wrench E5, install the 4 stud bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

EM

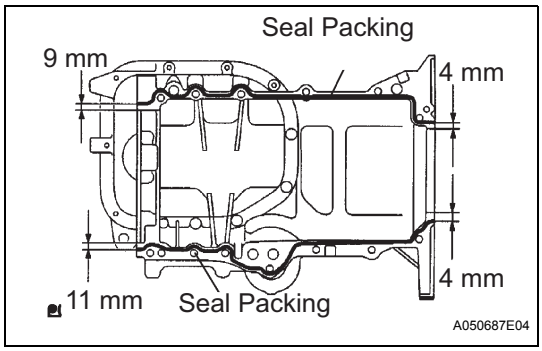
17. INSTALL OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material from the contact surface.



(b) Apply a continuous bead of seal packing (Diameter 2.0 mm to 3.0 mm (0.079 to 0.118 in.)) to the oil pan mating surface as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
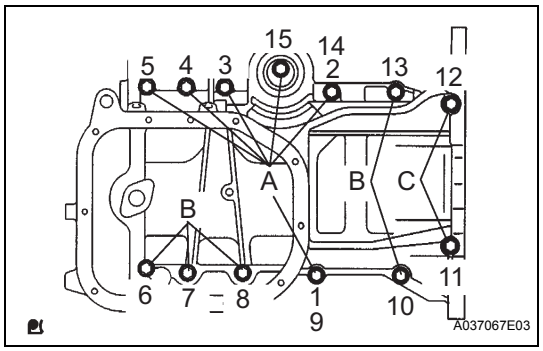
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes of applying the seal packing.**
- **Do not expose the seal to engine oil for at least within 2 hours after the installation.**

(c) Install 2 new O-rings onto the cylinder block.



(d) Using several steps, install and tighten the 13 bolts uniformly in the sequence shown in the illustration.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)
HINT:
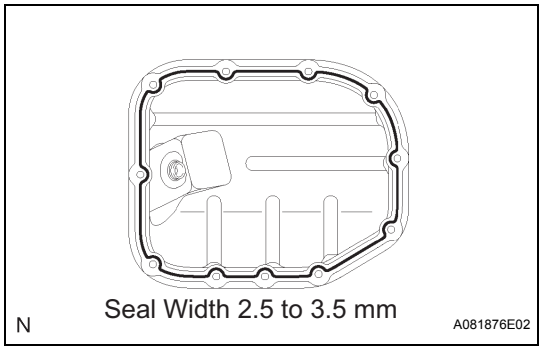
Each bolt length is as follows:
Bolt A 49 mm (1.93 in.)
Bolt B 88 mm (3.47 in.)
Bolt C 144 mm (5.67 in.)

18. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Install a new gasket and the oil strainer with the 2 nuts and the bolt.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)

19. INSTALL OIL PAN SUB-ASSEMBLY NO. 2

(a) Remove any old packing material from the contact surface.



(b) Apply a continuous bead of seal packing (Diameter 2.5 to 3.5 mm (0.0984 to 0.1378 in.)) to the oil pan mating surface as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
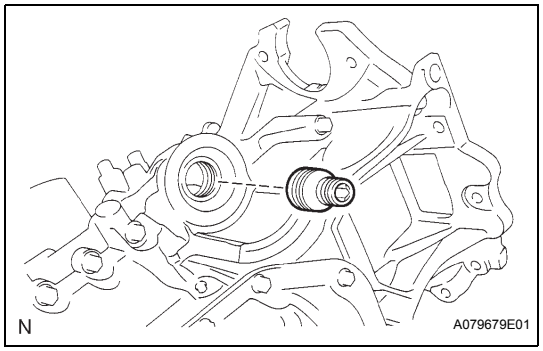
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes of applying the seal packing.**
- **Do not expose the seal to engine oil for at least 2 hours after the installation.**
- **Do not start the engine for at least 2 hours after the installation.**

(c) Install oil pan No. 2 with the 9 bolts and the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(d) Install the drain plug with a new gasket.
Torque: 38 N*m (382 kgf*cm, 28 ft.*lbf)



20. INSTALL OIL FILTER UNION

(a) Using a 12 mm hexagon wrench, install the oil filter union.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

21. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Gently screw the oil filter into place, and tighten it until the gasket comes into contact with the seat.

EM

(d) Using SST, tighten it an additional 3/4 turn.
SST 09228-06501
HINT:
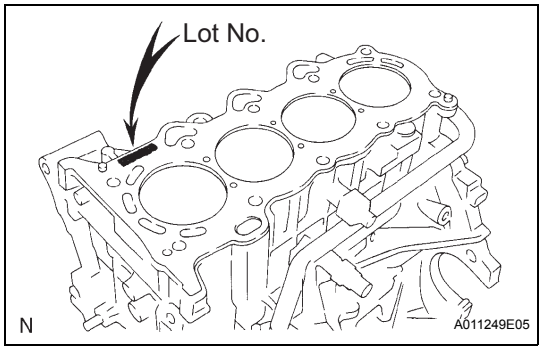
When using a torque wrench, tighten it to the specified torque.
Torque: 13 N*m (133 kgf*cm, 9.5 ft.*lbf)



22. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surface.**
- **Pay attention to the mounting orientation of the cylinder head gasket.**
- **Place the cylinder head on the cylinder head gently in order not to damage the gasket.**

23. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:
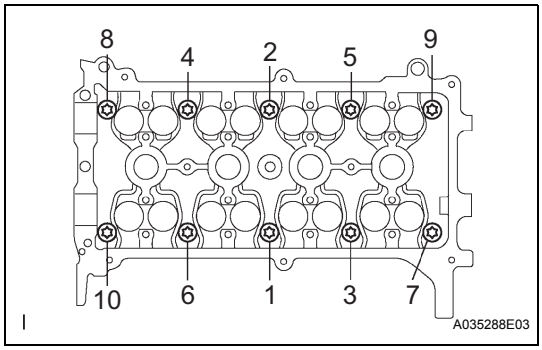
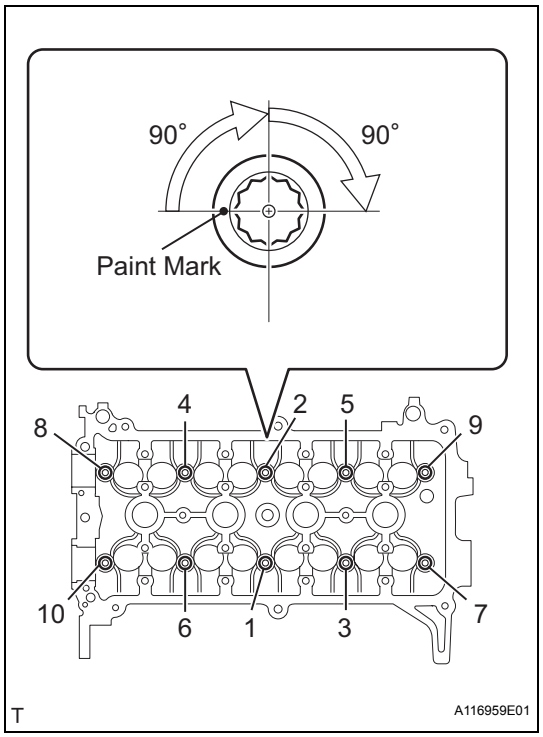
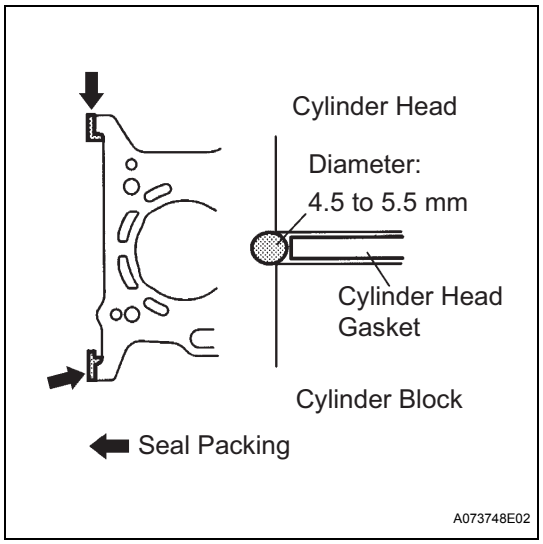
The cylinder head bolts are tightened in 2 successive steps.



(a) Apply a light coat of engine oil to the threads of the cylinder head bolts.
(b) Using several steps, install and tighten the 10 cylinder head bolts and plate washers uniformly with an 8 mm bi-hexagon wrench in the sequence shown in the illustration.
Torque: 29 N*m (300 kgf*cm, 22 ft.*lbf)
(c) Mark the front of the cylinder head bolt with paint.



(d) Retighten the cylinder head bolts by 90° and then an additional 90° as shown in the illustration.
(e) Check that the paint mark is now at a 180° angle from the front.



(f) Apply a continuous bead of seal packing (Diameter 4.5 to 5.5 mm (0.177 to 0.217 in.)) as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts within 15 minutes of applying seal packing.**

24. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.
NOTICE:
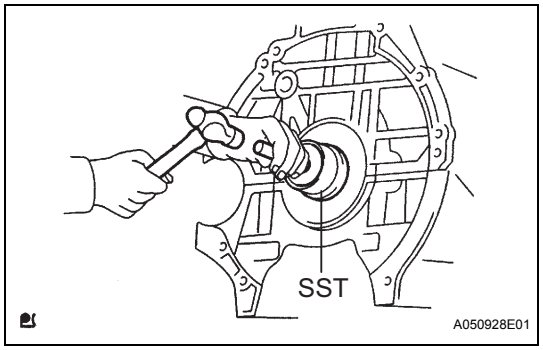
Keep the seal lip free of foreign matter.



(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-56010
NOTICE:
- **Do not tap the oil seal at an angle.**
- **Wipe any extra grease off the crankshaft.**

25. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY
NOTICE:
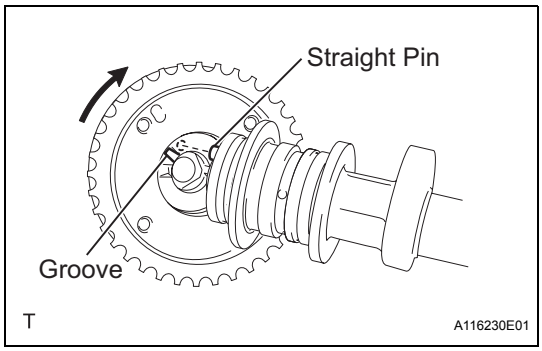
Install the camshaft timing gear assembly onto the camshaft with the lock pin of the camshaft timing gear assembly released.



(a) Put the camshaft timing gear assembly and camshaft together with the straight pin of the groove.
(b) Turn the camshaft timing gear assembly clockwise while pushing it gently toward the camshaft. When the pin fits into the groove, push to ensure a good fit.
NOTICE:
Do not turn the camshaft timing gear in the retard direction (clockwise).
(c) Check that there is no clearance between the gear fringe and the camshaft.
(d) Tighten the flange bolt with the camshaft timing gear fixed.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
NOTICE:
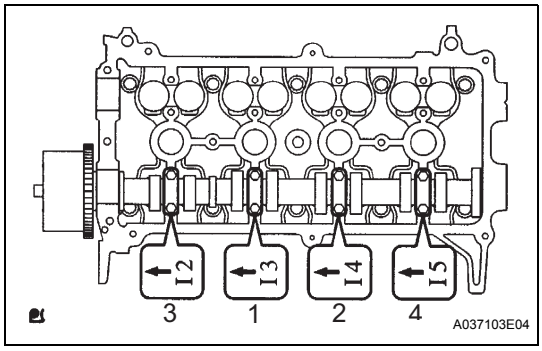
- **Do not lock the camshaft timing gear assembly when tightening the bolt.**
- **Release the lock pin of the camshaft timing gear assembly first, and tighten the bolt when the lock pin is locked in the most retarded position.**
- **Tightening the bolts with the lock pin locked could cause breakage of the lock pin.**

(e) Check that the camshaft timing gear assembly moves smoothly in the retard direction (clockwise) and is locked in the most retarded position.

26. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft journals.
(b) Place the camshaft on the cylinder head with the timing mark on the camshaft timing gear facing upward.



(c) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
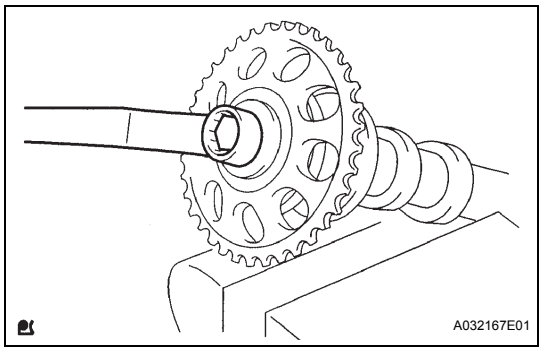
Tighten each bolt uniformly while keeping the camshaft level.



27. INSTALL CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vice.

(b) Align the knock pin hole in the camshaft timing sprocket with the knock pin of the camshaft, and install the camshaft timing sprocket.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
NOTICE:
Do not damage the camshaft.

28. INSTALL NO. 2 CAMSHAFT

(a) Apply a light coat of engine oil to the camshaft journals.

(b) Place the camshaft on the cylinder head with the timing mark on the camshaft timing gear facing upward.

(c) Examine the front marks and numbers on camshaft bearing caps No. 1 and No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf) for bearing cap No. 2
23 N*m (235 kgf*cm, 17 ft.*lbf) for bearing cap No. 1
NOTICE:
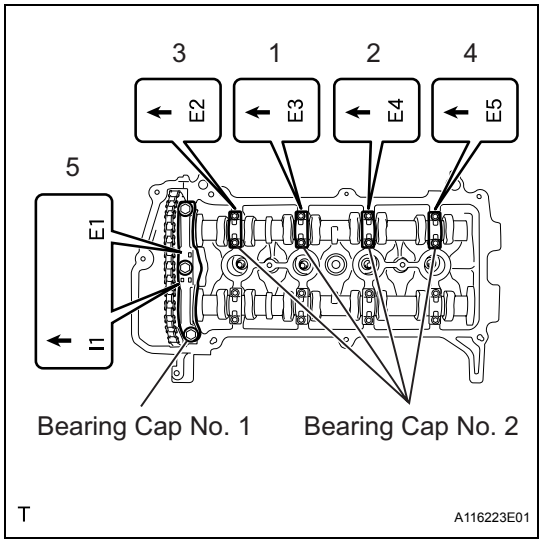
Tighten each bolt uniformly while keeping the camshaft level.



29. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply engine oil to the O-ring.
NOTICE:
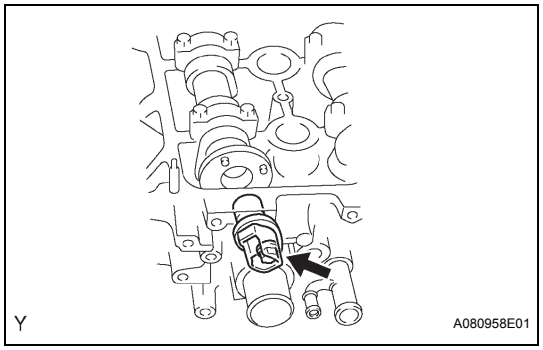
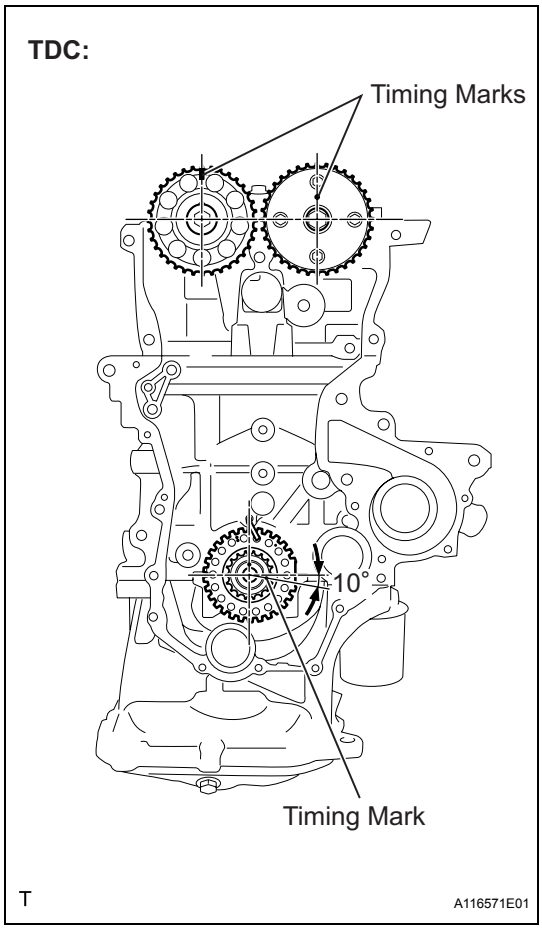
If the O-ring is damaged, replace the camshaft position sensor.

(b) Install the camshaft position sensor with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)





30. INSTALL CHAIN SUB-ASSEMBLY

(a) Make sure that all the timing marks are in the positions (TDC) shown in the illustration.
HINT:
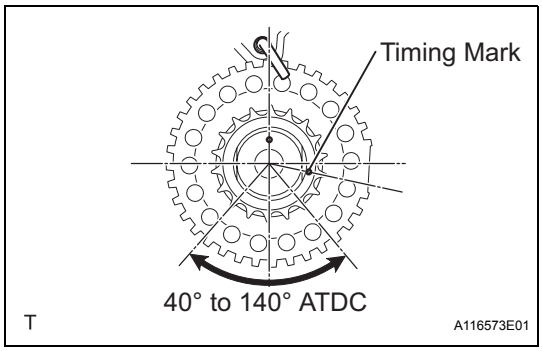
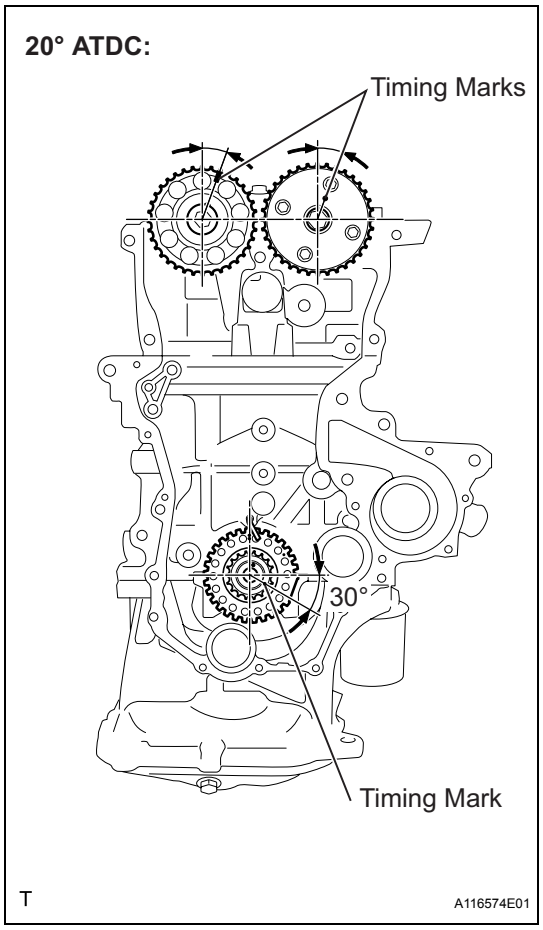
The positions of the timing marks may differ from the predetermined positions due to the force of the valve spring.

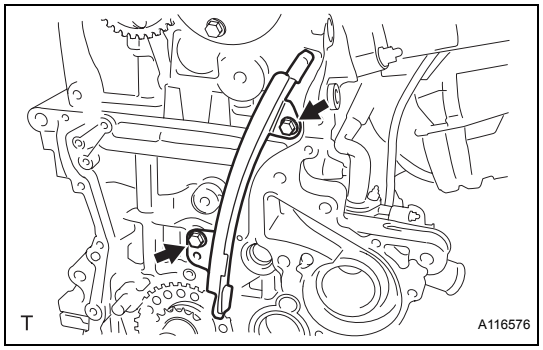


(b) Set the timing mark of the crankshaft in a position between 40 and 140°ATDC, as illustrated.



(c) Set the camshaft timing gear and the camshaft timing sprocket in the positions (20°ATDC) shown in the illustration.

(d) Set the crankshaft in the position (20°ATDC) shown in the illustration.



(e) Install chain vibration damper No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

(f) Align the timing marks of the camshaft with the mark plates of the timing chain and install the timing chain.
HINT:
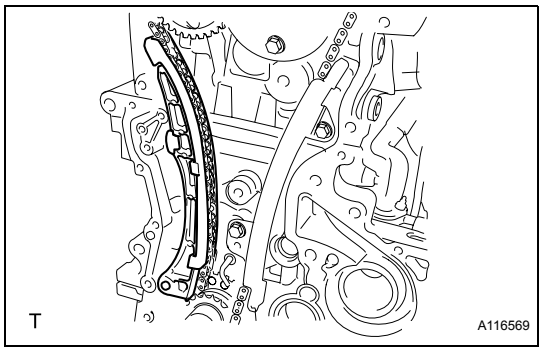
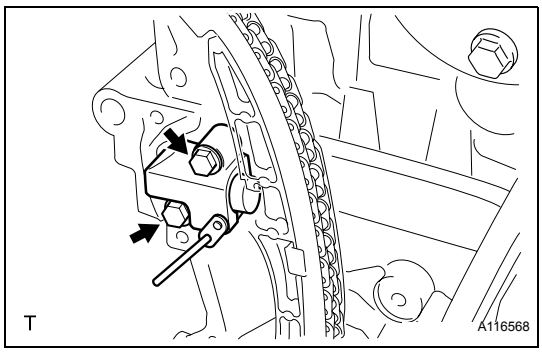
Align the timing marks with the mark plates while turning the hexagonal service portion of the camshaft using a wrench.



31. INSTALL CHAIN TENSIONER SLIPPER

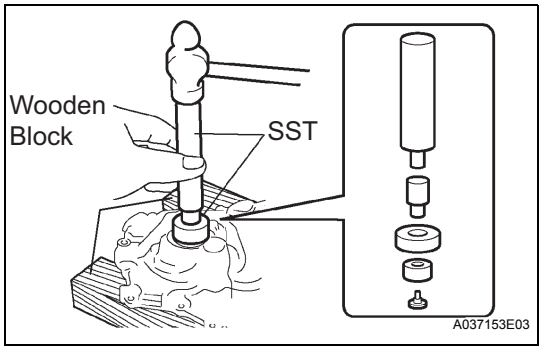
(a) Install the chain tensioner slipper.



32. INSTALL CHAIN TENSIONER ASSEMBLY NO. 1

(a) Install chain tensioner assembly No. 1 with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

(b) Remove the bar from chain tensioner assembly No. 1.



33. INSTALL OIL PUMP SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09950-60010 (09951-00250, 09951-00380, 09952-06010), 09950-70010 (09951-07100)
NOTICE:
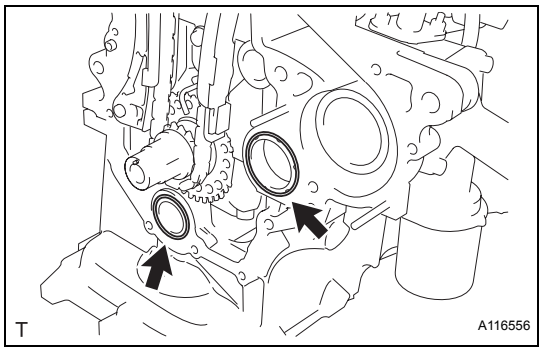
- **Do not tap the oil seal at an angle.**
- **Keep the seal lip free of foreign matter.**

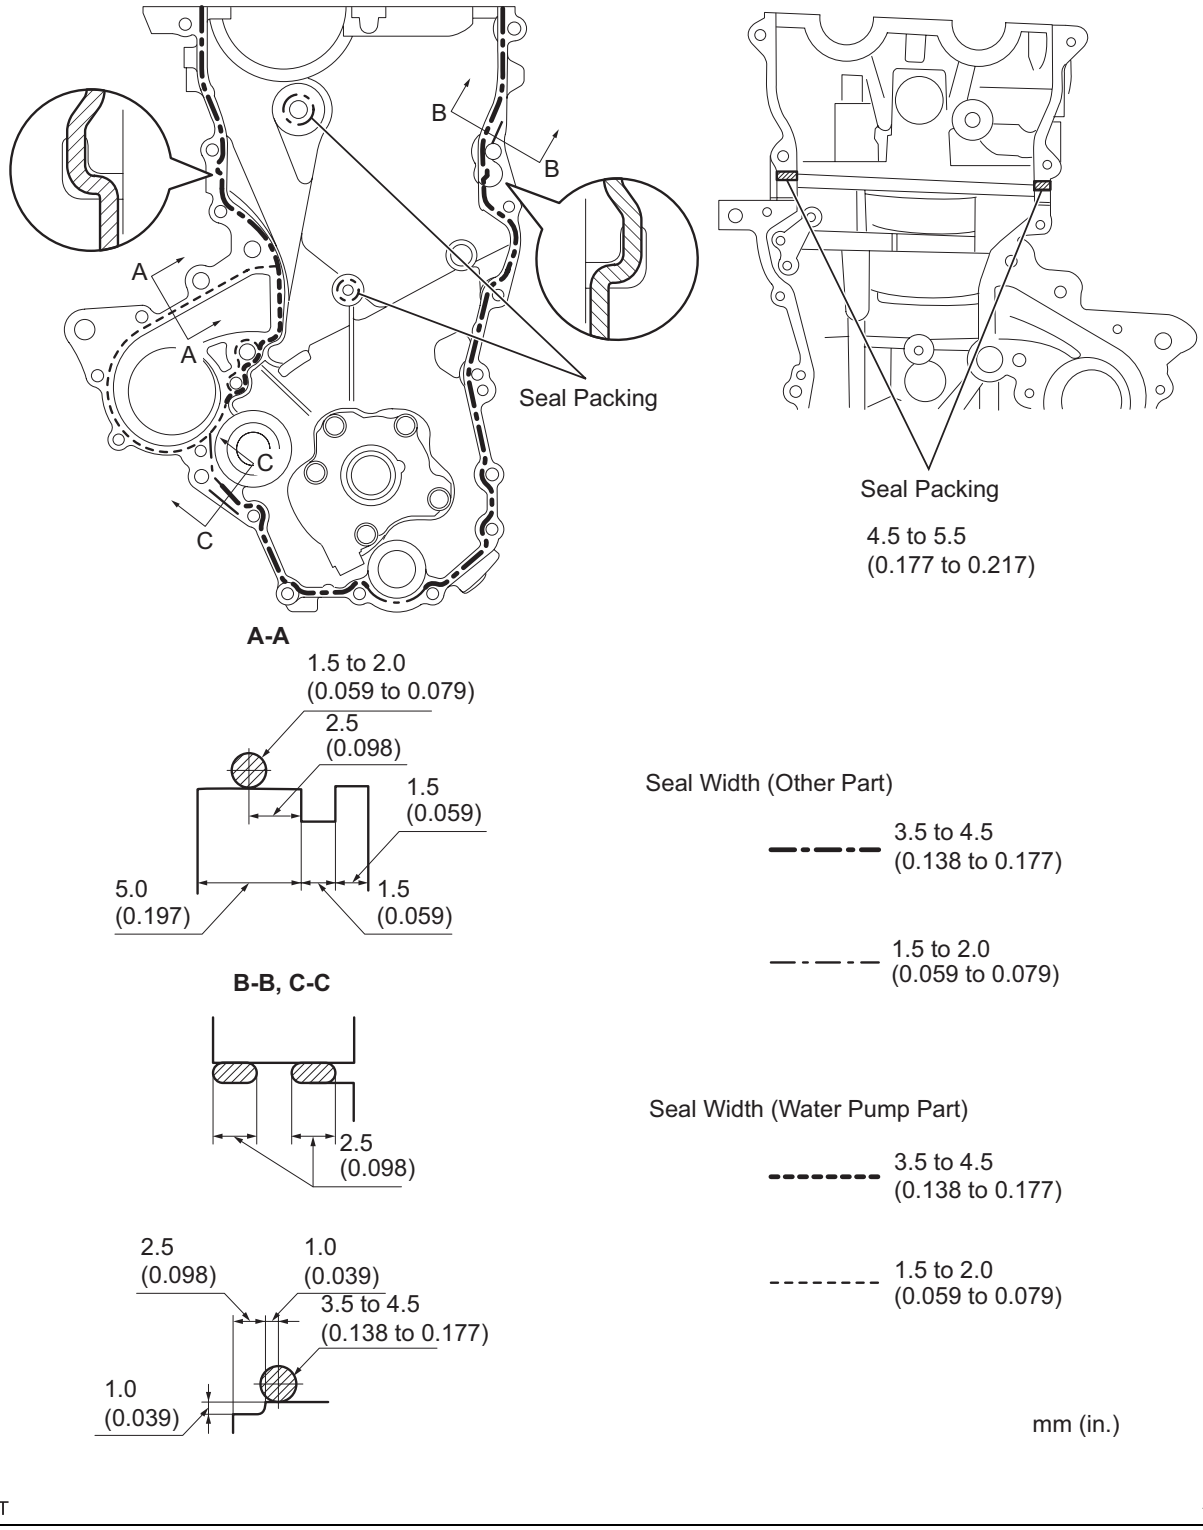
(b) Apply MP grease to the oil seal lip.



34. INSTALL OIL PUMP ASSEMBLY

(a) Install 2 new O-rings in the 2 locations shown in the illustration.

(b) Apply seal packing to the oil pump assembly, cylinder head and cylinder block as shown in the illustration.



Seal packing:
Water pump part Toyota Genuine Seal Packing 1282B, Three Bond 1282B or Equivalent
Other part Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

NOTICE:
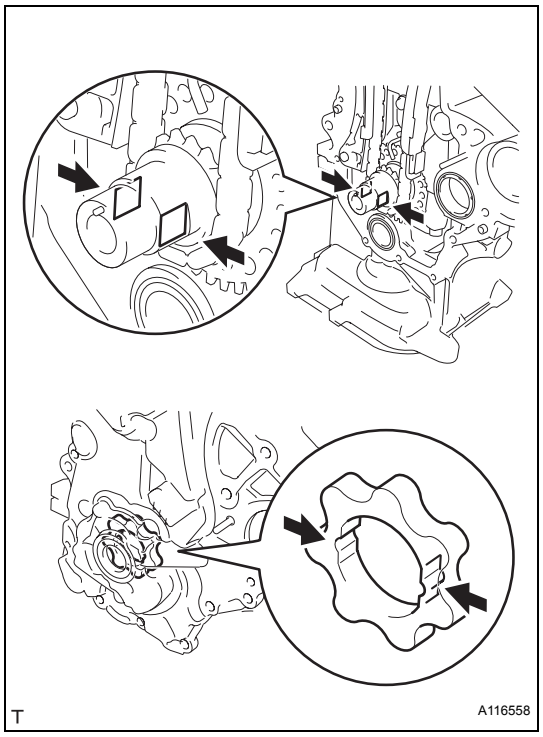
- **Remove any oil from the contact surface.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts and nut within 15 minutes of applying the the seal packing.**
- **Do not expose the seal to engine oil for at least 2 hours after the installation.**

(c) Align the keyway of the oil pump rotor with the rectangular portion of the crankshaft, and slide the oil pump into place.



(d) Install the oil pump assembly with the 15 bolts and nut. Tighten the bolts and nut uniformly in several steps.

Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf) for bolt A
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt B
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt C
24 N*m (245 kgf*cm, 18 ft.*lbf) for nut D
24 N*m (245 kgf*cm, 18 ft.*lbf) for bolt E

NOTICE:
Install the mounting bracket and water pump within 15 minutes of installing the oil pump assembly.

HINT:
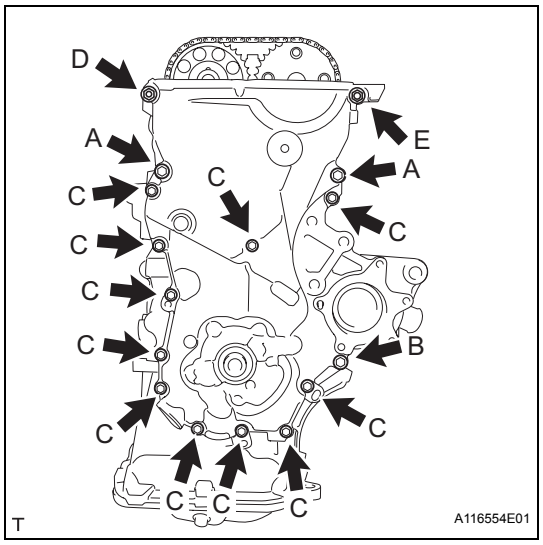
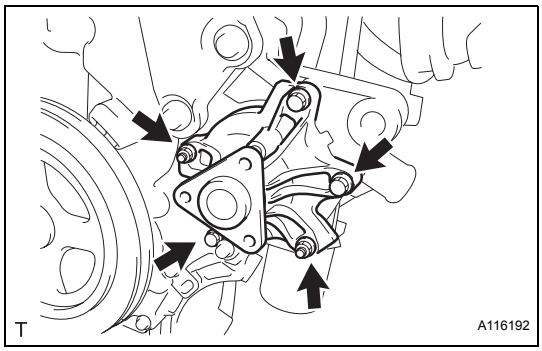
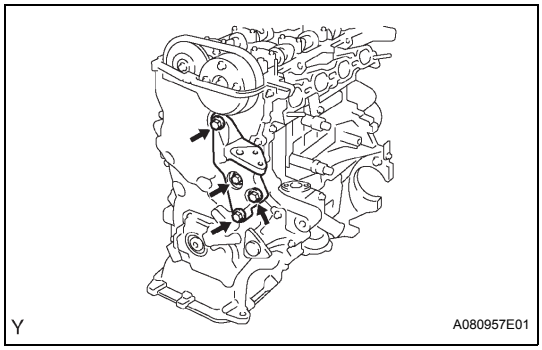
Each bolt length is as follows.
A: 30 mm (1.181 in.)
B: 35 mm (1.378 in.)
C: 20 mm (0.787 in.)
E: 20 to 14 mm (0.787 to 0.551 in.) Double ended bolt





35. INSTALL WATER PUMP ASSEMBLY

(a) Install the water pump and a new gasket with the 3 bolts and 2 nuts.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)



36. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the transverse engine mounting bracket with the 4 bolts.
Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

37. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY

(a) Align the pin hole in the crankshaft damper with the pin position and install the crankshaft damper sub-assembly.

(b) Provisionally install the bolt.

(c) Using 2 SSTs, tighten the bolt while holding the crankshaft damper sub-assembly.
SST 09213-14010 (91651-60865), 09330-00021
Torque: 128 N*m (1305 kgf*cm, 95 ft.*lbf)
NOTICE:
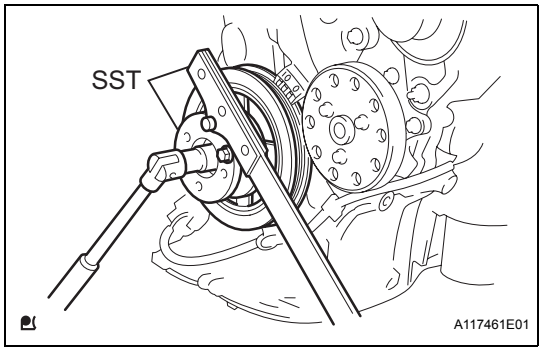
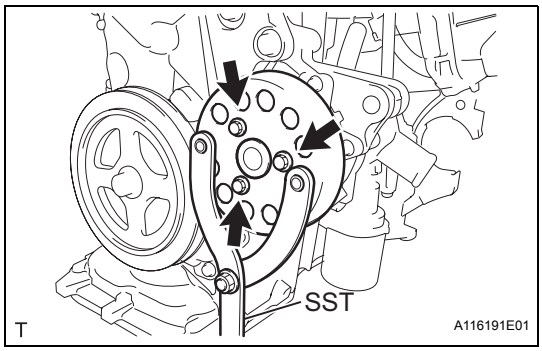
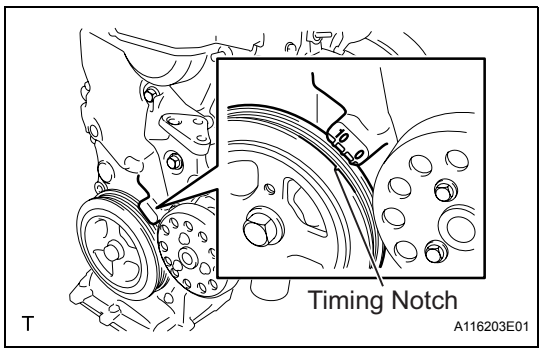
Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.





38. INSTALL WATER PUMP PULLEY

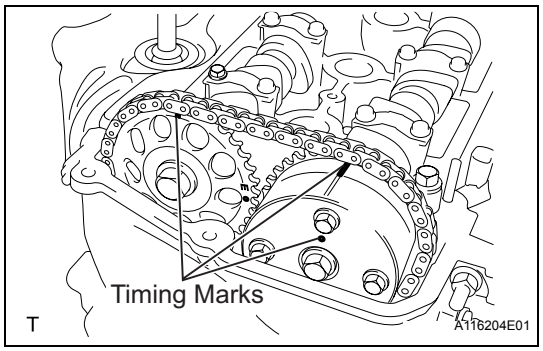
(a) Using SST, install the pump pulley with the 3 bolts.
SST 09960-10010 (09962-01000, 09963-00700)
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



39. INSPECT VALVE CLEARANCE

(a) Set the No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are all facing upward, as shown in the illustration.
HINT:
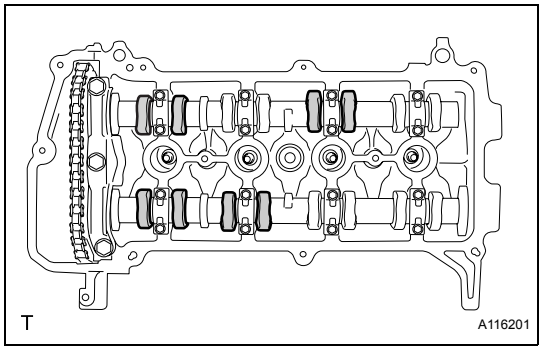
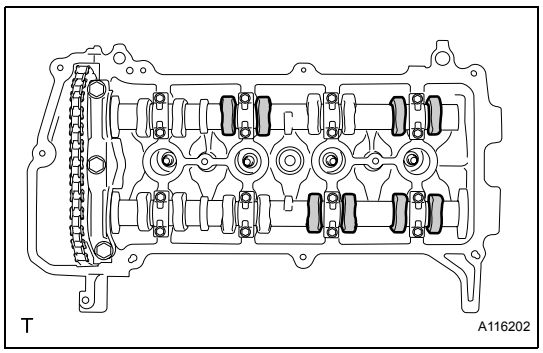
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.

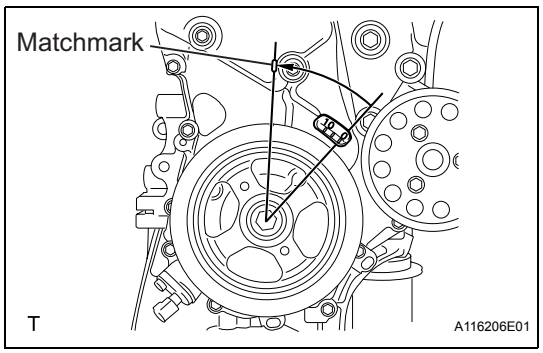


(b) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)
(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

(c) Turn the crankshaft 1 complete revolution (360°) and align its timing notch with timing mark "0" of the oil pump.



(d) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Valve clearance (cold):
for Intake:
0.15 to 0.25 mm (0.006 to 0.010 in.)
for Exhaust:
0.25 to 0.35 mm (0.010 to 0.014 in.)
(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.



40. ADJUST VALVE CLEARANCE
NOTICE:
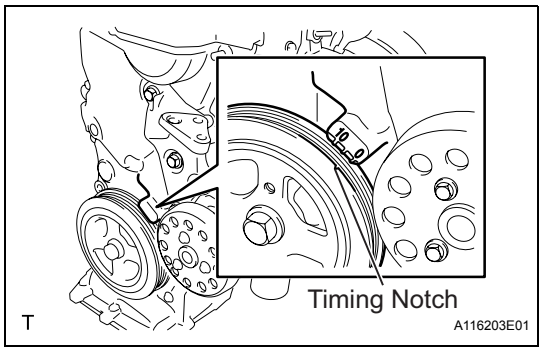
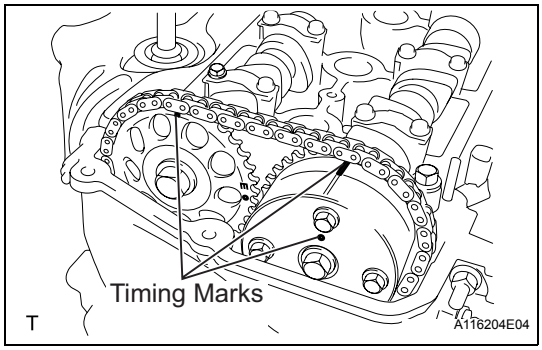
When rotating the camshaft with the timing chain removed, rotate the crankshaft damper counterclockwise 40° from the TDC and align its timing notch with the matchmark of the timing chain cover to prevent the pistons from coming into contact with the valves.



(a) Set the No. 1 cylinder to TDC/compression.
(1) Turn the crankshaft damper, and align its timing notch with timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are all facing upward as shown in the illustration.
HINT:
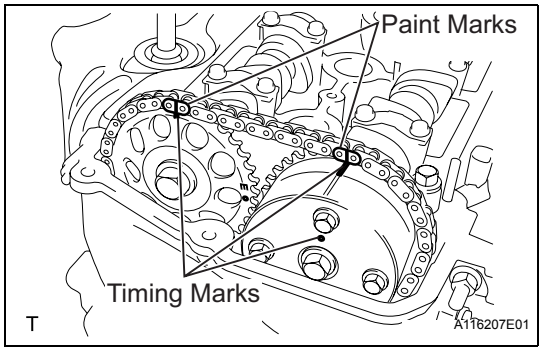
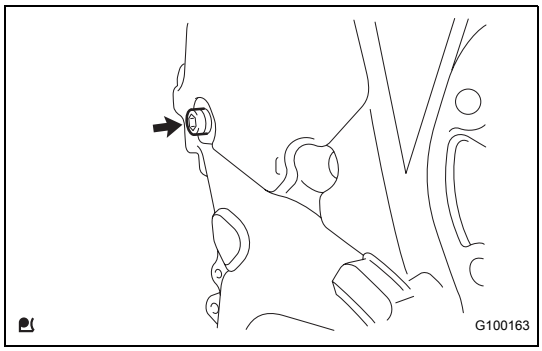
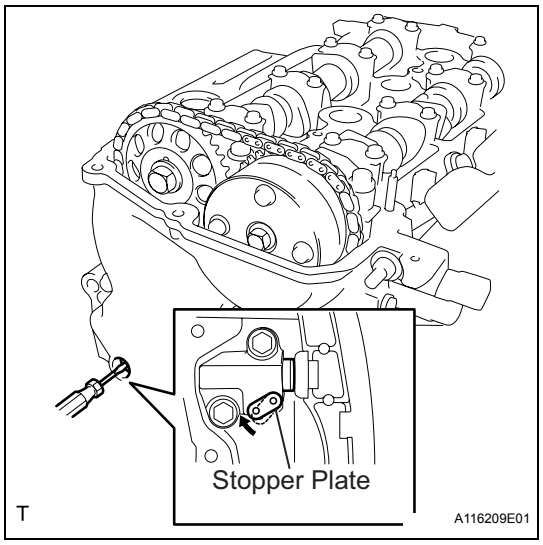
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.



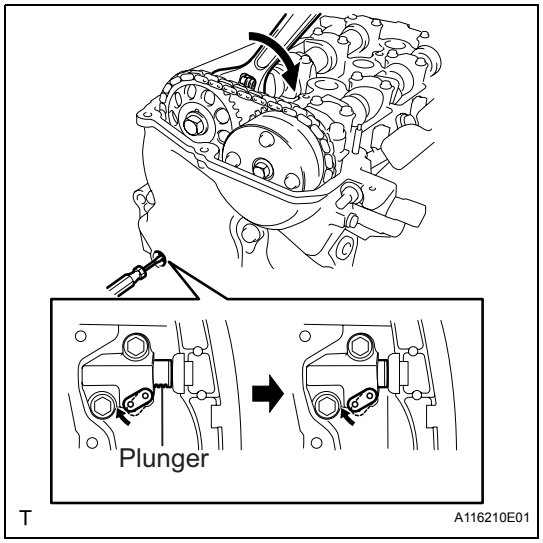
(b) Put paint marks on the chain in the places where the timing marks of the camshaft timing sprocket and the camshaft timing gear are located.



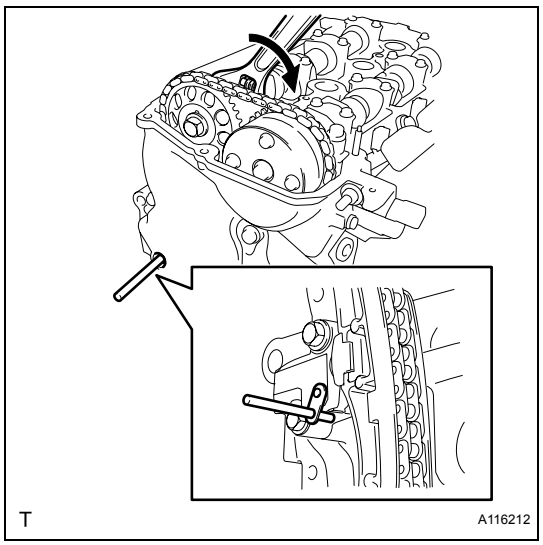
(c) Using an 8 mm hexagon wrench, remove the screw plug.



(d) Insert a screwdriver into the service hole in the chain tensioner to pull the stopper plate of the chain tensioner upward.



(e) Using a wrench, rotate the No. 2 camshaft clockwise to push in the plunger of the chain tensioner.



(f) Remove the screwdriver from the service hole, then align the hole in the stopper plate with the service hole and insert a 3 mm (0.12 in.) diameter bar into the holes to hold the stopper plate.
HINT:
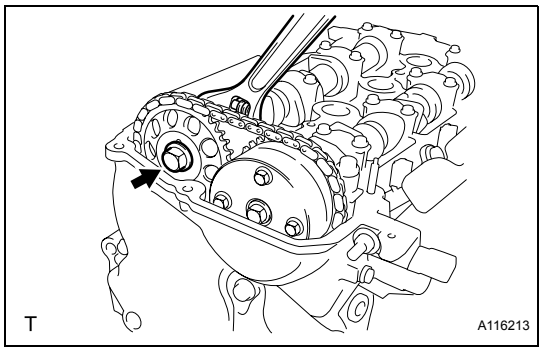
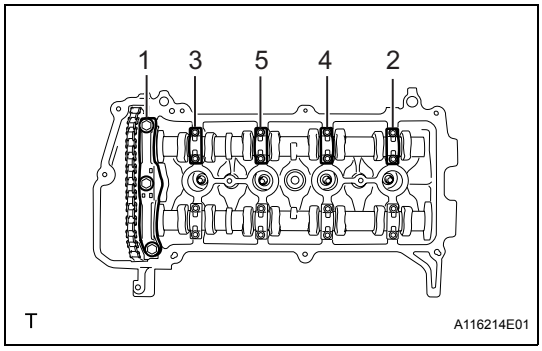
- Fix the stopper plate using the bar while rotating the camshaft right and left slightly.
- Hold the bar with tape so that it does not come out.



(g) Using a wrench, hold the hexagonal lobe of No. 2 camshaft and remove the flange bolt.



(h) Using several steps, loosen and remove the 11 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 1 and camshaft bearing cap No. 2.
NOTICE:
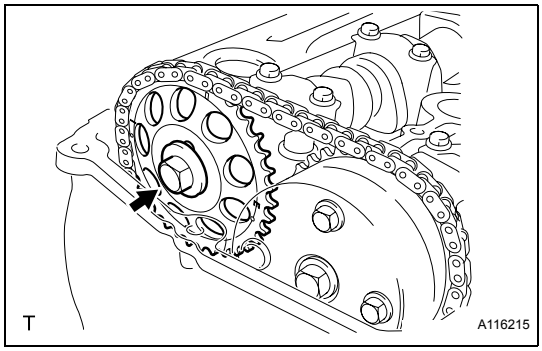
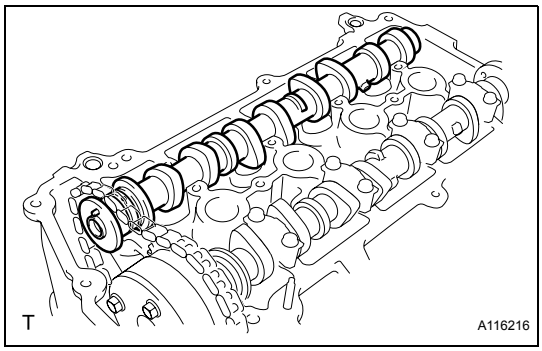
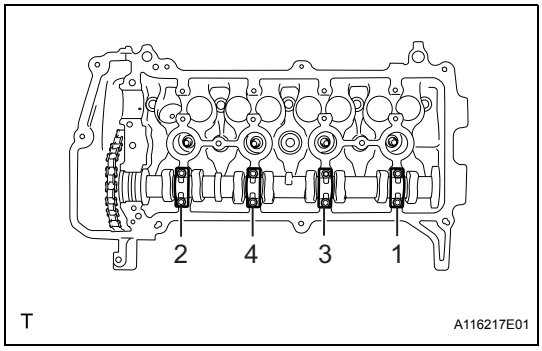
Loosen each bolt uniformly while keeping the camshaft level.



(i) Remove the flange bolt and remove the camshaft timing sprocket.



(j) Remove the No. 2 camshaft.



(k) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration, then remove camshaft bearing cap No. 2.
NOTICE:
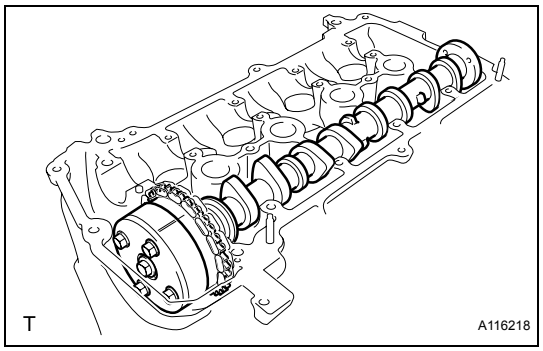
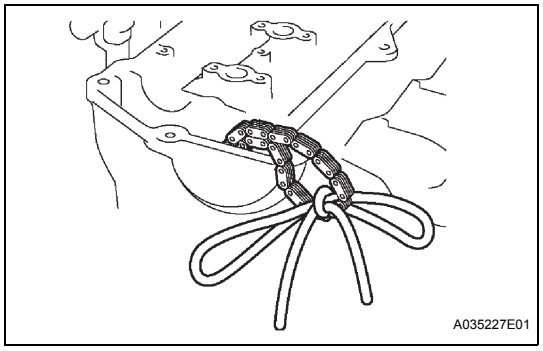
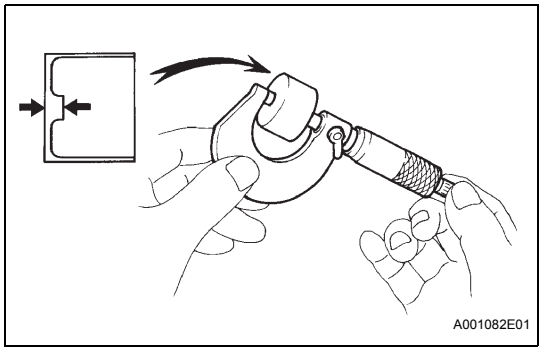
Loosen the bolts uniformly while keeping the camshaft level.



(l) Hold the chain by hand, and remove the camshaft and the camshaft timing gear assembly.



(m) Tie the chain with a piece of string as shown in the illustration.
(n) Remove the valve lifters.



(o) Using a micrometer, measure the thickness of the removed lifter.
(p) Calculate the thickness of the new lifter so that the valve clearance comes to within the specified values.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C - 0.20 mm (0.008 in.))
Exhaust A = B + (C - 0.30 mm (0.012 in.))

(q) Select a new lifter with a thickness as close to the calculated values as possible.
HINT:
Lifters are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

T

A117457

Intake valve clearance (cold):
0.15 to 0.25 mm (0.006 to 0.010 in.)
EXAMPLE:
A 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0158 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 46 lifter.

Exhaust valve clearance (cold):
0.25 to 0.35 mm (0.010 to 0.014 in.)
EXAMPLE:
A 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.). Replace the 5.340 mm (0.2102 in.) lifter with a new No. 48 lifter.

New Shim Thickness

Shim No.	Thickness	Shim No.	Thickness	Shim No.	Thickness
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)
20	5.200 (0.2047)	44	5.440 (0.2142)	68	5.680 (0.2236)

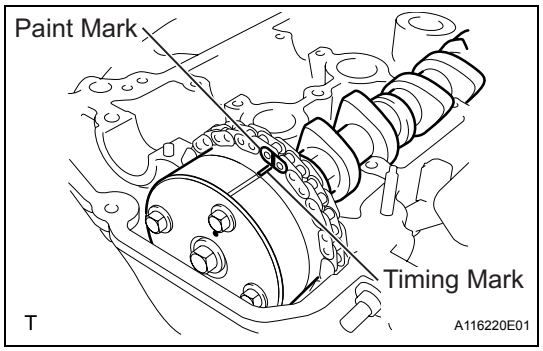
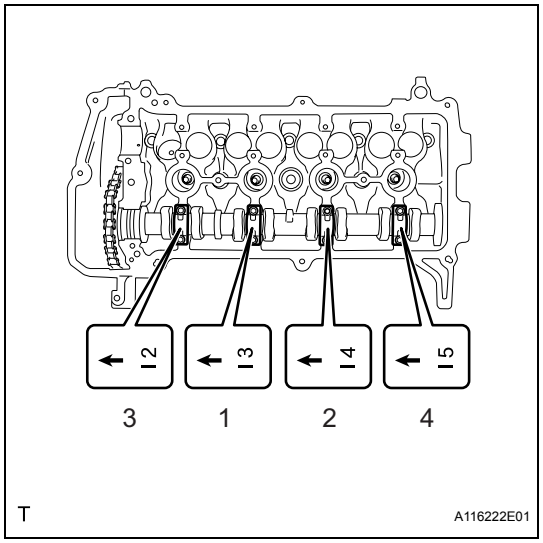
24	5.240 (0.2063)	48	5.480 (0.2157)	72	5.720 (0.2252)
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)		

(r) Install the selected valve lifter.
(s) Apply a light coat of engine oil to the camshaft and camshaft journals.



(t) Install the chain onto the camshaft timing gear with the paint mark and the timing mark aligned, as shown in the illustration.



(u) Examine the front marks and the numbers on camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts in several steps in the sequence shown in the illustration.
Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf)
NOTICE:
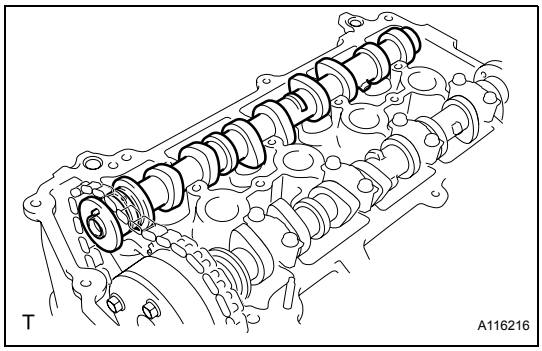
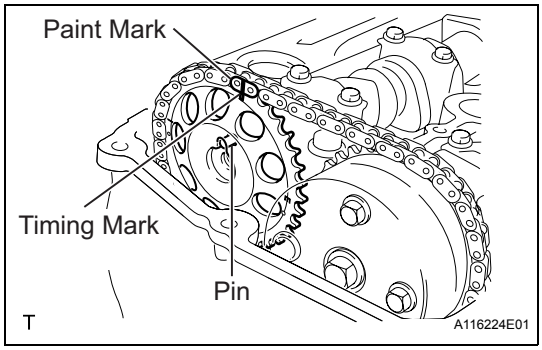
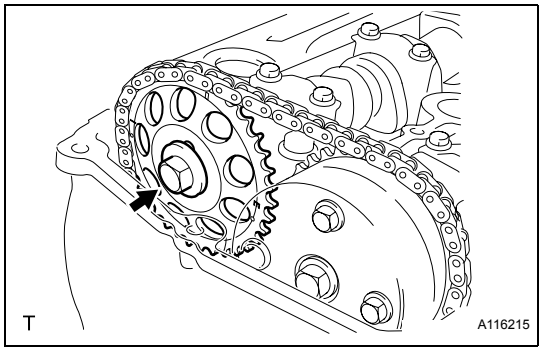
Tighten the bolts uniformly while keeping the camshaft level.



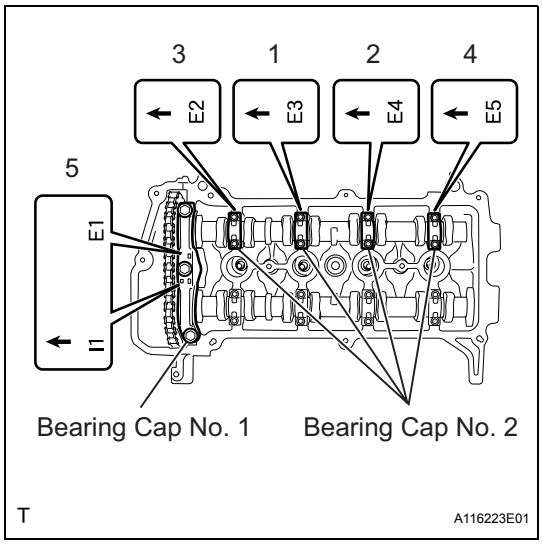
(v) Install camshaft No. 2.



(w) Hold the chain, and align the timing mark on the camshaft timing sprocket with the paint mark of the chain.
(x) Align the alignment pin hole in the camshaft timing sprocket with the alignment pin of the camshaft, and install the sprocket onto the camshaft.



(y) Provisionally install the flange bolt.



(z) Examine the front marks and the numbers of camshaft bearing cap No. 1 and camshaft bearing cap No. 2 and check that the sequence is as shown in the illustration. Then uniformly tighten the bolts, in several steps, in the sequence shown in the illustration.

Torque: 13 N*m (129 kgf*cm, 9.4 ft.*lbf) for bearing cap No. 2
23 N*m (235 kgf*cm, 17 ft.*lbf) for bearing cap No. 1

NOTICE:
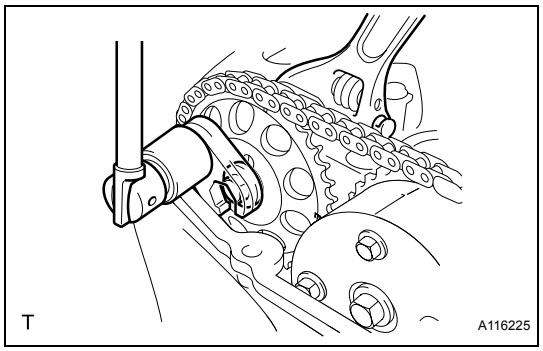
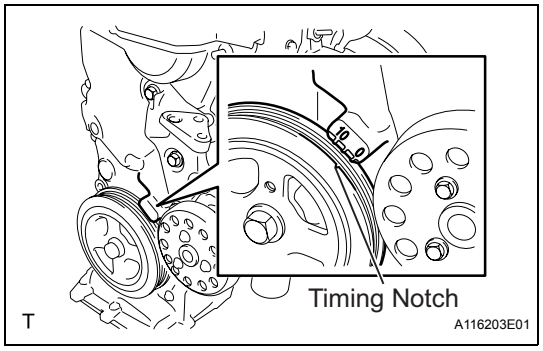
Tighten the bolts uniformly while keeping the camshaft level.



(aa) Using a wrench, hold the hexagonal lobe of camshaft No. 2, and install the flange bolt.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)
SST 09023-38400
(ab) Remove the bar from the timing chain tensioner.



(ac) Turn the crankshaft damper, and align its timing notch with the timing mark "0" of the oil pump.

EM

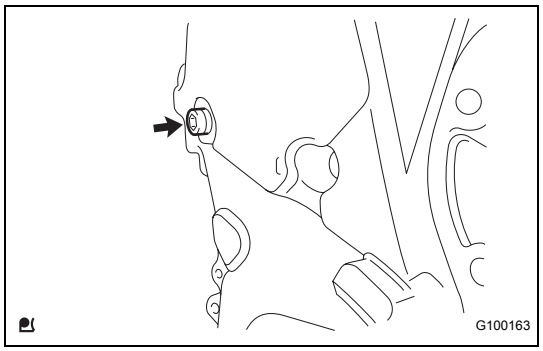
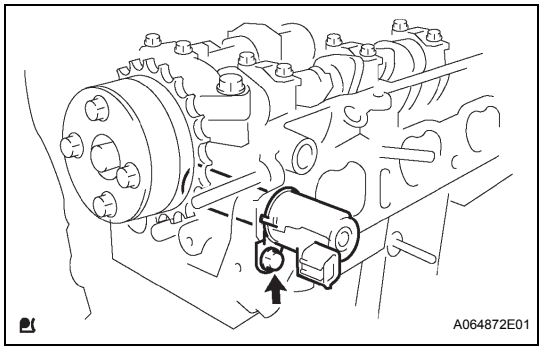
(ad) Check that all the pairs of timing marks are aligned.
(ae) Apply adhesive to the end 2 or 3 threads of the screw plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(af) Using an 8 mm hexagon wrench, install the screw plug.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



41. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY
(a) Apply a light coat of engine oil to a new O-ring, and install it onto the camshaft timing oil control valve.
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
NOTICE:
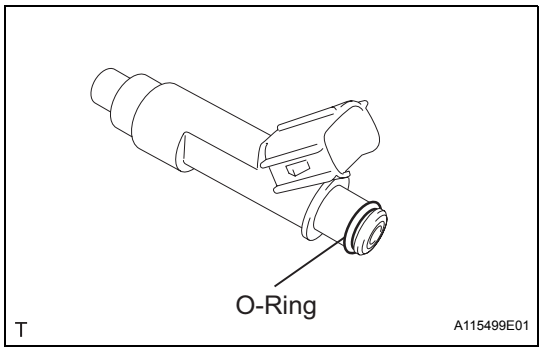
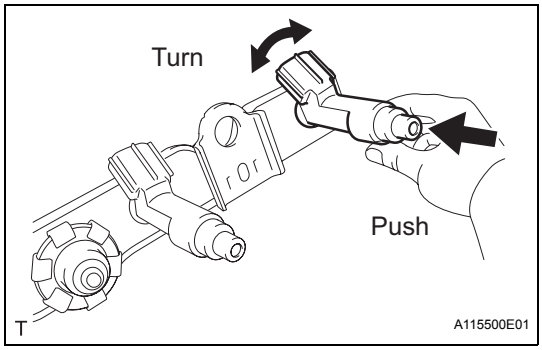
Do not twist the O-ring.



42. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each fuel injector.

(b) Apply a light coat of gasoline or spindle oil to the contact surfaces of the fuel delivery pipe and the O-ring of the fuel injector.



(c) While turning the fuel injector left and right, install it onto the fuel delivery pipe.

NOTICE:

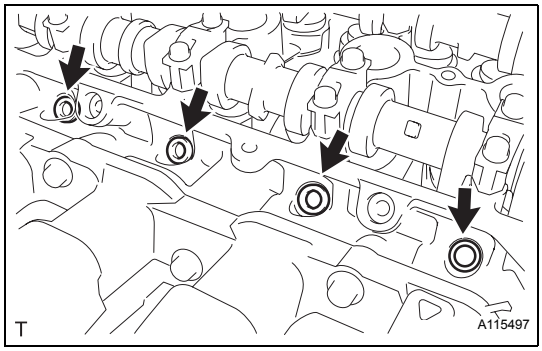
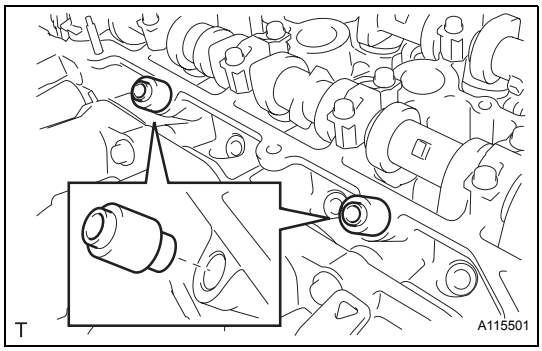
- **Do not twist the O-ring.**
- **After installing the fuel injectors, check that they turn smoothly. If not, replace the O-ring with a new one.**



43. INSTALL INJECTOR VIBRATION INSULATOR

(a) Install 4 new injector vibration insulators onto the cylinder head.



44. INSTALL DELIVERY PIPE NO. 1 SPACER

(a) Install the 2 delivery pipe No. 1 spacers onto the cylinder head.

NOTICE:

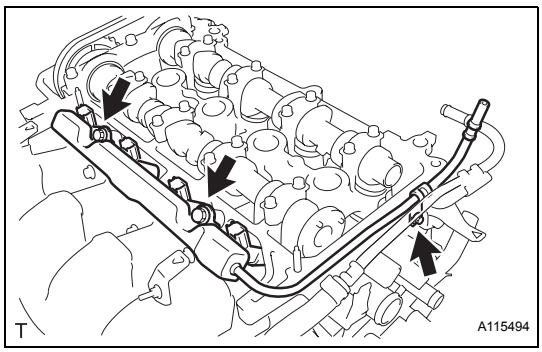
Install delivery pipe No. 1 spacer in the correct direction.



45. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Provisionally install the fuel delivery pipe sub-assembly and 4 fuel injectors with the 3 bolts.

NOTICE:

- **Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.**
- **Check that the fuel injectors rotate smoothly after installing the fuel delivery pipe sub-assembly.**

EM

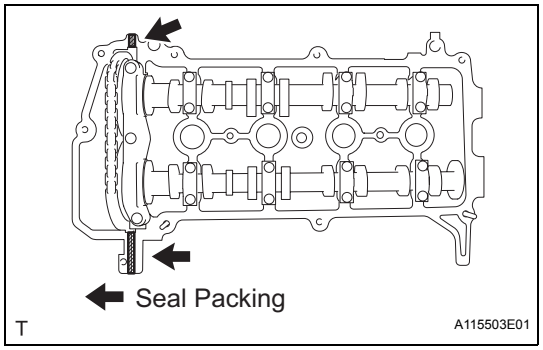
(b) Tighten the 3 bolts to the specified torque.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B



46. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Install the gasket onto the cylinder head cover.

(b) Apply seal packing to the cylinder head, as shown in the illustration.
Seal Packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
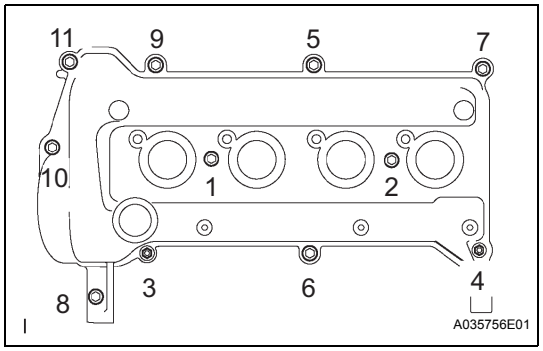
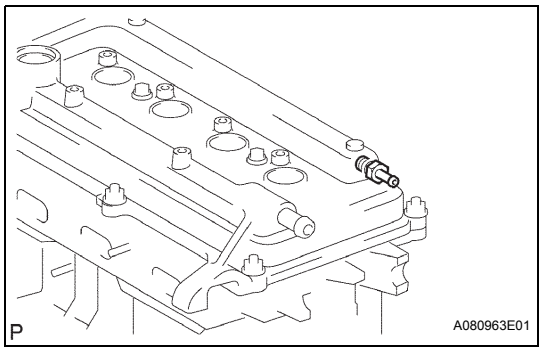
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover sub-assembly within 3 minutes of applying the seal packing.**
- **Do not start engine for at least 2 hours after the installation.**

(c) Install the cylinder head cover sub-assembly with the 9 bolts, 2 nuts and 2 seal washers.



(d) Tighten the 9 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7.0 ft.*lbf)



47. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Install the ventilation valve onto the cylinder head cover.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

48. INSTALL OIL LEVEL GAUGE GUIDE

(a) Apply engine oil to a new O-ring.

(b) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

49. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring on the crankshaft position sensor.
NOTICE:
If the O-ring is damaged, replace the crankshaft position sensor.

(b) Install the crankshaft position sensor with the bolt.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

50. INSTALL OIL FILLER CAP GASKET

(a) Install the oil filler cap gasket onto the oil filler cap.

51. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install the oil filler cap onto the cylinder head cover.

52. INSTALL THERMOSTAT

(a) Install a new gasket onto the thermostat.

(b) Install the thermostat with the jiggle valve facing upward.
HINT:
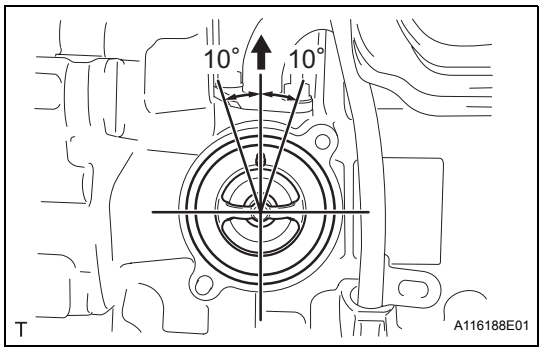
The jiggle valve may be set within 10°either side as shown in the illustration.



53. INSTALL WATER INLET

(a) Install the water inlet with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

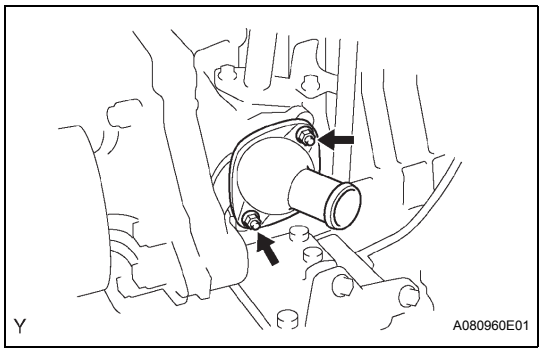
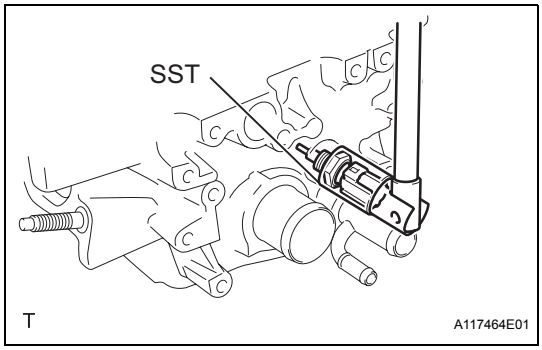
54. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Provisionally install the engine coolant temperature sensor through a new gasket.

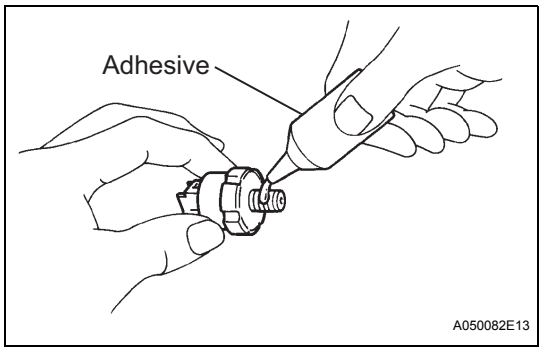


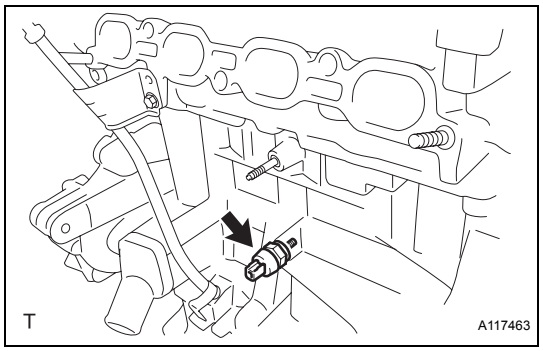
(b) Using SST, tighten the engine coolant temperature sensor.
SST 09817-33190
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



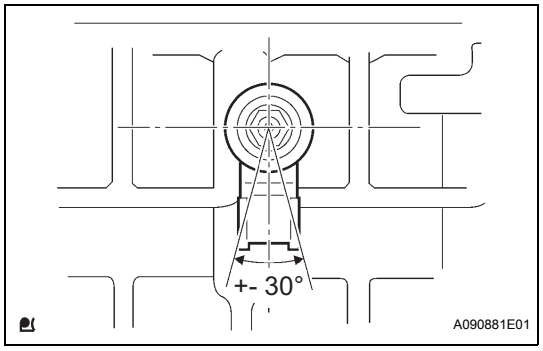
55. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads of the oil pressure switch.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



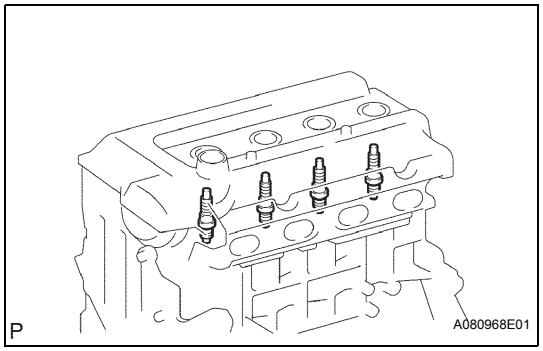


(b) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



56. INSTALL KNOCK SENSOR

(a) Install the knock sensor with the nut as shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



57. INSTALL SPARK PLUG

(a) Using a spark plug wrench, install the spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

EM

FUEL SYSTEM

PRECAUTION

1. PRECAUTIONS

(a) Before working on the fuel system, disconnect the cable from the negative battery terminal.

(b) Do not work on the fuel system near any naked flames. Never smoke during the work.

(c) Keep rubber and leather parts away from gasoline.

2. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

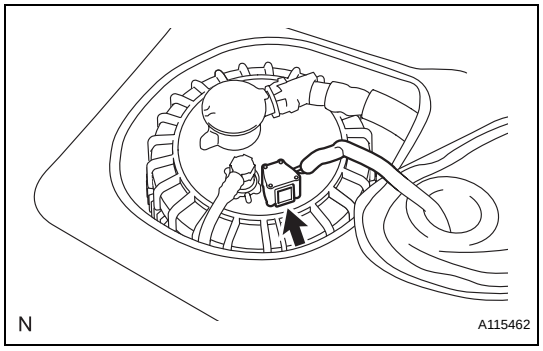
- **Before removing any fuel system parts, take precautions to prevent gasoline spillage.**
- **As some pressure remains in the fuel line even after taking precautions to prevent gasoline spillage, use a shop rag or piece of cloth to prevent gasoline splashes when disconnecting the fuel line.**

(a) Remove the rear seat cushion (for Hatchback) (See page SE-114).

(b) Remove the rear seat assembly (for Hatchback) (See page SE-70).

(c) Remove the rear seat cushion (for Sedan) (See page SE-46).

(d) Remove the rear floor service hole cover.



(e) Disconnect the connector from the fuel pump assembly.

(f) Start the engine. After the engine stops naturally, turn the ignition switch OFF.

HINT:

DTC P0171 may be set.

(g) Crank the engine again and make sure that the engine does not start.

(h) Remove the fuel tank cap and discharge the pressure.

(i) Disconnect the cable from the negative battery terminal.

(j) Connect the connector of the fuel pump assembly.

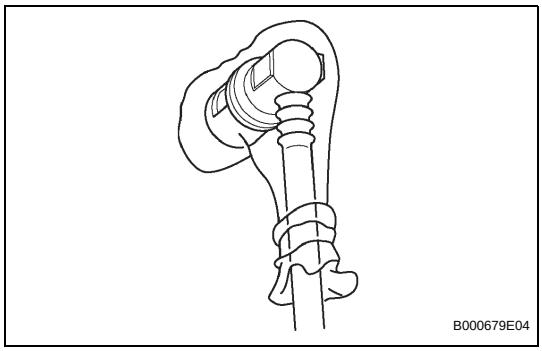
3. FUEL SYSTEM

(a) When disconnecting the high-pressure fuel line, a large amount of gasoline will splash. So take the following precautions.

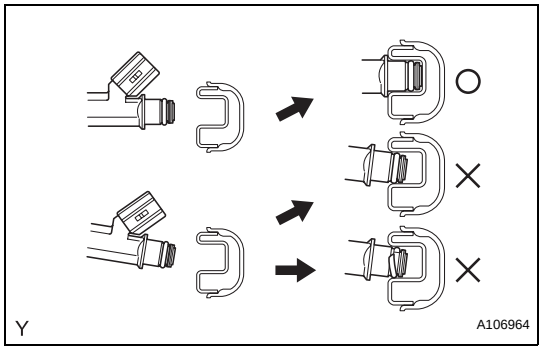
(1) Discharge the fuel system pressure.

(2) Disconnect the fuel tube.

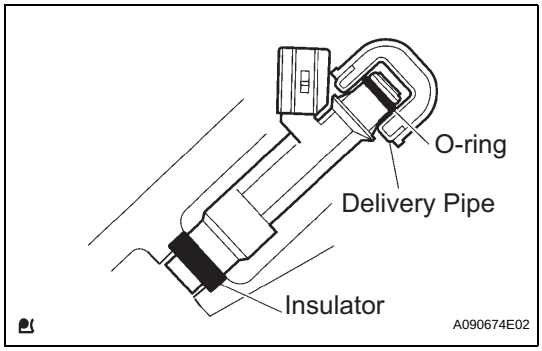
FU



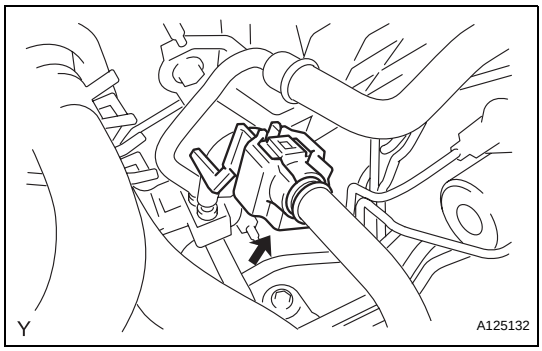
(3) Drain the fuel remaining inside the fuel pump tube.
(4) Cover the disconnected fuel tube connector and pipe with a vinyl bag to prevent damage and the intrusion of foreign matter.



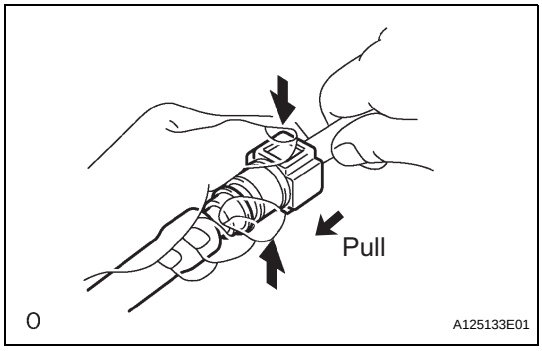
(b) Observe the following precautions when removing and installing the fuel injector.
(1) Do not reuse the O-ring.
(2) When placing a new O-ring onto the injector, do not damage the O-ring.
(3) Coat the new O-ring with grease or gasoline before installing it. Do not use engine, gear or brake oil.



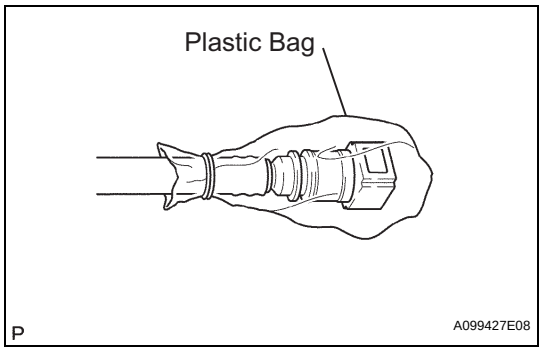
(c) Install the injector into the delivery pipe and cylinder head, as shown in the illustration. Apply grease or gasoline oil to the contact surfaces of the delivery pipe and injector before installing the injector.



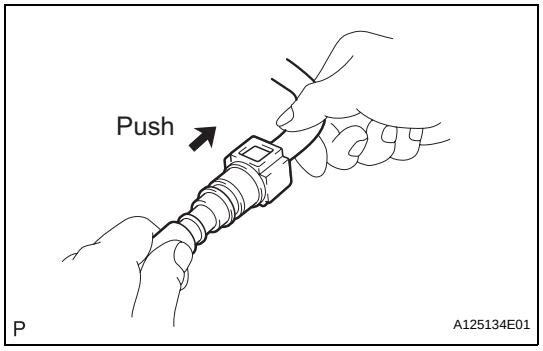
(d) Observe these precautions when disconnecting the fuel tube connector.
(1) Remove the fuel pipe clamp No.1.
(2) Check whether there is any dirt in the pipe around the connector before disconnecting it and remove the dirt as necessary.



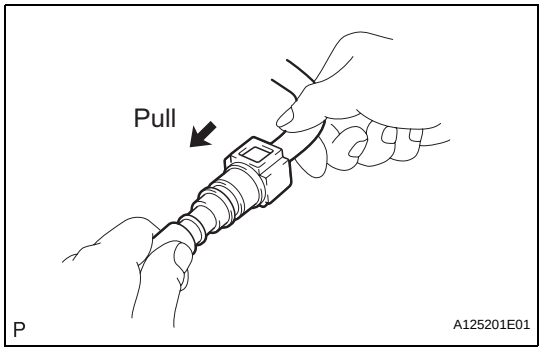
(3) If the connector and pipe are stuck, pinch the retainer with your hand, then push and pull the connector to disconnect them. Do not use any tools.
(4) Check the sealing surface of the pipe for dirt and mud. If dirty, wipe it with a shop rag or piece of cloth.



(5) Cover the disconnected fuel tube connector and pipe with a vinyl bag to prevent damage and the intrusion of foreign matter.



(e) Observe the following precautions when connecting the fuel tube connector.
(1) Check that there is no damage or foreign matter on the part of the pipe that comes into contact with the connector.
(2) Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a click sound. If the connection is too tight, apply a small amount of fresh engine oil to the tip of the pipe.



(3) After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.
(4) Attach the lock claws to the connector by pushing down on the cover.

4. CHECK FOR FUEL LEAKAGE

(a) Check that there is no fuel leakage after performing maintenance anywhere on the fuel system (See page FU-7).

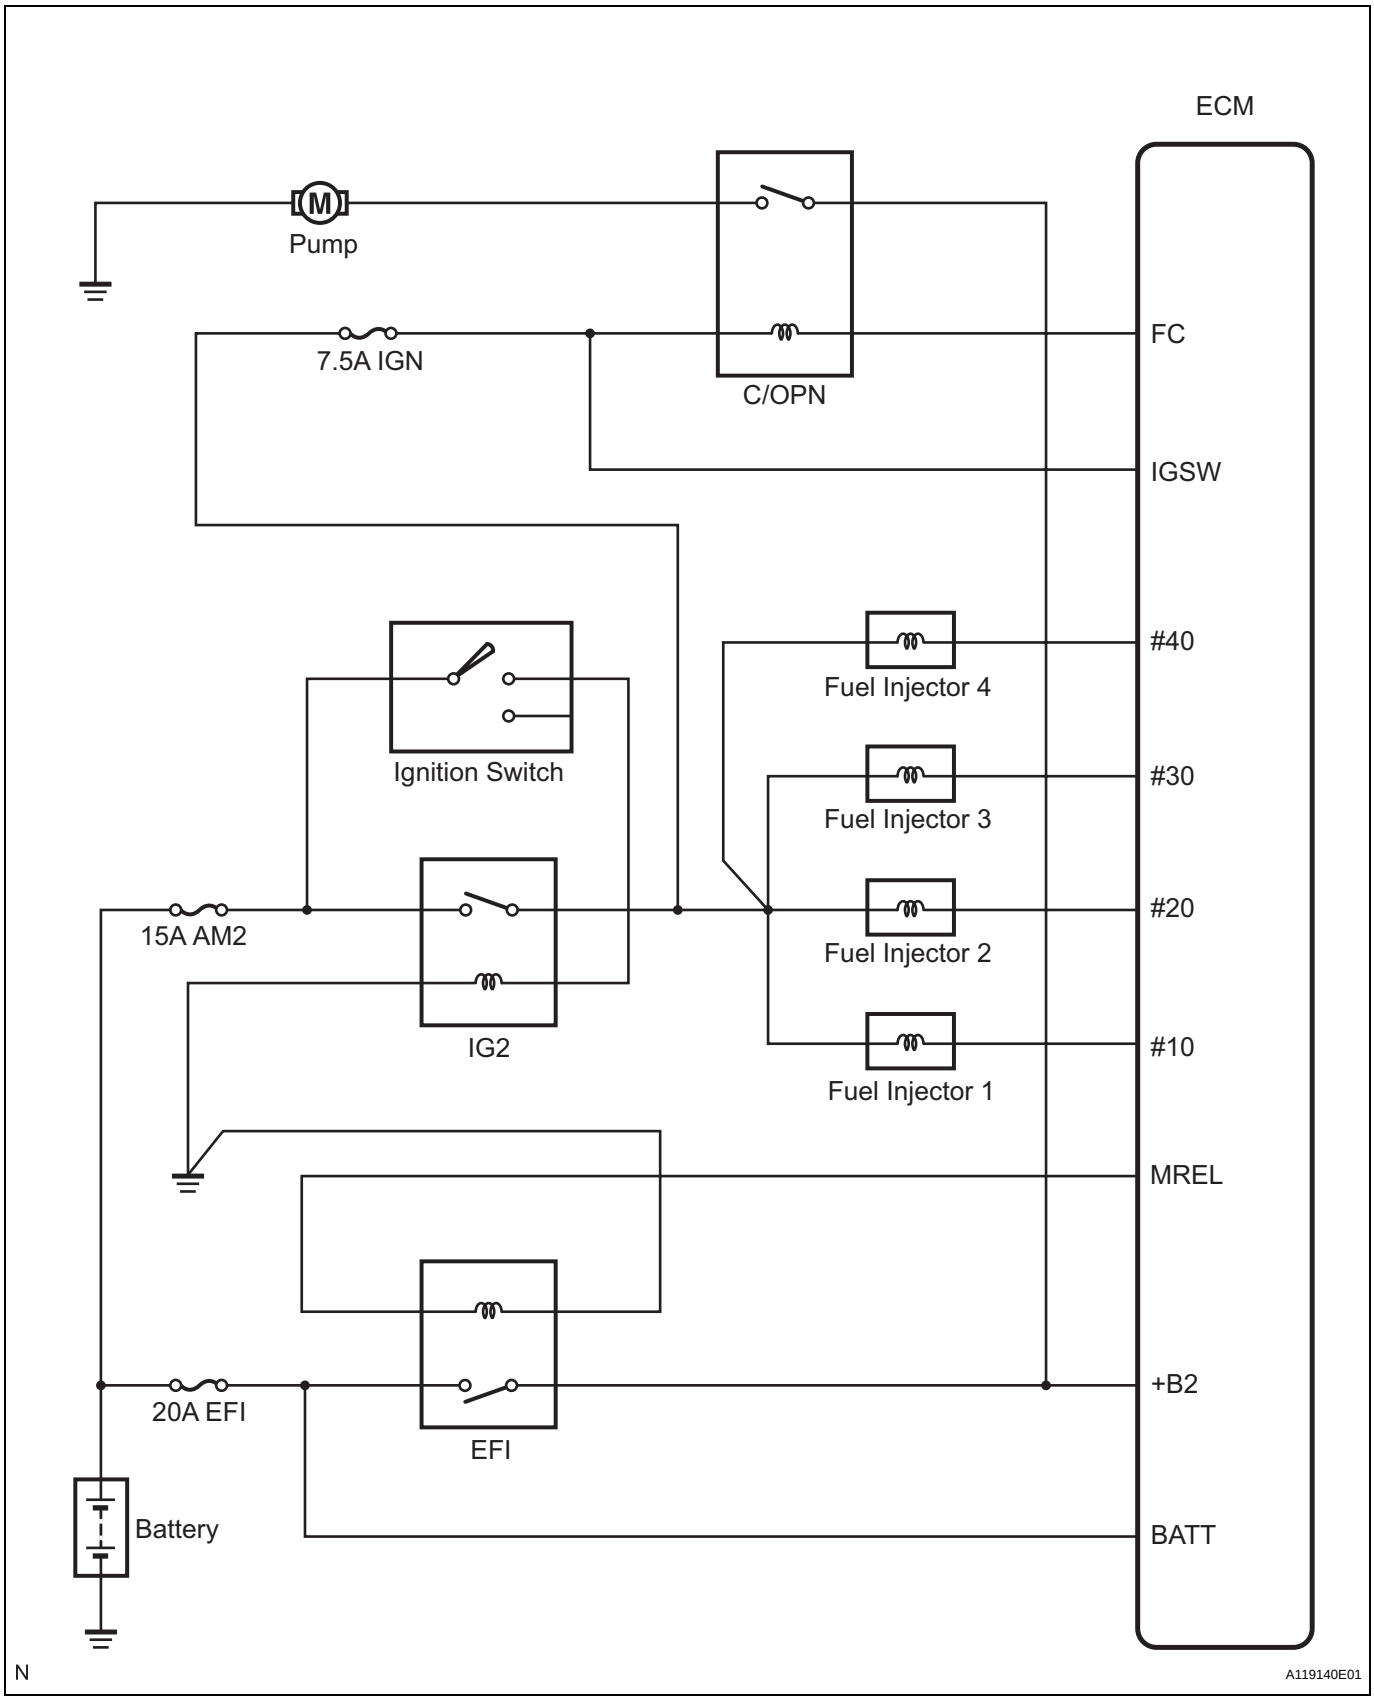
SYSTEM DIAGRAM



ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION AND FUEL LEAKAGE

(a) When using the intelligent tester.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG) and the intelligent tester main switch on.
  NOTICE:
  Do not start the engine.
  (3) Select the Active Test mode on the intelligent tester.
  HINT:
  Refer to the intelligent tester operator's manual for further details.

(b) Check that there is no fuel leakage anywhere on the fuel system after doing maintenance.

2. CHECK FUEL PRESSURE

(a) Discharge the fuel system pressure (See page FU-1).

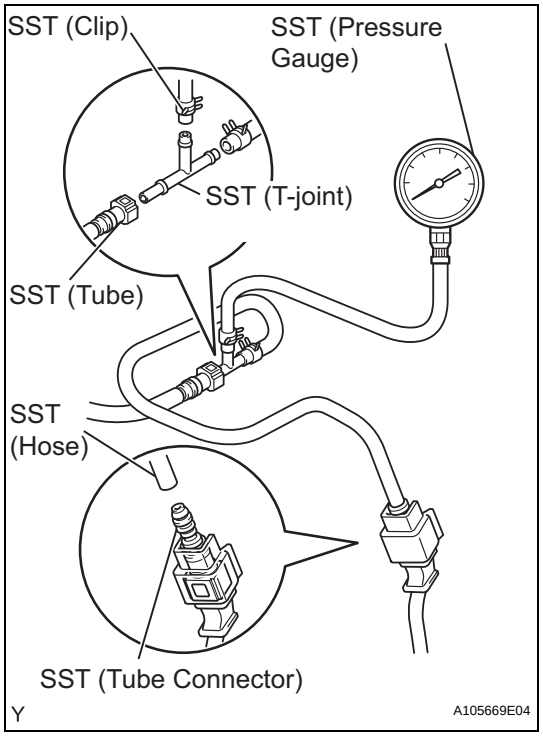
(b) Using a voltmeter, measure the battery voltage.
  Standard voltage:
  11 to 14 V

(c) Disconnect the negative (-) battery terminal cable.

(d) Remove fuel pipe clamp No. 1 from the fuel tube connector.

(e) Disconnect the fuel hose from the fuel main tube.

(f) Install SST (pressure gauge and fuel tube connector) as shown in the illustration.
  SST 09268-45014 (09268-41200, 09268-41220, 09268-41250), 09268-41047 (90467-13001, 95336-08070, 09268-41500)



(g) Wipe off any spilt gasoline.

(h) Reconnect the negative (-) battery terminal cable.

(i) Connect the intelligent tester to the DLC3 (see step 1 in check fuel pump operation).

(j) Measure the fuel pressure.
  Fuel pressure:
  304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)
  If the pressure is high, replace the fuel pressure regulator.
  If the pressure is low, check the fuel hoses, fuel hose connections, fuel pump and fuel pressure regulator.

(k) Disconnect the intelligent tester from the DLC3.

(l) Start the engine.

(m) Measure the fuel pressure while the engine is idling.
  Fuel pressure:
  304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)
  If the pressure is not as specified, check the vacuum sensing hose and the fuel pressure regulator.

(n) Stop the engine.
(o) Check that the fuel pressure remains as specified for 5 minutes after the engine stops.
Fuel pressure:

147 kPa (1.5 kgf*cm^2, 21 psi) or more

If the pressure is not as specified, check the fuel pump, pressure regulator and injectors.
(p) After checking the fuel pressure, disconnect the negative (-) battery terminal cable and carefully remove SST to prevent gasoline splashes.
(q) Reconnect the fuel tube to the fuel main tube.
(r) Install fuel pipe clamp No. 1 onto the fuel tube connector.
(s) Check for fuel leakage (step 1).

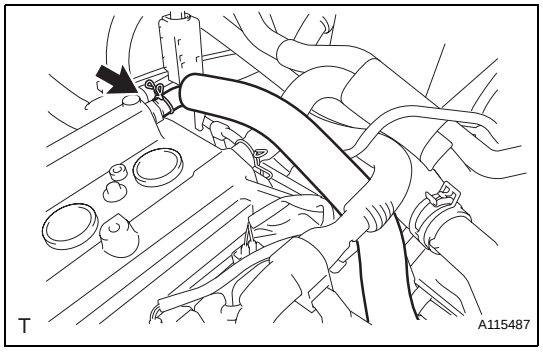
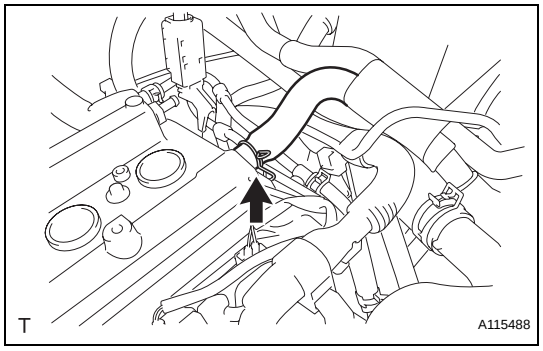
REMOVAL

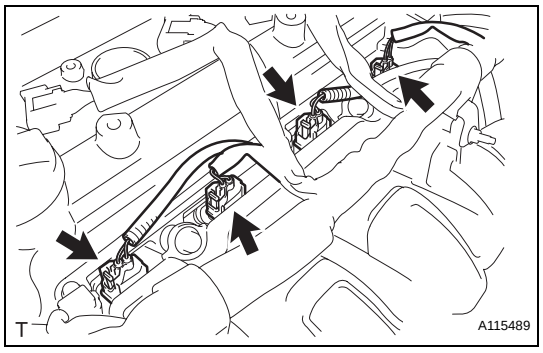
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
4. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
5. **REMOVE VENTILATION HOSE**
   (a) Disconnect the ventilation hose.



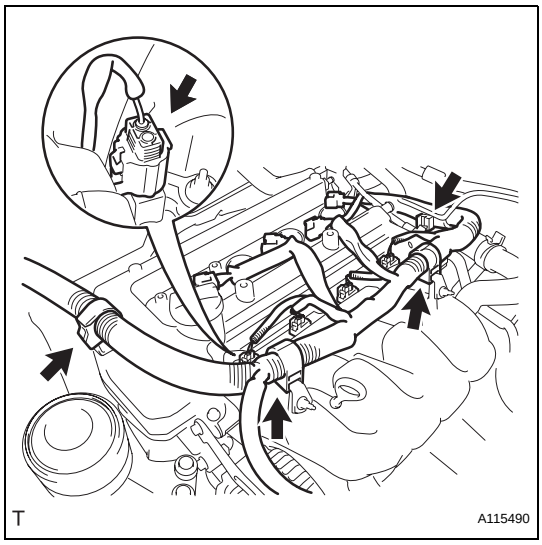
6. **REMOVE VENTILATION HOSE NO. 2**
   (a) Disconnect ventilation hose No. 2.



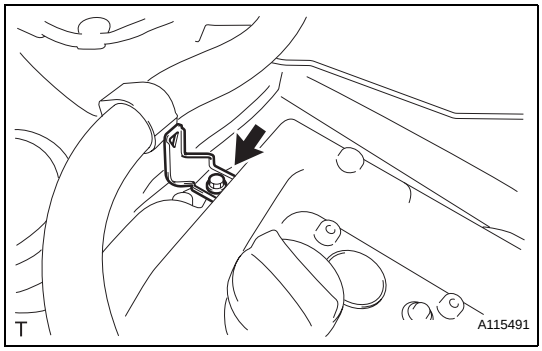
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY**
   (a) Disconnect the fuel injector connectors.



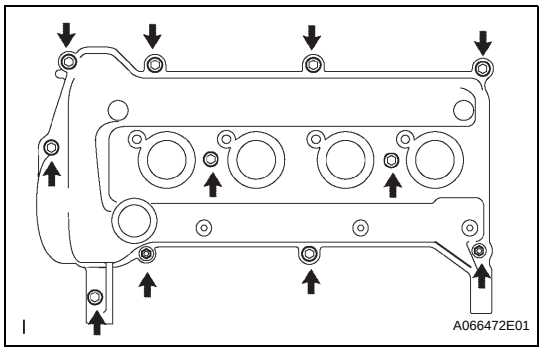
FU



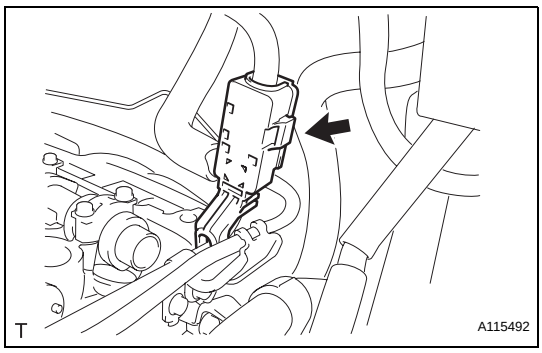
(b) Disconnect the connector and 3 wire harness clamps shown in the illustration and disconnect the engine wire harness.



(c) Remove the bolt and remove the wire harness bracket.

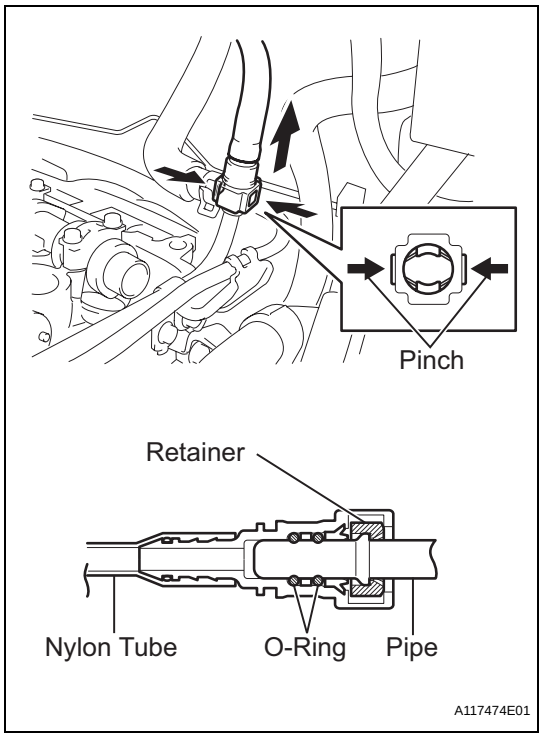


(d) Remove the 9 bolts, 2 nuts and 2 seal washers and then remove the cylinder head cover sub-assembly.



8. DISCONNECT FUEL TUBE SUB-ASSEMBLY

(a) Remove the fuel pipe clamp.

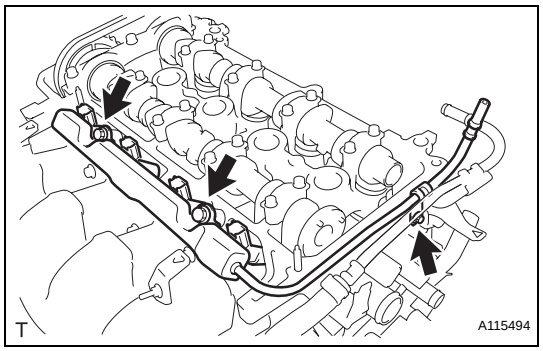


(b) Pinch the retainer of the fuel tube connector, then pull the fuel tube connector to disconnect the fuel tube out of the fuel delivery pipe sub-assembly.

NOTICE:

- **Remove any dirt and foreign matter from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with a vinyl bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

FU

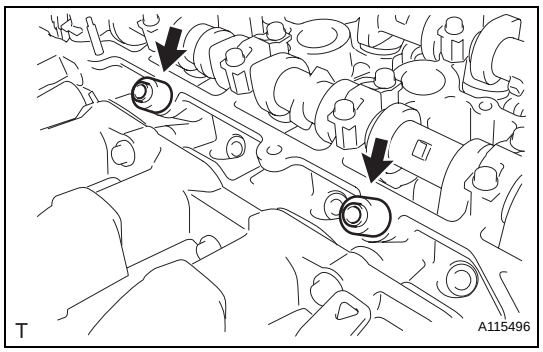


9. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Remove the 3 bolts and remove the fuel delivery pipe sub-assembly with 4 fuel injectors.

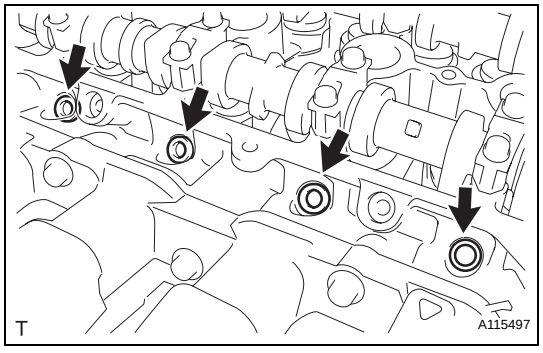
NOTICE:

Do not drop the fuel injectors when removing the fuel delivery pipe sub-assembly.



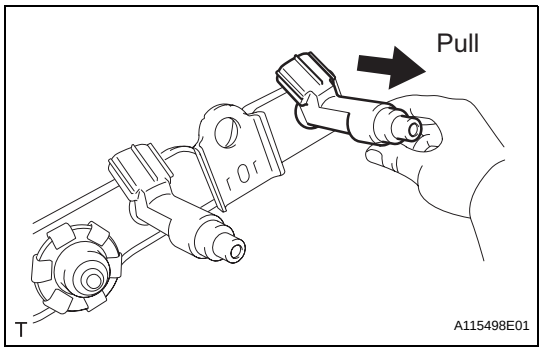
10. REMOVE DELIVERY PIPE NO. 1 SPACER

(a) Remove the 2 delivery pipe No. 1 spacers.



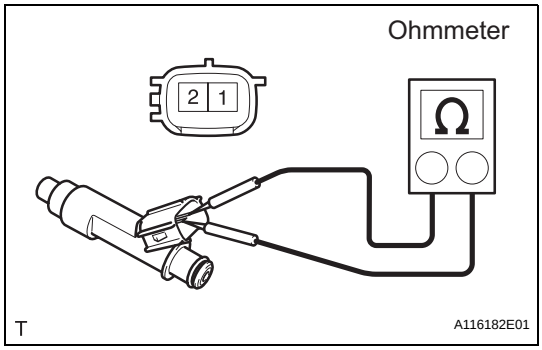
11. REMOVE INJECTOR VIBRATION INSULATOR

(a) Remove the 4 injector vibration insulators.



12. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull the 4 fuel injector assemblies out of the fuel delivery pipe sub-assembly.



INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance:

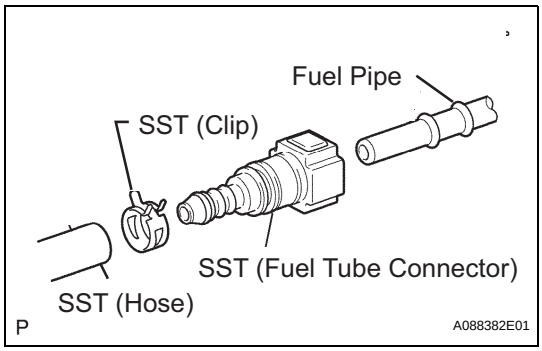
11.6 to 12.4 Ω at 20°C (68°F)

If the result is not as specified, replace the injector assembly.

(b) Check the operation.

CAUTION:

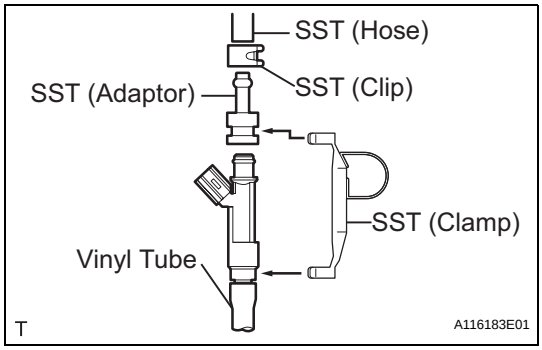
Perform the inspection in a well-ventilated area. Do not perform the inspection near any naked flames.



(1) Connect SST (fuel tube connector) to SST (hose), then connect them to the fuel pipe (vehicle side).

SST 09268-41048 (90467-13001, 95336-08070, 09268-41500)

(2) Install the O-ring onto the fuel injector assembly.



(3) Connect SST (adaptor and hose) to the injector assembly, and hold the injector assembly and union with SST (clamp).

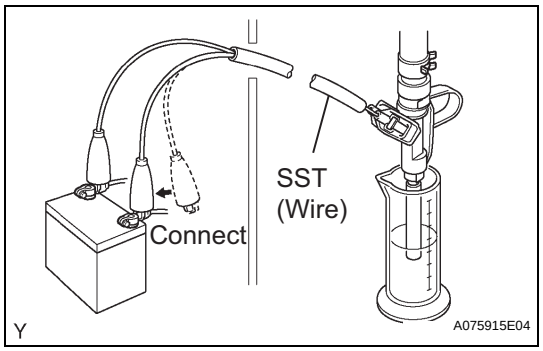
SST 09268-41048 (09268-41110, 90467-13001, 95336-08070, 09268-41310)

(4) Set the injector assembly in a graduated cylinder.

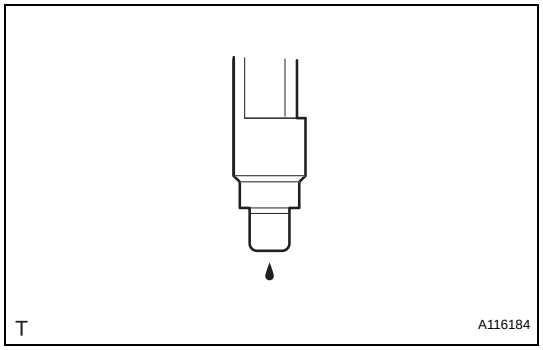
CAUTION:

Install a suitable vinyl tube onto the injector assembly to prevent gasoline splashes.

(5) Operate the fuel pump (see page FU-7).



(6) Connect SST (wire) to the injector assembly and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.
SST 09842-30080
Injection volume:
47 to 58 cm^3 (2.9 to 3.5 cu in.) per 15 seconds
Difference between each injector:
11 cm^3 (0.6 cu in.) or less
NOTICE:
Always do the switching at the battery side.
If the injection volume is not as specified, replace the injector assembly.



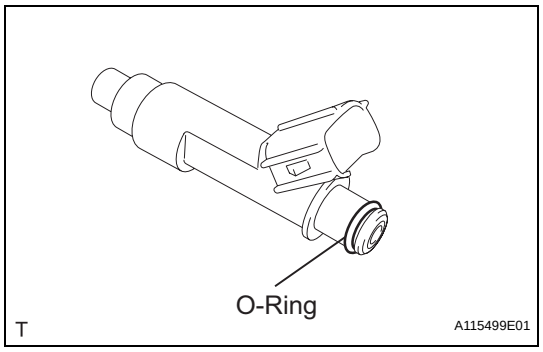
(c) Check the leakage.
(1) In the condition above, disconnect the test probes of SST (wire) from the battery and check the injector for fuel leakage.
Fuel drop:
1 drop or less every 12 minutes

FU

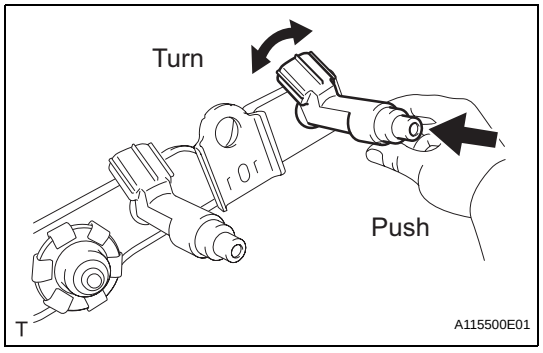
INSTALLATION

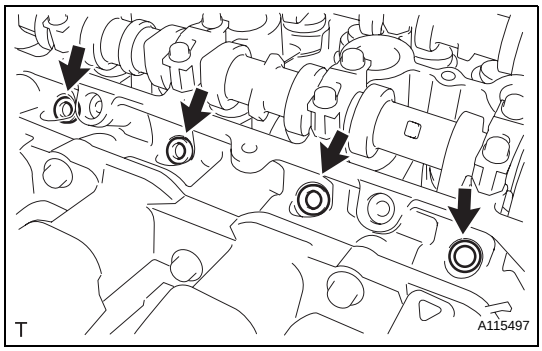
1. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each fuel injector.
(b) Apply a light coat of gasoline or spindle oil to the contact surfaces of the fuel delivery pipe and the O-ring of the fuel injector.



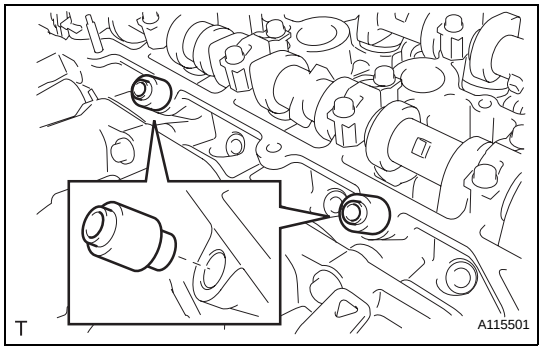
(c) While turning the fuel injector left and right, install it onto the fuel delivery pipe.
NOTICE:
- **Do not twist the O-ring.**
- **After installing the fuel injectors, check that they turn smoothly. If not, replace the O-ring with a new one.**





2. INSTALL INJECTOR VIBRATION INSULATOR

(a) Install 4 new injector vibration insulators onto the cylinder head.

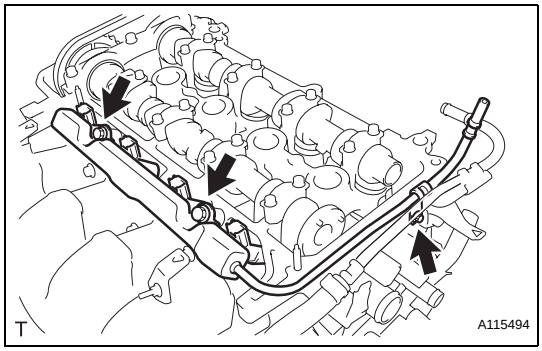


3. INSTALL DELIVERY PIPE NO. 1 SPACER

(a) Install the 2 No. 1 delivery pipe spacers onto the cylinder head.

NOTICE:

Install the delivery pipe No. 1 spacer in the correct direction.

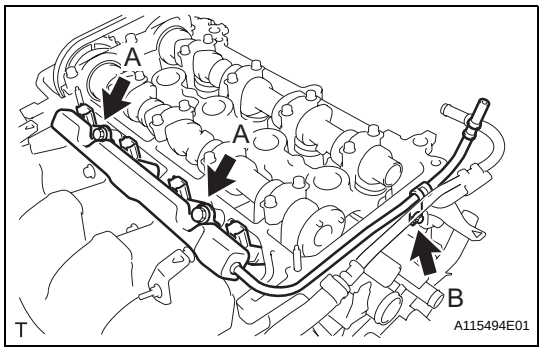


4. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Install the fuel delivery pipe sub-assembly with the 4 fuel injectors, then provisionally install the 3 bolts.

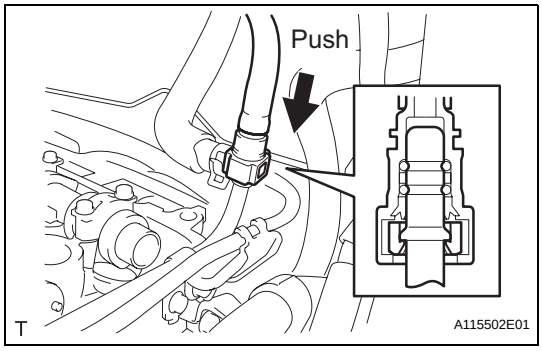
NOTICE:

- **Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.**
- **Check that the fuel injectors rotate smoothly after installing the fuel delivery pipe sub-assembly.**



(b) Tighten the 3 bolts to the specified torque.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf) for bolt B

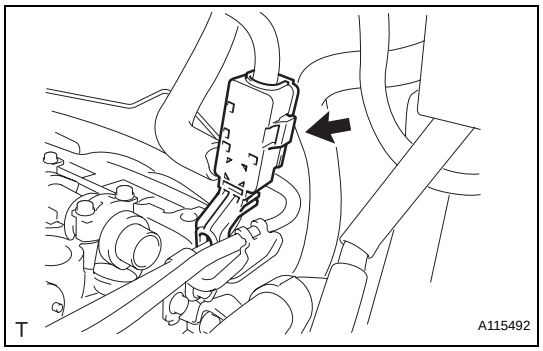


5. CONNECT FUEL TUBE SUB-ASSEMBLY

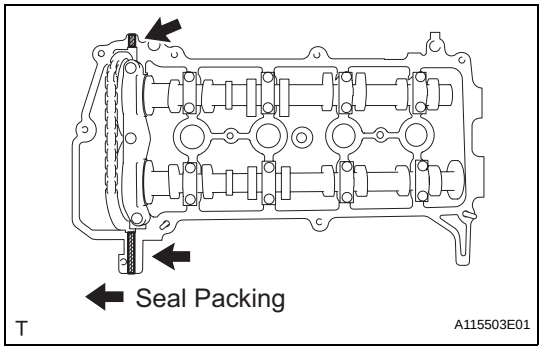
(a) Insert the fuel tube connector into the fuel delivery pipe until a click sound can be heard.

NOTICE:

- **Check that there are no scratches or foreign matter around the disconnected parts of the fuel tube connector and pipe before performing this work.**
- **After connecting the fuel tube, check that the fuel tube connector and pipe are securely connected by pulling them.**



(b) Install the fuel pipe clamp.



6. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Apply seal packing to the cylinder head as shown in the illustration.

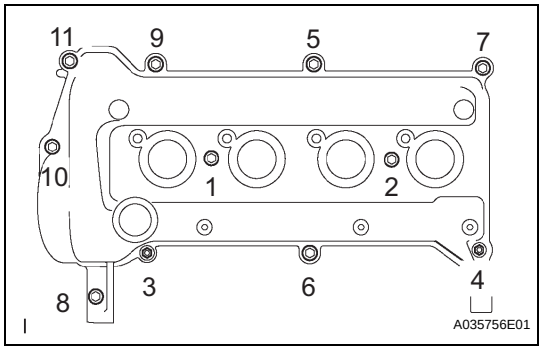
Seal Packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

NOTICE:

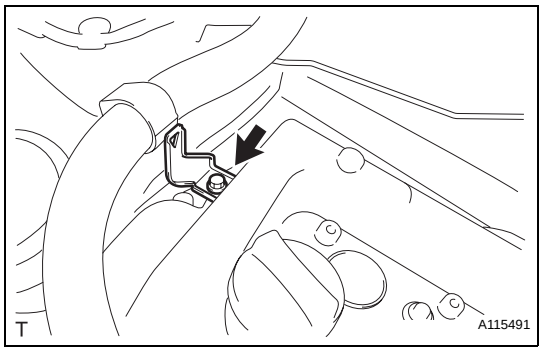
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover sub-assembly within 3 minutes of applying the seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the cylinder head cover sub-assembly with the 9 bolts, 2 nuts and 2 seal washers.



(c) Tighten the 9 bolts and 2 nuts in the sequence shown in the illustration.

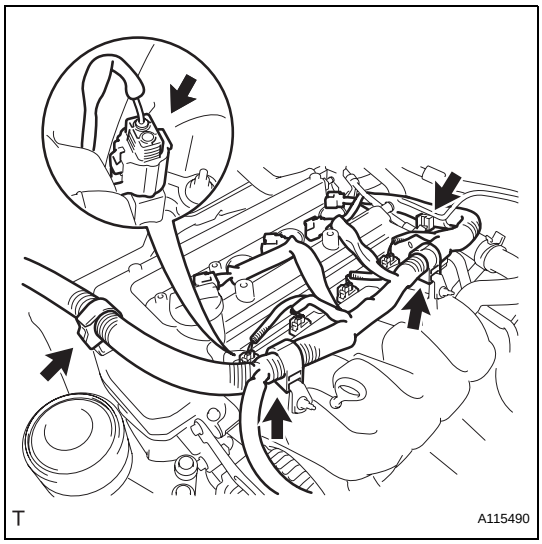
Torque: 10 N*m (102 kgf*cm, 7.0 ft.*lbf)



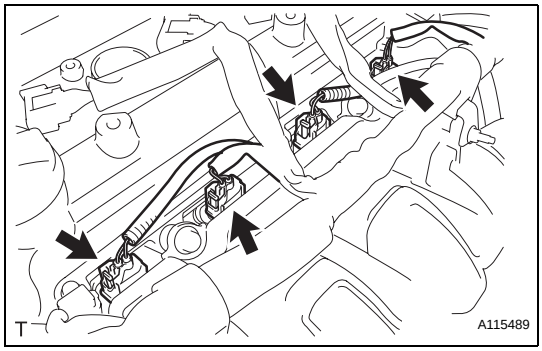
(d) Install the wire harness bracket with the bolt.

Torque: 13 N*m (133 kgf*cm, 9.6 ft.*lbf)

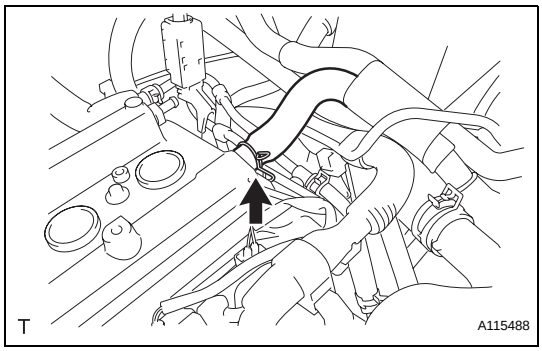
FU



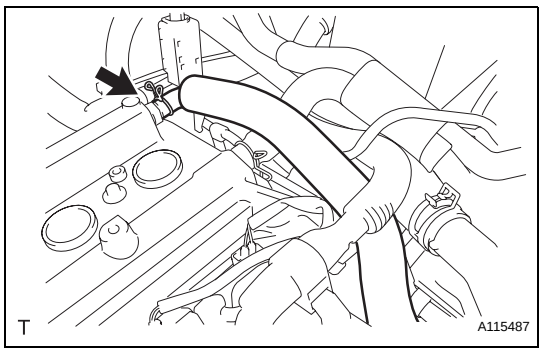
(e) Connect the connector and wire harness clamp shown in the illustration and connect the engine wire harness.



(f) Connect the fuel injector connectors.



7. CONNECT VENTILATION HOSE NO. 2
(a) Connect ventilation hose No. 2.



8. CONNECT VENTILATION HOSE
(a) Connect the ventilation hose.

9. INSTALL IGNITION COIL NO. 1 (See page IG-9)

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

11. CHECK FOR FUEL LEAKAGE (See page FU-7)

12. CHECK FOR ENGINE OIL LEAKAGE

13. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

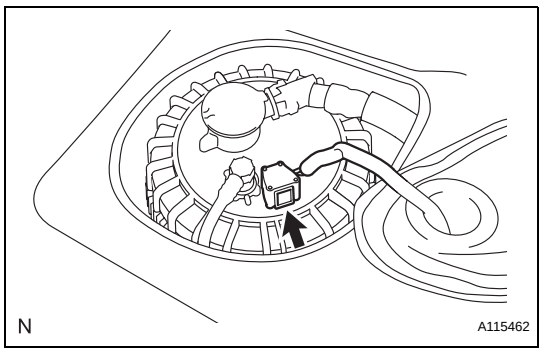
REMOVAL

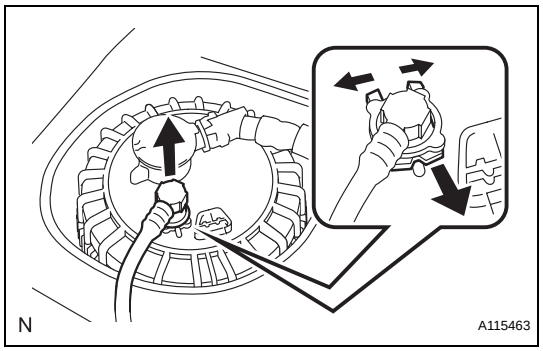
NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

1. **REMOVE REAR SEAT CUSHION COVER PAD (for Hatchback) (See page SE-114)**
2. **REMOVE REAR SEAT CUSHION COVER PAD (for Sedan) (See page SE-46)**
3. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Hatchback) (See page IR-48)**
4. **REMOVE DECK BOARD SUB-ASSEMBLY (for Hatchback) (See page IR-48)**
5. **REMOVE DECK FLOOR BOX (for Hatchback) (See page SE-70)**
6. **REMOVE REAR SEAT LEG COVER NO. 1 (for Hatchback) (See page SE-70)**
7. **REMOVE REAR SEAT LEG COVER NO. 2 (for Hatchback) (See page SE-70)**
8. **REMOVE REAR SEAT ASSEMBLY (for Hatchback) (See page SE-71)**
9. **REMOVE REAR FLOOR SERVICE HOLE COVER**
   (a) Remove the rear floor service hole cover.

   (b) Disconnect the fuel pump connector.



10. **DISCHARGE FUEL SYSTEM PRESSURE**
    (a) Discharge the fuel system pressure (See page FU-1).
11. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**



12. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

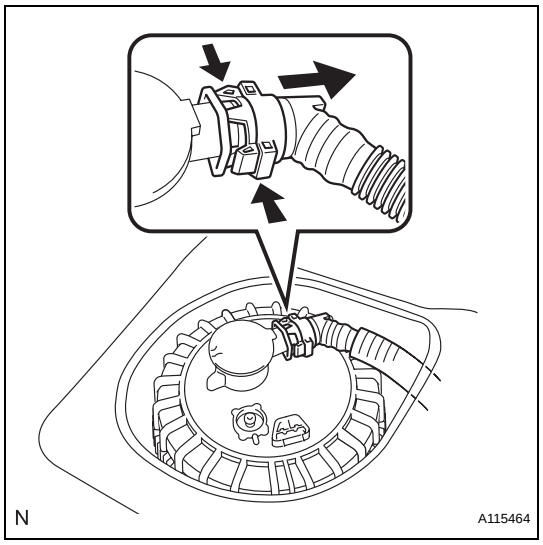
(a) Widen the tip of the tube joint clip and pull out the clip in the direction indicated by the arrow.

(b) Disconnect the fuel tank main tube.

NOTICE:

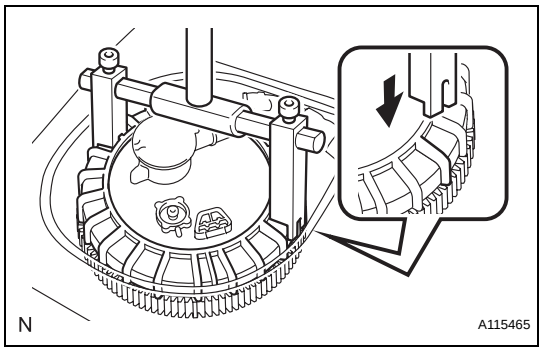
- **Keep the O-ring free of any foreign matter, as it becomes contaminated easily.**
- **Do not use any tools in this procedure.**
- **Do not forcefully bend or twist the tube.**
- **Put the tube in a plastic bag to prevent damage and contamination.**
- **If the fuel suction plate and tube are stuck together, pinch the tube and turn it carefully to disconnect them.**
- **Do not damage any clips. If a clip is damaged, replace it.**

FU



13. DISCONNECT FUEL TANK VENT HOSE SUB-ASSEMBLY

(a) Disconnect the fuel tank vent hose.



14. REMOVE FUEL PUMP GAUGE RETAINER

(a) Using SST, remove the fuel pump gauge retainer.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

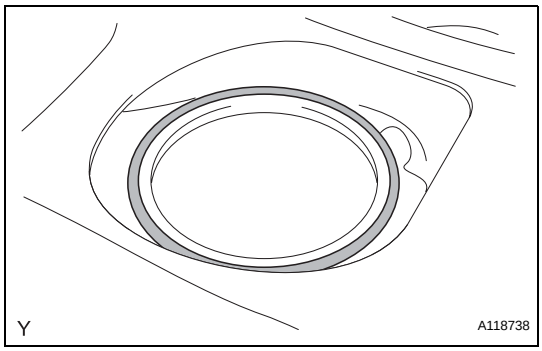
Align the claws of the fuel pump gauge retainer with the tips of SST.

15. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

(a) Remove the fuel suction with pump and gauge tube.

NOTICE:

Do not bend the arm of the sender gauge.

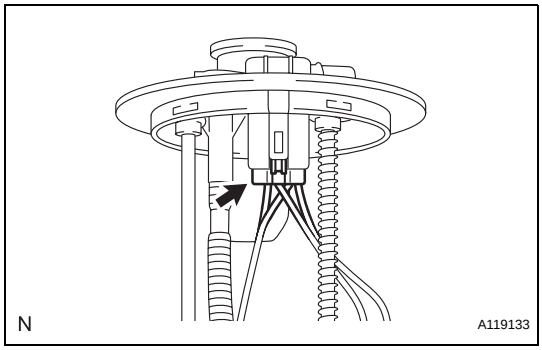


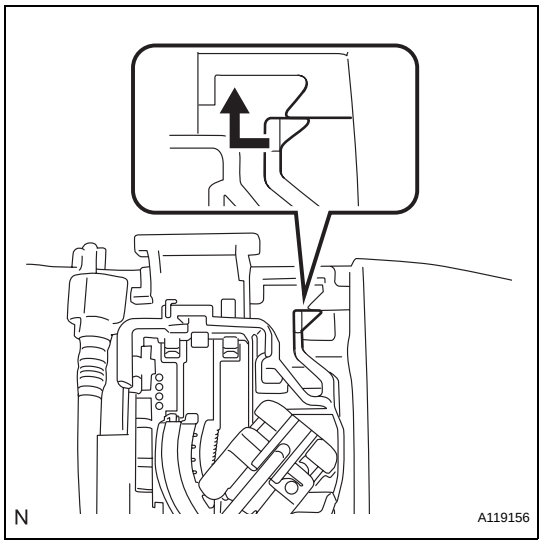
(b) Remove the fuel suction tube gasket from the fuel tank.

DISASSEMBLY

1. REMOVE FUEL SENDER GAUGE ASSEMBLY

(a) Disconnect the connector of the fuel sender gauge.

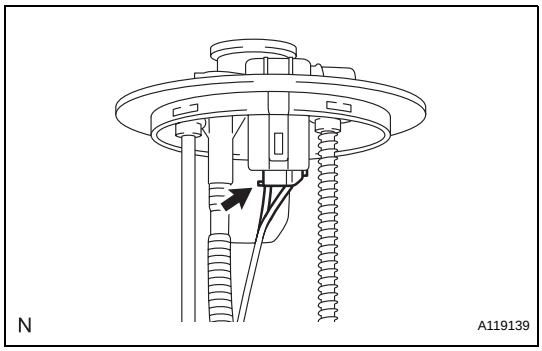


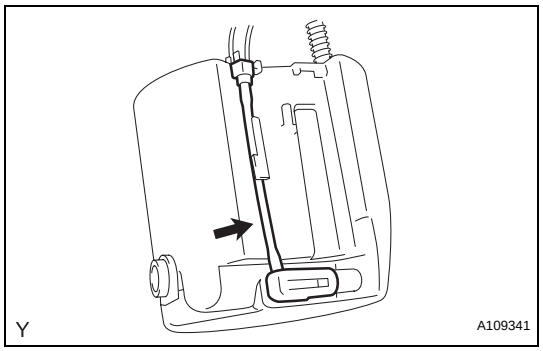


(b) Release the lock as shown in the illustration and slide the fuel sender gauge to remove it.

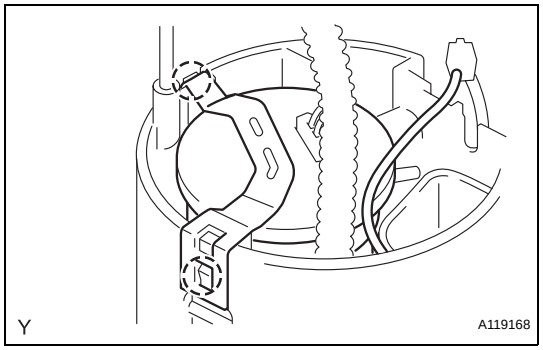
2. REMOVE FUEL PUMP

(a) Disconnect the connector of the fuel pump harness.

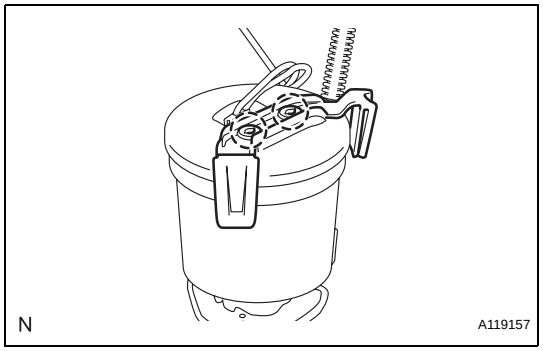




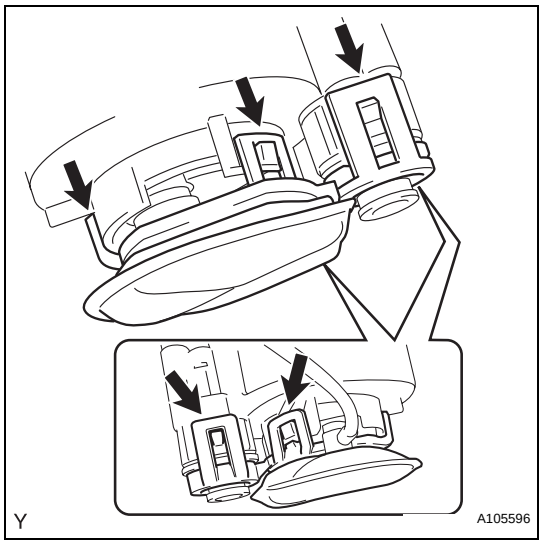
(b) Disconnect the fuel pump filter hose.



(c) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws, and remove the fuel filter and fuel pump.

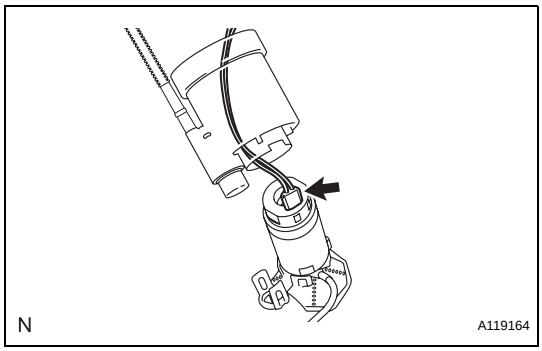


(d) Disengage the 2 claws and remove the fuel suction support.

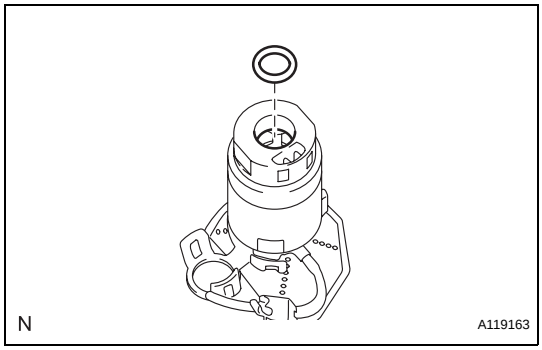


(e) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws, and remove the fuel pump filter and fuel pump from the fuel filter.
NOTICE:
- **Do not damage the fuel pump filter.**
- **Do not remove the suction filter.**
- **Do not use either the fuel pump or the suction filter if the suction filter is removed from the fuel pump.**

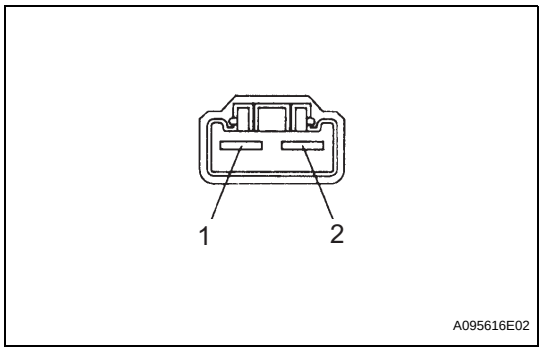
FU



(f) Disconnect the fuel pump harness.



(g) Remove the O-ring.



INSPECTION

1. INSPECT FUEL PUMP

(a) Check the resistance of the fuel pump.

(1) Using an ohmmeter, measure the resistance between terminals 1 and 2.

Standard resistance:

0.2 to 3.0 Ω at 20 °C (68°F)

(b) Inspect the operation of the fuel pump.

(1) Connect the positive (+) battery lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.

NOTICE:

- **These tests must be performed within 10 seconds of connecting the battery to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Turn the voltage on and off on the battery side, not the fuel pump side.**

REASSEMBLY

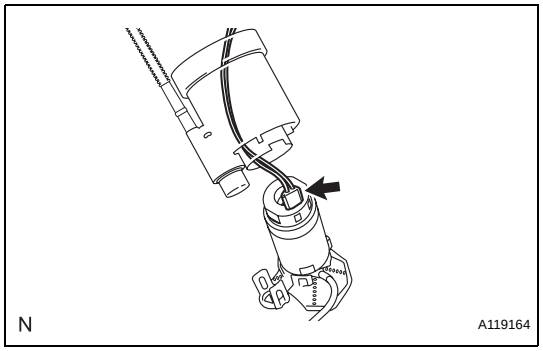
1. INSTALL FUEL PUMP

(a) Apply gasoline to a new O-ring, and then install it into the fuel filter.

NOTICE:

- **Do not disassemble the fuel pump or the suction filter because they are nonreusable parts.**

(b) Connect the fuel pump harness.

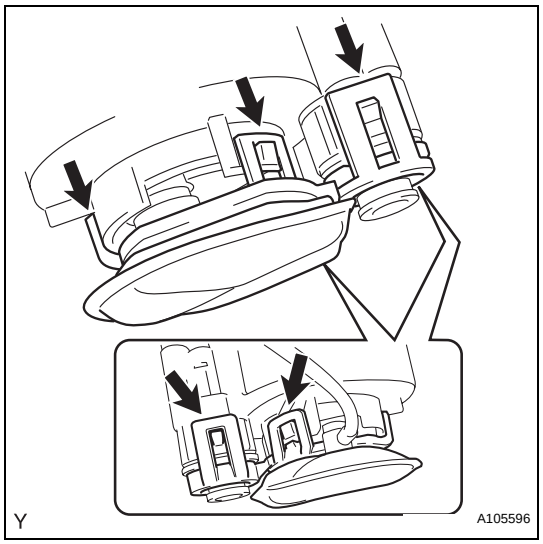


2. INSTALL FUEL PUMP FILTER

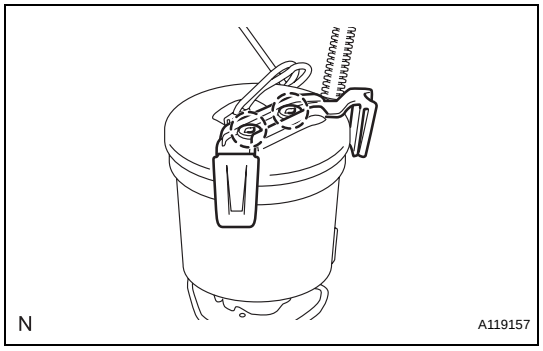
(a) Engage the 5 claws of the fuel pump.

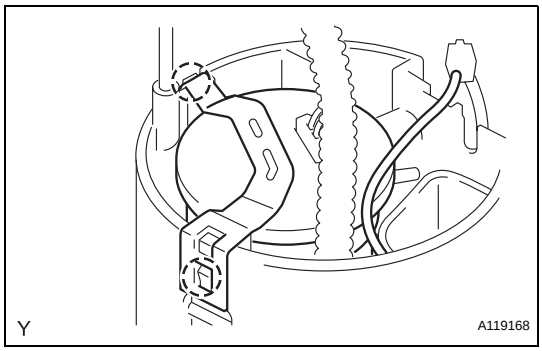
NOTICE:

- **Do not remove the suction filter.**
- **Do not use either the fuel pump or the suction filter if the suction filter is removed from the fuel pump.**

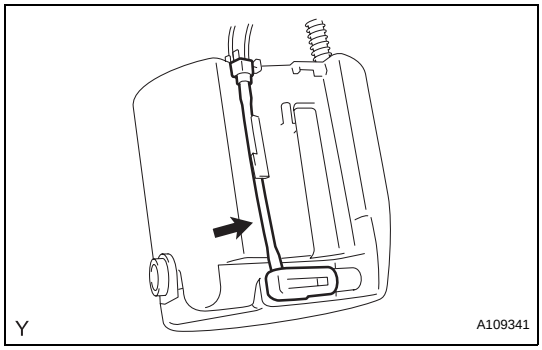


(b) Engage the 2 claws of the fuel suction support.

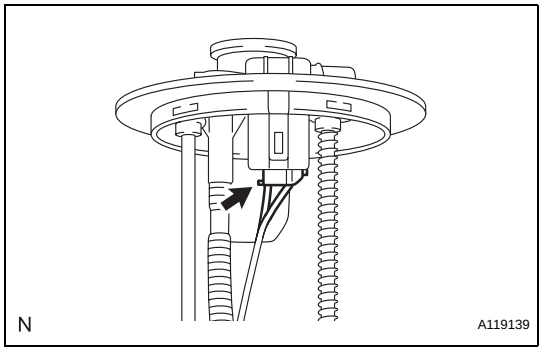




(c) Engage the 2 claws of the fuel suction support and install the fuel filter and the fuel pump onto the fuel sub-tank.



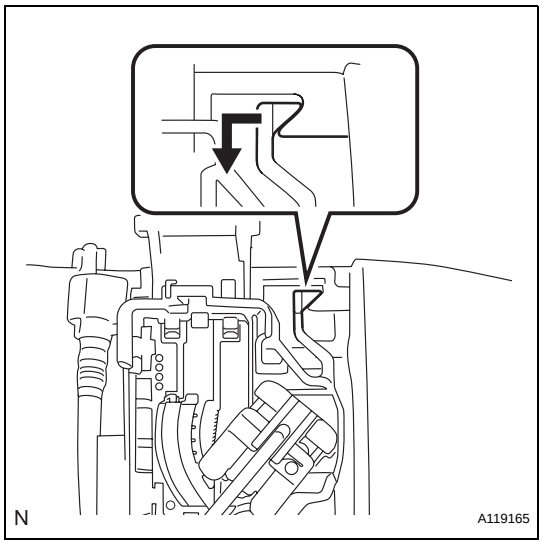
(d) Connect the fuel pump filter hose.

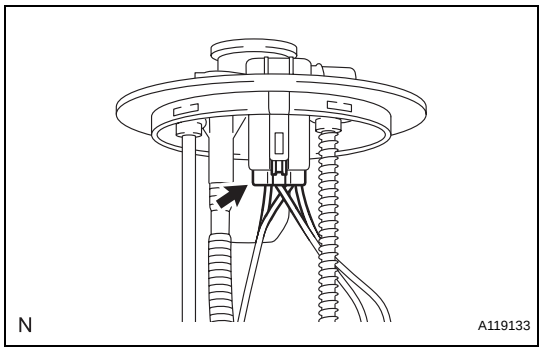


(e) Connect the connector of the fuel pump harness.

3. INSTALL FUEL SENDER GAUGE ASSEMBLY

(a) Install the fuel sender gauge by sliding it downward.

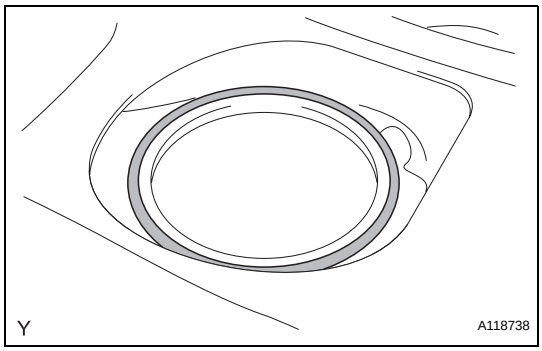




(b) Connect the connector of the fuel sender gauge.

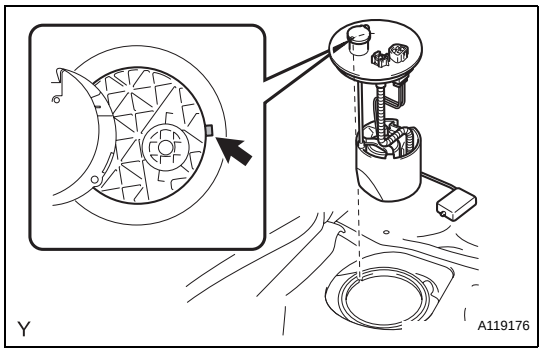
INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when installing the rear seat.

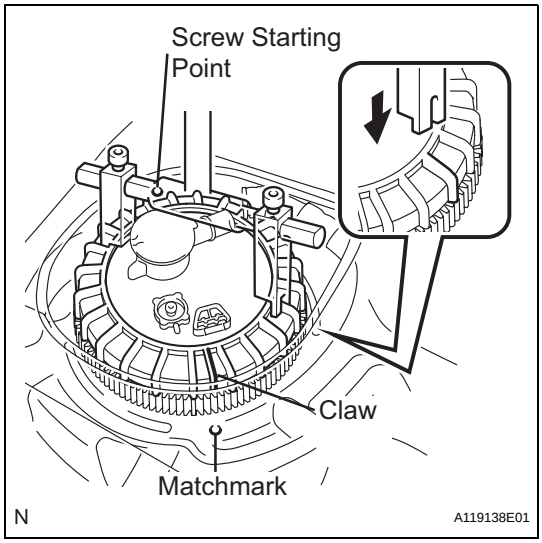


1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

(a) Install a new fuel suction tube gasket onto the fuel tank.

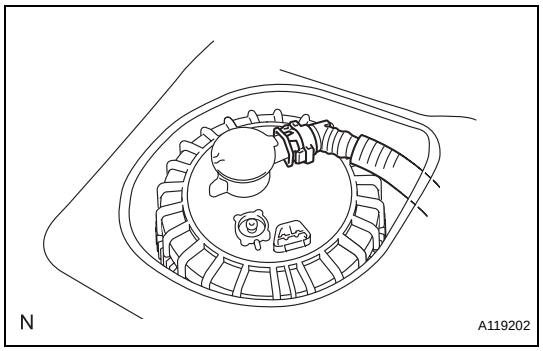


(b) Align the protrusion of the fuel pump with the cutout of the fuel tank and install the fuel suction with pump and gauge tube assembly.
NOTICE:
The arm of the sender gauge should not be bent.



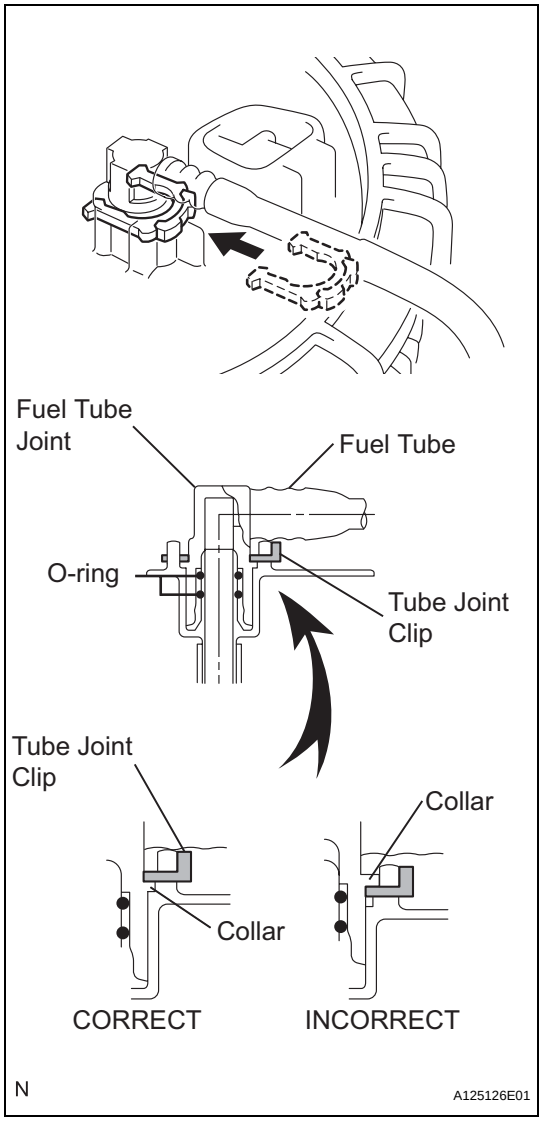
2. INSTALL FUEL PUMP GAUGE RETAINER

(a) Using SST, turn the retainer 540° clockwise from the screw starting point and align the claw of the retainer with the matchmark on the fuel tank.
SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)
NOTICE:
Replace the fuel pump gauge retainer with a new one if not installed properly.
Part No. 77144-52040
HINT:
- Align the claws of the fuel pump gauge retainer with the tips of SST.
- At the point where the retainer is turned 90° from the start of the thread, push the retainer in from the opposite side to the start of the thread. Check that the thread of the retainer is properly engaged with that on the tank.



3. CONNECT FUEL TANK VENT HOSE SUB-ASSEMBLY

(a) Connect the fuel tank vent hose.



4. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

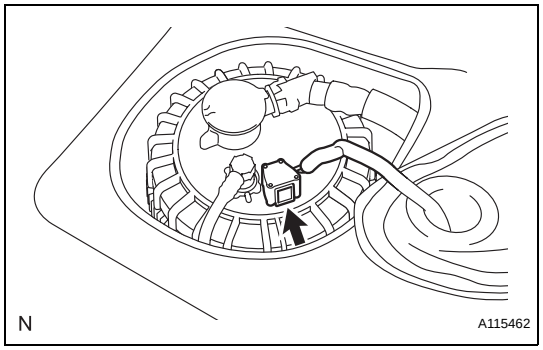
(a) Insert the fuel tank main tube.

(b) Install the tube joint clip.

NOTICE:

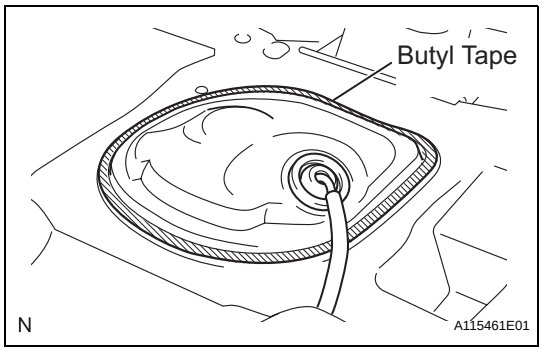
- **Check that there are no scratches or foreign matter on the connecting parts.**
- **Check that the fuel tube joint is inserted securely.**
- **After installing the tube joint clip, check that the fuel tube joint has not been pulled off.**
- **Do not damage any clips. If a clip is damaged, replace it.**

FU



5. INSTALL REAR FLOOR SERVICE HOLE COVER

(a) Connect the fuel pump connector.



(b) Install the rear service hole cover with new butyl tape.

6. **INSTALL REAR SEAT ASSEMBLY (for Hatchback) (See page SE-84)**
7. **INSTALL REAR SEAT LEG COVER NO. 2 (for Hatchback) (See page SE-85)**
8. **INSTALL REAR SEAT LEG COVER NO. 1 (for Hatchback) (See page SE-85)**
9. **INSTALL DECK FLOOR BOX (for Hatchback) (See page SE-85)**
10. **INSTALL DECK BOARD SUB-ASSEMBLY (for Hatchback) (See page IR-83)**
11. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Hatchback) (See page IR-83)**
12. **INSTALL REAR SEAT CUSHION COVER PAD (for Sedan) (See page SE-53)**
13. **INSTALL REAR SEAT CUSHION COVER PAD (for Hatchback) (See page SE-123)**
14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
15. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

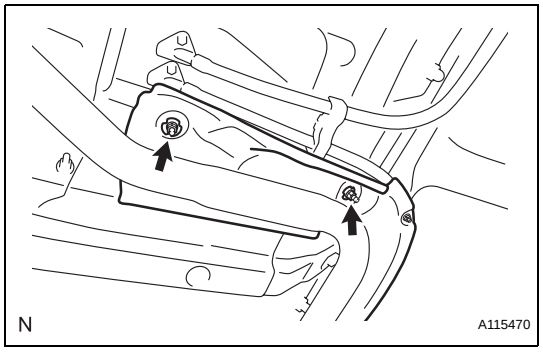
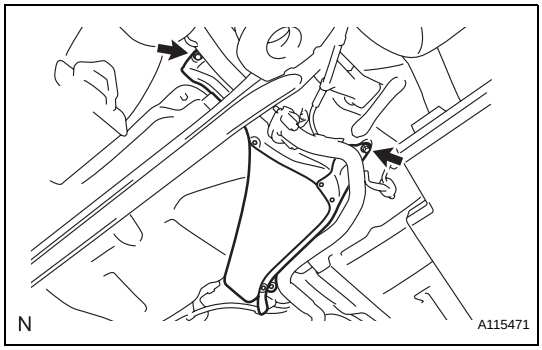
14. **REMOVE FUEL PUMP GAUGE RETAINER (See page FU-27)**
15. **REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY (See page FU-27)**
16. **DRAIN FUEL**
17. **REMOVE FRONT FLOOR HEAT INSULATOR NO. 4**
    (a) Remove the 2 nuts together with the insulator.

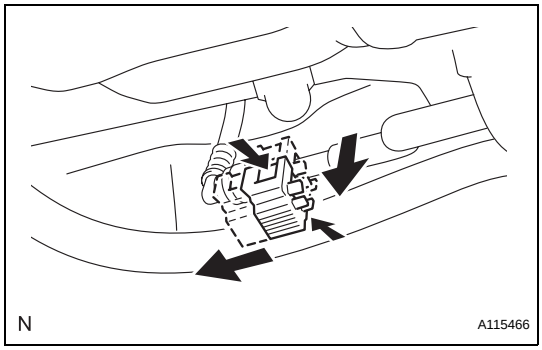


FU



18. REMOVE FUEL TANK PROTECTOR SUB-ASSEMBLY

(a) Remove the bolt together with the clip.

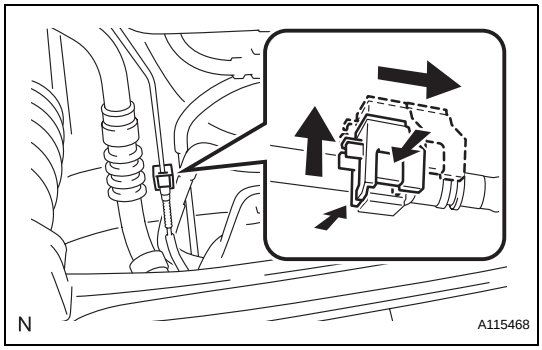


19. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Release the lock as shown in the illustration, then pull and remove the fuel tank main tube.

NOTICE:

- **Remove any dirt and foreign matter from the clip before performing this work.**
- **Avoid any scratches or foreign matter on the parts when disconnecting them, as the quick connector has the O-ring that seals the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with a plastic bag.**
- **If the connector and pipe are stuck, disconnect the nylon tube by turning it by hand to release them.**



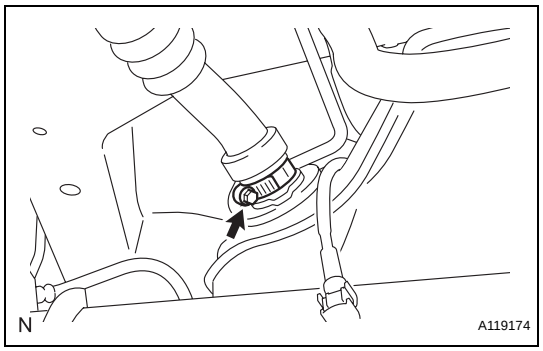
20. DISCONNECT FUEL TANK BREATHER HOSE

(a) Release the lock as shown in the illustration, then pull and remove the fuel tank breather hose.

NOTICE:

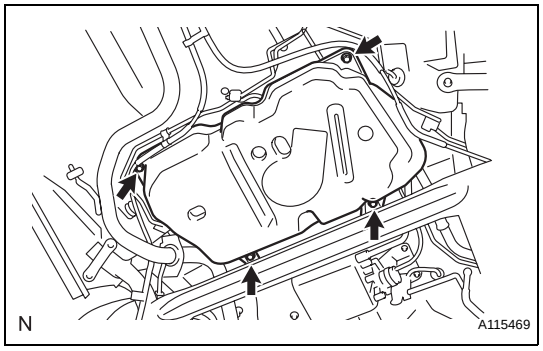
- **Remove any dirt and foreign matter from the clip before performing this work.**
- **Avoid any scratches or foreign matter on the parts when disconnecting, as the quick connector has the O-ring that seals the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected parts by covering them with a plastic bag.**
- **If the connector and pipe are stuck, disconnect the nylon tube by turning it by hand to release them.**

FU



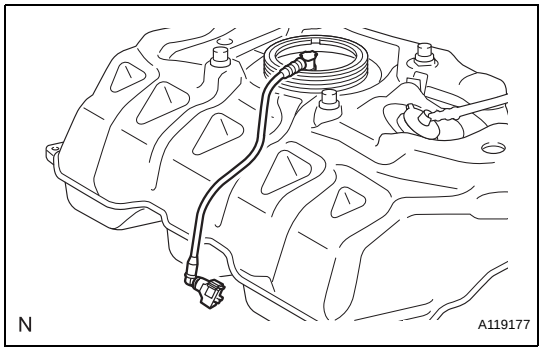
21. DISCONNECT FUEL TANK FILLER PIPE SUB-ASSEMBLY LOWER

(a) Loosen the clamp and disconnect the fuel tank filler pipe.



22. REMOVE FUEL TANK ASSEMBLY

(a) Remove the 4 bolts and remove the fuel tank.

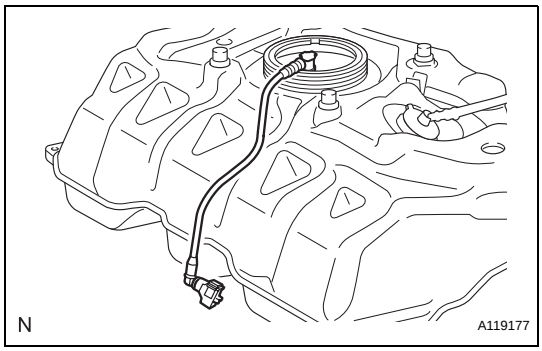


(b) Remove the fuel tank main tube from the fuel tank.

FU

INSTALLATION

NOTICE:
Always use "Torx" socket wrench E10 when removing the rear seat.

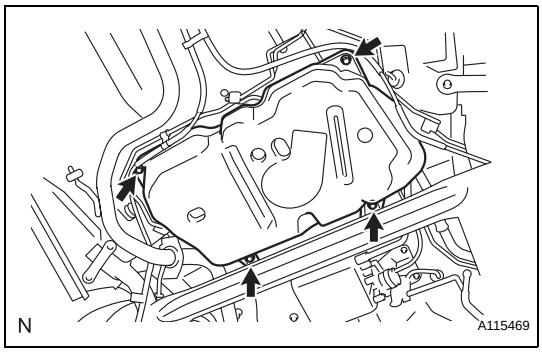


1. INSTALL FUEL TANK ASSEMBLY

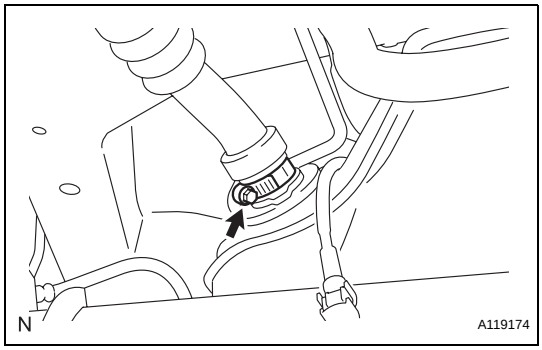
(a) Install the fuel tank main tube onto the fuel tank.

(b) Clean the bolt hole and remove any grease.

FU

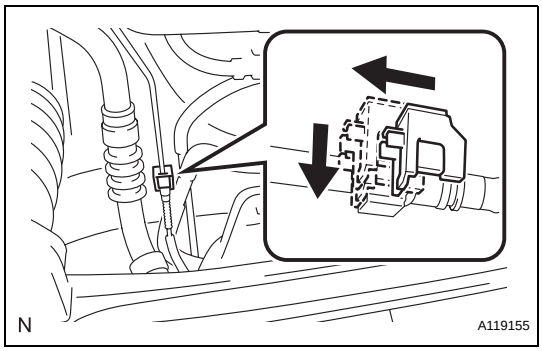


(c) Install the fuel tank with 4 new bolts.
Torque: 14 N*m (146 kgf*cm, 10 ft.*lbf)



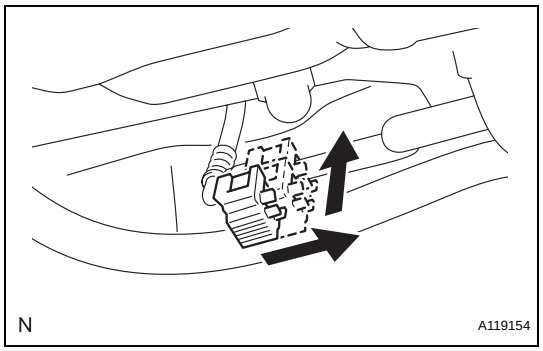
2. CONNECT FUEL TANK FILLER PIPE SUB-ASSEMBLY LOWER

(a) Connect the fuel tank filler pipe and install the clamp.

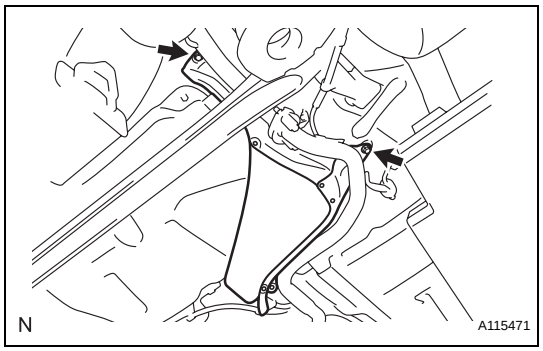


3. CONNECT FUEL TANK BREATHER TUBE

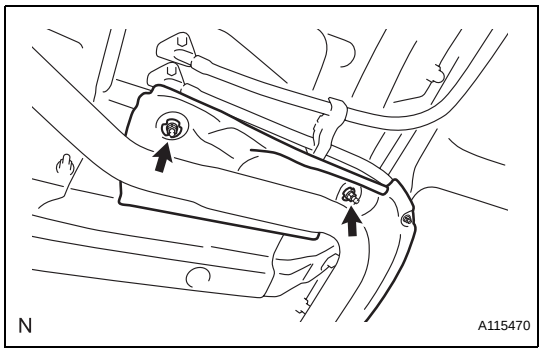
(a) Align the fuel tank breather tube connector with the pipe, push the fuel tube connector in until the retainer makes a click sound, then lock the cover of the connector.
NOTICE:
- **Check that there are no scratches or foreign matter on the disconnected parts of the fuel tank breather tube connector and pipe before performing this work.**
- **After connecting, pull the pipe and fuel tank breather connector to make sure that they are securely connected.**



4. **CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY**
   (a) Align the fuel tube connector with the pipe, push the fuel tube connector in until the retainer makes a click sound, then lock the cover of the connector.
   NOTICE:
   - **Check that there are no scratches or foreign matter on the disconnected parts of the fuel tube connector and pipe before performing this work.**
   - **After connecting, pull the pipe and fuel tube connector to make sure that they are securely connected.**



5. **INSTALL FUEL TANK PROTECTOR SUB-ASSEMBLY**
   (a) Install the fuel tank protector sub-assembly with the bolt and clip.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

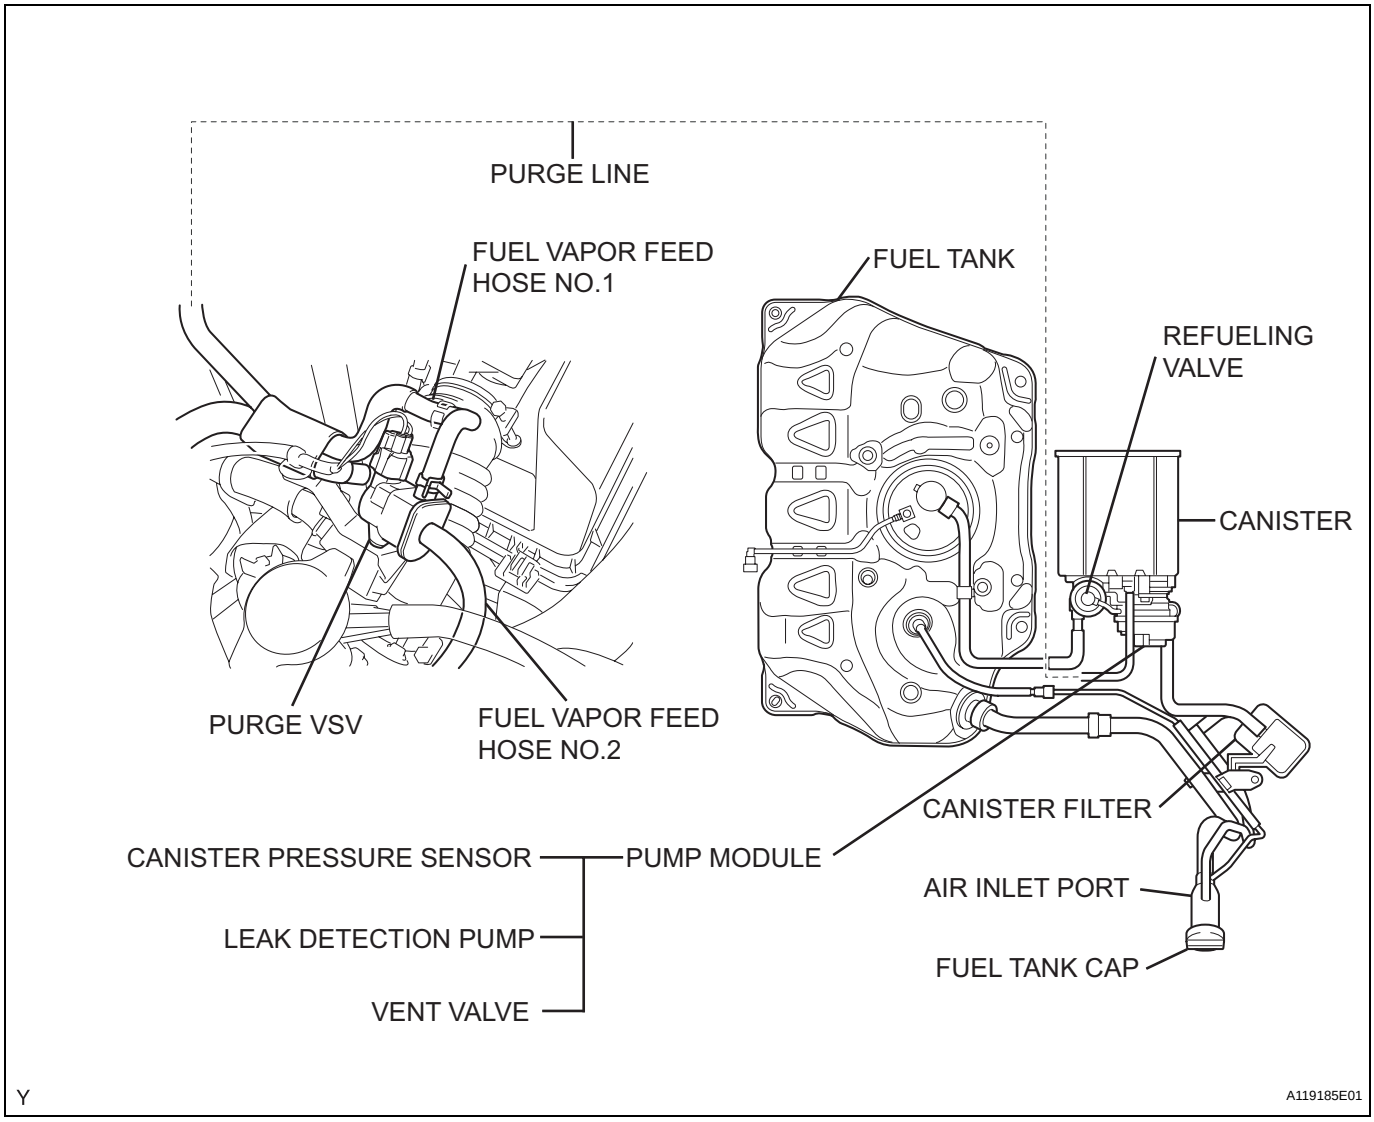


6. **INSTALL FRONT FLOOR HEAT INSULATOR NO. 4**
   (a) Install the 2 nuts.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
7. **INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY (See page FU-33)**
8. **INSTALL FUEL PUMP GAUGE RETAINER (See page FU-33)**
9. **CONNECT FUEL TANK VENT HOSE SUB-ASSEMBLY (See page FU-33)**
10. **CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (See page FU-34)**
11. **CONNECT REAR FLOOR SERVICE HOLE COVER (See page FU-34)**
12. **INSTALL REAR SEAT ASSEMBLY (for Hatchback) (See page SE-84)**
13. **INSTALL REAR SEAT LEG COVER NO. 2 (for Hatchback) (See page SE-85)**
14. **INSTALL REAR SEAT LEG COVER NO. 1 (for Hatchback) (See page SE-85)**
15. **INSTALL DECK FLOOR BOX (for Hatchback) (See page SE-85)**
16. **INSTALL DECK BOARD SUB-ASSEMBLY (for Hatchback) (See page IR-83)**
17. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Hatchback) (See page IR-83)**

18. **INSTALL REAR SEAT CUSHION COVER PAD (for Sedan) (See page SE-53)**
19. **INSTALL REAR SEAT CUSHION COVER PAD (for Hatchback) (See page SE-123)**
20. **ADD FUEL**
21. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
22. **CHECK FOR FUEL LEAKAGE (See page FU-7)**

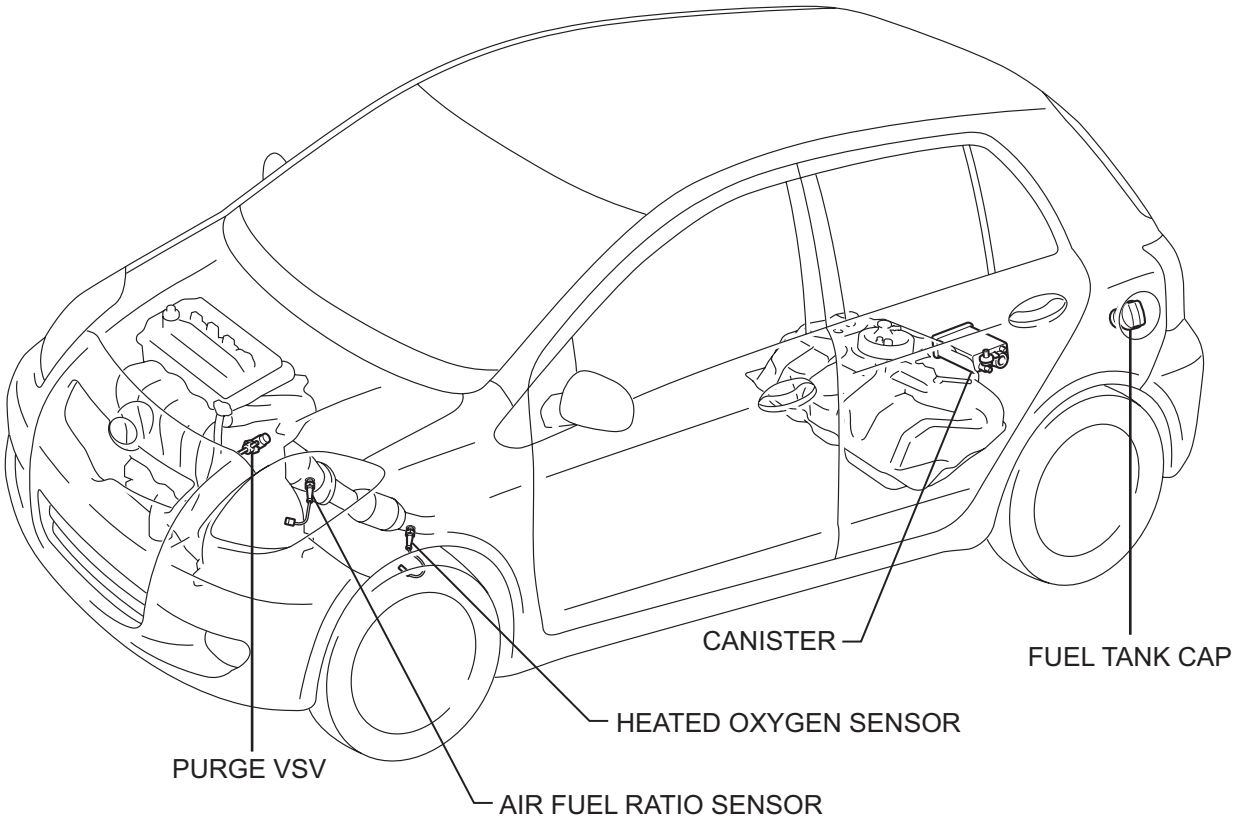
EMISSION CONTROL SYSTEM

PARTS LOCATION



EC

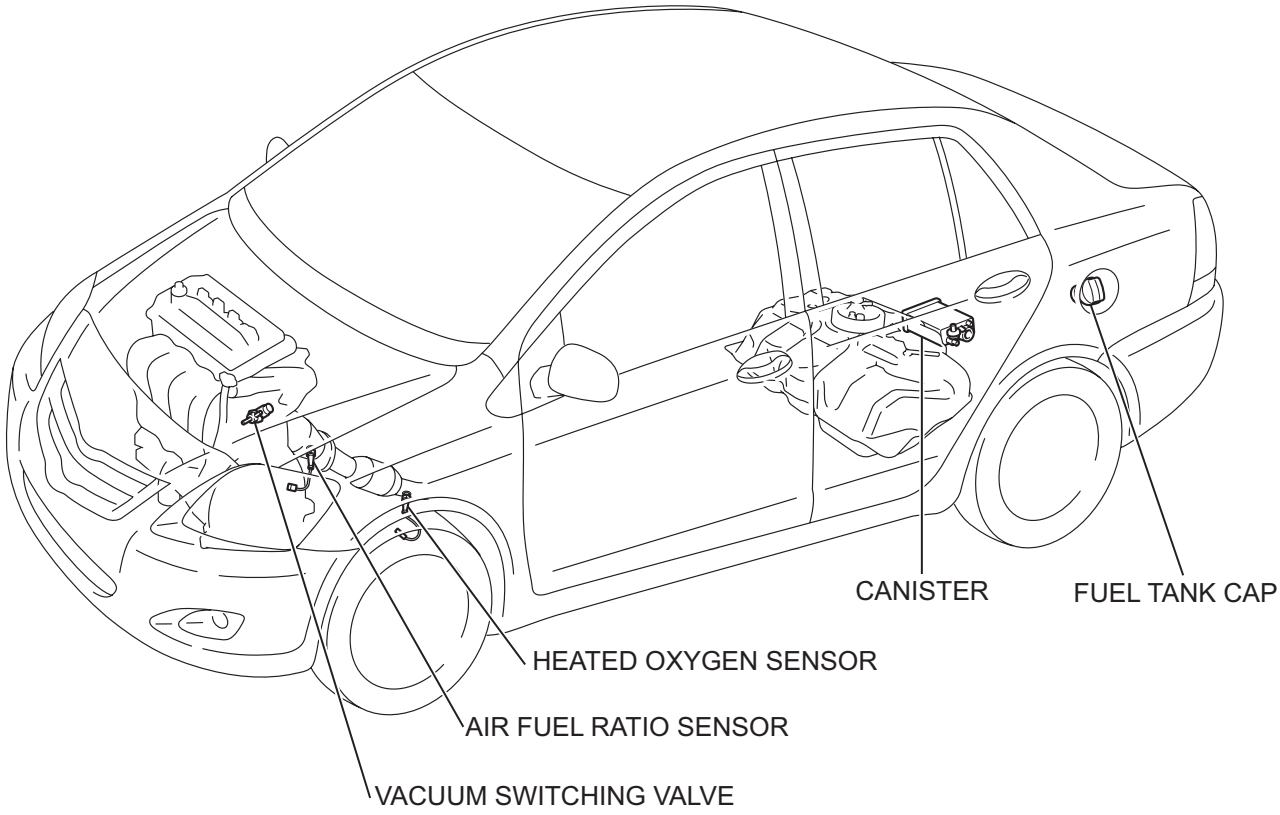
for Hatchback:



N

A117786E01

for Sedan:



N

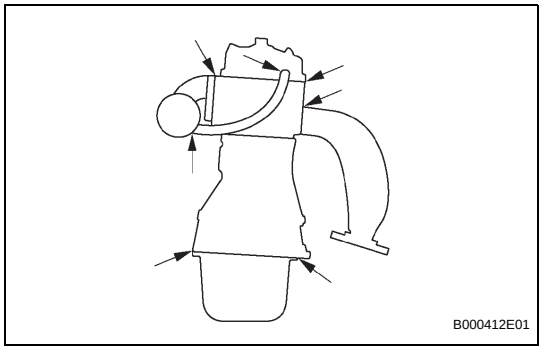
A133333E01

EC

ON-VEHICLE INSPECTION

1. INSPECT FUEL CUT-OFF RPM

(a) Start and warm up the engine.
(b) Increase the engine speed to approximately 3,500 rpm.
(c) Using a sound scope, check the operation sound of the injector.
(d) Release the accelerator pedal. Check that the operation noise stops momentarily and then resumes.



2. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

(a) Check that there are no cracks, leakage or scratches on the hoses, connections or gaskets.
HINT:
- Removing the oil level gauge, oil filter cap or PCV hose may cause the engine to malfunction or stall.
- Disconnections, looseness or cracks in the parts of the air induction system between the intake system and cylinder head will allow air suction and cause the engine to run improperly.

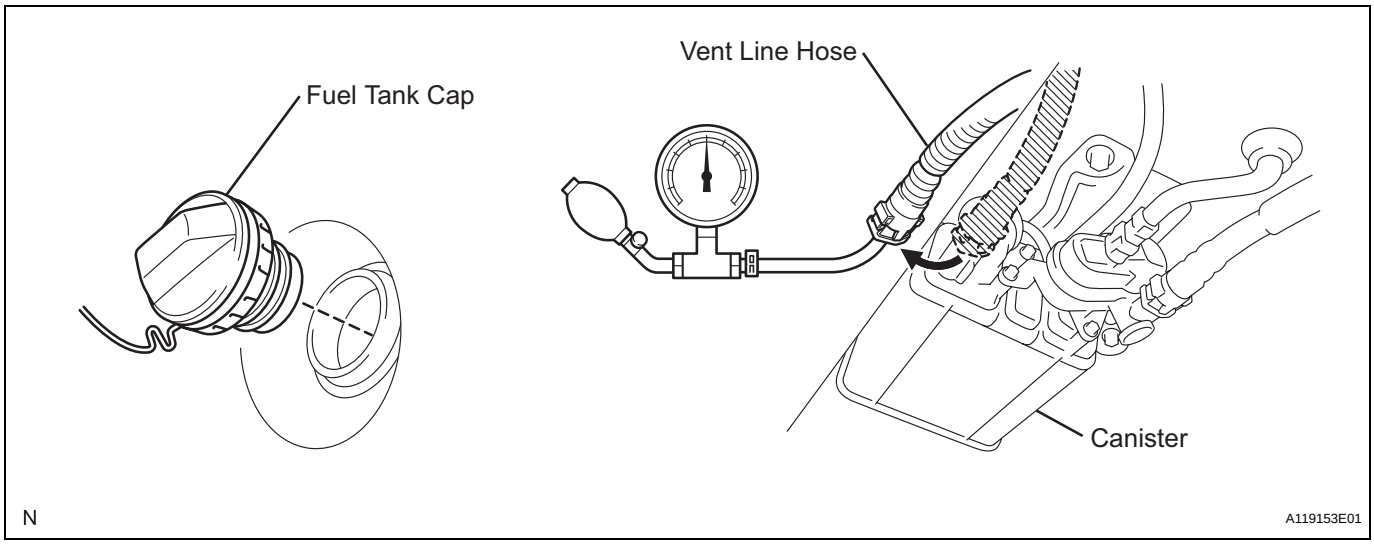
3. CHECK LINE AND CONNECTORS

(a) Visually check for loose connections, sharp bends and damage.

4. CHECK FUEL TANK ASSEMBLY

(a) Visually check for deformation, cracks and fuel leakage.

5. CHECK FUEL TANK AND VENT LINE



(a) Disconnect the vent line hose from the canister.
(b) Connect the pressure gauge to the vent line hose.

(c) Apply 4 kPa (41 kgf/cm2, 30 mmHg) of pressure to the vent line of the fuel tank.
HINT:
Perform this inspection with the fuel tank less than 90% full. When the fuel tank is full, the fuel cutoff valve closes and the pressure is released through the 2 mm orifice. As a result, when the fuel tank cap is removed, the pressure does not decrease smoothly.

(d) Check that the fuel tank pressure is maintained for some time, and does not decrease immediately.
HINT:
If the pressure decreases immediately, one of the following may apply:
- The fuel tank cap is not completely tightened.
- The fuel tank cap is damaged.
- Air is leaking from the vent line.
- The fuel tank is damaged.

(e) When the fuel tank cap is removed, check that the pressure is released smoothly.
HINT:
If the pressure does not drop, replace the fuel tank assembly.

(f) Reconnect the vent line hose to the canister.

6. CHECK AIR INLET LINE

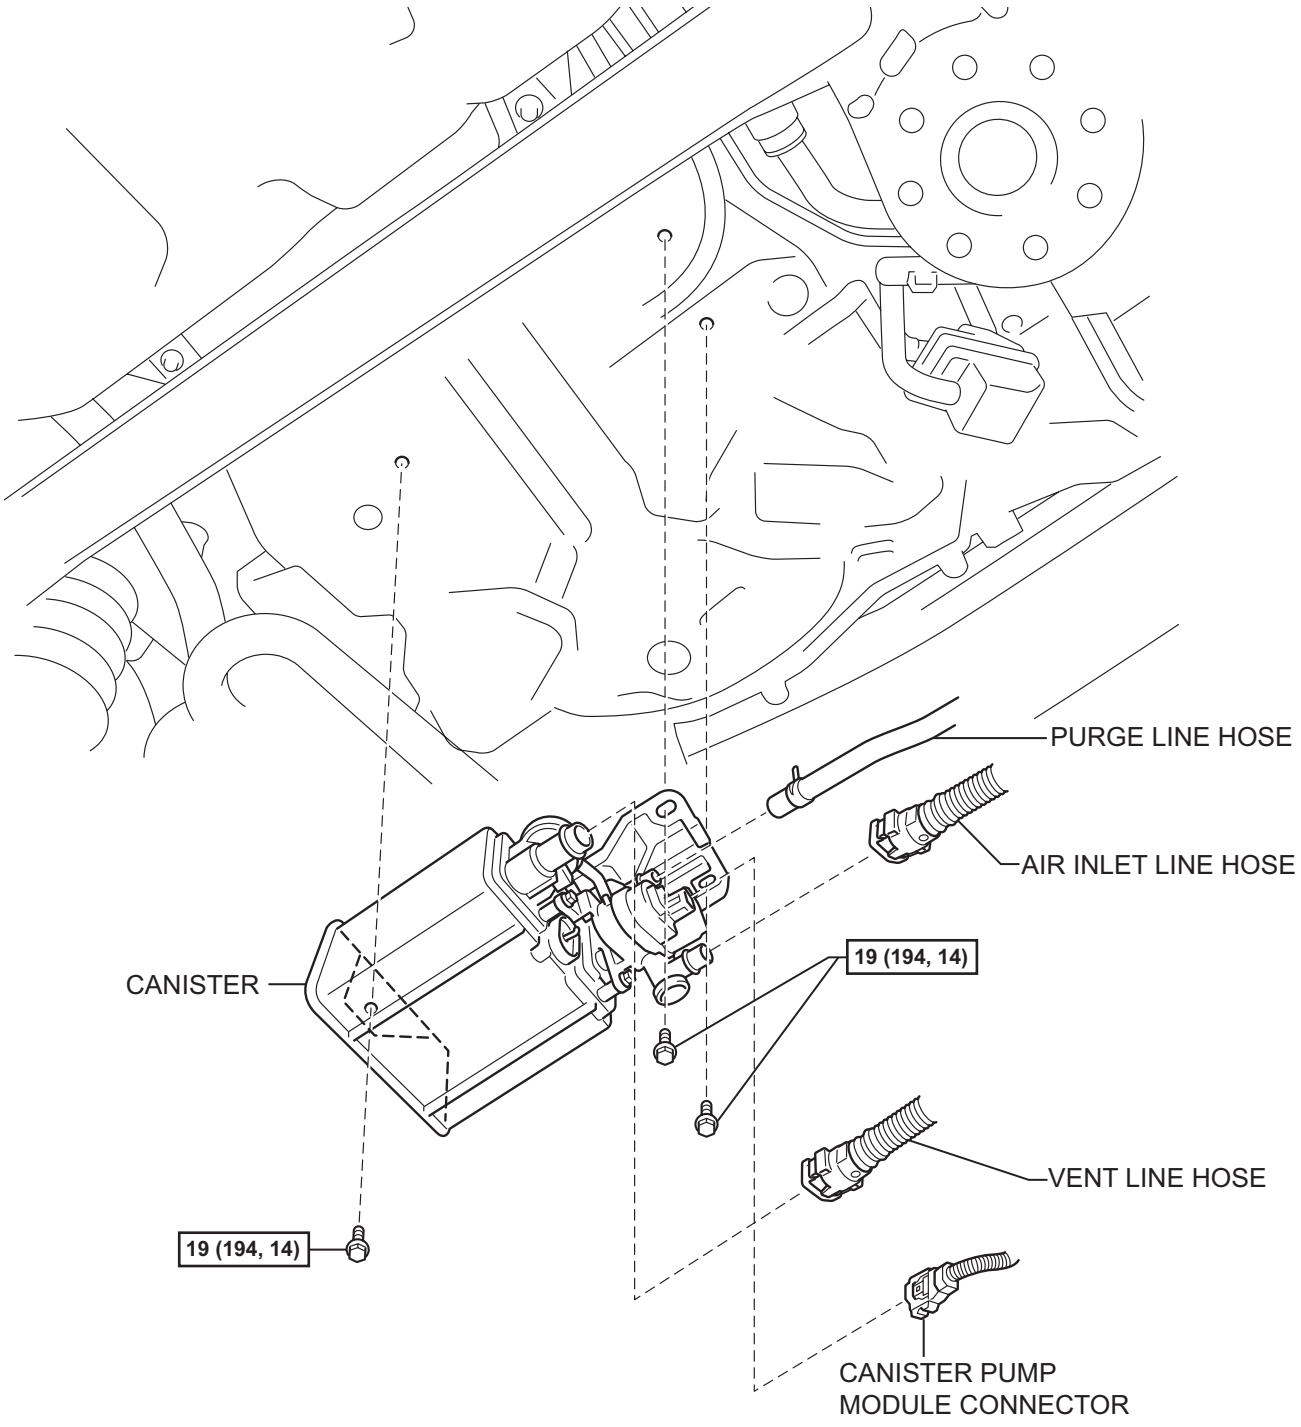
(a) Disconnect the air inlet line hose from the canister.

(b) Check that air flows freely into the air inlet line.
HINT:
If air does not flow freely into the air inlet line, repair or replace it.

(c) Reconnect the air inlet line hose to the canister.

CANISTER

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

N

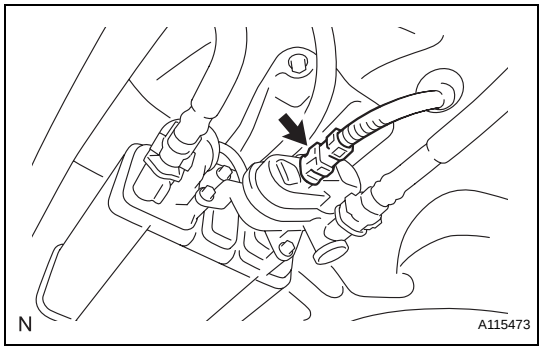
A115460E01

REMOVAL

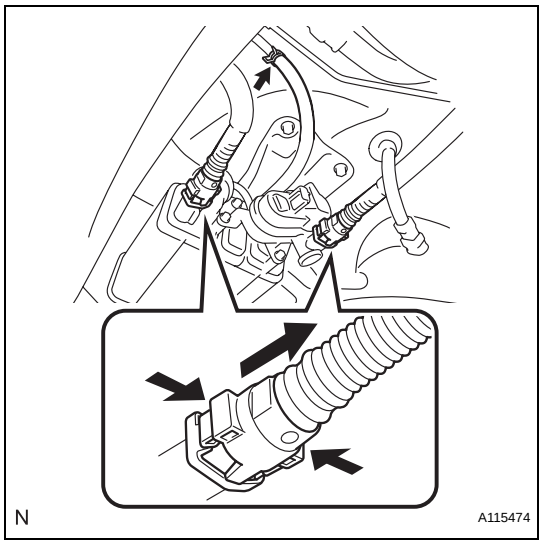
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE CANISTER

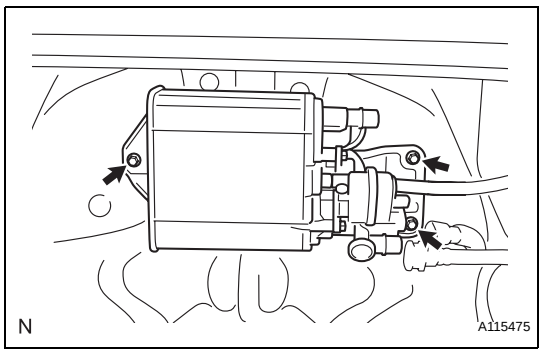
(a) Disconnect the connector.



(b) Disconnect the purge line hose.
(c) Disconnect the air inlet line hose from the leak detection pump.
(d) Disconnect the vent line hose from the canister.



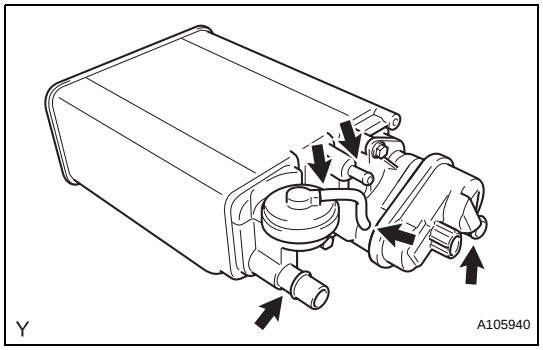
(e) Remove the 3 bolts and the canister assembly.



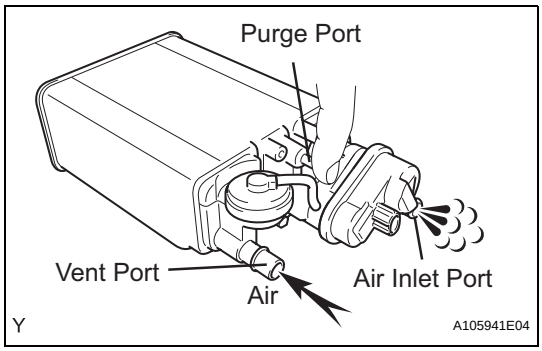
INSPECTION

1. INSPECT CANISTER

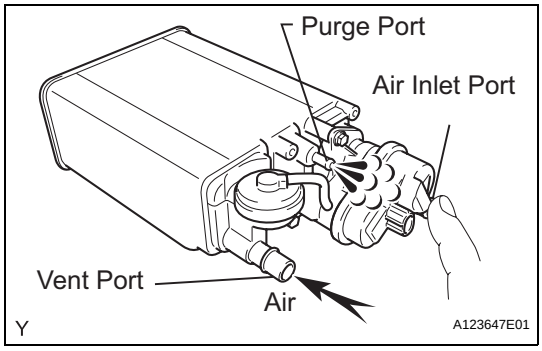
(a) Visually check the canister for cracks and damage. If cracks or damage are found, replace the canister.



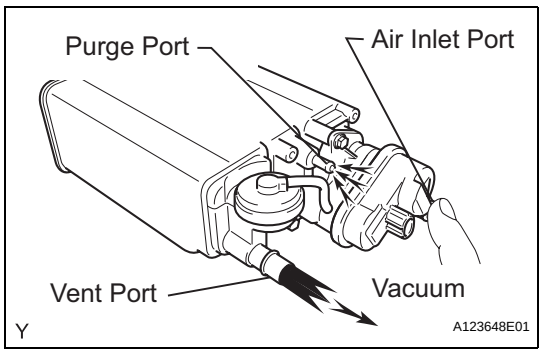
EC



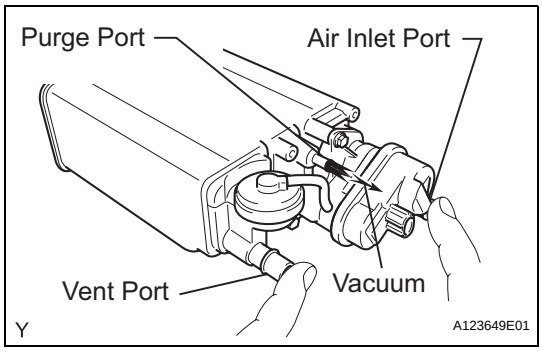
(b) Check the canister operation.
(1) While holding the purge port closed, blow air at 0.39 kPa (4.0 kgf/cm^2, 3 mmHg) into the vent port, and check that air flows from the air inlet port.
If the result is not as specified, replace the canister.



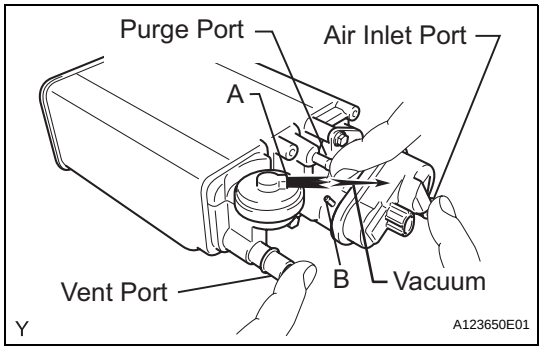
(2) While holding the air inlet port closed, blow air at 0.39 kPa (4.0 kgf/cm^2, 3 mmHg) into the vent port, and check that air flows from the purge port.
If the result is not as specified, replace the canister.



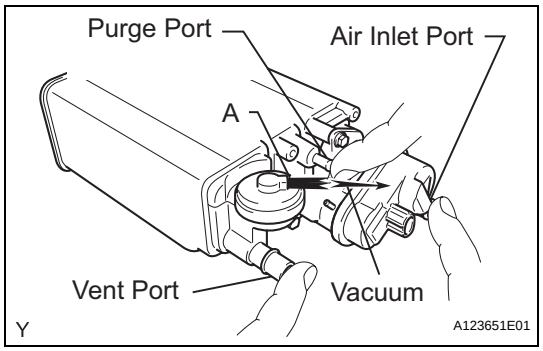
(3) While holding the air inlet port closed, apply vacuum at 3.43 kPa (35.0 kgf/cm^2, 25.7 mmHg) into the vent port, and check that air is sucked into the purge port.
If the result is not as specified, replace the canister.



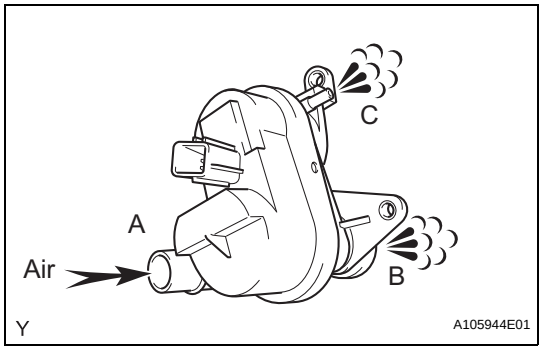
(c) Check the air tightness.
(1) While holding the vent and air inlet ports closed, apply vacuum at 3.43 kPa (35.0 kgf/cm^2, 25.7 mmHg) into the purge port, and check that the vacuum is maintained for 1 minute.
If the result is not as specified, replace the canister.



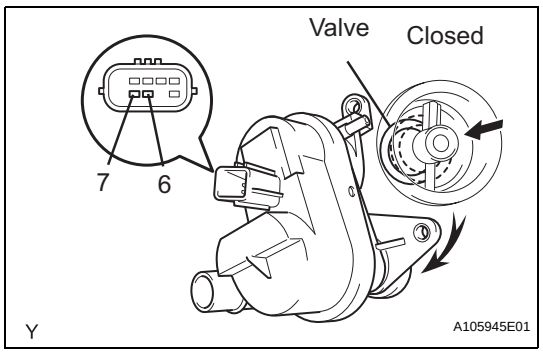
(d) Check the diaphragm.
(1) Remove the air hose between ports A and B.
(2) While holding the vent, purge and air inlet ports closed, apply vacuum at 1.42 kPa (14.5 kgf/cm^2, 10.6 mmHg) into port A, and check that air is not sucked into port B.



(3) While holding the vent, purge and air inlet ports closed, apply vacuum at 1.42 kPa (14.5 kgf/cm^2, 10.6 mmHg) into port A, and measure how long it takes for the vacuum to drop.
Vacuum drop time:
10 seconds or more
If the result is not as specified, replace the canister.



(e) Check the leak detection pump.
(1) Check that air flows from port A to ports B and C.
If the result is not as specified, replace the canister.

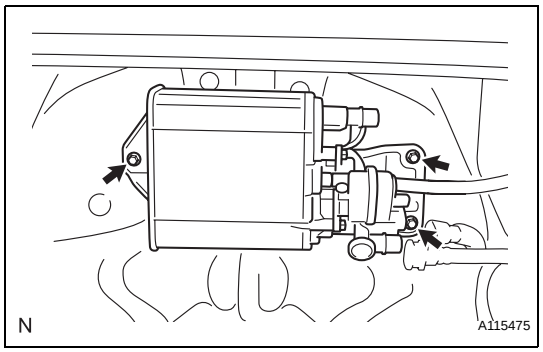


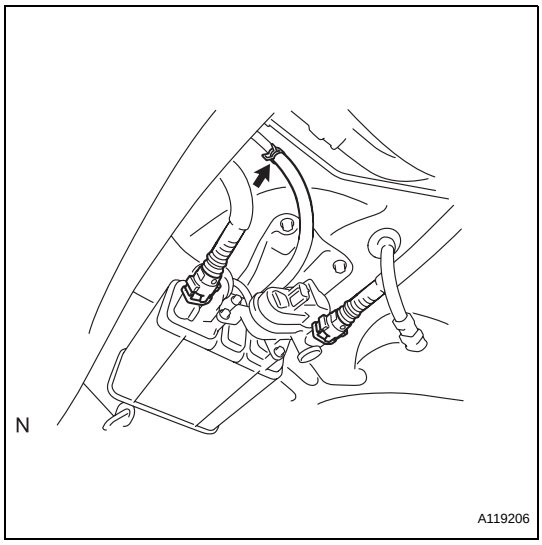
(2) Connect the positive (+) lead of the battery to terminal 7 and the negative (-) lead to terminal 6.
(3) Check that the valve is closed.
If the result is not as specified, replace the canister.
(4) Install the canister pump module.

INSTALLATION

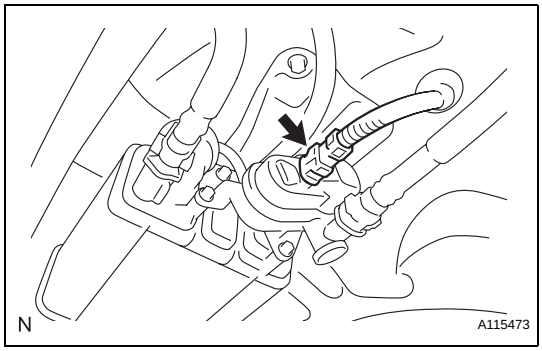
1. INSTALL CANISTER

(a) Install the canister with the 3 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)





(b) Connect the vent line hose to the canister.
(c) Connect the air inlet line hose to the leak detection pump.
(d) Connect the purge line hose.



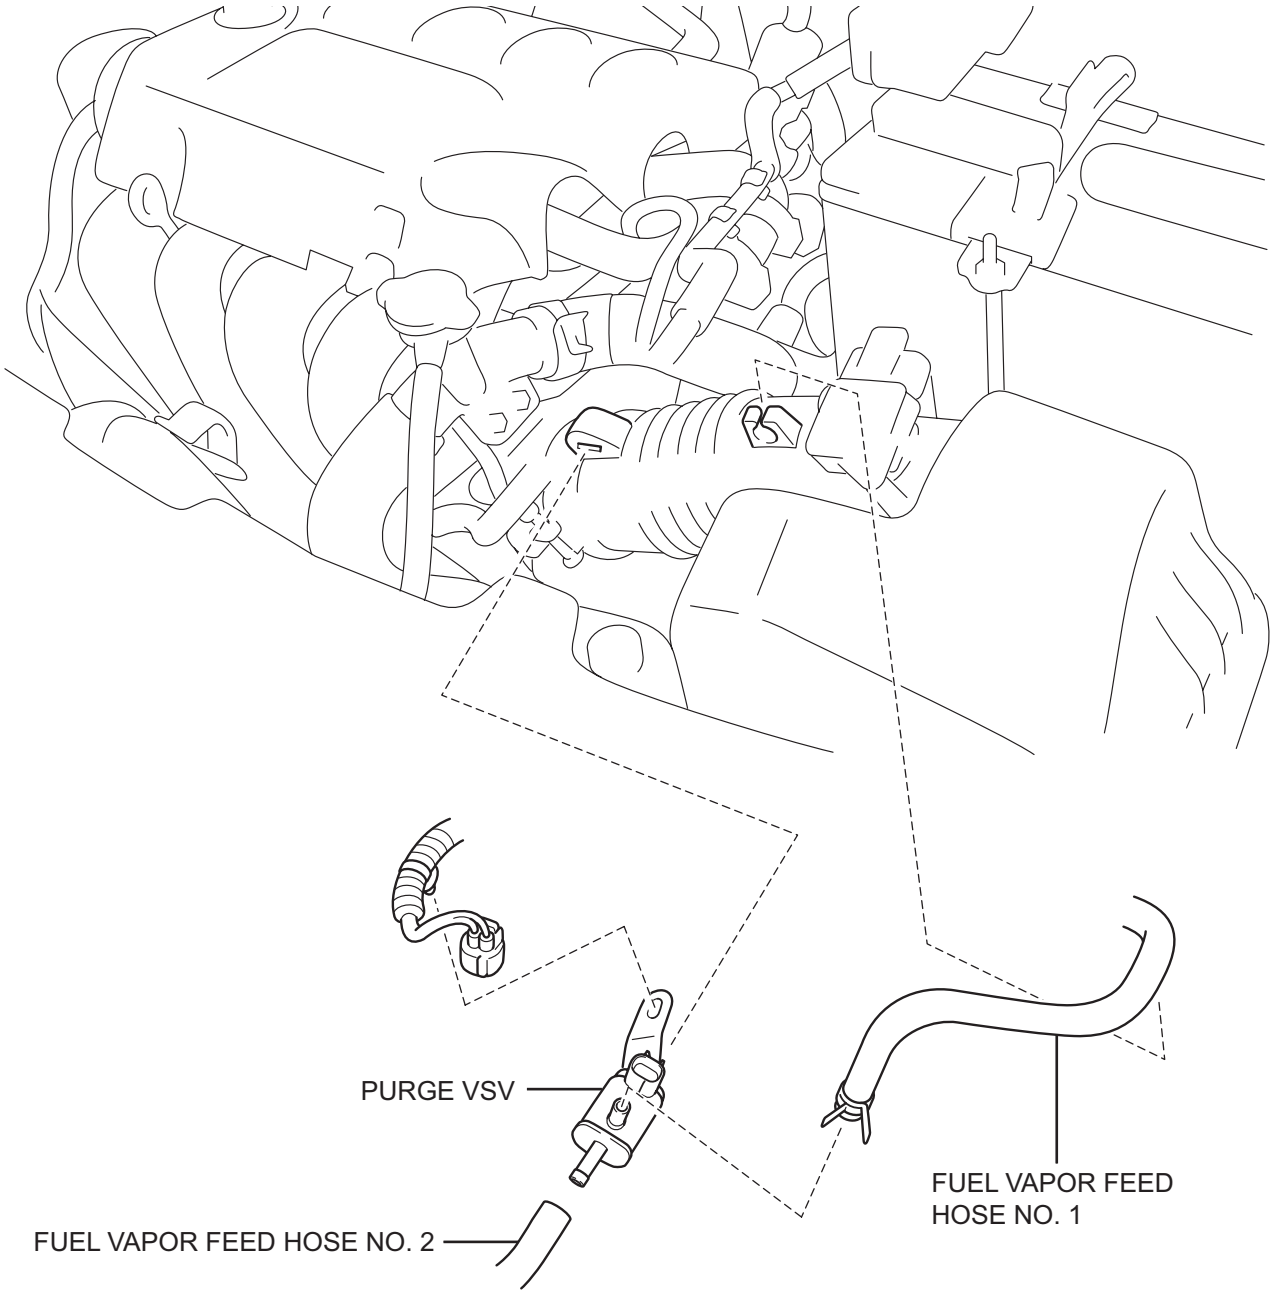
(e) Connect the connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

EC

VACUUM SWITCHING VALVE

COMPONENTS



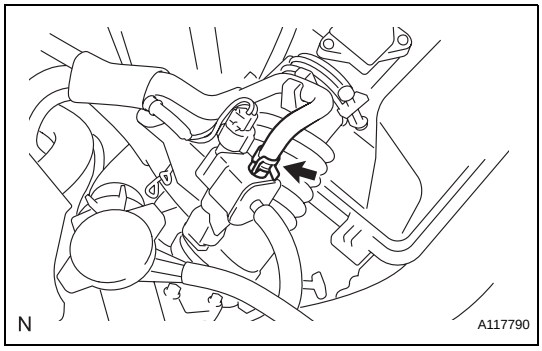
EC

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

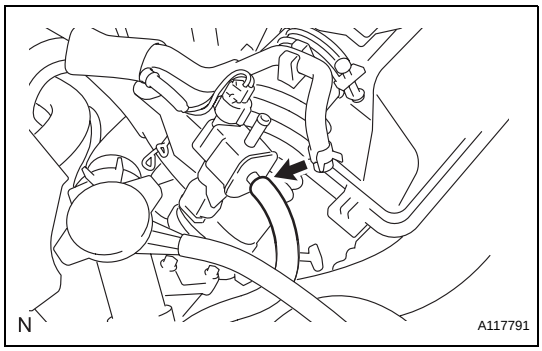
2. DISCONNECT FUEL VAPOR FEED HOSE NO. 1

(a) Disconnect fuel vapor feed hose No. 1.



3. DISCONNECT FUEL VAPOR FEED HOSE NO. 2

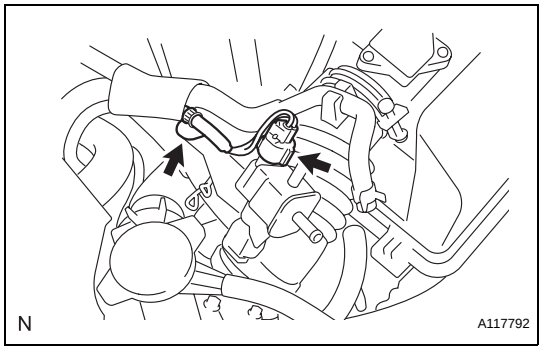
(a) Disconnect fuel vapor feed hose No. 2.



4. REMOVE PURGE VSV

(a) Disconnect the purge VSV connector and disengage the clip.

(b) Remove the purge VSV.



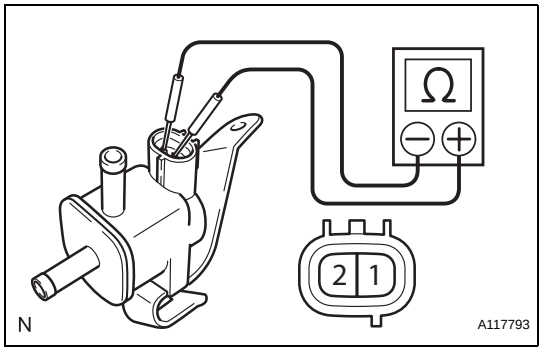
INSPECTION

1. INSPECT PURGE VSV

(a) Check the resistance.

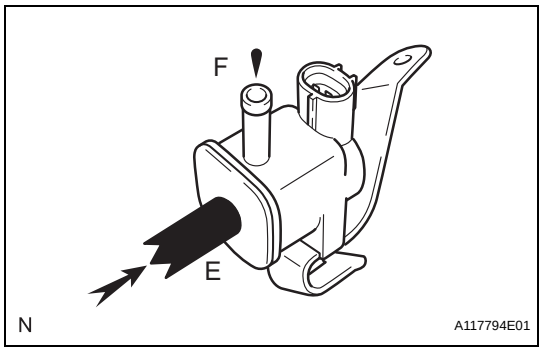
(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

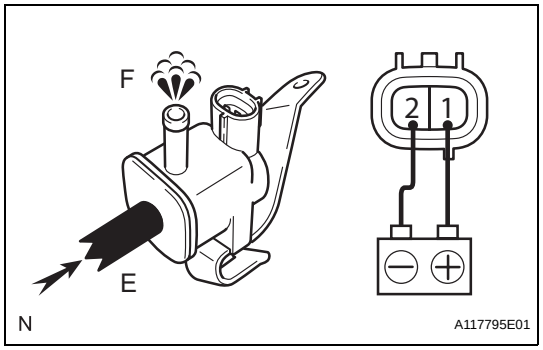


Tester Connection	Specified Condition
1 - 2	23 to 26 Ω at 20°C (68°F)

If the resistance is not as specified, replace the purge VSV.

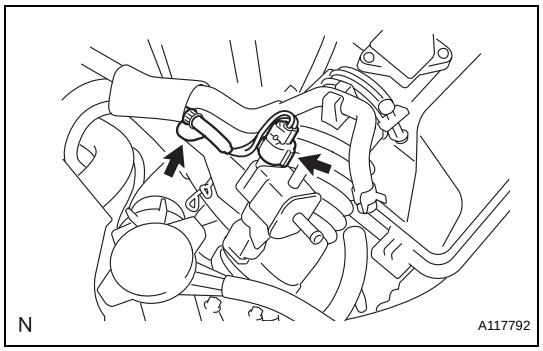


(b) Check the operation.
(1) Check that air does not flow from port E to F.

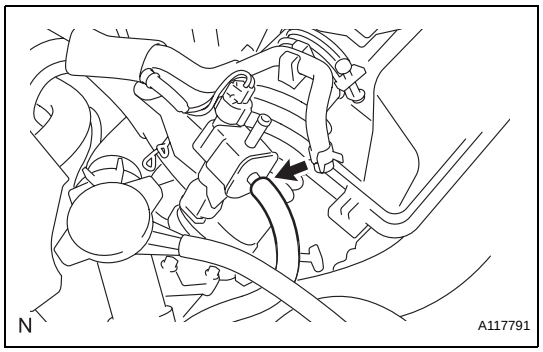


(2) Apply battery voltage across the terminals.
(3) Check that air flows from port E to F.
If the operation is not as specified, replace the purge VSV.

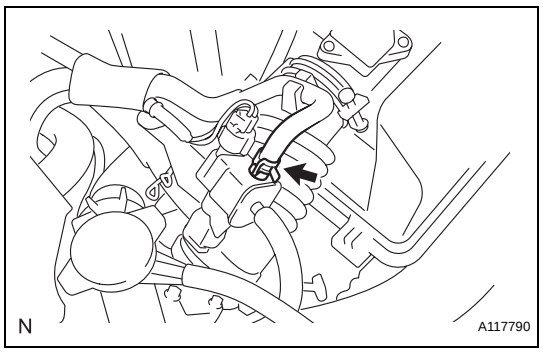
INSTALLATION



1. INSTALL PURGE VSV
(a) Install the purge VSV.
(b) Engage the clip and connect the purge VSV connector.



2. CONNECT FUEL VAPOR FEED HOSE NO. 2
(a) Connect fuel vapor feed hose No. 2.

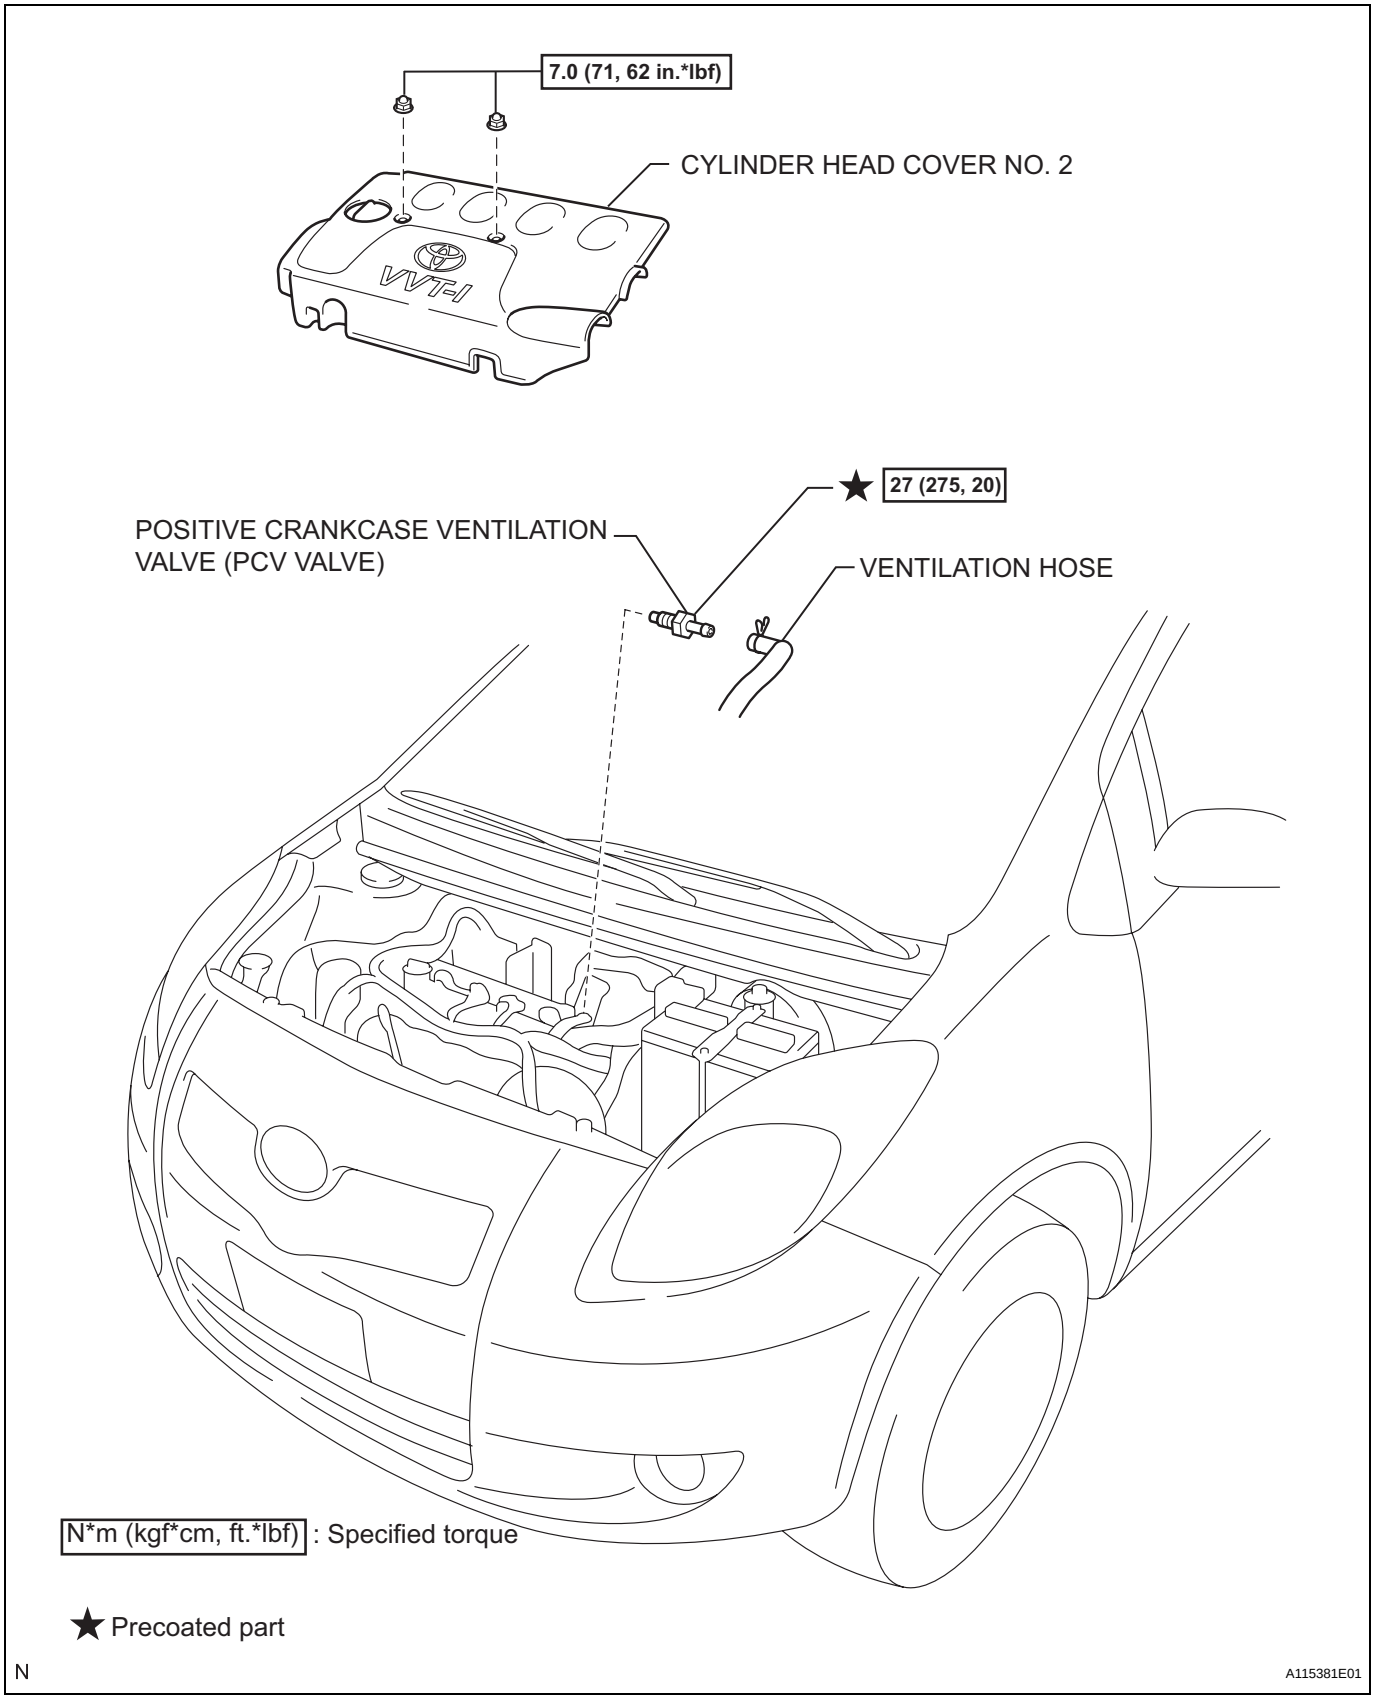


3. CONNECT FUEL VAPOR FEED HOSE NO. 1
(a) Connect fuel vapor feed hose No. 1.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

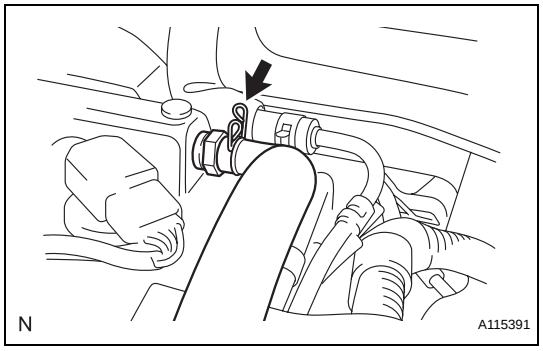
VENTILATION VALVE

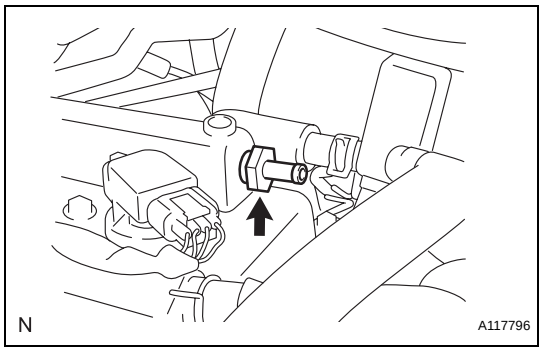
COMPONENTS



REMOVAL

1. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
2. **DISCONNECT VENTILATION HOSE**





3. **REMOVE POSITIVE CRANKCASE VENTILATION VALVE (PCV VALVE)**
   (a) Remove the positive crankcase ventilation valve (PCV valve).

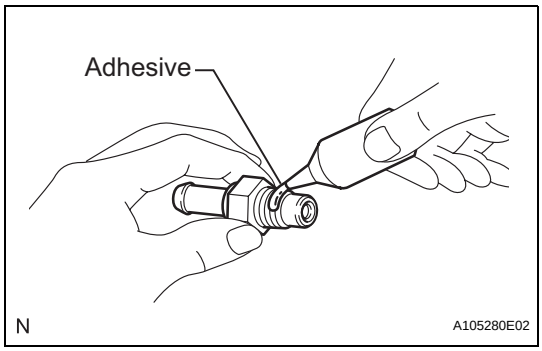
EC

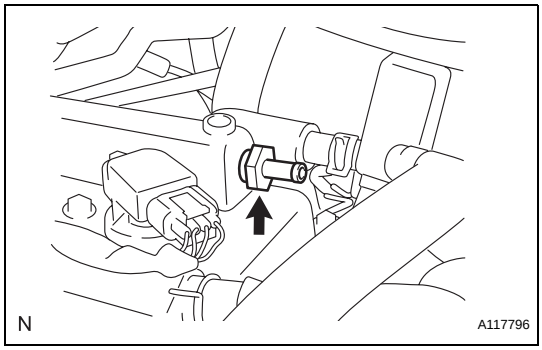
INSPECTION

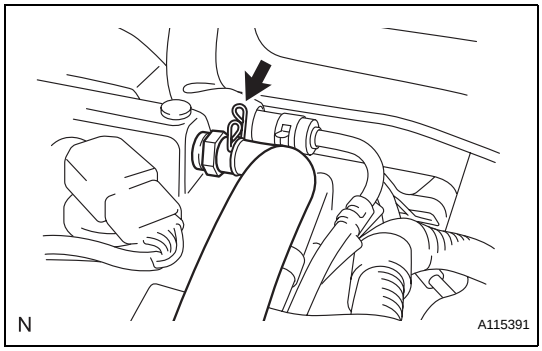
1. **INSPECT POSITIVE CRANKCASE VENTILATION VALVE (PCV VALVE)**
   (a) Install the hose onto the positive crankcase ventilation valve (PCV valve).
   (b) Check the ventilation.
      (1) Check the ventilation when air is applied from the cylinder head side.
      Standard:
      Air flows.
      CAUTION:
      Do not inhale the air from the ventilation valve because it is harmful.

      (2) Check the ventilation when air is applied from the intake manifold side.
      Standard:
      Air does not flow.
      If the ventilation is not as specified, replace the positive crankcase ventilation valve (PCV valve).

   (c) Remove the hose from the positive crankcase ventilation valve (PCV valve).







INSTALLATION

1. INSTALL POSITIVE CRANKCASE VENTILATION VALVE (PCV VALVE)

(a) Install the positive crankcase ventilation valve (PCV valve).

(1) Apply adhesive to the end 2 or 3 threads of the bolt.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent.

(2) Install the positive crankcase ventilation valve (PCV valve).

Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

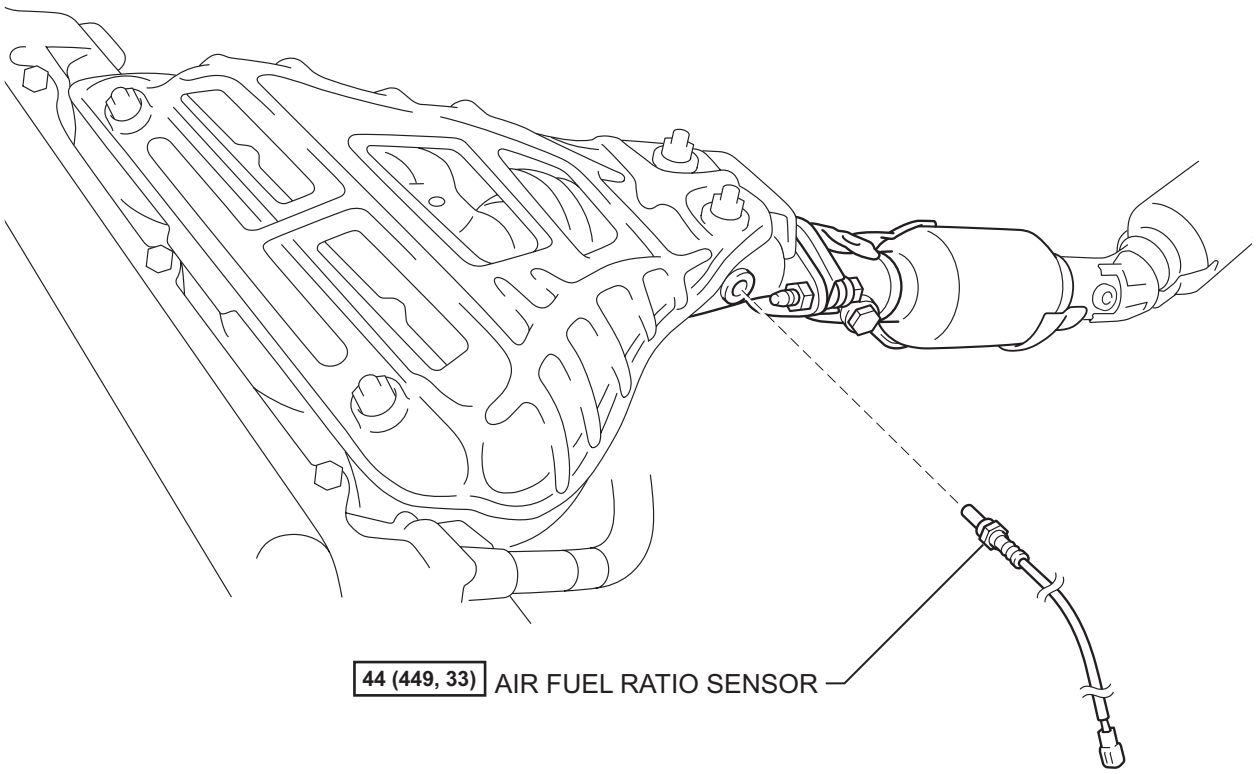
2. CONNECT VENTILATION HOSE

3. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)

EC

AIR FUEL RATIO SENSOR

COMPONENTS



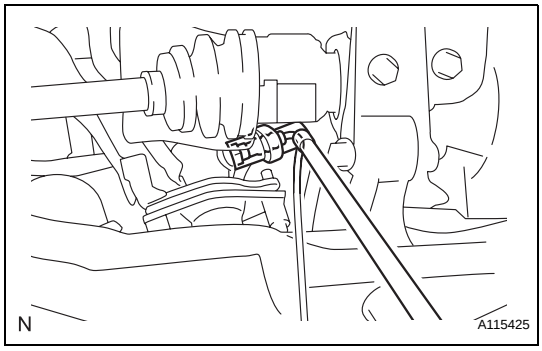
N*m (kgf*cm, ft.*lbf) : Specified torque

N

A115422E02

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

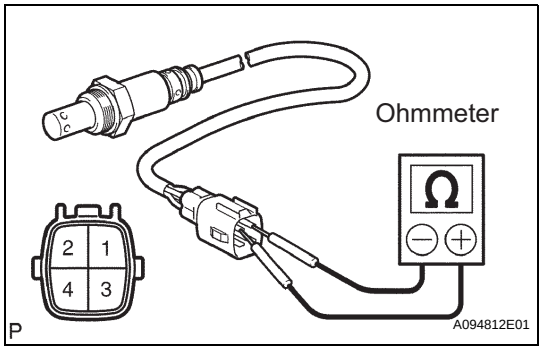


2. REMOVE AIR FUEL RATIO SENSOR

(a) Disconnect the air fuel ratio sensor connector and clamp.

(b) Using SST, remove the heated oxygen sensor.
SST 09224-00010

INSPECTION



1. INSPECT AIR FUEL RATIO SENSOR

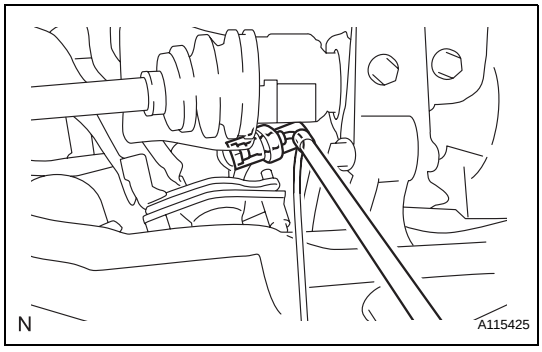
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
1 (HA1A) - 2 (+B)	1.8 to 3.4 Ω at 20°C (68°F)
1 (HA1A) - 4 (E2)	10 kΩ or higher

If the resistance is not as specified, replace the sensor.

INSTALLATION



1. INSTALL AIR FUEL RATIO SENSOR

(a) Using SST, install the air fuel ratio sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 33 ft.*lbf) (without SST)
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf) (with SST)
HINT:
Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).

(b) Connect the air fuel ratio sensor connector and the clamp.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. CHECK FOR EXHAUST GAS LEAKAGE

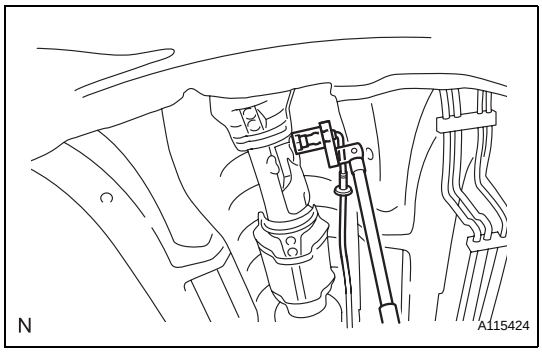
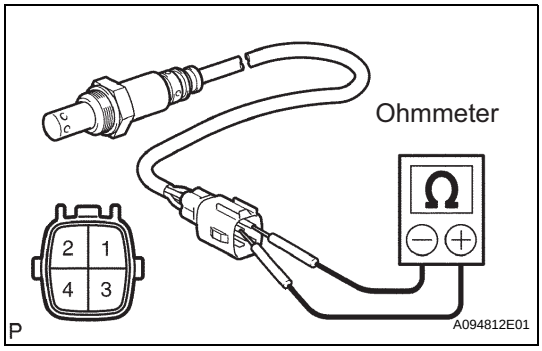
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-138)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-138)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
5. **REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-6)**
6. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
7. **REMOVE CONSOLE BOX REAR COVER (for Hatchback) (See page PB-6)**
8. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
9. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
10. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
11. **REMOVE INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-55)**
12. **REMOVE HEATED OXYGEN SENSOR**
    (a) Disconnect the sensor connector.
    (b) Remove the grommet and pass the sensor connector out of the cabin through the floor panel.
    (c) Using SST, remove heated oxygen sensor No. 2.
    SST 09224-00010



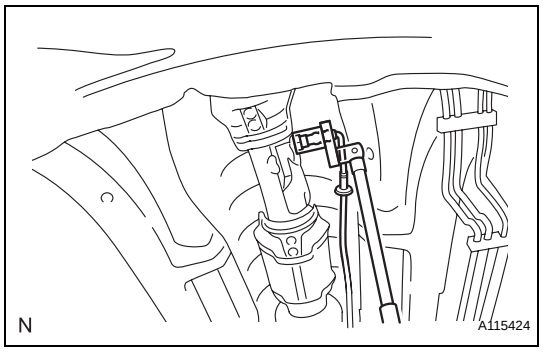


INSPECTION

1. **INSPECT HEATED OXYGEN SENSOR**
   (a) Check the resistance.
   (1) Using an ohmmeter, measure the resistance between the terminals.
   Standard resistance

Tester Connection	Specified Condition
1 (HT1B) - 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT1B) - 4 (E2)	10 kΩ or higher

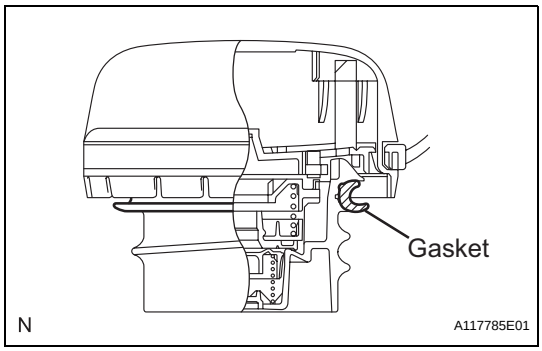
If the resistance is not as specified, replace the sensor.



INSTALLATION

1. **INSTALL HEATED OXYGEN SENSOR**
   (a) Using SST, install the sensor onto the front exhaust pipe.
   SST 09224-00010
   Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf) (without SST)
   Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf) (with SST)
   HINT:
   Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
   (b) Pass the sensor connector through the floor panel and install the grommet.
   (c) Connect the sensor connector.
2. **INSTALL INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-55)**
3. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
4. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
5. **INSTALL CONSOLE BOX REAR COVER (for Hatchback) (See page PB-11)**
6. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
7. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-12)**
8. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
9. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-141)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)**
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
13. **CHECK FOR EXHAUST GAS LEAKAGE**

EC



FUEL TANK CAP

ON-VEHICLE INSPECTION

1. INSPECT FUEL TANK CAP ASSEMBLY

(a) Check that there is no deformation or damage to the fuel tank cap or gasket. If necessary, replace the fuel tank cap.

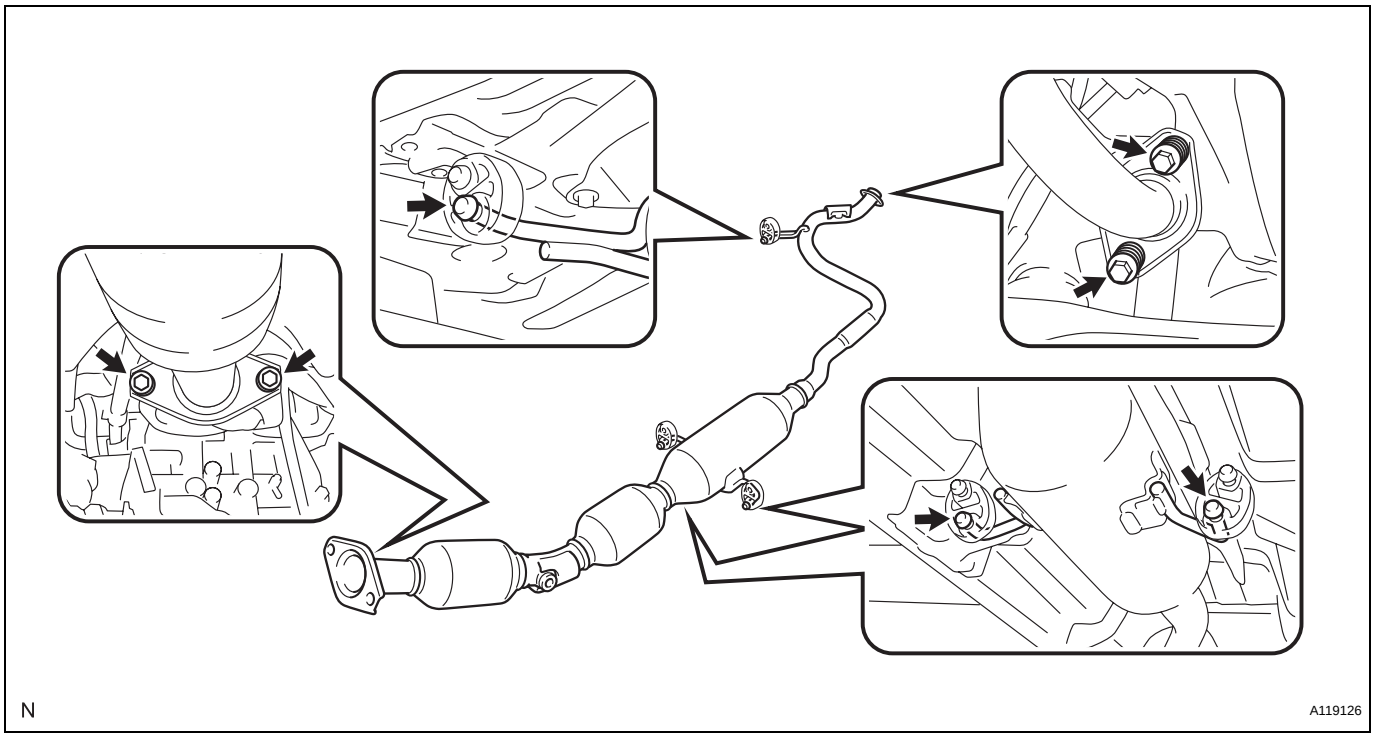
8. **REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-84)**
9. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
10. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
11. **REMOVE INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-44)**
12. **REMOVE HEATED OXYGEN SENSOR (See page EC-22)**
13. **REMOVE EXHAUST PIPE ASSEMBLY FRONT**
    (a) Remove the 4 bolts and 4 compression springs.

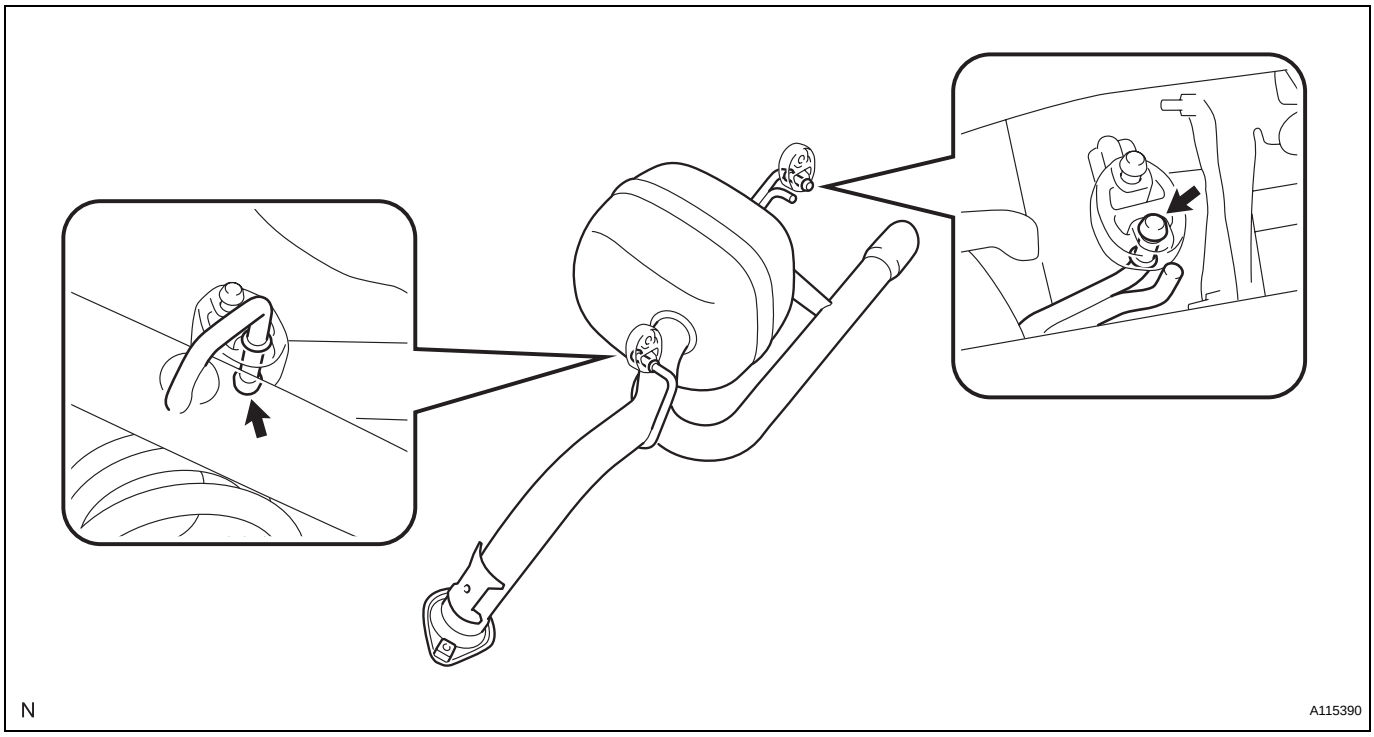
(b) Remove exhaust pipe support No. 4 and the exhaust front pipe assembly.



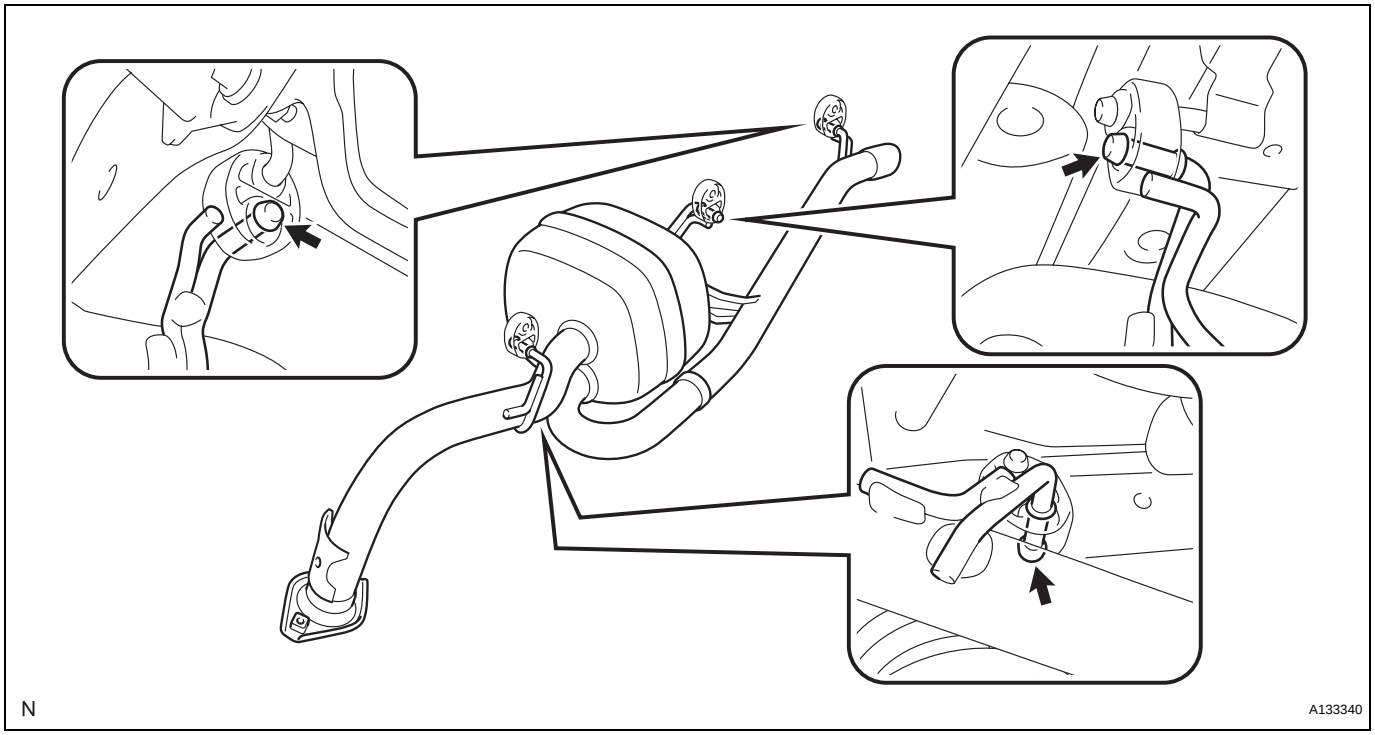
(c) Remove the 2 exhaust pipe gaskets.

14. REMOVE EXHAUST PIPE ASSEMBLY TAIL

(a) Remove the 2 No. 4 exhaust pipe supports and the exhaust tail pipe assembly. (for Hatchback)



(b) Remove the 3 No. 4 exhaust pipe supports and the exhaust tail pipe assembly. (for Sedan)



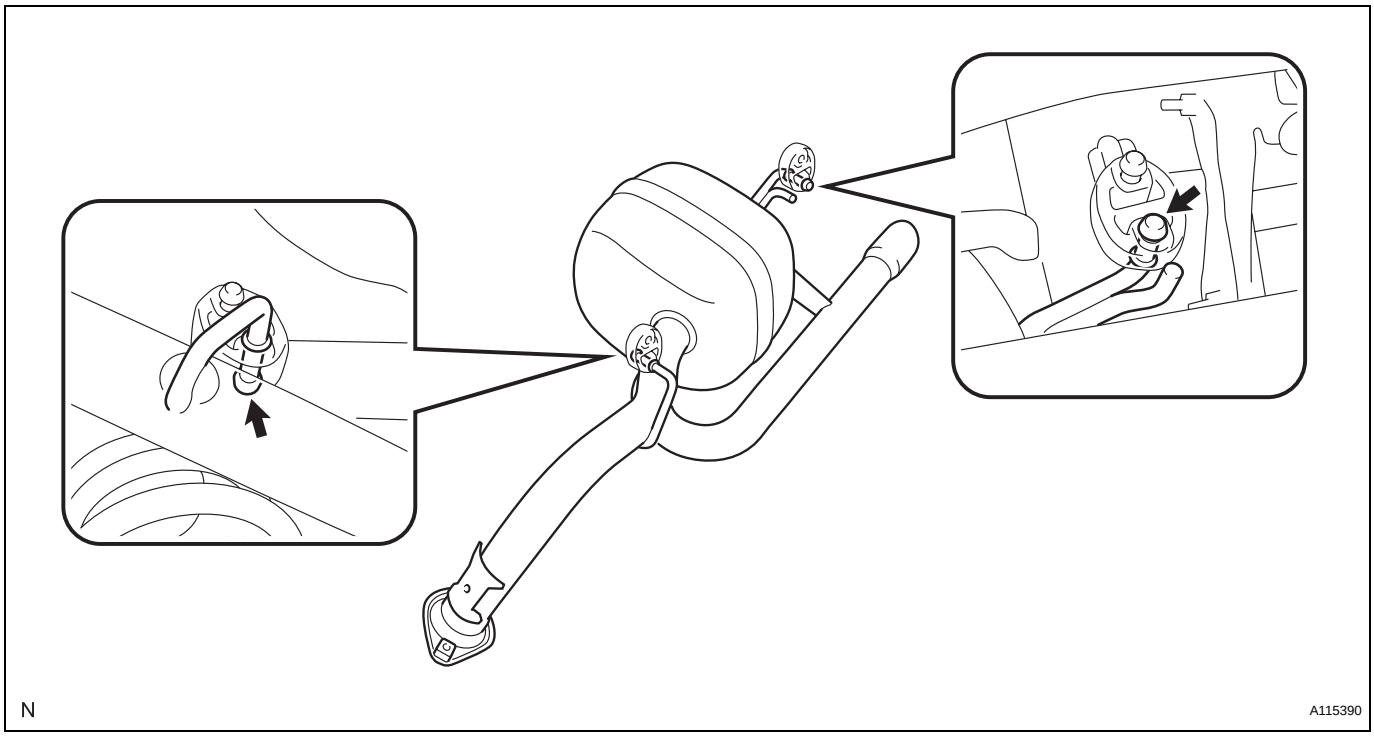
N

A133340

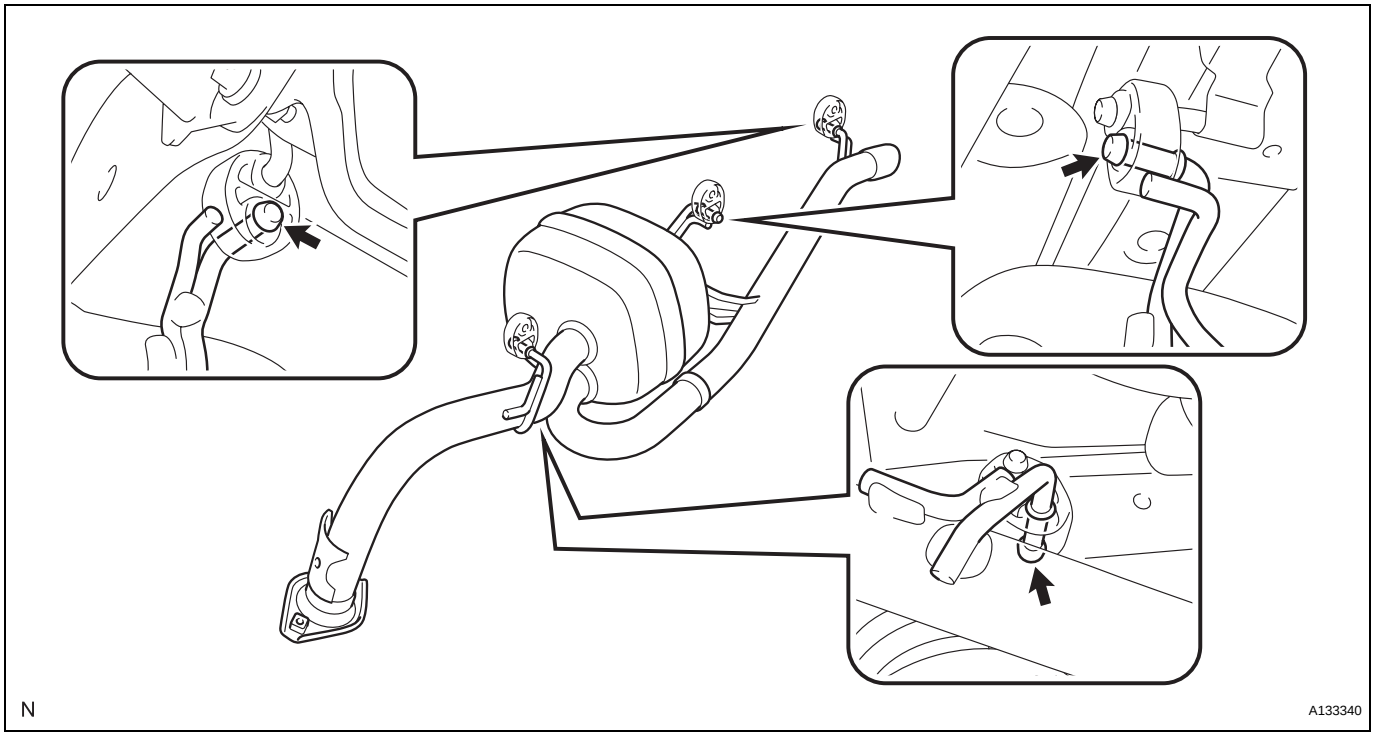
INSTALLATION

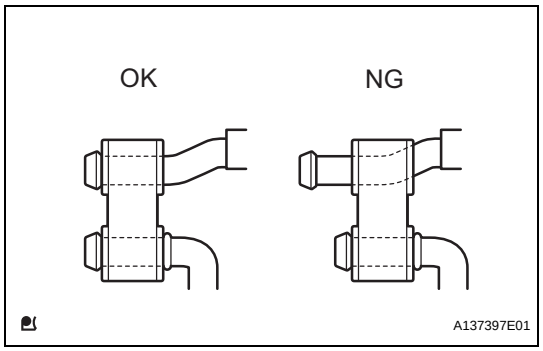
1. INSTALL EXHAUST PIPE ASSEMBLY TAIL

(a) Install the 2 No. 4 exhaust pipe supports and the exhaust tail pipe assembly. (for Hatchback)

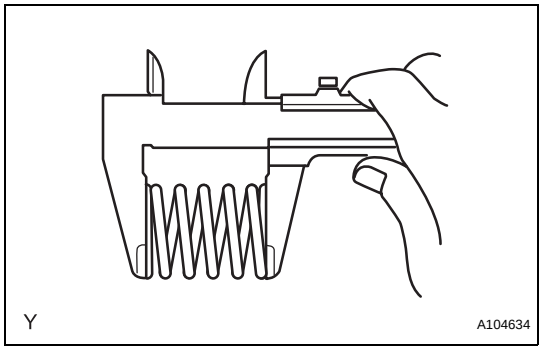


(b) Install the 3 No. 4 exhaust pipe supports and the exhaust tail pipe assembly. (for Sedan)



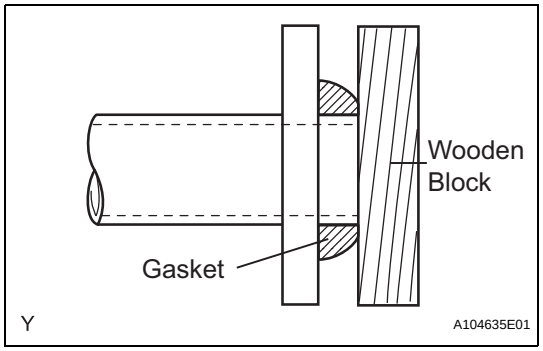


(c) Check the No. 4 exhaust pipe supports.
NOTICE:
Install No. 4 exhaust pipe support onto the pipe retaining support.



2. INSTALL EXHAUST PIPE ASSEMBLY FRONT

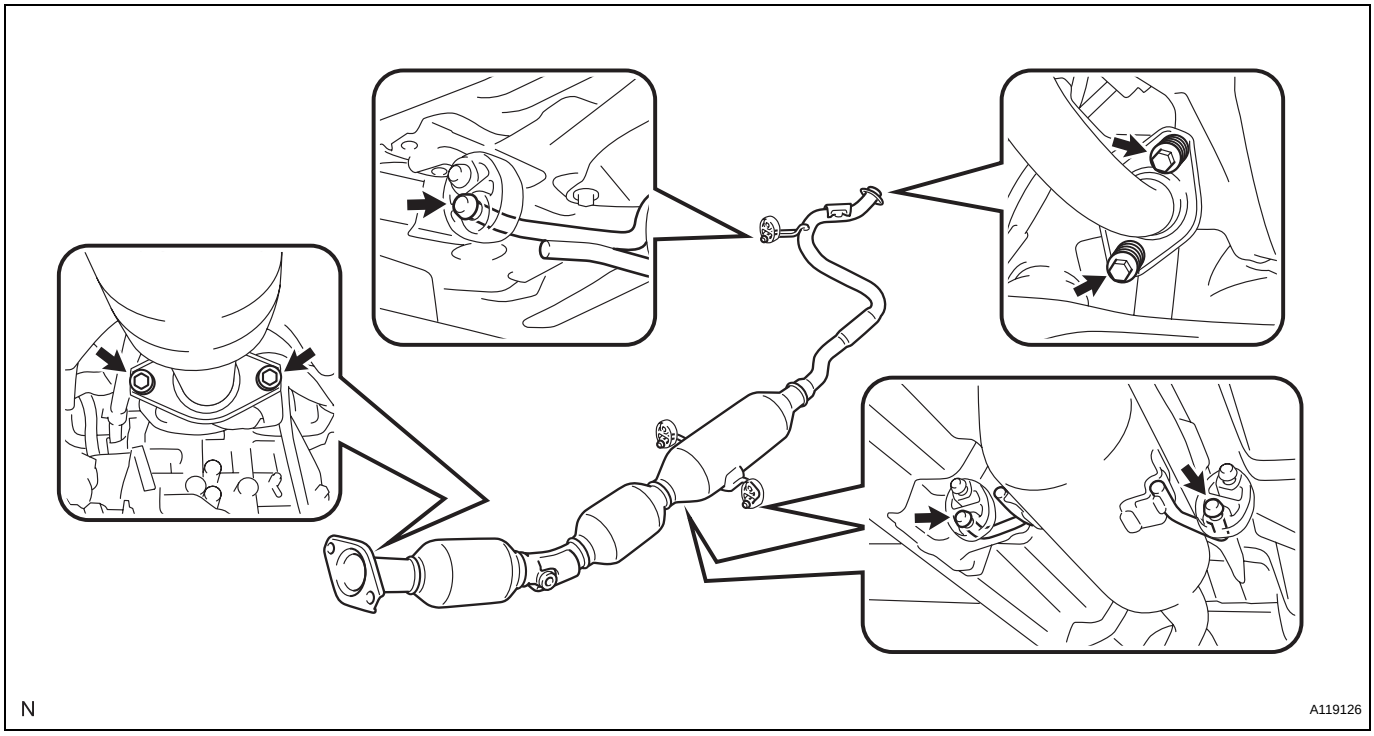
(a) Using vernier calipers, measure the free length of the compression spring.
Minimum length (Front Side):
40.5 mm (1.594 in.)
Minimum length (Rear Side):
38.5 mm (1.516 in.)
If the length is not as specified, replace the compression spring.



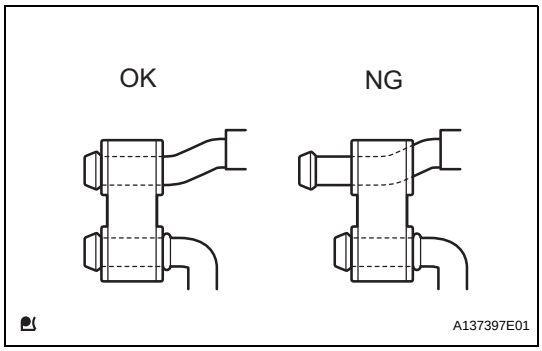
(b) Using a plastic hammer and a wooden block, tap in a new exhaust pipe gasket until its surface is flush with the exhaust manifold.
NOTICE:
- **Install the exhaust pipe gasket in the correct direction.**
- **Do not damage the outer surface of the exhaust pipe gasket.**
- **Do not reuse the exhaust pipe gasket.**
- **Do not push in the gasket with the exhaust pipe when connecting it.**

(c) Install the 3 No. 4 exhaust pipe supports.
(d) Install the exhaust front pipe assembly and a new exhaust pipe gasket with the 4 compression springs and 4 bolts.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)

EX



EX



(e) Check the No. 4 exhaust pipe supports.
NOTICE:
Install No. 4 exhaust pipe support onto the pipe retaining support.

3. **INSTALL HEATED OXYGEN SENSOR (See page EC-23)**
4. **INSTALL INSTRUMENT PAD LOWER LH (for Sedan) (See page IP-55)**
5. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
6. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
7. **INSTALL CONSOLE BOX REAR COVER (for Hatchback) (See page PB-11)**
8. **INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
9. **INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Hatchback Manual Transaxle) (See page PB-12)**
10. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page IP-89)**
11. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (for Sedan) (See page ME-141)**
13. **INSTALL INSTRUMENT PANEL FINISH PANEL LOWER CENTER (for Sedan) (See page ME-142)**

14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
15. **CHECK FOR EXHAUST GAS LEAKAGE**

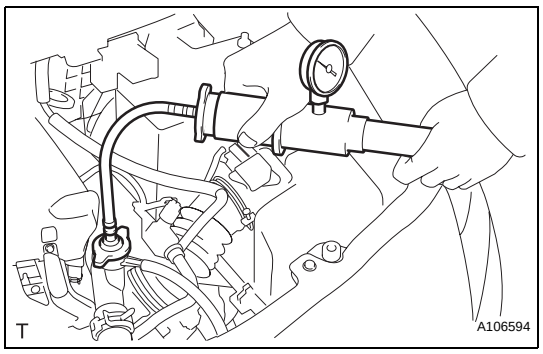
COOLING SYSTEM

ON-VEHICLE INSPECTION

CAUTION:
Be sure that the ignition is off if you work near the electric cooling fans or radiator grille. With the ignition on the electric cooling fans may automatically start to run if the engine coolant temperature is high and/or the air conditioning is on.

1. CHECK COOLING SYSTEM FOR LEAKAGE

CAUTION:
To avoid the danger of being burned, do not remove the radiator cap sub-assembly while the engine and radiator assembly are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator assembly.



(a) Fill the radiator assembly with engine coolant, then attach a radiator cap tester.

(b) Pump the tester to 137 kPa (1.4 kgf/cm^2, 19.9 psi), then check that the pressure does not drop.
If the pressure drops, check the hoses, radiator assembly and water pump assembly for leakage. If there are no signs or traces of external engine coolant leakage, check the heater core, cylinder block and head.

2. INSPECT RESERVOIR TANK ENGINE COOLANT LEVEL

(a) The engine coolant should be between the LOW and FULL lines when the engine is cold.
HINT:
If it is below the LOW line, check for leakage and add Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology up to the FULL line.

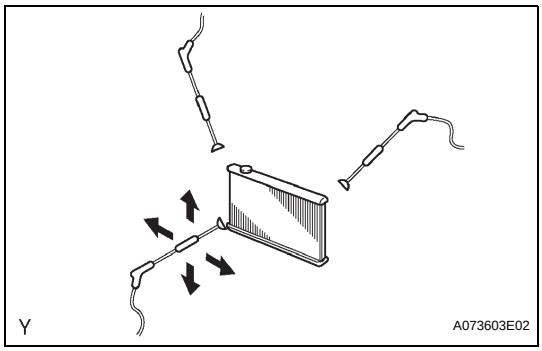
3. INSPECT ENGINE COOLANT QUALITY

(a) Remove the radiator cap sub-assembly.
CAUTION:
To avoid the danger of being burned, do not remove the radiator cap sub-assembly while the engine and radiator assembly are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator assembly.

(b) Check for excessive deposits of rust or scale around the radiator cap sub-assembly and radiator filler hole. The engine coolant should be free of oil.
If excessively dirty, replace the engine coolant.

(c) Reinstall the radiator cap sub-assembly.

CO



4. INSPECT FINS FOR BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner and dry them with compressed air.

NOTICE:

- **To avoid damaging the fins, the injection direction should be at right angles to the core surface.**
- **If the steam cleaner is too close to the core, there is a possibility of damaging the fins, so keep to the following injection distances.**

Injection Pressure kPa (kgf*cm^2, psi)	Injection Distance mm (in.)
2.942 to 4.903 (30 to 50, 427 to 711)	300 (11.811)
4.903 to 7.845 (50 to 80, 711 to 1.138)	500 (19.685)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Do not expose electronic components to water.**

CO

ON-VEHICLE INSPECTION

CAUTION:
Be sure that the ignition is off if you work near the electric cooling fans or radiator grille. With the ignition on the electric cooling fans may automatically start to run if the engine coolant temperature is high and/or the air conditioning is on.

1. INSPECT COOLING FAN OPERATION AT LOW TEMPERATURES (Below 83°C (181°F))

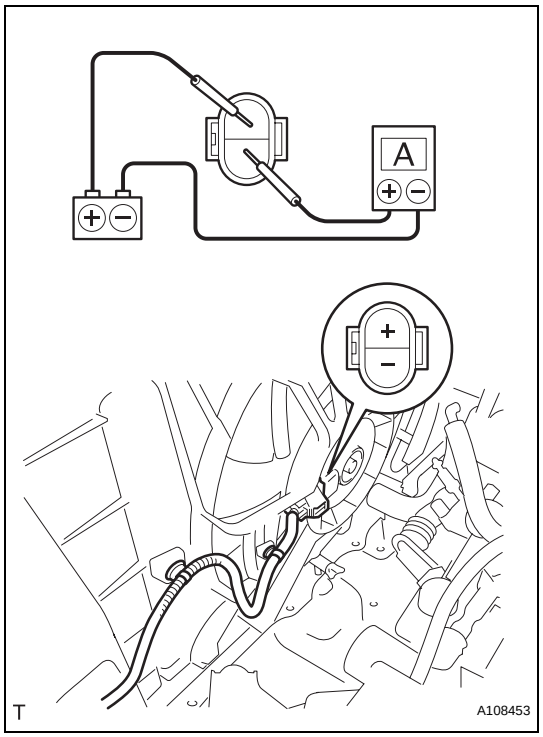
(a) Turn the ignition switch on (IG) and air conditioning switch off.
(b) Check that the cooling fan stops.
If not, check the cooling fan relay and engine coolant temperature sensor, and check whether there is disconnection or an open circuit between them.
(c) Disconnect the engine coolant temperature sensor connector.
(d) Check that the cooling fan rotates.
If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for a short circuit between the cooing fan relay and the engine coolant temperature sensor.
(e) Reconnect the engine coolant temperature sensor connector.

2. INSPECT COOLING FAN OPERATION AT HIGH TEMPERATURES (Above 93°C (199°F))

(a) Start the engine and air conditioning switch off, and raise the engine coolant temperature to above 93°C (199°F).
HINT:
Engine coolant temperature is detected by the engine coolant temperature sensor on the water outlet.
(b) Check that the cooling fan rotates.
If not, replace the engine coolant temperature sensor.

3. INSPECT COOLING FAN MOTOR

(a) Disconnect the cooling fan motor connector.
(b) Connect the cooling fan connector to the battery and check that the fan motor moves smoothly.



(c) Using an ammeter, measure the current between the terminals.
Standard Current:
w/ A/C 11.8 to 14.8 A (at 12 V)
w/o A/C 7.9 to 10.9 A (at 12 V)

(d) Connect the cooling fan motor connector.

COOLANT

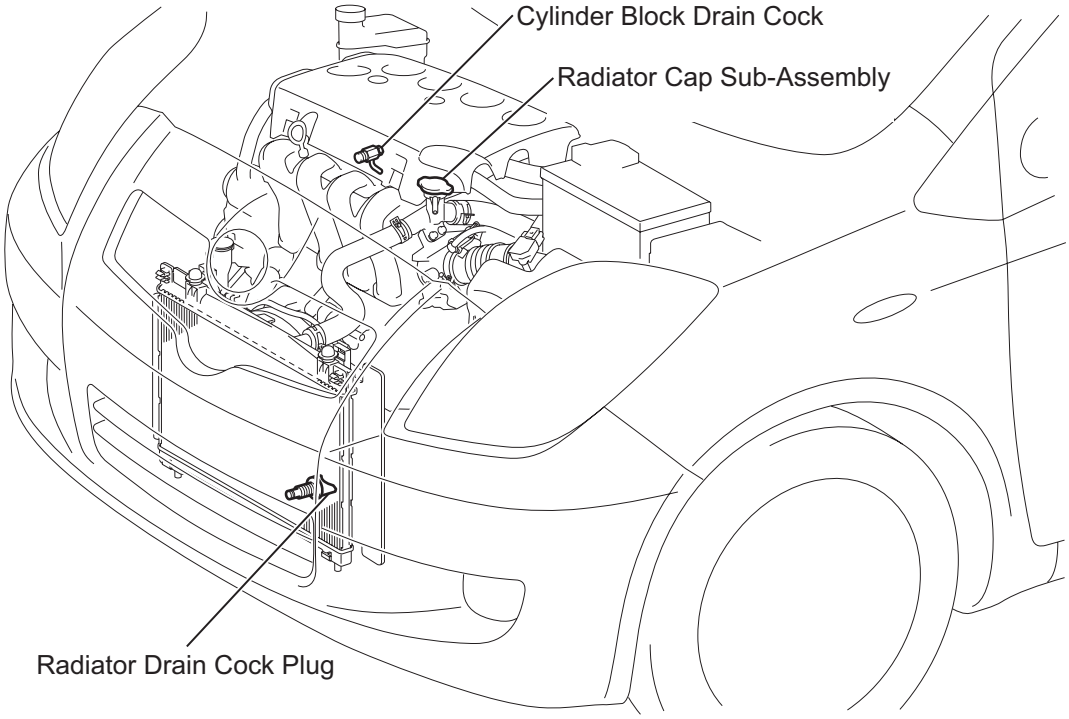
REPLACEMENT

CAUTION:
Be sure that the ignition is off if you work near the electric cooling fans or radiator grille. With the ignition on the electric cooling fans may automatically start to run if the engine coolant temperature is high and/or the air conditioning is on.

1. DRAIN ENGINE COOLANT

NOTICE:
To avoid the danger of being burned, do not remove the radiator cap sub-assembly while the engine and radiator assembly are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator assembly.

(a) Loosen the radiator drain cock plug.
(b) Remove the radiator cap sub-assembly.
(c) Loosen the cylinder block drain cock plug, then drain the coolant.



2. ADD ENGINE COOLANT

(a) Tighten all the plugs.

(b) Pour engine coolant into the radiator assembly until it overflows.
Capacity:
M/T 4.8 liters (5.1 USqts, 4.5 lmp. qts)
A/T 4.7 liters (5.0 USqts, 4.4 lmp. qts)
NOTICE:
Do not substitute water for engine coolant.
HINT:
- Use of improper engine coolant may damage the engine coolant system.
- Use only Toyota Super Long Life Coolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate engine coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

(c) Check the engine coolant level inside the radiator assembly by squeezing the inlet and outlet radiator hoses several times by hand. If the engine coolant level goes down, add engine coolant.
(d) Install the radiator cap sub-assembly securely.
(e) Slowly pour engine coolant into the radiator reservoir until it reaches the FULL line.
(f) Warm up the engine until the cooling fan operates.
(1) Set the air conditioning as follows while warming up the engine.

Item	Manual air conditioning system	Automatic air conditioning system
Set control as follows	Fan speed - Any setting except "OFF" Temperature - Toward WARM Air conditioning switch "OFF"	Fan speed - Any setting except "OFF" Temperature - To the highest temperature Air conditioning switch "OFF" "AUTO" switch "OFF"

(2) Maintain the engine speed at 2,000 to 2,500 rpm and warm up the engine until the cooling fan operates.
(g) Stop the engine and wait until the coolant cools down.
(h) If the engine coolant level is below the full level, perform steps (b) through (g) again and repeat the operation until the engine coolant level stays at the full level.
(i) Recheck the engine coolant level inside the radiator reservoir tank assembly. If it is below the full level, add engine coolant.

3. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

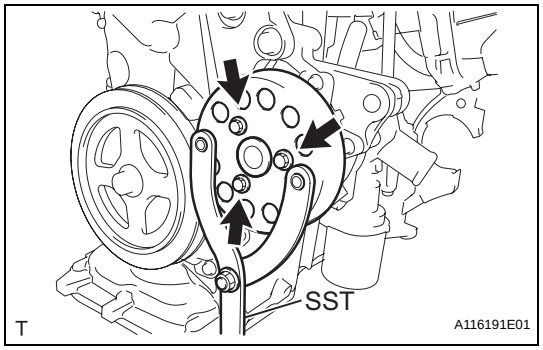
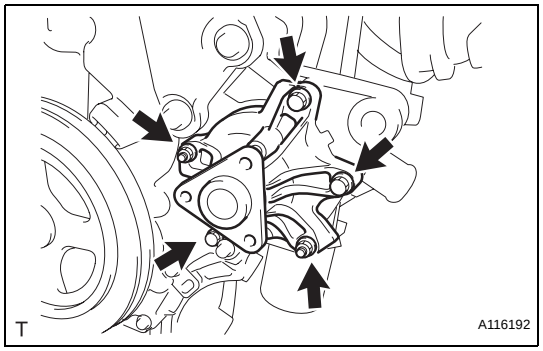
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE COOLANT (See page CO-8)**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
5. **REMOVE GENERATOR ASSEMBLY (See page CH-10)**
6. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (See page LU-17)**
7. **REMOVE WATER PUMP PULLEY**
   (a) Using SST, hold the water pump pulley.
   SST 09960-10010 (09962-01000, 09963-00700)
   (b) Remove the 3 bolts and remove the water pump pulley.



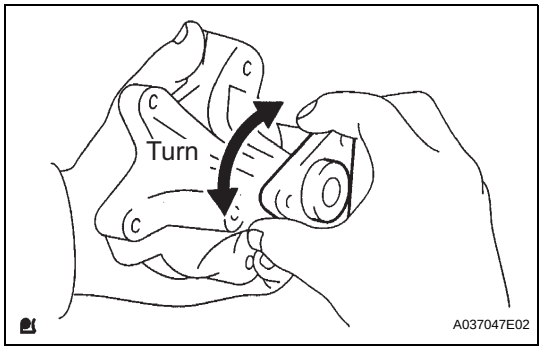
8. **REMOVE WATER PUMP ASSEMBLY**
   (a) Remove the 3 bolts and 2 nuts and remove the water pump assembly and gasket.



CO

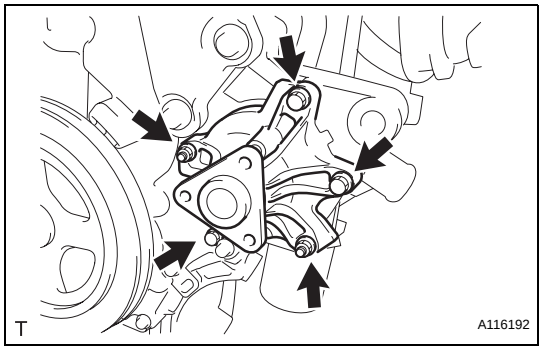
INSPECTION

1. **INSPECT WATER PUMP ASSEMBLY**
   (a) Visually check the drain hole for coolant leakage.
   (b) Turn the pulley and check that the water pump bearing moves smoothly and does not make any noise.
   If necessary, replace the water pump assembly.

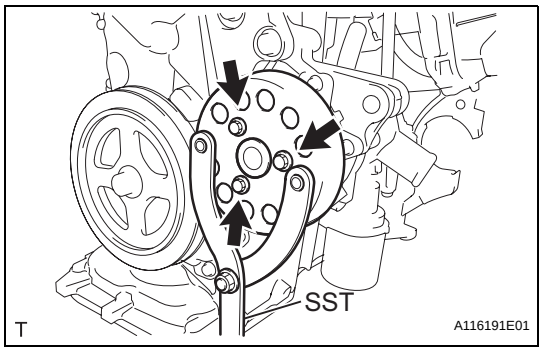


INSTALLATION

1. **INSTALL WATER PUMP ASSEMBLY**
   (a) Install the water pump assembly through a new gasket with the 3 bolts and 2 nuts.
   Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)



2. **INSTALL WATER PUMP PULLEY**
   (a) Provisionally install the water pump pulley with the 3 bolts.
   (b) Using SST, hold the water pump pulley.
   SST 09960-10010 (09962-01000, 09963-00700)
   (c) Tighten the 3 bolts to the specified torque.
   Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

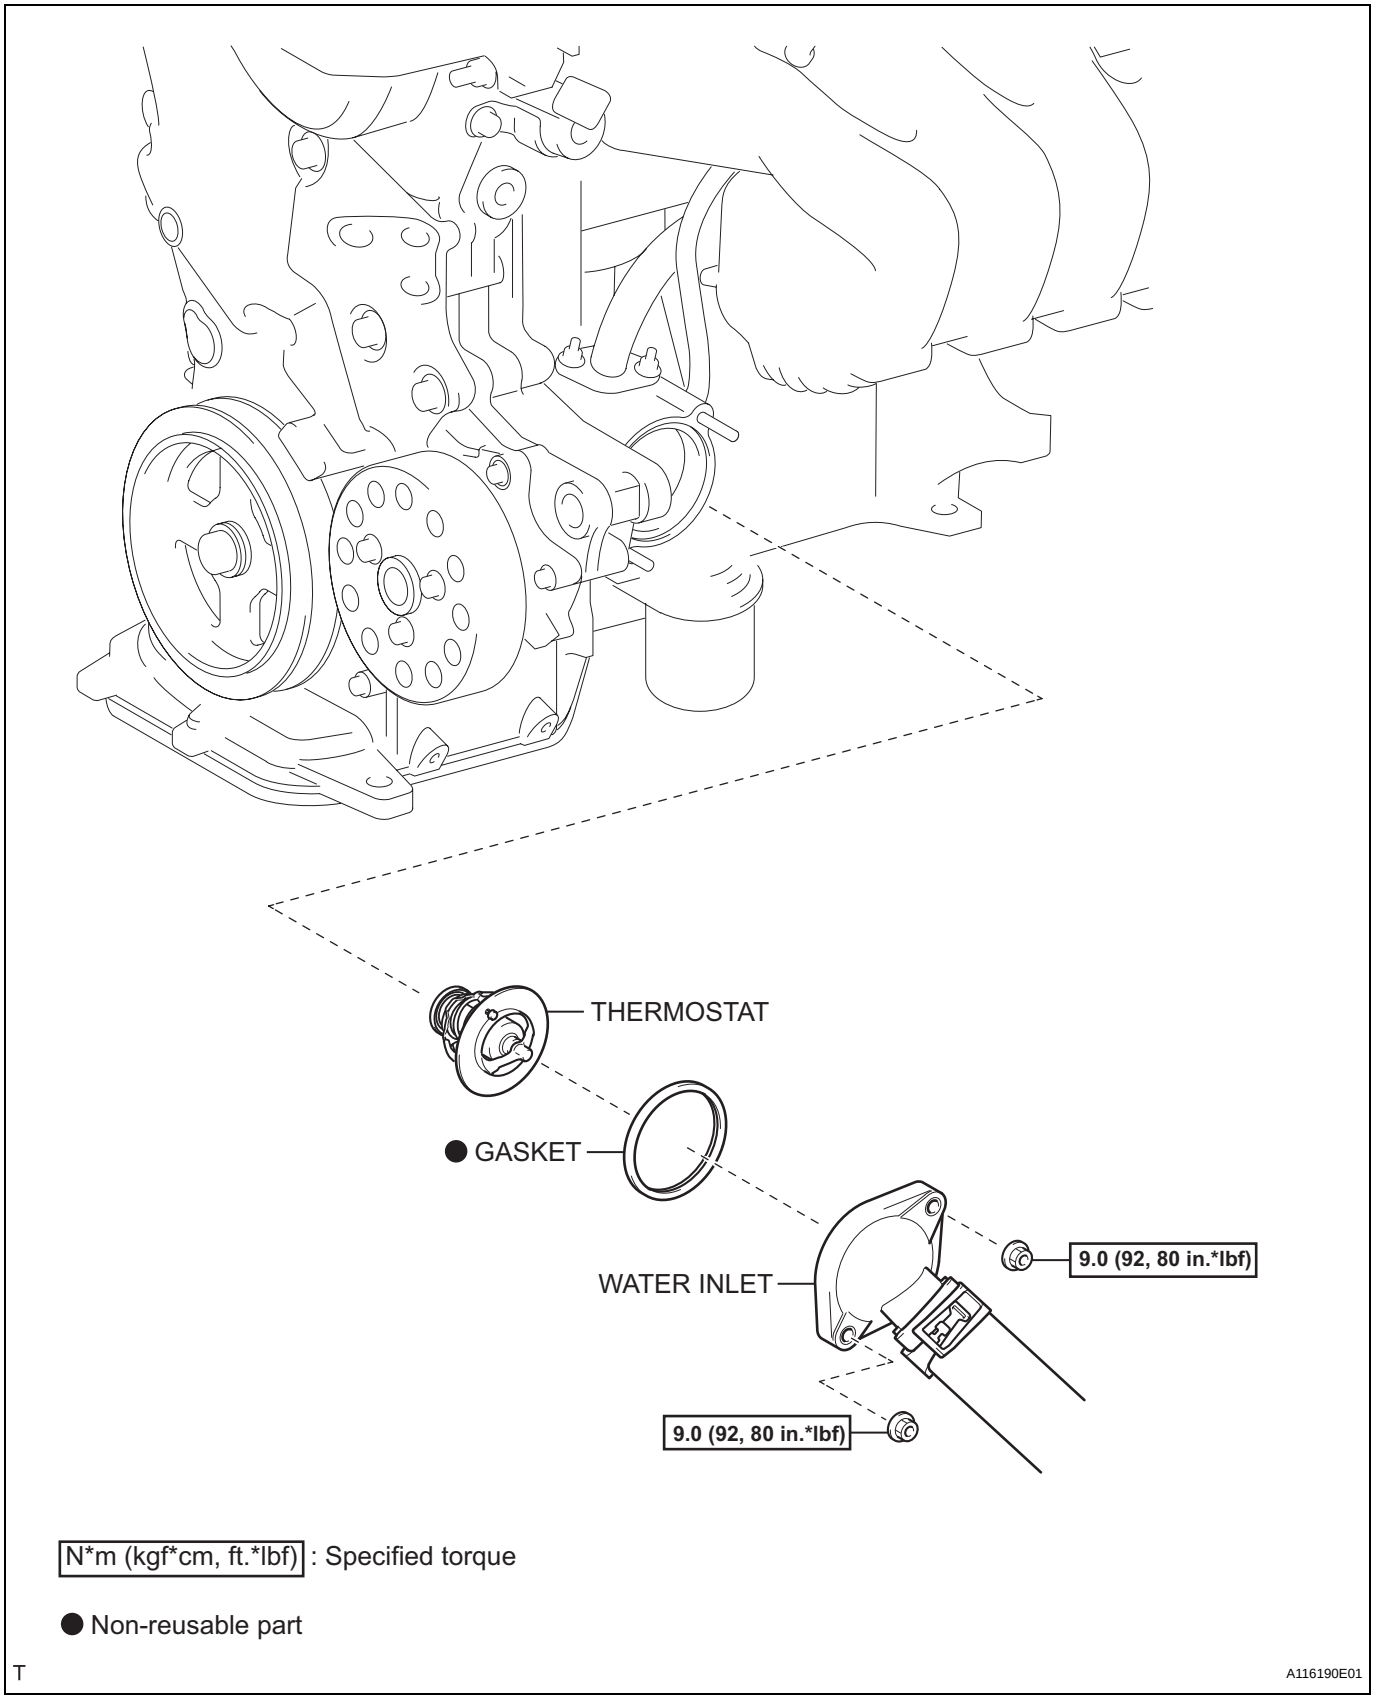


3. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (for Hatchback) (See page LU-26)**
4. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (for Sedan) (See page LU-26)**
5. **INSTALL GENERATOR ASSEMBLY (See page CH-17)**
6. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**
7. **ADJUST FAN AND GENERATOR V BELT (See page EM-7)**
8. **INSPECT FAN AND GENERATOR V BELT (See page EM-8)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
10. **ADD ENGINE COOLANT (See page CO-8)**
11. **CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)**
12. **INSTALL ENGINE UNDER COVER RH**

CO

THERMOSTAT

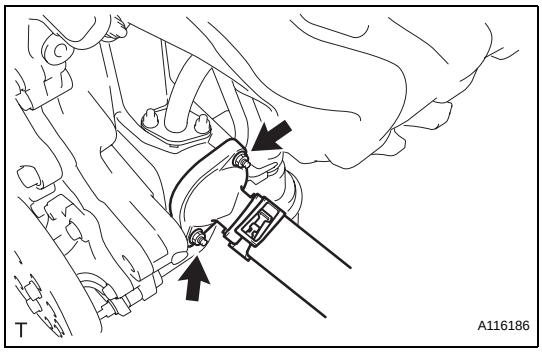
COMPONENTS



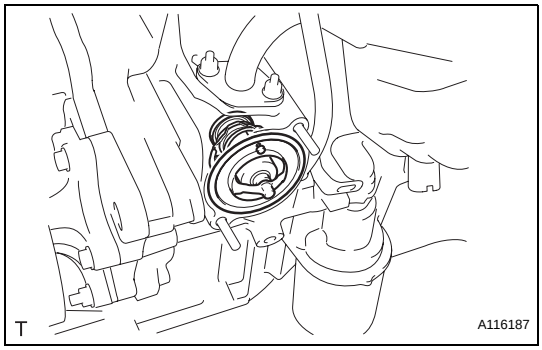
REMOVAL

1. **DRAIN ENGINE COOLANT (See page CO-8)**

2. **REMOVE WATER INLET**
   (a) Remove the 2 nuts and separate the water inlet with radiator hose from the cylinder block.



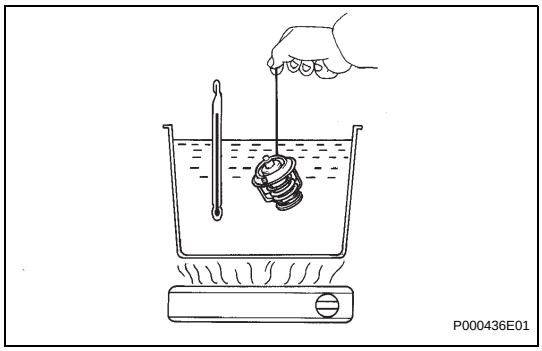
3. **REMOVE THERMOSTAT**
   (a) Remove the thermostat from the cylinder block.
   (b) Remove the gasket from the thermostat.

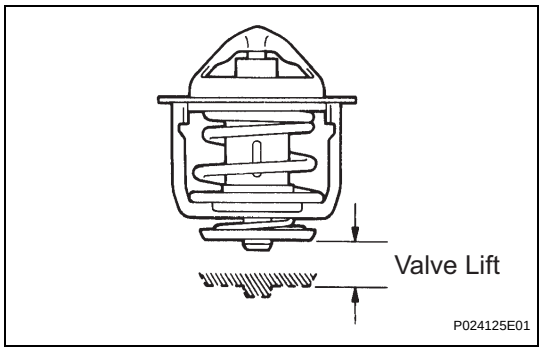


INSPECTION

1. **INSPECT THERMOSTAT**
   HINT:
   The valve opening temperature is inscribed on the thermostat.

   (a) Immerse the thermostat in water and gradually heat the water.
   (b) Check the valve opening temperature of the thermostat.
   Valve opening temperature:
   80 to 84°C (176 to 183°F)
   If the valve opening temperature is not as specified, replace the thermostat.





(c) Check the valve lift.
Valve lift:
8.5 mm (0.335 in.) or more at 95°C (203°F)
If the valve lift is not as specified, replace the thermostat.

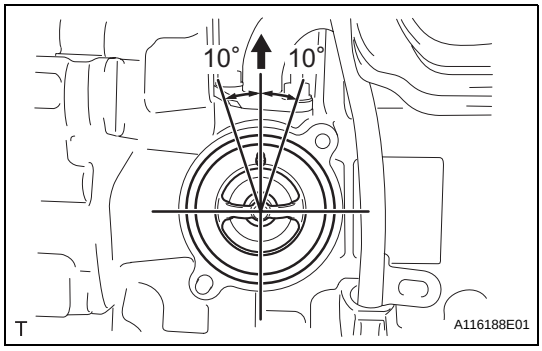
(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F))
If not fully closed, replace the thermostat.

INSTALLATION

1. INSTALL THERMOSTAT

(a) Install a new gasket onto the thermostat.

(b) Install the thermostat with the jiggle valve facing upward.
HINT:
The jiggle valve may be set within 10° on either side, as shown in the illustration.

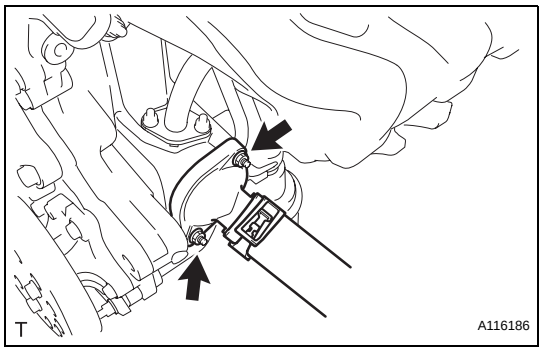


2. INSTALL WATER INLET

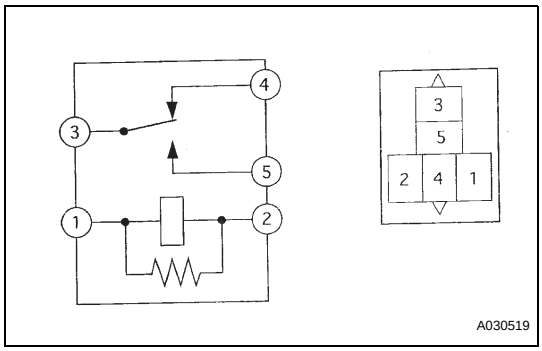
(a) Install the water inlet with radiator hose with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

3. ADD ENGINE COOLANT (See page CO-8)

4. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)



CO



COOLING FAN RELAY

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN RELAY NO. 2

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

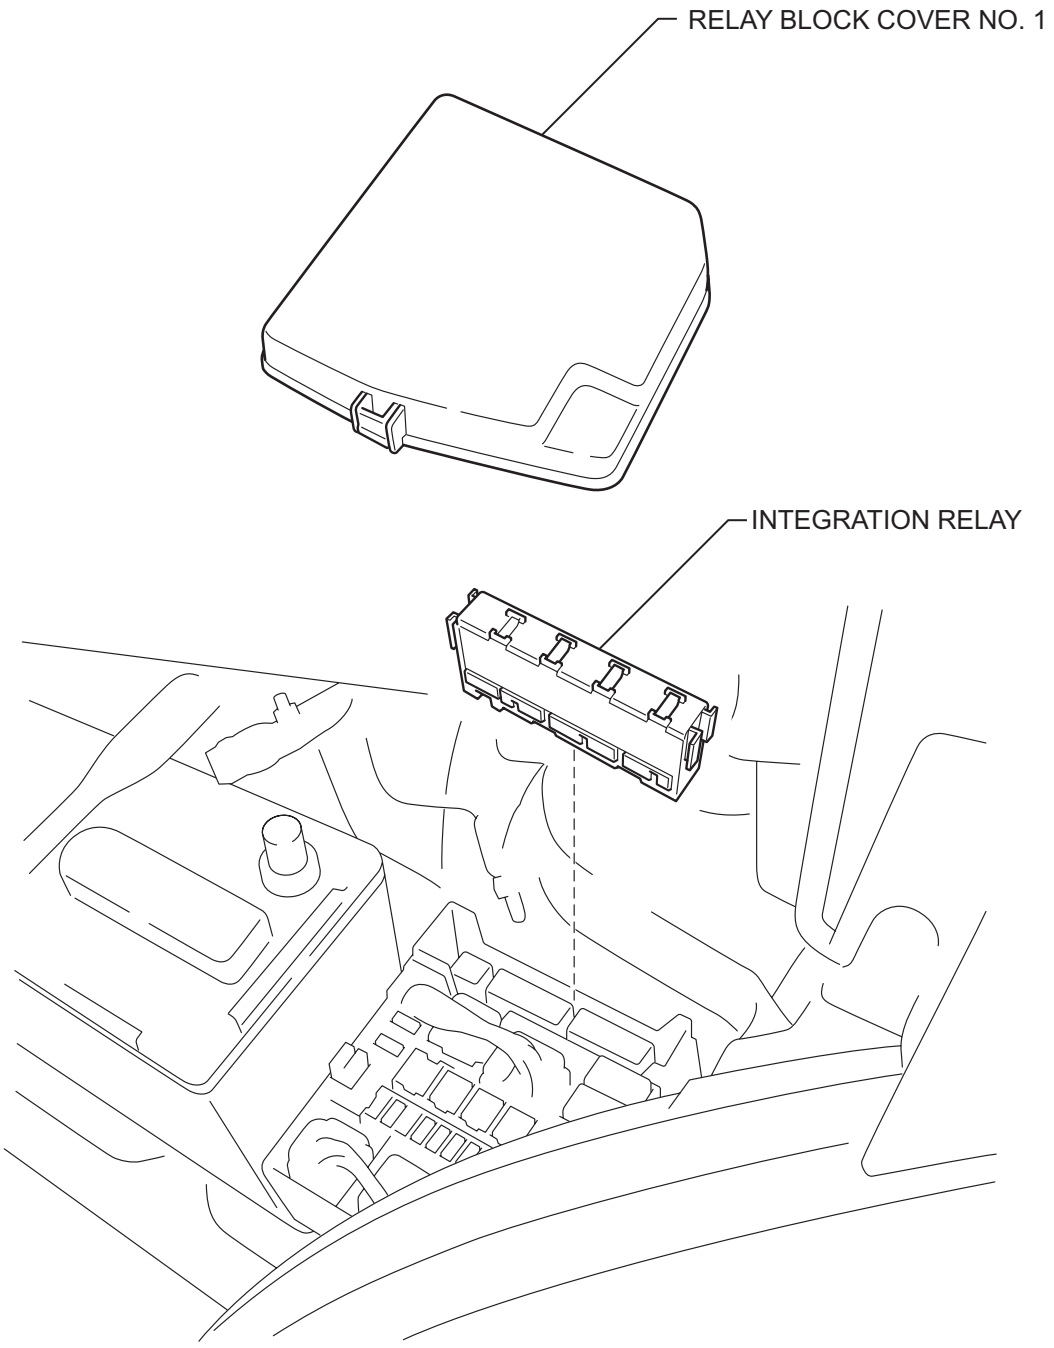
Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (When battery voltage applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

INTEGRATION RELAY

COMPONENTS

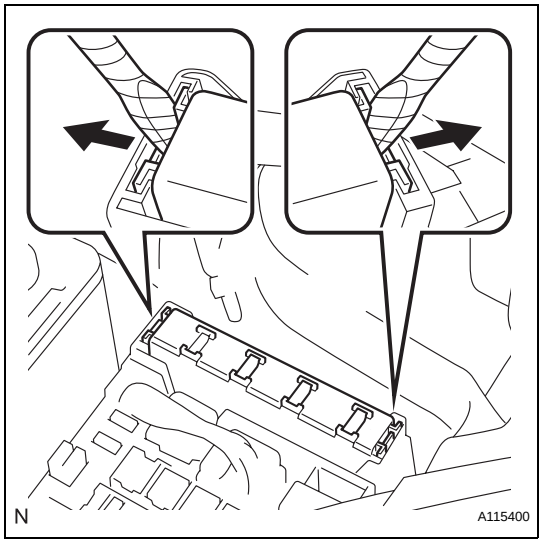


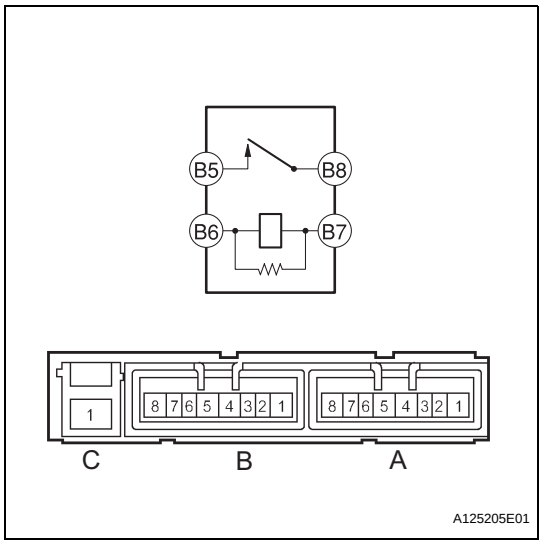
N

A115401E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE RELAY BLOCK COVER NO. 1**
3. **REMOVE INTEGRATION RELAY**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and disconnect the integration relay.
   (b) Disconnect the 3 connectors.





INSPECTION

1. **INSPECT INTEGRATION RELAY**
   (a) Inspect the cooling fan relay.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance

Tester connection	Specified condition
B5 - B8	10 kΩ or higher
B5 - B8	Below 1 Ω (Battery voltage applied between terminals B6 and B7)

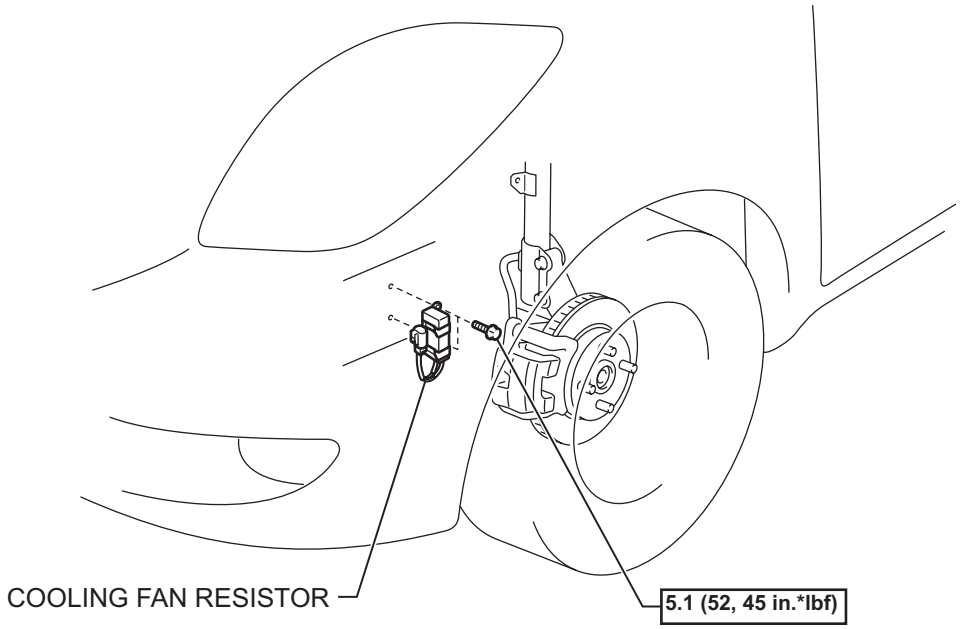
NOTICE:
While using the battery for the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

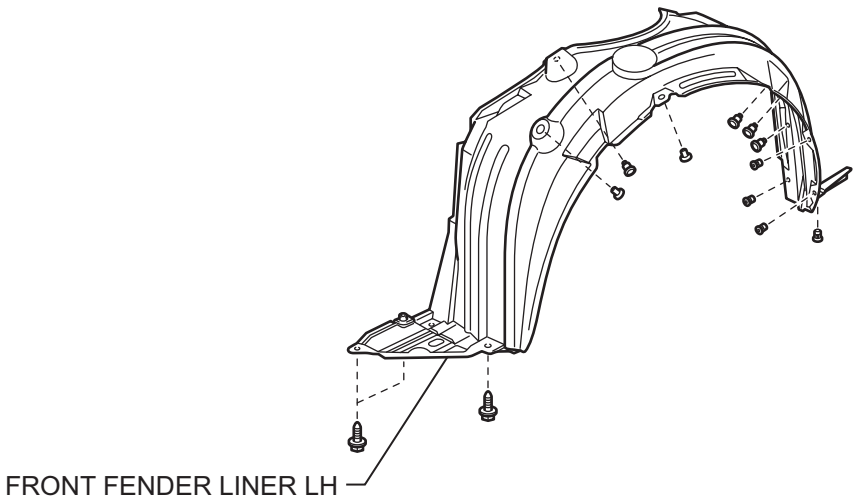
INSTALLATION

1. **INSTALL INTEGRATION RELAY**
   (a) Connect the 3 connectors.
   (b) Attach the integration relay to the engine room relay block.
2. **INSTALL RELAY BLOCK COVER NO. 1**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 4.8 in.*lbf)

COOLING FAN RESISTOR

COMPONENTS



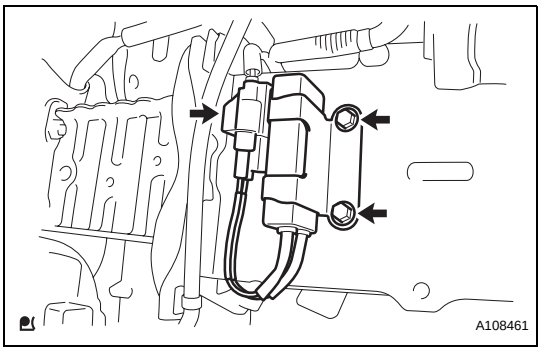


N*m (kgf*cm, ft.*lbf) : Specified torque

A108462E10

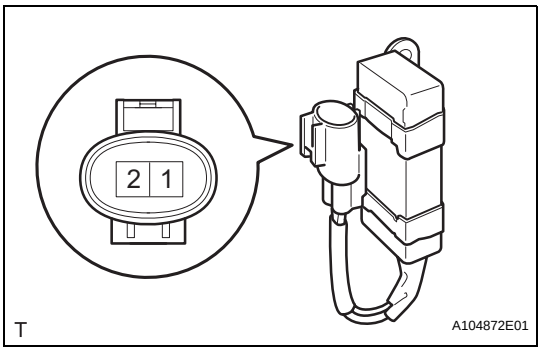
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL LH**
3. **REMOVE FRONT FENDER LINER LH (See page BC-95)**
4. **REMOVE COOLING FAN RESISTOR**
   (a) Disconnect the connector from the cooling fan resistor.
   (b) Remove the 2 bolts and the cooling fan resistor.



INSPECTION

1. **INSPECT COOLING FAN RESISTOR**
   (a) Using an ohmmeter, measure the resistance between the terminals.
   Standard resistance:
   1.17 to 1.43 Ω at 20°C (68°F)



INSTALLATION

1. **INSTALL COOLING FAN RESISTOR**
   (a) Install the cooling fan resistor with the 2 bolts.
   Torque: 5.1 N*m (52 kgf*cm, 45 in.*lbf)
   (b) Connect the cooling fan resistor connector.
2. **INSTALL FRONT FENDER LINER LH (See page BC-96)**
3. **INSTALL FRONT WHEEL LH**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Measure the valve opening pressure.

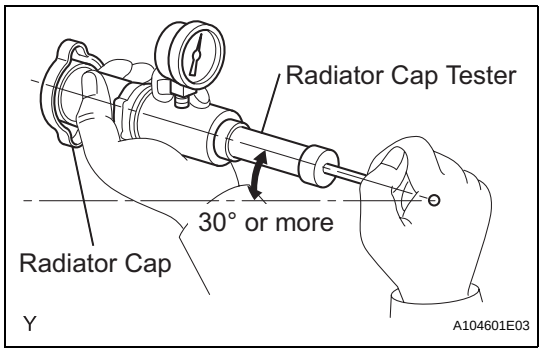
(1) If there are water stains or foreign matter on rubber packings 1, 2 or 3, clean the part(s) with water and finger scouring.

(2) Check that rubber packings 1, 2 and 3 are not deformed, cracked or swollen.

(3) Check that rubber packings 3 and 4 are not stuck together.

(4) Apply engine coolant to rubber packings 2 and 3 before using a radiator cap tester.

(5) When using the cap tester, tilt it to 30° or more above the horizontal.



(6) Pump the cap tester several times, and check the maximum pressure *1.

Pumping speed:

1 pumps every second

*1: Even if the cap cannot maintain the maximum pressure, it is not a defect.

Judgment Criteria

Item	Specified Condition
Standard valve (for brand-new cap)	**93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)**
Minimum standard valve (after using cap)	**78.5 kPa (0.8 kgf/cm^2, 11.4 psi)**

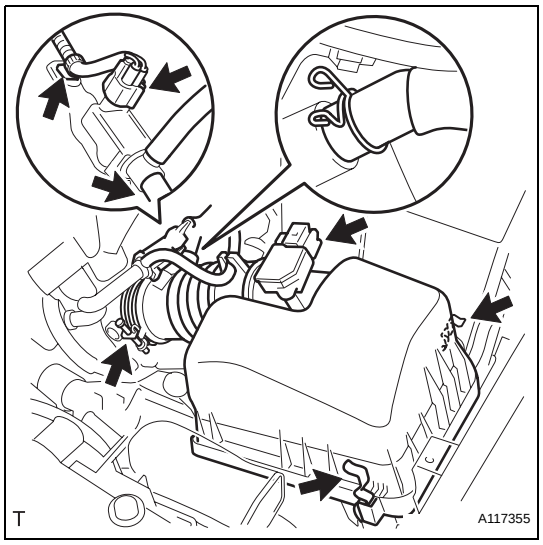
If the maximum pressure is less than the specified pressure for the minimum standard valve, replace the radiator cap sub-assembly.

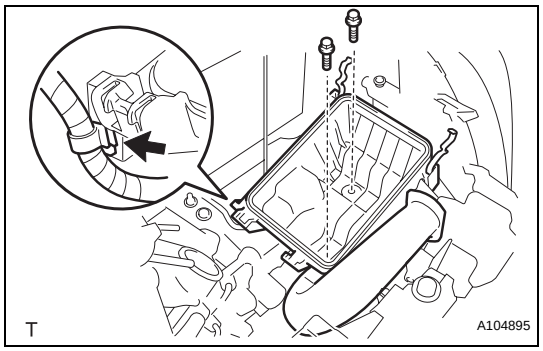
CO

REMOVAL

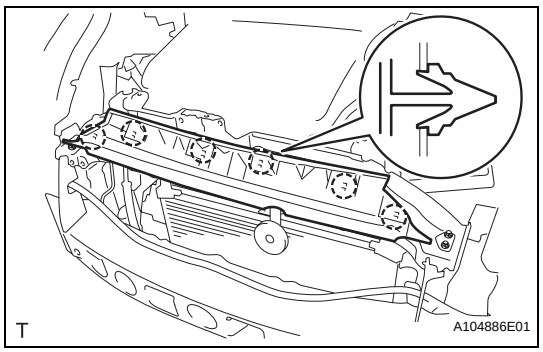
CAUTION:
Be sure that the ignition is off if you work near the electric cooling fans or radiator grille. With the ignition on the electric cooling fans may automatically start to run if the engine coolant temperature is high and/or the air conditioning is on.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-8)**
3. **REMOVE FRONT BUMPER COVER (for Hatchback) (See page ET-24)**
4. **REMOVE FRONT BUMPER COVER (for Sedan) (See page ET-6)**
5. **REMOVE AIR CLEANER ASSEMBLY**
   (a) Separate the intake air flow meter connector and the wire harness clamp.
   (b) Separate the fuel vapor feed hose and fuel vapor feed hose No. 1 from the vacuum switching valve assembly.
   (c) Separate the vacuum switching valve connector and the wire harness clamp.
   (d) Separate the ventilation hose from the air cleaner hose.
   (e) Release the air cleaner cap with air cleaner hose No. 1.
   (f) Loosen the air cleaner hose clamp on the throttle body side and remove the air cleaner cap and the air cleaner hose.
   (g) Remove the air cleaner element.
   (h) Separate the wire harness clamp from the air cleaner case.
   (i) Remove the 2 bolts and remove the air cleaner case with air cleaner inlet No. 1.

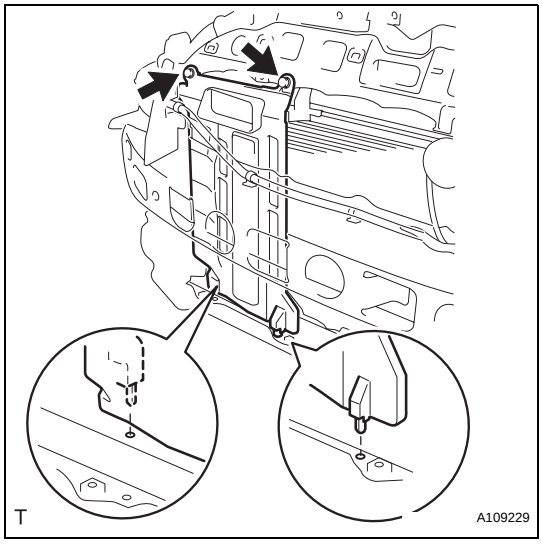




6. **REMOVE RADIATOR SUPPORT ABSORBER UPPER (for Hatchback)**
   (a) Disengage the 6 claws and remove the radiator support absorber upper.

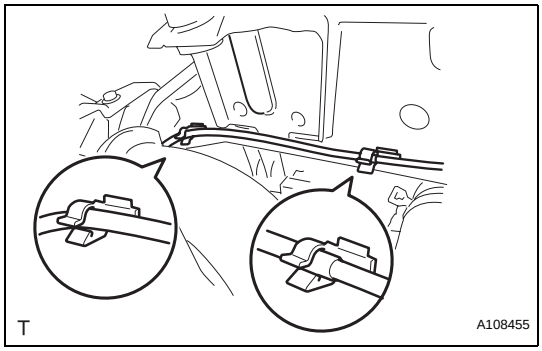


CO



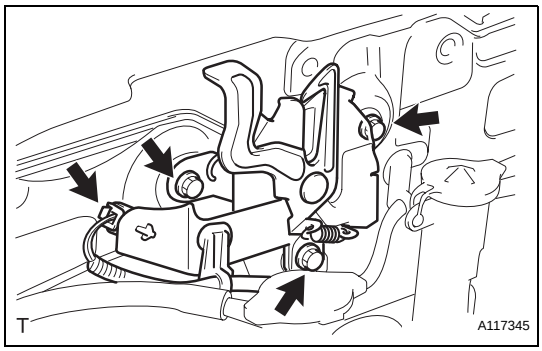
7. REMOVE NO. 1 COOLER COVER (w/ No. 1 Cooler Cover)

(a) Remove the 2 clips and No. 1 cooler cover.



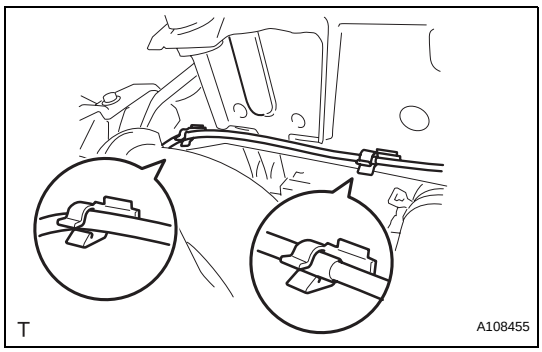
8. REMOVE HOOD LOCK ASSEMBLY (w/ Theft Deterrent System)

(a) Separate the hood lock control cable assembly from the 2 clamps.



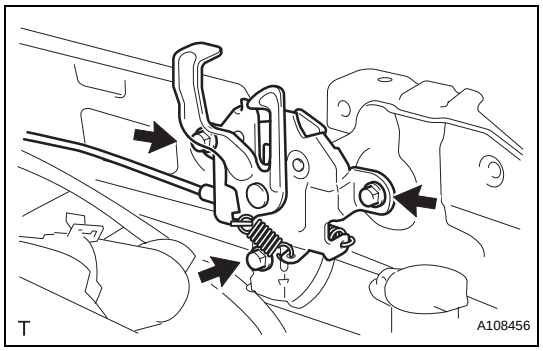
(b) Separate the engine hood courtesy switch connector.

(c) Remove the 3 bolts and remove the hood lock assembly.

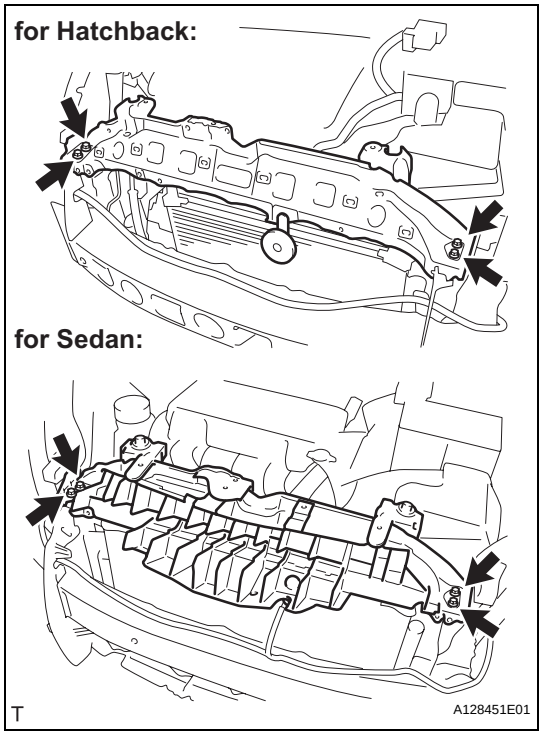


9. REMOVE HOOD LOCK ASSEMBLY (w/o Theft Deterrent System)

(a) Separate the hood lock control cable assembly from the 2 clamps.



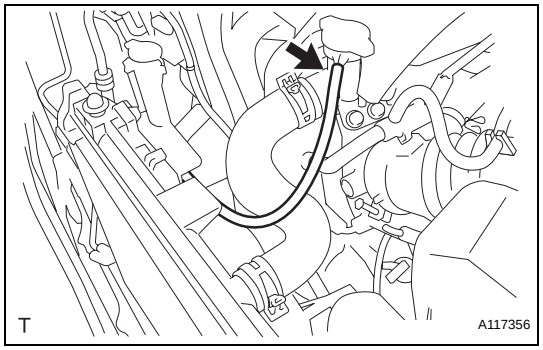
(b) Remove the 3 bolts and remove the hood lock assembly.



10. REMOVE RADIATOR SUPPORT SUB-ASSEMBLY UPPER

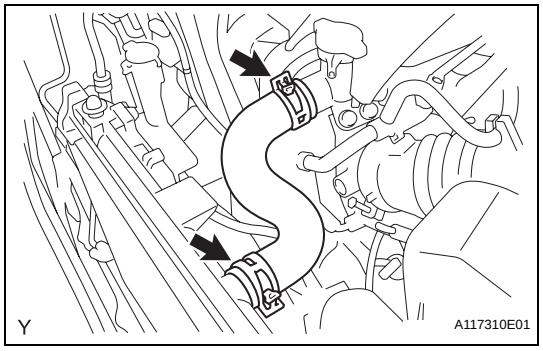
(a) Separate the horn assembly connector.

(b) Remove the 4 bolts and remove the radiator support sub-assembly upper.



11. DISCONNECT RADIATOR RESERVOIR TANK HOSE

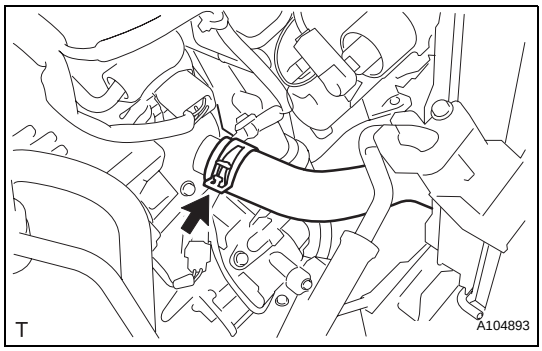
(a) Disconnect the radiator reservoir tank hose from the water filler.



12. REMOVE RADIATOR HOSE NO. 3

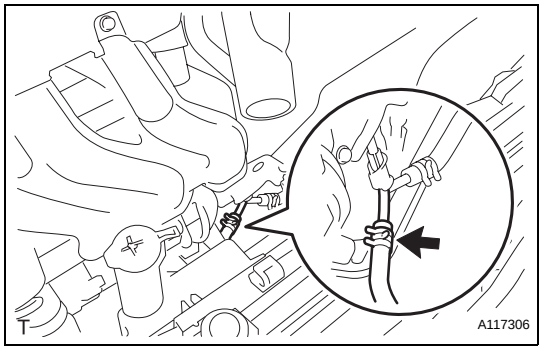
(a) Loosen the 2 clips and remove radiator hose No. 3.

CO



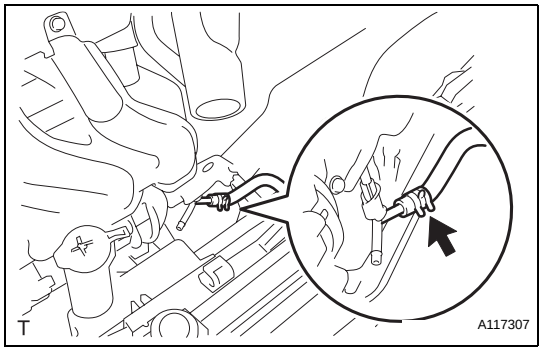
13. DISCONNECT RADIATOR HOSE NO. 2

(a) Loosen the clip and disconnect radiator hose No. 2.



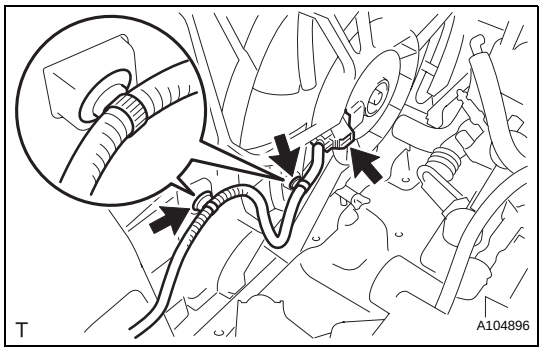
14. DISCONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)

(a) Loosen the clip and disconnect the oil cooler outlet hose.



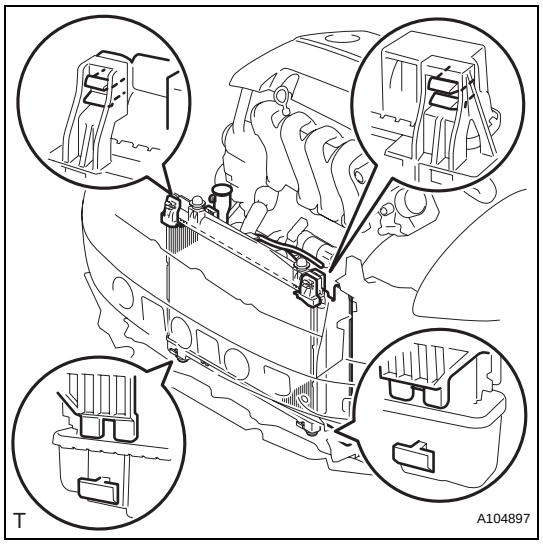
15. DISCONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Loosen the clip and disconnect the oil cooler inlet hose.

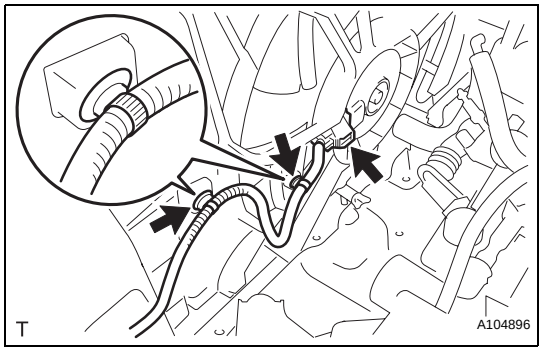


16. REMOVE RADIATOR ASSEMBLY (w/ Air Conditioning System)

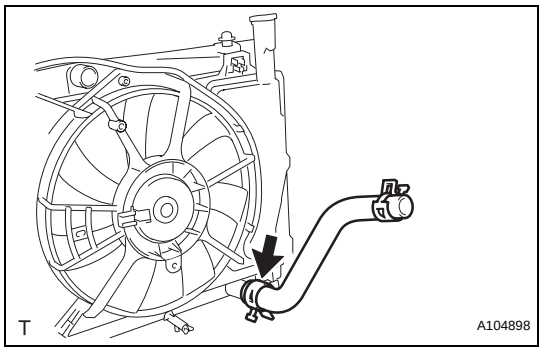
(a) Separate the cooling fan motor connector and wire harness clamps.



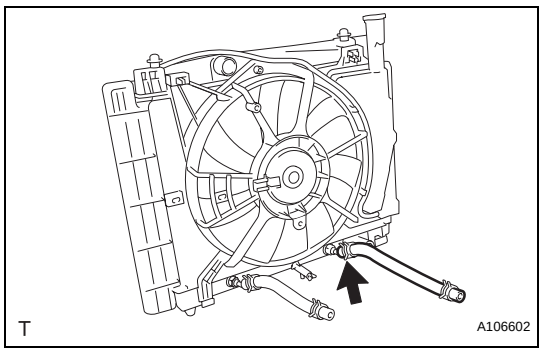
(b) Disengage the 2 claws and remove the radiator assembly from the vehicle.
NOTICE:
Do not apply excessive force to the cooler condenser assembly or piping when removing the radiator assembly.



17. REMOVE RADIATOR ASSEMBLY (w/o Air Conditioning System)
(a) Separate the cooling fan motor connector and wire harness clamps.
(b) Remove the radiator assembly from the vehicle.

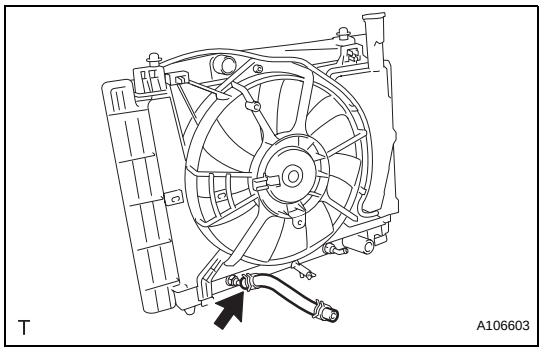


18. REMOVE RADIATOR HOSE NO. 2
(a) Loosen the clip and remove radiator hose No. 2.



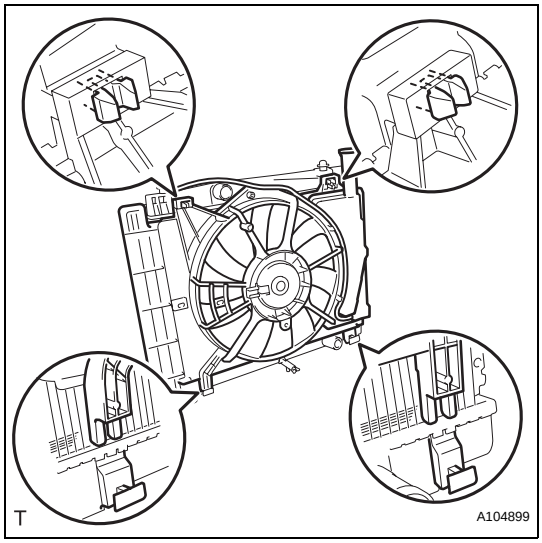
19. REMOVE OIL COOLER OUTLET HOSE (for Automatic Transaxle)
(a) Loosen the clip and remove the cooler outlet hose.

CO



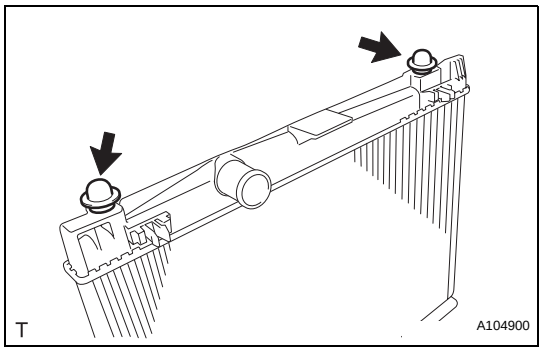
20. REMOVE OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Loosen the clip and remove the cooler inlet hose.



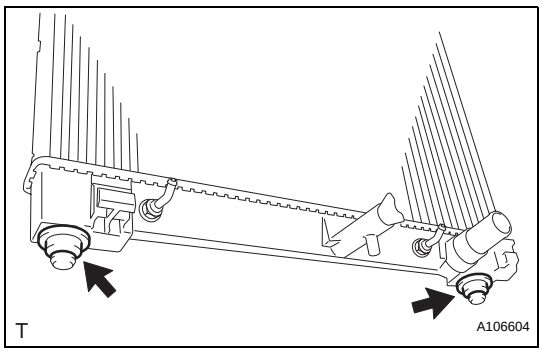
21. REMOVE FAN SHROUD

(a) Disengage the 2 claws and remove the fan shroud.



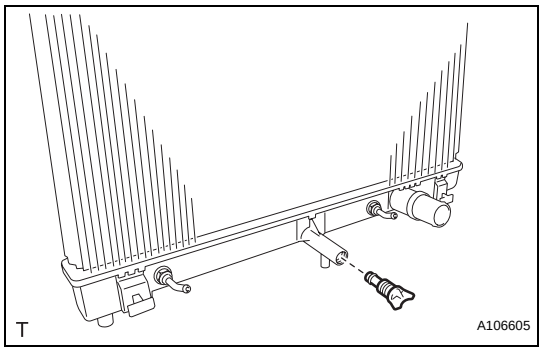
22. REMOVE RADIATOR SUPPORT CUSHION

(a) Remove the 2 radiator support cushions from the radiator assembly.



23. REMOVE RADIATOR RESERVE TANK HOSE GROMMET

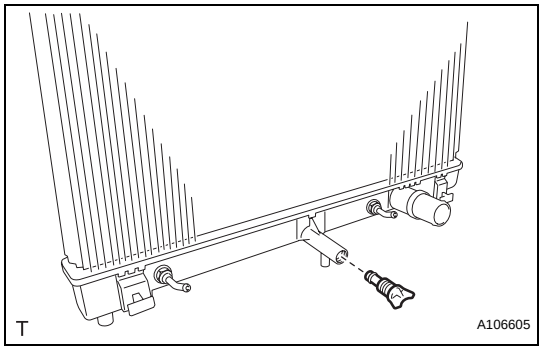
(a) Remove the 2 radiator reserve tank hose grommets from the radiator assembly.



24. REMOVE RADIATOR DRAIN COCK

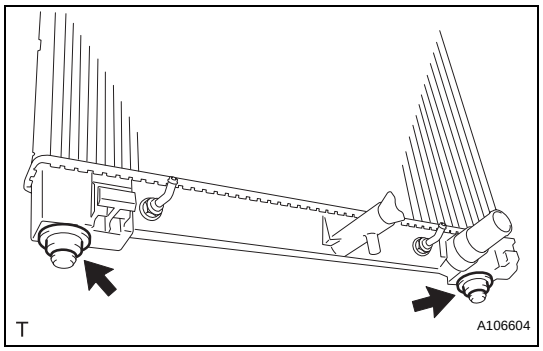
(a) Remove the radiator drain cock from the radiator assembly.

INSTALLATION



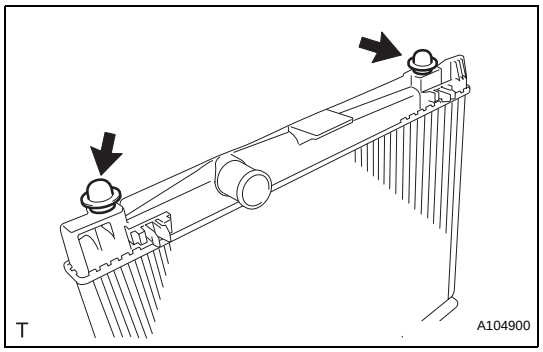
1. INSTALL RADIATOR DRAIN COCK

(a) Install the radiator drain cock onto the radiator assembly.



2. INSTALL RADIATOR RESERVE TANK HOSE GROMMET

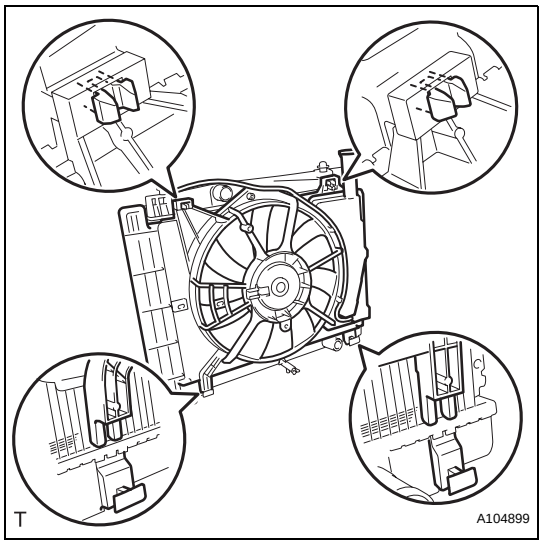
(a) Install the 2 radiator reserve tank hose grommets onto the radiator assembly.



3. INSTALL RADIATOR SUPPORT CUSHION

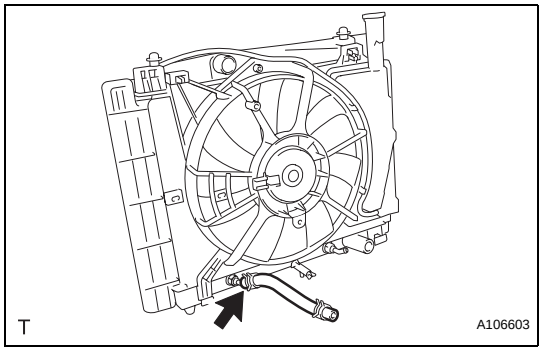
(a) Install the 2 radiator support cushions onto the radiator assembly.

CO



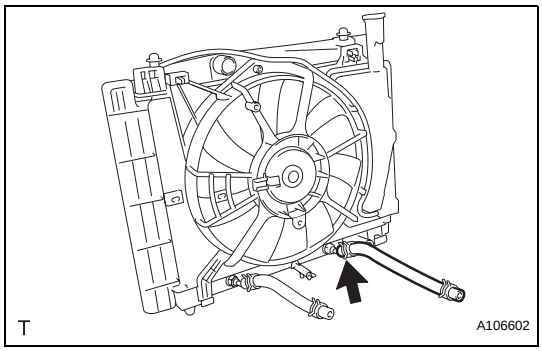
4. INSTALL FAN SHROUD

(a) Engage the 2 claws and install the fan shroud.



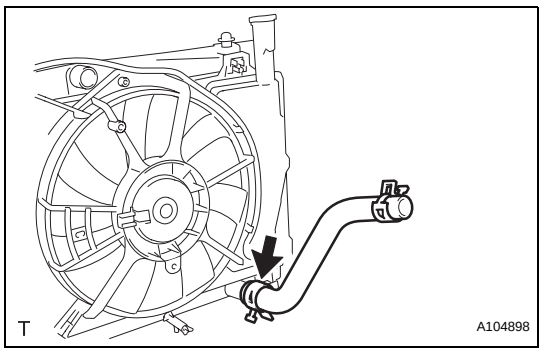
5. INSTALL OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Install the oil cooler inlet hose with the clip.



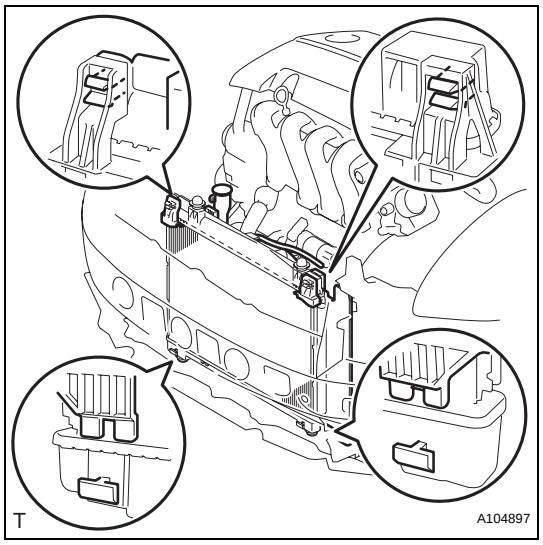
6. INSTALL OIL COOLER OUTLET HOSE (for Automatic Transaxle)

(a) Install the oil cooler outlet hose with the clip.



7. INSTALL RADIATOR HOSE NO. 2

(a) Install radiator hose No. 2 with the clip.

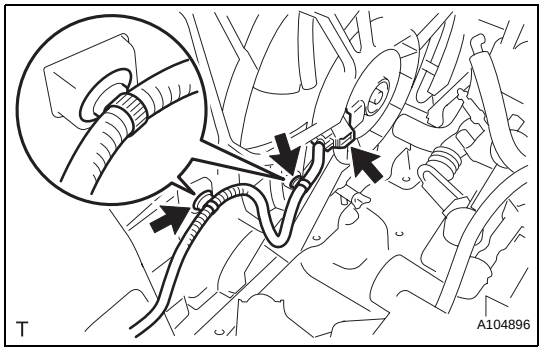


8. INSTALL RADIATOR ASSEMBLY (w/ Air Conditioning System)

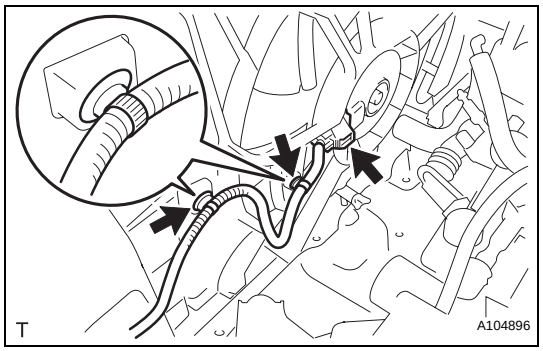
(a) Engage the 2 claws and install the radiator assembly into the vehicle.

NOTICE:

Do not apply excessive force to the cooler condenser assembly or piping when installing the radiator assembly.



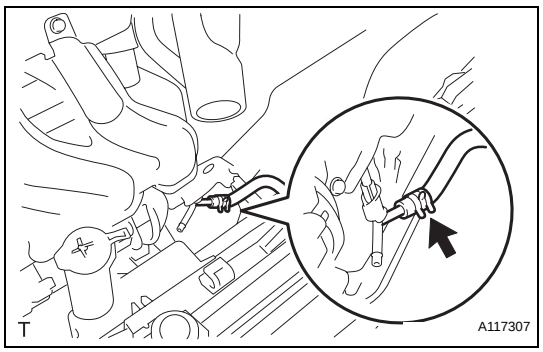
(b) Connect the cooling fan motor connector and wire harness clamps.



9. INSTALL RADIATOR ASSEMBLY (w/o Air Conditioning System)

(a) Install the radiator assembly into the vehicle.

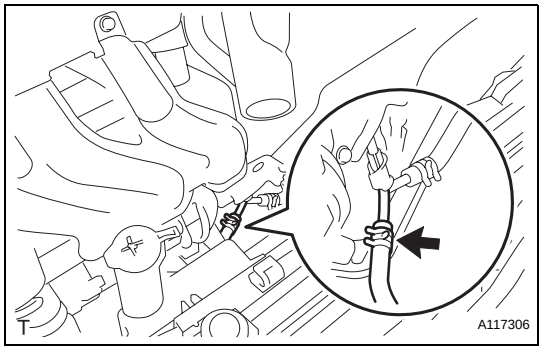
(b) Connect the cooling fan motor connector and wire harness clamps.



10. CONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)

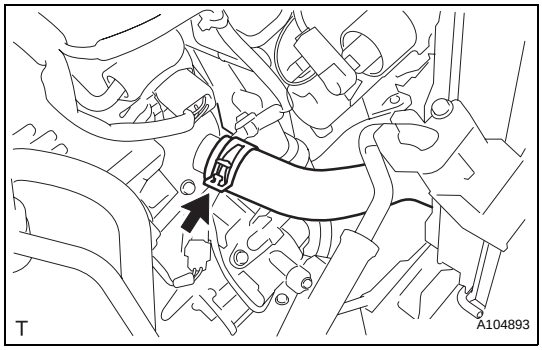
(a) Connect the oil cooler inlet hose with the clip.

CO



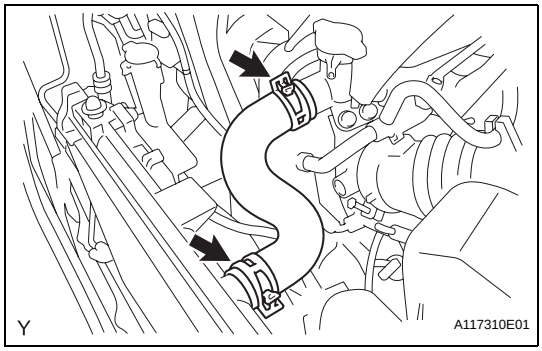
11. CONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)

(a) Connect the oil cooler outlet hose with the clip.



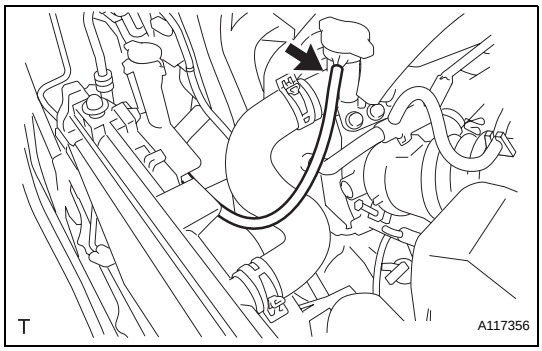
12. CONNECT RADIATOR HOSE NO. 2

(a) Connect radiator hose No. 2 with the clip.



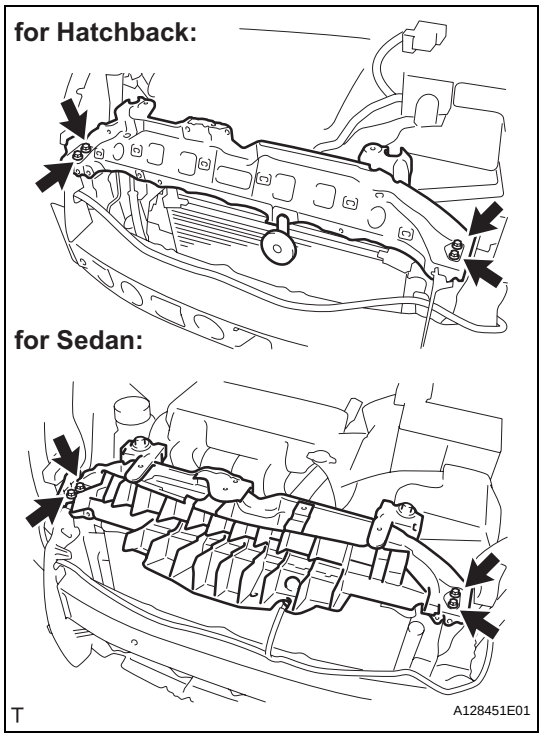
13. INSTALL RADIATOR HOSE NO. 3

(a) Install radiator hose No. 3 with the 2 clips.



14. CONNECT RADIATOR RESERVOIR TANK HOSE

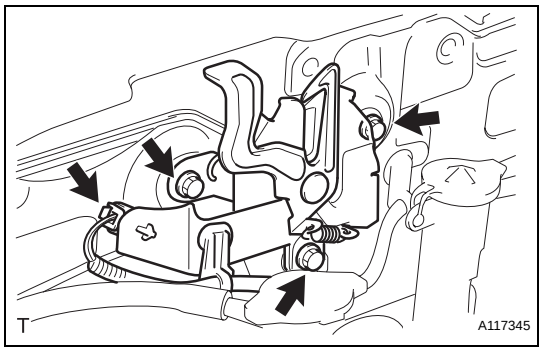
(a) Connect the radiator reservoir tank hose to the water filler.



15. INSTALL RADIATOR SUPPORT SUB-ASSEMBLY UPPER

(a) Install the radiator support sub-assembly upper with the 4 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

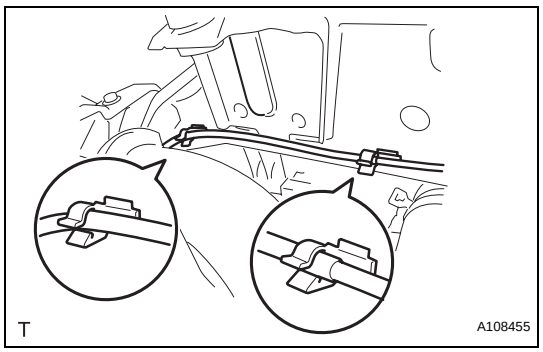
(b) Connect the horn assembly connector.



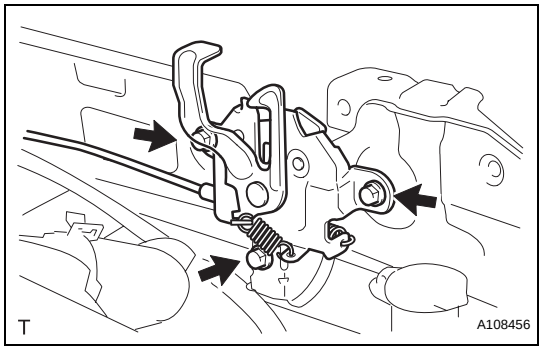
16. INSTALL HOOD LOCK ASSEMBLY (w/ Theft Deterrent System)

(a) Temporarily install the hood lock assembly with the 3 bolts.

(b) Connect the engine hood courtesy switch connector.



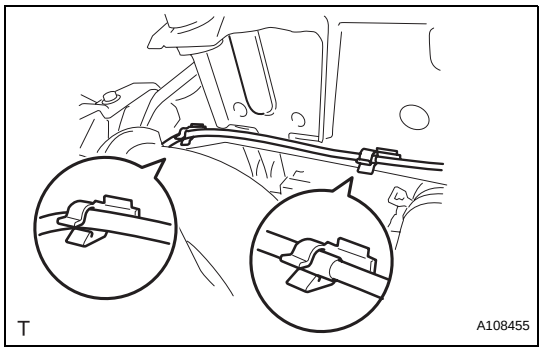
(c) Connect the hood lock control cable assembly to the 2 clamps.



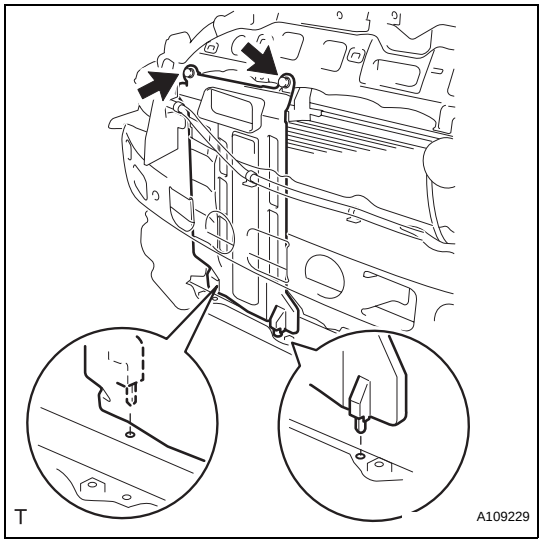
17. INSTALL HOOD LOCK ASSEMBLY (w/o Theft Deterrent System)

(a) Temporarily install the hood lock assembly with the 3 bolts.

CO

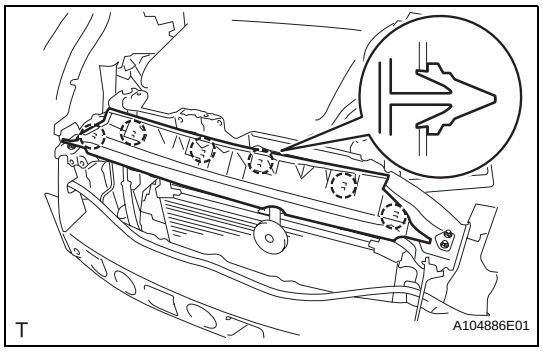


(b) Connect the hood lock control cable assembly to the 2 clamps.



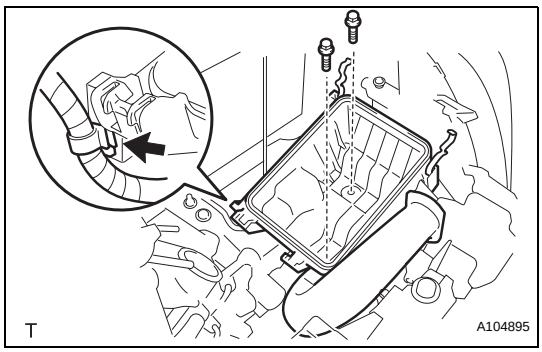
18. INSTALL NO. 1 COOLER COVER (w/ No. 1 Cooler Cover)

(a) Insert the 2 pins of No. 1 cooler cover into the radiator support LWR.
(b) Install No. 1 cooler cover with the 2 clips.



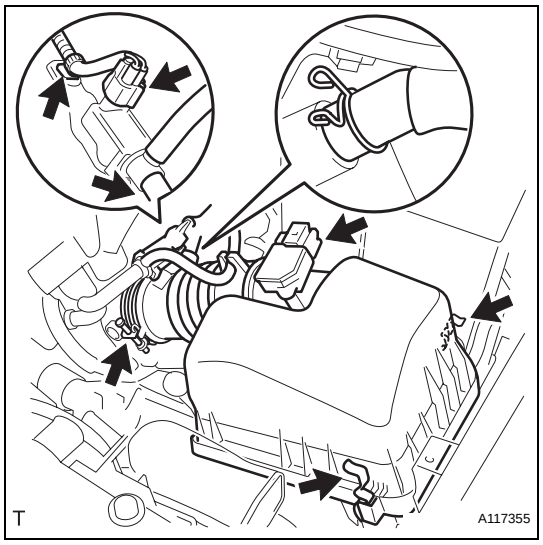
19. INSTALL RADIATOR SUPPORT ABSORBER UPPER (for Hatchback)

(a) Engage the 6 claws and install the radiator support absorber upper.



20. INSTALL AIR CLEANER ASSEMBLY

(a) Install the air cleaner case with air cleaner inlet No. 1 with the 2 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)
(b) Connect the wire harness to the air cleaner case.
(c) Install the air cleaner element.



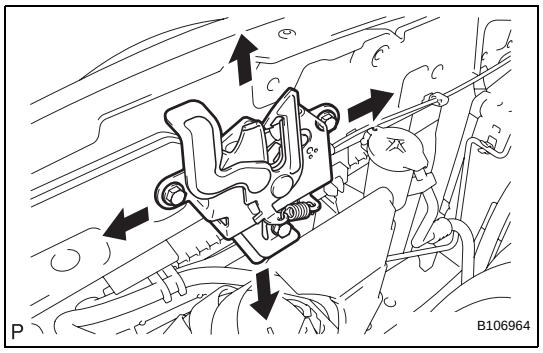
(d) Install and lock the air cleaner cap and air cleaner hose and then tighten the air cleaner hose clamp.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(e) Connect the ventilation hose to the air cleaner hose.
(f) Connect the vacuum switching valve connector and wire harness clamp.
(g) Connect the fuel vapor feed hose and fuel vapor feed hose No. 1 to the vacuum switching valve assembly.
(h) Connect the intake air flow meter connector and wire harness clamp.

21. INSTALL FRONT BUMPER COVER (for Hatchback) (See page ET-33)

22. INSTALL FRONT BUMPER COVER (for Sedan) (See page ET-16)

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

24. ADD ENGINE COOLANT (See page CO-8)



25. ADJUST HOOD LOCK ASSEMBLY
(a) Loosen the 3 bolts.
(b) Adjust the hood lock position so that the striker can enter it smoothly.
(c) Tighten the 3 bolts after the adjustment.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

26. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)

CO

LUBRICATION SYSTEM

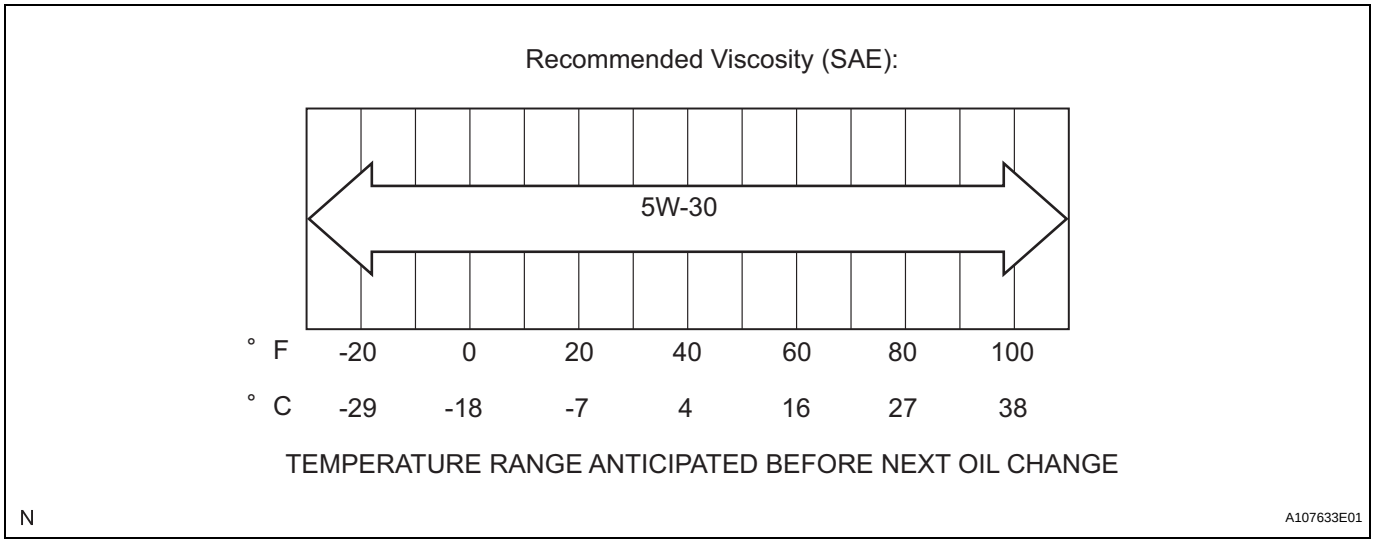
ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

(a) Warm up the engine, then stop the engine and wait for 5 minutes. Check that the engine oil level is between the low and full marks on the oil level gauge.
If the engine oil level is low, check for oil leakage and add engine oil up to the full level mark.
NOTICE:
Do not add engine oil to above the full level mark.

2. CHECK ENGINE OIL QUALITY

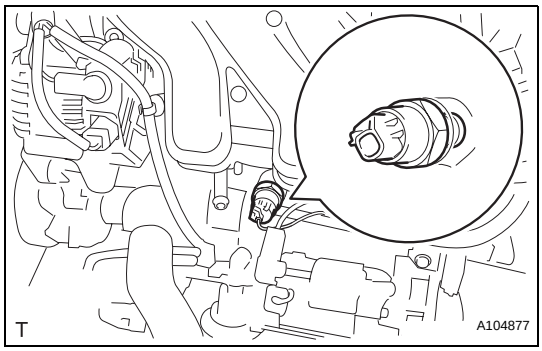
(a) Check the oil for deterioration, water intrusion, discoloration and thinning.
Oil grade:
Use ILSAC multigrade engine oil.
SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.



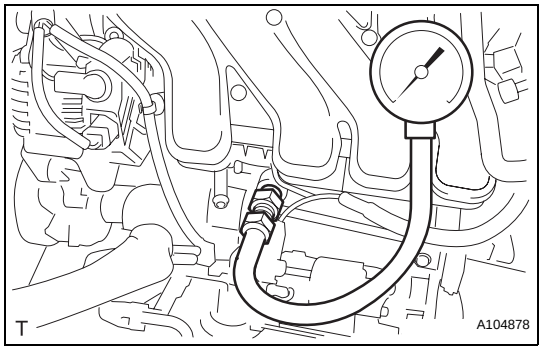
LU

3. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Remove the engine under cover LH.
(b) Remove the engine under cover RH.
(c) Disconnect the engine oil pressure switch assembly connector.



(d) Using a 24 mm deep socket wrench, remove the oil pressure switch.



4. INSTALL OIL PRESSURE GAUGE

(a) Install the oil pressure gauge.

5. CHECK OIL PRESSURE

(a) Warm up the engine.

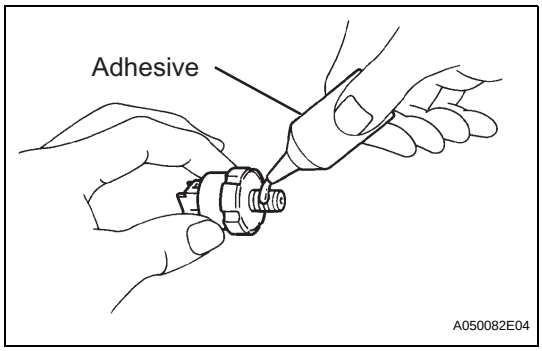
(b) Check the oil pressure.

Standard oil pressure

Engine rpm	Oil Pressure
When idling	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
At 3,000 rpm	150 to 550 kPa (1.5 to 5.6 kgf/cm^2, 22 to 80 psi) or more

6. REMOVE OIL PRESSURE GAUGE

(a) Remove the oil pressure gauge.



7. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads of the oil pressure switch.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

(b) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)

NOTICE:

Do not start the engine for at least 1 hour after the installation.

(c) Connect the oil pressure switch assembly connector.

(d) Install the engine under cover RH.

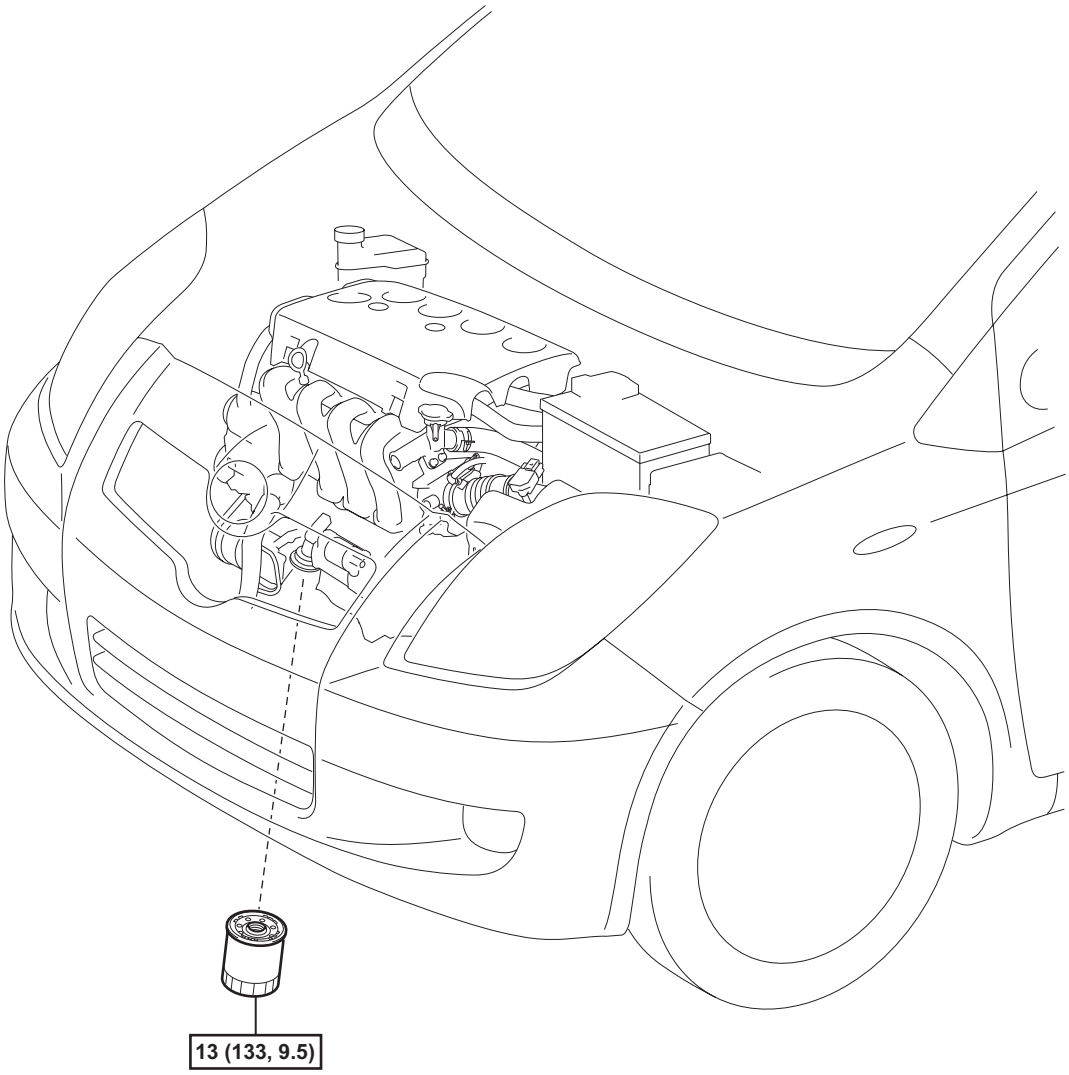
(e) Install the engine under cover LH.

8. CHECK FOR ENGINE OIL LEAKAGE

LU

OIL FILTER

COMPONENTS



● OIL FILTER SUB-ASSEMBLY

N*m (kgf*cm, ft.*lbf) : Specified torque ● Non-reusable part

T

A106606E04

REPLACEMENT

CAUTION:

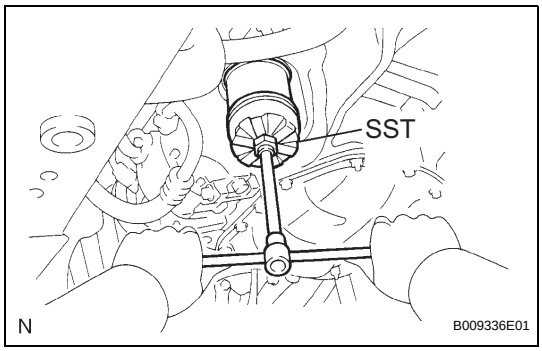
- **Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. Used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Take precautions when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves that cannot be penetrated by oil. Wash skin with soap and water, or use waterless hand cleaner, to remove any used engine oil completely. Do not use gasoline, thinner, or solvents.**
- **Dispose of used oil and used oil filters at designated disposal sites in order to preserve the environment.**

1. DRAIN ENGINE OIL

(a) Remove the oil pan drain plug and drain the engine oil.

(b) Clean the oil pan drain plug and install it with a new gasket.

Torque: 38 N*m (382 kgf*cm, 28 ft.*lbf)



2. REMOVE OIL FILTER SUB-ASSEMBLY

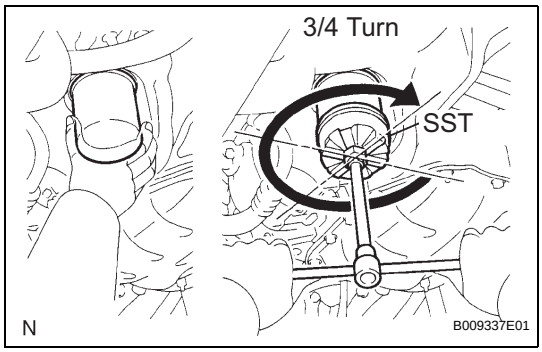
(a) Using SST, remove the oil filter.

SST 09228-06501

3. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.



(c) Gently screw the oil filter into place, then tighten it until the gasket comes into contact with the seat.

(d) Using SST, tighten the oil filter.

SST 09228-06501

(1) Depending on the available workspace, choose from the following procedures.

If enough space is available, use a torque wrench to tighten the oil filter.

Torque:

13 N*m (133 kgf*cm, 9.5 ft.*lbf)

If the available workspace is insufficient to use a torque wrench, tighten the oil filter a 3/4 turn by hand or use a common wrench.

4. ADD ENGINE OIL

(a) Fill with new engine oil.

Oil capacity

Item	Capacity
With oil filter change	3.7 liters (3.9 US qts, 3.4 Imp. qts)
Without oil filter change	3.4 liters (3.6 US qts, 3.1 Imp. qts)

Item	Capacity
Dry fill	4.1 liters (4.3 US qts, 3.8 lmp. qts)

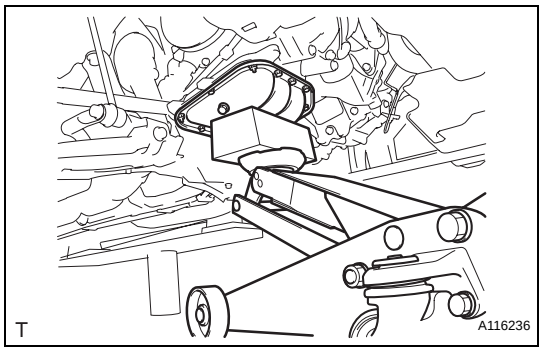
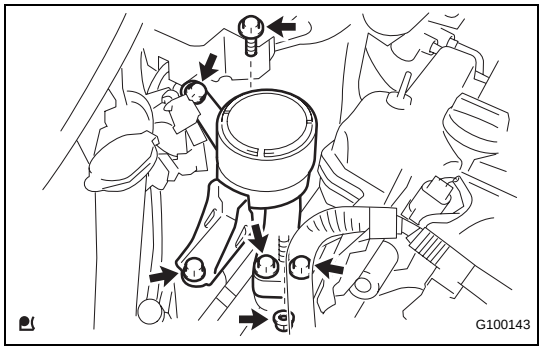
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **DRAIN ENGINE OIL**
5. **DRAIN ENGINE COOLANT (See page CO-8)**
6. **REMOVE CYLINDER HEAD COVER NO. 2 (See page IG-9)**
7. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
8. **REMOVE GENERATOR ASSEMBLY (See page CH-12)**
9. **REMOVE IGNITION COIL NO. 1 (See page IG-9)**
10. **DISCONNECT VENTILATION HOSE (See page FU-13)**
11. **DISCONNECT VENTILATION HOSE NO. 2 (See page FU-13)**
12. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-13)**
13. **REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH**

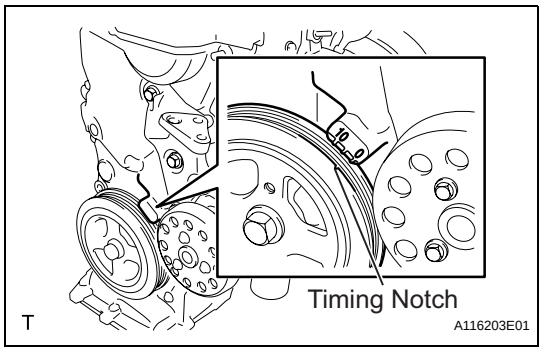


(a) Place a wooden block on a jack underneath the engine.



(b) Remove the 5 bolts and nut and remove the engine mounting insulator sub-assembly RH.

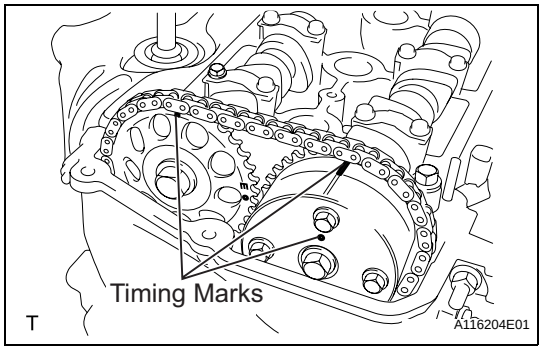
LU



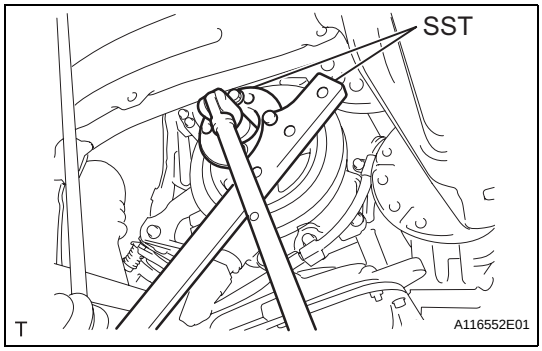
14. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

(a) Set cylinder No. 1 to TDC/compression.

(1) Turn the crankshaft damper sub-assembly, and align its timing notch with timing mark "0" of the oil pump.



(2) Check that the timing marks on the camshaft timing sprocket and the camshaft timing gear are all facing upward as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the marks as above.



(b) Using 2 SSTs, loosen the bolt while holding the crankshaft damper sub-assembly.
SST 09213-14010 (91651-60865), 09330-00021
NOTICE:
Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.

(c) Remove the SSTs and the bolt.

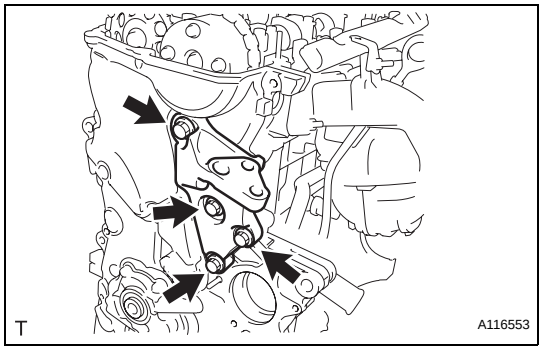
(d) Remove the crankshaft damper sub-assembly.

15. REMOVE CRANKSHAFT POSITION SENSOR (See page ES-403)

16. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-396)

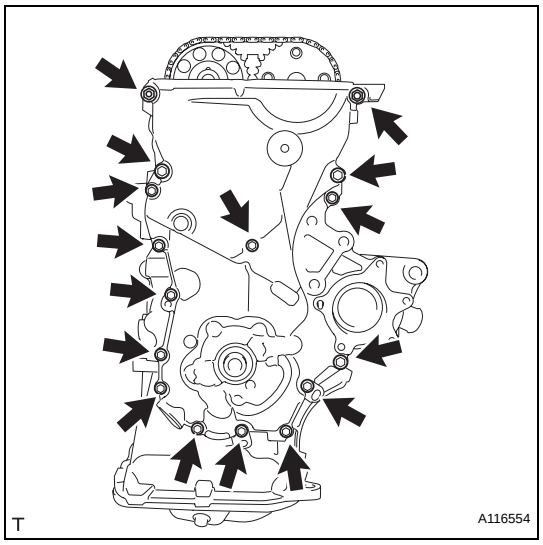
17. REMOVE WATER PUMP PULLEY (See page CO-15)

18. REMOVE WATER PUMP ASSEMBLY (See page CO-15)



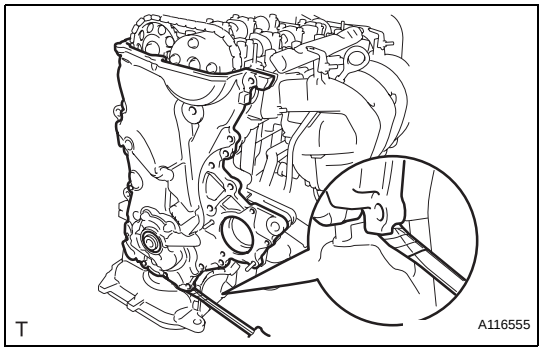
19. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and remove the transverse engine engine mounting bracket.



20. REMOVE OIL PUMP ASSEMBLY

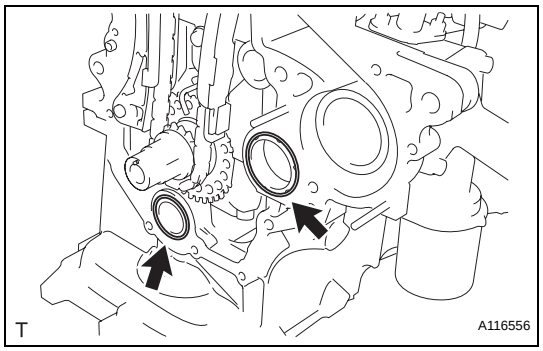
(a) Remove the 15 bolts and the nut.



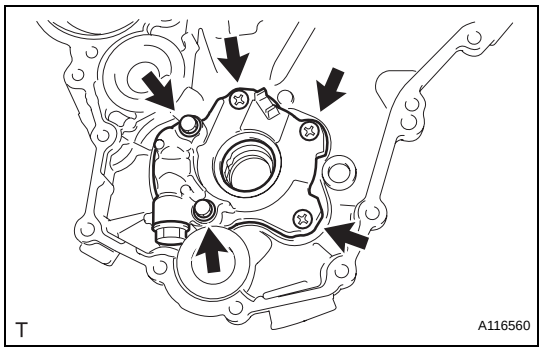
(b) Using a screwdriver with its tip wrapped in protective tape, prize the oil pump assembly to remove it.

NOTICE:

Do not damage the contact surfaces of the oil pump assembly or oil pan sub-assembly.



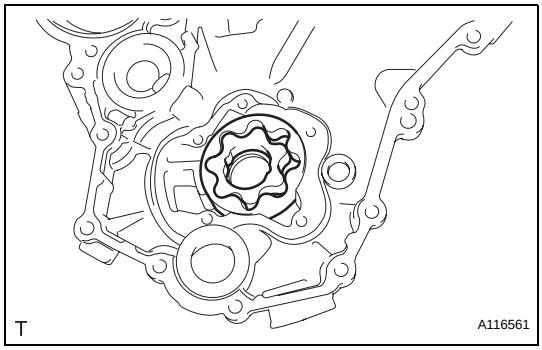
(c) Remove the 2 O-rings from the cylinder block and oil pan sub-assembly.



DISASSEMBLY

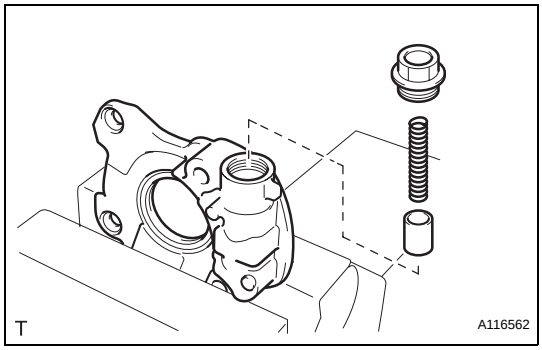
1. REMOVE OIL PUMP COVER

(a) Remove the 2 bolts and 3 screws and remove the oil pump cover.



2. REMOVE OIL PUMP ROTOR SET

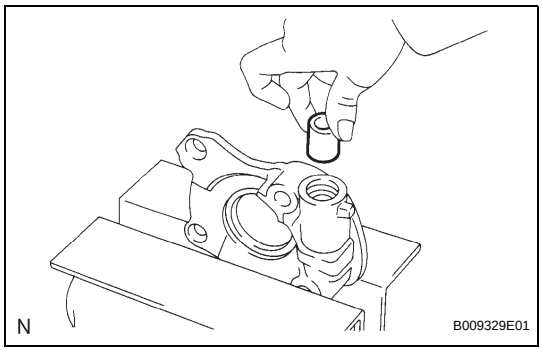
(a) Remove the oil pump rotor set.



3. REMOVE OIL PUMP RELIEF VALVE

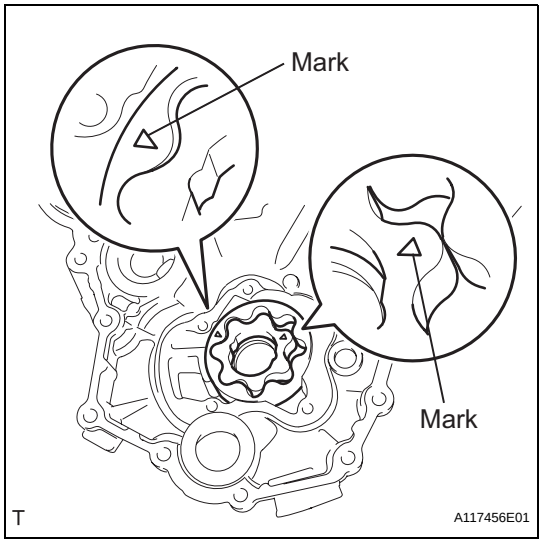
(a) Remove the oil pump relief valve plug, oil pump relief valve spring and oil pump relief valve.

INSPECTION



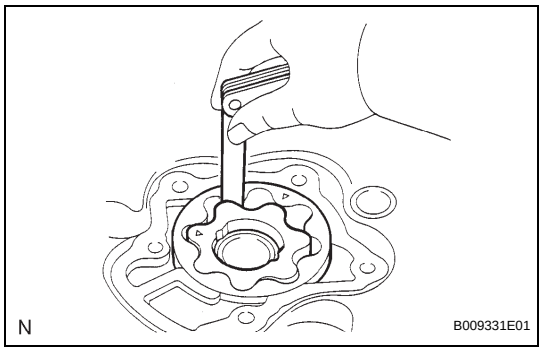
1. INSPECT OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil and check that it falls smoothly into the valve hole under its own weight.
If not, replace the oil pump relief valve. If necessary, replace the oil pump assembly.

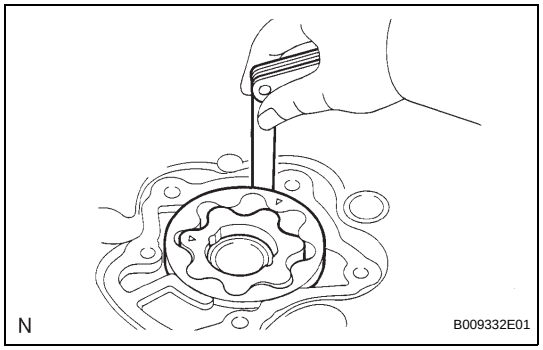


2. INSPECT OIL PUMP ROTOR SET

(a) Install the 2 rotors with both of the marks facing the oil pump cover side.

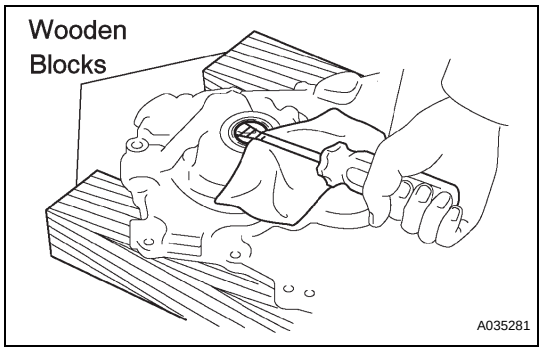


(b) Check the rotor tip clearance.
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard tip clearance:
0.060 to 0.180 mm (0.0024 to 0.0071 in.)
Maximum tip clearance:
0.28 mm (0.0110 in.)
If the tip clearance is greater than the maximum, replace the oil pump assembly.

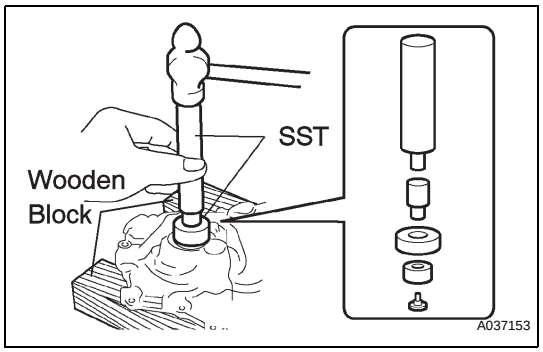


(c) Check the rotor body clearance.
(1) Using a feeler gauge, measure the clearance between the driven rotor and the oil pump body.
Standard body clearance:
0.250 to 0.325 mm (0.0098 to 0.0128 in.)
Maximum body clearance:
0.425 mm (0.0167 in.)
If the body clearance is greater than the maximum, replace the oil pump assembly.

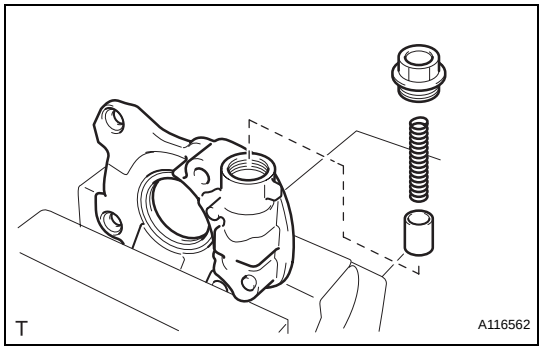
REPLACEMENT



1. REMOVE OIL PUMP SEAL
(a) Using a screwdriver with its tip wrapped in protective tape, remove the oil pump seal.

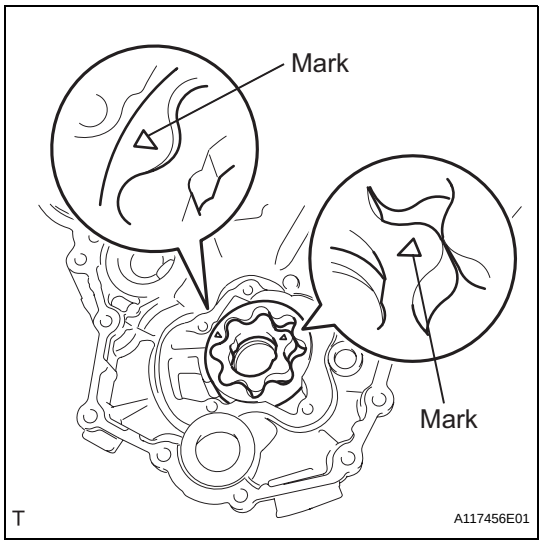


2. INSTALL OIL PUMP SEAL
(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09950-60010 (09951-00250, 09951-00410, 09952-06010), 09950-70010 (09951-07100)
NOTICE:
Do not tap the oil seal at an angle.
(b) Apply a light coat of MP grease to the oil pump seal lip.
NOTICE:
Keep the seal lip free of foreign matter.



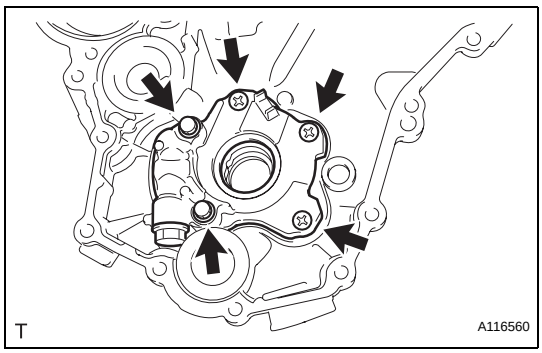
REASSEMBLY

1. INSTALL OIL PUMP RELIEF VALVE
(a) Coat the oil pump relief valve with engine oil and insert the oil pump relief valve and oil pump relief valve spring into the oil pump cover.
(b) Install the oil pump relief valve plug.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



2. INSTALL OIL PUMP ROTOR SET

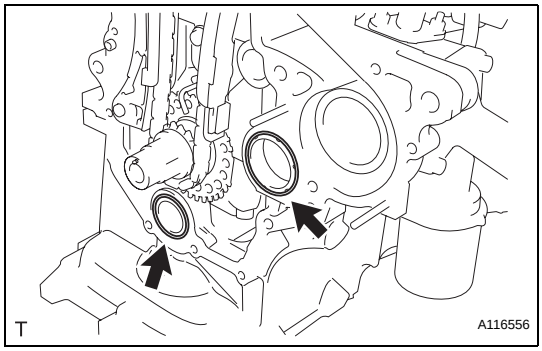
(a) Coat the oil pump rotor set with engine oil and place it into the oil pump body with the marks facing the oil pump cover side.



3. INSTALL OIL PUMP COVER

(a) Install the oil pump cover with the 2 bolts and 3 screws.

Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf) for bolt
10 N*m (105 kgf*cm, 7.6 ft.*lbf) for screw

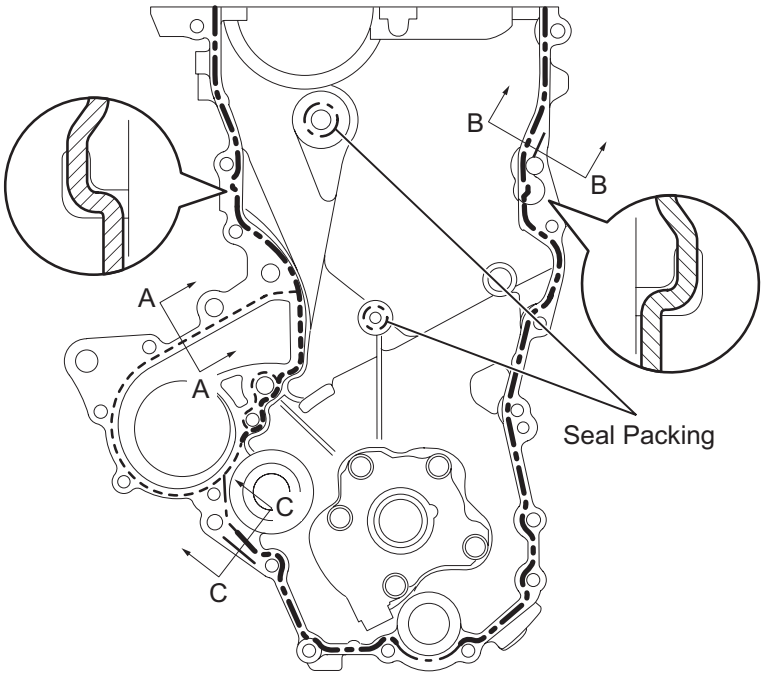


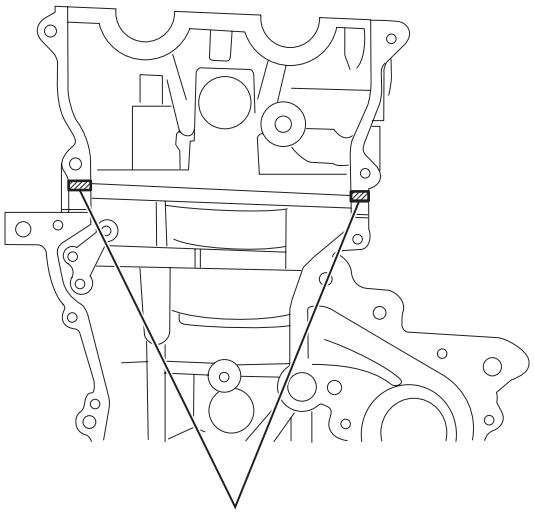
INSTALLATION

1. INSTALL OIL PUMP ASSEMBLY

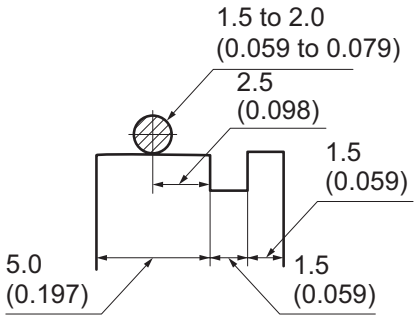
(a) Install 2 new O-rings in the 2 locations shown in the illustration.

(b) Apply seal packing to the oil pump assembly, cylinder head and cylinder block as shown in the illustration.

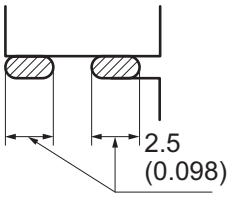


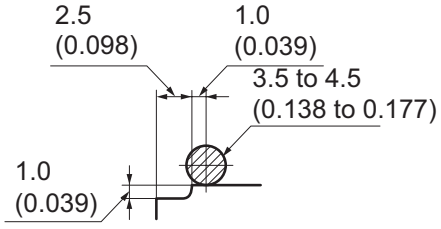


A-A



B-B, C-C





Seal Width (Other Part)

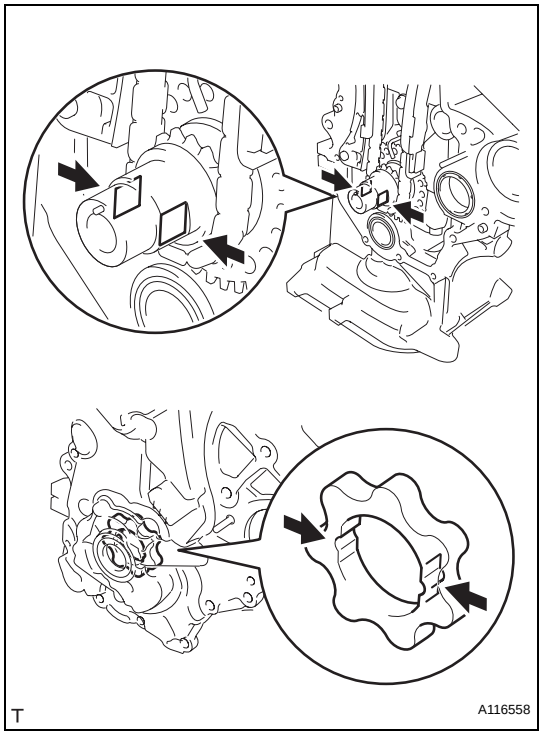
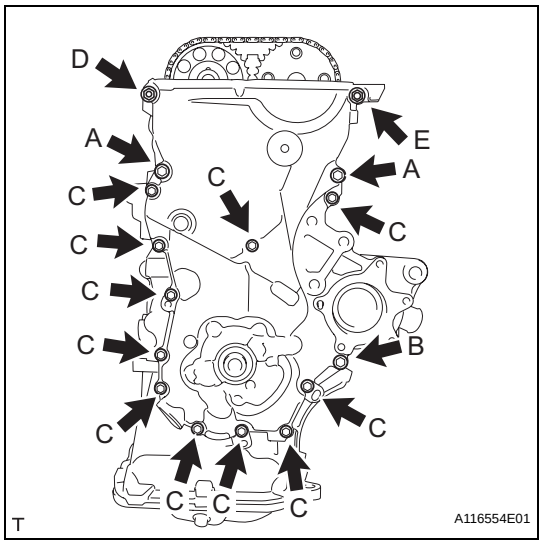
Seal packing:
Water pump part Toyota Genuine Seal Packing 1282B, Three Bond 1282B or Equivalent
Other part Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

NOTICE:
- **Remove any oil from the contact surfaces.**
- **Install the oil pump assembly within 3 minutes and tighten the bolts and nut within 15 minutes of applying the seal packing.**
- **Do not expose the seal to engine oil for at least 2 hours after the installation.**



(c) Align the keyway of the oil pump rotor with the rectangular portion of the crankshaft, and slide the oil pump into place.



(d) Install the oil pump assembly with the 15 bolts and the nut. Tighten the bolts and nut uniformly in several steps.

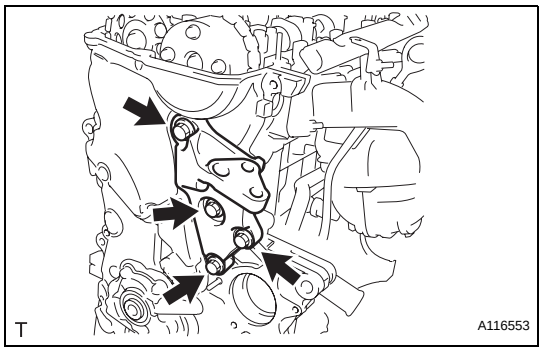
Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf) for bolt A
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt B
11 N*m (112 kgf*cm, 8.1 ft.*lbf) for bolt C
24 N*m (245 kgf*cm, 18 ft.*lbf) for nut D
24 N*m (245 kgf*cm, 18 ft.*lbf) for bolt E

NOTICE:
After installing the oil pump assembly, install the mounting bracket and water pump within 15 minutes.

HINT:
Each bolt length is as follows.
A: 30 mm (1.181 in.)
B: 35 mm (1.378 in.)
C: 20 mm (0.787 in.)

LU

E: 14 to 20 mm (0.551 to 0.787 in.), Double ended bolt



2. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET**
   (a) Install the transverse engine engine mounting bracket with the 4 bolts.
   Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

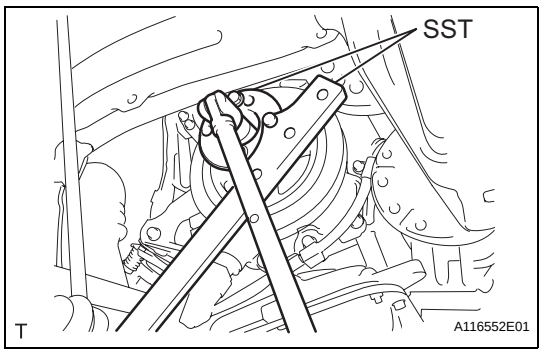
3. **INSTALL WATER PUMP ASSEMBLY (See page CO-16)**

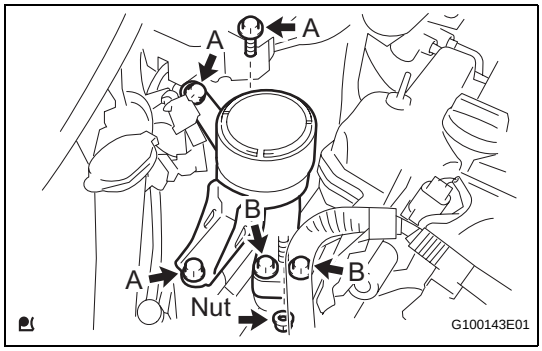
4. **INSTALL WATER PUMP PULLEY (See page CO-16)**

5. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-397)**

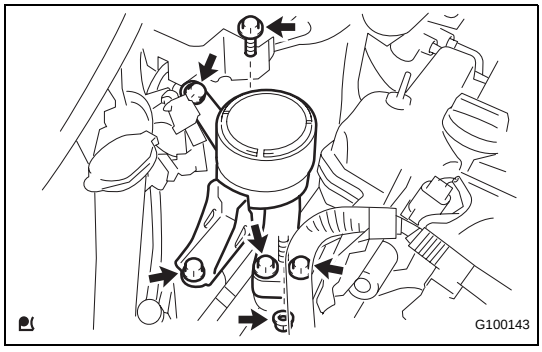
6. **INSTALL CRANKSHAFT POSITION SENSOR (See page ES-400)**

7. **INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY**
   (a) Align the pin hole in the crankshaft damper with the pin and install the crankshaft damper sub-assembly.
   (b) Provisionally install the bolt.
   (c) Using 2 SSTs, tighten the bolt while holding the crankshaft damper sub-assembly.
   SST 09213-14010 (91651-60865), 09330-00021
   Torque: 128 N*m (1,305 kgf*cm, 95 ft.*lbf)
   NOTICE:
   Check the SST installation positions when installing them, to avoid the SST fixing bolts from coming into contact with the oil pump assembly.





8. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (for Hatchback)**
   (a) Install the engine mounting insulator sub-assembly RH with the 5 bolts and nut.
   Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf) for bolt A
   52 N*m (530 kgf*cm, 38 ft.*lbf) for bolt B and nut



9. **INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH (for Sedan)**
   (a) Install the engine mounting insulator sub-assembly RH with the 5 bolts and nut.
   Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)

10. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page FU-19)**

11. **INSTALL VENTILATION HOSE NO. 2 (See page FU-20)**

12. **INSTALL VENTILATION HOSE (See page FU-20)**

13. INSTALL IGNITION COIL NO. 1 (See page IG-9)
14. INSTALL GENERATOR ASSEMBLY (See page CH-17)
15. INSTALL FAN AND GENERATOR V BELT (See page EM-7)
16. ADJUST FAN AND GENERATOR V BELT (See page EM-7)
17. INSPECT FAN AND GENERATOR V BELT (See page EM-8)
18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
19. ADD ENGINE OIL
20. ADD ENGINE COOLANT (See page CO-8)
21. CHECK ENGINE OIL LEVEL (See page LU-1)
22. CHECK FOR ENGINE OIL LEAKAGE
23. CHECK FOR ENGINE COOLANT LEAKAGE (See page CO-1)
24. INSTALL CYLINDER HEAD COVER NO. 2 (See page IG-10)
25. INSTALL ENGINE UNDER COVER RH
26. INSTALL FRONT WHEEL RH
    Torque: 103 N*m (1050 kgf*cm, 76 ft.*lbf)

ON-VEHICLE INSPECTION

HINT:
In this section, the terms Cold and Hot refer to the temperature of the coils. Cold means approximately -10 to 50 °C (14 to 122 °F). Hot means approximately 50 to 100 °C (122 to 212 °F).

1. INSPECT IGNITION COIL AND SPARK TEST

(a) Check for DTCs.

NOTICE:

If a DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

(b) Check whether sparks occur.

(1) Remove cylinder head cover No. 2 (See page IG-9).

(2) Remove the 4 ignition coils (See page IG-9).

(3) Using a 16 mm (0.63 in) plug wrench, remove the 4 spark plugs.

(4) Install the spark plug onto each ignition coil and connect the ignition coil connectors.

(5) Disconnect the 4 injector connectors.

(6) Ground the spark plugs.

(7) Check that sparks occur while the engine is being cranked.

NOTICE:

- **Ground the spark plug when checking it.**
- **Replace any ignition coils that have been subjected to any physical impact.**
- **Do not crank the engine for more than 2 seconds.**

If sparks do not occur, perform the following procedure.

(c) Perform the spark test in accordance with the following procedure.

(1) Check that the wire harness side connector of the ignition coil with igniter is securely connected.

Result

Result	Proceed to
NG	Connect securely
OK	Go to next step

(2) Perform a spark test on each ignition coil with igniter.

1. Replace the ignition coil with igniter with a functioning one.
2. Perform the spark test again.

Result

Result	Proceed to
OK	Replace ignition coil with igniter
NG	Go to next step

(3) Check that the power is supplied to the ignition coil with igniter.
1. Turn the engine switch ON.
2. Check that the battery voltage is applied to the positive (+) terminal of the ignition coil (See page ES-172).

Result

Result	Proceed to
NG	Check wiring between ignition switch and ignition coil with igniter
OK	Go to next step

(4) Check the resistance of the camshaft position sensor.

Standard resistance

Temperature	Specified Condition
Cold	1,630 to 2,740 Ω
Hot	2,065 to 3,225 Ω

Result

Result	Proceed to
NG	Replace camshaft position sensor
OK	Go to next step

(5) Check the resistance of the crankshaft position sensor.

Standard resistance

Temperature	Specified Condition
Cold	985 to 1,600 Ω
Hot	1,265 to 1,890 Ω

Result

Result	Proceed to
NG	Replace crankshaft position sensor
OK	Go to next step

(6) Check the IGT from the ECM (See page ES-172).

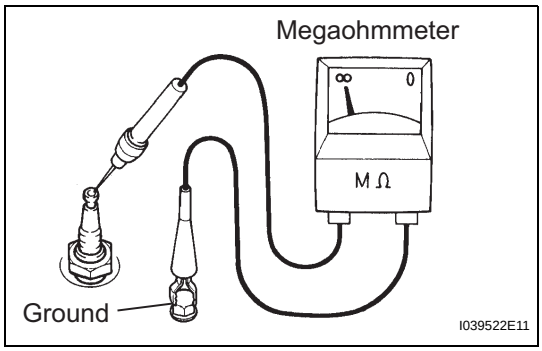
Result

Result	Proceed to
NG	Check ECM
OK	Repair wiring between ignition coil and ECM

(d) Connect the 4 injector connectors.
(e) Using a 16 mm (0.63 in) plug wrench, install the 4 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
(f) Install the 4 ignition coils (See page IG-9).
(g) Install cylinder head cover No. 2 (See page IG-10).

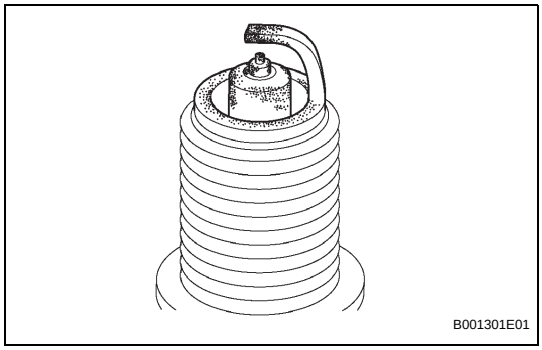
2. INSPECT SPARK PLUG

NOTICE:
Do not use a wire brush for cleaning.



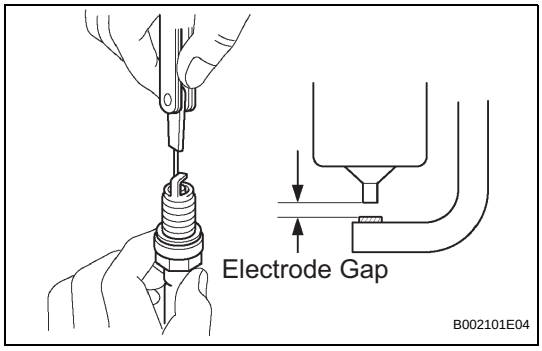
(a) Check the electrode.
(1) Using a megaohmmeter, measure the insulation resistance.
Standard resistance:
10 MΩ or more
HINT:
- If the result is not as specified, clean the spark plug with a spark plug cleaner and measure the resistance again.
- If a megaohmmeter is not available, perform the following simple inspection instead.

(b) Alternative inspection method:
(1) Quickly accelerate the engine to 4,000 rpm 5 times.
(2) Remove the spark plug.
(3) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

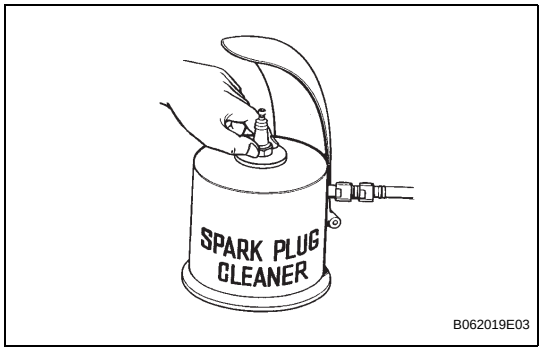


(c) Check the spark plug for any damage to its thread and insulator.
If there is damage, replace the spark plug.
Recommended spark plug

Manufacturer	Product
DENSO	SK16R11
NGK	IFR5A11



(d) Check the spark plug electrode gap.
Maximum electrode gap for used spark plug:
1.3 mm (0.051 in.)
If the gap is greater than the maximum, replace the spark plug.
Electrode gap for new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)



(e) Clean the spark plug.
If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.
Air pressure:
588 kPa (6 kgf/cm^2, 85 psi)
Duration:
20 seconds or less
HINT:
Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

N*m (kgf*cm, ft.*lbf) : Specified torque

T

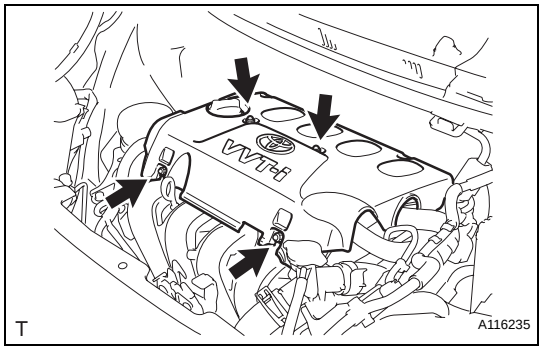
A115486E01

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMIANL

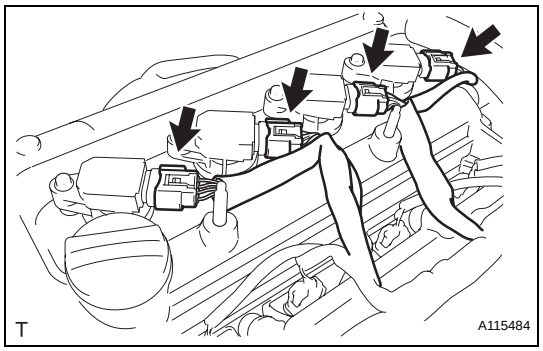
2. REMOVE CYLINDER HEAD COVER NO. 2

(a) Remove the 4 nuts and cylinder head cover No. 2.

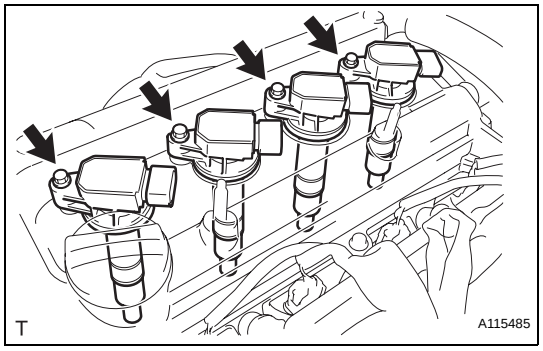


3. REMOVE IGNITION COIL NO. 1

(a) Disconnect the 4 ignition coil connectors.



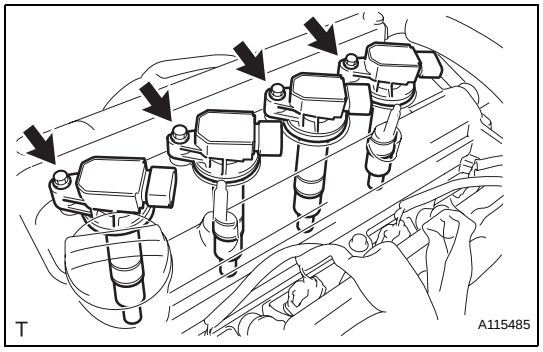
(b) Remove the 4 bolts and 4 ignition coils.



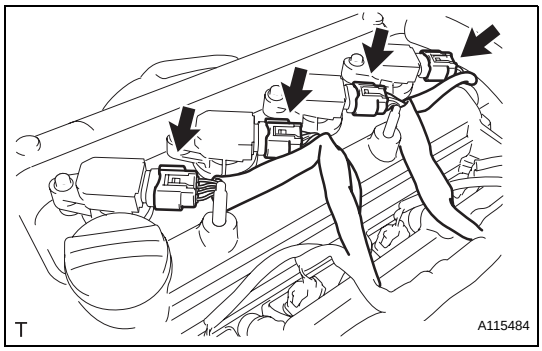
INSTALLATION

1. INSTALL IGNITION COIL NO. 1

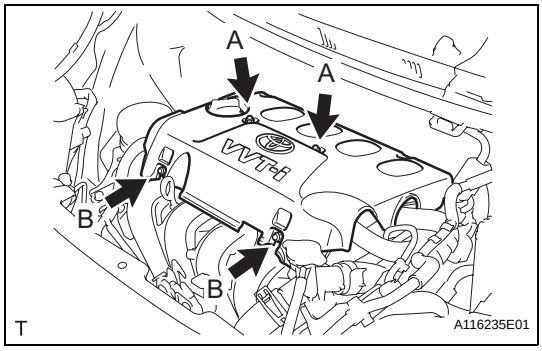
(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



IG



(b) Connect the 4 ignition coil connectors.



2. INSTALL CYLINDER HEAD COVER NO. 2

(a) Tighten the 2 A nuts, then the 2 B nuts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ST

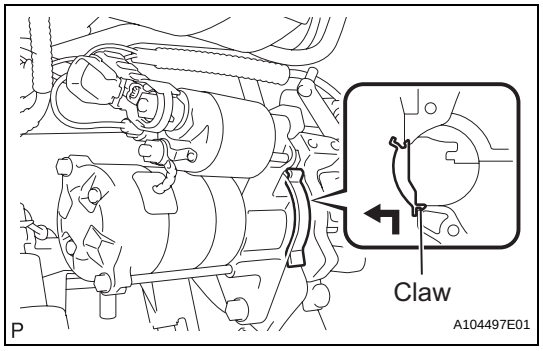
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

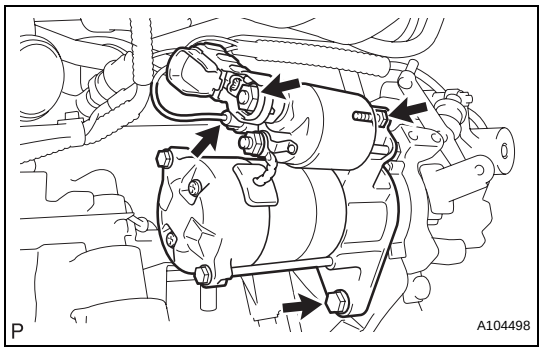
2. REMOVE FLYWHEEL HOUSING SIDE COVER

(a) Disengage the claw while pushing it upward and remove the flywheel housing side cover.



3. REMOVE STARTER ASSEMBLY

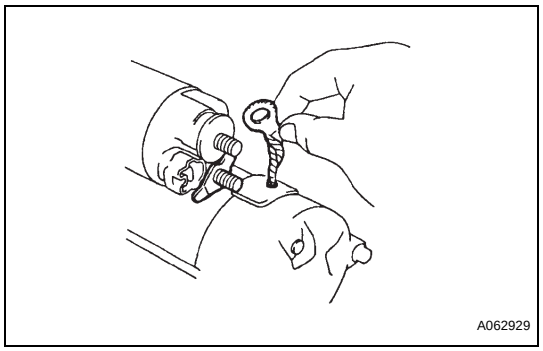
(a) Remove the terminal cap.
(b) Remove the nut and remove terminal 30.
(c) Disconnect the connector.
(d) Remove the 2 bolts and remove the starter assembly.



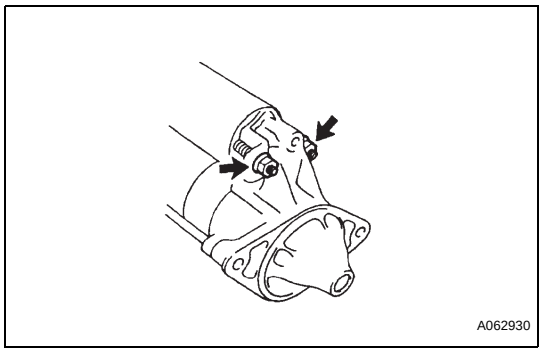
DISASSEMBLY

1. REMOVE MAGNET STARTER SWITCH ASSEMBLY

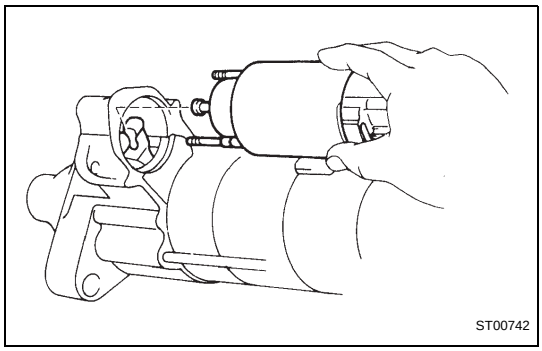
(a) Remove the nut, and disconnect the lead wire from the magnet starter switch assembly terminal.



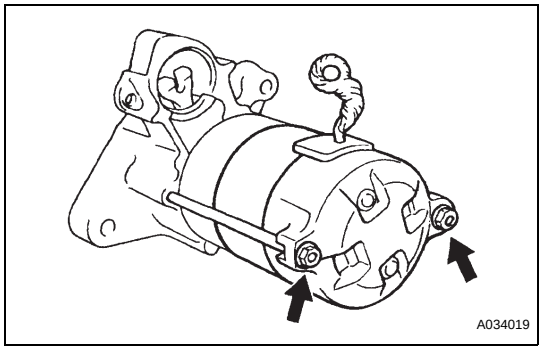
(b) Loosen the 2 nuts holding the magnet starter switch assembly onto the starter housing.



ST

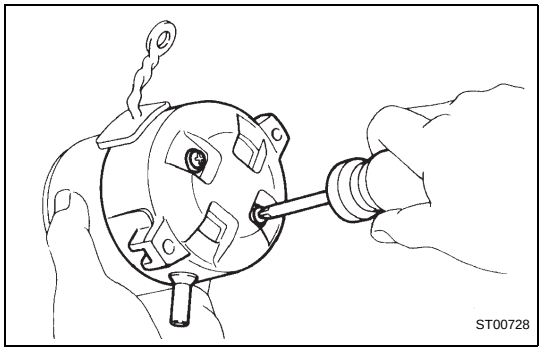


(c) Pull the magnet starter switch assembly and while lifting the front part of the magnet starter switch assembly, release the plunger hook from the driver lever, then remove the magnet starter switch assembly.



2. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the 2 through bolts, and pull out the field frame together with the armature.

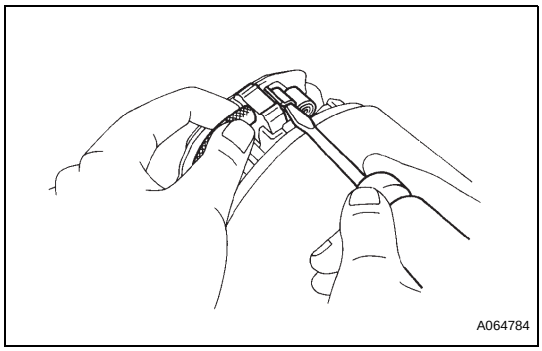


3. REMOVE STARTER BRUSH HOLDER ASSEMBLY

(a) Remove the 2 screws and the commutator end frame, and hold down the lead wire while releasing the commutator end frame.

NOTICE:

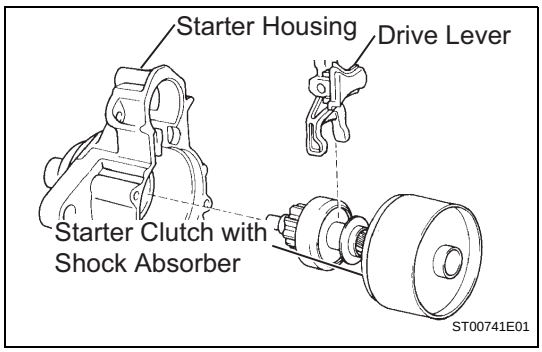
To avoid interference between the brush holder and the dust protector, pull the commutator end frame away at an angle.



(b) Using a screwdriver, hold the spring back and disconnect the brush holder.

(c) Disconnect the 4 brushes, and remove the brush holder.

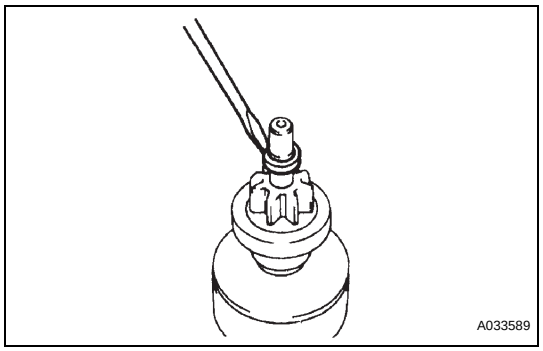
4. REMOVE STARTER ARMATURE ASSEMBLY



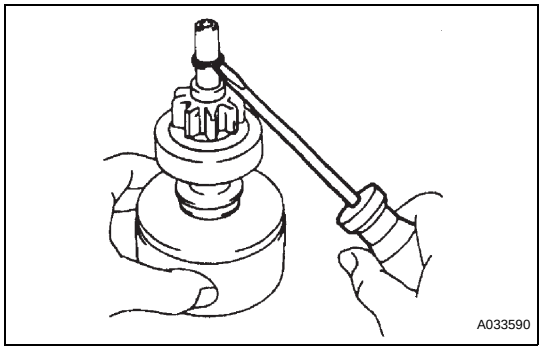
5. REMOVE STARTER CLUTCH SUB-ASSEMBLY

(a) Remove the drive lever and starter clutch with shock absorber from starter housing.

ST



(b) Using a screwdriver, tap in the stop collar toward the starter clutch.



(c) Using a screwdriver, pry off the snap ring.
(d) Remove the stop collar and starter clutch from the planetary shaft.

INSPECTION

1. INSPECT STARTER ASSEMBLY

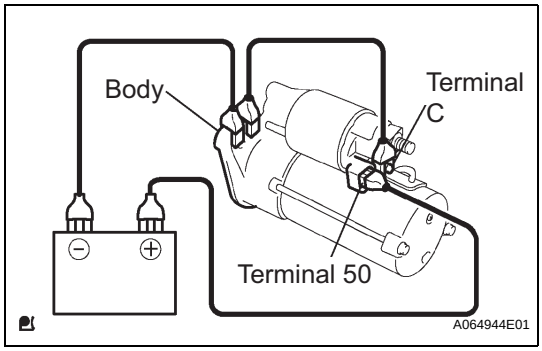
NOTICE:

Perform each of the following tests within 3 to 5 seconds.

(a) Perform pull-in test.

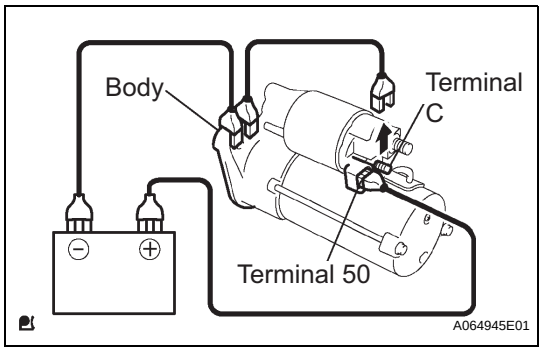
(1) Disconnect the field coil lead wire from terminal C.

(2) Connect the battery to the starter magnetic switch as shown in the illustration and check that the pinion gear is extended.



(b) Perform holding test.

(1) Check that the pinion gear does not return inward after the cable of terminal C is disconnected.



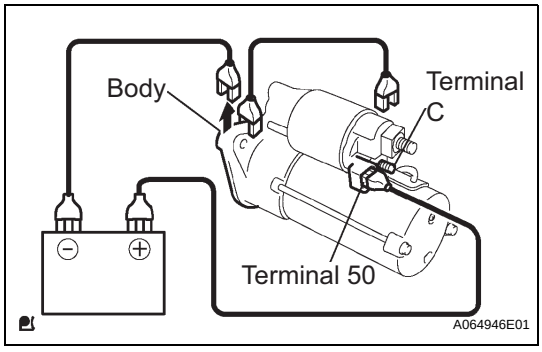
(c) Inspect the clutch pinion gear return.

(1) Disconnect the negative (-) lead from the starter body and move the pinion gear toward the armature.

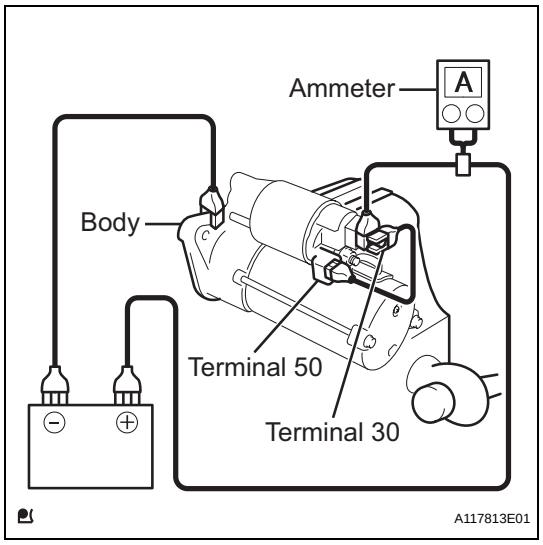
(d) Perform the operation test without load.

(1) Connect the field coil lead wire to terminal C.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

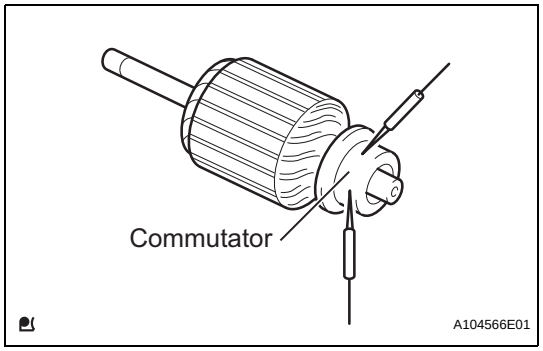
(2) Clamp the starter in a vise.



ST

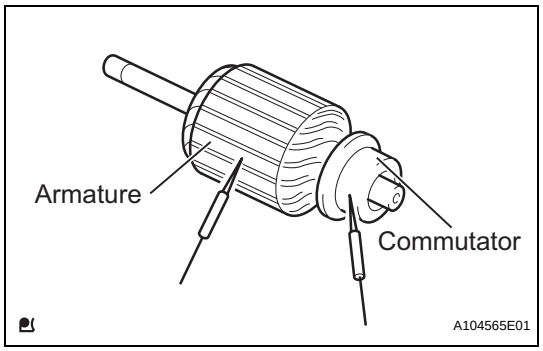


(3) Connect the battery and ammeter to the starter as shown in the illustration.
(4) Check that the ammeter indicates the specified current.
Standard current:
90A or less at 11.5V



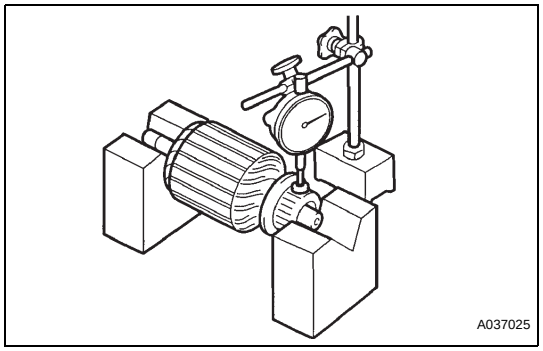
2. INSPECT STARTER ARMATURE ASSEMBLY

(a) Check the commutator for open circuits.
(1) Using an ohmmeter, check the resistance between the segments of the commutator.
Standard resistance:
Below 1 Ω
If the result is not as specified, replace the starter armature assembly.



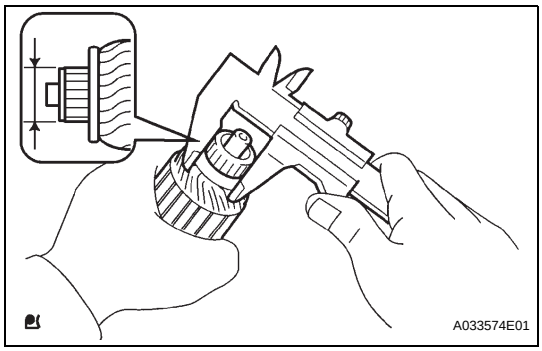
(b) Check the commutator for ground.
(1) Using an ohmmeter, check the resistance between the commutator and the armature core.
Standard resistance:
10 kΩ or higher
If the result is not as specified, replace the starter armature assembly.

(c) Check the commutator surface for dirt and burns.
If the surface is dirty or burnt, restore it with sandpaper (No. 400) or a lathe.

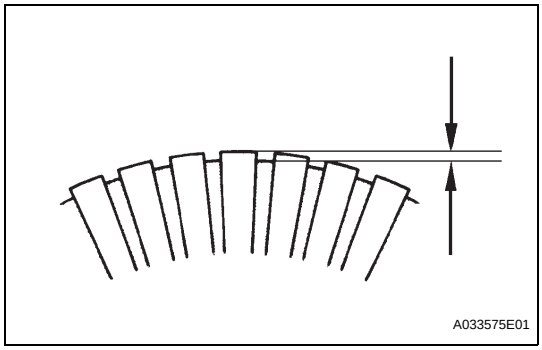


(d) Check for the commutator cirumference runout.
(1) Place the commutator on V-blocks.
(2) Using a dial indicator, measure the cirumference runout.
Maximum runout:
0.05 mm (0.0020 in.)
If the runout is greater than the maximum, replace the starter armature assembly.

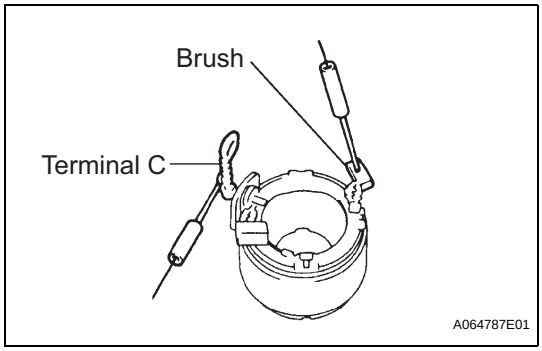
ST



(e) Using vernier calipers, measure the commutator diameter.
Standard diameter:
28.0 mm (1.1024 in.)
Minimum diameter:
27.0 mm (1.0630 in.)
If the diameter is less than the minimum, replace the starter armature assembly.

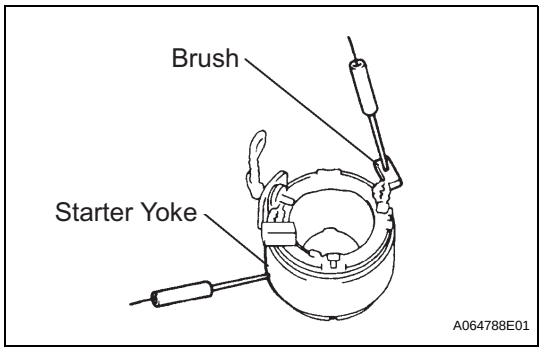


(f) Check that the undercut portion between the segments is free of foreign matter and measure its depth.
Standard undercut depth:
0.6 mm (0.0236 in.)
Minimum undercut depth:
0.2 mm (0.0079 in.)
If the undercut depth is less than the minimum, adjust it with a hacksaw blade.

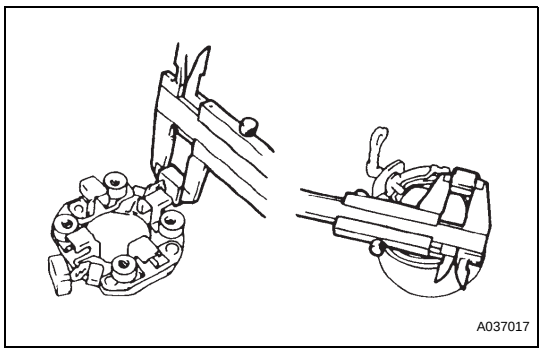


3. INSPECT STARTER YOKE ASSEMBLY

(a) Using an ohmmeter, check the resistance between terminal C and the field coil brush lead.
Standard resistance:
Below 1 Ω
If the result is not as specified, replace the starter yoke assembly.



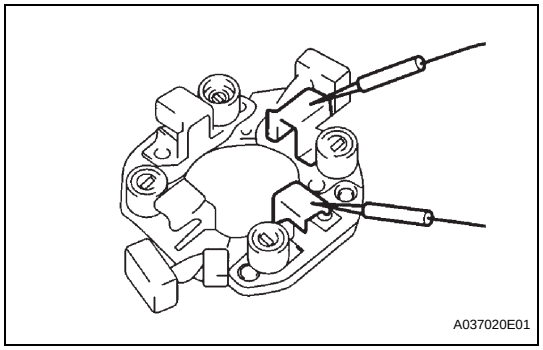
(b) Using an ohmmeter, check the resistance between the brush lead and the starter yoke.
Standard resistance:
10 kΩ or higher
If the result is not as specified, replace the starter yoke assembly.



4. INSPECT BRUSH

(a) Using vernier calipers, measure the brush length.
Standard length:
14 mm (0.5511 in.)
Minimum length:
9 mm (0.3543 in.)
If the length is less than the minimum, replace the starter brush holder assembly and the starter yoke assembly.

ST



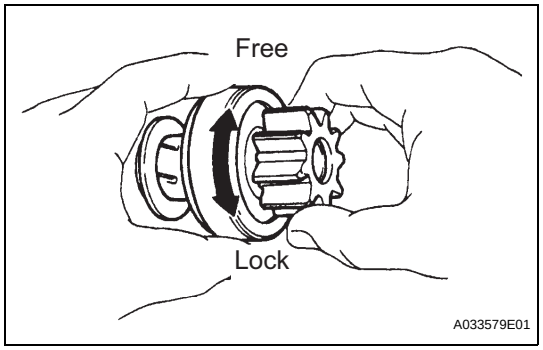
5. INSPECT STARTER BRUSH HOLDER ASSEMBLY

(a) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brush holders.

Standard resistance:

10 kΩ or higher

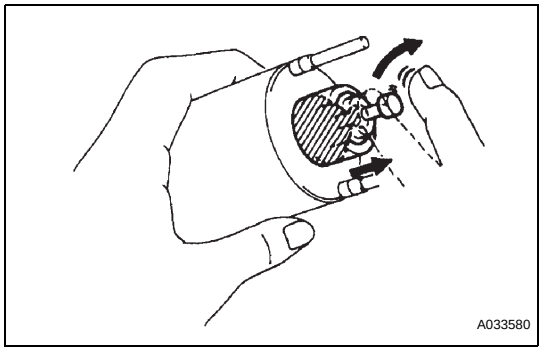
If the result is not as specified, replace the starter brush holder assembly.



6. INSPECT STARTER CLUTCH SUB-ASSEMBLY

(a) Hold the starter clutch and rotate the pinion gear clockwise, and check that it turns freely. Try to rotate the pinion gear counterclockwise and check that it locks.

If necessary, replace the starter clutch sub-assembly.

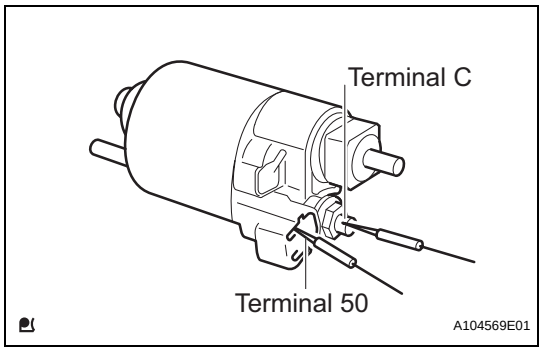


7. INSPECT MAGNET STARTER SWITCH ASSEMBLY

(a) Check the plunger.

(1) Push in the plunger and check that it returns quickly to its original position.

If necessary, replace the magnet starter switch assembly.



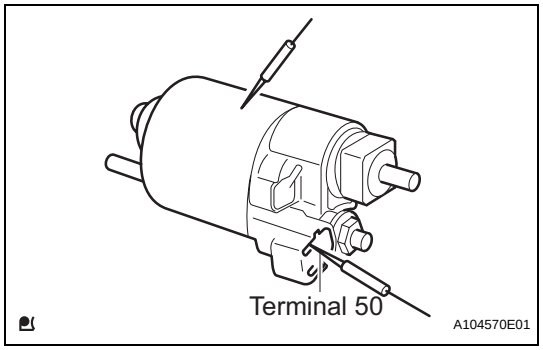
(b) Check the pull-in coil for open circuits.

(1) Using an ohmmeter, check the resistance between terminals 50 and C.

Standard resistance:

Below 1 Ω

If the result is not as specified, replace the magnet starter switch assembly.



(c) Check whether the holding coil has open circuit.

(1) Using an ohmmeter, check the resistance between terminal 50 and the switch body.

Standard resistance:

Below 2 Ω

If the result is not as specified, replace the magnet starter switch assembly.

ST

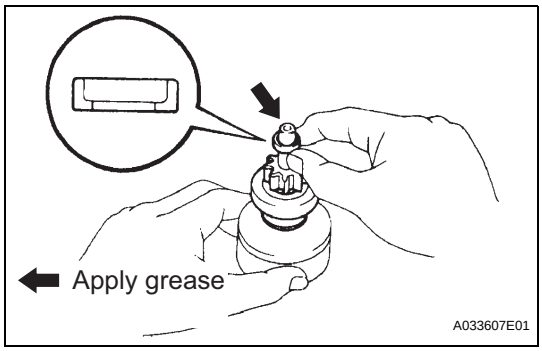
REASSEMBLY

1. INSTALL STARTER CLUTCH SUB-ASSEMBLY

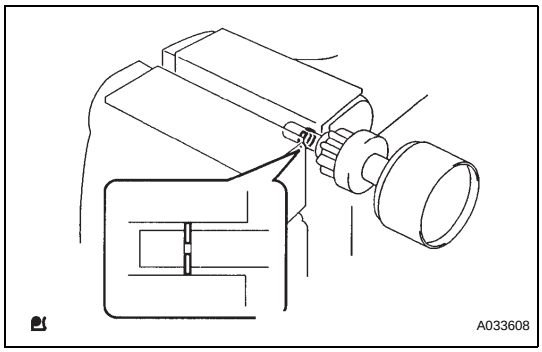
(a) Apply grease to the bushing and spline of the starter clutch and stop collar.

(b) Place the starter clutch and stop collar on the planetary shaft.

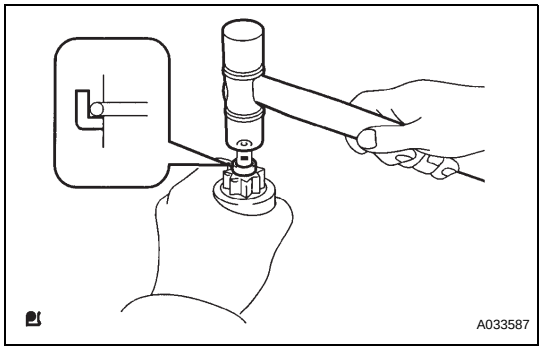
(c) Apply grease to a new snap ring, and install it onto the planetary shaft groove.



(d) Using a vise, compress the snap ring.

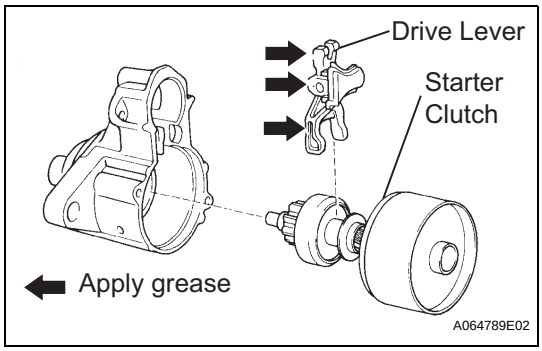


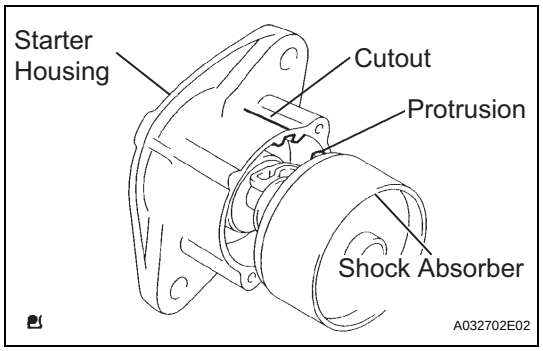
(e) Hold the starter clutch, tap the planetary shaft and install the stop collar onto the snap ring with a plastic-faced hammer.



(f) Apply grease to the drive lever which is in contact with the starter pivot part of the drive lever.

(g) Install the drive lever onto the starter clutch.



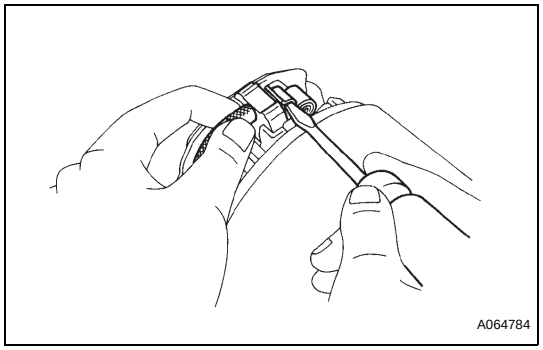


(h) Align the protrusion of the shock absorber with the cutout of the starter housing and install it.

2. INSTALL STARTER ARMATURE ASSEMBLY

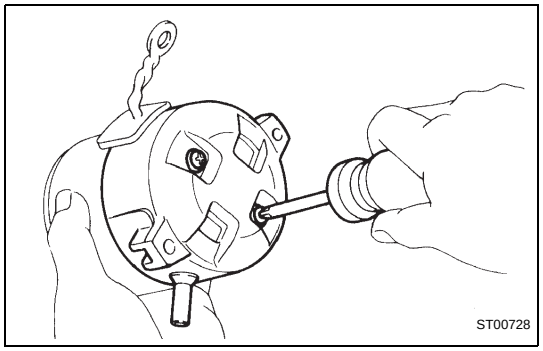
3. INSTALL STARTER BRUSH HOLDER ASSEMBLY

(a) Install the brush holder.

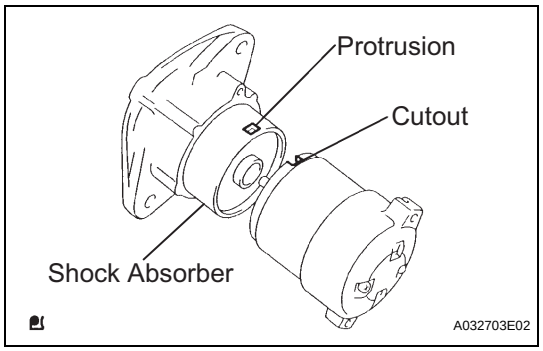


(b) Using a screwdriver, hold the brush spring back, and install the 4 brushes into the brush holder.

(c) Apply turbine oil with additives to the bearing of the end frame.

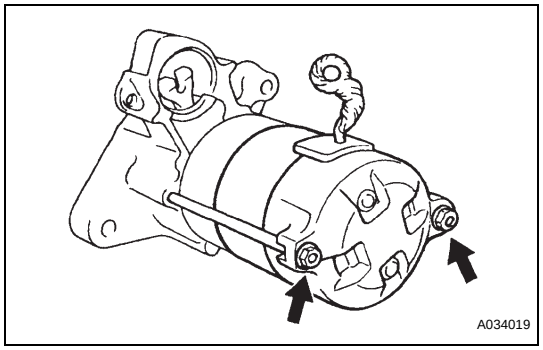


(d) Install the end frame with 2 new screws.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf)
NOTICE:
To avoid interference between the brush holder and the dust protector, push the commutator end frame away at an angle.



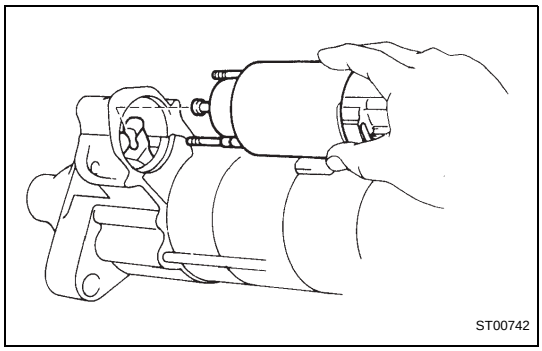
4. INSTALL STARTER YOKE ASSEMBLY

(a) Align the cutout of the field frame with the protrusion of the shock absorber.



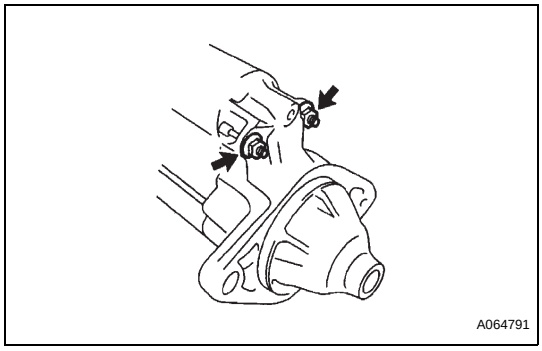
(b) Install the field frame and the armature assembly with the 2 through bolts.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)

ST

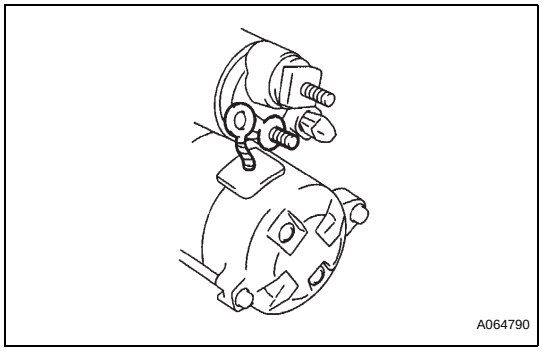


5. INSTALL MAGNET STARTER SWITCH ASSEMBLY

(a) Hang the plunger of the magnet starter switch assembly onto the driver lever from the upper side.



(b) Install the magnet starter switch assembly with the 2 nuts.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)



(c) Connect the lead wire to the terminal with the nut.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

ST

INSTALLATION

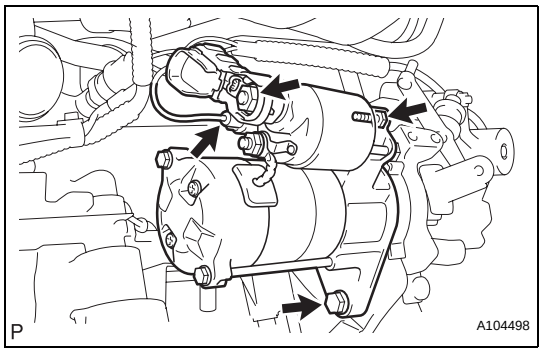
1. INSTALL STARTER ASSEMBLY

(a) Install the starter assembly with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(b) Connect the connector.

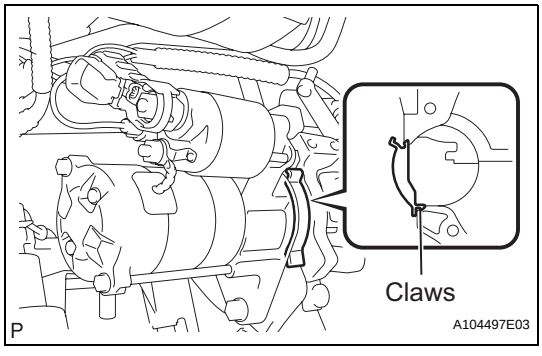
(c) Connect terminal 30 with the nut.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

(d) Close the terminal cap.



2. INSTALL FLYWHEEL HOUSING SIDE COVER

(a) Insert the protruding portion into the end of the cylinder block and while pushing it along the cylinder block, fit the 2 claws into the cylinder block.
NOTICE:
- **Make sure that the claw makes a click sound, indicating that it fits tightly.**
- **Replace the claw with a new one if it does not fit tightly or is deformed.**



3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

STARTER (for 1.6 kW Type)

N*m (kgf*cm, ft.*lbf) : Specified torque ⬅ Apply grease ● Non-reusable part

Y

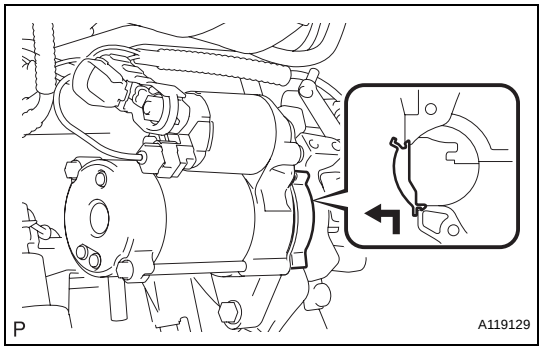
A117346E03

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

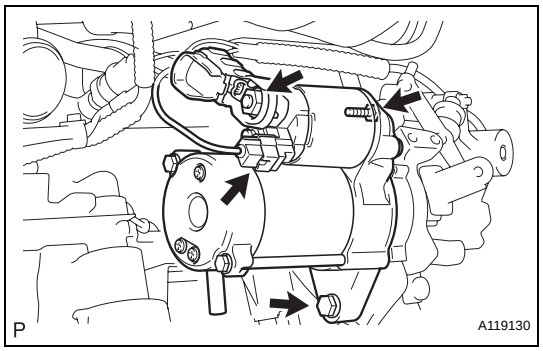
2. REMOVE FLYWHEEL HOUSING SIDE COVER

(a) Disengage the claw while pushing it upward and remove the flywheel housing side cover.



3. REMOVE STARTER ASSEMBLY

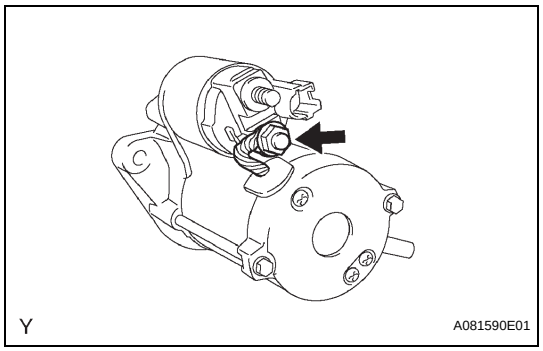
(a) Remove the terminal cap.
(b) Remove the nut and remove terminal 30.
(c) Disconnect the connector.
(d) Remove the 2 bolts and remove the starter assembly.



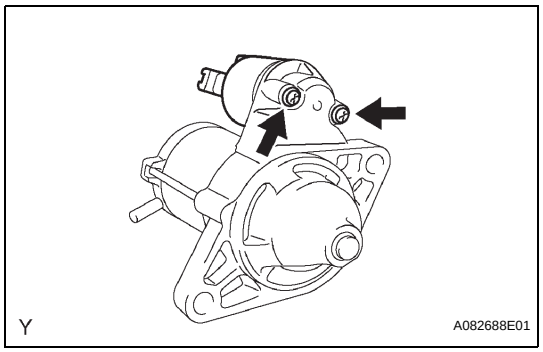
DISASSEMBLY

1. REMOVE MAGNET SWITCH BODY

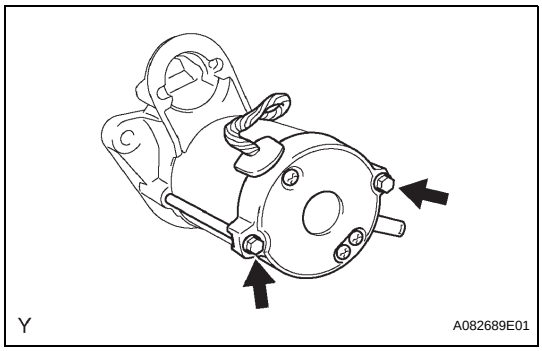
(a) Remove the nut, and disconnect the lead wire from the magnet switch body.



(b) Remove the 2 screws holding the magnet switch body onto the starter drive housing assembly.
(c) Remove the magnet switch body.
(d) Remove the return spring and the plunger.

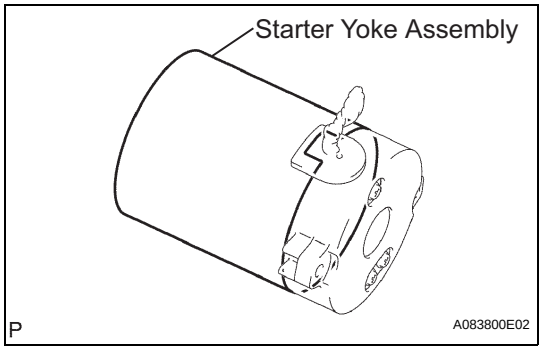


ST

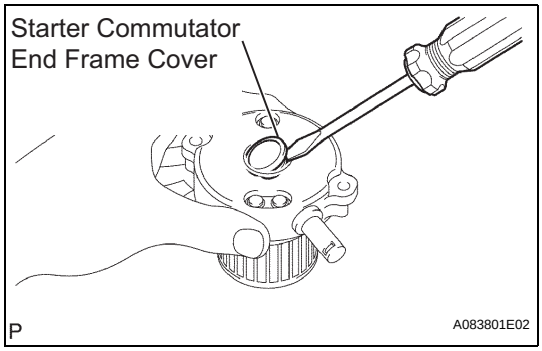


2. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the 2 through bolts, and pull out the starter yoke assembly and starter commutator end frame assembly together.

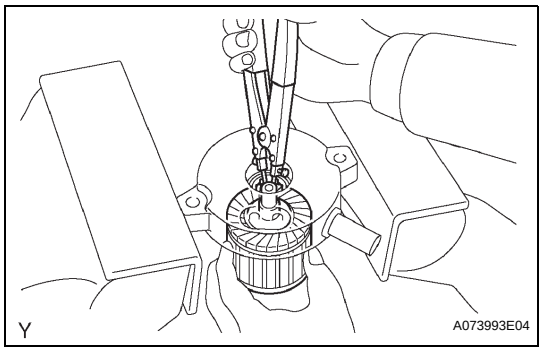


(b) Remove the starter yoke assembly from the starter commutator end frame assembly.



3. REMOVE STARTER COMMUTATOR END FRAME COVER

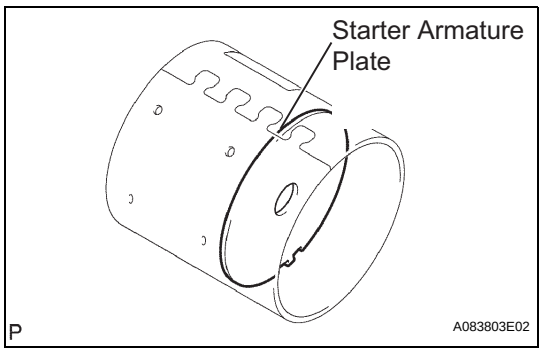
(a) Using a screwdriver, remove the starter commutator end frame cover.



4. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using snap ring pliers, remove the snap ring and the plate washer.

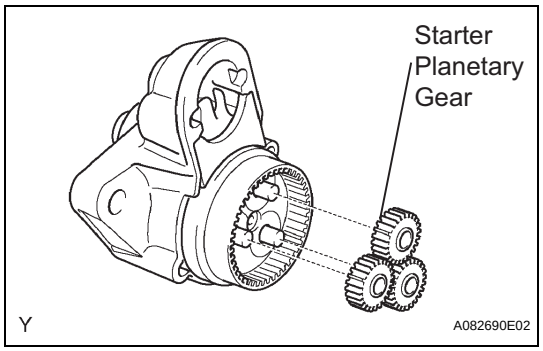
(b) Remove the starter armature assembly from the commutator end frame assembly.



5. REMOVE STARTER ARMATURE PLATE

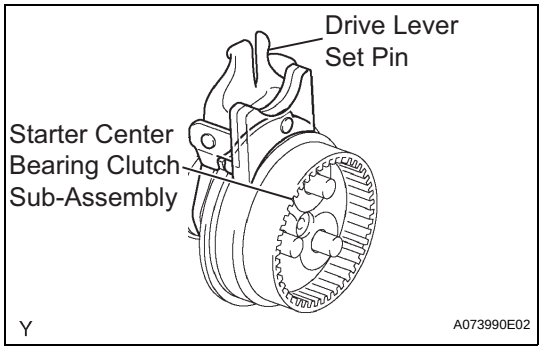
(a) Remove the starter armature plate from the starter yoke assembly.

ST



6. REMOVE STARTER PLANETARY GEAR

(a) Remove the 3 planetary gears.



7. REMOVE STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

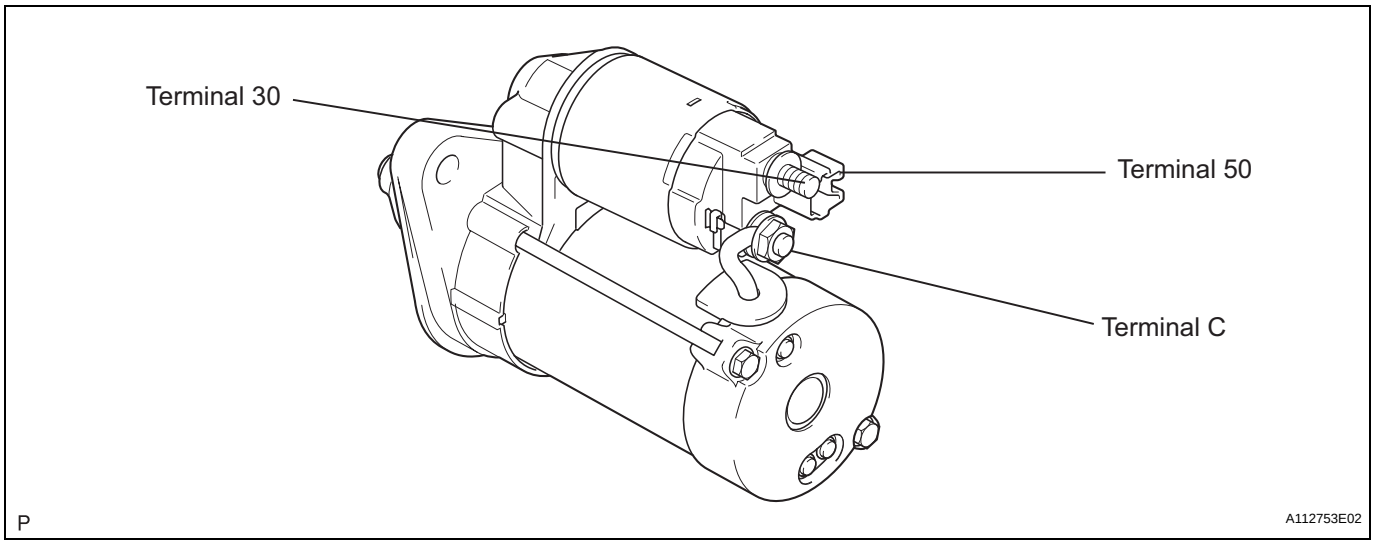
(a) Remove the starter center bearing clutch sub-assembly with drive lever set pin from the starter drive housing assembly.

(b) Remove the drive lever set pin from the starter center bearing clutch sub-assembly.

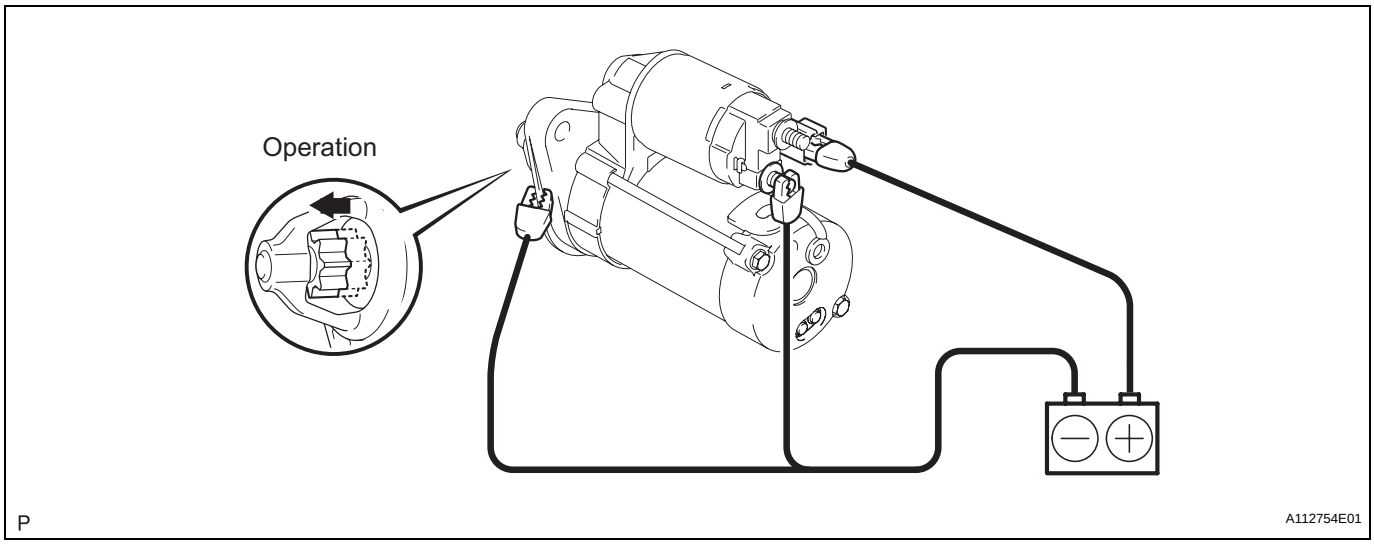
INSPECTION

1. INSPECT STARTER ASSEMBLY

CAUTION:
Perform each of the following tests within 3 to 5 seconds to prevent the coil from burning out.

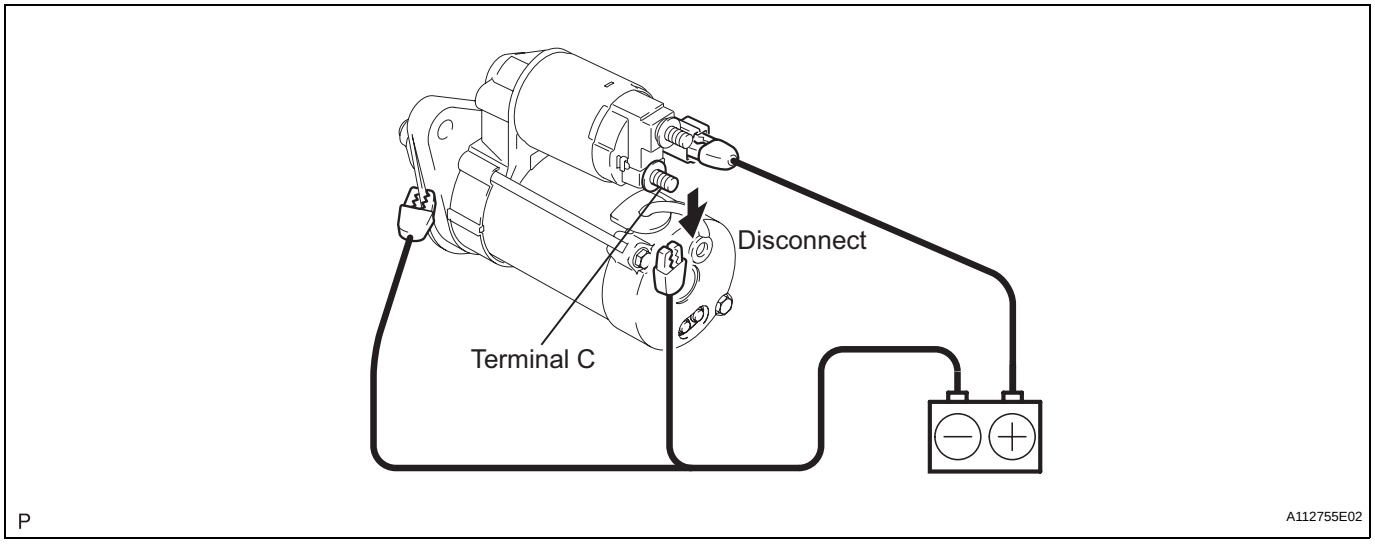


(a) Perform pull-in / holding test.

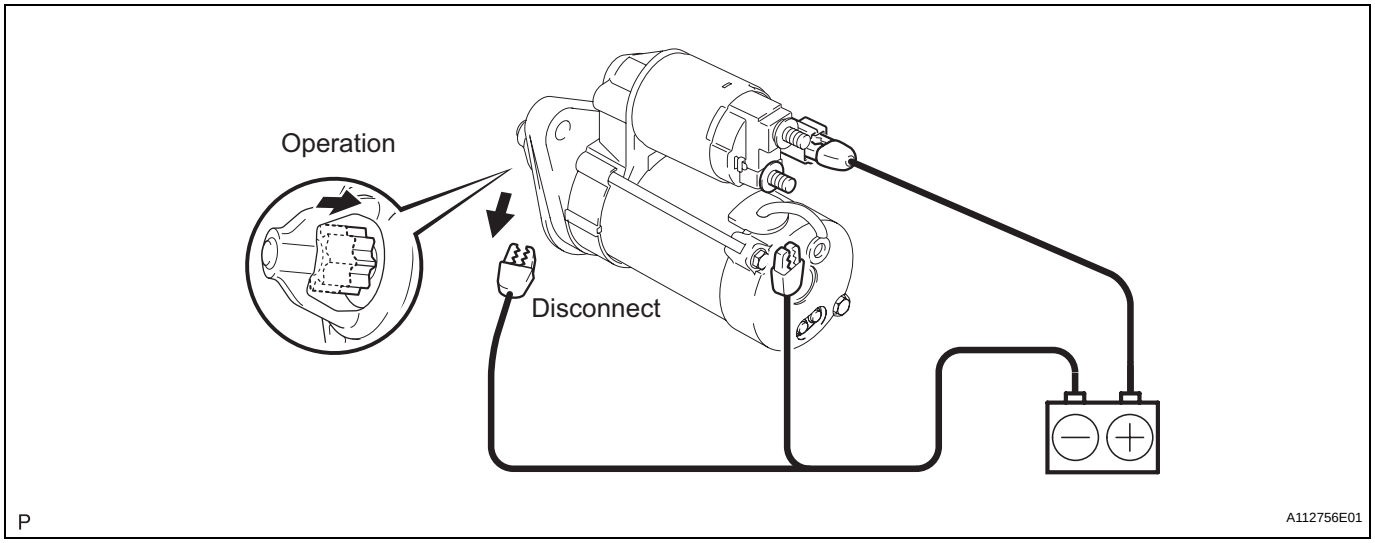


(1) Disconnect the lead wire from terminal C.
(2) Connect the battery to the magnet switch body as shown in the illustration. Then check that the clutch pinion gear moves outward.
If the result is not as specified, replace the magnet switch body.
(3) Disconnect the negative (-) lead from terminal C. Check that the pinion gear remains extended.
If the result is not as specified, replace the magnet switch body.

ST

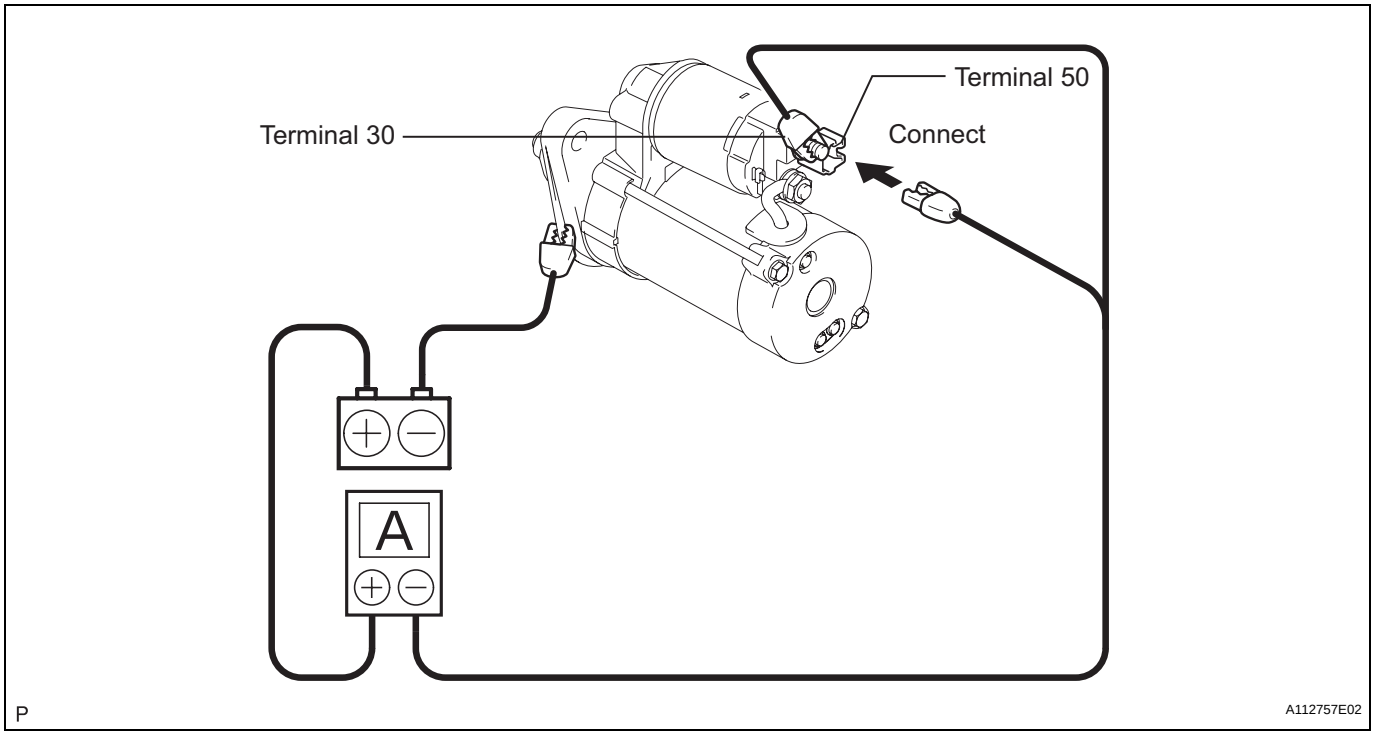


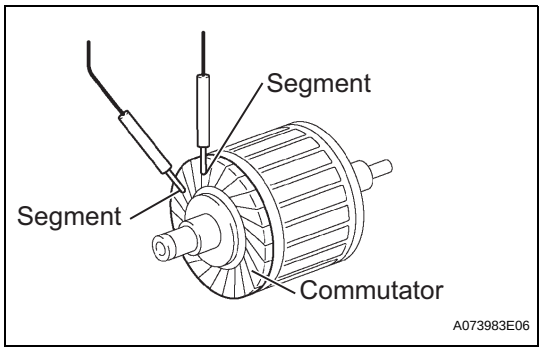
(4) Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear returns inward.
If the result is not as specified, replace the magnet switch body.



(b) Perform operation test without load.
(1) Connect the lead wire to terminal C.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
(2) Clamp the starter in a vise.
(3) Connect the battery and ammeter to the starter as shown in the illustration.
(4) Check that the starter rotates smoothly while the pinion gear is extended. Then measure the current.
Standard current:
90A or less at 11.5V
If the result is not as specified, replace the magnet switch body.

ST





2. INSPECT STARTER ARMATURE ASSEMBLY

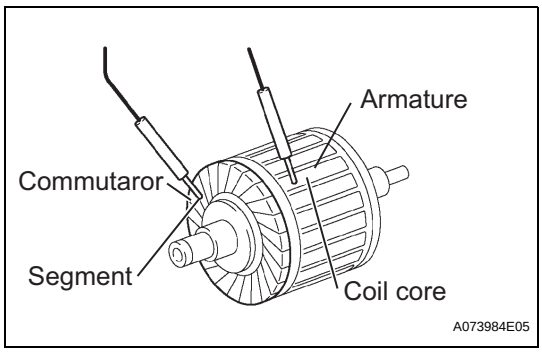
(a) Inspect the commutator for open circuits.

(1) Using an ohmmeter, check the resistance between the segments of the commutator.

Standard resistance:

1Ω or lower

If the result is not as specified, replace the starter armature assembly.



(b) Inspect the commutator for ground.

(1) Using an ohmmeter, check the resistance between the commutator and armature coil core.

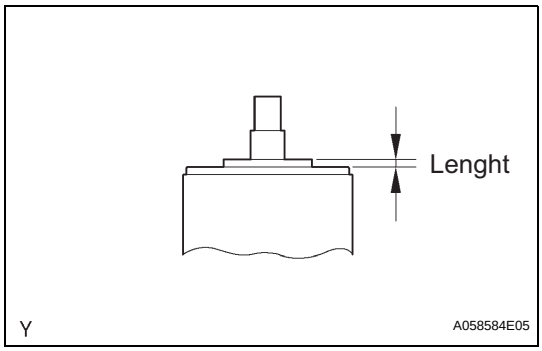
Standard resistance:

10 kΩ or higher

If the result is not as specified, replace the starter armature assembly.

(c) Inspect the commutator surface for dirt and burns.

If the surface is dirty or burnt, restore it with 400-grit sandpaper.



(d) Using vernier calipers, measure the commutator length.

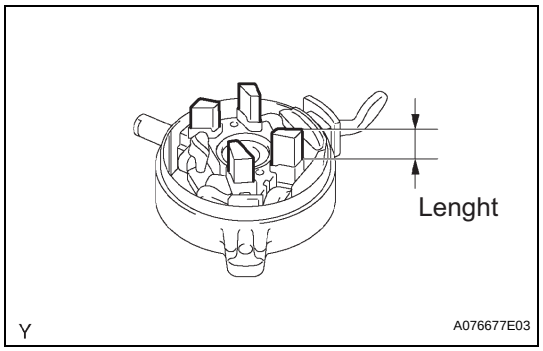
Standard length:

3.1 mm (0.122 in.)

Maximum length:

3.8 mm (0.150 in.)

If the length is greater than the maximum, replace the armature assembly.

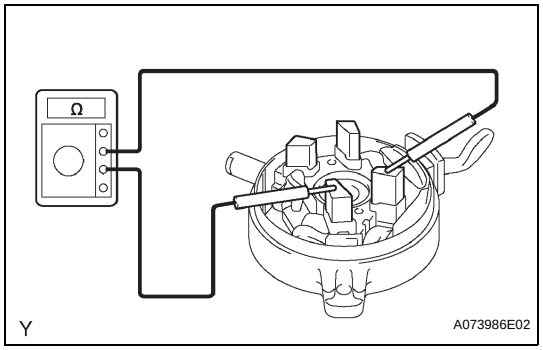


3. INSPECT STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Using vernier calipers, measure the brush length.

Standard length:
9.0 mm (0.354 in.)
Minimum length:
4.0 mm (0.158 in.)

If the length is less than the minimum, replace the starter commutator end frame assembly.



(b) Inspect the brush holder.

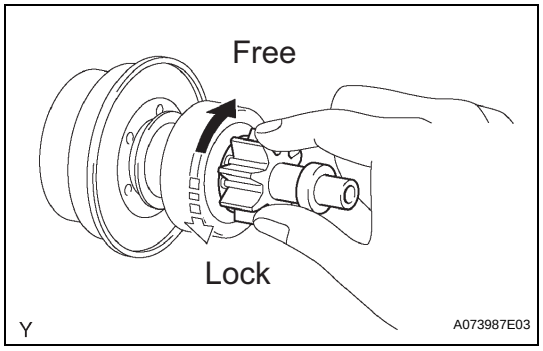
(1) Using an ohmmeter, check the resistance between the positive (+) and negative (-) brushes.

Standard resistance:
10 kΩ or higher

If the result is not as specified, replace the starter commutator end frame assembly.

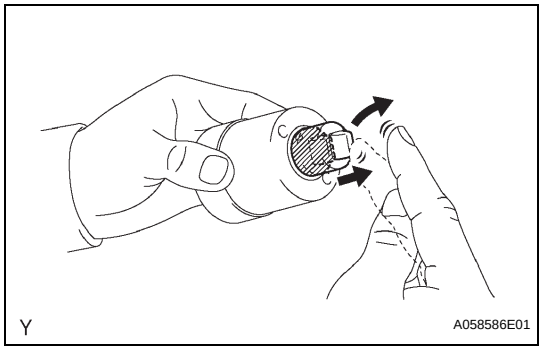
4. INSPECT STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

(a) Inspect the gear teeth on the planetary gear, internal gear and starter clutch for wear and damage.
If damaged, replace the starter planetary gear or starter center bearing clutch sub-assembly. Also check the starter planetary gear for wear or damage.



(b) Inspect the starter clutch.

(1) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.
If necessary, replace the starter center bearing clutch sub-assembly.

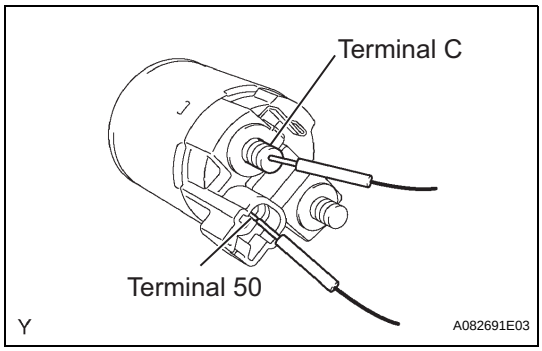


5. INSPECT MAGNET SWITCH BODY

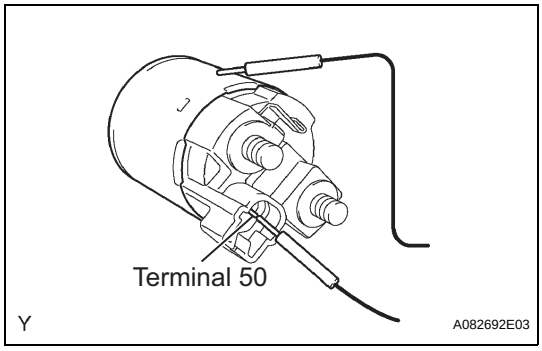
(a) Inspect the plunger.

(1) Push in the plunger and check that it returns quickly to its original position.
If necessary, replace the magnet switch body.

ST



(b) Inspect the pull-in coil for open circuits.
(1) Using an ohmmeter, check the resistance between terminals 50 and C.
Standard resistance:
1Ω or lower
If the result is not as specified, replace the magnet switch body.

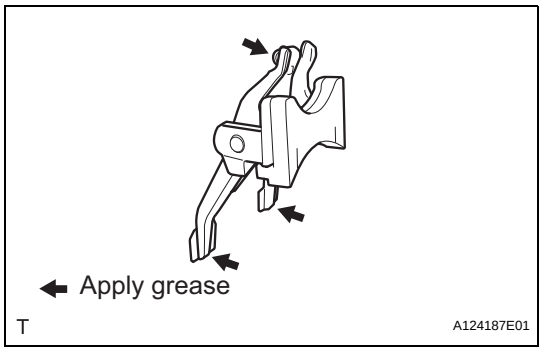


(c) Check whether the holding coil has an open circuit.
(1) Using an ohmmeter, check the resistance between terminal 50 and the magnet switch body.
Standard resistance:
2Ω or lower
If the result is not as specified, replace the magnet switch body.

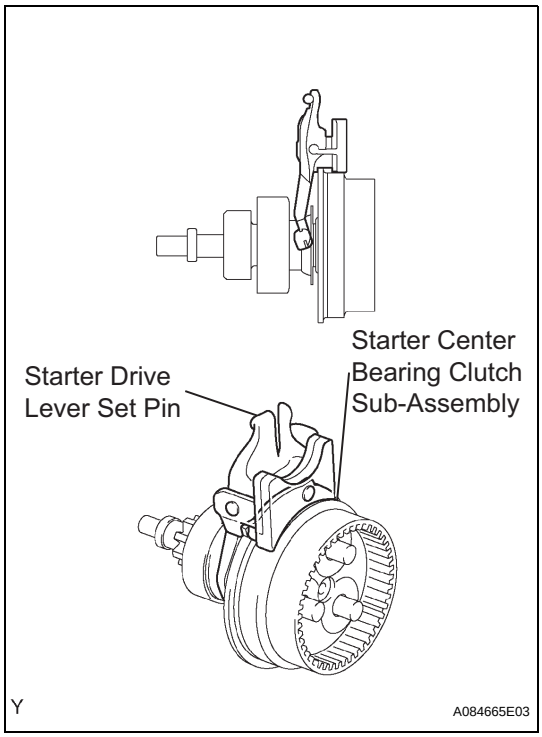
REASSEMBLY

1. INSTALL STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

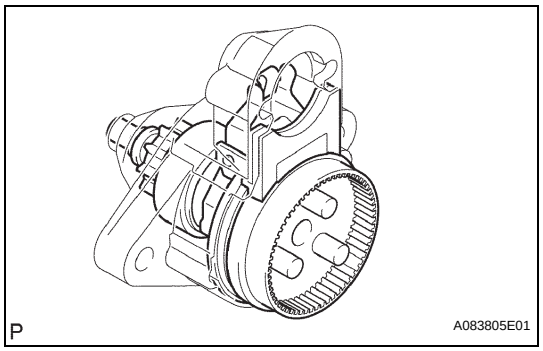
(a) Apply grease to the drive lever set pin which is in contact with the starter pivot part of the drive lever set pin.



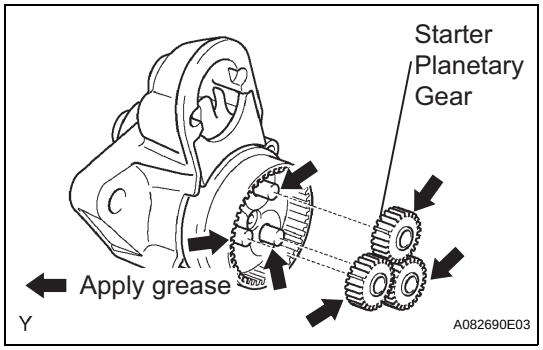
(b) Install the drive lever set pin into the starter center bearing clutch sub-assembly.



ST



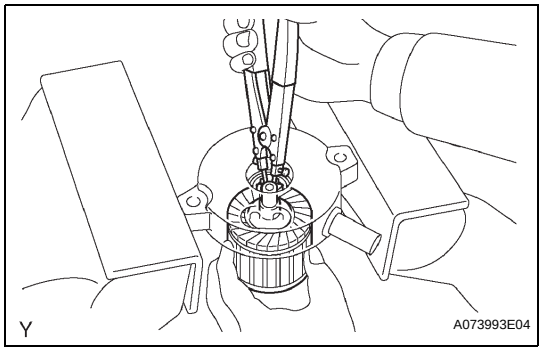
(c) Install the starter center bearing clutch sub-assembly together with the starter drive lever set pin into the starter drive housing assembly.



2. INSTALL STARTER PLANETARY GEAR

(a) Apply grease to the planetary gears and pin parts of the planetary shaft.

(b) Install the 3 planetary gears.

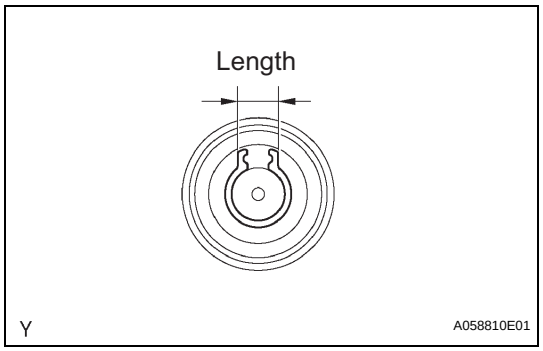


3. INSTALL STARTER ARMATURE ASSEMBLY

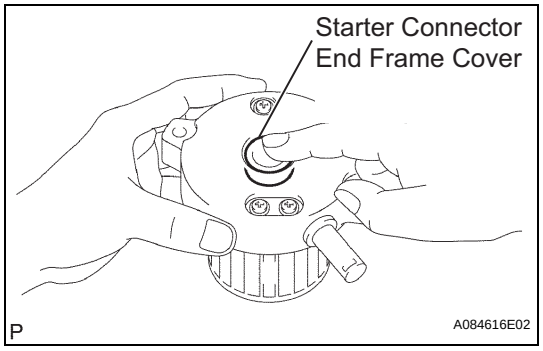
(a) Apply grease to the washer plate and the armature shaft.

(b) Install the armature shaft onto the starter commutator end frame assembly.

(c) Using snap ring pliers, install the plate washer and a new snap ring.



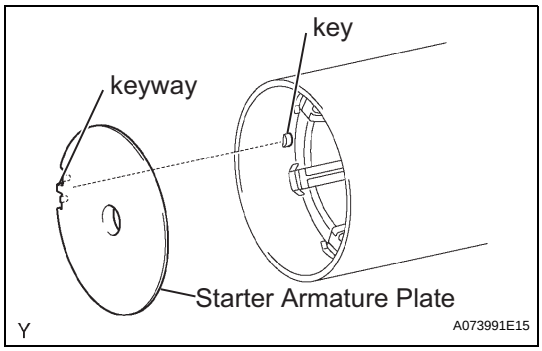
(d) Using vernier calipers, measure the snap ring.
Maximum length:
5.0 mm (0.197 in.)
If the length is greater than the maximum, replace the snap ring.



4. INSTALL STARTER COMMUTATOR END FRAME COVER

(a) Install the starter commutator end frame cover onto the starter commutator end frame assembly.

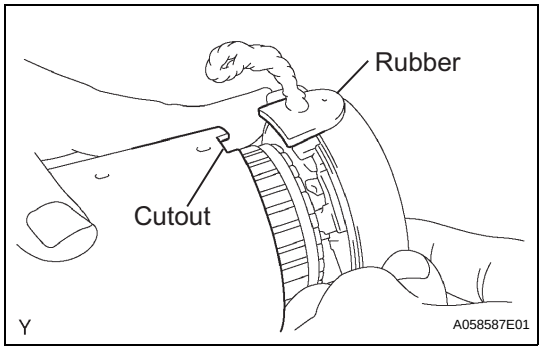
ST



5. INSTALL STARTER ARMATURE PLATE

(a) Insert the starter armature plate into the starter yoke assembly.

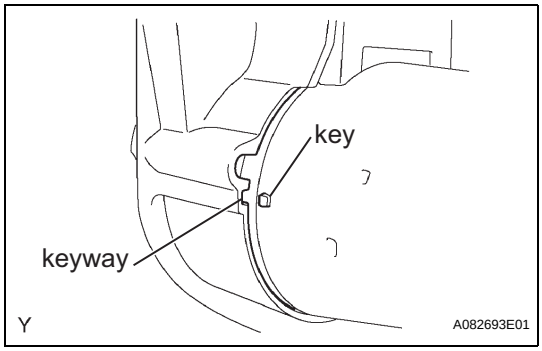
(b) Align the cutout of the plate with the inside protrusion of the starter yoke assembly, and install the plate.



6. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

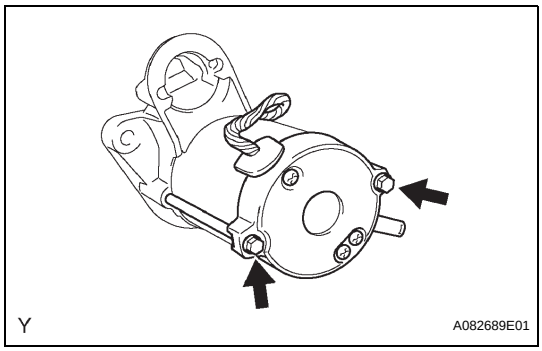
(a) Align the starter commutator rubber end frame with the cutout of the starter yoke assembly.

(b) Install the starter yoke assembly onto the starter commutator end frame assembly.

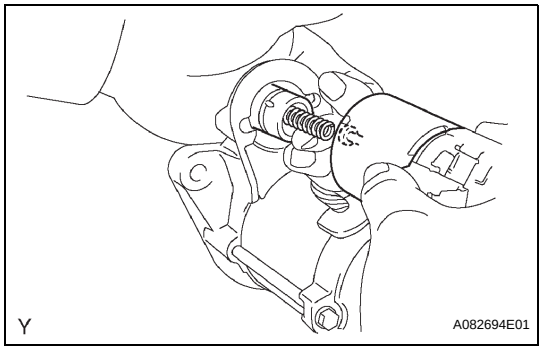


7. INSTALL STARTER YOKE ASSEMBLY

(a) Align the key located on the starter yoke assembly with the keyway of the starter drive housing assembly.



(b) Install the starter yoke assembly with the 2 through bolts.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)



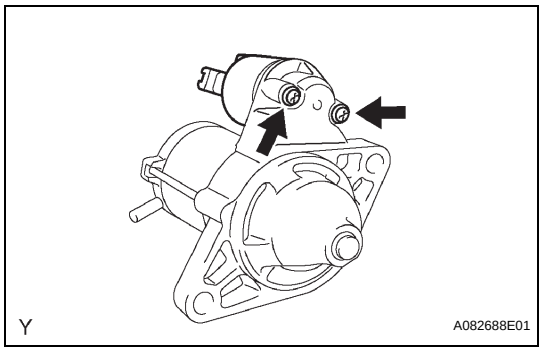
8. INSTALL MAGNET SWITCH BODY

(a) Apply grease to the plunger and the hook.

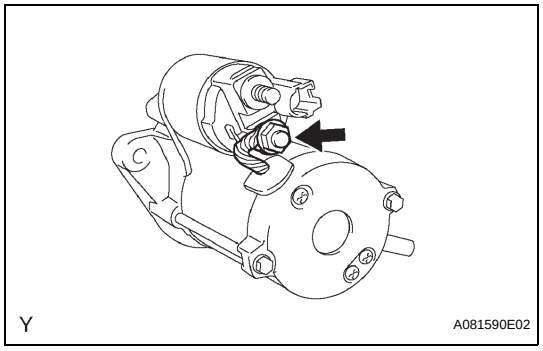
(b) Put the plunger hook of the magnet switch body on the starter drive lever set pin.

(c) Install the plunger and the return spring as shown in the illustration.

ST

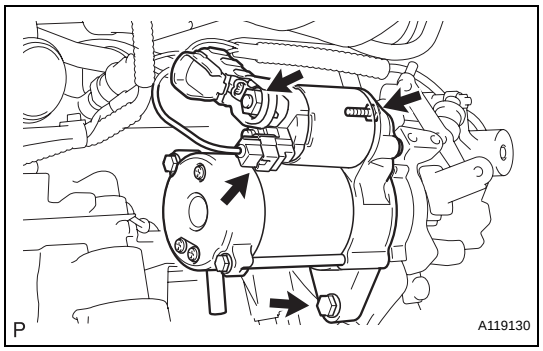


(d) Install the magnet switch body with the 2 screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



(e) Connect the lead wire to the terminal C with the nut.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf)

INSTALLATION



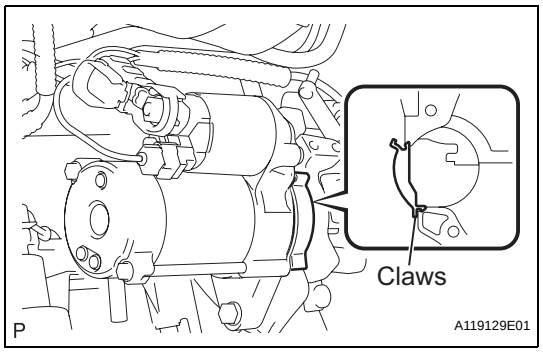
1. INSTALL STARTER ASSEMBLY

(a) Install the starter assembly with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(b) Connect the connector.

(c) Connect terminal 30 with the nut.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

(d) Close the terminal cap.

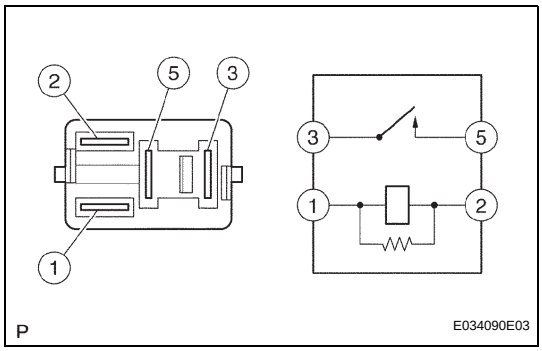


2. INSTALL FLYWHEEL HOUSING SIDE COVER

(a) Insert the protruding portion into the end of the cylinder block and while pushing it along the cylinder block, fit the 2 claws into the cylinder block.
NOTICE:
- **Make sure that the claw makes a click sound, indicating that it fits tightly.**
- **Replace the claw with a new one if it does not fit tightly or is deformed.**

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

ST



STARTER RELAY

ON-VEHICLE INSPECTION

1. INSPECT STARTER RELAY ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

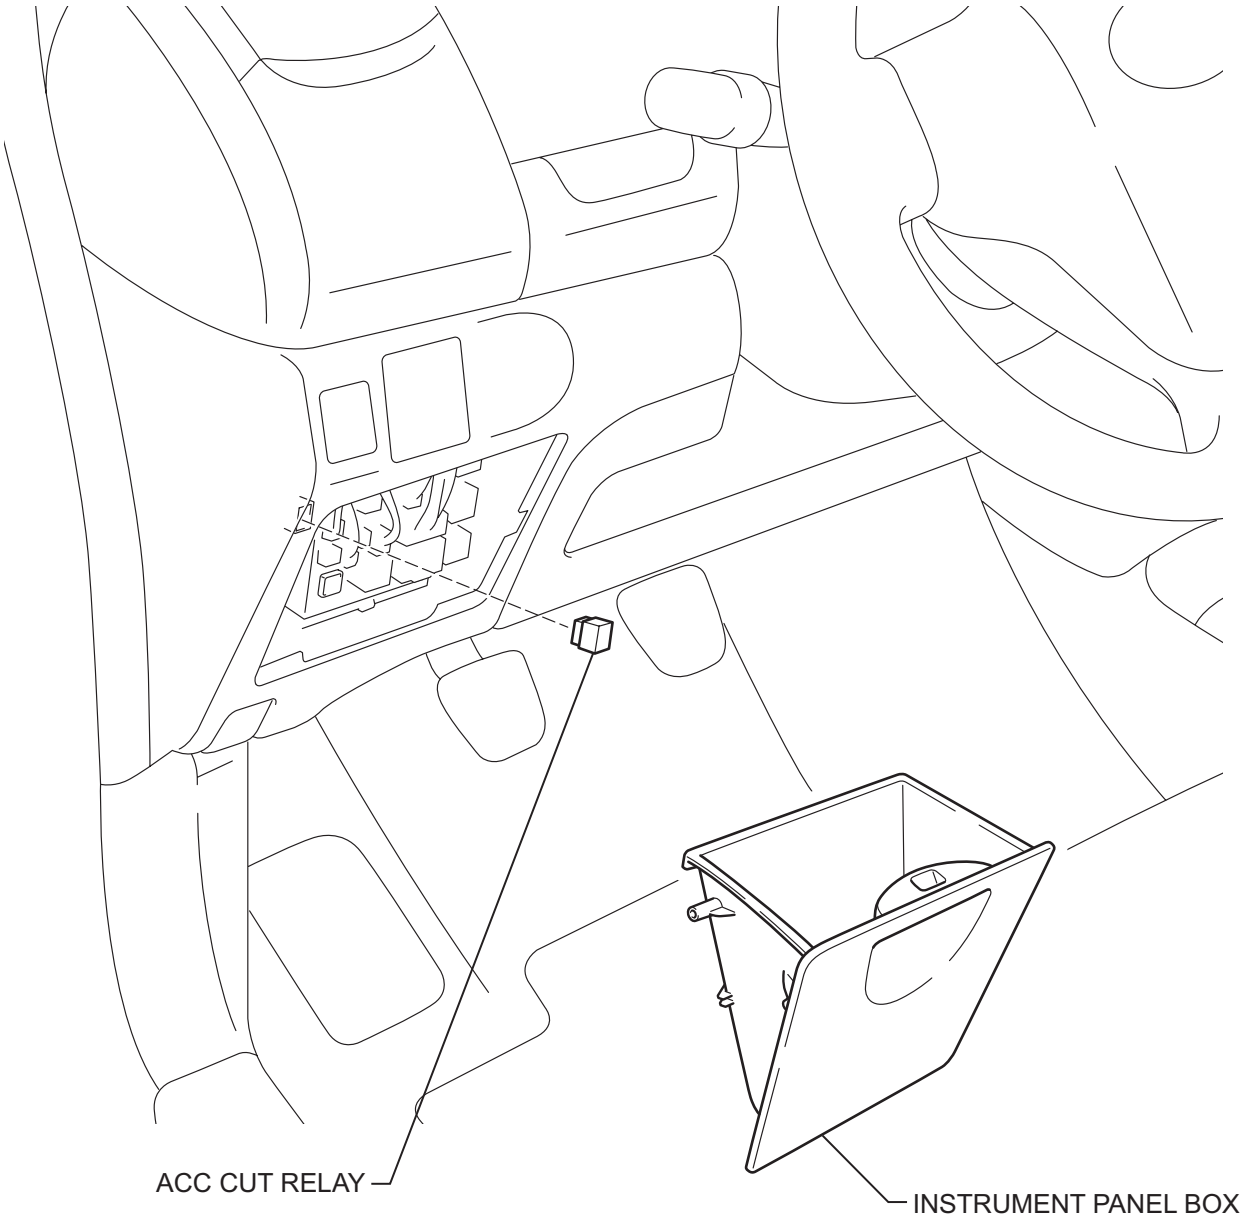
Standard resistance

Tester Connection	Specified Condition
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)
	10 kΩ or higher

If the result is not as specified, replace the relay.

ACC CUT RELAY

COMPONENTS

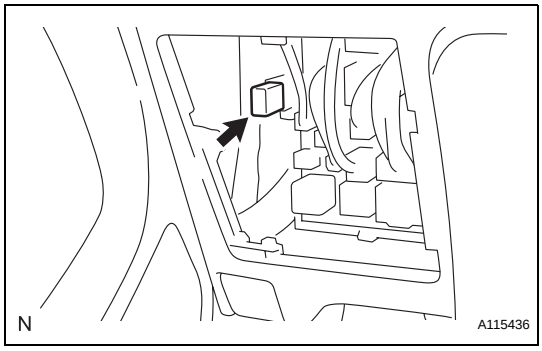


N

A115434E02

REMOVAL

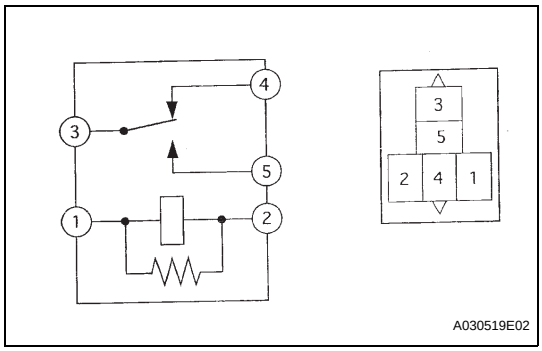
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
3. **REMOVE ACC CUT RELAY**
   (a) Remove the ACC cut relay.



INSPECTION

1. **INSPECT ACC CUT RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistence

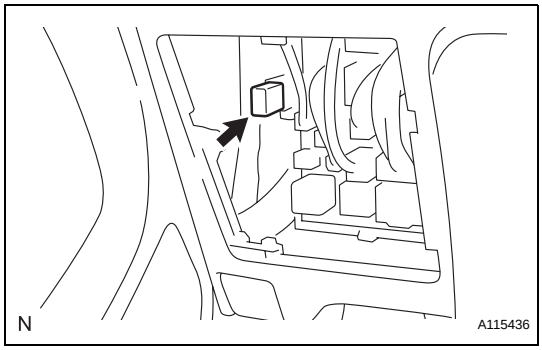
Tester Connection	Specified Condition
3 - 4	Below 1 Ω
	10 kΩ or higher (when battery voltage applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)
	10 kΩ or higher



If the result is not as specified, replace the relay.

INSTALLATION

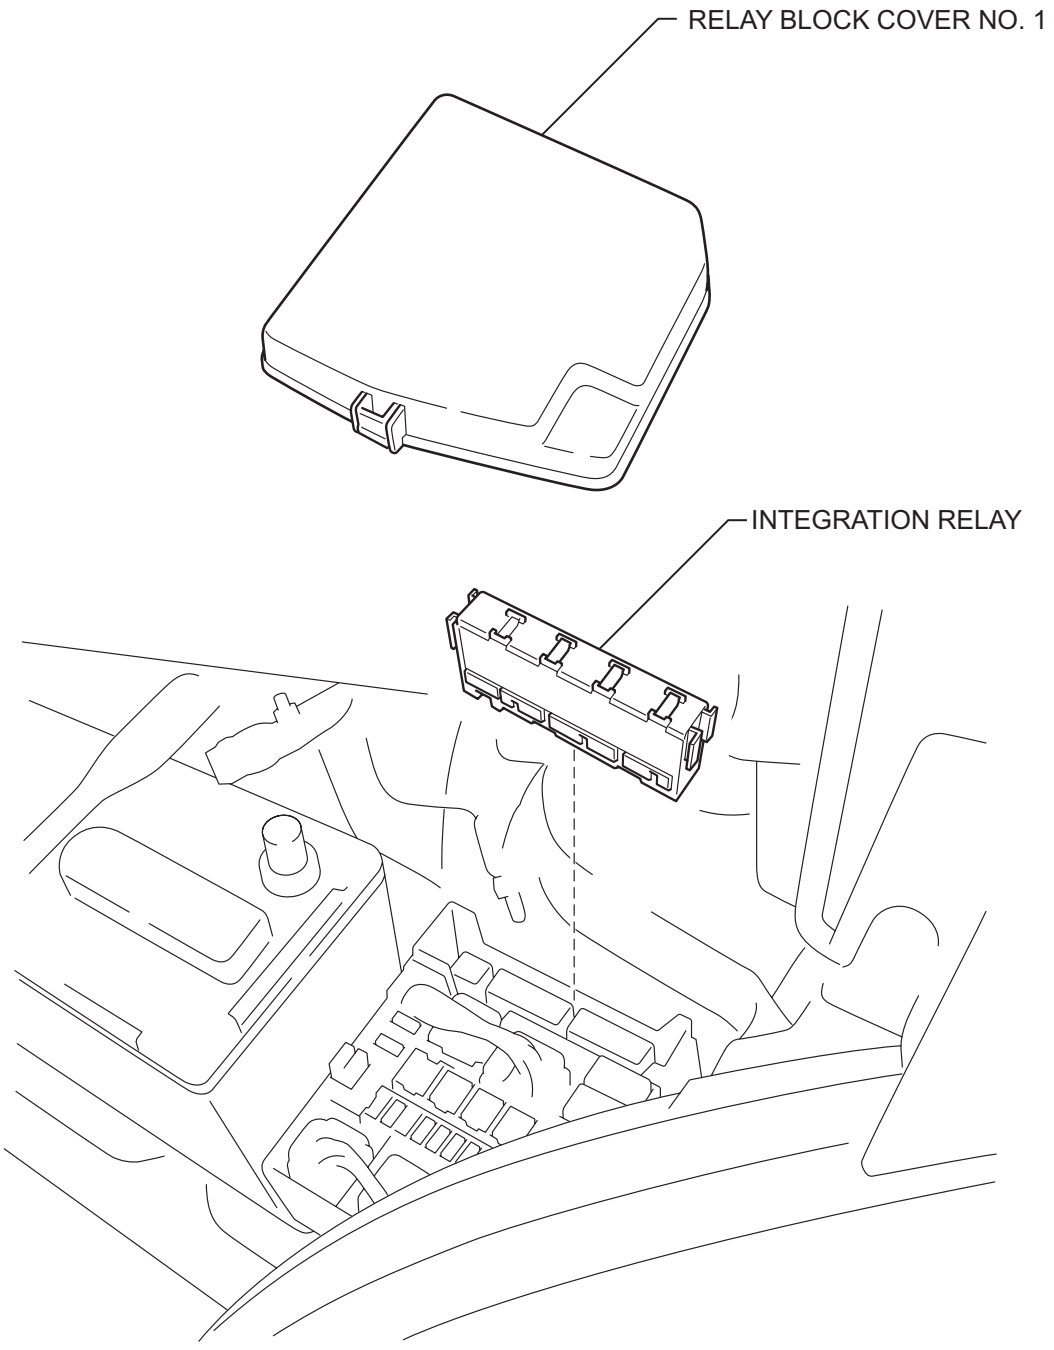
1. **INSTALL ACC CUT RELAY**
   (a) Install the ACC cut relay.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



ST

INTEGRATION RELAY

COMPONENTS

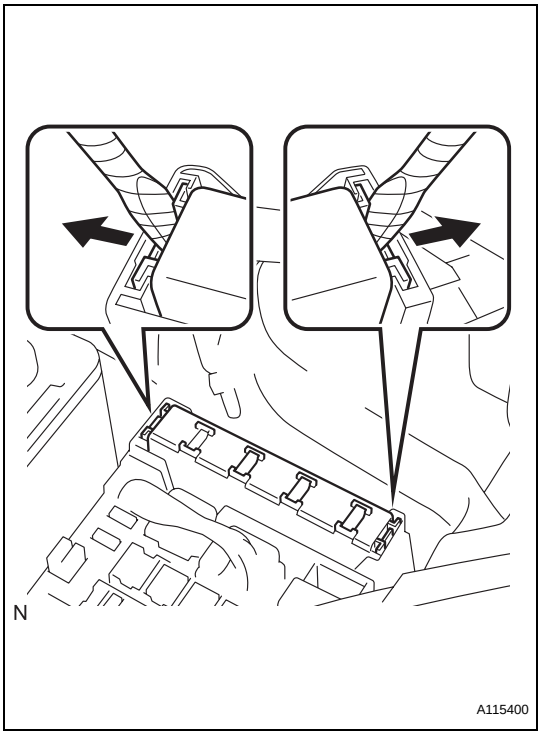


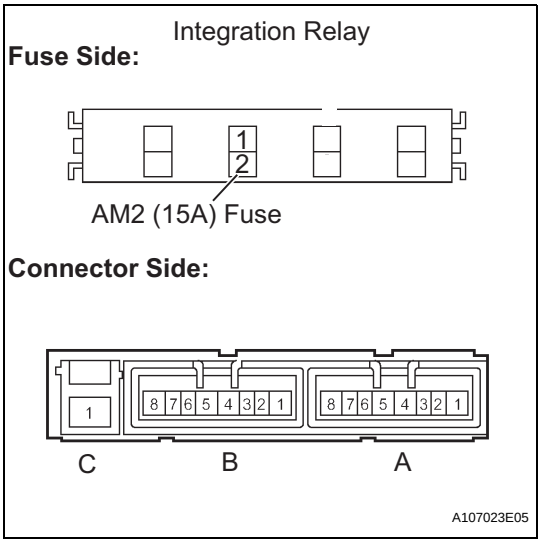
N

A115401E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE RELAY BLOCK COVER NO. 1**
3. **REMOVE INTEGRATION RELAY**
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and disconnect the integration relay.
   (b) Disconnect the 3 connectors.





INSPECTION

1. **INSPECT INTEGRATION RELAY**
   (a) Inspect the AM2 (15A) fuse.
      (1) Disconnect the fuse. Using an ohmmeter, measure the resistance of the fuse.
      Standard resistance

Tester Connection	Specified condition
1 - 2	Below 1 Ω

   (b) Inspect the IG2 relay.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance

Tester Connection	Specified condition
B1 - C1	Below 1 Ω
B4 - C1	Below 1 Ω (when battery voltage applied to terminals 1 and 2)
	10 kΩ or higher

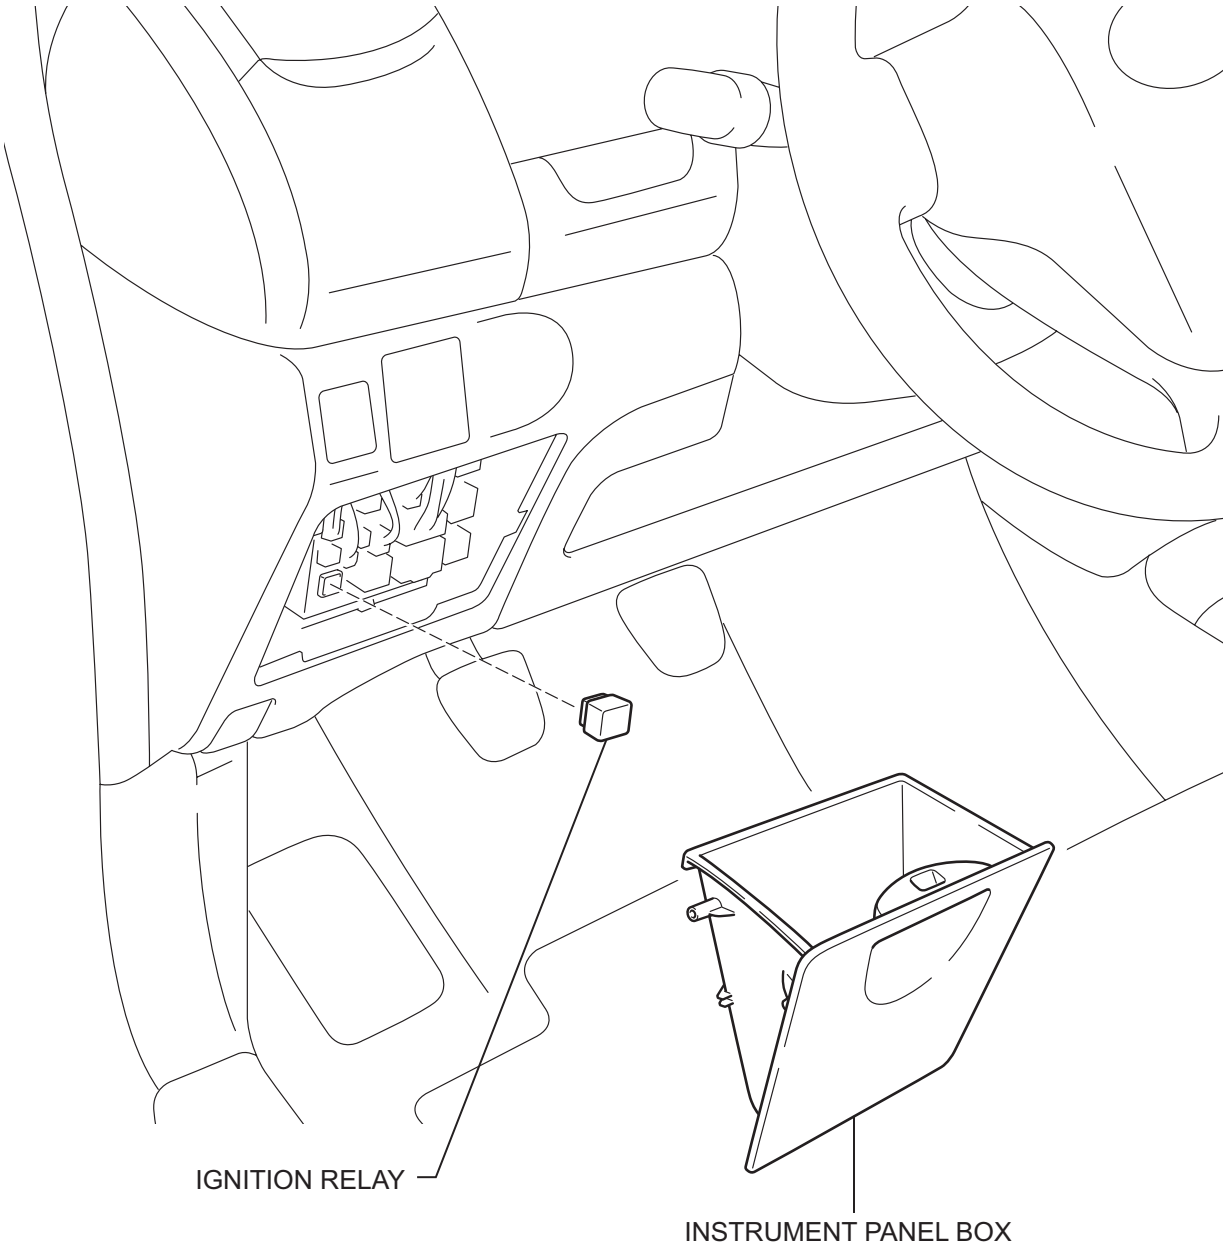
NOTICE:
While using the battery for the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

INSTALLATION

1. **INSTALL INTEGRATION RELAY**
   (a) Connect the 3 connectors.
   (b) Attach the integration relay to the engine room relay block.
2. **INSTALL RELAY BLOCK COVER NO. 1**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

IGNITION RELAY

COMPONENTS

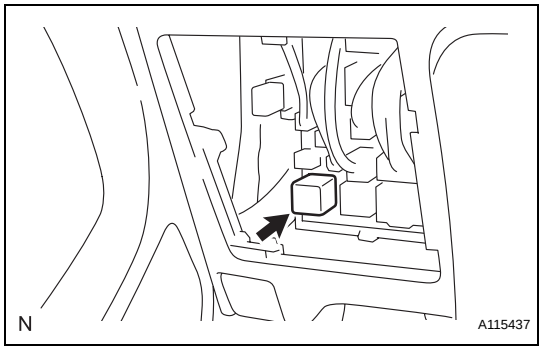


N

A115435E01

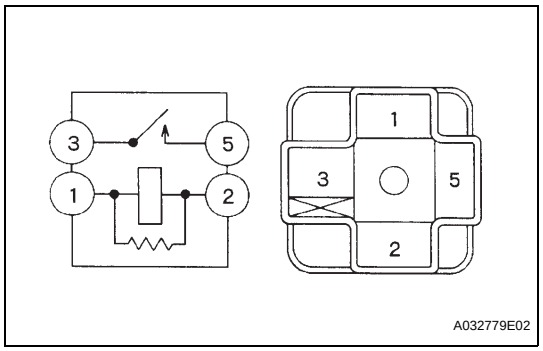
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL BOX (See page IP-70)**
3. **REMOVE IGNITION RELAY**
   (a) Remove the ignition relay.



INSPECTION

1. **INSPECT IGNITION RELAY**
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      Standard resistance

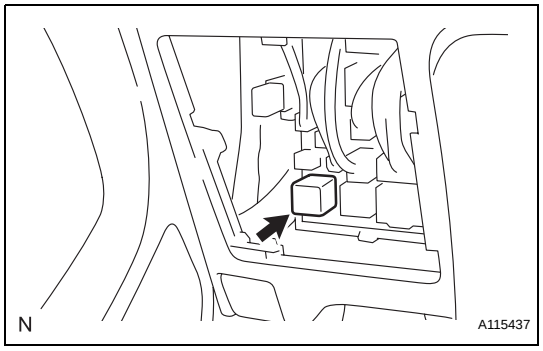


Tester Connection	Specified Condition
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)
	10 kΩ or higher

If the result is not as specified, replace the relay.

INSTALLATION

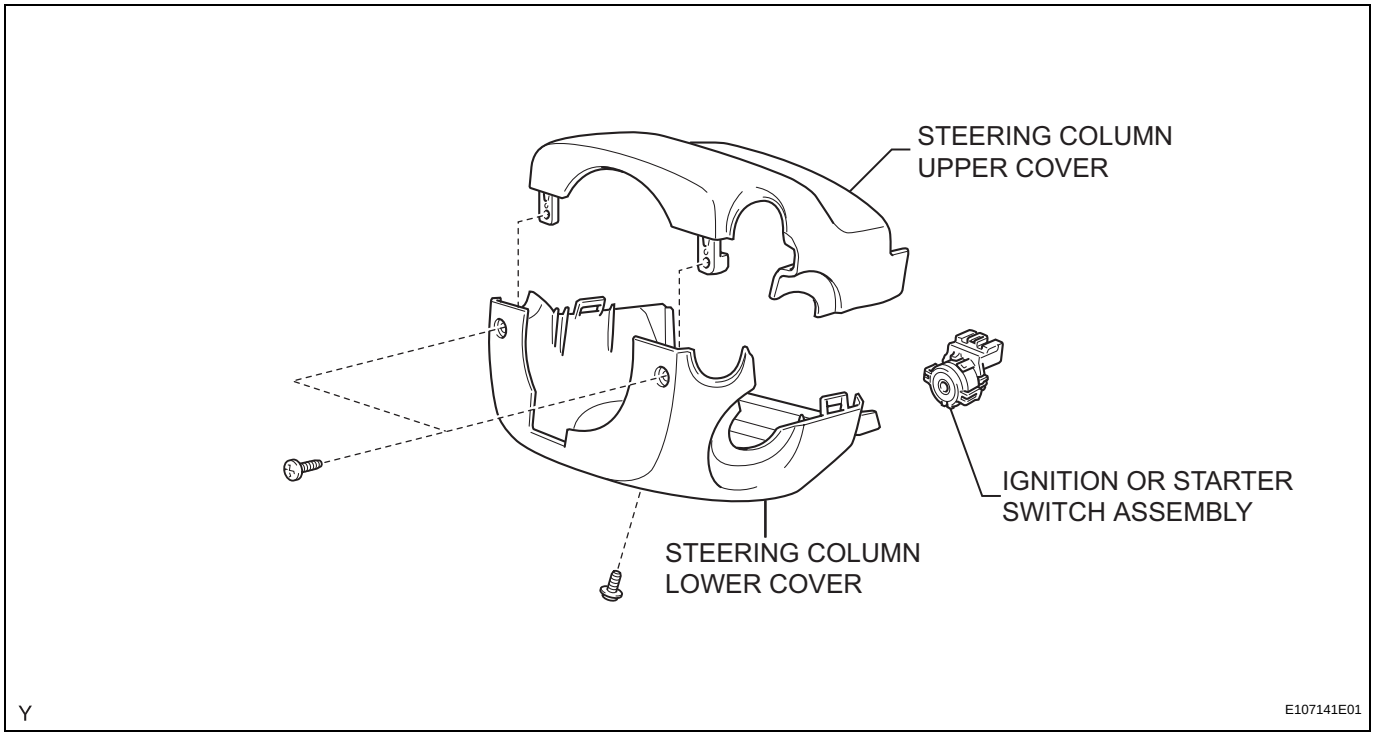
1. **INSTALL IGNITION RELAY**
   (a) Install the ignition relay.
2. **INSTALL INSTRUMENT PANEL BOX (See page IP-78)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



ST

IGNITION SWITCH

COMPONENTS

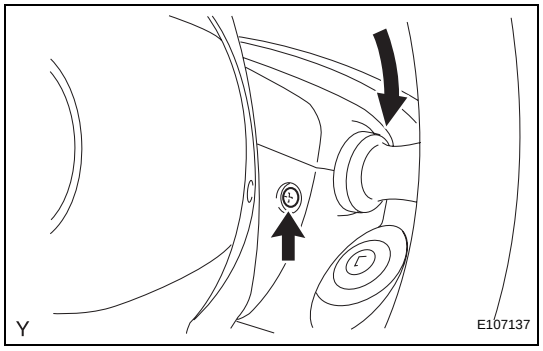


REMOVAL

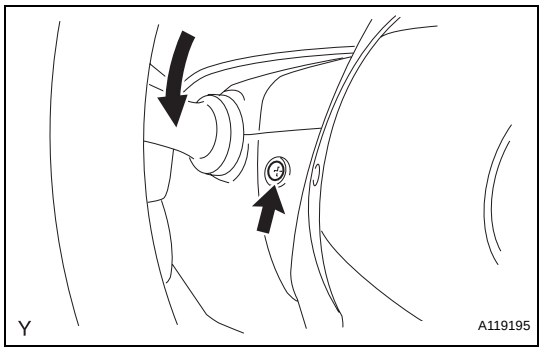
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE STEERING COLUMN COVER

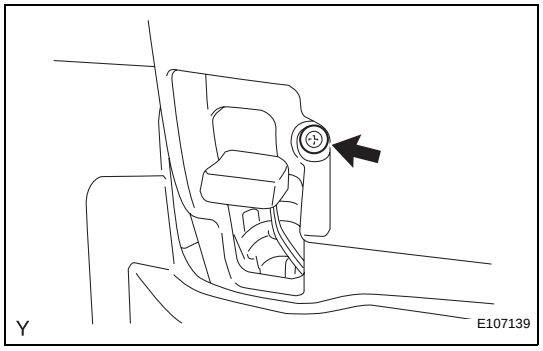
(a) Turn the steering wheel to the right and remove the screw indicated in the illustration.



(b) Turn the steering wheel to the left and remove the screw indicated in the illustration.



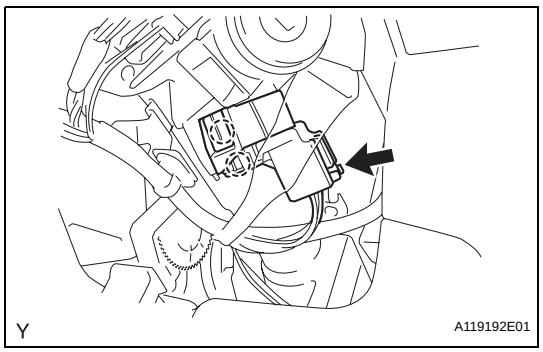
(c) Remove the screw indicated in the illustration and remove the steering column cover.



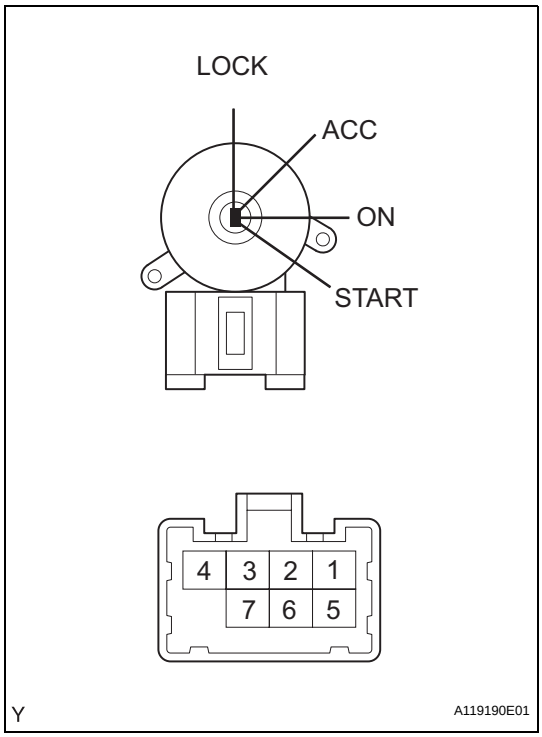
3. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

(a) Disconnect the connector.

(b) Disengage the 2 claws and remove the ignition or starter switch assembly.



ST



INSPECTION

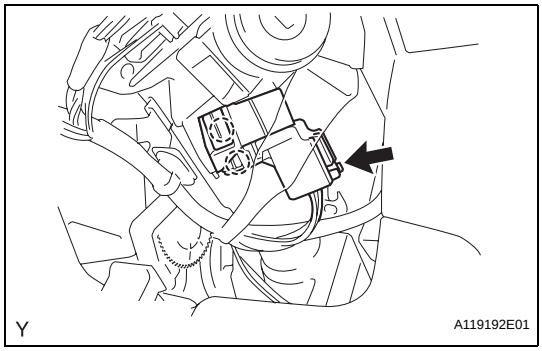
1. INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Condition	Tester Connection	Standard
LOCK	Between all terminals	10 kΩ or higher
ACC	2-4	Below 1 Ω
ON	1-2-4	Below 1 Ω
	5-6	
START	1-3-4	Below 1 Ω
	5-6-7	

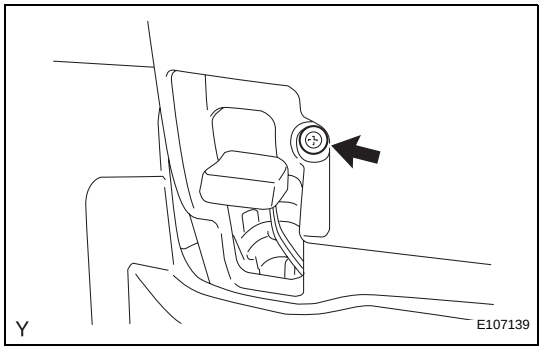


INSTALLATION

1. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY

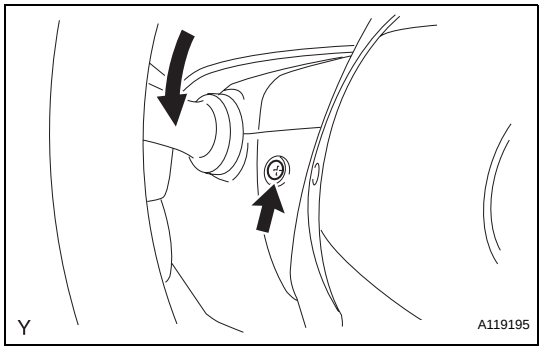
(a) Engage the 2 claws and install the ignition or starter switch assembly.

(b) Connect the connector.



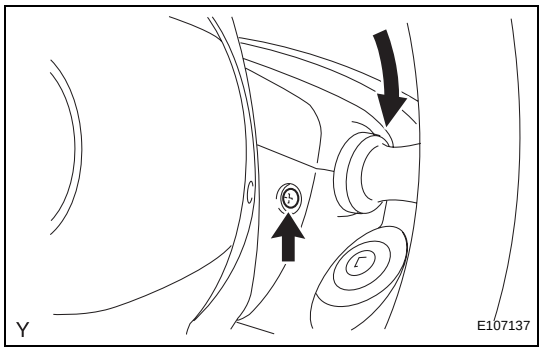
2. INSTALL STEERING COLUMN COVER

(a) Install the screw indicated in the illustration.



(b) Turn the steering wheel to the left and install the screw indicated in the illustration.

ST



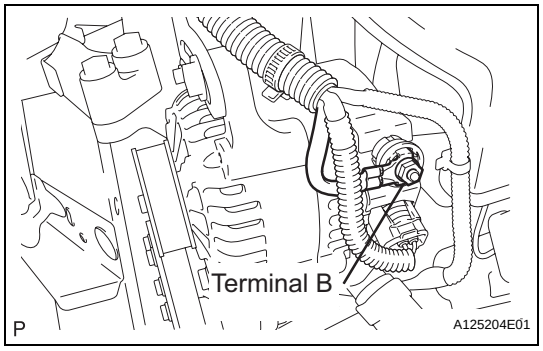
(c) Turn the steering wheel to the right, and install the screw indicated in the illustration.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

CHARGING SYSTEM

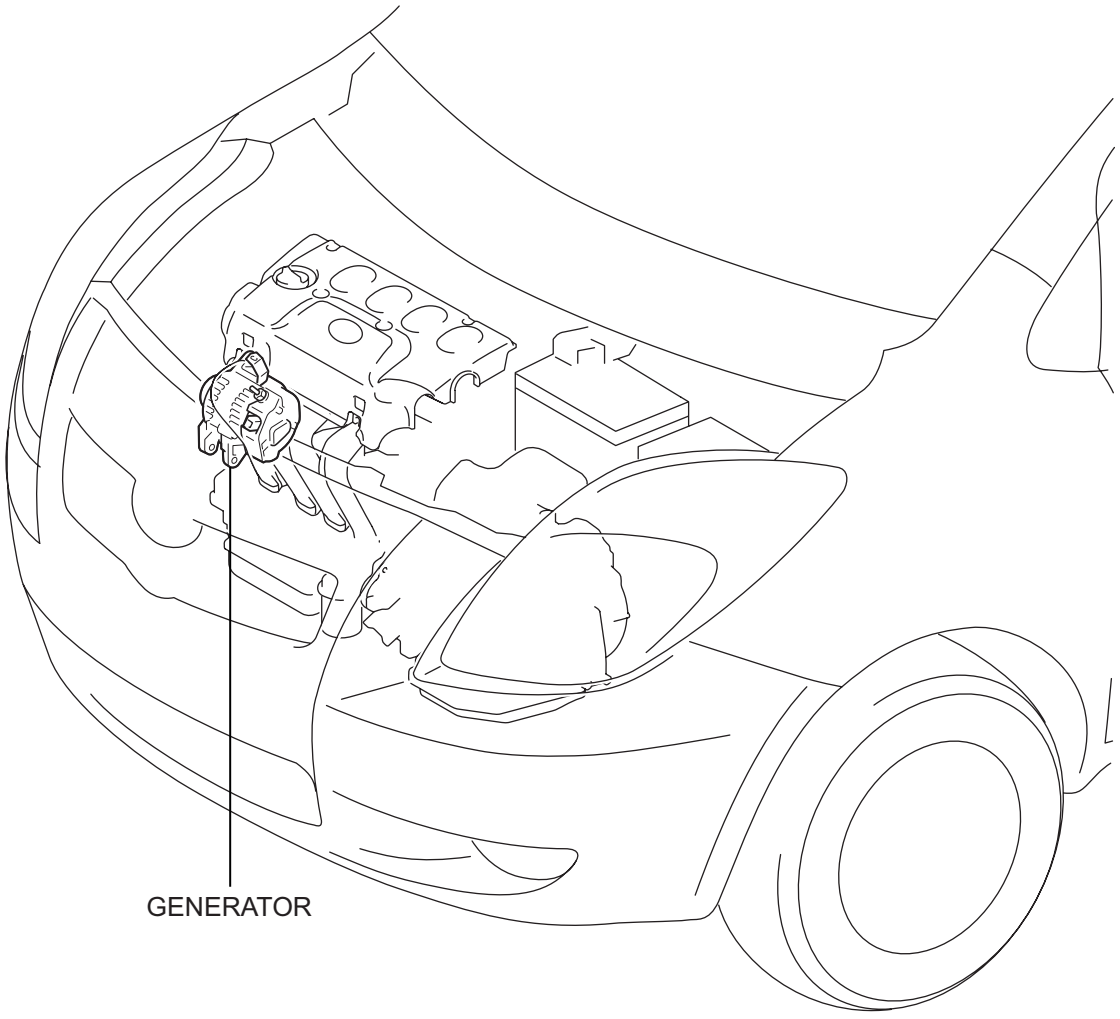
PRECAUTION

1. **Check that the battery cables are connected to the correct terminals.**
2. **Disconnect the battery cables when the battery is given a quick charge.**
3. **Never disconnect the battery while the engine is running.**
4. **Check that the charging cable is tightly connected to terminal B of the generator.**



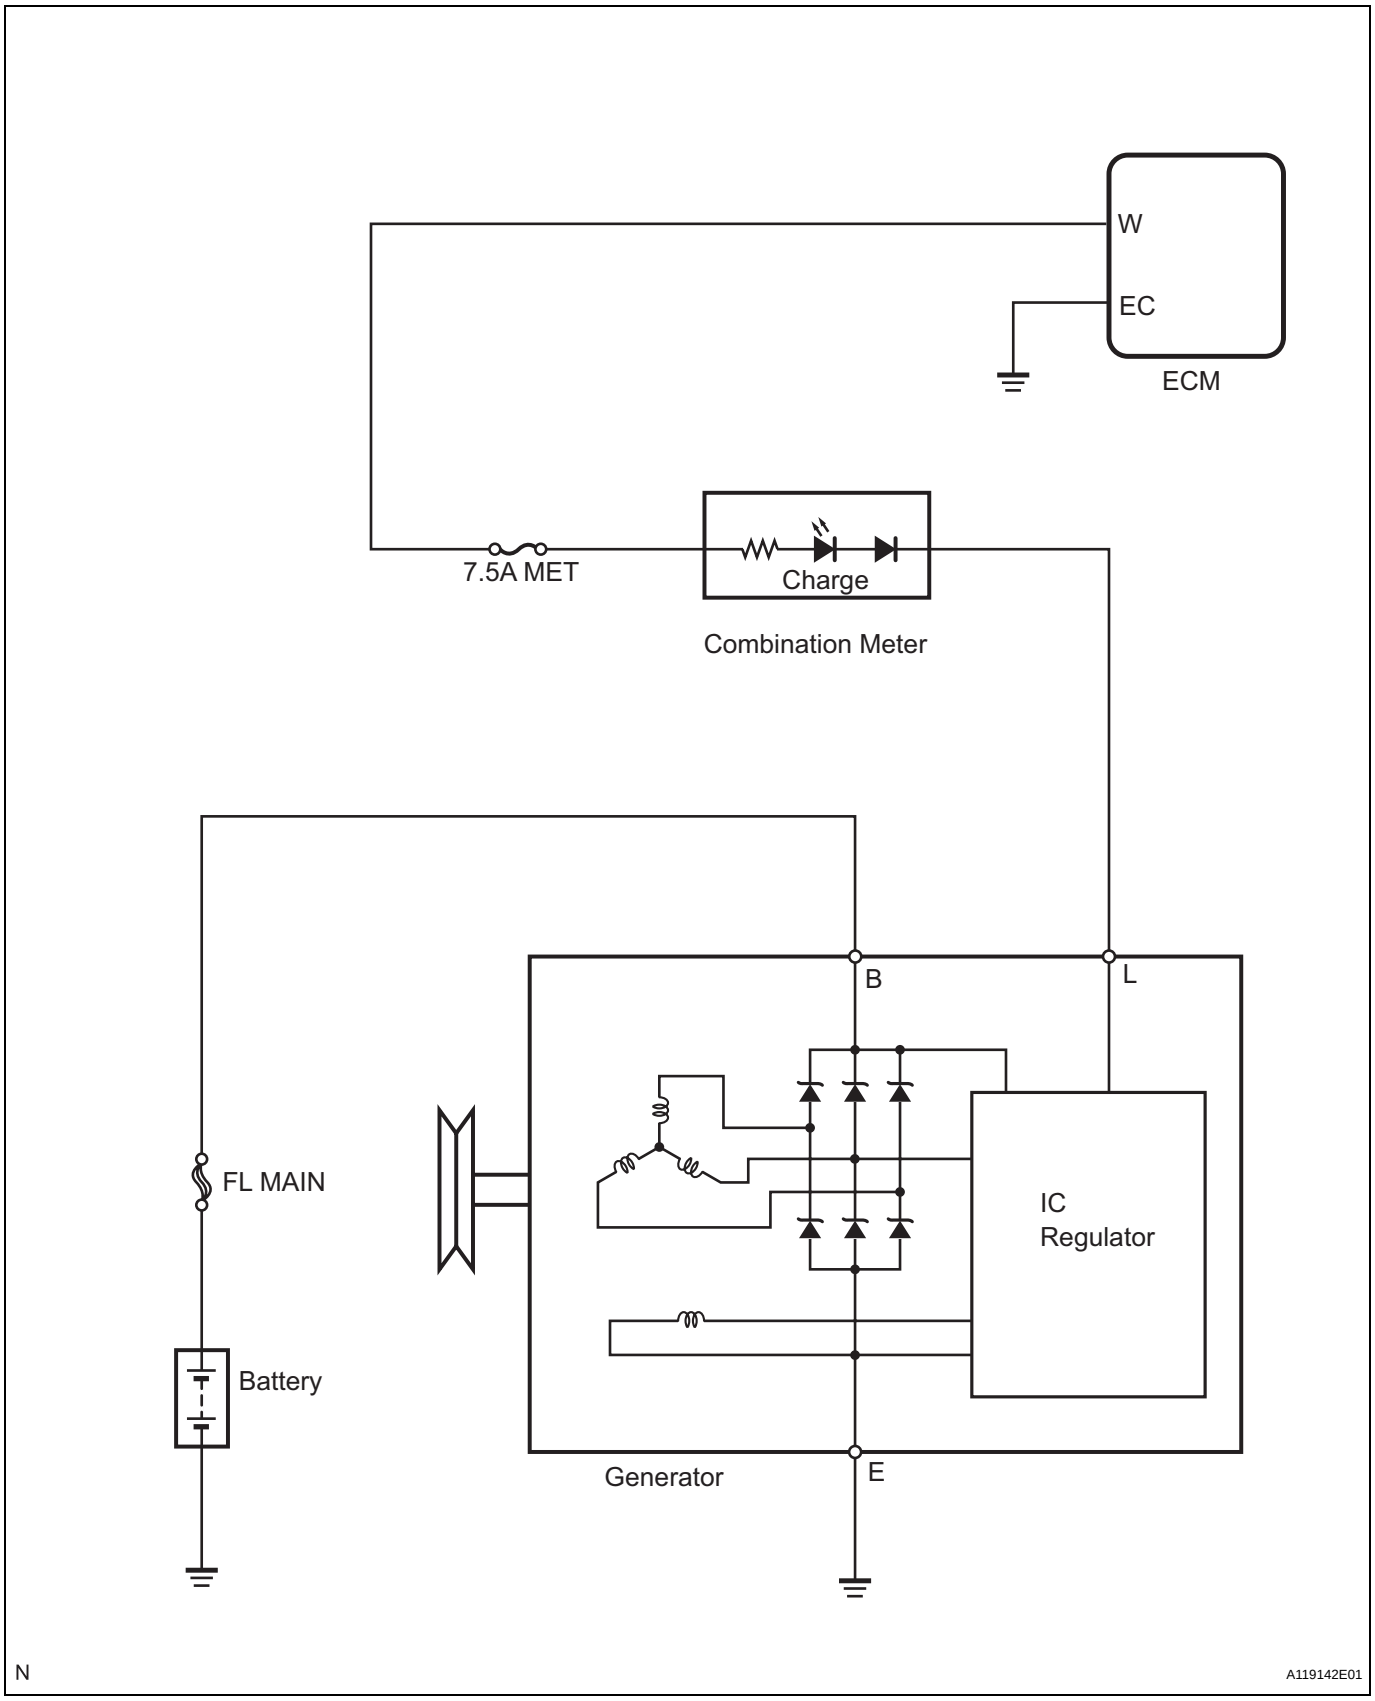
CH

PARTS LOCATION



A119213E01

SYSTEM DIAGRAM



ON-VEHICLE INSPECTION

CAUTION:
If the battery is weak or if the engine is difficult to start, recharge the battery and perform the inspections again before returning the vehicle to the customer.

1. CHECK BATTERY CONDITION

(a) Check the battery for damage and deformation. If severe damage, deformation or leakage is found, replace the battery.

(b) Check the volume of electrolyte in each cell.

(1) For batteries that are maintenance-free:

- If the electrolyte volume is below the lower line, replace the battery.
- If the electrolyte volume is above the lower line, check the battery voltage when cranking the engine.
- If the voltage is less than 9.6 V, recharge or replace the battery.

HINT:
Before checking the battery voltage, turn off all the electrical systems (headlights, blower motor, etc.).

(2) For batteries that are not maintenance-free:

- If the electrolyte volume is below the lower line, add distilled water to each cell. Then, recharge the battery and check the specific gravity of the electrolyte.

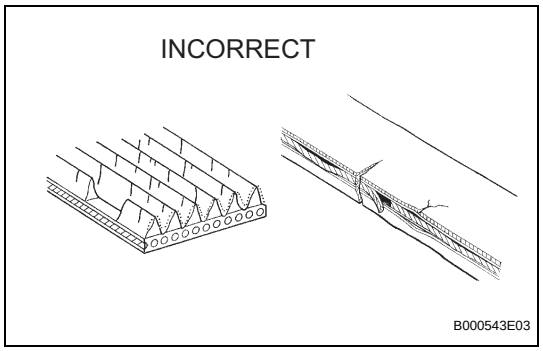
Standard specific gravity:
1.25 to 1.29 at 20 °C (68 °F)

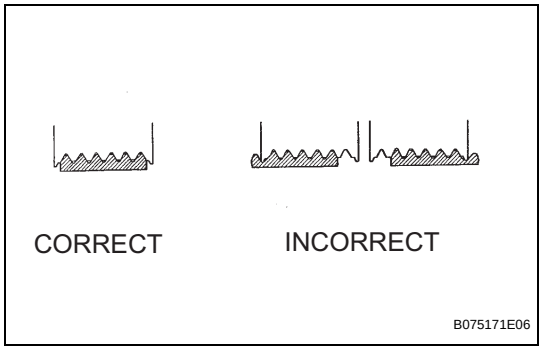
If the electrolyte volume is above the lower line, check the battery voltage when cranking the engine. If the voltage is less than 9.6 V, recharge or replace the battery.
HINT:
Before checking the battery voltage, turn off all the electrical systems (headlights, blower motor, rear defogger, etc.).

2. CHECK BATTERY TERMINAL AND FUSE

(a) Check that the battery terminals are not loose or corroded.
If the terminals are corroded, clean the terminals.

(b) Measure the resistance of the H-fuse and fuses.
Standard resistance:
Below 1 Ω
If the results are not as specified, replace the fuses as necessary.





3. CHECK V-RIBBED BELT

(a) Check the belt for wear, cracks and other signs of damage.
If any defects are found, replace the V-ribbed belt.
HINT:
Replace the drive belt if any of the following defects are found:
- The belt is worn out and the wire is exposed.
- The cracks reach the wire in more than one place.
- The belt has pieces missing from the ribs.

(b) Check that the belt fits properly into the ribbed grooves.
HINT:
With your hand, confirm that the belt has not slipped out of the grooves on the bottom of the pulley.

4. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

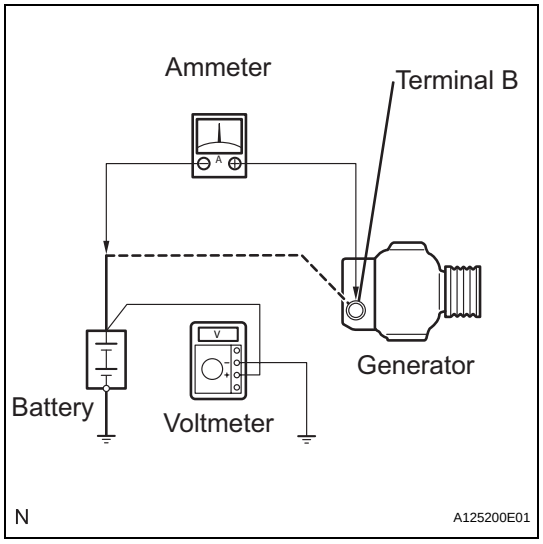
5. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that the generator does not emit any abnormal noise while the engine is running.

6. CHECK CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch on (IG). Check that the charge warning light turns on.

(b) Start the engine and check that the light turns off. If the light does not operate as specified, troubleshoot the charge warning light circuit.



7. CHECK CHARGING CIRCUIT WITHOUT LOAD

(a) Connect a voltmeter and an ammeter to the charging circuit as follows.
HINT:
If a battery/generator tester is available, connect the tester to the charging circuit in accordance with the manufacturer's instructions.
(1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) ammeter lead.
(2) Connect the positive (+) ammeter lead to terminal B of the generator.
(3) Connect the positive (+) voltmeter lead to positive (+) battery terminal.
(4) Ground the negative (-) voltmeter lead.

(b) Check the charging circuit.
(1) Keep the engine speed at 2,000 rpm and check the reading on the ammeter and voltmeter.
Standard current:
10 A or less
Standard voltage:
13.2 to 14.8 V
If the result is not as specified, replace the generator.

HINT:
If the battery is not fully charged, the ammeter reading will sometimes be more than the standard amperage.

8. CHECK CHARGING CIRCUIT WITH LOAD

(a) With the engine running at 2,000 rpm, turn on the high beam headlights and turn the heater blower switch to the HI position.

(b) Check the reading on the ammeter.

Standard current:

30 A or more

If the ammeter reading is less than the standard current, replace the generator.

HINT:
If the battery is fully charged, the ammeter reading will sometimes be less than the standard current. In this case, operate the wiper motor and the window defogger to increase the load and then check the charging circuit again.

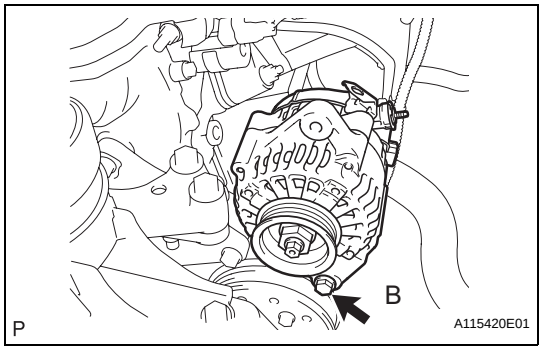
CH

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE FAN AND GENERATOR V BELT (See page EM-7)**
4. **REMOVE GENERATOR ASSEMBLY**
   (a) Remove the terminal cap.
   (b) Separate the connector and the harness clamp.
   (c) Remove the nut and remove terminal B.

   (d) Remove fan belt adjusting slider fixing bolts A and B and remove the fan belt adjusting slider.

   (e) Remove fixing bolt B and remove the generator.



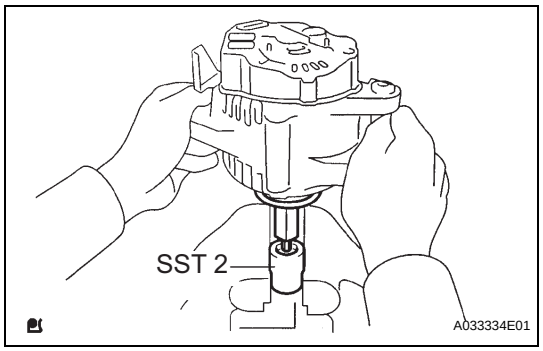
DISASSEMBLY

1. **REMOVE GENERATOR PULLEY**
   SST 09820-63010 (09820-06010, 09820-06020)
   HINT:

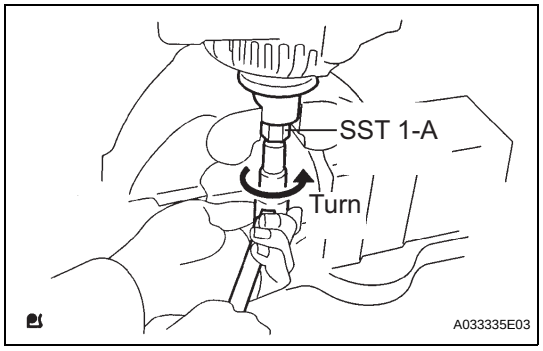
SST 1-A and B	09820 - 06010
SST 2	09820 - 06020

   (a) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise to the specified torque.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)
   NOTICE:
   Check that SST is securely fitted onto the generator rotor shaft.

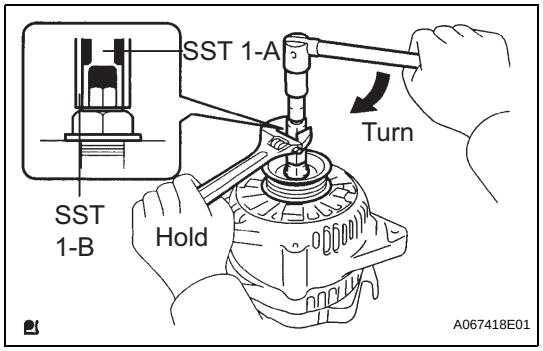
CH



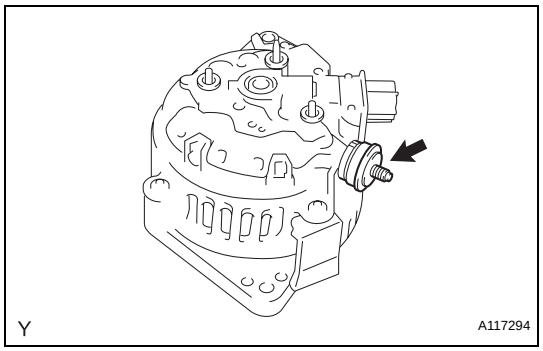
(b) Mount SST 2 in a vise.
(c) Insert SST 1-A and B into SST 2, and attach the generator pulley nut to SST 2.



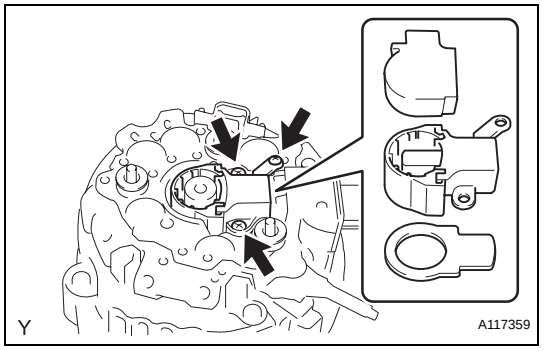
(d) To loosen the generator pulley nut, turn SST 1-A in the direction shown in the illustration.
NOTICE:
To prevent damage to the rotor shaft, do not loosen the generator pulley nut by more than one-half turn.
(e) Remove the generator from SST 2.



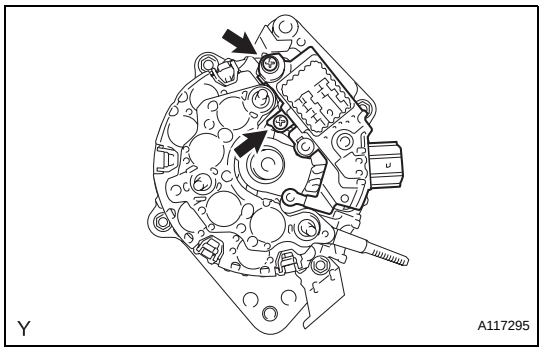
(f) Turn SST 1-B, and remove SST 1-A and B.
(g) Remove the generator pulley nut and generator pulley.



2. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY
(a) Remove the nut and terminal insulator.
(b) Remove the nut, screw and rectifier plate.
(c) Remove the 2 nuts and the rear end cover.

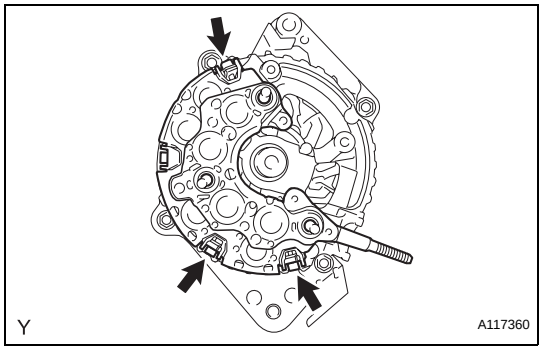


(d) Remove the brush cover from the generator brush holder assembly.
(e) Remove the 3 screws and the generator brush holder assembly.
(f) Remove the plate seal.



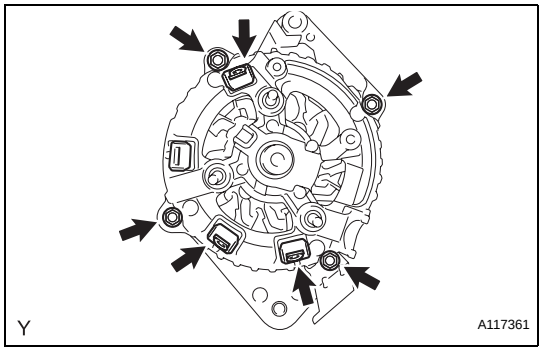
3. REMOVE GENERATOR REGULATOR ASSEMBLY

(a) Remove the 2 screws and the generator regulator assembly.



4. REMOVE GENERATOR HOLDER WITH RECTIFIER

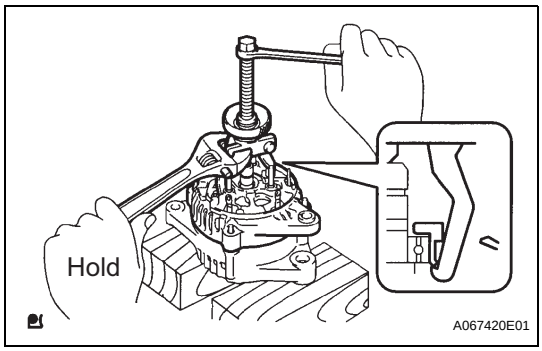
(a) Remove the 3 screws and the generator holder with rectifier.



5. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the 3 terminal insulators from the generator rectifier end frame.

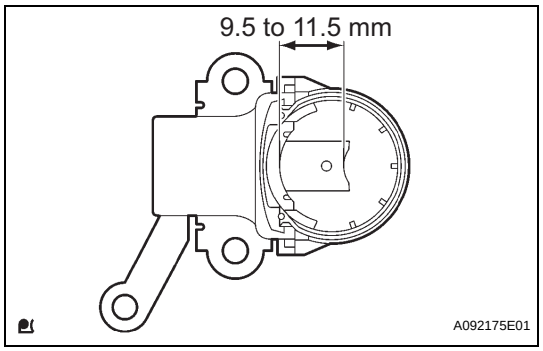
(b) Remove the 4 nuts and the cord clip.



(c) Using SST, remove the generator rectifier end frame.
SST 09286-46011

(d) Remove the plate retainer.

(e) Remove the generator rotor assembly from the generator drive end frame.
NOTICE:
Do not drop the generator rotor assembly.
HINT:
If the generator rotor is engaged too firmly, gently tap the generator rotor shaft to remove it using a plastic hammer.



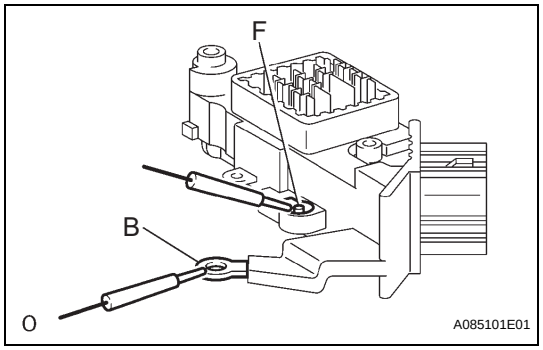
INSPECTION

1. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

(a) Using vernier calipers, measure the exposed brush length.

Standard exposed length:
9.5 to 11.5 mm (0.374 to 0.453 in.)
Minimum exposed length:
1.5 mm (0.059 in.)

If the exposed length is less than the minimum, replace the generator brush holder assembly.

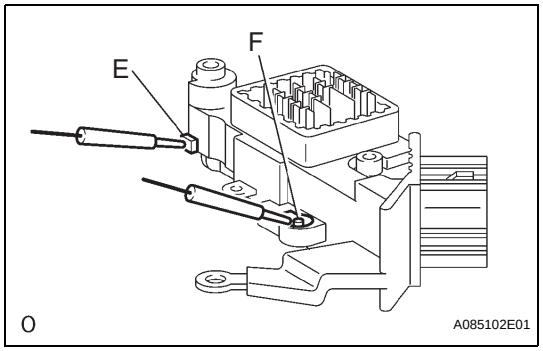


2. INSPECT GENERATOR REGULATOR ASSEMBLY

(a) Using an ohmmeter, check the continuity between terminals F and B.

Standard:
When the positive and negative poles between terminals F and B are exchanged, there is continuity in one direction but no continuity in the other direction.

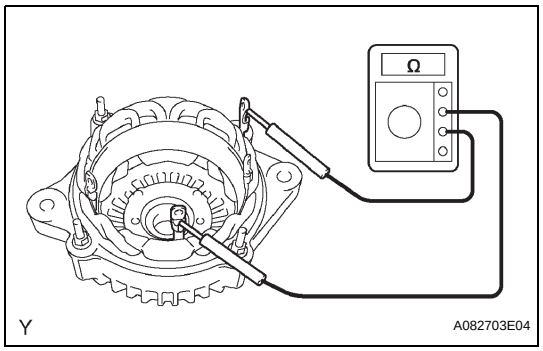
If the continuity is not as specified, replace the generator regulator assembly.



(b) Using an ohmmeter, check the continuity between terminals F and E.

Standard:
When the positive and negative poles between terminals F and E are exchanged, there is continuity in one direction but no continuity in the other direction.

If the continuity is not as specified, replace the generator regulator assembly.



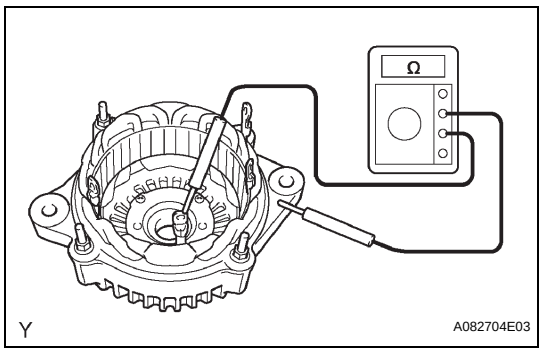
3. INSPECT GENERATOR DRIVE END FRAME

(a) Check the stator coil for open circuits.

(1) Using an ohmmeter, check the resistance between the coil leads.

Standard resistance:
Below 1 Ω

If the result is not as specified, replace the generator assembly.



(b) Inspect the stator for ground.

(1) Using an ohmmeter, check the resistance between the coil lead and drive end frame.

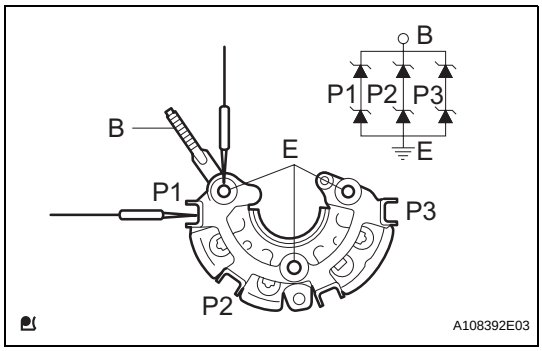
Standard resistance:
10 kΩ or higher

If the result is not as specified, replace the generator assembly.

(c) Inspect the bearing.

(1) Make sure that the bearing is not rough or worn.

If necessary, replace the generator assembly.



4. INSPECT GENERATOR HOLDER WITH RECTIFIER

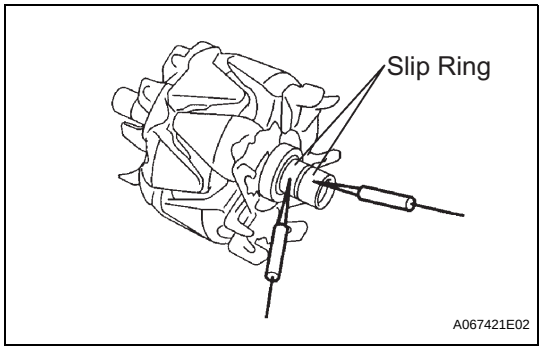
(a) Using an ohmmeter, check the continuity among terminals P1, P2, P3 and B, and among P1, P2, P3 and E.

Standard:

When the positive and negative poles among terminals P1, P2, P3 and B are exchanged, there is continuity in one direction but no continuity in the other direction.

When the positive and negative poles among terminals P1, P2, P3 and E are exchanged, there is continuity in one direction but no continuity in the other direction.

If the continuity is not as specified, replace the generator holder with rectifier.



5. INSPECT GENERATOR ROTOR ASSEMBLY

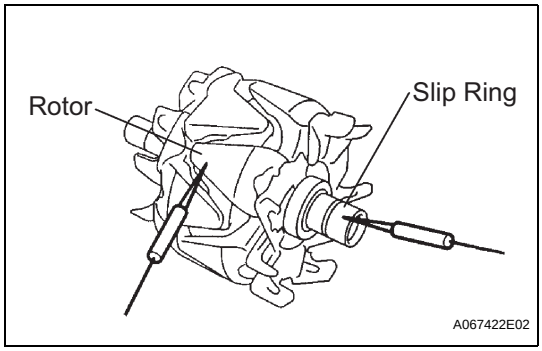
(a) Check the generator rotor for open circuits.

(1) Using an ohmmeter, measure the resistance between the slip rings.

Standard resistance:

1.7 to 2.1 Ω at 20°C (68°F)

If the resistance is not as specified, replace the generator rotor assembly.



(b) Check the generator rotor for short circuits.

(1) Using an ohmmeter, check the resistance between the slip ring and generator rotor assembly.

Standard resistance:

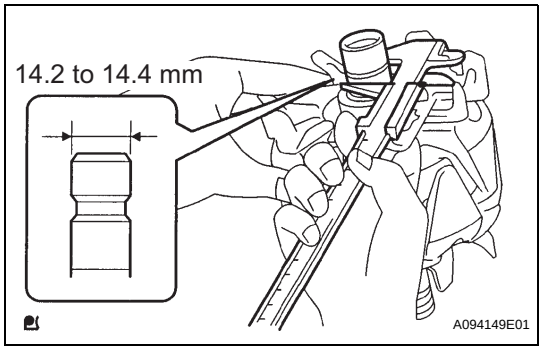
10 kΩ or higher

If the result is not as specified, replace the generator rotor assembly.

(c) Inspect the slip rings.

(1) Make sure that the slip rings are not rough or scored.

If rough or scored, replace the generator rotor assembly.



(2) Using vernier calipers, measure the slip ring diameter.

Standard diameter:

14.2 to 14.4 mm (0.559 to 0.567 in.)

Minimum diameter:

12.8 mm (0.504 in.)

If the diameter is less than the minimum, replace the generator rotor assembly.

CH

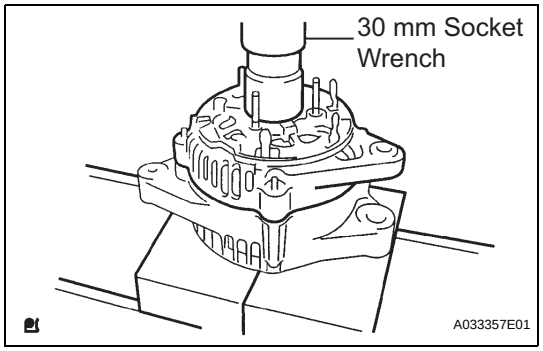
REASSEMBLY

1. INSTALL GENERATOR ROTOR ASSEMBLY

(a) Place the generator drive end frame on the generator rotor assembly.
NOTICE:
Do not drop the generator rotor assembly.

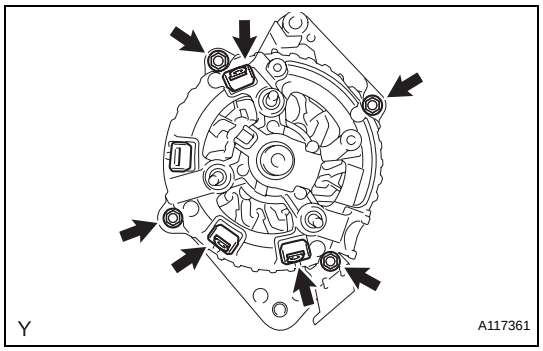
(b) Install the generator rotor assembly and the plate retainer.

(c) Using a 30 mm socket wrench and press, slowly press in the generator rectifier end frame.



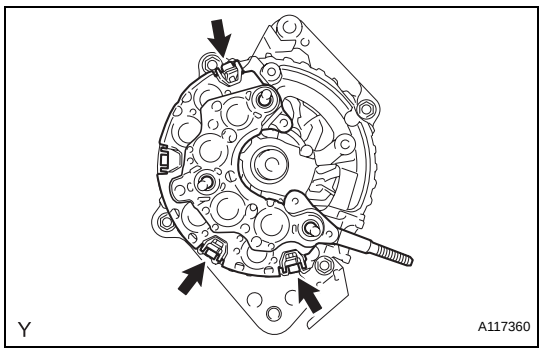
(d) Install the 4 nuts and the cord clip.
Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)

(e) Install the 3 terminal insulators onto the generator rectifier end frame.



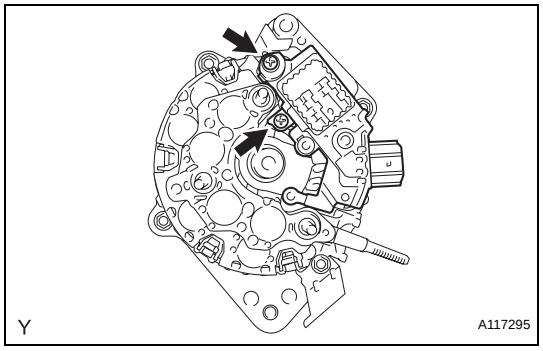
2. INSTALL GENERATOR HOLDER WITH RECTIFIER

(a) Install the generator holder with rectifier with the 3 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)

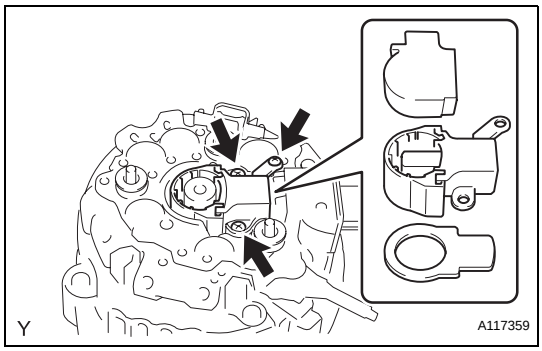


3. INSTALL GENERATOR REGULATOR ASSEMBLY

(a) Install the generator regulator assembly with the 2 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)



CH



4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

(a) Install the plate seal.

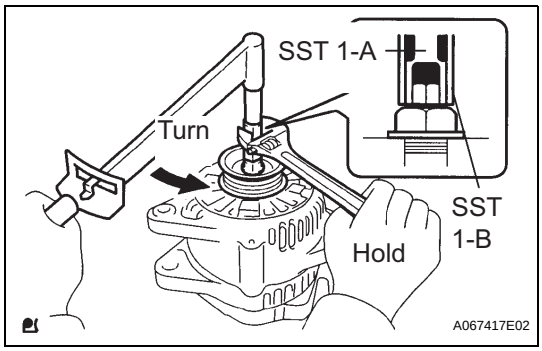
(b) Install the generator brush holder assembly with the 3 screws.
Torque: 2.0 N*m (20 kgf*cm, 17 in.*lbf)

(c) Install the brush cover onto the generator brush holder assembly.

(d) Install the rear end cover with the 2 nuts.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf)

(e) Install the rectifier plate with the nut and screw.
Torque: 4.4 N*m (45 kgf*cm, 39 in.*lbf) for nut
Torque: 3.8 N*m (39 kgf*cm, 34 in.*lbf) for bolt

(f) Install the terminal insulator with the nut.
Torque: 4.1 N*m (42 kgf*cm, 36 in.*lbf)

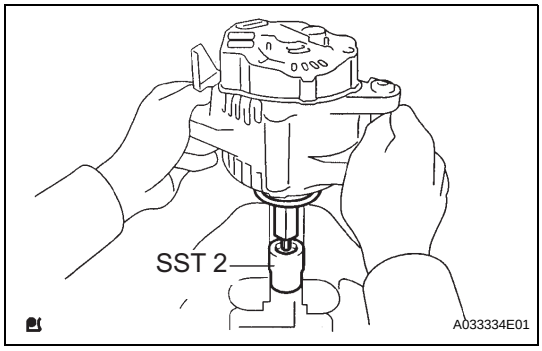


5. INSTALL GENERATOR PULLEY
SST 09820-63010 (09820-06010, 09820-06020)
HINT:

SST 1-A and B	09820 - 06010
SST 2	09820 - 06020

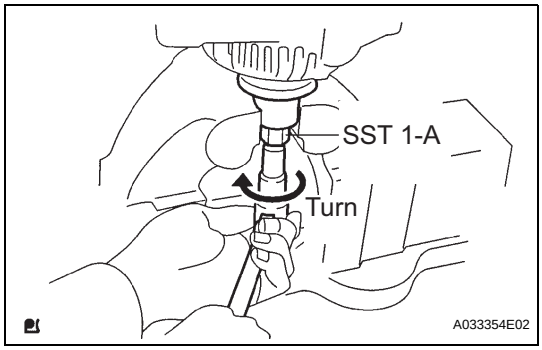
(a) Install the generator pulley onto the generator rotor shaft by tightening the generator pulley nut by hand.

(b) Hold SST 1-A with a torque wrench, and tighten SST 1-B clockwise to the specified torque.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
NOTICE:
Check that SST is securely fitted onto the generator rotor shaft.



(c) Mount SST 2 in a vise.

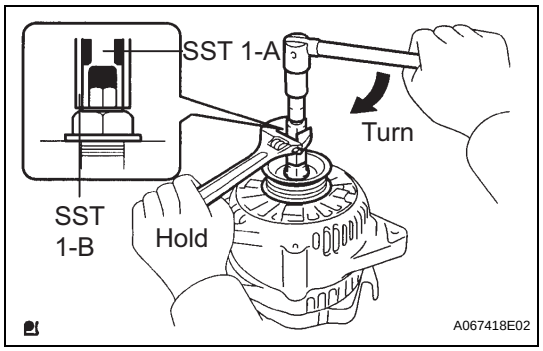
(d) Insert SST 1-A and B into SST 2, and attach the generator pulley nut to SST 2.



(e) Tighten the generator pulley nut by turning SST 1-A in the direction shown in the illustration.
Torque: 133 N*m (1,356 kgf*cm, 98 ft.*lbf)

(f) Remove the generator from SST 2.

CH

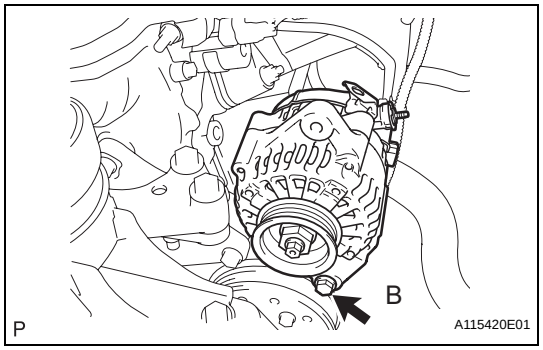


(g) Turn SST 1-B, and remove SST 1-A and B.
(h) Turn the generator pulley, and check that the generator pulley moves smoothly.

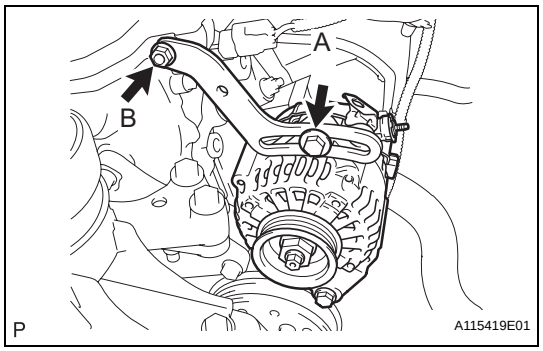
INSTALLATION

1. INSTALL GENERATOR ASSEMBLY

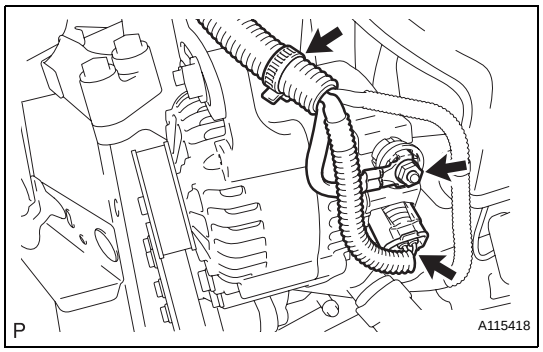
(a) Provisionally install the generator with fixing bolt B.



(b) Provisionally install the fan belt adjusting slider with fan belt adjusting slider fixing bolts A and B, then move the generator toward the cylinder block and tighten bolt B.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)



(c) Install the connector and the wire harness clamp.
(d) Install terminal B with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7.2 ft.*lbf)
(e) Install the terminal cap.



2. INSTALL FAN AND GENERATOR V BELT (See page EM-7)

3. ADJUST FAN AND GENERATOR V BELT (See page EM-7)

4. INSPECT FAN AND GENERATOR V BELT (See page EM-8)

5. INSTALL ENGINE UNDER COVER RH

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

CH

AUTOMATIC TRANSAXLE SYSTEM

PRECAUTION

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM (See page AX-14).**
- **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-13).**

HINT:
The RESET MEMORY cannot be completed by only disconnecting the battery cable.

CAUTION:
When using compressed air, always aim away from yourself to prevent Automatic Transmission Fluid (ATF) or kerosene from spraying on your face.

NOTICE:

- **The automatic transaxle is composed of high precision parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect the performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. As far as possible, complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair that group immediately. If a component group cannot be assembled because some parts are on order, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups.**
- **When changing the automatic transmission fluid, use only "Toyota Genuine ATF WS" (ATF JWS3324 or NWS9638).**
- **All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.**
- **Dry all parts with compressed air. Never use a shop rag or a piece of cloth to dry them.**
- **Only recommended ATF or kerosene should be used for cleaning.**
- **After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.**
- **When disassembling a valve body, be sure to match each valve with the corresponding spring.**

- **New brake and clutch discs that are to be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**
- **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
- **All gaskets and rubber O-rings should be replaced with new ones.**
- **Do not apply adhesive cements to gaskets or similar parts.**
- **Make sure that the ends of snap rings are not aligned with any cutouts and are installed in the grooves correctly.**
- **When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.**
- **Check thrust bearings and races for wear and damage. Replace them as necessary.**
- **When working with FIPG material, you must observe the following:**
  - **Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.**
  - **Clean both sealing surfaces with a non-residue solvent.**
  - **Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.**

DEFINITION OF TERMS

Term	Definition
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by the ECM based on the same malfunction detection logic.
Typical enabling conditions	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While one sensor is being monitored, the next sensor or component is not monitored until the current monitoring is concluded.
Required sensor/components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects malfunctions only one time during a single driving cycle. "Continuous" means that the ECM detects malfunctions every time the enabling conditions are met.
Duration	The minimum time that the ECM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins when the typical enabling conditions are met.
Malfunction thresholds	Beyond this value, the ECM concludes that there is a malfunction and sets a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediate" means that the ECM illuminates the MIL the instant the ECM determines that there is a malfunction. "2 driving cycle" means that the ECM illuminates the MIL if the same malfunction is detected again in the next driving cycle.
Component operating range	Normal operating ranges of sensors and solenoids under normal driving conditions. Use these ranges as references. They cannot be used to judge if a sensor or solenoid is defective or not.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic Controlled automatic Transmission/Transaxle) is an automatic transmission/transaxle that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission/transaxle performance are improved.
Shift shock has been reduced by controlling the engine and transmission simultaneously.
In addition, the ECT has features such as the following:

- Diagnostic function
- Fail-safe function when a malfunction occurs

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, be sure to check that there is no trouble in the CAN communication system.
- The intelligent tester can be used in steps 3, 4, 6, and 9.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. PERFORM ROAD TEST

NOTICE:

Perform the test at the ATF (Automatic Transmission Fluid) temperature 50° to 80 °C (122° to 176 °F) in the normal operation.

(a) D position test

Shift into the D position, fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1st to 2nd, 2nd to 3rd and 3rd to 4th up-shifts take place, and that the shift points conform to the automatic shift schedule (See page SS-19).

HINT:

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 60 °C (140 °F) or less.
- ATF temperature is 10 °C (50 °F) or less.

4th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60 °C (140 °F) or less.
- ATF temperature is 10 °C (50 °F) or less.

(2) Check for shift shock and slippage.

Check for shock and slippage when up-shifting from 1st to 2nd, 2nd to 3rd and 3rd to 4th.

(3) Check for abnormal noises and vibration.

Check for abnormal noise and vibration when up-shifting from 1st to 2nd, 2nd to 3rd and 3rd to 4th while driving with the shift lever in the D position, and also check while driving in the lock-up condition.

HINT:

The cause of abnormal noises and vibration must be checked very thoroughly as it could also cause loss of balance in parts, such as the differential and torque converter.

(4) Check kick-down operation.
Check the possible kick-down vehicle speeds when the 2nd to 1st, 3rd to 2nd and 4th to 3rd kick-downs take place while driving with the shift lever in the D position. Confirm that each takes place within the applicable vehicle speed range indicated in the automatic shift schedule (See page SS-19).
(5) Check for abnormal shock and slippage during kick-down.
(6) Check the lock-up mechanism.
- Drive in the D position (4th gear) at a constant speed (lock-up ON) of approximately 37 mph (60 km/h).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up function in the 1st, 2nd and 3rd gears in the D position.
- If there is a sudden increase in engine speed, lock-up has not occurred.

(b) 3 position test
Shift into the 3 position, fully depress the accelerator pedal and check the following points:
(1) Check the transmission control switch operation.
While driving in the D position (4th gear), shift the shift lever into the 3 position, and check that the 4th to 3rd down-shift takes place.
(2) Check up-shift operation.
Check that the 1st to 2nd and 2nd to 3rd up-shifts take place, and that the shift points conform to the automatic shift schedule (See page SS-19).
HINT:
There is no 3rd to 4th up-shift in the 3 position.
(3) Check engine braking.
While driving in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.

(c) 2 position test
Shift into the 2 position and fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1st to 2nd up-shift takes place and that the shift point conforms to the automatic shift schedule (See page SS-19).
HINT:
There is no lock-up function in the 2 position.
(2) Check engine braking.
While driving in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration, and for shock during up-shift and down-shift.

(d) L position test
Shift into the L position, fully depress the accelerator pedal and check the following points.
(1) Check that no up-shift takes place.
While driving in the L position, check that there is no up-shift to 2nd gear.
(2) Check engine braking.
While driving in the L position, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noises during acceleration and deceleration.

(e) R position test
Shift into the R position, fully depress the accelerator pedal and check for slippage.
CAUTION:
Before conducting this test, ensure that the test area is free from people and obstructions.

(f) P position test
Stop the vehicle on a slope (more than 5°), shift into the P position and release the parking brake. Check that the vehicle does not move.

MECHANICAL SYSTEM TESTS

1. STALL SPEED TEST

HINT:

This test is to check the overall performance of the engine and transaxle by measuring the stall speeds in the D position.

NOTICE:

- **Do not perform the stall speed test for longer than 5 seconds.**
- **To ensure safety, perform this test in a wide, clear level area which provides good traction.**
- **The stall speed test must always be carried out by pairs of technicians. One technician must watch the wheels and wheel stoppers from outside the vehicle to make sure they do not slip, while the other performs the test.**

(a) Connect the intelligent tester to the DLC3.

(b) Run the vehicle until the ATF (Automatic Transmission Fluid) temperature reaches 50° to 80°C (122° to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Chock all 4 wheels.

(e) Set the parking brake and keep the brake pedal firmly depressed with your left foot.

(f) Shift the shift lever to the D position.

(g) Depress the accelerator pedal all the way down with your right foot.

(h) Read the engine rpm (stall speed) and release the accelerator pedal immediately.

Standard value:

1,850 to 2,450 rpm

AX

Evaluation:

Test Result	Possible Cause
Stall speed is lower than standard value	• Stator one-way clutch is not operating properly • Torque converter is faulty (Stall speed is less than standard value by 600 rpm or more.) • Engine power is insufficient
Stall speed is higher than standard value	• Line pressure is too low • Forward clutch (C1) is slipping • No. 2 one-way clutch (F2) is not operating properly

2. SHIFT TIME LAG TEST

HINT:

This test is to check the conditions of the direct clutch, forward clutch, 1st brake and reverse brake.

(a) Connect the intelligent tester to the DLC3.

(b) Run the vehicle until the ATF (Automatic Transmission Fluid) temperature reaches 50° to 80°C (122° to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

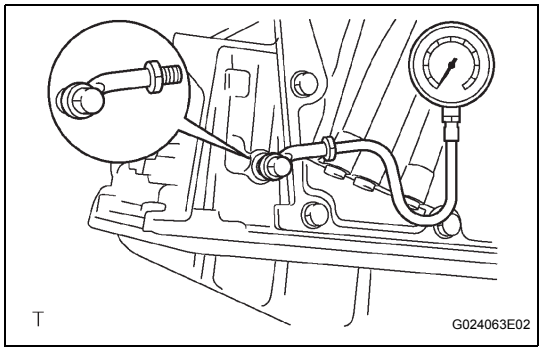
(d) Set the parking brake and keep the brake pedal firmly depressed with your left foot.

(e) Check the D range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute. (*1)
(2) Shift the shift lever into the D position and measure the time until the shock is felt. (*2)
(3) Repeat procedures (*1) and (*2) three times, and calculate the average time of the three tests.

(f) Check the R range time lag.
(1) Shift the shift lever into the N position and wait for 1 minute. (*3)
(2) Shift the shift lever into the R position and measure the time until the shock is felt. (*4)
(3) Repeat procedures (*3) and (*4) three times, and calculate the average time of the three tests.
Standard value:
D range time lag is less than 1.2 seconds
R range time lag is less than 1.5 seconds

Evaluation :

Test Result	Possible Cause
D range time lag exceeds standard value	• Line pressure is too low • Forward clutch (C1) is worn • No. 2 one-way clutch (F2) is not operating properly
R range time lag exceeds standard value	• Line pressure is too low • Reverse clutch (C3) is worn • 1st and reverse brake (B3) is worn



HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.
NOTICE:
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50° to 80°C (122° to 176°F).**
- **The line pressure test must always be carried out by pairs of technicians. One technician must observe the condition of the wheels and wheel stoppers outside the vehicle, while the other is performing the test.**
- **Prevent the SST hose from interfering with the exhaust pipe.**
- **This test must be conducted after checking and adjusting the engine.**
- **Perform this test with the air conditioning OFF.**
- **Do not continue the stall test for more than 5 seconds.**

(1) Warm up the ATF.
(2) Lift the vehicle up.
(3) Remove the engine under cover.
(4) Remove the test plug on the transmission case center right side and connect SST.
SST 09992-00095 (09992-00231, 09992-00271)
(5) Connect the intelligent tester to the DLC3.

AX

(6) Fully apply the parking brake and chock all 4 wheels.
(7) Start the engine and check the idling speed.
(8) Keep your left foot pressing firmly on the brake pedal and shift into the D position.
(9) Measure the line pressure when the engine is idling.
(10) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.
(11) Perform the test in the R position in the same manner.

Standard line pressure

Condition	D position kPa (kgf / cm^2, psi)	R position kPa (kgf / cm^2, psi)
Idling	**372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)**	**553 to 623 kPa (5.6 to 6.4 kgf/cm^2, 80 to 90 psi)**
Stall	**1,126 to 1,226 kPa (11.5 to 12.5 kgf/cm^2, 163 to 178 psi)**	**1,664 to 1,864 kPa (17.0 to 19.0 kgf/cm^2, 241 to 270 psi)**

Evaluation:

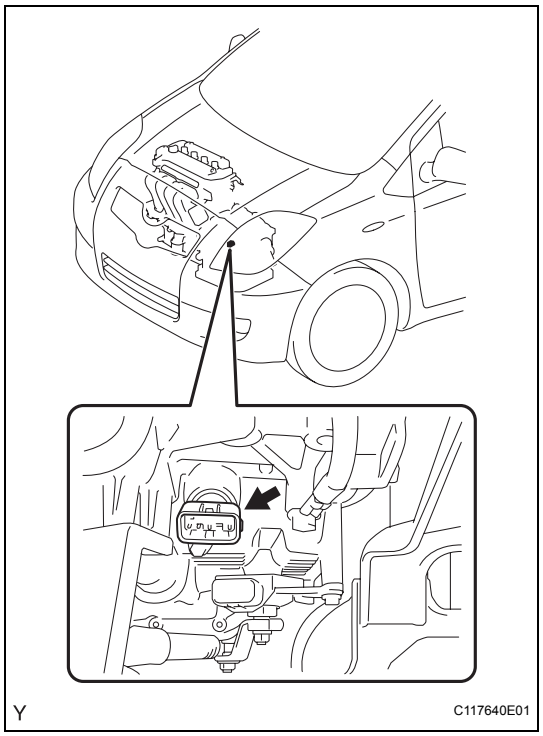
Problem	Possible Cause
Measured values are higher than specified values in all positions	• Shift solenoid valve SLT defective • Regulator valve defective
Measured values are lower than specified values in all positions	• Shift solenoid valve SLT defective • Regulator valve defective • Oil pump defective
Pressure is low in D position only	• D position circuit fluid leak • Forward clutch defective
Pressure is low in R position only	• R position circuit fluid leak • Reverse clutch defective • 1st and reverse brake defective

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- This test can be used to determine whether the trouble is occurring in the electrical circuit or is a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.



(a) Disconnect the transmission wire connector.
HINT:
It is possible to deactivate the electrical shift control by disconnecting the transmission wire. In this way, it is possible to change gear positions by mechanical shift change using the shift lever.

(b) Drive with the transmission wire disconnected. Shift the shift lever into each position to check whether the gear position changes as shown in the table below.

Shift Position	Shifting Condition
D	3rd
3	3rd
2	3rd
L	3rd
R	Reverse
P	Pawl Lock

(c) Connect the transmission wire connector.

(d) Clear the DTC (See page AX-25).

AX

INITIALIZATION

1. RESET MEMORY

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.**
- **The RESET MEMORY can only be performed using an intelligent tester.**

HINT:

The ECM stores the conditions that the ECT controls the automatic transaxle assembly and engine assembly in accordance with those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM is replaced, it is necessary to reset the memory so that the ECM can store the new information.

The reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch to the ON position and push the intelligent tester main switch on.

(d) Select the following items: DIAGNOSIS / ENHANCED OBD II.

(e) Perform the reset memory procedure from the ENGINE menu.

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (See page AX-9) as described earlier.

HINT:

The ECM stores learned values by performing the ROAD TEST.

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of ECT malfunctions. (The DTCs may not be detected due to the actual driving conditions. And some DTCs may not be detected through this drive pattern.)

HINT:

Preparation for driving

- Warm up the engine. (Engine coolant temperature is 60°C (140°F) or higher.)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F).)

Driving note

- Drive the vehicle through all gears. Stop → 1st → 2nd → 3rd → 4th (lock-up ON).
- Repeat the above driving pattern three times or more.

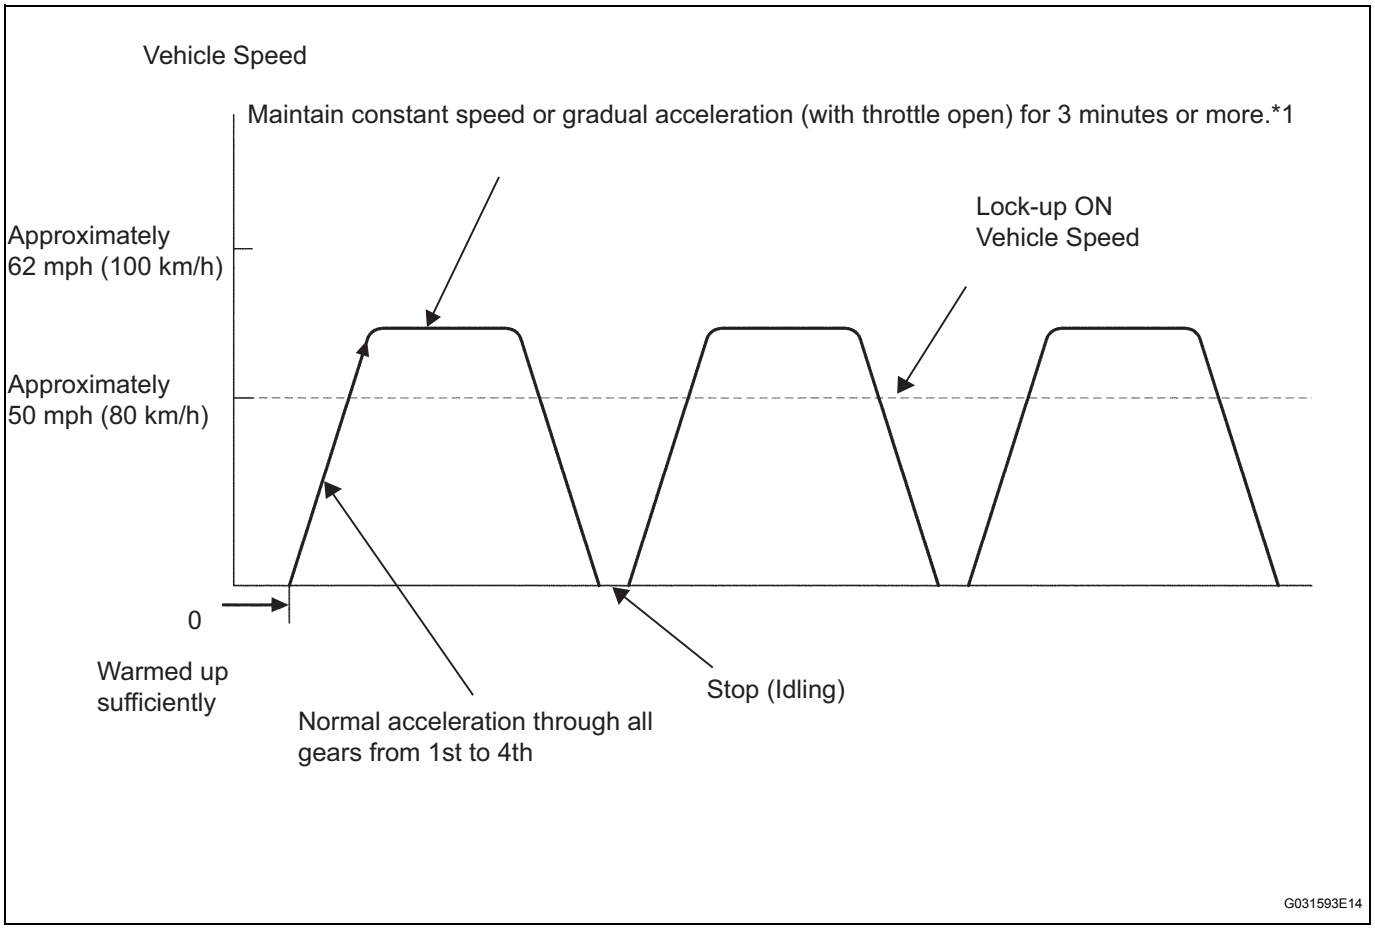
NOTICE:

- **The monitor status can be checked using the intelligent tester. When using an intelligent tester, monitor status can be found in the ENHANCED OBD II / DATA LIST or under CARB OBD II.**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:

Perform this drive pattern on as level a road as possible and strictly observe the posted speed limits and traffic laws while driving.

AX



HINT:
*1: Drive at such a speed in the uppermost gear, to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.

NOTICE:
To detect DTC P0711 (ATF temperature sensor malfunction), drive the vehicle for approximately 30 minutes.

AX

PROBLEM SYMPTOMS TABLE

HINT:

- If a normal code is displayed during the DTC check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the following charts and proceed to the page given for troubleshooting.
- The Matrix Chart is divided into 2 chapters.
- When the circuit on which *1 is attached malfunctions, a DTC could be output.

Chapter 1: Electronic Circuit Matrix Chart

Refer to the table below when the trouble cause is considered to be electrical. If the trouble still occurs even though there are no abnormalities in any of the other circuits, then check and replace the ECM.

Symptom	Suspected area	See page
No up-shift (Particular gear, from 1st to 3rd gear, is not up-shifted)	ECM	IN-34
No up-shift (From 3rd to 4th)	1. Shift lock control unit circuit	AX-47
	2. ECM	IN-34
No down-shift (From 4th to 3rd)	1. Shift lock control unit circuit	AX-47
	2. ECM	IN-34
No down-shift (Particular gear, from 1st to 3rd gear, is not down-shifted)	ECM	IN-34
No lock-up or No lock-up off	1. Stop light switch circuit *1	ES-48
	2. Engine coolant temperature sensor circuit *1	ES-48
	3. Vehicle speed sensor circuit *1	ES-48
	4. Speed sensor (NT) circuit *1	AX-50
	5. ATF temperature sensor circuit *1	AX-42
	6. Shift solenoid valve S1 *1	AX-67
	7. Shift solenoid valve S2 *1	AX-71
	8. Shift solenoid valve SLU *1	AX-89
	9. Throttle position sensor circuit *1	ES-48
	10. ECM	IN-34
Shift point too high or too low	1. Throttle position sensor circuit *1	ES-48
	2. ECM	IN-34
Up-shift to 2nd while in L position	ECM	IN-34
Up-shift to 3nd while in 2 position	ECM	IN-34
Up-shift from 3rd to 4th in 3 position	1. Shift lock control unit circuit	AX-47
	2. Park/neutral position switch *1	AX-35
	3. ECM	IN-34
Up-shift from 3rd to 4th while engine is cold	1. Engine coolant temperature sensor circuit *1	ES-48
	2. ECM	IN-34
Harsh engagement (From N to D)	1. Park/neutral position switch *1	AX-35
	2. ECM	IN-34
Harsh engagement (From 3rd to 4th)	1. Shift solenoid valve ST *1	AX-63
	2. ECM	IN-34
Harsh engagement (Lock-up)	1. Shift solenoid valve SLU *1	AX-89
	2. ECM	IN-34
Harsh engagement (Any driving position)	1. Throttle position sensor circuit *1	ES-48
	2. ECM	IN-34
Poor acceleration	ECM	IN-34
No kick-down	ECM	IN-34

Symptom	Suspected area	See page
Engine stalls when starting off or stopping	ECM	IN-34
Malfunction in shifting	1. Park/neutral position switch *1	AX-35
	2. Shift lock control unit circuit	AX-47
	3. ECM	IN-34

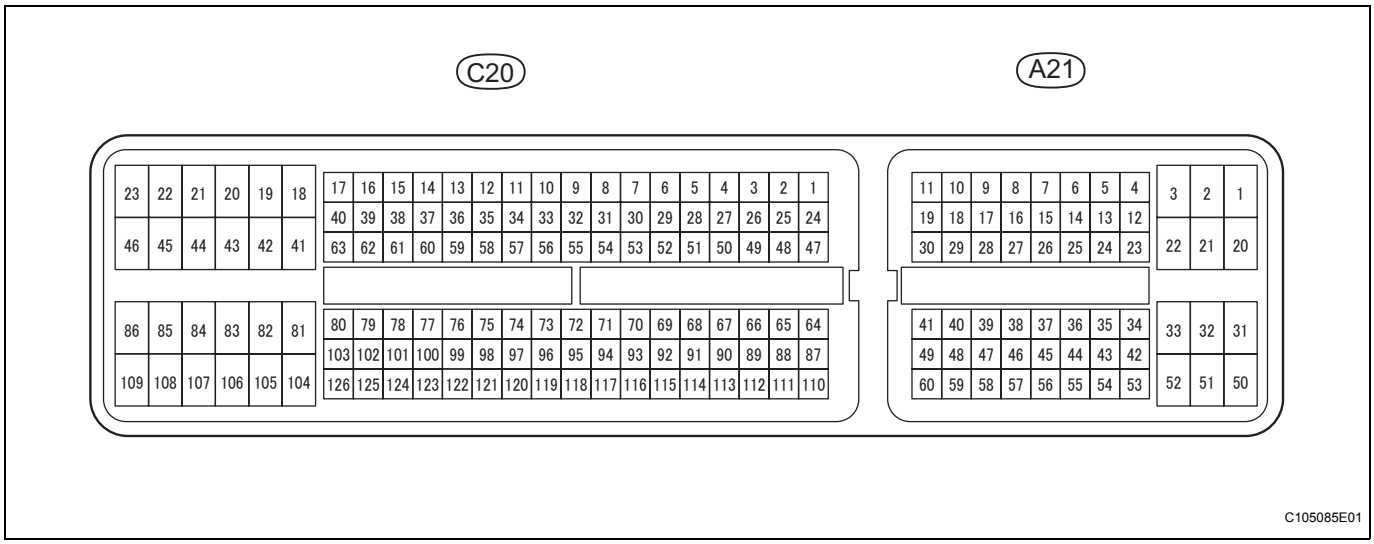
Chapter 2: On-Vehicle Repair and Off-Vehicle Repair

Symptom	Suspected area	See page
Vehicle does not move in any forward positions or in R position	1. Manual valve	AX-253
	2. Valve body assembly	AX-113
	3. Planetary gear unit	AX-173
	4. Forward clutch (C1)	AX-173
	5. No. 2 one-way clutch (F2)	AX-173
	6. Reverse clutch (C3)	AX-173
	7. 1st and reverse brake (B3)	AX-173
Vehicle does not move in R position	1. Manual valve	AX-253
	2. Valve body assembly	AX-113
	3. Planetary gear unit	AX-173
	4. Reverse clutch (C3)	AX-173
	5. 1st and reverse brake (B3)	AX-173
No up-shift (From 1st to 2nd)	1. Valve body assembly	AX-113
	2. 2nd brake (B2)	AX-173
	3. No. 1 one-way clutch (F1)	AX-173
No up-shift (From 2nd to 3rd)	1. Valve body assembly	AX-113
	2. Direct clutch (C2)	AX-173
No up-shift (From 3rd to 4th)	1. Valve body assembly	AX-113
	2. O/D and 2nd brake (B1)	AX-173
No down-shift (From 4th to 3rd)	Valve body assembly	AX-113
No down-shift (From 3rd to 2nd)	Valve body assembly	AX-113
No down-shift (From 2nd to 1st)	Valve body assembly	AX-113
No lock-up or No lock-up off	1. Valve body assembly	AX-113
	2. Torque converter clutch	AX-171
Harsh engagement (From N to D)	1. Valve body assembly	AX-113
	2. Forward clutch (C1)	AX-173
	3. No. 2 one-way clutch (F2)	AX-173
Harsh engagement (Lock-up)	1. Valve body assembly	AX-113
	2. Torque converter clutch	AX-171
Harsh engagement (From N to R)	1. Valve body assembly	AX-113
	2. C3 accumulator	AX-173
	3. Reverse clutch (C3)	AX-173
	4. 1st and reverse brake (B3)	AX-173
Harsh engagement (From 1st to 2nd)	1. B2 accumulator	AX-173
	2. Valve body assembly	AX-113
	3. 2nd brake (B2)	AX-173
	4. No. 1 one-way clutch (F1)	AX-173
Harsh engagement (From 2nd to 3rd)	1. C2 accumulator	AX-173
	2. Valve body assembly	AX-113
	3. Direct clutch (C2)	AX-173
Harsh engagement (From 3rd to 4th)	1. Shift solenoid valve ST	AX-63
	2. Valve body assembly	AX-113
	3. O/D and 2nd brake (B1)	AX-173

Symptom	Suspected area	See page
Harsh engagement (From 4th to 3rd)	1. Shift solenoid valve ST	AX-63
	2. Valve body assembly	AX-113
Harsh engagement (D, 2, L position)	Valve body assembly	AX-113
Slippage or shuddering (Forward position)	1. Valve body assembly	AX-113
	2. Oil strainer	AX-113
	3. Torque converter clutch	AX-171
	4. Forward clutch (C1)	AX-173
	5. Direct clutch (C2)	AX-173
	6. O/D and 2nd brake (B1)	AX-173
	7. 2nd brake (B2)	AX-173
	8. No. 1 one-way clutch (F1)	AX-173
	9. No. 2 one-way clutch (F2)	AX-173
Slippage or shuddering (R position)	1. Valve body assembly	AX-113
	2. Oil strainer	AX-113
	3. Reverse clutch (C3)	AX-173
	4. 1st and reverse brake (B3)	AX-173
Slippage or shuddering (1st)	No. 2 one-way clutch (F2)	AX-173
Slippage or shuddering (2nd)	1. 2nd brake (B2)	AX-173
	2. No.1 one-way clutch (F1)	AX-173
Slippage or shuddering (3rd)	Direct clutch (C2)	AX-173
Slippage or shuddering (4th)	O/D and 2nd brake (B1)	AX-173
No engine braking (1st: L position)	1. Valve body assembly	AX-113
	2. 1st and reverse brake (B3)	AX-173
No engine braking (2nd: 2 position)	1. Valve body assembly	AX-113
	2. 2nd and O/D brake (B1)	AX-173
No kick-down	Valve body assembly	AX-113
Poor acceleration	1. Valve body assembly	AX-113
	2. Torque converter clutch	AX-171
Engine stalls when starting off or stopping	Torque converter clutch	AX-171

TERMINALS OF ECM

1. ECM

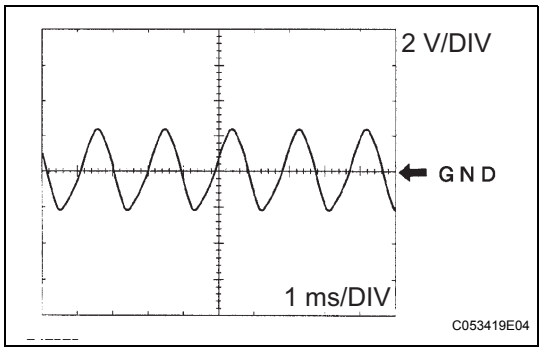


HINT:
Each ECM terminal's standard voltage is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specific Condition".
Use the illustration above as a reference for the ECM terminals.

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
L (C20-74) - E1 (C20-104)	V - W	L shift position switch signal	Ignition switch ON and shift lever L position	11 to 14 V
			Ignition switch ON and shift lever other than L position	Below 1 V
2 (C20-55) - E1 (C20-104)	G - W	2 shift position switch signal	Ignition switch ON and shift lever 2 position	11 to 14 V
			Ignition switch ON and shift lever other than 2 position	Below 1 V
ODMS (A21-26) - E1 (C20-104)	O - W	3 shift position switch signal	Ignition switch ON and shift lever 3 position	11 to 14 V
			Ignition switch ON and shift lever other than 3 position	Below 1 V
D (C20-56) - E1 (C20-104)	L - W	D shift position switch signal	Ignition switch ON and shift lever D or 3 position	11 to 14 V
			Ignition switch ON and shift lever other than D and 3 positions	Below 1 V
R (C20-53) - E1 (C20-104)	R - W	R shift position switch signal	Ignition switch ON and shift lever R position	11 to 14 V
			Ignition switch ON and shift lever other than R position	Below 1 V

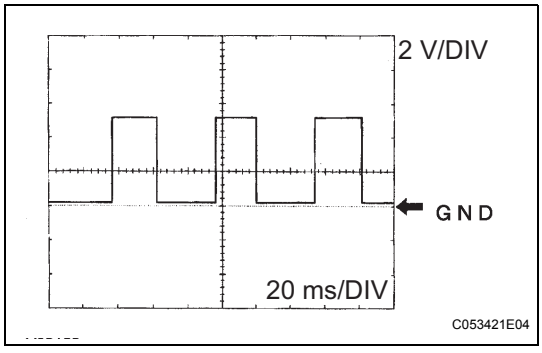
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
N (C20-54) - E1 (C20-104)	SB - W	N shift position switch signal	Ignition switch ON and shift lever N position	11 to 14 V
			Ignition switch ON and shift lever other than N position	Below 1 V
P (C20-73) - E1 (C20-104)	R - W	P shift position switch signal	Ignition switch ON and shift lever P position	11 to 14 V
			Ignition switch ON and shift lever other than P position	Below 1 V
NT+ (C20-125) - NT- (C20-124)	B - G	Speed sensor (NT) signal	Engine running	Pulse generation (See waveform 1)
STP (A21-36) - E1 (C20-104)	G - W	Stop light switch signal	Brake pedal depressed	7.5 to 14 V
			Brake pedal released	Below 1.5 V
SPD (A21-8) - E1 (C20-104)	V - W	Speed signal	Ignition switch ON and driving wheel rotating slowly	Pulse generation (See waveform 2)
S1 (C20-79) - E1 (C20-104)	SB - W	S1 solenoid signal	Ignition switch ON	11 to 14 V
			1st or 2nd gear	11 to 14 V
			3rd or 4th gear	Below 1 V
S2 (C20-78) - E1 (C20-104)	L - W	S2 solenoid signal	Ignition switch ON	Below 1 V
			1st or 4th gear	11 to 14 V
			2nd or 3rd gear	Below 1 V
ST (C20-80) - E1 (C20-104)	GR - W	ST solenoid signal	D position (3rd gear ⟷ 4th gear)	Below 1 V ⟷ 11 to 14 V
SLT+ (C20-76) - SLT- (C20-75)	G - W	SLT solenoid signal	Engine idling speed	Pulse generation (See waveform 3)
SLU+ (C20-57) - SLU- (C20-77)	P - O	SLU solenoid signal	Engine idling speed	Pulse generation (See waveform 4)
THO1 (C20-72) - ETHO (C20-95)	Y - B	ATF (Automatic Transmission Fluid) temperature sensor signal	ATF temperature: 10°C (50°F) to 145°C (293°F)	4 to 0 V

AX



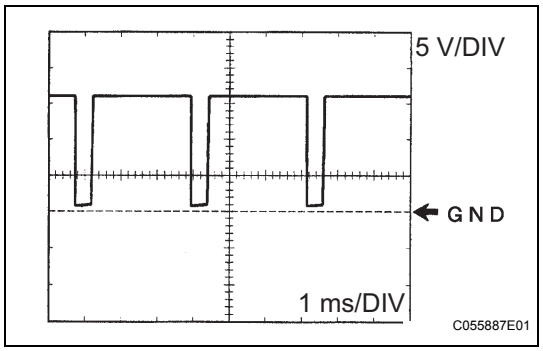
(a) Waveform 1

Terminal	NT+ - NT-
Tool setting	2 V/DIV, 1ms/DIV
Vehicle conditions	Driving at approximately 12 mph (20 km/h)



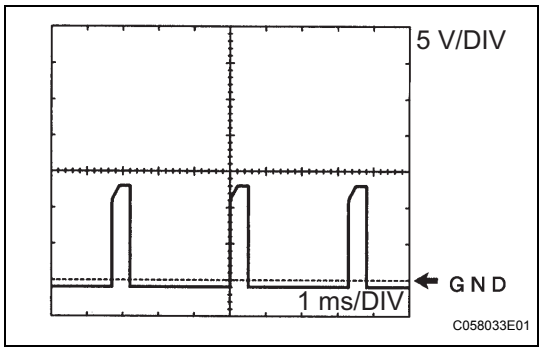
(b) Waveform 2

Terminal	SPD - E1
Tool setting	2 V/DIV, 20 ms/DIV
Vehicle conditions	Driving at approximately 12 mph (20 km/h)



(c) Waveform 3

Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle conditions	Engine idling speed



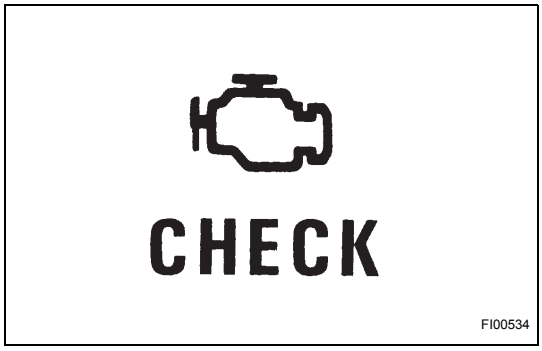
(d) Waveform 4

Terminal	SLU+ - SLU-
Tool setting	5 V/DIV, 1 ms/DIV
Vehicle conditions	Engine idling speed

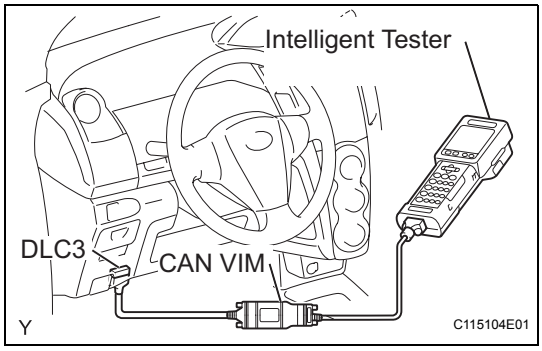
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) When troubleshooting OBD II vehicles, the only difference from the usual troubleshooting procedure is to connect an intelligent tester (complying with SAE J1987) to the vehicle, and read off various data output by the vehicle's ECM.



(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in the computer itself or in the drive system components which affect the vehicle emissions. In addition to illuminating the MIL when a malfunction is detected, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory (See page AX-32).
If the malfunction does not occur in 3 consecutive trips, the MIL goes off but the DTCs remain in the ECM memory.



(c) To check the DTCs, connect the intelligent tester to the DLC3 of the vehicle. The intelligent tester also enables you to erase the DTCs and check freeze frame data and various forms of engine data (For operating instructions, see the instruction book).

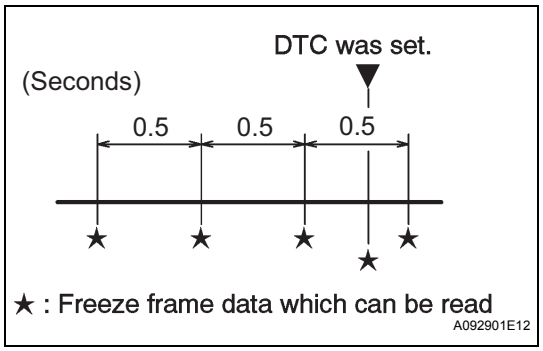
(d) The DTCs include SAE controlled codes and manufacturer controlled codes. SAE controlled codes must be set as prescribed by the SAE, while manufacturer controlled codes can be set freely by the manufacturer within the prescribed limits (See page AX-32).

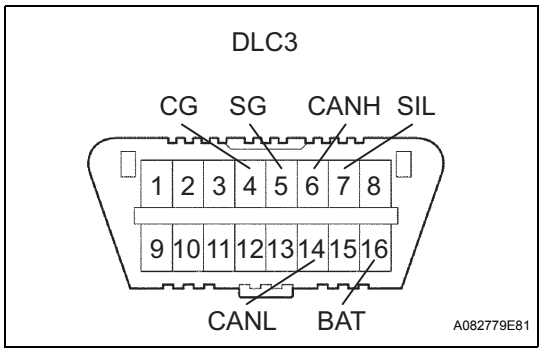
(e) The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2-trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available to technicians as an option. In check mode, 1-trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.

(f) 2-trip detection logic: When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned off and then turned to the ON position again, and same malfunction is detected again, the MIL illuminates.

(g) Freeze frame data records the engine conditions, such as fuel system, calculated load, engine coolant temperature, fuel trim, engine speed and vehicle speed when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air/fuel ratio was lean or rich, and other data from the time the malfunction occurred.

(h) The intelligent tester records freeze frame data in five different instances: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. These data can be used to simulate the vehicle's conditions around the time when the malfunction occurred. The data may help find the cause of the malfunction, or judge if the DTC is being caused by a temporary malfunction or not.





2. INSPECT DLC3

(a) The ECM uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

AX

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

If your display shows UNABLE TO CONNECT TO VEHICLE when you have connected the cable of the intelligent tester to the DLC3, turned the ignition switch to the ON position and operated the tester, there is a problem with the vehicle or the tester.

- If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. CHECK BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, replace the battery before proceeding.

4. CHECK MIL

(a) The MIL comes on when the ignition switch is turned to the ON position and the engine is not running.

HINT:

If the MIL does not light up, troubleshoot the combination meter.

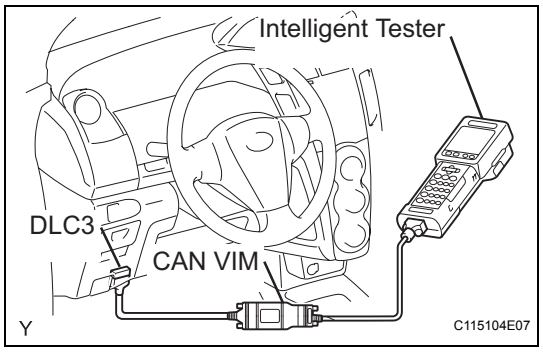
(b) When the engine is started, the MIL should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

DTC CHECK / CLEAR

1. DTC CHECK (NORMAL MODE)

NOTICE:

When the diagnostic system is switched from normal mode to check mode, all the DTCs and freeze frame data recorded in normal mode are erased. So before switching modes, always check the DTCs and freeze frame data, and note them down.



(a) Check DTCs using an intelligent tester.
  (1) Turn the ignition switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.
  (4) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
  (5) Read the DTCs and freeze frame data displayed on the tester and note them down.

  NOTICE:

  When simulating symptoms with an intelligent tester to check the DTCs, use normal mode. For DTCs in the DTC chart, which are subject to 2-trip detection logic, perform the following.

  Turn the ignition switch off after the symptom is simulated once. Then repeat the simulation process again. When the problem has been simulated twice, the MIL illuminates and the DTCs are recorded in the ECM.

2. DTC CLEAR

(a) Clear the DTCs: When using an intelligent tester.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.
  (3) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES [YES] button.

  HINT:

  When operating the intelligent tester to erase the DTCs, the freeze frame data are also erased.

(b) Clear the DTCs: When not using an intelligent tester.
  (1) Disconnect the battery terminal or remove the EFI and ETCS fuses from the engine room J/B for 60 seconds or more.

AX

CHECK MODE PROCEDURE

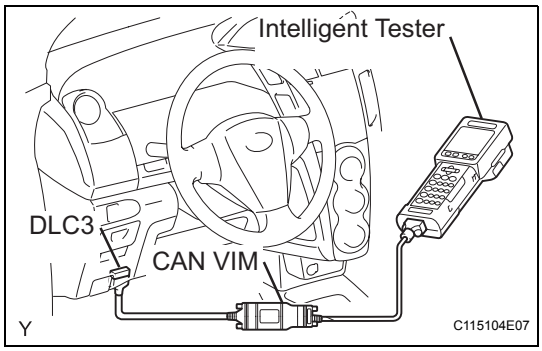
1. DESCRIPTION

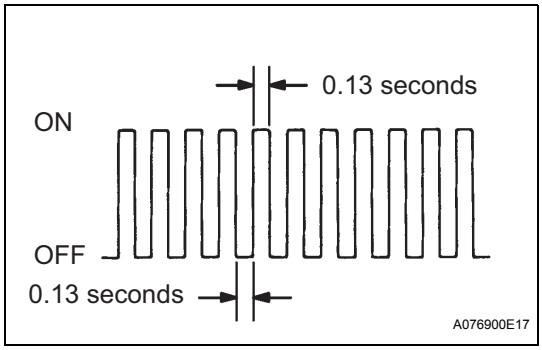
(a) Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

2. DTC CHECK (CHECK MODE)

HINT:

Intelligent tester only: Compared to normal mode, check mode is more sensitive for detecting malfunctions. Furthermore, the same diagnostic items which are detected in normal mode can also be detected in check mode.





(a) Procedure for check mode using the intelligent tester.

(1) Check the initial conditions.
- Battery positive voltage 11 V or more
- Throttle valve fully closed
- Transaxle in the P or N position
- A/C switched OFF

(2) Turn the ignition switch off.

(3) Connect the intelligent tester to the DLC3.

(4) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.

(5) Select the following items: DIAGNOSIS / ENHANCED OBD II / CHECK MODE (Check that the MIL flashes as shown in the illustration).
NOTICE:
All DTCs and freeze frame data recorded are erased if: 1) the intelligent tester is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from the ON position to the ACC or LOCK position.

(6) Start the engine (the MIL goes off after the engine starts).

(7) Perform MONITOR DRIVE PATTERN for the ECT test (See page AX-16), or simulate the conditions of the malfunction described by the customer.
NOTICE:
Leave the ignition switch in the ON position until you have checked the DTCs.

(8) After simulating malfunction conditions, use the intelligent tester to check the DTCs and freeze frame data.

AX

FAIL-SAFE CHART

1. FAIL-SAFE

(a) This function minimizes the loss of ECT functions when any malfunction occurs in the sensors or solenoids.

Malfunction Part	Function
Vehicle Speed Sensor	During vehicle speed sensor signal malfunction, 4th up-shift is prohibited.
Transmission Revolution Sensor (Speed Sensor (NT))	During transmission revolution sensor (NT) signal malfunction, 4th up-shift is prohibited.
ATF (Automatic Transmission Fluid) Temperature Sensor	During ATF temperature sensor malfunction, 4th up-shift is prohibited.
Shift Solenoid Valve S1 or S2	During shift solenoid valve S1 or S2 malfunction, current to faulty shift solenoid valve is cut off and control is effected by operating normal solenoid valve. Shift control effect depends on failed solenoid as described in table below.
Shift Solenoid Valve ST	During shift solenoid valve ST malfunction, 4th up-shift is prohibited.
Shift Solenoid Valve SLT	During shift solenoid valve SLT malfunction, 4th up-shift is prohibited.
Engine Coolant Temperature Sensor, Knock Sensor or Throttle Position Sensor	During engine coolant temperature sensor, knock sensor or throttle position sensor malfunction, 4th up-shift is prohibited.

(b) Fail-safe chart for shift solenoid valve S1 and/or S2:
Fail safe function:
If either of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid ON or OFF in order to shift into the gear positions shown in the table below.
Manual shifting as shown in the following table must be done (In case of a short circuit, the ECM stops sending the current to the short circuit solenoid).
Even if starting the engine in fail-safe mode, the gear position remains in the same position.

AX

Normal:

Shift Lever Position		Shift Solenoid Valve S1	Shift Solenoid Valve S2	Gear
D	1st	ON	ON	1st
	2nd	ON	OFF	2nd

X: Malfunctions

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Turn on the tester.

(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(g) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
VEHICLE SPD	Vehicle Speed display/ min.: 0 mph (0 km/h) max.: 158 mph (255 km/h)	• Vehicle stopped: 0 mph (0 km/h) • Same as speedometer reading	-
SPD (NT)	Input Turbine Speed/ display: 50 rpm min.: 0 rpm max.: 12750 rpm	HINT: • Lock-Up ON (After warming up engine): Input turbine speed (NT) equal to engine speed • Lock-Up OFF (Idling at P or N position): Input turbine speed (NT) nearly equal to engine speed • Vehicle stopped in D position: 0 rpm	-
PNP SW [NSW]	PNP SW Status/ ON or OFF	Shift lever position; P or N: ON Except P and N: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect. HINT: When failure still occurs even after adjusting these parts, see page AX-35.
STOP LIGHT SW	Stop Light SW Status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF	-
SHIFT	ECM Gearshift Command/ 1st, 2nd, 3rd or 4th	Shift lever position; • L: 1st • 2: 1st or 2nd • 3: 1st, 2nd or 3rd • D: 1st, 2nd, 3rd or 4th	-

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
REVERSE	PNP SW Status/ ON or OFF	Shift lever position; R: ON Except R: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect. HINT: When failure still occurs even after adjusting these parts, see page AX-35.
PARKING	PNP SW Status/ ON or OFF	Shift lever position; P: ON Except P: OFF	
NEUTRAL	PNP SW Status/ ON or OFF	Shift lever position; N: ON Except N: OFF	
DRIVE	PNP SW Status/ ON or OFF	Shift lever position; D or 3: ON Except D and 3: OFF	
3RD	PNP SW Status/ ON or OFF	Shift lever position; 3: ON Except 3: OFF	-
2ND	PNP SW Status/ ON or OFF	Shift lever position; 2: ON Except 2: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect. HINT: When failure still occurs even after adjusting these parts, see page AX-35.
LOW	PNP SW Status/ ON or OFF	Shift lever position; L: ON Except L: OFF	
A/T OIL TEMP1	ATF (Automatic Transmission Fluid) Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature when cold soak	If value is "-40°C (-40°F)" or " 150°C (302°F) or more ", ATF temperature sensor circuit is open or short.
ATF	ATF Condition	ATF Condition; NG: ON OK: OFF	Replace ATF when ATF condition is ON.
LOCK UP	Lock Up Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
LOCK UP SOL	Lock Up Solenoid Status/ ON or OFF	• Lock up solenoid ON: ON • Lock up solenoid OFF: OFF	-
SOLENOID (ST)	Shift Solenoid ST Status/ ON or OFF	Up-shifting and down-shifting between 3rd and 4th gears while driving: OFF → ON → OFF	-
SOLENOID (SLU)	Shift Solenoid SLU Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	-

AX

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn on the tester.
(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(g) In accordance with the display on the tester, perform the ACTIVE TEST.

Item	Test Details	Diagnostic Note
SOLENOID (SLU)	[Test Details] Operate shift solenoid SLU [Vehicle Condition] • Vehicle Stopped • Shift lever P or N position	-
SOLENOID (SLT)*	[Test Details] Operate shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON HINT: OFF: Line pressure up (When the active test of "SOLENOID (SLT)" is performed, ECM commands SLT solenoid to turn off.) ON: No action (normal operation)	-
SOLENOID (S1)	[Test Details] Operate shift solenoid S1 [Vehicle Condition] • Vehicle Stopped • Shift lever P or N position	-
SOLENOID (S2)	[Test Details] Operate shift solenoid S2 [Vehicle Condition] • Vehicle Stopped • Shift lever P or N position	-
LOCK UP	[Test Details] Control shift solenoid SLU to set automatic transaxle to lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more, and 4th gear	Possible to check SLU operation.
SHIFT	[Test Details] Operate shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down	Possible to check operation of shift solenoid valves.
SOLENOID (ST)	[Test Details] Operate shift solenoid ST [Vehicle Condition] • Vehicle Stopped • IDL: ON	-

*: SOLENOID (SLT) in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transaxle, which is used in the HYDRAULIC TEST (See page AX-13) as well.
HINT:
The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.
HINT:

- *1: "Comes on" means the MIL (Malfunction Indicator Lamp) illuminates.
- *2: "DTC stored" means the ECM stores the malfunction code if the ECM detects the DTC detection condition.
- These DTCs may be output when the clutch, brake and gear components inside the automatic transaxle are damaged.

AUTOMATIC TRANSMISSION SYSTEM

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	1. Open or short in park/neutral position switch circuit 2. Park/neutral position switch 3. Shift lock control ECU 4. ECM	Comes on	DTC stored	AX-35
P0710	Transmission Fluid Temperature Sensor "A" Circuit	1. Open or short in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-42
P0711	Transmission Fluid Temperature Sensor "A" Performance	1. ATF level 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-47
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	1. Short in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-42
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	1. Open in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-42
P0717	Turbine Speed Sensor Circuit No Signal	1. Open or short in transmission revolution sensor (Speed sensor (NT)) circuit 2. Transmission revolution sensor 3. Automatic transaxle (clutch, brake or gear etc.) 4. ECM	Comes on	DTC stored	AX-50

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)	1. Shift solenoid valve S1 remains open or closed 2. Valve body is blocked 3. Shift solenoid valve S1 4. Automatic transaxle (clutch, brake or gear etc.) 5. ECM	Comes on	DTC stored	AX-53
P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)	1. Shift solenoid valve S2 remains open or closed 2. Valve body is blocked 3. Shift solenoid valve S2 4. Automatic transaxle (clutch, brake or gear etc.) 5. ECM	Comes on	DTC stored	AX-58
P0787	Shift / Timing Solenoid Low (Shift Solenoid Valve ST)	1. Short in shift solenoid valve ST circuit 2. Shift solenoid valve ST 3. ECM	Comes on	DTC stored	AX-63
P0788	Shift / Timing Solenoid High (Shift Solenoid Valve ST)	1. Open in shift solenoid valve ST circuit 2. Shift solenoid valve ST 3. ECM	Comes on	DTC stored	AX-63
P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)	1. Short in shift solenoid valve S1 circuit 2. Shift solenoid valve S1 3. ECM	Comes on	DTC stored	AX-67
P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)	1. Open in shift solenoid valve S1 circuit 2. Shift solenoid valve S1 3. ECM	Comes on	DTC stored	AX-67
P0976	Shift Solenoid "B" Control Circuit Low (Shift Solenoid Valve S2)	1. Short in shift solenoid valve S2 circuit 2. Shift solenoid valve S2 3. ECM	Comes on	DTC stored	AX-71
P0977	Shift Solenoid "B" Control Circuit High (Shift Solenoid Valve S2)	1. Open in shift solenoid valve S2 circuit 2. Shift solenoid valve S2 3. ECM	Comes on	DTC stored	AX-71

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)	1. Shift solenoid valve SLT remains open or closed 2. Valve body is blocked 3. Torque converter clutch 4. Automatic transaxle (clutch, brake or gear etc.) 5. ECM	Comes on	DTC stored	AX-75
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	1. Open or short in shift solenoid valve SLT circuit 2. Shift solenoid valve SLT 3. ECM	Comes on	DTC stored	AX-80
P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)	1. Shift solenoid valve SLU remains open or closed 2. Valve body is blocked 3. Shift solenoid valve SLU 4. Torque converter clutch 5. Automatic transaxle (clutch, brake or gear etc.) 6. Line pressure is too low 7. ECM	Comes on	DTC stored	AX-84
P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)	1. Open or short in shift solenoid valve SLU circuit 2. Shift solenoid valve SLU 3. ECM	Comes on	DTC stored	AX-89

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0705	(a) Any 2 or more of following signals are ON simultaneously. (2-trip detection logic) • P input signal • R input signal • N input signal • D input signal • 2 input signal • L input signal (b) All switches are OFF simultaneously for P, R, N, D, 2 and L positions. (2-trip detection logic) (c) L or 3 input signal is ON for P, R or N position. (2-trip detection logic)	• Open or short in park/neutral position switch circuit • Park/neutral position switch • Shift lock control ECU • ECM

MONITOR DESCRIPTION

This DTC indicates a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
The park/neutral position switch detects the shift lever position and sends a signal to the ECM.
For safety, the park/neutral position switch detects the shift lever position so that the engine can be started only when the shift lever is in the P or N position.
The park/neutral position switch sends a signal to the ECM according to the shift position (P, R, N, D, 2 or L). The ECM determines that there is a problem with the switch or related parts if it receives 2 or more position signals simultaneously. The ECM turns on the MIL and stores the DTC.

MONITOR STRATEGY

AX

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	Condition (a) and (c): 2 seconds Condition (b): 60 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor runs whenever the following DTCs are not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met: Condition (a), (b) or (c)

Condition (a):

Number of following signals input simultaneously	2 or more
P switch	ON
R switch	ON
N switch	ON
D switch	ON

2 switch	ON
L switch	ON

Condition (b):
All of the following conditions are met.

P switch	OFF
R switch	OFF
N switch	OFF
D switch	OFF
2 switch	OFF
L switch	OFF

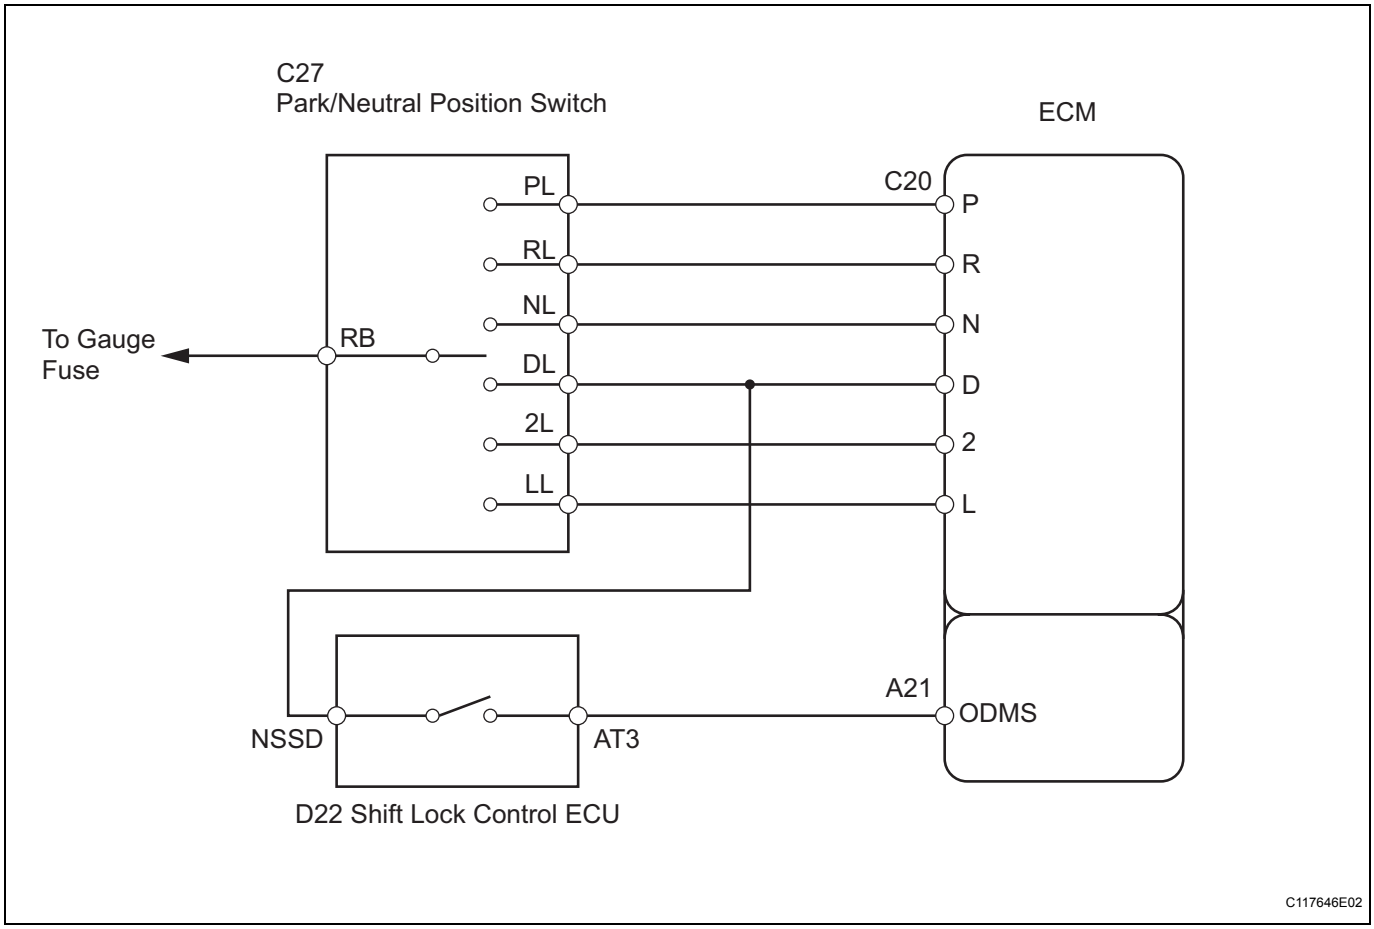
Condition (c):
When shift lever is in P, R or N position, either of following conditions is met.

3 switch	ON
L switch	ON

COMPONENT OPERATING RANGE

Park/neutral position switch	The park/neutral position switch sends only one signal to the ECM.

WIRING DIAGRAM



AX

INSPECTION PROCEDURE

1. DATA LIST

HINT:

Using the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

(a) Turn the ignition switch off.
(b) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Turn on the tester.
(e) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(f) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
REVERSE	PNP (Park/Neutral Position) SW Status/ ON or OFF	Shift lever position; R: ON Except R: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect.
PARKING	PNP SW Status/ ON or OFF	Shift lever position; P: ON Except P: OFF	
NEUTRAL	PNP SW Status/ ON or OFF	Shift lever position; N: ON Except N: OFF	
DRIVE	PNP SW Status/ ON or OFF	Shift lever position; D or 3: ON Except D and 3: OFF	
3RD	PNP SW Status/ ON or OFF	Shift lever position; 3: ON Except 3: OFF	-
2ND	PNP SW Status/ ON or OFF	Shift lever position; 2: ON Except 2: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect.
LOW	PNP SW Status/ ON or OFF	Shift lever position; L: ON Except L: OFF	

1	READ VALUE OF DATA LIST (PARK/NEUTRAL POSITION SWITCH)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn on the intelligent tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

AX

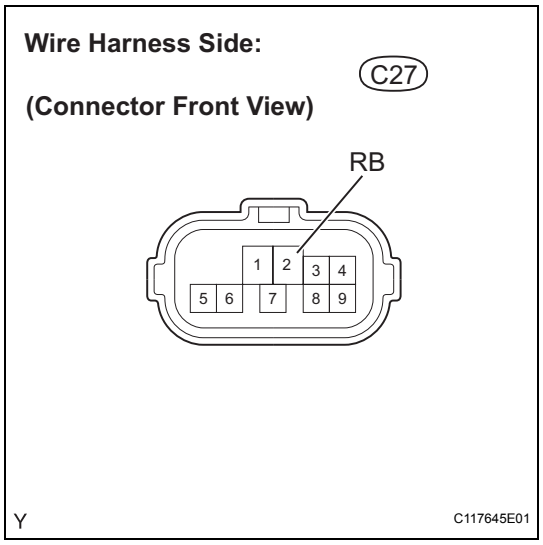
(e) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
REVERSE	PNP (Park/Neutral Position) SW Status/ ON or OFF	Shift lever position; R: ON Except R: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect.
PARKING	PNP SW Status/ ON or OFF	Shift lever position; P: ON Except P: OFF	
NEUTRAL	PNP SW Status/ ON or OFF	Shift lever position; N: ON Except N: OFF	
DRIVE	PNP SW Status/ ON or OFF	Shift lever position; D or 3: ON Except D and 3: OFF	
2ND	PNP SW Status/ ON or OFF	Shift lever position; 2: ON Except 2: OFF	
LOW	PNP SW Status/ ON or OFF	Shift lever position; L: ON Except L: OFF	

OK → **Go to step 5**

NG

2 CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PARK/NEUTRAL POSITION SWITCH)



(a) Disconnect the park/neutral position switch connector.
(b) Turn the ignition switch to the ON position, and measure the voltage.

Standard voltage

Tester Connection	Specified Condition
2 (RB) - Body ground	11 to 14 V

NG → **CHECK POWER SOURCE OF ECM**

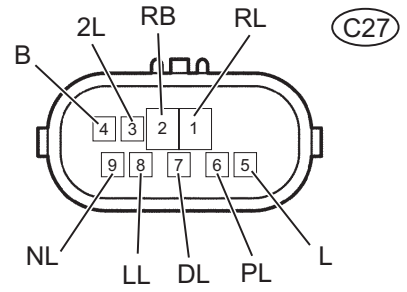
OK

AX

3 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

Component Side:

(Connector Front View)



C130119E04

(a) Disconnect the park/neutral position switch connector.
(b) Measure the resistance when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P or N	4 (B) - 5 (L)	Below 1 Ω
Except P and N	4 (B) - 5 (L)	10 kΩ or higher
P	2 (RB) - 6 (PL)	Below 1 Ω
Except P	2 (RB) - 6 (PL)	10 kΩ or higher
R	1 (RL) - 2 (RB)	Below 1 Ω
Except R	1 (RL) - 2 (RB)	10 kΩ or higher
N	2 (RB) - 9 (NL)	Below 1 Ω
Except N	2 (RB) - 9 (NL)	10 kΩ or higher
D or 3	2 (RB) - 7 (DL)	Below 1 Ω
Except D and 3	2 (RB) - 7 (DL)	10 kΩ or higher
2	2 (RB) - 3 (2L)	Below 1 Ω
Except 2	2 (RB) - 3 (2L)	10 kΩ or higher
L	2 (RB) - 8 (LL)	Below 1 Ω
Except L	2 (RB) - 8 (LL)	10 kΩ or higher

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK

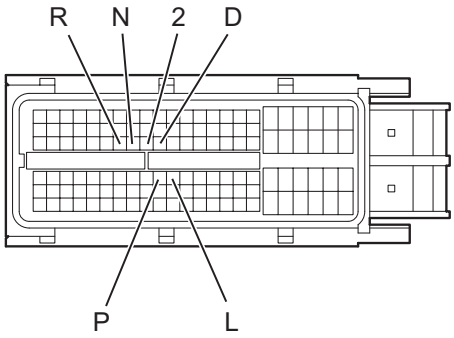
AX

4 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

Wire Harness Side:

C20

(Connector Front View)



C130155E01

(a) Connect the park/neutral position switch connector.
(b) Disconnect the ECM connector.
(c) Turn the ignition switch to the ON position, and measure the voltage when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P	73 (P) - Body ground	11 to 14 V
Except P	73 (P) - Body ground	Below 1 V
R	53 (R) - Body ground	11 to 14 V*
Except R	53 (R) - Body ground	Below 1 V
N	54 (N) - Body ground	11 to 14 V
Except N	54 (N) - Body ground	Below 1 V
D or 3	56 (D) - Body ground	11 to 14 V
Except D and 3	56 (D) - Body ground	Below 1 V
2	55 (2) - Body ground	11 to 14 V
Except 2	55 (2) - Body ground	Below 1 V
L	74 (L) - Body ground	11 to 14 V
Except L	74 (L) - Body ground	Below 1 V

HINT:
*: The voltage will drop slightly due to the back up light being turned on.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5 READ VALUE OF DATA LIST (PARK/NEUTRAL POSITION SWITCH)

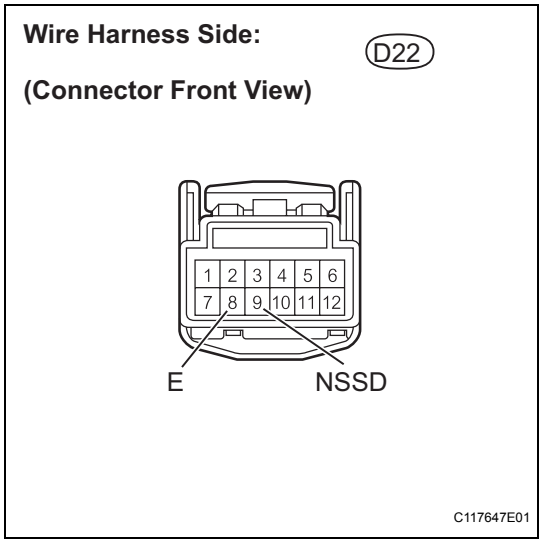
(a) Connect the ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Turn on the intelligent tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(e) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition
3RD	PNP SW Status/ ON or OFF	Shift lever position; 3: ON Except 3: OFF

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

6 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - SHIFT LOCK CONTROL ECU)



(a) Disconnect the shift lock control ECU connector.
(b) Turn the ignition switch to the ON position, and measure the voltage when the shift lever is moved to each position.

Standard voltage

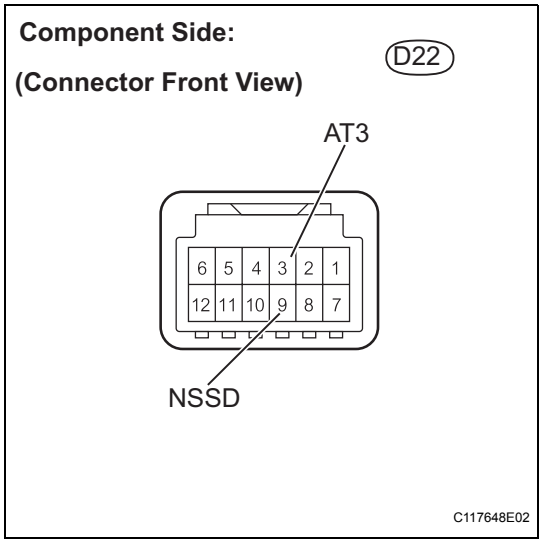
Shift Position	Tester Connection	Specified Condition
D or 3	9 (NSSD) - 8 (E)	11 to 14 V
Except D and 3	9 (NSSD) - 8 (E)	Below 1 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

AX

7	INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY



(a) Disconnect the shift lock control ECU connector.
(b) Measure the resistance when the shift lever is moved to each position.

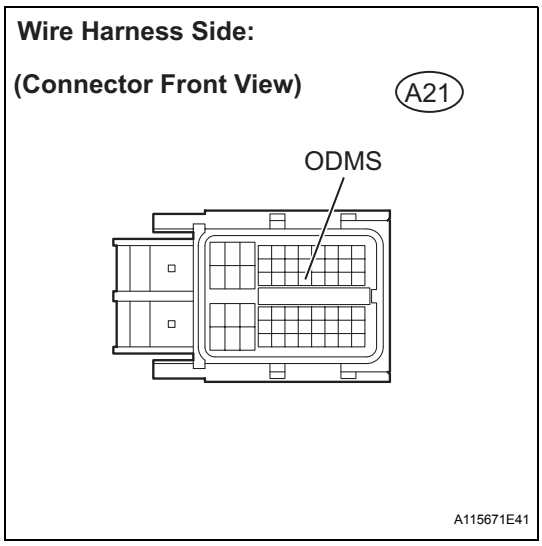
Standard resistance

Shift Position	Tester Connection	Specified Condition
3	3 (AT3) - 9 (NSSD)	Below 1 Ω
D	3 (AT3) - 9 (NSSD)	10 kΩ or higher

NG → **REPLACE SHIFT LOCK CONTROL ECU SUB-ASSEMBLY**

OK

8	CHECK HARNESS AND CONNECTOR (SHIFT LOCK CONTROL ECU - ECM)



(a) Connect the shift lock control ECU connector.
(b) Disconnect the ECM connectors.
(c) Turn the ignition switch to the ON position, and measure the voltage.

Standard voltage

Shift Position	Tester Connection	Specified Condition
3	26 (ODMS) - Body ground	11 to 14 V
Except 3	26 (ODMS) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

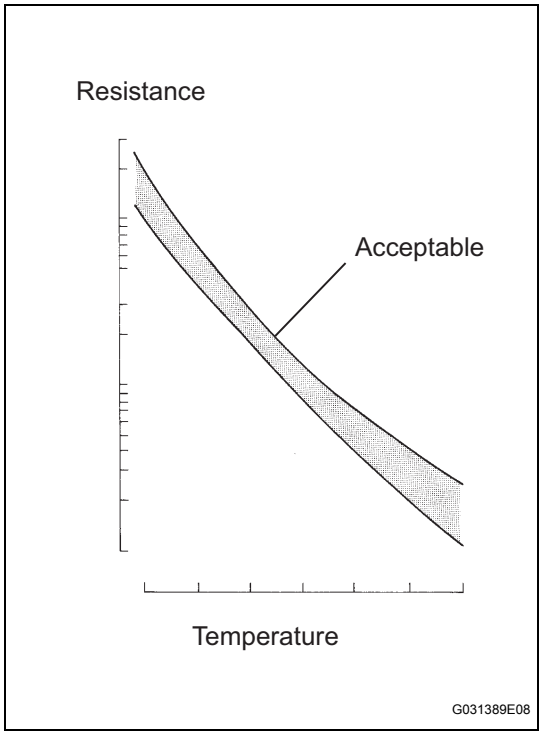
AX

DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input to the ECM.
The sensor resistance changes with the transmission fluid temperature. As the temperature rises, the sensor resistance decreases. The ECM applies a voltage to the temperature sensor through ECM terminal THO1, and the ECM calculates the fluid temperature based on the voltage signal.
HINT:

- The ATF temperature is likely to increase under conditions such as towing, climbing hills and in heavy traffic.
- When the ATF temperature sensor is normal, the transmission locks up in 4th gear with the shift lever in the D position and in 3rd gear with the shift lever in the 3rd position.

DTC No.	DTC Detection Condition	Trouble Area
P0710	Both (a) and (b) are detected momentarily within 0.5 seconds when neither P0712 nor P0713 is detected. (1-trip detection logic) (a) ATF temperature sensor resistance is less than 79 Ω. (b) ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 seconds, malfunction switches from (a) to (b) or from (b) to (a).	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 seconds or more. (1-trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0713	Following condition continues for 0.5 seconds or more. (1-trip detection logic) ATF temperature sensor resistance is more than 156 kΩ after 15 minutes or more after starting engine.	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects opens or shorts in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM turns on the MIL and stores the DTC.

*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.

*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.

HINT:

The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Fluttering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)
Required sensors/Components	ATF temperature sensor (TFT*1 sensor)
Frequency of operation	Continuous
Duration	0.5 seconds
MIL operation	Immediate
Sequence of operation	None

AX

*1: Transmission Fluid Temperature

TYPICAL ENABLING CONDITIONS

P0710: Range check (Fluttering)

The monitor runs whenever the following DTCs are not present.	None
The typical enabling conditions are not available.	-

P0712: Range check (Low resistance)

The monitor runs whenever the following DTCs are not present.	None
The typical enabling conditions are not available.	-

P0713: Range check (High resistance)

The monitor runs whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Fluttering)

ATF temperature sensor (TFT sensor) resistance	Less than 79 Ω or More than 156 kΩ

P0712: Range check (Low resistance)

ATF temperature sensor (TFT sensor) resistance	Less than 79 Ω

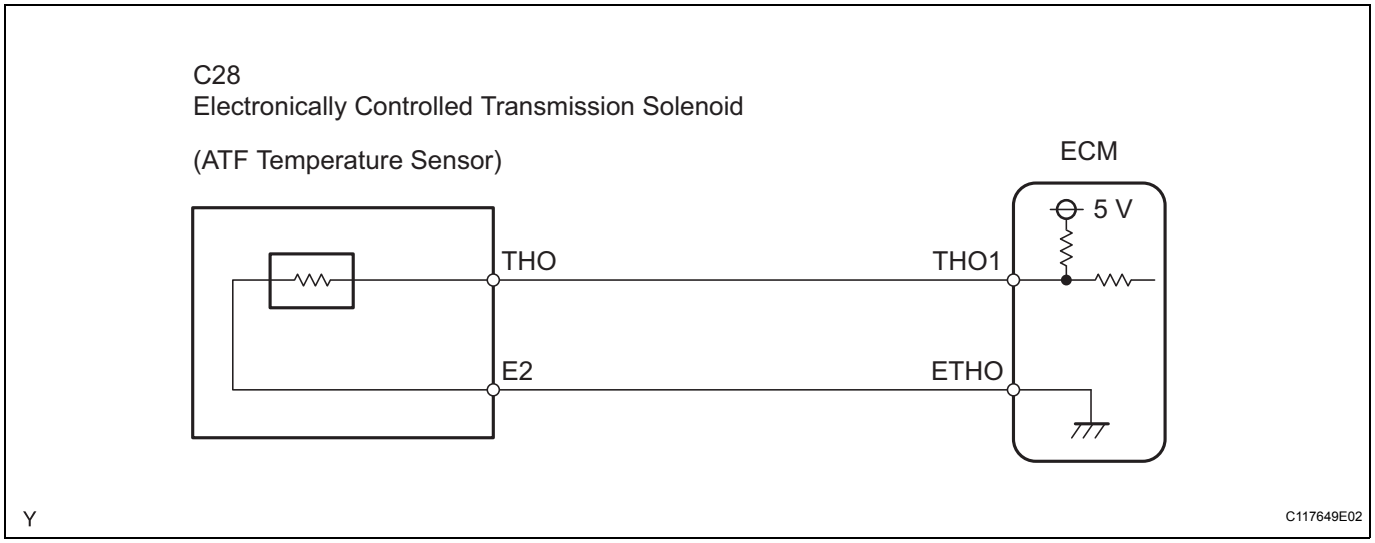
P0713: Range check (High resistance)

ATF temperature sensor (TFT sensor) resistance	More than 156 kΩ

COMPONENT OPERATING RANGE

ATF temperature sensor (TFT sensor) resistance	Resistance: 79 Ω to 156 kΩ

WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

HINT:

Using the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn on the tester.
(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(g) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
A/T OIL TEMP1	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature when cold soak	If value is -40°C (-40°F) or 150°C (302°F) or more, ATF temperature sensor circuit is open or short.

HINT:

When DTC P0712 is output and the intelligent tester reading is 150°C (302°F) or more, there is a short circuit.

When DTC P0713 is output and the intelligent tester reading is -40°C (-40°F), there is an open circuit.

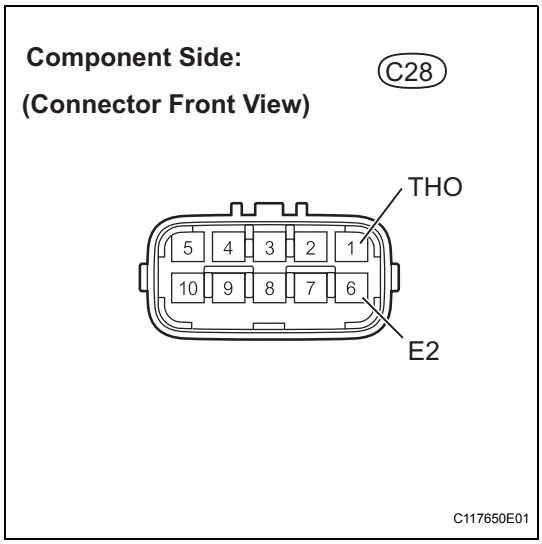
AX

Measure the resistance between terminal THO1 and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF (Automatic Transmission Fluid) temperature sensor becomes open, P0713 is immediately set (within 0.5 seconds).

1 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 (THO) - 6 (E2)	79 Ω to 156 kΩ
1 (THO) - Body ground	10 kΩ or higher
6 (E2) - Body ground	10 kΩ or higher

HINT:
If the resistance is outside the specified range at either of the ATF temperatures shown in the table below, the driveability of the vehicle may be affected.
Standard resistance

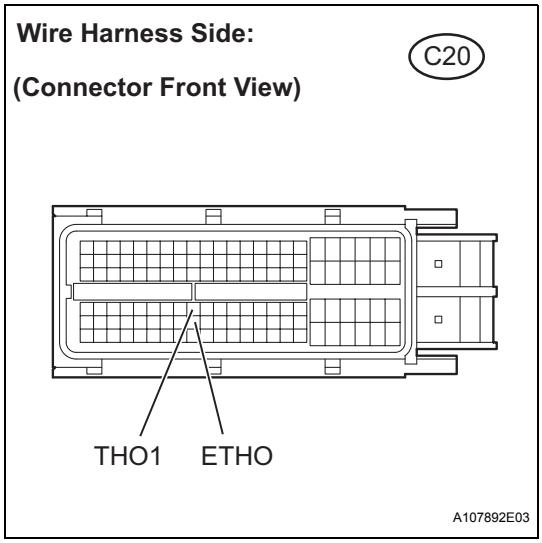
ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

AX

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector to the transaxle.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
72 (THO1) - 95 (ETHO)	79 Ω to 156 kΩ
72 (THO1) - Body ground	10 kΩ or higher
95 (ETHO) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input to the ECM.
The sensor resistance changes with the transmission fluid temperature. As the temperature rises, the sensor resistance decreases. The ECM applies a voltage to the temperature sensor through ECM terminal THO1, and the ECM calculates the fluid temperature based on the voltage signal.
HINT:

- The ATF temperature is likely to increase under conditions such as towing, climbing hills and in traffic.
- When the ATF temperature sensor is normal, the transmission locks up in 4th gear with the shift lever in the D position and in 3rd gear with the shift lever in the 3rd position.

DTC No.	DTC Detection Condition	Trouble Area
P0711	Either of the following Condition (A) or (B) is met: Condition (A): All of (a), (b) and (c) are detected (2-trip detection logic): (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start. (b) After normal driving for over 9 minutes and 5.6 miles (9 km) or more, ATF temperature is less than 20°C (68°F). (c) 19 minutes or more have elapsed after engine start. Condition (B): Both (a) and (b) are detected (2-trip detection logic) (a) Engine coolant temperature is less than 35°C (95°F) at engine start. (b) ATF temperature is 100°C (212°F) or more when engine coolant temperature reaches 60°C (140°F).	• ATF level • Transmission wire (ATF temperature sensor) • ECM

AX

MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects opens or shorts in the ATF temperature circuit or a fault of the ATF temperature sensor.
After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.
When the ATF temperature is 100°C (212°F) or more and engine coolant temperature reaches 60°C (140°F) after cold start, the ECM also determines this as a fault, turns on the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor (TFT* sensor)
Frequency of operation	Continuous
Duration	Condition (A): 3 seconds Condition (B): 10 seconds
MIL operation	2 driving cycles
Sequence of operation	None

*: Transmission Fluid Temperature

TYPICAL ENABLING CONDITIONS

The following conditions are common to Condition (A) and (B).

The monitor runs whenever the following DTCs are not present.	None
ATF temperature sensor (TFT sensor) circuit	No circuit malfunction
ECT (Engine Coolant Temperature) sensor circuit	No circuit malfunction
IAT (Intake Air Temperature) sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction

Condition (A):

Time after engine start	18 minutes and 20 seconds or more
Driving distance after engine start	5.6 mile (9 km) or more
Accumulated driving time	9 minutes and 10 seconds or more
ECT	-15°C (5°F) or more
IAT (12 seconds after engine start)	-10°C (14°F) or more
ECT (12 seconds after engine start)	-10°C (14°F) or more

Condition (B):

ECT (Current temperature)	60°C (140°F) or more
ECT (12 seconds after engine start)	Less than 35°C (95°F)
ATF temperature (12 seconds after engine start)	100°C (212°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: Condition (A) or (B)

Condition (A):

ATF temperature	Less than 20°C (68°F)

Condition (B):

ATF temperature	100°C (212°F) or more

AX

COMPONENT OPERATING RANGE

ATF temperature	20°C (68°F) or more and less than 100°C (212°F) under specific condition

INSPECTION PROCEDURE

1. DATA LIST

HINT:

Using the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method of shortening labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn on the tester.
(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(g) In accordance with the display on the tester, read the DATA LIST.

Item	Measurement Item/ Range (display)	Normal Condition
A/T OIL TEMP1	ATF Temperature Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approximately 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:
When DTC P0712 is output and intelligent tester reading is 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester reading is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF (Automatic Transmission Fluid) temperature sensor becomes open, P0713 is immediately set (within 0.5 seconds).
It is not necessary to inspect the circuit when P0711 is set.

1 CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn on the tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs using the tester.

AX

Result

Display (DTC output)	Proceed to
P0711	A
P0711 and other DTCs	B

HINT:
If any DTCs codes besides P0711 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2 CHECK TRANSMISSION FLUID LEVEL

OK:
Automatic transmission fluid level is correct.

NG → **ADD FLUID**

OK

REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

DTC	P0717	Turbine Speed Sensor Circuit No Signal

DESCRIPTION

This sensor detects the rotation speed of the input turbine. By comparing the input turbine speed signal (NT) with the speed sensor signal (SPD), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure in response to various conditions, thus performing smooth gear shifting.

DTC No.	DTC Detection Condition	Trouble Area
P0717	All conditions below are detected for 5 seconds or more. (1-trip detection logic) (a) Gear change is not being performed. (b) Gear position: 3rd or 4th (c) T/M input shaft rpm: 300 rpm or less (d) T/M output shaft rpm: 1,000 rpm or more (e) Park/neutral position switch (NSW, R and L) is OFF. (f) Shift solenoid valves, park/neutral position switch and vehicle speed sensor are in normal operation.	• Open or short in transmission revolution sensor (Speed sensor (NT)) circuit • Transmission revolution sensor • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM detects the revolving signal from the transmission revolution sensor (input RPM). The ECM outputs a gearshift signal by comparing the transmission revolution sensor signal with the speed sensor signal (SPD). While the vehicle is operating in the 3rd or 4th gear position in the shift position of D, if the input shaft revolution is less than 300 rpm*1 although the output shaft revolution is more than 1,000 rpm*2, the ECM detects the malfunction, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

*2: The vehicle speed is 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Turbine speed sensor/Verify pulse input
Required sensors/Components	Transmission revolution sensor (Speed sensor (NT))
Frequency of operation	Continuous
Duration	5 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor runs whenever the following DTCs are not present.	P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
Shift change	After shift change is completed and before starting next shift change operation
ECM selected gear	3rd or 4th
Output shaft rpm	1,000 rpm or more
Park/neutral position switch	OFF
R switch	OFF
L switch	OFF
Transmission range switch fail	Not detected
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF
Engine	Running

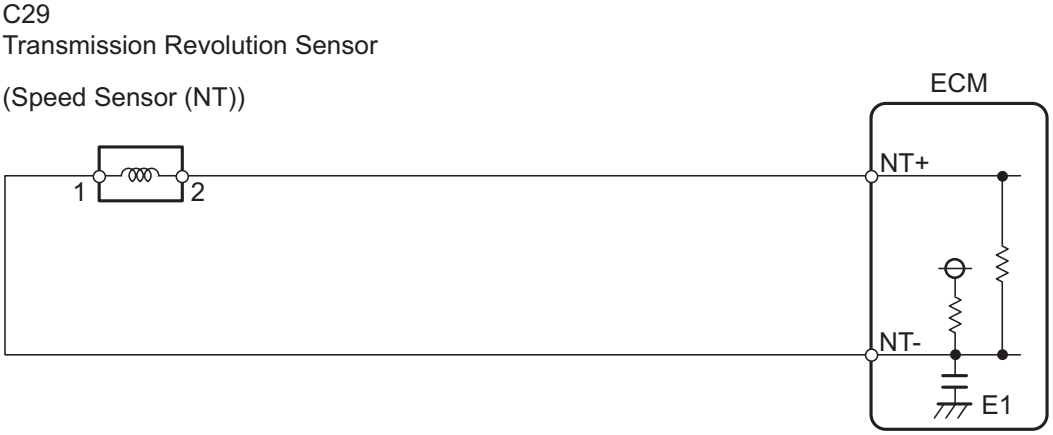
TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Transmission revolution sensor (speed sensor (NT))	Input turbine speed is equal to engine speed when lock-up ON

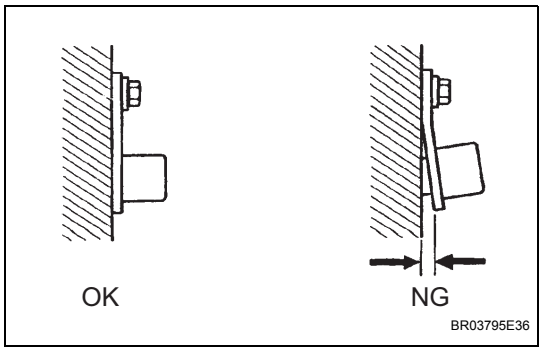
WIRING DIAGRAM



INSPECTION PROCEDURE

AX

1	INSPECT TRANSMISSION REVOLUTION SENSOR (NT) INSTALLATION



(a) Check the transmission revolution sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

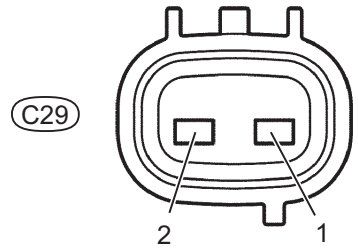
NG → **SECURELY INSTALL OR REPLACE TRANSMISSION REVOLUTION SENSOR**

OK

2	INSPECT TRANSMISSION REVOLUTION SENSOR

Sensor Side:

(Connector Front View):



C110343E29

(a) Disconnect the transmission revolution sensor connector from the transaxle.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	560 Ω to 680 kΩ at 20°C (68°F)

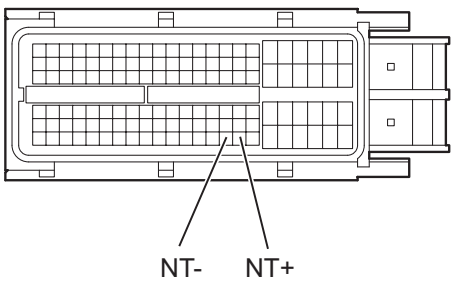
NG → **SECURELY INSTALL OR REPLACE TRANSMISSION REVOLUTION SENSOR**

OK

3	CHECK HARNESS AND CONNECTOR (TRANSMISSION REVOLUTION SENSOR - ECM)

Wire Harness Side:

(Connector Front View)



A107892E04

(a) Connect the transmission revolution sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
125 (NT+) - 124 (NT-)	560 to 680 kΩ at 20°C (68°F)
125 (NT+) - Body ground	10 kΩ or higher
124 (NT-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

AX

DTC	P0751	Shift Solenoid "A" Performance (Shift Solenoid Valve S1)

DESCRIPTION

The ECM uses signals from the vehicle speed sensor and speed sensor NT to detect the actual gear position (1st, 2nd, 3rd or 4th).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect the mechanical problems of the shift solenoid valves, the valve body or automatic transaxle (clutch, brake or gear etc.).

DTC No.	DTC Detection Condition	Trouble Area
P0751	S1 stuck OFF malfunction*1: ECM determines there is malfunction when both of following conditions are met: (2-trip detection logic) (a) When ECM directs gearshift to switch to 1st gear, actual gear is shifted to 4th. (b) When ECM directs gearshift to switch to 4th gear, actual gear is shifted to 4th.	• Shift solenoid valve S1 remains closed • Valve body is blocked • Shift solenoid valve S1 • Automatic transaxle (clutch, brake or gear etc.) • ECM
P0751	S1 stuck ON malfunction*2: ECM determines that there is malfunction when both of following conditions are met: (2-trip detection logic) (a) When ECM directs gearshift to switch from 3rd to 4th gear, actual gear is not shifted as above. (b) When ECM directs gearshift to switch to 4th gear, engine speed surges 1,100 rpm or more.	• Shift solenoid valve S1 remains open • Valve body is blocked • Shift solenoid valve S1 • Automatic transaxle (clutch, brake or gear etc.) • ECM

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th
*1: Actual gear position under S1 stuck OFF malfunction	4th	3rd	3rd	4th
*2: Actual gear position under S1 stuck ON malfunction	1st	2nd	2nd	1st

AX

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of shift solenoid valve S1.
The ECM controls the gearshifts by turning the shift solenoid valves ON/OFF. When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0751: Shift solenoid valve S1/OFF malfunction Shift solenoid valve S1/ON malfunction
Required sensors/Components	Shift solenoid valve S1, Speed sensor (NT), Speed sensor (SPD)
Frequency of operation	Continuous
Duration	OFF malfunction (a): 0.85 seconds OFF malfunction (b): 0.8 seconds ON malfunction (a): 0.8 seconds ON malfunction (b): 0.8 seconds
MIL operation	2 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions and ON malfunctions.

The monitor runs whenever the following DTCs are not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
ECT (Engine Coolant Temperature)	60°C (140°F) or more
Time after shifting N to D	4.5 seconds or more
Transmission shift position	D
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction
ECT sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Speed sensor (NT) circuit	No circuit malfunction
Speed sensor (SPD) circuit	No circuit malfunction

OFF malfunction (a):

ECM gearshift command	1st
Vehicle speed	5.6 mph (9 km/h) or more and Less than 24.9 mph (40 km/h)
Throttle valve opening angle	25 % or more and 7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

OFF malfunction (b):

ECM gearshift command	4th
Last ECM selected gear	3rd

ON malfunction (a):

ECM gearshift command	4th
Last ECM selected gear	3rd

ON malfunction (b):

ECM gearshift command	4th
V current - V last V current: Vehicle speed at current ECM selected gear V last: Vehicle speed at last ECM selected gear	Less than 9.3 mph (15 km/h)

Vehicle speed (current)	Less than 52.8 mph (85 km/h)
Throttle valve opening angle (current)	Less than 45 %
Engine speed (current)	3,200 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

Both of the following conditions met: OFF malfunctions (a) and (b)
2 detections are necessary per driving cycle.
1st detection: Temporary flag ON
2nd detection: Pending fault code ON

OFF malfunction (a):

Input speed/Output speed (NT/NO) NT: Input (turbine) speed NO: Internal counter shaft speed	0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

OFF malfunction (b):

Input speed/Output speed (NT/NO)	Changes as follows 0.95 or more and less than 1.09 (Last) (This means actual gear is 3rd) to 0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

[ON malfunction]

Both of the following conditions met: ON malfunctions (a) and (b)

ON malfunction (a):

Input speed/Output speed (NT/NO)	No change as follows 0.95 or more and less than 1.09 (Last) (This means actual gear is 3rd) to 0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

ON malfunction (b):

NE change HINT: NE current - NE last NE current: Engine speed at current ECM selected gear NE last: Engine speed at last ECM selected gear	1,100 rpm or more

INSPECTION PROCEDURE

1. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Turn on the tester.

(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / SHIFT.

(g) In accordance with the display on the tester, perform the ACTIVE TEST.

HINT:

While driving, the shift position can be forcibly changed using the intelligent tester. Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-27).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate shift solenoid valve and set each shift position. [Vehicle Condition] • IDL: ON • 30 mph (50 km/h) or less [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check operation of shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 3rd to 4th up-shifting must be performed with the accelerator pedal released.
- The 4th to 3rd down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift more than once in succession.
- The shift position directed by the ECM is shown in the DATA LIST / SHIFT display on the intelligent tester.
- Shift solenoid valve S1 is turned on/off normally when the shift lever is in the D position:

Gearshift controlled by ECM	1st	2nd	3rd	4th
Shift solenoid valve S1	ON	ON	OFF	OFF

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0751)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn on the tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs using the tester.

Result

Display (DTC output)	Proceed to
P0751	A
P0751 and other DTCs	B

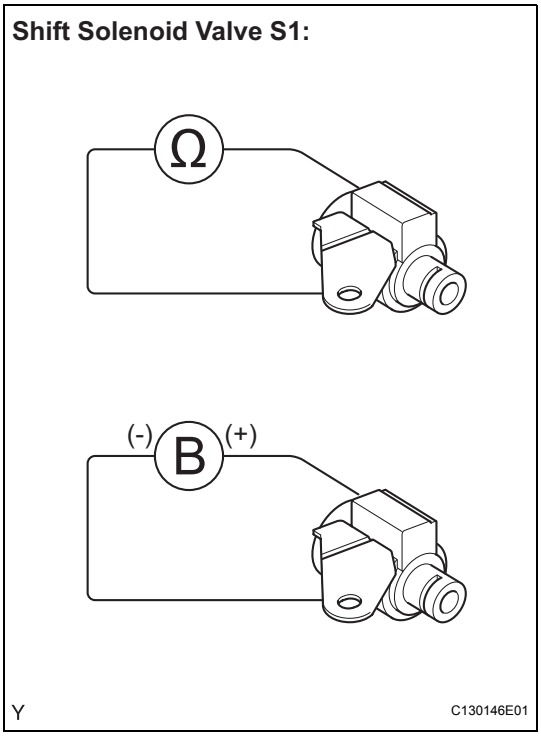
HINT:
If any DTCs besides P0751 are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT SHIFT SOLENOID VALVE S1

Shift Solenoid Valve S1:



(a) Remove shift solenoid valve S1.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (S1) - Solenoid Body (S1)	11 to 15 Ω at 20°C (68°F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector and the negative (-) lead to the solenoid body to check the solenoid valve operation.
OK:
The solenoid makes operating sounds.

NG → **REPLACE SHIFT SOLENOID VALVE S1**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

AX

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0756	Shift Solenoid "B" Performance (Shift Solenoid Valve S2)

DESCRIPTION

The ECM uses signals from the vehicle speed sensor and speed sensor NT to detect the actual gear position (1st, 2nd, 3rd or 4th).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect the mechanical problems of the shift solenoid valves, the valve body or automatic transaxle (clutch, brake or gear etc.).

DTC No.	DTC Detection Condition	Trouble Area
P0756	S2 stuck OFF malfunction*1: Shifting to 1st and 4th gears is impossible. ECM determines that there is malfunction when all of following conditions are met: (2-trip detection logic) (a) When ECM directs gearshift to switch to 1st gear, actual gear is shifted to 2nd. (b) When ECM directs gearshift to switch to 3rd gear, actual gear is shifted to 3rd. (c) When ECM directs gearshift to switch to 4th gear, actual gear is shifted to 3rd.	• Shift solenoid valve S2 remains closed • Valve body is blocked • Shift solenoid valve S2 • Automatic transaxle (clutch, brake or gear etc.) • ECM
P0756	S2 stuck ON malfunction*2: Shifting to 2nd gear and 3rd gear is impossible. ECM determines that there is malfunction when all of following conditions are met: (2-trip detection logic) (a) When ECM directs gearshift to switch to 2nd gear, actual gear is shifted to 1st. (b) When ECM directs gearshift to switch to 3rd gear, actual gear is shifted to 4th. (c) When ECM directs gearshift to switch to 4th gear, actual gear is shifted to 4th.	• Shift solenoid valve S2 remains open • Valve body is blocked • Shift solenoid valve S2 • Automatic transaxle (clutch, brake or gear etc.) • ECM

HINT:
Gear positions in the event of a solenoid valve mechanical problem:

Gearshift controlled by ECM	1st	2nd	3rd	4th
*1: Actual gear position under S2 stuck OFF malfunction	2nd	2nd	3rd	3rd
*2: Actual gear position under S2 stuck ON malfunction	1st	1st	4th	4th

AX

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of shift solenoid valve S2.
The ECM controls the gearshifts by turning the shift solenoid valves ON/OFF. When the gear position directed by the ECM and the actual gear position do not match, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0756: Shift solenoid valve S2/OFF malfunction Shift solenoid valve S2/ON malfunction
Required sensors/Components	Shift solenoid valve S2, Speed sensor (NT), Speed sensor (SPD)
Frequency of operation	Continuous
Duration	0.85 seconds
MIL operation	2 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions and ON malfunctions.

The monitor runs whenever the following DTCs are not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748 - P0798 (Trans solenoid (range))
ECT (Engine Coolant Temperature)	60°C (140°F) or more
Transmission shift position	D
Time after shifting N to D	4.5 seconds or more
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction
ECT sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Speed sensor (NT) circuit	No circuit malfunction
Speed sensor (SPD) circuit	No circuit malfunction

OFF malfunction (a):

ECM gearshift command	1st
Vehicle speed	5.6 mph (9 km/h) or more and less than 24.9 mph (40 km/h)
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

OFF malfunction (b):

ECM gearshift command	3rd
Vehicle speed	5.6 mph (9 km/h) or more
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

OFF malfunction (c):

ECM gearshift command	4th
Vehicle speed	5.6 mph (9 km/h) or more
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

ON malfunction (a):

ECM gearshift command	2nd
Vehicle speed	5.6 mph (9 km/h) or more
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

ON malfunction (b):

ECM gearshift command	3rd
Vehicle speed	5.6 mph (9 km/h) or more
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

ON malfunction (c):

ECM gearshift command	4th
Vehicle speed	5.6 mph (9 km/h) or more
Throttle valve opening angle	7.0 % or more at engine speed of 1,900 rpm (Conditions vary with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

All of the following conditions met: OFF malfunctions (a), (b) and (c)
2 detections are necessary per driving cycle.
1st detection: Temporary flag ON
2nd detection: Pending fault code ON

OFF malfunction (a):

Input speed/Output speed (NT/NO) NT: Input (turbine) speed NO: Internal counter shaft speed	1.50 or more and less than 1.80 (This means actual gear is 2nd)

OFF malfunction (b):

Input speed/Output speed (NT/NO)	0.95 or more and less than 1.09 (This means actual gear is 3rd)

OFF malfunction (c):

Input speed/Output speed (NT/NO)	0.95 or more and less than 1.09 (This means actual gear is 3rd)

[ON malfunction]

All of the following conditions met: ON malfunctions (a), (b) and (c)

ON malfunction (a):

Input speed/Output speed (NT/NO)	2.75 or more and less than 3.35 (This means actual gear is 1st)

ON malfunction (b):

Input speed/Output speed (NT/NO)	0.64 or more and less than 0.78 (This means actual gear is 4th)

ON malfunction (c):

Input speed/Output speed (NT/NO)	0.64 or more and less than 0.78 (This means actual gear is 4th)

DTC	P0787	Shift / Timing Solenoid Low (Shift Solenoid Valve ST)

DTC	P0788	Shift / Timing Solenoid High (Shift Solenoid Valve ST)

DESCRIPTION

Shift solenoid valve ST is switched OFF-ON-OFF in accordance with signals from the ECM when up-shifting and down-shifting between the 3rd and the 4th gears. This reduces the shock of gear shifting between these positions.

DTC No.	DTC Detection Condition	Trouble Area
P0787	ECM detects short in solenoid valve ST circuit 4 times when solenoid valve ST is operated. (1-trip detection logic)	• Short in shift solenoid valve ST circuit • Shift solenoid valve ST • ECM
P0788	ECM detects open in solenoid valve ST circuit 4 times when solenoid valve ST is not operated. (1-trip detection logic)	• Open in shift solenoid valve ST circuit • Shift solenoid valve ST • ECM

MONITOR DESCRIPTION

When there is an open or short circuit in the shift solenoid valve circuit, the ECM detects the problem and the MIL comes on.

MONITOR STRATEGY

Related DTCs	P0787: Shift timing solenoid/Range check (Low resistance) P0788: Shift timing solenoid/Range check (High resistance)
Required sensors/Components	Shift solenoid valve ST
Frequency of operation	Continuous
Duration	0.128 seconds
MIL operation	Immediate
Sequence of operation	None

AX

TYPICAL ENABLING CONDITIONS

P0787: Range check (Low resistance)

The monitor runs whenever the following DTCs are not present	None
Solenoid	ON
Time after solenoid OFF to ON	More than 0.008 seconds
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

P0788: Range check (High resistance)

The monitor runs whenever the following DTCs are not present	None
Solenoid	OFF
Time after solenoid ON to OFF	More than 0.008 seconds
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P0787: Range check (Low resistance)

Shift solenoid valve ST resistance	8 Ω or less

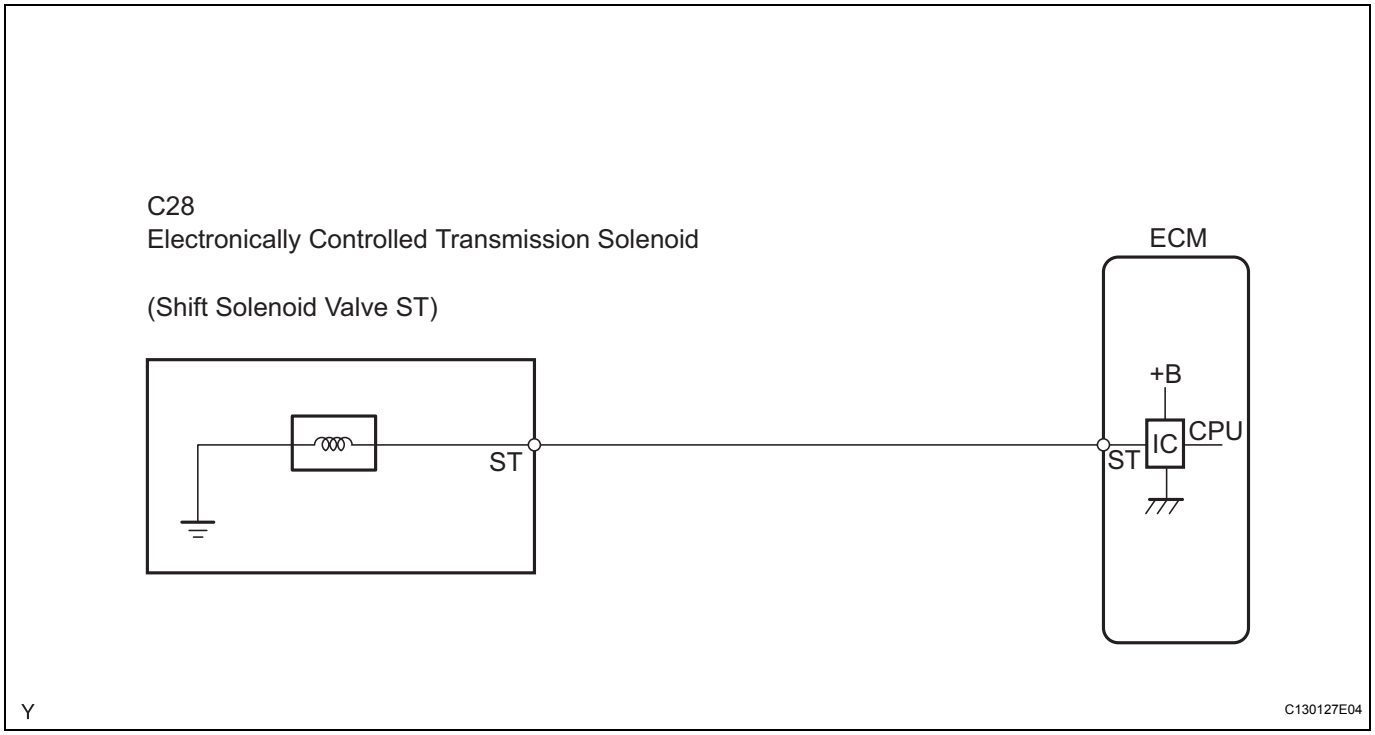
P0788: Range check (High resistance)

Shift solenoid valve ST resistance	100 kΩ or more

COMPONENT OPERATING RANGE

Shift solenoid valve ST resistance	11 to 15 Ω at 20°C (68°F)

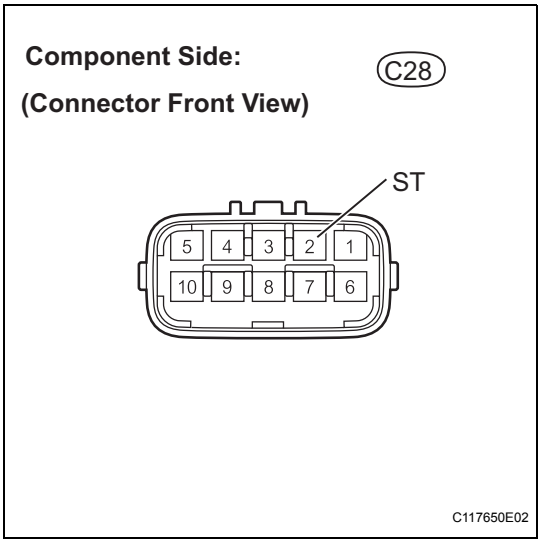
WIRING DIAGRAM



AX

INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE ST)



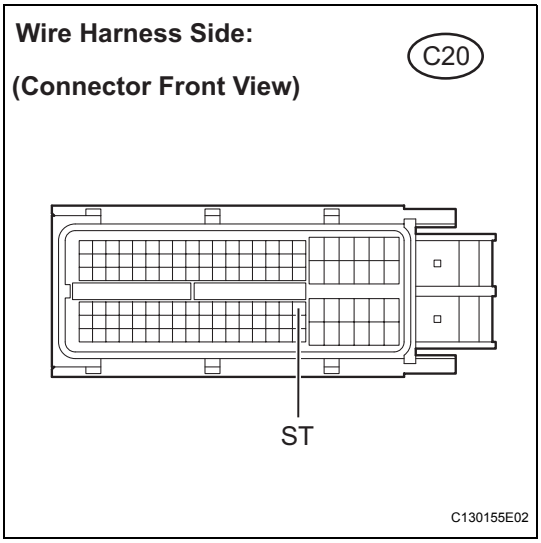
(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
2 (ST) - Body ground	11 Ω to 15 Ω at 20°C (68°F)

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission connector to the transaxle.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
80 (ST) - Body ground	11 Ω to 15 Ω at 20 °C (68 °F)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

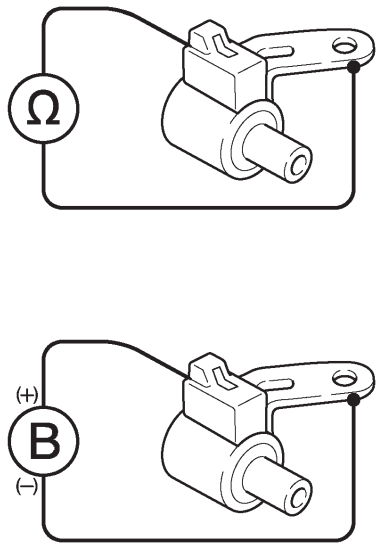
OK

REPLACE ECM

AX

3	INSPECT SHIFT SOLENOID VALVE ST

Shift Solenoid Valve ST:



(a) Remove shift solenoid valve ST.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
Solenoid Connector (ST) - Solenoid Body (ST)	11 to 15 Ω at 20 °C (68 °F)

(c) Connect the positive (+) lead to the terminal of the solenoid connector and the negative (-) lead to the solenoid body to check the solenoid valve operation.
OK:
The solenoid makes operating sounds.

NG → **REPLACE SHIFT SOLENOID VALVE ST**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX

DTC	P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)

DTC	P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)

DESCRIPTION

Shifting from 1st to 4th is performed in combination with the ON and OFF operations of shift solenoid valves S1 and S2 which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be driven smoothly.
(If an open or short circuit occurs, the ECM stops sending currents to the affected circuit.)
Fail-safe function (See page AX-27).

DTC No.	DTC Detection Condition	Trouble Area
P0973	ECM detects short in solenoid valve S1 circuit 4 times when solenoid valve S1 is operated. (1-trip detection logic)	• Short in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0974	ECM detects open in solenoid valve S1 circuit 4 times when solenoid valve S1 is not operated. (1-trip detection logic)	• Open in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM

MONITOR DESCRIPTION

The ECM commands gearshift by turning the shift solenoid valves ON/OFF. When there is an open or short circuit in the shift solenoid valve S1 circuit, the ECM detects the problem and the MIL comes on. Illuminating the MIL, the ECM performs the fail-safe and turns the other functioning shift solenoid valve ON/OFF.
(If an open or short circuit occurs, the ECM stops sending currents to the affected circuit.)

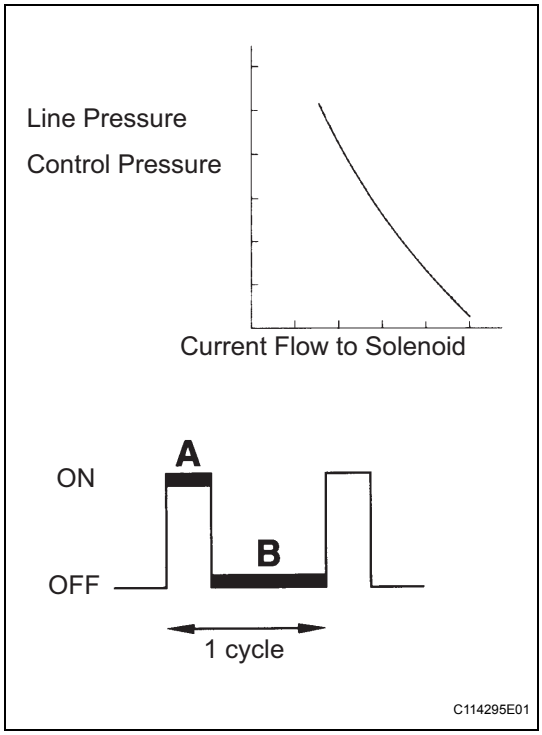
DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

DESCRIPTION



The throttle pressure that is applied to the primary regulator valve (which modulates the line pressure) causes shift solenoid valve SLT, under electronic control, to precisely modulate and generate the line pressure according to the extent that the accelerator pedal is depressed or the engine power output. This controls the line pressure and provides smooth shifting characteristics.

AX

Upon receiving a throttle valve opening angle signal, the ECM controls the line pressure by sending a predetermined duty ratio* to the solenoid valve, modulating the line pressure and generating throttle pressure.

*: The duty ratio is the ratio of the current ON time (A) to the total of the current ON and OFF time (A + B).
Duty Ratio (%) = A / (A + B) x 100

DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects malfunction on SLT (ON side) according to difference in revolutions of turbine (input) and output shaft. (2-trip detection logic)	• Shift solenoid valve SLT remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

In any forward position, when the difference between the revolutions of the turbine and output shaft exceeds the specified value (varies with output speed) determined by the ECM, the ECM illuminates the MIL and outputs the DTC. When shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.

MONITOR STRATEGY

Related DTCs	P2714: Shift solenoid valve SLT/ON malfunction
Required sensors/Components	Shift solenoid valve SLT, Speed sensor (NT), Speed sensor (SPD)
Frequency of operation	Continuous

Duration	1.0 second
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to ON malfunctions (a), (b), (c) and (d).

The monitor runs whenever the following DTCs are not present.	None
Transmission shift position	D
Time after shifting N to D	4.5 seconds or more
ATF (Automatic Transmission Fluid) temperature	-10°C (14°F) or more
ATF temperature sensor (TFT sensor) circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction

ECM gearshift command	2nd
Input (turbine) speed	200 rpm or more
Output speed	300 rpm or more

ON malfunction (c):

ECM gearshift command	3rd
Input (turbine) speed	200 rpm or more
Output speed	300 rpm or more

ON malfunction (d):

ECM gearshift command	4th
Input (turbine) speed	200 rpm or more
Output speed	300 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

[ON malfunction]

Detection condition: Total accumulated time of ON malfunctions (a), (b), (c) and (d) is 1 second or more

ON malfunction (a):

NT - NO x 1st gear ratio NT: Input (turbine) speed NO: Internal counter shaft speed	More than 300 rpm at output speed of 1,000 rpm (Conditions vary with output speed)
Duration	0.85 seconds or more

ON malfunction (b):

NT - NO x 2nd gear ratio	More than 300 rpm at output speed of 1,000 rpm (Conditions vary with output speed)
Duration	0.85 seconds or more

ON malfunction (c):

NT - NO x 3rd gear ratio	More than 300 rpm at output speed of 1,000 rpm (Conditions vary with output speed)
Duration	0.85 seconds or more

ON malfunction (d):

NT - NO x 4th gear ratio	More than 300 rpm at output speed of 1,000 rpm (Conditions vary with output speed)
Duration	0.85 seconds or more

INSPECTION PROCEDURE

1. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn on the tester.
(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / SOLENOID (SLT).
(g) In accordance with the display on the tester, perform the ACTIVE TEST.

Item	Test Details	Diagnostic Note
SOLENOID (SLT)*	[Test Details] Operate shift solenoid SLT and raise line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON HINT: OFF: Line pressure up (when active test of SOLENOID (SLT) is performed, ECM turns off SLT solenoid) ON: No action (normal operation)	-

*: SOLENOID (SLT) in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transaxle, which is used in the HYDRAULIC TEST (see page AX-13) as well.

HINT:

The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

1	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2714)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn on the tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs using the tester.

Result

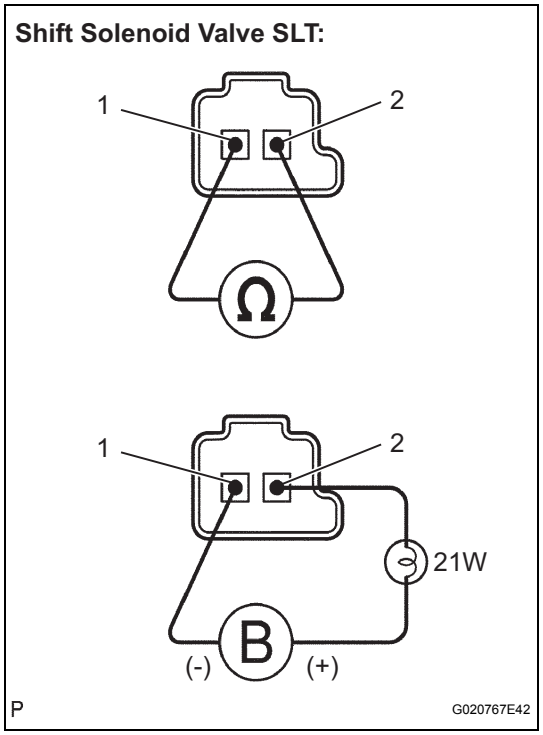
Display (DTC output)	Proceed to
P2714	A
P2714 and other DTCs	B

HINT:
If any other DTCs besides P2714 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2 INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes operating sounds.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

3 INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:
There are no foreign objects on any valves and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

AX

4	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:
The torque converter clutch operates normally.

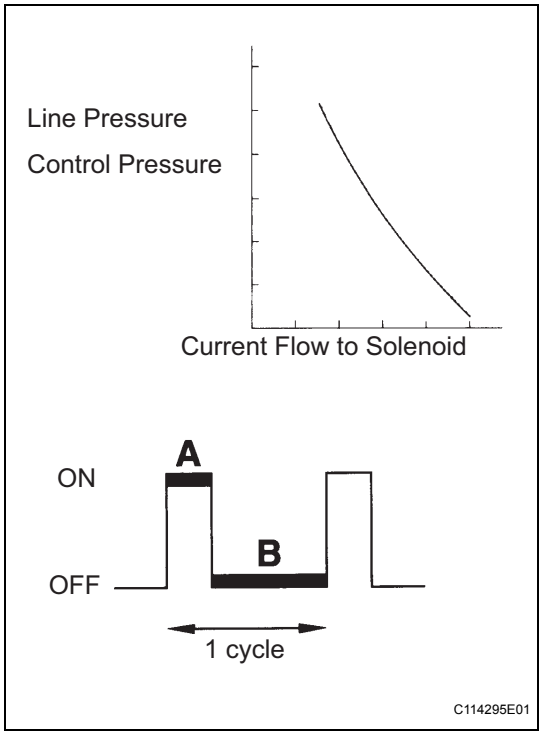
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION



The throttle pressure that is applied to the primary regulator valve (which modulates the line pressure) causes shift solenoid valve SLT, under electronic control, to precisely modulate and generate the line pressure according to the extent that the accelerator pedal is depressed or the engine power output. This controls the line pressure and provides smooth shifting characteristics.
Upon receiving a throttle valve opening angle signal, the ECM controls the line pressure by sending a predetermined duty ratio* to the solenoid valve, modulating the line pressure and generating throttle pressure.
*: The duty ratio is the ratio of the current ON time (A) to the total of the current ON and OFF time (A + B).
Duty Ratio (%) = A / (A + B) x 100

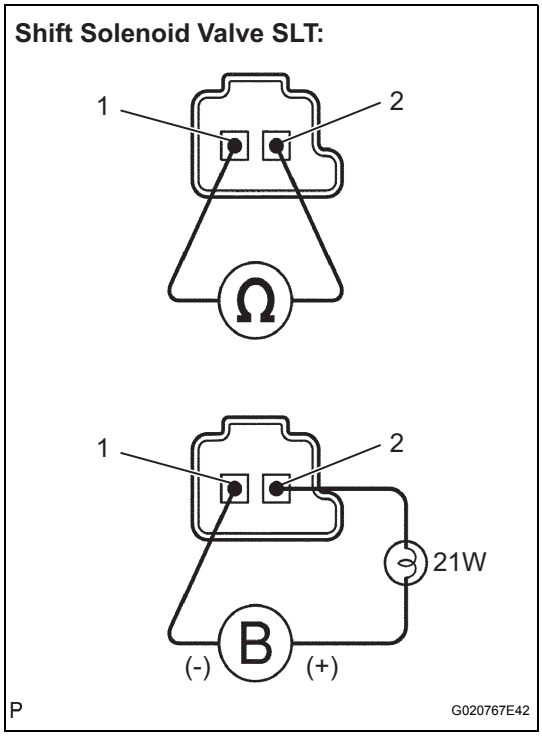
3	INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove shift solenoid valve SLT.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 Ω to 5.6 Ω at 20°C (68°F)

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes operating sounds.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

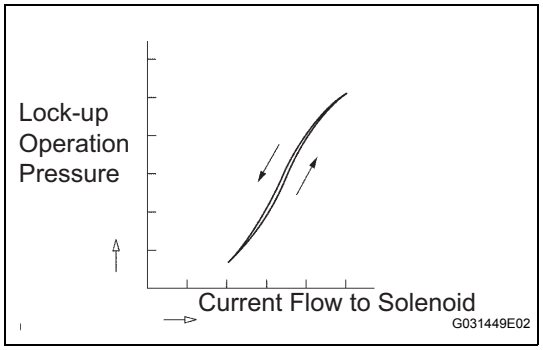
OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)

DESCRIPTION



The ECM uses the signals from the throttle position sensor, turbine (input) speed sensor, vehicle speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect mechanical problems of shift solenoid valve SLU, valve body and torque converter clutch.

DTC No.	DTC Detection Condition	Trouble Area
P2757	Lock-up does not occur when driving in lock-up range or lock-up remains ON in lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Shift solenoid valve SLU • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low • ECM

AX

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the speed sensor (NT), engine rpm (NE), engine load, engine coolant temperature, vehicle speed, transmission fluid temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to output shaft speed. When conditions are appropriate, the ECM requests lock-up by applying the control voltage to shift solenoid valve SLU. When SLU is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in shift solenoid valve SLU or lock-up system performance. The ECM turns on the MIL and stores the DTC.
Example:
When either of the following is met, the system judges it as a malfunction.

- There is a difference in the rotations of the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.
  (Engine speed is at least 100 rpm greater than input turbine speed.)
- There is no difference in the rotations of the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up off.
  (The difference between engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU/OFF malfunction Shift solenoid valve SLU/ON malfunction
Required sensors/Components	Shift solenoid valve SLU, Speed sensor (NT), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	OFF malfunction: 3.5 seconds ON malfunction: 1.8 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to OFF malfunction and ON malfunction.

The monitor runs whenever the following DTCs are not present.	None
Time after shifting N to D	4.5 seconds or more
ECT (Engine Coolant Temperature)	60°C (140°F) or more
Transmission shift position	D
ECM selected gear	3rd or 4th
Vehicle speed	15.5 mph (25 km/h) or more
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction
Shift solenoid valve SLU circuit	No circuit malfunction
ECT sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Speed sensor (NT) circuit	No circuit malfunction
Speed sensor (SPD) circuit	No circuit malfunction

AX

OFF malfunction:

ECM lock-up command	ON
Duration time from lock-up on command	3 seconds or more
Actual gear	3rd or 4th

ON malfunction:

ECM lock-up command	OFF
Throttle valve opening angle	8 % or more
Vehicle speed	Less than 37.3 mph (60 km/h)
Actual gear	3rd
Calculated load value	22 % or more

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction:

Engine speed - Input (turbine) speed (NE - NT)	100 rpm or more

[ON malfunction]

2 detections are necessary per driving cycle.
1st detection: Temporary flag ON
2nd detection: Pending fault code ON
Vehicle speed must be under 6.2 mph (10 km/h) once before 2nd detection.

ON malfunction:

Difference between engine speed and Input (turbine) speed	Less than 35 rpm

INSPECTION PROCEDURE

1. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as the first step of troubleshooting is one method of shortening labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Turn on the tester.

(f) Select the following items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / LOCK UP.

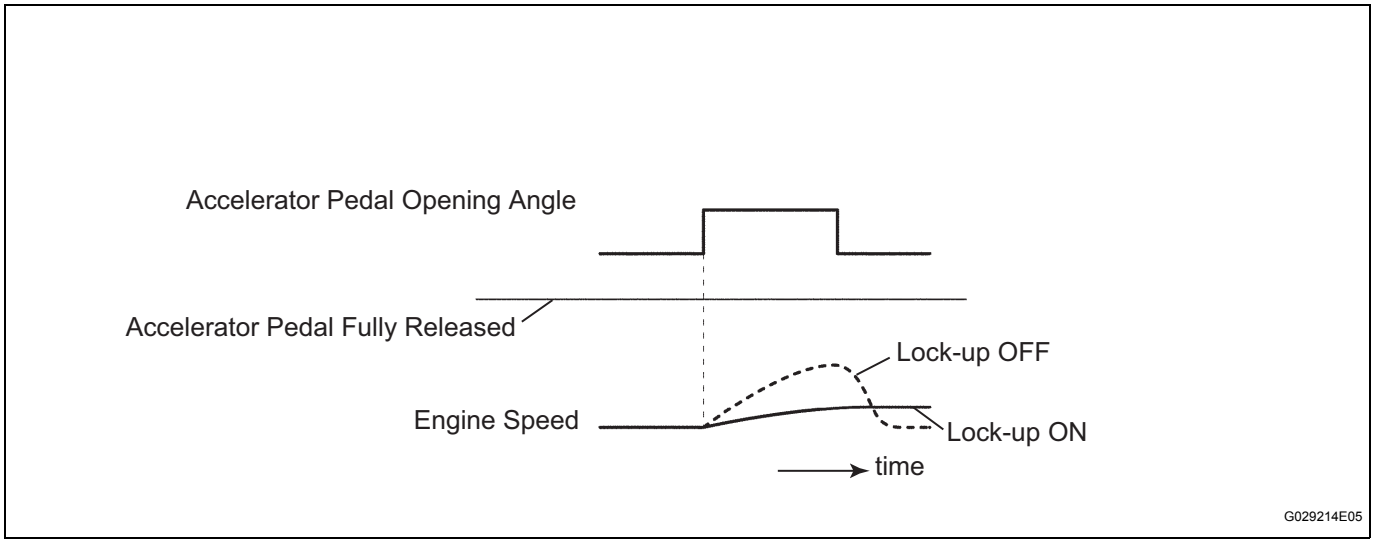
(g) According to the display on the tester, perform the ACTIVE TEST.

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control shift solenoid SLU to set automatic transaxle to lock-up condition. [Vehicle Condition] Vehicle Speed: 36 mph (60 km/h) or more, and 4th gear	Possible to check SLU operation.

HINT:

- This test can be conducted when the vehicle speed is 36 mph (60 km/h) or less.
- This test can be conducted in 4th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.



HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly, but not fully, release the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off.)

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the ON position.
(c) Turn on the tester.
(d) Select the following items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs using the tester.

Result

Display (DTC output)	Proceed to
P2757	A
P2757 and other DTCs	B

HINT:
If any other DTCs besides P2757 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

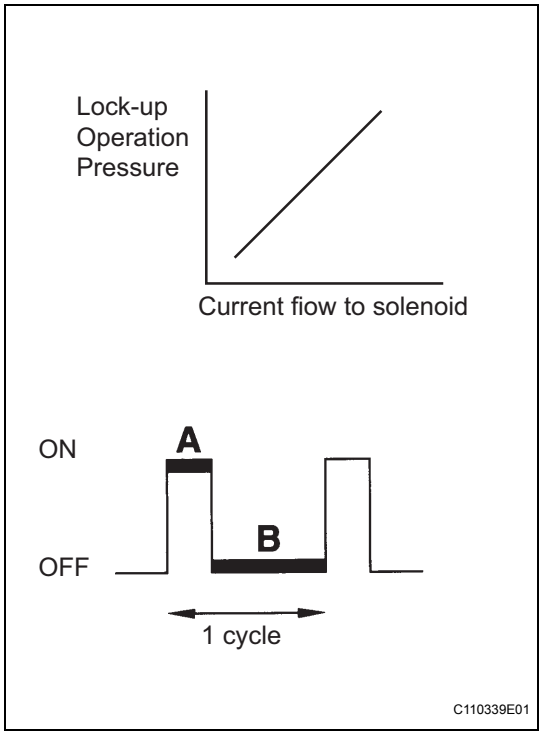
DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)

DESCRIPTION



The amount of current flowing to the solenoid is controlled by the duty ratio* of the ECM output signal. The higher the duty ratio* becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.

*: The duty ratio is the ratio of the current ON time (A) to the total of the current ON and OFF times (A + B).
Duty Ratio (%) = A / (A + B) x 100

DTC No.	DTC Detection Condition	Trouble Area
P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving. (1-trip detection logic)	• Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • ECM

MONITOR DESCRIPTION

When an open or short in the linear solenoid valve (SLU) circuit is detected, the ECM interprets this as a fault. The ECM turns on the MIL and stores the DTC.

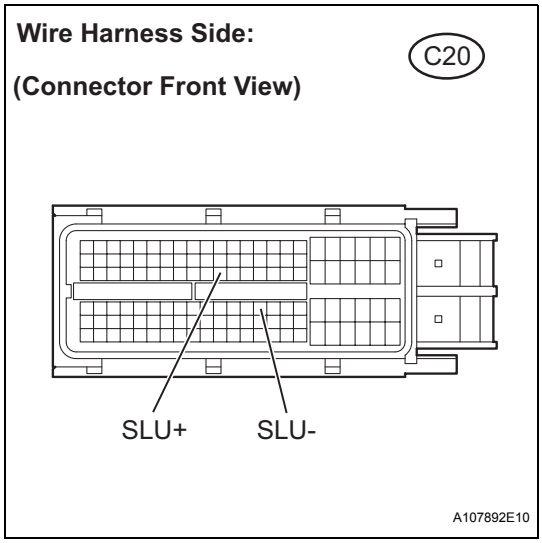
Standard resistance

Tester Connection	Specified Condition
4 (SLU+) - 9 (SLU-)	11 Ω to 15 Ω at 20°C (68°F)
4 (SLU+) - Body ground	10 kΩ or higher
9 (SLU-)- Body ground	10 kΩ or higher

NG → **Go to step 3**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission connector to the transaxle.
(b) Disconnect the ECM connector.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
77 (SLU+) - 57 (SLU-)	11 Ω to 15 Ω at 20°C (68°F)
57 (SLU+) - Body ground	10 kΩ or higher
77 (SLU-) - Body ground	10 kΩ or higher

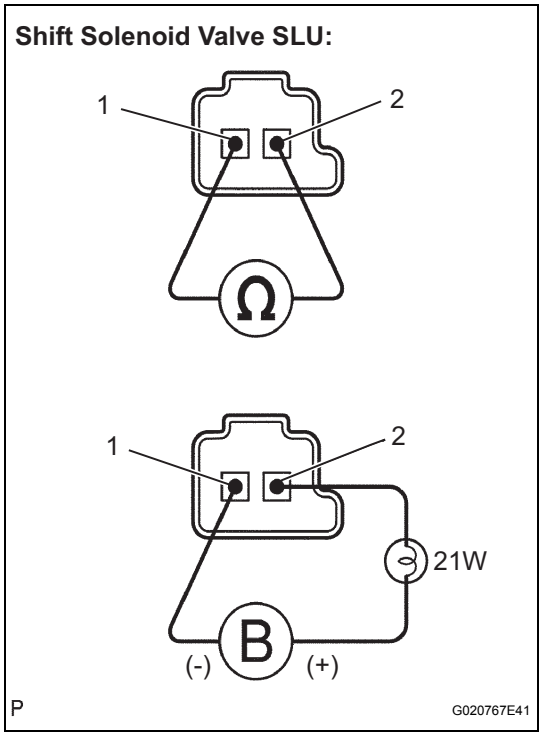
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

AX

3	INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove shift solenoid valve SLU.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
1 - 2	5.0 Ω to 5.6 Ω at 20°C (68°F)

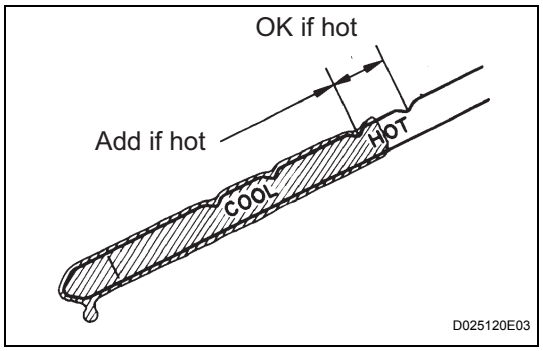
(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes operating sounds.

NG → **REPLACE SHIFT SOLENOID VALVE SLU**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX



AUTOMATIC TRANSAXLE FLUID

ON-VEHICLE INSPECTION

1. INSPECT AUTOMATIC TRANSAXLE FLUID

HINT:

Drive the vehicle until the engine and transaxle are at normal operating temperature.

Fluid temperature:

70 to 80 °C (158 to 176 °F)

(a) Park the vehicle on a level surface and engage the parking brake.

(b) With the engine idling and the brake pedal depressed, shift the shift lever into all positions from P to L, and then return it to the P position.

(c) Pull out the oil level gauge and wipe it clean.

(d) Push it fully back into the pipe.

(e) Pull it out and check that the fluid level is within the HOT range.

If there is any leakage, repair or replace O-rings, FIPGs, oil seals, plugs or other parts.

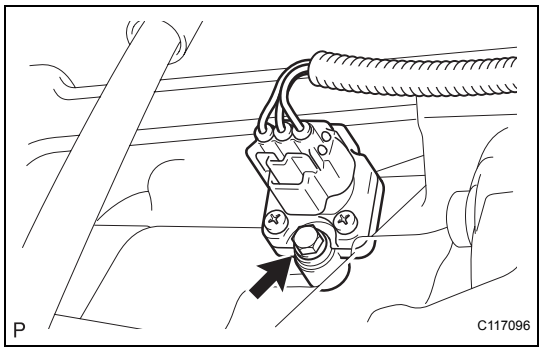
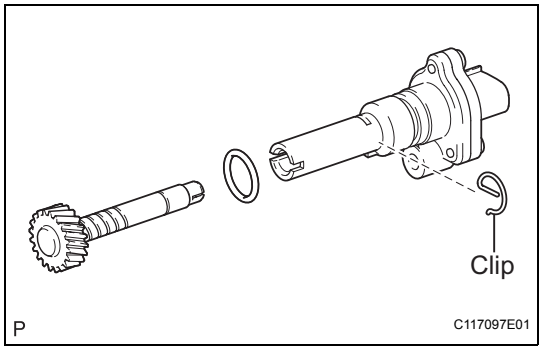
REMOVAL

1. **REMOVE FRONT WIPER ARM HEAD CAP**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
2. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
4. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
5. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
6. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
7. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
   Hatchback: (See page WW-18)
   Sedan: (See page WW-10)
8. **REMOVE COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-18)**
9. **REMOVE FRONT WIPER MOTOR AND LINK**
   Hatchback: (See page WW-19)
   Sedan: (See page WW-10)
10. **REMOVE COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-122)**
11. **REMOVE FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-123)**
12. **REMOVE OUTER COWL TOP PANEL**
    Hatchback: (See page EM-123)
    Sedan: (See page EM-123)
13. **REMOVE BATTERY (See page EM-122)**
14. **REMOVE BATTERY TRAY**
15. **REMOVE BATTERY CARRIER (See page EM-125)**



16. REMOVE SPEEDOMETER SENSOR

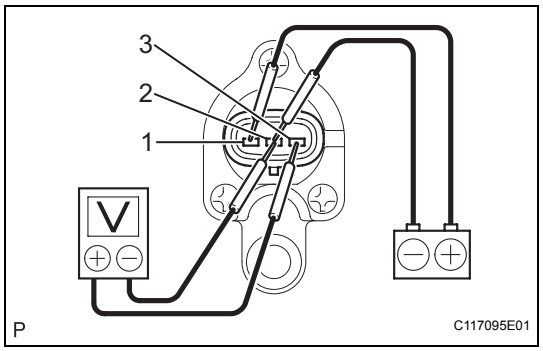
(a) Disconnect speedometer sensor connector.
(b) Remove the bolt and speedometer sensor.



17. REMOVE SPEEDOMETER DRIVEN GEAR

(a) Remove the clip and driven gear from the speedometer sensor.
(b) Remove the O-ring from the speedometer sensor.

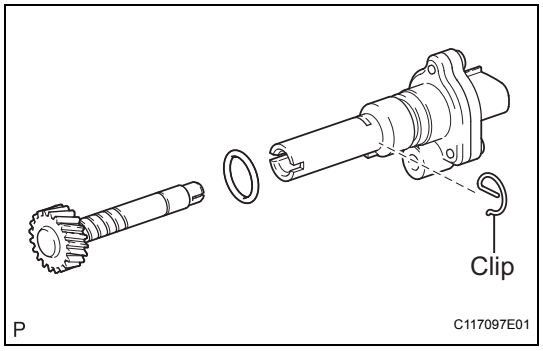
INSPECTION



1. INSPECT SPEEDOMETER SENSOR

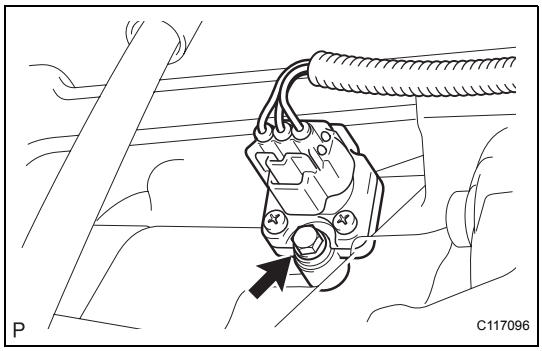
(a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2.
(b) Connect the positive (+) lead from the tester to terminal 3 and the negative (-) lead to terminal 2.
(c) Rotate the shaft.
(d) Check that the voltage output varies between 0 V and 11 V between terminals 2 and 3.
HINT:
The voltage output oscillates more than 4 times every revolution of the speed sensor shaft.
If the operation is not as specified, replace the sensor.

INSTALLATION



1. INSTALL SPEEDOMETER DRIVEN GEAR

(a) Coat a new O-ring with ATF and install it onto the speedometer sensor.
(b) Install the driven gear into the speedometer sensor with the clip.



2. **INSTALL SPEEDOMETER SENSOR**
   (a) Install the speedometer sensor with the bolt.
   Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
   (b) Connect the speedometer sensor connector.
3. **INSTALL BATTERY CARRIER (See page EM-145)**
4. **INSTALL BATTERY TRAY**
5. **INSTALL BATTERY (See page EM-148)**
6. **INSTALL OUTER COWL TOP PANEL**
   Hatchback: (See page EM-146)
   Sedan: (See page EM-147)
7. **INSTALL COWL TO REGISTER DUCT SUB-ASSEMBLY (for Hatchback) (See page EM-147)**
8. **INSTALL FRONT AIR SHUTTER SEAL (for Sedan) (See page EM-148)**
9. **INSTALL FRONT WIPER MOTOR AND LINK**
   Hatchback: (See page WW-21)
   Sedan: (See page WW-12)
10. **INSTALL COWL TOP VENTILATOR LOUVER LH (for Hatchback) (See page WW-21)**
11. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
    Hatchback: (See page WW-21)
    Sedan: (See page WW-12)
12. **INSTALL HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-22)**
13. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-13)**
14. **INSTALL COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-13)**
15. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH**
    Hatchback: (See page WW-22)
    Sedan: (See page WW-13)
16. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH**
    Hatchback: (See page WW-23)
    Sedan: (See page WW-14)
17. **INSTALL FRONT WIPER ARM HEAD CAP**
    Hatchback: (See page WW-23)
    Sedan: (See page WW-15)

REMOVAL

1. **REMOVE BATTERY (See page EM-122)**
2. **REMOVE BATTERY TRAY**
3. **REMOVE BATTERY CARRIER (See page EM-125)**
4. **REMOVE TRANSMISSION REVOLUTION SENSOR**
   (a) Disconnect the transmission revolution sensor connector.
   (b) Remove the bolt and transmission revolution sensor.

   (c) Remove the O-ring from the transmission revolution sensor.

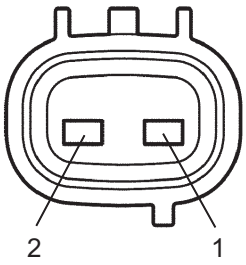
INSPECTION

1. **INSPECT TRANSMISSION REVOLUTION SENSOR**
   (a) Measure the resistance.
   Standard resistance

Tester Connection	Specified Condition
1 - 2	560 to 680 Ω at 20°C (68°F)

Sensor Side:

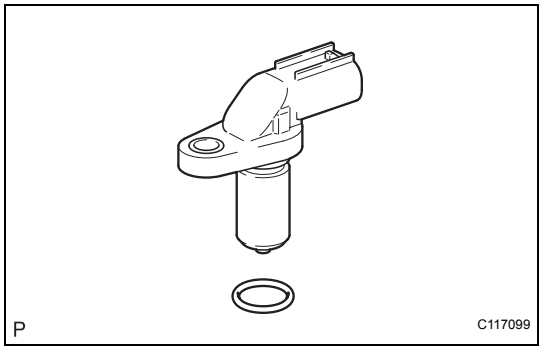
(Connector Front View):



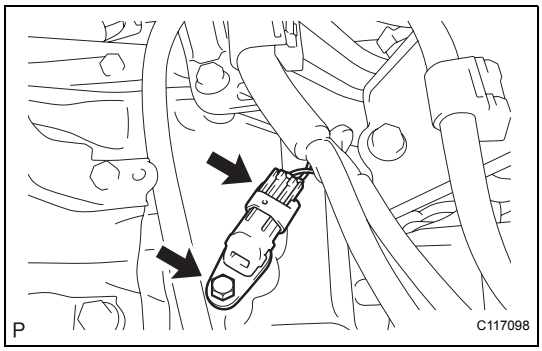
C113863E04

INSTALLATION

1. **INSTALL TRANSMISSION REVOLUTION SENSOR**
   (a) Coat a new O-ring with ATF, and install it onto the transmission revolution sensor.



AX

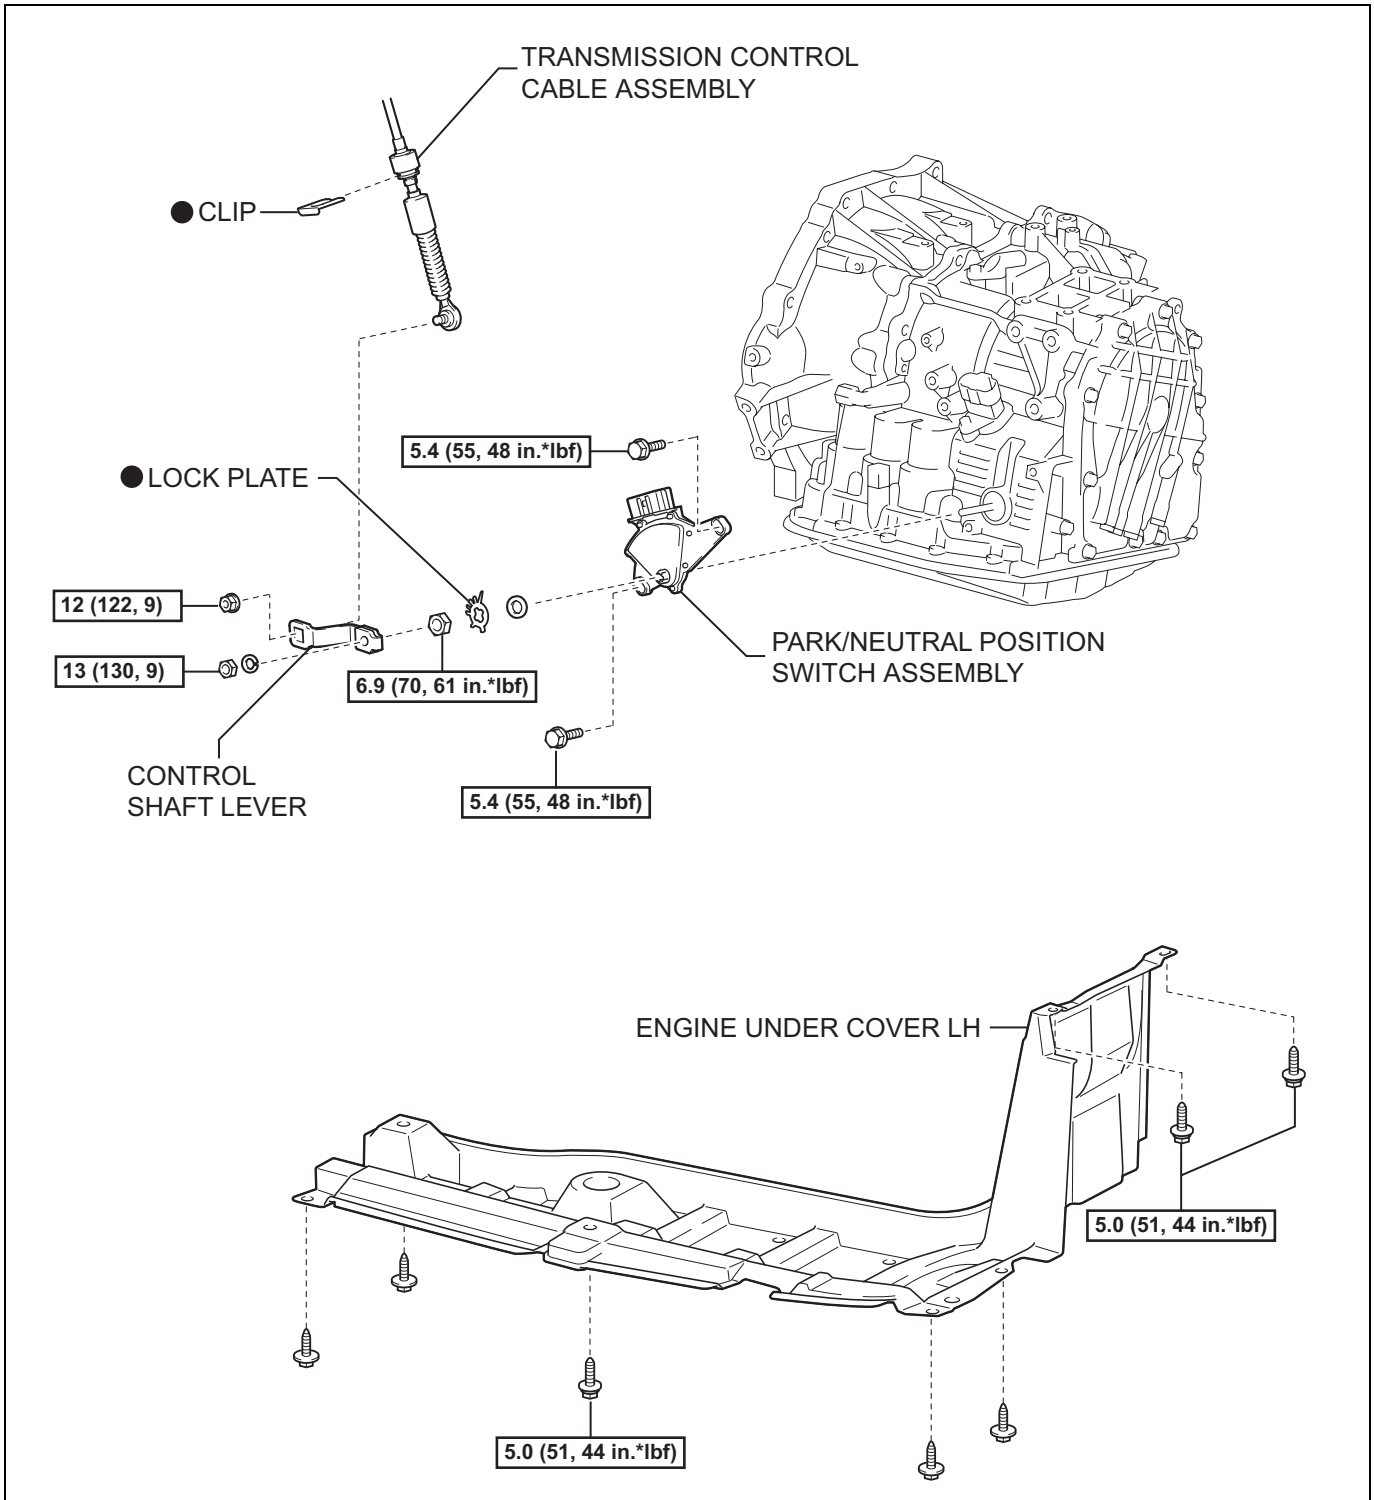


(b) Install the transmission revolution sensor with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(c) Connect the transmission revolution sensor connector.

2. **INSTALL BATTERY CARRIER (See page EM-145)**
3. **INSTALL BATTERY TRAY**
4. **INSTALL BATTERY (See page EM-148)**

PARK / NEUTRAL POSITION SWITCH

COMPONENTS



N*m (kgf*cm, ft*lbf) : Specified torque

● Non-reusable part

P

C133143E01

AX

ON-VEHICLE INSPECTION

1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Apply the parking brake and turn the ignition switch ON.

(b) Depress the brake pedal and check that the engine starts when the shift lever is set in the N or P position, but does not start in the other positions.

(c) Check that the back-up light illuminates and the reverse warning buzzer sounds when the shift lever is set in the R position, but does not function in the other positions.

If a malfunction failure is found, check the park/neutral position switch for continuity.

REMOVAL

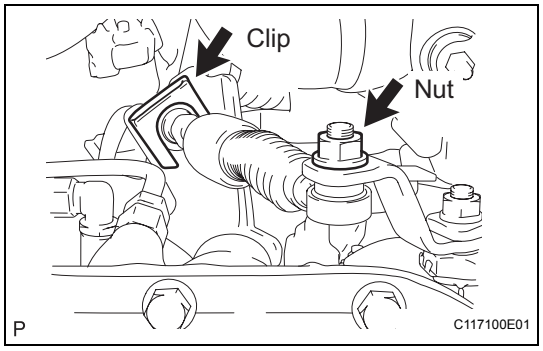
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE ENGINE UNDER COVER LH

3. SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Remove the nut and disconnect the control cable from the control shaft lever.

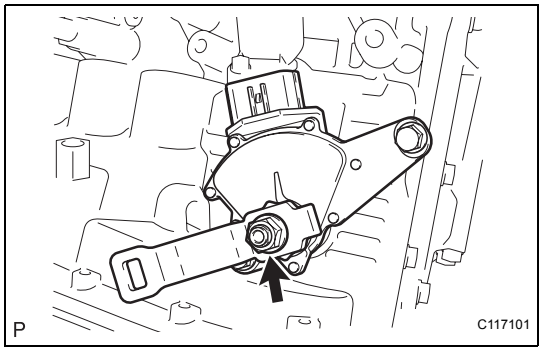
(b) Remove the clip and disconnect the control cable from the control cable bracket.



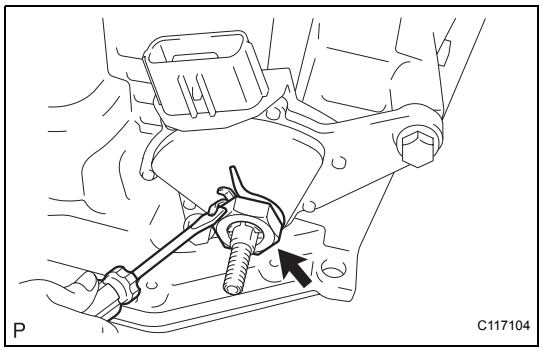
4. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the connector from the park/neutral position switch assembly.

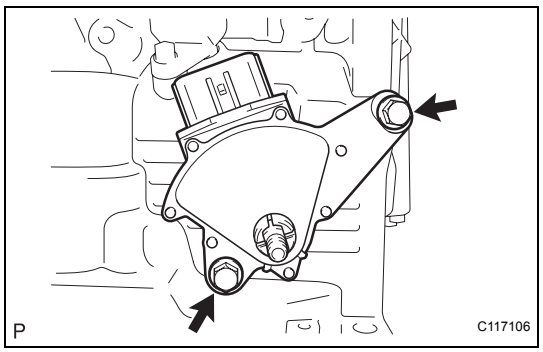
(b) Remove the nut, washer and control shaft lever.



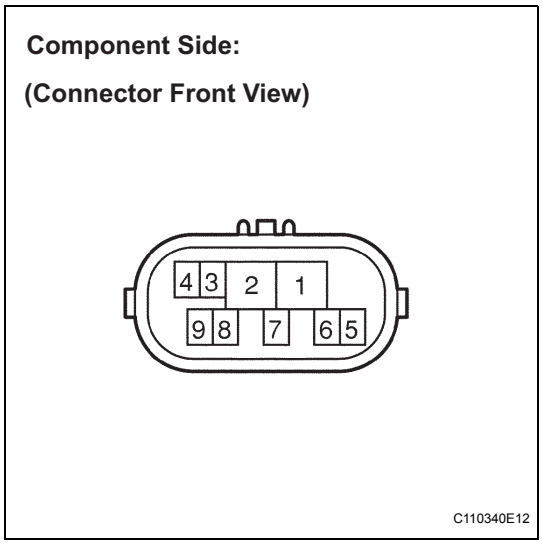
(c) Pry out the lock plate and remove the manual valve shaft nut.



(d) Remove the 2 bolts and pull out the park/neutral position switch assembly.



AX



INSPECTION

1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the park/neutral position switch connector.

(b) Measure the resistance with the shift lever in each position.

Standard resistance

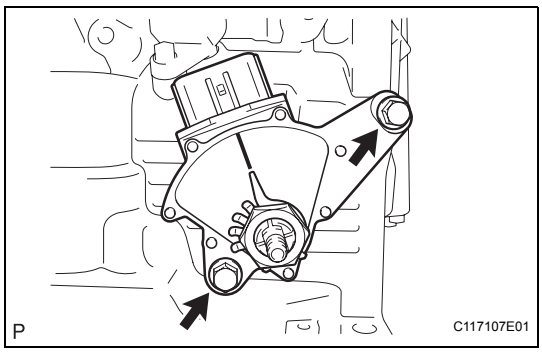
Shift Position	Tester Connection	Specified Connection
P	2 - 6 and 4 - 5	Below 1 Ω
Except P	↑	10 kΩ or higher
R	2 - 1	Below 1 Ω
Except R	↑	10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N	↑	10 kΩ or higher
D and 3	2 - 7	Below 1 Ω
Except D and 3	↑	10 kΩ or higher
2	2 - 3	Below 1 Ω
Except 2	↑	10 kΩ or higher
L	2 - 8	Below 1 Ω
Except L	↑	10 kΩ or higher

AX

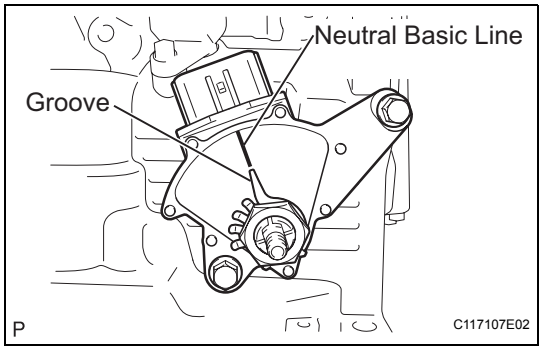
ADJUSTMENT

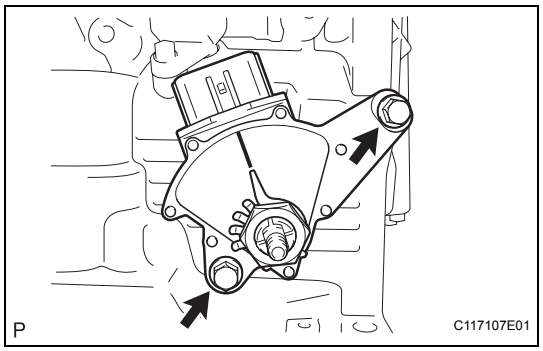
1. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Loosen the bolt of the park/neutral position switch and move the shift lever to the N position.



(b) Align the groove with the neutral basic line.



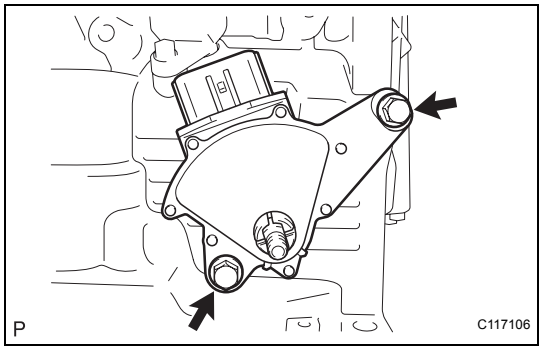


(c) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(d) After the adjustment, perform the switch operation check.

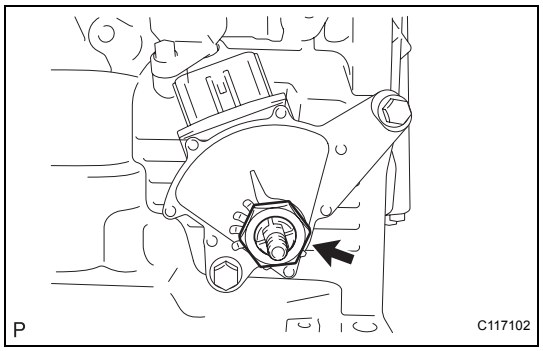
INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch assembly onto the manual transaxle.
(b) Provisionally install the 2 bolts.

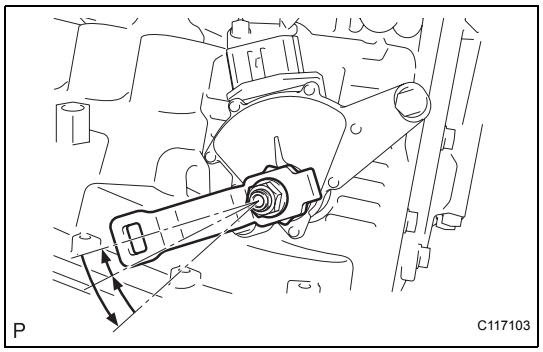


(c) Replace the lock plate with a new one and tighten the manual valve shaft nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)
(d) Provisionally install the control shaft lever.

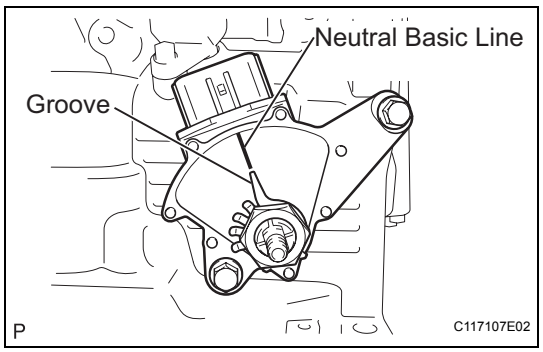


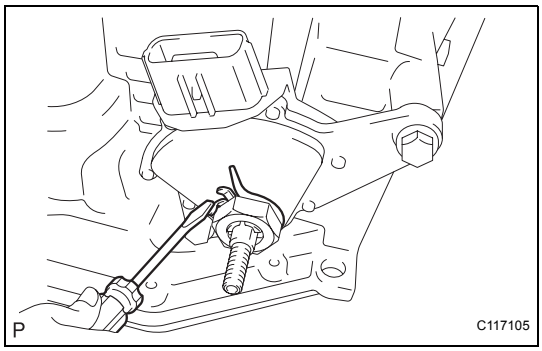
AX

(e) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.
(f) Remove the control shaft lever.

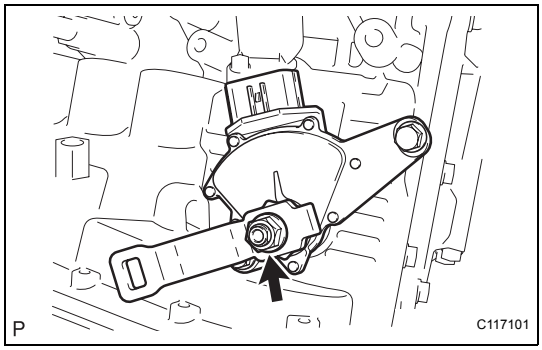


(g) Align the groove with the neutral basic line.
(h) Hold the switch in this position and tighten the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



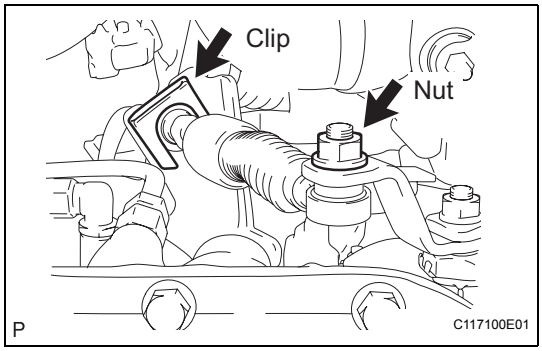


(i) Using a screwdriver, stake the nut with the lock plate.



(j) Install the control shaft lever with the nut and washer.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

(k) Connect the connector to the park/neutral position switch assembly.



2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable onto the control shaft lever with the nut.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

(b) Install the transmission control cable into the bracket with the new clip.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

4. ADJUST SHIFT LEVER POSITION (See page AX-137)

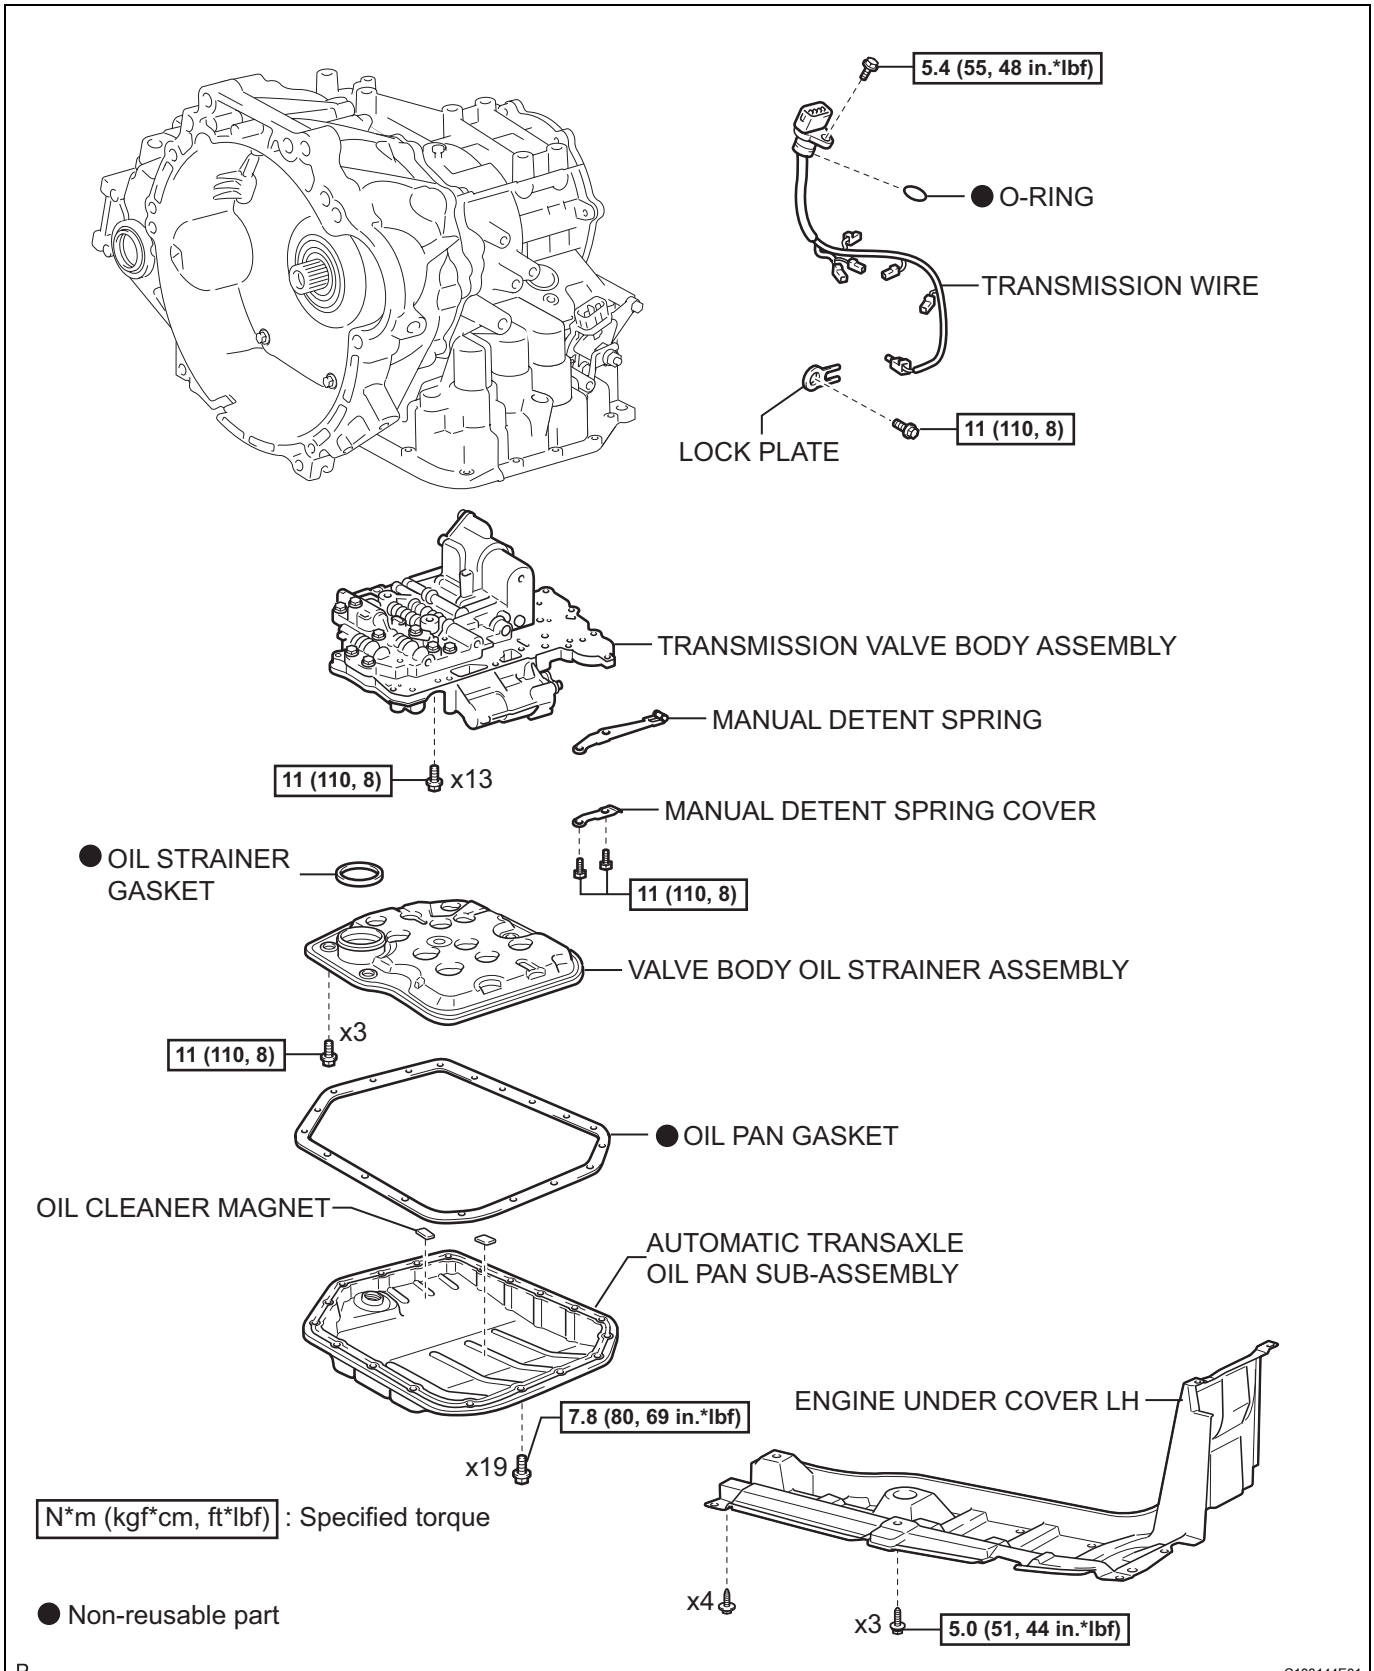
5. INSPECT SHIFT LEVER POSITION (See page AX-134)

6. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AX-106)

7. INSTALL ENGINE UNDER COVER LH

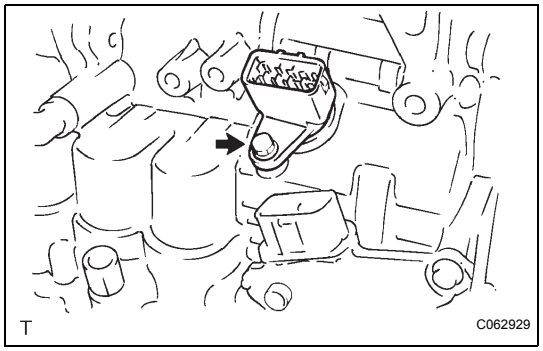
TRANSMISSION WIRE

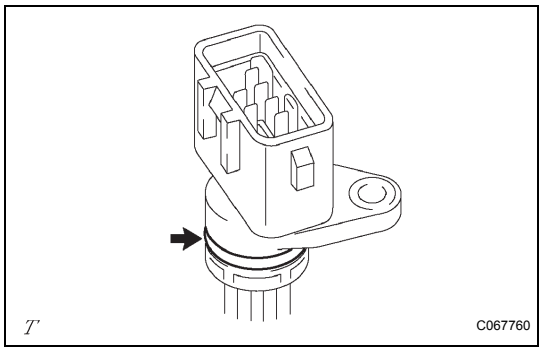
COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ENGINE UNDER COVER LH**
3. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Remove the drain plug and gasket, and drain ATF.
   (b) Install a new gasket and the drain plug.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
4. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-114)**
5. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-114)**
6. **REMOVE TRANSMISSION VALVE BODY ASSEMBLY (See page AX-115)**
7. **REMOVE TRANSMISSION WIRE**
   (a) Remove the bolt and the transmission wire from the transaxle case.





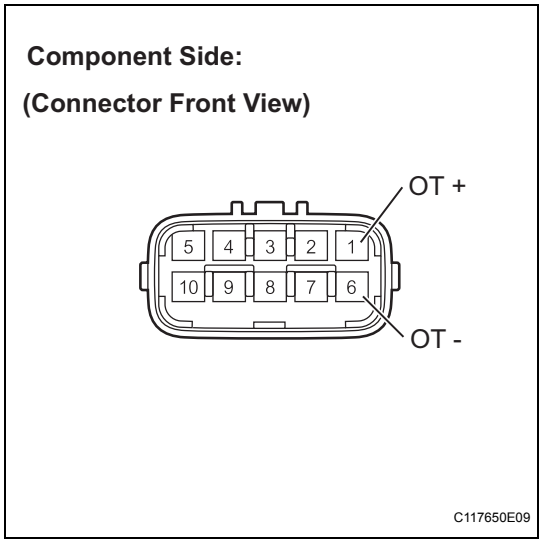
(b) Remove the O-ring from the transmission wire.

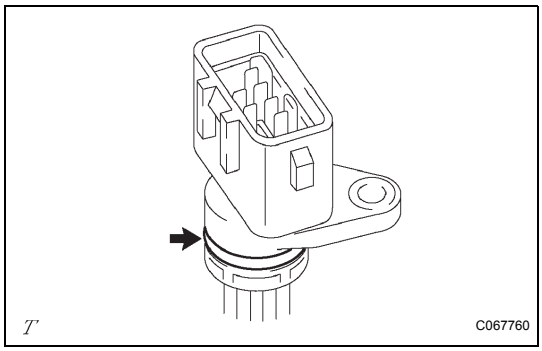
AX

INSPECTION

1. **INSPECT TRANSMISSION WIRE**
   (a) Measure the resistance.
   Standard resistance

Tester Connection	Oil Temperature	Specified Condition
1(OT+) - 6(OT-)	10°C (50°F)	6.4 kΩ
1(OT+) - 6(OT-)	110°C (230°F)	0.2 kΩ





INSTALLATION

1. **INSTALL TRANSMISSION WIRE**
   (a) Coat a new O-ring with ATF and install it into the transmission wire.

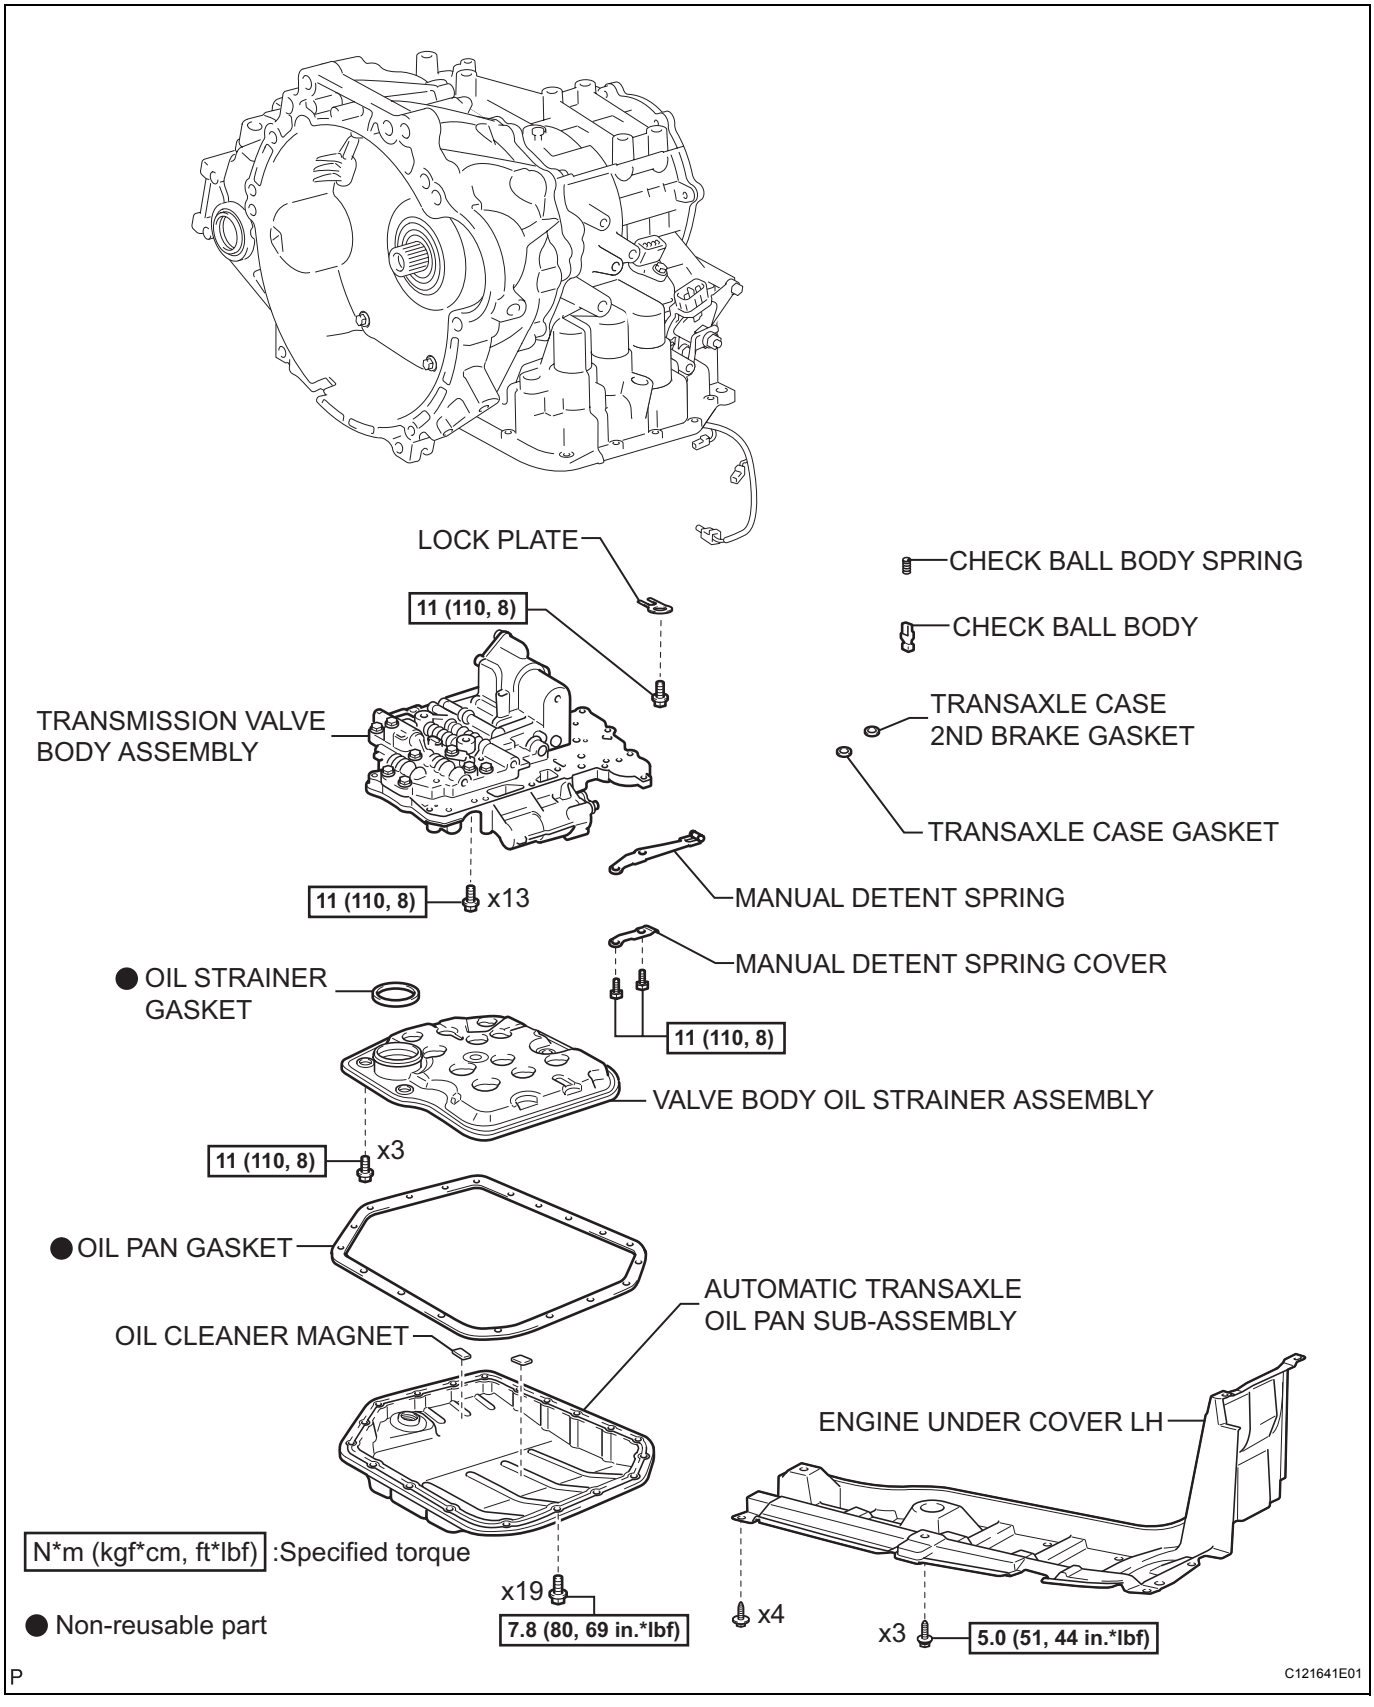
   (b) Pass the transmission wire through the transaxle.

   (c) Install the transmission wire with the bolt.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

2. **INSTALL TRANSMISSION VALVE BODY ASSEMBLY (See page AX-116)**
3. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-117)**
4. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-118)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
6. **ADD AUTOMATIC TRANSAXLE FLUID (See page AX-170)**
7. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-93)**
8. **CHECK FOR AUTOMATIC TRANSAXLE FLUID LEAKAGE**
9. **INSTALL ENGINE UNDER COVER LH**

VALVE BODY ASSEMBLY

COMPONENTS



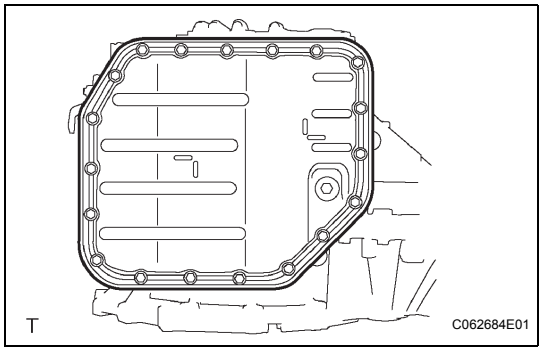
AX

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

2. **REMOVE ENGINE UNDER COVER LH**

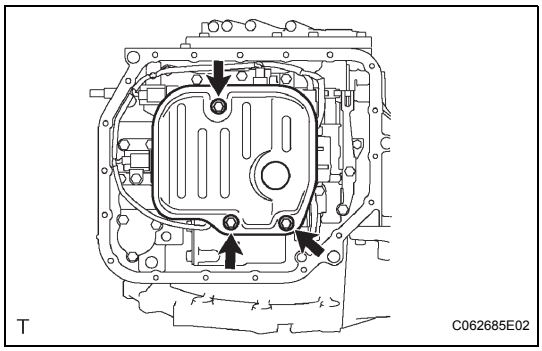
3. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Remove the drain plug and gasket, and drain ATF.
   (b) Install a new gasket and the drain plug.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



4. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY**
   (a) Remove the 19 bolts and remove the oil pan and oil pan gasket.
   NOTICE:
   Some fluid will remain in the oil pan.
   Remove all the oil pan bolts, and carefully remove the oil pan sub-assembly.

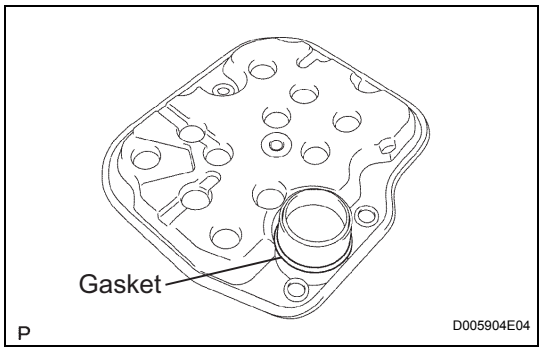
   (b) Remove the 2 magnets from the oil pan.

   (c) Examine the particles in the pan.
      (1) Collect any steel chips using the removed magnets.
      Carefully inspect the foreign matter and particles in the pan and on the magnets to guess at the type of wear which might be found in the transaxle.
      Steel (magnetic): bearing, gear and clutch plate wear
      Brass (non-magnetic): bearing wear

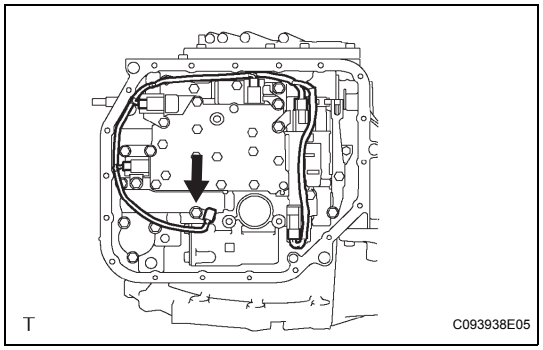


5. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY**
   (a) Remove the 3 bolts and remove the oil strainer.
   NOTICE:
   Perform the operation carefully as some fluid will come out from the oil strainer.

AX



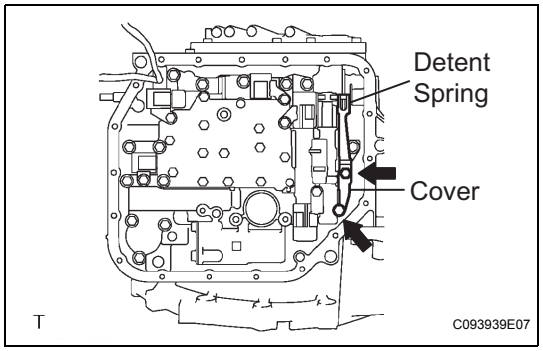
(b) Remove the oil strainer gasket from the oil strainer.



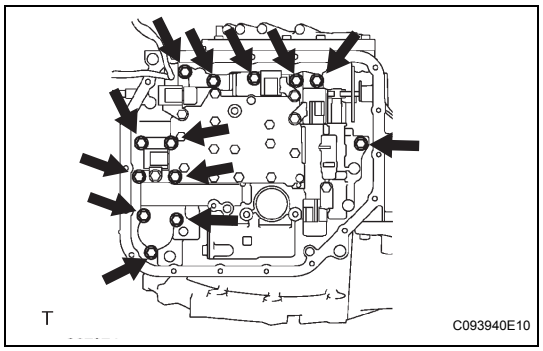
6. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Disconnect the 5 connectors.

(b) Remove the bolt and lock plate and remove the ATF temperature sensor.



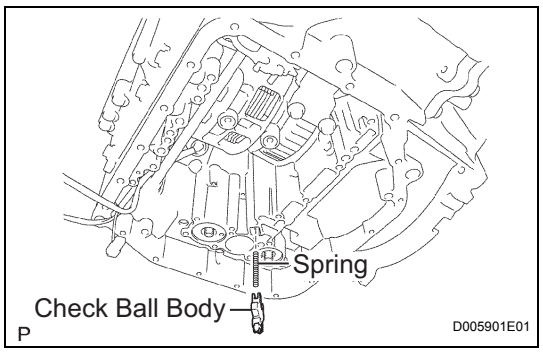
(c) Remove the 2 bolts and remove the detent spring cover and detent spring.



(d) Remove the 13 bolts and remove the valve body assembly.

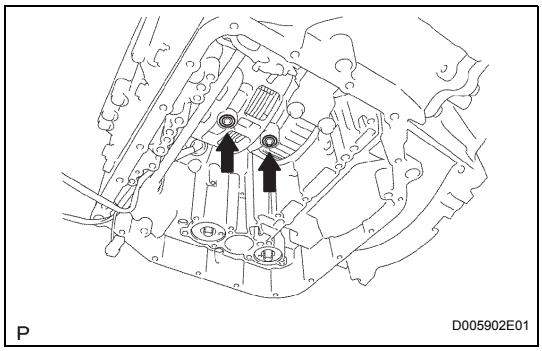
NOTICE:

Do not drop the check ball body, check ball body spring or accumulator piston.



(e) Remove the check ball body and check ball body spring.

AX

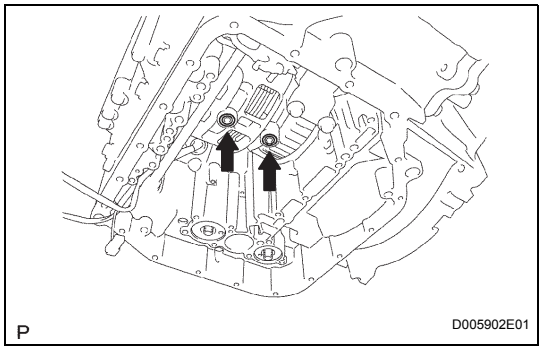


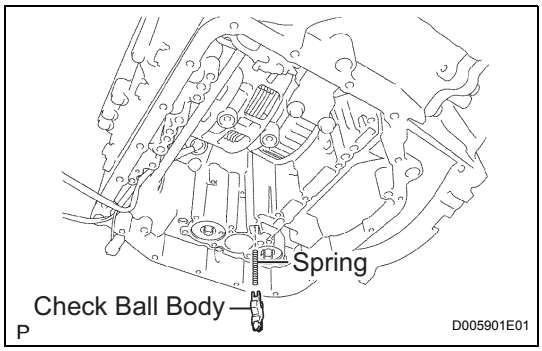
(f) Remove the 2 apply gaskets.

INSTALLATION

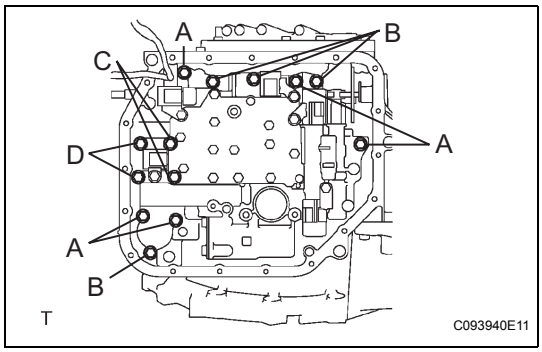
1. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Coat 2 new apply gaskets with ATF and install them into the transaxle case.





(b) Install the check ball body spring and check ball body.



(c) Align the groove of the manual valve with the pin of the manual valve lever.

(d) Provisionally install the valve body with the 13 bolts.

Bolt length:

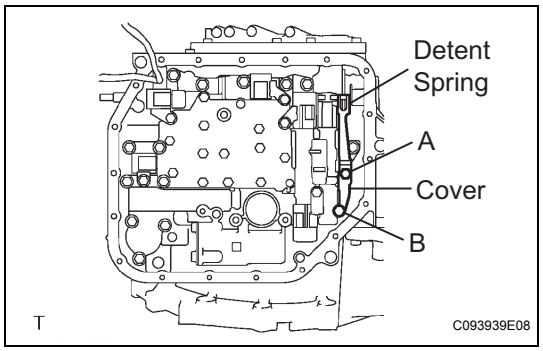
Bolt A:
32 mm (1.26 in.)

Bolt B:
22 mm (0.87 in.)

Bolt C:
55 mm (2.17 in.)

Bolt D:
45 mm (1.77 in.)

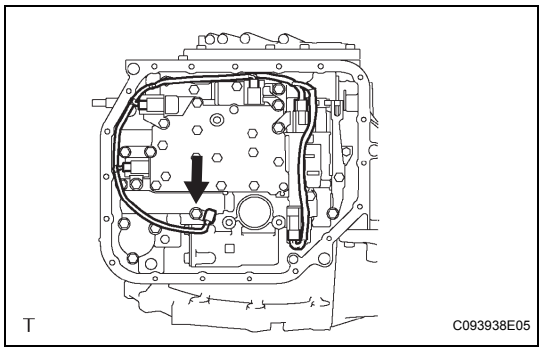
AX



(e) Provisionally install the detent spring and detent spring cover with the 2 bolts.
Bolt length:
Bolt A:
14 mm (0.55 in.)
Bolt B:
45 mm (1.77 in.)

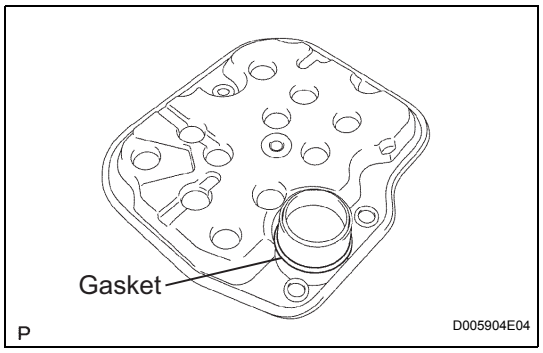
(f) Check that the manual valve lever comes into contact with the center of the roller at the tip of the detente spring.

(g) Tighten the 15 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)



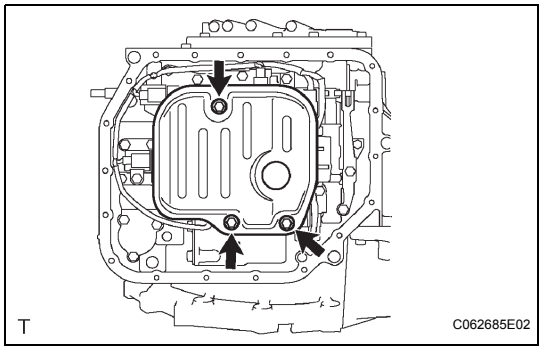
(h) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

(i) Connect the 5 shift solenoid valve connectors.



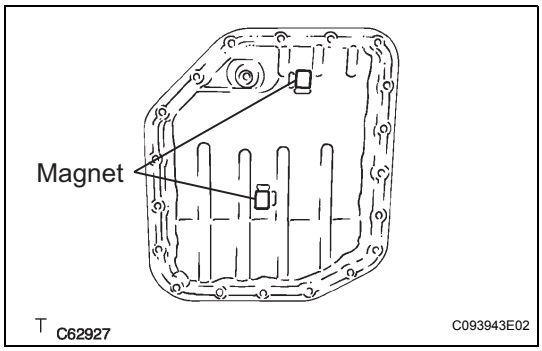
2. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new oil strainer gasket with ATF, and install it into the oil strainer.



(b) Install the oil strainer with the 3 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

AX



3. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY**
   (a) Install the 2 magnets onto the oil pan, as shown in the illustration.

   (b) Install the oil pan and a new gasket with the 19 bolts.
   Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

5. **ADD AUTOMATIC TRANSAXLE FLUID (See page AX-170)**

6. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-93)**

7. **CHECK AUTOMATIC TRANSAXLE FLUID LEAKAGE**

8. **INSTALL ENGINE UNDER COVER LH**

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. INSPECT SHIFT LOCK CONTROL ECU SUB-ASSEMBLY

(a) Check the shift lock operation.
  (1) Move the shift lever to P.
  (2) Turn the ignition switch OFF.
  (3) Check that the shift lever cannot be moved to any position other than P.
  (4) Turn the ignition switch ON, depress the brake pedal and check that the shift lever can be moved to other positions.

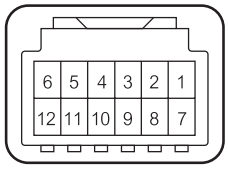
(b) Check the shift lock release button operation.
  (1) When operating the shift lever with the shift lock release button pressed, check that the lever can be moved to any position.
  If the operation cannot be performed as specified, check the shift lever assembly.

(c) Check the key interlock operation.
  (1) Turn the ignition switch ON.
  (2) Depress the brake pedal and move the shift lever to any position other than P.
  (3) Check that the ignition switch cannot be turned OFF.
  (4) Move the shift lever to P, turn the ignition switch OFF and check that the key can be removed.
  If the results are not as specified, inspect the shift lock control unit.

(d) Inspect the shift lock control unit assembly.
  (1) Measure the voltage of the connector.
  HINT:
  Do not disconnect the shift lock control ECU connector.

Component Side:

(Connector Front View)



C117648E03

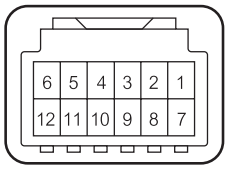
Standard voltage

Condition	Tester Connection	Specified Condition
Ignition switch ACC and shift lever P	12 (KLS+) - 8 (E)	Below 1 V
Ignition switch ACC and shift lever except P	12 (KLS+) - 8 (E)	7.5 to 11 V
Ignition switch ACC and shift lever except P (after approx. 1 second)	12 (KLS+) - 8 (E)	6 to 9 V
Ignition switch ON	6 (ACC) - 8 (E)	10 to 14 V

Condition	Tester Connection	Specified Condition
Ignition switch ACC	6 (ACC) - 8 (E)	10 to 14 V
Ignition switch OFF	6 (ACC) - 8 (E)	Below 1 V
Depress brake pedal	7 (STP) - 8 (E)	10 to 14 V
Release brake pedal	7 (STP) - 8 (E)	Below 1 V
Ignition switch ON	1 (IG) - 8 (E)	10 to 14 V
Ignition switch OFF	1 (IG) - 8 (E)	Below 1 V

Component Side:

(Connector Front View)



C117648E03

(2) Measure the resistance of the connector.
HINT:
Do not disconnect the shift lock control ECU connector.

Standard resistance

Tester Connection	Specified Condition
8 (E) - Body ground	Below 1 Ω

If the result is not as specified, replace the shift lock control ECU sub-assembly.

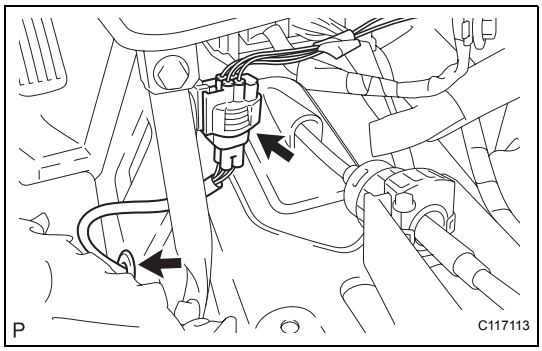
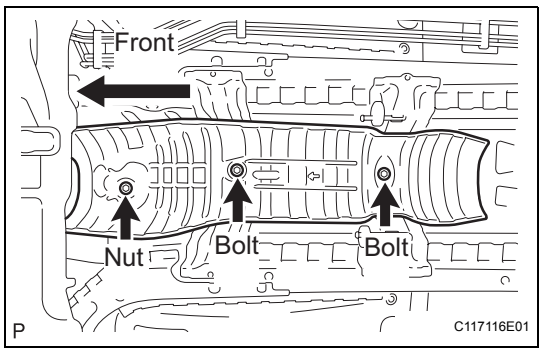
REMOVAL

1. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-6)**
2. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-6)**
3. **REMOVE REAR CONSOLE BOX COVER (for Hatchback) (See page PB-6)**
4. **REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-7)**
5. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
6. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
7. **REMOVE BATTERY (See page EM-122)**
8. **REMOVE BATTERY TRAY**
9. **REMOVE AIR CLEANER ASSEMBLY (See page EM-124)**
10. **REMOVE AIR CLEANER BRACKET (See page EM-125)**
11. **SEPARATE OXYGEN SENSOR CONNECTOR**
    (a) Pull back the floor carpet and disconnect the oxygen sensor connector.
    (b) Remove the grommet and put the oxygen sensor connector outside of the vehicle.

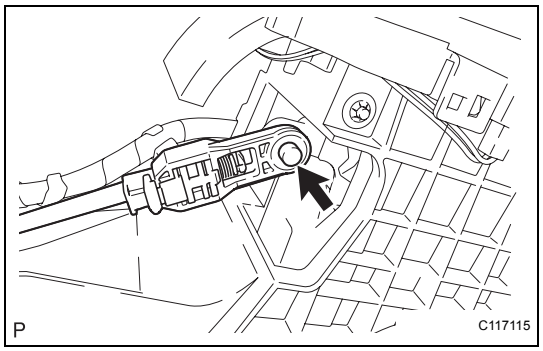


12. **REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-5)**



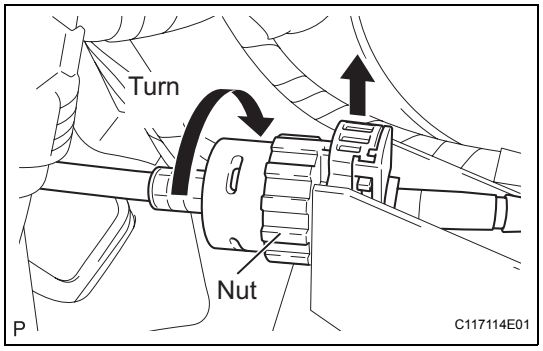
13. **REMOVE FRONT NO. 1 FLOOR HEAT INSULATOR**
    (a) Remove the 2 bolts and the nut and remove floor heat insulator.

AX

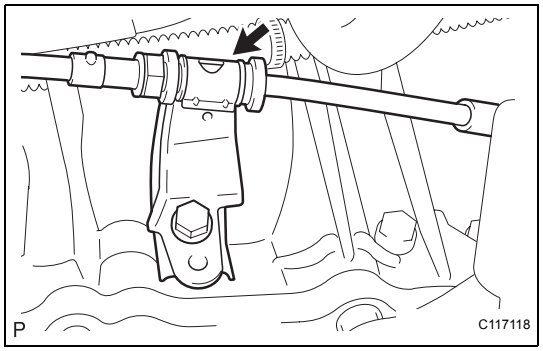


14. REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY

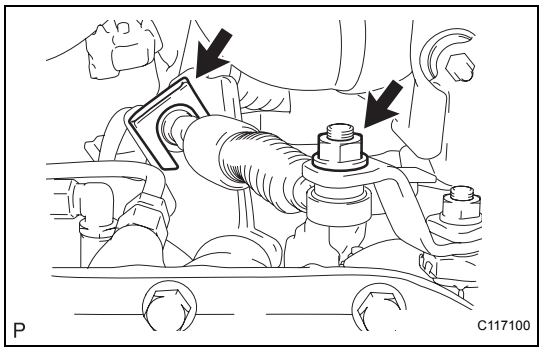
(a) Disconnect the control cable from the shift lever.



(b) Turn the nut and separate the control cable from the shift lever retainer.

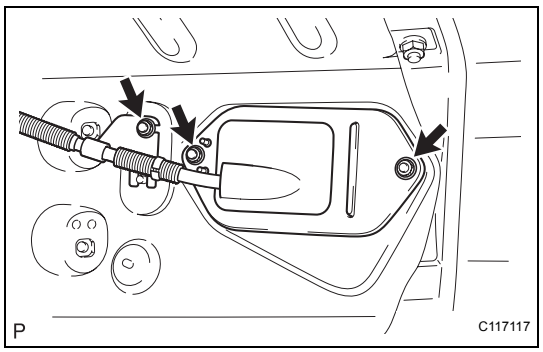


(c) Disconnect the control cable from the control cable support.



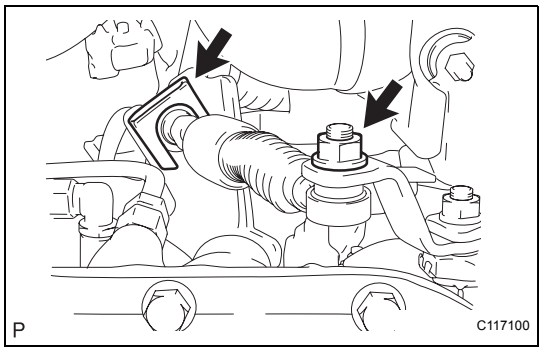
(d) Remove the nut and disconnect the control cable from the control shaft lever.

(e) Remove the clip and separate the control cable from the control cable bracket.



(f) Remove the 3 nuts and remove the control cable.

AX

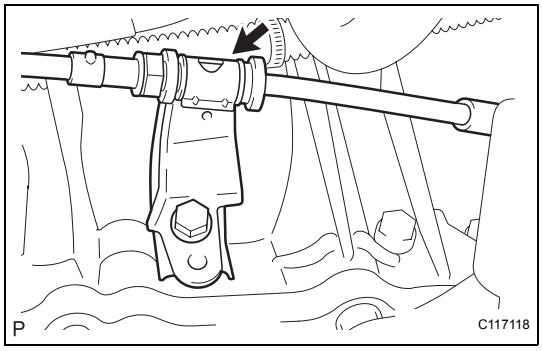


INSTALLATION

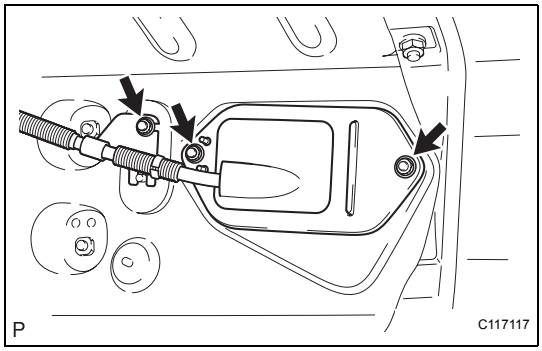
1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the control cable onto the control shaft lever with the nut.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

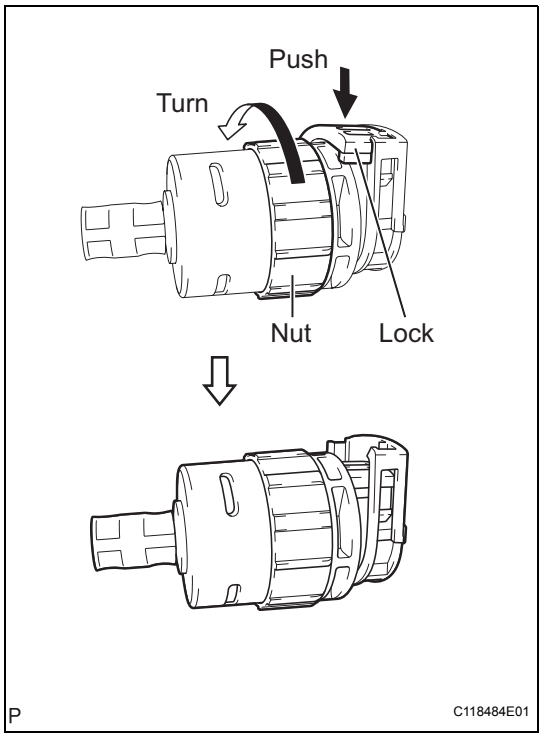
(b) Fix the control cable onto the control cable bracket with a new clip.



(c) Connect the control cable to the clamp.

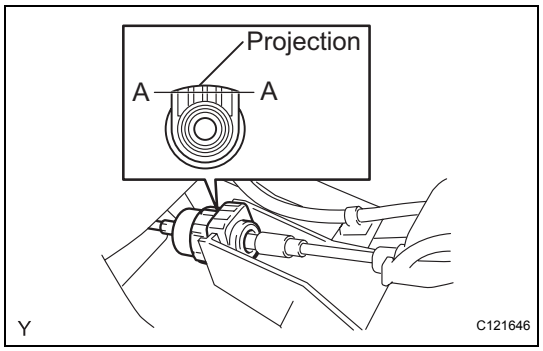


(d) Install the control cable with the 3 nuts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

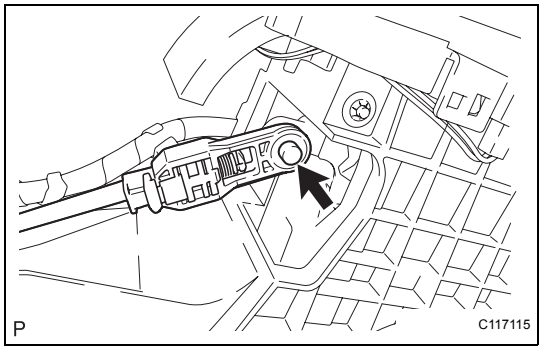


(e) Turn the nut of the control cable and push in the lock.

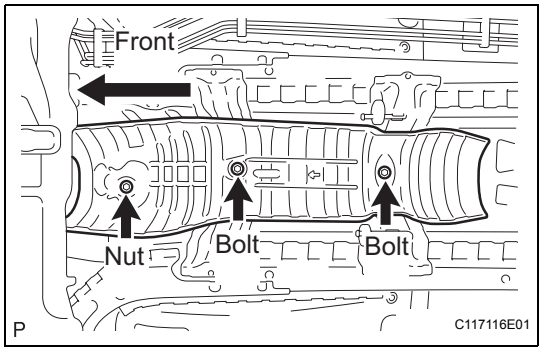
AX



(f) Install the control cable onto the shift lever retainer.
NOTICE:
- **Install the cable with the protruding portion of the cable outer facing upward.**
- **After installing, check that the lock of the cable outer is protruding beyond portion A-A, as shown in the illustration.**

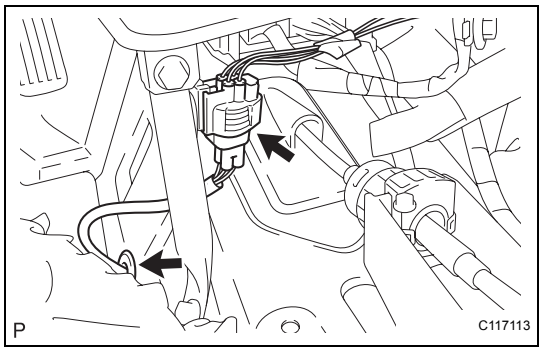


(g) Connect the control cable to the shift lever.
NOTICE:
Connect the control cable so that the adjusting mechanism lock of the control cable is installed on the left side of the vehicle.



2. INSTALL FRONT NO. 1 FLOOR HEAT INSULATOR
(a) Install floor heat insulator with the 2 bolts and the nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

3. INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-8)



4. CONNECT OXYGEN SENSOR CONNECTOR
(a) Insert the oxygen sensor connector toward the room side, through the hole in the floor panel, and then install the grommet.
(b) Connect the oxygen sensor connector.

5. INSTALL AIR CLEANER BRACKET (See page EM-145)

6. INSTALL AIR CLEANER ASSEMBLY (See page EM-146)

7. INSTALL BATTERY TRAY

8. INSTALL BATTERY (See page EM-148)

9. INSPECT SHIFT LEVER POSITION (See page AX-134)

10. ADJUST SHIFT LEVER POSITION (See page AX-137)

11. INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)

12. INSTALL CONSOLE BOX CARPET (See page PB-11)

13. INSTALL REAR CONSOLE BOX COVER (for Hatchback) (See page PB-11)

14. **INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-11)**
15. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-12)**
16. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-12)**
17. **CHECK FOR EXHAUST GAS LEAKAGE**

AX

ON-VEHICLE INSPECTION

1. INSPECT SHIFT LEVER POSITION

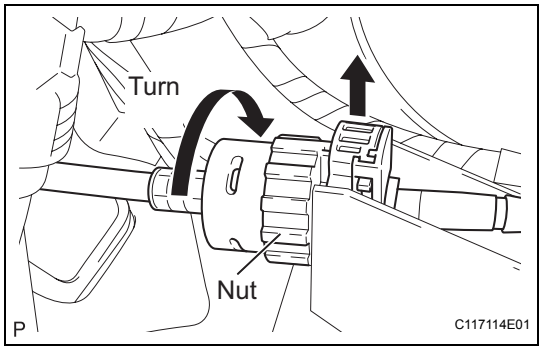
(a) When shifting the lever from P to the R position with the ignition switch ON and the brake pedal depressed, make sure that the shift lever moves smoothly and moves correctly into position.

(b) Start the engine and make sure that the vehicle moves forward when shifting the lever from N to the D position and moves rearward when shifting the lever to the R position.
If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
   (a) Remove the shift lever knob sub-assembly from the shift lever.
3. **REMOVE CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-6)**
4. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-6)**
5. **REMOVE REAR CONSOLE BOX COVER (for Hatchback) (See page PB-6)**
6. **REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-7)**
7. **REMOVE CONSOLE BOX CARPET (See page PB-7)**
8. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page PB-8)**
9. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Disconnect the control cable from the shift lever.

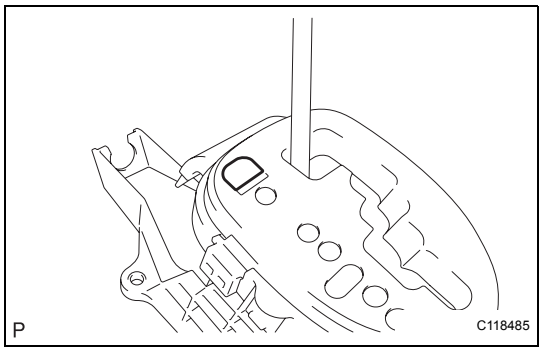
   (b) Turn the nut and separate the control cable from the shift lever retainer.



10. **REMOVE FLOOR SHIFT ASSEMBLY**
    (a) Separate the shift lock control computer connector and indicator wire connector.
    (b) Separate the 2 wire harness clamps from the shift lever.

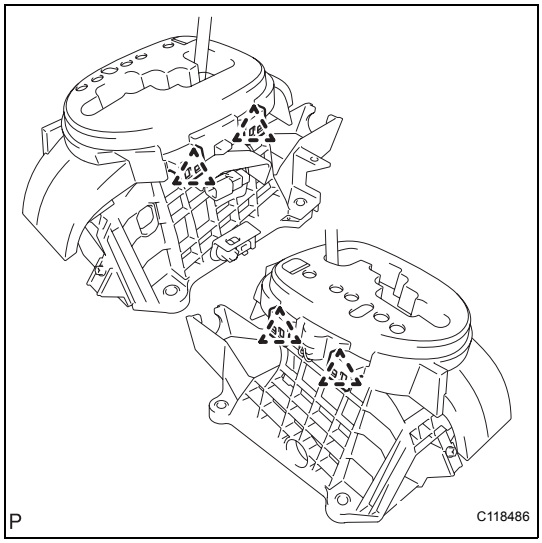
   (c) Remove the 4 bolts and remove the shift lever.

DISASSEMBLY



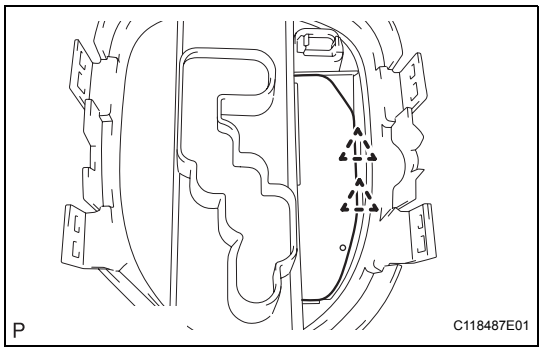
1. REMOVE SHIFT LEVER CAP

(a) Remove the shift lever cap from the position indicator housing upper.



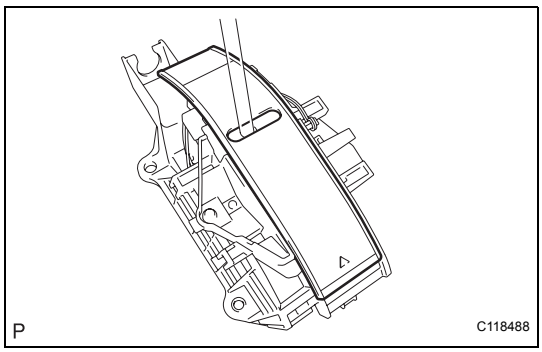
2. REMOVE UPPER POSITION INDICATOR HOUSING

(a) Release the 4 claws using a screwdriver and remove the upper position indicator housing from the shift lock control unit.



3. REMOVE NO. 2 CONTROL POSITION INDICATOR PLATE

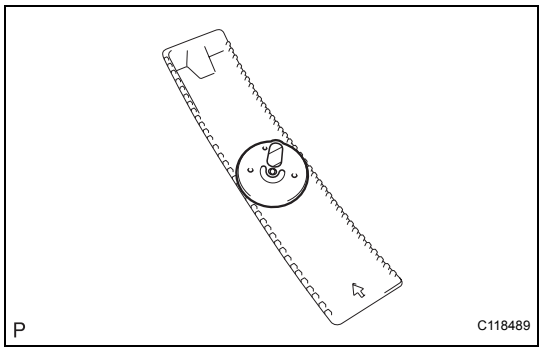
(a) Release the 2 claws using a screwdriver and remove position indicator plate from the upper position indicator housing.



4. REMOVE POSITION INDICATOR SLIDE COVER

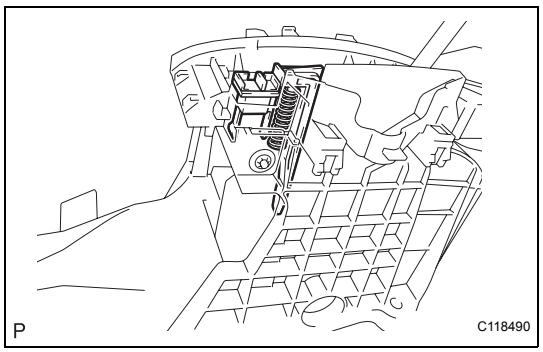
(a) Remove the position indicator slide cover from the shift lock control unit.

AX



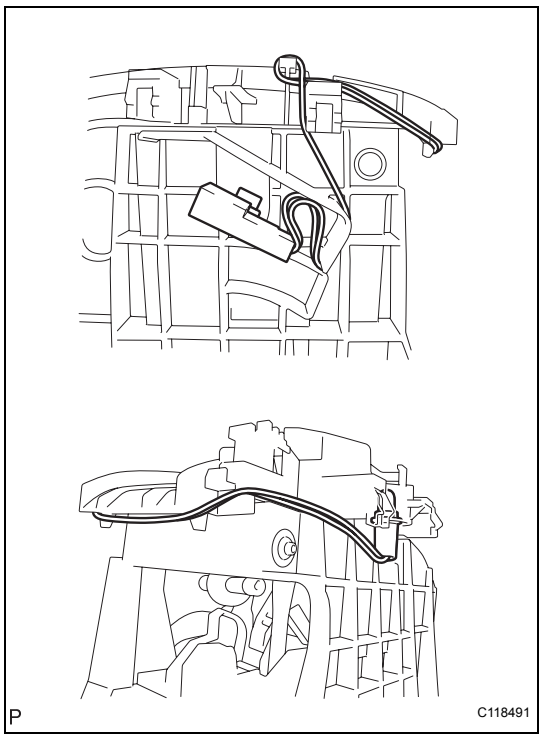
5. REMOVE NO. 2 POSITION INDICATOR SLIDE COVER

(a) Remove No. 2 position indicator slide cover from the position indicator slide cover.



6. REMOVE SHIFT LOCK RELEASE BUTTON

(a) Remove the shift lock release button and shift lock release spring from the shift lock control unit.



7. REMOVE INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Remove the indicator light wire sub-assembly from the shift lock control unit.

AX

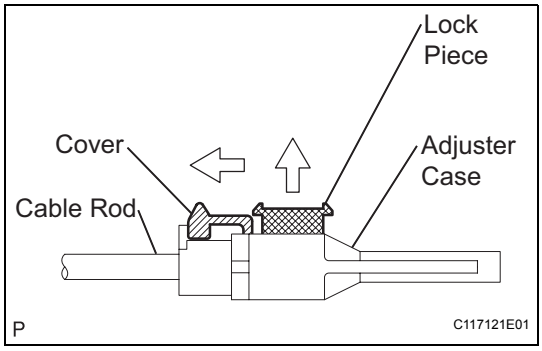
ADJUSTMENT

1. ADJUST SHIFT LEVER POSITION

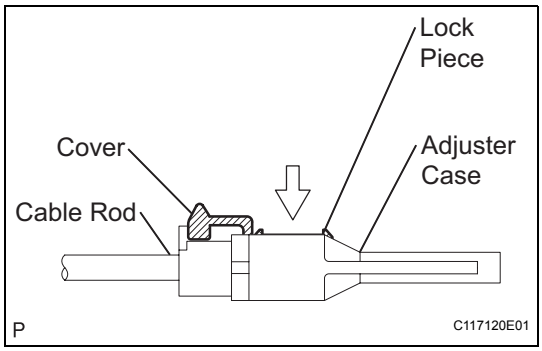
(a) Shift the shift lever to the N position.

(b) Slide the adjuster case cover in the direction shown in the illustration and pull out the lock piece.

(c) Gently pull the cable rod toward the rear of the vehicle by hand to pull the cable taut.

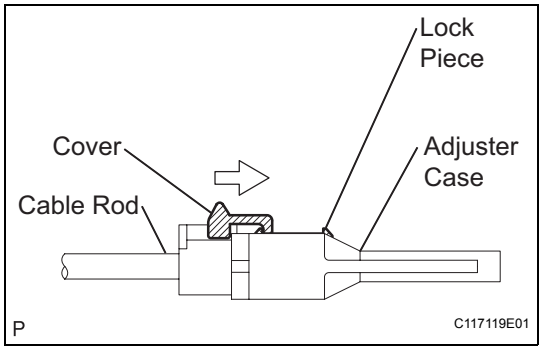


(d) Press the lock piece into the adjuster case and lock it.

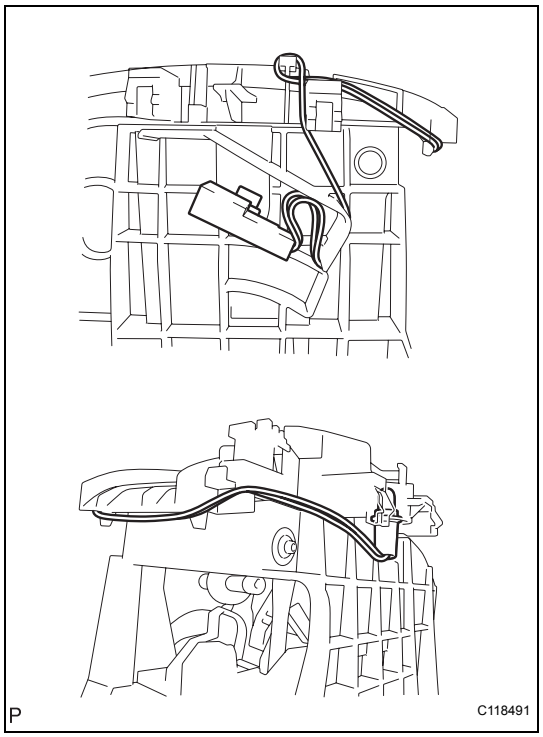


(e) Slide the cover in the direction shown in the illustration.
NOTICE:
Slide the cover past the protrusion of the lock piece.

(f) Inspect the operation after the adjustment.



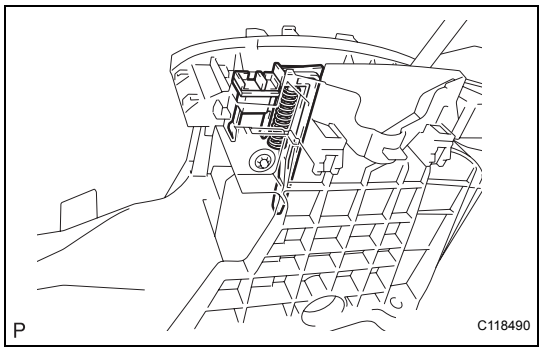
AX



REASSEMBLY

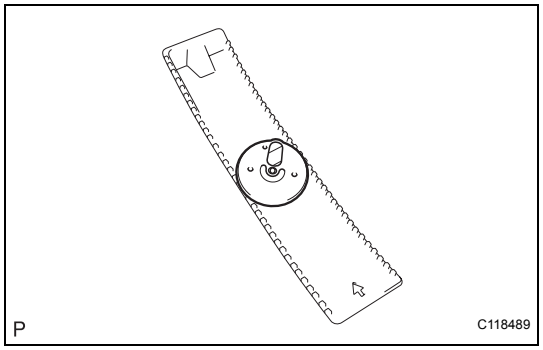
1. INSTALL INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Install the indicator light wire onto the shift lock control unit.



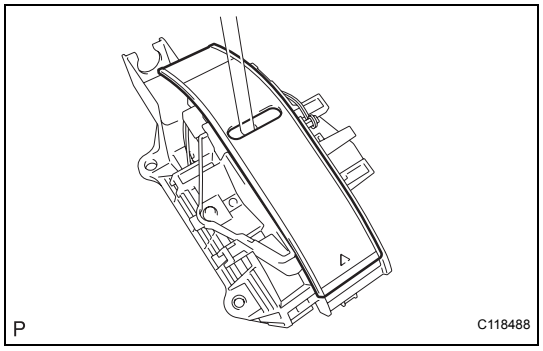
2. INSTALL SHIFT LOCK RELEASE BUTTON

(a) Install the shift lock release button and spring onto the shift lock control unit.



3. INSTALL NO. 2 POSITION INDICATOR SLIDE COVER

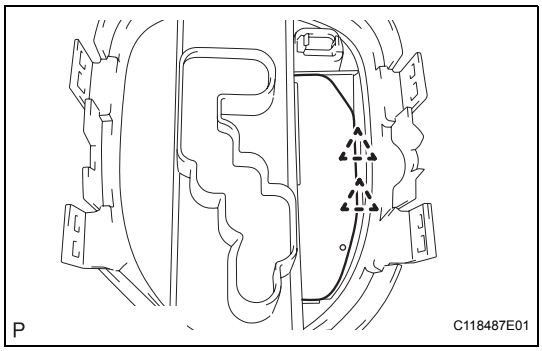
(a) Install No. 2 position indicator slide cover onto the position indicator slide cover.



4. INSTALL POSITION INDICATOR SLIDE COVER

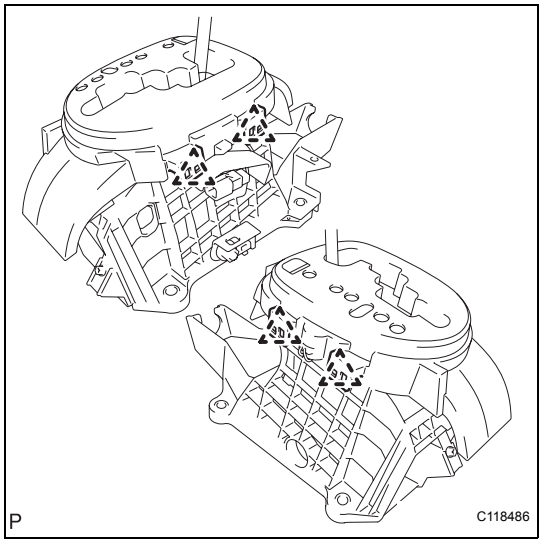
(a) Install the position indicator slide cover onto the shift lock control unit.

AX



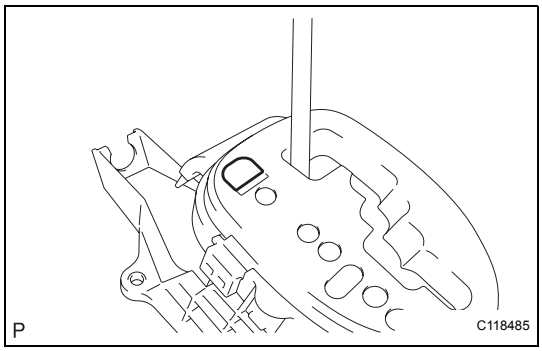
5. INSTALL NO. 2 CONTROL POSITION INDICATOR PLATE

(a) Install position indicator plate onto the upper position indicator housing.



6. INSTALL UPPER POSITION INDICATOR HOUSING

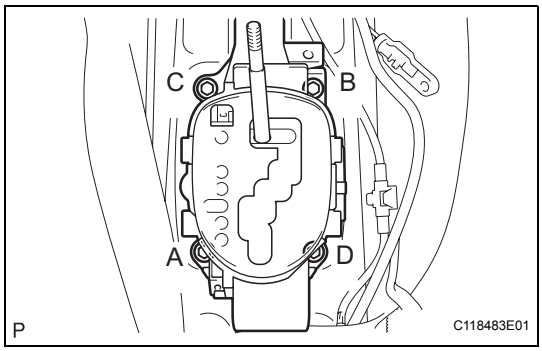
(a) Install the upper position indicator housing onto the shift lock control unit.
NOTICE:
Securely engage the 4 claws.



7. INSTALL SHIFT LEVER CAP

(a) Install the shift lever cap onto the position indicator housing upper.

INSTALLATION

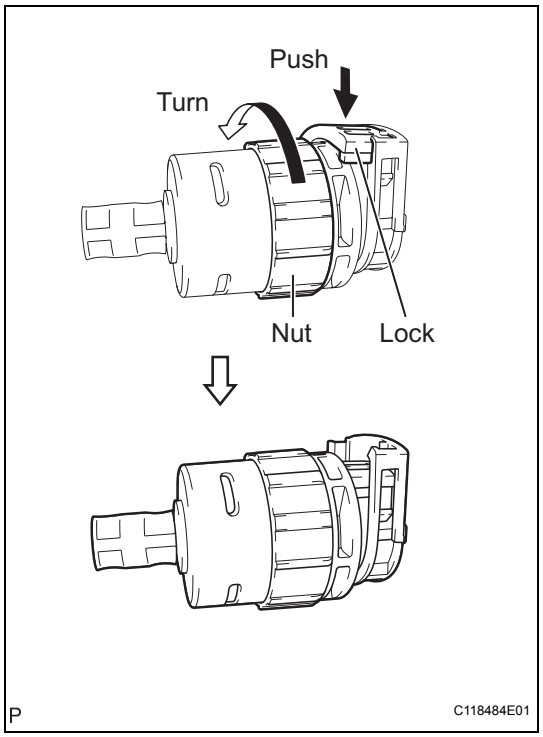


1. INSTALL FLOOR SHIFT ASSEMBLY

(a) Provisionally install the shift lever with the 4 bolts.
NOTICE:
Do not jam the wiring of the indicator light or shift lock.

(b) Tighten the 4 bolts in order, from A to D.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

(c) Install the shift lock control computer connector and indicator light connector.



2. **CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Turn the nut of the control cable and push in the lock.

   (b) Install the control cable onto the shift lever retainer.
   CAUTION:
   - **Install the cable with the projection of the cable outer facing upward.**
   - **After installing, check that the lock of the cable outer is protruding beyond portion A-A, as shown in the illustration.**

   (c) Connect the control cable to the shift lever.

3. **INSPECT SHIFT LEVER POSITION (See page AX-134)**
4. **ADJUST SHIFT LEVER POSITION (See page AX-137)**
5. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page PB-10)**
6. **INSTALL CONSOLE BOX CARPET (See page PB-11)**
7. **INSTALL REAR CONSOLE BOX COVER (for Hatchback) (See page PB-11)**
8. **INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-11)**
9. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Sedan) (See page PB-12)**
10. **INSTALL CENTER LOWER INSTRUMENT PANEL FINISH PANEL (for Sedan) (See page PB-12)**
11. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
    (a) Install the shift lever knob sub-assembly onto the shift lever.

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

DIFFERENTIAL OIL SEAL

COMPONENTS

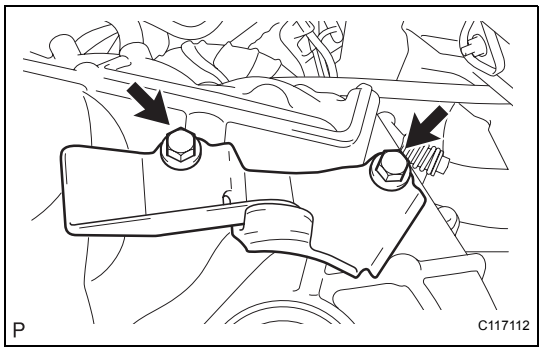
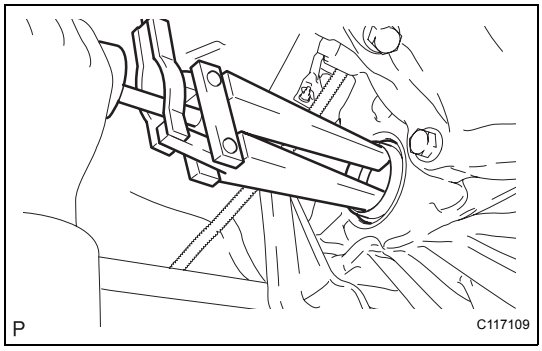
REMOVAL

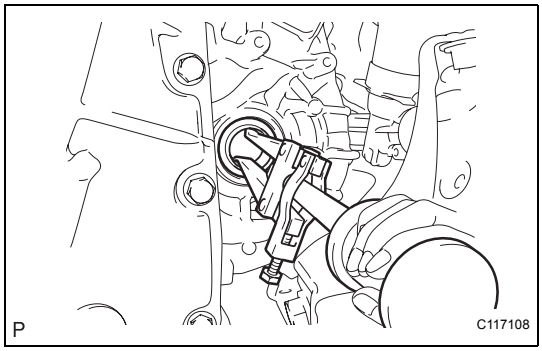
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEELS**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Remove the drain plug and gasket, and drain the automatic transaxle fluid.
   (b) Install a new gasket and the drain plug.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
6. **REMOVE FRONT AXLE HUB NUT LH (See page DS-3)**
7. **REMOVE FRONT AXLE HUB NUT RH**
   HINT:
   The removal procedure for the RH side is the same as that for the LH side.
8. **SEPARATE FRONT SPEED SENSOR LH (w/ ABS) (See page DS-3)**
9. **SEPARATE FRONT SPEED SENSOR RH (w/ ABS)**
   HINT:
   The separation procedure for the RH side is the same as that for the LH side.
10. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-4)**
11. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.
12. **SEPARATE TIE ROD END SUB-ASSEMBLY LH (See page DS-3)**
13. **SEPARATE TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.
14. **SEPARATE FRONT LOWER SUSPENSION ARM LH (See page DS-4)**
15. **SEPARATE FRONT LOWER SUSPENSION ARM RH**
    HINT:
    The separation procedure for the RH side is the same as that for the LH side.



16. **REMOVE TRANSMISSION CASE PROTECTOR (w/o ABS)**
    (a) Remove the 2 bolts and remove the transmission case protector from the automatic transansaxle.
17. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-5)**
18. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-5)**

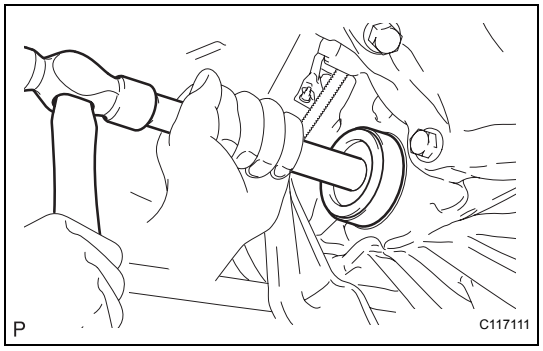


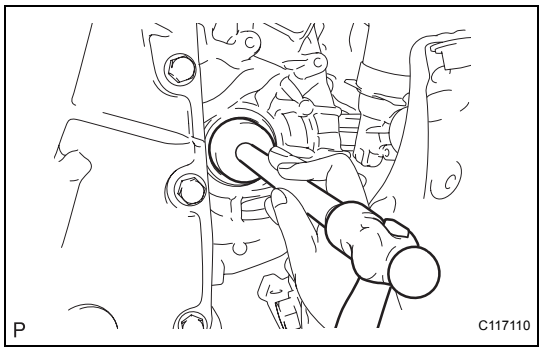
19. **REMOVE FRONT TRANSAXLE CASE OIL SEAL**
    (a) Using SST, remove the front transaxle case oil seal.
    SST 09308-00010

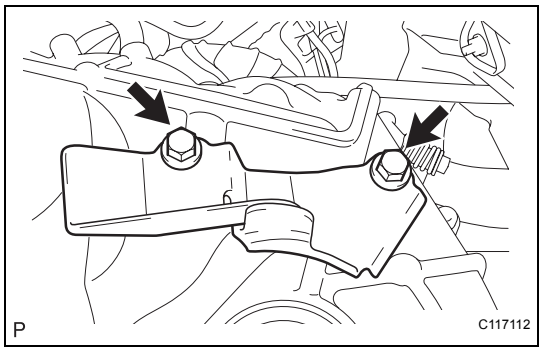


20. **REMOVE TRANSAXLE CASE OIL SEAL**
    (a) Using SST, remove the transaxle case oil seal.
    SST 09308-00010

INSTALLATION







1. **INSTALL FRONT TRANSAXLE CASE OIL SEAL**
   (a) Coat the lip of a new oil seal with MP grease.
   (b) Using SST and a hammer, install the front transaxle case oil seal.
   SST 09554-14010, 09950-70010 (09951-07200)
   Drive in depth:
   1.5 to 2.5 mm (0.059 to 0.098 in.)
   NOTICE:
   Do not damage the oil seal lip.
2. **INSTALL TRANSAXLE CASE OIL SEAL**
   (a) Coat the lip of a new oil seal with MP grease.
   (b) Using SST and a hammer, install the transaxle case oil seal.
   SST 09710-20011 (09710-06071), 09950-70010 (09951-07200)
   Drive in depth:
   5.4 to 6.4 mm (0.213 to 0.252 in.)
   NOTICE:
   Do not damage the oil seal lip.
3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-13)**
4. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-14)**
5. **INSTALL TRANSMISSION CASE PROTECTOR (w/o ABS)**
   (a) Install the transmission case protector onto the automatic transaxle with the 2 bolts.
6. **INSTALL FRONT LOWER SUSPENSION ARM LH (See page DS-14)**
7. **INSTALL FRONT LOWER SUSPENSION ARM RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.
8. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page DS-15)**
9. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
   HINT:
   The installation procedure for the RH side is the same as that for the LH side.
10. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-14)**
11. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.

AX

12. **INSTALL FRONT SPEED SENSOR LH (w/ ABS) (See page DS-15)**
13. **INSTALL FRONT SPEED SENSOR RH (w/ ABS)**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
14. **INSTALL FRONT AXLE HUB NUT LH (See page DS-15)**
15. **INSTALL FRONT AXLE HUB NUT RH**
    HINT:
    The installation procedure for the RH side is the same as that for the LH side.
16. **INSTALL FRONT WHEELS**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
17. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
18. **ADD AUTOMATIC TRANSAXLE FLUID (See page AX-170)**
19. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-93)**
20. **CHECK AUTOMATIC TRANSAXLE FLUID LEAKAGE**
21. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-2)
22. **INSTALL ENGINE UNDER COVER RH**
23. **INSTALL ENGINE UNDER COVER LH**

REMOVAL

1. **REMOVE HOOD SUB-ASSEMBLY**
   Hatchback: (See page PS-74)
   Sedan: (See page PS-63)
2. **REMOVE FRONT WHEELS**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Remove the drain plug and gasket, and drain the ATF.
   (b) Install a new gasket and the drain plug.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
6. **REMOVE FRONT WIPER ARM HEAD CAP**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
7. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
8. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH**
   Hatchback: (See page WW-17)
   Sedan: (See page WW-9)
9. **REMOVE HOOD TO COWL TOP SEAL (for Hatchback) (See page WW-18)**
10. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH (for Sedan) (See page WW-10)**
11. **REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH (for Sedan) (See page WW-10)**
